
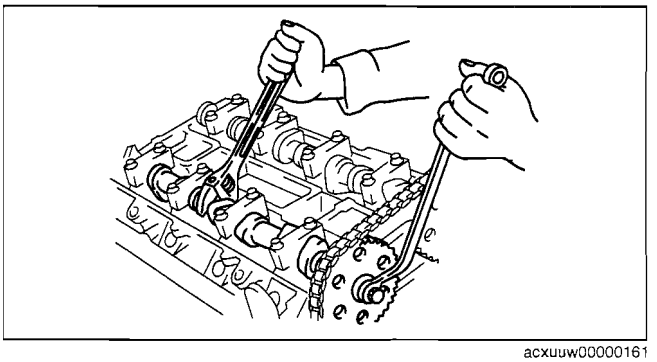
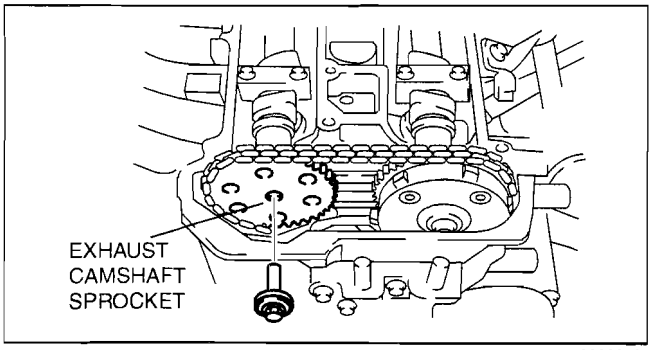
acxuuw00000160

16. Fix the exhaust camshaft using a wrench on the cast hexagon, and loosen the camshaft sprocket installation bolt.



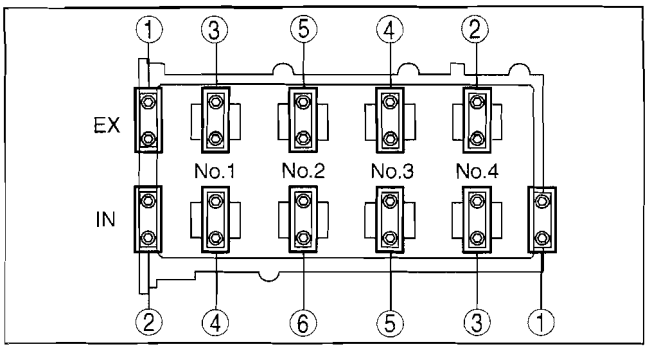
acxuuw00000161

17. Remove the installation bolt and remove the exhaust camshaft sprocket.
18. Remove the oil control valve (OCV). (See 01-10B-33 OIL CONTROL VALVE (OCV) REMOVAL/ INSTALLATION[L3 WITH TC].)



acxuuw00000162

19. Loosen the camshaft cap bolts in two or three passes in the order shown in the figure and remove the camshaft cap.



acxuuw00000163

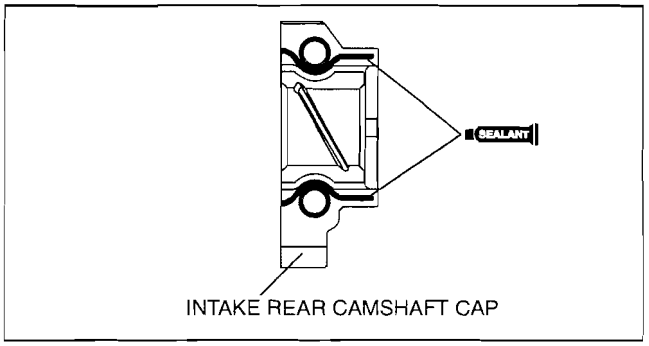
Note
- The camshaft caps are to be kept ordered for correct reassembly in their original positions. Do not mix the caps.

20. Remove the camshafts for the intake and exhaust sides.
21. Remove the tappet.
22. Install an appropriate tappet based on the results of the valve clearance inspection.
    Selected tappet = Removed tappet thickness + Measured valve clearance - Standard valve clearance

Standard valve clearance [Engine cold]
IN: 0.22—0.28 mm {0.0087—0.011 in}
EX: 0.27—0.33 mm {0.011—0.012 in}

23. Install the camshaft with No.1 cylinder cam aligned at TDC of the compression stroke.
24. Carefully apply adhesive agent to the area indicated in the figure so that it does not leak into the sliding part.

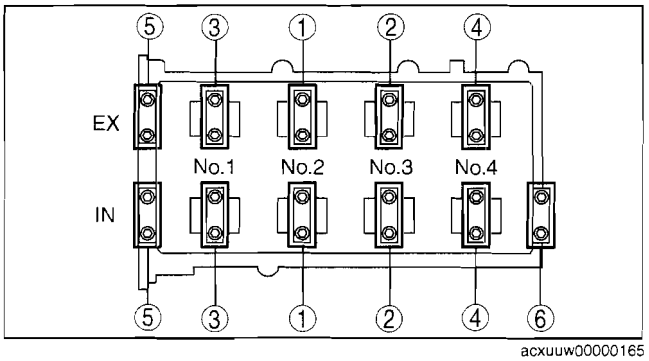
Thickness
1.0 mm {0.039 in}



acxuuw00000164

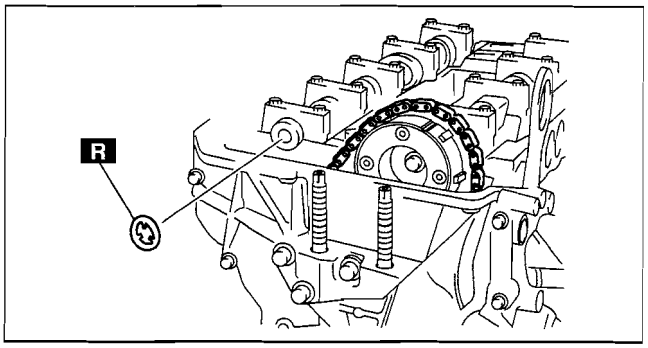
25. Install the camshaft caps and temporarily tighten the camshaft cap bolts evenly in two or three passes, and then tighten the camshaft cap bolts in two passes, using the following two steps and in the order shown in the figure.

Tightening procedure
1st step: 5.0—9.0 N·m {51—91 kgf·cm, 45—79 in·lbf}
2nd step: 14.0—17.0 N·m {1.5—1.7 kgf·m, 10.4—12.5 ft·lbf



acxuuw00000165

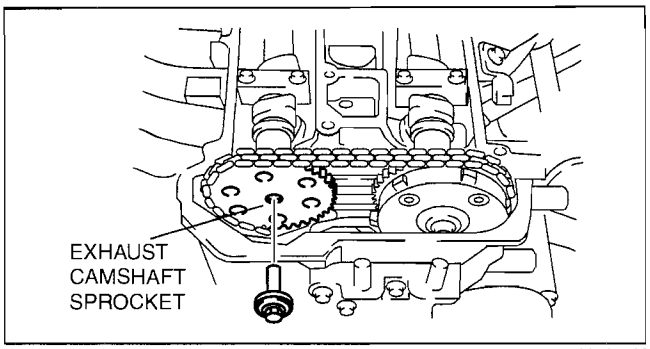
26. Install the OCV. (See 01-10B-33 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION[L3 WITH TC].)
27. Install a new washer.



acxuuw00000166

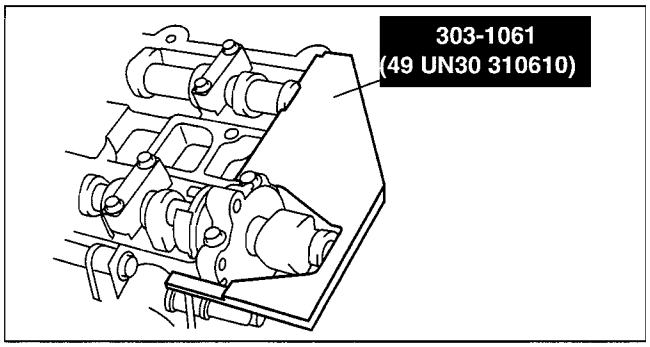
28. Install the exhaust camshaft sprocket.

Caution
- **Do not tighten the camshaft sprocket installation bolt at this stage. Verify the valve timing before performing the bolt tightening.**



acxuuw00000162

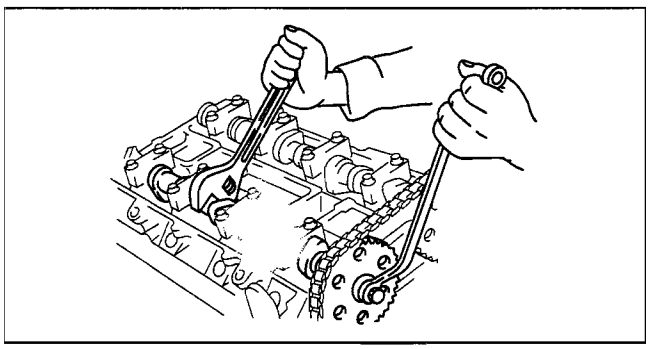
29. Install the **SST** on the camshaft as shown in the figure.
30. Remove the installation bolt for the engine front cover upper blind plug (**M6 X 1.0 length 25—35mm {0.99—1.3 in}**), and apply tension to the timing chain.
31. Rotate the crankshaft clockwise and verify that the No.1 cylinder is at TDC of the compression stroke. (The position crank weight contacts the **SST**.)



acxuuw00000167

32. Fix the exhaust camshaft using a wrench on the cast hexagon, and tighten the sprocket installation bolt.

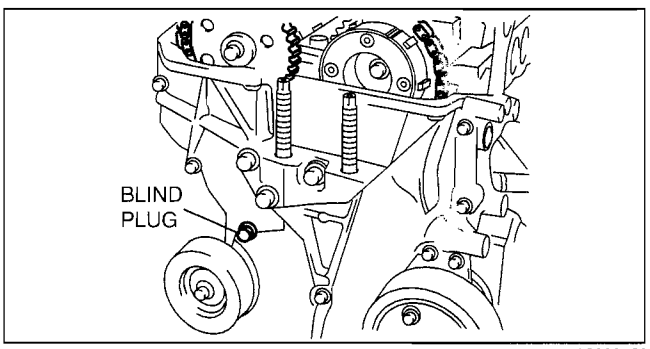
Tightening torque
69—75 N·m {7.1—7.6 kgf·m, 51—55 ft·lbf}



acxuuw00002396

33. Remove the **SST** from the camshaft.
34. Remove the **SST** installed in the cylinder block lower blind plug hole.
35. Rotate the crankshaft clockwise two turns and inspect the valve timing.
    - If it is not aligned, repeat the procedure.
36. Apply the silicone sealant and install the engine front cover upper blind plug.

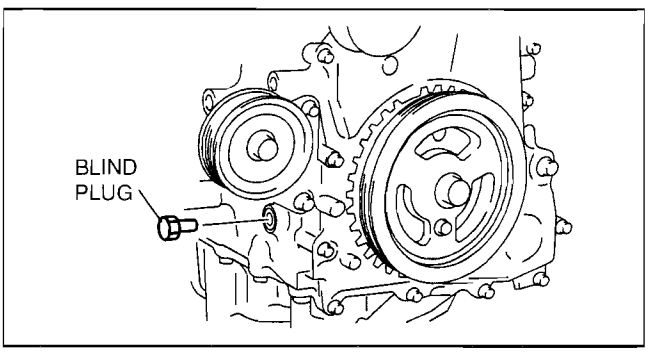
Tightening torque
8.0—11.5 N·m {82—117 kgf·cm, 71—101 in·lbf}



acxuuw00000168

37. Install the cylinder block lower blind plug.

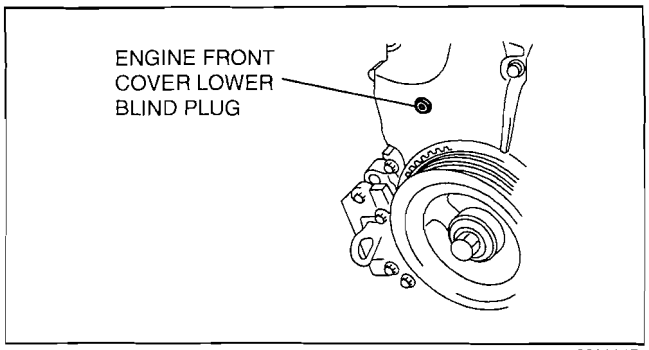
Tightening torque
18—22 N·m {1.9—2.2 kgf·m, 14—16 ft·lbf}



acxuuw00000169

38. Install a new engine front cover lower blind plug.

Tightening torque
10.0—14.0 N·m {102—142 kgf·cm, 89—123 in·lbf}



acxuuw00000170

39. Install the drive belt. (See 01-10B-3 DRIVE BELT REMOVAL/INSTALLATION[L3 WITH TC].)
40. Install the cylinder head cover. (See 01-10B-10 TIMING CHAIN REMOVAL/INSTALLATION[L3 WITH TC].)
41. Install the ventilation hose.
42. Connect the wiring harness.
43. Install the ignition coils. (See 01-18B-2 IGNITION COIL REMOVAL/INSTALLATION[L3 WITH TC].)
44. Install the high pressure fuel pump. (See 01-14B-21 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION[L3 WITH TC].)
45. Install the charge air cooler. (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
46. Install the splash shield (RH).
47. Connect the negative battery cable.
48. Install the battery cover.

COMPRESSION INSPECTION[L3 WITH TC]

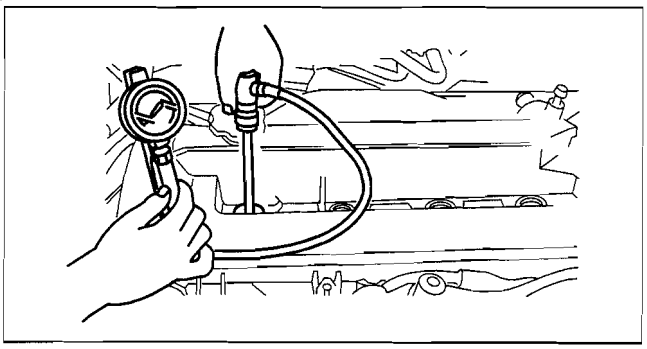
id011039800300

Warning
- **Hot engines can cause severe burns. Be careful not to burn yourself during removal/installation of each component.**
- **Fuel vapor is hazardous. It can very easily ignite, causing death, serious injury, or damage. Always keep sparks and flames away from fuel.**

1. Verify that the battery is completely charged. (See 01-17B-4 BATTERY INSPECTION[L3 WITH TC].)
2. Warm up the engine.

Warning
- **Fuel line spills and leakage from the pressurized fuel system are dangerous. Fuel can easily ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always perform the Fuel Line Safety Procedure. (See 01-14B-4 BEFORE SERVICE PRECAUTION[L3 WITH TC].)**

3. Remove the charge air cooler.
4. Remove the ignition coils. (See 01-18B-2 IGNITION COIL REMOVAL/INSTALLATION[L3 WITH TC].)
5. Remove all the spark plugs. (See 01-18B-3 SPARK PLUG REMOVAL/INSTALLATION[L3 WITH TC])
6. Remove the fuel pump relay. (See 01-14B-4 BEFORE SERVICE PRECAUTION[L3 WITH TC].)
7. Remove the fuel injector relay.
8. Measure the compression pressure using the following procedure.
   (1) Press the compression gauge into the spark plug hole.
   (2) Fully open the throttle valve.
   (3) Crank the engine and measure the compression pressure.



acxuuw00000151

Compression
Standard: 1,280 kPa {13.1 kgf/cm^2, 185.65 psi} [250rpm]
Minimum: 896 kPa {9.14 kgf/cm^2, 129.96 psi} [250rpm]
Maximum difference between cylinders: 196.1 kPa {2.0 kgf/cm^2, 28.5 psi}

   (4) Perform Steps (1) to (3) for all cylinders.

(5) If it is less than the minimum specification, or there is a cylinder with a compression value that differs from that of other cylinders by **196.1 kPa or more {2.0 kgf/cm^2, 28.5 psi}**, add a small quantity of engine oil through the spark plug hole and perform Steps (1) to (3).
- If the pressure increases by adding the engine oil, the piston ring or the cylinder surface is worn, or they are damaged. Perform overhaul servicing.
- If the pressure does not increase, valve seizure, valve attachment failure, or pressure leakage from the cylinder head gasket might be occurring. Perform overhaul servicing.

9. Install the fuel injector relay.
10. Install the fuel pump relay. (See 01-14B-4 BEFORE SERVICE PRECAUTION[L3 WITH TC].)
11. Install the spark plugs. (See 01-18B-3 SPARK PLUG REMOVAL/INSTALLATION[L3 WITH TC])
12. Install the ignition coils. (See 01-18B-2 IGNITION COIL REMOVAL/INSTALLATION[L3 WITH TC].)
13. Install the charge air cooler.

TIMING CHAIN REMOVAL/INSTALLATION[L3 WITH TC]

id011039801000

1. Remove the battery cover.
2. Disconnect the negative battery cable.
3. Remove the under cover and splash shield.
4. Remove the charge air cooler. (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
5. Remove the high pressure fuel pump. (See 01-14B-21 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION[L3 WITH TC].)
6. Remove the ignition coils. (See 01-18B-2 IGNITION COIL REMOVAL/INSTALLATION[L3 WITH TC].)
7. Disconnect the wiring harness.
8. Remove the ventilation hose.
9. Remove the drive belt. (See 01-10B-3 DRIVE BELT REMOVAL/INSTALLATION[L3 WITH TC].)
10. Remove the crankshaft position (CKP) sensor. (See 01-40B-44 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION[L3 WITH TC].)
11. Remove the P/S oil pump with the hoses and pipes still connected. (See 06-14-23 POWER STEERING OIL PUMP REMOVAL/INSTALLATION[L3 WITH TC].)

Note
- Position and secure the P/S oil pump out of the way with a rope or wire.

12. Remove in the order indicated in the figure.
13. Install in the reverse order of removal.
14. Start the engine and inspect and adjust the following:
    (1) Engine oil amount (See 01-11B-2 ENGINE OIL LEVEL INSPECTION[L3 WITH TC].)
    (2) Runout and contact of pulley and belt.
    (3) Ignition timing, idle speed, and idle mixture (CO and HC) verification (See 01-10B-35 ENGINE TUNE-UP[L3 WITH TC].)

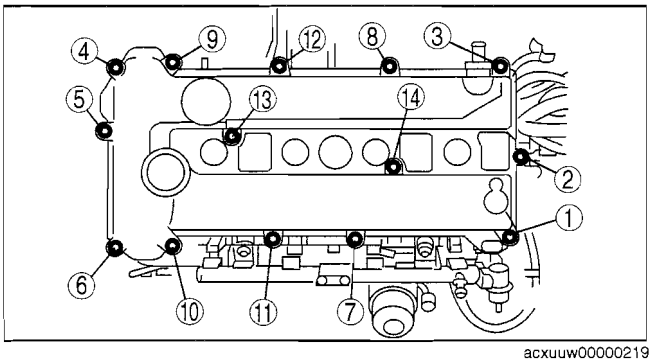
17	Oil pump chain
18	Crankshaft sprocket
19	Oil pump drive sprocket (See01-10B-16 Oil Pump Driven Sprocket Installation Note.)

Cylinder Head Cover Removal Note

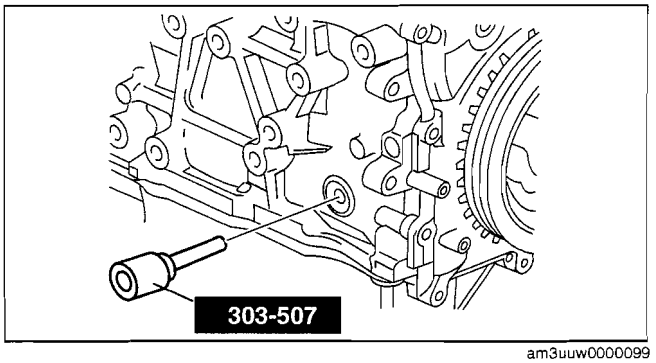
1. Loosen the cylinder head cover bolts in the order shown in the figure.



acxuuw00000219

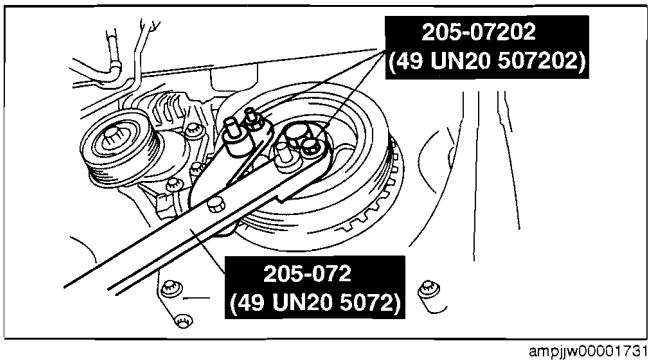
Crankshaft Pulley Lock Bolt Removal Note

1. Rotate the crankshaft in the direction of the engine rotation and remove the cylinder block lower blind plug when the No. 1 cylinder is at the point prior to top dead center (TDC) of compression, then install the **SST**.
2. Rotate the crankshaft in the direction of the engine rotation so that the No.1 piston is at TDC of the compression stroke. (Until the crank weight contacts **SST** and stops.)



am3uuw0000099

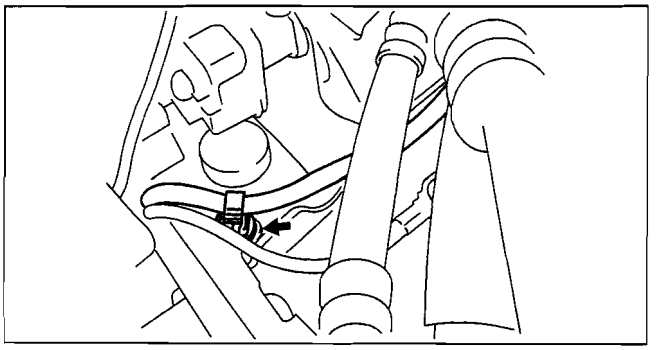
3. Install the **SST** to the crankshaft pulley and lock the crankshaft against rotation.



ampjjw00001731

No.3 Engine Mount Removal Note

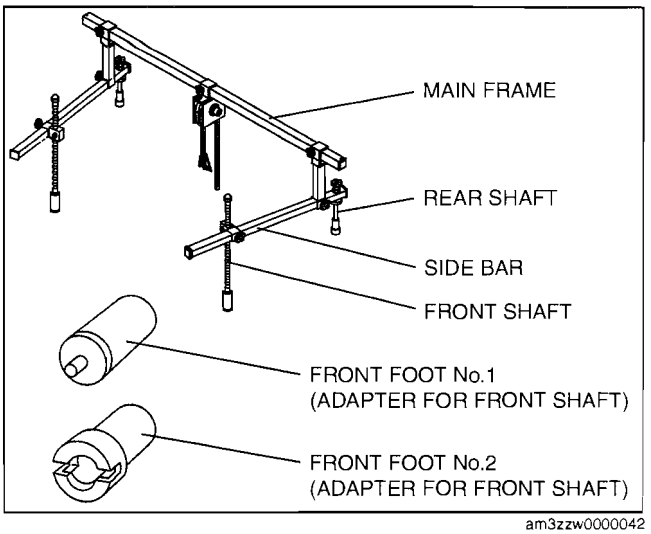
1. To install the front shaft (RH) of the **SST** (49 C017 5A0), remove the clip shown in the figure.



am3zzw0000042

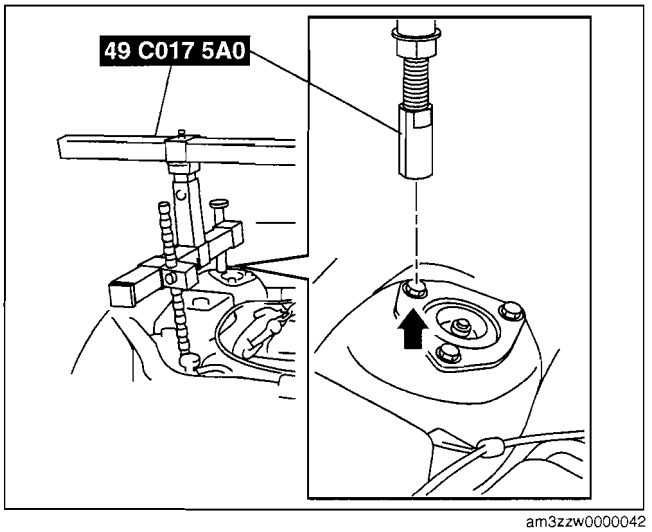
2. Install the **SST** using the following procedure.

Caution
- **Refer to the SST instruction manual for the basic handing procedure.**



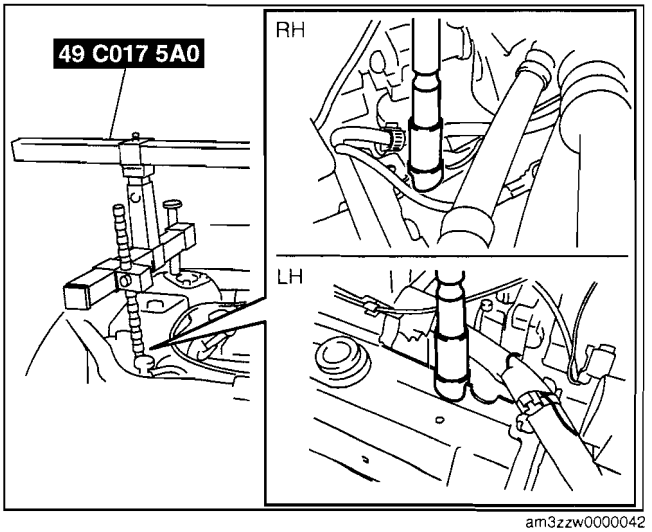
am3zzw0000042

(1) Install the right rear shaft of the **SST** to the bolt of the right shock absorber as shown in the figure.
(2) Install the left rear shaft of the **SST** to the bolt of the left shock absorber (Identical position to right side).



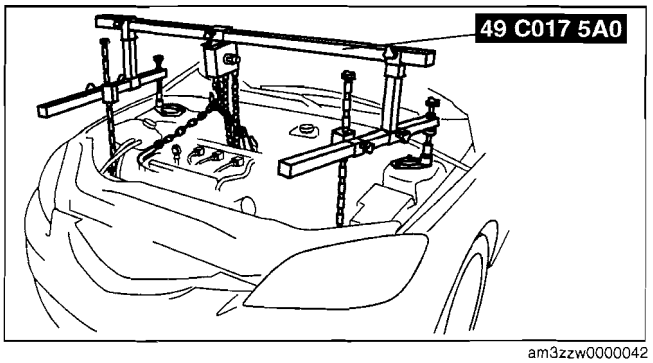
am3zzw0000042

(3) Install front foot No.2 to the left/right front shaft of the **SST**, then align the groove of the front shaft of the **SST** with the folded up part of the vehicle as shown in the figure.
(4) Adjust the positions of the **SST** side bars so that they are the same height (left and right) and horizontal.
(5) Make sure each joint is securely tightened.



am3zzw0000042

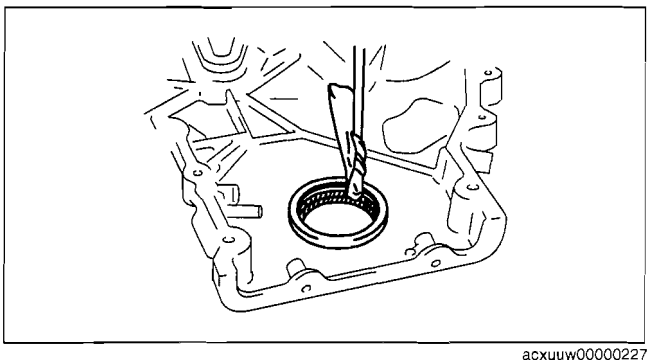
3. Support the engine using the **SST**.
4. Remove the battery tray bracket, No.4 engine mount rubber and bracket.



am3zzw0000042

Front Oil Seal Removal Note

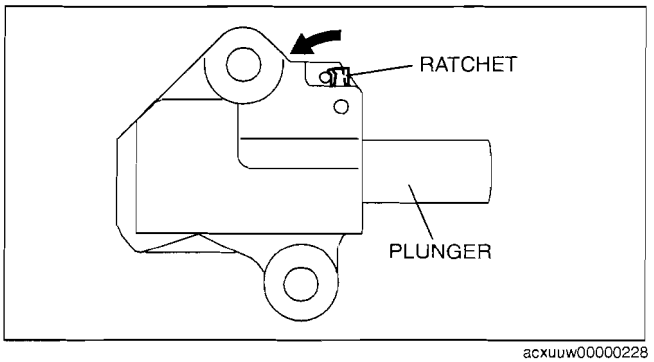
1. Remove the front oil seal using a flathead screwdriver or similar tool.



acxuuw00000227

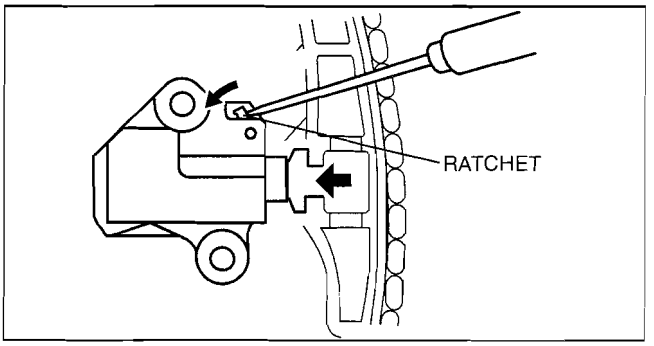
Chain Tensioner Removal Note

1. Press the timing chain tensioner ratchet to the left using a thin flathead screwdriver (precision screwdriver) to unlock the plunger.



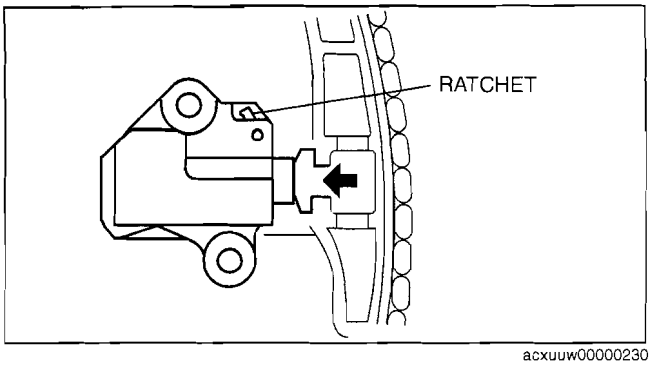
acxuuw00000228

2. Slowly press the plunger back in the direction shown in the figure while pressing the ratchet.



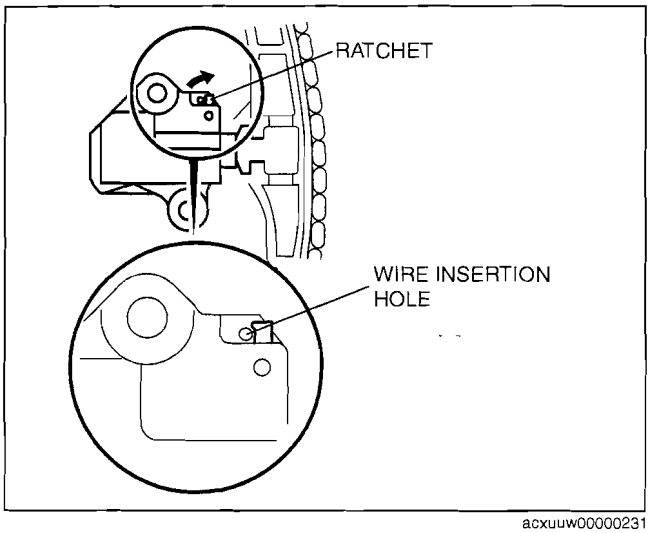
acxuuw00000229

3. Release the ratchet with the plunger still pressed down.



acxuuw00000230

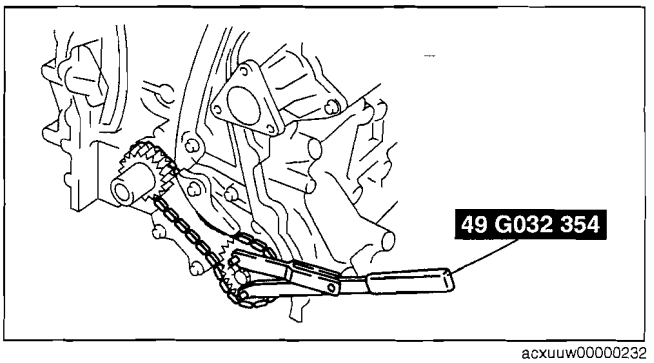
4. Press-in the plunger until the ratchet position is as indicated in the figure, and then insert the wire to lock the plunger.



acxuuw00000231

Oil Pump Driven Sprocket Removal Note

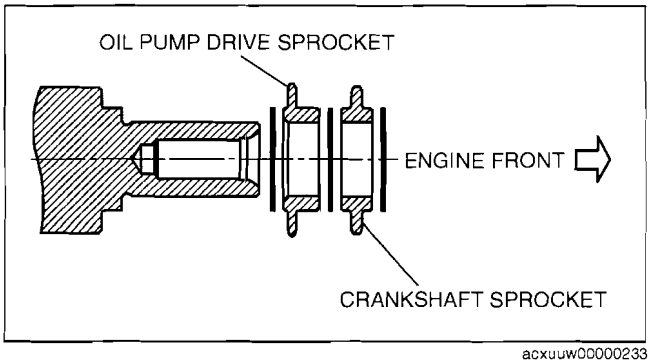
1. Install the **SSTs** to the oil pump driven sprocket, and lock it against rotation.



acxuuw00000232

Oil Pump Drive Sprocket Installation Note

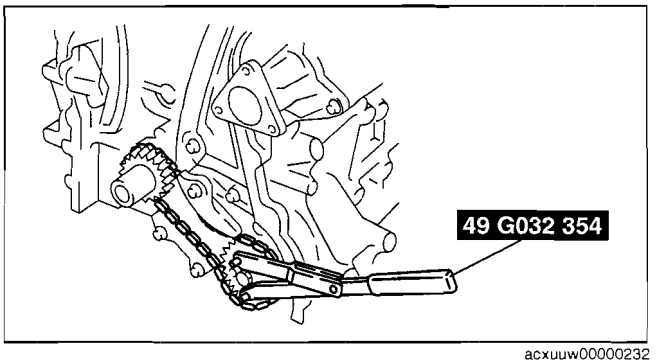
1. The oil pump drive sprocket has the assembly direction as shown in the figure.



acxuuw00000233

Oil Pump Driven Sprocket Installation Note

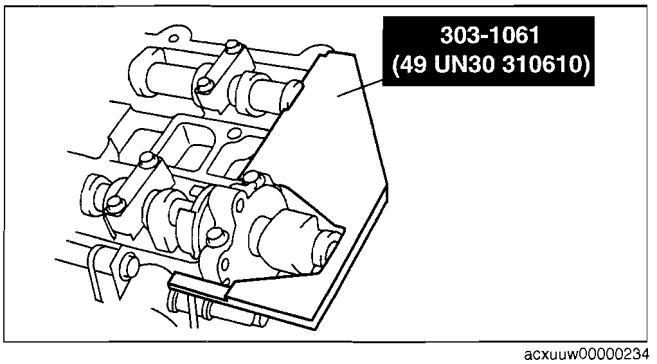
1. Install the **SST** to the oil pump driven sprocket and lock the oil pump against rotation.



acxuuw00000232

Timing Chain Installation Note

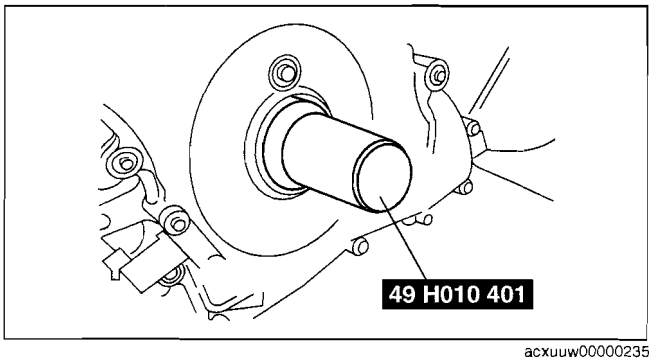
1. Install the **SST** to the camshaft as shown in the figure.
2. Install the timing chain.
3. Remove the wire or paper clip from the chain tensioner piston and apply tension to the timing chain.



acxuuw00000234

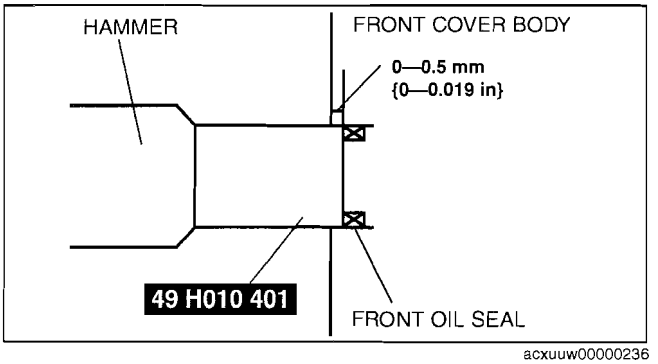
Front Oil Seal Installation Note

1. Apply clean engine oil to a new front oil seal.
2. Push the front oil seal in the engine front cover by hand.
3. Use the **SST** to tap in the front oil seal.



acxuuw00000235

Front oil seal press-in amount
0—0.5 mm {0—0.019 in}



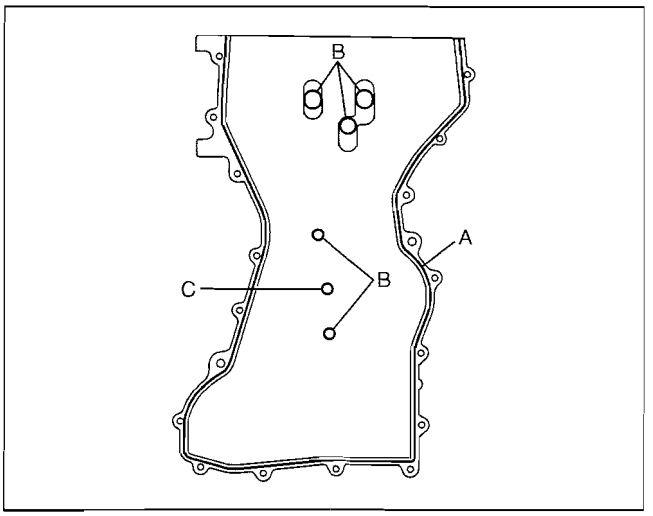
acxuuw00000236

Engine Front Cover Installation Note

1. Apply silicone sealant to the engine front cover.

Caution
- **Install the engine front cover within 10 min of applying the silicone sealant.**
- **Silicone sealant is not needed in area C shown in the figure.**

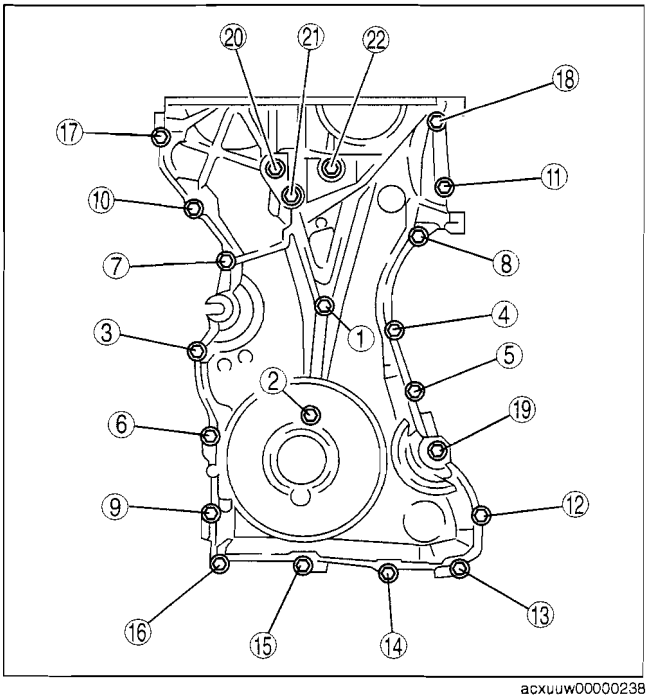
Thickness
A: 2.2—3.2 mm {0.087—0.12 in}
B: 1.5—2.5 mm {0.06—0.098 in}



acxuuw00000237

2. Tighten the engine front cover installation bolts in the order shown in the figure.

Installation Position	Tightening Torque
1—18	8.0—11.5 N·m {82—117 kgf·cm, 71—101 in·lbf}
19—22	40—55 N·m {4.1—5.6 kgf·m, 30—40 ft·lbf}



acxuuw00000238

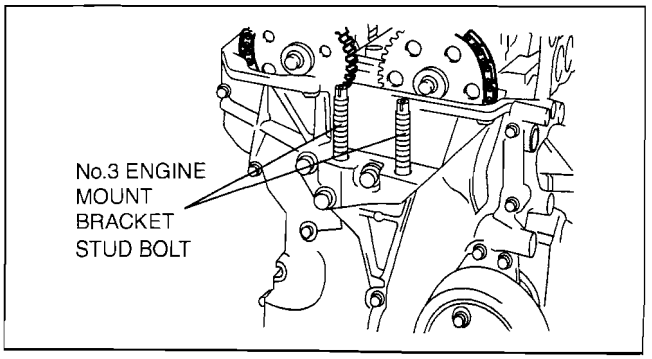
No.3 Engine Mount Installation Note

1. Tighten the stud bolt of the No.3 engine mount bracket.

Tightening torque
7.0—13 N·m {71.4—132.5 kgf·cm, 62.0—115.0 in·lbf}

Note
- Tightening stud bolt when the nut of No.3 engine mount nut is loosened.

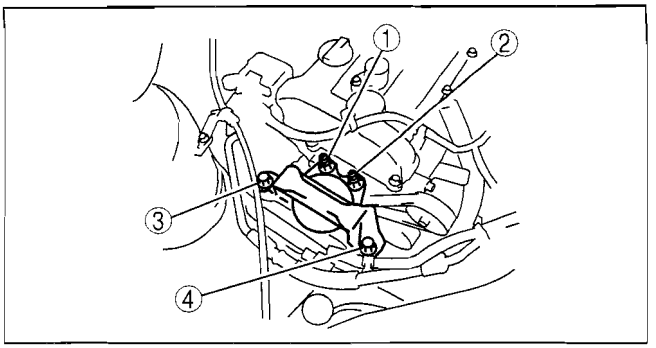
2. Hand-tighten the No.3 engine mount rubber and No.3 engine mount bracket.



am3zzw0000244

3. Tighten the bolts and nuts in the order as shown in the figure.

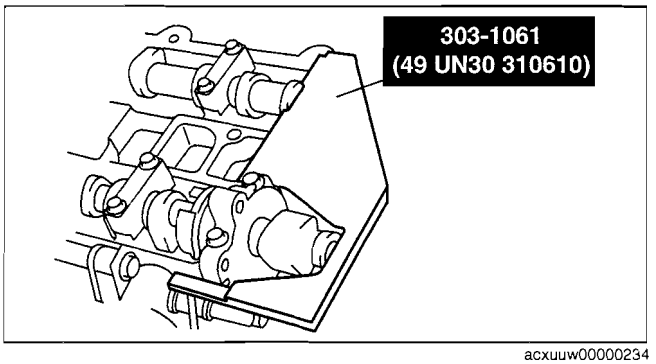
   Tightening torque
   74.5—104.9 {7.6—10.6 kgf·m, 55.0—77.3 ft·lbf}



am3zzw0000244

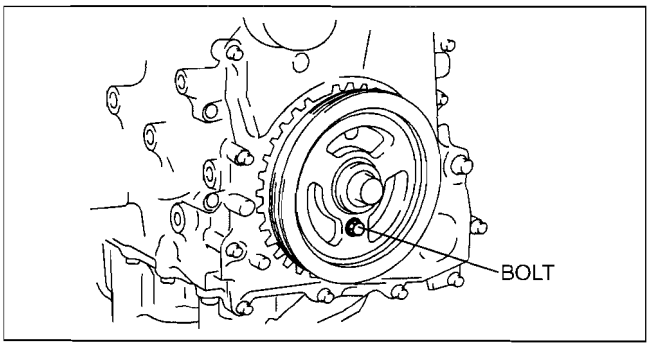
Crankshaft Pulley Lock Bolt Installation Note

1. Install the **SST** to the camshaft as shown in the figure.
2. Verify that cylinder No.1 is at TDC of the compression stroke. (Position crank weight contacts **SST**.)



acxuuw00000234

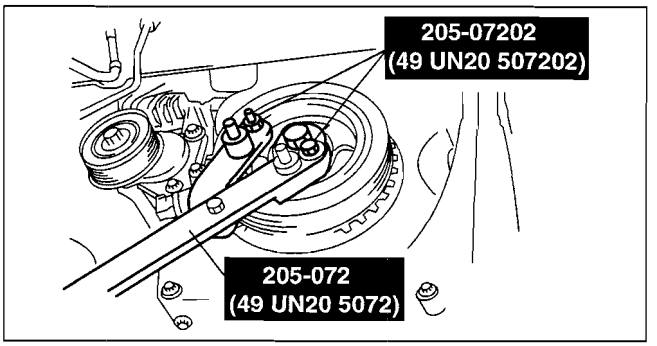
3. To position the crankshaft pulley, temporarily tighten it and, using a suitable bolt (**M6 X 1.0 length 25—35 mm {0.99—1.3 in}**), fix the crankshaft pulley to the engine front cover.



acxuuw00000243

4. Install the**SSTs** to the crankshaft pulley, lock the crankshaft against rotation, and tighten the crankshaft pulley lock bolt using the following two steps.

   Tightening procedure
   1st step: 96—104 N·m {9.8—10.6 kgf·m, 70.9—76.7 ft·lbf}
   2nd step: 87°—93°

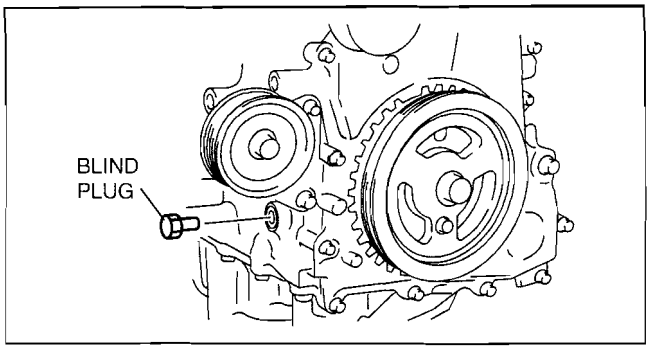


ampjjw00001731

5. Remove the bolt (**M6 X 1.0 length 25—35 mm {0.99—1.3 in}**) installed to the crankshaft pulley.
6. Remove the **SST** from the camshaft.
7. Remove the **SST** installed in the cylinder block lower blind plug hole.
8. Rotate the crankshaft clockwise two turns and inspect the valve timing.
   - If not aligned, repeat from Step 1.

9. Install the cylinder block lower blind plug.

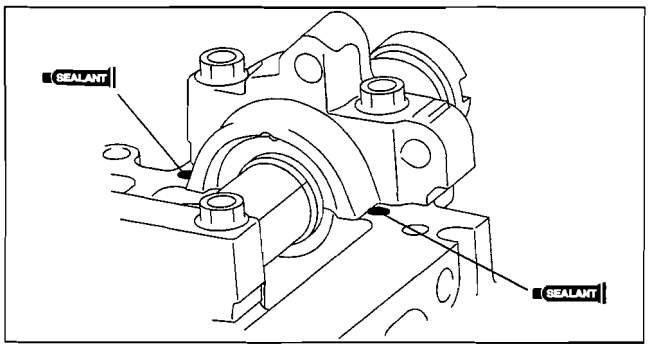
Tightening torque
18—22 N·m {1.9—2.2 kgf·m, 14—16 ft·lbf}



acxuuw00000244

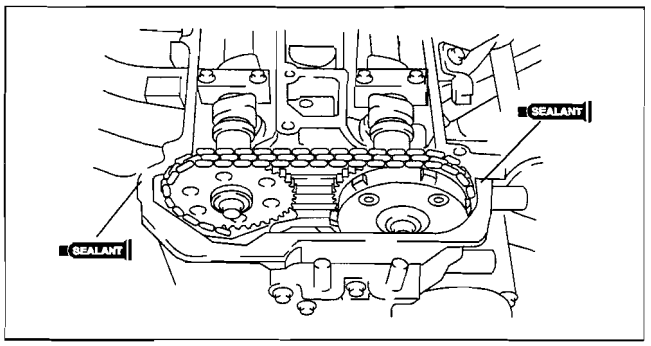
Cylinder Head Cover Installation Note

1. Apply silicone sealant to the areas shown in the figure.



acxuuw00000245

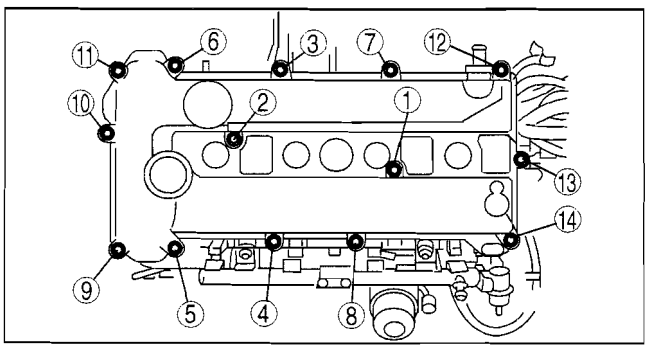
Thickness
5.0 mm {0.20 in}



acxuuw00000246

2. Tighten the cylinder head cover bolts in the order shown in the figure.

Tightening torque
8.0—10.5 N·m {82—107 kgf·cm, 71—92 in·lbf}



acxuuw00000247

CYLINDER HEAD GASKET REPLACEMENT[L3 WITH TC]

id011039800700

Warning

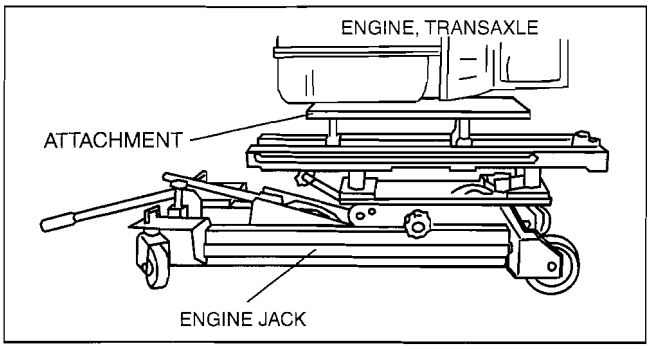
- **Fuel vapor is hazardous. It can very easily ignite, causing death, serious injury, or damage. Always keep sparks and flames away from fuel.**
- **Fuel line spills and leakage from the pressurized fuel system are dangerous. Fuel can easily ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always perform the Fuel Line Safety Procedure. (See 01-14B-4 BEFORE SERVICE PRECAUTION[L3 WITH TC].)**

1. Remove the timing chain. (See 01-10B-10 TIMING CHAIN REMOVAL/INSTALLATION[L3 WITH TC].)
2. Remove the generator. (See 01-17B-6 GENERATOR REMOVAL/INSTALLATION[L3 WITH TC].)

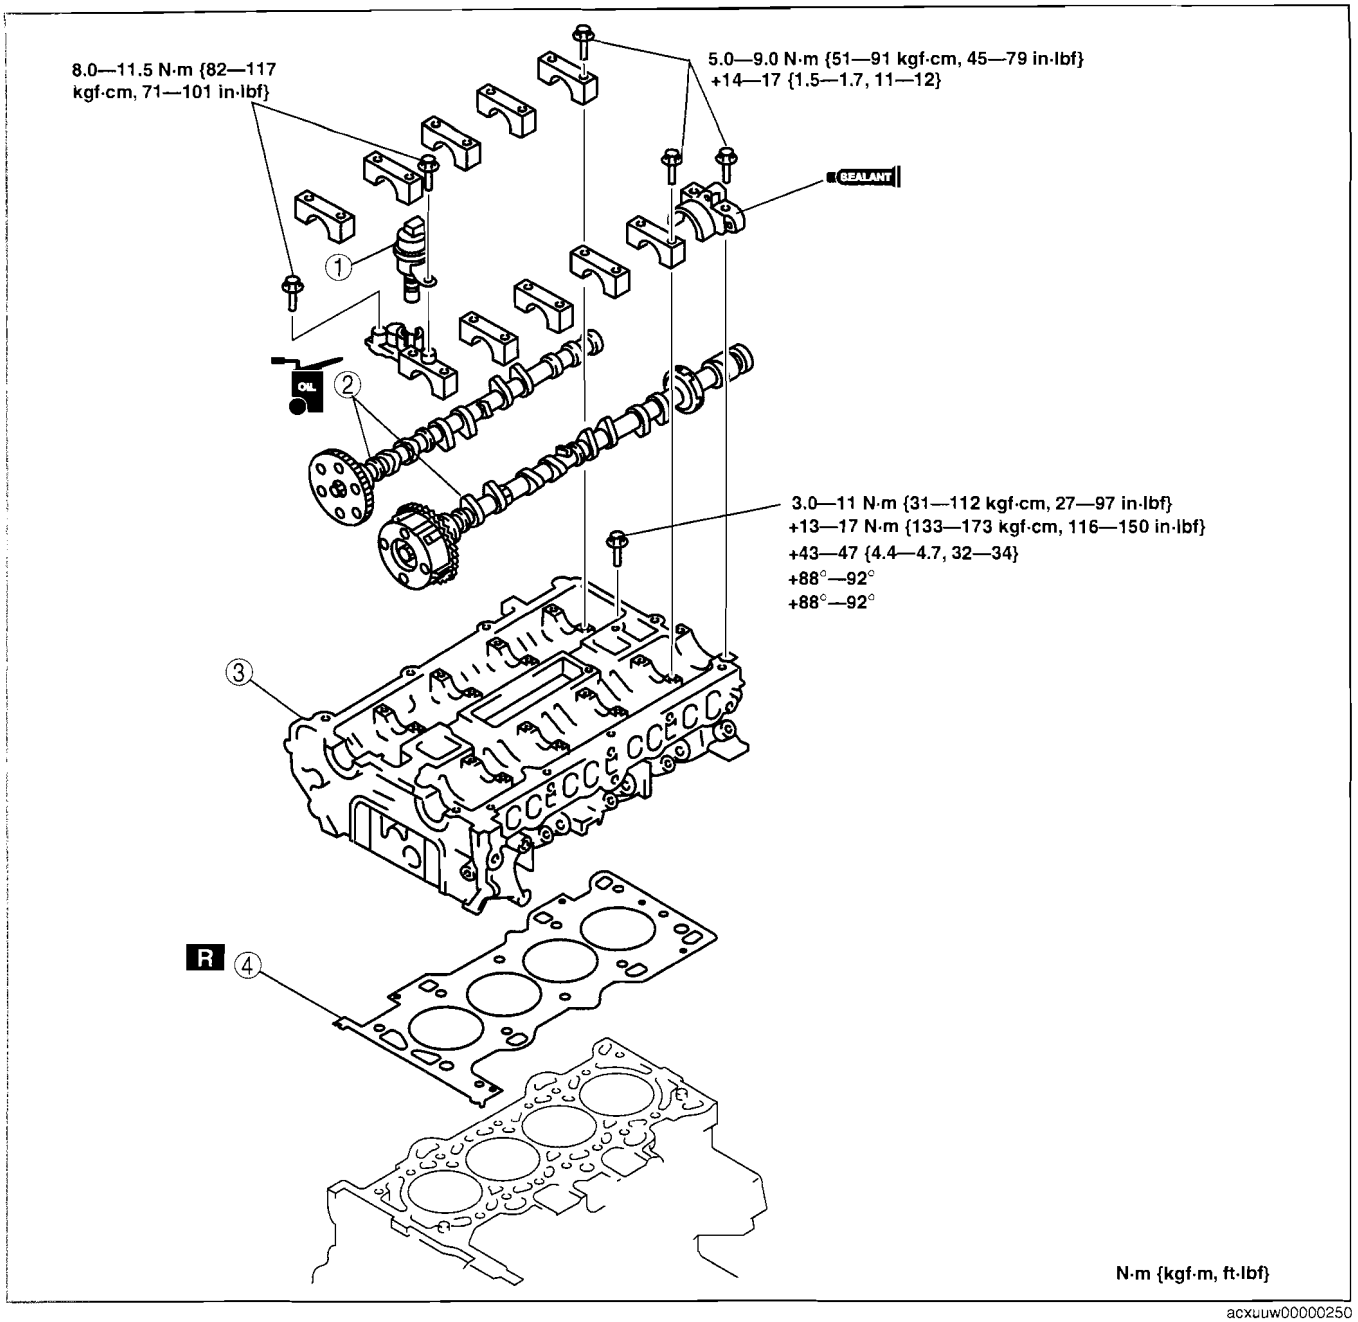
Note

- Place the generator out of the way with the wiring harnesses connected.

3. Remove the exhaust manifold. (See 01-15B-2 EXHAUST SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
4. Remove the intake manifold. (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
5. Disconnect the heater hose and radiator hose.
6. Disconnect the wiring harness.
7. To firmly support the engine, first set the engine jack and attachment to the oil pan.
8. Remove in the order indicated in the figure.
9. Install in the reverse order of removal.
10. Bleed the air from the cooling system. (See 01-12B-4 ENGINE COOLANT REPLACEMENT[L3 WITH TC].)
11. Inspect the compression pressure. (See 01-10B-9 COMPRESSION INSPECTION[L3 WITH TC].)



acxuuw00000249



acxuuw00000250

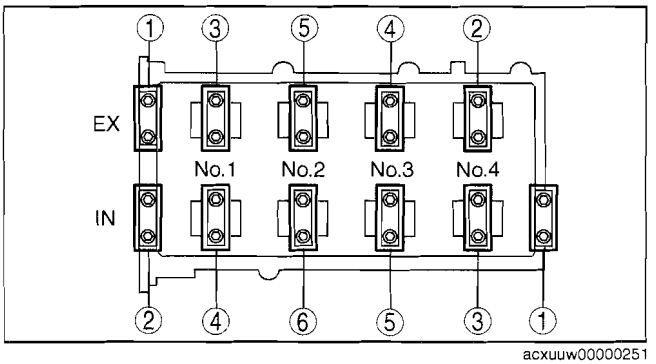
1	OCV
2	Camshaft (See01-10B-22 Camshaft Removal Note.) (See01-10B-23 Camshaft Installation Note.)

3	Cylinder head (See01-10B-22 Cylinder Head Removal Note.) (See01-10B-22 Cylinder Head Installation Note.)
4	Cylinder head gasket

Camshaft Removal Note

Note
- The camshaft caps are to be kept ordered for correct reassembly in their original positions.

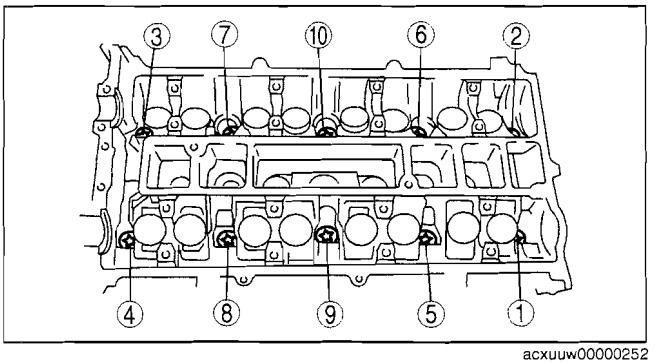
1. Loosen the camshaft cap bolts in two or three passes in the order shown, and remove them.



acxuuw00000251

Cylinder Head Removal Note

1. Loosen the cylinder head installation bolts in two to three passes in the order shown in the figure and remove them.

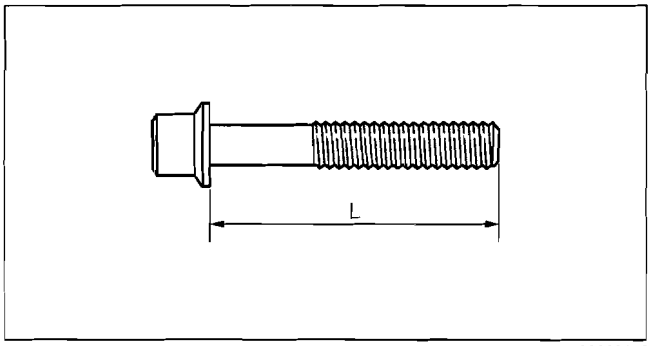


acxuuw00000252

Cylinder Head Installation Note

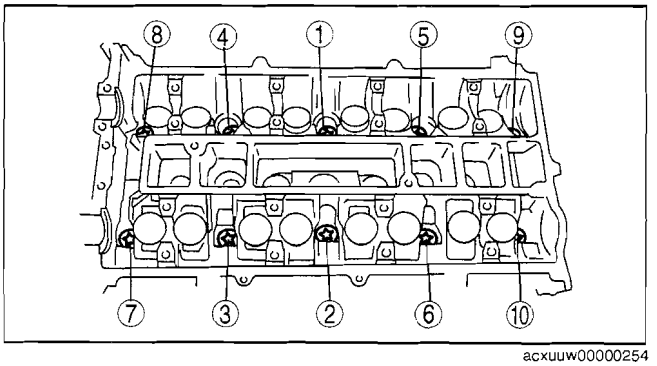
1. Measure the length of each cylinder head bolt.
   - Replace any cylinder head bolts that exceed the maximum length.

Cylinder head bolt length
Standard: 144.7—145.3 mm {5.697—5.720 in}
Maximum: 146 mm {5.74 in}



acxuuw00000253

Tightening procedure
1st step: 3.0—11 N·m {31—112 kgf·cm, 27—97 in·lbf}
2nd step: 13—17 N·m {133—173 kgf·cm, 116—150 in·lbf}
3rd step: 43—47 N·m {4.4—4.7 kgf·m, 32—34 ft·lbf}
4th step: 88°—92°
5th step: 88°—92°

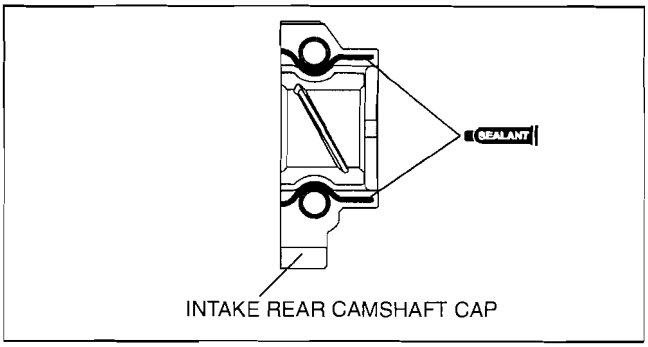


acxuuw00000254

Camshaft Installation Note

1. Install the camshaft with No.3 cylinder cam aligned at TDC of compression stroke.
2. Carefully apply adhesive agent to the area indicated in the figure so that it does not leak into the sliding part.

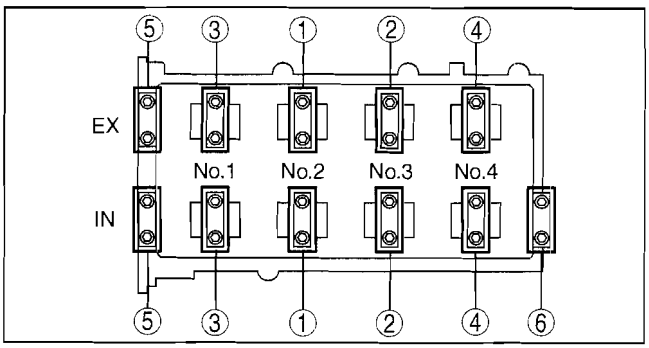
   Thickness
   1.0 mm {0.039 in}



acxuuw00000255

3. Install the camshaft caps and temporarily tighten the camshaft cap bolts evenly in two or three passes, and then tighten the camshaft cap bolts using the following two steps, in the order shown in the figure.

   Tightening procedure
   1st step: 5.0—9.0 N·m {51—91 kgf·cm, 45—79 in·lbf}
   2nd step: 14—17 N·m {1.5—1.7 kgf·m, 11—12 ft·lbf}

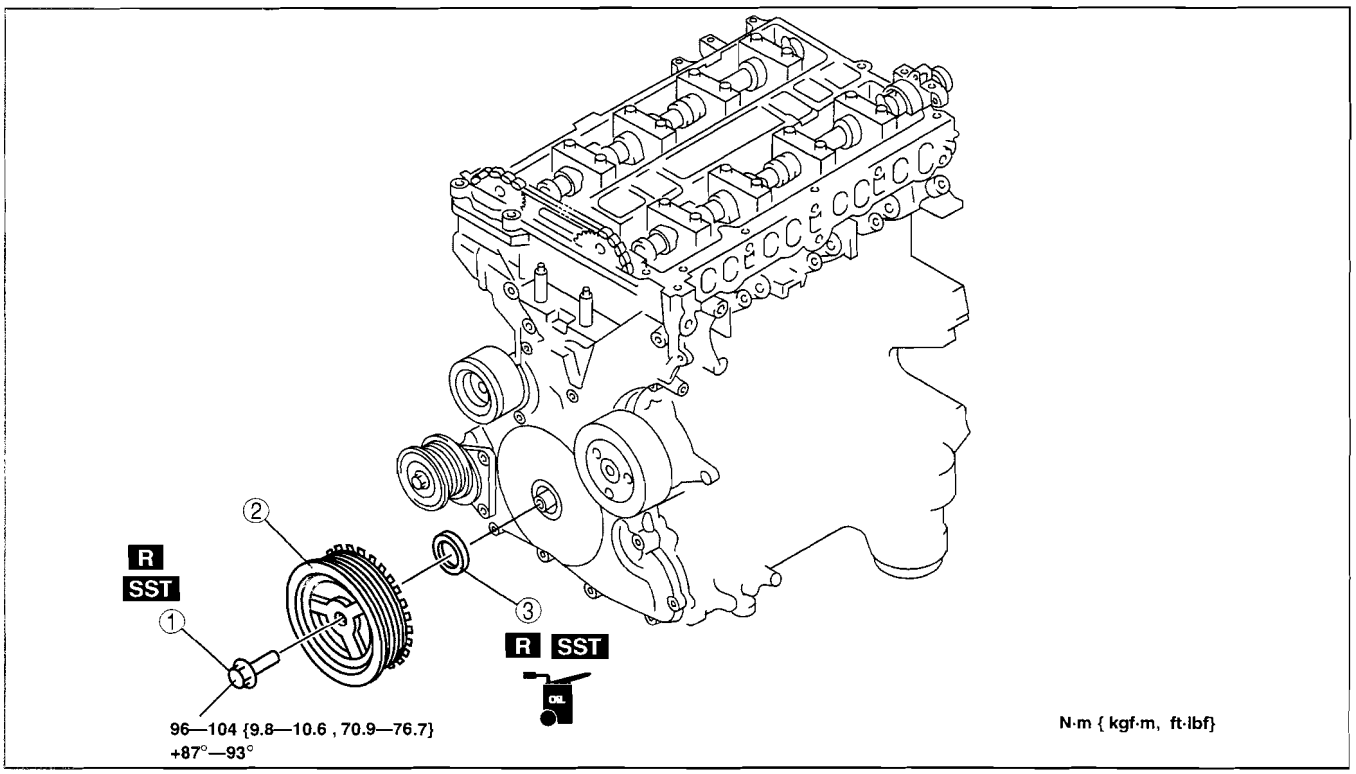


acxuuw00000256

FRONT OIL SEAL REPLACEMENT[L3 WITH TC]

id011039800800

1. Remove the battery cover.
2. Disconnect the negative battery cable.
3. Remove the under cover.
4. Remove the charge air cooler. (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
5. Remove the high pressure fuel pump. (See 01-14B-21 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION[L3 WITH TC].)
6. Remove the drive belt. (See 01-10B-3 DRIVE BELT REMOVAL/INSTALLATION[L3 WITH TC].)
7. Remove the ignition coils. (See 01-18B-2 IGNITION COIL REMOVAL/INSTALLATION[L3 WITH TC].)
8. Disconnect the wiring harness.
9. Remove the ventilation hose.
10. Remove cylinder head cover. (See 01-10B-10 TIMING CHAIN REMOVAL/INSTALLATION[L3 WITH TC].)
11. Remove the crankshaft position (CKP) sensor. (See 01-40B-44 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION[L3 WITH TC].)
12. Remove in the order indicated in the figure.
13. Install in the reverse order of removal.

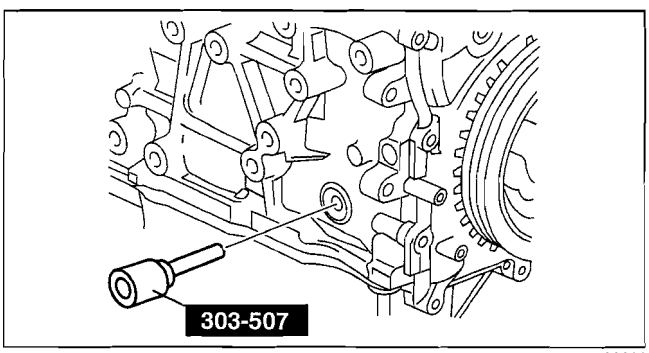


acxuuw00000196

1	Crankshaft pulley lock bolt (See01-10B-24 Crankshaft Pulley Lock Bolt Removal Note.) (See01-10B-26 Crankshaft Pulley Lock Bolt Installation Note.)
2	Crankshaft pulley
3	Front oil seal (See01-10B-25 Front Oil Seal Removal Note.) (See01-10B-25 Front Oil Seal Installation Note.)

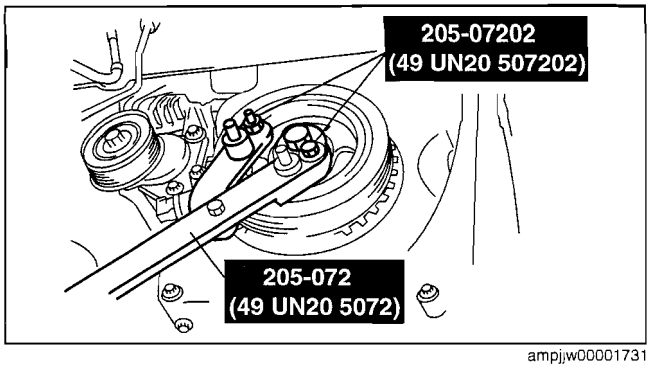
Crankshaft Pulley Lock Bolt Removal Note

1. Rotate the crankshaft in the direction of the engine rotation and remove the cylinder block lower blind plug when the No. 1 cylinder is at the point prior to top dead center (TDC) of compression, then install the **SST**.
2. Rotate the crankshaft in the direction of the engine rotation so that the No.1 piston is at TDC of the compression stroke. (Until the crank weight contacts **SST** and stops.)



am3uuw0000099

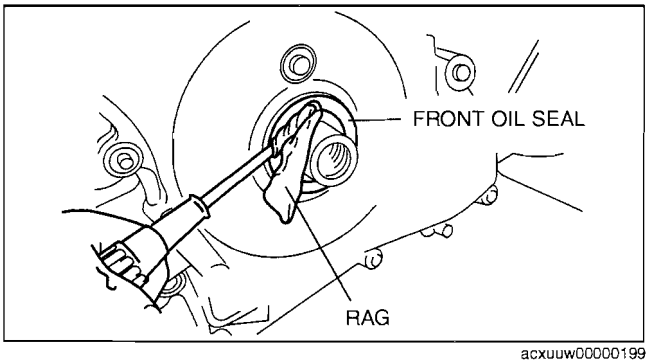
3. Install the **SSTs** to the crankshaft pulley and lock the crankshaft against rotation.



ampjjw00001731

Front Oil Seal Removal Note

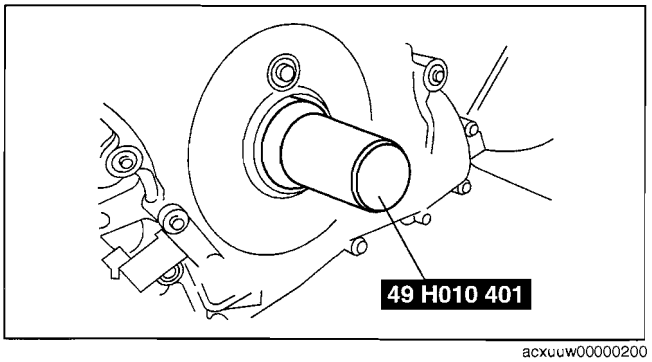
1. Remove the oil seal lip using a razor.
2. Remove the oil seal using a flathead screwdriver with the tip protected by a rag to prevent crankshaft oil seal damage.



acxuuw00000199

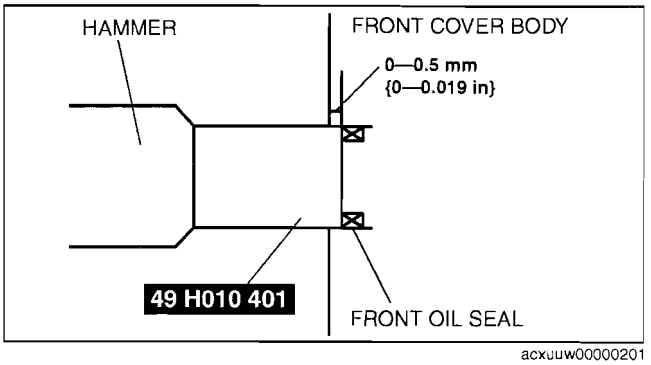
Front Oil Seal Installation Note

1. Apply clean engine oil to a new oil seal.
2. Insert the oil seal into the engine front cover.
3. Tap in the oil seal using the **SST.**



acxuuw00000200

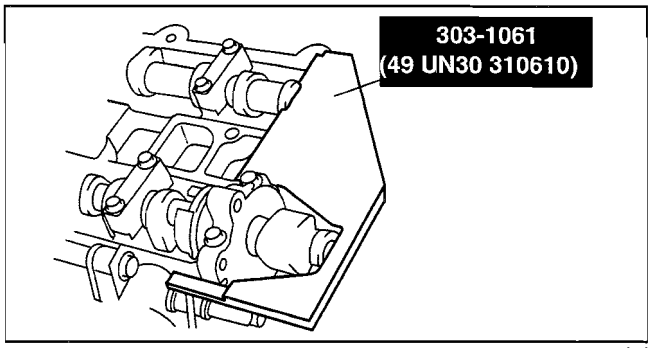
Front oil seal press-in amount
0—0.5 mm {0—0.019 in}



acxuuw00000201

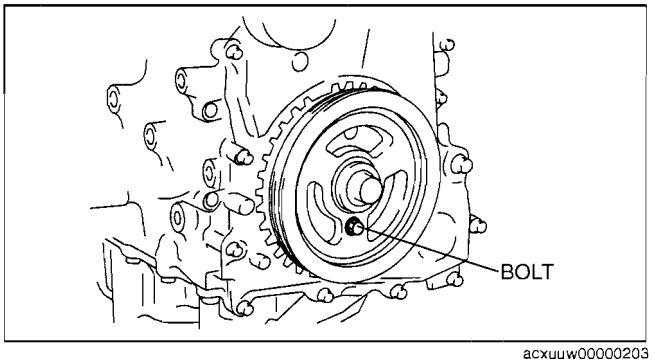
Crankshaft Pulley Lock Bolt Installation Note

1. Install the **SST** to the camshaft as shown in the figure.
2. Verify that cylinder No.1 is at TDC of the compression stroke. (Position crank weight contacts **SST**.)



acxuuw00000202

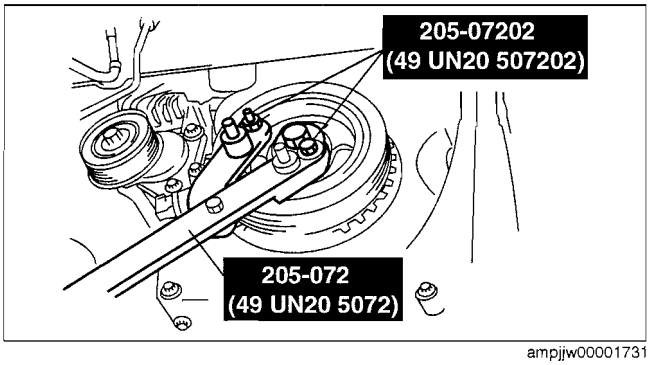
3. To position the crankshaft pulley, temporarily tighten it and, using a suitable bolt (**M6 x 1.0**), fix the crankshaft pulley to the engine front cover.



acxuuw00000203

4. Install the **SSTs** to the crankshaft pulley and lock the crankshaft against rotation, and tighten the crankshaft pulley lock bolt using the following two steps.

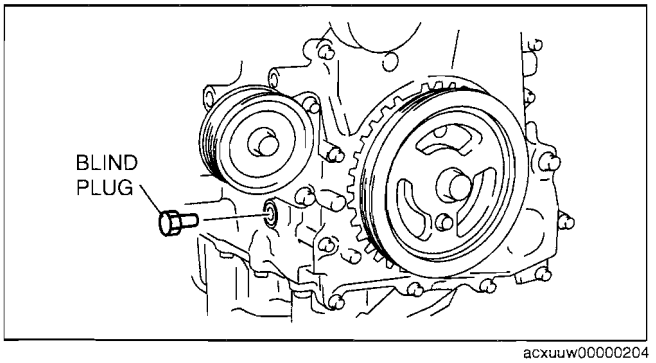
   Tightening procedure
   1st step: 96—104 N·m {9.8—10.6 kgf·m, 70.9—76.7 ft·lbf}
   2nd step: 87°—93°



ampjjw00001731

5. Remove the crankshaft pulley installation bolt **(M6 X 1.0)**.
6. Remove the SST from the camshaft.
7. Remove the SST installed in the cylinder block lower blind plug hole.
8. Rotate the crankshaft clockwise two turns and inspect the valve timing.
   - If not aligned, repeat from Step 1.
9. Install the cylinder block lower blind plug.

   Tightening torque
   18—22 N·m {1.9—2.2 kgf·m, 14—16 ft·lbf}



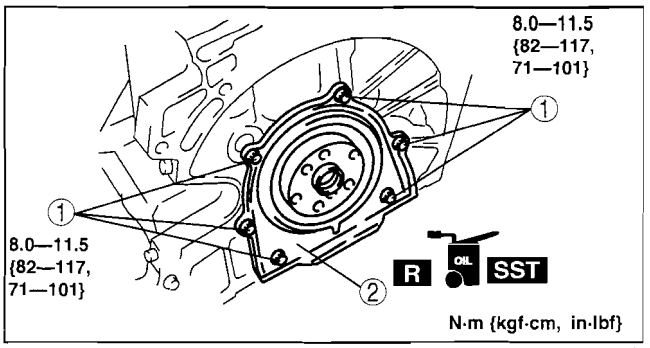
acxuuw00000204

REAR OIL SEAL REPLACEMENT[L3 WITH TC]

id011039800900

1. Remove the flywheel.
2. Remove in the order indicated in the figure.
3. Install in the reverse order of removal.

1	Bolt
2	Rear oil seal (See01-10B-27 Rear Oil Seal Installation Note.)



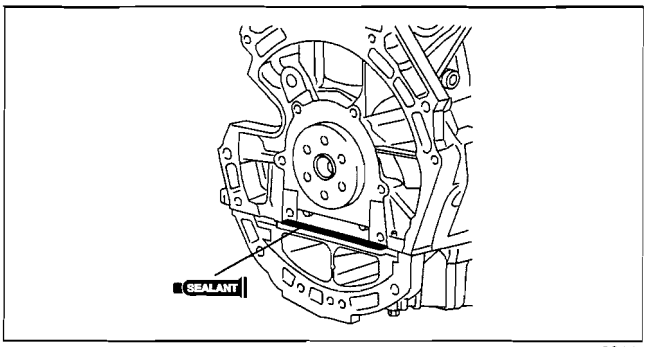
acxuuw00000146

Rear Oil Seal Installation Note

1. Apply silicone sealant to the areas shown in the figure.

Caution
- **Install the rear oil seal within 10 min of applying the silicone sealant.**

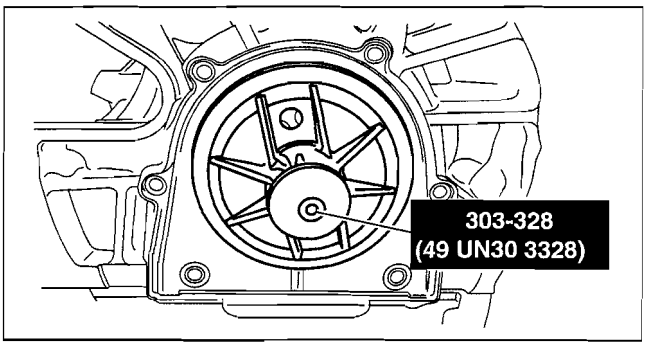
Thickness
4.0—6.0 mm {0.16—0.23 in}



acxuuw00000147

2. Apply clean engine oil to a new rear oil seal.

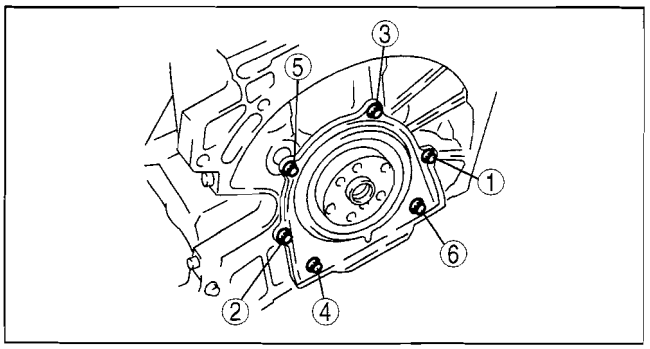
3. Install the rear oil seal using a **SST.**



acxuuw00000148

4. Tighten the rear oil seal installation bolts in the order shown in the figure.

Tightening torque
8.0—11.5 N·m {82—117 kgf·cm, 71—101 in·lbf}



acxuuw00000149

ENGINE REMOVAL/INSTALLATION[L3 WITH TC]

id011039800400

Warning

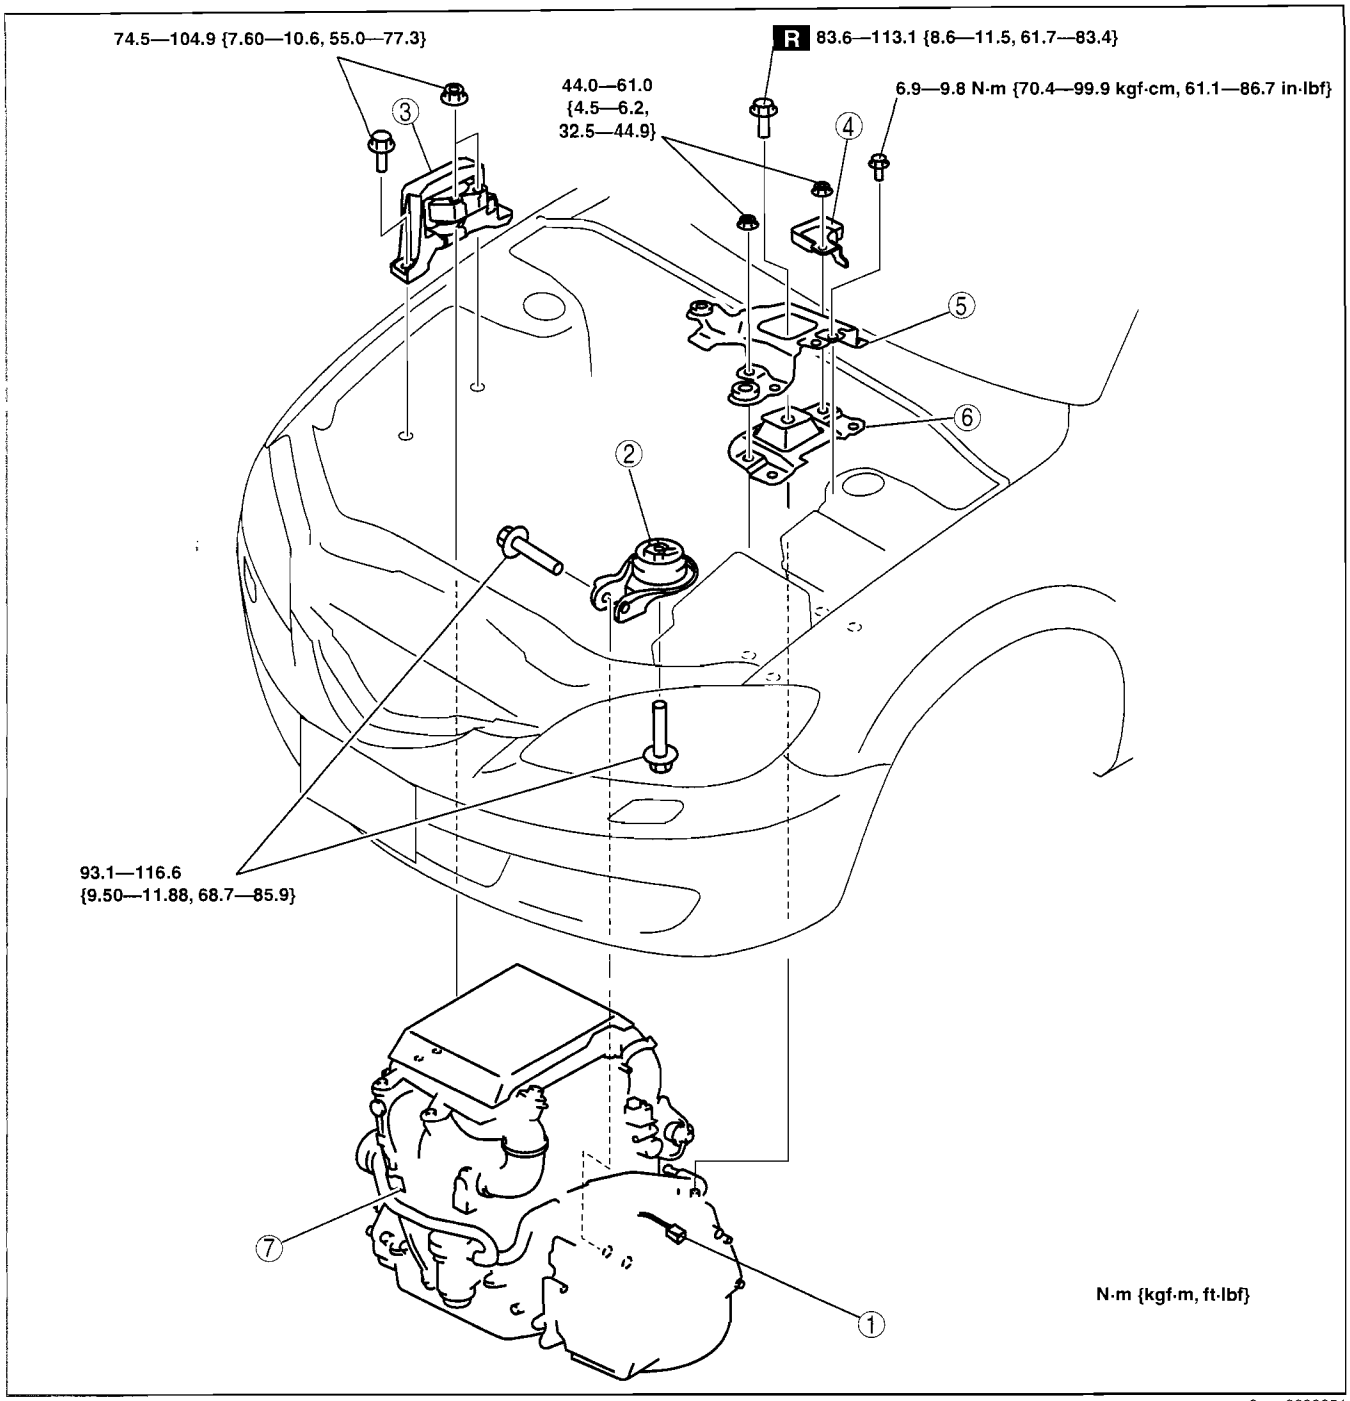
- **Fuel vapor is hazardous. It can very easily ignite, causing death, serious injury, or damage. Always keep sparks and flames away from fuel.'**
- **Fuel line spills and leakage from the pressurized fuel system are dangerous. Fuel can easily ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always perform the Fuel Line Safety Procedure. (See 01-14B-4 BEFORE SERVICE PRECAUTION[L3 WITH TC].)**

1. Remove the battery and battery tray. (See 01-17B-4 BATTERY INSPECTION[L3 WITH TC].)
2. Remove the front tire.
3. Remove the charge air cooler cover. (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
4. Remove the air cleaner. (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
5. Remove the under cover, splash shield and mudguard.
6. Drain the engine coolant (See 01-12B-4 ENGINE COOLANT REPLACEMENT[L3 WITH TC].)
7. Drain the transaxle oil. (See 05-15B-3 TRANSAXLE OIL REPLACEMENT[A26M-R].)
8. Remove the drive belt. (See 01-10B-3 DRIVE BELT REMOVAL/INSTALLATION[L3 WITH TC].)
9. Remove the tunnel member. (See 01-15B-2 EXHAUST SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
10. Remove the member. (See 01-15B-2 EXHAUST SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
11. Remove the TWC. (See 01-15B-2 EXHAUST SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
12. Remove the insulator. (See 01-15B-2 EXHAUST SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
13. Remove the WU-TWC. (See 01-15B-2 EXHAUST SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
14. Disconnect the heater hose. (See 07-11-3 A/C UNIT REMOVAL/INSTALLATION.)
15. Disconnect the radiator hose. (See 01-12B-7 RADIATOR REMOVAL/INSTALLATION[L3 WITH TC].)
16. Disconnect the brake vacuum hose. (See 04-11-4 VACUUM HOSE REMOVAL/INSTALLATION.)
17. Disconnect the fuel hose and vacuum hose. (See 01-14B-24 QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION[L3 WITH TC].)
18. Disconnect the shift cable. (See 05-15B-5 MANUAL TRANSAXLE REMOVAL/INSTALLATION[A26M-R].)
19. Disconnect the clutch release cylinder with the pipe. (See 05-10-9 CLUTCH RELEASE CYLINDER REMOVAL/INSTALLATION.)
20. Disconnect the wiring harnesses.
21. Disconnect the front drive shaft (RH) from the joint shaft side. (See 03-13-9 DRIVE SHAFT REMOVAL/INSTALLATION.)
22. Disconnect the front drive shaft (LH) from the transaxle side. (See 03-13-9 DRIVE SHAFT REMOVAL/INSTALLATION.)
23. Remove the A/C compressor with the pipes still connected. (See 07-11-16 A/C COMPRESSOR REMOVAL/INSTALLATION[L3 WITH TC].)

Note

- Position and secure the A/C compressor out of the way with rope.

24. Remove the front crossmember, lower arm, front stabilizer, and steering gear and linkage as a single unit. (See 02-13-14 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
25. Remove in the order indicated in the figure.
26. Install in the reverse order of removal.
27. Start the engine, and inspect and adjust the following:
    - Air bleeding (See 06-14-4 AIR BLEEDING.)
    - Front wheel alignment (See 02-11-2 FRONT WHEEL ALIGNMENT.)
    - Bleed the air from the cooling system. (See 01-12B-4 ENGINE COOLANT REPLACEMENT[L3 WITH TC].)
    - Runout and contact on pulley and belt
    - Leakage of engine oil, engine coolant, automatic transmission fluid, or fuel.
    - Ignition timing, idle speed and idle mixture (CO and HC)
    - Engine accessories operation
28. Perform a road test and verify that there is no abnormal vibration or noise.



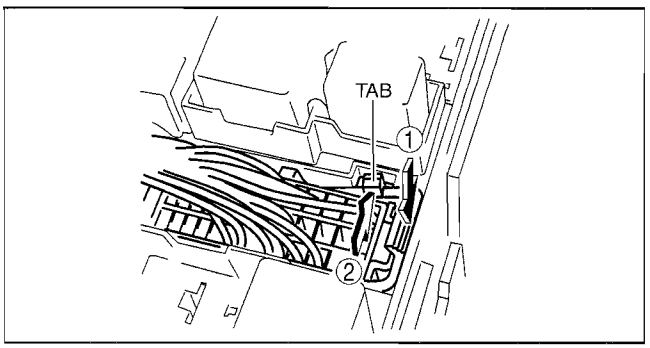
am3zzw0000351

1	Main fuse block connector (See 01-10B-30 Main Fuse Block Connector Removal Note.)
2	No.1 engine mount rubber (See 01-10B-31 No.1 Engine Mount Rubber Installation Note.)
3	No.3 Engine mount (See 01-10B-30 No.3 Engine Mount and No.4 Engine Mount Rubber Removal Note.) (See 01-10B-30 No.3 Engine Mount and No.4 Engine Mount Rubber Installation Note.)
4	Dynamic damper (if equipped)

5	Battery bracket
6	No.4 Engine mount rubber (See 01-10B-30 No.3 Engine Mount and No.4 Engine Mount Rubber Removal Note.) (See 01-10B-30 No.3 Engine Mount and No.4 Engine Mount Rubber Installation Note.)
7	Engine, transaxle

Main Fuse Block Connector Removal Note

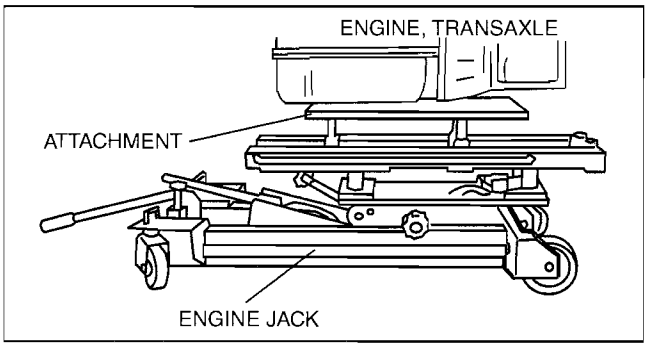
1. Release the tab in the order shown in the figure.
2. Pull the lock lever up and remove the connector.



am3zzw0000247

No.3 Engine Mount and No.4 Engine Mount Rubber Removal Note

1. Secure the engine and the transaxle using an engine jack and attachment as shown in the figure.



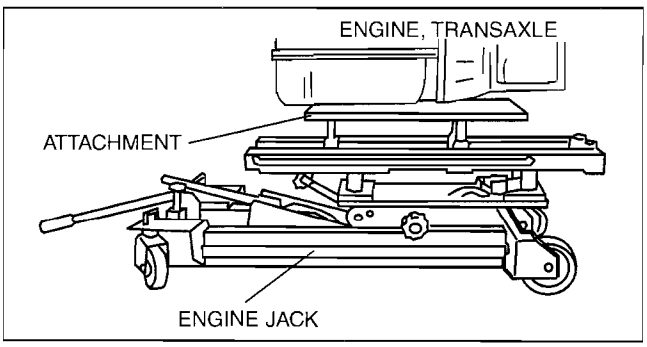
am3zzw0000247

No.3 Engine Mount and No.4 Engine Mount Rubber Installation Note

1. Secure the engine and the transaxle using an engine jack and attachment as shown in the figure.
2. Install the No.1 engine mount rubber and No.4 engine mount rubber.

Note

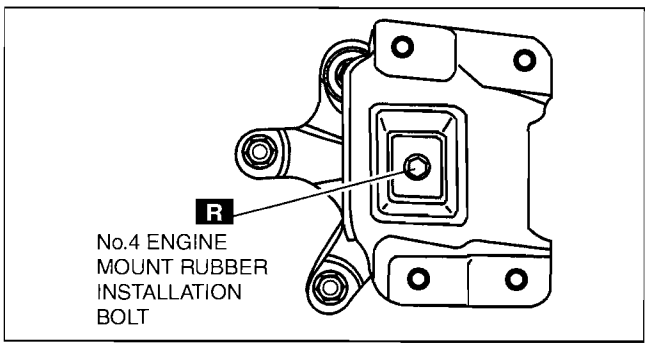
- Do not tighten the bolt and nut for the No.1 engine mount rubber and No.4 engine mount rubber during this step.



am3zzw0000247

3. Tighten the new No.4 engine mount rubber installation bolt as shown in the figure.

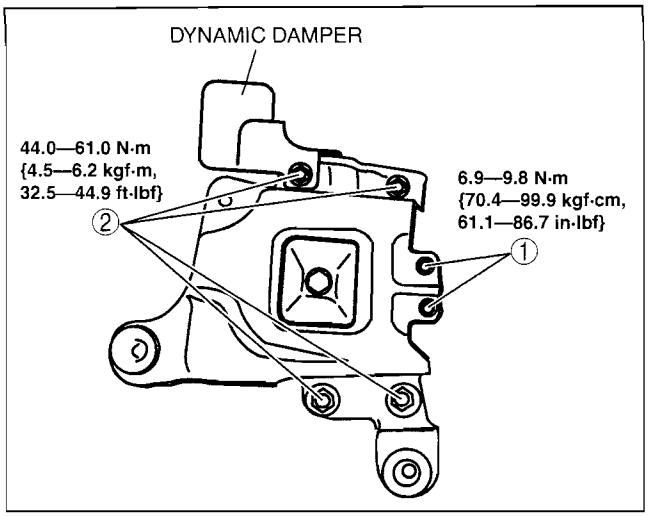
Tightening torque
83.6—113.1 N·m {8.6—11.5 kgf·m, 61.7—83.4 ft·lbf}



am3zzw0000247

4. Tighten the No.4 engine mount rubber and battery bracket bolts and nuts in the order as shown in the figure.

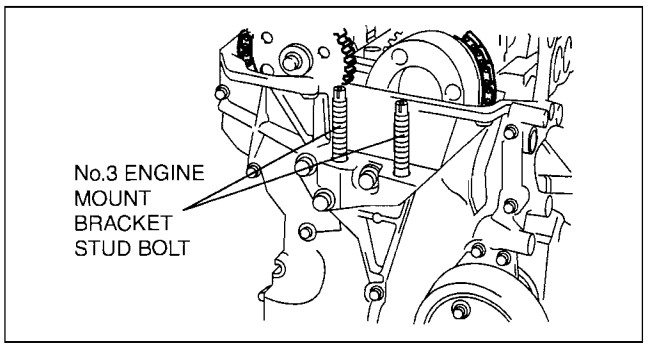
Tightening torque
1st step: 6.9—9.8 N·m {70.4—99.9 kgf·cm, 61.1—86.7 in·lbf}
2nd step: 44.0—61.0 N·m {4.5—6.2 kgf·m, 32.5—44.9 ft·lbf}



am3zzw0000247

5. Tighten the No.3 engine mount bracket stud bolts.

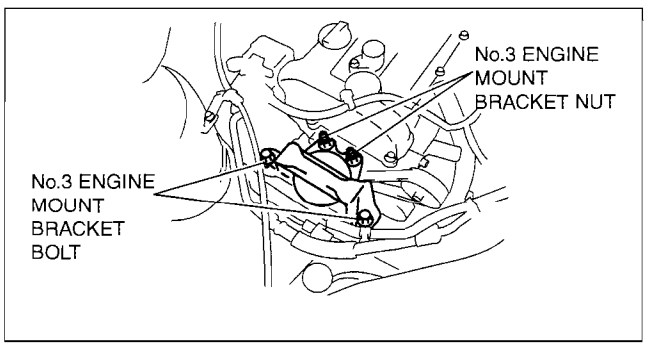
Tightening torque
7.0—13 N·m {71.4—132.5 kgf·cm, 62.0—115.0 in·lbf}



am3zzw0000247

6. Tighten the No.3 engine mount bracket bolts and nuts in the order as shown in the figure.

Tightening torque
74.5—104.9 N·m {7.60—10.6 kgf·m, 55.0—77.3 ft·lbf}



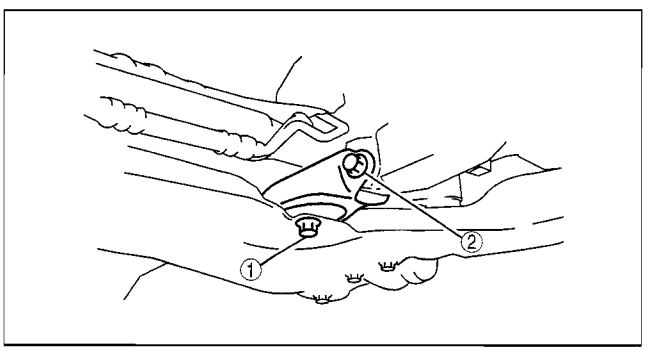
am3zzw0000247

No.1 Engine Mount Rubber Installation Note

1. Remove the engine jack and attachment.
2. Tighten the No.1 engine mount rubber installation bolts as shown in the figure.

Caution
- **Tighten the bolts in the order shown in the figure to prevent abnormal noise and vibration after assembly.**

Tightening torque
93.1—116.6 N·m {9.50—11.88 kgf·m, 68.7—85.9 ft·lbf}



am3zzw0000247

ENGINE DISASSEMBLY/ASSEMBLY[L3 WITH TC]

id011039800500

1. Remove the engine from the transaxle.
2. Remove the intake-air system. (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
3. Remove the exhaust system. (See 01-15B-2 EXHAUST SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
4. Remove the generator. (See 01-17B-6 GENERATOR REMOVAL/INSTALLATION[L3 WITH TC].)
5. Remove the starter. (See 01-19B-2 STARTER REMOVAL/INSTALLATION[L3 WITH TC].)
6. Remove the crankshaft position (CKP) sensor. (See 01-40B-44 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION[L3 WITH TC].)
7. Install in the reverse order of removal.

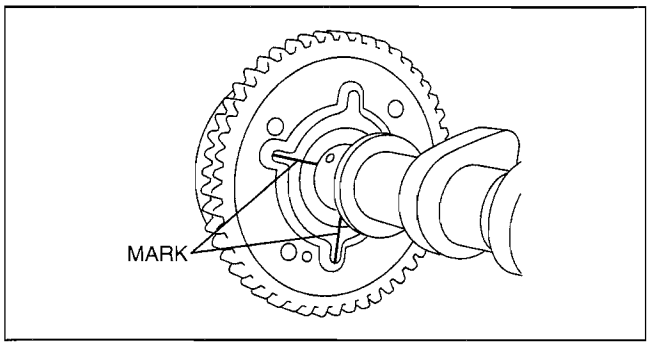
VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION[L3 WITH TC]

id011039801100

Caution
- **Remove the variable valve timing actuator and camshaft sprocket as a single unit.**

Note
- The variable valve timing actuator and camshaft sprocket cannot be disassembled.

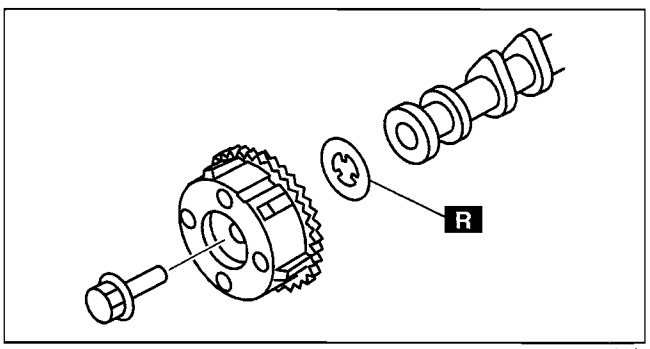
1. Referring to the valve clearance adjustment procedure, remove the variable valve timing actuator and the camshaft on the intake air side as a single unit. (See 01-10B-4 VALVE CLEARANCE INSPECTION/ ADJUSTMENT[L3 WITH TC].)
2. Remove the variable valve timing actuator.
   (1) Place alignment marks on the camshaft and variable valve timing actuator as shown in the figure so that the variable valve timing actuator is re-assembled in its original position.
   (2) Fix the camshaft in a vise.
   (3) Loosen the variable valve timing actuator installation bolt.



acxuuw00000144

3. Install a new washer.
4. Install the variable valve timing actuator.
   (1) Fix the camshaft in a vise.
   (2) Align the marks on the camshaft and the variable valve timing actuator.

Caution
- **If replacing with a new variable valve timing actuator, place alignment marks in the same positions as those prior to the replacement.**



acxuuw00000145

   (3) Tighten the variable valve timing actuator installation bolt.

Tightening torque
69—75 N·m {7.1—7.6 kgf·m, 51—55 ft·lbf}

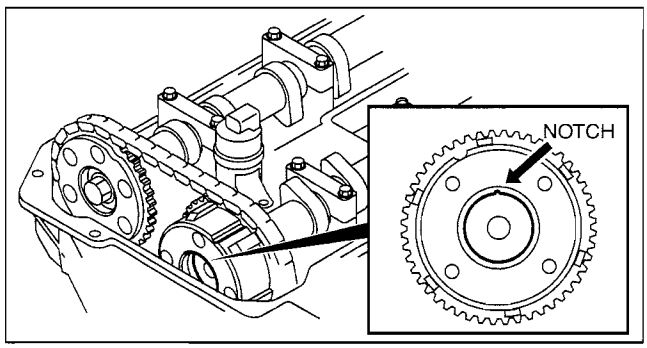
5. Referring to the valve clearance adjustment procedure, install the variable valve timing actuator and camshaft on the intake air side as a single unit. (See 01-10B-4 VALVE CLEARANCE INSPECTION/ADJUSTMENT[L3 WITH TC].)

VARIABLE VALVE TIMING ACTUATOR INSPECTION[L3 WITH TC]

id011039801200

Caution
- **Due to the precision interior construction of the variable valve timing actuator, it cannot be disassembled.**

1. Remove the battery cover.
2. Disconnect the negative battery cable.
3. Remove the charge air cooler. (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
4. Remove the ignition coils. (See 01-18B-2 IGNITION COIL REMOVAL/INSTALLATION[L3 WITH TC].)
5. Remove the spark plugs. (See 01-18B-3 SPARK PLUG REMOVAL/INSTALLATION[L3 WITH TC].)
6. Disconnect the wiring harness.
7. Remove the ventilation hose.
8. Remove cylinder head cover. (See 01-10B-10 TIMING CHAIN REMOVAL/INSTALLATION[L3 WITH TC].)
9. Verify that the groove of the rotor and notch of the cover on the variable valve timing actuator are aligned and fitted.
   - If they are not aligned, rotate the crankshaft in the direction of engine rotation two times and verify that they are aligned.
     — If they will not align, replace the variable valve timing actuator.
   - If under any condition, the variable valve timing actuator always makes a hitting noise directly after the camshaft exceeds maximum lift while rotating the crankshaft two times in the direction of engine rotation, replace the variable valve timing actuator as it has not been fixed.
10. install the cylinder head cover. (See 01-10B-10 TIMING CHAIN REMOVAL/INSTALLATION[L3 WITH TC].)
11. install the ventilation hose.
12. Connect the wiring harness.
13. Install the spark plugs. (See 01-18B-3 SPARK PLUG REMOVAL/INSTALLATION[L3 WITH TC].)
14. Install the ignition coils. (See 01-18B-2 IGNITION COIL REMOVAL/INSTALLATION[L3 WITH TC].)
15. Install the charge air cooler. (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
16. Connect the negative battery cable.
17. Install the battery cover.



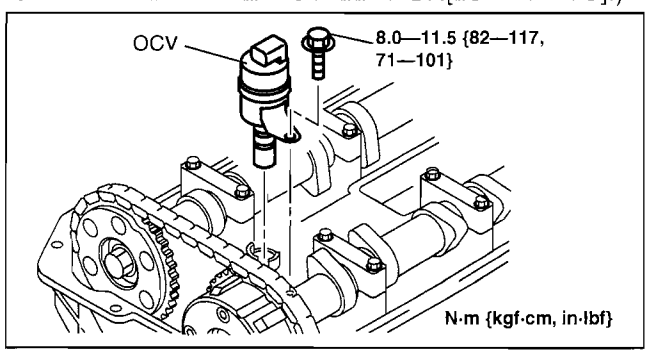
acxuuw00000143

OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION[L3 WITH TC]

id011039801300

1. Remove the battery cover.
2. Disconnect the negative battery cable.
3. Remove the charge air cooler. (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
4. Remove the ignition coils. (See 01-18B-2 IGNITION COIL REMOVAL/INSTALLATION[L3 WITH TC].)
5. Disconnect the wiring harness.
6. Remove the ventilation hose.
7. Remove the cylinder head cover. (See 01-10B-10 TIMING CHAIN REMOVAL/INSTALLATION[L3 WITH TC].)
8. Remove the OCV.
9. Install the OCV.

Tightening torque
8.0—11.5 N·m {82—117 kgf·cm, 71—101 in·lbf}



am3zzw0000352

OIL CONTROL VALVE (OCV) INSPECTION[L3 WITH TC]

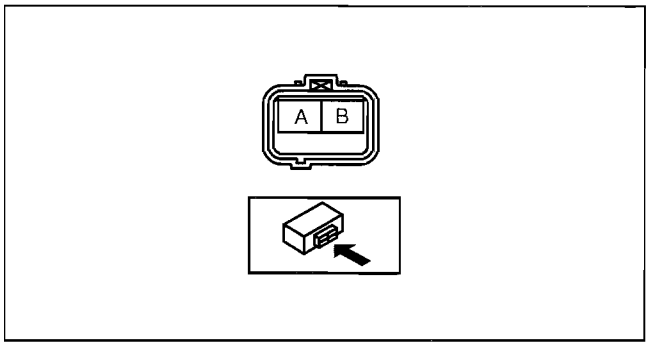
id011039801400

Coil Resistance Inspection

1. Remove the battery cover.
2. Disconnect the negative battery cable.
3. Disconnect the OCV connector.
4. Measure the coil resistance between terminals A and B using a tester.
   - If it is not within the specification, replace the OCV.

   OCV resistance
   6.9—7.9 ohms [20°C {68°F}]

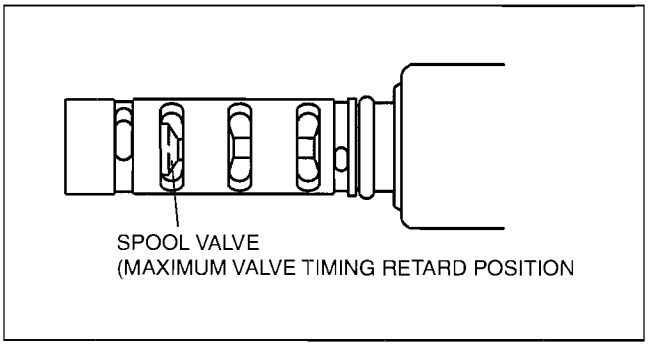
5. Connect the OCV connector.
6. Connect the negative battery cable.
7. Install the battery cover.



am3zzw0000352

Spool Valve Operation Inspection

1. Remove the battery cover.
2. Disconnect the negative battery cable.
3. Disconnect the OCV connector.
4. Remove the OCV. (See 01-10B-33 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION[L3 WITH TC].)
5. Verify that the spool valve in the OCV is in the maximum valve timing retard position as indicated in the figure.
   - If not as specified, replace the OCV.
6. Verify that the battery is fully charged.
   - If not as specified, recharge the battery.



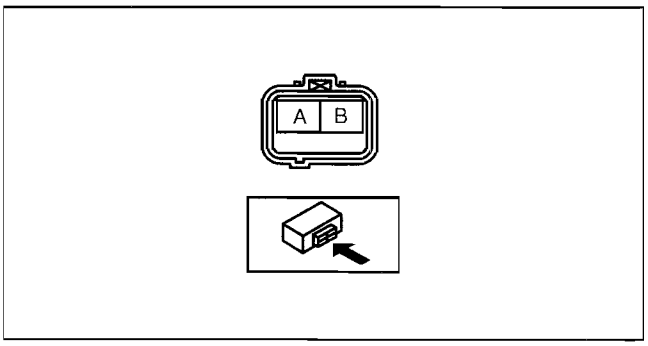
acxuuw00000140

7. Apply battery positive voltage between the OCV terminals and verify that the spool valve operates and moves to the maximum valve timing advance position.
   - If not as specified, replace the OCV.

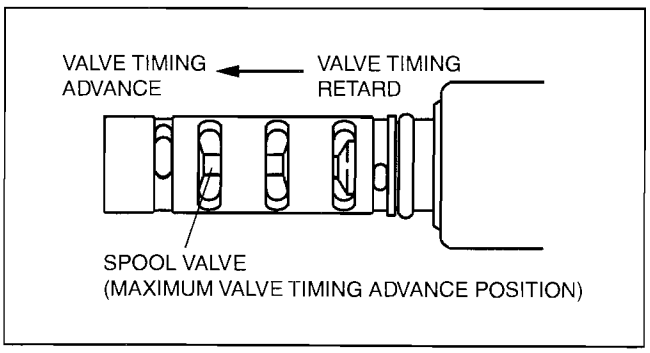
   Note
   - When applying battery positive voltage between the OCV terminals, the connection can be either of the following:
     — Positive battery cable to terminal A, Negative battery cable to terminal B

     — Positive battery cable to terminal B, Negative battery cable to terminal A

8. Stop applying battery positive voltage and verify that the spool valve returns to the maximum valve timing retard position.
   - If not as specified, replace the OCV. (See 01-10B-33 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION[L3 WITH TC].)
9. Connect the OCV connector.
10. Connect the negative battery cable.
11. Install the battery cover.



am3zzw0000352



acxuuw00000142

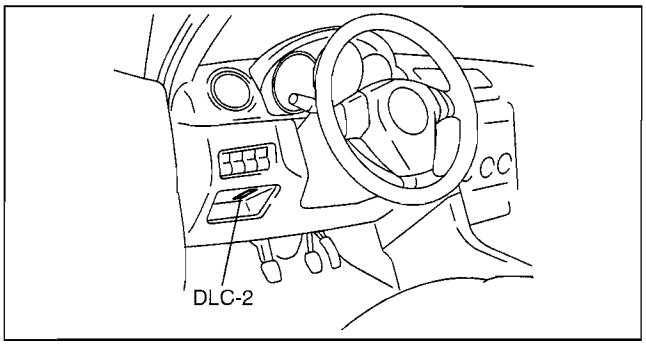
ENGINE TUNE-UP[L3 WITH TC]

id011039800600

Note
- If the accelerator pedal is depressed continuously for a specified time, the engine speed may decrease to the idle speed. This is due to the fuel cut control operation, which prevents overheating, and it does not indicate a malfunction.

Engine Tune-up Preparation

1. Verify that the shift lever is in neutral position
2. Connect the M-MDS to the DLC-2.
3. Verify that no DTCs are available.
4. Warm up the engine (ECT is **approx. 80°C {176 °F} or more**).
5. Turn off the electrical loads.
6. Wait until the cooling fans stop.



am3zzw0000351

Ignition Timing Inspection

Note
- The ignition timing cannot be adjusted.
- The M-MDS is required to verify the ignition timing.

1. Verify the ignition timing (M-MDS: SPARKADV) using the PID/data monitor function of the M-MDS.

Ignition timing
Approx. BTDC 10°

2. Verify that ignition timing advances when the engine speed increases gradually.
   - If there is malfunction, refer to "ENGINE SYMPTOM TROUBLESHOOTING". (See 01-03A-11 ENGINE SYMPTOM TROUBLESHOOTING[LF, L3].)

Idle Speed Inspection

Note
- Idle speed is not adjustable.
- Idle speed verification requires M-MDS.

1. Verify that the idle speed (M-MDS: RPM PID) is within the specification using M-MDS.
   - If there is malfunction, refer to "ENGINE SYMPTOM TROUBLESHOOTING". (See 01-03A-11 ENGINE SYMPTOM TROUBLESHOOTING[LF, L3].)

Idle speed
No load: 650—750 rpm
Electrical load on*1: 650—750 rpm
P/S operation: 650—750 rpm
A/C operation: 700—800 rpm

*1 : When the following electrical loads are on: Headlights, rear defroster, cooling fan No.1, cooling fan No.2, and the blower motor (2-step or more.)

Idle Mixture Inspection

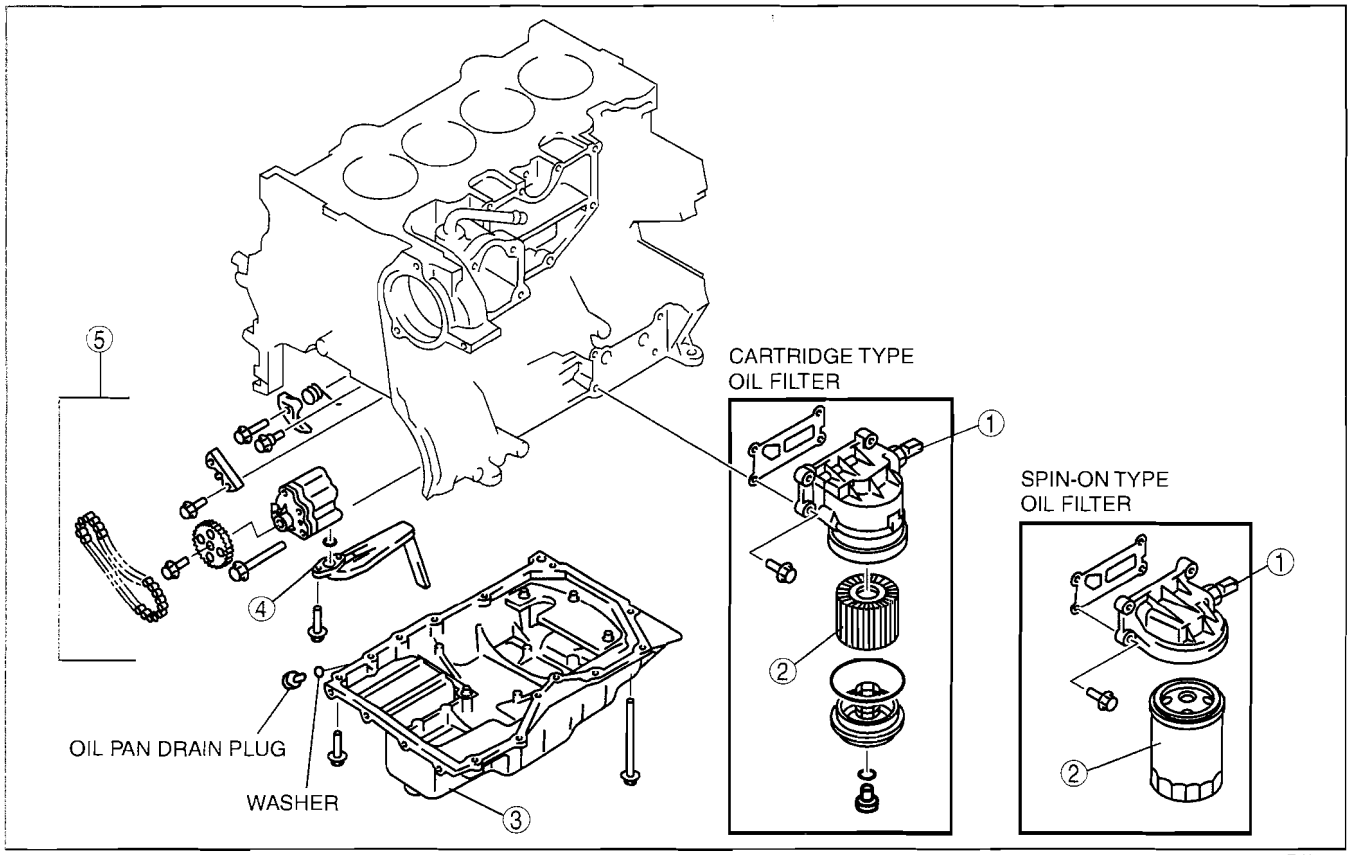
1. Verify that the idle speed and ignition timing are within the specification. (See01-10B-35 Idle Speed Inspection.) (See01-10B-35 Ignition Timing Inspection.)
2. Insert an exhaust gas analyzer to the tailpipe.
3. Verify that the CO and HC concentrations are within the regulation.

Idle mixture
HC concentration: Within the regulation
CO concentration: Within the regulation

01-11A LUBRICATION [LF, L3]

LUBRICATION SYSTEM LOCATION INDEX[LF, L3]

id0111c2800100



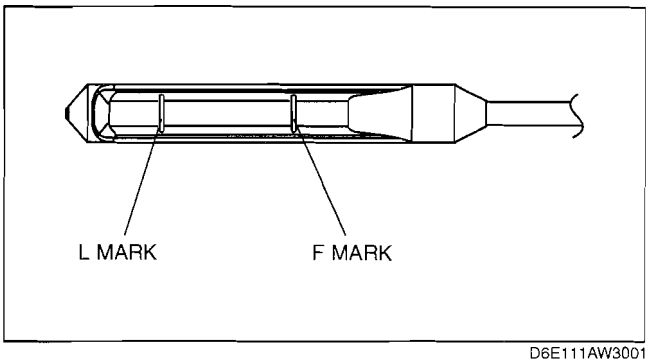
E3U111ZW6001

1	Oil pressure switch (See 01-11A-3 OIL PRESSURE INSPECTION[LF, L3].)
2	Oil filter (See 01-11A-4 OIL FILTER REPLACEMENT[LF, L3].)
3	Oil pan (See 01-11A-5 OIL PAN REMOVAL/ INSTALLATION[LF, L3].)
4	Oil strainer (See 01-11A-8 OIL PUMP REMOVAL/ INSTALLATION[LF, L3].)
5	Oil pump component (See 01-11A-8 OIL PUMP REMOVAL/ INSTALLATION[LF, L3].)

ENGINE OIL LEVEL INSPECTION[LF, L3]

id0111c2800500

1. Position the vehicle on level ground.
2. Warm up the engine.
3. Stop the engine and allow **approx. 5 min** before continuing.
4. Remove the dipstick and verify that the oil level is between the F and L marks on the dipstick.
   - If the oil level is below the L mark, add engine oil.



D6E111AW3001

ENGINE OIL REPLACEMENT[LF, L3]

id0111c2800400

Warning

- **Remove and install all parts when the engine is cold, otherwise they can cause severe burns or serious injury.**
- **A vehicle that is lifted but not securely supported on safety stands is dangerous. It can slip or fall, causing death or serious injury. Never work around or under a lifted vehicle if it is not securely supported on safety stands.**
- **Continuous exposure to used engine oil has caused skin cancer in laboratory mice. Protect your skin by washing with soap and water immediately after working with engine oil.**

Caution

- **In case you spill engine oil on the exhaust system, wipe it off completely. If you fail to wipe the spilled engine oil, it will produce fumes because of the heat.**

1. Position the vehicle on level ground.
2. Remove the oil filler cap.
3. Remove the oil pan drain plug.
4. Drain the engine oil into a container.
5. Install the oil pan drain plug with a new washer.

Oil pan drain plug tightening torque
30—41 N·m {3.0—4.2 kgf·m, 22—30 ft·lbf}

Note
- The amount of residual oil in the engine can vary according to the replacement method, oil temperature, etc. Verify the oil level after engine oil replacement.

6. Refill with the following type and amount of the engine oil.

Engine oil specification

Item	U.S.A. and CANADA	Except U.S.A. and CANADA
Engine oil grade	(ILSAC)	(ILSAC) API SL or ILSAC
Engine oil viscosity	5W-20	5W-20 (If SAE 5W-20 engine oil is not available in your market, use SAE 5W-30 engine oil.)

Oil capacity (approx. quantity)

L {US qt, Imp qt}

Item	Specifications
Oil replacement	3.9 {4.1, 3.4}
Oil and oil filter replacement	4.3 {4.5, 3.8}
Total (dry engine)	4.6 {4.9, 4.0}

7. Install the oil filler cap.
8. Start the engine and confirm that there is no oil leakage.
   - If there is oil leakage, repair or replace the applicable part.
9. Inspect the oil level. (See 01-11A-2 ENGINE OIL LEVEL INSPECTION[LF, L3].)

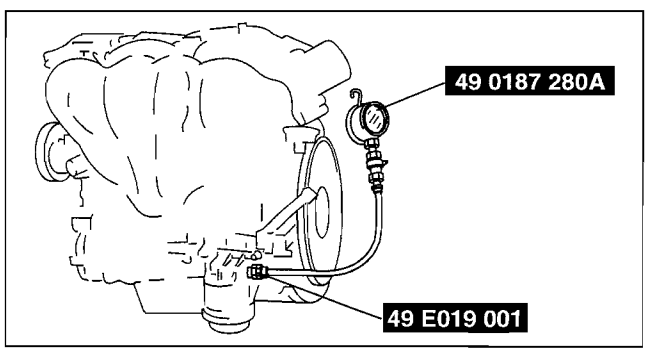
OIL PRESSURE INSPECTION[LF, L3]

id0111c2800300

Warning
- **Continuous exposure to USED engine oil has caused skin cancer in laboratory mice. Protect your skin by washing with soap and water immediately after working with engine oil.**
- **Hot engines and engine oil can cause severe burns. Turn off the engine and wait until it and the engine oil have cooled.**

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the under cover.
4. Remove the oil pressure switch.
5. Screw the **SST** into the oil pressure switch installation hole.
6. Warm up the engine to normal operating temperature.
7. Run the engine at the specified speed, and note the gauge readings.
   - If the pressure is not as specified, inspect for the cause and repair or replace if necessary.

Note
- The oil pressure can vary with oil viscosity and temperature.



D6E111AW3004

Oil pressure (reference value) [oil temperature: 100 °C {212 °F}]

337—591 kPa {3.44—6.03 kgf/cm^2, 49.0—85.8 psi} [3,000 rpm]

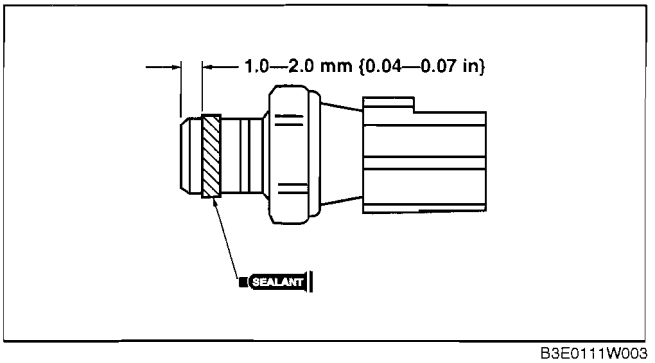
8. Stop the engine and wait until it is cool.
9. Remove the **SST**.

Caution
- **Be sure there is no sealant between 1.0—2.0 mm {0.04—0.07 in} from the end of the oil pressure switch to prevent a possible operation malfunction.**

10. Apply silicone sealant to the oil pressure switch threads as shown.
11. Install the oil pressure switch.

Tightening torque
12—18 N·m {1.2—1.8 kgf·m, 9—13 ft·lbf}

12. Install the under cover.
13. Connect the negative battery cable.
14. Install the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
15. Start the engine and confirm that there is no oil leakage.
    - If there is oil leakage, repair or replace the applicable part.



B3E0111W003

OIL FILTER REPLACEMENT[LF, L3]

id0111c2800700

Warning
- **Remove and install all parts when the engine is cold, otherwise they can cause severe burns or serious injury.**
- **A vehicle that is lifted but not securely supported on safety stands is dangerous. It can slip or fall, causing death or serious injury. Never work around or under a lifted vehicle if it is not securely supported on safety stands.**
- **Continuous exposure to used engine oil has caused skin cancer in laboratory mice. Protect your skin by washing with soap and water immediately after working with engine oil.**

Caution
- **In case you spill engine oil on the exhaust system, wipe it off completely. If you fail to wipe the spilled engine oil, it will produce fumes because of the heat.**

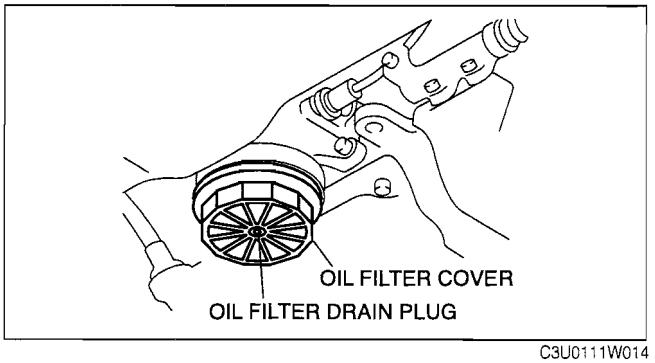
Cartridge Type

Caution
- **To avoid damage to the oil filter, use only specified oil filter.**

1. Remove the under cover.
2. Loosen the oil filter drain plug. (Do not remove.)
3. Loosen the filter cover for 1 turn using a commercially available, cup-type oil filter wrench (**74 mm {2.9 in} diameter, 14 sided**).
4. Remove the oil filter drain plug, and drain the engine oil.

Note
- Oil could be easily drained when the air is in the filter.

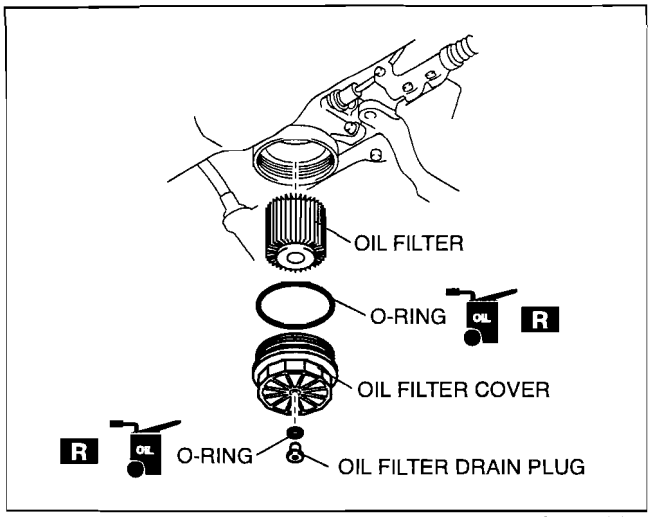
5. Loosen the oil filter cover for another 1 turn.



C3U0111W014

6. Remove the oil filter cover and the oil filter.
7. Use a clean rag to wipe off the mounting surface on the oil filter adapter and the oil filter cover.
8. Apply clean oil to a new O-ring of the oil filter cover.
9. Apply clean oil to a new O-ring of the oil filter drain plug.
10. Install the oil filter, oil filter drain plug, and oil filter cover.
11. Tighten the oil filter cover and the oil filter drain plug.

Tightening torque
Oil filter cover: 30—35 N·m {3.1—3.5 kgf·m, 22.2—25.8 ft·lbf}
Oil filter drain plug: 9—11 N·m {91.8—112.2 kgf·cm, 79.6—97.2 in·lbf}



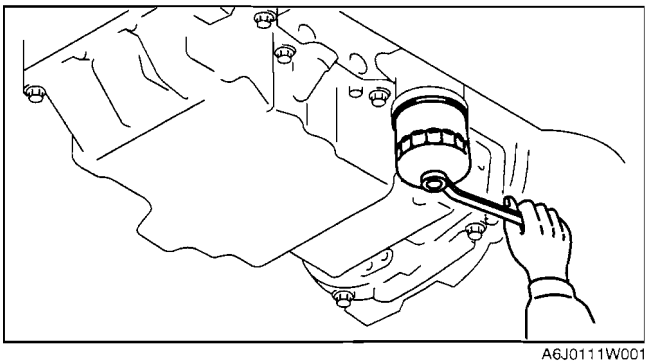
C3U0111W015

12. Start the engine and confirm that there is no oil leakage.
    - If there is oil leakage, repair or replace the applicable part.
13. Inspect the oil level. (See 01-11A-2 ENGINE OIL LEVEL INSPECTION[LF, L3].)
14. Install the under cover.

Spin-on Type

1. Remove the under cover.
2. Remove the oil filter using a commercially available, cup-type oil filter wrench (**76 mm {3.0 in} diameter, 15 sided**).
3. Use a clean rag to wipe off the mounting surface.
4. Apply clean engine oil to the gasket of a new oil filter.
5. Tighten the oil filter using cup-type oil filter wrench and according to the instructions on the package or side of the oil filter.

Tightening torque (reference value)
15—20 N·m {1.6—2.0 kgf·m, 11—14 ft·lbf}



A6J0111W001

6. Start the engine and confirm that there is no oil leakage.
    - If there is oil leakage, repair or replace the applicable part.
7. Inspect the oil level. (See 01-11A-2 ENGINE OIL LEVEL INSPECTION[LF, L3].)
8. Install the under cover.

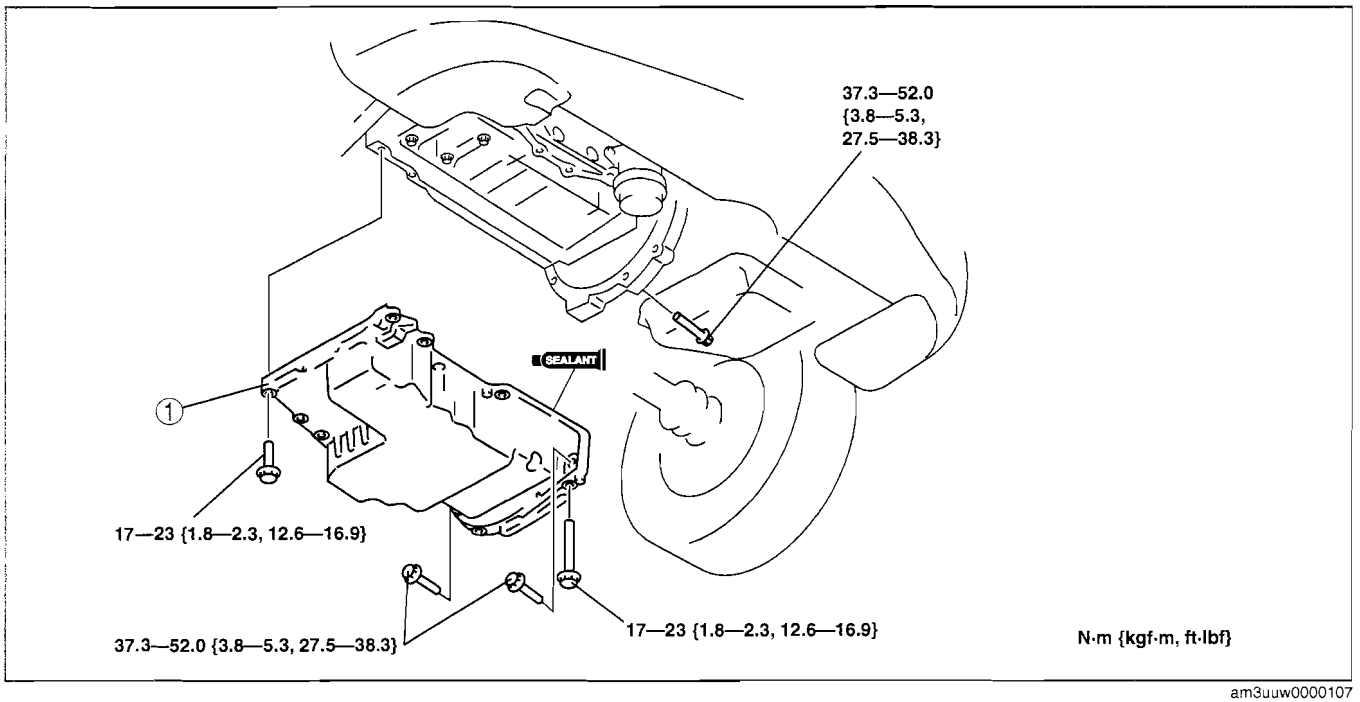
OIL PAN REMOVAL/INSTALLATION[LF, L3]

id0111c2800200

Warning
- **Remove and install all parts when the engine is cold, otherwise they can cause severe burns or serious injury.**
- **A vehicle that is lifted but not securely supported on safety stands is dangerous. It can slip or fall, causing death or serious injury. Never work around or under a lifted vehicle if it is not securely supported on safety stands.**
- **Continuous exposure to used engine oil has caused skin cancer in laboratory mice. Protect your skin by washing with soap and water immediately after working with engine oil.**

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the under cover and splash shield as a single unit.
4. Remove the front tire (RH).
5. Drain the engine oil. (See 01-11A-2 ENGINE OIL REPLACEMENT[LF, L3].)
6. Remove the plug hole plate. (See 01-10A-3 PLUG HOLE PLATE REMOVAL/INSTALLATION[LF, L3].)
7. Remove the drive belt. (See 01-10A-4 DRIVE BELT REPLACEMENT[LF, L3].)
8. Position the coolant reserve tank out of the way.

9. Remove the A/C compressor with the pipes still connected. (See 07-11-15 A/C COMPRESSOR REMOVAL/INSTALLATION[LF, L3].)
10. Remove the ignition coils. (See 01-18A-2 IGNITION COIL REMOVAL/INSTALLATION[LF, L3].)
11. Remove the crankshaft position (CKP) sensor. (See 01-40A-67 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION[LF, L3].)
12. Remove the engine front cover. (See 01-10A-12 TIMING CHAIN REMOVAL/INSTALLATION[LF, L3].)
13. Remove in the order indicated in the table.
14. Install in the reverse order of removal.
15. Refill with the specified type and amount of the engine oil. (See 01-11A-2 ENGINE OIL REPLACEMENT[LF, L3].)
16. Start the engine and confirm that there is no oil leakage.
    - If there is oil leakage, repair or replace the applicable part.
17. Inspect the oil level. (See 01-11A-2 ENGINE OIL LEVEL INSPECTION[LF, L3].)
18. Inspect for the ignition timing and idle speed. (See 01-10A-37 ENGINE TUNE-UP[LF, L3].)

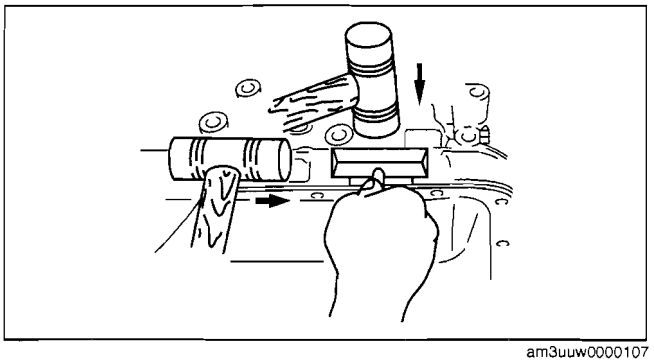


am3uuw0000107

1	Oil pan (See 01-11A-6 Oil Pan Removal Note.) (See 01-11A-7 Oil Pan Installation Note.)

Oil Pan Removal Note

1. Remove the oil pan using the separator tool.

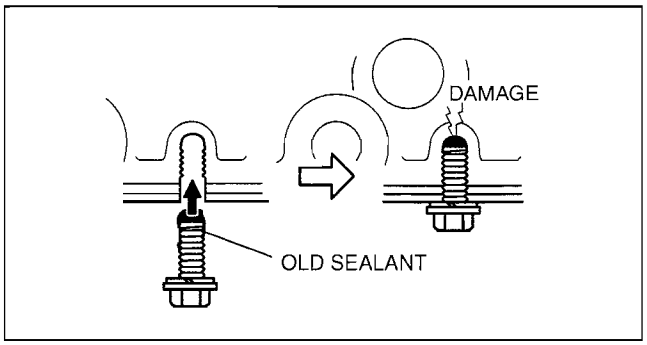


am3uuw0000107

Oil Pan Installation Note

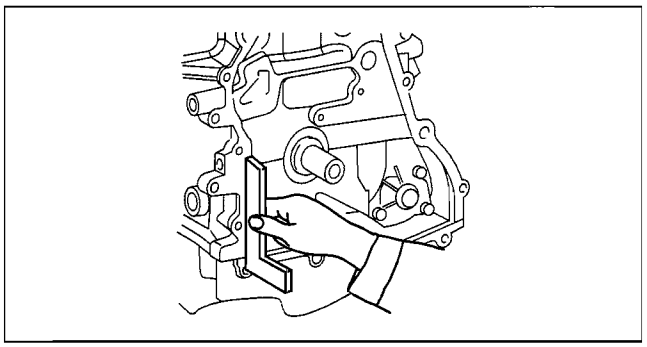
Caution
- **Apply the silicon sealant in a single, unbroken line around the whole perimeter.**
- **Using bolts with the old seal adhering could cause cracks in the housing.**

1. Completely clean and remove any oil, dirt, sealant or other foreign material that may be adhering to the housing and oil pan.
2. When reusing oil pan installation bolts, clean any old sealant from the bolts.



am3uuw0000107

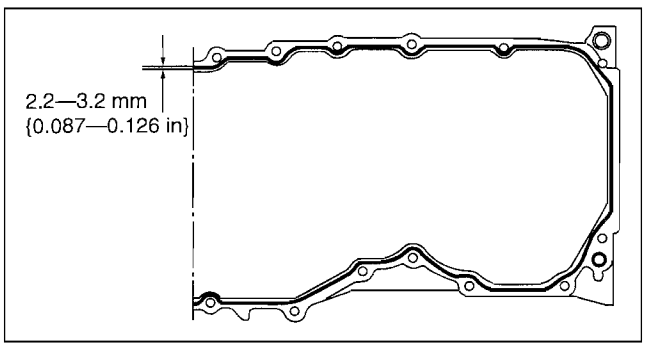
3. Use a square ruler to align the oil pan and the cylinder block junction side on the engine front cover side.



am3uuw0000107

4. Apply silicone sealant to the oil pan along the inside of the bolt holes as shown in the figure.

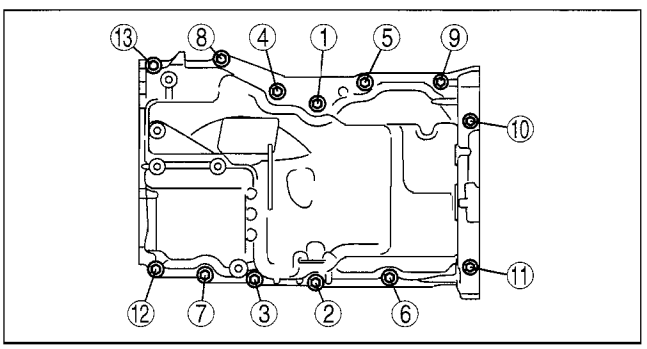
   Thickness
   2.2—3.2 mm {0.087—0.126 in}



am3uuw0000107

5. Tighten the bolts in the order shown in the figure.

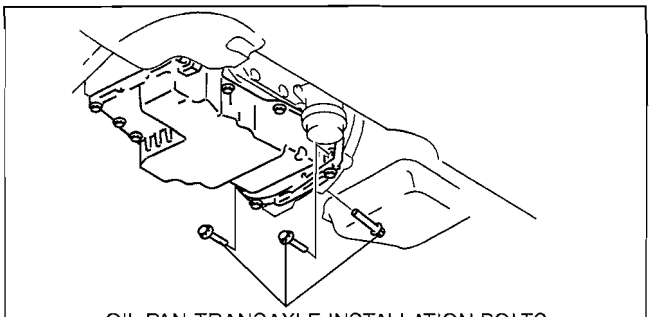
   Tightening torque
   17—23 N·m {1.8—2.3 kgf·m, 12.6—16.9 ft·lbf}



am3uuw0000107

6. Tighten the oil pan-transaxle installation bolts.

Tightening torque
37.3—52.0 N·m {3.8—5.3 kgf·m, 27.5—38.3 ft·lbf}



OIL PAN-TRANSAXLE INSTALLATION BOLTS

am3uuw0000108

OIL PUMP REMOVAL/INSTALLATION[LF, L3]

id0111c2800600

Warning
- **Remove and install all parts when the engine is cold, otherwise they can cause severe burns or serious injury.**
- **A vehicle that is lifted but not securely supported on safety stands is dangerous. It can slip or fall, causing death or serious injury. Never work around or under a lifted vehicle if it is not securely supported on safety stands.**
- **Continuous exposure to used engine oil has caused skin cancer in laboratory mice. Protect your skin by washing with soap and water immediately after working with engine oil.**

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the under cover and splash shield as a single unit.
4. Remove the front tire (RH).
5. Drain the engine oil. (See 01-11A-2 ENGINE OIL REPLACEMENT[LF, L3].)
6. Remove the plug hole plate. (See 01-10A-3 PLUG HOLE PLATE REMOVAL/INSTALLATION[LF, L3].)
7. Remove the drive belt. (See 01-10A-4 DRIVE BELT REPLACEMENT[LF, L3].)
8. Position the coolant reserve tank out of the way.
9. Remove the A/C compressor with the pipes still connected. (See 07-11-15 A/C COMPRESSOR REMOVAL/INSTALLATION[LF, L3].)
10. Remove the ignition coils. (See 01-18A-2 IGNITION COIL REMOVAL/INSTALLATION[LF, L3].)
11. Remove the crankshaft position (CKP) sensor. (See 01-40A-67 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION[LF, L3].)
12. Remove the engine front cover. (See 01-10A-12 TIMING CHAIN REMOVAL/INSTALLATION[LF, L3].)
13. Remove the oil pan. (See 01-11A-5 OIL PAN REMOVAL/INSTALLATION[LF, L3].)
14. Remove in the order indicated in the table.
15. Install in the reverse order of removal.
16. Refill with the specified type and amount of the engine oil. (See 01-11A-2 ENGINE OIL REPLACEMENT[LF, L3].)
17. Start the engine and confirm that there is no oil leakage.
    - If there is oil leakage, repair or replace the applicable part.
18. Inspect the oil level. (See 01-11A-2 ENGINE OIL LEVEL INSPECTION[LF, L3].)
19. Inspect for the ignition timing and idle speed. (See 01-10A-37 ENGINE TUNE-UP[LF, L3].)

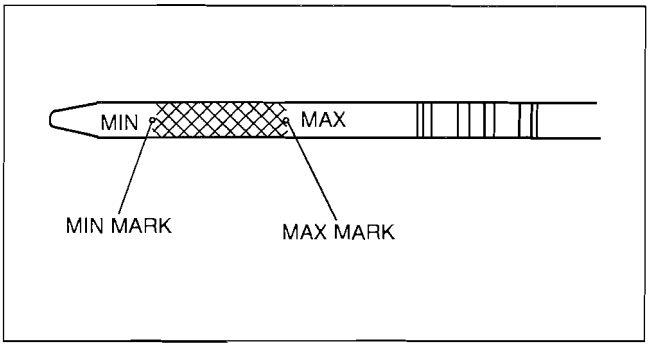
ENGINE OIL LEVEL INSPECTION[L3 WITH TC]

id011139800500

1. Position the vehicle on level ground.
2. Warm up the engine.
3. Stop the engine and allow **approx. 5 min** before continuing.
4. Remove the dipstick and verify that the oil level is between the MIN and MAX marks on the dipstick.
   - If the oil level is below the MIN mark, add engine oil.



acxuuw00002002

ENGINE OIL REPLACEMENT[L3 WITH TC]

id011139800400

Warning

- **Hot engines and engine oil can cause severe burns. Turn off the engine and wait until it and the engine oil have cooled.**
- **A vehicle that is lifted but not securely supported on safety stands is dangerous. It can slip or fall, causing death or serious injury. Never work around or under a lifted vehicle if it is not securely supported on safety stands.**
- **Continuous exposure to USED engine oil has caused skin cancer in laboratory mice. Protect your skin by washing with soap and water immediately after working with engine oil.**

Caution

- **If engine oil is spilled on the exhaust system, wipe it off completely. If you fail to wipe the spilled engine oil, it will produce fumes because of the heat.**

1. Position the vehicle on level ground.
2. Remove the oil filler cap.
3. Remove the oil pan drain plug.
4. Drain the engine oil into a container.
5. Install the oil pan drain plug with a new washer.

Oil pan drain plug tightening torque
30—41 N·m {3.1—4.1 kgf·m, 23—30 ft·lbf}

Note

- The amount of residual oil in the engine can vary according to factors such as the replacement method and oil temperature. Verify the oil level after engine oil replacement.

6. Refill with the following type and amount of the engine oil.

Engine oil capacity (approx. quantity)
Oil replacement: 5.3 L {5.6 US qt, 4.7 Imp qt}
Oil and oil filter replacement: 5.7 L {6.0 US qt, 5.0 Imp qt}
Total (dry engine): 6.4 L {6.8 US qt, 5.6 Imp qt}

Engine oil specification

Item	U.S.A. and CANADA	Except U.S.A. and CANADA
Engine oil grade	(ILSAC)	(ILSAC) API SM or ILSAC
Engine oil viscosity	5W-20	5W-20 (If SAE 5W-20 engine oil is not available in your market, use SAE 5W-30 engine oil.)

7. Install the oil filler cap.
8. Start the engine and confirm that there is no oil leakage.
   - If there is oil leakage, repair or replace the applicable part.
9. Inspect the oil level. (See 01-11B-2 ENGINE OIL LEVEL INSPECTION[L3 WITH TC].)

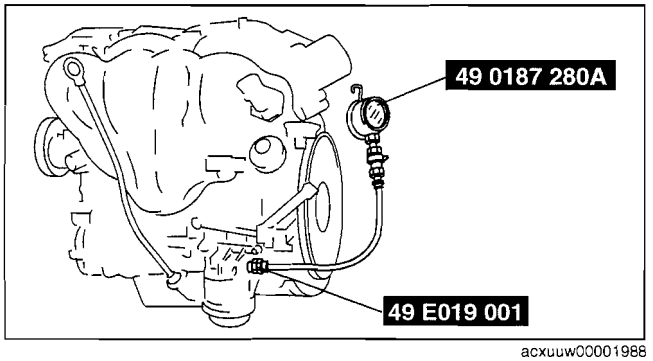
OIL PRESSURE INSPECTION[L3 WITH TC]

id011139800300

Warning

- **Hot engines and engine oil can cause severe burns. Turn off the engine and wait until it and the engine oil have cooled.**
- **A vehicle that is lifted but not securely supported on safety stands is dangerous. It can slip or fall, causing death or serious injury. Never work around or under a lifted vehicle if it is not securely supported on safety stands.**
- **Continuous exposure to USED engine oil has caused skin cancer in laboratory mice. Protect your skin by washing with soap and water immediately after working with engine oil.**

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Remove the under cover.
4. Remove the oil pressure switch.
5. Screw the **SSTs** into the oil pressure switch installation hole.
6. Connect the negative battery cable.
7. Warm up the engine to normal operating temperature.
8. Run the engine at the specified speed, and note the gauge readings.
   - If not within the specification, inspect for the cause and repair or replace if necessary.



acxuuw00001988

Note

- The oil pressure can vary with oil viscosity and temperature.

Oil pressure (reference value) [oil temperature: 100 °C {212 °F}]
297—551 kPa {3.03—5.61 kgf/cm^2, 43.1—79.9 psi} [3,000 rpm]

9. Stop the engine and wait until it is cool.
10. Disconnect the negative battery cable.
11. Remove the **SSTs.**

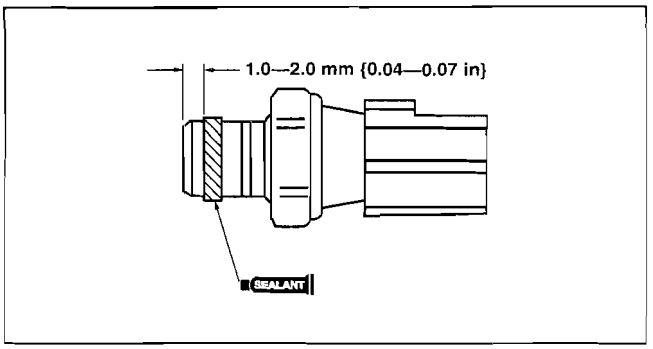
Caution

- **Make sure that there is no sealant between 1.0—2.0 mm {0.04—0.07 in} from the end of the oil pressure switch to prevent a possible operation malfunction.**

12. Apply silicone sealant to the oil pressure switch threads as shown in the figure.
13. Install the oil pressure switch.

    Tightening torque
    12—18 N·m {1.3—1.8 kgf·m, 9—13 ft·lbf}

14. Connect the negative battery cable.
15. Install the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
16. Start the engine and confirm that there is no oil leakage.
    - If there is oil leakage, repair or replace the applicable part.
17. Install the under cover.



acxuuw00001989

OIL FILTER REPLACEMENT[L3 WITH TC]

id011139800700

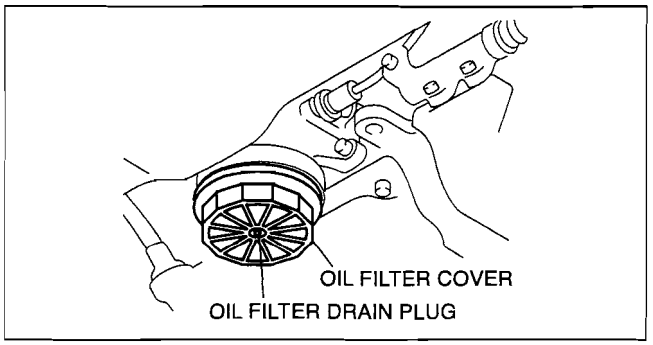
Warning
- **Hot engines and engine oil can cause severe burns. Turn off the engine and wait until it and the engine oil have cooled.**
- **A vehicle that is lifted but not securely supported on safety stands is dangerous. It can slip or fall, causing death or serious injury. Never work around or under a lifted vehicle if it is not securely supported on safety stands.**
- **Continuous exposure to USED engine oil has caused skin cancer in laboratory mice. Protect your skin by washing with soap and water immediately after working with engine oil.**

Caution
- **If engine oil is spilled on the exhaust system, wipe it off completely. If you fail to wipe the spilled engine oil, it will produce fumes because of the heat.**
- **To avoid damage to the oil filter, use only specified oil filter.**

1. Remove the under cover.
2. Loosen the oil filter drain plug. (Do not remove.)
3. Loosen the filter cover for 1 turn using a commercially available, cup-type oil filter wrench **(74 mm {2.9 in} diameter, 14 sided).**
4. Remove the oil filter drain plug, and drain the engine oil.

   Note
   - Oil could be easily drained when the air is in the filter.

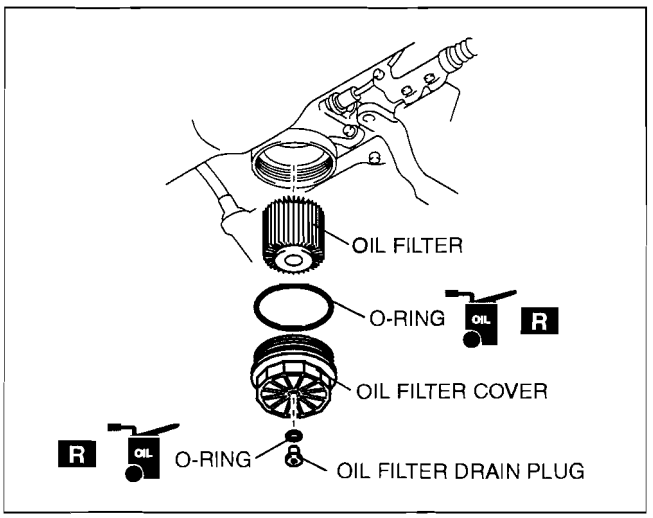
5. Loosen the oil filter cover for another 1 turn.



acxuuw00002007

6. Remove the oil filter cover and the oil filter.
7. Use a clean rag to wipe off the mounting surface on the oil filter adapter and the oil filter cover.
8. Apply clean engine oil to a new O-ring of the oil filter cover.
9. Apply clean engine oil to a new O-ring of the oil filter drain plug.
10. Install the oil filter, oil filter drain plug, and oil filter cover.
11. Tighten the oil filter cover and the oil filter drain plug.

    Tightening torque
    Oil filter cover: 30—35 N·m {3.1—3.5 kgf·m, 22.2—25.8 ft·lbf}
    Oil filter drain plug: 9—11 N·m {91.8—112.2 kgf·cm, 79.6—97.2 in·lbf}



acxuuw00002008

12. Start the engine and confirm that there is no oil leakage.
    - If there is oil leakage, repair or replace the applicable part.
13. Inspect the oil level. (See 01-11B-2 ENGINE OIL LEVEL INSPECTION[L3 WITH TC].)
14. Install the under cover.

OIL COOLER REMOVAL/INSTALLATION[L3 WITH TC]

id011139800800

Warning

- **Hot engines and engine oil can cause severe burns. Turn off the engine and wait until it and the engine oil have cooled.**
- **A vehicle that is lifted but not securely supported on safety stands is dangerous. It can slip or fall, causing death or serious injury. Never work around or under a lifted vehicle if it is not securely supported on safety stands.**
- **Continuous exposure to USED engine oil has caused skin cancer in laboratory mice. Protect your skin by washing with soap and water immediately after working with engine oil.**

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Remove the under cover.
4. Drain the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT[L3 WITH TC].)
5. Remove in the order indicated in the table.
6. Use a clean rag to wipe off the mounting surface on the oil filter adapter and the oil cooler.
7. Install in the reverse order of the removal.
8. Refill the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT[L3 WITH TC].)
9. Start the engine and confirm that there is no oil leakage.
   - If there is oil leakage, repair or replace the applicable part.
10. Inspect the oil level. (See 01-11B-2 ENGINE OIL LEVEL INSPECTION[L3 WITH TC].).

- **Continuous exposure to USED engine oil has caused skin cancer in laboratory mice. Protect your skin by washing with soap and water immediately after working with engine oil.**

1. Complete the "BEFORE SERVICE PRECAUTION". (See 01-14B-4 BEFORE SERVICE PRECAUTION[L3 WITH TC].)
2. Remove the battery, battery tray and PCM component. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
3. Remove the front tire (RH).
4. Remove the under cover and splash shield as a single unit.
5. Drain the engine oil. (See 01-11B-2 ENGINE OIL REPLACEMENT[L3 WITH TC].)
6. Drain the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT[L3 WITH TC].)
7. Remove the air cleaner, charge air cooler, and air hose. (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
8. Disconnect the quick release connector on the high pressure fuel pump. (See 01-14B-24 QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION[L3 WITH TC].)

9. Remove the high pressure fuel pump. (See 01-14B-21 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION[L3 WITH TC].)
10. Remove the ignition coils. (See 01-18B-2 IGNITION COIL REMOVAL/INSTALLATION[L3 WITH TC].)
11. Loosen the water pump pulley bolts before removing the drive belt.
12. Remove the drive belt. (See 01-10B-3 DRIVE BELT REMOVAL/INSTALLATION[L3 WITH TC].)
13. Remove the P/S oil pump with hose and pipe still connected. Position the P/S oil pump out of the way. (See 06-14-23 POWER STEERING OIL PUMP REMOVAL/INSTALLATION[L3 WITH TC].)
14. Remove the crankshaft position (CKP) sensor. (See 01-40B-44 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION[L3 WITH TC].)
15. Remove the engine front cover. (See 01-10B-10 TIMING CHAIN REMOVAL/INSTALLATION[L3 WITH TC].)
16. Remove in the order indicated in the table.
17. Install in the reverse order of removal.
18. Refill with the specified type and amount of the engine oil. (See 01-11B-2 ENGINE OIL REPLACEMENT[L3 WITH TC].)
19. Refill the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT[L3 WITH TC].)
20. Start the engine and confirm that there is no oil leakage.
    - If there is oil leakage, repair or replace the applicable part.
21. Inspect the oil level. (See 01-11B-2 ENGINE OIL LEVEL INSPECTION[L3 WITH TC].)
22. Inspect for engine coolant leakage. (See 01-12B-6 ENGINE COOLANT LEAKAGE INSPECTION[L3 WITH TC].)
23. Inspect for the ignition timing and idle speed. (See 01-10B-35 ENGINE TUNE-UP[L3 WITH TC].)

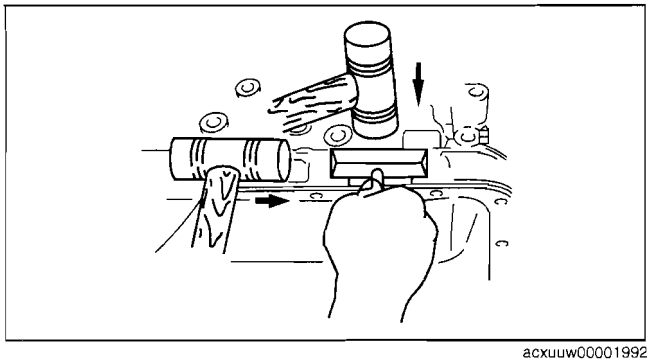
1	Dipstick pipe
2	O-ring

3	Oil pan (See 01-11B-7 Oil Pan Removal Note.) (See 01-11B-7 Oil Pan Installation Note.)

Oil Pan Removal Note

1. Remove the oil pan using a separator tool.



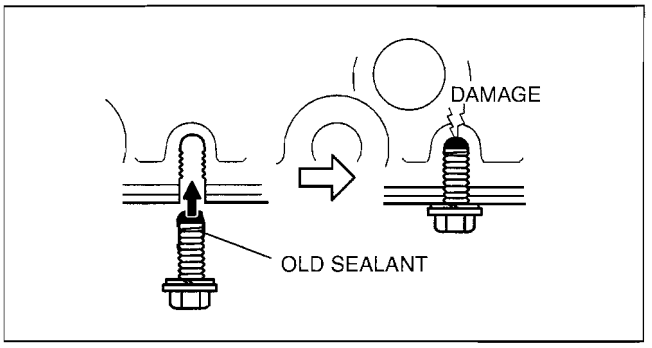
acxuuw00001992

Oil Pan Installation Note

Caution

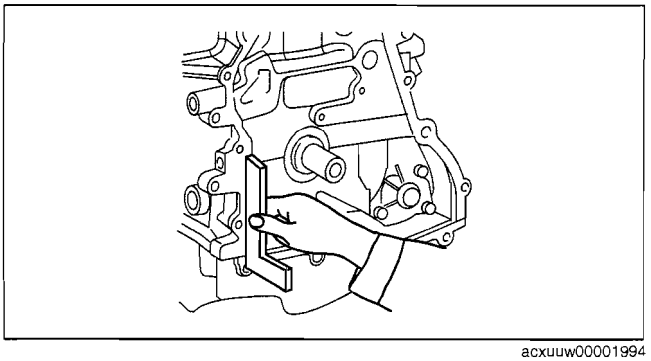
- **Apply the silicon sealant in a single, unbroken line around the whole perimeter.**
- **Using bolts with the old seal adhering could cause cracks in the housing.**

1. Completely clean and remove any oil, dirt, sealant or other foreign material that may be adhering to the housing and oil pan.
2. When reusing the oil pan installation bolts, clean any old sealant from the bolts.



acxuuw00001993

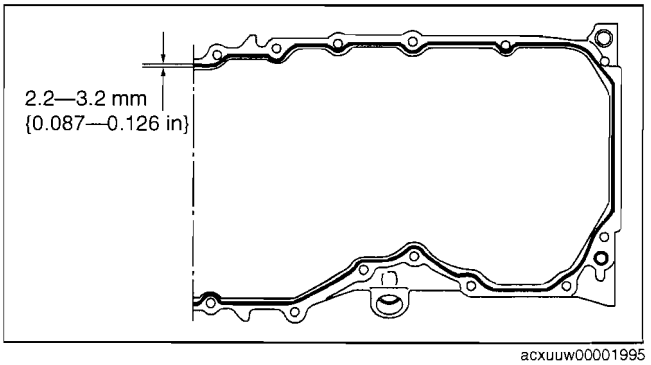
3. Use a square ruler to align the oil pan and the cylinder block junction side on the engine front cover side.



acxuuw00001994

4. Apply silicone sealant to the oil pan along the inside of the bolt holes as shown in the figure.

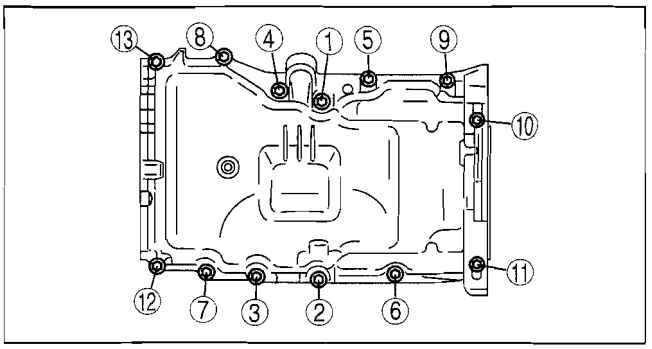
Thickness
2.2—3.2 mm {0.087—0.126 in}



acxuuw00001995

5. Tighten the bolts in the order shown in the figure.

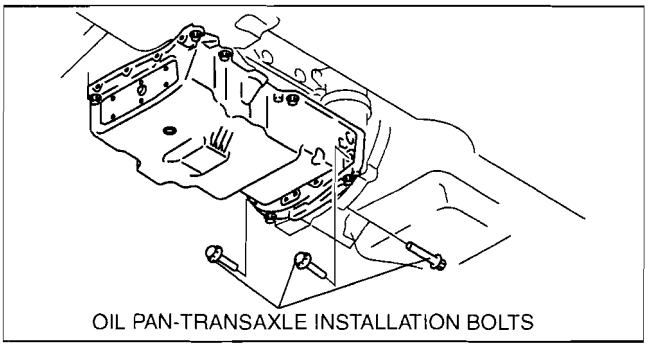
Tightening torque
17—23 N·m {1.8—2.3 kgf·m, 12.6—16.9 ft·lbf}



acxuuw00001996

6. Tighten the oil pan-transaxle installation bolts.

Tightening torque
37—52 N·m {3.8—5.3 kgf·m, 28—38 ft·lbf}



OIL PAN-TRANSAXLE INSTALLATION BOLTS

acxuuw00001997

OIL PUMP REMOVAL/INSTALLATION[L3 WITH TC]

id011139800600

Warning

- **Hot engines and engine oil can cause severe burns. Turn off the engine and wait until it and the engine oil have cooled.**
- **A vehicle that is lifted but not securely supported on safety stands is dangerous. It can slip or fall, causing death or serious injury. Never work around or under a lifted vehicle if it is not securely supported on safety stands.**
- **Continuous exposure to USED engine oil has caused skin cancer in laboratory mice. Protect your skin by washing with soap and water immediately after working with engine oil.**

1. Complete the "BEFORE SERVICE PRECAUTION". (See 01-14B-4 BEFORE SERVICE PRECAUTION[L3 WITH TC].)
2. Remove the battery, battery tray and PCM component. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
3. Remove the front tire (RH).
4. Remove the under cover and splash shield as a single unit.
5. Drain the engine oil. (See 01-11B-2 ENGINE OIL REPLACEMENT[L3 WITH TC].)
6. Drain the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT[L3 WITH TC].)
7. Remove the air cleaner, charge air cooler, and air hose. (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
8. Disconnect the quick release connector on the high pressure fuel pump. (See 01-14B-24 QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION[L3 WITH TC].)
9. Remove the high pressure fuel pump. (See 01-14B-21 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION[L3 WITH TC].)
10. Remove the ignition coils. (See 01-18B-2 IGNITION COIL REMOVAL/INSTALLATION[L3 WITH TC].)
11. Loosen the water pump pulley bolts before removing the drive belt.
12. Remove the drive belt. (See 01-10B-3 DRIVE BELT REMOVAL/INSTALLATION[L3 WITH TC].)

COOLING SYSTEM SERVICE WARNINGS[LF, L3]

id0112c2800200

Warning

- **Remove and install all parts when the engine is cold, otherwise they can cause severe burns or serious injury.**
- **Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise 2.5 turns. Step back while the pressure escapes.**
- **When you are sure all the pressure is gone, turns the cap using the cloth, and remove it.**

ENGINE COOLANT LEVEL INSPECTION[LF, L3]

id0112c2800300

Warning

- **Remove and install all parts when the engine is cold, otherwise they can cause severe burns or serious injury.**
- **Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise 2.5 turns. Step back while the pressure escapes.**
- **When you are sure all the pressure is gone, turn the cap using the cloth, and remove it.**

1. Verify that the engine coolant level in the coolant reserve tank is between the MIN and MAX marks.
2. If the engine coolant level is below MIN mark, add engine coolant.

ENGINE COOLANT PROTECTION INSPECTION[LF, L3]

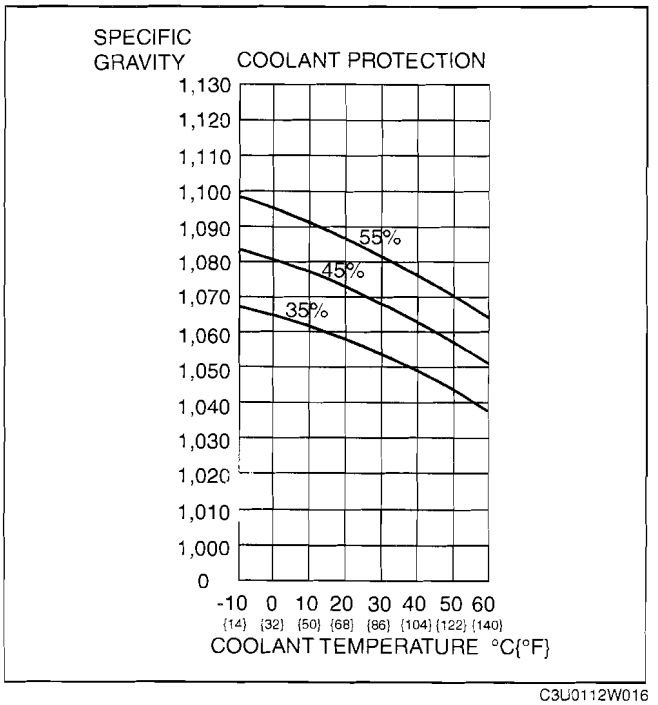
id0112c2800400

1. Measure the coolant temperature and specific gravity using a thermometer and a hydrometer.

Caution

- **Use engine coolant at a concentration that meets the environmental conditions in which the vehicle is driven, otherwise engine damage could occur.**
- **The engine has aluminum parts and must be protected by an ethylene-glycol-based coolant to prevent corrosion and freezing.**
- **Do not use coolants containing Alcohol, Methanol, Borate or Silicate. These coolants could damage the cooling system.**
- **Use only soft (demineralized) water in the coolant mixture. Water that contains minerals will cut down on the coolant's effectiveness.**
- **Engine coolant damages paint. If engine coolant does get on a painted surface, rinse it off quickly.**

2. Determine the coolant protection level by referring to the graph shown.
   - If the coolant protection level is not correct, add water or coolant.



C3U0112W016

ENGINE COOLANT REPLACEMENT[LF, L3]

id0112c2800600

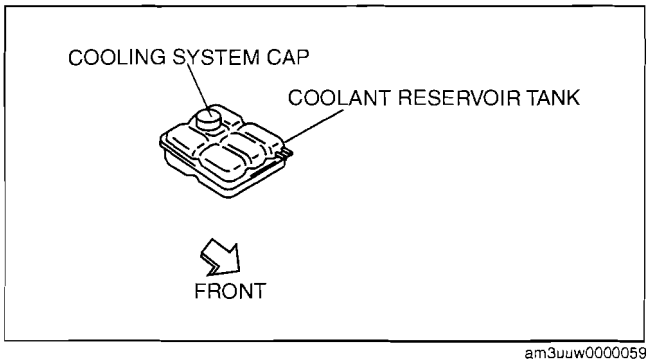
Warning

- **Remove and install all parts when the engine is cold, otherwise they can cause severe burns or serious injury.**
- **Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise 2.5 turns. Step back while the pressure escapes.**
- **When you are sure all the pressure is gone, turn the cap using the cloth, and remove it.**

Caution

- **Use engine coolant at a concentration that meets the environmental conditions in which the vehicle is driven, otherwise engine damage could occur.**
- **The engine has aluminum parts and must be protected by an ethylene-glycol-based coolant to prevent corrosion and freezing.**
- **Do not use coolants containing Alcohol, Methanol, Borate or Silicate. These coolants could damage the cooling system.**
- **Use only soft (demineralized) water in the coolant mixture. Water that contains minerals will cut down on the coolant's effectiveness.**
- **Engine coolant damages paint. If engine coolant does get on a painted surface, rinse it off quickly.**

1. Remove the cooling system cap.
2. Remove the under cover.

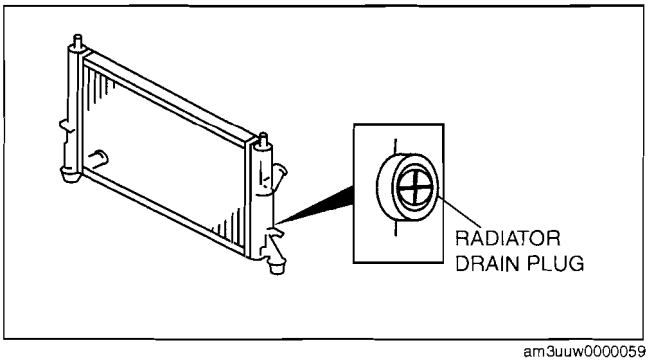


am3uuw0000059

3. Remove the radiator drain plug and drain the engine coolant into a container.
4. Flush the cooling system with water until all traces of color are gone.
5. Let the system drain completely.
6. Tighten the radiator drain plug.

Tightening torque
1.2—1.5 N·m {13—15 kgf·cm, 11—13 in·lbf}

7. Referring to the following chart, select the correct volume percentage of the water and coolant.



am3uuw0000059

Antifreeze solution mixture percentage

Coolant protection	Volume percentage		Gravity at 20 °C {68 °F}
	Water	Coolant	
Above –16 °C {3 °F}	65	35	1.057
Above –26 °C {–15°F}	55	45	1.072
Above –40 °C {–40 °F}	45	55	1.086

8. Refill the coolant into the coolant reserve tank up to the MAX mark on the tank.
9. Fully install the cooling system cap.

Caution
- **If the water temperature gauge rises too high, stop the engine and decrease the water temperature to prevent overheating. Then, verify the malfunctioning part and repair or replace it.**
- **If the engine coolant level in the coolant reserve tank is below the MIN mark during engine coolant air bleeding operation, stop the engine, and after the engine coolant temperature decreases, add engine coolant. Then, resume the engine coolant air bleeding operation.**

10. Start the engine and idle it until the thermometer indicator is in the center when the engine is at **below 1,500 rpm**.
11. Bleed the air by following the procedures below. At this time, be careful of the coolant temperature to prevent overheating.

Note
- If the accelerator pedal is depressed continuously for a specified time, the engine speed may decrease to the idle speed. This is due to the fuel cut control operation, which prevents overheating, and it does not indicate a malfunction.

(1) Run the engine at **2,500 rpm** for **2—3 min**, **2 times**.
(2) Run the engine at **3,000 rpm** for **5 s**, then idle.
(3) Repeat steps (1), (2) twice.

12. Stop the engine, and inspect the coolant level after the coolant temperature decreases (water temperature gauge indicates 'C' or less).
13. Check the coolant level.
    - If it is low, refill the coolant into the coolant reserve tank up to the MAX mark on the tank.
14. Inspect for engine coolant leakage. (See 01-12A-4 ENGINE COOLANT LEAKAGE INSPECTION[LF, L3].)

ENGINE COOLANT LEAKAGE INSPECTION[LF, L3]

id0112c2800500

Warning
- **Never remove the cooling system cap while the engine is running, or when the engine and radiator are hot. Scalding coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.**
- **Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise 2.5 turns. Step back while the pressure escapes.**
- **When you are sure all the pressure is gone, turn the cap using the cloth, and remove it.**

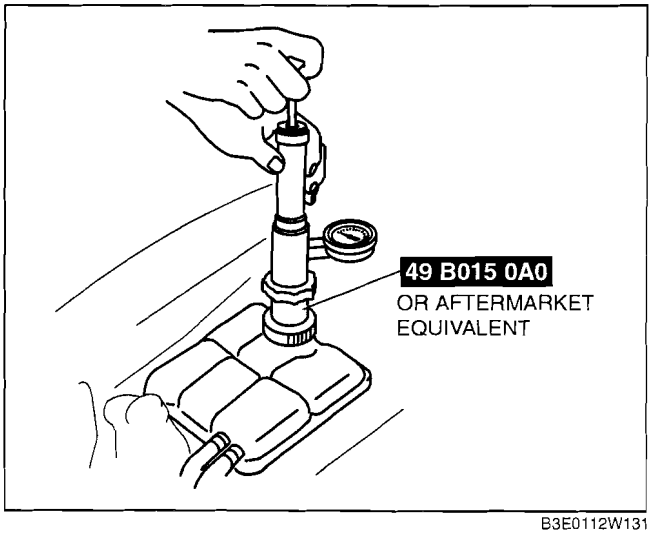
1. Inspect the engine coolant level.
2. Remove the cooling system cap.
3. Clean the installation parts of the cooling system cap.
4. Install the **SST** or aftermarket equivalent and a radiator cap tester to the coolant reserve tank filler port.
5. Apply pressure using the radiator cap tester.

Caution
- **Applying more than 145 kPa {1.5 kgf/cm^2, 21 psi} can damage the hoses, fittings, and other components, and cause leakage.**

Pressure

145 kPa {1.5 kgf/cm^2, 21 psi} [1 min]

6. When pressurizing the coolant reserve tank, verify that the pressure is maintained.
    - If the gauge needle drops, it may indicate water leakage. Repair or replace the applicable part.



B3E0112W131

COOLING SYSTEM CAP INSPECTION[LF, L3]

id0112c2801500

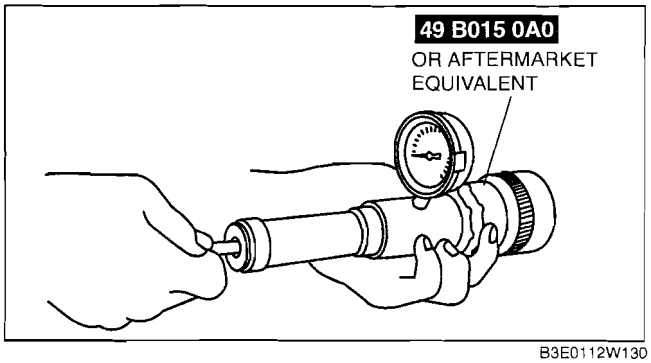
Warning

- **Never remove the cooling system cap while the engine is running, or when the engine and radiator are hot. Scalding coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.**
- **Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise 2.5 turns. Step back while the pressure escapes.**
- **When you"re sure all the pressure is gone, turn the cap using the cloth, and remove it.**

1. Clean the cooling system cap and the sealed part.
2. Inspect the cooling system cap for cracks or everted seal.
   - If there is any malfunction, replace the cooling system cap.
3. Attach the cooling system cap to the radiator cap tester.
4. Hold the cooling system cap downward and apply pressure gradually. Verify that the pressure holds for **10 s**.
   - If the pressure is not held stable within the specification, replace the cooling system cap.

Pressure

135—155 kPa {1.38—1.58 kgf/cm^2, 19.6—22.4 psi}



B3E0112W130

COOLANT RESERVE TANK REMOVAL/INSTALLATION[LF, L3]

id0112c2801000

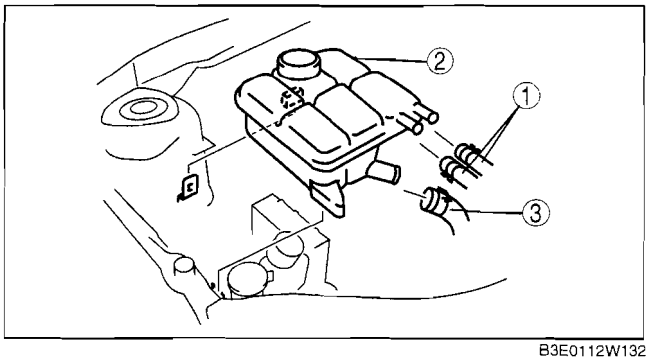
Warning

- **Remove and install all parts when the engine is cold, otherwise they can cause severe burns or serious injury.**

1. Drain the engine coolant until the coolant reserve tank becomes empty. (See 01-12A-3 ENGINE COOLANT REPLACEMENT[LF, L3].)
2. Remove in the order indicated in the table.

1	Hose
2	Coolant reserve tank
3	Hose

3. Install in the reverse order of removal.
4. Add engine coolant. (See 01-12A-3 ENGINE COOLANT REPLACEMENT[LF, L3].)
5. Inspect for engine coolant leakage. (See 01-12A-4 ENGINE COOLANT LEAKAGE INSPECTION[LF, L3].)



B3E0112W132

RADIATOR REMOVAL/INSTALLATION[LF, L3]

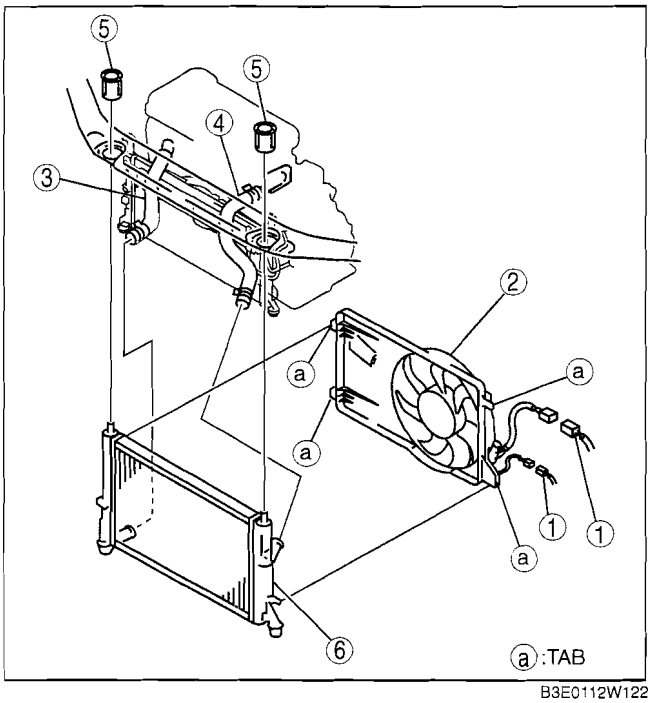
id0112c2801400

Warning

- **Remove and install all parts when the engine is cold, otherwise they can cause severe burns or serious injury.**

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the under cover.
4. Drain the engine coolant. (See 01-12A-3 ENGINE COOLANT REPLACEMENT[LF, L3].)
5. Disconnect the coolant reservoir hose from the radiator.
6. Position the front wiring harnesses out of the way.
7. Remove in the order indicated in the table.
8. Install in the reverse order of removal.
9. Add engine coolant.(See 01-12A-3 ENGINE COOLANT REPLACEMENT[LF, L3].)
10. Inspect for engine coolant leakage. (See 01-12A-4 ENGINE COOLANT LEAKAGE INSPECTION[LF, L3].)

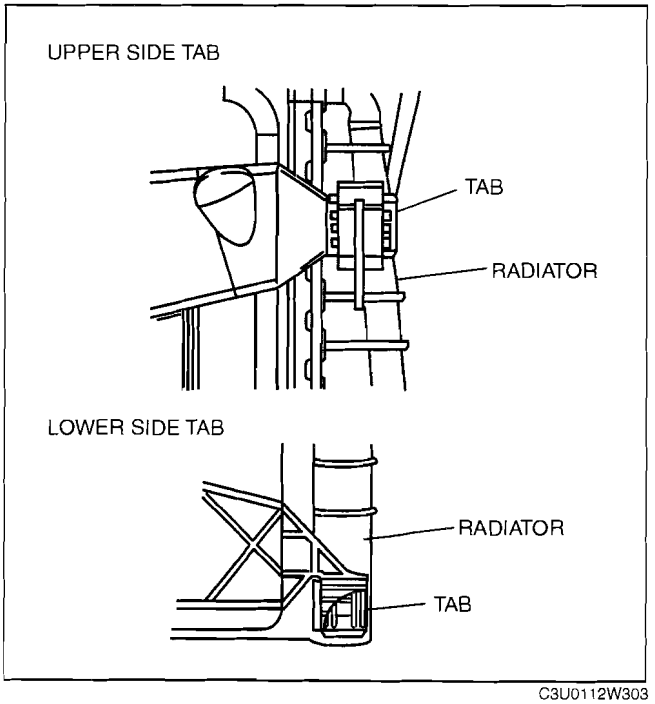
1	Fan control module connector
2	Cooling fan component (See 01-12A-6 Cooling Fan Component Removal Note.) (See 01-12A-7 Cooling Fan Component Installation Note.)
3	Radiator lower hose
4	Radiator upper hose
5	Radiator mount
6	Radiator (See 01-12A-7 Radiator Removal Note.) (See 01-12A-7 Radiator Installation Note.)



B3E0112W122

Cooling Fan Component Removal Note

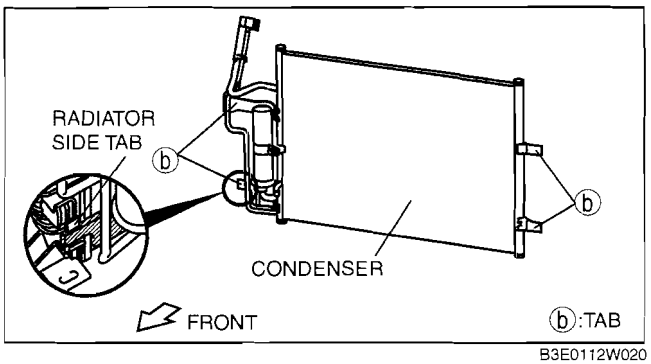
1. Unlock lower side tabs a at two points by pressing the cooling fan side tabs, remove upper side tabs a at two points, then remove the cooling fan component from the radiator.



C3U0112W303

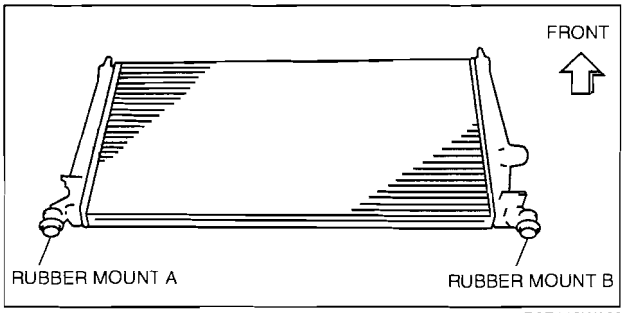
Radiator Removal Note

1. Remove the condenser from the radiator with the pipes still connected, by pressing the radiator side tabs to unlock tabs b on the condenser.



B3E0112W020

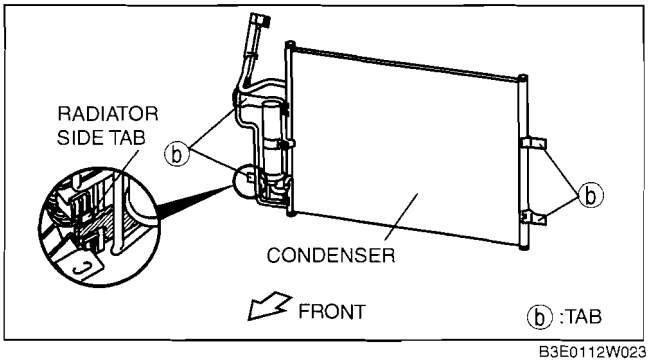
2. Remove rubber mount A from the mount installation hole.
3. Tilt the radiator to the engine side.
4. Remove rubber mount B from the mount installation hole.
5. Remove the radiator from below.



B3E112W002

Radiator Installation Note

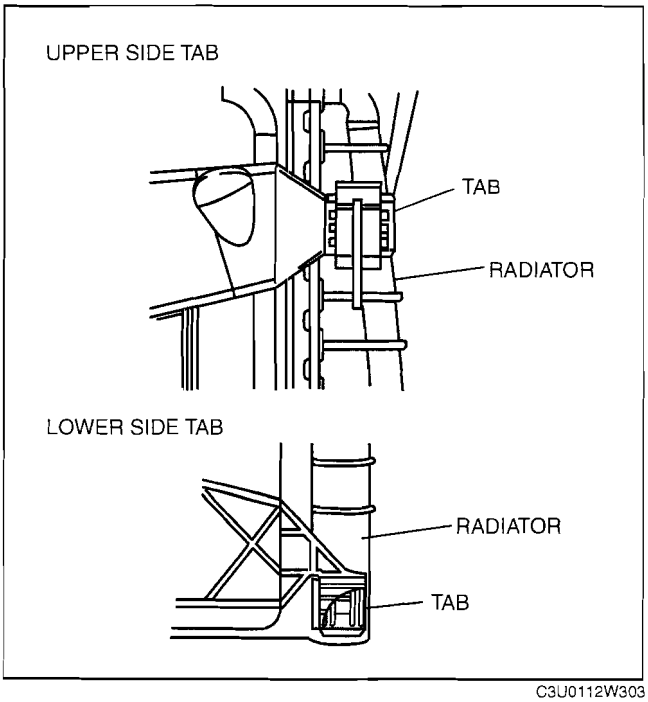
1. Install the condenser to the radiator by aligning lower side tabs b with the radiator side tabs, install upper tabs b, then install lower side tabs b.
2. Install the radiator.



B3E0112W023

Cooling Fan Component Installation Note

1. Insert tabs a to the radiator to install the cooling fan component.



C3U0112W303

THERMOSTAT REMOVAL/INSTALLATION[LF, L3]

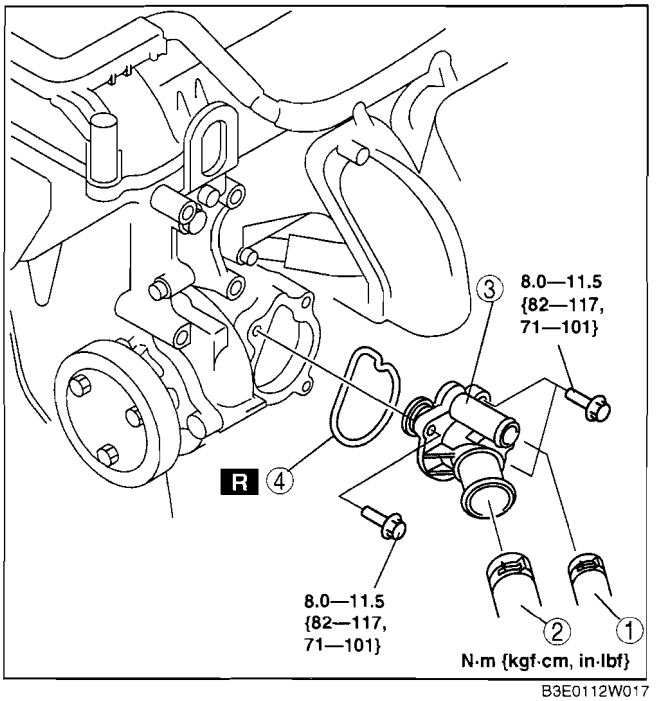
id0112c2801200

Warning

- **Remove and install all parts when the engine is cold, otherwise they can cause severe burns or serious injury.**

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the under cover and splash shield as a single unit.
4. Drain the engine coolant. (See 01-12A-3 ENGINE COOLANT REPLACEMENT[LF, L3].)
5. Position the coolant reserve tank out of the way.
6. Remove the plug hole plate. (See 01-10A-3 PLUG HOLE PLATE REMOVAL/INSTALLATION[LF, L3].)
7. Position the drive belt out of the way. (See 01-10A-4 DRIVE BELT REPLACEMENT[LF, L3].)
8. Remove the drive belt tensioner. (See 01-10A-12 TIMING CHAIN REMOVAL/INSTALLATION[LF, L3].)
9. Remove in the order indicated in the table.
10. Install in the reverse order of removal.
11. Add engine coolant. (See 01-12A-3 ENGINE COOLANT REPLACEMENT[LF, L3].)
12. Inspect for engine coolant leakage. (See 01-12A-4 ENGINE COOLANT LEAKAGE INSPECTION[LF, L3].)

1	Water hose
2	Lower radiator hose
3	Thermostat component
4	Gasket



B3E0112W017

THERMOSTAT INSPECTION[LF, L3]

id0112c2801300

1. Inspect the thermostat for the following.

Warning

- **During inspection, the thermostat and water are extremely hot and can cause severe burns. Do not touch the thermostat and water.**

- The valve should not open under normal temperature.
- Opening temperature and valve lift
  — If there is a malfunction, replace the thermostat.

Item		Specification
Initial-opening temperature	(°C {°F})	80—84 {176—183}
Full-open temperature	(°C {°F})	97 {207}
Full-open lift	(mm {in})	8.0 {0.31} or more

WATER PUMP REMOVAL/INSTALLATION[LF, L3]

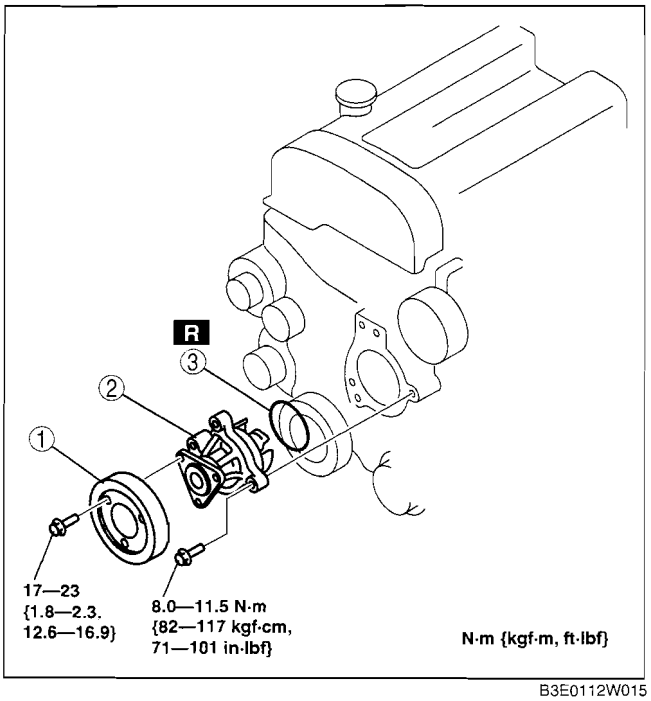
id0112c2800700

Warning

- **Remove and install all parts when the engine is cold, otherwise they can cause severe burns or serious injury.**

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the under cover and splash shield as a single unit.
4. Drain the engine coolant. (See 01-12A-3 ENGINE COOLANT REPLACEMENT[LF, L3].)
5. Position the coolant reserve tank out of the way.
6. Remove the plug hole plate. (See 01-10A-3 PLUG HOLE PLATE REMOVAL/INSTALLATION[LF, L3].)
7. Loosen the water pump pulley bolt and position the drive belt out of the way. (See 01-10A-4 DRIVE BELT REPLACEMENT[LF, L3].)
8. Remove in the order indicated in the table.
9. Install in the reverse order of removal.
10. Add engine coolant. (See 01-12A-3 ENGINE COOLANT REPLACEMENT[LF, L3].)
11. Inspect for engine coolant leakage. (See 01-12A-4 ENGINE COOLANT LEAKAGE INSPECTION[LF, L3].)

1	Water pump pulley
2	Water pump
3	O-ring



B3E0112W015

COOLING FAN MOTOR COMPONENT INSPECTION[LF, L3]

id0112c2802000

1. Perform the cooling fan control system inspection. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].)
   - If the cooling fan control does not operate properly, inspect the following.
     - — ECT sensor
     - — A/C switch
     - — A/C refrigerant pressure switch (High/low pressure)
     - — A/C refrigerant pressure switch (Middle pressure)
     - — VSS
     - — A/C magnetic clutch
     - — Fan control module power supply circuit
     - — Fan control module ground circuit
     - — Fan control signal circuit (between fan control module terminal B and PCM terminal 1Y*1, 1W*2, 1R*3)
       - If the all items are normal, replace the cooling fan component.

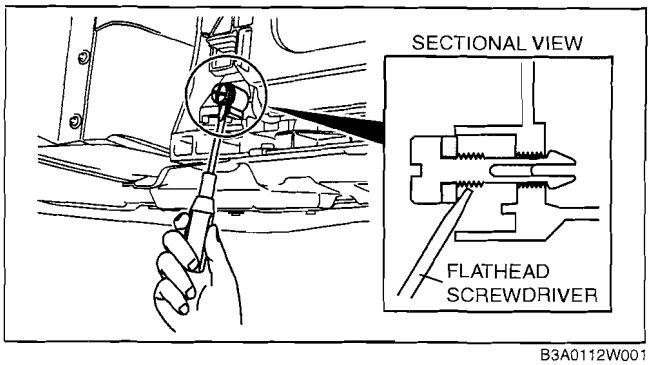
*1 : California emission regulation applicable model
*2 : Except for California emission regulation applicable model with LF ATX
*3 : Except for California emission regulation applicable model with LF MTX, L3

RADIATOR DRAIN PLUG REPLACEMENT[LF, L3]

id0112c2802100

1. Drain the engine coolant. (See 01-12A-3 ENGINE COOLANT REPLACEMENT[LF, L3].)
2. Loosen the radiator drain plug completely.
3. Using a flathead screwdriver or equivalent, pry out the radiator drain plug.

Caution
- **Do not apply excessive force to the flathead screwdriver or equivalent as doing so can damage the drain bore. Slowly and carefully pry out the radiator drain plug when removing it.**



B3A0112W001

4. Install a new radiator drain plug with a new O-ring.

Tightening torque
1.2—1.5 N·m {13—15 kgf·cm, 11—13 in·lbf}

5. Add engine coolant. (See 01-12A-3 ENGINE COOLANT REPLACEMENT[LF, L3].)

7	Cooling fan motor component (See 01-12B-12 COOLING FAN MOTOR COMPONENT INSPECTION[L3 WITH TC].)

COOLING SYSTEM SERVICE WARNINGS[L3 WITH TC]

id011239800200

Warning

- **Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.**
- **Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise 2.5 turns. Step back while the pressure escapes.**
- **When you are sure all the pressure is gone, turn the cap using the cloth, and remove it.**
- **Depending on the vehicle, the cooling fan may operate suddenly even when the ignition switch is turned off. Therefore, keep hands and tools away from the cooling fan even if the cooling fan is not operating to prevent injury to personnel or damage to the cooling fan. Always disconnect the negative battery cable when servicing the cooling fan or parts near the cooling fan.**

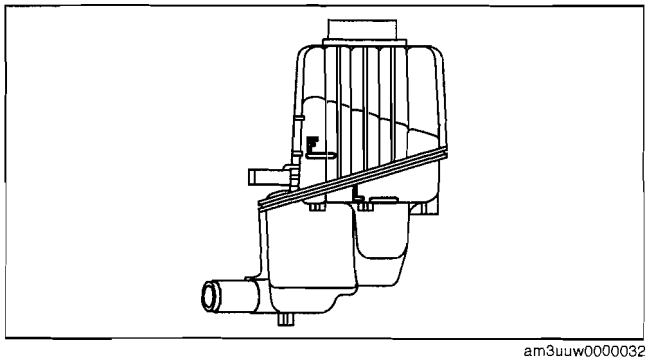
ENGINE COOLANT LEVEL INSPECTION[L3 WITH TC]

id011239800300

Warning

- **Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.**
- **Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise 2.5 turns. Step back while the pressure escapes.**
- **When you are sure all the pressure is gone, turn the cap using the cloth, and remove it.**

1. Verify that the engine coolant level in the coolant reserve tank is between the F and L marks.
   - If the engine coolant level is below the L mark, add engine coolant.



am3uuw0000032

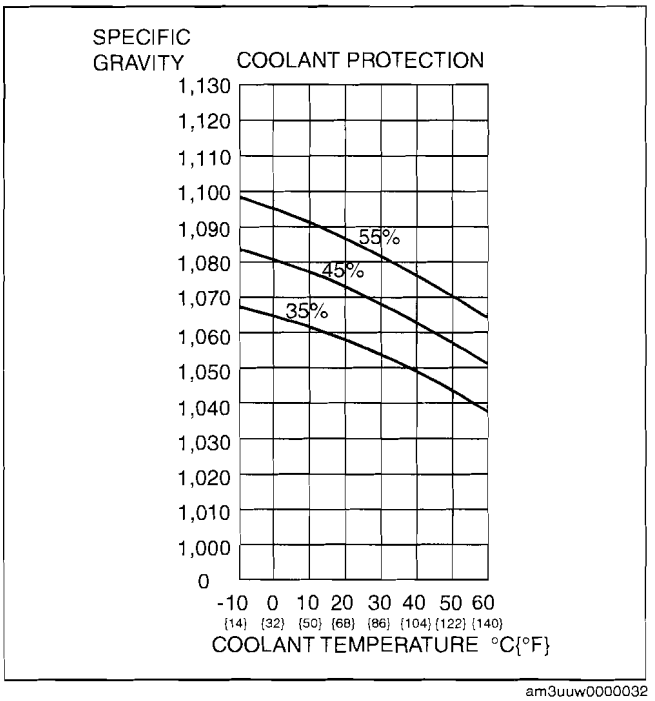
ENGINE COOLANT PROTECTION INSPECTION[L3 WITH TC]

id011239800400

1. Measure the engine coolant temperature and specific gravity using a thermometer and a hydrometer.

Caution
- **Use engine coolant at a concentration that meets the environmental conditions in which the vehicle is driven, otherwise engine damage could occur.**
- **The engine has aluminum parts and must be protected by an ethylene-glycol-based coolant to prevent corrosion and freezing.**
- **Do not use coolants containing Alcohol, Methanol, Borate or Silicate. These coolants could damage the cooling system.**
- **Use only soft (demineralized) water in the coolant mixture. Water that contains minerals will cut down on the coolant's effectiveness.**
- **Engine coolant damages paint. If engine coolant does get on a painted surface, rinse it off quickly.**

2. Determine the engine coolant protection level by referring to the graph shown in the figure.
   - If the engine coolant protection level is not correct, add water or engine coolant.



am3uuw0000032

ENGINE COOLANT REPLACEMENT[L3 WITH TC]

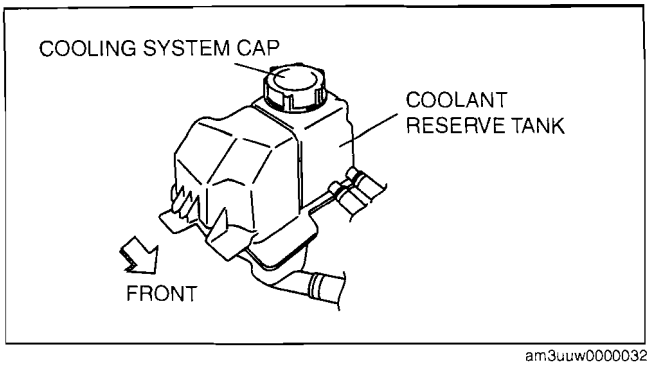
id011239800600

Warning
- **Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.**
- **Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise 2.5 turns. Step back while the pressure escapes.**
- **When you are sure all the pressure is gone, turn the cap using the cloth, and remove it.**

Caution
- **Use engine coolant at a concentration that meets the environmental conditions in which the vehicle is driven, otherwise engine damage could occur.**
- **The engine has aluminum parts and must be protected by an ethylene-glycol-based coolant to prevent corrosion and freezing.**
- **Do not use coolants containing Alcohol, Methanol, Borate or Silicate. These coolants could damage the cooling system.**
- **Use only soft (demineralized) water in the coolant mixture. Water that contains minerals will cut down on the coolant's effectiveness.**
- **Engine coolant damages paint. If engine coolant does get on a painted surface, rinse it off quickly.**

Engine coolant capacity (approx. quantity)
7.5 L {7.9 US qt, 6.6 Imp qt}

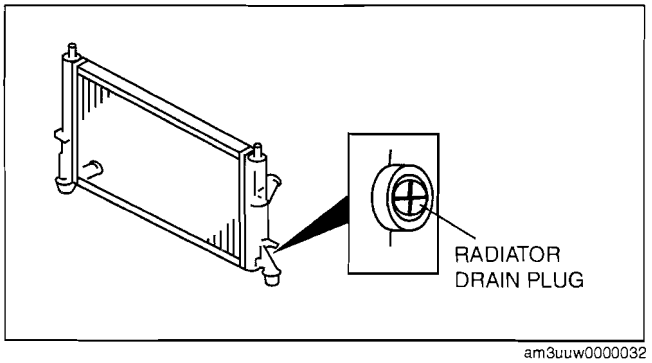
1. Remove the cooling system cap.
2. Remove the under cover.



am3uuw0000032

3. Loosen the radiator drain plug and drain the engine coolant into a container.
4. Flush the cooling system with water until all traces of color are gone.
5. Let the system drain completely.
6. Tighten the radiator drain plug.

Tightening torque
1.2—1.5 N·m {13—15 kgf·cm, 11—13 in·lbf}



am3uuw0000032

7. Referring to the following chart, select the correct volume percentage of the water and engine coolant.

Antifreeze solution mixture percentage

Engine coolant protection	Volume percentage (%)		Gravity at 20 °C {68 °F}
	Water	Coolant	
Above -16 °C {3 °F}	65	35	1.057
Above -26 °C {-15 °F}	55	45	1.072
Above -40 °C {-40 °F}	45	55	1.086

8. Refill the engine coolant into the coolant reserve tank up to the F mark on the tank.
9. Fully install the cooling system cap.

Caution
- **If the water temperature gauge rises too high, stop the engine and decrease the engine coolant temperature to prevent overheating. Then, verify the malfunctioning part and repair or replace it.**
- **If the engine coolant level in the coolant reserve tank is below the L mark during engine coolant air bleeding operation, stop the engine, and after the engine coolant temperature decreases, add engine coolant. Then, resume the engine coolant air bleeding operation.**

10. Start the engine and idle it until the thermometer indicator is in the center when the engine is at **below 1,500 rpm**.
11. Bleed the air by following the procedures below. At this time, be careful of the coolant temperature to prevent overheating.

Note
- If the accelerator pedal is depressed continuously for a specified time, the engine speed may decrease to the idle speed. This is due to the fuel cut control operation, which prevents overheating, and it does not indicate a malfunction.

(1) Run the engine at **2,500 rpm** for **2—3 min**, **2 times**.
(2) Run the engine at **3,000 rpm** for **5 s**, then idle.
(3) Repeat steps (1), (2) twice.

12. Stop the engine, and inspect the coolant level after the coolant temperature decreases (water temperature gauge indicates 'C' or less).
13. Check the coolant level.
    - If it is low, refill the coolant into the coolant reserve tank up to the F mark on the tank.
14. Inspect for engine coolant leakage. (See 01-12B-6 ENGINE COOLANT LEAKAGE INSPECTION[L3 WITH TC].)
15. Install the under cover.

ENGINE COOLANT LEAKAGE INSPECTION[L3 WITH TC]

id011239800500

Warning

- **Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.**
- **Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise 2.5 turns. Step back while the pressure escapes.**
- **When you are sure all the pressure is gone, turn the cap using the cloth, and remove it.**

1. Inspect the engine coolant level. (See 01-12B-3 ENGINE COOLANT LEVEL INSPECTION[L3 WITH TC].)
2. Remove the cooling system cap.
3. Install the **SST** or aftermarket equivalent and a radiator cap tester to the coolant reserve tank filler port.
4. Apply pressure using the radiator cap tester.

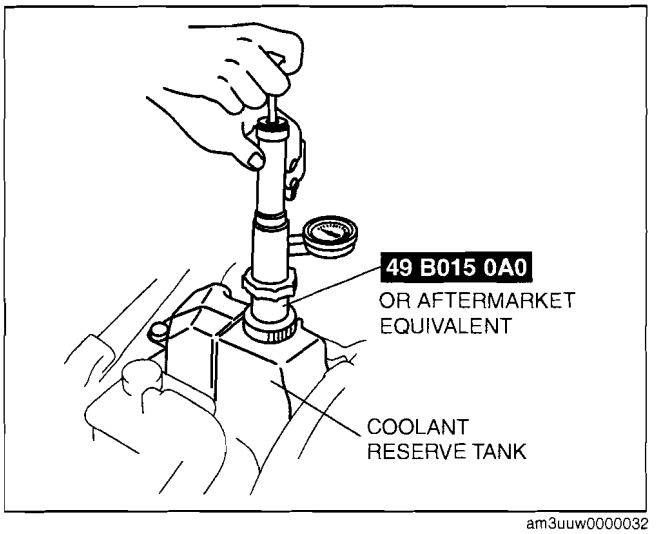
Caution

- **Applying more than 145 kPa {1.5 kgf/cm^2, 21 psi} can damage the hoses, fittings, and other components, and cause leakage.**

Pressure

145 kPa {1.5 kgf/cm^2, 21 psi} [1 min]

5. When pressurizing the cooling system, verify that the pressure is maintained.
   - If the gauge needle drops, it may indicate water leakage. Repair or replace the applicable part.



am3uuw0000032

COOLING SYSTEM CAP INSPECTION[L3 WITH TC]

id011239801500

Warning

- **Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.**
- **Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise 2.5 turns. Step back while the pressure escapes.**
- **When you are sure all the pressure is gone, turn the cap using the cloth, and remove it.**

1. Clean the cooling system cap and the sealed part.
2. Inspect the cooling system cap for cracks or everted seal.
   - If there is any malfunction, replace the cooling system cap.
3. Attach the cooling system cap to the **SST** and a radiator cap tester.
4. Hold the cooling system cap downward and apply pressure gradually. Verify that the pressure is held stable for **10 s.**
   - If the pressure is not held stable, replace the cooling system cap.

Cooling system cap valve opening pressure

1 Inspect the thermostat for the following.

Warning
- **During inspection, the thermostat and water are extremely hot and can cause severe burns. Do not touch the thermostat and water.**

- The valve should not open under normal temperature.
- Opening temperature and valve lift
  — If there is a malfunction, replace the thermostat.

Thermostat initial-opening temperature
80—84 °C {176—183 °F}

Thermostat full-open temperature
97 °C {207 °F}

Thermostat full-open lift
More than 8.0 mm {0.31 in}

WATER PUMP REMOVAL/INSTALLATION[L3 WITH TC]

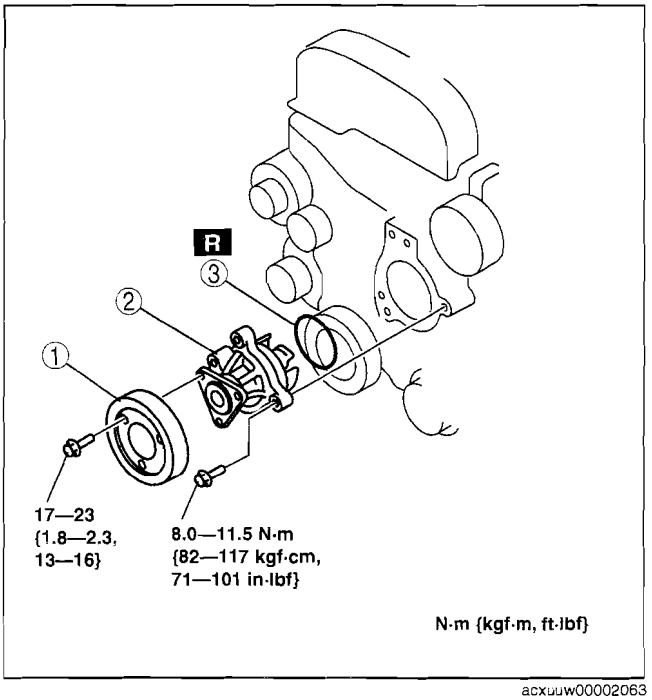
id011239800700

Warning

- **Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.**
- **Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise 2.5 turns. Step back while the pressure escapes.**
- **When you are sure all the pressure is gone, turn the cap using the cloth, and remove it.**

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Remove the under cover and splash shield as a single unit.
4. Drain the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT[L3 WITH TC].)
5. Remove the charge air cooler cover. (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
6. Loosen the water pump pulley bolts before removing the drive belt.
7. Remove the drive belt. (See 01-10B-3 DRIVE BELT REMOVAL/INSTALLATION[L3 WITH TC].)
8. Remove the P/S oil pump with hose and pipe still connected. Position the P/S oil pump out of the way. (See 06-14-23 POWER STEERING OIL PUMP REMOVAL/INSTALLATION[L3 WITH TC].)
9. Remove in the order indicated in the table.
10. Install in the reverse order of removal.
11. Refill the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT[L3 WITH TC].)
12. Inspect for engine coolant leakage. (See 01-12B-6 ENGINE COOLANT LEAKAGE INSPECTION[L3 WITH TC].).

1	Water pump pulley
2	Water pump
3	O-ring (See 01-12B-12 O-ring Installation Note.)



acxbuw00002063

O-ring Installation Note

1. Apply engine coolant to a new O-ring.
2. Install the O-ring.

COOLING FAN MOTOR COMPONENT INSPECTION[L3 WITH TC]

id011239802000

1. Perform the cooling fan control system inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].)
   - If the cooling fan control does not operate properly, inspect the following.
     - — ECT sensor
     - — A/C switch
     - — A/C refrigerant pressure switch (High/low pressure)
     - — A/C refrigerant pressure switch (Middle pressure)
     - — VSS
     - — A/C magnetic clutch
     - — Fan control module power supply circuit
     - — Fan control module ground circuit
     - — Fan control signal circuit (between fan control module terminal B and PCM terminal 1AE)
       - If the all items are normal, replace the cooling fan component.

RADIATOR DRAIN PLUG REPLACEMENT[L3 WITH TC]

id011239802100

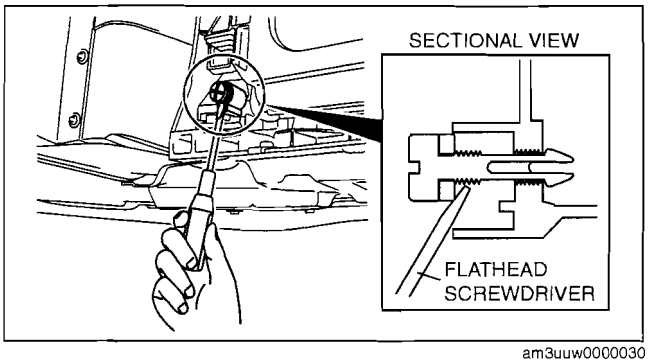
Warning

- **Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.**
- **Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise 2.5 turns. Step back while the pressure escapes.**
- **When you are sure all the pressure is gone, turn the cap using the cloth, and remove it.**

1. Remove the under cover.
2. Drain the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT[L3 WITH TC].)
3. Loosen the radiator drain plug completely.
4. Using a flathead screwdriver or equivalent, pry out the radiator drain plug.

Caution

- **Do not apply excessive force to the flathead screwdriver or equivalent as doing so can damage the drain bore. Slowly and carefully pry out the radiator drain plug when removing it.**



am3uuw0000030

5. Install a new radiator drain plug with a new O-ring.

Tightening torque
1.2—1.5 N·m {13—15 kgf·cm, 11—13 in·lbf}

6. Refill the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT[L3 WITH TC].)
7. Inspect for engine coolant leakage. (See 01-12B-6 ENGINE COOLANT LEAKAGE INSPECTION[L3 WITH TC].)
8. Install the under cover.

01-13A INTAKE-AIR SYSTEM [LF, L3]

INTAKE AIR SYSTEM LOCATION INDEX[LF, L3]

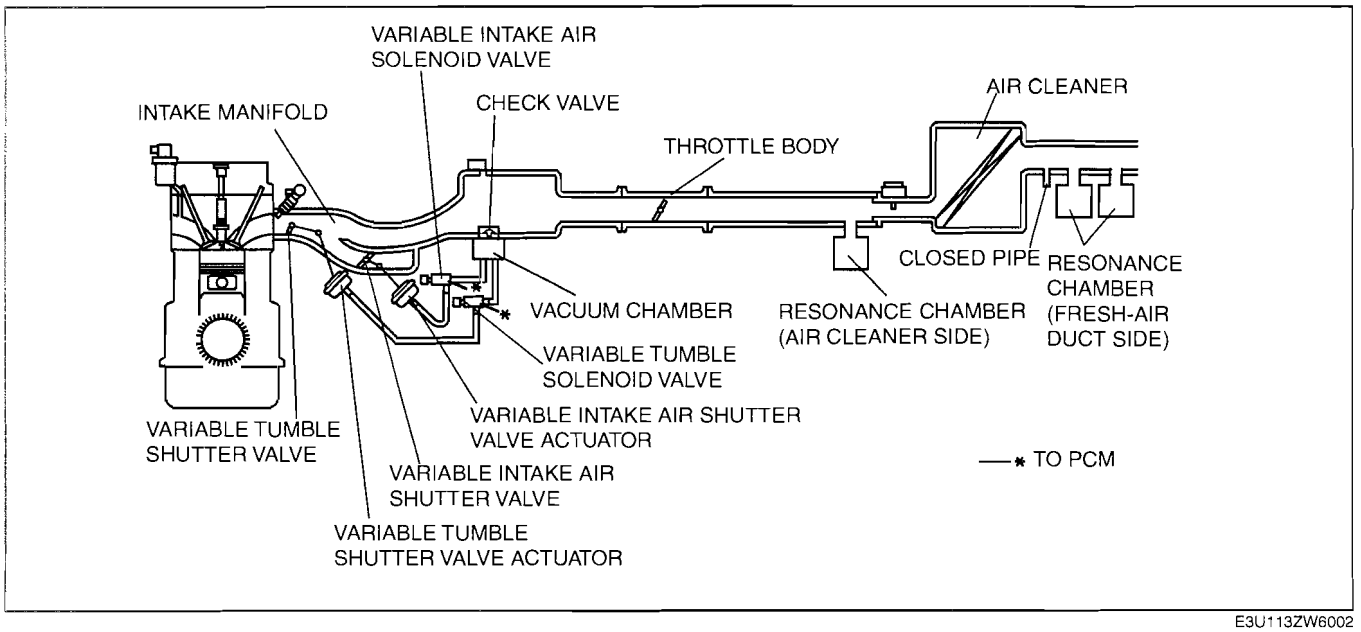
id0113a5804000



E3U113ZW6002

INTAKE AIR SYSTEM MANIFOLD VACUUM INSPECTION[LF, L3]

id0113a5804200

1. Verify that the intake air hoses are installed securely.
2. Warm up the engine.
3. Disconnect the vacuum hose connecting the intake manifold and the purge solenoid valve (purge solenoid vaive side) and install the vacuum gauge. (See 01-16A-12 PURGE SOLENOID VALVE REMOVAL/ INSTALLATION[LF, L3].)
4. Measure the intake manifold vacuum while idling (no load) using the vacuum gauge.
   - If not within the specification, perform the following inspections.
     — Accelerator cable play
     — Compression pressure (See 01-10A-11 COMPRESSION INSPECTION[LF, L3].)
     — Air suction (installation areas of throttle body, fuel injector, PCV valve, intake manifold)

Note
- If any air suction exists, the change in engine speed can be made apparent by spraying the penetrant lubricating spray on the applicable part.

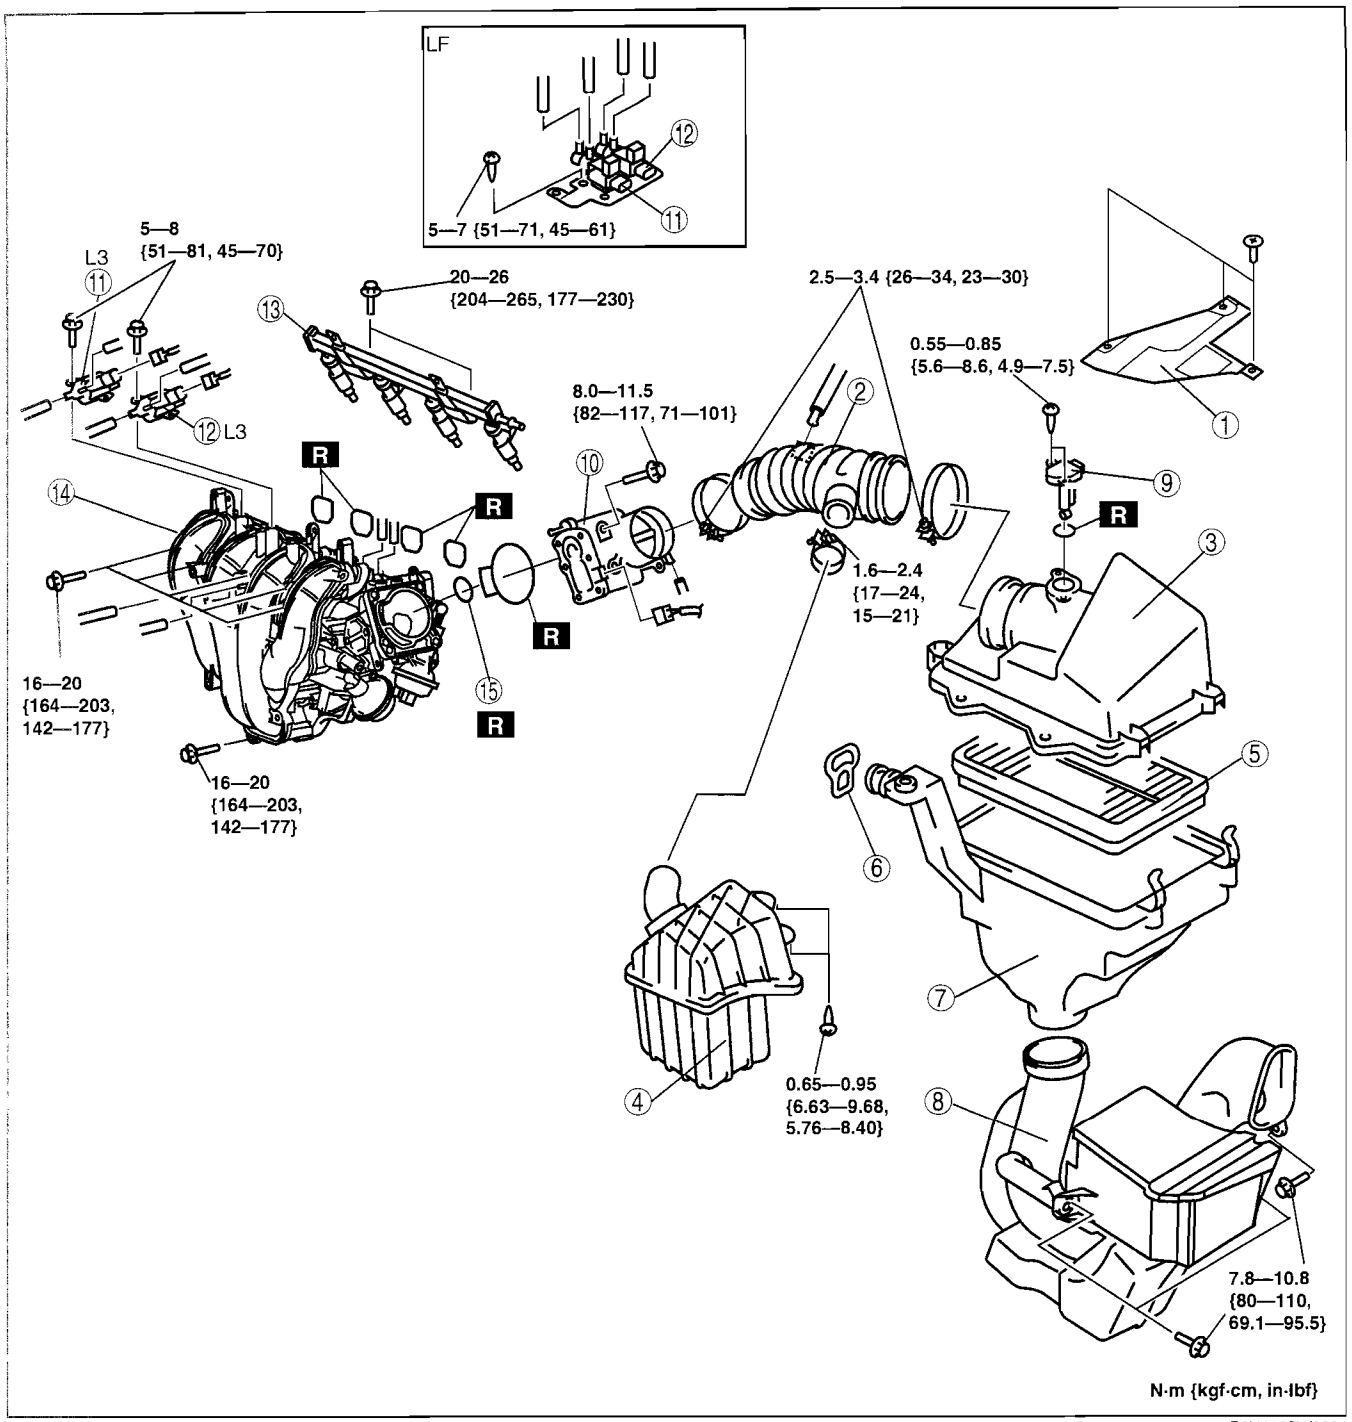
Standard
LF ATX: –55.0 kPa {–413 mmHg, –16.3 inHg} or more
LF MTX: –57.0 kPa {–428 mmHg, –16.9 inHg} or more
L3 ATX: –57.0 kPa {–428 mmHg, –16.9 inHg} or more
L3 MTX: –60.0 kPa {–451 mmHg, –17.8 inHg} or more

INTAKE AIR SYSTEM REMOVAL/INSTALLATION[LF, L3]

id0113a5800400

Warning
- **A hot engine and intake air system can cause severe burns. Turn off the engine and wait until they are cool before removing the intake air system.**
- **Fuel line spills and leakage from the pressurized fuel system are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure", while referring to the "BEFORE SERVICE PRECAUTION". (See 01-14A-4 BEFORE SERVICE PRECAUTION[LF, L3].)**

1. Remove the plug hole plate. (See 01-10A-3 PLUG HOLE PLATE REMOVAL/INSTALLATION[LF, L3].)
2. Remove the battery cover and battery duct. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
3. Remove the under cover.
4. Disconnect the negative battery cable.
5. Remove in the order indicated in the table.
6. Install in the reverse order of removal.
7. Complete the "AFTER SERVICE PRECAUTION". (See 01-14A-5 AFTER SERVICE PRECAUTION[LF, L3].)



E3U113ZW6004

1	Intake air cover
2	Air hose (See 01-13A-6 Air Hose Installation Note.)
3	Air cleaner cover
4	Resonance chamber (Air cleaner side)
5	Air cleaner element
6	Strap (See 01-13A-6 Strap Installation Note.)
7	Air cleaner case (See 01-13A-6 Air Cleaner Case Installation Note.)
8	Fresh-air duct (See 01-13A-6 Fresh-air Duct Removal Note.)

9	MAF/IAT sensor
10	Throttle body (See 01-13A-6 Throttle Body Removal Note.)

12	Variable tumble solenoid valve
13	Fuel distributor (See 01-14A-25 FUEL INJECTOR REMOVAL/ INSTALLATION[LF, L3].)
14	Intake manifold (See 01-13A-6 Intake Manifold Removal Note.)
15	EGR pipe gasket

Fresh-air Duct Removal Note

1. Remove the front bumper before removing the fresh-air duct. (See 09-10-8 FRONT BUMPER REMOVAL/INSTALLATION.)

Throttle Body Removal Note

1. Drain the engine coolant. (See 01-12A-3 ENGINE COOLANT REPLACEMENT[LF, L3].)

Intake Manifold Removal Note

1. Disconnect the vacuum hose connecting the intake manifold. (See 01-16A-12 PURGE SOLENOID VALVE REMOVAL/INSTALLATION[LF, L3].)
2. Remove the dipstick pipe. (See 01-11A-5 OIL PAN REMOVAL/INSTALLATION[LF, L3].)

Air Cleaner Case Installation Note

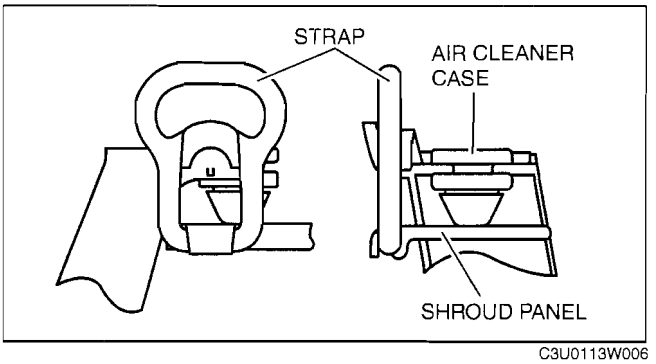
Note

- Before installing the air cleaner case, verify that the rubber mounts on the battery support bracket have not fallen off.
- When inserting the air cleaner case into the rubber mounts, applying soapy water aids the operation.

1. Verify that two rubber mounts are installed on the battery support bracket.
2. Install the air cleaner case into the rubber mounts.

Strap Installation Note

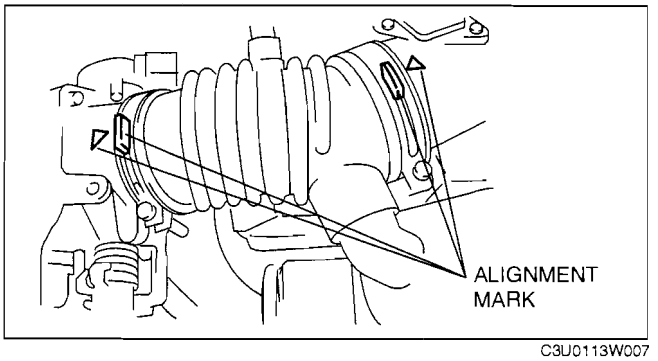
1. Using the strap, secure the shroud panel and the air cleaner case as shown in the figure.



C3U0113W006

Air Hose Installation Note

1. Align the alignment marks on the throttle body and the air hose.



C3U0113W007

AIR CLEANER ELEMENT INSPECTION[LF, L3]

id0113a5800800

1. Remove the air cleaner element. (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[LF, L3].) (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[LF, L3].)
2. Inspect the following items:
   - If there is any abnormality, clean or replace the air cleaner element.
     - — Has the replacement interval come?
     - — Is the air cleaner element soiled, damaged, or bent?
     - — Are the air cleaner case and the air cleaner element correctly sealed?
     - — Is the correct air cleaner element installed?

THROTTLE BODY INSPECTION[LF, L3]

id0113a5802600

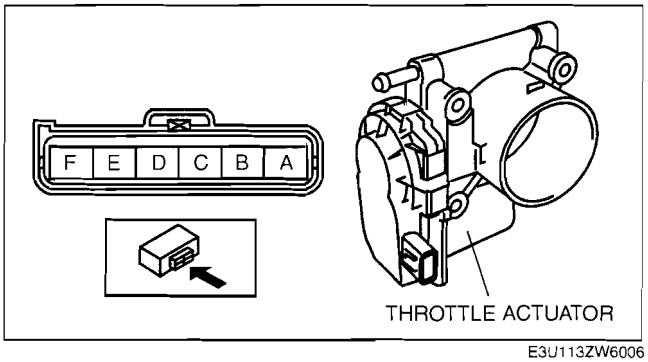
Note
- Perform the following inspection only when directed.

Resistance Inspection

1. Disconnect the negative battery cable.
2. Disconnect the throttle body connector.
3. Measure the resistance between throttle actuator terminals E and F.
   - If not as specified, replace the throttle body. (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[LF, L3].) (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[LF, L3].)
   - If as specified, carry out the "Circuit Open/Short Inspection".

Specification

Ambient temperature (°C {°F})	Resistance (ohm)
Approx. 20 {68}	0.3—100



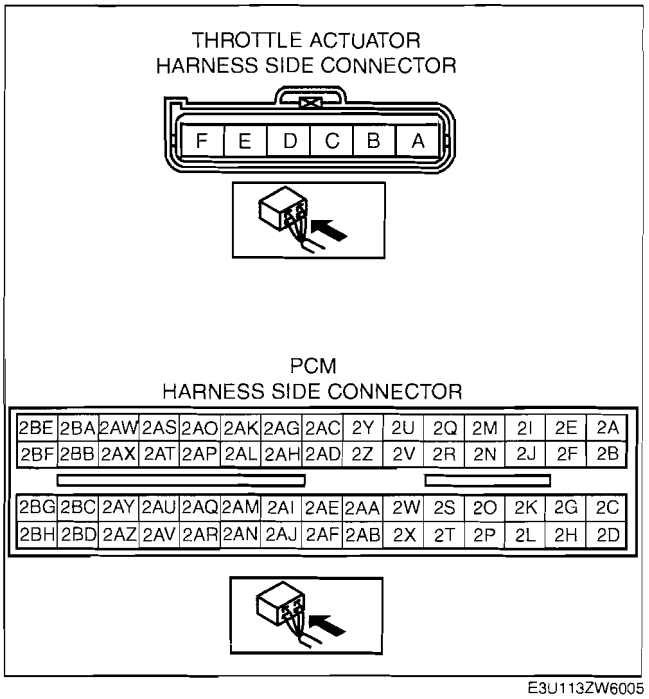
E3U113ZW6006

Circuit Open/Short Inspection

1. Disconnect the PCM connector. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
2. Inspect the following wiring harnesses for open or short (continuity check).

Open circuit
- If there is no continuity, the circuit is open. Repair or replace the wiring harness.
  - — Throttle actuator terminal F and PCM terminal 2A
  - — Throttle actuator terminal E and PCM terminal 2B

Short circuit
- If there is continuity, the circuit is shorted. Repair or replace the wiring harness.
  - — Throttle actuator terminal F and power supply
  - — Throttle actuator terminal F and ground
  - — Throttle actuator terminal E and power supply
  - — Throttle actuator terminal E and ground



E3U113ZW6005

VARIABLE INTAKE AIR SOLENOID VALVE INSPECTION[LF, L3]

id0113a5802800

1. Remove the variable intake air solenoid valve. (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[LF, L3].)
2. Inspect airflow between the ports under the following conditions.
   - If not as specified, replace the variable intake air solenoid valve.
   - If as specified, carry out the "Circuit Open/Short Inspection".

○—○ : Continuity ○═○ : Airflow

Step	Terminal		Port		
	A	B	A	B	C
1	○—○			○═○	
2	B+	GND	○═○

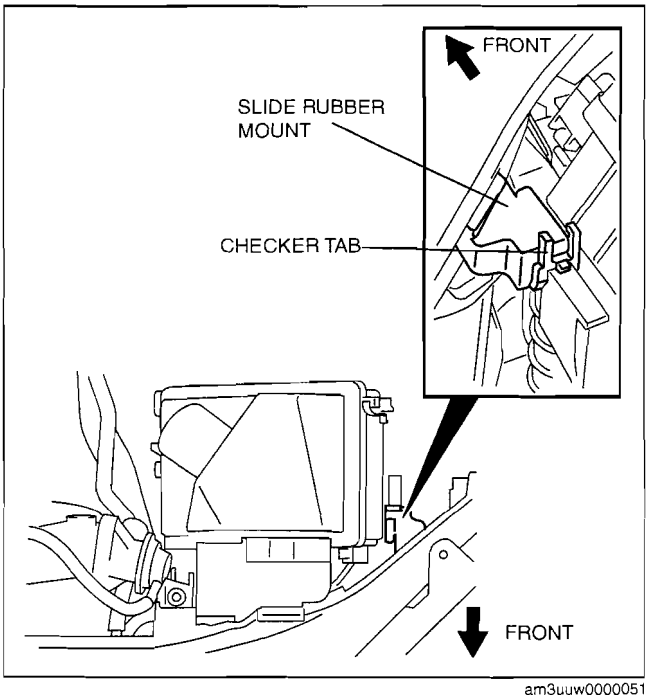
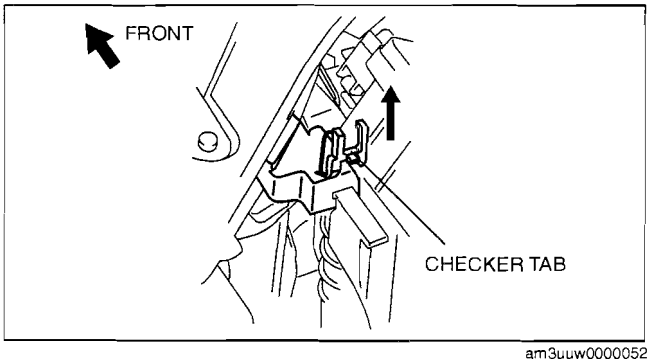
Air Cleaner Removal Note

1. Remove the slide rubber mount shown in the figure in the following procedure:



am3uuw0000051

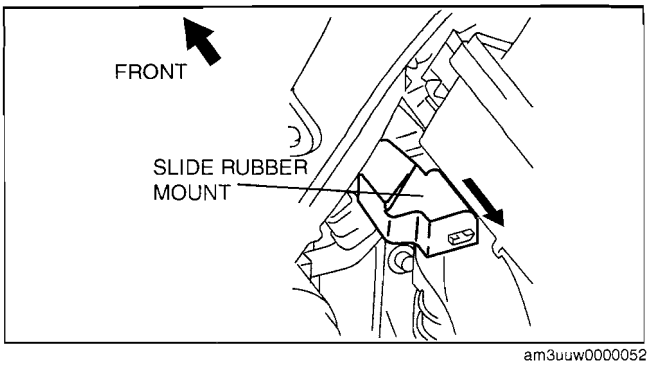
(1) Pull out the checker tab shown in the figure.



am3uuw0000052

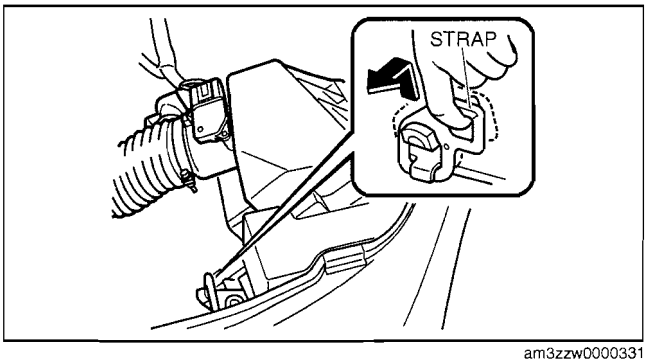
(2) Slide the slide rubber mount in the direction shown by the arrow while pulling up the rubber.

2. Remove the air cleaner.



am3uuw0000052

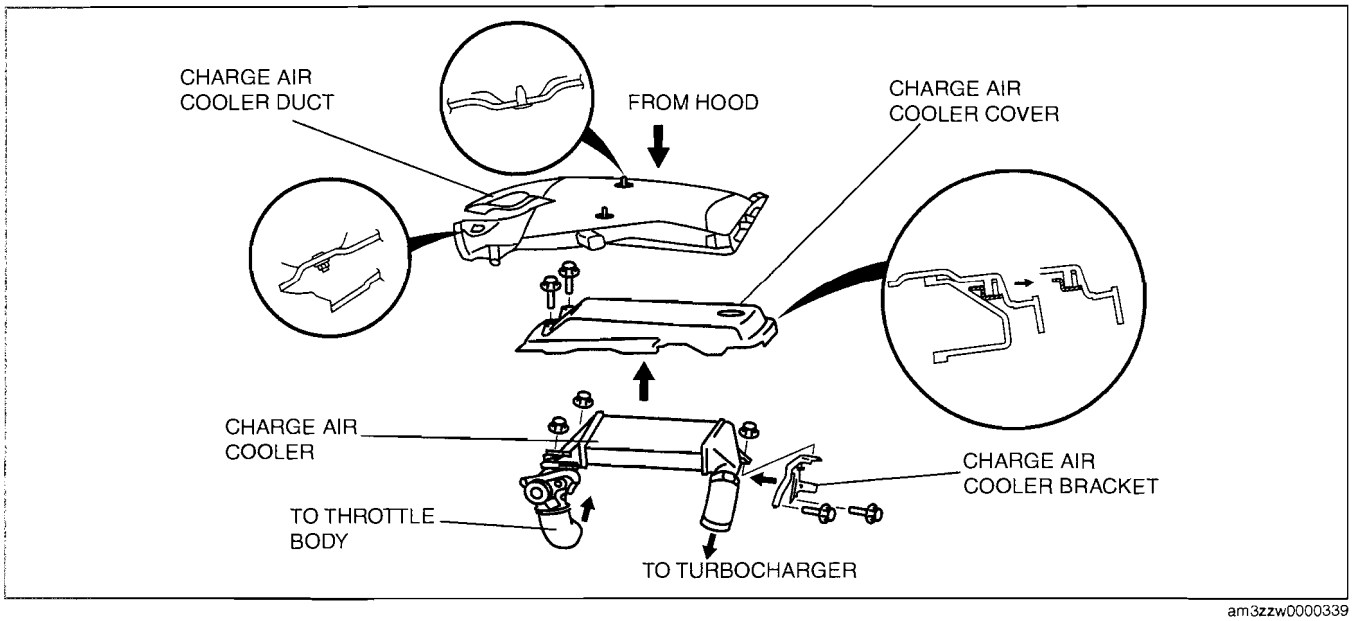
3. Remove the strap shown in the figure.



am3zzw0000331

Charge Air Cooler Removal Note

1. Remove the charge air cooler duct.



am3zzw0000339

2. Remove the charge air cooler cover.
3. Remove the charge air cooler.
4. Remove the charge air cooler bracket.

Air Hose Removal Note

1. Disconnect the variable swirl shutter valve switch connector.
2. Disconnect the fuel injector harness connector.
3. Disconnect the ventilation hose connected to the air hose.
4. Remove the air hose.

Air Duct Removal Note

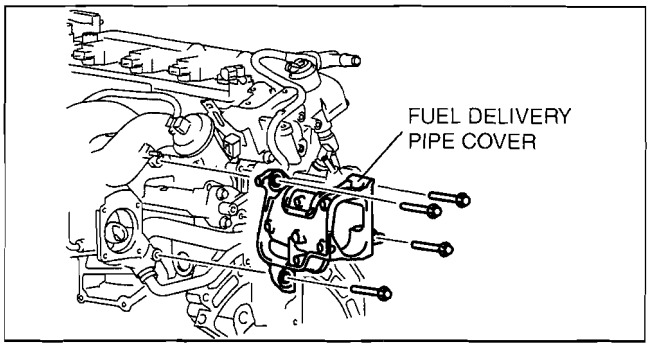
1. Disconnect the wastegate control solenoid valve connector.
2. Disconnect the purge solenoid valve connector.
3. Disconnect the EGR valve connector.
4. Remove the air duct.

Throttle Body Removal Note

1. Disconnect the throttle body connector.
2. Drain the engine coolant before removing the water hose. (See 01-12B-4 ENGINE COOLANT REPLACEMENT[L3 WITH TC].)
3. Remove the throttle body.

Intake Manifold Removal Note

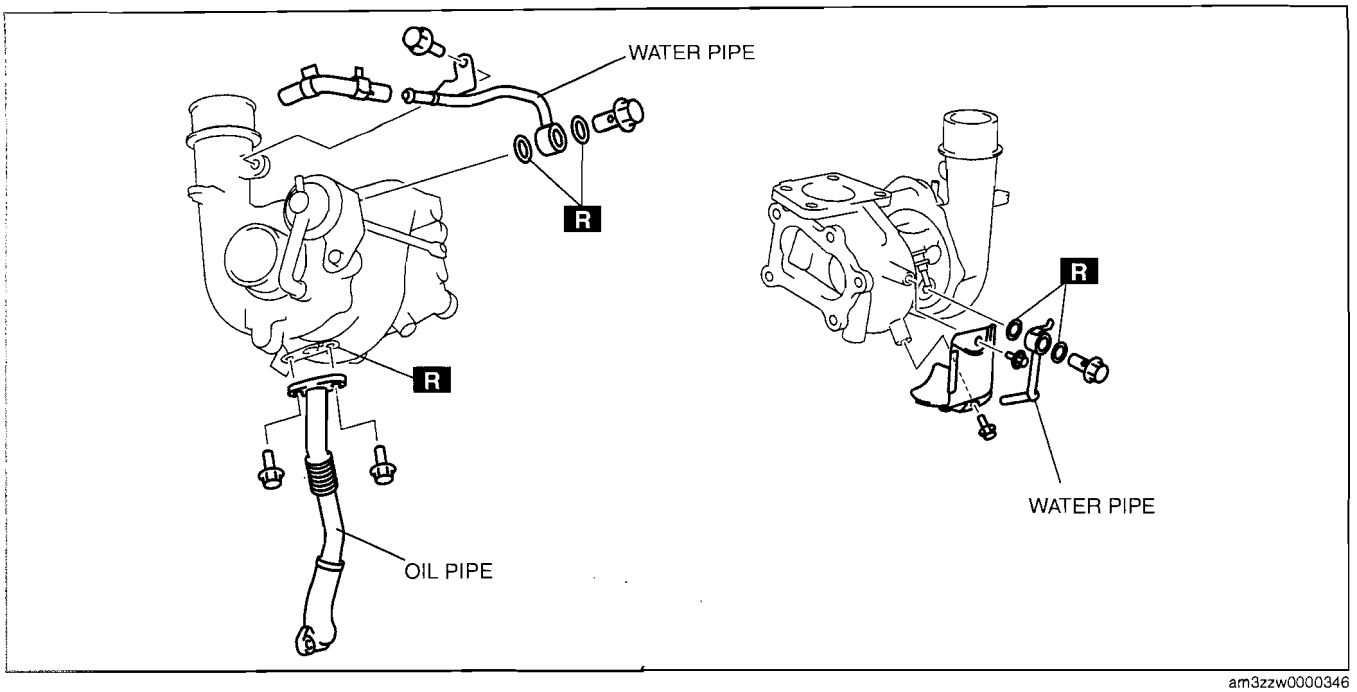
1. Remove the fuel delivery pipe cover.
2. Disconnect the quick connector connected to the intake manifold.
3. Remove the EGR pipe.
4. Disconnect the variable swirl solenoid valve connector.
5. Remove the oil level gauge pipe. (See 01-11B-5 OIL PAN REMOVAL/INSTALLATION[L3 WITH TC].)
6. Remove the drive belt. (See 01-10B-3 DRIVE BELT REMOVAL/INSTALLATION[L3 WITH TC].)
7. Set the power steering oil pump out of the way.
8. Disconnect the fuel pressure sensor connector.
9. Disconnect the brake vacuum hose.
10. Disconnect the MAP sensor connector.
11. Remove the intake manifold installation bolts.
12. Disconnect the evaporative hose connected between the intake manifold and the PCV valve from the intake manifold.
13. Remove the intake manifold.



acxuuw00000206

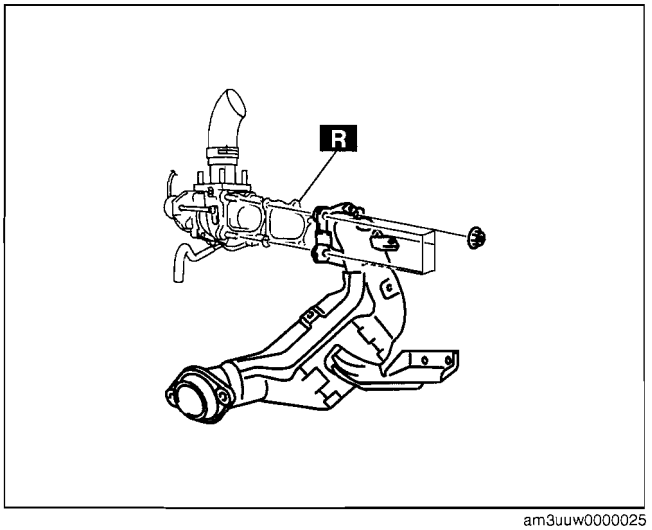
Turbocharger Removal Note

1. Remove the TWC. (See 01-15B-2 EXHAUST SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
2. Disconnect the rear HO2S
3. Remove the insulator (Exhaust manifold upper side). (See 01-15B-2 EXHAUST SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
4. Set the generator duct out of the way. (See 01-17B-6 GENERATOR REMOVAL/INSTALLATION[L3 WITH TC].)
5. Remove the insulator (Exhaust manifold lower side). (See 01-15B-2 EXHAUST SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
6. Remove the insulator (WU-TWC top side). (See 01-15B-2 EXHAUST SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
7. Remove the front HO2S. (See 01-15B-2 EXHAUST SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
8. Remove the WU-TWC. (See 01-15B-2 EXHAUST SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
9. Remove the oil pipe and water pipe.



am3zzw0000346

10. Remove the turbocharger.



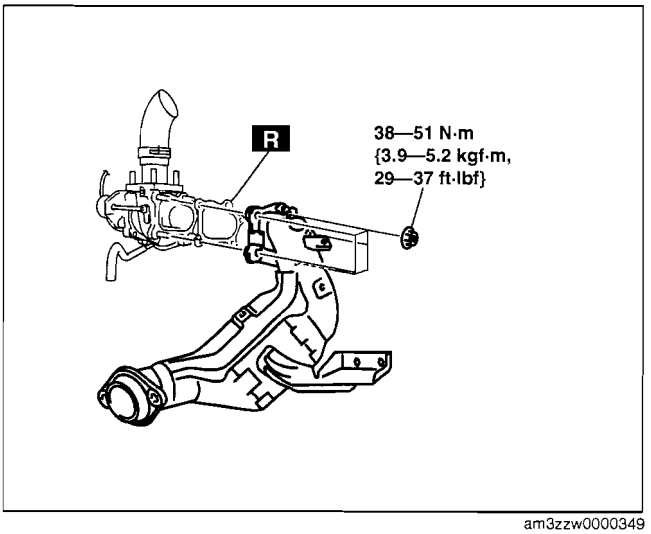
am3uuw0000025

Turbocharger Installation Note

1. Install the turbocharger.

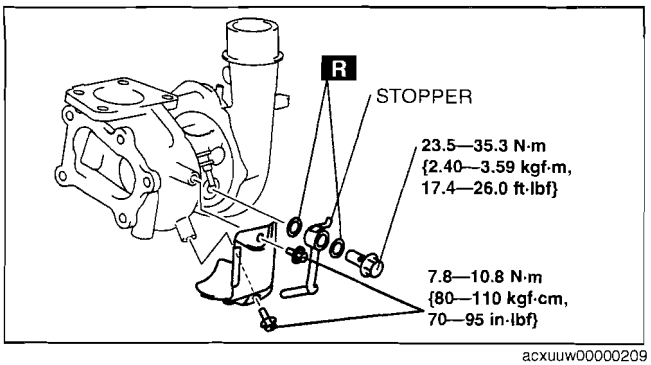
   Tightening torque
   38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}

2. Install the WU-TWC. (See 01-15B-2 EXHAUST SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
3. Install the front HO2S. (See 01-15B-2 EXHAUST SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)



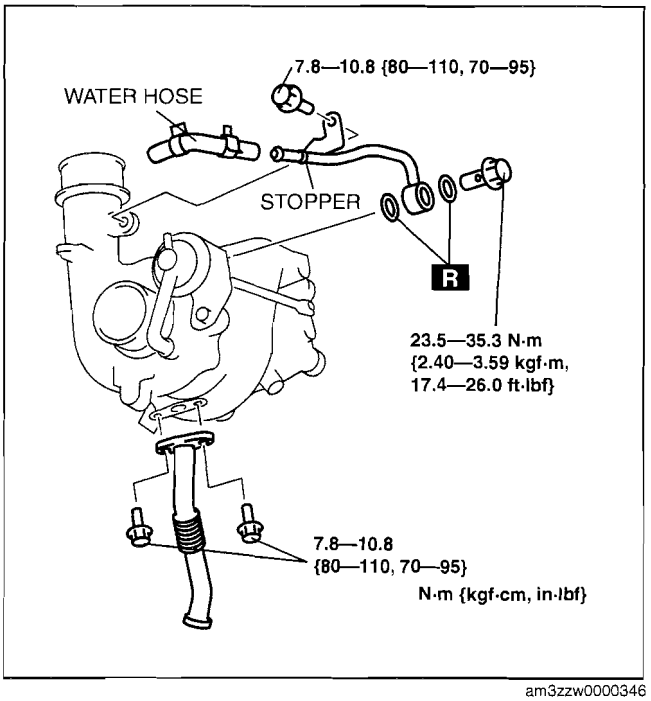
am3zzw0000349

4. Tight the water pipe installation bolt while the stopper of the water pipe is faced to the turbocharger.



acxuuw00000209

5. Install the water pipes and, insert the water hose until it reaches the stopper.

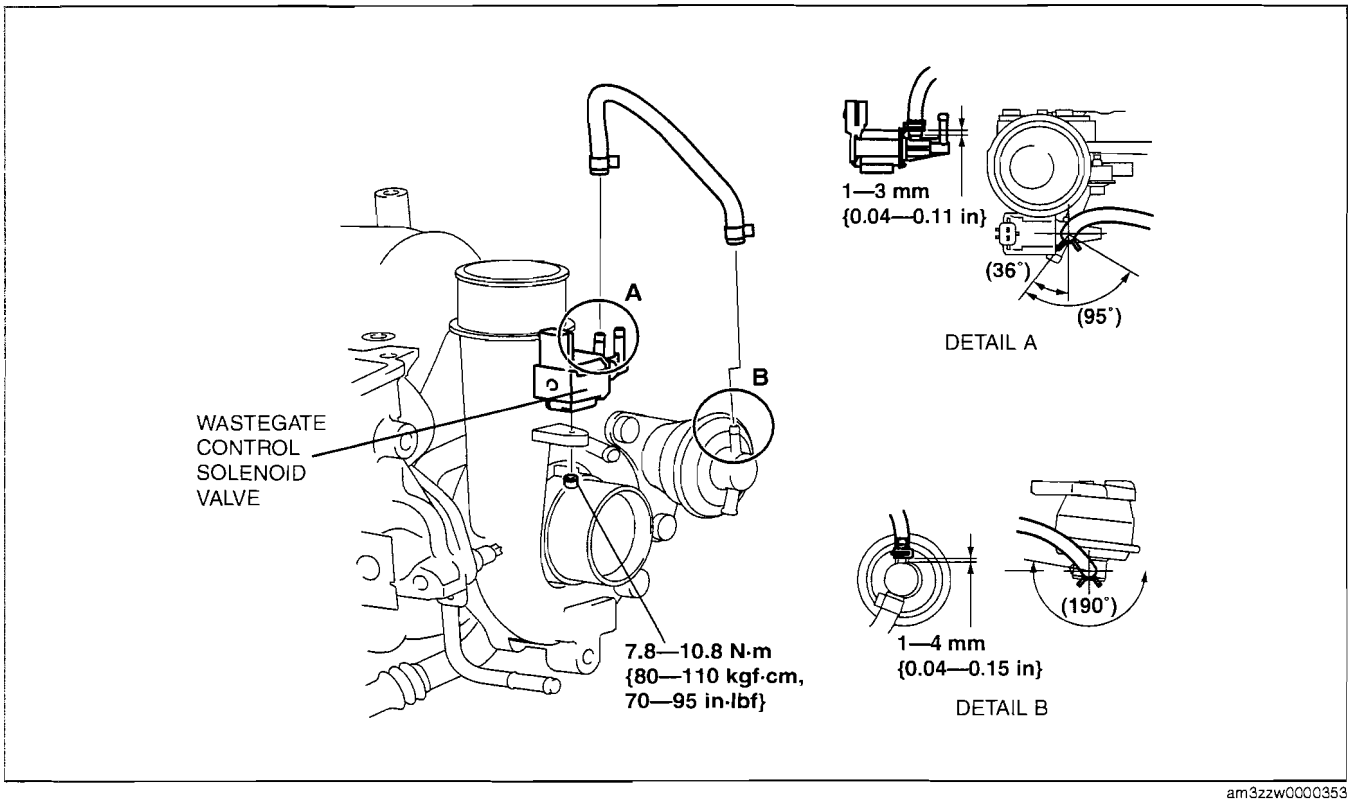


am3zzw0000346

Wastegate Control Solenoid Valve Installation Note

1. Install the wastegate control solenoid valve.

Tightening torque
7.8—10.8 N·m {80—110 kgf·cm, 70—95 in·lbf}



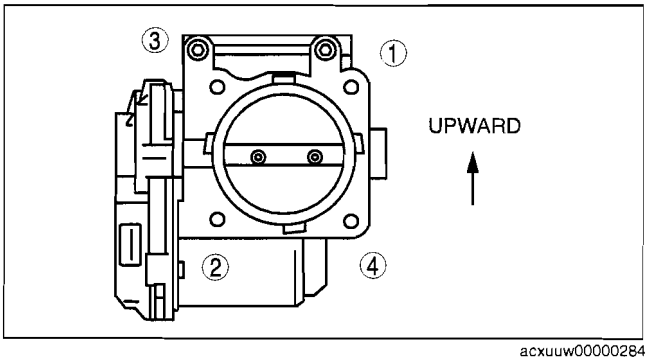
am3zzw0000353

2. Install the hose as shown in the figure.

Throttle Body Installation Note

1. Tighten the throttle body installation bolts in the order shown in the figure.

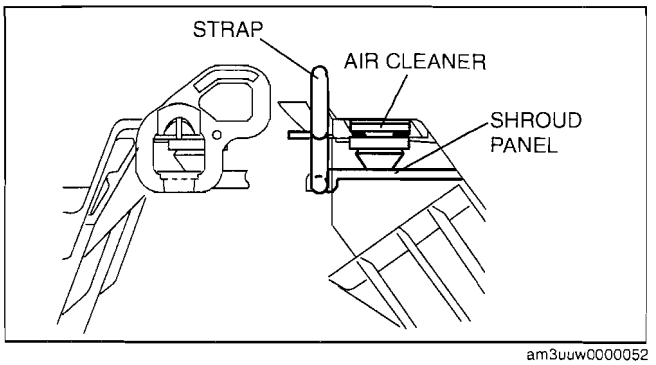
Tightening torque
8—11.5 N·m {82—117 kgf·cm, 71—101 in·lbf}



acxuuw00000284

Strap Installation Note

1. Using the strap, secure the shroud panel and the air cleaner case as shown in the figure.



am3uuw0000052

AIR CLEANER ELEMENT INSPECTION[L3 WITH TC]

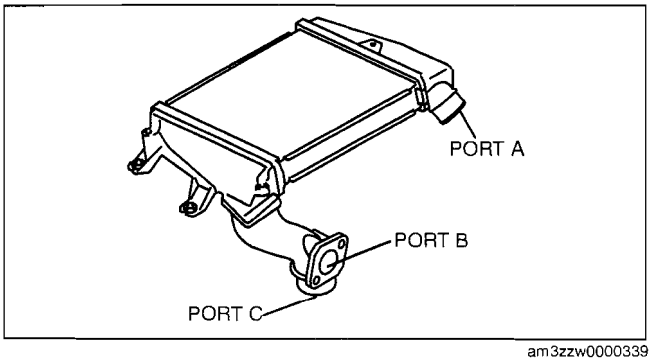
id011339800800

1. Remove the air cleaner element. (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
2. Verify that the air cleaner element surface is free of dirt.
   - If there is dirt, use an air gun or similar tool to clean the element.
   - If the replacement time limit has passed, replace the element.

CHARGE AIR COOLER INSPECTION[L3 WITH TC]

id011339800900

1. Remove the charge air cooler cover. (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
2. Remove the charge air cooler. (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
3. Remove the air bypass valve. (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
4. Plug ports A and B.
5. Verify that there is no air leakage when air is sent from port C.
   - If there is leakage, replace the charge air cooler.



am3zzw0000339

AIR BYPASS VALVE INSPECTION[L3 WITH TC]

id011339800500

1. Remove the air bypass valve. (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
2. Connect the vacuum pump to the vacuum ports of the air bypass valve.
3. Verify that the airflow is as indicated in the table.
   - If there is any malfunction, replace the air bypass valve.

Vacuum (kPa {mmHg, inHg})	Valve operation condition	Airflow between port A—B
–66 {–496, –20} or more	Open	Yes
–49 {–367, –14} or less	Closed	No

acxuuw00000286

THROTTLE ACTUATOR INSPECTION[L3 WITH TC]

id011339801300

Note
- Perform the following inspection only when directed.

Resistance Inspection

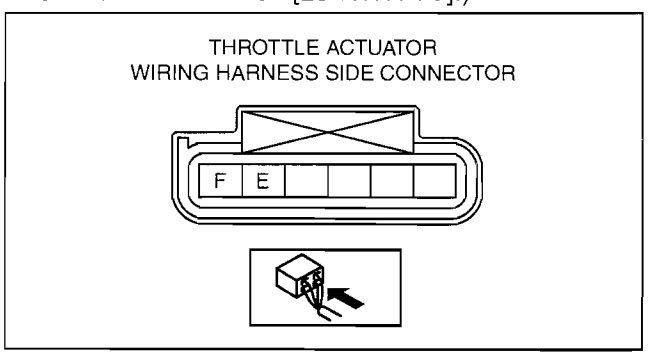
1. Remove the battery cover. (See01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Disconnect the throttle body connector.
4. Measure the resistance between the throttle actuator terminals using a tester.
   - If not as specified, replace the throttle body. (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/ INSTALLATION[L3 WITH TC].)
   - If as specified, carry out the "Circuit Open/Short Inspection".

Specification

Ambient temperature (°C {°F})	Resistance (ohm)
Approx. 20 {68}	0.3—100

Circuit Open/Short Inspection

1. Disconnect the PCM connector. (See 01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
2. Inspect the following wiring harnesses for an open or short circuit (continuity check).



acxuuw00000024

PCM
WIRING HARNESS-SIDE CONNECTOR

acxuuw00000025

Open circuit

- If there is no continuity, there is an open circuit. Repair or replace the wiring harness.
  - — Throttle actuator terminal F and PCM terminal 2A
  - — Throttle actuator terminal E and PCM terminal 2B

Short circuit

- If there is continuity, there is a short circuit. Repair or replace the wiring harness.
  - — Throttle actuator terminal F and power supply
  - — Throttle actuator terminal F and ground
  - — Throttle actuator terminal E and power supply
  - — Throttle actuator terminal E and ground

VARIABLE SWIRL SHUTTER VALVE ACTUATOR INSPECTION[L3 WITH TC]

id011339801200

1. Remove the air hose. (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
2. Disconnect the vacuum hose from the variable swirl control solenoid valve.
3. Connect a vacuum pump to the variable swirl shutter valve actuator.
4. Apply vacuum and verify that the rod moves.
   - If the rod does not move, replace the intake manifold. (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/ INSTALLATION[L3 WITH TC].)

Vacuum kPa {mmHg, inHg}	Rod movement
–2.7 {–20, –0.7} or less	Not move
–33.4 {–251, –9.9} or more	Fully pulled

VARIABLE SWIRL SOLENOID VALVE INSPECTION[L3 WITH TC]

id011339801100

1. Remove the variable swirl solenoid valve.
2. Inspect the airflow between the ports under the following conditions.
   - If not as specified, replace the variable swirl control solenoid valve.
   - If as specified, carry out the "Circuit Open/ Short Inspection".

Open circuit

- If there is no continuity, there is an open circuit. Repair or replace the wiring harness.
  - Wastegate control solenoid valve terminal B and PCM terminal 2AA
  - Wastegate control solenoid valve terminal A and main relay terminal A

Short circuit

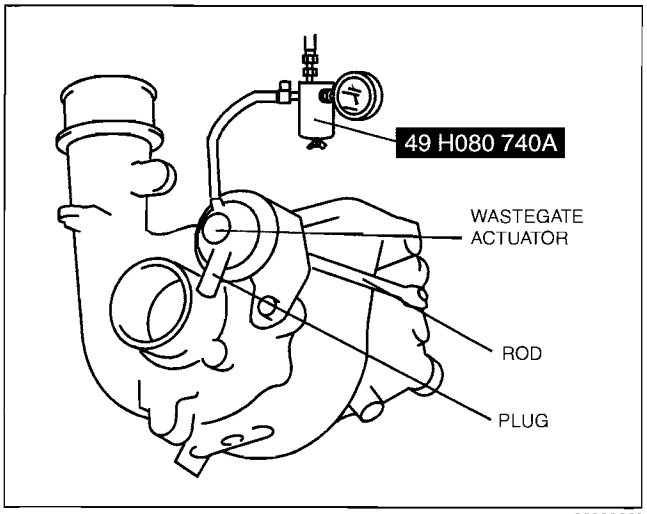
- If there is continuity, there is a short circuit. Repair or replace the wiring harness.
  - Wastegate control solenoid valve terminal A and body ground
  - Wastegate control solenoid valve terminal B and power supply
  - Wastegate control solenoid valve terminal B and body ground

WASTEGATE ACTUATOR INSPECTION[L3 WITH TC]

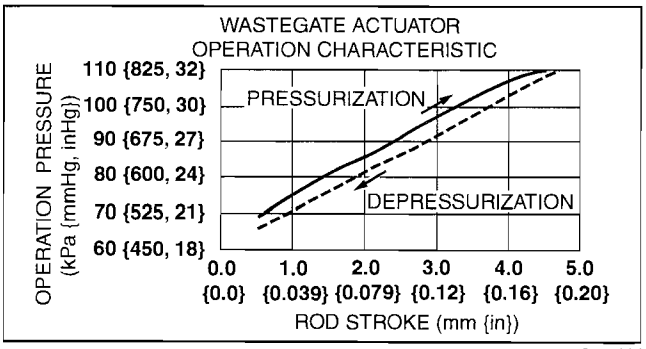
id011339800700

1. Remove the air hose and air duct. (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC])
2. Disconnect the hose from the wastegate actuator.
3. Plug the wastegate actuator as shown in the figure.
4. Connect the vacuum pump to the port
5. Raise the pressure slowly and take a measurement of the pressure when the rod stroke is **1.5 mm {0.06 in}**.
   - If the rod does not move, replace the turbocharger.

Specification (rod stroke: 1.5 mm {0.06 in})
78.0—83.4 kPa {586—625 mmHg, 23.1—24.6 inHg}



acxuuw00000663



acxuuw00000664

TURBOCHARGER INSPECTION[L3 WITH TC]

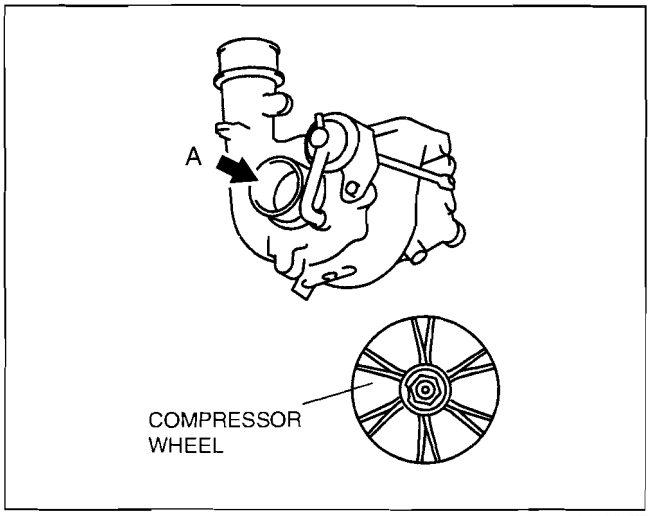
id011339801000

Compressor Wheel Inspection

1. Remove the turbocharger. (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
2. Visually inspect the compressor wheel from view A for the cracks, damage, or bending on all the compressor wheel blades.
   - If there are any cracks or damage, replace the turbocharger.

Note

- If there is contact between the compressor wheel and compressor housing, there may be cracks, damage, or bending on the blade end area.
- If there are cracks, damage, or bending on the compressor wheel, verify the following after replacing the turbocharger.
  - — Intake air/exhaust system related components
  - — Oil pipe damage



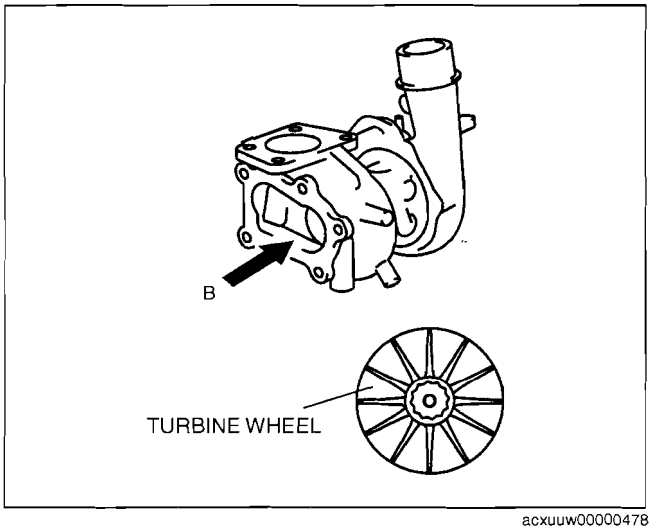
acxuuw00000477

Turbine wheel inspection

1. Remove the turbocharger. (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
2. Visually inspect the turbine wheel from view B for the cracks, damage, or bending on all the turbine wheel blades.
   - If there are cracks, damage, or bending on the turbine wheel, replace the turbocharger.

Note

- If there is contact between the turbine wheel and turbine housing, there may be cracks, damage, or bending on the blade end area.
- If there are cracks, damage, or bending on the turbine wheel, verify the following after replacing the turbocharger.
  - — Intake air/exhaust system related components
  - — Oil pipe damage



acxuuw00000478

ACCELERATOR PEDAL REMOVAL/INSTALLATION[L3 WITH TC]

id011339801400

1. Remove the battery cover. (See01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.

BEFORE SERVICE PRECAUTION[LF, L3]

id0114a4802000

Warning

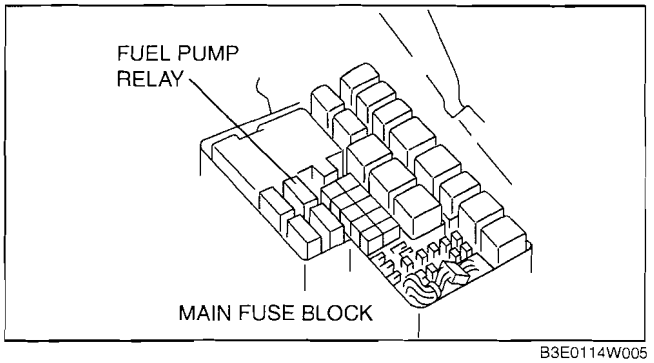
- **Fuel vapor is hazardous. It can very easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.**
- **Fuel line spills and leakage from the pressurized fuel system are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure".**
- **A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before performing work on the fuel system, discharge static electricity by touching the vehicle body.**

Caution

- **If there is foreign material on the connecting area of the quick release connector, it might damage the connector or fuel pipe. To prevent this, disconnect the connector and clean the connecting area before connecting.**

Fuel Line Safety Procedure

1. Remove the fuel-filler cap to release the pressure inside the fuel tank.
2. Remove the fuel pump relay.
3. Start the engine.
4. After the engine stalls, crank the engine **several times**.
5. Turn the ignition switch to the LOCK position.
6. Install the fuel pump relay.



B3E0114W005

AFTER SERVICE PRECAUTION[LF, L3]

id0114a4801900

Warning

- **Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Leakage Inspection".**

Fuel Leakage Inspection

Warning

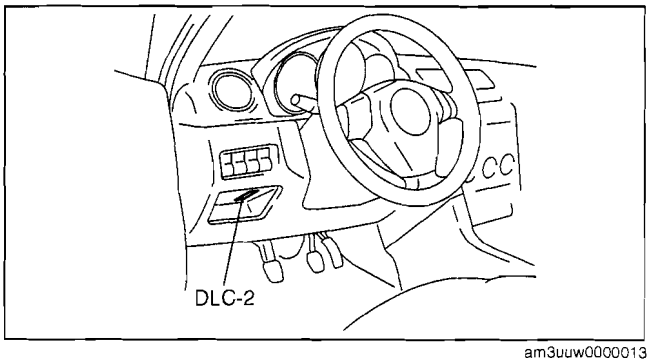
- **Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, complete the following inspection with the engine stopped.**

Using M-MDS

1. Connect the M-MDS to the DLC-2.
2. Start the fuel pump using the "FP" simulation function.
3. Verify that there is no fuel leakage from the pressurized parts.
   - If there is leakage, replace the fuel hoses and clips.
   - If there is damage on the seal on the fuel pipe side, replace the fuel pipe.

Standard
There shall be no leakage after 5 min.

4. After reinstallation, repeat step 2—3 in the fuel leakage inspection.



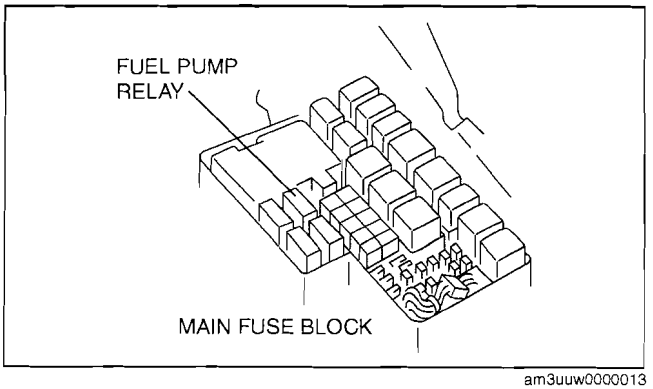
am3uuw0000013

Without using M-MDS

1. Disconnect the negative battery cable.
2. Remove the fuel pump relay.

Caution

- **Be careful to short the specified terminal as shorting the wrong terminal of the main fuse block may cause a malfunction.**

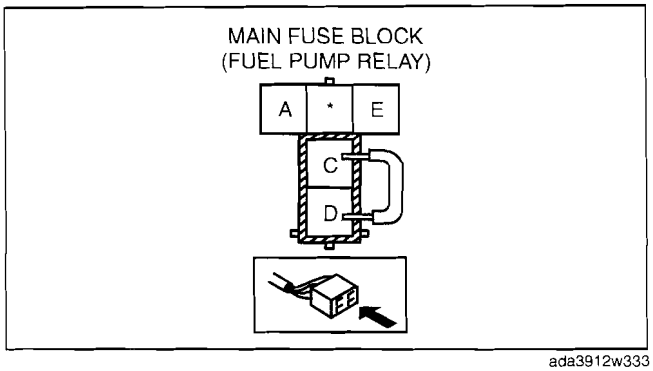


am3uuw0000013

3. Using a jumper wire, short fuel pump relay terminals C and D and connect the negative battery cable to start the fuel pump.
4. Verify that there is no fuel leakage from the pressurized parts.
   - If there is leakage, replace the fuel hoses and clips.
   - If there is damage on the seal on the fuel pipe side, replace the fuel pipe.

Standard
There shall be no leakage after 5 min.

5. After reinstallation, repeat step 3—4 in the fuel leakage inspection.



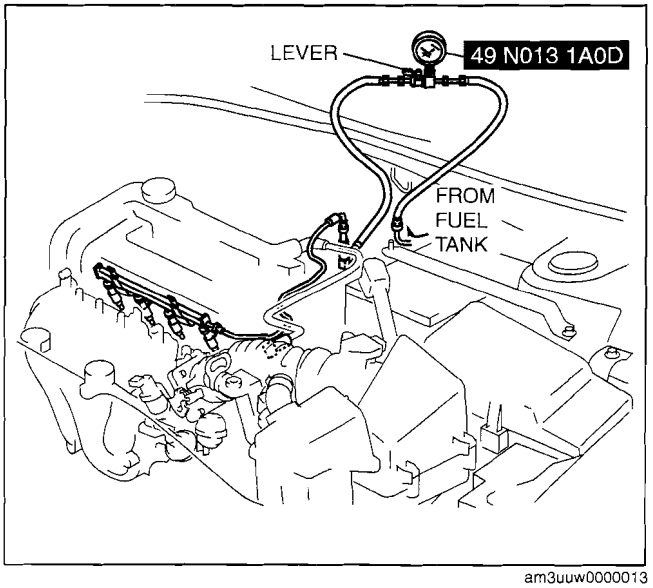
ada3912w333

FUEL LINE PRESSURE INSPECTION[LF, L3]

id0114a4800500

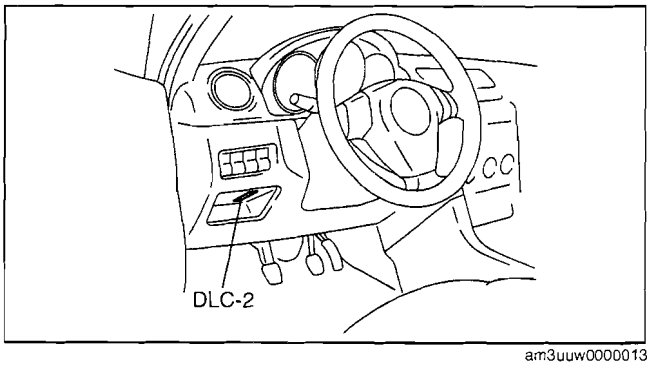
Warning
- **Fuel line spills and leakage from the pressurized fuel system are dangerous. Fuel can ignite and cause serious injury or death and damage. To prevent this, complete the following inspection with the engine stopped.**

1. Follow "BEFORE SERVICE PRECAUTION" before performing any work operations to prevent fuel from spilling from the fuel system. (See 01-14A-4 BEFORE SERVICE PRECAUTION[LF, L3].)
2. Disconnect the negative battery cable.
3. Disconnect the quick release connector (in the engine compartment). (See 01-14A-22 QUICK RELEASE CONNECTOR (FUEL SYSTEM) REMOVAL/INSTALLATION[LF, L3].)
4. Turn the lever of the **SST** parallel to the hose as shown in the figure.
5. Insert the **SST** quick release connector into the fuel pipe until a click is heard.
6. Verify that the quick release connector is firmly connected by pulling it by hand.
7. Start the fuel pump using the following procedure:



am3uuw0000013

Using M-MDS
1. Connect the M-MDS to the DLC-2.
2. Start the fuel pump using the "FP" simulation function.



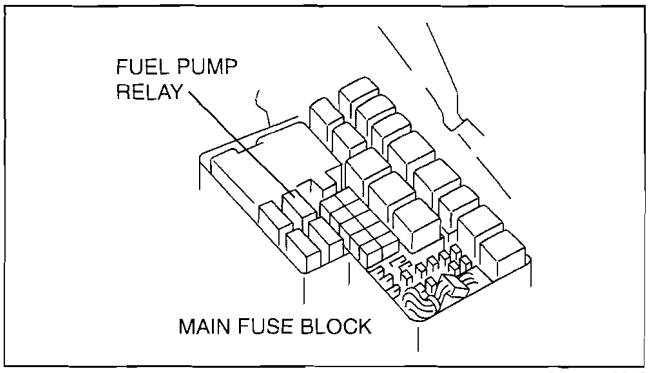
am3uuw0000013

Without using M-MDS

1. Remove the fuel pump relay.

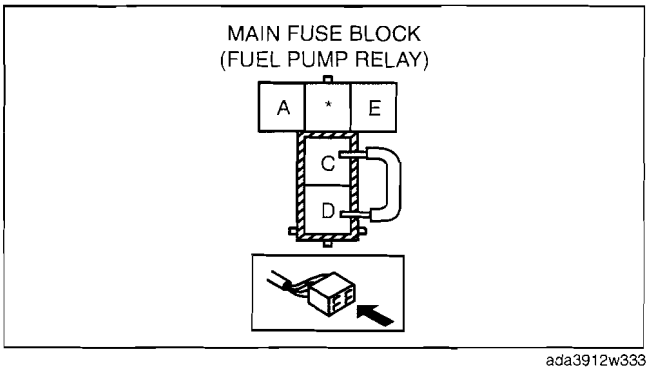
Caution

- **Be careful to short the specified terminal as shorting the wrong terminal of the main fuse block may cause a malfunction.**



am3uuw0000013

2. Using a jumper wire, short fuel pump relay terminals C and D and connect the negative battery cable to start the fuel pump.



ada3912w333

8. Operate the fuel pump for **10 s**.
9. Measure the fuel line pressure.
   - If not within the specification, inspect the following:
     If it less than the specification:
     — Fuel pump unit
     — Fuel line leakage
     If it exceeds the specification:
     — Pressure regulator

Fuel pressure (Reference)

350—410 kPa {3.57—4.18 kgf/cm^2, 50.8—59.4 psi}

10. Stop the fuel pump using the following procedure:
    Using M-MDS
    1. Stop the fuel pump using the "FP" simulation function.
    Without using M-MDS
    1. Disconnect the negative battery cable to stop the fuel pump.
11. Measure the fuel hold pressure **after 5 min**.
    - If not within the specification, inspect the following:
      — Fuel line for clogging or leakage

Fuel hold pressure (Reference)

250 kPa {2.55 kgf/cm^2, 36.2 psi} or more

12. Disconnect the **SST**.
13. Connect the quick release connector. (See 01-14A-22 QUICK RELEASE CONNECTOR (FUEL SYSTEM) REMOVAL/INSTALLATION[LF, L3].)
14. Inspect all related parts by performing "AFTER SERVICE PRECAUTION". (See 01-14A-5 AFTER SERVICE PRECAUTION[LF, L3].)

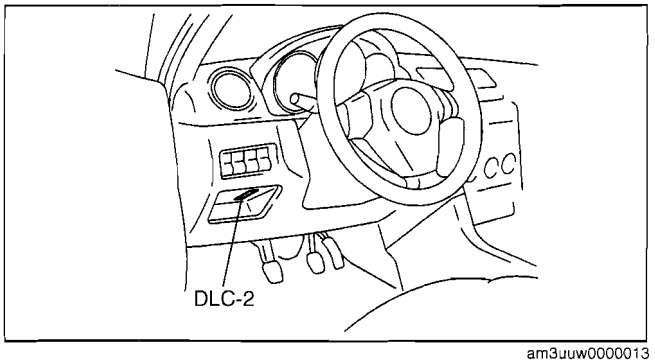
FUEL TANK REMOVAL/INSTALLATION[LF, L3]

id0114a4801600

Warning

- **Repairing a fuel tank containing fuel is dangerous. Explosion or fire may cause death or serious injury. Always properly steam clean a fuel tank before repairing it.**
- **A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before draining fuel, make sure to discharge static electricity by touching the vehicle body.**

1. Park the vehicle on a level surface.
2. Follow "BEFORE SERVICE PRECAUTION" before performing any work operations to prevent fuel from spilling from the fuel system. (See 01-14A-4 BEFORE SERVICE PRECAUTION[LF, L3].)
3. Drain the fuel from the fuel tank using the following procedure:
   (1) Disconnect the quick release connector (in the engine compartment). (See 01-14A-22 QUICK RELEASE CONNECTOR (FUEL SYSTEM) REMOVAL/INSTALLATION[LF, L3].)
   (2) Attach a long hose to the disconnected fuel pipe and drain the fuel into a proper receptacle.
   (3) Start the fuel pump using the following procedure:
   Using M-MDS
   1. Connect the M-MDS to the DLC-2.
   2. Start the fuel pump using the "FP" simulation function.

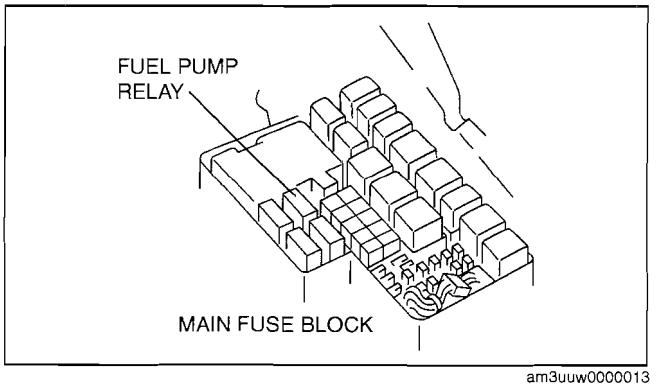


am3uuw0000013

   Without using M-MDS
   1. Disconnect the negative battery cable.
   2. Remove the fuel pump relay.

Caution

- **Be careful to short the specified terminal as shorting the wrong terminal of the main fuse block may cause a malfunction.**

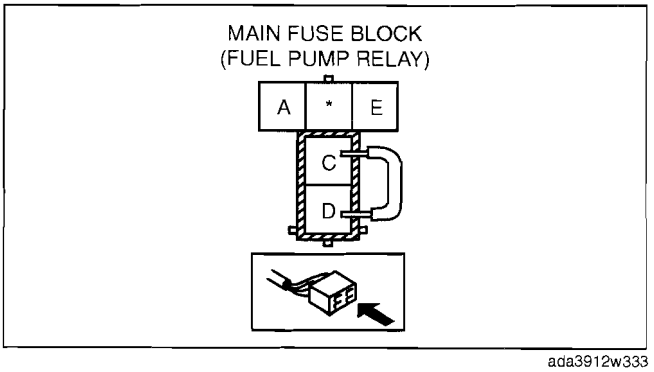


am3uuw0000013

   3. Using a jumper wire, short fuel pump relay terminals C and D and connect the negative battery cable to start the fuel pump.

Caution

- **The fuel pump may malfunction if it is operated without any fuel in the fuel tank (fuel pump idling). Constantly monitor the amount of fuel being discharged and immediately stop operation of the pump when essentially no fuel is being discharged.**



ada3912w333

   (4) When essentially no fuel is being discharged from the hose, stop the fuel pump using the following procedure:
   Using M-MDS
   1. Stop the fuel pump using the "FP" simulation function.
   Without using M-MDS
   1. Disconnect the negative battery cable to stop the fuel pump.

4. Disconnect the negative battery cable. (using M-MDS)
5. Remove the rear seat cushion. (See 09-13-6 REAR SEAT REMOVAL/INSTALLATION.)
6. Remove the service hole cover.
7. Disconnect the fuel pump unit connector.
8. Remove the charcoal canister protector. (See 01-16A-7 CHARCOAL CANISTER REMOVAL/INSTALLATION[LF, L3].)
9. Lower the main silencer so that the insulator can be removed. (See 01-15A-1 EXHAUST SYSTEM REMOVAL/INSTALLATION[LF, L3].)
10. Remove the insulator.
11. Remove the rear under cover (LH).
12. Remove in the order indicated in the table.
13. Install in the reverse order of removal.
14. Inspect all parts by performing "AFTER SERVICE PRECAUTION". (See 01-14A-5 AFTER SERVICE PRECAUTION[LF, L3].)

8	Fuel-filler cap
9	Fuel-filler pipe (See 01-14A-11 Fuel-filler Pipe Removal Note.)

Evaporative Hose Removal/Installation Note

- Refer to the "QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/INSTALLATION" to disconnect the quick release connector of the front side of the fuel tank. (See 01-16A-16 QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/INSTALLATION[LF, L3].)
- Refer to the "QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/INSTALLATION" to disconnect the quick release connector connected to the charcoal canister. (See 01-16A-16 QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/INSTALLATION[LF, L3].)
- Refer to the "QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/INSTALLATION" to reconnect the quick release connector of the front side of the fuel tank. (See 01-16A-16 QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/INSTALLATION[LF, L3].)
- Refer to the "QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/INSTALLATION" to reconnect the quick release connector connected to the charcoal canister. (See 01-16A-16 QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/INSTALLATION[LF, L3].)

Joint Hose Removal Note

1. Remove the fuel-filler pipe installation bolt.
2. Loosen the tie band connecting with the fuel tank.
3. Pull down the fuel-filler pipe to disconnect the joint hose.

Breather Hose Removal Note

- Except for California emission regulation applicable model, refer to the "QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/INSTALLATION)" to disconnect the quick release connector connecting to the fuel shut-off valve. (See 01-16A-16 QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/INSTALLATION[LF, L3].)

Fuel-filler Pipe Removal Note

1. Remove the rear tire (RH).
2. Remove the rear mudguard (RH).
3. Support the rear crossmember using a transmission jack.
4. Remove the rear shock absorber (RH) lower bolts. (See 02-14-3 REAR SHOCK ABSORBER REMOVAL/INSTALLATION.)
5. Loosen the rear crossmember installation nuts (6 locations) and lower the rear crossmember **30 mm {1.2 in}**. (See 02-14-12 REAR CROSSMEMBER REMOVAL/INSTALLATION.)
6. Remove the fuel-filler pipe.

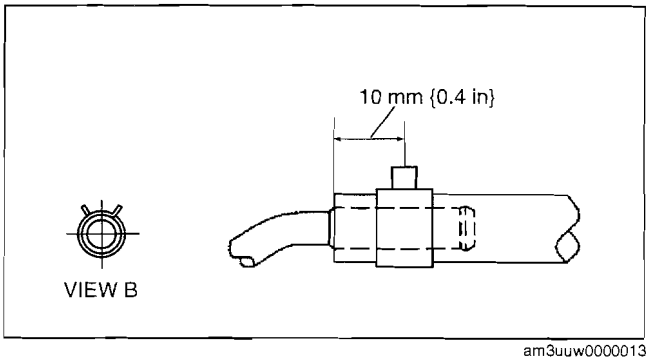
Breather Hose Installation Note

California emission regulation applicable model

- Connect the breather hose connecting with the fuel tank and clamp as shown in the figure.

Except for California emission regulation applicable model

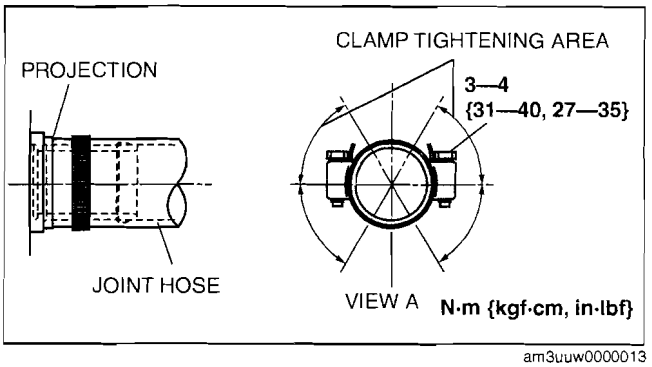
- Refer to the "QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/INSTALLATION)" to reconnect the quick release connector connecting to the fuel shut-off valve. (See 01-16A-16 QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/INSTALLATION[LF, L3].)



am3uuw0000013

Joint Hose Installation Note

1. Install the joint hose and clamp as shown in the figure.



am3uuw0000013

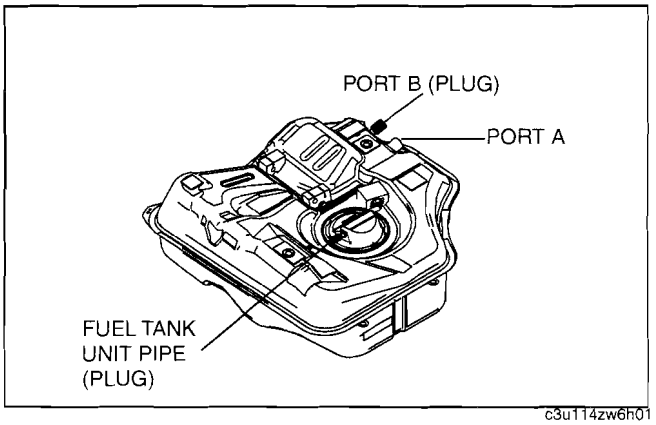
FUEL TANK INSPECTION[LF, L3]

id0114a4803200

Note
- The two rollover valves built into the fuel tank and check valves (two-way) built into the rollover valves are inspected in this inspection.

1. Follow "BEFORE SERVICE PRECAUTION" before performing any work operations to prevent fuel from spilling from the fuel system. (See 01-14A-4 BEFORE SERVICE PRECAUTION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the fuel tank. (See 01-14A-8 FUEL TANK REMOVAL/INSTALLATION[LF, L3].)
4. Level the fuel tank.
5. Perform the following procedure to verify the fuel tank airtightness.
   (1) Plug the fuel pump unit pipe, ports B and C.

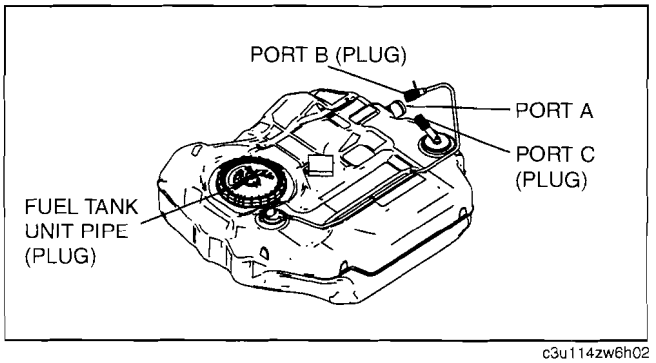
California emission regulation applicable model



c3u114zw6h01

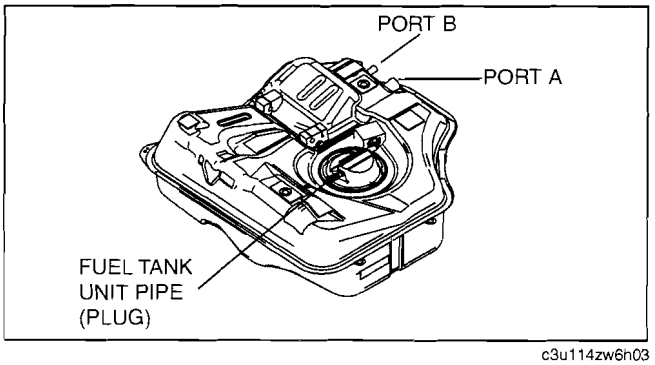
Except for California emission regulation applicable model

   (2) Apply a pressure to port A and wait for a while.
   (3) Verify that there is no air leakage from the fuel tank.
      - If there is no airflow, replace the fuel tank.
6. Apply a pressure to port A and wait for a while.



c3u114zw6h02

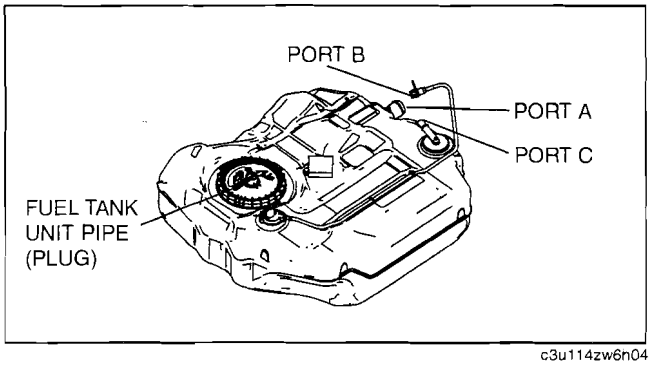
California emission regulation applicable model



c3u114zw6h03

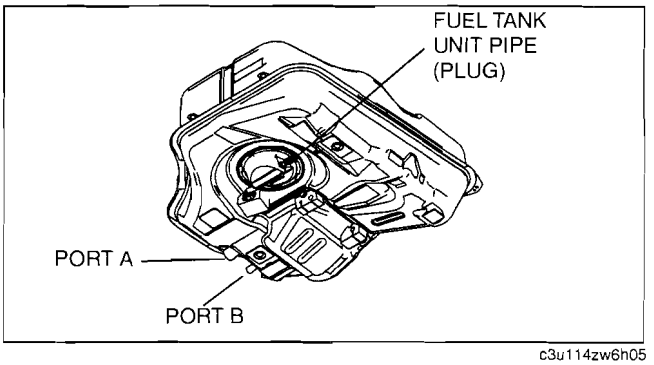
Except for California emission regulation applicable model

7. With the pressure still applied, verify that there is airflow from port B and C.
   - If there is no airflow from either port, replace the fuel tank.
8. Place the fuel tank upside down.
9. Apply a pressure to port A and wait for a while.



c3u114zw6h04

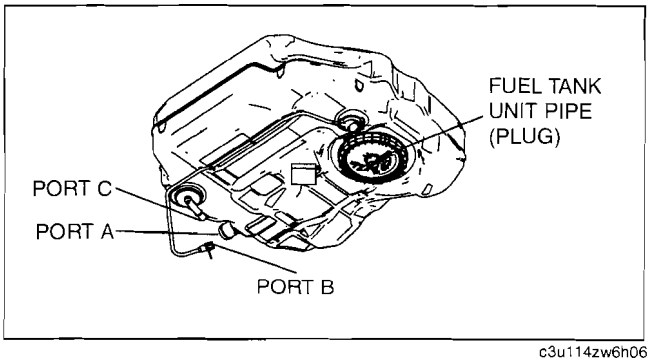
California emission regulation applicable model



c3u114zw6h05

Except for California emission regulation applicable model

10. With the pressure still applied, verify that there is no airflow from port B and C.
    - If there is airflow from either port, replace the fuel tank.

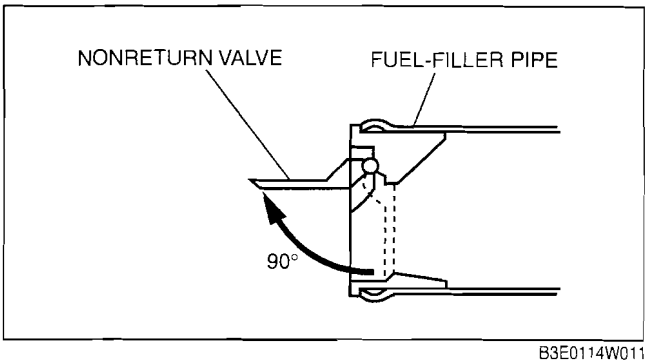


c3u114zw6h06

NONRETURN VALVE INSPECTION[LF, L3]

id0114a4803600

1. Remove the fuel-filler pipe. (See 01-14A-8 FUEL TANK REMOVAL/INSTALLATION[LF, L3].)
2. Move the valve and verify that the valve opens to **90°**.
   - If it does not open, replace the fuel-filler pipe.
3. Verify that the nonreturn valve returns to the normal position by spring force.
   - If it does not return, replace the fuel-filler pipe.



B3E0114W011

FUEL PUMP UNIT REMOVAL/INSTALLATION[LF, L3]

id0114a4800900

Warning

- **Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure", while referring to "BEFORE SERVICE PRECAUTION".**
- **Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, before performing the fuel pump unit removal/installation, always complete the "Fuel Leak Inspection After Fuel Pump Unit Installation".**

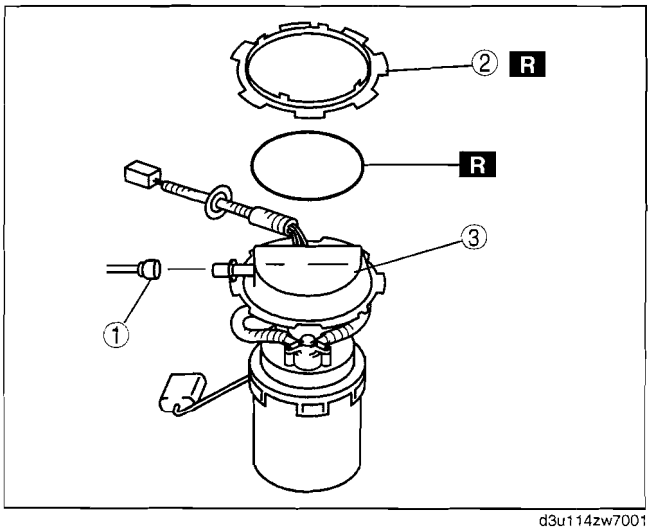
Note

- Gasket must be replaced anytime fuel pump is removed or replaced.

California Emission Regulation Applicable Model

1. Follow "BEFORE SERVICE PRECAUTION" before performing any work operations to prevent fuel from spilling from the fuel system. (See 01-14A-4 BEFORE SERVICE PRECAUTION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the fuel tank. (See 01-14A-8 FUEL TANK REMOVAL/INSTALLATION[LF, L3].)
4. Remove in the order indicated in the table.
5. Install in the reverse order of removal.
6. Inspect all related parts by performing "AFTER SERVICE PRECAUTION". (See 01-14A-5 AFTER SERVICE PRECAUTION[LF, L3].)

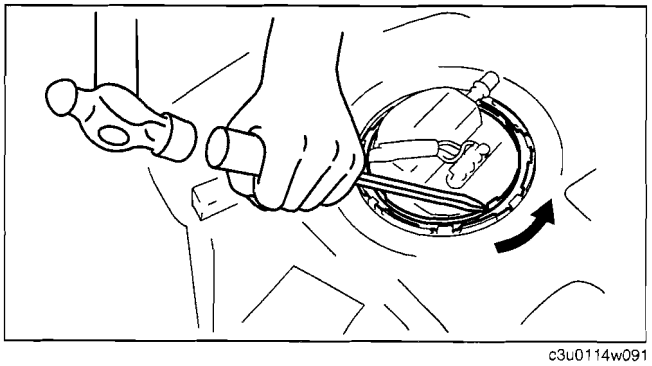
1	Quick release connector (See 01-14A-4 BEFORE SERVICE PRECAUTION[LF, L3], 01-14A-22 QUICK RELEASE CONNECTOR (FUEL SYSTEM) REMOVAL/INSTALLATION[LF, L3],.)
2	Retainer ring (See 01-14A-14 Retainer ring removal note.) (See 01-14A-15 Retainer ring installation note.)
3	Fuel pump unit (See 01-14A-15 Fuel pump unit removal note.) (See 01-14A-15 Fuel pump unit installation note.)



d3u114zw7001

Retainer ring removal note

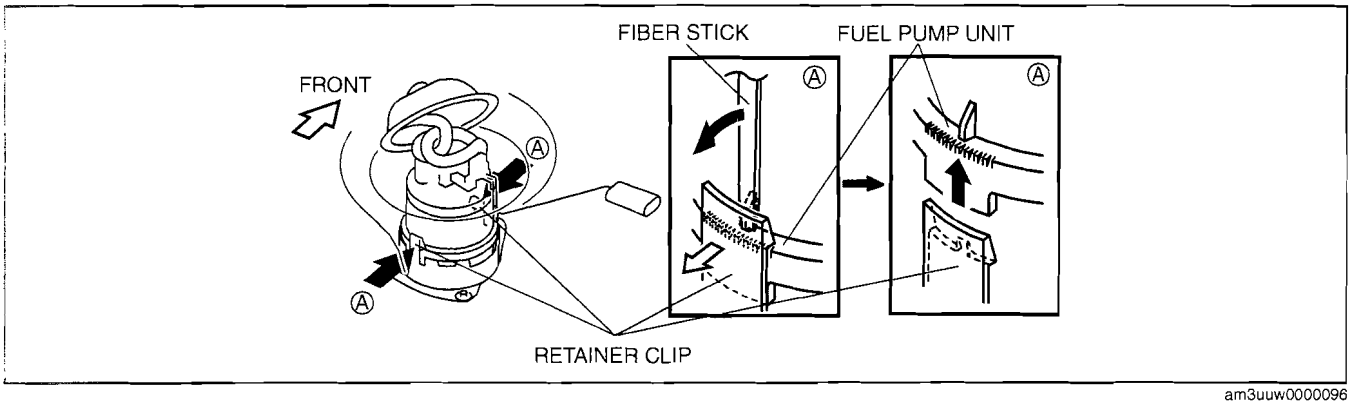
1. Remove the retainer ring by tapping a retainer ring projection using a flathead screwdriver as shown in the figure.



c3u0114w091

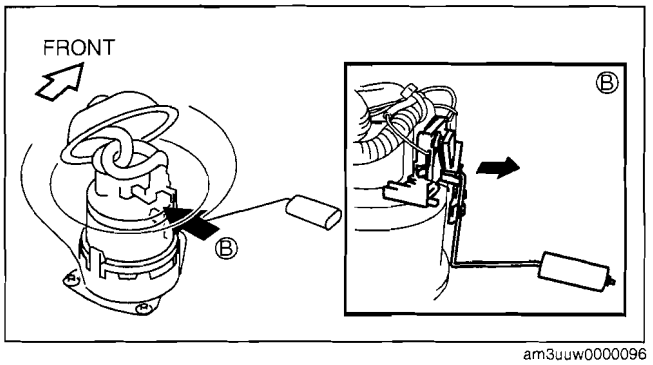
Fuel pump unit removal note

Note
- The fuel pump unit is secured by the two retainer clips with the bracket on the bottom surface of the fuel tank.



am3uuw0000096

1. Using a fiber stick, disengage the retainer clips until the pump can be removed.
2. Remove the fuel pump gauge connection area from the fuel pump unit.
3. Set the fuel pump gauge out of the way and remove the fuel pump unit from the fuel tank.



am3uuw0000096

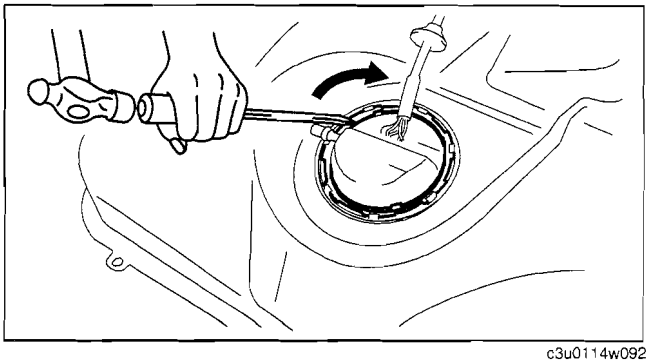
Fuel pump unit installation note

Note
- Keep the fuel pump gauge set out of the way.

1. Insert the fuel pump unit to the fuel tank.
2. Install the fuel pump gauge to the fuel pump unit.
3. Engage the retainer clips with the fuel pump unit.

Retainer ring installation note

1. Tap a retainer ring projection using a flathead screwdriver as shown in the figure and tighten the retainer until it is fixed in place.

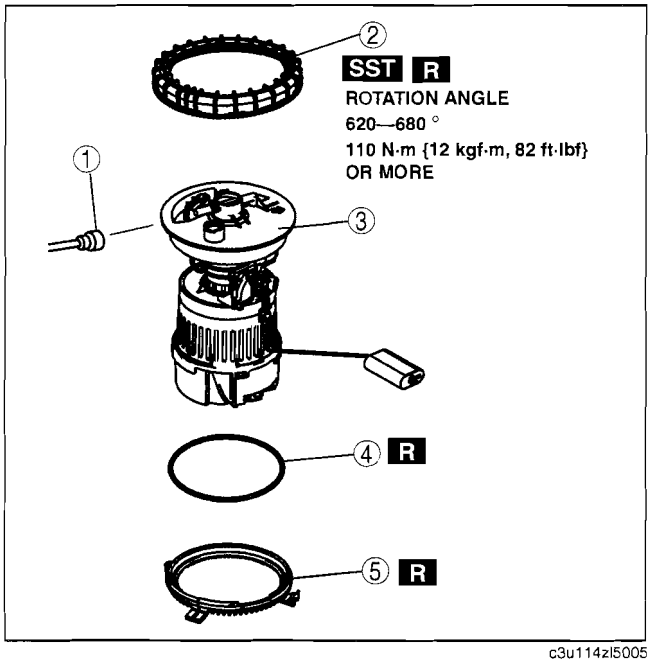


c3u0114w092

Except For California Emission Regulation Applicable Model

1. Follow "BEFORE SERVICE PRECAUTION" before performing any work operations to prevent fuel from spilling from the fuel system. (See 01-14A-4 BEFORE SERVICE PRECAUTION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the fuel tank. (See 01-14A-8 FUEL TANK REMOVAL/INSTALLATION[LF, L3].)
4. Remove in the order indicated in the table.
5. Install in the reverse order of removal.
6. Inspect all related parts by performing "AFTER SERVICE PRECAUTION". (See 01-14A-5 AFTER SERVICE PRECAUTION[LF, L3].)

1	Quick release connector (See 01-14A-22 QUICK RELEASE CONNECTOR (FUEL SYSTEM) REMOVAL/INSTALLATION[LF, L3].)
2	Fuel pump cap (See 01-14A-16 Fuel pump cap removal note.) (See 01-14A-15 Fuel pump unit installation note.)
3	Fuel pump unit (See 01-14A-14 FUEL PUMP UNIT REMOVAL/ INSTALLATION[LF, L3].)
4	Packing (See 01-14A-14 FUEL PUMP UNIT REMOVAL/ INSTALLATION[LF, L3].)
5	Retainer (See 01-14A-14 FUEL PUMP UNIT REMOVAL/ INSTALLATION[LF, L3].)



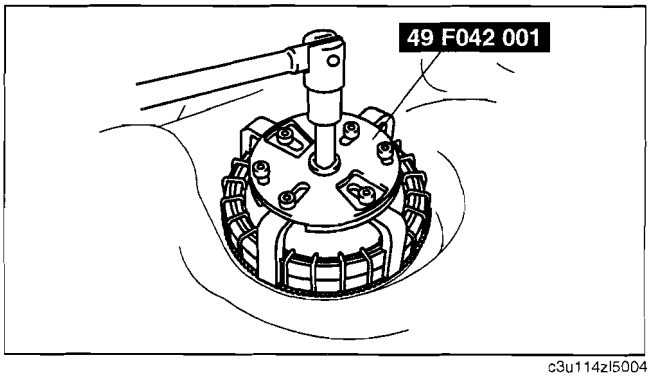
c3u114zl5005

Fuel pump cap removal note

Caution

- **The fuel pump cap could be damaged if the SST is used with any gap between the cap and the SST. Securely attach the SST so that there is no gap between the SST tabs and the side of the cap.**

1. Remove the fuel pump cap using the **SST**.



c3u114zl5004

Fuel pump cap installation note

Warning
- **Make sure there is no foreign material on each of the parts. If there is foreign material on the parts, the fuel pump unit cannot be assembled correctly, which could result in fuel leakage.**

Note
- The fuel pump unit will rotate and cannot be secured in the specified position if there is any gasoline on the gasket. Thoroughly wipe away all gasoline from the gasket.

1. Replace the packing, fuel pump cap and the retainer with new parts.

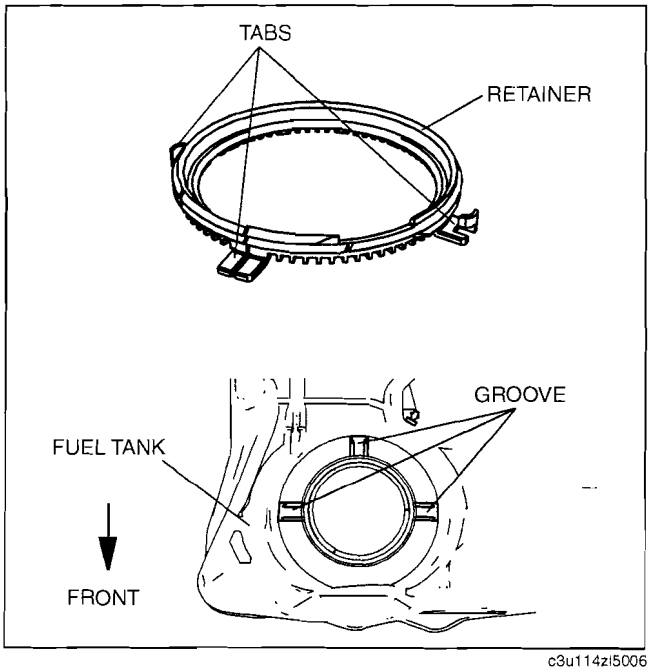
Caution
- **New parts can deform depending on the temperature. If the parts deform, the fuel pump unit cannot be assembled correctly, which could result in fuel leakage. Therefore, keep new parts at room temperature for the specified period of time to stabilize the shape.**

2. Leave new parts inside for the following period of time:

Stand-by time
12 h or more

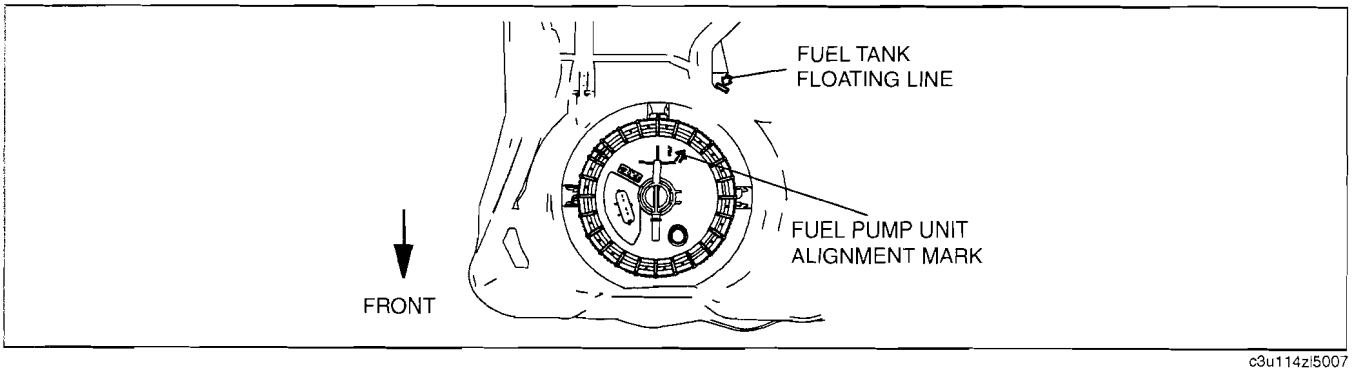
3. Install a new retainer to the fuel tank.
   (1) Align the retainer tabs (3 locations) with the fuel tank grooves.
   (2) Verify that the tabs are inserted into the grooves and the retainer is installed correctly.
   (3) Verify the retainer is not damaged.
4. Install a new packing to the fuel tank.
   (1) Verify the packing groove is clean and free of foreign material.
   (2) Install the packing to the fuel tank so that it is inserted into the fuel tank grooves.

Caution
- **Install the fuel pump unit to the fuel tank being careful not to bend the fuel sender unit arm. If the arm is bent, the fuel sender unit will not operate correctly.**



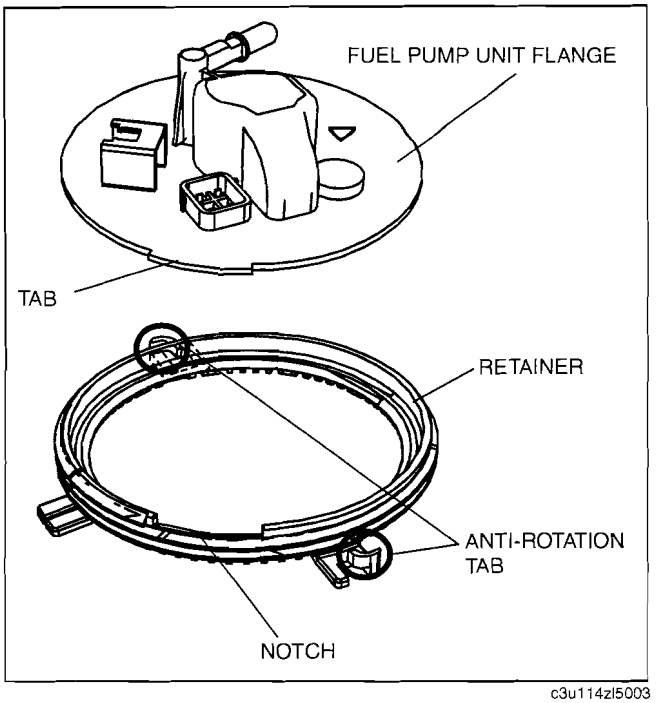
c3u114zl5006

5. Install the fuel pump unit to the fuel tank.
   (1) Align the fuel pump unit alignment mark and the floating line on the fuel tank.



c3u114zl5007

(2) Verify the tab on the fuel pump unit flange with the notch on the retainer.

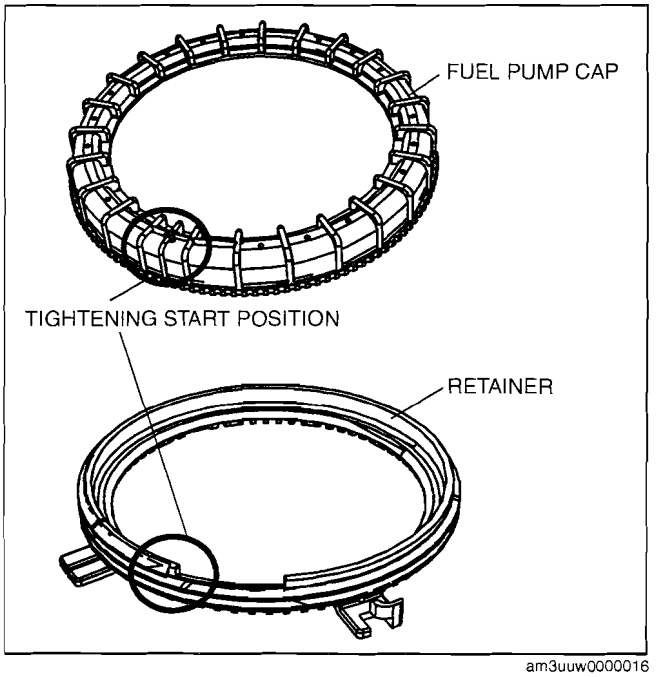


c3u114zl5003

6. Set on a new fuel pump cap.
   (1) Apply downward force (push down) on the center of the fuel pump unit flange.

Note
- Align the fuel pump cap with the tightening start position of the retainer and tighten the fuel pump cap with the start position as **0** °.
- The fuel pump cap tightening start position is the position where the spaces between the ribs become narrow. The retainer tightening start position is the notch position.

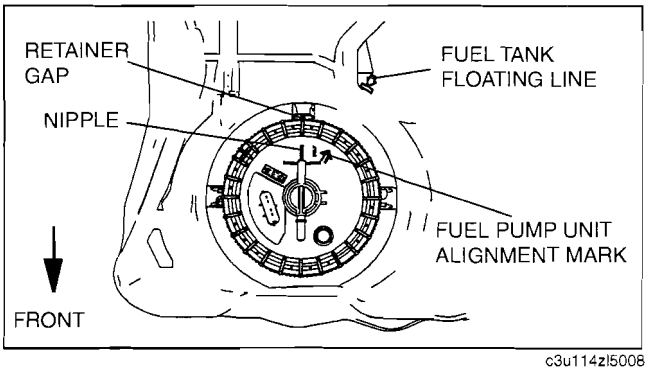
   (2) Align the tightening start position on the fuel pump cap and the tightening start point of the retainer.



am3uuw0000016

Warning

- **No grease or lubrication allowed on parts during installation. Parts could slide or they cannot be tightened to the specified torque. As a result, fuel leakage could occur.**
- **When tightening the fuel pump cap, be careful that the points indicated below have not deviated. If there is deviation, the fuel pump unit cannot be installed correctly, which could result in fuel leakage.**
  - **— The fuel pump unit alignment mark and the floating line on the fuel tank**
  - **— The fuel pump unit nipple and the retainer gap**

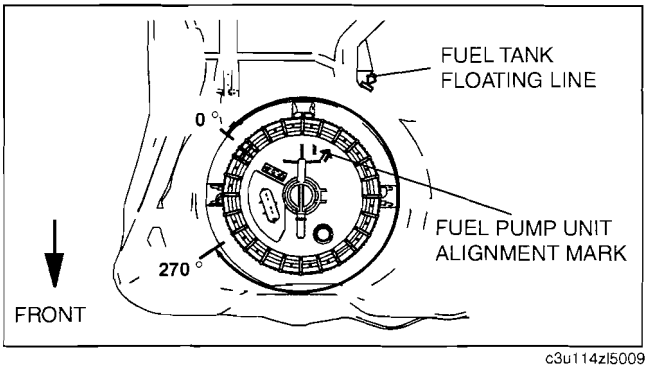


c3u114zl5008

7. Tighten the fuel pump cap.

(1) Tighten the fuel pump cap by hand to the specified angle or more until the flange is fixed.

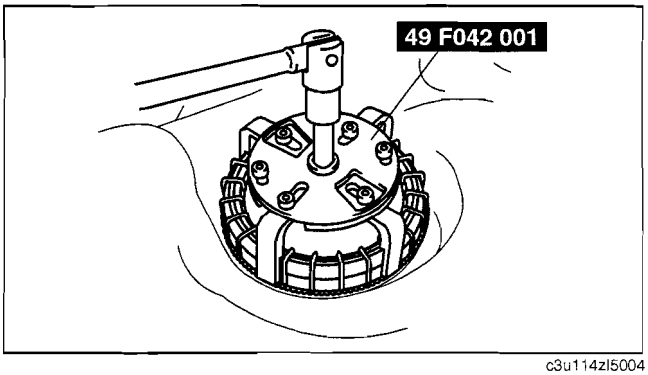
Fuel pump cap rotation angle
270 ° or more



c3u114zl5009

(2) Verify that the fuel pump cap is tightened correctly.
   1) The gap between the bottom of the fuel pump cap and the tank surface is even all around.
      - If the fuel pump cap is not tightened uniformly, loosen it by hand and re-install it.

(3) Install the **SST**.



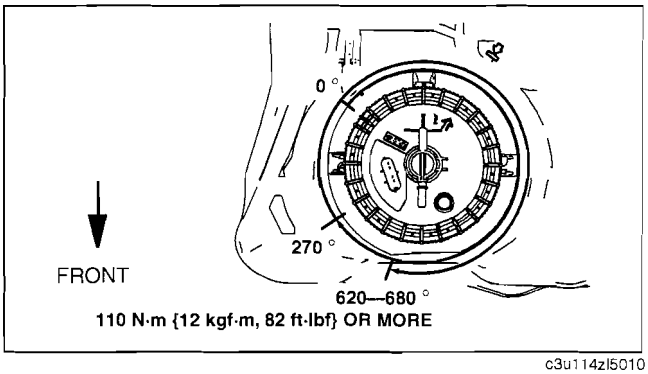
c3u114zl5004

Note

- The fuel pump cap rotation angle is the angle from the **0 °** position. The angle tightened to using the **SST** includes the angle tightened by hand.

(4) Tighten the fuel pump cap to the specified torque and to the specified angle or more.

Fuel pump cap rotation angle
620—680 °
Fuel pump cap tightening torque
110 N·m {12 kgf·m, 82 ft·lbf} or more



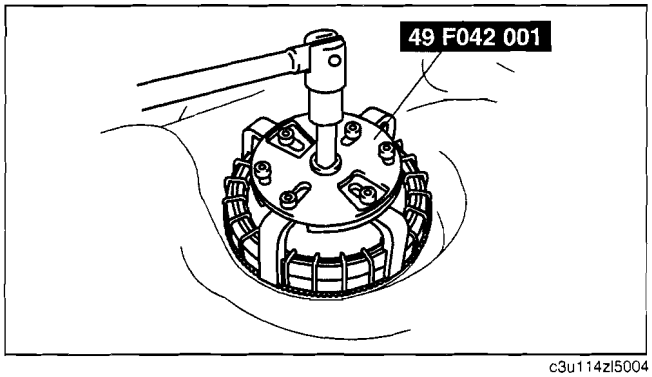
c3u114zl5010

(5) Verify that the fuel pump cap is tightened correctly.
1) The gap between the top of the fuel pump unit flange and the fuel pump cap is even all around.
- If it is not tightened uniformly, re-install it using the following procedure.

2) The gap between the fuel pump unit and fuel tank is even all around.
- If it is not tightened uniformly, re-install it using the following procedure.

3) Verify that the fuel pump unit alignment mark and the floating line on the fuel tank are aligned.
- If they are not aligned, re-install it using the following procedure.

4) Verify that the fuel pump unit nipple and the retainer gap are aligned.
- If it is not aligned, re-install using the following procedure.
  1. Install the **SST**.
  2. Remove the fuel pump cap, fuel pump unit, packing, and retainer.
  3. Verify that the retainer is not damaged.
     - If both of the retainer anti-rotation tabs are broken, replace it with new one.
  4. Return to Step 2 and re-install.



c3u114zl5004

FUEL PUMP UNIT DISASSEMBLY/ASSEMBLY[LF, L3]

id0114a4801000

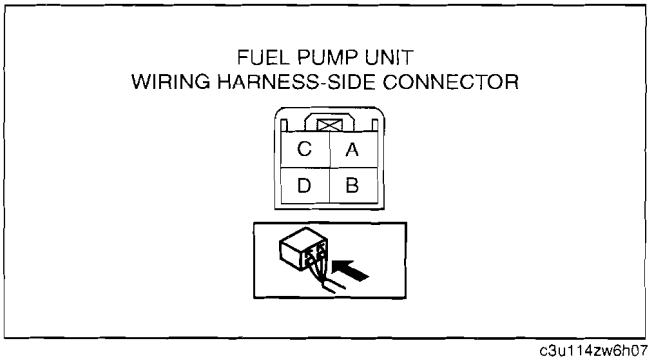
Note
- The fuel pump unit cannot be disassembled.

FUEL PUMP UNIT INSPECTION[LF, L3]

id0114a4801100

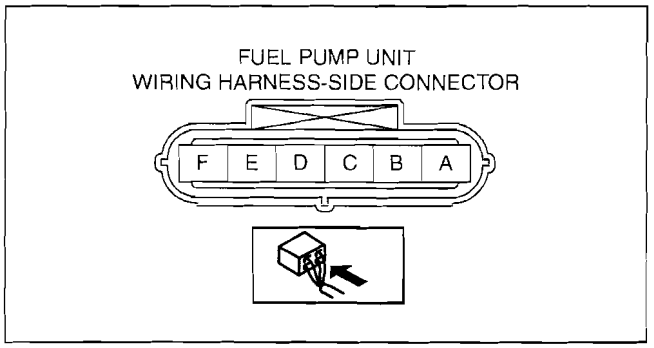
Continuity Inspection
1. Disconnect the negative battery cable.
2. Disconnect the fuel pump unit connector.
3. Inspect for continuity between the following fuel pump unit terminals.

California emission regulation applicable model
- B and C



c3u114zw6h07

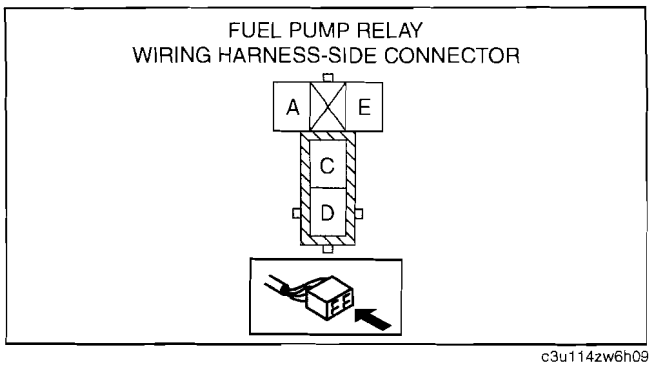
Except for California emission regulation applicable model
- A and E
- If there is continuity, perform the "Circuit Open/Short Inspection".
- If there is no continuity, replace the fuel pump.



c3u114zw6h08

Circuit Open/Short Inspection

1. Inspect the following wiring harnesses for open or short circuit (continuity check).



c3u114zw6h09

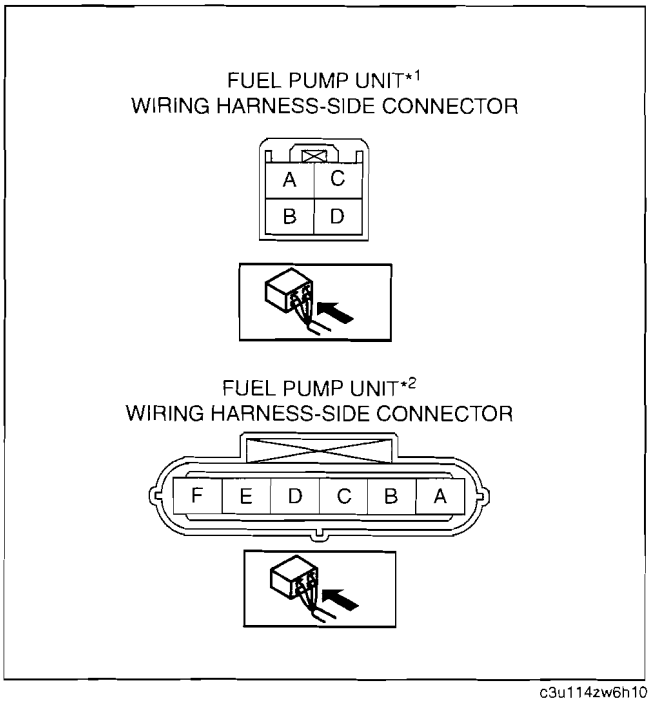
Open circuit

- If there is no continuity, there is an open circuit. Repair or replace the harness.
  - — Fuel pump unit terminal C*1, A*2 and fuel pump relay terminal C
  - — Fuel pump unit terminal B*1, E*2 and body ground

Short circuit

- If there is continuity, there is a short circuit. Repair or replace the harness.
  - — Fuel pump unit terminal C*1, A*2 and body ground
  - — Fuel pump unit terminal B*1, E*2 and power supply

*1 : California emission regulation applicable model
*2 : Except for California emission regulation applicable model



c3u114zw6h10

Fuel Static Pressure Inspection

Note

- The fuel static pressure inspection cannot be performed because the pressure regulator is integrated with the fuel pump unit.

QUICK RELEASE CONNECTOR (FUEL SYSTEM) REMOVAL/INSTALLATION[LF, L3]

id0114a4804800

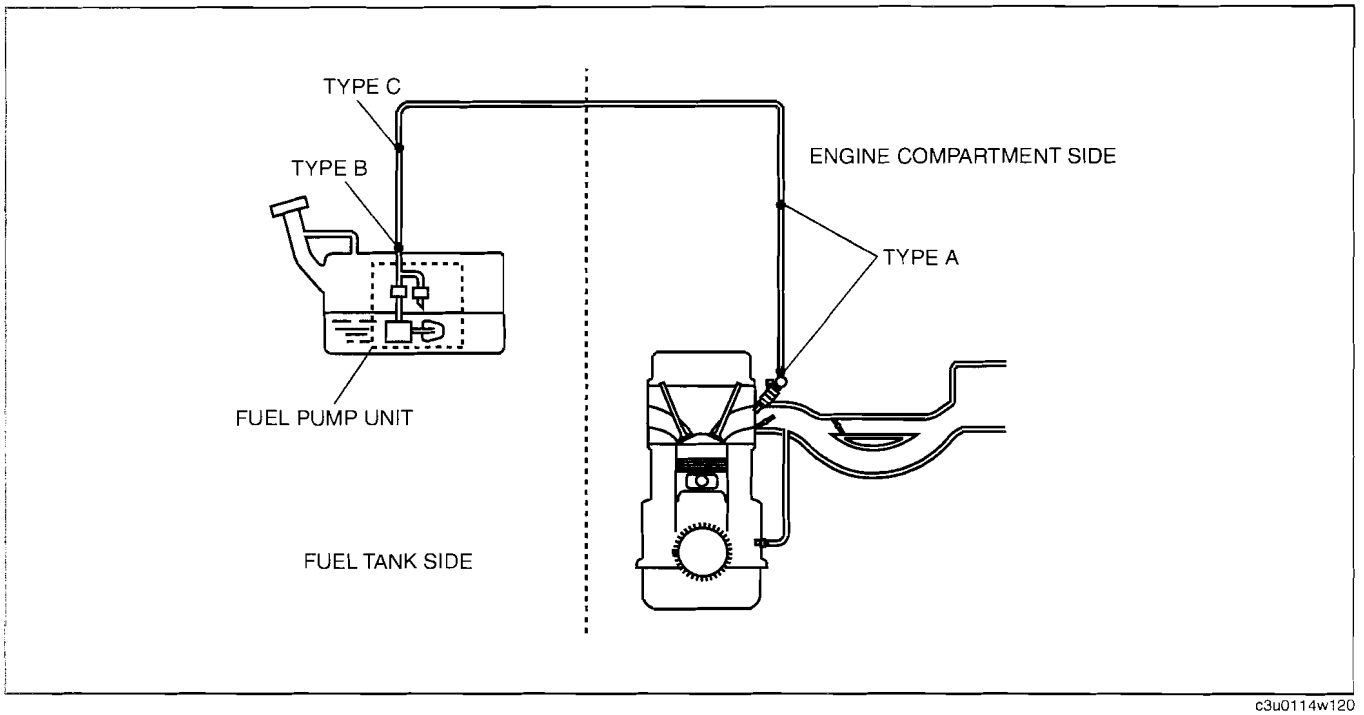
Warning

- **Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure", while referring to the "BEFORE SERVICE PRECAUTION".**

Quick Release Connector Type

Caution

- **There are three types of quick release connectors. Verify the type and location, and install/remove properly.**



c3u0114w120

Type A Removal

1. Follow "BEFORE SERVICE PRECAUTION" before performing any work operations to prevent fuel from spilling from the fuel system. (See 01-14A-4 BEFORE SERVICE PRECAUTION[LF, L3].)

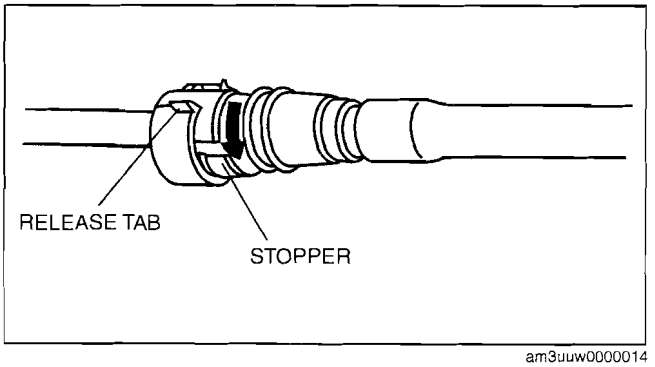
Caution

- **The quick release connector may be damaged if the release tab is bent excessively. Do not expand the release tab over the stopper.**

Note

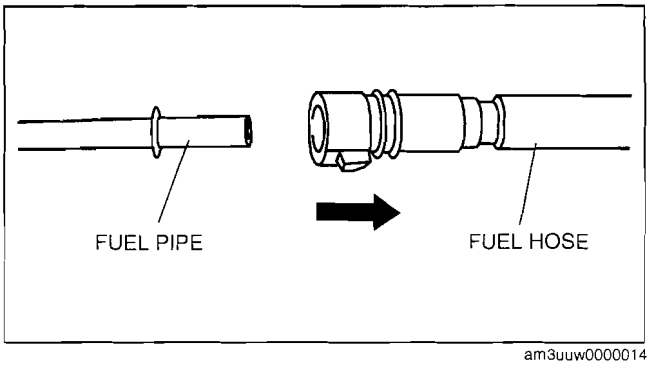
- The fuel hose can be removed by pushing it to the pipe side to release the lock.

2. Rotate the release tab on the quick release connector to the stopper position.



am3uuw0000014

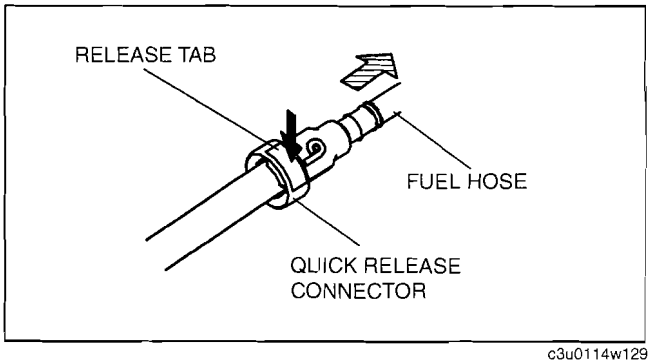
3. Pull out the fuel hose straight from the fuel pipe and disconnect it.
4. Cover the disconnected quick release connector and fuel pipe with vinyl sheeting or a similar material to prevent it from becoming scratched or dirty.



am3uuw0000014

Type B Removal

1. Follow "BEFORE SERVICE PRECAUTION" and remove dirt from the connecting surfaces before performing any work operations. (See 01-14A-4 BEFORE SERVICE PRECAUTION[LF, L3].)
2. Push the release tab on the retainer to unlock.
3. Pull out the fuel hose straight from the fuel pipe and disconnect it.
4. Cover the disconnected quick release connector and fuel pipe with vinyl sheeting or a similar material to prevent it from becoming scratched or dirty.



c3u0114w129

Type C Removal

Caution

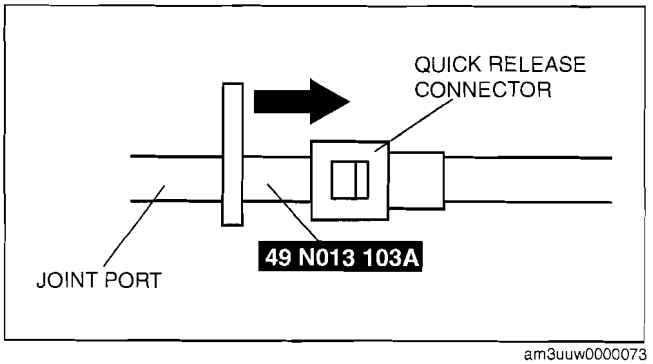
- **Be careful not to damage the pipe when unlocking the retainer.**

Note

- When a prompt connector is detached, following SST can be used.
  - — **49 N013 103A**
  - — **49 E042 001**

When using SST 49 N013 103A

1. Follow "BEFORE SERVICE PRECAUTION" and remove dirt from the connecting surfaces before performing any work operations. (See 01-14A-4 BEFORE SERVICE PRECAUTION[LF, L3].)
2. Verify that the quick release connector joint area is free of foreign material. Clean if necessary.
3. Install the **SST** as shown in the figure and push into the quick release connector to disconnect the fuel pipe.
4. Cover the disconnected quick release connector and fuel pipe to prevent them from being scratched or contaminated with foreign material.



am3uuw0000073

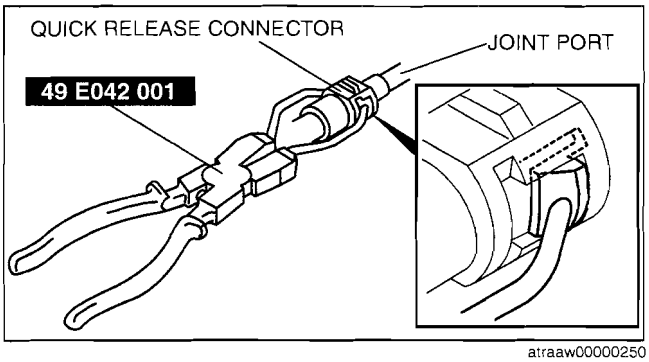
When using SST 49 E042 001

Note
- If the quick release connector is removed, replace the retainer with a new one.

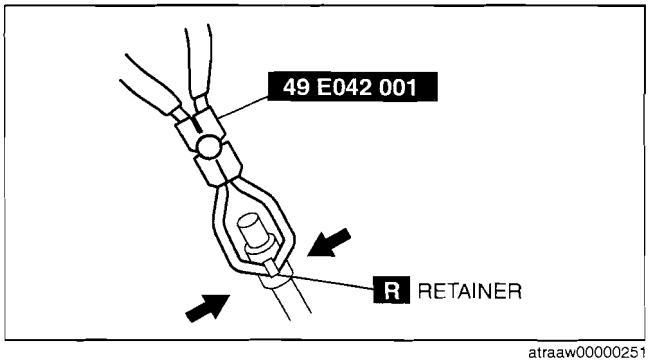
1. Follow "BEFORE SERVICE PRECAUTION" and remove dirt from the connecting surfaces before performing any work operations.(See 01-14A-4 BEFORE SERVICE PRECAUTION[LF, L3].)
2. Set the **SST** parallel to the quick release connector.

Note
- The quick release connector can be removed by pushing the center of the retainer tabs.
- The retainer is attached to the pipe even after the connector is disconnected.

3. Hold the center of the retainer tabs with the **SST** ends and press the retainer.
4. Pull the connector side and disconnect the quick release connector.
5. Raise a retainer tab using the **SST** and remove the retainer.
6. Cover the disconnected quick release connector and fuel pipe with vinyl sheeting or a similar material to prevent it from scratches or dirt.



atraaw00000250

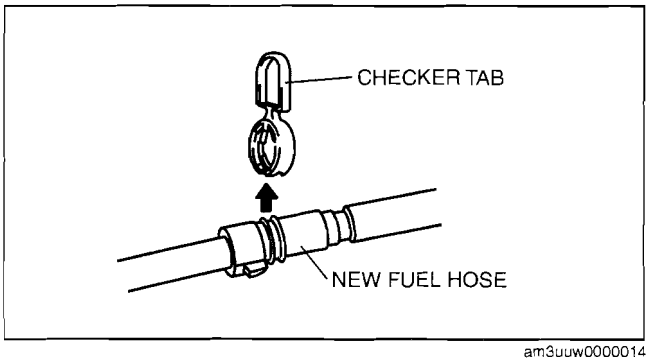


atraaw00000251

Type A Installation

Note
- If the quick release connector O-ring is damaged or has slipped, replace the fuel hose.
- A checker tab is integrated with the quick release connector for new fuel hoses and evaporative hoses. Remove the checker tab from the quick release connector after the connector is completely engaged with the fuel pipe.

1. Inspect the fuel hose and fuel pipe sealing surface for damage and deformation.
   - If there is any malfunction, replace it with a new one.
2. Apply a small amount of clean engine oil to the sealing surface of the fuel pipe.
3. Reconnect the fuel hose straight to the fuel pipe until a click is heard.



am3uuw0000014

Note
- If the quick release connector does not move at all, disconnect it, verify that the O-ring is not damaged or has not slipped, and then reconnect the quick release connector.

4. Lightly pull and push the quick release connector a few times by hand, and then verify that it can move **2.0—3.0 mm {0.08—0.12 in}** and is connected securely.
5. Inspect all related parts by performing "AFTER SERVICE PRECAUTION". (See 01-14A-5 AFTER SERVICE PRECAUTION[LF, L3].)

Type B Installation

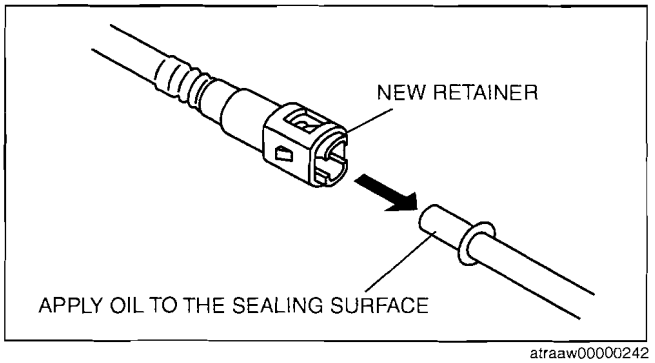
Note
- If the quick release connector O-ring is damaged or has slipped, replace the fuel hose.

1. inspect the fuel hose and fuel pipe sealing surface for damage and deformation.
   - If there is any malfunction, replace it with a new one.
2. Reconnect the fuel hose straight to the fuel pipe until a click is heard.
3. Lightly pull and push the quick release connector a few times by hand, and then verify that it is connected securely.
4. Inspect all related parts by performing "AFTER SERVICE PRECAUTION". (See 01-14A-5 AFTER SERVICE PRECAUTION[LF, L3].)

Type C Installation

Note
- Use only the designated genuine retainer when replacing the retainer.

1. Verify that the sealing surfaces of the fuel hose or fuel pipe have no damage or deformation. Replace if necessary.
   - If the O-ring of the quick release connector is damaged or displaced, replace the fuel hose.
2. Install a new retainer to the quick release connector, then visually verify that the retainer tab is installed securely to the connector.
3. Apply a small amount of clean engine oil to the sealing surface of the fuel pipe.
4. Push the quick release connector into the fuel pipe until a click is heard.
5. Lightly pull and push the quick release connector a few times by hand, and then verify that it can move **2.0—3.0 mm {0.08—0.12 in}** and is connected securely.
   - If the quick release connector does not move at all, verify that the O-ring is not damaged or has slipped, and then reconnect the connector.
6. Inspect all related parts by performing "AFTER SERVICE PRECAUTION". (See 01-14A-5 AFTER SERVICE PRECAUTION[LF, L3].)



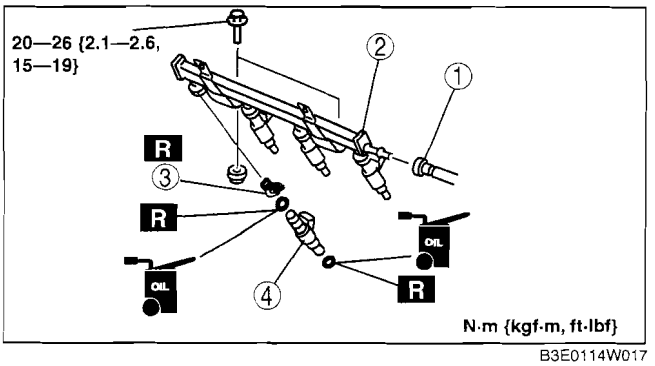
atraaw00000242

FUEL INJECTOR REMOVAL/INSTALLATION[LF, L3]

id0114a4800600

1. Follow "BEFORE SERVICE PRECAUTION" before performing any work operations to prevent fuel from spilling from the fuel system. (See 01-14A-4 BEFORE SERVICE PRECAUTION[LF, L3].)
2. Remove the plug hole plate.
3. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
4. Disconnect the negative battery cable.
5. Disconnect the fuel injector connector.
6. Remove in the order indicated in the table.
7. Install in the reverse order of removal.
8. Inspect all related parts by performing "AFTER SERVICE PRECAUTION". (See 01-14A-5 AFTER SERVICE PRECAUTION[LF, L3].)

1	Quick release connector (See 01-14A-22 QUICK RELEASE CONNECTOR (FUEL SYSTEM) REMOVAL/INSTALLATION[LF, L3], 01-14A-22 QUICK RELEASE CONNECTOR (FUEL SYSTEM) REMOVAL/INSTALLATION[LF, L3].)
2	Fuel distributor
3	Injector clip (See 01-14A-26 Fuel Injector Removal Note.)
4	Fuel injector (See 01-14A-26 Fuel Injector Installation Note.)

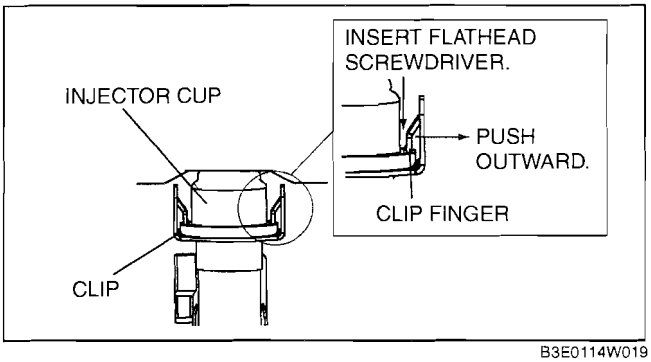


B3E0114W017

Fuel Injector Removal Note

Caution
- **Use of a deformed injector clip will cause the fuel injector to be connected incorrectly and could result in fuel leakage. It will also cause the injector to rotate. Therefore, always replace the clip when the injector is removed.**

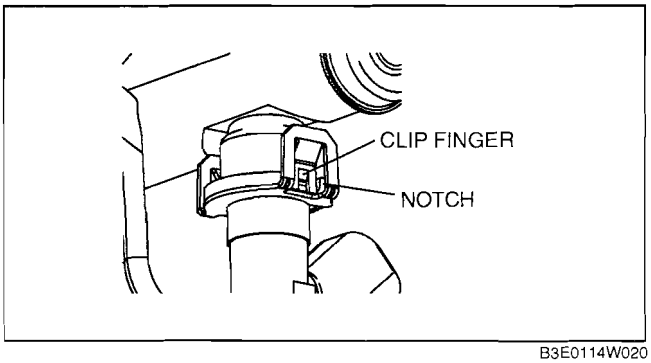
1. Insert a flathead screwdriver between the injector cup and clip finger.



B3E0114W019

Note
- When pushing the clip finger outward, deform the finger until it is removed completely from the cup notch.

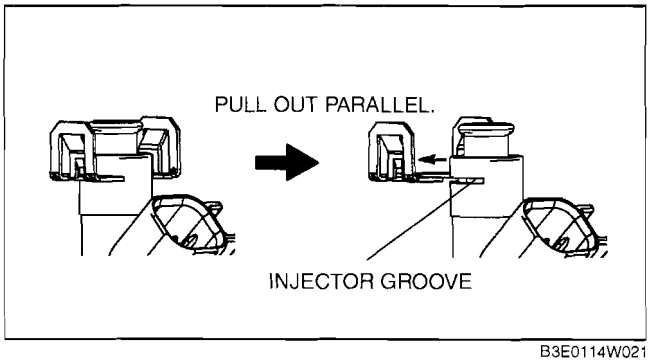
2. Push the clip finger outward using a flathead screwdriver.
3. Remove the injector with the clip.
4. Remove the clip from the fuel injector using the following procedure:



B3E0114W020

Note
- The clip will not be reused.

(1) Hold the clip using pliers.
(2) Pull the clip parallel to the injector groove and remove it from the injector.

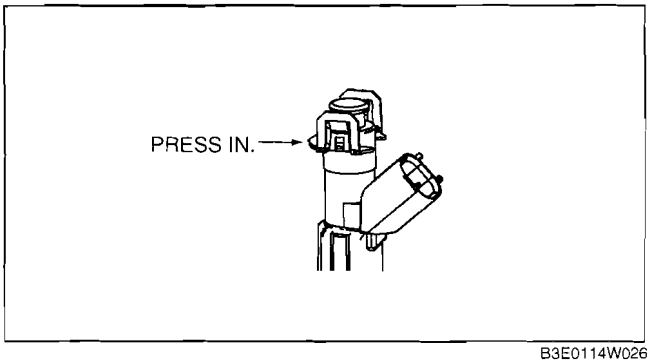


B3E0114W021

Fuel Injector Installation Note
1. Verify that the O-ring is not damaged.
   - If there is any damage, replace the O-ring.
2. Apply a small amount of clean oil to the injector groove and the O-ring.
3. Temporarily attach a new clip to the injector groove.

Note
- When the clip is attached correctly, the central area of the injector and the clip finger positions are aligned.

4. Hold the injector firmly and push the clip into the injector until the clip stops sliding.
5. Verify that the injector connector position is correct.
6. Press the injector into the injector cup. Continue pressing until the clip contacts the lower surface of the injector cup.
7. Verify that the injector and clip are correctly installed with the clip locked onto the injector cup notch.



B3E0114W026

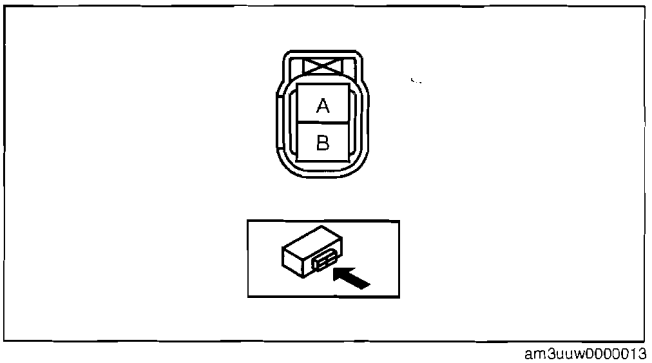
FUEL INJECTOR INSPECTION[LF, L3]

id0114a4800700

Resistance Inspection

1. Turn the ignition switch to the LOCK position.
2. Disconnect the negative battery cable.
3. Disconnect the fuel injector connector.
4. Inspect the resistance between fuel injector terminals A and B using a tester.
   - If within the specification, perform the "Circuit Open/Short Inspection".
   - If not within the specification, replace the fuel injector.

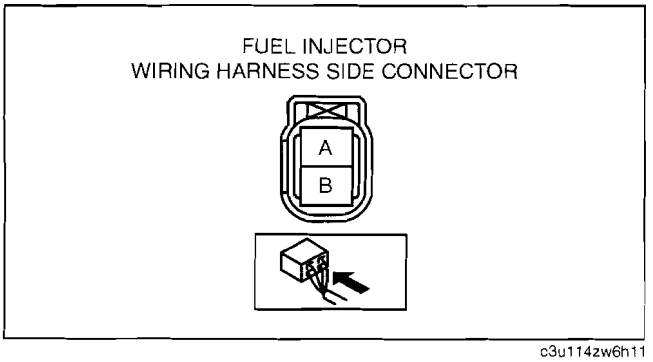
Fuel injector resistance
California emission regulation applicable model: 13.1—14.5 ohms [20 °C {68 °F}]
Except for California emission regulation applicable model: 11.4—12.6 ohms [20 °C {68 °F}]



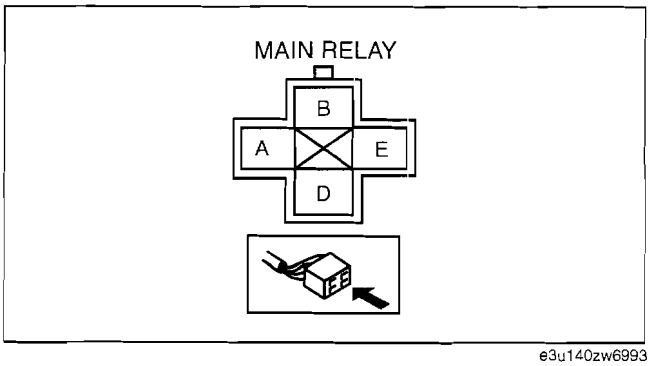
am3uuw0000013

Circuit Open/Short Inspection

1. Disconnect the PCM connector. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
2. Inspect the following wiring harnesses for open or short circuit (continuity check).



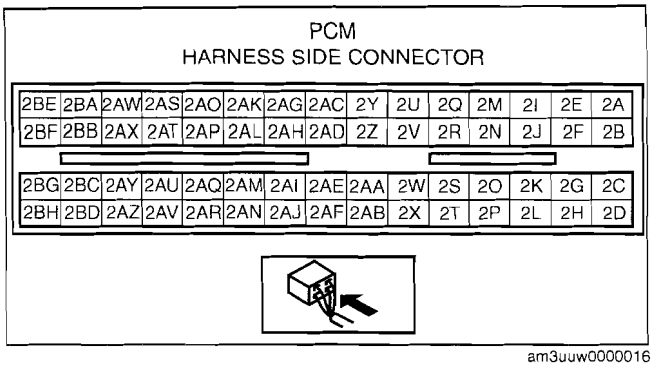
c3u114zw6h11



e3u140zw6993

Open circuit

- If there is no continuity, there is an open circuit. Repair or replace the wiring harness.
  - — Fuel injector No.1 terminal A and PCM terminal 2BB
  - — Fuel injector No.2 terminal A and PCM terminal 2BC
  - — Fuel injector No.3 terminal A and PCM terminal 2BD
  - — Fuel injector No.4 terminal A and PCM terminal 2AZ
  - — Fuel injector No.1 terminal B and main relay terminal A
  - — Fuel injector No.2 terminal B and main relay terminal A
  - — Fuel injector No.3 terminal B and main relay terminal A
  - — Fuel injector No.4 terminal B and main relay terminal A



am3uuw0000016

Short circuit

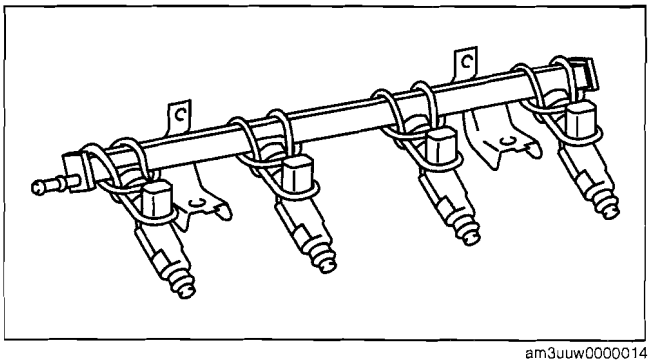
- If there is continuity, there is a short circuit. Repair or replace the wiring harness.
  - — Fuel injector No.1 terminal A and body ground
  - — Fuel injector No.2 terminal A and body ground
  - — Fuel injector No.3 terminal A and body ground
  - — Fuel injector No.4 terminal A and body ground

Leakage Inspection

Warning

- **Fuel line spills and leakage from the pressurized fuel system are dangerous. Fuel can ignite and cause serious injury or death and damage. To prevent this, complete the following inspection with the engine stopped.**

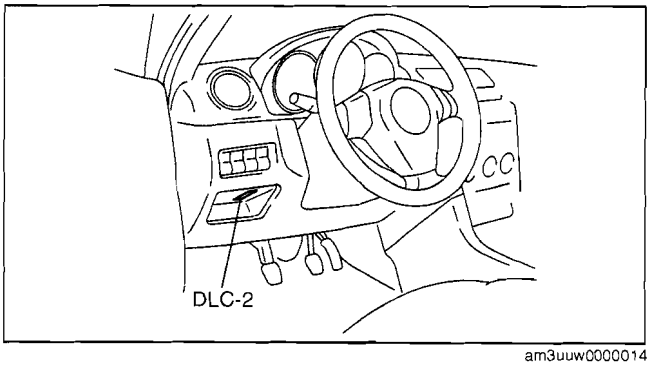
1. Follow "BEFORE SERVICE PRECAUTION" before performing any work operations to prevent fuel from spilling from the fuel system. (See 01-14A-4 BEFORE SERVICE PRECAUTION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the fuel injector and fuel distributor as a single unit. (See 01-14A-25 FUEL INJECTOR REMOVAL/ INSTALLATION[LF, L3].)
4. Fix the fuel injector to the fuel distributor with a wire or the equivalent.
5. Connect the fuel hose.
6. Start the fuel pump using the following procedure:



am3uuw0000014

Using M-MDS

1. Connect the M-MDS to the DLC-2.
2. Start the fuel pump using the "FP" simulation function.



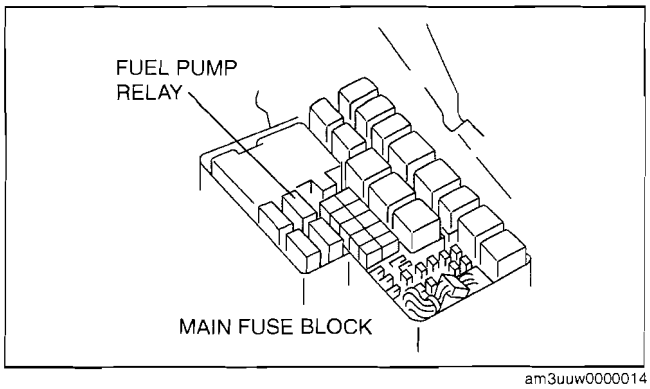
am3uuw0000014

Without using M-MDS

1. Remove the fuel pump relay.

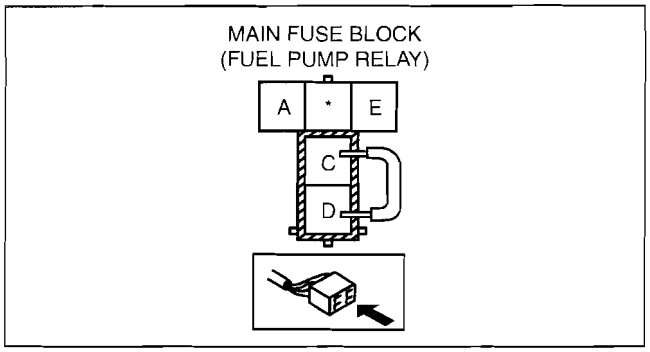
Caution

- **Be careful to short the specified terminal as shorting the wrong terminal of the main fuse block may cause a malfunction.**



am3uuw0000014

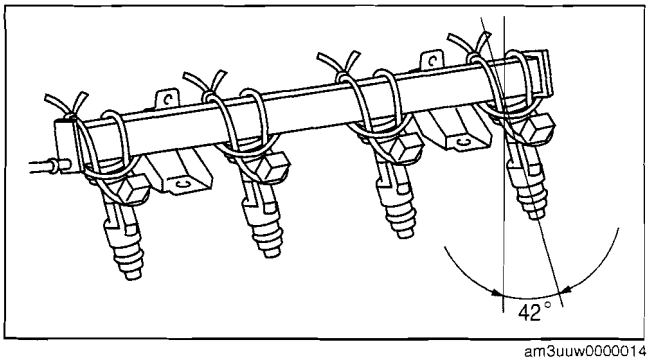
2. Using a jumper wire, short fuel pump relay terminals C and D and connect the negative battery cable to start the fuel pump.



ada3912w333

7. Tilt the fuel injector at an angle of **42°** to inspect for leakage.
   - If not within the specification, replace the fuel injector.

Standard
Less than 1 drop/2 min



am3uuw0000014

8. Stop the fuel pump using the following procedure:
   Using M-MDS
   1. Stop the fuel pump using the "FP" simulation function.
   Without using M-MDS
   1. Disconnect the negative battery cable to stop the fuel pump.
9. Disconnect the negative battery cable. (using M-MDS)
10. Remove the wire or equivalent securing the fuel injector.
11. Install the fuel injector. (See 01-14A-25 FUEL INJECTOR REMOVAL/INSTALLATION[LF, L3].)
12. Inspect all related parts by performing "AFTER SERVICE PRECAUTION". (See 01-14A-5 AFTER SERVICE PRECAUTION[LF, L3].)

Injection Volume Inspection

Warning

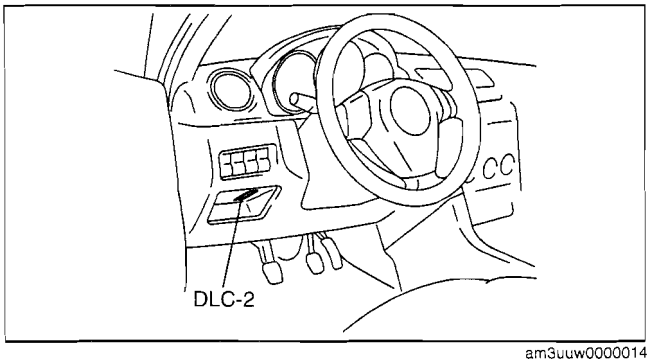
- **Fuel line spills and leakage from the pressurized fuel system are dangerous. Fuel can ignite and cause serious injury or death and damage. To prevent this, complete the following inspection with the engine stopped.**

1. Follow "BEFORE SERVICE PRECAUTION" before performing any work operations to prevent fuel from spilling from the fuel system. (See 01-14A-4 BEFORE SERVICE PRECAUTION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the fuel injector. (See 01-14A-25 FUEL INJECTOR REMOVAL/INSTALLATION[LF, L3].)
4. Connect the fuel injector to the fuel injector tester.
5. Start the fuel pump using the following procedure:

Using M-MDS

1. Connect the M-MDS to the DLC-2.
2. Start the fuel pump using the "FP" simulation function.

Without using M-MDS

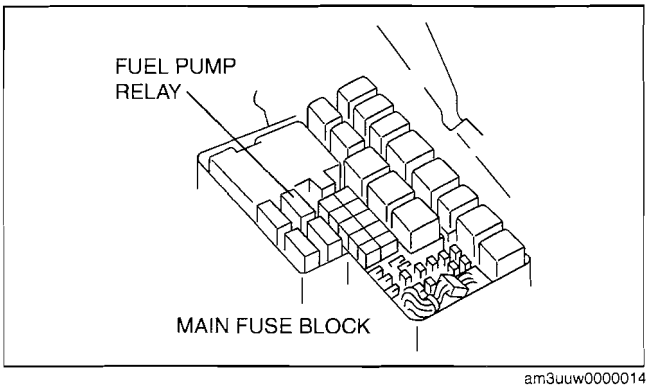


am3uuw0000014

1. Remove the fuel pump relay.

Caution

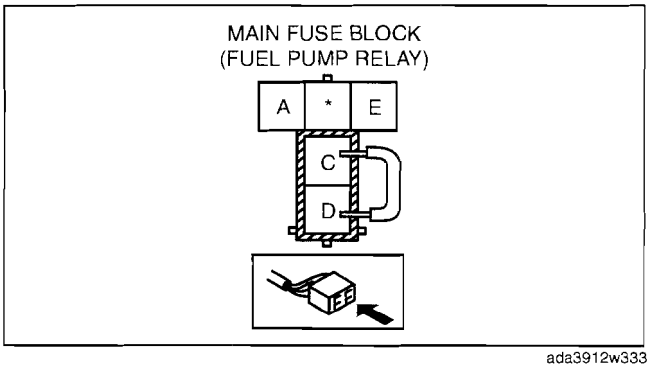
- **Be careful to short the specified terminal as shorting the wrong terminal of the main fuse block may cause a malfunction.**



am3uuw0000014

2. Using a jumper wire, short fuel pump relay terminals C and D and connect the negative battery cable to start the fuel pump.

6. Measure the injection volume of each fuel injector.
   - If not within the specification, replace the fuel injector.



ada3912w333

Standard

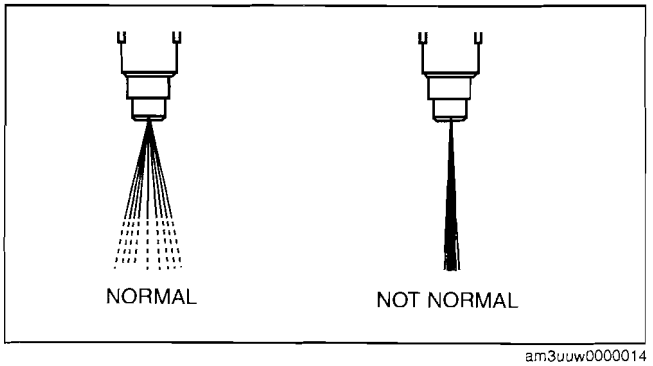
California emission regulation applicable model: 260—320 ml {260—320 cc, 15.9—19.5 cu in}/min

Except for California emission regulation applicable mode: 195—245 ml {195—245 cc, 11.9—14.9 cu in}/min

7. Disconnect the negative battery cable.
8. Install the fuel injector. (See 01-14A-25 FUEL INJECTOR REMOVAL/INSTALLATION[LF, L3].)
9. Inspect all related parts by performing "AFTER SERVICE PRECAUTION". (See 01-14A-5 AFTER SERVICE PRECAUTION[LF, L3].)

Atomization Inspection

1. Inspect the atomization status.
   - If not normal, replace the fuel injector.



am3uuw0000014

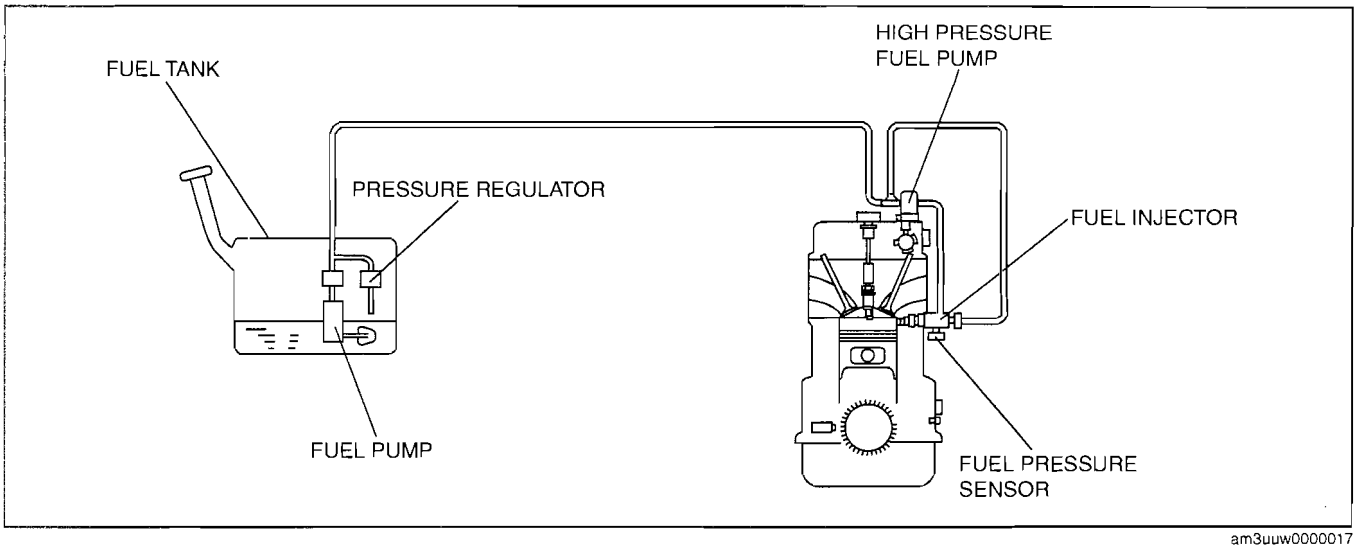
FUEL SYSTEM DIAGRAM[L3 WITH TC]

id011439800200



am3uuw0000017

BEFORE SERVICE PRECAUTION[L3 WITH TC]

id011439802000

Warning

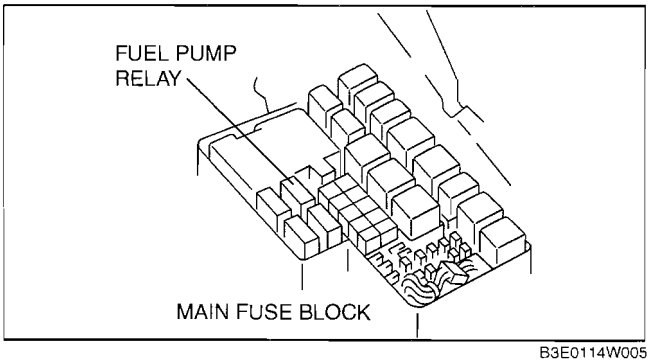
- **Fuel vapor is hazardous. It can very easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.**
- **Fuel line spills and leakage from the pressurized fuel system are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure".**
- **A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before performing work on the fuel system, discharge static electricity by touching the vehicle body.**

Caution

- **If there is foreign material on the connecting area of the quick release connector, it might damage the connector or fuel pipe. To prevent this, disconnect the connector and clean the connecting area before connecting.**

Fuel Line Safety Procedure

1. Remove the fuel-filler cap to release the pressure inside the fuel tank.
2. Remove the fuel pump relay.
3. Start the engine.
4. After the engine stalls, crank the engine **several times**.
5. Turn the ignition switch to the LOCK position.
6. Install the fuel pump relay.



B3E0114W005

AFTER SERVICE PRECAUTION[L3 WITH TC]

id011439801900

Warning

- **Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Leakage Inspection".**

Fuel Leakage Inspection

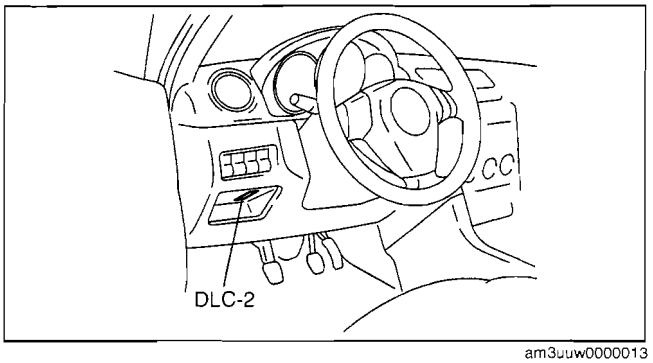
Warning

- **Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, complete the following inspection with the engine stopped.**

Using M-MDS

1. Connect the M-MDS to the DLC-2.
2. Start the fuel pump using the "FP" simulation function.
3. Verify that there is no fuel leakage from the pressurized parts.
   - If there is leakage, replace the fuel hoses and clips.
   - If there is damage on the seal on the fuel pipe side, replace the fuel pipe.

Standard
There shall be no leakage after 5 min.



am3uuw0000013

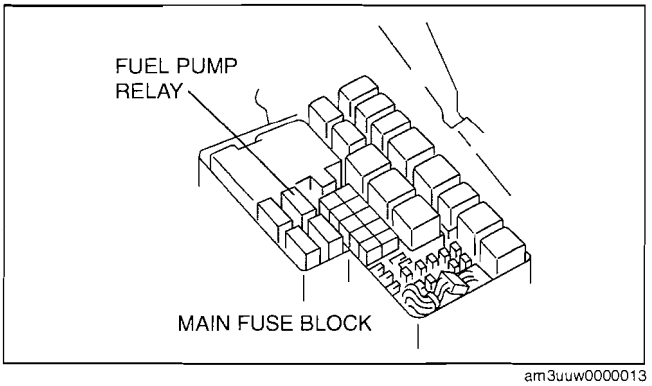
4. After reinstallation, repeat step 2—3 in the fuel leakage inspection.

Without using M-MDS

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Remove the fuel pump relay.

Caution

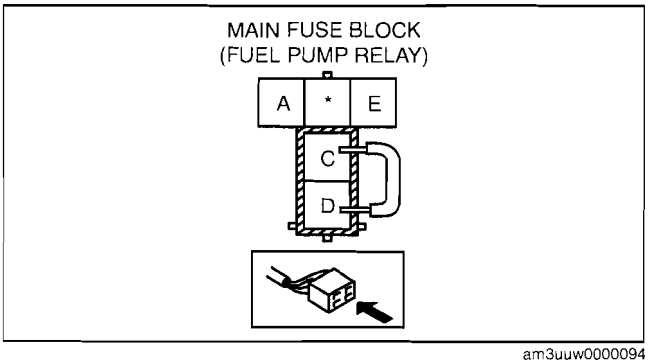
- **Be careful to short the specified terminal as shorting the wrong terminal of the main fuse block may cause a malfunction.**



am3uuw0000013

4. Using a jumper wire, short fuel pump relay terminals C and D and connect the negative battery cable to start the fuel pump.
5. Verify that there is no fuel leakage from the pressurized parts.
   - If there is leakage, replace the fuel hoses and clips.
   - If there is damage on the seal on the fuel pipe side, replace the fuel pipe.

Standard
There shall be no leakage after 5 min.



am3uuw0000094

6. After reinstallation, repeat step 3—4 in the fuel leakage inspection.

FUEL LINE PRESSURE INSPECTION[L3 WITH TC]

id011439800500

Low Pressure Line (From the Fuel Tank to the High Pressure Fuel Pump)

Warning

- **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death. Fuel can also irritate skin and eyes. To prevent this, always complete the "BEFORE SERVICE PRECAUTION". (See01-14B-4 BEFORE SERVICE PRECAUTION[L3 WITH TC].)**

Caution

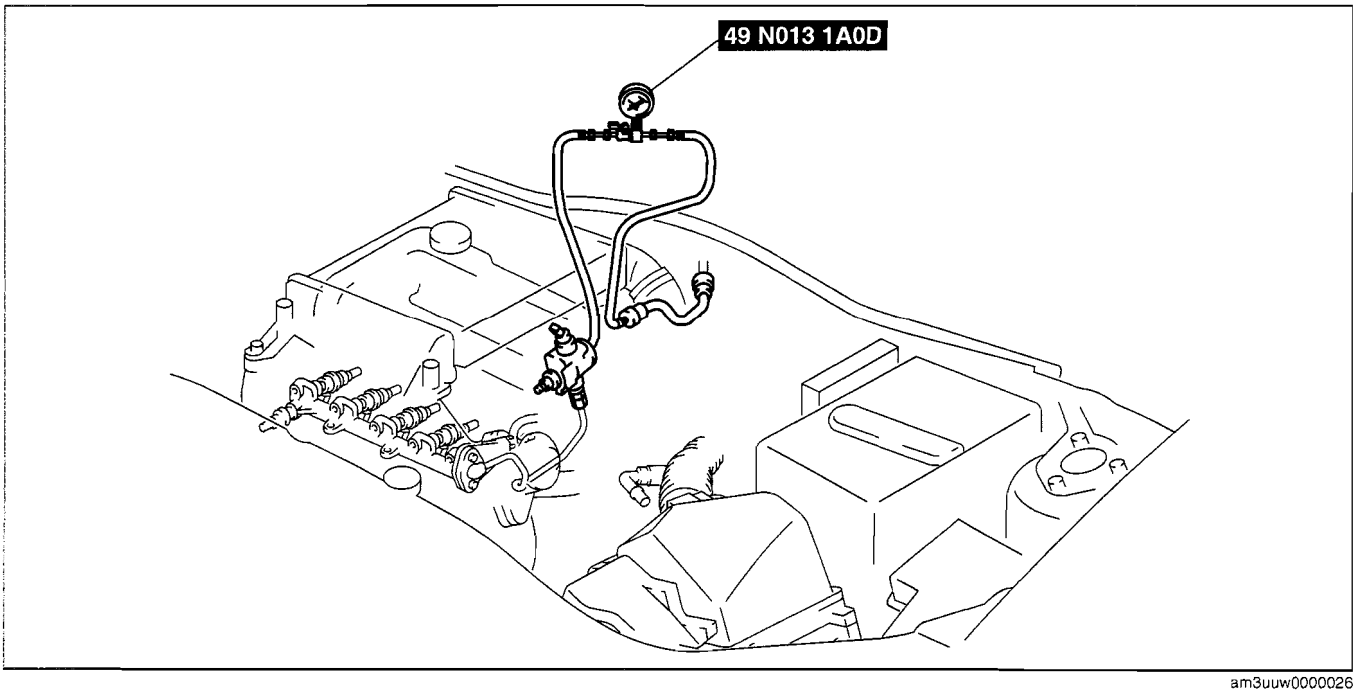
- **Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting using cloth or soft brush, and make sure that it is free of foreign material.**

1. Complete the "BEFORE SERVICE PRECAUTION". (See01-14B-4 BEFORE SERVICE PRECAUTION[L3 WITH TC].)
2. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
3. Disconnect the negative battery cable.

Caution

- **The quick release connector may be damaged if the tab is turned too far. Do not turn the tab over the stopper.**

4. Disconnect the quick release connector from the fuel tank. (See01-14B-24 QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION[L3 WITH TC].)
5. Push the **SST** quick release connector into the fuel pipe and plastic fuel hose into the **SST** until a click is heard.
6. Turn the lever parallel to the hose of the **SST** as shown.

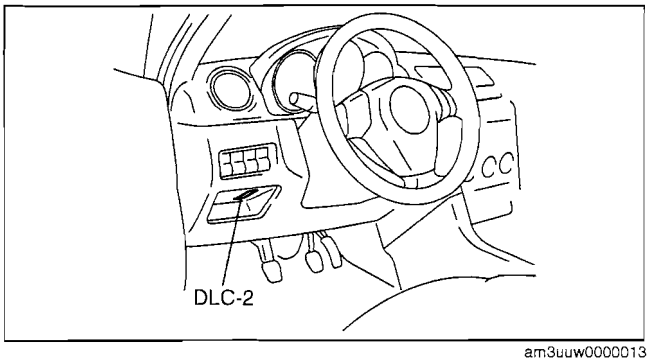


am3uuw0000026

7. Start the fuel pump using the following procedure:

Using M-MDS

1. Connect the M-MDS to the DLC-2.
2. Start the fuel pump using the "FP" simulation function.



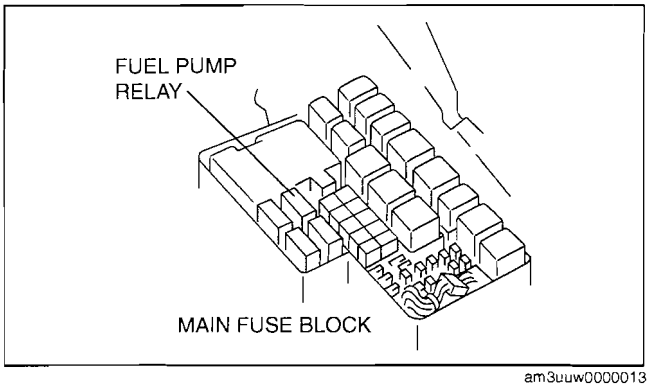
am3uuw0000013

Without using M-MDS

1. Remove the fuel pump relay.

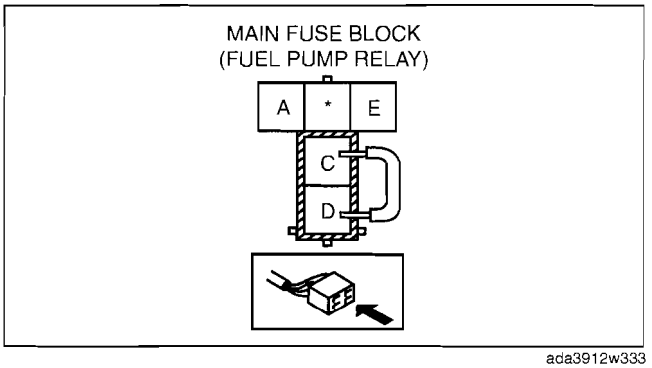
Caution

- **Be careful to short the specified terminal as shorting the wrong terminal of the main fuse block may cause a malfunction.**



am3uuw0000013

2. Using a jumper wire, short fuel pump relay terminals C and D and connect the negative battery cable to start the fuel pump.



ada3912w333

8. Operate the fuel pump for **10 s**.
9. Measure the fuel line pressure.
   - If not as specified, inspect the following:
     Zero or low
     — FP circuit
     — FP
     — Fuel line (clogged)
     — Fuel leakage inside pressure regulator
     High
     — Pressure regulator for high pressure cause

Fuel line pressure

410—490 kPa {4.2—4.9 kgf/cm^2, 60—71 psi}

10. Turn the ignition switch to the LOCK position.
11. Measure the fuel hold pressure **after 5 min.**
    - If not as specified, inspect the following:
      — FP hold pressure
      — Fuel injector for leakage
      — Fuel line for improper routing, kinks or leakage

Fuel hold pressure

More than 230 kPa {2.3 kgf/cm^2, 33 psi}

12. Disconnect the **SST.**
13. Connect the quick release connector. (See01-14B-24 QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION[L3 WITH TC].)
14. Complete the "AFTER SERVICE PRECAUTION". (See01-14B-5 AFTER SERVICE PRECAUTION[L3 WITH TC])

High Pressure Line (From the High Pressure Fuel Pump to the Fuel Injector)

1. Inspect the fuel pressure sensor. (See01-40B-38 FUEL PRESSURE SENSOR INSPECTION[L3 WITH TC].)
2. Inspect the high pressure fuel pump. (See01-14B-23 HIGH PRESSURE FUEL PUMP INSPECTION[L3 WITH TC].)

FUEL TANK REMOVAL/INSTALLATION[L3 WITH TC]

id011439801600

Warning

- **Repairing a fuel tank containing fuel is dangerous. Explosion or fire may cause death or serious injury. Always properly steam clean a fuel tank before repairing it.**
- **A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before draining fuel, make sure to discharge static electricity by touching the vehicle body.**

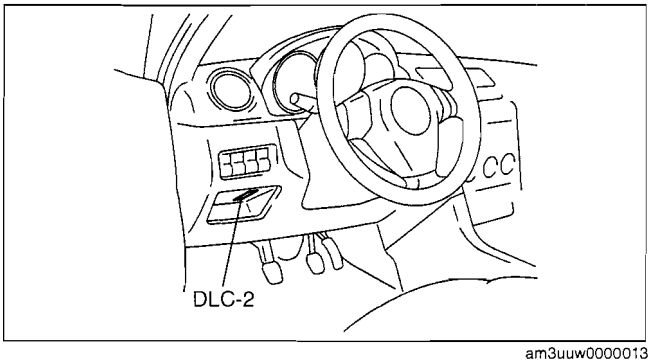
1. Park the vehicle on a level surface.
2. Follow "BEFORE SERVICE PRECAUTION" before performing any work operations to prevent fuel from spilling from the fuel system. (See 01-14B-4 BEFORE SERVICE PRECAUTION[L3 WITH TC].)
3. Drain the fuel from the fuel tank using the following procedure:
   (1) Disconnect the quick release connector (in the engine compartment). (See 01-14B-24 QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION[L3 WITH TC].)
   (2) Attach a long hose to the disconnected fuel pipe and drain the fuel into a proper receptacle.
   (3) Start the fuel pump using the following procedure:

Using M-MDS

1. Connect the M-MDS to the DLC-2.
2. Start the fuel pump using the "FP" simulation function.

Without using M-MDS

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
2. Disconnect the negative battery cable.

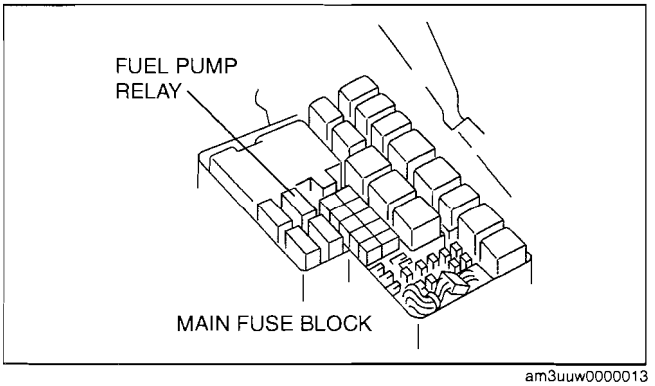


am3uuw0000013

3. Remove the fuel pump relay.

Caution

- **Be careful to short the specified terminal as shorting the wrong terminal of the main fuse block may cause a malfunction.**

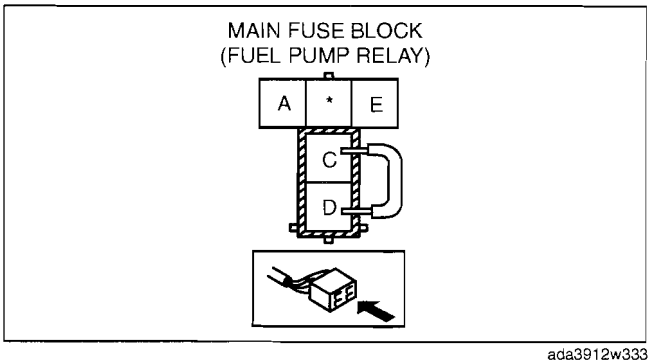


am3uuw0000013

4. Using a jumper wire, short fuel pump relay terminals C and D and connect the negative battery cable to start the fuel pump.

Caution

- **The fuel pump may malfunction if it is operated without any fuel in the fuel tank (fuel pump idling). Constantly monitor the amount of fuel being discharged and immediately stop operation of the pump when essentially no fuel is being discharged.**



ada3912w333

(4) When essentially no fuel is being discharged from the hose, stop the fuel pump using the following procedure:

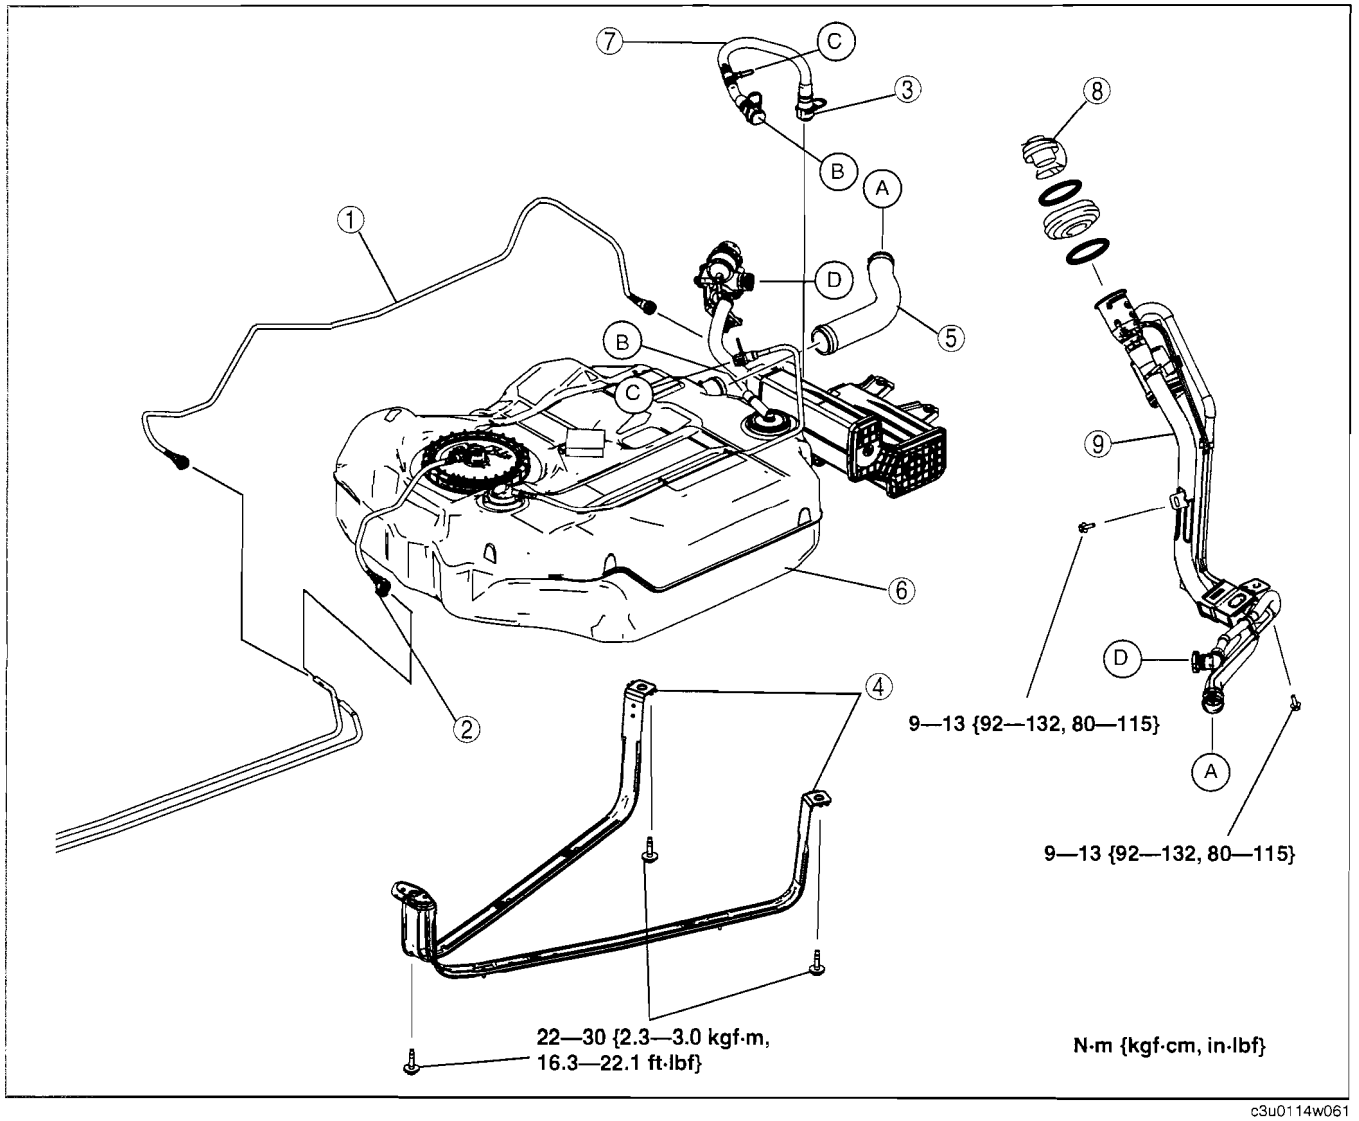
Using M-MDS

1. Stop the fuel pump using the "FP" simulation function.
2. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
3. Disconnect the negative battery cable.

Without using M-MDS

1. Disconnect the negative battery cable to stop the fuel pump.

4. Remove the rear seat cushion. (See 09-13-6 REAR SEAT REMOVAL/INSTALLATION.)
5. Remove the service hole cover.
6. Disconnect the fuel pump unit connector.
7. Remove the charcoal canister protector. (See 01-16B-6 CHARCOAL CANISTER REMOVAL/INSTALLATION[L3 WITH TC].)
8. Lower the main silencer so that the insulator can be removed. (See 01-15B-2 EXHAUST SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
9. Remove the insulator.
10. Remove the rear under cover (LH).
11. Remove in the order indicated in the table.
12. Install in the reverse order of removal.
13. Inspect all parts by performing "AFTER SERVICE PRECAUTION". (See 01-14B-5 AFTER SERVICE PRECAUTION[L3 WITH TC].)



c3u0114w061

1	Evaporative hose (See 01-14B-24 QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION[L3 WITH TC].)
2	Quick release connector (on fuel line) (See 01-14B-24 QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION[L3 WITH TC].)

3	Quick release connector (on charcoal canister) (See 01-14B-24 QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION[L3 WITH TC],.)
4	Strap
5	Joint hose (See 01-14B-10 Joint Hose Removal Note.) (See 01-14B-10 Joint Hose Installation Note.)
6	Fuel tank
7	Breather hose (See 01-14B-24 QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION[L3 WITH TC].)
8	Fuel-filler cap
9	Fuel-filler pipe (See 01-14B-10 Fuel-filler Pipe Removal Note.)

Joint Hose Removal Note

1. Remove the fuel-filler pipe installation bolt.
2. Loosen the tie band connecting with the fuel tank.
3. Pull down the fuel-filler pipe to disconnect the joint hose.

Fuel-filler Pipe Removal Note

1. Remove the rear tire (RH).
2. Remove the rear mudguard (RH).
3. Support the rear crossmember using a transmission jack.
4. Remove the rear shock absorber (RH) lower bolts. (See 02-14-3 REAR SHOCK ABSORBER REMOVAL/INSTALLATION.)
5. Removal the three rear crossmember installation bolts (RH). (See 02-14-12 REAR CROSSMEMBER REMOVAL/INSTALLATION.)
6. Loosen the three rear crossmember installation bolts (LH) **about 10 mm {0.39 in}**. (See 02-14-12 REAR CROSSMEMBER REMOVAL/INSTALLATION.)
7. Lower the rear crossmember **about 35—40 mm {1.4—1.5 in}** using a transmission jack.

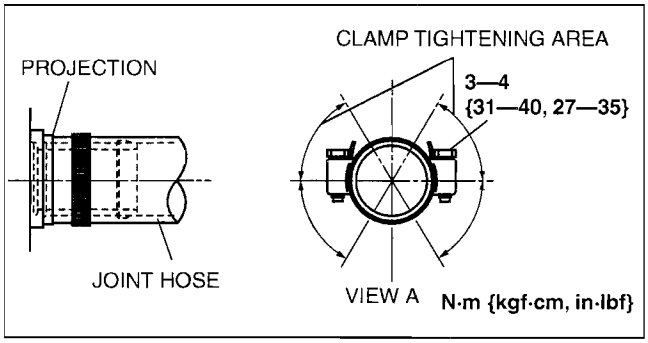
Note

- Because the rear crossmember is equipped with the positioning pins, rear wheel alignment inspection/adjustment is not necessary.

8. Remove the fuel-filler pipe.

Joint Hose Installation Note

1. Install the joint hose and clamp as shown in the figure.



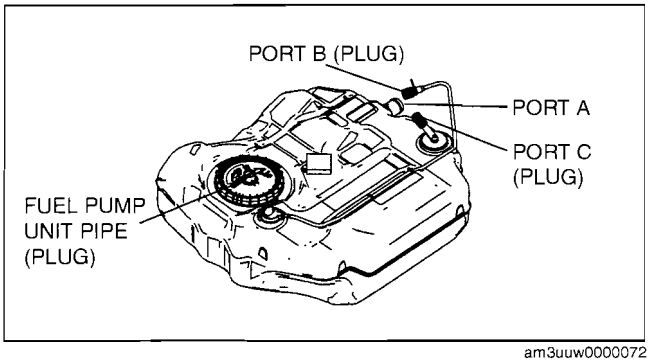
am3uuw0000013

FUEL TANK INSPECTION[L3 WITH TC]

id011439803200

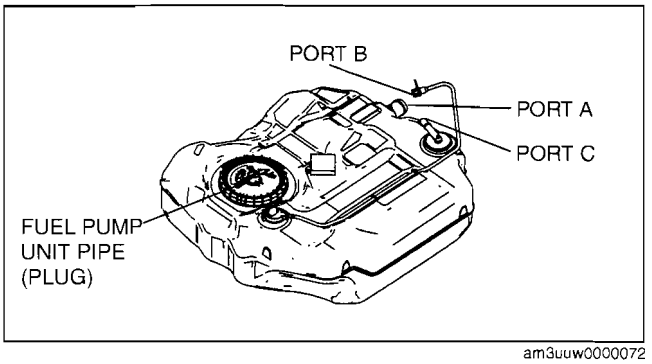
Note
- This inspection is for fuel shut-off valve and rollover valve integrated in the fuel tank.

1. Follow "BEFORE SERVICE PRECAUTION" before performing any work operations to prevent fuel from spilling from the fuel system. (See 01-14B-4 BEFORE SERVICE PRECAUTION[L3 WITH TC].)
2. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
3. Disconnect the negative battery cable.
4. Remove the fuel tank. (See 01-14B-8 FUEL TANK REMOVAL/INSTALLATION[L3 WITH TC].)
5. Level the fuel tank.
6. Perform the following procedure to verify the fuel tank airtightness.
   (1) Plug the fuel pump unit pipe, ports B and C.
   (2) Apply a pressure to port A and wait for a while.
   (3) Verify that there is no air leakage from the fuel tank.
      - If there is airflow, replace the fuel tank.



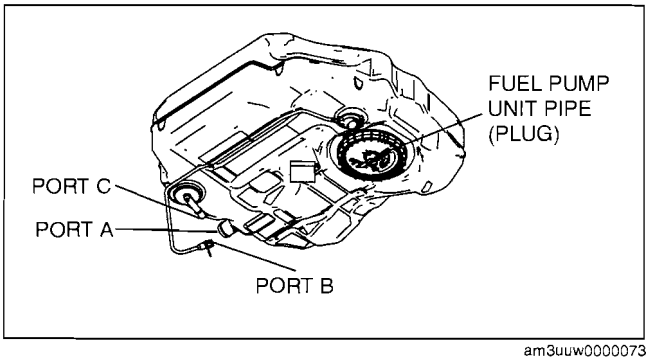
am3uuw0000072

7. Apply a pressure to port A and wait for a while.
8. With the pressure still applied, verify that there is airflow from port B and C.
   - If there is no airflow from either port, replace the fuel tank.
9. Place the fuel tank upside down.



am3uuw0000072

10. Apply a pressure to port A and wait for a while.
11. With the pressure still applied, verify that there is no airflow from port B and C.
    - If there is airflow from either port, replace the fuel tank.

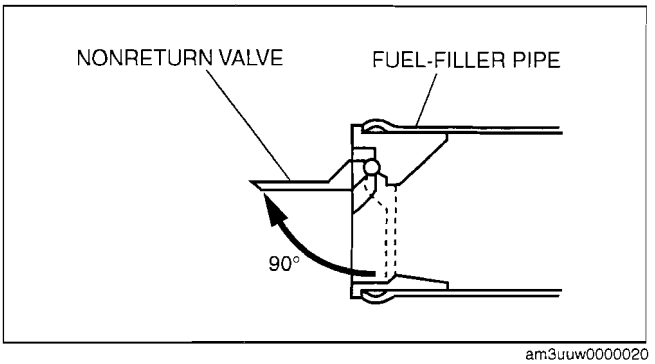


am3uuw0000073

NONRETURN VALVE INSPECTION[L3 WITH TC]

id011439803600

1. Remove the fuel-filler pipe. (See 01-14B-8 FUEL TANK REMOVAL/INSTALLATION[L3 WITH TC].)
2. Move the valve and verify that the valve opens to **90°**.
   - If it does not open, replace the fuel-filler pipe.
3. Verify that the nonreturn valve returns to the normal position by spring force.
   - If it does not return, replace the fuel-filler pipe.



am3uuw0000020

FUEL PUMP UNIT REMOVAL/INSTALLATION[L3 WITH TC]

id011439800900

Warning

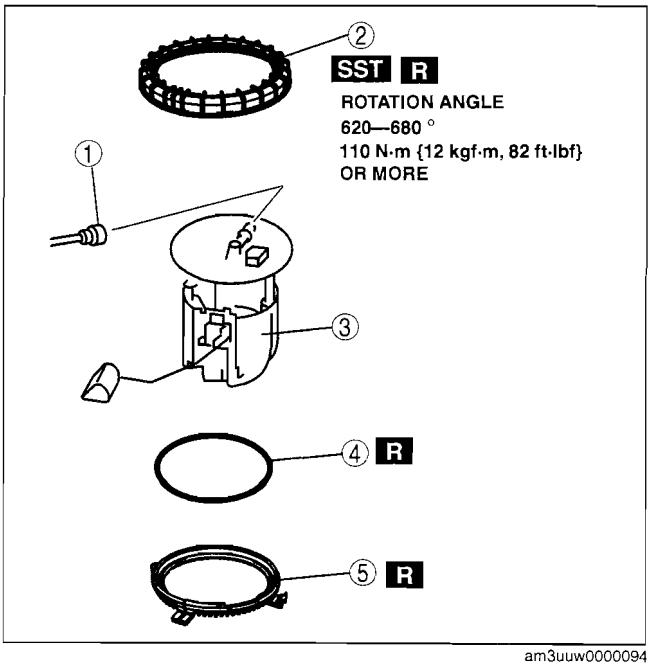
- **Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure", while referring to "BEFORE SERVICE PRECAUTION".**
- **Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, before performing the fuel pump unit removal/installation, always complete the "Fuel Leak Inspection After Fuel Pump Unit Installation".**

Note

- Gasket must be replaced anytime fuel pump is removed or replaced.

1. Follow "BEFORE SERVICE PRECAUTION" before performing any work operations to prevent fuel from spilling from the fuel system. (See 01-14B-4 BEFORE SERVICE PRECAUTION[L3 WITH TC].)
2. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
3. Disconnect the negative battery cable.
4. Remove the fuel tank. (See 01-14B-8 FUEL TANK REMOVAL/INSTALLATION[L3 WITH TC].)
5. Remove in the order indicated in the table.
6. Install in the reverse order of removal.
7. Inspect all related parts by performing "AFTER SERVICE PRECAUTION". (See 01-14B-5 AFTER SERVICE PRECAUTION[L3 WITH TC].)

1	Quick release connector (See 01-14B-24 QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION[L3 WITH TC].)
2	Fuel pump cap (See 01-14B-13 Fuel pump cap removal note.) (See 01-14B-13 Fuel pump cap installation note.)
3	Fuel pump unit (See 01-14B-13 Fuel pump cap removal note.)
4	Packing (See 01-14B-13 Fuel pump cap installation note.)
5	Retainer (See 01-14B-13 Fuel pump cap installation note.)

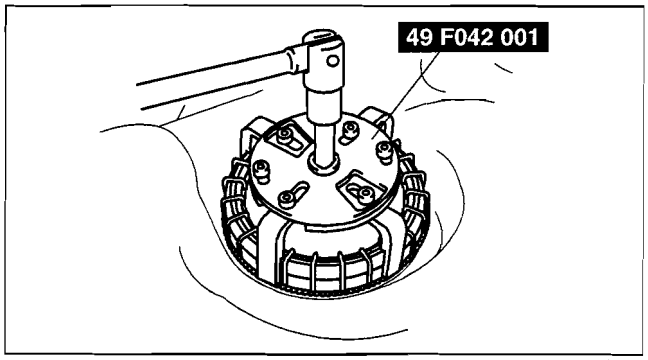


am3uuw0000094

Fuel pump cap removal note

Caution
- **The fuel pump cap could be damaged if the SST is used with any gap between the cap and the SST. Securely attach the SST so that there is no gap between the SST tabs and the side of the cap.**

1. Remove the fuel pump cap using the **SST**.



c3u114zl5004

Fuel pump cap installation note

Warning
- **Make sure there is no foreign material on each of the parts. If there is foreign material on the parts, the fuel pump unit cannot be assembled correctly, which could result in fuel leakage.**

Note
- The fuel pump unit will rotate and cannot be secured in the specified position if there is any gasoline on the gasket. Thoroughly wipe away all gasoline from the gasket.

1. Replace the packing, fuel pump cap and the retainer with new parts.

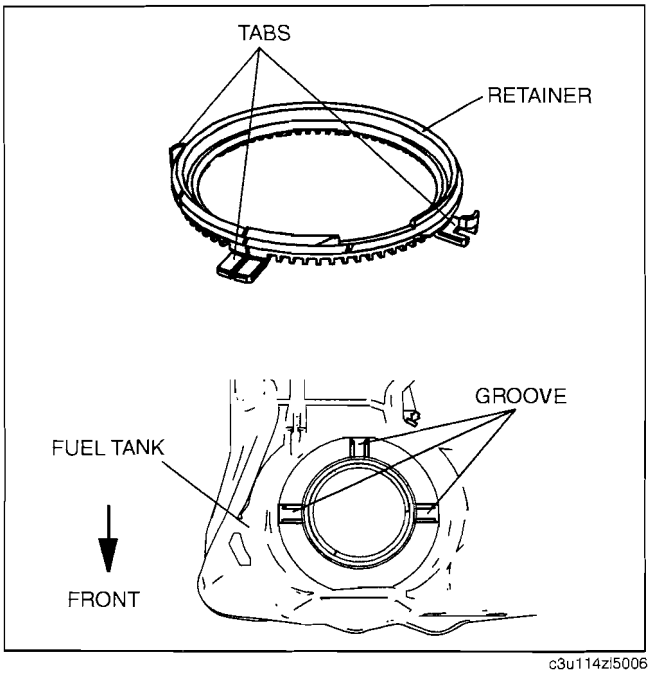
Caution
- **New parts can deform depending on the temperature. If the parts deform, the fuel pump unit cannot be assembled correctly, which could result in fuel leakage. Therefore, keep new parts at room temperature for the specified period of time to stabilize the shape.**

2. Leave new parts inside for the following period of time:

Stand-by time
12 h or more

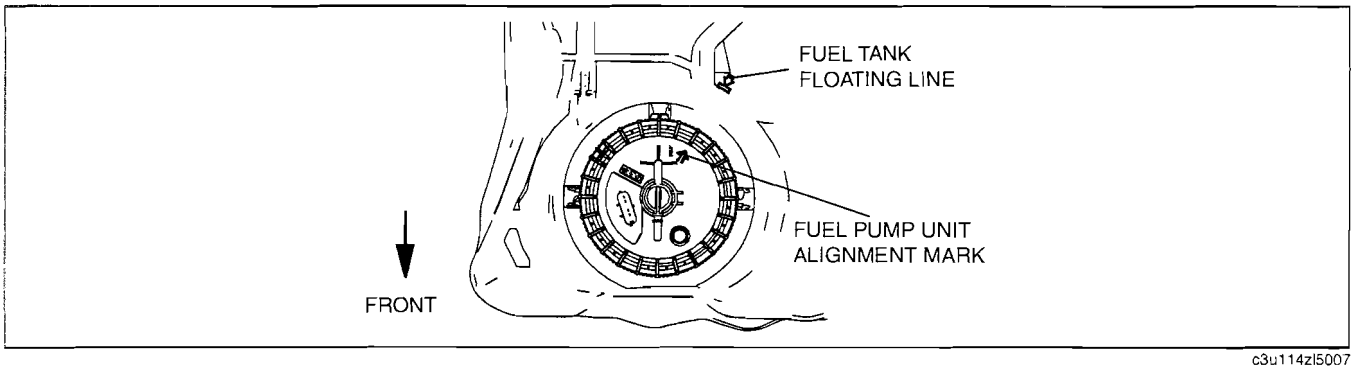
3. Install a new retainer to the fuel tank.
   (1) Align the retainer tabs (3 locations) with the fuel tank grooves.
   (2) Verify that the tabs are inserted into the grooves and the retainer is installed correctly.
   (3) Verify the retainer is not damaged.
4. Install a new packing to the fuel tank.
   (1) Verify the packing groove is clean and free of foreign material.
   (2) Install the packing to the fuel tank so that it is inserted into the fuel tank grooves.

Caution
- **Install the fuel pump unit to the fuel tank being careful not to bend the fuel sender unit arm. If the arm is bent, the fuel sender unit will not operate correctly.**



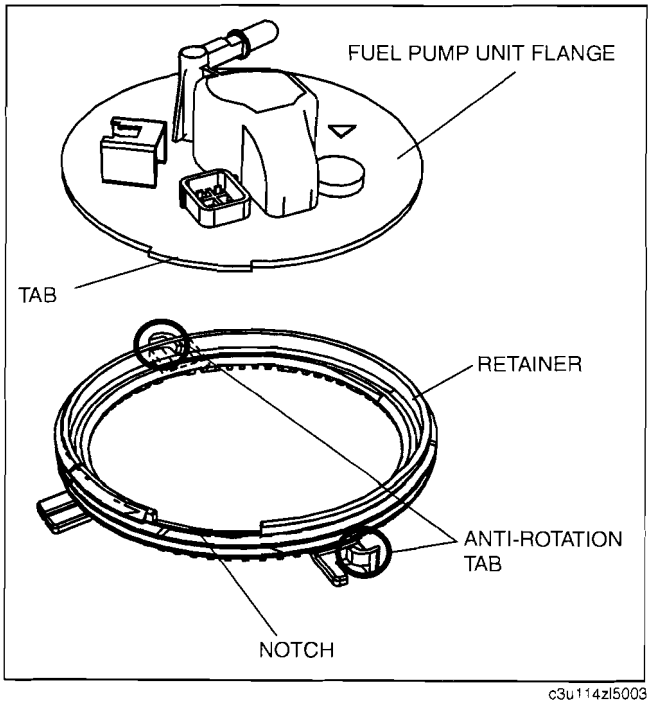
c3u114zl5006

5. Install the fuel pump unit to the fuel tank.
   (1) Align the fuel pump unit alignment mark and the floating line on the fuel tank.



c3u114zl5007

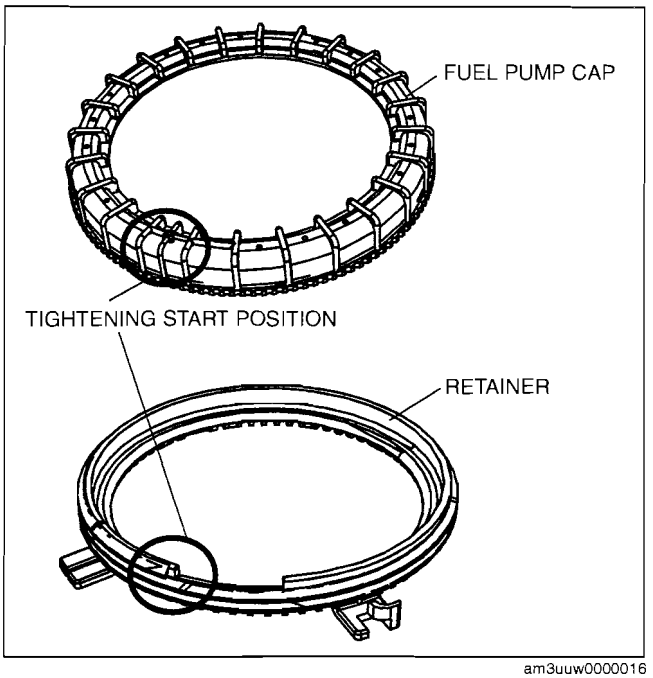
   (2) Verify the tab on the fuel pump unit flange with the notch on the retainer.



c3u114zl5003

6. Set on a new fuel pump cap.
   (1) Apply downward force (push down) on the center of the fuel pump unit flange.

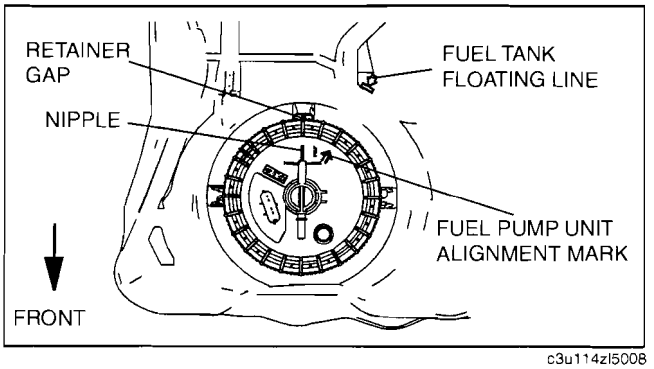
Note
- Align the fuel pump cap with the tightening start position of the retainer and tighten the fuel pump cap with the start position as **0** °.
- The fuel pump cap tightening start position is the position where the spaces between the ribs become narrow. The retainer tightening start position is the notch position.



am3uuw0000016

   (2) Align the tightening start position on the fuel pump cap and the tightening start point of the retainer.

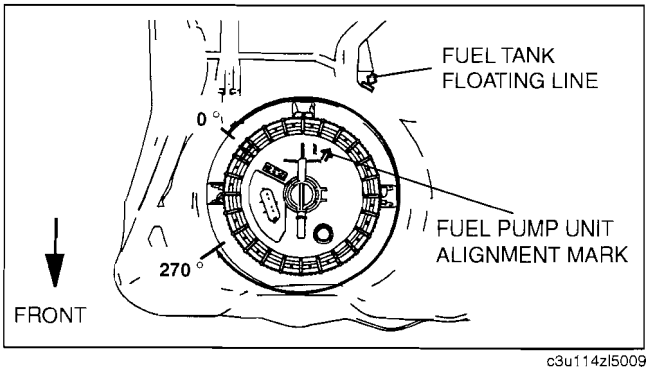
Warning
- **No grease or lubrication allowed on parts during installation. Parts could slide or they cannot be tightened to the specified torque. As a result, fuel leakage could occur.**
- **When tightening the fuel pump cap, be careful that the points indicated below have not deviated. If there is deviation, the fuel pump unit cannot be installed correctly, which could result in fuel leakage.**
  - **— The fuel pump unit alignment mark and the floating line on the fuel tank**
  - **— The fuel pump unit nipple and the retainer gap**



c3u114zl5008

7. Tighten the fuel pump cap.
   (1) Tighten the fuel pump cap by hand to the specified angle or more until the flange is fixed.

Fuel pump cap rotation angle
270 ° or more

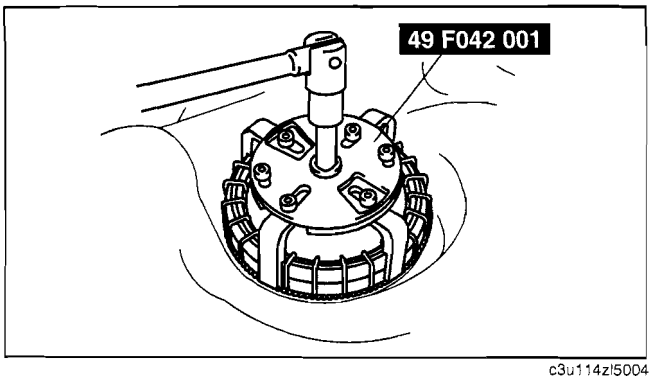


c3u114zl5009

   (2) Verify that the fuel pump cap is tightened correctly.
      1) The gap between the bottom of the fuel pump cap and the tank surface is even all around.
         - If the fuel pump cap is not tightened uniformly, loosen it by hand and re-install it.

(3) Install the **SST**.

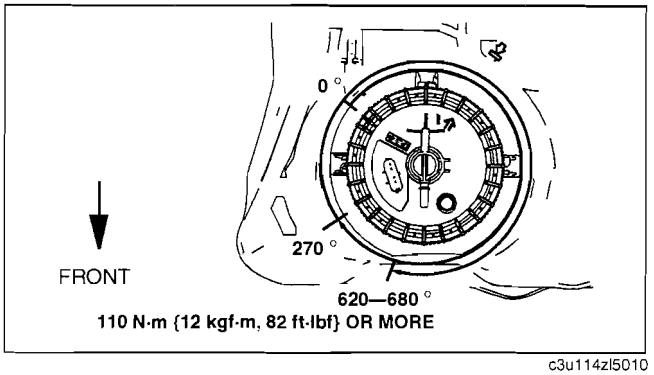
Note
- The fuel pump cap rotation angle is the angle from the **0** ° position. The angle tightened to using the **SST** includes the angle tightened by hand.



c3u114zl5004

(4) Tighten the fuel pump cap to the specified torque and to the specified angle or more.

Fuel pump cap rotation angle
620—680 °
Fuel pump cap tightening torque
110 N·m {12 kgf·m, 82 ft·lbf} or more



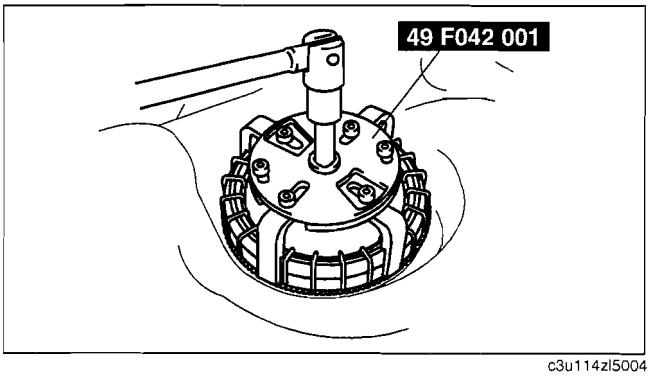
c3u114zl5010

(5) Verify that the fuel pump cap is tightened correctly.
1) The gap between the top of the fuel pump unit flange and the fuel pump cap is even all around.
- If it is not tightened uniformly, re-install it using the following procedure.

2) The gap between the fuel pump unit and fuel tank is even all around.
- If it is not tightened uniformly, re-install it using the following procedure.

3) Verify that the fuel pump unit alignment mark and the floating line on the fuel tank are aligned.
- If they are not aligned, re-install it using the following procedure.

4) Verify that the fuel pump unit nipple and the retainer gap are aligned.
- If it is not aligned, re-install using the following procedure.
  1. Install the **SST**.
  2. Remove the fuel pump cap, fuel pump unit, packing, and retainer.
  3. Verify that the retainer is not damaged.
     - If both of the retainer anti-rotation tabs are broken, replace it with new one.
  4. Return to Step 2 and re-install.



c3u114zl5004

FUEL PUMP UNIT DISASSEMBLY/ASSEMBLY[L3 WITH TC]

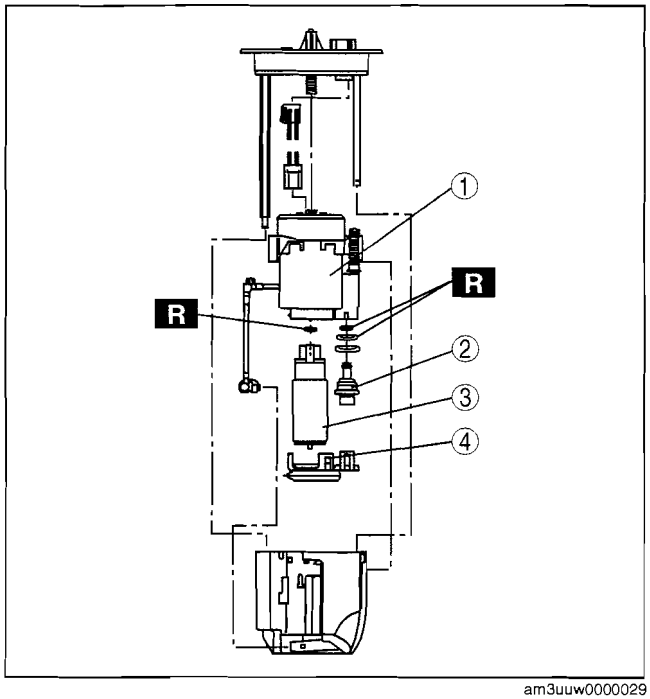
id011439801000

Warning

- **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, do not damage the sealing surface of the fuel pump unit when removing or installing.**

1. Disassemble in the order indicated in the table.
2. Assemble in the reverse order of disassembly.

1	Fuel filter body
2	Fuel pressure regulator
3	Fuel pump
4	Filter



am3uuw0000029

FUEL PUMP UNIT INSPECTION[L3 WITH TC]

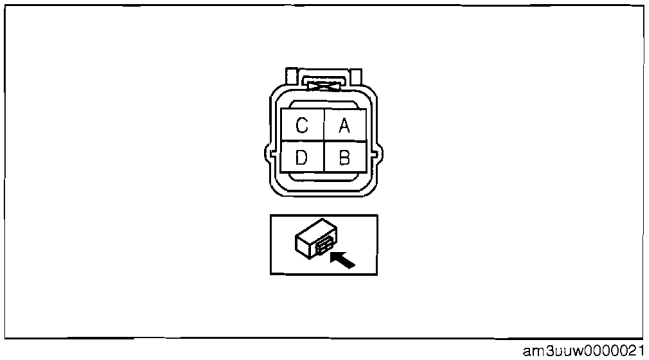
id011439801100

Continuity Inspection

Note

- Perform the following test only when directed.

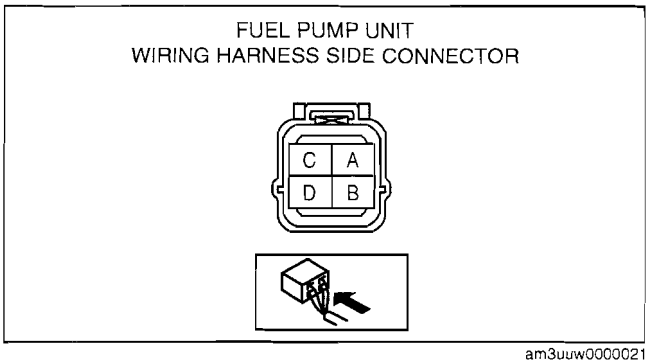
1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Disconnect the fuel pump unit connector.
4. Inspect for continuity between fuel pump unit connector terminals B and D.
   - If there is no continuity, replace the fuel pump body.
   - If as specified, carry out the "Circuit Open/ Short Inspection".



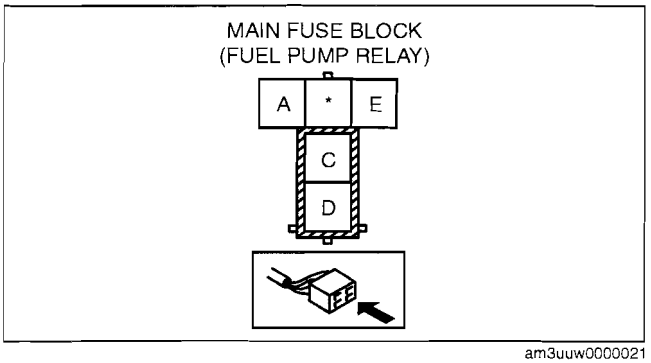
am3uuw0000021

Circuit Open/Short Inspection

1. Inspect the following wiring harnesses as for open or short circuit (continuity check).



am3uuw0000021



am3uuw0000021

Open circuit

- If there is no continuity, there is an open circuit. Repair or replace the wiring harness.
  - — Fuel pump unit terminal B and fuel pump relay terminal A
  - — Fuel pump unit terminal D and body ground

Short circuit

- If there is continuity, there is a short circuit. Repair or replace the wiring harness.
  - — Fuel pump unit terminal B and power supply
  - — Fuel pump unit terminal B and body ground
  - — Fuel pump unit terminal D and power supply

Fuel Pump Hold Pressure Inspection

Warning

- **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Always carry out the following procedure with the engine stopped.**

Caution

- **Disconnecting/connecting the quick release connector without cleaning it may cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting using a cloth or soft brush, and make sure that it is free of foreign material.**

Note

- Perform the following test only when directed.

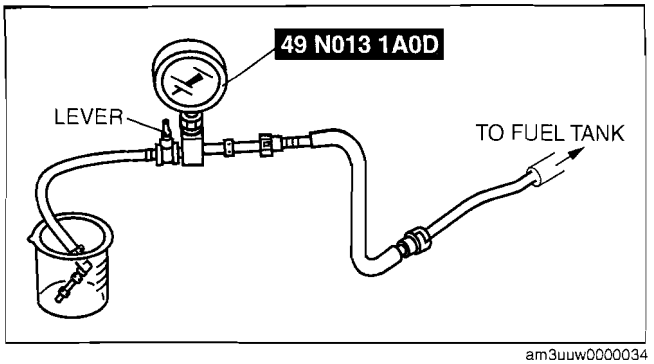
1. Complete the "BEFORE SERVICE PRECAUTION". (See01-14B-4 BEFORE SERVICE PRECAUTION[L3 WITH TC].)
2. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
3. Disconnect the negative battery cable.
4. Remove the battery and battery tray. (See01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)

Caution

- **The quick release connector may be damaged if the tab is bent excessively. Do not expand the tab over the stopper.**

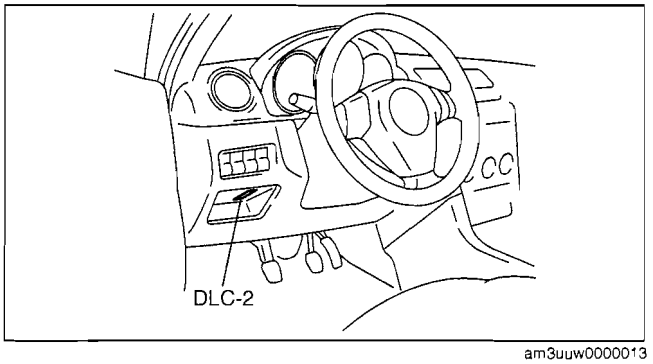
5. Disconnect the quick release connector from the fuel tank. (See01-14B-24 QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION[L3 WITH TC].)

6. Turn the lever **90°** against the hose of the **SST** to plug the **SST** outlet.
7. Push the **SST** quick release connector into the fuel pipe until a click is heard.
8. Set the fuel hose into a container to avoid fuel spills.



am3uuw0000034

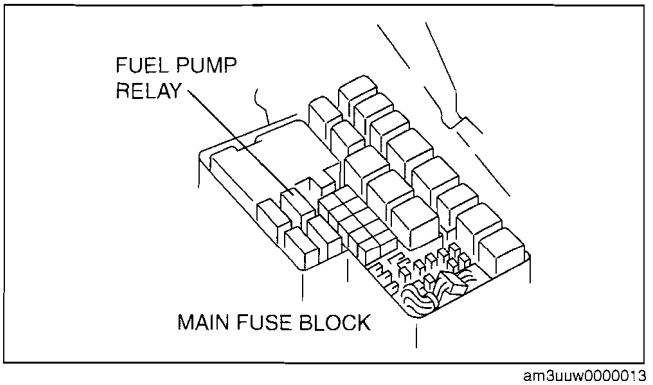
9. Start the fuel pump using the following procedure:
   Using M-MDS
   1. Connect the M-MDS to the DLC-2.
   2. Start the fuel pump using the "FP" simulation function.



am3uuw0000013

   Without using M-MDS
   1. Disconnect the negative battery cable.
   2. Remove the fuel pump relay.

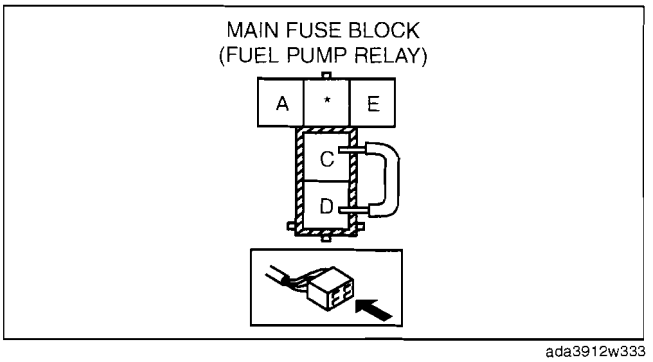
   Caution
   - **Be careful to short the specified terminal as shorting the wrong terminal of the main fuse block may cause a malfunction.**



am3uuw0000013

   3. Using a jumper wire, short fuel pump relay terminals C and D and connect the negative battery cable to start the fuel pump.

   Caution
   - **The fuel pump may malfunction if it is operated without any fuel in the fuel tank (fuel pump idling). Constantly monitor the amount of fuel being discharged and immediately stop operation of the pump when essentially no fuel is being discharged.**



ada3912w333

10. Turn the ignition switch to the LOCK position.
11. Measure the fuel pump hold pressure **after 5 min**.
    - If not as specified, replace the fuel pump after inspecting the following:
      — Fuel line for clogging or leakage

Fuel pump hold pressure

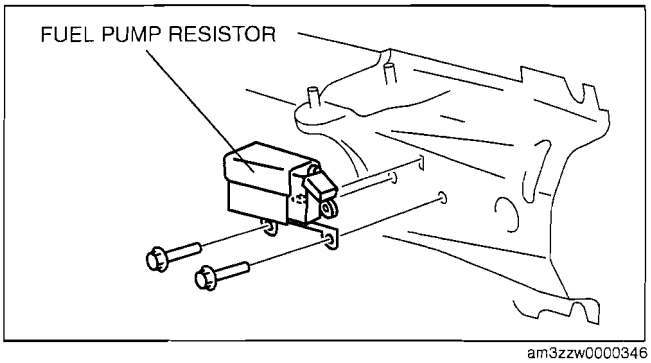
More than 230 kPa {2.3 kgf/cm^2, 33 psi}

12. Disconnect the jumper wire.
13. Disconnect the **SST**.
14. Connect the quick release connector. (See01-14B-24 QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION[L3 WITH TC].)
15. Inspect all parts by performing "AFTER SERVICE PRECAUTION". (See 01-14B-5 AFTER SERVICE PRECAUTION[L3 WITH TC].)

FUEL PUMP RESISTOR REMOVAL/INSTALLATION[L3 WITH TC]

id011439801200

1. Remove the battery cover. (See01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Remove the air cleaner. (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
4. Disconnect the fuel pump resistor connector.
5. Remove in the fuel pump resistor.

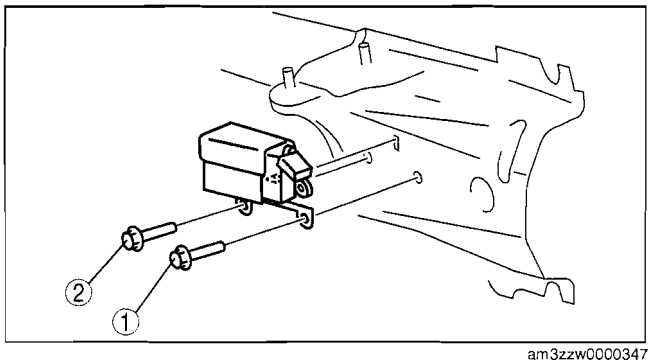


am3zzw0000346

6. Install in the order as shown in the figure.

Tightening torque
7.8—11.8 N·m {80—120 kgf·cm, 70—104 in·lbf}

7. Connect the fuel pump resistor connector.



am3zzw0000347

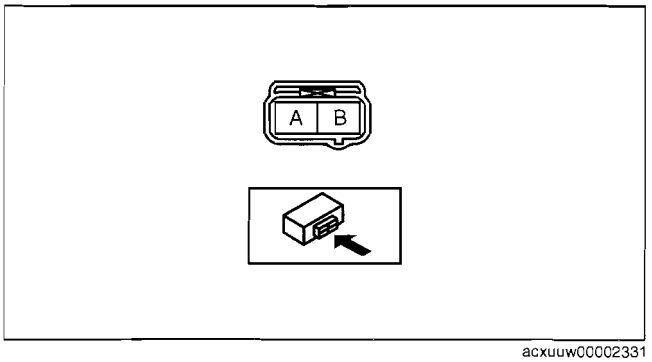
FUEL PUMP RESISTOR INSPECTION[L3 WITH TC]

id011439801300

Resistance Inspection

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Remove the fuel pump resister. (See 01-14B-20 FUEL PUMP RESISTOR REMOVAL/INSTALLATION[L3 WITH TC].)
4. Verify that the continuity between the fuel pump resister terminal A and B is within the specification.
   - If not within the specification, replace the fuel resistor.

Fuel pump resistor continuity
0.304—0.336 ohms (20 °C {68 °F})



acxuuw00002331

HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION[L3 WITH TC]

id011439801400

Caution

- **Do not disassemble the high pressure fuel pump.**
- **Do not scratch or damage the fuel sealing surface of the high and low fuel ports.**
- **When removing the high pressure fuel pipe, secure the joint (pump side) so that it dose not rotate, and loosen the screw (pipe side).**

Note

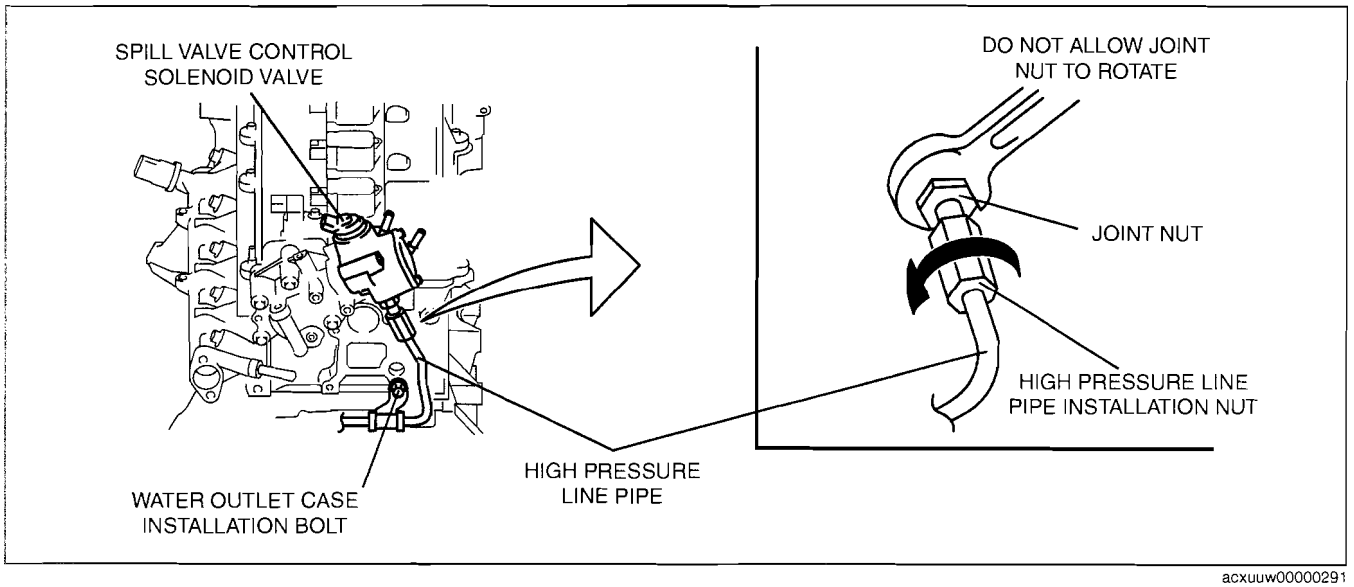
- If the high pressure fuel pump is removed, replace the O-ring with a new one.

1. Complete the "BEFORE SERVICE PRECAUTION". (See01-14B-4 BEFORE SERVICE PRECAUTION[L3 WITH TC].)
2. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
3. Disconnect the negative battery cable.
4. Remove the charge air cooler cover. (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC])
5. Disconnect the spill valve control solenoid valve connector.
6. Disconnect the quick release connector on the high pressure fuel pump. (See 01-14B-24 QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION[L3 WITH TC].)
7. Remove the battery and battery tray. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
8. Remove the air duct. (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC])

Warning

- **If the high pressure fuel pump joint nut is loosened, fuel leakage may occur resulting in death or serious injury, or damage to the equipment or the vehicle. Fuel can also irritate the skin and eyes. When removing the high pressure line pipe, always tighten the high pressure line pipe installation nut while fixing the high pressure fuel pump joint nut with a wrench. If the high pressure fuel pump joint nut has rotated, replace the high pressure fuel pump with a new one.**

9. Disconnect the high pressure line pipe of the high pressure fuel pump.

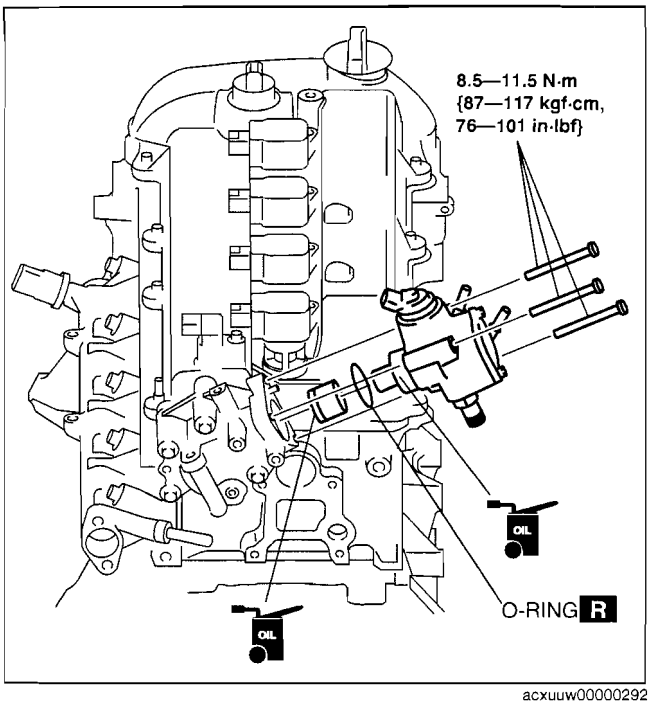


acxuuw00000291

(1) Fix the joint nut with a wrench on the high pressure fuel pump side as shown in the figure.
(2) Loosen the high pressure line pipe installation nut.

10. Drain engine coolant. (See01-12B-4 ENGINE COOLANT REPLACEMENT[L3 WITH TC].)
11. Loosen the water outlet case installation bolts securing the high pressure line pipe.

12. Remove the high pressure fuel pump.

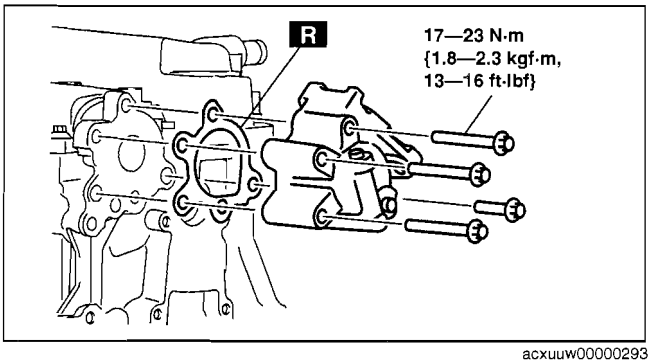


acxuuw00000292

13. Remove the high pressure fuel pump cover.
14. Tighten the bolts on the high pressure fuel pump cover.

Tightening torque
17—23 N·m {1.8—2.3 kgf·m, 13—16 ft·lbf}

Caution
- **If the high pressure fuel pump installation bolts are tightened with the high pressure fuel pump tilted, the high pressure fuel pump may not operate correctly. Tighten the high pressure fuel pump installation bolts in a few passes with equal torque.**



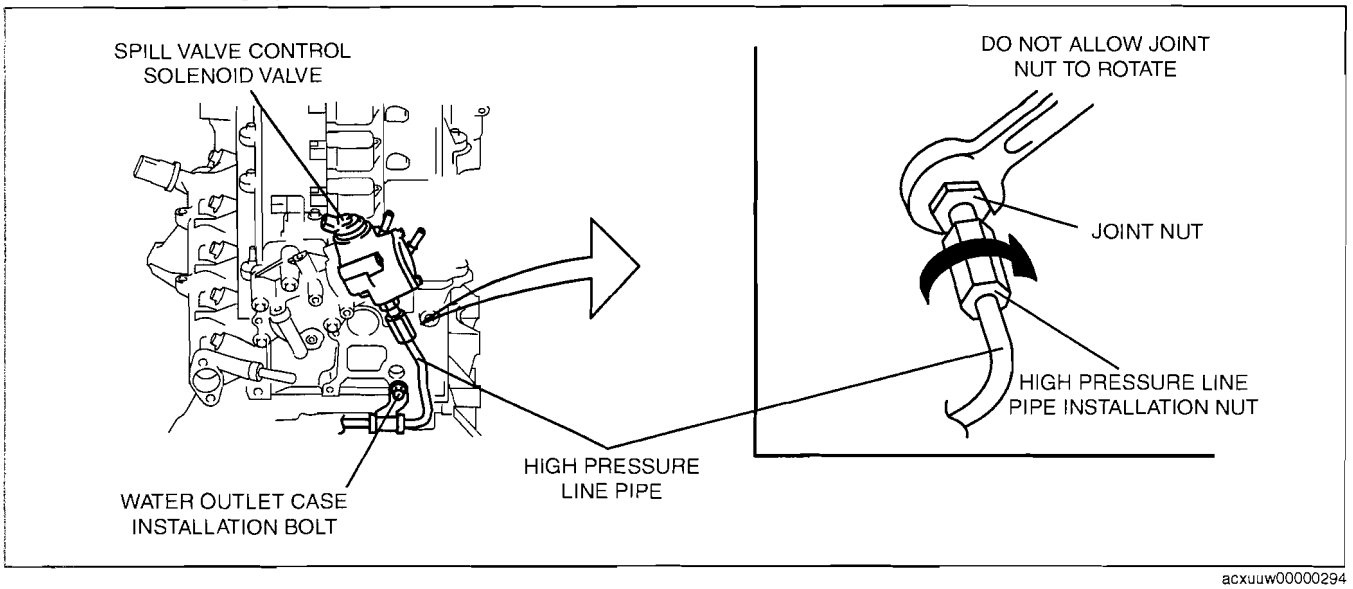
acxuuw00000293

15. Tighten the bolts on the high pressure fuel pump.

Tightening torque
8.5—11.5 N·m {87—117 kgf·cm, 76—101 in·lbf}

Warning
- **If the high pressure fuel pump joint nut is loosened, fuel leakage may occur resulting in death or serious injury, or damage to the equipment or the vehicle. Fuel can also irritate the skin and eyes. When installing the high pressure line pipe, always tighten the high pressure line pipe installation nut while fixing the high pressure fuel pump joint nut with a wrench. If the high pressure fuel pump joint nut has rotated, replace the high pressure fuel pump with a new one.**

16. Assemble the high pressure line pipe.



acxuuw00000294

(1) Fix the joint nut with a wrench on the high pressure fuel pump side as shown in the figure.
(2) Tighten the high pressure line pipe installation nut.

Tightening torque
23.5—35.5 N·m {2.40—3.59 kgf·m, 17.4—26.0 ft·lbf}

17. Tighten the water outlet case installation bolts.

Tightening torque
8—11.5 N·m {82—117 kgf·cm, 71—101 in·lbf}

18. Install the quick release connector. (See01-14B-24 QUICK RELEASE CONNECTOR REMOVAL/ INSTALLATION[L3 WITH TC].)

Fuel Leakage Inspection After High Pressure Fuel Pump Installation

1. Verify that the high pressure fuel pump is assembled securely.
2. Drive the vehicle starting from a standstill and brake suddenly **five to six times** at a low speed.
3. Stop the vehicle and verify from outside the vehicle that there is no fuel leakage around the high pressure fuel pump.

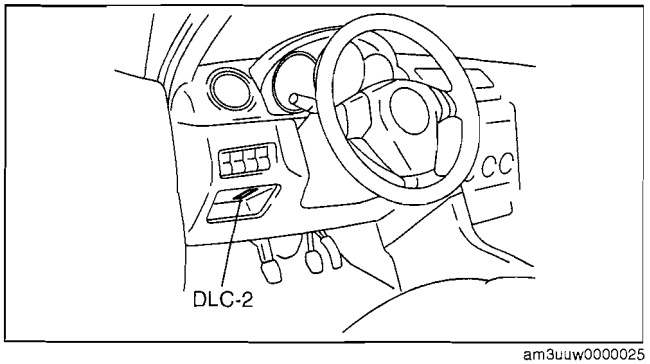
HIGH PRESSURE FUEL PUMP INSPECTION[L3 WITH TC]

id011439801500

Note
- Perform the following inspection only when directed.
- The following vacuum values are indicated by relative pressure from the fuel pressure sensor.

1. Verify that the fuel pressure sensor is normal. (See01-40B-38 FUEL PRESSURE SENSOR INSPECTION[L3 WITH TC].)
2. Connect the M-MDS to the DLC-2.
3. Turn the ignition switch to the ON position (Engine off).
4. Select the FUEL_PRES, and LOAD, RPM PIDs on the M-MDS.

Caution
- **If the engine is run at a high speed, it could be damaged. When racing the engine, do not race it up to 6,700 rpm or more.**



am3uuw0000025

5. After the LOAD PID is **60% or more** while the engine is raced with the accelerator pedal fully depressed, verify that the FUEL_PRES PID is **approx. 11.5 Mpa**.
— If not as verified, replace the high pressure fuel pump.

QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION[L3 WITH TC]

id011439801700

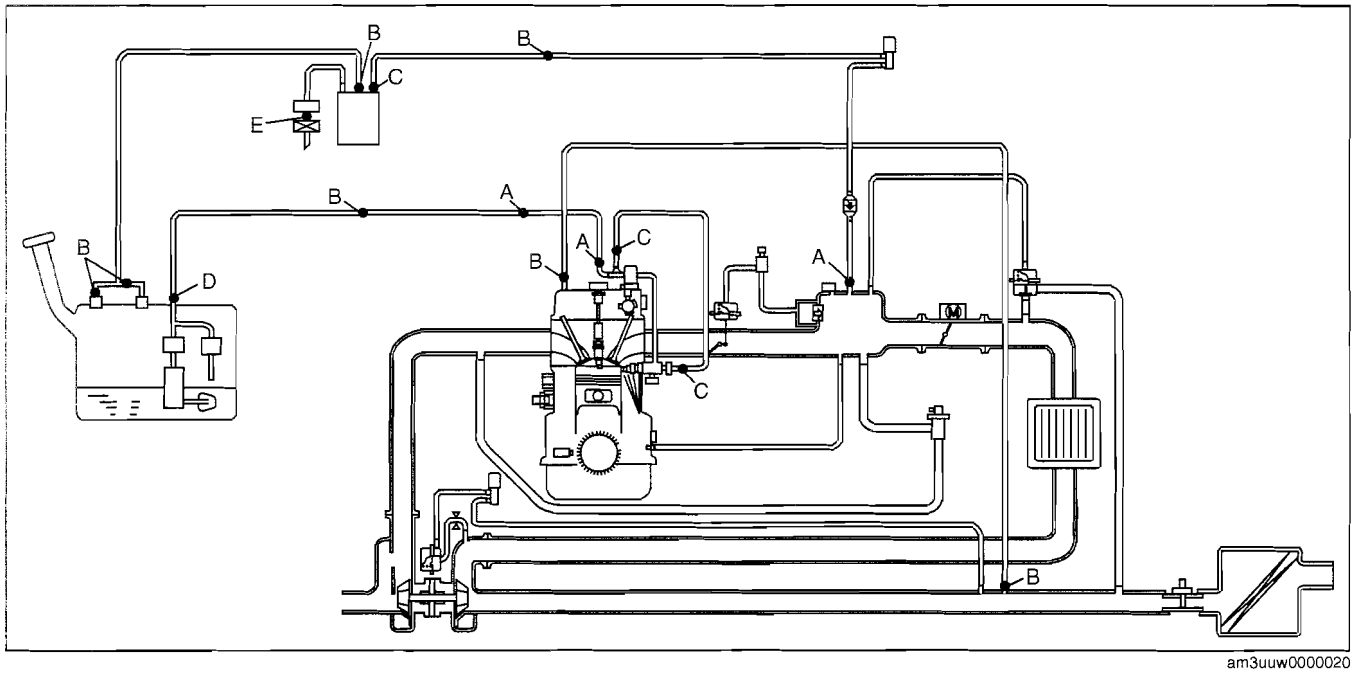
Warning

- **Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure", while referring to the "BEFORE SERVICE PRECAUTION".**

Quick Release Connector Type

Caution

- **There are five types of quick release connectors. Verify the type and location, and install/remove properly.**



am3uuw0000020

Type A Removal

1. Follow "BEFORE SERVICE PRECAUTION" before performing any work operations to prevent fuel from spilling from the fuel system. (See01-14B-4 BEFORE SERVICE PRECAUTION[L3 WITH TC].)

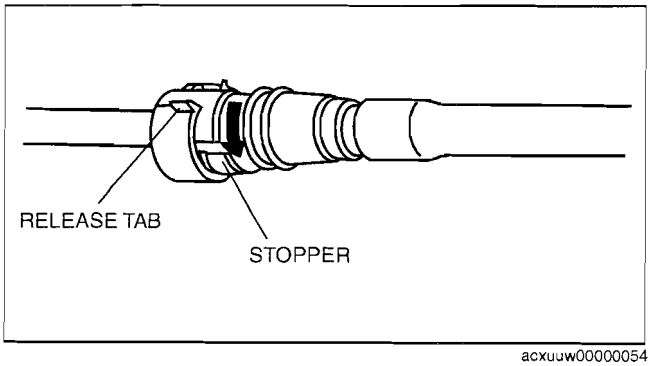
Caution

- **The quick release connector may be damaged if the release tab is bent excessively. Do not expand the release tab over the stopper.**

Note

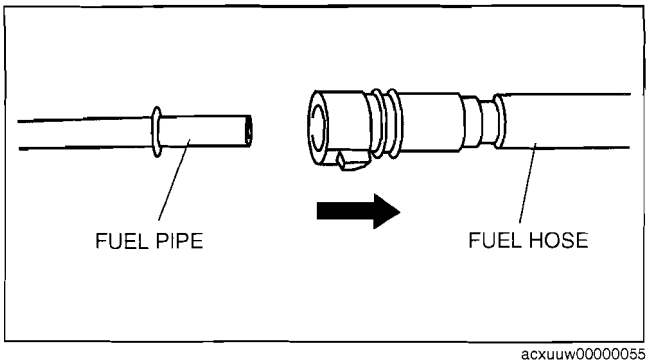
- The fuel hose can be removed by pushing it to the pipe side to release the lock.

2. Rotate the release tab on the quick release connector to the stopper position.



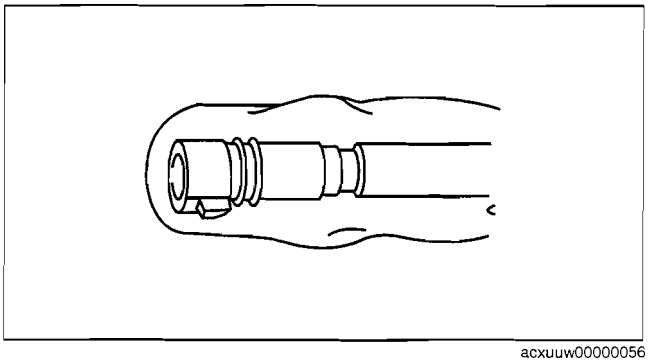
acxuuw00000054

3. Pull out the fuel hose straight from the fuel pipe and disconnect it.



acxuuw00000055

4. Cover the disconnected quick release connector and fuel pipe with vinyl sheeting or a similar material to prevent it from scratches or dirt.



acxuuw00000056

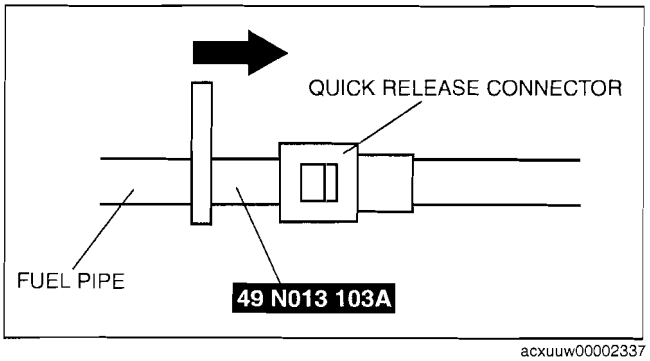
Type B Removal

Caution
- **Be careful not to damage the pipe when unlocking the retainer.**

Note
- When removing the quick connector, either SST 49 E042 001 or 49 N013 103A.

When using SST 49 N013 103A

1. Follow "BEFORE SERVICE PRECAUTION" and remove dirt from the connecting surfaces before performing any work operations. (See01-14B-4 BEFORE SERVICE PRECAUTION[L3 WITH TC].)
2. Insert the SST into the quick release connector.
3. Pull out the fuel hose straight from the fuel pipe and disconnect it.
4. Cover the disconnected quick release connector and fuel pipe with vinyl sheeting or a similar material to prevent it from scratches or dirt.



acxuuw00002337

When using SST 49 E042 001

Note
- If the quick release connector is removed, replace the retainer with a new one.

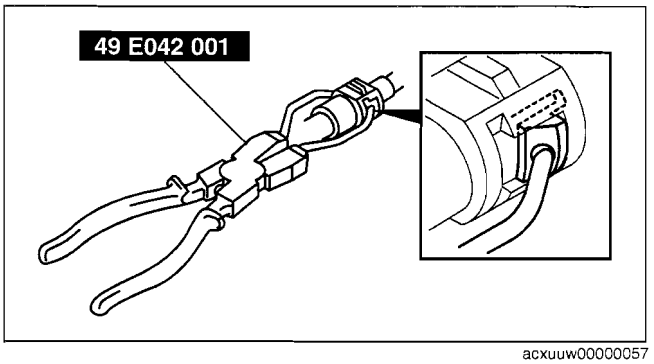
1. Follow "BEFORE SERVICE PRECAUTION" and remove dirt from the connecting surfaces before performing any work operations. (See01-14B-4 BEFORE SERVICE PRECAUTION[L3 WITH TC].)

Note
- The retainer is attached to the pipe even after the connector is disconnected.

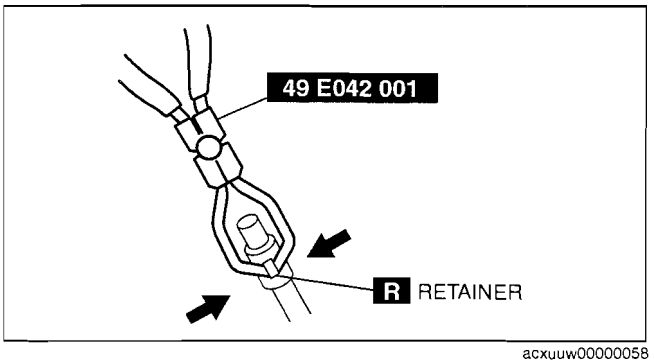
2. Set the **SST** parallel to the quick release connector.

Note
- The quick release connector can be removed by pushing the center of the retainer tabs.

3. Hold the center of the retainer tabs with the **SST** ends and press the retainer.
4. Pull the connector side and disconnect the quick release connector.
5. Raise a retainer tab using the **SST** and remove the retainer.
6. Cover the disconnected quick release connector and evaporative hose with vinyl sheeting or a similar material to prevent it from scratches or dirt.



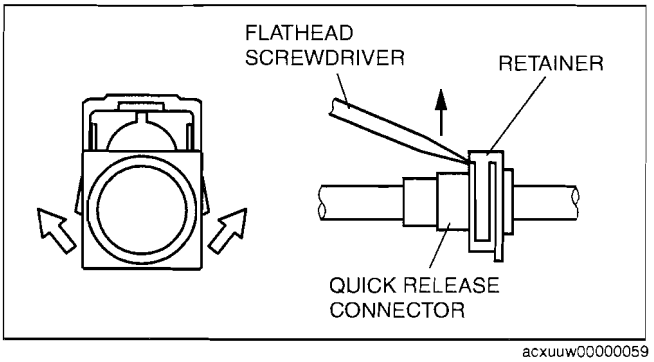
acxuuw00000057



acxuuw00000058

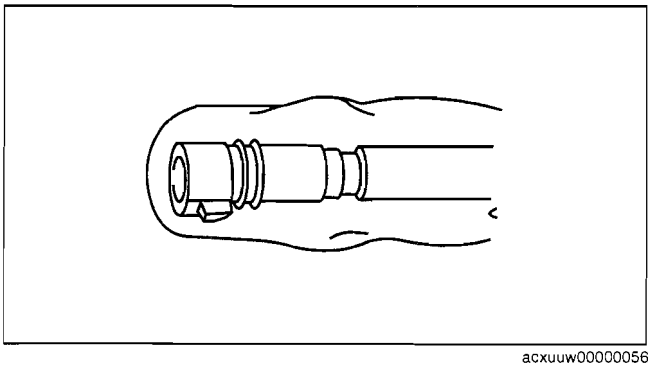
Type C Removal

1. Follow "BEFORE SERVICE PRECAUTION" and remove dirt from the connecting surfaces before performing any work operations. (See01-14B-4 BEFORE SERVICE PRECAUTION[L3 WITH TC].)
2. Move the retainer upward using a small flathead screwdriver or a similar tool.
3. Pull out the fuel hose straight from the fuel pipe and disconnect it.



acxuuw00000059

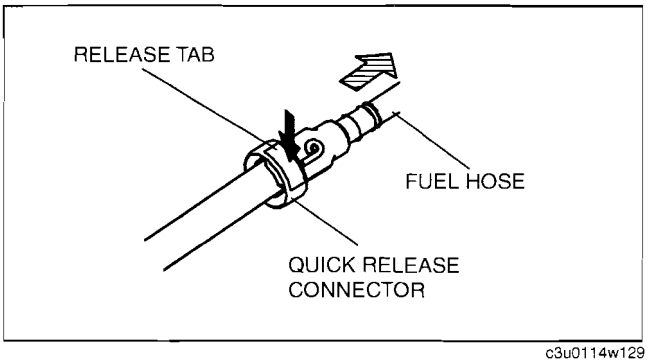
4. Cover the disconnected quick release connector and fuel pipe with vinyl sheeting or a similar material to prevent it from scratches or dirt.



acxuuw00000056

Type D Removal

1. Follow "BEFORE SERVICE PRECAUTION" and remove dirt from the connecting surfaces before performing any work operations. (See 01-14B-4 BEFORE SERVICE PRECAUTION[L3 WITH TC].)
2. Push the release tab on the retainer to unlock.
3. Pull out the fuel hose straight from the fuel pipe and disconnect it.
4. Cover the disconnected quick release connector and fuel pipe with vinyl sheeting or a similar material to prevent it from becoming scratched or dirty.



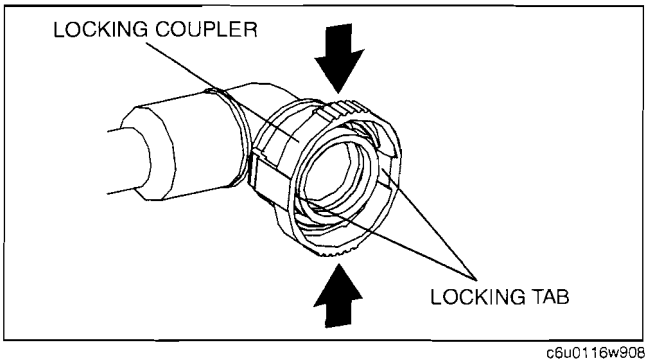
c3u0114w129

Type E Removal

1. Squeeze the locking coupler until the locking tab opens and releases.

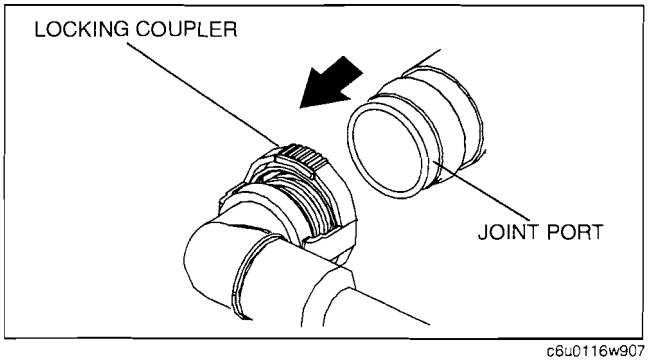
Note

- The locking coupler has two internal locking tabs which retain the joint port. Be sure that the squeezing place on the locking coupler is squeezed until it can be released from the joint port.



c6u0116w908

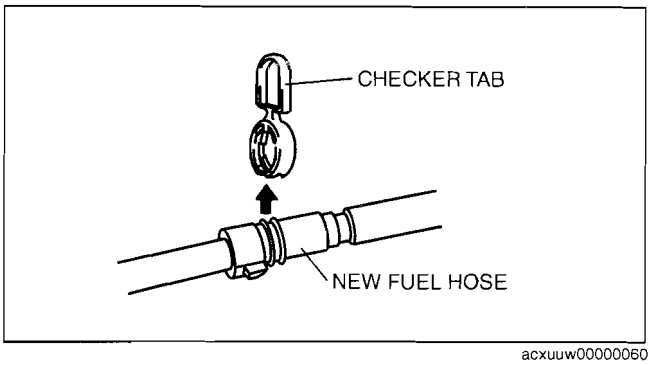
2. Pull the quick release connector straight outward.
3. Cover the disconnected quick release connector and joint port with vinyl sheeting or a similar material to prevent it from becoming scratched or dirty.



c6u0116w907

Type A Installation

Note
- If the quick release connector O-ring is damaged or has slipped, replace the fuel hose.
- A checker tab is integrated with the quick release connector for new fuel hoses and evaporative hoses. Remove the checker tab from the quick release connector after the connector is completely engaged with the fuel pipe.



acxuuw00000060

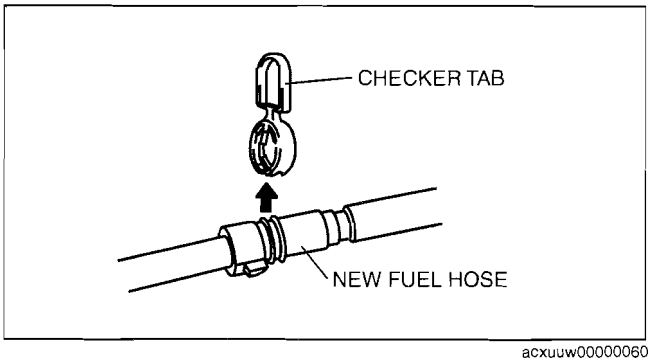
1. Inspect the fuel hose and fuel pipe sealing surface for damage and deformation.
   - If there is any malfunction, replace it with a new one.
2. Apply a small amount of clean engine oil to the sealing surface of the fuel pipe.
3. Reconnect the fuel hose straight to the fuel pipe until a click is heard.

Note
- If the quick release connector does not move at all, disconnect it, verify that the O-ring is not damaged or has not slipped, and then reconnect the quick release connector.

4. Lightly pull and push the quick release connector a few times by hand, and then verify that it can move **2.0—3.0 mm {0.08—0.12 in}** and is connected securely.
5. Inspect all related parts by performing"AFTER SERVICE PRECAUTION". (See 01-14B-5 AFTER SERVICE PRECAUTION[L3 WITH TC].)

Type B Installation

Note
- If the quick release connector O-ring is damaged or has slipped, replace the fuel hose.
- A checker tab is integrated with the quick release connector for new fuel hoses and evaporative hoses. Remove the checker tab from the quick release connector after the connector is completely engaged with the fuel pipe.



acxuuw00000060

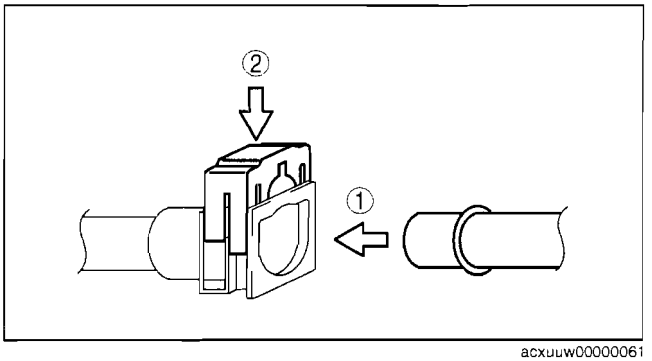
Caution
- **Be sure to replace the retainer with a new one to prevent gas leakage.**
- **To prevent evaporative gas leakage, be sure not to damage the connecting part between the charcoal canister and pipe, and the locks between the quick release connector and retainer. If any of them are damaged, replace the charcoal canister or hose with a new one.**

1. Remove the retainer remaining on the charcoal canister pipe.
2. Install a new retainer to the quick release connector.
3. Reconnect the hose straight to the pipe until a click is heard.
4. Lightly pull and push the quick release connector a few times by hand, and then verify that it is connected securely.
5. Inspect all related parts by performing "AFTER SERVICE PRECAUTION". (See 01-14B-5 AFTER SERVICE PRECAUTION[L3 WITH TC].)

Type C Installation

Note
- If the quick release connector O-ring is damaged or has slipped, replace the fuel hose.

1. Inspect the fuel hose and fuel pipe sealing surface for damage and deformation.
   - If there is any malfunction, replace it with a new one.
2. Install the quick release connector.
   - Insert the fuel pipe straight to the end of the quick release connector.
   - Push down the retainer using a finger.
     - — If the retainer cannot be pushed down, push the fuel pipe further to the quick release connector.
3. Lightly pull and push the quick release connector a few times by hand, and then verify that it is connected securely.
4. Inspect all related parts by performing ""AFTER SERVICE PRECAUTION". (See 01-14B-5 AFTER SERVICE PRECAUTION[L3 WITH TC].)



acxuuw00000061

Type D Installation

Note
- If the quick release connector O-ring is damaged or has slipped, replace the fuel hose.

1. Inspect the fuel hose and fuel pipe sealing surface for damage and deformation.
   - If there is any malfunction, replace it with a new one.
2. Reconnect the fuel hose straight to the fuel pipe until a click is heard.
3. Lightly pull and push the quick release connector a few times by hand, and then verify that it is connected securely.
4. Inspect all related parts by performing "AFTER SERVICE PRECAUTION". (See 01-14B-5 AFTER SERVICE PRECAUTION[L3 WITH TC].)

Type E Installation

Note
- If the quick release connector O-ring is damaged or has slipped, replace the evaporative hose.

1. Inspect the evaporative hose and joint port sealing surface for damage and deformation.
   - If there is any malfunction, replace it with a new one.
2. Apply a small amount of clean engine oil to the sealing surface of the joint port.
3. Reconnect the evaporative hose straight to the joint port until a click is heard.

Note
- If the quick release connector does not move at all, disconnect it, verify that the O-ring is not damaged or has not slipped, and then reconnect the quick release connector.

4. Lightly pull and push the quick release connector a few times by hand, and then verify that it is connected securely.

FUEL INJECTOR REMOVAL/INSTALLATION[L3 WITH TC]

id011439800600

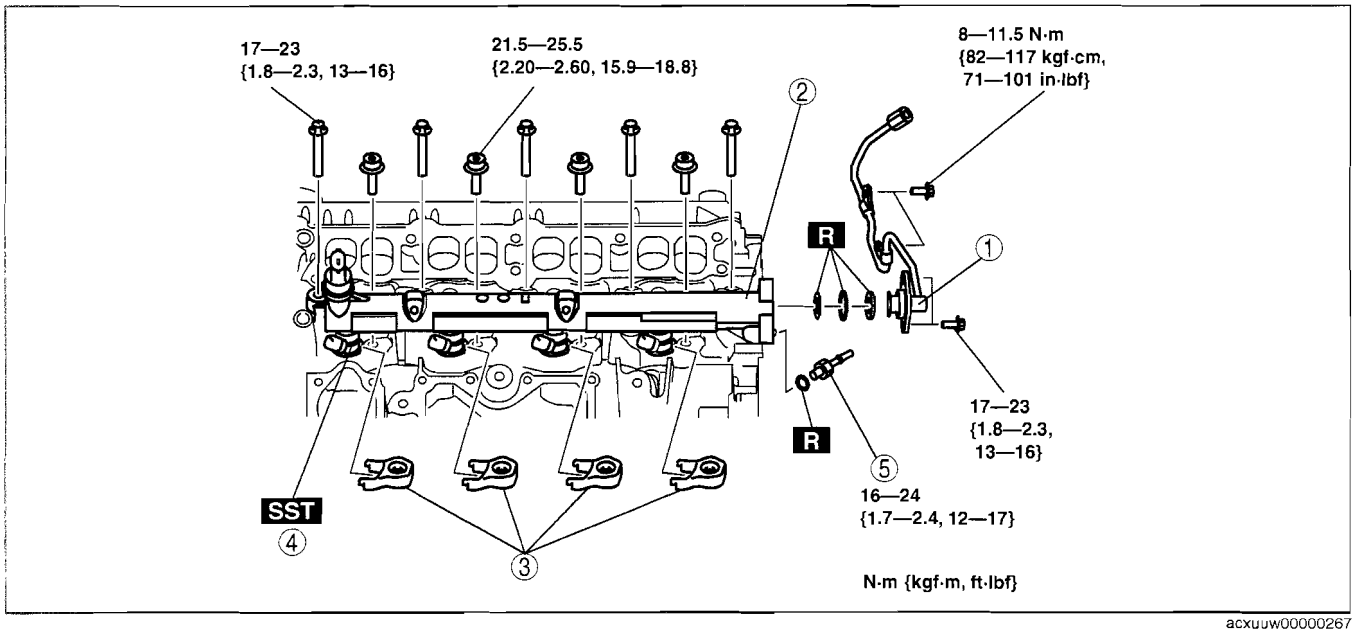
Caution

- **Disconnecting/connecting the quick release connector without cleaning it may cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting using a cloth or soft brush, and make sure that it is free of foreign material.**

Note

- When the fuel pressure sensor replaces, replace a new fuel delivery pipe with a new fuel pressure sensor.(See 01-14B-30 FUEL INJECTOR REMOVAL/INSTALLATION[L3 WITH TC])

1. Complete the "BEFORE SERVICE PRECAUTION". (See01-14B-4 BEFORE SERVICE PRECAUTION[L3 WITH TC].)
2. Disconnect the negative battery cable. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
3. Remove the intake manifold. (See01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
4. Remove in the order indicated in the table.



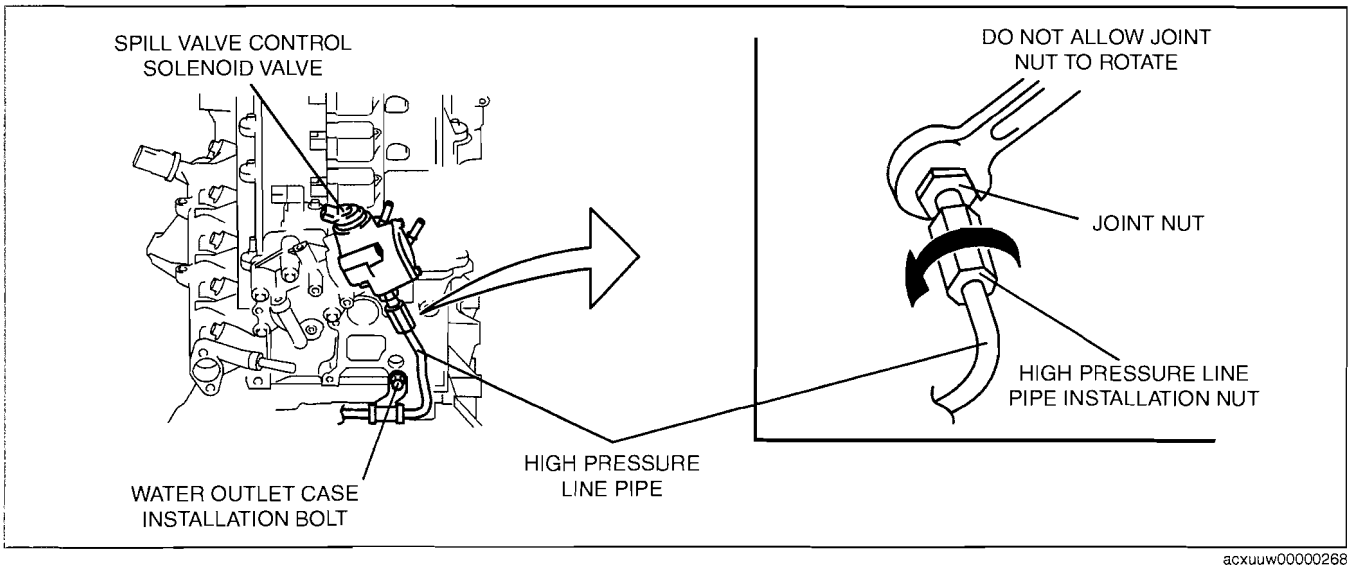
acxuuw00000267

1	High pressure line pipe (See01-14B-31 High Pressure Line Pipe Removal Note.) (See01-14B-32 High Pressure Line Pipe Installation Note.)
2	Fuel delivery pipe (See01-14B-32 Fuel Delivery Pipe Installation Note.)
3	Fuel injector bracket
4	Fuel injector (See01-14B-31 Fuel Injector Removal Note.)
5	Relief valve

5. Install in the reverse order of removal.
6. Inspect all parts by performing "AFTER SERVICE PRECAUTION". (See 01-14B-5 AFTER SERVICE PRECAUTION[L3 WITH TC].)

High Pressure Line Pipe Removal Note

1. Drain engine coolant. (See01-12B-4 ENGINE COOLANT REPLACEMENT[L3 WITH TC].)
2. Disconnect the high pressure line pipe of the high pressure fuel pump. (See01-14B-21 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION[L3 WITH TC].)



acxuuw00000268

   (1) Fix the joint nut with a wrench on the high pressure fuel pump side as shown in the figure.
   (2) Loosen the high pressure line pipe installation nut.
3. Remove the high pressure line pipe.

Fuel Injector Removal Note

Note

- Depending on the driving conditions, carbon may accumulate on the inserted part of the fuel injector, causing the fuel injector to stick. Remove the fuel injector using the following procedure.

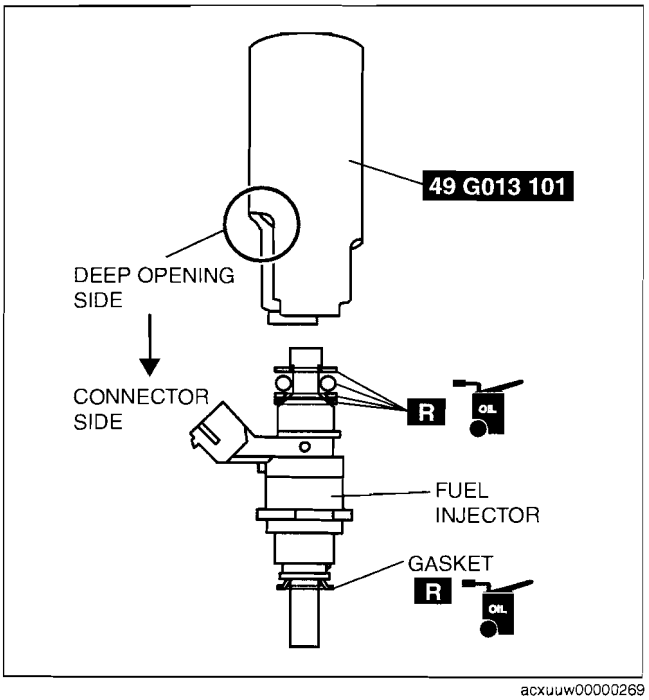
1. Install the **SST** to the fuel injector confirming that the **SST** faces the correct direction as shown in the figure.

Caution

- **If the SST slips while ratcheting up the fuel injector, the fuel injector or surrounding parts could be damaged. Press fit the SST to the fuel injector firmly and operate carefully.**
- **When ratcheting up the fuel injector, the fuel injector connector may contact the cylinder head and damage the fuel injector. Ratchet up the fuel injector so that the fuel injector connector does not contact the cylinder head.**

Note

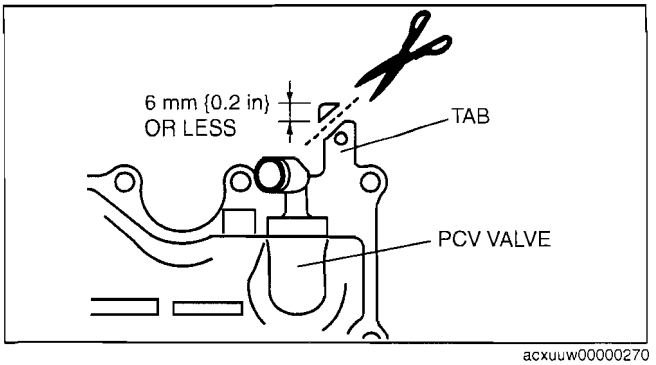
- If fuel injector No.3 contacts the oil separator, cut the tab on the oil separator as shown in the figure. Carefully cut the tab so that the oil separator is not deformed or damaged, with no clearance on the mating surfaces of the oil separator and engine.



acxuuw00000269

2. Keep ratcheting the **SST** so that the fuel injector becomes free enough to ratchet up without using the **SST**.

Caution
- **Do not apply excessive force to the fuel injector connector because the fuel injector could be damaged.**



acxuuw00000270

3. Pull out the fuel injector by ratcheting it upright.
4. Verify that there are no gasket in the cylinder heads after removing the fuel injectors.

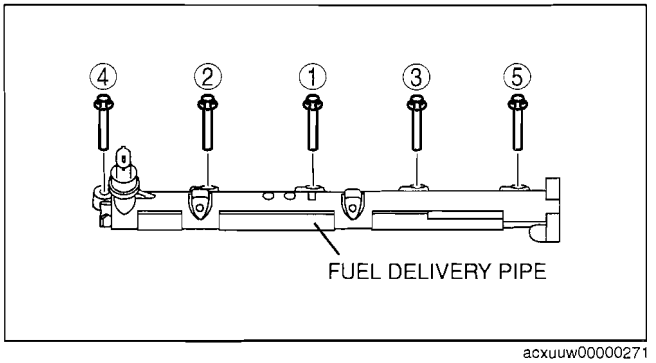
Warning
- **If foreign material such as metal shavings penetrates the fuel injector installation hole on the cylinder block, the engine could be damaged. Remove all foreign material and cap the fuel injector installation hole after removing the fuel injector.**

5. Clean the fuel injector and around the insertion hole using a vacuum cleaner.

Fuel Delivery Pipe Installation Note

1. Tighten the bolts in the order shown in the figure.

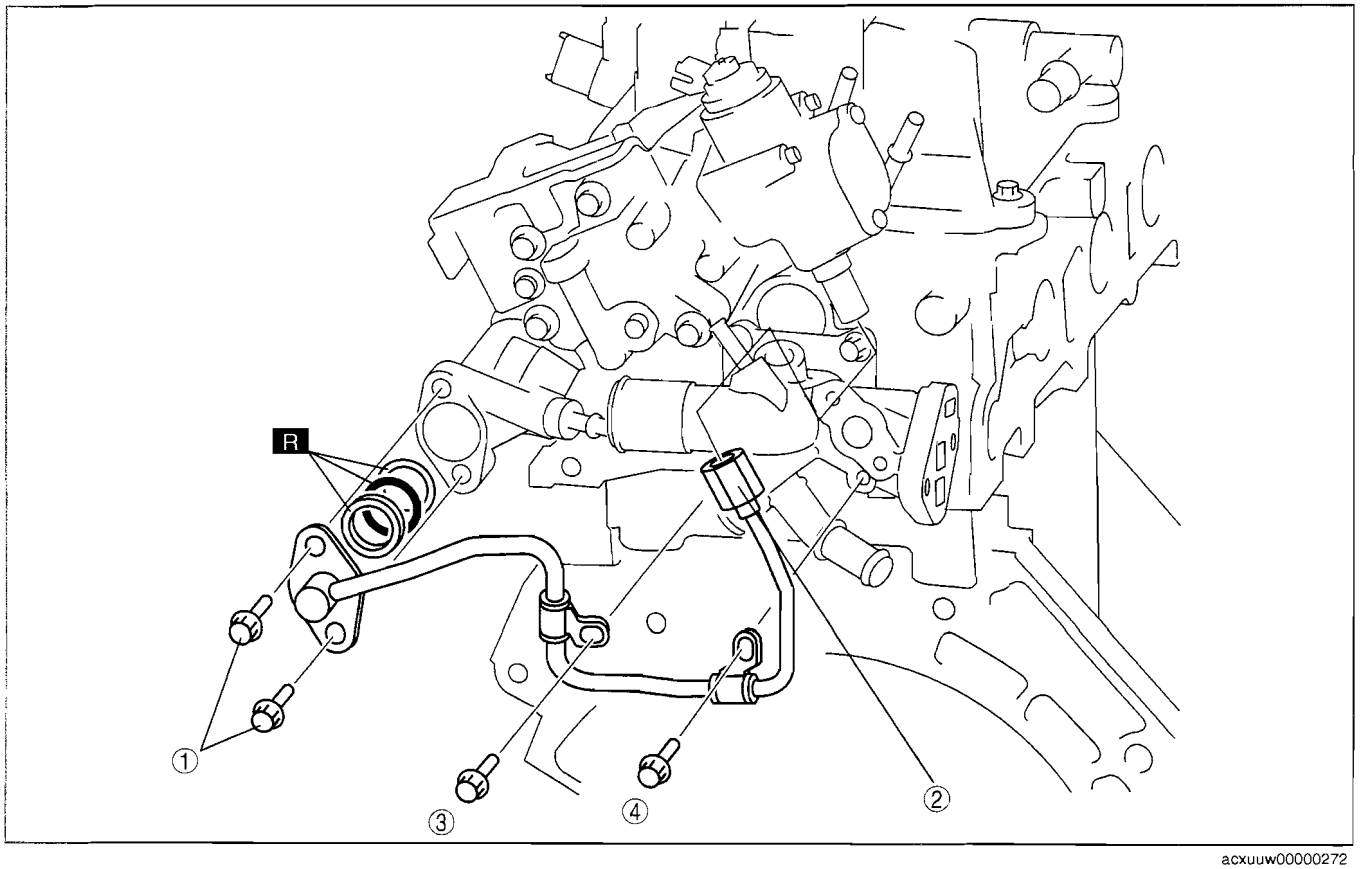
Tightening torque
17—23 N·m {1.8—2.3 kgf·m, 13—16 ft·lbf}



acxuuw00000271

High Pressure Line Pipe Installation Note

1. Temporarily tighten the bolts in the order shown in the figure.

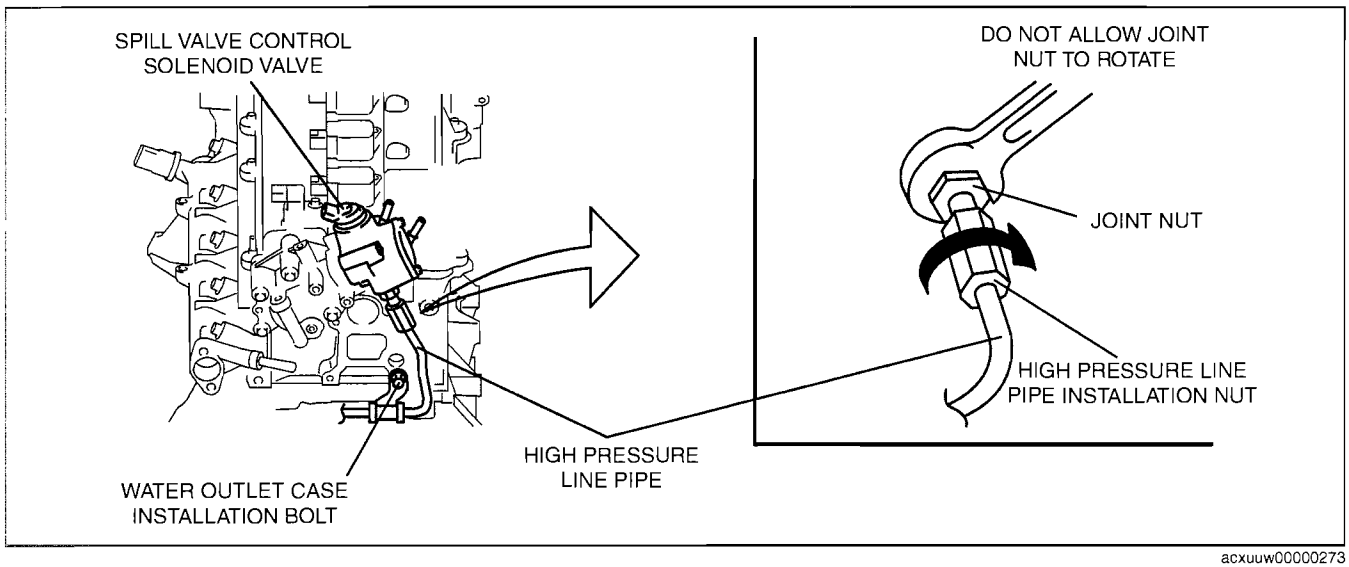


acxuuw00000272

2. Tighten No.1 bolts shown in the figure.

Tightening torque
17—23 N·m {1.8—2.3 kgf·m, 13—16 ft·lbf}

3. Tighten No.2 bolts shown in the figure.



acxuuw00000273

(1) Fix the joint nut with a wrench on the high pressure fuel pump side as shown in the figure.
(2) Tighten the high pressure line pipe installation nut.

Tightening torque
23.5—35.5 N·m {2.40—3.61 kgf·m, 17.4—26.1 ft·lbf}

4. Tighten No.3, No.4 bolts shown in the figure.

Tightening torque
17—23 N·m {1.8—2.3 kgf·m, 13—16 ft·lbf}

FUEL INJECTOR INSPECTION[L3 WITH TC]

id011439800700

Operation Test

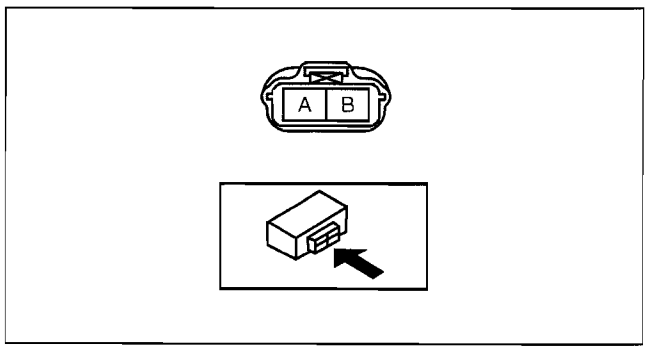
1. Carry out the "Fuel Injector Operation Inspection". (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].)
   - If not as specified, perform the further inspection for the fuel injectors.

Resistance Inspection

Note
- Perform the following procedure only when directed.

1. Turn the ignition switch to the LOCK position.
2. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
3. Disconnect the negative battery cable.
4. Remove the fuel delivery pipe. (See 01-14B-30 FUEL INJECTOR REMOVAL/INSTALLATION[L3 WITH TC].)
5. Disconnect the fuel injector connectors.
6. Measure the resistance of the fuel injector using a tester.
   - If not as specified, replace the fuel injector. (See01-14B-30 FUEL INJECTOR REMOVAL/INSTALLATION[L3 WITH TC].)
   - If as specified but "Operation Test" is failed, carry out the "Circuit Open/Short Inspection". Inspect for open or short circuit.

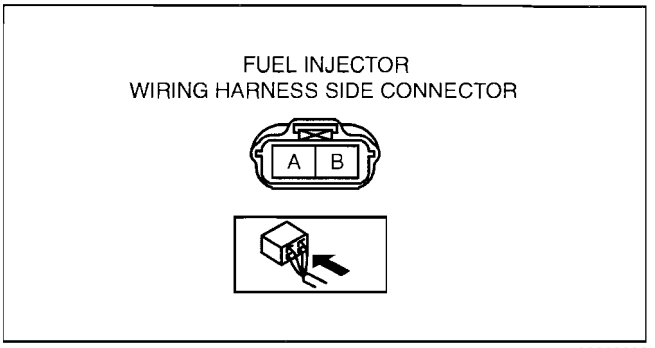
Fuel injector resistance
1.0—1.2 ohms [20 °C {68 °F}]



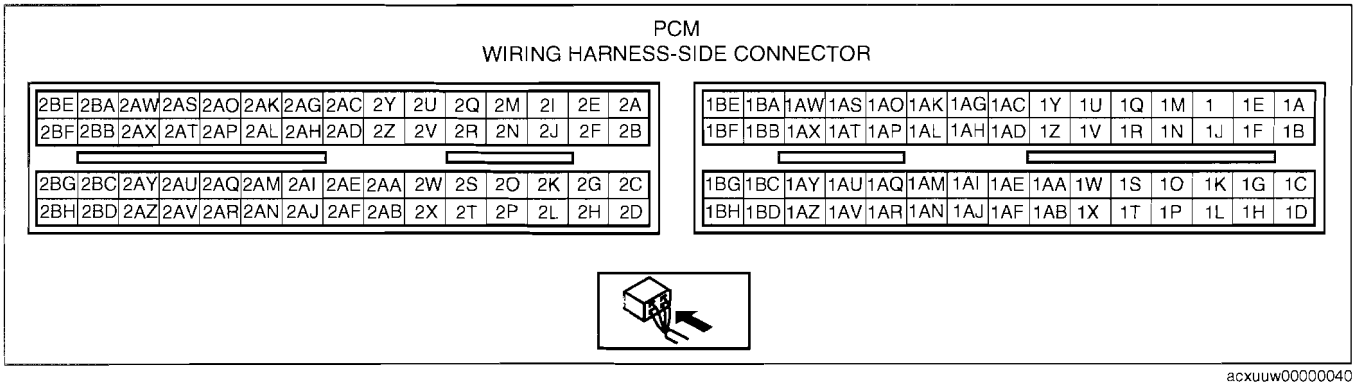
acxuuw00000038

Circuit Open/Short Inspection

1. Disconnect the PCM connector. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
2. Inspect the following wiring harnesses for an open or short circuit (continuity check).



acxuuw00000039



acxuuw00000040

Open circuit

- If there is no continuity, there is an open circuit. Repair or replace the wiring harness.
  - No.1 cylinder fuel injector terminal A and PCM terminal 2BB
  - No.2 cylinder fuel injector terminal A and PCM terminal 2BC
  - No.3 cylinder fuel injector terminal A and PCM terminal 2BD
  - No.4 cylinder fuel injector terminal A and PCM terminal 2AZ
  - No.1 cylinder fuel injector terminal B and PCM terminal 2BG
  - No.2 cylinder fuel injector terminal B and PCM terminal 2BH
  - No.3 cylinder fuel injector terminal B and PCM terminal 2BH
  - No.4 cylinder fuel injector terminal B and PCM terminal 2BG

Short circuit

- If there is continuity, there is a short circuit. Repair or replace the wiring harness.
  - No.1 cylinder fuel injector terminal A and power supply
  - No.1 cylinder fuel injector terminal A and body ground
  - No.2 cylinder fuel injector terminal A and power supply
  - No.2 cylinder fuel injector terminal A and body ground
  - No.3 cylinder fuel injector terminal A and power supply
  - No.3 cylinder fuel injector terminal A and body ground
  - No.4 cylinder fuel injector terminal A and power supply
  - No.4 cylinder fuel injector terminal A and body ground
  - No.1 cylinder fuel injector terminal B and power supply
  - No.1 cylinder fuel injector terminal B and body ground
  - No.2 cylinder fuel injector terminal B and power supply
  - No.2 cylinder fuel injector terminal B and body ground
  - No.3 cylinder fuel injector terminal B and power supply
  - No.3 cylinder fuel injector terminal B and body ground
  - No.4 cylinder fuel injector terminal B and power supply
  - No.4 cylinder fuel injector terminal B and body ground

PRESSURE REGULATOR INSPECTION[L3 WITH TC]

id011439800800

Note

- Due to the adoption of the mechanical returnless fuel system, the pressure regulator cannot be inspected separately.

1. Perform "FUEL LINE PRESSURE INSPECTION". (See 01-14B-6 FUEL LINE PRESSURE INSPECTION[L3 WITH TC].)

01-15A EXHAUST SYSTEM [LF, L3]

EXHAUST SYSTEM INSPECTION[LF, L3]

id0115a4800100

1. Start the engine and inspect each exhaust system component for exhaust gas leakage.
   - If there is leakage, repair or replace the appropriate component.

EXHAUST SYSTEM REMOVAL/INSTALLATION[LF, L3]

id0115a4800200

Warning

- **A hot engine and exhaust system can cause severe burns. Turn off the engine and wait until they are cool before removing the exhaust system.**

1. Remove the plug hole plate. (See 01-10A-3 PLUG HOLE PLATE REMOVAL/INSTALLATION[LF, L3].)
2. Remove the battery cover and battery duct. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
3. Disconnect the negative battery cable.
4. Remove the under cover.
5. Remove in the order indicated in the table.
6. Install in the reverse order of removal.
7. Inspect the wheel alignment and adjust it if necessary. (See 02-11-2 FRONT WHEEL ALIGNMENT.) (See 02-11-4 REAR WHEEL ALIGNMENT.)

California emission regulation applicable model

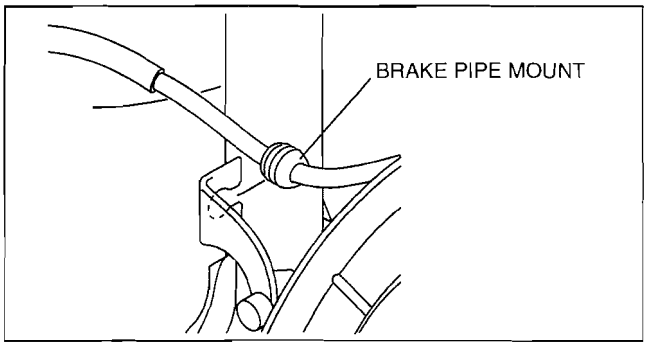
Main Silencer Removal Note

Except for California emission regulation applicable model

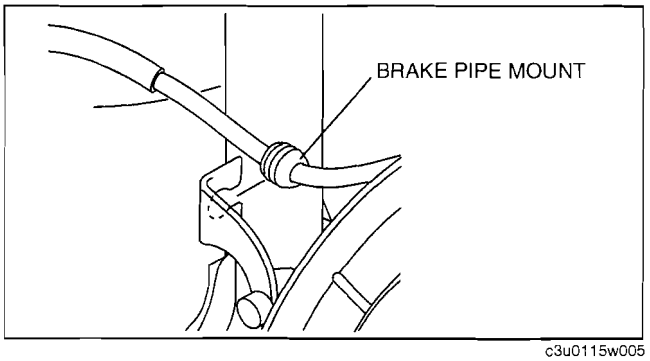
1. Disconnect the ABS wheel-speed sensor wiring harness connector.
2. Disengage the brake pipe mount from bracket.
3. Remove the rear shock absorber lower bolts. (See 02-14-3 REAR SHOCK ABSORBER REMOVAL/INSTALLATION.)
4. Loosen the rear crossmember component installation bolts (6 locations) and lower the rear crossmember component **approx. 70 mm {2.8 in}**. (See 02-14-12 REAR CROSSMEMBER REMOVAL/INSTALLATION.)
5. Remove the main silencer.



c3u0115w005

California emission regulation applicable model

1. Remove the rear wheels and tires.
2. Disconnect the ABS wheel-speed sensor wiring harness connector.
3. Disengage the brake pipe mount from bracket.
4. Remove the caliper component installation bolts, remove the parking brake cable from the caliper, and then set the caliper out of the way. (See 04-11-30 REAR BRAKE (DISC) REMOVAL/INSTALLATION.)
5. Remove the rear shock absorber lower bolts. (See 02-14-3 REAR SHOCK ABSORBER REMOVAL/INSTALLATION.)
6. Remove the rear trailing link installation bolts (4 locations). (See 02-14-8 REAR TRAILING LINK REMOVAL/INSTALLATION.)
7. Remove the rear crossmember component installation bolts (6 locations) and lower the rear crossmember component. (See 02-14-12 REAR CROSSMEMBER REMOVAL/INSTALLATION.)
8. Remove the main silencer.



c3u0115w005

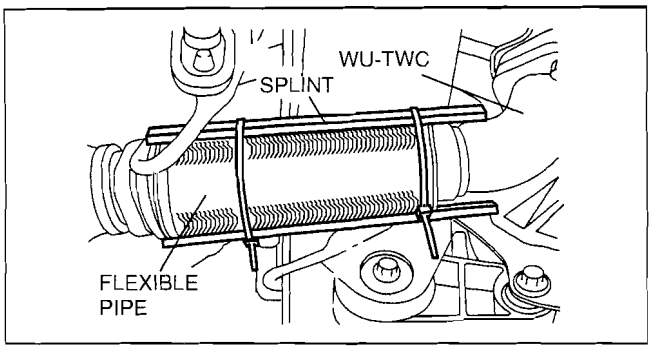
Exhaust Manifold Removal Note

Caution

- **Over bending of the exhaust flexible pipe may cause damage resulting in failure.**

1. Remove the front wheels and tires.
2. Disconnect the steering shaft from the steering gear and linkage side. (See 02-13-14 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
3. Remove the No.1 engine mount rubber. (See 01-10A-28 ENGINE REMOVAL/INSTALLATION[LF, L3].)
4. Loosen the exhaust manifold bolts.
5. Remove the installation bolts of the front stabilizer and stabilizer control link. (See 02-13-11 FRONT STABILIZER REMOVAL/INSTALLATION.)
6. Loosen the front crossmember component installation bolts and lower the front crossmember component **approx. 100 mm {3.94 in}**. (See 02-13-14 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)

7. Support the flexible pipe with a support wrap or splint as shown in the figure.
8. Remove the exhaust manifold by lowering it to the underside of the vehicle.

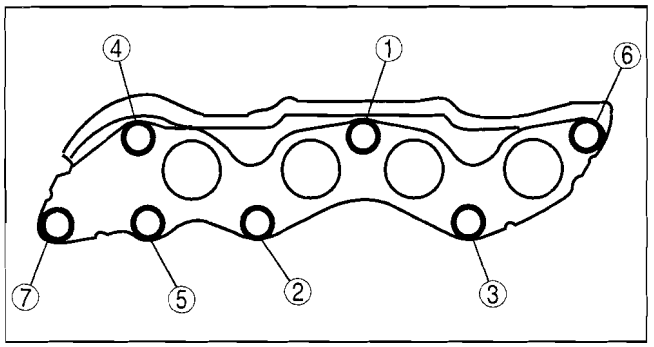


c3u0115w003

Exhaust Manifold Installation Note

1. Tighten the exhaust manifold installation nuts in the order shown in the figure.

Tightening torque
43—64 N·m {4.4—6.5 kgf·m, 32—47 ft·lbf}



c3u0115w004

THREE WAY CATALYTIC CONVERTER (TWC) REPLACEMENT[LF, L3]

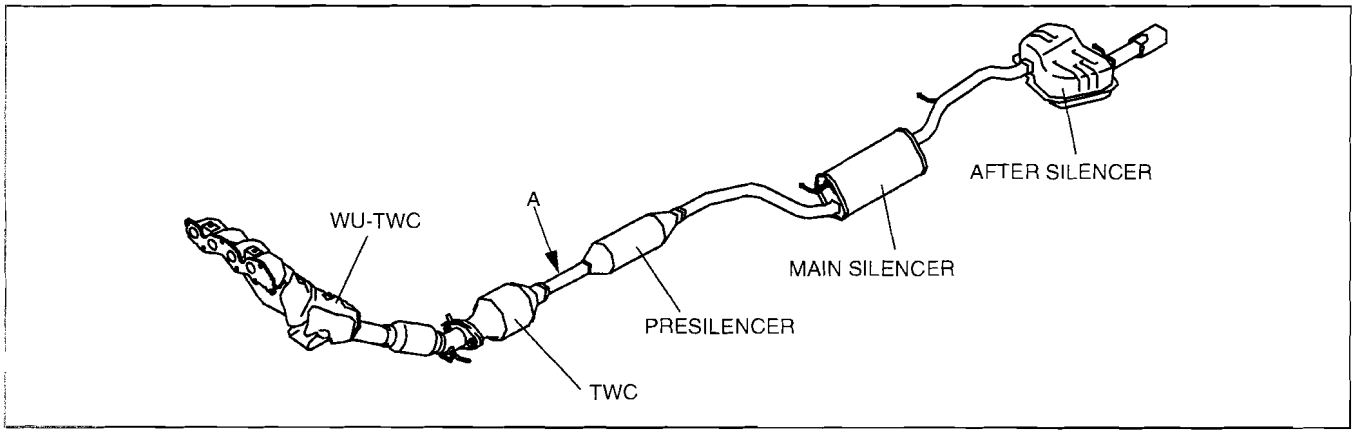
id0115a4801000

California Emission Regulation Applicable Model

Note

- The TWC is integrated with the presilencer and main silencer. Therefore, when replacing the TWC, cut between the TWC and presilencer.

Cut Location



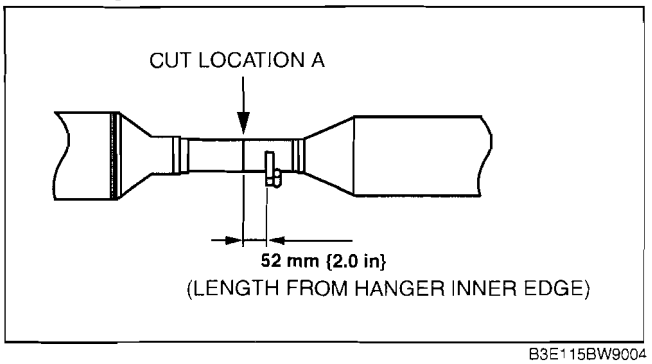
e3u115zw6301

1. Remove the rear tunnel member. (See 01-15A-1 EXHAUST SYSTEM REMOVAL/INSTALLATION[LF, L3].)
2. Remove the front tunnel member. (See 01-15A-1 EXHAUST SYSTEM REMOVAL/INSTALLATION[LF, L3].)

Caution

- **Be careful not to deform the pipe when cutting. If the pipe is deformed, the new pipe may not be installed correctly.**

3. Cut the pipe between the TWC and presilencer using the following procedure. (Cut location A)
   (1) Measure the length from the hanger inner edge.
   (2) Cut the pipe at the specified location.
4. Remove the nut and TWC.
5. Remove burrs from the cut surface on the presilencer side using a round file.
6. Install the new TWC to the presilencer using the following procedure. (Cut location A)

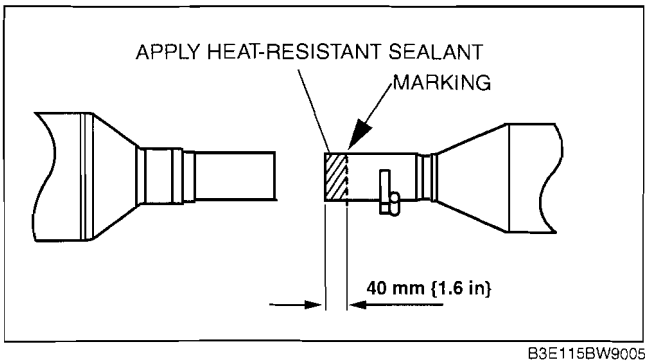


B3E115BW9004

   (1) Measure the indicated length from the cut surface of the presilencer to the marking.
   (2) Apply heat-resistant sealant to the marked position along the complete perimeter.

Note
- The TWC installation nut should remain untightened.

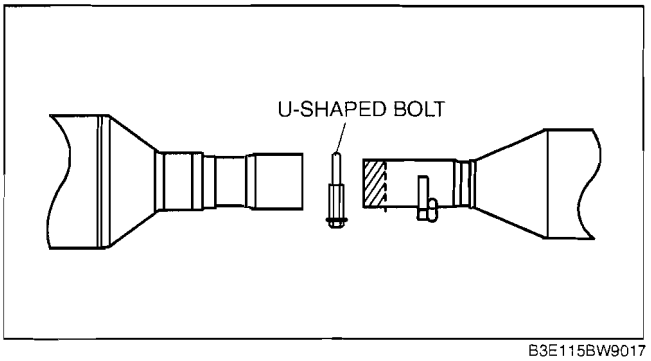
   (3) Replace the gasket with a new one and install the new TWC to the WU-TWC.



B3E115BW9005

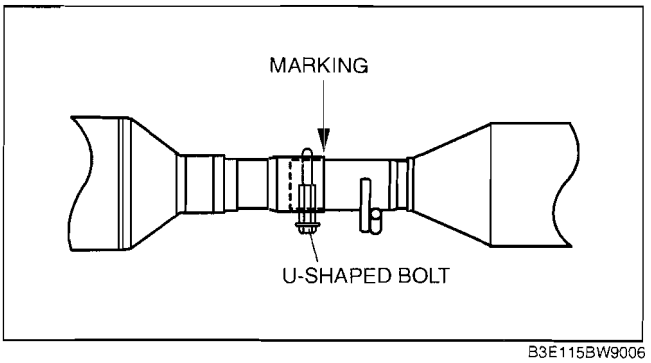
Note
- The U-shaped bolt can be inserted to the pipe on either side.

   (4) Insert the U-shaped bolt.



B3E115BW9017

   (5) Insert the TWC to the presilencer, and align the cut surface of the pipe with the marking.
7. Tighten the TWC installation nut. (See 01-15A-1 EXHAUST SYSTEM REMOVAL/ INSTALLATION[LF, L3].)

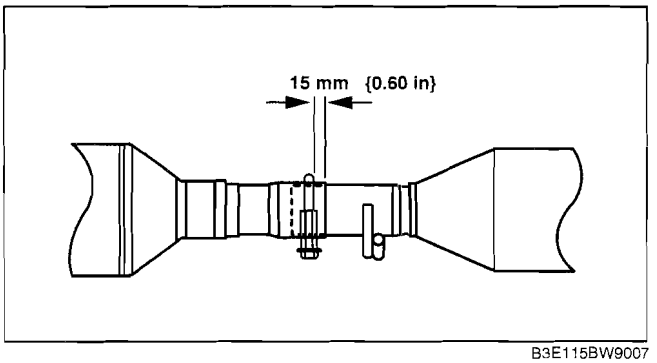


B3E115BW9006

8. Tighten the U-shaped bolt between the presilencer and the new TWC using the following procedure. (Cut location A)

Note
- The TWC has a marked line at the specified position where the U-shaped bolt is to be set.

(1) Set the U-shaped bolt in the specified position.



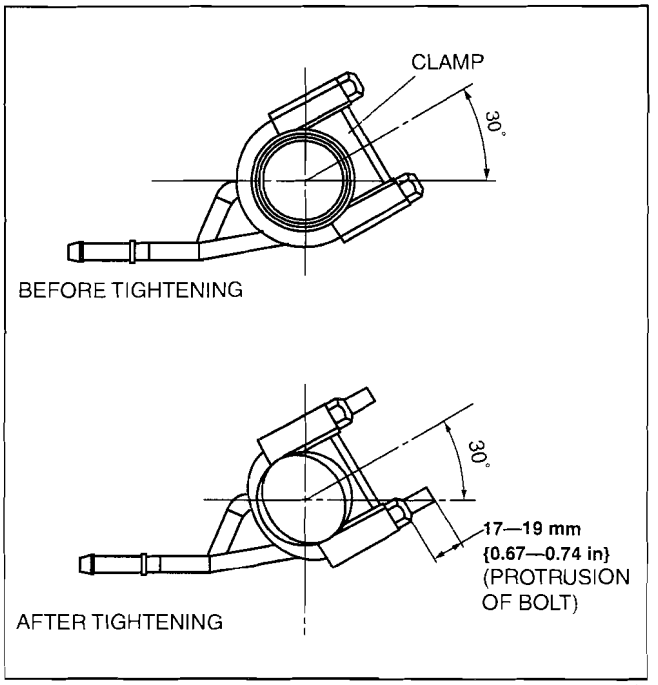
B3E115BW9007

(2) Set the U-shaped bolt so that the clearance between the bolt and surrounding parts is as indicated in the figure.

Caution
- **Do not loosen U-shaped bolt after tightening. If it is loosened, the bolt cannot be tightened at the specified torque with the specified protrusion.**
- **Tighten the U-shaped bolt in three or four steps, left and right equally, to prevent clamp deformation.**

(3) Tighten the U-shaped bolt.

Protrusion of U-shaped bolt after tightening
17—19 mm {0.67—0.74 in}

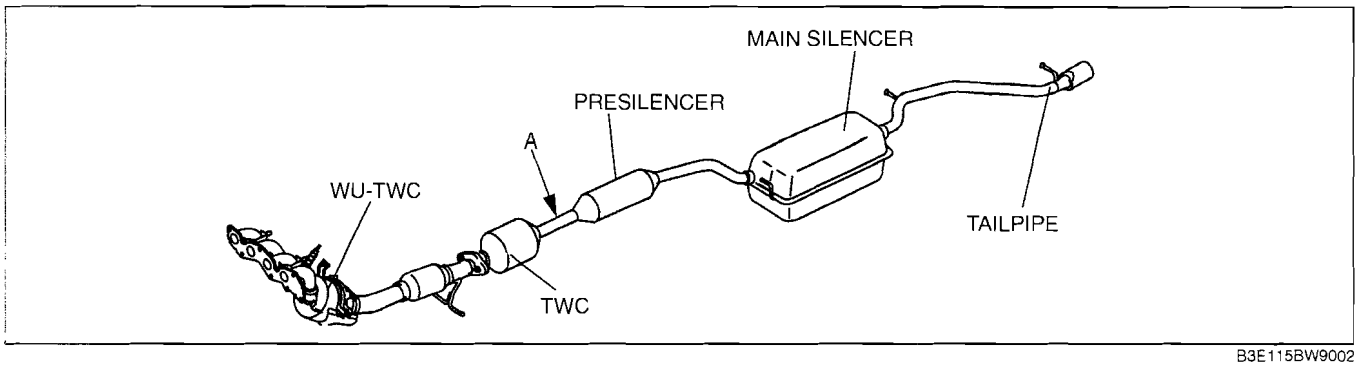


e3u115zw6306

Except for California Emission Regulation Applicable Model

Note
- The TWC is integrated with the presilencer and main silencer. Therefore, when replacing the TWC, cut between the TWC and presilencer.

Cut Location

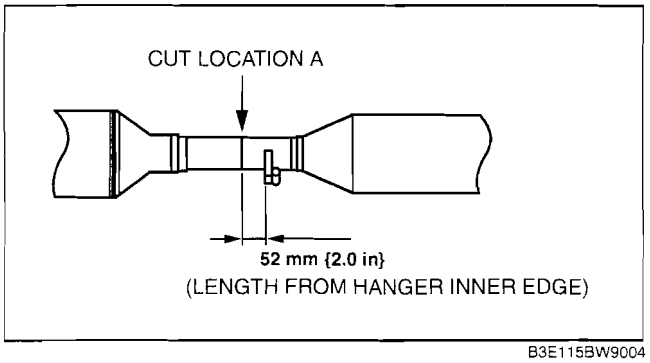


B3E115BW9002

1. Remove the rear tunnel member. (See 01-15A-1 EXHAUST SYSTEM REMOVAL/INSTALLATION[LF, L3].)
2. Remove the front tunnel member. (See 01-15A-1 EXHAUST SYSTEM REMOVAL/INSTALLATION[LF, L3].)

Caution
- **Be careful not to deform the pipe when cutting. If the pipe is deformed, the new pipe may not be installed correctly.**

3. Cut the pipe between the TWC and presilencer using the following procedure. (Cut location A)
   (1) Measure the length from the hanger inner edge.
   (2) Cut the pipe at the specified location.
4. Remove the nut and TWC.
5. Remove burrs from the cut surface on the presilencer side using a round file.
6. Install the new TWC to the presilencer using the following procedure. (Cut location A)



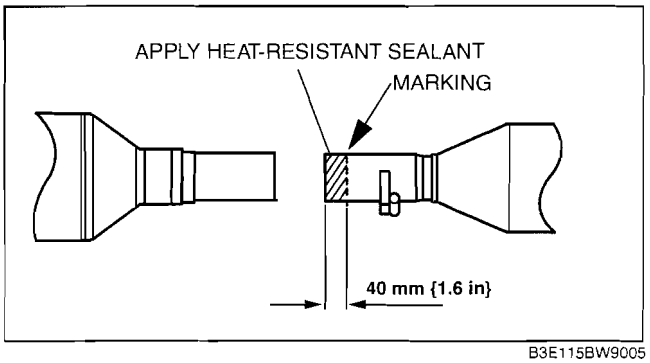
B3E115BW9004

   (1) Measure the indicated length from the cut surface of the presilencer to the marking.
   (2) Apply heat-resistant sealant to the marked position along the complete perimeter.

Note
- The TWC installation nut should remain untightened.

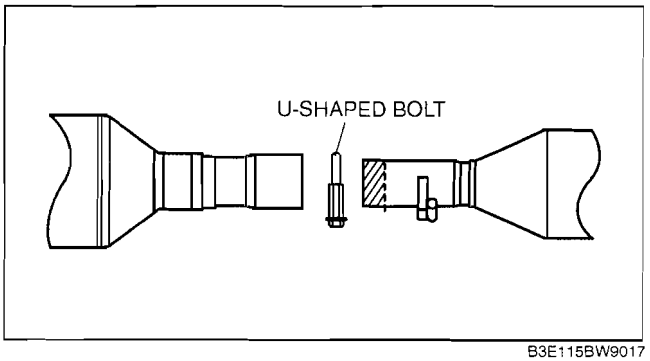
   (3) Replace the gasket with a new one and install the new TWC to the WU-TWC.

Note
- The U-shaped bolt can be inserted to the pipe on either side.



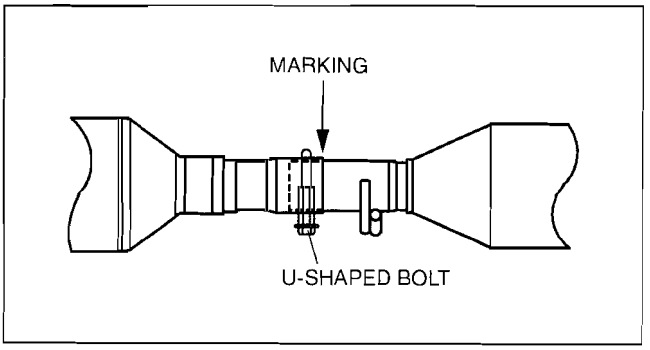
B3E115BW9005

   (4) Insert the U-shaped bolt.



B3E115BW9017

   (5) Insert the TWC to the presilencer, and align the cut surface of the pipe with the marking.
7. Tighten the TWC installation nut. (See 01-15A-1 EXHAUST SYSTEM REMOVAL/ INSTALLATION[LF, L3].)

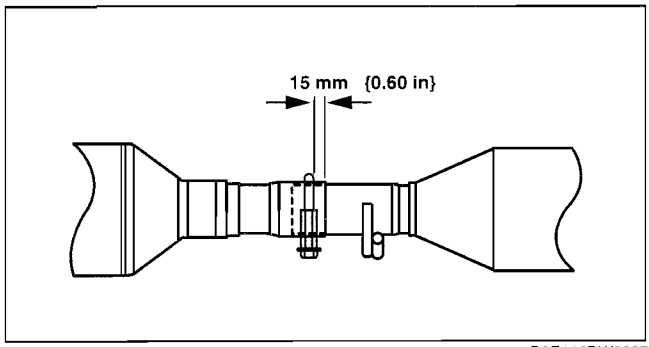


B3E115BW9006

8. Tighten the U-shaped bolt between the presilencer and the new TWC using the following procedure. (Cut location A)

Note
- The TWC has a marked line at the specified position where the U-shaped bolt is to be set.

(1) Set the U-shaped bolt in the specified position.



B3E115BW9007

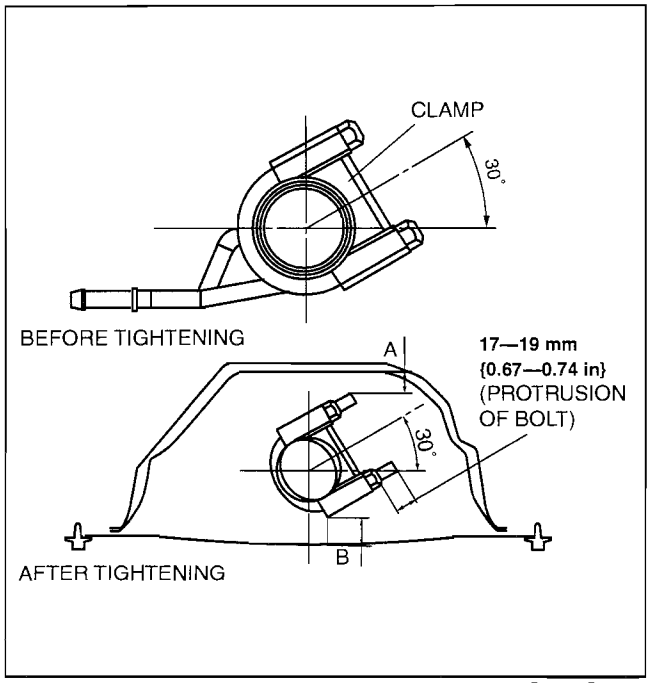
(2) Set the U-shaped bolt so that the clearance between the bolt and surrounding parts is as indicated in the figure.

A: Clearance between the U-shaped bolt end and the vehicle side insulator
10 mm {0.40 in} or longer
B: Clearance between the U-shaped bolt and the tunnel member
20 mm {0.79 in} or longer

Caution
- **Do not loosen U-shaped bolt after tightening. If it is loosened, the bolt cannot be tightened at the specified torque with the specified protrusion.**
- **Tighten the U-shaped bolt in three or four steps, left and right equally, to prevent clamp deformation.**

(3) Tighten the U-shaped bolt.

Protrusion of U-shaped bolt after tightening
17—19 mm {0.67—0.74 in}



B3E115BW9008

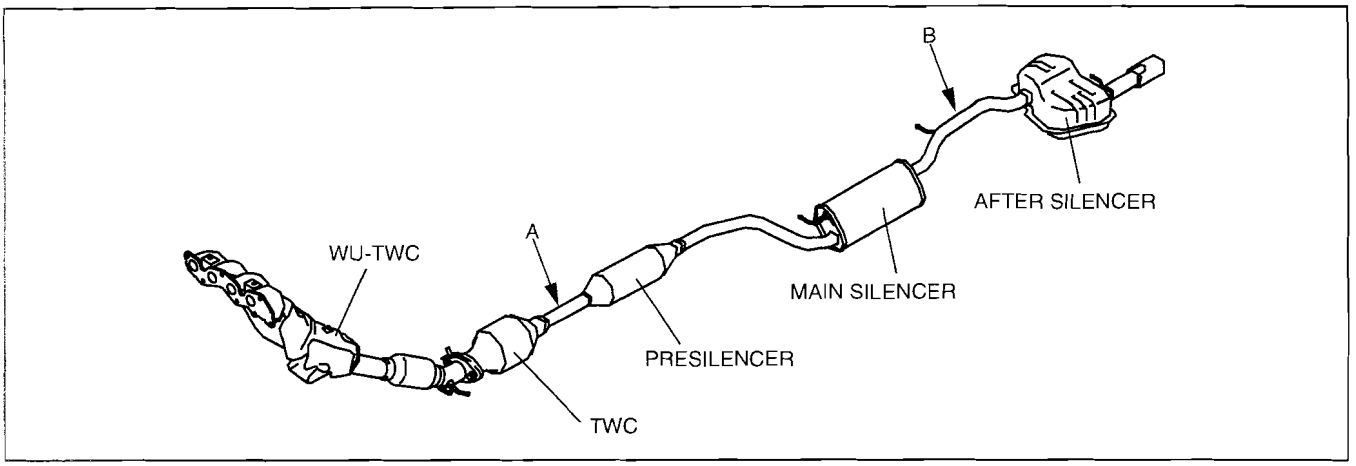
PRESILENCER, MAIN SILENCER REPLACEMENT[LF, L3]

id0115a4800800

California Emission Regulation Applicable Model

Note
- The presilencer and main silencer are integrated with the TWC and after silencer. Therefore, when replacing the presilencer and main silencer, cut between the TWC and presilencer, and between the main silencer and after silencer.
- After bending the body insulator to secure a work space, return it to its original condition after the installation.
- After the installation, verify that there is no noise.

Cut Location



e3u115zw6307

1. Remove the rear tunnel member. (See 01-15A-1 EXHAUST SYSTEM REMOVAL/INSTALLATION[LF, L3].)
2. Remove the front tunnel member. (See 01-15A-1 EXHAUST SYSTEM REMOVAL/INSTALLATION[LF, L3].)
3. Remove three rubber hangers from back side.

Caution
- **Be careful not to deform the pipe when cutting. If the pipe is deformed, the new pipe may not be installed correctly.**

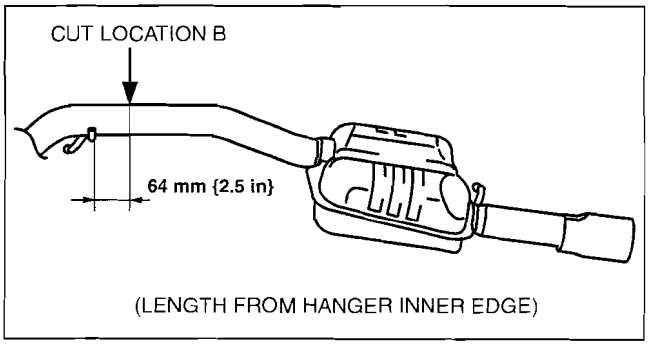
4. Cut the pipe between the main silencer and the after silencer using the following procedure. (Cut location B)

Note
- Perform measurement parallel to the pipe being cut.

(1) Measure the length from the hanger inner edge at the end.
(2) Cut the pipe at the specified location.

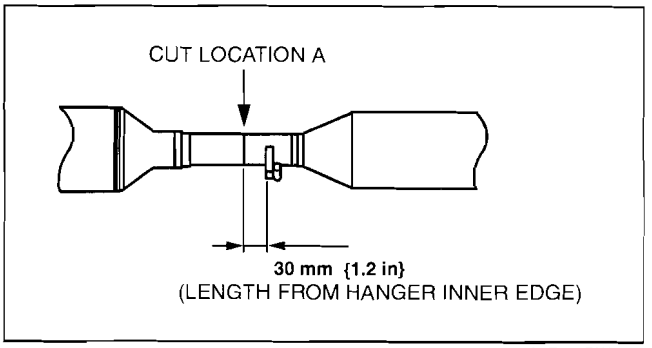
Caution
- **Be careful not to deform the pipe when cutting. If the pipe is deformed, the new pipe may not be installed correctly.**

Note
- The pipe can be cut after removing it from the vehicle. In this case, replace the gasket with a new one.



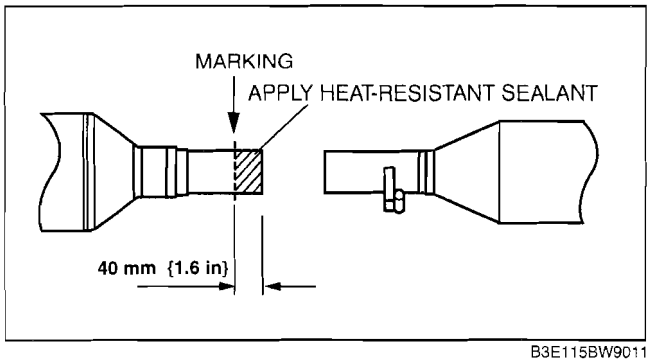
e3u115zw6302

5. Cut the pipe between the TWC and presilencer using the following procedure. (Cut location A)
   (1) Measure the length from the hanger end.
   (2) Cut the pipe at the specified location.
6. Remove burrs from the cut surface on both the TWC and the after silencer side using a round file.



B3E115BW9010

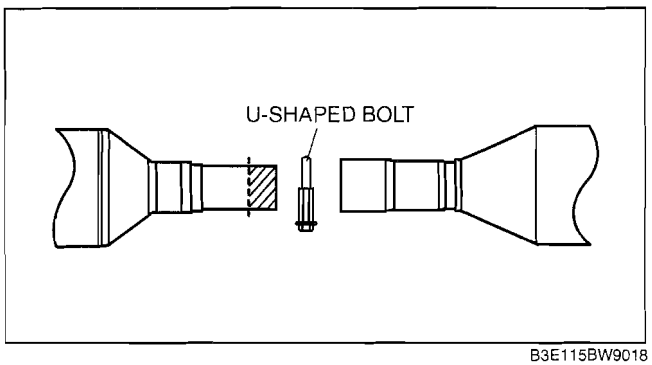
7. Install the new presilencer and main silencer to the TWC using the following procedure. (Cut location A)
   (1) Measure the indicated length from the cut surface of the TWC to the marking.
   (2) Apply heat-resistant sealant to the marked position along the complete perimeter.
   (3) If the pipe is cut after removing it from the vehicle, replace the gasket with a new one and install the TWC to the WU-TWC. (See 01-15A-1 EXHAUST SYSTEM REMOVAL/ INSTALLATION[LF, L3].)



B3E115BW9011

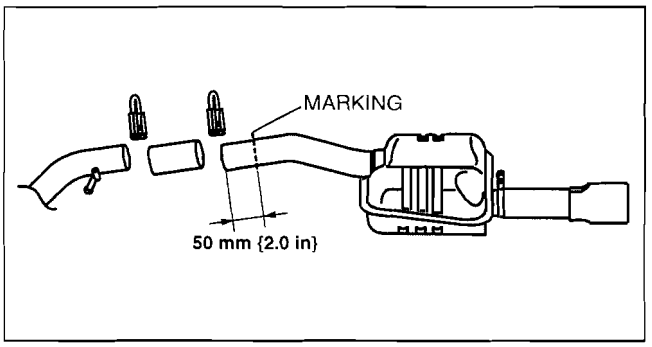
Note
- The U-shaped bolt can be inserted to the pipe on either side.

   (4) Insert the U-shaped bolt.
   (5) Insert the new presilencer to the TWC, and align the cut surface of the pipe with the marking.
   (6) Secure the exhaust pipe to the rubber hanger.



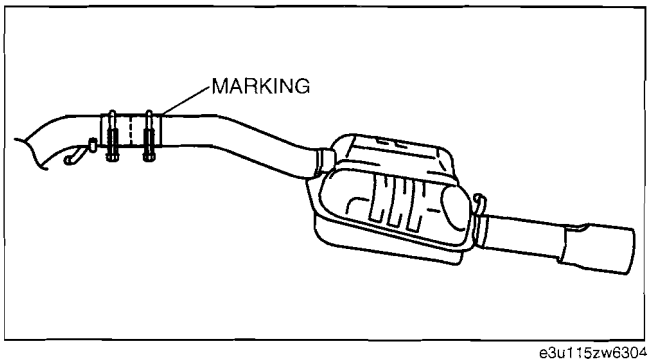
B3E115BW9018

8. Install the new presilencer and main silencer to the after silencer using the following procedure. (Cut location B)
   (1) Remove the after silencer from the rubber hanger.
   (2) Measure the indicated length from the cut surface of the after silencer to the marking.
   (3) Apply heat-resistant sealant to the specified position along the complete perimeter.
   (4) Insert the U-shaped bolt.
   (5) Insert the joint pipe to the main silencer.
   (6) Insert the after silencer to the joint pipe.
   (7) Secure the exhaust pipe to the rubber hanger.



e3u115zw6303

   (8) Align the cut surface of the joint pipe with the marking.
   (9) Verify that the exhaust pipe is installed without any bends or strain on the pipe.

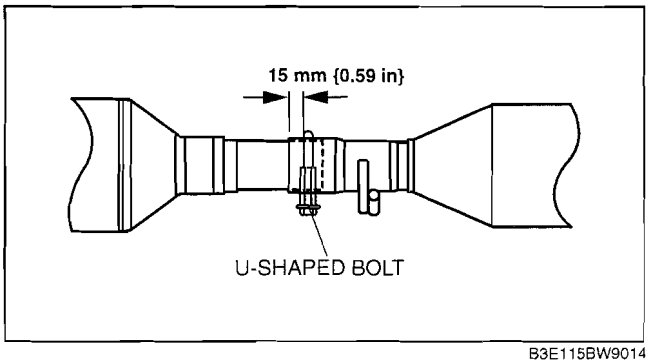


e3u115zw6304

9. Tighten the U-shaped bolt between the TWC and the new presilencer using the following procedure. (Cut location A)

Note
- The presilencer has a marked line at the specified position where the U-shaped bolt is to be set.

(1) Set the U-shaped bolt in the specified position.



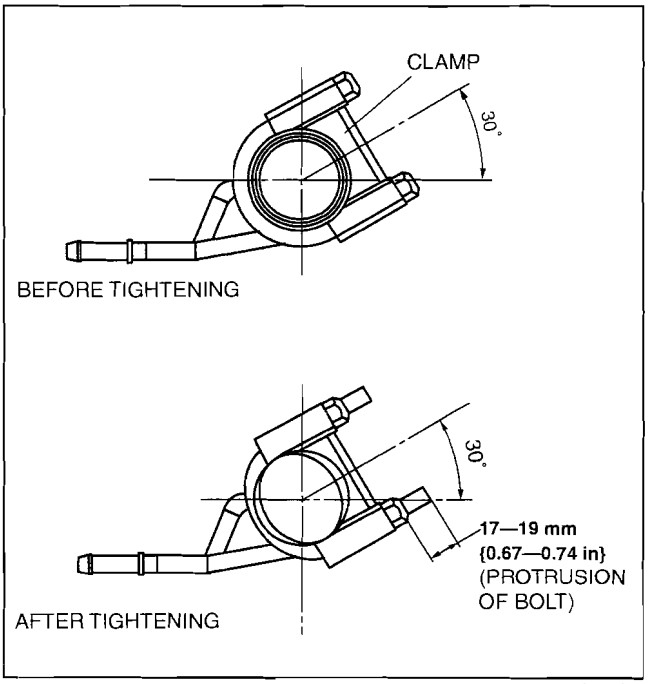
B3E115BW9014

(2) Set the U-shaped bolt so that the clearance between the bolt and surrounding parts is as indicated in the figure.

Caution
- **Do not loosen U-shaped bolt after tightening. If it is loosened, the bolt cannot be tightened at the specified torque with the specified protrusion.**
- **Tighten the U-shaped bolt in three or four steps, left and right equally, to prevent clamp deformation.**

(3) Tighten the U-shaped bolt.

Protrusion of U-shaped bolt after tightening
17—19 mm {0.67—0.74 in}

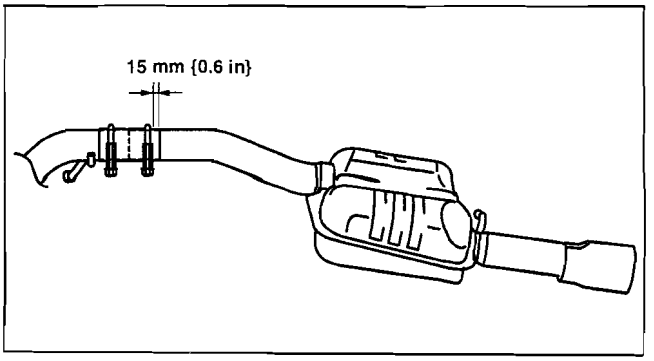


e3u115zw6306

10. Tighten the U-shaped bolt between the after silencer and the new main silencer using the following procedure. (Cut location B)

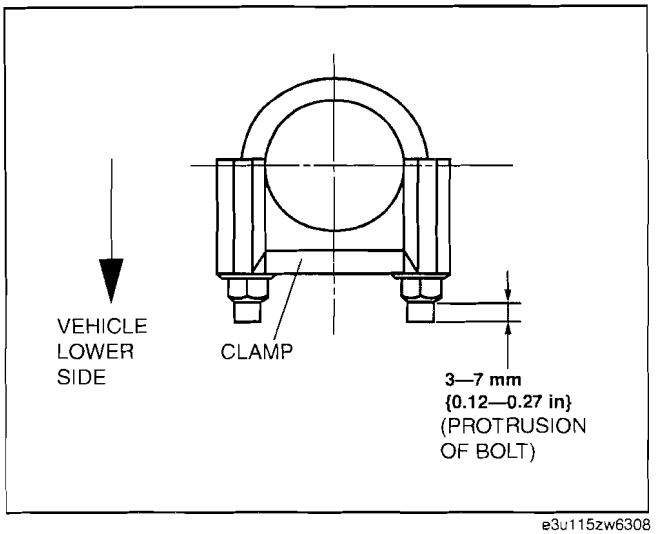
Note
- The joint pipe has a marked line at the specified position where the U-shaped bolt is to be set.

(1) Set the U-shaped bolt in the specified position.



e3u115zw6305

(2) Set the U-shaped bolt so that it faces the vehicle lower side.



e3u115zw6308

Caution
- **Do not loosen U-shaped bolt after tightening. If it is loosened, the bolt cannot be tightened at the specified torque with the specified protrusion.**
- **Tighten the U-shaped bolt in three or four steps, left and right equally, to prevent clamp deformation.**

Note
- Tighten the U-shaped bolt on the main silencer side first, then the after silencer side.

(3) Tighten the U-shaped bolt on the main silencer side.

Protrusion of U-shaped bolt after tightening
3—7 mm {0.12—0.27 in}

(4) Gradually tighten the U-shaped bolt on the after silencer side verifying that the after silencer end is at the center of the bumper as viewed from behind the vehicle.

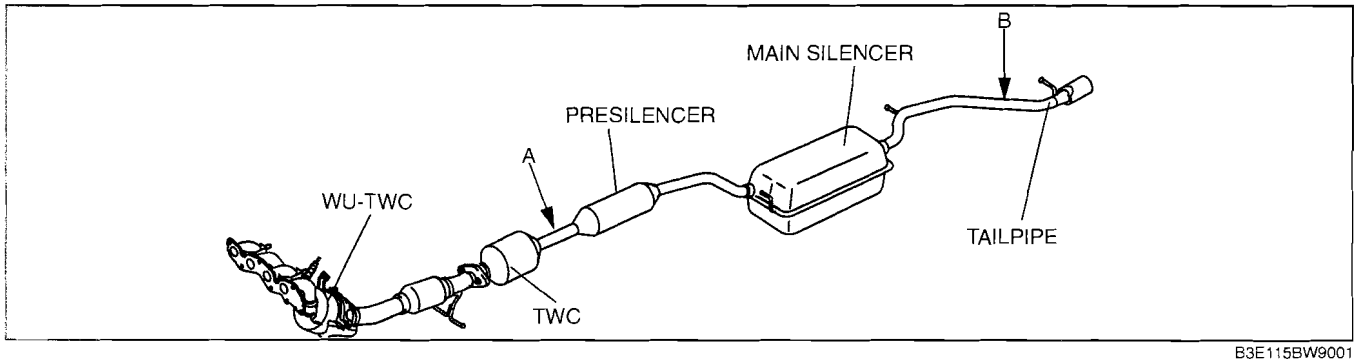
Protrusion of U-shaped bolt after tightening
3—7 mm {0.12—0.27 in}

11. Start the engine, and verify that there is no noise.

Except for California Emission Regulation Applicable Model

Note
- The presilencer and main silencer are integrated with the TWC and tailpipe. Therefore, when replacing the presilencer and main silencer, cut between the TWC and presilencer, and between the main silencer and tailpipe.

Cut Location



B3E115BW9001

1. Remove the rear tunnel member. (See 01-15A-1 EXHAUST SYSTEM REMOVAL/INSTALLATION[LF, L3].)
2. Remove the front tunnel member. (See 01-15A-1 EXHAUST SYSTEM REMOVAL/INSTALLATION[LF, L3].)

Caution
- **Be careful not to deform the pipe when cutting. If the pipe is deformed, the new pipe may not be installed correctly.**

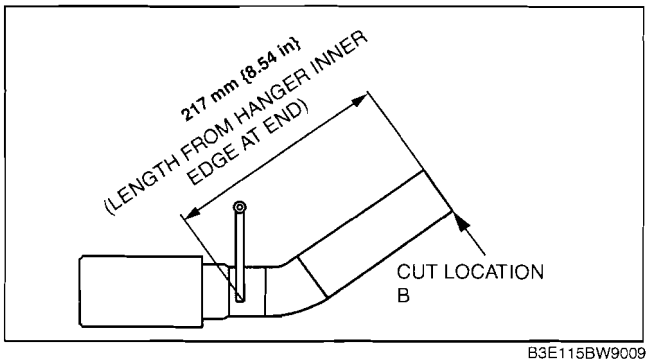
3. Cut the pipe between the main silencer and tailpipe using the following procedure. (Cut location B)

Note
- Perform measurement parallel to the pipe being cut.

(1) Measure the length from the hanger inner edge at the end.
(2) Cut the pipe at the specified location.

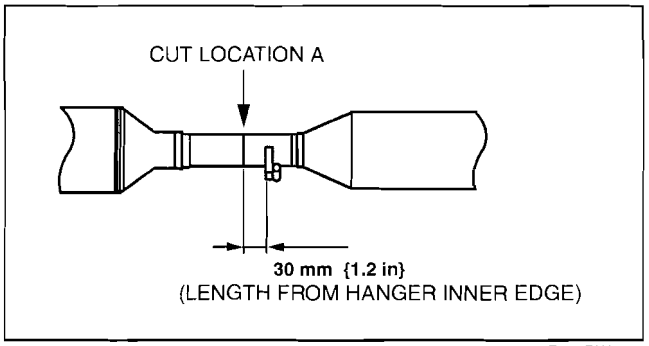
Caution
- **Be careful not to deform the pipe when cutting. If the pipe is deformed, the new pipe may not be installed correctly.**

Note
- The pipe can be cut after removing it from the vehicle. In this case, replace the gasket with a new one.



B3E115BW9009

4. Cut the pipe between the TWC and presilencer using the following procedure. (Cut location A)
(1) Measure the length from the hanger end.
(2) Cut the pipe at the specified location.
5. Remove burrs from the cut surface on both the TWC and tail pile side using a round file.

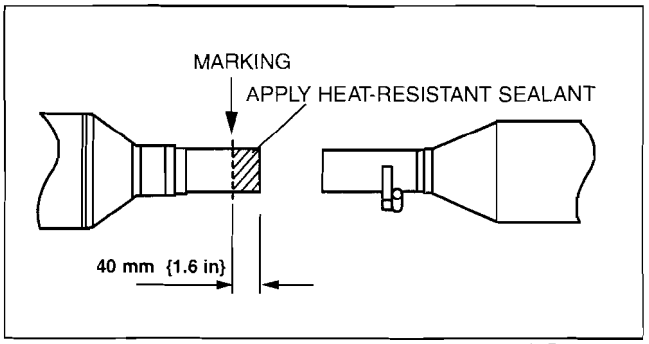


B3E115BW9010

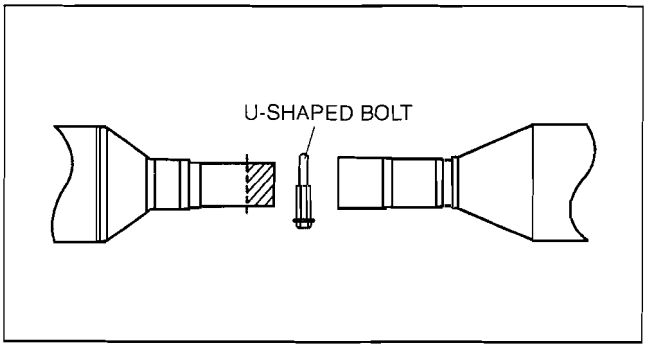
6. Install the new presilencer and main silencer to the TWC using the following procedure. (Cut location A)
(1) Measure the indicated length from the cut surface of the TWC to the marking.
(2) Apply heat-resistant sealant to the marked position along the complete perimeter.
(3) If the pipe is cut after removing it from the vehicle, replace the gasket with a new one and install the TWC to the WU-TWC. (See 01-15A-1 EXHAUST SYSTEM REMOVAL/ INSTALLATION[LF, L3].)

Note
- The U-shaped bolt can be inserted to the pipe on either side.

(4) Insert the U-shaped bolt.
(5) Insert the new presilencer to the TWC, and align the cut surface of the pipe with the marking.
(6) Secure the exhaust pipe to the rubber hanger.

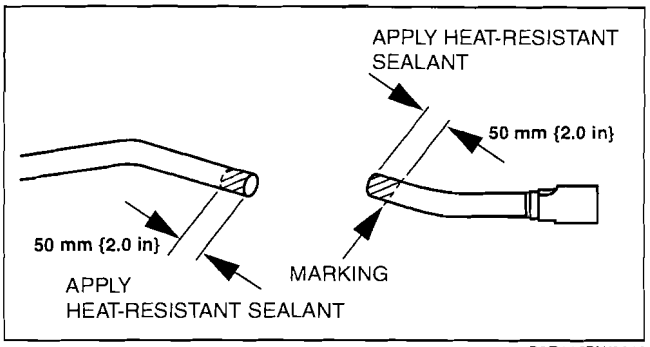


B3E115BW9011



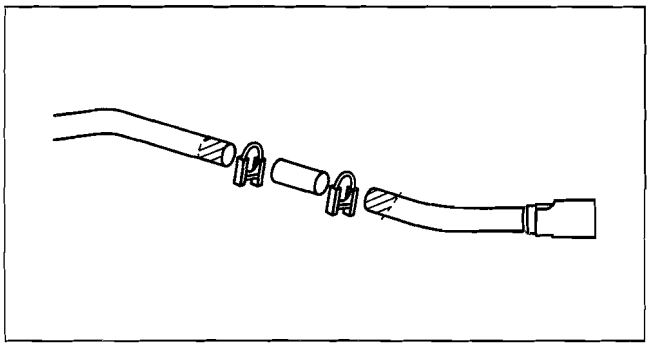
B3E115BW9018

7. Install the new presilencer and main silencer to the tailpipe using the following procedure. (Cut location B)
   (1) Remove the tailpipe from the rubber hanger.
   (2) Measure the indicated length from the cut surface of the tailpipe to the marking.
   (3) Apply heat-resistant sealant to the specified position along the complete perimeter.



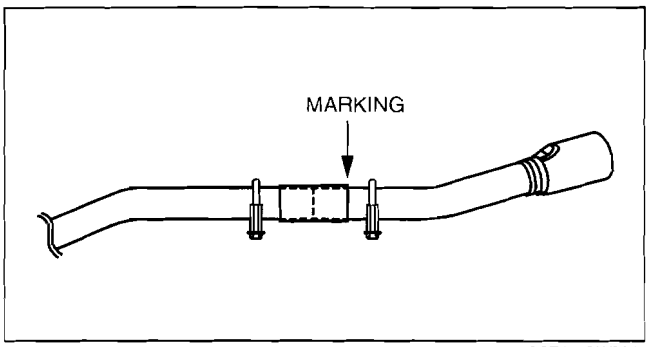
B3E115BW9012

   (4) Insert the U-shaped bolt.
   (5) Insert the joint pipe to the main silencer.
   (6) Insert the tailpipe to the joint pipe.
   (7) Secure the exhaust pipe to the rubber hanger.



B3E115BW9019

   (8) Align the cut surface of the joint pipe with the marking.
   (9) Verify that the exhaust pipe is installed without any bends or strain on the pipe.

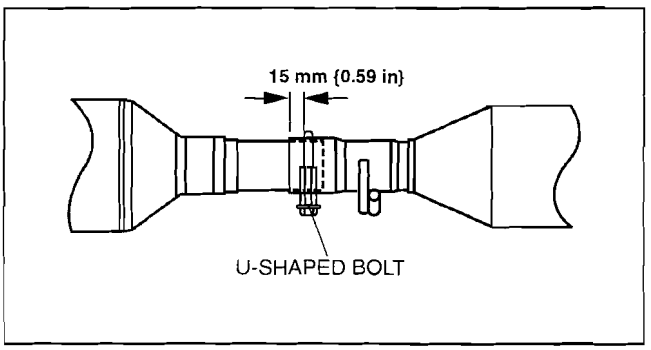


B3E115BW9013

8. Tighten the U-shaped bolt between the TWC and the new presilencer using the following procedure. (Cut location A)

Note
- The presilencer has a marked line at the specified position where the U-shaped bolt is to be set.

   (1) Set the U-shaped bolt in the specified position.



B3E115BW9014

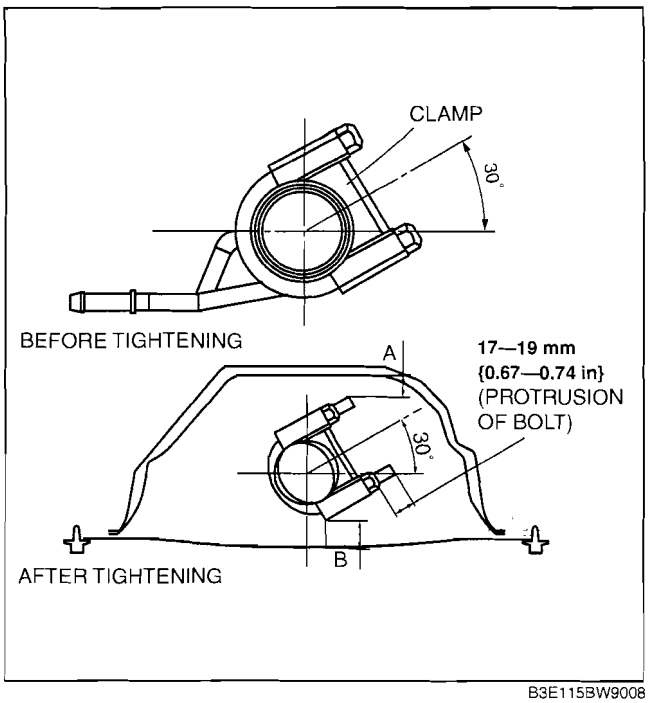
(2) Set the U-shaped bolt so that the clearance between the bolt and surrounding parts is as indicated in the figure.

A: Clearance between the U-shaped bolt end and the vehicle side insulator
10 mm {0.40 in} or longer
B: Clearance between the U-shaped bolt and the tunnel member
20 mm {0.79 in} or longer

Caution
- **Do not loosen U-shaped bolt after tightening. If it is loosened, the bolt cannot be tightened at the specified torque with the specified protrusion.**
- **Tighten the U-shaped bolt in three or four steps, left and right equally, to prevent clamp deformation.**

(3) Tighten the U-shaped bolt.

Protrusion of U-shaped bolt after tightening
17—19 mm {0.67—0.74 in}

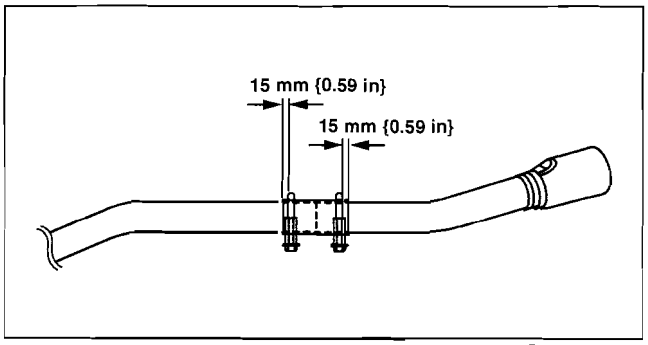


B3E115BW9008

9. Tighten the U-shaped bolt between the tailpipe and the new main silencer using the following procedure. (Cut location B)

Note
- The joint pipe has a marked line at the specified position where the U-shaped bolt is to be set.

(1) Set the U-shaped bolt in the specified position.

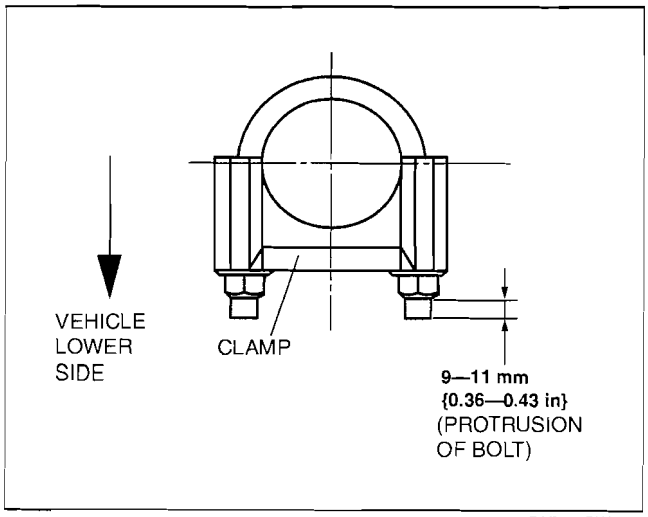


B3E115BW9015

(2) Set the U-shaped bolt so that it faces the vehicle lower side.

Caution
- **Do not loosen U-shaped bolt after tightening. If it is loosened, the bolt cannot be tightened at the specified torque with the specified protrusion.**
- **Tighten the U-shaped bolt in three or four steps, left and right equally, to prevent clamp deformation.**

Note
- Tighten the U-shaped bolt on the main silencer side first, then the tailpipe side.



B3E115BW9016

(3) Tighten the U-shaped bolt on the main silencer side.

Protrusion of U-shaped bolt after tightening
9—11 mm {0.36—0.43 in}

(4) Gradually tighten the U-shaped bolt on the tailpipe side verifying that the tailpipe end is at the center of the bumper as viewed from behind the vehicle.

Protrusion of U-shaped bolt after tightening
9—11 mm {0.36—0.43 in}

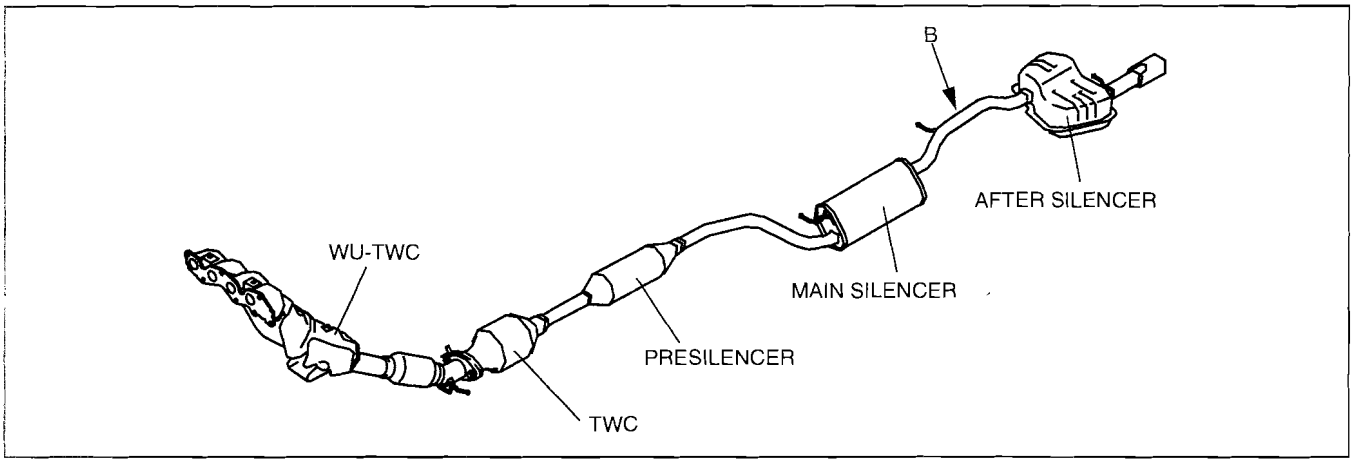
AFTER SILENCER/TAILPIPE REPLACEMENT[LF, L3]

id0115a4801100

California Emission Regulation Applicable Model

Note
- The after silencer is integrated with the presilencer and main silencer. Therefore, when replacing the after silencer, cut between the main silencer and after silencer.
- After bending the body insulator to secure a work space, return it to its original condition after the installation.
- After the installation, verify that there is no noise.

Cut Location



e3u115zw6309

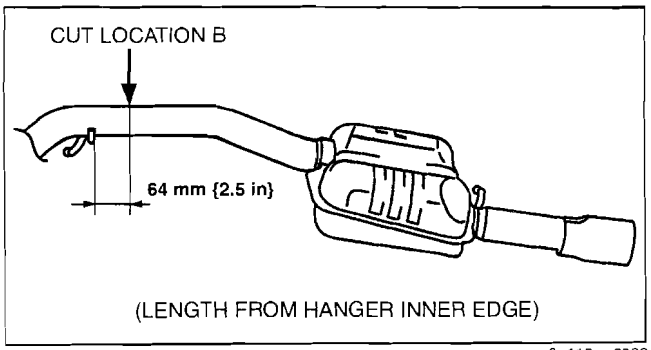
Caution
- **Be careful not to deform the pipe when cutting. If the pipe is deformed, the new pipe may not be installed correctly.**

1. Remove three rubber hangers from back side.
2. Cut the pipe between the main silencer and after silencer using the following procedure. (Cut location B)

Note
- Perform measurement parallel to the pipe being cut.

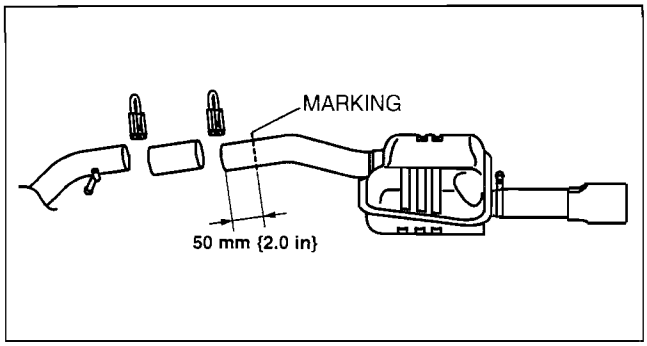
(1) Measure the length from the hanger inner edge at the end.
(2) Cut the pipe at the specified location.

3. Remove burrs from the cut surface on the main silencer side using a round file.



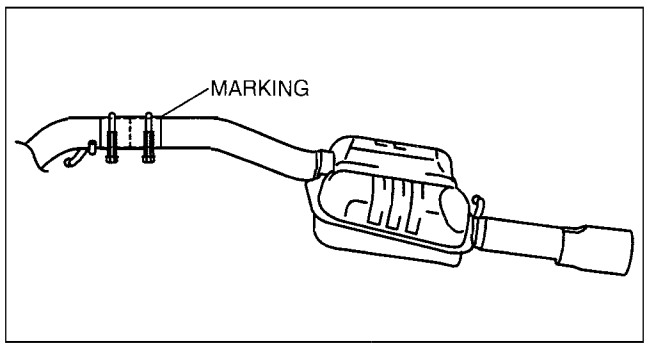
e3u115zw6302

4. Install the new after silencer to the main silencer using the following procedure. (Cut location B)
   (1) Measure the indicated length from the cut surface of the new after silencer to the marking.
   (2) Apply heat-resistant sealant to the specified position along the complete perimeter.
   (3) Insert the U-shaped bolt.
   (4) Insert the joint pipe to the main silencer.
   (5) Insert the after silencer to the joint pipe.
   (6) Secure the exhaust pipe to the rubber hanger.



e3u115zw6303

   (7) Align the cut surface of the joint pipe with the marking.
   (8) Verify that the exhaust pipe is installed without any bends or strain on the pipe.

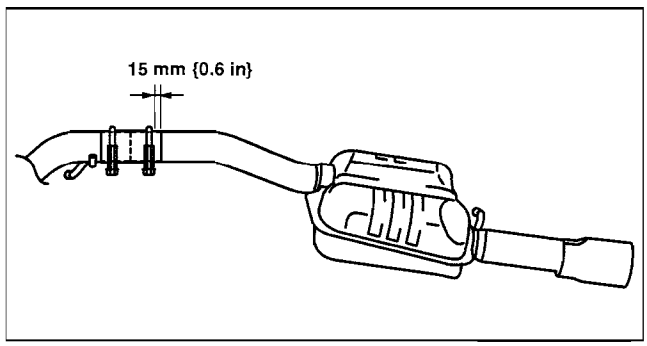


e3u115zw6304

5. Tighten the U-shaped bolt between the main silencer and the new after silencer using the following procedure. (Cut location B)

Note
- The joint pipe has a marked line at the specified position where the U-shaped bolt is to be set.

   (1) Set the U-shaped bolt in the specified position.

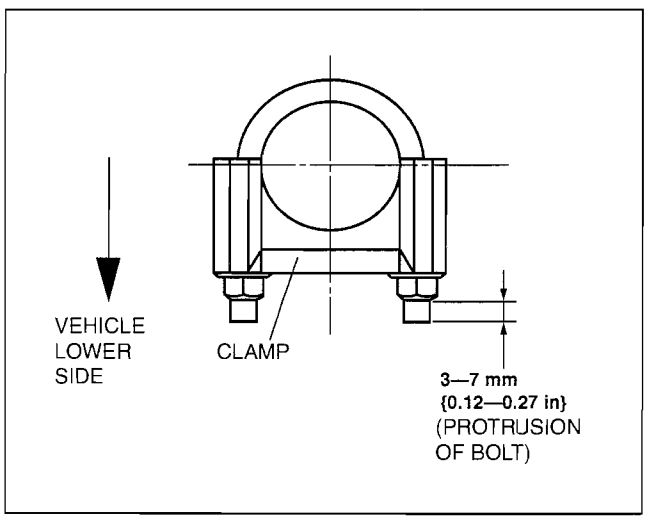


e3u115zw6305

   (2) Set the U-shaped bolt so that it faces the vehicle lower side.

Caution
- **Do not loosen U-shaped bolt after tightening. If it is loosened, the bolt cannot be tightened at the specified torque with the specified protrusion.**
- **Tighten the U-shaped bolt in three or four steps, left and right equally, to prevent clamp deformation.**

Note
- Tighten the U-shaped bolt on the main silencer side first, then the after silencer side.



e3u115zw6308

(3) Tighten the U-shaped bolt on the main silencer side.

Protrusion of U-shaped bolt after tightening
3—7 mm {0.12—0.27 in}

(4) Gradually tighten the U-shaped bolt on the after silencer side verifying that the after silencer end is at the center of the bumper as viewed from behind the vehicle.

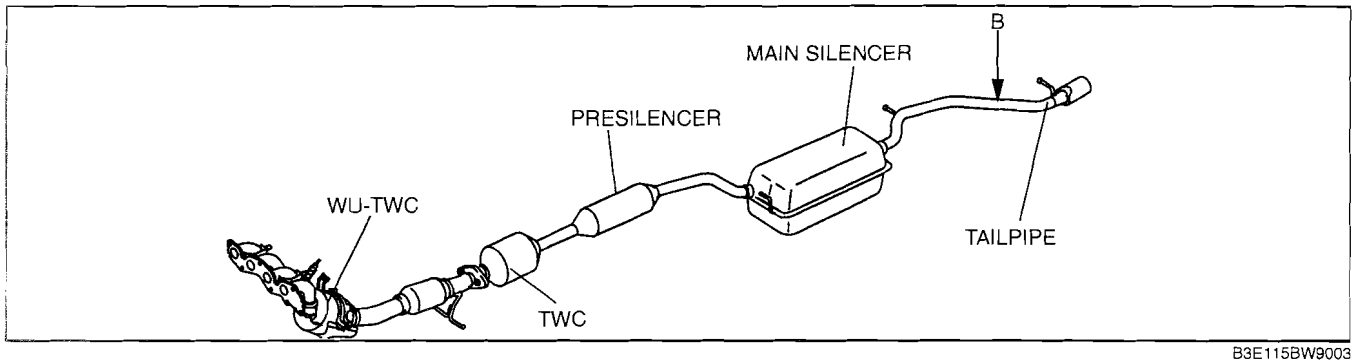
Protrusion of U-shaped bolt after tightening
3—7 mm {0.12—0.27 in}

6. Start the engine, and verify that there is no noise.

Except for California Emission Regulation Applicable Model

Note
- The tailpipe is integrated with the presilencer and main silencer. Therefore, when replacing the tailpipe, cut between the main silencer and tailpipe.

Cut Location



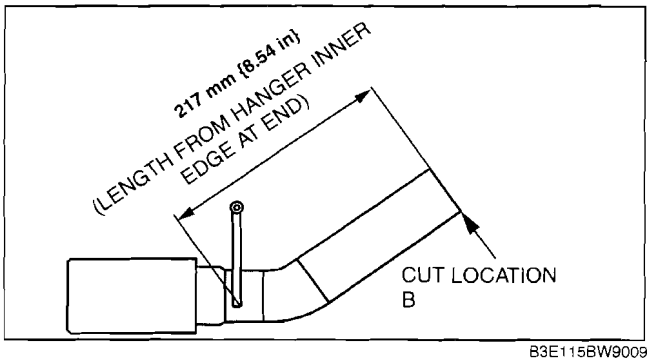
B3E115BW9003

Caution
- **Be careful not to deform the pipe when cutting. If the pipe is deformed, the new pipe may not be installed correctly.**

1. Cut the pipe between the main silencer and tailpipe using the following procedure. (Cut location B)

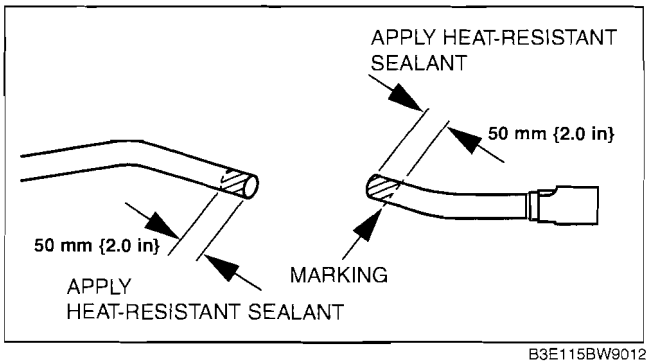
Note
- Perform measurement parallel to the pipe being cut.

(1) Measure the length from the hanger inner edge at the end.
(2) Cut the pipe at the specified location.
2. Remove burrs from the cut surface on the main silencer side using a round file.



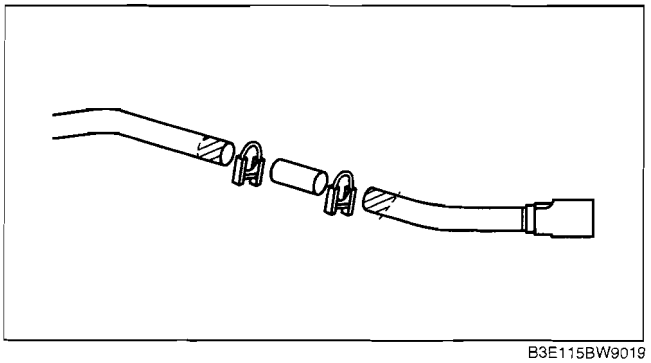
B3E115BW9009

3. Install the new tailpipe to the main silencer using the following procedure. (Cut location B)
   (1) Measure the indicated length from the cut surface of the new tailpipe to the marking.
   (2) Apply heat-resistant sealant to the specified position along the complete perimeter.



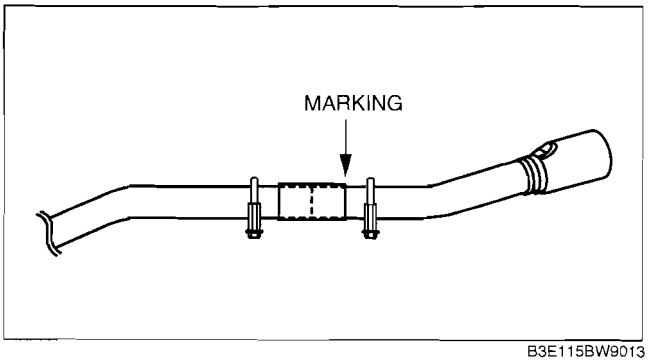
B3E115BW9012

   (3) Insert the U-shaped bolt.
   (4) Insert the joint pipe to the main silencer.
   (5) Insert the tailpipe to the joint pipe.
   (6) Secure the exhaust pipe to the rubber hanger.



B3E115BW9019

   (7) Align the cut surface of the joint pipe with the marking.
   (8) Verify that the exhaust pipe is installed without any bends or strain on the pipe.

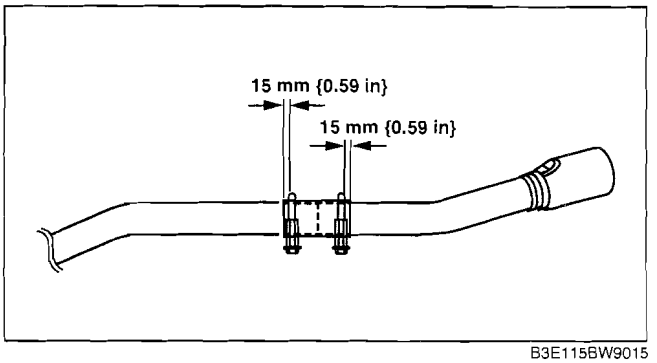


B3E115BW9013

4. Tighten the U-shaped bolt between the main silencer and the new tailpipe using the following procedure. (Cut location B)

Note
- The joint pipe has a marked line at the specified position where the U-shaped bolt is to be set.

(1) Set the U-shaped bolt in the specified position.



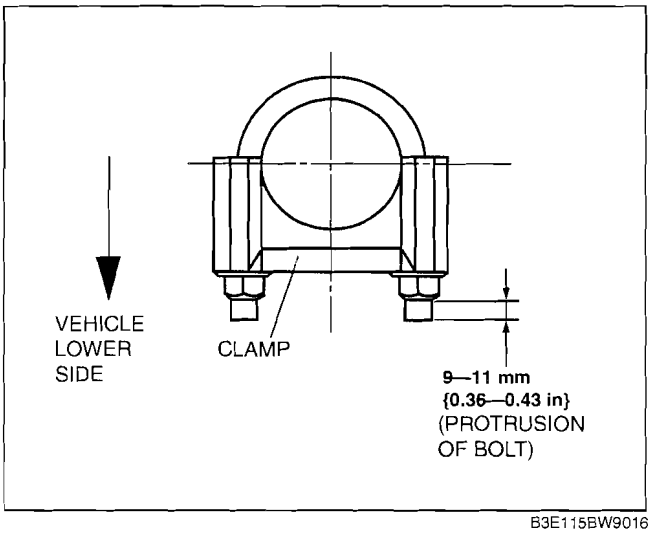
B3E115BW9015

(2) Set the U-shaped bolt so that it faces the vehicle lower side.

Caution
- **Do not loosen U-shaped bolt after tightening. If it is loosened, the bolt cannot be tightened at the specified torque with the specified protrusion.**
- **Tighten the U-shaped bolt in three or four steps, left and right equally, to prevent clamp deformation.**

Note
- Tighten the U-shaped bolt on the main silencer side first, then the tailpipe side.

(3) Tighten the U-shaped bolt on the main silencer side.



B3E115BW9016

Protrusion of U-shaped bolt after tightening
9—11 mm {0.36—0.43 in}

(4) Gradually tighten the U-shaped bolt on the tailpipe side verifying that the tailpipe end is at the center of the bumper as viewed from behind the vehicle.

Protrusion of U-shaped bolt after tightening
9—11 mm {0.36—0.43 in}

01-15B EXHAUST SYSTEM [L3 WITH TC]

EXHAUST SYSTEM INSPECTION[L3 WITH TC]

id011539800100

1. Start the engine and inspect each exhaust system component for exhaust gas leakage.
   - If there is leakage, repair or replace if necessary.

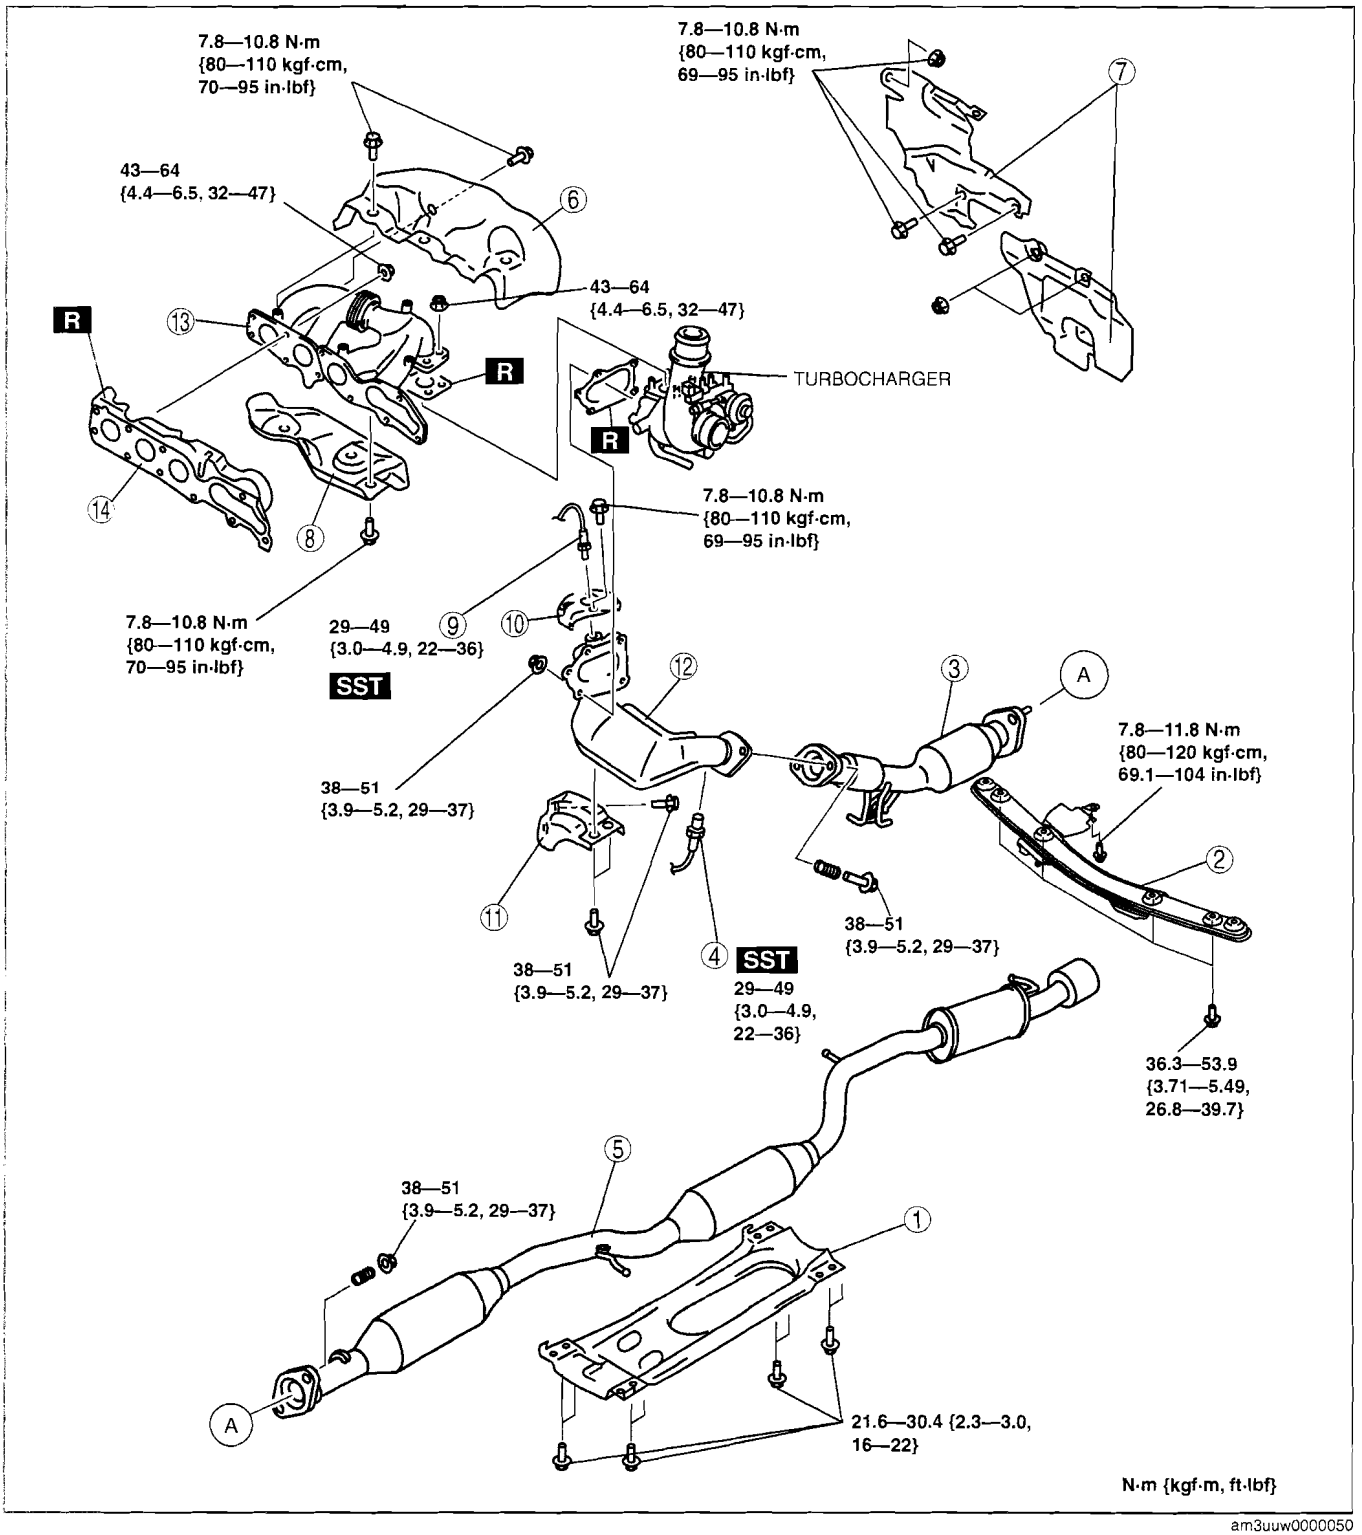
EXHAUST SYSTEM REMOVAL/INSTALLATION[L3 WITH TC]

id011539800200

Warning

- **A hot engine and exhaust system can cause severe burns. Turn off the engine and wait until they are cool before removing the exhaust system.**

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Remove the charge air cooler. (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC])
4. Remove in the order indicated in the table.
5. Install in the reverse order of removal.



am3uuw0000050

FUEL-FILLER CAP INSPECTION[LF, L3]

id0116a5801300

Leakage Inspection

1. Perform the following **SST** (Evaporative Emission System Tester 134-01049) self-test:

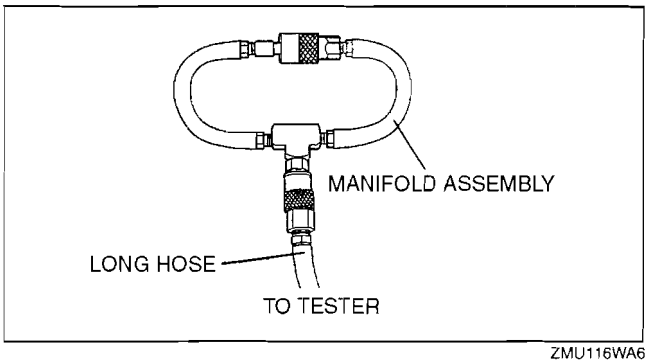
Note

- If the tester does not work correctly during self-test, refer to the tester operators manual for more detailed procedures.

(1) Verify the gas cylinder valve is closed and the control valve located on the tester is in the TEST position. All tester display should be off at this time.
(2) Connect the long hose (part of **SST**) to the tester.
(3) Connect the manifold assembly (part of **SST**) to the long hose as shown.
(4) Open the gas cylinder valve and verify the gas cylinder regulator left gauge reads **10 to 12 psi** (preset at factory).
- If not, refer to the tester operators manual to contact tester manufacturer.

(5) Press the ON/OFF switch to turn on the **SST** and make sure the left display reads **0.0**.
(6) Turn the control valve on the tester to the FILL position.
(7) Verify the left display reading is **within 13.9 to 14.0 in of water**.
- If not, adjust the pressure using the regulator knob located on the right side of the tester.

(8) Turn the control valve to TEST position and press the START switch.
(9) After the **2-min** countdown (left display) is completed, the right display shows the total pressure loss for that period. A **0.5 in of water** loss is acceptable on the self-test.
- If the loss is **more than 0.5 in of water**, do one or more self-test. If the failed test repeats, check for leak using the ultrasonic leak detector (part of **SST**).



ZMU116WA6

2. Press the RESET switch to set the left display reading to **0.0**.
3. Connect the fuel cap receiver assembly (part of **SST**) to the manifold assembly and fuel-filler cap from the vehicle.
- If the fuel-filler cap is not a genuine part, replace it.

4. Turn the control valve to the FILL position.
5. Wait (**maximum 20 s**) until the left display reads **13.9 to 14 in** of water.
- If the reading is slightly below, adjust it using the regulator knob.
- If the reading is far below, the fuel-filler cap has leak. Replace it.

6. Turn the control valve to the TEST position and press the START switch.
7. After the **2-min** countdown (left display) is completed, check the test result (the failed/passed light on the tester).
- If the green light turns on, the fuel-filler cap is OK.
- If the red light turns on, the fuel-filler cap has leakage. Replace it.

8. Close the gas cylinder valve.
9. Turn the control valve to the FILL position.
10. Press the ON/OFF switch to turn off the tester.

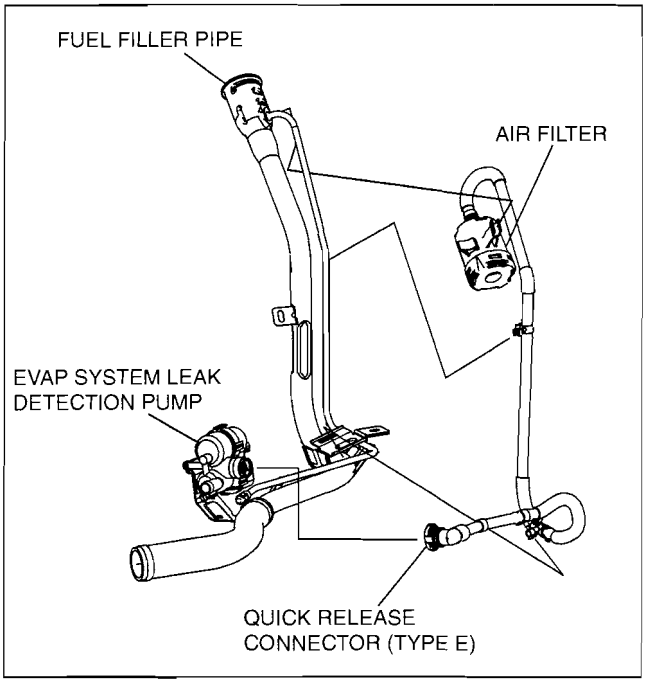
AIR FILTER REMOVAL/INSTALLATION[LF, L3]

id0116a5809500

1. Remove the rear tire (RH).
2. Remove the rear mudguard (RH).
3. Support the rear crossmember using a transmission jack.
4. Remove the rear shock absorber (RH) lower bolts. (See 02-14-3 REAR SHOCK ABSORBER REMOVAL/INSTALLATION.)
5. Loosen the rear crossmember installation nuts (6 locations) and lower the rear crossmember **30 mm {1.2 in}**. (See 02-14-12 REAR CROSSMEMBER REMOVAL/INSTALLATION.)
6. Remove the fuel-filler cap.
7. Remove the Air filter.
8. Install in the reverse order of removal.

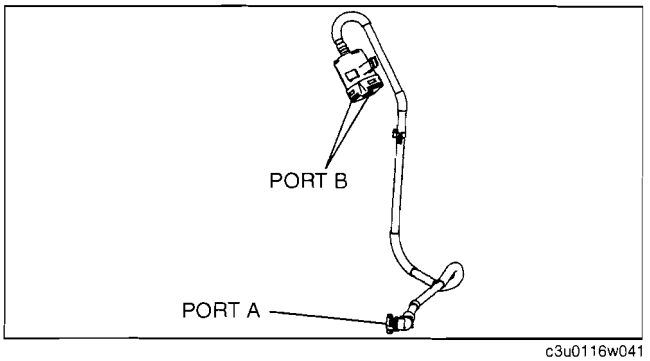


c3u0116w500

AIR FILTER INSPECTION[LF, L3]

id0116a5800600

1. Remove the air filter. (See 01-16A-7 AIR FILTER REMOVAL/INSTALLATION[LF, L3].)
2. Blow from port A and verify that there is airflow from port B.
   - If not as specified, replace the air filter.
3. Blow from port B and verify that there is airflow from port A.
   - If not as specified, replace the air filter. (See 01-16A-7 AIR FILTER REMOVAL/INSTALLATION[LF, L3].)

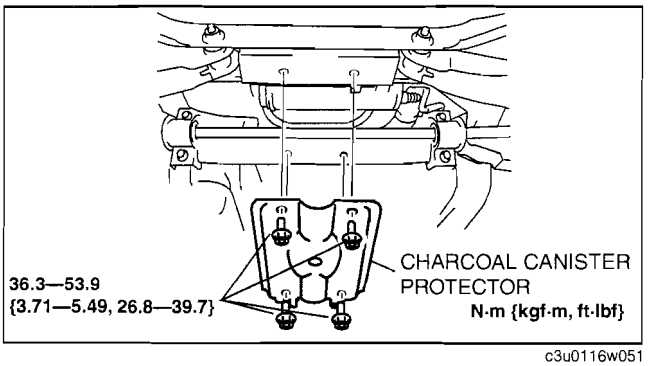


c3u0116w041

CHARCOAL CANISTER REMOVAL/INSTALLATION[LF, L3]

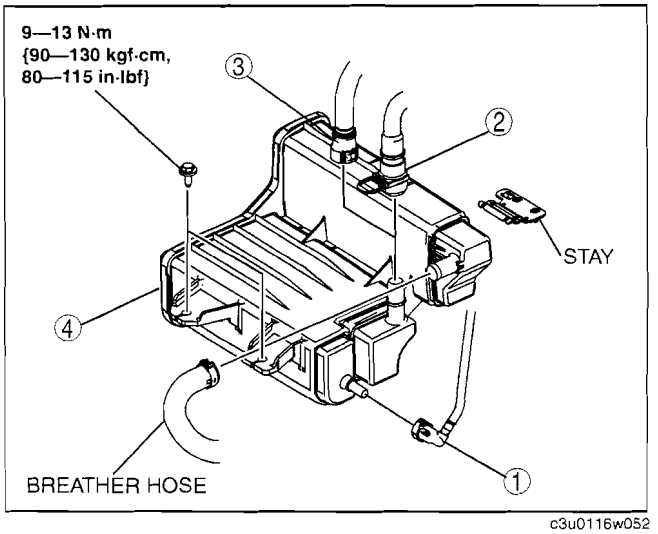
id0116a5801500

1. Remove the charcoal canister protector.
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.



c3u0116w051

4. Verify that the rear wheel alignment is within the specification. (See 02-11-4 REAR WHEEL ALIGNMENT.).

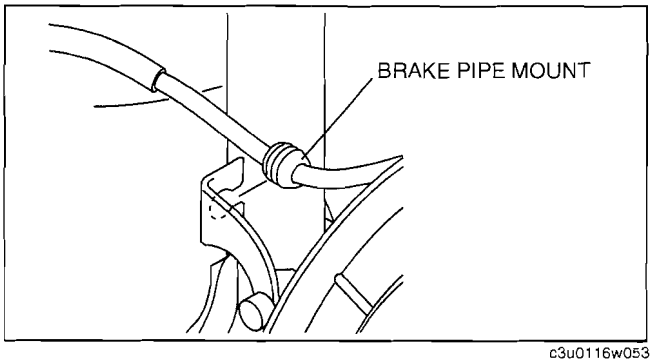


c3u0116w052

1	Quick connector (Type C) (See 01-16A-16 QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/ INSTALLATION[LF, L3].)
2	Quick connector (Type B) [Except for California regulation emission applicable model] (See 01-16A-16 QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/ INSTALLATION[LF, L3].)
3	Quick connector (Type D) [For California regulation emission applicable model] (See 01-16A-16 QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/ INSTALLATION[LF, L3].)
4	Charcoal canister (See 01-16A-8 Charcoal Canister Removal Note.) (See 01-16A-8 Charcoal Canister Installation Note.)

Charcoal Canister Removal Note

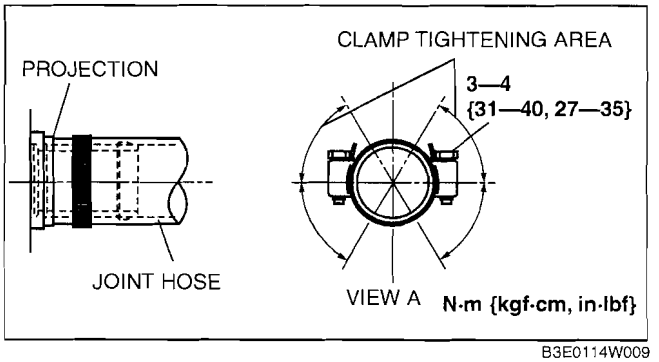
1. Support the rear crossmember using a transmission jack.
2. Remove the rear wheels.
3. Disconnect the ABS wheel-speed sensor wiring harness connector.
4. Disengage the brake pipe mount from bracket.
5. Remove the rear shock absorber lower bolts. (See 02-14-3 REAR SHOCK ABSORBER REMOVAL/INSTALLATION.)
6. Loosen the rear crossmember installation nuts (6 locations) and lower the rear crossmember **approx. 140 mm {5.5 in}**. (See 02-14-12 REAR CROSSMEMBER REMOVAL/INSTALLATION.)
7. Disconnect the breather hose.
8. Remove the installation bolts and remove the charcoal canister.



c3u0116w053

Charcoal Canister Installation Note

1. Fit the charcoal canister into the stay.
2. Install the breather hose and clamp as shown in the figure.

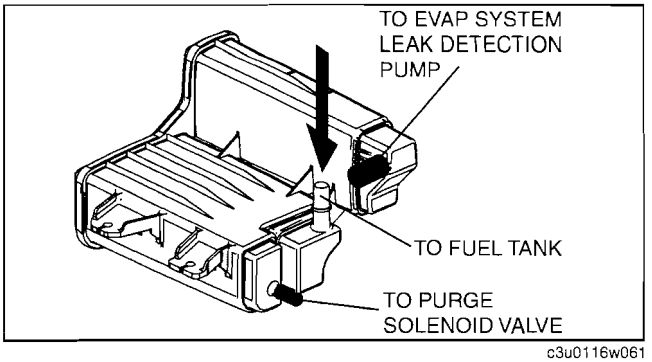


B3E0114W009

CHARCOAL CANISTER INSPECTION[LF, L3]

id0116a5800500

1. Remove the charcoal canister. (See 01-16A-7 CHARCOAL CANISTER REMOVAL/INSTALLATION[LF, L3].)
2. Plug the EVAP leak detection pump side and purge solenoid valve side of the charcoal canister.
3. Inspect for air leakage when blowing air by mouth from the fuel tank side.
   - If air leaks, replace the charcoal canister. (See 01-16A-7 CHARCOAL CANISTER REMOVAL/INSTALLATION[LF, L3].)



c3u0116w061

EVAPORATIVE EMISSION (EVAP) SYSTEM LEAK DETECTION PUMP REMOVAL/INSTALLATION[LF, L3]

id0116a5800700

1. Remove the charcoal canister protector.
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.

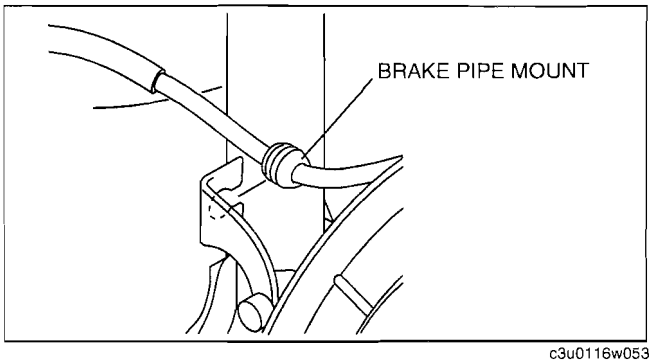
c3u0116w075

EVAP System Leak Detection Pump Removal Note

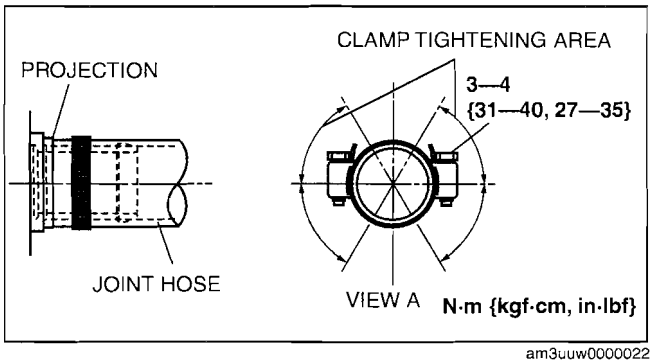
1. Support the rear crossmember using a transmission jack.
2. Remove the rear wheels.
3. Disconnect the ABS wheel-speed sensor wiring harness connector.
4. Disengage the brake pipe mount from bracket.
5. Remove the rear shock absorber lower bolts. (See 02-14-3 REAR SHOCK ABSORBER REMOVAL/INSTALLATION.)
6. Loosen the rear crossmember installation nuts (6 locations) and lower the rear crossmember **approx. 140 mm {5.5 in}**. (See 02-14-12 REAR CROSSMEMBER REMOVAL/INSTALLATION.)
7. Disconnect the breather hose.
8. Remove the installation bolt and remove the EVAP system leak detection pump.



c3u0116w053

EVAP System Leak Detection Pump Installation Note

1. Install the breather hose and clamp as shown in the figure.



am3uuw0000022

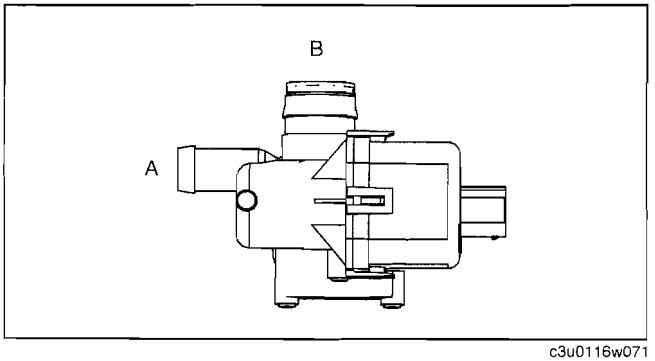
EVAPORATIVE EMISSION (EVAP) SYSTEM LEAK DETECTION PUMP INSPECTION[LF, L3]

id0116a5800800

Airflow Inspection

Note
- Perform the following test only when directed.

1. Remove the EVAP system leak detection pump. (See 01-16A-9 EVAPORATIVE EMISSION (EVAP) SYSTEM LEAK DETECTION PUMP REMOVAL/INSTALLATION[LF, L3].)
2. Blow air into port A and verify that there is airflow from port B.
   - If not as specified, replace the EVAP system leak detection pump. (See 01-16A-9 EVAPORATIVE EMISSION (EVAP) SYSTEM LEAK DETECTION PUMP REMOVAL/INSTALLATION[LF, L3].)
3. Blow air into port B and verify that there is airflow from port A.
   - If not as specified, replace the EVAP system leak detection pump. (See 01-16A-9 EVAPORATIVE EMISSION (EVAP) SYSTEM LEAK DETECTION PUMP REMOVAL/INSTALLATION[LF, L3].)
   - If as specified, perform the following "Resistance Inspection".



c3u0116w071

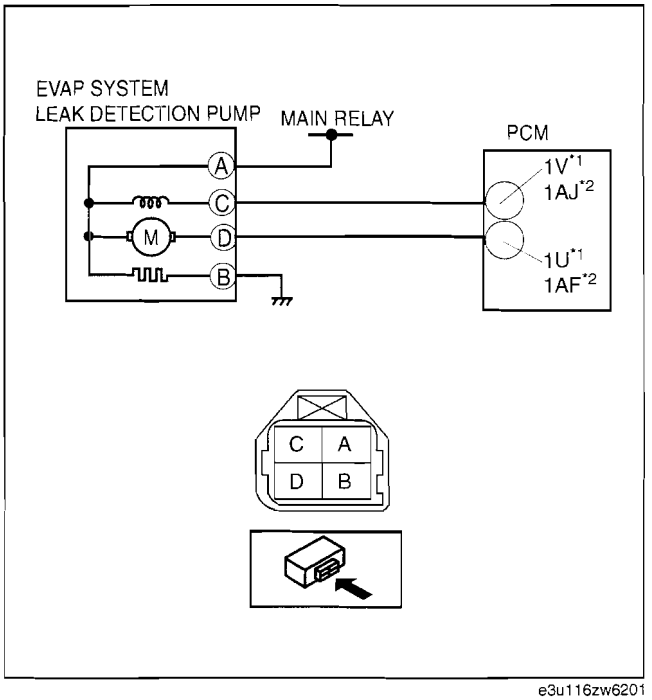
Resistance Inspection

Note
- Perform the following procedure only when directed.

1. Inspect resistance of the EVAP system leak detection pump.
   - If not as specified, replace the EVAP system leak detection pump. (See 01-16A-9 EVAPORATIVE EMISSION (EVAP) SYSTEM LEAK DETECTION PUMP REMOVAL/INSTALLATION[LF, L3].)
   - If as specified, carry out the "Circuit Open/Short Inspection".

Terminals	Resistance (ohm)
A—B	20—50
A—C	26.6—32.4
A—D	MAX. 118

*1 : California emission regulation applicable model and except for California emission regulation applicable model with LF MTX, L3
*2 : Except for California emission regulation applicable model with LF ATX

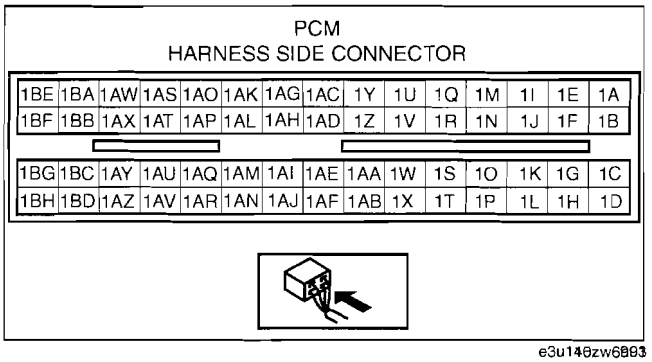


e3u116zw6201

Circuit Open/Short Inspection

1. Disconnect the PCM connector. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
2. Inspect the following wiring harness for open or short circuit (continuity check).

Open circuit
- If there is no continuity, there is an open circuit. Repair or replace the wiring harness.
  - — EVAP system leak detection pump terminal C and PCM terminal 1V*1, 1AJ*2
  - — EVAP system leak detection pump terminal D and PCM terminal 1U*1, 1AF*2
  - — EVAP system leak detection pump terminal A and main relay terminal A
  - — EVAP system leak detection pump terminal B and the body ground



e3u146zw6893

Short circuit
- If there is continuity, there is a short circuit. Repair or replace the wiring harness.
  - — EVAP system leak detection pump terminal A and the body ground
  - — EVAP system leak detection pump terminal B and power supply
  - — EVAP system leak detection pump terminal C and power supply
  - — EVAP system leak detection pump terminal D and power supply

*1 : California emission regulation applicable model and except for California emission regulation applicable model with LF MTX, L3
*2 : Except for California emission regulation applicable model with LF ATX

PURGE SOLENOID VALVE REMOVAL/INSTALLATION[LF, L3]

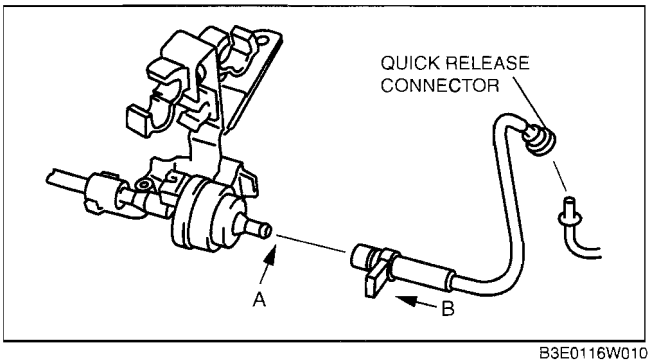
id0116a5803500

1. Remove the plug hole plate.
2. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
3. Disconnect the negative battery cable.
4. Remove using the following procedure:

Caution

- **Do not disconnect the purge solenoid valve and evaporative hose except when replacing the purge solenoid valve because it may cause evaporative gas leakage. When it is necessary to remove the purge solenoid valve for removing/installing other parts, disconnect the valve at the quick release connector.**

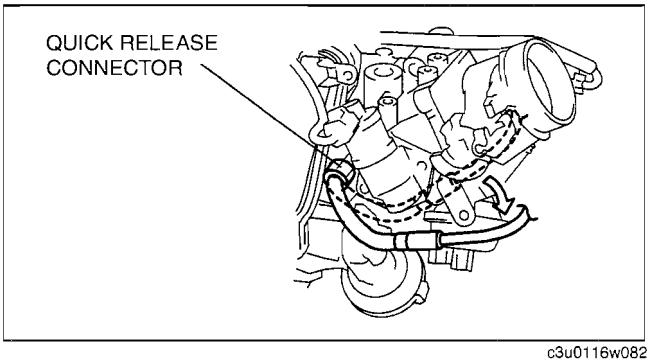
(1) Disconnect the evaporative hose at the charcoal canister side. (See 01-16A-12 Evaporative Hose Installation Note.)



B3E0116W010

(2) Turn the evaporative hose (intake manifold side) approx. 30° from the dot line to the solid line.
(3) Disconnect the quick release connector (Type A). (See 01-16A-16 QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/INSTALLATION[LF, L3].)

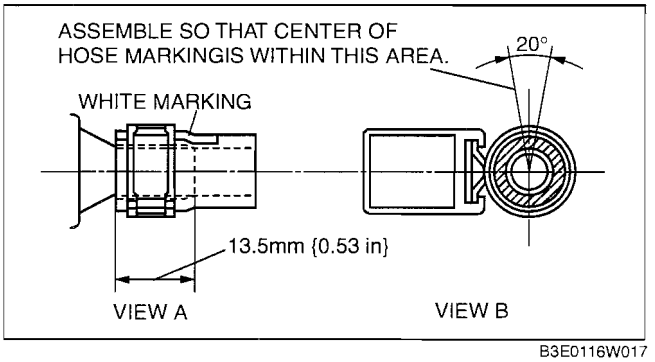
5. Install in the reverse order of removal.



c3u0116w082

Evaporative Hose Installation Note

1. Install the evaporative hose and clamp as shown in the figure.



B3E0116W017

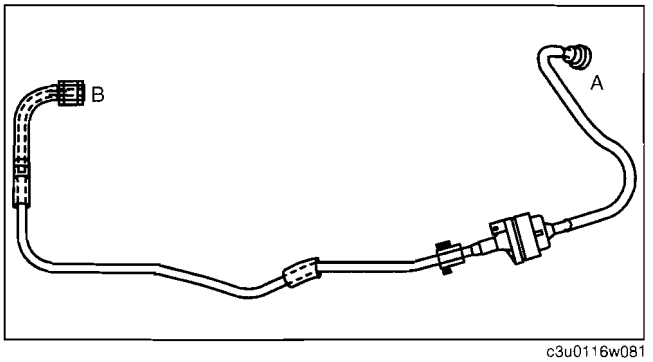
PURGE SOLENOID VALVE INSPECTION[LF, L3]

id0116a5800900

Airflow Inspection

1. Remove the purge solenoid valve without disconnecting the evaporative hose. (See 01-16A-12 PURGE SOLENOID VALVE REMOVAL/INSTALLATION[LF, L3].)
2. Verify that the airflow is as indicated in the table.
   - If as specified in the table, perform the "Circuit Open/Short Inspection".
   - If not as specified in the table, inspect the purge solenoid valve. (See 01-16A-12 PURGE SOLENOID VALVE REMOVAL/INSTALLATION[LF, L3].)

Measured condition	Continuity between A—B
When voltage is not applied between terminals A and B	No airflow
When voltage is applied between terminals A and B	Airflow detected



c3u0116w081

Circuit Open/Short Inspection

1. Disconnect the PCM connector. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
2. Inspect the following wiring harnesses for open or short circuit (continuity check).

Open circuit

- If there is no continuity, there is an open circuit. Repair or replace the wiring harness.
  - — Purge solenoid valve terminal A and PCM terminal 2C*1, 2AN*2
  - — Purge solenoid valve terminal B and main relay terminal A

Short circuit

- If there is continuity, there is a short circuit. Repair or replace the wiring harness.
  - — Purge solenoid valve terminal A and body ground

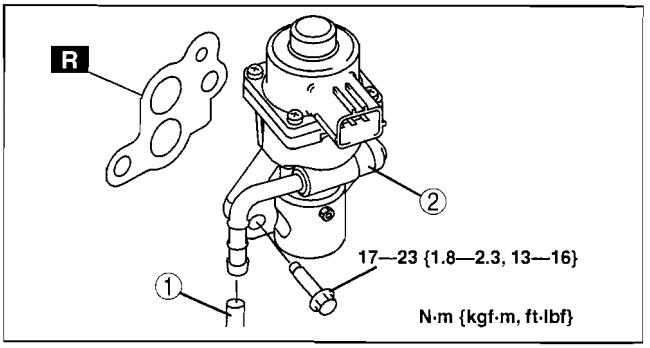
EGR VALVE REMOVAL/INSTALLATION[LF, L3]

id0116a5801000

1. Remove the plug hole plate.
2. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
3. Disconnect the negative battery cable.
4. Disconnect the EGR valve connector.
5. Remove in the order indicated in the table.
6. Install in the reverse order of removal.

1	Water hose (See 01-16A-14 Water Hose Removal Note.)
2	EGR valve (See 01-16A-14 EGR Valve Removal Note.)



c3u0116w021

Water Hose Removal Note

1. Drain the engine coolant from the radiator. (See 01-12A-3 ENGINE COOLANT REPLACEMENT[LF, L3].)

EGR Valve Removal Note

1. Remove the air cleaner and air hose. (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[LF, L3],)
2. Remove the radiator hose (upper). (See 01-12A-6 RADIATOR REMOVAL/INSTALLATION[LF, L3].)

EGR VALVE INSPECTION[LF, L3]

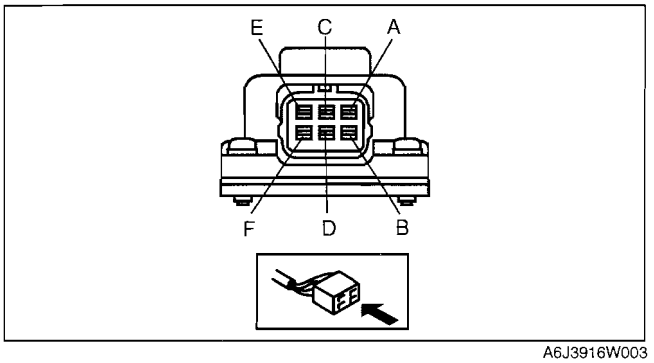
id0116a5801100

On-vehicle Inspection

1. Verify that the buzzing sound (valve operation sound) is heard from the EGR valve when engine cranking.
   - If the buzzing sound is not heard, perform the resistance inspection.

Resistance Inspection

1. Disconnect the EGR valve connector. (See 01-16A-13 EGR VALVE REMOVAL/INSTALLATION[LF, L3].)
2. Measure the resistance between the EGR valve terminals.
   - If within the specification, perform out the "Circuit Open/Short Inspection".
   - If not within the specification, replace the EGR valve. (See 01-16A-13 EGR VALVE REMOVAL/INSTALLATION[LF, L3].)



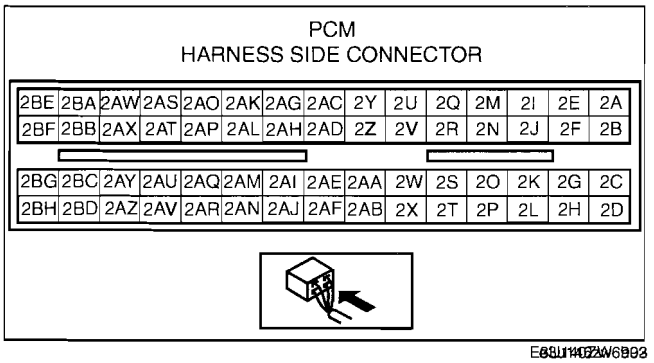
A6J3916W003

Standard

Terminal	Resistance (ohm)
C—E C—A D—B D—F	12—16

Circuit Open/Short Inspection

1. Disconnect the PCM connector. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
2. Inspect the following wiring harnesses for open or short circuit (continuity check).



E6U1402W6903

Open circuit

- If there is no continuity, there is an open circuit. Repair or replace the wiring harness.
  - — EGR valve terminal A and PCM terminal 2G[*1], 2AR[*2]
  - — EGR valve terminal B and PCM terminal 2L[*1], 2AY[*2]
  - — EGR valve terminal E and PCM terminal 2K[*1], 2AU[*2]
  - — EGR valve terminal F and PCM terminal 2H[*1], 2AV[*2]
  - — EGR valve terminal C and main relay terminal A
  - — EGR valve terminal D and main relay terminal A

Short circuit

- If there is continuity, there is a short circuit. Repair or replace the wiring harness.
  - — EGR valve terminal A and body ground
  - — EGR valve terminal B and body ground
  - — EGR valve terminal E and body ground
  - — EGR valve terminal F and body ground

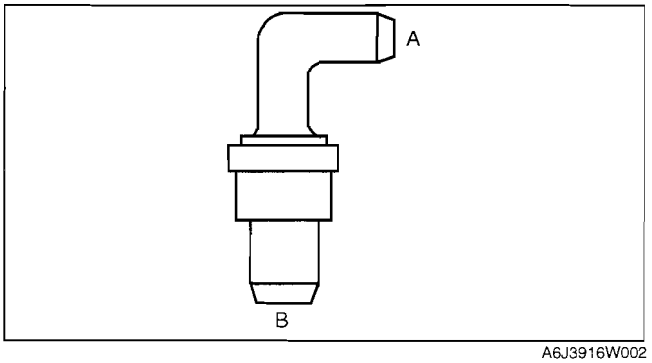
*1 : California emission regulation applicable model and except for California emission regulation applicable model with LF MTX, L3

*2 : Except for California emission regulation applicable model with LF ATX

POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION[LF, L3]

id0116a5800400

1. Remove the intake manifold.
2. Remove the PCV valve.
3. Verify that there is no airflow when pressure is applied to port A.
   - If there is airflow, replace the PCV valve.
4. Verify that there is airflow when vacuum is applied to port A.
   - If there is no airflow, replace the PCV valve.



A6J3916W002

WARM-UP THREE-WAY CATALYTIC CONVERTER (WU-TWC) INSPECTION[LF, L3]

id0116a5801200

Caution
- **Perform the following procedures, DTC P0421 is indicated only.**

1. Connect the M-MDS to the DLC-2.
2. Start the engine and warm it up to normal operating temperature.
3. Turn off the engine.
4. Verify that the engine compression is within the specification. (See 01-10A-11 COMPRESSION INSPECTION[LF, L3].)
   - If the compression pressure is not within the specification, repair or replace the malfunction part.
5. Drive the vehicle for **10 min** at **65—96 km/h {40—60 mph}** to allow the front catalytic converter to reach operating temperature.
6. Stop the vehicle and leave it in a safe space.
7. Access Test ID 10:21:80 on the "Diagnostic Monitoring Test Result" function.
8. Verify that the test result is within the specified indicated on the M-MDS.
   - If it is not as specified, replace the front catalytic converter.

ROLLOVER VALVE REMOVAL/INSTALLATION[LF, L3]

id0116a5804600

Note
- Except for the California emission regulation applicable model, the rollover valve cannot be removed as it is welded on the upper surface of the fuel tank.
- For the California emission regulation applicable model, the rollover valve cannot be removed as it is built into the fuel tank.

ROLLOVER VALVE INSPECTION[LF, L3]

id0116a5804500

Note
- Except for the California emission regulation applicable model, the rollover valve cannot be removed and inspected as it is welded on the upper surface of the fuel tank.
- For the California emission regulation applicable model, the rollover valve cannot be removed and inspected as it is built into the fuel tank.

1. Perform the fuel tank inspection. (See 01-14A-12 FUEL TANK INSPECTION[LF, L3].)

FUEL SHUT-OFF VALVE REMOVAL/INSTALLATION[LF, L3]

id0116a5809600

Note
- Except for the California emission regulation applicable model, the fuel shut-off valve cannot be removed as it is welded on the upper surface of the fuel tank.
- For the California emission regulation applicable model, the fuel shut-off valve cannot be removed as it is built into the fuel tank.

FUEL SHUT-OFF VALVE INSPECTION[LF, L3]

id0116a5809700

Note

- Except for the California emission regulation applicable model, the fuel shut-off valve cannot be removed and inspected as it is welded on the upper surface of the fuel tank.
- For the California emission regulation applicable model, the fuel shut-off valve cannot be removed and inspected as it is built into the fuel tank.

1. Perform the fuel tank inspection. (See 01-14A-12 FUEL TANK INSPECTION[LF, L3].)

QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/INSTALLATION[LF, L3]

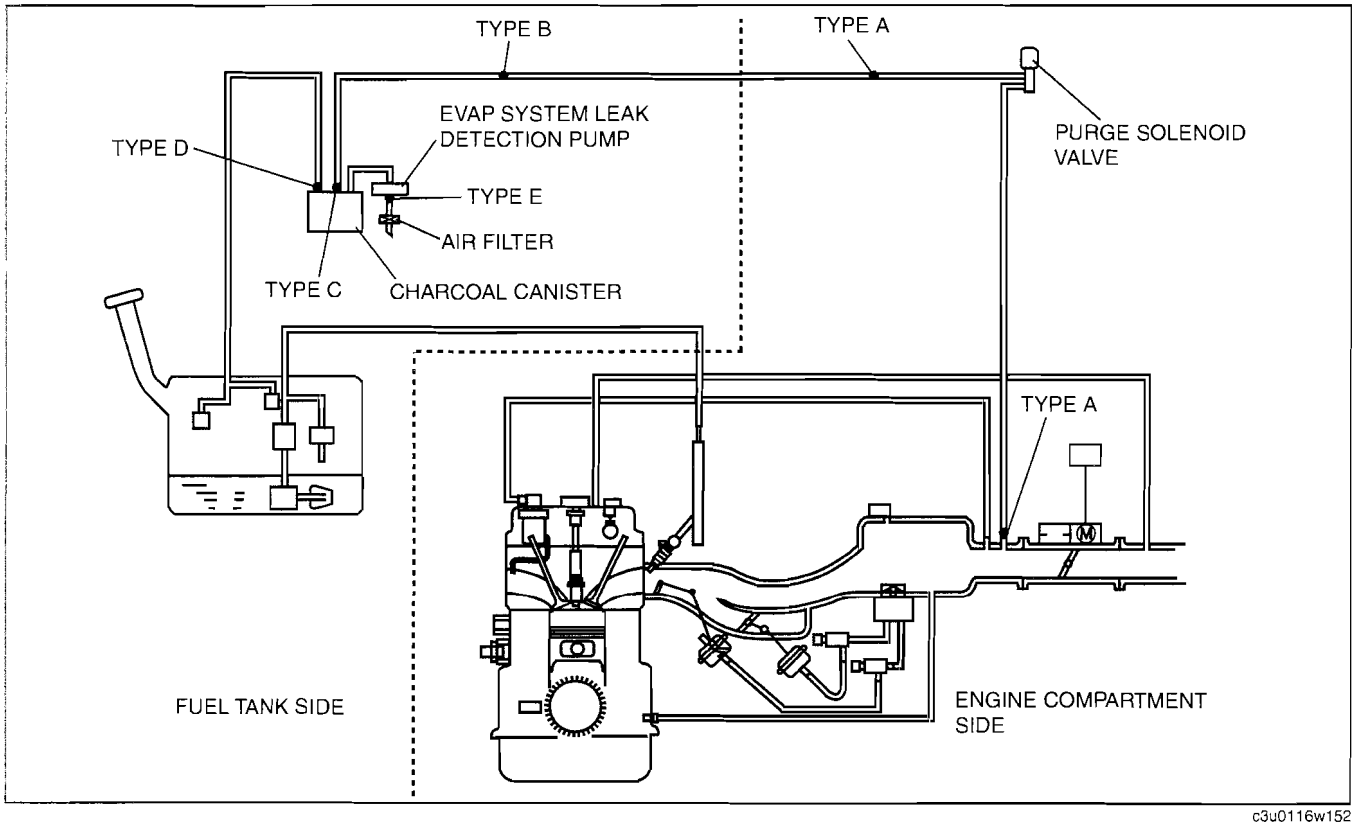
id0116a5805500

Quick Release Connector Type

Caution

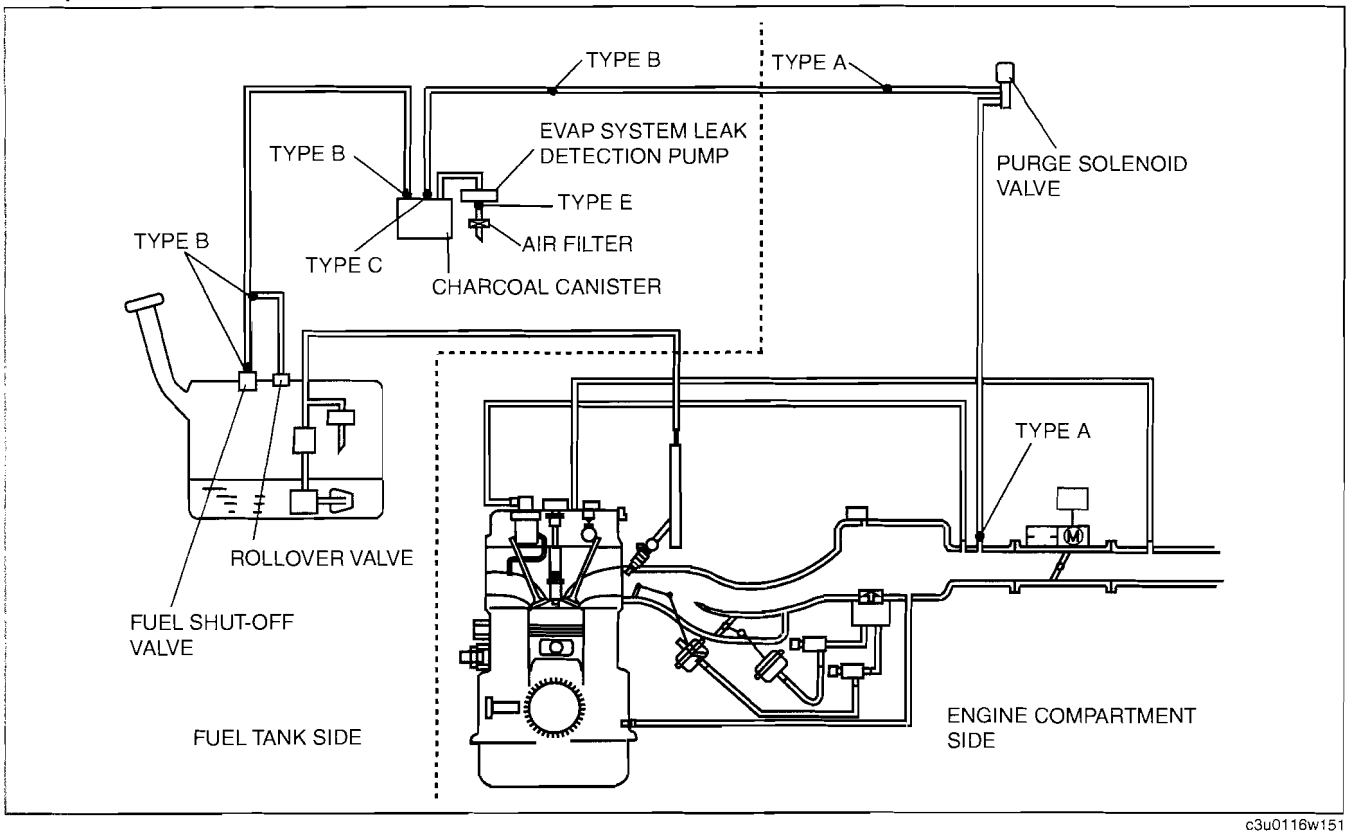
- **There are five types of quick release connectors. Verify the type and location, and install/remove properly.**

California emission regulation applicable model



c3u0116w152

Except for California emission regulation applicable model



c3u0116w151

Type A Removal

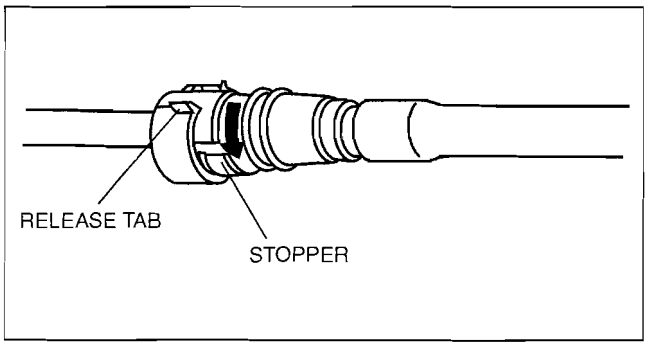
Caution

- **The quick release connector may be damaged if the release tab is bent excessively. Do not expand the release tab over the stopper.**

Note

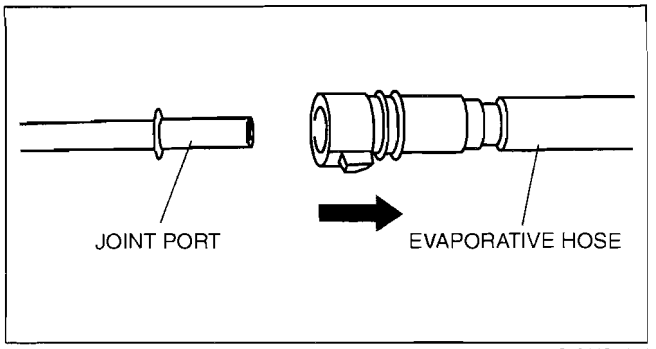
- The evaporative hose can be removed by pushing it to the joint port side to release the lock.

1. Rotate the release tab on the quick release connector to the stopper position.



am3uuw0000014

2. Pull out the evaporative hose straight from the joint port and disconnect it.
3. Cover the disconnected quick release connector and joint port with vinyl sheeting or a similar material to prevent it from scratches or dirt.



c3u0116w154

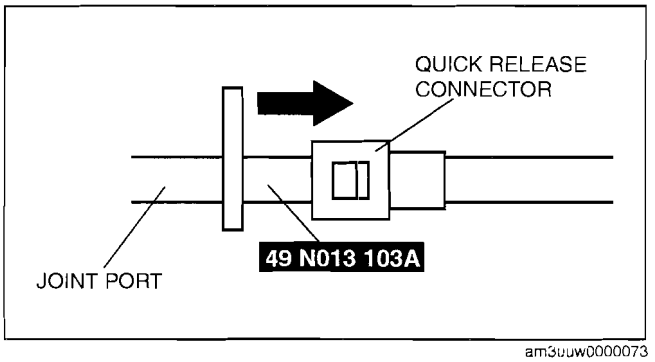
Type B Removal

Caution
- **Be careful not to damage the pipe when unlocking the retainer.**

Note
- When a prompt connector is detached, following SST can be used.
  - — **49 N013 103A**
  - — **49 E042 001**

When using SST 49 N013 103A

1. Follow "BEFORE SERVICE PRECAUTION" and remove dirt from the connecting surfaces before performing any work operations. (See 01-14A-4 BEFORE SERVICE PRECAUTION[LF, L3].)
2. Verify that the quick release connector joint area is free of foreign material. Clean if necessary.
3. Install the **SST** as shown in the figure and push into the quick release connector to disconnect the fuel pipe.
4. Cover the disconnected quick release connector and fuel pipe to prevent them from being scratched or contaminated with foreign material.



am3uuw0000073

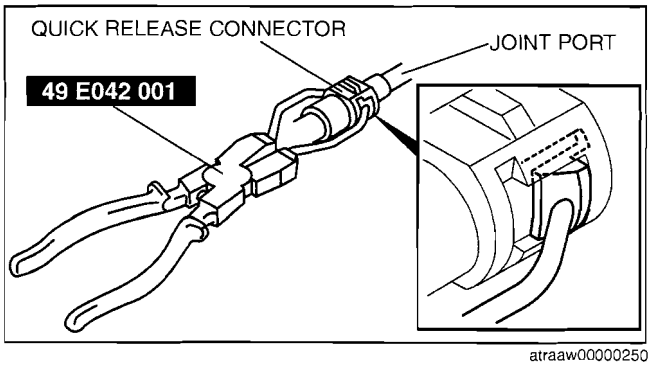
When using SST 49 E042 001

Note
- If the quick release connector is removed, replace the retainer with a new one.

1. Follow "BEFORE SERVICE PRECAUTION" and remove dirt from the connecting surfaces before performing any work operations.(See 01-14A-4 BEFORE SERVICE PRECAUTION[LF, L3].)
2. Set the **SST** parallel to the quick release connector.

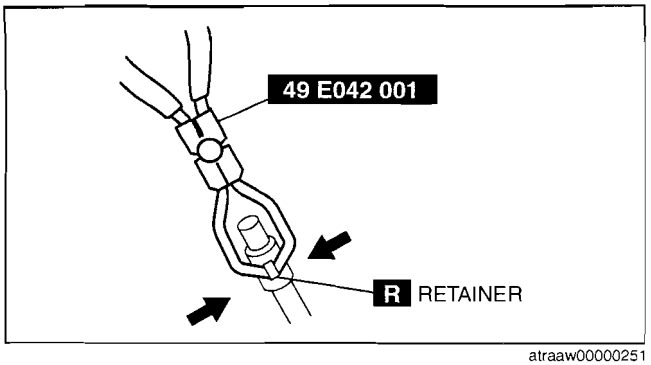
Note
- The quick release connector can be removed by pushing the center of the retainer tabs.
- The retainer is attached to the pipe even after the connector is disconnected.

3. Hold the center of the retainer tabs with the **SST** ends and press the retainer.
4. Pull the connector side and disconnect the quick release connector.



atraaw00000250

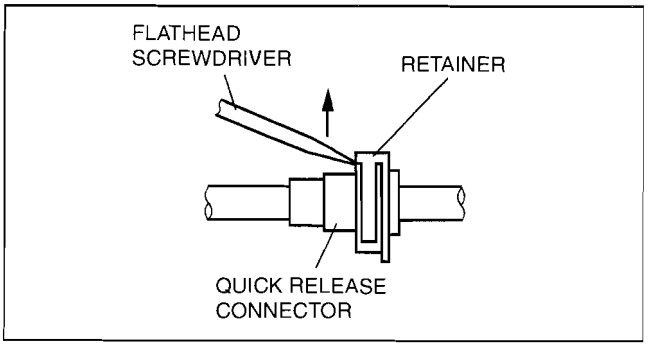
5. Raise a retainer tab using the **SST** and remove the retainer.
6. Cover the disconnected quick release connector and fuel pipe with vinyl sheeting or a similar material to prevent it from scratches or dirt.



atraaw00000251

Type C Removal

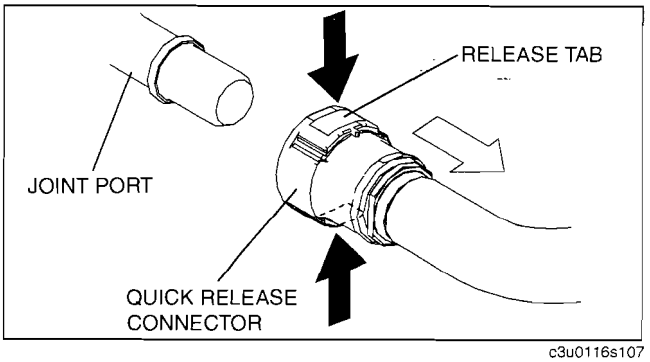
1. Move the retainer upward using a small flathead screwdriver or a similar tool.
2. Pull out the evaporative hose straight from the joint port and disconnect it.
3. Cover the disconnected quick release connector and joint port with vinyl sheeting or a similar material to prevent it from becoming scratched or dirty.



am3uuw0000014

Type D Removal

1. Squeeze the release tab until the locks are released.
2. Pull the quick release connector straight outward.
3. Cover the disconnected quick release connector and joint port with vinyl sheeting or a similar material to prevent it from becoming scratched or dirty.

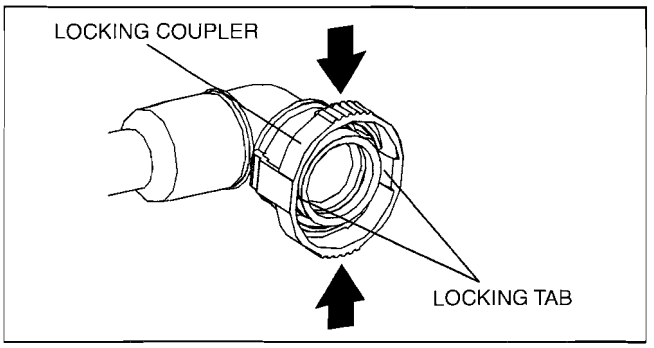


c3u0116s107

Type E Removal

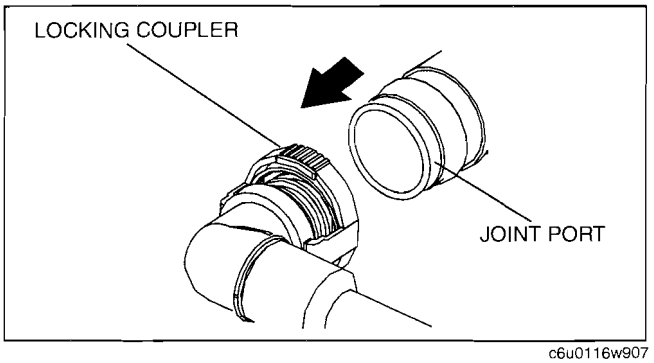
1. Squeeze the locking coupler until the locking tab opens and releases.

Note
- The locking coupler has two internal locking tabs which retain the joint port. Be sure that the squeezing place on the locking coupler is squeezed until it can be released from the joint port.



c6u0116w908

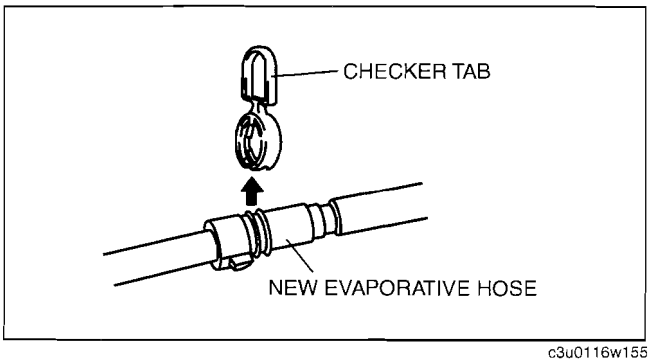
2. Pull the quick release connector straight outward.
3. Cover the disconnected quick release connector and joint port with vinyl sheeting or a similar material to prevent it from becoming scratched or dirty.



c6u0116w907

Type A Installation

Note
- If the quick release connector O-ring is damaged or has slipped, replace the evaporative hose.
- A checker tab is integrated with the quick release connector for new evaporative hoses. Remove the checker tab from the quick release connector after the connector is completely engaged with the joint port.



c3u0116w155

1. Inspect the evaporative hose and joint port sealing surface for damage and deformation.
   - If there is any malfunction, replace it with a new one.
2. Apply a small amount of clean engine oil to the sealing surface of the joint port.
3. Reconnect the evaporative hose straight to the joint port until a click is heard.

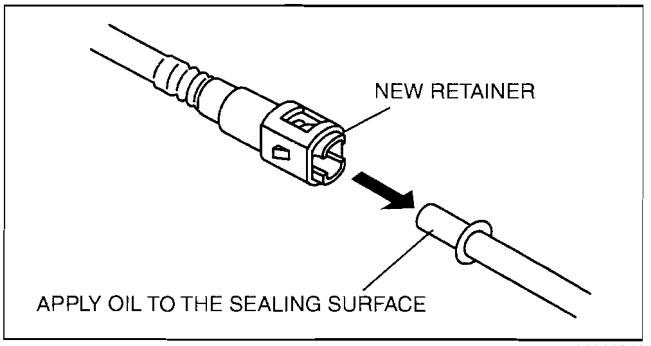
Note
- If the quick release connector does not move at all, disconnect it, verify that the O-ring is not damaged or has not slipped, and then reconnect the quick release connector.

4. Lightly pull and push the quick release connector a few times by hand, and then verify that it can move **2.0—3.0 mm {0.08—0.12 in}** and is connected securely.

Type B Installation

Note
- Use only the designated genuine retainer when replacing the retainer.

1. Verify that the sealing surfaces of the fuel hose or fuel pipe have no damage or deformation. Replace if necessary.
   - If the O-ring of the quick release connector is damaged or displaced, replace the fuel hose.
2. Install a new retainer to the quick release connector, then visually verify that the retainer tab is installed securely to the connector.
3. Apply a small amount of clean engine oil to the sealing surface of the fuel pipe.
4. Push the quick release connector into the fuel pipe until a click is heard.
5. Lightly pull and push the quick release connector a few times by hand, and then verify that it can move **2.0—3.0 mm {0.08—0.12 in}** and is connected securely.
   - If the quick release connector does not move at all, verify that the O-ring is not damaged or has slipped, and then reconnect the connector.
6. Inspect all related parts by performing "AFTER SERVICE PRECAUTION". (See 01-14A-5 AFTER SERVICE PRECAUTION[LF, L3].)



atraaw00000242

Type C Installation

Note
- If the quick release connector O-ring is damaged or has slipped, replace the evaporative hose.

1. Inspect the evaporative hose and joint port sealing surface for damage and deformation.
   - If there is any malfunction, replace it with a new one.
2. When disconnecting and reconnecting the quick release connector, verify if the metal reinforcement pipe protrudes from the plastic pipe end while pressing the end with a finger.
   - If the metal pipe protrudes from the resin pipe, insert it flush with the end of the resin pipe.
3. Insert the joint port straight to the end of the quick release connector.
4. Push down the retainer using a finger.
   - If the retainer cannot be pushed down, push the joint port further to the quick release connector.
5. Lightly pull and push the quick release connector a few times by hand, and then verify that it is connected securely.

Type D Installation

Note
- If the quick release connector O-ring is damaged or has slipped, replace the evaporative hose.

1. Inspect the evaporative hose and joint port sealing surface for damage and deformation.
   - If there is any malfunction, replace it with a new one.
2. Apply a small amount of clean engine oil to the sealing surface of the joint port.
3. Reconnect the evaporative hose straight to the joint port until a click is heard.

Note
- If the quick release connector does not move at all, disconnect it, verify that the O-ring is not damaged or has not slipped, and then reconnect the quick release connector.

4. Lightly pull and push the quick release connector a few times by hand, and then verify that it is connected securely.

Type E Installation

Note
- If the quick release connector O-ring is damaged or has slipped, replace the evaporative hose.

1. Inspect the evaporative hose and joint port sealing surface for damage and deformation.
   - If there is any malfunction, replace it with a new one.
2. Apply a small amount of clean engine oil to the sealing surface of the joint port.
3. Reconnect the evaporative hose straight to the joint port until a click is heard.

Note
- If the quick release connector does not move at all, disconnect it, verify that the O-ring is not damaged or has not slipped, and then reconnect the quick release connector.

4. Lightly pull and push the quick release connector a few times by hand, and then verify that it is connected securely.

01-16B EMISSION SYSTEM [L3 WITH TC]

am3uuw0000021

FUEL-FILLER CAP INSPECTION[L3 WITH TC]

id011639801300

Leakage Inspection

1. Perform the following **SST** (Evaporative Emission System Tester 134-01049) self-test:

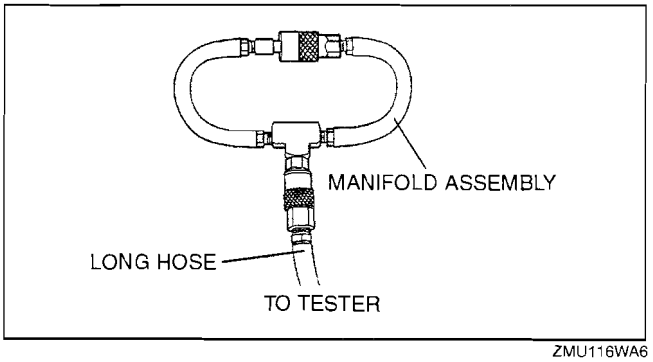
Note

- If the tester does not work correctly during self-test, refer to the tester operators manual for more detailed procedures.

(1) Verify the gas cylinder valve is closed and the control valve located on the tester is in the TEST position. All tester display should be off at this time.
(2) Connect the long hose (part of **SST**) to the tester.
(3) Connect the manifold assembly (part of **SST**) to the long hose as shown.
(4) Open the gas cylinder valve and verify the gas cylinder regulator left gauge reads **10 to 12 psi** (preset at factory).
- If not, refer to the tester operators manual to contact tester manufacturer.

(5) Press the ON/OFF switch to turn on the **SST** and make sure the left display reads **0.0**.
(6) Turn the control valve on the tester to the FILL position.
(7) Verify the left display reading is **within 13.9 to 14.0 in of water**.
- If not, adjust the pressure using the regulator knob located on the right side of the tester.

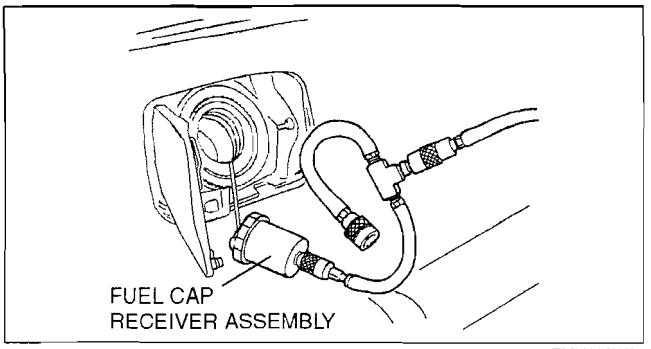
(8) Turn the control valve to TEST position and press the START switch.
(9) After the **2-min** countdown (left display) is completed, the right display shows the total pressure loss for that period. A **0.5 in of water** loss is acceptable on the self-test.
- If the loss is **more than 0.5 in of water**, do one or more self-test. If the failed test repeats, check for leak using the ultrasonic leak detector (part of **SST**).



ZMU116WA6

2. Press the RESET switch to set the left display reading to **0.0**.

3. Connect the fuel cap receiver assembly (part of **SST**) to the manifold assembly and fuel-filler cap from the vehicle.
   - If the fuel-filler cap is not a genuine part, replace it.
4. Turn the control valve to the FILL position.
5. Wait (**maximum 20 s**) until the left display reads **13.9 to 14 in** of water.
   - If the reading is slightly below, adjust it using the regulator knob.
   - If the reading is far below, the fuel-filler cap has leak. Replace it.
6. Turn the control valve to the TEST position and press the START switch.
7. After the **2-min** countdown (left display) is completed, check the test result (the failed/passed light on the tester).
   - If the green light turns on, the fuel-filler cap is OK.
   - If the red light turns on, the fuel-filler cap has leakage. Replace it.
8. Close the gas cylinder valve.
9. Turn the control valve to the FILL position.
10. Press the ON/OFF switch to turn off the tester.

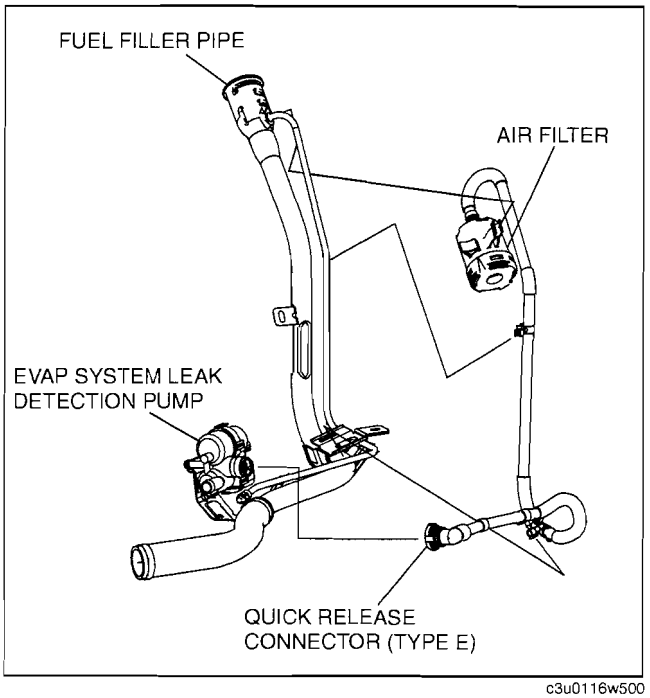


ZMU116WA7

AIR FILTER REMOVAL/INSTALLATION[L3 WITH TC]

id011639809500

1. Remove the rear tire (RH).
2. Remove the rear mudguard (RH).
3. Support the rear crossmember using a transmission jack.
4. Remove the rear shock absorber (RH) lower bolts. (See 02-14-3 REAR SHOCK ABSORBER REMOVAL/ INSTALLATION.)
5. Loosen the rear crossmember installation bolts (6 locations) and lower the rear crossmember **30 mm {1.2 in}**. (See 02-14-12 REAR CROSSMEMBER REMOVAL/INSTALLATION.)
6. Remove the fuel-filler cap.
7. Remove the Air filter.
8. Install in the reverse order of removal.

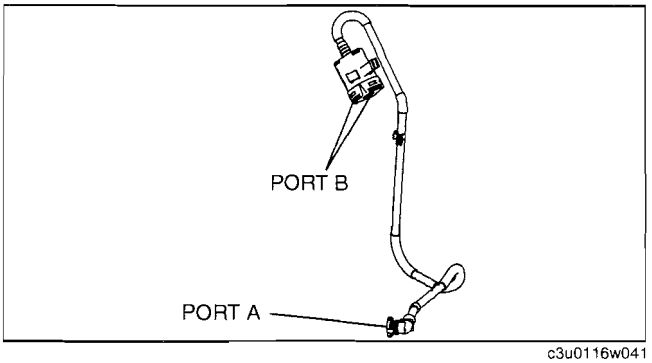


c3u0116w500

AIR FILTER INSPECTION[L3 WITH TC]

id011639800600

1. Remove the air filter. (See 01-16A-7 AIR FILTER REMOVAL/INSTALLATION[LF, L3].)
2. Blow from port A and verify that there is airflow from port B.
   - If not as specified, replace the air filter.
3. Blow from port B and verify that there is airflow from port A.
   - If not as specified, replace the air filter. (See 01-16A-7 AIR FILTER REMOVAL/ INSTALLATION[LF, L3].)

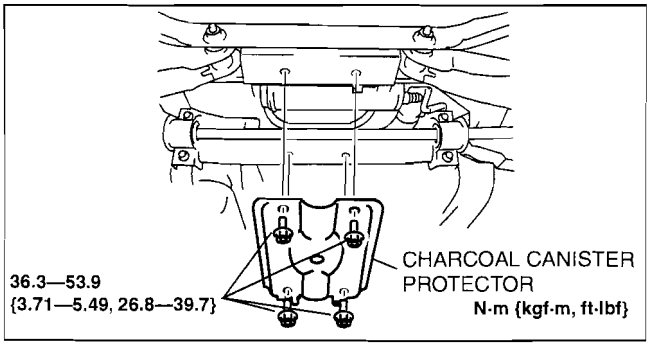


c3u0116w041

CHARCOAL CANISTER REMOVAL/INSTALLATION[L3 WITH TC]

id011639801500

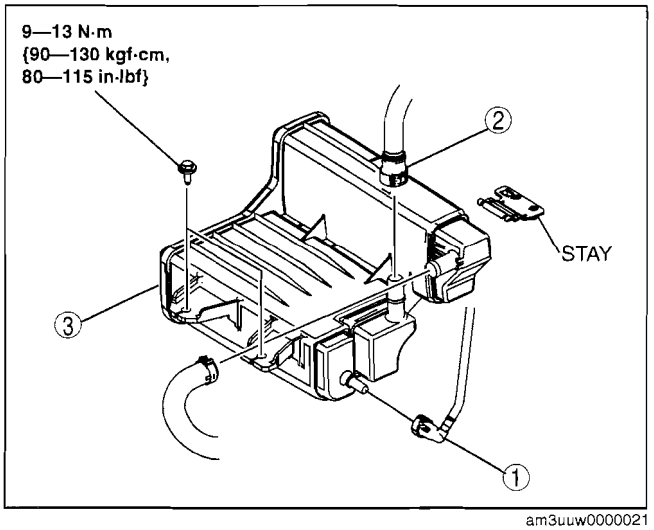
1. Remove the charcoal canister protector.
2. Remove the dynamic damper. (See 02-14-12 REAR CROSSMEMBER REMOVAL/ INSTALLATION.)
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.



c3u0116w051

5. Verify that the rear wheel alignment is within the specification. (See 02-11-4 REAR WHEEL ALIGNMENT.).

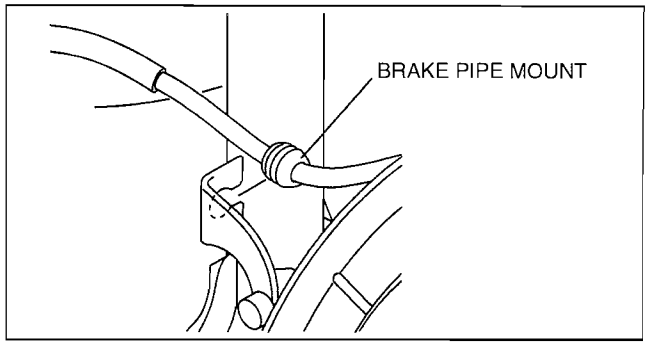
1	Quick connector (Type C) (See 01-14B-24 QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION[L3 WITH TC].)
2	Quick connector (Type B) (See 01-14B-24 QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION[L3 WITH TC].)
3	Charcoal canister (See 01-16B-7 Charcoal Canister Removal Note.)



am3uuw0000021

Charcoal Canister Removal Note

1. Support the rear crossmember using a transmission jack.
2. Remove the rear wheels.
3. Disconnect the ABS wheel-speed sensor wiring harness connector.
4. Disengage the brake pipe mount from bracket.
5. Remove the rear shock absorber lower bolts. (See 02-14-3 REAR SHOCK ABSORBER REMOVAL/INSTALLATION.)
6. Loosen the rear crossmember installation bolts (6 locations) and lower the rear crossmember **approx. 140 mm {5.5 in}**. (See 02-14-12 REAR CROSSMEMBER REMOVAL/INSTALLATION.)
7. Disconnect the breather hose.
8. Remove the installation bolts and remove the charcoal canister.

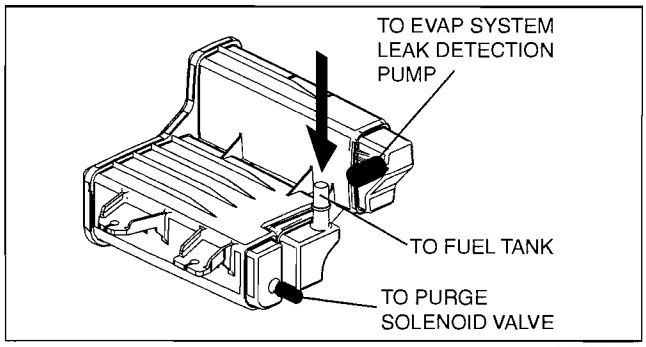


c3u0116w053

CHARCOAL CANISTER INSPECTION[L3 WITH TC]

id011639800500

1. Remove the charcoal canister. (See 01-16A-7 CHARCOAL CANISTER REMOVAL/INSTALLATION[LF, L3].)
2. Plug the EVAP leak detection pump side and purge solenoid valve side of the charcoal canister.
3. Inspect for air leakage when blowing air by mouth from the fuel tank side.
   - If air leaks, replace the charcoal canister. (See 01-16A-7 CHARCOAL CANISTER REMOVAL/INSTALLATION[LF, L3].)

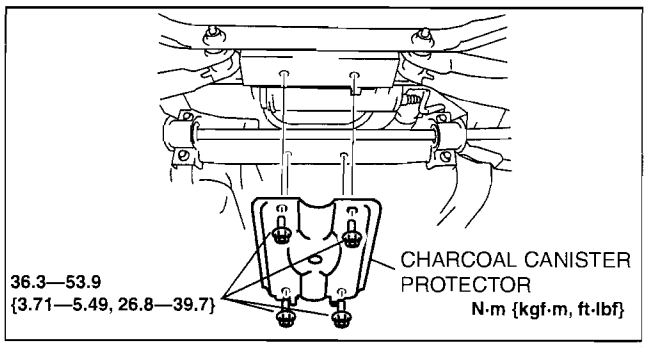


c3u0116w061

EVAPORATIVE EMISSION (EVAP) SYSTEM LEAK DETECTION PUMP REMOVAL/INSTALLATION[L3 WITH TC]

id011639800700

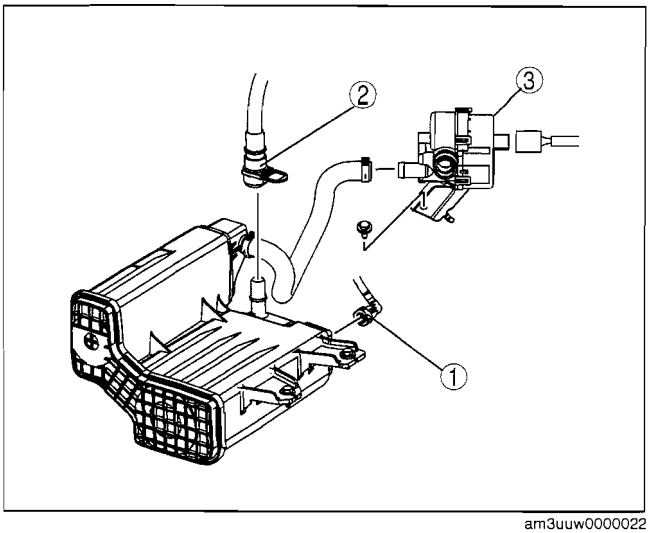
1. Remove the charcoal canister protector.
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.



c3u0116w051

4. Verify that the rear wheel alignment is within the specification. (See 02-11-4 REAR WHEEL ALIGNMENT.)

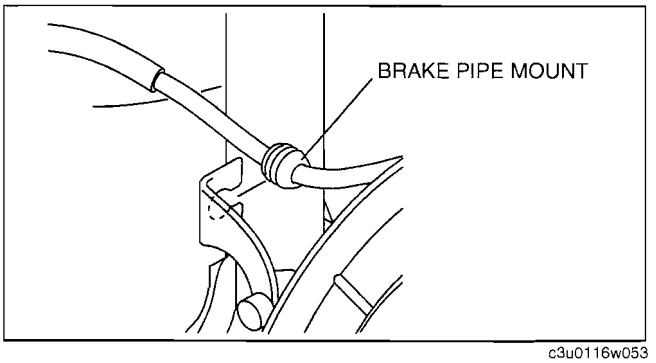
1	Quick connector (Type C) (See 01-14B-24 QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION[L3 WITH TC].)
2	Quick connector (Type B) (See 01-14B-24 QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION[L3 WITH TC].)
3	EVAP system leak detection pump (See 01-16A-9 EVAPORATIVE EMISSION (EVAP) SYSTEM LEAK DETECTION PUMP REMOVAL/ INSTALLATION[LF, L3].)



am3uuw0000022

EVAP System Leak Detection Pump Removal Note

1. Support the rear crossmember using a transmission jack.
2. Remove the rear wheels.
3. Disconnect the ABS wheel-speed sensor wiring harness connector.
4. Disengage the brake pipe mount from bracket.
5. Remove the rear shock absorber lower bolts. (See 02-14-3 REAR SHOCK ABSORBER REMOVAL/INSTALLATION.)
6. Loosen the rear crossmember installation nuts (6 locations) and lower the rear crossmember **approx. 140 mm {5.5 in}**. (See 02-14-12 REAR CROSSMEMBER REMOVAL/INSTALLATION.)
7. Remove the installation bolt and remove the EVAP system leak detection pump.



c3u0116w053

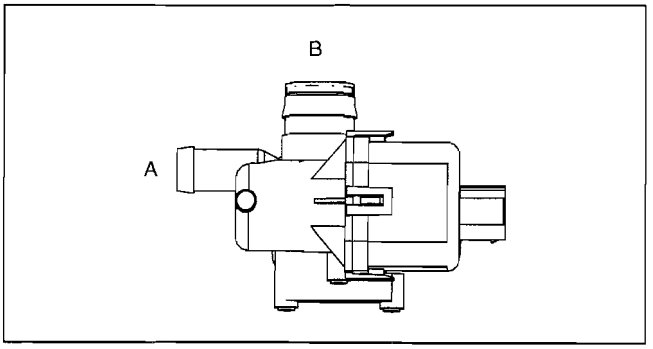
EVAPORATIVE EMISSION (EVAP) SYSTEM LEAK DETECTION PUMP INSPECTION[L3 WITH TC]

id011639800800

Airflow Inspection

Note
- Perform the following test only when directed.

1. Remove the EVAP system leak detection pump. (See 01-16B-7 EVAPORATIVE EMISSION (EVAP) SYSTEM LEAK DETECTION PUMP REMOVAL/INSTALLATION[L3 WITH TC].)
2. Blow air into port A and verify that there is airflow from port B.
   - If not as specified, replace the EVAP system leak detection pump. (See 01-16B-7 EVAPORATIVE EMISSION (EVAP) SYSTEM LEAK DETECTION PUMP REMOVAL/INSTALLATION[L3 WITH TC].)
3. Blow air into port B and verify that there is airflow from port A.
   - If not as specified, replace the EVAP system leak detection pump. (See 01-16B-7 EVAPORATIVE EMISSION (EVAP) SYSTEM LEAK DETECTION PUMP REMOVAL/ INSTALLATION[L3 WITH TC].)
   - If as specified, perform the following "Resistance Inspection".



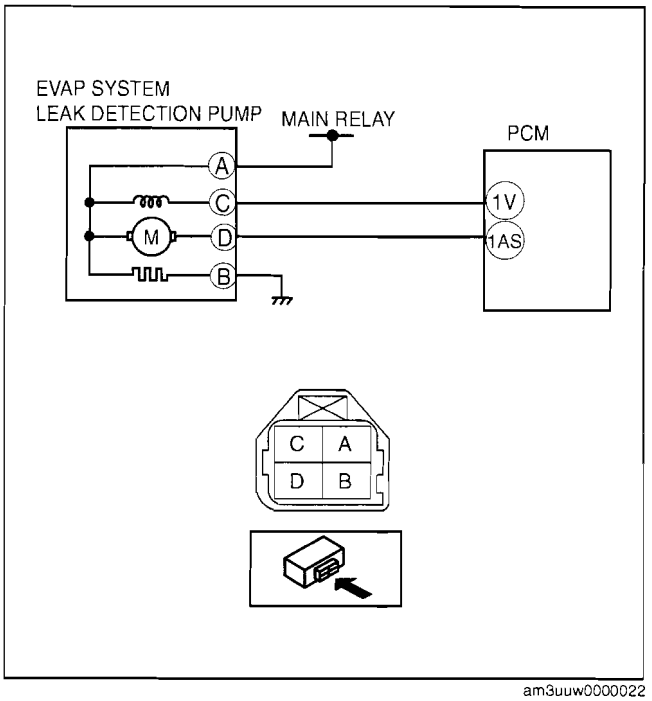
am3uuw0000095

Resistance Inspection

Note
- Perform the following procedure only when directed.

1. Inspect resistance of the EVAP system leak detection pump.
   - If not as specified, replace the EVAP system leak detection pump. (See 01-16B-7 EVAPORATIVE EMISSION (EVAP) SYSTEM LEAK DETECTION PUMP REMOVAL/ INSTALLATION[L3 WITH TC].)
   - If as specified, carry out the "Circuit Open/ Short Inspection".

Terminals	Resistance (ohm)
A—B	20—50
A—C	26.6—32.4
A—D	MAX. 118



am3uuw0000022

Circuit Open/Short Inspection

1. Disconnect the PCM connector. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
2. Inspect the following wiring harness for open or short circuit (continuity check).

EVAP SYSTEM LEAK DETECTION PUMP

am3uuw0000022

Open circuit

- If there is no continuity, there is an open circuit. Repair or replace the wiring harness.
  - — EVAP system leak detection pump terminal A and main relay terminal A
  - — EVAP system leak detection pump terminal B and the body ground
  - — EVAP system leak detection pump terminal C and PCM terminal 1V
  - — EVAP system leak detection pump terminal D and PCM terminal 1AS

Short circuit

- If there is continuity, there is a short circuit. Repair or replace the wiring harness.
  - — EVAP system leak detection pump terminal A and the body ground
  - — EVAP system leak detection pump terminal B and power supply
  - — EVAP system leak detection pump terminal C and power supply
  - — EVAP system leak detection pump terminal C the body ground
  - — EVAP system leak detection pump terminal D and power supply
  - — EVAP system leak detection pump terminal D the body ground

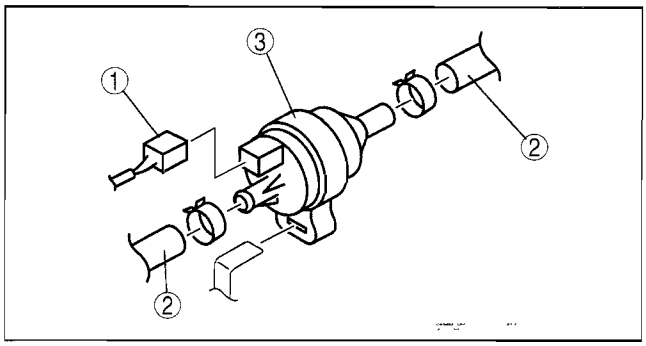
PURGE SOLENOID VALVE REMOVAL/INSTALLATION[L3 WITH TC]

id011639803500

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Remove the charge air cooler duct.
4. Remove in the order indicated in the table.

1	Connector
2	Vacuum hose
3	Purge solenoid valve

5. Install in the reverse order of removal.



acxuuw00000217

PURGE SOLENOID VALVE INSPECTION[L3 WITH TC]

id011639800900

Airflow Inspection

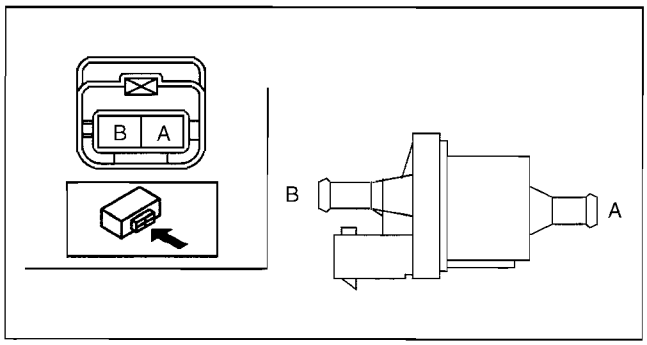
Note
- Perform the following test only when directed.

1. Disconnect the negative battery cable. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
2. Remove the purge solenoid valve. (See 01-16B-11 PURGE SOLENOID VALVE REMOVAL/INSTALLATION[L3 WITH TC].)
3. Inspect airflow between the ports under the following conditions.
   - If not as specified, replace the purge solenoid valve. (See 01-16B-11 PURGE SOLENOID VALVE REMOVAL/INSTALLATION[L3 WITH TC].)
   - If as specified, carry out the "Circuit Open/ Short Inspection".

O—O : Continuity O=O : Airflow

Step	Terminal		Port	
	A	B	A	B
1	O—O			
2	B+	GND	O=O	

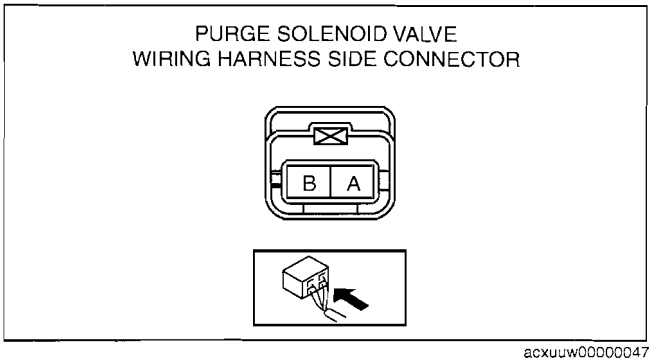
am3uuw0000094



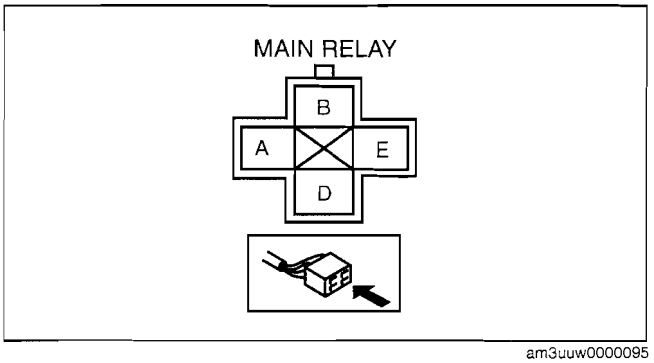
acxuuw00000046

Circuit Open/Short Inspection

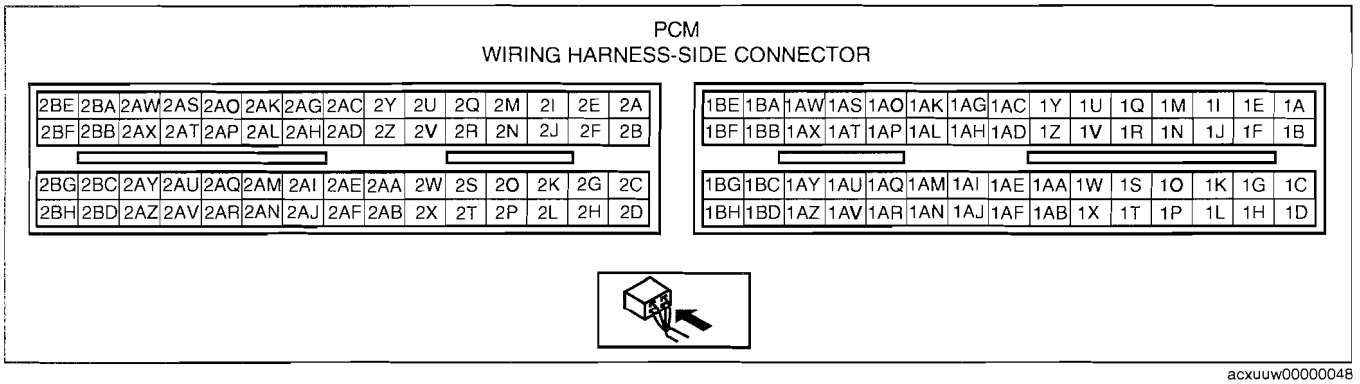
1. Disconnect the PCM connector. (See 01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
2. Inspect the following wiring harnesses for an open or short circuit (continuity check).



acxuuw00000047



am3uuw0000095



acxuuw00000048

Open circuit

- If there is no continuity, there is an open circuit. Repair or replace the wiring harness.
  - — Purge solenoid valve terminal A and main relay terminal A
  - — Purge solenoid valve terminal B and PCM terminal 2AB

Short circuit

- If there is continuity, there is a short circuit. Repair or replace the wiring harness.
  - — Purge solenoid valve terminal A and body ground
  - — Purge solenoid valve terminal B and power supply
  - — Purge solenoid valve terminal B and body ground

CHECK VALVE INSPECTION[L3 WITH TC]

id011639801400

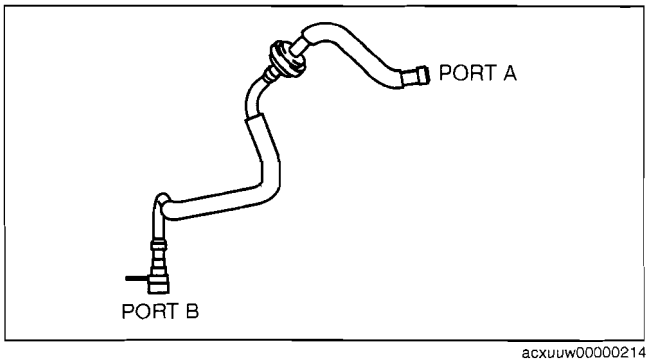
1. Remove the charge air cooler cover. (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
2. Disconnect the vacuum hose connected between the check valve and the purge solenoid valve from the purge solenoid valve.
3. Disconnect the vacuum hose connected between the check valve and the intake manifold from the intake manifold.

4. Blow through the check valve and verify that air flows as specified.
   - If not as specified, replace the check valve.

Specification

Condition	Airflow
Air applied from port A to B	Yes
Air applied from port B to A	No*

* : The check valve is normal if the aeration to port B is **3.5 kPa/min {0.03 kgf/cm2 min, 0.5 psi/min} or less** when **130 kPa {1.32 kgf/cm2, 18.9 psi}** is applied to port A.



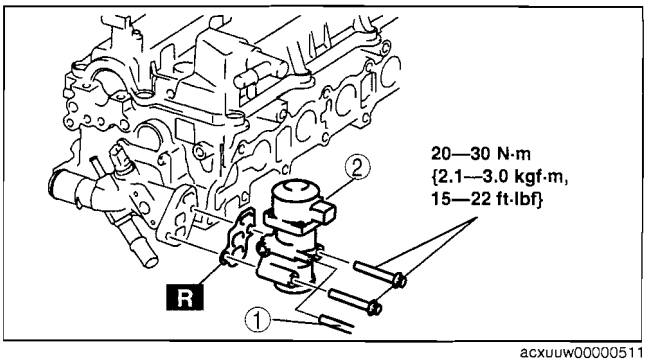
acxuuw00000214

EGR VALVE REMOVAL/INSTALLATION[L3 WITH TC]

id011639801000

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Remove the charge air cooler cover. (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
4. Disconnect the EGR valve connector.
5. Remove the air hose and air duct. (See01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC])
6. Drain the engine coolant. (See01-12B-4 ENGINE COOLANT REPLACEMENT[L3 WITH TC].)
7. Remove in the order indicated in the table.
8. Install in the reverse order of removal.

1	Water hose
2	EGR valve



acxuuw00000511

EGR VALVE INSPECTION[L3 WITH TC]

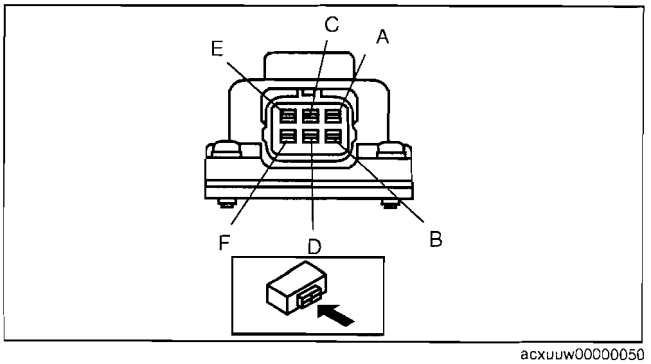
id011639801100

Resistance Inspection

Note
- Perform the following test only when directed.

1. Disconnect the negative battery cable. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
2. Inspect resistance of the EGR valve coils.
   - If not as specified, replace the EGR valve. (See 01-16B-13 EGR VALVE REMOVAL/INSTALLATION[L3 WITH TC])
   - If as specified, carry out the "Circuit Open/Short Inspection".

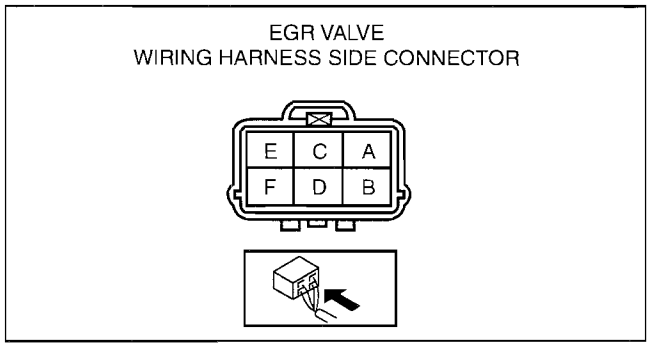
Terminals	Resistance (ohm)
C—E C—A D—B D—F	8—9



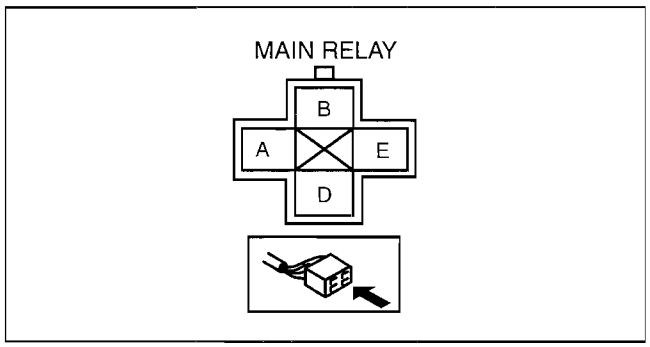
acxuuw00000050

Circuit Open/Short Inspection

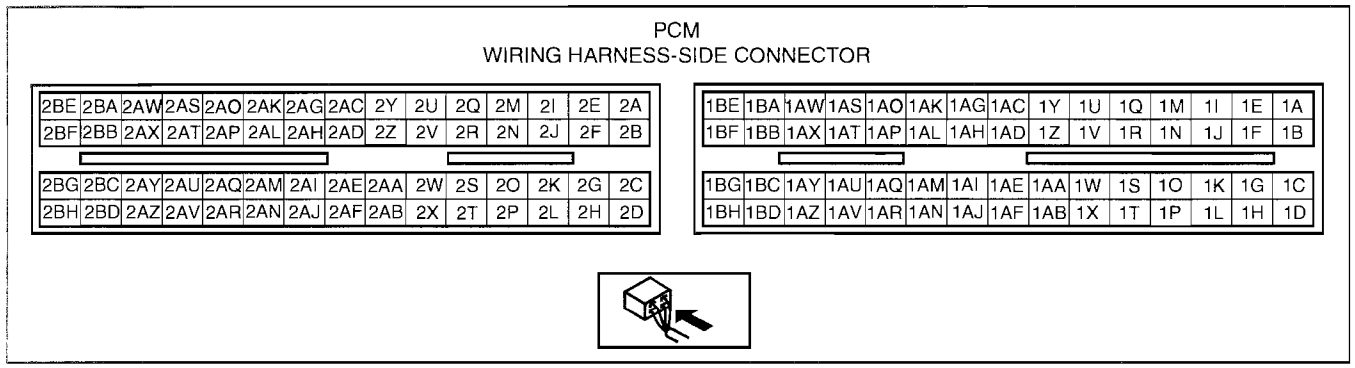
1. Disconnect the PCM connector. (See 01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
2. Inspect the following wiring harnesses for open or short circuit (continuity check).



acxuuw00000051



am3uuw0000095



acxuuw00000052

Open circuit

- If there is no continuity, there is an open circuit. Repair or replace the wiring harness.
  - EGR valve terminal A and PCM terminal 2AM
  - EGR valve terminal B and PCM terminal 2AR
  - EGR valve terminal C or D and main relay terminal A
  - EGR valve terminal E and PCM terminal 2AQ
  - EGR valve terminal F and PCM terminal 2AN

Short circuit

- If there is continuity, there is a short circuit. Repair or replace the wiring harness.
  - EGR valve terminal A and power supply
  - EGR valve terminal A and body ground
  - EGR valve terminal B and power supply
  - EGR valve terminal B and body ground
  - EGR valve terminal C or D and body ground
  - EGR valve terminal E and power supply
  - EGR valve terminal E and body ground
  - EGR valve terminal F and power supply
  - EGR valve terminal F and body ground

3. Remove the EGR valve, and inspect for any damage or clogging.
   - If there is no damage or clogging, replace the EGR valve. (See 01-16B-13 EGR VALVE REMOVAL/INSTALLATION[L3 WITH TC])

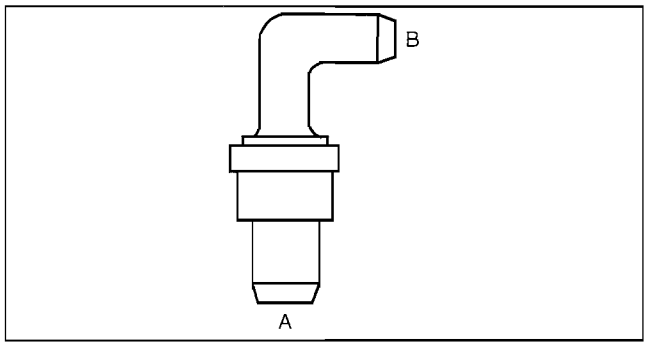
POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION[L3 WITH TC]

id011639800400

1. Remove the intake manifold. (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC])
2. Remove the PCV valve.
3. Blow through the valve and verify that air flows as specified.
   - If not as specified, replace the PCV valve.

Specification

Condition	Airflow
Air applied from port A to B	Yes
Air applied from port B to A	No



acxuuw00001930

WARM-UP THREE-WAY CATALYTIC CONVERTER (WU-TWC) INSPECTION[L3 WITH TC]

id011639801200

Caution
- **Perform the following procedures, DTC P0421 is indicated only.**

1. Connect the M-MDS to the DLC-2.
2. Start the engine and warm it up to normal operating temperature.
3. Turn off the engine.
4. Verify that the engine compression is within the specification. (See 01-10A-11 COMPRESSION INSPECTION[LF, L3].)
   - If the compression pressure is not within the specification, repair or replace the malfunction part.
5. Drive the vehicle for **10 min** at **65—96 km/h {40—60 mph}** to allow the front catalytic converter to reach operating temperature.
6. Stop the vehicle and leave it in a safe space.
7. Access Test ID 10:21:80 on the "Diagnostic Monitoring Test Result" function.
8. Verify that the test result is within the specified indicated on the M-MDS.
   - If it is not as specified, replace the front catalytic converter.

ROLLOVER VALVE REMOVAL/INSTALLATION[L3 WITH TC]

id011639804600

Note
- The rollover valve cannot be removed as it is built into the fuel tank.

ROLLOVER VALVE INSPECTION[L3 WITH TC]

id011639804500

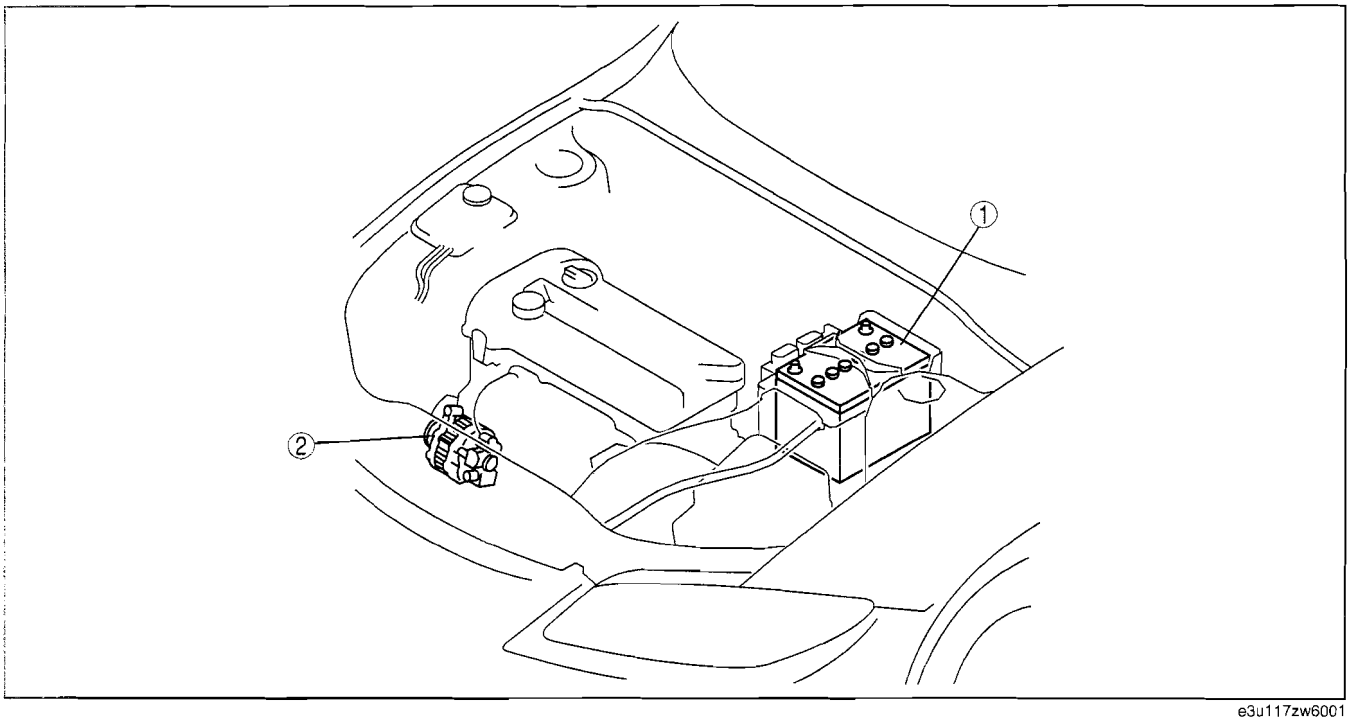
Note
- The rollover valve cannot be disassembled and inspected as it is built into the fuel tank.

1. Perform the fuel tank inspection. (See 01-14B-11 FUEL TANK INSPECTION[L3 WITH TC].)

01-17A CHARGING SYSTEM [LF, L3]

CHARGING SYSTEM LOCATION INDEX[LF, L3]

id0117a4800100



e3u117zw6001

1	Battery (See 01-17A-2 BATTERY REMOVAL/ INSTALLATION[LF, L3].) (See 01-17A-4 BATTERY INSPECTION[LF, L3].) (See 01-17A-6 BATTERY RECHARGING[LF, L3].)

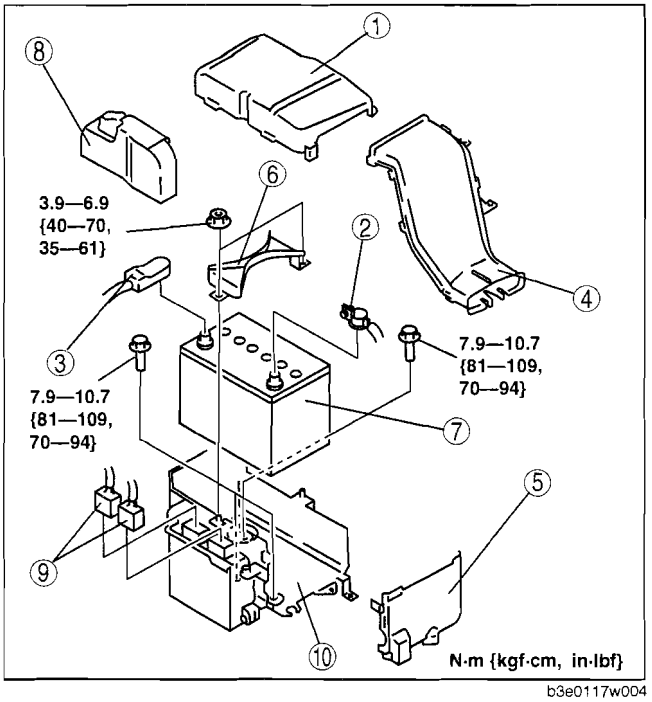
2	Generator (See 01-17A-6 GENERATOR REMOVAL/ INSTALLATION[LF, L3].) (See 01-17A-7 GENERATOR INSPECTION[LF, L3].) (See 01-17A-12 GENERATOR DISASSEMBLY/ ASSEMBLY[LF, L3].)

BATTERY REMOVAL/INSTALLATION[LF, L3]

id0117a4800500

1. Remove in the order indicated in the table.
2. Install in the reverse order of removal.

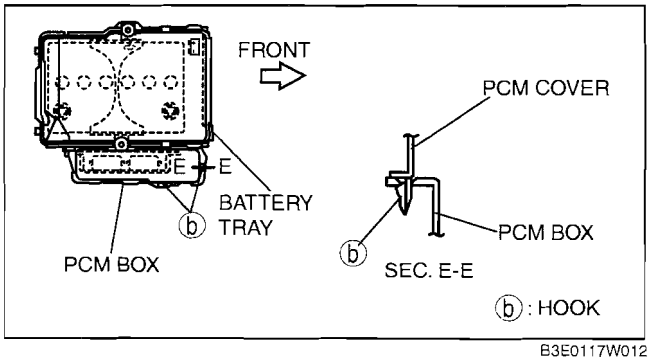
1	Battery cover (See 01-17A-3 Battery Cover Installation Note.)
2	Negative battery cable
3	Positive battery cable
4	Battery duct (See 01-17A-3 Battery Duct Installation Note.)
5	Battery box (See 01-17A-3 Battery Box Installation Note.)
6	Battery clamp (See 01-17A-3 Battery Clamp Installation Note.)
7	Battery
8	PCM cover (See 01-17A-2 PCM Cover Installation Note.)
9	PCM connectors
10	Battery tray and PCM component



b3e0117w004

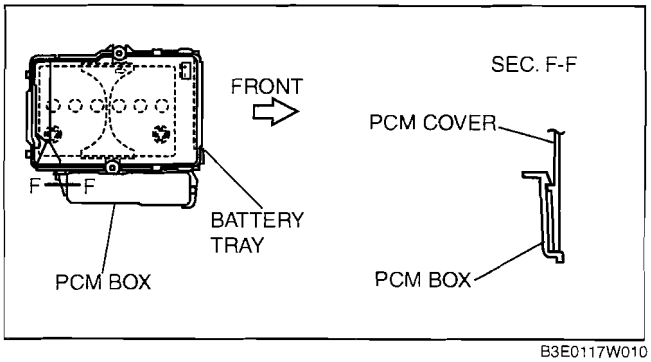
PCM Cover Installation Note

1. Install with PCM cover hooks B aligned with the PCM box holes at two points.



B3E0117W012

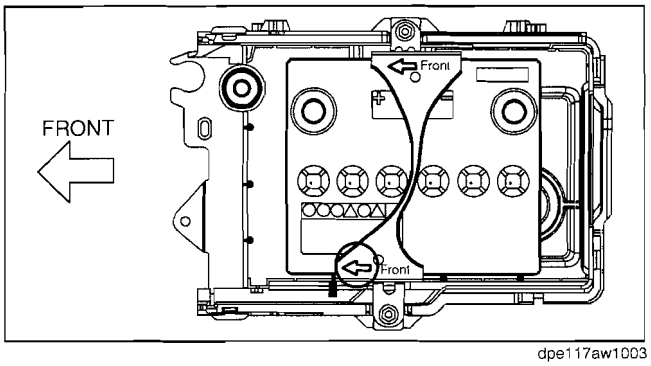
2. Install the PCM cover to the PCM box hook.



B3E0117W010

Battery Clamp Installation Note

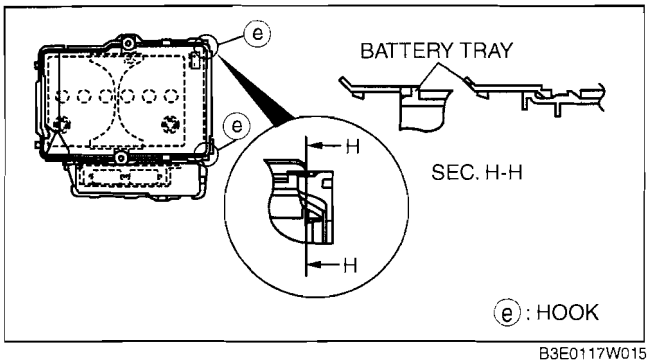
1. Assemble the battery clamp so that the arrow on it is pointed toward the front of the vehicle.



dpe117aw1003

Battery Box Installation Note

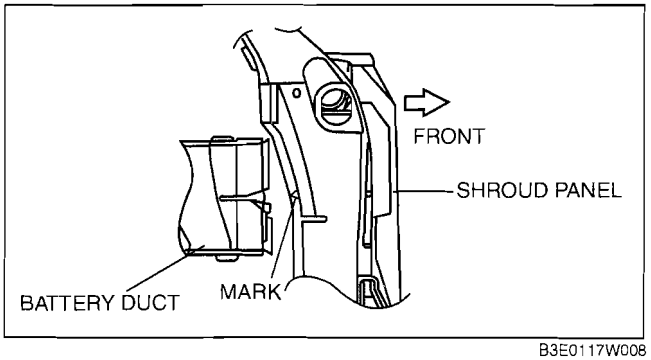
1. Assemble with battery box hooks E aligned with the battery tray holes at two points.



B3E0117W015

Battery Duct Installation Note

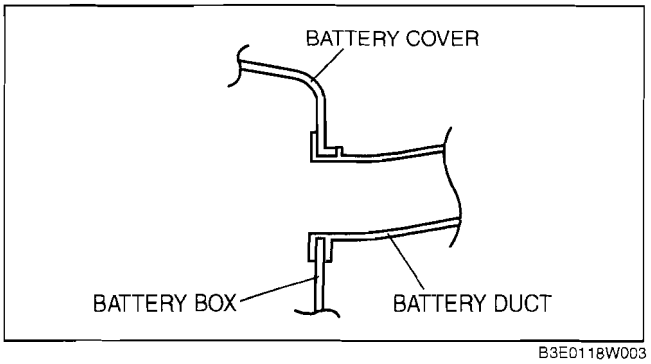
1. Align the mark of the shroud panel with notch in the battery duct, and install the battery duct to the shroud panel.



B3E0117W008

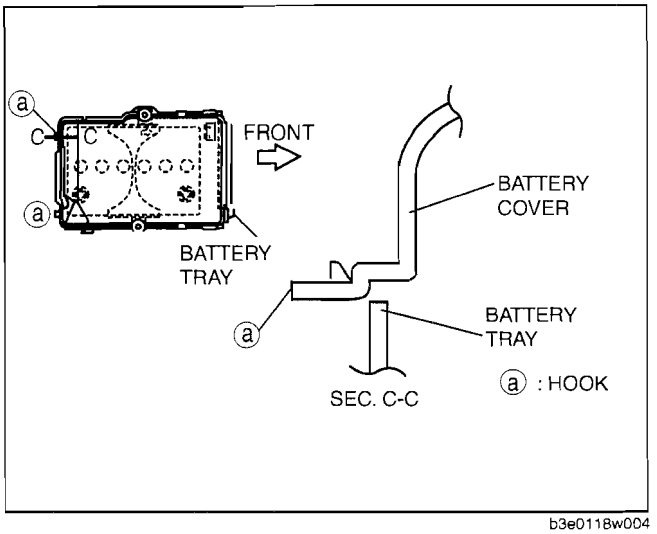
Battery Cover Installation Note

1. Install the battery duct between the battery cover and the battery box.



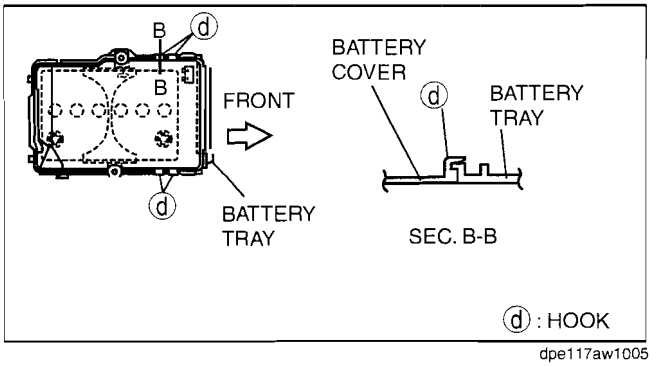
B3E0118W003

2. Install with battery cover hooks A aligned with the battery tray holes at two points.



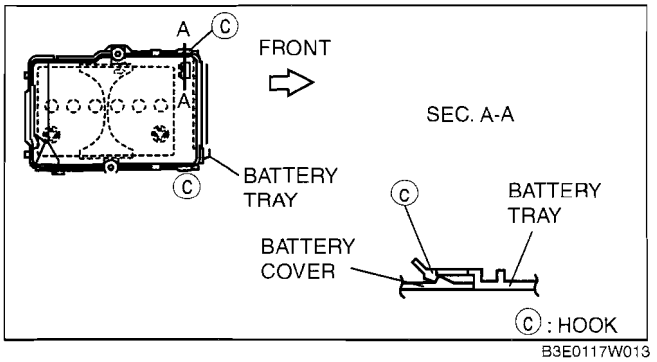
b3e0118w004

3. Install with battery cover hooks D aligned with the battery tray flange at four points.



dpe117aw1005

4. Set the battery cover to battery tray hooks C at two points.



B3E0117W013

BATTERY INSPECTION[LF, L3]

id0117a4800600

Warning

- **Since battery acid is toxic, be careful when handling the battery.**
- **Since battery acid is highly corrosive, be careful not to allow it to contact clothing or the vehicle.**
- **In case battery acid contacts skin, eyes, or clothing, flush it immediately with running water. Especially if the acid gets in the eyes, flush with water for more than 15 min and get prompt medical attention.**

Electrolyte gravity

1. Measure the electrolyte specific gravity using a hydrometer.
   - If it is less than the specification, recharge the battery. (See 01-17A-6 BATTERY RECHARGING[LF, L3].)

Standard electrolyte gravity
1.22—1.29 [20 °C {68 °F}]

Battery voltage

1. Inspect the battery as follows:

Step	Inspection		Action
1	Measure the battery positive voltage.	12.4 V or more	Go to Step 3.
		Less than 12.4 V	Go to the next step.
2	Quick charge for **30 min** and recheck voltage.	12.4 V or more	Go to the next step.
		Less than 12.4 V	Replace the battery.
3	Using the battery load tester, apply load current (see load test chart) and record battery voltage after **15 s**. Is voltage more than the specification?	Yes	Normal
		No	Replace the battery.

Load test chart

Battery	Current load (A)
50D20L	150
75D23L	195
80D26L	195

Standard specification

Battery temp. (°C {°F})	Minimum voltage (V)
4 {39}	9.3
10 {50}	9.4
16 {61}	9.5
21 {70}	9.6

Back-up current

1. Verify that the ignition switch is off (key has been removed) and that all doors are closed.
2. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
3. Disconnect the negative battery cable.
4. Connect the tester between the negative battery terminal and negative battery cable, leave the battery undisturbed for **30 min**, and then measure the back-up current.
   - If not within the specification, measure the back-up current while removing the fuses one by one from the inside of the main fuse block and the inside of the fuse block.

Note

- If the battery is not left undisturbed for **30 min**, the tester will indicate a high value (**approx. 300 mA**).
- If the key or any electrical accessory is operated within **approx. 30 min** after the tester is connected, the battery must be left undisturbed for **approx. 30 min** from that point.

Caution

- **Operating electrical loads while the back-up current is being measured can damage the tester.**

Note

- For vehicles with the immobilizer system, the system periodically shifts synchronization of the security light flashing. Therefore, **45 mA (0.1 s)** current is supplied when the security light is illuminated, and **25 mA (2 s)** current is supplied when the security light is not illuminated. In addition, the measuring instrument, which shows the average value, indicates around **30 mA**.

Battery back-up current

Vehicles with immobilizer system: 25—45 mA
Vehicles without immobilizer system: 30 mA or less

5. Inspect and repair wiring harnesses and connectors of the fuse where the current has decreased.

BATTERY RECHARGING[LF, L3]

id0117a4800700

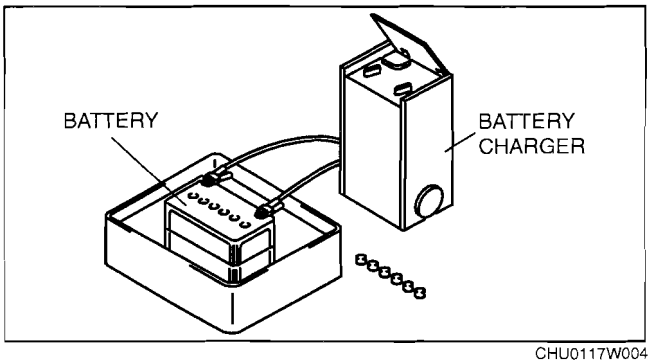
Warning
- **Keep all flames away from the battery, otherwise evaporated gas from the battery fluid may catch fire, and cause serious injury.**
- **Remove the battery filler caps when recharging to prevent battery deformation or damage.**

Caution
- **Do not quick charge for more than 30 min. It will damage the battery.**

1. Remove the battery and then place it in a pan of water.
2. Connect a battery charger to the battery and adjust the charging current as follows.

Standard specification

Battery type (5-h rate)	Recharge current (A)	Quick charge (A/30 min)
50D20L (40)	4.0—5.0	25
75D23L (52)	5.0—6.0	35
80D26L (55)	5.5—6.5	35



CHU0117W004

3. After the battery is recharged, verify that the voltage is within the specification and remains at the same value for **1 h or more** after the recharging has been completed.
   - If not within the specification, replace the battery.

Standard voltage
12.4 V or more

GENERATOR REMOVAL/INSTALLATION[LF, L3]

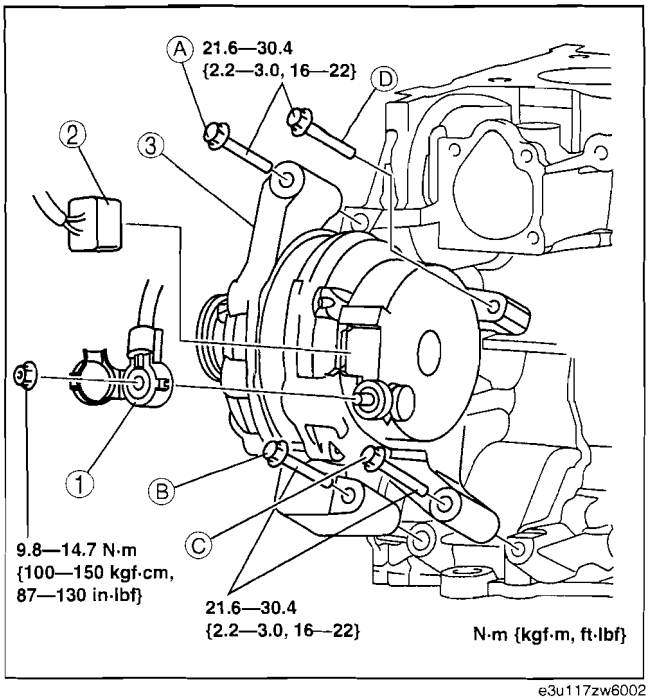
id0117a4800200

Warning
- **When the battery cables are connected, touching the vehicle body with generator terminal B will generate sparks. This can cause personal injury, fire, and damage to the electrical components. Always disconnect the battery negative cables before performing the following operation.**

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the under cover and splash shield as a single unit.
4. Remove the plug hole plate. (See 01-10A-3 PLUG HOLE PLATE REMOVAL/INSTALLATION[LF, L3].)
5. Position the coolant reserve tank out of the way.
6. Position the drive belt out of the way. (See 01-10A-4 DRIVE BELT REPLACEMENT[LF, L3].)
7. Position the coolant reserve tank out of the way.
8. Remove in the order indicated in the table.

9. Install in the reverse order of removal.

1	Terminal B cable
2	Generator connector
3	Generator (See 01-17A-7 Generator Installation Note.)



e3u117zw6002

Generator Installation Note

1. Align the generator fixing hole with the engine side hole, then temporarily tighten the generator installation bolts in the order of A, B, C, and D.
2. Securely tighten the generator installation bolts in the order of A, B, C, and D.

GENERATOR INSPECTION[LF, L3]

id0117a4800300

Caution

- **Do not apply direct battery positive voltage to generator terminal D, otherwise it could cause damage to the internal parts (power transistor) of the generator.**

Generator warning light

1. Verify that the battery is fully charged.
2. Verify that the drive belt deflection/tension is correct. (See 01-10A-3 DRIVE BELT INSPECTION[LF, L3].)
3. With the ignition switch turned to the ON position, verify that the generator warning light illuminates.
   - If it does not illuminate, inspect the generator warning light and the wiring harness.
     — If the generator warning light and the wiring harness are normal, inspect the PCM.
4. Verify that the generator warning light goes out after the engine is started.
   - If it does not go out, inspect if any one of the following DTCs in the on-board diagnostic system are displayed: P0112, P0113, P2502, P2503, P2504. (See 01-02A-22 DTC TABLE[LF, L3].)

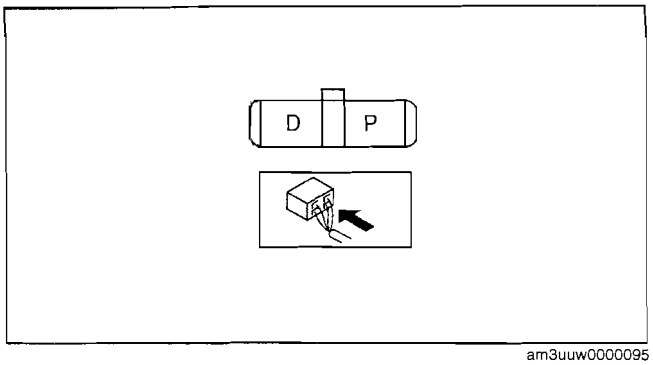
Generator
Voltage

1. Verify that the battery is fully charged.
2. Verify that the drive belt deflection/tension is correct. (See 01-10A-3 DRIVE BELT INSPECTION[LF, L3].)
3. Turn off all electrical loads.
4. Start the engine.
5. Verify that the generator rotates smoothly without any noise while the engine is running.
   - If there is any noise, find the cause and repair or replace the generator.

6. Measure the voltage at each terminal using a tester.

Standard specification

Terminal	IG-ON (V)	Idle (V) [20°C {68 °F}]
B	B+	13.0—15.0
P	Approx. 1.0 or less	Approx. 3.0—8.0
D	Approx. 0	*



am3uuw0000095

* : Turn the following electrical loads on and verify that the voltage reading increases.

- Headlights
- Blower motor
- Rear window defroster

Current

Note
- Since the charging current decreases rapidly after starting the engine, carry out the following procedure quickly, and read the maximum current value.

1. Verify that the battery is fully charged.
2. Verify that the drive belt deflection/tension is correct. (See 01-10A-3 DRIVE BELT INSPECTION[LF, L3].)
3. Disconnect the negative battery cable.
4. Connect a tester, which can read **120 A or more**, between generator terminal B and the wiring harness.
5. Connect the negative battery cable.
6. Turn off all electrical loads.
7. Start the engine.
8. Increase engine speed to **2,500 rpm**.

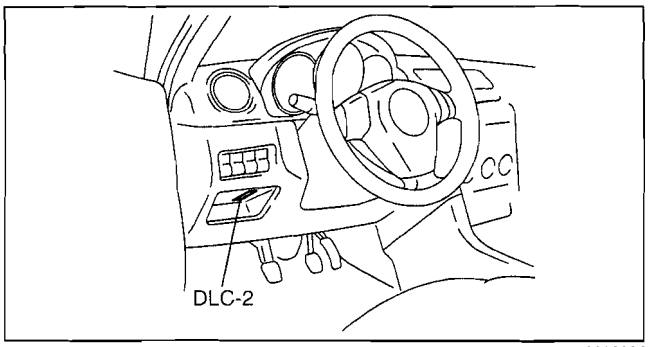
Note
- When the electrical load on the vehicle is low, the specified current cannot be verified although the generator is normal. In this case, increase the electrical load (Leave the headlights turned on for a while, then discharge the battery, or use a similar method.) and recheck.
- When the generator itself or the ambient temperature are too high, the specified current also cannot be verified. In this case, cool down the generator and recheck.

9. Turn the following electrical loads on and verify that the current reading increases more than the minimum value indicated below.
   — If it is not as specified, go to the PCM and generator shearing inspection. (See 01-17A-9 PCM and generator shearing inspection.)
   - Headlights (high-beam)
   - Blower motor (HI)
   - Rear window defroster
   - Brake lights

Minimum current value
70 % of the nominal output current (nominal output current: 90 A)
[Ambient temp. 20°C {68 °F}, voltage 13.0—15.0 V, both engine and generator are hot]

PCM and generator shearing inspection

1. Connect the M-MDS to the DLC-2.



am3uuw0000095

2. Inspect as follows:

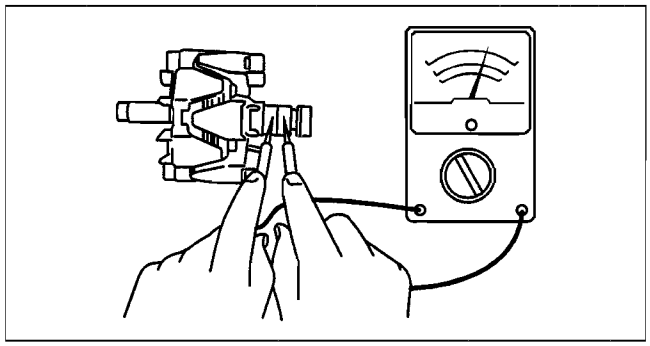
Step	Inspection		Action
1	Measure the generator terminal B voltage when the electrical loads*1 are on and off.	15 V or more	Go to Step 2.
		13–15 V	Normal*2
		13 V or less	Go to Step 3.
2	Monitor the ALTT V PID using the M-MDS, or measure the voltage of PCM terminal 2AJ*3, 2AM*4, 2AJ*5 using a tester. Is the voltage between 13–15 V ?	Yes	Go to Step 4.
		No	PCM input error.
3	Monitor the ALTT V PID using the M-MDS, or measure the voltage of PCM terminal 2AJ*3, 2AM*4, 2AJ*5 using a tester. Is the voltage between 13–15 V ?	Yes	Go to Step 5.
		No	PCM input error.
4	Monitor the ALTF PID using the M-MDS, or calculate the duty value of the PCM terminal 2AI*3, 2AQ*4, 2AI*5 using an oscilloscope. Is the duty value 100 % ? 	Yes	PCM input error.
		No	PCM, generator, or both is not normal.
5	Monitor the ALTF PID using the M-MDS, or calculate the duty value of the PCM terminal 2AI*3, 2AQ*4, 2AI*5 using an oscilloscope. Is the duty value 0 % ? 	Yes	PCM input error.
		No	PCM, generator, or both is not normal.

*1 : Headlights, blower motor, rear window defroster, and brake lights.
*2 : If the generator field coil duty value does not change when electrical loads (such as headlights, blower motor, rear window defroster, brake lights) are on or off, inspection with discharged battery is needed.
*3 : California emission regulation applicable model
*4 : Except for California emission regulation applicable model with LF ATX
*5 : Except for California emission regulation applicable model with LF MTX, L3

Generator Inner Parts
Rotor

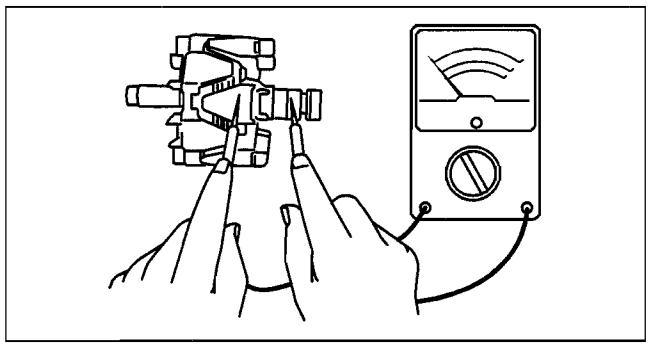
1. Measure the resistance between the slip rings using a tester.
   - If not within the specification, replace the rotor.

   Resistance [20 °C {68 °F}]
   1.8—2.2 ohms



am3uuw0000095

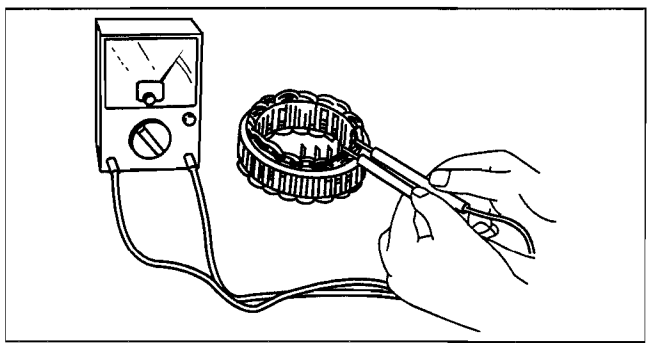
2. Verify that there is no continuity between the slip ring and core using a tester.
   - If there is continuity, replace the rotor.
3. Inspect the slip ring surface condition.
   - If the slip ring surface is rough, use a lathe or fine sandpaper to smooth it.



am3uuw0000095

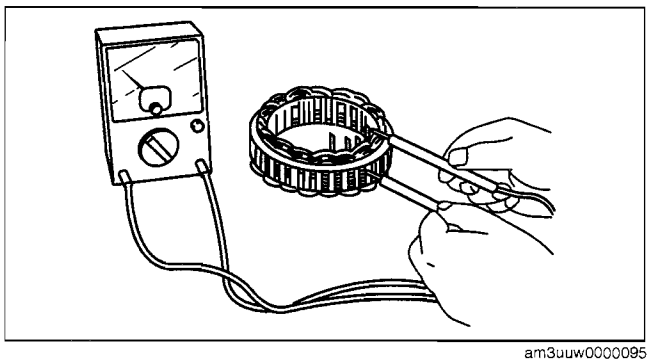
Stator coil

1. Inspect for continuity between the stator coil leads using a tester.
   - If there is no continuity, replace the stator.



am3uuw0000095

2. Verify that there is no continuity between the stator coil leads and the core using a tester.
   - If there is continuity, replace the stator coil.



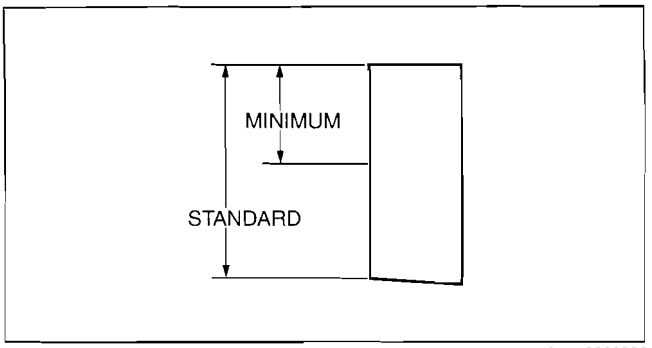
am3uuw0000095

Brush

1. Inspect brushes for wear.
   - If any brush is worn almost to or beyond the limit, replace all of the brushes.

Standard brush length
18.5 mm {0.73 in}

Minimum brush length
5.0 mm {0.2 in}



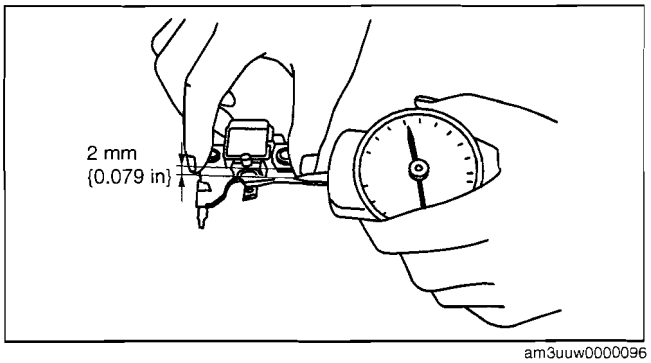
am3uuw0000096

Brush spring

1. Measure the force of the brush spring using a spring pressure gauge.
2. Read the spring pressure gauge at the brush tip projection of **2 mm {0.079 in}**.
   - Replace the brush spring if necessary.

Standard spring force
4.8—6.0 N {0.49—0.61 kgf, 1.08—1.34 lbf}

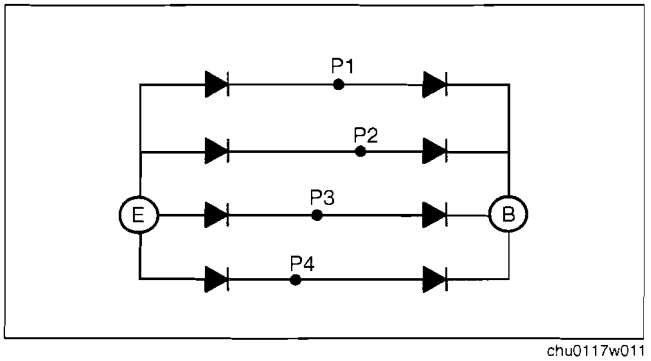
Minimum spring force
2.16 N {0.22 kgf, 0.49 lbf}



am3uuw0000096

Rectifier

1. Inspect for continuity of the diodes using a tester.

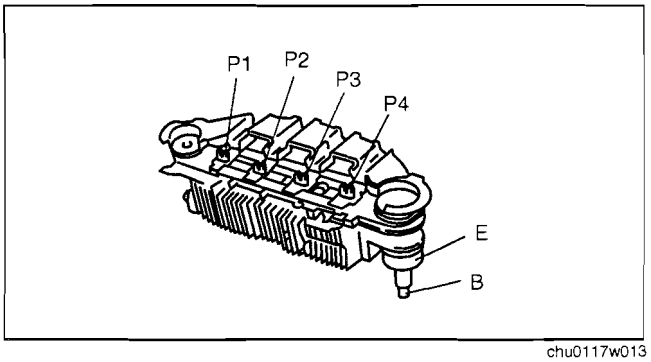


chu0117w011

- If not as specified, replace the rectifier.

Specification

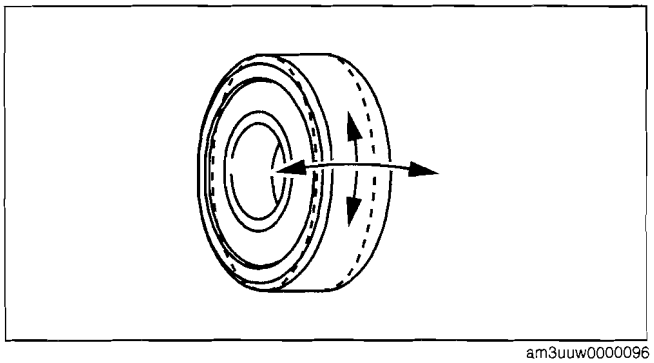
Tester		Continuity
Negative	Positive	
E	P1, P2, P3, P4	Yes
B		No
P1, P2, P3, P4	E	No
	B	Yes



chu0117w013

Bearing

1. Inspect for abnormal noise, looseness, and sticking.
   - Replace the bearing if necessary.



am3uuw0000096

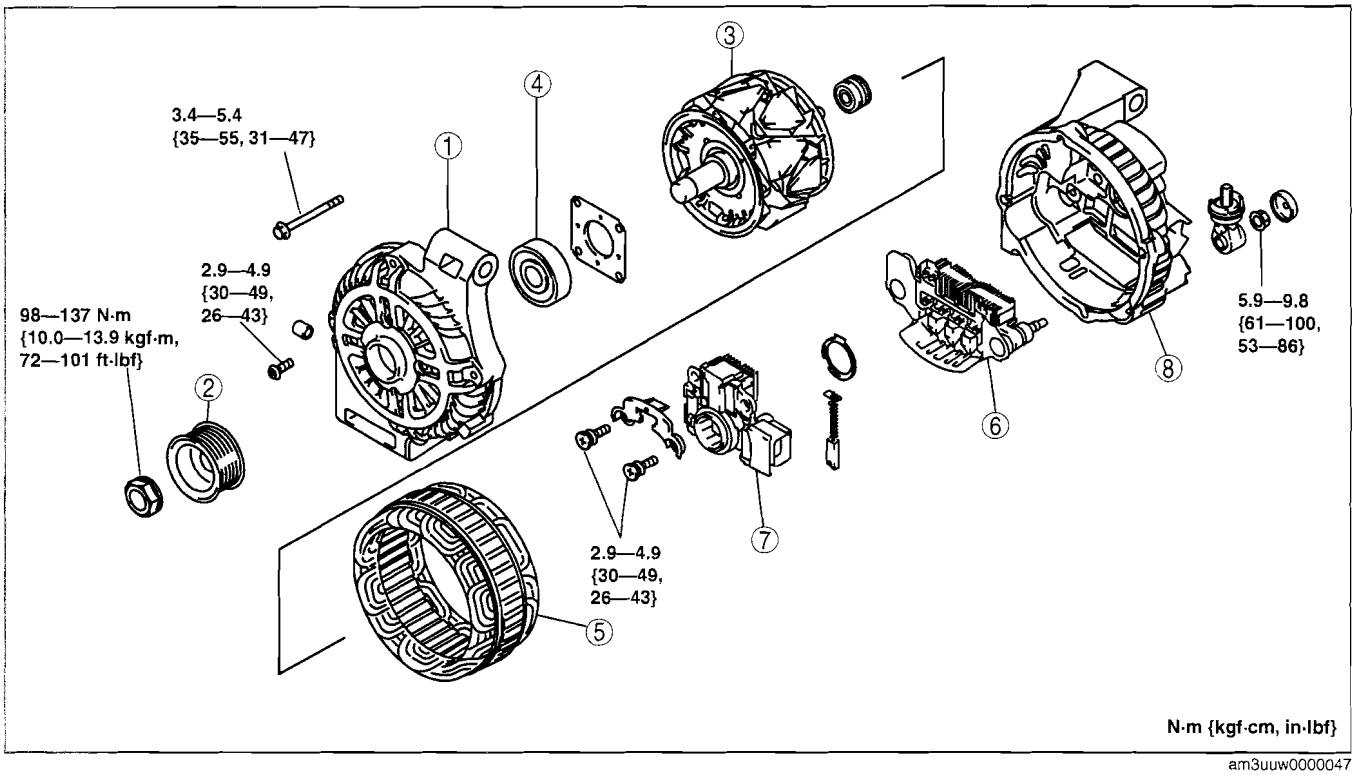
GENERATOR DISASSEMBLY/ASSEMBLY[LF, L3]

id0117a4800400

Caution

- **Melt the solder quickly, otherwise the diodes (rectifier) and regulator will be damaged by excessive heat.**

1. Disassemble in the order indicated in the table.
2. Assemble in the reverse order of disassembly.



am3uuw0000047

1	Front cover
2	Pulley
3	Rotor
4	Bearing

5	Stator coil

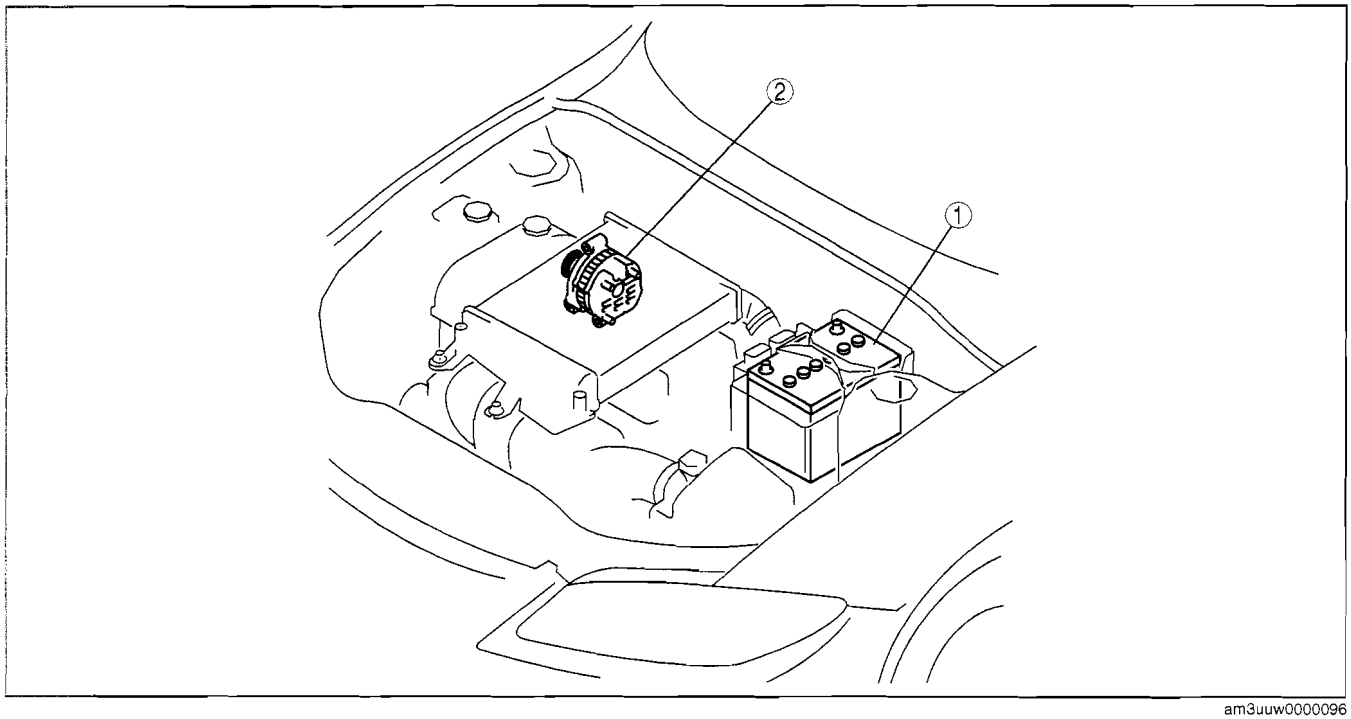
7	Brush holder
8	Rear bracket

01-17B CHARGING SYSTEM [L3 WITH TC]

CHARGING SYSTEM LOCATION INDEX[L3 WITH TC]

id011739800100



am3uuw0000096

1	Battery (See 01-17B-2 BATTERY REMOVAL/ INSTALLATION[L3 WITH TC].) (See 01-17B-4 BATTERY INSPECTION[L3 WITH TC].) (See 01-17B-5 BATTERY RECHARGING[L3 WITH TC].)

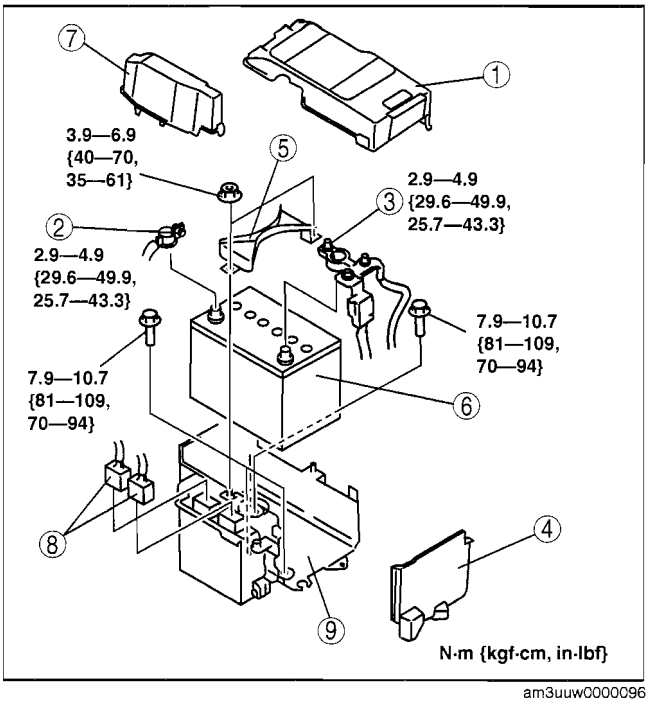
2	Generator (See 01-17B-6 GENERATOR REMOVAL/ INSTALLATION[L3 WITH TC].) (See 01-17B-7 GENERATOR INSPECTION[L3 WITH TC].) (See 01-17B-12 GENERATOR DISASSEMBLY/ ASSEMBLY[L3 WITH TC].)

BATTERY REMOVAL/INSTALLATION[L3 WITH TC]

id011739800500

1. Remove in the order indicated in the table.
2. Install in the reverse order of removal.

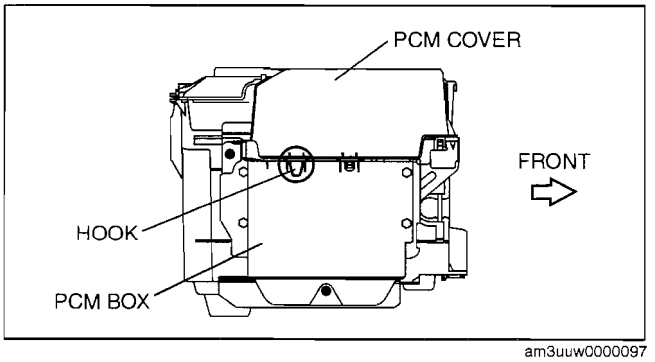
1	Battery cover (See 01-17B-3 Battery Cover Installation Note.)
2	Negative battery cable
3	Positive battery cable
4	Battery box (See 01-17B-3 Battery Box Installation Note.)
5	Battery clamp (See 01-17B-3 Battery Clamp Installation Note.)
6	Battery
7	PCM cover (See 01-17B-2 PCM Cover Installation Note.)
8	PCM connectors
9	Battery tray and PCM component



am3uuw0000096

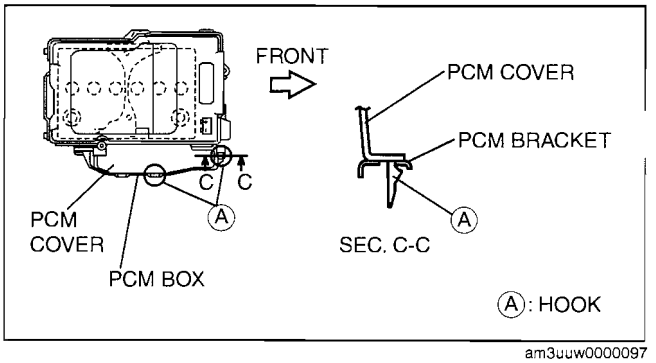
PCM Cover Installation Note

1. Install the PCM cover hook to the PCM box hole.



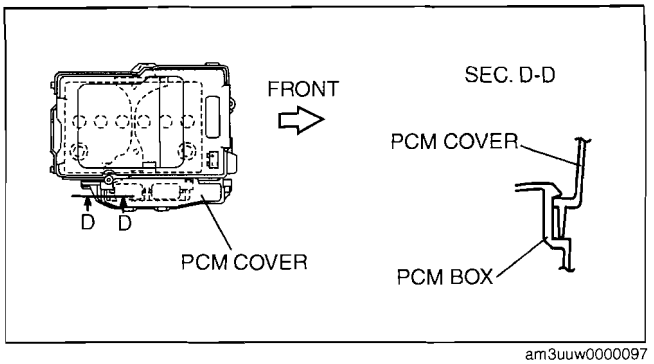
am3uuw0000097

2. Install with PCM cover hooks A aligned with the PCM box and PCM bracket holes at two points.



am3uuw0000097

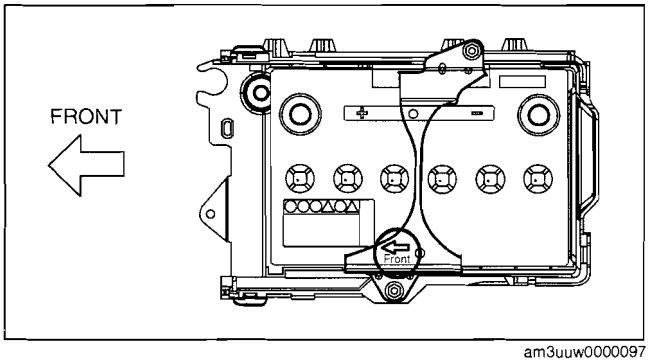
3. Install the PCM cover to the PCM box hook.



am3uuw0000097

Battery Clamp Installation Note

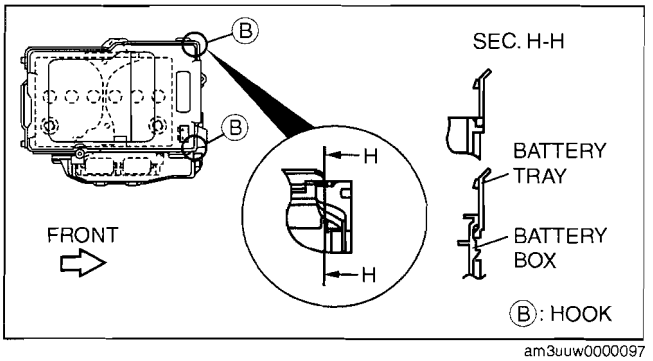
1. Assemble the battery clamp so that the arrow on it is pointed toward the front of the vehicle.



am3uuw0000097

Battery Box Installation Note

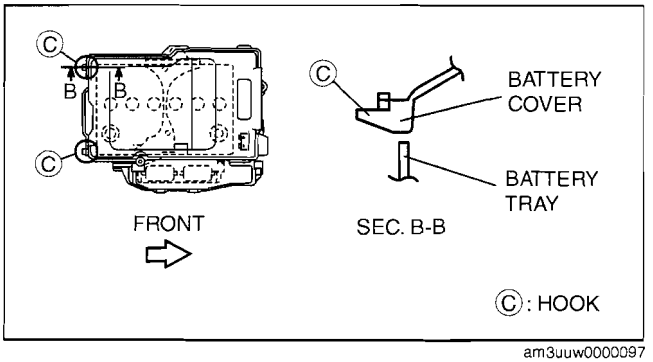
1. Assemble with battery box hooks B aligned with the battery tray holes at two points.



am3uuw0000097

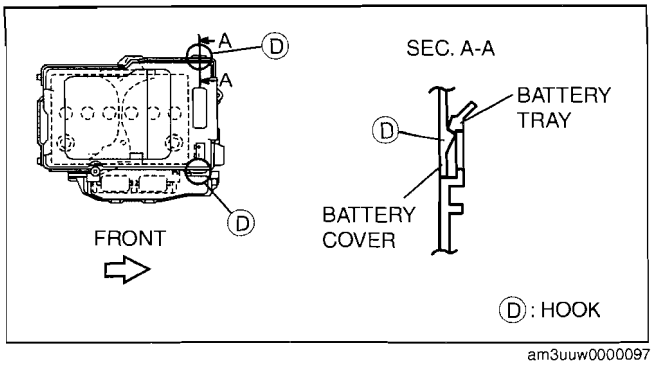
Battery Cover Installation Note

1. Install with battery cover hooks C aligned with the battery tray holes at two points.



am3uuw0000097

2. Set the battery cover to battery tray hooks D at two points.



am3uuw0000097

BATTERY INSPECTION[L3 WITH TC]

id011739800600

Warning

- **Since battery acid is toxic, be careful when handling the battery.**
- **Since battery acid is highly corrosive, be careful not to allow it to contact clothing or the vehicle.**
- **In case battery acid contacts skin, eyes, or clothing, flush it immediately with running water. Especially if the acid gets in the eyes, flush with water for more than 15 min and get prompt medical attention.**

Electrolyte Specific Gravity

1. Measure the electrolyte specific gravity using a hydrometer.
   - If it is less than the specification, recharge the battery. (See 01-17B-5 BATTERY RECHARGING[L3 WITH TC].)

Battery electrolyte specific gravity [20 °C {68 °F}]
1.22—1.29

Battery Voltage

1. Inspect the battery as follows:

Step	Inspection		Action
1	Measure the battery positive voltage.	12.4 V or more	Go to Step 3.
		Less than 12.4 V	Go to the next step.
2	Quick charge for **30 min** and recheck voltage.	12.4 V or more	Go to the next step.
		Less than 12.4 V	Replace the battery.
3	Using the battery load tester, apply load current (see battery load test current) and record battery voltage after **15 s**. Is voltage more than the specification?	Yes	Normal
		No	Replace the battery.

Battery load test current
55D23L (48): 180 A
80D26L (55): 195 A

Standard specification

Battery temp. (°C {°F})	Minimum voltage (V)
4 {39}	9.3
10 {50}	9.4
16 {61}	9.5
21 {70}	9.6

Back-up Current

1. Verify that the ignition switch is off (key has been removed) and that all doors are closed.
2. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
3. Disconnect the negative battery cable.
4. Connect the tester between the negative battery terminal and negative battery cable, leave the battery undisturbed for **30 min**, and then measure the back-up current.
   - If not within the specification, measure the back-up current while removing the fuses one by one from the inside of the main fuse block and the inside of the fuse block.

Note
- If the battery is not left undisturbed for **30 min**, the tester will indicate a high value (**approx. 300 mA**).
- If the key or any electrical accessory is operated within **approx. 30 min** after the tester is connected, the battery must be left undisturbed for **approx. 30 min** from that point.

Caution
- **Operating electrical loads while the back-up current is being measured can damage the tester.**

Note
- For vehicles with the immobilizer system, the system periodically shifts synchronization of the security light flashing. Therefore, **45 mA (0.1 s)** current is supplied when the security light is illuminated, and **25 mA (2 s)** current is supplied when the security light is not illuminated. In addition, the measuring instrument, which shows the average value, indicates around **30 mA**.

Battery back-up current
Vehicles with immobilizer system: 25—45 mA
Vehicles without immobilizer system: 30 mA or less

5. Inspect and repair wiring harnesses and connectors of the fuse where the current has decreased.

BATTERY RECHARGING[L3 WITH TC]

id011739800700

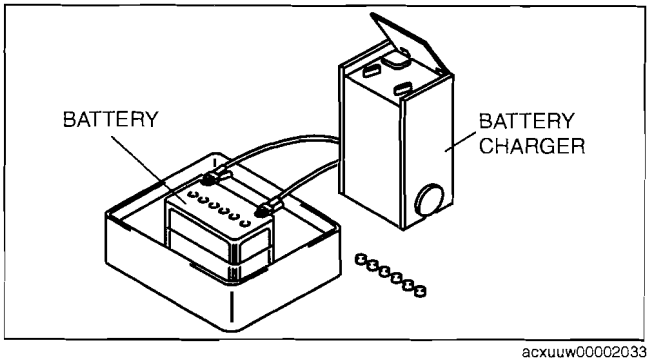
Warning
- **Keep all flames away from the battery, otherwise evaporated gas from the battery fluid may catch fire, and cause serious injury.**
- **Remove the battery filler caps when recharging to prevent battery deformation or damage.**

Caution
- **Do not quick charge for more than 30 min. It will damage the battery.**

1. Remove the battery and then place it in a pan of water.
2. Remove the battery filler caps.
3. Connect a battery charger to the battery and adjust the charging current as follows.

Battery slow charge current
55D23L (48): 4.5—5.5 A
80D26L (55): 5.5—6.5 A

Battery quick charge current [30 min]
55D23L (48): 30 A
80D26L (55): 35 A



acxuuw00002033

4. After the battery is recharged, verify that the voltage is within the specification and remains at the same value for **1 h or more** after the recharging has been completed.
   - If not within the specification, replace the battery.

Standard voltage
12.4 V or more

GENERATOR REMOVAL/INSTALLATION[L3 WITH TC]

id011739800200

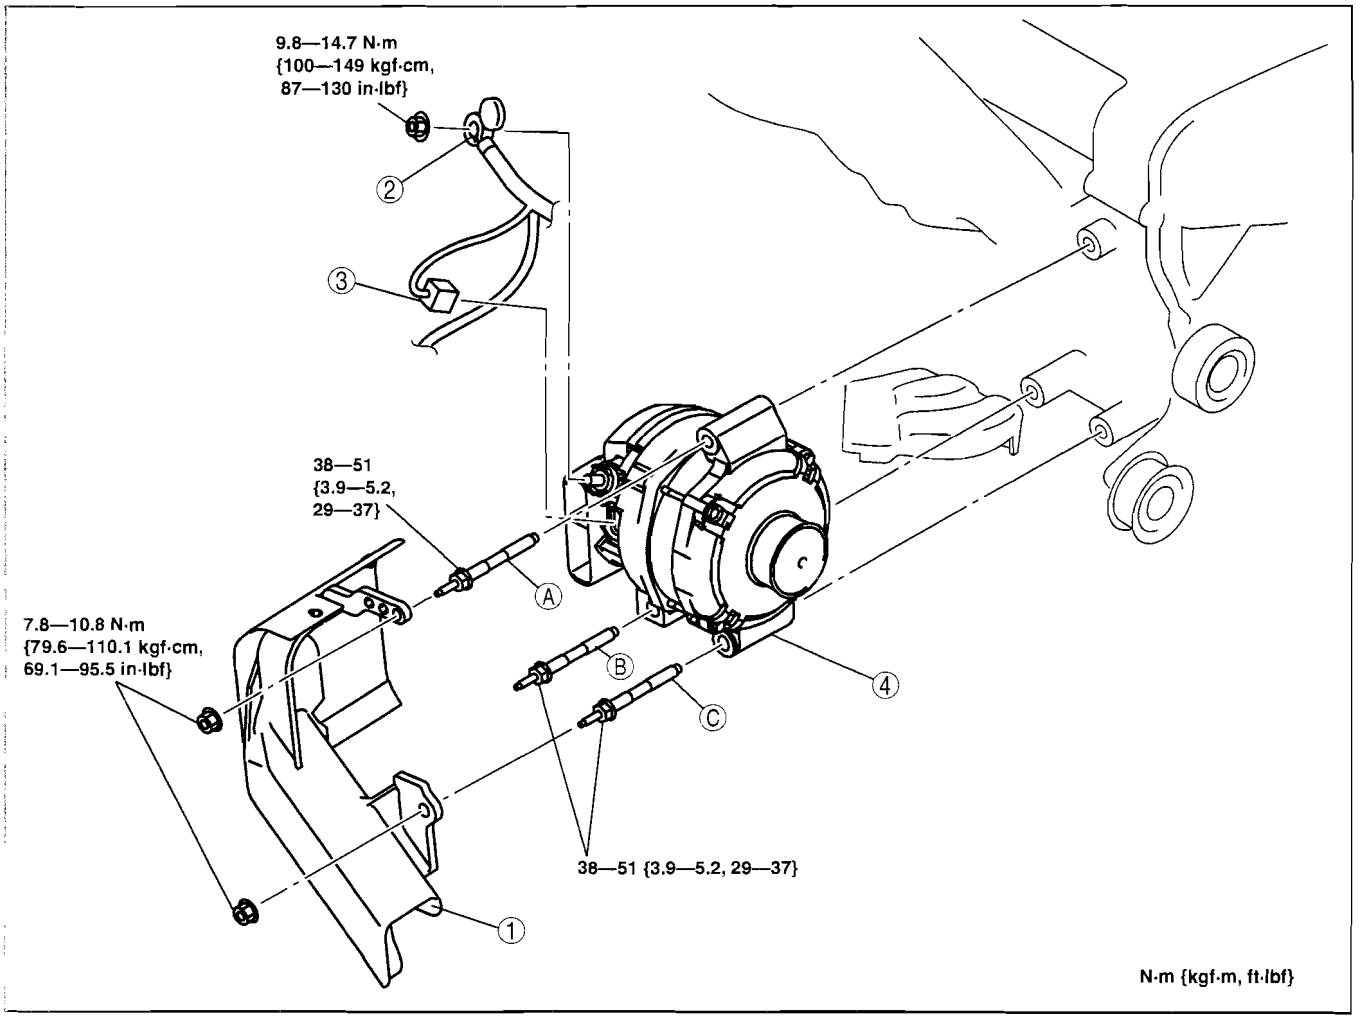
Warning

- **Remove and install all parts when the engine is cold, otherwise they can cause severe burns or serious injury.**
- **When the battery cables are connected, touching the vehicle body with generator terminal B will generate sparks. This can cause personal injury, fire, and damage to the electrical components. Always disconnect the negative battery cable before performing the following operation.**

Caution

- **The generator can be damaged by the heat from the exhaust manifold. Make sure the generator duct is installed securely.**

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Remove the charge air cooler and charge air cooler bracket. (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
4. Remove the heat insulator (body side) and exhaust manifold insulator (upper). (See 01-15B-2 EXHAUST SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
5. Remove the under cover and splash shield as a single unit.
6. Remove the drive belt. (See 01-10B-3 DRIVE BELT REMOVAL/INSTALLATION[L3 WITH TC].)
7. Remove in the order indicated in the table.
8. Install in the reverse order of removal.



am3uuw0000030

1	Generator duct (See 01-17B-7 Generator Duct Removal Note.)
2	Terminal B cable

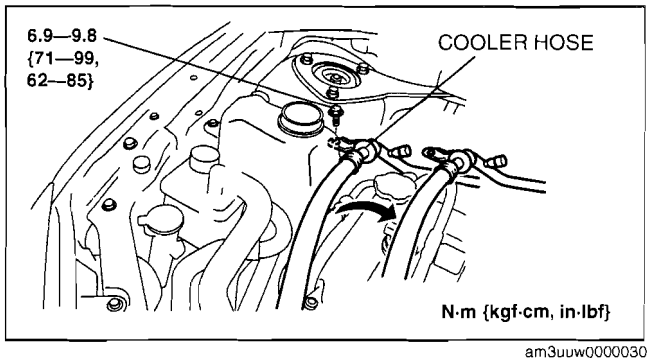
3	Generator connector
4	Generator (See 01-17B-7 Generator Removal Note.) (See 01-17B-7 Generator Installation Note.)

Generator Duct Removal Note

1. Remove the generator duct fitting nuts, and position it in the engine compartment in a location where no part can be damaged.

Generator Removal Note

1. Remove the cooler hose bracket bolt and set the cooler hose out of the way before performing the generator removal/installation.
2. Remove the generator from above the engine compartment.



am3uuw0000030

Generator Installation Note

1. Tighten bolt A temporarily.
2. Tighten bolt B, C to the specified tightening torque.
3. Tighten bolt A to the specified tightening torque.

GENERATOR INSPECTION[L3 WITH TC]

id011739800300

Caution

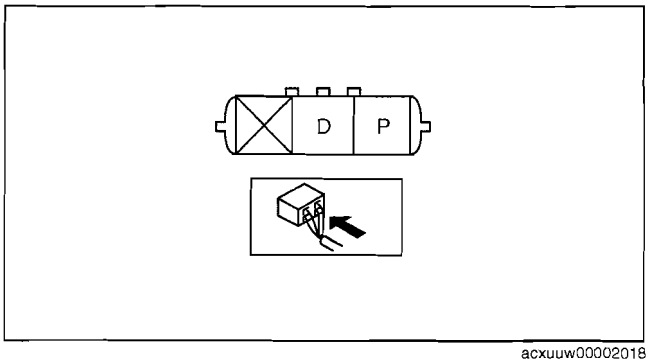
- **Do not apply direct battery positive voltage to generator terminal D, otherwise it could cause damage to the internal parts (power transistor) of the generator.**

Generator Warning Light

1. Verify that the battery is fully charged.
2. Verify that the drive belt deflection/tension is correct. (See 01-10B-3 DRIVE BELT INSPECTION[L3 WITH TC].)
3. With the ignition switch turned to the ON position, verify that the generator warning light illuminates.
   - If it does not illuminate, inspect the generator warning light and the wiring harness.
     — If the generator warning light and the wiring harness are normal, inspect the PCM.
4. Verify that the generator warning light goes out after the engine is started.
   - If it does not go out, inspect if any one of the following DTCs in the on-board diagnostic system are displayed: P0112, P0113, P2502, P2503, P2504. (See 01-02B-14 DTC TABLE[L3 WITH TC].)

Generator
Voltage

1. Verify that the battery is fully charged.
2. Verify that the drive belt deflection/tension is correct. (See 01-10B-3 DRIVE BELT INSPECTION[L3 WITH TC].)
3. Turn off all electrical loads.
4. Start the engine.
5. Verify that the generator rotates smoothly without any noise while the engine is running.
   - If there is any noise, find the cause and repair or replace the generator.
6. Measure the voltage at each terminal using a tester.
   - If it is not as specified, find the cause and repair or replace the applicable part.



acxuuw00002018

Generator standard voltage [IG-ON]
Terminal B: B+
Terminal P: Approx. 1 V or less
Terminal D: Approx. 0 V

Generator standard voltage [Idle, 20 °C {68 °F}]
Terminal B: 13—15 V
Terminal P: Approx. 3—8 V
Terminal D: Turn the electrical loads (headlights, blower motor, rear window defroster) on and verify that the voltage reading increases.

Current

Note
- Since the charging current decreases rapidly after starting the engine, carry out the following procedure quickly, and read the maximum current value.

1. Verify that the battery is fully charged.
2. Verify that the drive belt deflection/tension is correct. (See 01-10B-3 DRIVE BELT INSPECTION[L3 WITH TC].)
3. Disconnect the negative battery cable.
4. Connect a tester, which can read **120 A or more**, between generator terminal B and the wiring harness.
5. Connect the negative battery cable.
6. Turn off all electrical loads.
7. Start the engine.
8. Increase engine speed to **2,500 rpm.**

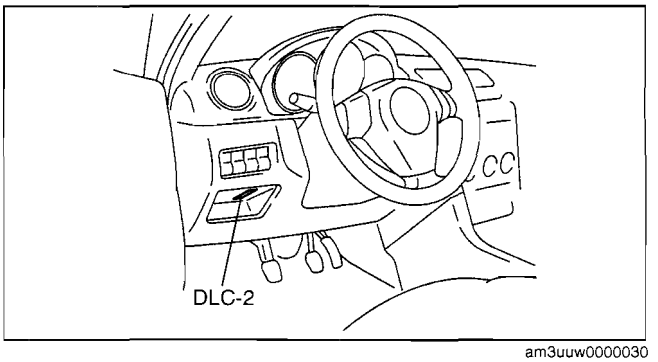
Note
- When the electrical load on the vehicle is low, the specified current cannot be verified although the generator is normal. In this case, increase the electrical load (Leave the headlights turned on for a while, then discharge the battery, or use a similar method.) and recheck.
- When the generator itself or the ambient temperature are too high, the specified current also cannot be verified. In this case, cool down the generator and recheck.

9. Turn the following electrical loads on and verify that the current reading increases more than the minimum value indicated below.
   — If it is not as specified, go to the PCM and generator shearing inspection. (See 01-17B-8 PCM and generator shearing inspection.)
   - Headlights (high-beam)
   - Blower motor (HI)
   - Rear window defroster
   - Brake lights

Generator generated current minimum value
70 % of the nominal output current (nominal output current: 110 A)
[Ambient temp. 20 °C {68 °F}, voltage 13.0—15.0 V, both engine and generator are hot]

PCM and generator shearing inspection

1. Connect the M-MDS to the DLC-2.



am3uuw0000030

2. Inspect as follows:

Step	Inspection		Action
1	Measure the generator terminal B voltage when the electrical loads*1 are on and off.	15 V or more	Go to Step 2.
		13—15 V	Normal*2
		13 V or less	Go to Step 3.
2	Monitor the ALTT V PID using the M-MDS, or measure the voltage of PCM terminal 2AJ using a tester. Is the voltage between 13 and 15 V ?	Yes	Go to Step 4.
		No	PCM input error.
3	Monitor the ALTT V PID using the M-MDS, or measure the voltage of PCM terminal 2AJ using a tester. Is the voltage between 13 and 15 V ?	Yes	Go to Step 5.
		No	PCM input error.

Step	Inspection		Action
4	Monitor the ALTF PID using the M-MDS, or calculate the duty value of the PCM terminal 2AI using an oscilloscope. Is the duty value 100 % ?	 $\frac{A}{B}$ x 100 (%) = DUTY (%)	Yes: PCM input error. No: PCM, generator, or both are not normal.
5	Monitor the ALTF PID using the M-MDS, or calculate the duty value of the PCM terminal 2AI using an oscilloscope. Is the duty value 0 % ?	 $\frac{A}{B}$ x 100 (%) = DUTY (%)	Yes: PCM input error. No: PCM, generator, or both are not normal.

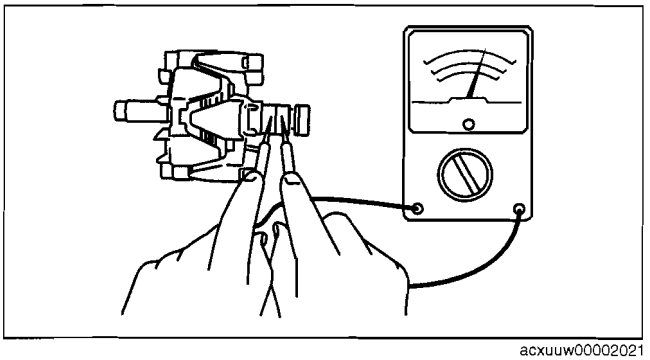
*1 : Headlights, blower motor, rear window defroster, and brake lights.
*2 : If the generator field coil duty value does not change when electrical loads (such as headlights, blower motor, rear window defroster, brake lights) are on or off, inspection with discharged battery is needed.

Generator Inner Parts

Rotor

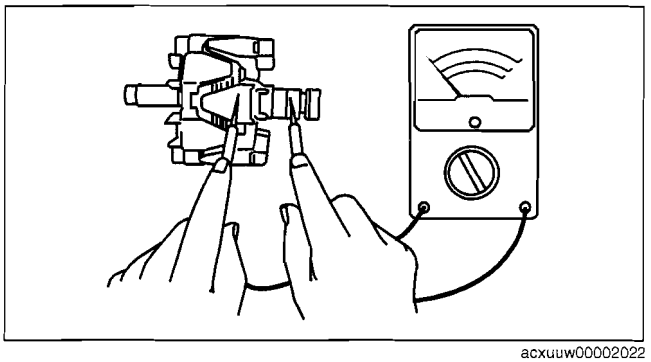
1. Measure the resistance between the slip rings using a tester.
   - If not within the specification, replace the rotor.

   Generator rotor resistance (between slip rings) [20 °C {68 °F}]
   2.0—2.3 ohm



acxuuw00002021

2. Verify that there is no continuity between the slip ring and core using a tester.
   - If there is continuity, replace the rotor.
3. Inspect the slip ring surface condition.
   - If the slip ring surface is rough, use a lathe or fine sandpaper to smooth it.



acxuuw00002022

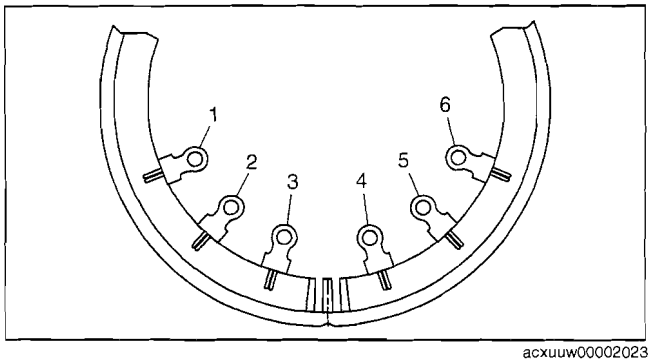
Stator coil

1. Verify that the continuity is as indicated in the table.
   - If there is any malfunction, replace the stator.

O—O : Continuity

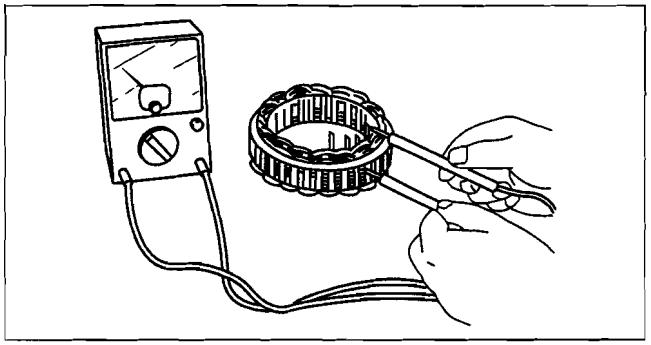
Terminal					
1	2	3	4	5	6
O—O					
O—		—O			
	O—	—O			
			O—	—O	
			O—	——	—O
				O—	—O

acxuuw00002024



acxuuw00002023

2. Verify that there is no continuity between the stator coil leads and core using a tester.
   - If there is continuity, replace the stator coil.

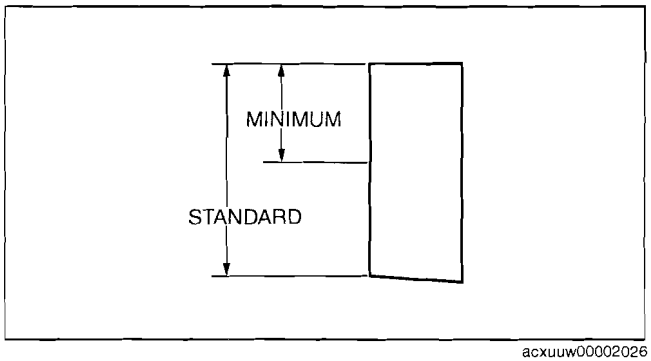


acxuuw00002025

Brush

1. Inspect brushes for wear.
   - If any brush is worn almost to or beyond the limit, replace all of the brushes.

Generator brush length
Standard: 22.5 mm {0.89 in}
Minimum: 5.0 mm {0.20 in}

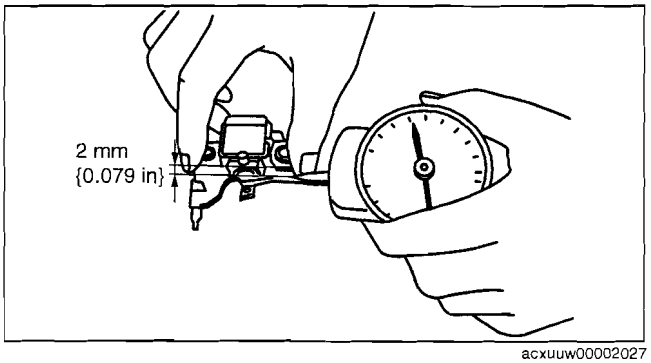


acxuuw00002026

Brush spring

1. Measure the force of the brush spring using a spring pressure gauge.
2. Read the spring pressure gauge at the brush tip projection of **2 mm {0.079 in}**.
   - Replace the brush spring if necessary.

Generator brush spring force
Standard: 4.1—5.3 N {0.42—0.54 kgf, 0.92—1.19 lbf}
Minimum: 1.7 N {0.17 kgf, 0.38 lbf}



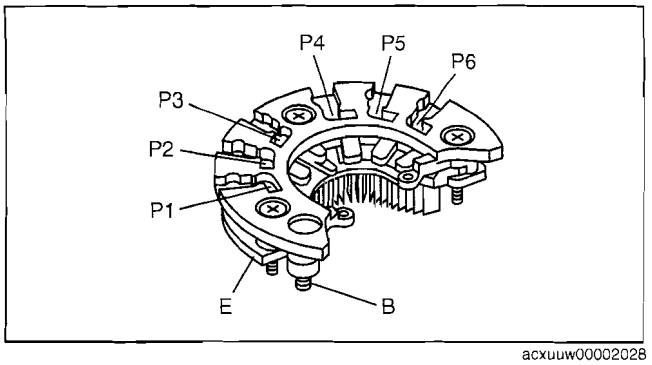
acxuuw00002027

Rectifier (Using an analog circuit tester)

1. Inspect for continuity of the diodes using an analog circuit tester.
   - If not as specified, replace the rectifier.

Specification

Negative	Positive	Continuity
E	P1, P2, P3, P4, P5, P6	Yes
B		No
P1, P2, P3, P4, P5, P6	E	No
	B	Yes



acxuuw00002028

Rectifier (Using a digital circuit tester)

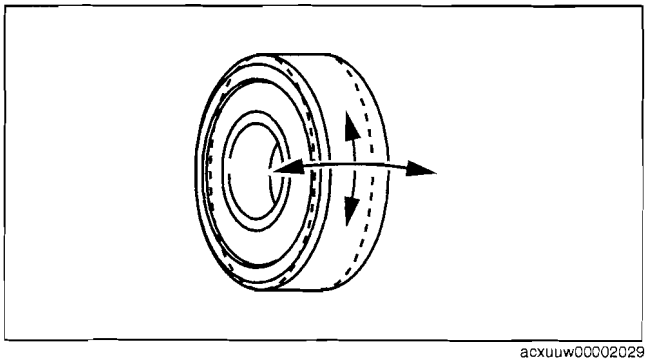
1. Inspect for continuity of the diodes using a digital circuit tester.
   - If not as specified, replace the rectifier.

Specification

Negative	Positive	Continuity
E	P1, P2, P3, P4, P5, P6	No
B		Yes
P1, P2, P3, P4, P5, P6	E	Yes
	B	No

Bearing

1. Inspect for abnormal noise, looseness, and sticking.
   - Replace the bearing if necessary.



acxuuw00002029

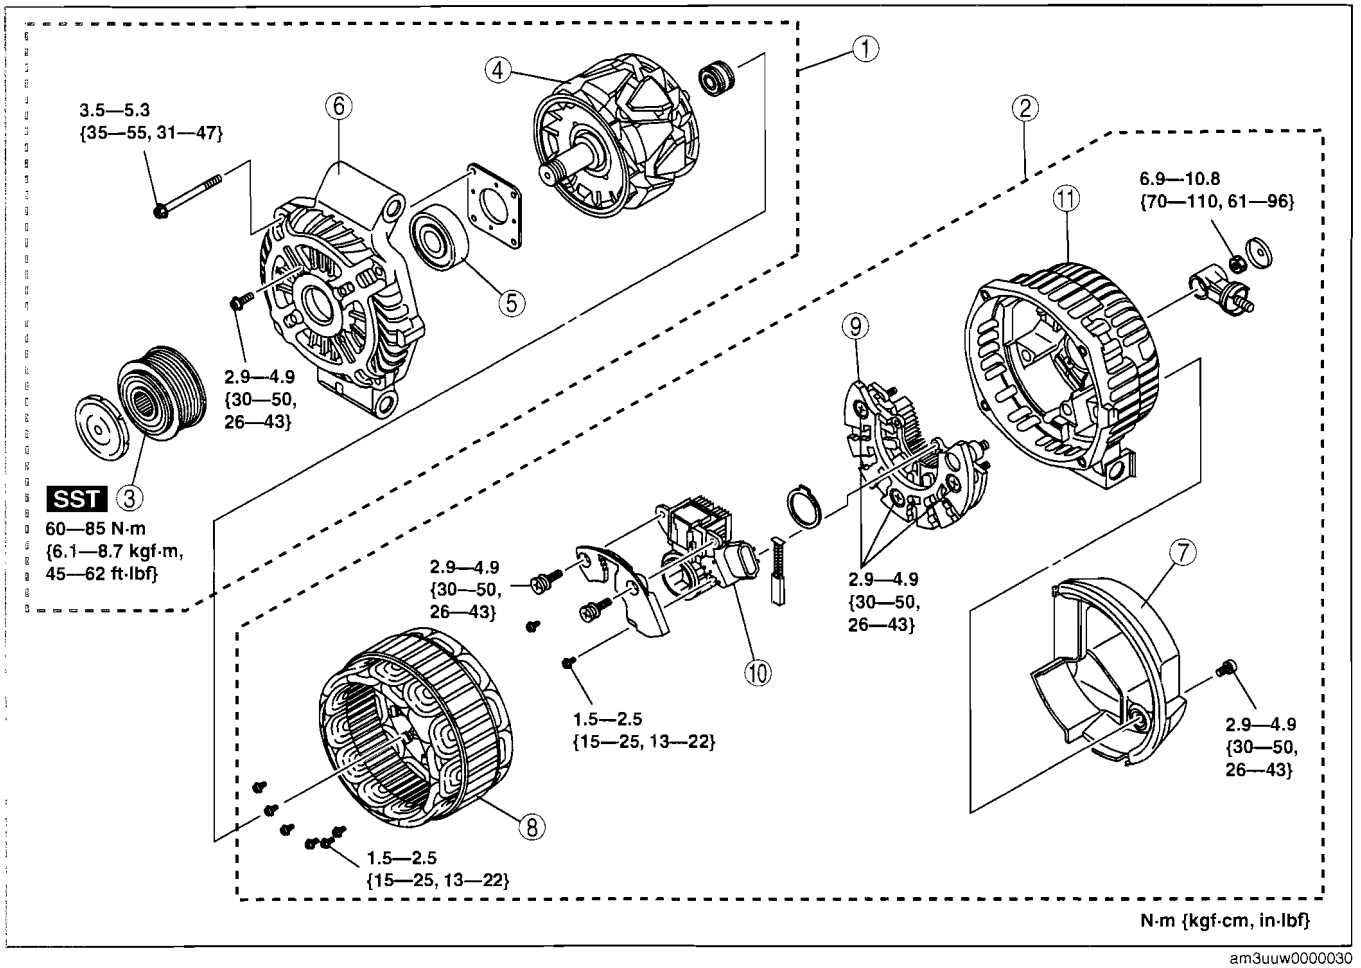
GENERATOR DISASSEMBLY/ASSEMBLY[L3 WITH TC]

id011739800400

Caution

- **Melt the solder quickly, otherwise the diodes (rectifier) and regulator will be damaged by excessive heat.**

1. Disassemble in the order indicated in the table.
2. Assemble in the reverse order of disassembly.



am3uuw0000030

1	Rotor component
2	Stator coil component
3	Pulley (See 01-17B-12 Pulley Disassembly/Assembly Note.)

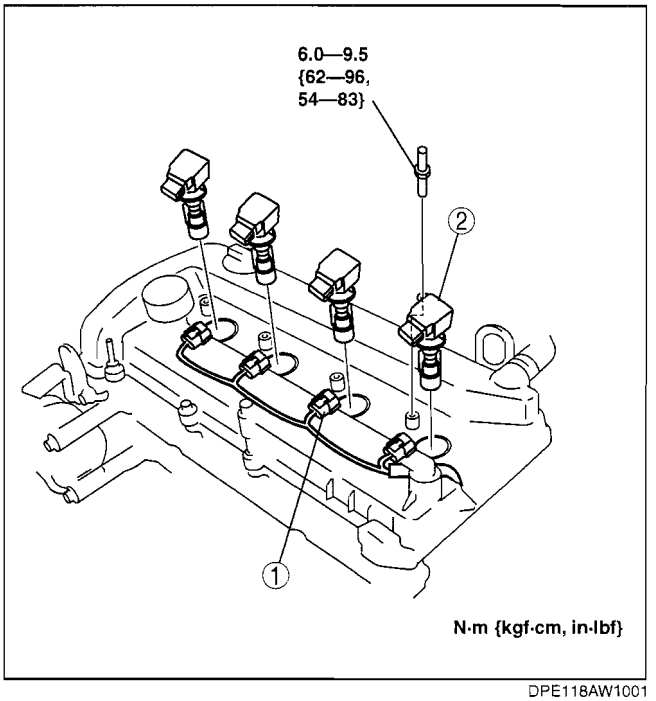
2	Ignition coil



DPE118AW1001

IGNITION COIL INSPECTION[LF, L3]

id0118a5800300

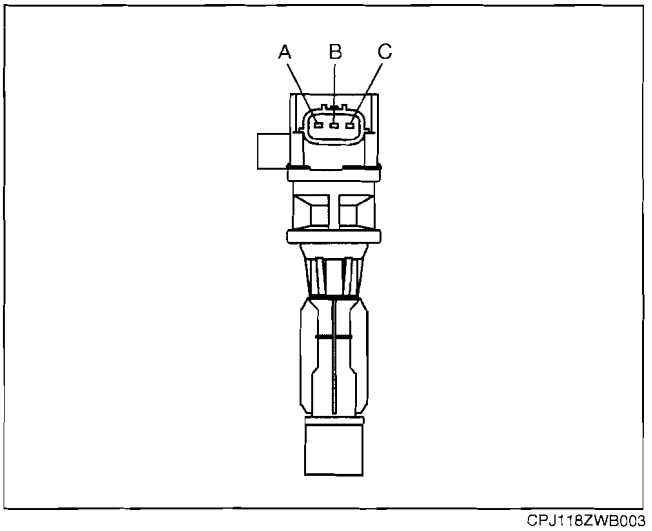
Ignition Coil Inspection

1. Perform the spark test and identify the malfunctioning cylinder.
2. Replace the ignition coil of the malfunctioning cylinder with that of a normal cylinder, and reperform the spark test.
   - If the spark is not normal due to a malfunctioning ignition coil, replace that ignition coil.
   - It is unlikely that all four ignition coils fail to operate properly. To prevent replacing a normal component, perform the above procedure, identify the malfunctioning ignition coil, and replace it.

Ignition Coil with Built-In Igniter Inspection

1. Disconnect the ignition coil connector.
2. Measure the resistance between each terminal on the ignition coil connector using an analog circuit tester.
   - If the measurement corresponds to the table, replace the ignition coil.

Item	Tester Connection Position		Condition
	Positive	Negative	
Terminal	C	A	0 ohm is not normal (∞ ohm is normal)
	A	C	
	C	B	
	B	C	
	A	B	∞ or 0 ohm is not normal (several kilohm is normal)
	B	A	



CPJ118ZWB003

SPARK PLUG REMOVAL/INSTALLATION[LF, L3]

id0118a5800400

Caution

- **If a spark plug that is not as specified is installed, engine performance will be deteriorated. Install only the specified spark plug when replacing.**

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the plug hole plate. (See 01-10A-3 PLUG HOLE PLATE REMOVAL/INSTALLATION[LF, L3].)
4. Remove the ignition coils. (See 01-18A-2 IGNITION COIL REMOVAL/INSTALLATION[LF, L3].)
5. Remove the spark plugs using a plug-wrench.
6. Install in the reverse order of removal.

Tightening torque

10—14 N·m {1.1—1.4 kgf·m, 8—10 ft·lbf}

SPARK PLUG INSPECTION[LF, L3]

id0118a5800500

Specification

Spark plug type

LFG1 18 110 (ILTR5A-13G), L3Y2 18 110

Plug Gap Inspection

Caution

- **To avoid possible damage to the tip, do not adjust the plug gap.**
- **To prevent damaging the tip, use a wire type plug gap gauge when inspecting the plug gap.**

1. Measure the spark plug gap using a wire type plug gap gauge.
   - If it exceeds the specification, replace the spark plug.

Standard plug gap
1.25—1.35 mm {0.050—0.053 in}

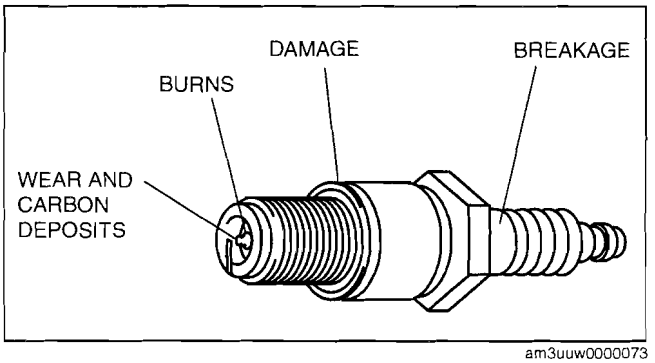
Cleaning

Caution
- **Carbon may adhere to the tip of the spark plug during vehicle delivery or repeated short distance driving during the winter time. If there is any malfunction such as rough idling or start difficulty due to carbon adhesion causing plug fouling, burn off the carbon by performing no-load racing of the engine.**
- **When performing the no-load racing, apply the side brake and foot brake, move the shift lever to neutral (MTX), or the selector lever to P position (ATX) to prevent an accident and serious injury.**
- **To avoid possible damage to the spark plug tip, do not use a wire brush for cleaning.**

Note
- To avoid possible damage to the tip, use gasoline to clean the spark plugs after removing dirt.
- If the accelerator pedal is depressed continuously for a specified time, the engine speed may decrease to the idle speed. This is due to the fuel cut control operation, which prevents overheating, and it does not indicate a malfunction.

1. If there is carbon adhering to the spark plug, perform no-load racing at **4,000 rpm** for **2 min**, **2 times**.

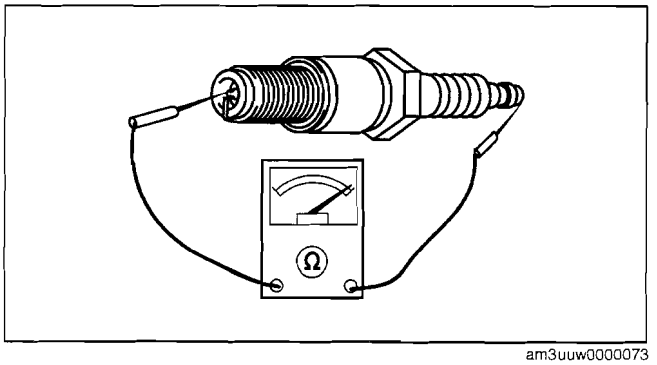
Visual inspection
1. Inspect the following items:
   - If any of the following malfunction are indicated, replace the spark plug.
     — Insulator breakage
     — Worn electrode
     — Damaged gasket
     — Badly burned insulator (sparking side)



am3uuw0000073

Resistance Inspection
1. Measure the resistance of the spark plug using a tester as shown in the figure.
   - If not within the specification, replace the spark plug.

Resistance
3.0—7.5 kilohms [25°C {77 °F}]



am3uuw0000073

1	Wiring harness bracket
2	Terminal B cable
3	Terminal S connector
4	Starter

STARTER INSPECTION[LF, L3]

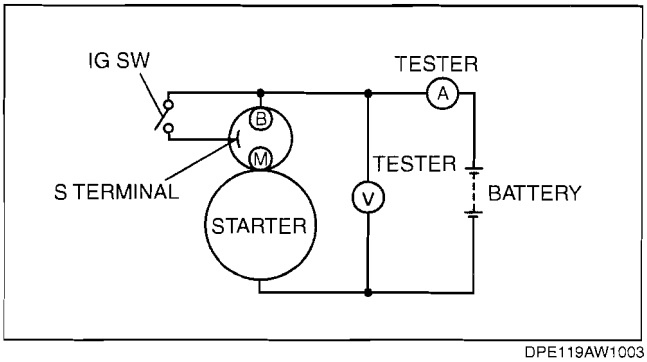
id0119a4800300

On-vehicle Inspection

1. Verify that the battery is fully charged.
2. The starter is normal if it rotates smoothly and without any noise when the engine is cranked.
   - If the starter does not operate, inspect the following:
     — Remove the starter, and inspect the starter unit.
     — Inspect the related wiring harnesses, the ignition switch, and the transaxle range switch (ATX).

No-load test

1. Verify that the battery is fully charged.
2. Connect the starter, battery, and a tester as shown in the figure.
3. Operate the starter and verify that it rotates smoothly.
   - If the starter does not rotate smoothly, inspect the starter unit.
4. Measure the voltage and current while the starter is operating.
   - If not within the specification, replace the starter.



DPE119AW1003

Standard current

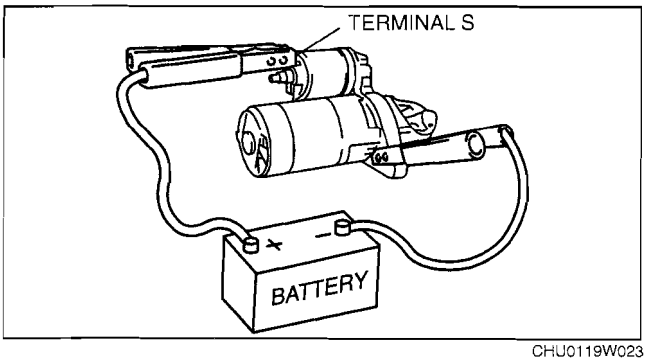
Item	
Voltage (V)	Current (A)
11	90 or less

Magnetic Switch Operation Inspection
Pull-out test

Note

- Depending on the battery charge condition, the starter motor pinion may rotate while in an extended state. This is due to current flowing to the starter motor through the pull-in coil to turn the starter motor, and does not indicate an abnormality.

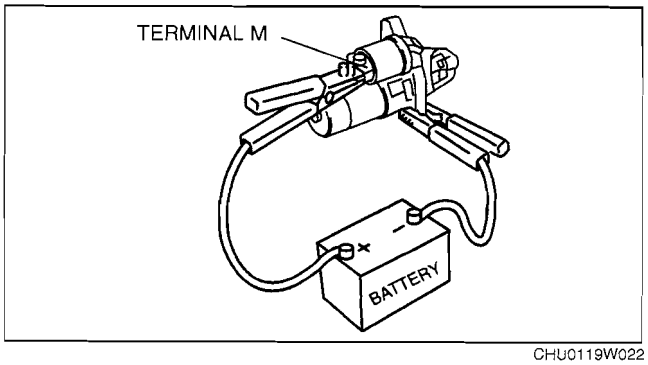
1. Verify that the starter motor pinion is extended while battery positive voltage is connected to terminal S and the starter body is grounded.
   - If the starter motor pinion is not extended, repair or replace the starter.



CHU0119W023

Return test

1. Disconnect the motor wire from terminal M.
2. Connect battery positive voltage to terminal M and ground the starter body.
3. Pull out the drive pinion with a screwdriver. Verify that it returns to its original position when released.
   - If does not return, repair or replace the starter.

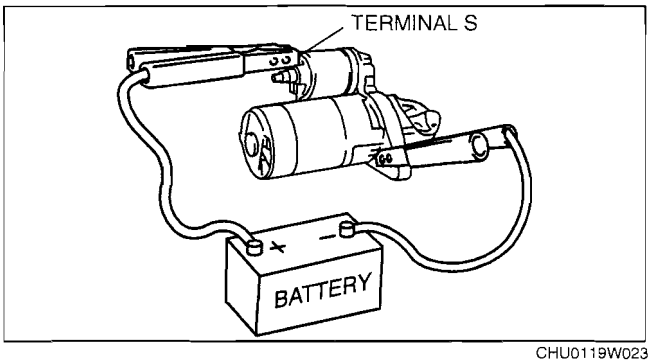


CHU0119W022

Pinion Gap Inspection

1. Pull out the drive pinion with battery positive voltage connected to terminal S and the starter body grounded.

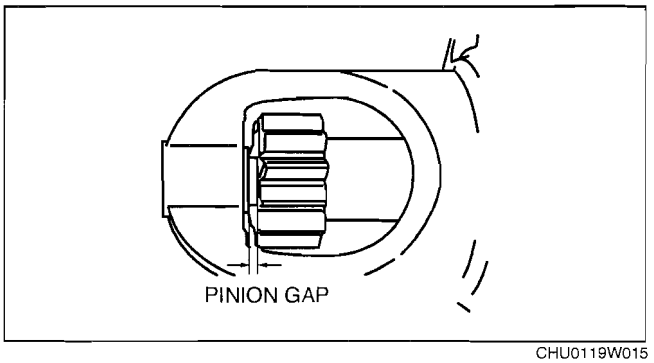
   Caution
   - **Applying power for more than 10 s can damage the starter. Do not apply power for more than 10 s.**



CHU0119W023

2. Measure the pinion gap while the drive pinion is extended.
   - If not as specified, adjust with an adjustment washer (between drive housing front cover and magnetic switch).

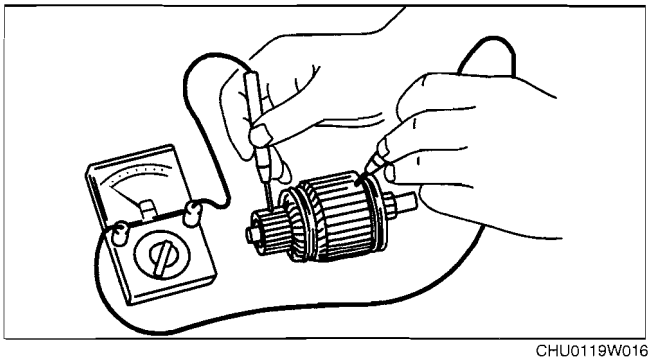
   Pinion gap
   0.5—2.0 mm {0.02—0.07 in}



CHU0119W015

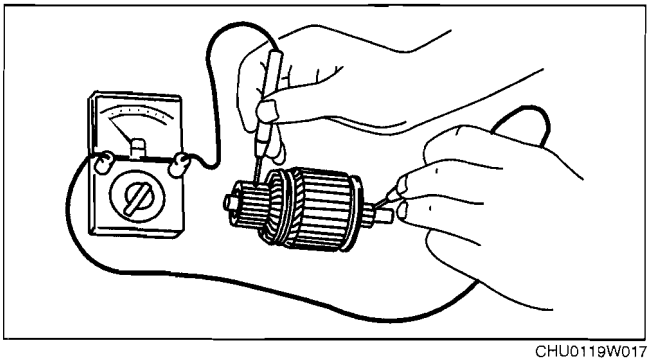
Starter Inner Parts Inspection
Armature

1. Verify that there is no continuity between the commutator and the core at each segment using a tester.
   - If there is continuity, replace the armature.



CHU0119W016

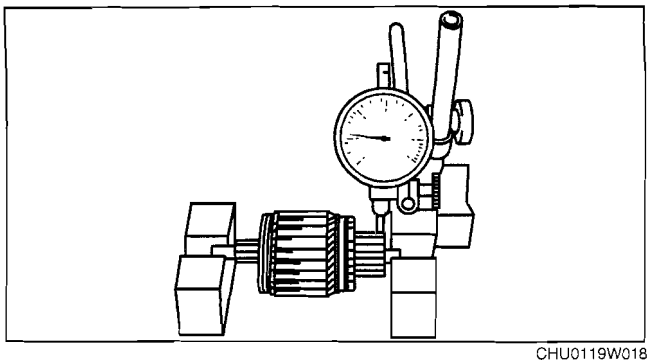
2. Verify that there is no continuity between the commutator and the shaft using a tester.
   - If there is continuity, replace the armature.



CHU0119W017

3. Place the armature on V-blocks, and measure the runout using a dial indicator.

Runout
0.05 mm {0.002 in} max.

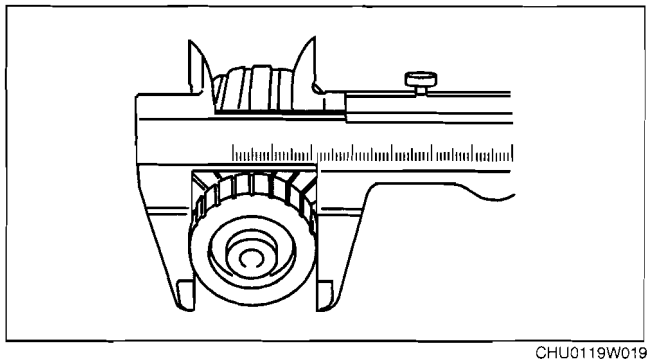


CHU0119W018

4. Measure the commutator diameter.
   - If not within the minimum specification, replace the armature.

Standard commutator diameter
29.4 mm {1.16 in}

Minimum commutator diameter
28.8 mm {1.13 in}

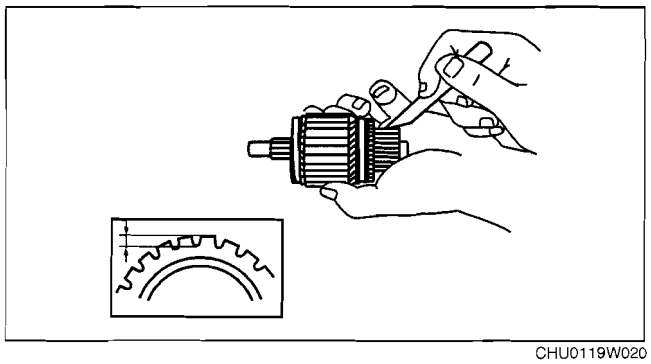


CHU0119W019

5. Measure the segment groove depth of commutator.
   - If not within the minimum specification, undercut the grooves to the standard depth.

Standard depth
0.4—0.6 mm {0.016—0.023 in}

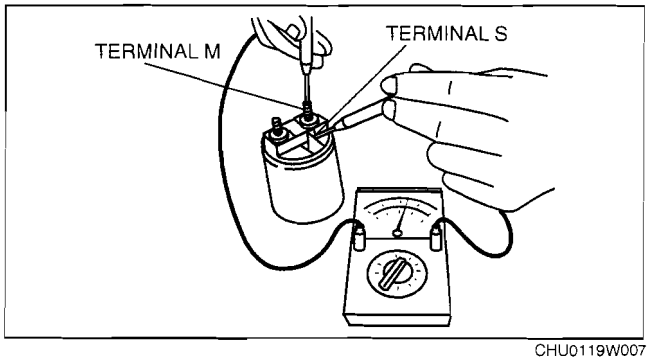
Minimum depth
0.2 mm {0.008 in}



CHU0119W020

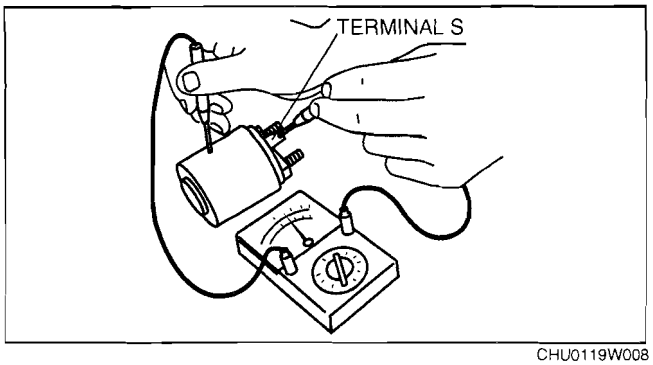
Magnetic switch

1. Inspect for continuity between terminals S and M using a tester.
   - If there is no continuity, replace the magnetic switch.
2. Inspect for continuity between terminal S and the body using a tester.
   - If there is no continuity, replace the magnetic switch.

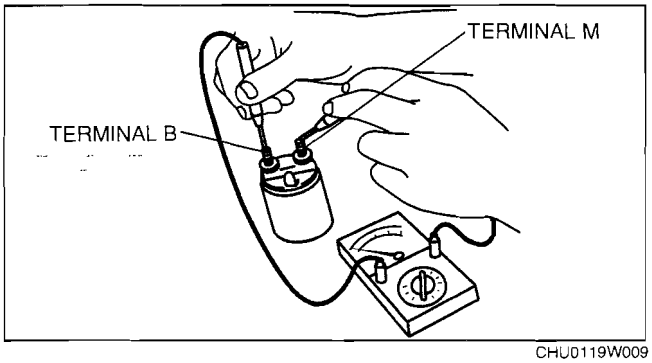


CHU0119W007

3. Verify that there is no continuity between terminals M and B using a tester.
   - If there is continuity, replace the magnetic switch.



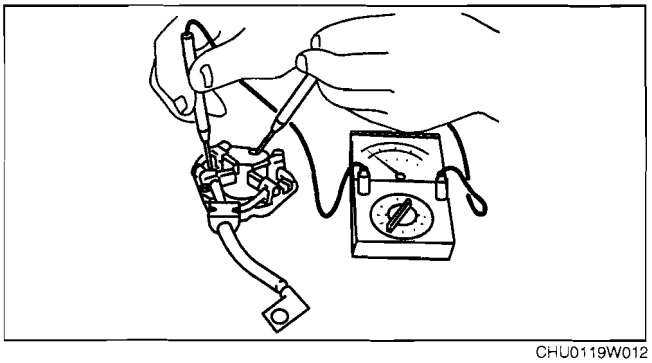
CHU0119W008



CHU0119W009

Brush and brush holder

1. Verify that there is no continuity between each insulated brush and plate using a tester.
   - If there is continuity, replace the brush holder.

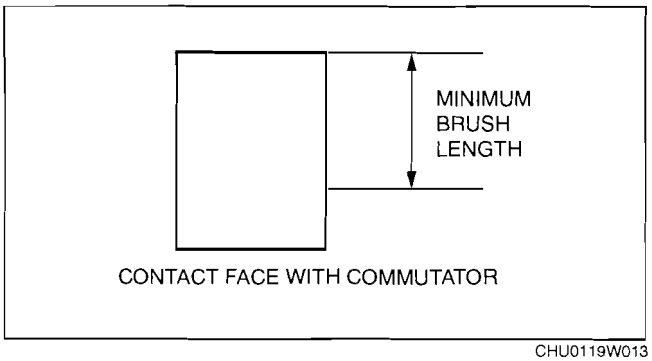


CHU0119W012

2. Measure the brush length.
   - If any brush is worn almost to or beyond the minimum specification, replace all of the brushes.

   Standard brush length
   12.3 mm {0.48 in}

   Minimum brush length
   7.0 mm {0.28 in}

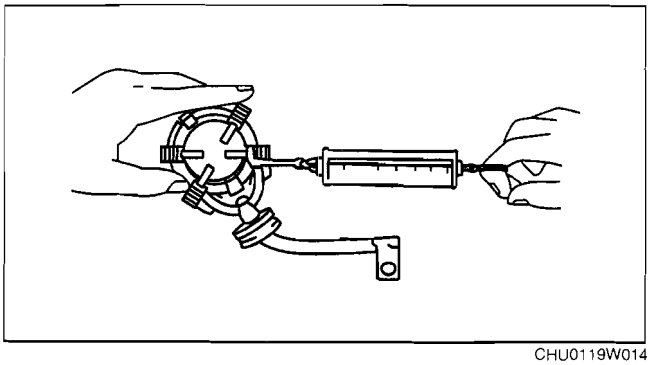


CHU0119W013

3. Measure the brush spring force using a spring balance.
   - If not within the minimum specification, replace the brush and brush holder component.

   Standard spring force
   18.3—24.9 N {1.87—2.53 kgf, 4.12—5.59 lbf}

   Minimum spring force
   5.9 N {0.6 kgf, 1.3 lbf}



CHU0119W014

STARTER DISASSEMBLY/ASSEMBLY[LF, L3]

PCM REMOVAL/INSTALLATION[LF, L3]

id0140a6802400

1. When replacing the PCM, perform the following:
   - PCM configuration (See 01-40A-45 PCM CONFIGURATION[LF, L3].)
2. Remove the battery cover, battery duct, battery and battery tray with PCM. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
3. Disconnect the PCM connector.
4. Remove the PCM from the battery tray.
5. When replacing the PCM on the vehicles, perform the following:
   - PCM parameter reset (See 09-14-17 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING.)
6. Install in the reverse order of removal.

2AY	EGR valve #3 coil control	EGR valve (terminal B)	Ignition switch to the ON position	B+	• EGR valve • Related wiring harness
			Idle	B+	
2AZ	Fuel injection (#4)	Fuel injector No.4	• Inspect using the wave profile. (See 01-40A-33 Inspection Using An Oscilloscope (Reference).)		• Fuel injector No.4 • Related wiring harness
2BA	—	—	—	—	—
2BB	Fuel injection (#1)	Fuel injector No.1	• Inspect using the wave profile. (See 01-40A-33 Inspection Using An Oscilloscope (Reference).)		• Fuel injector No.1 • Related wiring harness
2BC	Fuel injection (#2)	Fuel injector No.2	• Inspect using the wave profile. (See 01-40A-33 Inspection Using An Oscilloscope (Reference).)		• Fuel injector No.2 • Related wiring harness
2BD	Fuel injection (#3)	Fuel injector No.3	• Inspect using the wave profile. (See 01-40A-33 Inspection Using An Oscilloscope (Reference).)		• Fuel injector No.3 • Related wiring harness
2BE	IGT1	Ignition coil (No.1 cylinders)	• Inspect using the wave profile. (See 01-40A-33 Inspection Using An Oscilloscope (Reference).)		• Ignition coil • Related wiring harness
2BF	IGT2	Ignition coil (No.2 cylinders)	• Inspect using the wave profile. (See 01-40A-33 Inspection Using An Oscilloscope (Reference).)		• Ignition coil • Related wiring harness
2BG	IGT3	Ignition coil (No.3 cylinders)	• Inspect using the wave profile. (See 01-40A-33 Inspection Using An Oscilloscope (Reference).)		• Ignition coil • Related wiring harness
2BH	IGT4	Ignition coil (No.4 cylinders)	• Inspect using the wave profile. (See 01-40A-33 Inspection Using An Oscilloscope (Reference).)		• Ignition coil • Related wiring harness

Except for California emission regulation applicable model with LF MTX and L3

Note

- The PCM terminal voltage can vary with the conditions when measuring and changes due to aged deterioration on the vehicle, causing false diagnosis. Therefore determine comprehensively where the malfunction occurs among the input systems, output systems, and the PCM.

			Engine speed: below 4,750 rpm [LF]/4,600 rpm [L3]	Below 1.0	
			Engine speed: above 4,750 rpm [LF]/4,600 rpm [L3]	B+	
2K	EGR valve #1 coil control	EGR valve (terminal E)	Ignition switch to the ON position	Below 1.0	• EGR valve • Related wiring harness
			Idle	Below 1.0	
2L	EGR valve #3 coil control	EGR valve (terminal B)	Ignition switch to the ON position	B+	• EGR valve • Related wiring harness
			Idle	B+	
2M	—	—	—	—	—
2N	—	—	—	—	—
2O	—	—	—	—	—
2P	Sensor GND	Variable tumble shutter valve switch, ECT sensor, MAP sensor, HO2S (middle, rear)	Under any condition	Below 1.0	• Variable tumble shutter valve switch • ECT sensor • MAP sensor • HO2S (middle, rear) • Related wiring harness
2Q	Rear HO2S	HO2S (rear)	Ignition switch to the ON position	Approx. 0	• HO2S (rear) • Related wiring harness
			Idle (after warm up)	Alternates between 0 and 1.0	
2R	—	—	—	—	—
2S	CMP	CMP sensor	• Inspect using the wave profile. (See 01-40A-33 Inspection Using An Oscilloscope (Reference).)		• CMP sensor • Related wiring harness
2T	—	—	—	—	—
2U	Knocking (+)	KS	Ignition switch to the ON position (Use digital type voltmeter, because measurement voltage will be detected less than true voltage when using analog type voltmeter)	Approx. 4.3	• KS • Related wiring harness
2V	Knocking (–)	KS	Ignition switch to the ON position (Use digital type voltmeter, because measurement voltage will be detected less than true voltage when using analog type voltmeter)	Below 1.0	• KS • Related wiring harness
2W	CKP	CKP sensor	• Inspect using the wave profile. (See 01-40A-33 Inspection Using An Oscilloscope (Reference).)		• CKP sensor • Related wiring harness
2X	GND (shield)	KS harness, HO2S (front, middle, rear) harness, GND	Under any condition	Below 1.0	• Related wiring harness
2Y	—	—	—	—	—
2Z	HO2S (front) power supply	HO2S (front)	Idle (after warm up)	Approx. 4.1	• HO2S (front) • Related wiring harness
2AA	—	—	—	—	—

Terminal	Signal	Connected to	Test condition		Voltage (V)	Inspection item
2AB	—	—	—		—	—
2AC	HO2S (front) VSIP	HO2S (front)	Idle (after warm up)		Approx. 4.0	• HO2S (front) • Related wiring harness
2AD	HO2S (front) IP+	HO2S (front)	When the engine speed is increased, the voltage increased.			• HO2S (front) • Related wiring harness
2AE	Variable tumble shutter valve monitor	Variable tumble shutter valve switch	ECT above 63 °C {145 °F} while idling.		B+	• Variable tumble shutter valve switch • Related wiring harness
			ECT below 63 °C {145 °F} and engine speed below 3,750 rpm		Below 1.0	
2AF	—	—	—		—	—
2AG	Manifold absolute pressure	MAP sensor	Ignition switch to the ON position (at sea level)		Approx. 4.1	• MAP sensor • Related wiring harness
			Idle		Approx. 1.4	
2AH	ECT	ECT sensor	Ignition switch to the ON position	IAT 20 °C {68 °F}	3.04—3.14	• ECT sensor • Related wiring harness
				IAT 40 °C {104 °F}	2.09—2.21	
				IAT 60 °C {140 °F}	1.29—1.39	
				IAT 80 °C {176 °F}	0.76—0.83	
				IAT 100 °C {212 °F}	0.45—0.49	
2AI	Generator field coil control	Generator (terminal D)	• Inspect using the wave profile. (See 01-40A-33 Inspection Using An Oscilloscope (Reference).)			• Following PIDs: IAT, ECT, RPM, VPWR, ALTT V • Generator • Related wiring harness
2AJ	Generator output voltage	Generator (terminal P)	• Inspect using the wave profile. (See 01-40A-33 Inspection Using An Oscilloscope (Reference).)			• Generator • Related wiring harness
2AK	TP (No. 1)	TP sensor No. 1	Ignition switch to the ON position	APP closed	0.53—1.00	• TP sensor • Related wiring harness
				APP open	4.25—4.75	
2AL	TP (No. 2)	TP sensor No. 2	Ignition switch to the ON position	APP closed	4.00—4.47	• TP sensor • Related wiring harness
				APP open	0.25—0.75	
2AM	Constant voltage (Vref)	CMP sensor	Ignition switch to the ON position		B+	• CMP sensor • Related wiring harness
2AN	—	—	—		—	—
2AO	Constant voltage (Vref)	TP sensor	Ignition switch to the ON position		Approx. 5.0	• TP sensor • Related wiring harness
2AP	Sensor GND	TP sensor	Under any condition		Below 1.0	• TP sensor • Related wiring harness
2AQ	Constant voltage (Vref)	CKP sensor	Ignition switch to the ON position		B+	• CKP sensor • Related wiring harness
2AR	Constant voltage (Vref)	MAP sensor, variable tumble shutter valve switch	Ignition switch to the ON position		Approx. 5.0	• MAP sensor • Variable tumble shutter valve switch • Related wiring harness

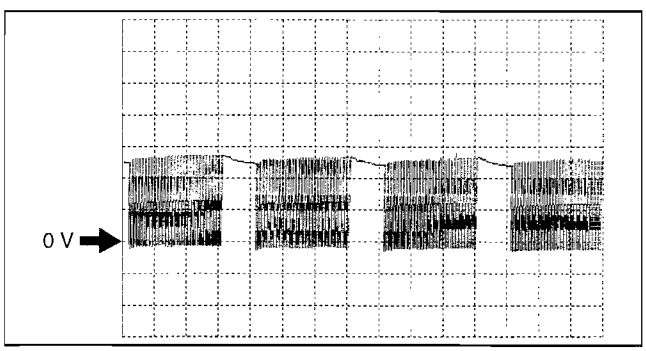
Terminal	Signal	Connected to	Test condition	Voltage (V)	Inspection item
2AS	—	—	—	—	—
2AT	IGT4	Ignition coil (No.4 cylinders)	• Inspect using the wave profile. (See 01-40A-33 Inspection Using An Oscilloscope (Reference).)		• Ignition coil • Related wiring harness
2AU	—	—	—	—	—
2AV	—	—	—	—	—
2AW	IGT2	Ignition coil (No.2 cylinders)	• Inspect using the wave profile. (See 01-40A-33 Inspection Using An Oscilloscope (Reference).)		• Ignition coil • Related wiring harness
2AX	IGT3	Ignition coil (No.3 cylinders)	• Inspect using the wave profile. (See 01-40A-33 Inspection Using An Oscilloscope (Reference).)		• Ignition coil • Related wiring harness
2AY	—	—	—	—	—
2AZ	Fuel injection (#4)	Fuel injector No.4	• Inspect using the wave profile. (See 01-40A-33 Inspection Using An Oscilloscope (Reference).)		• Fuel injector No.4 • Related wiring harness
2BA	IGT1	Ignition coil (No.1 cylinders)	• Inspect using the wave profile. (See 01-40A-33 Inspection Using An Oscilloscope (Reference).)		• Ignition coil • Related wiring harness
2BB	Fuel injection (#1)	Fuel injector No.1	• Inspect using the wave profile. (See 01-40A-33 Inspection Using An Oscilloscope (Reference).)		• Fuel injector No.1 • Related wiring harness
2BC	Fuel injection (#2)	Fuel injector No.2	• Inspect using the wave profile. (See 01-40A-33 Inspection Using An Oscilloscope (Reference).)		• Fuel injector No.2 • Related wiring harness
2BD	Fuel injection (#3)	Fuel injector No.3	• Inspect using the wave profile. (See 01-40A-33 Inspection Using An Oscilloscope (Reference).)		• Fuel injector No.3 • Related wiring harness
2BE	Rear HO2S heater control	HO2S (Rear) heater	• Inspect using the wave profile. (See 01-40A-33 Inspection Using An Oscilloscope (Reference).)		• HO2S (Rear) heater • Related wiring harness
2BF	—	—	—	—	—
2BG	Front HO2S heater control	HO2S (Front) heater	• Inspect using the wave profile. (See 01-40A-33 Inspection Using An Oscilloscope (Reference).)		• HO2S (Front) heater • Related wiring harness
2BH	—	—	—	—	—

*1 : ATX
*2 : MTX

Inspection Using An Oscilloscope (Reference)
Shift solenoid A signal
PCM terminals
- 1A*1, 1B*2 (+)—body ground (–)

Oscilloscope setting
- 5 V/DIV (Y), 5 ms/DIV (X), DC range

Vehicle condition
- 4GR

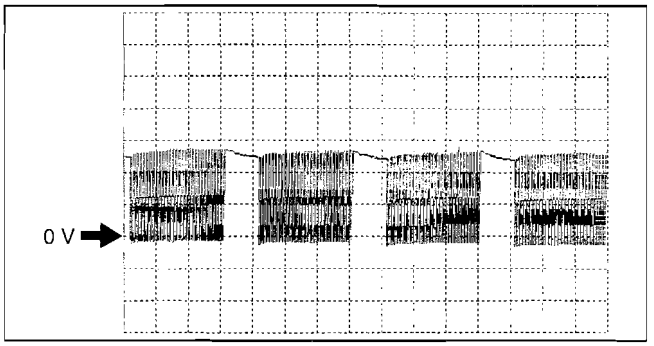


am3uuw0000054

Shift solenoid B signal
PCM terminals
- 1E*1, 1C*2 (+)—body ground (–)

Oscilloscope setting
- 5 V/DIV (Y), 5 ms/DIV (X), DC range

Vehicle condition
- 1GR

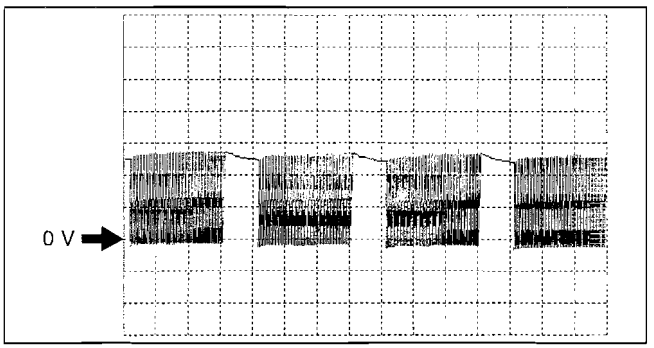


am3uuw0000055

Shift solenoid C signal
PCM terminals
- 1F*1, 1D*2 (+)—body ground (–)

Oscilloscope setting
- 5 V/DIV (Y), 5 ms/DIV (X), DC range

Vehicle condition
- 1GR or 2GR

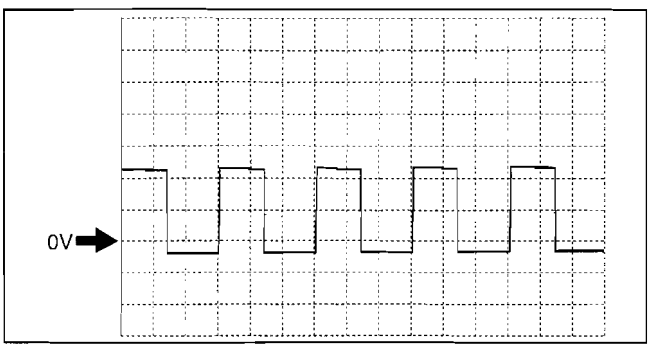


am3uuw0000055

Pressure control solenoid (+) signal
PCM terminals
- 1M*1, 1G*2 (+)—body ground (–)

Oscilloscope setting
- 5 V/DIV (Y), 1 ms/DIV (X), DC range

Vehicle condition
- All of the following conditions are met.
  - — Ignition switch is turned to the ON position. (engine off)
  - — P or N position
  - — CTP

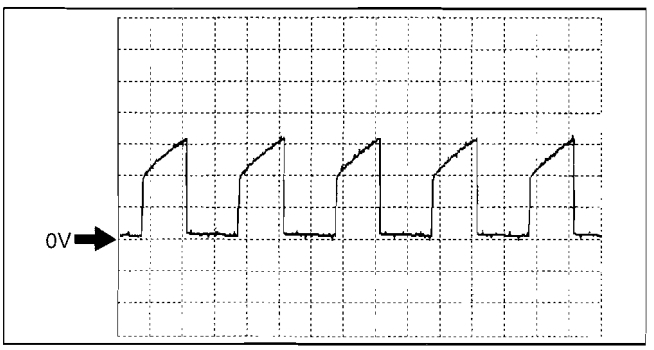


am3uuw0000055

Pressure control solenoid (–) signal
PCM terminals
- 1N*1, 1H*2 (+)—body ground (–)

Oscilloscope setting
- 200 mV/DIV (Y), 1 ms/DIV (X), DC range

Vehicle condition
- All of the following conditions are met.
  - — Ignition switch is turned to the ON position. (engine off)
  - — P or N position
  - — CTP

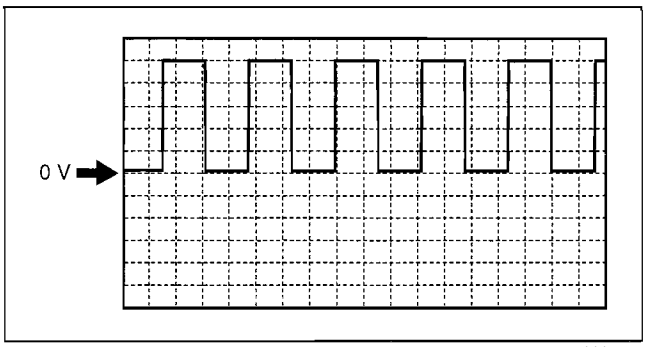


am3uuw0000055

Vehicle speed signal (ATX)
PCM terminals
- 1AW*1, 1J*2 (+)—body ground (–)

Oscilloscope setting
- 1 V/DIV (Y), 2.5 ms/DIV (X), DC range

Vehicle condition
- Vehicle speed is 32 km/h {20 mph}.

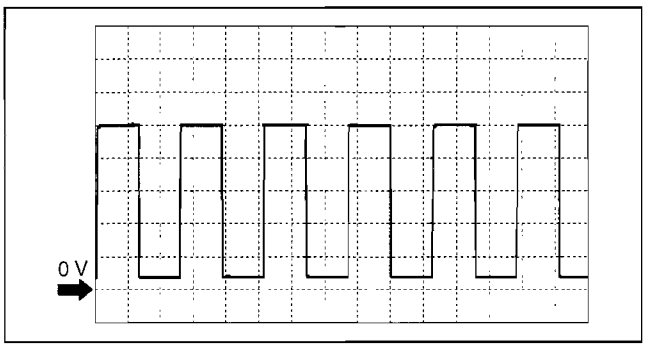


am3uuw0000055

Vehicle speed signal (MTX)
PCM terminals
- 2M (+)—2N (–)

Oscilloscope setting
- 1 V/DIV (Y), 10 ms/DIV (X), DC range

Vehicle condition
- Vehicle speed is 10 km/h {6.2 mph}.

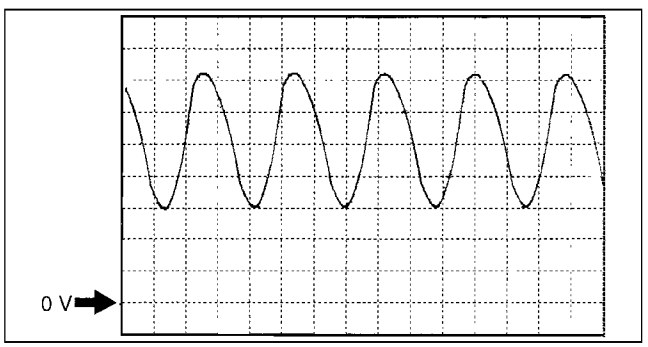


am3uuw0000055

Input/turbine speed sensor (+) signal
PCM terminals
- 1AO*1, 1M*2 (+)—body ground (–)

Oscilloscope setting
- 500 mV/DIV (Y), 1 ms/DIV (X), DC range

Vehicle condition
- Idle after warm-up (no load, P/S off, A/C off)

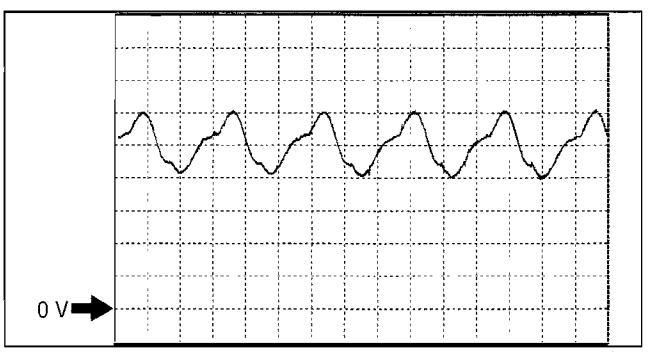


am3uuw0000055

Input/turbine speed sensor (–) signal
PCM terminals
- 1AG*1, 1Q*2 (+)—body ground (–)

Oscilloscope setting
- 500 mV/DIV (Y), 1 ms/DIV (X), DC range

Vehicle condition
- Idle after warm-up (no load, P/S off, A/C off)

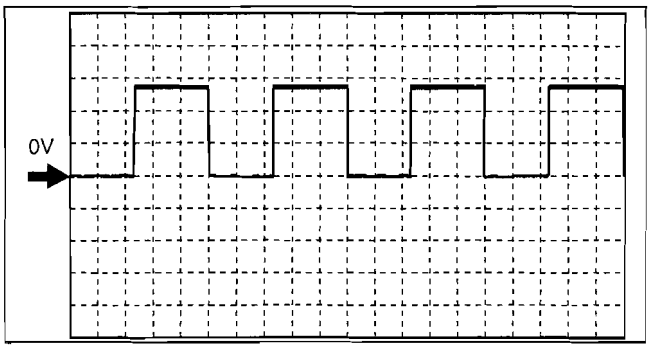


am3uuw0000055

Cooling fan control signals
PCM terminals
- 1Y*1, 1W*3, 1R*4(+)—body ground (–)

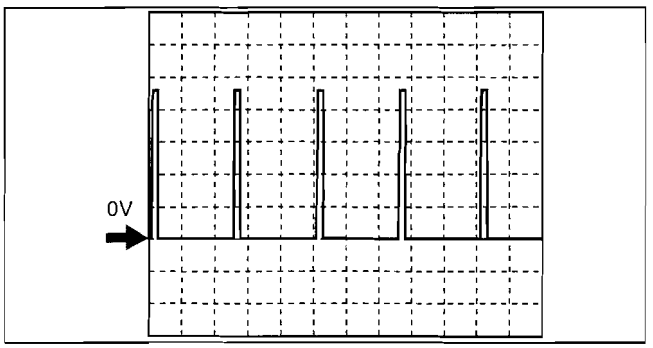
Oscilloscope setting
- 5 V/DIV (Y), 1 ms/DIV (X), DC range

Vehicle condition
- Idle after warm up (engine speed approx. 700 rpm, A/C ON)



am3uuw0000055

APP signal
Accelerator pedal is released

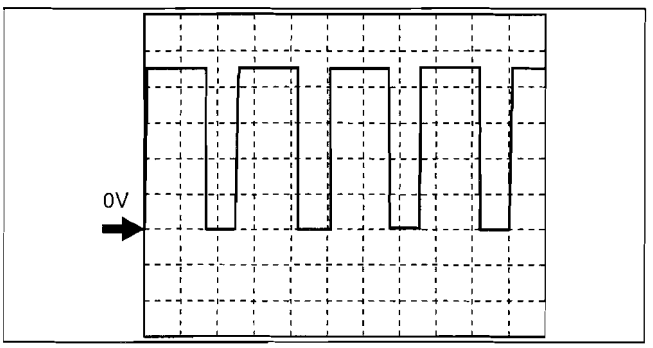


c3u0140w016

Accelerator pedal is depressed
PCM terminals
- 1AC*1, 1AL*3, 1AO*4(+)—body ground (–)

Oscilloscope setting
- 2.5 V/DIV (Y), 2 ms/DIV (X), DC range

Vehicle condition
- Ignition switch is turned to the ON position. (engine off)

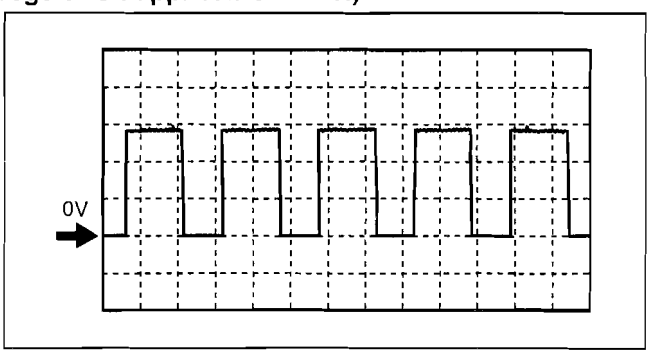


c3u0140w017

HO2S (front) heater control signal (California emission regulation applicable model)
PCM terminals
- 2BG(+)—body ground (–)

Oscilloscope setting
- 5 V/DIV (Y), 50 ms/DIV (X), DC range

Vehicle condition
- Idle after warm up (no load, P/S off, A/C off)

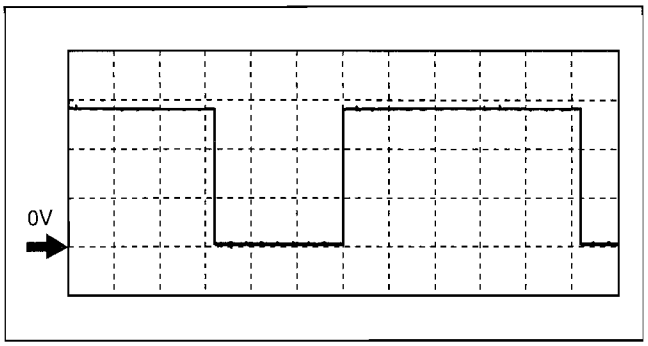


am3uuw0000055

HO2S (front) heater control signal (except for California emission regulation applicable model)
PCM terminals
- 2G*3, 2BG*4(+)—body ground (–)

Oscilloscope setting
- 5 V/DIV (Y), 125 ms/DIV (X), DC range

Vehicle condition
- Idle after warm up (no load, P/S off, A/C off)

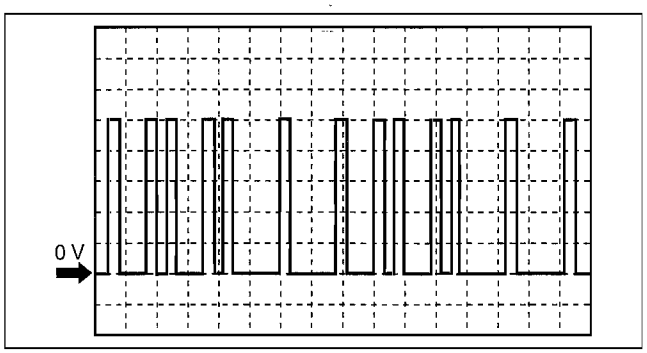


am3uuw0000056

CMP sensor signal
PCM terminals
- 2S*1*4, 2V*3(+)—body ground(–)

Oscilloscope setting
- 1 V/DIV (Y), 25 ms/DIV (X), DC range

Vehicle condition
- Idle after warm up (no load, P/S off, A/C off)

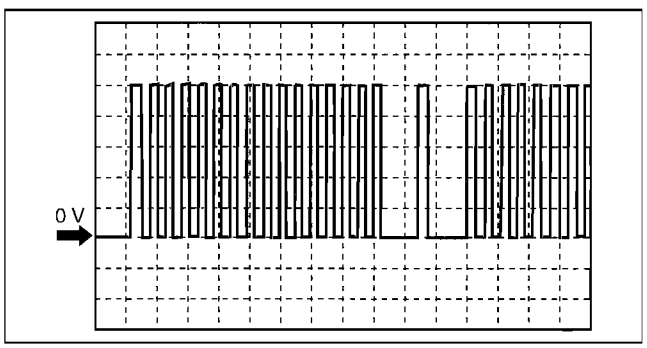


am3uuw0000056

CKP sensor signal
PCM terminals
- 2W*1*4, 2U*3(+)—body ground(–)

Oscilloscope setting
- 1 V/DIV (Y), 2.5 ms/DIV (X), DC range

Vehicle condition
- Idle after warm up (no load, P/S off, A/C off)

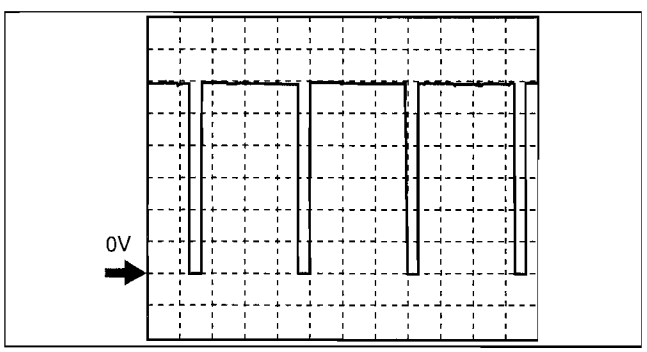


am3uuw0000056

OCV signal
PCM terminals
- 2E*1*4, 2AF*3(+)—body ground (–)

Oscilloscope setting
- 2.5 V/DIV (Y), 1 ms/DIV (X), DC range

Vehicle condition
- Idle after warm up (no load, P/S off, A/C off)

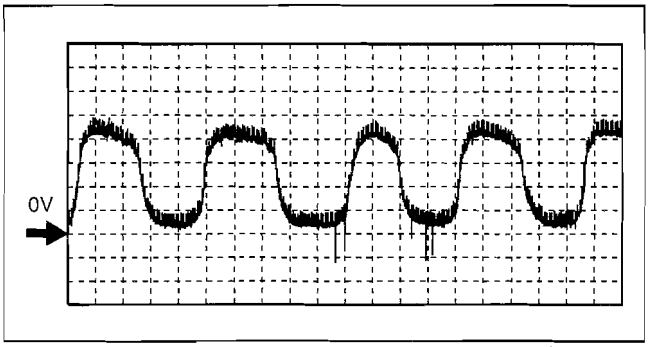


am3uuw0000056

HO2S (front) signal (except for California emission regulation applicable model)
PCM terminals
- 2AG(+)—body ground (–)

Oscilloscope setting
- 0.2 V/DIV (Y), 500 ms/DIV (X), DC range

Vehicle condition
- Idle after warm up (no load, P/S off, A/C off)

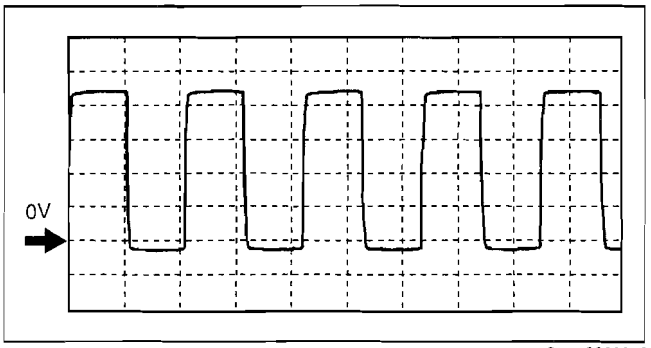


am3uuw0000056

Generator output voltage signal
PCM terminals
- 2AJ*1*4, 2AM*3 (+)—body ground (–)

Oscilloscope setting
- 2 V/DIV (Y), 2.5 ms/DIV (X), DC range

Vehicle condition
- Idle after warm up (no load, P/S off, A/C off)

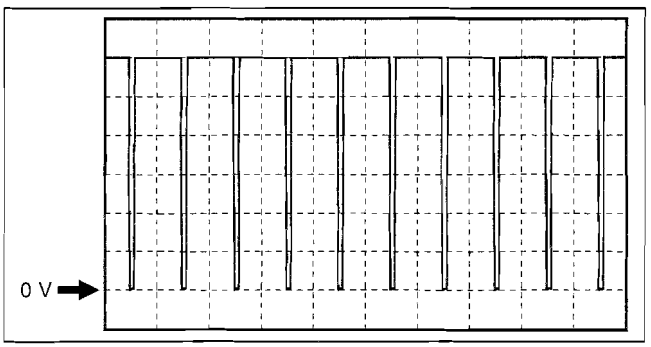


am3uuw0000056

Purge control signal
PCM terminals
- 2C*1*4, 2AN*3 (+)—body ground (–)

Oscilloscope setting
- 2 V/DIV (Y), 0.1 s/DIV (X), DC range

Vehicle condition
- Idle after warm up (no load, P/S off, A/C off)

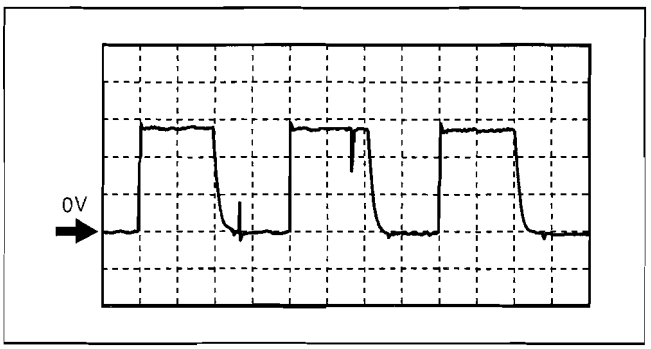


am3uuw0000056

Generator field coil control signal
PCM terminals
- 2AI*1*4, 2AQ*3(+)—body ground (–)

Oscilloscope setting
- 0.5 V/DIV (Y), 1 ms/DIV (X), DC range

Vehicle condition
- Idle after warm up (no load, P/S off, A/C off)



am3uuw0000056

Fuel injection control

PCM terminals

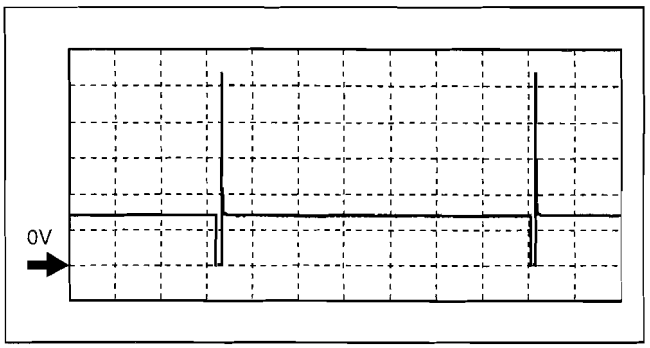
- Fuel injection No.1: 2BB(+)—body ground (–)
- Fuel injection No.2: 2BC(+)—body ground (–)
- Fuel injection No.3: 2BD(+)—body ground (–)
- Fuel injection No.4: 2AZ(+)—body ground (–)

Oscilloscope setting

- 10 V/DIV (Y), 25 ms/DIV (X), DC range

Vehicle condition

- Idle after warm up (no load, P/S off, A/C off)



am3uuw0000056

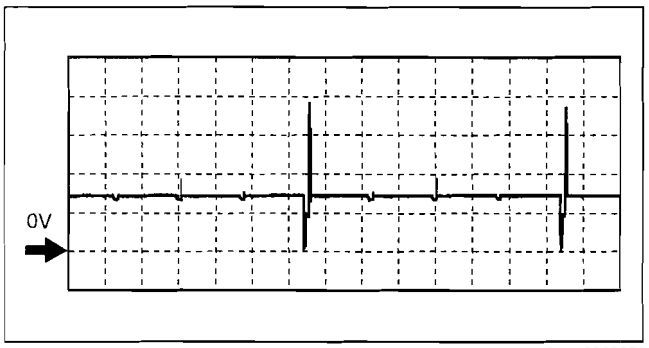
IGT1, IGT2, IG3, IG4 control signals

PCM terminals*1*4

- IGT1 (No.1): 2BA(+)—body ground (–)
- IGT2 (No.2): 2AW(+)—body ground (–)
- IGT3 (No.3): 2AX(+)—body ground (–)
- IGT4 (No.4): 2AT(+)—body ground (–)

PCM terminals*3

- IGT1 (No.1): 2BE(+)—body ground (–)
- IGT2 (No.2): 2BF(+)—body ground (–)
- IGT3 (No.3): 2BG(+)—body ground (–)
- IGT4 (No.4): 2BH(+)—body ground (–)



am3uuw0000056

Oscilloscope setting

- 10 V/DIV (Y), 25 ms/DIV (X), DC range

Vehicle condition

- Idle after warm up (engine speed approx. 650 rpm, no load)

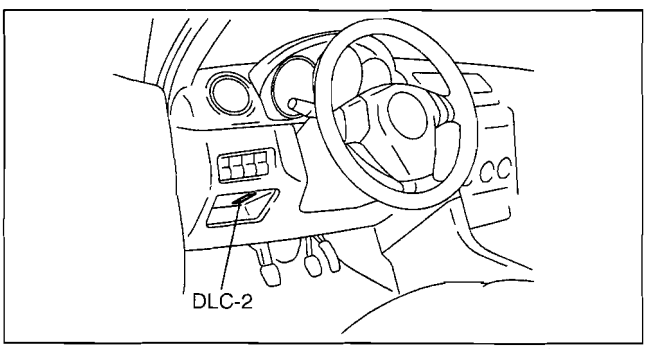
*1 : California emission regulation applicable model
*2 : Except for California emission regulation applicable model
*3 : Except for California emission regulation applicable LF ATX model
*4 : except for California emission regulation applicable LF MTX, L3 model

Using SST (M-MDS)

Note

- PIDs for the following parts are not available on this model. Go to the appropriate part inspection page.
  - — CMP sensor (See 01-40A-70 CAMSHAFT POSITION (CMP) SENSOR INSPECTION[LF, L3].)
  - — Main relay (See 09-21-3 RELAY INSPECTION.)

1. Connect the **SST** (M-MDS) to the DLC-2.
2. Turn the ignition switch to ON position.
3. Measure the PID value.
   - If PID value is not within the specification, follow the instructions in Action column.



am3uuw0000057

Note

- The PID/DATA MONITOR function monitors the calculated value of the input/output signals in the PCM. Therefore, an output device malfunction is not directly indicated as a malfunction of the monitored value for the output device. If a monitored value of an output device is out of specification, inspect the monitored value of the input device related to the output control.
- The simulation items that are used in the ENGINE CONTROL SYSTEM OPERATION INSPECTION are as follows.
  - — ACCS, ALTF, ARPMDES, EVAPCP, FAN_DUTY, FP, FUELPW1, GENVDSD, HTR11, HTR12, HTR13*1, IMRC, IMTV, INJ_1, INJ_2, INJ_3, INJ_4, LPS*2, SEGRP, SOL 12S*2, SOL 23S*2, SSA/SS1*2, SSB/SS2*2, SSC/SS3*2, test, VT DUTY1 Wt

*1 California emission regulation applicable model
*2 LF ATX

PID/DATA monitor table (reference)

Monitor item (Definition)	Unit/ Condition	Condition/Specification (Reference)	Inspection item(s)	PCM terminal
AAT (Ambient air temperature)	°C °F	Ignition switch at ON position: Indicate the ambient air temperature	• IAT sensor	—
AC_REQ (Refrigerant pressure switch (high, low)l)	On/Off	Refrigerant pressure is more than the specification or less than the specification. (Refrigerant pressure switch (high, low) is off.): Off Except above: On	• Refrigerant pressure switch (high, low)	1AU*8 1AP*9
ACCS (A/C relay)	On/Off	Ignition switch ON: Off A/C switch ON and fan switch ON at idle: On	• Following PIDs: RPM, TP, ECT, TR • A/C relay	1I*8 1AN*9
AFR (Air fuel ratio)	—	Ignition switch at ON position: Indicate the air fuel ratio*4	• Following PIDs: O2S11, O2S12, O2S13*1 • Fuel injector	—
AFR_ACT (Actual air fuel ratio)	—	Ignition switch at ON position: Indicate the actual air fuel ratio	• Following PIDs: O2S11, O2S12, O2S13*1 • Fuel injector	—
ALTF (Generator field coil control duty value)	%	Ignition switch ON: 0% Idle: 0—100% Just after A/C switch ON and fan switch ON at idle: Duty value rises	• Following PIDs: IAT, ECT, RPM, VPWR, ALTT V • Generator	2AI*8 2AQ*9
ALTT V (Generator output voltage)	V	Ignition switch ON: 0 V Idle: Approx. 14.9 V (E/L not operating)	• Generator	2AJ*8 2AM*9
APP (Accelerator pedal position)	%	APP released: 0% APP open: 100%	• Following PIDs: APP1, APP2 • APP sensor	1AC*1 1AP*1 1Y*9 1AL*9 1AO*10 1AP*10
APP1 (APP sensor 1)	%	APP released: 31.0—32.4% APP open: 69.8—81.8%	• APP sensor	1AP*8 1Y*9
	V	APP released: 1.55—1.62 V APP depressed: 3.49—4.09 V		
APP2 (APP sensor 2)	%	APP released: 20.2—21.4% APP depressed: 58.8—70.8%	• APP sensor	1AC*1 1AL*9 1AO*10
	V	APP released: 1.01—1.07 V APP depressed: 2.94—3.54 V		
ARPMDES (Target engine speed)	RPM	No load: 700 rpm E/L operating: 700 rpm P/S operating: 700 rpm A/C ON: 750 rpm	• Following PIDs: IAT, RPM, MAP, ECT, MAF, TP, INGEAR, TR, PSP, ALTT V • IAC valve • CKP sensor	—
BARO (Barometric pressure)	Pa	Ignition switch ON: Indicate the atmospheric pressure	• BARO sensor	—
	V	Ignition switch ON (at sea level): Approx. 4.0 V		
BOO (Brake switch)	On/Off	Brake pedal depressed: On Brake pedal released: Off	• Brake switch	1AB*8 1AU*9
BPA (Brake pressure applied switch)	On/Off	Brake pedal depressed: On Brake pedal released: Off	• Brake switch	—
CATT11_DSD (Desired catalyst temperature bank one, sensor one)	°C	Indicate the estimated catalytic converter temperature	• Perform applicable DTC troubleshooting.	—
CHRGLP (Generator warning light)	On/Off	Ignition switch ON: On Idle: Off	• Perform applicable DTC troubleshooting.	—

Monitor item (Definition)	Unit/ Condition	Condition/Specification (Reference)	Inspection item(s)	PCM terminal
COLP (Refrigerant pressure switch (middle))	ON/OFF	Refrigerant pressure switch (middle) ON *5 at idle: ON Refrigerant pressure switch (middle) OFF*6 at idle: OFF	• Refrigerant pressure switch	1J*8 1R*9
CPP*3 (Clutch pedal position)	On/Off	Clutch pedal depressed: On Clutch pedal released: Off	• CPP switch	1D
CPP/PNP*3 (Shift lever position)	Drive/ Neutral	Neutral position: Neutral Others: Drive	• Neutral switch	1X
DTCCNT (Number of DTC detected)	—	—	• Perform applicable DTC troubleshooting.	—
DWN SW*2	(See 05-02A-81 PID/DATA MONITOR INSPECTION[FN4A-EL].)			
ECT (Engine coolant temperature)	°C / °F	ECT 20 °C {68 °F}: 20 °C {68 °F} ECT 60 °C {140 °F}: 60 °C {140 °F}	• ECT sensor	2AH*8 2AK*9
	V	ECT 20 °C {68 °F}: 3.04—3.14 V ECT 60 °C {140 °F}: 1.29—1.39 V		
EQ_RAT11 (Equivalence ratio (lambda))	—	Idling after warm-up: Approx. 1	• Perform applicable DTC troubleshooting.	2Z*1,*7 2AC*7 2AD*1,*7
EQ_RAT11_DSD (Desired equivalence ratio (lambda))	—	Idling after warm-up: Approx. 1	• Perform applicable DTC troubleshooting.	2Z*1,*7 2AC*7 2AD*1,*7
ETC_ACT (Electronic throttle control actual)	°	Indicate the desired TP by angle	• Perform applicable DTC troubleshooting.	2AL*8 2AK*8 2I*9 2M*9
ETC_DSD (Electronic throttle control desired)	%	Indicate the desired TP by percent	• Following PIDs:APP1, APP2, ETC_ACT. • TP sensor	—
	°	Indicate the desired TP by angle		
EVAPCP (Purge solenoid valve duty value)	%	Ignition switch ON: 0% Idle: 0%	• Following PIDs: IAT, RPM, ECT, MAF, O2S11, INGEAR, TR, VPWR.	2C*8 2AN*9
FAN_DUTY (Cooling fan control)	%	ECT 108 C {226 F} or more: 90% ECT less than 100 °C {212 °F}: 0%	• Following PIDs: RPM, TP, ECT, COLP, TEST. • Fan control module	1Y*1 1W*9 1R*10
FLI (Fuel level)	%	Fuel gauge level F: Approx. 100% Fuel gauge level E: Approx. 0%	• Perform applicable DTC troubleshooting.	—
FP (Fuel pump relay)	On/Off	Ignition switch ON: Off Idle: On Cranking: On	• Following PIDs: RPM • Fuel pump relay	1H*8 1AR*9
FUELPW (Fuel injector duration)	sec	Ignition switch ON: 0 ms Idle (after warm up): approx. 2.5 ms	• Following PIDs: IAT, MAF, TP, MAP, ECT, RPM, O2S11, O2S12, INGEAR, TR, PSP, VPWR, ALTT V • Fuel injector	2AZ 2BB 2BC 2BD
FUELSYS (Fuel system status)	OL/CL/OL-Drive/OL-Fault/CL-Fault	Ignition switch ON: OL Idle (after warm up): CL	• Following PIDs: IAT, MAF, TP, MAP, ECT, RPM, O2S11, O2S12, INGEAR, TR, PSP, VPWR, ALTT V • Fuel injector	—
GEAR*2	(See 05-02A-81 PID/DATA MONITOR INSPECTION[FN4A-EL].)			
GENVDSD (Generator voltage desired)	V	Ignition switch ON: 0 V Idle: Approx. 14.9 V (E/L not operating)	• Perform applicable DTC troubleshooting	—
HTM_CNT*2	(See 05-02A-81 PID/DATA MONITOR INSPECTION[FN4A-EL].)			
HTM_DIS*2	(See 05-02A-81 PID/DATA MONITOR INSPECTION[FN4A-EL].)			

Monitor item (Definition)	Unit/ Condition	Condition/Specification (Reference)	Inspection item(s)	PCM terminal
HTR11 (HO2S heater (front))	On/Off	Idle (after warm up): On⇔Off	• Following PIDs: IAT, MAF, TP, ECT, RPM	2BG*8 2G*9
HTR12 (HO2S heater (middle*1, rear*7))	On/Off	Ignition switch ON: Off (HO2S heater not operating) Idle: On (HO2S heater operating)	• Following PIDs: IAT, MAF, ECT, RPM	2BF*1 2C*9 2BE*10
HTR13*1 (HO2S heater (rear))	On/Off	Ignition switch ON: Off (HO2S heater not operating) Idle: On (HO2S heater operating)	• Following PIDs: IAT, MAF, ECT, RPM	2BE
IAT (Intake air temperature)	°C °F	Indicate the IAT.	• IAT sensor	1AT*8 1AH*9
	V	IAT 0 °C {32 °F}: Approx. 3.43 V IAT 20 °C {68 °F}: Approx. 2.38 V IAT 40 °C {104 °F}: Approx. 1.49 V		
IMRC (Variable tumble solenoid valve)	On/Off	Engine speed is less than approx. 3,750 rpm: On Others: Off	• Following PIDs: TP, ECT, RPM • Variable tumble solenoid valve	2I*8 2AI*9
IMTV (Variable Intake air control solenoid valve)	On/Off	Engine speed is less than approx. 4,500 rpm: On Others: Off	• Following PIDs: RP • Variable intake air solenoid valve	2J*8 2AJ*9
INGEAR (Load/no load condition)	On/Off	**MTX** CPP or CPP/PNP is ON: Off Others: On **ATX** P, N position: Off Others: On	• Perform applicable DTC troubleshooting.	1D*3 1X*3 1S*9 1AH*11
IVS (CTP condition)	Idle/Off Idle	CTP: Idle Others: Off Idle	• Perform applicable DTC troubleshooting.	—
KNOCKR (Knocking retard)	°	Ignition switch ON: 0° Idle: 0°	• Knock sensor	2U*8 2V*8 2Q*9 2R*9
LDP_EVAPCP (EVAP system leak detection pump detect incorrect purge flow)	A	Indicate the EVAP control system incorrect purge flow detection value	• Perform applicable DTC troubleshooting.	—
LDP_IDL (EVAP system leak detection pump idle current)	A	Indicate the EVAP system leak detection pump idle current	• Perform applicable DTC troubleshooting.	—
LDP_MON (EVAP system leak detection pump monitoring current)	A	Indicate the EVAP system leak detection pump monitoring current	• Perform applicable DTC troubleshooting.	—
LDP_REF (EVAP system leak detection pump reference current)	A	Indicate the EVAP system leak detection pump reference current	• Perform applicable DTC troubleshooting.	—
LDP_SLDV (EVAP system small leak detection value)	A	Indicate the EVAP control system small leak detection value	• Perform applicable DTC troubleshooting.	—
LDP_VSL_FV*1 (EVAP system small leak detection value)	mA/sec	Indicate the EVAP control system vary small leak-fail value	• Perform applicable DTC troubleshooting.	—
LDP_VSL_SV*1 (EVAP system small leak detection value)	mA/sec	Indicate the EVAP control system vary small leak-safe value	• Perform applicable DTC troubleshooting.	—
LDP_VSLDV*1 (EVAP system small leak detection value)	mA/sec	Indicate the EVAP control system vary small leak detection value	• Perform applicable DTC troubleshooting.	—
LINEDES*2	(See 05-02A-81 PID/DATA MONITOR INSPECTION[FN4A-EL].)

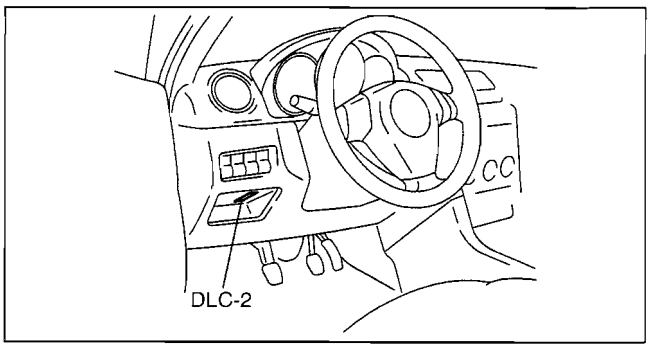
PCM CONFIGURATION[LF, L3]

1. Connect the M-MDS to DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Module Programming".
   - When using the PDS (Pocket PC)
     1. Select "Programming".
     2. Select "Module Programming".
3. Then, select the "Programmable Module installation" and "PCM" from the screen menu.
4. Select "Programmable Parameters". [with DSC HU/CM]
5. Select "Tire Size / Axle Ratio". [with DSC HU/CM]
6. Select "Body Type - (PCM)", then select the applicable body type on the M-MDS screen. [with DSC HU/CM]
7. Retrieve DTCs using the M-MDS, then verify if DTCs are present.
   - If a DTC is present, perform the applicable DTC inspection.

id0140a6802600



am3zzw0000046

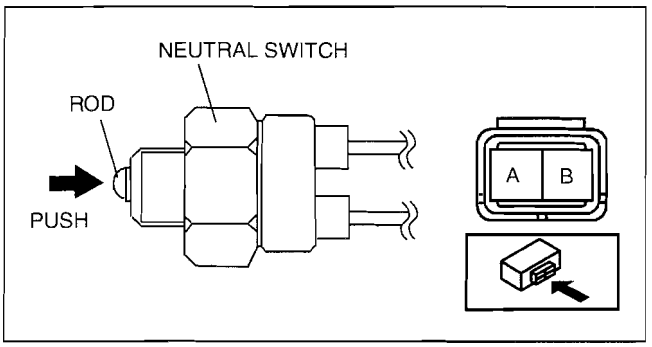
NEUTRAL SWITCH INSPECTION[LF, L3]

id0140a6800800

Note
- Before performing the following inspection, make sure to follow the procedure as indicated in the troubleshooting flowchart.

Continuity Inspection

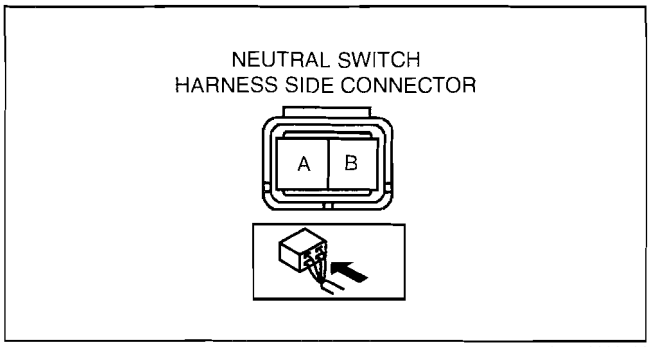
1. Remove the neutral switch. (See 05-15A-2 NEUTRAL SWITCH REMOVAL/INSTALLATION[G35M-R].)
2. Verify that the continuity between neutral switch terminals A and B is as indicated in the table.
   - If it can be verified, perform the "Circuit Open/ Short Inspection".
   - If it cannot be verified, replace the neutral switch.



am3uuw0000108

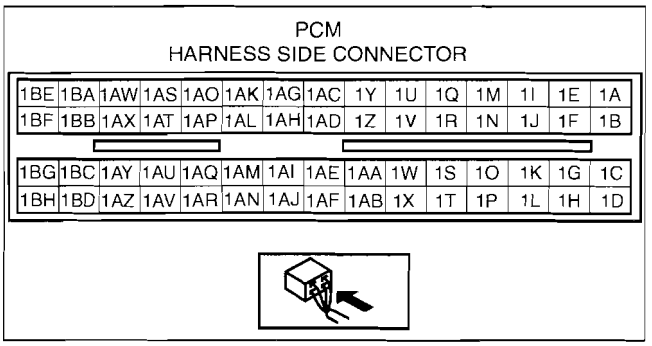
Measured condition	Continuity
Rod pushed	Continuity detected
Except above	No continuity

Circuit Open/Short Inspection



am3uuw0000108

1. Disconnect the PCM connector.
2. Inspect the following wiring harness for an open or short circuit. (Continuity inspection)



e3u140zw6991

Open circuit

- If there is no continuity in the following wiring harnesses, there is an open circuit. Repair or replace the wiring harness.
  - — Neutral switch terminal A and PCM terminal 1X
  - — Neutral switch terminal B and body ground

Short circuit

- If there is continuity in the following wiring harnesses, there is a short circuit. Repair or replace the wiring harness.
  - — Neutral switch terminal B and ground

CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION[LF, L3]

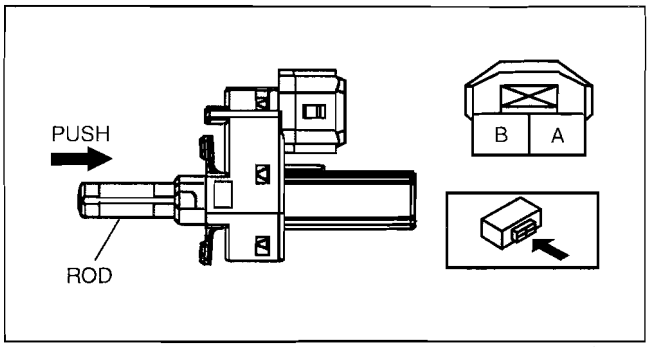
id0140a6801600

Note
- Before performing the following inspection, make sure to follow the troubleshooting flowchart. (See 01-03A-10 FOREWORD[LF, L3].)

Continuity Inspection

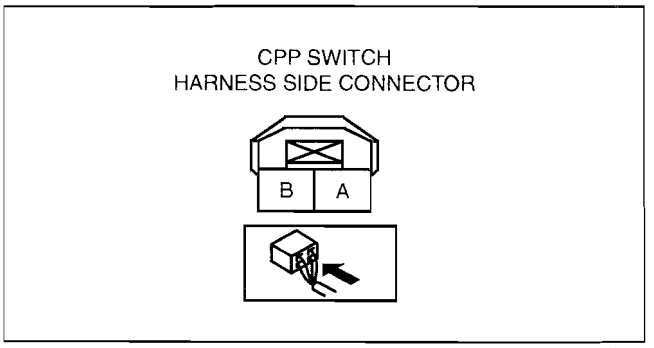
1. Remove the CPP switch.
2. Verify that the continuity between CPP switch terminals A and B is as indicated in the table.
   - If there is no malfunction, perform the "Circuit Open/Short Inspection".
   - If there is any malfunction, replace the CPP switch.

Measurement condition	Continuity
Push the rod.	No continuity
Except above	Continuity detected



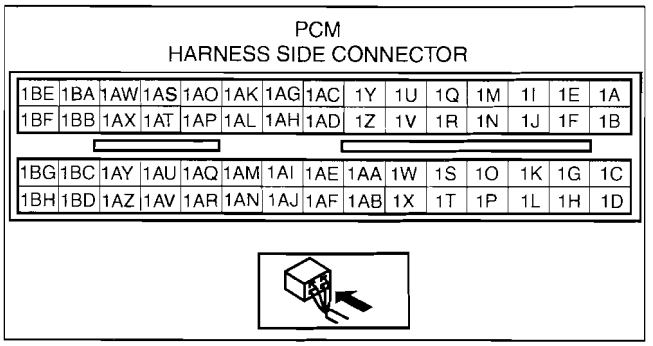
B3E0140W023

Circuit Open/Short Inspection



e3u140zw6204

1. Disconnect the PCM connector.
2. Disconnect the CPP switch connector.
3. Inspect the following wiring harnesses for an open or short circuit. (Continuity inspection)



e3u140zw6991

Open circuit

- If there is no continuity in the following wiring harnesses, there is an open circuit. Repair or replace the wiring harness.
  - CPP switch terminal A and PCM terminal 1D
  - CPP switch terminal B and body ground

Short circuit

- If there is continuity in the following wiring harnesses, there is a short circuit. Repair or replace the wiring harness.
  - CPP switch terminal A and body ground
  - CPP switch terminal A and power supply
  - CPP switch terminal B and power supply

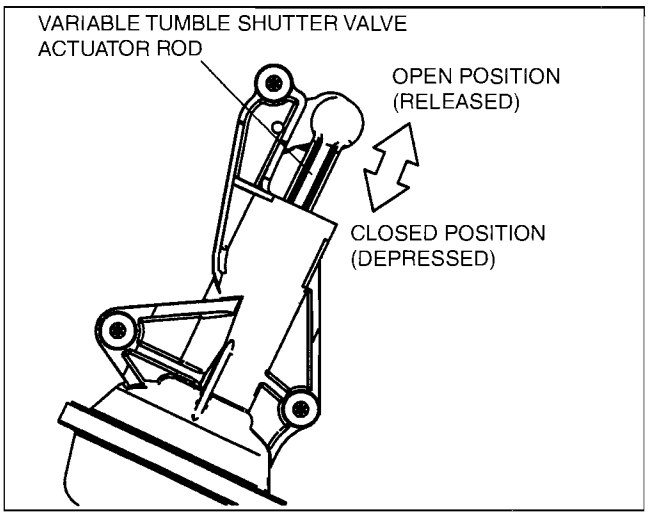
VARIABLE TUMBLE SHUTTER VALVE SWITCH INSPECTION[LF, L3]

id0140a6808200

Note
- Perform the following inspection only when directed.

Voltage Inspection

1. Turn the ignition switch to the ON position (Engine off).
2. Verify that the PCM terminal 2AE voltage is as shown in the following table when the variable tumble shutter valve actuator rod is depressed and released by hand.

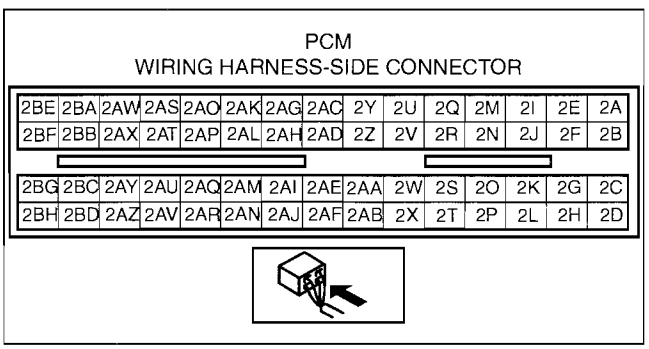


c3u0140w010

- If not as specified, perform the "Circuit Open/ Short Inspection".
  - — If there is no open or short circuit, replace the intake manifold.

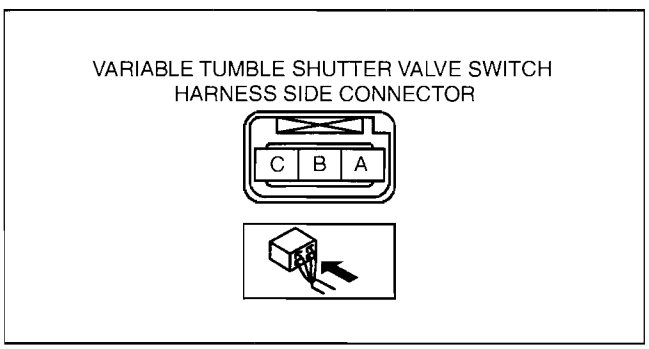
Variable tumble shutter valve switch output voltage

Condition	PCM terminal 2AE
Released (Open position)	Approx. 5.0 V
Depressed (Closed position)	Less than 0.4 V



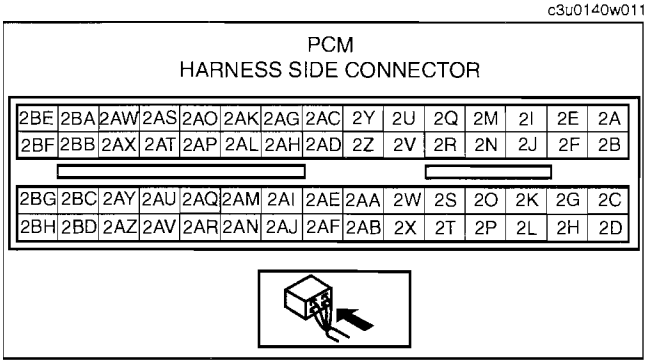
c3u0140w009

Circuit Open/Short Inspection



c3u0140w011

1. Disconnect the PCM connector.



E3U140ZW6992

2. Inspect the following harness for an open or short wiring. (Continuity inspection)

Open circuit

- If there is no continuity, there is an open circuit. Repair or replace the wiring harness.
  - Variable tumble shutter valve switch terminal A and PCM terminal 2AU*1, 2AR*2, 2W*3
  - Variable tumble shutter valve switch terminal B and PCM terminal 2AY*1, 2P*2, 2AA*3
  - Variable tumble shutter valve switch terminal C and PCM terminal 2AE

Short circuit

- If there is continuity, there is a short circuit. Repair or replace the wiring harness.
  - Variable tumble shutter valve switch terminal A and body ground
  - Variable tumble shutter valve switch terminal B and power supply
  - Variable tumble shutter valve switch terminal C and power supply
  - Variable tumble shutter valve switch terminal C and body ground

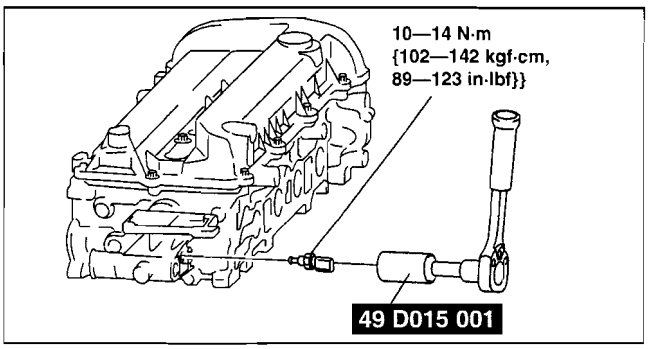
ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION[LF, L3]

id0140a6801900

1. Remove the battery cover.
2. Disconnect the negative battery cable.
3. Remove the plug hole cover.
4. Drain the engine coolant. (See 01-12A-3 ENGINE COOLANT REPLACEMENT[LF, L3].)
5. Disconnect the ECT sensor connector.
6. Remove the ECT sensor using the **SST**.
7. Install in the reverse order of removal.

Tightening torque
10—14 N·m {102—142 kgf·cm, 89—123 in·lbf}



c3u0140w051

ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION[LF, L3]

id0140a6802000

Resistance Inspection

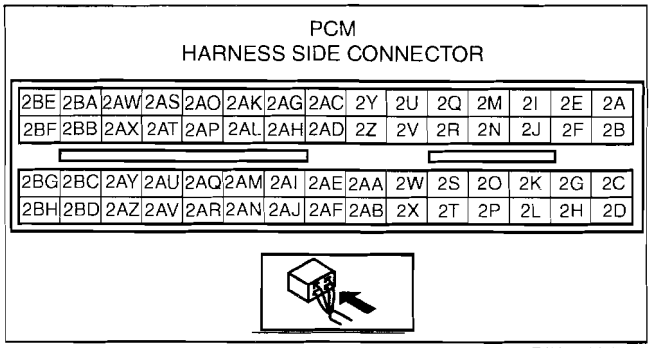
Note
- Before performing the following inspection, make sure to follow the procedure as indicated in the troubleshooting flowchart.

1. Disconnect the ECT sensor connector.
2. Remove the ECT sensor. (See 01-40A-49 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION[LF, L3].)
3. Place the ECT sensor in the water and while increasing the water temperature, measure the resistance between ECT sensor terminals A and B.
   - If the monitor item status/specification (reference) is not within the specification, even though the ECT sensor resistance is within the specification, perform the "Circuit Open/Short Inspection".
   - If not within the specification, replace the ECT sensor.

Standard

Water temperature (°C {°F})	Resistance (kilohm)
20 {68}	35.48—39.20
70 {158}	5.07—5.60
80 {176}	3.65—4.02

Circuit Open/Short Inspection



1. Disconnect the PCM connector.
2. Inspect the following wiring harnesses for an open or short circuit. (Continuity inspection)

Open circuit
- If there is no continuity, there is an open circuit. Repair or replace the wiring harness.
  - — ECT sensor terminal A and PCM terminal 2AH*1 *2, 2AK*3
  - — ECT sensor terminal B and PCM terminal 2AY*1, 2P*2, 2AA*3

Short circuit
- If there is continuity, there is a short circuit. Repair or replace the wiring harness.
  - — ECT sensor terminal A and power supply
  - — ECT sensor terminal A and body ground
  - — ECT sensor terminal B and power supply

*1 : California emission regulation applicable model
*2 : Except for California emission regulation applicable model with LF MTX, L3
*3 : Except for California emission regulation applicable model with LF ATX

MASS AIR FLOW (MAF) SENSOR INSPECTION[LF, L3]

id0140a6800700

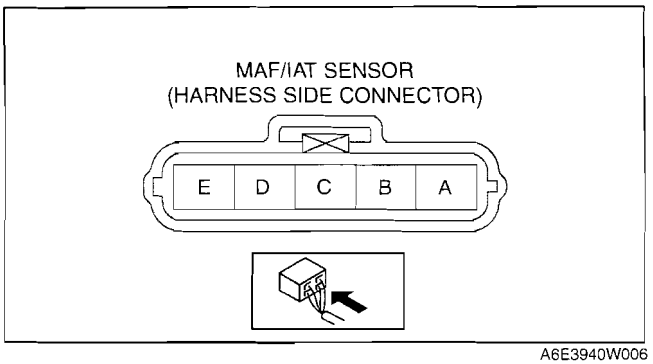
Note
- Before performing the following inspection, make sure to follow the procedure as indicated in the troubleshooting flowchart.

Visual Inspection
1. Visually inspect the MAF sensor for the following:
   - Damage, cracks
   - Rusted sensor terminal
   - Bent sensor terminal
     - — If there is any malfunction, replace the MAF sensor.
     - — If the monitor item status/specification (reference) is not within the specification even though there is no malfunction, perform the "Circuit Open/Short Inspection".

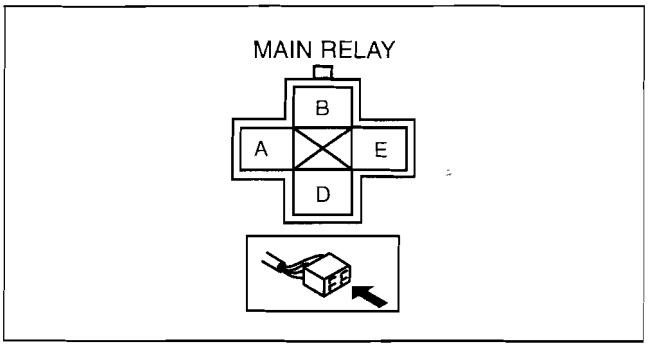
Voltage Inspection
1. Remove the MAF/IAT sensor without disconnect the MAF/IAT sensor connector.
2. Turn the ignition switch to the ON position.
3. As the air gradually approaches the MAF detection part of the MAF/IAT sensor, verify that the voltage at PCM terminal 1AK*1, 1AC*2 (M-MDS PID: MAF) varies.
   - If it cannot be verified even though the related harnesses have no malfunction, replace the MAF/IAT sensor. (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[LF, L3], 01-13A-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[LF, L3].)

*1 : California emission regulation applicable model and except for California emission regulation applicable model with LF MTX, L3
*2 : Except for California emission regulation applicable model with LF ATX

Circuit Open/Short Inspection

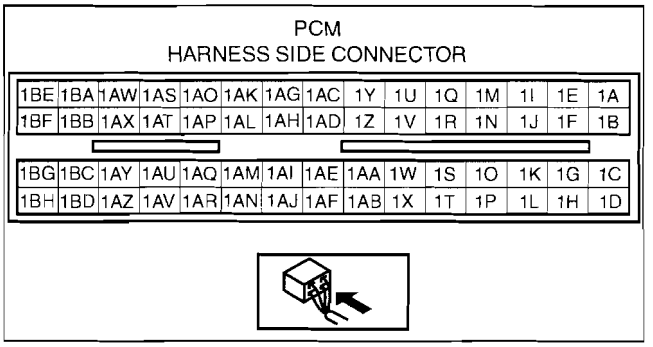


A6E3940W006



e3u140zw6993

1. Disconnect the PCM connector. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the MAF sensor connector.
3. Inspect the following wiring harnesses for an open or short circuit. (Continuity inspection)



e3u140zw6991

Open circuit

- If there is no continuity, there is an open circuit. Repair or replace the wiring harness.
  - — MAF sensor terminal A and main relay terminal A
  - — MAF sensor terminal B and PCM terminal 1AR[*1], 1AE[*2]
  - — MAF sensor terminal C and PCM terminal 1AK[*1], 1AC[*2]

Short circuit

- If there is continuity, there is a short circuit. Repair or replace the wiring harness.
  - — MAF sensor terminal A and body ground
  - — MAF sensor terminal B and power supply
  - — MAF sensor terminal C and power supply
  - — MAF sensor terminal C and body ground

*1 : California emission regulation applicable model and except for California emission regulation applicable model with LF MTX, L3

*2 : Except for California emission regulation applicable model with LF ATX

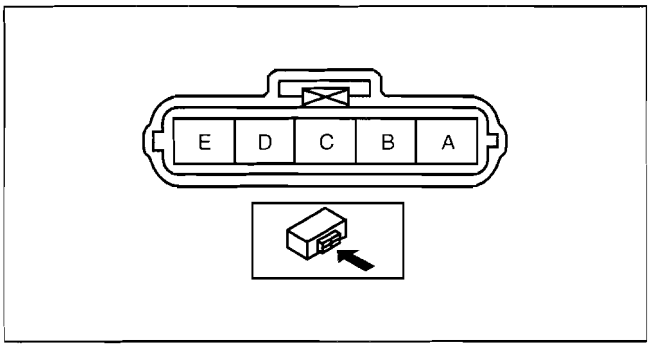
INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION[LF, L3]

id0140a6802200

Note
- Before performing the following inspection, make sure to follow the procedure as indicated in the troubleshooting flowchart.

Resistance Inspection

1. Disconnect the mass air flow sensor connector.
2. Verify that the resistance between MAF sensor terminals D and E is within the specification.
   - If the monitor item status/specification (reference) is not within the specification, even though the IAT sensor resistance is within the specification, perform the "Circuit Open/Short Inspection".
   - If not within the specification, replace the MAF sensor.

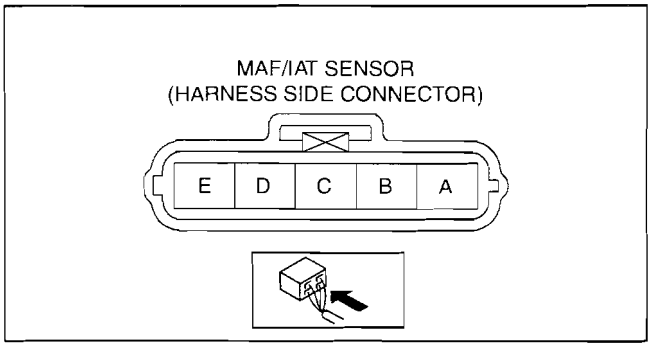


B3E0140W028

Standard

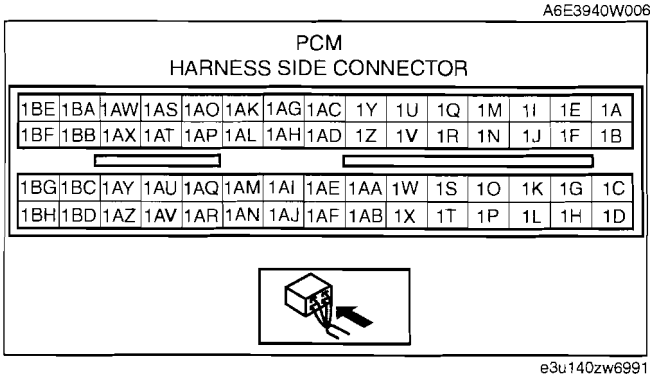
Ambient temperature (°C {°F})	Resistance (kilohm)
–20 {–4.0}	13.6—18.4
20 {68}	2.21—2.69
60 {140}	0.493—0.667

Circuit Open/Short Inspection



A6E3940W006

1. Disconnect the PCM connector.
2. Inspect the following wiring harnesses for an open or short circuit. (Continuity inspection)



e3u140zw6991

Open circuit

- If there is no continuity, there is an open circuit. Repair or replace the wiring harness.
  - — MAF/IAT sensor terminal D and PCM terminal 1AT[*1 *2], 1AH[*3]
  - — MAF/IAT sensor terminal E and PCM terminal 1AS[*1], 1AV[*2], 1AA[*3]

Short circuit

- If there is continuity, there is a short circuit. Repair or replace the wiring harness.
  - — MAF/IAT sensor terminal E and power supply
  - — MAF/IAT sensor terminal D and power supply
  - — MAF/IAT sensor terminal D and body ground

*1 : California emission regulation applicable model
*2 : Except for California emission regulation applicable model with LF MTX, L3

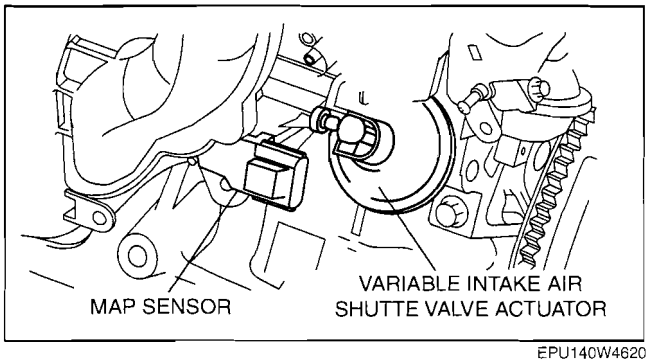
MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR REMOVAL/INSTALLATION[LF, L3]

id0140a6804300

1. Remove the battery cover.
2. Disconnect the negative battery cable.
3. Remove the plug hole cover.
4. Remove the vacuum hose.
5. Disconnect the MAP sensor connector.
6. Remove the MAP sensor installation screw.
7. Remove MAP sensor from the intake manifold.
8. Install in the reverse order of removal.

Tightening torque
2.7—3.7 N·m {28—37 kgf·cm, 24—32 in·lbf}



EPU140W4620

MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION[LF, L3]

id0140a6800900

Note
- Before performing the following inspection, make sure to follow the procedure as indicated in the troubleshooting flowchart.

Voltage Inspection

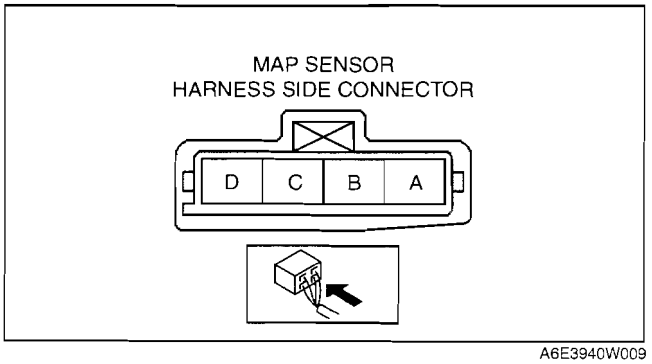
1. Remove the MAP sensor with the connector still connected. (See 01-40A-53 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR REMOVAL/INSTALLATION[LF, L3].)
2. Remove the vacuum hose of the MAP sensor.
3. Verify that the voltage at PCM terminal 2AL is within the specification when the ignition switch is turned to the ON position.
   - If not within the specification, replace the MAP sensor.

Voltage
2.69—4.37 V

4. Install the vacuum pump.
5. Turn the ignition switch to the ON position.
6. Verify that change in voltage is within the specification when a vacuum of **30 kPa {225 mmHg, 8.86 inHg}** is applied using a vacuum pump.
   - If not within the specification, replace the MAP sensor.

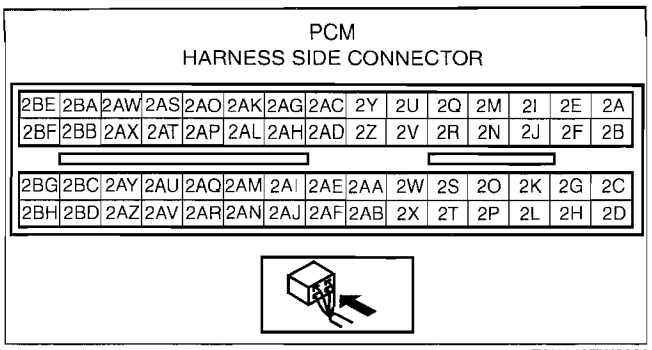
Voltage variance
1.16—1.27 V

Circuit Open/Short Inspection



A6E3940W009

1. Disconnect the PCM connector.
2. Inspect the following wiring harness for an open or short circuit. (Continuity inspection)



E3U140ZW6992

Open circuit

- If there is no continuity, there is an open circuit. Repair or replace the wiring harness.
  - — MAP sensor terminal A and PCM terminal 2AY*1, 2P*2, 2AA*3
  - — MAP sensor terminal C and PCM terminal 2AU*1, 2AR*2, 2W*3
  - — MAP sensor terminal D and PCM terminal 2AG*1, 2AG*2, 2AL*3

Short circuit

- If there is continuity, there is a short circuit. Repair or replace the wiring harness.
  - — MAP sensor terminal A and power supply.
  - — MAP sensor terminal C and body ground.
  - — MAP sensor terminal D and power supply.
  - — MAP sensor terminal D and body ground

*1 : California emission regulation applicable model
*2 : Except for California emission regulation applicable model with LF MTX, L3
*3 : Except for California emission regulation applicable model with LF ATX

THROTTLE POSITION (TP) SENSOR INSPECTION[LF, L3]

id0140a6802700

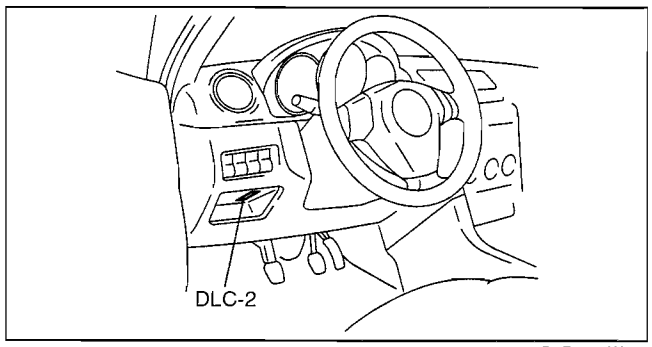
Caution

- **This inspection procedure cannot be completed correctly if the accelerator pedal position sensor has a malfunction. Before performing this procedure, verify that any one of the DTCs (P2122, P2123, P2127, P2128, P2138) related to the accelerator pedal position sensor is not detected.**

Note

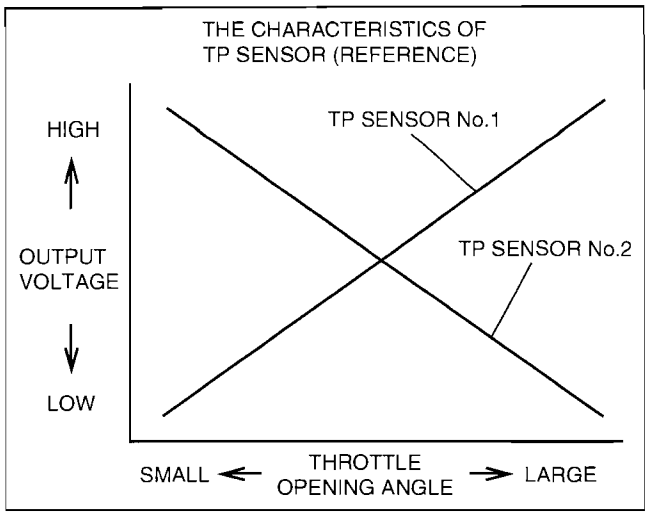
- Before performing the following inspection, make sure to follow the troubleshooting flowchart. (See 01-03A-10 FOREWORD[LF, L3].)

1. Verify that no DTC related to APP sensor has been detected.
   - If any DTCs related to APP sensor have been detected, perform the DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
2. Connect the M-MDS to the DLC-2.
3. Turn the ignition switch to ON position.
4. Select TP1 or TP2 PID (percentage) on the M-MDS.
5. Verify that the TP1 or TP2 PID is within the specification when the accelerator pedal not depressed. (See 01-40A-13 PCM INSPECTION[LF, L3].)



B3E0102W003

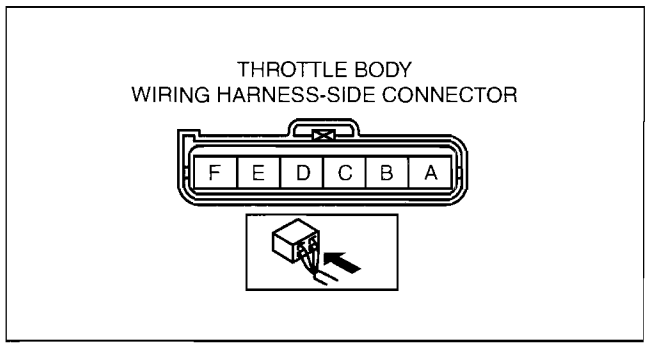
6. Operate the accelerator pedal and verify that the TP1 or TP2 PID (percentage) changes as shown in the following graph.
   - If not verified, perform the "Circuit Open/Short Inspection".
     — If there is no open or short circuit, replace the throttle body. (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/ INSTALLATION[LF, L3], 01-13A-4 INTAKE AIR SYSTEM REMOVAL/ INSTALLATION[LF, L3].)



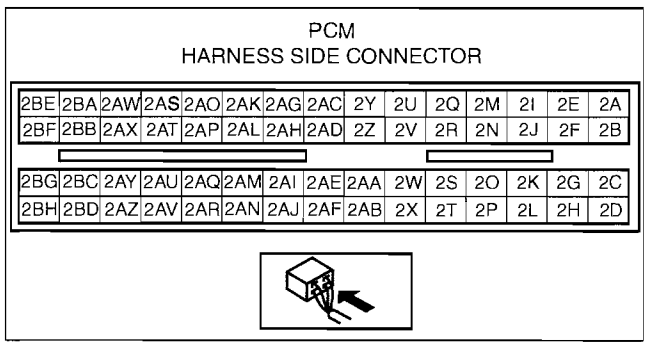
B6U0140W082

Circuit Open/Short Inspection

1. Disconnect the PCM connector.
2. Disconnect the throttle body connector.
3. Inspect the following wiring harnesses for an open or short circuit. (Continuity inspection)



e3u140zw6205



E3U140ZW6992

Open circuit

- If there is no continuity in the following wiring harnesses, there is an open circuit. Repair or replace the wiring harness.
  — Throttle body terminal A and PCM terminal 2AK*1, 2M*2
  — Throttle body terminal B and PCM terminal 2AO*1, 2K*2
  — Throttle body terminal C and PCM terminal 2AL*1, 2I*2
  — Throttle body terminal D and PCM terminal 2AP*1, 2O*2

Short circuit

- If there is continuity in the following wiring harnesses, there is a short circuit. Repair or replace the wiring harness.
  — Throttle body terminal A and body ground
  — Throttle body terminal A and power supply
  — Throttle body terminal B and body ground
  — Throttle body terminal B and power supply
  — Throttle body terminal C and body ground
  — Throttle body terminal C and power supply
  — Throttle body terminal D and body ground
  — Throttle body terminal D and power supply

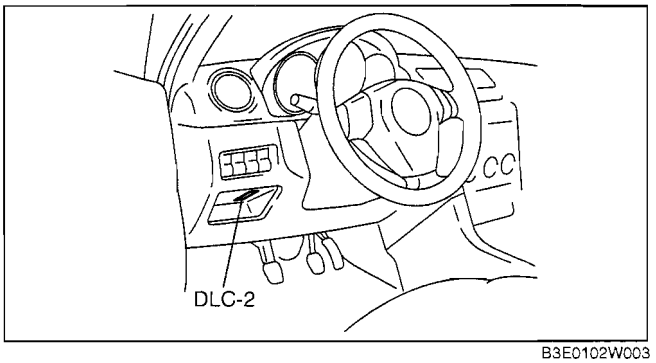
ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION[LF, L3]

id0140a6803200

Note
- Before performing the following inspection, make sure to follow the troubleshooting flowchart. (See 01-03A-10 FOREWORD[LF, L3].)

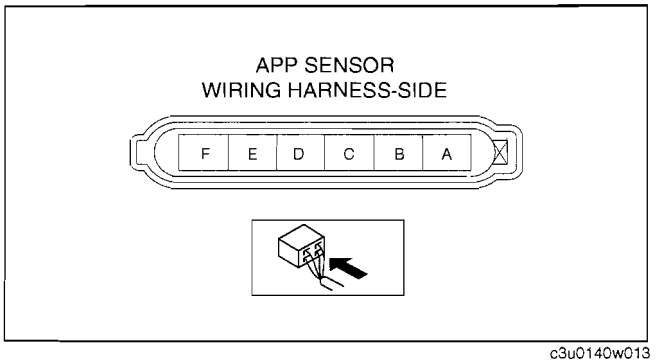
1. Connect the M-MDS to the DLC-2.
2. Turn the ignition switch to ON position.
3. Select APP1 and APP2 PID on the M-MDS.
4. Verify that the APP1 and APP2 PID is within the specification when the accelerator pedal not depressed. (See 01-40A-13 PCM INSPECTION[LF, L3].)



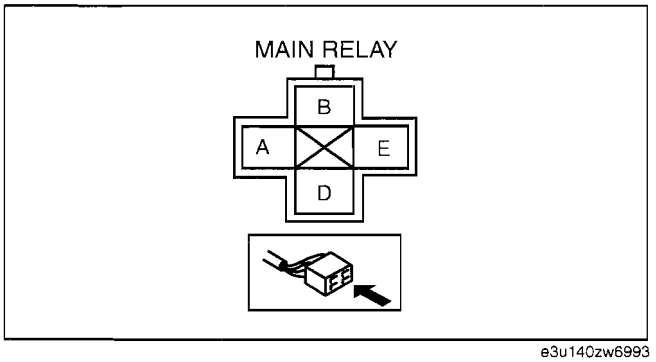
B3E0102W003

Circuit Open/Short Inspection

1. Disconnect the PCM connectors.
2. Disconnect the APP sensor connector.
3. Inspect the following wiring harnesses for an open or short circuit. (Continuity inspection)

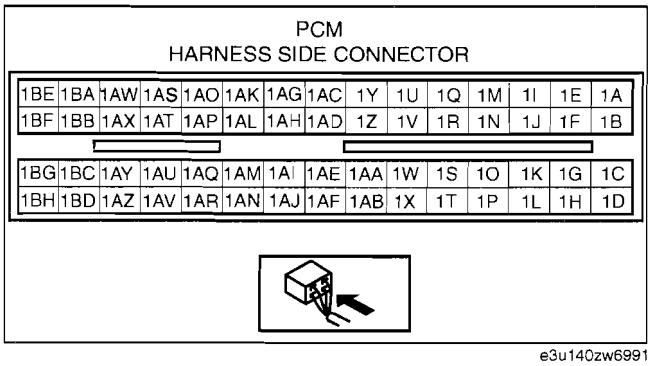


c3u0140w013



e3u140zw6993

Open circuit
- If there is no continuity in the following wiring harnesses, there is an open circuit. Repair or replace the wiring harness.
  - — APP sensor terminal A and PCM terminal 1AL*1 *2, 1AW*3
  - — APP sensor terminal B and PCM terminal 1AP *1 *2, 1Y*3
  - — APP sensor terminal C and PCM terminal 1AS*1, 1AV*2, 1AA*3
  - — APP sensor terminal D and PCM terminal body ground
  - — APP sensor terminal E and PCM terminal 1AC*1, 1AO*2, 1AL*3
  - — APP sensor terminal F and main relay terminal A



e3u140zw6991

Short circuit

- If there is continuity in the following wiring harnesses, there is a short circuit. Repair or replace the wiring harness.
  - APP sensor terminal A and body ground
  - APP sensor terminal B and body ground
  - APP sensor terminal B and power supply
  - APP sensor terminal C and power supply
  - APP sensor terminal D and power supply
  - APP sensor terminal E and body ground
  - APP sensor terminal E and power supply
  - APP sensor terminal F and power supply

HEATED OXYGEN SENSOR (HO2S) INSPECTION[LF, L3]

id0140a6802300

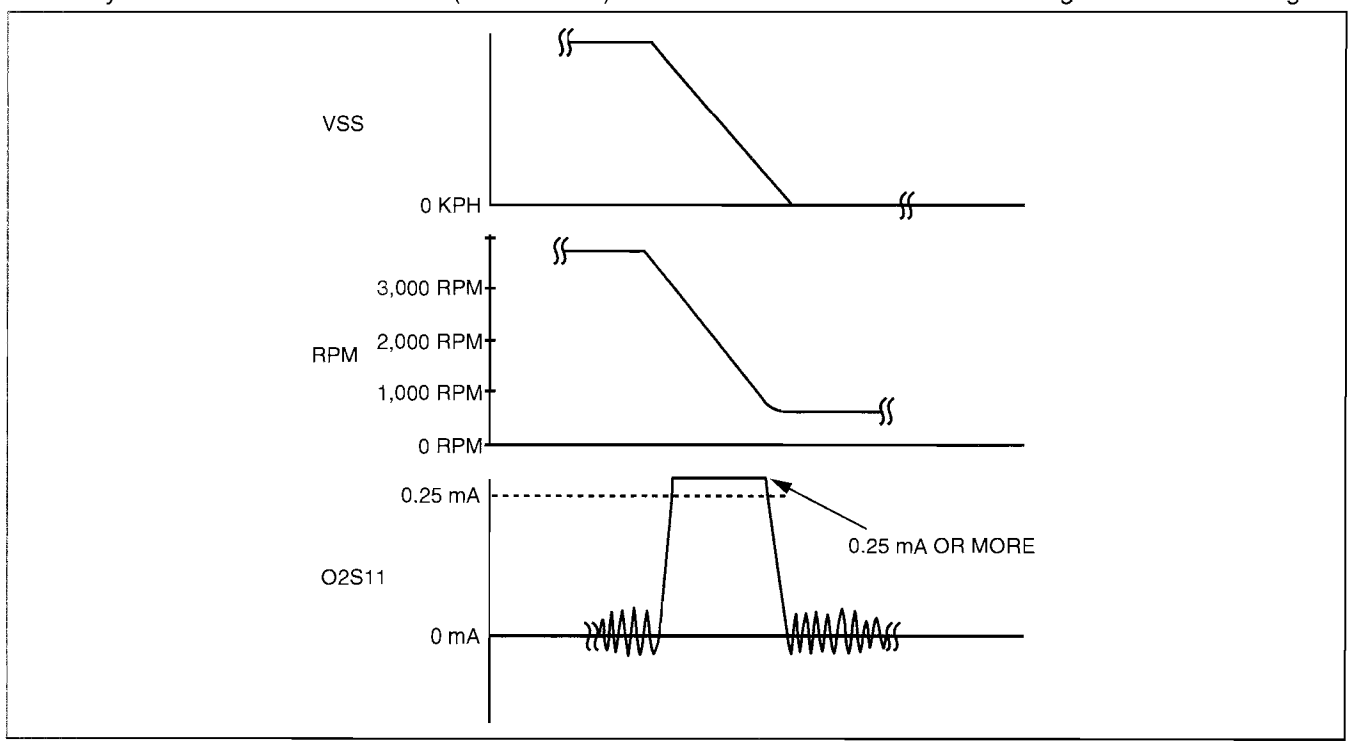
California Emission Regulation Applicable Model

Note

- Before performing the following inspection, make sure to follow the troubleshooting flowchart. (See 01-03A-10 FOREWORD[LF, L3].)

Front HO2S current inspection

1. Warm up the engine to normal operating temperature.
2. Using the M-MDS, monitor the following:
   - Vehicle speed (PID: VSS)
   - Engine speed (PID: RPM)
   - Front HO2S current (PID: O2S11)
3. Drive the vehicle and decelerate the engine speed by releasing the accelerator pedal fully when the engine speed is **3,000 rpm or more**.
4. Verify that the front HO2S current (PID: O2S11) is **0.25 mA or more** while decelerating as shown in the figure.



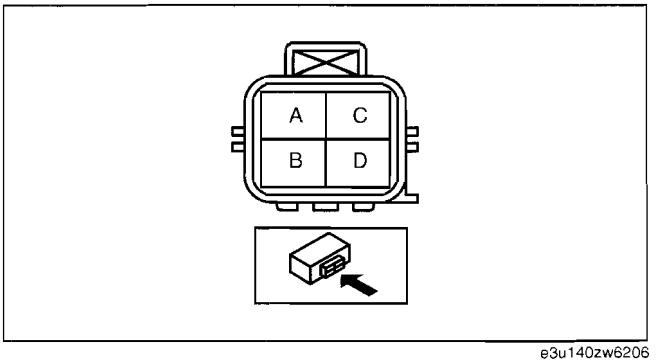
am3uuw0000100

- If not within the specification, inspect the HO2S for an open or short circuit. (See 01-40A-58 Front HO2S circuit open/short inspection (sensor).) Then if there is no malfunction in the wiring harness, replace the front HO2S.

Front HO2S heater resistance inspection

1. Disconnect the front HO2S connector.
2. Measure the resistance between front HO2S terminals C and D.
   - If not within the specification, replace the front HO2S. (See 01-40A-66 HEATED OXYGEN SENSOR (HO2S) REMOVAL/ INSTALLATION[LF, L3].)

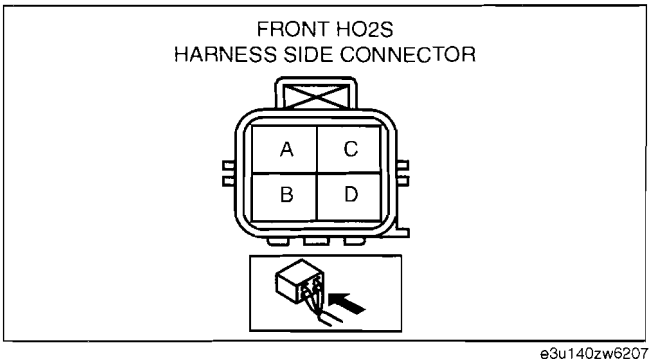
Front HO2S heater resistance
1—10 ohms [20 °C {68 °F}]



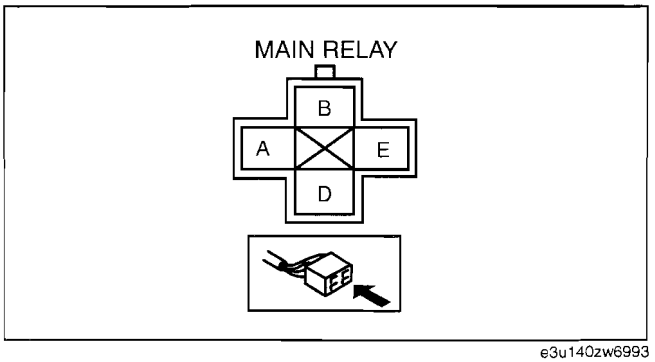
e3u140zw6206

Front HO2S circuit open/short inspection (sensor)

1. Disconnect the PCM connector.
2. Disconnect the front HO2S connector.
3. Inspect the following wiring harnesses for an open or short circuit. (Continuity inspection)



e3u140zw6207



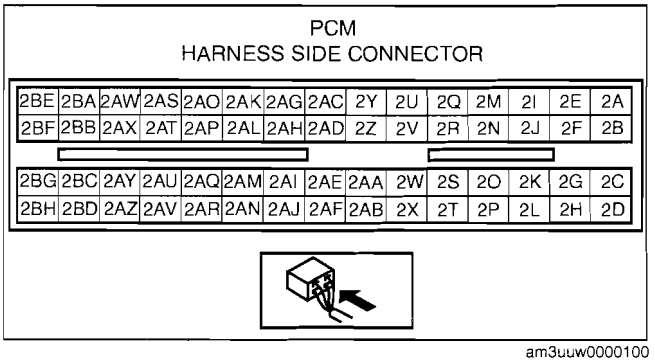
e3u140zw6993

Open circuit

- If there is no continuity in the following wiring harnesses, there is an open circuit. Repair or replace the wiring harness.
  - Front HO2S terminal A and PCM terminal 2AD
  - Front HO2S terminal B and PCM terminal 2Z
  - Front HO2S terminal C and PCM terminal 2BG
  - Front HO2S terminal D and main relay terminal A

Short circuit

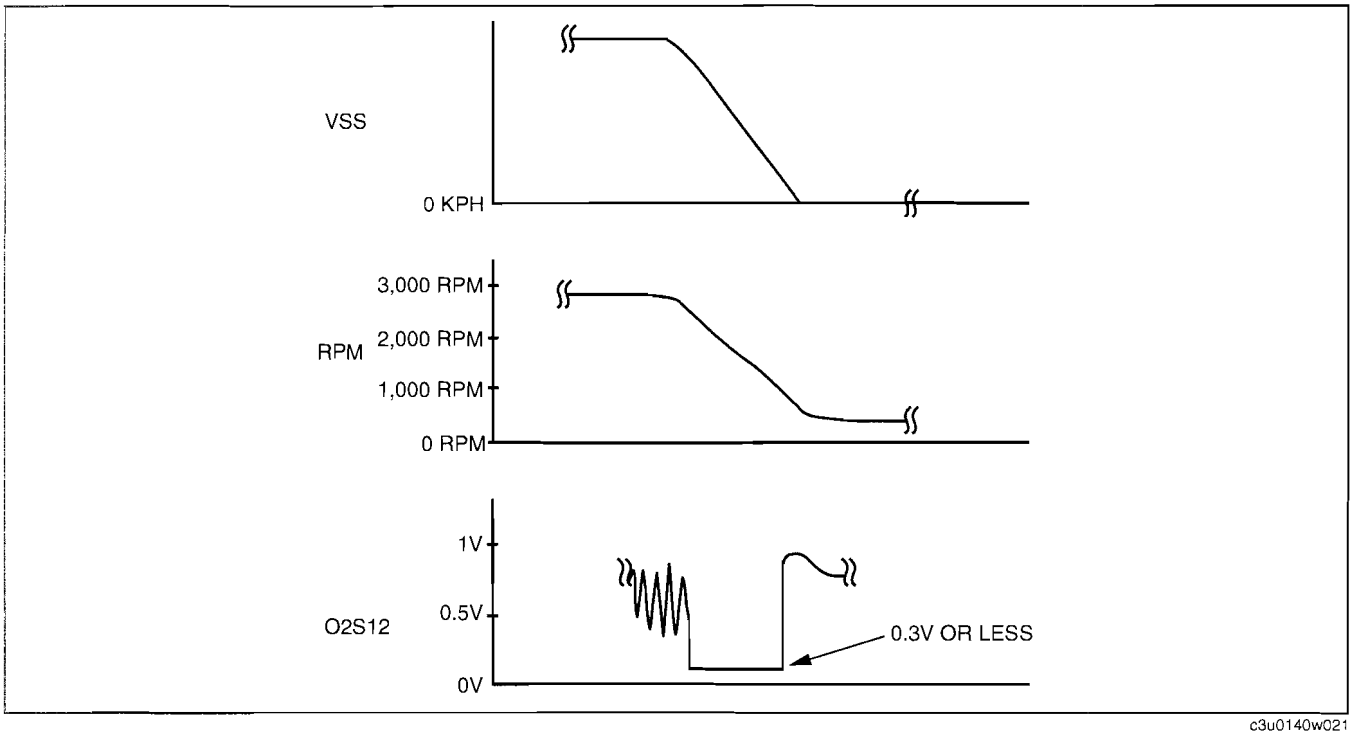
- If there is continuity in the following wiring harnesses, there is a short circuit. Repair or replace the wiring harness.
  - Front HO2S terminal A and body ground
  - Front HO2S terminal A and power supply
  - Front HO2S terminal B and body ground
  - Front HO2S terminal B and power supply
  - Front HO2S terminal C and body ground
  - Front HO2S terminal C and power supply
  - Front HO2S terminal D and body ground



am3uuw0000100

Middle/rear HO2S voltage inspection

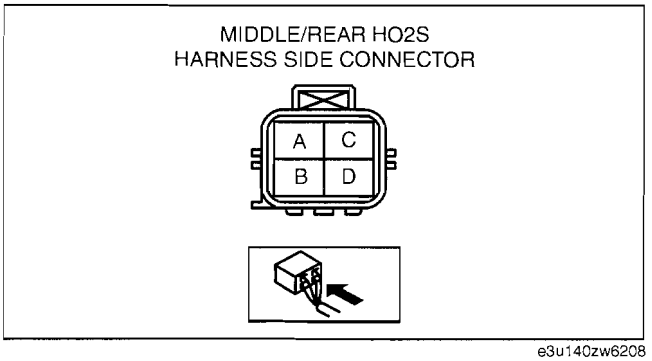
1. Warm up the engine to normal operating temperature.
2. Using the M-MDS, monitor the following:
   — Vehicle speed (PID: VSS)
   — Engine speed (PID: RPM)
   — Middle/rear HO2S voltage (PID: O2S12/O2S13)
3. Drive the vehicle and decelerate the engine speed by releasing the accelerator pedal fully when the engine speed is **3,000 rpm or more**.
4. Verify that the middle/rear HO2S outputs a voltage of **0.6 V or more**, one time or more, then verify that the middle/rear HO2S voltage (PID: O2S12/O2S13) is **0.3 V or less** while decelerating as shown in the figure.



c3u0140w021

- If not within the specification, inspect the HO2S for an open or short circuit. (See 01-40A-59 Middle/rear HO2S circuit open/short inspection (sensor).) Then if there is no malfunction in the wiring harness, replace the middle/rear HO2S.

Middle/rear HO2S circuit open/short inspection (sensor)



e3u140zw6208

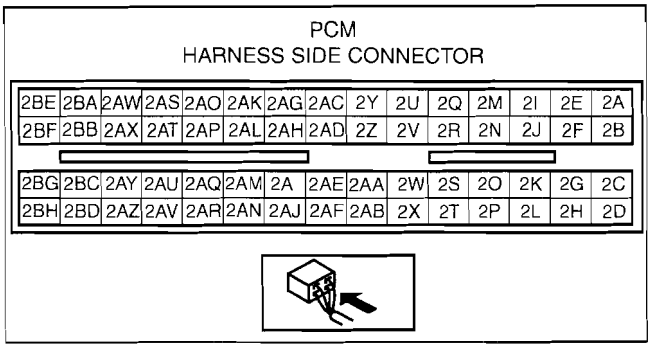
1. Disconnect the PCM connector.
2. Inspect the following wiring harnesses for an open or short circuit. (Continuity inspection)

Open circuit

- If there is no continuity, there is an open circuit. Repair or replace the wiring harness.
  - — Middle HO2S terminal A and PCM terminal 2R
  - — Rear HO2S terminal A and PCM terminal 2Q
  - — Middle/rear HO2S terminal B and PCM terminal 2AY

Short circuit

- If there is continuity, there is a short circuit. Repair or replace the wiring harness.
  - — Middle/rear HO2S terminal A and body ground
  - — Middle/rear HO2S terminal A and power supply
  - — Middle/rear HO2S terminal B and power supply

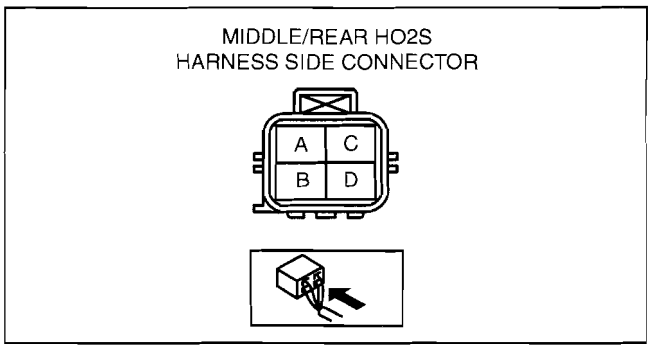


am3uuw0000100

Middle/rear HO2S heater resistance inspection

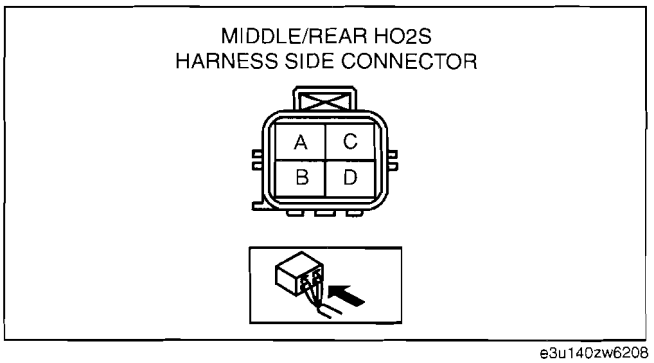
1. Disconnect the middle/rear HO2S connector.
2. Measure the middle/rear HO2S resistance between terminals C and D.
   - If not within the specification, replace the HO2S.

Middle/rear HO2S heater resistance
2—50 ohms

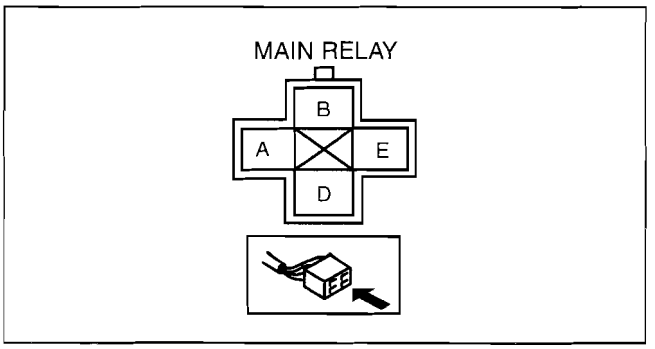


e3u140zw6208

Middle/rear HO2S circuit open/short inspection (heater)



e3u140zw6208



e3u140zw6993

1. Disconnect the PCM connector.
2. Inspect the following wiring harnesses for an open or short circuit. (Continuity inspection)

Open circuit

- If there is no continuity, there is an open circuit. Repair or replace the wiring harness.
  - — Middle/rear HO2S terminal C and main relay A
  - — Middle HO2S terminal D and PCM terminal 2BF
  - — Rear HO2S terminal D and PCM terminal 2BE

Short circuit

- If there is no continuity, there is a short circuit. Repair or replace the wiring harness.

  Middle and rear
  - — Middle/rear HO2S terminal C and body ground
  - — Middle/rear HO2S terminal D and power supply
  - — Middle/rear HO2S terminal D and body ground

am3uuw0000100

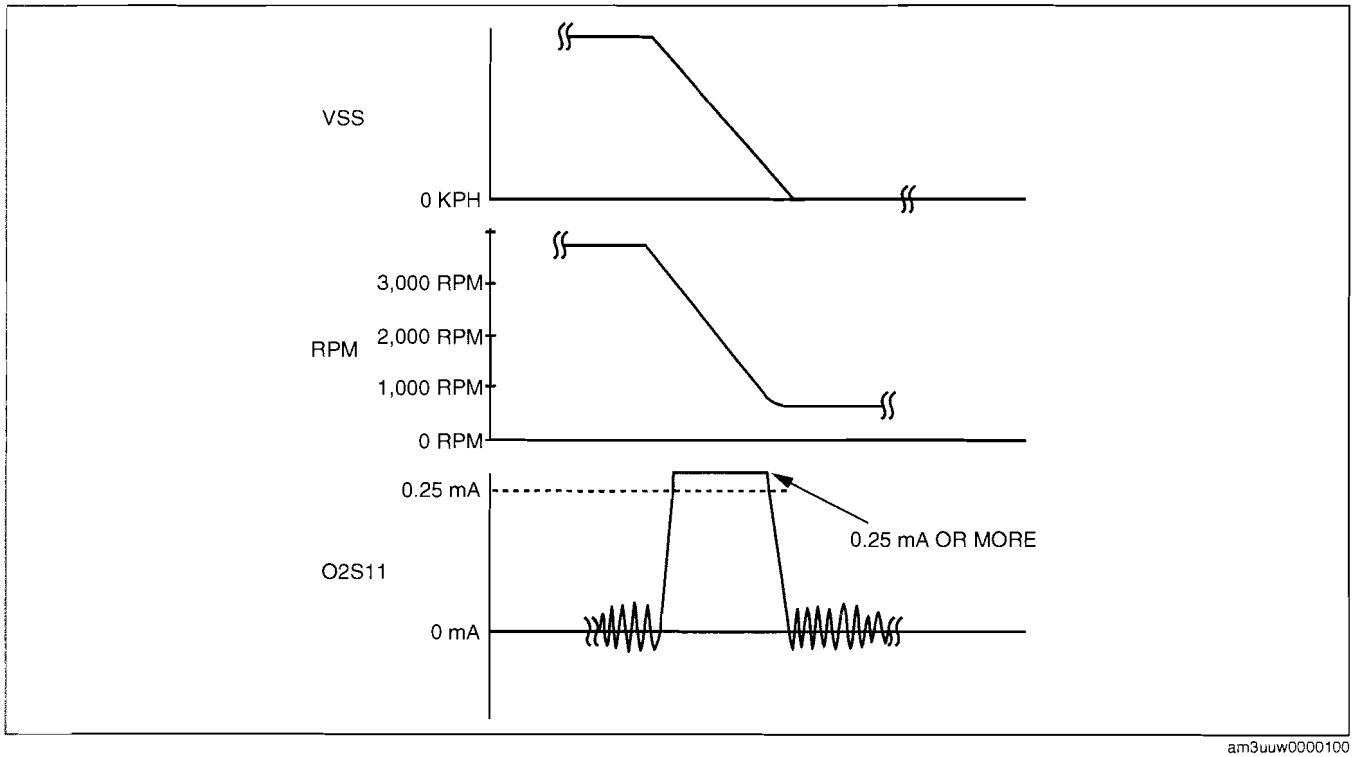
Except for California Emission Regulation Applicable Model

Note

- Before performing the following inspection, make sure to follow the procedure as indicated in the troubleshooting flowchart.

Front HO2S current inspection

1. Warm up the engine to normal operating temperature.
2. Using the M-MDS, monitor the following:
   - — Vehicle speed (PID: VSS)
   - — Engine speed (PID: RPM)
   - — Front HO2S current (PID: O2S11)
3. Drive the vehicle and decelerate the engine speed by releasing the accelerator pedal fully when the engine speed is **3,000 rpm or more**.
4. Verify that the front HO2S current (PID: O2S11) is **0.25 mA or more** while decelerating as shown in the figure.



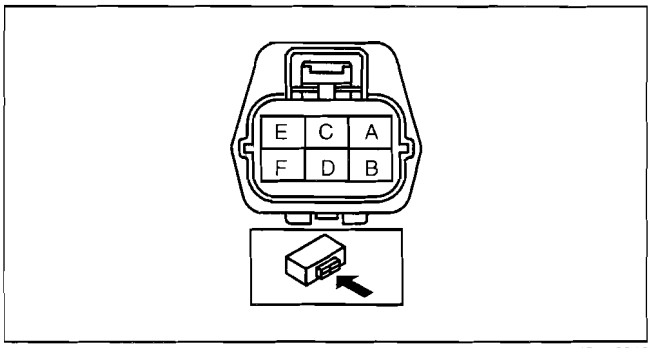
am3uuw0000100

- If not within the specification, inspect the HO2S for an open or short circuit. (See 01-40A-58 Front HO2S circuit open/short inspection (sensor).) Then if there is no malfunction in the wiring harness, replace the front HO2S.

Front HO2S heater resistance inspection

1. Disconnect the front HO2S connector.
2. Measure the resistance between front HO2S terminals C and D.
   - If not within the specification, replace the front HO2S. (See 01-40A-66 HEATED OXYGEN SENSOR (HO2S) REMOVAL/ INSTALLATION[LF, L3].)

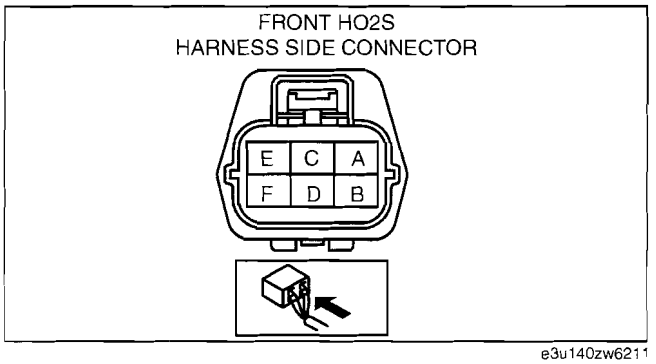
Front HO2S heater resistance
1—10 ohms [20 °C {68 °F}]



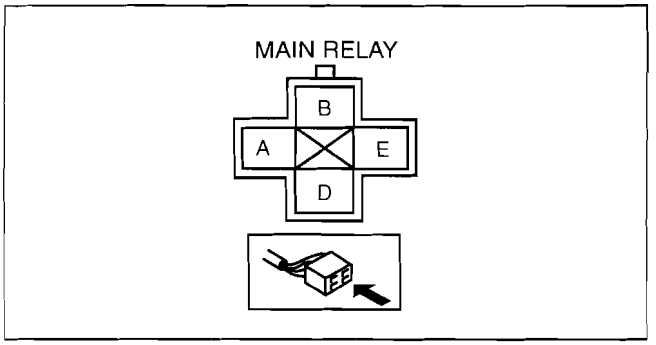
e3u140zw6212

Front HO2S circuit open/short inspection (sensor)

1. Disconnect the PCM connector.
2. Disconnect the front HO2S connector.
3. Inspect the following wiring harnesses for an open or short circuit. (Continuity inspection)



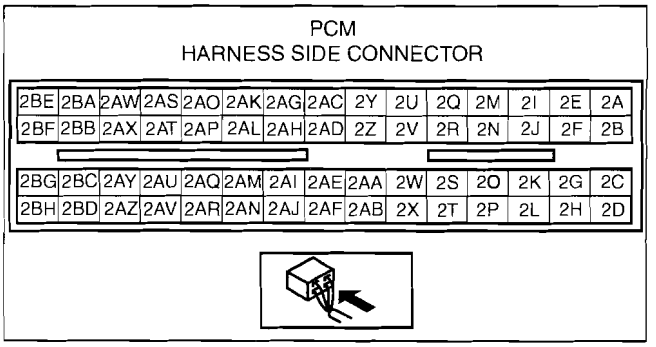
e3u140zw6211



e3u140zw6993

Open circuit

- If there is no continuity in the following wiring harnesses, there is an open circuit. Repair or replace the wiring harness.
  - — Front HO2S terminal A and main relay terminal A
  - — Front HO2S terminal B and PCM terminal 2AD
  - — Front HO2S terminal D and PCM terminal 2AC
  - — Front HO2S terminal E and PCM terminal 2BG*1, 2G*2
  - — Front HO2S terminal F and PCM terminal 2Z



am3uuw0000100

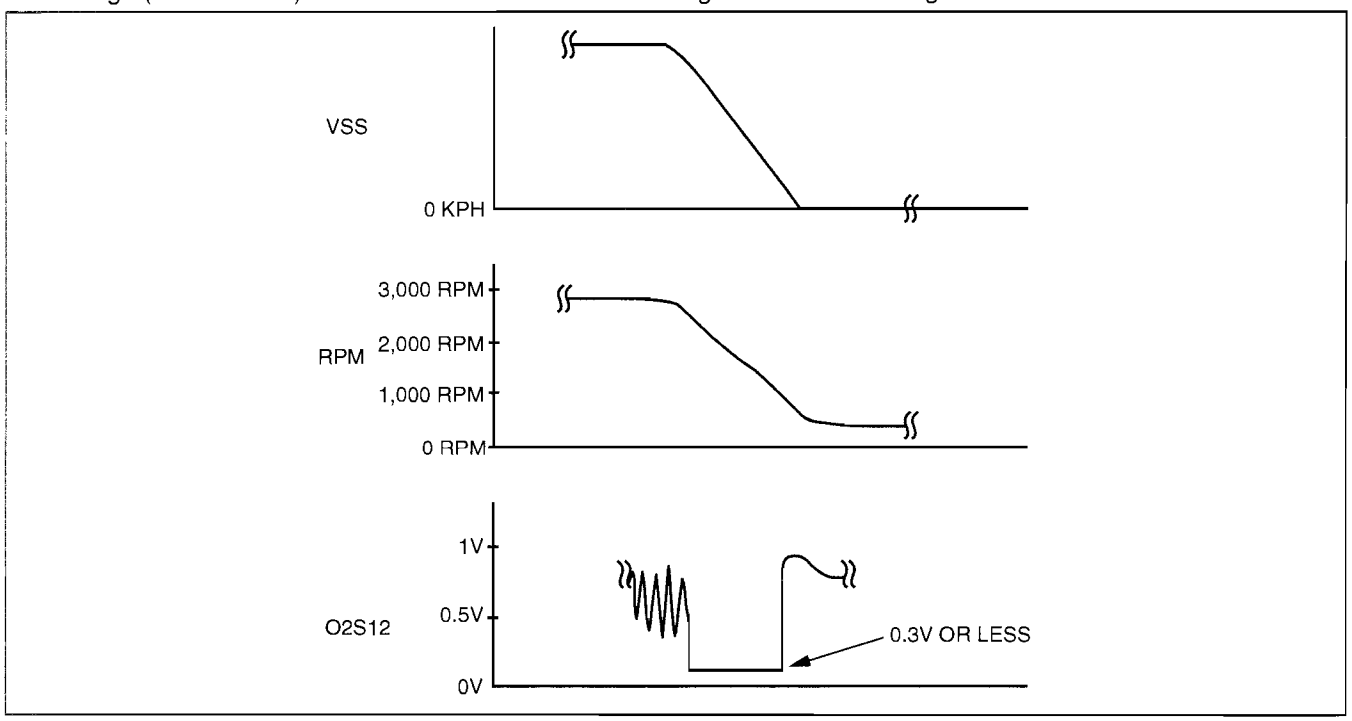
Short circuit

- If there is continuity in the following wiring harnesses, there is a short circuit. Repair or replace the wiring harness.
  - — Front HO2S terminal A and body ground
  - — Front HO2S terminal B and body ground
  - — Front HO2S terminal B and power supply
  - — Front HO2S terminal D and body ground
  - — Front HO2S terminal D and power supply
  - — Front HO2S terminal E and body ground
  - — Front HO2S terminal E and power supply

*1 : LF MTX, L3
*2 : LF ATX

Rear HO2S voltage inspection

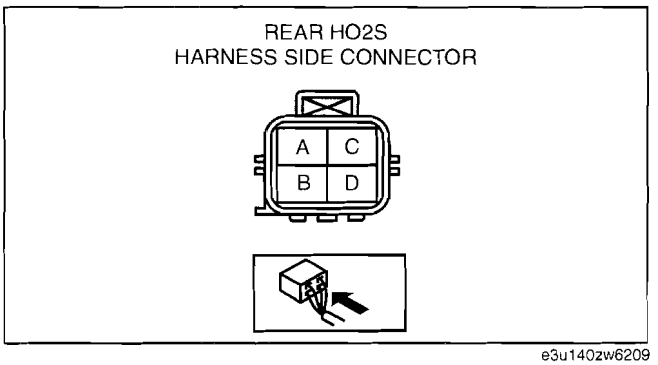
1. Warm up the engine to normal operating temperature.
2. Using the M-MDS, monitor the following:
   - — Vehicle speed (PID: VSS)
   - — Engine speed (PID: RPM)
   - — Rear HO2S voltage (PID: O2S12)
3. Drive the vehicle and decelerate the engine speed by releasing the accelerator pedal fully when the engine speed is 3,000 rpm or more.
4. Verify that the rear HO2S outputs a voltage of **0.6 V or more**, one time or more, then verify that the rear HO2S voltage (PID: O2S12) is **0.3 V or less** while decelerating as shown in the figure.



c3u0140w021

- If not within the specification, inspect the HO2S for an open or short circuit. (See 01-40A-64 Rear HO2S circuit open/short inspection (sensor).) Then if there is no malfunction in the wiring harness, replace the rear HO2S.

Rear HO2S circuit open/short inspection (sensor)



e3u140zw6209

1. Disconnect the PCM connector.
2. Inspect the following wiring harnesses for an open or short circuit. (Continuity inspection)

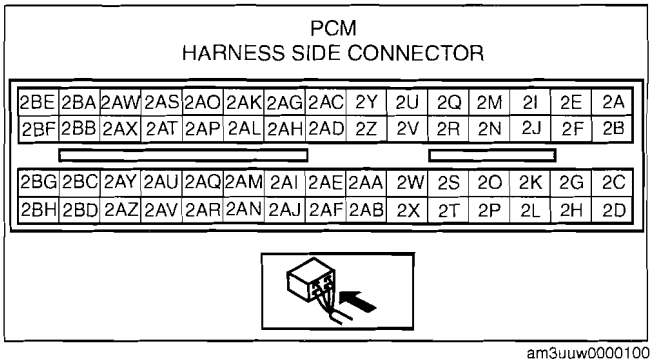
Open circuit

- If there is no continuity, there is an open circuit. Repair or replace the wiring harness.
  - — Rear HO2S terminal A and PCM terminal 2Q*1, 2AH*2
  - — Rear HO2S terminal B and PCM terminal 2P*1, 2AA*2

Short circuit

- If there is continuity, there is a short circuit. Repair or replace the wiring harness.
  - — Rear HO2S terminal A and body ground
  - — Rear HO2S terminal A and power supply
  - — Rear HO2S terminal B and power supply

*1 : LF MTX, L3
*2 : LF ATX

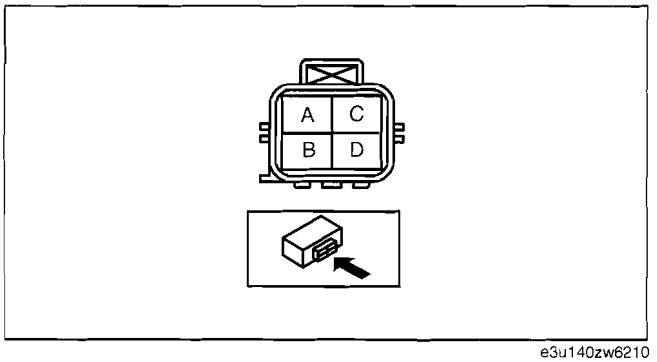


am3uuw0000100

Rear HO2S heater resistance inspection

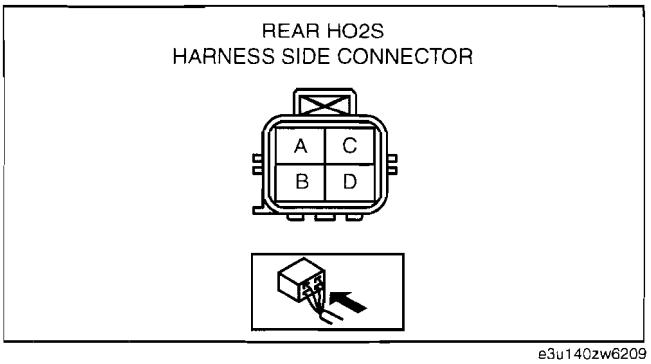
1. Disconnect the rear HO2S connector.
2. Measure the rear HO2S resistance between terminals C and D.
   - If not within the specification, replace the rear HO2S.

Rear HO2S heater resistance
2—50 ohms

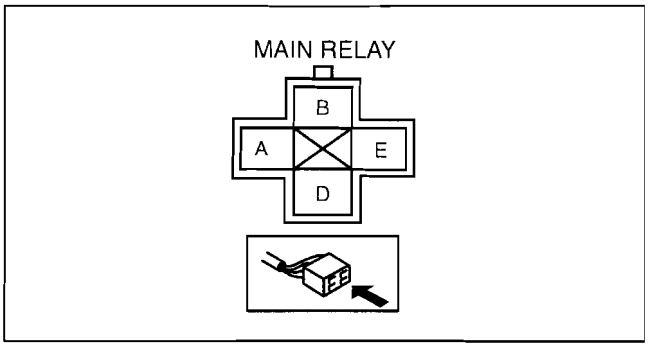


e3u140zw6210

Rear HO2S circuit open/short inspection (heater)



e3u140zw6209



e3u140zw6993

1. Disconnect the PCM connector.
2. Inspect the following wiring harnesses for an open or short circuit. (Continuity inspection)

Open circuit

- If there is no continuity, there is an open circuit. Repair or replace the wiring harness.
  - — Rear HO2S terminal C and main relay terminal A
  - — Rear HO2S terminal D and PCM terminal 2BE[*1], 2C[*2]

Short circuit

- If there is no continuity, there is a short circuit. Repair or replace the wiring harness.

  Front and rear
  - — Rear HO2S terminal C and body ground
  - — Rear HO2S terminal D and power supply
  - — Rear HO2S terminal D and body ground

HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION[LF, L3]

id0140a6804000

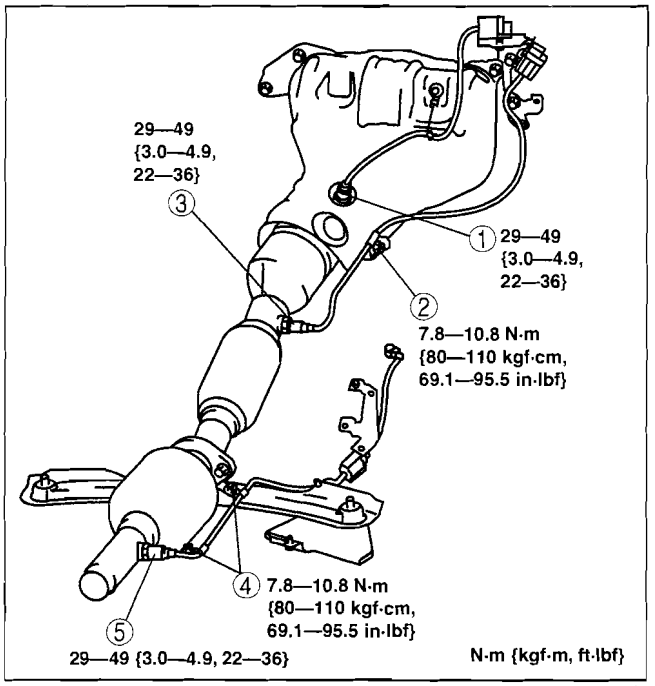
Warning

- **A hot engine and exhaust system can cause severe burns. Turn off the engine and wait until they are cool before removing the exhaust system.**

1. Remove the battery cover.
2. Disconnect the negative battery cable.
3. Remove the plug hole cover.
4. Disconnect the HO2S connector.
5. Remove in the order indicated in the table.

California emission regulation applicable model

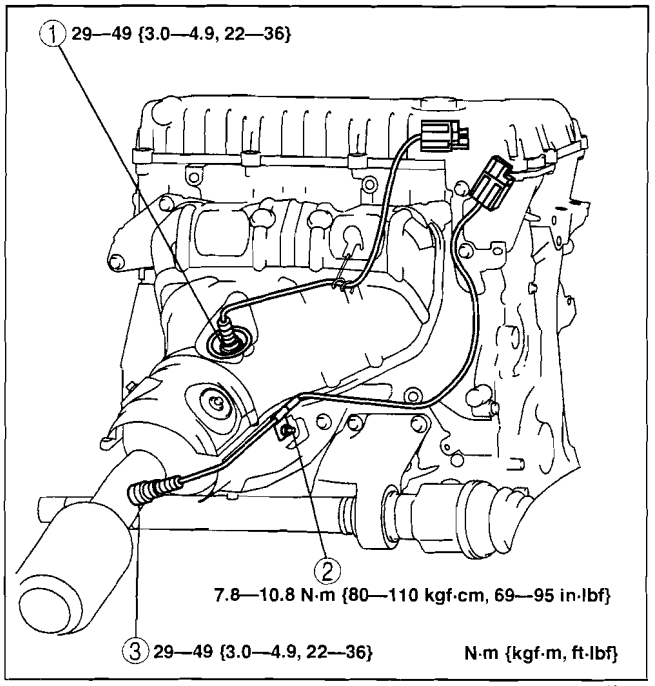
1	Front HO2S (See 01-40A-67 HO2S Removal Note.)
2	Wiring harness bracket (See 01-40A-67 Wiring Harness Bracket Installation Note.)
3	Middle HO2S (See 01-40A-67 HO2S Removal Note.)
4	Wiring harness bracket (See 01-40A-67 Wiring Harness Bracket Installation Note.)
5	Rear HO2S (See 01-40A-67 HO2S Removal Note.)



c3u0140w007

Except for California emission regulation applicable model

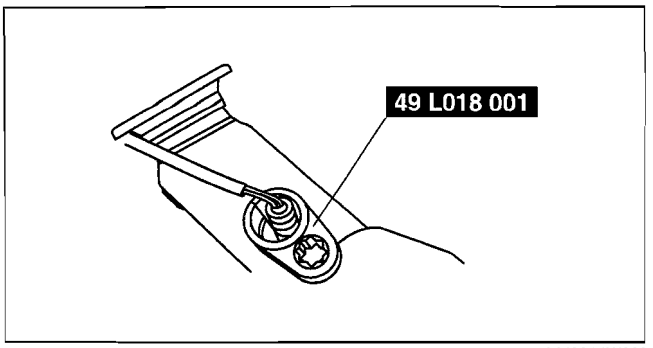
1	Front HO2S (See 01-40A-67 HO2S Removal Note.)
2	Wiring harness bracket (See 01-40A-67 Wiring Harness Bracket Installation Note.)
3	Rear HO2S (See 01-40A-67 HO2S Removal Note.)



B3E0140W015

HO2S Removal Note

1. Remove the HO2S using the **SST**.

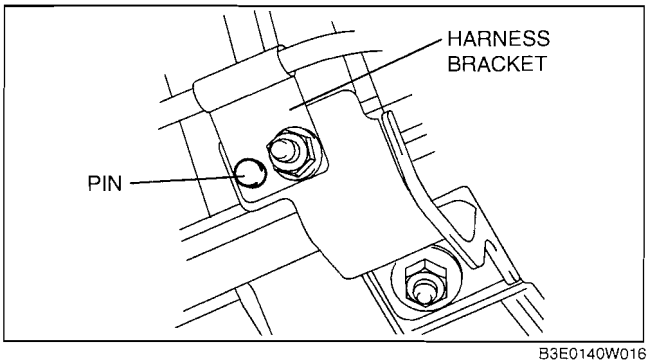


A6J3914W002

Wiring Harness Bracket Installation Note

Note

- There might be no pin. If there is no pin, lock the wiring harness bracket against rotation and tighten the nut.



B3E0140W016

CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION[LF, L3]

id0140a6800600

Removal

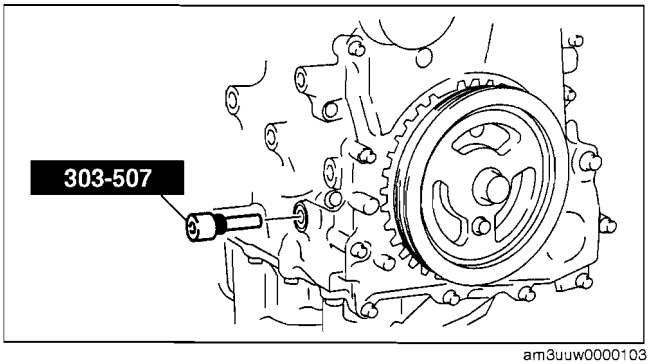
1. Remove the battery cover.
2. Disconnect the negative battery cable.
3. Remove the plug hole cover.
4. Perform the following procedure for easier access.
   (1) Remove the front tire (RH).
   (2) Remove the splash shield.
5. Disconnect the CKP sensor connector.
6. Remove the installation bolt and remove the CKP sensor.

Installation

Caution

- **When foreign material such as an iron chip is on the CKP sensor, it can cause abnormal output from the sensor because of flux turbulence and adversely affect the engine control. Be sure there is no foreign material on the CKP sensor when replacing.**

1. Perform the following procedure so that cylinder No.1 is at TDC.
   (1) Remove the cylinder block lower blind plug and install the **SST**.
   (2) Rotate the crankshaft pulley clockwise until the crank weight contacts the **SST** so that cylinder No.1 is at TDC.



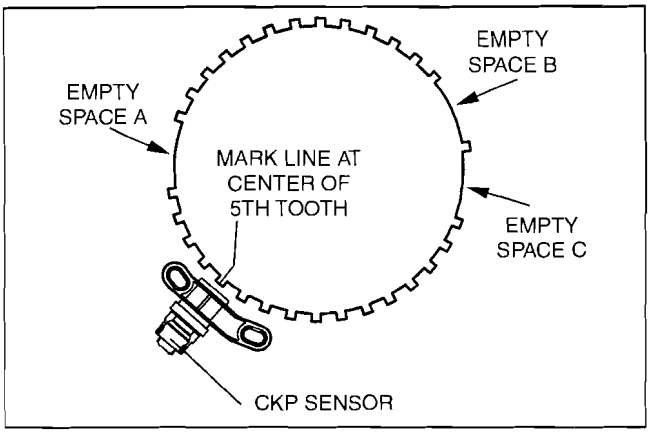
am3uuw0000103

2. Fit the center of the CKP sensor with the fifth tooth (counting counterclockwise from the empty space A as shown in the figure) of the pulse wheel.
3. Install the CKP sensor fitting bolts.

Tightening torque
5.5—7.5 N·m {56—76 kgf·cm, 4.1—5.5 ft·lbf}

4. Remove the **SST** then install the cylinder block lower blind plug.

Tightening torque
18—22 N·m {1.9—2.2 kgf·m, 14—16 ft·lbf}



am3uuw0000103

CRANKSHAFT POSITION (CKP) SENSOR INSPECTION[LF, L3]

id0140a6800500

Note
- Perform the following inspection according to the DATA MONITOR function (indicated by monitor item from here onwards).

Air Gap Inspection
1. Verify that the CKP sensor is securely installed.
2. Using a thickness gauge, measure the air gap between the plate projections at the back of crankshaft pulley and the CKP sensor.
   - If not within the specification, inspect the plate projections for cracks or bending.
     — If there is any malfunction, replace the plate.
     — If the monitor item condition/specification (reference) is not within the specification, even though there is no malfunction, carry out the "Circuit Open/Short Inspection".

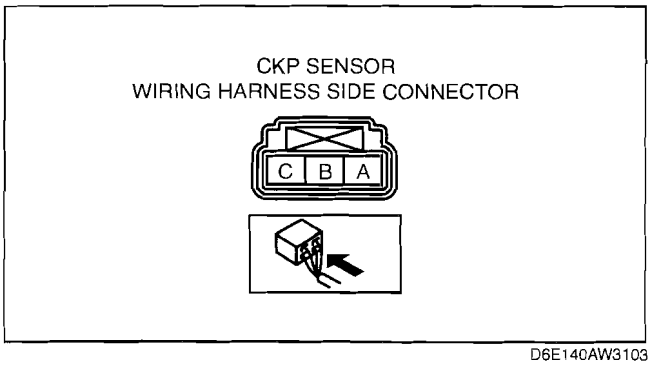
Air gap
0.5—1.5 mm {0.02—0.05 in}

Visual Inspection
1. Disconnect the negative battery cable.
2. Remove the CKP sensor. (See 01-40A-68 CRANKSHAFT POSITION (CKP) SENSOR INSPECTION[LF, L3].)
3. Verify that there are no metal shavings on the sensor.
   - If the monitor item condition/specification (reference) is without the specification even though there is no malfunction, carry out the "Circuit Open/Short Inspection".

Voltage Inspection
1. Idle the engine.

Caution
- **Water penetrating the connector will cause sensor malfunction. To prevent this, be careful not to damage the wiring harnesses or the waterproof connector so as to cause water penetration.**

2. Measure the output voltage using a oscilloscope.
   - If not within the specification, replace the CKP sensor.
   - If the monitor item condition/specification (reference) is without the specification, even though the voltage is within the specification, carry out the "Circuit Open/Short Inspection".



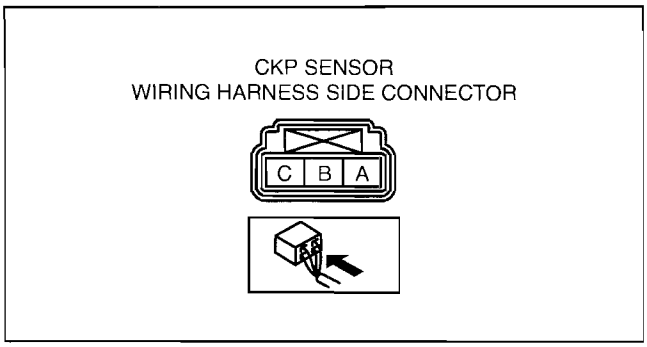
D6E140AW3103

Voltage

Terminal	Voltage (V)	Condition
A	0	Under any condition
B	4.8 or more	High output*
	0.8 or less	Low output*
C	B+	Under any condition

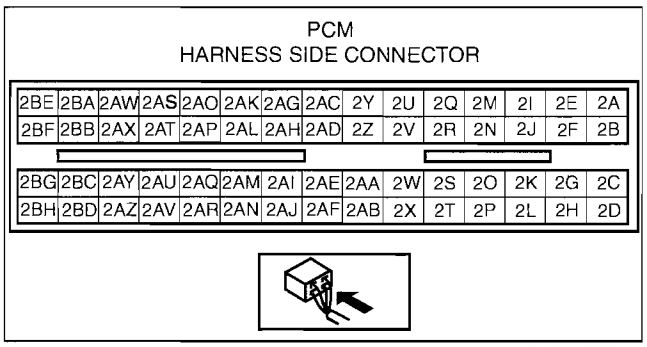
*: Output voltage varies with crankshaft rotation.

Circuit Open/Short Inspection



E6U140ZWC310

1. Inspect the following wiring harnesses for an open or short circuit. (Continuity inspection)



E3U140ZW6992

Open circuit

- If there is no continuity, the circuit is open. Repair or replace the wiring harness.
  - CKP sensor terminal A and body ground
  - CKP sensor terminal B and PCM terminal 2W[*1], 2U[*2]
  - CKP sensor terminal C and PCM terminal 2AQ[*1], 2T[*2]

Short circuit

- If there is continuity, the circuit is shorted. Repair or replace the wiring harness.
  - CKP sensor terminal A and power supply
  - CKP sensor terminal B and power supply
  - CKP sensor terminal B and body ground
  - CKP sensor terminal C and body ground

[*2] : Except for California emission regulation applicable model with LF ATX

CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION[LF, L3]

id0140a6801500

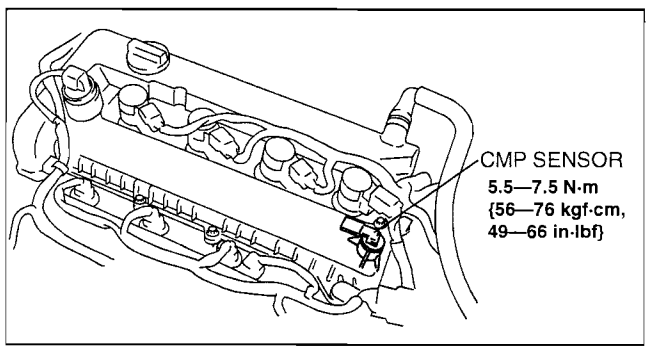
1. Remove the battery cover.
2. Disconnect the negative battery cable.
3. Remove the plug hole cover.

Caution

- **When replacing the CMP sensor, make sure there is no foreign material on it such as metal shavings. If it is installed with foreign material, the sensor output signal will malfunction resulting from fluctuation in magnetic flux and cause a deterioration in engine control.**

4. Disconnect the CMP sensor connector.
5. Remove the CMP sensor installation bolt.
6. Remove the CMP sensor from the cylinder head cover.
7. Install in the reverse order of removal.

Tightening torque
5.5—7.5 N·m {56—76 kgf·cm, 49—66 in·lbf}



B3E0140W019

CAMSHAFT POSITION (CMP) SENSOR INSPECTION[LF, L3]

id0140a6801400

Note

- Perform the following inspection according to the DATA MONITOR function (indicated by monitor item from here onwards).

Visual Inspection

1. Disconnect the negative battery cable.
2. Remove the CMP sensor. (See 01-40A-69 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/ INSTALLATION[LF, L3].)
3. Verify that there are no metal shavings on the sensor.
   - If the monitor item condition/specification (reference) is not within the specification even though there is no malfunction, carry out the "Circuit Open/Short Inspection".

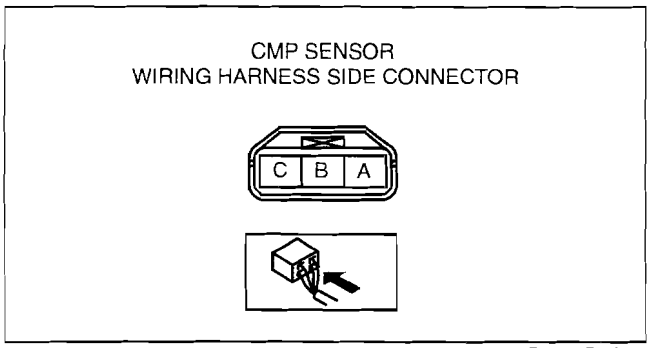
Voltage Inspection

1. Idle the engine.

Caution

- **Water penetrating the connector will cause sensor malfunction. To prevent this, be careful not to damage the wiring harnesses or the waterproof connector so as to cause water penetration.**

2. Measure the output voltage using a oscilloscope.
   - If not within the specification, replace the CMP sensor.
   - If the monitor item condition/specification (reference) is not within the specification, even though the voltage is within the specification, carry out the "Circuit Open/ Short Inspection".



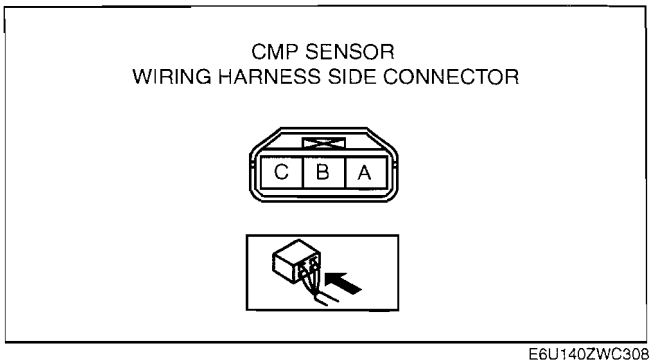
E6U140ZWC308

Voltage

Terminal	Voltage (V)	Condition
A	0	Under any condition
B	4.8 or more	High output*
	0.8 or less	Low output*
C	B+	Under any condition

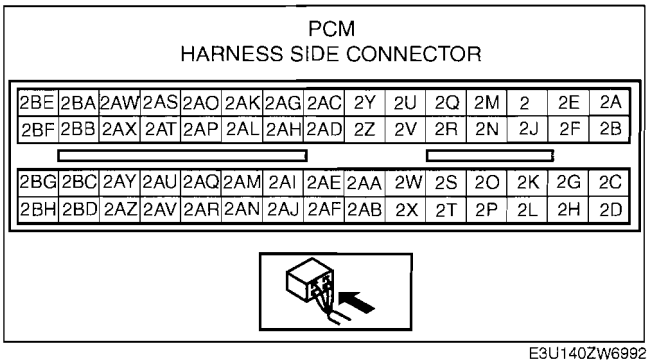
*: Output voltage varies with camshaft rotation.

Circuit Open/Short Inspection



E6U140ZWC308

1. Inspect the following wiring harnesses for an open or short circuit. (Continuity inspection)



E3U140ZW6992

Open circuit

- If there is no continuity, the circuit is open. Repair or replace the wiring harness.
  - — CMP sensor terminal A and body ground
  - — CMP sensor terminal B and PCM terminal 2S[*1], 2V[*2]
  - — CMP sensor terminal C and PCM terminal 2AM[*1], 2X[*2]

Short circuit

- If there is continuity, the circuit is shorted. Repair or replace the wiring harness.
  - — CMP sensor terminal A and power supply
  - — CMP sensor terminal B and power supply
  - — CMP sensor terminal B and body ground
  - — CMP sensor terminal C and power supply

*1 : California emission regulation applicable model and except for California emission regulation applicable model with LF MTX, L3

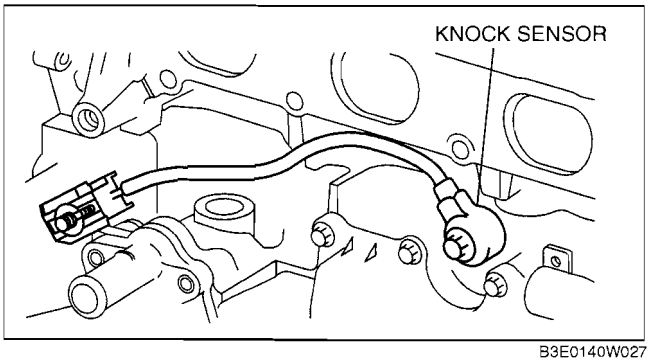
*2 : Except for California emission regulation applicable model with LF ATX

KNOCK SENSOR (KS) REMOVAL/INSTALLATION[LF, L3]

id0140a6802900

1. Remove the following part for easier access.
   - Intake manifold (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the KS connector.
3. Remove the KS installation bolt, then remove the KS.
4. Install in the reverse order of removal.

Tightening torque
16—24 N·m {1.7—2.4 kgf·m, 12—17 ft·lbf}



B3E0140W027

KNOCK SENSOR (KS) INSPECTION[LF, L3]

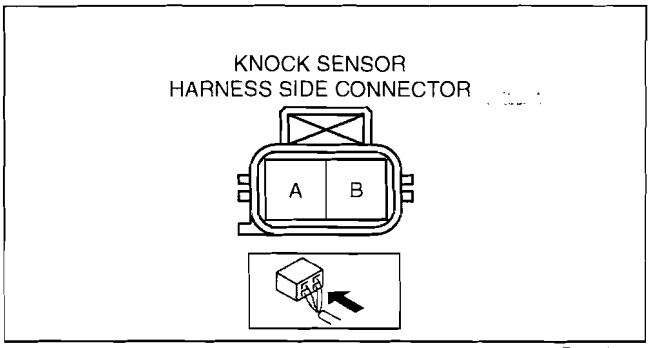
id0140a6802800

Note
- Before performing the following inspection, make sure to follow the procedure as indicated in the troubleshooting flowchart.

Resistance Inspection
1. Disconnect the knock sensor connector.
2. Measure resistance between KS terminals A and B.
   - If not within the specification, replace the KS.
   - If the monitor item status/specification (reference) is not within the specification, even though the KS resistance is within the specification, perform the "Circuit Open/Short Inspection".

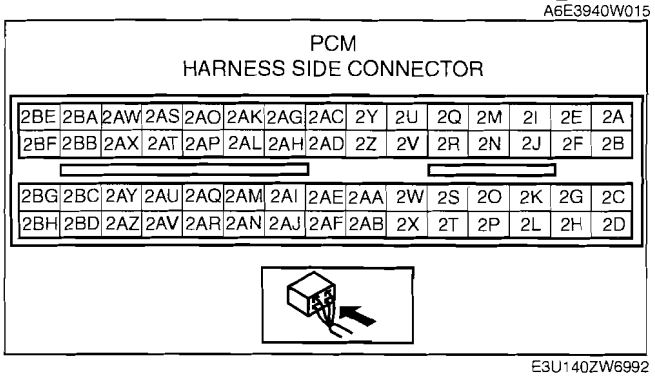
Resistance
Approx. 4.87 megohms

Circuit Open/Short Inspection



A6E3940W015

1. Disconnect the PCM connector.
2. Inspect the following wiring harnesses for an open or short circuit. (Continuity inspection)



E3U140ZW6992

Open circuit
- If there is no continuity, there is an open circuit. Repair or replace the wiring harness.
  - Knock sensor terminal A and PCM terminal 2U*1, 2Q*2
  - Knock sensor terminal B and PCM terminal 2V*1, 2R*2

Short circuit
- If there is continuity, there is a short circuit. Repair or replace the wiring harness.
  - Knock sensor terminal A and power supply
  - Knock sensor terminal A and body ground
  - Knock sensor terminal B and power supply
  - Knock sensor terminal B and body ground

*1 : California emission regulation applicable model and except for California emission regulation applicable model with LF MTX, L3

*2 : Except for California emission regulation applicable model with LF ATX

BAROMETRIC PRESSURE (BARO) SENSOR INSPECTION[LF, L3]

id0140a6801100

Note
- Perform the following inspection only when directed.
- The following vacuum values are indicated by relative pressure from the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)

1. Connect the M-MDS to the DLC-2.
2. Turn the ignition switch to the ON position.
3. Select BARO on the M-MDS.
4. Verify that the BARO PID (pressure) and barometric pressure are practically equal.
   - If not as verified, perform the "Circuit Open/Short Inspection".
     - If there is no open or short circuit, replace the PCM.

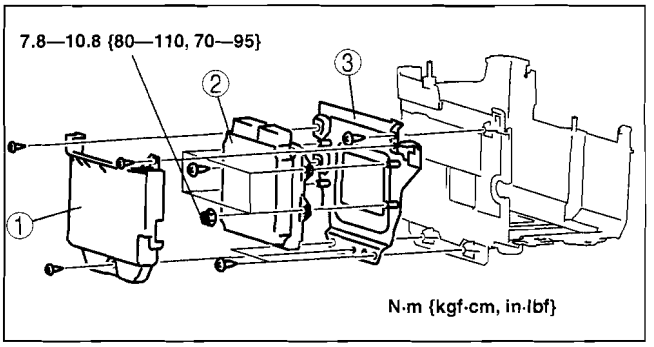
PCM REMOVAL/INSTALLATION[L3 WITH TC]

id014039802400

Note
- For PCM replacement, set up the M-MDS and perform the PCM configuration. (See 01-40B-22 PCM CONFIGURATION[L3 WITH TC].)

1. Remove the battery cover.
2. Disconnect the negative battery cable.
3. Disconnect the PCM connector.
4. When replacing the PCM on the vehicles, perform the following.
   - PCM parameter reset (See09-14-17 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING.)
5. Install in the reverse order of removal.

1	PCM cover
2	PCM
3	PCM bracket



am3uuw0000050

PCM INSPECTION[L3 WITH TC]

id014039802500

Without Using the M-MDS

Note
- The PCM terminal voltage can vary with the conditions when measuring and changes due to aged deterioration on the vehicle, causing false diagnosis. Therefore determine comprehensively where the malfunction occurs among the input systems, output systems, and the PCM.

PCM terminal voltage table (Reference)

1I	A/C	A/C relay	Idle	A/C operating	Below 1.0	• A/C relay • Related wiring harness
				A/C not operating	B+	
1J	Refrigerant pressure switch (middle)	Refrigerant pressure switch (middle)	A/C ON	Refrigerant pressure is more than the specification. (Refrigerant pressure switch (middle) is on.)	Below 1.0	• Refrigerant pressure switch • Related wiring harness
				Refrigerant pressure is less than the specification. (Refrigerant pressure switch (middle) is off.)	B+	
1K	—	—	—		—	—
1L	—	—	—		—	—
1M	IAT	MAF/IAT sensor	Ignition switch to the ON position	IAT 20 °C {68 °F}	2.4—2.6	• MAF/IAT sensor • Related wiring harness
				IAT 30 °C {86 °F}	1.7—1.9	
1N	—	—	—		—	—
1O	—	—	—		—	—
1P	MAF sensor ground	MAF/IAT sensor	Under any condition		Below 1.0	• Related wiring harness
1Q	—	—	—		—	—
1R	—	—	—		—	—
1S	Neutral position	Neutral switch	Shift lever is at neutral position		Below 1.0	• Neutral switch • Related wiring harness
			Shift lever is not at neutral position		B+	
1T	—	—	—		—	—
1U	APP sensor ground	APP sensor	Under any condition		Below 1.0	• Related wiring harness • APP sensor
1V	EVAP leak detection pump (solenoid)	EVAP leak detection pump	Ignition switch to the ON position		B+	• EVAP leak detection pump • Related wiring harness
1W	—	—	—		—	—
1X	—	—	—		—	—
1Y	APP sensor (No.1)	APP sensor	Ignition switch to the ON position	When the accelerator pedal is released	1.56—1.65	• APP sensor • Related wiring harness
				When the accelerator pedal is depressed	3.65—3.93	
1Z	—	—	—		—	—
1AA	Fuel pump speed control	Fuel pump speed control relay	Ignition switch to the ON position after 10 s		B+	• Fuel pump speed control relay • Related wiring harness
			Cranking		Below 1.0	
			Idle		Below 1.0	

Terminal	Signal	Connected to	Test condition		Voltage (V)	Inspection item
1AB	Brake	Brake switch	Brake pedal depressed		B+	• Brake switch • Related wiring harness
			Brake pedal released		Below 1.0	
1AC	APP sensor (No.2)	APP sensor (No.2)	Ignition switch to the ON position	When the accelerator pedal is released	1.01—1.10	• APP sensor • Related wiring harness
				When the accelerator pedal is depressed	3.10—3.38	
1AD	—	—	—		—	—
1AE	Fan control module	Fan control module	• Inspect using the wave profile. (See01-40B-13 Inspection Using An Oscilloscope (Reference).)			• Fan control module • Related wiring harness
1AF	—	—	—		—	—
1AG	—	—	—		—	—
1AH	—	—	—		—	—
1AI	CAN (L)	CAN related module	Because this terminal is for CAN, no valid determination of terminal voltage is possible			• Related wiring harness
1AJ	Constant voltage	APP sensor	Ignition switch to the ON position		Approx. 5.0	• Related wiring harness
1AK	MAF	MAF/IAT sensor	Ignition switch to the ON position		Approx. 0.7	• MAF/IAT sensor • Related wiring harness
			Idle		Approx. 1.3	
1AL	—	—	—		—	—
1AM	CAN (H)	CAN related module	Because this terminal is for CAN, no valid determination of terminal voltage is possible			• Related wiring harness
1AN	—	—	—		—	—
1AO	—	—	—		—	—
1AP	—	—	—		—	—
1AQ	Cruise control switch	Cruise control switch	Ignition switch to the ON position	ON/OFF switch pressed in	Approx. 0	• Cruise control switch • Related wiring harness
				CANCEL switch pressed in	Approx. 1.1	
				SET/COAST switch pressed in	Approx. 3.1	
				RES/ACCEL switch pressed in	Approx. 4.2	
				Except above	Approx. 5.0	
1AR	IAT sensor ground	MAF/IAT sensor	Under any condition		Below 1.0	• Related wiring harness
1AS	EVAP leak detection pump (pump)	EVAP leak detection pump	Ignition switch to the ON position		Below 1.0	• EVAP leak detection pump • Related wiring harness
			Idling		B+	
1AT	Main relay control	Main relay	Ignition switch off after 10 s		B+	• Main relay • Related wiring harness
			Ignition switch to the ON position		Below 1.0	
1AU	A/C on signal	Refrigerant pressure switch (high, low)	Idle	A/C switch and fan switch on	B+	• Refrigerant pressure switch (high, low) • Related wiring harness
1AV	APP sensor ground	APP sensor	Under any condition		Below 1.0	• Related wiring harness
1AW	Injector control	Fuel Injector relay	Under any condition		Below 1.0	• Related wiring harness

Terminal	Signal	Connected to	Test condition	Voltage (V)	Inspection item
1AX	Drive-by-wire relay control	Drive-by-wire relay	Ignition switch off after 10 s	B+	• Related wiring harness
			Ignition switch to the ON position	Below 1.0	
1AY	Ignition switch	Ignition switch	Ignition switch off	Below 1.0	• Related wiring harness
			Ignition switch to the ON position	B+	
1AZ	Ground	Ground	Under any condition	Below 1.0	• Related wiring harness
1BA	Back-up power supply	Battery (positive terminal)	Under any condition	B+	• Battery • Related wiring harness
1BB	Ground	Ground	Under any condition	Below 1.0	• Related wiring harness
1BC	Sensor ground	HO2S (rear)	Under any condition	Below 1.0	• HO2S (rear) • Related wiring harness
1BD	Ground	Ground	Under any condition	Below 1.0	• Related wiring harness
1BE	B+	Main relay	Ignition switch off after 10 s	Below 1.0	• Battery • Related wiring harness
			Ignition switch to the ON position	B+	
1BF	Drive-by-wire power supply	Drive-by-wire relay	Ignition switch off after 10 s	Below 1.0	• Related wiring harness
			Ignition switch to the ON position	B+	
1BG	Ground	Ground	Under any condition	Below 1.0	• Related wiring harness
1BH	Ground	Ground	Under any condition	Below 1.0	• Related wiring harness
2A	Throttle actuator control (+)	Throttle body	Ignition switch off	Approx. 1.5	• Throttle actuator • Related wiring harness
			Ignition switch to the ON position	B+	
2B	Throttle actuator control (–)	Throttle body	Ignition switch off	Approx. 1.5	• Throttle actuator • Related wiring harness
			Ignition switch to the ON position	B+	
2C	HO2S (front) heater control	HO2S (front) heater	• Inspect using the wave profile. (See01-40B-13 Inspection Using An Oscilloscope (Reference).)		• HO2S (front) • Related wiring harness
2D	HO2S (rear) heater control	HO2S (rear) heater	• Engine speed above 5,000 rpm (Heater control not operating)	B+	• HO2S (rear) heater • Related wiring harness
2E	Power supply	Main relay, Variable swirl solenoid valve, CMP sensor	Ignition switch off after 10 s	Below 1.0	• Main relay • Related wiring harness
			Ignition switch to the ON position	B+	
2F	High pressure fuel pump control (+)	High pressure fuel pump	Ignition switch off	Below 1.0	• High pressure fuel pump • Related wiring harness Related wiring harness
			Ignition switch to the ON position	Approx. 9.7	
			Idle	Approx. 9.4	
2G	High pressure fuel pump control (–)	High pressure fuel pump	Ignition switch off	Below 1.0	• High pressure fuel pump • Related wiring harness Related wiring harness
			Ignition switch to the ON position	Approx. 9.6	
			Idle	Approx. 8.6	
2H	Ground	Body ground	Under any condition	Below 1.0	• Related wiring harness
2I	Constant voltage (Vref)	Fuel pressure sensor	Ignition switch to the ON position	Approx. 5.0	• Related wiring harness

2M	Sensor ground	HO2S (front)	Under any condition		Below 1.0	• Related wiring harness
2N	Boost air temperature	MAP/Boost air temperature sensor	Ignition switch to the ON position	IAT 20 °C {68 °F}	2.4—2.6	• Boost air temperature sensor • Related wiring harness
				IAT 30 °C {86 °F}	1.7—1.9	
2O	—	—	—		—	—
2P	Sensor ground	Fuel pressure sensor	Under any condition		Below 1.0	• Fuel pressure sensor • Related wiring harness
2Q	HO2S (rear)	HO2S (rear)	Idle		0—1	• HO2S (rear) • Related wiring harness
2R	Fuel pressure sensor	Fuel pressure sensor	Ignition switch off		Below 1.0	• Fuel pressure sensor • Related wiring harness
			Ignition switch to the ON position		Approx. 1.1	
			Idle		Approx. 1.7	
2S	CMP	CMP sensor	• Inspect using the wave profile. (See01-40B-13 Inspection Using An Oscilloscope (Reference).)			• CMP sensor • Related wiring harness
2T	PSP	PSP switch	Idle	Steering wheel at straight ahead position	B+	• PSP switch • Power steering system • Related wiring harness
				While turning steering wheel	Below 1.0	
2U	Knocking (+)	KS	Ignition switch to the ON position (Use digital type voltmeter, because measurement voltage will be detected less than true voltage when using analog type voltmeter)		Approx. 4.3	• KS • Related wiring harness
2V	Knocking (–)	KS	Ignition switch to the ON position (Use digital type voltmeter, because measurement voltage will be detected less than true voltage when using analog type voltmeter)		Below 1.0	• KS • Related wiring harness
2W	CKP	CKP sensor	• Inspect using the wave profile. (See01-40B-13 Inspection Using An Oscilloscope (Reference).)			• CKP sensor • Related wiring harness
2X	Internal ground	KS, CMP sensor, CKP sensor, HO2S (Front), TP sensor	Under any condition		Below 1.0	• Related wiring harness
2Y	HO2S (front) calibration resistor	HO2S (front)	Ignition switch off after 10s		Below 1.0	• HO2S (front) • Related wiring harness
			Ignition switch to the ON position		Approx. 3.9	
2Z	HO2S (front) power supply	HO2S (front)	Idle (after warm up)		Approx. 6.2	• HO2S (front) • Related wiring harness
2AA	Wastegate control solenoid valve	Wastegate control solenoid valve	• Inspect using the wave profile. (See01-40B-13 Inspection Using An Oscilloscope (Reference).)			• Wastegate control solenoid valve • Related wiring harness
2AB	Purge solenoid valve	Purge solenoid valve	• Inspect using the wave profile. (See01-40B-13 Inspection Using An Oscilloscope (Reference).)			• Purge solenoid valve • Related wiring harness
2AC	HO2S (front) negative current	HO2S (front)	Idle (after warm up)		Approx. 3.7	• HO2S (front) • Related wiring harness

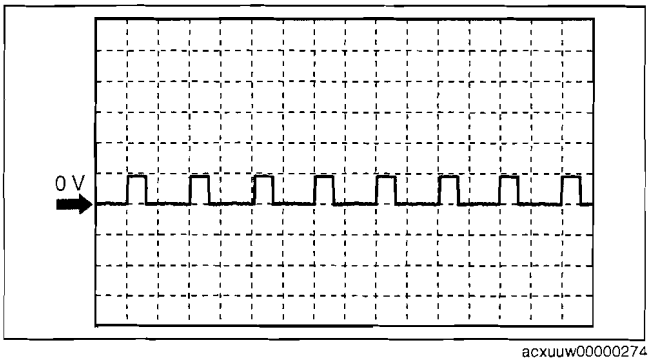
Terminal	Signal	Connected to	Test condition		Voltage (V)	Inspection item
2AD	HO2S (front) positive current	HO2S (front)	Idle (after warm up)		Approx. 3.7	• HO2S (front) • Related wiring harness
			After racing		2.1—4.8	
2AE	Variable swirl shutter valve monitor	Variable swirl shutter valve switch	variable swirl shutter valve close		Below 1.0	• Variable swirl shutter valve switch • Related wiring harness
			variable swirl shutter valve open		B+	
2AF	OCV control	OCV	• Inspect using the wave profile. (See01-40B-13 Inspection Using An Oscilloscope (Reference).)			• OCV valve • Related wiring harness
2AG	Manifold absolute pressure	MAP sensor	Ignition switch to the ON position)		Approx. 1.9	• MAP sensor • Related wiring harness
			Idle (after warm up)		Below 1.0	
2AH	ECT	ECT sensor	Ignition switch to the ON position	ECT 20 °C {68 °F}	3.04—3.14	• ECT sensor • Related wiring harness
				ECT 60 °C {140 °F}	1.29—1.39	
2AI	Generator field coil control	Generator (terminal D)	• Inspect using the wave profile. (See01-40B-13 Inspection Using An Oscilloscope (Reference).)			• Generator • Related wiring harness
2AJ	Generator output voltage	Generator (terminal P)	• Inspect using the wave profile. (See01-40B-13 Inspection Using An Oscilloscope (Reference).)			• Generator • Related wiring harness
2AK	TP sensor (No. 1)	TP sensor (No. 1)	Ignition switch to the ON position	APP is released	0.4—0.6	• TP sensor • Related wiring harness
				APP is depressed	4.7—4.9	
2AL	TP sensor (No. 2)	TP sensor (No. 2)	Ignition switch to the ON position	APP is released	4.4—4.6	• TP sensor • Related wiring harness
				APP is depressed	0.1—0.3	
2AM	EGR valve #3 coil control	EGR valve (terminal A)	Ignition switch to the ON position		B+	• EGR valve • Related wiring harness
			Ignition switch off		Below 1.0	
2AN	EGR valve #6 coil control	EGR valve (terminal F)	Ignition switch to the ON position		B+	• EGR valve • Related wiring harness
			Idle		B+	
2AO	Constant voltage (Vref)	TP sensor	Ignition switch to the ON position		Approx. 5.0	• TP sensor • Related wiring harness
2AP	TP sensor ground	TP sensor	Under any condition		Below 1.0	• TP sensor • Related wiring harness
2AQ	EGR valve #1 coil control	EGR valve (terminal E)	Ignition switch to the ON position		Below 1.0	• EGR valve • Related wiring harness
			Idle		Below 1.0	
2AR	EGR valve #4 coil control	EGR valve (terminal B)	Ignition switch to the ON position		B+	• EGR valve • Related wiring harness
			Ignition switch off		Below 1.0	
2AS	Variable swirl control	Variable swirl solenoid valve	ECT 62 °C {144 °F} or more and engine speed 3,250 rpm or more		B+	• Variable swirl solenoid valve • Related wiring harness
			ECT less than 62 °C {144 °F} and engine speed less than3,250 rpm		Below 1.0	
2AT	IGT4	Ignition coil (No.4 cylinders)	• Inspect using the wave profile. (See01-40B-13 Inspection Using An Oscilloscope (Reference).)			• Ignition coil No.4 • Related wiring harness
2AU	Constant voltage (Vref)	MAP sensor	Ignition switch to the ON position		Approx. 5.0	• Related wiring harness
2AV	Sensor ground	MAP sensor	Under any condition		Below 1.0	• Related wiring harness
2AW	IGT2	Ignition coil (No.2 cylinders)	• Inspect using the wave profile. (See01-40B-13 Inspection Using An Oscilloscope (Reference).)			• Ignition coil No.2 • Related wiring harness

Terminal	Signal	Connected to	Test condition	Voltage (V)	Inspection item
2AX	IGT3	Ignition coil (No.3 cylinders)	• Inspect using the wave profile. (See01-40B-13 Inspection Using An Oscilloscope (Reference).)		• Ignition coil No.3 • Related wiring harness
2AY	Sensor ground	ECT sensor	Under any condition	Below 1.0	• ECT sensor • Related wiring harness
2AZ	Fuel injection (–)(#4)	Fuel injector (No.4)	• Inspect using the wave profile. (See01-40B-13 Inspection Using An Oscilloscope (Reference).)		• Fuel injector No.4 • Related wiring harness
2BA	IGT1	Ignition coil (No.1 cylinders)	• Inspect using the wave profile. (See01-40B-13 Inspection Using An Oscilloscope (Reference).)		• Ignition coil No.1 • Related wiring harness
2BB	Fuel injection (–)(#1)	Fuel injector (No.1)	• Inspect using the wave profile. (See01-40B-13 Inspection Using An Oscilloscope (Reference).)		• Fuel injector No.1 • Related wiring harness
2BC	Fuel injection (–)(#2)	Fuel injector (No.2)	• Inspect using the wave profile. (See01-40B-13 Inspection Using An Oscilloscope (Reference).)		• Fuel injector No.2 • Related wiring harness
2BD	Fuel injection (–)(#3)	Fuel injector (No.3)	• Inspect using the wave profile. (See01-40B-13 Inspection Using An Oscilloscope (Reference).)		• Fuel injector No.3 • Related wiring harness
2BE	Fuel injector power supply 1	Fuel Injector relay	Ignition switch off	Below 1.0	• Fuel Injector relay • Related wiring harness
			Ignition switch to the ON position	B+	
2BF	Fuel injector power supply 2	Fuel Injector relay	Ignition switch off	Below 1.0	• Fuel Injector relay • Related wiring harness
			Ignition switch to the ON position	B+	
2BG	Fuel injection (+)(#1, #4)	Fuel injector (No.1,No.4)	• Inspect using the wave profile. (See01-40B-13 Inspection Using An Oscilloscope (Reference).)		• Fuel injector No.1, No.4 • Related wiring harness
2BH	Fuel injection (+)(#2, #3)	Fuel injector (No.2, No.3)	• Inspect using the wave profile. (See01-40B-13 Inspection Using An Oscilloscope (Reference).)		• Fuel injector No.2, No.3 • Related wiring harness

Inspection Using An Oscilloscope (Reference)
Fan control module signal
PCM terminals
- 1AE (+)—body ground (–)

Oscilloscope setting
- 5 V/DIV (Y), 20 ms/DIV (X), DC range

Vehicle condition
- Idle after warm up (no load, P/S off, A/C off)

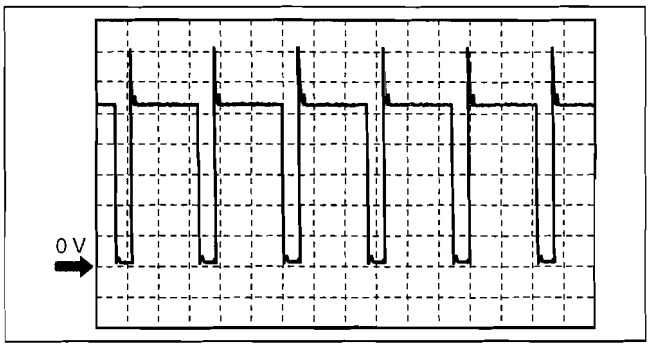


acxuuw00000274

HO2S (front) heater control signal
PCM terminals
- 2C (+)—body ground (–)

Oscilloscope setting
- 2 V/DIV (Y), 20 ms/DIV (X), DC range

Vehicle condition
- Idle after warm up (no load, P/S off, A/C off)

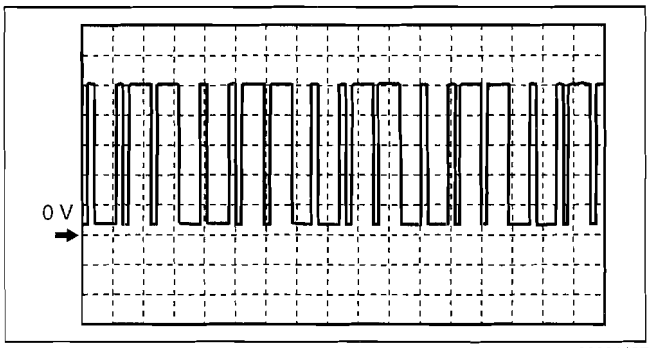


acxuuw00000275

CMP sensor signal
PCM terminals
- 2S (+)—body ground (–)

Oscilloscope setting
- 2 V/DIV (Y), 100 ms/DIV (X), DC range

Vehicle condition
- Idle after warm up (no load, P/S off, A/C off)

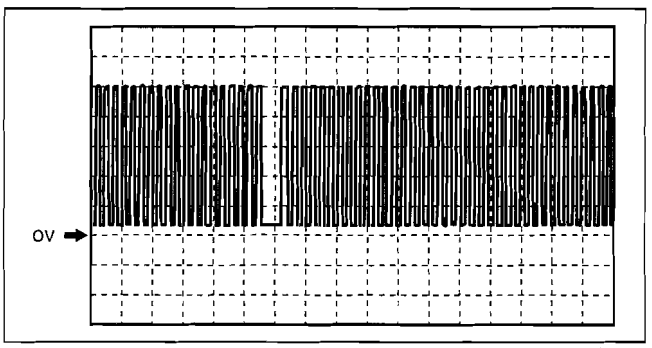


acxuuw00000127

CKP sensor signal
PCM terminals
- 2W (+)—body ground (–)

Oscilloscope setting
- 2 V/DIV (Y), 5 ms/DIV (X), DC range

Vehicle condition
- Idle after warm up (no load, P/S off, A/C off)

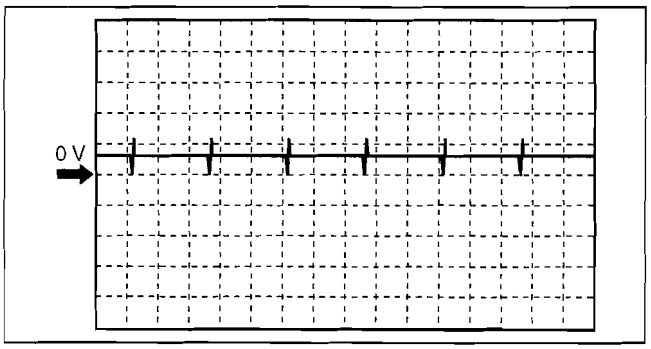


acxuuw00000128

Wastegate control solenoid valve signal
PCM terminals
- 2AA (+)—body ground (–)

Oscilloscope setting
- 20 V/DIV (Y), 20 ms/DIV (X), DC range

Vehicle condition
- Ignition switch to the ON position

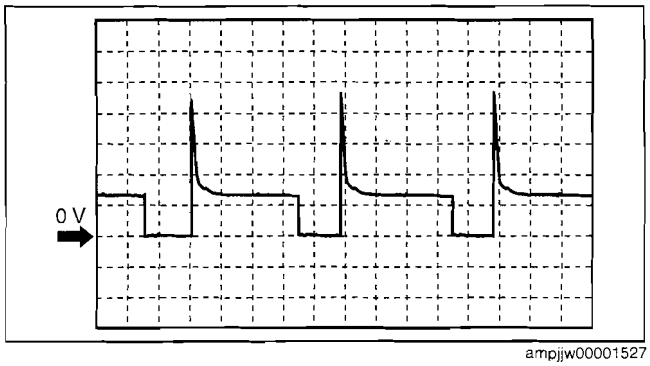


acxuuw00002325

Purge control signal
PCM terminals
- 2AB (+)—body ground (–)

Oscilloscope setting
- 10 V/DIV (Y), 20 ms/DIV (X), DC range

Vehicle condition
- Engine speed is 2,000 rpm

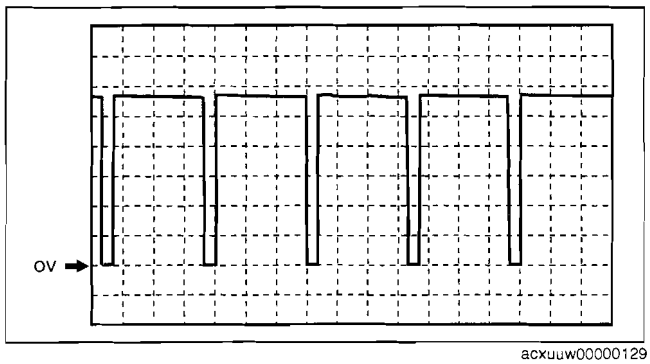


ampjjw00001527

OCV signal
PCM terminals
- 2AF (+)—body ground (–)

Oscilloscope setting
- 2.5 V/DIV (Y), 1 ms/DIV (X), DC range

Vehicle condition
- Idle after warm up (no load, P/S off, A/C off)

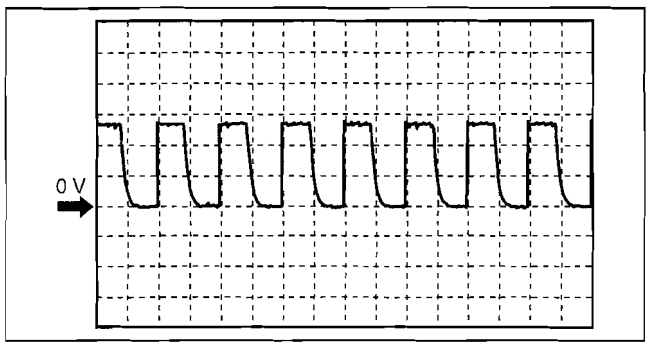


acxuuw00000129

Generator field coil control signal
PCM terminals
- 2AI (+)—body ground (–)

Oscilloscope setting
- 0.5 V/DIV (Y), 2 ms/DIV (X), DC range

Vehicle condition
- Idle after warm up (engine speed approx. 650 rpm, no load)

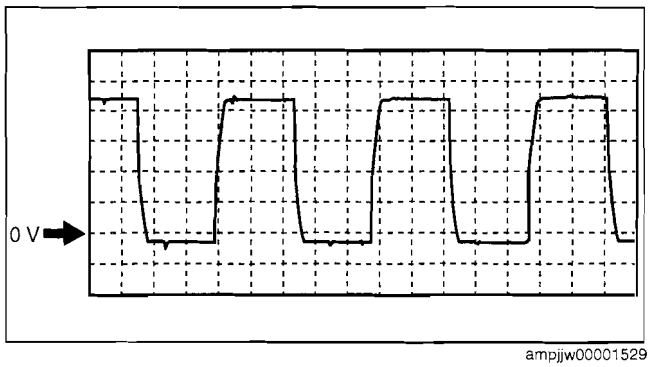


ampjjw00001528

Generator output voltage signal
PCM terminals
- 2AJ (+)—body ground (–)

Oscilloscope setting
- 2 V/DIV (Y),1 ms/DIV (X), DC range

Vehicle condition
- Idle after warm up (no load, P/S off, A/C off)



ampjjw00001529

IGT1, IGT2, IGT3, IGT4 control signals
PCM terminals
- IGT1 (No.1): 2BA (+)—body ground (–)
- IGT2 (No.2): 2AW (+)—body ground (–)
- IGT3 (No.3): 2AX (+)—body ground (–)
- IGT4 (No.4): 2AT (+)—body ground (–)

Oscilloscope setting
- 2 V/DIV (Y), 20 ms/DIV (X), DC range

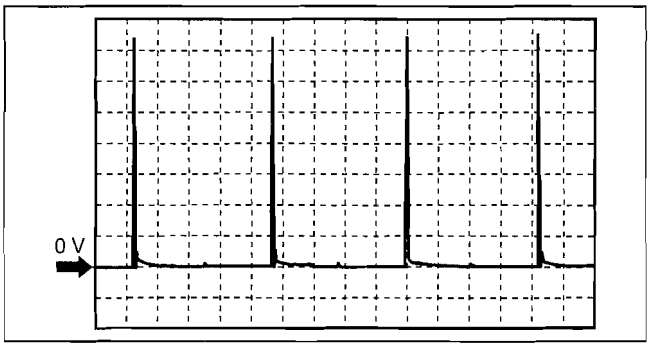
Vehicle condition
- Idle after warm up (no load, P/S off, A/C off)

ampjiw00000781

Fuel injection control (–)
PCM terminals
- Fuel injection No.1: 2BB (+)—body ground (–)
- Fuel injection No.2: 2BC (+)—body ground (–)
- Fuel injection No.3: 2BD (+)—body ground (–)
- Fuel injection No.4: 2AZ (+)—body ground (–)

Oscilloscope setting
- 10 V/DIV (Y), 20 ms/DIV (X), DC range

Vehicle condition
- Idle after warm up (no load, P/S off, A/C off)

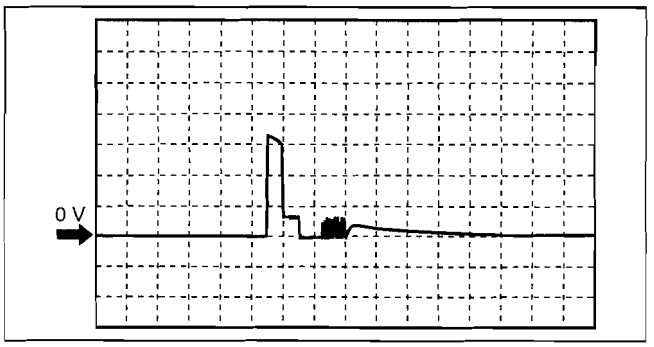


acxuuw00002326

Fuel injection control (+)
PCM terminals
- Fuel injection No.1, No.4: 2BG (+)—body ground (–)
- Fuel injection No.2, No.3: 2BH (+)—body ground (–)

Oscilloscope setting
- 20 V/DIV (Y), 400 µs/DIV (X), DC range

Vehicle condition
- Idle after warm up (no load, P/S off, A/C off)

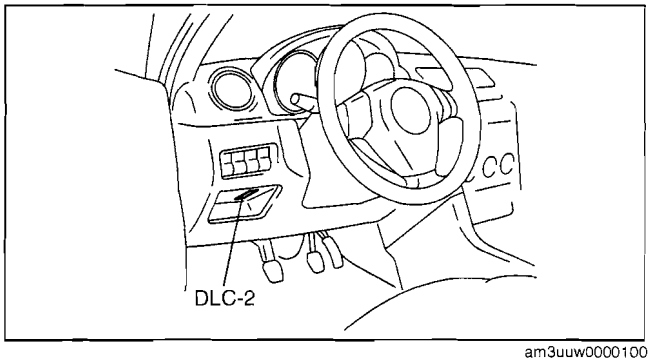


acxuuw00000277

Using the M-MDS

Note
- PIDs for the following parts are not available on this model. Perform the specific inspections for the following parts:
  — CMP sensor (See01-40B-47 CAMSHAFT POSITION (CMP) SENSOR INSPECTION[L3 WITH TC].)
  — Main relay

1. Connect the M-MDS to the DLC-2.
2. Turn the ignition switch to the ON position.
3. Measure the PID value.
   - If PID value is not within the specification, follow the instructions in the "Inspection item"column.



am3uuw0000100

Note
- The PID/DATA MONITOR function monitors the calculated value of the input/output signals in the PCM. Therefore, an output device malfunction is not directly indicated as a malfunction of the monitored value for the output device. If a monitored value of an output device is out of specification, inspect the monitored value of the input device related to the output control.
- For input/output signals except those of the monitoring items, use a voltmeter to measure the PCM terminal voltage.
- The simulation items that are used in the ENGINE CONTROL SYSTEM OPERATION INSPECTION are as follows.
  — ACCS, ALTF, ARPMDES, FAN_DUTY, EVAPCP, FP, FUELPW1, GENVDSD, HTR11, HTR12, IMRC, INJ_1, INJ_2, INJ_3, INJ_4, SEGRP, test, VT DUTY1 Wt, WGC

PID/DATA monitor table (reference)

Monitor item (Definition)	Unit/ Condition		Condition/Specification (Reference)	Inspection item	PCM terminal
AAT (Ambient air temperature)	°C	°F	Ignition switch to the ON position: Indicate the ambient air temperature	• MAF/IAT sensor	1M
AC_REQ (Refrigerant pressure switch (high, low))	On/Off		Refrigerant pressure is more than the specification or less than the specification. (Refrigerant pressure switch (high, low) is off.): Off Except above: On	• Refrigerant pressure switch (high, low)	1AU
ACCS (A/C relay)	On/Off		A/C relay is ON: On A/C relay is OFF: Off	• The following PIDs: — RPM, TP, ECT • A/C relay	1I
AFR (Air/fuel ratio)	—		Target air-oil ratio is displayed	• HO2S	2Q 2Z 2AC 2AD
AFR_ACT (Actual air/ fuel ratio)	—		Actual air-oil ratio is displayed	• HO2S	2Q 2Z 2AC 2AD
ALTF (Generator field coil control duty value)	%		Ignition switch to the ON position: 0% Idle: 0—100% Just after A/C switch ON and fan switch ON at idle: Duty value rises	• The following PIDs: — IAT, ECT, RPM, VPWR, ALTT V • Generator	2AI
ALTT V (Generator output voltage)	V		Idle (no E/L): Approx. 14 V (This is an internal calculation value and differs from the terminal voltage.)	• Generator	2AJ
APP (Accelerator pedal position)	%		Accelerator pedal is released: 0% Accelerator pedal is depressed: 100%	• The following PIDs: — APP1, APP2 • APP sensor	1Y 1AC

Monitor item (Definition)	Unit/ Condition	Condition/Specification (Reference)	Inspection item	PCM terminal
APP1 (Accelerator pedal position)	%	Accelerator pedal is released: 31.0—32.4% Accelerator pedal is depressed: 69.8—81.8%	• APP sensor	1Y
	V	Accelerator pedal is released: 1.56—1.65 V Accelerator pedal is depressed: 3.65—3.93 V		
APP2 (Accelerator pedal position)	%	Accelerator pedal is released: 20.2—21.4% Accelerator pedal is depressed: 58.8—70.8%	• APP sensor	1AC
	V	Accelerator pedal is released: 1.01—1.10 V Accelerator pedal is depressed: 3.10—3.38 V		
ARPMDES (Target engine speed)	RPM	Shift position: P or N — No load: 700 rpm — E/L operating: 700 rpm — P/S operating: 700 rpm — A/C ON: 700 rpm	• The following PIDs: — IAT, RPM, MAP, ECT, MAF, TP, INGEAR, PSP, ALTT V • CKP sensor	—
BARO (Barometric pressure)	Pa	Ignition switch is ON at sea level: Approx. 101 kPa {1.01 Bar, 14.6psi}	• BARO sensor	—
	V	Ignition switch is ON at sea level: Approx. 4.0 V		
BAT	°C	Boost air temperature is displayed	• MAP/boost air temperature sensor	2N
BAT_V	V	Boost air temperature 20 °C {68 °F}: 2.4—2.6 V	• MAP/boost air temperature sensor	2N
		Boost air temperature 30 °C {86 °F}: 1.7—1.9 V		
BOO (Brake switch)	On/Off	Brake pedal depressed: On Brake pedal released: Off	• Brake switch No.1/No.2	1AB 1AF
BPA (Brake pressure applied switch)	On/Off	Brake pedal depressed: On Brake pedal released: Off	• Brake switch No.1/No.2	1AB 1AF
CATT11_DSD (Estimated catalytic converter temperature)	°C / °F	Indicate the estimated catalytic converter temperature	• Perform applicable DTC troubleshooting.	—
CHRGLP (Generator warning light)	On/Off	Ignition switch to the ON position: On Idle: Off	• Perform applicable DTC troubleshooting.	—
COLP (Refrigerant pressure switch (middle))	ON/OFF	Refrigerant pressure is more than the specification. (Refrigerant pressure switch (middle) is on.): On Refrigerant pressure is less than the specification. (Refrigerant pressure switch (middle) is off.): Off	• Refrigerant pressure switch (middle)	1J
CPP (Clutch pedal position)	On/Off	Clutch pedal depressed: On Clutch pedal released: Off	• CPP switch	1D
CPP/PNP (Shift lever position)	Drive/ Neutral	Neutral position: Neutral Others: Drive	• Neutral switch	1S
DTCCNT (Number of DTC detected)	—	Indicates number of DTC	• Perform applicable DTC troubleshooting.	—
ECT (Engine coolant temperature)	°C / °F	Ignition switch to the ON position: Indicate the ECT	• ECT sensor	2AH
	V	ECT 20 °C {68 °F}: 3.04—3.14 V ECT 60 °C {140 °F}: 1.29—1.39 V		
EQ_RAT11 (Equivalence ratio (lambda))	—	Idling after warm-up: Approx. 1	• Perform applicable DTC troubleshooting.	—

Monitor item (Definition)	Unit/ Condition	Condition/Specification (Reference)	Inspection item	PCM terminal
EQ_RAT11_DSD (Front oxygen sensor)	—	Idling after warm-up: Approx. 1	• Perform applicable DTC troubleshooting.	—
ETC_ACT (Electronic throttle control actual)	°	Indicate the desired TP by angle	• Perform applicable DTC troubleshooting.	2AK 2AL
ETC_DSD (Electronic throttle control desired)	%	Indicate the desired TP by percent	• The following PIDs: — APP1, APP2, ETC_ACT • TP sensor	2AK 2AL
	°	Indicate the desired TP by angle		
EVAPCP (Purge solenoid valve duty value)	%	Ignition switch to the ON position: 0% Idle: 0%	• The following PIDs: — IAT, RPM, ECT, MAF, O2S11,BARO, INGEAR, VPWR • Purge solenoid valve	2AB
FAN_DUTY	%	ECT less than 98 °C {208 °F}: 0% ECT 100 °C {212 °F}: 30% ECT 106 °C {223 °F}: 70% ECT 110 °C {230 °F}: 100%	• Fan control module	1R 1AE
FIA (Fuel injection amount)	—	Indicate the fuel injection amount.	• Fuel injector • Fuel Injector relay	—
FLI (Fuel level)	%	Fuel gauge level F: Approx. 100% Fuel gauge level E: Approx. 0%	• Perform applicable DTC troubleshooting.	—
FP (Fuel pump relay)	On/Off	Idle: On Cranking: On	• The following PIDs: — RPM • Fuel pump relay	1H
FP_Hi_PRES	On/Off	Spill valve control solenoid valve work: On Spill valve control solenoid valve don't work: Off	• High pressure fuel pump	2F 2G
FUEL_PRES	Pa	Idle: Approx. 3 MPa Load 60 % or more: Approx. 11.5 MPa	• Fuel pressure sensor	2R
FUEL_PRES_V	V	Ignition switch to the ON position: Approx. 1.1 V Idle: Approx. 1.7 V	• Fuel pressure sensor	2R
FUELPW (Fuel injector duration)	sec	Idle: Approx. 2.0 ms	• The following PIDs: — ECT, IAT, RPM, TP, MAF, O2S11, O2S12, MAP, VSS, TR, BOO, AC_REQ, COLP, VPWR	2AZ 2BB 2BC 2BD
FUELSYS (Fuel system status)	OL/CL/ OL-Drive/ OL-Fault/ CL-Fault	Ignition switch to the ON position: OL_Drive Idle (after warm up): CL	• The following PIDs: — IAT, MAF, TP, MAP, ECT, RPM, O2S11, O2S12, INGEAR, PSP, VPWR, ALTT V • Fuel injector	—
GENVDSD (Generator voltage desired)	V	Idle: Approx. 13.83 V (E/L not operating)	• Perform applicable DTC troubleshooting.	—
HTR11 (HO2S heater (front))	On/Off	Idle (after warm up): On⇔Off	• The following PIDs: — IAT, MAF, TP, ECT, RPM	2C
HTR12 (HO2S heater (rear))	On/Off	Idle: On Engine speed is above 4,000 rpm: Off	• The following PIDs: — IAT, MAF, ECT, RPM, ACSW	2D
IAT (Intake air temperature)	°C °F	Ignition switch to the ON position position: Indicate the IAT	• MAF/IAT sensor	1M
	V	IAT 20 °C {68 °F}: 2.4—2.6V IAT 30 °C {86 °F}: 1.7—1.9V		
IMRC (Variable swirl solenoid valve)	On/Off	Engine speed is below Approx. 3,750 rpm and ECT is below 60 °C {140 °F}: On Others: Off	• The following PIDs: — TP, ECT, RPM • Variable swirl solenoid valve	2AS
INGEAR (Load/no load condition)	On/Off	Driving range: On Except above: Off Others: On	• Perform applicable DTC troubleshooting.	—

Monitor item (Definition)	Unit/ Condition	Condition/Specification (Reference)	Inspection item	PCM terminal
IVS (CTP condition)	Idle/ Off Idle	APP closed: Idle Others: Off Idle	• Perform applicable DTC troubleshooting.	2AK 2AL
KNOCKR (Knocking retard)	°	Ignition switch to the ON position: 0 ° Idle: 0 °	• KS	2U 2V
LDP_EVAPCP (EVAP system leak detection pump detect incorrect purge flow)	A	Indicate the EVAP control system incorrect purge flow detection value	• Perform applicable DTC troubleshooting.	—
LDP_IDL (EVAP system leak detection pump idle current)	A	Indicate the EVAP system leak detection pump idle current	• Perform applicable DTC troubleshooting.	—
LDP_MON (EVAP system leak detection pump monitoring current)	A	Indicate the EVAP system leak detection pump monitoring current	• Perform applicable DTC troubleshooting.	—
LDP_REF (EVAP system leak detection pump reference current)	A	Indicate the EVAP system leak detection pump reference current	• Perform applicable DTC troubleshooting.	—
LDP_SLDV (EVAP system small leak detection value)	A	Indicate the EVAP control system small leak detection value	• Perform applicable DTC troubleshooting.	—
LDP_VSL_FV*1 (EVAP system very small leak detection fail value)	mA/sec	Indicate EVAP system very small leak detection fail value	• Perform applicable DTC troubleshooting.	—
LDP_VSL_SV*1 (EVAP system very small leak detection safe value)	mA/sec	Indicate EVAP system very small leak detection safe value	• Perform applicable DTC troubleshooting.	—
LDP_VSLDV*1 (EVAP system small leak detection value)	mA/sec	Indicate the EVAP control system vary small leak detection value	• Perform applicable DTC troubleshooting.	—
LOAD (Engine load)	%	Ignition switch to the ON position: 0% Idle (after warm up): 17.1—18.5% Engine speed is 2,500 rpm: 14.2—15.2	• MAF/IAT sensor	—
LONGFT1 (long term fuel trim)	%	Idle (after warm up):–14—14%	• Perform applicable DTC troubleshooting.	—
MAF (Mass airflow)	g/sec	Ignition switch to the ON position: Approx. 0 g/s Idle (after warm up): 2.72—2.94 g/s Engine speed is 2,500 rpm: 8.00—8.66	• MAF/IAT sensor	1AK
	V	Ignition switch to the ON position: Approx. 0.7 V Idle (after warm up): Approx. 1.3 V		
MAP (Manifold absolute pressure)	Pa	Ignition switch to the ON position: Indicate the atmospheric pressure	• MAP sensor	2AG
	V	Ignition switch to the ON position: Approx. 1.9 V Idle (after warm up): Below 1.0 V		
MIL (Malfunction indicator lamp)	On/Off	Ignition switch to the ON position: On Idle: Off	• Perform applicable DTC troubleshooting.	—
MIL_DIS (Traveled distance since the MIL illuminated)	km / mile	No DTC: 0 km {0 mile} DTC detected: Not 0 km {0 mile}	• Perform applicable DTC troubleshooting.	—
O2S11 (Front oxygen sensor)	A	Idle (after warm up): –1.0—1.0 A Deceleration (after warm up): 0.25 A or more	• HO2S (front)	2Z 2AC 2AD

Monitor item (Definition)	Unit/ Condition	Condition/Specification (Reference)	Inspection item	PCM terminal
O2S12 (Rear oxygen sensor)	V	Idle: 0—1 V	• HO2S (rear)	2Q
PSP (Power steering pressure switch)	High/Low	Steering wheel in straight ahead position: Low Others: High	• PSP switch	2T
RO2FT1 (Rear oxygen sensor fuel trim)	—	• Idle after warm-up: Approx. 0.2	• The following PID — O2S12	2Q
RPM (Engine speed)	RPM	No load: 650—750 rpm E/L operating: 650—750 rpm P/S operating: 650—750 rpm A/C ON: 650—750 rpm	• CKP sensor	2W
SCCS (Speed control command switch)	V	Press ON/OFF: Approx. 0 V Press CANCEL: Approx. 1.1 V Press SET/COAST: Approx. 3.1 V Press RES/ACCEL: Approx. 4.2 V Others: Approx. 5.0 V	• Cruise control switch	1AQ
SEGRP (EGR valve (stepping motor) position)	—	Idle: 0 step Cranking: 0—60 steps	• The following PIDs: — MAF, TP, ECT, RPM, VSS • EGR valve	—
SEGRP DSD (Desired EGR valve (stepping motor) position)	%	Idle: 0%	• The following PIDs: — MAF, TP, ECT, RPM, VSS	—
SHRTFT1 (Short term fuel trim [front HO2S])	%	Idle (after warm up): Approx.–30—25%	• Perform applicable DTC troubleshooting.	—
SHRTFT12 (Short term fuel trim)	%	Idle (after warm up): Approx.–30—25%	• Perform applicable DTC troubleshooting.	—
SPARKADV (Ignition timing)	°	Idle: BTDC Approx. 10°	• The following PIDs: — MAF, TP, ECT, RPM, INGEAR, PSP, ACSW, VPWR • Ignition timing	—
test (Test mode)	On/Off	—	—	—
TIRESIZE (Tire revolution per mile)	rev/mile	Indicate the tire circumference length	—	—
TP REL (Relative TP)	%	Ignition switch to the ON position APP is released: Approx. 5% APP is depressed: Approx. 46 %	• TP sensor	2AK 2AL
TP1 (TP sensor 1)	%	Ignition switch to the ON position APP is released: Approx. 15% APP is depressed: Approx. 55 %	• TP sensor	2AK
	V	Ignition switch to the ON position APP is released: 0.4—0.6 V APP is depressed: 4.7—4.9 V		
TP2 (TP sensor 2)	%	Ignition switch to the ON position APP is released: Approx. 15% APP is depressed: Approx. 56%	• TP sensor	2AL
	V	Ignition switch to the ON position APP is released: 4.4—4.6 V APP is depressed: 0.1—0.3 V		
TPCT (Lowest closed throttle voltage)	V	Ignition switch to the ON position: Approx 1.0 V	• TP sensor	2AK 2AL
VPWR (Battery positive voltage)	V	Indicate the battery voltage	• Battery	1BA
Vref (Battery voltage)	V	Indicate the battery voltage	• Battery	1BA
VSS (Vehicle speed)	KPH / MPH	Indicate the vehicle speed	• Perform applicable DTC troubleshooting.	—
VT ACT1 (Actual valve timing)	°	Idle: Approx. 0°	• The following PIDs: — TP, ECT, RPM • OCV	—

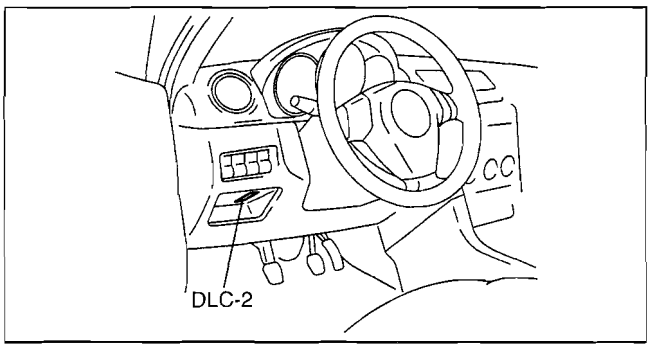
Monitor item (Definition)	Unit/ Condition	Condition/Specification (Reference)	Inspection item	PCM terminal
VT DIFF1 (Difference between actual valve timing and target valve timing)	°	Idle: Approx. 0°	• The following PIDs: — TP, ECT, RPM • OCV	2AF
VT DUTY1	%	Idle: Approx. 11.5%	• The following PIDs: — TP, ECT, RPM • OCV	2AF
VTC	On/Off	Variable swirl shutter valve switch ON: On	• Variable swirl shutter valve switch	2AE
		Variable swirl shutter valve switch OFF: Off		
WGC	%	Racing with the accelerator pedal fully depressed: 10—100 %	• Wastegate control solenoid valve	2AA
		Fully closed: 0 %		

*1 : California emission regulation applicable model

PCM CONFIGURATION[L3 WITH TC]

id014039802600

1. Connect the M-MDS to DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Module Programming".
   - When using the PDS (Pocket PC)
     1. Select "Programming".
     2. Select "Module Programming".
3. Then, select the "Programmable Module Installation" and "PCM" from the screen menu.
4. Select "Programmable Parameters". [with DSC HU/CM]
5. Select "Tire Size / Axle Ratio". [with DSC HU/CM]
6. Select "Body Type - (PCM)", then select the applicable body type on the M-MDS screen. [with DSC HU/CM]
7. Retrieve DTCs using the M-MDS, then verify if DTCs are present.
   - If a DTC is present, perform the applicable DTC inspection.



am3zzw0000046

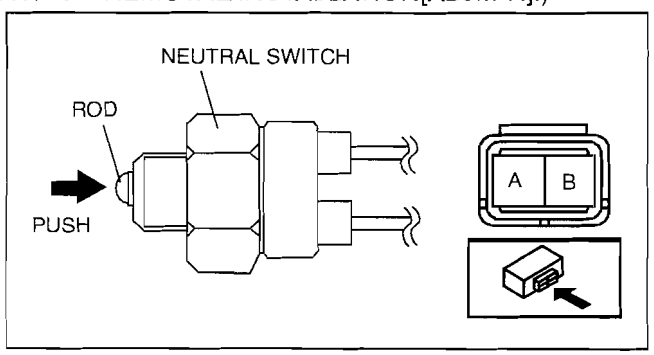
NEUTRAL SWITCH INSPECTION[L3 WITH TC]

id014039800800

Note
- Before performing the following inspection, make sure to follow the procedure as indicated in the troubleshooting flowchart.

Continuity Inspection

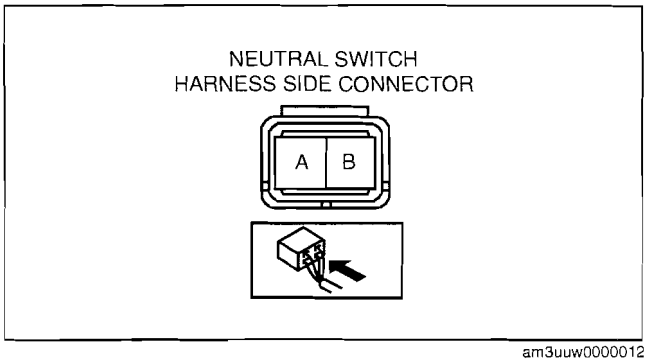
1. Remove the neutral switch. (See 05-15B-3 NEUTRAL SWITCH REMOVAL/INSTALLATION[A26M-R].)
2. Verify that the continuity between neutral switch terminals A and B is as indicated in the table.
   - If it can be verified, perform the "Circuit Open/ Short Inspection".
   - If it cannot be verified, replace the neutral switch.



am3uuw0000012

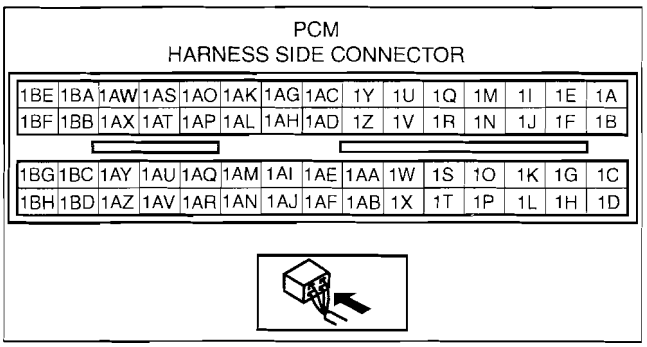
Measured condition	Continuity
Rod pushed	Continuity detected
Except above	No continuity

Circuit Open/Short Inspection



am3uuw0000012

1. Disconnect the PCM connector.
2. Inspect the following wiring harness for an open or short circuit. (Continuity inspection)



e3u140zw6991

Open circuit

- If there is no continuity in the following wiring harnesses, there is an open circuit. Repair or replace the wiring harness.
  - Neutral switch terminal A and PCM terminal 1S
  - Neutral switch terminal B and body ground

Short circuit

- If there is continuity in the following wiring harnesses, there is a short circuit. Repair or replace the wiring harness.
  - Neutral switch terminal B and ground

CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION[L3 WITH TC]

id014039801600

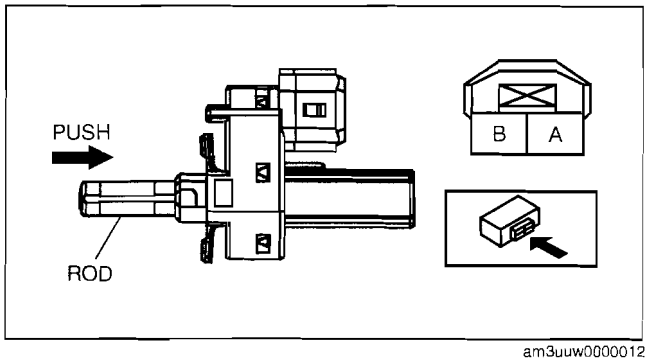
Note

- Before performing the following inspection, make sure to follow the troubleshooting flowchart. (See 01-03A-10 FOREWORD[LF, L3].)

Continuity Inspection

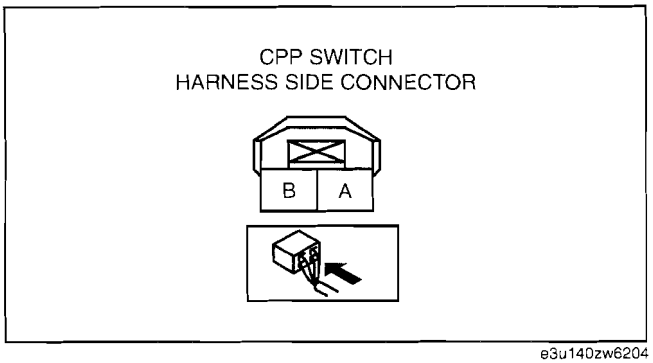
1. Remove the CPP switch.
2. Verify that the continuity between CPP switch terminals A and B is as indicated in the table.
   - If there is no malfunction, perform the "Circuit Open/Short Inspection".
   - If there is any malfunction, replace the CPP switch.

Measurement condition	Continuity
Push the rod.	No continuity
Except above	Continuity detected



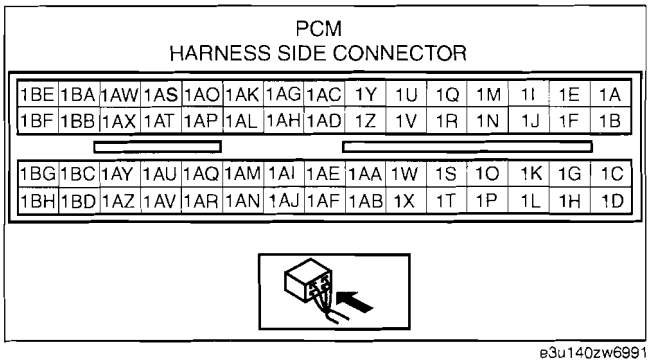
am3uuw0000012

Circuit Open/Short Inspection



e3u140zw6204

1. Disconnect the PCM connector.
2. Disconnect the CPP switch connector.
3. Inspect the following wiring harnesses for an open or short circuit. (Continuity inspection)



e3u140zw6991

Open circuit

- If there is no continuity in the following wiring harnesses, there is an open circuit. Repair or replace the wiring harness.
  - CPP switch terminal A and PCM terminal 1D
  - CPP switch terminal B and body ground

Short circuit

- If there is continuity in the following wiring harnesses, there is a short circuit. Repair or replace the wiring harness.
  - CPP switch terminal A and body ground
  - CPP switch terminal A and power supply
  - CPP switch terminal B and power supply

POWER STEERING PRESSURE (PSP) SWITCH INSPECTION[L3 WITH TC]

id014039803100

Note

- Before performing the following inspection, make sure to follow the procedure as indicated in the troubleshooting flowchart. (See 00-00-3 HOW TO USE THIS MANUAL.)

Continuity Inspection

1. Inspect the following if the power steering is inoperative (See06-14-4 POWER STEERING FLUID INSPECTION.):
   - Power steering fluid level
   - Power steering fluid leakage
   - Power steering fluid pressure
2. Disconnect the PSP switch connector.
3. Start the engine.
4. Inspect for continuity between the PSP switch terminal and ground using a tester.
   - If not as specified, replace the PSP switch. (See06-14-23 POWER STEERING OIL PUMP REMOVAL/ INSTALLATION[L3 WITH TC].)
   - If the PSP switch is normal, but PID value is out of specification, perform the "Circuit Open/Short Inspection".

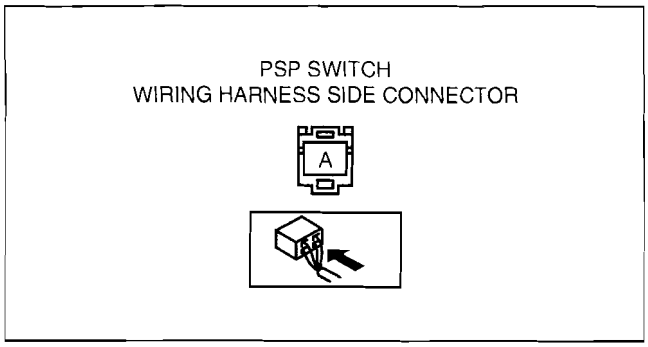
Specification

○—○ : Continuity

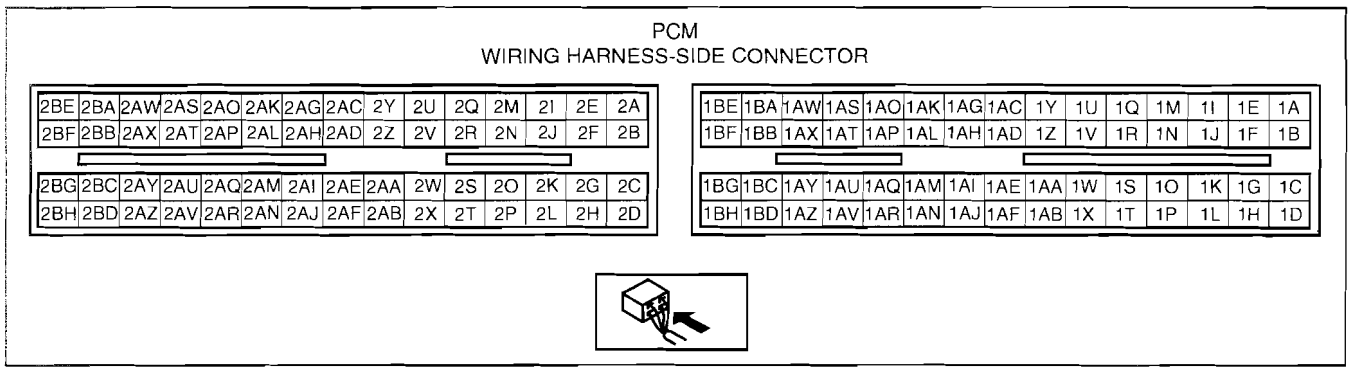
Condition	Terminal	GND
Steering wheel in straight ahead position		
While turning steering wheel	○	○

acxuuw00000116

Circuit Open/Short Inspection



acxuuw00000117



acxuuw00000118

1. Disconnect the PCM connector. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
2. Inspect the following harnesses for an open or short circuit. (Continuity check)

Open circuit

- If there is no continuity, there is an open circuit. Repair or replace the wiring harness.
  — PSP switch terminal and PCM terminal 2T

Short circuit

- If there is no continuity, there is a short circuit. Repair or replace the wiring harness.
  — PSP switch terminal and body ground

VARIABLE SWIRL SHUTTER VALVE SWITCH INSPECTION[L3 WITH TC]

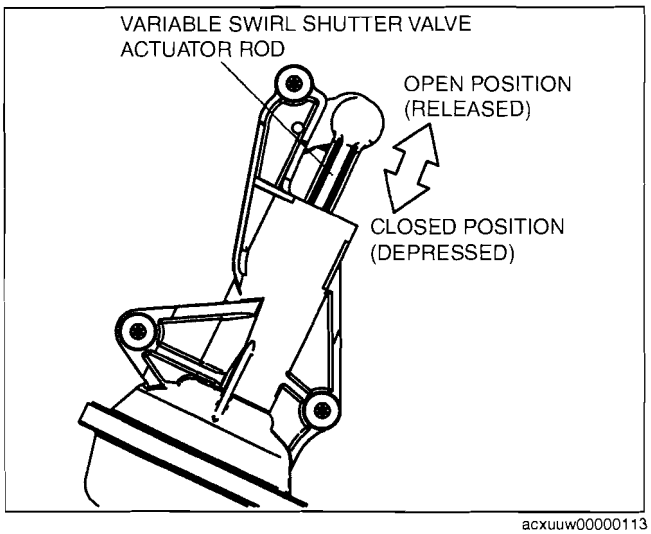
id014039803000

Note

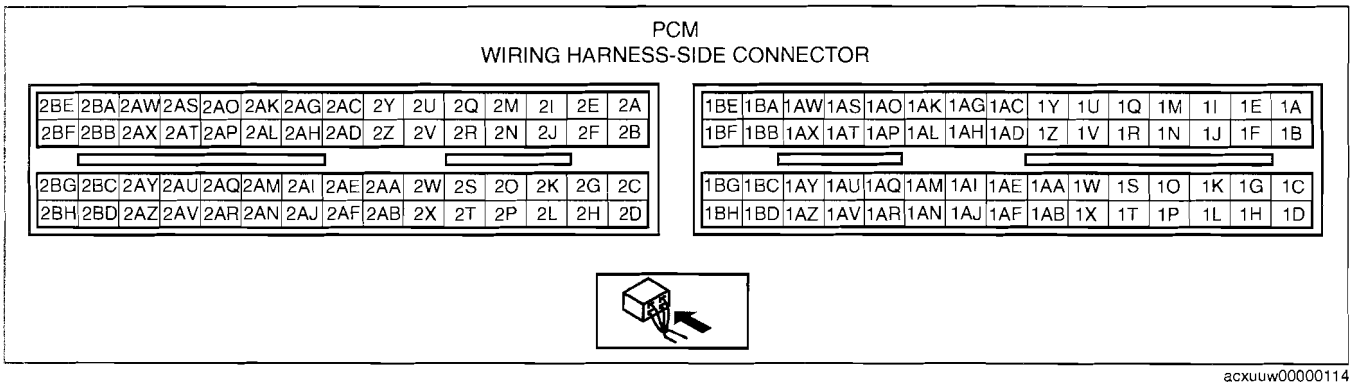
- Before performing the following inspection, make sure to follow the procedure as indicated in the troubleshooting flowchart. (See00-00-3 HOW TO USE THIS MANUAL.)

Voltage Inspection

1. Turn the ignition switch to the ON position (Engine off).
2. Verify that the PCM terminal 2AE voltage is as shown in the following table when the variable swirl shutter valve actuator rod is depressed and released by hand.



acxuuw00000113



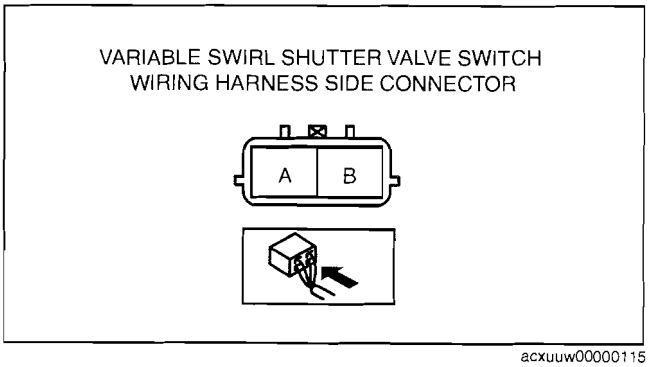
acxuuw00000114

- If not as specified, perform the "Circuit Open/Short Inspection".
  - — If there is no open or short circuit, replace the intake manifold. (See01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)

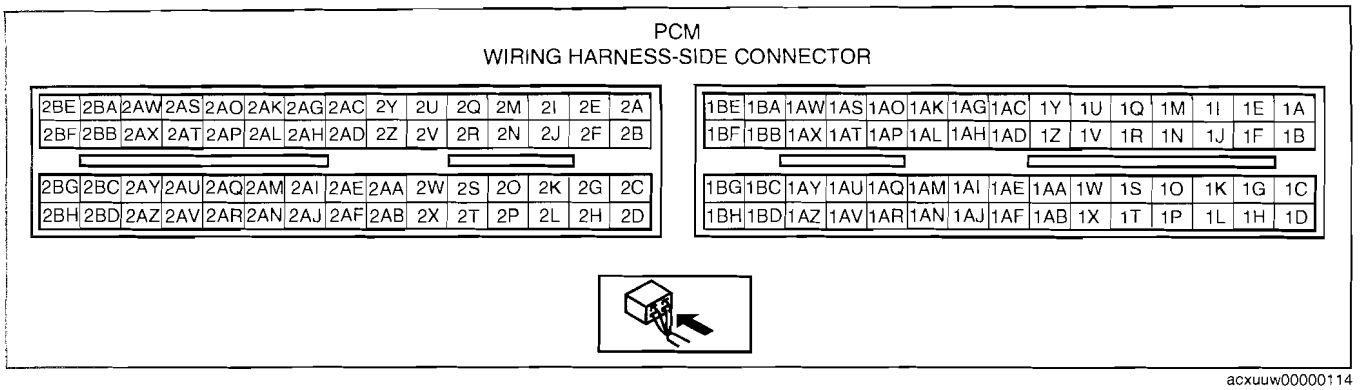
Variable swirl shutter valve switch output voltage

Condition	PCM terminal 2AE
Released (Open position)	B+
Depressed (Closed position)	Below 1.0 V

Circuit Open/Short Inspection



acxuuw00000115



acxuuw00000114

1. Disconnect the PCM connector. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
2. Inspect the following harnesses for an open or short circuit. (Continuity check)

Open circuit

- If there is no continuity, there is an open circuit. Repair or replace the wiring harness.
  - — Variable swirl shutter valve switch terminal A and PCM terminal 2AE
  - — Variable swirl shutter valve switch terminal B and body ground.

Short circuit

- If there is continuity, there is a short circuit. Repair or replace the wiring harness.
  - — Variable swirl shutter valve switch terminal A and power supply
  - — Variable swirl shutter valve switch terminal A and body ground
  - — Variable swirl shutter valve switch terminal B and power supply

ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION[L3 WITH TC]

id0140398019OO

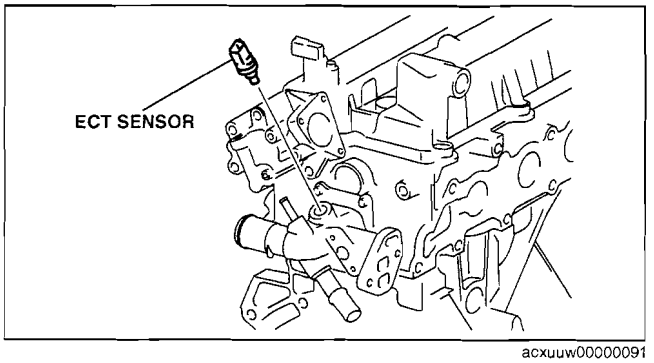
Warning

- **A hot engine can cause severe burns. Turn off the engine and wait until it is cool before removing the ECT sensor.**

1. Remove the battery cover.
2. Disconnect the negative battery cable.
3. Remove the battery and battery tray. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
4. Remove the air cleaner and air hose. (See01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
5. Drain the engine coolant. (See01-12B-3 COOLING SYSTEM SERVICE WARNINGS[L3 WITH TC].)
6. Disconnect the wiring harness.
7. Remove the ECT sensor.
8. Install in the reverse order of removal.

Tightening torque
10—14 N·m {102—142 kgf·cm, 89—123 in·lbf}

9. Refill the engine coolant. (See01-12B-3 COOLING SYSTEM SERVICE WARNINGS[L3 WITH TC].)



acxuuw00000091

ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION[L3 WITH TC]

id014039802000

Note

- Before performing the following inspection, make sure to follow the procedure as indicated in the troubleshooting flowchart. (See 00-00-3 HOW TO USE THIS MANUAL.)

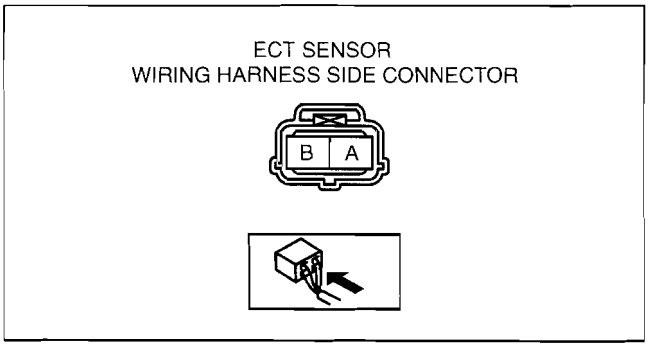
ECT Sensor Resistance Inspection

1. Drain the engine coolant. (See01-12B-3 COOLING SYSTEM SERVICE WARNINGS[L3 WITH TC].)
2. Remove the ECT sensor (located above the starter).
3. Place the ECT sensor in water with a thermometer, and heat the water gradually.
4. Measure the resistance between the ECT sensor terminals A and B using a tester.
   - If not as specified, replace the ECT sensor.
   - If the ECT sensor is normal, but PID value is out of specification, perform the "Circuit Open/Short Inspection".

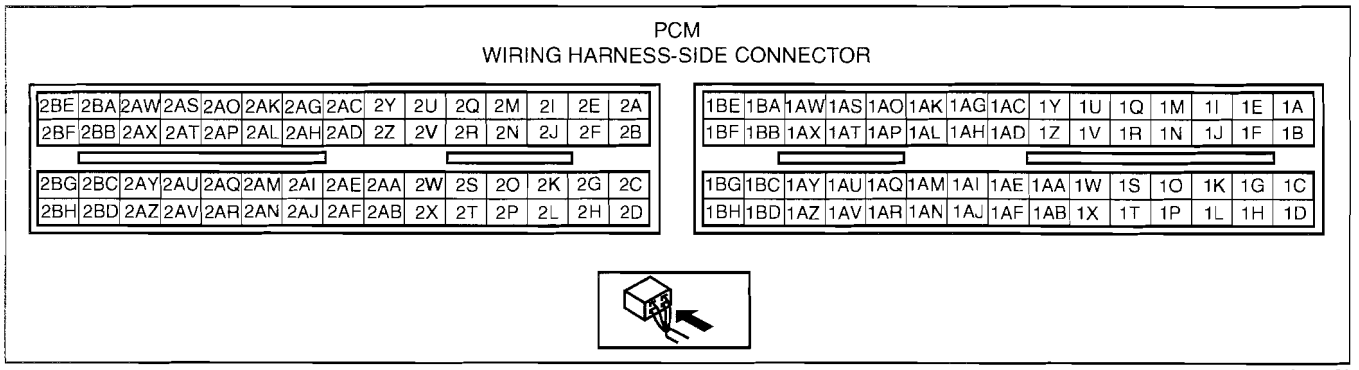
Specification

Water temperature (°C {°F})	Resistance (kilohm)
20 {68}	35.48—39.20
80 {176}	3.65—4.02

Circuit Open/Short Inspection



acxuuw00000092



acxuuw00000093

1. Disconnect the PCM connector. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
2. Inspect the following wiring harnesses for an open or short circuit. (Continuity check)

Open circuit

- If there is no continuity, there is an open circuit. Repair or replace the wiring harness.
  - — ECT sensor terminal A and PCM terminal 2AH
  - — ECT sensor terminal B and PCM terminal 2AY

Short circuit

- If there is continuity, there is a short circuit. Repair or replace the wiring harness.
  - — ECT sensor terminal A and power supply
  - — ECT sensor terminal A and body ground
  - — ECT sensor terminal B and power supply

MASS AIR FLOW (MAF) SENSOR INSPECTION[L3 WITH TC]

id014039800700

Visual Inspection

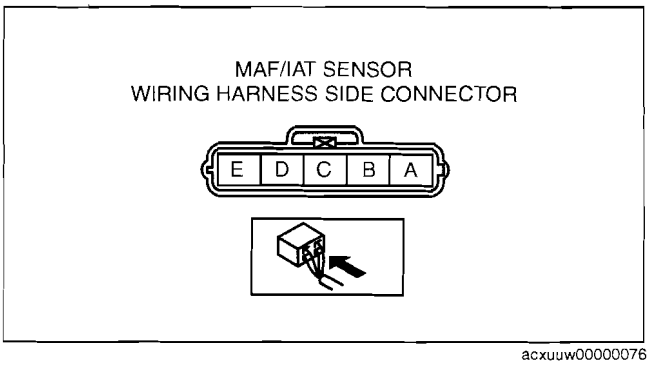
Note
- Before performing the following inspection, make sure to follow the procedure as indicated in the troubleshooting flowchart. (See 00-00-3 HOW TO USE THIS MANUAL.)

1. Visually inspect for the following on the MAF sensor. (See01-13B-4 INTAKE AIR SYSTEM REMOVAL/ INSTALLATION[L3 WITH TC].)
   - Damage
   - Cracks
   - Bent terminals
   - Terminal rust
     - — If any of the above are found, replace the MAF/IAT sensor.
     - — If the monitor item status/specification (reference) is not within the specification even though there is no malfunction, perform the "Circuit Open/Short Inspection".

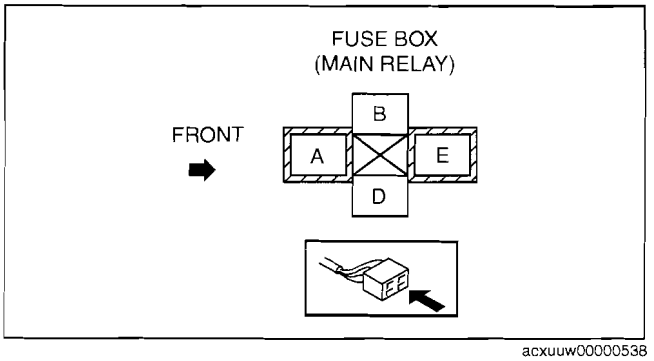
Voltage Inspection

1. Remove the MAF/IAT sensor without disconnect the MAF/IAT sensor connector.
2. Turn the ignition switch to the ON position.
3. As the air gradually approaches the MAF detection part of the MAF/IAT sensor, verify that the voltage at PCM terminal 1AK (M-MDS PID: MAF) varies.
   - If it cannot be verified even though the related harnesses have no malfunction, replace the MAF/IAT sensor.

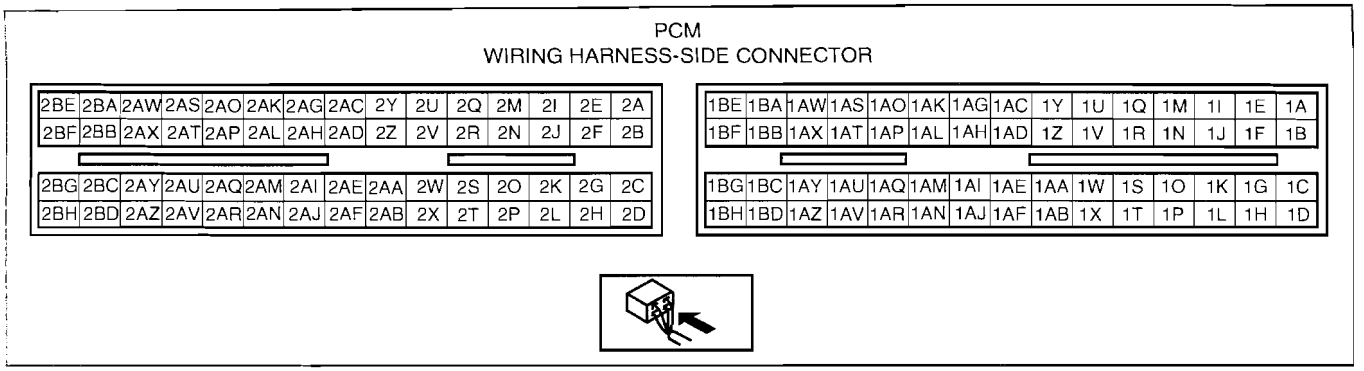
Circuit Open/Short Inspection



acxuuw00000076



acxuuw00000538



acxuuw00000078

1. Disconnect the PCM connector. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
2. Disconnect the MAF/IAT sensor connector.
3. Inspect the following wiring harnesses for an open or short circuit. (Continuity check)

Open circuit

- If there is no continuity, there is an open circuit. Repair or replace the wiring harness.
  - — MAF/IAT sensor terminal A and main relay terminal A
  - — MAF/IAT sensor terminal B and PCM terminal 1P
  - — MAF/IAT sensor terminal C and PCM terminal 1AK

Short circuit

- If there is continuity, there is a short circuit. Repair or replace the wiring harness.
  - — MAF/IAT sensor terminal A and body ground
  - — MAF/IAT sensor terminal B and power supply
  - — MAF/IAT sensor terminal C and power supply
  - — MAF/IAT sensor terminal C and body ground

INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION[L3 WITH TC]

id014039802200

Resistance Inspection

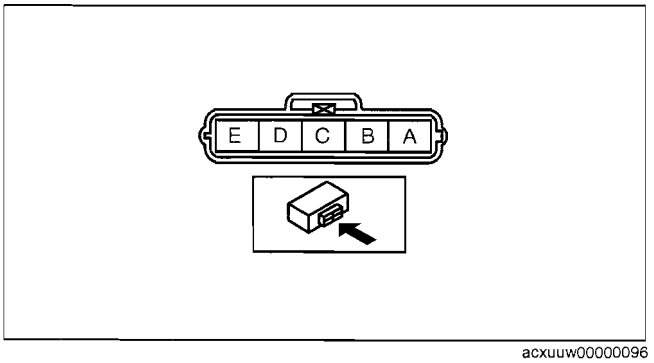
Note

- Before performing the following inspection, make sure to follow the procedure as indicated in the troubleshooting flowchart. (See 00-00-3 HOW TO USE THIS MANUAL.)

1. Disconnect the MAF/IAT sensor.
2. Measure the resistance between the MAF/IAT sensor terminals D and E using a tester.
   - If not as specified, replace the MAF/IAT sensor. (See01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
   - If the MAF/IAT sensor is normal, but the PID is out of specification, perform the "Circuit Open/Short Inspection".

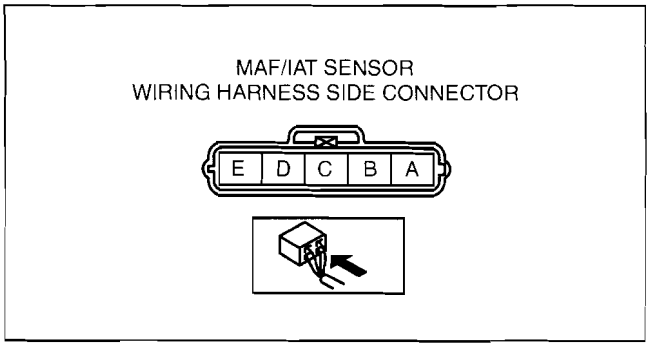
Specification

Ambient temperature (°C {°F})	Resistance (kilohm)
20 {68}	2.21—2.69
60 {140}	0.493—0.667

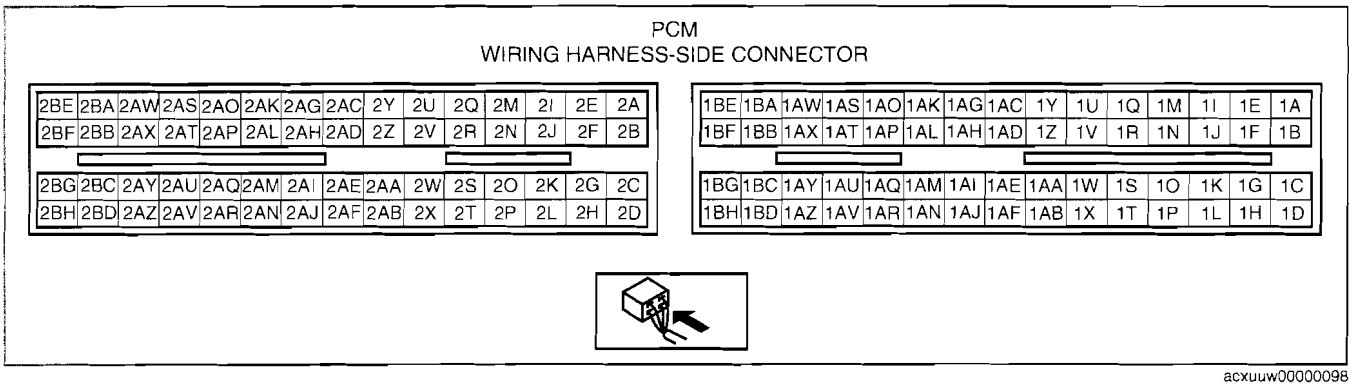


acxuuw00000096

Circuit Open/Short Inspection



acxuuw00000097



acxuuw00000098

1. Disconnect the PCM connector. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
2. Inspect the following wiring harnesses for an open or short circuit. (Continuity check)

Open circuit

- If there is no continuity, there is an open circuit. Repair or replace the wiring harness.
  - — MAF/IAT sensor terminal D and PCM terminal 1M
  - — MAF/IAT sensor terminal E and PCM terminal 1AR

Short circuit

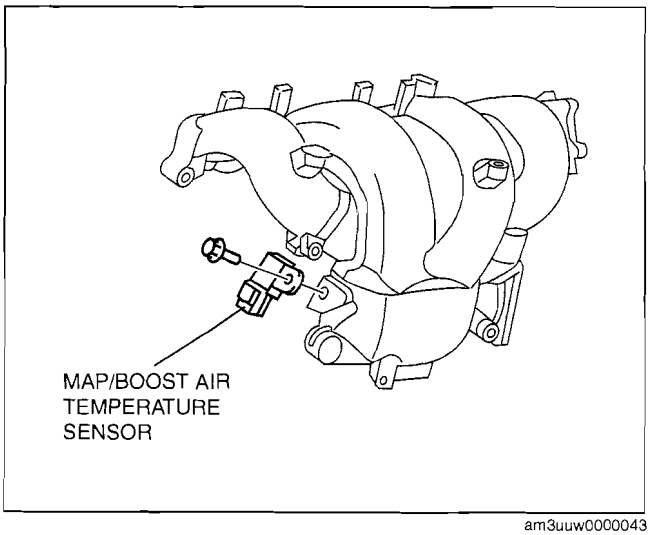
- If there is continuity, there is a short circuit. Repair or replace the wiring harness.
  - — MAF/IAT sensor terminal E and power supply
  - — MAF/IAT sensor terminal D and power supply
  - — MAF/IAT sensor terminal D and body ground

MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/BOOST AIR TEMPERATURE SENSOR REMOVAL/ INSTALLATION[L3 WITH TC]

id014039801000

1. Remove the battery cover.
2. Disconnect the negative battery cable.
3. Remove the oil level gauge pipe. (See01-11B-5 OIL PAN REMOVAL/INSTALLATION[L3 WITH TC].)
4. Disconnect the MAP/boost air temperature sensor connector.
5. Remove MAP/boost air temperature sensor from the intake manifold.
6. Install in the reverse order of removal.

Tightening torque
5.0—7.0 N·m {51—71 kgf·cm, 45—61 in·lbf}



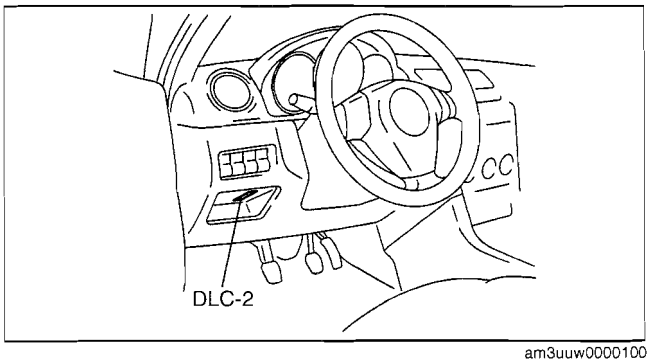
am3uuw0000043

MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION[L3 WITH TC]

id014039800900

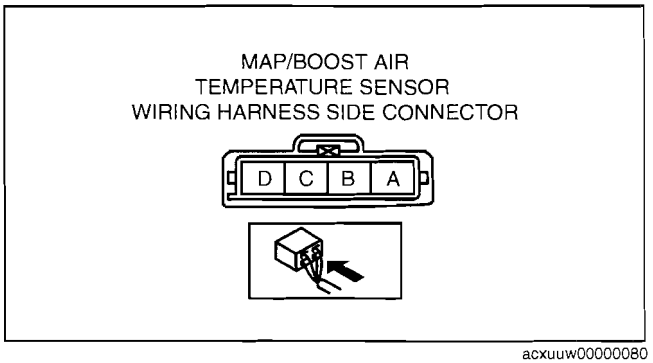
Note
- Perform the following inspection only when directed.
- The following vacuum values are indicated by relative pressure from the MAP sensor.

1. Connect the M-MDS to the DLC-2.
2. Turn the ignition switch to ON (Engine off).
3. Select MAP PID on the M-MDS.
4. Verify that the MAP PID (pressure) and barometric pressure are practically equal.
   - If not as verified, perform the "Circuit Open/Short Inspection".
     — If there is no open or short circuit, replace the MAP sensor.
   - If as verified, go to next step.
5. Apply vacuum of**–25.0 kPa {–187 mmHg, –7.38 inHg}** to the MAP sensor, and verify that the MAP variation from that of Step 4 is**approx. 25.0 kPa {187 mmHg, 7.38 inHg}**.
   - If not as verified, perform the "Circuit Open/Short inspection".
     — If there is no open or short circuit, replace the barometric pressure sensor. (See01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)

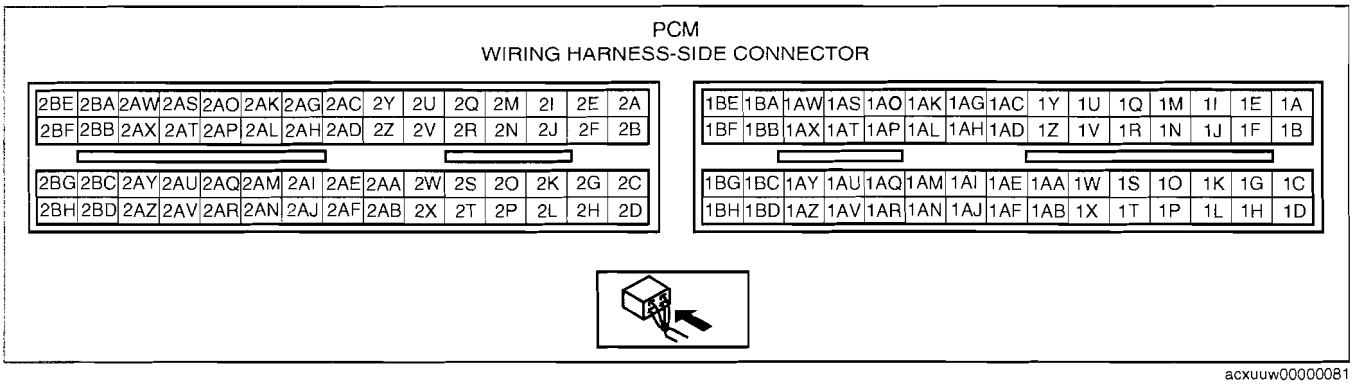


am3uuw0000100

Circuit Open/Short Inspection



acxuuw00000080



acxuuw00000081

1. Disconnect the PCM connector. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
2. Inspect the following wiring harnesses for an open or short circuit. (Continuity check)

Open circuit
- If there is no continuity, there is an open circuit. Repair or replace the wiring harness.
  — MAP/boost air temperature sensor terminal A and PCM terminal 2AV
  — MAP/boost air temperature sensor terminal C and PCM terminal 2AU
  — MAP/boost air temperature sensor terminal D and PCM terminal 2AG

Short circuit
- If there is continuity, there is a short circuit. Repair or replace the wiring harness.
  — MAP/boost air temperature sensor terminal A and power supply.
  — MAP/boost air temperature sensor terminal C and body ground.
  — MAP/boost air temperature sensor terminal D and power supply.
  — MAP/boost air temperature sensor terminal D and body ground

BOOST AIR TEMPERATURE SENSOR INSPECTION[L3 WITH TC]

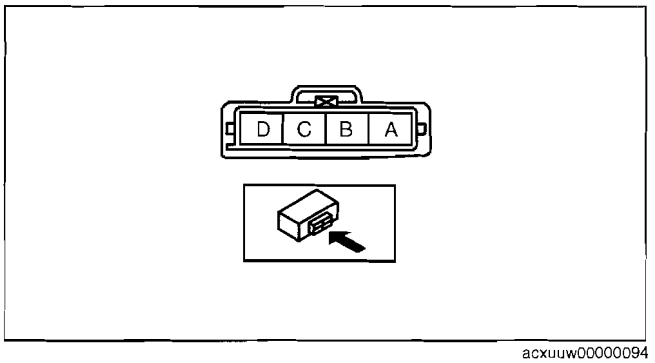
id014039802100

Resistance Inspection

Note

- Before performing the following inspection, make sure to follow the procedure as indicated in the troubleshooting flowchart. (See 00-00-3 HOW TO USE THIS MANUAL.)

1. Disconnect MAP/boost air temperature sensor.
2. Measure the resistance between the MAP/boost air temperature sensor terminals A and B using a tester.
   - If not as specified, replace the MAP/boost air temperature sensor. (See01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
   - If the MAP/boost air temperature sensor is normal, but PID are out of specification, perform the "Circuit Open/Short Inspection".

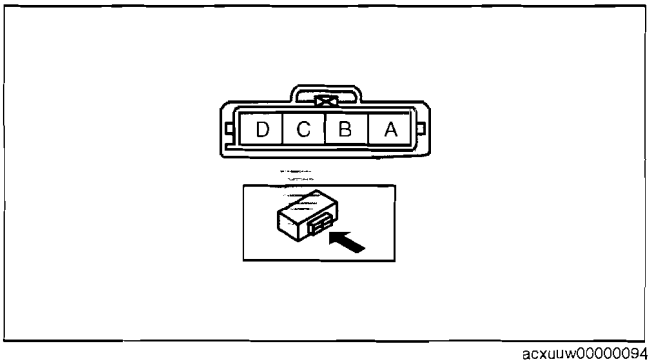


acxuuw00000094

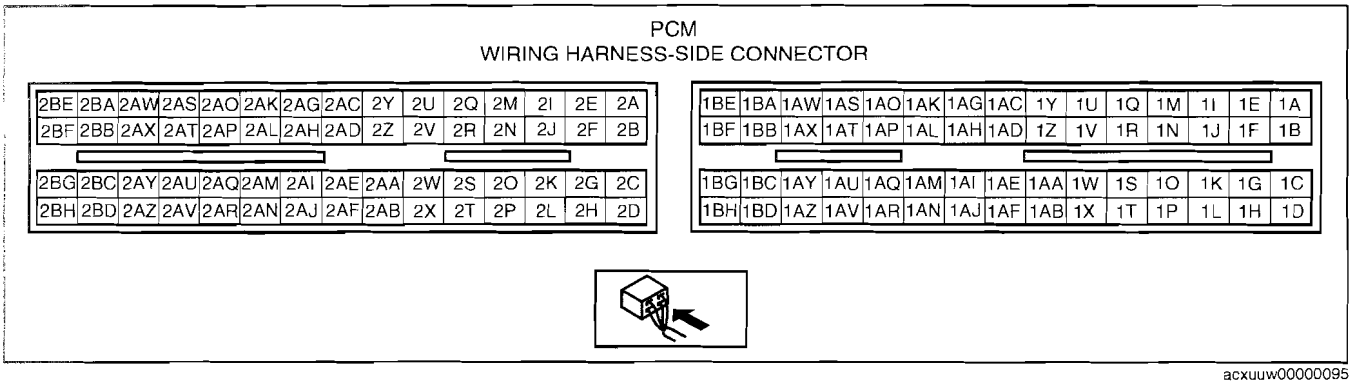
Specification

Ambient temperature (°C {°F})	Resistance (kilohm)
20 {68}	2.4—2.7
60 {140}	0.59—0.64

Circuit Open/Short Inspection



acxuuw00000094



acxuuw00000095

1. Disconnect the PCM connector. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
2. Inspect the following wiring harnesses for an open or short circuit. (Continuity check)

Open circuit

- If there is no continuity, there is an open circuit. Repair or replace the wiring harness.
  - MAP/boost air temperature sensor terminal A and PCM terminal 2AV
  - MAP/boost air temperature sensor terminal B and PCM terminal 2N
  - MAP/boost air temperature sensor terminal C and PCM terminal 2AU

Short circuit

- If there is continuity, there is a short circuit. Repair or replace the wiring harness.
  - MAP/boost air temperature sensor terminal A and power supply
  - MAP/boost air temperature sensor terminal B and power supply
  - MAP/boost air temperature sensor terminal B and body ground
  - MAP/boost air temperature sensor terminal C and body ground

THROTTLE POSITION (TP) SENSOR INSPECTION[L3 WITH TC]

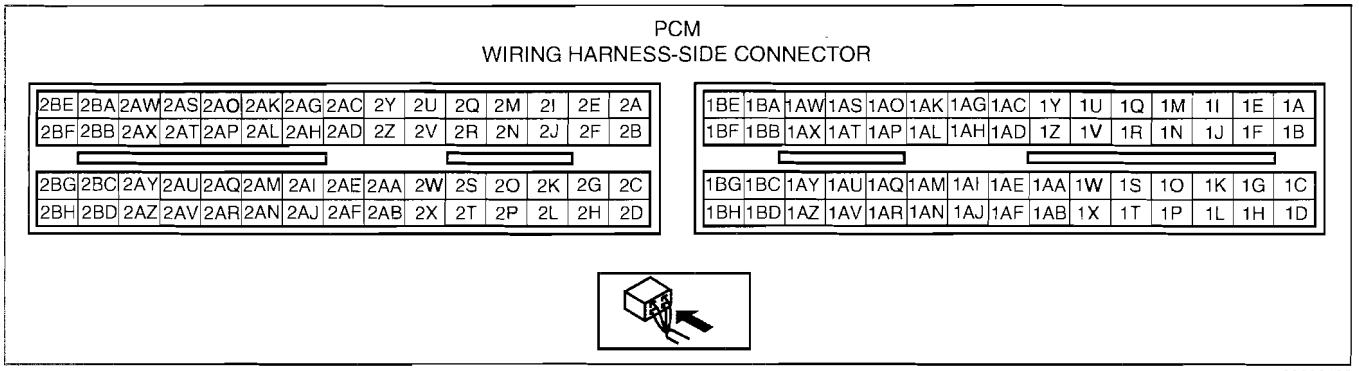
id014039802700

Note

- Before performing the following inspection, make sure to follow the procedure as indicated in the troubleshooting flowchart. (See 00-00-3 HOW TO USE THIS MANUAL.)

Voltage Inspection

1. Verify that no DTC related to the APP sensor has been detected.
   - If any DTCs related to the APP sensor have been detected, perform the DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
2. Start the engine and warm it up (ECT: **more than 80°C {176 °F}).**
3. Turn the ignition switch to the ON position (Engine off).
4. Verify that the PCM terminal 2AK and 2AL change smoothly while the throttle valve is gradually opened.
   - If as verified, go to next step.
   - If not as verified, perform the "Circuit Open/Short Inspection".
     — If there is no open or short circuit, replace the throttle body.
5. Verify that the PCM terminal 2AK and 2AL voltages are as shown in the following table.

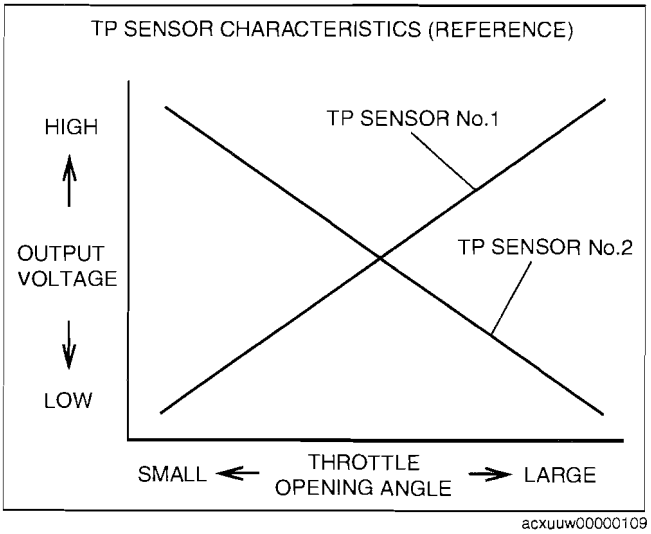


acxuuw00000108

- If the voltage is not according to the following table, perform the "Circuit Open/Short Inspection".
  — If there is no open or short circuit, replace the throttle body.

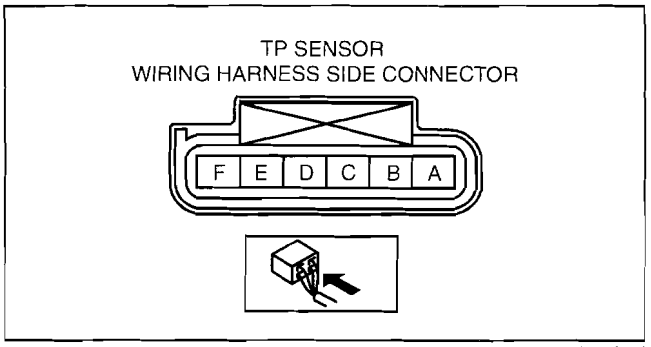
TP sensor output voltage

Condition	PCM terminal 2AK (TP sensor No.1)	PCM terminal 2AL (TP sensor No.2)
APP is released	0.4—0.6 V	4.4—4.6 V
APP is depressed	4.7—4.9 V	0.1—0.3 V

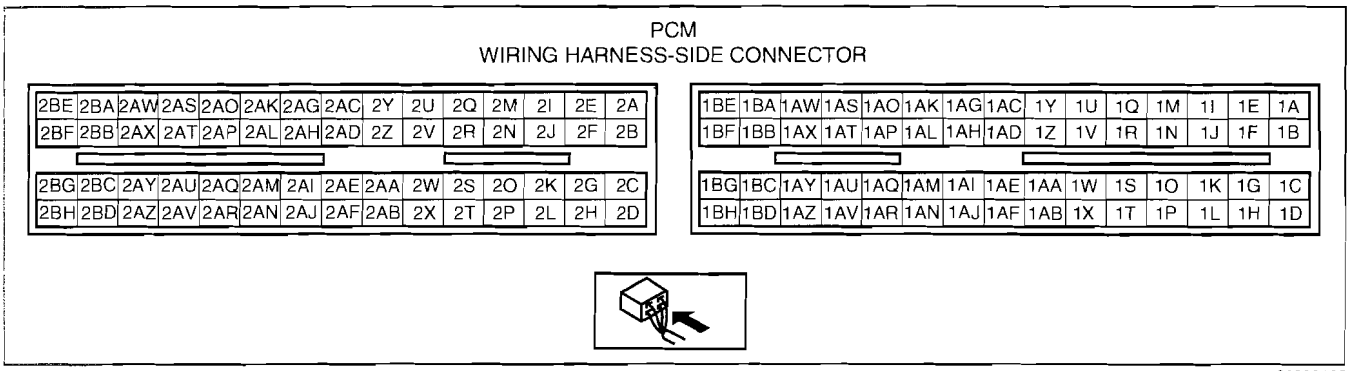


acxuuw00000109

Circuit Open/Short Inspection



acxuuw00000110



acxuuw00000108

1. Disconnect the PCM connector. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
2. Inspect the following wiring harnesses for an open or short circuit. (Continuity check)

Open circuit

- If there is no continuity, there is an open circuit. Repair or replace the wiring harness.
  - — Throttle body terminal A and PCM terminal 2AK
  - — Throttle body terminal B and PCM terminal 2AO
  - — Throttle body terminal C and PCM terminal 2AL
  - — Throttle body terminal D and PCM terminal 2AP

Short circuit

- If there is continuity, there is a short circuit. Repair or replace the wiring harness.
  - — Throttle body terminal A and power supply
  - — Throttle body terminal A and body ground
  - — Throttle body terminal B and body ground
  - — Throttle body terminal C and power supply
  - — Throttle body terminal C and body ground
  - — Throttle body terminal D and power supply

ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION[L3 WITH TC]

id014039803200

Note

- Before performing the following inspection, make sure to follow the procedure as indicated in the troubleshooting flowchart. (See 00-00-3 HOW TO USE THIS MANUAL.)

Voltage Inspection

1. Turn the ignition switch to the ON position (Engine off).
2. Verify that the PCM terminal 1Y and 1AC change smoothly while throttle valve is gradually opened.
   - If as verified, go to next step.
   - If not as verified, perform the "Circuit Open/Short Inspection".
     — If there is no open or short circuit, replace the throttle body. (See01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
3. Verify that the PCM terminal 1Y and 1AC voltages are as shown in the following table.

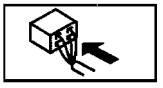
PCM
WIRING HARNESS-SIDE CONNECTOR

2BE	2BA	2AW	2AS	2AO	2AK	2AG	2AC	2Y	2U	2Q	2M	2I	2E	2A
2BF	2BB	2AX	2AT	2AP	2AL	2AH	2AD	2Z	2V	2R	2N	2J	2F	2B

2BG	2BC	2AY	2AU	2AQ	2AM	2AI	2AE	2AA	2W	2S	2O	2K	2G	2C
2BH	2BD	2AZ	2AV	2AR	2AN	2AJ	2AF	2AB	2X	2T	2P	2L	2H	2D

1BE	1BA	1AW	1AS	1AO	1AK	1AG	1AC	1Y	1U	1Q	1M	1I	1E	1A
1BF	1BB	1AX	1AT	1AP	1AL	1AH	1AD	1Z	1V	1R	1N	1J		1B

1BG	1BC	1AY	1AU	1AQ	1AM	1AI	1AE	1AA	1W	1S	1O	1K	G	1C
1BH	1BD	1AZ	1AV	1AR	1AN	1AJ	1AF	1AB	1X	1T	1P	1L	1H	1D

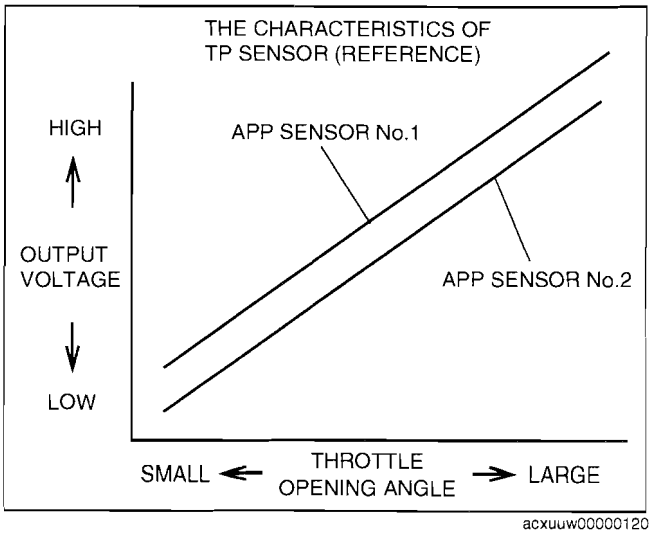


acxuuw00000119

- If the voltage is not according to the following table, perform the "Circuit Open/Short Inspection".
  — If there is no open or short circuit, replace accelerator pedal. (See01-13B-18 ACCELERATOR PEDAL REMOVAL/INSTALLATION[L3 WITH TC].)

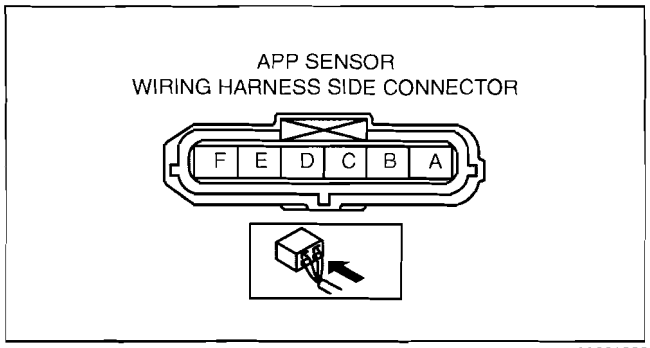
APP sensor output voltage

Condition	PCM terminal 1Y (APP sensor No.1)	PCM terminal 1AC (APP sensor No.2)
APP is depressed	3.65—3.93 V	3.10—3.38
APP is released	1.56—1.65V	1.01—1.10

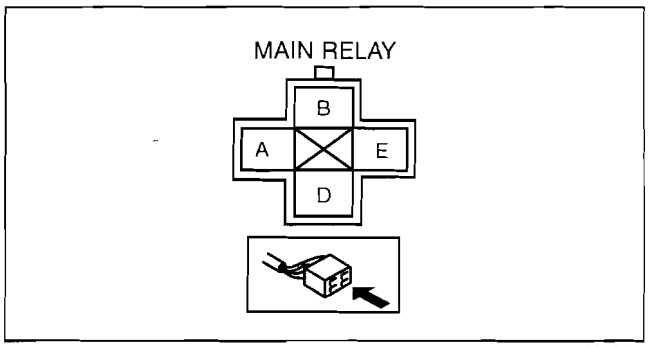


acxuuw00000120

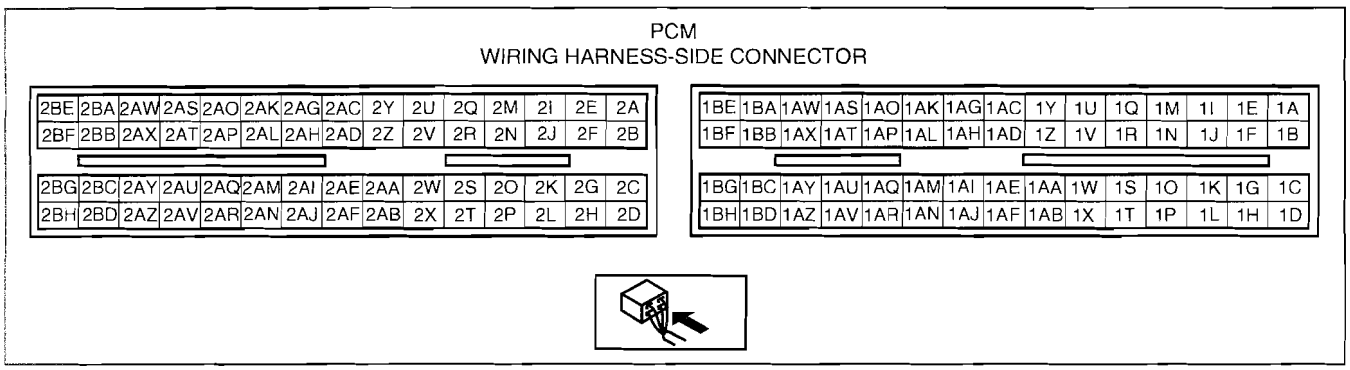
Circuit Open/Short Inspection



acxuuw00001926



am3uuw0000100



acxuuw00000119

1. Disconnect the PCM connector. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
2. Inspect the following wiring harnesses for an open or short circuit. (Continuity check)

Open circuit

- If there is no continuity, there is an open circuit. Repair or replace the wiring harness.
  - — APP sensor terminal A and PCM terminal 1AJ
  - — APP sensor terminal B and PCM terminal 1Y
  - — APP sensor terminal C and PCM terminal 1AV
  - — APP sensor terminal D and PCM terminal 1U
  - — APP sensor terminal E and PCM terminal 1AC
  - — APP sensor terminal F and main relay terminal A

Short circuit

- If there is continuity, there is a short circuit. Repair or replace the wiring harness.
  - — APP sensor terminal A and body ground
  - — APP sensor terminal B and power supply
  - — APP sensor terminal C and power supply
  - — APP sensor terminal C and body ground
  - — APP sensor terminal D and body ground
  - — APP sensor terminal E and power supply
  - — APP sensor terminal F and power supply
  - — APP sensor terminal F and body ground

FUEL PRESSURE SENSOR REMOVAL/INSTALLATION[L3 WITH TC]

id014039801200

Note

- If the fuel pressure sensor is removed, do not reuse the fuel pressure sensor and the fuel delivery pipe. When you replace the fuel pressure sensor, replace a new fuel delivery pipe with a new fuel pressure sensor. (SEE 01-14B-30 FUEL INJECTOR REMOVAL/INSTALLATION[L3 WITH TC].)

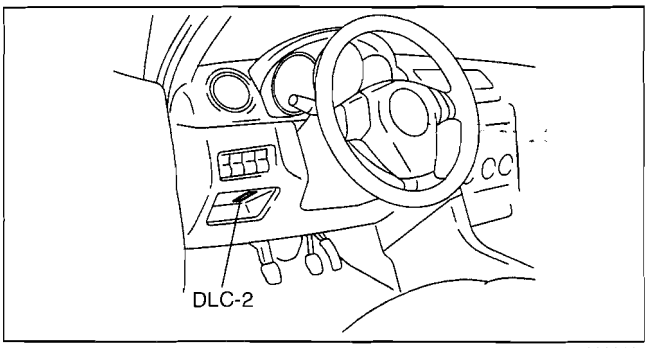
FUEL PRESSURE SENSOR INSPECTION[L3 WITH TC]

id014039801300

Note

- Before performing the following inspection, make sure to follow the procedure as indicated in the troubleshooting flowchart. (See 00-00-3 HOW TO USE THIS MANUAL.)

1. Connect the M-MDS to the DLC-2.
2. Turn the ignition switch to the ON position (Engine off).
3. Select the FUEL_PRES PID on the M-MDS.
4. After warming up the engine, verify that the FUEL_PRES PID is at the standard value under the following conditions.
   — If not as verified, replace the fuel delivery pipe.

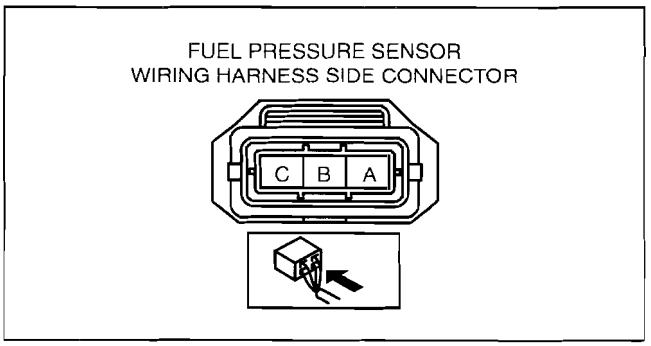


am3uuw0000100

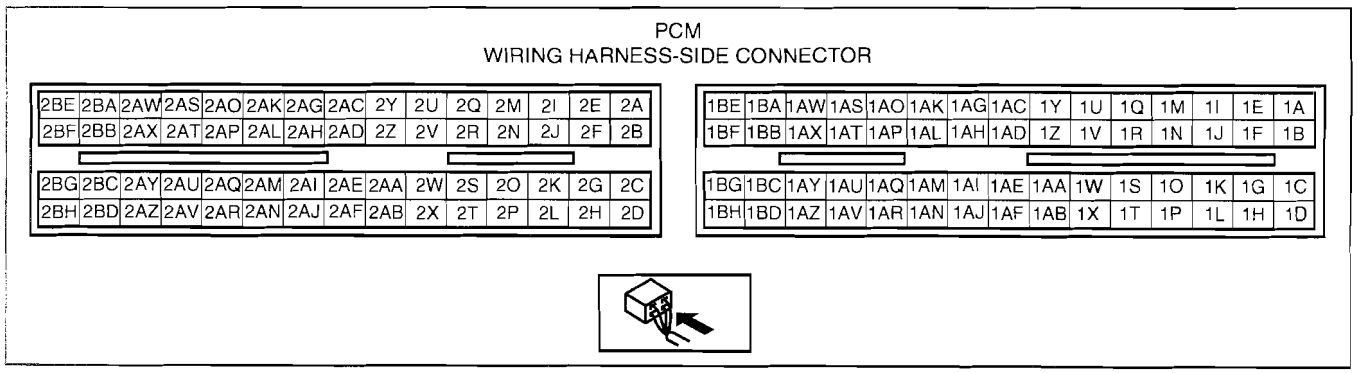
Step	Condition	FUEL_PRES PID
1	• Idle • 90 s after engine is started	Approx. 3 MPa
2	• Idle • Spill valve solenoid valve connector is disconnected	Approx. 530 kPa

5. After connecting the spill valve control solenoid valve connector, clear the DTC.

Circuit Open/Short Inspection



acxuuw00000085



acxuuw00000086

1. Disconnect the PCM connector. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
2. Inspect the following wiring harnesses for an open or short circuit. (Continuity check)

Open circuit

- If there is no continuity, there is an open circuit. Repair or replace the wiring harness.
  - Fuel pressure sensor terminal A and PCM terminal 2P
  - Fuel pressure sensor terminal B and PCM terminal 2R
  - Fuel pressure sensor terminal C and PCM terminal 2I

Short circuit

- If there is continuity, there is a short circuit. Repair or replace the wiring harness.
  - Fuel pressure sensor terminal A and power supply.
  - Fuel pressure sensor terminal B and power supply.
  - Fuel pressure sensor terminal B and body ground.
  - Fuel pressure sensor terminal C and body ground

HEATED OXYGEN SENSOR (HO2S) INSPECTION[L3 WITH TC]

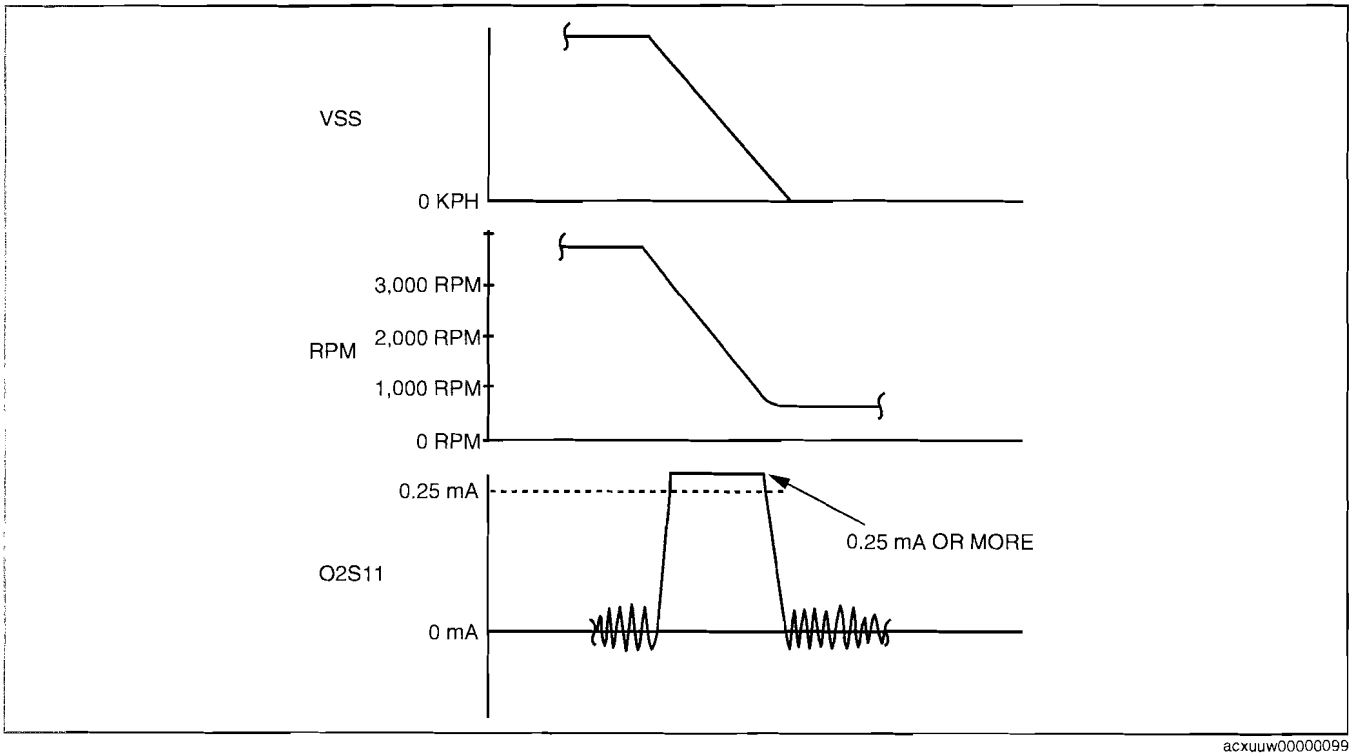
id014039802300

Note

- Before performing the following inspection, make sure to follow the procedure as indicated in the troubleshooting flowchart. (See 00-00-3 HOW TO USE THIS MANUAL.)

Front HO2S Current Inspection

1. Warm up the engine to normal operating temperature.
2. Using the M-MDS, monitor the following:
   - Vehicle speed (PID: VSS)
   - Engine speed (PID: RPM)
   - Front HO2S current (PID: O2S11)
3. Drive the vehicle and decelerate the engine speed by releasing the accelerator pedal fully when the engine speed is **3,000 rpm or more.**
4. Verify that the front HO2S current (PID: O2S11) is **0.25 mA or more** while decelerating as shown in the figure.



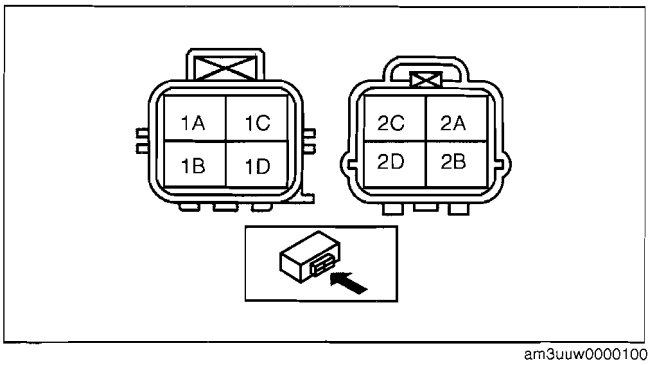
acxuuw00000099

- If not within the specification, inspect the HO2S for an open or short circuit. (See01-40B-40 Front HO2S Circuit Open/Short Inspection (Sensor).) Then if there is no malfunction in the wiring harness, replace the front HO2S.

Front HO2S Heater Resistance Inspection

1. Disconnect the front HO2S connector.
2. Measure the resistance between front HO2S terminals 2B and 2D.
   - If not within the specification, replace the front HO2S. (See01-40B-43 HEATED OXYGEN SENSOR (HO2S) REMOVAL/ INSTALLATION[L3 WITH TC].)

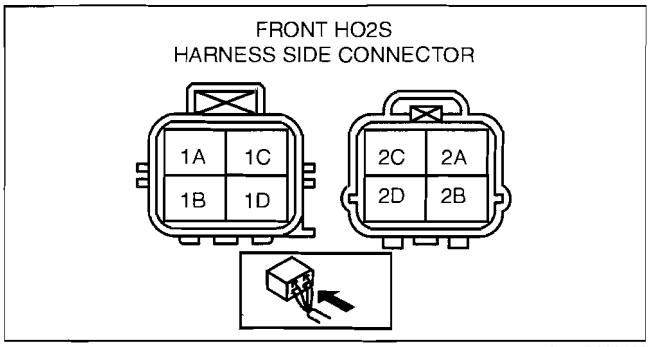
Front HO2S heater resistance
1—10 ohms



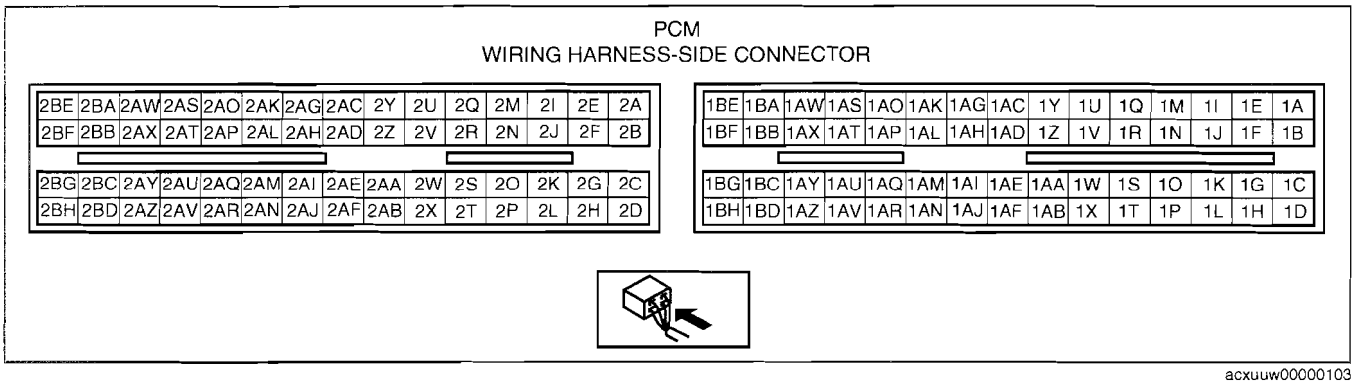
am3uuw0000100

Front HO2S Circuit Open/Short Inspection (Sensor)

1. Disconnect the PCM connector.
2. Disconnect the front HO2S connector.
3. Inspect the following wiring harnesses for an open or short circuit. (Continuity inspection)



am3uuw0000100



acxuuw00000103

Open circuit

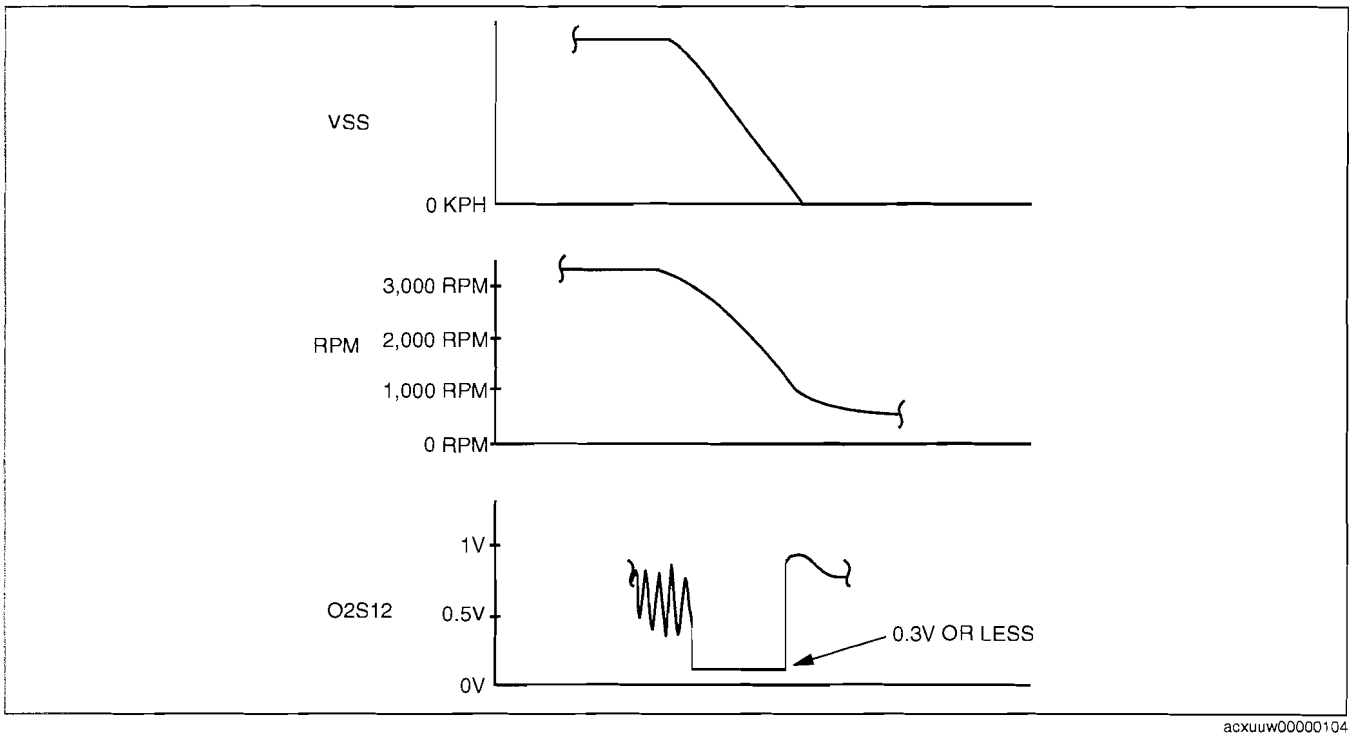
- If there is no continuity in the following wiring harnesses, there is an open circuit. Repair or replace the wiring harness.
  - — Front HO2S terminal 1A and PCM terminal 2AD
  - — Front HO2S terminal 1B and PCM terminal 2AC
  - — Front HO2S terminal 1C and PCM terminal 2Z

Short circuit

- If there is continuity in the following wiring harnesses, there is a short circuit. Repair or replace the wiring harness.
  - — Front HO2S terminal 1A and body ground
  - — Front HO2S terminal 1A and power supply
  - — Front HO2S terminal 1B and body ground
  - — Front HO2S terminal 1B and power supply
  - — Front HO2S terminal 1C and body ground
  - — Front HO2S terminal 1C and power supply

Rear HO2S Voltage Inspection

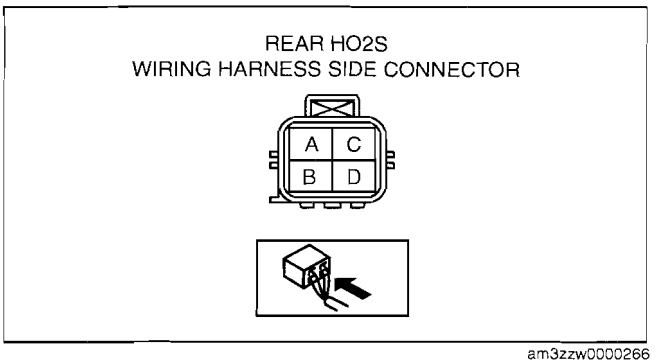
1. Warm up the engine to normal operating temperature.
2. Using the M-MDS, monitor the following:
   - Vehicle speed (PID: VSS)
   - Engine speed (PID: RPM)
   - Rear HO2S voltage (PID: O2S12)
3. Drive the vehicle and decelerate the engine speed by releasing the accelerator pedal fully when the engine speed is **3,000 rpm or more.**
4. Verify that the rear HO2S outputs a voltage of **0.6 V or more**, one time or more, then verify that the rear HO2S voltage (PID: O2S12) is **0.3 V or less** while decelerating as shown in the figure.



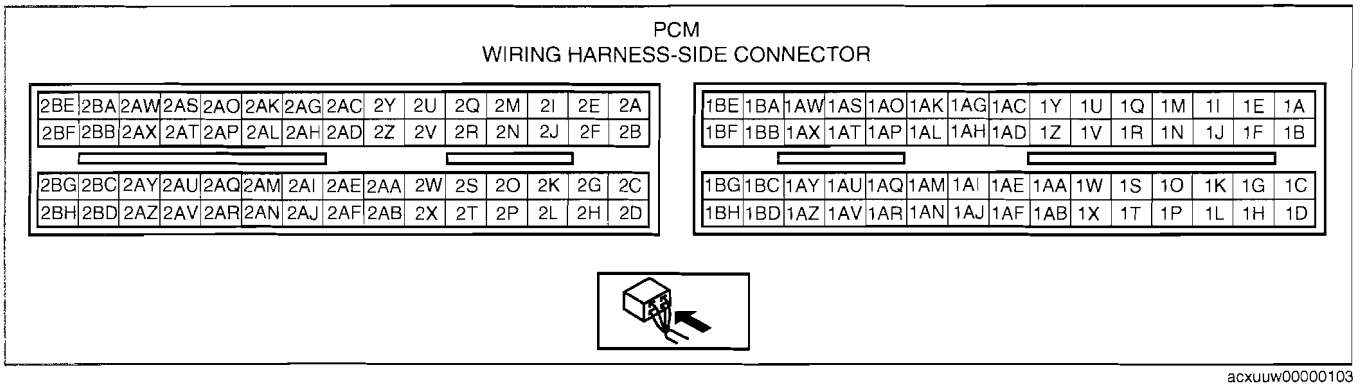
acxuuw00000104

- If not within the specification, inspect the HO2S for an open or short circuit. (See01-40B-42 Rear HO2S Circuit Open/Short Inspection.) Then if there is no malfunction in the wiring harness, replace the rear HO2S.

Rear HO2S Circuit Open/Short Inspection



am3zzw0000266



acxuuw00000103

1. Disconnect the PCM connector.
2. Disconnect the rear HO2S connector.
3. Inspect the following wiring harnesses for an open or short circuit. (Continuity inspection)

Open circuit

- If there is no continuity, there is an open circuit. Repair or replace the wiring harness.
  - Rear HO2S terminal A and PCM terminal 2Q
  - Rear HO2S terminal B and PCM terminal 1BC

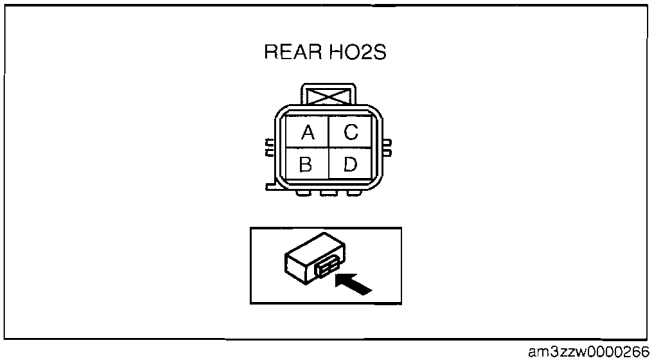
Short circuit

- If there is continuity, there is a short circuit. Repair or replace the wiring harness.
  - Rear HO2S terminal A and body ground
  - Rear HO2S terminal A and power supply
  - Rear HO2S terminal B and power supply

Rear HO2S Heater Resistance Inspection

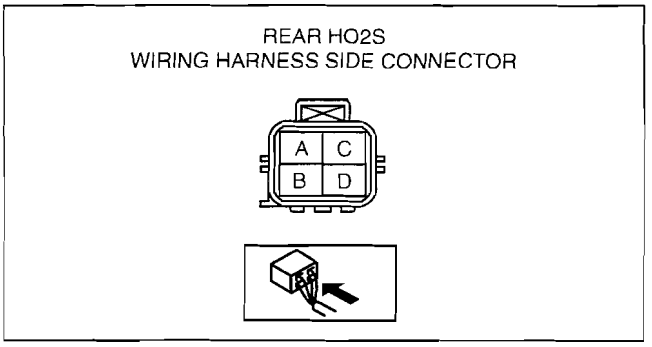
1. Disconnect the rear HO2S connector.
2. Measure the rear HO2S resistance between terminals C and D.
   - If not within the specification, replace the HO2S.

Rear HO2S heater resistance
2—50 ohms

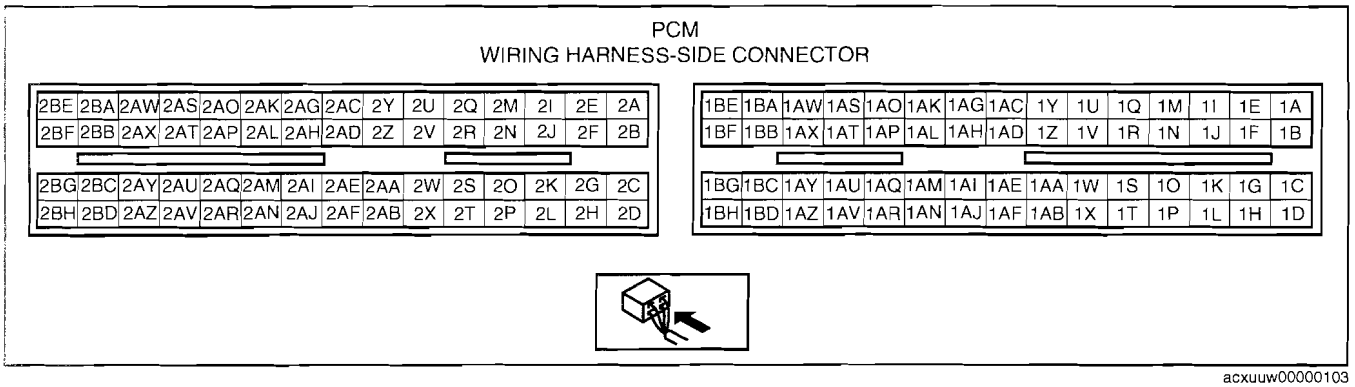


am3zzw0000266

Rear HO2S Heater Circuit Open/Short Inspection (Heater)



am3zzw0000266



acxuuw00000103

1. Disconnect the PCM connector.
2. Disconnect the rear HO2S connector.
3. Inspect the following wiring harnesses for an open or short circuit. (Continuity check)

Open circuit

- If there is no continuity, there is an open circuit. Repair or replace the wiring harness.
  - — Rear HO2S terminal C and ignition switch
  - — Rear HO2S terminal D and PCM terminal 2D

Short circuit

- If there is no continuity, there is a short circuit. Repair or replace the wiring harness.

  Rear
  - — Rear HO2S terminal A and body ground
  - — Rear HO2S terminal B and power supply
  - — Rear HO2S terminal B and body ground

HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION[L3 WITH TC]

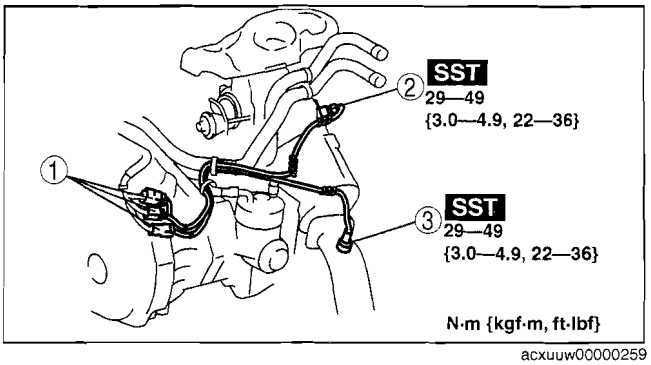
id014039804000

Warning

- **A hot engine and exhaust system can cause severe burns. Turn off the engine and wait until they are cool before removing the exhaust system.**

1. Remove the battery cover.
2. Disconnect the negative battery cable.
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.

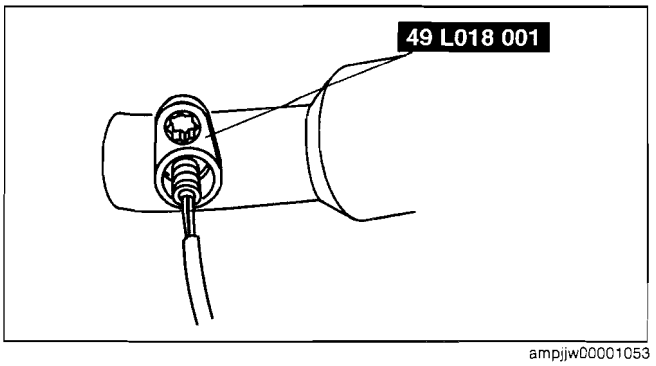
1	Connector
2	Front HO2S (See01-40B-44 HO2S Removal Note.)
3	Rear HO2S (See01-40B-44 HO2S Removal Note.)



acxuuw00000259

HO2S Removal Note

1. Remove the HO2S using the **SST**.



ampjjw00001053

CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION[L3 WITH TC]

id014039800600

Removal

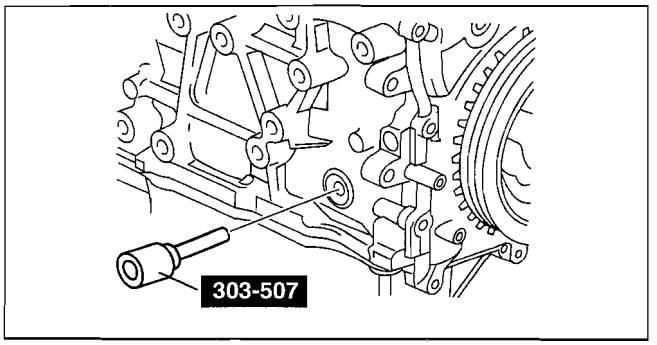
1. Remove the battery cover.
2. Disconnect the negative battery cable.
3. Remove the under cover.
4. Remove the splash shield (RH).
5. Disconnect the CKP sensor connector.
6. Remove the installation bolts to remove the CKP sensor.

Installation

Caution

- **When foreign material, such as an iron chips, gets on the CKP sensor, it can cause abnormal output from the sensor because of flux turbulence and adversely affect engine control. Be sure there is no foreign material on the CKP sensor when replacing.**

1. Perform the following procedure so that piston No.1 is at the top dead center.
   (1) Rotate the crankshaft in the direction of the engine rotation and remove the cylinder block lower blind plug when the No. 1 cylinder is at the point prior to top dead center (TDC) of compression, then install the SST.
   (2) Rotate the crankshaft in the direction of the engine rotation so that the No.1 piston is at TDC of the compression stroke. (Until the crank weight contacts SST and stops.)



acxuuw00001899

2. Using a straight edge, draw a straight line directly in the center of the twentieth tooth of the crankshaft pulley pulse wheel (counting counterclockwise from the empty space).

   Caution

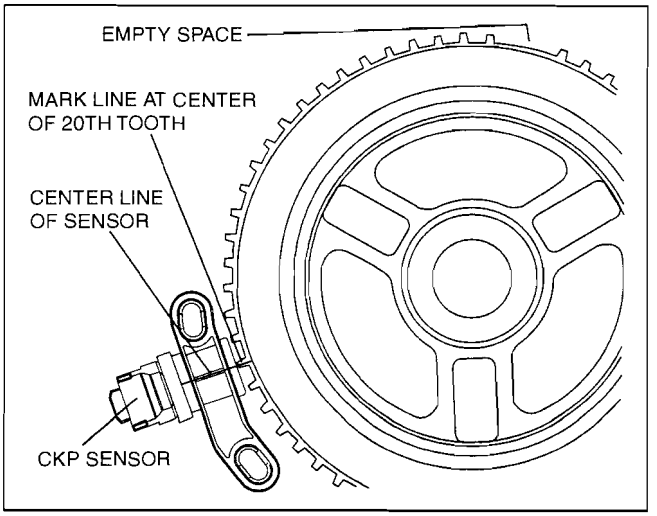
   - **If the line is not accurately drawn, ignition timing, fuel injection and other engine control systems will be adversely effected. Draw the straight line carefully using a straight edge.**

3. Align the center line of the crankshaft position sensor and the line drawn in Step 2, then install the sensor.
4. Install the CKP sensor fitting bolts.

   Tightening torque
   5.5—7.5 N·m {57—76 kgf·cm, 49—66 in·lbf}

5. Remove the **SST** then install the cylinder block lower blind plug.

   Tightening torque
   18—22 N·m {1.9—2.2 kgf·m, 14—16 ft·lbf}



acxuuw00000075

CRANKSHAFT POSITION (CKP) SENSOR INSPECTION[L3 WITH TC]

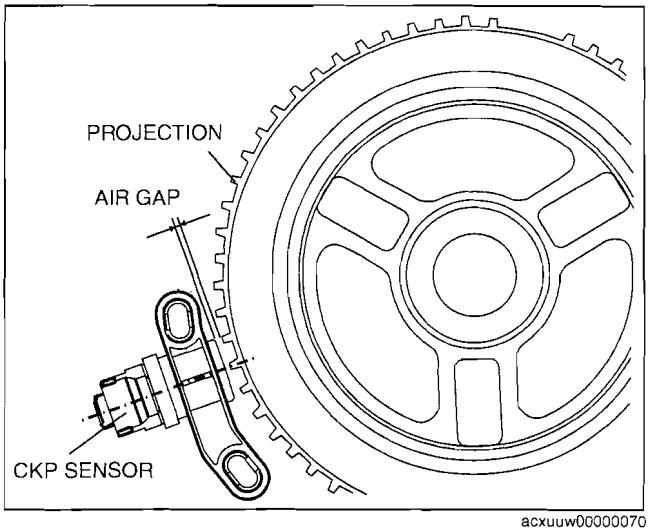
id014039800500

Note
- Before performing the following inspection, make sure to follow the procedure as indicated in the troubleshooting flowchart. (See 00-00-3 HOW TO USE THIS MANUAL.)

Air Gap Inspection

1. Verify that the CKP sensor is securely installed.
2. Using a thickness gauge, measure the air gap between the plate projections at the back of crankshaft pulley and the CKP sensor.
   - If not within the specification, inspect the plate projections for cracks or bending.
     — If there is any malfunction, replace the plate.
     — If the monitor item condition/specification (reference) is not within the specification, even though there is no malfunction, carry out the "Circuit Open/Short Inspection".

Air gap
0.5—1.5 mm {0.02—0.05 in}



acxuuw00000070

Visual Inspection

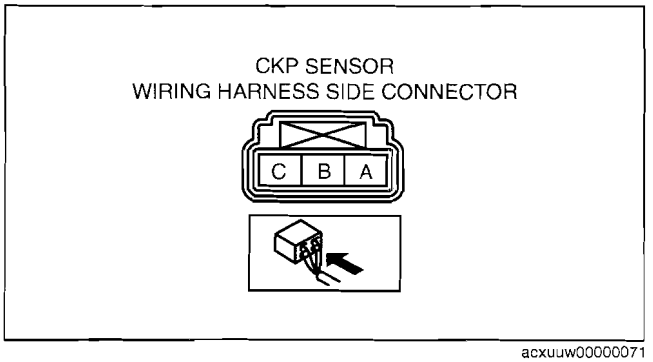
1. Disconnect the negative battery cable.
2. Remove the CKP sensor. (See01-40B-44 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/ INSTALLATION[L3 WITH TC].)
3. Verify that there are no metal shavings on the sensor.
   - If the monitor item condition/specification (reference) is without the specification even though there is no malfunction, carry out the "Circuit Open/Short Inspection".

Voltage Inspection

1. Idle the engine.

Caution
- **Water penetrating the connector will cause sensor malfunction. To prevent this, be careful not to damage the wiring harnesses or the waterproof connector so as to cause water penetration.**

2. Measure the output voltage using an oscilloscope.
   - If not within the specification, replace the CKP sensor.
   - If the monitor item condition/specification (reference) is without the specification, even though the voltage is within the specification, carry out the "Circuit Open/Short Inspection".



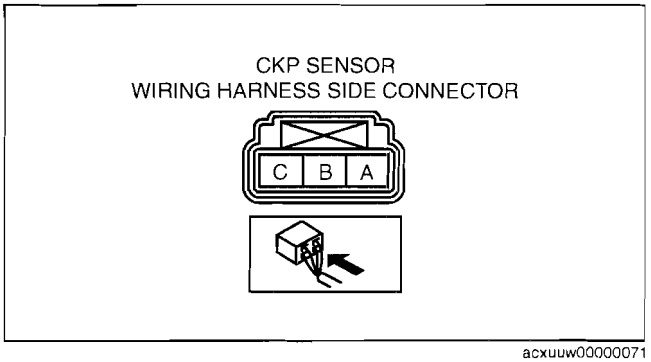
acxuuw00000071

Voltage

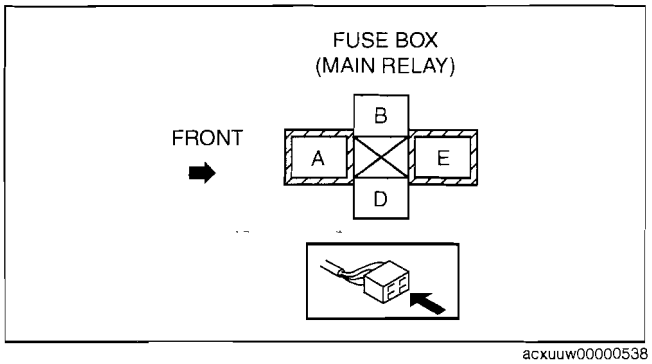
Terminal	Voltage (V)	Condition
A	Below 1.0	Under any condition
B	4.8 or more	High output*
	0.8 or less	Low output*
C	B+	Under any condition

*: Output voltage varies with crankshaft rotation.

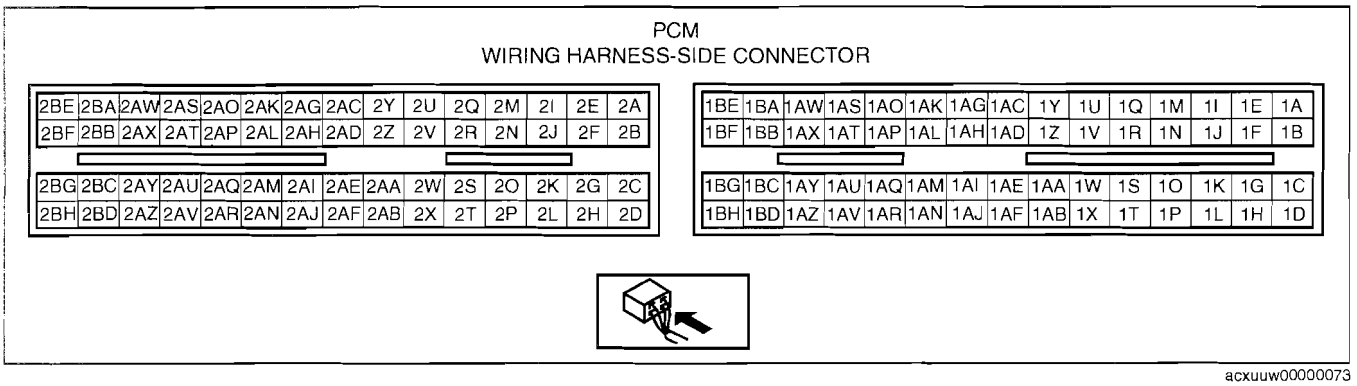
Circuit Open/Short Inspection



acxuuw00000071



acxuuw00000538



acxuuw00000073

1. Inspect the following wiring harnesses for an open or short circuit. (Continuity check)

Open circuit

- If there is no continuity, the circuit is open. Repair or replace the wiring harness.
  - CKP sensor terminal A and PCM terminal 2P
  - CKP sensor terminal B and PCM terminal 2W
  - CKP sensor terminal C and main relay terminal A

Short circuit

- If there is continuity, the circuit is shorted. Repair or replace the wiring harness.
  - CKP sensor terminal A and power supply
  - CKP sensor terminal B and power supply
  - CKP sensor terminal B and body ground
  - CKP sensor terminal C and body ground

CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION[L3 WITH TC]

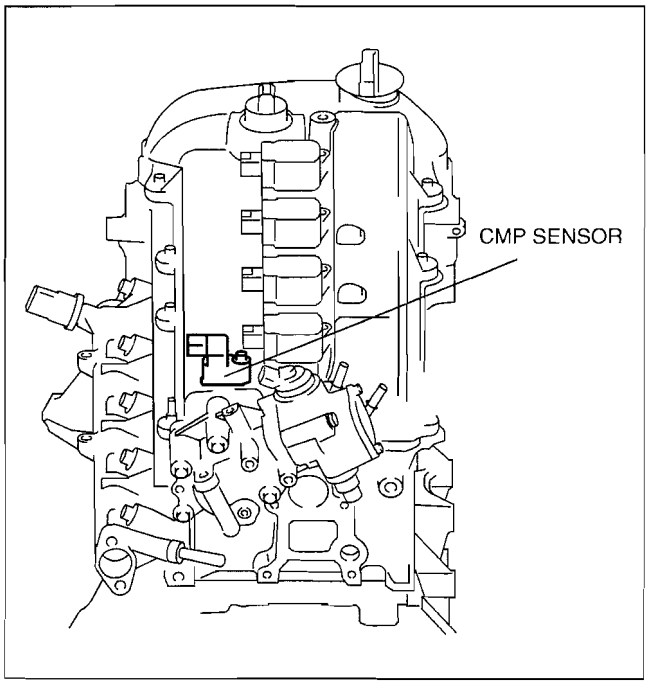
id014039801500

Caution

- **When replacing the CMP sensor, make sure there is no foreign material on it such as metal shavings. If it is installed with foreign material, the sensor output signal will malfunction resulting from fluctuation in magnetic flux and cause a deterioration in engine control.**

1. Remove the battery cover.
2. Disconnect the negative battery cable.
3. Remove the charge air cooler. (See01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
4. Disconnect the CMP sensor connector.
5. Remove the CMP sensor installation bolt.
6. Remove the CMP sensor from the cylinder head cover.
7. Install in the reverse order of removal.

Tightening torque
5.5—7.5 N·m {57—76 kgf·cm, 49—66 in·lbf}



acxuuw00000090

CAMSHAFT POSITION (CMP) SENSOR INSPECTION[L3 WITH TC]

id014039801400

Note

- Before performing the following inspection, make sure to follow the procedure as indicated in the troubleshooting flowchart. (See 00-00-3 HOW TO USE THIS MANUAL.)

Visual Inspection

1. Remove the battery cover.
2. Disconnect the negative battery cable.
3. Remove the CMP sensor. (See01-40B-47 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/ INSTALLATION[L3 WITH TC].)
4. Verify that there are no metal shavings on the sensor.
   - If the monitor item condition/specification (reference) is not within the specification even though there is no malfunction, carry out the "Circuit Open/Short Inspection".

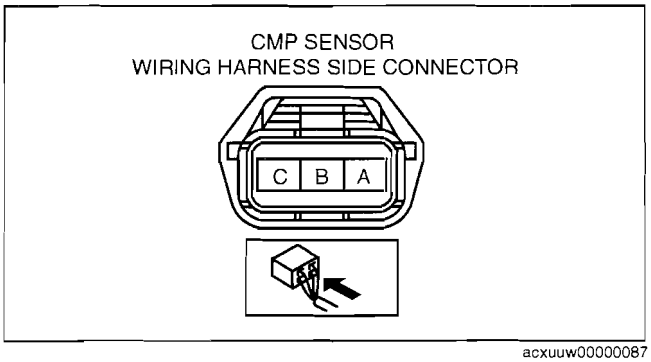
Voltage Inspection

1. Idle the engine.

Caution

- **Water penetrating the connector will cause sensor malfunction. To prevent this, be careful not to damage the wiring harnesses or the waterproof connector so as to cause water penetration.**

2. Measure the output voltage using an oscilloscope.
   - If not within the specification, replace the CMP sensor.
   - If the monitor item condition/specification (reference) is not within the specification, even though the voltage is within the specification, carry out the "Circuit Open/Short Inspection".



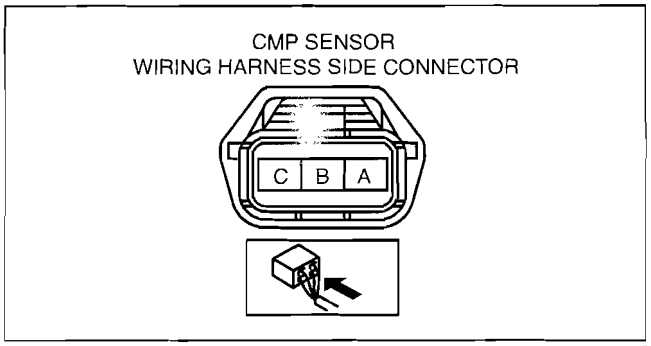
acxuuw00000087

Voltage

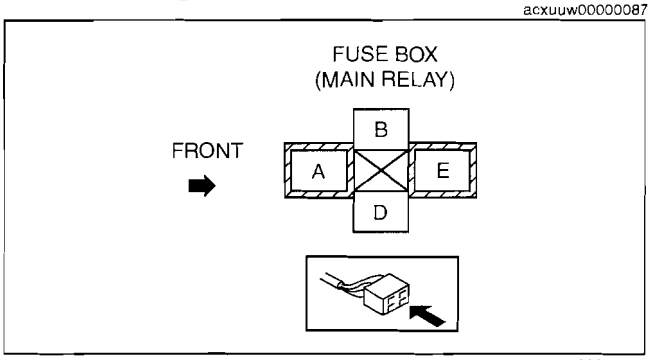
Terminal	Voltage (V)	Condition
A	B+	Under any condition
B	Below 1.0	Under any condition
C	4.8 or more	High output*
	0.8 or less	Low output*

*: Output voltage varies with camshaft rotation.

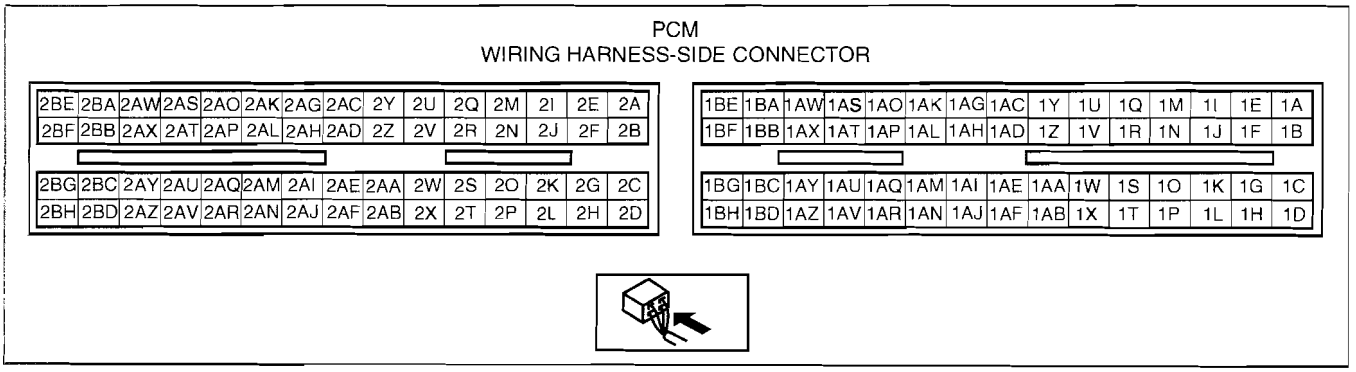
Circuit Open/Short Inspection



acxuuw00000087



acxuuw00000538



acxuuw00000089

1. Inspect the following wiring harnesses for an open or short circuit. (Continuity check)

Open circuit
- If there is no continuity, the circuit is open. Repair or replace the wiring harness.
  - CMP sensor terminal A and main relay terminal A
  - CMP sensor terminal B and PCM terminal 2P
  - CMP sensor terminal C and PCM terminal 2S

Short circuit
- If there is continuity, the circuit is shorted. Repair or replace the wiring harness.
  - CMP sensor terminal A and body ground
  - CMP sensor terminal B and power supply
  - CMP sensor terminal C and body ground
  - CMP sensor terminal C and power supply

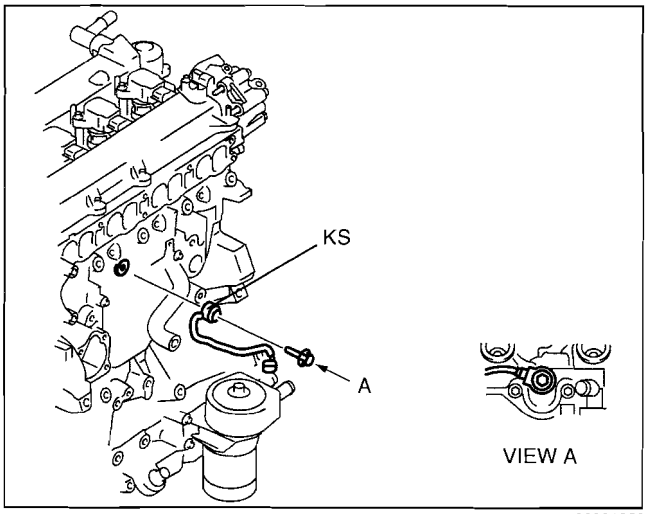
KNOCK SENSOR (KS) REMOVAL/INSTALLATION[L3 WITH TC]

id014039802900

Caution
- **Be careful not to impact the sensor.**
- **Verify that there is no debris between the sensor and the cylinder block before installing.**

1. Remove the battery cover.
2. Disconnect the negative battery cable.
3. Remove the intake manifold. (See01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC])
4. Remove the KS attachment bolt to remove the KS.
5. Install in the reverse order of removal.

Tightening torque
16—24 N·m {1.7—2.4 kgf·m, 12—17 ft·lbf}



acxuuw00001859

KNOCK SENSOR (KS) INSPECTION[L3 WITH TC]

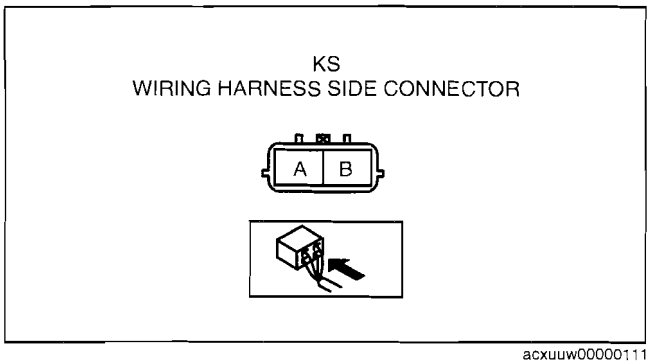
id014039802800

Note
- Before performing the following inspection, make sure to follow the procedure as indicated in the troubleshooting flowchart. (See 00-00-3 HOW TO USE THIS MANUAL.)

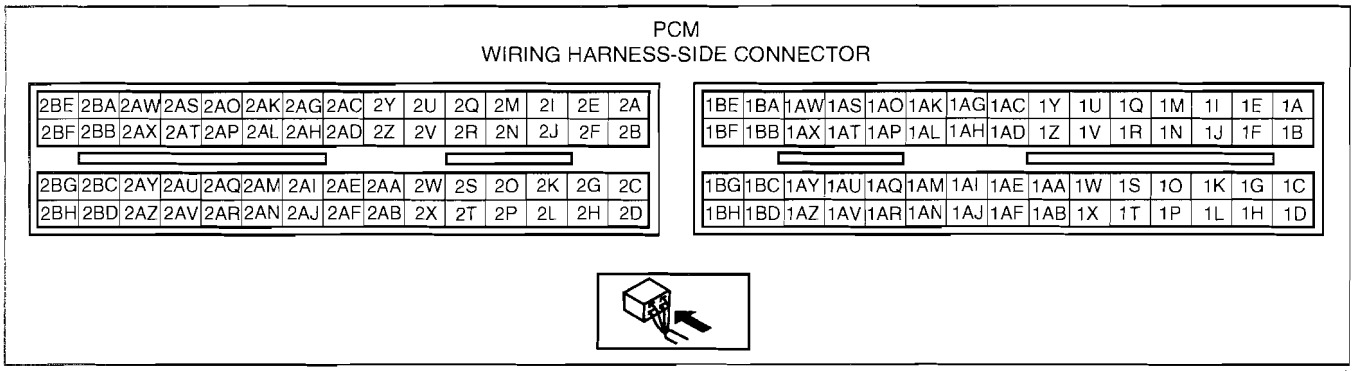
Resistance Inspection
1. Turn the ignition switch to the LOCK position.
2. Disconnect the KS connector.
3. Measure the resistance between KS terminals A and B using a tester.
   - If not as specified, replace the KS. (See01-40B-49 KNOCK SENSOR (KS) REMOVAL/INSTALLATION[L3 WITH TC].)
   - If the KS is normal, but the PID value is out of specification, perform the "Circuit Open/Short Inspection".

Specification
Approx. 4.87 megohms

Circuit Open/Short Inspection



acxuuw00000111



acxuuw00000112

1. Disconnect the PCM connector. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
2. Inspect the following wiring harnesses for an open or short circuit. (Continuity check)

Open circuit

- If there is no continuity, there is an open circuit. Repair or replace the wiring harness.
  - KS terminal A and PCM terminal 2U
  - KS terminal B and PCM terminal 2V

Short circuit

- If there is continuity, there is a short circuit. Repair or replace the wiring harness.
  - KS terminal A and power supply
  - KS terminal A and body ground
  - KS terminal B and power supply
  - KS terminal B and body ground

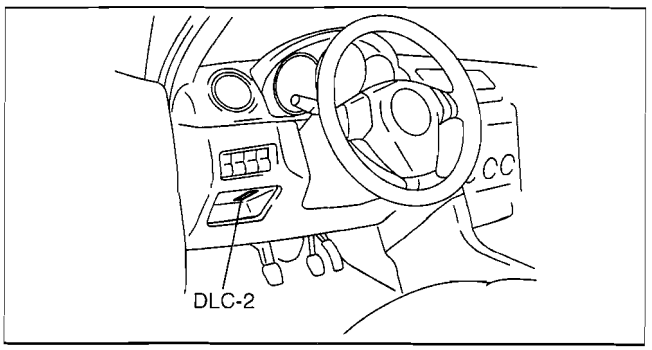
BAROMETRIC PRESSURE (BARO) SENSOR INSPECTION[L3 WITH TC]

id014039801100

Note

- Before performing the following inspection, make sure to follow the procedure as indicated in the troubleshooting flowchart. (See00-00-3 HOW TO USE THIS MANUAL.)

1. Connect the M-MDS to the DLC-2.
2. Turn the ignition switch to the ON position.
3. Select BARO on the M-MDS.
4. Verify that the BARO PID (pressure) and barometric pressure are practically equal.
   - If not as verified, replace the PCM. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)



am3uuw0000100

Engine oil specification

Item	U.S.A. and CANADA	Except U.S.A. and CANADA
Engine oil grade	(ILSAC)	(ILSAC) API SL or ILSAC
Engine oil viscosity	5W-20	5W-20 (If SAE 5W-20 engine oil is not available in your market, use SAE 5W-30 engine oil.)

*1 : Excludes temporary idle speed drop just after the electrical loads (E/L) are turned on.
*2 : Generator generating current value.
*3 : California emission regulation applicable model
*4 : Except for California emission regulation applicable model
*5 : Back-up current is the constant flow of current (for audio unit, clock, PCM, etc.) that is supplied after leaving the battery undisturbed for **approx. 30 min** when the ignition switch is off (key has been removed) and all doors are closed.
*6 : Turn the following electrical loads on and verify that the voltage reading increases.

- Headlights
- Blower motor
- Rear window defroster

01-50B TECHNICAL DATA [L3 WITH TC]

ENGINE TECHNICAL DATA[L3 WITH TC]

id015039800100

Item	Specification
Standard valve clearance [Engine cold]	IN: 0.22—0.28 mm {0.0087—0.011 in} EX: 0.27—0.33 mm {0.011—0.012 in}
Compression	Standard: 1,280 kPa {13.1 kgf/cm^2, 185.65 psi}[250rpm] Minimum: 896 kPa {9.14 kgf/cm^2, 129.96 psi}[250rpm] Maximum difference between cylinders: 196.1 kPa {2.0 kgf/cm^2, 28.5 psi}
Cylinder head bolt length	Standard: 144.7—145.3 mm {5.697—5.720 in} Maximum: 146 mm {5.74 in}
Front oil seal press-in amount	0—0.5 mm {0—0.019 in}
OCV resistance	6.9—7.9 ohms [20°C {68°F}]
Ignition timing	Approx. BTDC 10°
Idle speed	No load: 650—750 rpm Electrical load on*1: 650—750 rpm P/S operation: 650—750 rpm A/C operation: 700—800 rpm
Idle mixture	HC concentration: Within the regulation CO concentration: Within the regulation
Engine oil capacity (approx. quantity)	Oil replacement: 5.3 L {5.6 US qt, 4.7 Imp qt} Oil and oil filter replacement: 5.7 L {6.0 US qt, 5.0 Imp qt} Total (dry engine): 6.4 L {6.8 US qt, 5.6 Imp qt}
Oil pressure (reference value) [oil temperature: 100 °C {212 °F}]	297—551 kPa {3.03—5.61 kgf/cm^2, 43.1—79.9 psi} [3,000 rpm]
Engine coolant capacity (approx. quantity)	7.5 L {7.9 US qt, 6.6 Imp qt}
Cooling system cap valve opening pressure	135—155 kPa {1.38—1.58 kgf/cm^2, 19.6—22.4 psi}
Thermostat initial-opening temperature	80—84 °C {176—183 °F}
Thermostat full-open temperature	97 °C {207 °F}
Thermostat full-open lift	More than 8.0 mm {0.31 in}
Fuel line pressure	410—490 kPa {4.2—4.9 kgf/cm^2, 60—71 psi}
Fuel pump hold pressure	More than 230 kPa {2.3 kgf/cm^2, 33 psi}
Fuel injector resistance	1.0—1.2 ohms [20 °C {68 °F}]
Battery electrolyte specific gravity [20 °C {68 °F}]	1.22—1.29
Battery load test current	55D23L (48): 180 A80D26L (55): 195 A
Battery back-up current	Vehicles with immobilizer system: 25—45 mA Vehicles without immobilizer system: 30 mA or less
Battery slow charge current	55D23L (48): 4.5—5.5 A80D26L (55): 5.5—6.5 A
Battery quick charge current [30 min]	55D23L (48): 30 A80D26L (55): 35 A
Generator standard voltage [IG-ON]	Terminal B: B+ Terminal P: Approx. 1 V or less Terminal D: Approx. 0 V
Generator standard voltage [Idle, 20 °C {68 °F}]	Terminal B: 13—15 V Terminal P: Approx. 3—8 V Terminal D: Turn the electrical loads (headlights, blower motor, rear window defroster) on and verify that the voltage reading increases.
Generator generated current minimum value	70 % of the nominal output current (nominal output current: 110 A) [Ambient temp. 20 °C {68 °F}, voltage 13.0—15.0 V, both engine and generator are hot]
Generator rotor resistance (between slip rings) [20 °C {68 °F}]	2.0—2.3 ohm
Generator brush length	Standard: 22.5 mm {0.89 in} Minimum: 5.0 mm {0.20 in}

Item	Specification
Generator brush spring force	Standard: 4.1—5.3 N {0.42—0.54 kgf, 0.92—1.19 lbf} Minimum: 1.7 N {0.17 kgf, 0.38 lbf}
Firing order	1-3-4-2 (all cylinders independent firing)
	Spark plug type	L3K9 18 110A, L3Y3 18 110
Spark plug gap	0.7—0.8 mm {0.028—0.031 in}
Spark plug resistance [25°C {77 °F}]	3.0—7.5 kilohms
Starter no-load test voltage	11 V
Starter no-load test current	90 A or less
Starter pinion gap	0.5—2.0 mm {0.02—0.07 in}
Starter armature runout	0.05 mm {0.002 in} max.
Starter commutator diameter	Standard: 29.4 mm {1.16 in} Minimum: 28.8 mm {1.13 in}
Segment groove depth of starter commutator	Standard: 0.4—0.6 mm {0.016—0.023 in} Minimum: 0.2 mm {0.008 in}
Starter brush length	Standard: 12.3 mm {0.48 in} Minimum: 7.0 mm {0.28 in}
Starter brush spring force	Standard: 18.3—24.9 N {1.87—2.53 kgf, 4.12—5.59 lbf} Minimum: 5.9 N {0.6 kgf, 1.3 lbf}

*1 : When the following electrical loads are on: Headlights, rear defroster, cooling fan No.1, cooling fan No.2, and the blower motor (2-step or more.)

Recommended engine oil

Item	U.S.A. and CANADA	Except U.S.A. and CANADA
Engine oil grade	 (ILSAC)	  (ILSAC) API SM or ILSAC
Engine oil viscosity	5W-20	5W-20 (If SAE 5W-20 engine oil is not available in your market, use SAE 5W-30 engine oil.)

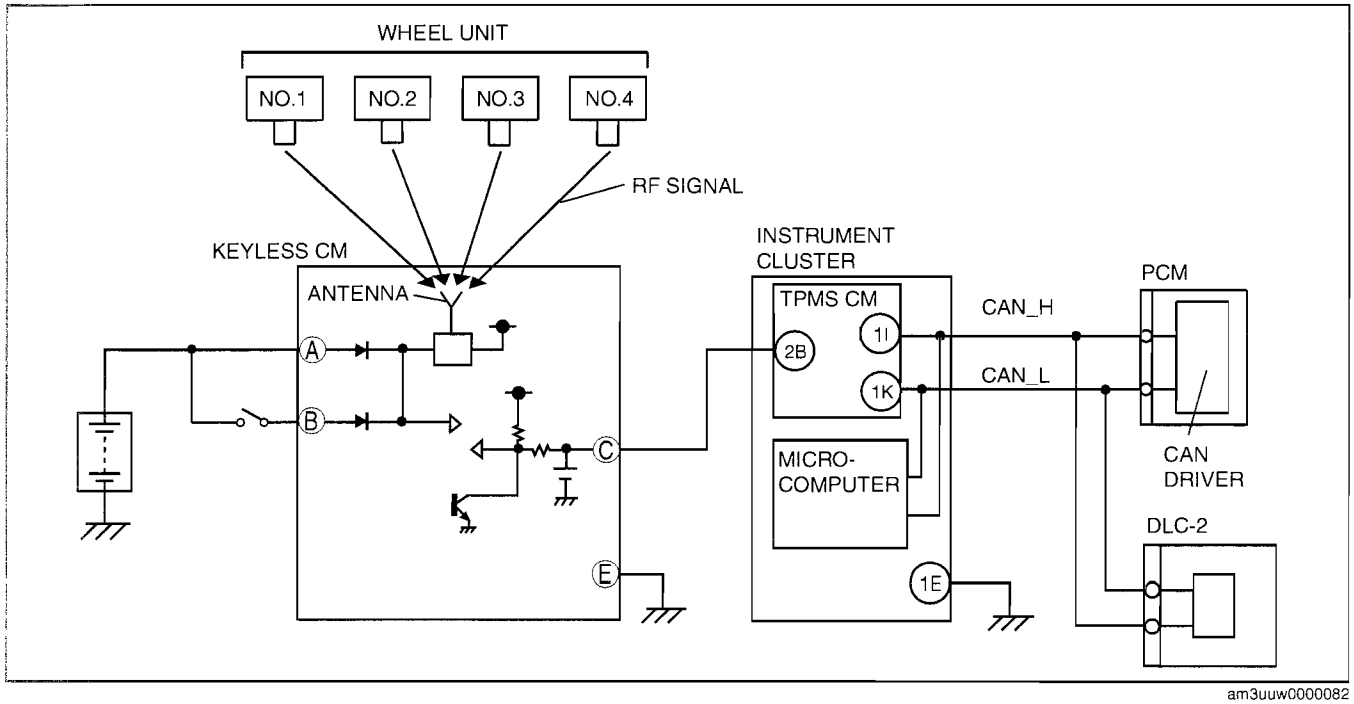
02-02 ON-BOARD DIAGNOSTIC

TIRE PRESSURE MONITORING SYSTEM (TPMS) WIRING DIAGRAM

id020200800100



am3uuw0000082

TIRE PRESSURE MONITORING SYSTEM (TPMS) ON-BOARD DIAGNOSIS

id020200800200

On-Board Diagnostic (OBD) Test Description

- The OBD test inspects the integrity and function of the TPMS and outputs the results when requested by the specific tests.
- On-board diagnostic test also:
  - — Provides a quick inspection of the TPMS usually performed at the start of each diagnostic procedure.
  - — Provides verification after repairs to ensure that no other faults occurred during service.
- The OBD test is divided into 3 tests:
  - — Read/clear diagnostic results, PID monitor and active command mode.

Read/clear diagnostic results

- This function allows you to read or clear DTCs in the instrument cluster memory.

PID/Data monitor and record

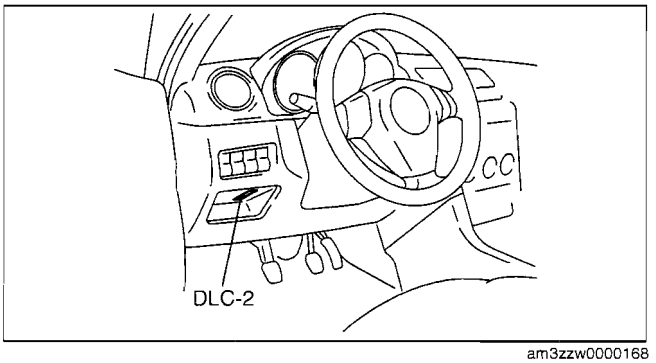
- This function allows you to access certain data values, input signals, calculated values, and system status information.

Active command modes

- This function allows you to control devices through the M-MDS.

Reading DTCs Procedure

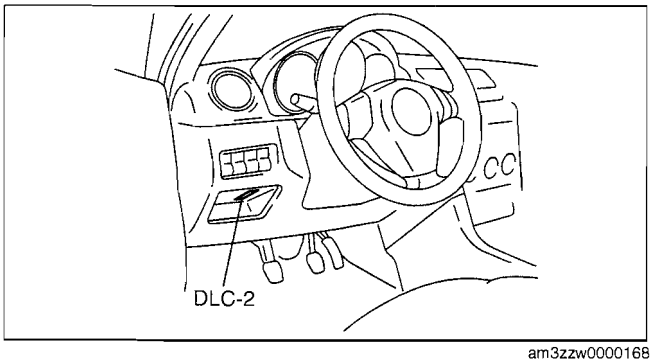
1. Connect the M-MDS to the DLC-2 connector.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Toolbox" tab.
     2. Select "Self Test".
     3. Select "Modules".
     4. Select "TPM".
   - When using the PDS (Pocket PC)
     1. Select "Module Tests".
     2. Select "TPM".
     3. Select "Self Test".
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
4. After completion of repairs, clear all DTCs stored in the TPMS. (See 02-02-2 Clearing DTCs Procedures.)



am3zzw0000168

Clearing DTCs Procedures

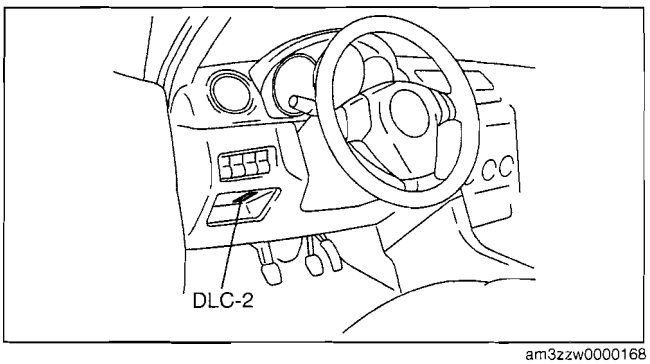
1. Connect the M-MDS to the DLC-2 connector.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Toolbox" tab.
     2. Select "Self Test".
     3. Select "Modules".
     4. Select "TPM".
   - When using the PDS (Pocket PC)
     1. Select "Module Tests".
     2. Select "TPM".
     3. Select "Self Test".
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Verify that no DTCs are displayed.



am3zzw0000168

PID/Data Monitor and Record Procedure

1. Connect the M-MDS to the DLC-2 connector.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Toolbox" tab.
     2. Select "DataLogger".
     3. Select "Modules".
     4. Select "TPM".
   - When using the PDS (Pocket PC)
     1. Select "Module Tests".
     2. Select "TPM".
     3. Select "DataLogger".
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the directions on the screen.



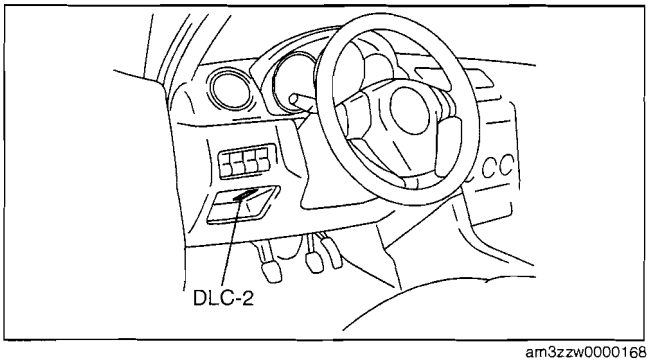
am3zzw0000168

Note

- The PID/Data monitor function is used for monitoring the calculated value. Therefore, if the monitored value of the output parts is not within the specification, inspection of the monitored value of input parts corresponding to applicable output part control is necessary. In addition, because the system does not display output part malfunction as abnormality in the monitored value.

Active Command Modes Procedure

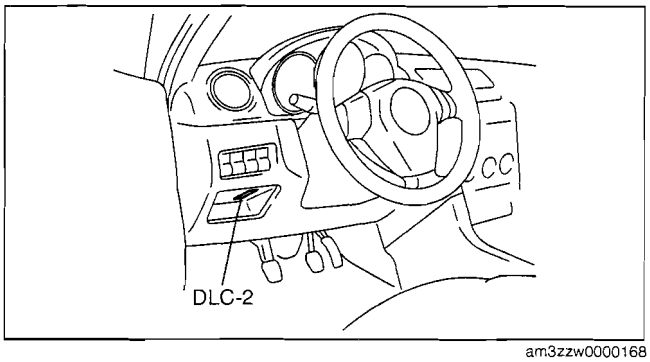
1. Connect the M-MDS to the DLC-2 connector.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Toolbox" tab.
     2. Select "DataLogger".
     3. Select "Modules".
     4. Select "TPM".
   - When using the PDS (Pocket PC)
     1. Select "Module Tests".
     2. Select "TPM".
     3. Select "DataLogger".
3. Select the active command modes from the PID table.
4. Perform the active command modes.



am3zzw0000168

Freeze Frame PID Data Access Procedure

1. Connect the M-MDS to the DLC-2 connector.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - This function is available for only the IDS (laptop PC)
     1. Select the "Toolbox" tab.
     2. Select "Body".
     3. Select "TPMS Functions".
     4. Select "Freeze Frame Data".



am3zzw0000168

DTC Table

DTC M-MDS	Description	Page
B1342	Instrument cluster internal malfunction	(See 09-02C-5 DTC B1342[INSTRUMENT CLUSTER].)
B2143	ID registration failure	(See 02-02-7 DTC B2143.)
B2477	Instrument cluster configuration not performed	(See 09-02C-5 DTC B2477[INSTRUMENT CLUSTER].)
B2868	Wheel unit No.1 internal malfunction	(See 02-02-7 DTC B2868, B2869, B2870, B2871.)
B2869	Wheel unit No.2 internal malfunction	(See 02-02-7 DTC B2868, B2869, B2870, B2871.)
B2870	Wheel unit No.3 internal malfunction	(See 02-02-7 DTC B2868, B2869, B2870, B2871.)
B2871	Wheel unit No.4 internal malfunction	(See 02-02-7 DTC B2868, B2869, B2870, B2871.)
U0073	Communication failure between instrument cluster and keyless receiver	(See 09-02B-11 DTC U0073, U2012[MULTIPLEX COMMUNICATION SYSTEM].)
U0127	Communication failure between instrument cluster and keyless receiver	(See 02-02-8 DTC U0127.)
U2616	Wheel unit No.1 (No response)	(See 02-02-9 DTC U2616, U2617, U2618, U2619.)
U2617	Wheel unit No.2 (No response)	(See 02-02-9 DTC U2616, U2617, U2618, U2619.)
U2618	Wheel unit No.3 (No response)	(See 02-02-9 DTC U2616, U2617, U2618, U2619.)
U2619	Wheel unit No.4 (No response)	(See 02-02-9 DTC U2616, U2617, U2618, U2619.)

PID/DATA Monitor Table

PID Name (Definition)	Unit/ Condition	Condition/Specification	Action
AI_WU1_ID AI_WU2_ID AI_WU3_ID AI_WU4_ID (Wheel unit ID code (during ID registration))	–	Indicates the wheel unit ID code. (During wheel unit ID registration.)	• Replace the wheel unit. • Perform the wheel unit ID registration.
AI_WU1_P AI_WU2_P AI_WU3_P AI_WU4_P (Tire pressure value (during ID registration))	Pa, psi	Indicates the tire pressure. (During ID registration.)	• Adjust tire pressure. • Replace the wheel unit. • Perform the wheel unit ID registration.
FFD1_WU1_P FFD1_WU2_P FFD1_WU3_P FFD1_WU4_P (Tire pressure value (freeze frame PID data 1))	Pa, psi	Indicates the tire pressure. (Freeze frame PID data 1)	Adjust tire pressure.
FFD2_WU1_P FFD2_WU2_P FFD2_WU3_P FFD2_WU4_P (Tire pressure value (freeze frame PID data 2))	Pa, psi	Indicates the tire pressure. (Freeze frame PID data 2)	Adjust tire pressure.
FFD1_WU1_T FFD1_WU2_T FFD1_WU3_T FFD1_WU4_T (Internal tire air temperature value (freeze frame PID data 1))	°C, °F	Indicates the internal tire air temperature. (Freeze frame PID data 1)	Adjust tire pressure.

PID Name (Definition)	Unit/ Condition	Condition/Specification	Action
FFD2_WU1_T FFD2_WU2_T FFD2_WU3_T FFD2_WU4_T (Internal tire air temperature value (freeze frame PID data 2))	°C, °F	Indicates the internal tire air temperature. (Freeze frame PID data 2)	Adjust tire pressure.
FFD1_MLG (Wheel unit mileage value (freeze frame PID data 1))	m, mi (ft)	Indicates the mileage. (Freeze frame PID data 1)	Adjust tire pressure.
FFD2_MLG (Wheel unit mileage value (freeze frame PID data 2))	m, mi (ft)	Indicates the mileage. (Freeze frame PID data 2)	Adjust tire pressure.
FFD1_SPD (Wheel unit speed value (freeze frame PID data 1))	KPH, MPH	Indicates the speed. (Freeze frame PID data 1)	Adjust tire pressure.
FFD2_SPD (Wheel unit speed value (freeze frame PID data 2))	KPH, MPH	Indicates the speed. (Freeze frame PID data 2)	Adjust tire pressure.
CCNT_TPMS (Number of continuous DTCs)	–	Indicates number of DTC	Perform the DTC inspection.
ID_LAST* (Last received tire transmitter ID code value)	–	Indicates the last ID that is transmitted from the wheel unit.	• Replace the wheel unit. • Perform the configuration.
ID_WU1* ID_WU2* ID_WU3* ID_WU4* (Registered wheel unit ID code)	–	Indicates the registered ID that is transmitted from the wheel unit.	• Replace the wheel unit. • Perform the wheel unit ID registration.
SPDOMETER (Vehicle speed)	KPH, MPH	• Vehicle is stopped: **0 KPH {0 MPH}** • Vehicle is running: Indicates vehicle speed	Inspect the PCM.
VBATT (Battery positive voltage)	V	• Ignition switch ON: **B+** • Ignition switch OFF: **0 V**	• Inspect the battery. • Inspect the related wiring harness.
WU1_P* WU2_P* WU3_P* WU4_P* (Tire pressure value)	Pa, psi	Indicates the tire pressure. (See 02-50-1 SUSPENSION TECHNICAL DATA.)	• Adjust tire pressure. • Replace the wheel unit.
WU1_T* WU2_T* WU3_T* WU4_T* (Internal tire air temperature value)	°C, °F	Indicates the internal tire air temperature.	Replace the wheel unit.

*: Data transmission from the wheel unit occurs when the vehicle speed is **25 km/h {15.5 mph} or more.** Due to this, the current air pressure and temperature data can only be displayed after the vehicle is driven at **25 km/h {15.5 mph} or more.** Also, the ID_LAST, and tire pressure and internal tire air temperature data are erased when the instrument cluster connector and the battery terminal are disconnected. If the instrument cluster is replaced or the battery terminals are disconnected, drive the vehicle at **25 km/h {15.5 mph} or more** and display the tire pressure PID after the data transmission.

Active Command Modes Table

Command Name	Definition	Operation	Note
IDR_MODE	Wheel unit ID registration mode	On/Off	Ignition switch at ON

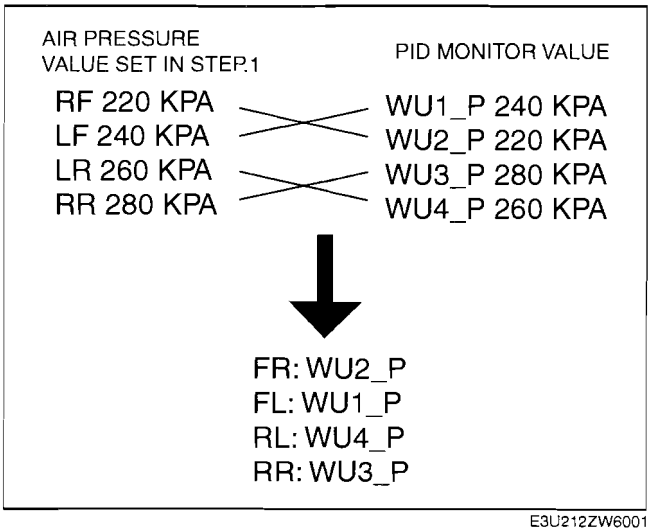
MALFUNCTIONING WHEEL UNIT IDENTIFICATION

id020200800300

Note

- The tire pressure monitoring system (TPMS) does not identify the location of the failed wheel unit on the vehicle (LF, RF, LR, RR). The TPMS identifies each wheel unit as No.1, No.2, No.3 and No.4. In order to identify the location of the wheel unit, perform the following procedure.

1. Adjust the air pressure as follows:
   - RF: 220 kPa {2.2 kgf/cm^2, 32 psi}
   - LF: 240 kPa {2.4 kgf/cm^2, 35 psi}
   - LR: 260 kPa {2.6 kgf/cm^2, 38 psi}
   - RR: 280 kPa {2.8 kgf/cm^2, 40 psi}
2. Turn the ignition switch off.
3. Connect the M-MDS to the DLC-2.
4. Turn the ignition switch to the ON position.
5. Drive the vehicle at a speed of **25 km/h {15.5 mph}** for **2 min or more**.
6. Select the following PIDs using the M-MDS, and monitor them.
   - PRS_WU1
   - PRS_WU2
   - PRS_WU3
   - PRS_WU4
7. Determine which wheel unit identification code matches which wheel and tire by comparing the PID monitor values with the air pressure values set in Step 1.
8. Select the LAST_ID PID using the M-MDS, and take a note of four displayed identification codes.
9. Inspect the DTCs using the M-MDS.



E3U212ZW6001

DTC B2143

id020200800400

DTC B2143	• **ID registration failure**
DETECTION CONDITION	• Two or more codes are overlapping.
POSSIBLE CAUSE	• ID registration procedure has not been performed properly.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE PROGRAMMED ID** • Turn the ignition switch off. • Connect the M-MDS to the DLC-2. • Select the following PIDs using the M-MDS: — ID_WU1 — ID_WU2 — ID_WU3 — ID_WU4 • Turn the ignition switch to the ON position. • Is the same code in the output ID?	Yes	Register the wheel unit ID, then go to the next step. (See 02-12-5 WHEEL UNIT ID REGISTRATION.)
		No	Go to the next step.
2	**VERIFY TROUBLESHOOTING COMPLETED** • Clear the DTC from the memory. (See 02-02-2 TIRE PRESSURE MONITORING SYSTEM (TPMS) ON-BOARD DIAGNOSIS.) • Drive the vehicle at a speed of **25 km/h {15.5 mph} or more** for **10 min or more.** • Is the same DTC present?	Yes	• Repeat the inspection from Step 1. If the malfunction recurs, replace the instrument cluster and/or wheel unit. (See 09-22-2 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.) (See 02-12-6 WHEEL UNIT REMOVAL/ INSTALLATION.)
		No	Go to the next step.
3	**VERIFY AFTER REPAIR PROCEDURE** • Are there any other DTCs present?	Yes	Go to the applicable DTC inspection. (See 02-02-2 TIRE PRESSURE MONITORING SYSTEM (TPMS) ON-BOARD DIAGNOSIS.)
		No	DTC troubleshooting completed.

DTC B2868, B2869, B2870, B2871

id020200800500

DTC	**B2868** **B2869** **B2870** **B2871**	**Wheel unit No.1 (internal malfunction)** **Wheel unit No.2 (internal malfunction)** **Wheel unit No.3 (internal malfunction)** **Wheel unit No.4 (internal malfunction)**
DETECTION CONDITION	• The instrument cluster receives error signals from the wheel unit.	
POSSIBLE CAUSE	• Internal malfunction of wheel unit	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**IDENTIFY MALFUNCTIONING WHEEL UNIT** • (See 02-02-6 MALFUNCTIONING WHEEL UNIT IDENTIFICATION.)		• Identify the malfunctioning wheel unit. • Replace and register the wheel unit. (See 02-12-5 WHEEL UNIT ID REGISTRATION.) • Go to the next step.
2	**VERIFY TROUBLESHOOTING COMPLETED** • Clear the DTC from the memory. (See 02-02-2 TIRE PRESSURE MONITORING SYSTEM (TPMS) ON-BOARD DIAGNOSIS.) • Drive the vehicle at a speed of **25 km/h {15.5 mph} or more** for **10 min or more.** • Is the same DTC present?	Yes	Go to Step 1.
		No	Go to the next step.
3	**VERIFY AFTER REPAIR PROCEDURE** • Are there any other DTCs present?	Yes	Go to the applicable DTC inspection. (See 02-02-2 TIRE PRESSURE MONITORING SYSTEM (TPMS) ON-BOARD DIAGNOSIS.)
		No	DTC troubleshooting completed.

DTC U0127

id020200800600

DTC U0127	• **Communication failure between instrument cluster and keyless CM**
DETECTION CONDITION	• The instrument cluster cannot receive signal from the keyless CM.
POSSIBLE CAUSE	• Open or short circuit in the wiring harness between the keyless CM terminal C and the instrument cluster terminal 2B. • Keyless receiver malfunction. • Instrument cluster malfunction. • Poor connection at connectors (female terminal)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT WHEEL UNIT SIGNAL FOR OPEN CIRCUIT** • Turn the ignition switch off. • Disconnect keyless receiver and instrument cluster connectors. • Inspect for continuity between keyless CM terminal C (harness-side) and instrument cluster terminal 2B (harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit between keyless CM terminal C and instrument cluster terminal 2B, then go to Step 4.
2	**INSPECT WHEEL UNIT SIGNAL FOR SHORT TO POWER** • Turn the ignition switch off. • Disconnect keyless receiver and instrument cluster connectors. • Measure the voltage between keyless CM terminal C (harness-side) and ground. • Is there B+?	Yes	Repair or replace the wiring harness for a short to power between keyless CM terminal C and instrument cluster terminal 2B, then go to Step 4.
		No	Go to the next step.
3	**INSPECT WHEEL UNIT SIGNAL FOR SHORT TO GROUND** • Turn the ignition switch off. • Disconnect keyless receiver and instrument cluster connectors. • Inspect for continuity between keyless CM terminal C (harness-side) and ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a short to ground between keyless CM terminal C and instrument cluster terminal 2B, then go to the next step.
		No	Replace keyless receiver, then go to the next step. (See 09-14-27 KEYLESS CONTROL MODULE REMOVAL/ INSTALLATION.)
4	**VERIFY TROUBLESHOOTING COMPLETED** • Clear the DTC from the memory. (See 02-02-2 TIRE PRESSURE MONITORING SYSTEM (TPMS) ON-BOARD DIAGNOSIS.) • Turn the ignition switch to the ON position and wait for **30 s.** • Is the same DTC present?	Yes	• If the malfunction recurs, replace the instrument cluster. (See 09-22-2 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.) • Configure the instrument cluster. (See 09-22-2 INSTRUMENT CLUSTER CONFIGURATION.) • Register the wheel unit ID. (See 02-12-5 WHEEL UNIT ID REGISTRATION.) • Go to the next step.
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Drive the vehicle at a speed of **25 km/h {15.5 mph} or more** for **10 min or more.** • Are there any other DTCs present?	Yes	Go to the applicable DTC inspection. (See 02-02-2 TIRE PRESSURE MONITORING SYSTEM (TPMS) ON-BOARD DIAGNOSIS.)
		No	DTC troubleshooting completed.

DTC U2616, U2617, U2618, U2619

id020200800700

DTC	U2616 U2617 U2618 U2619	**Wheel unit No.1 (No response)** **Wheel unit No.2 (No response)** **Wheel unit No.3 (No response)** **Wheel unit No.4 (No response)**
DETECTION CONDITION	• The keyless receiver has continuously not received a signal from the wheel unit for a certain period.	
POSSIBLE CAUSE	• Wheel unit identification code is not registered in the instrument cluster. • No signal is received from the wheel unit. • Wheel unit is not installed. • Poor connection at connectors (female terminal).	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY WHEEL UNIT IS INSTALLED TO EACH WHEEL** • Are all four wheels equipped with a wheel unit?	Yes	Go to the Step 3.
		No	• Install the wheel unit. (See 02-12-6 WHEEL UNIT REMOVAL/INSTALLATION.) • Register the wheel unit ID. (See 02-12-5 WHEEL UNIT ID REGISTRATION.) • Go to the next step.
2	**INSPECT FOR DTCs** • Drive the vehicle at a speed of **25 km/h {15.5 mph} or more** for **10 min or more**. • Is the same DTC present?	Yes	Go to the next step.
		No	Go to the Step 5.
3	**IDENTIFY MALFUNCTIONING WHEEL UNIT** • (See 02-02-6 MALFUNCTIONING WHEEL UNIT IDENTIFICATION.)		• Identify the malfunctioning wheel unit. • Replace the wheel unit. (See 02-12-6 WHEEL UNIT REMOVAL/INSTALLATION.) • Register the wheel unit ID. (See 02-12-5 WHEEL UNIT ID REGISTRATION.) • Go to the Step 5.
4	**INSPECT FOR KEYLESS CM MALFUNCTION** • Inspect the keyless CM. • Is there any malfunction?	Yes	Replace the malfunctioning part.
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Clear the DTC from the memory. (See 02-02-2 TIRE PRESSURE MONITORING SYSTEM (TPMS) ON-BOARD DIAGNOSIS.) • Drive the vehicle at a speed of **25 km/h {15.5 mph} or more** for **10 min or more**. • Is the same DTC present?	Yes	• If the malfunction recurs, replace the instrument cluster. (See 09-22-2 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.) • Configure the instrument cluster. (See 09-22-2 INSTRUMENT CLUSTER CONFIGURATION.) • Register the wheel unit ID. (See 02-12-5 WHEEL UNIT ID REGISTRATION.) • Go to the next step.
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Are there any other DTCs present?	Yes	Go to the applicable DTC inspection. (See 02-02-2 TIRE PRESSURE MONITORING SYSTEM (TPMS) ON-BOARD DIAGNOSIS.)
		No	DTC troubleshooting completed.

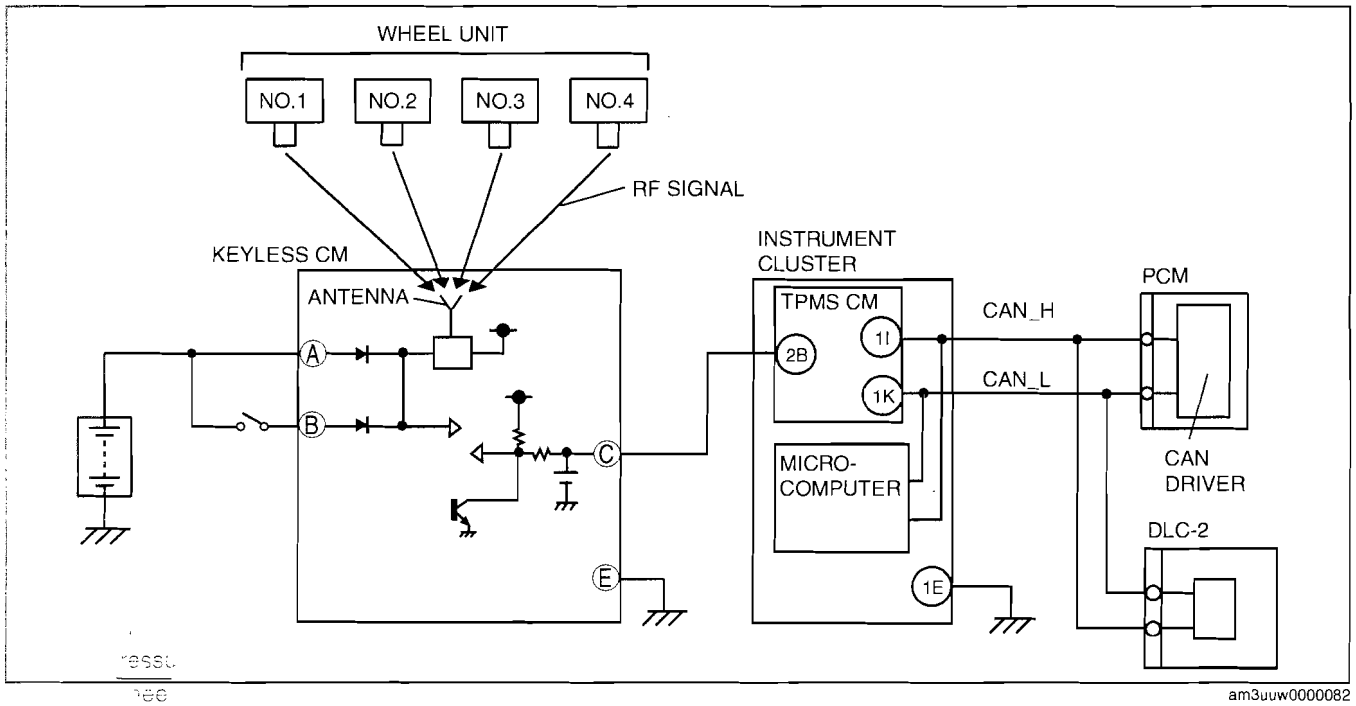
Note

- If the installed wheel unit ID number is known, verification of whether the instrument cluster is receiving data from the wheel unit can be easily confirmed using the following procedure:
  1. Drive the vehicle at **25 km/h {15.5 mph} or more**, and send data from the wheel unit.
  2. Select [ID_LAST] from the PID items, and monitor the data.
  3. Verification that the instrument cluster is receiving data is possible if the monitored ID number matches the installed wheel unit ID number.
- If the wheel unit has been newly replaced, the TPMS warning light may flashes before the ID registration is complete, and DTC U2616, U2617, U2618 and U2619 may be stored in the memory. In this case, re-implement the wheel unit ID registration, and after confirming that the TPMS warning light is no longer flashing, erase the DTC. If the TPMS warning light does not go out, a malfunction on any one of the wheel units may have occurred and the ID registration will not have been correctly performed. Repeat the diagnostic procedure from Step 1 and perform and inspection.

02-03 SYMPTOM TROUBLESHOOTING

TIRE PRESSURE MONITORING SYSTEM (TPMS) WIRING DIAGRAM

id020300800100



am3uuw0000082

FOREWORD

id020300800200

- Before performing the steps in Symptom Troubleshooting, perform the On-board Diagnostic Inspection. To check the DTC, follow the DTC Inspection steps. (See 02-02-2 TIRE PRESSURE MONITORING SYSTEM (TPMS) ON-BOARD DIAGNOSIS.)

PRECAUTION

id020300800300

Intermittent Concern Troubleshooting

Vibration method

- If a malfunction occurs or becomes worse while driving on a rough road or when the engine is vibrating, perform the following steps.

Note

- There are several reasons why vehicle or engine vibration could cause an electrical malfunction. Inspect the following:
  - — Connectors not fully seated.
  - — Wiring harnesses not having full play.
  - — Wiring harnesses laying across brackets or moving parts.
  - — Wiring harnesses routed too close to hot parts.
- An improperly routed, improperly clamped, or loose wiring harness can cause wiring to become pinched between parts.
- The connector joints, points of vibration, and places where wiring harnesses pass through the firewall, body panels and other panels are the major areas to be inspected.

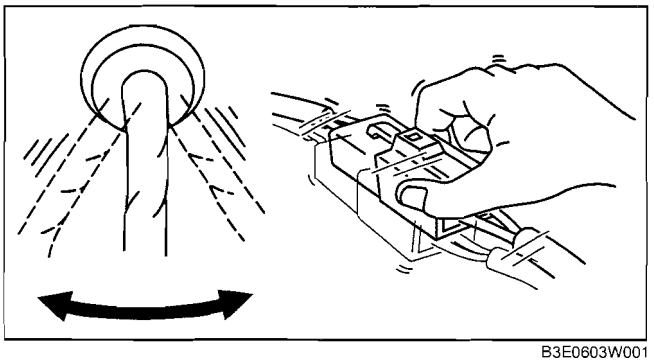
Inspection method for switch and/or sensor connectors or wiring harnesses

1. Connect the M-MDS to the DLC-2.
2. Turn the ignition switch to the ON position (engine off).

Note

- If the engine starts and runs, perform the following steps at idle.

3. Access PIDs for the switch you are inspecting.
4. Turn the switch on manually.
5. Slightly shake each connector or wiring harness vertically and horizontally while monitoring the PID.
   - If the PID value is unstable, inspect for poor connection.



B3E0603W001

Inspection method for sensors

1. Connect the M-MDS to the DLC-2.
2. Turn the ignition switch to the ON position (engine off).

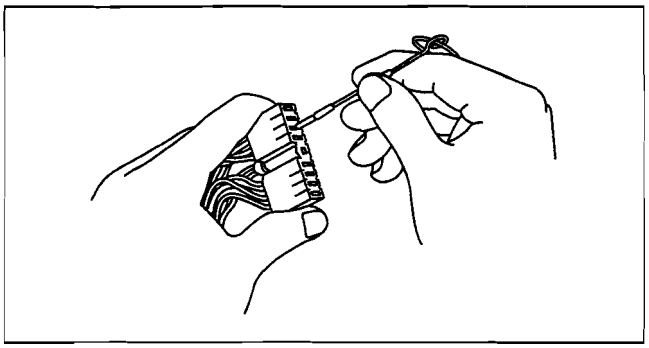
Note

- If the engine starts and runs, perform the following steps at idle.

3. Access PIDs for the switch you are inspecting.
4. Vibrate the sensor slightly with your finger.
   - If the PID value is unstable or a malfunction occurs, inspect for poor connection and/or poorly mounted sensor.

Connector terminal inspection method

1. Inspect the connection of each female terminal.
2. Insert the male terminal to the female terminal and inspect the female terminal for looseness.



B3E0603W002

SYMPTOM TROUBLESHOOTING

id020300800400

No.	Symptom
1	TPMS warning light illuminates continuously.
2	TPMS warning light (low pressure warning) illuminates after engine start and turns off after driving for a period of time.
3	Wheel unit ID registration cannot be performed (TPMS warning light flashes).

No.1 TPMS WARNING LIGHT ILLUMINATES CONTINUOUSLY

id020300800500

Caution

- **The tire pressure cannot be measured accurately after driving for a long period due to the internal temperature and pressure. Stop the vehicle for approx. 1 hour and then perform the tire pressure measurement and adjustment.**
- **Use a high accuracy digital gauge for measurement of the tire pressure.**

Note

- If the DTC clearing procedure is implement, the TPMS warning light turns off.

1	TPMS warning light illuminates continuously
[TROUBLESHOOTING HINTS] • Tire pressure is lower than the specification.	

STEP	INSPECTION		ACTION
1	INSPECT THE TIRE • Is there any foreign object adhering to the tire?	Yes	Remove any foreign object. Replace the tire if necessary, and then go to the next step.
		No	Go to the next step.
2	INSPECT THE TIRE PRESSURE • Is the tire pressure lower than the specification?	Yes	Adjust the tire pressure to the specification when the tires are cold, and then go tot the next step.
		No	Go to the next step.
3	DOES THE TPMS WARNING LIGHT TURN OFF?	Yes	Troubleshooting completed. Explain to the customer what has been repaired.
		No	Go to the next step.
4	DRIVE THE VEHICLE AT 25 KM/H FOR 10 MIN. • Does the TPMS warning light turn off?	Yes	Troubleshooting completed. Explain to the customer what has been repaired.
		No	Adjust the tire pressure to the specification, and then return to Step 1. **Note** • If the TPMS warning light does not turn off after repeating this step, the tire may be flat.

No.2 TPMS WARNING LIGHT (LOW PRESSURE WARNING) ILLUMINATES AFTER ENGINE START AND TURNS OFF AFTER DRIVING FOR PERIOD OF TIME

id020300800600

Caution

- **The tire pressure cannot be measured accurately after driving for a long period due to increased internal temperature and pressure. Stop the vehicle for approx. 1 hour and then perform the tire pressure measurement and adjustment.**
- **Use a high accuracy digital gauge for measurement of the tire pressure.**

Note

- The tire pressure normally decreases by **approx. 7 kPa {0.07 kgf/cm^2, 1.02 psi}** per month even if the tire is normal.
- The FFD (temperature and pressure) stored when the TPMS warning light is turned on or off can be verified by operating the M-MDS.

2	**TPMS warning light (low pressure warning) illuminates after engine start and turns off after driving for a period of time.**
[TROUBLESHOOTING HINTS] • The tire pressure decreases (approaches value to illuminate TPMS warning light) when the internal temperature of the tire is low.	

STEP	INSPECTION		ACTION
1	**INSPECT THE TIRE** • Is there any foreign object adhering to the tire?	Yes	Remove any foreign object. Replace the tire if necessary, and then go to the next step.
		No	Go to the next step.
2	**MEASURE THE TIRE PRESSURE WHEN THE TIRES ARE COLD** • Has the tire pressure decreased (approaches value to illuminate TPMS warning light)?	Yes	Adjust the tire pressure to the specification, and then go to the next step.
		No	Go to the next step.
3	**IS THE MALFUNCTION CORRECTED?**	Yes	Troubleshooting completed.
		No	Verify troubleshooting again and return to Step 1 if the malfunction recurs.

No.3 WHEEL UNIT ID REGISTRATION CANNOT BE PERFORMED (TPMS WARNING LIGHT FLASHES)

id020300800900

Caution

- **Activate the wheel unit ID registration mode using the M-MDS, and perform the following steps if the TPMS warning light does not turn off after driving at 25 km/h {15.5 mph} or more for 10 min or more.**

3	**Wheel unit ID registration cannot be performed (TPMS warning light flashes).**
[TROUBLESHOOTING HINTS] • New wheel unit malfunction (caused when installing to wheel) • Any malfunction on an old wheel unit which has not been replaced.	

STEP	INSPECTION		ACTION
1	**CAN THE WHEEL UNIT ID BE REGISTERED?** • Connect the M-MDS. • Display the wheel unit ID registration condition (ID and tire pressure table) using the M-MDS. • Temporarily remove the battery and reinstall it immediately. **Note** • If the battery is removed, the tire pressure data for WU_1 to WU_4 stored in the instrument cluster is reset. • Pressure is **0 kPa {0 kgf/cm^2, 0 psi}** when it is displayed again using the M-MDS. • Set tire pressure for the four wheels separately. • Perform the wheel unit ID registration again. • Can the ID be registered?	Yes	Trouble shooting completed. (Adjust the tire pressure on four wheels, and then return the vehicle to the customer.)
		No	Go to the next step.
2	**VERIFY THE WHEEL UNIT ID REGISTRATION CONDITIONS (ID AND TIRE PRESSURE TABLE) USING THE M-MDS** • Refer to [Display Of M-MDS (Example)] to specify wheel unit for which the ID could not be registered. (See 02-03-5 Display Of M-MDS (Example).) • Is the wheel unit for which the ID could not be registered a new wheel unit? **Caution** • **ID numbers of WU_1 to WU_4 are updated when wheel on all of four wheels are registered.**	Yes	Replace with a new wheel unit, and then go to Step 4.
		No	Go to the next step.
3	Replace the old wheel unit, and then go tot the next step (any malfunction on an old wheel unit which has not been replaced).		
4	**CAN THE WHEEL UNIT ID BE REGISTERED?** • Perform the wheel unit ID registration using the M-MDS.	Yes	Troubleshooting completed.
		No	Verify troubleshooting again and return to Step 1 if the malfunction recurs.

Display Of M-MDS (Example)

Registered ID: 0xAAAAAAAA, 0xBBBBBBBB, 0xCCCCCCCC, and 0xDDDDDDDD (AAAAAAAA, BBBBBBBB, CCCCCCCC, and DDDDDDDD mean arbitrary numbers.)

Unregistered ID: 0x00000000

Tire pressure: aaa kPa, bbb kPa, ccc kPa, ddd kPa (aaa, bbb, ccc, and ddd mean measurement value.)

* The battery is removed, the stored tire pressure is reset to 0 kPa.

Three registered wheel units and a replaced wheel unit
When a replaced wheel unit malfunctions

02-10 GENERAL PROCEDURES

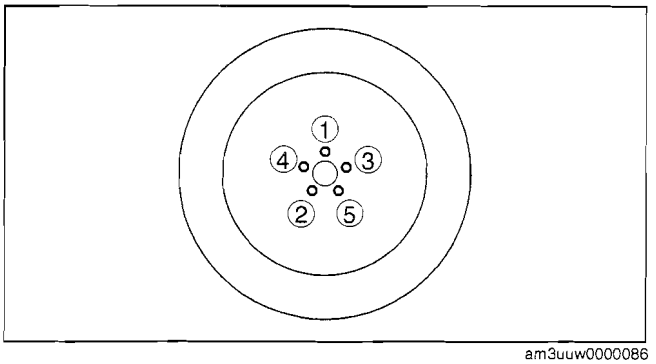
GENERAL PROCEDURES (SUSPENSION)

id021000800300

Wheel and Tire Installation

1. When installing the wheels and tires, tighten the wheel nuts in a criss-cross pattern to the following tightening torque.

   Tightening torque
   88.2—117.6 N·m {9.00—11.99 kgf·m, 65.06—86.73 ft·lbf}



am3uuw0000086

Suspension Links Removal/Installation

1. For the joint sections with rubber bushings, raise the vehicle using a lift, and then temporarily tighten the installation bolts and nuts. Lower the vehicle to the ground and tighten them completely with the specified torque.

Connector Disconnection

1. Disconnect the negative battery cable before performing any work that requires handling of connectors. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].) (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)

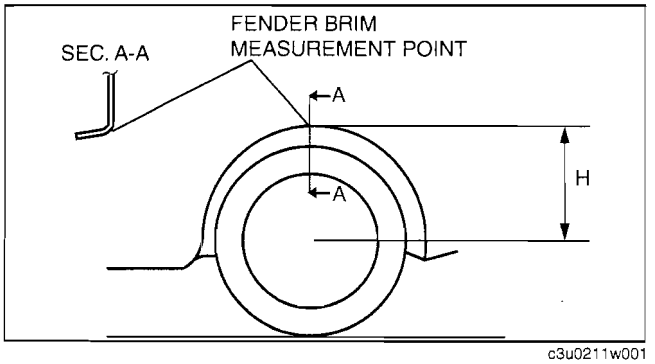
02-11 WHEEL ALIGNMENT

WHEEL ALIGNMENT PRE-INSPECTION

id021100800100

1. Park the vehicle on a level ground, in an unloaded condition*, and with the wheels straight forward.
   *: Unloaded condition.....Fuel tank is full. Engine coolant and engine oil are at specified level. Spare tire, jack and tools are in designated position.
2. Inspect the tire pressure.
   - Adjust to the recommended pressure if necessary. (See 02-50-1 SUSPENSION TECHNICAL DATA.)
3. Inspect the wheel bearing play.
   - Correct if necessary. (See 03-11-2 WHEEL HUB, STEERING KNUCKLE INSPECTION.) (See 03-12-2 WHEEL HUB COMPONENT INSPECTION.)
4. Inspect the wheel runout.
   - Correct if necessary. (See 02-50-1 SUSPENSION TECHNICAL DATA.)
5. Rock the vehicle, and verify that there is no looseness in the steering wheel joint and suspension ball joint.
6. Rock the vehicle, and verify that the shock absorber operates properly.
7. Measure height H from the center of the wheel to the fender brim.
8. Verify that the difference between the left and right dimension H is within the specification.
   - If it exceeds the specification, repeat the Step 2—7.

Standard
10 mm {0.39 in} or less



c3u0211w001

FRONT WHEEL ALIGNMENT

	Rim inner		1±3 {0.04±0.12}				
		(degree)	0°11′±0°22′				
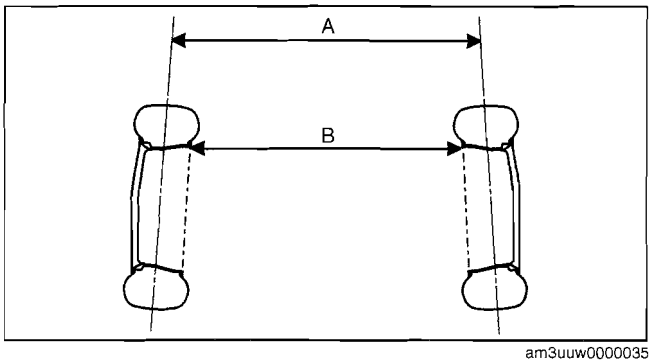
Caster angle*2 [Tolerance ±1°]			3°01′	3°02′	3°04′	3°06′	3°08′
Camber angle*2 [Tolerance ±1°]			−0°55′	−0°56′			−0°57′
Steering axis inclination (Reference value)			14°18′	14°20′			14°21′

*1 : Engine coolant and engine oil are at specified level. Spare tire, jack and tools are in designated position.
*2 : Difference between left and right must not exceed **1°30′**.

Note
Total toe-in measuring position
- Tire: A indicated in the figure (between the center of the tires)
- Rim inner: B indicated in the figure (between the inner side of the rims)

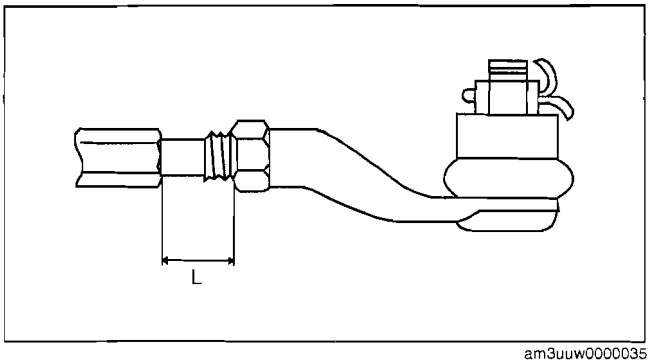


am3uuw0000035

Steering Angle Adjustment
1. Loosen the locknut of the tie-rod end.
2. Remove the rack boot clamp.
3. Rotate the tie rod and adjust the steering angle.

Note
- The travel distance of the right and left tie rods should be the same.

4. Rotate the tie rod and adjust so that the difference between right and left dimension L shown in the figure is less than the specification.



am3uuw0000035

Standard
3 mm {0.12 in} or less

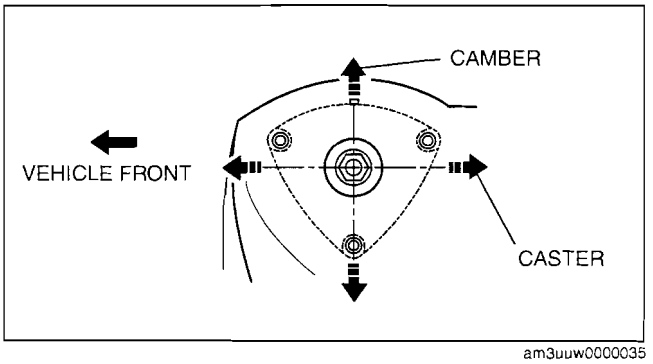
5. Tighten the locknut of the tie-rod end.

Tightening torque
78.6—108.0 N·m {8.02—11.01 kgf·m, 57.98—79.65 ft·lbf}

6. Correct the rack boot twists.
7. Install and fix the rack boot clamp.
8. After adjusting the steering angle, always inspect and adjust the toe angle.

Camber and Caster angle Adjustment

1. Remove the shock absorber upper nuts.
2. Move the shock absorber and coil spring to adjust the camber and caster angle.



am3uuw0000035

Note
- Moving the shock absorber and coil spring to the right or left side of the vehicle allows camber adjustment and forward and backward of the vehicle allows caster adjustment.
- Available camber adjustment range : ±10′
- Available caster adjustment range : ±10′

3. Install the shock absorber upper nuts.
4. Reinspect the alignment to make sure that it is within the specification.

Total Toe-in Adjustment

1. Loosen the locknut of the tie-rod end.
2. Remove the rack boot clamp.
3. Adjust the total toe-in by rotating each tie rod (left and right) in the opposite directions by the same amount respectively.

Note
- Toe angle changes by **approx. 6mm {0.2 in}** per one rotation of the tie rod for one wheel.
- Each tie rod has a right-hand thread. When increasing the toe-in angle, rotate the right tie rod toward the front of the vehicle and rotate the left tie rod toward the rear of the vehicle by the same amount.

4. Tighten the locknut of the tie-rod end.

Tightening torque
78.6—108.0 N·m {8.02—11.01 kgf·m, 57.98—79.65 ft·lbf}

5. Verify that the rack boot does not have any twisting and install the rack boot clamp.

REAR WHEEL ALIGNMENT

id021100800300

Rear wheel alignment [LF and L3] (Unloaded)*1

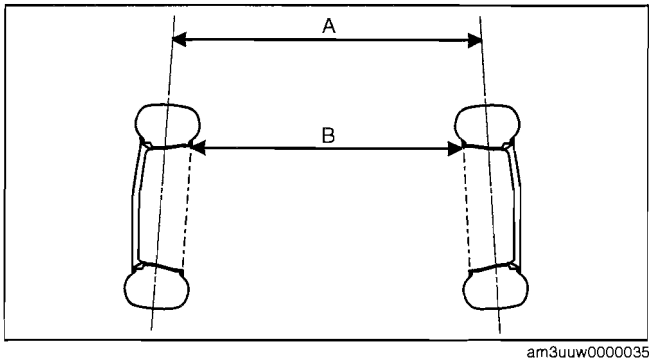
Item			Fuel gauge indication				
			Empty	1/4	1/2	3/4	Full
Total toe-in	Tire [Tolerance ±4 {±0.16}]	(mm {in})	2 {0.08}				
	Rim inner		1±3 {0.04±0.12}				
		(degree)	0°11′±0°22′				
Camber angle*2 (Reference value) [Tolerance ±1°]			−1°20′	−1°21′	−1°23′	−1°25′	−1°27′
Thrust angle (Reference value) [Tolerance ±0°48′]			0°				

Rear wheel alignment [L3 WITH TC] (Unloaded)*1

Item			Fuel gauge indication				
			Empty	1/4	1/2	3/4	Full
Total toe-in	Tire [Tolerance ±4 {±0.16}]	(mm {in})	2 {0.08}				
	Rim inner		1±3 {0.04±0.12}				
		(degree)	0°11′±0°22′				
Camber angle*2 (Reference value) [Tolerance ±1°]			−1°36′	−1°37′	−1°39′	−1°40′	−1°42′
Thrust angle (Reference value) [Tolerance ±0°48′]			0°				

*1 : Engine coolant and engine oil are at specified level. Spare tire, jack and tools are in designated position.
*2 : Difference between left and right must not exceed **1°30′**.

Note
Total toe-in measuring position
- Tire: A indicated in the figure (between the center of the tires)
- Rim inner: B indicated in the figure (between the inner side of the rims)



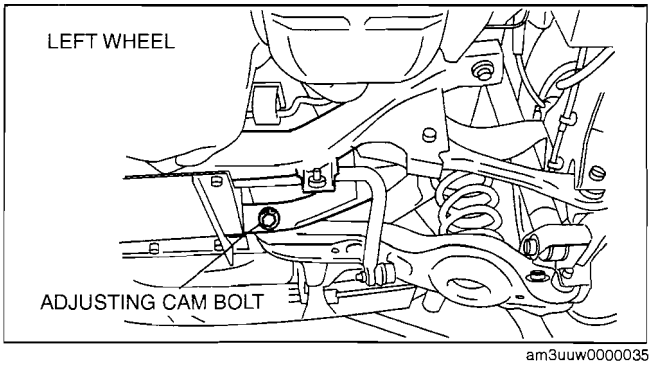
am3uuw0000035

Total Toe-in Adjustment
1. Loosen the installation nut of the adjusting cam bolt.
2. Rotate the adjusting cam bolt in either direction to adjust the camber.

	Left wheel	Right wheel
Toe-out direction	Clockwise	Counterclockwise
Toe-in direction	Counterclockwise	Clockwise

3. Tighten the nut.

Tightening torque
80.0—100.0 N·m {8.16—10.19 kgf·m, 59.01—73.75 ft·lbf}

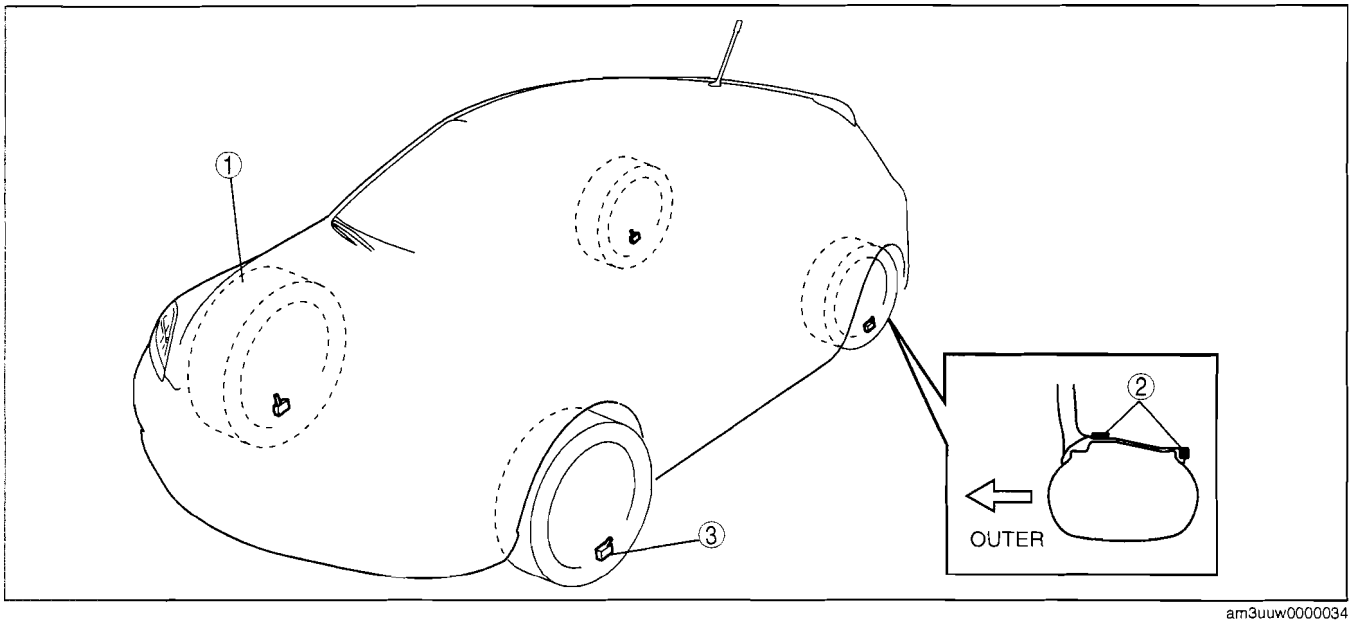


am3uuw0000035

02-12 WHEEL AND TIRES

WHEEL AND TIRES LOCATION INDEX

id021200801200



am3uuw0000034

1	Wheel and tire (See 02-12-2 WHEEL AND TIRE SPECIFICATION.) (See 02-12-4 TIRE PRESSURE ADJUSTMENT (WITH TPMS).)
2	Wheel balance weight (See 02-12-2 WHEEL BALANCE ADJUSTMENT (ALUMINUM ALLOY WHEEL).)
3	Wheel unit (See 02-12-5 WHEEL UNIT ID REGISTRATION.) (See 02-12-6 WHEEL UNIT REMOVAL/INSTALLATION.)

WHEEL AND TIRE SPECIFICATION

id021200800100

Wheel and tires

Item			Specification				
Standard tire and wheel							
Wheel	Size		15 ×6J		16 × 6 1/2J	17 × 6 1/2J	18 × 7J
	Offset	(mm {in})	52.5 {2.07}				
	Pitch circle diameter	(mm {in})	114.3 {4.50}				
	Material		Steel	Aluminum alloy			
Tire	Size		P195/65R15 89H		P205/55R16 89H	P205/50R17 88V	215/45R18 93Y
	Air pressure (kPa {psi})	Front	230 {34}		220 {32}	220 {32}	230 {34}
		Rear					220 {32}
	Remaining tread	(mm {in})	1.6 {0.06}				
Wheel and tire	Tightening torque	(N·m {kgf·m, ft·lbf})	88.2—117.6 {9.00—11.99, 65.06—86.73}				
	Wheel and tire runout (mm {in})	Radial direction	1.5 {0.06} max.				
		Lateral direction	2.5 {0.10} max.	2.0 {0.08} max.			
	Wheel imbalance	(g {oz})	Knock-type*2: 9 {0.32} max.	Adhesive-type*1: 14 {0.49} max. Knock-type*2: 9 {0.31} max.	Adhesive-type*1: 13 {0.46} max. Knock-type*2: 8 {0.28} max.	Adhesive-type*1: 11 {0.38} max. Knock-type*2: 7 {0.25} max.	Adhesive-type*1: 10 {0.35} max. Knock-type*2: 6 {0.21} max.
Temporary spare tire							
Wheel	Size		15× 4T		16× 4T		17× 4T
	Offset	(mm {in})	45 {1.8}				40 {1.6}
	Pitch circle diameter	(mm {in})	114.3 {4.50}				
	Material		Steel				
Tire	Size		T115/70 D15		T125/70 D16		T125/70 D16
	Air pressure	(kPa {psi})	420 {60}				
Wheel and tire	Wheel and tire runout (mm {in})	Radial direction	2.0 {0.08} max.				
		Lateral direction	2.5 {0.10} max.				
	Tightening torque	(N·m {kgf·m, ft·lbf})	88.2—117.6 {9.00—11.99, 65.06—86.73}				

*1 . Total weight exceeds **160 g {5.65 oz}**.
*2 . One balance weight: **60 g {2.12 oz}** max. If the total weight exceeds **100 g {3.53 oz}** on one side, rebalance after moving the tire around on the rim. Do not use three or more balance weights.

WHEEL BALANCE ADJUSTMENT (ALUMINUM ALLOY WHEEL)

id021200801100

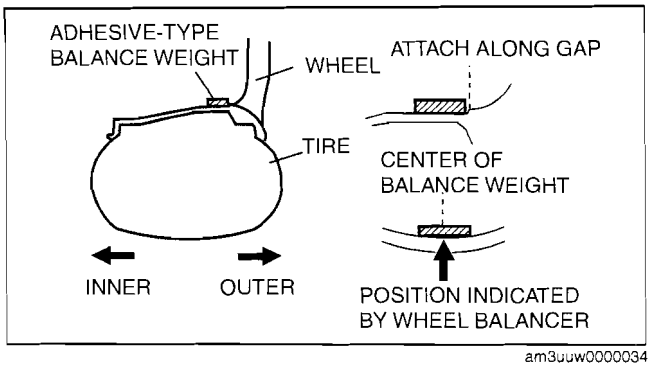
Caution
- **Adjust the outer wheel balance first, then the inner wheel balance.**
- **Be careful not to scratch the wheels.**

Adhesive-type Balance Weight (Outer)

1. Remove the old balance weight from the wheel.
2. Remove the double-sided adhesive tape remaining on the wheel, then clean and degrease the bonding area.
3. Set the wheel on a wheel balancer, measure the amount of unbalance and the position with the mode set for knock-type balance weight.
4. Multiply the amount of unbalance by **1.6** to obtain the balance weight value.

5. Select a balance weight closest to the weight value and attach the balance weight on the position (outer) indicated by the wheel balancer.

Example calculation of balance weight value
Indicated amount of unbalance: 23 g {0.81 oz}
23 g {0.81 oz}×1.6 = 36.8 g {1.30 oz}
Selected balance weight value: 35 g {1.24 oz}



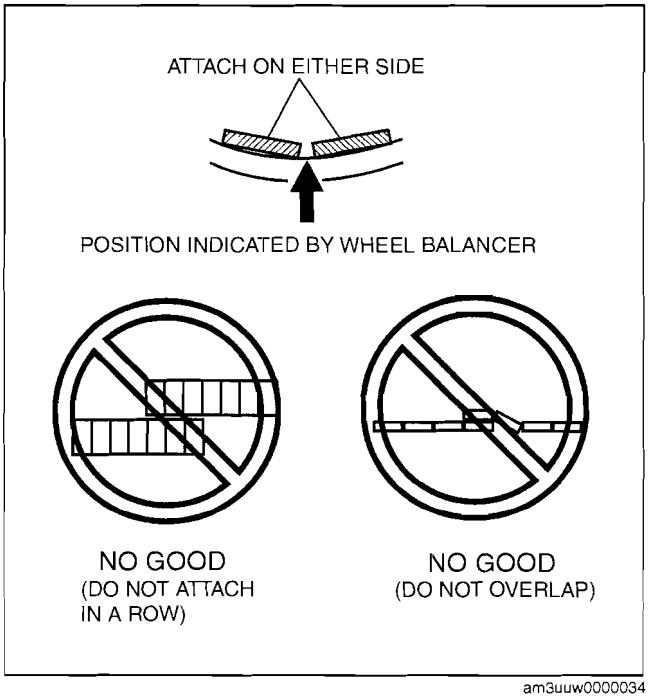
am3uuw0000034

Note
- When selecting a balance weight, select one closest to the calculated value.
  Example: **32.4 g {1.14 oz} = 30 g {1.06 oz}**

Caution
- **Use a genuine balance weight or equivalent (steel).**
- **When attaching the weight, press the weight with a force of 25 N {2.5 kgf, 5.5 lbf} per 5 g {0.2 oz} for 2 s or more.**

6. If attaching tow balance weights, position them so that each is on either side of the position indicated by the wheel balancer.

Caution
- **Do not attach weight balances in a row.**
- **Do not overlap the balance weights.**
- **Total weight must not exceed 160 g {5.65 oz}.**



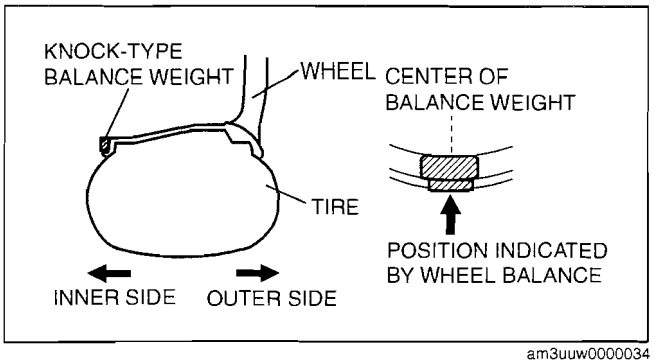
am3uuw0000034

Knock-type Balance Weight (Inner)

1. Measure the amount of unbalance with a wheel balancer.
2. Attach a weight corresponding to the measured weight value on the position (inner) indicated by the wheel balancer.

Caution

- **Do not attach three or more balance weights.**
- **One balance weight must not exceed 60 g {2.12 oz}, and a total of tow balance weights must not exceed 100 g {3.53 oz}.**



am3uuw0000034

Remaining Amount of Unbalance Confirmation

1. After installing the outer and inner balance weights, operate the wheel balancer again.
2. Confirm that the remaining unbalance does not exceed the following on either side.
   - If the remaining unbalance exceeds the specifications, adjust the wheel balance again.

Specifications

	Outer (Adhesive-type)	Inner (Knock-type)
15 inch wheel	14 g {0.49 oz}	9 g {0.31 oz}
16 inch wheel	13 g {0.46 oz}	8 g {0.28 oz}
17 inch wheel	11 g {0.38 oz}	7 g {0.25 oz}
18 inch wheel	10 g {0.35 oz}	6 g {0.21 oz}

TIRE PRESSURE ADJUSTMENT (WITH TPMS)

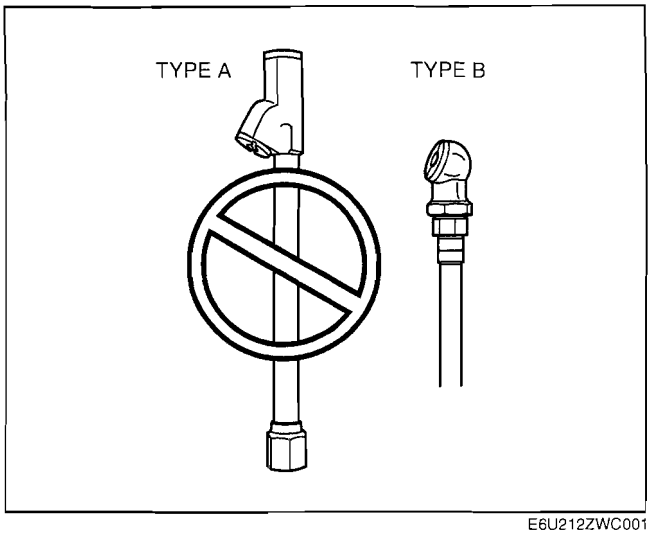
id021200800300

1. Use of a digital gauge is recommended for accurate measurement of the air pressure.
2. Tire pressure lowers gradually as time passes. Due to this, monthly air pressure inspection is recommended.
3. Perform tire pressure adjustment before driving. (When tires are cold.)
   - Tire pressure will increase after driving because the internal temperature of the tire is high. If tire pressure is adjusted to specifications when the internal temperature of the tire is high, tire pressure will decrease when the internal temperature of the tire decreases to the same level as ambient temperature. If the tire pressure is lower than the lower-limit pressure, the TPMS warning light may illuminate.
   - Even though the air pressure is adjusted to specifications, the indicated air pressure may be higher than the specified value when the internal temperature of the tire is higher than ambient temperature. (Example: Air pressure changes approx.**10 kPa {0.1 kgf/cm2, 1.5 psi}** when the temperature changes **10 degrees**)

Caution

- **In an area or a season with varying temperatures, tire pressure will change due to ambient temperature change. If the tire pressure is lower than the lower-limit pressure due to low ambient temperature, the TPMS warning light may illuminate. Adjust the pressure when the TPMS warning light illuminates.**
- **Do not tilt or use excessive side force when checking air pressure or inflating the tire with air. Which can provide enough leverage to easily bend or break the wheel unit.**

- **To prevent damage to the valve area of the wheel unit or pressure loss during air pressure adjustment, use a type B tool with a round end as shown in the figure, not a type A tool.**



E6U212ZWC001

WHEEL UNIT ID REGISTRATION

id021200800400

Note
- After the wheel unit replacement, registration of the wheel unit identification codes must be performed.
- ID registration can be done using the M-MDS, or not using the M-MDS.

Using M-MDS

1. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - This function is available for only the IDS (laptop PC).
     1. Select the "Body" tab.
     2. Select the "TPMS Functions".
     3. Select the "Wheel Unit ID Registration".
     4. Select the "WU_ID Registration".

Caution
- **If performing the procedure alone, never drive the vehicle while checking the M-MDS screen. When performing the ID registration, record each data on the screen before driving, and verify that the ID numbers have changed after driving.**

Note
- When the vehicle is driven, the four ID numbers in the bold cell of the chart change at the same time the ID registration finishes.

	WU 1	WU 2	WU 3	WU 4
ID Number (Stored)	0xAAAAAAAA	0xBBBBBBBB	0xCCCCCCCC	0xDDDDDDDD
ID Number (Candidate)	0x00000000	0x00000000	0x00000000	0x00000000
Tire Pressure (Stored)	aaaKPa	bbbKPa	cccKPa	dddKPa
Tire pressure (Candidate)	0KPa	0KPa	0KPa	0KPa

am5uuw0000043

2. Leave the vehicle with the engine off for **15 min or more**.
3. Verify that the TPMS warning light turns on and off in **0.5 s** cycles repeatedly.
4. Drive the vehicle at a speed of **25 km/h {15.5 mph} or more** for **10 min** to implement the wheel unit ID registration.

Note
- If the ID registration is not completed even after driving the vehicle for **10 min or more** at a speed of **25 km/h {15.5 mph} or more**, the TPMS warning light flashes.

5. Verify that the TPMS warning light turns off.

Note
- If the wheel unit ID registration cannot be performed after driving **10 min or more**, refer to the symptom troubleshooting procedure.

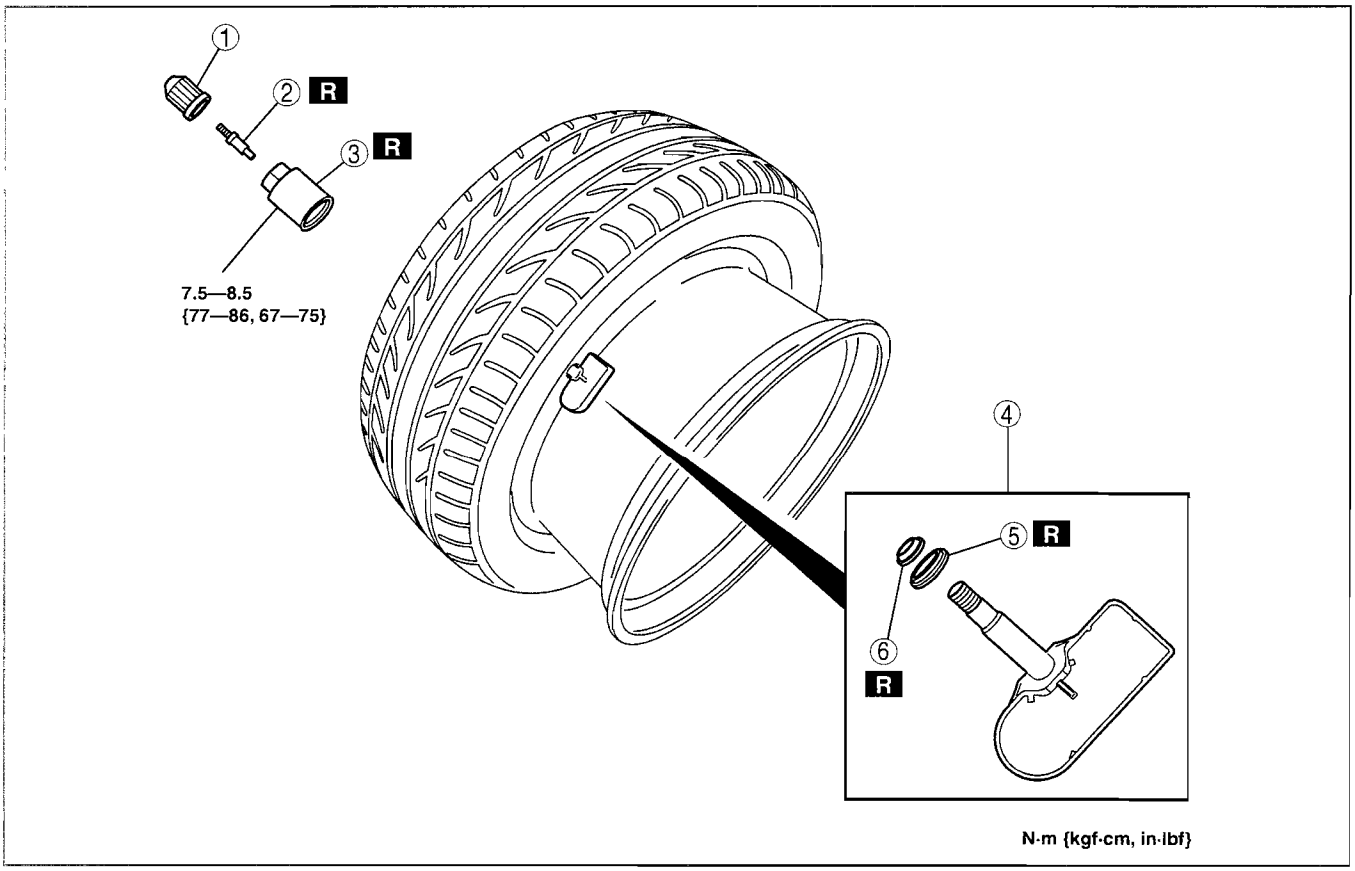
Without Using M-MDS
1. Turn the ignition switch to the ON position, then turn it off.
2. Leave the vehicle with the engine off for **15 min or more**.
3. Drive the vehicle at a speed of **25 km/h {15.5 mph} or more** for **10 min or more**.
4. After driving for **10 min**, verify that the TPMS warning light does not flash and is not illuminated.

WHEEL UNIT REMOVAL/INSTALLATION

id021200800600

1. Remove in the order indicated in the table.
2. Install in the reverse order of removal.
3. When replacing wheel unit (s), register the new wheel unit ID (s). (See 02-12-5 WHEEL UNIT ID REGISTRATION.)

Note
- If the wheel unit is replaced with a new one, the ID registration must be performed. When the ID registration is finished, the data for the new wheel unit is displayed on the M-MDS.



acxuuw00001040

1	Valve cap
2	Valve core (See 02-12-7 Valve Core Removal Note.)
3	Valve nut and washer

4	Wheel unit (See 02-12-7 Wheel Unit Removal Note.) (See 02-12-7 Wheel Unit Installation Note.)
5	Seal washer
6	Seal

Valve Core Removal Note

1. Remove the valve core of the wheel unit, and bleed the air from the tire.

Wheel Unit Removal Note

1. Push the tire valve completely into the tire.

Caution

- **Breaking the tire bead with the wheel unit installed normally could damage the unit. Be sure to always push the wheel unit so that it is completely inside the tire to prevent any damage.**

2. Position the shoe (bead breaker) of the tire changer **10—20 mm {0.40—0.78 in}** from the outer edge of the wheel, and break both tire beads.
3. Remove the bead from one side of the wheel.
4. Remove the wheel unit.

Wheel Unit Installation Note

1. Insert the wheel unit valve into the valve hole so that the polyurethane foam side faces the rim.

Note

- Maintain the wheel unit in contact with the rim, then start manually to screw the valve nut for a few turns.

2. Install the nut from the outer side of the wheel.
3. Tighten the valve nut slowly **(15 rpm max.)** to **8.0 N·m {82 kgf·cm, 71 in·lbf}** in one rotation.

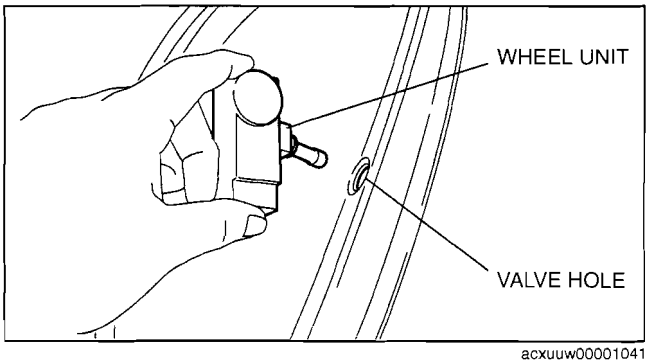
Caution

- **Do not retighten the valve nut after the initial operation.**

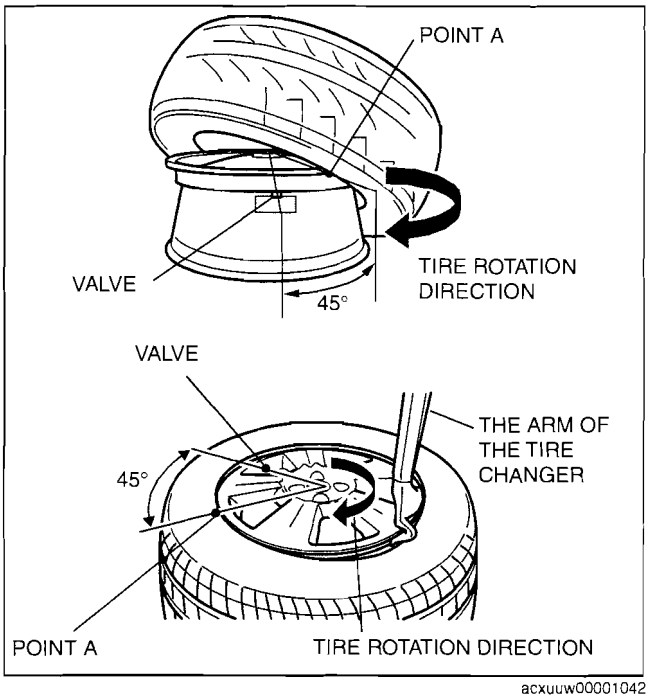
4. Set the tire changer so that it is **45°** away (point A) from the valve hole.

Caution

- **Do not position the tire changer near the tire valve to avoid any damage to the wheel unit.**



acxuuw00001041

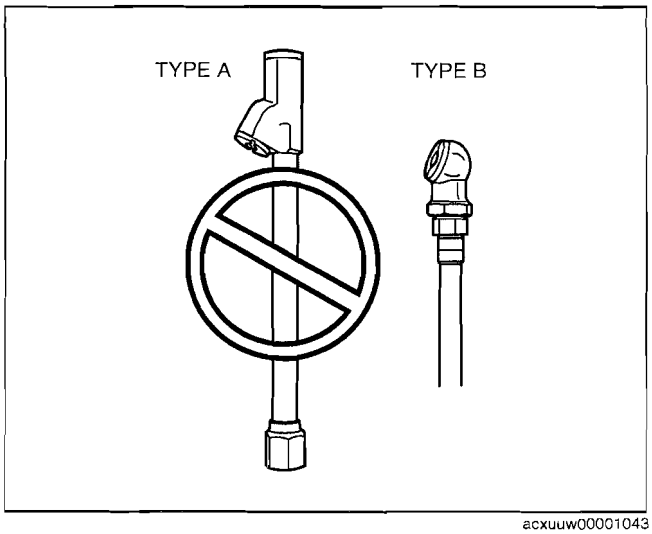


acxuuw00001042

5. Fill the tire with air and verify the valve nut tightening torque.

Caution

- **To prevent damage to the valve area of the wheel unit or charging loss during air pressure adjustment, use a type B tool with a round end as shown in the figure, not a type A tool.**

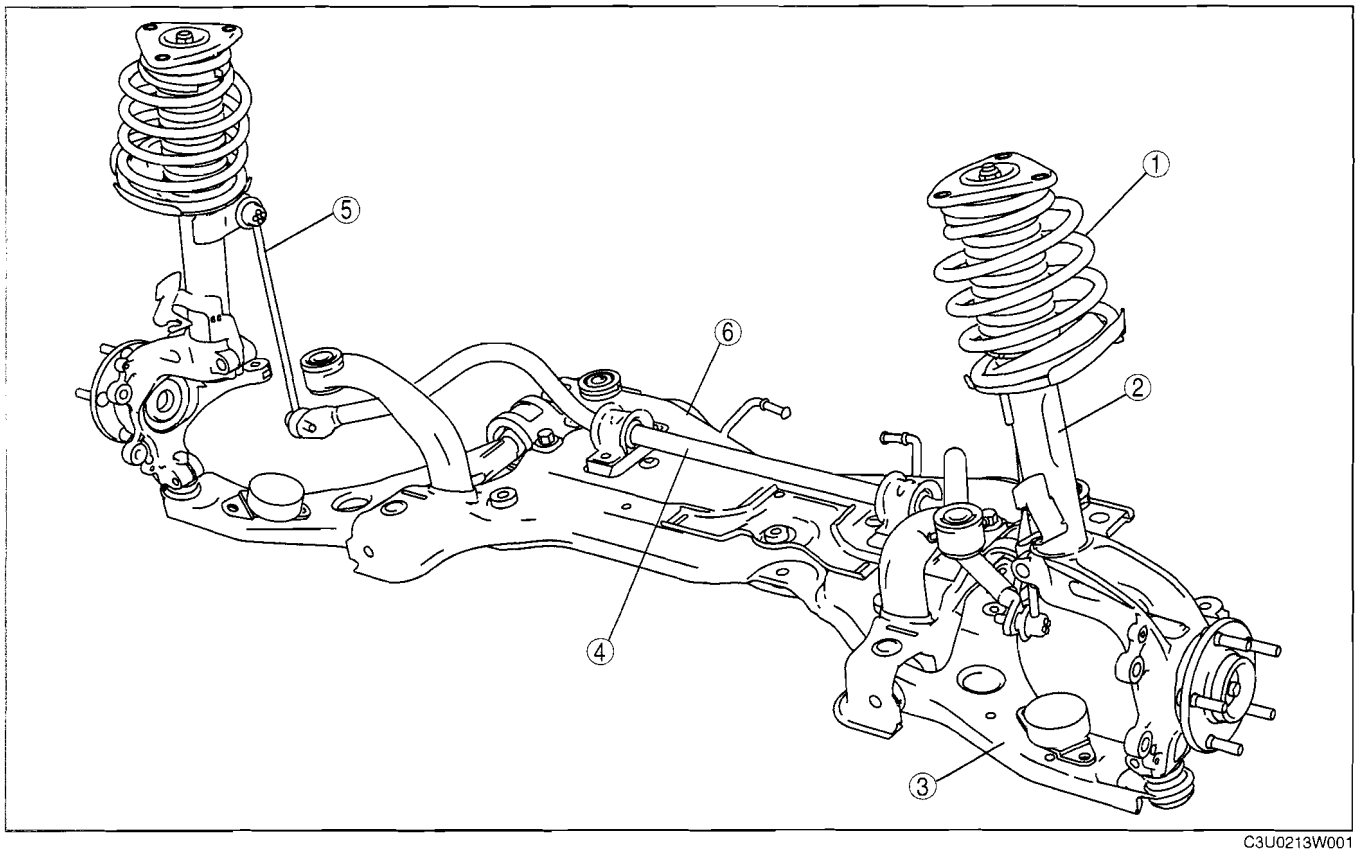


acxuuw00001043

02-13 FRONT SUSPENSION

FRONT SUSPENSION LOCATION INDEX

id021300800100



C3U0213W001

1	Front shock absorber and coil spring (See 02-13-3 FRONT SHOCK ABSORBER AND COIL SPRING REMOVAL/INSTALLATION.) (See 02-13-6 FRONT SHOCK ABSORBER AND COIL SPRING DISASSEMBLY/ASSEMBLY.)
2	Front shock absorber (See 02-13-8 FRONT SHOCK ABSORBER INSPECTION.) (See 02-13-8 FRONT SHOCK ABSORBER DISPOSAL.)
3	Front lower arm (See 02-13-9 FRONT LOWER ARM REMOVAL/INSTALLATION.) (See 02-13-10 FRONT LOWER ARM INSPECTION.)
4	Front stabilizer (See 02-13-11 FRONT STABILIZER REMOVAL/INSTALLATION.)
5	Stabilizer control link (See 02-13-14 STABILIZER CONTROL LINK INSPECTION.)
6	Front crossmember (See 02-13-14 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)

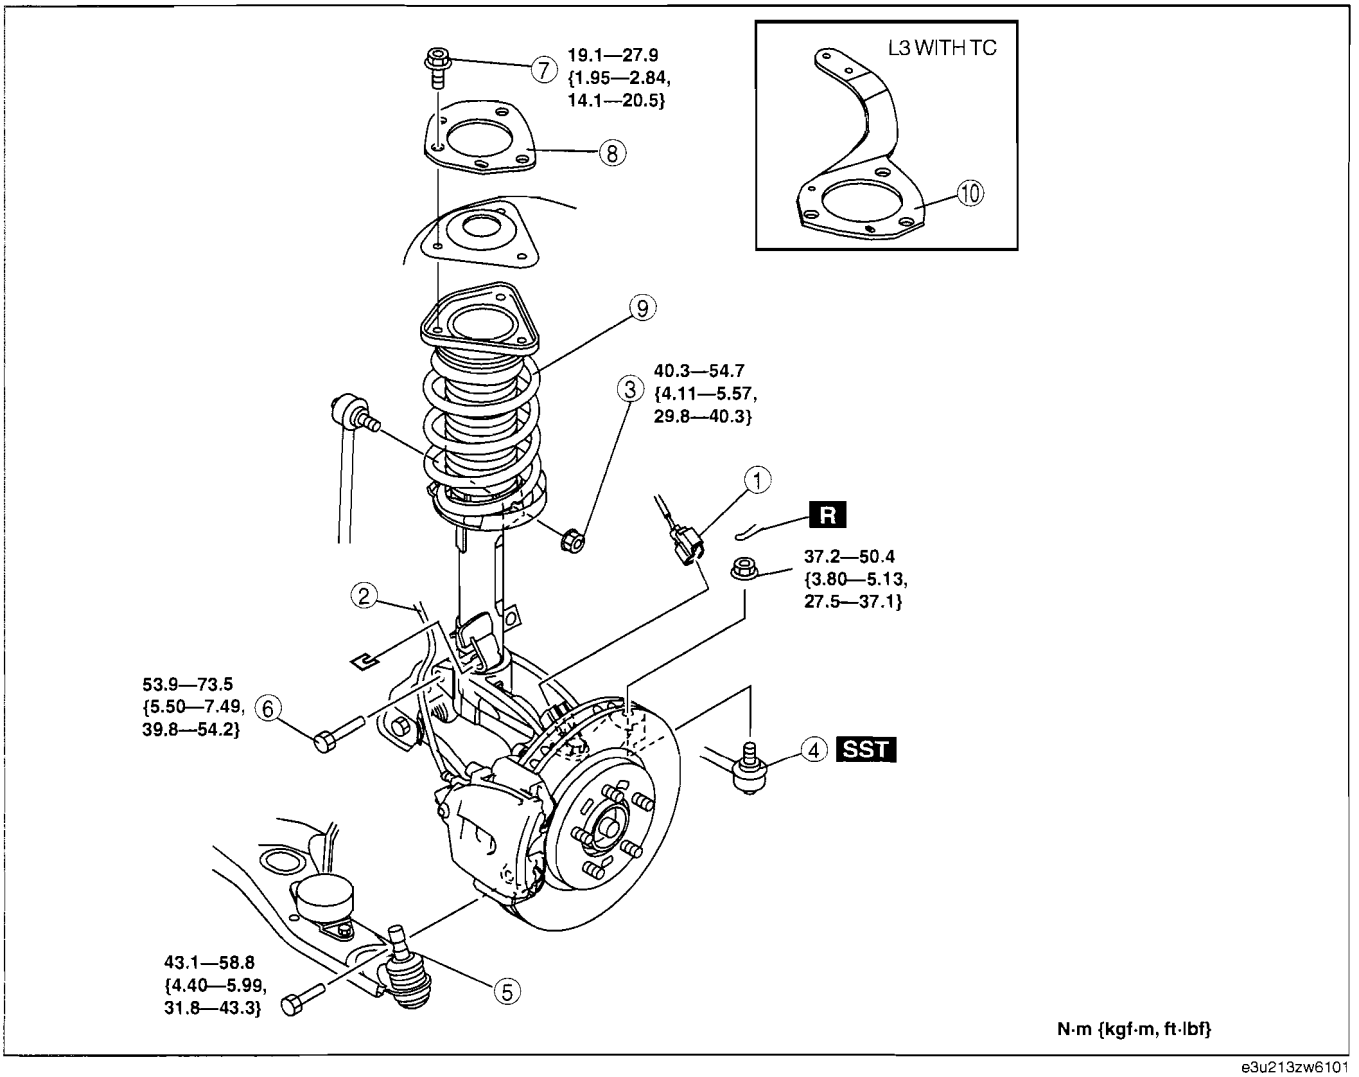
FRONT SHOCK ABSORBER AND COIL SPRING REMOVAL/INSTALLATION

id021300801400

Caution

- **Performing the following procedures without first removing the ABS wheel-speed sensor may possibly cause an open circuit in the wiring harness if it is pulled by mistake. Before performing the following procedures, disconnect the ABS wheel-speed sensor wiring harness connector (axle side) and fix the wiring harness to an appropriate place where it will not be pulled by mistake while servicing the vehicle.**

1. Remove in the order indicated in the table.
2. Install in the reverse order of removal.
3. Inspect the total wheel alignment if necessary. (See 02-11-2 FRONT WHEEL ALIGNMENT.)



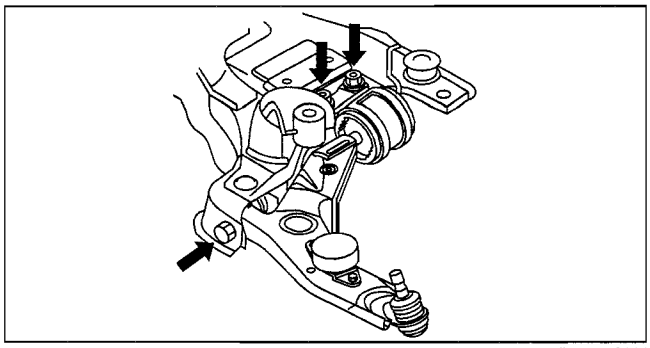
e3u213zw6101

1	ABS wheel-speed sensor wiring harness connector
2	Brake hose
3	Stabilizer control link upper nut
4	Tie-rod end ball joint (See 02-13-14 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
5	Front lower arm ball joint (See 02-13-4 Front Lower Arm Ball Joint Removal Note.) (See 02-13-5 Front Lower Arm Ball Joint Installation Note.)
6	Shock absorber lower bolt

7	Shock absorber upper bolt
8	Stiffener (See 02-13-5 Stiffener Installation Note.)
9	Shock absorber and coil spring (See 02-13-4 Shock Absorber and Coil Spring Removal Note.) (See 02-13-4 Shock Absorber and Coil Spring Installation Note.)
10	Strut plate (L3 with TC)

Front Lower Arm Ball Joint Removal Note

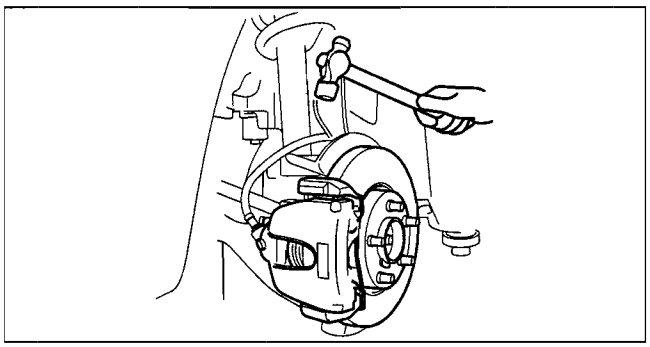
1. Loosen the installation bolt on the inner side of the front lower arm.
2. Separate the lower arm ball joint.



aaxjjw00002114

Shock Absorber and Coil Spring Removal Note

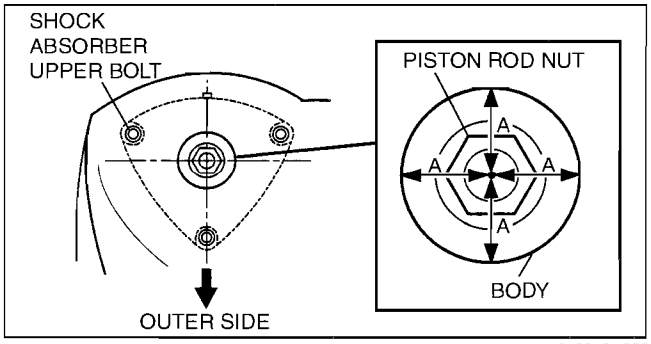
1. Loosen the front lower arm inner bolt.
2. Separate the front lower arm ball joint.
3. Separate the shock absorber from the wheel hub, steering knuckle component by tapping the upper part of the steering knuckle with a hammer.



am3uuw0000041

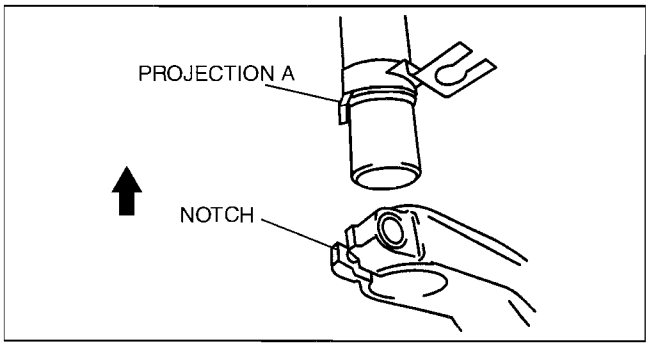
Shock Absorber and Coil Spring Installation Note

1. Align the piston rod nut with the center of the part where the shock absorber is installed by positioning the piston rod nut with lengths A all the same, and tighten the shock absorber upper bolts.
2. Align the knuckle notch with projection A on the lower side of the shock absorber.



c3u0213w006

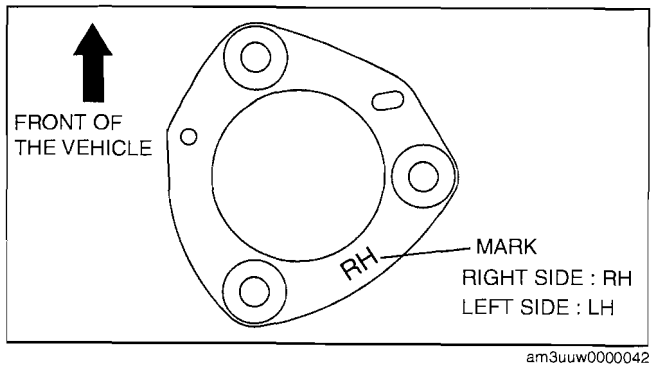
3. Raise the front lower arm using a jack and install the shock absorber and coil spring.



am3uuw0000041

Stiffener Installation Note

1. Install the stiffener so that the mark (RH or LH) faces upward.



am3uuw0000042

Front Lower Arm Ball Joint Installation Note

1. Tighten the installation bolts.

Tightening torque

- **Front side: 130.0—150.0 N·m {13.26—15.29 kgf·m, 95.9—110.5 ft·lbf}**
- **Rear side: 75.5—102.0 N·m {7.70—10.4 kgf·m, 55.7—75.2 ft·lbf}**

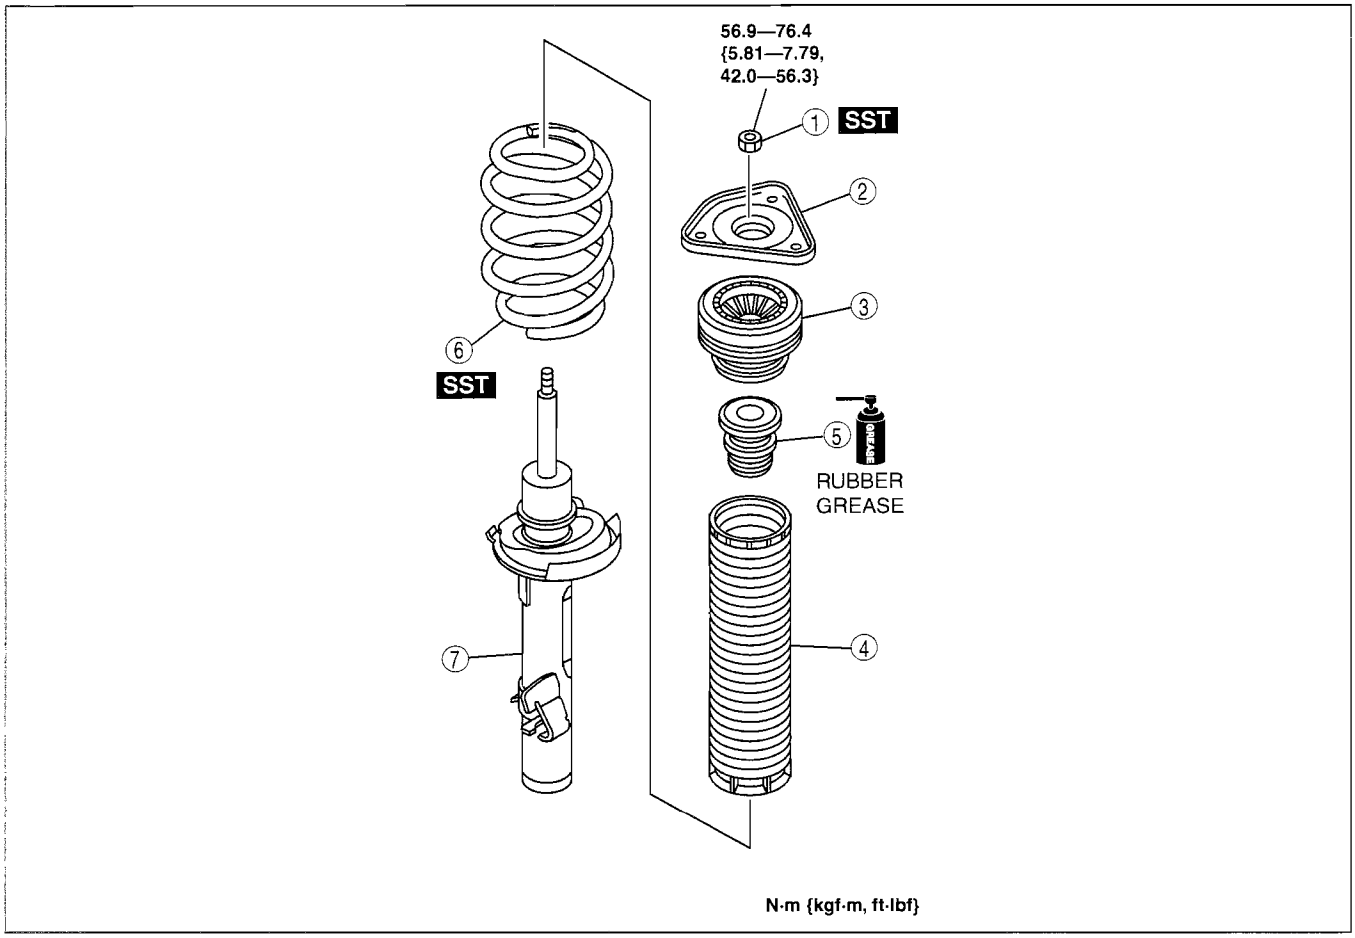
FRONT SHOCK ABSORBER AND COIL SPRING DISASSEMBLY/ASSEMBLY

id021300801300

Warning

- **Removing/installing the shock absorber and coil spring is dangerous. The shock absorber and coil spring could fly off and cause serious injury or death, and damage the vehicle.**

1. Remove the front shock absorber and coil spring. (See 02-13-3 FRONT SHOCK ABSORBER AND COIL SPRING REMOVAL/INSTALLATION.)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.



e3u213zw6102

1	Piston rod nut (See 02-13-7 Piston Rod Nut Removal Note.)
2	Mounting rubber
3	Bearing (See 02-13-8 Bearing Installation Note.)

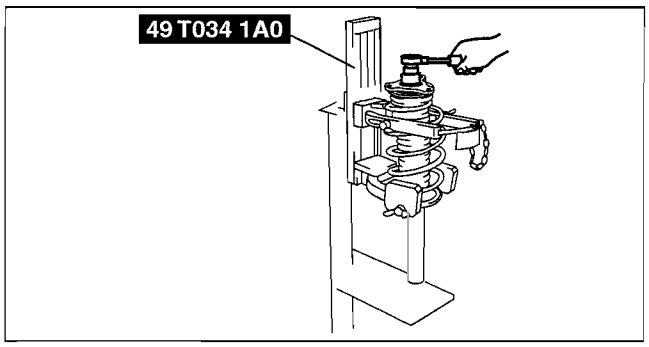
4	Dust boot (See 02-13-7 Dust Boot Installation Note.)
5	Bound stopper
6	Coil spring (See 02-13-7 Coil Spring Installation Note.)
7	Front shock absorber

Piston Rod Nut Removal Note

Warning

- **Before removing the piston rod nut, secure the shock absorber and coil spring in the SSTs. Otherwise, the coil spring could fly off under tremendous pressure and cause serious injury or death, or damage to vehicle parts.**

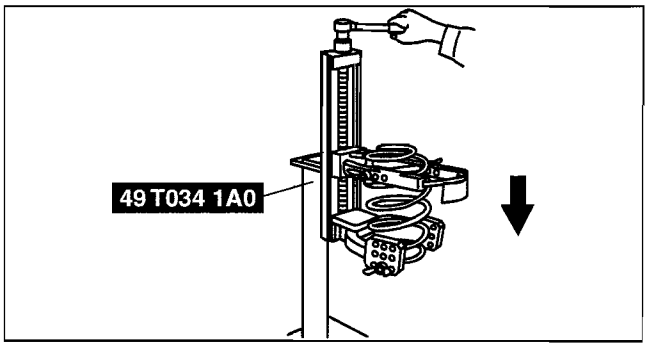
1. Install the shock absorber and coil spring to the **SSTs** using a piece of cloth in order to prevent the coil spring from being scratched.
2. Compress the coil spring using the **SSTs** and remove the piston rod nut.



am3uuw0000087

Coil Spring Installation Note

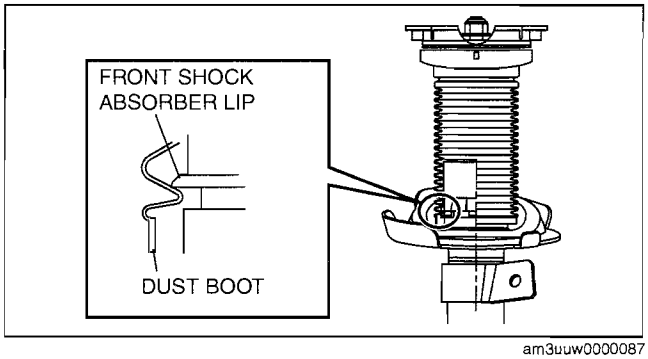
1. Compress the coil spring using the **SSTs**.
2. Install the shock absorber so that the lower end of the coil spring is seated on the step of the lower spring seat.



am3uuw0000087

Dust Boot Installation Note

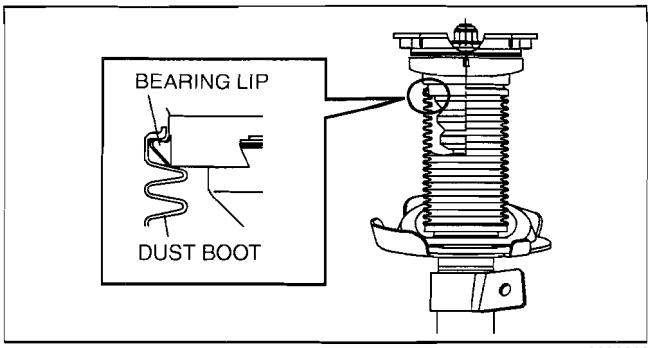
1. Install the dust boot by hooking the bottom edge over the shock absorber lip.



am3uuw0000087

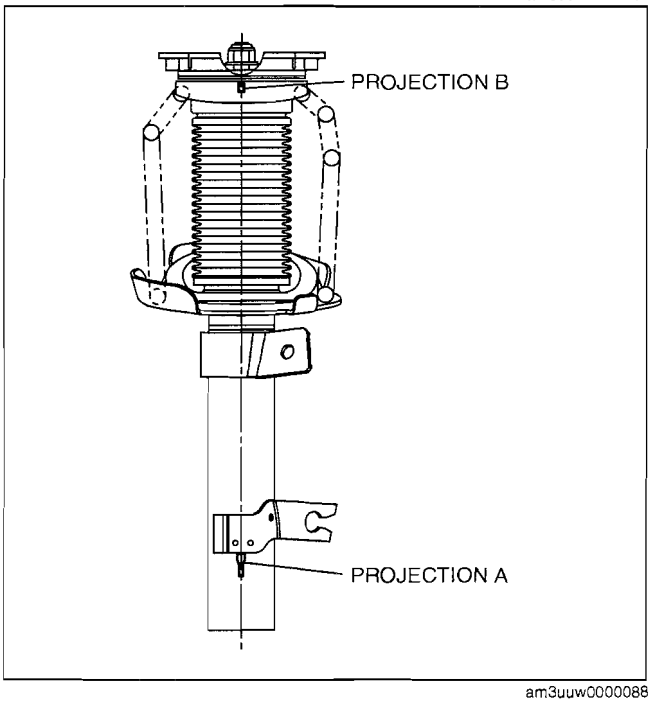
Bearing Installation Note

1. Install the bearing by hooking the upper end of the dust boot to the bearing lip.



am3uuw0000088

2. Align the projection A on the lower part of the shock absorber with the bearing projection B.



am3uuw0000088

FRONT SHOCK ABSORBER INSPECTION

id021300800800

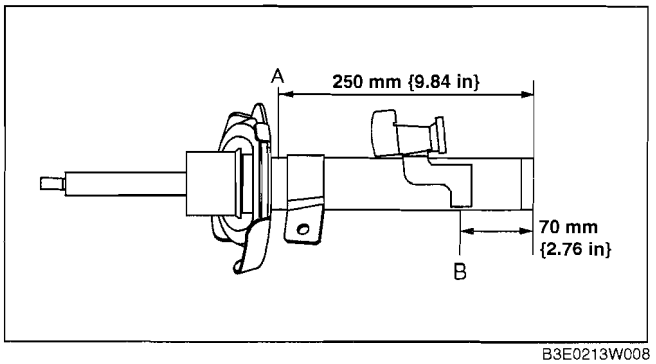
1. Remove the front shock absorber.
2. Inspect for damage and oil leakage.
3. Compress and extend the shock absorber piston rod **at least three times** at a steady rate. **From the fourth** compression stroke, verify that the operational force does not change and that there is no unusual noise.
   - If there is any malfunction, replace the shock absorber.

FRONT SHOCK ABSORBER DISPOSAL

id021300800900

1. Place the shock absorber on a level surface or with the piston pointing downwards.
2. Drill a **2—3 mm {0.08—0.11 in}** hole at the point A shown in the figure so that the gas can escape.

   Warning
   - **Whenever drilling into a shock absorber, wear protective eye wear. The gas in the shock absorber is pressurized and could spray metal chips into the eyes and face.**



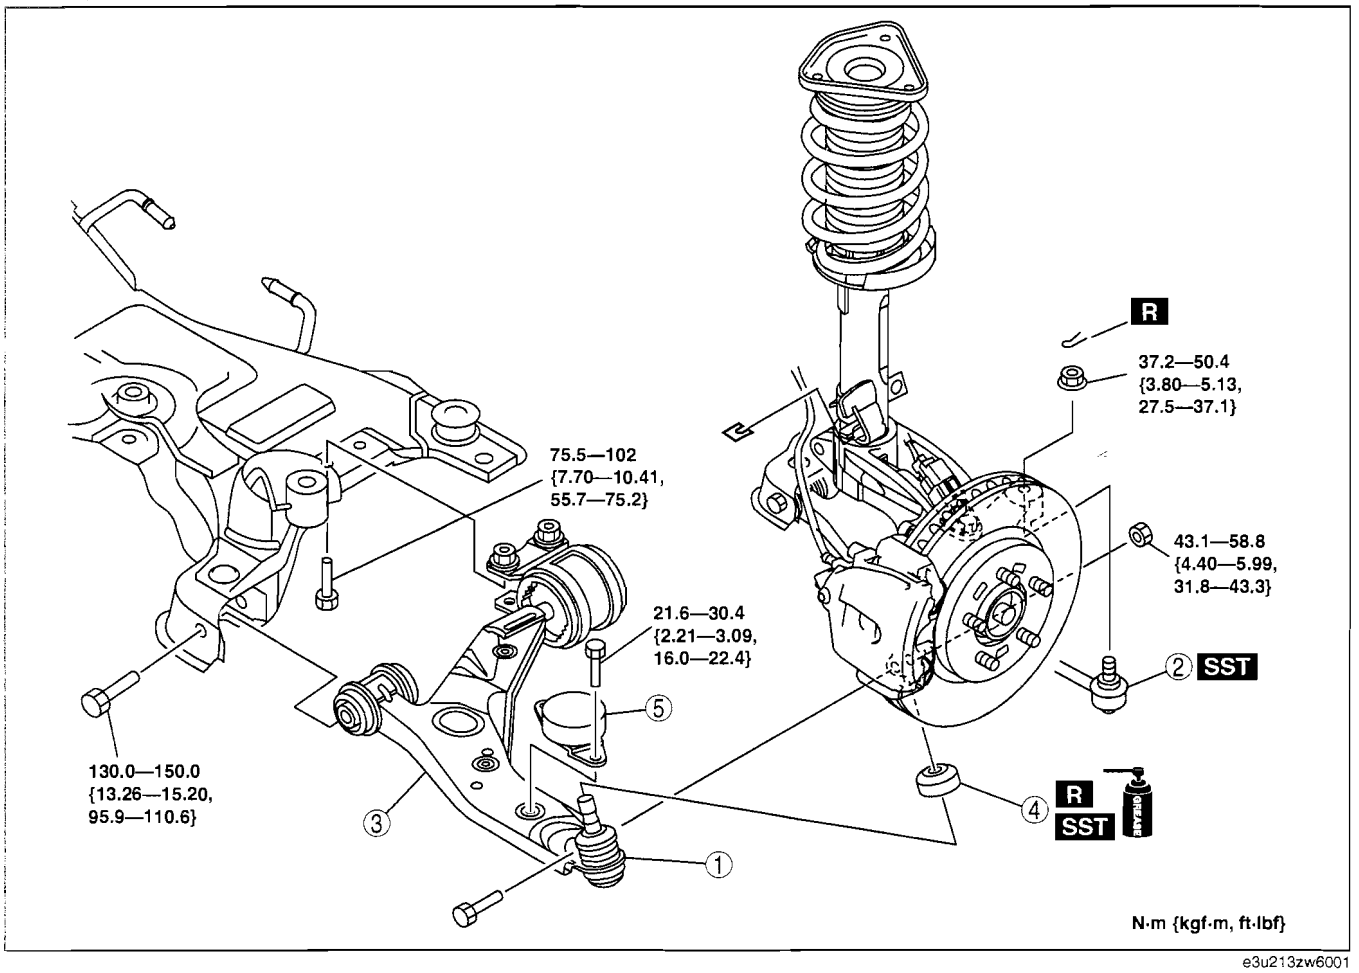
B3E0213W008

3. Drill a **2—3 mm {0.08—0.11 in}** hole at the point B shown in the figure to drain the oil.
4. Turn the hole made in Step 3 downwards and drain the oil by pumping the piston rod up and down several times.
5. Cut off the end of the shock absorber.
6. Dispose of waste oil according to local waste disposal laws.

FRONT LOWER ARM REMOVAL/INSTALLATION

id021300800600

1. Remove in the order indicated in the table.
2. Install in the reverse order of removal.
3. Inspect the wheel alignment and adjust it if necessary. (See 02-11-2 FRONT WHEEL ALIGNMENT.)



e3u213zw6001

1	Front lower arm ball joint
2	Tie-rod end ball joint (See 02-13-14 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)

3	Front lower arm (See 02-13-9 Front Lower Arm Removal Note.) (See 02-13-10 Front Lower Arm Installation Note.)
4	Dust boot (See 02-13-10 Dust Boot Installation Note.)
5	Dynamic damper

Front Lower Arm Removal Note

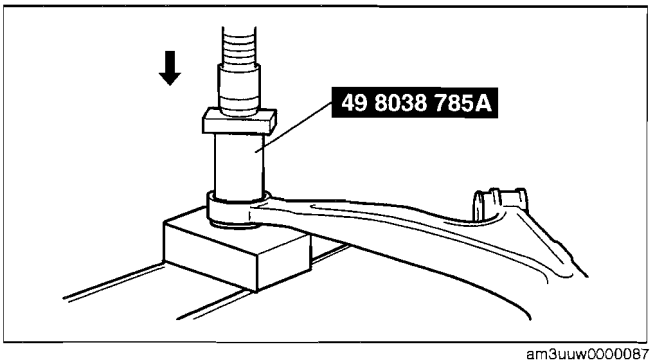
Note

- When working on the right side of vehicles, move the engine and transaxle slightly towards the front side of the vehicle so that the engine does not interfere with the removal of the lower arm rear side bolt.

1. Remove the No.1 engine mount center bolt.
2. Move the engine and transaxle slightly towards the front side of the vehicle.
3. Remove the front lower arm rear side bolt.
4. Remove the front lower arm.

Dust Boot Installation Note

1. Wipe the grease off the ball stud.
2. Fill the inside of the new dust boot with grease.
3. Press the boot onto the ball joint using the **SST**.
4. Wipe away the excess grease.



am3uuw0000087

Front Lower Arm Installation Note

Caution

- **Install the front lower arm according to the following procedures for optimal installation. Tighten the lower arm installation bolt properly when the vehicle is lifted.**

1. Temporarily install the front lower arm.
2. Install the No.1 engine mount.

Tightening torque
93.1—116.6 N·m {9.50—11.88 kgf·m, 68.67—85.99 ft·lbf}

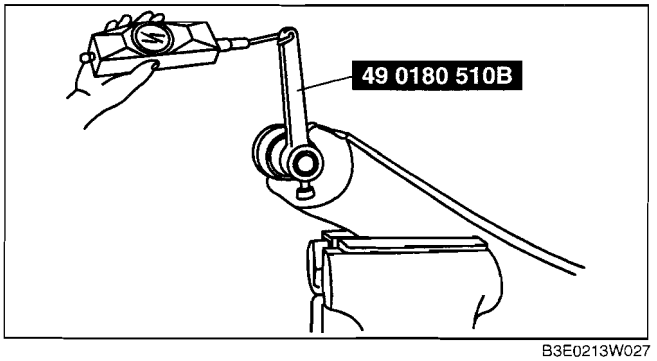
3. Tighten the front lower arm rear side bolt.
4. Tighten the front lower arm front side bolt.
5. Tighten the nut (front lower arm ball joint).

FRONT LOWER ARM INSPECTION

id021300800700

1. Remove the lower arm from the vehicle.
2. Inspect the arm for bending or damage, and the ball joint for excessive looseness.
   - If there is any malfunction, replace the lower arm.
3. Rotate the ball joint stud **5 times**. Install the **SST** to the ball joint stud, measure the rotational torque using a pull scale.
   - If not within the specification, replace the lower arm.

Rotational torque
1.0—4.9 N·m {11—49 kgf·cm, 9—43 in·lbf}
Pull scale reading [10—49 N {1.1—4.9 kgf, 3—10 lbf}]

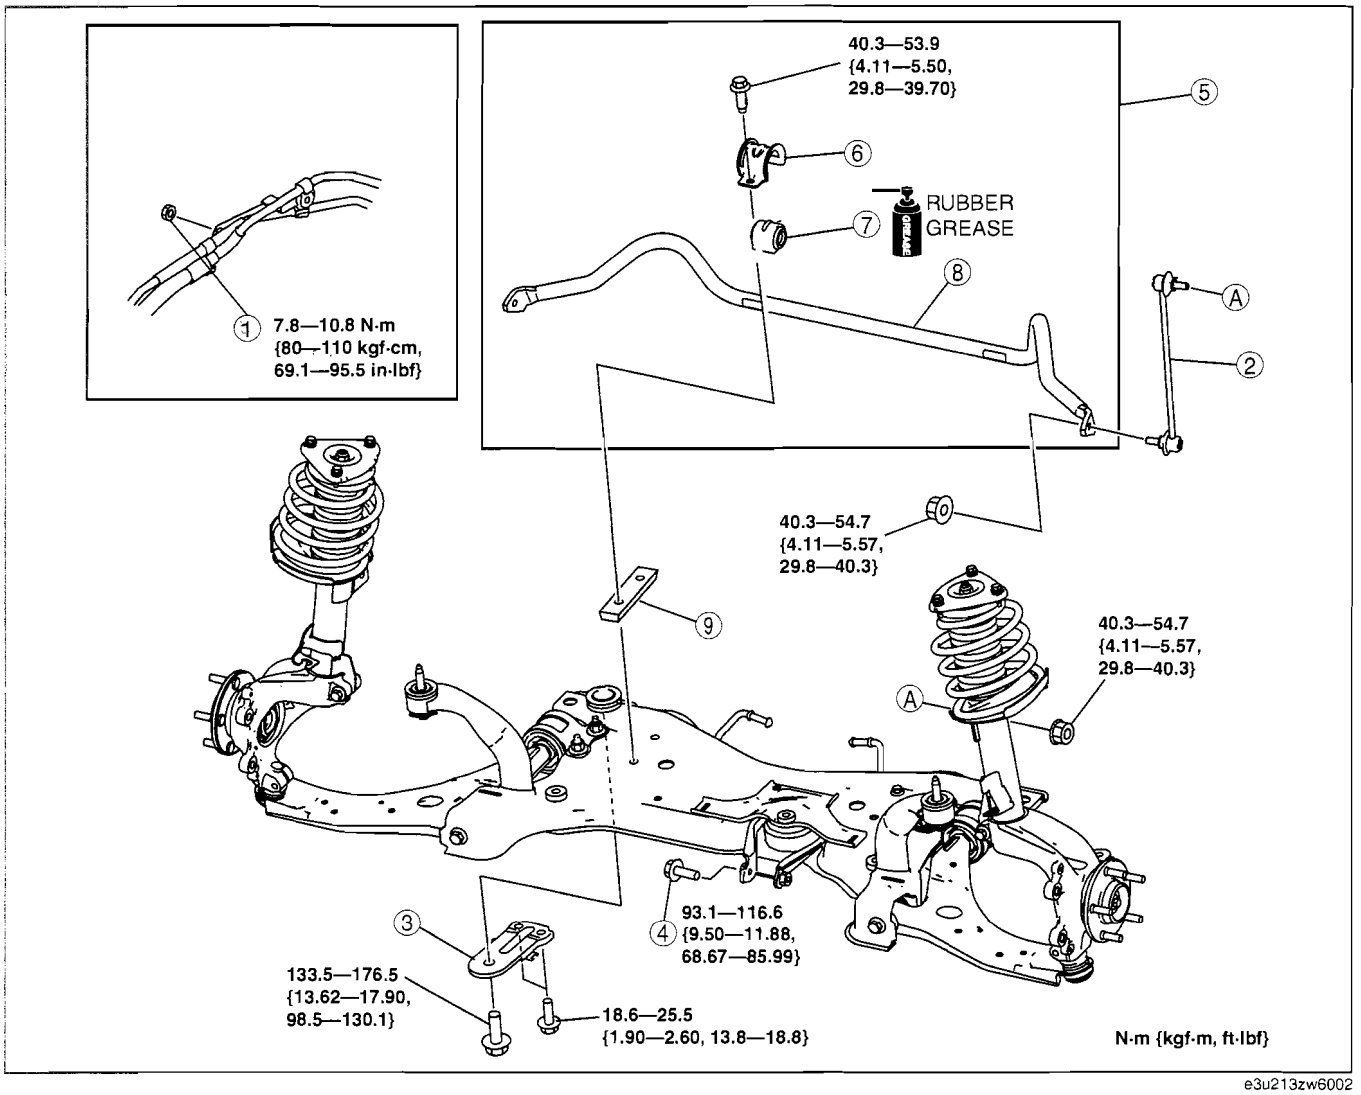


B3E0213W027

FRONT STABILIZER REMOVAL/INSTALLATION

id021300800400

1. Detach the steering shaft from the steering gear and linkage. (See 06-14-8 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.
4. Inspect the wheel alignment and adjust it if necessary. (See 02-11-2 FRONT WHEEL ALIGNMENT.)



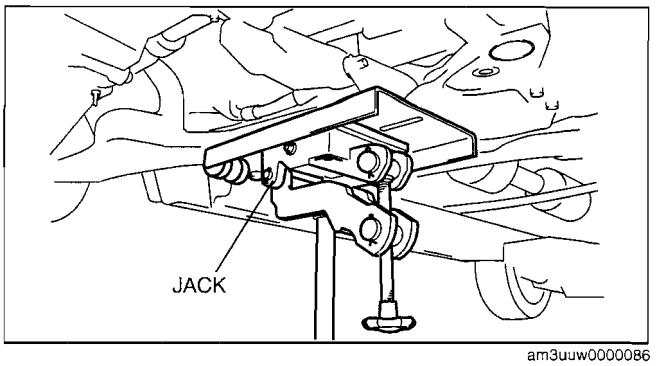
e3u213zw6002

1	Power steering pipe bracket
2	Stabilizer control link
3	Front crossmember bracket (See 02-13-12 Front Crossmember Bracket Removal Note.)
4	No.1 engine mount center bolt
5	Front stabilizer component (See 02-13-12 Front Stabilizer Component Removal Note.) (See 02-13-14 Front Stabilizer Component Installation Note.)

6	Stabilizer bracket (See 02-13-12 Stabilizer Bracket Removal Note.) (See 02-13-13 Stabilizer Bracket Installation Note.)
7	Stabilizer bushing (See 02-13-13 Stabilizer Bushing Installation Note.)
8	Front stabilizer
9	Stabilizer plate

Front Crossmember Bracket Removal Note

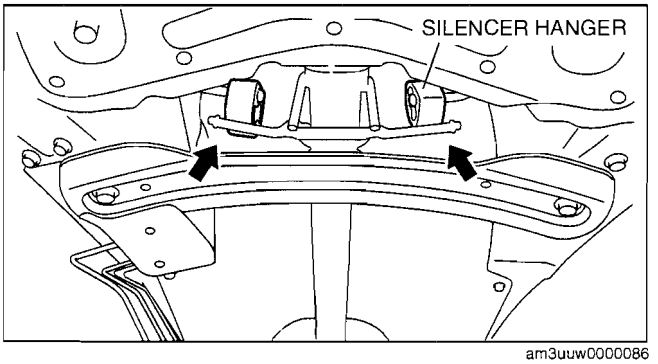
1. Support the front crossmember using a jack.
2. Remove the front crossmember brackets.



am3uuw0000086

Front Stabilizer Component Removal Note

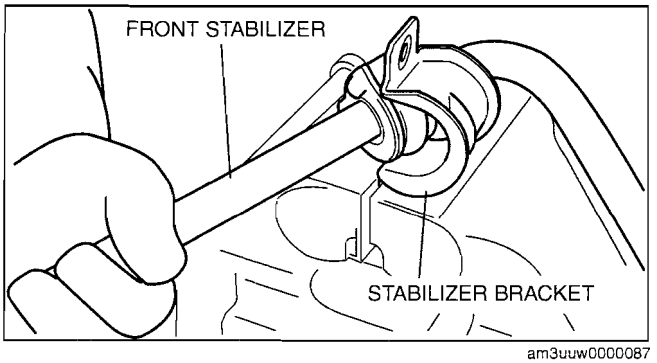
1. Detach the silencer hangers on the middle pipe from the front crossmember.
2. Lower the front crossmember slowly **approx. 90 mm {3.5 in}** and remove the front stabilizer component.



am3uuw0000086

Stabilizer Bracket Removal Note

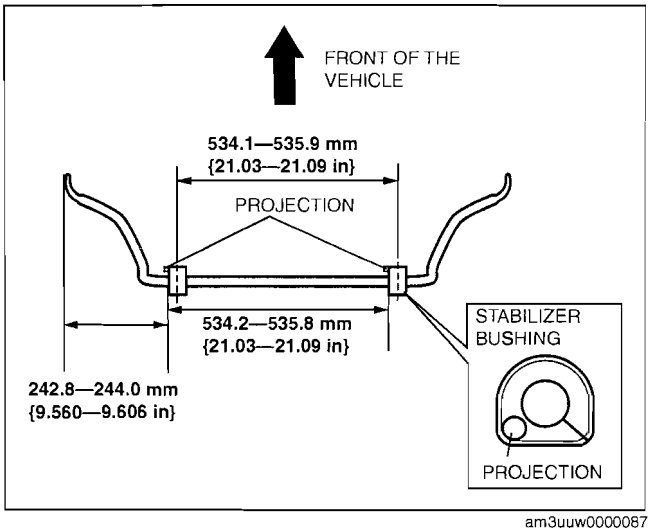
1. Secure the stabilizer bracket flange using a vise.
2. Remove the front stabilizer.



am3uuw0000087

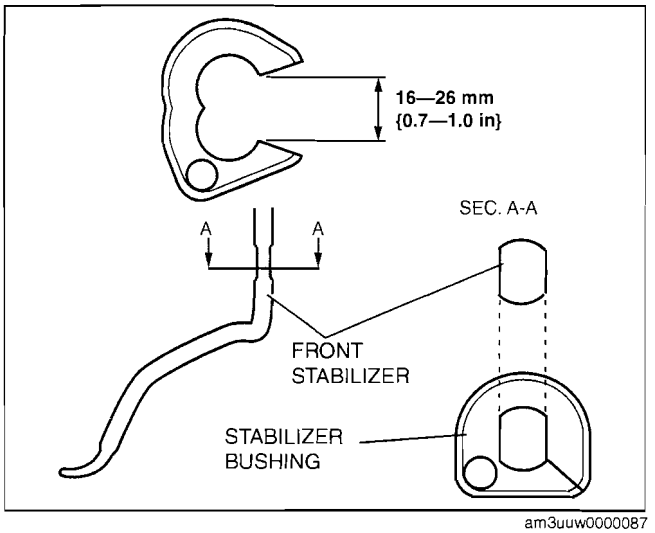
Stabilizer Bushing Installation Note

1. Verify the installation direction of the stabilizer bushing.



am3uuw0000087

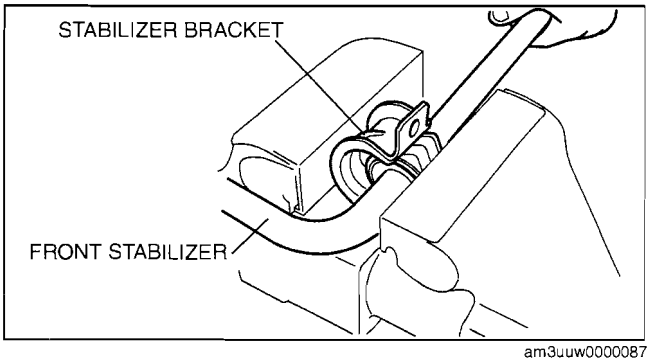
2. Widen the stabilizer bushing opening **16—26 mm {0.7—1.0 in}** and install the bushing to the front stabilizer as shown in the figure.



am3uuw0000087

Stabilizer Bracket Installation Note

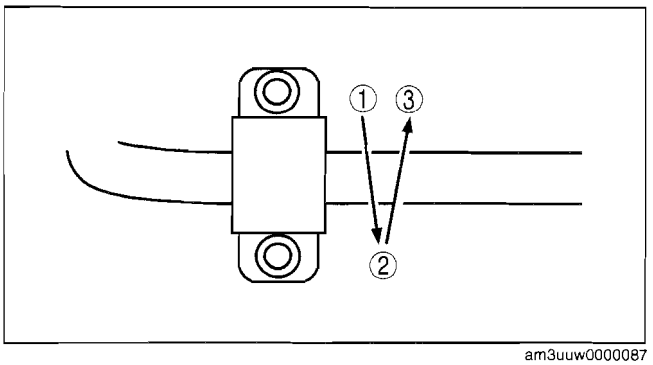
1. Apply grease to the stabilizer bushing.
2. Install the stabilizer bracket using a vise.



am3uuw0000087

Front Stabilizer Component Installation Note

1. Tighten the bolts in order indicated in the figure.



am3uuw0000087

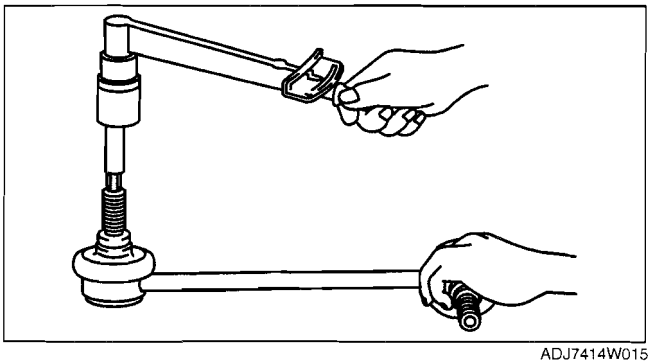
STABILIZER CONTROL LINK INSPECTION

id021300800500

1. Remove the stabilizer control link from the vehicle.
2. Inspect for bending or damage. If there is any malfunction, replace the stabilizer control link.
3. Rotate the ball joint stud **10 times** and shake it side to side **10 times**.
4. Measure the ball-joint rotational torque using an Allen wrench and a torque wrench.

Stabilizer control link ball joint rotational torque
0.2—0.9 N·m {3—9 kgf·cm, 2—7 in·lbf}

- If not within the specification, replace the stabilizer control link.



ADJ7414W015

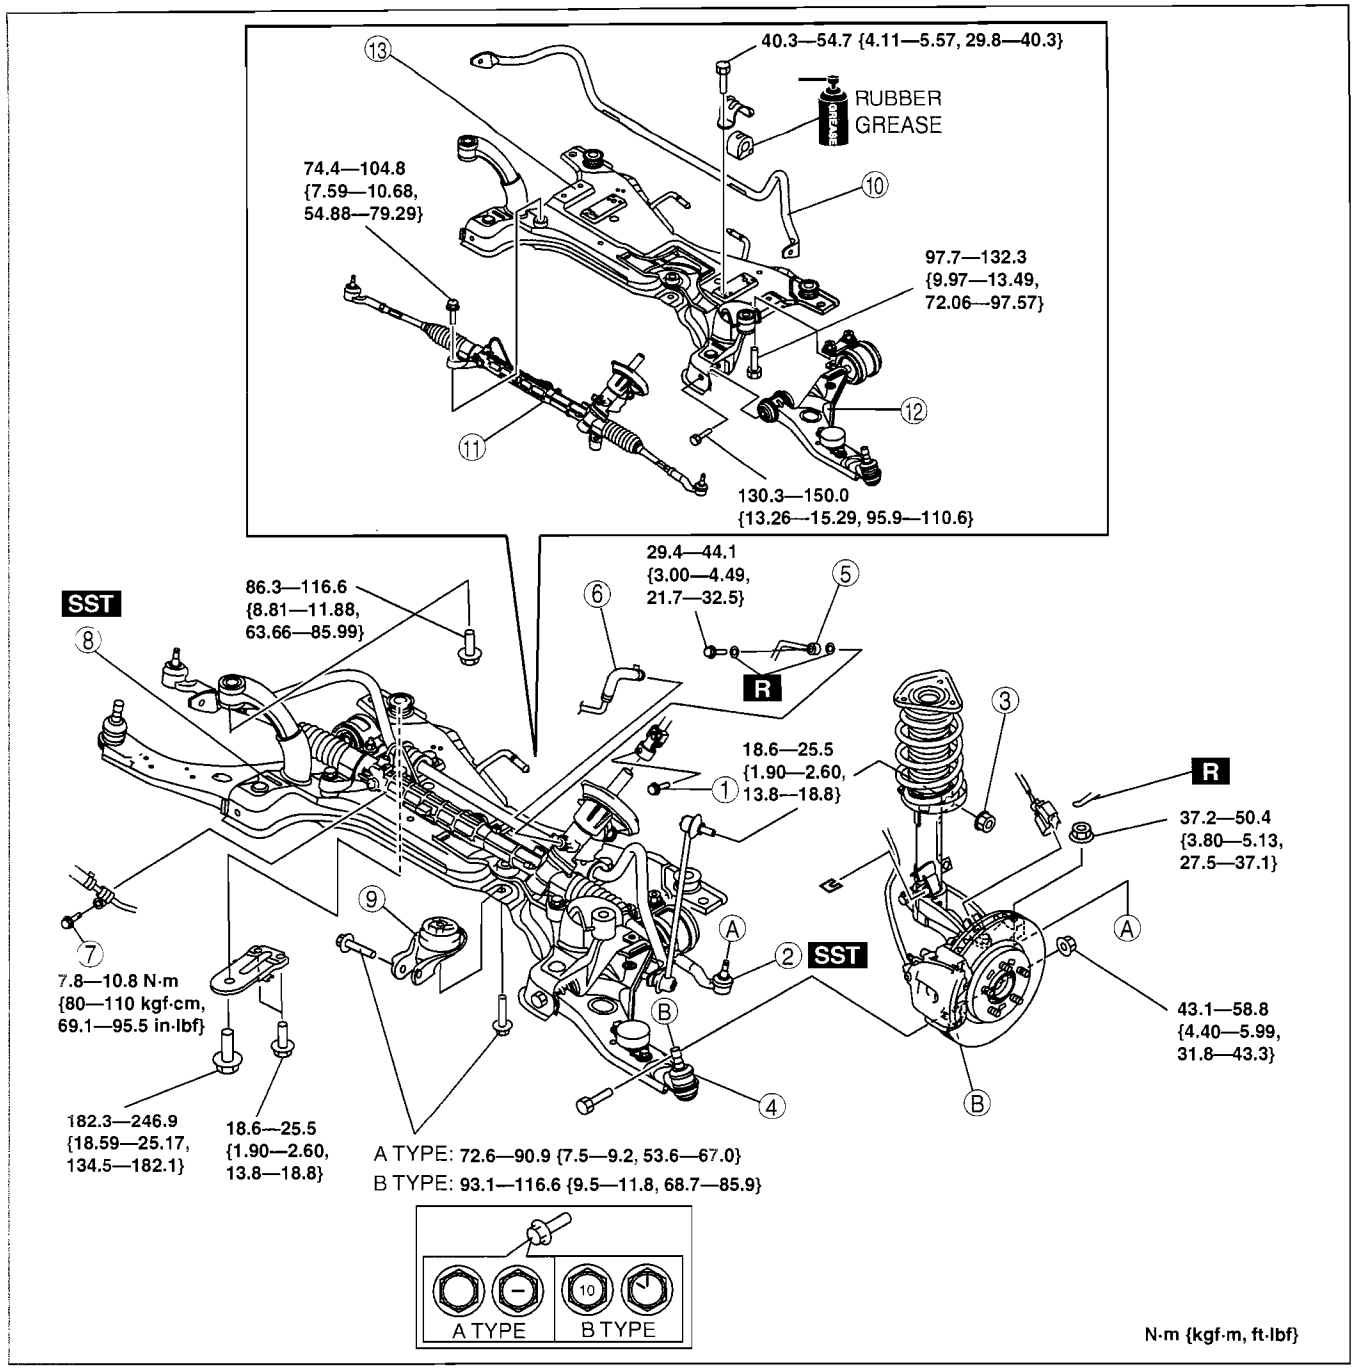
FRONT CROSSMEMBER REMOVAL/INSTALLATION

id021300801000

Caution

- **Performing the following procedures without first removing the ABS wheel-speed sensor may possibly cause an open circuit in the wiring harness if it is pulled by mistake. Before performing the following procedures, disconnect the ABS wheel-speed sensor wiring harness connector (axle side) and fix the wiring harness to an appropriate place where it will not be pulled by mistake while servicing the vehicle.**

1. Remove in the order indicated in the table.
2. Install in the reverse order of removal.
3. Inspect the wheel alignment and adjust it if necessary. (See 02-11-2 FRONT WHEEL ALIGNMENT.)



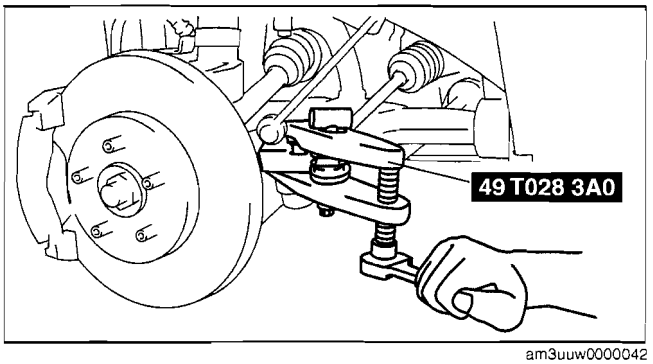
e3e213zsi997

1	Bolt (intermediate shaft)
2	Tie-rod end ball joint (See 02-13-16 Tie-rod End Ball Joint Removal Note.)
3	Stabilizer control link upper nut
4	Lower arm ball joint
5	Pressure pipe (gear side)
6	Return hose (gear side)
7	Bolt

8	Front crossmember component, steering gear and linkage component (See 02-13-16 Front Crossmember Component, Steering Gear and Linkage Component Removal Note.) (See 02-13-16 Front Crossmember Component, Steering Gear and Linkage Component Installation Note.)
9	No.1 engine mount rubber
10	Front stabilizer
11	Steering gear and linkage
12	Front lower arm
13	Front crossmember

Tie-rod End Ball Joint Removal Note

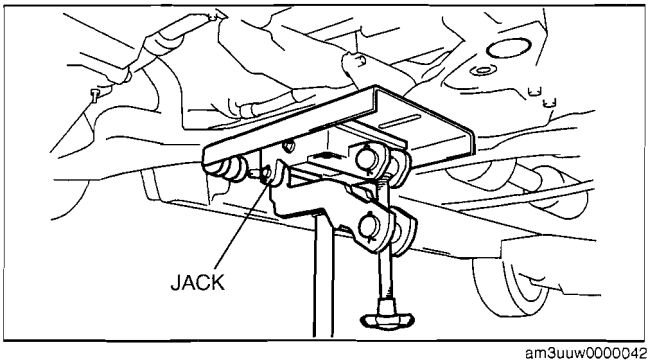
1. Remove the tie-rod end locknut.
2. Detach the tie-rod end from the steering knuckle using the **SST**.



am3uuw0000042

Front Crossmember Component, Steering Gear and Linkage Component Removal Note

1. Remove the front crossmember, front stabilizer, lower arm, and steering gear as a single unit using a transmission jack.

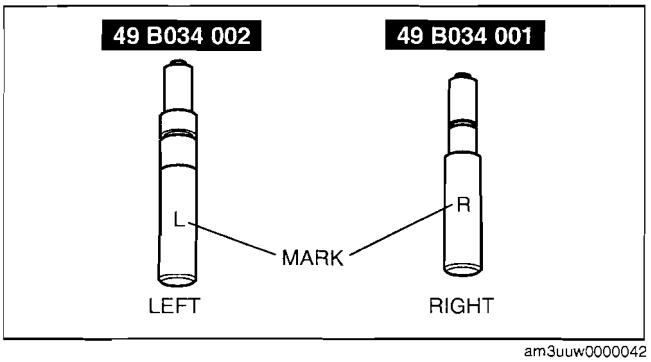


am3uuw0000042

Front Crossmember Component, Steering Gear and Linkage Component Installation Note

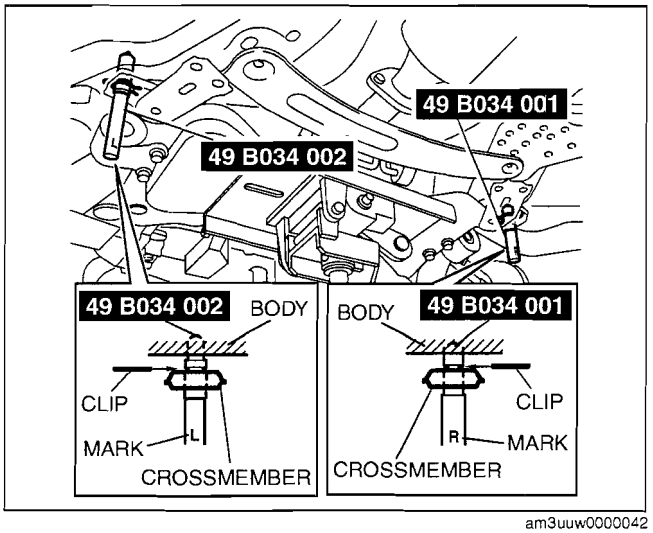
1. Verify the left and right identification marks and install the positioning **SST** to the front crossmember.

   Note
   - Verify the identification marks before installation because the left and right parts of the **SST** have different shapes.



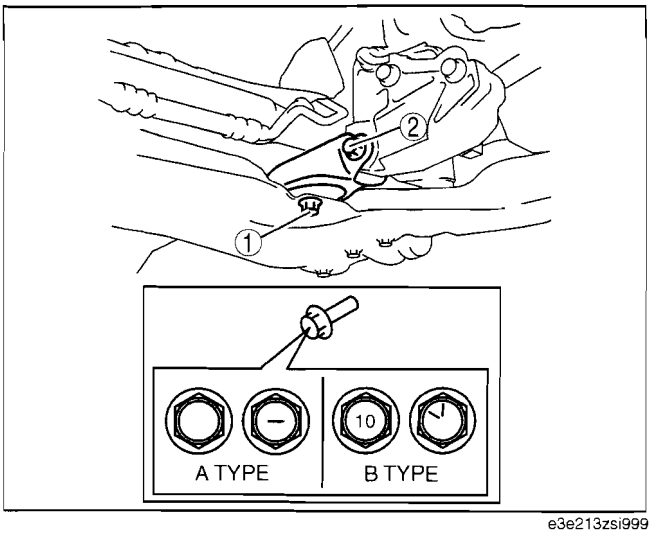
am3uuw0000042

2. Raise the transmission jack gradually and install the front crossmember to the vehicle. At this point verify that the **SST** is securely inserted in the positioning holes on the body.
3. Tighten the front crossmember installation bolts and nuts.



am3uuw0000042

4. Tighten the No.1 engine mount rubber installation bolt.



e3e213zsi999

Caution
- **When installing the No.1 engine mount, tighten the bolts in order shown in the figure to prevent abnormal noise and vibration after assembly.**
- **Tighten the bolts while being careful of their length to prevent interference between the steering gear housing and bolt.**

Bolt length (measured from below the head)
Front crossmember side: 62 mm {2.441 in}
No.1 engine mount bracket side: 65 mm {2.559 in}

Tightening torque
A type: 72.6—90.9 N·m {7.5—9.2 kgf·m, 53.6—67.0 ft·lbf}
b type: 93.1—116.6 N·m {9.5—11.8 kgf·m, 68.7—85.9 ft·lbf}

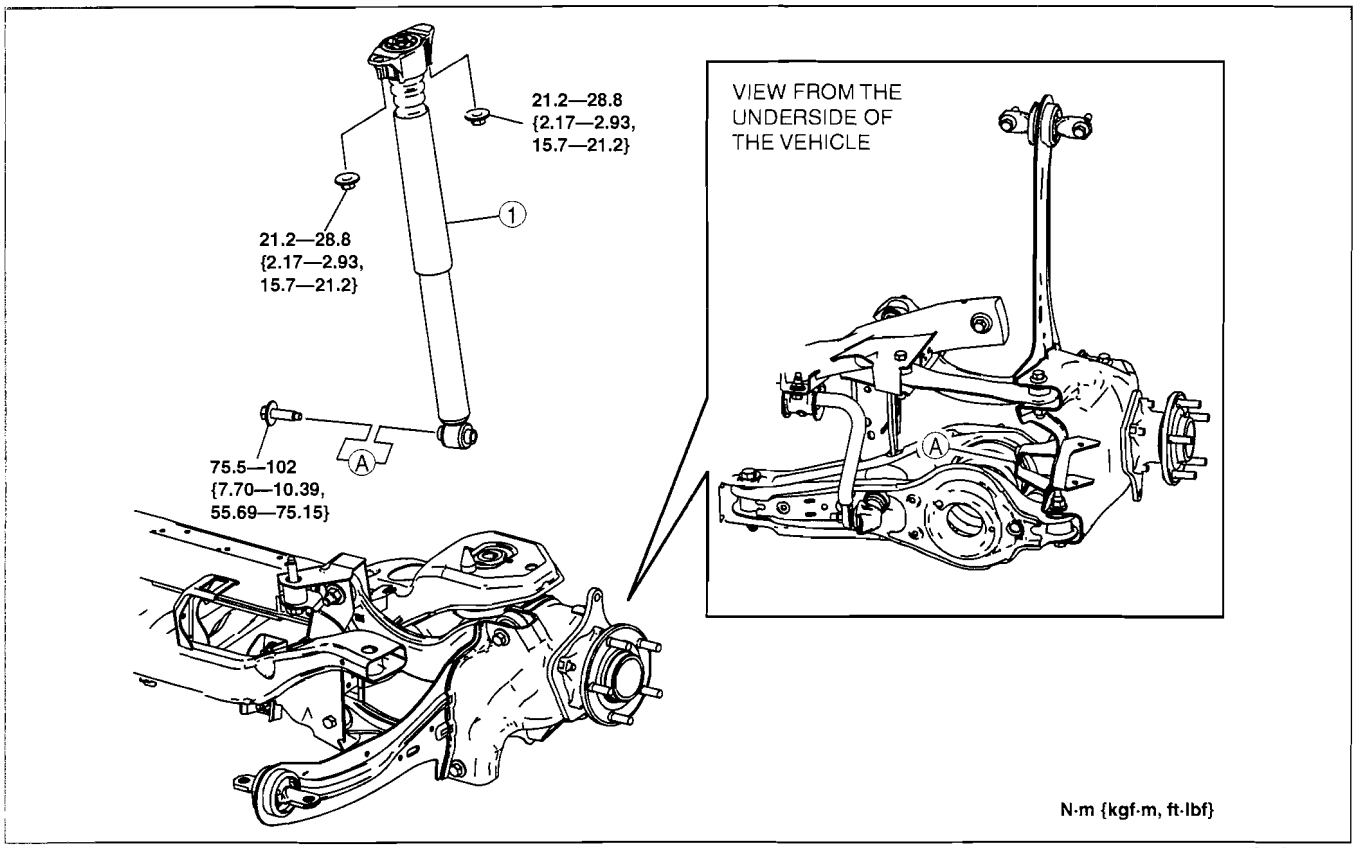
REAR SHOCK ABSORBER REMOVAL/INSTALLATION

id021400801300

1. Remove in the order indicated in the table.



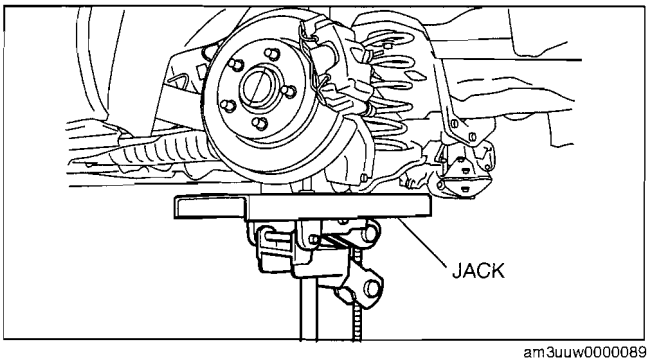
e3u214zw6005

1	Rear shock absorber (See 02-14-3 Rear Shock Absorber Removal Note.)

2. Install in the reverse order of removal.

Rear Shock Absorber Removal Note

1. Support the rear axle using a jack.
2. Remove the rear shock absorber.



am3uuw0000089

REAR SHOCK ABSORBER INSPECTION

id021400801400

1. Inspect in the same way as the front shock absorber.
   (See 02-13-8 FRONT SHOCK ABSORBER INSPECTION.)

REAR SHOCK ABSORBER DISPOSAL

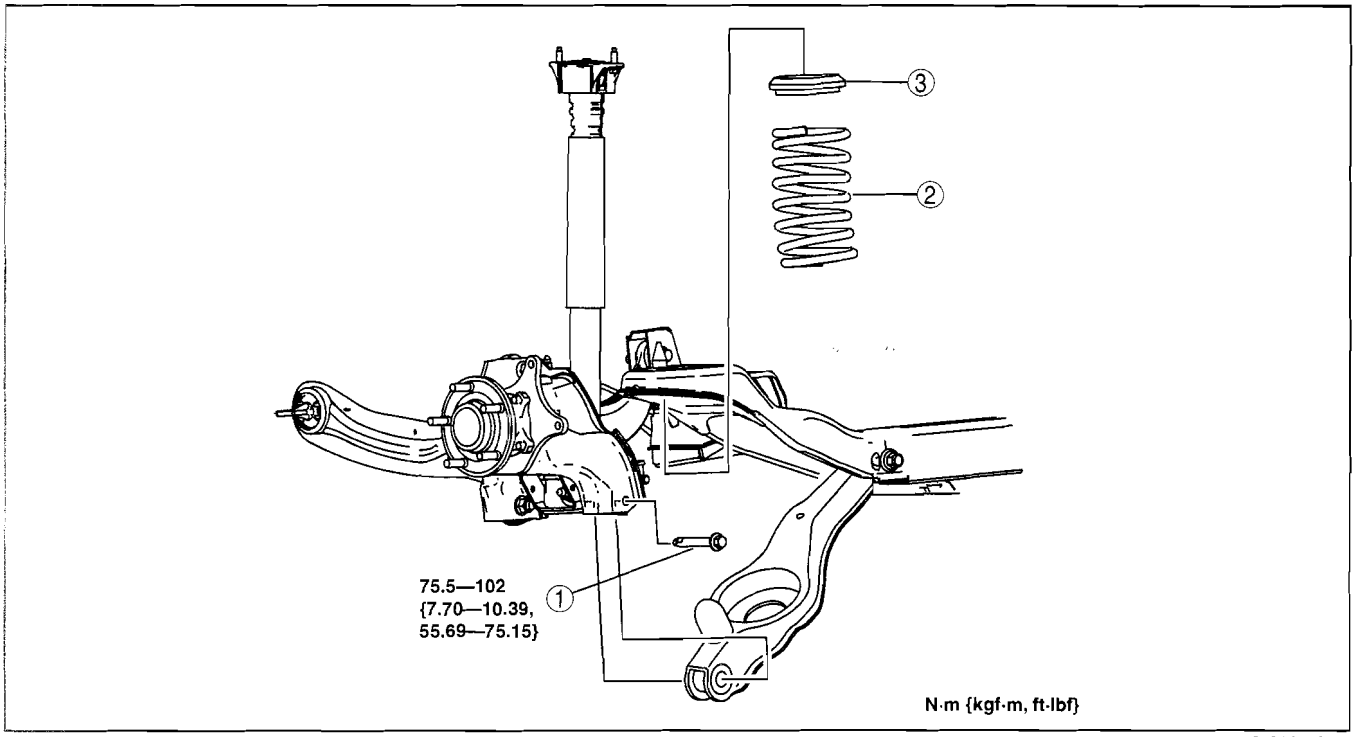
id021400801500

1. Dispose of the rear shock absorber in the same way as the front shock absorber.
   (See 02-13-8 FRONT SHOCK ABSORBER DISPOSAL.)

REAR COIL SPRING REMOVAL/INSTALLATION

id021400800700

1. Remove the rear stabilizer. (See 02-14-10 REAR STABILIZER REMOVAL/INSTALLATION.)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.
4. Inspect the wheel alignment and adjust it if necessary. (See 02-11-4 REAR WHEEL ALIGNMENT.)



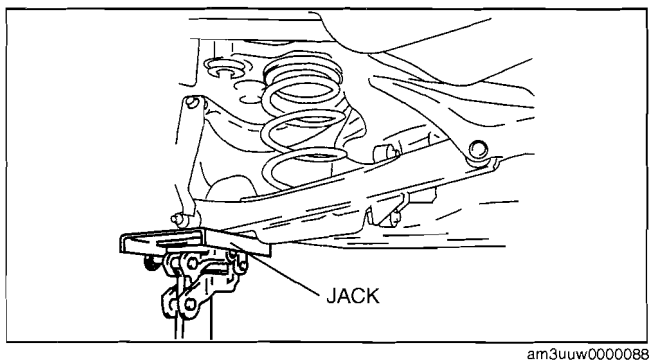
e3u214zw6004

1	Rear lower arm outer bolt (See 02-14-4 Rear Lower Arm Outer Bolt Removal Note.)

2	Rear coil spring (See 02-14-5 Rear Coil Spring Installation Note.)
3	Upper spring seat rubber

Rear Lower Arm Outer Bolt Removal Note

1. Support the rear lower arm using a jack.
2. Loosen the rear lower arm inner bolt.
3. Remove the rear lower arm outer bolt.



am3uuw0000088

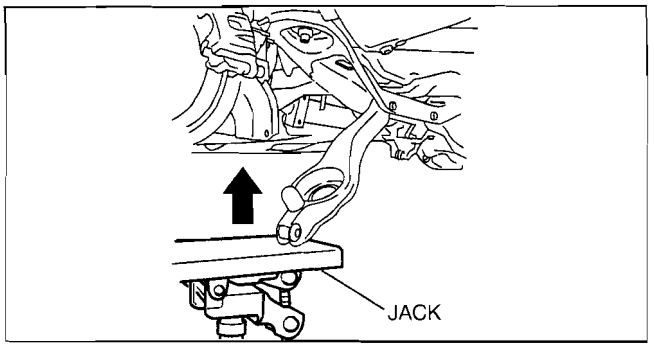
Rear Coil Spring Installation Note

1. Position the jack under the rear lower arm and jack up slowly.

Warning

- **Installing the coil spring is dangerous. The coil spring could fly off and cause serious injure or death, and damage the vehicle.**

2. Align the upper end of the rear coil spring with the step of the upper spring seat rubber.
3. Align the lower end of the rear coil spring with the step of the lower spring seat rubber.
4. Install the lower arm outer bolt.



am3uuw0000088

REAR LOWER ARM REMOVAL/INSTALLATION

id021400800900

1. Remove in the order indicated in the table.
2. Install in the reverse order of removal.
3. Inspect the wheel alignment and adjust it if necessary. (See 02-11-4 REAR WHEEL ALIGNMENT.)

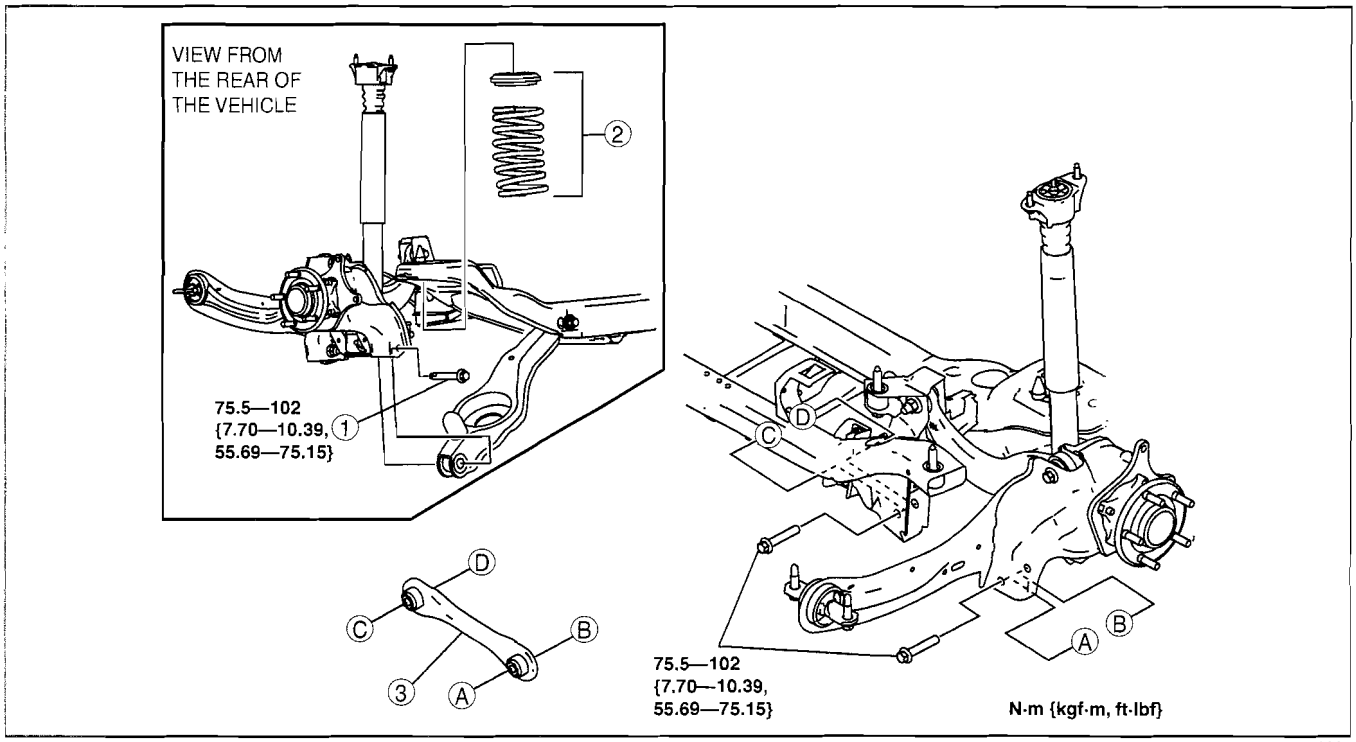
REAR LATERAL LINK REMOVAL/INSTALLATION

id021400801200

1. Remove the rear stabilizer. (See 02-14-10 REAR STABILIZER REMOVAL/INSTALLATION.)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.
4. Inspect the wheel alignment and adjust it if necessary. (See 02-11-4 REAR WHEEL ALIGNMENT.)

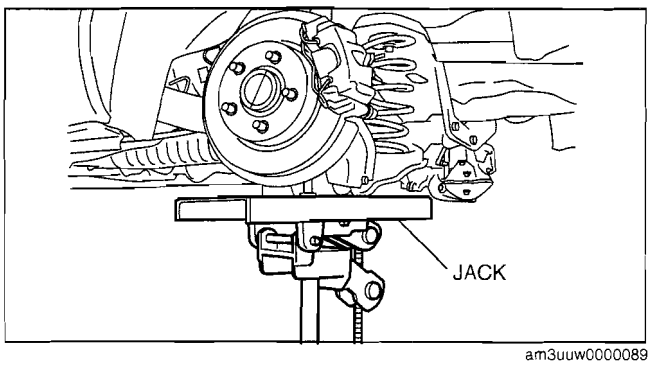


e3u214zw6003

1	Rear lower arm outer bolt (See 02-14-6 Rear Lower Arm Outer Bolt Removal Note.)
2	Rear coil spring component (See 02-14-4 REAR COIL SPRING REMOVAL/ INSTALLATION.)
3	Rear lateral link (See 02-14-6 Rear Lateral Link Installation Note.)

Rear Lower Arm Outer Bolt Removal Note

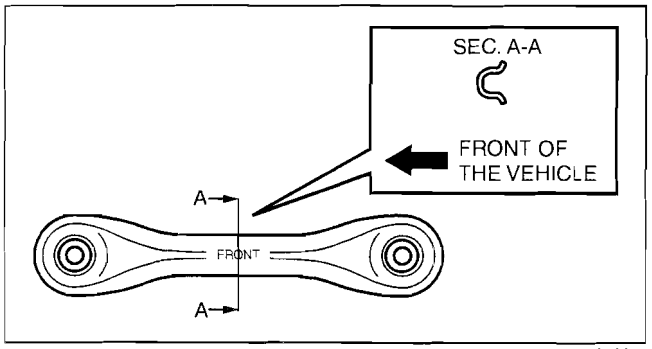
1. Support the rear lower arm using a jack.
2. Loosen the rear lower arm inner bolt.
3. Remove the rear lower arm outer bolt.



am3uuw0000089

Rear Lateral Link Installation Note

1. Install the rear lateral link so that the rib is facing toward the front of the vehicle.

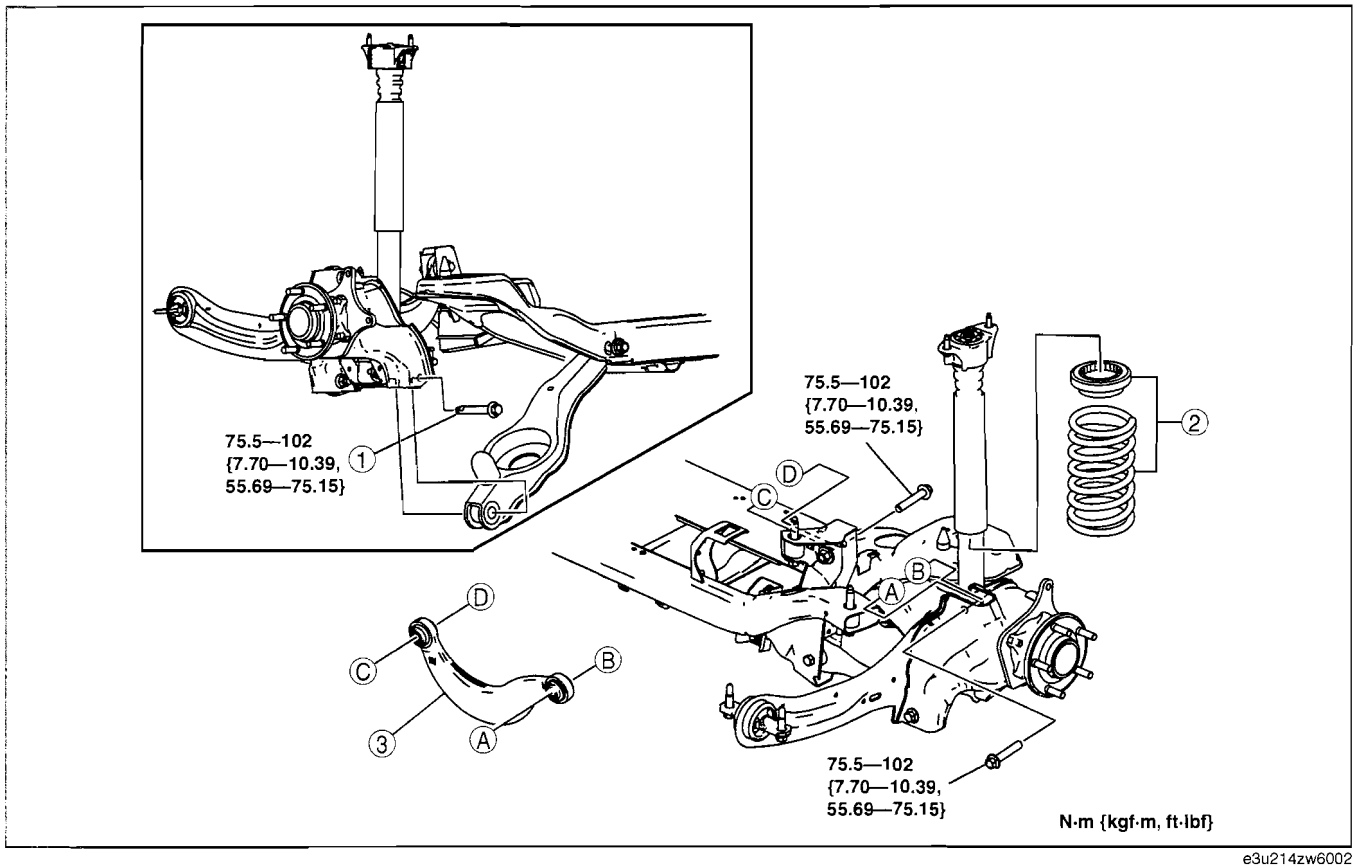


am3uuw0000089

REAR UPPER ARM REMOVAL/INSTALLATION

id021400800800

1. Remove the evaporative mission (EVAP) system leak detection pump. (See 01-16A-9 EVAPORATIVE EMISSION (EVAP) SYSTEM LEAK DETECTION PUMP REMOVAL/INSTALLATION[LF, L3].) (See 01-16B-7 EVAPORATIVE EMISSION (EVAP) SYSTEM LEAK DETECTION PUMP REMOVAL/INSTALLATION[L3 WITH TC].)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.
4. Inspect the wheel alignment and adjust it if necessary. (See 02-11-4 REAR WHEEL ALIGNMENT.)



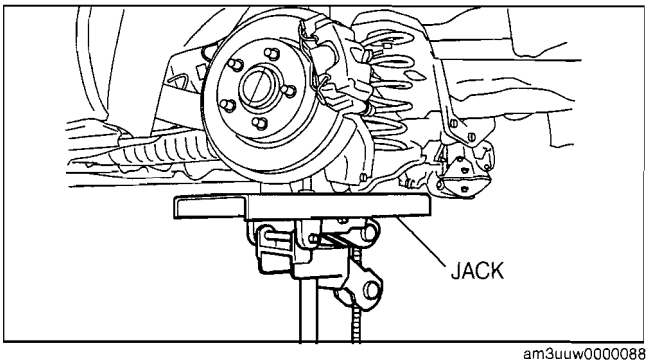
e3u214zw6002

1	Rear lower arm outer bolt (See 02-14-7 Rear Lower Arm Outer Bolt Removal Note.)

2	Rear coil spring component (See 02-14-4 REAR COIL SPRING REMOVAL/INSTALLATION.)
3	Rear upper arm (See 02-14-8 Rear Upper Arm Installation Note.)

Rear Lower Arm Outer Bolt Removal Note

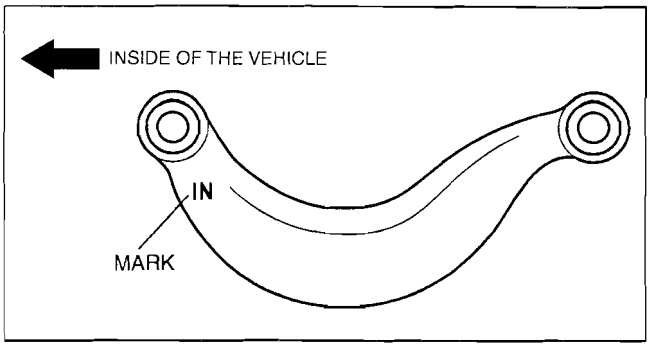
1. Support the rear lower arm using a jack.
2. Loosen the rear lower arm inner bolt.
3. Remove the rear lower arm outer bolt.



am3uuw0000088

Rear Upper Arm Installation Note

1. Install the rear upper arm so that IN mark is facing toward the inside of the vehicle.



am3uuw0000089

REAR TRAILING LINK REMOVAL/INSTALLATION

id021400802000

Caution

- **Performing the following procedures without first removing the ABS wheel-speed sensor may possibly cause an open circuit in the wiring harness if it is pulled by mistake. Before performing the following procedures, disconnect the ABS wheel-speed sensor wiring harness connector (axle side) and fix the wiring harness to an appropriate place where it will not be pulled by mistake while servicing the vehicle.**

1. Remove in the order indicated in the table.

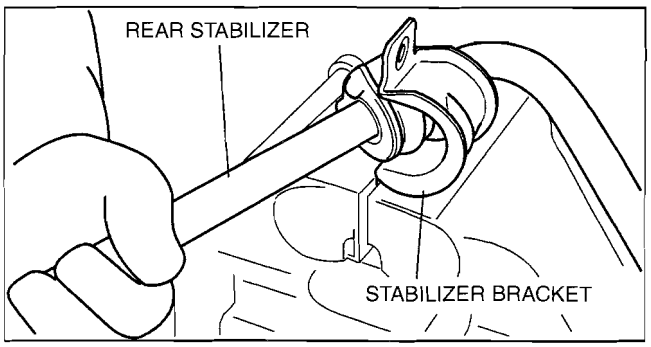
5	Stabilizer bushing (See 02-14-11 Stabilizer Bushing Installation Note.)
6	Rear stabilizer

Stabilizer Bracket Removal Note

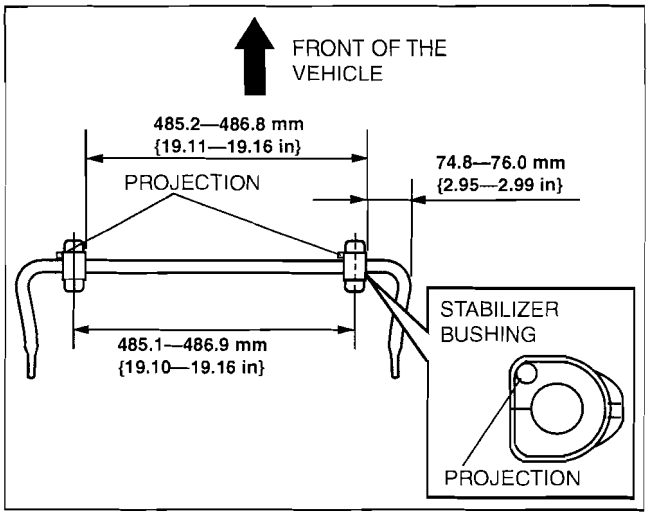
1. Secure the stabilizer bracket flange using a vise.
2. Remove the stabilizer bracket.



am3uuw0000088

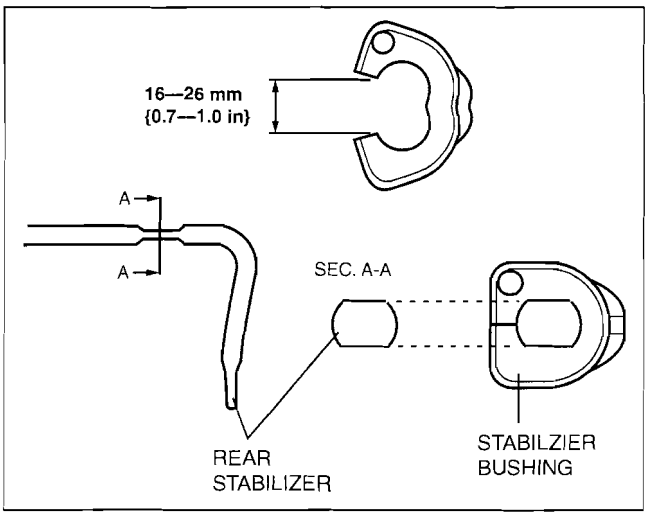
Stabilizer Bushing Installation Note

1. Place the stabilizer bushing so that the projection is facing toward the left side of the vehicle.



c3u0214w016

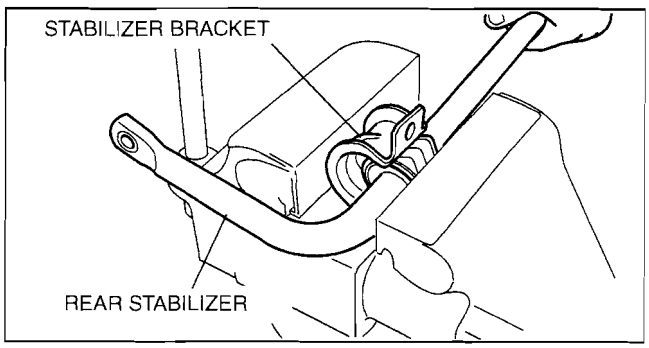
2. Widen the stabilizer bushing opening **16—26 mm {0.7—1.0 in}** and install the bushing to the rear stabilizer as shown in the figure.



am3uuw0000088

Stabilizer Bracket Installation Note

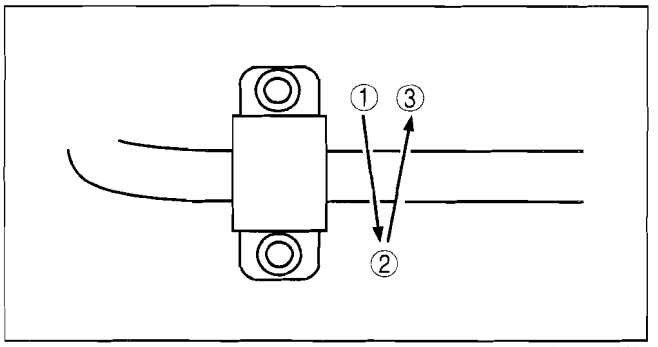
1. Apply grease to the stabilizer bushing.
2. Install the stabilizer bracket using a vise.



am3uuw0000088

Rear Stabilizer Component Installation Note

1. Tighten the bolts in order indicated in the figure.



am3uuw0000088

STABILIZER CONTROL LINK INSPECTION

id021400800300

1. Remove the stabilizer control link from the vehicle.
2. Inspect for bending or damage. If there is any malfunction, replace the stabilizer control link.
3. Rotate the ball joint stud **10 times** and shake it side to side **10 times**.
4. Measure the ball-joint rotational torque using an Allen wrench and a torque wrench.

   Stabilizer control link ball joint rotational torque
   0.5—2.0 N·m {6—20 kgf·cm, 5—17 in·lbf}

   - If not within the specification, replace the stabilizer control link.

DRIVELINE/AXLE

03
SECTION

03-10 GENERAL PROCEDURES

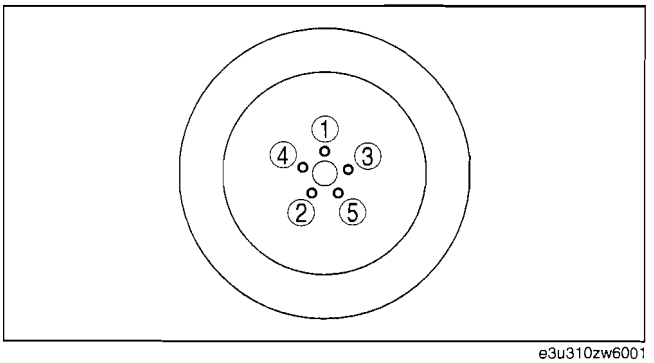
GENERAL PROCEDURES (FRONT AND REAR AXLES)

id031000800100

Wheel and Tire Installation

1. When installing the wheels and tires, tighten the wheel nuts in a criss-cross pattern to the following tightening torque.

   Tightening torque
   88.2—117.6 N·m {9.00—11.99 kgf·m, 65.06—86.73 ft·lbf}



e3u310zw6001

Connector Disconnection

1. Disconnect the negative battery cable before performing any work that requires handling of connectors. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].) (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)

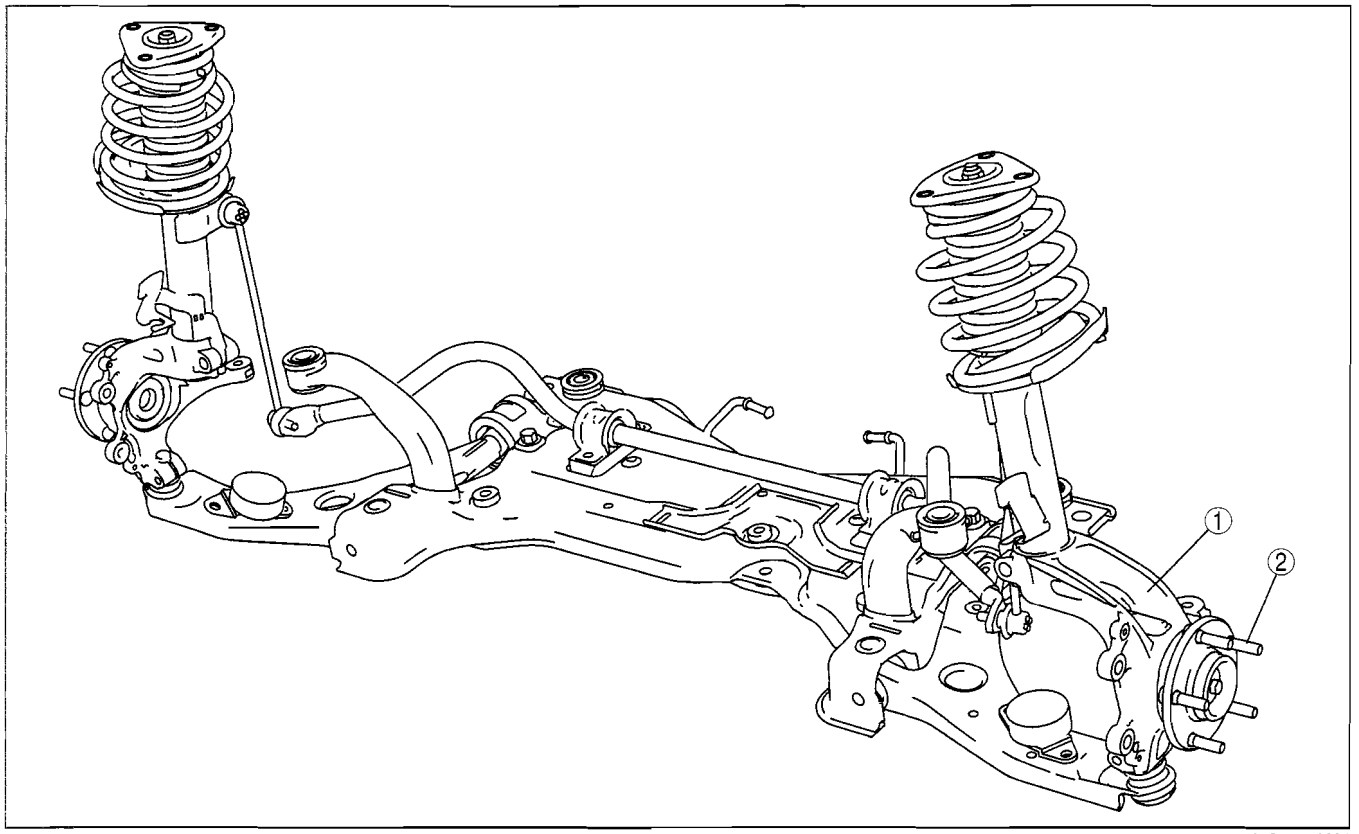
Suspension Links Removal/Installation

1. For the joint sections with rubber bushings, raise the vehicle using a lift, and then temporarily tighten the installation bolts and nuts. Lower the vehicle to the ground and tighten them completely with the specified torque.

03-11 FRONT AXLE

FRONT AXLE LOCATION INDEX

id031100800100



e3u311zw6001

1	Wheel hub, steering knuckle (See 03-11-2 WHEEL HUB, STEERING KNUCKLE INSPECTION.) (See 03-11-3 WHEEL HUB, STEERING KNUCKLE REMOVAL/INSTALLATION.)

2	Wheel hub bolt (See 03-11-2 FRONT WHEEL HUB BOLT REPLACEMENT.)

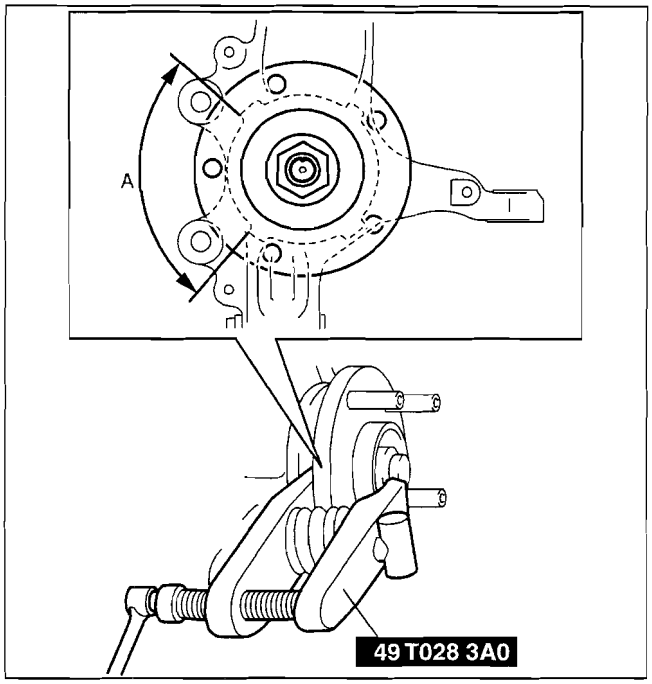
FRONT WHEEL HUB BOLT REPLACEMENT

id031100800200

1. Remove the brake calliper component and disc plate.
2. Remove the wheel hub bolt using the **SST** as shown in the figure.

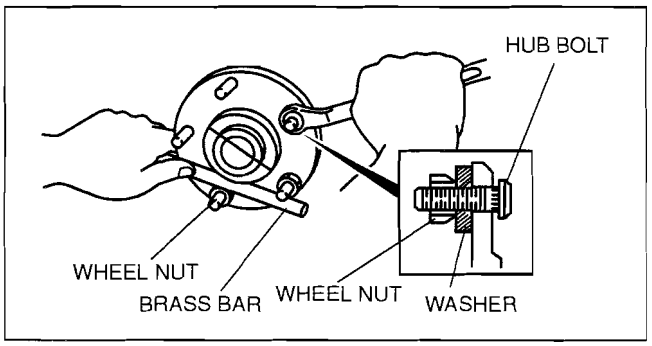
Note
- When removing the wheel hub bolts, perform the work between range A shown in the figure to assure a space for the bolt removal.

3. Place a new wheel hub bolt in the wheel hub.



am5uuw0000086

4. Install the wheel hub by placing a proper sized washer on the hub, and tightening the nut as shown in the figure.



am3uuw0000099

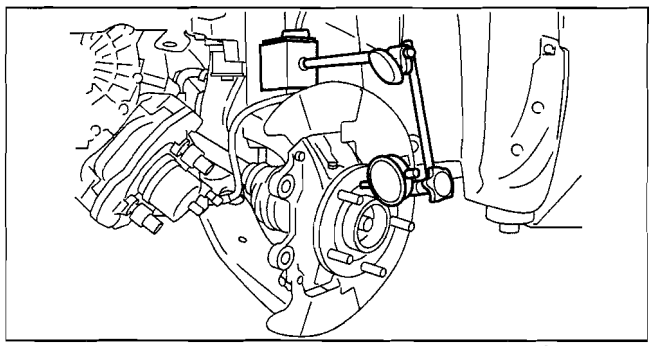
WHEEL HUB, STEERING KNUCKLE INSPECTION

id031100800300

Wheel Bearing Excessive Play Inspection

1. Install the magnetic base and dial gauge as shown in the figure and measure the wheel bearing axial excessive play.
   - If it exceeds the maximum specification, replace the wheel hub bearing.

Maximum front wheel bearing play
0.05 mm {0.002 in}



B3E0311W002

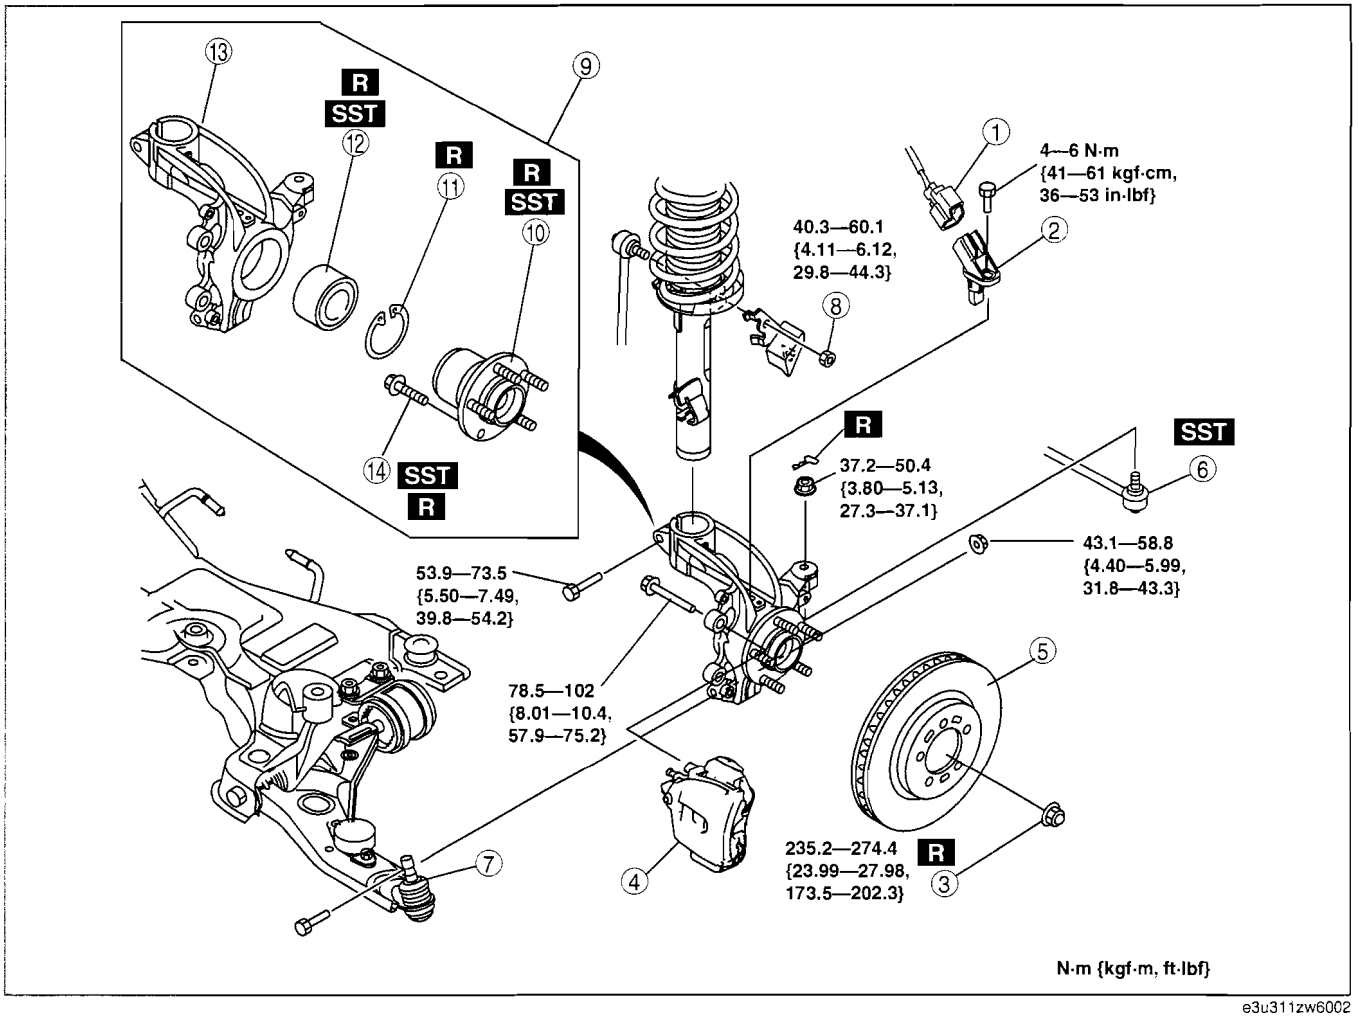
WHEEL HUB, STEERING KNUCKLE REMOVAL/INSTALLATION

id031100800400

Caution

- **Performing the following procedures without first removing the ABS wheel-speed sensor may possibly cause an open circuit in the wiring harness if it is pulled by mistake. Before performing the following procedures, disconnect the ABS wheel-speed sensor connector (axle side) and fix the wiring harness to an appropriate place where it will not be pulled by mistake while servicing the vehicle.**

1. Remove in the order indicated in the table.
2. Install in the reverse order of removal.
3. After installation, inspect the front wheel alignment and adjust it if necessary. (See 02-11-2 FRONT WHEEL ALIGNMENT.)



e3u311zw6002

1	ABS wheel-speed sensor connector
2	ABS wheel-speed sensor

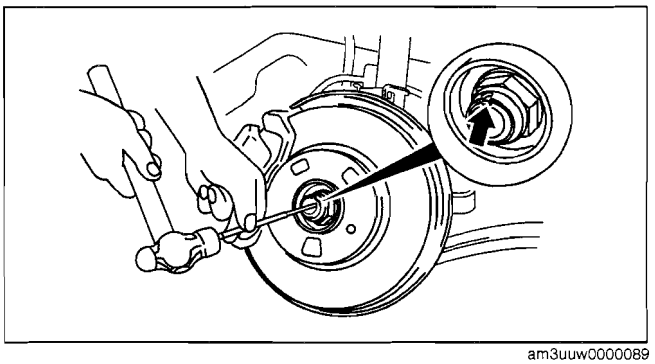
4	Brake caliper component (See 03-11-4 Brake Caliper Removal Note.)
5	Disc plate (See 04-11-18 FRONT BRAKE (DISC) REMOVAL/INSTALLATION[LF, L3].) (See 04-11-19 FRONT BRAKE (DISC) REMOVAL/INSTALLATION[L3 WITH TC].)
6	Tie-rod end ball joint (See 02-13-14 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
7	Front lower arm ball joint

8	Stabilizer control link upper nut
9	Wheel hub, steering knuckle component (See 03-11-4 Wheel Hub, Steering Knuckle Component Removal Note.)
10	Wheel hub component (See 03-11-4 Wheel Hub Component Removal Note.) (See 03-11-6 Wheel Hub Component Installation Note.)
11	Retaining clip
12	Wheel bearing (See 03-11-5 Wheel Bearing Removal Note.) (See 03-11-6 Wheel Bearing Installation Note.)
13	Steering knuckle
14	Hub bolt (See 03-11-5 Wheel Hub Bolt Removal Note.) (See 03-11-6 Wheel Hub Bolt Installation Note.)

Locknut Removal Note

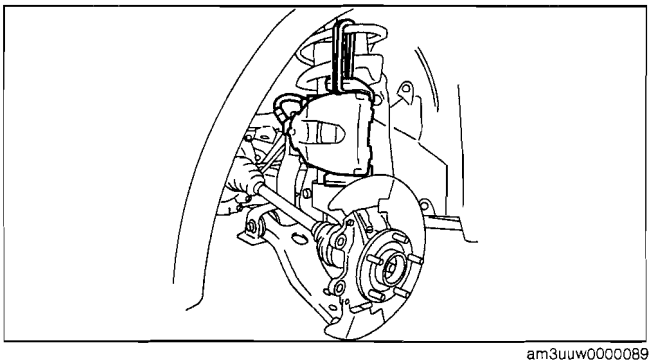
1. Knock the crimped portion of the locknut outward using a small chisel and a hummer.
2. Lock the hub by applying the brakes.
3. Remove the locknut.



am3uuw0000089

Brake Caliper Removal Note

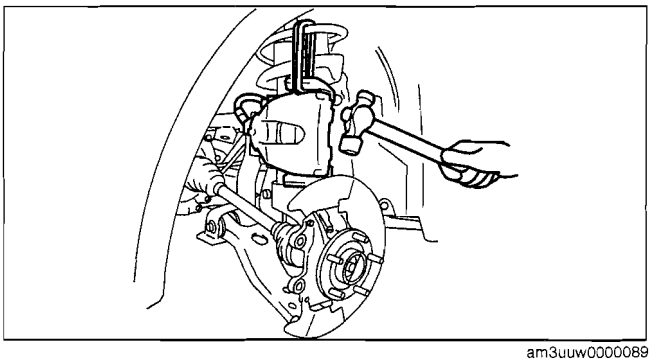
1. Remove the brake caliper component from the steering knuckle and suspend it out of the way using a cable.



am3uuw0000089

Wheel Hub, Steering Knuckle Component Removal Note

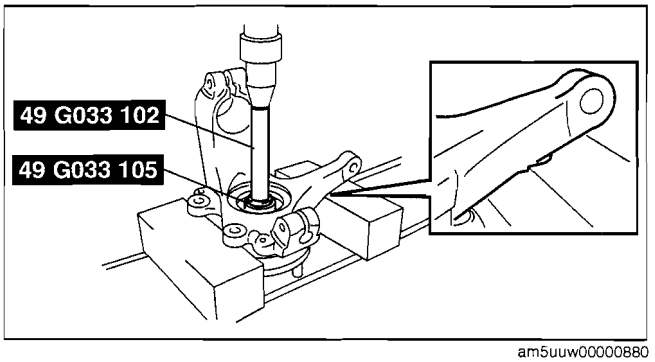
1. Separate the shock absorber from the wheel hub, steering knuckle component by tapping the upper part of the steering knuckle with a hammer.



am3uuw0000089

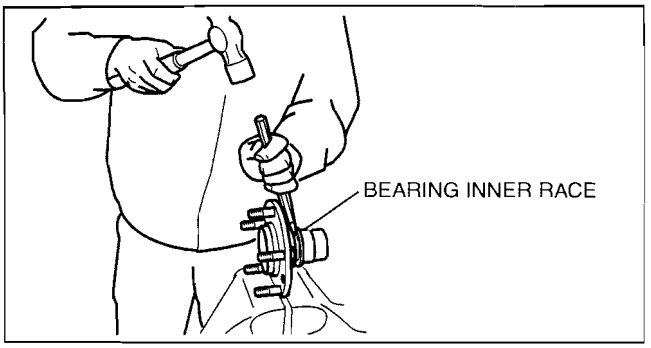
Wheel Hub Component Removal Note

1. Remove the wheel hub component using the **SSTs**.



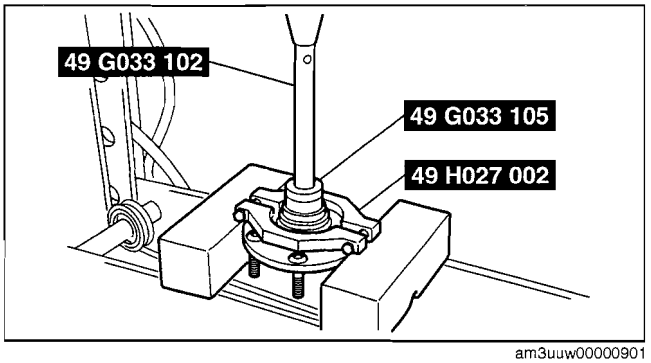
am5uuw00000880

2. If the bearing inner race remains on the wheel hub component, use a chisel to secure a sufficient space for installing the **SST** (49 H027 002) between wheel hub component and bearing inner race.



am5uuw0000018

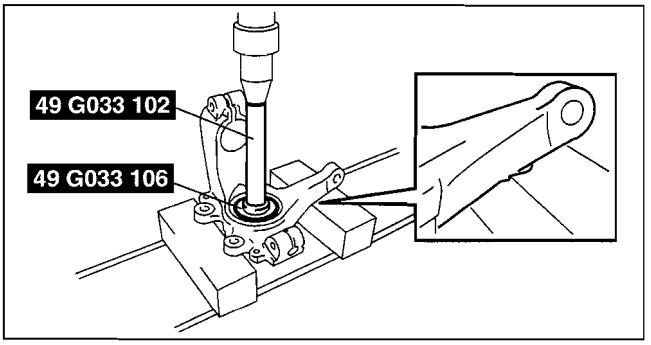
3. Remove the bearing inner race using the **SSTs**.



am3uuw00000901

Wheel Bearing Removal Note

1. Remove the wheel bearing using the **SSTs**.



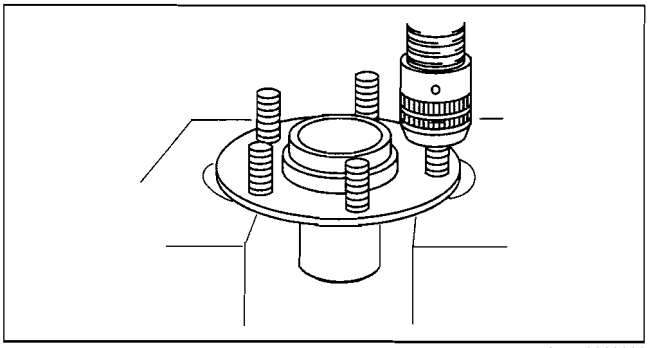
am5uuw00000881

Wheel Hub Bolt Removal Note

Note

- The hub bolts do not need to be removed unless they are being replaced.

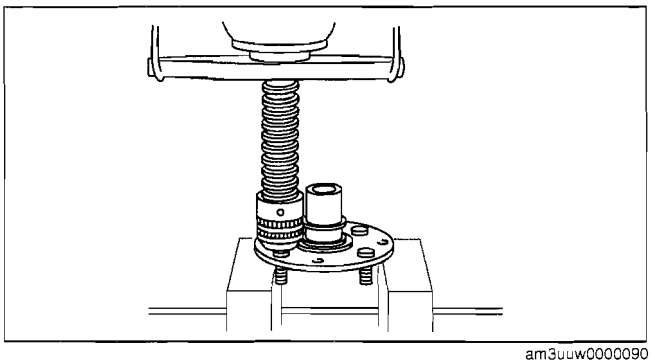
1. Remove the hub bolt using a press.



am3uuw0000090

Wheel Hub Bolt Installation Note

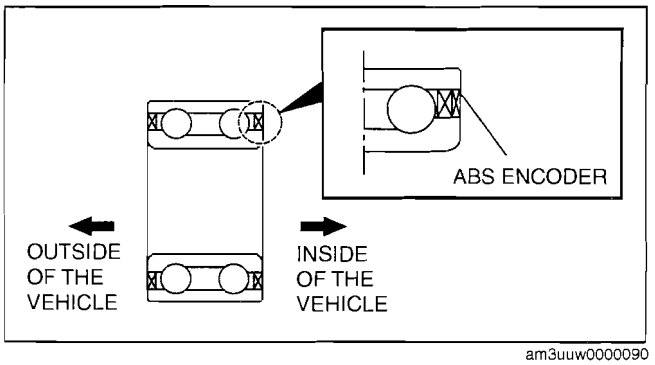
1. Install the new hub bolt using a press.



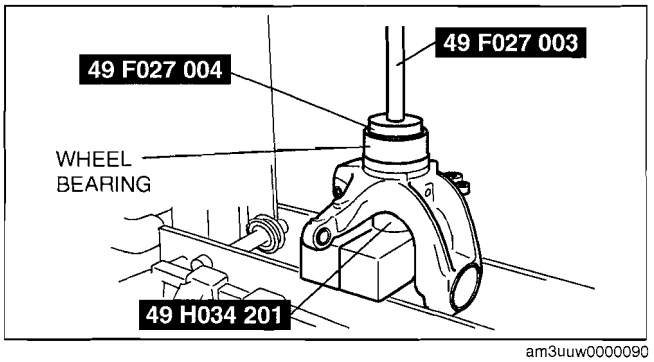
Wheel Bearing Installation Note

Caution

- **Install the wheel bearing with the ABS encoder facing inside of the vehicle.**

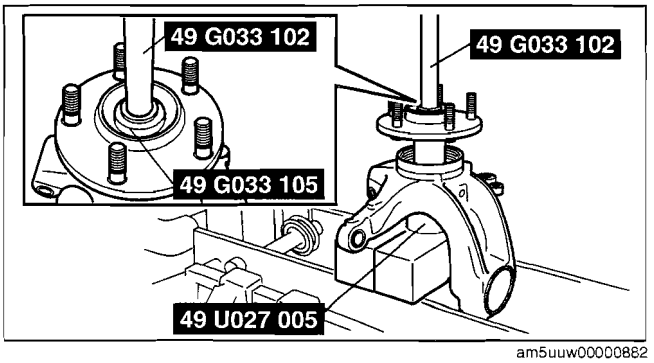


1. Install the new wheel bearing using the **SSTs**.



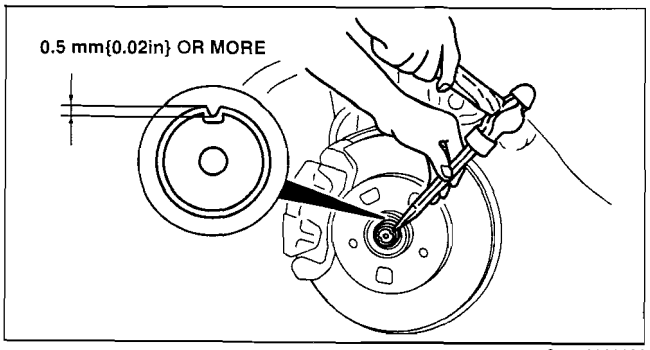
Wheel Hub Component Installation Note

1. Install the wheel hub component using the **SSTs**.



Locknut Installation Note

1. Install a new locknut and stake it as shown.

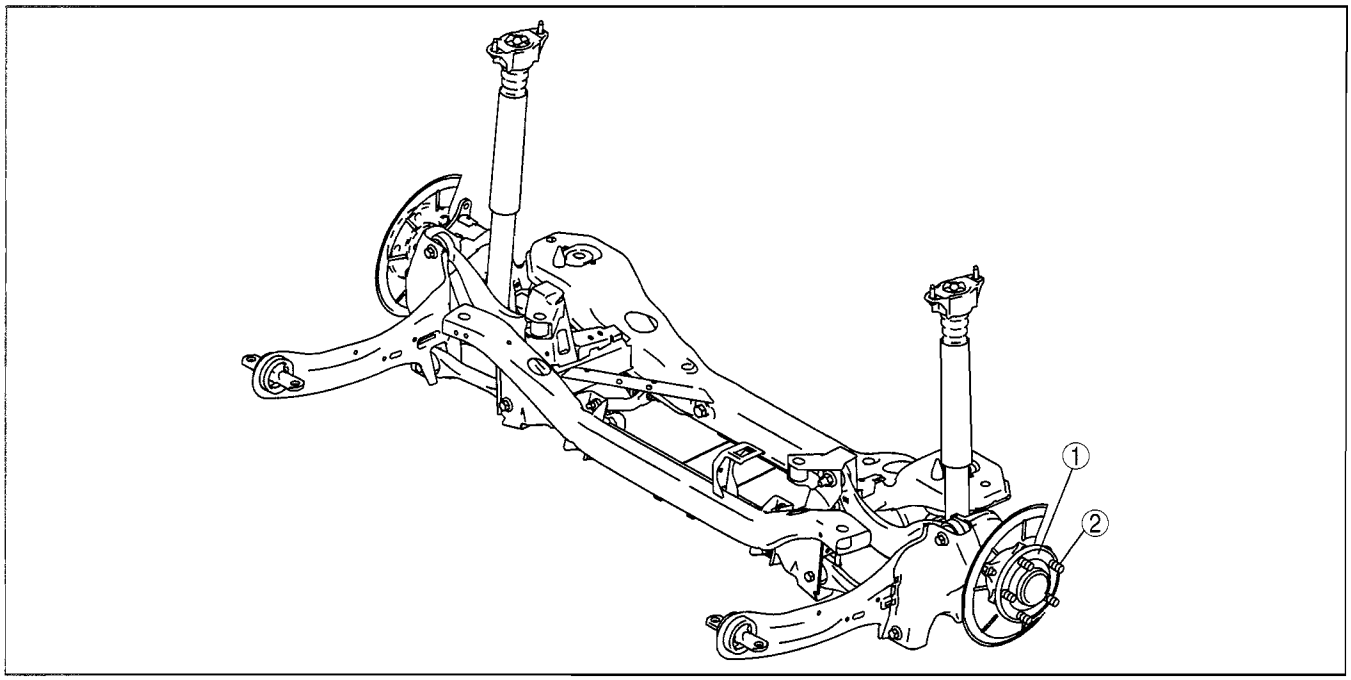


am3uuw0000090

03-12 REAR AXLE

REAR AXLE LOCATION INDEX

id031200800100



e3u312zw6001

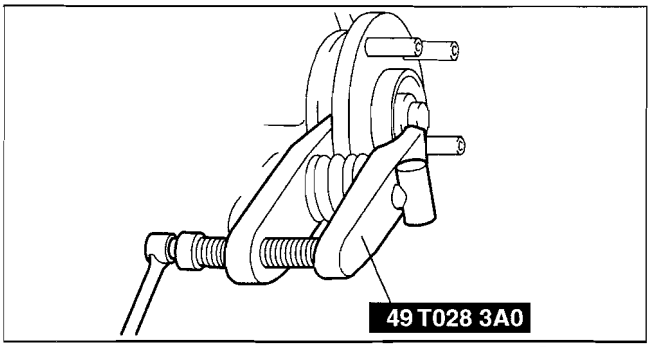
1	Wheel hub component (See 03-12-2 WHEEL HUB COMPONENT INSPECTION.) (See 03-12-3 WHEEL HUB COMPONENT REMOVAL/INSTALLATION.)

2	Wheel hub bolt (See 03-12-2 WHEEL HUB BOLT REPLACEMENT.)

WHEEL HUB BOLT REPLACEMENT

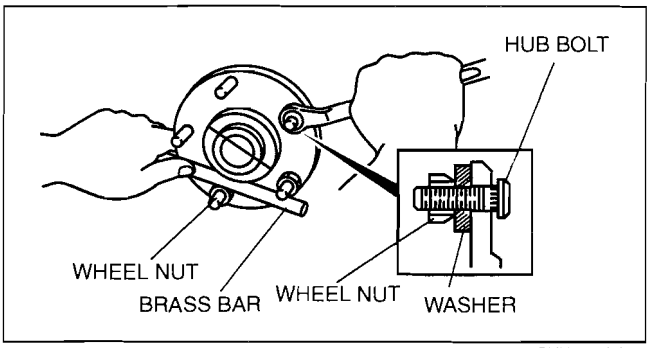
id031200800800

1. Remove the brake calliper component and disc plate.
2. Remove the wheel hub bolt using the **SST** as shown in the figure.
3. Place a new wheel hub bolt in the wheel hub.



D3U312ZSI001

4. Install the wheel hub by placing a proper sized washer on the hub, and tightening the nut as shown in the figure.



CHU0311W005

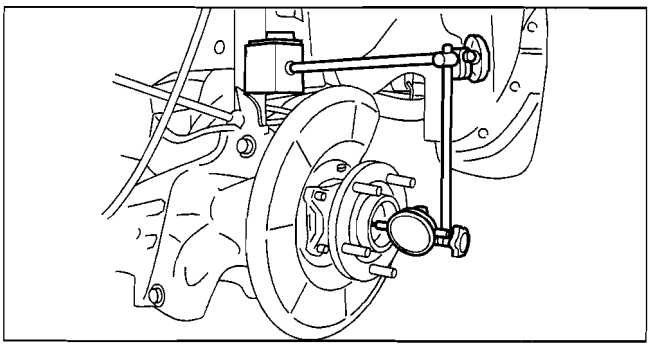
WHEEL HUB COMPONENT INSPECTION

id031200800300

Wheel Bearing Excessive Play Inspection

1. Install the magnetic base and dial gauge as shown in the figure and measure the wheel bearing axial excessive play.
   - If it exceeds the maximum specification, replace the wheel hub component.

Maximum rear wheel bearing play
0.05 mm {0.002 in}



B3E0312W002

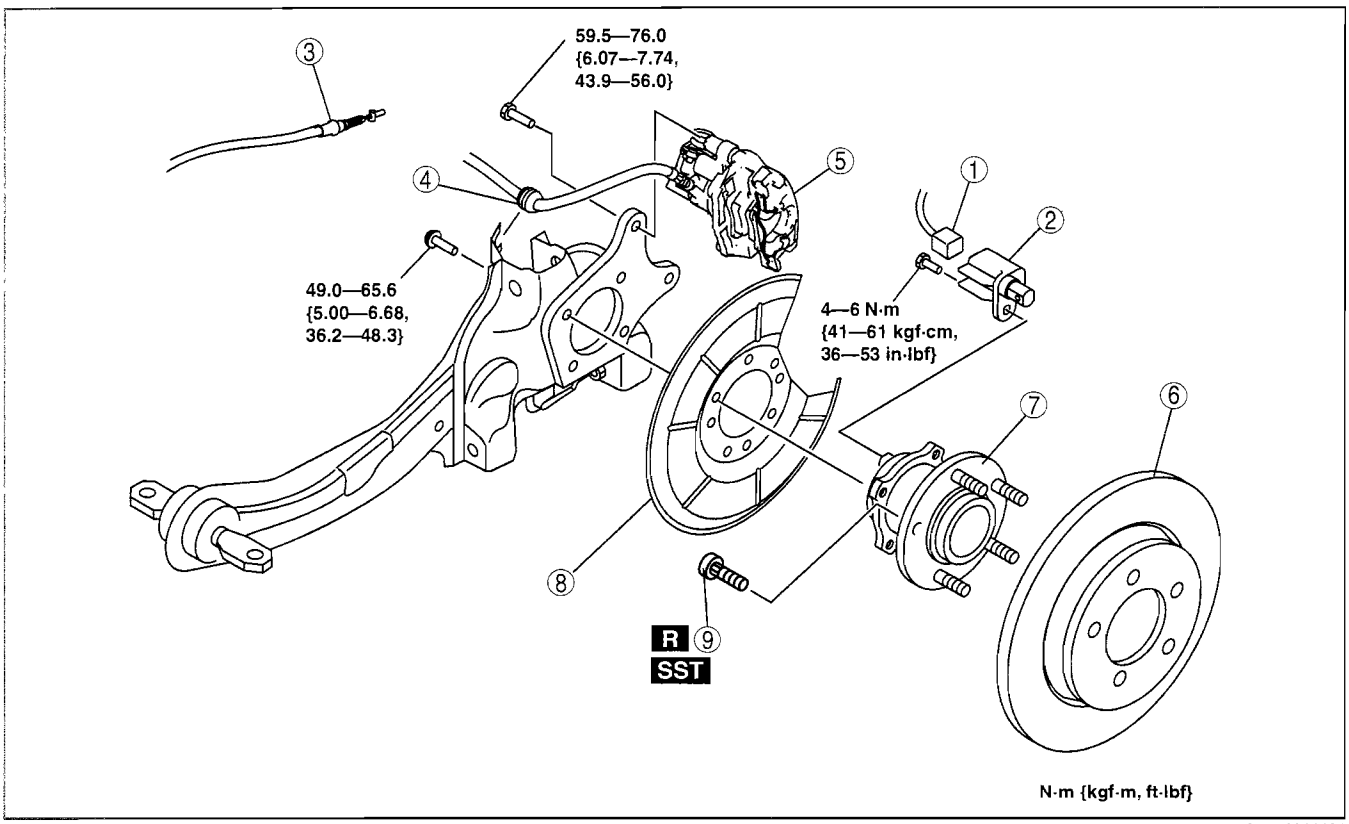
WHEEL HUB COMPONENT REMOVAL/INSTALLATION

id031200800400

Caution

- **Performing the following procedures without first removing the ABS wheel-speed sensor may possibly cause an open circuit in the wiring harness if it is pulled by mistake. Before performing the following procedures, disconnect the ABS wheel-speed sensor connector (wheel hub side) and fix the wiring harness to an appropriate place where it will not be pulled by mistake while servicing the vehicle.**

1. Remove in the order indicated in the table.
2. Install in the reverse order of removal.



am3uuw0000091

1	ABS wheel-speed sensor connector
2	ABS wheel-speed sensor
3	Rear parking brake cable (See 04-12-2 PARKING BRAKE LEVER REMOVAL/INSTALLATION.)
4	Brake hose
5	Brake caliper component (See 03-12-4 Brake Caliper Component Removal Note.)

6	Disc plate (See 04-11-30 REAR BRAKE (DISC) REMOVAL/INSTALLATION.)

8	Dust cover
9	Wheel hub bolt (See 03-12-4 Wheel Hub Bolt Removal Note.) (See 03-12-4 Wheel Hub Bolt Installation Note.)

Brake Caliper Component Removal Note

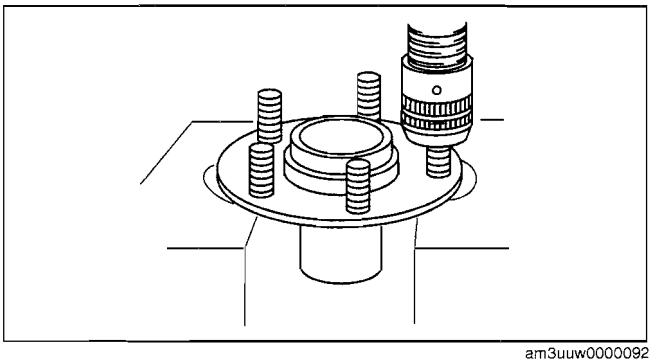
1. Remove the brake caliper component from the trailing link and suspend it out of the way using a cable.

Wheel Hub Bolt Removal Note

Note

- The hub bolts do not need to be removed unless they are being replaced.

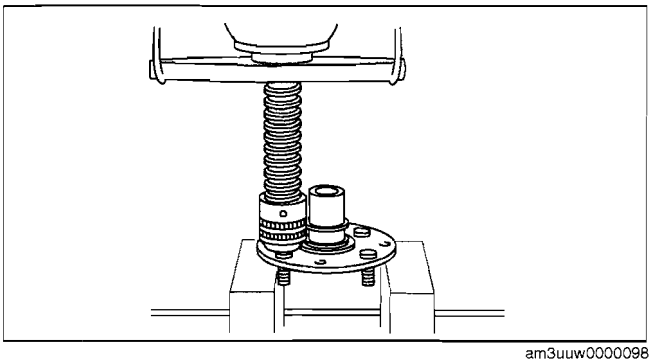
1. Remove the hub bolt using a press.



am3uuw0000092

Wheel Hub Bolt Installation Note

1. Install the new hub bolt using a press.

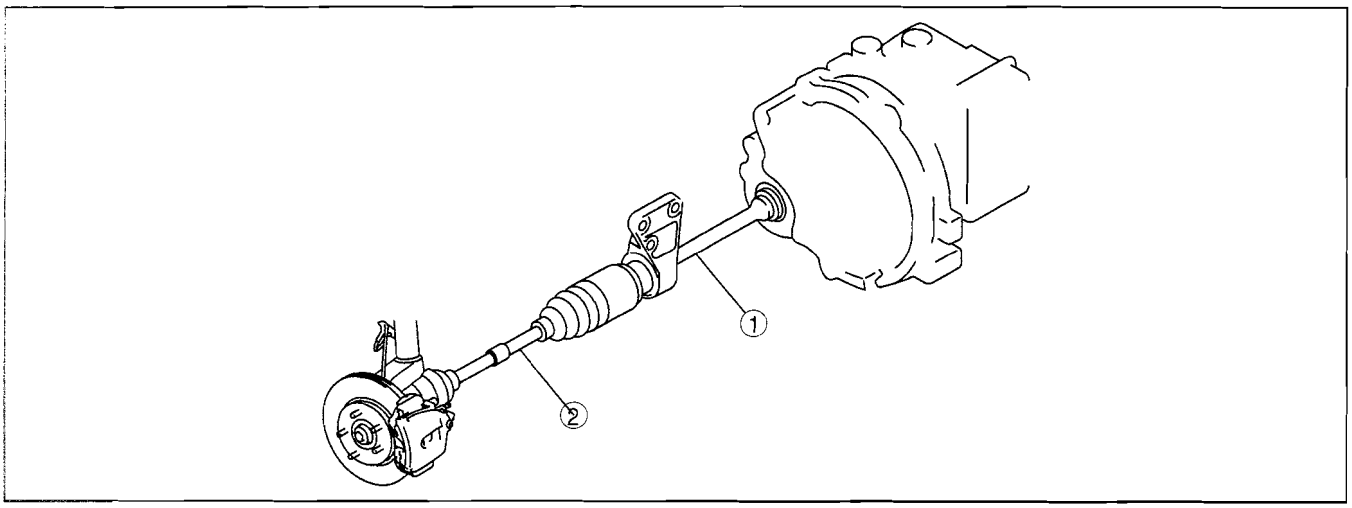


am3uuw0000098

03-13 DRIVE SHAFT

DRIVE SHAFT LOCATION INDEX

id031300800100



c3u0313w105

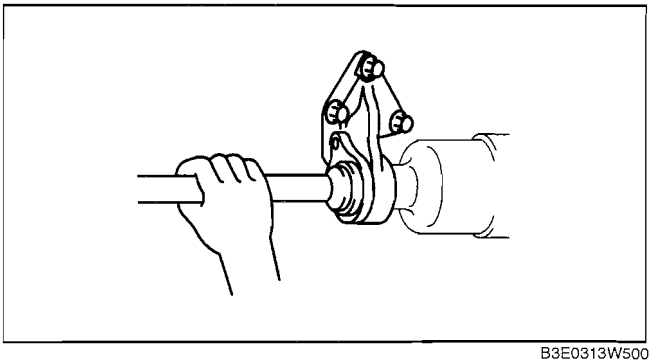
1	Joint shaft (See 03-13-2 JOINT SHAFT INSPECTION.) (See 03-13-2 JOINT SHAFT REMOVAL/INSTALLATION[LF].) (See 03-13-4 JOINT SHAFT REMOVAL/INSTALLATION[L3, L3 WITH TC].) (See 03-13-6 JOINT SHAFT DISASSEMBLY/ASSEMBLY.)

2	Drive shaft (See 03-13-8 DRIVE SHAFT INSPECTION.) (See 03-13-9 DRIVE SHAFT REMOVAL/INSTALLATION.) (See 03-13-12 DRIVE SHAFT (TRIPOD JOINT) DISASSEMBLY/ASSEMBLY.)

JOINT SHAFT INSPECTION

id031300801500

1. Verify that there is no torsion or cracks on the joint shaft.
   - If there is any malfunction, replace the joint shaft.
2. Turn the joint shaft by hand and verify that the bearing rotates smoothly.
   - If there is any malfunction, replace the joint shaft.



B3E0313W500

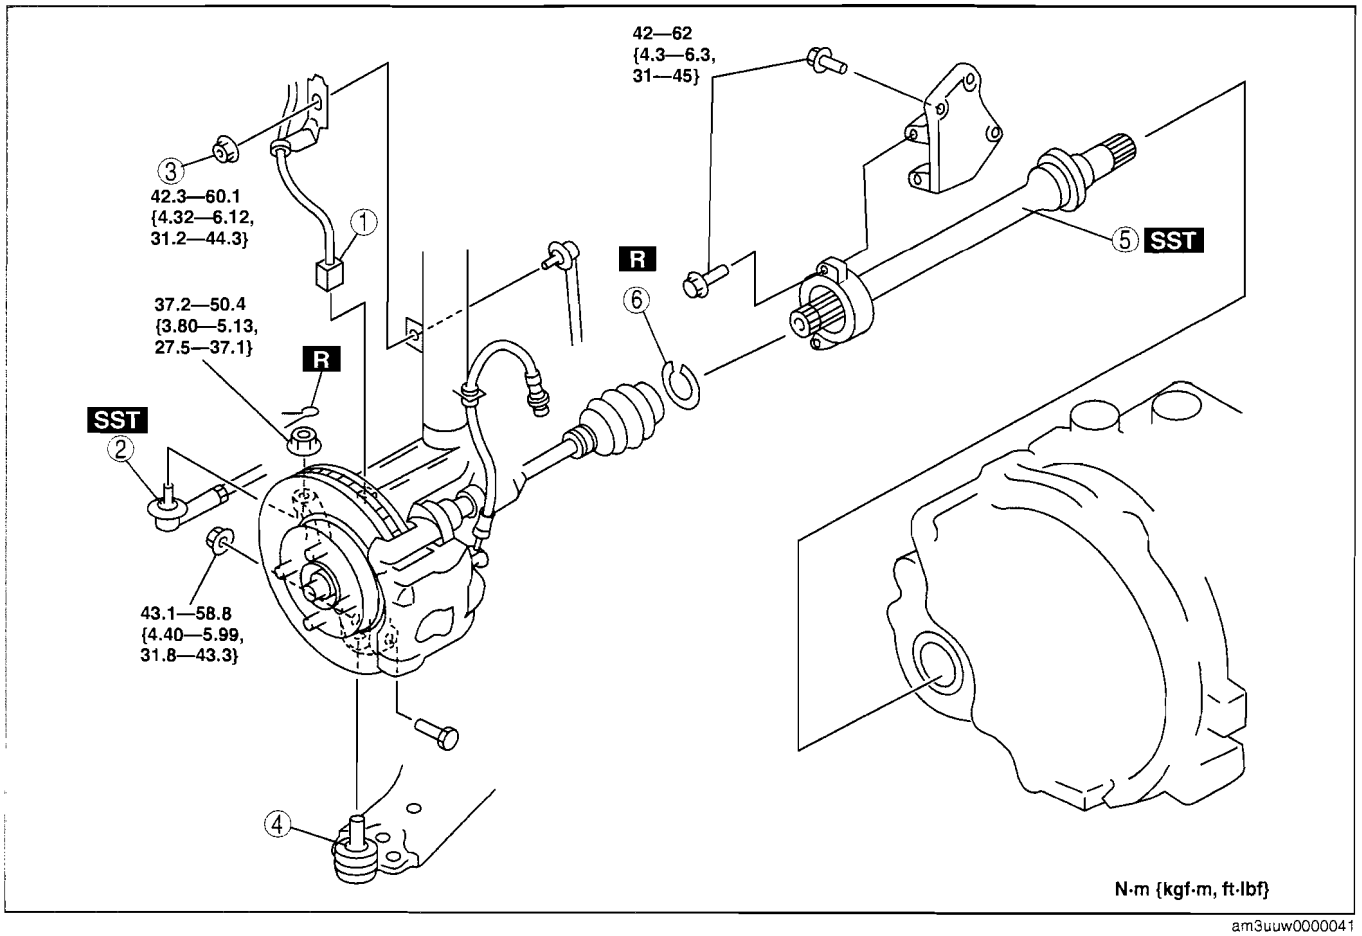
JOINT SHAFT REMOVAL/INSTALLATION[LF]

id031300800917

Caution

- **Performing the following procedures without first removing the ABS wheel-speed sensor may possibly cause an open circuit in the wiring harness if it is pulled by mistake. Before performing the following procedures, remove the ABS wheel-speed sensor (axle side) and fix it to an appropriate place where the sensor wiring harness will not be pulled by mistake while servicing the vehicle.**

1. Drain the transaxle oil. (See 05-15A-3 TRANSAXLE OIL REPLACEMENT[G35M-R].) (See 05-17A-9 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FN4A-EL].)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.



am3uuw0000041

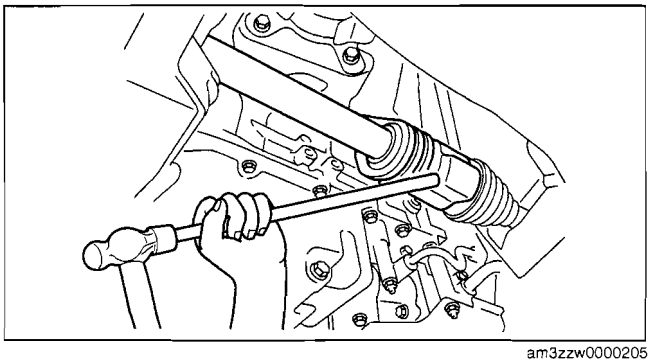
1	ABS wheel-speed sensor connector
2	Tie-rod end ball joint (See 02-13-14 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
3	Stabilizer control link upper nut
4	Front lower arm ball joint
5	Joint shaft (See 03-13-3 Joint Shaft Removal Note.)
6	Clip (See 03-13-3 Clip Installation Note.)

Joint Shaft Removal Note

1. Disconnect the drive shaft (RH) from the joint shaft by tapping the transaxle side outer ring with a brass bar and hammer.
2. Disconnect the joint shaft bracket from the cylinder block and remove the joint shaft.

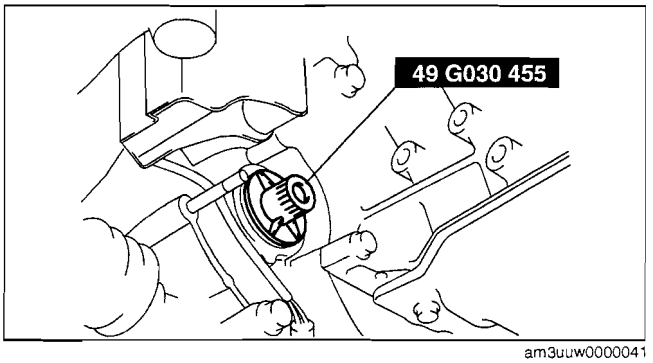
Caution

- **The sharp edges of the joint shaft can slice or puncture the oil seal. Be careful when removing the joint shaft from the transaxle.**



am3zzw0000205

3. Install the **SST** to the transaxle after the joint shaft is removed.

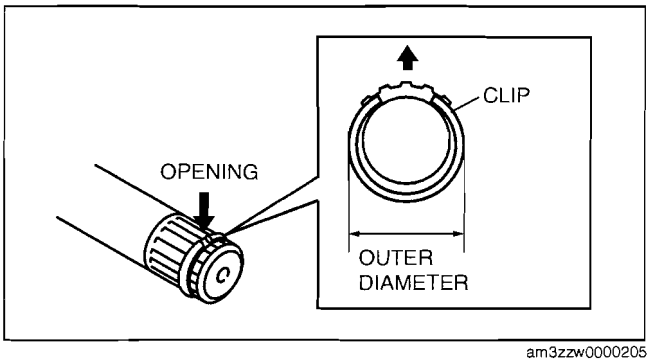


am3uuw0000041

Clip Installation Note

1. Install a new joint shaft clip to the clip groove at the end of the joint shaft with the clip opening facing upward and the clip width within the specification.
2. After installation, measure the outer diameter.
   - If it exceeds the specification, repeat installation using a new clip.

Standard
31.2 mm {1.23 in} or less



am3zzw0000205

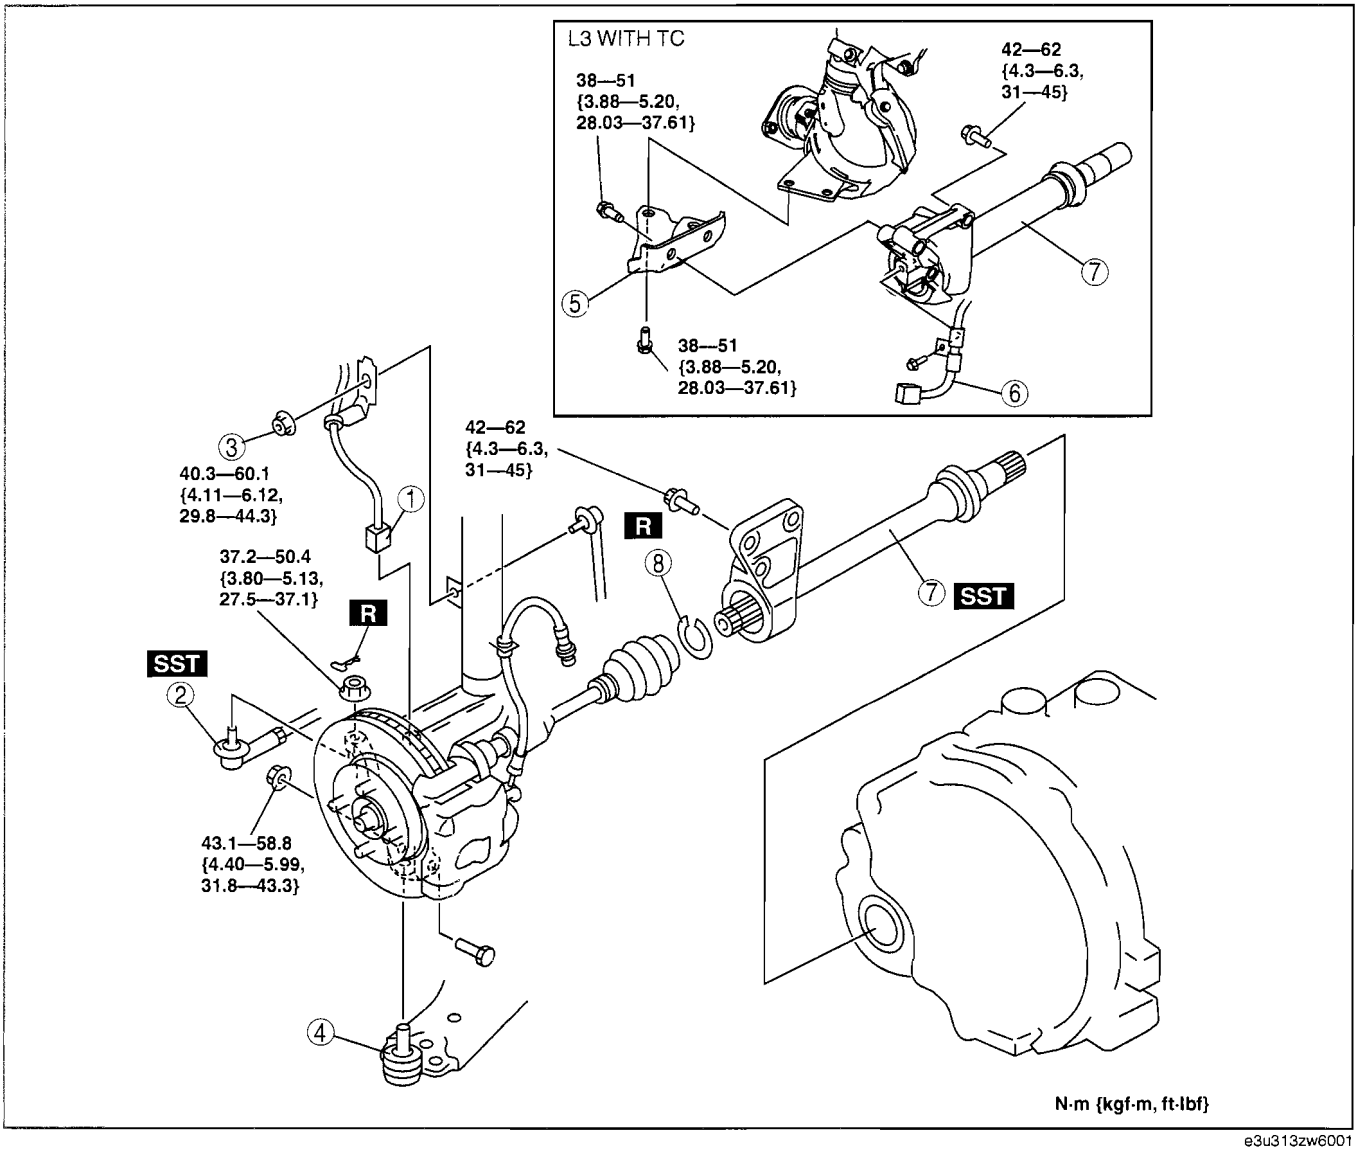
JOINT SHAFT REMOVAL/INSTALLATION[L3, L3 WITH TC]

id031300800918

Caution

- **Performing the following procedures without first removing the ABS wheel-speed sensor may possibly cause an open circuit in the wiring harness if it is pulled by mistake. Before performing the following procedures, remove the ABS wheel-speed sensor (axle side) and fix it to an appropriate place where the sensor wiring harness will not be pulled by mistake while servicing the vehicle.**

1. Drain the transaxle oil. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FS5A-EL].) (See 05-15A-3 TRANSAXLE OIL REPLACEMENT[G35M-R].) (See 05-15B-3 TRANSAXLE OIL REPLACEMENT[A26M-R].)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.



e3u313zw6001

1	ABS wheel-speed sensor connector
2	Tie-rod end ball joint (See 06-14-11 STEERING GEAR AND LINKAGE REMOVAL/INSTALLATION.)

4	Front lower arm ball joint

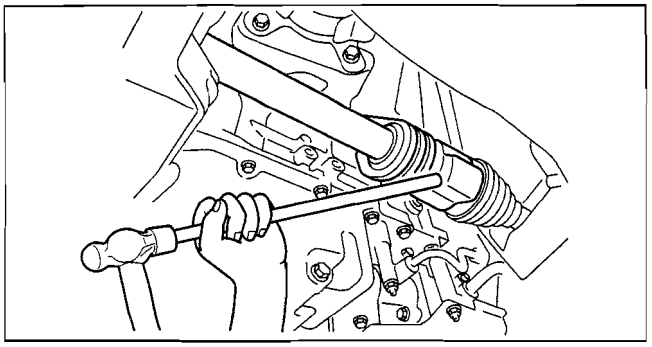
5	WU-TWC bracket
6	CKP sensor connecor and harness bracket
7	Joint shaft (See 03-13-5 Joint Shaft Removal Note.)
8	Clip (See 03-13-5 Clip Installation Note.)

Joint Shaft Removal Note

1. Disconnect the drive shaft (RH) from the joint shaft by tapping the transaxle side outer ring with a brass bar and hammer.
2. Disconnect the joint shaft bracket from the cylinder block and remove the joint shaft.

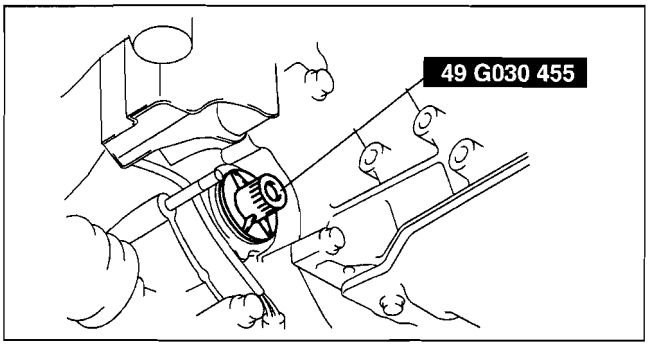
Caution

- **The sharp edges of the joint shaft can slice or puncture the oil seal. Be careful when removing the joint shaft from the transaxle.**



am3uuw0000041

3. Install the **SST** to the transaxle after the joint shaft is removed.



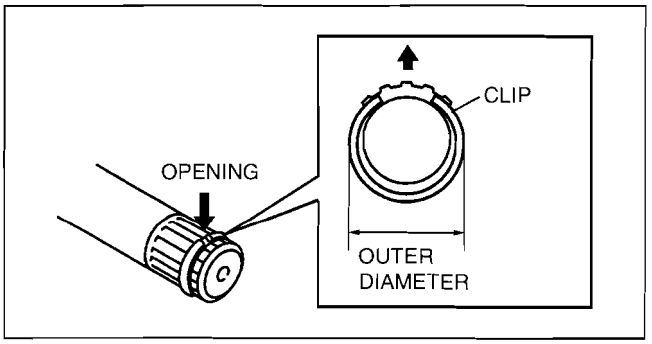
am3uuw0000099

Clip Installation Note

1. Install a new joint shaft clip to the clip groove at the end of the joint shaft with the clip opening facing upward and the clip width within the specification.
2. After installation, measure the outer diameter.
   - If it exceeds the specification, repeat installation using a new clip.

Standard

L3: 31.0 mm {1.22 in} or less
L3 WITH TC: 31.2 mm {1.23 in} or less

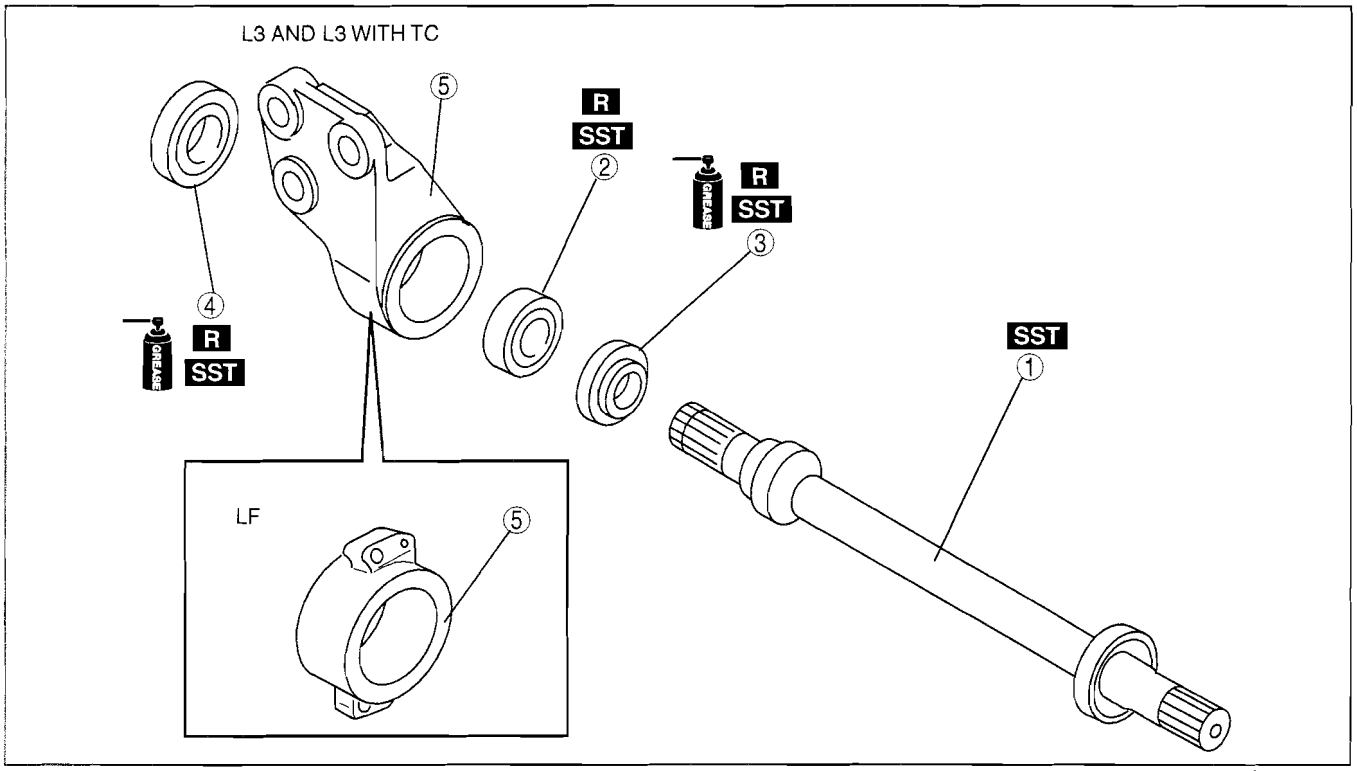


am3uuw0000041

JOINT SHAFT DISASSEMBLY/ASSEMBLY

id031300801400

1. Disassemble in the order indicated in the table.
2. Assemble in the reverse order of disassembly.

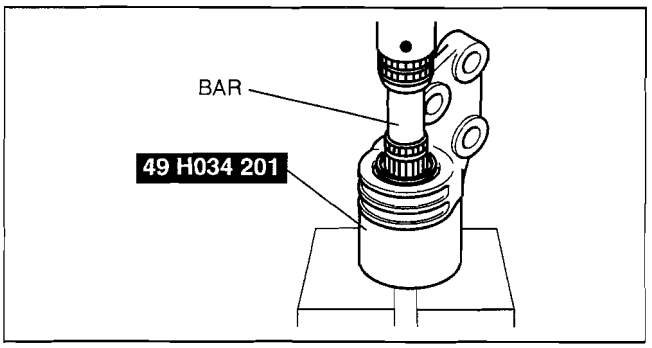


am3uuw0000041

1	Joint shaft (See 03-13-6 Joint Shaft Disassembly Note.) (See 03-13-8 Joint Shaft Assembly Note.)
2	Bearing (See 03-13-7 Bearing Disassembly Note.) (See 03-13-7 Bearing Assembly Note.)
3	Dust seal (LH) (See 03-13-8 Dust Seal (LH) Assembly Note.)
4	Dust seal (RH) (See 03-13-7 Dust Seal (RH) Assembly Note.)
5	Bracket

Joint Shaft Disassembly Note

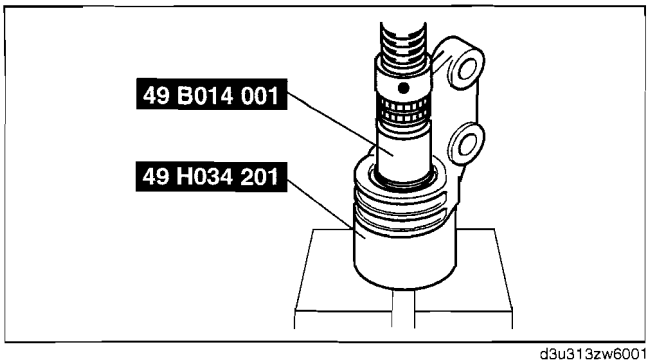
1. Remove the joint shaft using the **SST** and a press.



c3u0313w010

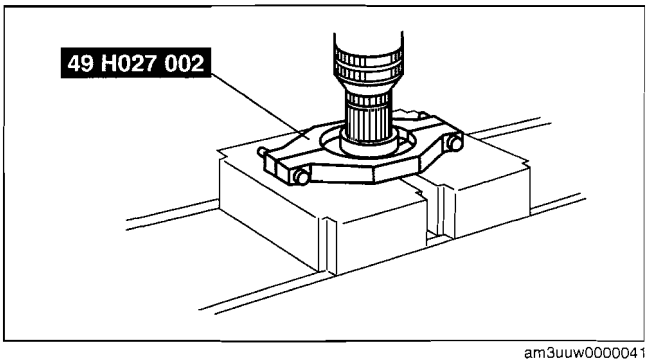
Bearing Disassembly Note

1. Remove the bearing and the dust seal (RH/LH) using the **SSTs**.



d3u313zw6001

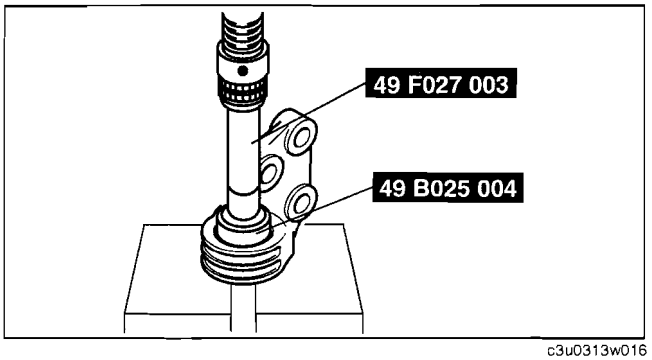
2. If the bearing remains on the joint shaft, set the **SST** and joint shaft to the press.



am3uuw0000041

Dust Seal (RH) Assembly Note

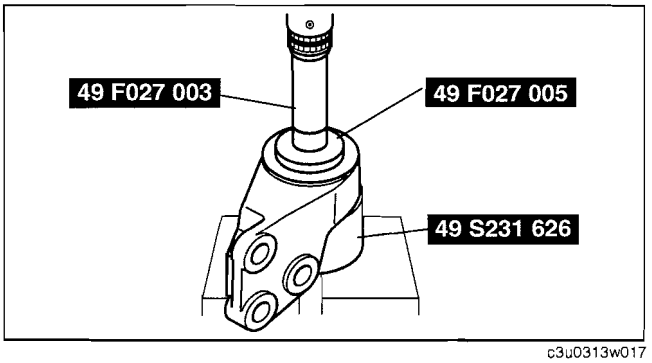
1. Apply grease to a new dust seal lip.
2. Install the dust seal (RH) using the **SSTs**.



c3u0313w016

Bearing Assembly Note

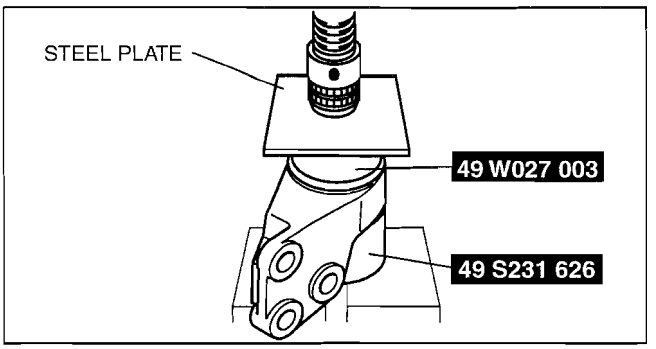
1. Install a new bearing using the **SSTs**.



c3u0313w017

Dust Seal (LH) Assembly Note

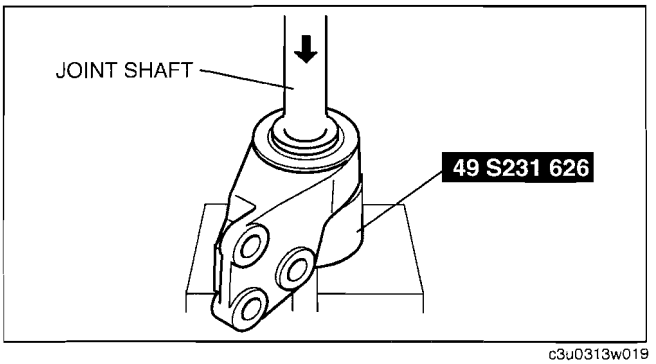
1. Apply grease to a new dust seal lip.
2. Install a new dust seal (LH) using the steel plate and the **SSTs**.



c3u0313w018

Joint Shaft Assembly Note

1. Press fit the joint shaft using the **SST** and a press.

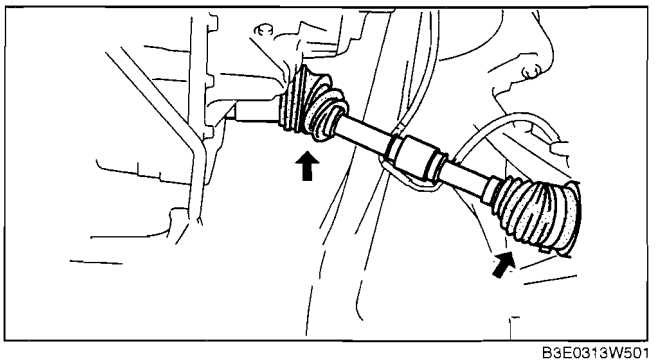


c3u0313w019

DRIVE SHAFT INSPECTION

id031300801800

1. Inspect the connections for any looseness.
   - If there is any malfunction, tighten or replace the applicable part.
2. Inspect the dust boot for damage and cracks.
   - If there is any malfunction, replace the applicable part.
3. Move the spline and joint up and down, left and right by hand and verify that there is no excessive play.
   - If there is any malfunction, replace the applicable part.



B3E0313W501

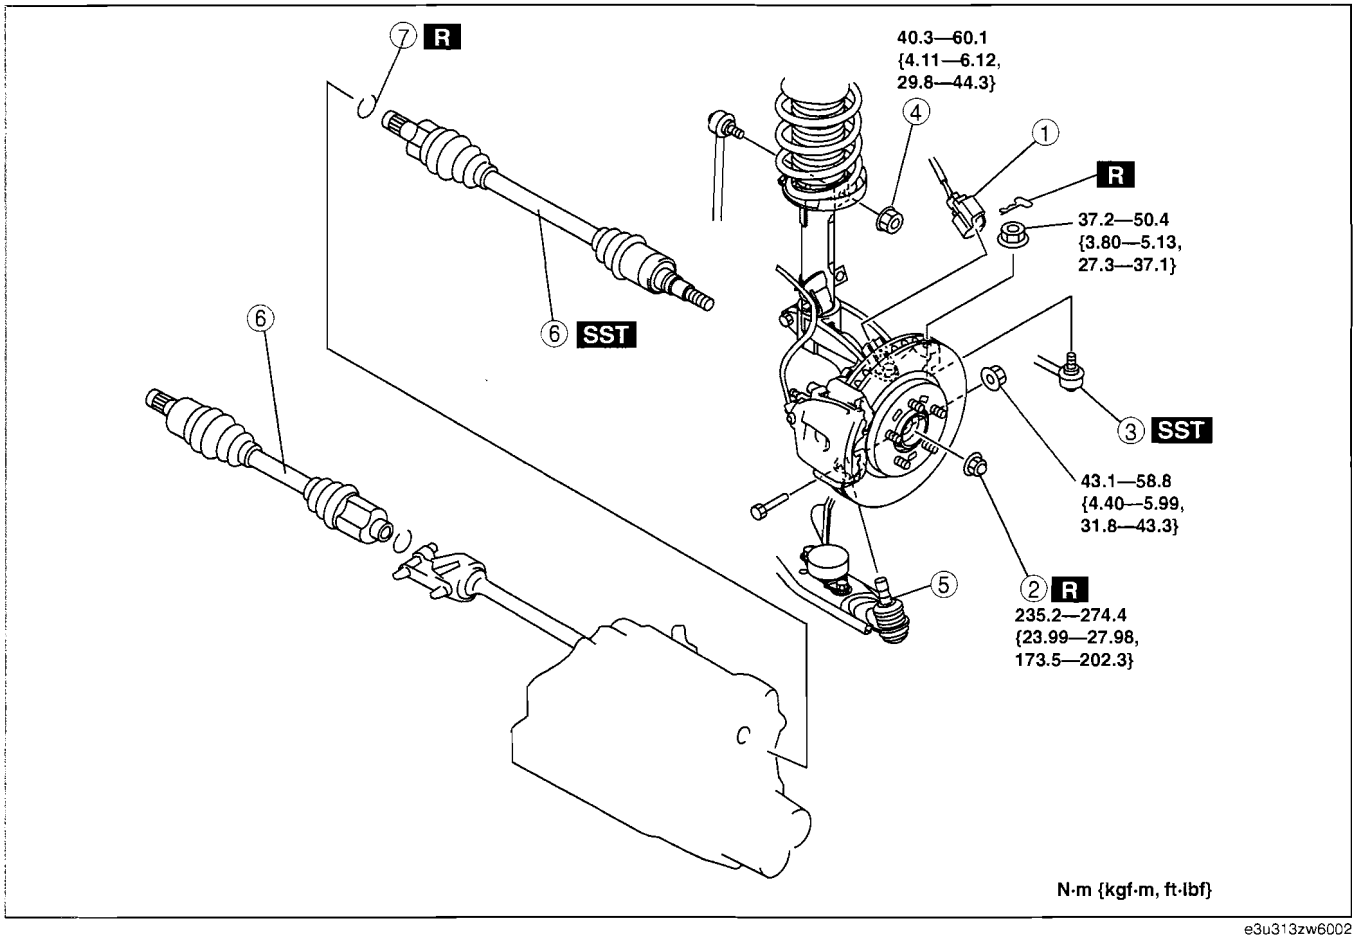
DRIVE SHAFT REMOVAL/INSTALLATION

id031300801900

Caution

- **Performing the following procedures without first removing the ABS wheel-speed sensor may possibly cause an open circuit in the wiring harness if it is pulled by mistake. Before performing the following procedures, disconnect the ABS wheel-speed sensor connector (axle side) and fix the wiring harness to an appropriate place where it will not be pulled by mistake while servicing the vehicle.**

1. Drain the transaxle oil. (See 05-17A-9 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FN4A-EL].) (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FS5A-EL].) (See 05-15A-3 TRANSAXLE OIL REPLACEMENT[G35M-R]) (See 05-15B-3 TRANSAXLE OIL REPLACEMENT[A26M-R].)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.



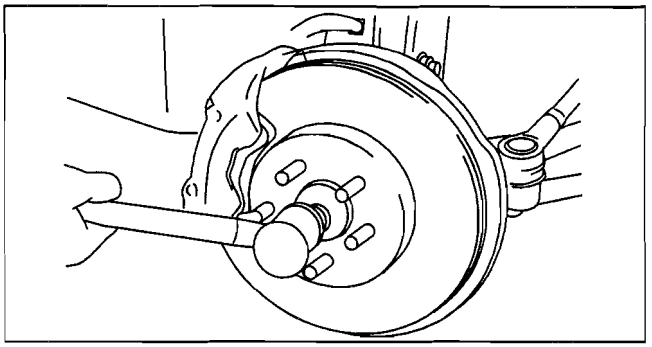
e3u313zw6002

1	ABS wheel-speed sensor connector
2	Locknut (See 03-11-3 WHEEL HUB, STEERING KNUCKLE REMOVAL/INSTALLATION.)
3	Tie-rod end ball joint (See 06-14-11 STEERING GEAR AND LINKAGE REMOVAL/INSTALLATION.)

4	Stabilizer control link upper nut
5	Front lower arm ball joint
6	Drive shaft (See 03-13-10 Drive Shaft Removal Note.) (See 03-13-11 Drive Shaft Installation Note.)
7	Clip (See 03-13-11 Clip Installation Note.)

Drive Shaft Removal Note

1. Install a spare bolt onto the drive shaft.
2. Tap the bolt with a copper hammer and separate the drive shaft from the axle.
3. Separate the drive shaft from the wheel hub.

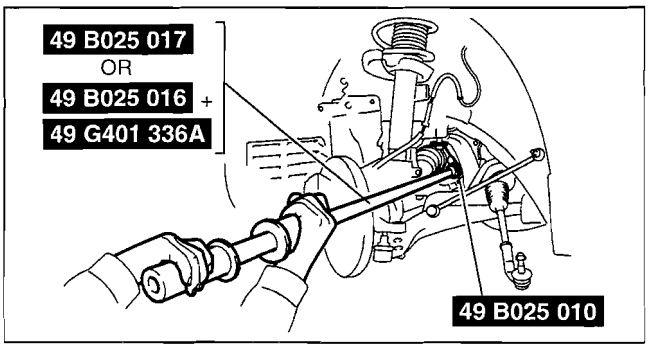


am3uuw0000042

4. Separate the drive shaft (LH) from the transaxle using the **SST**.

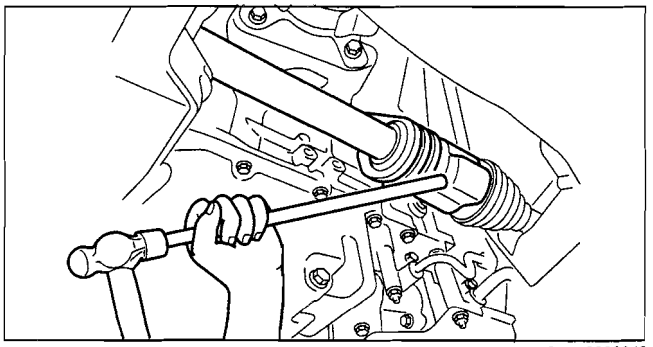
Caution

- **Be careful not to damage the transaxle oil seal with the bar.**



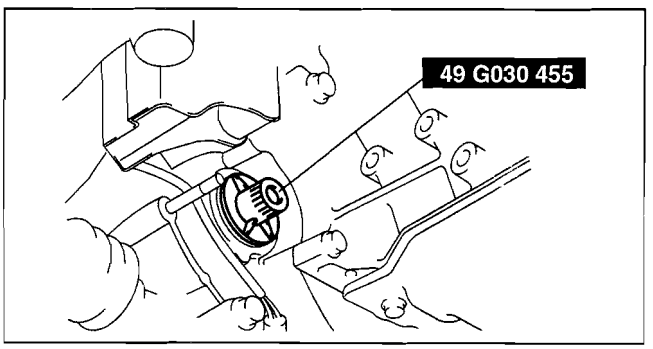
am3zzw0000338

5. Disconnect the drive shaft (RH) from the joint shaft by tapping the transaxle side outer ring with a brass bar and hammer.



am3uuw0000042

6. Install the **SST** to the transaxle after the drive shaft is removed.



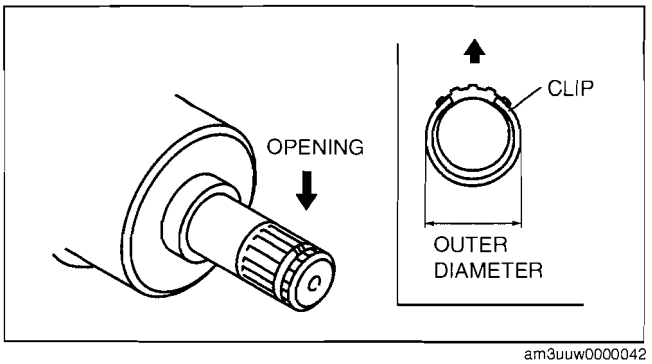
c3u0313w504

Clip Installation Note

1. Install a new drive shaft clip to the clip groove at the end of the drive shaft with the clip opening facing upward and the clip width within the specification.

   Standard
   LF (ATX): 29.5 mm {1.16 in}
   LF (MTX) and L3: 31.2 mm {1.23 in}
   L3 WITH TC: 33.2 mm {1.30 in}

2. After installation, measure the outer diameter.
   - If it exceeds the specification, repeat installation using a new clip.

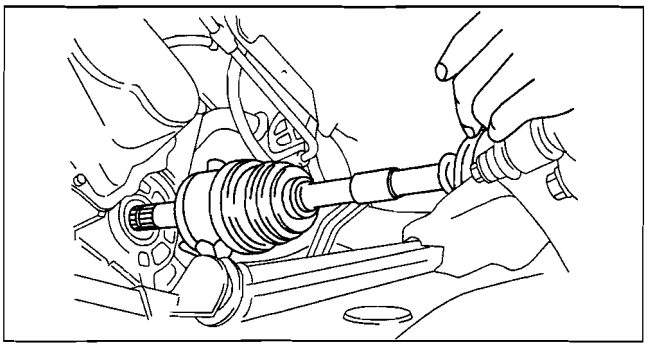


am3uuw0000042

Drive Shaft Installation Note
Left side

Caution
- **The sharp edges of the drive shaft can slice or puncture the oil seal. Be careful when installing the drive shaft to the transaxle.**

1. Insert the drive shaft into the wheel hub.
2. Apply transaxle oil to the oil seal lip.
3. Install the drive shaft to the transaxle.
4. After installation, pull the transaxle side outer ring forward to confirm that the drive shaft is securely held by the clip.



am3uuw0000042

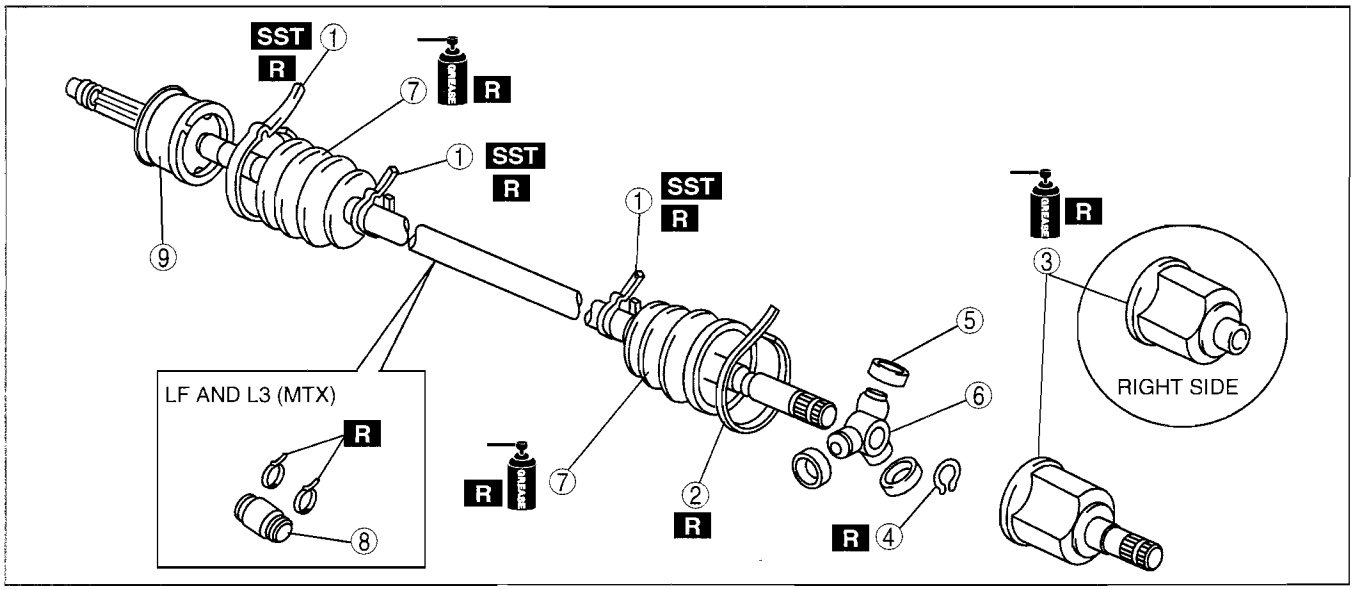
Right side

1. Install a new clip onto the joint shaft. (See 03-13-2 JOINT SHAFT REMOVAL/INSTALLATION[LF].) (See 03-13-4 JOINT SHAFT REMOVAL/INSTALLATION[L3, L3 WITH TC].)
2. Insert the drive shaft to the wheel hub.
3. Insert the drive shaft to the joint shaft.
4. After installation, pull the transaxle side outer ring forward to confirm that the drive shaft is securely held by the clip.

DRIVE SHAFT (TRIPOD JOINT) DISASSEMBLY/ASSEMBLY

id031300801700

1. Disassemble in the order indicated in the table.
2. Assemble in the reverse order of disassembly.



am3uuw0000043

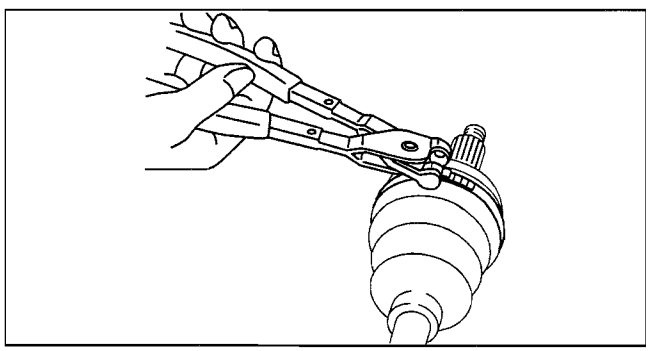
1	Boot band (wheel side, transaxle side smaller diameter) (See 03-13-12 Boot Band (Wheel Side, Transaxle Side Smaller Diameter) Disassembly Note.) (See 03-13-16 Boot Band (Wheel Side, Transaxle Side Smaller Diameter) Assembly Note.)
2	Boot band (transaxle side larger diameter) (See 03-13-13 Boot Band (Transaxle Side Larger Diameter) Disassembly Note.) (See 03-13-15 Boot Band (Transaxle Side Larger Diameter) Assembly Note.)
3	Outer ring (See 03-13-13 Outer Ring Disassembly Note.) (See 03-13-15 Outer Ring Assembly Note)
4	Snap ring (See 03-13-13 Snap Ring, Tripod Joint Disassembly Note.) (See 03-13-14 Tripod Joint, Snap Ring Assembly Note.)
5	Free ring (ATX)
6	Tripod joint (See 03-13-13 Snap Ring, Tripod Joint Disassembly Note.) (See 03-13-14 Tripod Joint, Snap Ring Assembly Note.)
7	Boot (See 03-13-13 Boot Disassembly Note.) (See 03-13-14 Boot Assembly Note.)
8	Dynamic damper (LF and L3 (MTX)) (See 03-13-14 Dynamic Damper Assembly Note.)
9	Shaft and ball joint component

Boot Band (Wheel Side, Transaxle Side Smaller Diameter) Disassembly Note

Note

- Remove the boot band only if there is a malfunction.

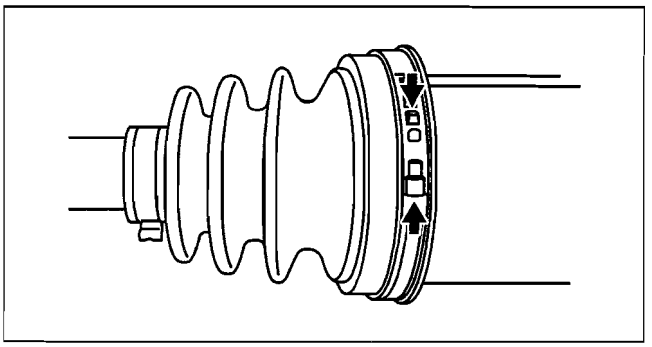
1. Remove the boot band using end clamp pliers.



am3uuw0000043

Boot Band (Transaxle Side Larger Diameter) Disassembly Note

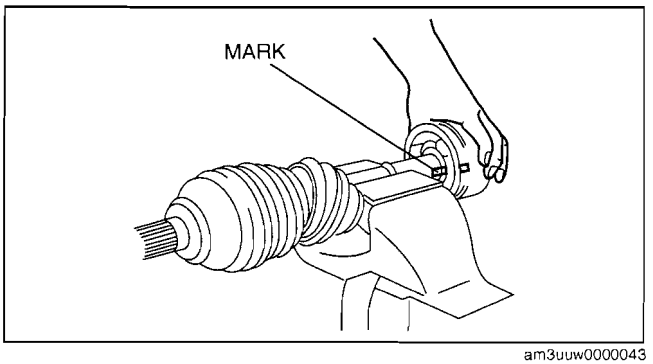
1. Pry up the boot band at the points indicated in the figure using pliers and remove the band.



am3uuw0000043

Outer Ring Disassembly Note

1. Place an alignment mark on the drive shaft and outer ring.
2. Remove the outer ring.



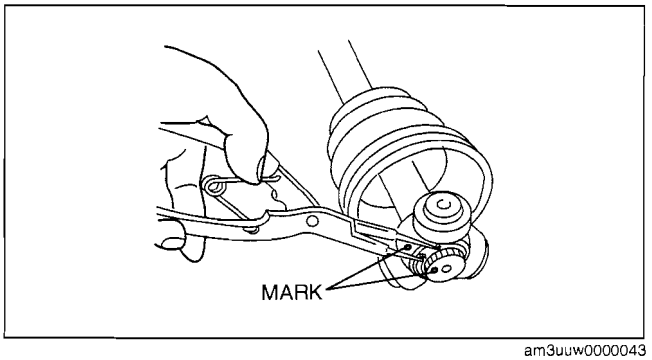
am3uuw0000043

Snap Ring, Tripod Joint Disassembly Note

1. Place an alignment mark on the shaft and tripod joint.
2. Remove the snap ring using snap ring pliers.
3. Remove the tripod joint from the shaft.

Caution

- **Do not tap the tripod joint with a hammer.**



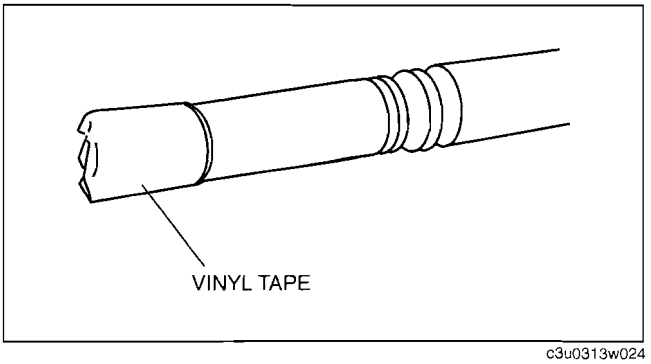
am3uuw0000043

Boot Disassembly Note

Note

- Remove the wheel side boot only if there is any malfunction.

1. Wrap the shaft splines with tape.
2. Remove the boot.



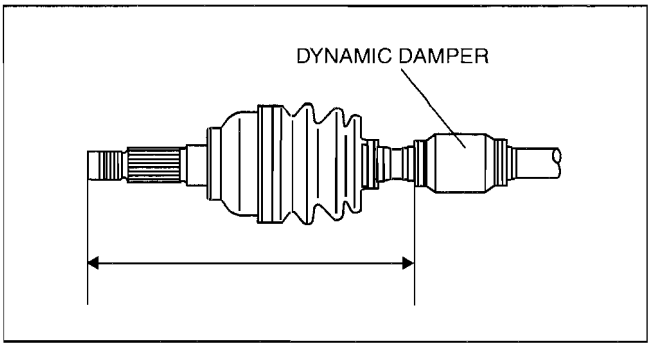
c3u0313w024

Dynamic Damper Assembly Note

1. Install the dynamic damper as shown in the figure.

   Standard length
   RH: 303.7—313.7 mm {11.96—12.35 in}
   LH: 288.7—298.7 mm {11.37—11.75 in}

2. Install the new boot band onto the dynamic damper.



am3uuw0000043

Boot Assembly Note

Note
- The boot shapes on the wheel side and the differential side are different. Do not install the wrong boot by mistake.

1. Fill the inside of the new dust boot (wheel side) with grease.

   Caution
   - **Do not touch the grease with your hand. Apply it from the tube to prevent foreign matter from entering the boot.**

   Grease amount
   LF and L3 (ATX): 103—113 g {3.64—3.98 oz}
   LF and L3 (MTX): 105—115 g {3.71—4.05 oz}
   L3 WITH TC: 120—130 g {4.24—4.58 oz}

2. Install the boot with the drive shaft spline still wrapped with vinyl tape.
3. Remove the vinyl tape.

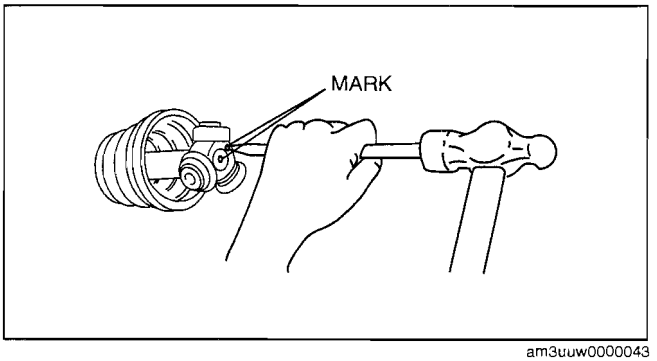
Tripod Joint, Snap Ring Assembly Note

1. While aligning the marks on the shaft and the tripod joint, insert the tripod joint using a bar and a hammer.

   Caution
   - **Do not tap the roller with a hammer.**

2. Insert a new snap ring using snap ring pliers.

   Caution
   - **Be sure the snap ring engages correctly in the groove of the shaft.**



am3uuw0000043

Outer Ring Assembly Note

1. Fill the outer ring and boot (transaxle side) with the specified grease.

Caution

- **Do not touch the grease with your hand. Apply it from the tube to prevent foreign matter from entering the boot.**

Grease amount

LF and L3 (ATX): 105—119 g {3.71—4.19 oz}
LF and L3 (MTX): 140—145 g {4.95—5.11 oz}
L3 WITH TC (RH): 135—145 g {4.77—5.11 oz}
L3 WITH TC (LH): 174—188 g {6.15—6.63 oz}

2. Assemble the outer ring.
3. Set the drive shaft to the standard length.

Front drive shaft standard length

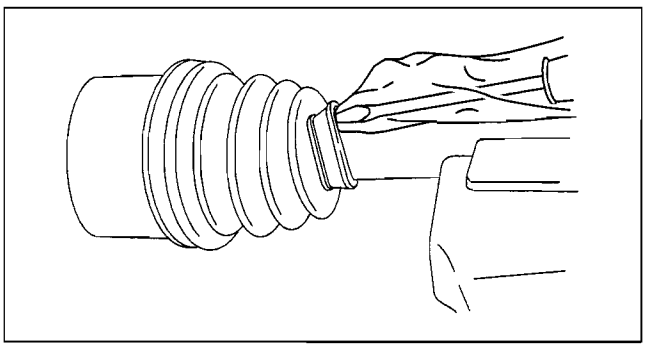
LF and L3 (ATX (RH)): 546.1—556.1 mm {21.50—21.89 in}
LF and L3 (ATX (LH)): 626.9—636.9 mm {24.69—25.07 in}
LF and L3 (MTX (RH)): 610.02—620.02 mm {24.02—24.41 in}
LF and L3 (MTX (LH)): 639.04—649.04 mm {25.16—25.55 in}
L3 WITH TC (RH): 587.55—597.55 mm {23.14—25.52 in}
L3 WITH TC (LH): 600.0—610.0 mm {23.63—24.01 in}

4. Release any trapped air from the boots by carefully lifting up the small end of each boot with a cloth wrapped screwdriver.

Caution

- **Do not let the grease leak.**
- **Do not damage the boot.**

5. Verify that the drive shaft length is within the specification under atmospheric pressure inside the boot.
   - If not within the specification, repeat from Step 3.



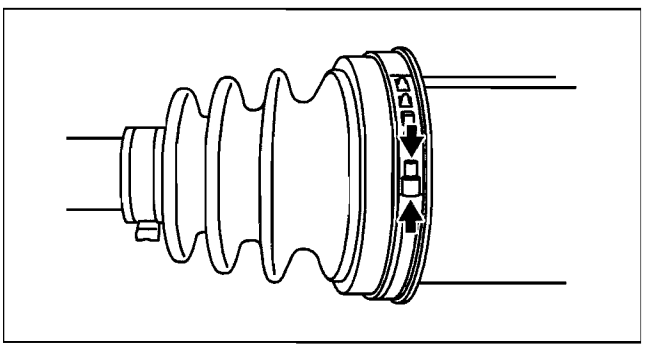
am3uuw0000043

Boot Band (Transaxle Side Larger Diameter) Assembly Note

1. Pry up the boot band at the points indicated in the figure using pliers and tighten the boot band.

Caution

- **Verify that the boot band is installed securely to the boot slot.**

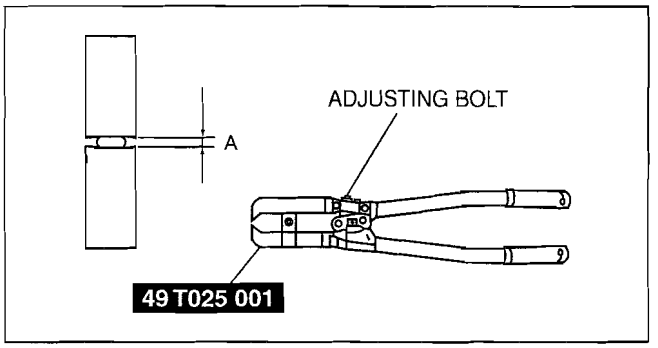


am3uuw0000044

Boot Band (Wheel Side, Transaxle Side Smaller Diameter) Assembly Note

1. Adjust opening width A by turning the adjusting bolt of the **SST**.

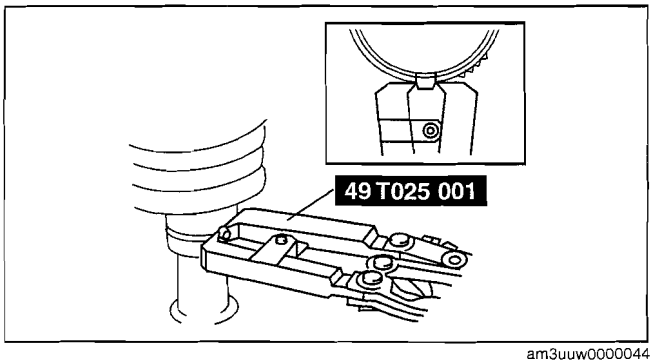
   Standard A
   1.6 mm {0.063 in}



c3u0313w027

2. Crimp the wheel side small boot band completely closed so there is no gap using the **SST**.
3. Verify that the boot band does not protrude from the boot band installation area.
   - If the boot band protrudes from the boot band installation area, replace the boot band and repeat Step 2.
4. Fill the boot with the repair kit grease.
5. Adjust opening width A of the **SST** to the specification.

   Standard A
   2.0 mm {0.079 in}



am3uuw0000044

6. Crimp the wheel side large boot band completely closed so there is no gap using the **SST**.
7. Verify that the boot band does not protrude from the boot band installation area.
   - If the boot band protrudes from the boot band installation area, replace the boot band and repeat Step 6.

ON-BOARD DIAGNOSIS[ABS]

id0402a7805500

On-Board Diagnostic (OBD) Test Description

- The OBD test inspects the integrity and function of the ABS and outputs the results when requested by the specific tests.
- On-board diagnostic test also:
  - Provides a quick inspection of the ABS usually performed at the start of each diagnostic procedure.
  - Provides verification after repairs to ensure that no other faults occurred during service.
- The OBD test is divided into 3 tests:
  - Read/clear diagnostic results, PID monitor and record and active command modes.

Read/clear diagnostic results

- This function allows you to read or clear DTCs in the ABS HU/CM memory.

PID/Data monitor and record

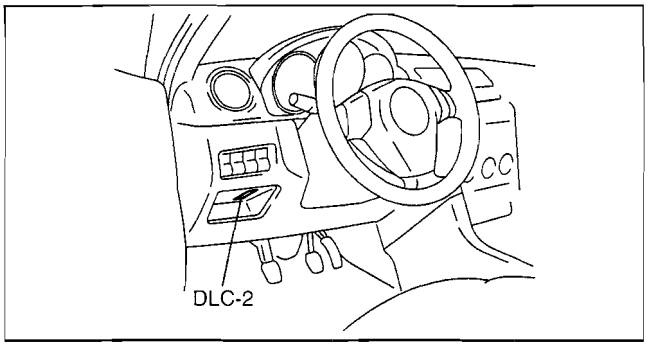
- This function allows you to access certain data values, input signals, calculated values, and system status information.

Active command modes

- This function allows you to control devices through the M-MDS.

Reading DTCs Procedure

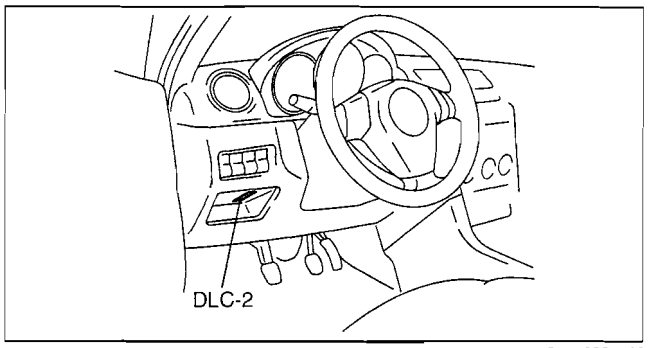
1. Connect the M-MDS to the DLC-2 connector.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Toolbox" tab.
     2. Select "Self Test".
     3. Select "Modules".
     4. Select "ABS".
   - When using the PDS (Pocket PC)
     1. Select "Module Tests".
     2. Select "ABS".
     3. Select "Self Test".
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
4. After completion of repairs, clear all DTCs stored in the ABS. (See 04-02A-3 Clearing DTCs Procedures.)



am3zzw0000168

Clearing DTCs Procedures

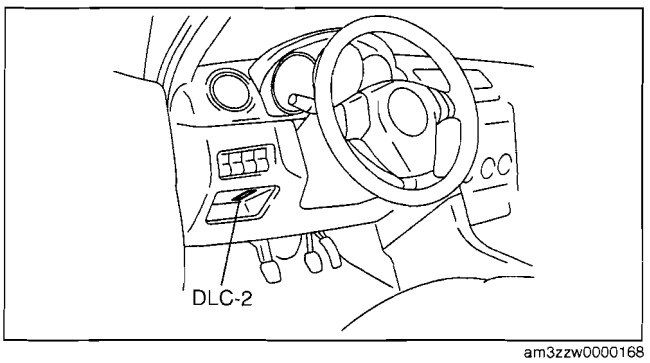
1. Connect the M-MDS to the DLC-2 connector.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Toolbox" tab.
     2. Select "Self Test".
     3. Select "Modules".
     4. Select "ABS".
   - When using the PDS (Pocket PC)
     1. Select "Module Tests".
     2. Select "ABS".
     3. Select "Self Test".
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Verify that no DTCs are displayed.



am3zzw0000168

PID/Data Monitor and Record Procedure

1. Connect the M-MDS to the DLC-2 connector.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Toolbox" tab.
     2. Select "DataLogger".
     3. Select "Modules".
     4. Select "ABS".
   - When using the PDS (Pocket PC)
     1. Select "Module Tests".
     2. Select "ABS".
     3. Select "DataLogger".
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the directions on the screen.



am3zzw0000168

Note

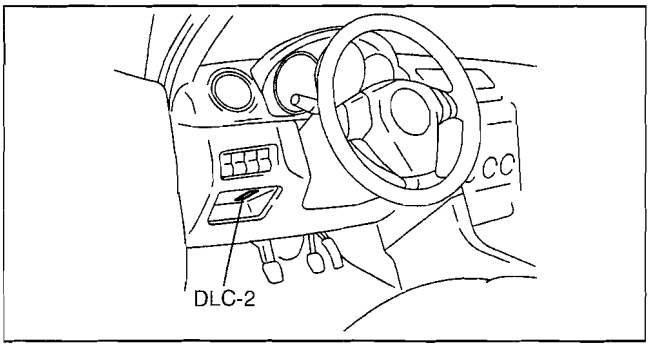
- The PID/Data monitor function is used for monitoring the calculated value. Therefore, if the monitored value of the output parts is not within the specification, inspection of the monitored value of input parts corresponding to applicable output part control is necessary. In addition, because the system does not display output part malfunction as abnormality in the monitored value, it is necessary to inspect the output part individually using a active command modes function.

Active Command Modes Procedure

Note

- Performing the active command modes function while the engine is running could result in the DTC U2064 being stored in the instrument cluster. Therefore, perform the active command mode inspection while the engine is stopped. If the active command mode inspection is accidentally performed while the engine is running, inspect the instrument cluster for the recorded DTCs, and then clear any that have been recorded.

1. Connect the M-MDS to the DLC-2 connector.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Toolbox" tab.
     2. Select "DataLogger".
     3. Select "Modules".
     4. Select "ABS".
   - When using the PDS (Pocket PC)
     1. Select "Module Tests".
     2. Select "ABS".
     3. Select "DataLogger".
3. Select the active command modes from the PID table.
4. Perform the active command modes, inspect the operations for each parts.
   - If there is no operation sound from the relay, motor, and solenoid after the active command mode inspection is performed, it is possible that there is an open or short circuit in the wiring harness, relay, motor or solenoid, or sticking and operation malfunction.



am3zzw0000168

DTC Table

DTC M-MDS	System malfunction location	Page
B1317	Power supply system	(See 04-02A-6 DTC B1317, B1318[ABS].)
B1318	Power supply system	(See 04-02A-6 DTC B1317, B1318[ABS].)
B1342	ABS HU/CM (internal malfunction)	(See 04-02A-7 DTC B1342, C1267[ABS].)
C1095	Pump motor, motor relay	(See 04-02A-8 DTC C1095[ABS].)
C1141	LF ABS sensor rotor	(See 04-02A-9 DTC C1141, C1142, C1143, C1144, C1233, C1234, C1235, C1236[ABS].)
C1142	RF ABS sensor rotor	(See 04-02A-9 DTC C1141, C1142, C1143, C1144, C1233, C1234, C1235, C1236[ABS].)
C1143	LR ABS sensor rotor	(See 04-02A-9 DTC C1141, C1142, C1143, C1144, C1233, C1234, C1235, C1236[ABS].)
C1144	RR ABS sensor rotor	(See 04-02A-9 DTC C1141, C1142, C1143, C1144, C1233, C1234, C1235, C1236[ABS].)
C1145	RF ABS wheel-speed sensor	(See 04-02A-11 DTC C1145, C1155, C1165, C1175[ABS].)
C1155	LF ABS wheel-speed sensor	(See 04-02A-11 DTC C1145, C1155, C1165, C1175[ABS].)
C1165	RR ABS wheel-speed sensor	(See 04-02A-11 DTC C1145, C1155, C1165, C1175[ABS].)
C1175	LR ABS wheel-speed sensor	(See 04-02A-11 DTC C1145, C1155, C1165, C1175[ABS].)
C1233	LF ABS wheel-speed sensor/ABS sensor rotor	(See 04-02A-9 DTC C1141, C1142, C1143, C1144, C1233, C1234, C1235, C1236[ABS].)
C1234	RF ABS wheel-speed sensor/ABS sensor rotor	(See 04-02A-9 DTC C1141, C1142, C1143, C1144, C1233, C1234, C1235, C1236[ABS].)
C1235	RR ABS wheel-speed sensor/ABS sensor rotor	(See 04-02A-9 DTC C1141, C1142, C1143, C1144, C1233, C1234, C1235, C1236[ABS].)
C1236	LR ABS wheel-speed sensor/ABS sensor rotor	(See 04-02A-9 DTC C1141, C1142, C1143, C1144, C1233, C1234, C1235, C1236[ABS].)
C1267	ABS HU/CM (internal malfunction)	(See 04-02A-7 DTC B1342, C1267[ABS].)
C1446	Brake switch	(See 04-02A-13 DTC C1446[ABS].)
U1900	CAN line	(See 04-02A-14 DTC U1900, U2012[ABS].)
U2012	CAN line	(See 04-02A-14 DTC U1900, U2012[ABS].)

PID/DATA Monitor Table

PID name (definition)	Unit/Condition	Operation condition (reference)	Action	ABS HU/CM terminal
BOO_ABS (Brake pedal switch input)	On/Off	• Brake pedal depressed: On • Brake pedal released: Off	Inspect the brake switch. (See 04-11-8 BRAKE SWITCH INSPECTION.)	—
CCNTABS (Number of continuous codes)	—	• DTCs detected: **1—255** • No DTCs detected: **0**	Perform the DTC inspection. (See 04-02A-4 DTC Table.)	—
LF_WSPD (Left front ABS wheel-speed sensor input)	KPH, MPH	• Vehicle stopped: **0 KPH, 0 MPH** • Vehicle running: Vehicle speed	Inspect the ABS wheel-speed sensor. (See 04-13-8 FRONT ABS WHEEL-SPEED SENSOR INSPECTION.)	I, K
LR_WSPD (Left rear ABS wheel-speed sensor input)	KPH, MPH	• Vehicle stopped: **0 KPH, 0 MPH** • Vehicle running: Vehicle speed	Inspect the ABS wheel-speed sensor. (See 04-13-10 REAR ABS WHEEL-SPEED SENSOR INSPECTION.)	U, W
RF_WSPD (Right front ABS wheel-speed sensor input)	KPH, MPH	• Vehicle stopped: **0 KPH, 0 MPH** • Vehicle running: Vehicle speed	Inspect the ABS wheel-speed sensor. (See 04-13-8 FRONT ABS WHEEL-SPEED SENSOR INSPECTION.)	Q, O
RR_WSPD (Right rear ABS wheel-speed sensor input)	KPH, MPH	• Vehicle stopped: **0 KPH, 0 MPH** • Vehicle running: Vehicle speed	Inspect the ABS wheel-speed sensor. (See 04-13-10 REAR ABS WHEEL-SPEED SENSOR INSPECTION.)	E, C

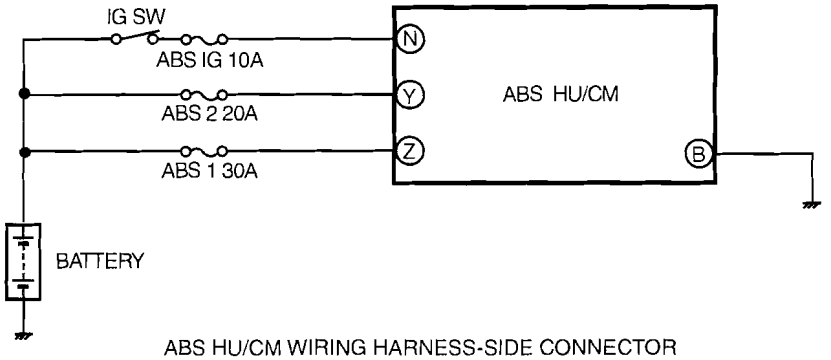
Active Command Modes Table

Command name	Output part	Operation	Operating condition
PMP_MOTOR	Pump motor	On/Off	Ignition switch at ON
RF_OUTLET	RF outlet solenoid valve		
RF_INLET	RF inlet solenoid valve		
LF_OUTLET	LF outlet solenoid valve		
LF_INLET	LF inlet solenoid valve		
RR_OUTLET	RR outlet solenoid valve		
RR_INLET	RR inlet solenoid valve		
LR_OUTLET	LR outlet solenoid valve		
LR_INLET	LR inlet solenoid valve		

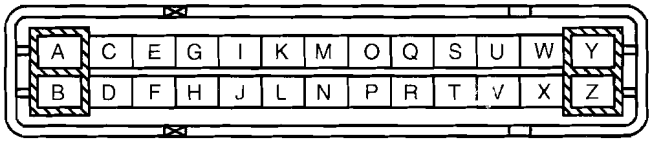
DTC B1317, B1318[ABS]

id0402a7806500

DTC B1317, B1318	Power supply system
DETECTION CONDITION	• B1317 — High ignition voltage (**16 V or more**) is detected at the voltage monitor of the solenoid valve or motor monitor. • B1318 — When driving the vehicle at **20 km/h {12.4 mph} or more**, low ignition voltage (**10 V or less**) is detected at the voltage monitor of the solenoid valve or motor monitor.
POSSIBLE CAUSE	• ABS 1 30A/ABS 2 20A/ABS IG 10A fuse malfunction • Open or short circuit in wiring harness between ABS HU/CM terminal N and battery • Open or short circuit in wiring harness between ABS HU/CM terminal Y and battery • Open or short circuit in wiring harness between ABS HU/CM terminal Z and battery • Open circuit in wiring harness between ABS HU/CM terminal B and body ground • Battery deterioration • Generator malfunction • Poor connection at connectors (female terminal)



ABS HU/CM WIRING HARNESS-SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT BATTERY VOLTAGE** • Is the battery positive terminal voltage normal?	Yes	Inspect for normal connection of the battery terminals. Go to the next step.
		No	Charge or replace the battery, then go to Step 6. (See 01-17A-6 BATTERY RECHARGING[LF, L3].) (See 01-17A-2 BATTERY REMOVAL/ INSTALLATION[LF, L3].)
2	**INSPECT BATTERY GRAVITY** • Is battery specific gravity as specified?	Yes	Go to the next step.
		No	Replace the battery, then go to Step 6. (See 01-17A-2 BATTERY REMOVAL/ INSTALLATION[LF, L3].)
3	**INSPECT CHARGING SYSTEM** • Are the generator and the drive belt tensions normal?	Yes	Go to the next step.
		No	Replace the generator and/or drive belt if necessary. (See 01-17A-6 GENERATOR REMOVAL/ INSTALLATION[LF, L3].) (See 01-10A-4 DRIVE BELT REPLACEMENT[LF, L3].) Go to Step 6.

STEP	INSPECTION		ACTION
4	**INSPECT ABS HU/CM POWER SUPPLY FOR OPEN CIRCUIT** • Disconnect the ABS HU/CM connectors. • Turn the ignition switch to the ON position. • Measure the voltage between following connector terminals of the ABS HU/CM (vehicle harness-side) and body ground: — ABS HU/CM: N—Body ground — ABS HU/CM: Y—Body ground — ABS HU/CM: Z—Body ground • Is the voltage **10 V or more**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 6.
5	**INSPECT ABS HU/CM GROUND FOR POOR GROUND OR OPEN CIRCUIT** • Turn the ignition switch off. • Measure the resistance between following connector terminal of ABS HU/CM (vehicle harness-side) and body ground: — ABS HU/CM: B—Body ground • Is the resistance **within 0—1 ohm**?	Yes	Go to the next step.
		No	If there is open circuit: • Repair or replace the wiring harness, then go to the next step. If resistance is not within specification: • Repair or replace the poor ground part, then go to the next step.
6	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Reconnect all disconnected connectors. • Clear the DTCs from the memory. (See 04-02A-2 ON-BOARD DIAGNOSIS[ABS].) • Start the engine and drive the vehicle at **20 km/h {12.4 mph} or more**. • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the ABS HU/CM, then go to the next step. (See 04-13-4 ABS HU/CM REMOVAL/ INSTALLATION)
		No	Go to the next step.
7	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02A-2 ON-BOARD DIAGNOSIS[ABS].)
		No	DTC troubleshooting completed.

DTC B1342, C1267[ABS]

id0402a7803200

DTC B1342, C1267	ABS HU/CM (internal malfunction)
DETECTION CONDITION	• The ABS HU/CM on-board diagnostic function detects control module internal malfunction.
POSSIBLE CAUSE	• ABS HU/CM internal malfunction

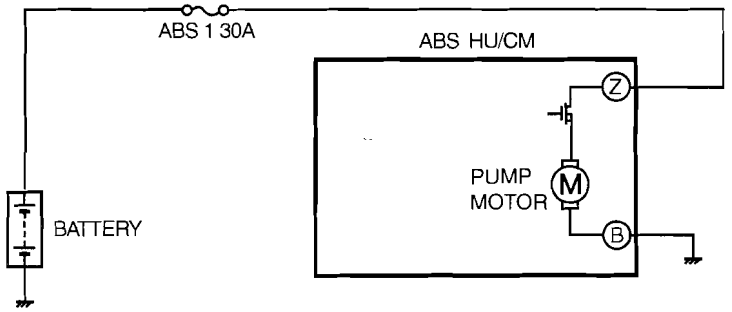
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY NO ABS HU/CM MALFUNCTION** • Clear the DTCs from the memory. (See 04-02A-2 ON-BOARD DIAGNOSIS[ABS].) • Start the engine and drive the vehicle at **10km/h {6.2 mph} or more**. • Are the same DTCs present?	Yes	Replace the ABS HU/CM, then go to the next step. (See 04-13-4 ABS HU/CM REMOVAL/ INSTALLATION.)
		No	Go to the next step.
2	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02A-2 ON-BOARD DIAGNOSIS[ABS].)
		No	DTC troubleshooting completed.

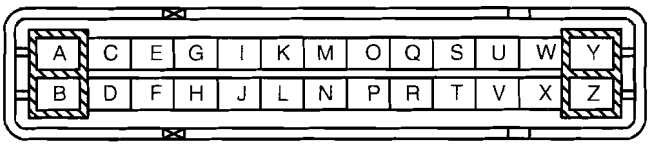
DTC C1095[ABS]

id0402a7802800

DTC C1095	Pump motor, motor relay
DETECTION CONDITION	• ABS motor monitor signal does not correspond to ABS HU/CM OFF signal. • ABS motor monitor signal does not correspond to ABS HU/CM ON signal. • ABS motor monitor OFF signal is input within specified time limit when motor signal is switched from ON to OFF by ABS HU/CM.
POSSIBLE CAUSE	• ABS 1 (30 A) fuse malfunction • Open circuit or short to ground in the wiring harness between the battery and ABS HU/CM terminal Z • Open circuit in the wiring harness between ABS HU/CM terminal B and body ground • Open or short circuit in ABS HU/CM internal motor relay, or stuck motor relay • Open or short circuit in ABS HU/CM internal pump motor, or frozen pump motor • Poor connection at connectors (female terminal)



ABS HU/CM WIRING HARNESS-SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT ABS FUSE CONDITION** • Is the ABS fuse (ABS 1 30 A) normal?	Yes	Go to the next step.
		No	Replace the ABS fuse, then go to Step 6.
2	**VERIFY PUMP MOTOR OPERATION** • Turn the ignition switch off. • Connect the M-MDS to the DLC-2. • Turn the ignition switch to the ON position. • Access PMP _MOTOR active command modes using the M-MDS. • Does the pump motor operate?	Yes	Go to the next step.
		No	Replace the ABS HU/CM, then go to Step 6. (See 04-13-4 ABS HU/CM REMOVAL/ INSTALLATION.)
3	**INSPECT MOTOR RELAY POWER SUPPLY FOR OPEN CIRCUIT** • Turn the ignition switch off. • Disconnect the ABS HU/CM connector. • Inspect for continuity between ABS HU/CM terminal Z and the positive battery terminal. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 6.
4	**INSPECT MOTOR RELAY POWER SUPPLY FOR SHORT CIRCUIT** • Inspect for continuity between ABS HU/CM terminal Z and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 6.
		No	Go to the next step.

STEP	INSPECTION		ACTION
5	**INSPECT PUMP MOTOR GROUND FOR OPEN CIRCUIT** • Inspect for continuity between ABS HU/CM terminal B and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to the next step.
6	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Reconnect all disconnected connectors. • Clear the DTCs from the memory. (See 04-02A-2 ON-BOARD DIAGNOSIS[ABS].) • Start the engine and drive the vehicle at **10 km/h {6.2 mph} or more**. • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the ABS HU/CM, then go to the next step. (See 04-13-4 ABS HU/CM REMOVAL/ INSTALLATION.)
		No	Go to the next step.
7	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02A-2 ON-BOARD DIAGNOSIS[ABS].)
		No	DTC troubleshooting completed.

04-02A

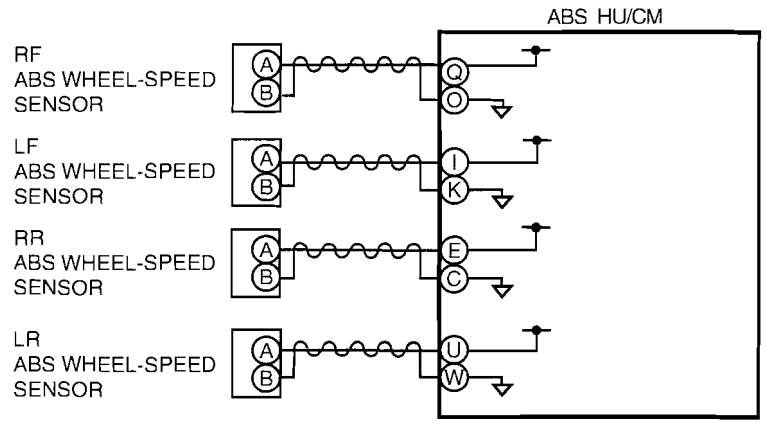
DTC C1141, C1142, C1143, C1144, C1233, C1234, C1235, C1236[ABS]

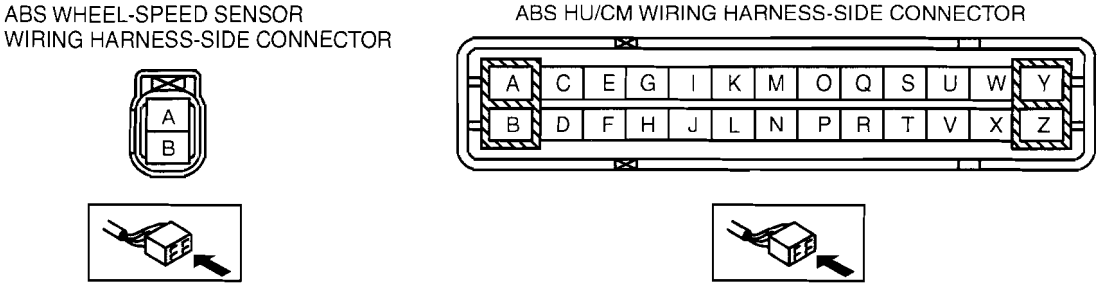
id0402a7803300

Note

- When only the driving wheels are rotated while the vehicle is jacked up, DTCs C1235 and C1236 are input to the memory.

DTC	C1141, C1142, C1143, C1144, C1233, C1234, C1235, C1236	ABS wheel-speed sensor/ABS sensor rotor
DETECTION CONDITION	• C1141, C1142, C1143, C1144 — Periodic abnormality is detected in the signal wave pattern from the ABS wheel-speed sensors. • C1234, C1233, C1235, C1236 — Wheel speed signal is not input or extremely low wheel speed signal is input from any of the four wheels when driving at a vehicle speed of **10 km/h {6.2 mph} or more**. — A large, sudden change in wheel speed signal is detected. — ABS control operates for **28 s or more**.	
POSSIBLE CAUSE	• ABS wheel-speed sensor malfunction • ABS sensor rotor malfunction (foreign material adhering) • Improper installation of ABS wheel-speed sensor and/or sensor rotor • Excessive clearance between the ABS wheel-speed sensor and sensor rotor • Continuous ABS operation	





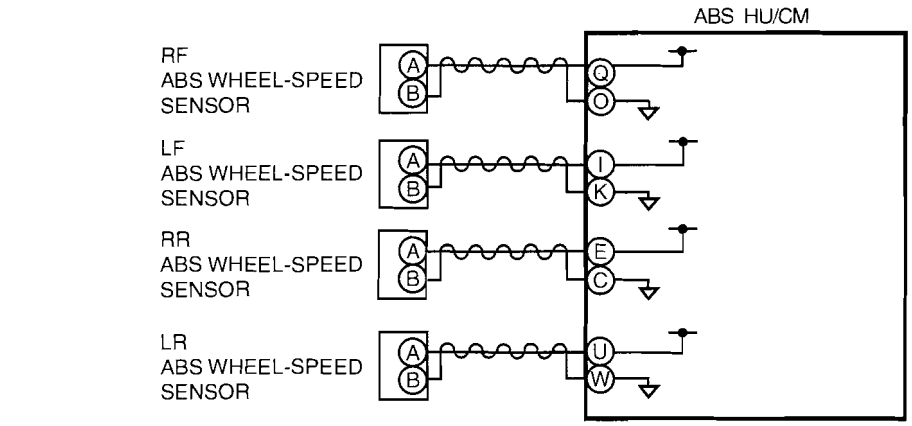
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT PID FOR ABS WHEEL-SPEED SENSOR OUTPUT ERROR USING M-MDS** • Turn the ignition switch off. • Connect the M-MDS to the DLC-2. • Select the following PIDs using the M-MDS: LF_WSPD LR_WSPD RF_WSPD RR_WSPD • Drive the vehicle. • Verify that the vehicle speeds detected by the four ABS wheel-speed sensors are approximately the same. • Are the vehicle speeds approximately the same?	Yes	Go to Step 3.
		No	Go to the next step.
2	**INSPECT FOR SHORT TO GROUND BETWEEN ABS WHEEL-SPEED SENSOR CONNECTORS AND GROUND** • Disconnect the ABS wheel-speed sensor connectors. • Inspect for no continuity between the following ABS wheel-speed sensor connector terminals (vehicle harness-side) and body ground: — ABS wheel-speed sensor (RF): B—Body ground — ABS wheel-speed sensor (LF): B—Body ground — ABS wheel-speed sensor (RR): B—Body ground — ABS wheel-speed sensor (LR): B—Body ground • Is the continuity normal?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 6.
3	**INSPECT IF MALFUNCTION OCCURRED DUE TO IMPROPER SENSOR CLEARANCE.** • Inspect the clearance between the ABS wheel-speed sensor and the ABS sensor rotor. (See 04-13-8 FRONT ABS WHEEL-SPEED SENSOR INSPECTION.) (See 04-13-10 REAR ABS WHEEL-SPEED SENSOR INSPECTION.) • Is the clearance normal? **Clearance** **Front: 2.1 mm {0.082 in} or less** **Rear: 1.46 mm {0.057 in} or less**	Yes	Go to the next step.
		No	Replace the ABS wheel-speed sensor, then go to Step 6. (See 04-13-8 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.) (See 04-13-9 REAR ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
4	**VISUALLY INSPECT ABS SENSOR ROTOR FOR FOREIGN MATERIAL ADHERING OR IMPROPER INSTALLATION** • Is the result normal?	Yes	Go to Step 6.
		No	Replace the wheel hub component, then go to Step 6. (See 03-11-3 WHEEL HUB, STEERING KNUCKLE REMOVAL/INSTALLATION.) (See 03-12-3 WHEEL HUB COMPONENT REMOVAL/INSTALLATION.)
5	**INSPECT IF MALFUNCTION OCCURRED DUE TO INTERNAL MALFUNCTION OF HYDRAULIC UNIT (CLOGGING IN PIPING)** • Perform the ABS system operation inspection. (See 04-13-2 ABS SYSTEM INSPECTION.) • Is the system normal?	Yes	Go to the next step.
		No	Replace the hydraulic unit, then go to the next step. (See 04-13-4 ABS HU/CM REMOVAL/INSTALLATION.)
6	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 04-02A-2 ON-BOARD DIAGNOSIS[ABS].) • Start the engine and drive the vehicle at **10 km/h {6.2 mph} or more**. • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the ABS HU/CM, then go to the next step. (See 04-13-4 ABS HU/CM REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02A-2 ON-BOARD DIAGNOSIS[ABS].)
		No	DTC troubleshooting completed.

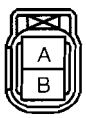
DTC C1145, C1155, C1165, C1175[ABS]

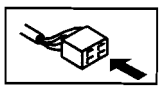
id0402a7805700

DTC C1145, C1155, C1165, C1175	ABS wheel-speed sensor
DETECTION CONDITION	• Open circuit or short to ground has been detected in the ABS wheel-speed sensor wiring harness on any of the four vehicle wheels.
POSSIBLE CAUSE	• Open circuit or short to ground in the wiring harness between the following ABS HU/CM terminals and ABS wheel-speed sensor terminals: — ABS HU/CM terminal Q—RF ABS wheel-speed sensor terminal A — ABS HU/CM terminal O—RF ABS wheel-speed sensor terminal B — ABS HU/CM terminal I—LF ABS wheel-speed sensor terminal A — ABS HU/CM terminal K—LF ABS wheel-speed sensor terminal B — ABS HU/CM terminal E—RR ABS wheel-speed sensor terminal A — ABS HU/CM terminal C—RR ABS wheel-speed sensor terminal B — ABS HU/CM terminal U—LR ABS wheel-speed sensor terminal A — ABS HU/CM terminal W—LR ABS wheel-speed sensor terminal B • ABS wheel-speed sensor malfunction • Poor connection at connectors (female terminal)

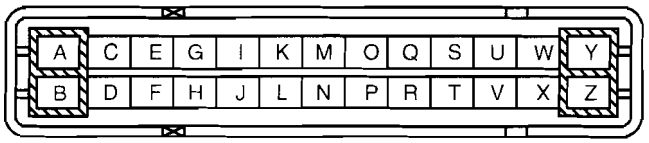


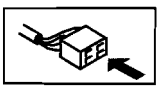
ABS WHEEL-SPEED SENSOR
WIRING HARNESS-SIDE CONNECTOR





ABS HU/CM WIRING HARNESS-SIDE CONNECTOR





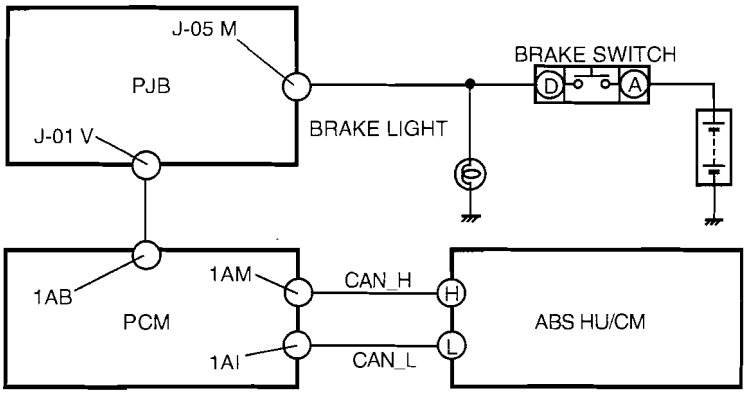
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT ABS WHEEL-SPEED SENSOR FOR SHORT TO GROUND** • Turn the ignition switch off. • Disconnect the ABS HU/CM connectors. • Inspect for continuity between the following ABS HU/CM connector terminals (vehicle harness-side) and body ground: — RF ABS wheel-speed sensor(+): Q — RF ABS wheel-speed sensor(-): O — LF ABS wheel-speed sensor(+): I — LF ABS wheel-speed sensor(-): K — RR ABS wheel-speed sensor(+): E — RR ABS wheel-speed sensor(-): C — LR ABS wheel-speed sensor(+): U — LR ABS wheel-speed sensor(-): W • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 3.
2	**INSPECT ABS WHEEL-SPEED SENSOR WIRING HARNESS FOR SHORT TO GROUND** • Disconnect the ABS wheel-speed sensor connectors. • Inspect for continuity between the following ABS HU/CM connector terminals (vehicle harness-side) and body ground: — RF ABS wheel-speed sensor(+): Q — RF ABS wheel-speed sensor(-): O — LF ABS wheel-speed sensor(+): I — LF ABS wheel-speed sensor(-): K — RR ABS wheel-speed sensor(+): E — RR ABS wheel-speed sensor(-): C — LR ABS wheel-speed sensor(+): U — LR ABS wheel-speed sensor(-): W • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 4.
		No	Replace the ABS wheel-speed sensor, then go to Step 4. (See 04-13-8 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.) (See 04-13-9 REAR ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
3	**INSPECT FOR OPEN CIRCUIT IN ABS WHEEL-SPEED SENSOR WIRING HARNESS** • Inspect for continuity between the ABS HU/CM connectors (vehicle harness-side) and the following vehicle harness-side connector terminals of the ABS wheel-speed sensors: — RF ABS wheel-speed sensor(+): Q—A — RF ABS wheel-speed sensor(-): O—B — LF ABS wheel-speed sensor(+): I—A — LF ABS wheel-speed sensor(-): K—B — RR ABS wheel-speed sensor(+): E—A — RR ABS wheel-speed sensor(-): C—B — LR ABS wheel-speed sensor(+): U—A — LR ABS wheel-speed sensor(-): W—B • Is there continuity?	Yes	Go to the next step.
		No	Replace the ABS wheel-speed sensor, then go to the next step. (See 04-13-8 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.) (See 04-13-9 REAR ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
4	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Reconnect all disconnected connectors. • Clear the DTCs from the memory. (See 04-02A-2 ON-BOARD DIAGNOSIS[ABS].) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the ABS HU/CM, then go to the next step. (See 04-13-4 ABS HU/CM REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02A-2 ON-BOARD DIAGNOSIS[ABS].)
		No	DTC troubleshooting completed.

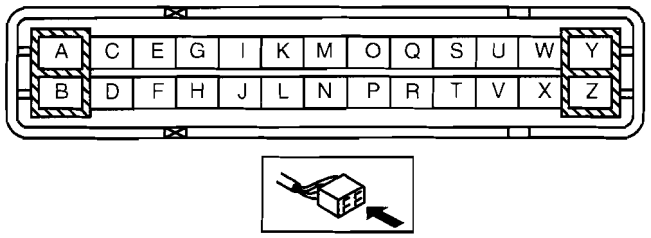
DTC C1446[ABS]

id0402a7803400

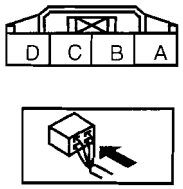
DTC C1446	Brake switch
DETECTION CONDITION	• Brake switch ON signal is input for **6 min or more** when driving at a vehicle speed of **20 km/h {12.4 mph} or more**. • Brake switch ON signal is not input even though the control module determines vehicle deceleration.
POSSIBLE CAUSE	• Open or short circuit in wiring harness between the brake switch and PJB terminal • Open or short circuit in wiring harness between the PJB and PCM terminals • Brake switch malfunction • Poor connection at connectors (female terminal)



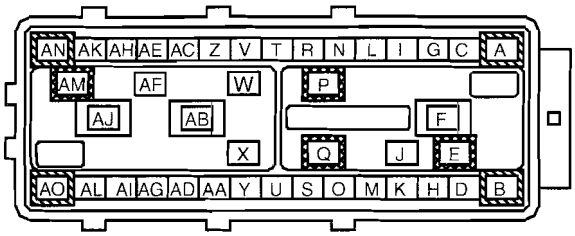
ABS HU/CM WIRING HARNESS-SIDE CONNECTOR



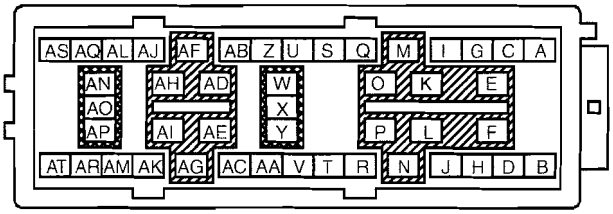
BRAKE SWITCH WIRING HARNESS-SIDE CONNECTOR



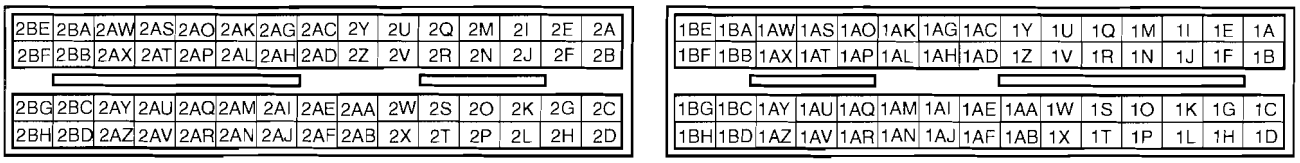
PJB J-01 WIRING HARNESS-SIDE CONNECTOR



PJB J-05 WIRING HARNESS-SIDE CONNECTOR



PCM WIRING HARNESS-SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY OPEN OR SHORT CIRCUIT IN BRAKE SWITCH SIGNAL** • Turn the ignition switch to the ON position. • Measure the voltage between the PCM terminal 1AB and body ground when the brake pedal is depressed and released: **Voltage** **Brake pedal depressed: B+** **Brake pedal released:** **1 V or less**	Yes	Go to Step 5.
		No	If it is **B+** under any condition, then go to the next step. If it is **1 V or less** under any condition, then go to Step 3.
2	**INSPECT BRAKE SWITCH SIGNAL FOR SHORT TO POWER SUPPLY CIRCUIT** • Disconnect the brake switch connector. • Measure the voltage between the brake switch connector terminal D (vehicle harness-side) and body ground. • Is the voltage **1 V or less**?	Yes	Go to Step 4.
		No	Repair or replace the wiring harness between the PCM and brake switch, then go to Step 5
3	**INSPECT BRAKE SWITCH SIGNAL FOR OPEN CIRCUIT** • Disconnect the PCM connectors. • Disconnect the brake switch connector. • Inspect continuity between the PCM connector terminal 1AB (vehicle harness-side) and brake switch terminal D: • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between the PCM and brake switch, then go to Step 5.
4	**INSPECT BRAKE SWITCH** • Inspect the brake switch. (See 04-11-8 BRAKE SWITCH INSPECTION.) • Is the brake switch normal?	Yes	Go to the next step.
		No	Replace the brake switch, then go to the next step. (See 04-11-6 BRAKE PEDAL REMOVAL/ INSTALLATION.)
5	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Reconnect all disconnected connectors. • Clear the DTCs from the memory. (See 04-02A-2 ON-BOARD DIAGNOSIS[ABS].) • Start the engine and drive the vehicle at **20 km/h {12.4 mph} or more**. • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the ABS HU/CM, then go to the next step. (See 04-13-4 ABS HU/CM REMOVAL/ INSTALLATION.)
		No	Go to the next step.
6	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02A-2 ON-BOARD DIAGNOSIS[ABS].)
		No	DTC troubleshooting completed.

DTC U1900, U2012[ABS]

id0402a7803500

DTC U1900, U2012	CAN line
DETECTION CONDITION	• U1900 — Communication error with PCM is detected in CAN communication. • U2012 — CAN system wiring harness open or short circuit is detected.
POSSIBLE CAUSE	• CAN system wiring harness open or short circuit with PCM • PCM malfunction

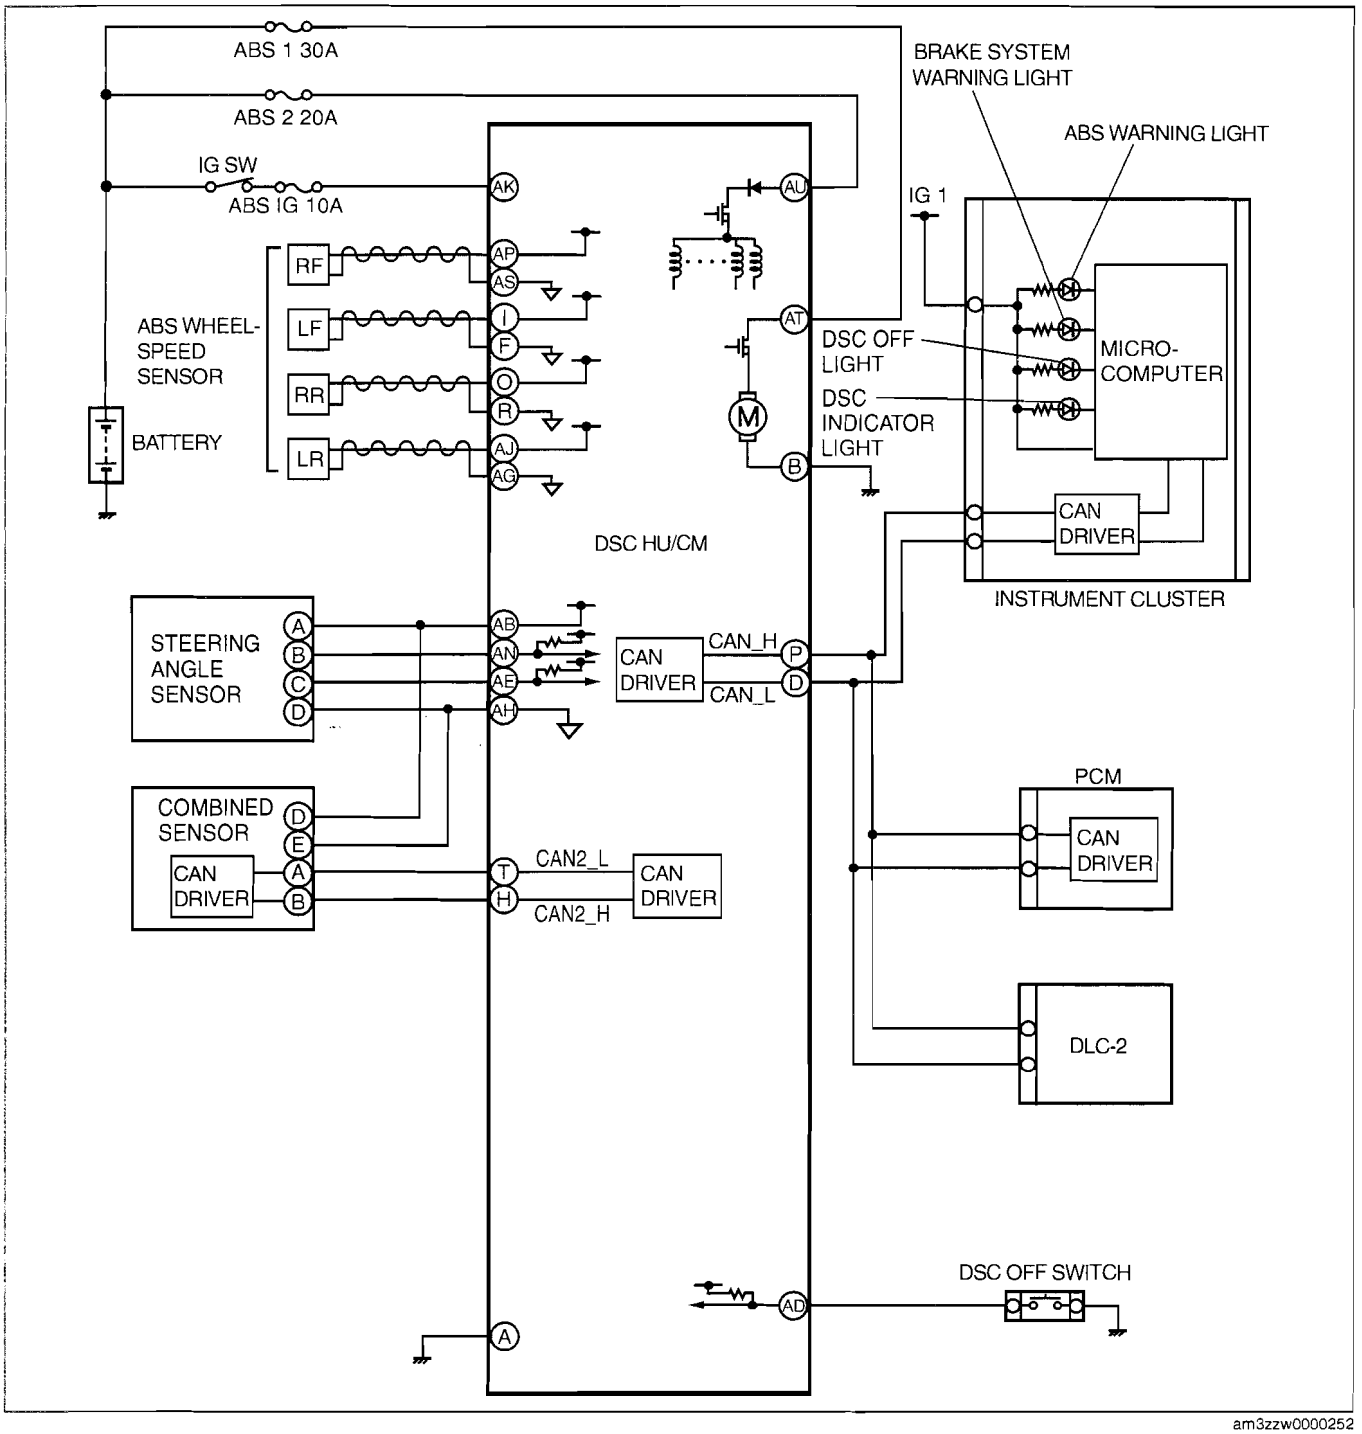
Diagnostic procedure

- Inspect according to diagnostic procedure in BODY & ACCESSORIES. (See 09-02B-5 DTC TABLE[MULTIPLEX COMMUNICATION SYSTEM].)

04-02B ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

DYNAMIC STABILITY CONTROL WIRING DIAGRAM[DYNAMIC STABILITY CONTROL (DSC)]

id0402b2804700



am3zzw0000252

ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)]

id0402b2800200

On-Board Diagnostic (OBD) Test Description

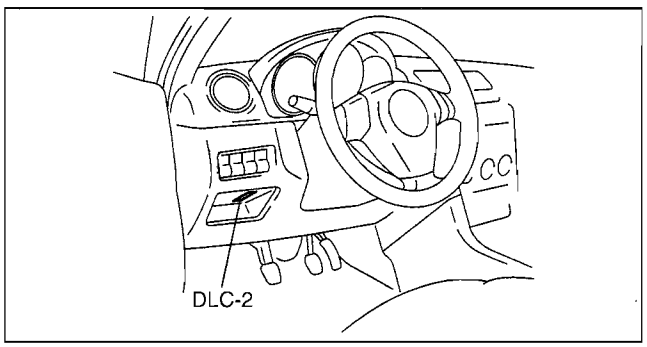
- The OBD test inspects the integrity and function of the DSC and outputs the results when requested by the specific tests.
- On-board diagnostic test also:
  - — Provides a quick inspection of the DSC usually performed at the start of each diagnostic procedure.
  - — Provides verification after repairs to ensure that no other faults occurred during service.
- The OBD test is divided into 3 tests:
  - — Read/clear diagnostic results, PID monitor and record and active command modes.

Read/clear diagnostic results
- This function allows you to read or clear DTCs in the DSC HU/CM memory.

PID/Data monitor and record
- This function allows you to access certain data values, input signals, calculated values, and system status information.

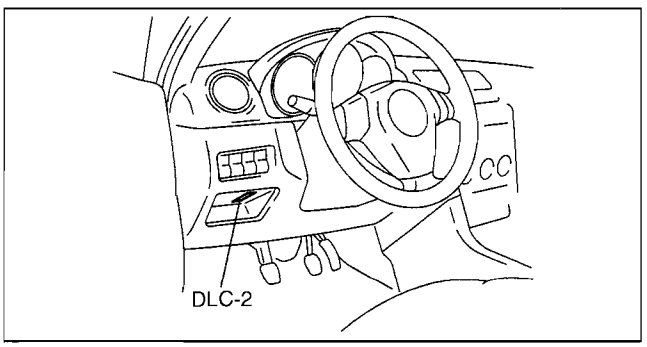
Active command modes
- This function allows you to control devices through the M-MDS.

Reading DTCs Procedure
1. Connect the M-MDS to the DLC-2 connector.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Toolbox" tab.
     2. Select "Self Test".
     3. Select "Modules".
     4. Select "ABS".
   - When using the PDS (Pocket PC)
     1. Select "Module Tests".
     2. Select "ABS".
     3. Select "Self Test".
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
4. After completion of repairs, clear all DTCs stored in the DSC. (See 04-02B-3 Clearing DTCs Procedures.)



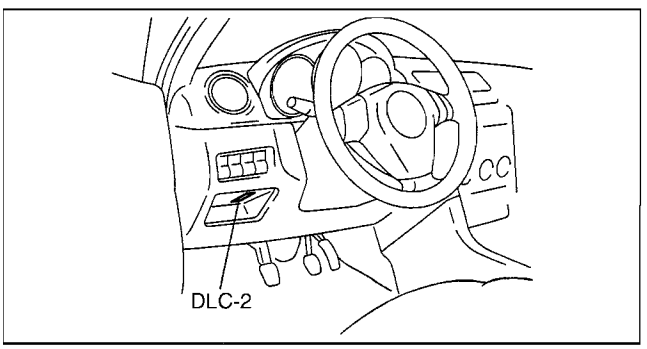
am3zzw0000163

Clearing DTCs Procedures
1. Connect the M-MDS to the DLC-2 connector.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Toolbox" tab.
     2. Select "Self Test".
     3. Select "Modules".
     4. Select "ABS".
   - When using the PDS (Pocket PC)
     1. Select "Module Tests".
     2. Select "ABS".
     3. Select "Self Test".
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Verify that no DTCs are displayed.



am3zzw0000163

PID/Data Monitor and Record Procedure
1. Connect the M-MDS to the DLC-2 connector.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Toolbox" tab.
     2. Select "DataLogger".
     3. Select "Modules".
     4. Select "ABS".
   - When using the PDS (Pocket PC)
     1. Select "Module Tests".
     2. Select "ABS".
     3. Select "DataLogger".
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the directions on the screen.



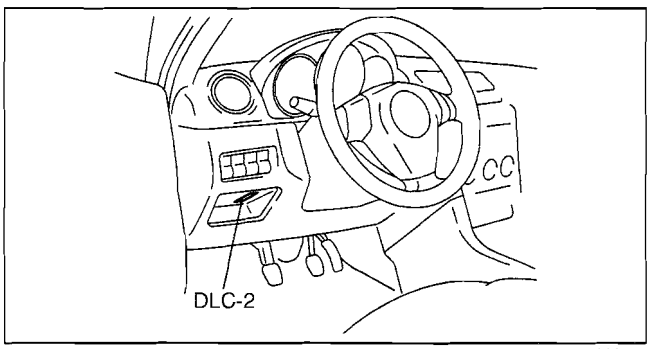
am3zzw0000163

Note
- The PID/Data monitor function is used for monitoring the calculated value. Therefore, if the monitored value of the output parts is not within the specification, inspection of the monitored value of input parts corresponding to applicable output part control is necessary. In addition, because the system does not display output part malfunction as abnormality in the monitored value, it is necessary to inspect the output part individually using a active command modes function.

Active Command Modes Procedure

Note
- Performing the active command modes function while the engine is running could result in the DTC U2064 being stored in the instrument cluster. Therefore, perform the active command mode inspection while the engine is stopped. If the active command mode inspection is accidentally performed while the engine is running, inspect the instrument cluster for the recorded DTCs, and then clear any that have been recorded.

1. Connect the M-MDS to the DLC-2 connector.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Toolbox" tab.
     2. Select "DataLogger".
     3. Select "Modules".
     4. Select "ABS".
   - When using the PDS (Pocket PC)
     1. Select "Module Tests".
     2. Select "ABS".
     3. Select "DataLogger".
3. Select the active command modes from the PID table.
4. Perform the active command modes, inspect the operations for each parts.
   - If there is no operation sound from the relay, motor, and solenoid after the active command mode inspection is performed, it is possible that there is an open or short circuit in the wiring harness, relay, motor or solenoid, or sticking and operation malfunction.



am3zzw0000163

DTC Table

DTC M-MDS	System malfunction location	Page
B1317	Power supply system	(See 04-02B-8 DTC B1317, B1318[DYNAMIC STABILITY CONTROL (DSC)].)
B1318	Power supply system	(See 04-02B-8 DTC B1317, B1318[DYNAMIC STABILITY CONTROL (DSC)].)
B1342	DSC HU/CM (internal malfunction)	(See 04-02B-10 DTC B1342, C1267, C1730[DYNAMIC STABILITY CONTROL (DSC)].)
B2141	Vehicle data not recorded	(See 04-02B-10 DTC B2141[DYNAMIC STABILITY CONTROL (DSC)].)
B2741	Combined sensor (internal malfunction)	(See 04-02B-11 DTC B2741[DYNAMIC STABILITY CONTROL (DSC)].)
C1093	DSC OFF switch	(See 04-02B-12 DTC C1093[DYNAMIC STABILITY CONTROL (DSC)].)
C1095	Pump motor, motor relay	(See 04-02B-13 DTC C1095[DYNAMIC STABILITY CONTROL (DSC)].)
C1141	LF ABS sensor rotor	(See 04-02B-14 DTC C1141, C1142, C1143, C1144, C1233, C1234, C1235, C1236[DYNAMIC STABILITY CONTROL (DSC)].)
C1142	RF ABS sensor rotor	(See 04-02B-14 DTC C1141, C1142, C1143, C1144, C1233, C1234, C1235, C1236[DYNAMIC STABILITY CONTROL (DSC)].)
C1143	LR ABS sensor rotor	(See 04-02B-14 DTC C1141, C1142, C1143, C1144, C1233, C1234, C1235, C1236[DYNAMIC STABILITY CONTROL (DSC)].)

DTC M-MDS	System malfunction location	Page
C1144	RR ABS sensor rotor	(See 04-02B-14 DTC C1141, C1142, C1143, C1144, C1233, C1234, C1235, C1236[DYNAMIC STABILITY CONTROL (DSC)].)
C1145	RF ABS wheel-speed sensor	(See 04-02B-16 DTC C1145, C1155, C1165, C1175[DYNAMIC STABILITY CONTROL (DSC)].)

C1234	RF ABS wheel-speed sensor/ABS sensor rotor	(See 04-02B-14 DTC C1141, C1142, C1143, C1144, C1233, C1234, C1235, C1236[DYNAMIC STABILITY CONTROL (DSC)].)
C1235	RR ABS wheel-speed sensor/ABS sensor rotor	(See 04-02B-14 DTC C1141, C1142, C1143, C1144, C1233, C1234, C1235, C1236[DYNAMIC STABILITY CONTROL (DSC)].)
C1236	LR ABS wheel-speed sensor/ABS sensor rotor	(See 04-02B-14 DTC C1141, C1142, C1143, C1144, C1233, C1234, C1235, C1236[DYNAMIC STABILITY CONTROL (DSC)].)
C1267	DSC HU/CM (internal malfunction)	(See 04-02B-10 DTC B1342, C1267, C1730[DYNAMIC STABILITY CONTROL (DSC)].)
C1277	Steering angle sensor	(See 04-02B-18 DTC C1277, C1278, C1306, C1307[DYNAMIC STABILITY CONTROL (DSC)].)
C1278	Steering angle sensor	(See 04-02B-18 DTC C1277, C1278, C1306, C1307[DYNAMIC STABILITY CONTROL (DSC)].)
C1279	Combined sensor system	(See 04-02B-20 DTC C1279, C1280, C1281, C1282, C2778[DYNAMIC STABILITY CONTROL (DSC)].)
C1280	Combined sensor system	(See 04-02B-20 DTC C1279, C1280, C1281, C1282, C2778[DYNAMIC STABILITY CONTROL (DSC)].)
C1281	Combined sensor system	(See 04-02B-20 DTC C1279, C1280, C1281, C1282, C2778[DYNAMIC STABILITY CONTROL (DSC)].)
C1282	Combined sensor system	(See 04-02B-20 DTC C1279, C1280, C1281, C1282, C2778[DYNAMIC STABILITY CONTROL (DSC)].)
C1288	Brake fluid pressure sensor	(See 04-02B-22 DTC C1288, C1440[DYNAMIC STABILITY CONTROL (DSC)].)
C1306	Steering angle sensor	(See 04-02B-18 DTC C1277, C1278, C1306, C1307[DYNAMIC STABILITY CONTROL (DSC)].)
C1307	Steering angle sensor	(See 04-02B-18 DTC C1277, C1278, C1306, C1307[DYNAMIC STABILITY CONTROL (DSC)].)
C1440	Brake fluid pressure sensor	(See 04-02B-22 DTC C1288, C1440[DYNAMIC STABILITY CONTROL (DSC)].)
C1446	Brake switch	(See 04-02B-22 DTC C1446[DYNAMIC STABILITY CONTROL (DSC)].)
C1470	TCS control system	(See 04-02B-24 DTC C1470, C1994[DYNAMIC STABILITY CONTROL (DSC)].)
C1730	Brake fluid pressure sensor power supply system	(See 04-02B-10 DTC B1342, C1267, C1730[DYNAMIC STABILITY CONTROL (DSC)].)
C1994	TCS/DSC control system	(See 04-02B-24 DTC C1470, C1994[DYNAMIC STABILITY CONTROL (DSC)].)
C2778	Combined sensor system	(See 04-02B-20 DTC C1279, C1280, C1281, C1282, C2778[DYNAMIC STABILITY CONTROL (DSC)].)
C2785	Combined sensor system (unperformed initialization procedure)	(See 04-02B-25 DTC C2785[DYNAMIC STABILITY CONTROL (DSC)].)
U1900	CAN line	(See 04-02B-25 DTC U1900, U2012, U2023, U2202[DYNAMIC STABILITY CONTROL (DSC)].)

DTC M-MDS	System malfunction location	Page
U1901	Combined sensor system (CAN2 line malfunction)	(See 04-02B-26 DTC U1901, U2527[DYNAMIC STABILITY CONTROL (DSC)].)
U2012	CAN line	(See 04-02B-25 DTC U1900, U2012, U2023, U2202[DYNAMIC STABILITY CONTROL (DSC)].)
U2023	CAN line	(See 04-02B-25 DTC U1900, U2012, U2023, U2202[DYNAMIC STABILITY CONTROL (DSC)].)
U2202	CAN line	(See 04-02B-25 DTC U1900, U2012, U2023, U2202[DYNAMIC STABILITY CONTROL (DSC)].)
U2527	Combined sensor system (CAN2 line malfunction)	(See 04-02B-26 DTC U1901, U2527[DYNAMIC STABILITY CONTROL (DSC)].)

PID/DATA Monitor Table

PID name (definition)	Unit/Condition	Operation condition (reference)	Action	DSC HU/CM terminal
BOO_ABS (Brake pedal switch input)	On/Off	• Brake pedal depressed: On • Brake pedal released: Off	Inspect the brake switch. (See 04-11-8 BRAKE SWITCH INSPECTION.)	—
CCNTABS (Number of continuous codes)	—	• DTCs detected: **1—255** • No DTCs detected: **0**	Perform the DTC inspection. (See 04-02B-4 DTC Table.)	—
ESP_VOLT	V	• Ignition switch at ON: **Approx. 12.2 V** • Idling: **Approx. 14.1 V**	Inspect the battery.	—
LAT_ACCL	G	• Vehicle stopped or driving at constant speed: **0 G** • Cornering to right: Changes **0 G—positive** • Cornering to left: Changes **0 G—negative**	Inspect the combined sensor. (See 04-15-11 COMBINED SENSOR INSPECTION.)	—
LF_WSPD (Left front ABS wheel-speed sensor input)	KPH, MPH	• Vehicle stopped: **0 KPH, 0 MPH** • Vehicle running: vehicle speed	Inspect the ABS wheel-speed sensor. (See 04-13-8 FRONT ABS WHEEL-SPEED SENSOR INSPECTION.)	I, F
LR_WSPD (Left rear ABS wheel-speed sensor input)	KPH, MPH	• Vehicle stopped: **0 KPH, 0 MPH** • Vehicle running: vehicle speed	Inspect the ABS wheel-speed sensor. (See 04-13-10 REAR ABS WHEEL-SPEED SENSOR INSPECTION.)	AJ, AG
MPRETDR	Pa	• Brake pedal released: **0 Pa** • Brake pedal depressed: Changes according to the brake fluid pressure	Inspect the DSC HU/CM. (See 04-15-8 DSC HU/CM INSPECTION.)	—
RF_WSPD (Right front ABS wheel-speed sensor input)	KPH, MPH	• Vehicle stopped: **0 KPH, 0 MPH** • Vehicle running: vehicle speed	Inspect the ABS wheel-speed sensor. (See 04-13-8 FRONT ABS WHEEL-SPEED SENSOR INSPECTION.)	AP, AS
RR_WSPD (Right rear ABS wheel-speed sensor input)	KPH, MPH	• Vehicle stopped: **0 KPH, 0 MPH** • Vehicle running: vehicle speed	Inspect the ABS wheel-speed sensor. (See 04-13-10 REAR ABS WHEEL-SPEED SENSOR INSPECTION.)	O, R
SWA_POS	°	• Steering wheel in neutral position (not turned): **0°** • Steering wheel turned to left: Changes **0°—negative** • Steering wheel turned to right: Changes **0°—positive**	Inspect the steering angle sensor.	AE, AN

PID name (definition)	Unit/Condition	Operation condition (reference)	Action	DSC HU/CM terminal
TCYC_FS	On/Off	• Solenoid valve activated: On • Solenoid valve not activated: Off	Inspect the DSC HU/CM. (See 04-15-3 DSC SYSTEM INSPECTION.)	—
TCYC_SW	Depressed/ Not_Depressed	• DSC OFF switch depressed: Depressed • DSC OFF switch not depressed: Not_Depressed	Inspect the DSC OFF switch. (See 04-15-14 DSC OFF SWITCH INSPECTION.)	AD
YAW_RATE	°/s	• Vehicle stopped or driving straight: **0 °/s** • Cornering to left: Changes **0 °/s—negative** • Cornering to right: Changes **0 °/s—positive**	Inspect the combined sensor. (See 04-15-11 COMBINED SENSOR INSPECTION.)	—

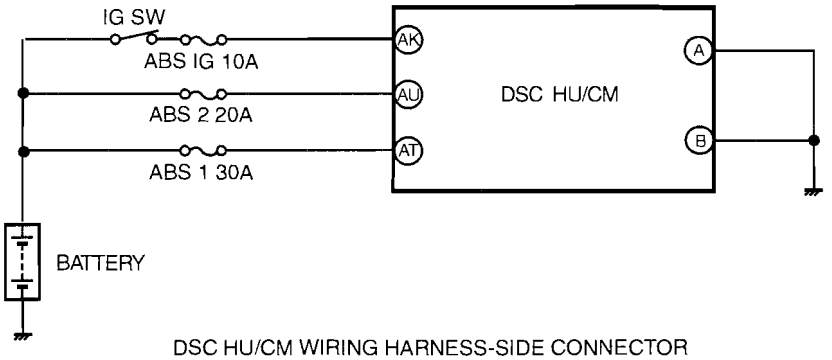
Active Command Modes Table

Command name	Output part	Operation	Operating condition
PMP_MOTOR	Pump motor	On/Off	Ignition switch at ON
RF_OUTLET	RF outlet solenoid valve		
RF_INLET	RF inlet solenoid valve		
LF_OUTLET	LF outlet solenoid valve		
LF_INLET	LF inlet solenoid valve		
RR_OUTLET	RR outlet solenoid valve		
RR_INLET	RR inlet solenoid valve		
LR_OUTLET	LR outlet solenoid valve		
LR_INLET	LR inlet solenoid valve		
LF_TC_PRV	LF stability control solenoid valve		
RF_TC_PRV	RF stability control solenoid valve		
LF_TC_SWV	LF traction control solenoid valve		
RF_TC_SWV	RF traction control solenoid valve		
MCYL_S_CAL	Brake fluid pressure sensor initialization start-up	True/False	
LATACCEL	Combined sensor (lateral acceleration) initialization start-up		

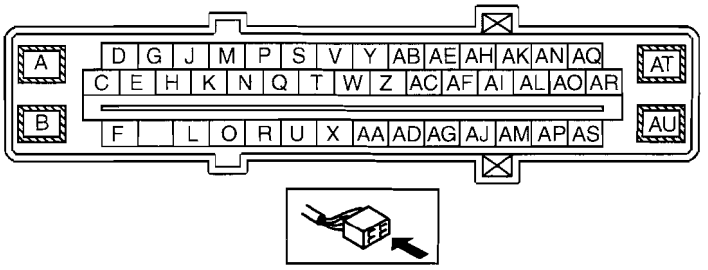
DTC B1317, B1318[DYNAMIC STABILITY CONTROL (DSC)]

id0402b2800300

DTC B1317, B1318	Power supply system
DETECTION CONDITION	• B1317 — High ignition voltage (**16 V or more**) is detected at the voltage monitor of the solenoid valve or motor monitor. • B1318 — When driving the vehicle at **20 km/h {12.4 mph} or more**, low ignition voltage (**10 V or less**) is detected at the voltage monitor of the solenoid valve or motor monitor.
POSSIBLE CAUSE	• ABS 1 30A/ABS 2 20A/ABS IG 10A fuse malfunction • Open or short circuit in the wiring harness between DSC HU/CM terminal AK and battery • Open or short circuit in the wiring harness between DSC HU/CM terminal AU and battery • Open or short circuit in the wiring harness between DSC HU/CM terminal AT and battery • Open circuit in the wiring harness between DSC HU/CM terminal A and body ground • Open circuit in the wiring harness between DSC HU/CM terminal B and body ground • Battery deterioration • Generator malfunction • Poor connection at connectors (female terminal)



DSC HU/CM WIRING HARNESS-SIDE CONNECTOR



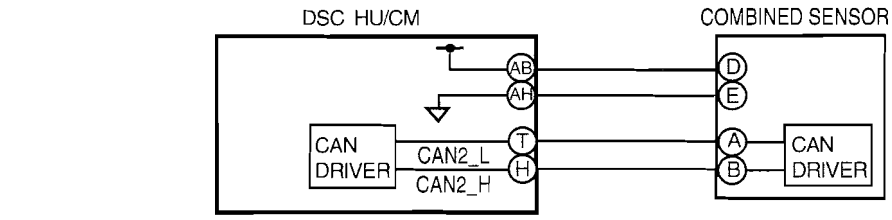
Diagnostic procedure

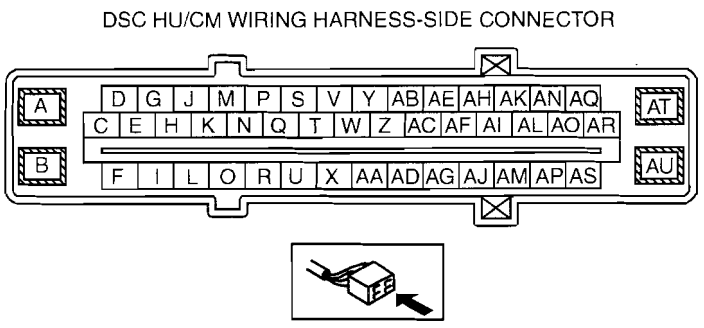
STEP	INSPECTION		ACTION
1	**INSPECT BATTERY VOLTAGE** • Is the battery terminal voltage normal?	Yes	Verify that the battery terminal connection is normal. Go to the next step.
		No	Recharge or replace the battery, then go to Step 6. (See 01-17A-6 BATTERY RECHARGING[LF, L3].) (See 01-17B-5 BATTERY RECHARGING[L3 WITH TC].) (See 01-17A-2 BATTERY REMOVAL/ INSTALLATION[LF, L3].) (See 01-17B-2 BATTERY REMOVAL/ INSTALLATION[L3 WITH TC].)
2	**INSPECT BATTERY GRAVITY** • Is the battery specific gravity as specified?	Yes	Go to the next step.
		No	Replace the battery, then go to Step 6. (See 01-17A-2 BATTERY REMOVAL/ INSTALLATION[LF, L3].) (See 01-17B-2 BATTERY REMOVAL/ INSTALLATION[L3 WITH TC].)
3	**INSPECT CHARGING SYSTEM** • Are the generator and the drive belt tensions normal?	Yes	Go to the next step.
		No	Replace the generator and/or drive belt if necessary. (See 01-17A-6 GENERATOR REMOVAL/ INSTALLATION[LF, L3].) (See 01-17B-6 GENERATOR REMOVAL/ INSTALLATION[L3 WITH TC].) (See 01-10A-4 DRIVE BELT REPLACEMENT[LF, L3].) (See 01-10B-3 DRIVE BELT REMOVAL/ INSTALLATION[L3 WITH TC].) Go to Step 6.
4	**INSPECT DSC HU/CM POWER SUPPLY FOR OPEN CIRCUIT** • Disconnect the DSC HU/CM connectors. • Turn the ignition switch to the ON position. • Measure the voltage between following connector terminals of the DSC HU/CM (vehicle harness-side) and body ground: — DSC HU/CM: AK—Body ground — DSC HU/CM: AU—Body ground — DSC HU/CM: AT—Body ground • Is the voltage **10 V or more**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 6.
5	**INSPECT DSC HU/CM GROUND FOR POOR GROUND OR OPEN CIRCUIT** • Turn the ignition switch off. • Measure the resistance between following connector terminals of the DSC HU/CM (vehicle harness-side) and body ground: — DSC HU/CM: A—Body ground — DSC HU/CM: B—Body ground • Is the resistance **within 0—1 ohm**?	Yes	Go to the next step.
		No	If there is open circuit: • Repair or replace the wiring harness, then go to the next step. If resistance is not within specification: • Repair or replace the wiring harness for poor ground, then go to the next step.
6	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Reconnect all disconnected connectors. • Clear the DTCs from the memory. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].) • Start the engine and drive the vehicle at **20 km/h {12.4 mph} or more**. • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See 04-15-6 DSC HU/CM REMOVAL/ INSTALLATION.)
		No	Go to the next step.
7	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

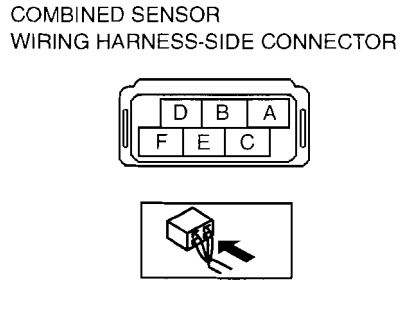
DTC B2741[DYNAMIC STABILITY CONTROL (DSC)]

id0402b2803900

DTC B2741	Combined sensor (internal malfunction)
DETECTION CONDITION	• Combined sensor internal malfunction is detected.
POSSIBLE CAUSE	• Combined sensor internal malfunction







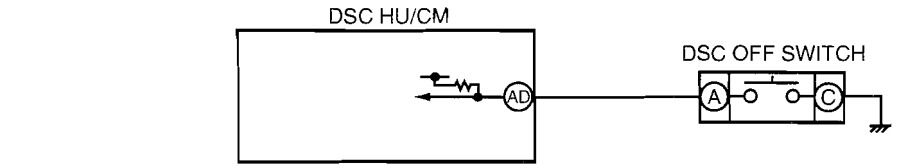
Diagnostic procedure

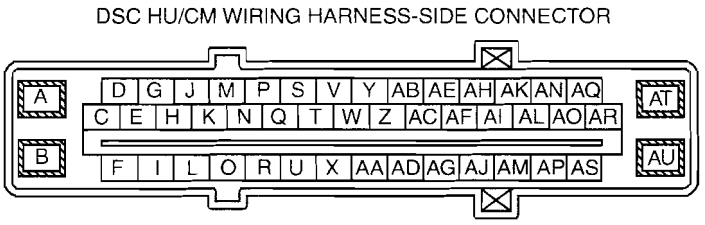
STEP	INSPECTION		ACTION
1	**VERIFY COMBINED SENSOR MALFUNCTION** • Clear the DTCs from the memory. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].) • Are the same DTCs present?	Yes	Replace the combined sensor, then go to the next step. (See 04-15-10 COMBINED SENSOR REMOVAL/ INSTALLATION.)
		No	Go to the next step.
2	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

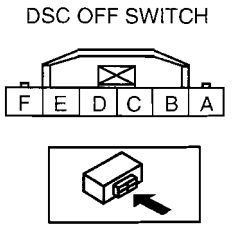
DTC C1093[DYNAMIC STABILITY CONTROL (DSC)]

id0402b2800700

DTC C1093	DSC OFF switch
DETECTION CONDITION	• Continuous ON signal from the DSC OFF switch for **10 s or more** is detected.
POSSIBLE CAUSE	• The driver pressed and held the DSC OFF switch for **10 s or more**. • Short to ground in the wiring harness between DSC OFF switch and DSC HU/CM terminal AD • DSC OFF switch malfunction • Poor connection at connectors (female terminal)







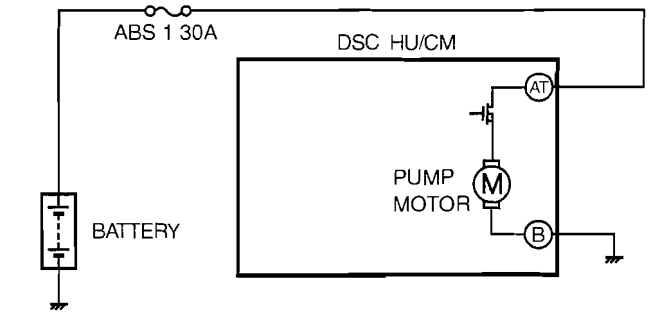
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT DSC OFF SWITCH SIGNAL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Disconnect the DSC HU/CM connector. • Inspect for continuity between DSC HU/CM connector (vehicle harness-side) terminal AD and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 3.
		No	Go to the next step.
2	**INSPECT DSC OFF SWITCH** • Inspect the DSC OFF switch. (See 04-15-14 DSC OFF SWITCH INSPECTION.) • Is the DSC OFF switch normal?	Yes	Go to the next step.
		No	Replace the DSC OFF switch, then go to the next step. (See 04-15-14 DSC OFF SWITCH REMOVAL/ INSTALLATION.)
3	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Reconnect all disconnected connectors. • Clear the DTCs from the memory. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See 04-15-6 DSC HU/CM REMOVAL/ INSTALLATION.)
		No	Go to the next step.
4	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

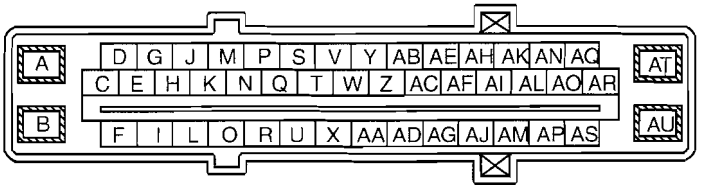
DTC C1095[DYNAMIC STABILITY CONTROL (DSC)]

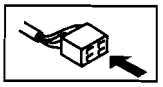
id0402b2806800

DTC C1095	Pump motor, motor relay
DETECTION CONDITION	• DSC motor monitor signal does not correspond to DSC HU/CM OFF signal. • DSC motor monitor signal does not correspond to DSC HU/CM ON signal. • DSC motor monitor ON signal is not input within specified time limit when motor signal is switched from ON to OFF by DSC HU/CM.
POSSIBLE CAUSE	• ABS 1 30A fuse malfunction • Open circuit or short to ground in the wiring harness between DSC HU/CM terminal AT and battery • Open circuit in the wiring harness between DSC HU/CM terminal B and body ground • Open or short circuit in the DSC HU/CM internal motor relay, or stuck motor relay • Open or short circuit in the DSC HU/CM internal pump motor, or frozen pump motor • Poor connection at connectors (female terminal)



DSC HU/CM WIRING HARNESS-SIDE CONNECTOR





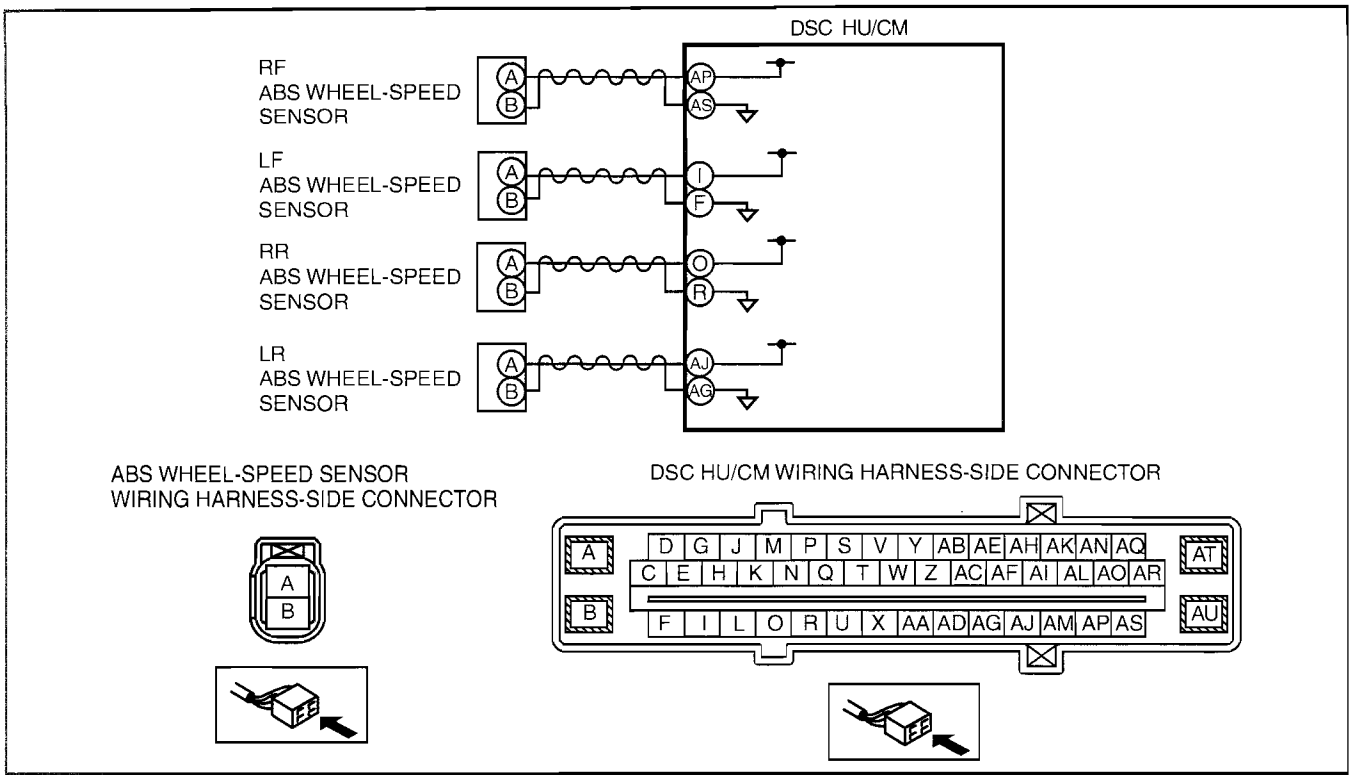
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT ABS FUSE CONDITION** • Is the ABS fuse (ABS 1 30A) normal?	Yes	Go to the next step.
		No	Replace the ABS fuse, then go to Step 6.
2	**VERIFY PUMP MOTOR OPERATION** • Turn the ignition switch off. • Connect the M-MDS to the DLC-2. • Turn the ignition switch to the ON position. • Access PMP_MOTOR active command modes using the M-MDS. • Does the pump motor operate?	Yes	Go to the next step.
		No	Replace the DSC HU/CM, then go to Step 6. (See 04-15-6 DSC HU/CM REMOVAL/ INSTALLATION.)
3	**INSPECT MOTOR RELAY POWER SUPPLY FOR OPEN CIRCUIT** • Turn the ignition switch off. • Disconnect the DSC HU/CM connectors. • Inspect for continuity between the DSC HU/CM terminal AT and the battery positive terminal. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 6.
4	**INSPECT MOTOR RELAY POWER SUPPLY FOR SHORT CIRCUIT** • Inspect for continuity between the DSC HU/CM terminal AT and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 6.
		No	Go to the next step.
5	**INSPECT PUMP MOTOR GROUND FOR OPEN CIRCUIT** • Inspect for continuity between the DSC HU/CM terminal B and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 6.
6	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Reconnect all disconnected connectors. • Clear the DTCs from the memory. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].) • Start the engine and drive the vehicle at **10 km/h {6.2 mph} or more**. • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See 04-15-6 DSC HU/CM REMOVAL/ INSTALLATION.)
		No	Go to the next step.
7	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

DTC C1141, C1142, C1143, C1144, C1233, C1234, C1235, C1236[DYNAMIC STABILITY CONTROL (DSC)]

id0402b2806400

DTC	C1141, C1142, C1143, C1144, C1233, C1234, C1235, C1236	ABS wheel-speed sensor/ABS sensor rotor
DETECTION CONDITION	• C1141, C1142, C1143, C1144 — Periodic abnormality is detected in the signal wave pattern from the ABS wheel-speed sensors. • C1234, C1233, C1235, C1236 — Wheel-speed signal is not input or extremely low wheel-speed signal is input from any of the four wheels when driving at a vehicle speed of **10 km/h {6.2 mph} or more**. — A large, sudden change in wheel-speed signal is detected. — ABS control operates for **28 s or more**.	
POSSIBLE CAUSE	• ABS wheel-speed sensor malfunction • ABS sensor rotor malfunction (foreign material adhering) • Improper installation of ABS wheel-speed sensor and/or sensor rotor • Excessive clearance between the ABS wheel-speed sensor and sensor rotor • Continuous ABS operation	



04-02B

Diagnostic procedure

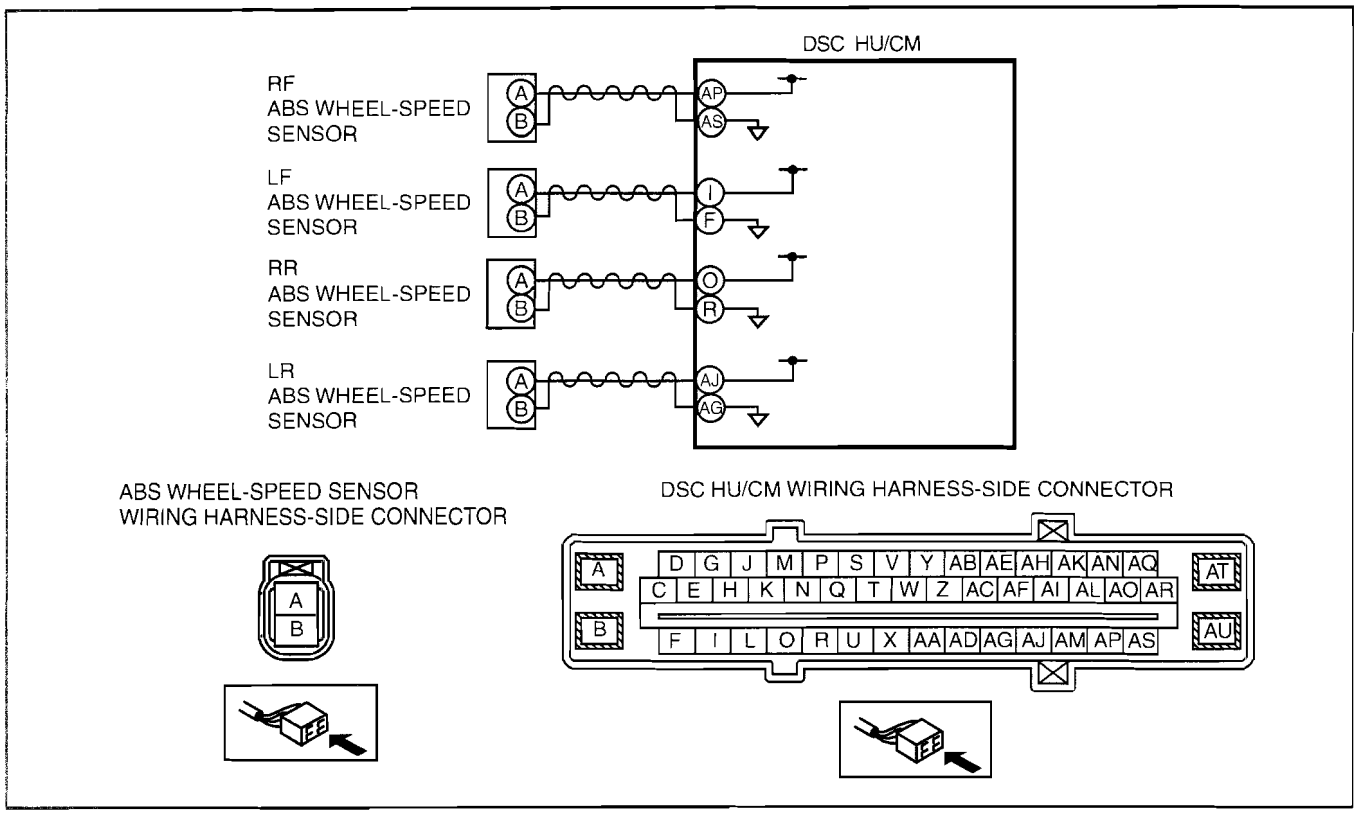
STEP	INSPECTION		ACTION
1	**INSPECT PID FOR ABS WHEEL-SPEED SENSOR OUTPUT ERROR USING M-MDS** • Turn the ignition switch off. • Connect the M-MDS to the DLC-2. • Select the following PIDs using the M-MDS: LF_WSPD LR_WSPD RF_WSPD RR_WSPD • Drive the vehicle. • Verify that the vehicle speeds detected by the four ABS wheel-speed sensors are approximately the same. • Are the vehicle speeds approximately the same?	Yes	Go to Step 3.
		No	Go to the next step.
2	**INSPECT ABS WHEEL-SPEED SENSOR CONNECTOR FOR SHORT TO GROUND** • Disconnect the ABS wheel-speed sensor connectors. • Verify that there is no continuity between the following ABS wheel-speed sensor terminals (vehicle harness-side) and body ground. — ABS wheel-speed sensor (RF): B—Body ground — ABS wheel-speed sensor (LF): B—Body ground — ABS wheel-speed sensor (RR): B—Body ground — ABS wheel-speed sensor (LR): B—Body ground • Is the continuity normal?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 6.

STEP	INSPECTION		ACTION
3	**INSPECT IF MALFUNCTION OCCURRED DUE TO IMPROPER SENSOR CLEARANCE.** • Inspect the clearance between the ABS wheel-speed sensor and the ABS sensor rotor. (See 04-13-8 FRONT ABS WHEEL-SPEED SENSOR INSPECTION.) (See 04-13-10 REAR ABS WHEEL-SPEED SENSOR INSPECTION.) • Is the clearance normal? **Clearance** **Front: 2.1 mm {0.082 in} or less** **Rear: 1.46 mm {0.057 in} or less**	Yes	Go to the next step.
		No	Replace the ABS wheel-speed sensor, then go to Step 6. (See 04-13-8 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.) (See 04-13-9 REAR ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
4	**VISUALLY INSPECT ABS SENSOR ROTOR FOR FOREIGN MATERIAL ADHERING OR IMPROPER INSTALLATION** • Is the result normal?	Yes	Go to Step 6.
		No	Replace the wheel hub component, then go to Step 6. (See 03-11-3 WHEEL HUB, STEERING KNUCKLE REMOVAL/INSTALLATION.) (See 03-12-3 WHEEL HUB COMPONENT REMOVAL/INSTALLATION.)
5	**INSPECT IF MALFUNCTION OCCURRED DUE TO INTERNAL MALFUNCTION OF HYDRAULIC UNIT (CLOGGING IN PIPING)** • Perform the DSC system operation inspection. (See 04-15-3 DSC SYSTEM INSPECTION.) • Is the system normal?	Yes	Go to the next step.
		No	Replace the DSC HU/CM, then go to the next step. (See 04-15-6 DSC HU/CM REMOVAL/ INSTALLATION.)
6	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].) • Start the engine and drive the vehicle at **10 km/h {6.2 mph} or more**. • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM. (See 04-15-6 DSC HU/CM REMOVAL/ INSTALLATION.)
		No	Go to the next step.
7	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-15-6 DSC HU/CM REMOVAL/ INSTALLATION.)
		No	DTC troubleshooting completed.

DTC C1145, C1155, C1165, C1175[DYNAMIC STABILITY CONTROL (DSC)]

id0402b2801100

DTC C1145, C1155, C1165, C1175	ABS wheel-speed sensor
DETECTION CONDITION	• Open circuit or short to ground has been detected in the ABS wheel-speed sensor wiring harness on any of the four vehicle wheels.
POSSIBLE CAUSE	• Open circuit or short to ground in the wiring harness between the following DSC HU/CM terminals and the ABS wheel-speed sensor terminals: — DSC HU/CM terminal AP—RF ABS wheel-speed sensor terminal A — DSC HU/CM terminal AS—RF ABS wheel-speed sensor terminal B — DSC HU/CM terminal I—LF ABS wheel-speed sensor terminal A — DSC HU/CM terminal F—LF ABS wheel-speed sensor terminal B — DSC HU/CM terminal O—RR ABS wheel-speed sensor terminal A — DSC HU/CM terminal R—RR ABS wheel-speed sensor terminal B — DSC HU/CM terminal AJ—LR ABS wheel-speed sensor terminal A — DSC HU/CM terminal AG—LR ABS wheel-speed sensor terminal B • ABS wheel-speed sensor malfunction • Poor connection at connectors (female terminal)



04-02B

Diagnostic procedure

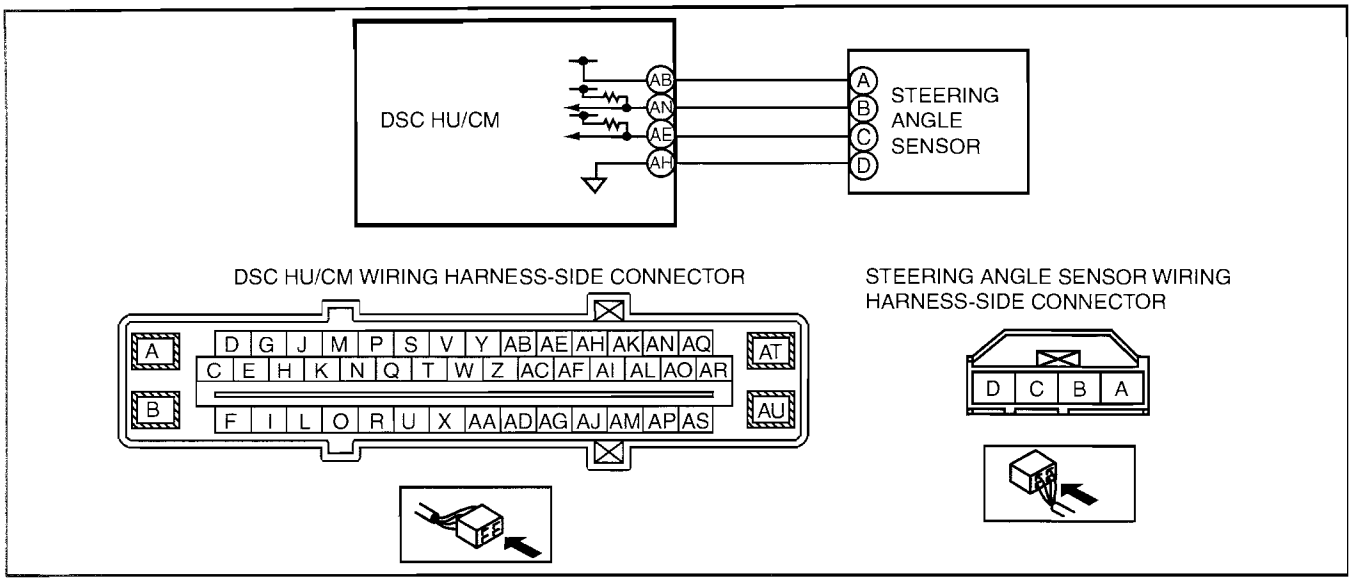
STEP	INSPECTION		ACTION
1	**INSPECT ABS WHEEL-SPEED SENSOR FOR SHORT TO GROUND** • Turn the ignition switch off. • Disconnect the DSC HU/CM connectors. • Inspect for continuity between the following DSC HU/CM connector terminals (vehicle harness-side) and body ground: — RF ABS wheel-speed sensor(+): AP — RF ABS wheel-speed sensor(-): AS — LF ABS wheel-speed sensor(+): I — LF ABS wheel-speed sensor(-): F — RR ABS wheel-speed sensor(+): O — RR ABS wheel-speed sensor(-): R — LR ABS wheel-speed sensor(+): AJ — LR ABS wheel-speed sensor(-): AG • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 3.
2	**INSPECT ABS WHEEL-SPEED SENSOR WIRING HARNESS FOR SHORT TO GROUND** • Disconnect the ABS wheel-speed sensor connectors. • Inspect for continuity between the following DSC HU/CM connector terminals (vehicle harness-side) and body ground: — RF ABS wheel-speed sensor(+): AP — RF ABS wheel-speed sensor(-): AS — LF ABS wheel-speed sensor(+): I — LF ABS wheel-speed sensor(-): F — RR ABS wheel-speed sensor(+): O — RR ABS wheel-speed sensor(-): R — LR ABS wheel-speed sensor(+): AJ — LR ABS wheel-speed sensor(-): AG • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 4.
		No	Replace the ABS wheel-speed sensor, then go to Step 4. (See 04-13-8 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.) (See 04-13-9 REAR ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)

STEP	INSPECTION		ACTION
3	**INSPECT ABS WHEEL-SPEED SENSOR WIRING HARNESS FOR OPEN CIRCUIT** • Inspect for continuity between the DSC HU/CM connectors (vehicle harness-side) and the following vehicle harness-side terminals of ABS wheel-speed sensors: — RF ABS wheel-speed sensor(+): AP—A — RF ABS wheel-speed sensor(-): AS—B — LF ABS wheel-speed sensor(+): I—A — LF ABS wheel-speed sensor(-): F—B — RR ABS wheel-speed sensor(+): O—A — RR ABS wheel-speed sensor(-): R—B — LR ABS wheel-speed sensor(+): AJ—A — LR ABS wheel-speed sensor(-): AG—B • Is there continuity?	Yes	Go to the next step.
		No	Replace the ABS wheel-speed sensor, then go to the next step. (See 04-13-8 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.) (See 04-13-9 REAR ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
4	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Reconnect all disconnected connectors. • Clear the DTCs from the memory. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See 04-15-6 DSC HU/CM REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

DTC C1277, C1278, C1306, C1307[DYNAMIC STABILITY CONTROL (DSC)]

id0402b2808000

DTC C1277, C1278, C1306, C1307	Steering angle sensor
DETECTION CONDITION	• C 1277 — Output voltage from either steering angle sensors 1 or 2 is **4.75 V or more** or **0.25 V or less**. • C 1278 — The steering angle sensor detects signal modulation or steering angle that exceeds specification. • C 1306 — The neutral position of the steering angle cannot be estimated from the signals from the ABS wheel-speed sensors and the combined sensor. • C 1307 — The signal from the steering angle sensor remains unchanged when the steering angle is turned to the right and left.
POSSIBLE CAUSE	• Improper installation or positioning of the steering angle sensor • Open circuit in the wiring harness between DSC HU/CM terminal AB and steering angle sensor terminal A • Open circuit in the wiring harness between DSC HU/CM terminal AE and steering angle sensor terminal C, short to battery or to ground • Open circuit in the wiring harness between DSC HU/CM terminal AN and steering angle sensor terminal B, short to battery or to ground • Open circuit in the wiring harness between DSC HU/CM terminal AH and steering angle sensor terminal D • Signal error from the ABS wheel-speed sensor • Signal error from the combined sensor • Signal errors from sensors due to rough road driving • Steering angle sensor malfunction • Poor connection at connectors (female terminal)



Diagnostic procedure

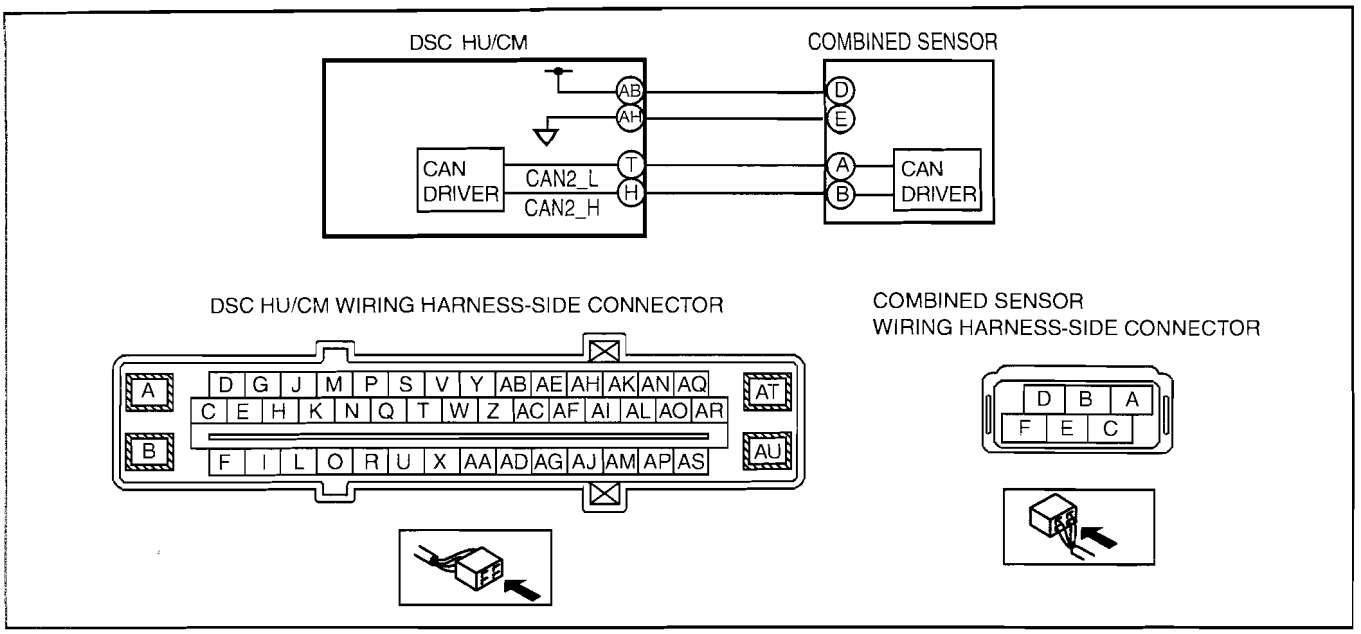
STEP	INSPECTION		ACTION
1	**INSPECT STEERING ANGLE SENSOR POWER SUPPLY FOR OPEN CIRCUIT** • Turn the ignition switch to the ON position. • Measure the voltage between the steering angle sensor terminal A and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 8.
2	**INSPECT STEERING ANGLE SENSOR GROUND FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between the steering angle sensor terminal D and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 8.
3	**INSPECT STEERING ANGLE SENSOR SIGNAL FOR OPEN CIRCUIT** • Disconnect the DSC HU/CM connectors. • Inspect for continuity between the DSC HU/CM connectors (vehicle harness-side) and the following steering angle sensor connector terminals: — Steering angle sensor (Sensor 1 system): AN—B — Steering angle sensor (Sensor 2 system): AE—C • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 8.
4	**INSPECT STEERING ANGLE SENSOR SIGNAL FOR SHORT TO GROUND** • Disconnect the steering angle sensor connectors • Inspect for continuity between the following steering angle sensor connector terminals (vehicle harness-side) and body ground: — Steering angle sensor (Sensor 1 system): B—Body ground — Steering angle sensor (Sensor 2 system): C—Body ground • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 8.
		No	Go to the next step.
5	**INSPECT STEERING ANGLE SENSOR SIGNAL FOR SHORT TO POWER SUPPLY CIRCUIT** • Measure voltage between the following steering angle sensor connector terminals (vehicle harness-side) and body ground: — Steering angle sensor (Sensor 1 system): B—Body ground — Steering angle sensor (Sensor 2 system): C—Body ground • Is the voltage **1 V or less**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 8.

STEP	INSPECTION		ACTION
6	**INSPECT FOR IMPROPER INSTALLATION OF STEERING ANGLE SENSOR** • Is the installation normal?	Yes	Go to the next step.
		No	Repair installation or replace the steering angle sensor, then go to Step 8. (See 08-10-14 CLOCK SPRING REMOVAL/ INSTALLATION.)
7	**INSPECT STEERING ANGLE SENSOR** • Reconnect all disconnected connectors. • Inspect the steering angle sensor. (See 04-15-13 STEERING ANGLE SENSOR INSPECTION.) • Is the steering angle sensor normal?	Yes	Go to the next step.
		No	Replace the steering angle sensor, then go to the next step. (See 08-10-14 CLOCK SPRING REMOVAL/ INSTALLATION.)
8	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].) • Start the engine and drive the vehicle at **10 km/h {6.2 mph} or more**. • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See 04-15-6 DSC HU/CM REMOVAL/ INSTALLATION.)
		No	Go to the next step.
9	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

DTC C1279, C1280, C1281, C1282, C2778[DYNAMIC STABILITY CONTROL (DSC)]

id0402b2804100

DTC C1279, C1280, C1281, C1282, C2778	Combined sensor system
DETECTION CONDITION	• C1279, C1280 — Out-of-specification signal modulation or yaw rate value is detected from the combined sensor (yaw rate part). • C1281, C1282 — Out-of-specification signal modulation or lateral-G value is detected from the combined sensor (lateral-G part). • C2778 — An error is detected for the voltage to the combined sensor.
POSSIBLE CAUSE	• Open or short circuit in the wiring harness between DSC HU/CM terminal AB and combined sensor terminal D • Open or short circuit in the wiring harness between DSC HU/CM terminal AH and combined sensor terminal E • Open circuit in the wiring harness between DSC HU/CM terminal T and combined sensor terminal A (CAN2 line) • Open circuit in the wiring harness between DSC HU/CM terminal H and combined sensor terminal B (CAN2 line) • Combined sensor malfunction • Poor connection at connectors (female terminal)



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT COMBINED SENSOR POWER SUPPLY FOR OPEN CIRCUIT** • Turn the ignition switch to the ON position. • Measure the voltage between the combined sensor terminal D and body ground. • Is the voltage **approx. 12 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 4.
2	**INSPECT COMBINED SENSOR GROUND FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between the combined sensor terminal E and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 4.
3	**INSPECT COMBINED SENSOR** • Inspect the combined sensor. (See 04-15-11 COMBINED SENSOR INSPECTION.) • Is the combined sensor normal?	Yes	Go to the next step.
		No	Replace the combined sensor, then go to the next step. (See 04-15-10 COMBINED SENSOR REMOVAL/ INSTALLATION.)
4	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].) • Start the engine and drive the vehicle at **10 km/h {6.2 mph} or more**. • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See 04-15-6 DSC HU/CM REMOVAL/ INSTALLATION.)
		No	Go to the next step.
5	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

DTC C1288, C1440[DYNAMIC STABILITY CONTROL (DSC)]

id0402b2804200

DTC C1288, C1440	Brake fluid pressure sensor
DETECTION CONDITION	• C1288 — The voltage value from the brake fluid pressure sensor is not within specification. • C1440 — The value output from the brake fluid pressure sensor when braking does not change. — The pressure value from the brake fluid pressure sensor is not within specification when decelerating. — The pressure value from the brake fluid pressure sensor when not braking exceeds specification.
POSSIBLE CAUSE	• Brake fluid pressure sensor malfunction • Open or short circuit in the brake fluid pressure sensor circuit in DSC HU/CM

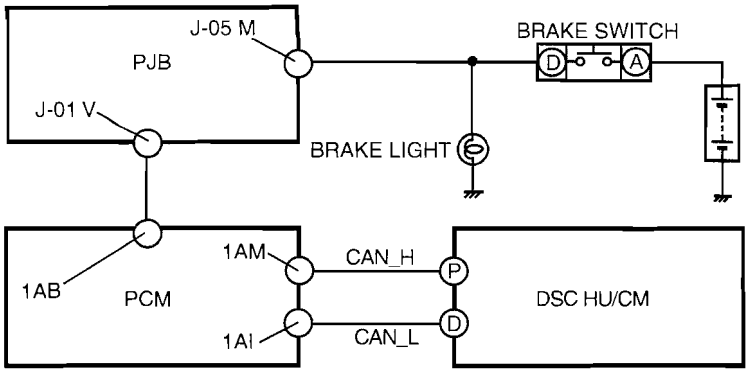
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY NO ABNORMALITY ON BRAKE FLUID PRESSURE SENSOR** • Clear the DTCs from the memory. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].) • Start the engine and drive the vehicle at **10 km/h {6.2 mph} or more**. • Are the same DTCs present?	Yes	Replace the DSC HU/CM, then go to the next step. (See 04-15-6 DSC HU/CM REMOVAL/ INSTALLATION.)
		No	Go to the next step.
2	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

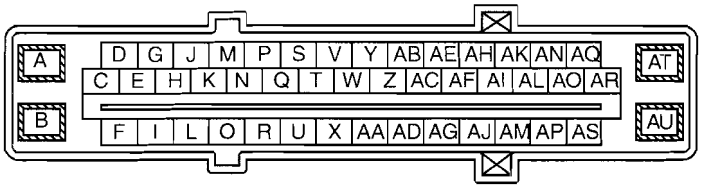
DTC C1446[DYNAMIC STABILITY CONTROL (DSC)]

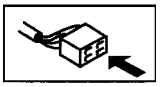
id0402b2803400

DTC C1446	Brake switch
DETECTION CONDITION	• Brake switch ON signal is input for **6 min or more** when driving at a vehicle speed of **20 km/h {12.4 mph} or more**. • Brake switch ON signal is not input even though the DSC HU/CM determines vehicle deceleration.
POSSIBLE CAUSE	• Open or short circuit in the wiring harness between brake switch and the terminal on the PJB • Open or short circuit in the wiring harness between the terminals on the PJB and PCM • Brake switch malfunction • Poor connection at connectors (female terminal)

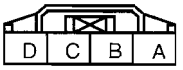


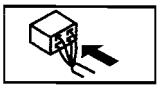
DSC HU/CM WIRING HARNESS-SIDE CONNECTOR





BRAKE SWITCH WIRING HARNESS-SIDE CONNECTOR





PJB J-01 WIRING HARNESS-SIDE CONNECTOR

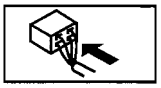
1BH	1BD	1AZ	1AV	1AR	1AN	1AJ	1AF	1AB	1X	1T	1P	1L	1H	1D



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY OPEN OR SHORT CIRCUIT IN BRAKE SWITCH SIGNAL** • Turn the ignition switch to the ON position. • Measure the voltage between the PCM terminal 1AB and body ground when the brake pedal is depressed and released: **Voltage** **Brake pedal depressed: B+** **Brake pedal released:** **1 V or less**	Yes	Go to Step 5.
		No	If it is **B+** under any condition, then go to the next step. If it is **1 V or less** under any condition, then go to Step 3.
2	**INSPECT BRAKE SWITCH SIGNAL FOR SHORT TO POWER SUPPLY CIRCUIT** • Disconnect the brake switch connector. • Measure the voltage between the brake switch connector terminal D (vehicle harness-side) and body ground. • Is the voltage **1 V or less**?	Yes	Go to Step 4.
		No	Repair or replace the wiring harness between the PCM and brake switch, then go to Step 5.
3	**INSPECT BRAKE SWITCH SIGNAL FOR OPEN CIRCUIT** • Disconnect the PCM connectors. • Disconnect the brake switch connector. • Inspect continuity between the PCM connector terminal 1AB (vehicle harness-side) and brake switch terminal D: • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between the PCM and brake switch, then go to Step 5.
4	**INSPECT BRAKE SWITCH** • Inspect the brake switch. (See 04-11-8 BRAKE SWITCH INSPECTION.) • Is the brake switch normal?	Yes	Go to the next step.
		No	Replace the brake switch, then go to the next step. (See 04-11-6 BRAKE PEDAL REMOVAL/ INSTALLATION.)
5	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Reconnect all disconnected connectors. • Clear the DTCs from the memory. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].) • Start the engine and drive the vehicle at **20 km/h {12.4 mph} or more**. • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See 04-15-6 DSC HU/CM REMOVAL/ INSTALLATION.)
		No	Go to the next step.
6	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

DTC C1470, C1994[DYNAMIC STABILITY CONTROL (DSC)]

id0402b2804300

DTC C1470, C1994	TCS/DSC control system
DETECTION CONDITION	• C1470 — Due to excessive braking, TCS control using braking is temporarily inhibited. • C1994 — DSC control continues for a specified period of time or more
POSSIBLE CAUSE	• This does not indicate a malfunction since constant TCS or DSC control over an extended period of time is inhibited to protect the DSC solenoid valve inside the DSC HU or the engine.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].) • Are the same DTCs present?	Yes	Replace the DSC HU/CM, then go to the next step. (See 04-15-6 DSC HU/CM REMOVAL/ INSTALLATION.)
		No	Go to the next step.
2	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

DTC C2785[DYNAMIC STABILITY CONTROL (DSC)]

id0402b2804400

DTC C2785	Combined sensor system (unperformed initialization procedure)
DETECTION CONDITION	• DSC detects that the initialization procedure for combined sensor has not been performed.
POSSIBLE CAUSE	• Initialization procedure for the combined sensor not performed • Combined sensor malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY OTHER DTC HAS BEEN RECORDED** • Has DTC B2141 also been stored?	Yes	Go to the applicable DTC inspection. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].)
		No	Go to the next step.
2	**VERIFY INITIALIZATION PROCEDURE** • Was the combined sensor initialization procedure performed?	Yes	Go to the next step.
		No	Perform the combined sensor initialization procedure, then go to the next step. (See 04-15-12 COMBINED SENSOR INITIALIZATION PROCEDURE.)
3	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See 04-15-6 DSC HU/CM REMOVAL/ INSTALLATION.)
		No	Go to the next step.
4	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

DTC U1900, U2012, U2023, U2202[DYNAMIC STABILITY CONTROL (DSC)]

id0402b2808100

DTC U1900, U2012, U2202	CAN line
DETECTION CONDITION	• U1900, U2202 — Communication error with PCM is detected in CAN communication. • U2012 — CAN system wiring harness open or short circuit is detected.
POSSIBLE CAUSE	• Incorrect vehicle data (suspension and brake specs.) input during PCM configuration • CAN system wiring harness open or short circuit with PCM • PCM malfunction

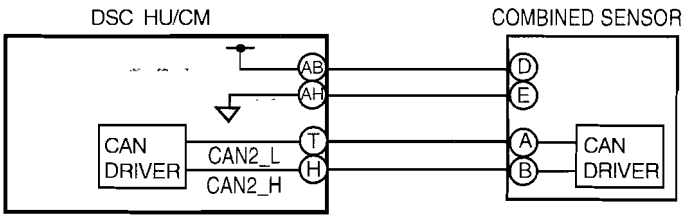
Diagnostic procedure

- Inspect according to the diagnostic procedure in BODY & ACCESSORIES. (See 09-02B-5 DTC TABLE[MULTIPLEX COMMUNICATION SYSTEM].)

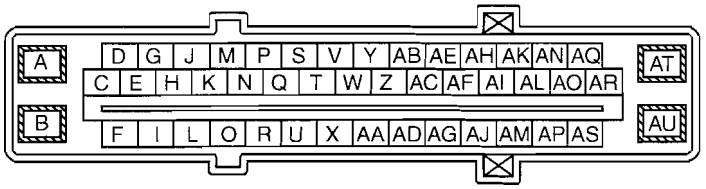
DTC U1901, U2527[DYNAMIC STABILITY CONTROL (DSC)]

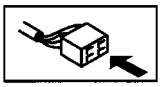
id0402b2804600

DTC U1901, U2527	Combined sensor system (CAN2 line malfunction)
DETECTION CONDITION	• U1901 — The signal from the combined sensor is not within specification. • U2527 — Open or short circuit in CAN system wiring harness is detected.
POSSIBLE CAUSE	• Open or short circuit in the CAN2_L wiring harness between combined sensor terminal A and DSC HU/CM terminal T • Open or short circuit in the CAN2_H wiring harness between combined sensor terminal B and DSC HU/CM terminal H • Combined sensor malfunction • DSC HU/CM malfunction • Poor connection at connectors (female terminal)

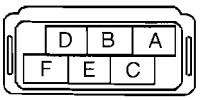


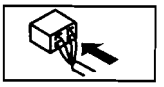
DSC HU/CM WIRING HARNESS-SIDE CONNECTOR





COMBINED SENSOR WIRING HARNESS-SIDE CONNECTOR





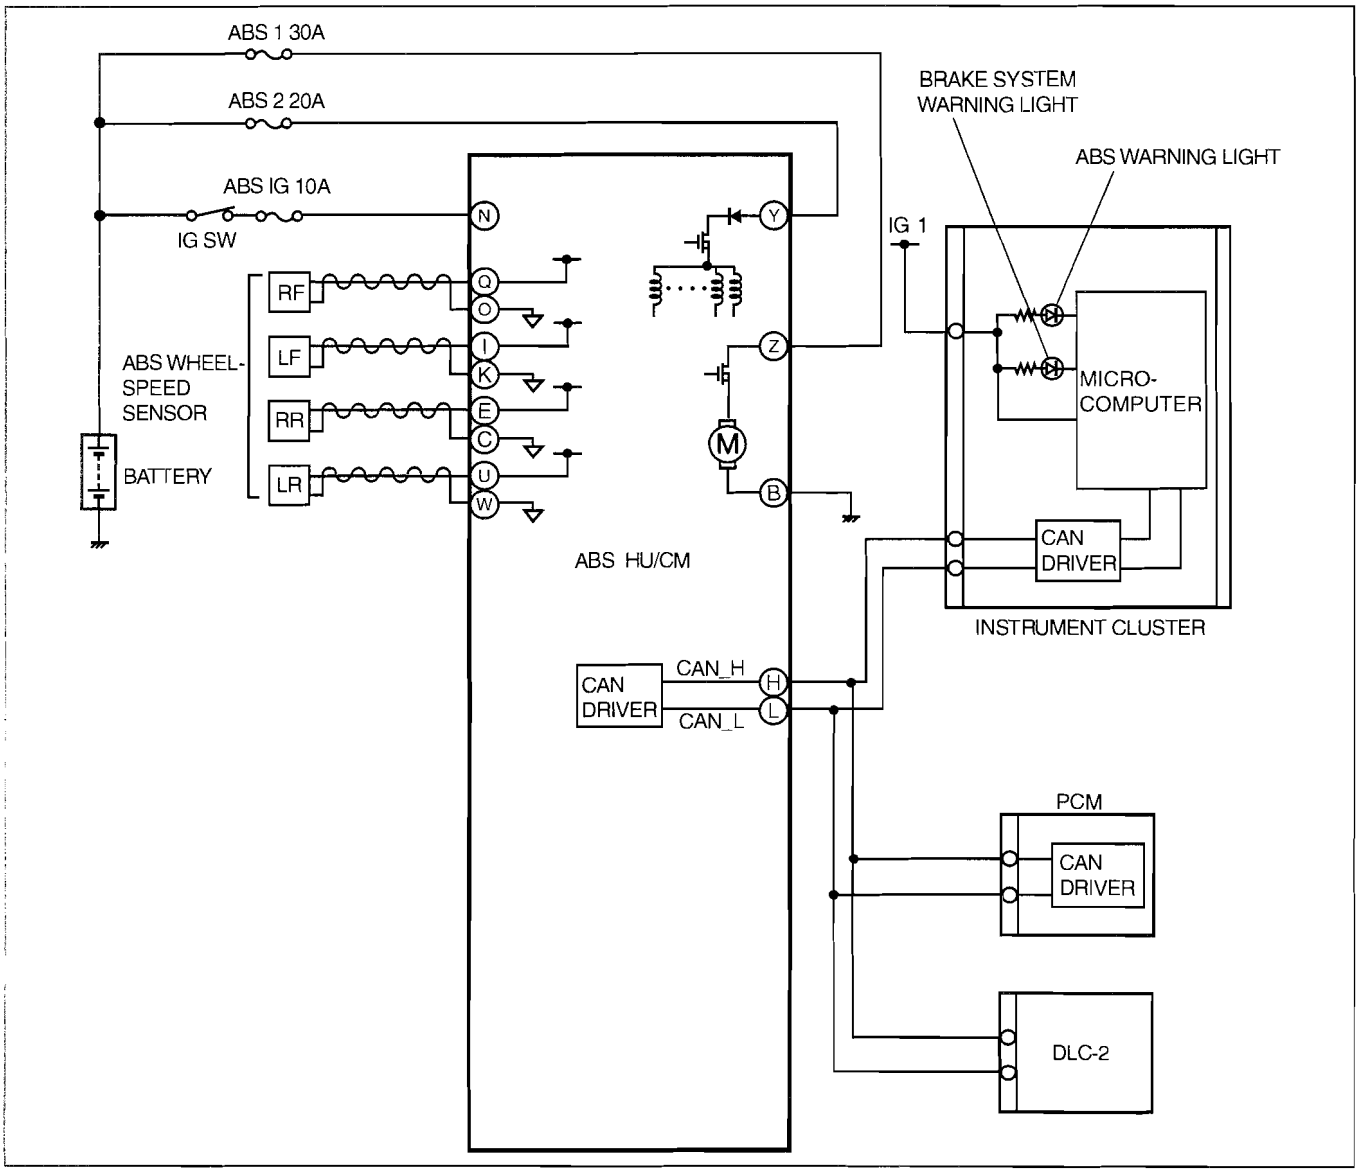
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT COMBINED SENSOR SIGNAL (CAN2 LINE) FOR OPEN CIRCUIT** • Disconnect the DSC HU/CM connectors. • Disconnect the combined sensor connectors. • Inspect for continuity between the DSC HU/CM connectors (vehicle harness-side) and the following combined sensor connector terminals (vehicle harness-side): — Combined sensor (CAN2_L): T—A — Combined sensor (CAN2_H): H—B • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 4.
2	**INSPECT COMBINED SENSOR SIGNAL (CAN2 LINE) FOR SHORT CIRCUIT** • Inspect for continuity between the following DSC HU/CM connector terminals (vehicle harness-side) and body ground: — Combined sensor (CAN2_L): T — Combined sensor (CAN2_H): H • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 4.
		No	Go to the next step.
3	**INSPECT THE COMBINED SENSOR** • Reconnect all disconnected connectors. Inspect the combined sensor. (See 04-15-11 COMBINED SENSOR INSPECTION.) • Is the combined sensor normal?	Yes	Go to the next step.
		No	Replace the combined sensor, then go to the next step. (See 04-15-10 COMBINED SENSOR REMOVAL/ INSTALLATION.)
4	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See 04-15-6 DSC HU/CM REMOVAL/ INSTALLATION.)
		No	Go to the next step.
5	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

04-03A SYMPTOM TROUBLESHOOTING [ABS]

SYSTEM WIRING DIAGRAM[ABS]

id0403a5806400



am3zzw0000240

FOREWORD[ABS]

id0403a5804000

- Before performing the steps in Symptom Troubleshooting, perform the On-board Diagnostic inspection. To inspect the DTC, follow the DTC Inspection steps. (See 04-02A-2 ON-BOARD DIAGNOSIS[ABS].)

PRECAUTION[ABS]

id0403a5804100

1. Any one or a combination of the ABS warning and BRAKE system warning lights illuminates even when the system is normal.

Warning lights that may illuminate and/or flash	Cases in which the light may illuminate	Conditions in which the light will go out	ABS, EBD control
Either or both of the following lights illuminate: • ABS warning light • BRAKE system warning light(*1)	When the front wheels are jacked up, stuck, or placed on a chassis roller, and only the front wheel ABS wheel speed sensors are spun.	After turning ignition switch off, vehicle is driven at speed **greater than 10 km/h {6.2 mph}** and normal operation is confirmed.	• ABS: Cuts control. • EBD: 1. Cuts control, in cases where the light may illuminate, only when ABS CM detects that a wheel speed sensor determines that more than two wheels are malfunctioning. 2. Operates control, if wheel speed sensor determines that more than three wheels are functioning correctly.
	Parking brake is not fully released while driving.		
	Brake drag.		
	Sudden acceleration/ deceleration.		
	Left/right or front/rear tires are different. (Size, radius, tire pressure, or wear is other than that listed on tire label.)		
Both of the following lights illuminate: • ABS warning light • BRAKE system warning light	Battery voltage at ABS HU/CM ignition terminal AK drops **below approx. 8 V.**(*2)	Battery voltage rises **above approx. 8 V.**	ABS: Cuts control. EBD: Cuts control.

*1 : In cases where the light may illuminate, only when ABS HU/CM detects that a wheel-speed sensor determines that more than two wheels are malfunctioning.
*2 : If battery voltage drops **below 8 V** while vehicle speed is **greater than 20 km/h {12.4 mph}**, ABS HU/CM records DTC B1318.

2. Precautions during servicing of ABS
The ABS is composed of electrical and mechanical parts. It is necessary to categorize malfunctions as being either electrical or hydraulic when performing troubleshooting.
(1) Malfunctions in electrical system
- The ABS hydraulic unit and control module (ABS HU/CM) has an on-board diagnostic function. With this function, the ABS warning light and/or BRAKE system warning light will illuminate when there is a problem in the electrical system. Also, past and present malfunctions are recorded in the ABS HU/CM. This function can find malfunctions that do not occur during periodic inspections. Connect the M-MDS to the DLC-2. The stored malfunctions will be displayed in the order of occurrence. To find out the causes of ABS malfunctions, use these on-board diagnostic results.
- If a malfunction occurred in the past but is now normal, the cause is likely a temporary poor connection of the wiring harness. The ABS HU/CM usually operates normally. Be careful when searching for the cause of malfunction.
- After repair, it is necessary to clear the DTC from the ABS HU/CM memory. Also, if the ABS related parts have been replaced, verify that the no DTC has been displayed after repairs.
- After repairing the ABS wheel-speed sensor or ABS sensor rotor, or after replacing the ABS CM (ABS motor or ABS motor relay or solenoid valve), the ABS warning light may not go out (*) even when the ignition switch is turned to the ON position. In this case, drive the vehicle at a speed of **10 km/h {6.2 mph} or more**, make sure that ABS warning light goes out, and then clear the DTC.
  * The BRAKE system warning light also illuminates when any two wheels malfunction, or battery voltage drops **below 8 V**.
- When repairing, if the ABS related connectors are disconnected and the ignition switch is turned to the ON position, the ABS CM will mistakenly detect a fault and record it as a malfunction.
- To protect the ABS HU/CM, make sure the ignition switch is turned off before connecting or disconnecting the ABS CM connector.

(2) Malfunctions in hydraulic system
- Symptoms in a hydraulic system malfunction are similar to those in a conventional brake malfunction. However, it is necessary to determine if the malfunction is in an ABS component or the conventional brake system.
- The ABS hydraulic unit contains delicate mechanical parts. If foreign material enters into the component, the ABS may fail to operate. Also, it will likely become extremely difficult to find the location of the malfunction in the event that the brakes operate but the ABS does not. Make sure foreign material does not enter when servicing the ABS (e.g. brake fluid replacement, pipe removal).

Intermittent Concern Troubleshooting
Vibration method

- If malfunction occurs or becomes worse while driving on a rough road or when engine is vibrating, perform the steps below.

Note

- There are several reasons why vehicle or engine vibration could cause an electrical malfunction. Some of the things to inspect are:
  - — Connectors not fully seated.
  - — Wiring harness not having full play.
  - — Wires laying across brackets or moving parts.
  - — Wires routed too close to hot parts.
- An improperly routed, improperly clamped, or loose wiring harness can cause wiring to become pinched between parts.
- The connector joints, points of vibration, and places where wiring harness pass through the firewall, body panels, etc. are the major areas to be inspected.

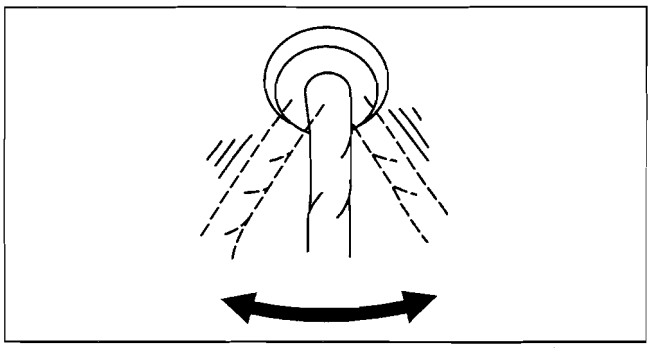
Inspection method for switch connectors or wiring harnesses

1. Connect the M-MDS to the DLC-2.
2. Turn the ignition switch to the ON position (Engine OFF).

Note

- If engine starts and runs, perform the following steps at idle.

3. Access PIDs for the switch you are inspecting.
4. Turn switch on manually.
5. Slightly shake each connector or wiring harness vertically and horizontally while monitoring the PID.
   - If the PID value is unstable, inspect poor connection.



am3zzw0000169

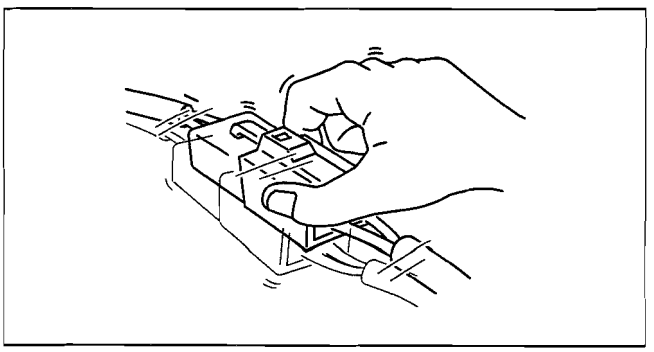
Inspection method for sensor connectors or wiring harnesses

1. Connect the M-MDS to the DLC-2.
2. Turn the ignition switch to the ON position (Engine OFF).

Note

- If engine starts and runs, perform the following steps at idle.

3. Access PIDs for the switch you are inspecting.
4. Slightly shake each connector or wiring harness vertically and horizontally while monitoring the PID.
   - If the PID value is unstable, inspect poor connection.



am3zzw0000169

Inspection method for sensors

1. Connect the M-MDS to the DLC-2.
2. Turn the ignition switch to the ON position (Engine OFF).

Note

- If engine starts and runs, perform the following steps at idle.

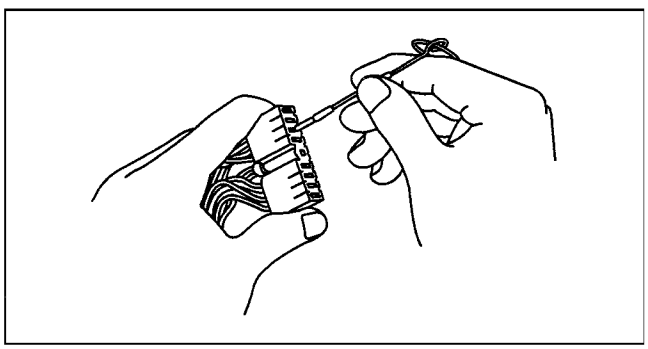
3. Access PIDs for the switch you are inspecting.
4. Vibrate the sensor slightly with your finger.
   - If the PID value is unstable or malfunction occurs, inspect the sensor for poor connection and/or poor mounting.

Malfunction data monitor method

1. Perform malfunction reappearance test according to malfunction reappearance mode and malfunction data monitor. The malfunction cause is found in the malfunction data.

Connector terminal inspection method

1. Inspect the connection condition of each female terminal.
2. Insert the male terminal to the female terminal and Inspect the female terminal for looseness.



am3zzw0000170

SYMPTOM TROUBLESHOOTING[ABS]

id0403a5804200

- Verify the symptoms, and perform troubleshooting according to the appropriate number.

No.	Symptom
1	Neither ABS warning light nor BRAKE system warning light illuminate when the ignition switch is turned to the ON position.
2	ABS warning light does not illuminate when the ignition switch is turned to the ON position.
3	BRAKE system warning light does not illuminate when the ignition switch is turned to the ON position.
4	Both ABS warning light and BRAKE system warning light stay on **4 s or more** when the ignition switch is turned to the ON position.
5	ABS warning light stays on **4 s or more** when the ignition switch is turned to the ON position.
6	BRAKE system warning light stays on **4 s or more** when the ignition switch is turned to the ON position. (Parking brake is released.)
7	There is a malfunction in the system even through ABS warning light, BRAKE system warning light, do not illuminate.

x: Applicable

Troubleshooting item	Possible factor	ABS HU/CM	Instrument cluster	CAN communication	Battery	Brake fluid	Parking brake switch	Charging system	ABS HU/CM power supply (terminal N)	ABS HU/CM GND (terminal B)	Instrument cluster power supply (terminal 1G)	Instrument cluster GND	Conventional brakes	Brake pipe routing

am3zzw0000170

NO.1 NEITHER ABS WARNING LIGHT NOR BRAKE SYSTEM WARNING LIGHT ILLUMINATE WHEN THE IGNITION SWITCH IS TURNED TO THE ON POSITION[ABS]

id0403a5801700

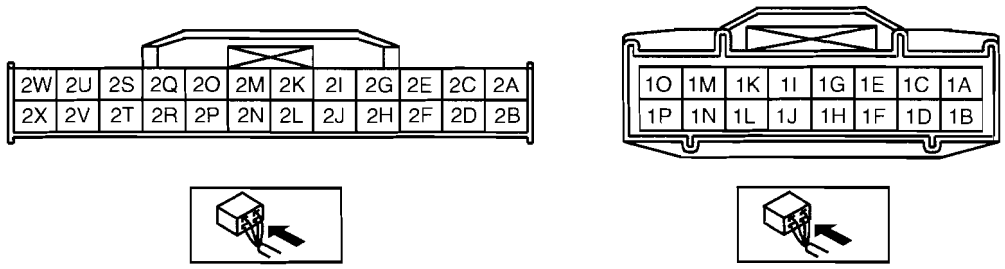
1	**Neither ABS warning light nor BRAKE system warning light illuminate when the ignition switch is turned to the ON position.**

[TROUBLESHOOTING HINTS]
- **Instrument cluster or ABS HU/CM malfunction**
- **Improper configuration (instrument cluster)**

STEP	INSPECTION		ACTION
1	**INSPECT FOR DTCs IN ABS HU/CM** • Have DTCs been stored in memory?	Yes	Perform the applicable DTC inspection. (See DTC Table.)
		No	Inspect the instrument cluster. If the instrument cluster is normal, inspect CAN communication. If instrument cluster has a malfunction, go to the next step.

STEP	INSPECTION		ACTION
2	**VERIFY WHETHER MALFUNCTION IS IN WARNING LIGHTS AND INDICATOR LIGHT'S COMMON POWER SUPPLY, OR IN OTHER WARNING LIGHTS AND INDICATOR LIGHTS** • Do other warning and indicator lights illuminate when the ignition switch is turned to the ON position?	Yes	Replace the instrument cluster. (open circuit in instrument cluster) (See 09-22-2 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.)
		No	Go to the next step.
3	**INSPECT INSTRUMENT CLUSTER POWER SUPPLY FUSE** • Is the instrument cluster ignition power supply fuse normal?	Yes	Go to the next step.
		No	Inspect for a short to ground on circuit of blown fuse. Repair or replace if necessary. Install appropriate amperage fuse.
*4	**VERIFY WHETHER MALFUNCTION IS IN WIRING HARNESS (BETWEEN INSTRUMENT CLUSTER POWER SUPPLY AND INSTRUMENT CLUSTER FOR CONTINUITY) OR INSTRUMENT CLUSTER** • Turn the ignition switch to the ON position. • Measure voltage at instrument cluster connector terminal 1G. • Is the voltage **approx. 12 V?**	Yes	Replace the instrument cluster (open circuit in instrument cluster). (See 09-22-2 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.)
		No	Inspect for open circuit in wiring harness between the instrument cluster and ground. Repair or replace if necessary. Replace the ABS HU/CM. (See 04-13-4 ABS HU/CM REMOVAL/INSTALLATION.)

INSTRUMENT CLUSTER WIRING HARNESS-SIDE CONNECTOR



- When performing an asterisked (*) troubleshooting inspection, slightly shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunction. If there is a problem, verify that the connectors, terminals and wiring harness are connected correctly and undamaged.

NO.2 ABS WARNING LIGHT DOES NOT ILLUMINATE WHEN THE IGNITION SWITCH IS TURNED TO THE ON POSITION[ABS]

id0403a5801800

2	**ABS warning light does not illuminate when the ignition switch is turned to the ON position.**
[TROUBLESHOOTING HINTS] • **Instrument cluster malfunction**	

NO.3 BRAKE SYSTEM WARNING LIGHT DOES NOT ILLUMINATE WHEN THE IGNITION SWITCH IS TURNED TO THE ON POSITION[ABS]

id0403a5801900

3	**BRAKE system warning light does not illuminate when the ignition switch is turned to the ON position.**
[TROUBLESHOOTING HINTS] • **Instrument cluster malfunction**	

NO.4 BOTH ABS WARNING LIGHT AND BRAKE SYSTEM WARNING LIGHT STAY ON 4 S OR MORE WHEN THE IGNITION SWITCH IS TURNED TO THE ON POSITION[ABS]

id0403a5802000

4	**Both ABS warning light and BRAKE system warning light stay on 4 s or more when the ignition switch is turned to the ON position.**

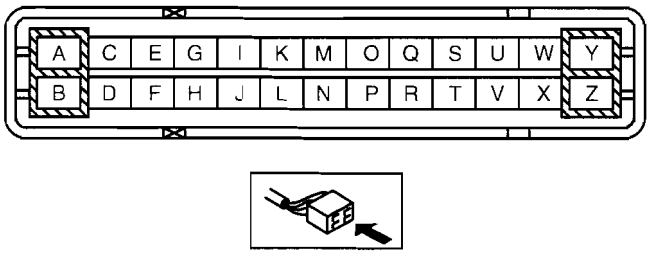
[TROUBLESHOOTING HINTS]
- **ABS HU/CM detects ABS proportioning system malfunction.**
- **ABS HU/CM detects low voltage in power supply (ABS CM ignition terminal N voltage is below approx. 8 V).**
- **ABS HU/CM does not operate.**
- **Malfunction of communication network**

Diagnostic procedure

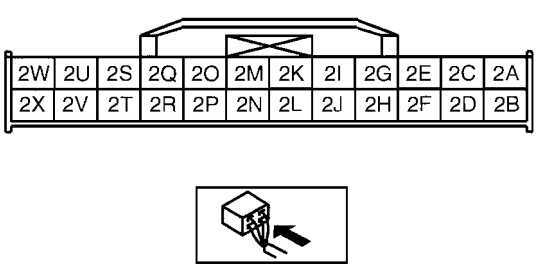
STEP	INSPECTION		ACTION
1	**INSPECT ABS HU/CM POWER SUPPLY FUSE** • Is the ABS HU/CM ignition power supply fuse normal?	Yes	Go to the next step. Inspect for a short to ground on blown fuse's circuit.
		No	Repair or replace if necessary. Install appropriate amperage fuse.
2	**INSPECT WIRING HARNESS BETWEEN ABS HU/CM AND DLC-2 FOR CONTINUITY AND SHORT CIRCUIT** • Perform DTC inspection. • Is any error message displayed regarding communication between the ABS HU/CM and M-MDS?	Yes	If the communication error message is displayed even after inspecting according to the procedure displayed on the M-MDS, go to step 6.
		No	Go to the next step.
3	**INSPECT FOR DTCs IN ABS HU/CM** • Have DTCs been stored in memory?	Yes	Perform the applicable DTC inspection. (See 04-02A-2 ON-BOARD DIAGNOSIS[ABS].)
		No	Inspect the instrument cluster. If the instrument cluster is normal, go to the next step. If the instrument cluster malfunction repair the instrument cluster, go to the next step.
4	**INSPECT BATTERY** • Is the battery voltage normal?	Yes	Go to the next step.
		No	Inspect the battery and charging system. (See 01-17A-4 BATTERY INSPECTION[LF, L3].) (See 01-17A-7 GENERATOR INSPECTION[LF, L3].)
5	**INSPECT CHARGING SYSTEM** • Is the battery voltage normal with electrical load (such as A/C, headlight) on and engine idling?	Yes	Go to the next step.
		No	Inspect the charging system (such as drive belt tension and generator). (See 01-17A-7 GENERATOR INSPECTION[LF, L3].)
6	**INSPECT ABS HU/CM IGNITION POWER SUPPLY SYSTEM (TERMINAL N)** • Disconnect the ABS HU/CM connector. • Turn the ignition switch to the ON position. • Inspect the voltage of connector terminal N. **Specification: approx. 8 V** • Is the voltage within the specification?	Yes	Replace the ABS HU/CM (open or short in ground circuit in the ABS HU/CM). (See 04-13-4 ABS HU/CM REMOVAL/INSTALLATION.)
		No	Repair the wiring harness between the ABS HU/CM and ground.
7	**INSPECT WIRING HARNESS BETWEEN ABS HU/CM GROUND FOR CONTINUITY** • Turn the ignition switch to the LOCK position. • Is there continuity between connector terminal B and ground?	Yes	If a malfunction error message is displayed on M-MDS in Step 1 inspection, go to the next step. If a malfunction error message is not displayed on M-MDS in Step 1 inspection, troubleshooting is completed.
		No	Repair the wiring harness between the ABS HU/CM and ground.
8	**INSPECT WIRING HARNESS BETWEEN ABS HU/CM AND DLC-2 FOR CONTINUITY** • Is there continuity between connector terminal H, L and DLC-2?	Yes	Go to the next step.
		No	Repair the wiring harness between the ABS HU/CM and DLC-2.
9	**INSPECT WIRING HARNESS BETWEEN ABS HU/CM AND DLC-2 FOR SHORT TO POWER SUPPLY** • Is the voltage **approx. 12 V** at connector terminal H, L?	Yes	Repair the wiring harness between the ABS HU/CM and DLC-2.
		No	Go to the next step.

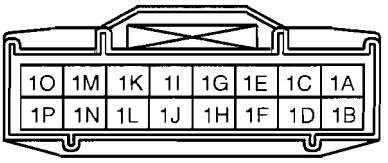
STEP	INSPECTION		ACTION
10	**INSPECT WIRING HARNESS BETWEEN ABS HU/CM AND DLC-2 FOR SHORT TO GROUND** • Is there continuity between connector terminal H, L and DLC-2?	Yes	Repair the wiring harness between the ABS HU/CM and DLC-2.
		No	Replace the ABS HU/CM (communication circuit malfunction in ABS HU/CM). (See 04-13-4 ABS HU/CM REMOVAL/INSTALLATION.)

ABS HU/CM WIRING HARNESS-SIDE CONNECTOR



INSTRUMENT CLUSTER WIRING HARNESS-SIDE CONNECTOR





NO.5 ABS WARNING LIGHT STAYS ON 4 S OR MORE WHEN THE IGNITION SWITCH IS TURNED TO THE ON POSITION[ABS]

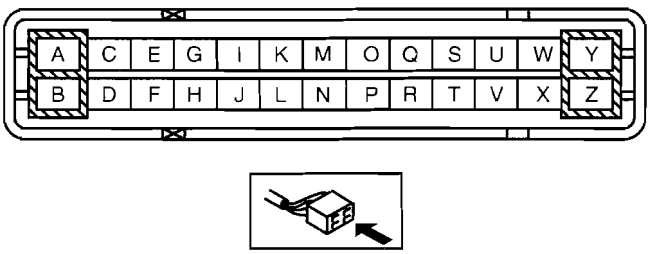
id0403a5802100

5	ABS warning light stays on 4 s or more when the ignition switch is turned to the ON position.
[TROUBLESHOOTING HINTS] • **ABS CM detects ABS system malfunction.**	

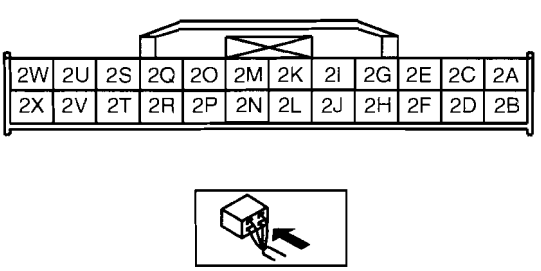
Diagnostic procedure

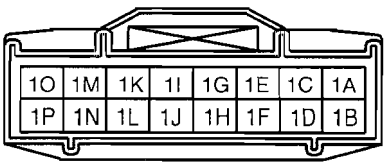
STEP	INSPECTION		ACTION
1	**INSPECT WIRING HARNESS BETWEEN ABS HU/CM AND DLC-2 FOR CONTINUITY AND SHORT CIRCUIT** • Perform DTC inspection. • Is any error message displayed regarding communication between ABS HU/CM and M-MDS?	Yes	If the communication error message is displayed even after inspecting according to the procedures displayed in the M-MDS, go to Step 4.
		No	Go to the next step.
2	**INSPECT FOR DTCs IN ABS HU/CM** • Have DTCs been stored in memory?	Yes	Perform the applicable DTC inspection. (See 04-02A-2 ON-BOARD DIAGNOSIS[ABS].)
		No	Inspect the instrument cluster If the instrument cluster is normal, go to the next step. If the instrument cluster has a malfunction, repair the instrument cluster, go to the next step.
3	**INSPECT WIRING HARNESS BETWEEN ABS HU/CM AND DLC-2 FOR CONTINUITY** • Disconnect the ABS HU/CM connector. • Is there continuity between connector terminal H, L and DLC-2?	Yes	Go to the next step.
		No	Repair the wiring harness between the ABS HU/CM and DLC-2.
4	**INSPECT WIRING HARNESS BETWEEN ABS HU/CM AND DLC-2 FOR SHORT TO POWER SUPPLY** • Is the voltage **approx. 12 V** at connector terminal H, L?	Yes	Repair the wiring harness between the ABS HU/CM and DLC-2.
		No	Go to the next step.
5	**INSPECT WIRING HARNESS BETWEEN ABS HU/CM AND DLC-2 FOR SHORT TO GROUND** Is there continuity between connector terminal H, L and ground?	Yes	Repair the wiring harness between the ABS HU/CM and DLC-2.
		No	Replace the ABS HU/CM (communication circuit malfunction in ABS HU/CM). (See 04-13-4 ABS HU/CM REMOVAL/INSTALLATION.)

ABS HU/CM WIRING HARNESS-SIDE CONNECTOR



INSTRUMENT CLUSTER WIRING HARNESS-SIDE CONNECTOR





- When performing an asterisked (*) troubleshooting inspection, slightly shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunction. If there is a problem, verify that the connectors, terminals and wiring harness are connected correctly and undamaged.

NO.6 BRAKE SYSTEM WARNING LIGHT STAYS ON 4 S OR MORE WHEN THE IGNITION SWITCH IS TURNED TO THE ON POSITION (PARKING BRAKE IS RELEASED)[ABS]

id0403a5802200

6	**BRAKE system warning light stays on 4 s or more when the ignition switch is turned to the ON position. (Parking brake is released.)**

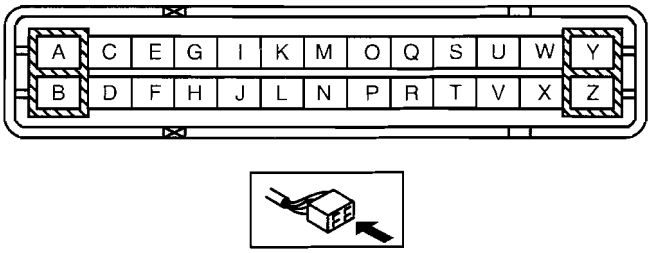
[TROUBLESHOOTING HINTS]
- **Instrument cluster malfunction**
- **Short to ground in circuit in parking brake switch**
- **Brake fluid level sensor is low**

Diagnostic procedure

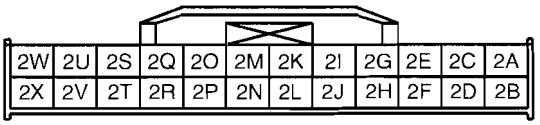
STEP	INSPECTION		ACTION
1	**INSPECT BRAKE FLUID LEVEL** • Is brake fluid level normal?	Yes	Go to the next step.
		No	Add brake fluid.
2	**INSPECT FOR DTCs IN ABS HU/CM** • Have DTCs been stored in memory?	Yes	Perform the applicable DTC inspection. (See 04-02A-2 ON-BOARD DIAGNOSIS[ABS].)
		No	Go to the next step.
3	**VERIFY WHETHER MALFUNCTION IS IN PARKING BRAKE SWITCH** • Disconnect the parking brake switch connector. • Does BRAKE system warning light go out with the ignition switch is turned to the ON position?	Yes	Replace the parking brake switch. (See 04-12-2 PARKING BRAKE LEVER REMOVAL/ INSTALLATION.)
		No	Perform the following inspection. Repair if necessary. • Short to ground in the wiring harness between the instrument cluster (BRAKE system warning light) and parking brake switch. Inspect the instrument cluster.
*4	**INSPECT WIRING HARNESS BETWEEN ABS HU/CM AND DLC -2 FOR CONTINUITY** • Disconnect the ABS HU/CM connector. • Is there continuity between connector terminal H, L and DLC-2?	Yes	Go to the next step.
		No	Repair the wiring harness between the ABS HU/CM and DLC-2.
*5	**INSPECT WIRING HARNESS BETWEEN ABS/ HU/CM AND DLC-2 FOR SHORT TO POWER SUPPLY** Is the voltage **approx. 12 V** at connector terminal H, L?	Yes	Repair the wiring harness between the ABS HU/CM and DLC-2.
		No	Go to the next step.
*6	**INSPECT WIRING HARNESS BETWEEN ABS HU/CM AND DLC-2 FOR SHORT TO GROUND** Is there continuity between connector terminal H, L and ground?	Yes	Repair the wiring harness between the ABS HU/CM and DLC-2.
		No	Replace the ABS HU/CM (communication circuit malfunction in ABS HU/CM). (See 04-13-4 ABS HU/CM REMOVAL/INSTALLATION.)

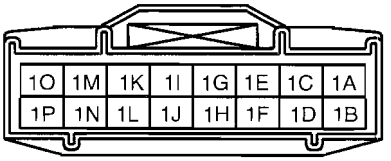
STEP	INSPECTION	ACTION

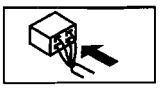
ABS HU/CM WIRING HARNESS-SIDE CONNECTOR

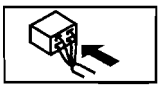


INSTRUMENT CLUSTER WIRING HARNESS-SIDE CONNECTOR









- When performing an asterisked (*) troubleshooting inspection, slightly shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunction. If there is a problem, verify that the connectors, terminals and wiring harness are connected correctly and undamaged.

NO.7 THERE IS MALFUNCTION IN THE SYSTEM EVEN THOUGH ABS WARNING LIGHT, BRAKE SYSTEM WARNING LIGHT, DO NOT ILLUMINATE[ABS]

id0403a5802300

7	**There is a malfunction in system even though ABS warning light, BRAKE system warning light, do not illuminate.**
[TROUBLESHOOTING HINTS] • **There is a difference in size or air pressure between the front and rear tires.**	

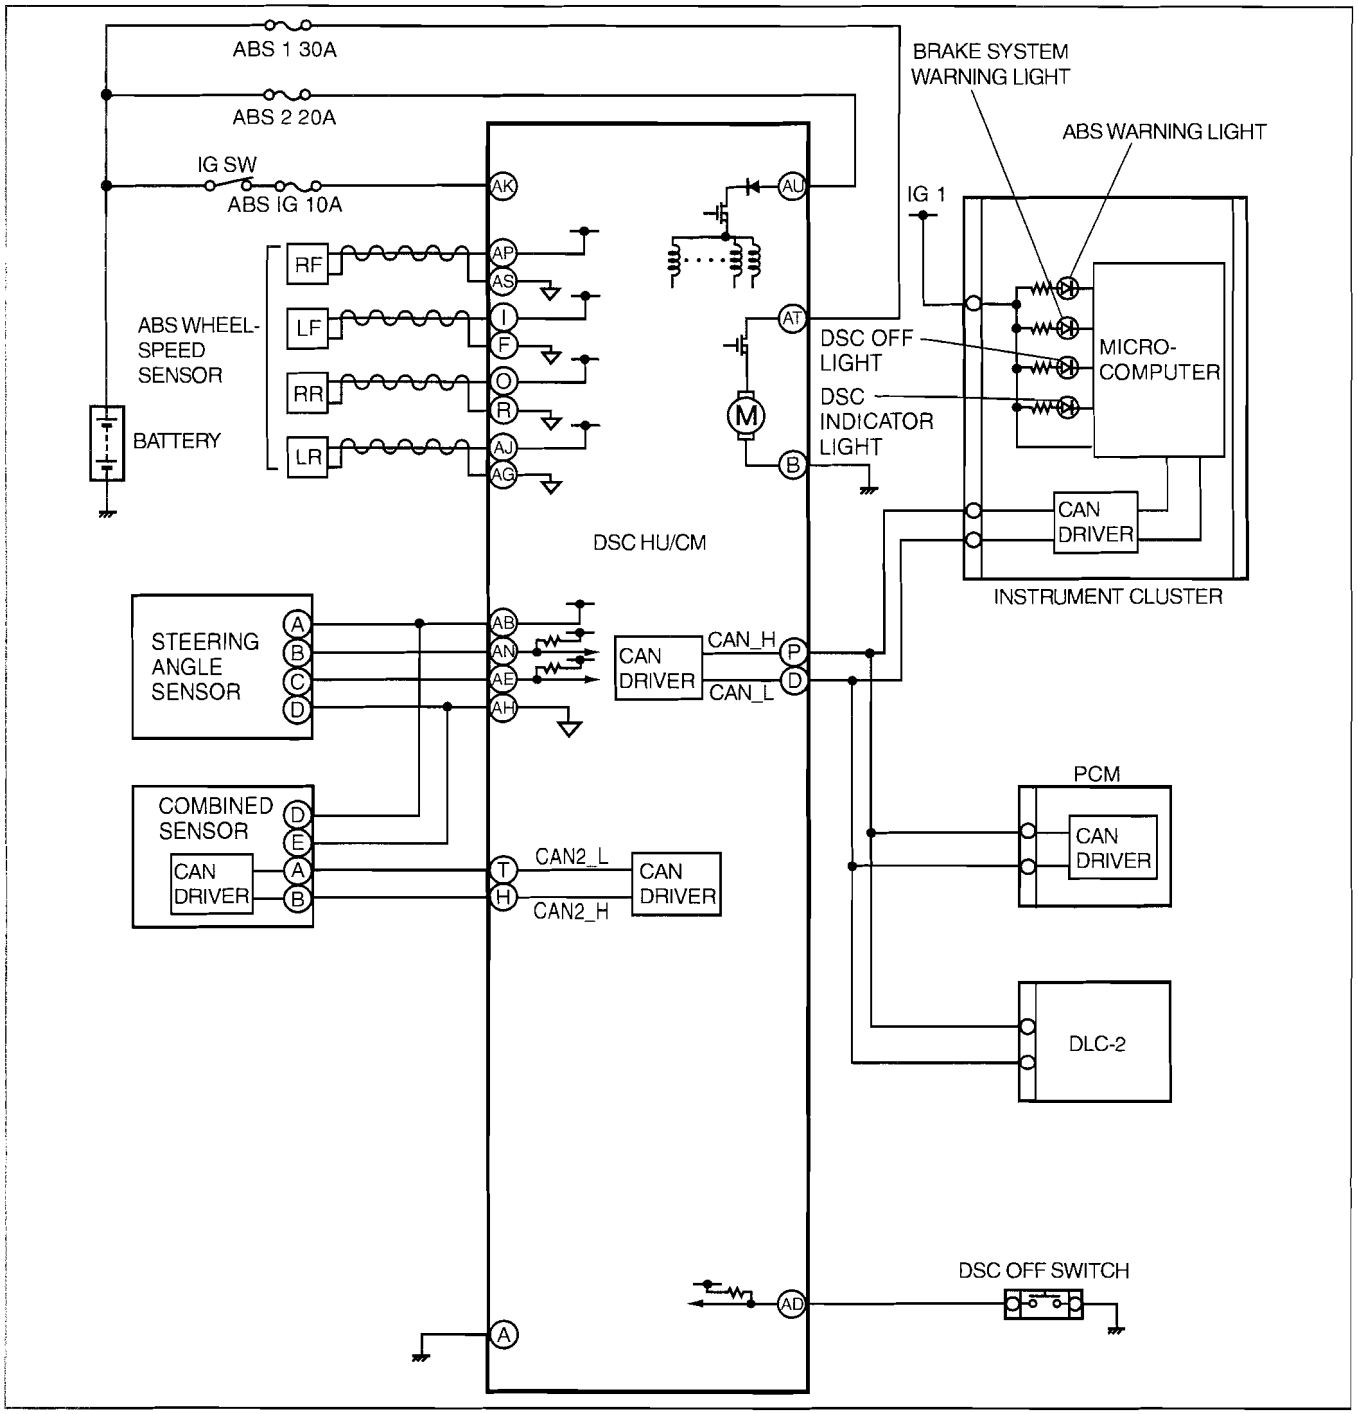
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FOR DTCs IN ABS HU/CM** Have DTCs been stored in memory?	Yes	Perform the applicable DTC inspection. (See 04-02A-2 ON-BOARD DIAGNOSIS[ABS].)
		No	Go to the next step.
2	**INSPECT ABS HYDRAULIC UNIT** Perform the ABS hydraulic unit on-vehicle inspection. (See 04-13-2 ABS SYSTEM INSPECTION.) Does the system operate properly?	Yes	Inspect the conventional brake system.
		No	**If the wheels do not rotate:** Replace the ABS HU/CM. (See 04-13-4 ABS HU/CM REMOVAL/INSTALLATION.) **If the wheels rotate but order in which wheels rotate is incorrect:** Inspect the brake pipe passage to the ABS HU/CM.

04-03B SYMPTOM TROUBLESHOOTING [DYNAMIC STABILITY CONTROL (DSC)]

SYSTEM WIRING DIAGRAM[DYNAMIC STABILITY CONTROL (DSC)]

id0403b2800100



am3uuw0000001

FOREWORD[DYNAMIC STABILITY CONTROL (DSC)]

id0403b2800200

- Before performing the steps in Symptom Troubleshooting, perform the On-board Diagnostic inspection. To inspect the DTC, follow the DTC Inspection steps. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].)

PRECAUTION[DYNAMIC STABILITY CONTROL (DSC)]

id0403b2800300

1. The ABS warning light and/or BRAKE system warning light and/or DSC indicator light illuminate even when the system is normal.

Warning lights that may illuminate and/or flash	Cases in which the light may illuminate	Conditions in which the light will go out	ABS, EBD, TCS and DSC control
• ABS warning light • BRAKE system warning light • DSC indicator light	When the front wheels are jacked up, struck, or placed on a chassis roller, and only the front wheel ABS wheel speed sensors are spun for **60 s or more.**	After turning the ignition switch off, vehicle is driven at a speed **greater than 10 km/h {6.2 mph}** and normal operation is confirmed.	ABS: Cuts control. EBD: Cuts control. TCS: Cuts control. DSC: Cuts control.
	Parking brake is not fully released while driving.		
	Brake drag.		
	Sudden acceleration/deceleration.		
	Left/right or front/rear tires are different. (Size, radius, tire pressure, or wear is other than that listed on tire label.)		
	Battery voltage at DSC HU/CM ignition terminal drops **below approx. 8 V.**	Battery voltage rises **above approx. 8 V.**	ABS: Cuts control. EBD: Cuts control. TCS: Cuts control. DSC: Cuts control.

2. Precautions during servicing of DSC. The DSC is composed of electrical and mechanical parts. It is necessary to categorize malfunctions as being either electrical or hydraulic when performing troubleshooting.
   (1) Malfunction in electrical system
   - The control module has an on-board diagnostic function. With this function, the ABS warning light and/or BRAKE system warning light and/or DSC indicator light will illuminate when there is a problem in the electrical system.
     Also, past and present malfunctions are recorded in the control module. This function can find malfunctions that do not occur during periodic inspections. Connect the M-MDS to the DLC-2, then turn the ignition switch to the ON position. As a result, the stored malfunctions will be displayed on the M-MDS in numeric order by connecting DLC-2. To find out the causes of DSC malfunctions, use these on-board diagnostic results.
   - If a malfunction occurred in the past but is now normal, the cause is likely a temporary poor connection of the wiring harness.
     The control module usually operates normally. Be careful when searching for the cause of malfunction.
   - After repair, it is necessary to clear the DTC from the control module memory.
     Also, if the DSC related parts have been replaced, verify that the no DTC has been displayed after repairs.
   - After repairing the ABS wheel-speed sensor or ABS sensor rotor, or after replacing the control module, the ABS warning light may not go out even when the ignition switch is turned to the ON position. In this case, drive the vehicle at a speed of **10 km/h {6.2 mph} or more**, make sure the ABS warning light goes out, and then clear the DTC.
   - When repairing, if the DSC related connectors are disconnected and the ignition switch is turned to the ON position, the control module will mistakenly detect a fault and record it as a malfunction.

   Caution
   - **In DSC vehicles, when the DSC HU/CM, combined sensor is replaced, perform the initialization procedure for each sensor. (See 04-15-12 COMBINED SENSOR INITIALIZATION PROCEDURE.) (See 04-15-13 BRAKE FLUID PRESSURE SENSOR INITIALIZATION PROCEDURE.)**

   - To protect the control module, make sure the ignition switch is turned off before connecting or disconnecting the control module connector.

   (2) Malfunctions in hydraulic system
   - Symptoms in a hydraulic system malfunction are similar to those in a conventional brake malfunction. However, it is necessary to determine if the malfunction is in a DSC component or the conventional brake system.
   - The hydraulic unit contains delicate mechanical parts. If foreign material enters the component, the DSC may fail to operate. Also, it will likely become extremely difficult to find the location of the malfunction in the event that the brakes operate but the DSC does not. Make sure foreign materials does not enter when servicing the DSC (e.g. brake fluid replacement, pipe removal).

Intermittent Concern Troubleshooting
Vibration method

- If malfunction occurs or becomes worse while driving on a rough road or when engine is vibrating, perform the steps below.

Note

- There are several reasons why vehicle or engine vibration could cause an electrical malfunction. Some of the things to inspect are:
  - — Connectors not fully seated.
  - — Wiring harness not having full play.
  - — Wires laying across brackets or moving parts.
  - — Wires routed too close to hot parts.
- An improperly routed, improperly clamped, or loose wiring harness can cause wiring to become pinched between parts.
- The connector joints, points of vibration, and places where wiring harness pass through the firewall, body panels, etc. are the major areas to be inspected.

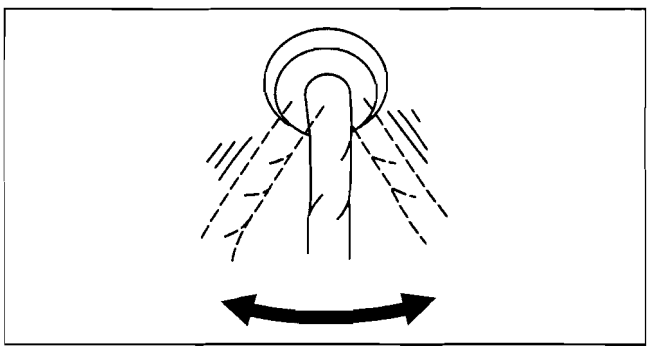
Inspection method for switch connectors or wiring harnesses

1. Connect the M-MDS to the DLC-2.
2. Turn the ignition switch to the ON position (Engine OFF).

Note

- If engine starts and runs, perform the following steps at idle.

3. Access PIDs for the switch you are inspecting.
4. Turn switch on manually.
5. Slightly shake each connector or wiring harness vertically and horizontally while monitoring the PID.
   - If the PID value is unstable, inspect poor connection.



am3uuw0000001

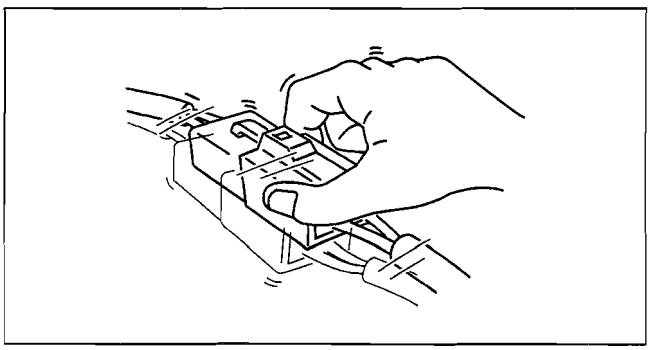
Inspection method for sensor connectors or wiring harnesses

1. Connect the M-MDS to the DLC-2.
2. Turn the ignition switch to the ON position (Engine OFF).

Note

- If engine starts and runs, perform the following steps at idle.

3. Access PIDs for the switch you are inspecting.
4. Slightly shake each connector or wiring harness vertically and horizontally while monitoring the PID.
   - If the PID value is unstable, inspect poor connection.



am3uuw0000001

Inspection method for sensors

1. Connect the M-MDS to the DLC-2.
2. Turn the ignition switch to the ON position (Engine OFF).

Note

- If engine starts and runs, perform the following steps at idle.

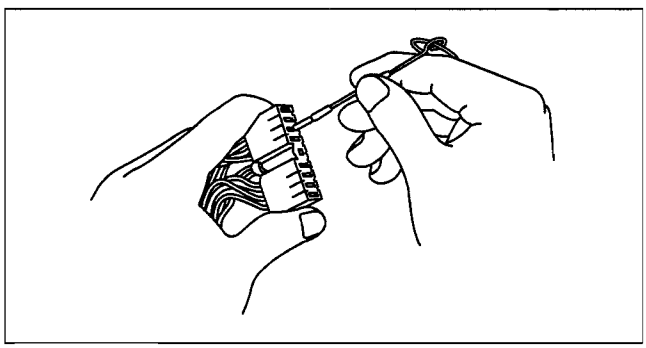
3. Access PIDs for the switch you are inspecting.
4. Vibrate the sensor slightly with your finger.
   - If the PID value is unstable or malfunction occurs, inspect the sensor for poor connection and/or poor mounting.

Malfunction data monitor method

1. Perform malfunction reappearance test according to malfunction reappearance mode and malfunction data monitor. The malfunction cause is found in the malfunction data.

Connector terminal inspection method

1. Inspect the connection condition of each female terminal.
2. Insert the male terminal to the female terminal and Inspect the female terminal for looseness.



am3uuw0000001

SYMPTOM TROUBLESHOOTING[DYNAMIC STABILITY CONTROL (DSC)]

id0403b2800400

- Verify the symptoms, and perform troubleshooting according to the appropriate number.

No.	Symptom
1	Any of the following lights do not illuminate when the ignition switch is turned to the ON position. • ABS warning light • BRAKE system warning light • DSC indicator light • DSC OFF light
2	Any of the following lights remain on: • ABS warning light. • BRAKE system warning light • DSC indicator light • DSC OFF light
3	There is a malfunction in the system even though ABS warning light, BRAKE system warning light, DSC indicator light and DSC OFF light do not illuminate.
4	ABS or TCS*1 operates frequently.
	TCS does not work correctly.
5	DSC*2 operates frequently.
	DSC does not work correctly.

*1 : DSC system contains traction control function; DSC indicator light illuminates and goes out while DSC is operating.

*2 : DSC indicator light illuminates and goes out while DSC is operating.

NO.1 ANY OF THE FOLLOWING LIGHTS DO NOT ILLUMINATE WHEN THE IGNITION SWITCH IS TURNED TO THE ON POSITION: (ABS WARNING LIGHT, BRAKE SYSTEM WARNING LIGHT, DSC INDICATOR LIGHT AND/OR DSC OFF LIGHT)[DYNAMIC STABILITY CONTROL (DSC)]

id0403b2804500

1	**Any of the following lights do not illuminate when the ignition switch is turned to the ON position: (ABS warning light, BRAKE system warning light, DSC indicator light and/or DSC OFF light).**

[TROUBLESHOOTING HINTS]
- **Inspect each light in the instrument cluster for malfunction.**
- **Poor connection at DSC HU/CM connector**

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FOR DTCs IN DSC HU/CM** • Have DTCs been stored in memory?	Yes	Perform the applicable DTC inspection. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].)
		No	Go to the next step.
2	**INSPECT IF MALFUNCTION IS IN INSTRUMENT CLUSTER SYSTEM OR OTHER SYSTEM** • Do other warning and indicator lights illuminate when the ignition switch is turned to the ON position?	Yes	Go to the next step.
		No	Inspect or repair the instrument cluster (power supply system, ground system).
3	**VERIFY THAT DSC HU/CM CONNECTOR IS CONNECTED** • Is the DSC HU/CM connector securely connected?	Yes	Go to the next step.
		No	Connect the DSC HU/CM connector securely, then go to the next step.
4	**VERIFY THAT DSC HU/CM CONNECTOR TERMINAL OR RELATED CONNECTOR TERMINALS ARE CONNECTED** • Are the DSC HU/CM connector terminal, instrument cluster connector terminal, or related connector terminals securely connected?	Yes	Replace the DSC HU/CM. (See 04-15-6 DSC HU/CM REMOVAL/INSTALLATION.)
		No	Connect the DSC HU/CM connector terminal or related connector terminal securely.

NO.2 ANY OF THE FOLLOWING LIGHTS REMAIN ON: (ABS WARNING LIGHT, BRAKE SYSTEM WARNING LIGHT, DSC INDICATOR LIGHT AND/OR DSC OFF LIGHT)[DYNAMIC STABILITY CONTROL (DSC)]

id0403b2804600

2	**Any of the following lights remain on: (ABS warning light, BRAKE system warning light, DSC indicator light and/or DSC OFF light)**

[TROUBLESHOOTING HINTS]
- **Brake fluid amount is low.**
- **Parking brake is not released.**
- **No connection at DSC HU/CM connector**
  (When DSC HU/CM connector goes out, ABS warning light and BRAKE system warning light illuminate.)
- **DSC HU/CM detected malfunction (input and output device malfunction).**
- **DSC HU/CM detects low voltage in power supply circuit.**
- **DSC HU/CM ground malfunction**
  (When DSC HU/CM ground is not securely connected, ABS warning light and BRAKE system warning light illuminate but no DTC is displayed.)
- **DSC HU/CM does not operate (DSC HU/CM malfunction).**

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT BRAKE FLUID AMOUNT AND VERIFY THAT PARKING BRAKE RELEASES** • Is the brake fluid amount normal? • Is the parking brake lever released?	Yes	Go to the next step.
		No	Add brake fluid or release the parking brake lever.
2	**INSPECT FOR DTCs IN DSC HU/CM** • Have DTCs been stored in memory?	Yes	Perform the applicable DTC inspection. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].)
		No	Go to the next step.
3	**INSPECT IF MALFUNCTION IS IN CONTROL MODULE CONNECTOR, TERMINAL OR OTHER** • Do ABS warning light and BRAKE system warning light go out **after 4 s** with the ignition switch turned to the ON position?	Yes	Temporary poor connection in control module connector. Inspect the DSC HU/CM connector, then go to Step 6. Inspect the DSC HU/CM connector terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT BATTERY** • Is the battery voltage normal?	Yes	Go to the next step.
		No	Inspect the battery and charging system. (See 01-17A-4 BATTERY INSPECTION[LF, L3].) (See 01-17A-7 GENERATOR INSPECTION[LF, L3].)
5	**INSPECT CHARGING SYSTEM** • Is the battery voltage normal with electrical load (such as A/C, headlight) on and engine idling?	Yes	Go to the next step.
		No	Inspect the charging system (such as drive belt tension, generator). (See 01-17A-7 GENERATOR INSPECTION[LF, L3].)
6	**VERIFY THAT DSC HU/CM CONNECTOR IS CONNECTED** • Is the DSC HU/CM securely connected?	Yes	Go to the next step.
		No	Connect the DSC HU/CM connector securely, then go to the next step.
7	**VERIFY THAT DSC HU/CM CONNECTOR TERMINAL OR RELATED CONNECTOR TERMINALS ARE CONNECTED** • Are DSC HU/CM connector terminal or instrument cluster connector terminal, related connector terminals securely connected?	Yes	Replace the DSC HU/CM. (See 04-15-6 DSC HU/CM REMOVAL/INSTALLATION.)
		No	Connect the DSC HU/CM connector terminal or related connector terminals securely.

NO.3 THERE IS A MALFUNCTION IN THE SYSTEM EVEN THOUGH ABS WARNING LIGHT, BRAKE SYSTEM WARNING LIGHT, DSC INDICATOR LIGHT AND DSC OFF LIGHT DO NOT ILLUMINATE[DYNAMIC STABILITY CONTROL (DSC)]

id0403b2804700

3	**There is a malfunction in the system even though ABS warning light, BRAKE system warning light, DSC indicator light and DSC OFF light do not illuminate.**
[TROUBLESHOOTING HINTS] • **There is a mechanical malfunction in the system.**	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FOR DTCs IN DSC HU/CM** • Have DTCs been stored in memory?	Yes	Perform the applicable DTC inspection. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].)
		No	Go to the next step.
2	**INSPECT DSC SYSTEM** • Perform the DSC system inspection. • Is the system normal?	Yes	Inspect the conventional brake system.
		No	Repair or replace the malfunctioning part.

NO.4 ABS OR TCS*1 OPERATES FREQUENTLY/TCS DOES NOT WORK CORRECTLY *1: DSC SYSTEM FUNCTION CONTAINs TRACTION CONTROL FUNCTION, DSC INDICATOR LIGHT GOES ON AND OUT WHILE DSC OPERATES[DYNAMIC STABILITY CONTROL (DSC)]

id0403b2804800

4	**ABS or TCS (*1) operates frequently./TCS does not work correctly. (*1): DSC system function contains traction control function, DSC indicator light goes on and out while DSC operates.**

[TROUBLESHOOTING HINTS]
- **There is a difference in size or air pressure between the front and rear tires.**
- **Incorrect ABS wheel-speed signal is input to DSC HU/CM**
- **There is a malfunction in the engine control system (TCS malfunction).**

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FOR DTCs IN DSC HU/CM** • Have DTCs been stored in memory?	Yes	Perform the applicable DTC inspection. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].)
		No	Go to the next step.
2	**INSPECT TIRE SIZE AND AIR PRESSURE** • Inspect the tire size and air pressure. • Are the size and air pressure as specified?	Yes	Go to the next step.
		No	Replace with the specified tires and adjust tire air pressure.
3	**INSPECT ABS WHEEL-SPEED SENSOR OUTPUT VALUE** • Inspect the output value from the ABS wheel-speed sensor. (See 04-13-8 FRONT ABS WHEEL-SPEED SENSOR INSPECTION.) (See 04-13-10 REAR ABS WHEEL-SPEED SENSOR INSPECTION.) • Is the output value normal?	Yes	Found malfunctioning part according to "INTERMITTENT CONCERN TROUBLESHOOTING".
		No	• ABS wheel-speed sensor installation inspection: Inspect the ABS wheel-speed sensor for looseness and confirm it is securely adhered. • ABS sensor rotor installation inspection: Inspect the ABS sensor rotor for poor installation.

NO.5 DSC*2 OPERATES FREQUENTLY/DSC DOES NOT WORK CORRECTLY *2: DSC INDICATOR LIGHT GOES ON AND OUT WHILE DSC OPERATES[DYNAMIC STABILITY CONTROL (DSC)]

id0403b2804900

5	**DSC (*2) operates frequently. /DSC does not work correctly. (*2): DSC indicator light goes on and off while DSC operates.**

[TROUBLESHOOTING HINTS]
- **DSC HU/CM detected a malfunction (input and output device malfunction).**
- **Poor installation of combined sensor and/or steering angle sensor.**
  (If any of the above sensors are poorly installed, DSC may operate intermittently.)
- **Initialization was not performed for combined sensor, brake fluid pressure sensor when replacing DSC HU/CM, combined sensor.**
  (If initialization is not performed correctly, DSC may not work correctly.)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FOR DTCs IN DSC HU/CM** • Have DTCs been stored in memory?	Yes	Perform the applicable DTC inspection. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].)
		No	Go to the next step.
2	**VERIFY THAT EACH SENSOR IS INSTALLED** • Are the combined sensor and steering angle sensor securely installed?	Yes	Go to the next step.
		No	Install the malfunctioning sensor securely.
*3	**VERIFY THAT EACH SENSOR IS INITIALIZED** • Did each sensor initialize after replacement of DSC HU/CM, combined sensor?	Yes	Find malfunctioning part according to "INTERMITTENT CONCERN TROUBLESHOOTING."
		No	Perform initialization procedure. (See 04-15-12 COMBINED SENSOR INITIALIZATION PROCEDURE.) (See 04-15-13 BRAKE FLUID PRESSURE SENSOR INITIALIZATION PROCEDURE.)

04-10 GENERAL PROCEDURES

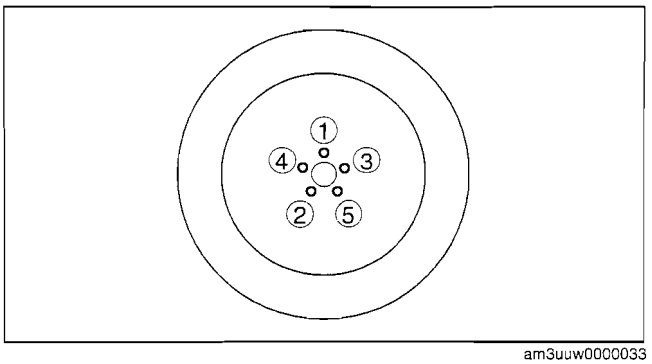
GENERAL PROCEDURES (BRAKE)

id041000800100

Wheel and Tire Installation

1. When installing the wheels and tires, tighten the wheel nuts in a criss-cross pattern to the following tightening torque.

Tightening torque
88.2—117.6 N·m {9.00—11.99 Kgf·m, 65.06—86.73 ft·lbf}



am3uuw0000033

Brake Lines Disconnection

1. If any brake line has been disconnected during the procedures, add brake fluid, bleed the brakes, and inspect for leakage after the procedure has been completed.

Caution
- **Brake fluid will damage painted surfaces. Be careful not to spill any on painted surfaces. If it is spilled, wipe it off immediately.**

Brake Pipe Flare Nut Tightening

1. Tighten the brake pipe flare nut using the **SST** (49 0259 770B) or any commercially available flare nut wrench.

Connector Disconnection

1. Disconnect the negative battery cable before performing any work that requires handling of connectors. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].) (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)

ABS Related Parts

1. Make sure that there are no DTCs in the ABS memory after working on ABS related parts. If there are any DTCs in the memory, clear them.

DSC Related Parts Sensor Initialization Procedure

Warning
- **If the initialization procedure is not completed, the DSC will not operate properly and it might cause an unexpected accident. Therefore, when replacing or removing the following parts, make sure to perform the initialization procedure to ensure proper DSC operation.**

1. When replacing or removing the following parts, perform the initialization procedure. (See 04-15-12 COMBINED SENSOR INITIALIZATION PROCEDURE.) (See 04-15-13 BRAKE FLUID PRESSURE SENSOR INITIALIZATION PROCEDURE.)
   - DSC HU/CM
   - Combined sensor

04-11 CONVENTIONAL BRAKE SYSTEM

CONVENTIONAL BRAKE SYSTEM LOCATION INDEX

id041100800100

1	Brake fluid (See 04-11-3 AIR BLEEDING.)
2	Vacuum line (See 04-11-4 VACUUM LINE INSPECTION.) (See 04-11-4 VACUUM HOSE REMOVAL/ INSTALLATION.)
3	Brake pedal (See 04-11-5 BRAKE PEDAL INSPECTION.) (See 04-11-6 BRAKE PEDAL REMOVAL/ INSTALLATION.)
4	Brake switch (See 04-11-8 BRAKE SWITCH INSPECTION.)
5	Master cylinder (See 04-11-9 MASTER CYLINDER REMOVAL/ INSTALLATION[LF, L3].) (See 04-11-10 MASTER CYLINDER REMOVAL/ INSTALLATION[L3 WITH TC].)
6	Brake fluid level sensor (See 04-11-11 BRAKE FLUID LEVEL SENSOR INSPECTION.)

7	Power brake unit (See 04-11-11 POWER BRAKE UNIT INSPECTION.) (See 04-11-13 POWER BRAKE UNIT REMOVAL/ INSTALLATION[LF, L3].) (See 04-11-14 POWER BRAKE UNIT REMOVAL/ INSTALLATION[L3 WITH TC].)
8	Proportioning valve (See 04-11-15 PROPORTIONING VALVE INSPECTION.)

9	Front brake (disc) (See 04-11-15 FRONT BRAKE (DISC) INSPECTION.) (See 04-11-18 FRONT BRAKE (DISC) REMOVAL/INSTALLATION[LF, L3].) (See 04-11-19 FRONT BRAKE (DISC) REMOVAL/INSTALLATION[L3 WITH TC].) (See 04-11-21 DISC PAD (FRONT) REPLACEMENT[LF, L3].) (See 04-11-22 DISC PAD (FRONT) REPLACEMENT[L3 WITH TC].) (See 04-11-23 CALIPER (FRONT) DISASSEMBLY/ASSEMBLY[LF, L3].) (See 04-11-25 CALIPER (FRONT) DISASSEMBLY/ASSEMBLY[L3 WITH TC].)

10	Rear brake (disc) (See 04-11-26 REAR BRAKE (DISC) INSPECTION.) (See 04-11-30 REAR BRAKE (DISC) REMOVAL/INSTALLATION.) (See 04-11-31 DISC PAD (REAR) REPLACEMENT.) (See 04-11-32 CALIPER (REAR) DISASSEMBLY/ASSEMBLY.)

AIR BLEEDING

id041100800200

Caution
- **Brake fluid will damage painted surfaces. Be careful not to spill any on painted surfaces. If it is spilled, wipe it off immediately.**

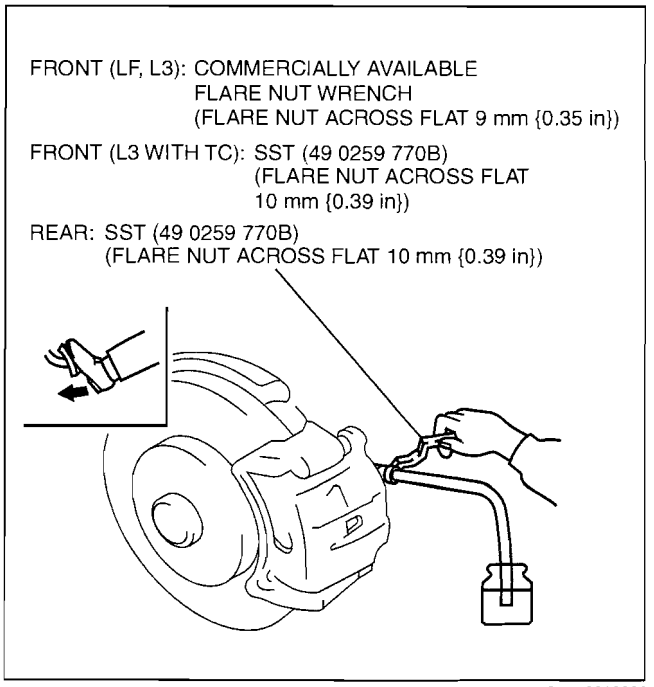
Note
- Keep the fluid level in the reserve tank at 3/4 full or more during the air bleeding.
- Begin air bleeding with the brake caliper that is furthest from the master cylinder.

Brake fluid type
SAE J1703, FMVSS 116 DOT3

1. Remove the bleeder cap on the brake caliper, and attach a vinyl tube to the bleeder screw.
2. Place the other end of the vinyl tube in a clear container and fill the container with fluid during air bleeding.
3. Working with two people, one should pump the brake pedal several times and depress and hold the pedal down.
4. While the brake pedal is depressed, the other should loosen the bleeder screw using the **SST** or any commercially available flare nut wrench, drain out any fluid containing air bubbles, and tighten the bleeder screw.

   Tightening torque
   Front (LF, L3): 7—9 N·m {72—91 kgf·cm, 70—79 in·lbf}
   Front (L3 WITH TC): 12—16 N·m {123—163 kgf·cm, 107—141 in·lbf}
   Rear: 12—16 N·m {123—163 kgf·cm, 107—141 in·lbf}

5. Repeat Steps 3 and 4 until no air bubbles are seen.
6. Perform air bleeding as described in the above procedures for all brake calipers.
7. After air bleeding, inspect the following:
   - Brake operation
   - Fluid leakage
   - Fluid level

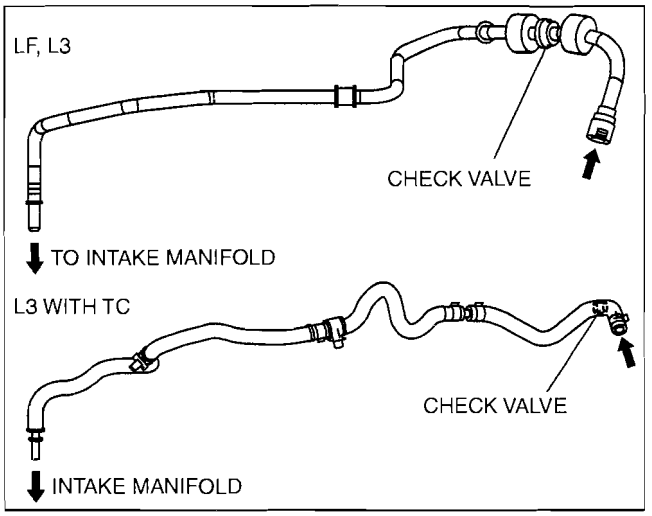


am3uuw0000026

VACUUM LINE INSPECTION

id041100801500

1. Remove the vacuum hose. (See 04-11-4 VACUUM HOSE REMOVAL/INSTALLATION.)
2. Verify that air can be blown from the power brake unit side of the vacuum hose towards the intake manifold side, and that air cannot be blown in the opposite direction.
   - If there is any malfunction of the inner check valve, replace it together with the vacuum hose as a single unit.

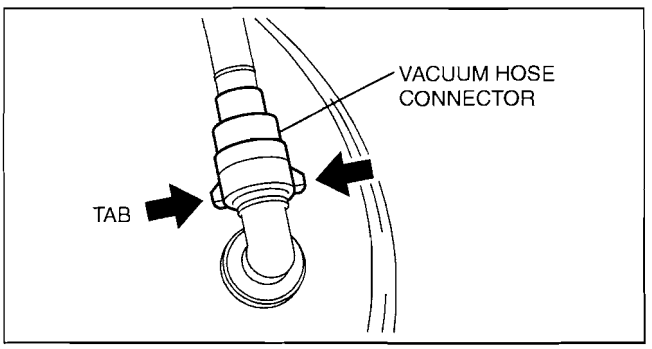


am3uuw0000039

VACUUM HOSE REMOVAL/INSTALLATION

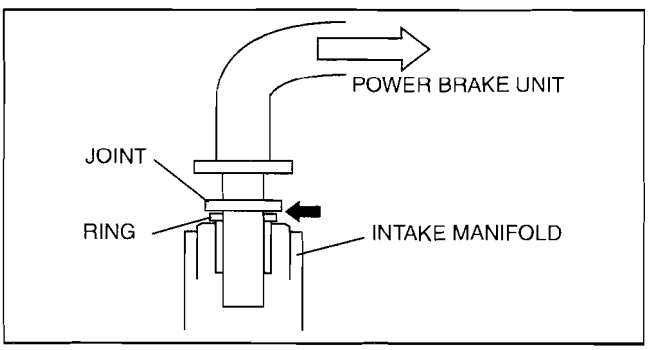
id041100801600

1. Disconnect the vacuum hose connector from the power brake unit while pressing the tabs of the vacuum hose connector. (LF, L3)
2. Pinch open the clip using pliers and disconnect the vacuum hose from the power brake unit. (L3 WITH TC)



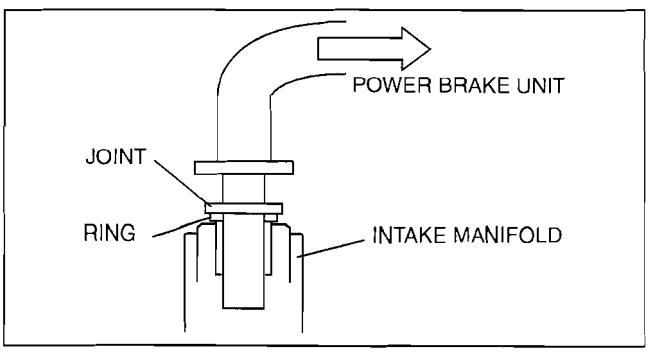
am3uuw0000027

3. Insert a thin flathead screwdriver at the point indicated by the arrow in the figure, push the ring down and disconnect the vacuum hose from the intake manifold.
4. Remove the vacuum hose.
5. Install in the reverse order of removal.



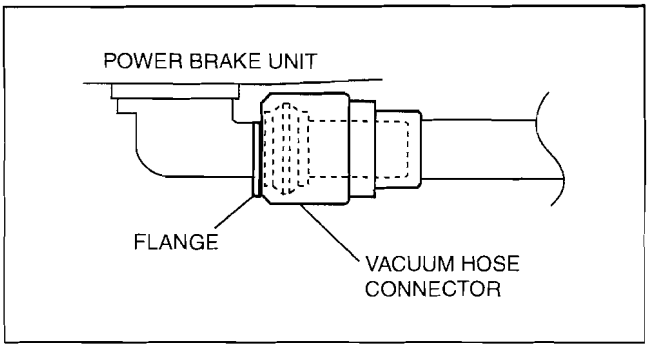
am3uuw0000027

6. Verify that the vacuum hose is inserted so that the joint contacts the intake manifold ring. (LF, L3)
7. Insert the vacuum hose connector to the power brake unit. (LF, L3)



am3uuw0000027

8. Verify that the vacuum hose is inserted so that the connector contacts the power brake unit flange. (LF, L3)



am3uuw0000027

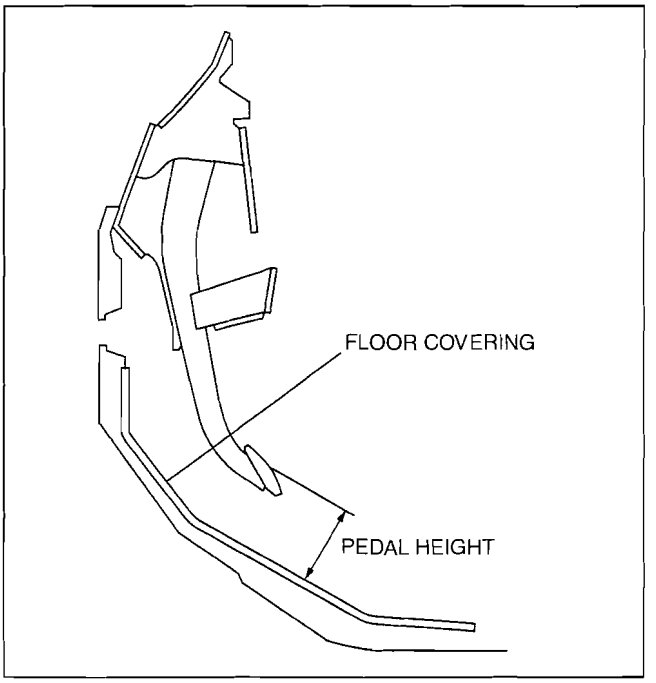
BRAKE PEDAL INSPECTION

id041100801100

Pedal Height Inspection

1. Measure the distance from the center of the upper surface of the pedal pad to the floor covering and verify that it is as specified.
   - If not within the specification, replace the brake pedal.

Brake pedal height (reference value)
136.4 mm {5.37 in}



am3uuw0000074

Pedal Play Inspection

1. Pump the pedal several times to release the vacuum in the power brake unit.
2. Gently depress the pedal by hand and measure the pedal play.
   - If not within the specification, inspect the wear of the joint pin. Replace it if there is any malfunction.

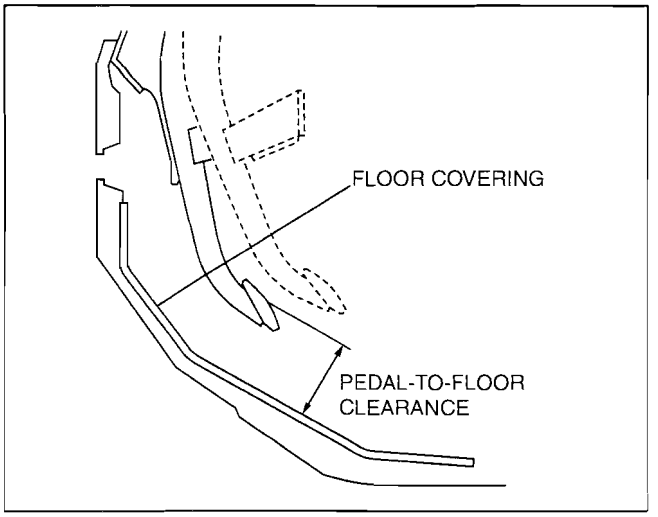
Brake pedal play
4.0—8.4 mm {0.16—0.33 in}

Note
- If there is no malfunction in the joint pin, there is a possibility that the power brake unit has some malfunction. Verify that there are no malfunctions, and replace it if necessary.

Pedal-to-floor Clearance Inspection

1. Start the engine and depress the brake pedal with a force of **147 N {15.0 kgf, 33.0 lbf}**.
2. Measure the distance from the center of the upper surface of the pedal pad to the floor covering and verify that it is as specified.
   - If it is less than the specification, inspect for air in the brake line.

Brake pedal-to-floor clearance (Brake pedal when depressed at 147 N {15.0 kgf, 33.0 lbf})
89.8 mm {3.54 in} or more



am3uuw0000074

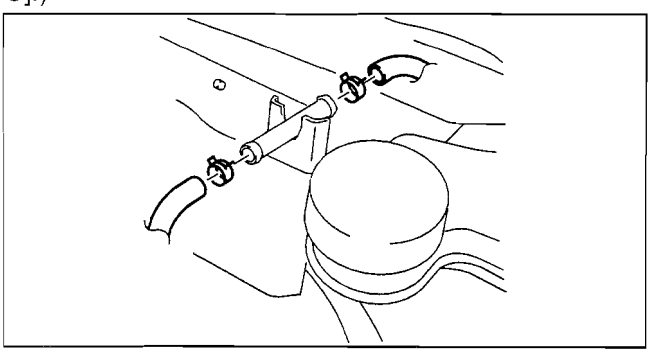
BRAKE PEDAL REMOVAL/INSTALLATION

id041100801200

Caution

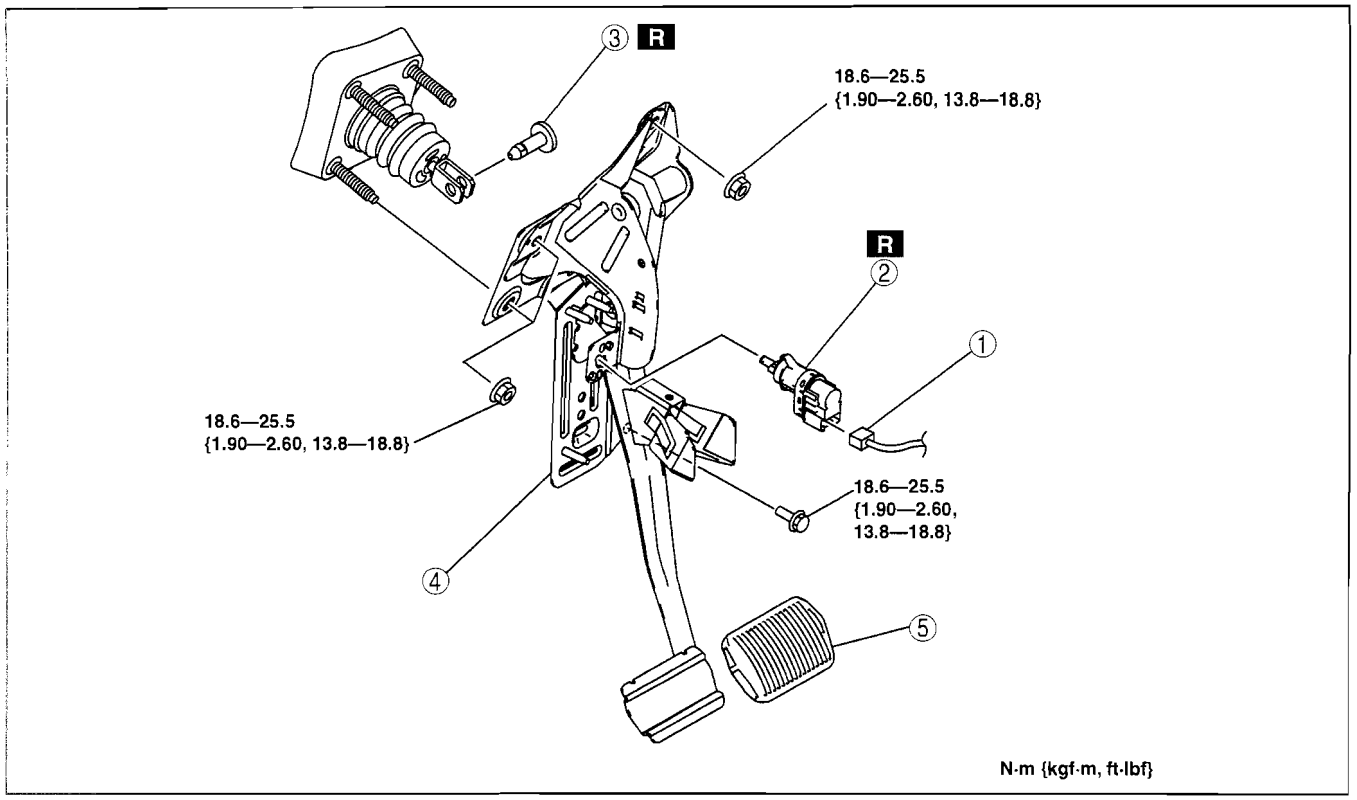
- **The clearance between the brake switch and the brake pedal is automatically adjusted to the correct amount when the brake switch is inserted into the installation hole on the brake pedal and rotated to fix in place. If the brake switch is not properly installed, the clearance may be incorrect, causing a brake light malfunction. Therefore, always verify that the brake pedal is properly installed and fully released before installing the brake switch to the pedal.**
- **Once the brake switch clearance has automatically been adjusted, it cannot be adjusted again. Therefore, replace the switch with a new one when replacing the power brake unit or the pedal, or performing any procedure that changes the pedal stroke.**

1. Remove the charge air cooler cover. (L3 WITH TC) (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
2. Remove the battery and battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].) (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
3. Disconnect the vacuum hose from the insulator pipe as shown in the figure. (L3 WITH TC)
4. Remove the insulator. (L3 WITH TC) (see 04-11-10 MASTER CYLINDER REMOVAL/INSTALLATION[L3 WITH TC].)
5. Disconnect the brake pipe (master cylinder side). (See 04-11-9 MASTER CYLINDER REMOVAL/INSTALLATION[LF, L3].) (See 04-11-10 MASTER CYLINDER REMOVAL/INSTALLATION[L3 WITH TC].)
6. Remove the accelerator pedal. (See 01-13A-11 ACCELERATOR PEDAL REMOVAL/INSTALLATION[LF, L3].) (See 01-13B-18 ACCELERATOR PEDAL REMOVAL/INSTALLATION[L3 WITH TC].)
7. Remove in the order indicated in the table.



am3uuw0000038

8. Install in the reverse order of removal.



c3u0411w008

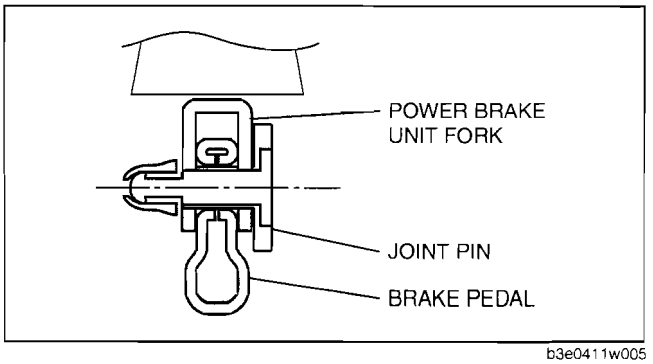
1	Brake switch connector
2	Brake switch (See 04-11-8 Brake Switch Installation Note.)
3	Joint pin (See 04-11-7 Joint Pin Installation Note.)
4	Brake pedal (See 04-11-7 Brake Pedal Removal Note.)
5	Pedal pad

Brake Pedal Removal Note

1. Remove the brake pedal installation bolts and nuts.
2. Move the power brake unit to the vehicle front where the power brake unit fork does not interfere with the brake pedal arm.
3. Remove the brake pedal.

Joint Pin Installation Note

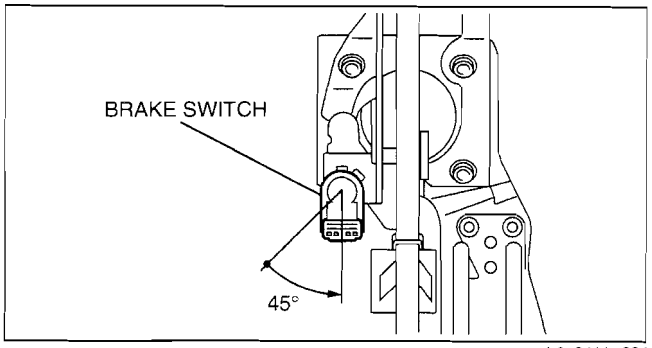
1. Install the new joint pin by aligning the pin holes of the brake pedal and power brake unit fork.
2. Verify that the joint pin touches the power brake unit fork completely.



b3e0411w005

Brake Switch Installation Note

1. Inspect the brake pedal. (See 04-11-5 BRAKE PEDAL INSPECTION.)
2. With the brake pedal fully released, insert a new brake switch into the installation hole on the brake pedal.
3. Secure the brake switch by turning it counterclockwise **45°**.



b3e0411w004

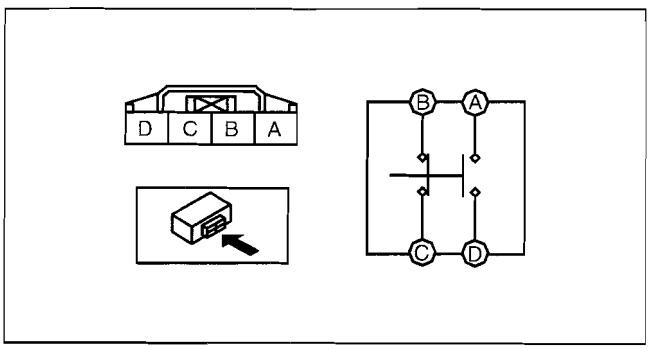
BRAKE SWITCH INSPECTION

id041100801900

Caution

- **Inspect the brake switch with it installed to the brake pedal, otherwise the brake switch may not operate normally. If the brake switch is removed from the brake pedal, replace the brake switch with a new one.**

1. Remove the lower panel.
2. Remove the column cover.
3. Disconnect the brake switch connector.
4. Verify that the continuity is as indicated in the table.
   - If not as indicated in the table, replace the brake switch.



c3u0411w005

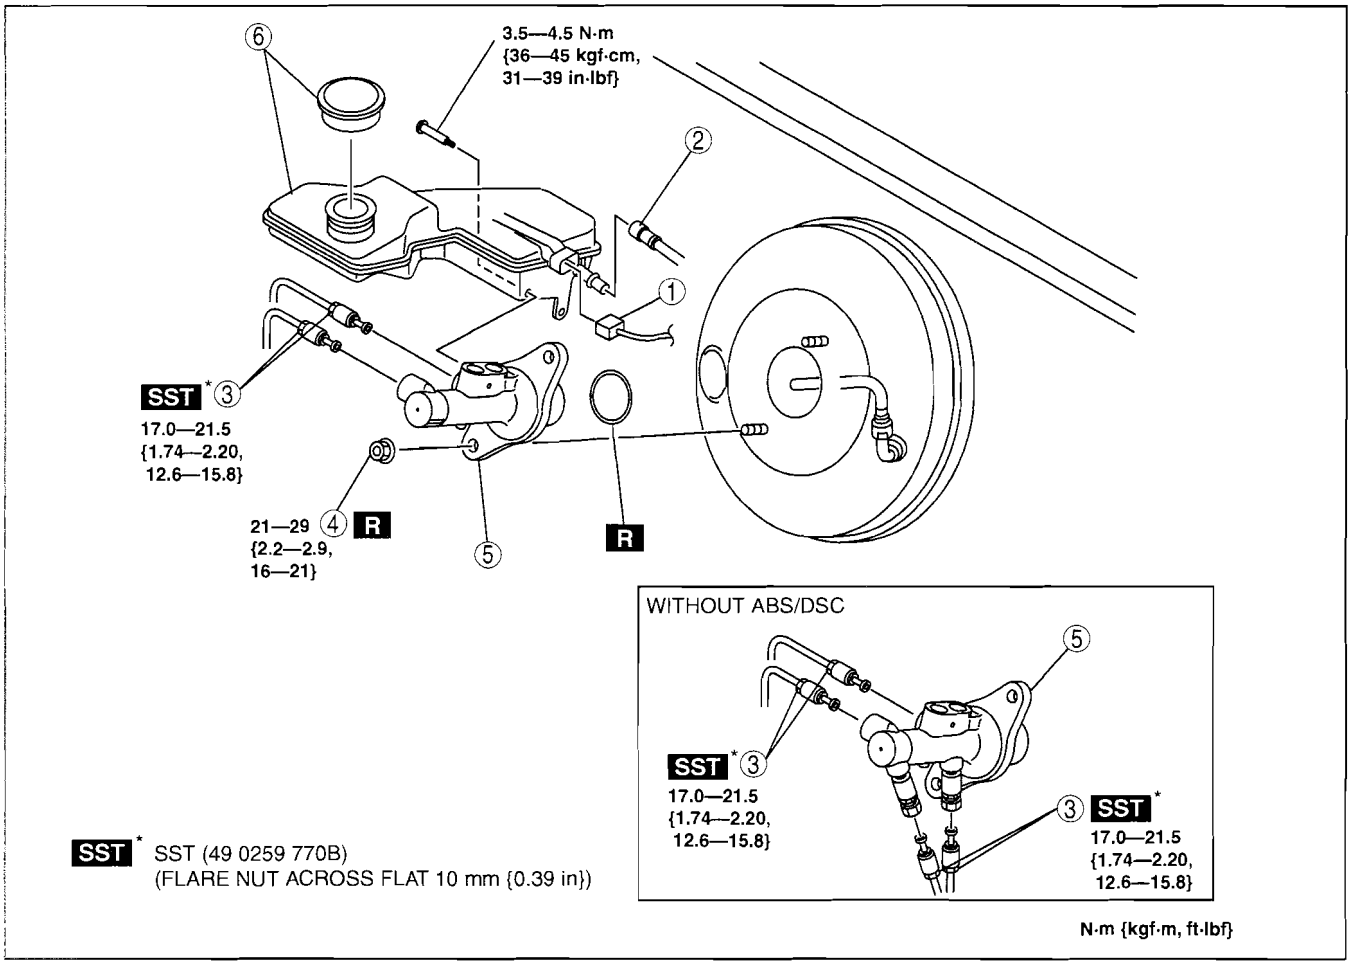
MASTER CYLINDER REMOVAL/INSTALLATION[LF, L3]

id041100801338

1. Remove the battery and battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.

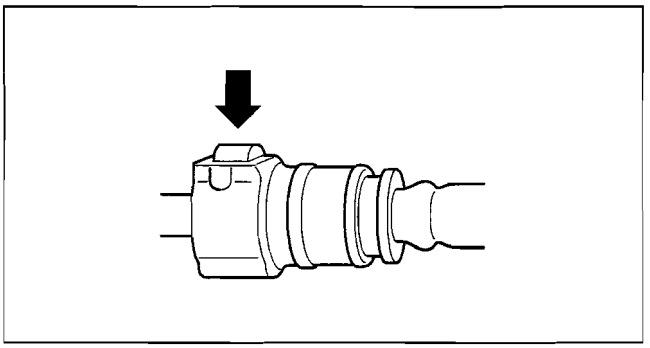


am3uuw0000026

1	Brake fluid level sensor connector
2	Reserve hose (MTX) (See 04-11-9 Reserve Hose (MTX) Removal Note.) (See 04-11-9 Reserve Hose (MTX) Installation Note.)
3	Brake pipe
4	Nut
5	Master cylinder
6	Reserve tank, cap

Reserve Hose (MTX) Removal Note

1. Remove the reserve hose from the reserve tank while pressing the point indicated by the arrow in the figure.



am3uuw0000026

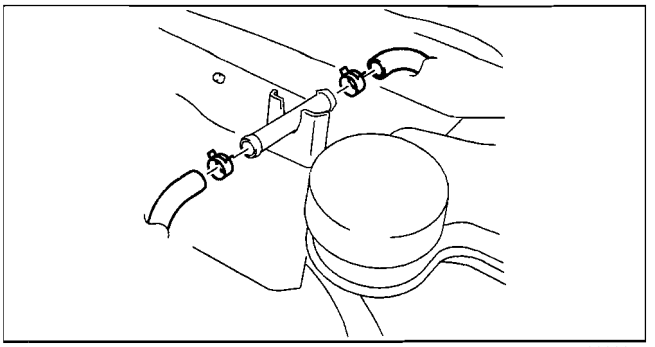
Reserve Hose (MTX) Installation Note

1. Insert the reserve hose to the reserve tank until a click is heard.
2. Verify that the reserve hose is firmly installed by pulling it, and push it into the reserve tank again.

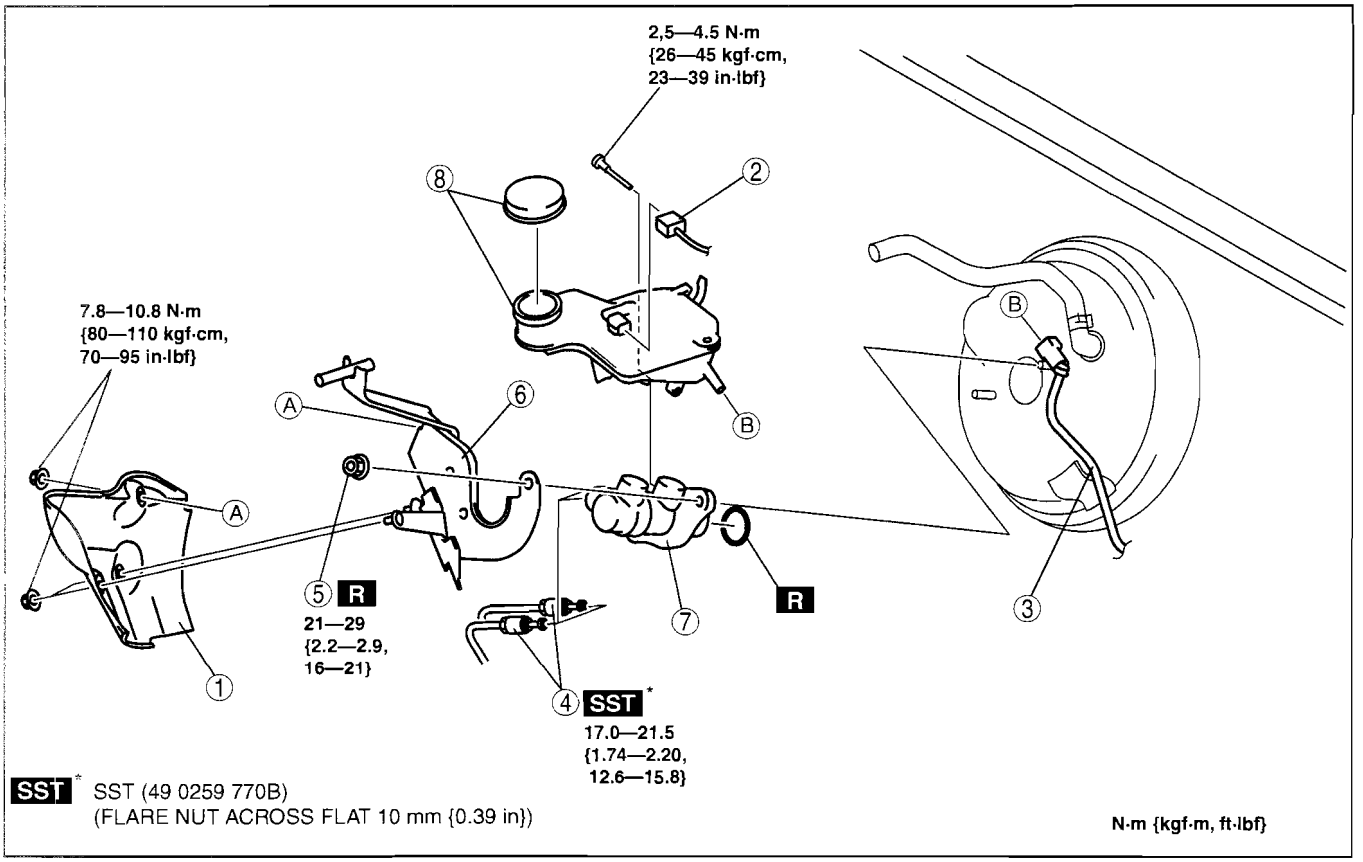
MASTER CYLINDER REMOVAL/INSTALLATION[L3 WITH TC]

id041100801339

1. Remove the battery and battery tray. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
2. Disconnect the vacuum hose from the insulator pipe as shown in the figure.
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.



am3uuw0000038



am3uuw0000039

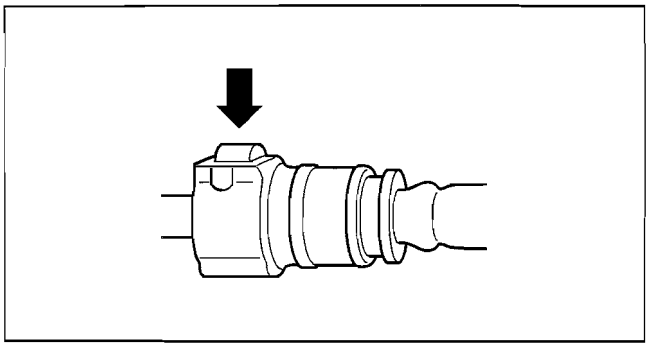
7	Master cylinder (See 04-11-11 Insulator Bracket, Master Cylinder Removal Note.) (See 04-11-11 Insulator Bracket, Master Cylinder Installation Note.)
8	Reserve tank, cap

Reserve Hose Removal Note

1. Remove the reserve hose from the reserve tank while pressing the point indicated by the arrow in the figure.



am3uuw0000027

Insulator Bracket, Master Cylinder Removal Note

1. Remove the insulator bracket and master cylinder from the power brake unit as a single unit.
2. Remove the insulator bracket from the master cylinder.

Insulator Bracket, Master Cylinder Installation Note

1. Temporarily install the insulator bracket to the master cylinder.
2. Install the insulator bracket and master cylinder to the power brake unit as a single unit.

Reserve Hose Installation Note

1. Insert the reserve hose to the reserve tank until a click is heard.
2. Verify that the reserve hose is firmly installed by pulling it, and push it into the reserve tank again.

BRAKE FLUID LEVEL SENSOR INSPECTION

id041100801400

1. Disconnect the brake fluid level sensor connector from the master cylinder.
2. Inspect for continuity according to fluid level between the brake fluid level sensor terminals.
   - If not as indicated in the table, replace the reserve tank.

Below MIN	O	O

chu0411w017

POWER BRAKE UNIT INSPECTION

id041100801700

Note

- The following inspection methods are simple inspection methods to judge the function of the power brake unit.
- If there is any malfunction in the power brake unit, replace the power brake unit as a single unit.

Without Using SST

Operation inspection

1. With the engine stopped, pump the pedal a few times.
2. With the pedal depressed, start the engine.
3. If the pedal moves down slightly immediately after starting the engine, the unit is normal.

Vacuum function inspection

1. Start the engine.
2. Stop the engine after driving the vehicle for **1—2 min.**
3. Depress the pedal with normal force.
4. If the first pedal stroke is long and becomes shorter with subsequent strokes, the unit is normal.
   - If a problem is found, inspect for damage to or improper installation of the check valve and vacuum hose. After repairing, inspect again.

Vacuum loss function inspection

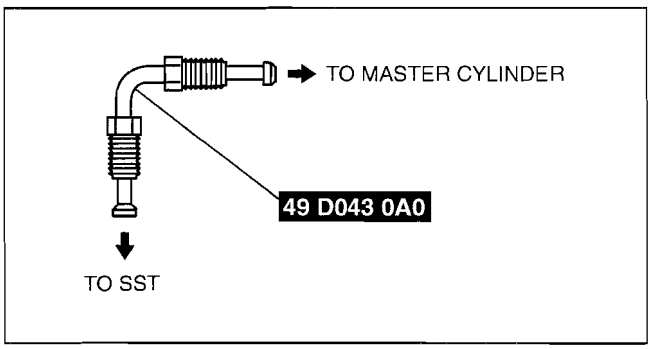
1. Start the engine.
2. Depress the pedal with normal force.
3. With the pedal depressed, stop the engine.
4. Hold the pedal depressed for **approx. 30 s.**
5. If the pedal height does not change during this time, the unit is normal.

Using SST

Pre-inspection preparation

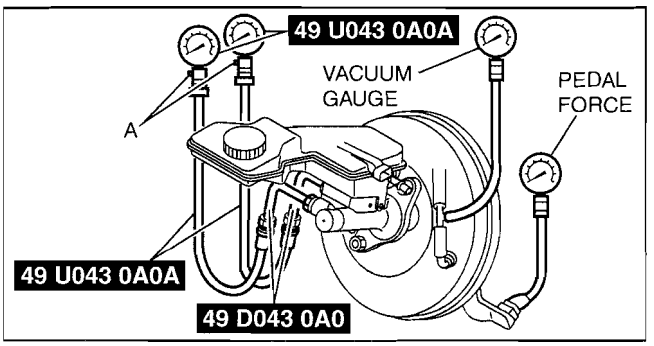
1. Install the **SST** (49 D043 0A0) to the master cylinder in the orientation shown in the figure.

   Note
   - When installing the **SST** (49 D043 0A0) to the master cylinder, use a commercially available flare nut wrench.
     — Flare nut across flat: **12 mm {0.47 in}**



c3u0411w009

2. Connect the **SSTs**, a vacuum gauge, and a pedal force gauge to the master cylinder, and bleed the air from the **SSTs** and the brake line. (Bleed the air from the **SSTs** using air bleed valve A.)



c3u0411w010

Vacuum loss inspection

1. Start the engine.
2. Depress the brake pedal with a force of **200 N {20.4 kgf, 44.9 lbf}**.
3. Stop the engine when the vacuum gauge reading reaches **68 kPa {510 mmHg, 20.1 inHg}** with the pedal depressed.
4. With the engine off, observe the vacuum gauge for **15 s.**
5. If the gauge has dropped **3.3 kPa {25 mmHg, 1.0 inHg}** or less, the unit is normal.

Lack of hydraulic pressure inspection

1. If the pedal force and fluid pressure correlation is within the specification with the engine stopped and a vacuum amount of **0 kPa {0 mmHg, 0 inHg}**, the system is normal.

Master cylinder fluid pressure

Vacuum amount at 0 kPa {0 mmHg, 0 inHg}	
Pedal force (N {kgf, lbf})	**Fluid pressure (kPa {kgf/cm2, psi})**
200 N {20.4kgf, 44.9lbf}	500 kPa {5.10 kgf/cm^2, 72.6 psi} or more

Hydraulic pressure inspection

1. Start the engine. Depress the brake pedal when the vacuum reaches **66.7 kPa {500 mmHg, 19.7 inHg}**.
2. At this time, apply the indicated pedal force and if the fluid pressure is within the specification, the unit is normal.

Master cylinder fluid pressure (except L3 WITH TC)

Vacuum amount at 66.7 kPa {500 mmHg, 19.7 inHg}	
Pedal force (N {kgf, lbf})	**Fluid pressure (kPa {kgf/cm2, psi})**
200 N {20.4kgf, 44.9lbt}	6,500 kPa {66.29 kgf/cm^2, 942.8 psi} or more

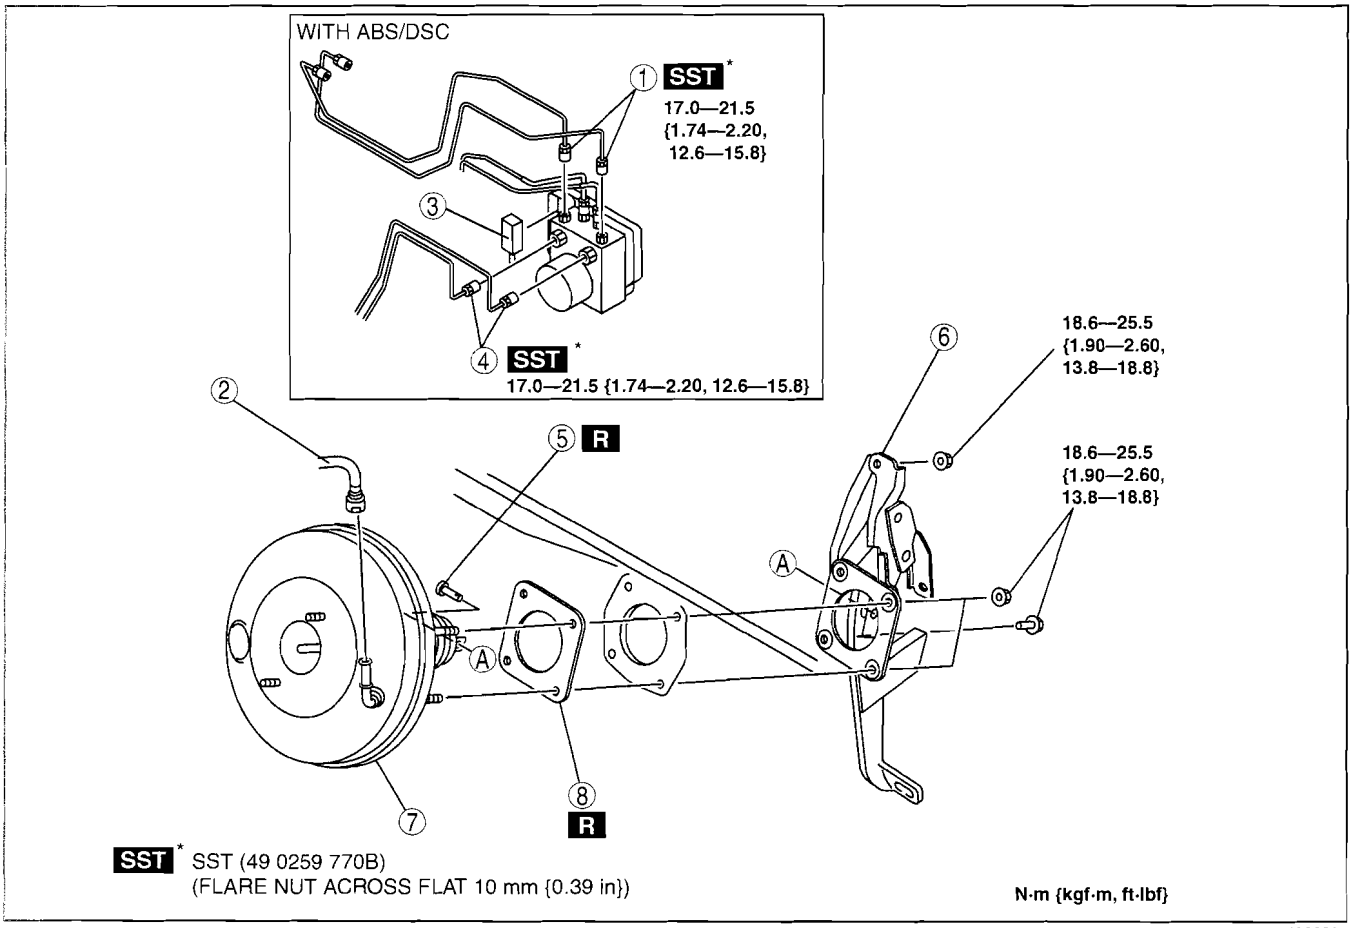
Master cylinder fluid pressure (L3 WITH TC)

Vacuum amount at 66.7 kPa {500 mmHg, 19.7 inHg}	
Pedal force (N {kgf, lbf})	**Fluid pressure (kPa {kgf/cm2, psi})**
200 N {20.4kgf, 44.9lbt}	7,000 kPa {71.39 kgf/cm^2, 1,016 psi} or more

POWER BRAKE UNIT REMOVAL/INSTALLATION[LF, L3]

id041100801838

1. Remove the battery and battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Remove the master cylinder. (See 04-11-9 MASTER CYLINDER REMOVAL/INSTALLATION[LF, L3].)
3. Remove the brake switch connector.
4. Remove the accelerator pedal. (See 01-13A-11 ACCELERATOR PEDAL REMOVAL/INSTALLATION[LF, L3].)
5. Remove in the order indicated in the table.
6. Install in the reverse order of removal.
7. After installation, inspect the brake pedal. (See 04-11-5 BRAKE PEDAL INSPECTION.)



am3uuw0000027

1	Brake pipe
2	Vacuum hose (See 04-11-4 VACUUM HOSE REMOVAL/ INSTALLATION.)
3	Connector (See 04-13-4 ABS HU/CM REMOVAL/ INSTALLATION.)
4	Brake pipe

5	Joint pin (See 04-11-6 BRAKE PEDAL REMOVAL/ INSTALLATION.)
6	Brake pedal component (See 04-11-14 Brake Pedal Component Removal Note.)
7	Power brake unit
8	Gasket

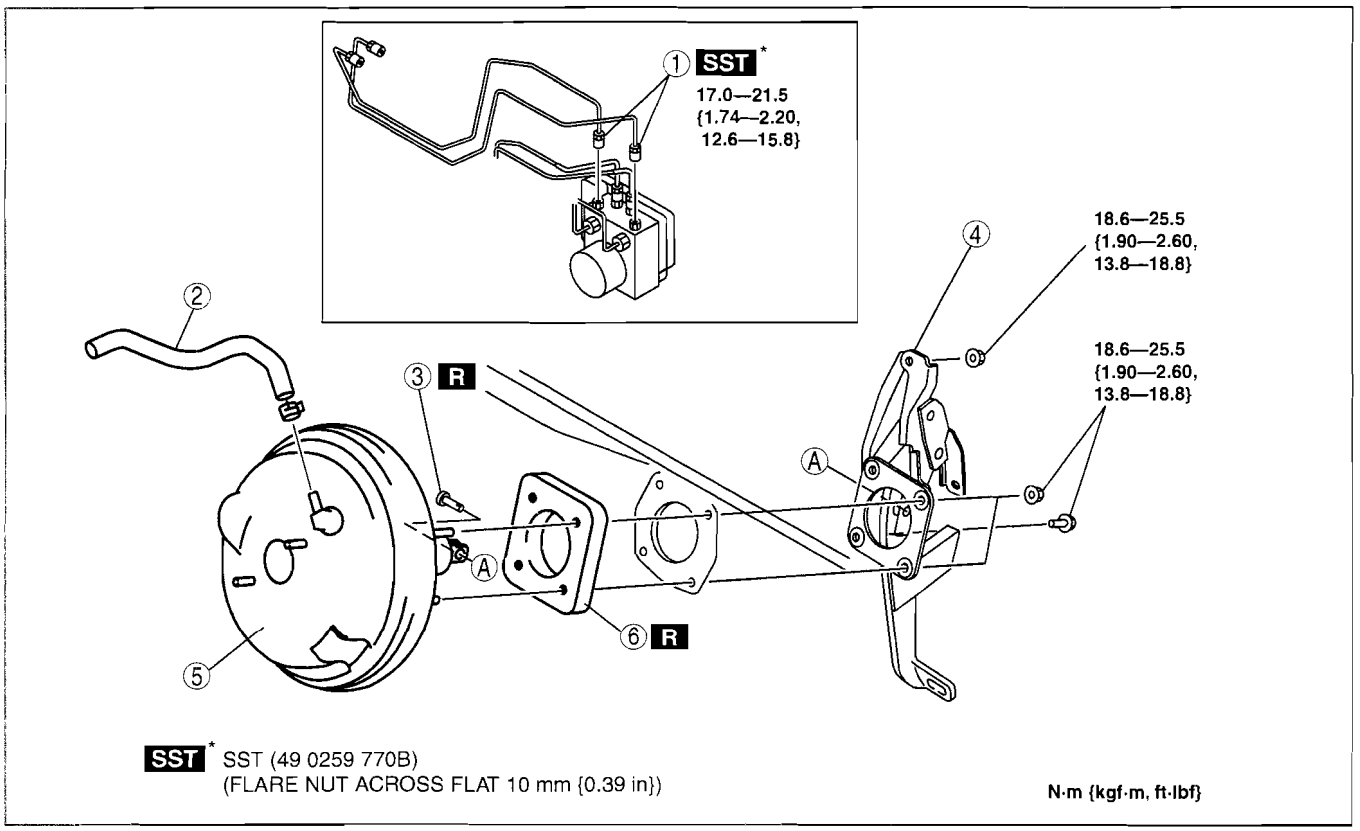
Brake Pedal Component Removal Note

1. Remove the brake pedal installation bolt and nuts.
2. Move the power brake unit toward the vehicle front.
3. Remove the brake pedal component.

POWER BRAKE UNIT REMOVAL/INSTALLATION[L3 WITH TC]

id041100801839

1. Remove the battery and battery tray. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
2. Remove the master cylinder. (See 04-11-10 MASTER CYLINDER REMOVAL/INSTALLATION[L3 WITH TC].)
3. Remove the air hose and air duct. (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
4. Remove the brake switch connector.
5. Remove the accelerator pedal. (See 01-13B-18 ACCELERATOR PEDAL REMOVAL/INSTALLATION[L3 WITH TC].)
6. Remove in the order indicated in the table.
7. Install in the reverse order of removal.
8. After installation, inspect the brake pedal. (See 04-11-5 BRAKE PEDAL INSPECTION.)



am3uuw0000039

1	Brake pipe
2	Vacuum hose (See 04-11-4 VACUUM HOSE REMOVAL/ INSTALLATION.)
3	Joint pin (See 04-11-6 BRAKE PEDAL REMOVAL/ INSTALLATION.)

4	Brake pedal component (See 04-11-14 Brake Pedal Component Removal Note.)
5	Power brake unit
6	Gasket

Brake Pedal Component Removal Note

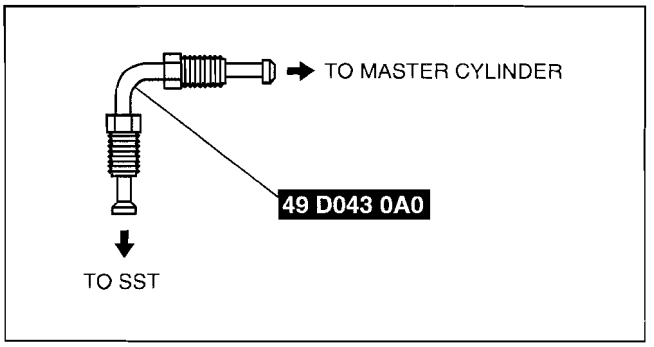
1. Remove the brake pedal installation bolt and nuts.
2. Move the power brake unit toward the vehicle front.
3. Remove the brake pedal component.

PROPORTIONING VALVE INSPECTION

id041100804300

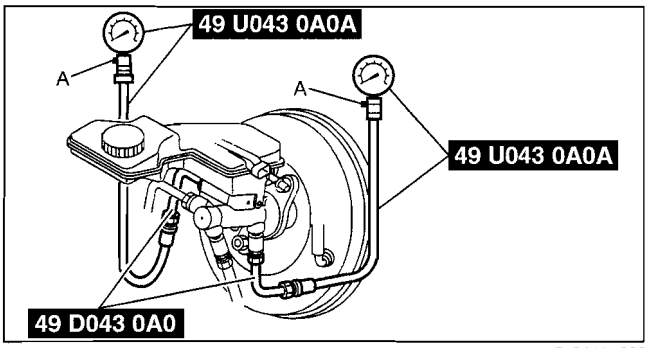
1. Disconnect the master cylinder brake pipes, and install the **SST** (49 D043 0A0) to the master cylinder orientated as shown in the figure.

   Note
   - Use a commercially available flare nut wrench when installing the **SST** (49 D043 0A0) to the master cylinder.
     — Flare nut across flat: **12 mm {0.47 in}**



c3u0411w009

2. Connect the **SSTs** as shown in the figure, and bleed the air from the **SSTs** and the brake line. (Bleed the air from the **SSTs** using air bleed valve A.)
3. Inspect the rear brake fluid pressure when the front brake fluid pressure is adjusted to the level indicated in the table.
   - If not within the specification, replace the master cylinder.



c3u0411w003

04-11

Proportioning valve fluid pressure

Front brake fluid pressure (kPa {kgf/cm^2, psi})	Rear brake fluid pressure (kPa {kgf/cm^2, psi})
5,000 {50.99, 725.2}	3,500—3,700 {35.70—37.72, 507.7—536.6}
10,000 {101.97, 1450.4}	4,950—5,250 {50.48—53.53, 718.0—761.4}

FRONT BRAKE (DISC) INSPECTION

id041100800800

Brake Judder Repair Hints

Description

1. Brake judder concern has the following 3 characteristics:

Steering wheel vibration

1. The steering wheel vibrates in the rotation direction. This characteristic is most noticeable when applying brakes at a vehicle speed of **100—140 km/h {62.1—86.8 mph}**.

Floor vibration

1. When applying the brakes, the vehicle body shakes back and forth. The seriousness of the shaking is not influenced by vehicle speed.

Brake pedal vibration

1. When applying the brakes, a pulsating force tries to push the brake pad back. The pulsation is transmitted to the brake pedal.
2. The following are the main possible causes of brake judder:

Due to an excessive runout (side-to-side wobble) of the disc plate, the thickness of the disc plate is uneven.

1. If the runout is **more than 0.05 mm {0.002 in}** at the position **10 mm {0.39 in}** from the disc plate edge, uneven wear occurs on the disc plate because the pad contacts the plate unevenly.
2. If the runout is **less than 0.05 mm {0.002 in}**, uneven wear does not occur.

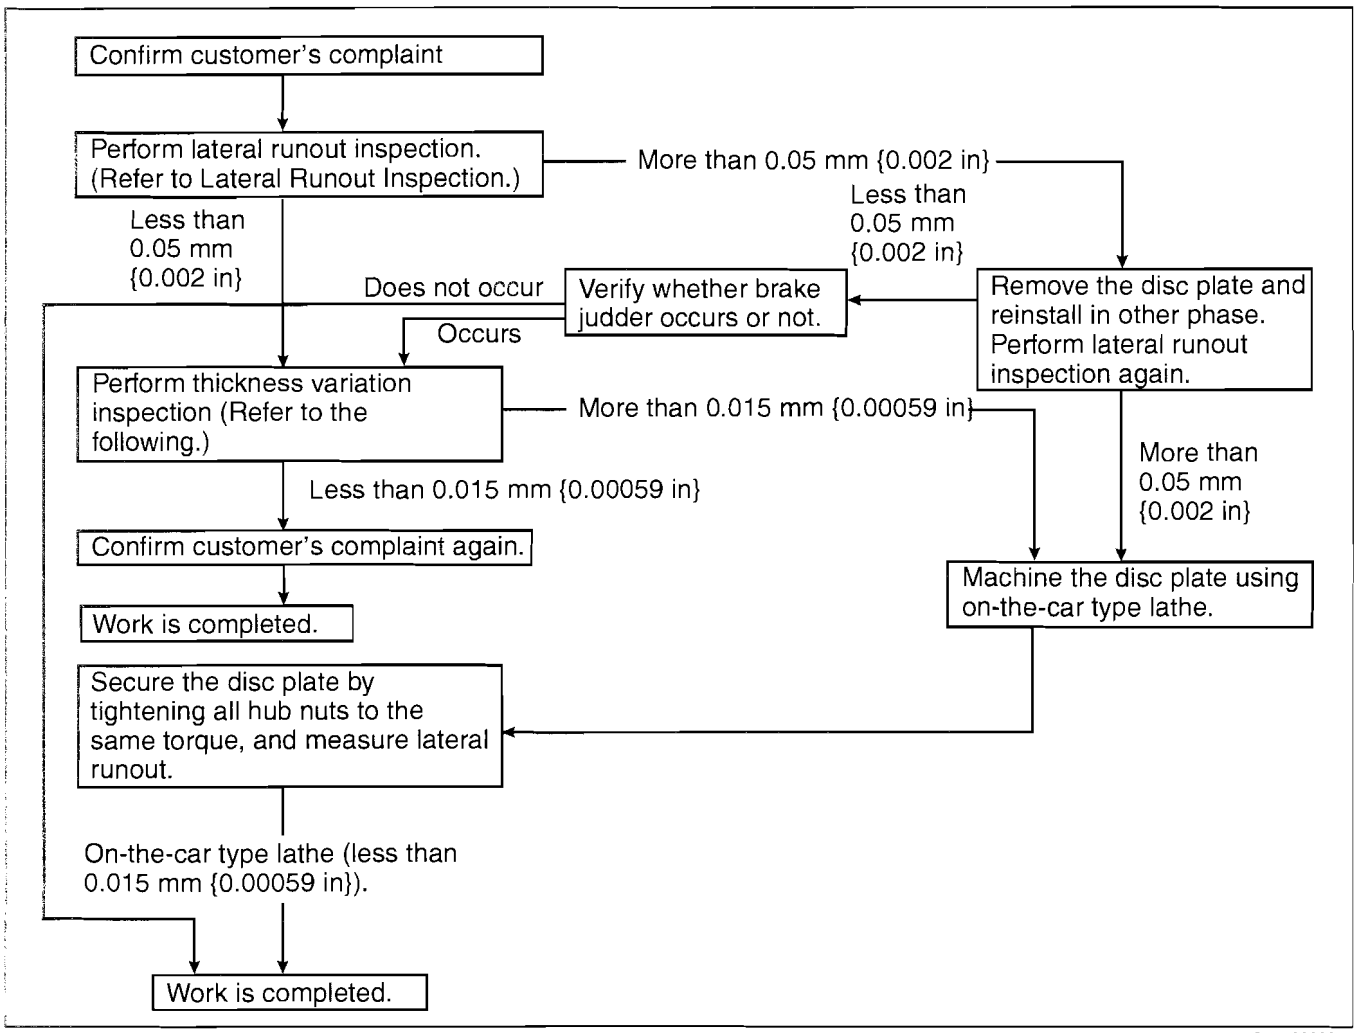
The disc plate is deformed by heat.

1. Repeated panic braking may raise the temperature in some portions of the disc plate by **approx. 1,000 °C {1,832 °F}**. This results in a deformed disc plate.

Due to corrosion, the thickness and friction coefficient of the disc plate change.

1. If the vehicle is parked in damp conditions for a long time, corrosion occurs on the friction surface of the disc plate.
2. The thickness of corrosion is uneven and sometimes appears like a wave pattern, which changes the friction coefficient and causes a reaction force.

Inspection and repair procedure



am3uuw0000037

Lateral runout inspection

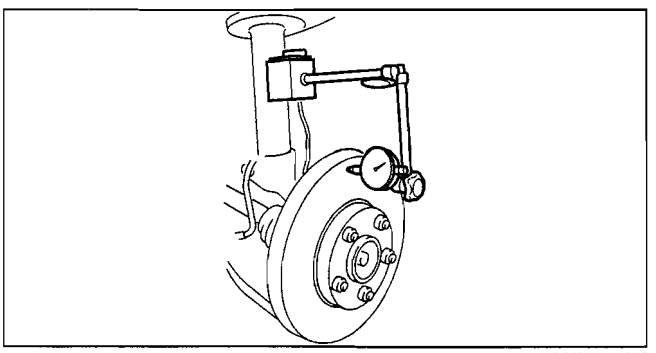
1. To secure the disc plate and the hub, insert the washer (thickness **10 mm {0.39 in}**, inner diameter **more than 12 mm {0.47 in}**) between each hub bolt and the hub nut, then tighten all the hub nuts.

Note

- The component parts of the **SST** (49 B017 001 or 49 G019 003) can be used as a suitable washer.

2. After tightening all the hub nuts to the same torque, put the dial gauge on the friction surface of the disc plate **10 mm {0.39 in}** from the disc plate edge.
3. Rotate the disc plate one time and measure the runout.

Front disc plate runout limit
0.05 mm {0.002 in}



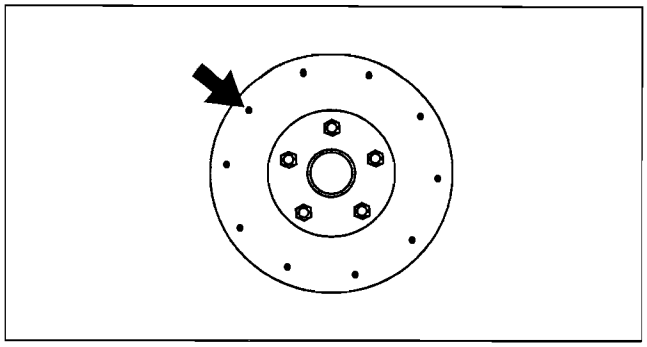
b3j0411w049

Thickness variation inspection

1. Clean the disc plate-to-pad friction surface using a brake cleaner.
2. Measure the points indicated in the illustration using a caliper (micrometer).
3. Subtract the minimum value from the maximum, and if the result is not within the specification, machine the disc plate using a lathe.

Thickness variation limit
0.015 mm {0.00059 in}

Warning
- **Do not exceed minimum disc plate thickness.**



am3uuw0000037

Disc Plate Thickness Inspection

Caution
- **Excessive runout may result if the disc plate is removed from the vehicle then machined. Machine the disc plate while installed on the vehicle.**

1. Measure the thickness of the disc plate.
   - If the thickness is not within the specification, replace the disc plate.

Minimum front disc plate thickness
23 mm {0.91 in}

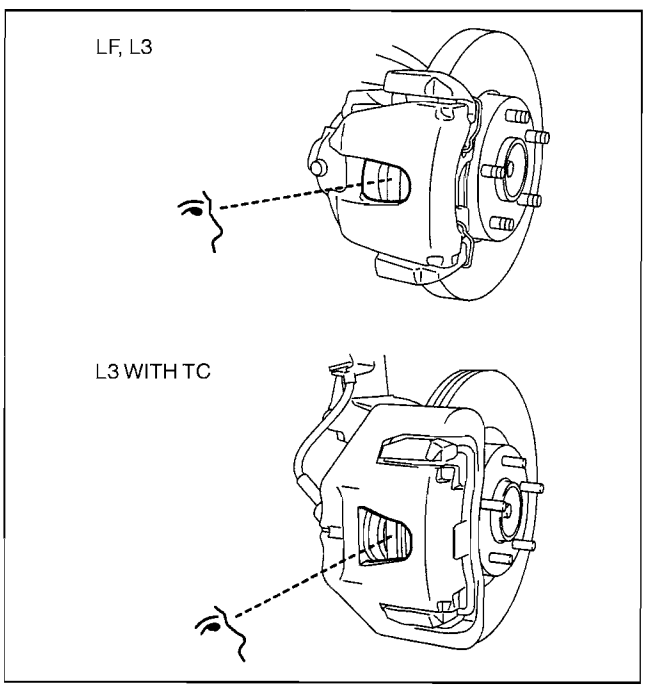
Minimum front disc plate thickness after machining using a brake lathe on-vehicle
23.8 mm {0.94 in}

Disc Pad Thickness Inspection

1. Jack up the front of the vehicle and support it with safety stands.
2. Remove the wheels and tires.
3. Verify the remaining thickness of the pads.

Minimum front disc pad thickness
2.0 mm {0.079 in} min.

4. Replace the pads as a set (right and left wheels) if either one is at or less than the minimum thickness.

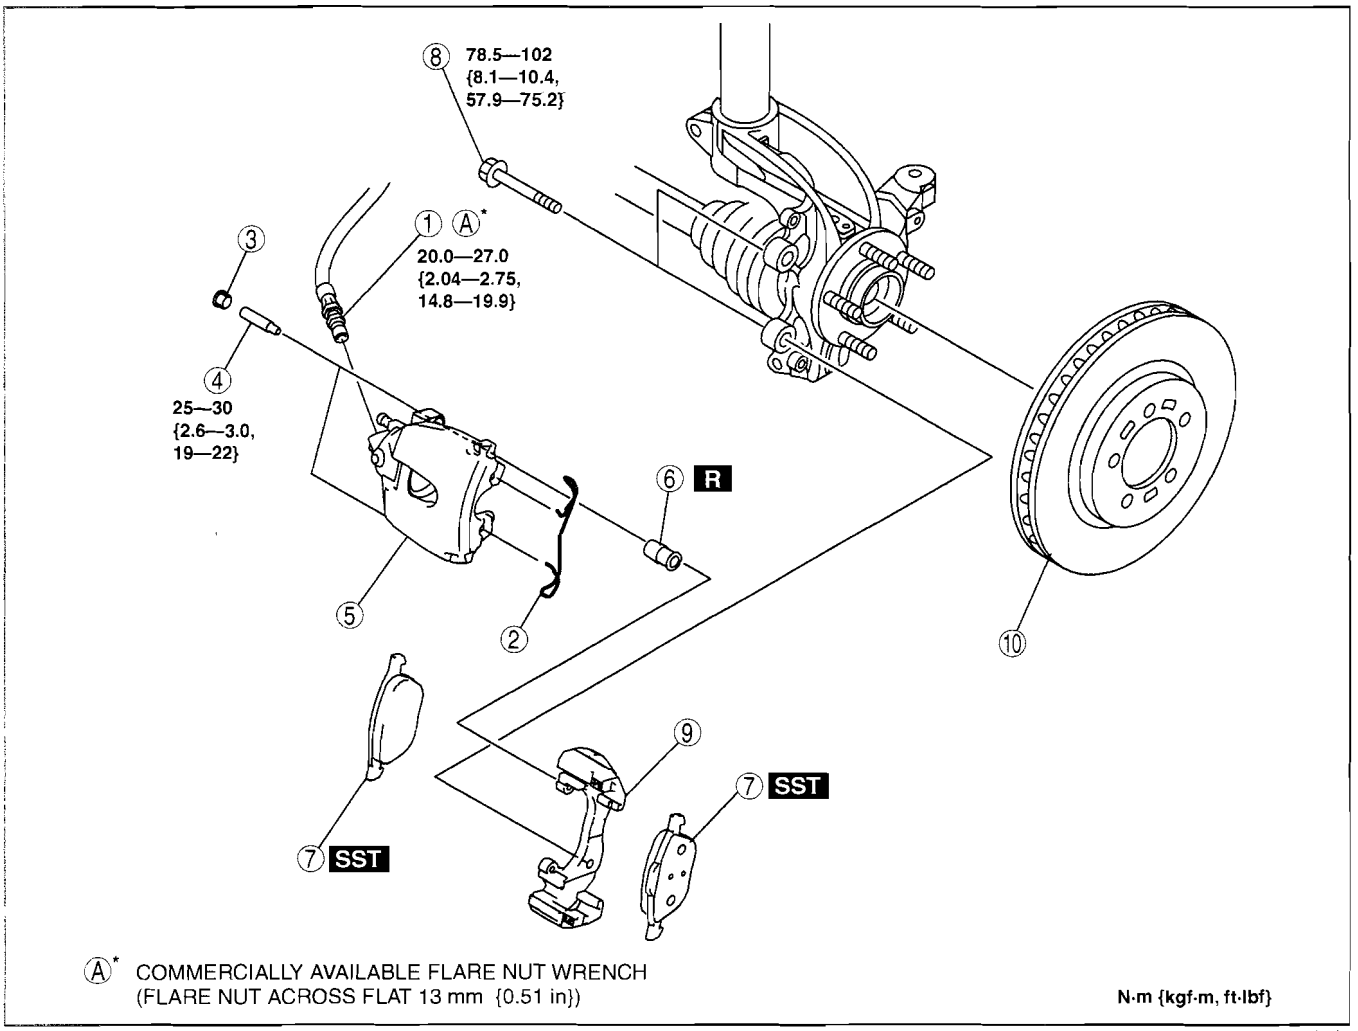


am3uuw0000037

FRONT BRAKE (DISC) REMOVAL/INSTALLATION[LF, L3]

id041100800938

1. Remove in the order indicated in the table.
2. Install in the reverse order of removal.
3. After installation, pump the brake pedal a few times and verify that the brakes do not drag.



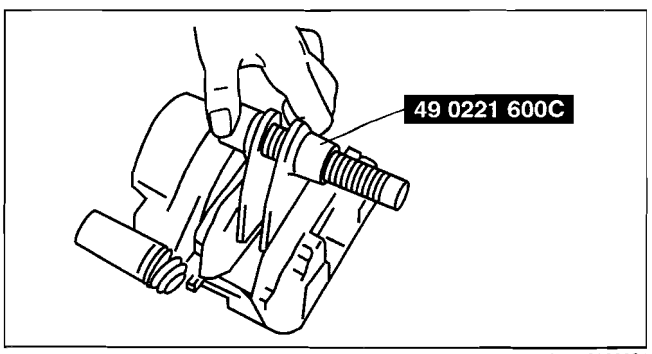
d3u411zwb101

1	Brake hose (See 04-11-19 Brake Hose Installation Note.)
2	Retaining clip
3	Cap
4	Bolt
5	Caliper

6	Boot
7	Disc pad (See 04-11-18 Disc Pad Installation Note.)
8	Bolt
9	Mounting support
10	Disc plate

Disc Pad Installation Note

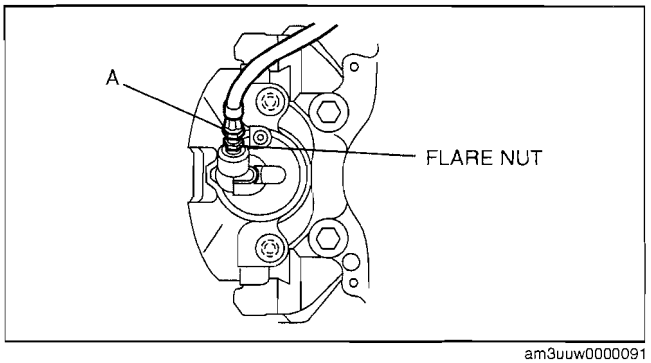
1. Clean the exposed area of the piston.
2. Push the piston in using the **SST**.
3. Install the disc pad (outer side) to the mounting support.
4. Install the disc pad (inner side) to the caliper.



am3uuw0000091

Brake Hose Installation Note

1. Install the brake hose to the caliper.
2. Tighten the flare nut while holding the brake hose at point A with a spanner or equivalent.
3. Verify that the brake hose is not twisted.

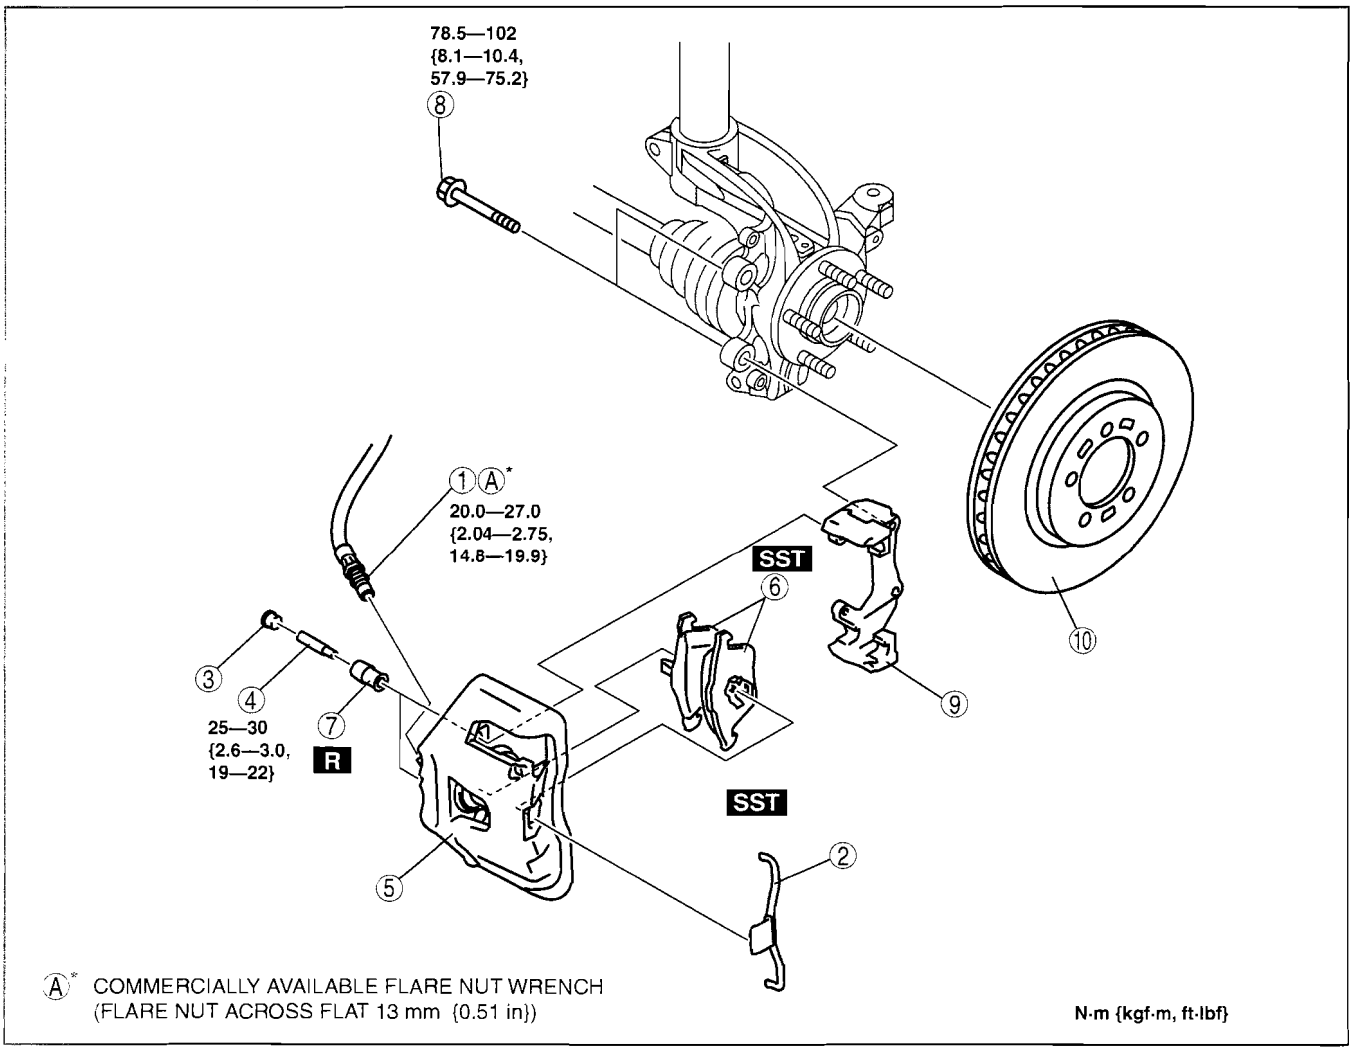


am3uuw0000091

FRONT BRAKE (DISC) REMOVAL/INSTALLATION[L3 WITH TC]

id041100800939

1. Remove in the order indicated in the table.
2. Install in the reverse order of removal.
3. After installation, pump the brake pedal a few times and verify that the brakes do not drag.



am3uuw0000037

1	Brake hose (See 04-11-20 Brake Hose Installation Note.)

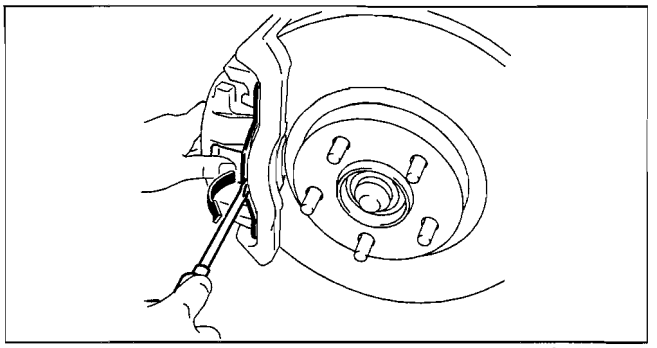
10	Disc plate

Retaining Clip Removal Note

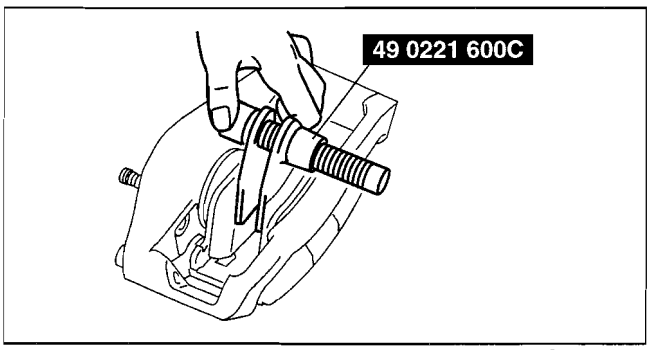
1. Move the retaining clip in the direction shown by the arrow using a flathead screwdriver and remove it from the caliper.



am3uuw0000037

Disc Pad Installation Note

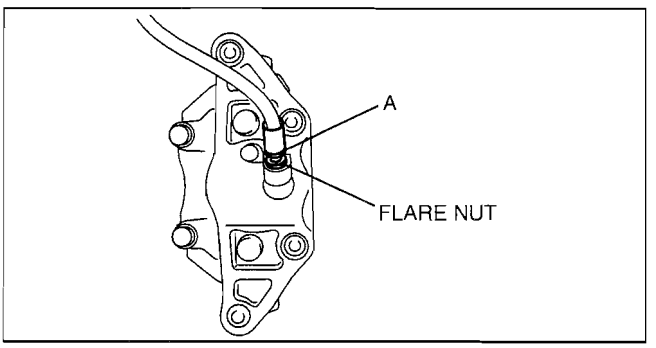
1. Clean the exposed area of the piston.
2. Push the piston in using the **SST**.
3. Install the disc pad to the caliper.



am3uuw0000037

Brake Hose Installation Note

1. Install the brake hose to the caliper.
2. Tighten the flare nut while holding the brake hose at point A with a spanner or equivalent.
3. Verify that the brake hose is not twisted.

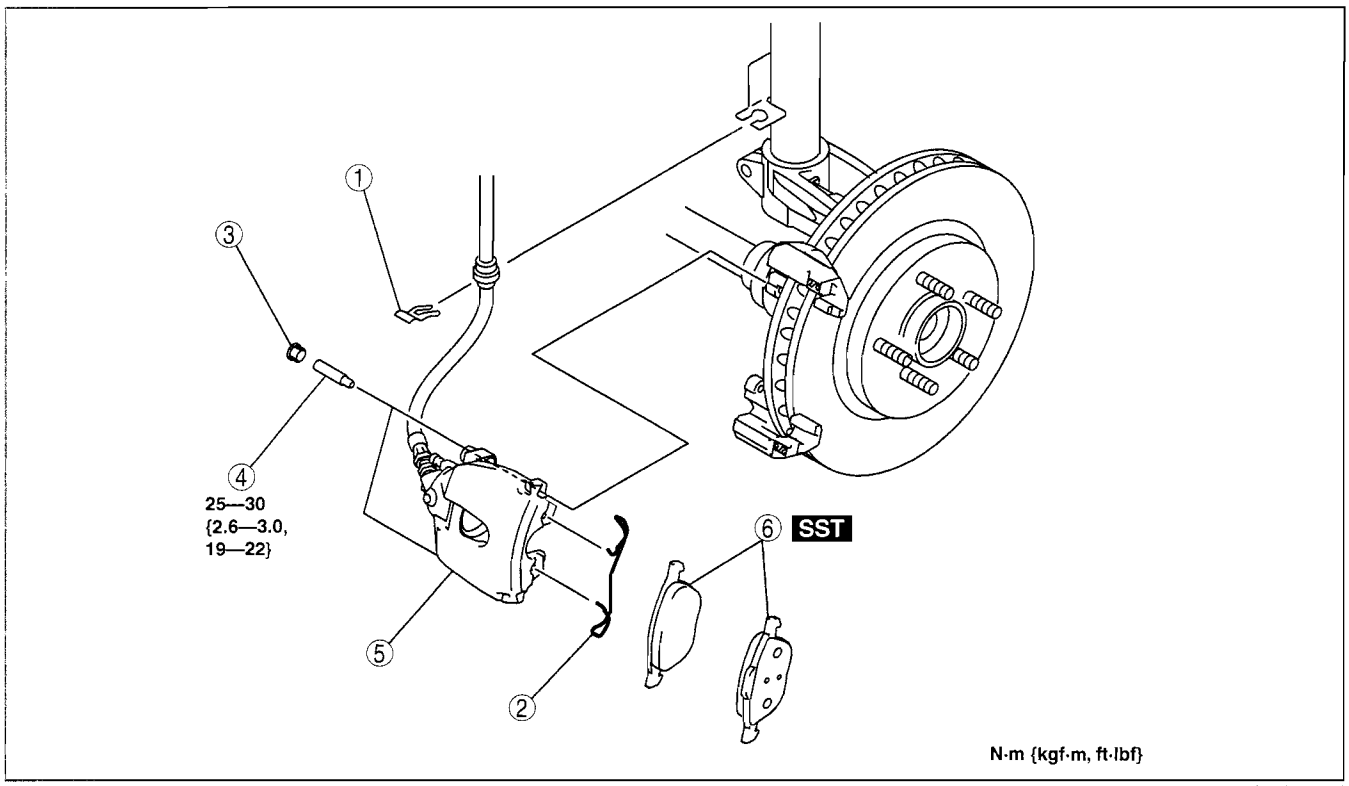


am3uuw0000037

DISC PAD (FRONT) REPLACEMENT[LF, L3]

id041100800738

1. Remove in the order indicated in the table.
2. install in the reverse order of removal.
3. After installation, pump the brake pedal a few times and verify that the brakes do not drag.



c3u0411w014

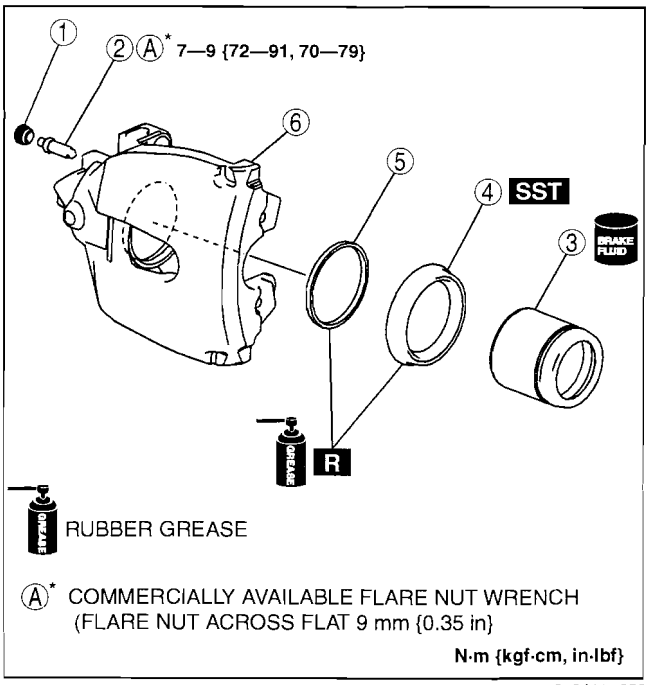
CALIPER (FRONT) DISASSEMBLY/ASSEMBLY[LF, L3]

id041100801038

1. Disassemble in the order indicated in the table.

1	Bleeder cap
2	Bleeder screw
3	Piston (See 04-11-23 Piston Disassembly Note.) (See 04-11-24 Piston Assembly Note.)
4	Dust seal (See 04-11-23 Dust Seal Assembly Note.)
5	Piston seal
6	Caliper body

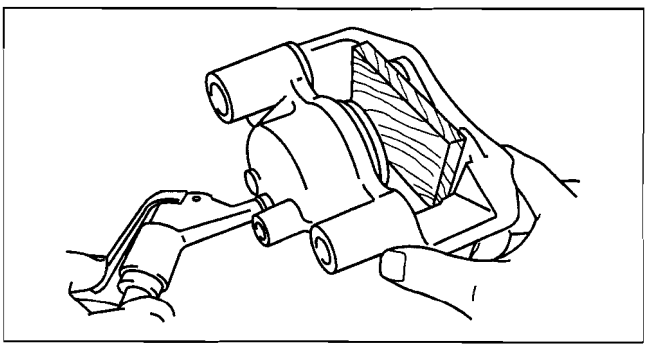
2. Assemble in the reverse order of disassembly.



c3u0411w052

Piston Disassembly Note

1. Insert a piece of wood in the caliper as shown in the figure and blow compressed air through the bleeder screw installation hole to remove the piston from the caliper body.



am3uuw0000037

Warning

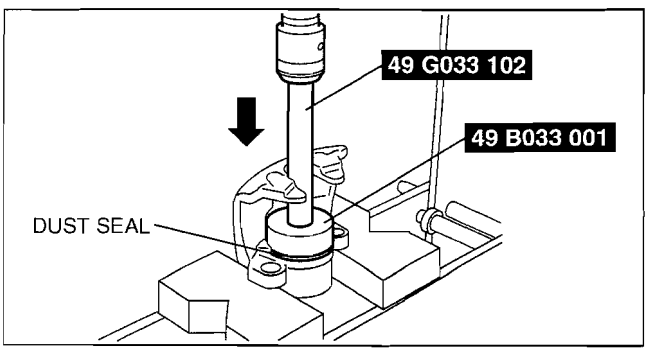
- **When compressed air is blown into the caliper body, injury to a finger or other part from pinching could result from the piston springing up. When blowing in compressed air, do not place your fingers between the piston and caliper body when performing the work.**

Caution

- **The piston could be damaged if blown out with great force. Blow the compressed air slowly to prevent the piston from suddenly popping out.**

Dust Seal Assembly Note

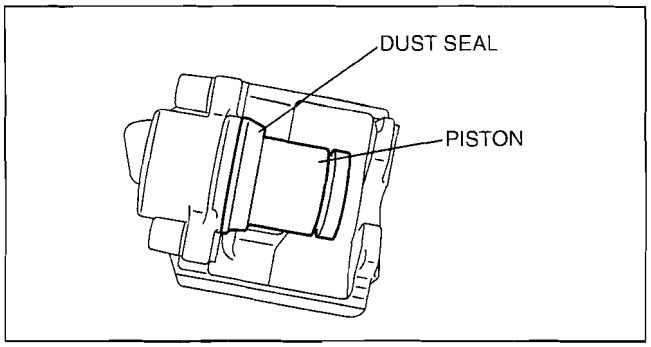
1. Assemble a new dust seal to the caliper using the **SSTs** and a press with a press-in force of **834 N {85 kgf, 187 in·lbf}**.
2. Verify that there is no gap between the dust seal and caliper body.



am3uuw0000037

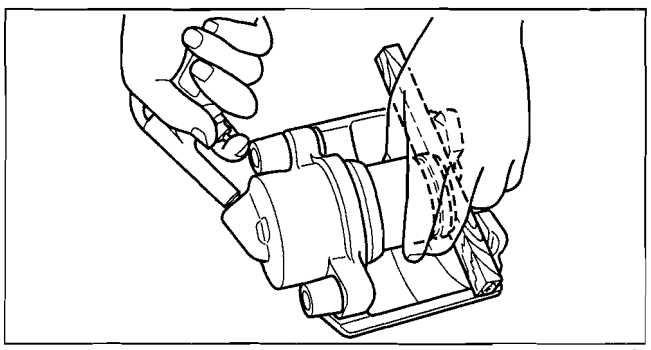
Piston Assembly Note

1. Press the piston into the dust seal opening as shown in the figure.



am3uuw0000037

2. Insert a piece of wood between the caliper body and the piston, and while supporting the piston by hand, blow compressed air through the brake hose installation hole.



am3uuw0000038

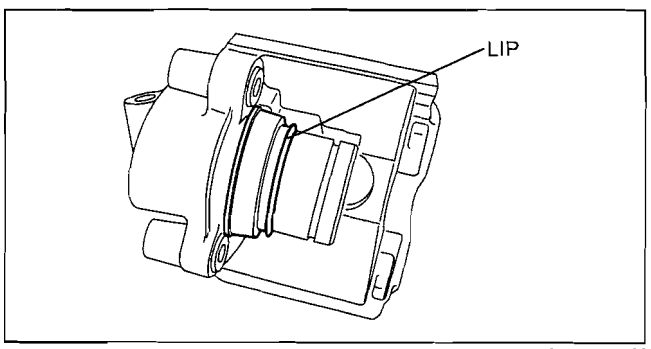
Warning

- **When blowing compressed air into the caliper body, the piston may pop out and cause injury if not supported at the correct point. Securely support the piston friction surface by hand when blowing compressed air.**

Note

- By blowing compressed air, the dust seal expands due to air pressure and covers the piston end.

3. Verify that the dust seal lip covers the piston end as shown in the figure.
4. Press the piston into the caliper body completely.



am3uuw0000038

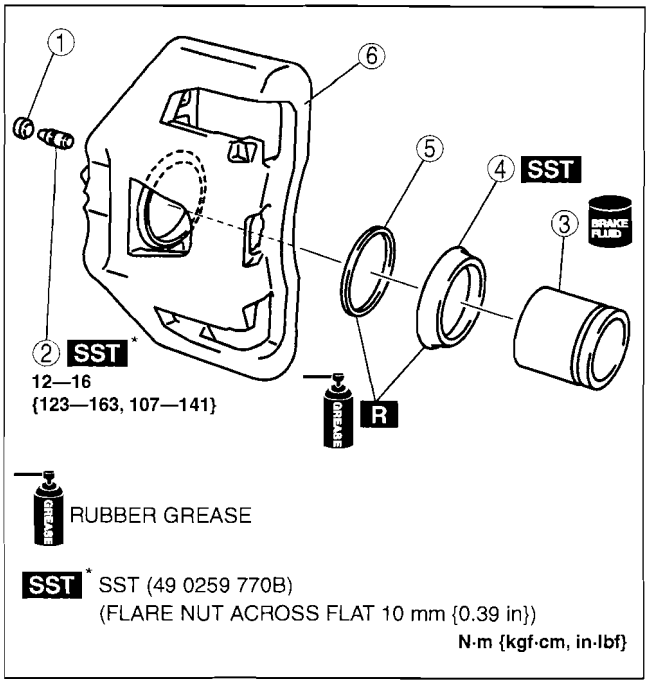
CALIPER (FRONT) DISASSEMBLY/ASSEMBLY[L3 WITH TC]

id041100801039

1. Disassemble in the order indicated in the table.

1	Bleeder cap
2	Bleeder screw
3	Piston (See 04-11-25 Piston Disassembly Note.) (See 04-11-26 Piston Assembly Note.)
4	Dust seal (See 04-11-25 Dust Seal Assembly Note.)
5	Piston seal
6	Caliper body

2. Assemble in the reverse order of disassembly.

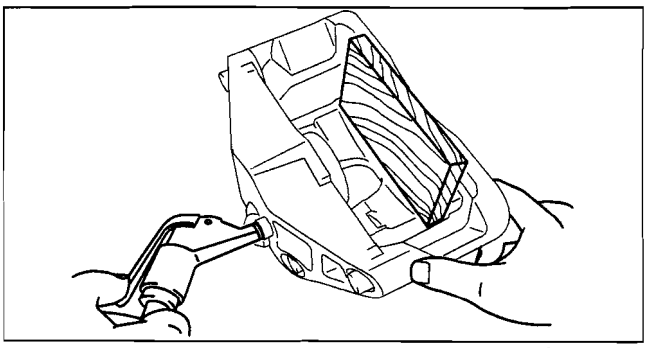


am3zzw0000347

04-11

Piston Disassembly Note

1. Insert a piece of wood in the caliper as shown in the figure and blow compressed air through the bleeder screw installation hole to remove the piston from the caliper body.



am3uuw0000038

Warning

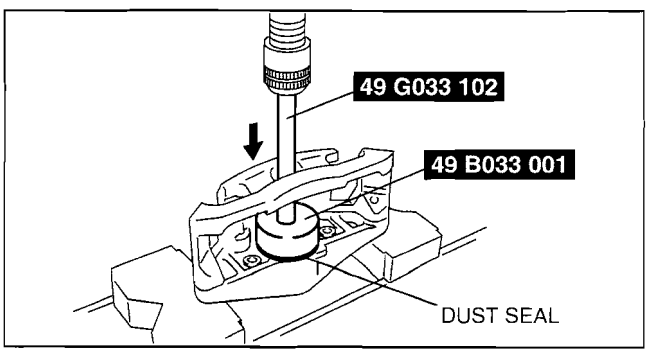
- **When compressed air is blown into the caliper body, injury to a finger or other part from pinching could result from the piston springing up. When blowing in compressed air, do not place your fingers between the piston and caliper body when performing the work.**

Caution

- **The piston could be damaged if blown out with great force. Blow the compressed air slowly to prevent the piston from suddenly popping out.**

Dust Seal Assembly Note

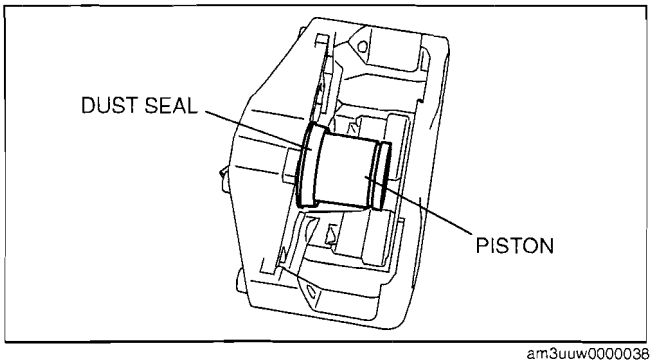
1. Assemble a new dust seal to the caliper using the **SSTs** and a press with a press-in force of **834 N {85 kgf, 187 in·lbf}**.
2. Verify that there is no gap between the dust seal and caliper body.



am3zzw0000347

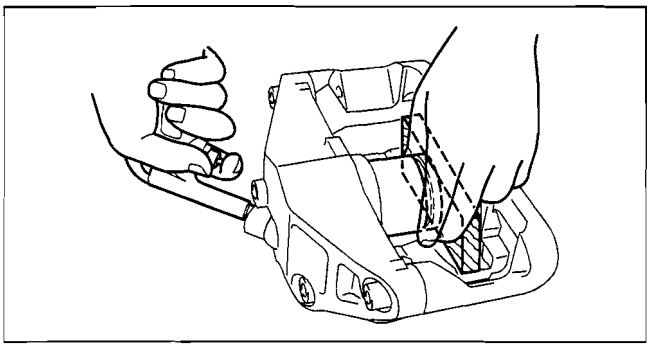
Piston Assembly Note

1. Press the piston into the dust seal opening as shown in the figure.



am3uuw0000038

2. Insert a piece of wood between the caliper body and the piston, and while supporting the piston by hand, blow compressed air through the brake hose installation hole.



am3uuw0000038

Warning

- **When blowing compressed air into the caliper body, the piston may pop out and cause injury if not supported at the correct point. Securely support the piston friction surface by hand when blowing compressed air.**

Note

- By blowing compressed air, the dust seal expands due to air pressure and covers the piston end.

3. Verify that the dust seal lip covers the piston end as shown in the figure.
4. Press the piston into the caliper body completely.

REAR BRAKE (DISC) INSPECTION

id041100800400

Brake Judder Repair Hints

Description

1. Brake judder concern has the following 3 characteristics:

Steering wheel vibration

1. The steering wheel vibrates in the rotation direction. This characteristic is most noticeable when applying brakes at a vehicle speed of **100—140 km/h {62.1—86.8 mph}**.

Floor vibration

1. When applying the brakes, the vehicle body shakes back and forth. The seriousness of the shaking is not influenced by vehicle speed.

Brake pedal vibration

1. When applying the brakes, a pulsating force tries to push the brake pad back. The pulsation is transmitted to the brake pedal.
2. The following are the main possible causes of brake judder:

Due to an excessive runout (side-to-side wobble) of the disc plate, the thickness of the disc plate is uneven.

1. If the runout is **more than 0.05 mm {0.002 in}** at the position **10 mm {0.39 in}** from the disc plate edge, uneven wear occurs on the disc plate because the pad contacts the plate unevenly.
2. If the runout is **less than 0.05 mm {0.002 in}**, uneven wear does not occur.

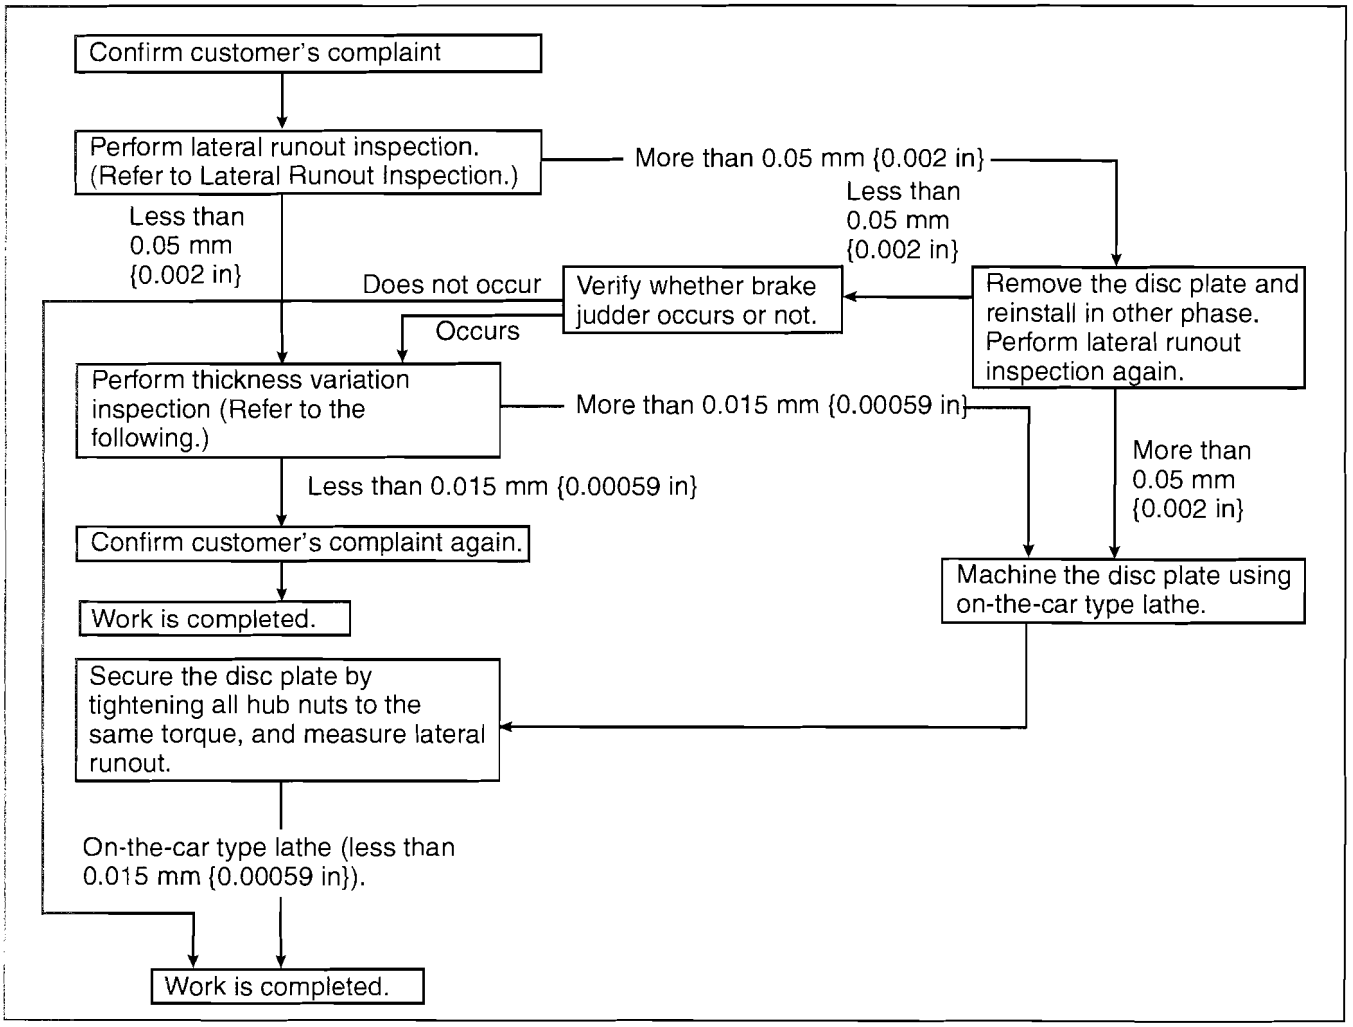
The disc plate is deformed by heat.

1. Repeated panic braking may raise the temperature in some portions of the disc plate by **approx. 1,000 °C {1,832 °F}**. This results in a deformed disc plate.

Due to corrosion, the thickness and friction coefficient of the disc plate change.

1. If the vehicle is parked in damp conditions for a long time, corrosion occurs on the friction surface of the disc plate.
2. The thickness of corrosion is uneven and sometimes appears like a wave pattern, which changes the friction coefficient and causes a reaction force.

Inspection and repair procedure



am3uuw0000074

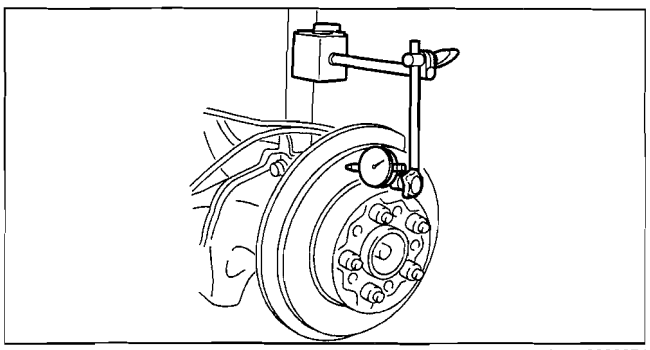
Lateral runout inspection

1. To secure the disc plate and the hub, insert the washer (thickness **10 mm {0.39 in}**, inner diameter **more than 12 mm {0.47 in}**) between each hub bolt and the hub nut, then tighten all the hub nuts.

Note
- The component parts of the **SST** (49 B017 001 or 49 G019 003) can be used as a suitable washer.

2. After tightening all the hub nuts to the same torque, put the dial gauge on the friction surface of the disc plate **10 mm {0.39 in}** from the disc plate edge.
3. Rotate the disc plate one time and measure the runout.

Rear disc plate runout limit
0.05 mm {0.002 in}



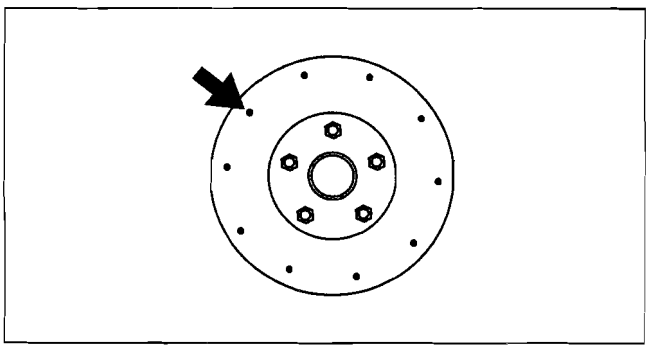
am3uuw0000074

Thickness variation inspection

1. Clean the disc plate-to-pad friction surface using a brake cleaner.
2. Measure the points indicated in the illustration using a caliper (micrometer).
3. Subtract the minimum value from the maximum, and if the result is not within the specification, machine the disc plate using a lathe.

Thickness variation limit
0.015 mm {0.00059 in}

Warning
- **Do not exceed minimum disc plate thickness.**



am3uuw0000074

Disc Plate Thickness Inspection

Caution
- **Excessive runout may result if the disc plate is removed from the vehicle then machined. Machine the disc plate while installed on the vehicle.**

1. Measure the thickness of the disc plate.
   - If the thickness is not within the specification, replace the disc plate.

Minimum read disc plate thickness
9 mm {0.35 in}

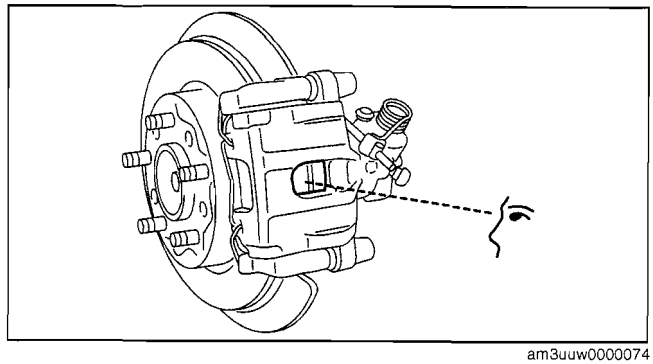
Minimum rear disc plate thickness after machining using a brake lathe on-vehicle
9.8 mm {0.39 in}

Disc Pad Thickness Inspection

1. Jack up the front of the vehicle and support it with safety stands.
2. Remove the wheels and tires.
3. Verify the remaining thickness of the pads.

Minimum rear disc pat thickness
2.0 mm {0.079 in} min.

4. Replace the pads as a set (right and left wheels) if either one is at or less than the minimum thickness.

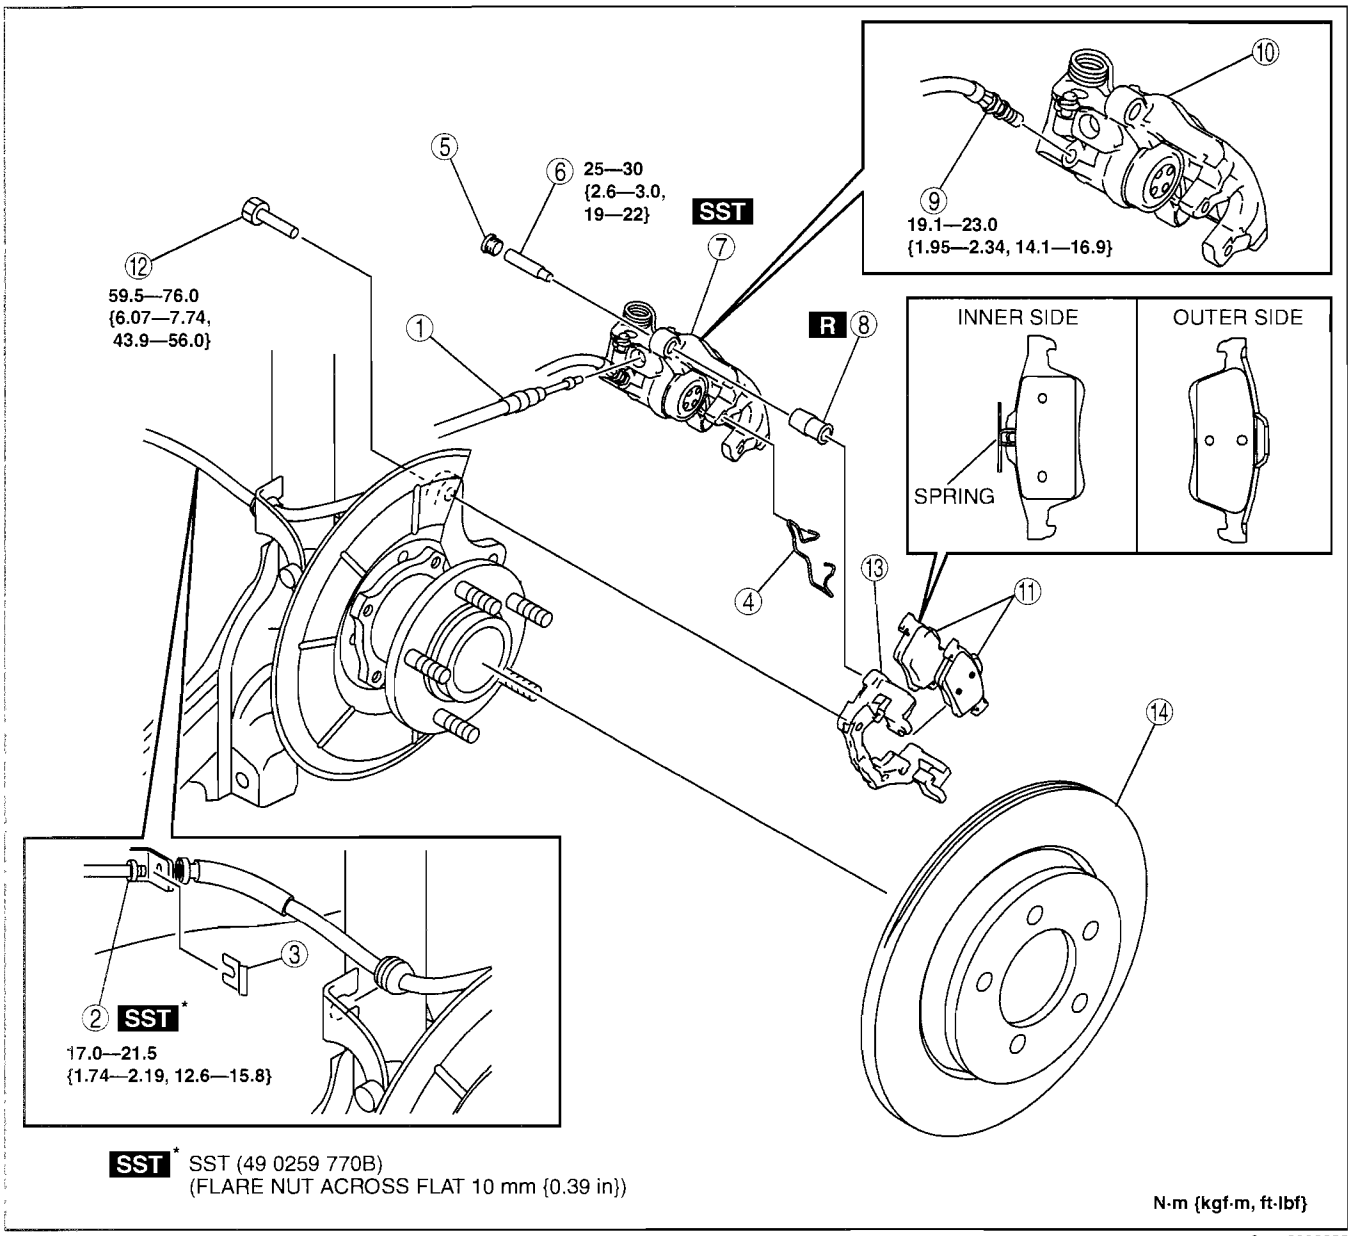


am3uuw0000074

REAR BRAKE (DISC) REMOVAL/INSTALLATION

id041100800500

1. Remove in the order indicated in the table.
2. Install in the reverse order of removal.
3. After installation, pump the brake pedal a few times and inspect the following:
   — Parking brake lever stroke
   — Brake drag



am3zzw0000259

1	Parking brake cable
2	Brake pipe
3	Clip
4	Retaining clip
5	Cap
6	Bolt
7	Caliper, brake hose (See 04-11-31 Caliper, Brake Hose Installation Note.)

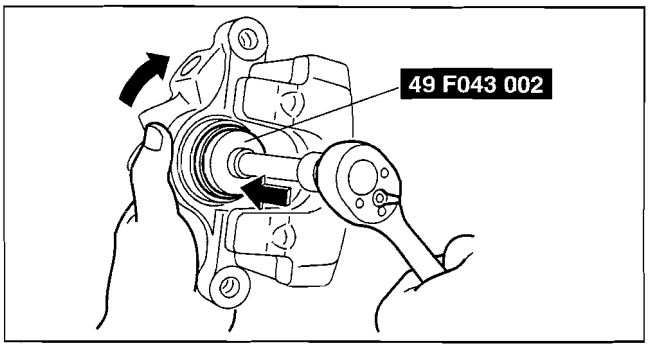
8	Boot
9	Brake hose
10	Caliper
11	Disc pad
12	Bolt
13	Mounting support
14	Disc plate

Caliper, Brake Hose Installation Note

1. Clean the exposed area of the piston.
2. Slowly rotate the piston clockwise while firmly pushing it to the caliper body using the **SST** and push the piston completely into the caliper body.

Warning

- **If the SST comes off the piston, it may cause other parts to crush against your hand causing injury. Be careful that the SST remains firmly connected to the piston when you push the piston into the caliper body.**



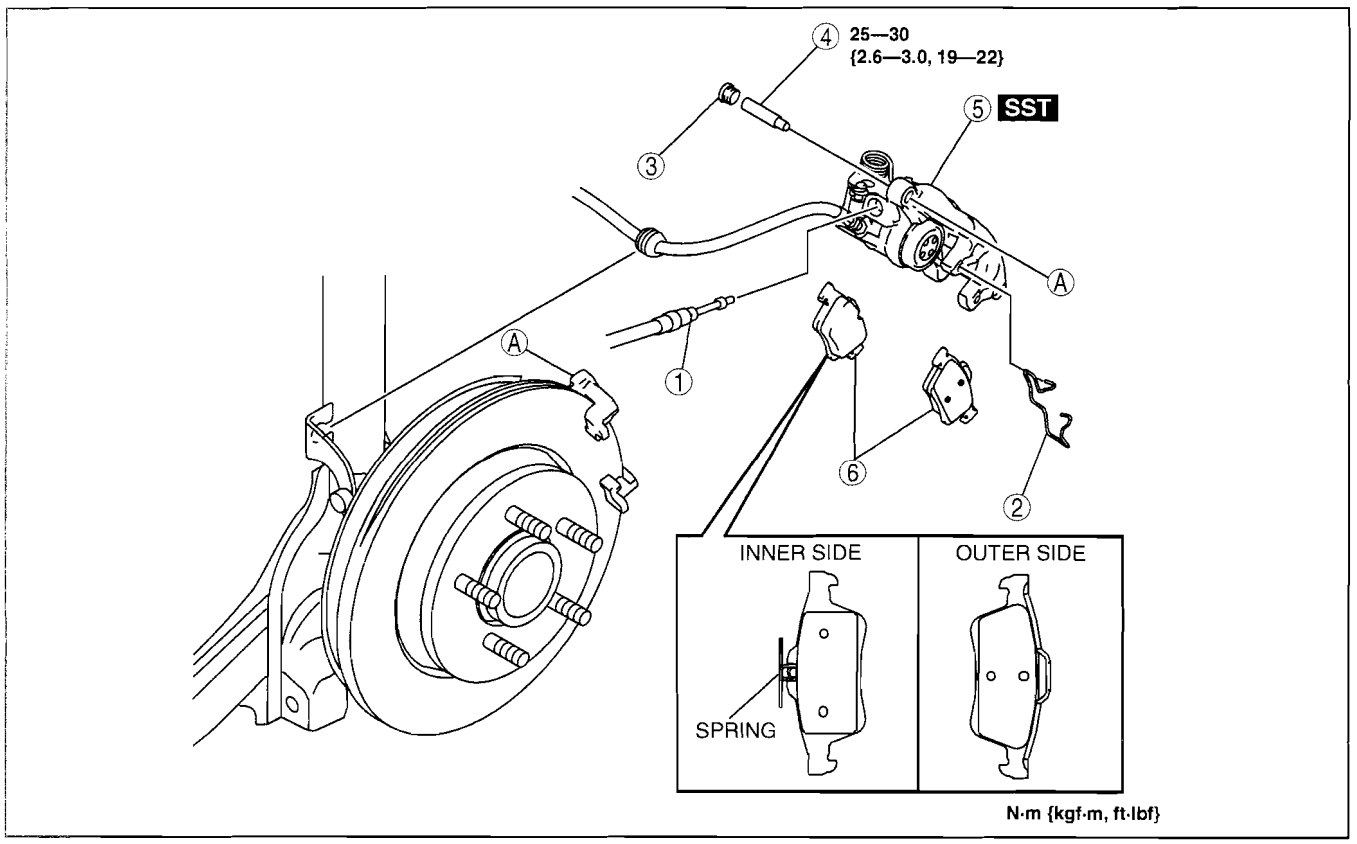
am3uuw0000088

3. Install the the caliper, brake hose.

DISC PAD (REAR) REPLACEMENT

id041100800300

1. Remove in the order indicated in the table.
2. Install in the reverse order of removal.
3. After installation, pump the brake pedal a few times and inspect the following:
   — Parking brake lever stroke
   — Brake drag



am3zzw0000259

1	Parking brake cable
2	Retaining clip
3	Cap
4	Bolt

5	Caliper (See 04-11-30 REAR BRAKE (DISC) REMOVAL/ INSTALLATION.)
6	Disc pad

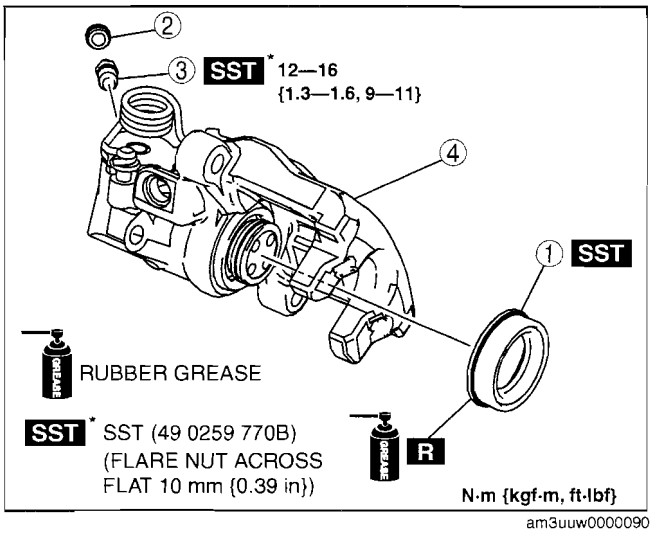
CALIPER (REAR) DISASSEMBLY/ASSEMBLY

id041100800600

1. Disassemble in the order indicated in the table.

1	Dust seal (See 04-11-32 Dust Seal Assembly Note.)
2	Bleeder cap
3	Bleeder screw
4	Caliper body

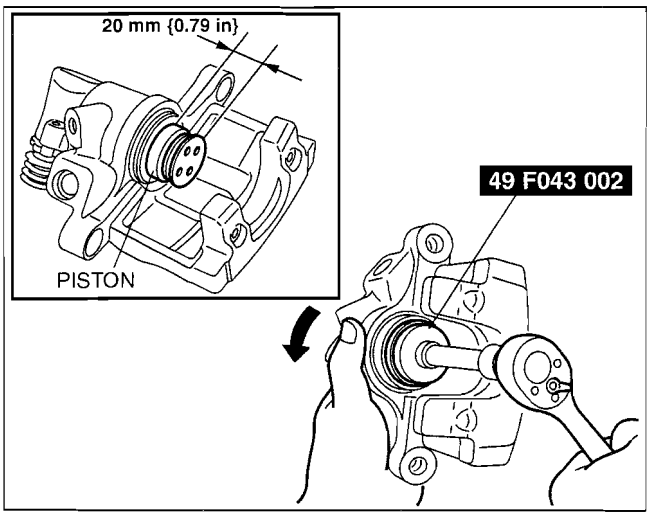
2. Assemble in the reverse order of disassembly.



am3uuw0000090

Dust Seal Assembly Note

1. While rotating the piston counterclockwise using the **SST**, pull it out to the position shown in the figure.

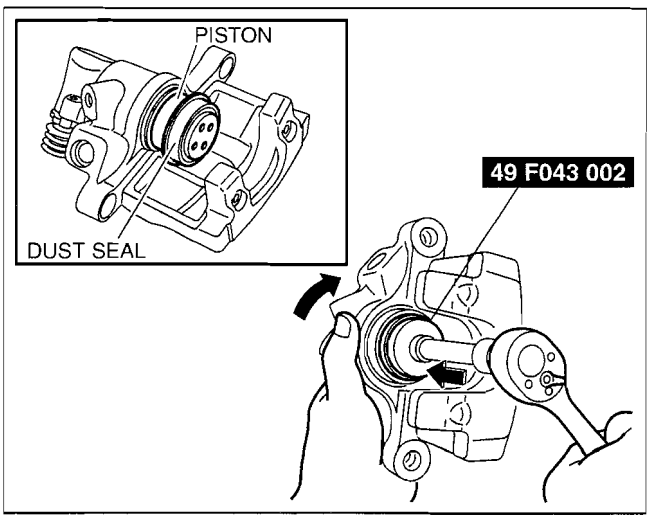


am3uuw0000091

2. As shown in the figure, assemble a new dust seal to the piston and slowly rotate the piston clockwise while pushing it to the caliper body using SST to push the piston completely into the caliper body.

Warning

- **If the SST comes off the piston, it may cause other parts to crush against your hand causing injury. Be careful that the SST remains firmly connected to the piston when you push the piston into the caliper body.**



am3uuw0000091

3. Assemble the dust seal to the caliper body using the **SSTs** and a press with a press-in force of **834 N {85 kgf, 187 in·lbf}**
4. Verify that there is no gap between the dust seal and caliper body.

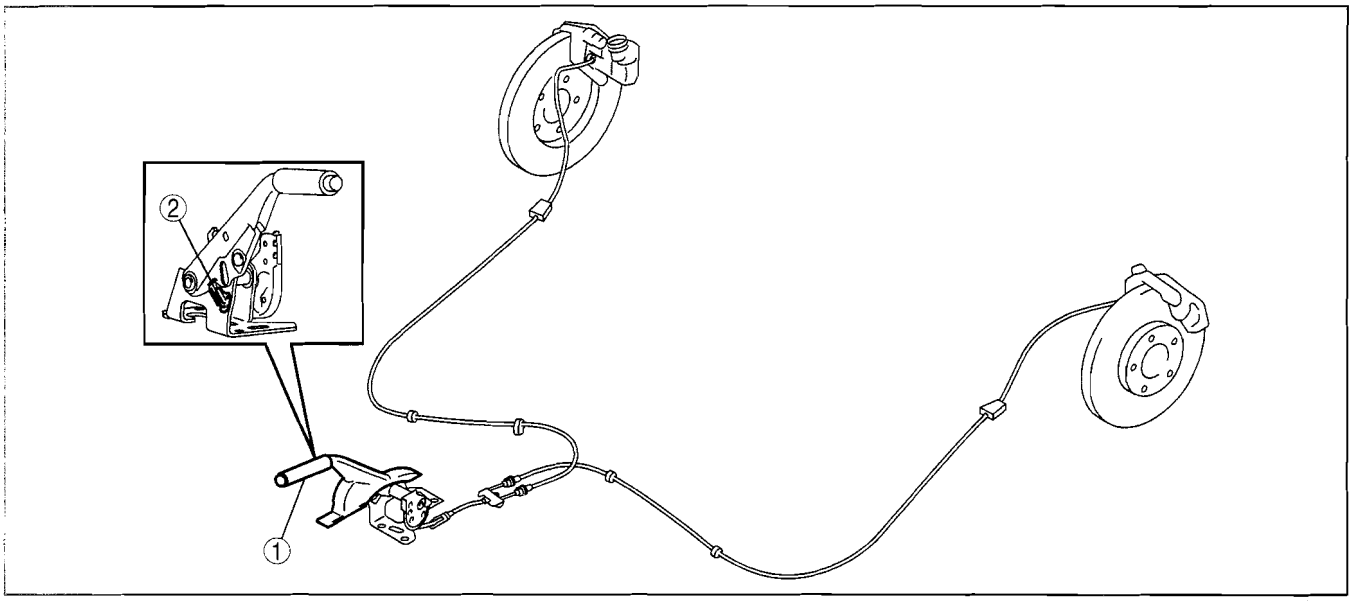
04-12 PARKING BRAKE SYSTEM

PARKING BRAKE SYSTEM LOCATION INDEX

id041200800100



C3U0412W002

1	Parking brake lever (See 04-12-2 PARKING BRAKE LEVER INSPECTION.) (See 04-12-2 PARKING BRAKE LEVER ADJUSTMENT.) (See 04-12-2 PARKING BRAKE LEVER REMOVAL/INSTALLATION.)
2	Parking brake switch (See 04-12-4 PARKING BRAKE SWITCH INSPECTION.)

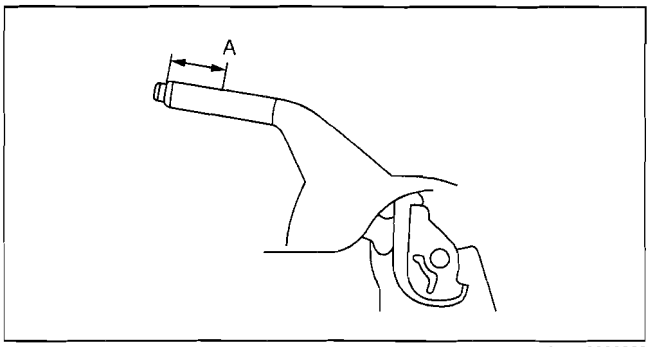
PARKING BRAKE LEVER INSPECTION

id041200800900

Stroke Inspection

1. Pump the brake pedal a few times.
2. Pull the parking brake lever two to three times.
3. Inspect the parking brake stroke by slowly pulling at point A **50 mm {1.97 in}** from the end of the parking brake lever with a force of **98 N {10 kgf, 22 lbf}** and counting the number of notches (clicking sound).
   - If not within the specification, adjust the parking brake lever.

Parking brake lever stroke when pulled at 98 N {10 kgf, 22 lbf}
3—7 notches

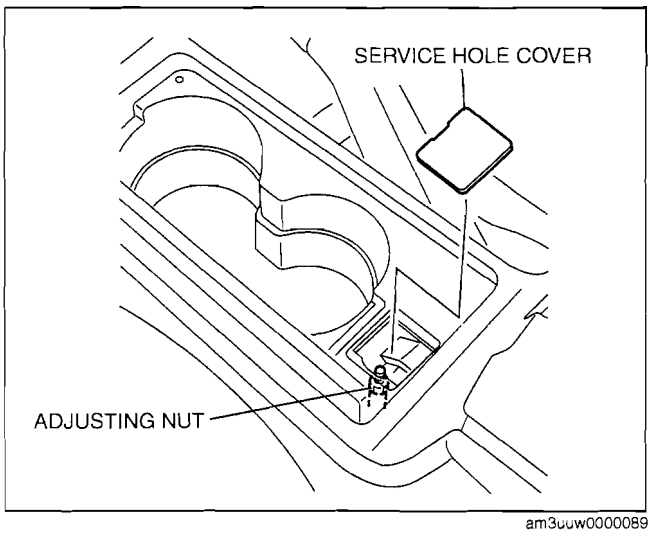


am3uuw0000028

PARKING BRAKE LEVER ADJUSTMENT

id041200801500

1. Pump the brake pedal a few times.
2. Remove the service hole cover of the rear console.
3. Turn the adjusting nut and adjust the parking brake lever.
4. After adjustment, pull the parking brake lever one notch and verify that the parking brake warning light illuminates.
5. Verify that the rear brakes do not drag.



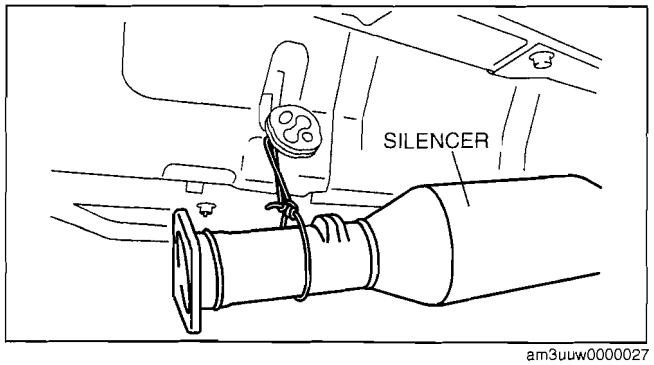
am3uuw0000089

PARKING BRAKE LEVER REMOVAL/INSTALLATION

id041200801600

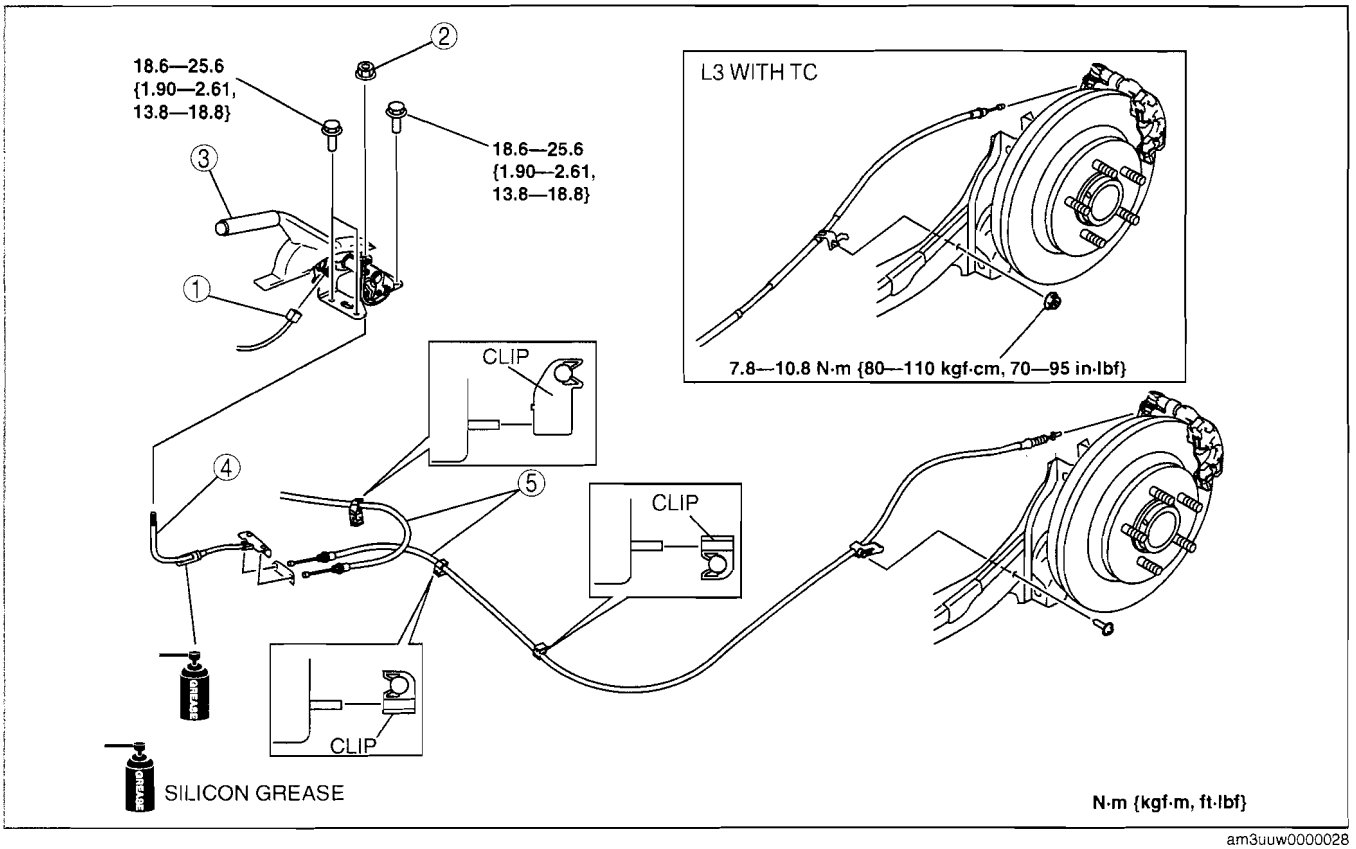
1. To remove the front and rear parking brake cables, perform the following and remove the heat insulator.
   LF, L3
   1. Remove the main silencer. (See 01-15A-1 EXHAUST SYSTEM REMOVAL/INSTALLATION[LF, L3].)
   2. Remove the heat insulator.

   L3 WITH TC
   1. Remove the member. (See 01-15B-2 EXHAUST SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
   2. Remove the silencer installation nuts. (See 01-15B-2 EXHAUST SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
   3. Disconnect the hanger rubber except for the one installed to the rear end of the vehicle from the silencer, and suspend the silencer using rope.
   4. Remove the heat insulator.
2. To remove the parking brake lever and front parking brake cable, remove the console. (See 09-17-10 CONSOLE REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.



am3uuw0000027

5. After installation, inspect the parking brake lever stroke. (See 04-12-2 PARKING BRAKE LEVER INSPECTION.)

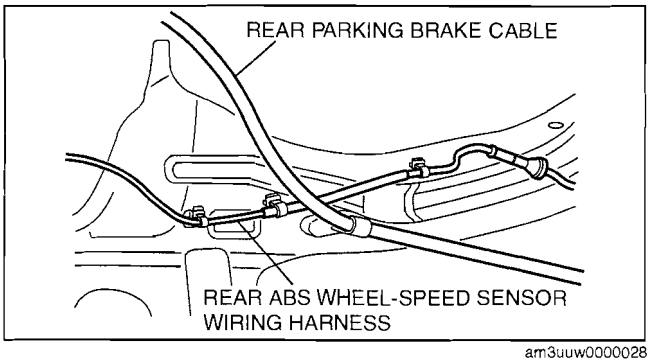


am3uuw0000028

1	Parking brake switch connector
2	Adjusting nut
3	Parking brake lever
4	Front parking brake cable (See 04-12-4 Front Parking Brake Cable Installation Note.)
5	Rear parking brake cable (See 04-12-3 Rear Parking Brake Cable Installation Note.)

Rear Parking Brake Cable Installation Note

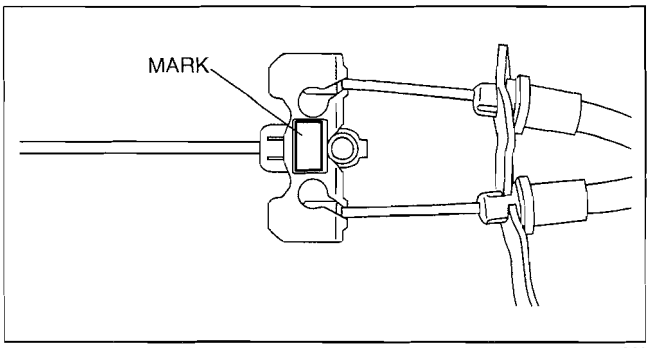
1. Pass the rear parking brake cable inside the rear ABS wheel-speed sensor wiring harness as shown in the figure.
2. Install the rear parking brake cable.



am3uuw0000028

Front Parking Brake Cable Installation Note

1. Install the front parking brake cable with the mark on the equalizer facing toward the vehicle downside.



am3uuw0000028

PARKING BRAKE SWITCH INSPECTION

id041200800700

1. Disconnect the parking brake switch connector.
2. Verify that the continuity is as indicated in the table.
   - If not as indicated in the table, replace the parking brake lever.

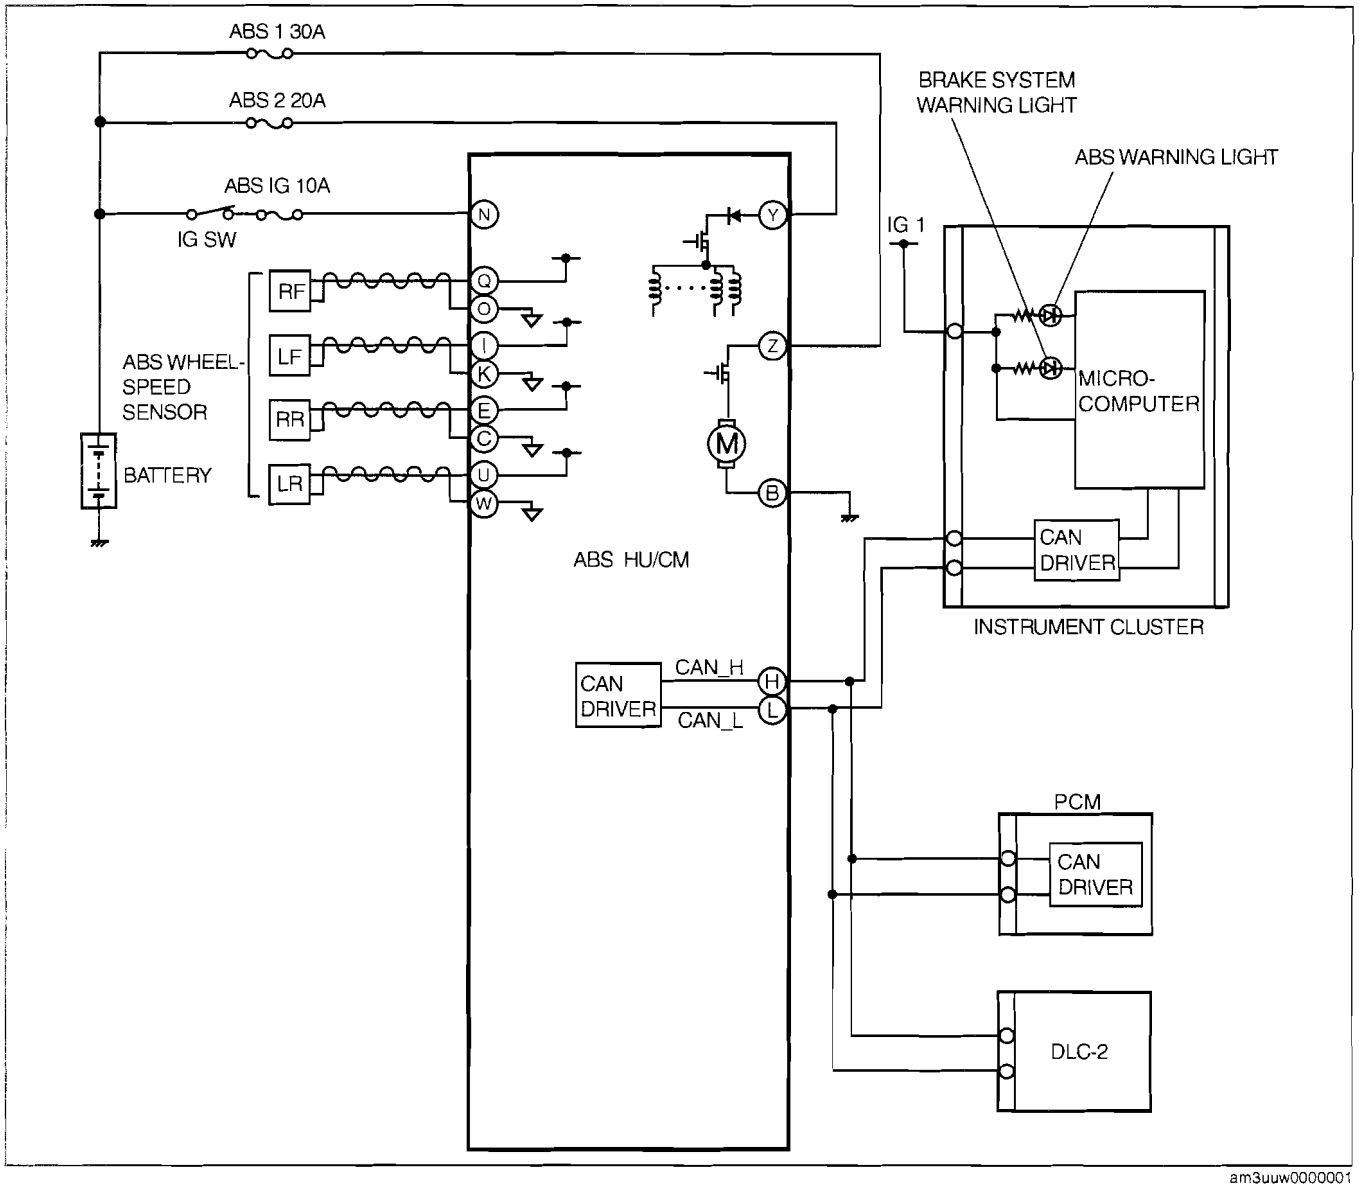
ABS SYSTEM WIRING DIAGRAM

id041300805000



am3uuw0000001

ABS SYSTEM INSPECTION

id041300800200

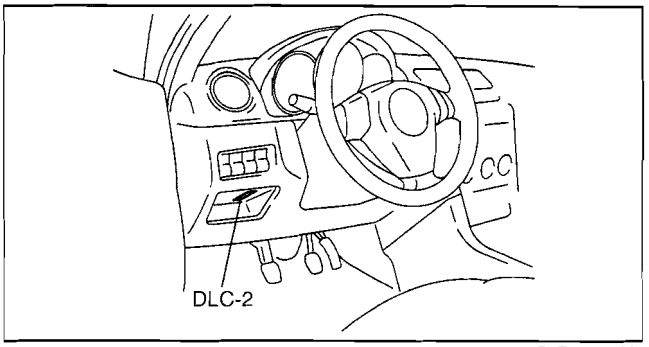
ABS Hydraulic Unit On-vehicle Inspection

Preparation

1. Verify that the battery is fully charged.
2. Turn the ignition switch to the ON position and verify that the ABS warning light goes out after **approx. 3.0 s**.
3. Turn the ignition switch off.
4. Jack up the vehicle and support it evenly on safety stands.
5. Shift to neutral.
6. Release the parking brake.
7. Verify that all four wheels rotate.
8. Rotate the inspected wheels by hand and verify there is no brake drag.
   - If there is any brake drag, perform regular brake inspection.
   - If there is no brake drag, perform ABS HU/CM operation inspection.

Operation inspection

1. Perform "Preparation".
2. Connect the M-MDS to the DLC-2.
3. Set up an active command mode inspection according to the combination of commands below.



B3E0102W003

Operation condition	Command name			Command transmission type
	PMP_MOTOR	RF_OUTLET	RF_INLET	
Brake pressure retention	OFF	OFF	ON	Manual
Brake pressure reduction	ON	ON	ON	

The chart above shows an example of a right front wheel inspection.

Caution

- **When operating the solenoid valve and pump motor using the active command mode, make sure to keep the operation time within 2 s to prevent damaging the ABS HU/CM.**

Note

- When working with two people, one should press on the brake pedal, the other should attempt to rotate the wheel being inspected.

4. Send the command while depressing on the brake pedal and attempting to rotate the wheel being inspected.
5. Performing the inspection above determines the following:
   - The ABS HU/CM brake lines are normal.
   - The ABS HU/CM hydraulic system is not significantly abnormal (including inside ABS HU/CM).
   - The ABS HU/CM internal electrical parts (solenoid, motor and other parts) are normal.
   - The ABS HU/CM output system wiring harnesses (solenoid valve, relay system) are normal.
     - — However, the following items cannot be verified.
       - Malfunction of ABS HU/CM input system wiring harnesses and parts
       - Extremely small leakage in the ABS HU/CM internal hydraulic system
       - Intermittent malfunction of the above items

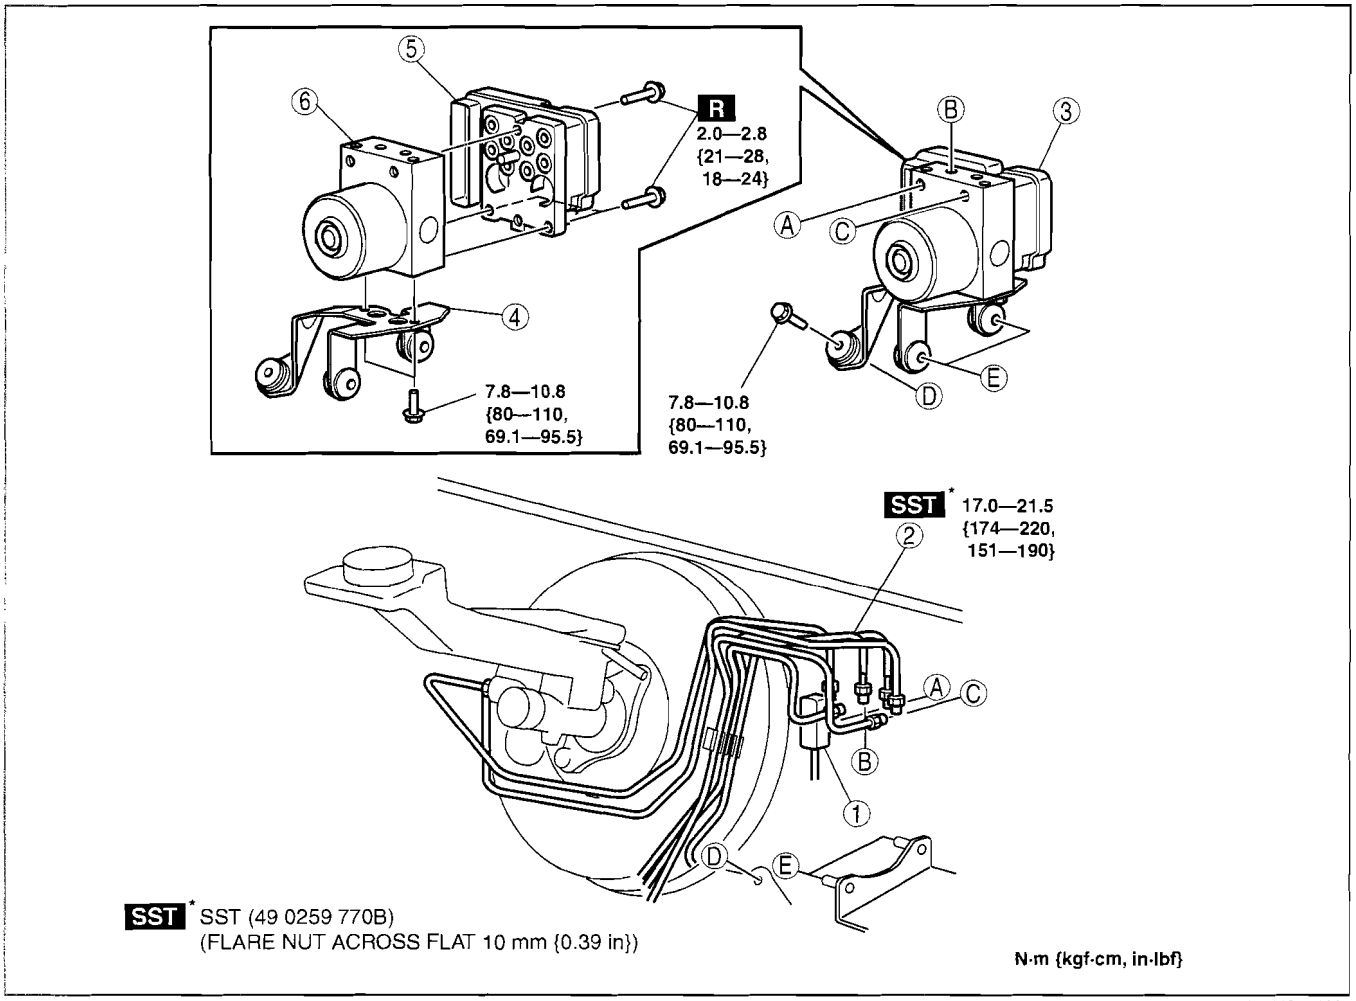
ABS HU/CM REMOVAL/INSTALLATION

id041300801400

Caution

- **When replacing the ABS HU/CM, the configuration procedure must be done before removing the ABS HU/CM. If the configuration is not completed before removing the ABS HU/CM, ABS will not work properly after installation of the ABS HU/CM.**
- **Do not separate the ABS HU and ABS CM unless replacing them, otherwise the ABS HU/CM may not function properly. When replacing them with new ones, always perform procedures according to the instructions included with the new parts.**
- **The internal parts of the ABS HU/CM could be damaged if dropped. Be careful not to drop the ABS HU/CM. Replace the ABS HU/CM if it is subjected to an impact.**

1. Remove the battery and battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Remove the reserve hose. (MTX) (See 04-11-9 MASTER CYLINDER REMOVAL/INSTALLATION[LF, L3].) (See 05-10-6 CLUTCH MASTER CYLINDER REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.
5. Configurate the ABS HU/CM (only when replacing it). (See 04-13-6 ABS CONFIGURATION.)



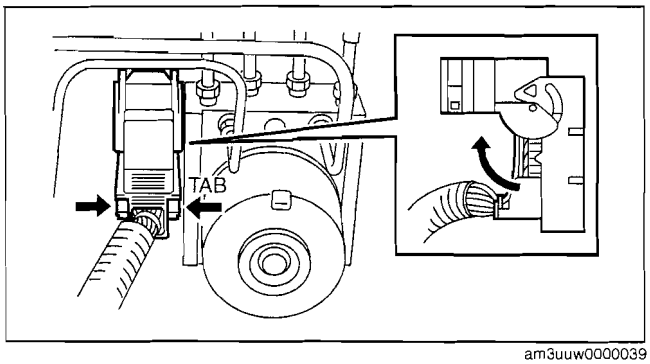
d3u413zw6001

1	Connector (See 04-13-5 Connector Removal Note.) (See 04-13-6 Connector Installation Note.)
2	Brake pipe (See 04-13-5 Brake Pipe Removal Note.) (See 04-13-5 Brake Pipe Installation Note.)

3	ABS HU/CM component, bracket (See 04-13-5 ABS HU/CM Component, Bracket Removal Note.)
4	Bracket
5	ABS CM
6	ABS HU

Connector Removal Note

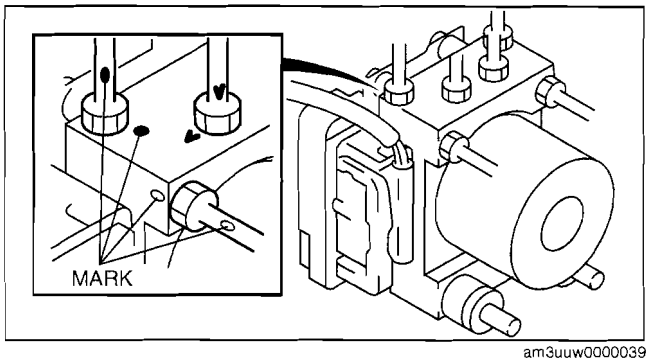
1. Pull the connector cover up in the direction of the arrow while pressing the tab of the connector cover.
2. Pull the connector toward the vehicle front and remove it.



am3uuw0000039

Brake Pipe Removal Note

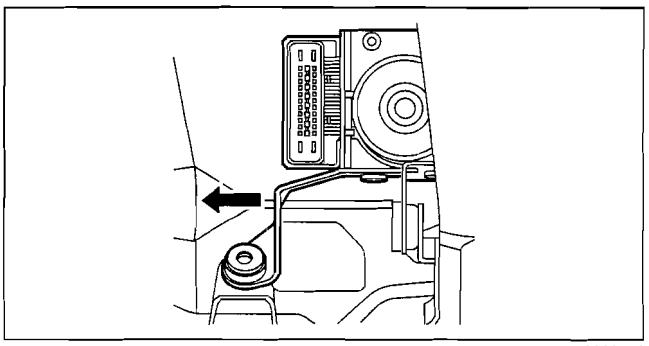
1. Place an alignment mark on the brake pipe and ABS HU/CM.
2. Apply protective tape to the connector to prevent brake fluid from entering.
3. Remove the brake pipe.



am3uuw0000039

ABS HU/CM Component, Bracket Removal Note

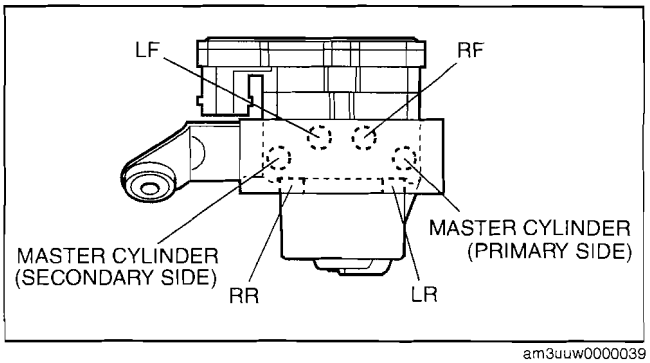
1. As shown in the figure, move the bracket in the direction of the arrow and remove the ABS HU/CM component and bracket from the body.



am3uuw0000039

Brake Pipe Installation Note

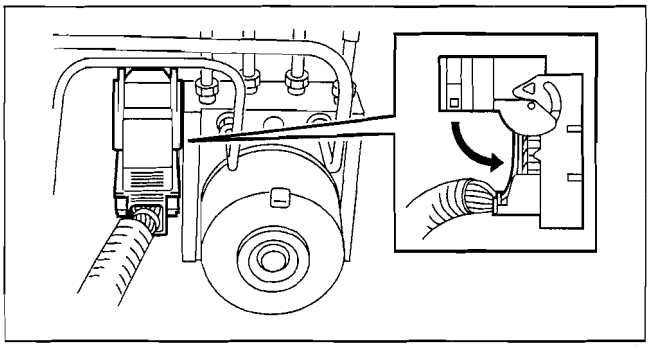
1. Align the marks made before removal and install the brake pipe to the ABS HU/CM referring to the figure.



am3uuw0000039

Connector Installation Note

1. After connecting the connector, verify that the connector cover is completely pushed in.

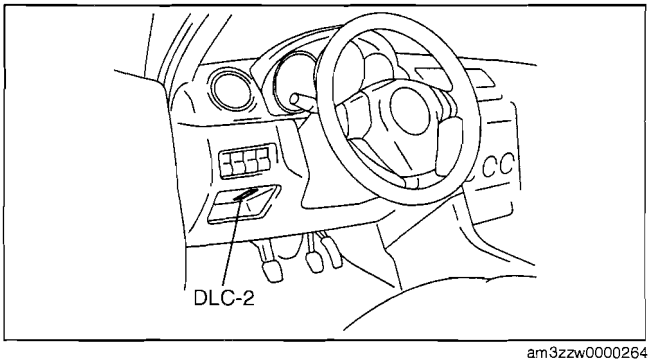


am3uuw0000039

ABS CONFIGURATION

id041300802000

1. Connect the M-MDS to the DLC-2 connector.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Module Programming".
   - When using the PDS (Pocket PC)
     1. Select "Programming".
     2. Select "Module Programming".
3. Then, select the "Programmable Module Installation" and "ABS" from the screen menu.
4. Perform the configuration according to the directions on the screen.
5. Retrieve DTCs using the M-MDS, then verify if DTCs are present.
   - If a DTC is present, perform the applicable DTC inspection. (See 04-02A-2 ON-BOARD DIAGNOSIS[ABS].)



am3zzw0000264

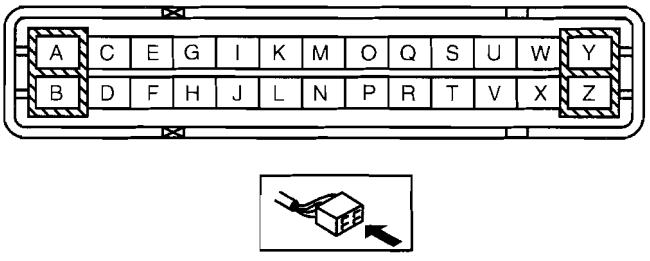
ABS HU/CM INSPECTION

id041300801000

1. Disconnect the ABS HU/CM connector.
2. Connect the negative battery cable.
3. Attach the tester lead to the ABS HU/CM wiring harness-side connector, then inspect the voltage, continuity, or resistance according to the standard (reference) on the table.

Terminal Voltage Table (Reference)

ABS HU/CM WIRING HARNESS-SIDE CONNECTOR



B3E0413W010

Terminal	Signal name	Connected to	Measured item	Measured terminal (measurement condition)	Standard	Inspection item(s)

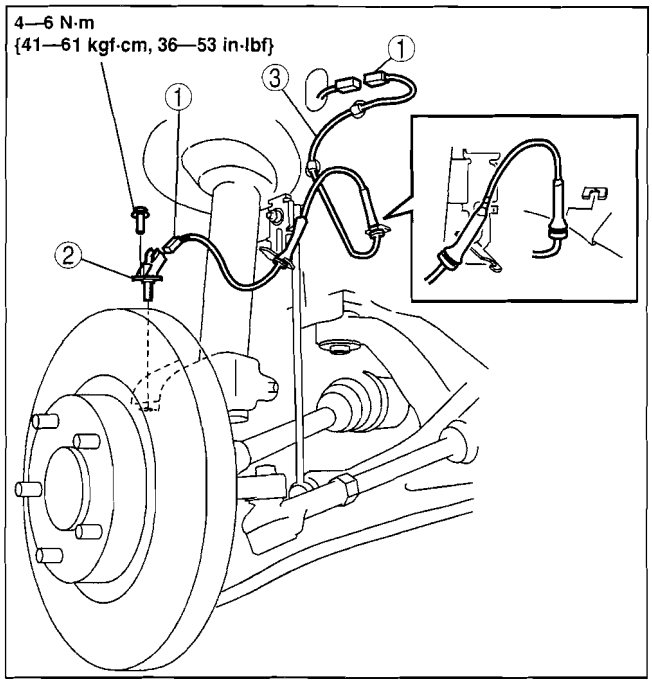
FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION

id041300800700

1. Remove the mudguard.
2. Remove in the order indicated in the table.

1	Connector
2	Front ABS wheel-speed sensor
3	Front ABS wheel-speed sensor wiring harness

3. Install in the reverse order of removal.



c3u0413w001

FRONT ABS WHEEL-SPEED SENSOR INSPECTION

id041300801300

Installation Visual Inspection

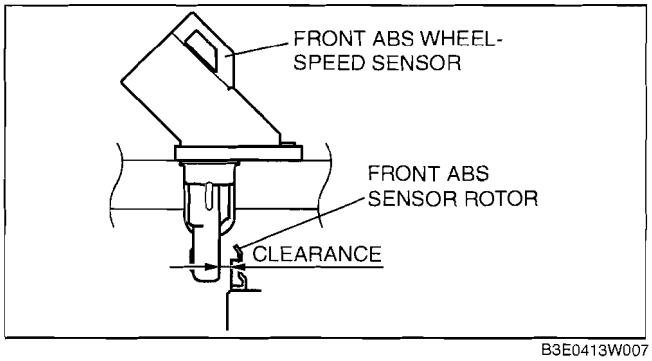
1. Inspect for the following:
   - If there is any malfunction, replace the part.

   (1) Excessive play of the ABS wheel-speed sensor
   (2) Deformation of the ABS wheel-speed sensor
   (3) Deformation or damage of the ABS sensor rotor

Clearance Inspection

1. Inspect the clearance between the front ABS wheel-speed sensor and the ABS sensor rotor.
   - If there is any malfunction, verify improper installation and replace if necessary.

Clearance
2.1 mm {0.082 in} or less



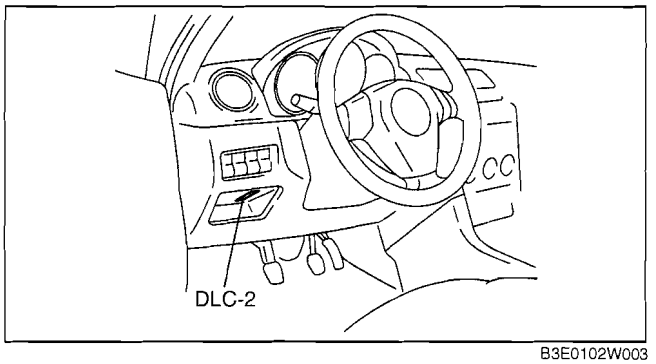
B3E0413W007

Sensor Output Value Inspection

Caution

- **Resistance inspection using other testers may cause damage to the ABS wheel-speed sensor internal circuit. Be sure to use the M-MDS to inspect the ABS wheel-speed sensor.**

1. Turn the ignition switch off.
2. Connect the M-MDS to the DLC-2.
3. Select the following PIDs using the M-MDS:
   - LF_WSPD
     (LF wheel-speed sensor)
   - RF_WSPD
     (RF wheel-speed sensor)
4. Start the engine and drive the vehicle.
5. Verify that the display of the M-MDS shows the same value as the speedometer.
   - If there is any malfunction, replace the front ABS wheel-speed sensor.

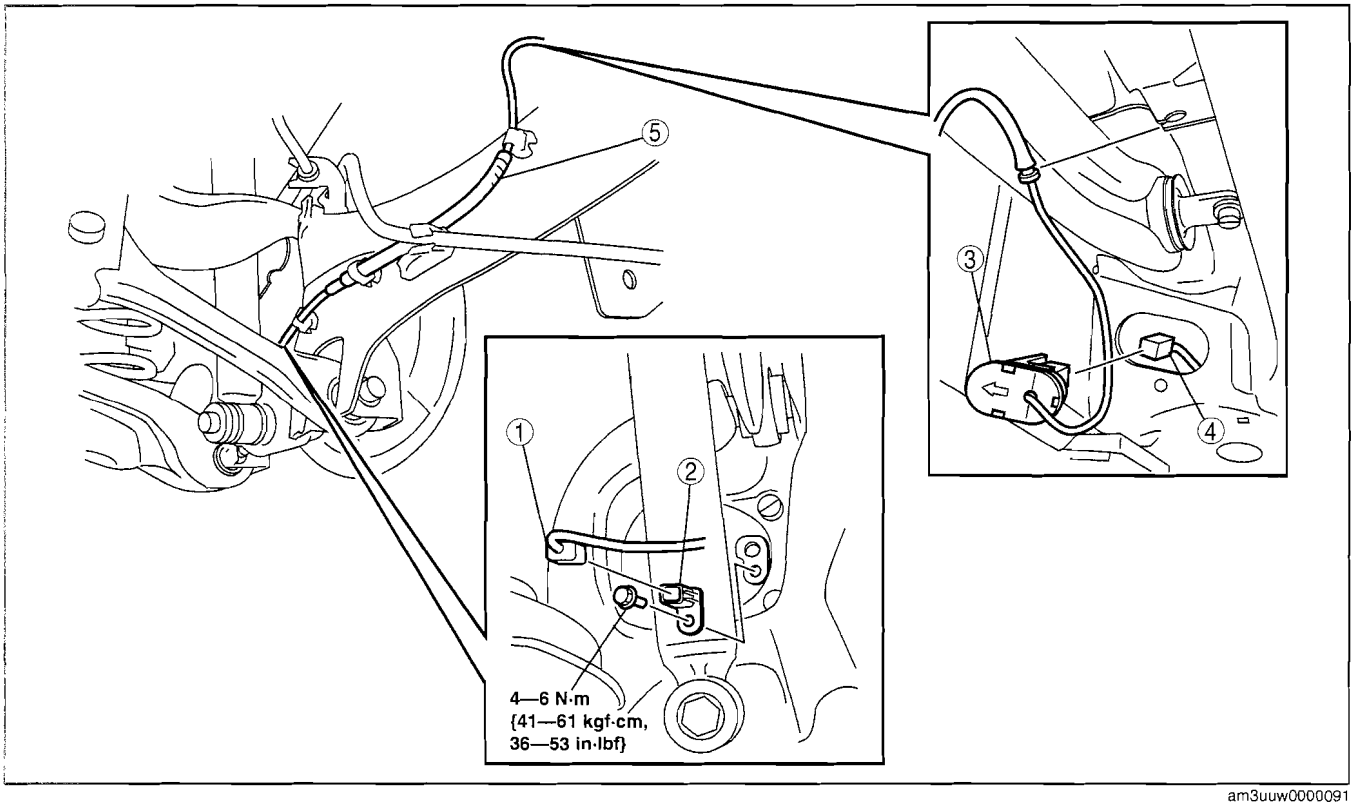


B3E0102W003

REAR ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION

id041300800500

1. Remove the under cover (rear).
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.



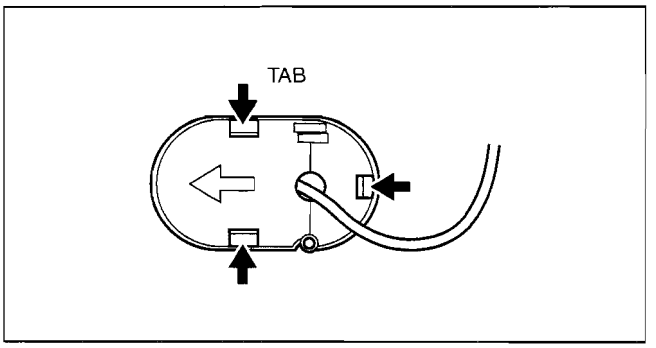
am3uuw0000091

1	Connector
2	Rear ABS wheel-speed sensor
3	ABS hole cover (See 04-13-10 ABS Hole Cover Removal Note.) (See 04-13-10 ABS Hole Cover Installation Note.)

4	Connector
5	Rear ABS wheel-speed sensor wiring harness (See 04-13-10 Rear ABS Wheel-speed Sensor Wiring Harness Installation Note.)

ABS Hole Cover Removal Note

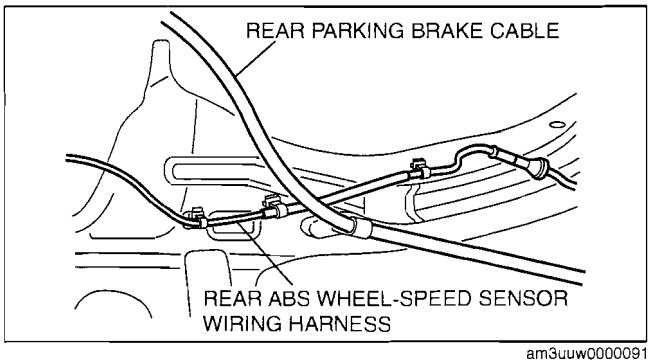
1. Press the tab of the ABS hole cover to separate the ABS hole cover from the body.
2. Remove the ABS hole cover from the body.



am3uuw0000091

Rear ABS Wheel-speed Sensor Wiring Harness Installation Note

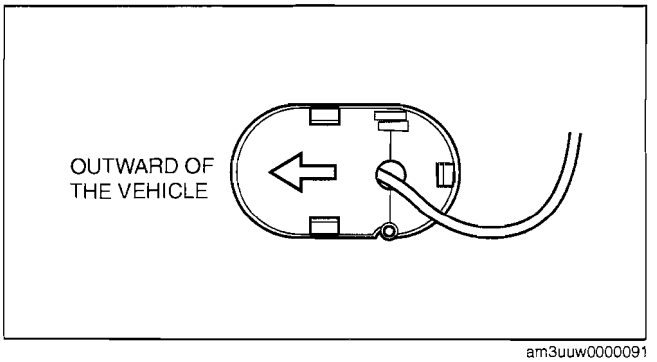
1. Pass the rear ABS wheel-speed sensor wiring harness outside the rear parking brake cable as shown in the figure.
2. Install the rear ABS wheel-speed sensor wiring harness.



am3uuw0000091

ABS Hole Cover Installation Note

1. Install the ABS hole cover into the body so that the arrow on it is facing toward the outer side of the vehicle.



am3uuw0000091

REAR ABS WHEEL-SPEED SENSOR INSPECTION

id041300801200

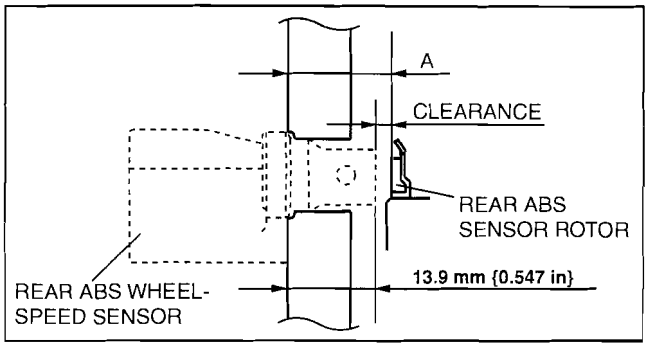
Installation Visual Inspection

1. Inspect for the following:
   - If there is any malfunction, replace the part.

   (1) Excessive looseness or play of the ABS wheel-speed sensor
   (2) Deformation of the ABS wheel-speed sensor
   (3) Deformation or damage of the ABS sensor rotor

Clearance Inspection

1. Remove the rear ABS wheel-speed sensor.
2. Measure the distance between the rear ABS wheel-speed sensor installation surface and the ABS sensor rotor. This is dimension A.
3. Calculate the clearance between the rear ABS wheel-speed sensor and the ABS sensor rotor using the following formula:
   Clearance (mm {in}) = A –13.9 {0.547}
4. Verify that the clearance between the ABS sensor rotor and the rear ABS wheel-speed sensor is as indicated below.
   - If there is any malfunction, replace it.



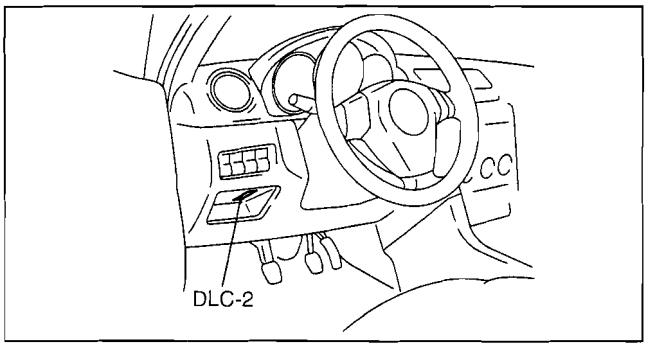
B3E0413W008

Clearance
1.46 mm {0.057 in} or less

Sensor Output Value Inspection

Caution
- **Resistance inspection using other testers may cause damage to the ABS wheel-speed sensor internal circuit. Be sure to use the M-MDS to inspect the ABS wheel-speed sensor.**

1. Turn the ignition switch off.
2. Connect the M-MDS to the DLC-2.
3. Select the following PIDs using the M-MDS:
   - LR_WSPD
     (LR wheel-speed sensor)
   - RR_WSPD
     (RR wheel-speed sensor)
4. Start the engine and drive the vehicle.
5. Verify that the display of the M-MDS shows the same value as the speedometer.
   - If there is any malfunction, replace the ABS wheel-speed sensor.



B3E0102W003

04-15 DYNAMIC STABILITY CONTROL

DSC LOCATION INDEX

id041500802100

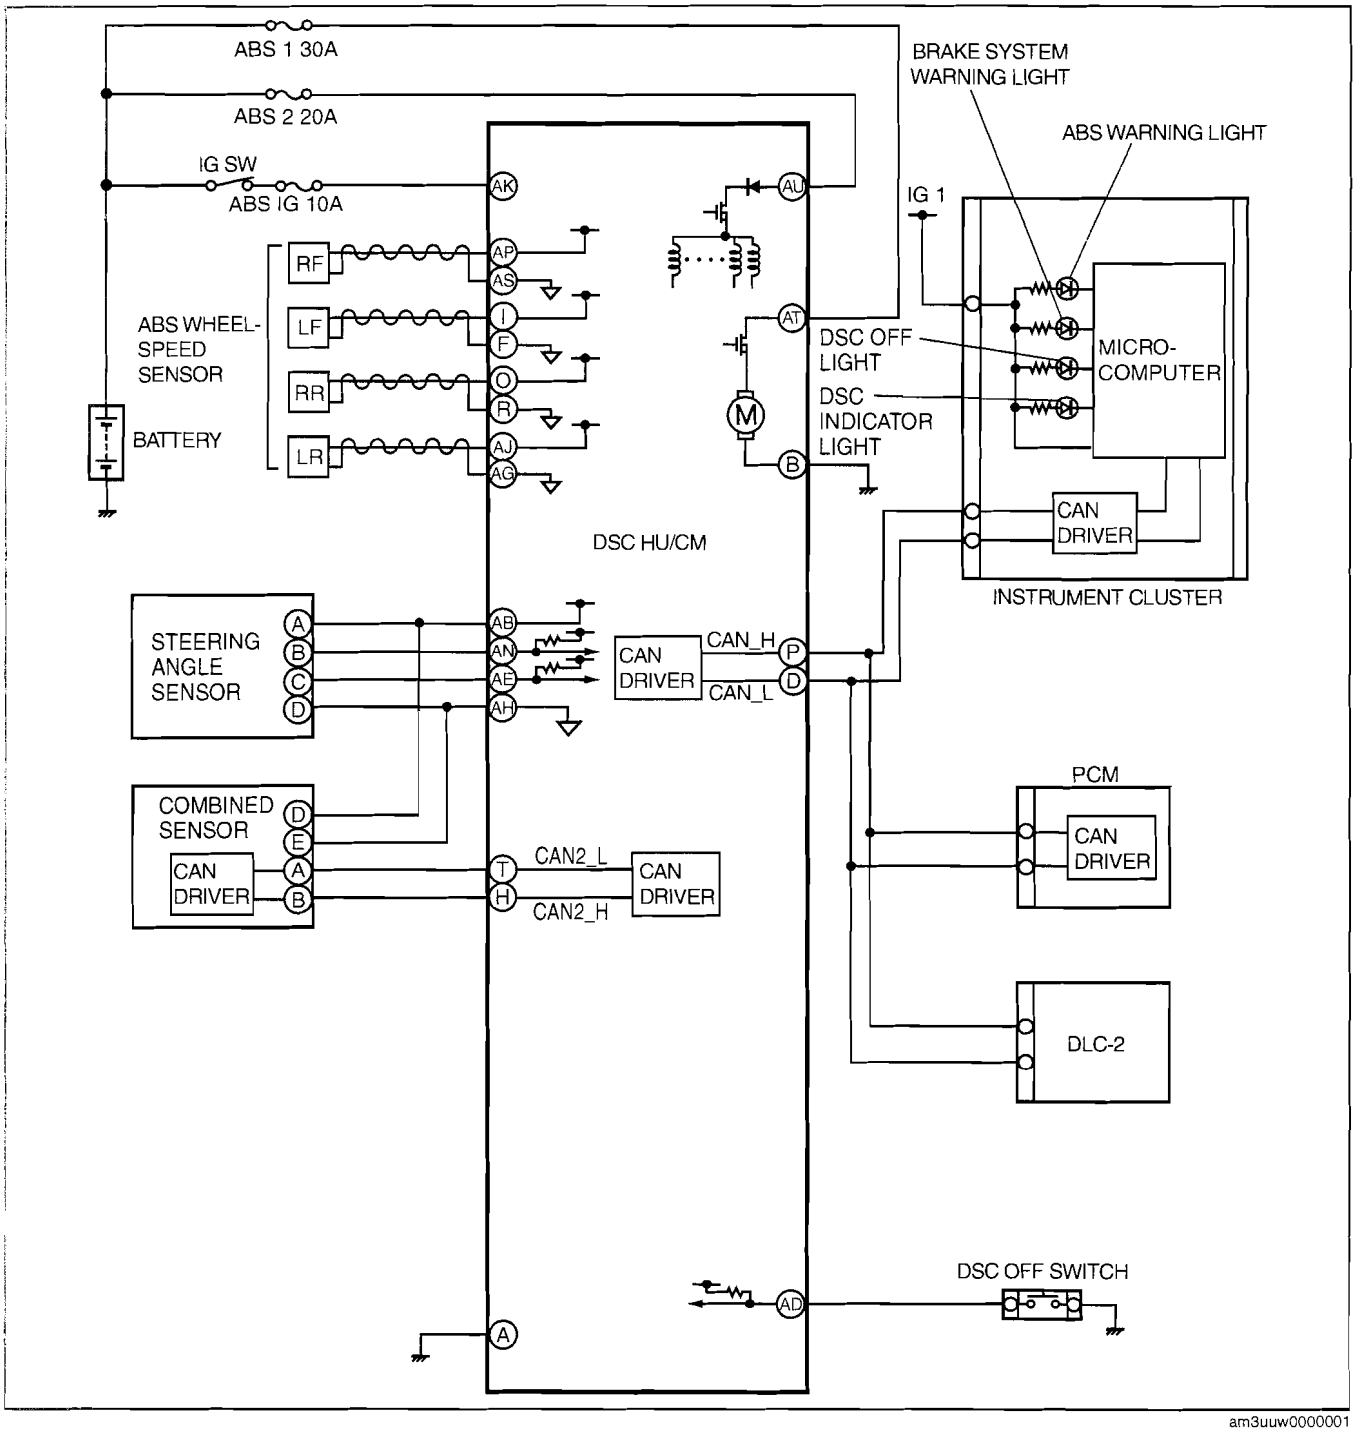
6	Steering angle sensor (See 04-15-13 STEERING ANGLE SENSOR REMOVAL/INSTALLATION.) (See 04-15-13 STEERING ANGLE SENSOR INSPECTION.)
7	DSC OFF switch (See 04-15-14 DSC OFF SWITCH REMOVAL/ INSTALLATION.) (See 04-15-14 DSC OFF SWITCH INSPECTION.)

DSC SYSTEM WIRING DIAGRAM

id041500800600



am3uuw0000001

DSC SYSTEM INSPECTION

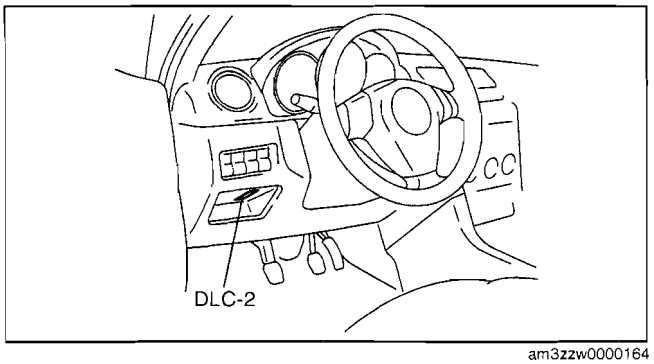
id041500800700

Preparation

1. Verify that the battery is fully charged.
2. Turn the ignition switch to the ON position and verify that the ABS warning light goes out after **approx. 3.0 s**.
3. Turn the ignition switch off.
4. Jack up the vehicle and support it evenly on safety stands.
5. Shift to the N position.
6. Verify that all four wheels rotate.
7. Rotate the inspected wheels by hand and verify there is no brake drag.
   - If there is any brake drag, perform regular brake inspection.
   - If there is no brake drag, perform DSC HU/CM operation inspection.

ABS Control Inspection

1. Perform "Preparation".
2. Connect the M-MDS to the DLC-2.
3. Set up an active command mode inspection according to the combination of commands below. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].)



am3zzw0000164

Brake pressure retention

Command name	Inspected wheels			
	LF	RF	LR	RR
LF_TC_PRV	OFF			
RF_TC_PRV				
LF_TC_SWV				
RF_TC_SWV				
LF_INLET	ON	OFF	OFF	OFF
LF_OUTLET	OFF			
LR_INLET			ON	
LR_OUTLET			OFF	
RF_INLET		ON		
RF_OUTLET		OFF		
RR_INLET				ON
RR_OUTLET				OFF
PMP_MOTOR				

Brake pressure reduction

Command name	Inspected wheels			
	LF	RF	LR	RR
LF_TC_PRV	OFF			
RF_TC_PRV				
LF_TC_SWV				
RF_TC_SWV				
LF_INLET	ON	OFF	OFF	OFF
LF_OUTLET				
LR_INLET	OFF		ON	
LR_OUTLET				
RF_INLET		ON	OFF	
RF_OUTLET				
RR_INLET		OFF		ON
RR_OUTLET				
PMP_MOTOR	ON			

Caution

- **When operating the solenoid valve and pump motor using the active command mode, make sure to keep the operation time within 2 s to prevent damaging the DSC HU/CM.**

Note

- When working with two people, one should press on the brake pedal, the other should attempt to rotate the wheel being inspected.

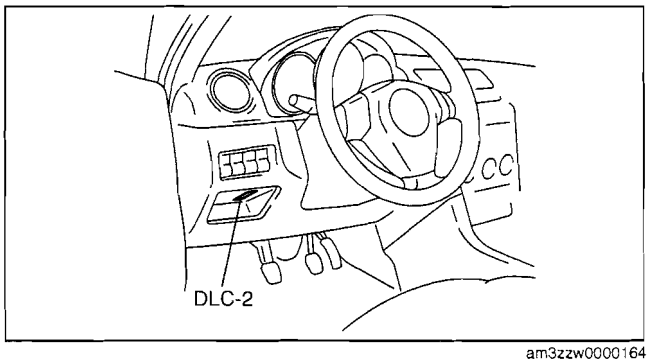
4. Send the command while depressing on the brake pedal and attempting to rotate the wheel being inspected.
5. When brake pressure is maintained and a DSC HU/CM operation click sound is heard, confirm that the wheel does not rotate. When brake pressure is being reduced and a DSC HU/CM operation click sound is heard, confirm that the wheel rotates.
   - Performing the inspection above determines the following:
     — The DSC HU/CM brake lines are normal.
     — The DSC HU/CM hydraulic system has no significant malfunction (including DSC HU/CM).
     — The DSC HU/CM internal electrical parts (solenoid, motor and other parts) are normal.
     — The DSC unit and DSC HU/CM output system wiring harnesses (solenoid valve, relay system) are normal.
   - However, the following items cannot be verified.
     — Intermittent malfunction of the above items
     — Malfunction of DSC HU/CM input system wiring harnesses and parts
     — Extremely small leakage in the DSC HU/CM internal hydraulic system

DSC Control Inspection

1. Perform "Preparation".
2. Connect the M-MDS to the DLC-2.
3. Set up an active command mode inspection according to the combination of commands below. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].)

Caution

- **When operating the solenoid valve and pump motor using the active command mode, make sure to keep the operation time within 2 s to prevent damaging the DSC HU/CM.**



am3zzw0000164

Command name	Inspected wheels			
	Understeer control disabled		Oversteer control disabled	
	LF	RF	LR	RR
LF_TC_PRV	ON	OFF		ON
RF_TC_PRV	OFF	ON		OFF
LF_TC_SWV	OFF			
RF_TC_SWV				
LF_INLET	OFF	OFF	OFF	ON
LF_OUTLET				OFF
LR_INLET		ON		
LR_OUTLET		OFF		
RF_INLET			ON	
RF_OUTLET			OFF	
RR_INLET	ON			
RR_OUTLET	OFF			
PMP_MOTOR	ON			

4. Send the command while rotating the wheel being inspected by hand in a forward direction.
5. Confirm that the wheel does not rotate easily while a DSC HU/CM operation click sound is heard.
   - Performing the inspection above determines the following:
     — The DSC HU/CM brake lines are normal.
     — The DSC HU/CM hydraulic system has no significant malfunction (including DSC HU/CM).
     — The DSC HU/CM internal electrical parts (solenoid, motor and other parts) are normal.
     — The DSC unit and DSC HU/CM output system wiring harnesses (solenoid valve, relay system) are normal.
   - However, the following items cannot be verified.
     — Intermittent malfunction of the above items
     — Malfunction of DSC HU/CM input system wiring harnesses and parts
     — Extremely small leakage in the DSC HU/CM internal hydraulic system

DSC HU/CM REMOVAL/INSTALLATION

id041500801000

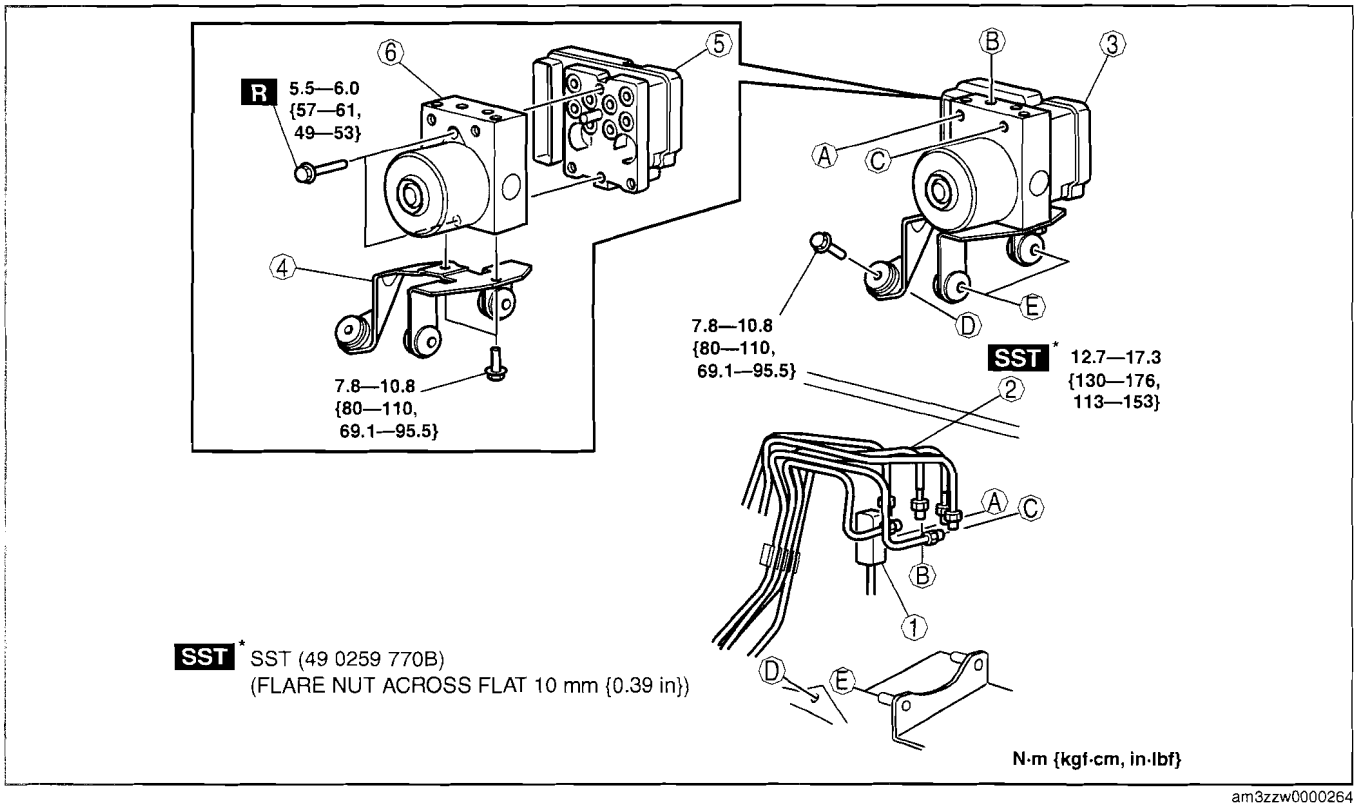
Caution

- **When replacing the DSC HU/CM, the configuration procedure must be done before removing the DSC HU/CM. If the configuration is not completed before removing the DSC HU/CM, DSC will not work properly after installation of the DSC HU/CM.**
- **The DSC may not function normally immediately after the DSC HU/CM is replaced. After installation, always perform the initialization procedures for the combined sensor, brake fluid pressure sensor.**
- **Always use the adapter that comes with a new DSC HU or DSC CM when separating the DSC HU or DSC CM. Otherwise, the pump motor may come off the DSC HU and be damaged. Therefore, do not separate the DSC HU and DSC CM unless replacing them. When replacing them with new ones, always perform procedures according to the instructions included with the new parts.**
- **The internal parts of the DSC HU/CM could be damaged if dropped. Be careful not to drop the DSC HU/CM. Replace the DSC HU/CM if it is subjected to an impact.**

1. Remove the battery and battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].) (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
2. Remove the reserve hose (MTX vehicles). (See 04-11-10 MASTER CYLINDER REMOVAL/INSTALLATION[L3 WITH TC].) (See 05-10-6 CLUTCH MASTER CYLINDER REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.
5. Configurate the DSC HU/CM (only when replacing it). (See 04-15-8 DSC CONFIGURATION.)
6. Perform the initialization procedures for the combined sensor, brake fluid pressure sensor. (See 04-15-12 COMBINED SENSOR INITIALIZATION PROCEDURE.) (See 04-15-13 BRAKE FLUID PRESSURE SENSOR INITIALIZATION PROCEDURE.)
7. Clear the DTCs from the memory. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].)

Note

- Even if the initialization procedure is performed after replacing the DSC HU/CM, DTCs B2141 and C2785 are stored in the memory as past malfunctions.

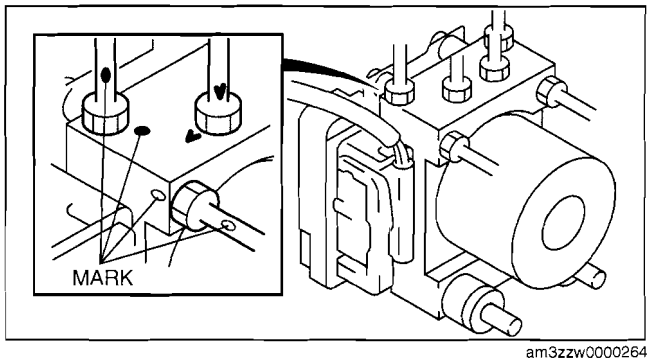


am3zzw0000264

1	Connector (See 04-13-4 ABS HU/CM REMOVAL/ INSTALLATION.)
2	Brake pipe (See 04-15-7 Brake Pipe Removal Note.) (See 04-15-7 Brake Pipe Installation Note.)
3	DSC HU/CM, bracket (See 04-15-7 DSC HU/CM, Bracket Removal Note.)
4	Bracket
5	DSC CM
6	DSC HU

Brake Pipe Removal Note

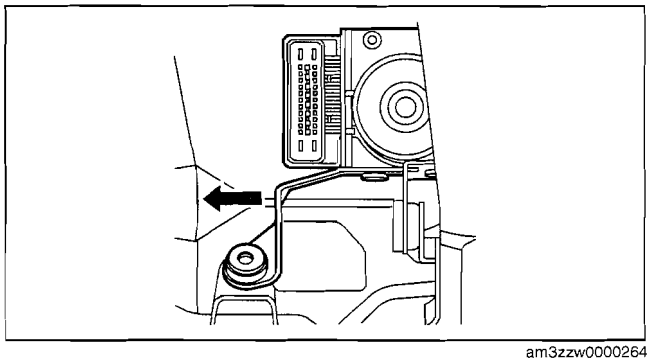
1. Place an alignment mark on the brake pipe and DSC HU/CM.
2. Apply protective tape to the connector to prevent brake fluid from entering.
3. Remove the brake pipe.



am3zzw0000264

DSC HU/CM, Bracket Removal Note

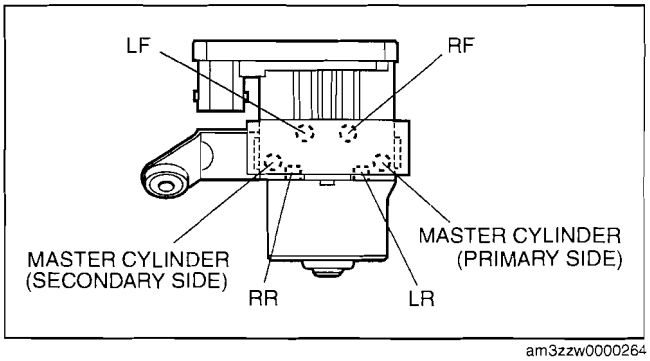
1. As shown in the figure, move the bracket in the direction of the arrow and remove the DSC HU/CM and bracket from the body.



am3zzw0000264

Brake Pipe Installation Note

1. Align the marks made before removal and install the brake pipe into the DSC HU/CM referring to the figure.

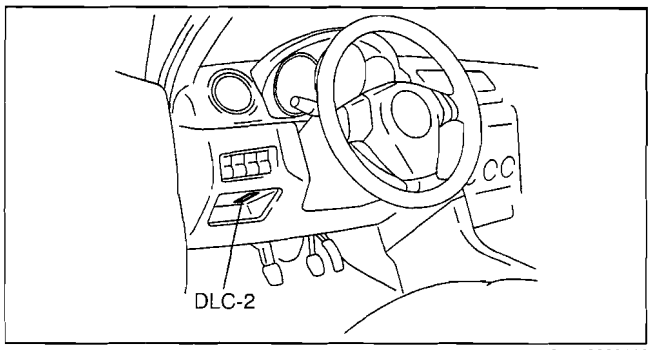


am3zzw0000264

DSC CONFIGURATION

id041500800800

1. Connect the M-MDS to the DLC-2 connector.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Module programming".
   - When using the PDS (Pocket PC)
     1. Select "Programming".
     2. Select "Module programming".
3. Then, select the "Programmable Module Installation" and "ABS" from the screen menu.
4. Perform the configuration according to the directions on the screen.
5. Retrieve DTCs using the M-MDS, then verify if DTCs are present.
   - If a DTC is present, perform the applicable DTC inspection. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].)



am3zzw0000162

DSC HU/CM INSPECTION

id041500801100

1. Disconnect the DSC HU/CM connector.
2. Connect the negative battery cable.
3. Attach the tester lead to the DSC HU/CM wiring harness-side connector and inspect voltage, continuity, or resistance according to the standard (reference) on the table.

Standard (Reference)

FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION

id041500800300

1. Remove or install the front ABS wheel-speed sensor in the same order of vehicles with ABS. (See 04-13-8 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)

FRONT ABS WHEEL-SPEED SENSOR INSPECTION

id041500800400

1. Inspect the front ABS wheel-speed sensor in the same order of vehicles with ABS. (See 04-13-8 FRONT ABS WHEEL-SPEED SENSOR INSPECTION.)

REAR ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION

id041500800100

1. Remove or install the rear ABS wheel-speed sensor in the same order of vehicles with ABS. (See 04-13-9 REAR ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)

REAR ABS WHEEL-SPEED SENSOR INSPECTION

id041500800200

1. Inspect the rear ABS wheel-speed sensor in the same order of vehicles with ABS. (See 04-13-10 REAR ABS WHEEL-SPEED SENSOR INSPECTION.)

COMBINED SENSOR REMOVAL/INSTALLATION

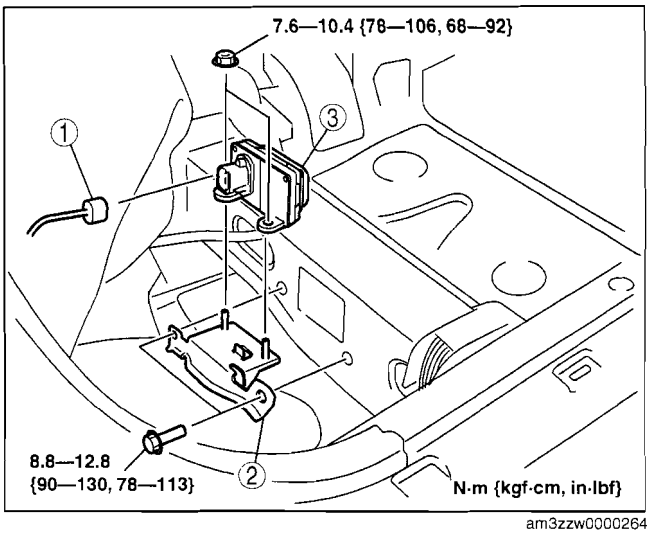
id041500801200

Caution
- **The DSC may not function normally immediately after the combined sensor/ is replaced. After installation, always perform the initialization procedures for the combined sensor.**
- **The internal parts of the combined sensor could be damaged if dropped. Be careful not to drop the combined sensor. Replace the combined sensor if it is subjected to an impact. Also, do not use an impact wrench or other similar air tools when removing/installing the sensor.**

1. Perform the following and partially peel back the floor covering.
   (1) Remove the front seat (RH). (See 09-13-2 FRONT SEAT REMOVAL/INSTALLATION.)
   (2) Remove the woofer. (See 09-20-10 WOOFER REMOVAL/INSTALLATION.)
   (3) Remove the front scuff plate (RH). (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (4) Remove the front side trim (RH). (See 09-17-17 FRONT SIDE TRIM REMOVAL/INSTALLATION.)

2. Remove in the order indicated in the table.

1	Combined sensor connector
2	Bracket
3	Combined sensor



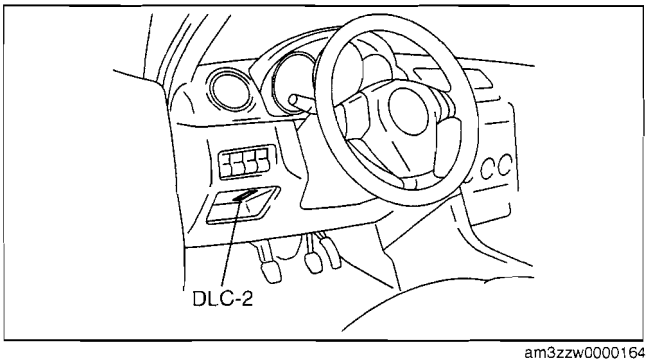
am3zzw0000264

3. Install in the reverse order of removal.
4. After installation, perform the combined sensor initialization procedure. (See 04-15-12 COMBINED SENSOR INITIALIZATION PROCEDURE.)

COMBINED SENSOR INSPECTION

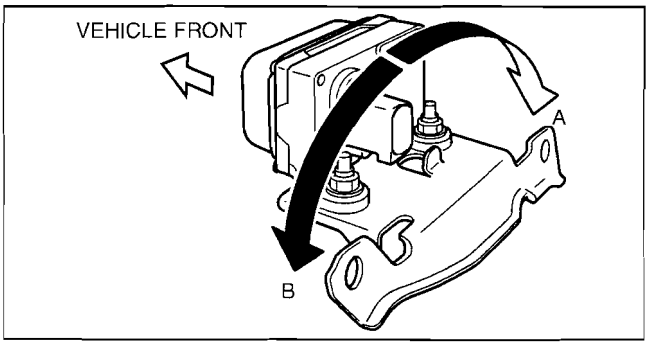
id041500801300

1. Turn the ignition switch off.
2. Connect the M-MDS to the DLC-2.
3. Select the following PIDs and inspect the lateral acceleration and yaw rate. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].)
   — LAT_ACCL (lateral acceleration)
   — YAW_RATE (yaw rate)
   (1) Lateral acceleration inspection



am3zzw0000164

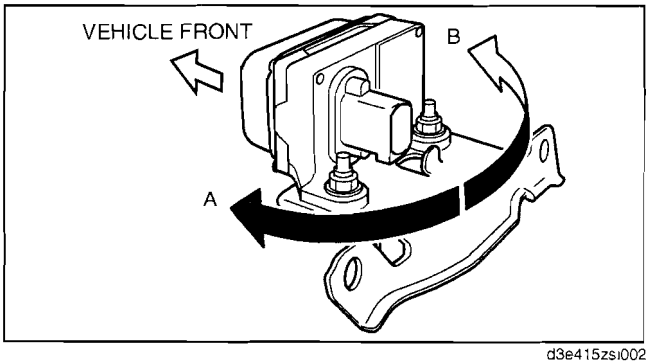
1) Verify the LAT_ACCL change when the combined sensor is tilted to the left and right.
- If there is any malfunction, replace the combined sensor.(See 04-15-10 COMBINED SENSOR REMOVAL/ INSTALLATION.)



am3zzw0000164

Standard
When the sensor is tilted to the right (A):
LAT_ACCL changes positively.
When the sensor is tilted to the left (B):
LAT_ACCL changes negatively.

(2) Yaw rate inspection
1) Verify the YAW_RATE change when the combined sensor is rotated to the left and right.
- If there is any malfunction, replace the combined sensor. (See 04-15-10 COMBINED SENSOR REMOVAL/ INSTALLATION.)



d3e415zsi002

Standard
When the sensor is rotated to the right (A):
YAW_RATE changes negatively.
When the sensor is rotated to the left (B):
YAW_RATE changes positively.

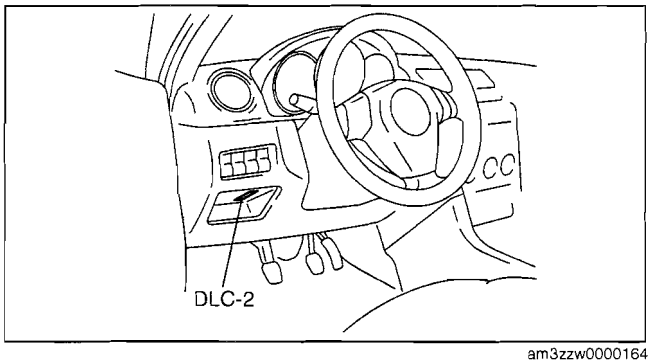
COMBINED SENSOR INITIALIZATION PROCEDURE

id041500801400

Warning

- **If the initialization procedure is not completed, the DSC will not operate properly and it might cause an unexpected accident. Therefore, after replacing or removing the combined sensor or DSC HU/CM, make sure to perform the initialization procedure to insure proper DSC operation.**

1. Inspect the wheel alignment and the tire pressure.
   - If there is any malfunction, adjust the applicable part.
2. Position the vehicle on level ground.
3. Turn the ignition switch off.
4. Connect the M-MDS to the DLC-2.
5. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select "Chassis".
     2. Select "ABS/DSC".
     3. Select "Sensor Initialization".
   - When using the PDS (Pocket PC)
     1. Select "Module Tests".
     2. Select "ABS".
     3. Select "DataLogger".
     4. Select "LATACCEL".
6. Perform the initialization procedure according to the directions on the screen.
7. Drive the vehicle.
8. After **5 min or more** of driving, verify that the DSC system is normal.



am3zzw0000164

BRAKE FLUID PRESSURE SENSOR INSPECTION

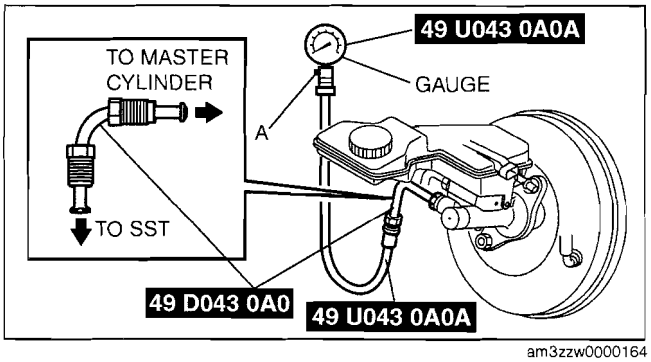
id041500801500

1. Turn the ignition switch off.
2. Install the **SSTs** to the master cylinder as shown in the figure.

Note

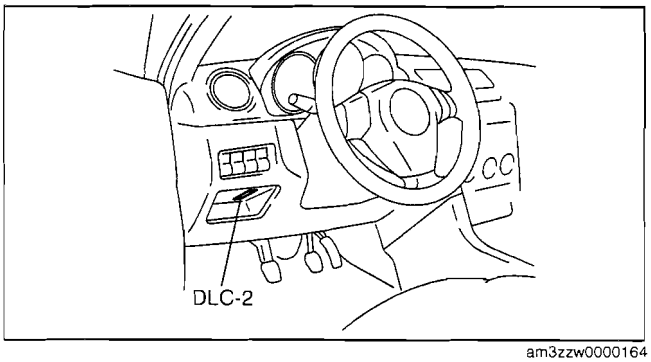
- When installing the **SST** (49 D043 0A0) to the master cylinder, use a commercially available flare nut wrench (flare nut across flat **12 mm {0.47 in}**).

3. Bleed the brake line and the **SSTs** of air. (Bleed the **SSTs** of air using air bleed valve A.)



am3zzw0000164

4. Connect the M-MDS to the DLC-2.
5. Select the "MPRETDR" PID. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].)
6. Start the engine.
7. Depress the brake pedal, and verify that the fluid pressure value of the **SST** (gauge) and the value shown on the M-MDS are equal.
   - If the fluid pressure values are different, replace the DSC HU/CM. (See 04-15-6 DSC HU/CM REMOVAL/INSTALLATION.)



am3zzw0000164

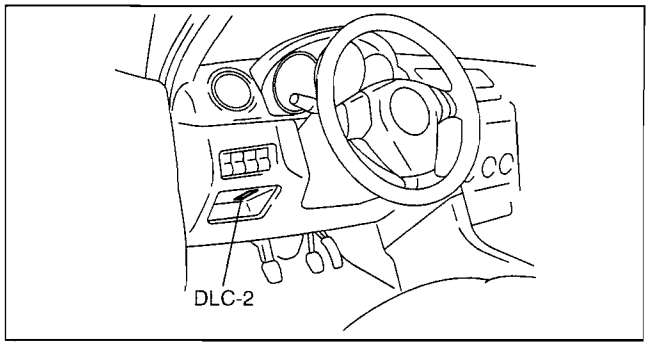
BRAKE FLUID PRESSURE SENSOR INITIALIZATION PROCEDURE

id041500802200

Warning

- **If the initialization procedure is not completed, the DSC will not operate properly and it might cause an unexpected accident. Therefore, after replacing or removing the DSC HU/CM, make sure to perform the initialization procedure to insure proper DSC operation.**

1. Turn the ignition switch off.
2. Connect the M-MDS to the DLC-2.
3. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select "Chassis".
     2. Select "ABS/DSC".
     3. Select "Sensor Initialization".
   - When using the PDS (Pocket PC)
     1. Select "Module Tests".
     2. Select "ABS".
     3. Select "DataLogger".
     4. Select "MCYL_S_CAL".
4. Perform the initialization procedure according to the directions on the screen.
5. Drive the vehicle.
6. After **5 min or more** of driving, verify that the DSC system is normal.



am3zzw0000164

STEERING ANGLE SENSOR REMOVAL/INSTALLATION

id041500801600

1. When removing or installing the steering angle sensor, refer to the clock spring removal/installation procedure. (See 08-10-14 CLOCK SPRING REMOVAL/INSTALLATION.)

STEERING ANGLE SENSOR INSPECTION

id041500801700

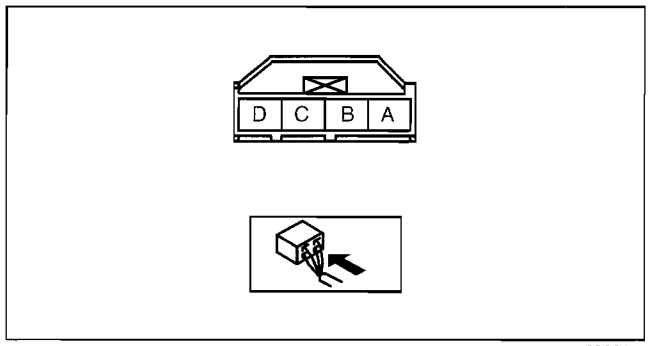
1. Remove the column cover.
2. Turn the ignition switch to the ON position and measure the voltage between steering angle sensor terminal A and ground.
   - If there is any malfunction, inspect the wiring harness between steering angle sensor terminal A and DSC HU/CM terminal AB. Repair or replace if necessary.

   Standard voltage
   B+

3. Measure the voltage between steering angle sensor terminal D and ground.
   - If there is any malfunction, inspect the wiring harness between steering angle sensor terminal D and DSC HU/CM terminal AH. Repair or replace if necessary.

   Standard voltage
   0 V

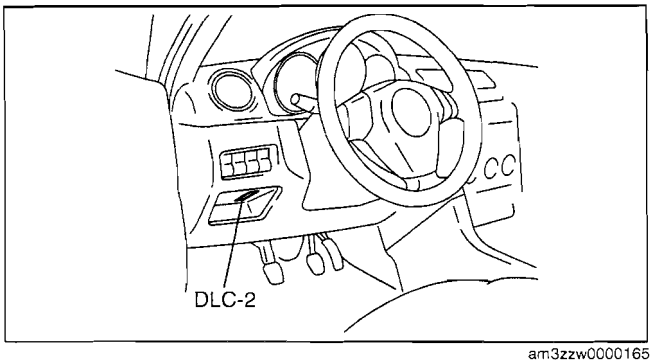
4. Turn the ignition switch off.



am3zzw0000165

5. Connect the M-MDS to the DLC-2.
6. Select the "SWA_POS" PID.
7. Verify the SWA_POS changes when the steering wheel is turned to the left and right.
   - If there is any malfunction, replace the steering angle sensor. (See 08-10-14 CLOCK SPRING REMOVAL/INSTALLATION.)

Standard
When the steering wheel is turned to the left:
SWA_POS changes positively.
When the steering wheel is turned to the right:
SWA_POS changes negatively.

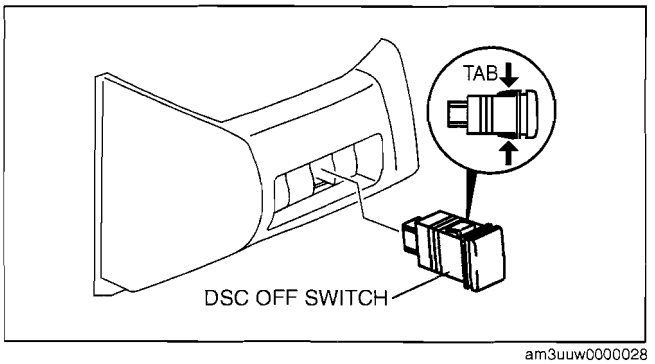


am3zzw0000165

DSC OFF SWITCH REMOVAL/INSTALLATION

id041500801900

1. Remove the lower panel. (See 09-17-7 LOWER PANEL REMOVAL/INSTALLATION.)
2. While squeezing the tabs of the DSC OFF switch, pull the DSC OFF switch outward to remove it from the lower panel.
3. Install in the reverse order of removal.

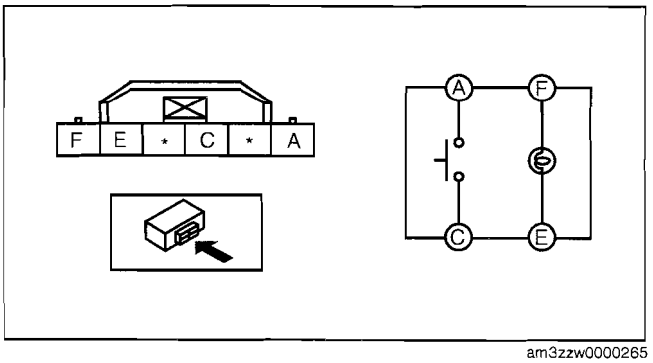


am3uuw0000028

DSC OFF SWITCH INSPECTION

id041500802000

1. Remove the DSC OFF switch. (See 04-15-14 DSC OFF SWITCH REMOVAL/INSTALLATION.)
2. Verify that the continuity is as indicated in the table.
   - If not as indicated in the table, replace the DSC OFF switch.



am3zzw0000265

04-50 TECHNICAL DATA

BRAKES TECHNICAL DATA

id045000800100

Item	Specification
Brake fluid type	SAE J1703, FMVSS 116 DOT3
Brake pedal height (reference value)	136.4 mm {5.37 in}
Brake pedal play	4.0—8.4 mm {0.16—0.33 in}
Brake pedal-to-floor clearance (Brake pedal when depressed at 147 N {15.0 kgf, 33.0 lbf})	89.8 mm {3.54 in} or more
Front disc plate runout limit	0.05 mm {0.002 in}
Minimum front disc plate thickness	23 mm {0.91 in}
Minimum front disc plate thickness after machining using a brake lathe on-vehicle	23.8 mm {0.94 in}
Minimum front disc pad thickness	2.0 mm {0.079 in} min.
Rear disc plate runout limit	0.05 mm {0.002 in}
Minimum read disc plate thickness	9 mm {0.35 in}
Minimum rear disc plate thickness after machining using a brake lathe on-vehicle	9.8 mm {0.39 in}
Minimum rear disc pat thickness	2.0 mm {0.079 in} min.
Parking brake lever stroke when pulled at 98 N {10 kgf, 22 lbf}	3—7 notches

Master cylinder fluid pressure

Vacuum amount at o kPa {0 mmHg, 0 inHg}	
Pedal force (N {kgf, lbf})	**Fluid pressure (kPa {kgf/cm2, psi})**
200 N {20.4kgf, 44.9lbt}	500 kPa {5.10 kgf/cm^2, 72.6 psi} or more

Master cylinder fluid pressure (except L3 WITH TC)

Vacuum amount at 66.7 kPa {500 mmHg, 19.7 inHg}	
Pedal force (N {kgf, lbf})	**Fluid pressure (kPa {kgf/cm2, psi})**
200 N {20.4kgf, 44.9lbt}	6,500 kPa {66.29 kgf/cm^2, 942.8 psi} or more

Master cylinder fluid pressure (L3 WITH TC)

Vacuum amount at 66.7 kPa {500 mmHg, 19.7 inHg}	
Pedal force (N {kgf, lbf})	**Fluid pressure (kPa {kgf/cm2, psi})**
200 N {20.4kgf, 44.9lbt}	7,000 kPa {71.39 kgf/cm^2, 1,016 psi} or more

Proportioning valve fluid pressure

Front brake fluid pressure (kPa {kgf/cm^2, psi})	Rear brake fluid pressure (kPa {kgf/cm^2, psi})
5,000 {50.99, 725.2}	3,500—3,700 {35.70—37.72, 507.7—536.6}
10,000 {101.97, 1450.4}	4,950—5,250 {50.48—53.53, 718.0—761.4}

FOREWORD[FN4A-EL]

id0502a1800200

- When the customer reports a vehicle malfunction, inspect the malfunction indicator lamp (MIL), AT warning light indication, and PCM memory for diagnostic trouble code (DTC), then diagnose the malfunction according to the following flowchart.
  — If a DTC exists, diagnose the applicable DTC. (See 05-02A-11 DTC TABLE[FN4A-EL].)
  — If no DTC exists, the MIL does not illuminate, and AT warning light does not illuminate. Diagnose the applicable symptom troubleshooting. (See 05-03A-7 SYMPTOM TROUBLESHOOTING ITEM TABLE[FN4A-EL].)

id0502a1800300

DTC Reading Procedure

(See 01-02A-14 ON-BOARD DIAGNOSTIC TEST[LF, L3].)

AFTER REPAIR PROCEDURE[FN4A-EL]

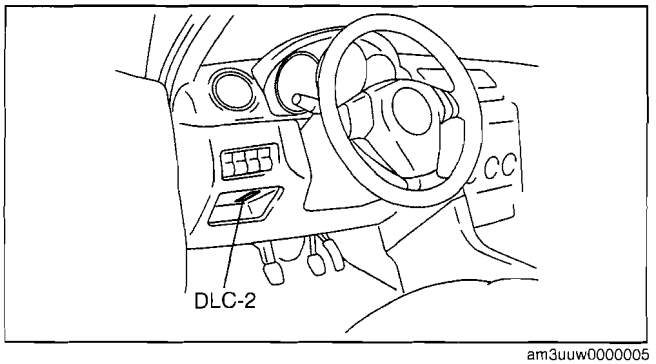
id0502a1800400

Caution

- **After repairing a malfunction, perform the following procedure to verify that the malfunction has been corrected.**
- **When performing this procedure, be sure to drive the vehicle at lawful speed and pay attention to the other vehicles.**

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.

- When using the IDS (laptop PC)
  1. Select the "Toolbox" tab.
  2. Select "SelfTest".
  3. Select "Modules".
  4. Select "PCM".
  5. Select "Retrieve CMDTCs".
- When using the PDS (Pocket PC)
  1. Select "Module Tests".
  2. Select "PCM".
  3. Select "SelfTest".
  4. Select "Retrieve CMDTCs".



am3uuw0000005

3. Verify the DTC according to the directions on the M-MDS screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Perform the following DTC inspections to ensure that the DTCs have been resolved:

DTC No.	inspection
P0706, P0707, P0708	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle in D range at **20 km/h {12 mph} or more** for **100 s or more**. iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle in D range at **20 km/h {12 mph} or more** for **100 s or more**. vii. Go to Step 6.
P0711	i. Start the engine then wait **180 s or more**. ii. Warm up the engine and ATX. iii. Drive the vehicle in D range, at **25 km/h {16 mph} or more** for **90 s or more**. iv. Drive the vehicle in D range, at **60 km/h {37 mph} or more** for **60 s or more**. v. Turn the ignition switch to the LOCK position. vi. Start the engine. vii. Drive the vehicle in D range, at **25 km/h {16 mph} or more** for **90 s or more**. viii. Drive the vehicle in D range, at **60 km/h {37 mph} or more** for **60 s or more**. ix. Go to Step 6.
P0712, P0713	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle in D range, at **20 km/h {12 mph} or more** for **150 s or more**. iv. Go to Step 6.
P0715	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle in D range, at **41 km/h {25 mph} or more** for **0.7 s or more**. iv. Go to Step 6.
P0720	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions for **4.5 s or more**. • Turbine speed (TSS PID): **1,500 rpm or more** • Selector lever position: D range, 1GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions for **4.5 s or more**. • Turbine speed (TSS PID): **1,500 rpm or more** • Selector lever position: D range, 1GR vii. Go to Step 6.
P0731	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D or M range, 1GR • Accelerator opening angle (APP PID): **3.07% or more** iv. Go to Step 6.
P0732	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions 3 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D or M range, 2GR iv. Go to Step 6.
P0733	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions. • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D or M range, 3GR iv. Go to Step 6.
P0734	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions. • Vehicle speed (VSS PID): **36 km/h {23 mph} or more** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D or M range, 4GR iv. Go to Step 6.

DTC No.	inspection
P0741	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions for **5 s or more.** • Vehicle speed (VSS PID): **60—100 km/h {38—62 mph}** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 4GR iv. Go to Step 6.
P0742	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions. • Vehicle speed (VSS PID): **less than 70 km/h {43 mph}** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 4GR • Accelerator conditions — Accelerator opening angle (APP PID) is **6.25% or more** and **5 s or more** have passed. — Accelerator opening angle (APP PID) is **within 3.13—6.25%** and **3 s or more** have passed. — Accelerator opening angle is at closed throttle position and **5 s or more** have passed. iv. Go to Step 6.
P0745	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle in D range. iv. Go to Step 6.
P0751	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions for **15 s or more.** • Vehicle speed (VSS PID): **46 km/h {29 mph} or more** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 4GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions for **15 s or more.** • Vehicle speed (VSS PID): **46 km/h {29 mph} or more** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 4GR vii. Go to Step 6.
P0752	i. Start the engine. ii. Warm up the engine and ATX. iii. Selector lever position: D range iv. Depress the brake pedal. v. Turn the ignition switch to the LOCK position. vi. Start the engine. vii. Selector lever position: D range viii. Depress the brake pedal. ix. Go to Step 6.
P0753, P0758, P0763, P0768, P0773, P0883, P1783	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle in D range and make sure that the gears shift smoothly from 1GR to 4GR and TCC is operated. iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle in D range and make sure that the gears shift smoothly from 1GR to 4GR and TCC is operated. vii. Go to Step 6.

DTC No.	inspection
P0756	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Accelerator opening angle (APP PID): **3.07% or more** • Differential gear case (output) revolution speed (OSS PID): **35 rpm or more** • Selector lever position: D range, 1GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Accelerator opening angle (APP PID): **3.07% or more** • Differential gear case (output) revolution speed (OSS PID): **35 rpm or more** • Selector lever position: D range, 1GR vii. Go to Step 6.
P0757, P0766	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions. • Vehicle speed (VSS PID): **36 km/h {22 mph} or more** • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle at closed throttle position • Differential gear case (output) revolution speed (OSS PID): **35 rpm or more** • Selector lever position: D range, 2GR and 4GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions. • Vehicle speed (VSS PID): **36 km/h {22 mph} or more** • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle at closed throttle position • Differential gear case (output) revolution speed (OSS PID): **35 rpm or more** • Selector lever position: D range, 2GR and 4GR vii. Go to Step 6.
P0761	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Accelerator opening angle (APP PID): **3.07% or more** • Differential gear case (output) revolution speed (OSS PID): **35 rpm or more** • Selector lever position: D range, 1GR and 2GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Accelerator opening angle (APP PID): **3.07% or more** • Differential gear case (output) revolution speed (OSS PID): **35 rpm or more** • Selector lever position: D range, 1GR and 2GR vii. Go to Step 6.
P0762	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions. • Vehicle speed (VSS PID): **23 km/h {14.3 mph} or more** • Turbine speed (TSS PID): **225—4,987 rpm** • Differential gear case (output) revolution speed (OSS PID): **35 rpm or more** • Selector lever position: D range, 3GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions. • Vehicle speed (VSS PID): **23 km/h {14.3 mph} or more** • Turbine speed (TSS PID): **225—4,987 rpm** • Differential gear case (output) revolution speed (OSS PID): **35 rpm or more** • Selector lever position: D range, 3GR vii. Go to Step 6.

DTC No.	inspection
P0767	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions for **5 s or more.** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 3GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions for **5 s or more**. • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 3GR vii. Go to Step 6.
P0771	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions for **5 s or more**. • Vehicle speed (VSS PID): **60—100 km/h {38—62 mph}** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 4GR and TCC is operated iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions for **5 s or more**. • Vehicle speed (VSS PID): **60—100 km/h {38—62 mph}** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 4GR and TCC is operated vii. Go to Step 6.
P0772	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions. • Vehicle speed (VSS PID): **less than 70 km/h {43 mph}** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 4GR • Accelerator conditions — Accelerator opening angle (APP PID) is **6.25% or more** and **5 s or more** have passed. — Accelerator opening angle (APP PID) is **within 3.13—6.25%** and **3 s or more** have passed. — Accelerator opening angle is at closed throttle position and **5 s or more** have passed. iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions. • Vehicle speed (VSS PID): less than **70 km/h {43 mph}** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 4GR • Accelerator conditions — Accelerator opening angle (APP PID) is **6.25% or more** and **5 s or more** have passed. — Accelerator opening angle (APP PID) is **within 3.13—6.25%** and **3 s or more** have passed. — Accelerator opening angle is at closed throttle position and **5 s or more** have passed. vii. Go to Step 6.
P0894	i. Start the engine. ii. Warm up the engine and ATX. iii. Depress the brake pedal. iv. Throttle opening angle at closed throttle position. v. Shift the selector lever from the N position to the D range and hold for **3 s or more**. vi. Go to Step 7.

6. Gradually slow down and stop the vehicle.
7. Make sure that the repaired DTC does not recur.

DTC TABLE[FN4A-EL]

DTC P0706[FN4A-EL]

id0502a1800900

DTC P0706	Transaxle range (TR) switch range/performance
DETECTION CONDITION	• When all conditions below are satisfied and **100 s or more** have passed. — Engine speed **530 rpm or more** — Vehicle speed **20 km/h {12 mph} or more** — Voltage at PCM terminal 1AH*1/1S*2 **0.5 V or more** — P, R, N, or D range/position not detected **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • The PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• TR switch malfunction • TR switch misadjustment • PCM malfunction

*1 : California emission regulation applicable mode
*2 : Except for California emission regulation applicable mode

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TR SWITCH** • Turn the ignition switch to the LOCK position. • Disconnect the TR switch connector. • Inspect for resistance between TR switch terminals B and C (part-side). • Is the resistance normal? (See 05-17A-10 TRANSAXLE RANGE (TR) SWITCH INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Adjust or replace the TR switch, then go to the next step. (See 05-17A-16 TRANSAXLE RANGE (TR) SWITCH ADJUSTMENT[FN4A-EL].) (See 05-17A-12 TRANSAXLE RANGE (TR) SWITCH REMOVAL/INSTALLATION[FN4A-EL].)
4	**VERIFY TROUBLESHOOTING OF DTC P0706 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle in each range (D and R) for **100 s or more** under the following conditions: — Engine speed (RPM PID): **530 rpm or more** — Vehicle speed (VSS PID): **20 km/h {12 mph} or more** • Is the PENDING CODE present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0707[FN4A-EL]

id0502a1801000

DTC P0707	Transaxle range (TR) switch circuit low input
DETECTION CONDITION	• When all conditions below are satisfied and **100 s or more** have passed. — Vehicle speed **20 km/h {12 mph} or more** — Engine speed **530 rpm or more** — Voltage at PCM terminal 1AH*1/1S*2 **0.5 V or less** **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• TR switch malfunction • Short to ground in wiring harness between TR switch terminal C and PCM terminal 1AH*1/1S*2 • TR switch signal and TR switch ground circuits shorted each other • PCM malfunction

*2 : Except for California emission regulation applicable mode

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TR SWITCH CONNECTOR** • Turn the ignition switch to the LOCK position. • Disconnect the TR switch connector. • Inspect for poor connection at TR switch terminals B and C (part-side) (such as damaged/pulled-out pins, corrosion) • Are TR switch terminals normal?	Yes	Go to the next step.
		No	Repair terminals or replace the TR switch, then go to Step 8. (See 05-17A-12 TRANSAXLE RANGE (TR) SWITCH REMOVAL/INSTALLATION[FN4A-EL].)
4	**INSPECT TR SWITCH** • Turn the ignition switch to the LOCK position. • Disconnect the TR switch connector. • Inspect for resistance between TR switch terminals B and C (part-side). • Is the resistance normal? (See 05-17A-10 TRANSAXLE RANGE (TR) SWITCH INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Replace the TR switch, then go to Step 8. (See 05-17A-12 TRANSAXLE RANGE (TR) SWITCH REMOVAL/INSTALLATION[FN4A-EL].)
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection at terminals 1AH*1/1S*2 and 1AS*1/1AA*2 (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
6	**INSPECT TR SWITCH SIGNAL CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between TR switch terminal C (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for short to ground, then go to Step 8.
		No	Go to the next step.
7	**INSPECT TR SWITCH CIRCUIT FOR SHORT CIRCUIT** • Inspect for continuity between TR switch terminals B and C (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for short circuit, then go to the next step.
		No	Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0707 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle for **100 s or more** under the following conditions: — Engine speed (RPM PID): **530 rpm or more** — Vehicle speed (VSS PID): **20 km/h {12 mph} or more** • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0708[FN4A-EL]

id0502a1801100

DTC P0708	Transaxle range (TR) switch circuit high input
DETECTION CONDITION	• When all conditions below are satisfied and **100 s or more** have passed. — Vehicle speed **20 km/h {12 mph} or more** — Engine speed **530 rpm or more** — Voltage at PCM terminal 1AH*1/1S*2 **4.79 V or more** **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• TR switch malfunction • Open circuit in wiring harness between TR switch terminal C and PCM terminal 1AH*1/1S*2 • Short to power supply in wiring harness between TR switch terminal C and PCM terminal 1AH*1/1S*2 • Open circuit in wiring harness between TR switch terminal B and PCM terminal 1AS*1/1AA*2 • Poor connection of TR switch or PCM connectors • PCM malfunction

*1 : California emission regulation applicable mode
*2 : Except for California emission regulation applicable mode

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.

STEP	INSPECTION		ACTION
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TR SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the TR switch connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are TR switch terminals normal?	Yes	Go to the next step.
		No	Repair terminals or replace the TR switch, then go to Step 9. (See 05-17A-12 TRANSAXLE RANGE (TR) SWITCH REMOVAL/INSTALLATION[FN4A-EL].)
4	**INSPECT TR SWITCH** • Inspect for resistance between TR switch terminals B and C (part-side). • Is the resistance normal? (See 05-17A-10 TRANSAXLE RANGE (TR) SWITCH INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Replace the TR switch, then go to Step 9. (See 05-17A-12 TRANSAXLE RANGE (TR) SWITCH REMOVAL/INSTALLATION[FN4A-EL].)
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection at terminals 1AH*1/ 1S*2 and 1AS*1/1AA*2 (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to step 9.
		No	Go to the next step.
6	**INSPECT TR SWITCH SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (engine off). • Inspect the voltage between TR switch terminal C and (wiring harness-side) body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for short to power supply, then go to Step 9.
		No	Go to the next step.
7	**INSPECT TR SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between TR switch terminal C (wiring harness-side) and PCM terminal 1AH*1/1S*2. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open circuit, then go to step 9.
8	**INSPECT TR SWITCH GROUND CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between TR switch terminal B (wiring harness-side) and PCM terminal 1AS*1/1AA*2. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0708 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle for **100 s or more** under the following conditions: — Engine speed (RPM PID) **530 rpm or more** — Vehicle speed (VSS PID) **20 km/h {12 mph} or more** • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0711[FN4A-EL]

id0502a1801200

DTC P0711	Transaxle fluid temperature (TFT) sensor circuit range/performance (stuck)
DETECTION CONDITION	• When all conditions below are satisfied. — When **180 s or more** have passed after the engine is started, vehicle is driven for **90 s or more** at vehicle speed **25 km/h {16 mph} or more**, then **60 km/h {37 mph} or more** for **60 s or more**. — D range of TR switch input — Opened accelerator position — P0712, P0713 not output — Variation in ATF voltage **less than 0.03 V** • When the detected ATF temperature is **less than 20°C {68 °F}** together with the following conditions. — Intake air temperature is **-7 °C {19.4 °F} or more** after engine starts. — Estimated ATF temperature is **more than 55° C {131 °F}** while vehicle is driving. **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • The PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • AT warning light does not illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• TFT sensor malfunction • Connector corrosion • PCM malfunction

*1 : California emission regulation applicable mode
*2 : Except for California emission regulation applicable mode

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TFT SENSOR VOLTAGE** • Turn the ignition switch to the ON position (engine off). • Measure the voltage at PCM terminal 2AC*1/1U*2. • Record terminal 2AC*1/1U*2 voltage. • Start the engine. • Drive the vehicle at **60 km/h {37 mph} or more** for **330 s or more**. • Record terminal 2AC*1/1U*2 voltage again. • Is the variation in voltage **0.03 V or more**?	Yes	Go to Step 5.
		No	Go to the next step.
4	**INSPECT TERMINAL CONDITION** • Turn the ignition switch to the LOCK position. • Disconnect the ATX connector. • Inspect terminals for corrosion. • Are terminals normal?	Yes	Go to the next step.
		No	Repair or replace the terminals, then go to the next step.

STEP	INSPECTION		ACTION
5	**VERIFY TROUBLESHOOTING OF DTC P0711 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Decrease ATF temperature to **20 °C {68 °F} or less**. • Start the engine and wait for **180 s or more**. • Drive the vehicle at a vehicle speed **25 km/h {16 mph} or more** for **90 s or more**. • Drive the vehicle at a vehicle speed **60 km/h {37 mph} or more** for **60 s or more**. • Is the PENDING CODE present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0712[FN4A-EL]

id0502a1801300

DTC P0712	Transaxle fluid temperature (TFT) sensor circuit malfunction (short to ground)
DETECTION CONDITION	• If the PCM detects either of the following conditions for **150 s or more**, the PCM determines that the TFT sensor circuit has a malfunction. — TFT sensor voltage **0.06 V or less** and vehicle speed **20 km/h {12 mph} or more** **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction conditions during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• TFT sensor malfunction • Short to ground in wiring harness between TFT sensor and ATX terminal E • Short to ground in wiring harness between TFT sensor and ATX terminal H • Short to ground in wiring harness between ATX terminal E and PCM terminal 2AC*1/1U*2 • Damaged connectors between TFT sensor and PCM • PCM malfunction

*2 : Except for California emission regulation applicable mode

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY CURRENT INPUT SIGNAL STATUS** • Turn the ignition switch to the ON position (engine off). • Inspect the voltage at PCM terminal 2AC*1/1U*2. • Is the voltage **0.06 V or more**?	Yes	Go to the intermittent concern troubleshooting procedure. (See 01-03A-66 INTERMITTENT CONCERN TROUBLESHOOTING[LF, L3].)
		No	Go to the next step.
4	**INSPECT TERMINAL CONDITION** • Turn the ignition switch to the LOCK position. • Disconnect the ATX connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Are the terminals bent?	Yes	Repair or replace the terminals, then go to Step 8. • If the terminals cannot be repaired, replace the wiring harness, then go to Step 8.
		No	Go to the next step.
5	**INSPECT TFT SENSOR CIRCUIT** • Turn the ignition switch to the ON position (engine off). • Verify that the voltage changes to **4.67 V or more** at PCM terminal 2AC*1/1U*2 when ATX connector is disconnected. • Does the voltage change?	Yes	Go to the next step.
		No	Go to Step 7.
6	**INSPECT TFT SENSOR CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between ATX terminals (transaxle case side) and body ground. — E and body ground — H and body ground • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 8.
		No	Replace the TFT sensor, then go to Step 8. (See 05-17A-20 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR REMOVAL/INSTALLATION[FN4A-EL].)
7	**INSPECT ATX CONNECTOR CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between ATX terminal E (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to the next step.
		No	Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0712 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle under the following condition for **150 s or more**. — Vehicle speed (VSS PID) **20 km/h {12 mph} or more.** • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
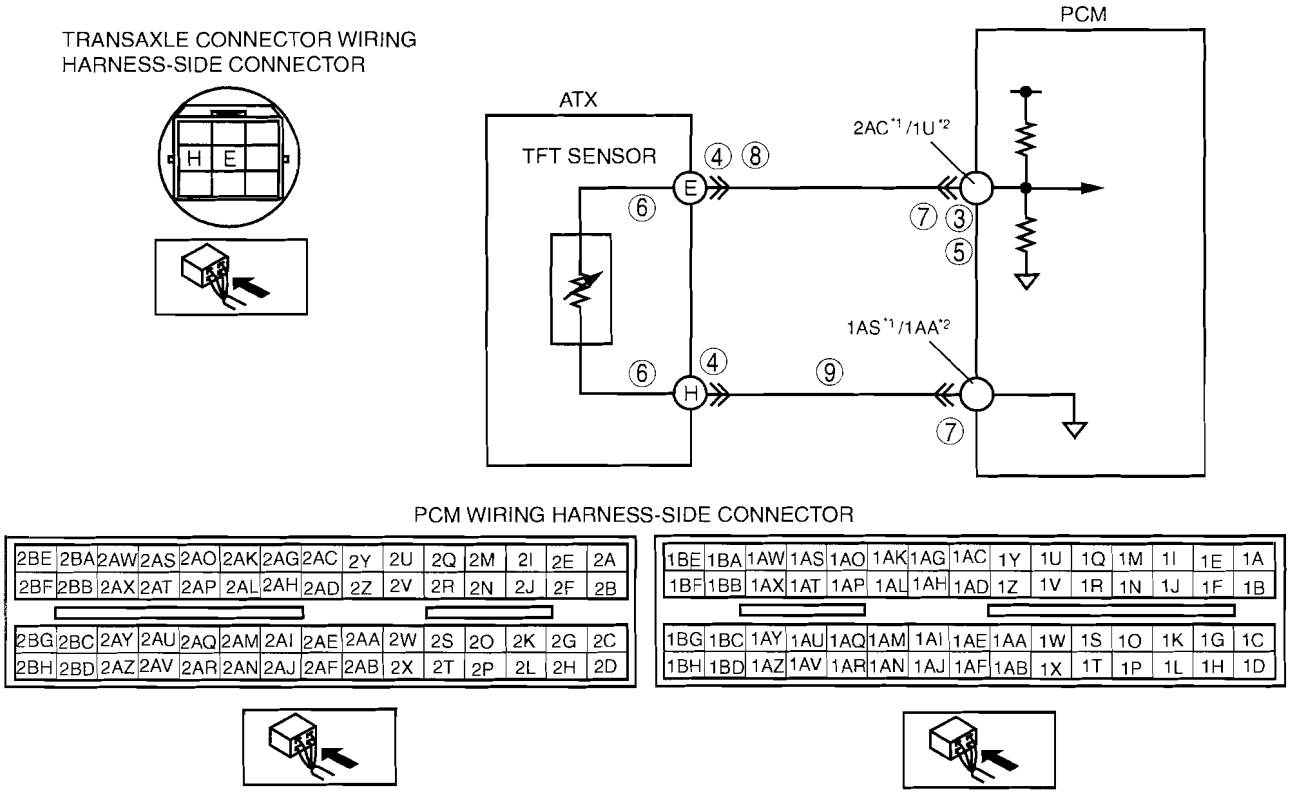
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0713[FN4A-EL]

id0502a1801400

DTC P0713	Transaxle fluid temperature (TFT) sensor circuit malfunction (open circuit)
DETECTION CONDITION	• If the PCM detects the following condition for **150 s or more**, the PCM determines that the TFT sensor circuit has a malfunction. — TFT sensor voltage **4.67 V or more** and vehicle speed **20 km/h {12 mph} or more** **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction conditions during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• TFT sensor malfunction • Open circuit in wiring harness between TFT sensor and ATX terminal E • Open circuit in wiring harness between TFT sensor and ATX terminal H • Open circuit in wiring harness between ATX terminal E and PCM terminal 2AC*1/1U*2 • Open circuit in wiring harness between ATX terminal H and PCM terminal 1AS*1/1AA*2 • Damaged connectors between TFT sensor and PCM • PCM malfunction



*1 : California emission regulation applicable mode
*2 : Except for California emission regulation applicable mode

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**VERIFY CURRENT INPUT SIGNAL STATUS** • Turn the ignition switch to the ON position (engine off). • Measure the voltage at PCM terminal 2AC*1/ 1U*2. • Is the voltage **below 4.67 V**?	Yes	Go to the intermittent concern troubleshooting procedure. (See 01-03A-66 INTERMITTENT CONCERN TROUBLESHOOTING[LF, L3].)
		No	Go to the next step.
4	**INSPECT ATX CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Inspect ATX connector connection. • Disconnect the ATX connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 10.
5	**INSPECT TFT SENSOR CIRCUIT** • Turn the ignition switch to the ON position (engine off). • Measure the voltage at PCM terminal 2AC*1/ 1U*2 when connect between ATX terminals E and H (wiring harness-side) using jumper wire. • Verify that voltage changes to **0.06 V or less**. • Does the voltage change?	Yes	Go to the next step.
		No	Go to Step 7.
6	**INSPECT TFT SENSOR CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between ATX terminals (transaxle case side) E and H. • Is there continuity?	Yes	Replace the TFT sensor, then go to Step 10. (See 05-17A-20 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR REMOVAL/INSTALLATION[FN4A-EL].)
		No	Repair or replace the wiring harness, then go to Step 10.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 10.
8	**INSPECT WIRING HARNESS FOR OPEN CIRCUIT** • Disconnect the ATX connector. • Connect the PCM connector. • Turn the ignition switch to the ON position (engine off). • Inspect the voltage at ATX terminal E (vehicle wiring harness-side). • Is the voltage **5 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 10.
9	**INSPECT ATX CONNECTOR CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch to the LOCK position. • Inspect for continuity between ATX terminal H (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0713 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle under the following condition for **150 s or more**. — Vehicle speed (VSS PID) **20 km/h {12 mph} or more**. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.

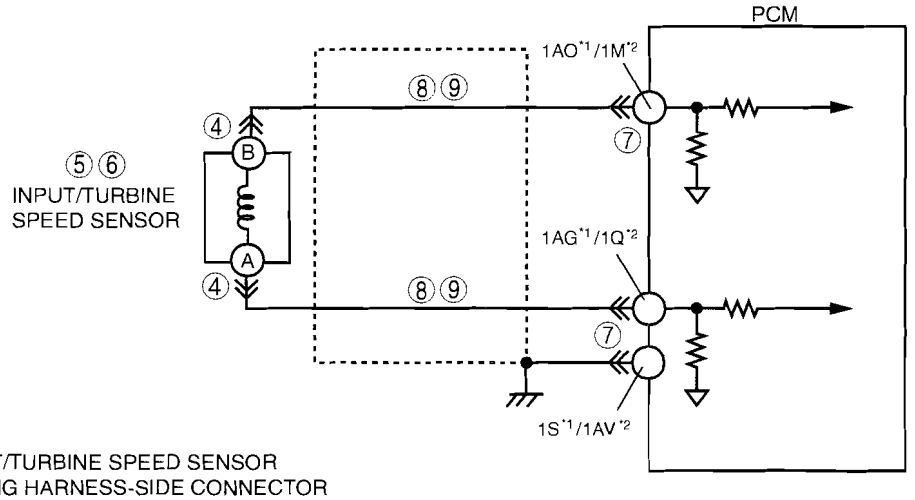
STEP	INSPECTION		ACTION
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0715[FN4A-EL]

id0502a1806100

DTC P0715	Input/turbine speed sensor circuit malfunction
DETECTION CONDITION	• When all conditions below are satisfied and **0.7 s or more** have passed. — D range of TR switch input — Driving vehicle at vehicle speed of **41 km/h {25 mph} or more** — Input/turbine speed sensor signal not input **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction conditions during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Input/turbine speed sensor malfunction • Short to ground in wiring harness between input/turbine speed sensor terminal A and PCM terminal 1AG*1/1Q*2 • Short to ground in wiring harness between input/turbine speed sensor terminal B and PCM terminal 1AO*1/1M*2 • Open circuit in wiring harness between input/turbine speed sensor terminal A and PCM terminal 1AG*1/1Q*2 • Open circuit in wiring harness between input/turbine speed sensor terminal B and PCM terminal 1AO*1/1M*2 • Damaged connectors between input/turbine speed sensor and PCM • PCM malfunction



INPUT/TURBINE SPEED SENSOR
WIRING HARNESS-SIDE CONNECTOR

*1 : California emission regulation applicable mode
*2 : Except for California emission regulation applicable mode

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY CURRENT INPUT SIGNAL STATUS** • Turn the ignition switch to the LOCK position. • Start the engine. • Measure the frequency of input/turbine speed sensor using a oscilloscope. — IG ON: **0 Hz** — Idle: **Within 320—374 Hz** (P, N position) • Are frequencies of input/turbine speed sensor within specifications?	Yes	Go to the intermittent concern troubleshooting procedure. (See 01-03A-66 INTERMITTENT CONCERN TROUBLESHOOTING[LF, L3].)
		No	Go to the next step.
4	**INSPECT INPUT/TURBINE SPEED SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the input/turbine speed sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 10.
5	**INSPECT INPUT/TURBINE SPEED SENSOR RESISTANCE** • Measure the resistance between the input/ turbine speed sensor terminals (part-side). • Is the resistance **within 250—600 ohms** between input/turbine speed sensor terminals (part-side)? (See 05-17A-20 INPUT/TURBINE SPEED SENSOR INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Replace the input/turbine speed sensor, then go to Step 10. (See 05-17A-21 INPUT/TURBINE SPEED SENSOR REMOVAL/INSTALLATION[FN4A-EL].)
6	**INSPECT INPUT/TURBINE SPEED SENSOR** • Remove the input/turbine speed sensor. • Is there iron powder stuck on input/turbine speed sensor? (See 05-17A-21 INPUT/TURBINE SPEED SENSOR REMOVAL/INSTALLATION[FN4A-EL].)	Yes	Clean the input/turbine speed sensor, then go to Step 10.
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 10.
8	**INSPECT INPUT/TURBINE SPEED SENSOR CIRCUIT FOR OPEN CIRCUIT** • Inspect the following input/turbine speed sensor terminals (wiring harness-side) and PCM terminals (wiring harness-side): — A and 1AG[*1]/1Q[*2] — B and 1AO[*1]/1M[*2] • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 10.
9	**INSPECT INPUT/TURBINE SPEED SENSOR CIRCUIT FOR SHORT TO GROUND** • Inspect input/turbine speed sensor terminal (wiring harness-side) and body ground. — A and body ground — B and body ground • Is there continuity?	Yes	Repair or replace the wiring harness, then go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
10	**VERIFY TROUBLESHOOTING OF DTC P0715 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle a vehicle speed **41 km/h {25 mph} or more** for **0.7 s or more**. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0720[FN4A-EL]

id0502a1809800

DTC P0720	Vehicle speed sensor (VSS) circuit malfunction
DETECTION CONDITION	• Vehicle speed signal is not input after the following conditions are met and **4.5 s or more** have passed: — D range switch ON — Engine coolant temperature **60 °C {140 °F} or more** — Turbine speed **1,500 rpm or more** **Diagnostic support note:** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • AT warning light illuminates. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• VSS malfunction • Open circuit between VSS terminal B and PCM terminal 1AW*1/1J*2 • Short to ground between VSS terminal B and PCM terminal 1AW*1/1J*2 • Open circuit between VSS terminal A and main relay • Open circuit between VSS terminal C and body ground • Damaged connectors between VSS and PCM • PCM malfunction

*2 : Except for California emission regulation applicable mode

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair Information available?	Yes	Perform repair or diagnosis according to the available repair information. • If vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT VSS CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the VSS connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the pin or connector, then go to Step 11.
4	**INSPECT VSS POWER CIRCUIT FOR OPEN CIRCUIT** • Verify that VSS connector is disconnected. • Turn ignition switch to ON (engine off). • Inspect the voltage between VSS terminal A (harness-side) and ground. • Is voltage reading **B+**?	Yes	Go to the next step.
		No	Repair or replace the harness, then go to Step 11.
5	**INSPECT VSS GROUND CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch to the LOCK position. • Verify that VSS connector is disconnected. • Inspect for continuity between VSS terminal C (harness-side) and ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the harness, then go to Step 11.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the pin or connector, then go to Step 11.
7	**INSPECT VEHICLE SPEED SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Disconnect the PCM connector and VSS connector. • Inspect for continuity between VSS terminal B and PCM terminal 1AW*1/1J*2. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the harness, then go to Step 11.
8	**INSPECT VEHICLE SPEED SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that VSS connector and PCM connector are disconnected. • Inspect for continuity between PCM harness side connector and body ground. • Is there continuity?	Yes	Repair or replace the harness, then go to Step 11.
		No	Go to the next step.
9	**INSPECT VEHICLE SPEEDOMETER SENSOR** • Inspect VSS. (See 05-17A-21 VEHICLE SPEED SENSOR (VSS) INSPECTION[FN4A-EL].) • Is VSS normal?	Yes	Go to the next step.
		No	Repair or replace the VSS, then go to Step 11.
10	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the pin or connector, then go to Step 11.

STEP	INSPECTION		ACTION
11	**VERIFY TROUBLESHOOTING OF DTC P0720 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from memory using M-MDS. • Warm up engine. • Drive vehicle under following conditions for **4.5 s or more** while monitoring PIDs. — Engine coolant temp: **60 °C {140 °F} or more** — Drive in M range — Frequency of input/turbine speed sensor: **800 Hz or more** • Is the PENDING CODE present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0731[FN4A-EL]

id0502a1801900

DTC P0731	Gear 1 incorrect (incorrect gear ratio detected)
DETECTION CONDITION	• The PCM monitors the revolution ratio of the forward clutch drum revolution to differential gear case revolution when the following monitoring conditions are met. If the revolution ratio is **2.157 or less**, the PCM determines that there is a malfunction. **Monitoring condition:** — ATF temperature **20 °C {68 °F} or more** — Driving in 1GR in D or M range — Engine running — Turbine speed **within 225—4,987 rpm** — Accelerator opening angle **3.07% or more** — Differential gear case (output) revolution speed **35 rpm or more**. — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate. • The AT warning light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is not available. • A PENDING CODE is not available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid A stuck • Pressure control solenoid stuck • Line pressure low • One-way clutch slipping • Forward clutch slipping • Control valve stuck • Oil pump malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information.
		No	Go to the next step.
2	**INSPECT ATF CONDITION** • Inspect the ATF condition. (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Replace the transaxle, then go to Step 8.
3	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 8.
4	**INSPECT SHIFT SOLENOID A** • Perform operation inspection. (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].) • Verify the click sound of shift solenoid A when applying B+ to transaxle terminal A. • Was a click heard from solenoid?	Yes	Go to the next step.
		No	Replace the solenoid that you could not hear a click sound, then go to Step 8. (See 05-17A-27 SOLENOID VALVE REMOVAL/ INSTALLATION[FN4A-EL].)

STEP	INSPECTION		ACTION
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	All ranges: Replace the oil pump, then go to Step 8. Any ranges: Replace the control valve body, then go to Step 8. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].)
6	**INSPECT STALL SPEED** • Measure the stall speed in D range. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) • Is the stall speed within the specification?	Yes	Go to the next step.
		No	Replace the automatic transaxle, then go to Step 8. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].)
7	**INSPECT FREQUENCY OF INPUT/TURBINE SPEED SENSOR WHEN DRIVING VEHICLE** • Turn the ignition switch to the LOCK position. • Connect the M-MDS. • Start the engine. • Measure the frequency of input/turbine speed sensor while driving vehicle under the following conditions: — Vehicle speed (VSS PID): **20 km/h {12 mph}** — Drive in the D range, 1GR — Accelerator opening angle (APP PID): **approx. 25%** • Was the frequency of the input/turbine speed sensor at **approx. 1,100 Hz**?	Yes	Go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].)
8	**VERIFY REPAIR OF DTC P0731** • Make sure to reconnect all the disconnected connectors. • Clear the DTC using the M-MDS. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions at least 4 times for **more than 1 s**: — ATF temperature: **20 °C {68 °F} or more** — Drive in the D range, 1GR — Accelerator opening angle (APP PID): **3.07% or more** — Vehicle speed (VSS PID): **4 km/h {3 mph} or more** • Are any DTCs present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0732[FN4A-EL]

id0502a1802000

DTC P0732	Gear 2 incorrect (incorrect gear ratio detected)
DETECTION CONDITION	• The PCM monitors revolution ratio of forward clutch drum revolution to differential gear case revolution when the following monitoring conditions are met. If revolution ratio is **1.249 or less** or **2.157 or more**, the PCM determines that there is a malfunction. **Monitoring condition:** — ATF temperature **20 °C {68 °F} or more** — Driving in 2 GR in D or M range — Engine running — Turbine speed **within 225—4,987 rpm** — Differential gear case (output) revolution speed **35 rpm or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate. • The AT warning light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is not available. • A PENDING CODE is not available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoids A, B or C stuck • Pressure control solenoid stuck • Line pressure low • 2-4 brake band slipping • Forward clutch slipping • Control valve stuck • Oil pump malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information.
		No	Go to the next step.
2	**INSPECT ATF CONDITION** • Inspect the ATF condition. (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Replace the transaxle, then go to Step 8.
3	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 8.
4	**INSPECTION SHIFT SOLENOID A, B AND C FOR CLICK SOUND** • Perform operation inspection. (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].) • Verify the click sound of shift solenoid A, B, and C when applying B+ to each transaxle terminal. • Was a click heard from solenoids?	Yes	Go to the next step.
		No	Replace the solenoid where you could not hear a click sound, then go to Step 8. (See 05-17A-27 SOLENOID VALVE REMOVAL/ INSTALLATION[FN4A-EL].)

STEP	INSPECTION		ACTION
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	All ranges: Replace the oil pump, then go to Step 8. Any ranges: Replace the control valve body, then go to Step 8. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].)
6	**INSPECT STALL SPEED** • Measure the stall speed in D range. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) • Is the stall speed within the specification?	Yes	Go to the next step.
		No	Replace the automatic transaxle, then go to Step 8. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].)
7	**INSPECT FREQUENCY OF INPUT/TURBINE SPEED SENSOR WHEN DRIVING VEHICLE** • Turn the ignition switch to the LOCK position. • Connect the M-MDS. • Start the engine. • Measure the frequency of input/turbine speed sensor while driving vehicle under the following conditions: — Vehicle speed (VSS PID): **40 km/h {24 mph}** — Drive in the D range, 2GR — Accelerator opening angle (APP PID): **approx. 25%** • Was the frequency of the input/turbine speed sensor at **approx. 1,156 Hz**?	Yes	Go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].)
8	**VERIFY REPAIR OF DTC P0732** • Make sure to reconnect all the disconnected connectors. • Clear the DTC using the M-MDS. • Start the engine. • Warm up the transaxle. • Drive the vehicle under the following conditions at least 4 times for **more than 1 s**: — ATF temperature: **20 °C {68 °F} or more** — Drive in the D range, 2GR — Vehicle speed (VSS PID): **3.8 km/h {2.4 mph} or more** • Are any DTCs present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0733[FN4A-EL]

id0502a1802100

DTC P0733	Gear 3 incorrect (incorrect gear ratio detected)
DETECTION CONDITION	• The PCM monitors revolution ratio of forward clutch drum revolution to differential gear case revolution when the following monitoring conditions are met. If the revolution ratio is **2.157 or more**, the PCM determines that there is a malfunction. **Monitoring condition:** — ATF temperature **20 °C {68 °F} or more** — Driving in 3 GR in D or M range — Engine running — Turbine speed **within 225—4,987 rpm** — Differential gear case (output) revolution speed **35 rpm or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773 • The PCM monitors revolution ratio of forward clutch drum revolution to differential gear case revolution when the following monitoring conditions are met. If the revolution ratio is **0.863 or less**, the PCM determines that there is a malfunction. **Monitoring condition:** — ATF temperature **20 °C {68 °F} or more** — Driving in 3 GR in D or M range — Engine running — Turbine speed **within 225—4,987 rpm** — Torque converter clutch (TCC) no operating — Differential gear case (output) revolution speed **35 rpm or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773 • The PCM monitors revolution ratio of forward clutch drum revolution to differential gear case revolution when the following monitoring conditions are met. If the revolution ratio is **within 1.345—1.644**, the PCM determines that there is a malfunction. **Monitoring condition:** — ATF temperature **20 °C {68 °F} or more** — Driving in 3 GR in D or M range — Engine running — Turbine speed **within 225—4,987 rpm** — Vehicle speed **23 km/h {14.3 mph} or more** — Torque converter clutch (TCC) no operating — Differential gear case (output) revolution speed **35 rpm or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate. • The AT warning light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is not available. • A PENDING CODE is not available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoids A or C stuck • Pressure control solenoid stuck • Line pressure low • 3-4 clutch slipping • Forward clutch slipping • Control valve stuck (Bypass, TCC or 3-4 shift valve) • Oil pump malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information.
		No	Go to the next step.

STEP	INSPECTION		ACTION
2	**INSPECT ATF CONDITION** • Inspect the ATF condition. (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Replace the transaxle, then go to Step 8.
3	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 8.
4	**INSPECTION SHIFT SOLENOID A AND C FOR CLICK SOUND** • Perform operation inspection. (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].) • Verify the click sound of shift solenoid A and C when applying B+ to each transaxle terminal. • Was a click heard from solenoids?	Yes	Go to the next step.
		No	Replace the solenoid where you could not hear a click sound, then go to Step 8. (See 05-17A-27 SOLENOID VALVE REMOVAL/INSTALLATION[FN4A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	All ranges: Replace the oil pump, then go to Step 8. Any ranges: Replace the control valve body, then go to Step 8. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].)
6	**INSPECT STALL SPEED** • Measure the stall speed in D range. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) • Is the stall speed within the specification?	Yes	Go to the next step.
		No	Replace the automatic transaxle, then go to Step 8. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].)
7	**INSPECT FREQUENCY OF INPUT/TURBINE SPEED SENSOR WHEN DRIVING VEHICLE** • Turn the ignition switch to the LOCK position. • Connect the M-MDS. • Start the engine. • Measure the frequency of input/turbine speed sensor while driving vehicle under the following conditions: — Vehicle speed (VSS PID): **60 km/h {37 mph}** — Drive in the D range, 3GR — Accelerator opening angle (APP PID): **approx. 25%** • Was the frequency of the input/turbine speed sensor at **approx. 1,200 Hz**?	Yes	Go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].)
8	**VERIFY REPAIR OF DTC P0733** • Make sure to reconnect all the disconnected connectors. • Clear the DTC using the M-MDS. • Start the engine. • Warm up the transaxle. • Drive the vehicle under the following conditions for **more than 2 s**: — ATF temperature: **20 °C {68 °F} or more** — Drive in the D range, 3GR — Vehicle speed (VSS PID): **23 km/h {14.3 mph} or more** • Are any DTCs present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0734[FN4A-EL]

id0502a1802200

DTC P0734	Gear 4 incorrect (incorrect gear ratio detected)
DETECTION CONDITION	• The PCM monitors revolution ratio of the forward clutch drum revolution to the differential gear case revolution when the following monitoring conditions are met. If the revolution ratio is **0.6 or less** or **1.249 or more**, the PCM determines that there is a malfunction. **Monitoring condition:** — ATF temperature **20 °C {68 °F} or more** — Driving in 4 GR in D or M range — Engine running — Turbine speed **within 225—4,987 rpm** — Vehicle speed **36 km/h {23 mph} or more** — Closed accelerator position — Differential gear case (output) revolution speed **35 rpm or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773 • The PCM monitors revolution ratio of the forward clutch drum revolution to the differential gear case revolution when the following monitoring conditions are met. If the revolution ratio is **within 0.91—1.09**, the PCM determines that there is a malfunction. **Monitoring condition:** — ATF temperature **20 °C {68 °F} or more** — Driving in 4 GR in D or M range — Engine running — Turbine speed **within 225—4,987 rpm** — Vehicle speed **46 km/h {29 mph} or more** — Torque converter clutch (TCC) no operating — Differential gear case (output) revolution speed **35 rpm or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate. • The AT warning light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is not available. • A PENDING CODE is not available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoids A, B or C stuck • Pressure control solenoid stuck • Line pressure low • 2-4 brake band slipping • 3-4 clutch slipping • Forward clutch slipping • Control valve stuck (Bypass or 3-4 shift valve) • Oil pump malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information.
		No	Go to the next step.
2	**INSPECT ATF CONDITION** • Inspect the ATF condition. (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Replace the transaxle, then go to Step 8.

STEP	INSPECTION		ACTION
3	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 8.
4	**INSPECT SHIFT SOLENOID A AND D FOR CLICK SOUND** • Perform operation inspection. (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].) • Verify the click sound of shift solenoids A and D when applying B+ to each transaxle terminal. **Note** • The click from solenoid D is barely audible. Remove solenoids to correctly inspect if necessary. • Was a click heard from solenoids?	Yes	Go to the next step.
		No	Replace the solenoid where you could not hear click sound, then go to Step 8. (See 05-17A-27 SOLENOID VALVE REMOVAL/INSTALLATION[FN4A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	All ranges: Replace the oil pump, then go to Step 8. Any ranges: Replace the control valve body, then go to Step 8. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].)
6	**INSPECT STALL SPEED** • Measure the stall speed in D range. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) • Is the stall speed within the specification?	Yes	Go to the next step.
		No	Replace the automatic transaxle, then go to Step 8. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].)
7	**INSPECT FREQUENCY OF INPUT/TURBINE SPEED SENSOR WHEN DRIVING VEHICLE** • Turn the ignition switch to the LOCK position. • Connect the M-MDS. • Start the engine. • Measure the frequency of input/turbine speed sensor while driving vehicle under the following conditions: — Vehicle speed (VSS PID): **80 km/h {49 mph}** — Drive in the D range, 4GR — Accelerator opening angle (APP PID): **approx. 25%** • Was the frequency of the input/turbine speed sensor at **approx. 1,200 Hz**?	Yes	Go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].)
8	**VERIFY REPAIR OF DTC P0734** • Make sure to reconnect all the disconnected connectors. • Clear the DTC using the M-MDS. • Start the engine. • Warm up the transaxle. • Drive the vehicle under the following conditions for **more than 1 s**: — ATF temperature: **20 °C {68 °F} or more** — Drive in the D range, 4GR — Accelerator opening angle (APP PID): **0%** — Vehicle speed (VSS PID): **46 km/h {29 mph} or more** • Are any DTCs present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0741[FN4A-EL]

id0502a1807900

DTC P0741	Torque converter clutch (TCC) stuck off
DETECTION CONDITION	• When all conditions below are satisfied. — ATF temperature **20 °C {68 °F} or more** — Driving in 4GR at D or M range — Engine running — Turbine speed **within 225—4,987 rpm** — Vehicle speed **within 60—100 km/h {37—62 mph}** — Torque converter clutch (TCC) operating — Shift solenoid A duty value exceeds **99%** — Difference between engine speed and turbine speed **more than 100 rpm** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate if PCM detects the above malfunction conditions during first the drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is not available. • The AT warning light illuminates • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoids A, B, C, D, E, and pressure control solenoid stuck • Line pressure low • 2-4 brake band slipping • 3-4 clutch slipping • Control valve stuck. • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 4. (See 05-17A-9 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FN4A-EL].)
3	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 6. (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)

STEP	INSPECTION		ACTION
4	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 6. • Any ranges: Replace the ATX, then go to Step 6. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
5	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the control valve body. • Disassemble the control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)	Yes	Replace the ATX, then go to the next step (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
6	**VERIFY TROUBLESHOOTING OF DTC P0741 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up engine and ATX. • Drive the vehicle under the following conditions for **10 s or more**. — ATF temperature: **20 °C {68 °F} or more** — Drive in the D range, 4GR (TCC operation) — Vehicle speed (VSS PID): **within 60—100 km/h {37—62 mph}** • Are any DTCs present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0742[FN4A-EL]

id0502a1808000

DTC P0742	Torque converter clutch (TCC) stuck on
DETECTION CONDITION	• All of the following conditions are satisfied under each of the following accelerator conditions. — ATF temperature **20 °C {68 °F} or more** — Driving in 4GR at D or M range — Engine running — Turbine speed **within 225—4,987 rpm** — Vehicle speed **less than 70 km/h {43 mph}** — Torque converter clutch (TCC) no operating — Difference between engine speed and turbine speed **less than 50 rpm** — DTC P0734 not output — Accelerator conditions • Accelerator opening angle (APP PID) is **more than 6.25%** and **5 s or more** have passed. • Accelerator opening angle (APP PID) is **within 3.13—6.25%** and **3 s or more** have passed. • Accelerator opening angle is at closed accelerator position and **5 s or more** have passed. **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate if PCM detects the above malfunction conditions during first the drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is not available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoids A, B, C, D, E, and pressure control solenoid stuck • Line pressure low • 2-4 brake band slipping • 3-4 clutch slipping • Control valve stuck • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 4. (See 05-17A-9 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FN4A-EL].)
3	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 6. (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)
4	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 6. • Any ranges: Replace the ATX, then go to Step 6. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)

STEP	INSPECTION		ACTION
5	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the control valve body. • Disassemble the control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)	Yes	Replace the ATX, then go to the next step. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
6	**VERIFY TROUBLESHOOTING OF DTC P0742 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up engine and ATX. • Drive the vehicle under the following conditions: — ATF temperature: **20 °C {68 °F} or more** — Drive in the D range, 4GR (TCC not in operation) — Vehicle speed: **less than 70 km/h {43 mph}**. — Accelerator conditions • Accelerator opening angle (APP PID) **more than 6.25%** and **5 s or more** have passed. • Accelerator opening angle (APP PID) **within 3.13—6.25%** and **3 s or more** have passed. • Accelerator opening angle at closed accelerator position and **5 s or more** have passed. • Are any DTCs present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0745[FN4A-EL]

id0502a1806600

DTC P0745	Pressure control solenoid malfunction
DETECTION CONDITION	• If the PCM detects either of the following conditions, the PCM determines that pressure control solenoid circuit has a malfunction. — Pressure control solenoid voltage stuck **0 V** after engine start — Pressure control solenoid voltage stuck **B+** after engine start **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate if PCM detects above malfunction conditions during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is not available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Pressure control solenoid malfunction • Open circuit in wiring harness between pressure control solenoid terminal B and ATX terminal I • Open circuit in wiring harness between ATX terminal I and PCM terminal 1N*1/1H*2 • Short to ground in wiring harness between ATX terminal D and PCM terminal 1M*1/1G*2 • Short to power supply in wiring harness between ATX terminal D and PCM terminal 1M*1/1G*2 • Open circuit in wiring harness between pressure control solenoid terminal A and ATX terminal D • Open circuit in wiring harness between ATX terminal D and PCM terminal 1M*1/1G*2 • Damaged connector between pressure control solenoid and PCM • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT ATX CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the ATX connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 10.
3	**INSPECT RESISTANCE** • Inspect the resistance between ATX terminals D and I (transaxle case side). • Is the resistance **within 2.4—7.3 ohms**? (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].)	Yes	Go to Step 6.
		No	Go to the next step.
4	**INSPECT PRESSURE CONTROL SOLENOID CONNECTOR FOR POOR CONNECTION** • Disconnect the pressure control solenoid connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 10.
5	**INSPECT RESISTANCE** • Inspect the resistance between the pressure control solenoid terminals A and B. • Is the resistance **within 2.4—7.3 ohms**? (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].)	Yes	Replace the solenoid wiring harness, then go to Step 10.
		No	Verify pressure control solenoid installation. • If solenoid installed correctly, replace the pressure control solenoid, then go to Step 10. (See 05-17A-27 SOLENOID VALVE REMOVAL/ INSTALLATION[FN4A-EL].)
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 10.
7	**INSPECT ATX CONNECTOR CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between the PCM (wiring harness-side) and ATX connector (wiring harness-side). — PCM terminal 1M*1/1G*2 and ATX terminal D — PCM terminal 1N*1/1H*2 and ATX terminal I • Is there continuity between terminals?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, the go to Step 10.
8	**INSPECT ATX CONNECTOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (engine off). • Inspect the voltage at ATX terminal D (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 10.
9	**INSPECT PCM CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between ATX terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
10	**VERIFY TROUBLESHOOTING OF DTC P0745 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Make sure to wait **more than 1 s** after turning the ignition switch to the ON position. • Are any DTCs present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0751[FN4A-EL]

id0502a1808100

DTC P0751	Shift solenoid A stuck off
DETECTION CONDITION	• When P0731, P0732, and P0733 are not output, and all conditions below are satisfied. — ATF temperature **20 °C {68 °F} or more** — Driving in 4GR at D range — Engine running — Turbine speed **within 225— 4,987 rpm** — Vehicle speed **46 km/h {29 mph} or more** — Differential gear case (output) revolution speed **35 rpm or more** — Torque converter clutch (TCC) not operating — Revolution ratio of forward clutch drum revolution to differential gear case revolution **within 0.91—1.09** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0767, P0768, P0771, P0772, P0773 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • The PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid A stuck • Control valve stuck • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05-17A-9 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FN4A-EL].)

STEP	INSPECTION		ACTION
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the ATX, then go to Step 7. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the control valve body. • Disassemble the control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)	Yes	Replace the ATX, then go to the next step. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
7	**VERIFY TROUBLESHOOTING OF DTC P0751 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 4GR. — ATF temperature: **20 °C {68 °F} or more** — Drive in the D range • Is the PENDING CODE present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0752[FN4A-EL]

id0502a1808200

DTC P0752	Shift solenoid A stuck on
DETECTION CONDITION	• When P0734 is not output, and all conditions below are satisfied in 1GR and 2GR. — ATF temperature **20 °C {68 °F} or more** — Engine running — D range selected — Brake pedal depressed — Accelerator opening angle at closed accelerator position — Vehicle speed **0 km/h {0 mph}** — Input/turbine speed sensor signal **187.5 rpm or more**. — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0767, P0768, P0771, P0772, P0773 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • The PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid A stuck • Control valve stuck • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05-17A-9 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FN4A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the ATX, then go to Step 7. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)

STEP	INSPECTION		ACTION
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the control valve body. • Disassemble the control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)	Yes	Replace the ATX, then go to the next step. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
7	**VERIFY TROUBLESHOOTING OF DTC P0752 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 4GR: — ATF temperature: **20 °C {68 °F} or more** — Drive in the D range • Is the PENDING CODE present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
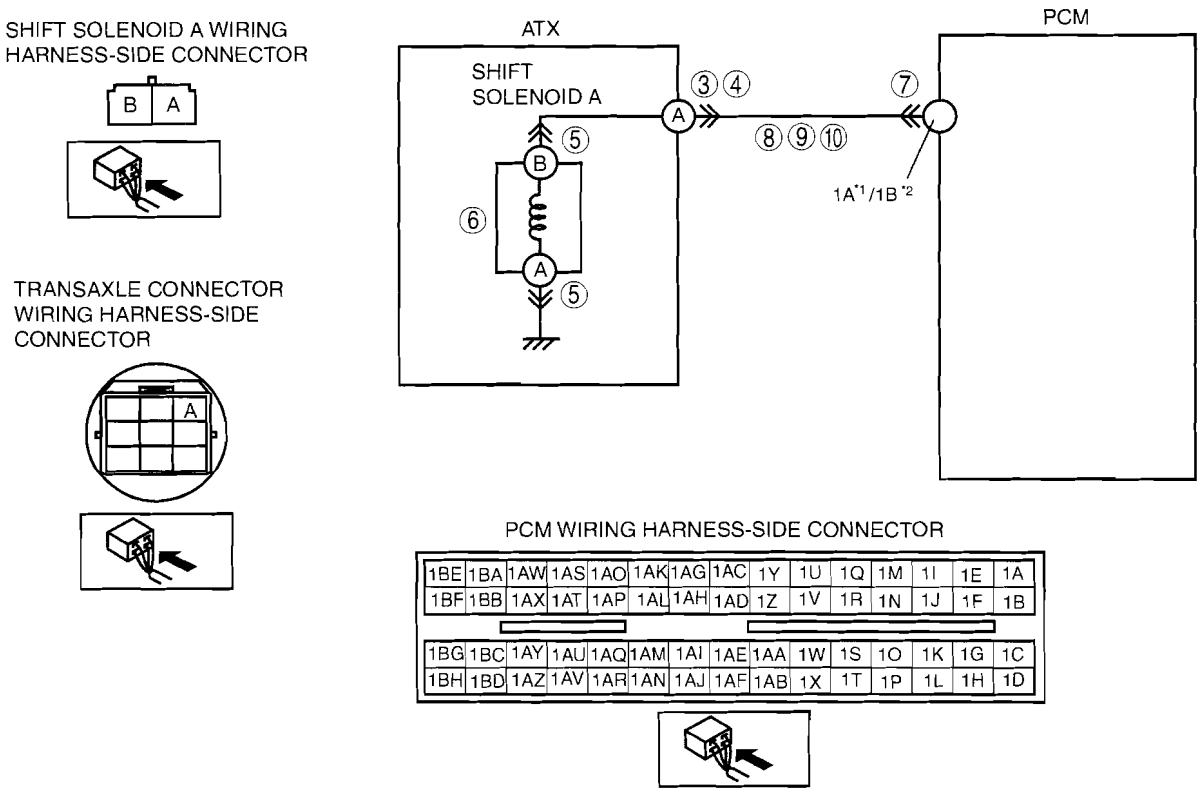
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0753[FN4A-EL]

id0502a1808300

DTC P0753	Shift solenoid A malfunction (electrical)
DETECTION CONDITION	• If PCM detects either of the following conditions, PCM determines that shift solenoid A circuit has a malfunction. — Shift solenoid A voltage stuck at **B+** after engine start — Shift solenoid A voltage stuck at **0 V** after engine start **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction conditions during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Shift solenoid A malfunction • Short to ground in wiring harness between ATX terminal A and PCM terminal 1A*1/1B*2 • Short to power supply in wiring harness between ATX terminal A and PCM terminal 1A*1/1B*2 • Open circuit in wiring harness between shift solenoid A terminal B and ATX terminal A • Open circuit in wiring harness between ATX terminal A and PCM terminal 1A*1/1B*2 • Open circuit in wiring harness between shift solenoid A terminal A and body ground • Damaged connector between shift solenoid A and PCM • PCM malfunction



*1 : California emission regulation applicable mode
*2 : Except for California emission regulation applicable mode

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATX CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the ATX connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
4	**INSPECT RESISTANCE** • Inspect the resistance between ATX terminal A (transaxle case side) and body ground. • Is the resistance **within 1.0—4.2 ohms**? (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].)	Yes	Go to Step 7.
		No	Go to the next step.
5	**INSPECT SHIFT SOLENOID A CONNECTOR FOR POOR CONNECTION** • Disconnect the shift solenoid A connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
6	**INSPECT RESISTANCE** • Inspect the resistance between shift solenoid A terminals A and B (part-side). • Is the resistance **within 1.0—4.2 ohms**? (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].)	Yes	Replace the solenoid wiring harness, then go to Step 11.
		No	Verify shift solenoid A installation. • If solenoid installed correctly, replace the solenoid, then go to Step 11. (See 05-17A-27 SOLENOID VALVE REMOVAL/ INSTALLATION[FN4A-EL].)
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
8	**INSPECT ATX CONNECTOR CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between PCM terminal 1A*1/1B*2 (wiring harness-side) and ATX terminal A (wiring harness-side). • Is there continuity between terminals?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
9	**INSPECT ATX CONNECTOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (engine off). • Inspect the voltage at ATX terminal A (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
10	**INSPECT PCM CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between PCM terminal 1A*1/1B*2 (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 11.
		No	Go to the next step.

STEP	INSPECTION		ACTION
11	**VERIFY TROUBLESHOOTING OF DTC P0753 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle in D range and make sure that the gears shift smoothly from 1GR to 4GR. • Are any DTCs present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0756[FN4A-EL]

id0502a1808400

DTC P0756	Shift solenoid B stuck off
DETECTION CONDITION	• When DTC P0732, P0733, and P0734 are not output, and all conditions below are satisfied. — ATF temperature **20 °C {68 °F} or more** — Driving in 1GR at D range — Engine running — Turbine speed **within 225—4,987 rpm** — Differential gear case (output) revolution speed **35 rpm or more** — Accelerator opening angle (APP PID) **3.07% or more** — Revolution ratio of forward clutch drum revolution to differential gear case revolution **2.157 or less** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0767, P0768, P0771, P0772, P0773 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • The PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid B stuck • Control valve stuck • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05-17A-9 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FN4A-EL].)

STEP	INSPECTION		ACTION
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the ATX, then go to Step 7. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the control valve body. • Disassemble the control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)	Yes	Replace the ATX, then go to the next step. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
7	**VERIFY TROUBLESHOOTING OF DTC P0756 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 4GR: — ATF temperature: **20 °C {68 °F} or more** — Drive in the D range — Engine speed (RPM PID): **300 rpm or more** — Accelerator opening angle (APP PID): **3.07% or more** • Is the PENDING CODE present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0757[FN4A-EL]

id0502a1808500

DTC P0757	Shift solenoid B stuck on
DETECTION CONDITION	• When DTC P0731 and P0733 are not output, and both the following conditions are satisfied. — When all conditions below are satisfied while driving in 2GR • ATF temperature **20 °C {68 °F} or more** • Driving in D or M range • Engine running • Turbine speed **within 225—4,987 rpm** • Differential gear case (output) revolution speed **35 rpm or more** • Revolution ratio of forward clutch drum revolution to differential gear case revolution **1.249 or less** or **2.157 or more** • None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0767, P0768, P0771, P0772, P0773 — When all conditions below are satisfied with driving in 4GR • ATF temperature **20 °C {68 °F} or more** • Driving in D or M range • Engine running • Turbine speed **within 225—4,987 rpm** • Differential gear case (output) revolution speed **35 rpm or more** • Vehicle speed **36 km/h {22 mph}** • Accelerator opening angle at closed accelerator position • Revolution ratio of forward clutch drum revolution to differential gear case revolution **0.6 or less** or **1.249 or more** • None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0767, P0768, P0771, P0772, P0773 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • The PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid B stuck • Control valve stuck • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05-17A-9 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FN4A-EL].)

STEP	INSPECTION		ACTION
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the ATX, then go to Step 7. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the control valve body. • Disassemble the control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)	Yes	Replace the ATX, then go to the next step. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
7	**VERIFY TROUBLESHOOTING OF DTC P0757 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions make sure that gears shift smoothly from 1GR to 4GR. — ATF temperature: **20 °C {68 °F} or more** — Drive in the D range — Engine speed (RPM PID): **300 rpm or more** — Accelerator opening angle (APP PID): **0%** (4GR only) — Vehicle speed (VSS PID): **36 km/h {22 mph} or more** (4GR only) • Is the PENDING CODE present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
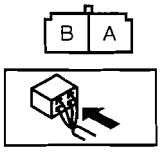
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0758[FN4A-EL]

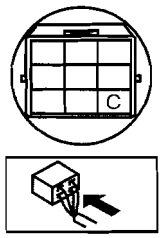
id0502a1808600

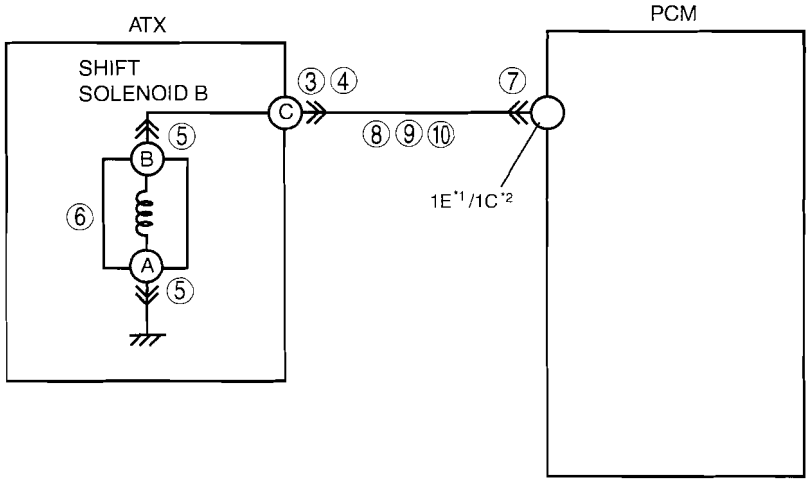
DTC P0758	Shift solenoid B malfunction (electrical)
DETECTION CONDITION	• If the PCM detects either of the following conditions, the PCM determines that shift solenoid B circuit has a malfunction. — Shift solenoid B voltage stuck at **B+** after engine start — Shift solenoid B voltage stuck at **0 V** after engine start **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction conditions during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Shift solenoid B malfunction • Short to ground in wiring harness between ATX terminal C and PCM terminal 1E*1/1C*2 • Short to power supply in wiring harness between ATX terminal C and PCM terminal 1E*1/1C*2 • Open circuit in wiring harness between shift solenoid B terminal B and ATX terminal C • Open circuit in wiring harness between ATX terminal C and PCM terminal 1E*1/1C*2 • Open circuit in wiring harness between shift solenoid B terminal A and body ground • Damaged connector between shift solenoid B and PCM • PCM malfunction

SHIFT SOLENOID B WIRING HARNESS-SIDE CONNECTOR

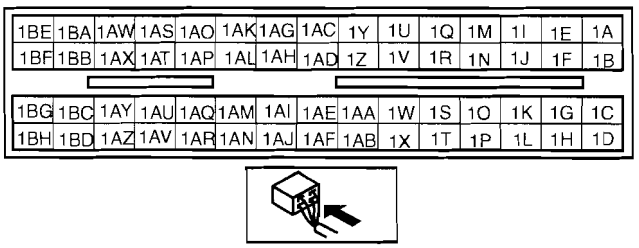


TRANSAXLE CONNECTOR WIRING HARNESS-SIDE CONNECTOR





PCM WIRING HARNESS-SIDE CONNECTOR



*1 : California emission regulation applicable mode
*2 : Except for California emission regulation applicable mode

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATX CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the ATX connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
4	**INSPECT RESISTANCE** • Inspect the resistance between ATX terminal C (transaxle case side) and body ground. • Is the resistance **within 1.0—4.2 ohms**? (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].)	Yes	Go to Step 7.
		No	Go to the next step.
5	**INSPECT SHIFT SOLENOID B CONNECTOR FOR POOR CONNECTION** • Disconnect the shift solenoid B connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
6	**INSPECT RESISTANCE** • Inspect the resistance between shift solenoid B terminals A and B (part-side). • Is the resistance **within 1.0—4.2 ohms**? (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].)	Yes	Replace the solenoid wiring harness, then go to Step 11.
		No	Verify shift solenoid B installation. • If solenoid installed correctly, replace the solenoid, then go to Step 11. (See 05-17A-27 SOLENOID VALVE REMOVAL/ INSTALLATION[FN4A-EL].)
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
8	**INSPECT ATX CONNECTOR CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between PCM terminal 1E*1/1C*2 (wiring harness-side) and ATX terminal C (wiring harness-side). • Is there continuity between terminals?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
9	**INSPECT ATX CONNECTOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (engine off). • Inspect for voltage at ATX terminal C (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
10	**INSPECT PCM CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between PCM terminal 1E*1/1C*2 (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 11.
		No	Go to the next step.

STEP	INSPECTION		ACTION
11	**VERIFY TROUBLESHOOTING OF DTC P0758 SHIFT SOLENOID B COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle in D range and make sure that the gears shift smoothly from 1GR to 4GR. • Are any DTCs present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0761[FN4A-EL]

id0502a1808700

DTC P0761	Shift solenoid C stuck off
DETECTION CONDITION	• When DTC P0733 and P0734 are not output, and both the following conditions are satisfied. — When all conditions below are satisfied while driving in 1GR • ATF temperature **20 °C {68 °F} or more** • Driving in D or M range • Engine running • Turbine speed **within 225—4,987 rpm** • Accelerator opening angle (APP PID) **3.07% or more** • Differential gear case (output) revolution speed **35 rpm or more** • Revolution ratio of forward clutch drum revolution to differential gear case revolution **2.157 or less** • None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0767, P0768, P0771, P0772, P0773 — When all conditions below are satisfied while driving in 2GR • ATF temperature **20 °C {68 °F} or more** • Driving in D or M range • Engine running • Turbine speed **within 225—4,987 rpm** • Differential gear case (output) revolution speed **35 rpm or more** • Revolution ratio of forward clutch drum revolution to differential gear case revolution **1.249 or less** or **2.157or more** • None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0767, P0768, P0771, P0772, P0773 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • The PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid C stuck • Control valve stuck • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.

STEP	INSPECTION		ACTION
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05-17A-9 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FN4A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the ATX, then go to Step 7. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the control valve body. • Disassemble the control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)	Yes	Replace the ATX, then go to the next step. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
7	**VERIFY TROUBLESHOOTING OF DTC P0761 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that the gears shift smoothly from 1GR to 4GR. — ATF temperature: **20 °C {68 °F} or more** — Drive in the D range — Accelerator opening angle (APP PID): **3.07% or more** • Is the PENDING CODE present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0762[FN4A-EL]

id0502a1808800

DTC P0762	Shift solenoid C stuck on
DETECTION CONDITION	• When DTC P0731 and P0732 are not output, and both the following conditions are satisfied. — When all conditions below are satisfied while driving in 3GR. • ATF temperature **20 °C {68 °F} or more**. • Driving in D range • Engine running • Turbine speed **within 225—4,987 rpm** • Vehicle speed **23 km/h {14.3 mph} or more** • Torque converter clutch (TCC) no operating • Differential gear case (output) revolution speed **35 rpm or more** • Revolution ratio of forward clutch drum revolution to differential gear case revolution **within 1.345—1.644** • None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0767, P0768, P0771, P0772, P0773 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • The PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid C and pressure control solenoid stuck • Control valve stuck • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05-17A-9 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FN4A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the ATX, then go to Step 7. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)

STEP	INSPECTION		ACTION
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the control valve body. • Disassemble the control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)	Yes	Replace the ATX, then go to the next step. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
7	**VERIFY TROUBLESHOOTING OF DTC P0762 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 4GR: — ATF temperature: **20 °C {68 °F} or more** — Drive in the D range — Vehicle speed (VSS PID): **23 km/h {14.3 mph} or more** • Is the PENDING CODE present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
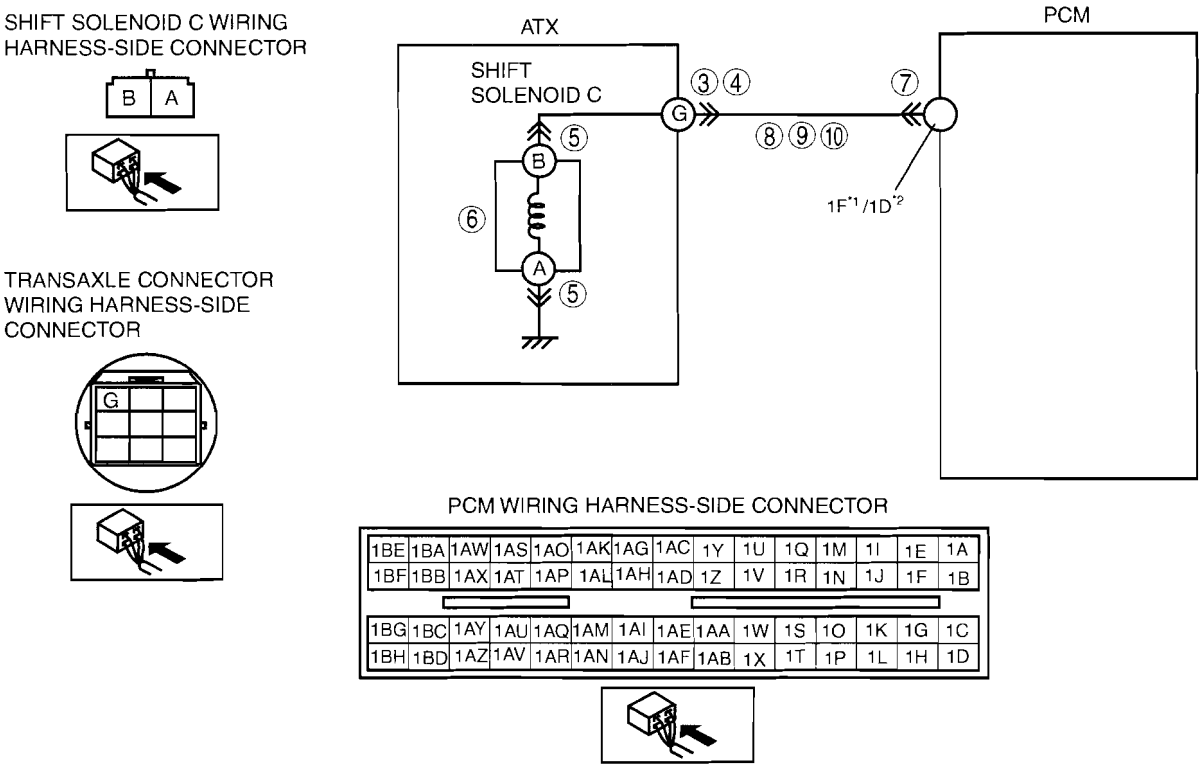
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0763[FN4A-EL]

id0502a1808900

DTC P0763	Shift solenoid C malfunction (electrical)
DETECTION CONDITION	• If the PCM detects either of the following conditions, the PCM determines that shift solenoid C circuit has a malfunction. — Shift solenoid C voltage stuck at **B+** after engine start — Shift solenoid C voltage stuck at **0 V** after engine start **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction conditions during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Shift solenoid C malfunction • Short to ground in wiring harness between ATX terminal G and PCM terminal 1F*1/1D*2 • Short to power supply in wiring harness between ATX terminal G and PCM terminal 1F*1/1D*2 • Open circuit in wiring harness between shift solenoid C terminal B and ATX terminal G • Open circuit in wiring harness between ATX terminal G and PCM terminal 1F*1/1D*2 • Open circuit in wiring harness between shift solenoid C terminal A and body ground • Damaged connector between shift solenoid C and PCM • PCM malfunction



*1 : California emission regulation applicable mode
*2 : Except for California emission regulation applicable mode

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT ATX CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the ATX connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
4	**INSPECT RESISTANCE** • Inspect the resistance between ATX terminal G (transaxle case side) and body ground. • Is the resistance **within 1.0—4.2 ohms**? (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].)	Yes	Go to Step 7.
		No	Go to the next step.
5	**INSPECT SHIFT SOLENOID C CONNECTOR FOR POOR CONNECTION** • Disconnect the shift solenoid C connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
6	**INSPECT RESISTANCE** • Inspect the resistance between shift solenoid C terminals A and B (part-side). • Is the resistance **within 1.0—4.2 ohms**? (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].)	Yes	Replace the solenoid wiring harness, then go to Step 11.
		No	Verify shift solenoid C installation. • If solenoid installed correctly, replace the solenoid, then go to Step 11. (See 05-17A-27 SOLENOID VALVE REMOVAL/ INSTALLATION[FN4A-EL].)
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
8	**INSPECT ATX CONNECTOR CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between PCM terminal 1F*1/1D*2 (wiring harness-side) and ATX terminal G (wiring harness-side). • Is there continuity between terminals?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
9	**INSPECT ATX CONNECTOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (engine off). • Inspect the voltage at ATX terminal G (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
10	**INSPECT PCM CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between PCM terminal 1F*1/1D*2 (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 11.
		No	Go to the next step.
11	**VERIFY TROUBLESHOOTING OF DTC P0763 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 4GR. • Are any DTCs present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0766[FN4A-EL]

id0502a1809000

DTC P0766	Shift solenoid D stuck off
DETECTION CONDITION	• When any of DTC P0732, and P0733 not output (correct judgment), and all conditions below are satisfied. — When all conditions below are satisfied while driving in 1GR • ATF temperature **20 °C {68 °F} or more** • Driving in M range • Engine running • Turbine speed **within 225—4,987 rpm** • Accelerator opening angle (APP PID) **3.07% or more** • Differential gear case (output) revolution speed **35 rpm or more** • Revolution ratio of forward clutch drum revolution to differential gear case revolution **2.157 or less** • None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0767, P0768, P0771, P0772, P0773 — When all conditions below are satisfied while driving in 4GR • ATF temperature **20 °C {68 °F} or more** • Driving in D or M range • Engine running • Turbine speed **within 225—4,987 rpm** • Differential gear case (output) revolution speed **35 rpm or more** • Vehicle speed **36 km/h {23 mph} or more** • Accelerator opening angle at closed accelerator position • Revolution ratio of forward clutch drum revolution to differential gear case revolution **0.6 or less** or **1.249 or more** • None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0767, P0768, P0771, P0772, P0773 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • The PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid D stuck • Control valve stuck • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05-17A-9 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FN4A-EL].)

STEP	INSPECTION		ACTION
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the ATX, then go to Step 7. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the control valve body. • Disassemble the control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)	Yes	Replace the ATX, then go to the next step. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
7	**VERIFY TROUBLESHOOTING OF DTC P0766 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 4GR: — ATF temperature: **20 °C {68 °F} or more** — Drive in the M range — Accelerator opening angle (APP PID): **0%** (4GR only) — Vehicle speed (VSS PID): **36 km/h {23 mph} or more** (4GR only) • Is the PENDING CODE present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0767[FN4A-EL]

id0502a1809100

DTC P0767	Shift solenoid D stuck on
DETECTION CONDITION	• When any of DTC P0731, P0732, P0734, and P0741 are not output, and all conditions below are satisfied. — ATF temperature **20 °C {68 °F} or more** — Driving in 3GR at D range — Engine running — Turbine speed **within 225—4,987 rpm** — Differential gear case (output) revolution speed **35 rpm or more** — Revolution ratio of forward clutch drum revolution to differential gear case revolution **0.863 or less** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0767, P0768, P0771, P0772, P0773 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • The PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid D stuck • Control valve stuck • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05-17A-9 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FN4A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the ATX, then go to Step 7. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)

STEP	INSPECTION		ACTION
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the control valve body. • Disassemble the control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)	Yes	Replace the ATX, then go to the next step. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
7	**VERIFY TROUBLESHOOTING OF DTC P0767 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 4GR. — ATF temperature: **20 °C {68 °F} or more** — Drive in the D range, 3GR • Is the PENDING CODE present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

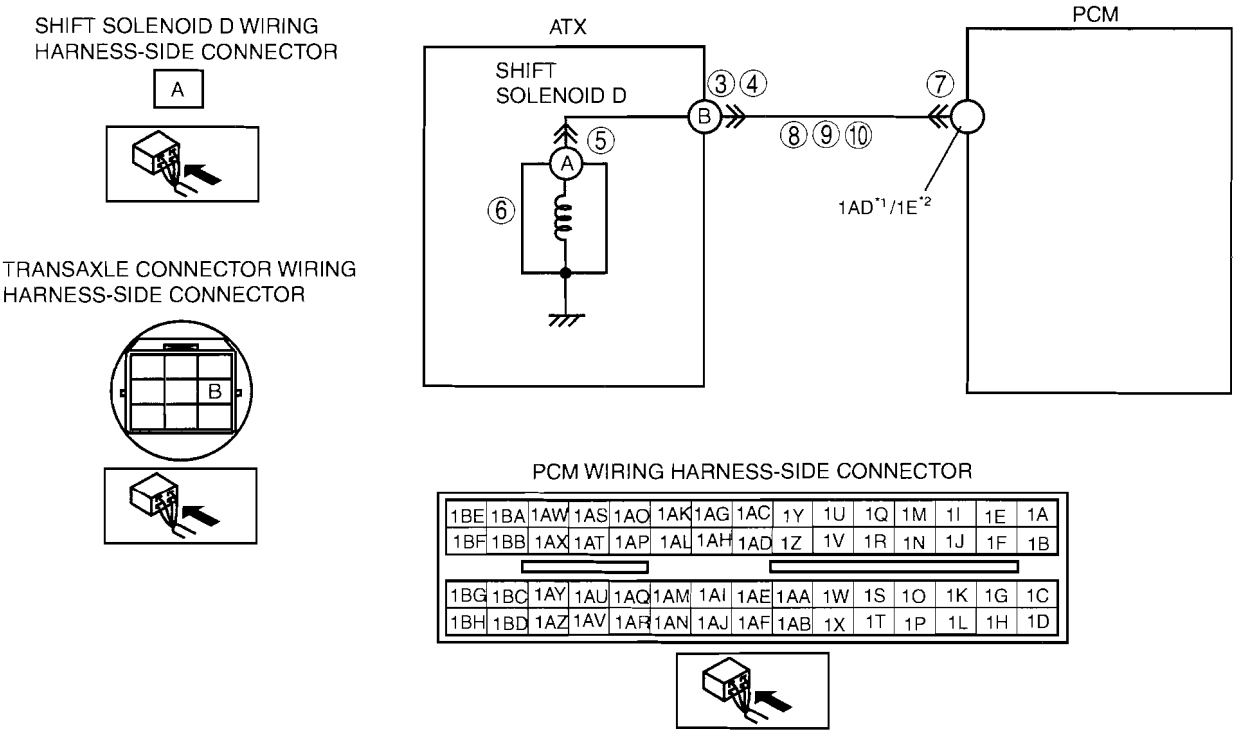
DTC P0768[FN4A-EL]

id0502a1807000

DTC P0768	Shift solenoid D malfunction (electrical)
DETECTION CONDITION	• If PCM detects either of the following conditions while driving in 4GR at D range, the PCM determines that shift solenoid D circuit has a malfunction. — Shift solenoid D voltage stuck at **B+** after engine start — Shift solenoid D voltage stuck at **0 V** after engine start **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction conditions during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Shift solenoid D malfunction • Short to ground in wiring harness between ATX terminal B and PCM terminal 1AD*1/1E*2 • Short to power supply in wiring harness between ATX terminal B and PCM terminal 1AD*1/1E*2 • Open circuit in wiring harness between shift solenoid D terminal A and ATX terminal B • Open circuit in wiring harness between ATX terminal B and PCM terminal 1AD*1/1E*2 • Damaged connector between shift solenoid D and PCM • PCM malfunction



*1 : California emission regulation applicable mode
*2 : Except for California emission regulation applicable mode

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT ATX CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the ATX connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
4	**INSPECT RESISTANCE** • Inspect the resistance between ATX terminal B (transaxle case side) and body ground. • Is the resistance **within 10.9—26.2 ohms**? (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].)	Yes	Go to Step 7.
		No	Go to the next step.
5	**INSPECT SHIFT SOLENOID D CONNECTOR FOR POOR CONNECTION** • Disconnect the shift solenoid D connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
6	**INSPECT RESISTANCE** • Inspect the resistance between shift solenoid D terminal A (part-side) and body ground. • Is the resistance **within 10.9—26.2 ohms**? (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].)	Yes	Replace the solenoid wiring harness, then go to Step 11.
		No	Verify shift solenoid D installation. • If solenoid installed correctly, replace the solenoid, then go to Step 11. (See 05-17A-27 SOLENOID VALVE REMOVAL/ INSTALLATION[FN4A-EL].)
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
8	**INSPECT ATX CONNECTOR CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between PCM terminal 1AD*1/1E*2 (wiring harness-side) and ATX terminal B (wiring harness-side). • Is there continuity between terminals?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
9	**INSPECT ATX CONNECTOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (engine off). • Inspect the voltage at ATX terminal B (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
10	**INSPECT PCM CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between PCM terminal 1AD*1/1E*2 (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 11.
		No	Go to the next step.
11	**VERIFY TROUBLESHOOTING OF DTC P0768 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 4GR. • Are any DTCs present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	No concern is detected. Go to the next step.

STEP	INSPECTION		ACTION
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0771[FN4A-EL]

id0502a1809200

DTC P0771	Shift solenoid E stuck off
DETECTION CONDITION	• When any of P0732, and P0734 are not output, and all conditions below are satisfied. — When all conditions below are satisfied while driving in 1GR • ATF temperature **20 °C {68 °F} or more** • Driving in M range • Engine running • Turbine speed **within 225—4,987 rpm** • Accelerator opening angle (APP PID) **3.07% or more** • Differential gear case (output) revolution speed **35 rpm or more** • Revolution ratio of forward clutch drum revolution to differential gear case revolution **2.157 or less** • None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0767, P0768, P0771, P0772, P0773 — When all conditions below are satisfied while driving in 4GR • ATF temperature **20 °C {68 °F} or more** • Driving in D range • Engine running • Turbine speed **within 225—4,987 rpm** • Vehicle speed **within 60—100 km/h {37—62 mph}** • Torque converter clutch (TCC) operating • Shift solenoid A duty value exceeds **99%** • Difference between engine speed and turbine speed **more than 100 rpm** • None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0767, P0768, P0771, P0772, P0773 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • The PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid E stuck • Control valve stuck • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05-17A-9 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FN4A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the ATX, then go to Step 7. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the control valve body. • Disassemble the control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)	Yes	Replace the ATX, then go to the next step. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
7	**VERIFY TROUBLESHOOTING OF DTC P0771 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 4GR. — ATF temperature: **20 °C {68 °F} or more** — Drive in the M range — Vehicle speed: **within 60—100 km/h {37—62 mph}** (4GR only). • Is the PENDING CODE present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0772[FN4A-EL]

id0502a1809300

DTC P0772	Shift solenoid E stuck on
DETECTION CONDITION	• When any of DTC P0731, P0733, and P0734 are not output, and all of the following conditions are satisfied under each of the following accelerator conditions. — ATF temperature **20 °C {68 °F} or more** — Driving in 4GR at D range — Engine running — Turbine speed **within 225—4,987 rpm** — Vehicle speed **less than 70 km/h {43 mph}** — Torque converter clutch (TCC) no operating — Difference between engine speed and turbine speed **50 rpm or less** — Accelerator conditions • Accelerator opening angle (APP PID) is **more than 6.25%** and **5 s or more** have passed • Accelerator opening angle (APP PID) is **within 3.13—6.25%** and **3 s or more** have passed • Accelerator opening angle is at closed accelerator position and **5 s or more** have passed **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • The PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid E stuck • Control valve stuck • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05-17A-9 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FN4A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the ATX, then go to Step 7. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)

STEP	INSPECTION		ACTION
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the control valve body. • Disassemble the control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)	Yes	Replace the ATX, then go to the next step. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
7	**VERIFY TROUBLESHOOTING OF DTC P0772 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 4GR. — ATF temperature: **20 °C {68 °F} or more** — Drive in the D range — Vehicle speed (VSS PID): **less than 70 km/h {43 mph}** (4GR only) • Is the PENDING CODE present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

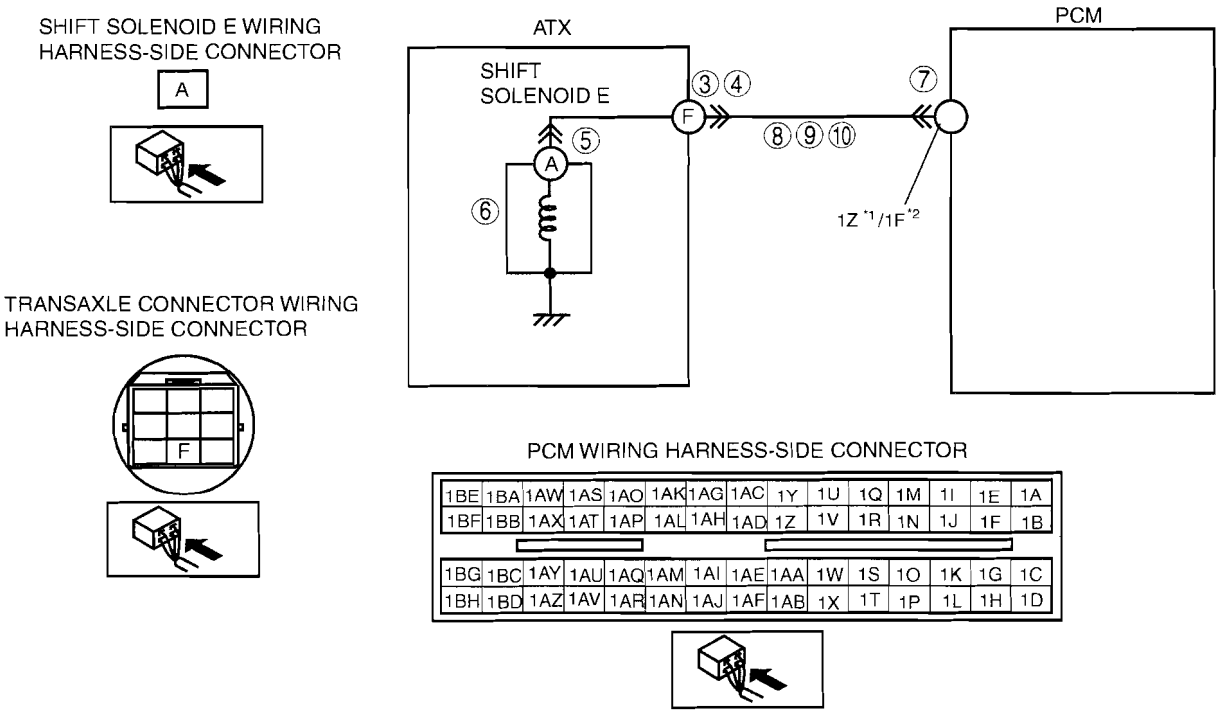
DTC P0773[FN4A-EL]

id0502a1809400

DTC P0773	Shift solenoid E malfunction (electrical)
DETECTION CONDITION	• If PCM detects either of the following conditions while driving in 4GR at D range with TCC operating, PCM determines that shift solenoid E circuit has a malfunction. — Shift solenoid E voltage stuck at **B+** after engine start — Shift solenoid E voltage stuck at **0 V** after engine start **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction conditions during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Shift solenoid E malfunction • Short to ground in wiring harness between ATX terminal F and PCM terminal 1Z*1/1F*2 • Short to power supply in wiring harness between ATX terminal F and PCM terminal 1Z*1/1F*2 • Open circuit in wiring harness between shift solenoid E terminal A and ATX terminal F • Open circuit in wiring harness between ATX terminal F and PCM terminal 1Z*1/1F*2 • Damaged connector between shift solenoid E and PCM • PCM malfunction



*1 : California emission regulation applicable mode
*2 : Except for California emission regulation applicable mode

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT ATX CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the ATX connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
4	**INSPECT RESISTANCE** • Inspect the resistance between ATX terminal F (transaxle case side) and body ground. • Is the resistance **within 10.9—26.2 ohms**? (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].)	Yes	Go to Step 7.
		No	Go to the next step.
5	**INSPECT SHIFT SOLENOID E CONNECTOR FOR POOR CONNECTION** • Disconnect the shift solenoid E connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
6	**INSPECT RESISTANCE** • Inspect the resistance between shift solenoid E terminal A (part-side) and body ground. • Is the resistance **within 10.9—26.2 ohms**? (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].)	Yes	Replace the solenoid wiring harness, then go to Step 11.
		No	Verify shift solenoid E installation. • If solenoid installed correctly, replace the solenoid, then go to Step 11. (See 05-17A-27 SOLENOID VALVE REMOVAL/ INSTALLATION[FN4A-EL].)
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
8	**INSPECT ATX CONNECTOR CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between PCM terminal 1Z*1/1F*2 (wiring harness-side) and ATX terminal F (wiring harness-side). • Is there continuity between terminals?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
9	**INSPECT ATX CONNECTOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (engine off). • Inspect the voltage at ATX terminal F (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
10	**INSPECT PCM CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between PCM terminal 1Z*1/1F*2 (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 11.
		No	Go to the next step.
11	**VERIFY TROUBLESHOOTING OF DTC P0773 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 4GR. • Are any DTCs present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0883[FN4A-EL]

id0502a1802900

DTC P0883	Battery voltage high
DETECTION CONDITION	• Voltage of **16 V or more** detected at PCM terminal 1BE. **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction conditions during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Generator malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY DTC** • Turn the ignition switch to the LOCK position, then to the ON position. • Verify the DTC in the PCM memory. • Are DTC P2504 output?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
4	**VERIFY TROUBLESHOOTING OF DTC P0883 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine and warm it up completely. • Is same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0894[FN4A-EL]

id0502a1809600

DTC P0894	Forward clutch power transmission malfunction
DETECTION CONDITION	• With the engine running and the selector lever in the D or M range, all of the following conditions are met: — ATF temperature **20 °C {68 °F} or more** — Vehicle speed **0 km/h {0 mph}** (brake on) — Even when **3 s or more** has passed since the engine has started, the turbine speed will not decrease to **less than 187.5 rpm**. **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is not available. • The AT warning light illuminates. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Forward clutch not engaged or slipped • Short to power supply in wiring harness between shift solenoid A terminal B and PCM terminal 1A*1/1B*2 • Shift solenoid A stuck on • VSS malfunction • PCM malfunction

*1 : California emission regulation applicable mode
*2 : Except for California emission regulation applicable mode

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY DTCS** • Turn the ignition switch to the LOCK position, then to the ON position. • Verify the DTCs in the PCM memory. • Are DTCs P0500, P0752, and P0753 output?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	Replace the forward clutch, then go to the next step.
3	**VERIFY TROUBLESHOOTING OF DTC P0894 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Warm up the engine. • With the selector lever in the D range and the vehicle stopped (brake on), wait **3 s or more**. • Are any DTCs present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P1783[FN4A-EL]

id0502a1807700

DTC P1783	ATF high oil temperature malfunction
DETECTION CONDITION	• When all conditions below are satisfied. — P0712, P0713 not output — ATF temperature **149.5 °C {301°F} or more** — ATF oil temperature signal of **0.06 V or more** is input to PCM terminal 2AC*1/1U*2. **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate if the PCM detects above malfunction conditions during the first drive cycle. • The PENDING CODE is not available. • FREEZE FRAME DATA is not available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• High engine load drive (Driving a steep gradient at a low speed.) • Insufficient or excess level of ATF • Deteriorated ATF • TFT sensor circuit malfunction • PCM malfunction

*1 : California emission regulation applicable mode
*2 : Except for California emission regulation applicable mode

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY VEHICLE DRIVING CONDITIONS** • Verify each PID monitor of the HTM_CNT and HTM_DIS. • Verify vehicle driving conditions when a DTC P1783 is output. • Has the vehicle been driven at a high engine load?	Yes	• Go to Step 6. • Inform the customer that the ATX temperature is high due to high engine load driving.
		No	Go to the next step.
4	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 6. (See 05-17A-9 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FN4A-EL].)
5	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to the next step. (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)
6	**VERIFY TROUBLESHOOTING OF DTC P1783 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up the ATX. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

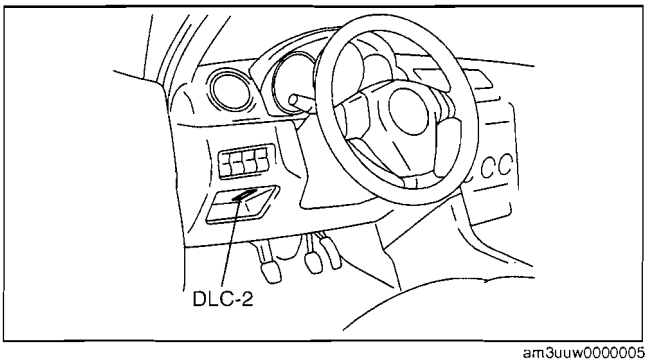
PID/DATA MONITOR INSPECTION[FN4A-EL]

id0502a1805600

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Toolbox" tab.
     2. Select "DataLogger".
     3. Select "Modules".
     4. Select "PCM".
   - When using the PDS (Pocket PC)
     1. Select "Module Tests".
     2. Select "PCM".
     3. Select "DataLogger".
3. Select the PID from the PID table
4. Verify the PID data according to the directions on the M-MDS screen.



am3uuw0000005

Note
- Perform part inspection for the output device after PCM inspection.
- The PID/DATA MONITOR function monitors the calculated value of the input/output signals in the PCM. Therefore, if a monitored value of an output device is out of specification, it is necessary to inspect the monitored value of the input device related to the output device control. Since an output device malfunction is not directly indicated as a malfunction of the monitored value for the output device, it is necessary to inspect the output device individually using methods such as the simulation function.

PID/DATA MONITOR AND RECORD function table

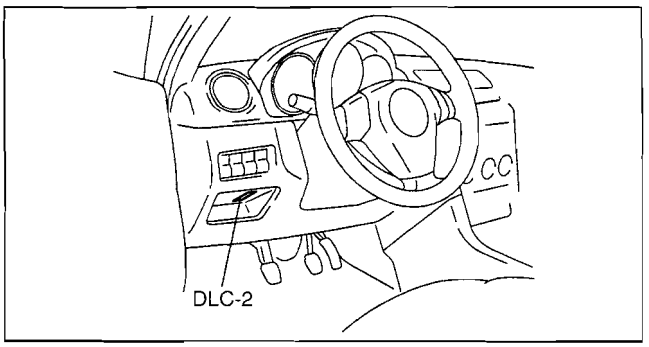
Monitor item (Definition)	Unit/ Condition	Condition/Specification	Action	PCM terminal
DWN SW (Down switch)	On/Off	• M range, downshift: On • Other: Off	Inspect the selector lever component. (See 05-18-4 SELECTOR LEVER COMPONENT INSPECTION.)	1AF*1/1P*2
GEAR	1/2/3/4	1GR: 1 2GR: 2 3GR: 3 4GR: 4	Inspect the following PIDs: SSA/SS1, SSB/SS2, SSC/SS3, SSD/SS4, SSE_SS5	N/A
HTM_CNT	N/A	Indicates number of high oil temperature mode (ATF temperature at 130 °C {266 °F} or more) operations • 0—65,535	N/A	N/A
HTM_DIS	km	Indicates travel distance after operation of high oil temperature mode (ATF temperature at 130 °C {266 °F} or more) • 0—65,535 km	N/A	N/A
LINEDES	Pa	Indicates target line pressure	Inspect the following PIDs: APP, OSS, TFT, TFTV, TR, TSS, VPWR, VSS	N/A
LPS (Pressure control solenoid)	A	Change current value according to accelerator opening angle	Inspect the pressure control solenoid. (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].)	1M*1, 1N*1/ 1G*2, 1H*2
MNL SW (M range switch)	On/Off	M range: On Other: Off	Inspect the selector lever component. (See 05-18-4 SELECTOR LEVER COMPONENT INSPECTION.)	1AN*1/1O*2

Monitor item (Definition)	Unit/ Condition	Condition/Specification	Action	PCM terminal
OSS (Output shaft speed)	RPM	Indicates output shaft speed	Inspect the VSS. (See 05-17A-21 VEHICLE SPEED SENSOR (VSS) INSPECTION[FN4A-EL].)	1AW*1/1J*2
SSA/SS1 (Shift solenoid A)	%	4GR: **99%** Others: **0%**	Inspect the shift solenoid A. (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].)	1A*1/1B*2
SSB/SS2 (Shift solenoid B)	%	1GR at D range: **99%** Others: **0%**	Inspect the shift solenoid B. (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].)	1E*1/1C*2
SSC/SS3 (Shift solenoid C)	%	1GR/2GR: **99%** Others: **0%**	Inspect the shift solenoid C. (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].)	1F*1/1D*2
SSD/SS4 (Shift solenoid D)	On/Off	• P/N position, 4GR at D range, 1GR at M range: On • Others: Off	Inspect the shift solenoid D. (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].)	1AD*1/1E*2
SSE_SS5 (Shift solenoid E)	On/Off	• TCC operating: On • TCC non operating: Off	Inspect the shift solenoid E. (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].)	1Z*1/1F*2
TFT (Transaxle fluid temperature)	°C	Indicates transaxle fluid temperature	Inspect the TFT sensor. (See 05-17A-18 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR INSPECTION[FN4A-EL].)	2AC*1/1U*2
TFTV (Transaxle fluid signal voltage)	V	ATF **20 °C {68 °F}: Approx. 3.3 V** ATF **40 °C {104 °F}: Approx. 2.4 V** ATF **60 °C {140 °F}: Approx. 1.5 V**	Inspect the TFT sensor. (See 05-17A-18 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR INSPECTION[FN4A-EL].)	2AC*1/1U*2
THOP (Throttle position sensor)	%	• CTP: **12%** • WOT: **75%**	Inspect the TP sensor. (See 01-40A-54 THROTTLE POSITION (TP) SENSOR INSPECTION[LF, L3].)	N/A
TR (Transaxle range)	P/R/N/D	P position: P R position: R N position: N D range: D	Inspect the TR switch. (See 05-17A-10 TRANSAXLE RANGE (TR) SWITCH INSPECTION[FN4A-EL].)	1AH*1/1S*2
TR_SENS (TR switch)	V	P position: **4.34—4.79 V** R position: **3.83—4.18 V** N position: **3.05—3.50 V** D range: **2.23—2.66 V**	Inspect the TR switch. (See 05-17A-10 TRANSAXLE RANGE (TR) SWITCH INSPECTION[FN4A-EL].)	1AH*1/1S*2
TSS (Input/turbine speed)	RPM	Ignition switch ON: **0 RPM** Idle: **700—800 RPM** (P, N position) Indicates Input/turbine speed	Inspect the input/turbine speed sensor. (See 05-17A-20 INPUT/TURBINE SPEED SENSOR INSPECTION[FN4A-EL].)	1AG*1, 1AO*1/ 1M*2, 1Q*2
UP SW (Up switch)	On/Off	• M range, upshift: On • Other: Off	Inspect the selector lever component. (See 05-18-4 SELECTOR LEVER COMPONENT INSPECTION.)	1AJ*1/1K*2

*1 : California emission regulation applicable mode
*2 : Except for California emission regulation applicable mode

Simulation Function Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     - — Select the "Toolbox" tab.
     - — Select "DataLogger".
     - — Select "Modules".
     - — Select "PCM".
   - When using the PDS (Pocket PC)
     - — Select "Module Tests".
     - — Select "PCM".
     - — Select "DataLogger".
3. Select the simulation items from the PID table.
4. Perform the simulation function, inspect the operations for each parts.
   - If there is no operation sound from the solenoid after the simulation function inspection is performed, it is possible that there is an open or short circuit in the wiring harness, or solenoid, or sticking and operation malfunction.



am3uuw0000005

Simulation item table

X: Available

Simulation item	Applicable component	Unit/Condition	Operation		PCM terminal
			IG ON	Idle	
LPS	Pressure control solenoid	%	N/A	X	1M*1, 1N*1/1G*2, 1H*2
SSA/SS1	Shift solenoid A	%	N/A	X	1A*1/1B*2
SSB/SS2	Shift solenoid B	%	N/A	X	1E*1/1C*2
SSC/SS3	Shift solenoid C	%	N/A	X	1F*1/1D*2

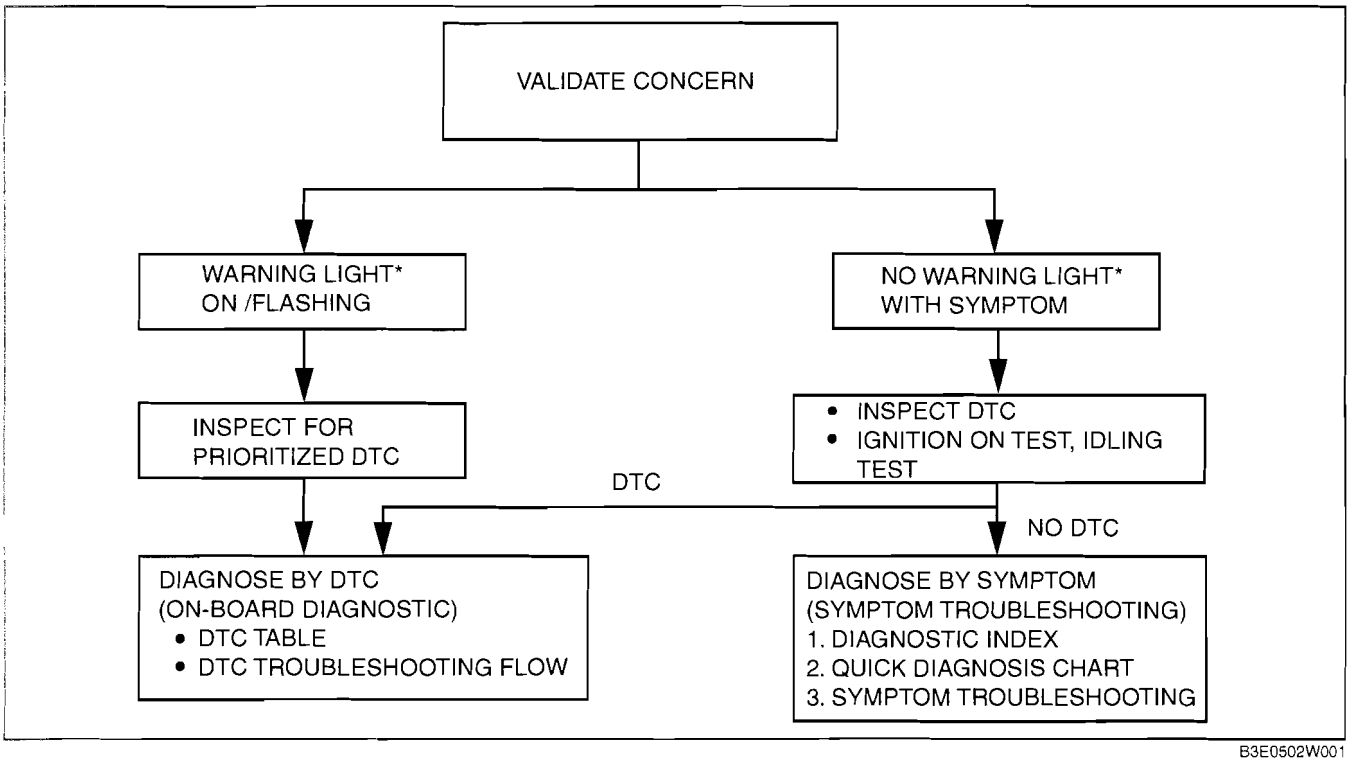
FOREWORD[FS5A-EL]

id050221800200

- When the customer reports a vehicle malfunction, inspect the malfunction indicator lamp (MIL), AT warning light indication, and TCM memory for diagnostic trouble code (DTC), then diagnose the malfunction according to the following flowchart.
  — If a DTC exists, diagnose the applicable DTC. (See 05-02B-9 DTC TABLE[FS5A-EL].)
  — If no DTC exists, the MIL does not illuminate, and AT warning light does not illuminate. Diagnose the applicable symptom troubleshooting. (See 05-03B-4 SYMPTOM TROUBLESHOOTING ITEM TABLE[FS5A-EL].)



B3E0502W001

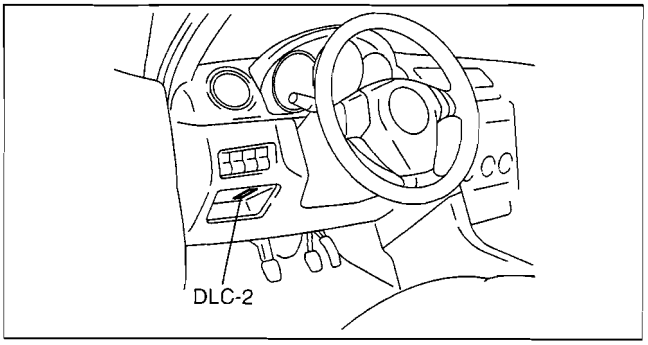
*: Malfunction indicator lamp (MIL), AT warning light

AUTOMATIC TRANSAXLE ON-BOARD DIAGNOSTIC FUNCTION[FS5A-EL]

id050221800300

DTC Reading Procedure

1. Perform the necessary vehicle preparation and visual inspection.
2. Connect the M-MDS to the DLC-2.
3. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Toolbox" tab.
     2. Select "Self Test".
     3. Select "Modules".
     4. Select "TCM".
   - When using the PDS (Pocket PC)
     1. Select "Module Tests".
     2. Select "TCM".
     3. Select "Self Test".
4. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
5. After completion of repairs, clear all DTCs stored in the TCM. (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].)



am3uuw0000006

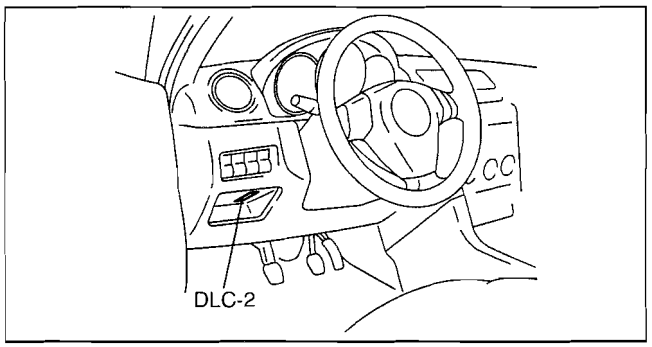
AFTER REPAIR PROCEDURE[FS5A-EL]

id050221800400

Caution

- **After repairing a malfunction, perform the following procedure to verify that the malfunction has been corrected.**
- **When performing this procedure, be sure to drive the vehicle at lawful speed and pay attention to the other vehicles.**

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Toolbox" tab.
     2. Select "SelfTest".
     3. Select "Modules".
     4. Select "TCM".
   - When using the PDS (Pocket PC)
     1. Select "Module Tests".
     2. Select "TCM".
     3. Select "SelfTest".
3. Verify the DTC according to the directions on the M-MDS screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Perform the following DTC inspections to ensure that the DTCs have been resolved:



am3uuw0000005

DTC No.	inspection
P0706, P0707, P0708	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle in D range at **20 km/h {12.4 mph} or more** for **100 s or more**. iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle in D range at **20 km/h {12.4 mph} or more** for **100 s or more**. vii. Go to Step 6.
P0711	i. Start the engine then wait **180 s or more**. ii. Warm up the engine and ATX. iii. Drive the vehicle in D range, at **within 25—59 km/h {16—36 mph}** for **90 s or more**. iv. Drive the vehicle in D range, at **60 km/h {37 mph}** for **60 s or more**. v. Turn the ignition switch to the LOCK position. vi. Start the engine. vii. Drive the vehicle in D range, at **within 25—59 km/h {16—36 mph}** for **90 s or more**. viii. Drive the vehicle in D range, at **60 km/h {37 mph} or more** for **60 s or more**. ix. Go to Step 6.
P0712, P0713	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle in D range, at **20 km/h {12 mph} or more** for **150 s or more**. iv. Go to Step 6.
P0715	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle in D range, at **41 km/h {25 mph} or more** for **0.7 s or more**. iv. Go to Step 6.
P0720	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions for **4.5 s or more**. • Turbine speed (TSS PID): **1,500 rpm or more** • Selector lever position: D range, 1GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions for **4.5 s or more**. • Turbine speed (TSS PID): **1,500 rpm or more** • Selector lever position: D range, 1GR vii. Go to Step 6.

DTC No.	inspection
P0731	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D or M range, 1GR • Throttle opening angle (THOP PID): **2.77% or more** iv. Go to Step 6.
P0732	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions 3 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D or M range, 2GR iv. Go to Step 6.
P0733	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions. • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D or M range, 3GR iv. Go to Step 6.
P0734	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions. • Vehicle speed (VSS PID): **28 km/h {17 mph} or more** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D or M range, 4GR iv. Go to Step 6.
P0735	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions. • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle (THOP PID): **2.77% or more** • Selector lever position: D or M range, from 1GR to 5GR iv. Go to Step 6.
P0741	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions for **5 s or more.** • Vehicle speed (VSS PID): **60—100 km/h {38—62 mph}** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 4GR iv. Go to Step 6.
P0742	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions. • Vehicle speed (VSS PID): **70 km/h {43 mph} or less** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 4GR • Throttle conditions — Throttle opening angle (THOP PID) is **6.25% or more** and **5 s or more** have passed. — Throttle opening angle (THOP PID) is **within 3.13—6.25%** and **3 s or more** have passed. — Throttle opening angle is at closed throttle position and **5 s or more** have passed. iv. Go to Step 6.
P0744, P0753, P0758, P0763, P0768, P0773, P0778, P0841, P0883, P1783, P2709	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle in D range and make sure that the gears shift smoothly from 1GR to 5GR and TCC is operated. iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle in D range and make sure that the gears shift smoothly from 1GR to 5GR and TCC is operated. vii. Go to Step 6.
P0745	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle in D range. iv. Go to Step 6.

DTC No.	inspection
P0751	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions for **15 s or more.** • Vehicle speed (VSS PID): **36 km/h {22 mph} or more** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 4GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions for **15 s or more.** • Vehicle speed (VSS PID): **36 km/h {22 mph} or more** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 4GR vii. Go to Step 6.
P0752	i. Start the engine. ii. Warm up the engine and ATX. iii. Selector lever position: D range iv. Depress the brake pedal. v. Turn the ignition switch to the LOCK position. vi. Start the engine. vii. Selector lever position: D range viii. Depress the brake pedal. ix. Go to Step 6.
P0756	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle (THOP PID): **2.77% or more** • Differential gear case (output) revolution speed (OSS PID): **35 rpm or more** • Selector lever position: D range, 1GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle (THOP PID): **2.77% or more** • Differential gear case (output) revolution speed (OSS PID): **35 rpm or more** • Selector lever position: D range, 1GR vii. Go to Step 6.
P0757, P0766	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions. • Vehicle speed (VSS PID): **28 km/h {17 mph} or more** • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle at closed throttle position • Differential gear case (output) revolution speed (OSS PID): **35 rpm or more** • Selector lever position: D range, 2GR and 4GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions. • Vehicle speed (VSS PID): **28 km/h {17 mph} or more** • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle at closed throttle position • Differential gear case (output) revolution speed (OSS PID): **35 rpm or more** • Selector lever position: D range, 2GR and 4GR vii. Go to Step 6.

DTC No.	inspection
P0761	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle (THOP PID): **2.77% or more** • Differential gear case (output) revolution speed (OSS PID): **35 rpm or more** • Selector lever position: D range, 1GR and 2GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle (THOP PID): **2.77% or more** • Differential gear case (output) revolution speed (OSS PID): **35 rpm or more** • Selector lever position: D range, 1GR and 2GR vii. Go to Step 6.
P0762	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions. • Vehicle speed (VSS PID): **26 km/h {16 mph} or more** • Turbine speed (TSS PID): **225—4,987 rpm** • Differential gear case (output) revolution speed (OSS PID): **35 rpm or more** • Selector lever position: D range, 3GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions. • Vehicle speed (VSS PID): **26 km/h {16 mph} or more** • Turbine speed (TSS PID): **225—4,987 rpm** • Differential gear case (output) revolution speed (OSS PID): **35 rpm or more** • Selector lever position: D range, 3GR vii. Go to Step 6.
P0767	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions for **5 s or more.** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 3GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions for **5 s or more.** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 3GR vii. Go to Step 6.
P0771	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions for **5 s or more.** • Vehicle speed (VSS PID): **60—100 km/h {38—62 mph}** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 4GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions for **5 s or more.** • Vehicle speed (VSS PID): **60—100 km/h {38—62 mph}** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 4GR vii. Go to Step 6.

DTC No.	inspection
P0772	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions. • Vehicle speed (VSS PID): **70 km/h {43 mph} or less** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 4GR • Throttle conditions — Throttle opening angle (THOP PID) is **6.25% or more** and **5 s or more** have passed. — Throttle opening angle (THOP PID) is **within 3.13—6.25%** and **3 s or more** have passed. — Throttle opening angle is at closed throttle position and **5 s or more** have passed. iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions. • Vehicle speed (VSS PID): **70 km/h {43 mph} or less** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 4GR • Throttle conditions — Throttle opening angle (THOP PID) is **6.25% or more** and **5 s or more** have passed. — Throttle opening angle (THOP PID) is **within 3.13—6.25%** and **3 s or more** have passed. — Throttle opening angle is at closed throttle position and **5 s or more** have passed. vii. Go to Step 6.
P0777	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle (THOP PID): **2.77% or more** • Selector lever position: D range, 5GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle (THOP PID): **2.77% or more** • Selector lever position: D range, 5GR vii. Go to Step 6.
P0791	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle in D range at **40 km/h {25 mph} or more** for **4.5 s or more**. iv. Go to Step 6.
P0894	i. Start the engine. ii. Warm up the engine and ATX. iii. Depress the brake pedal. iv. Throttle opening angle at closed throttle position. v. Shift the selector lever from the N position to the D range and hold for **3 s or more**. vi. Go to Step 7.
P2707	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle (THOP PID): **2.77% or more** • Selector lever position: D range, 3GR or 4GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle (THOP PID): **2.77% or more** • Selector lever position: D range, 3GR or 4GR vii. Go to Step 6.

DTC No.	inspection
P2708	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle (THOP PID): **2.77% or more** • Selector lever position: D range, 5GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle (THOP PID): **2.77% or more** • Selector lever position: D range, 5GR vii. Go to Step 6.

6. Gradually slow down and stop the vehicle.
7. Make sure that the repaired DTC does not recur.

DTC TABLE[FS5A-EL]

id050221800500

DTC No.	Condition	MIL	AT warning light illuminates	DC	Monitor item	Memory function	Page
P0706	Transaxle range (TR) switch circuit range/ performance	ON	YES	2	CCM	X	(See 05-02B-12 DTC P0706[FS5A-EL].)
P0707	Transaxle range (TR) switch circuit low input	ON	YES	1	CCM	X	(See 05-02B-13 DTC P0707[FS5A-EL].)
P0708	Transaxle range (TR) switch circuit high input	ON	YES	2	CCM	X	(See 05-02B-15 DTC P0708[FS5A-EL].)
P0711	Transaxle fluid temperature (TFT) sensor circuit range/performance (stuck)	ON	NO	2	CCM	X	(See 05-02B-17 DTC P0711[FS5A-EL].)
P0712	Transaxle fluid temperature (TFT) sensor circuit malfunction (short to ground)	ON	YES	1	CCM	X	(See 05-02B-18 DTC P0712[FS5A-EL].)
P0713	Transaxle fluid temperature (TFT) sensor circuit malfunction (open circuit)	ON	YES	1	CCM	X	(See 05-02B-21 DTC P0713[FS5A-EL].)
P0715	Input/turbine speed sensor circuit malfunction	ON	YES	1	CCM	X	(See 05-02B-23 DTC P0715[FS5A-EL].)

DTC P0706[FS5A-EL]

id050221800900

DTC P0706	Transaxle range (TR) switch range/performance
DETECTION CONDITION	• When all conditions below are satisfied and **100 s or more** have passed. — Engine speed **530 rpm or more** — Vehicle speed **20 km/h {12 mph} or more** — Voltage at TCM terminal U **0.5 V or more** — P, R, N, or D range/position not detected **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• TR switch malfunction • TR switch misadjustment • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TR SWITCH** • Turn the ignition switch to the LOCK position. • Disconnect the TR switch connector. • Inspect for resistance between TR switch terminals B and C (part-side). • Is the resistance normal? (See 05-17B-11 TRANSAXLE RANGE (TR) SWITCH INSPECTION[FS5A-EL].)	Yes	Adjust the TR switch, then go to the next step. (See 05-17B-17 TRANSAXLE RANGE (TR) SWITCH ADJUSTMENT[FS5A-EL].)
		No	Replace the TR switch, then go to the next step. (See 05-17B-14 TRANSAXLE RANGE (TR) SWITCH REMOVAL/INSTALLATION[FS5A-EL].)

STEP	INSPECTION		ACTION
4	**VERIFY TROUBLESHOOTING OF DTC P0706 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle in each range (D and R) for **100 s or more** under the following conditions: — Engine speed (RPM PID): **530 rpm or more** — Vehicle speed (VSS PID): **20 km/h {12 mph} or more** • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	No concern is detected. Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

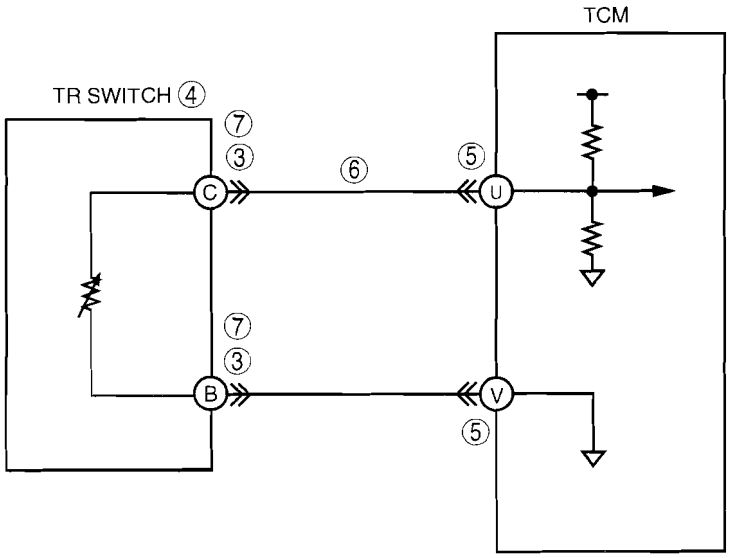
DTC P0707[FS5A-EL]

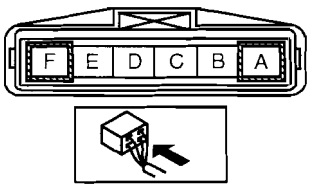
id050221801000

DTC P0707	Transaxle range (TR) switch circuit low input
DETECTION CONDITION	• When all conditions below are satisfied and **100 s or more** have passed. — Vehicle speed **20 km/h {12 mph} or more** — Engine speed **530 rpm or more** — Voltage at TCM terminal U **0.5 V or less** **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• TR switch malfunction • Short to ground in wiring harness between TR switch terminal C and TCM terminal U • TR switch signal and TR switch ground circuits shorted each other • TCM malfunction

DTC P0707	Transaxle range (TR) switch circuit low input



TR SWITCH WIRING HARNESS-SIDE CONNECTOR



TCM WIRING HARNESS-SIDE CONNECTOR

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TR SWITCH CONNECTOR** • Turn the ignition switch to the LOCK position. • Disconnect the TR switch connector. • Inspect for poor connection at TR switch terminals B and C (part-side) (such as damaged/pulled-out pins, corrosion) • Are TR switch terminals normal?	Yes	Go to the next step.
		No	Repair terminals or replace the TR switch, then go to Step 8. (See 05-17B-14 TRANSAXLE RANGE (TR) SWITCH REMOVAL/INSTALLATION[FS5A-EL].)
4	**INSPECT TR SWITCH** • Turn the ignition switch to the LOCK position. • Disconnect the TR switch connector. • Inspect for resistance between TR switch terminals B and C (part-side). • Is the resistance normal? (See 05-17B-11 TRANSAXLE RANGE (TR) SWITCH INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	Replace the TR switch, then go to Step 8. (See 05-17B-14 TRANSAXLE RANGE (TR) SWITCH REMOVAL/INSTALLATION[FS5A-EL].)
5	**INSPECT TCM CONNECTOR FOR POOR CONNECTION** • Disconnect the TCM connector. • Inspect for poor connection at terminals U and V (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.

STEP	INSPECTION		ACTION
6	**INSPECT TR SWITCH SIGNAL CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between TR switch terminal C (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for short to ground, then go to Step 8.
		No	Go to the next step.
7	**INSPECT TR SWITCH CIRCUIT FOR SHORT CIRCUIT** • Inspect for continuity between TR switch terminals B and C (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for short circuit, then go to the next step.
		No	Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0707 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle for **100 s or more** under the following conditions: — Engine speed (RPM PID): **530 rpm or more** — Vehicle speed (VSS PID): **20 km/h {12 mph} or more** • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	No concern is detected. Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

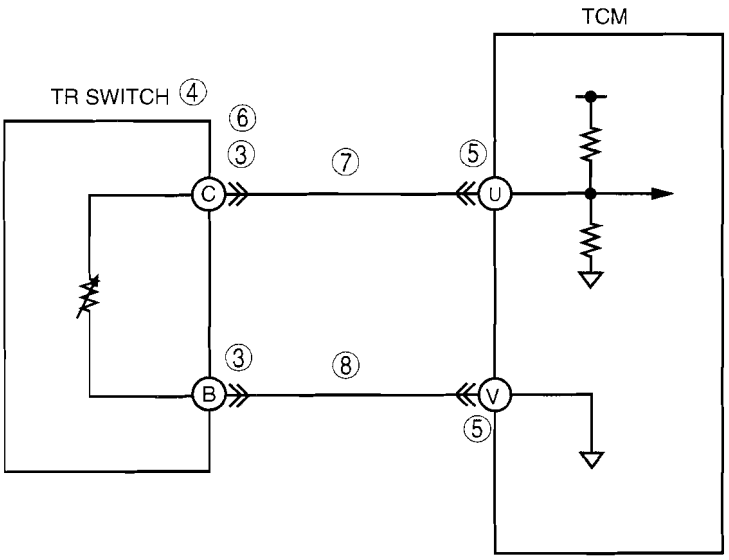
DTC P0708[FS5A-EL]

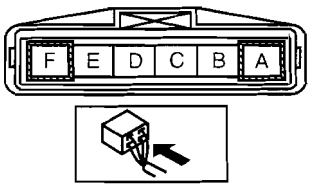
id050221801100

DTC P0708	Transaxle range (TR) switch circuit high input
DETECTION CONDITION	• When all conditions below are satisfied and **100 s or more** have passed. — Vehicle speed **20 km/h {12 mph} or more** — Engine speed **530 rpm or more** — Voltage at TCM terminal U **4.79 V or more** **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• TR switch malfunction • Open circuit in wiring harness between TR switch terminal C and TCM terminal U • Short to power supply in wiring harness between TR switch terminal C and TCM terminal U • Open circuit in wiring harness between TR switch terminal B and TCM terminal V • Poor connection of TR switch or TCM connectors • TCM malfunction

DTC P0708	Transaxle range (TR) switch circuit high input



TR SWITCH WIRING HARNESS-SIDE CONNECTOR



TCM WIRING HARNESS-SIDE CONNECTOR

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TR SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the TR switch connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Are TR switch terminals normal?	Yes	Go to the next step.
		No	Repair terminals or replace the TR switch, then go to Step 9. (See 05-17B-14 TRANSAXLE RANGE (TR) SWITCH REMOVAL/INSTALLATION[FS5A-EL].)
4	**INSPECT TR SWITCH** • Inspect for resistance between TR switch terminals B and C (part-side). • Is the resistance normal? (See 05-17B-11 TRANSAXLE RANGE (TR) SWITCH INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	Replace the TR switch, then go to Step 9. (See 05-17B-14 TRANSAXLE RANGE (TR) SWITCH REMOVAL/INSTALLATION[FS5A-EL].)
5	**INSPECT TCM CONNECTOR FOR POOR CONNECTION** • Disconnect the TCM connector. • Inspect for poor connection at terminals U and V (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to step 9.
		No	Go to the next step.

STEP	INSPECTION		ACTION
6	**INSPECT TR SWITCH SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (engine off). • Inspect the voltage between TR switch terminal C and (wiring harness-side) body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for short to power supply, then go to Step 9.
		No	Go to the next step.
7	**INSPECT TR SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between TR switch terminal C (wiring harness-side) and TCM terminal U. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open circuit, then go to step 9.
8	**INSPECT TR SWITCH GROUND CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between TR switch terminal B (wiring harness-side) and TCM terminal V. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0708 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle for **100 s or more** under the following conditions: — Engine speed (RPM PID) **530 rpm or more** — Vehicle speed (VSS PID) **20 km/h {12 mph} or more** • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	No concern is detected. Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0711[FS5A-EL]

id050221801200

DTC P0711	Transaxle fluid temperature (TFT) sensor circuit range/performance (stuck)
DETECTION CONDITION	• When all conditions below are satisfied. — When **180 s or more** have passed after the engine is started, vehicle is driven for **90 s or more** at vehicle speed **between 25—59 km/h {15—36 mph}**, then **60 km/h {37 mph} or more** for **60 s or more**. — P0712, P0713 not output — Variation in ATF voltage **0.03 V or less** **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light does not illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• TFT sensor malfunction • Connector corrosion • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.

STEP	INSPECTION		ACTION
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TFT SENSOR VOLTAGE** • Turn the ignition switch to the ON position (engine off). • Measure the voltage at TCM terminal AA. • Record terminal AA voltage. • Start the engine. • Drive the vehicle at **60 km/h {37 mph} or more** for **330 s or more**. • Record terminal AA voltage again. • Is the variation in voltage **0.03 V or more**?	Yes	Go to Step 5.
		No	Go to the next step.
4	**INSPECT TERMINAL CONDITION** • Turn the ignition switch to the LOCK position. • Disconnect the transaxle connector (primary). • Inspect terminals for corrosion. • Are terminals normal?	Yes	Go to the next step.
		No	Repair or replace the terminals, then go to the next step.
5	**VERIFY TROUBLESHOOTING OF DTC P0711 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Decrease ATF temperature to **20 °C {68 °F} or less**. • Start the engine and wait for **180 s or more**. • Drive the vehicle at a vehicle speed **between 25—59 km/h {15—36 mph}** for **90 s or more**. • Drive the vehicle at a vehicle speed **60 km/h {37 mph} or more** for **60 s or more**. • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0712[FS5A-EL]

id050221801300

DTC P0712	Transaxle fluid temperature (TFT) sensor circuit malfunction (short to ground)
DETECTION CONDITION	• If the TCM detects either of the following conditions for **150 s or more**, the TCM determines that the TFT sensor circuit has a malfunction. — TFT sensor voltage **0.12 V or less** and vehicle speed **20 km/h {12 mph} or more** **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction conditions during the first drive cycle. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• TFT sensor malfunction • Short to ground in wiring harness between TFT sensor and transaxle connector (primary) terminal E • Short to ground in wiring harness between TFT sensor and transaxle connector (primary) terminal H • Short to ground in wiring harness between transaxle connector (primary) terminal E and TCM terminal AA • Damaged connectors between TFT sensor and TCM • TCM malfunction

DTC P0712	Transaxle fluid temperature (TFT) sensor circuit malfunction (short to ground)

05-02B

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY CURRENT INPUT SIGNAL STATUS** • Turn the ignition switch to the ON position (engine off). • Inspect the voltage at TCM terminal AA. • Is the voltage **0.06 V or more**?	Yes	Go to the intermittent concern troubleshooting procedure. (See 01-03A-66 INTERMITTENT CONCERN TROUBLESHOOTING[LF, L3].)
		No	Go to the next step.
4	**INSPECT TERMINAL CONDITION** • Turn the ignition switch to the LOCK position. • Disconnect the transaxle connector (primary). • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are the terminals bent?	Yes	Repair or replace the terminals, then go to Step 8. • If the terminals cannot be repaired, replace the wiring harness, then go to Step 8.
		No	Go to the next step.
5	**INSPECT TFT SENSOR CIRCUIT** • Turn the ignition switch to the ON position (engine off). • Verify that the voltage changes to **4.67 V or more** at TCM terminal AA when transaxle connector (primary) is disconnected. • Does the voltage change?	Yes	Go to the next step.
		No	Go to Step 8.
6	**INSPECT TFT SENSOR CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between transaxle connector (primary) terminals (transaxle case side) and body ground. — E and body ground — H and body ground • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 8.
		No	Replace the TFT sensor, then go to Step 8. (See 05-17B-21 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR REMOVAL/INSTALLATION[FS5A-EL].)
7	**INSPECT TRANSAXLE CONNECTOR CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between transaxle connector (primary) terminal E (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to the next step.
		No	Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0712 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle under the following condition for **150 s or more**. — Vehicle speed (VSS PID) **20 km/h {12 mph} or more**. • Is the same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0713[FS5A-EL]

id050221801400

DTC P0713	Transaxle fluid temperature (TFT) sensor circuit malfunction (open circuit)
DETECTION CONDITION	• If the TCM detects the following condition for **150 s or more**, the TCM determines that the TFT sensor circuit has a malfunction. — TFT sensor voltage **4.67 V or more** and vehicle speed **20 km/h {12 mph} or more** **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction conditions during the first drive cycle. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• TFT sensor malfunction • Open circuit in wiring harness between TFT sensor and transaxle connector (primary) terminal E • Open circuit in wiring harness between TFT sensor and transaxle connector (primary) terminal H • Open circuit in wiring harness between transaxle connector (primary) terminal E and TCM terminal AA • Open circuit in wiring harness between transaxle connector (primary) terminal H and TCM terminal V • Damaged connectors between TFT sensor and TCM • TCM malfunction

		AI	AF	AC	Z	W	T	Q	N	K	H	E	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**VERIFY CURRENT INPUT SIGNAL STATUS** • Turn the ignition switch to the ON position (engine off). • Measure the voltage at TCM terminal AA. • Is the voltage **4.67 V or less**?	Yes	Go to the intermittent concern troubleshooting procedure. (See 01-03A-66 INTERMITTENT CONCERN TROUBLESHOOTING[LF, L3].)
		No	Go to the next step.
4	**INSPECT TRANSAXLE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Inspect transaxle connector (primary) connection. • Disconnect the transaxle connector (primary). • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 10.
5	**INSPECT TFT SENSOR CIRCUIT** • Turn the ignition switch to the ON position (engine off). • Measure the voltage at TCM terminal AA when connect between transaxle connector (primary) terminals E and H (wiring harness-side) using jumper wire. • Verify that voltage changes to **0.06 V or less**. • Does the voltage change?	Yes	Go to the next step.
		No	Go to Step 7.
6	**INSPECT TFT SENSOR CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between transaxle connector (primary) terminals (transaxle case side) E and H. • Is there continuity?	Yes	Replace the TFT sensor, then go to Step 10. (See 05-17B-21 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR REMOVAL/INSTALLATION[FS5A-EL].)
		No	Repair or replace the wiring harness, then go to Step 10.
7	**INSPECT TCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 10.
8	**INSPECT WIRING HARNESS FOR OPEN CIRCUIT** • Disconnect the transaxle connector (primary). • Connect the TCM connector. • Turn the ignition switch to the ON position (engine off). • Inspect the voltage at transaxle connector (primary) terminal E (vehicle wiring harness-side). • Is the voltage **5 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 10.
9	**INSPECT TRANSAXLE CONNECTOR CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch to the LOCK position. • Inspect for continuity between transaxle connector (primary) terminal H (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0713 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle under the following condition for **150 s or more**. — Vehicle speed (VSS PID) **20 km/h {12 mph} or more**. • Is the same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

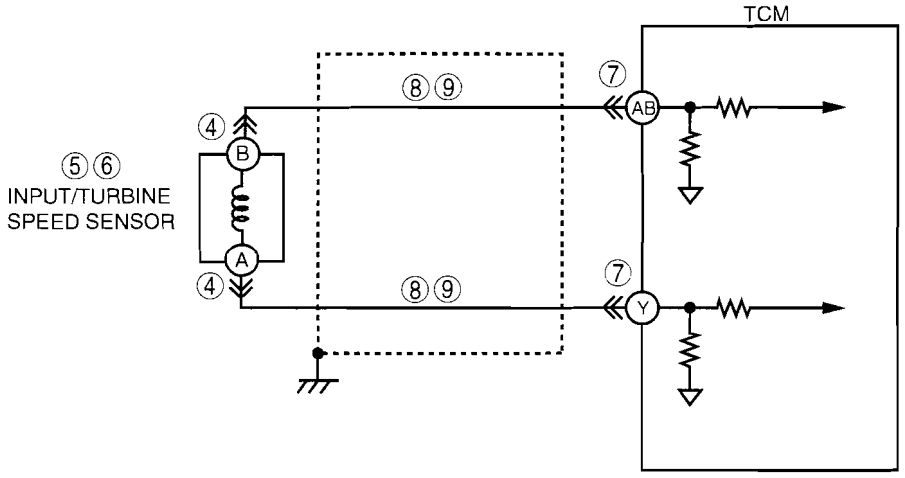
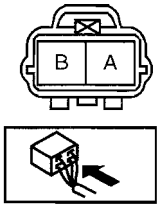
DTC P0715[FS5A-EL]

id050221806100

DTC P0715	Input/turbine speed sensor circuit malfunction
DETECTION CONDITION	• When all conditions below are satisfied and **0.7 s or more** have passed. — D range of TR switch input — Driving vehicle at vehicle speed of **41 km/h {25 mph} or more** — Input/turbine speed sensor signal not input **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction conditions during the first drive cycle. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Input/turbine speed sensor malfunction • Short to ground in wiring harness between input/turbine speed sensor terminal A and TCM terminal Y • Short to ground in wiring harness between input/turbine speed sensor terminal B and TCM terminal AB • Open circuit in wiring harness between input/turbine speed sensor terminal A and TCM terminal Y • Open circuit in wiring harness between input/turbine speed sensor terminal B and TCM terminal AB • Damaged connectors between input/turbine speed sensor and TCM • TCM malfunction



INPUT/TURBINE SPEED SENSOR WIRING HARNESS-SIDE CONNECTOR



TCM WIRING HARNESS-SIDE CONNECTOR

AL	AJ	AG	AD	AA	X	U	R	O	L	I	F	C	A
AM	AK	AH	AE	AB	Y	V	S	P	M	J	G	D	B
		AI	AF	AC	Z	W	T	Q	N	K	H	E	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY CURRENT INPUT SIGNAL STATUS** • Turn the ignition switch to the LOCK position. • Start the engine. • Measure the frequency of input/turbine speed sensor using a oscilloscope. — IG ON: **0 Hz** — Idle: **Within 320—374 Hz** (P, N position) • Are frequencies of input/turbine speed sensor within specifications?	Yes	Go to the intermittent concern troubleshooting procedure. (See 01-03A-66 INTERMITTENT CONCERN TROUBLESHOOTING[LF, L3].)
		No	Go to the next step.
4	**INSPECT INPUT/TURBINE SPEED SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the input/turbine speed sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 10.
5	**INSPECT INPUT/TURBINE SPEED SENSOR RESISTANCE** • Measure the resistance between the input/ turbine speed sensor terminals (part-side). • Is the resistance **within 250—600 ohms** between input/turbine speed sensor terminals (part-side)? (See 05-17B-24 INPUT/TURBINE SPEED SENSOR INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	Replace the input/turbine speed sensor, then go to Step 10. (See 05-17B-25 INPUT/TURBINE SPEED SENSOR REMOVAL/INSTALLATION[FS5A-EL].)
6	**INSPECT INPUT/TURBINE SPEED SENSOR** • Remove input/turbine speed sensor. • Is there iron powder stuck on input/turbine speed sensor? (See 05-17B-25 INPUT/TURBINE SPEED SENSOR REMOVAL/INSTALLATION[FS5A-EL].)	Yes	Clean the input/turbine speed sensor, then go to Step 10.
		No	Go to the next step.
7	**INSPECT TCM CONNECTOR FOR POOR CONNECTION** • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 10.
8	**INSPECT INPUT/TURBINE SPEED SENSOR CIRCUIT FOR OPEN CIRCUIT** • Inspect the following input/turbine speed sensor terminals (wiring harness-side) and TCM terminals (wiring harness-side): — A and Y — B and AB • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 10.
9	**INSPECT INPUT/TURBINE SPEED SENSOR CIRCUIT FOR SHORT TO GROUND** • Inspect input/turbine speed sensor terminal (wiring harness-side) and body ground. — A and body ground — B and body ground • Is there continuity?	Yes	Repair or replace the wiring harness, then go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
10	**VERIFY TROUBLESHOOTING OF DTC P0715 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle a vehicle speed **41 km/h {25 mph} or more** for **0.7 s or more**. • Is the same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0720[FS5A-EL]

id050221809800

DTC P0720	Vehicle speed sensor (VSS) circuit malfunction
DETECTION CONDITION	• Vehicle speed signal is not input after the following conditions are met and **4.5 s or more** have passed. — D range switch ON — Engine coolant temperature **60 °C {140 °F} or more** — Turbine speed **1,500 rpm or more** — Secondary gear revolution speed **50 rpm or more** **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction conditions during the first drive cycle. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• VSS malfunction • Open circuit in wiring harness between VSS terminal B and TCM terminal Z • Short to ground in wiring harness between VSS terminal B and TCM terminal Z • Open circuit in wiring harness between VSS terminal A and main relay terminal C • Short to ground in wiring harness between VSS terminal A and AT main relay terminal C • Open circuit in wiring harness between VSS terminal C and body ground • Damaged connectors between VSS and TCM • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair Information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT VSS CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the VSS connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the pin or connector, then go to Step 11.
4	**INSPECT VSS POWER CIRCUIT FOR OPEN CIRCUIT** • Verify that the VSS connector is disconnected. • Turn the ignition switch to the ON position (engine off). • Inspect the voltage between VSS terminal A (wiring harness-side) and ground. • Is the voltage **B+**?	Yes	Go to Step 6.
		No	Go to the next step.
5	**INSPECT VSS POWER CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between VSS terminal A (wiring harness-side) and ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
6	**INSPECT VSS GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the VSS connector is disconnected. • Inspect for continuity between VSS (wiring harness-side) terminal C and ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
7	**INSPECT TCM CONNECTOR FOR POOR CONNECTION** • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the pin or connector, then go to Step 11.
8	**INSPECT VEHICLE SPEED SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Disconnect the TCM connector and VSS connector. • Inspect for continuity between VSS terminal B and TCM terminal Z. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
9	**INSPECT VEHICLE SPEED SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verity that the VSS connector and TCM connector are disconnected. • Inspect for continuity between TCM terminal Z and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to the next step.
		No	Replace the VSS, then go to the next step. (See 05-17B-29 VEHICLE SPEED SENSOR (VSS) REMOVAL/INSTALLATION[FS5A-EL].)
10	**INSPECT VEHICLE SPEED SENSOR** • Inspect the VSS. (See 05-17B-28 VEHICLE SPEED SENSOR (VSS) INSPECTION[FS5A-EL].) • Is VSS normal?	Yes	Go to the next step.
		No	Repair or replace the VSS, then go to Step 11.

STEP	INSPECTION		ACTION
11	**VERIFY TROUBLESHOOTING OF DTC P0720 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Warm up engine. • Drive the vehicle under the following conditions for **4.5 s or more** while monitoring PIDs. — Engine coolant temp (ECT PID): **60 °C {140 °F} or more** — Drive in D or M range — Frequency of input/turbine speed sensor: **800 Hz or more** • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	No concern is detected. Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0731[FS5A-EL]

id050221801900

DTC P0731	Gear 1 incorrect (incorrect gear ratio detected)
DETECTION CONDITION	• The TCM monitors the revolution ratio of the forward clutch drum revolution to secondary gear revolution when the following monitoring conditions are met. If the revolution ratio is **2.157 or less**, the TCM determines that there is a malfunction. **Monitoring conditions:** — Engine running — ATF temperature **20 °C {68 °F} or more** — Driving in 1GR in D or M range — Turbine speed **within 225—4,987 rpm** — Secondary gear revolution speed **50 rpm or more** — Throttle opening angle **2.77% or more** — Differential gear case (output) revolution speed **35 rpm or more**. — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate. • The AT warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is not available. • A PENDING CODE is not available. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid A stuck • Pressure control solenoid A stuck • Line pressure low • One-way clutch slipping • Forward clutch slipping • Control valve stuck • Oil pump malfunction • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information.
		No	Go to the next step.
2	**INSPECT ATF CONDITION** • Inspect the ATF condition. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Replace the ATF, then go to Step 8.
3	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 8. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)
4	**INSPECT SHIFT SOLENOID A** • Perform operation inspection. (See 05-17B-30 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].) • Verify the click sound of shift solenoid A when applying B+ to transaxle terminal A. • Was a click heard from solenoids?	Yes	Go to the next step.
		No	Replace the solenoid that you could not hear a click sound, then go to Step 8. (See 05-17B-32 SOLENOID VALVE REMOVAL/ INSTALLATION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	All ranges: Replace the oil pump, then go to Step 8. Any ranges: Replace the primary control valve body, then go to Step 8. (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].)
6	**INSPECT STALL SPEED** • Measure the stall speed in D range. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) • Is the stall speed within the specification?	Yes	Go to the next step.
		No	Replace the automatic transaxle, then go to Step 8. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION[FS5A-EL].)
7	**INSPECT FREQUENCY OF INPUT/TURBINE SPEED SENSOR WHEN DRIVING VEHICLE** • Turn the ignition switch to the LOCK position. • Connect the M-MDS. • Start the engine. • Measure the frequency of input/turbine speed sensor while driving vehicle under the following conditions: — Vehicle speed (VSS PID): **20 km/h {12 mph}** — Drive in the D range, 1GR — Throttle opening angle (THOP PID): **approx. 25%** • Was the frequency of the input/turbine speed sensor at **approx. 1,300 Hz**?	Yes	Go to the next step.
		No	Replace the primary control valve body, then go to the next step. (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].)

STEP	INSPECTION		ACTION
8	**VERIFY REPAIR OF DTC P0731** • Make sure to reconnect all the disconnected connectors. • Clear the DTC using the M-MDS. • Start the engine. • Warm up the transaxle. • Drive the vehicle under the following conditions at least 4 times for **more than 1 s**: — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range, 1GR — Throttle opening angle (THOP PID): **2.77% or more** — Vehicle speed (VSS PID): **4 km/h {3 mph} or more** • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0732[FS5A-EL]

id050221802000

DTC P0732	Gear 2 incorrect (incorrect gear ratio detected)
DETECTION CONDITION	• The TCM monitors revolution ratio of the forward clutch drum revolution to the secondary gear case revolution when the following monitoring conditions are met. If revolution ratio is **1.249 or less** or **2.157 or more**, the TCM determines that there is a malfunction. **Monitoring conditions:** — Engine running — ATF temperature **20 °C {68 °F} or more** — Driving in 2 GR in D or M range — Turbine speed **within 225—4,987 rpm** — Secondary gear revolution speed **50 rpm or more** — Differential gear case (output) revolution speed **35 rpm or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate. • The AT warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is not available. • A PENDING CODE is not available. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoids A, B or C stuck • Pressure control solenoid A stuck • Line pressure low • 2-4 brake band slipping • Forward clutch slipping • Control valve stuck • Oil pump malfunction • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information.
		No	Go to the next step.
2	**INSPECT ATF CONDITION** • Inspect the ATF condition. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Replace the ATF, then go to Step 8.
3	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 8. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)
4	**INSPECTION SHIFT SOLENOID A, B AND C FOR CLICK SOUND** • Perform operation inspection. (See 05-17B-30 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].) • Verify the click sound of shift solenoid A, B, and C when applying B+ to each transaxle terminal. • Was a click heard from solenoids?	Yes	Go to the next step.
		No	Replace the solenoid where you could not hear a click sound, then go to Step 8. (See 05-17B-32 SOLENOID VALVE REMOVAL/ INSTALLATION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	All ranges: Replace the oil pump, then go to Step 8. Any ranges: Replace the primary control valve body, then go to Step 8. (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].)
6	**INSPECT STALL SPEED** • Measure the stall speed in D range. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) • Is the stall speed within the specification?	Yes	Go to the next step.
		No	Replace the automatic transaxle, then go to Step 8. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION[FS5A-EL].)
7	**INSPECT FREQUENCY OF INPUT/TURBINE SPEED SENSOR WHEN DRIVING VEHICLE** • Turn the ignition switch to the LOCK position. • Connect the M-MDS. • Start the engine. • Measure the frequency of input/turbine speed sensor while driving vehicle under the following conditions: — Vehicle speed (VSS PID): **40 km/h {24 mph}** — Drive in the D range, 2GR — Throttle opening angle (THOP PID): **approx. 25%** • Was the frequency of the input/turbine speed sensor at **approx. 1,300 Hz**?	Yes	Go to the next step.
		No	Replace the primary control valve body, then go to the next step. (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].)

STEP	INSPECTION		ACTION
8	**VERIFY REPAIR OF DTC P0732** • Make sure to reconnect all the disconnected connectors. • Clear the DTC using the M-MDS. • Start the engine. • Warm up the transaxle. • Drive the vehicle under the following conditions at least 3 times for **more than 1 s**: — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range, 2GR — Vehicle speed (VSS PID): **3.8 km/h {2.4 mph} or more** • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0733[FS5A-EL]

id050221802100

DTC P0733	Gear 3 incorrect (incorrect gear ratio detected)
DETECTION CONDITION	• The TCM monitors revolution ratio of the forward clutch drum revolution to the secondary gear case revolution when the following monitoring conditions are met. If the revolution ratio is **0.863 or less**, the TCM determines that there is a malfunction. **Monitoring conditions:** — Engine running — ATF temperature **20 °C {68 °F} or more** — Driving in 3 GR in D or M range — Torque converter clutch (TCC) not operating — Turbine speed **within 225—4,987 rpm** — Secondary gear revolution speed **50 rpm or more** — Differential gear case (output) revolution speed **35 rpm or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 • The TCM monitors revolution ratio of the forward clutch drum revolution to the secondary gear case revolution when the following monitoring conditions are met. If the revolution ratio is **2.175 or more**, the TCM determines that there is a malfunction. **Monitoring conditions:** — Engine running — ATF temperature **20 °C {68 °F} or more** — Driving in 3 GR in D or M range — Turbine speed **within 225—4,987 rpm** — Secondary gear revolution speed **50 rpm or more** — Differential gear case (output) revolution speed **35 rpm or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 • The TCM monitors revolution ratio of the forward clutch drum revolution to the secondary gear case revolution when the following monitoring conditions are met. If the revolution ratio is **within 1.345—1.644**, the TCM determines that there is a malfunction. **Monitoring conditions:** — Engine running — ATF temperature **20 °C {68 °F} or more** — Driving in 3 GR in D or M range — Torque converter clutch (TCC) not operating — Vehicle speed **26 km/h {16 mph} or more** — Turbine speed **within 225—4,987 rpm** — Secondary gear revolution speed **50 rpm or more** — Differential gear case (output) revolution speed **35 rpm or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate. • The AT warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is not available. • A PENDING CODE is not available. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoids A or C stuck • Pressure control solenoid A stuck • Line pressure low • 3-4 clutch slipping • Forward clutch slipping • Control valve stuck (Bypass, TCC or 3-4 shift valve) • Oil pump malfunction • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information.
		No	Go to the next step.
2	**INSPECT ATF CONDITION** • Inspect the ATF condition. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Replace the ATF, then go to Step 8.
3	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 8. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)
4	**INSPECTION SHIFT SOLENOID A AND C FOR CLICK SOUND** • Perform operation inspection. (See 05-17B-30 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].) • Verify the click sound of shift solenoid A and C when applying B+ to each transaxle terminal. • Was a click heard from solenoids?	Yes	Go to the next step.
		No	Replace the solenoid where you could not hear a click sound, then go to Step 8. (See 05-17B-32 SOLENOID VALVE REMOVAL/ INSTALLATION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	All ranges: Replace the oil pump, then go to Step 8. Any ranges: Replace the primary control valve body, then go to Step 8. (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].)
6	**INSPECT STALL SPEED** • Measure the stall speed in D range. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) • Is the stall speed within the specification?	Yes	Go to the next step.
		No	Replace the automatic transaxle, then go to Step 8. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION[FS5A-EL].)
7	**INSPECT FREQUENCY OF INPUT/TURBINE SPEED SENSOR WHEN DRIVING VEHICLE** • Turn the ignition switch to the LOCK position. • Connect the M-MDS. • Start the engine. • Measure the frequency of input/turbine speed sensor while driving vehicle under the following conditions: — Vehicle speed (VSS PID): **60 km/h {37 mph}** — Drive in the D range, 3GR — Throttle opening angle (THOP PID): **approx. 25%** • Was the frequency of the input/turbine speed sensor at **approx. 1,300 Hz**?	Yes	Go to the next step.
		No	Replace the primary control valve body, then go to the next step. (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].)

STEP	INSPECTION		ACTION
8	**VERIFY REPAIR OF DTC P0733** • Make sure to reconnect all the disconnected connectors. • Clear the DTC using the M-MDS. • Start the engine. • Warm up the transaxle. • Drive the vehicle under the following conditions for **more than 2 s**: — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range, 3GR — Vehicle speed (VSS PID): **26 km/h {16 mph} or more** • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0734[FS5A-EL]

id050221802200

DTC P0734	Gear 4 incorrect (incorrect gear ratio detected)
DETECTION CONDITION	• The TCM monitors revolution ratio of the forward clutch drum revolution to the secondary gear case revolution when the following monitoring conditions are met. If the revolution ratio is **0.6 or less** or **1.249 or more**, the TCM determines that there is a malfunction. **Monitoring conditions:** — Engine running — ATF temperature **20 °C {68 °F} or more** — Driving in 4GR in D or M range — Turbine speed **within 225—4,987 rpm** — Secondary gear revolution speed **50 rpm or more** — Vehicle speed **28 km/h {17 mph} or more** — Throttle opening angle at closed throttle position — Differential gear case (output) revolution speed **35 rpm or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 • The TCM monitors revolution ratio of the forward clutch drum revolution to the secondary gear case revolution when the following monitoring conditions are met. If the revolution ratio is **within 0.91—1.09**, the TCM determines that there is a malfunction. **Monitoring conditions:** — Engine running — ATF temperature **20 °C {68 °F} or more** — Driving in 4GR in D or M range — Torque converter clutch (TCC) not operating — Vehicle speed **36 km/h {22 mph} or more** — Turbine speed **within 225—4,987 rpm** — Secondary gear revolution speed **50 rpm or more** — Differential gear case (output) revolution speed **35 rpm or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate. • The AT warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is not available. • A PENDING CODE is not available. • The DTC is stored in the TCM memory.

DTC P0734	Gear 4 incorrect (incorrect gear ratio detected)
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoids A, B or C stuck • Pressure control solenoid A stuck • Line pressure low • 2-4 brake band slipping • 3-4 clutch slipping • Forward clutch slipping • Control valve stuck (Bypass or 3-4 shift valve) • Oil pump malfunction • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information.
		No	Go to the next step.
2	**INSPECT ATF CONDITION** • Inspect the ATF condition. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Replace the ATF, then go to Step 8.
3	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 8. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)
4	**INSPECT SHIFT SOLENOID A AND D FOR CLICK SOUND** • Perform operation inspection. (See 05-17B-30 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].) • Verify the click sound of shift solenoids A and D when applying B+ to each transaxle terminal. **Note** • The click from solenoid D is barely audible. Remove solenoids to correctly inspect if necessary. • Was a click heard from solenoids?	Yes	Go to the next step.
		No	Replace the solenoid where you could not hear click sound, then go to Step 8. (See 05-17B-32 SOLENOID VALVE REMOVAL/ INSTALLATION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	All ranges: Replace the oil pump, then go to Step 8. Any ranges: Replace the primary control valve body, then go to Step 8. (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].)
6	**INSPECT STALL SPEED** • Measure the stall speed in D range. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) • Is the stall speed within the specification?	Yes	Go to the next step.
		No	Replace the automatic transaxle, then go to Step 8. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION[FS5A-EL].)

STEP	INSPECTION		ACTION
7	**INSPECT FREQUENCY OF INPUT/TURBINE SPEED SENSOR WHEN DRIVING VEHICLE** • Turn the ignition switch to the LOCK position. • Connect the M-MDS. • Start the engine. • Measure the frequency of input/turbine speed sensor while driving vehicle under the following conditions: — Vehicle speed (VSS PID): **80 km/h {49 mph}** — Drive in the D range, 4GR — Throttle opening angle (THOP PID): **approx. 25%** • Was the frequency of the input/turbine speed sensor at **approx. 1,300 Hz**?	Yes	Go to the next step.
		No	Replace the primary control valve body, then go to the next step. (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].)
8	**VERIFY REPAIR OF DTC P0734** • Make sure to reconnect all the disconnected connectors. • Clear the DTC using the M-MDS. • Start the engine. • Warm up the transaxle. • Drive the vehicle under the following conditions for **more than 5 s**: — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range, 4GR — Throttle opening angle (THOP PID): **0%** — Vehicle speed (VSS PID): **36 km/h {22 mph} or more** • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0735[FS5A-EL]

id050221802300

DTC P0735	Gear 5 incorrect (incorrect gear ratio detected)
DETECTION CONDITION	• The TCM monitors revolution ratio of the secondary gear revolution to the differential gear case revolution when the following monitoring conditions are met. When any of the following conditions are met: — Revolution ratio of the secondary gear and the differential gear case is **1.11 or less** when driving in 3GR or 4GR. — Revolution ratio of the secondary gear and differential gear case is **1.11 or more** when driving in 5GR. **Monitoring conditions:** — Engine running — ATF temperature **20 °C {68 °F} or more** — Throttle opening angle **2.77% or more** — Secondary gear revolution speed **50 rpm or more** — Turbine speed **within 225—4,987 rpm** — Vehicle speed **29 km/h {18 mph} or more** — Differential gear case (output) revolution speed **35 rpm or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0777, P0778, P0791, P2707, P2708, P2709 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate. • The AT warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is not available. • A PENDING CODE is not available. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid F stuck • Pressure control solenoid B stuck • Line pressure low • Direct clutch slipping • Reduction brake slipping • Control valve stuck (Bypass or 4-5 shift valve) • Oil pump malfunction • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information.
		No	Go to the next step.
2	**INSPECT ATF CONDITION** • Inspect the ATF condition. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Replace the ATF, then go to Step 9.
3	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 9. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)
4	**INSPECT SHIFT SOLENOID F AND PRESSURE CONTROL SOLENOID B FOR CLICK SOUND** • Perform operation inspection. (See 05-17B-33 SOLENOID VALVE INSPECTION (SECONDARY CONTROL VALVE BODY)[FS5A-EL].) • Verify the click sound of shift solenoid F and pressure control solenoid B when applying B+ to each transaxle terminal. • Was a click heard from solenoids?	Yes	Go to the next step.
		No	Replace the solenoid where you could not hear click sound, then go to Step 9. (See 05-17B-32 SOLENOID VALVE REMOVAL/ INSTALLATION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].)

STEP	INSPECTION		ACTION
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	All ranges: Replace the oil pump, then go to Step 9. Any ranges: Replace the secondary control valve body, then go to Step 8. (See 05-17B-54 SECONDARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-55 SECONDARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].)
6	**INSPECT STALL SPEED** • Measure the stall speed in D range. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) • Is the stall speed within the specification?	Yes	Go to the next step.
		No	Replace the automatic transaxle, then go to Step 9. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FS5A-EL].)
7	**INSPECT FREQUENCY OF INTERMEDIATE SENSOR WHEN DRIVING VEHICLE** • Turn the ignition switch to the LOCK position. • Connect the M-MDS. • Start the engine. • Measure the frequency of intermediate sensor while driving vehicle under the following conditions: — Vehicle speed (VSS PID): **80 km/h {49 mph}** — Drive in the D range, 4GR — Throttle opening angle (THOP PID): **approx. 25%** • Was the frequency of the intermediate sensor at **approx. 4,800 Hz**?	Yes	Go to the next step.
		No	Replace the secondary control valve body, then go to the next step. (See 05-17B-54 SECONDARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-55 SECONDARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].)
8	**INSPECT FREQUENCY OF INTERMEDIATE SENSOR WHEN DRIVING VEHICLE** • Turn the ignition switch to the LOCK position. • Connect the M-MDS. • Start the engine. • Measure the frequency of input/turbine speed sensor while driving vehicle under the following conditions: — Vehicle speed (VSS PID): **90 km/h {56 mph}** — Drive in the D range, 5GR — Throttle opening angle (THOP PID): **approx. 25%** • Was the frequency of the input/turbine speed sensor at **approx. 4,100 Hz**?	Yes	Go to the next step.
		No	Replace the secondary control valve body, then go to the next step. (See 05-17B-54 SECONDARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-55 SECONDARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].)
9	**VERIFY REPAIR OF DTC P0735** • Make sure to reconnect all the disconnected connectors. • Clear the DTC using the M-MDS. • Start the engine. • Warm up the transaxle. • Drive the vehicle under the following conditions for **more than 5 s**: — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range, 5GR — Throttle opening angle (THOP PID): **2.77% or more** • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0741[FS5A-EL]

id050221807900

DTC P0741	Torque converter clutch (TCC) stuck off
DETECTION CONDITION	• When all conditions below are satisfied. — ATF temperature **20 °C {68 °F} or more** — Driving in 4GR at D range — Engine running — Turbine speed **within 225—4,987 rpm** — Vehicle speed **within 60—100 km/h {37—62 mph}** — Torque converter clutch (TCC) operating — Shift solenoid A duty value exceeds **99%** — Difference between engine speed and turbine speed **more than 100 rpm** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate if TCM detects the above malfunction conditions during first the drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is not available. • The AT warning light illuminates • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoids A, B, C, D, E, and pressure control solenoid A stuck • Line pressure low • 2-4 brake band slipping • 3-4 clutch slipping • Control valve stuck • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 4. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FS5A-EL].)
3	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 6. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)
4	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 6. • Any ranges: Replace the automatic transaxle, then go to Step 6. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)

STEP	INSPECTION		ACTION
5	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the primary control valve body. • Disassemble the primary control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)	Yes	Replace the automatic transaxle, then go to the next step (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
6	**VERIFY TROUBLESHOOTING OF DTC P0741 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up engine and ATX. • Drive the vehicle under the following conditions for **5 s or more**. — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range, 4GR (TCC operation) — Vehicle speed (VSS PID): **within 60—100 km/h {37—62 mph}** • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0742[FS5A-EL]

id050221808000

DTC P0742	Torque converter clutch (TCC) stuck on
DETECTION CONDITION	• All of the following conditions are satisfied under each of the following throttle conditions. — ATF temperature **20 °C {68 °F} or more** — Driving in 4GR at D or M range — Engine running — Turbine speed **within 225—4,987 rpm** — Vehicle speed **70 km/h {43 mph} or less** — Torque converter clutch (TCC) not operating — Difference between engine speed and turbine speed **50 rpm or less** — DTC P0734 not output — Throttle conditions • Throttle opening angle (THOP PID) is **6.25% or more** and **5 s or more** have passed. • Throttle opening angle (THOP PID) is **within 3.13—6.25%** and **3 s or more** have passed. • Throttle opening angle is at closed throttle position and **5 s or more** have passed. **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate if TCM detects the above malfunction conditions during first the drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is not available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoids A, B, C, D, E, and pressure control solenoid A stuck • Line pressure low • 2-4 brake band slipping • 3-4 clutch slipping • Control valve stuck • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 4. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FS5A-EL].)
3	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 6. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)
4	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 6. • Any ranges: Replace the automatic transaxle, then go to Step 6. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
5	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the primary control valve body. • Disassemble the primary control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)	Yes	Replace the automatic transaxle, then go to the next step. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
6	**VERIFY TROUBLESHOOTING OF DTC P0742 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up engine and ATX. • Drive the vehicle under the following conditions: — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range, 4GR (TCC not in operation) — Vehicle speed (VSS PID): **70 km/h {43 mph} or less**. • Throttle conditions — Throttle opening angle (THOP PID) **6.25% or more** and **5 s or more** have passed. — Throttle opening angle (THOP PID) **within 3.13—6.25%** and **3 s or more** have passed. — Throttle opening angle at closed throttle position and **5 s or more** have passed. • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0744[FS5A-EL]

id050221809700

DTC P0744	Slip control malfunction
DETECTION CONDITION	• With the engine running, all of the following conditions are met: — ATF temperature **20 °C {68 °F} or more** — Secondary gear revolution speed **50 rpm or more** — Differential gear case (output) revolution speed **35 rpm or more** — Throttle opening angle **18.75% or less** — Torque converter clutch (TCC) operating — Drive the vehicle at 3GR, 4GR, or 5GR, slip control operation — When any of the following conditions are met: • Revolution ratio of the forward clutch drum to secondary gear is **1.344 or less** or **1.645 or more** when driving in 2GR. • Revolution ratio of the forward clutch drum to secondary gear is **0.91 or less** or **1.09 or more** when driving in 3GR. • Revolution ratio of the forward clutch drum to secondary gear is **0.636 or less** or **0.817 or more** when driving in 4GR. — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • A PENDING CODE is not available. • FREEZE FRAME DATA is not available. • The AT warning light illuminates. • DTCs are stored in the TCM memory.
POSSIBLE CAUSE	• Forward clutch not engaged or slipped • Short to power supply in wiring harness between shift solenoid A terminal B and TCM terminal 1A • Shift solenoid A stuck on • Short to power supply in wiring harness between shift solenoid D terminal A and TCM terminal 1F • Shift solenoid D stuck on • Short to ground in wiring harness between shift solenoid E terminal A and TCM terminal 1H • Shift solenoid E stuck off • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY DTCS** • Turn the ignition switch to the LOCK position, then to the ON position. • Verify the DTCs in the TCM memory. • Are DTCs P0752, P0753, P0767, P0768, P0771, and P0773 output?	Yes	Go to the applicable DTC inspection.
		No	Replace the forward clutch, then go to the next step.
3	**VERIFY TROUBLESHOOTING OF DTC P0744 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Warm up the engine. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 5GR. — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range — Throttle opening angle (THOP PID): **18.75% or less** • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	No concern is detected. Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0745[FS5A-EL]

id050221806600

DTC P0745	Pressure control solenoid A malfunction
DETECTION CONDITION	• If the TCM detects either of the following conditions, the TCM determines that pressure control solenoid A circuit has a malfunction. — Pressure control solenoid A voltage stuck **0 V** after engine start — Pressure control solenoid A voltage stuck **B+** after engine start **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate if TCM detects above malfunction conditions during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is not available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Pressure control solenoid A malfunction • Open circuit in wiring harness between pressure control solenoid A terminal B and transaxle connector (primary) terminal I • Open circuit in wiring harness between transaxle connector (primary) terminal I and TCM terminal AE • Short to ground in wiring harness between transaxle connector (primary) terminal D and TCM terminal AD • Short to power supply in wiring harness between transaxle connector (primary) terminal D and TCM terminal AD • Open circuit in wiring harness between pressure control solenoid A terminal A and transaxle connector (primary) terminal D • Open circuit in wiring harness between transaxle connector (primary) terminal D and TCM terminal AD • Damaged connector between pressure control solenoid A and TCM • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT TRANSAXLE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the transaxle connector (primary). • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 10.
3	**INSPECT RESISTANCE** • Inspect the resistance between transaxle connector (primary) terminals D and I (transaxle case side). • Is the resistance **within 2.4—7.3 ohms**? (See 05-17B-30 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].)	Yes	Go to Step 6.
		No	Go to the next step.
4	**INSPECT PRESSURE CONTROL SOLENOID CONNECTOR FOR POOR CONNECTION** • Disconnect the pressure control solenoid connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 10.
5	**INSPECT RESISTANCE** • Inspect the resistance between the pressure control solenoid terminals A and B. • Is the resistance **within 2.4—7.3 ohms**? (See 05-17B-30 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].)	Yes	Replace the solenoid wiring harness, then go to Step 10.
		No	Verify pressure control solenoid installation. • If solenoid installed correctly, replace the pressure control solenoid, then go to Step 10. (See 05-17B-32 SOLENOID VALVE REMOVAL/ INSTALLATION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].)
6	**INSPECT TCM CONNECTOR FOR POOR CONNECTION** • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 10.
7	**INSPECT TRANSAXLE CONNECTOR CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between the TCM (wiring harness-side) and transaxle connector (primary) (wiring harness-side). — TCM terminal AD and transaxle connector (primary) terminal D — TCM terminal AE and transaxle connector (primary) terminal I • Is there continuity between terminals?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, the go to Step 10.
8	**INSPECT TRANSAXLE CONNECTOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (engine off). • Inspect the voltage at transaxle connector (primary) terminal D (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 10.
9	**INSPECT TCM CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between transaxle connector (primary) terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
10	**VERIFY TROUBLESHOOTING OF DTC P0745 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Make sure to wait **more than 1 s** after turning the ignition switch to the ON position. • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	No concern is detected. Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0751[FS5A-EL]

id050221808100

DTC P0751	Shift solenoid A stuck off
DETECTION CONDITION	• When P0731, P0732, and P0733 are not output, and all conditions below are satisfied. — Engine running — ATF temperature **20 °C {68 °F} or more** — Driving in 4GR at D or M range — Vehicle speed **36 km/h {22 mph} or more** — Turbine speed **within 225—4,987 rpm** — Secondary gear revolution speed **50 rpm or more** — Differential gear case (output) revolution speed **35 rpm or more** — Torque converter clutch (TCC) not operating — Revolution ratio of forward clutch drum revolution to secondary gear revolution **within 0.91—1.09** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid A stuck off • Control valve stuck • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FS5A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the automatic transaxle, then go to Step 7. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the primary control valve body. • Disassemble the primary control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)	Yes	Replace the automatic transaxle, then go to the next step. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
7	**VERIFY TROUBLESHOOTING OF DTC P0751 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 4GR. — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range — Vehicle speed (VSS PID): **36 km/h {22 mph}** (4GR only) • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0752[FS5A-EL]

id050221808200

DTC P0752	Shift solenoid A stuck on
DETECTION CONDITION	• When P0734 is not output, and all conditions below are satisfied in 1GR and 2GR. — Engine running — ATF temperature **20 °C {68 °F} or more** — D range selected — Brake pedal depressed — Throttle opening angle at closed throttle position — Vehicle speed **0 km/h {0 mph}** — Input/turbine speed sensor signal **187.5 rpm or more**. — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid A stuck on • Control valve stuck • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FS5A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the automatic transaxle, then go to Step 7. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)

STEP	INSPECTION		ACTION
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the primary control valve body. • Disassemble the primary control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)	Yes	Replace the automatic transaxle, then go to the next step. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
7	**VERIFY TROUBLESHOOTING OF DTC P0752 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 4GR: — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

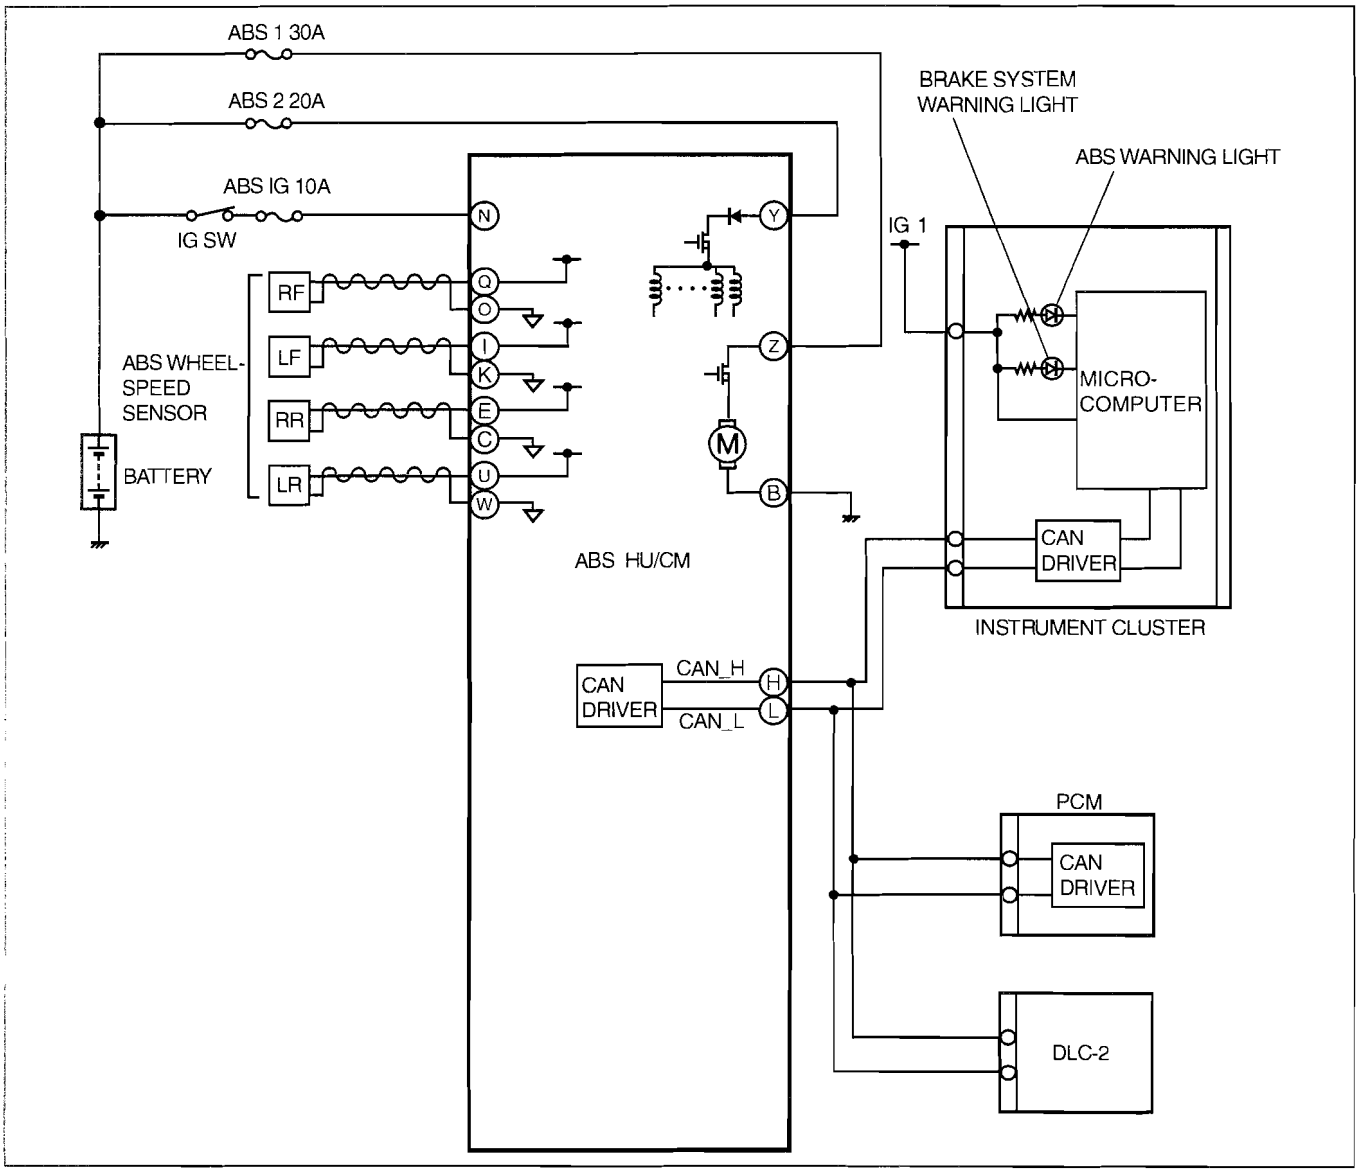
04-03A SYMPTOM TROUBLESHOOTING [ABS]

SYSTEM WIRING DIAGRAM[ABS]

id0403a5806400



am3zzw0000240

FOREWORD[ABS]

id0403a5804000

- Before performing the steps in Symptom Troubleshooting, perform the On-board Diagnostic inspection. To inspect the DTC, follow the DTC Inspection steps. (See 04-02A-2 ON-BOARD DIAGNOSIS[ABS].)

PRECAUTION[ABS]

id0403a5804100

1. Any one or a combination of the ABS warning and BRAKE system warning lights illuminates even when the system is normal.

Warning lights that may illuminate and/or flash	Cases in which the light may illuminate	Conditions in which the light will go out	ABS, EBD control
Either or both of the following lights illuminate: • ABS warning light • BRAKE system warning light(*1)	When the front wheels are jacked up, stuck, or placed on a chassis roller, and only the front wheel ABS wheel speed sensors are spun.	After turning ignition switch off, vehicle is driven at speed **greater than 10 km/h {6.2 mph}** and normal operation is confirmed.	• ABS: Cuts control. • EBD: 1. Cuts control, in cases where the light may illuminate, only when ABS CM detects that a wheel speed sensor determines that more than two wheels are malfunctioning. 2. Operates control, if wheel speed sensor determines that more than three wheels are functioning correctly.
	Parking brake is not fully released while driving.		
	Brake drag.		
	Sudden acceleration/ deceleration.		
	Left/right or front/rear tires are different. (Size, radius, tire pressure, or wear is other than that listed on tire label.)		
Both of the following lights illuminate: • ABS warning light • BRAKE system warning light	Battery voltage at ABS HU/CM ignition terminal AK drops **below approx. 8 V.**(*2)	Battery voltage rises **above approx. 8 V.**	ABS: Cuts control. EBD: Cuts control.

*1 : In cases where the light may illuminate, only when ABS HU/CM detects that a wheel-speed sensor determines that more than two wheels are malfunctioning.
*2 : If battery voltage drops **below 8 V** while vehicle speed is **greater than 20 km/h {12.4 mph}**, ABS HU/CM records DTC B1318.

2. Precautions during servicing of ABS
The ABS is composed of electrical and mechanical parts. It is necessary to categorize malfunctions as being either electrical or hydraulic when performing troubleshooting.
(1) Malfunctions in electrical system
- The ABS hydraulic unit and control module (ABS HU/CM) has an on-board diagnostic function. With this function, the ABS warning light and/or BRAKE system warning light will illuminate when there is a problem in the electrical system. Also, past and present malfunctions are recorded in the ABS HU/CM. This function can find malfunctions that do not occur during periodic inspections. Connect the M-MDS to the DLC-2. The stored malfunctions will be displayed in the order of occurrence. To find out the causes of ABS malfunctions, use these on-board diagnostic results.
- If a malfunction occurred in the past but is now normal, the cause is likely a temporary poor connection of the wiring harness. The ABS HU/CM usually operates normally. Be careful when searching for the cause of malfunction.
- After repair, it is necessary to clear the DTC from the ABS HU/CM memory. Also, if the ABS related parts have been replaced, verify that the no DTC has been displayed after repairs.
- After repairing the ABS wheel-speed sensor or ABS sensor rotor, or after replacing the ABS CM (ABS motor or ABS motor relay or solenoid valve), the ABS warning light may not go out (*) even when the ignition switch is turned to the ON position. In this case, drive the vehicle at a speed of **10 km/h {6.2 mph} or more**, make sure that ABS warning light goes out, and then clear the DTC.
  * The BRAKE system warning light also illuminates when any two wheels malfunction, or battery voltage drops **below 8 V**.
- When repairing, if the ABS related connectors are disconnected and the ignition switch is turned to the ON position, the ABS CM will mistakenly detect a fault and record it as a malfunction.
- To protect the ABS HU/CM, make sure the ignition switch is turned off before connecting or disconnecting the ABS CM connector.

(2) Malfunctions in hydraulic system
- Symptoms in a hydraulic system malfunction are similar to those in a conventional brake malfunction. However, it is necessary to determine if the malfunction is in an ABS component or the conventional brake system.
- The ABS hydraulic unit contains delicate mechanical parts. If foreign material enters into the component, the ABS may fail to operate. Also, it will likely become extremely difficult to find the location of the malfunction in the event that the brakes operate but the ABS does not. Make sure foreign material does not enter when servicing the ABS (e.g. brake fluid replacement, pipe removal).

Intermittent Concern Troubleshooting
Vibration method

- If malfunction occurs or becomes worse while driving on a rough road or when engine is vibrating, perform the steps below.

Note

- There are several reasons why vehicle or engine vibration could cause an electrical malfunction. Some of the things to inspect are:
  - — Connectors not fully seated.
  - — Wiring harness not having full play.
  - — Wires laying across brackets or moving parts.
  - — Wires routed too close to hot parts.
- An improperly routed, improperly clamped, or loose wiring harness can cause wiring to become pinched between parts.
- The connector joints, points of vibration, and places where wiring harness pass through the firewall, body panels, etc. are the major areas to be inspected.

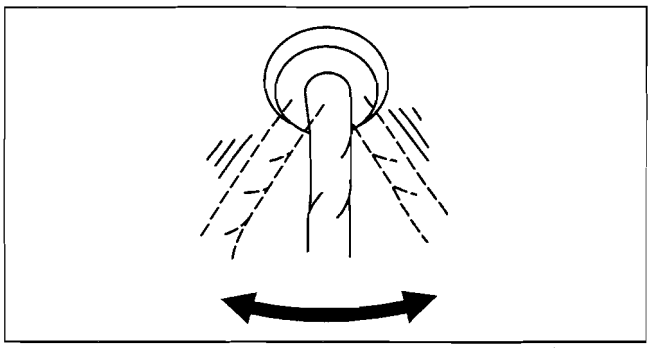
Inspection method for switch connectors or wiring harnesses

1. Connect the M-MDS to the DLC-2.
2. Turn the ignition switch to the ON position (Engine OFF).

Note

- If engine starts and runs, perform the following steps at idle.

3. Access PIDs for the switch you are inspecting.
4. Turn switch on manually.
5. Slightly shake each connector or wiring harness vertically and horizontally while monitoring the PID.
   - If the PID value is unstable, inspect poor connection.



am3zzw0000169

Inspection method for sensor connectors or wiring harnesses

1. Connect the M-MDS to the DLC-2.
2. Turn the ignition switch to the ON position (Engine OFF).

Note

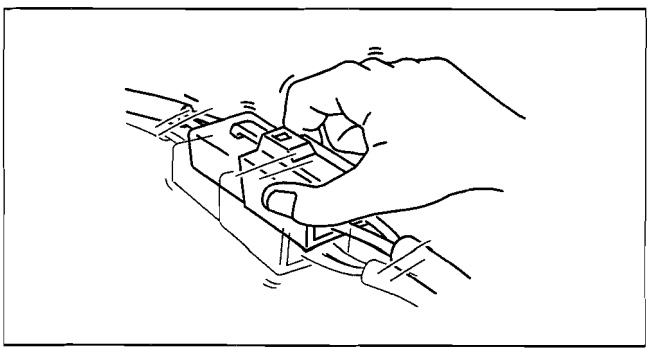
- If engine starts and runs, perform the following steps at idle.

3. Access PIDs for the switch you are inspecting.
4. Slightly shake each connector or wiring harness vertically and horizontally while monitoring the PID.
   - If the PID value is unstable, inspect poor connection.



am3zzw0000169

Inspection method for sensors

1. Connect the M-MDS to the DLC-2.
2. Turn the ignition switch to the ON position (Engine OFF).

Note

- If engine starts and runs, perform the following steps at idle.

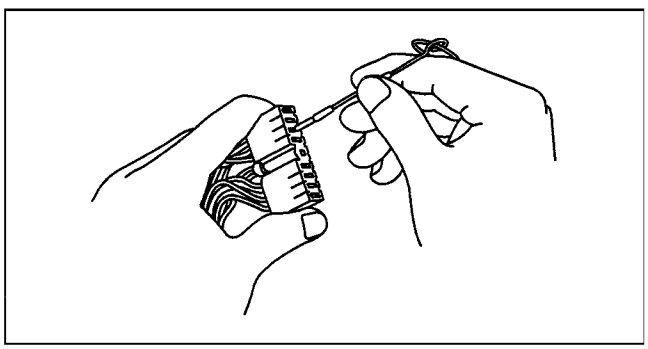
3. Access PIDs for the switch you are inspecting.
4. Vibrate the sensor slightly with your finger.
   - If the PID value is unstable or malfunction occurs, inspect the sensor for poor connection and/or poor mounting.

Malfunction data monitor method

1. Perform malfunction reappearance test according to malfunction reappearance mode and malfunction data monitor. The malfunction cause is found in the malfunction data.

Connector terminal inspection method

1. Inspect the connection condition of each female terminal.
2. Insert the male terminal to the female terminal and Inspect the female terminal for looseness.



am3zzw0000170

SYMPTOM TROUBLESHOOTING[ABS]

id0403a5804200

- Verify the symptoms, and perform troubleshooting according to the appropriate number.

No.	Symptom
1	Neither ABS warning light nor BRAKE system warning light illuminate when the ignition switch is turned to the ON position.
2	ABS warning light does not illuminate when the ignition switch is turned to the ON position.
3	BRAKE system warning light does not illuminate when the ignition switch is turned to the ON position.
4	Both ABS warning light and BRAKE system warning light stay on **4 s or more** when the ignition switch is turned to the ON position.
5	ABS warning light stays on **4 s or more** when the ignition switch is turned to the ON position.
6	BRAKE system warning light stays on **4 s or more** when the ignition switch is turned to the ON position. (Parking brake is released.)
7	There is a malfunction in the system even through ABS warning light, BRAKE system warning light, do not illuminate.

x: Applicable

Troubleshooting item	Possible factor	ABS HU/CM	Instrument cluster	CAN communication	Battery	Brake fluid	Parking brake switch	Charging system	ABS HU/CM power supply (terminal N)	ABS HU/CM GND (terminal B)	Instrument cluster power supply (terminal 1G)	Instrument cluster GND	Conventional brakes	Brake pipe routing
1	Neither ABS warning light nor BRAKE system warning light illuminate when the ignition switch is turned to the ON position.	X	X	X							X	X		
2	ABS warning light does not illuminate when the ignition switch is turned to the ON position.		X											
3	BRAKE system warning light does not illuminate when the ignition switch is turned to the ON position.		X											
4	Both ABS warning light and BRAKE system warning light stay on 4 s or more when the ignition switch is turned to the ON position.	X	X	X	X			X	X	X				
5	ABS warning light stays on 4 s or more when the ignition switch is turned to the ON position.	X	X	X										
6	BRAKE system warning light stays on 4 s or more when the ignition switch is turned to the ON position. (Parking brake is released.)	X	X			X	X							
7	There is a malfunction in the system even though ABS warning light, BRAKE system warning light do not illuminate.	X											X	X

am3zzw0000170

NO.1 NEITHER ABS WARNING LIGHT NOR BRAKE SYSTEM WARNING LIGHT ILLUMINATE WHEN THE IGNITION SWITCH IS TURNED TO THE ON POSITION[ABS]

id0403a5801700

1	**Neither ABS warning light nor BRAKE system warning light illuminate when the ignition switch is turned to the ON position.**

[TROUBLESHOOTING HINTS]
- **Instrument cluster or ABS HU/CM malfunction**
- **Improper configuration (instrument cluster)**

STEP	INSPECTION		ACTION
1	**INSPECT FOR DTCs IN ABS HU/CM** • Have DTCs been stored in memory?	Yes	Perform the applicable DTC inspection. (See DTC Table.)
		No	Inspect the instrument cluster. If the instrument cluster is normal, inspect CAN communication. If instrument cluster has a malfunction, go to the next step.

STEP	INSPECTION		ACTION
2	**VERIFY WHETHER MALFUNCTION IS IN WARNING LIGHTS AND INDICATOR LIGHT'S COMMON POWER SUPPLY, OR IN OTHER WARNING LIGHTS AND INDICATOR LIGHTS** • Do other warning and indicator lights illuminate when the ignition switch is turned to the ON position?	Yes	Replace the instrument cluster. (open circuit in instrument cluster) (See 09-22-2 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.)
		No	Go to the next step.
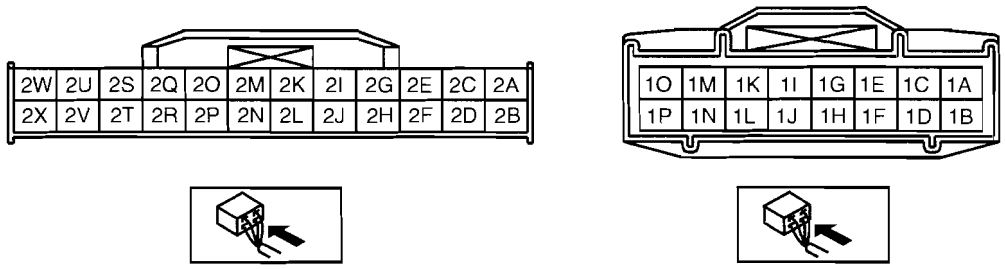
3	**INSPECT INSTRUMENT CLUSTER POWER SUPPLY FUSE** • Is the instrument cluster ignition power supply fuse normal?	Yes	Go to the next step.
		No	Inspect for a short to ground on circuit of blown fuse. Repair or replace if necessary. Install appropriate amperage fuse.
*4	**VERIFY WHETHER MALFUNCTION IS IN WIRING HARNESS (BETWEEN INSTRUMENT CLUSTER POWER SUPPLY AND INSTRUMENT CLUSTER FOR CONTINUITY) OR INSTRUMENT CLUSTER** • Turn the ignition switch to the ON position. • Measure voltage at instrument cluster connector terminal 1G. • Is the voltage **approx. 12 V?**	Yes	Replace the instrument cluster (open circuit in instrument cluster). (See 09-22-2 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.)
		No	Inspect for open circuit in wiring harness between the instrument cluster and ground. Repair or replace if necessary. Replace the ABS HU/CM. (See 04-13-4 ABS HU/CM REMOVAL/INSTALLATION.)

INSTRUMENT CLUSTER WIRING HARNESS-SIDE CONNECTOR



- When performing an asterisked (*) troubleshooting inspection, slightly shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunction. If there is a problem, verify that the connectors, terminals and wiring harness are connected correctly and undamaged.

NO.2 ABS WARNING LIGHT DOES NOT ILLUMINATE WHEN THE IGNITION SWITCH IS TURNED TO THE ON POSITION[ABS]

id0403a5801800

2	**ABS warning light does not illuminate when the ignition switch is turned to the ON position.**
[TROUBLESHOOTING HINTS] • **Instrument cluster malfunction**	

NO.3 BRAKE SYSTEM WARNING LIGHT DOES NOT ILLUMINATE WHEN THE IGNITION SWITCH IS TURNED TO THE ON POSITION[ABS]

id0403a5801900

3	**BRAKE system warning light does not illuminate when the ignition switch is turned to the ON position.**
[TROUBLESHOOTING HINTS] • **Instrument cluster malfunction**	

NO.4 BOTH ABS WARNING LIGHT AND BRAKE SYSTEM WARNING LIGHT STAY ON 4 S OR MORE WHEN THE IGNITION SWITCH IS TURNED TO THE ON POSITION[ABS]

id0403a5802000

4	**Both ABS warning light and BRAKE system warning light stay on 4 s or more when the ignition switch is turned to the ON position.**

[TROUBLESHOOTING HINTS]
- **ABS HU/CM detects ABS proportioning system malfunction.**
- **ABS HU/CM detects low voltage in power supply (ABS CM ignition terminal N voltage is below approx. 8 V).**
- **ABS HU/CM does not operate.**
- **Malfunction of communication network**

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT ABS HU/CM POWER SUPPLY FUSE** • Is the ABS HU/CM ignition power supply fuse normal?	Yes	Go to the next step. Inspect for a short to ground on blown fuse's circuit.
		No	Repair or replace if necessary. Install appropriate amperage fuse.
2	**INSPECT WIRING HARNESS BETWEEN ABS HU/CM AND DLC-2 FOR CONTINUITY AND SHORT CIRCUIT** • Perform DTC inspection. • Is any error message displayed regarding communication between the ABS HU/CM and M-MDS?	Yes	If the communication error message is displayed even after inspecting according to the procedure displayed on the M-MDS, go to step 6.
		No	Go to the next step.
3	**INSPECT FOR DTCs IN ABS HU/CM** • Have DTCs been stored in memory?	Yes	Perform the applicable DTC inspection. (See 04-02A-2 ON-BOARD DIAGNOSIS[ABS].)
		No	Inspect the instrument cluster. If the instrument cluster is normal, go to the next step. If the instrument cluster malfunction repair the instrument cluster, go to the next step.
4	**INSPECT BATTERY** • Is the battery voltage normal?	Yes	Go to the next step.
		No	Inspect the battery and charging system. (See 01-17A-4 BATTERY INSPECTION[LF, L3].) (See 01-17A-7 GENERATOR INSPECTION[LF, L3].)
5	**INSPECT CHARGING SYSTEM** • Is the battery voltage normal with electrical load (such as A/C, headlight) on and engine idling?	Yes	Go to the next step.
		No	Inspect the charging system (such as drive belt tension and generator). (See 01-17A-7 GENERATOR INSPECTION[LF, L3].)
6	**INSPECT ABS HU/CM IGNITION POWER SUPPLY SYSTEM (TERMINAL N)** • Disconnect the ABS HU/CM connector. • Turn the ignition switch to the ON position. • Inspect the voltage of connector terminal N. **Specification: approx. 8 V** • Is the voltage within the specification?	Yes	Replace the ABS HU/CM (open or short in ground circuit in the ABS HU/CM). (See 04-13-4 ABS HU/CM REMOVAL/INSTALLATION.)
		No	Repair the wiring harness between the ABS HU/CM and ground.
7	**INSPECT WIRING HARNESS BETWEEN ABS HU/CM GROUND FOR CONTINUITY** • Turn the ignition switch to the LOCK position. • Is there continuity between connector terminal B and ground?	Yes	If a malfunction error message is displayed on M-MDS in Step 1 inspection, go to the next step. If a malfunction error message is not displayed on M-MDS in Step 1 inspection, troubleshooting is completed.
		No	Repair the wiring harness between the ABS HU/CM and ground.
8	**INSPECT WIRING HARNESS BETWEEN ABS HU/CM AND DLC-2 FOR CONTINUITY** • Is there continuity between connector terminal H, L and DLC-2?	Yes	Go to the next step.
		No	Repair the wiring harness between the ABS HU/CM and DLC-2.
9	**INSPECT WIRING HARNESS BETWEEN ABS HU/CM AND DLC-2 FOR SHORT TO POWER SUPPLY** • Is the voltage **approx. 12 V** at connector terminal H, L?	Yes	Repair the wiring harness between the ABS HU/CM and DLC-2.
		No	Go to the next step.

STEP	INSPECTION		ACTION
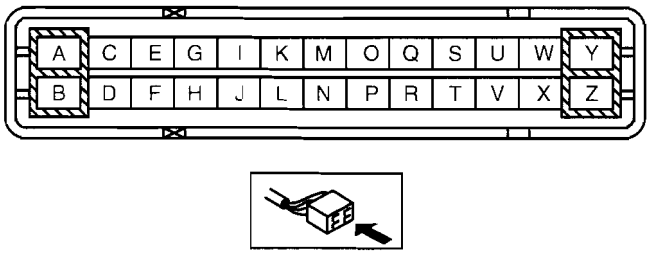
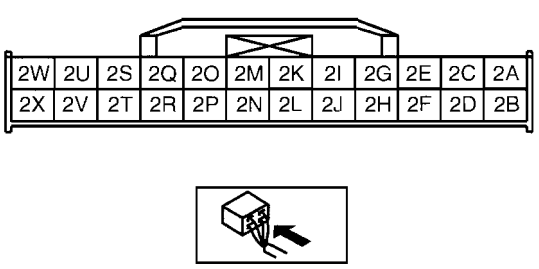
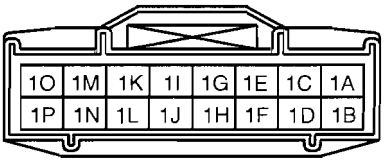
10	**INSPECT WIRING HARNESS BETWEEN ABS HU/CM AND DLC-2 FOR SHORT TO GROUND** • Is there continuity between connector terminal H, L and DLC-2?	Yes	Repair the wiring harness between the ABS HU/CM and DLC-2.
		No	Replace the ABS HU/CM (communication circuit malfunction in ABS HU/CM). (See 04-13-4 ABS HU/CM REMOVAL/INSTALLATION.)

ABS HU/CM WIRING HARNESS-SIDE CONNECTOR



INSTRUMENT CLUSTER WIRING HARNESS-SIDE CONNECTOR





NO.5 ABS WARNING LIGHT STAYS ON 4 S OR MORE WHEN THE IGNITION SWITCH IS TURNED TO THE ON POSITION[ABS]

id0403a5802100

5	ABS warning light stays on 4 s or more when the ignition switch is turned to the ON position.
[TROUBLESHOOTING HINTS] • **ABS CM detects ABS system malfunction.**	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT WIRING HARNESS BETWEEN ABS HU/CM AND DLC-2 FOR CONTINUITY AND SHORT CIRCUIT** • Perform DTC inspection. • Is any error message displayed regarding communication between ABS HU/CM and M-MDS?	Yes	If the communication error message is displayed even after inspecting according to the procedures displayed in the M-MDS, go to Step 4.
		No	Go to the next step.
2	**INSPECT FOR DTCs IN ABS HU/CM** • Have DTCs been stored in memory?	Yes	Perform the applicable DTC inspection. (See 04-02A-2 ON-BOARD DIAGNOSIS[ABS].)
		No	Inspect the instrument cluster If the instrument cluster is normal, go to the next step. If the instrument cluster has a malfunction, repair the instrument cluster, go to the next step.
3	**INSPECT WIRING HARNESS BETWEEN ABS HU/CM AND DLC-2 FOR CONTINUITY** • Disconnect the ABS HU/CM connector. • Is there continuity between connector terminal H, L and DLC-2?	Yes	Go to the next step.
		No	Repair the wiring harness between the ABS HU/CM and DLC-2.
4	**INSPECT WIRING HARNESS BETWEEN ABS HU/CM AND DLC-2 FOR SHORT TO POWER SUPPLY** • Is the voltage **approx. 12 V** at connector terminal H, L?	Yes	Repair the wiring harness between the ABS HU/CM and DLC-2.
		No	Go to the next step.
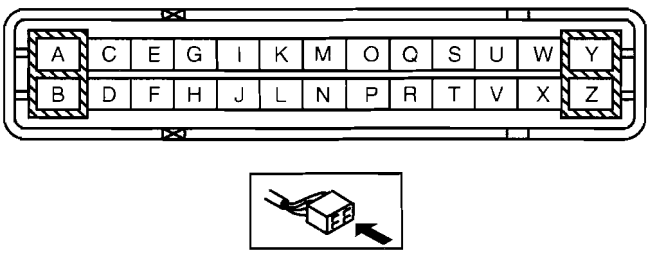
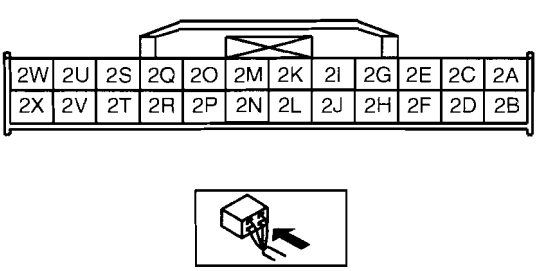
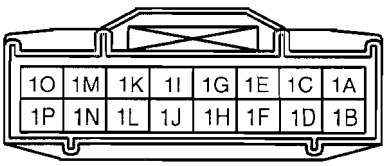
5	**INSPECT WIRING HARNESS BETWEEN ABS HU/CM AND DLC-2 FOR SHORT TO GROUND** Is there continuity between connector terminal H, L and ground?	Yes	Repair the wiring harness between the ABS HU/CM and DLC-2.
		No	Replace the ABS HU/CM (communication circuit malfunction in ABS HU/CM). (See 04-13-4 ABS HU/CM REMOVAL/INSTALLATION.)

ABS HU/CM WIRING HARNESS-SIDE CONNECTOR



INSTRUMENT CLUSTER WIRING HARNESS-SIDE CONNECTOR





- When performing an asterisked (*) troubleshooting inspection, slightly shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunction. If there is a problem, verify that the connectors, terminals and wiring harness are connected correctly and undamaged.

NO.6 BRAKE SYSTEM WARNING LIGHT STAYS ON 4 S OR MORE WHEN THE IGNITION SWITCH IS TURNED TO THE ON POSITION (PARKING BRAKE IS RELEASED)[ABS]

id0403a5802200

6	**BRAKE system warning light stays on 4 s or more when the ignition switch is turned to the ON position. (Parking brake is released.)**

[TROUBLESHOOTING HINTS]
- **Instrument cluster malfunction**
- **Short to ground in circuit in parking brake switch**
- **Brake fluid level sensor is low**

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT BRAKE FLUID LEVEL** • Is brake fluid level normal?	Yes	Go to the next step.
		No	Add brake fluid.
2	**INSPECT FOR DTCs IN ABS HU/CM** • Have DTCs been stored in memory?	Yes	Perform the applicable DTC inspection. (See 04-02A-2 ON-BOARD DIAGNOSIS[ABS].)
		No	Go to the next step.
3	**VERIFY WHETHER MALFUNCTION IS IN PARKING BRAKE SWITCH** • Disconnect the parking brake switch connector. • Does BRAKE system warning light go out with the ignition switch is turned to the ON position?	Yes	Replace the parking brake switch. (See 04-12-2 PARKING BRAKE LEVER REMOVAL/ INSTALLATION.)
		No	Perform the following inspection. Repair if necessary. • Short to ground in the wiring harness between the instrument cluster (BRAKE system warning light) and parking brake switch. Inspect the instrument cluster.
*4	**INSPECT WIRING HARNESS BETWEEN ABS HU/CM AND DLC -2 FOR CONTINUITY** • Disconnect the ABS HU/CM connector. • Is there continuity between connector terminal H, L and DLC-2?	Yes	Go to the next step.
		No	Repair the wiring harness between the ABS HU/CM and DLC-2.
*5	**INSPECT WIRING HARNESS BETWEEN ABS/ HU/CM AND DLC-2 FOR SHORT TO POWER SUPPLY** Is the voltage **approx. 12 V** at connector terminal H, L?	Yes	Repair the wiring harness between the ABS HU/CM and DLC-2.
		No	Go to the next step.
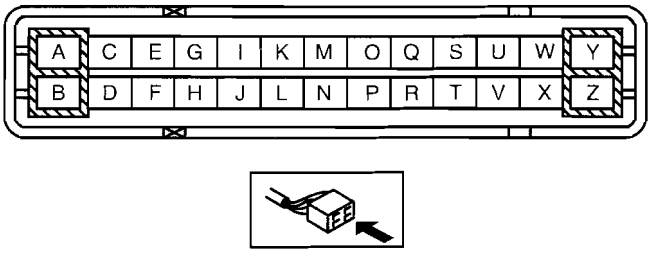
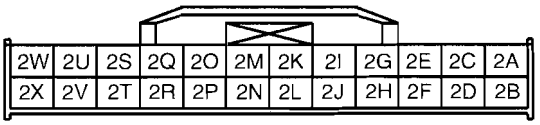
*6	**INSPECT WIRING HARNESS BETWEEN ABS HU/CM AND DLC-2 FOR SHORT TO GROUND** Is there continuity between connector terminal H, L and ground?	Yes	Repair the wiring harness between the ABS HU/CM and DLC-2.
		No	Replace the ABS HU/CM (communication circuit malfunction in ABS HU/CM). (See 04-13-4 ABS HU/CM REMOVAL/INSTALLATION.)

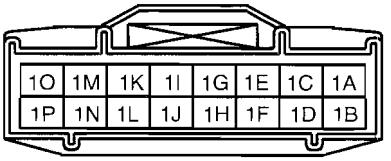
STEP	INSPECTION	ACTION

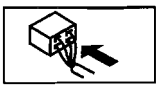
ABS HU/CM WIRING HARNESS-SIDE CONNECTOR

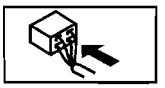


INSTRUMENT CLUSTER WIRING HARNESS-SIDE CONNECTOR









- When performing an asterisked (*) troubleshooting inspection, slightly shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunction. If there is a problem, verify that the connectors, terminals and wiring harness are connected correctly and undamaged.

NO.7 THERE IS MALFUNCTION IN THE SYSTEM EVEN THOUGH ABS WARNING LIGHT, BRAKE SYSTEM WARNING LIGHT, DO NOT ILLUMINATE[ABS]

id0403a5802300

7	**There is a malfunction in system even though ABS warning light, BRAKE system warning light, do not illuminate.**
[TROUBLESHOOTING HINTS] • **There is a difference in size or air pressure between the front and rear tires.**	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FOR DTCs IN ABS HU/CM** Have DTCs been stored in memory?	Yes	Perform the applicable DTC inspection. (See 04-02A-2 ON-BOARD DIAGNOSIS[ABS].)
		No	Go to the next step.
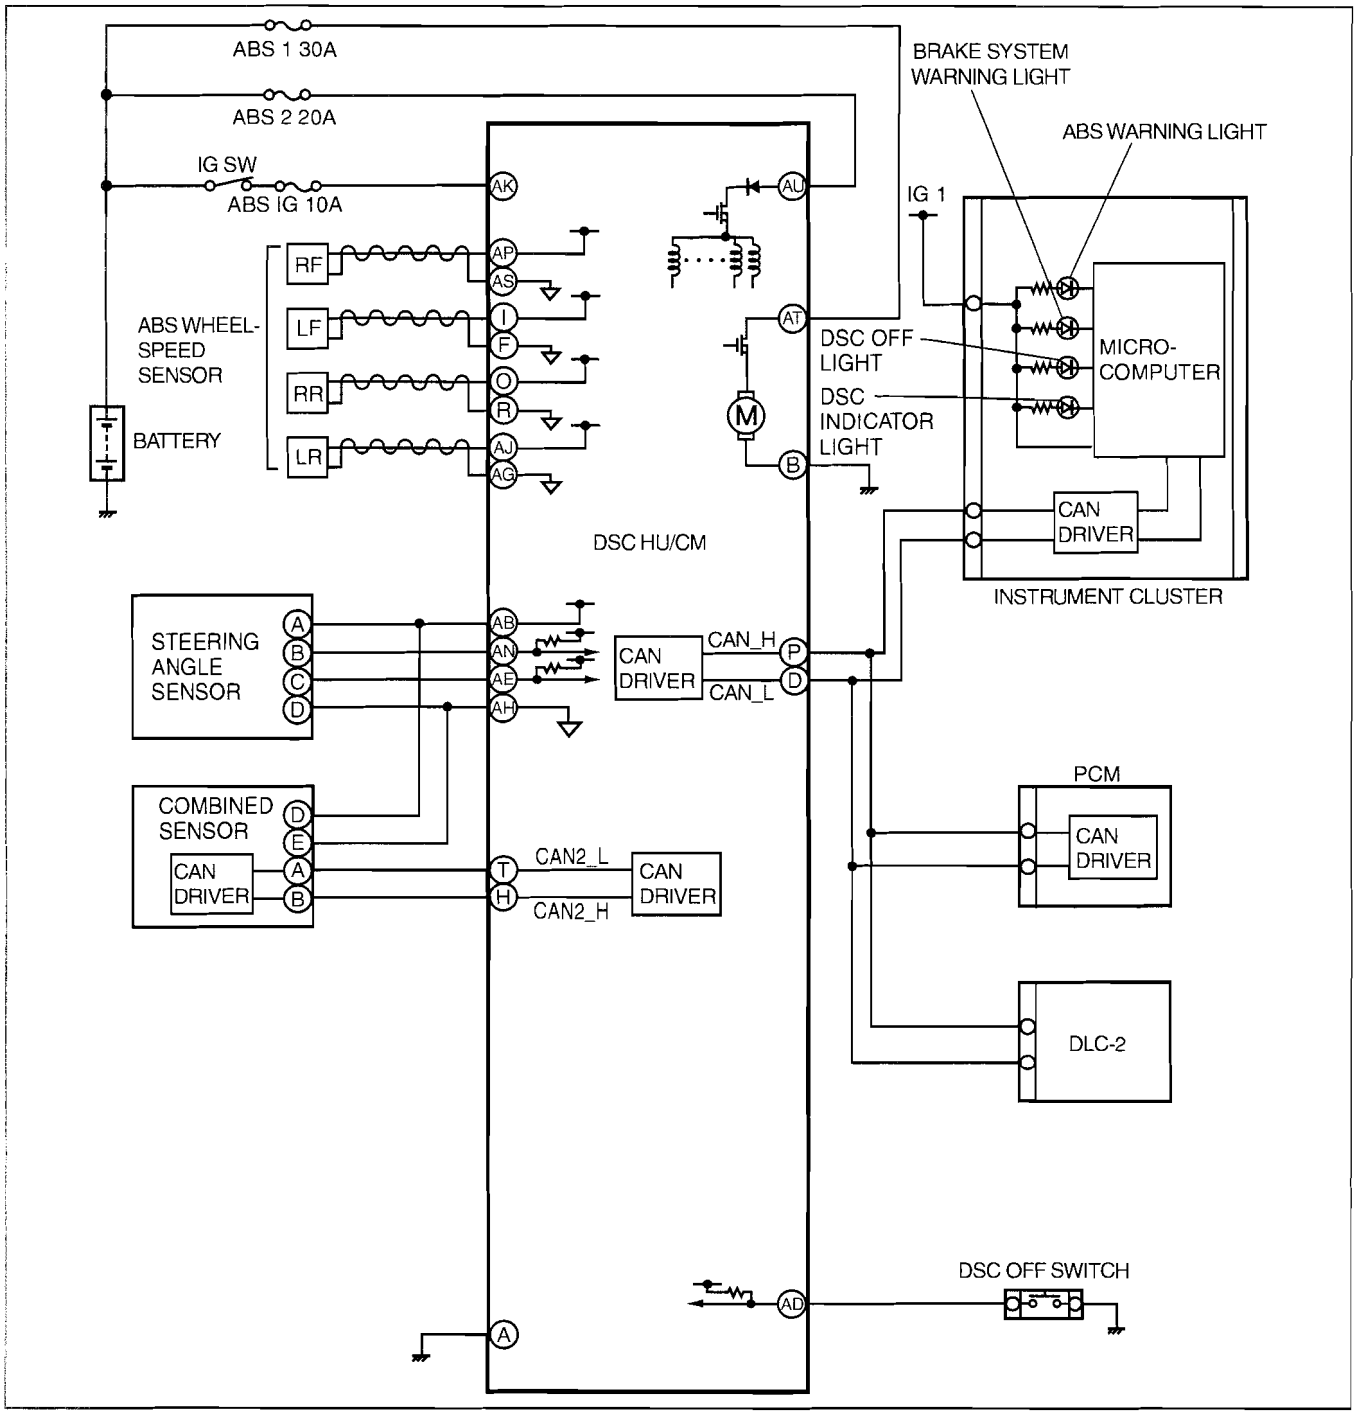
2	**INSPECT ABS HYDRAULIC UNIT** Perform the ABS hydraulic unit on-vehicle inspection. (See 04-13-2 ABS SYSTEM INSPECTION.) Does the system operate properly?	Yes	Inspect the conventional brake system.
		No	**If the wheels do not rotate:** Replace the ABS HU/CM. (See 04-13-4 ABS HU/CM REMOVAL/INSTALLATION.) **If the wheels rotate but order in which wheels rotate is incorrect:** Inspect the brake pipe passage to the ABS HU/CM.

04-03B SYMPTOM TROUBLESHOOTING [DYNAMIC STABILITY CONTROL (DSC)]

SYSTEM WIRING DIAGRAM[DYNAMIC STABILITY CONTROL (DSC)]

id0403b2800100



am3uuw0000001

FOREWORD[DYNAMIC STABILITY CONTROL (DSC)]

id0403b2800200

- Before performing the steps in Symptom Troubleshooting, perform the On-board Diagnostic inspection. To inspect the DTC, follow the DTC Inspection steps. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].)

PRECAUTION[DYNAMIC STABILITY CONTROL (DSC)]

id0403b2800300

1. The ABS warning light and/or BRAKE system warning light and/or DSC indicator light illuminate even when the system is normal.

Warning lights that may illuminate and/or flash	Cases in which the light may illuminate	Conditions in which the light will go out	ABS, EBD, TCS and DSC control
• ABS warning light • BRAKE system warning light • DSC indicator light	When the front wheels are jacked up, struck, or placed on a chassis roller, and only the front wheel ABS wheel speed sensors are spun for **60 s or more.**	After turning the ignition switch off, vehicle is driven at a speed **greater than 10 km/h {6.2 mph}** and normal operation is confirmed.	ABS: Cuts control. EBD: Cuts control. TCS: Cuts control. DSC: Cuts control.
	Parking brake is not fully released while driving.		
	Brake drag.		
	Sudden acceleration/deceleration.		
	Left/right or front/rear tires are different. (Size, radius, tire pressure, or wear is other than that listed on tire label.)		
	Battery voltage at DSC HU/CM ignition terminal drops **below approx. 8 V.**	Battery voltage rises **above approx. 8 V.**	ABS: Cuts control. EBD: Cuts control. TCS: Cuts control. DSC: Cuts control.

2. Precautions during servicing of DSC. The DSC is composed of electrical and mechanical parts. It is necessary to categorize malfunctions as being either electrical or hydraulic when performing troubleshooting.
   (1) Malfunction in electrical system
   - The control module has an on-board diagnostic function. With this function, the ABS warning light and/or BRAKE system warning light and/or DSC indicator light will illuminate when there is a problem in the electrical system.
     Also, past and present malfunctions are recorded in the control module. This function can find malfunctions that do not occur during periodic inspections. Connect the M-MDS to the DLC-2, then turn the ignition switch to the ON position. As a result, the stored malfunctions will be displayed on the M-MDS in numeric order by connecting DLC-2. To find out the causes of DSC malfunctions, use these on-board diagnostic results.
   - If a malfunction occurred in the past but is now normal, the cause is likely a temporary poor connection of the wiring harness.
     The control module usually operates normally. Be careful when searching for the cause of malfunction.
   - After repair, it is necessary to clear the DTC from the control module memory.
     Also, if the DSC related parts have been replaced, verify that the no DTC has been displayed after repairs.
   - After repairing the ABS wheel-speed sensor or ABS sensor rotor, or after replacing the control module, the ABS warning light may not go out even when the ignition switch is turned to the ON position. In this case, drive the vehicle at a speed of **10 km/h {6.2 mph} or more**, make sure the ABS warning light goes out, and then clear the DTC.
   - When repairing, if the DSC related connectors are disconnected and the ignition switch is turned to the ON position, the control module will mistakenly detect a fault and record it as a malfunction.

   Caution
   - **In DSC vehicles, when the DSC HU/CM, combined sensor is replaced, perform the initialization procedure for each sensor. (See 04-15-12 COMBINED SENSOR INITIALIZATION PROCEDURE.) (See 04-15-13 BRAKE FLUID PRESSURE SENSOR INITIALIZATION PROCEDURE.)**

   - To protect the control module, make sure the ignition switch is turned off before connecting or disconnecting the control module connector.

   (2) Malfunctions in hydraulic system
   - Symptoms in a hydraulic system malfunction are similar to those in a conventional brake malfunction. However, it is necessary to determine if the malfunction is in a DSC component or the conventional brake system.
   - The hydraulic unit contains delicate mechanical parts. If foreign material enters the component, the DSC may fail to operate. Also, it will likely become extremely difficult to find the location of the malfunction in the event that the brakes operate but the DSC does not. Make sure foreign materials does not enter when servicing the DSC (e.g. brake fluid replacement, pipe removal).

Intermittent Concern Troubleshooting
Vibration method

- If malfunction occurs or becomes worse while driving on a rough road or when engine is vibrating, perform the steps below.

Note

- There are several reasons why vehicle or engine vibration could cause an electrical malfunction. Some of the things to inspect are:
  - — Connectors not fully seated.
  - — Wiring harness not having full play.
  - — Wires laying across brackets or moving parts.
  - — Wires routed too close to hot parts.
- An improperly routed, improperly clamped, or loose wiring harness can cause wiring to become pinched between parts.
- The connector joints, points of vibration, and places where wiring harness pass through the firewall, body panels, etc. are the major areas to be inspected.

Inspection method for switch connectors or wiring harnesses

1. Connect the M-MDS to the DLC-2.
2. Turn the ignition switch to the ON position (Engine OFF).

Note

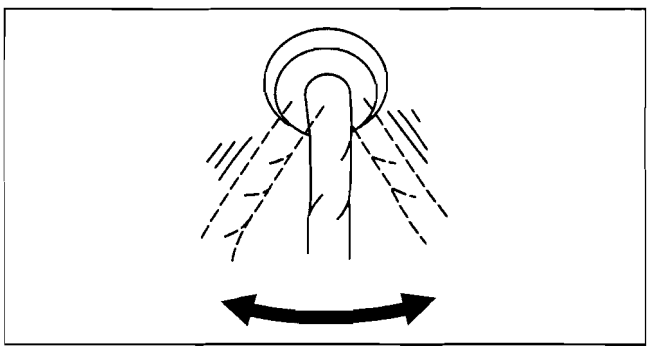
- If engine starts and runs, perform the following steps at idle.

3. Access PIDs for the switch you are inspecting.
4. Turn switch on manually.
5. Slightly shake each connector or wiring harness vertically and horizontally while monitoring the PID.
   - If the PID value is unstable, inspect poor connection.



am3uuw0000001

Inspection method for sensor connectors or wiring harnesses

1. Connect the M-MDS to the DLC-2.
2. Turn the ignition switch to the ON position (Engine OFF).

Note

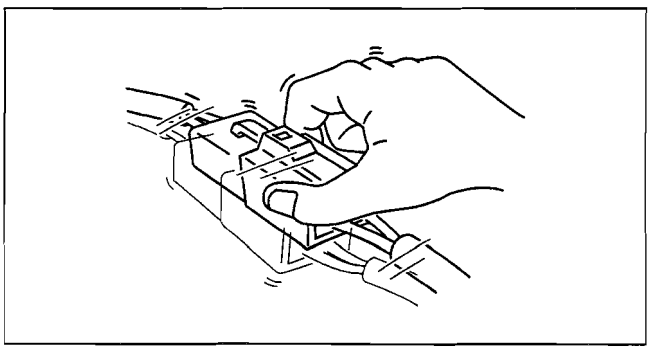
- If engine starts and runs, perform the following steps at idle.

3. Access PIDs for the switch you are inspecting.
4. Slightly shake each connector or wiring harness vertically and horizontally while monitoring the PID.
   - If the PID value is unstable, inspect poor connection.



am3uuw0000001

Inspection method for sensors

1. Connect the M-MDS to the DLC-2.
2. Turn the ignition switch to the ON position (Engine OFF).

Note

- If engine starts and runs, perform the following steps at idle.

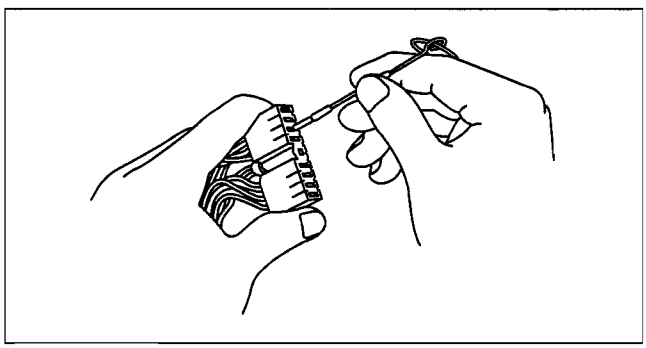
3. Access PIDs for the switch you are inspecting.
4. Vibrate the sensor slightly with your finger.
   - If the PID value is unstable or malfunction occurs, inspect the sensor for poor connection and/or poor mounting.

Malfunction data monitor method

1. Perform malfunction reappearance test according to malfunction reappearance mode and malfunction data monitor. The malfunction cause is found in the malfunction data.

Connector terminal inspection method

1. Inspect the connection condition of each female terminal.
2. Insert the male terminal to the female terminal and Inspect the female terminal for looseness.



am3uuw0000001

SYMPTOM TROUBLESHOOTING[DYNAMIC STABILITY CONTROL (DSC)]

id0403b2800400

- Verify the symptoms, and perform troubleshooting according to the appropriate number.

No.	Symptom
1	Any of the following lights do not illuminate when the ignition switch is turned to the ON position. • ABS warning light • BRAKE system warning light • DSC indicator light • DSC OFF light
2	Any of the following lights remain on: • ABS warning light. • BRAKE system warning light • DSC indicator light • DSC OFF light
3	There is a malfunction in the system even though ABS warning light, BRAKE system warning light, DSC indicator light and DSC OFF light do not illuminate.
4	ABS or TCS*1 operates frequently.
	TCS does not work correctly.
5	DSC*2 operates frequently.
	DSC does not work correctly.

*1 : DSC system contains traction control function; DSC indicator light illuminates and goes out while DSC is operating.

*2 : DSC indicator light illuminates and goes out while DSC is operating.

x: Applicable

Troubleshooting item	Possible factor	DSC HU/CM	Instrument cluster	CAN communication	Each sensor installation	Battery	Charging system	Brake fluid	Parking brake	Tire	Tire air pressure	Control module power supply system	Control module ground system	Instrument cluster power supply system	Instrument cluster ground system	Conventional brake

NO.1 ANY OF THE FOLLOWING LIGHTS DO NOT ILLUMINATE WHEN THE IGNITION SWITCH IS TURNED TO THE ON POSITION: (ABS WARNING LIGHT, BRAKE SYSTEM WARNING LIGHT, DSC INDICATOR LIGHT AND/OR DSC OFF LIGHT)[DYNAMIC STABILITY CONTROL (DSC)]

id0403b2804500

1	**Any of the following lights do not illuminate when the ignition switch is turned to the ON position: (ABS warning light, BRAKE system warning light, DSC indicator light and/or DSC OFF light).**

[TROUBLESHOOTING HINTS]
- **Inspect each light in the instrument cluster for malfunction.**
- **Poor connection at DSC HU/CM connector**

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FOR DTCs IN DSC HU/CM** • Have DTCs been stored in memory?	Yes	Perform the applicable DTC inspection. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].)
		No	Go to the next step.
2	**INSPECT IF MALFUNCTION IS IN INSTRUMENT CLUSTER SYSTEM OR OTHER SYSTEM** • Do other warning and indicator lights illuminate when the ignition switch is turned to the ON position?	Yes	Go to the next step.
		No	Inspect or repair the instrument cluster (power supply system, ground system).
3	**VERIFY THAT DSC HU/CM CONNECTOR IS CONNECTED** • Is the DSC HU/CM connector securely connected?	Yes	Go to the next step.
		No	Connect the DSC HU/CM connector securely, then go to the next step.
4	**VERIFY THAT DSC HU/CM CONNECTOR TERMINAL OR RELATED CONNECTOR TERMINALS ARE CONNECTED** • Are the DSC HU/CM connector terminal, instrument cluster connector terminal, or related connector terminals securely connected?	Yes	Replace the DSC HU/CM. (See 04-15-6 DSC HU/CM REMOVAL/INSTALLATION.)
		No	Connect the DSC HU/CM connector terminal or related connector terminal securely.

NO.2 ANY OF THE FOLLOWING LIGHTS REMAIN ON: (ABS WARNING LIGHT, BRAKE SYSTEM WARNING LIGHT, DSC INDICATOR LIGHT AND/OR DSC OFF LIGHT)[DYNAMIC STABILITY CONTROL (DSC)]

id0403b2804600

2	**Any of the following lights remain on: (ABS warning light, BRAKE system warning light, DSC indicator light and/or DSC OFF light)**

[TROUBLESHOOTING HINTS]
- **Brake fluid amount is low.**
- **Parking brake is not released.**
- **No connection at DSC HU/CM connector**
  (When DSC HU/CM connector goes out, ABS warning light and BRAKE system warning light illuminate.)
- **DSC HU/CM detected malfunction (input and output device malfunction).**
- **DSC HU/CM detects low voltage in power supply circuit.**
- **DSC HU/CM ground malfunction**
  (When DSC HU/CM ground is not securely connected, ABS warning light and BRAKE system warning light illuminate but no DTC is displayed.)
- **DSC HU/CM does not operate (DSC HU/CM malfunction).**

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT BRAKE FLUID AMOUNT AND VERIFY THAT PARKING BRAKE RELEASES** • Is the brake fluid amount normal? • Is the parking brake lever released?	Yes	Go to the next step.
		No	Add brake fluid or release the parking brake lever.
2	**INSPECT FOR DTCs IN DSC HU/CM** • Have DTCs been stored in memory?	Yes	Perform the applicable DTC inspection. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].)
		No	Go to the next step.
3	**INSPECT IF MALFUNCTION IS IN CONTROL MODULE CONNECTOR, TERMINAL OR OTHER** • Do ABS warning light and BRAKE system warning light go out **after 4 s** with the ignition switch turned to the ON position?	Yes	Temporary poor connection in control module connector. Inspect the DSC HU/CM connector, then go to Step 6. Inspect the DSC HU/CM connector terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT BATTERY** • Is the battery voltage normal?	Yes	Go to the next step.
		No	Inspect the battery and charging system. (See 01-17A-4 BATTERY INSPECTION[LF, L3].) (See 01-17A-7 GENERATOR INSPECTION[LF, L3].)
5	**INSPECT CHARGING SYSTEM** • Is the battery voltage normal with electrical load (such as A/C, headlight) on and engine idling?	Yes	Go to the next step.
		No	Inspect the charging system (such as drive belt tension, generator). (See 01-17A-7 GENERATOR INSPECTION[LF, L3].)
6	**VERIFY THAT DSC HU/CM CONNECTOR IS CONNECTED** • Is the DSC HU/CM securely connected?	Yes	Go to the next step.
		No	Connect the DSC HU/CM connector securely, then go to the next step.
7	**VERIFY THAT DSC HU/CM CONNECTOR TERMINAL OR RELATED CONNECTOR TERMINALS ARE CONNECTED** • Are DSC HU/CM connector terminal or instrument cluster connector terminal, related connector terminals securely connected?	Yes	Replace the DSC HU/CM. (See 04-15-6 DSC HU/CM REMOVAL/INSTALLATION.)
		No	Connect the DSC HU/CM connector terminal or related connector terminals securely.

NO.3 THERE IS A MALFUNCTION IN THE SYSTEM EVEN THOUGH ABS WARNING LIGHT, BRAKE SYSTEM WARNING LIGHT, DSC INDICATOR LIGHT AND DSC OFF LIGHT DO NOT ILLUMINATE[DYNAMIC STABILITY CONTROL (DSC)]

id0403b2804700

3	**There is a malfunction in the system even though ABS warning light, BRAKE system warning light, DSC indicator light and DSC OFF light do not illuminate.**
[TROUBLESHOOTING HINTS] • **There is a mechanical malfunction in the system.**	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FOR DTCs IN DSC HU/CM** • Have DTCs been stored in memory?	Yes	Perform the applicable DTC inspection. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].)
		No	Go to the next step.
2	**INSPECT DSC SYSTEM** • Perform the DSC system inspection. • Is the system normal?	Yes	Inspect the conventional brake system.
		No	Repair or replace the malfunctioning part.

NO.4 ABS OR TCS*1 OPERATES FREQUENTLY/TCS DOES NOT WORK CORRECTLY *1: DSC SYSTEM FUNCTION CONTAINs TRACTION CONTROL FUNCTION, DSC INDICATOR LIGHT GOES ON AND OUT WHILE DSC OPERATES[DYNAMIC STABILITY CONTROL (DSC)]

id0403b2804800

4	**ABS or TCS (*1) operates frequently./TCS does not work correctly. (*1): DSC system function contains traction control function, DSC indicator light goes on and out while DSC operates.**

[TROUBLESHOOTING HINTS]
- **There is a difference in size or air pressure between the front and rear tires.**
- **Incorrect ABS wheel-speed signal is input to DSC HU/CM**
- **There is a malfunction in the engine control system (TCS malfunction).**

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FOR DTCs IN DSC HU/CM** • Have DTCs been stored in memory?	Yes	Perform the applicable DTC inspection. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].)
		No	Go to the next step.
2	**INSPECT TIRE SIZE AND AIR PRESSURE** • Inspect the tire size and air pressure. • Are the size and air pressure as specified?	Yes	Go to the next step.
		No	Replace with the specified tires and adjust tire air pressure.
3	**INSPECT ABS WHEEL-SPEED SENSOR OUTPUT VALUE** • Inspect the output value from the ABS wheel-speed sensor. (See 04-13-8 FRONT ABS WHEEL-SPEED SENSOR INSPECTION.) (See 04-13-10 REAR ABS WHEEL-SPEED SENSOR INSPECTION.) • Is the output value normal?	Yes	Found malfunctioning part according to "INTERMITTENT CONCERN TROUBLESHOOTING".
		No	• ABS wheel-speed sensor installation inspection: Inspect the ABS wheel-speed sensor for looseness and confirm it is securely adhered. • ABS sensor rotor installation inspection: Inspect the ABS sensor rotor for poor installation.

NO.5 DSC*2 OPERATES FREQUENTLY/DSC DOES NOT WORK CORRECTLY *2: DSC INDICATOR LIGHT GOES ON AND OUT WHILE DSC OPERATES[DYNAMIC STABILITY CONTROL (DSC)]

id0403b2804900

5	**DSC (*2) operates frequently. /DSC does not work correctly. (*2): DSC indicator light goes on and off while DSC operates.**

[TROUBLESHOOTING HINTS]
- **DSC HU/CM detected a malfunction (input and output device malfunction).**
- **Poor installation of combined sensor and/or steering angle sensor.**
  (If any of the above sensors are poorly installed, DSC may operate intermittently.)
- **Initialization was not performed for combined sensor, brake fluid pressure sensor when replacing DSC HU/CM, combined sensor.**
  (If initialization is not performed correctly, DSC may not work correctly.)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FOR DTCs IN DSC HU/CM** • Have DTCs been stored in memory?	Yes	Perform the applicable DTC inspection. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].)
		No	Go to the next step.
2	**VERIFY THAT EACH SENSOR IS INSTALLED** • Are the combined sensor and steering angle sensor securely installed?	Yes	Go to the next step.
		No	Install the malfunctioning sensor securely.
*3	**VERIFY THAT EACH SENSOR IS INITIALIZED** • Did each sensor initialize after replacement of DSC HU/CM, combined sensor?	Yes	Find malfunctioning part according to "INTERMITTENT CONCERN TROUBLESHOOTING."
		No	Perform initialization procedure. (See 04-15-12 COMBINED SENSOR INITIALIZATION PROCEDURE.) (See 04-15-13 BRAKE FLUID PRESSURE SENSOR INITIALIZATION PROCEDURE.)

04-10 GENERAL PROCEDURES

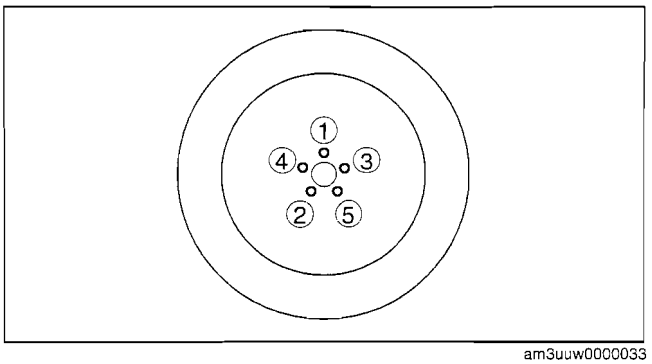
GENERAL PROCEDURES (BRAKE)

id041000800100

Wheel and Tire Installation

1. When installing the wheels and tires, tighten the wheel nuts in a criss-cross pattern to the following tightening torque.

Tightening torque
88.2—117.6 N·m {9.00—11.99 Kgf·m, 65.06—86.73 ft·lbf}



am3uuw0000033

Brake Lines Disconnection

1. If any brake line has been disconnected during the procedures, add brake fluid, bleed the brakes, and inspect for leakage after the procedure has been completed.

Caution
- **Brake fluid will damage painted surfaces. Be careful not to spill any on painted surfaces. If it is spilled, wipe it off immediately.**

Brake Pipe Flare Nut Tightening

1. Tighten the brake pipe flare nut using the **SST** (49 0259 770B) or any commercially available flare nut wrench.

Connector Disconnection

1. Disconnect the negative battery cable before performing any work that requires handling of connectors. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].) (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)

ABS Related Parts

1. Make sure that there are no DTCs in the ABS memory after working on ABS related parts. If there are any DTCs in the memory, clear them.

DSC Related Parts Sensor Initialization Procedure

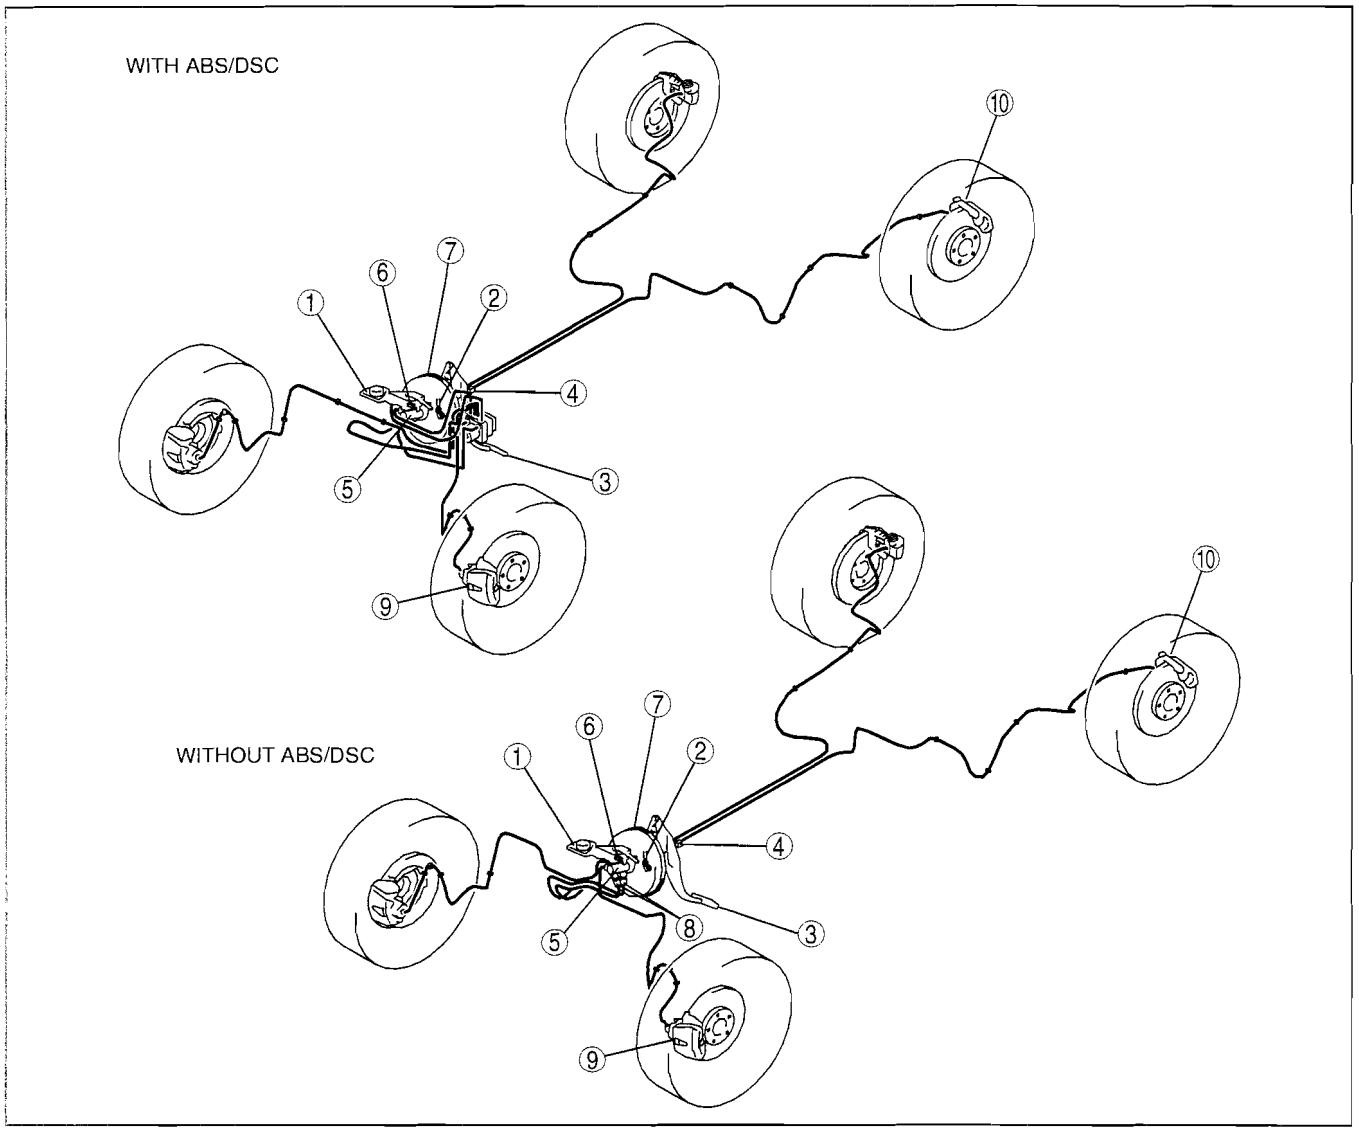
Warning
- **If the initialization procedure is not completed, the DSC will not operate properly and it might cause an unexpected accident. Therefore, when replacing or removing the following parts, make sure to perform the initialization procedure to ensure proper DSC operation.**

1. When replacing or removing the following parts, perform the initialization procedure. (See 04-15-12 COMBINED SENSOR INITIALIZATION PROCEDURE.) (See 04-15-13 BRAKE FLUID PRESSURE SENSOR INITIALIZATION PROCEDURE.)
   - DSC HU/CM
   - Combined sensor

04-11 CONVENTIONAL BRAKE SYSTEM

CONVENTIONAL BRAKE SYSTEM LOCATION INDEX

id041100800100



c3u0411w001

1	Brake fluid (See 04-11-3 AIR BLEEDING.)
2	Vacuum line (See 04-11-4 VACUUM LINE INSPECTION.) (See 04-11-4 VACUUM HOSE REMOVAL/ INSTALLATION.)
3	Brake pedal (See 04-11-5 BRAKE PEDAL INSPECTION.) (See 04-11-6 BRAKE PEDAL REMOVAL/ INSTALLATION.)
4	Brake switch (See 04-11-8 BRAKE SWITCH INSPECTION.)
5	Master cylinder (See 04-11-9 MASTER CYLINDER REMOVAL/ INSTALLATION[LF, L3].) (See 04-11-10 MASTER CYLINDER REMOVAL/ INSTALLATION[L3 WITH TC].)
6	Brake fluid level sensor (See 04-11-11 BRAKE FLUID LEVEL SENSOR INSPECTION.)

7	Power brake unit (See 04-11-11 POWER BRAKE UNIT INSPECTION.) (See 04-11-13 POWER BRAKE UNIT REMOVAL/ INSTALLATION[LF, L3].) (See 04-11-14 POWER BRAKE UNIT REMOVAL/ INSTALLATION[L3 WITH TC].)
8	Proportioning valve (See 04-11-15 PROPORTIONING VALVE INSPECTION.)

9	Front brake (disc) (See 04-11-15 FRONT BRAKE (DISC) INSPECTION.) (See 04-11-18 FRONT BRAKE (DISC) REMOVAL/INSTALLATION[LF, L3].) (See 04-11-19 FRONT BRAKE (DISC) REMOVAL/INSTALLATION[L3 WITH TC].) (See 04-11-21 DISC PAD (FRONT) REPLACEMENT[LF, L3].) (See 04-11-22 DISC PAD (FRONT) REPLACEMENT[L3 WITH TC].) (See 04-11-23 CALIPER (FRONT) DISASSEMBLY/ASSEMBLY[LF, L3].) (See 04-11-25 CALIPER (FRONT) DISASSEMBLY/ASSEMBLY[L3 WITH TC].)

10	Rear brake (disc) (See 04-11-26 REAR BRAKE (DISC) INSPECTION.) (See 04-11-30 REAR BRAKE (DISC) REMOVAL/INSTALLATION.) (See 04-11-31 DISC PAD (REAR) REPLACEMENT.) (See 04-11-32 CALIPER (REAR) DISASSEMBLY/ASSEMBLY.)

AIR BLEEDING

id041100800200

Caution
- **Brake fluid will damage painted surfaces. Be careful not to spill any on painted surfaces. If it is spilled, wipe it off immediately.**

Note
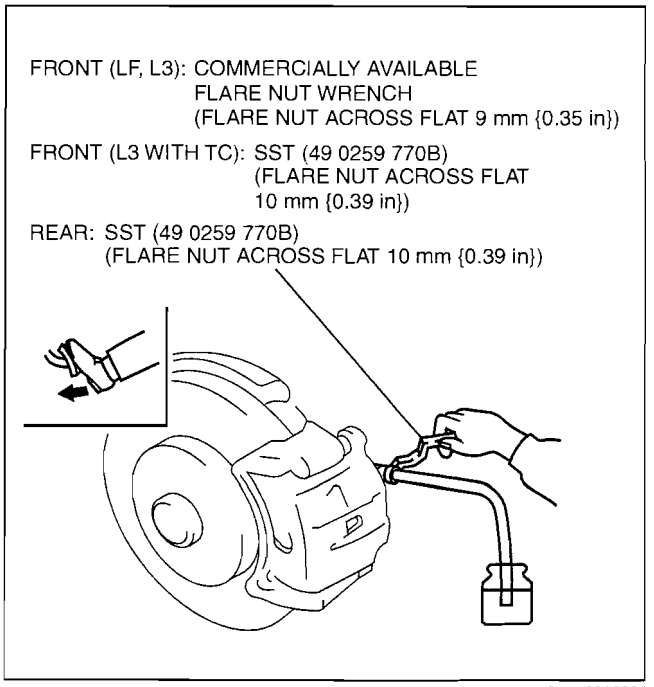
- Keep the fluid level in the reserve tank at 3/4 full or more during the air bleeding.
- Begin air bleeding with the brake caliper that is furthest from the master cylinder.

Brake fluid type
SAE J1703, FMVSS 116 DOT3

1. Remove the bleeder cap on the brake caliper, and attach a vinyl tube to the bleeder screw.
2. Place the other end of the vinyl tube in a clear container and fill the container with fluid during air bleeding.
3. Working with two people, one should pump the brake pedal several times and depress and hold the pedal down.
4. While the brake pedal is depressed, the other should loosen the bleeder screw using the **SST** or any commercially available flare nut wrench, drain out any fluid containing air bubbles, and tighten the bleeder screw.

   Tightening torque
   Front (LF, L3): 7—9 N·m {72—91 kgf·cm, 70—79 in·lbf}
   Front (L3 WITH TC): 12—16 N·m {123—163 kgf·cm, 107—141 in·lbf}
   Rear: 12—16 N·m {123—163 kgf·cm, 107—141 in·lbf}

5. Repeat Steps 3 and 4 until no air bubbles are seen.
6. Perform air bleeding as described in the above procedures for all brake calipers.
7. After air bleeding, inspect the following:
   - Brake operation
   - Fluid leakage
   - Fluid level

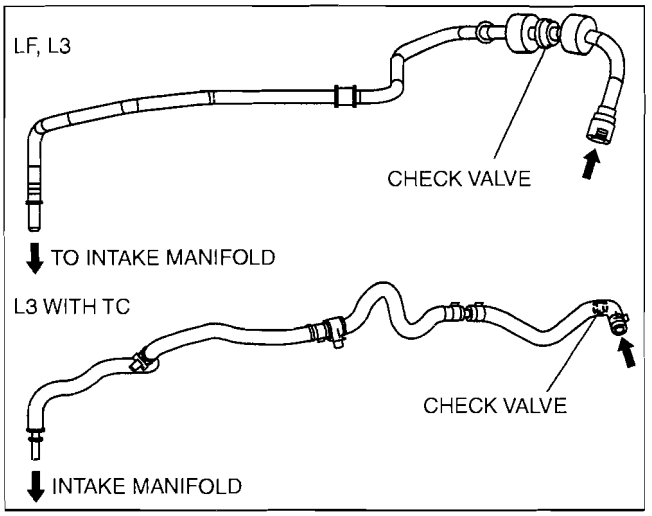


am3uuw0000026

VACUUM LINE INSPECTION

id041100801500

1. Remove the vacuum hose. (See 04-11-4 VACUUM HOSE REMOVAL/INSTALLATION.)
2. Verify that air can be blown from the power brake unit side of the vacuum hose towards the intake manifold side, and that air cannot be blown in the opposite direction.
   - If there is any malfunction of the inner check valve, replace it together with the vacuum hose as a single unit.

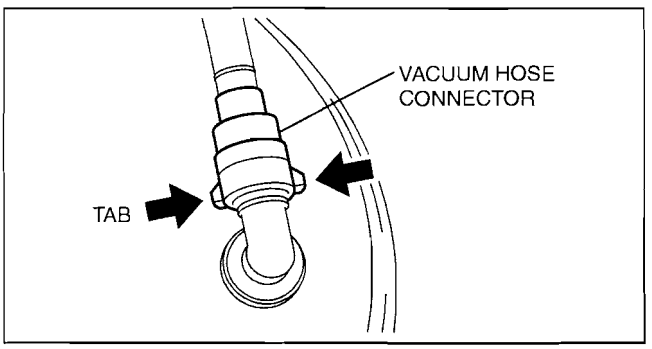


am3uuw0000039

VACUUM HOSE REMOVAL/INSTALLATION

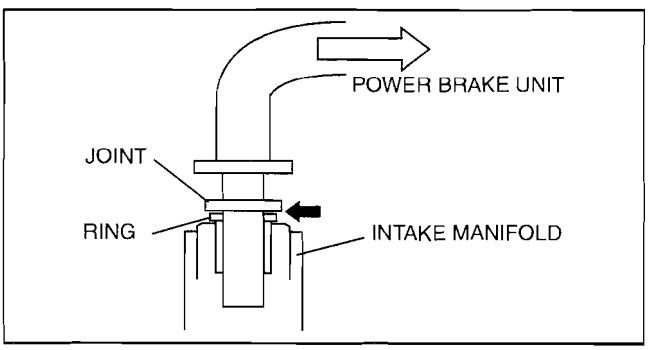
id041100801600

1. Disconnect the vacuum hose connector from the power brake unit while pressing the tabs of the vacuum hose connector. (LF, L3)
2. Pinch open the clip using pliers and disconnect the vacuum hose from the power brake unit. (L3 WITH TC)



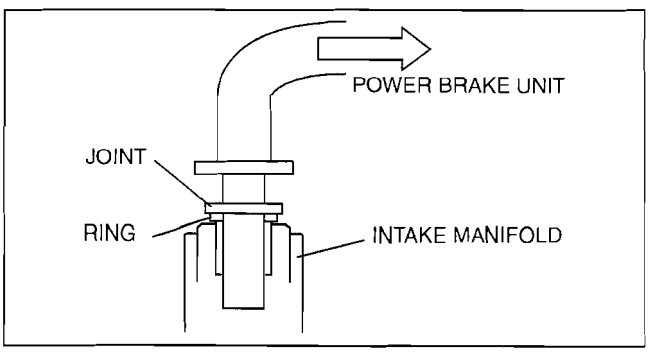
am3uuw0000027

3. Insert a thin flathead screwdriver at the point indicated by the arrow in the figure, push the ring down and disconnect the vacuum hose from the intake manifold.
4. Remove the vacuum hose.
5. Install in the reverse order of removal.



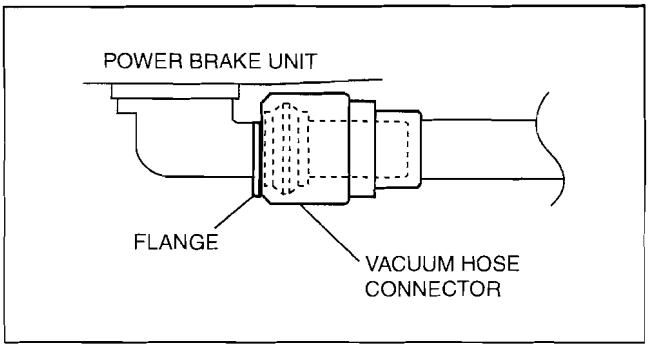
am3uuw0000027

6. Verify that the vacuum hose is inserted so that the joint contacts the intake manifold ring. (LF, L3)
7. Insert the vacuum hose connector to the power brake unit. (LF, L3)



am3uuw0000027

8. Verify that the vacuum hose is inserted so that the connector contacts the power brake unit flange. (LF, L3)



am3uuw0000027

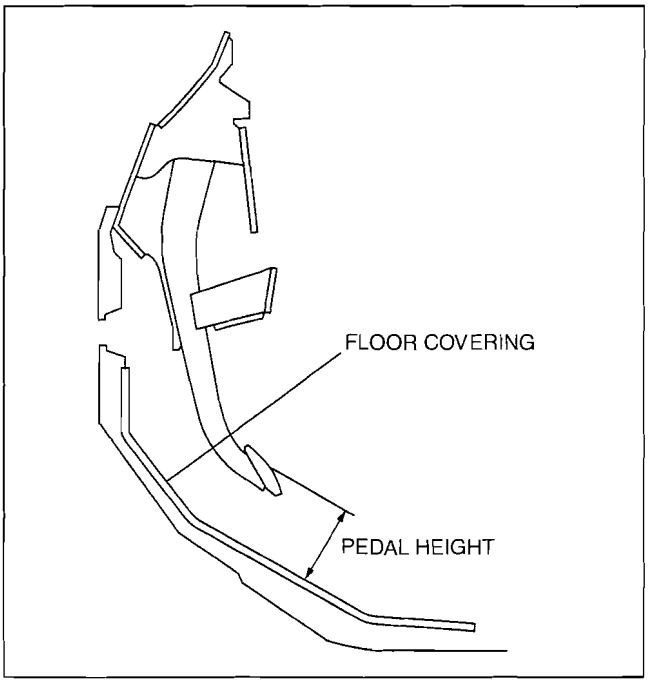
BRAKE PEDAL INSPECTION

id041100801100

Pedal Height Inspection

1. Measure the distance from the center of the upper surface of the pedal pad to the floor covering and verify that it is as specified.
   - If not within the specification, replace the brake pedal.

Brake pedal height (reference value)
136.4 mm {5.37 in}



am3uuw0000074

Pedal Play Inspection

1. Pump the pedal several times to release the vacuum in the power brake unit.
2. Gently depress the pedal by hand and measure the pedal play.
   - If not within the specification, inspect the wear of the joint pin. Replace it if there is any malfunction.

Brake pedal play
4.0—8.4 mm {0.16—0.33 in}

Note
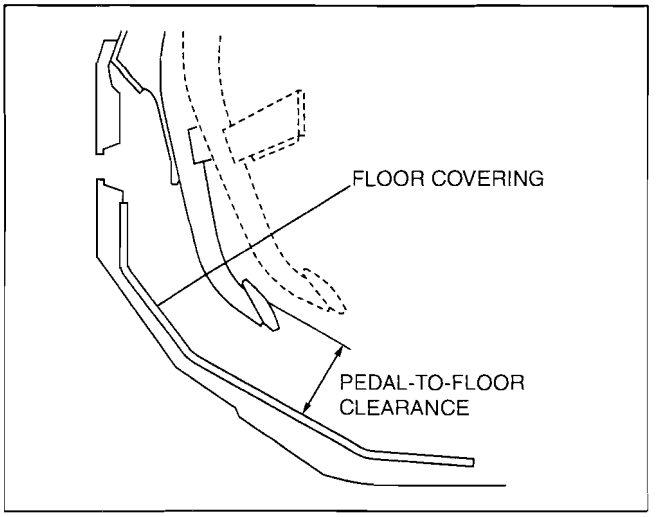
- If there is no malfunction in the joint pin, there is a possibility that the power brake unit has some malfunction. Verify that there are no malfunctions, and replace it if necessary.

Pedal-to-floor Clearance Inspection

1. Start the engine and depress the brake pedal with a force of **147 N {15.0 kgf, 33.0 lbf}**.
2. Measure the distance from the center of the upper surface of the pedal pad to the floor covering and verify that it is as specified.
   - If it is less than the specification, inspect for air in the brake line.

Brake pedal-to-floor clearance (Brake pedal when depressed at 147 N {15.0 kgf, 33.0 lbf})
89.8 mm {3.54 in} or more



am3uuw0000074

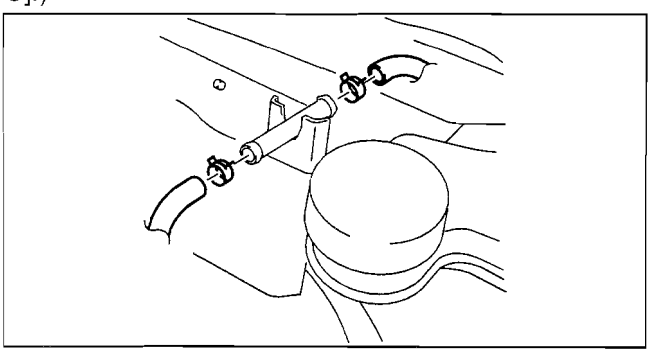
BRAKE PEDAL REMOVAL/INSTALLATION

id041100801200

Caution

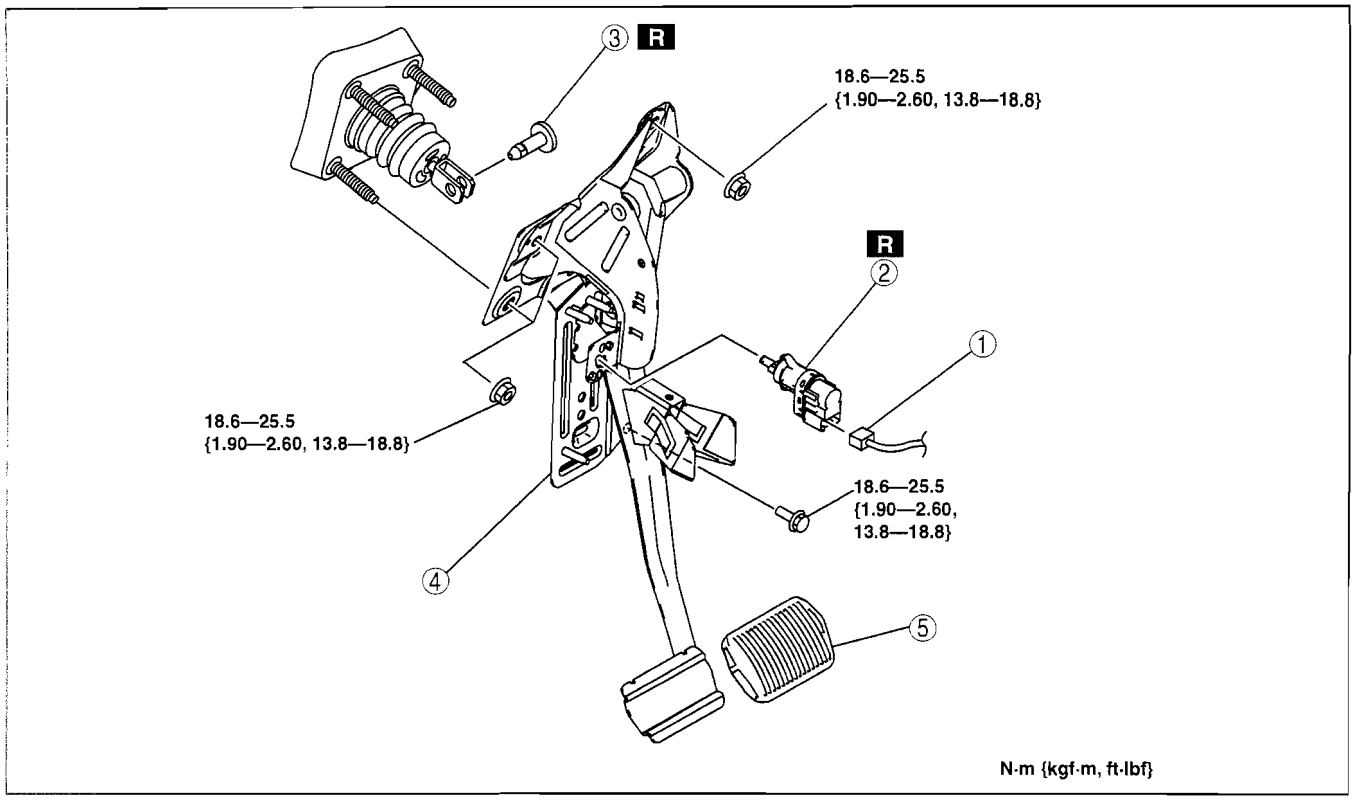
- **The clearance between the brake switch and the brake pedal is automatically adjusted to the correct amount when the brake switch is inserted into the installation hole on the brake pedal and rotated to fix in place. If the brake switch is not properly installed, the clearance may be incorrect, causing a brake light malfunction. Therefore, always verify that the brake pedal is properly installed and fully released before installing the brake switch to the pedal.**
- **Once the brake switch clearance has automatically been adjusted, it cannot be adjusted again. Therefore, replace the switch with a new one when replacing the power brake unit or the pedal, or performing any procedure that changes the pedal stroke.**

1. Remove the charge air cooler cover. (L3 WITH TC) (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
2. Remove the battery and battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].) (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
3. Disconnect the vacuum hose from the insulator pipe as shown in the figure. (L3 WITH TC)
4. Remove the insulator. (L3 WITH TC) (see 04-11-10 MASTER CYLINDER REMOVAL/INSTALLATION[L3 WITH TC].)
5. Disconnect the brake pipe (master cylinder side). (See 04-11-9 MASTER CYLINDER REMOVAL/INSTALLATION[LF, L3].) (See 04-11-10 MASTER CYLINDER REMOVAL/INSTALLATION[L3 WITH TC].)
6. Remove the accelerator pedal. (See 01-13A-11 ACCELERATOR PEDAL REMOVAL/INSTALLATION[LF, L3].) (See 01-13B-18 ACCELERATOR PEDAL REMOVAL/INSTALLATION[L3 WITH TC].)
7. Remove in the order indicated in the table.



am3uuw0000038

8. Install in the reverse order of removal.



c3u0411w008

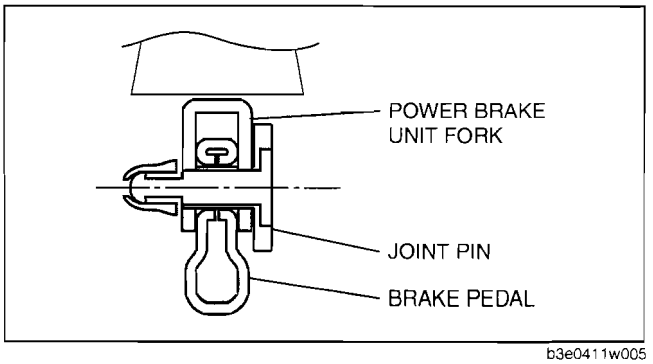
1	Brake switch connector
2	Brake switch (See 04-11-8 Brake Switch Installation Note.)
3	Joint pin (See 04-11-7 Joint Pin Installation Note.)
4	Brake pedal (See 04-11-7 Brake Pedal Removal Note.)
5	Pedal pad

Brake Pedal Removal Note

1. Remove the brake pedal installation bolts and nuts.
2. Move the power brake unit to the vehicle front where the power brake unit fork does not interfere with the brake pedal arm.
3. Remove the brake pedal.

Joint Pin Installation Note

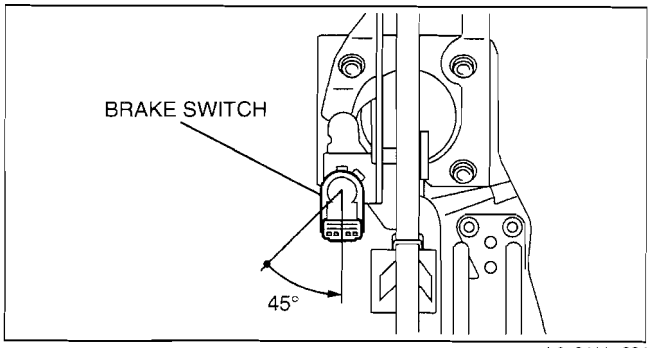
1. Install the new joint pin by aligning the pin holes of the brake pedal and power brake unit fork.
2. Verify that the joint pin touches the power brake unit fork completely.



b3e0411w005

Brake Switch Installation Note

1. Inspect the brake pedal. (See 04-11-5 BRAKE PEDAL INSPECTION.)
2. With the brake pedal fully released, insert a new brake switch into the installation hole on the brake pedal.
3. Secure the brake switch by turning it counterclockwise **45°**.



b3e0411w004

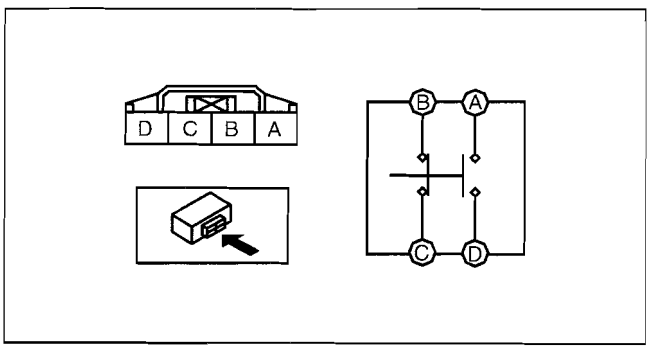
BRAKE SWITCH INSPECTION

id041100801900

Caution

- **Inspect the brake switch with it installed to the brake pedal, otherwise the brake switch may not operate normally. If the brake switch is removed from the brake pedal, replace the brake switch with a new one.**

1. Remove the lower panel.
2. Remove the column cover.
3. Disconnect the brake switch connector.
4. Verify that the continuity is as indicated in the table.
   - If not as indicated in the table, replace the brake switch.



c3u0411w005

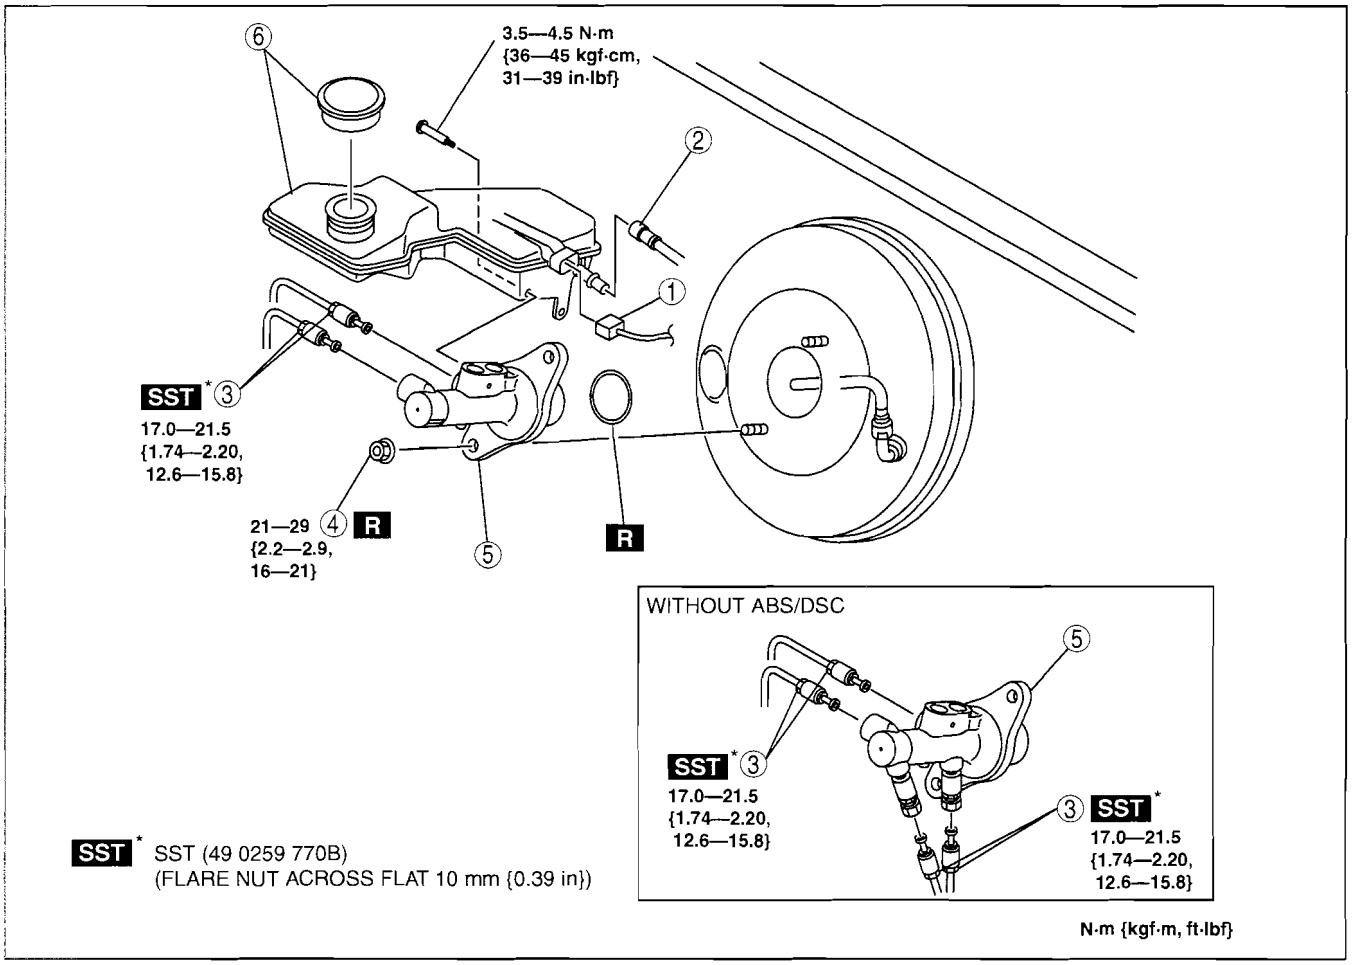
MASTER CYLINDER REMOVAL/INSTALLATION[LF, L3]

id041100801338

1. Remove the battery and battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.

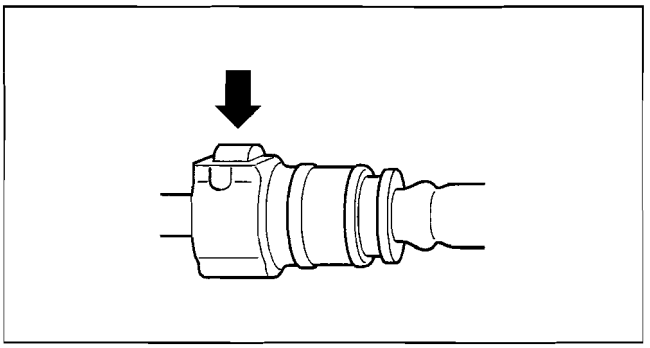


am3uuw0000026

1	Brake fluid level sensor connector
2	Reserve hose (MTX) (See 04-11-9 Reserve Hose (MTX) Removal Note.) (See 04-11-9 Reserve Hose (MTX) Installation Note.)
3	Brake pipe
4	Nut
5	Master cylinder
6	Reserve tank, cap

Reserve Hose (MTX) Removal Note

1. Remove the reserve hose from the reserve tank while pressing the point indicated by the arrow in the figure.



am3uuw0000026

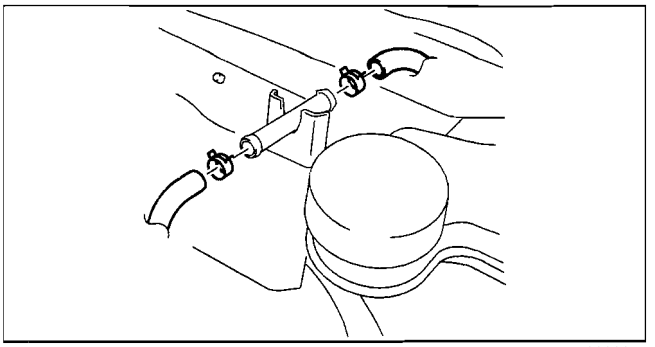
Reserve Hose (MTX) Installation Note

1. Insert the reserve hose to the reserve tank until a click is heard.
2. Verify that the reserve hose is firmly installed by pulling it, and push it into the reserve tank again.

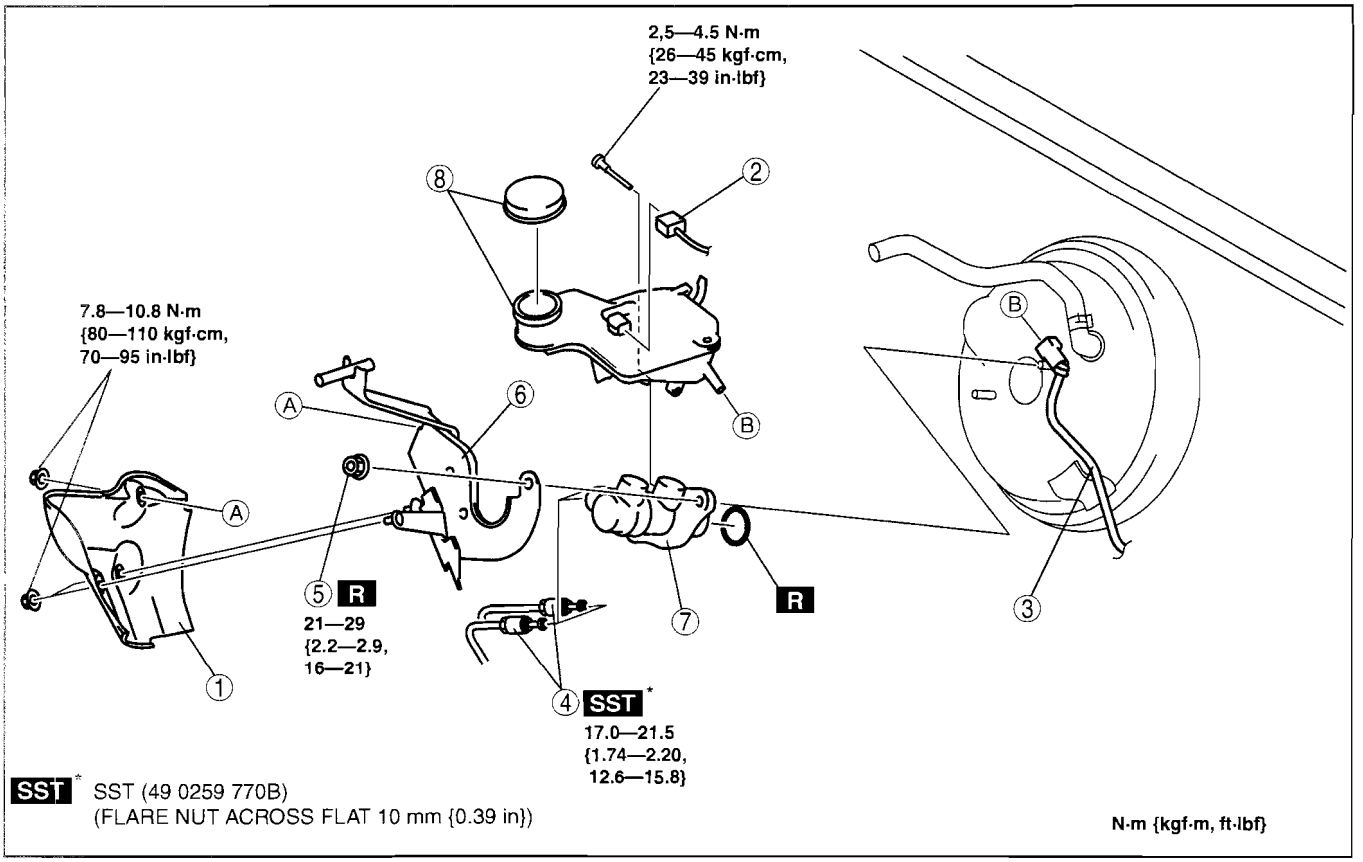
MASTER CYLINDER REMOVAL/INSTALLATION[L3 WITH TC]

id041100801339

1. Remove the battery and battery tray. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
2. Disconnect the vacuum hose from the insulator pipe as shown in the figure.
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.



am3uuw0000038



am3uuw0000039

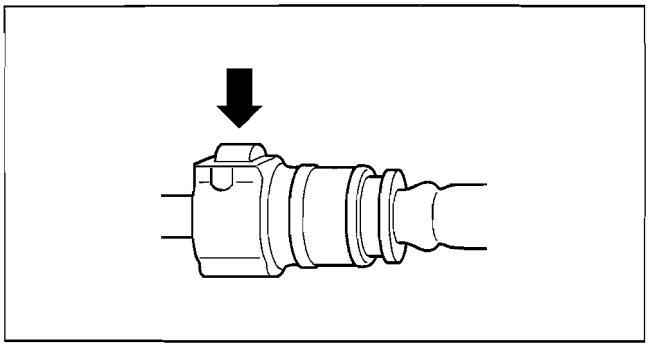
8	Reserve tank, cap

Reserve Hose Removal Note

1. Remove the reserve hose from the reserve tank while pressing the point indicated by the arrow in the figure.



am3uuw0000027

Insulator Bracket, Master Cylinder Removal Note

1. Remove the insulator bracket and master cylinder from the power brake unit as a single unit.
2. Remove the insulator bracket from the master cylinder.

Insulator Bracket, Master Cylinder Installation Note

1. Temporarily install the insulator bracket to the master cylinder.
2. Install the insulator bracket and master cylinder to the power brake unit as a single unit.

Reserve Hose Installation Note

1. Insert the reserve hose to the reserve tank until a click is heard.
2. Verify that the reserve hose is firmly installed by pulling it, and push it into the reserve tank again.

BRAKE FLUID LEVEL SENSOR INSPECTION

id041100801400

1. Disconnect the brake fluid level sensor connector from the master cylinder.
2. Inspect for continuity according to fluid level between the brake fluid level sensor terminals.
   - If not as indicated in the table, replace the reserve tank.

Below MIN	O	O

chu0411w017

POWER BRAKE UNIT INSPECTION

id041100801700

Note

- The following inspection methods are simple inspection methods to judge the function of the power brake unit.
- If there is any malfunction in the power brake unit, replace the power brake unit as a single unit.

Without Using SST

Operation inspection

1. With the engine stopped, pump the pedal a few times.
2. With the pedal depressed, start the engine.
3. If the pedal moves down slightly immediately after starting the engine, the unit is normal.

Vacuum function inspection

1. Start the engine.
2. Stop the engine after driving the vehicle for **1—2 min.**
3. Depress the pedal with normal force.
4. If the first pedal stroke is long and becomes shorter with subsequent strokes, the unit is normal.
   - If a problem is found, inspect for damage to or improper installation of the check valve and vacuum hose. After repairing, inspect again.

Vacuum loss function inspection

1. Start the engine.
2. Depress the pedal with normal force.
3. With the pedal depressed, stop the engine.
4. Hold the pedal depressed for **approx. 30 s.**
5. If the pedal height does not change during this time, the unit is normal.

Using SST

Pre-inspection preparation

1. Install the **SST** (49 D043 0A0) to the master cylinder in the orientation shown in the figure.

   Note
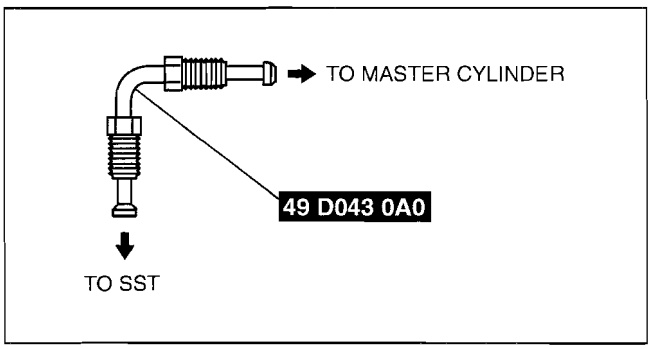
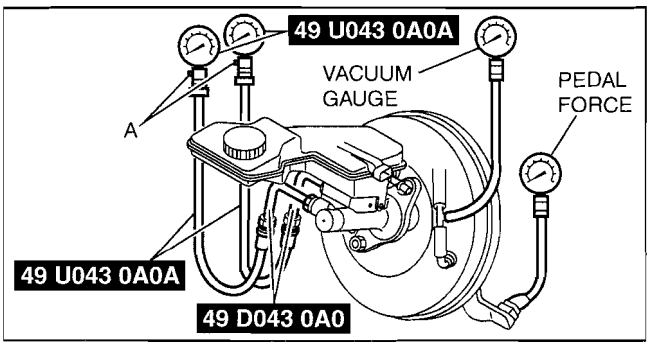
   - When installing the **SST** (49 D043 0A0) to the master cylinder, use a commercially available flare nut wrench.
     — Flare nut across flat: **12 mm {0.47 in}**



c3u0411w009

2. Connect the **SSTs**, a vacuum gauge, and a pedal force gauge to the master cylinder, and bleed the air from the **SSTs** and the brake line. (Bleed the air from the **SSTs** using air bleed valve A.)



c3u0411w010

Vacuum loss inspection

1. Start the engine.
2. Depress the brake pedal with a force of **200 N {20.4 kgf, 44.9 lbf}**.
3. Stop the engine when the vacuum gauge reading reaches **68 kPa {510 mmHg, 20.1 inHg}** with the pedal depressed.
4. With the engine off, observe the vacuum gauge for **15 s.**
5. If the gauge has dropped **3.3 kPa {25 mmHg, 1.0 inHg}** or less, the unit is normal.

Lack of hydraulic pressure inspection

1. If the pedal force and fluid pressure correlation is within the specification with the engine stopped and a vacuum amount of **0 kPa {0 mmHg, 0 inHg}**, the system is normal.

Master cylinder fluid pressure

Vacuum amount at 0 kPa {0 mmHg, 0 inHg}	
Pedal force (N {kgf, lbf})	**Fluid pressure (kPa {kgf/cm2, psi})**
200 N {20.4kgf, 44.9lbf}	500 kPa {5.10 kgf/cm^2, 72.6 psi} or more

Hydraulic pressure inspection

1. Start the engine. Depress the brake pedal when the vacuum reaches **66.7 kPa {500 mmHg, 19.7 inHg}**.
2. At this time, apply the indicated pedal force and if the fluid pressure is within the specification, the unit is normal.

Master cylinder fluid pressure (except L3 WITH TC)

Vacuum amount at 66.7 kPa {500 mmHg, 19.7 inHg}	
Pedal force (N {kgf, lbf})	**Fluid pressure (kPa {kgf/cm2, psi})**
200 N {20.4kgf, 44.9lbt}	6,500 kPa {66.29 kgf/cm^2, 942.8 psi} or more

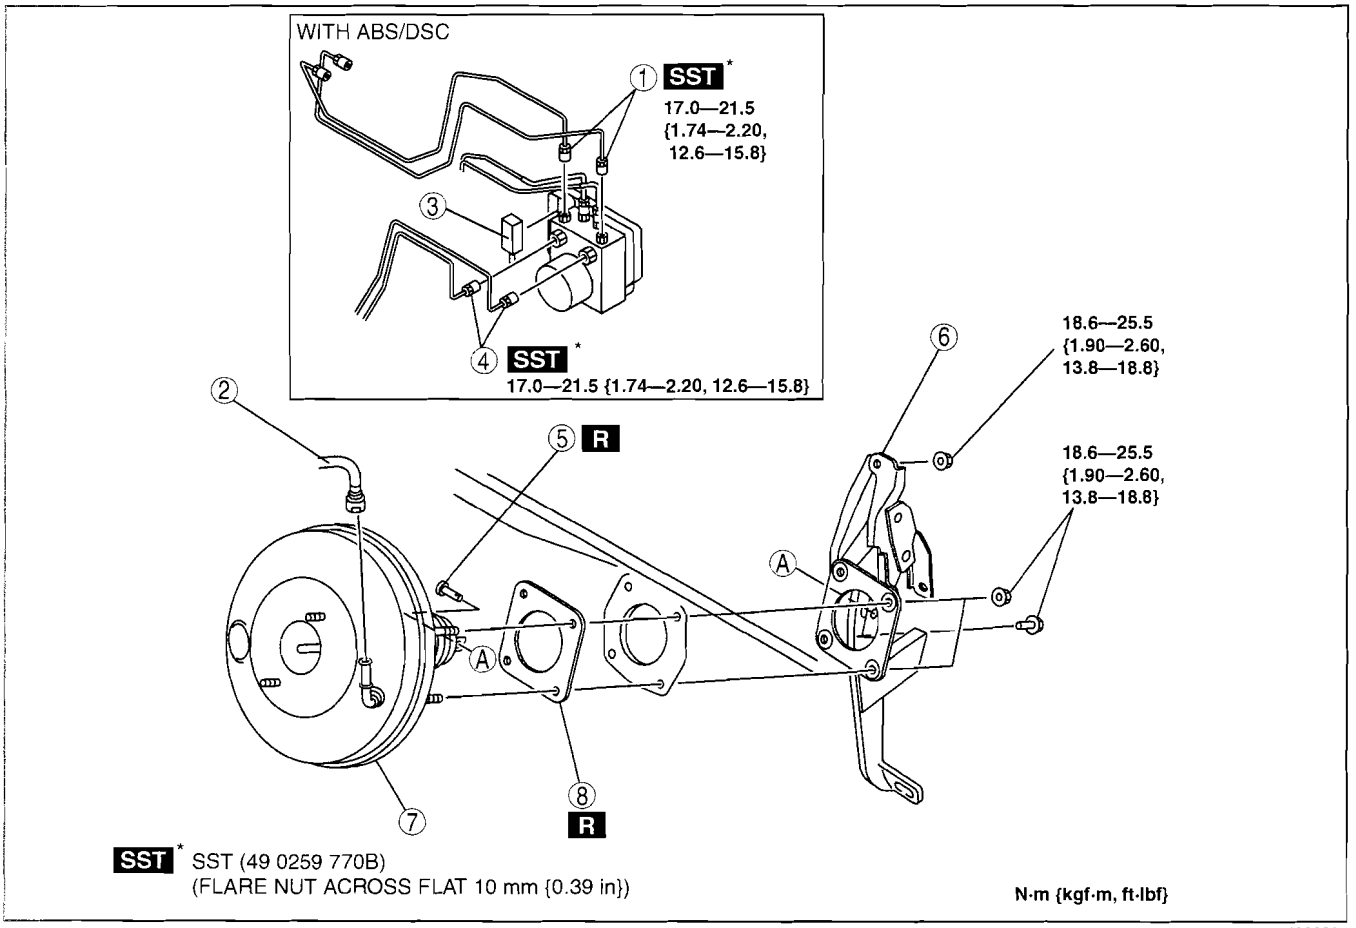
Master cylinder fluid pressure (L3 WITH TC)

Vacuum amount at 66.7 kPa {500 mmHg, 19.7 inHg}	
Pedal force (N {kgf, lbf})	**Fluid pressure (kPa {kgf/cm2, psi})**
200 N {20.4kgf, 44.9lbt}	7,000 kPa {71.39 kgf/cm^2, 1,016 psi} or more

POWER BRAKE UNIT REMOVAL/INSTALLATION[LF, L3]

id041100801838

1. Remove the battery and battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Remove the master cylinder. (See 04-11-9 MASTER CYLINDER REMOVAL/INSTALLATION[LF, L3].)
3. Remove the brake switch connector.
4. Remove the accelerator pedal. (See 01-13A-11 ACCELERATOR PEDAL REMOVAL/INSTALLATION[LF, L3].)
5. Remove in the order indicated in the table.
6. Install in the reverse order of removal.
7. After installation, inspect the brake pedal. (See 04-11-5 BRAKE PEDAL INSPECTION.)



am3uuw0000027

1	Brake pipe
2	Vacuum hose (See 04-11-4 VACUUM HOSE REMOVAL/ INSTALLATION.)
3	Connector (See 04-13-4 ABS HU/CM REMOVAL/ INSTALLATION.)
4	Brake pipe

6	Brake pedal component (See 04-11-14 Brake Pedal Component Removal Note.)
7	Power brake unit
8	Gasket

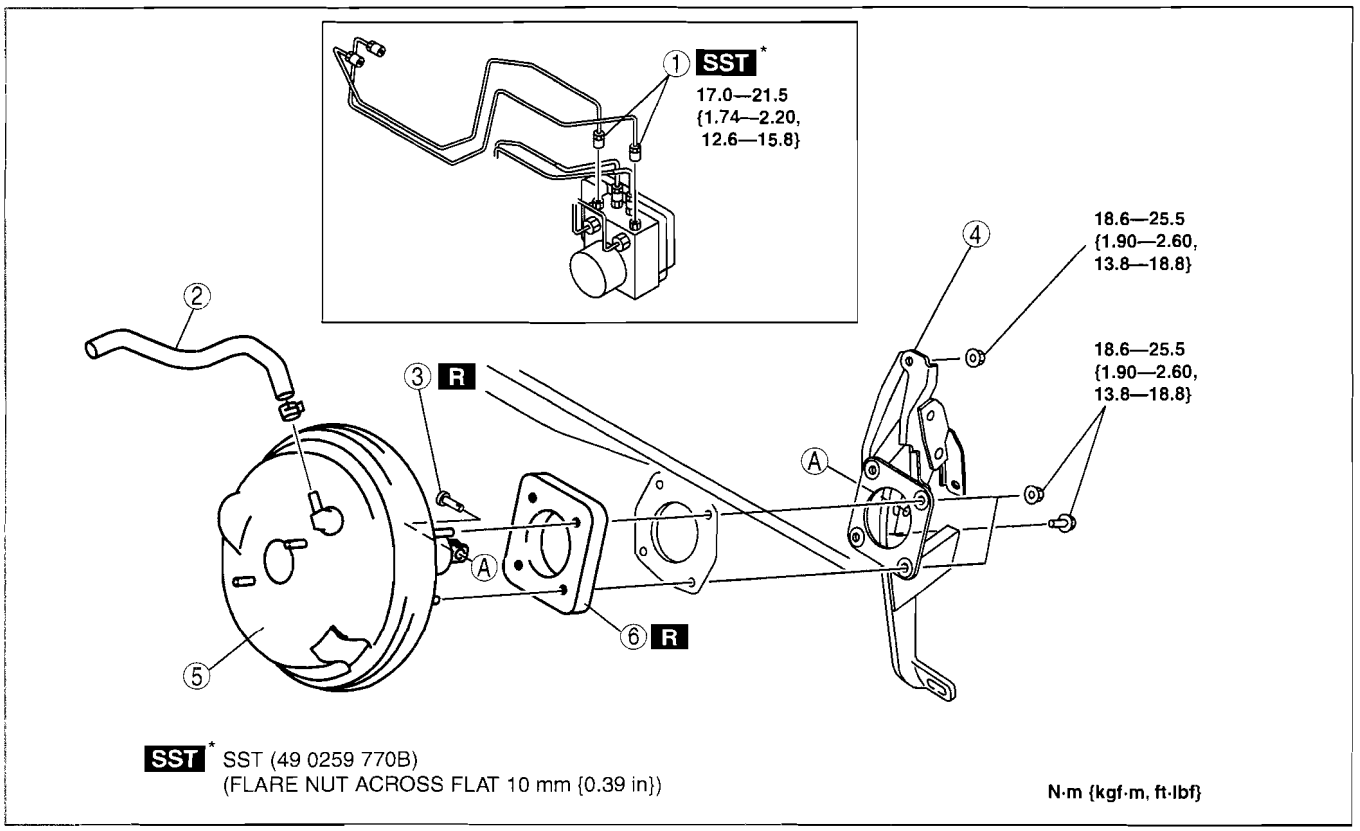
Brake Pedal Component Removal Note

1. Remove the brake pedal installation bolt and nuts.
2. Move the power brake unit toward the vehicle front.
3. Remove the brake pedal component.

POWER BRAKE UNIT REMOVAL/INSTALLATION[L3 WITH TC]

id041100801839

1. Remove the battery and battery tray. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
2. Remove the master cylinder. (See 04-11-10 MASTER CYLINDER REMOVAL/INSTALLATION[L3 WITH TC].)
3. Remove the air hose and air duct. (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
4. Remove the brake switch connector.
5. Remove the accelerator pedal. (See 01-13B-18 ACCELERATOR PEDAL REMOVAL/INSTALLATION[L3 WITH TC].)
6. Remove in the order indicated in the table.
7. Install in the reverse order of removal.
8. After installation, inspect the brake pedal. (See 04-11-5 BRAKE PEDAL INSPECTION.)



am3uuw0000039

1	Brake pipe
2	Vacuum hose (See 04-11-4 VACUUM HOSE REMOVAL/ INSTALLATION.)
3	Joint pin (See 04-11-6 BRAKE PEDAL REMOVAL/ INSTALLATION.)

4	Brake pedal component (See 04-11-14 Brake Pedal Component Removal Note.)
5	Power brake unit
6	Gasket

Brake Pedal Component Removal Note

1. Remove the brake pedal installation bolt and nuts.
2. Move the power brake unit toward the vehicle front.
3. Remove the brake pedal component.

PROPORTIONING VALVE INSPECTION

id041100804300

1. Disconnect the master cylinder brake pipes, and install the **SST** (49 D043 0A0) to the master cylinder orientated as shown in the figure.

   Note
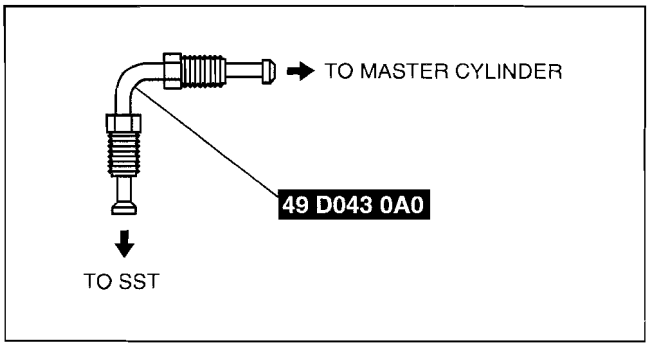
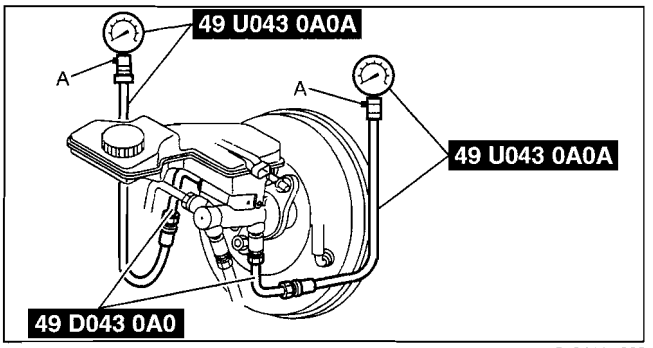
   - Use a commercially available flare nut wrench when installing the **SST** (49 D043 0A0) to the master cylinder.
     — Flare nut across flat: **12 mm {0.47 in}**



c3u0411w009

2. Connect the **SSTs** as shown in the figure, and bleed the air from the **SSTs** and the brake line. (Bleed the air from the **SSTs** using air bleed valve A.)
3. Inspect the rear brake fluid pressure when the front brake fluid pressure is adjusted to the level indicated in the table.
   - If not within the specification, replace the master cylinder.



c3u0411w003

04-11

Proportioning valve fluid pressure

Front brake fluid pressure (kPa {kgf/cm^2, psi})	Rear brake fluid pressure (kPa {kgf/cm^2, psi})
5,000 {50.99, 725.2}	3,500—3,700 {35.70—37.72, 507.7—536.6}
10,000 {101.97, 1450.4}	4,950—5,250 {50.48—53.53, 718.0—761.4}

FRONT BRAKE (DISC) INSPECTION

id041100800800

Brake Judder Repair Hints

Description

1. Brake judder concern has the following 3 characteristics:

Steering wheel vibration

1. The steering wheel vibrates in the rotation direction. This characteristic is most noticeable when applying brakes at a vehicle speed of **100—140 km/h {62.1—86.8 mph}**.

Floor vibration

1. When applying the brakes, the vehicle body shakes back and forth. The seriousness of the shaking is not influenced by vehicle speed.

Brake pedal vibration

1. When applying the brakes, a pulsating force tries to push the brake pad back. The pulsation is transmitted to the brake pedal.
2. The following are the main possible causes of brake judder:

Due to an excessive runout (side-to-side wobble) of the disc plate, the thickness of the disc plate is uneven.

1. If the runout is **more than 0.05 mm {0.002 in}** at the position **10 mm {0.39 in}** from the disc plate edge, uneven wear occurs on the disc plate because the pad contacts the plate unevenly.
2. If the runout is **less than 0.05 mm {0.002 in}**, uneven wear does not occur.

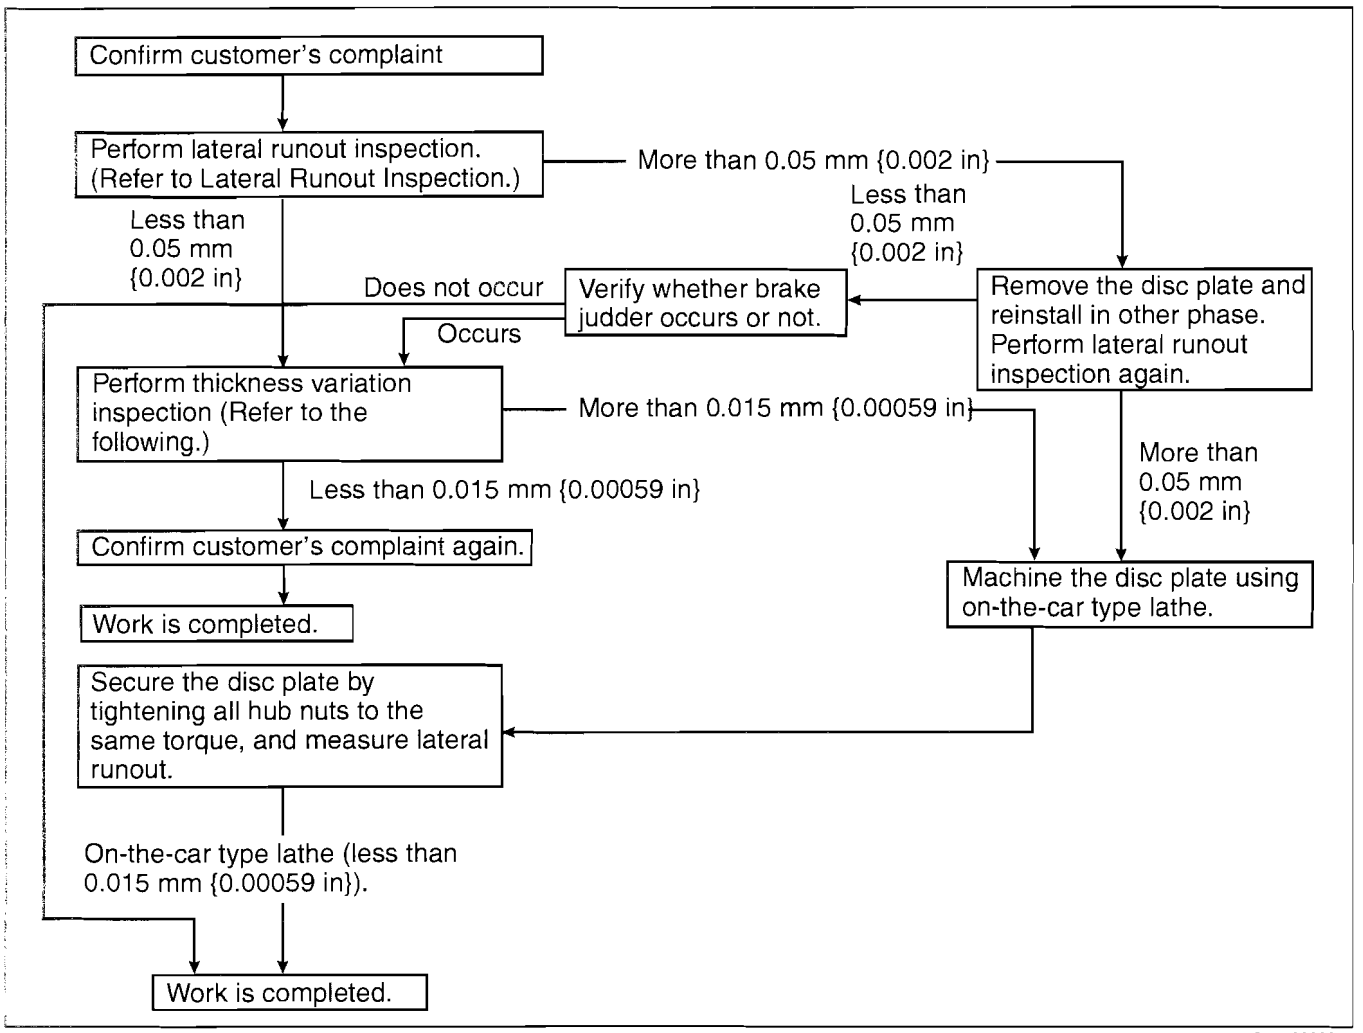
The disc plate is deformed by heat.

1. Repeated panic braking may raise the temperature in some portions of the disc plate by **approx. 1,000 °C {1,832 °F}**. This results in a deformed disc plate.

Due to corrosion, the thickness and friction coefficient of the disc plate change.

1. If the vehicle is parked in damp conditions for a long time, corrosion occurs on the friction surface of the disc plate.
2. The thickness of corrosion is uneven and sometimes appears like a wave pattern, which changes the friction coefficient and causes a reaction force.

Inspection and repair procedure



am3uuw0000037

Lateral runout inspection

1. To secure the disc plate and the hub, insert the washer (thickness **10 mm {0.39 in}**, inner diameter **more than 12 mm {0.47 in}**) between each hub bolt and the hub nut, then tighten all the hub nuts.

Note

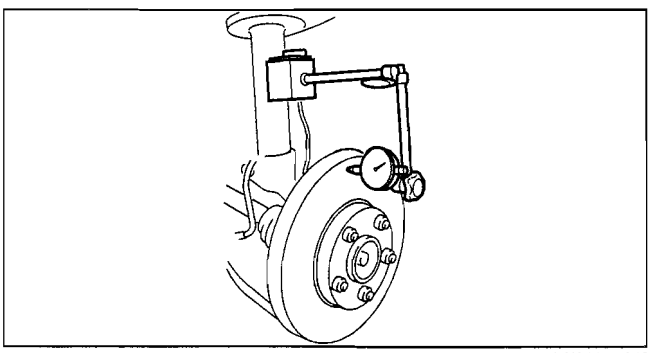
- The component parts of the **SST** (49 B017 001 or 49 G019 003) can be used as a suitable washer.

2. After tightening all the hub nuts to the same torque, put the dial gauge on the friction surface of the disc plate **10 mm {0.39 in}** from the disc plate edge.
3. Rotate the disc plate one time and measure the runout.

Front disc plate runout limit
0.05 mm {0.002 in}



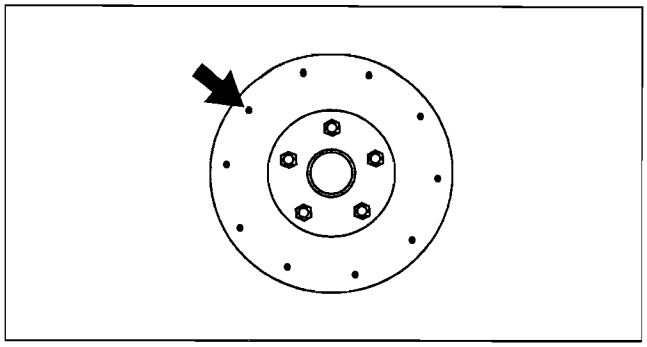
b3j0411w049

Thickness variation inspection

1. Clean the disc plate-to-pad friction surface using a brake cleaner.
2. Measure the points indicated in the illustration using a caliper (micrometer).
3. Subtract the minimum value from the maximum, and if the result is not within the specification, machine the disc plate using a lathe.

Thickness variation limit
0.015 mm {0.00059 in}

Warning
- **Do not exceed minimum disc plate thickness.**



am3uuw0000037

Disc Plate Thickness Inspection

Caution
- **Excessive runout may result if the disc plate is removed from the vehicle then machined. Machine the disc plate while installed on the vehicle.**

1. Measure the thickness of the disc plate.
   - If the thickness is not within the specification, replace the disc plate.

Minimum front disc plate thickness
23 mm {0.91 in}

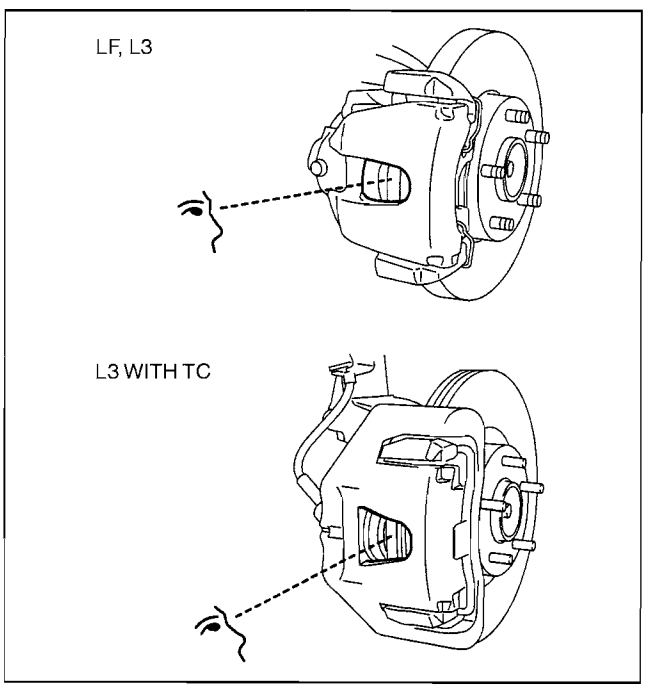
Minimum front disc plate thickness after machining using a brake lathe on-vehicle
23.8 mm {0.94 in}

Disc Pad Thickness Inspection

1. Jack up the front of the vehicle and support it with safety stands.
2. Remove the wheels and tires.
3. Verify the remaining thickness of the pads.

Minimum front disc pad thickness
2.0 mm {0.079 in} min.

4. Replace the pads as a set (right and left wheels) if either one is at or less than the minimum thickness.



am3uuw0000037

FRONT BRAKE (DISC) REMOVAL/INSTALLATION[LF, L3]

id041100800938

1. Remove in the order indicated in the table.
2. Install in the reverse order of removal.
3. After installation, pump the brake pedal a few times and verify that the brakes do not drag.

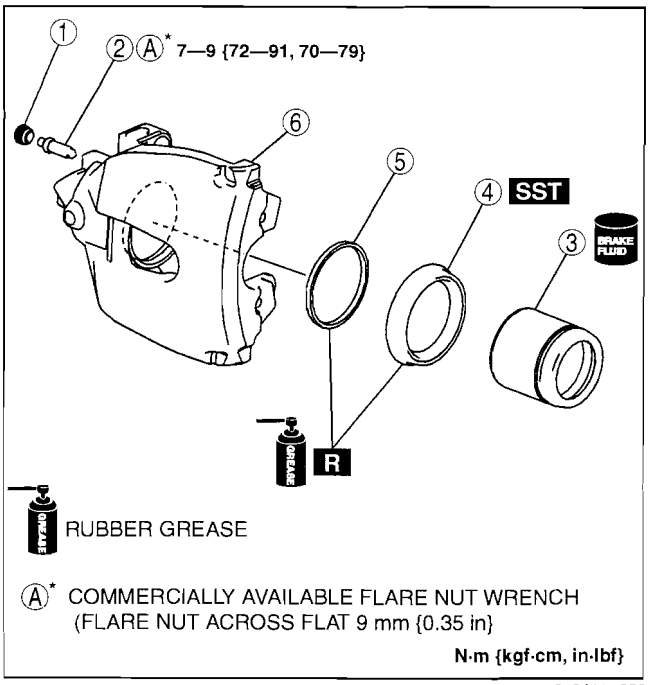
CALIPER (FRONT) DISASSEMBLY/ASSEMBLY[LF, L3]

id041100801038

1. Disassemble in the order indicated in the table.

1	Bleeder cap
2	Bleeder screw
3	Piston (See 04-11-23 Piston Disassembly Note.) (See 04-11-24 Piston Assembly Note.)
4	Dust seal (See 04-11-23 Dust Seal Assembly Note.)
5	Piston seal
6	Caliper body

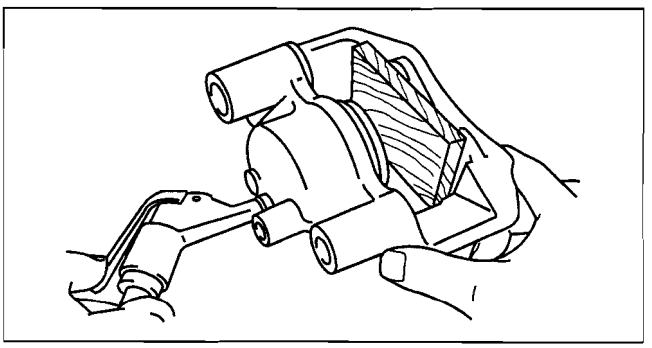
2. Assemble in the reverse order of disassembly.



c3u0411w052

Piston Disassembly Note

1. Insert a piece of wood in the caliper as shown in the figure and blow compressed air through the bleeder screw installation hole to remove the piston from the caliper body.



am3uuw0000037

Warning

- **When compressed air is blown into the caliper body, injury to a finger or other part from pinching could result from the piston springing up. When blowing in compressed air, do not place your fingers between the piston and caliper body when performing the work.**

Caution

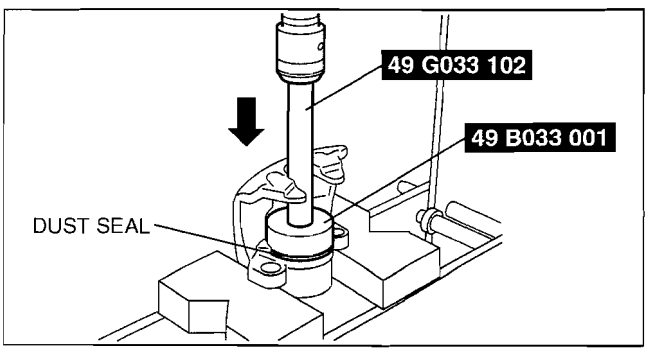
- **The piston could be damaged if blown out with great force. Blow the compressed air slowly to prevent the piston from suddenly popping out.**

Dust Seal Assembly Note

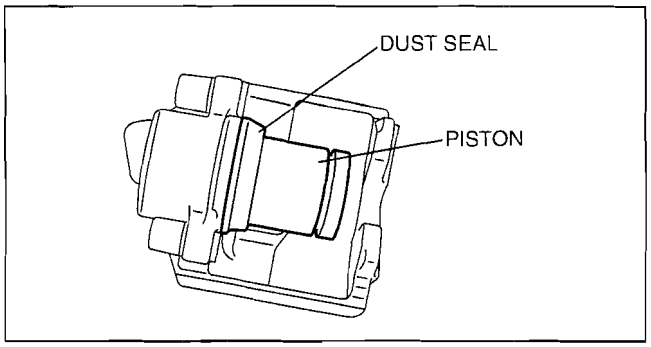
1. Assemble a new dust seal to the caliper using the **SSTs** and a press with a press-in force of **834 N {85 kgf, 187 in·lbf}**.
2. Verify that there is no gap between the dust seal and caliper body.



am3uuw0000037

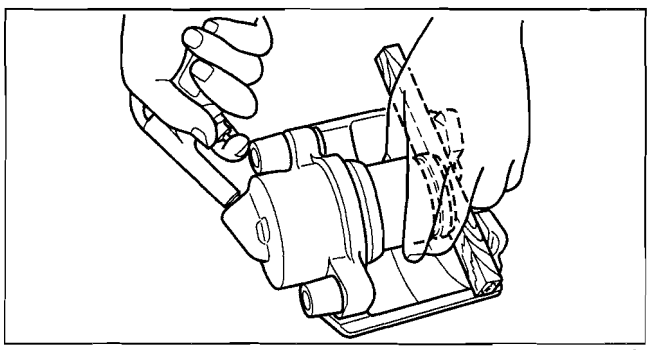
Piston Assembly Note

1. Press the piston into the dust seal opening as shown in the figure.



am3uuw0000037

2. Insert a piece of wood between the caliper body and the piston, and while supporting the piston by hand, blow compressed air through the brake hose installation hole.



am3uuw0000038

Warning

- **When blowing compressed air into the caliper body, the piston may pop out and cause injury if not supported at the correct point. Securely support the piston friction surface by hand when blowing compressed air.**

Note

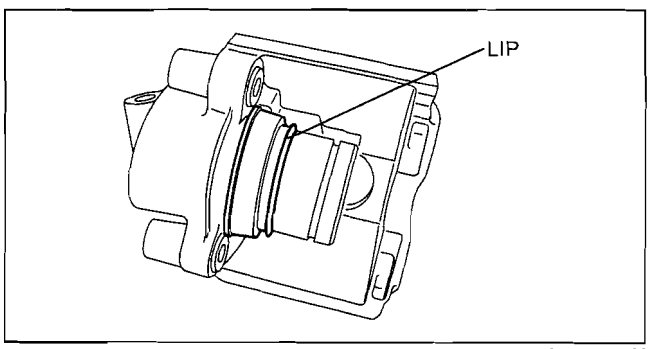
- By blowing compressed air, the dust seal expands due to air pressure and covers the piston end.

3. Verify that the dust seal lip covers the piston end as shown in the figure.
4. Press the piston into the caliper body completely.



am3uuw0000038

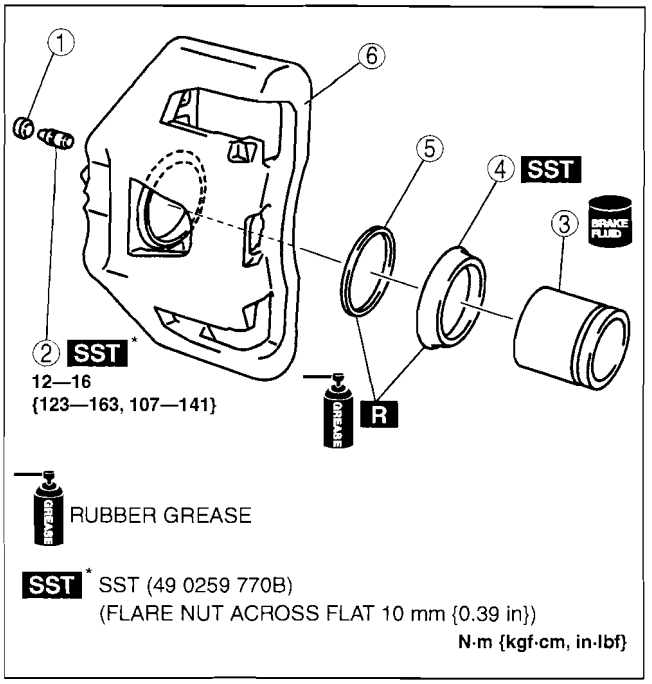
CALIPER (FRONT) DISASSEMBLY/ASSEMBLY[L3 WITH TC]

id041100801039

1. Disassemble in the order indicated in the table.

1	Bleeder cap
2	Bleeder screw
3	Piston (See 04-11-25 Piston Disassembly Note.) (See 04-11-26 Piston Assembly Note.)
4	Dust seal (See 04-11-25 Dust Seal Assembly Note.)
5	Piston seal
6	Caliper body

2. Assemble in the reverse order of disassembly.

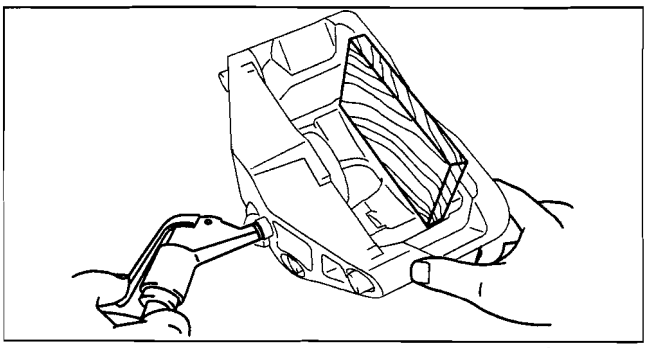


am3zzw0000347

04-11

Piston Disassembly Note

1. Insert a piece of wood in the caliper as shown in the figure and blow compressed air through the bleeder screw installation hole to remove the piston from the caliper body.



am3uuw0000038

Warning

- **When compressed air is blown into the caliper body, injury to a finger or other part from pinching could result from the piston springing up. When blowing in compressed air, do not place your fingers between the piston and caliper body when performing the work.**

Caution

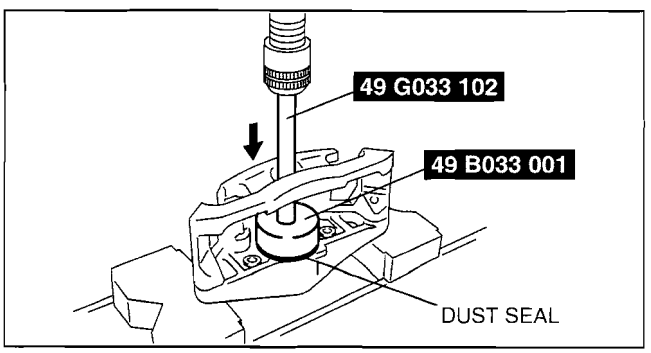
- **The piston could be damaged if blown out with great force. Blow the compressed air slowly to prevent the piston from suddenly popping out.**

Dust Seal Assembly Note

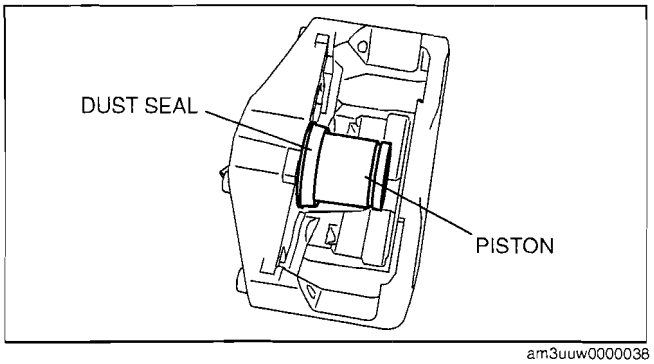
1. Assemble a new dust seal to the caliper using the **SSTs** and a press with a press-in force of **834 N {85 kgf, 187 in·lbf}**.
2. Verify that there is no gap between the dust seal and caliper body.



am3zzw0000347

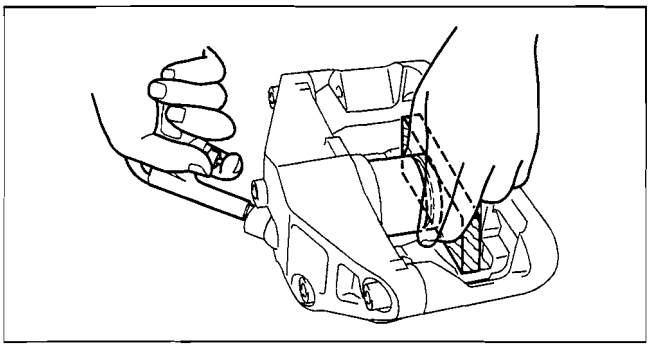
Piston Assembly Note

1. Press the piston into the dust seal opening as shown in the figure.



am3uuw0000038

2. Insert a piece of wood between the caliper body and the piston, and while supporting the piston by hand, blow compressed air through the brake hose installation hole.



am3uuw0000038

Warning

- **When blowing compressed air into the caliper body, the piston may pop out and cause injury if not supported at the correct point. Securely support the piston friction surface by hand when blowing compressed air.**

Note

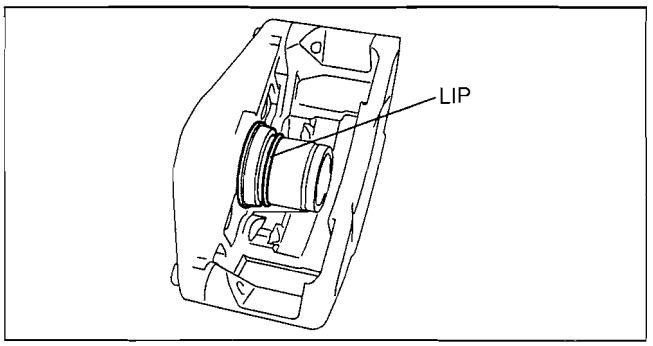
- By blowing compressed air, the dust seal expands due to air pressure and covers the piston end.

3. Verify that the dust seal lip covers the piston end as shown in the figure.
4. Press the piston into the caliper body completely.



am3uuw0000038

REAR BRAKE (DISC) INSPECTION

id041100800400

Brake Judder Repair Hints

Description

1. Brake judder concern has the following 3 characteristics:

Steering wheel vibration

1. The steering wheel vibrates in the rotation direction. This characteristic is most noticeable when applying brakes at a vehicle speed of **100—140 km/h {62.1—86.8 mph}**.

Floor vibration

1. When applying the brakes, the vehicle body shakes back and forth. The seriousness of the shaking is not influenced by vehicle speed.

Brake pedal vibration

1. When applying the brakes, a pulsating force tries to push the brake pad back. The pulsation is transmitted to the brake pedal.
2. The following are the main possible causes of brake judder:

Due to an excessive runout (side-to-side wobble) of the disc plate, the thickness of the disc plate is uneven.

1. If the runout is **more than 0.05 mm {0.002 in}** at the position **10 mm {0.39 in}** from the disc plate edge, uneven wear occurs on the disc plate because the pad contacts the plate unevenly.
2. If the runout is **less than 0.05 mm {0.002 in}**, uneven wear does not occur.

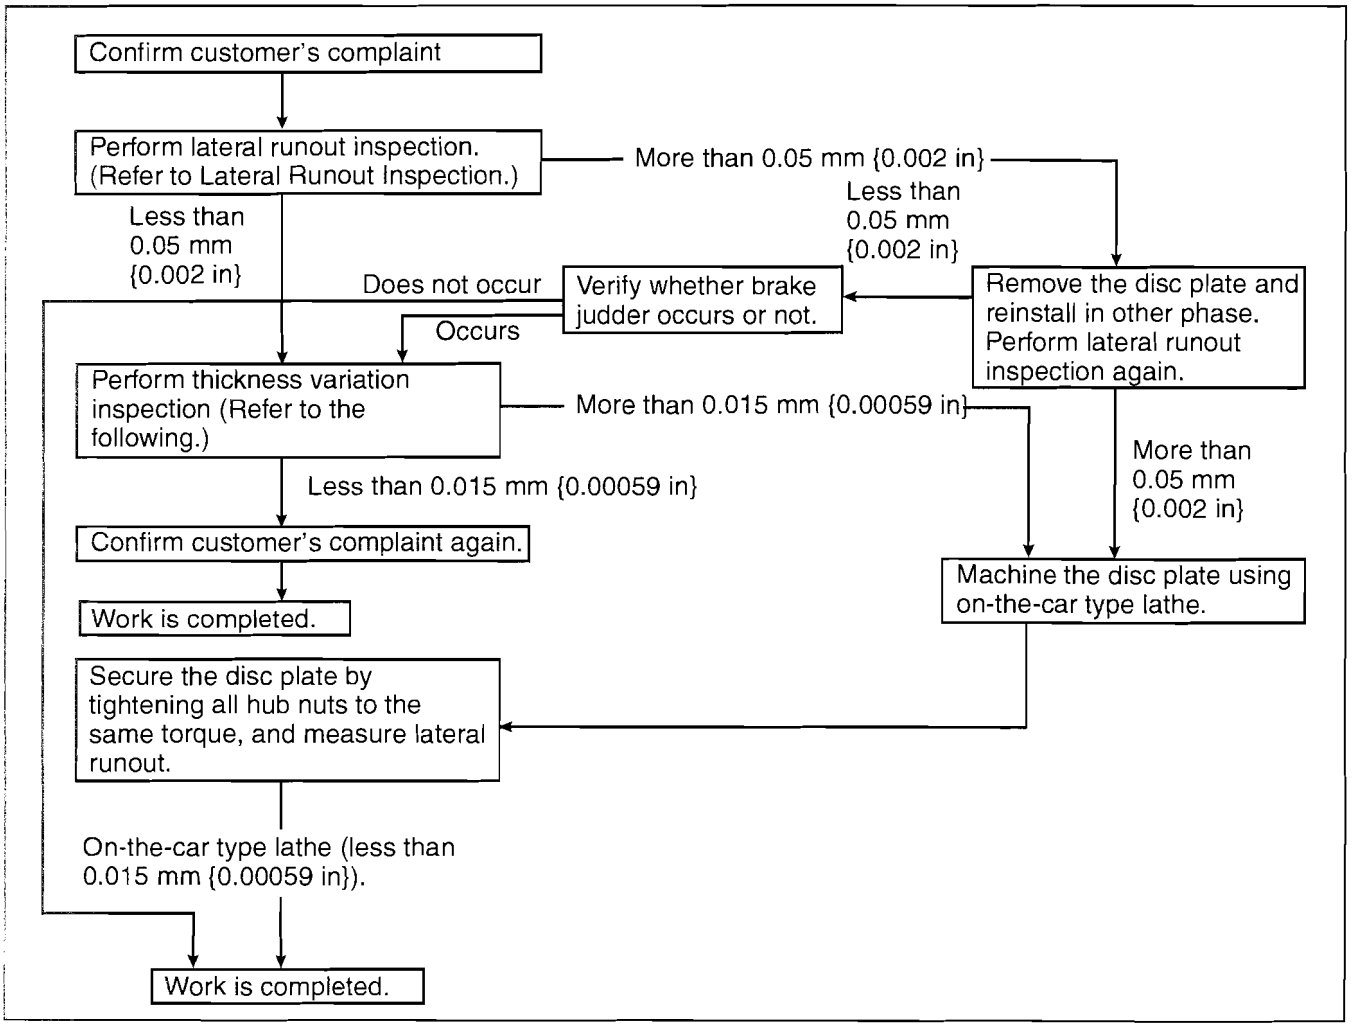
The disc plate is deformed by heat.

1. Repeated panic braking may raise the temperature in some portions of the disc plate by **approx. 1,000 °C {1,832 °F}**. This results in a deformed disc plate.

Due to corrosion, the thickness and friction coefficient of the disc plate change.

1. If the vehicle is parked in damp conditions for a long time, corrosion occurs on the friction surface of the disc plate.
2. The thickness of corrosion is uneven and sometimes appears like a wave pattern, which changes the friction coefficient and causes a reaction force.

Inspection and repair procedure



am3uuw0000074

Lateral runout inspection

1. To secure the disc plate and the hub, insert the washer (thickness **10 mm {0.39 in}**, inner diameter **more than 12 mm {0.47 in}**) between each hub bolt and the hub nut, then tighten all the hub nuts.

Note
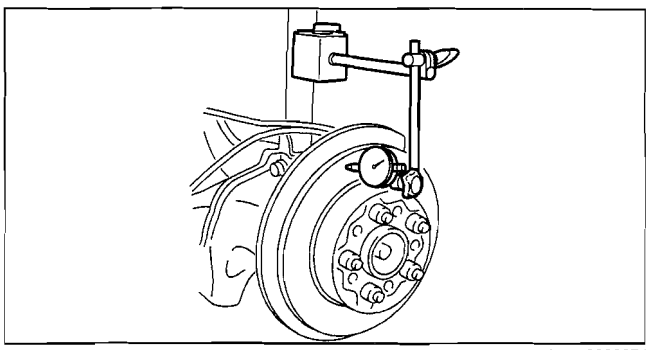
- The component parts of the **SST** (49 B017 001 or 49 G019 003) can be used as a suitable washer.

2. After tightening all the hub nuts to the same torque, put the dial gauge on the friction surface of the disc plate **10 mm {0.39 in}** from the disc plate edge.
3. Rotate the disc plate one time and measure the runout.

Rear disc plate runout limit
0.05 mm {0.002 in}



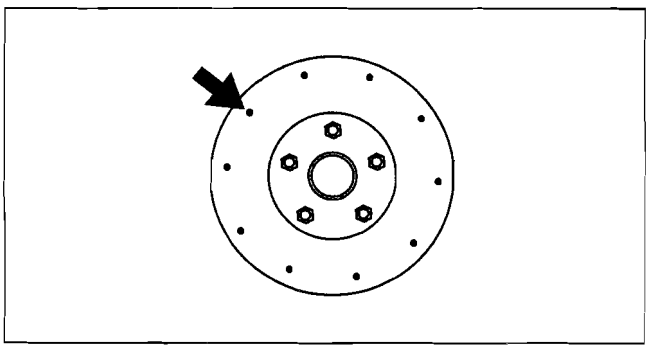
am3uuw0000074

Thickness variation inspection

1. Clean the disc plate-to-pad friction surface using a brake cleaner.
2. Measure the points indicated in the illustration using a caliper (micrometer).
3. Subtract the minimum value from the maximum, and if the result is not within the specification, machine the disc plate using a lathe.

Thickness variation limit
0.015 mm {0.00059 in}

Warning
- **Do not exceed minimum disc plate thickness.**



am3uuw0000074

Disc Plate Thickness Inspection

Caution
- **Excessive runout may result if the disc plate is removed from the vehicle then machined. Machine the disc plate while installed on the vehicle.**

1. Measure the thickness of the disc plate.
   - If the thickness is not within the specification, replace the disc plate.

Minimum read disc plate thickness
9 mm {0.35 in}

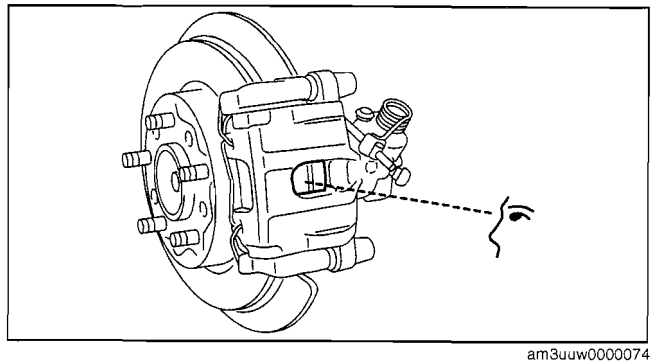
Minimum rear disc plate thickness after machining using a brake lathe on-vehicle
9.8 mm {0.39 in}

Disc Pad Thickness Inspection

1. Jack up the front of the vehicle and support it with safety stands.
2. Remove the wheels and tires.
3. Verify the remaining thickness of the pads.

Minimum rear disc pat thickness
2.0 mm {0.079 in} min.

4. Replace the pads as a set (right and left wheels) if either one is at or less than the minimum thickness.

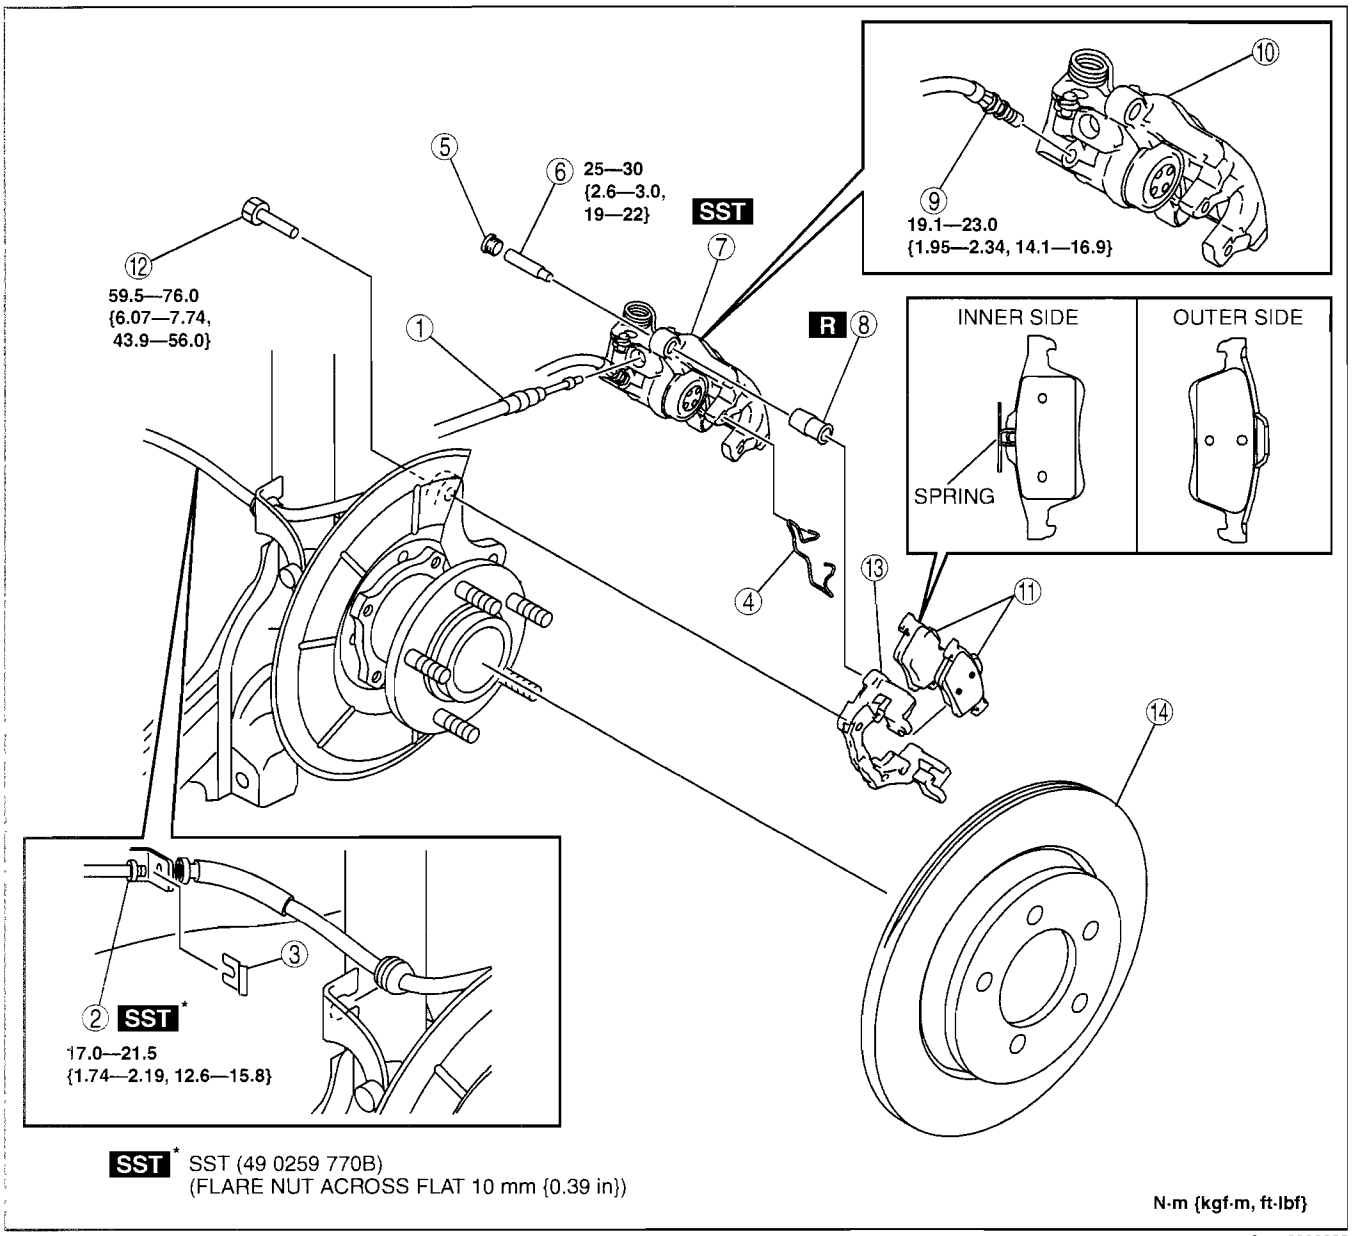


am3uuw0000074

REAR BRAKE (DISC) REMOVAL/INSTALLATION

id041100800500

1. Remove in the order indicated in the table.
2. Install in the reverse order of removal.
3. After installation, pump the brake pedal a few times and inspect the following:
   — Parking brake lever stroke
   — Brake drag



am3zzw0000259

1	Parking brake cable
2	Brake pipe
3	Clip
4	Retaining clip
5	Cap
6	Bolt
7	Caliper, brake hose (See 04-11-31 Caliper, Brake Hose Installation Note.)

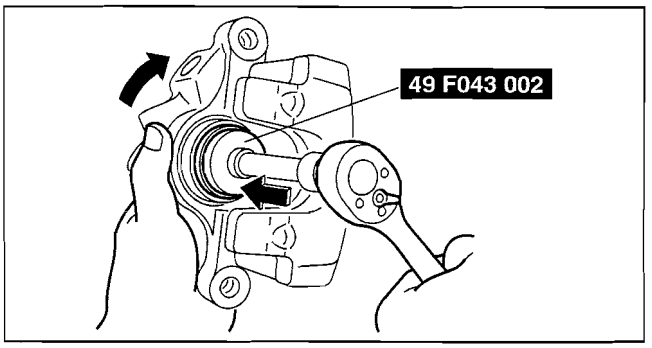
8	Boot
9	Brake hose
10	Caliper
11	Disc pad
12	Bolt
13	Mounting support
14	Disc plate

Caliper, Brake Hose Installation Note

1. Clean the exposed area of the piston.
2. Slowly rotate the piston clockwise while firmly pushing it to the caliper body using the **SST** and push the piston completely into the caliper body.

Warning

- **If the SST comes off the piston, it may cause other parts to crush against your hand causing injury. Be careful that the SST remains firmly connected to the piston when you push the piston into the caliper body.**



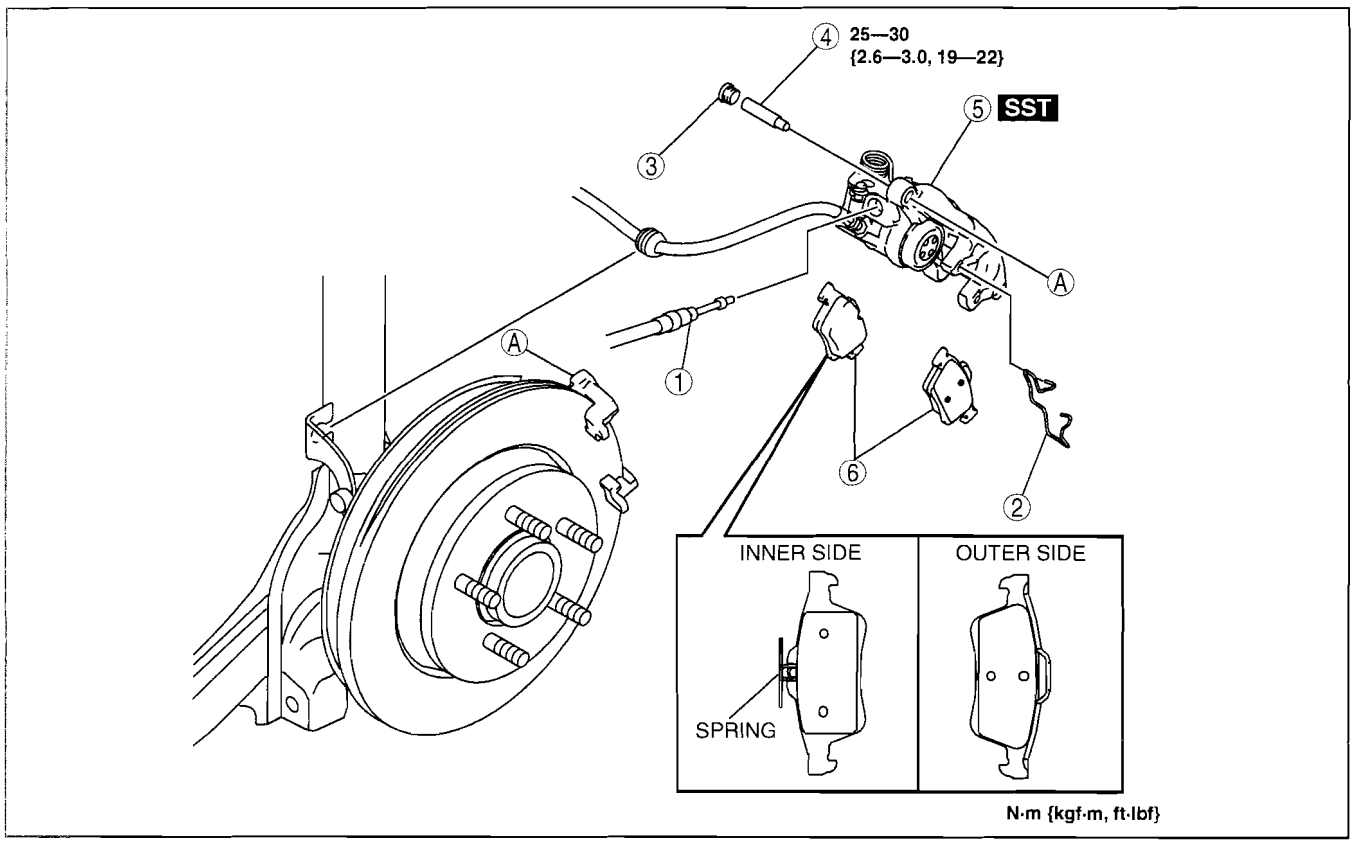
am3uuw0000088

3. Install the the caliper, brake hose.

DISC PAD (REAR) REPLACEMENT

id041100800300

1. Remove in the order indicated in the table.
2. Install in the reverse order of removal.
3. After installation, pump the brake pedal a few times and inspect the following:
   — Parking brake lever stroke
   — Brake drag



am3zzw0000259

1	Parking brake cable
2	Retaining clip
3	Cap
4	Bolt

5	Caliper (See 04-11-30 REAR BRAKE (DISC) REMOVAL/ INSTALLATION.)
6	Disc pad

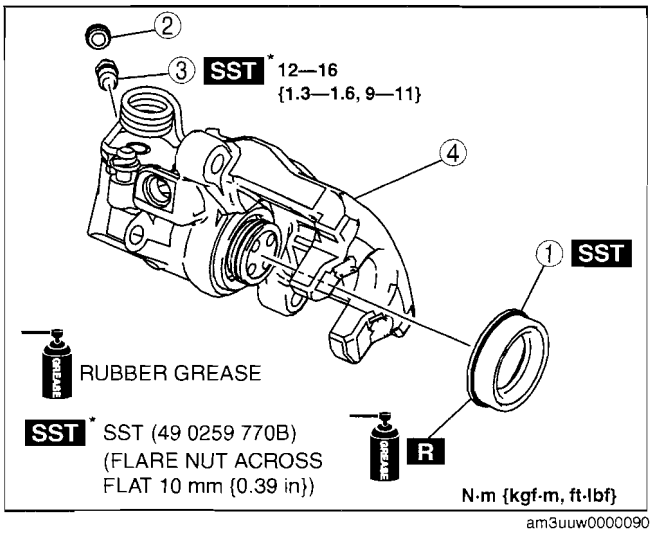
CALIPER (REAR) DISASSEMBLY/ASSEMBLY

id041100800600

1. Disassemble in the order indicated in the table.

1	Dust seal (See 04-11-32 Dust Seal Assembly Note.)
2	Bleeder cap
3	Bleeder screw
4	Caliper body

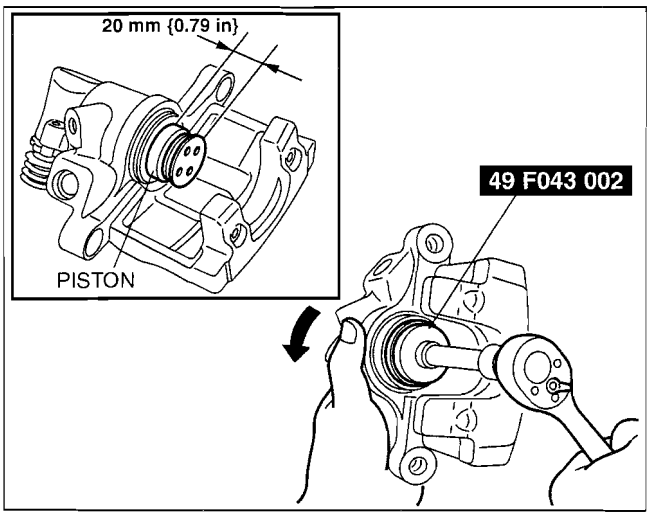
2. Assemble in the reverse order of disassembly.



am3uuw0000090

Dust Seal Assembly Note

1. While rotating the piston counterclockwise using the **SST**, pull it out to the position shown in the figure.

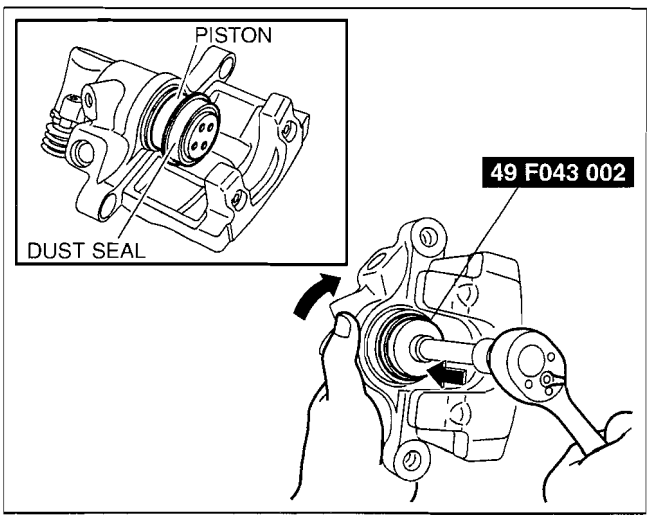


am3uuw0000091

2. As shown in the figure, assemble a new dust seal to the piston and slowly rotate the piston clockwise while pushing it to the caliper body using SST to push the piston completely into the caliper body.

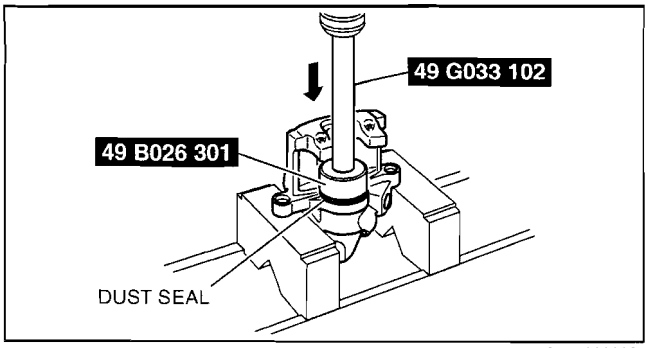
Warning

- **If the SST comes off the piston, it may cause other parts to crush against your hand causing injury. Be careful that the SST remains firmly connected to the piston when you push the piston into the caliper body.**



am3uuw0000091

3. Assemble the dust seal to the caliper body using the **SSTs** and a press with a press-in force of **834 N {85 kgf, 187 in·lbf}**
4. Verify that there is no gap between the dust seal and caliper body.

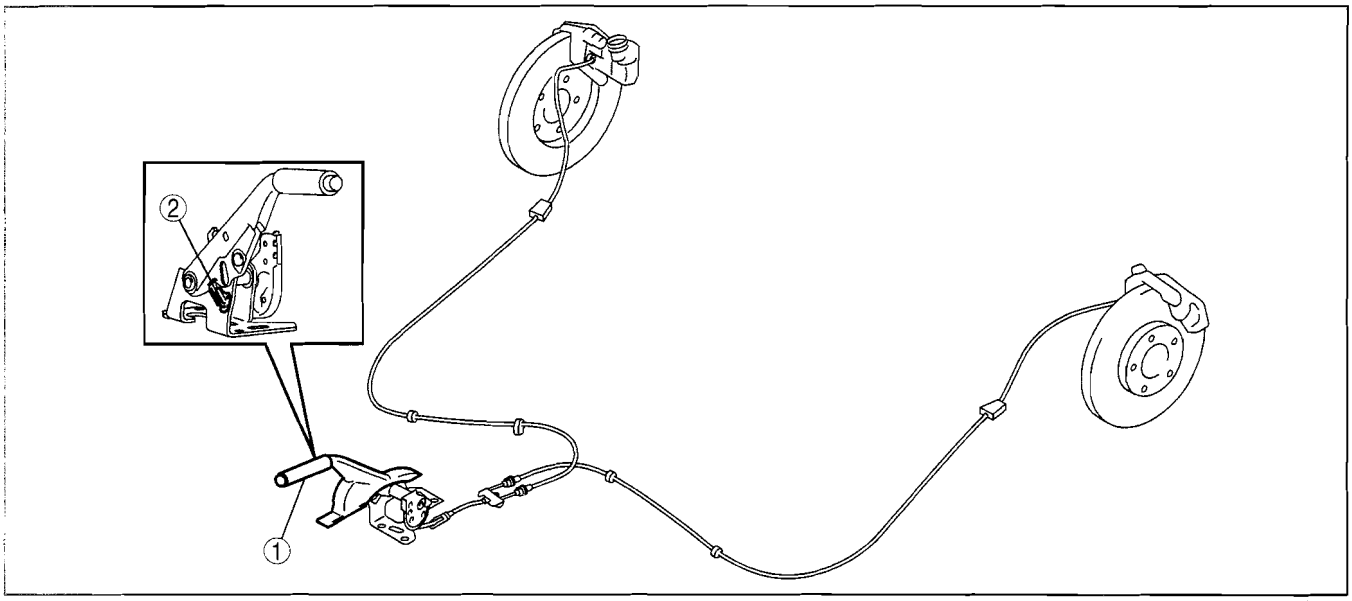


am3uuw0000091

04-12 PARKING BRAKE SYSTEM

PARKING BRAKE SYSTEM LOCATION INDEX

id041200800100



C3U0412W002

1	Parking brake lever (See 04-12-2 PARKING BRAKE LEVER INSPECTION.) (See 04-12-2 PARKING BRAKE LEVER ADJUSTMENT.) (See 04-12-2 PARKING BRAKE LEVER REMOVAL/INSTALLATION.)
2	Parking brake switch (See 04-12-4 PARKING BRAKE SWITCH INSPECTION.)

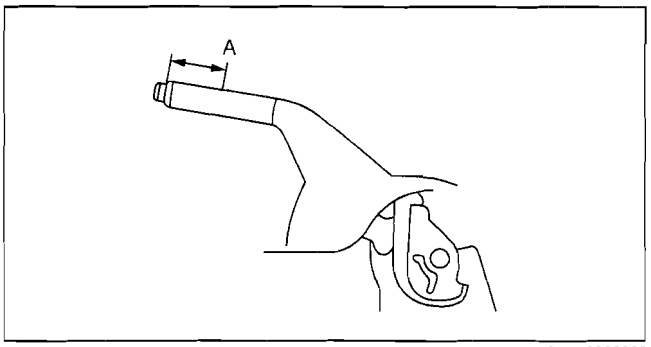
PARKING BRAKE LEVER INSPECTION

id041200800900

Stroke Inspection

1. Pump the brake pedal a few times.
2. Pull the parking brake lever two to three times.
3. Inspect the parking brake stroke by slowly pulling at point A **50 mm {1.97 in}** from the end of the parking brake lever with a force of **98 N {10 kgf, 22 lbf}** and counting the number of notches (clicking sound).
   - If not within the specification, adjust the parking brake lever.

Parking brake lever stroke when pulled at 98 N {10 kgf, 22 lbf}
3—7 notches

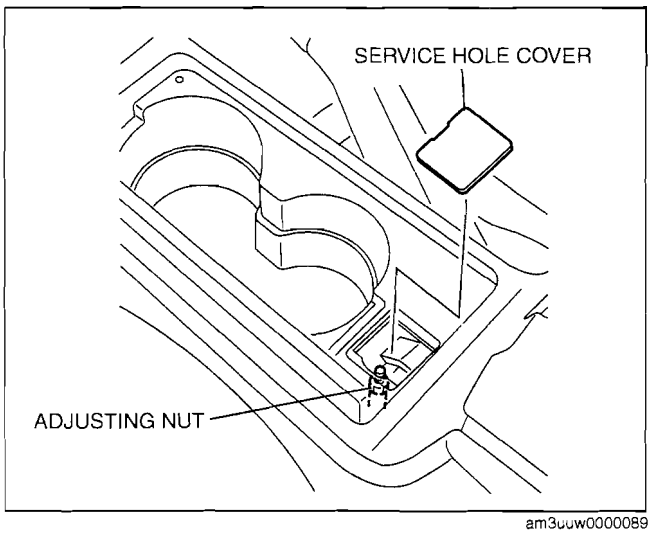


am3uuw0000028

PARKING BRAKE LEVER ADJUSTMENT

id041200801500

1. Pump the brake pedal a few times.
2. Remove the service hole cover of the rear console.
3. Turn the adjusting nut and adjust the parking brake lever.
4. After adjustment, pull the parking brake lever one notch and verify that the parking brake warning light illuminates.
5. Verify that the rear brakes do not drag.



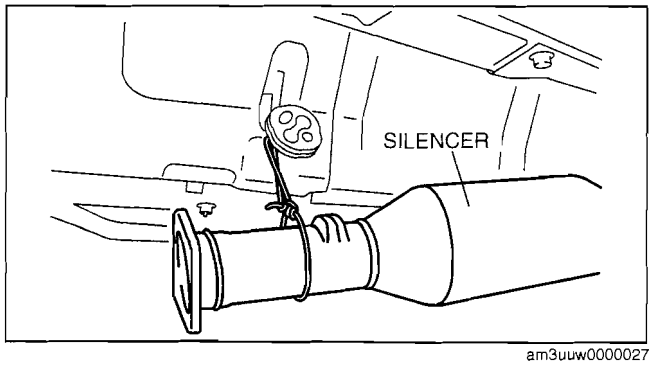
am3uuw0000089

PARKING BRAKE LEVER REMOVAL/INSTALLATION

id041200801600

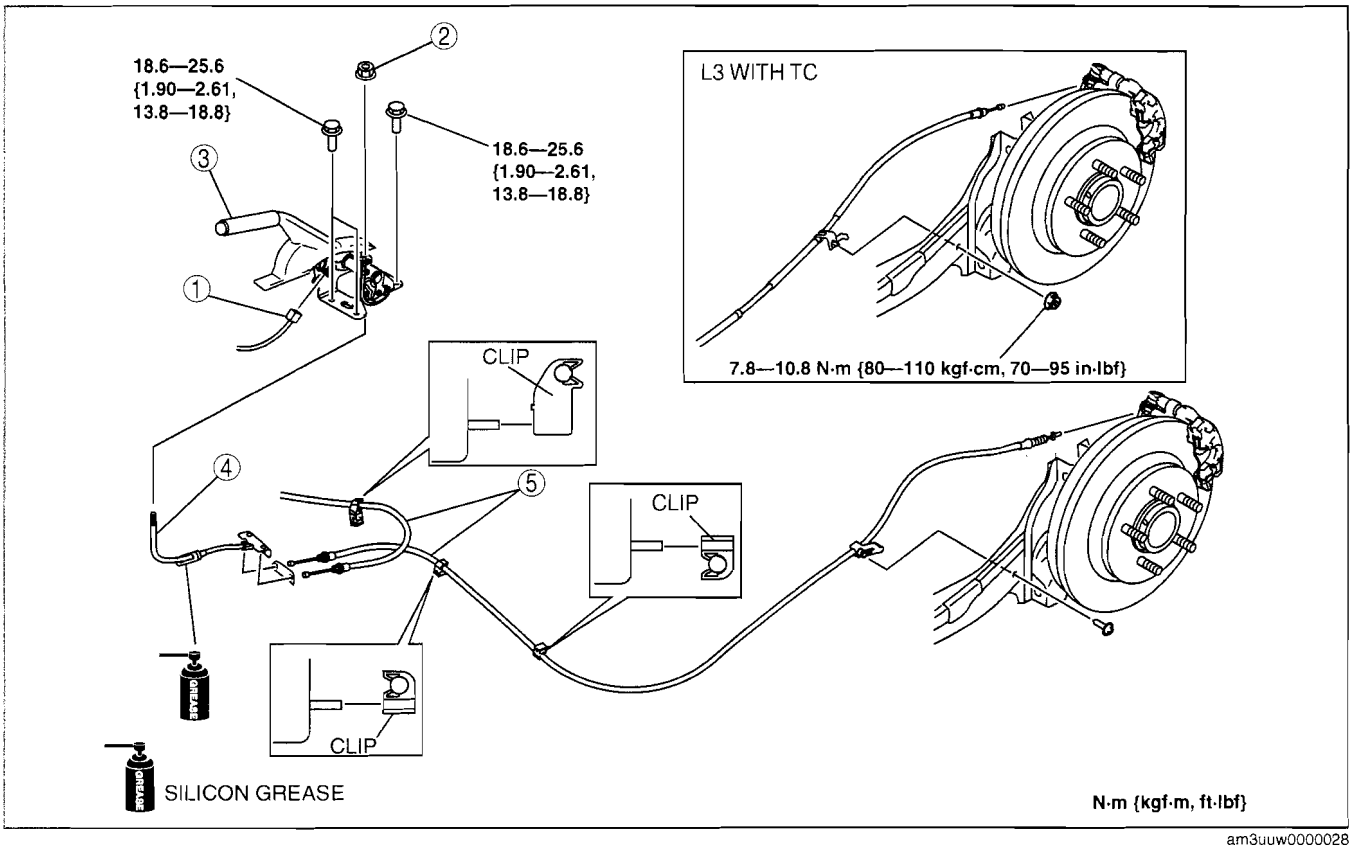
1. To remove the front and rear parking brake cables, perform the following and remove the heat insulator.
   LF, L3
   1. Remove the main silencer. (See 01-15A-1 EXHAUST SYSTEM REMOVAL/INSTALLATION[LF, L3].)
   2. Remove the heat insulator.

   L3 WITH TC
   1. Remove the member. (See 01-15B-2 EXHAUST SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
   2. Remove the silencer installation nuts. (See 01-15B-2 EXHAUST SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
   3. Disconnect the hanger rubber except for the one installed to the rear end of the vehicle from the silencer, and suspend the silencer using rope.
   4. Remove the heat insulator.
2. To remove the parking brake lever and front parking brake cable, remove the console. (See 09-17-10 CONSOLE REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.



am3uuw0000027

5. After installation, inspect the parking brake lever stroke. (See 04-12-2 PARKING BRAKE LEVER INSPECTION.)

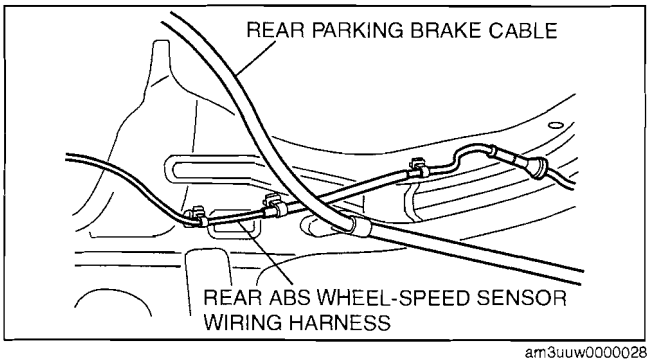


am3uuw0000028

1	Parking brake switch connector
2	Adjusting nut
3	Parking brake lever
4	Front parking brake cable (See 04-12-4 Front Parking Brake Cable Installation Note.)
5	Rear parking brake cable (See 04-12-3 Rear Parking Brake Cable Installation Note.)

Rear Parking Brake Cable Installation Note

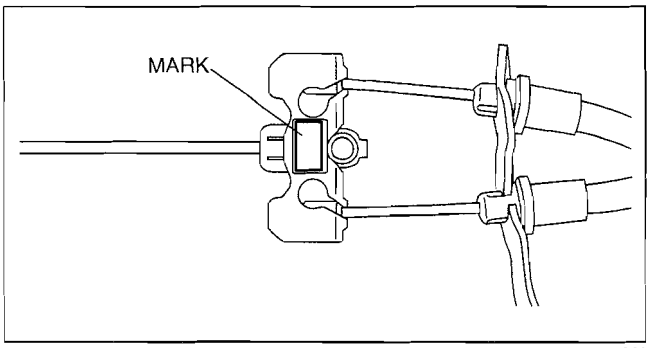
1. Pass the rear parking brake cable inside the rear ABS wheel-speed sensor wiring harness as shown in the figure.
2. Install the rear parking brake cable.



am3uuw0000028

Front Parking Brake Cable Installation Note

1. Install the front parking brake cable with the mark on the equalizer facing toward the vehicle downside.

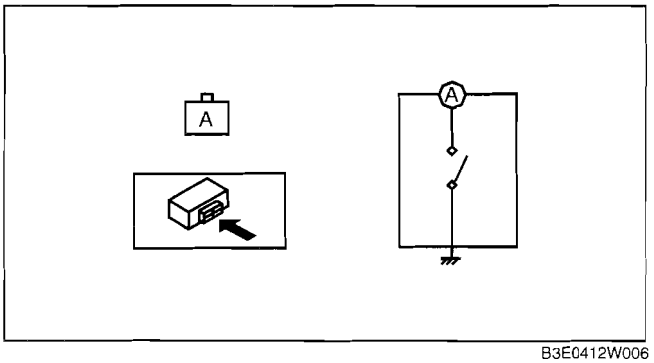


am3uuw0000028

PARKING BRAKE SWITCH INSPECTION

id041200800700

1. Disconnect the parking brake switch connector.
2. Verify that the continuity is as indicated in the table.
   - If not as indicated in the table, replace the parking brake lever.



B3E0412W006

O—O: Continuity

Condition	Terminal	
	A	Body ground
Parking brake lever pulled	O	O
Parking brake lever released		

CHU0412W003

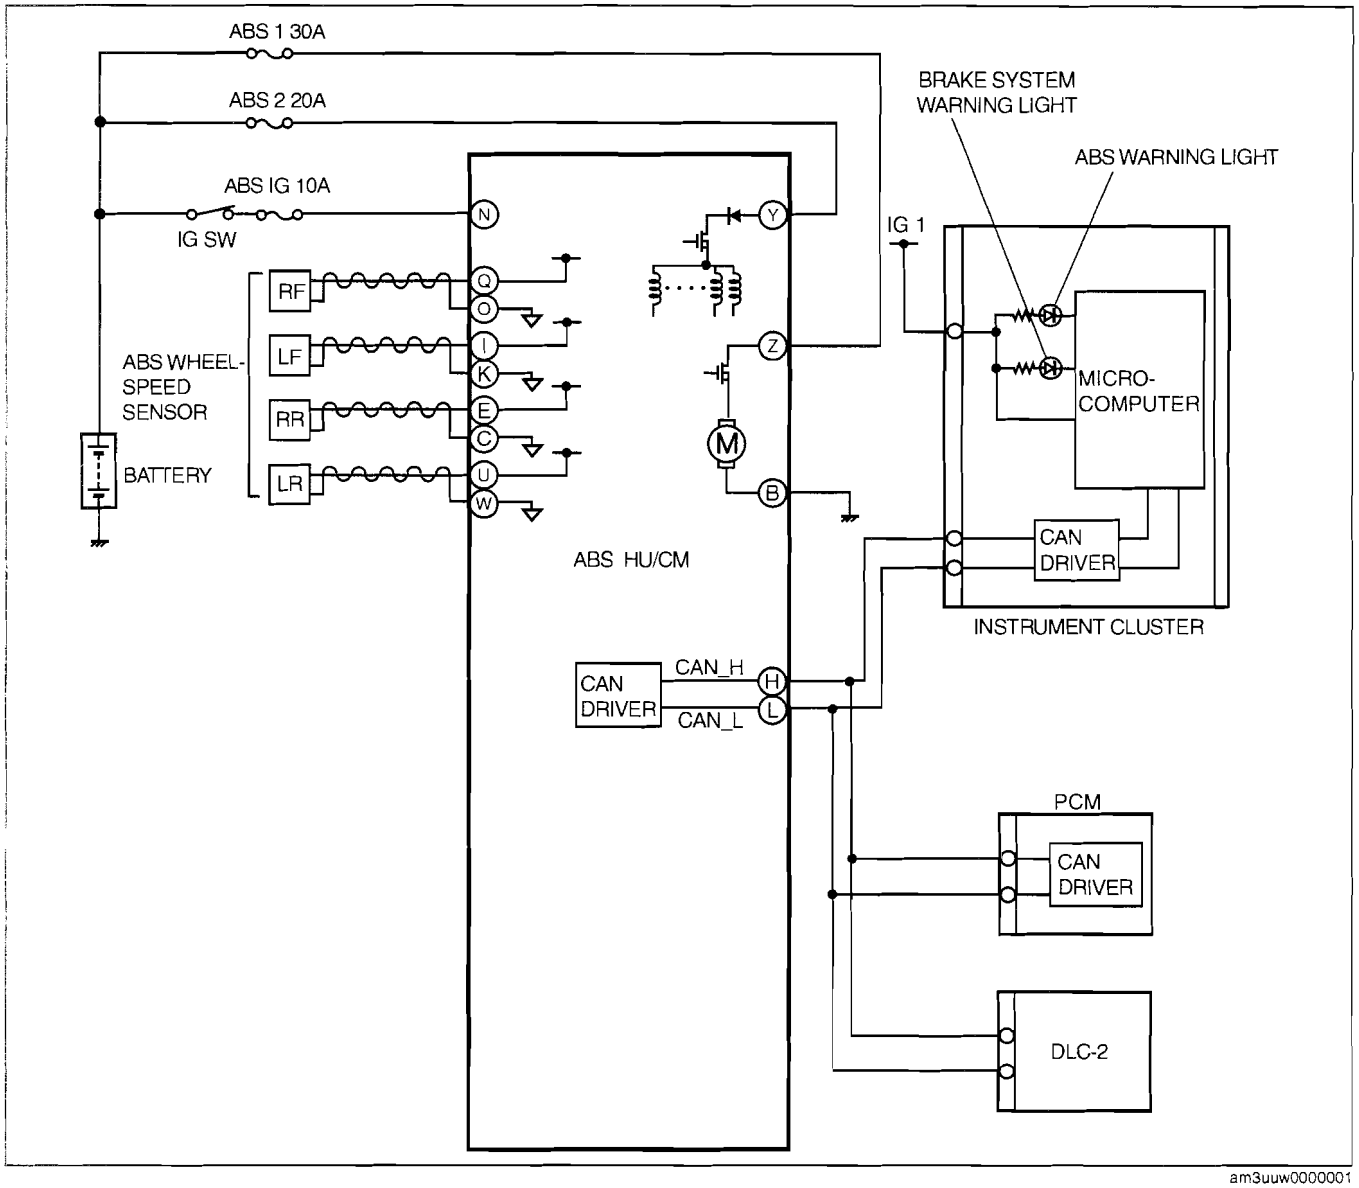
ABS SYSTEM WIRING DIAGRAM

id041300805000



am3uuw0000001

ABS SYSTEM INSPECTION

id041300800200

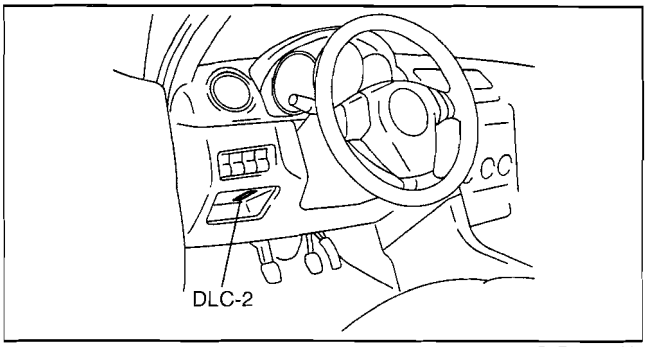
ABS Hydraulic Unit On-vehicle Inspection

Preparation

1. Verify that the battery is fully charged.
2. Turn the ignition switch to the ON position and verify that the ABS warning light goes out after **approx. 3.0 s**.
3. Turn the ignition switch off.
4. Jack up the vehicle and support it evenly on safety stands.
5. Shift to neutral.
6. Release the parking brake.
7. Verify that all four wheels rotate.
8. Rotate the inspected wheels by hand and verify there is no brake drag.
   - If there is any brake drag, perform regular brake inspection.
   - If there is no brake drag, perform ABS HU/CM operation inspection.

Operation inspection

1. Perform "Preparation".
2. Connect the M-MDS to the DLC-2.
3. Set up an active command mode inspection according to the combination of commands below.



B3E0102W003

Operation condition	Command name			Command transmission type
	PMP_MOTOR	RF_OUTLET	RF_INLET	
Brake pressure retention	OFF	OFF	ON	Manual
Brake pressure reduction	ON	ON	ON	

The chart above shows an example of a right front wheel inspection.

Caution

- **When operating the solenoid valve and pump motor using the active command mode, make sure to keep the operation time within 2 s to prevent damaging the ABS HU/CM.**

Note

- When working with two people, one should press on the brake pedal, the other should attempt to rotate the wheel being inspected.

4. Send the command while depressing on the brake pedal and attempting to rotate the wheel being inspected.
5. Performing the inspection above determines the following:
   - The ABS HU/CM brake lines are normal.
   - The ABS HU/CM hydraulic system is not significantly abnormal (including inside ABS HU/CM).
   - The ABS HU/CM internal electrical parts (solenoid, motor and other parts) are normal.
   - The ABS HU/CM output system wiring harnesses (solenoid valve, relay system) are normal.
     - — However, the following items cannot be verified.
       - Malfunction of ABS HU/CM input system wiring harnesses and parts
       - Extremely small leakage in the ABS HU/CM internal hydraulic system
       - Intermittent malfunction of the above items

ABS HU/CM REMOVAL/INSTALLATION

id041300801400

Caution

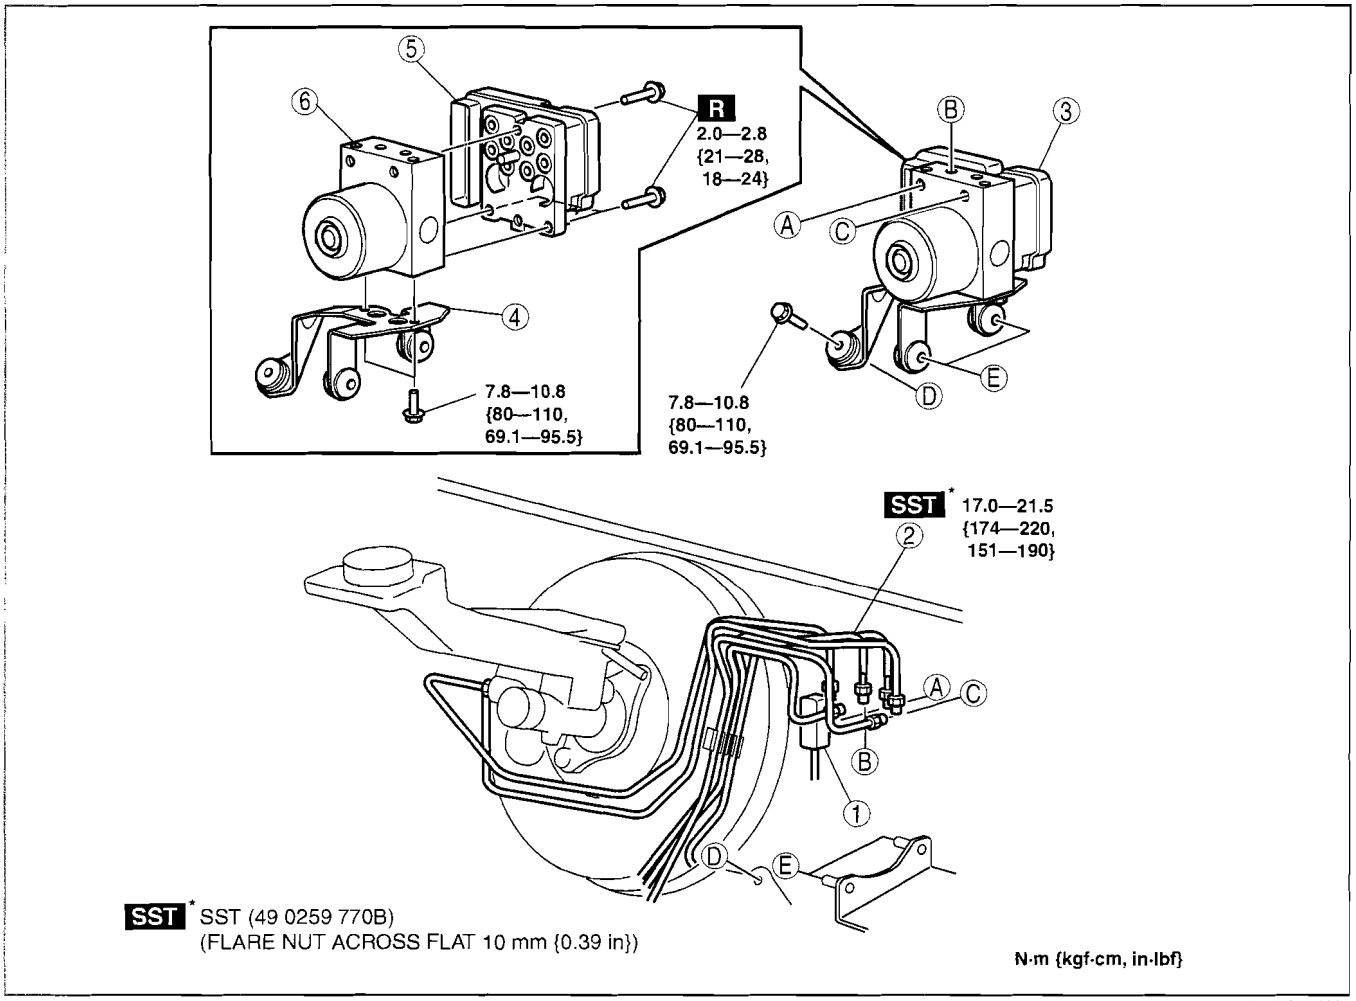
- **When replacing the ABS HU/CM, the configuration procedure must be done before removing the ABS HU/CM. If the configuration is not completed before removing the ABS HU/CM, ABS will not work properly after installation of the ABS HU/CM.**
- **Do not separate the ABS HU and ABS CM unless replacing them, otherwise the ABS HU/CM may not function properly. When replacing them with new ones, always perform procedures according to the instructions included with the new parts.**
- **The internal parts of the ABS HU/CM could be damaged if dropped. Be careful not to drop the ABS HU/CM. Replace the ABS HU/CM if it is subjected to an impact.**

1. Remove the battery and battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Remove the reserve hose. (MTX) (See 04-11-9 MASTER CYLINDER REMOVAL/INSTALLATION[LF, L3].) (See 05-10-6 CLUTCH MASTER CYLINDER REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.
5. Configurate the ABS HU/CM (only when replacing it). (See 04-13-6 ABS CONFIGURATION.)



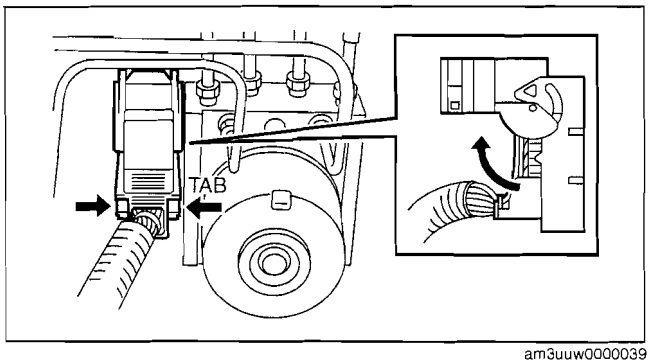
d3u413zw6001

1	Connector (See 04-13-5 Connector Removal Note.) (See 04-13-6 Connector Installation Note.)
2	Brake pipe (See 04-13-5 Brake Pipe Removal Note.) (See 04-13-5 Brake Pipe Installation Note.)

3	ABS HU/CM component, bracket (See 04-13-5 ABS HU/CM Component, Bracket Removal Note.)
4	Bracket
5	ABS CM
6	ABS HU

Connector Removal Note

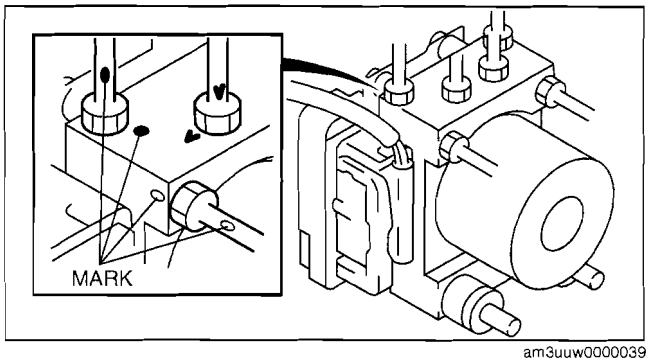
1. Pull the connector cover up in the direction of the arrow while pressing the tab of the connector cover.
2. Pull the connector toward the vehicle front and remove it.



am3uuw0000039

Brake Pipe Removal Note

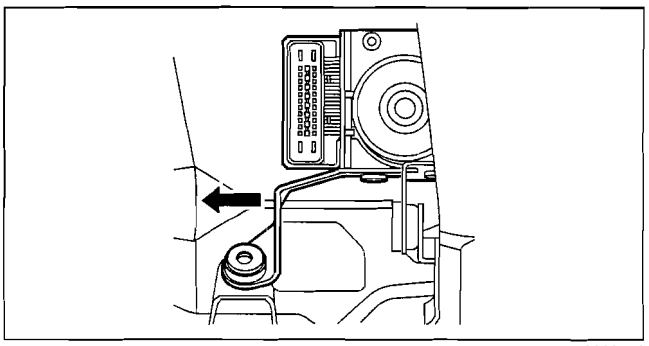
1. Place an alignment mark on the brake pipe and ABS HU/CM.
2. Apply protective tape to the connector to prevent brake fluid from entering.
3. Remove the brake pipe.



am3uuw0000039

ABS HU/CM Component, Bracket Removal Note

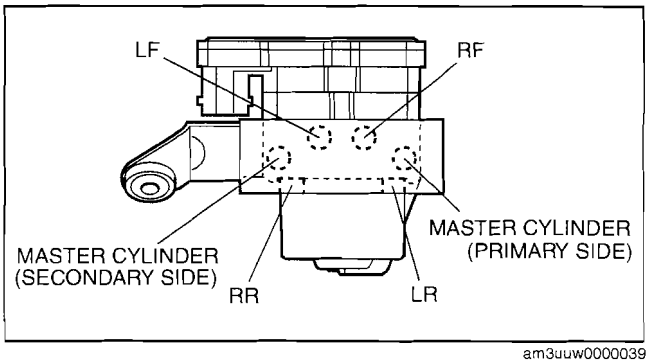
1. As shown in the figure, move the bracket in the direction of the arrow and remove the ABS HU/CM component and bracket from the body.



am3uuw0000039

Brake Pipe Installation Note

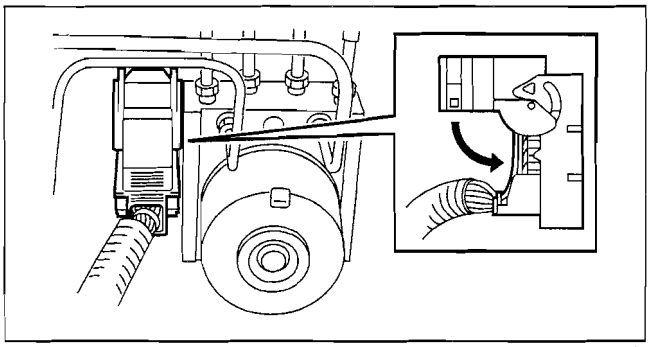
1. Align the marks made before removal and install the brake pipe to the ABS HU/CM referring to the figure.



am3uuw0000039

Connector Installation Note

1. After connecting the connector, verify that the connector cover is completely pushed in.

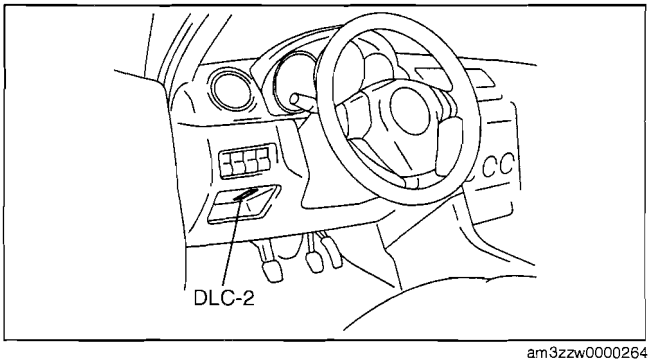


am3uuw0000039

ABS CONFIGURATION

id041300802000

1. Connect the M-MDS to the DLC-2 connector.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Module Programming".
   - When using the PDS (Pocket PC)
     1. Select "Programming".
     2. Select "Module Programming".
3. Then, select the "Programmable Module Installation" and "ABS" from the screen menu.
4. Perform the configuration according to the directions on the screen.
5. Retrieve DTCs using the M-MDS, then verify if DTCs are present.
   - If a DTC is present, perform the applicable DTC inspection. (See 04-02A-2 ON-BOARD DIAGNOSIS[ABS].)



am3zzw0000264

ABS HU/CM INSPECTION

id041300801000

1. Disconnect the ABS HU/CM connector.
2. Connect the negative battery cable.
3. Attach the tester lead to the ABS HU/CM wiring harness-side connector, then inspect the voltage, continuity, or resistance according to the standard (reference) on the table.

Terminal Voltage Table (Reference)

ABS HU/CM WIRING HARNESS-SIDE CONNECTOR

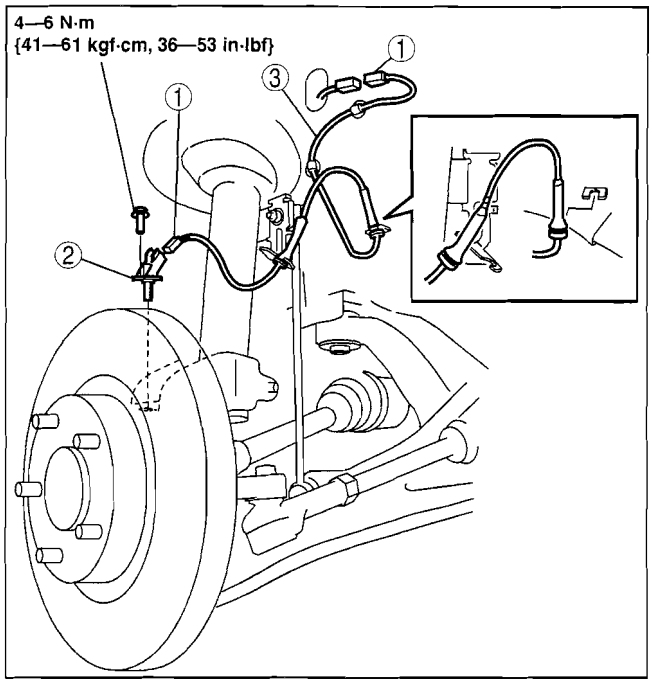
FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION

id041300800700

1. Remove the mudguard.
2. Remove in the order indicated in the table.

1	Connector
2	Front ABS wheel-speed sensor
3	Front ABS wheel-speed sensor wiring harness

3. Install in the reverse order of removal.



c3u0413w001

FRONT ABS WHEEL-SPEED SENSOR INSPECTION

id041300801300

Installation Visual Inspection

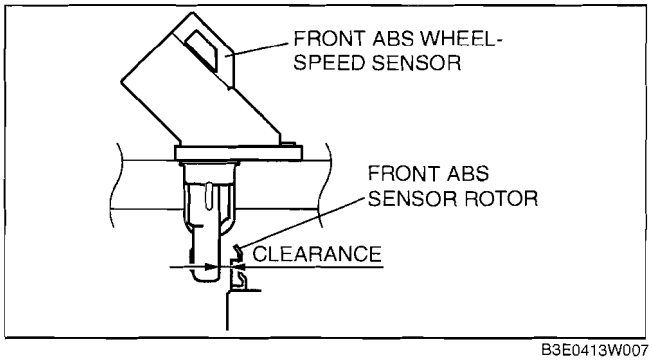
1. Inspect for the following:
   - If there is any malfunction, replace the part.

   (1) Excessive play of the ABS wheel-speed sensor
   (2) Deformation of the ABS wheel-speed sensor
   (3) Deformation or damage of the ABS sensor rotor

Clearance Inspection

1. Inspect the clearance between the front ABS wheel-speed sensor and the ABS sensor rotor.
   - If there is any malfunction, verify improper installation and replace if necessary.

Clearance
2.1 mm {0.082 in} or less



B3E0413W007

Sensor Output Value Inspection

Caution

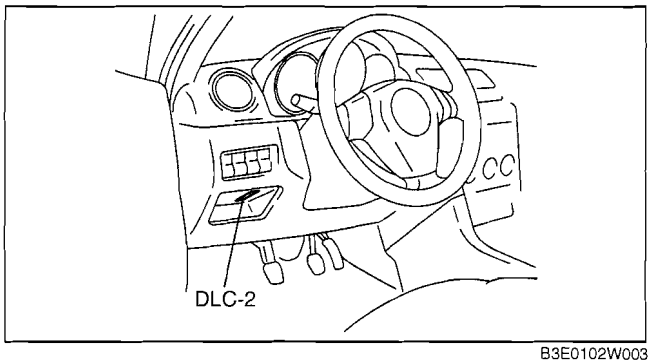
- **Resistance inspection using other testers may cause damage to the ABS wheel-speed sensor internal circuit. Be sure to use the M-MDS to inspect the ABS wheel-speed sensor.**

1. Turn the ignition switch off.
2. Connect the M-MDS to the DLC-2.
3. Select the following PIDs using the M-MDS:
   - LF_WSPD
     (LF wheel-speed sensor)
   - RF_WSPD
     (RF wheel-speed sensor)
4. Start the engine and drive the vehicle.
5. Verify that the display of the M-MDS shows the same value as the speedometer.
   - If there is any malfunction, replace the front ABS wheel-speed sensor.

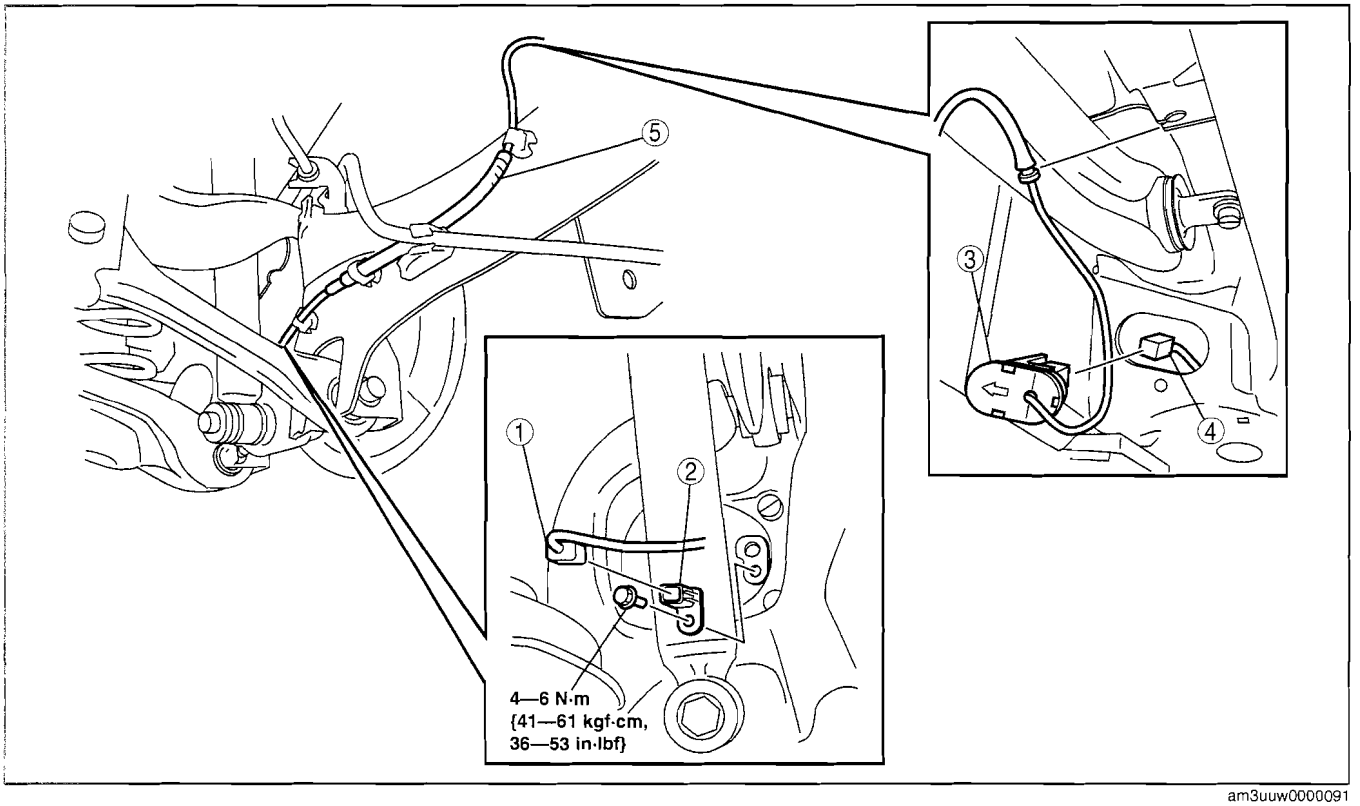


B3E0102W003

REAR ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION

id041300800500

1. Remove the under cover (rear).
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.



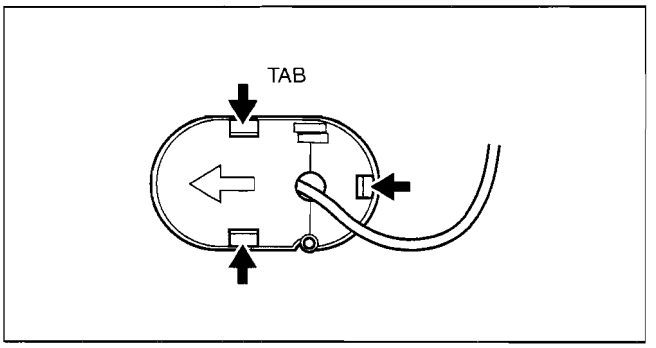
am3uuw0000091

1	Connector
2	Rear ABS wheel-speed sensor
3	ABS hole cover (See 04-13-10 ABS Hole Cover Removal Note.) (See 04-13-10 ABS Hole Cover Installation Note.)

4	Connector
5	Rear ABS wheel-speed sensor wiring harness (See 04-13-10 Rear ABS Wheel-speed Sensor Wiring Harness Installation Note.)

ABS Hole Cover Removal Note

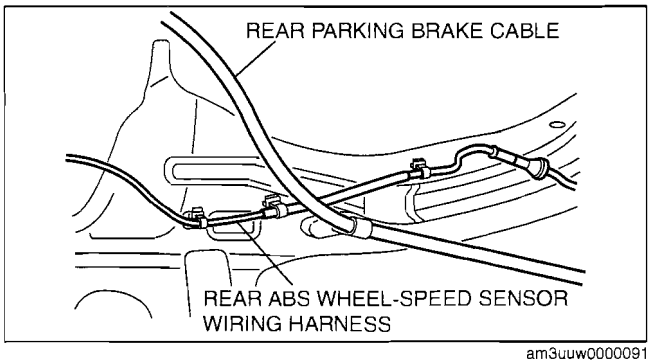
1. Press the tab of the ABS hole cover to separate the ABS hole cover from the body.
2. Remove the ABS hole cover from the body.



am3uuw0000091

Rear ABS Wheel-speed Sensor Wiring Harness Installation Note

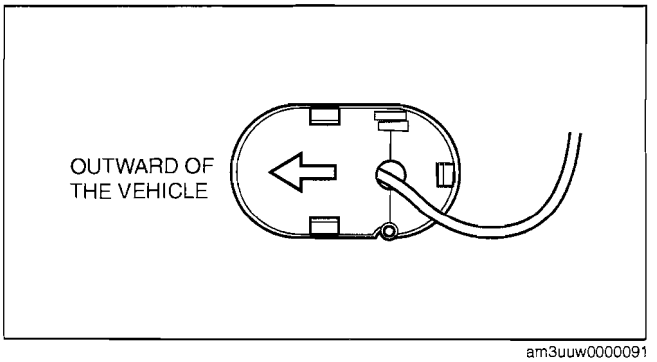
1. Pass the rear ABS wheel-speed sensor wiring harness outside the rear parking brake cable as shown in the figure.
2. Install the rear ABS wheel-speed sensor wiring harness.



am3uuw0000091

ABS Hole Cover Installation Note

1. Install the ABS hole cover into the body so that the arrow on it is facing toward the outer side of the vehicle.



am3uuw0000091

REAR ABS WHEEL-SPEED SENSOR INSPECTION

id041300801200

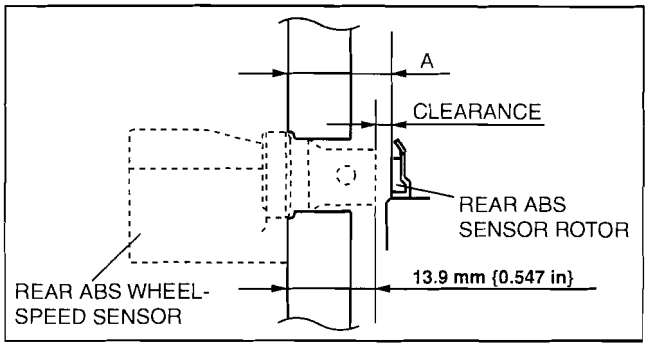
Installation Visual Inspection

1. Inspect for the following:
   - If there is any malfunction, replace the part.

   (1) Excessive looseness or play of the ABS wheel-speed sensor
   (2) Deformation of the ABS wheel-speed sensor
   (3) Deformation or damage of the ABS sensor rotor

Clearance Inspection

1. Remove the rear ABS wheel-speed sensor.
2. Measure the distance between the rear ABS wheel-speed sensor installation surface and the ABS sensor rotor. This is dimension A.
3. Calculate the clearance between the rear ABS wheel-speed sensor and the ABS sensor rotor using the following formula:
   Clearance (mm {in}) = A –13.9 {0.547}
4. Verify that the clearance between the ABS sensor rotor and the rear ABS wheel-speed sensor is as indicated below.
   - If there is any malfunction, replace it.



B3E0413W008

Clearance
1.46 mm {0.057 in} or less

Sensor Output Value Inspection

Caution
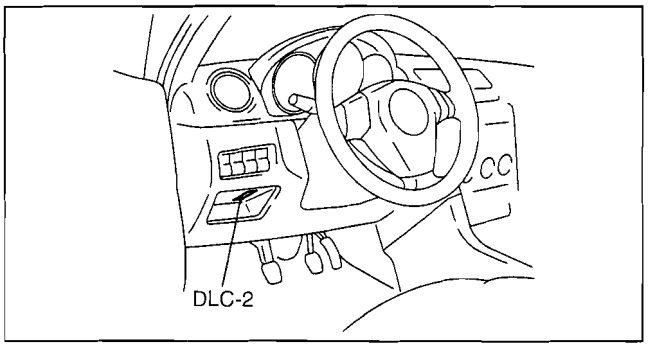
- **Resistance inspection using other testers may cause damage to the ABS wheel-speed sensor internal circuit. Be sure to use the M-MDS to inspect the ABS wheel-speed sensor.**

1. Turn the ignition switch off.
2. Connect the M-MDS to the DLC-2.
3. Select the following PIDs using the M-MDS:
   - LR_WSPD
     (LR wheel-speed sensor)
   - RR_WSPD
     (RR wheel-speed sensor)
4. Start the engine and drive the vehicle.
5. Verify that the display of the M-MDS shows the same value as the speedometer.
   - If there is any malfunction, replace the ABS wheel-speed sensor.



B3E0102W003

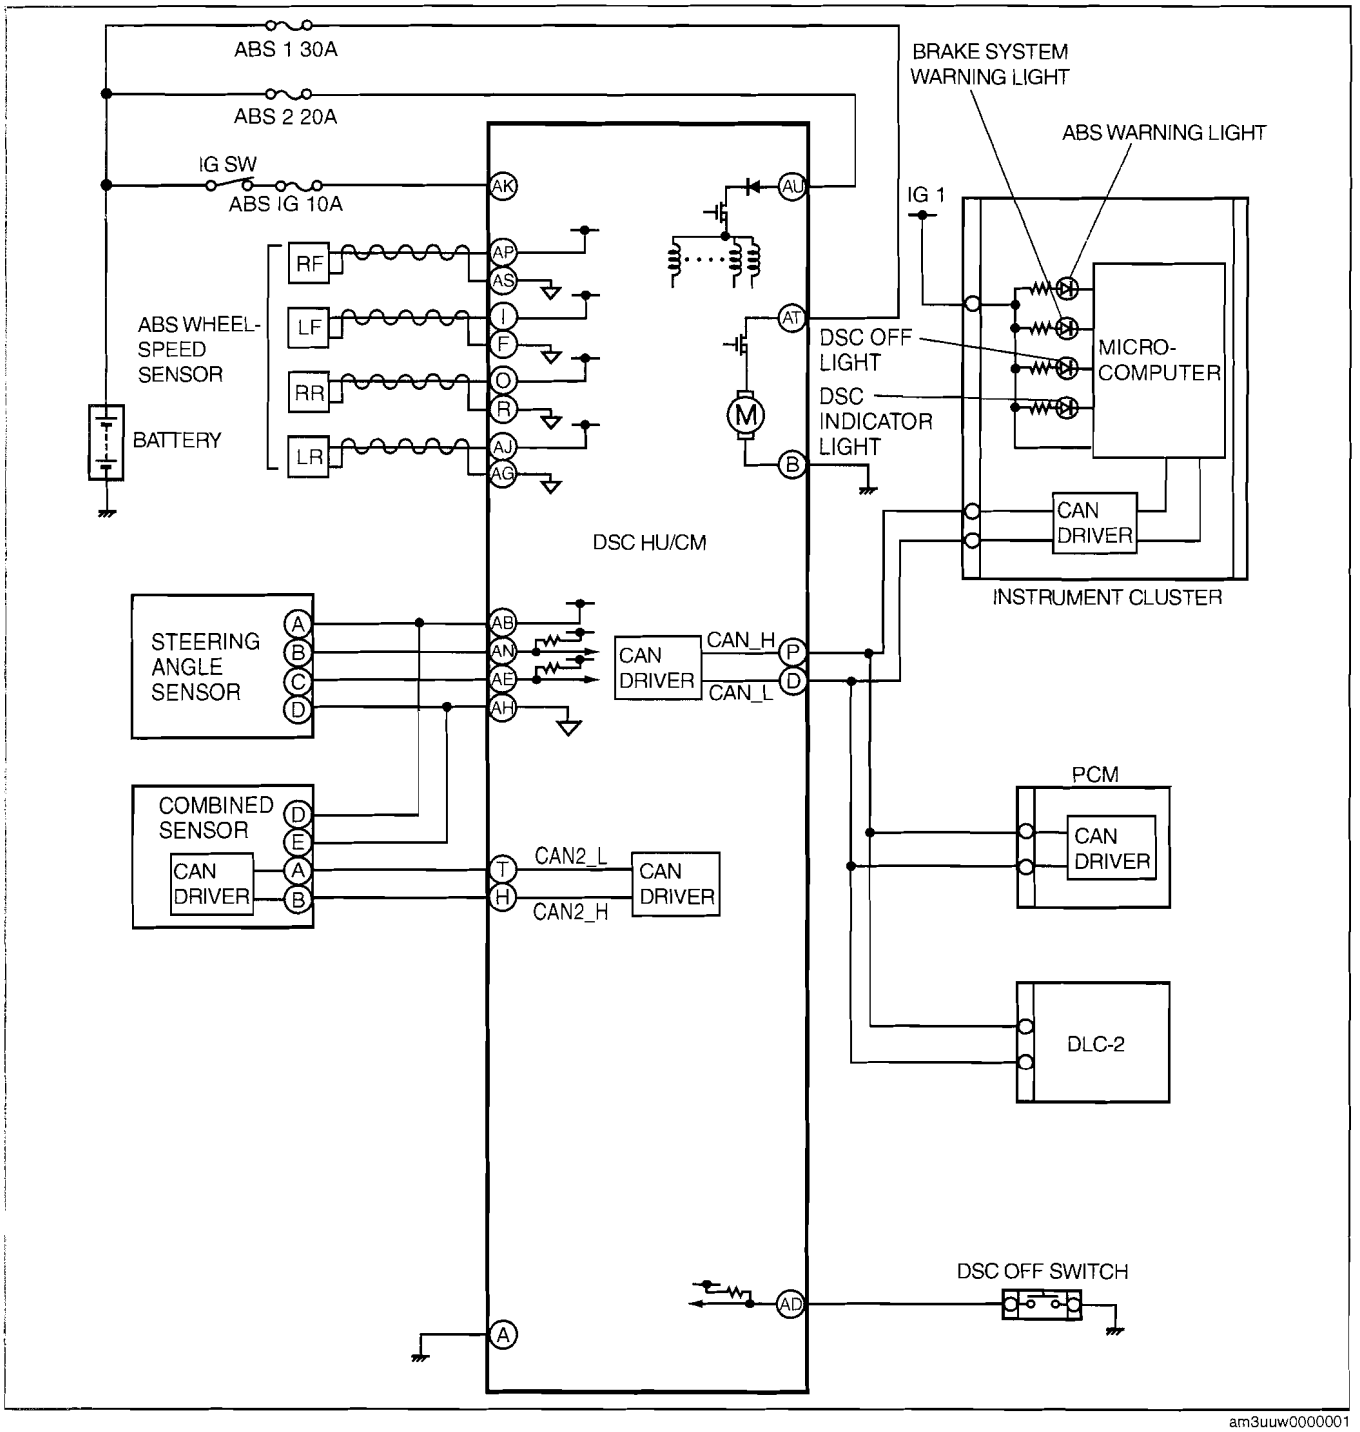
DSC SYSTEM WIRING DIAGRAM

id041500800600



am3uuw0000001

DSC SYSTEM INSPECTION

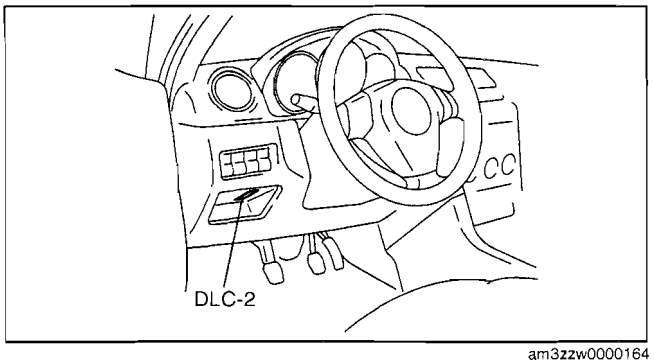
id041500800700

Preparation

1. Verify that the battery is fully charged.
2. Turn the ignition switch to the ON position and verify that the ABS warning light goes out after **approx. 3.0 s**.
3. Turn the ignition switch off.
4. Jack up the vehicle and support it evenly on safety stands.
5. Shift to the N position.
6. Verify that all four wheels rotate.
7. Rotate the inspected wheels by hand and verify there is no brake drag.
   - If there is any brake drag, perform regular brake inspection.
   - If there is no brake drag, perform DSC HU/CM operation inspection.

ABS Control Inspection

1. Perform "Preparation".
2. Connect the M-MDS to the DLC-2.
3. Set up an active command mode inspection according to the combination of commands below. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].)



am3zzw0000164

Brake pressure retention

Command name	Inspected wheels			
	LF	RF	LR	RR

Caution

- **When operating the solenoid valve and pump motor using the active command mode, make sure to keep the operation time within 2 s to prevent damaging the DSC HU/CM.**

Note

- When working with two people, one should press on the brake pedal, the other should attempt to rotate the wheel being inspected.

4. Send the command while depressing on the brake pedal and attempting to rotate the wheel being inspected.
5. When brake pressure is maintained and a DSC HU/CM operation click sound is heard, confirm that the wheel does not rotate. When brake pressure is being reduced and a DSC HU/CM operation click sound is heard, confirm that the wheel rotates.
   - Performing the inspection above determines the following:
     — The DSC HU/CM brake lines are normal.
     — The DSC HU/CM hydraulic system has no significant malfunction (including DSC HU/CM).
     — The DSC HU/CM internal electrical parts (solenoid, motor and other parts) are normal.
     — The DSC unit and DSC HU/CM output system wiring harnesses (solenoid valve, relay system) are normal.
   - However, the following items cannot be verified.
     — Intermittent malfunction of the above items
     — Malfunction of DSC HU/CM input system wiring harnesses and parts
     — Extremely small leakage in the DSC HU/CM internal hydraulic system

DSC Control Inspection

1. Perform "Preparation".
2. Connect the M-MDS to the DLC-2.
3. Set up an active command mode inspection according to the combination of commands below. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].)

Caution

- **When operating the solenoid valve and pump motor using the active command mode, make sure to keep the operation time within 2 s to prevent damaging the DSC HU/CM.**

4. Send the command while rotating the wheel being inspected by hand in a forward direction.
5. Confirm that the wheel does not rotate easily while a DSC HU/CM operation click sound is heard.
   - Performing the inspection above determines the following:
     — The DSC HU/CM brake lines are normal.
     — The DSC HU/CM hydraulic system has no significant malfunction (including DSC HU/CM).
     — The DSC HU/CM internal electrical parts (solenoid, motor and other parts) are normal.
     — The DSC unit and DSC HU/CM output system wiring harnesses (solenoid valve, relay system) are normal.
   - However, the following items cannot be verified.
     — Intermittent malfunction of the above items
     — Malfunction of DSC HU/CM input system wiring harnesses and parts
     — Extremely small leakage in the DSC HU/CM internal hydraulic system

DSC HU/CM REMOVAL/INSTALLATION

id041500801000

Caution

- **When replacing the DSC HU/CM, the configuration procedure must be done before removing the DSC HU/CM. If the configuration is not completed before removing the DSC HU/CM, DSC will not work properly after installation of the DSC HU/CM.**
- **The DSC may not function normally immediately after the DSC HU/CM is replaced. After installation, always perform the initialization procedures for the combined sensor, brake fluid pressure sensor.**
- **Always use the adapter that comes with a new DSC HU or DSC CM when separating the DSC HU or DSC CM. Otherwise, the pump motor may come off the DSC HU and be damaged. Therefore, do not separate the DSC HU and DSC CM unless replacing them. When replacing them with new ones, always perform procedures according to the instructions included with the new parts.**
- **The internal parts of the DSC HU/CM could be damaged if dropped. Be careful not to drop the DSC HU/CM. Replace the DSC HU/CM if it is subjected to an impact.**

1. Remove the battery and battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].) (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
2. Remove the reserve hose (MTX vehicles). (See 04-11-10 MASTER CYLINDER REMOVAL/INSTALLATION[L3 WITH TC].) (See 05-10-6 CLUTCH MASTER CYLINDER REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.
5. Configurate the DSC HU/CM (only when replacing it). (See 04-15-8 DSC CONFIGURATION.)
6. Perform the initialization procedures for the combined sensor, brake fluid pressure sensor. (See 04-15-12 COMBINED SENSOR INITIALIZATION PROCEDURE.) (See 04-15-13 BRAKE FLUID PRESSURE SENSOR INITIALIZATION PROCEDURE.)
7. Clear the DTCs from the memory. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].)

Note

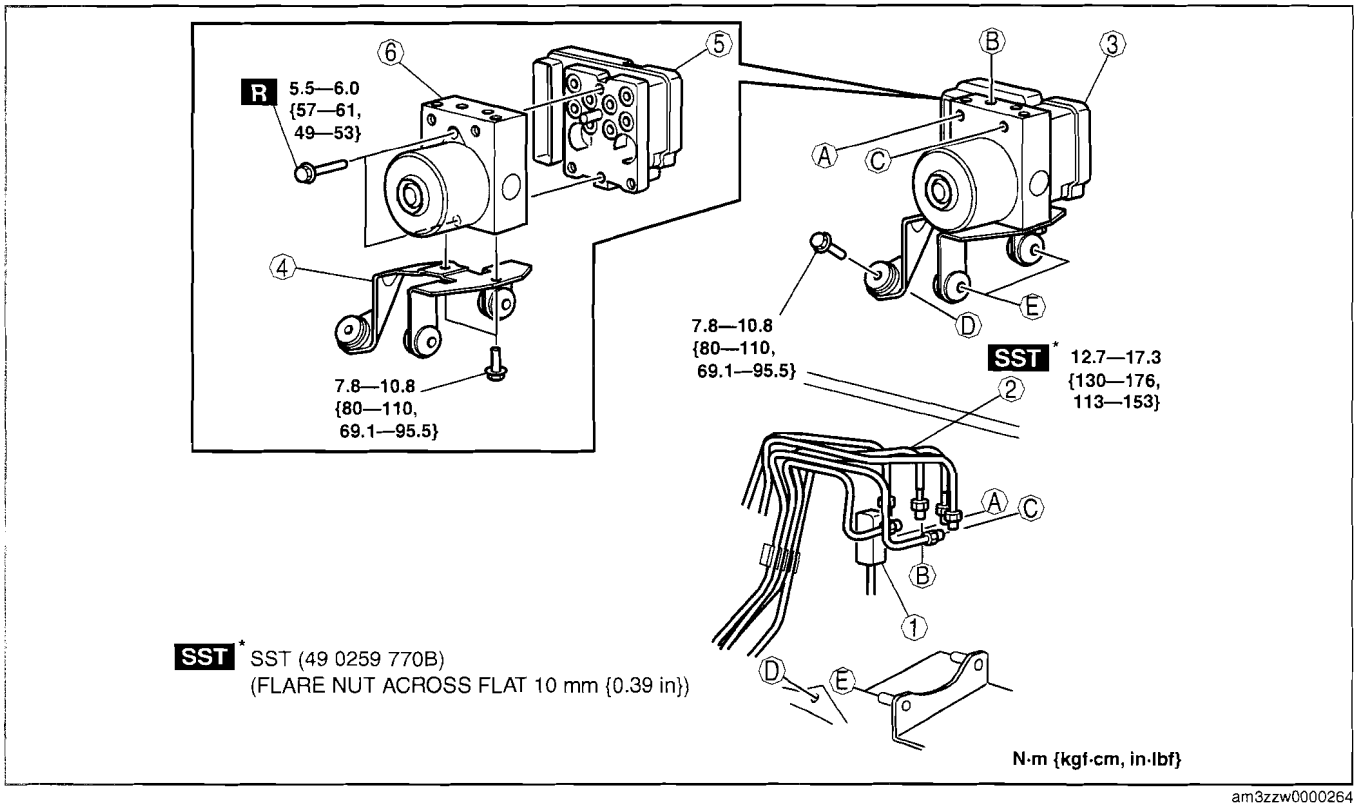
- Even if the initialization procedure is performed after replacing the DSC HU/CM, DTCs B2141 and C2785 are stored in the memory as past malfunctions.

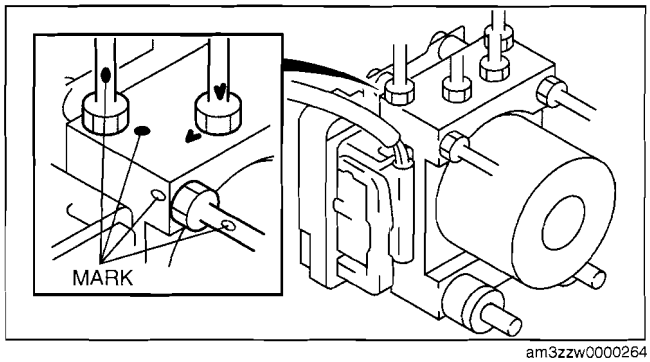


am3zzw0000264

1	Connector (See 04-13-4 ABS HU/CM REMOVAL/ INSTALLATION.)
2	Brake pipe (See 04-15-7 Brake Pipe Removal Note.) (See 04-15-7 Brake Pipe Installation Note.)
3	DSC HU/CM, bracket (See 04-15-7 DSC HU/CM, Bracket Removal Note.)
4	Bracket
5	DSC CM
6	DSC HU

Brake Pipe Removal Note

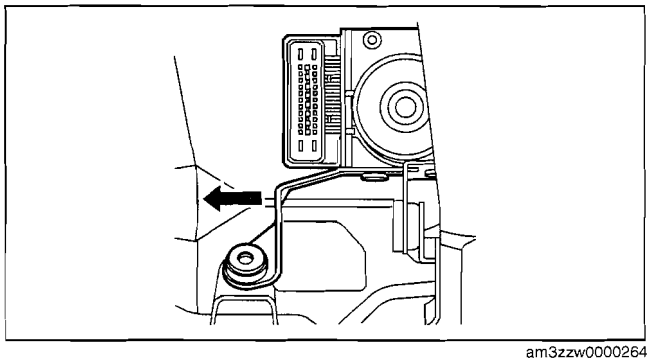
1. Place an alignment mark on the brake pipe and DSC HU/CM.
2. Apply protective tape to the connector to prevent brake fluid from entering.
3. Remove the brake pipe.



am3zzw0000264

DSC HU/CM, Bracket Removal Note

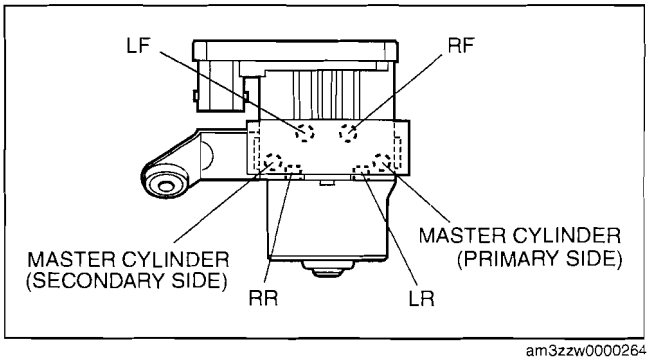
1. As shown in the figure, move the bracket in the direction of the arrow and remove the DSC HU/CM and bracket from the body.



am3zzw0000264

Brake Pipe Installation Note

1. Align the marks made before removal and install the brake pipe into the DSC HU/CM referring to the figure.

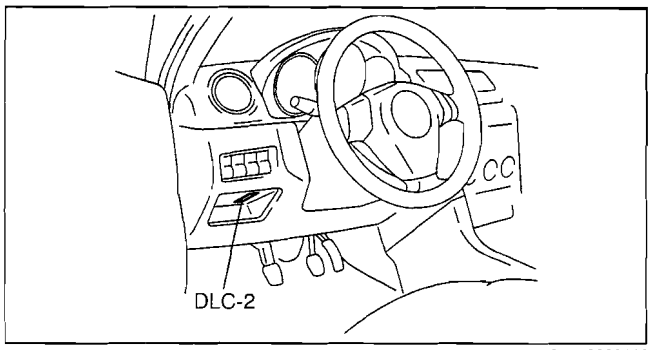


am3zzw0000264

DSC CONFIGURATION

id041500800800

1. Connect the M-MDS to the DLC-2 connector.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Module programming".
   - When using the PDS (Pocket PC)
     1. Select "Programming".
     2. Select "Module programming".
3. Then, select the "Programmable Module Installation" and "ABS" from the screen menu.
4. Perform the configuration according to the directions on the screen.
5. Retrieve DTCs using the M-MDS, then verify if DTCs are present.
   - If a DTC is present, perform the applicable DTC inspection. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].)



am3zzw0000162

DSC HU/CM INSPECTION

id041500801100

1. Disconnect the DSC HU/CM connector.
2. Connect the negative battery cable.
3. Attach the tester lead to the DSC HU/CM wiring harness-side connector and inspect voltage, continuity, or resistance according to the standard (reference) on the table.

Standard (Reference)

DSC HU/CM WIRING HARNESS-SIDE CONNECTOR

FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION

id041500800300

1. Remove or install the front ABS wheel-speed sensor in the same order of vehicles with ABS. (See 04-13-8 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)

FRONT ABS WHEEL-SPEED SENSOR INSPECTION

id041500800400

1. Inspect the front ABS wheel-speed sensor in the same order of vehicles with ABS. (See 04-13-8 FRONT ABS WHEEL-SPEED SENSOR INSPECTION.)

REAR ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION

id041500800100

1. Remove or install the rear ABS wheel-speed sensor in the same order of vehicles with ABS. (See 04-13-9 REAR ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)

REAR ABS WHEEL-SPEED SENSOR INSPECTION

id041500800200

1. Inspect the rear ABS wheel-speed sensor in the same order of vehicles with ABS. (See 04-13-10 REAR ABS WHEEL-SPEED SENSOR INSPECTION.)

COMBINED SENSOR REMOVAL/INSTALLATION

id041500801200

Caution
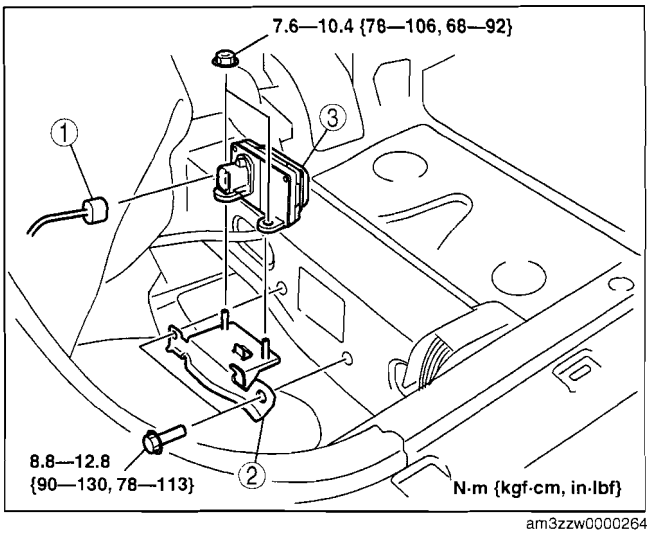
- **The DSC may not function normally immediately after the combined sensor/ is replaced. After installation, always perform the initialization procedures for the combined sensor.**
- **The internal parts of the combined sensor could be damaged if dropped. Be careful not to drop the combined sensor. Replace the combined sensor if it is subjected to an impact. Also, do not use an impact wrench or other similar air tools when removing/installing the sensor.**

1. Perform the following and partially peel back the floor covering.
   (1) Remove the front seat (RH). (See 09-13-2 FRONT SEAT REMOVAL/INSTALLATION.)
   (2) Remove the woofer. (See 09-20-10 WOOFER REMOVAL/INSTALLATION.)
   (3) Remove the front scuff plate (RH). (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (4) Remove the front side trim (RH). (See 09-17-17 FRONT SIDE TRIM REMOVAL/INSTALLATION.)

2. Remove in the order indicated in the table.

1	Combined sensor connector
2	Bracket
3	Combined sensor



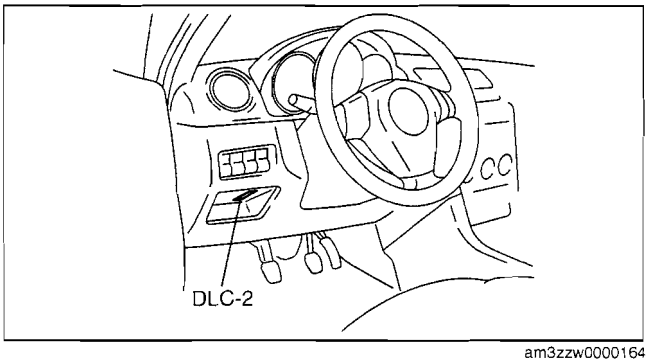
am3zzw0000264

3. Install in the reverse order of removal.
4. After installation, perform the combined sensor initialization procedure. (See 04-15-12 COMBINED SENSOR INITIALIZATION PROCEDURE.)

COMBINED SENSOR INSPECTION

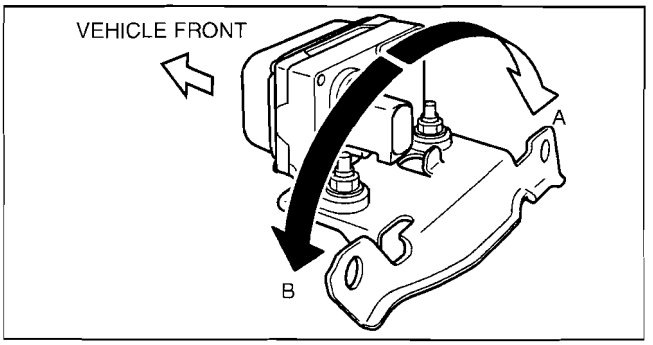
id041500801300

1. Turn the ignition switch off.
2. Connect the M-MDS to the DLC-2.
3. Select the following PIDs and inspect the lateral acceleration and yaw rate. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].)
   — LAT_ACCL (lateral acceleration)
   — YAW_RATE (yaw rate)
   (1) Lateral acceleration inspection



am3zzw0000164

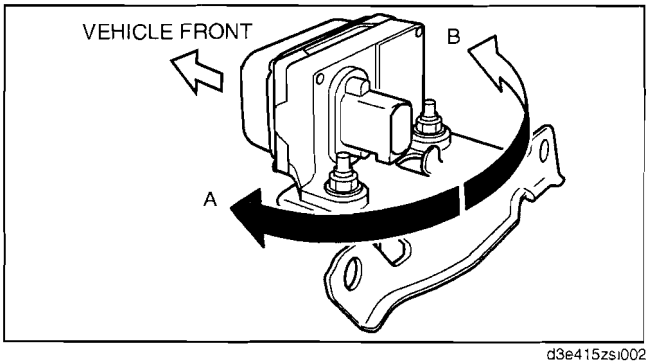
1) Verify the LAT_ACCL change when the combined sensor is tilted to the left and right.
- If there is any malfunction, replace the combined sensor.(See 04-15-10 COMBINED SENSOR REMOVAL/ INSTALLATION.)



am3zzw0000164

Standard
When the sensor is tilted to the right (A):
LAT_ACCL changes positively.
When the sensor is tilted to the left (B):
LAT_ACCL changes negatively.

(2) Yaw rate inspection
1) Verify the YAW_RATE change when the combined sensor is rotated to the left and right.
- If there is any malfunction, replace the combined sensor. (See 04-15-10 COMBINED SENSOR REMOVAL/ INSTALLATION.)



d3e415zsi002

Standard
When the sensor is rotated to the right (A):
YAW_RATE changes negatively.
When the sensor is rotated to the left (B):
YAW_RATE changes positively.

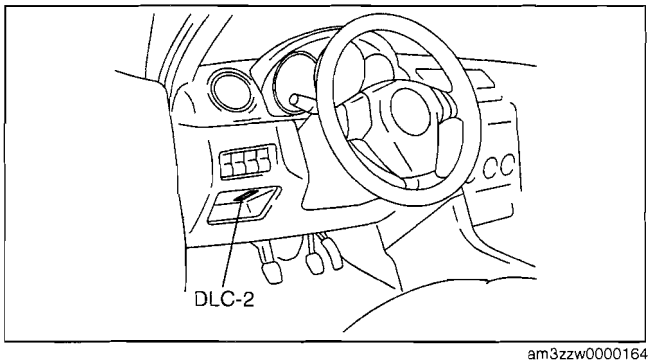
COMBINED SENSOR INITIALIZATION PROCEDURE

id041500801400

Warning

- **If the initialization procedure is not completed, the DSC will not operate properly and it might cause an unexpected accident. Therefore, after replacing or removing the combined sensor or DSC HU/CM, make sure to perform the initialization procedure to insure proper DSC operation.**

1. Inspect the wheel alignment and the tire pressure.
   - If there is any malfunction, adjust the applicable part.
2. Position the vehicle on level ground.
3. Turn the ignition switch off.
4. Connect the M-MDS to the DLC-2.
5. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select "Chassis".
     2. Select "ABS/DSC".
     3. Select "Sensor Initialization".
   - When using the PDS (Pocket PC)
     1. Select "Module Tests".
     2. Select "ABS".
     3. Select "DataLogger".
     4. Select "LATACCEL".
6. Perform the initialization procedure according to the directions on the screen.
7. Drive the vehicle.
8. After **5 min or more** of driving, verify that the DSC system is normal.



am3zzw0000164

BRAKE FLUID PRESSURE SENSOR INSPECTION

id041500801500

1. Turn the ignition switch off.
2. Install the **SSTs** to the master cylinder as shown in the figure.

Note

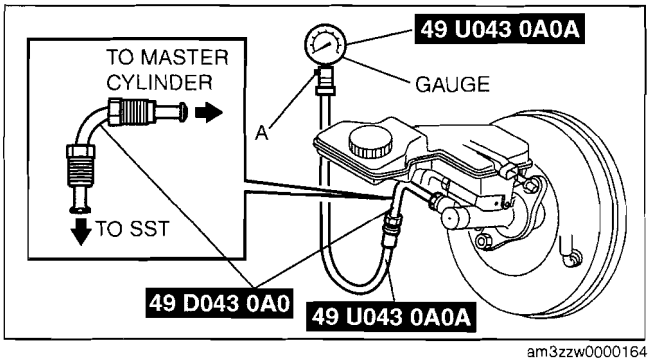
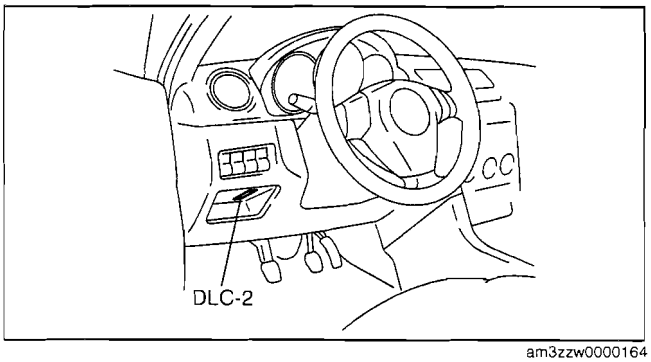
- When installing the **SST** (49 D043 0A0) to the master cylinder, use a commercially available flare nut wrench (flare nut across flat **12 mm {0.47 in}**).

3. Bleed the brake line and the **SSTs** of air. (Bleed the **SSTs** of air using air bleed valve A.)



am3zzw0000164

4. Connect the M-MDS to the DLC-2.
5. Select the "MPRETDR" PID. (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].)
6. Start the engine.
7. Depress the brake pedal, and verify that the fluid pressure value of the **SST** (gauge) and the value shown on the M-MDS are equal.
   - If the fluid pressure values are different, replace the DSC HU/CM. (See 04-15-6 DSC HU/CM REMOVAL/INSTALLATION.)



am3zzw0000164

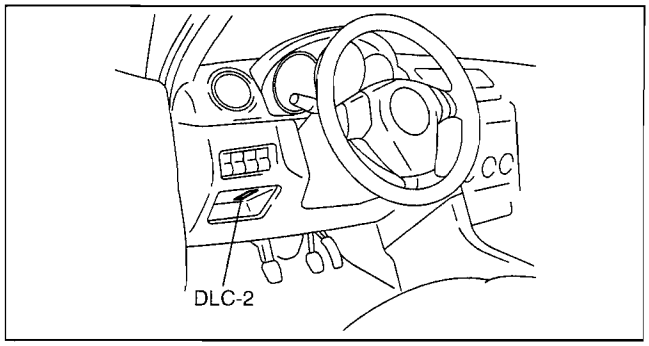
BRAKE FLUID PRESSURE SENSOR INITIALIZATION PROCEDURE

id041500802200

Warning

- **If the initialization procedure is not completed, the DSC will not operate properly and it might cause an unexpected accident. Therefore, after replacing or removing the DSC HU/CM, make sure to perform the initialization procedure to insure proper DSC operation.**

1. Turn the ignition switch off.
2. Connect the M-MDS to the DLC-2.
3. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select "Chassis".
     2. Select "ABS/DSC".
     3. Select "Sensor Initialization".
   - When using the PDS (Pocket PC)
     1. Select "Module Tests".
     2. Select "ABS".
     3. Select "DataLogger".
     4. Select "MCYL_S_CAL".
4. Perform the initialization procedure according to the directions on the screen.
5. Drive the vehicle.
6. After **5 min or more** of driving, verify that the DSC system is normal.



am3zzw0000164

STEERING ANGLE SENSOR REMOVAL/INSTALLATION

id041500801600

1. When removing or installing the steering angle sensor, refer to the clock spring removal/installation procedure. (See 08-10-14 CLOCK SPRING REMOVAL/INSTALLATION.)

STEERING ANGLE SENSOR INSPECTION

id041500801700

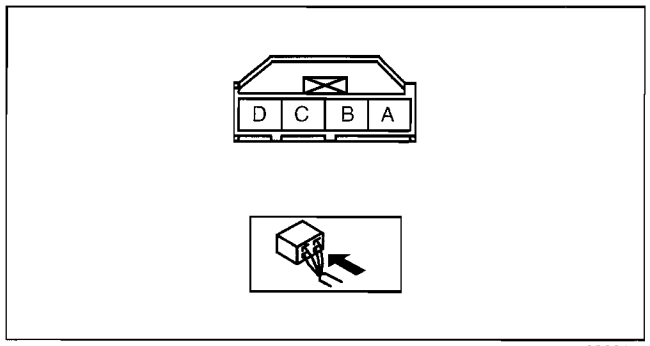
1. Remove the column cover.
2. Turn the ignition switch to the ON position and measure the voltage between steering angle sensor terminal A and ground.
   - If there is any malfunction, inspect the wiring harness between steering angle sensor terminal A and DSC HU/CM terminal AB. Repair or replace if necessary.

   Standard voltage
   B+

3. Measure the voltage between steering angle sensor terminal D and ground.
   - If there is any malfunction, inspect the wiring harness between steering angle sensor terminal D and DSC HU/CM terminal AH. Repair or replace if necessary.

   Standard voltage
   0 V

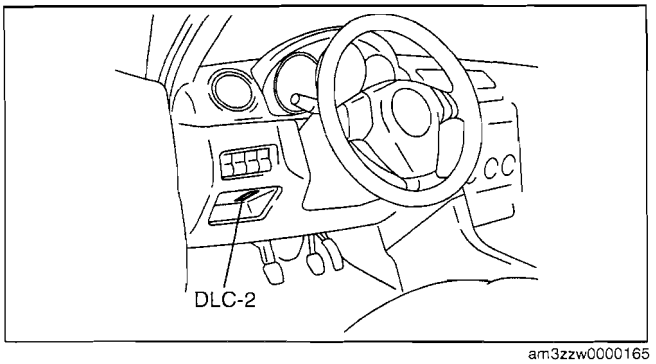
4. Turn the ignition switch off.



am3zzw0000165

5. Connect the M-MDS to the DLC-2.
6. Select the "SWA_POS" PID.
7. Verify the SWA_POS changes when the steering wheel is turned to the left and right.
   - If there is any malfunction, replace the steering angle sensor. (See 08-10-14 CLOCK SPRING REMOVAL/INSTALLATION.)

Standard
When the steering wheel is turned to the left:
SWA_POS changes positively.
When the steering wheel is turned to the right:
SWA_POS changes negatively.

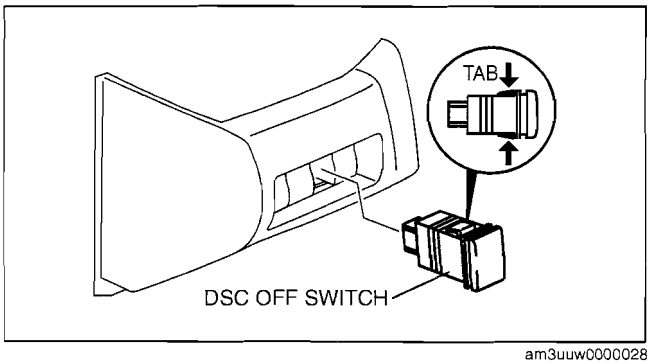


am3zzw0000165

DSC OFF SWITCH REMOVAL/INSTALLATION

id041500801900

1. Remove the lower panel. (See 09-17-7 LOWER PANEL REMOVAL/INSTALLATION.)
2. While squeezing the tabs of the DSC OFF switch, pull the DSC OFF switch outward to remove it from the lower panel.
3. Install in the reverse order of removal.

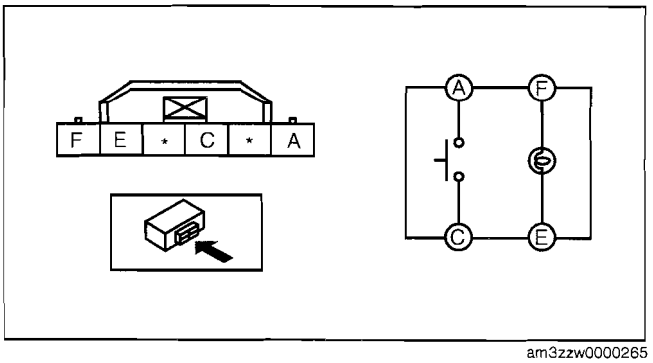


am3uuw0000028

DSC OFF SWITCH INSPECTION

id041500802000

1. Remove the DSC OFF switch. (See 04-15-14 DSC OFF SWITCH REMOVAL/INSTALLATION.)
2. Verify that the continuity is as indicated in the table.
   - If not as indicated in the table, replace the DSC OFF switch.



am3zzw0000265

FOREWORD[FN4A-EL]

id0502a1800200

- When the customer reports a vehicle malfunction, inspect the malfunction indicator lamp (MIL), AT warning light indication, and PCM memory for diagnostic trouble code (DTC), then diagnose the malfunction according to the following flowchart.
  — If a DTC exists, diagnose the applicable DTC. (See 05-02A-11 DTC TABLE[FN4A-EL].)
  — If no DTC exists, the MIL does not illuminate, and AT warning light does not illuminate. Diagnose the applicable symptom troubleshooting. (See 05-03A-7 SYMPTOM TROUBLESHOOTING ITEM TABLE[FN4A-EL].)

id0502a1800300

DTC Reading Procedure

(See 01-02A-14 ON-BOARD DIAGNOSTIC TEST[LF, L3].)

AFTER REPAIR PROCEDURE[FN4A-EL]

id0502a1800400

Caution

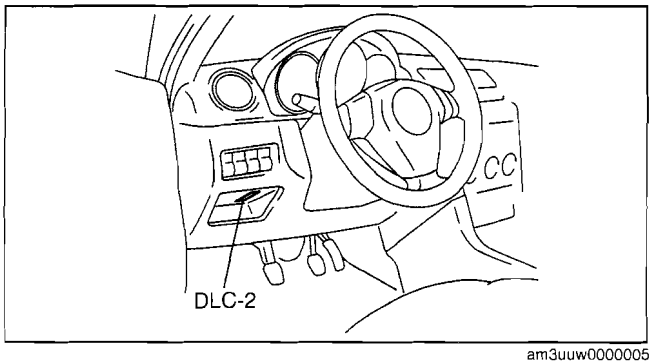
- **After repairing a malfunction, perform the following procedure to verify that the malfunction has been corrected.**
- **When performing this procedure, be sure to drive the vehicle at lawful speed and pay attention to the other vehicles.**

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.

- When using the IDS (laptop PC)
  1. Select the "Toolbox" tab.
  2. Select "SelfTest".
  3. Select "Modules".
  4. Select "PCM".
  5. Select "Retrieve CMDTCs".
- When using the PDS (Pocket PC)
  1. Select "Module Tests".
  2. Select "PCM".
  3. Select "SelfTest".
  4. Select "Retrieve CMDTCs".



am3uuw0000005

3. Verify the DTC according to the directions on the M-MDS screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Perform the following DTC inspections to ensure that the DTCs have been resolved:

DTC No.	inspection
P0706, P0707, P0708	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle in D range at **20 km/h {12 mph} or more** for **100 s or more**. iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle in D range at **20 km/h {12 mph} or more** for **100 s or more**. vii. Go to Step 6.
P0711	i. Start the engine then wait **180 s or more**. ii. Warm up the engine and ATX. iii. Drive the vehicle in D range, at **25 km/h {16 mph} or more** for **90 s or more**. iv. Drive the vehicle in D range, at **60 km/h {37 mph} or more** for **60 s or more**. v. Turn the ignition switch to the LOCK position. vi. Start the engine. vii. Drive the vehicle in D range, at **25 km/h {16 mph} or more** for **90 s or more**. viii. Drive the vehicle in D range, at **60 km/h {37 mph} or more** for **60 s or more**. ix. Go to Step 6.
P0712, P0713	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle in D range, at **20 km/h {12 mph} or more** for **150 s or more**. iv. Go to Step 6.
P0715	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle in D range, at **41 km/h {25 mph} or more** for **0.7 s or more**. iv. Go to Step 6.
P0720	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions for **4.5 s or more**. • Turbine speed (TSS PID): **1,500 rpm or more** • Selector lever position: D range, 1GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions for **4.5 s or more**. • Turbine speed (TSS PID): **1,500 rpm or more** • Selector lever position: D range, 1GR vii. Go to Step 6.
P0731	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D or M range, 1GR • Accelerator opening angle (APP PID): **3.07% or more** iv. Go to Step 6.
P0732	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions 3 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D or M range, 2GR iv. Go to Step 6.
P0733	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions. • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D or M range, 3GR iv. Go to Step 6.
P0734	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions. • Vehicle speed (VSS PID): **36 km/h {23 mph} or more** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D or M range, 4GR iv. Go to Step 6.

DTC No.	inspection
P0741	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions for **5 s or more.** • Vehicle speed (VSS PID): **60—100 km/h {38—62 mph}** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 4GR iv. Go to Step 6.
P0742	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions. • Vehicle speed (VSS PID): **less than 70 km/h {43 mph}** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 4GR • Accelerator conditions — Accelerator opening angle (APP PID) is **6.25% or more** and **5 s or more** have passed. — Accelerator opening angle (APP PID) is **within 3.13—6.25%** and **3 s or more** have passed. — Accelerator opening angle is at closed throttle position and **5 s or more** have passed. iv. Go to Step 6.
P0745	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle in D range. iv. Go to Step 6.
P0751	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions for **15 s or more.** • Vehicle speed (VSS PID): **46 km/h {29 mph} or more** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 4GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions for **15 s or more.** • Vehicle speed (VSS PID): **46 km/h {29 mph} or more** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 4GR vii. Go to Step 6.
P0752	i. Start the engine. ii. Warm up the engine and ATX. iii. Selector lever position: D range iv. Depress the brake pedal. v. Turn the ignition switch to the LOCK position. vi. Start the engine. vii. Selector lever position: D range viii. Depress the brake pedal. ix. Go to Step 6.
P0753, P0758, P0763, P0768, P0773, P0883, P1783	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle in D range and make sure that the gears shift smoothly from 1GR to 4GR and TCC is operated. iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle in D range and make sure that the gears shift smoothly from 1GR to 4GR and TCC is operated. vii. Go to Step 6.

DTC No.	inspection
P0756	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Accelerator opening angle (APP PID): **3.07% or more** • Differential gear case (output) revolution speed (OSS PID): **35 rpm or more** • Selector lever position: D range, 1GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Accelerator opening angle (APP PID): **3.07% or more** • Differential gear case (output) revolution speed (OSS PID): **35 rpm or more** • Selector lever position: D range, 1GR vii. Go to Step 6.
P0757, P0766	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions. • Vehicle speed (VSS PID): **36 km/h {22 mph} or more** • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle at closed throttle position • Differential gear case (output) revolution speed (OSS PID): **35 rpm or more** • Selector lever position: D range, 2GR and 4GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions. • Vehicle speed (VSS PID): **36 km/h {22 mph} or more** • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle at closed throttle position • Differential gear case (output) revolution speed (OSS PID): **35 rpm or more** • Selector lever position: D range, 2GR and 4GR vii. Go to Step 6.
P0761	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Accelerator opening angle (APP PID): **3.07% or more** • Differential gear case (output) revolution speed (OSS PID): **35 rpm or more** • Selector lever position: D range, 1GR and 2GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Accelerator opening angle (APP PID): **3.07% or more** • Differential gear case (output) revolution speed (OSS PID): **35 rpm or more** • Selector lever position: D range, 1GR and 2GR vii. Go to Step 6.
P0762	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions. • Vehicle speed (VSS PID): **23 km/h {14.3 mph} or more** • Turbine speed (TSS PID): **225—4,987 rpm** • Differential gear case (output) revolution speed (OSS PID): **35 rpm or more** • Selector lever position: D range, 3GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions. • Vehicle speed (VSS PID): **23 km/h {14.3 mph} or more** • Turbine speed (TSS PID): **225—4,987 rpm** • Differential gear case (output) revolution speed (OSS PID): **35 rpm or more** • Selector lever position: D range, 3GR vii. Go to Step 6.

DTC No.	inspection
P0767	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions for **5 s or more.** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 3GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions for **5 s or more**. • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 3GR vii. Go to Step 6.
P0771	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions for **5 s or more**. • Vehicle speed (VSS PID): **60—100 km/h {38—62 mph}** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 4GR and TCC is operated iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions for **5 s or more**. • Vehicle speed (VSS PID): **60—100 km/h {38—62 mph}** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 4GR and TCC is operated vii. Go to Step 6.
P0772	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions. • Vehicle speed (VSS PID): **less than 70 km/h {43 mph}** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 4GR • Accelerator conditions — Accelerator opening angle (APP PID) is **6.25% or more** and **5 s or more** have passed. — Accelerator opening angle (APP PID) is **within 3.13—6.25%** and **3 s or more** have passed. — Accelerator opening angle is at closed throttle position and **5 s or more** have passed. iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions. • Vehicle speed (VSS PID): less than **70 km/h {43 mph}** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 4GR • Accelerator conditions — Accelerator opening angle (APP PID) is **6.25% or more** and **5 s or more** have passed. — Accelerator opening angle (APP PID) is **within 3.13—6.25%** and **3 s or more** have passed. — Accelerator opening angle is at closed throttle position and **5 s or more** have passed. vii. Go to Step 6.
P0894	i. Start the engine. ii. Warm up the engine and ATX. iii. Depress the brake pedal. iv. Throttle opening angle at closed throttle position. v. Shift the selector lever from the N position to the D range and hold for **3 s or more**. vi. Go to Step 7.

6. Gradually slow down and stop the vehicle.
7. Make sure that the repaired DTC does not recur.

DTC TABLE[FN4A-EL]

id0502a1800500

DTC No.	Condition	MIL	AT warning light illuminates	DC	Monitor item	Memory function	Page
B1342	PCM malfunction	(See 01-02A-22 DTC TABLE[LF, L3].)					
P0011	CMP timing over-advanced	(See 01-02A-22 DTC TABLE[LF, L3].)					
P0012	CMP timing over-retarded	(See 01-02A-22 DTC TABLE[LF, L3].)					
P0016	CKP-CMP correlation	(See 01-02A-22 DTC TABLE[LF, L3].)

*2 : Except for California emission regulation applicable model

DTC P0706[FN4A-EL]

id0502a1800900

DTC P0706	Transaxle range (TR) switch range/performance
DETECTION CONDITION	• When all conditions below are satisfied and **100 s or more** have passed. — Engine speed **530 rpm or more** — Vehicle speed **20 km/h {12 mph} or more** — Voltage at PCM terminal 1AH*1/1S*2 **0.5 V or more** — P, R, N, or D range/position not detected **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • The PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• TR switch malfunction • TR switch misadjustment • PCM malfunction

*1 : California emission regulation applicable mode
*2 : Except for California emission regulation applicable mode

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TR SWITCH** • Turn the ignition switch to the LOCK position. • Disconnect the TR switch connector. • Inspect for resistance between TR switch terminals B and C (part-side). • Is the resistance normal? (See 05-17A-10 TRANSAXLE RANGE (TR) SWITCH INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Adjust or replace the TR switch, then go to the next step. (See 05-17A-16 TRANSAXLE RANGE (TR) SWITCH ADJUSTMENT[FN4A-EL].) (See 05-17A-12 TRANSAXLE RANGE (TR) SWITCH REMOVAL/INSTALLATION[FN4A-EL].)
4	**VERIFY TROUBLESHOOTING OF DTC P0706 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle in each range (D and R) for **100 s or more** under the following conditions: — Engine speed (RPM PID): **530 rpm or more** — Vehicle speed (VSS PID): **20 km/h {12 mph} or more** • Is the PENDING CODE present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0707[FN4A-EL]

id0502a1801000

DTC P0707	Transaxle range (TR) switch circuit low input
DETECTION CONDITION	• When all conditions below are satisfied and **100 s or more** have passed. — Vehicle speed **20 km/h {12 mph} or more** — Engine speed **530 rpm or more** — Voltage at PCM terminal 1AH*1/1S*2 **0.5 V or less** **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• TR switch malfunction • Short to ground in wiring harness between TR switch terminal C and PCM terminal 1AH*1/1S*2 • TR switch signal and TR switch ground circuits shorted each other • PCM malfunction

*2 : Except for California emission regulation applicable mode

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TR SWITCH CONNECTOR** • Turn the ignition switch to the LOCK position. • Disconnect the TR switch connector. • Inspect for poor connection at TR switch terminals B and C (part-side) (such as damaged/pulled-out pins, corrosion) • Are TR switch terminals normal?	Yes	Go to the next step.
		No	Repair terminals or replace the TR switch, then go to Step 8. (See 05-17A-12 TRANSAXLE RANGE (TR) SWITCH REMOVAL/INSTALLATION[FN4A-EL].)
4	**INSPECT TR SWITCH** • Turn the ignition switch to the LOCK position. • Disconnect the TR switch connector. • Inspect for resistance between TR switch terminals B and C (part-side). • Is the resistance normal? (See 05-17A-10 TRANSAXLE RANGE (TR) SWITCH INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Replace the TR switch, then go to Step 8. (See 05-17A-12 TRANSAXLE RANGE (TR) SWITCH REMOVAL/INSTALLATION[FN4A-EL].)
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection at terminals 1AH*1/1S*2 and 1AS*1/1AA*2 (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
6	**INSPECT TR SWITCH SIGNAL CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between TR switch terminal C (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for short to ground, then go to Step 8.
		No	Go to the next step.
7	**INSPECT TR SWITCH CIRCUIT FOR SHORT CIRCUIT** • Inspect for continuity between TR switch terminals B and C (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for short circuit, then go to the next step.
		No	Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0707 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle for **100 s or more** under the following conditions: — Engine speed (RPM PID): **530 rpm or more** — Vehicle speed (VSS PID): **20 km/h {12 mph} or more** • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0708[FN4A-EL]

id0502a1801100

DTC P0708	Transaxle range (TR) switch circuit high input
DETECTION CONDITION	• When all conditions below are satisfied and **100 s or more** have passed. — Vehicle speed **20 km/h {12 mph} or more** — Engine speed **530 rpm or more** — Voltage at PCM terminal 1AH*1/1S*2 **4.79 V or more** **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• TR switch malfunction • Open circuit in wiring harness between TR switch terminal C and PCM terminal 1AH*1/1S*2 • Short to power supply in wiring harness between TR switch terminal C and PCM terminal 1AH*1/1S*2 • Open circuit in wiring harness between TR switch terminal B and PCM terminal 1AS*1/1AA*2 • Poor connection of TR switch or PCM connectors • PCM malfunction

*1 : California emission regulation applicable mode
*2 : Except for California emission regulation applicable mode

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.

STEP	INSPECTION		ACTION
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TR SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the TR switch connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are TR switch terminals normal?	Yes	Go to the next step.
		No	Repair terminals or replace the TR switch, then go to Step 9. (See 05-17A-12 TRANSAXLE RANGE (TR) SWITCH REMOVAL/INSTALLATION[FN4A-EL].)
4	**INSPECT TR SWITCH** • Inspect for resistance between TR switch terminals B and C (part-side). • Is the resistance normal? (See 05-17A-10 TRANSAXLE RANGE (TR) SWITCH INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Replace the TR switch, then go to Step 9. (See 05-17A-12 TRANSAXLE RANGE (TR) SWITCH REMOVAL/INSTALLATION[FN4A-EL].)
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection at terminals 1AH*1/ 1S*2 and 1AS*1/1AA*2 (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to step 9.
		No	Go to the next step.
6	**INSPECT TR SWITCH SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (engine off). • Inspect the voltage between TR switch terminal C and (wiring harness-side) body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for short to power supply, then go to Step 9.
		No	Go to the next step.
7	**INSPECT TR SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between TR switch terminal C (wiring harness-side) and PCM terminal 1AH*1/1S*2. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open circuit, then go to step 9.
8	**INSPECT TR SWITCH GROUND CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between TR switch terminal B (wiring harness-side) and PCM terminal 1AS*1/1AA*2. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0708 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle for **100 s or more** under the following conditions: — Engine speed (RPM PID) **530 rpm or more** — Vehicle speed (VSS PID) **20 km/h {12 mph} or more** • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0711[FN4A-EL]

id0502a1801200

DTC P0711	Transaxle fluid temperature (TFT) sensor circuit range/performance (stuck)
DETECTION CONDITION	• When all conditions below are satisfied. — When **180 s or more** have passed after the engine is started, vehicle is driven for **90 s or more** at vehicle speed **25 km/h {16 mph} or more**, then **60 km/h {37 mph} or more** for **60 s or more**. — D range of TR switch input — Opened accelerator position — P0712, P0713 not output — Variation in ATF voltage **less than 0.03 V** • When the detected ATF temperature is **less than 20°C {68 °F}** together with the following conditions. — Intake air temperature is **-7 °C {19.4 °F} or more** after engine starts. — Estimated ATF temperature is **more than 55° C {131 °F}** while vehicle is driving. **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • The PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • AT warning light does not illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• TFT sensor malfunction • Connector corrosion • PCM malfunction

*1 : California emission regulation applicable mode
*2 : Except for California emission regulation applicable mode

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TFT SENSOR VOLTAGE** • Turn the ignition switch to the ON position (engine off). • Measure the voltage at PCM terminal 2AC*1/1U*2. • Record terminal 2AC*1/1U*2 voltage. • Start the engine. • Drive the vehicle at **60 km/h {37 mph} or more** for **330 s or more**. • Record terminal 2AC*1/1U*2 voltage again. • Is the variation in voltage **0.03 V or more**?	Yes	Go to Step 5.
		No	Go to the next step.
4	**INSPECT TERMINAL CONDITION** • Turn the ignition switch to the LOCK position. • Disconnect the ATX connector. • Inspect terminals for corrosion. • Are terminals normal?	Yes	Go to the next step.
		No	Repair or replace the terminals, then go to the next step.

STEP	INSPECTION		ACTION
5	**VERIFY TROUBLESHOOTING OF DTC P0711 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Decrease ATF temperature to **20 °C {68 °F} or less**. • Start the engine and wait for **180 s or more**. • Drive the vehicle at a vehicle speed **25 km/h {16 mph} or more** for **90 s or more**. • Drive the vehicle at a vehicle speed **60 km/h {37 mph} or more** for **60 s or more**. • Is the PENDING CODE present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0712[FN4A-EL]

id0502a1801300

DTC P0712	Transaxle fluid temperature (TFT) sensor circuit malfunction (short to ground)
DETECTION CONDITION	• If the PCM detects either of the following conditions for **150 s or more**, the PCM determines that the TFT sensor circuit has a malfunction. — TFT sensor voltage **0.06 V or less** and vehicle speed **20 km/h {12 mph} or more** **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction conditions during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• TFT sensor malfunction • Short to ground in wiring harness between TFT sensor and ATX terminal E • Short to ground in wiring harness between TFT sensor and ATX terminal H • Short to ground in wiring harness between ATX terminal E and PCM terminal 2AC*1/1U*2 • Damaged connectors between TFT sensor and PCM • PCM malfunction

*1 : California emission regulation applicable mode
*2 : Except for California emission regulation applicable mode

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY CURRENT INPUT SIGNAL STATUS** • Turn the ignition switch to the ON position (engine off). • Inspect the voltage at PCM terminal 2AC*1/1U*2. • Is the voltage **0.06 V or more**?	Yes	Go to the intermittent concern troubleshooting procedure. (See 01-03A-66 INTERMITTENT CONCERN TROUBLESHOOTING[LF, L3].)
		No	Go to the next step.
4	**INSPECT TERMINAL CONDITION** • Turn the ignition switch to the LOCK position. • Disconnect the ATX connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Are the terminals bent?	Yes	Repair or replace the terminals, then go to Step 8. • If the terminals cannot be repaired, replace the wiring harness, then go to Step 8.
		No	Go to the next step.
5	**INSPECT TFT SENSOR CIRCUIT** • Turn the ignition switch to the ON position (engine off). • Verify that the voltage changes to **4.67 V or more** at PCM terminal 2AC*1/1U*2 when ATX connector is disconnected. • Does the voltage change?	Yes	Go to the next step.
		No	Go to Step 7.
6	**INSPECT TFT SENSOR CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between ATX terminals (transaxle case side) and body ground. — E and body ground — H and body ground • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 8.
		No	Replace the TFT sensor, then go to Step 8. (See 05-17A-20 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR REMOVAL/INSTALLATION[FN4A-EL].)
7	**INSPECT ATX CONNECTOR CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between ATX terminal E (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to the next step.
		No	Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0712 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle under the following condition for **150 s or more**. — Vehicle speed (VSS PID) **20 km/h {12 mph} or more.** • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

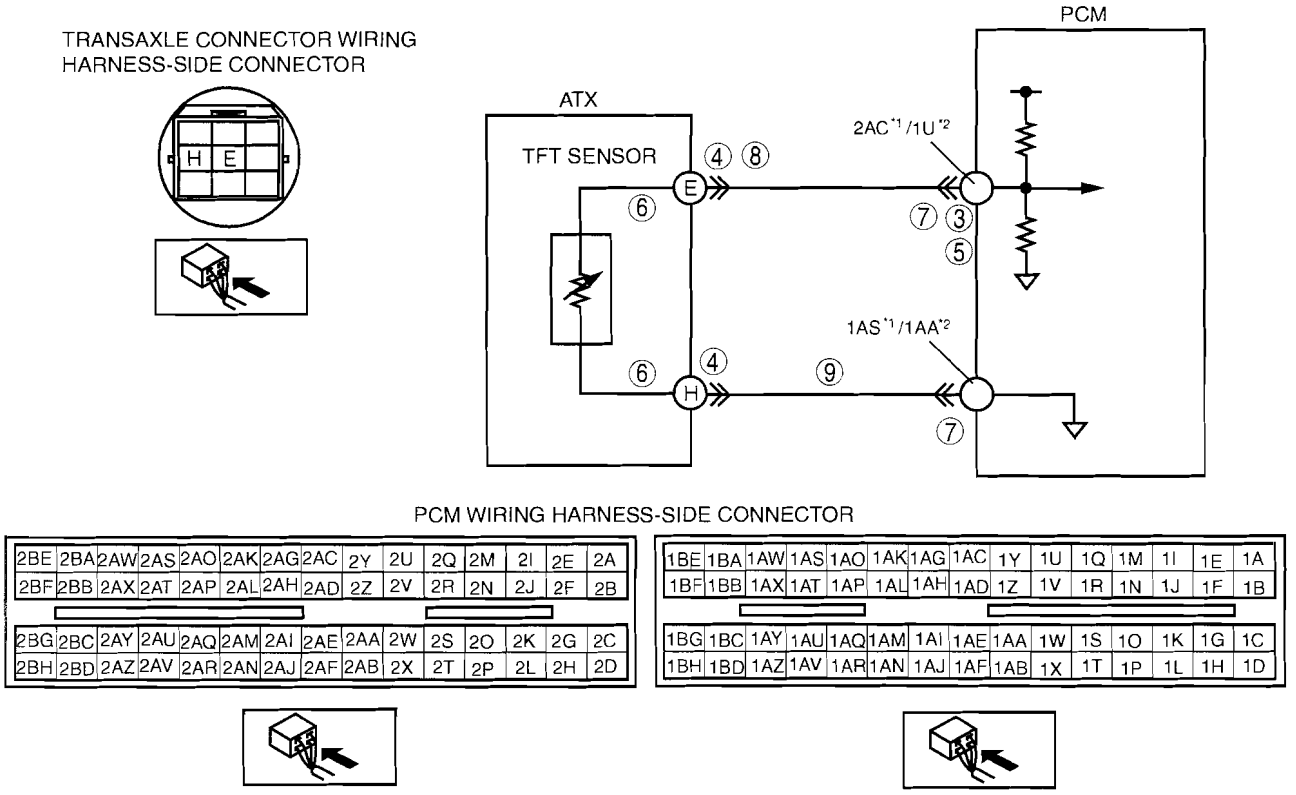
DTC P0713[FN4A-EL]

id0502a1801400

DTC P0713	Transaxle fluid temperature (TFT) sensor circuit malfunction (open circuit)
DETECTION CONDITION	• If the PCM detects the following condition for **150 s or more**, the PCM determines that the TFT sensor circuit has a malfunction. — TFT sensor voltage **4.67 V or more** and vehicle speed **20 km/h {12 mph} or more** **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction conditions during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• TFT sensor malfunction • Open circuit in wiring harness between TFT sensor and ATX terminal E • Open circuit in wiring harness between TFT sensor and ATX terminal H • Open circuit in wiring harness between ATX terminal E and PCM terminal 2AC*1/1U*2 • Open circuit in wiring harness between ATX terminal H and PCM terminal 1AS*1/1AA*2 • Damaged connectors between TFT sensor and PCM • PCM malfunction



*1 : California emission regulation applicable mode
*2 : Except for California emission regulation applicable mode

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**VERIFY CURRENT INPUT SIGNAL STATUS** • Turn the ignition switch to the ON position (engine off). • Measure the voltage at PCM terminal 2AC*1/ 1U*2. • Is the voltage **below 4.67 V**?	Yes	Go to the intermittent concern troubleshooting procedure. (See 01-03A-66 INTERMITTENT CONCERN TROUBLESHOOTING[LF, L3].)
		No	Go to the next step.
4	**INSPECT ATX CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Inspect ATX connector connection. • Disconnect the ATX connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 10.
5	**INSPECT TFT SENSOR CIRCUIT** • Turn the ignition switch to the ON position (engine off). • Measure the voltage at PCM terminal 2AC*1/ 1U*2 when connect between ATX terminals E and H (wiring harness-side) using jumper wire. • Verify that voltage changes to **0.06 V or less**. • Does the voltage change?	Yes	Go to the next step.
		No	Go to Step 7.
6	**INSPECT TFT SENSOR CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between ATX terminals (transaxle case side) E and H. • Is there continuity?	Yes	Replace the TFT sensor, then go to Step 10. (See 05-17A-20 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR REMOVAL/INSTALLATION[FN4A-EL].)
		No	Repair or replace the wiring harness, then go to Step 10.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 10.
8	**INSPECT WIRING HARNESS FOR OPEN CIRCUIT** • Disconnect the ATX connector. • Connect the PCM connector. • Turn the ignition switch to the ON position (engine off). • Inspect the voltage at ATX terminal E (vehicle wiring harness-side). • Is the voltage **5 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 10.
9	**INSPECT ATX CONNECTOR CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch to the LOCK position. • Inspect for continuity between ATX terminal H (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0713 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle under the following condition for **150 s or more**. — Vehicle speed (VSS PID) **20 km/h {12 mph} or more**. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0715[FN4A-EL]

id0502a1806100

DTC P0715	Input/turbine speed sensor circuit malfunction
DETECTION CONDITION	• When all conditions below are satisfied and **0.7 s or more** have passed. — D range of TR switch input — Driving vehicle at vehicle speed of **41 km/h {25 mph} or more** — Input/turbine speed sensor signal not input **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction conditions during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Input/turbine speed sensor malfunction • Short to ground in wiring harness between input/turbine speed sensor terminal A and PCM terminal 1AG*1/1Q*2 • Short to ground in wiring harness between input/turbine speed sensor terminal B and PCM terminal 1AO*1/1M*2 • Open circuit in wiring harness between input/turbine speed sensor terminal A and PCM terminal 1AG*1/1Q*2 • Open circuit in wiring harness between input/turbine speed sensor terminal B and PCM terminal 1AO*1/1M*2 • Damaged connectors between input/turbine speed sensor and PCM • PCM malfunction

*2 : Except for California emission regulation applicable mode

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY CURRENT INPUT SIGNAL STATUS** • Turn the ignition switch to the LOCK position. • Start the engine. • Measure the frequency of input/turbine speed sensor using a oscilloscope. — IG ON: **0 Hz** — Idle: **Within 320—374 Hz** (P, N position) • Are frequencies of input/turbine speed sensor within specifications?	Yes	Go to the intermittent concern troubleshooting procedure. (See 01-03A-66 INTERMITTENT CONCERN TROUBLESHOOTING[LF, L3].)
		No	Go to the next step.
4	**INSPECT INPUT/TURBINE SPEED SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the input/turbine speed sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 10.
5	**INSPECT INPUT/TURBINE SPEED SENSOR RESISTANCE** • Measure the resistance between the input/ turbine speed sensor terminals (part-side). • Is the resistance **within 250—600 ohms** between input/turbine speed sensor terminals (part-side)? (See 05-17A-20 INPUT/TURBINE SPEED SENSOR INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Replace the input/turbine speed sensor, then go to Step 10. (See 05-17A-21 INPUT/TURBINE SPEED SENSOR REMOVAL/INSTALLATION[FN4A-EL].)
6	**INSPECT INPUT/TURBINE SPEED SENSOR** • Remove the input/turbine speed sensor. • Is there iron powder stuck on input/turbine speed sensor? (See 05-17A-21 INPUT/TURBINE SPEED SENSOR REMOVAL/INSTALLATION[FN4A-EL].)	Yes	Clean the input/turbine speed sensor, then go to Step 10.
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 10.
8	**INSPECT INPUT/TURBINE SPEED SENSOR CIRCUIT FOR OPEN CIRCUIT** • Inspect the following input/turbine speed sensor terminals (wiring harness-side) and PCM terminals (wiring harness-side): — A and 1AG[*1]/1Q[*2] — B and 1AO[*1]/1M[*2] • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 10.
9	**INSPECT INPUT/TURBINE SPEED SENSOR CIRCUIT FOR SHORT TO GROUND** • Inspect input/turbine speed sensor terminal (wiring harness-side) and body ground. — A and body ground — B and body ground • Is there continuity?	Yes	Repair or replace the wiring harness, then go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
10	**VERIFY TROUBLESHOOTING OF DTC P0715 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle a vehicle speed **41 km/h {25 mph} or more** for **0.7 s or more**. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0720[FN4A-EL]

id0502a1809800

DTC P0720	Vehicle speed sensor (VSS) circuit malfunction
DETECTION CONDITION	• Vehicle speed signal is not input after the following conditions are met and **4.5 s or more** have passed: — D range switch ON — Engine coolant temperature **60 °C {140 °F} or more** — Turbine speed **1,500 rpm or more** **Diagnostic support note:** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • AT warning light illuminates. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• VSS malfunction • Open circuit between VSS terminal B and PCM terminal 1AW*1/1J*2 • Short to ground between VSS terminal B and PCM terminal 1AW*1/1J*2 • Open circuit between VSS terminal A and main relay • Open circuit between VSS terminal C and body ground • Damaged connectors between VSS and PCM • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair Information available?	Yes	Perform repair or diagnosis according to the available repair information. • If vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT VSS CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the VSS connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the pin or connector, then go to Step 11.
4	**INSPECT VSS POWER CIRCUIT FOR OPEN CIRCUIT** • Verify that VSS connector is disconnected. • Turn ignition switch to ON (engine off). • Inspect the voltage between VSS terminal A (harness-side) and ground. • Is voltage reading **B+**?	Yes	Go to the next step.
		No	Repair or replace the harness, then go to Step 11.
5	**INSPECT VSS GROUND CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch to the LOCK position. • Verify that VSS connector is disconnected. • Inspect for continuity between VSS terminal C (harness-side) and ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the harness, then go to Step 11.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the pin or connector, then go to Step 11.
7	**INSPECT VEHICLE SPEED SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Disconnect the PCM connector and VSS connector. • Inspect for continuity between VSS terminal B and PCM terminal 1AW*1/1J*2. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the harness, then go to Step 11.
8	**INSPECT VEHICLE SPEED SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that VSS connector and PCM connector are disconnected. • Inspect for continuity between PCM harness side connector and body ground. • Is there continuity?	Yes	Repair or replace the harness, then go to Step 11.
		No	Go to the next step.
9	**INSPECT VEHICLE SPEEDOMETER SENSOR** • Inspect VSS. (See 05-17A-21 VEHICLE SPEED SENSOR (VSS) INSPECTION[FN4A-EL].) • Is VSS normal?	Yes	Go to the next step.
		No	Repair or replace the VSS, then go to Step 11.
10	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the pin or connector, then go to Step 11.

STEP	INSPECTION		ACTION
11	**VERIFY TROUBLESHOOTING OF DTC P0720 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from memory using M-MDS. • Warm up engine. • Drive vehicle under following conditions for **4.5 s or more** while monitoring PIDs. — Engine coolant temp: **60 °C {140 °F} or more** — Drive in M range — Frequency of input/turbine speed sensor: **800 Hz or more** • Is the PENDING CODE present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0731[FN4A-EL]

id0502a1801900

DTC P0731	Gear 1 incorrect (incorrect gear ratio detected)
DETECTION CONDITION	• The PCM monitors the revolution ratio of the forward clutch drum revolution to differential gear case revolution when the following monitoring conditions are met. If the revolution ratio is **2.157 or less**, the PCM determines that there is a malfunction. **Monitoring condition:** — ATF temperature **20 °C {68 °F} or more** — Driving in 1GR in D or M range — Engine running — Turbine speed **within 225—4,987 rpm** — Accelerator opening angle **3.07% or more** — Differential gear case (output) revolution speed **35 rpm or more**. — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate. • The AT warning light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is not available. • A PENDING CODE is not available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid A stuck • Pressure control solenoid stuck • Line pressure low • One-way clutch slipping • Forward clutch slipping • Control valve stuck • Oil pump malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information.
		No	Go to the next step.
2	**INSPECT ATF CONDITION** • Inspect the ATF condition. (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Replace the transaxle, then go to Step 8.
3	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 8.
4	**INSPECT SHIFT SOLENOID A** • Perform operation inspection. (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].) • Verify the click sound of shift solenoid A when applying B+ to transaxle terminal A. • Was a click heard from solenoid?	Yes	Go to the next step.
		No	Replace the solenoid that you could not hear a click sound, then go to Step 8. (See 05-17A-27 SOLENOID VALVE REMOVAL/ INSTALLATION[FN4A-EL].)

STEP	INSPECTION		ACTION
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	All ranges: Replace the oil pump, then go to Step 8. Any ranges: Replace the control valve body, then go to Step 8. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].)
6	**INSPECT STALL SPEED** • Measure the stall speed in D range. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) • Is the stall speed within the specification?	Yes	Go to the next step.
		No	Replace the automatic transaxle, then go to Step 8. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].)
7	**INSPECT FREQUENCY OF INPUT/TURBINE SPEED SENSOR WHEN DRIVING VEHICLE** • Turn the ignition switch to the LOCK position. • Connect the M-MDS. • Start the engine. • Measure the frequency of input/turbine speed sensor while driving vehicle under the following conditions: — Vehicle speed (VSS PID): **20 km/h {12 mph}** — Drive in the D range, 1GR — Accelerator opening angle (APP PID): **approx. 25%** • Was the frequency of the input/turbine speed sensor at **approx. 1,100 Hz**?	Yes	Go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].)
8	**VERIFY REPAIR OF DTC P0731** • Make sure to reconnect all the disconnected connectors. • Clear the DTC using the M-MDS. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions at least 4 times for **more than 1 s**: — ATF temperature: **20 °C {68 °F} or more** — Drive in the D range, 1GR — Accelerator opening angle (APP PID): **3.07% or more** — Vehicle speed (VSS PID): **4 km/h {3 mph} or more** • Are any DTCs present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0732[FN4A-EL]

id0502a1802000

DTC P0732	Gear 2 incorrect (incorrect gear ratio detected)
DETECTION CONDITION	• The PCM monitors revolution ratio of forward clutch drum revolution to differential gear case revolution when the following monitoring conditions are met. If revolution ratio is **1.249 or less** or **2.157 or more**, the PCM determines that there is a malfunction. **Monitoring condition:** — ATF temperature **20 °C {68 °F} or more** — Driving in 2 GR in D or M range — Engine running — Turbine speed **within 225—4,987 rpm** — Differential gear case (output) revolution speed **35 rpm or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate. • The AT warning light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is not available. • A PENDING CODE is not available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoids A, B or C stuck • Pressure control solenoid stuck • Line pressure low • 2-4 brake band slipping • Forward clutch slipping • Control valve stuck • Oil pump malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information.
		No	Go to the next step.
2	**INSPECT ATF CONDITION** • Inspect the ATF condition. (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Replace the transaxle, then go to Step 8.
3	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 8.
4	**INSPECTION SHIFT SOLENOID A, B AND C FOR CLICK SOUND** • Perform operation inspection. (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].) • Verify the click sound of shift solenoid A, B, and C when applying B+ to each transaxle terminal. • Was a click heard from solenoids?	Yes	Go to the next step.
		No	Replace the solenoid where you could not hear a click sound, then go to Step 8. (See 05-17A-27 SOLENOID VALVE REMOVAL/ INSTALLATION[FN4A-EL].)

STEP	INSPECTION		ACTION
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	All ranges: Replace the oil pump, then go to Step 8. Any ranges: Replace the control valve body, then go to Step 8. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].)
6	**INSPECT STALL SPEED** • Measure the stall speed in D range. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) • Is the stall speed within the specification?	Yes	Go to the next step.
		No	Replace the automatic transaxle, then go to Step 8. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].)
7	**INSPECT FREQUENCY OF INPUT/TURBINE SPEED SENSOR WHEN DRIVING VEHICLE** • Turn the ignition switch to the LOCK position. • Connect the M-MDS. • Start the engine. • Measure the frequency of input/turbine speed sensor while driving vehicle under the following conditions: — Vehicle speed (VSS PID): **40 km/h {24 mph}** — Drive in the D range, 2GR — Accelerator opening angle (APP PID): **approx. 25%** • Was the frequency of the input/turbine speed sensor at **approx. 1,156 Hz**?	Yes	Go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].)
8	**VERIFY REPAIR OF DTC P0732** • Make sure to reconnect all the disconnected connectors. • Clear the DTC using the M-MDS. • Start the engine. • Warm up the transaxle. • Drive the vehicle under the following conditions at least 4 times for **more than 1 s**: — ATF temperature: **20 °C {68 °F} or more** — Drive in the D range, 2GR — Vehicle speed (VSS PID): **3.8 km/h {2.4 mph} or more** • Are any DTCs present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0733[FN4A-EL]

id0502a1802100

DTC P0733	Gear 3 incorrect (incorrect gear ratio detected)
DETECTION CONDITION	• The PCM monitors revolution ratio of forward clutch drum revolution to differential gear case revolution when the following monitoring conditions are met. If the revolution ratio is **2.157 or more**, the PCM determines that there is a malfunction. **Monitoring condition:** — ATF temperature **20 °C {68 °F} or more** — Driving in 3 GR in D or M range — Engine running — Turbine speed **within 225—4,987 rpm** — Differential gear case (output) revolution speed **35 rpm or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773 • The PCM monitors revolution ratio of forward clutch drum revolution to differential gear case revolution when the following monitoring conditions are met. If the revolution ratio is **0.863 or less**, the PCM determines that there is a malfunction. **Monitoring condition:** — ATF temperature **20 °C {68 °F} or more** — Driving in 3 GR in D or M range — Engine running — Turbine speed **within 225—4,987 rpm** — Torque converter clutch (TCC) no operating — Differential gear case (output) revolution speed **35 rpm or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773 • The PCM monitors revolution ratio of forward clutch drum revolution to differential gear case revolution when the following monitoring conditions are met. If the revolution ratio is **within 1.345—1.644**, the PCM determines that there is a malfunction. **Monitoring condition:** — ATF temperature **20 °C {68 °F} or more** — Driving in 3 GR in D or M range — Engine running — Turbine speed **within 225—4,987 rpm** — Vehicle speed **23 km/h {14.3 mph} or more** — Torque converter clutch (TCC) no operating — Differential gear case (output) revolution speed **35 rpm or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate. • The AT warning light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is not available. • A PENDING CODE is not available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoids A or C stuck • Pressure control solenoid stuck • Line pressure low • 3-4 clutch slipping • Forward clutch slipping • Control valve stuck (Bypass, TCC or 3-4 shift valve) • Oil pump malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information.
		No	Go to the next step.

STEP	INSPECTION		ACTION
2	**INSPECT ATF CONDITION** • Inspect the ATF condition. (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Replace the transaxle, then go to Step 8.
3	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 8.
4	**INSPECTION SHIFT SOLENOID A AND C FOR CLICK SOUND** • Perform operation inspection. (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].) • Verify the click sound of shift solenoid A and C when applying B+ to each transaxle terminal. • Was a click heard from solenoids?	Yes	Go to the next step.
		No	Replace the solenoid where you could not hear a click sound, then go to Step 8. (See 05-17A-27 SOLENOID VALVE REMOVAL/INSTALLATION[FN4A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	All ranges: Replace the oil pump, then go to Step 8. Any ranges: Replace the control valve body, then go to Step 8. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].)
6	**INSPECT STALL SPEED** • Measure the stall speed in D range. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) • Is the stall speed within the specification?	Yes	Go to the next step.
		No	Replace the automatic transaxle, then go to Step 8. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].)
7	**INSPECT FREQUENCY OF INPUT/TURBINE SPEED SENSOR WHEN DRIVING VEHICLE** • Turn the ignition switch to the LOCK position. • Connect the M-MDS. • Start the engine. • Measure the frequency of input/turbine speed sensor while driving vehicle under the following conditions: — Vehicle speed (VSS PID): **60 km/h {37 mph}** — Drive in the D range, 3GR — Accelerator opening angle (APP PID): **approx. 25%** • Was the frequency of the input/turbine speed sensor at **approx. 1,200 Hz**?	Yes	Go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].)
8	**VERIFY REPAIR OF DTC P0733** • Make sure to reconnect all the disconnected connectors. • Clear the DTC using the M-MDS. • Start the engine. • Warm up the transaxle. • Drive the vehicle under the following conditions for **more than 2 s**: — ATF temperature: **20 °C {68 °F} or more** — Drive in the D range, 3GR — Vehicle speed (VSS PID): **23 km/h {14.3 mph} or more** • Are any DTCs present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0734[FN4A-EL]

id0502a1802200

DTC P0734	Gear 4 incorrect (incorrect gear ratio detected)
DETECTION CONDITION	• The PCM monitors revolution ratio of the forward clutch drum revolution to the differential gear case revolution when the following monitoring conditions are met. If the revolution ratio is **0.6 or less** or **1.249 or more**, the PCM determines that there is a malfunction. **Monitoring condition:** — ATF temperature **20 °C {68 °F} or more** — Driving in 4 GR in D or M range — Engine running — Turbine speed **within 225—4,987 rpm** — Vehicle speed **36 km/h {23 mph} or more** — Closed accelerator position — Differential gear case (output) revolution speed **35 rpm or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773 • The PCM monitors revolution ratio of the forward clutch drum revolution to the differential gear case revolution when the following monitoring conditions are met. If the revolution ratio is **within 0.91—1.09**, the PCM determines that there is a malfunction. **Monitoring condition:** — ATF temperature **20 °C {68 °F} or more** — Driving in 4 GR in D or M range — Engine running — Turbine speed **within 225—4,987 rpm** — Vehicle speed **46 km/h {29 mph} or more** — Torque converter clutch (TCC) no operating — Differential gear case (output) revolution speed **35 rpm or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate. • The AT warning light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is not available. • A PENDING CODE is not available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoids A, B or C stuck • Pressure control solenoid stuck • Line pressure low • 2-4 brake band slipping • 3-4 clutch slipping • Forward clutch slipping • Control valve stuck (Bypass or 3-4 shift valve) • Oil pump malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information.
		No	Go to the next step.
2	**INSPECT ATF CONDITION** • Inspect the ATF condition. (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Replace the transaxle, then go to Step 8.

STEP	INSPECTION		ACTION
3	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 8.
4	**INSPECT SHIFT SOLENOID A AND D FOR CLICK SOUND** • Perform operation inspection. (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].) • Verify the click sound of shift solenoids A and D when applying B+ to each transaxle terminal. **Note** • The click from solenoid D is barely audible. Remove solenoids to correctly inspect if necessary. • Was a click heard from solenoids?	Yes	Go to the next step.
		No	Replace the solenoid where you could not hear click sound, then go to Step 8. (See 05-17A-27 SOLENOID VALVE REMOVAL/INSTALLATION[FN4A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	All ranges: Replace the oil pump, then go to Step 8. Any ranges: Replace the control valve body, then go to Step 8. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].)
6	**INSPECT STALL SPEED** • Measure the stall speed in D range. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) • Is the stall speed within the specification?	Yes	Go to the next step.
		No	Replace the automatic transaxle, then go to Step 8. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].)
7	**INSPECT FREQUENCY OF INPUT/TURBINE SPEED SENSOR WHEN DRIVING VEHICLE** • Turn the ignition switch to the LOCK position. • Connect the M-MDS. • Start the engine. • Measure the frequency of input/turbine speed sensor while driving vehicle under the following conditions: — Vehicle speed (VSS PID): **80 km/h {49 mph}** — Drive in the D range, 4GR — Accelerator opening angle (APP PID): **approx. 25%** • Was the frequency of the input/turbine speed sensor at **approx. 1,200 Hz**?	Yes	Go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].)
8	**VERIFY REPAIR OF DTC P0734** • Make sure to reconnect all the disconnected connectors. • Clear the DTC using the M-MDS. • Start the engine. • Warm up the transaxle. • Drive the vehicle under the following conditions for **more than 1 s**: — ATF temperature: **20 °C {68 °F} or more** — Drive in the D range, 4GR — Accelerator opening angle (APP PID): **0%** — Vehicle speed (VSS PID): **46 km/h {29 mph} or more** • Are any DTCs present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0741[FN4A-EL]

id0502a1807900

DTC P0741	Torque converter clutch (TCC) stuck off
DETECTION CONDITION	• When all conditions below are satisfied. — ATF temperature **20 °C {68 °F} or more** — Driving in 4GR at D or M range — Engine running — Turbine speed **within 225—4,987 rpm** — Vehicle speed **within 60—100 km/h {37—62 mph}** — Torque converter clutch (TCC) operating — Shift solenoid A duty value exceeds **99%** — Difference between engine speed and turbine speed **more than 100 rpm** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate if PCM detects the above malfunction conditions during first the drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is not available. • The AT warning light illuminates • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoids A, B, C, D, E, and pressure control solenoid stuck • Line pressure low • 2-4 brake band slipping • 3-4 clutch slipping • Control valve stuck. • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 4. (See 05-17A-9 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FN4A-EL].)
3	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 6. (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)

STEP	INSPECTION		ACTION
4	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 6. • Any ranges: Replace the ATX, then go to Step 6. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
5	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the control valve body. • Disassemble the control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)	Yes	Replace the ATX, then go to the next step (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
6	**VERIFY TROUBLESHOOTING OF DTC P0741 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up engine and ATX. • Drive the vehicle under the following conditions for **10 s or more**. — ATF temperature: **20 °C {68 °F} or more** — Drive in the D range, 4GR (TCC operation) — Vehicle speed (VSS PID): **within 60—100 km/h {37—62 mph}** • Are any DTCs present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0742[FN4A-EL]

id0502a1808000

DTC P0742	Torque converter clutch (TCC) stuck on
DETECTION CONDITION	• All of the following conditions are satisfied under each of the following accelerator conditions. — ATF temperature **20 °C {68 °F} or more** — Driving in 4GR at D or M range — Engine running — Turbine speed **within 225—4,987 rpm** — Vehicle speed **less than 70 km/h {43 mph}** — Torque converter clutch (TCC) no operating — Difference between engine speed and turbine speed **less than 50 rpm** — DTC P0734 not output — Accelerator conditions • Accelerator opening angle (APP PID) is **more than 6.25%** and **5 s or more** have passed. • Accelerator opening angle (APP PID) is **within 3.13—6.25%** and **3 s or more** have passed. • Accelerator opening angle is at closed accelerator position and **5 s or more** have passed. **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate if PCM detects the above malfunction conditions during first the drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is not available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoids A, B, C, D, E, and pressure control solenoid stuck • Line pressure low • 2-4 brake band slipping • 3-4 clutch slipping • Control valve stuck • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 4. (See 05-17A-9 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FN4A-EL].)
3	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 6. (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)
4	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 6. • Any ranges: Replace the ATX, then go to Step 6. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)

STEP	INSPECTION		ACTION
5	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the control valve body. • Disassemble the control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)	Yes	Replace the ATX, then go to the next step. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
6	**VERIFY TROUBLESHOOTING OF DTC P0742 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up engine and ATX. • Drive the vehicle under the following conditions: — ATF temperature: **20 °C {68 °F} or more** — Drive in the D range, 4GR (TCC not in operation) — Vehicle speed: **less than 70 km/h {43 mph}**. — Accelerator conditions • Accelerator opening angle (APP PID) **more than 6.25%** and **5 s or more** have passed. • Accelerator opening angle (APP PID) **within 3.13—6.25%** and **3 s or more** have passed. • Accelerator opening angle at closed accelerator position and **5 s or more** have passed. • Are any DTCs present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0745[FN4A-EL]

id0502a1806600

DTC P0745	Pressure control solenoid malfunction
DETECTION CONDITION	• If the PCM detects either of the following conditions, the PCM determines that pressure control solenoid circuit has a malfunction. — Pressure control solenoid voltage stuck **0 V** after engine start — Pressure control solenoid voltage stuck **B+** after engine start **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate if PCM detects above malfunction conditions during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is not available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Pressure control solenoid malfunction • Open circuit in wiring harness between pressure control solenoid terminal B and ATX terminal I • Open circuit in wiring harness between ATX terminal I and PCM terminal 1N*1/1H*2 • Short to ground in wiring harness between ATX terminal D and PCM terminal 1M*1/1G*2 • Short to power supply in wiring harness between ATX terminal D and PCM terminal 1M*1/1G*2 • Open circuit in wiring harness between pressure control solenoid terminal A and ATX terminal D • Open circuit in wiring harness between ATX terminal D and PCM terminal 1M*1/1G*2 • Damaged connector between pressure control solenoid and PCM • PCM malfunction

*2 : Except for California emission regulation applicable mode

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT ATX CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the ATX connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 10.
3	**INSPECT RESISTANCE** • Inspect the resistance between ATX terminals D and I (transaxle case side). • Is the resistance **within 2.4—7.3 ohms**? (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].)	Yes	Go to Step 6.
		No	Go to the next step.
4	**INSPECT PRESSURE CONTROL SOLENOID CONNECTOR FOR POOR CONNECTION** • Disconnect the pressure control solenoid connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 10.
5	**INSPECT RESISTANCE** • Inspect the resistance between the pressure control solenoid terminals A and B. • Is the resistance **within 2.4—7.3 ohms**? (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].)	Yes	Replace the solenoid wiring harness, then go to Step 10.
		No	Verify pressure control solenoid installation. • If solenoid installed correctly, replace the pressure control solenoid, then go to Step 10. (See 05-17A-27 SOLENOID VALVE REMOVAL/ INSTALLATION[FN4A-EL].)
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 10.
7	**INSPECT ATX CONNECTOR CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between the PCM (wiring harness-side) and ATX connector (wiring harness-side). — PCM terminal 1M*1/1G*2 and ATX terminal D — PCM terminal 1N*1/1H*2 and ATX terminal I • Is there continuity between terminals?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, the go to Step 10.
8	**INSPECT ATX CONNECTOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (engine off). • Inspect the voltage at ATX terminal D (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 10.
9	**INSPECT PCM CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between ATX terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
10	**VERIFY TROUBLESHOOTING OF DTC P0745 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Make sure to wait **more than 1 s** after turning the ignition switch to the ON position. • Are any DTCs present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0751[FN4A-EL]

id0502a1808100

DTC P0751	Shift solenoid A stuck off
DETECTION CONDITION	• When P0731, P0732, and P0733 are not output, and all conditions below are satisfied. — ATF temperature **20 °C {68 °F} or more** — Driving in 4GR at D range — Engine running — Turbine speed **within 225— 4,987 rpm** — Vehicle speed **46 km/h {29 mph} or more** — Differential gear case (output) revolution speed **35 rpm or more** — Torque converter clutch (TCC) not operating — Revolution ratio of forward clutch drum revolution to differential gear case revolution **within 0.91—1.09** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0767, P0768, P0771, P0772, P0773 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • The PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid A stuck • Control valve stuck • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05-17A-9 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FN4A-EL].)

STEP	INSPECTION		ACTION
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the ATX, then go to Step 7. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the control valve body. • Disassemble the control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)	Yes	Replace the ATX, then go to the next step. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
7	**VERIFY TROUBLESHOOTING OF DTC P0751 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 4GR. — ATF temperature: **20 °C {68 °F} or more** — Drive in the D range • Is the PENDING CODE present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0752[FN4A-EL]

id0502a1808200

DTC P0752	Shift solenoid A stuck on
DETECTION CONDITION	• When P0734 is not output, and all conditions below are satisfied in 1GR and 2GR. — ATF temperature **20 °C {68 °F} or more** — Engine running — D range selected — Brake pedal depressed — Accelerator opening angle at closed accelerator position — Vehicle speed **0 km/h {0 mph}** — Input/turbine speed sensor signal **187.5 rpm or more**. — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0767, P0768, P0771, P0772, P0773 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • The PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid A stuck • Control valve stuck • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05-17A-9 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FN4A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the ATX, then go to Step 7. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)

STEP	INSPECTION		ACTION
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the control valve body. • Disassemble the control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)	Yes	Replace the ATX, then go to the next step. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
7	**VERIFY TROUBLESHOOTING OF DTC P0752 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 4GR: — ATF temperature: **20 °C {68 °F} or more** — Drive in the D range • Is the PENDING CODE present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0753[FN4A-EL]

id0502a1808300

DTC P0753	Shift solenoid A malfunction (electrical)
DETECTION CONDITION	• If PCM detects either of the following conditions, PCM determines that shift solenoid A circuit has a malfunction. — Shift solenoid A voltage stuck at **B+** after engine start — Shift solenoid A voltage stuck at **0 V** after engine start **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction conditions during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Shift solenoid A malfunction • Short to ground in wiring harness between ATX terminal A and PCM terminal 1A*1/1B*2 • Short to power supply in wiring harness between ATX terminal A and PCM terminal 1A*1/1B*2 • Open circuit in wiring harness between shift solenoid A terminal B and ATX terminal A • Open circuit in wiring harness between ATX terminal A and PCM terminal 1A*1/1B*2 • Open circuit in wiring harness between shift solenoid A terminal A and body ground • Damaged connector between shift solenoid A and PCM • PCM malfunction

*1 : California emission regulation applicable mode
*2 : Except for California emission regulation applicable mode

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATX CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the ATX connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
4	**INSPECT RESISTANCE** • Inspect the resistance between ATX terminal A (transaxle case side) and body ground. • Is the resistance **within 1.0—4.2 ohms**? (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].)	Yes	Go to Step 7.
		No	Go to the next step.
5	**INSPECT SHIFT SOLENOID A CONNECTOR FOR POOR CONNECTION** • Disconnect the shift solenoid A connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
6	**INSPECT RESISTANCE** • Inspect the resistance between shift solenoid A terminals A and B (part-side). • Is the resistance **within 1.0—4.2 ohms**? (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].)	Yes	Replace the solenoid wiring harness, then go to Step 11.
		No	Verify shift solenoid A installation. • If solenoid installed correctly, replace the solenoid, then go to Step 11. (See 05-17A-27 SOLENOID VALVE REMOVAL/ INSTALLATION[FN4A-EL].)
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
8	**INSPECT ATX CONNECTOR CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between PCM terminal 1A*1/1B*2 (wiring harness-side) and ATX terminal A (wiring harness-side). • Is there continuity between terminals?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
9	**INSPECT ATX CONNECTOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (engine off). • Inspect the voltage at ATX terminal A (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
10	**INSPECT PCM CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between PCM terminal 1A*1/1B*2 (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 11.
		No	Go to the next step.

STEP	INSPECTION		ACTION
11	**VERIFY TROUBLESHOOTING OF DTC P0753 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle in D range and make sure that the gears shift smoothly from 1GR to 4GR. • Are any DTCs present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0756[FN4A-EL]

id0502a1808400

DTC P0756	Shift solenoid B stuck off
DETECTION CONDITION	• When DTC P0732, P0733, and P0734 are not output, and all conditions below are satisfied. — ATF temperature **20 °C {68 °F} or more** — Driving in 1GR at D range — Engine running — Turbine speed **within 225—4,987 rpm** — Differential gear case (output) revolution speed **35 rpm or more** — Accelerator opening angle (APP PID) **3.07% or more** — Revolution ratio of forward clutch drum revolution to differential gear case revolution **2.157 or less** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0767, P0768, P0771, P0772, P0773 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • The PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid B stuck • Control valve stuck • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05-17A-9 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FN4A-EL].)

STEP	INSPECTION		ACTION
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the ATX, then go to Step 7. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the control valve body. • Disassemble the control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)	Yes	Replace the ATX, then go to the next step. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
7	**VERIFY TROUBLESHOOTING OF DTC P0756 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 4GR: — ATF temperature: **20 °C {68 °F} or more** — Drive in the D range — Engine speed (RPM PID): **300 rpm or more** — Accelerator opening angle (APP PID): **3.07% or more** • Is the PENDING CODE present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0757[FN4A-EL]

id0502a1808500

DTC P0757	Shift solenoid B stuck on
DETECTION CONDITION	• When DTC P0731 and P0733 are not output, and both the following conditions are satisfied. — When all conditions below are satisfied while driving in 2GR • ATF temperature **20 °C {68 °F} or more** • Driving in D or M range • Engine running • Turbine speed **within 225—4,987 rpm** • Differential gear case (output) revolution speed **35 rpm or more** • Revolution ratio of forward clutch drum revolution to differential gear case revolution **1.249 or less** or **2.157 or more** • None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0767, P0768, P0771, P0772, P0773 — When all conditions below are satisfied with driving in 4GR • ATF temperature **20 °C {68 °F} or more** • Driving in D or M range • Engine running • Turbine speed **within 225—4,987 rpm** • Differential gear case (output) revolution speed **35 rpm or more** • Vehicle speed **36 km/h {22 mph}** • Accelerator opening angle at closed accelerator position • Revolution ratio of forward clutch drum revolution to differential gear case revolution **0.6 or less** or **1.249 or more** • None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0767, P0768, P0771, P0772, P0773 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • The PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid B stuck • Control valve stuck • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05-17A-9 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FN4A-EL].)

STEP	INSPECTION		ACTION
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the ATX, then go to Step 7. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the control valve body. • Disassemble the control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)	Yes	Replace the ATX, then go to the next step. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
7	**VERIFY TROUBLESHOOTING OF DTC P0757 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions make sure that gears shift smoothly from 1GR to 4GR. — ATF temperature: **20 °C {68 °F} or more** — Drive in the D range — Engine speed (RPM PID): **300 rpm or more** — Accelerator opening angle (APP PID): **0%** (4GR only) — Vehicle speed (VSS PID): **36 km/h {22 mph} or more** (4GR only) • Is the PENDING CODE present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

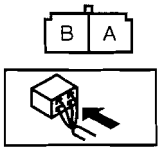
DTC P0758[FN4A-EL]

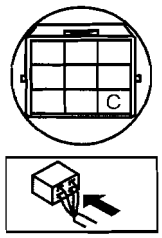
id0502a1808600

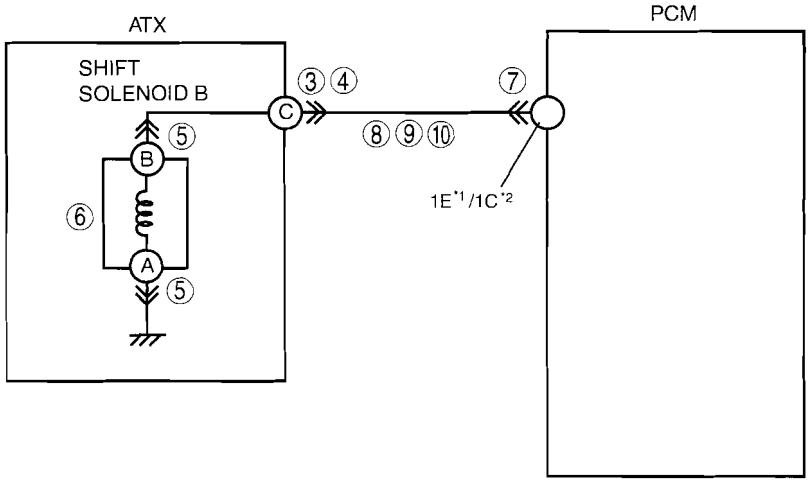
DTC P0758	Shift solenoid B malfunction (electrical)
DETECTION CONDITION	• If the PCM detects either of the following conditions, the PCM determines that shift solenoid B circuit has a malfunction. — Shift solenoid B voltage stuck at **B+** after engine start — Shift solenoid B voltage stuck at **0 V** after engine start **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction conditions during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Shift solenoid B malfunction • Short to ground in wiring harness between ATX terminal C and PCM terminal 1E*1/1C*2 • Short to power supply in wiring harness between ATX terminal C and PCM terminal 1E*1/1C*2 • Open circuit in wiring harness between shift solenoid B terminal B and ATX terminal C • Open circuit in wiring harness between ATX terminal C and PCM terminal 1E*1/1C*2 • Open circuit in wiring harness between shift solenoid B terminal A and body ground • Damaged connector between shift solenoid B and PCM • PCM malfunction

SHIFT SOLENOID B WIRING HARNESS-SIDE CONNECTOR



TRANSAXLE CONNECTOR WIRING HARNESS-SIDE CONNECTOR





PCM WIRING HARNESS-SIDE CONNECTOR

*1 : California emission regulation applicable mode
*2 : Except for California emission regulation applicable mode

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATX CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the ATX connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
4	**INSPECT RESISTANCE** • Inspect the resistance between ATX terminal C (transaxle case side) and body ground. • Is the resistance **within 1.0—4.2 ohms**? (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].)	Yes	Go to Step 7.
		No	Go to the next step.
5	**INSPECT SHIFT SOLENOID B CONNECTOR FOR POOR CONNECTION** • Disconnect the shift solenoid B connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
6	**INSPECT RESISTANCE** • Inspect the resistance between shift solenoid B terminals A and B (part-side). • Is the resistance **within 1.0—4.2 ohms**? (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].)	Yes	Replace the solenoid wiring harness, then go to Step 11.
		No	Verify shift solenoid B installation. • If solenoid installed correctly, replace the solenoid, then go to Step 11. (See 05-17A-27 SOLENOID VALVE REMOVAL/ INSTALLATION[FN4A-EL].)
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
8	**INSPECT ATX CONNECTOR CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between PCM terminal 1E*1/1C*2 (wiring harness-side) and ATX terminal C (wiring harness-side). • Is there continuity between terminals?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
9	**INSPECT ATX CONNECTOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (engine off). • Inspect for voltage at ATX terminal C (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
10	**INSPECT PCM CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between PCM terminal 1E*1/1C*2 (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 11.
		No	Go to the next step.

STEP	INSPECTION		ACTION
11	**VERIFY TROUBLESHOOTING OF DTC P0758 SHIFT SOLENOID B COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle in D range and make sure that the gears shift smoothly from 1GR to 4GR. • Are any DTCs present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0761[FN4A-EL]

id0502a1808700

DTC P0761	Shift solenoid C stuck off
DETECTION CONDITION	• When DTC P0733 and P0734 are not output, and both the following conditions are satisfied. — When all conditions below are satisfied while driving in 1GR • ATF temperature **20 °C {68 °F} or more** • Driving in D or M range • Engine running • Turbine speed **within 225—4,987 rpm** • Accelerator opening angle (APP PID) **3.07% or more** • Differential gear case (output) revolution speed **35 rpm or more** • Revolution ratio of forward clutch drum revolution to differential gear case revolution **2.157 or less** • None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0767, P0768, P0771, P0772, P0773 — When all conditions below are satisfied while driving in 2GR • ATF temperature **20 °C {68 °F} or more** • Driving in D or M range • Engine running • Turbine speed **within 225—4,987 rpm** • Differential gear case (output) revolution speed **35 rpm or more** • Revolution ratio of forward clutch drum revolution to differential gear case revolution **1.249 or less** or **2.157or more** • None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0767, P0768, P0771, P0772, P0773 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • The PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid C stuck • Control valve stuck • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.

STEP	INSPECTION		ACTION
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05-17A-9 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FN4A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the ATX, then go to Step 7. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the control valve body. • Disassemble the control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)	Yes	Replace the ATX, then go to the next step. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
7	**VERIFY TROUBLESHOOTING OF DTC P0761 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that the gears shift smoothly from 1GR to 4GR. — ATF temperature: **20 °C {68 °F} or more** — Drive in the D range — Accelerator opening angle (APP PID): **3.07% or more** • Is the PENDING CODE present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0762[FN4A-EL]

id0502a1808800

DTC P0762	Shift solenoid C stuck on
DETECTION CONDITION	• When DTC P0731 and P0732 are not output, and both the following conditions are satisfied. — When all conditions below are satisfied while driving in 3GR. • ATF temperature **20 °C {68 °F} or more**. • Driving in D range • Engine running • Turbine speed **within 225—4,987 rpm** • Vehicle speed **23 km/h {14.3 mph} or more** • Torque converter clutch (TCC) no operating • Differential gear case (output) revolution speed **35 rpm or more** • Revolution ratio of forward clutch drum revolution to differential gear case revolution **within 1.345—1.644** • None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0767, P0768, P0771, P0772, P0773 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • The PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid C and pressure control solenoid stuck • Control valve stuck • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05-17A-9 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FN4A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the ATX, then go to Step 7. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)

STEP	INSPECTION		ACTION
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the control valve body. • Disassemble the control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)	Yes	Replace the ATX, then go to the next step. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
7	**VERIFY TROUBLESHOOTING OF DTC P0762 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 4GR: — ATF temperature: **20 °C {68 °F} or more** — Drive in the D range — Vehicle speed (VSS PID): **23 km/h {14.3 mph} or more** • Is the PENDING CODE present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0763[FN4A-EL]

id0502a1808900

DTC P0763	Shift solenoid C malfunction (electrical)
DETECTION CONDITION	• If the PCM detects either of the following conditions, the PCM determines that shift solenoid C circuit has a malfunction. — Shift solenoid C voltage stuck at **B+** after engine start — Shift solenoid C voltage stuck at **0 V** after engine start **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction conditions during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Shift solenoid C malfunction • Short to ground in wiring harness between ATX terminal G and PCM terminal 1F*1/1D*2 • Short to power supply in wiring harness between ATX terminal G and PCM terminal 1F*1/1D*2 • Open circuit in wiring harness between shift solenoid C terminal B and ATX terminal G • Open circuit in wiring harness between ATX terminal G and PCM terminal 1F*1/1D*2 • Open circuit in wiring harness between shift solenoid C terminal A and body ground • Damaged connector between shift solenoid C and PCM • PCM malfunction

*1 : California emission regulation applicable mode
*2 : Except for California emission regulation applicable mode

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT ATX CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the ATX connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
4	**INSPECT RESISTANCE** • Inspect the resistance between ATX terminal G (transaxle case side) and body ground. • Is the resistance **within 1.0—4.2 ohms**? (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].)	Yes	Go to Step 7.
		No	Go to the next step.
5	**INSPECT SHIFT SOLENOID C CONNECTOR FOR POOR CONNECTION** • Disconnect the shift solenoid C connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
6	**INSPECT RESISTANCE** • Inspect the resistance between shift solenoid C terminals A and B (part-side). • Is the resistance **within 1.0—4.2 ohms**? (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].)	Yes	Replace the solenoid wiring harness, then go to Step 11.
		No	Verify shift solenoid C installation. • If solenoid installed correctly, replace the solenoid, then go to Step 11. (See 05-17A-27 SOLENOID VALVE REMOVAL/ INSTALLATION[FN4A-EL].)
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
8	**INSPECT ATX CONNECTOR CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between PCM terminal 1F*1/1D*2 (wiring harness-side) and ATX terminal G (wiring harness-side). • Is there continuity between terminals?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
9	**INSPECT ATX CONNECTOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (engine off). • Inspect the voltage at ATX terminal G (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
10	**INSPECT PCM CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between PCM terminal 1F*1/1D*2 (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 11.
		No	Go to the next step.
11	**VERIFY TROUBLESHOOTING OF DTC P0763 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 4GR. • Are any DTCs present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0766[FN4A-EL]

id0502a1809000

DTC P0766	Shift solenoid D stuck off
DETECTION CONDITION	• When any of DTC P0732, and P0733 not output (correct judgment), and all conditions below are satisfied. — When all conditions below are satisfied while driving in 1GR • ATF temperature **20 °C {68 °F} or more** • Driving in M range • Engine running • Turbine speed **within 225—4,987 rpm** • Accelerator opening angle (APP PID) **3.07% or more** • Differential gear case (output) revolution speed **35 rpm or more** • Revolution ratio of forward clutch drum revolution to differential gear case revolution **2.157 or less** • None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0767, P0768, P0771, P0772, P0773 — When all conditions below are satisfied while driving in 4GR • ATF temperature **20 °C {68 °F} or more** • Driving in D or M range • Engine running • Turbine speed **within 225—4,987 rpm** • Differential gear case (output) revolution speed **35 rpm or more** • Vehicle speed **36 km/h {23 mph} or more** • Accelerator opening angle at closed accelerator position • Revolution ratio of forward clutch drum revolution to differential gear case revolution **0.6 or less** or **1.249 or more** • None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0767, P0768, P0771, P0772, P0773 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • The PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid D stuck • Control valve stuck • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05-17A-9 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FN4A-EL].)

STEP	INSPECTION		ACTION
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the ATX, then go to Step 7. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the control valve body. • Disassemble the control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)	Yes	Replace the ATX, then go to the next step. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
7	**VERIFY TROUBLESHOOTING OF DTC P0766 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 4GR: — ATF temperature: **20 °C {68 °F} or more** — Drive in the M range — Accelerator opening angle (APP PID): **0%** (4GR only) — Vehicle speed (VSS PID): **36 km/h {23 mph} or more** (4GR only) • Is the PENDING CODE present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0767[FN4A-EL]

id0502a1809100

DTC P0767	Shift solenoid D stuck on
DETECTION CONDITION	• When any of DTC P0731, P0732, P0734, and P0741 are not output, and all conditions below are satisfied. — ATF temperature **20 °C {68 °F} or more** — Driving in 3GR at D range — Engine running — Turbine speed **within 225—4,987 rpm** — Differential gear case (output) revolution speed **35 rpm or more** — Revolution ratio of forward clutch drum revolution to differential gear case revolution **0.863 or less** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0767, P0768, P0771, P0772, P0773 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • The PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid D stuck • Control valve stuck • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05-17A-9 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FN4A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the ATX, then go to Step 7. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)

STEP	INSPECTION		ACTION
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the control valve body. • Disassemble the control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)	Yes	Replace the ATX, then go to the next step. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
7	**VERIFY TROUBLESHOOTING OF DTC P0767 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 4GR. — ATF temperature: **20 °C {68 °F} or more** — Drive in the D range, 3GR • Is the PENDING CODE present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0768[FN4A-EL]

id0502a1807000

DTC P0768	Shift solenoid D malfunction (electrical)
DETECTION CONDITION	• If PCM detects either of the following conditions while driving in 4GR at D range, the PCM determines that shift solenoid D circuit has a malfunction. — Shift solenoid D voltage stuck at **B+** after engine start — Shift solenoid D voltage stuck at **0 V** after engine start **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction conditions during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Shift solenoid D malfunction • Short to ground in wiring harness between ATX terminal B and PCM terminal 1AD*1/1E*2 • Short to power supply in wiring harness between ATX terminal B and PCM terminal 1AD*1/1E*2 • Open circuit in wiring harness between shift solenoid D terminal A and ATX terminal B • Open circuit in wiring harness between ATX terminal B and PCM terminal 1AD*1/1E*2 • Damaged connector between shift solenoid D and PCM • PCM malfunction

*1 : California emission regulation applicable mode
*2 : Except for California emission regulation applicable mode

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT ATX CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the ATX connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
4	**INSPECT RESISTANCE** • Inspect the resistance between ATX terminal B (transaxle case side) and body ground. • Is the resistance **within 10.9—26.2 ohms**? (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].)	Yes	Go to Step 7.
		No	Go to the next step.
5	**INSPECT SHIFT SOLENOID D CONNECTOR FOR POOR CONNECTION** • Disconnect the shift solenoid D connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
6	**INSPECT RESISTANCE** • Inspect the resistance between shift solenoid D terminal A (part-side) and body ground. • Is the resistance **within 10.9—26.2 ohms**? (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].)	Yes	Replace the solenoid wiring harness, then go to Step 11.
		No	Verify shift solenoid D installation. • If solenoid installed correctly, replace the solenoid, then go to Step 11. (See 05-17A-27 SOLENOID VALVE REMOVAL/ INSTALLATION[FN4A-EL].)
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
8	**INSPECT ATX CONNECTOR CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between PCM terminal 1AD*1/1E*2 (wiring harness-side) and ATX terminal B (wiring harness-side). • Is there continuity between terminals?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
9	**INSPECT ATX CONNECTOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (engine off). • Inspect the voltage at ATX terminal B (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
10	**INSPECT PCM CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between PCM terminal 1AD*1/1E*2 (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 11.
		No	Go to the next step.
11	**VERIFY TROUBLESHOOTING OF DTC P0768 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 4GR. • Are any DTCs present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	No concern is detected. Go to the next step.

STEP	INSPECTION		ACTION
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0771[FN4A-EL]

id0502a1809200

DTC P0771	Shift solenoid E stuck off
DETECTION CONDITION	• When any of P0732, and P0734 are not output, and all conditions below are satisfied. — When all conditions below are satisfied while driving in 1GR • ATF temperature **20 °C {68 °F} or more** • Driving in M range • Engine running • Turbine speed **within 225—4,987 rpm** • Accelerator opening angle (APP PID) **3.07% or more** • Differential gear case (output) revolution speed **35 rpm or more** • Revolution ratio of forward clutch drum revolution to differential gear case revolution **2.157 or less** • None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0767, P0768, P0771, P0772, P0773 — When all conditions below are satisfied while driving in 4GR • ATF temperature **20 °C {68 °F} or more** • Driving in D range • Engine running • Turbine speed **within 225—4,987 rpm** • Vehicle speed **within 60—100 km/h {37—62 mph}** • Torque converter clutch (TCC) operating • Shift solenoid A duty value exceeds **99%** • Difference between engine speed and turbine speed **more than 100 rpm** • None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0767, P0768, P0771, P0772, P0773 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • The PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid E stuck • Control valve stuck • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05-17A-9 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FN4A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the ATX, then go to Step 7. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the control valve body. • Disassemble the control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)	Yes	Replace the ATX, then go to the next step. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
7	**VERIFY TROUBLESHOOTING OF DTC P0771 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 4GR. — ATF temperature: **20 °C {68 °F} or more** — Drive in the M range — Vehicle speed: **within 60—100 km/h {37—62 mph}** (4GR only). • Is the PENDING CODE present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0772[FN4A-EL]

id0502a1809300

DTC P0772	Shift solenoid E stuck on
DETECTION CONDITION	• When any of DTC P0731, P0733, and P0734 are not output, and all of the following conditions are satisfied under each of the following accelerator conditions. — ATF temperature **20 °C {68 °F} or more** — Driving in 4GR at D range — Engine running — Turbine speed **within 225—4,987 rpm** — Vehicle speed **less than 70 km/h {43 mph}** — Torque converter clutch (TCC) no operating — Difference between engine speed and turbine speed **50 rpm or less** — Accelerator conditions • Accelerator opening angle (APP PID) is **more than 6.25%** and **5 s or more** have passed • Accelerator opening angle (APP PID) is **within 3.13—6.25%** and **3 s or more** have passed • Accelerator opening angle is at closed accelerator position and **5 s or more** have passed **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • The PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid E stuck • Control valve stuck • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05-17A-9 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FN4A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the ATX, then go to Step 7. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)

STEP	INSPECTION		ACTION
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the control valve body. • Disassemble the control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)	Yes	Replace the ATX, then go to the next step. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].) (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
7	**VERIFY TROUBLESHOOTING OF DTC P0772 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 4GR. — ATF temperature: **20 °C {68 °F} or more** — Drive in the D range — Vehicle speed (VSS PID): **less than 70 km/h {43 mph}** (4GR only) • Is the PENDING CODE present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0773[FN4A-EL]

id0502a1809400

DTC P0773	Shift solenoid E malfunction (electrical)
DETECTION CONDITION	• If PCM detects either of the following conditions while driving in 4GR at D range with TCC operating, PCM determines that shift solenoid E circuit has a malfunction. — Shift solenoid E voltage stuck at **B+** after engine start — Shift solenoid E voltage stuck at **0 V** after engine start **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction conditions during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Shift solenoid E malfunction • Short to ground in wiring harness between ATX terminal F and PCM terminal 1Z*1/1F*2 • Short to power supply in wiring harness between ATX terminal F and PCM terminal 1Z*1/1F*2 • Open circuit in wiring harness between shift solenoid E terminal A and ATX terminal F • Open circuit in wiring harness between ATX terminal F and PCM terminal 1Z*1/1F*2 • Damaged connector between shift solenoid E and PCM • PCM malfunction

*1 : California emission regulation applicable mode
*2 : Except for California emission regulation applicable mode

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT ATX CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the ATX connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
4	**INSPECT RESISTANCE** • Inspect the resistance between ATX terminal F (transaxle case side) and body ground. • Is the resistance **within 10.9—26.2 ohms**? (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].)	Yes	Go to Step 7.
		No	Go to the next step.
5	**INSPECT SHIFT SOLENOID E CONNECTOR FOR POOR CONNECTION** • Disconnect the shift solenoid E connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
6	**INSPECT RESISTANCE** • Inspect the resistance between shift solenoid E terminal A (part-side) and body ground. • Is the resistance **within 10.9—26.2 ohms**? (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].)	Yes	Replace the solenoid wiring harness, then go to Step 11.
		No	Verify shift solenoid E installation. • If solenoid installed correctly, replace the solenoid, then go to Step 11. (See 05-17A-27 SOLENOID VALVE REMOVAL/ INSTALLATION[FN4A-EL].)
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
8	**INSPECT ATX CONNECTOR CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between PCM terminal 1Z*1/1F*2 (wiring harness-side) and ATX terminal F (wiring harness-side). • Is there continuity between terminals?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
9	**INSPECT ATX CONNECTOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (engine off). • Inspect the voltage at ATX terminal F (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
10	**INSPECT PCM CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between PCM terminal 1Z*1/1F*2 (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 11.
		No	Go to the next step.
11	**VERIFY TROUBLESHOOTING OF DTC P0773 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 4GR. • Are any DTCs present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0883[FN4A-EL]

id0502a1802900

DTC P0883	Battery voltage high
DETECTION CONDITION	• Voltage of **16 V or more** detected at PCM terminal 1BE. **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction conditions during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Generator malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY DTC** • Turn the ignition switch to the LOCK position, then to the ON position. • Verify the DTC in the PCM memory. • Are DTC P2504 output?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
4	**VERIFY TROUBLESHOOTING OF DTC P0883 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine and warm it up completely. • Is same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P0894[FN4A-EL]

id0502a1809600

DTC P0894	Forward clutch power transmission malfunction
DETECTION CONDITION	• With the engine running and the selector lever in the D or M range, all of the following conditions are met: — ATF temperature **20 °C {68 °F} or more** — Vehicle speed **0 km/h {0 mph}** (brake on) — Even when **3 s or more** has passed since the engine has started, the turbine speed will not decrease to **less than 187.5 rpm**. **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is not available. • The AT warning light illuminates. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Forward clutch not engaged or slipped • Short to power supply in wiring harness between shift solenoid A terminal B and PCM terminal 1A*1/1B*2 • Shift solenoid A stuck on • VSS malfunction • PCM malfunction

*1 : California emission regulation applicable mode
*2 : Except for California emission regulation applicable mode

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY DTCS** • Turn the ignition switch to the LOCK position, then to the ON position. • Verify the DTCs in the PCM memory. • Are DTCs P0500, P0752, and P0753 output?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	Replace the forward clutch, then go to the next step.
3	**VERIFY TROUBLESHOOTING OF DTC P0894 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Warm up the engine. • With the selector lever in the D range and the vehicle stopped (brake on), wait **3 s or more**. • Are any DTCs present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

DTC P1783[FN4A-EL]

id0502a1807700

DTC P1783	ATF high oil temperature malfunction
DETECTION CONDITION	• When all conditions below are satisfied. — P0712, P0713 not output — ATF temperature **149.5 °C {301°F} or more** — ATF oil temperature signal of **0.06 V or more** is input to PCM terminal 2AC*1/1U*2. **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate if the PCM detects above malfunction conditions during the first drive cycle. • The PENDING CODE is not available. • FREEZE FRAME DATA is not available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• High engine load drive (Driving a steep gradient at a low speed.) • Insufficient or excess level of ATF • Deteriorated ATF • TFT sensor circuit malfunction • PCM malfunction

*1 : California emission regulation applicable mode
*2 : Except for California emission regulation applicable mode

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY VEHICLE DRIVING CONDITIONS** • Verify each PID monitor of the HTM_CNT and HTM_DIS. • Verify vehicle driving conditions when a DTC P1783 is output. • Has the vehicle been driven at a high engine load?	Yes	• Go to Step 6. • Inform the customer that the ATX temperature is high due to high engine load driving.
		No	Go to the next step.
4	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 6. (See 05-17A-9 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FN4A-EL].)
5	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to the next step. (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)
6	**VERIFY TROUBLESHOOTING OF DTC P1783 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up the ATX. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02A-6 AFTER REPAIR PROCEDURE[FN4A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
		No	DTC troubleshooting completed.

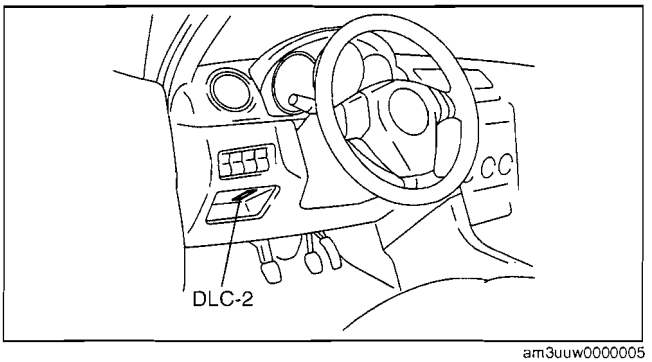
PID/DATA MONITOR INSPECTION[FN4A-EL]

id0502a1805600

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Toolbox" tab.
     2. Select "DataLogger".
     3. Select "Modules".
     4. Select "PCM".
   - When using the PDS (Pocket PC)
     1. Select "Module Tests".
     2. Select "PCM".
     3. Select "DataLogger".
3. Select the PID from the PID table
4. Verify the PID data according to the directions on the M-MDS screen.



am3uuw0000005

Note
- Perform part inspection for the output device after PCM inspection.
- The PID/DATA MONITOR function monitors the calculated value of the input/output signals in the PCM. Therefore, if a monitored value of an output device is out of specification, it is necessary to inspect the monitored value of the input device related to the output device control. Since an output device malfunction is not directly indicated as a malfunction of the monitored value for the output device, it is necessary to inspect the output device individually using methods such as the simulation function.

PID/DATA MONITOR AND RECORD function table

Monitor item (Definition)	Unit/ Condition	Condition/Specification	Action	PCM terminal
DWN SW (Down switch)	On/Off	• M range, downshift: On • Other: Off	Inspect the selector lever component. (See 05-18-4 SELECTOR LEVER COMPONENT INSPECTION.)	1AF*1/1P*2
GEAR	1/2/3/4	1GR: 1 2GR: 2 3GR: 3 4GR: 4	Inspect the following PIDs: SSA/SS1, SSB/SS2, SSC/SS3, SSD/SS4, SSE_SS5	N/A
HTM_CNT	N/A	Indicates number of high oil temperature mode (ATF temperature at 130 °C {266 °F} or more) operations • 0—65,535	N/A	N/A
HTM_DIS	km	Indicates travel distance after operation of high oil temperature mode (ATF temperature at 130 °C {266 °F} or more) • 0—65,535 km	N/A	N/A
LINEDES	Pa	Indicates target line pressure	Inspect the following PIDs: APP, OSS, TFT, TFTV, TR, TSS, VPWR, VSS	N/A
LPS (Pressure control solenoid)	A	Change current value according to accelerator opening angle	Inspect the pressure control solenoid. (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].)	1M*1, 1N*1/ 1G*2, 1H*2
MNL SW (M range switch)	On/Off	M range: On Other: Off	Inspect the selector lever component. (See 05-18-4 SELECTOR LEVER COMPONENT INSPECTION.)	1AN*1/1O*2

Monitor item (Definition)	Unit/ Condition	Condition/Specification	Action	PCM terminal
OSS (Output shaft speed)	RPM	Indicates output shaft speed	Inspect the VSS. (See 05-17A-21 VEHICLE SPEED SENSOR (VSS) INSPECTION[FN4A-EL].)	1AW*1/1J*2
SSA/SS1 (Shift solenoid A)	%	4GR: **99%** Others: **0%**	Inspect the shift solenoid A. (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].)	1A*1/1B*2
SSB/SS2 (Shift solenoid B)	%	1GR at D range: **99%** Others: **0%**	Inspect the shift solenoid B. (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].)	1E*1/1C*2
SSC/SS3 (Shift solenoid C)	%	1GR/2GR: **99%** Others: **0%**	Inspect the shift solenoid C. (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].)	1F*1/1D*2
SSD/SS4 (Shift solenoid D)	On/Off	• P/N position, 4GR at D range, 1GR at M range: On • Others: Off	Inspect the shift solenoid D. (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].)	1AD*1/1E*2
SSE_SS5 (Shift solenoid E)	On/Off	• TCC operating: On • TCC non operating: Off	Inspect the shift solenoid E. (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].)	1Z*1/1F*2
TFT (Transaxle fluid temperature)	°C	Indicates transaxle fluid temperature	Inspect the TFT sensor. (See 05-17A-18 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR INSPECTION[FN4A-EL].)	2AC*1/1U*2
TFTV (Transaxle fluid signal voltage)	V	ATF **20 °C {68 °F}: Approx. 3.3 V** ATF **40 °C {104 °F}: Approx. 2.4 V** ATF **60 °C {140 °F}: Approx. 1.5 V**	Inspect the TFT sensor. (See 05-17A-18 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR INSPECTION[FN4A-EL].)	2AC*1/1U*2
THOP (Throttle position sensor)	%	• CTP: **12%** • WOT: **75%**	Inspect the TP sensor. (See 01-40A-54 THROTTLE POSITION (TP) SENSOR INSPECTION[LF, L3].)	N/A
TR (Transaxle range)	P/R/N/D	P position: P R position: R N position: N D range: D	Inspect the TR switch. (See 05-17A-10 TRANSAXLE RANGE (TR) SWITCH INSPECTION[FN4A-EL].)	1AH*1/1S*2
TR_SENS (TR switch)	V	P position: **4.34—4.79 V** R position: **3.83—4.18 V** N position: **3.05—3.50 V** D range: **2.23—2.66 V**	Inspect the TR switch. (See 05-17A-10 TRANSAXLE RANGE (TR) SWITCH INSPECTION[FN4A-EL].)	1AH*1/1S*2
TSS (Input/turbine speed)	RPM	Ignition switch ON: **0 RPM** Idle: **700—800 RPM** (P, N position) Indicates Input/turbine speed	Inspect the input/turbine speed sensor. (See 05-17A-20 INPUT/TURBINE SPEED SENSOR INSPECTION[FN4A-EL].)	1AG*1, 1AO*1/ 1M*2, 1Q*2
UP SW (Up switch)	On/Off	• M range, upshift: On • Other: Off	Inspect the selector lever component. (See 05-18-4 SELECTOR LEVER COMPONENT INSPECTION.)	1AJ*1/1K*2

*1 : California emission regulation applicable mode
*2 : Except for California emission regulation applicable mode

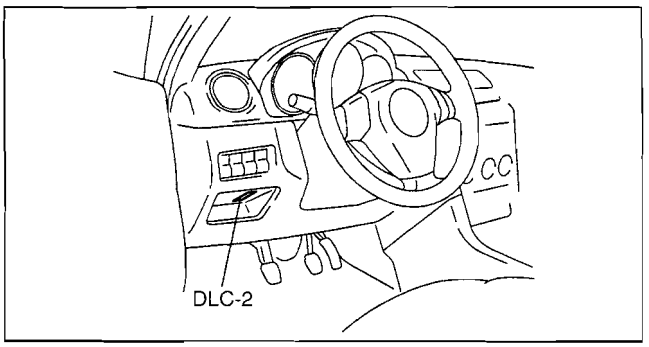
Simulation Function Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     - — Select the "Toolbox" tab.
     - — Select "DataLogger".
     - — Select "Modules".
     - — Select "PCM".
   - When using the PDS (Pocket PC)
     - — Select "Module Tests".
     - — Select "PCM".
     - — Select "DataLogger".
3. Select the simulation items from the PID table.
4. Perform the simulation function, inspect the operations for each parts.
   - If there is no operation sound from the solenoid after the simulation function inspection is performed, it is possible that there is an open or short circuit in the wiring harness, or solenoid, or sticking and operation malfunction.



am3uuw0000005

Simulation item table

X: Available

Simulation item	Applicable component	Unit/Condition	Operation		PCM terminal
			IG ON	Idle	
LPS	Pressure control solenoid	%	N/A	X	1M*1, 1N*1/1G*2, 1H*2
SSA/SS1	Shift solenoid A	%	N/A	X	1A*1/1B*2
SSB/SS2	Shift solenoid B	%	N/A	X	1E*1/1C*2
SSC/SS3	Shift solenoid C	%	N/A	X	1F*1/1D*2
SSD/SS4	Shift solenoid D	On/Off	N/A	X	1AD*1/1E*2
SSE_SS5	Shift solenoid E	On/Off	N/A	X	1Z*1/1F*2

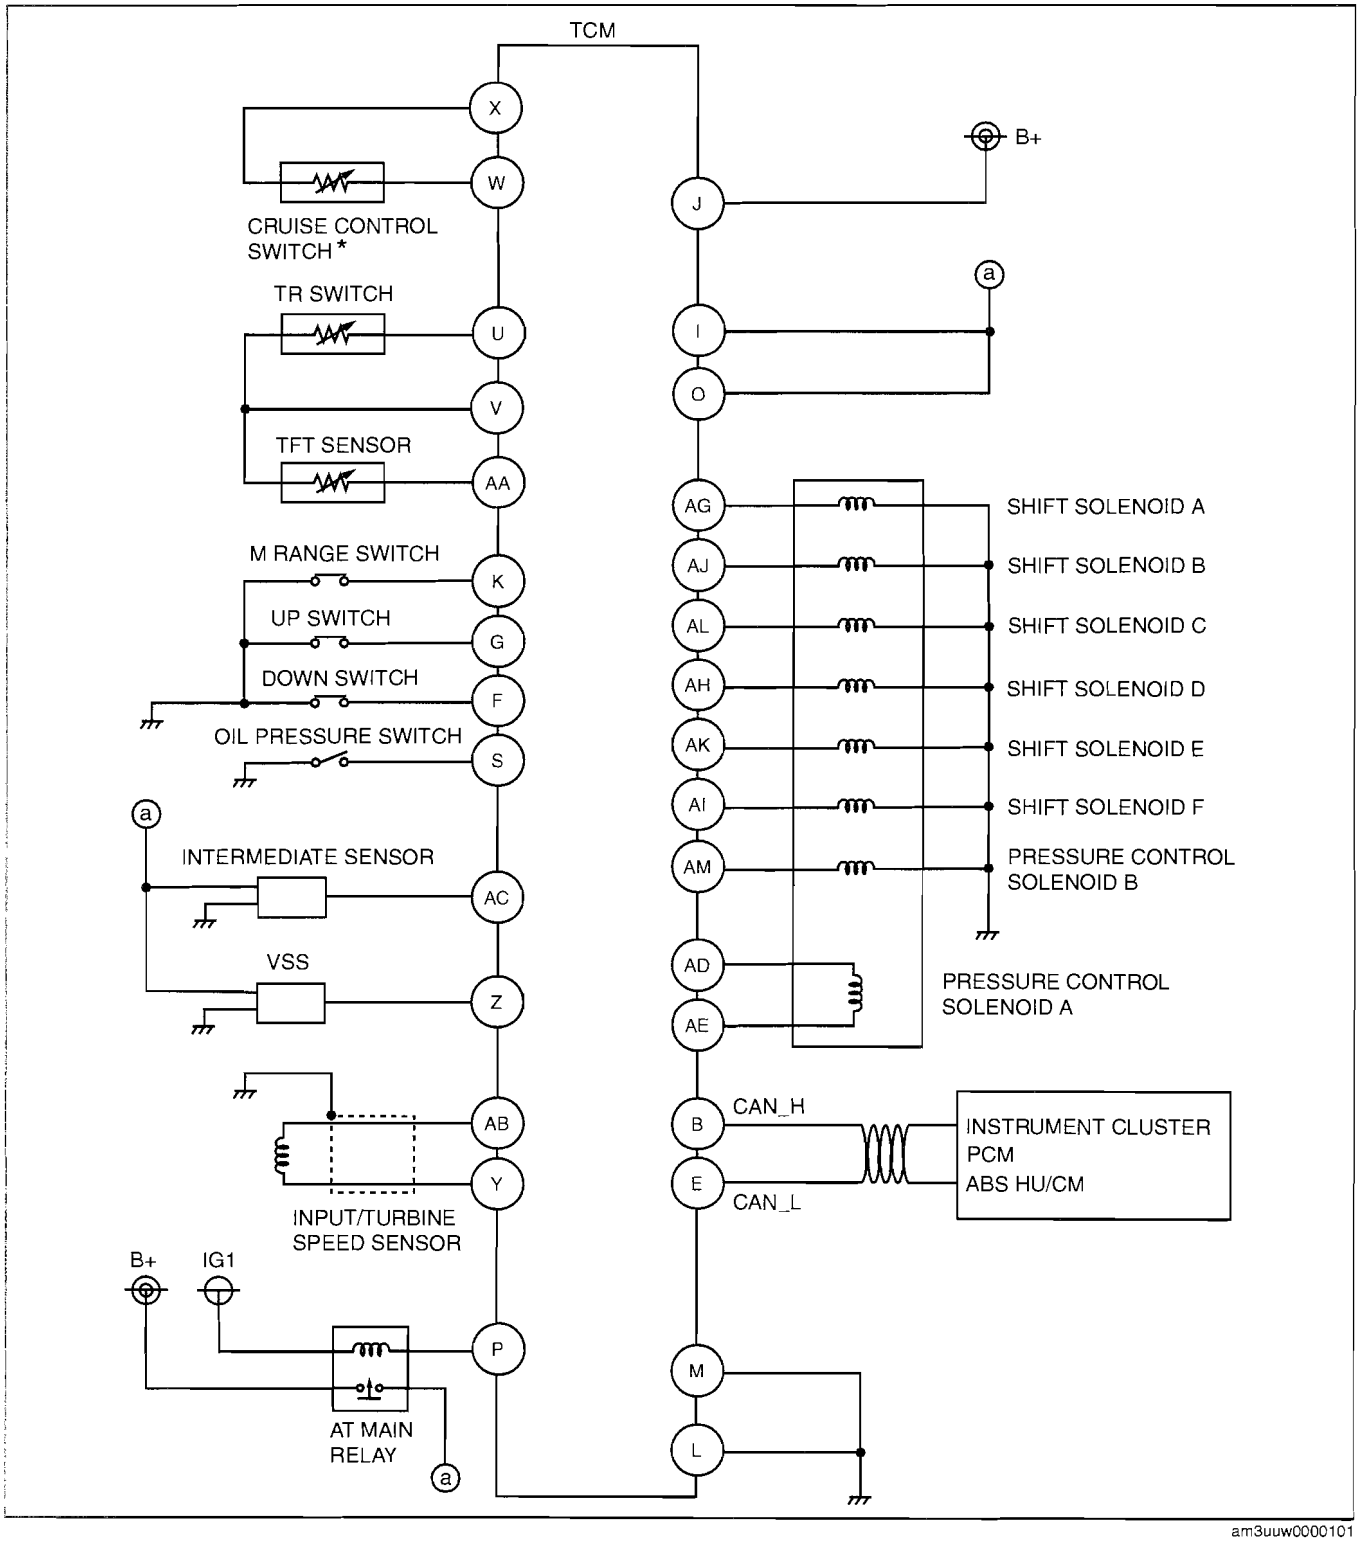
05-02B ON-BOARD DIAGNOSTIC [FS5A-EL]

AUTOMATIC TRANSAXLE CONTROL SYSTEM WIRING DIAGRAM[FS5A-EL]

id050221800100



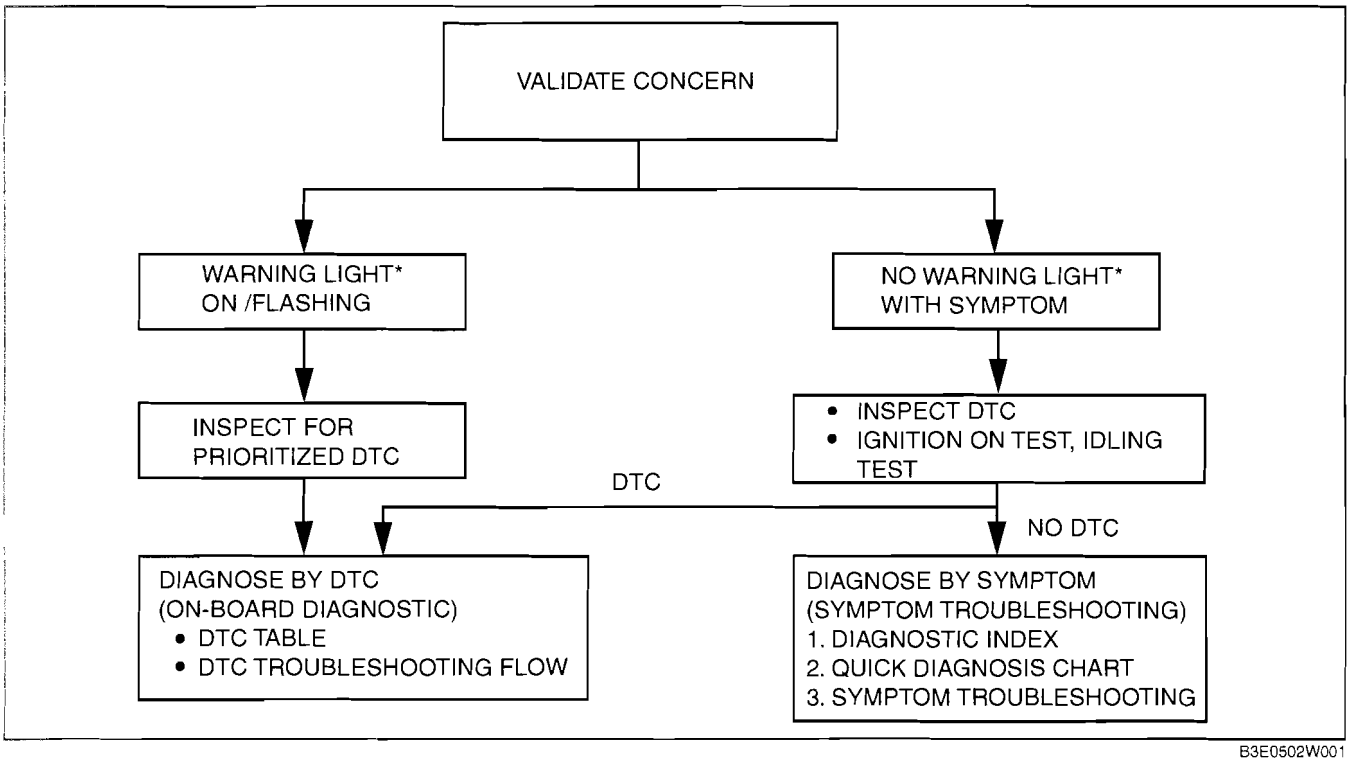
am3uuw0000101

* : Except for California emission regulation applicable model

FOREWORD[FS5A-EL]

id050221800200

- When the customer reports a vehicle malfunction, inspect the malfunction indicator lamp (MIL), AT warning light indication, and TCM memory for diagnostic trouble code (DTC), then diagnose the malfunction according to the following flowchart.
  — If a DTC exists, diagnose the applicable DTC. (See 05-02B-9 DTC TABLE[FS5A-EL].)
  — If no DTC exists, the MIL does not illuminate, and AT warning light does not illuminate. Diagnose the applicable symptom troubleshooting. (See 05-03B-4 SYMPTOM TROUBLESHOOTING ITEM TABLE[FS5A-EL].)



B3E0502W001

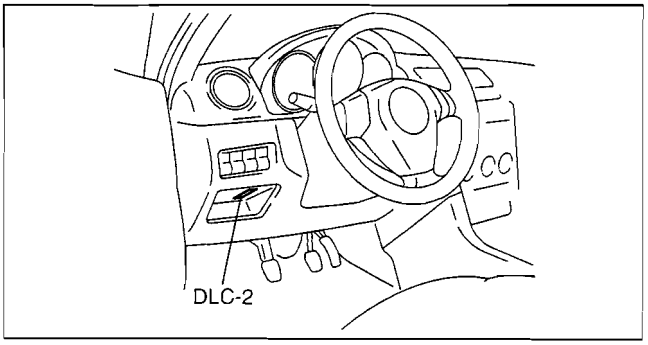
*: Malfunction indicator lamp (MIL), AT warning light

AUTOMATIC TRANSAXLE ON-BOARD DIAGNOSTIC FUNCTION[FS5A-EL]

id050221800300

DTC Reading Procedure

1. Perform the necessary vehicle preparation and visual inspection.
2. Connect the M-MDS to the DLC-2.
3. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Toolbox" tab.
     2. Select "Self Test".
     3. Select "Modules".
     4. Select "TCM".
   - When using the PDS (Pocket PC)
     1. Select "Module Tests".
     2. Select "TCM".
     3. Select "Self Test".
4. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
5. After completion of repairs, clear all DTCs stored in the TCM. (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].)



am3uuw0000006

AFTER REPAIR PROCEDURE[FS5A-EL]

id050221800400

Caution

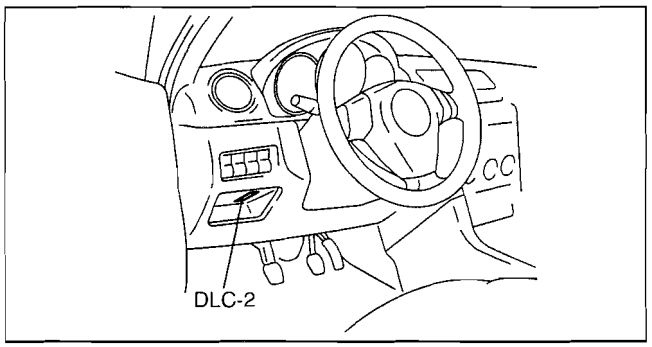
- **After repairing a malfunction, perform the following procedure to verify that the malfunction has been corrected.**
- **When performing this procedure, be sure to drive the vehicle at lawful speed and pay attention to the other vehicles.**

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Toolbox" tab.
     2. Select "SelfTest".
     3. Select "Modules".
     4. Select "TCM".
   - When using the PDS (Pocket PC)
     1. Select "Module Tests".
     2. Select "TCM".
     3. Select "SelfTest".
3. Verify the DTC according to the directions on the M-MDS screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Perform the following DTC inspections to ensure that the DTCs have been resolved:



am3uuw0000005

DTC No.	inspection
P0706, P0707, P0708	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle in D range at **20 km/h {12.4 mph} or more** for **100 s or more**. iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle in D range at **20 km/h {12.4 mph} or more** for **100 s or more**. vii. Go to Step 6.
P0711	i. Start the engine then wait **180 s or more**. ii. Warm up the engine and ATX. iii. Drive the vehicle in D range, at **within 25—59 km/h {16—36 mph}** for **90 s or more**. iv. Drive the vehicle in D range, at **60 km/h {37 mph}** for **60 s or more**. v. Turn the ignition switch to the LOCK position. vi. Start the engine. vii. Drive the vehicle in D range, at **within 25—59 km/h {16—36 mph}** for **90 s or more**. viii. Drive the vehicle in D range, at **60 km/h {37 mph} or more** for **60 s or more**. ix. Go to Step 6.
P0712, P0713	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle in D range, at **20 km/h {12 mph} or more** for **150 s or more**. iv. Go to Step 6.
P0715	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle in D range, at **41 km/h {25 mph} or more** for **0.7 s or more**. iv. Go to Step 6.
P0720	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions for **4.5 s or more**. • Turbine speed (TSS PID): **1,500 rpm or more** • Selector lever position: D range, 1GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions for **4.5 s or more**. • Turbine speed (TSS PID): **1,500 rpm or more** • Selector lever position: D range, 1GR vii. Go to Step 6.

DTC No.	inspection
P0731	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D or M range, 1GR • Throttle opening angle (THOP PID): **2.77% or more** iv. Go to Step 6.
P0732	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions 3 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D or M range, 2GR iv. Go to Step 6.
P0733	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions. • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D or M range, 3GR iv. Go to Step 6.
P0734	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions. • Vehicle speed (VSS PID): **28 km/h {17 mph} or more** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D or M range, 4GR iv. Go to Step 6.
P0735	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions. • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle (THOP PID): **2.77% or more** • Selector lever position: D or M range, from 1GR to 5GR iv. Go to Step 6.
P0741	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions for **5 s or more.** • Vehicle speed (VSS PID): **60—100 km/h {38—62 mph}** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 4GR iv. Go to Step 6.
P0742	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions. • Vehicle speed (VSS PID): **70 km/h {43 mph} or less** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 4GR • Throttle conditions — Throttle opening angle (THOP PID) is **6.25% or more** and **5 s or more** have passed. — Throttle opening angle (THOP PID) is **within 3.13—6.25%** and **3 s or more** have passed. — Throttle opening angle is at closed throttle position and **5 s or more** have passed. iv. Go to Step 6.
P0744, P0753, P0758, P0763, P0768, P0773, P0778, P0841, P0883, P1783, P2709	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle in D range and make sure that the gears shift smoothly from 1GR to 5GR and TCC is operated. iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle in D range and make sure that the gears shift smoothly from 1GR to 5GR and TCC is operated. vii. Go to Step 6.
P0745	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle in D range. iv. Go to Step 6.

DTC No.	inspection
P0751	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions for **15 s or more.** • Vehicle speed (VSS PID): **36 km/h {22 mph} or more** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 4GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions for **15 s or more.** • Vehicle speed (VSS PID): **36 km/h {22 mph} or more** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 4GR vii. Go to Step 6.
P0752	i. Start the engine. ii. Warm up the engine and ATX. iii. Selector lever position: D range iv. Depress the brake pedal. v. Turn the ignition switch to the LOCK position. vi. Start the engine. vii. Selector lever position: D range viii. Depress the brake pedal. ix. Go to Step 6.
P0756	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle (THOP PID): **2.77% or more** • Differential gear case (output) revolution speed (OSS PID): **35 rpm or more** • Selector lever position: D range, 1GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle (THOP PID): **2.77% or more** • Differential gear case (output) revolution speed (OSS PID): **35 rpm or more** • Selector lever position: D range, 1GR vii. Go to Step 6.
P0757, P0766	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions. • Vehicle speed (VSS PID): **28 km/h {17 mph} or more** • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle at closed throttle position • Differential gear case (output) revolution speed (OSS PID): **35 rpm or more** • Selector lever position: D range, 2GR and 4GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions. • Vehicle speed (VSS PID): **28 km/h {17 mph} or more** • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle at closed throttle position • Differential gear case (output) revolution speed (OSS PID): **35 rpm or more** • Selector lever position: D range, 2GR and 4GR vii. Go to Step 6.

DTC No.	inspection
P0761	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle (THOP PID): **2.77% or more** • Differential gear case (output) revolution speed (OSS PID): **35 rpm or more** • Selector lever position: D range, 1GR and 2GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle (THOP PID): **2.77% or more** • Differential gear case (output) revolution speed (OSS PID): **35 rpm or more** • Selector lever position: D range, 1GR and 2GR vii. Go to Step 6.
P0762	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions. • Vehicle speed (VSS PID): **26 km/h {16 mph} or more** • Turbine speed (TSS PID): **225—4,987 rpm** • Differential gear case (output) revolution speed (OSS PID): **35 rpm or more** • Selector lever position: D range, 3GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions. • Vehicle speed (VSS PID): **26 km/h {16 mph} or more** • Turbine speed (TSS PID): **225—4,987 rpm** • Differential gear case (output) revolution speed (OSS PID): **35 rpm or more** • Selector lever position: D range, 3GR vii. Go to Step 6.
P0767	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions for **5 s or more.** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 3GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions for **5 s or more.** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 3GR vii. Go to Step 6.
P0771	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions for **5 s or more.** • Vehicle speed (VSS PID): **60—100 km/h {38—62 mph}** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 4GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions for **5 s or more.** • Vehicle speed (VSS PID): **60—100 km/h {38—62 mph}** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 4GR vii. Go to Step 6.

DTC No.	inspection
P0772	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions. • Vehicle speed (VSS PID): **70 km/h {43 mph} or less** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 4GR • Throttle conditions — Throttle opening angle (THOP PID) is **6.25% or more** and **5 s or more** have passed. — Throttle opening angle (THOP PID) is **within 3.13—6.25%** and **3 s or more** have passed. — Throttle opening angle is at closed throttle position and **5 s or more** have passed. iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions. • Vehicle speed (VSS PID): **70 km/h {43 mph} or less** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 4GR • Throttle conditions — Throttle opening angle (THOP PID) is **6.25% or more** and **5 s or more** have passed. — Throttle opening angle (THOP PID) is **within 3.13—6.25%** and **3 s or more** have passed. — Throttle opening angle is at closed throttle position and **5 s or more** have passed. vii. Go to Step 6.
P0777	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle (THOP PID): **2.77% or more** • Selector lever position: D range, 5GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle (THOP PID): **2.77% or more** • Selector lever position: D range, 5GR vii. Go to Step 6.
P0791	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle in D range at **40 km/h {25 mph} or more** for **4.5 s or more**. iv. Go to Step 6.
P0894	i. Start the engine. ii. Warm up the engine and ATX. iii. Depress the brake pedal. iv. Throttle opening angle at closed throttle position. v. Shift the selector lever from the N position to the D range and hold for **3 s or more**. vi. Go to Step 7.
P2707	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle (THOP PID): **2.77% or more** • Selector lever position: D range, 3GR or 4GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle (THOP PID): **2.77% or more** • Selector lever position: D range, 3GR or 4GR vii. Go to Step 6.

DTC No.	inspection
P2708	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle (THOP PID): **2.77% or more** • Selector lever position: D range, 5GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle (THOP PID): **2.77% or more** • Selector lever position: D range, 5GR vii. Go to Step 6.

6. Gradually slow down and stop the vehicle.
7. Make sure that the repaired DTC does not recur.

DTC TABLE[FS5A-EL]

id050221800500

DTC No.	Condition	MIL	AT warning light illuminates	DC	Monitor item	Memory function	Page
P0706	Transaxle range (TR) switch circuit range/ performance	ON	YES	2	CCM	X	(See 05-02B-12 DTC P0706[FS5A-EL].)
P0707	Transaxle range (TR) switch circuit low input	ON	YES	1	CCM	X	(See 05-02B-13 DTC P0707[FS5A-EL].)
P0708	Transaxle range (TR) switch circuit high input	ON	YES	2	CCM	X	(See 05-02B-15 DTC P0708[FS5A-EL].)
P0711	Transaxle fluid temperature (TFT) sensor circuit range/performance (stuck)	ON	NO	2	CCM	X	(See 05-02B-17 DTC P0711[FS5A-EL].)
P0712	Transaxle fluid temperature (TFT) sensor circuit malfunction (short to ground)	ON	YES	1	CCM	X	(See 05-02B-18 DTC P0712[FS5A-EL].)
P0713	Transaxle fluid temperature (TFT) sensor circuit malfunction (open circuit)	ON	YES	1	CCM	X	(See 05-02B-21 DTC P0713[FS5A-EL].)
P0715	Input/turbine speed sensor circuit malfunction	ON	YES	1	CCM	X	(See 05-02B-23 DTC P0715[FS5A-EL].)
P0720	Vehicle speed sensor (VSS) circuit malfunction	ON	YES	1	CCM	X	(See 05-02B-26 DTC P0720[FS5A-EL].)
P0731	Gear 1 incorrect (incorrect gear ratio detected)	OFF	YES	1	CCM	X	(See 05-02B-28 DTC P0731[FS5A-EL].)
P0732	Gear 2 incorrect (incorrect gear ratio detected)	OFF	YES	1	CCM	X	(See 05-02B-30 DTC P0732[FS5A-EL].)

DTC No.	Condition	MIL	AT warning light illuminates	DC	Monitor item	Memory function	Page
P0733	Gear 3 incorrect (incorrect gear ratio detected)	OFF	YES	1	CCM	X	(See 05-02B-33 DTC P0733[FS5A-EL].)
P0734	Gear 4 incorrect (incorrect gear ratio detected)	OFF	YES	1	CCM	X	(See 05-02B-35 DTC P0734[FS5A-EL].)
P0735	Gear 5 incorrect (incorrect gear ratio detected)	OFF	YES	1	CCM	X	(See 05-02B-38 DTC P0735[FS5A-EL].)
P0741	Torque converter clutch (TCC) (stuck off)	OFF	YES	1	CCM	X	(See 05-02B-40 DTC P0741[FS5A-EL].)
P0742	Torque converter clutch (TCC) (stuck on)	OFF	YES	1	CCM	X	(See 05-02B-41 DTC P0742[FS5A-EL].)
P0744	Slip control malfunction	OFF	YES	2	CCM	X	(See 05-02B-43 DTC P0744[FS5A-EL].)
P0745	Pressure control solenoid A malfunction	OFF	YES	1	CCM	X	(See 05-02B-45 DTC P0745[FS5A-EL].)
P0751	Shift solenoid A stuck off	ON	YES	2	CCM	X	(See 05-02B-47 DTC P0751[FS5A-EL].)
P0752	Shift solenoid A stuck on	ON	YES	2	CCM	X	(See 05-02B-49 DTC P0752[FS5A-EL].)
P0753	Shift solenoid A malfunction (electrical)	ON	YES	1	CCM	X	(See 05-02B-51 DTC P0753[FS5A-EL].)
P0756	Shift solenoid B stuck off	ON	YES	2	CCM	X	(See 05-02B-53 DTC P0756[FS5A-EL].)
P0757	Shift solenoid B stuck on	ON	YES	2	CCM	X	(See 05-02B-55 DTC P0757[FS5A-EL].)
P0758	Shift solenoid B malfunction (electrical)	ON	YES	1	CCM	X	(See 05-02B-57 DTC P0758[FS5A-EL].)
P0761	Shift solenoid C stuck off	ON	YES	2	CCM	X	(See 05-02B-59 DTC P0761[FS5A-EL].)
P0762	Shift solenoid C stuck on	ON	YES	2	CCM	X	(See 05-02B-61 DTC P0762[FS5A-EL].)

DTC No.	Condition	MIL	AT warning light illuminates	DC	Monitor item	Memory function	Page
P0763	Shift solenoid C malfunction (electrical)	ON	YES	1	CCM	X	(See 05-02B-63 DTC P0763[FS5A-EL].)
P0766	Shift solenoid D stuck off	ON	YES	2	CCM	X	(See 05-02B-65 DTC P0766[FS5A-EL].)

DTC P0706[FS5A-EL]

id050221800900

DTC P0706	Transaxle range (TR) switch range/performance
DETECTION CONDITION	• When all conditions below are satisfied and **100 s or more** have passed. — Engine speed **530 rpm or more** — Vehicle speed **20 km/h {12 mph} or more** — Voltage at TCM terminal U **0.5 V or more** — P, R, N, or D range/position not detected **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• TR switch malfunction • TR switch misadjustment • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TR SWITCH** • Turn the ignition switch to the LOCK position. • Disconnect the TR switch connector. • Inspect for resistance between TR switch terminals B and C (part-side). • Is the resistance normal? (See 05-17B-11 TRANSAXLE RANGE (TR) SWITCH INSPECTION[FS5A-EL].)	Yes	Adjust the TR switch, then go to the next step. (See 05-17B-17 TRANSAXLE RANGE (TR) SWITCH ADJUSTMENT[FS5A-EL].)
		No	Replace the TR switch, then go to the next step. (See 05-17B-14 TRANSAXLE RANGE (TR) SWITCH REMOVAL/INSTALLATION[FS5A-EL].)

STEP	INSPECTION		ACTION
4	**VERIFY TROUBLESHOOTING OF DTC P0706 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle in each range (D and R) for **100 s or more** under the following conditions: — Engine speed (RPM PID): **530 rpm or more** — Vehicle speed (VSS PID): **20 km/h {12 mph} or more** • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	No concern is detected. Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

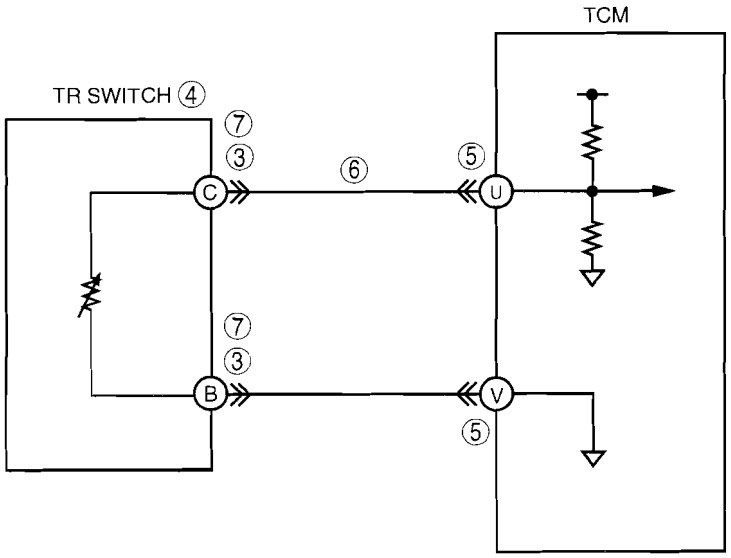
DTC P0707[FS5A-EL]

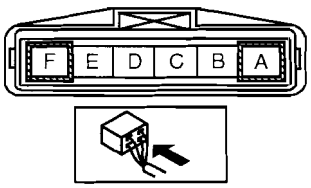
id050221801000

DTC P0707	Transaxle range (TR) switch circuit low input
DETECTION CONDITION	• When all conditions below are satisfied and **100 s or more** have passed. — Vehicle speed **20 km/h {12 mph} or more** — Engine speed **530 rpm or more** — Voltage at TCM terminal U **0.5 V or less** **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• TR switch malfunction • Short to ground in wiring harness between TR switch terminal C and TCM terminal U • TR switch signal and TR switch ground circuits shorted each other • TCM malfunction

DTC P0707	Transaxle range (TR) switch circuit low input



TR SWITCH WIRING HARNESS-SIDE CONNECTOR



TCM WIRING HARNESS-SIDE CONNECTOR

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TR SWITCH CONNECTOR** • Turn the ignition switch to the LOCK position. • Disconnect the TR switch connector. • Inspect for poor connection at TR switch terminals B and C (part-side) (such as damaged/pulled-out pins, corrosion) • Are TR switch terminals normal?	Yes	Go to the next step.
		No	Repair terminals or replace the TR switch, then go to Step 8. (See 05-17B-14 TRANSAXLE RANGE (TR) SWITCH REMOVAL/INSTALLATION[FS5A-EL].)
4	**INSPECT TR SWITCH** • Turn the ignition switch to the LOCK position. • Disconnect the TR switch connector. • Inspect for resistance between TR switch terminals B and C (part-side). • Is the resistance normal? (See 05-17B-11 TRANSAXLE RANGE (TR) SWITCH INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	Replace the TR switch, then go to Step 8. (See 05-17B-14 TRANSAXLE RANGE (TR) SWITCH REMOVAL/INSTALLATION[FS5A-EL].)
5	**INSPECT TCM CONNECTOR FOR POOR CONNECTION** • Disconnect the TCM connector. • Inspect for poor connection at terminals U and V (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.

STEP	INSPECTION		ACTION
6	**INSPECT TR SWITCH SIGNAL CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between TR switch terminal C (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for short to ground, then go to Step 8.
		No	Go to the next step.
7	**INSPECT TR SWITCH CIRCUIT FOR SHORT CIRCUIT** • Inspect for continuity between TR switch terminals B and C (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for short circuit, then go to the next step.
		No	Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0707 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle for **100 s or more** under the following conditions: — Engine speed (RPM PID): **530 rpm or more** — Vehicle speed (VSS PID): **20 km/h {12 mph} or more** • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	No concern is detected. Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

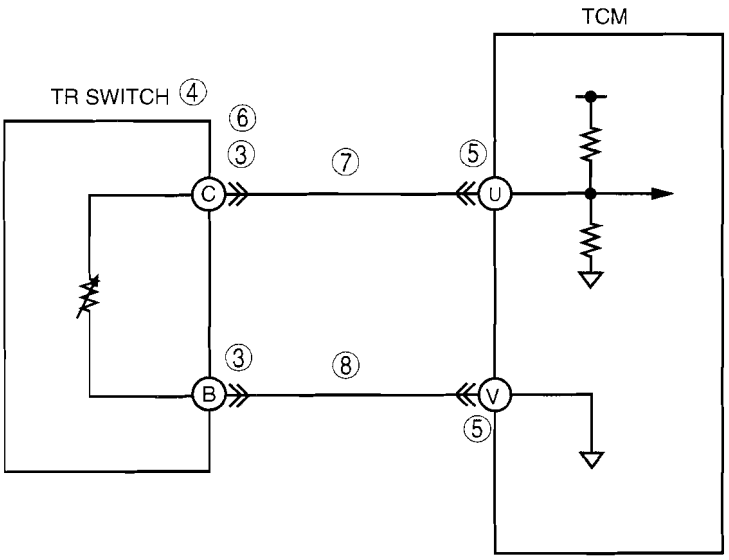
DTC P0708[FS5A-EL]

id050221801100

DTC P0708	Transaxle range (TR) switch circuit high input
DETECTION CONDITION	• When all conditions below are satisfied and **100 s or more** have passed. — Vehicle speed **20 km/h {12 mph} or more** — Engine speed **530 rpm or more** — Voltage at TCM terminal U **4.79 V or more** **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• TR switch malfunction • Open circuit in wiring harness between TR switch terminal C and TCM terminal U • Short to power supply in wiring harness between TR switch terminal C and TCM terminal U • Open circuit in wiring harness between TR switch terminal B and TCM terminal V • Poor connection of TR switch or TCM connectors • TCM malfunction

DTC P0708	Transaxle range (TR) switch circuit high input



TR SWITCH WIRING HARNESS-SIDE CONNECTOR

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TR SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the TR switch connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Are TR switch terminals normal?	Yes	Go to the next step.
		No	Repair terminals or replace the TR switch, then go to Step 9. (See 05-17B-14 TRANSAXLE RANGE (TR) SWITCH REMOVAL/INSTALLATION[FS5A-EL].)
4	**INSPECT TR SWITCH** • Inspect for resistance between TR switch terminals B and C (part-side). • Is the resistance normal? (See 05-17B-11 TRANSAXLE RANGE (TR) SWITCH INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	Replace the TR switch, then go to Step 9. (See 05-17B-14 TRANSAXLE RANGE (TR) SWITCH REMOVAL/INSTALLATION[FS5A-EL].)
5	**INSPECT TCM CONNECTOR FOR POOR CONNECTION** • Disconnect the TCM connector. • Inspect for poor connection at terminals U and V (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to step 9.
		No	Go to the next step.

STEP	INSPECTION		ACTION
6	**INSPECT TR SWITCH SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (engine off). • Inspect the voltage between TR switch terminal C and (wiring harness-side) body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for short to power supply, then go to Step 9.
		No	Go to the next step.
7	**INSPECT TR SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between TR switch terminal C (wiring harness-side) and TCM terminal U. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open circuit, then go to step 9.
8	**INSPECT TR SWITCH GROUND CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between TR switch terminal B (wiring harness-side) and TCM terminal V. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0708 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle for **100 s or more** under the following conditions: — Engine speed (RPM PID) **530 rpm or more** — Vehicle speed (VSS PID) **20 km/h {12 mph} or more** • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	No concern is detected. Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0711[FS5A-EL]

id050221801200

DTC P0711	Transaxle fluid temperature (TFT) sensor circuit range/performance (stuck)
DETECTION CONDITION	• When all conditions below are satisfied. — When **180 s or more** have passed after the engine is started, vehicle is driven for **90 s or more** at vehicle speed **between 25—59 km/h {15—36 mph}**, then **60 km/h {37 mph} or more** for **60 s or more**. — P0712, P0713 not output — Variation in ATF voltage **0.03 V or less** **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light does not illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• TFT sensor malfunction • Connector corrosion • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.

STEP	INSPECTION		ACTION
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TFT SENSOR VOLTAGE** • Turn the ignition switch to the ON position (engine off). • Measure the voltage at TCM terminal AA. • Record terminal AA voltage. • Start the engine. • Drive the vehicle at **60 km/h {37 mph} or more** for **330 s or more**. • Record terminal AA voltage again. • Is the variation in voltage **0.03 V or more**?	Yes	Go to Step 5.
		No	Go to the next step.
4	**INSPECT TERMINAL CONDITION** • Turn the ignition switch to the LOCK position. • Disconnect the transaxle connector (primary). • Inspect terminals for corrosion. • Are terminals normal?	Yes	Go to the next step.
		No	Repair or replace the terminals, then go to the next step.
5	**VERIFY TROUBLESHOOTING OF DTC P0711 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Decrease ATF temperature to **20 °C {68 °F} or less**. • Start the engine and wait for **180 s or more**. • Drive the vehicle at a vehicle speed **between 25—59 km/h {15—36 mph}** for **90 s or more**. • Drive the vehicle at a vehicle speed **60 km/h {37 mph} or more** for **60 s or more**. • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0712[FS5A-EL]

id050221801300

DTC P0712	Transaxle fluid temperature (TFT) sensor circuit malfunction (short to ground)
DETECTION CONDITION	• If the TCM detects either of the following conditions for **150 s or more**, the TCM determines that the TFT sensor circuit has a malfunction. — TFT sensor voltage **0.12 V or less** and vehicle speed **20 km/h {12 mph} or more** **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction conditions during the first drive cycle. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• TFT sensor malfunction • Short to ground in wiring harness between TFT sensor and transaxle connector (primary) terminal E • Short to ground in wiring harness between TFT sensor and transaxle connector (primary) terminal H • Short to ground in wiring harness between transaxle connector (primary) terminal E and TCM terminal AA • Damaged connectors between TFT sensor and TCM • TCM malfunction

DTC P0712	Transaxle fluid temperature (TFT) sensor circuit malfunction (short to ground)

05-02B

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY CURRENT INPUT SIGNAL STATUS** • Turn the ignition switch to the ON position (engine off). • Inspect the voltage at TCM terminal AA. • Is the voltage **0.06 V or more**?	Yes	Go to the intermittent concern troubleshooting procedure. (See 01-03A-66 INTERMITTENT CONCERN TROUBLESHOOTING[LF, L3].)
		No	Go to the next step.
4	**INSPECT TERMINAL CONDITION** • Turn the ignition switch to the LOCK position. • Disconnect the transaxle connector (primary). • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are the terminals bent?	Yes	Repair or replace the terminals, then go to Step 8. • If the terminals cannot be repaired, replace the wiring harness, then go to Step 8.
		No	Go to the next step.
5	**INSPECT TFT SENSOR CIRCUIT** • Turn the ignition switch to the ON position (engine off). • Verify that the voltage changes to **4.67 V or more** at TCM terminal AA when transaxle connector (primary) is disconnected. • Does the voltage change?	Yes	Go to the next step.
		No	Go to Step 8.
6	**INSPECT TFT SENSOR CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between transaxle connector (primary) terminals (transaxle case side) and body ground. — E and body ground — H and body ground • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 8.
		No	Replace the TFT sensor, then go to Step 8. (See 05-17B-21 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR REMOVAL/INSTALLATION[FS5A-EL].)
7	**INSPECT TRANSAXLE CONNECTOR CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between transaxle connector (primary) terminal E (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to the next step.
		No	Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0712 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle under the following condition for **150 s or more**. — Vehicle speed (VSS PID) **20 km/h {12 mph} or more**. • Is the same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0713[FS5A-EL]

id050221801400

DTC P0713	Transaxle fluid temperature (TFT) sensor circuit malfunction (open circuit)
DETECTION CONDITION	• If the TCM detects the following condition for **150 s or more**, the TCM determines that the TFT sensor circuit has a malfunction. — TFT sensor voltage **4.67 V or more** and vehicle speed **20 km/h {12 mph} or more** **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction conditions during the first drive cycle. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• TFT sensor malfunction • Open circuit in wiring harness between TFT sensor and transaxle connector (primary) terminal E • Open circuit in wiring harness between TFT sensor and transaxle connector (primary) terminal H • Open circuit in wiring harness between transaxle connector (primary) terminal E and TCM terminal AA • Open circuit in wiring harness between transaxle connector (primary) terminal H and TCM terminal V • Damaged connectors between TFT sensor and TCM • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**VERIFY CURRENT INPUT SIGNAL STATUS** • Turn the ignition switch to the ON position (engine off). • Measure the voltage at TCM terminal AA. • Is the voltage **4.67 V or less**?	Yes	Go to the intermittent concern troubleshooting procedure. (See 01-03A-66 INTERMITTENT CONCERN TROUBLESHOOTING[LF, L3].)
		No	Go to the next step.
4	**INSPECT TRANSAXLE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Inspect transaxle connector (primary) connection. • Disconnect the transaxle connector (primary). • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 10.
5	**INSPECT TFT SENSOR CIRCUIT** • Turn the ignition switch to the ON position (engine off). • Measure the voltage at TCM terminal AA when connect between transaxle connector (primary) terminals E and H (wiring harness-side) using jumper wire. • Verify that voltage changes to **0.06 V or less**. • Does the voltage change?	Yes	Go to the next step.
		No	Go to Step 7.
6	**INSPECT TFT SENSOR CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between transaxle connector (primary) terminals (transaxle case side) E and H. • Is there continuity?	Yes	Replace the TFT sensor, then go to Step 10. (See 05-17B-21 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR REMOVAL/INSTALLATION[FS5A-EL].)
		No	Repair or replace the wiring harness, then go to Step 10.
7	**INSPECT TCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 10.
8	**INSPECT WIRING HARNESS FOR OPEN CIRCUIT** • Disconnect the transaxle connector (primary). • Connect the TCM connector. • Turn the ignition switch to the ON position (engine off). • Inspect the voltage at transaxle connector (primary) terminal E (vehicle wiring harness-side). • Is the voltage **5 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 10.
9	**INSPECT TRANSAXLE CONNECTOR CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch to the LOCK position. • Inspect for continuity between transaxle connector (primary) terminal H (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0713 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle under the following condition for **150 s or more**. — Vehicle speed (VSS PID) **20 km/h {12 mph} or more**. • Is the same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

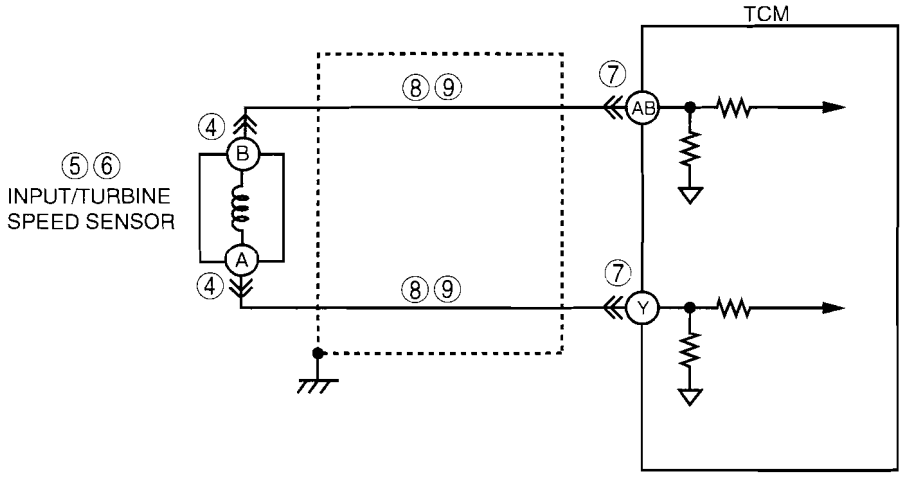
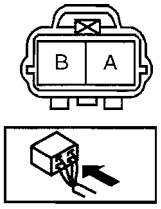
DTC P0715[FS5A-EL]

id050221806100

DTC P0715	Input/turbine speed sensor circuit malfunction
DETECTION CONDITION	• When all conditions below are satisfied and **0.7 s or more** have passed. — D range of TR switch input — Driving vehicle at vehicle speed of **41 km/h {25 mph} or more** — Input/turbine speed sensor signal not input **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction conditions during the first drive cycle. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Input/turbine speed sensor malfunction • Short to ground in wiring harness between input/turbine speed sensor terminal A and TCM terminal Y • Short to ground in wiring harness between input/turbine speed sensor terminal B and TCM terminal AB • Open circuit in wiring harness between input/turbine speed sensor terminal A and TCM terminal Y • Open circuit in wiring harness between input/turbine speed sensor terminal B and TCM terminal AB • Damaged connectors between input/turbine speed sensor and TCM • TCM malfunction



INPUT/TURBINE SPEED SENSOR WIRING HARNESS-SIDE CONNECTOR



TCM WIRING HARNESS-SIDE CONNECTOR

AM	AK	AH	AE	AB	Y	V	S	P	M	J	G	D	B
		AI	AF	AC	Z	W	T	Q	N	K	H	E	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY CURRENT INPUT SIGNAL STATUS** • Turn the ignition switch to the LOCK position. • Start the engine. • Measure the frequency of input/turbine speed sensor using a oscilloscope. — IG ON: **0 Hz** — Idle: **Within 320—374 Hz** (P, N position) • Are frequencies of input/turbine speed sensor within specifications?	Yes	Go to the intermittent concern troubleshooting procedure. (See 01-03A-66 INTERMITTENT CONCERN TROUBLESHOOTING[LF, L3].)
		No	Go to the next step.
4	**INSPECT INPUT/TURBINE SPEED SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the input/turbine speed sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 10.
5	**INSPECT INPUT/TURBINE SPEED SENSOR RESISTANCE** • Measure the resistance between the input/ turbine speed sensor terminals (part-side). • Is the resistance **within 250—600 ohms** between input/turbine speed sensor terminals (part-side)? (See 05-17B-24 INPUT/TURBINE SPEED SENSOR INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	Replace the input/turbine speed sensor, then go to Step 10. (See 05-17B-25 INPUT/TURBINE SPEED SENSOR REMOVAL/INSTALLATION[FS5A-EL].)
6	**INSPECT INPUT/TURBINE SPEED SENSOR** • Remove input/turbine speed sensor. • Is there iron powder stuck on input/turbine speed sensor? (See 05-17B-25 INPUT/TURBINE SPEED SENSOR REMOVAL/INSTALLATION[FS5A-EL].)	Yes	Clean the input/turbine speed sensor, then go to Step 10.
		No	Go to the next step.
7	**INSPECT TCM CONNECTOR FOR POOR CONNECTION** • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 10.
8	**INSPECT INPUT/TURBINE SPEED SENSOR CIRCUIT FOR OPEN CIRCUIT** • Inspect the following input/turbine speed sensor terminals (wiring harness-side) and TCM terminals (wiring harness-side): — A and Y — B and AB • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 10.
9	**INSPECT INPUT/TURBINE SPEED SENSOR CIRCUIT FOR SHORT TO GROUND** • Inspect input/turbine speed sensor terminal (wiring harness-side) and body ground. — A and body ground — B and body ground • Is there continuity?	Yes	Repair or replace the wiring harness, then go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
10	**VERIFY TROUBLESHOOTING OF DTC P0715 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle a vehicle speed **41 km/h {25 mph} or more** for **0.7 s or more**. • Is the same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0720[FS5A-EL]

id050221809800

DTC P0720	Vehicle speed sensor (VSS) circuit malfunction
DETECTION CONDITION	• Vehicle speed signal is not input after the following conditions are met and **4.5 s or more** have passed. — D range switch ON — Engine coolant temperature **60 °C {140 °F} or more** — Turbine speed **1,500 rpm or more** — Secondary gear revolution speed **50 rpm or more** **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction conditions during the first drive cycle. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• VSS malfunction • Open circuit in wiring harness between VSS terminal B and TCM terminal Z • Short to ground in wiring harness between VSS terminal B and TCM terminal Z • Open circuit in wiring harness between VSS terminal A and main relay terminal C • Short to ground in wiring harness between VSS terminal A and AT main relay terminal C • Open circuit in wiring harness between VSS terminal C and body ground • Damaged connectors between VSS and TCM • TCM malfunction

		AI	AF	AC	Z	W	T	Q	N	K	H	E	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair Information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT VSS CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the VSS connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the pin or connector, then go to Step 11.
4	**INSPECT VSS POWER CIRCUIT FOR OPEN CIRCUIT** • Verify that the VSS connector is disconnected. • Turn the ignition switch to the ON position (engine off). • Inspect the voltage between VSS terminal A (wiring harness-side) and ground. • Is the voltage **B+**?	Yes	Go to Step 6.
		No	Go to the next step.
5	**INSPECT VSS POWER CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between VSS terminal A (wiring harness-side) and ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
6	**INSPECT VSS GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the VSS connector is disconnected. • Inspect for continuity between VSS (wiring harness-side) terminal C and ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
7	**INSPECT TCM CONNECTOR FOR POOR CONNECTION** • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the pin or connector, then go to Step 11.
8	**INSPECT VEHICLE SPEED SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Disconnect the TCM connector and VSS connector. • Inspect for continuity between VSS terminal B and TCM terminal Z. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
9	**INSPECT VEHICLE SPEED SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verity that the VSS connector and TCM connector are disconnected. • Inspect for continuity between TCM terminal Z and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to the next step.
		No	Replace the VSS, then go to the next step. (See 05-17B-29 VEHICLE SPEED SENSOR (VSS) REMOVAL/INSTALLATION[FS5A-EL].)
10	**INSPECT VEHICLE SPEED SENSOR** • Inspect the VSS. (See 05-17B-28 VEHICLE SPEED SENSOR (VSS) INSPECTION[FS5A-EL].) • Is VSS normal?	Yes	Go to the next step.
		No	Repair or replace the VSS, then go to Step 11.

STEP	INSPECTION		ACTION
11	**VERIFY TROUBLESHOOTING OF DTC P0720 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Warm up engine. • Drive the vehicle under the following conditions for **4.5 s or more** while monitoring PIDs. — Engine coolant temp (ECT PID): **60 °C {140 °F} or more** — Drive in D or M range — Frequency of input/turbine speed sensor: **800 Hz or more** • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	No concern is detected. Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0731[FS5A-EL]

id050221801900

DTC P0731	Gear 1 incorrect (incorrect gear ratio detected)
DETECTION CONDITION	• The TCM monitors the revolution ratio of the forward clutch drum revolution to secondary gear revolution when the following monitoring conditions are met. If the revolution ratio is **2.157 or less**, the TCM determines that there is a malfunction. **Monitoring conditions:** — Engine running — ATF temperature **20 °C {68 °F} or more** — Driving in 1GR in D or M range — Turbine speed **within 225—4,987 rpm** — Secondary gear revolution speed **50 rpm or more** — Throttle opening angle **2.77% or more** — Differential gear case (output) revolution speed **35 rpm or more**. — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate. • The AT warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is not available. • A PENDING CODE is not available. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid A stuck • Pressure control solenoid A stuck • Line pressure low • One-way clutch slipping • Forward clutch slipping • Control valve stuck • Oil pump malfunction • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information.
		No	Go to the next step.
2	**INSPECT ATF CONDITION** • Inspect the ATF condition. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Replace the ATF, then go to Step 8.
3	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 8. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)
4	**INSPECT SHIFT SOLENOID A** • Perform operation inspection. (See 05-17B-30 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].) • Verify the click sound of shift solenoid A when applying B+ to transaxle terminal A. • Was a click heard from solenoids?	Yes	Go to the next step.
		No	Replace the solenoid that you could not hear a click sound, then go to Step 8. (See 05-17B-32 SOLENOID VALVE REMOVAL/ INSTALLATION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	All ranges: Replace the oil pump, then go to Step 8. Any ranges: Replace the primary control valve body, then go to Step 8. (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].)
6	**INSPECT STALL SPEED** • Measure the stall speed in D range. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) • Is the stall speed within the specification?	Yes	Go to the next step.
		No	Replace the automatic transaxle, then go to Step 8. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION[FS5A-EL].)
7	**INSPECT FREQUENCY OF INPUT/TURBINE SPEED SENSOR WHEN DRIVING VEHICLE** • Turn the ignition switch to the LOCK position. • Connect the M-MDS. • Start the engine. • Measure the frequency of input/turbine speed sensor while driving vehicle under the following conditions: — Vehicle speed (VSS PID): **20 km/h {12 mph}** — Drive in the D range, 1GR — Throttle opening angle (THOP PID): **approx. 25%** • Was the frequency of the input/turbine speed sensor at **approx. 1,300 Hz**?	Yes	Go to the next step.
		No	Replace the primary control valve body, then go to the next step. (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].)

STEP	INSPECTION		ACTION
8	**VERIFY REPAIR OF DTC P0731** • Make sure to reconnect all the disconnected connectors. • Clear the DTC using the M-MDS. • Start the engine. • Warm up the transaxle. • Drive the vehicle under the following conditions at least 4 times for **more than 1 s**: — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range, 1GR — Throttle opening angle (THOP PID): **2.77% or more** — Vehicle speed (VSS PID): **4 km/h {3 mph} or more** • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0732[FS5A-EL]

id050221802000

DTC P0732	Gear 2 incorrect (incorrect gear ratio detected)
DETECTION CONDITION	• The TCM monitors revolution ratio of the forward clutch drum revolution to the secondary gear case revolution when the following monitoring conditions are met. If revolution ratio is **1.249 or less** or **2.157 or more**, the TCM determines that there is a malfunction. **Monitoring conditions:** — Engine running — ATF temperature **20 °C {68 °F} or more** — Driving in 2 GR in D or M range — Turbine speed **within 225—4,987 rpm** — Secondary gear revolution speed **50 rpm or more** — Differential gear case (output) revolution speed **35 rpm or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate. • The AT warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is not available. • A PENDING CODE is not available. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoids A, B or C stuck • Pressure control solenoid A stuck • Line pressure low • 2-4 brake band slipping • Forward clutch slipping • Control valve stuck • Oil pump malfunction • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information.
		No	Go to the next step.
2	**INSPECT ATF CONDITION** • Inspect the ATF condition. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Replace the ATF, then go to Step 8.
3	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 8. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)
4	**INSPECTION SHIFT SOLENOID A, B AND C FOR CLICK SOUND** • Perform operation inspection. (See 05-17B-30 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].) • Verify the click sound of shift solenoid A, B, and C when applying B+ to each transaxle terminal. • Was a click heard from solenoids?	Yes	Go to the next step.
		No	Replace the solenoid where you could not hear a click sound, then go to Step 8. (See 05-17B-32 SOLENOID VALVE REMOVAL/ INSTALLATION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	All ranges: Replace the oil pump, then go to Step 8. Any ranges: Replace the primary control valve body, then go to Step 8. (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].)
6	**INSPECT STALL SPEED** • Measure the stall speed in D range. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) • Is the stall speed within the specification?	Yes	Go to the next step.
		No	Replace the automatic transaxle, then go to Step 8. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION[FS5A-EL].)
7	**INSPECT FREQUENCY OF INPUT/TURBINE SPEED SENSOR WHEN DRIVING VEHICLE** • Turn the ignition switch to the LOCK position. • Connect the M-MDS. • Start the engine. • Measure the frequency of input/turbine speed sensor while driving vehicle under the following conditions: — Vehicle speed (VSS PID): **40 km/h {24 mph}** — Drive in the D range, 2GR — Throttle opening angle (THOP PID): **approx. 25%** • Was the frequency of the input/turbine speed sensor at **approx. 1,300 Hz**?	Yes	Go to the next step.
		No	Replace the primary control valve body, then go to the next step. (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].)

STEP	INSPECTION		ACTION
8	**VERIFY REPAIR OF DTC P0732** • Make sure to reconnect all the disconnected connectors. • Clear the DTC using the M-MDS. • Start the engine. • Warm up the transaxle. • Drive the vehicle under the following conditions at least 3 times for **more than 1 s**: — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range, 2GR — Vehicle speed (VSS PID): **3.8 km/h {2.4 mph} or more** • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0733[FS5A-EL]

id050221802100

DTC P0733	Gear 3 incorrect (incorrect gear ratio detected)
DETECTION CONDITION	• The TCM monitors revolution ratio of the forward clutch drum revolution to the secondary gear case revolution when the following monitoring conditions are met. If the revolution ratio is **0.863 or less**, the TCM determines that there is a malfunction. **Monitoring conditions:** — Engine running — ATF temperature **20 °C {68 °F} or more** — Driving in 3 GR in D or M range — Torque converter clutch (TCC) not operating — Turbine speed **within 225—4,987 rpm** — Secondary gear revolution speed **50 rpm or more** — Differential gear case (output) revolution speed **35 rpm or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 • The TCM monitors revolution ratio of the forward clutch drum revolution to the secondary gear case revolution when the following monitoring conditions are met. If the revolution ratio is **2.175 or more**, the TCM determines that there is a malfunction. **Monitoring conditions:** — Engine running — ATF temperature **20 °C {68 °F} or more** — Driving in 3 GR in D or M range — Turbine speed **within 225—4,987 rpm** — Secondary gear revolution speed **50 rpm or more** — Differential gear case (output) revolution speed **35 rpm or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 • The TCM monitors revolution ratio of the forward clutch drum revolution to the secondary gear case revolution when the following monitoring conditions are met. If the revolution ratio is **within 1.345—1.644**, the TCM determines that there is a malfunction. **Monitoring conditions:** — Engine running — ATF temperature **20 °C {68 °F} or more** — Driving in 3 GR in D or M range — Torque converter clutch (TCC) not operating — Vehicle speed **26 km/h {16 mph} or more** — Turbine speed **within 225—4,987 rpm** — Secondary gear revolution speed **50 rpm or more** — Differential gear case (output) revolution speed **35 rpm or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate. • The AT warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is not available. • A PENDING CODE is not available. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoids A or C stuck • Pressure control solenoid A stuck • Line pressure low • 3-4 clutch slipping • Forward clutch slipping • Control valve stuck (Bypass, TCC or 3-4 shift valve) • Oil pump malfunction • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information.
		No	Go to the next step.
2	**INSPECT ATF CONDITION** • Inspect the ATF condition. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Replace the ATF, then go to Step 8.
3	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 8. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)
4	**INSPECTION SHIFT SOLENOID A AND C FOR CLICK SOUND** • Perform operation inspection. (See 05-17B-30 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].) • Verify the click sound of shift solenoid A and C when applying B+ to each transaxle terminal. • Was a click heard from solenoids?	Yes	Go to the next step.
		No	Replace the solenoid where you could not hear a click sound, then go to Step 8. (See 05-17B-32 SOLENOID VALVE REMOVAL/ INSTALLATION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	All ranges: Replace the oil pump, then go to Step 8. Any ranges: Replace the primary control valve body, then go to Step 8. (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].)
6	**INSPECT STALL SPEED** • Measure the stall speed in D range. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) • Is the stall speed within the specification?	Yes	Go to the next step.
		No	Replace the automatic transaxle, then go to Step 8. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION[FS5A-EL].)
7	**INSPECT FREQUENCY OF INPUT/TURBINE SPEED SENSOR WHEN DRIVING VEHICLE** • Turn the ignition switch to the LOCK position. • Connect the M-MDS. • Start the engine. • Measure the frequency of input/turbine speed sensor while driving vehicle under the following conditions: — Vehicle speed (VSS PID): **60 km/h {37 mph}** — Drive in the D range, 3GR — Throttle opening angle (THOP PID): **approx. 25%** • Was the frequency of the input/turbine speed sensor at **approx. 1,300 Hz**?	Yes	Go to the next step.
		No	Replace the primary control valve body, then go to the next step. (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].)

STEP	INSPECTION		ACTION
8	**VERIFY REPAIR OF DTC P0733** • Make sure to reconnect all the disconnected connectors. • Clear the DTC using the M-MDS. • Start the engine. • Warm up the transaxle. • Drive the vehicle under the following conditions for **more than 2 s**: — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range, 3GR — Vehicle speed (VSS PID): **26 km/h {16 mph} or more** • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0734[FS5A-EL]

id050221802200

DTC P0734	Gear 4 incorrect (incorrect gear ratio detected)
DETECTION CONDITION	• The TCM monitors revolution ratio of the forward clutch drum revolution to the secondary gear case revolution when the following monitoring conditions are met. If the revolution ratio is **0.6 or less** or **1.249 or more**, the TCM determines that there is a malfunction. **Monitoring conditions:** — Engine running — ATF temperature **20 °C {68 °F} or more** — Driving in 4GR in D or M range — Turbine speed **within 225—4,987 rpm** — Secondary gear revolution speed **50 rpm or more** — Vehicle speed **28 km/h {17 mph} or more** — Throttle opening angle at closed throttle position — Differential gear case (output) revolution speed **35 rpm or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 • The TCM monitors revolution ratio of the forward clutch drum revolution to the secondary gear case revolution when the following monitoring conditions are met. If the revolution ratio is **within 0.91—1.09**, the TCM determines that there is a malfunction. **Monitoring conditions:** — Engine running — ATF temperature **20 °C {68 °F} or more** — Driving in 4GR in D or M range — Torque converter clutch (TCC) not operating — Vehicle speed **36 km/h {22 mph} or more** — Turbine speed **within 225—4,987 rpm** — Secondary gear revolution speed **50 rpm or more** — Differential gear case (output) revolution speed **35 rpm or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate. • The AT warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is not available. • A PENDING CODE is not available. • The DTC is stored in the TCM memory.

DTC P0734	Gear 4 incorrect (incorrect gear ratio detected)
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoids A, B or C stuck • Pressure control solenoid A stuck • Line pressure low • 2-4 brake band slipping • 3-4 clutch slipping • Forward clutch slipping • Control valve stuck (Bypass or 3-4 shift valve) • Oil pump malfunction • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information.
		No	Go to the next step.
2	**INSPECT ATF CONDITION** • Inspect the ATF condition. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Replace the ATF, then go to Step 8.
3	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 8. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)
4	**INSPECT SHIFT SOLENOID A AND D FOR CLICK SOUND** • Perform operation inspection. (See 05-17B-30 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].) • Verify the click sound of shift solenoids A and D when applying B+ to each transaxle terminal. **Note** • The click from solenoid D is barely audible. Remove solenoids to correctly inspect if necessary. • Was a click heard from solenoids?	Yes	Go to the next step.
		No	Replace the solenoid where you could not hear click sound, then go to Step 8. (See 05-17B-32 SOLENOID VALVE REMOVAL/ INSTALLATION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	All ranges: Replace the oil pump, then go to Step 8. Any ranges: Replace the primary control valve body, then go to Step 8. (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].)
6	**INSPECT STALL SPEED** • Measure the stall speed in D range. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) • Is the stall speed within the specification?	Yes	Go to the next step.
		No	Replace the automatic transaxle, then go to Step 8. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION[FS5A-EL].)

STEP	INSPECTION		ACTION
7	**INSPECT FREQUENCY OF INPUT/TURBINE SPEED SENSOR WHEN DRIVING VEHICLE** • Turn the ignition switch to the LOCK position. • Connect the M-MDS. • Start the engine. • Measure the frequency of input/turbine speed sensor while driving vehicle under the following conditions: — Vehicle speed (VSS PID): **80 km/h {49 mph}** — Drive in the D range, 4GR — Throttle opening angle (THOP PID): **approx. 25%** • Was the frequency of the input/turbine speed sensor at **approx. 1,300 Hz**?	Yes	Go to the next step.
		No	Replace the primary control valve body, then go to the next step. (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].)
8	**VERIFY REPAIR OF DTC P0734** • Make sure to reconnect all the disconnected connectors. • Clear the DTC using the M-MDS. • Start the engine. • Warm up the transaxle. • Drive the vehicle under the following conditions for **more than 5 s**: — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range, 4GR — Throttle opening angle (THOP PID): **0%** — Vehicle speed (VSS PID): **36 km/h {22 mph} or more** • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0735[FS5A-EL]

id050221802300

DTC P0735	Gear 5 incorrect (incorrect gear ratio detected)
DETECTION CONDITION	• The TCM monitors revolution ratio of the secondary gear revolution to the differential gear case revolution when the following monitoring conditions are met. When any of the following conditions are met: — Revolution ratio of the secondary gear and the differential gear case is **1.11 or less** when driving in 3GR or 4GR. — Revolution ratio of the secondary gear and differential gear case is **1.11 or more** when driving in 5GR. **Monitoring conditions:** — Engine running — ATF temperature **20 °C {68 °F} or more** — Throttle opening angle **2.77% or more** — Secondary gear revolution speed **50 rpm or more** — Turbine speed **within 225—4,987 rpm** — Vehicle speed **29 km/h {18 mph} or more** — Differential gear case (output) revolution speed **35 rpm or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0777, P0778, P0791, P2707, P2708, P2709 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate. • The AT warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is not available. • A PENDING CODE is not available. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid F stuck • Pressure control solenoid B stuck • Line pressure low • Direct clutch slipping • Reduction brake slipping • Control valve stuck (Bypass or 4-5 shift valve) • Oil pump malfunction • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information.
		No	Go to the next step.
2	**INSPECT ATF CONDITION** • Inspect the ATF condition. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Replace the ATF, then go to Step 9.
3	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 9. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)
4	**INSPECT SHIFT SOLENOID F AND PRESSURE CONTROL SOLENOID B FOR CLICK SOUND** • Perform operation inspection. (See 05-17B-33 SOLENOID VALVE INSPECTION (SECONDARY CONTROL VALVE BODY)[FS5A-EL].) • Verify the click sound of shift solenoid F and pressure control solenoid B when applying B+ to each transaxle terminal. • Was a click heard from solenoids?	Yes	Go to the next step.
		No	Replace the solenoid where you could not hear click sound, then go to Step 9. (See 05-17B-32 SOLENOID VALVE REMOVAL/ INSTALLATION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].)

STEP	INSPECTION		ACTION
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	All ranges: Replace the oil pump, then go to Step 9. Any ranges: Replace the secondary control valve body, then go to Step 8. (See 05-17B-54 SECONDARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-55 SECONDARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].)
6	**INSPECT STALL SPEED** • Measure the stall speed in D range. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) • Is the stall speed within the specification?	Yes	Go to the next step.
		No	Replace the automatic transaxle, then go to Step 9. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FS5A-EL].)
7	**INSPECT FREQUENCY OF INTERMEDIATE SENSOR WHEN DRIVING VEHICLE** • Turn the ignition switch to the LOCK position. • Connect the M-MDS. • Start the engine. • Measure the frequency of intermediate sensor while driving vehicle under the following conditions: — Vehicle speed (VSS PID): **80 km/h {49 mph}** — Drive in the D range, 4GR — Throttle opening angle (THOP PID): **approx. 25%** • Was the frequency of the intermediate sensor at **approx. 4,800 Hz**?	Yes	Go to the next step.
		No	Replace the secondary control valve body, then go to the next step. (See 05-17B-54 SECONDARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-55 SECONDARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].)
8	**INSPECT FREQUENCY OF INTERMEDIATE SENSOR WHEN DRIVING VEHICLE** • Turn the ignition switch to the LOCK position. • Connect the M-MDS. • Start the engine. • Measure the frequency of input/turbine speed sensor while driving vehicle under the following conditions: — Vehicle speed (VSS PID): **90 km/h {56 mph}** — Drive in the D range, 5GR — Throttle opening angle (THOP PID): **approx. 25%** • Was the frequency of the input/turbine speed sensor at **approx. 4,100 Hz**?	Yes	Go to the next step.
		No	Replace the secondary control valve body, then go to the next step. (See 05-17B-54 SECONDARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-55 SECONDARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].)
9	**VERIFY REPAIR OF DTC P0735** • Make sure to reconnect all the disconnected connectors. • Clear the DTC using the M-MDS. • Start the engine. • Warm up the transaxle. • Drive the vehicle under the following conditions for **more than 5 s**: — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range, 5GR — Throttle opening angle (THOP PID): **2.77% or more** • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0741[FS5A-EL]

id050221807900

DTC P0741	Torque converter clutch (TCC) stuck off
DETECTION CONDITION	• When all conditions below are satisfied. — ATF temperature **20 °C {68 °F} or more** — Driving in 4GR at D range — Engine running — Turbine speed **within 225—4,987 rpm** — Vehicle speed **within 60—100 km/h {37—62 mph}** — Torque converter clutch (TCC) operating — Shift solenoid A duty value exceeds **99%** — Difference between engine speed and turbine speed **more than 100 rpm** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate if TCM detects the above malfunction conditions during first the drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is not available. • The AT warning light illuminates • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoids A, B, C, D, E, and pressure control solenoid A stuck • Line pressure low • 2-4 brake band slipping • 3-4 clutch slipping • Control valve stuck • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 4. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FS5A-EL].)
3	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 6. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)
4	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 6. • Any ranges: Replace the automatic transaxle, then go to Step 6. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)

STEP	INSPECTION		ACTION
5	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the primary control valve body. • Disassemble the primary control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)	Yes	Replace the automatic transaxle, then go to the next step (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
6	**VERIFY TROUBLESHOOTING OF DTC P0741 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up engine and ATX. • Drive the vehicle under the following conditions for **5 s or more**. — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range, 4GR (TCC operation) — Vehicle speed (VSS PID): **within 60—100 km/h {37—62 mph}** • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0742[FS5A-EL]

id050221808000

DTC P0742	Torque converter clutch (TCC) stuck on
DETECTION CONDITION	• All of the following conditions are satisfied under each of the following throttle conditions. — ATF temperature **20 °C {68 °F} or more** — Driving in 4GR at D or M range — Engine running — Turbine speed **within 225—4,987 rpm** — Vehicle speed **70 km/h {43 mph} or less** — Torque converter clutch (TCC) not operating — Difference between engine speed and turbine speed **50 rpm or less** — DTC P0734 not output — Throttle conditions • Throttle opening angle (THOP PID) is **6.25% or more** and **5 s or more** have passed. • Throttle opening angle (THOP PID) is **within 3.13—6.25%** and **3 s or more** have passed. • Throttle opening angle is at closed throttle position and **5 s or more** have passed. **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate if TCM detects the above malfunction conditions during first the drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is not available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoids A, B, C, D, E, and pressure control solenoid A stuck • Line pressure low • 2-4 brake band slipping • 3-4 clutch slipping • Control valve stuck • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 4. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FS5A-EL].)
3	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 6. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)
4	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 6. • Any ranges: Replace the automatic transaxle, then go to Step 6. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
5	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the primary control valve body. • Disassemble the primary control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)	Yes	Replace the automatic transaxle, then go to the next step. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
6	**VERIFY TROUBLESHOOTING OF DTC P0742 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up engine and ATX. • Drive the vehicle under the following conditions: — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range, 4GR (TCC not in operation) — Vehicle speed (VSS PID): **70 km/h {43 mph} or less**. • Throttle conditions — Throttle opening angle (THOP PID) **6.25% or more** and **5 s or more** have passed. — Throttle opening angle (THOP PID) **within 3.13—6.25%** and **3 s or more** have passed. — Throttle opening angle at closed throttle position and **5 s or more** have passed. • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0744[FS5A-EL]

id050221809700

DTC P0744	Slip control malfunction
DETECTION CONDITION	• With the engine running, all of the following conditions are met: — ATF temperature **20 °C {68 °F} or more** — Secondary gear revolution speed **50 rpm or more** — Differential gear case (output) revolution speed **35 rpm or more** — Throttle opening angle **18.75% or less** — Torque converter clutch (TCC) operating — Drive the vehicle at 3GR, 4GR, or 5GR, slip control operation — When any of the following conditions are met: • Revolution ratio of the forward clutch drum to secondary gear is **1.344 or less** or **1.645 or more** when driving in 2GR. • Revolution ratio of the forward clutch drum to secondary gear is **0.91 or less** or **1.09 or more** when driving in 3GR. • Revolution ratio of the forward clutch drum to secondary gear is **0.636 or less** or **0.817 or more** when driving in 4GR. — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • A PENDING CODE is not available. • FREEZE FRAME DATA is not available. • The AT warning light illuminates. • DTCs are stored in the TCM memory.
POSSIBLE CAUSE	• Forward clutch not engaged or slipped • Short to power supply in wiring harness between shift solenoid A terminal B and TCM terminal 1A • Shift solenoid A stuck on • Short to power supply in wiring harness between shift solenoid D terminal A and TCM terminal 1F • Shift solenoid D stuck on • Short to ground in wiring harness between shift solenoid E terminal A and TCM terminal 1H • Shift solenoid E stuck off • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY DTCS** • Turn the ignition switch to the LOCK position, then to the ON position. • Verify the DTCs in the TCM memory. • Are DTCs P0752, P0753, P0767, P0768, P0771, and P0773 output?	Yes	Go to the applicable DTC inspection.
		No	Replace the forward clutch, then go to the next step.
3	**VERIFY TROUBLESHOOTING OF DTC P0744 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Warm up the engine. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 5GR. — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range — Throttle opening angle (THOP PID): **18.75% or less** • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	No concern is detected. Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0745[FS5A-EL]

id050221806600

DTC P0745	Pressure control solenoid A malfunction
DETECTION CONDITION	• If the TCM detects either of the following conditions, the TCM determines that pressure control solenoid A circuit has a malfunction. — Pressure control solenoid A voltage stuck **0 V** after engine start — Pressure control solenoid A voltage stuck **B+** after engine start **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate if TCM detects above malfunction conditions during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is not available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Pressure control solenoid A malfunction • Open circuit in wiring harness between pressure control solenoid A terminal B and transaxle connector (primary) terminal I • Open circuit in wiring harness between transaxle connector (primary) terminal I and TCM terminal AE • Short to ground in wiring harness between transaxle connector (primary) terminal D and TCM terminal AD • Short to power supply in wiring harness between transaxle connector (primary) terminal D and TCM terminal AD • Open circuit in wiring harness between pressure control solenoid A terminal A and transaxle connector (primary) terminal D • Open circuit in wiring harness between transaxle connector (primary) terminal D and TCM terminal AD • Damaged connector between pressure control solenoid A and TCM • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT TRANSAXLE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the transaxle connector (primary). • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 10.
3	**INSPECT RESISTANCE** • Inspect the resistance between transaxle connector (primary) terminals D and I (transaxle case side). • Is the resistance **within 2.4—7.3 ohms**? (See 05-17B-30 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].)	Yes	Go to Step 6.
		No	Go to the next step.
4	**INSPECT PRESSURE CONTROL SOLENOID CONNECTOR FOR POOR CONNECTION** • Disconnect the pressure control solenoid connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 10.
5	**INSPECT RESISTANCE** • Inspect the resistance between the pressure control solenoid terminals A and B. • Is the resistance **within 2.4—7.3 ohms**? (See 05-17B-30 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].)	Yes	Replace the solenoid wiring harness, then go to Step 10.
		No	Verify pressure control solenoid installation. • If solenoid installed correctly, replace the pressure control solenoid, then go to Step 10. (See 05-17B-32 SOLENOID VALVE REMOVAL/ INSTALLATION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].)
6	**INSPECT TCM CONNECTOR FOR POOR CONNECTION** • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 10.
7	**INSPECT TRANSAXLE CONNECTOR CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between the TCM (wiring harness-side) and transaxle connector (primary) (wiring harness-side). — TCM terminal AD and transaxle connector (primary) terminal D — TCM terminal AE and transaxle connector (primary) terminal I • Is there continuity between terminals?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, the go to Step 10.
8	**INSPECT TRANSAXLE CONNECTOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (engine off). • Inspect the voltage at transaxle connector (primary) terminal D (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 10.
9	**INSPECT TCM CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between transaxle connector (primary) terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
10	**VERIFY TROUBLESHOOTING OF DTC P0745 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Make sure to wait **more than 1 s** after turning the ignition switch to the ON position. • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	No concern is detected. Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0751[FS5A-EL]

id050221808100

DTC P0751	Shift solenoid A stuck off
DETECTION CONDITION	• When P0731, P0732, and P0733 are not output, and all conditions below are satisfied. — Engine running — ATF temperature **20 °C {68 °F} or more** — Driving in 4GR at D or M range — Vehicle speed **36 km/h {22 mph} or more** — Turbine speed **within 225—4,987 rpm** — Secondary gear revolution speed **50 rpm or more** — Differential gear case (output) revolution speed **35 rpm or more** — Torque converter clutch (TCC) not operating — Revolution ratio of forward clutch drum revolution to secondary gear revolution **within 0.91—1.09** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid A stuck off • Control valve stuck • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FS5A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the automatic transaxle, then go to Step 7. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the primary control valve body. • Disassemble the primary control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)	Yes	Replace the automatic transaxle, then go to the next step. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
7	**VERIFY TROUBLESHOOTING OF DTC P0751 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 4GR. — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range — Vehicle speed (VSS PID): **36 km/h {22 mph}** (4GR only) • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0752[FS5A-EL]

id050221808200

DTC P0752	Shift solenoid A stuck on
DETECTION CONDITION	• When P0734 is not output, and all conditions below are satisfied in 1GR and 2GR. — Engine running — ATF temperature **20 °C {68 °F} or more** — D range selected — Brake pedal depressed — Throttle opening angle at closed throttle position — Vehicle speed **0 km/h {0 mph}** — Input/turbine speed sensor signal **187.5 rpm or more**. — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid A stuck on • Control valve stuck • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FS5A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the automatic transaxle, then go to Step 7. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)

STEP	INSPECTION		ACTION
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the primary control valve body. • Disassemble the primary control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)	Yes	Replace the automatic transaxle, then go to the next step. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
7	**VERIFY TROUBLESHOOTING OF DTC P0752 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 4GR: — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

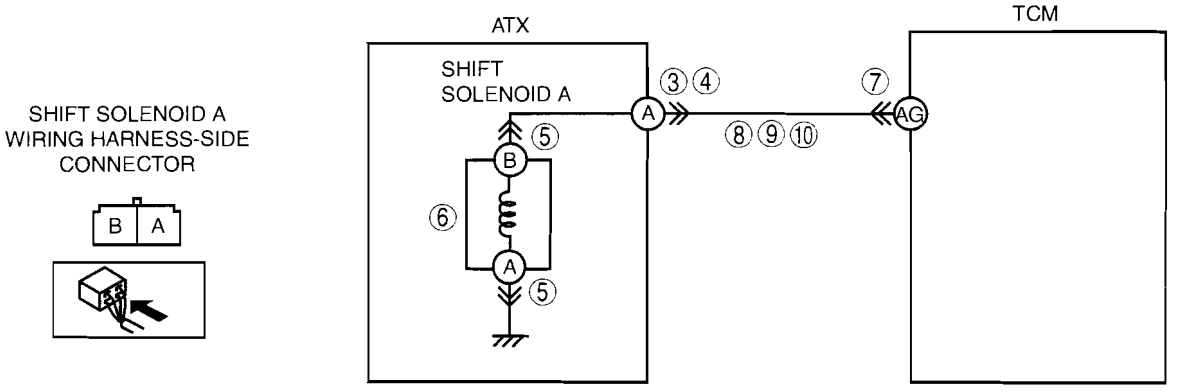
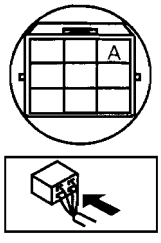
DTC P0753[FS5A-EL]

id050221808300

DTC P0753	Shift solenoid A malfunction (electrical)
DETECTION CONDITION	• If TCM detects either of the following conditions, TCM determines that shift solenoid A circuit has a malfunction. — Shift solenoid A voltage stuck at **B+** after engine start — Shift solenoid A voltage stuck at **0 V** after engine start **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction conditions during the first drive cycle. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Shift solenoid A malfunction • Short to ground in wiring harness between transaxle connector (primary) terminal A and TCM terminal AG • Short to power supply in wiring harness between transaxle connector (primary) terminal A and TCM terminal AG • Open circuit in wiring harness between shift solenoid A terminal B and transaxle connector (primary) terminal A • Open circuit in wiring harness between transaxle connector (primary) terminal A and TCM terminal AG • Open circuit in wiring harness between shift solenoid A terminal A and body ground • Damaged connector between shift solenoid A and TCM • TCM malfunction



TRANSAXLE CONNECTOR (PRIMARY) WIRING HARNESS-SIDE CONNECTOR



TCM WIRING HARNESS-SIDE CONNECTOR

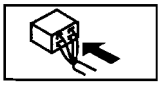
AM	AK	AH	AE	AB	Y	V	S	P	M	J	G	D	B
		AI	AF	AC	Z	W	T	Q	N	K	H	E	



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TRANSAXLE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the transaxle connector (primary). • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
4	**INSPECT RESISTANCE** • Inspect the resistance between transaxle connector (primary) terminal A (transaxle case side) and body ground. • Is the resistance **within 1.0—4.2 ohms**? (See 05-17B-30 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].)	Yes	Go to Step 7.
		No	Go to the next step.
5	**INSPECT SHIFT SOLENOID A CONNECTOR FOR POOR CONNECTION** • Disconnect the shift solenoid A connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
6	**INSPECT RESISTANCE** • Inspect the resistance between shift solenoid A terminals A and B (part-side). • Is the resistance **within 1.0—4.2 ohms**? (See 05-17B-30 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].)	Yes	Replace the solenoid wiring harness, then go to Step 11.
		No	Verify shift solenoid A installation. • If solenoid installed correctly, replace the solenoid, then go to Step 11. (See 05-17B-32 SOLENOID VALVE REMOVAL/ INSTALLATION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].)
7	**INSPECT TCM CONNECTOR FOR POOR CONNECTION** • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
8	**INSPECT TRANSAXLE CONNECTOR CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between TCM terminal AG (wiring harness-side) and transaxle connector (primary) terminal A (wiring harness-side). • Is there continuity between terminals?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
9	**INSPECT TRANSAXLE CONNECTOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (engine off). • Inspect the voltage at transaxle connector (primary) terminal A (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
10	**INSPECT TCM CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between TCM terminal AG (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 11.
		No	Go to the next step.

STEP	INSPECTION		ACTION
11	**VERIFY TROUBLESHOOTING OF DTC P0753 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle in D range and make sure that the gears shift smoothly from 1GR to 4GR. • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	No concern is detected. Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0756[FS5A-EL]

id050221808400

DTC P0756	Shift solenoid B stuck off
DETECTION CONDITION	• When DTC P0732, P0733, and P0734 are not output, and all conditions below are satisfied. — Engine running — ATF temperature **20 °C {68 °F} or more** — Driving in 1GR at D range — Turbine speed **within 225—4,987 rpm** — Secondary gear revolution speed **50 rpm or more** — Differential gear case (output) revolution speed **35 rpm or more** — Throttle opening angle (THOP PID) **2.77% or more** — Revolution ratio of forward clutch drum revolution to secondary gear revolution **2.157 or less** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid B stuck off • Control valve stuck • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FS5A-EL].)

STEP	INSPECTION		ACTION
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the automatic transaxle, then go to Step 7. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the primary control valve body. • Disassemble the primary control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)	Yes	Replace the automatic transaxle, then go to the next step. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
7	**VERIFY TROUBLESHOOTING OF DTC P0756 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 4GR: — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range — Engine speed (RPM PID): **450 rpm or more** — Throttle opening angle (THOP PID): **2.77% or more** • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0757[FS5A-EL]

id050221808500

DTC P0757	Shift solenoid B stuck on
DETECTION CONDITION	• When DTC P0731 and P0733 are not output, and both the following conditions are satisfied. — When all conditions below are satisfied while driving in 2GR • Engine running • ATF temperature **20 °C {68 °F} or more** • Driving in D or M range • Turbine speed **within 225—4,987 rpm** • Secondary gear revolution speed **50 rpm or more** • Differential gear case (output) revolution speed **35 rpm or more** • Revolution ratio of forward clutch drum revolution to secondary gear revolution **1.249 or less** or **2.157 or more** • None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 — When all conditions below are satisfied with driving in 4GR • Engine running • ATF temperature **20 °C {68 °F} or more** • Driving in D or M range • Turbine speed **within 225—4,987 rpm** • Secondary gear revolution speed **50 rpm or more** • Differential gear case (output) revolution speed **35 rpm or more** • Vehicle speed **28 km/h {17 mph} or more** • Throttle opening angle at closed throttle position • Revolution ratio of forward clutch drum revolution to secondary gear revolution **0.6 or less** or **1.249 or more** • None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid B stuck on • Control valve stuck • TCM malfunction

Diagnostic procedure

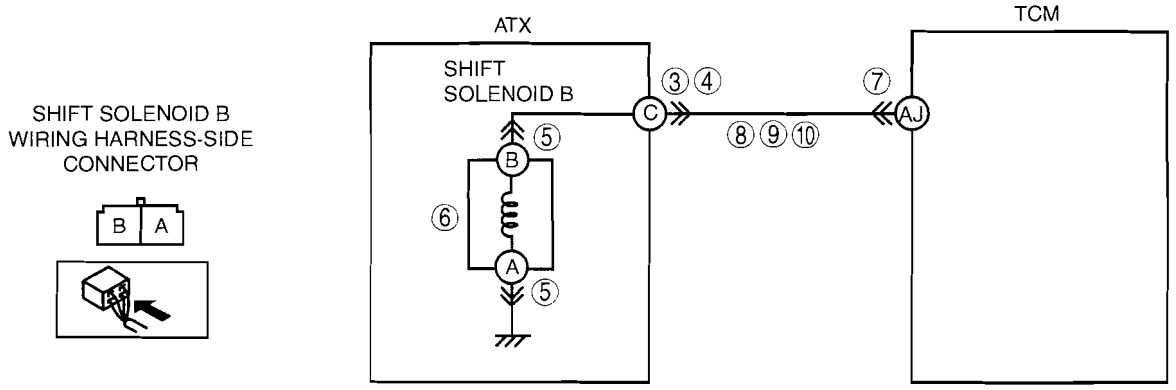
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FS5A-EL].)

STEP	INSPECTION		ACTION
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the automatic transaxle, then go to Step 7. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the primary control valve body. • Disassemble the primary control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)	Yes	Replace the automatic transaxle, then go to the next step. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
7	**VERIFY TROUBLESHOOTING OF DTC P0757 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions make sure that gears shift smoothly from 1GR to 4GR. — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range — Engine speed (RPM PID): **450 rpm or more** — Throttle opening angle (THOP PID): **0%** (4GR only) — Vehicle speed (VSS PID): **28 km/h {17 mph} or more** (4GR only) • Is the PENDING CODE present?	Yes	Replace the TCM. then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

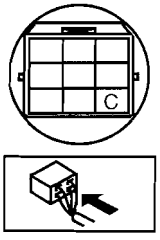
DTC P0758[FS5A-EL]

id050221808600

DTC P0758	Shift solenoid B malfunction (electrical)
DETECTION CONDITION	• If the TCM detects either of the following conditions, the TCM determines that shift solenoid B circuit has a malfunction. — Shift solenoid B voltage stuck at **B+** after engine start — Shift solenoid B voltage stuck at **0 V** after engine start **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction conditions during the first drive cycle. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Shift solenoid B malfunction • Short to ground in wiring harness between transaxle connector (primary) terminal C and TCM terminal AJ • Short to power supply in wiring harness between transaxle connector (primary) terminal C and TCM terminal AJ • Open circuit in wiring harness between shift solenoid B terminal B and transaxle connector (primary) terminal C • Open circuit in wiring harness between transaxle connector (primary) terminal C and TCM terminal AJ • Open circuit in wiring harness between shift solenoid B terminal A and body ground • Damaged connector between shift solenoid B and TCM • TCM malfunction



TRANSAXLE CONNECTOR (PRIMARY) WIRING HARNESS-SIDE CONNECTOR



TCM WIRING HARNESS-SIDE CONNECTOR

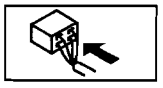
AM	AK	AH	AE	AB	Y	V	S	P	M	J	G	D	B
		AI	AF	AC	Z	W	T	Q	N	K	H	E	



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TRANSAXLE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the transaxle connector (primary). • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
4	**INSPECT RESISTANCE** • Inspect the resistance between transaxle connector (primary) terminal C (transaxle case side) and body ground. • Is the resistance **within 1.0—4.2 ohms**? (See 05-17B-30 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].)	Yes	Go to Step 7.
		No	Go to the next step.
5	**INSPECT SHIFT SOLENOID B CONNECTOR FOR POOR CONNECTION** • Disconnect the shift solenoid B connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
6	**INSPECT RESISTANCE** • Inspect the resistance between shift solenoid B terminals A and B (part-side). • Is the resistance **within 1.0—4.2 ohms**? (See 05-17B-30 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].)	Yes	Replace the solenoid wiring harness, then go to Step 11.
		No	Verify shift solenoid B installation. • If solenoid installed correctly, replace the solenoid, then go to Step 11. (See 05-17B-32 SOLENOID VALVE REMOVAL/ INSTALLATION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].)
7	**INSPECT TCM CONNECTOR FOR POOR CONNECTION** • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
8	**INSPECT TRANSAXLE CONNECTOR CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between TCM terminal AJ (wiring harness-side) and transaxle connector (primary) terminal C (wiring harness-side). • Is there continuity between terminals?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
9	**INSPECT TRANSAXLE CONNECTOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (engine off). • Inspect for voltage at transaxle connector (primary) terminal C (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
10	**INSPECT TCM CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between TCM terminal AJ (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 11.
		No	Go to the next step.

STEP	INSPECTION		ACTION
11	**VERIFY TROUBLESHOOTING OF DTC P0758 SHIFT SOLENOID B COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle in D range and make sure that the gears shift smoothly from 1GR to 4GR. • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0761[FS5A-EL]

id050221808700

DTC P0761	Shift solenoid C stuck off
DETECTION CONDITION	• When DTC P0733 and P0734 are not output, and both the following conditions are satisfied. — When all conditions below are satisfied while driving in 1GR • Engine running • ATF temperature **20 °C {68 °F} or more** • Driving in D or M range • Turbine speed **within 225—4,987 rpm** • Secondary gear revolution speed **50 rpm or more** • Throttle opening angle (THOP PID) **2.77% or more** • Differential gear case (output) revolution speed **35 rpm or more** • Revolution ratio of forward clutch drum revolution to secondary gear revolution **2.157 or less** • None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 — When all conditions below are satisfied while driving in 2GR • ATF temperature **20 °C {68 °F} or more** • Driving in D or M range • Engine running • Turbine speed **within 225—4,987 rpm** • Secondary gear revolution speed **50 rpm or more** • Differential gear case (output) revolution speed **35 rpm or more** • Revolution ratio of forward clutch drum revolution to secondary gear revolution **1.249 or less** or **2.157 or more** • None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid C stuck off • Control valve stuck • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.

STEP	INSPECTION		ACTION
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FS5A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the automatic transaxle, then go to Step 7. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the primary control valve body. • Disassemble the primary control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)	Yes	Replace the automatic transaxle, then go to the next step. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
7	**VERIFY TROUBLESHOOTING OF DTC P0761 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that the gears shift smoothly from 1GR to 4GR. — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range — Throttle opening angle (THOP PID): **2.77% or more** • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0762[FS5A-EL]

id050221808800

DTC P0762	Shift solenoid C stuck on
DETECTION CONDITION	• When DTC P0731 and P0732 are not output, and both the following conditions are satisfied. — When all conditions below are satisfied while driving in 3GR. • Engine running • ATF temperature **20 °C {68 °F} or more.** • Driving in D or M range • Vehicle speed **26 km/h {16 mph} or more** • Turbine speed **within 225—4,987 rpm** • Secondary gear revolution speed **50 rpm or more** • Torque converter clutch (TCC) not operating • Differential gear case (output) revolution speed **35 rpm or more** • Revolution ratio of forward clutch drum revolution to secondary gear revolution **within 1.345—1.644** • None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid C stuck on • Control valve stuck • TCM malfunction

Diagnostic procedure

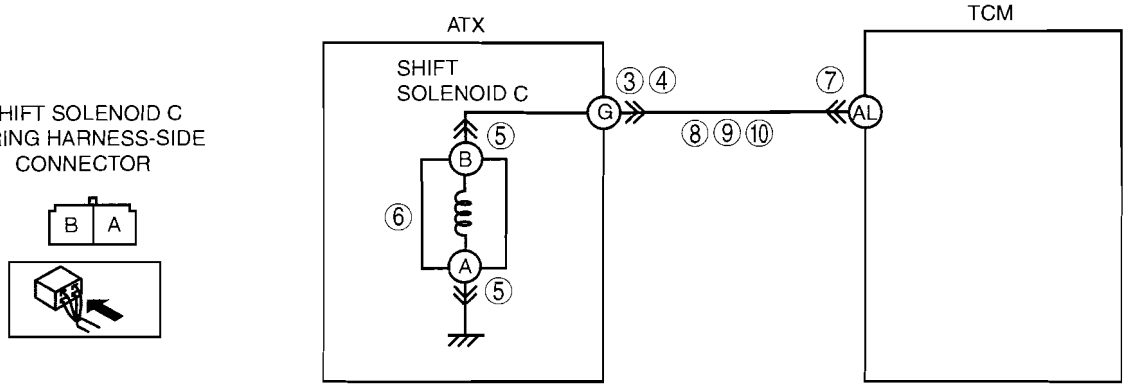
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FS5A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the automatic transaxle, then go to Step 7. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)

STEP	INSPECTION		ACTION
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the primary control valve body. • Disassemble the primary control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)	Yes	Replace the automatic transaxle, then go to the next step. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
7	**VERIFY TROUBLESHOOTING OF DTC P0762 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 4GR: — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range — Vehicle speed (VSS PID): **26 km/h {16 mph} or more** • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

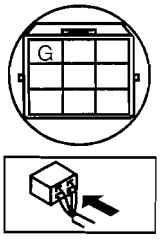
DTC P0763[FS5A-EL]

id050221808900

DTC P0763	Shift solenoid C malfunction (electrical)
DETECTION CONDITION	• If the TCM detects either of the following conditions, the TCM determines that shift solenoid C circuit has a malfunction. — Shift solenoid C voltage stuck at **B+** after engine start — Shift solenoid C voltage stuck at **0 V** after engine start **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction conditions during the first drive cycle. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Shift solenoid C malfunction • Short to ground in wiring harness between transaxle connector (primary) terminal G and TCM terminal AL • Short to power supply in wiring harness between transaxle connector (primary) terminal G and TCM terminal AL • Open circuit in wiring harness between shift solenoid C terminal B and transaxle connector (primary) terminal G • Open circuit in wiring harness between transaxle connector (primary) terminal G and TCM terminal AL • Open circuit in wiring harness between shift solenoid C terminal A and body ground • Damaged connector between shift solenoid C and TCM • TCM malfunction



TRANSAXLE CONNECTOR (PRIMARY) WIRING HARNESS-SIDE CONNECTOR



TCM WIRING HARNESS-SIDE CONNECTOR

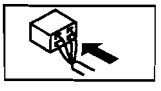
AM	AK	AH	AE	AB	Y	V	S	P	M	J	G	D	B
		AI	AF	AC	Z	W	T	Q	N	K	H	E	



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT TRANSAXLE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the transaxle connector (primary). • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
4	**INSPECT RESISTANCE** • Inspect the resistance between transaxle connector (primary) terminal G (transaxle case side) and body ground. • Is the resistance **within 1.0—4.2 ohms**? (See 05-17B-30 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].)	Yes	Go to Step 7.
		No	Go to the next step.
5	**INSPECT SHIFT SOLENOID C CONNECTOR FOR POOR CONNECTION** • Disconnect the shift solenoid C connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
6	**INSPECT RESISTANCE** • Inspect the resistance between shift solenoid C terminals A and B (part-side). • Is the resistance **within 1.0—4.2 ohms**? (See 05-17B-30 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].)	Yes	Replace the solenoid wiring harness, then go to Step 11.
		No	Verify shift solenoid C installation. • If solenoid installed correctly, replace the solenoid, then go to Step 11. (See 05-17B-32 SOLENOID VALVE REMOVAL/ INSTALLATION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].)
7	**INSPECT TCM CONNECTOR FOR POOR CONNECTION** • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
8	**INSPECT TRANSAXLE CONNECTOR CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between TCM terminal AL (wiring harness-side) and transaxle connector (primary) terminal G (wiring harness-side). • Is there continuity between terminals?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
9	**INSPECT TRANSAXLE CONNECTOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (engine off). • Inspect the voltage at transaxle connector (primary) terminal G (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
10	**INSPECT TCM CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between TCM terminal AL (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 11.
		No	Go to the next step.
11	**VERIFY TROUBLESHOOTING OF DTC P0763 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 4GR. • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	No concern is detected. Go to the next step.

STEP	INSPECTION		ACTION
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0766[FS5A-EL]

id050221809000

DTC P0766	Shift solenoid D stuck off
DETECTION CONDITION	• When any of DTC P0732, and P0733 not output (correct judgment), and all conditions below are satisfied. — Is DTC P0731 not output while driving in 1GR at D range — Engine running — ATF temperature **20 °C {68 °F} or more** — Driving in 4GR at D or M range — Turbine speed **within 225—4,987 rpm** — Secondary gear revolution speed **50 rpm or more** — Differential gear case (output) revolution speed **35 rpm or more** — Vehicle speed **28 km/h {17 mph} or more** — Throttle opening angle at closed throttle position — Revolution ratio of forward clutch drum revolution to secondary gear revolution **0.6 or less** or **1.249 or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0767, P0768, P0771, P0772, P0773, P0791 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid D stuck off • Control valve stuck • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FS5A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)

STEP	INSPECTION		ACTION
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the automatic transaxle, then go to Step 7. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the primary control valve body. • Disassemble the primary control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)	Yes	Replace the automatic transaxle, then go to the next step. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
7	**VERIFY TROUBLESHOOTING OF DTC P0766 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 4GR: — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range — Throttle opening angle (THOP PID): **0%** (4GR only) — Vehicle speed (VSS PID): **28 km/h {17 mph} or more.** (4GR only) • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0767[FS5A-EL]

id050221809100

DTC P0767	Shift solenoid D stuck on
DETECTION CONDITION	• When any of DTC P0731, P0732, P0734, and P0741 are not output, and all conditions below are satisfied. — Engine running — ATF temperature **20 °C {68 °F} or more** — Driving in 3GR at D or M range — Turbine speed **within 225—4,987 rpm** — Differential gear case (output) revolution speed **35 rpm or more** — Revolution ratio of forward clutch drum revolution to secondary gear revolution **0.863 or less** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0768, P0771, P0772, P0773, P0791 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid D stuck on • Control valve stuck • TCM malfunction

Diagnostic procedure

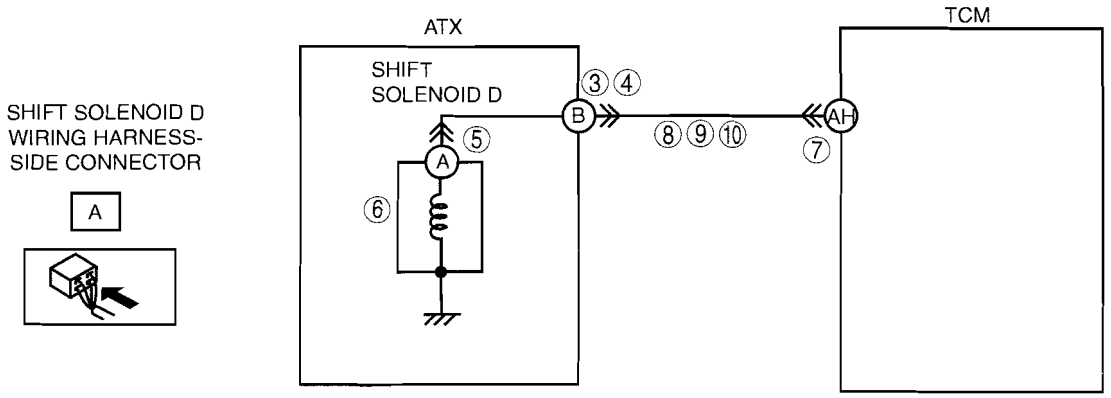
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FS5A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the automatic transaxle, then go to Step 7. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)

STEP	INSPECTION		ACTION
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the primary control valve body. • Disassemble the primary control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)	Yes	Replace the automatic transaxle, then go to the next step. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
7	**VERIFY TROUBLESHOOTING OF DTC P0767 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 4GR. — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range, 3GR • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

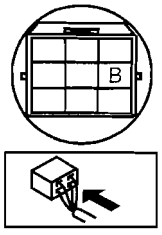
DTC P0768[FS5A-EL]

id050221807000

DTC P0768	Shift solenoid D malfunction (electrical)
DETECTION CONDITION	• If TCM detects either of the following conditions while driving in 4GR at D range, the TCM determines that shift solenoid D circuit has a malfunction. — Shift solenoid D voltage stuck at **B+** after engine start — Shift solenoid D voltage stuck at **0 V** after engine start **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction conditions during the first drive cycle. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Shift solenoid D malfunction • Short to ground in wiring harness between transaxle connector (primary) terminal B and TCM terminal AH • Short to power supply in wiring harness between transaxle connector (primary) terminal B and TCM terminal AH • Open circuit in wiring harness between shift solenoid D terminal A and transaxle connector (primary) terminal B • Open circuit in wiring harness between transaxle connector (primary) terminal B and TCM terminal AH • Damaged connector between shift solenoid D and TCM • TCM malfunction

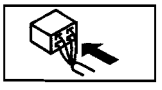


TRANSAXLE CONNECTOR (PRIMARY) WIRING HARNESS-SIDE CONNECTOR



TCM WIRING HARNESS-SIDE CONNECTOR

AL	AJ	AG	AD	AA	X	U	R	O	L	I	F	C	A
AM	AK	AH	AE	AB	Y	V	S	P	M	J	G	D	B
		AI	AF	AC	Z	W	T	Q	N	K	H	E	



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TRANSAXLE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the transaxle connector (primary). • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
4	**INSPECT RESISTANCE** • Inspect the resistance between transaxle connector (primary) terminal B (transaxle case side) and body ground. • Is the resistance **within 10.9—26.2 ohms**? (See 05-17B-30 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].)	Yes	Go to Step 7.
		No	Go to the next step.
5	**INSPECT SHIFT SOLENOID D CONNECTOR FOR POOR CONNECTION** • Disconnect the shift solenoid D connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
6	**INSPECT RESISTANCE** • Inspect the resistance between shift solenoid D terminal A (part-side) and body ground. • Is the resistance **within 10.9—26.2 ohms**? (See 05-17B-30 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].)	Yes	Replace the solenoid wiring harness, then go to Step 11.
		No	Verify shift solenoid D installation. • If solenoid installed correctly, replace the solenoid, then go to Step 11. (See 05-17B-32 SOLENOID VALVE REMOVAL/ INSTALLATION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].)
7	**INSPECT TCM CONNECTOR FOR POOR CONNECTION** • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
8	**INSPECT TRANSAXLE CONNECTOR CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between TCM terminal AH (wiring harness-side) and transaxle connector (primary) terminal B (wiring harness-side). • Is there continuity between terminals?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
9	**INSPECT TRANSAXLE CONNECTOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (engine off). • Inspect the voltage at transaxle connector (primary) terminal B (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
10	**INSPECT TCM CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between TCM terminal AH (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 11.
		No	Go to the next step.

STEP	INSPECTION		ACTION
11	**VERIFY TROUBLESHOOTING OF DTC P0768 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 4GR. • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	No concern is detected. Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0771[FS5A-EL]

id050221809200

DTC P0771	Shift solenoid E stuck off
