DETECTION CONDITION	• When any of DTC P0732, and P0734 are not output, and all conditions below are satisfied. — Is DTC P0731 not output while driving in 1GR at D range — Engine running — ATF temperature **20 °C {68 °F} or more** — Driving in 4GR at D range — Turbine speed **within 225—4,987 rpm** — Vehicle speed **within 60—100 km/h {37—62 mph}** — Torque converter clutch (TCC) operating — Shift solenoid A duty value exceeds **99%** — Difference between engine speed and turbine speed **more than 100 rpm** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0772, P0773, P0791 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid E stuck off • Control valve stuck • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FS5A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the automatic transaxle, then go to Step 7. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the primary control valve body. • Disassemble the primary control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)	Yes	Replace the automatic transaxle, then go to the next step. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
7	**VERIFY TROUBLESHOOTING OF DTC P0771 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 4GR. — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range — Vehicle speed (VSS PID): **within 60—100 km/h {37—62 mph}** (4GR only). • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0772[FS5A-EL]

id050221809300

DTC P0772	Shift solenoid E stuck on
DETECTION CONDITION	• When any of DTC P0731, P0733, and P0734 are not output, and all of the following conditions are satisfied under each of the following throttle conditions. — Engine running — ATF temperature **20 °C {68 °F} or more** — Driving in 4GR at D or M range — Turbine speed **within 225—4,987 rpm** — Vehicle speed **70 km/h {43 mph} or less** — Torque converter clutch (TCC) not operating — Difference between engine speed and turbine speed **50 rpm or less** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0773, P0791 — Throttle conditions • Throttle opening angle (THOP PID) is **6.25% or more** and **5 s or more** have passed • Throttle opening angle (THOP PID) is **within 3.13—6.25%** and **3 s or more** have passed • Throttle opening angle is at closed throttle position and **5 s or more** have passed **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid E stuck on • Control valve stuck • TCM malfunction

Diagnostic procedure

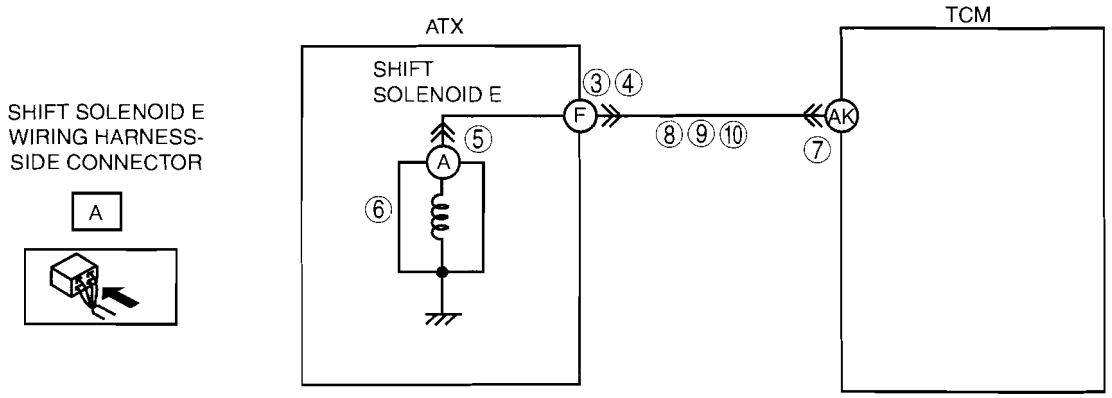
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FS5A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)

STEP	INSPECTION		ACTION
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the automatic transaxle, then go to Step 7. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the primary control valve body. • Disassemble the primary control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)	Yes	Replace the automatic transaxle, then go to the next step. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
7	**VERIFY TROUBLESHOOTING OF DTC P0772 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 4GR. — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range — Vehicle speed (VSS PID): **70 km/h {43 mph} or less** (4GR only) • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

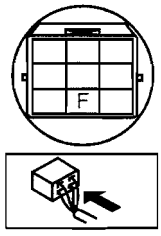
DTC P0773[FS5A-EL]

id050221809400

DTC P0773	Shift solenoid E malfunction (electrical)
DETECTION CONDITION	• If TCM detects either of the following conditions while driving in 4GR at D range with TCC operating, TCM determines that shift solenoid E circuit has a malfunction. — Shift solenoid E voltage stuck at **B+** after engine start — Shift solenoid E voltage stuck at **0 V** after engine start **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction conditions during the first drive cycle. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Shift solenoid E malfunction • Short to ground in wiring harness between transaxle connector (primary) terminal F and TCM terminal AK • Short to power supply in wiring harness between transaxle connector (primary) terminal F and TCM terminal AK • Open circuit in wiring harness between shift solenoid E terminal A and transaxle connector (primary) terminal F • Open circuit in wiring harness between transaxle connector (primary) terminal F and TCM terminal AK • Damaged connector between shift solenoid E and TCM • TCM malfunction



TRANSAXLE CONNECTOR (PRIMARY) WIRING HARNESS-SIDE CONNECTOR



TCM WIRING HARNESS-SIDE CONNECTOR

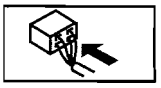
		AI	AF	AC	Z	W	T	Q	N	K	H	E	



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TRANSAXLE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the transaxle connector (primary). • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
4	**INSPECT RESISTANCE** • Inspect the resistance between transaxle connector (primary) terminal F (transaxle case side) and body ground. • Is the resistance **within 10.9—26.2 ohms**? (See 05-17B-30 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].)	Yes	Go to Step 7.
		No	Go to the next step.
5	**INSPECT SHIFT SOLENOID E CONNECTOR FOR POOR CONNECTION** • Disconnect the shift solenoid E connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
6	**INSPECT RESISTANCE** • Inspect the resistance between shift solenoid E terminal A (part-side) and body ground. • Is the resistance **within 10.9—26.2 ohms**? (See 05-17B-30 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].)	Yes	Replace the solenoid wiring harness, then go to Step 11.
		No	Verify shift solenoid E installation. • If solenoid installed correctly, replace the solenoid, then go to Step 11. (See 05-17B-32 SOLENOID VALVE REMOVAL/ INSTALLATION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].)
7	**INSPECT TCM CONNECTOR FOR POOR CONNECTION** • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
8	**INSPECT TRANSAXLE CONNECTOR CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between TCM terminal AK (wiring harness-side) and transaxle connector (primary) terminal F (wiring harness-side). • Is there continuity between terminals?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
9	**INSPECT TRANSAXLE CONNECTOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (engine off). • Inspect the voltage at transaxle connector (primary) terminal F (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
10	**INSPECT TCM CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between TCM terminal AK (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 11.
		No	Go to the next step.

STEP	INSPECTION		ACTION
11	**VERIFY TROUBLESHOOTING OF DTC P0773 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 4GR. • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	No concern is detected. Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0777[FS5A-EL]

id050221810400

DTC P0777	Pressure control solenoid B stuck on
DETECTION CONDITION	• With the engine running, all of the following conditions are met: — ATF temperature **20 °C {68 °F} or more** — Turbine speed **within 225—4,987 rpm** — Secondary gear revolution speed **50 rpm or more** — Differential gear case (output) revolution speed **35 rpm or more** — Throttle opening angle **2.77% or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0778, P0791, P2707, P2708, P2709 — Revolution ratio of the secondary gear and differential gear case is **1.11 or more** when driving in 5GR. **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Pressure control solenoid B stuck on • Control valve stuck • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FS5A-EL].)

STEP	INSPECTION		ACTION
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the automatic transaxle, then go to Step 7. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the secondary control valve body. • Disassemble the secondary control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17B-54 SECONDARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-55 SECONDARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)	Yes	Replace the automatic transaxle, then go to the next step. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17B-54 SECONDARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-55 SECONDARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
7	**VERIFY TROUBLESHOOTING OF DTC P0777 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 5GR: — ATF temperature (TFT PID) (TFT PID): **20 °C {68 °F} or more** — Drive in the D range, 5GR — Throttle opening angle (THOP PID): **2.77% or more** • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0778[FS5A-EL]

id050221810500

DTC P0778	Pressure control solenoid B malfunction (electrical)
DETECTION CONDITION	• If TCM detects either of the following conditions, TCM determines that pressure control solenoid B circuit has a malfunction. — Pressure control solenoid B voltage stuck at **B+** after engine start — Pressure control solenoid B voltage stuck at **0 V** after engine start **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction conditions during the first drive cycle. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Pressure control solenoid B malfunction • Short to ground in wiring harness between transaxle connector (secondary) terminal A and TCM terminal AM • Short to power supply in wiring harness between transaxle connector (secondary) terminal A and TCM terminal AM • Open circuit in wiring harness between pressure control solenoid B terminal B and transaxle connector (secondary) terminal A • Open circuit in wiring harness between transaxle connector (secondary) terminal A and TCM terminal AM • Open circuit in wiring harness between pressure control solenoid B terminal A and body ground • Damaged connector between pressure control solenoid B and TCM • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TRANSAXLE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the transaxle connector (secondary). • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
4	**INSPECT RESISTANCE** • Inspect the resistance between transaxle connector (secondary) terminal A (transaxle case side) and body ground. • Is the resistance **within 1.0—4.2 ohms**? (See 05-17B-30 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].)	Yes	Go to Step 7.
		No	Go to the next step.
5	**INSPECT PRESSURE CONTROL SOLENOID B CONNECTOR FOR POOR CONNECTION** • Disconnect the pressure control solenoid B connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
6	**INSPECT RESISTANCE** • Inspect the resistance between pressure control solenoid B terminals A and B (part-side). • Is the resistance **within 1.0—4.2 ohms**? (See 05-17B-33 SOLENOID VALVE INSPECTION (SECONDARY CONTROL VALVE BODY)[FS5A-EL].)	Yes	Replace the solenoid wiring harness, then go to Step 11.
		No	Verify shift pressure control solenoid B installation. • If solenoid installed correctly, replace the solenoid, then go to Step 11. (See 05-17B-34 SOLENOID VALVE REMOVAL/ INSTALLATION (SECONDARY CONTROL VALVE BODY)[FS5A-EL].)
7	**INSPECT TCM CONNECTOR FOR POOR CONNECTION** • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
8	**INSPECT TRANSAXLE CONNECTOR CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between TCM terminal AM (wiring harness-side) and transaxle connector (secondary) terminal A (wiring harness-side). • Is there continuity between terminals?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
9	**INSPECT TRANSAXLE CONNECTOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (engine off). • Inspect the voltage at transaxle connector (secondary) terminal A (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.

STEP	INSPECTION		ACTION
10	**INSPECT TCM CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between TCM terminal AM (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 11.
		No	Go to the next step.
11	**VERIFY TROUBLESHOOTING OF DTC P0778 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle in D range and make sure that the gears shift smoothly from 1GR to 5GR. • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	No concern is detected. Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0791[FS5A-EL]

id050221810600

DTC P0791	Intermediate sensor circuit malfunction
DETECTION CONDITION	• Secondary gear revolution speed signal is not input after the following conditions are met and **4.5 s or more** have passed. — D range selected — Engine coolant temperature **60 °C {140 °F} or more** — Engine speed **500 rpm or more** — Vehicle speed **40 km/h {25 mph} or more** **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction conditions during the first drive cycle. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Intermediate sensor malfunction • Open circuit in wiring harness between intermediate sensor terminal B and TCM terminal AC • Short to ground in wiring harness between intermediate sensor terminal B and TCM terminal AC • Open circuit in wiring harness between intermediate sensor terminal A and AT main relay terminal C • Short to ground in wiring harness between intermediate sensor terminal A and AT main relay terminal C • Open circuit in wiring harness between intermediate sensor terminal C and body ground • Damaged connectors between intermediate sensor and TCM • TCM malfunction

Diagnostic procedure

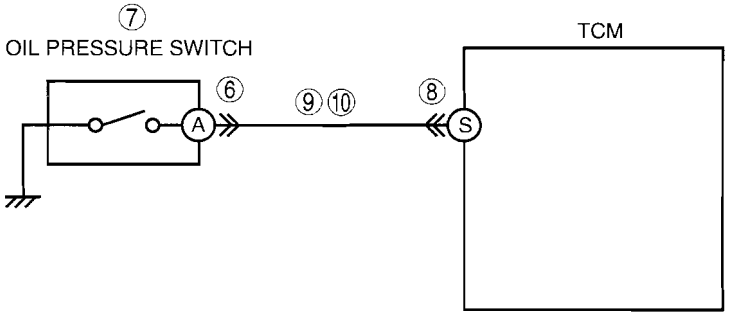
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair Information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT INTERMEDIATE SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the intermediate sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the pin or connector, then go to Step 11.
4	**INSPECT INTERMEDIATE SENSOR POWER CIRCUIT FOR OPEN CIRCUIT** • Verify that the intermediate sensor connector is disconnected. • Turn the ignition switch to the ON position (engine off). • Inspect the voltage between intermediate sensor terminal A (wiring harness-side) and ground. • Is the voltage **B+**?	Yes	Go to Step 6.
		No	Go to the next step.
5	**INSPECT INTERMEDIATE SENSOR POWER CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between intermediate sensor terminal A (wiring harness-side) and ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
6	**INSPECT INTERMEDIATE SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the intermediate sensor connector is disconnected. • Inspect for continuity between intermediate sensor (wiring harness-side) terminal C and ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
7	**INSPECT TCM CONNECTOR FOR POOR CONNECTION** • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the pin or connector, then go to Step 11.
8	**INSPECT SECONDARY GEAR REVOLUTION SPEED SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Disconnect the TCM connector and intermediate sensor connector. • Inspect for continuity between intermediate sensor terminal B and TCM terminal AC. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
9	**INSPECT SECONDARY GEAR REVOLUTION SPEED SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verity that the intermediate sensor connector and TCM connector are disconnected. • Inspect for continuity between TCM terminal AC and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to the next step.
		No	Replace the intermediate sensor, then go to the next step. (See 05-17B-27 INTERMEDIATE SENSOR REMOVAL/ INSTALLATION[FS5A-EL].)

STEP	INSPECTION		ACTION
10	**INSPECT INTERMEDIATE SENSOR** • Inspect the intermediate sensor. (See 05-17B-25 INTERMEDIATE SENSOR INSPECTION[FS5A-EL].) • Is intermediate sensor normal?	Yes	Go to the next step.
		No	Repair or replace the intermediate sensor, then go to the next step. (See 05-17B-27 INTERMEDIATE SENSOR REMOVAL/INSTALLATION[FS5A-EL].)
11	**VERIFY TROUBLESHOOTING OF DTC P0791 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Warm up engine. • Drive the vehicle under the following conditions for **4.5 s or more** while monitoring PIDs. — Engine coolant temp (ECT PID): **60 °C {140 °F} or more** — Drive in D range — Vehicle speed (VSS PID): **40 km/h {25 mph} or more** • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	No concern is detected. Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

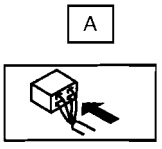
DTC P0841[FS5A-EL]

id050221809500

DTC P0841	Oil pressure switch circuit malfunction
DETECTION CONDITION	• When DTC P0731, P0732, P0733 and P0734 are not output and **10 s or more** has passed. — When all the conditions below are satisfied while driving in 1GR, 2GR or 3GR • ATF temperature **20 °C {68 °F} or more** • Oil pressure switch OFF • Revolution ratio of forward clutch drum revolution to differential gear case revolution **within 0.91—3.07** • None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 — When all conditions below are satisfied while driving in 4GR or 5GR • ATF temperature **20 °C {68 °F} or more** • Oil pressure switch ON • Revolution ratio of forward clutch drum revolution to differential gear case revolution **within 0.64—0.81** • None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • A PENDING CODE is not available. • FREEZE FRAME DATA is not available. • The AT warning light does not illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Line pressure low • Oil pressure switch malfunction • Open circuit in wiring harness between oil pressure switch terminal A and TCM terminal S • Short to ground in wiring harness between oil pressure switch terminal A and TCM terminal S • Damaged connector between oil pressure switch and TCM • Control valve stuck • TCM malfunction



OIL PRESSURE SWITCH WIRING HARNESS-SIDE CONNECTOR



TCM WIRING HARNESS-SIDE CONNECTOR

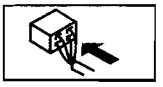
AM	AK	AH	AE	AB	Y	V	S	P	M	J	G	D	B
		AI	AF	AC	Z	W	T	Q	N	K	H	E	



Diagnostic procedure

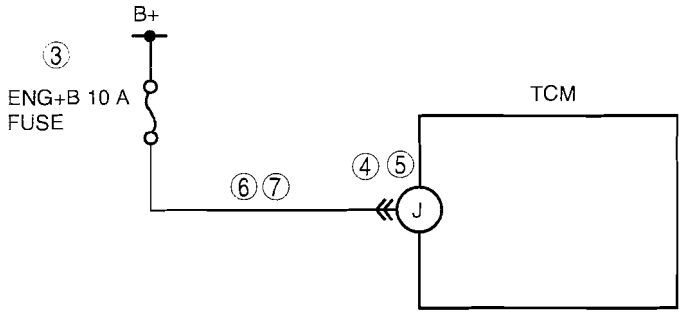
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair Information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Inspect the ATF condition. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Replace the ATF, then go to Step 11.
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 11. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	All ranges: Replace the oil pump, then go to Step 11. Any ranges: Replace the primary control valve body, then go to Step 11. (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-52 PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].)
6	**INSPECT OIL PRESSURE SWITCH CONNECTOR FOR POOR CONNECTION** • Disconnect the shift oil pressure switch connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step11.
7	**INSPECT CONTINUITY** • Inspect for continuity between oil pressure switch terminal A (part-side) and body ground. • Is there continuity?	Yes	Replace the oil pressure switch, then go to Step 11. (See 05-17B-23 OIL PRESSURE SWITCH REMOVAL/ INSTALLATION[FS5A-EL].)
		No	Go to the next step.
8	**INSPECT TCM CONNECTOR FOR POOR CONNECTION** • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
9	**INSPECT OIL PRESSURE SWITCH CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between TCM terminal S (wiring harness-side) and transaxle connector terminal A (wiring harness-side). • Is there continuity between terminals?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
10	**INSPECT TCM CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between TCM terminal S (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to the next step.
		No	Replace the oil pressure switch, then go to the next step. (See 05-17B-23 OIL PRESSURE SWITCH REMOVAL/ INSTALLATION[FS5A-EL].)

STEP	INSPECTION		ACTION
11	**VERIFY TROUBLESHOOTING OF DTC P0841 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle and make sure that gears shift smoothly from 1GR to 5GR. • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	No concern is detected. Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0882[FS5A-EL]

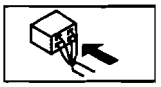
id050221802800

DTC P0882	Battery back-up power supply circuit
DETECTION CONDITION	• When the signal of the battery back-up power supply circuit is **less than 2.5 V**. **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate if the TCM detects the above malfunction condition during the first drive cycle. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light not illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Melted ENG+B 10 A fuse • Open circuit in wiring harness between battery positive terminal and TCM terminal J • Short to ground in wiring harness between battery positive terminal and TCM terminal J • Poor connection of TCM connector • TCM malfunction



TCM WIRING HARNESS-SIDE CONNECTOR

AL	AJ	AG	AD	AA	X	U	R	O	L	I	F	C	A
AM	AK	AH	AE	AB	Y	V	S	P	M	J	G	D	B
		AI	AF	AC	Z	W	T	Q	N	K	H	E	



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and or/on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FUSE** • Turn the ignition switch to the LOCK position. • Inspect ENG+B 10 A fuse malfunction. • Is it normal?	Yes	Go to the next step.
		No	• If fuse has been melted, go to the next step. • If fuse is not installed correctly, install it correctly, then go to Step 13.

STEP	INSPECTION		ACTION
4	**INSPECT VOLTAGE OF POWER SUPPLY CIRCUIT** • Turn the ignition switch to the ON position (engine off). • Inspect for voltage TCM connector terminal J (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Go go to Step 6.
5	**INSPECT TERMINAL TCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the negative battery cable. • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go go to Step 8.
		No	Replace the couple component, then go to Step 8.
6	**INSPECT POWER SUPPLY CIRCUIT FOR SHORT TO GROUND** • Disconnect the positive battery cable. • Inspect for continuity between the TCM terminal J and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 8.
		No	Go to the next step.
7	**INSPECT POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between TCM terminal J and ENG+B 10 A fuse terminal (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the harness, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0882 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine and warm it up completely. • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-9 DTC TABLE[FS5A-EL].)
		No	Troubleshooting completed.

DTC P0883[FS5A-EL]

id050221802900

DTC P0883	Battery voltage high
DETECTION CONDITION	• Voltage of **16 V or more** detected at TCM terminal 1J. **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction conditions during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Generator malfunction • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY DTC** • Turn the ignition switch to the LOCK position, then to the ON position. • Verify the DTC in the TCM memory. • Are DTC P2504 output?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
4	**VERIFY TROUBLESHOOTING OF DTC P0883 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine and warm it up completely. • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-9 DTC TABLE[FS5A-EL].)
		No	DTC troubleshooting completed.

DTC P0894[FS5A-EL]

id050221809600

DTC P0894	Forward clutch power transmission malfunction
DETECTION CONDITION	• With the engine running, all of the following conditions are met: — ATF temperature **20 °C {68 °F} or more** — Vehicle speed **0 km/h {0 mph}** (brake on) — Even when **3 s or more** have passed since the selector lever was shifted from the N position to the D range, the turbine speed will not decrease to less than 187 rpm. **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate if the TCM detects above malfunction conditions during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is not available. • The AT warning light illuminates. • DTCs are stored in the TCM memory.
POSSIBLE CAUSE	• Forward clutch not engaged or slipped • Short to power supply in wiring harness between shift solenoid A terminal B and TCM terminal AG • Shift solenoid A stuck on • VSS malfunction • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY DTCS** • Turn the ignition switch to the LOCK position, then to the ON position. • Verify the DTCs in the TCM memory. • Are DTCs P0720, P0752, and P0753 output?	Yes	Go to the applicable DTC inspection.
		No	Replace the forward clutch, then go to the next step.
3	**VERIFY TROUBLESHOOTING OF DTC P0894 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Warm up the engine. • With the selector lever in the D range and the vehicle stopped (brake on), wait **3 s or more**. • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	No concern is detected. Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P1783[FS5A-EL]

id050221807700

DTC P1783	ATF high oil temperature malfunction
DETECTION CONDITION	• When all conditions below are satisfied. — P0712, P0713 not output — ATF temperature **149.5 °C {301°F} or more** — ATF oil temperature signal of **0.06 V or more** is input to TCM terminal U. **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate if the TCM detects above malfunction conditions during the first drive cycle. • The PENDING CODE is not available. • FREEZE FRAME DATA is not available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• High engine load drive (Driving a steep gradient at a low speed.) • Insufficient or excess level of ATF • Deteriorated ATF • TFT sensor circuit malfunction • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY VEHICLE DRIVING CONDITIONS** • Verify each PID monitor of the HTM_CNT and HTM_DIS. • Verify vehicle driving conditions when a DTC P1783 is output. • Has the vehicle been driven at a high engine load?	Yes	• Go to Step 6. • Inform the customer that the ATX temperature is high due to high engine load driving.
		No	Go to the next step.
4	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 6. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FS5A-EL].)
5	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to the next step. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)
6	**VERIFY TROUBLESHOOTING OF DTC P1783 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up the ATX. • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P2707[FS5A-EL]

id050221810700

DTC P2707	Shift solenoid F stuck off
DETECTION CONDITION	• When all conditions below are satisfied. — ATF temperature **20 °C {68 °F} or more** — Turbine speed **within 225—4,987 rpm** — Secondary gear revolution speed **50 rpm or more** — Differential gear case (output) revolution speed **35 rpm or more** — Throttle opening angle **2.77% or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0777, P0778, P0791, P2708, P2709 — Revolution ratio of the secondary gear and the differential gear case is **1.11 or less** when driving in 3GR or 4GR. **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid F stuck off • Secondary control valve stuck • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FS5A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)

STEP	INSPECTION		ACTION
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the automatic transaxle, then go to Step 7. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the secondary control valve body. • Disassemble the secondary control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17B-54 SECONDARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-55 SECONDARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)	Yes	Replace the automatic transaxle, then go to the next step. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17B-54 SECONDARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-55 SECONDARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
7	**VERIFY TROUBLESHOOTING OF DTC P2707 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 5GR: — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range, 4GR — Throttle opening angle (THOP PID): **2.77% or more** • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P2708[FS5A-EL]

id050221810800

DTC P2708	Shift solenoid F stuck on
DETECTION CONDITION	• When all conditions below are satisfied. — ATF temperature **20 °C {68 °F} or more** — Turbine speed **within 225—4,987 rpm** — Secondary gear revolution speed **50 rpm or more** — Differential gear case (output) revolution speed **35 rpm or more** — Throttle opening angle **2.77% or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0777, P0778, P0791, P2707, P2709 — Revolution ratio of the secondary gear and differential gear case is **1.11 or more** when driving in 5GR. **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid F stuck on • Secondary control valve stuck • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FS5A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the automatic transaxle, then go to Step 7. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)

STEP	INSPECTION		ACTION
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the secondary control valve body. • Disassemble the secondary control valve body. • Is each valve operation normal and is the return spring normal? (See 05-17B-54 SECONDARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-55 SECONDARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)	Yes	Replace the automatic transaxle, then go to the next step. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05-17B-54 SECONDARY CONTROL VALVE BODY REMOVAL[FS5A-EL].) (See 05-17B-55 SECONDARY CONTROL VALVE BODY INSTALLATION[FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
7	**VERIFY TROUBLESHOOTING OF DTC P2708 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 5GR. — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range, 5GR — Throttle opening angle (THOP PID): **2.77% or more** • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P2709[FS5A-EL]

id050221810900

DTC P2709	Shift solenoid F malfunction (electrical)
DETECTION CONDITION	• If TCM detects either of the following conditions while driving in 5GR at D range, the TCM determines that shift solenoid F circuit has a malfunction. — Shift solenoid F voltage stuck at **B+** after engine start — Shift solenoid F voltage stuck at **0 V** after engine start **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction conditions during the first drive cycle. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Shift solenoid F malfunction • Short to ground in wiring harness between transaxle connector (secondary) terminal B and TCM terminal AI • Short to power supply in wiring harness between transaxle connector (secondary) terminal B and TCM terminal AI • Open circuit in wiring harness between shift solenoid F terminal A and transaxle connector (secondary) terminal B • Open circuit in wiring harness between transaxle connector (secondary) terminal B and TCM terminal AI • Damaged connector between shift solenoid F and TCM • TCM malfunction

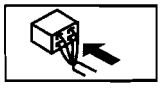
		AI	AF	AC	Z	W	T	Q	N	K	H	E	



Diagnostic procedure

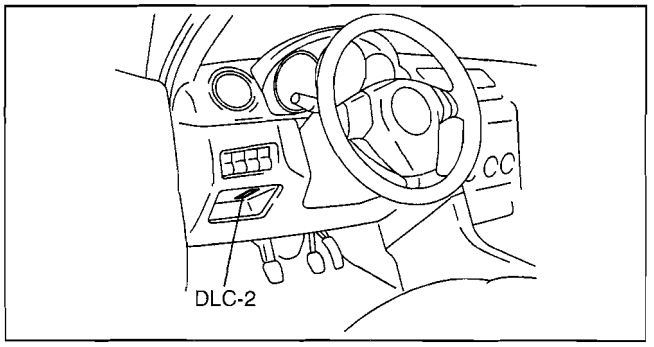
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TRANSAXLE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the transaxle connector (secondary). • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
4	**INSPECT RESISTANCE** • Inspect the resistance between transaxle connector (secondary) terminal B (transaxle case side) and body ground. • Is the resistance **within 10.9—26.2 ohms**? (See 05-17B-33 SOLENOID VALVE INSPECTION (SECONDARY CONTROL VALVE BODY)[FS5A-EL].)	Yes	Go to Step 7.
		No	Go to the next step.
5	**INSPECT SHIFT SOLENOID D CONNECTOR FOR POOR CONNECTION** • Disconnect the shift solenoid F connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
6	**INSPECT RESISTANCE** • Inspect the resistance between shift solenoid F terminal A (part-side) and body ground. • Is the resistance **within 10.9—26.2 ohms**? (See 05-17B-33 SOLENOID VALVE INSPECTION (SECONDARY CONTROL VALVE BODY)[FS5A-EL].)	Yes	Replace the solenoid wiring harness, then go to Step 11.
		No	Verify shift solenoid F installation. • If solenoid installed correctly, replace the solenoid, then go to Step 11. (See 05-17B-34 SOLENOID VALVE REMOVAL/ INSTALLATION (SECONDARY CONTROL VALVE BODY)[FS5A-EL].)
7	**INSPECT TCM CONNECTOR FOR POOR CONNECTION** • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
8	**INSPECT TRANSAXLE CONNECTOR CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between TCM terminal AI (wiring harness-side) and transaxle connector (secondary) terminal B (wiring harness-side). • Is there continuity between terminals?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
9	**INSPECT TRANSAXLE CONNECTOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (engine off). • Inspect the voltage at transaxle connector (secondary) terminal B (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
10	**INSPECT TCM CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between TCM terminal AI (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 11.
		No	Go to the next step.

STEP	INSPECTION		ACTION
11	**VERIFY TROUBLESHOOTING OF DTC P2709 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 5GR. • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
		No	No concern is detected. Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05-02B-4 AFTER REPAIR PROCEDURE[FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

PID/DATA MONITOR INSPECTION[FS5A-EL]

id050221805600

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Toolbox" tab.
     2. Select "DataLogger".
     3. Select "Modules".
     4. Select "TCM".
   - When using the PDS (Pocket PC)
     1. Select "Module Tests".
     2. Select "TCM".
     3. Select "DataLogger".
3. Select the PID from the PID table
4. Verify the PID data according to the directions on the M-MDS screen.



am3uuw0000005

Note

- Perform part inspection for the output device after TCM inspection.
- The PID/DATA MONITOR function monitors the calculated value of the input/output signals in the TCM. Therefore, if a monitored value of an output device is out of specification, it is necessary to inspect the monitored value of the input device related to the output device control. Since an output device malfunction is not directly indicated as a malfunction of the monitored value for the output device, it is necessary to inspect the output device individually using methods such as the simulation function.

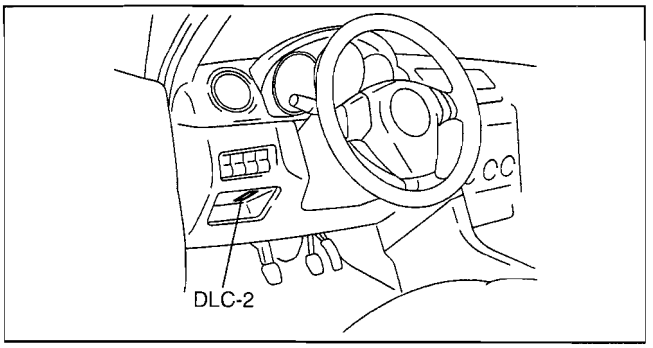
PID/DATA MONITOR AND RECORD function table

Monitor item (Definition)	Unit/ Condition		Condition/Specification	Action	TCM terminal
DTCCNT (Number of DTC detected)	N/A		• DTCs is detected: 1—255 • No DTCs are detected: 0	Perform applicable DTC troubleshooting. (See 05-02B-9 DTC TABLE[FS5A-EL].)	N/A
DWN SW (Down switch)	On/Off		• M range, downshift: On • Other: Off	Inspect the selector lever component. (See 05-18-4 SELECTOR LEVER COMPONENT INSPECTION.)	F
ECT TCM (ECT sensor)	°C	°F	Indicates engine coolant temperature	Inspect the ECT sensor. (See 01-40A-49 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION[LF, L3].) Inspect the PCM (See 01-40A-13 PCM INSPECTION[LF, L3].)	N/A
GEAR_SEL	1/2/3/4/5		• 1GR: 1 • 2GR: 2 • 3GR: 3 • 4GR: 4 • 5GR: 5	Inspect the following PIDs: SSA/SS1, SSB/SS2, SSC/SS3, SSD/SS4, SSE_SS5, SSF_SS6	N/A
HTM_CNT	N/A		Indicates number of high oil temperature mode (ATF temperature at 130 °C {266 °F} or more) operations • 0—65,535	N/A	N/A
HTM_DIS	km		Indicates travel distance after operation of high oil temperature mode (ATF temperature at 130 °C {266 °F} or more) • 0—65,535 km	N/A	N/A
ISS (Intermediate shaft speed)	RPM		Indicates secondary gear revolution speed • Vehicle speed **0 km/h {0 mph}: 0 RPM** • Vehicle speed **25 km/h {16 mph}: 200—230 RPM**	Inspect the intermediate sensor. (See 05-17B-25 INTERMEDIATE SENSOR INSPECTION[FS5A-EL].)	AC
LINEDES	kPa	inHg	Indicates target line pressure	Inspect the following PIDs: ISS, OSS, TFT, TFTV, THOP, TR, TSS	N/A
LPS (Pressure control solenoid A)	A		Change current value according to throttle opening angle	Inspect the pressure control solenoid A. (See 05-17B-30 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].)	AD, AE
LPS B (Pressure control solenoid B)	%		• 4GR→ 5GR: **99%** • others: **0%**	Inspect the pressure control solenoid B. (See 05-17B-33 SOLENOID VALVE INSPECTION (SECONDARY CONTROL VALVE BODY)[FS5A-EL].)	AM
MNL SW (M range switch)	On/Off		• M range: On • Other: Off	Inspect the selector lever component. (See 05-18-4 SELECTOR LEVER COMPONENT INSPECTION.)	K
OP_SW_B (Oil pressure switch)	On/Off		• 1GR, 2GR or 3GR: On • Other: Off	Inspect the oil pressure switch. (See 05-17B-22 OIL PRESSURE SWITCH INSPECTION[FS5A-EL].)	S
OSS (Output shaft speed)	RPM		Indicates output shaft speed • Vehicle speed **0 km/h {0 mph}: 0 RPM** • Vehicle speed 25 km/h {16 mph}: **200—230 RPM**	Inspect the VSS. (See 05-17B-28 VEHICLE SPEED SENSOR (VSS) INSPECTION[FS5A-EL].)	Z
RPM_TCM (Engine speed)	RPM		Ignition switch ON: **0 RPM** Idle: **700—800 RPM**	Inspect the TCM. (See 05-17B-36 TCM INSPECTION[FS5A-EL].)	N/A
SSA/SS1 (Shift solenoid A)	%		• 4GR: **99%** • others: **0%**	Inspect the shift solenoid A. (See 05-17B-30 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].)	AG

Monitor item (Definition)	Unit/ Condition	Condition/Specification	Action	TCM terminal
SSB/SS2 (Shift solenoid B)	%	• 1GR at D range: **99%** • Others: **0%**	Inspect the shift solenoid B. (See 05-17B-30 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].)	AJ
SSC/SS3 (Shift solenoid C)	%	• 1GR/2GR: **99%** • Others: **0%**	Inspect the shift solenoid C. (See 05-17B-30 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].)	AL
SSD/SS4 (Shift solenoid D)	On/Off	• P/N position, 4GR at D range, 1GR at M range: On • Others: Off	Inspect the shift solenoid D. (See 05-17B-30 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].)	AH
SSE_SS5 (Shift solenoid E)	On/Off	• TCC operating: On • TCC non operating: Off	Inspect the shift solenoid E. (See 05-17B-30 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].)	AK
SSF_SS6 (Shift solenoid F)	On/Off	• 1GR/2GR/3GR/4GR: On • 5GR: Off	Inspect the shift solenoid F. (See 05-17B-33 SOLENOID VALVE INSPECTION (SECONDARY CONTROL VALVE BODY)[FS5A-EL].)	AI
TFT (Transaxle fluid temperature)	°C / °F	Indicates transaxle fluid temperature	Inspect the TFT sensor. (See 05-17B-19 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR INSPECTION[FS5A-EL].)	AA
TFTV (Transaxle fluid signal voltage)	V	• ATF **20 °C {68 °F}: Approx. 3.3 V** • ATF **40 °C {104 °F}: Approx. 2.4 V** • ATF **60 °C {140 °F}: Approx. 1.5 V**	Inspect the TFT sensor. (See 05-17B-19 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR INSPECTION[FS5A-EL].)	AA
THOP (Throttle position sensor)	%	• CTP: **12%** • WOT: **75%**	Inspect the TP sensor. (See 01-40A-54 THROTTLE POSITION (TP) SENSOR INSPECTION[LF, L3].)	N/A
TR (Transaxle range)	P/R/N/D	• P position: P • R position: R • N position: N • D range: D	Inspect the TR switch. (See 05-17B-11 TRANSAXLE RANGE (TR) SWITCH INSPECTION[FS5A-EL].)	U
TR_SENS (TR switch)	V	• P position: **4.34—4.79 V** • R position: **3.83—4.18 V** • N position: **3.05—3.50 V** • D range: **2.23—2.66 V**	Inspect the TR switch. (See 05-17B-11 TRANSAXLE RANGE (TR) SWITCH INSPECTION[FS5A-EL].)	U
TSS (Input/turbine speed)	RPM	Indicates Input/turbine speed • Ignition switch ON: **0 RPM** • Idle: **700—800 RPM** (P, N position)	Inspect the input/turbine speed sensor. (See 05-17B-24 INPUT/TURBINE SPEED SENSOR INSPECTION[FS5A-EL].)	Y, AB
UP SW (Up switch)	On/Off	• M range, upshift: On • Other: Off	Inspect the selector lever component. (See 05-18-4 SELECTOR LEVER COMPONENT INSPECTION.)	G
VPWR_TCM (Battery voltage)	V	B+	Inspect the main relay. (See 09-21-3 RELAY INSPECTION.)	J
VSS (Vehicle speed)	KPH	• Vehicle speed **20 km/h {12.5 mph}: 20 KPH** • Vehicle speed **40 km/h {25 mph}: 40 KPH**	Inspect the VSS. (See 05-17B-28 VEHICLE SPEED SENSOR (VSS) INSPECTION[FS5A-EL].)	Z

Simulation Function Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     - — Select the "Toolbox" tab.
     - — Select "DataLogger".
     - — Select "Modules".
     - — Select "TCM".
   - When using the PDS (Pocket PC)
     - — Select "Module Tests".
     - — Select "TCM".
     - — Select "DataLogger".
3. Select the simulation items from the PID table.
4. Perform the simulation function, inspect the operations for each parts.
   - If there is no operation sound from the solenoid after the simulation function inspection is performed, it is possible that there is an open or short circuit in the wiring harness, or solenoid, or sticking and operation malfunction.



am3uuw0000005

Simulation item table

X: Available

Simulation item	Applicable component	Unit/Condition	Operation		TCM terminal
			IG ON	Idle

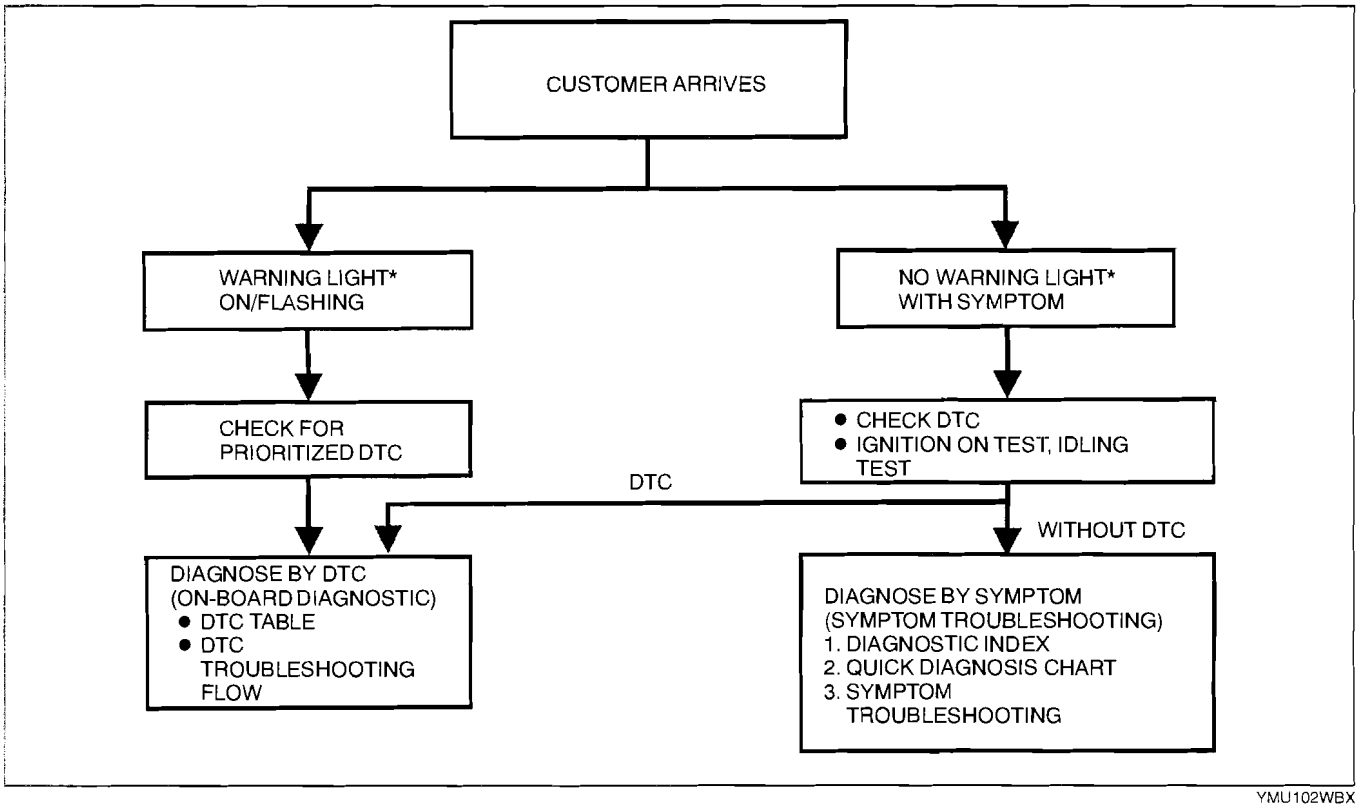
FOREWORD[FN4A-EL]

id0503a1800200

- When the customer reports a vehicle malfunction, check the malfunction indicator lamp (MIL) indication, AT warning light flash, and diagnostic trouble code (DTC), then diagnose the malfunction according to following flowchart.
  - — If a DTC exists, diagnose the applicable DTC inspection. (See 05-02A-11 DTC TABLE[FN4A-EL].)
  - — If a DTC does not exist, the MIL does not illuminate and AT warning light illuminate, diagnose the applicable symptom troubleshooting. (See 05-03A-7 SYMPTOM TROUBLESHOOTING ITEM TABLE[FN4A-EL].)



YMU102WBX

*: Malfunction Indicator Lamp (MIL), AT warning light.

BASIC INSPECTION[FN4A-EL]

id0503a1800300

STEP	INSPECTION		ACTION
1	Perform the mechanical system test. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) Is the mechanical system normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection result.
2	Turn the ignition switch to the ON position. When the selector lever is moved, does the gear position indicator light indication correspond to the selector lever position? Also, when other ranges are selected from N or P during idling, does the vehicle move **within 1—2 s**?	Yes	Go to the next step.
		No	Inspect the selector lever and TR switch. Repair or replace malfunctioning parts. (See 05-18-3 SELECTOR LEVER INSPECTION.) (See 05-17A-10 TRANSAXLE RANGE (TR) SWITCH INSPECTION[FN4A-EL].) If the selector lever and TR switch are normal, go to the next step.
3	Inspect the ATF color and condition. (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].) Are the ATF color and odor normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection result. Flush the ATX and cooler line if necessary.
4	Perform the line pressure test. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) Is the line pressure normal?	Yes	Go to the next step.
		No	Adjust the accelerator cable if necessary. Repair or replace any malfunctioning parts according to the inspection result.

STEP	INSPECTION		ACTION
5	Perform the stall test. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) Is the stall speed normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection result.
6	Inspect the voltage at the following PCM terminals. (See 01-40A-13 PCM INSPECTION[LF, L3].) • Terminal 2AC*1, 1U*2 (TFT sensor) • Terminal 1AH*1, 1S*2 (TR switch) • Terminal 1AO*1, 1AG*1, 1M*2, 1Q*2 (Input/ TSS) • Terminal 1AF*1, 1P*2 (Down switch) • Terminal 1AJ*1, 1K*2 (Up switch) • Terminal 1AM*1, 1O*2 (M range switch) Is the voltage normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection result.
7	Inspect the value at the following PCM PIDs using the M-MDS. (See 01-40A-13 PCM INSPECTION[LF, L3].) • B+ • APP1 • APP2 • ECT • RPM • TP1 • VSS Are the PID values normal?	Yes	Perform the symptom troubleshooting and follow the procedures.
		No	Repair or replace any malfunctioning parts according to the inspection result.

*1 : California emission regulation applicable model
*2 : Except for California emission regulation applicable model

SYMPTOM TROUBLESHOOTING ITEM TABLE[FN4A-EL]

id0503a1800400

- Use the chart below to verify the symptoms of the trouble in order to diagnose the appropriate area.

No.	TROUBLESHOOTING ITEM	DESCRIPTION	PAGE
1	Vehicle does not move in D range, or in R position	Vehicle does not move when accelerator pedal is depressed.	(See 05-03A-13 NO.1 VEHICLE DOES NOT MOVE IN D RANGE, OR IN R POSITION[FN4A-EL].)
2	Vehicle moves in N position	Vehicle creeps in N position. Vehicle creeps if brake pedal is not depressed in N position.	(See 05-03A-14 NO.2 VEHICLE MOVES IN N POSITION[FN4A-EL].)
3	Vehicle moves in P position, or parking gear does not disengage when P position is disengaged	Vehicle rolls when on a downward slope and tires do not lock in P position. Tires locked when P position is disengaged, vehicle does not move in D range, and R position when accelerator pedal is depressed, and engine remains in stalled condition.	(See 05-03A-14 NO.3 VEHICLE MOVES IN P POSITION, OR PARKING GEAR DOES NOT DISENGAGE WHEN P IS DISENGAGED[FN4A-EL].)
4	Excessive creep	Vehicle accelerates in D range, and R position when accelerator pedal is not depressed.	(See 05-03A-15 NO.4 EXCESSIVE CREEP[FN4A-EL].)
5	No creep at all	Vehicle does not move in D range, or R position when idling on flat paved road.	(See 05-03A-15 NO.5 NO CREEP AT ALL[FN4A-EL].)
6	Low maximum speed and poor acceleration	Vehicle acceleration is poor at start. Delayed acceleration when accelerator pedal is depressed while driving.	(See 05-03A-16 NO.6 LOW MAXIMUM SPEED AND POOR ACCELERATION[FN4A-EL].)
7	No shifting	Single shift range only. Sometimes shifts correctly.	(See 05-03A-18 NO.7 NO SHIFTING[FN4A-EL].)

No.	TROUBLESHOOTING ITEM	DESCRIPTION	PAGE
8	Does not shift to 4GR	Vehicle does not upshift from 3GR to 4GR even though vehicle speed is increased. Vehicle does not shift to 4GR even though accelerator pedal is released in D range at **60 km/h {37 mph}**.	(See 05-03A-19 NO.8 DOES NOT SHIFT TO 4GR[FN4A-EL].)
9	Abnormal shifting	Shifts incorrectly (incorrect shift pattern).	(See 05-03A-20 NO.9 ABNORMAL SHIFTING[FN4A-EL].)
10	Frequent shifting	Downshifting occurs suddenly even when accelerator pedal is depressed slightly in D range.	(See 05-03A-21 NO.10 FREQUENT SHIFTING[FN4A-EL].)
11	Shift point is high or low	Shift point considerably different from automatic shift diagram. Shift delays when accelerating. Shift occurs suddenly when accelerating and engine speed does not increase.	(See 05-03A-21 NO.11 SHIFT POINT IS HIGH OR LOW[FN4A-EL].)
12	Torque converter clutch (TCC) non-operation	TCC does not operate when vehicle reaches TCC operation range.	(See 05-03A-21 NO.12 TORQUE CONVERTER CLUTCH (TCC) NON-OPERATION[FN4A-EL].)
13	No kickdown	Does not downshift when accelerator pedal is fully depressed within kickdown range.	(See 05-03A-22 NO.13 NO KICKDOWN[FN4A-EL].)
14	Engine flares up or slips when upshifting or downshifting	When accelerator pedal is depressed, engine speed increases normally but vehicle speed increases slowly. When accelerator pedal is depressed while driving, engine speed increases but vehicle speed does not.	(See 05-03A-23 NO.14 ENGINE FLARES UP OR SLIPS WHEN UPSHIFTING OR DOWNSHIFTING[FN4A-EL].)
15	Engine flares up or slips when accelerating vehicle	Engine flares up when accelerator pedal is depressed for upshifting. Engine flares up suddenly when accelerator pedal is depressed for downshifting.	(See 05-03A-24 NO.15 ENGINE FLARES UP OR SLIPS WHEN ACCELERATING VEHICLE[FN4A-EL].)
16	Judder upon torque converter clutch (TCC) operation	Vehicle jolts when TCC is engaged.	(See 05-03A-24 NO.16 JUDDER UPON TORQUE CONVERTER CLUTCH (TCC) OPERATION[FN4A-EL].)
17	Excessive shift shock from N to D or N to R position/range	Strong shock is felt when shifting from N to D or N to R position/range at idle.	(See 05-03A-25 NO.17 EXCESSIVE SHIFT SHOCK FROM N TO D OR N TO R POSITION/RANGE[FN4A-EL].)
18	Excessive shift shock is given when upshifting and downshifting	Excessive shift shock is felt when depressing accelerator pedal to accelerate at upshifting. During cruising, excessive shift shock is felt when depressing accelerator pedal at downshifting.	(See 05-03A-27 NO.18 EXCESSIVE SHIFT SHOCK IS FELT WHEN UPSHIFTING AND DOWNSHIFTING[FN4A-EL].)
19	Excessive shift shock on torque converter clutch (TCC)	Strong shock is felt when TCC is engaged.	(See 05-03A-28 NO.19 EXCESSIVE SHIFT SHOCK ON TORQUE CONVERTER CLUTCH (TCC)[FN4A-EL].)
20	Noise occurs at idle when vehicle is stopped in all positions/ranges	Transaxle is noisy in all positions and ranges when vehicle idling.	(See 05-03A-28 NO.20 NOISE OCCURS AT IDLE WHEN VEHICLE IS STOPPED IN ALL POSITIONS/RANGES[FN4A-EL].)
21	Noise occurs at idle when vehicle is stopped in D range, or in R position	Transaxle is noisy in driving ranges when vehicle is idling.	(See 05-03A-29 NO.21 NOISE OCCURS AT IDLE WHEN VEHICLE IS STOPPED IN D RANGE, OR IN R POSITION[FN4A-EL].)

No.	TROUBLESHOOTING ITEM	DESCRIPTION	PAGE
22	No engine braking in 1GR position of M range	Engine speed drops to idle but vehicle coasts when accelerator pedal is released when in M range (1GR) at low vehicle speed.	(See 05-03A-29 NO.22 NO ENGINE BRAKING IN 1GR POSITION OF M RANGE[FN4A-EL].)
23	Transaxle overheats	Burnt smell emitted from the transaxle. Smoke is emitted from the transaxle.	(See 05-03A-30 NO.23 TRANSAXLE OVERHEATS[FN4A-EL].)
24	Engine stalls when shifted to D range, or in R position	Engine stalls when shifting from N or P position to D range or R position at idle.	(See 05-03A-31 NO.24 ENGINE STALLS WHEN SHIFTED TO D RANGE, OR IN R POSITION[FN4A-EL].)
25	Engine stalls when driving at slow speeds or stopping	Engine stalls when brake pedal is depressed while driving at low speed or stopping.	(See 05-03A-31 NO.25 ENGINE STALLS WHEN DRIVING AT SLOW SPEEDS OR STOPPING[FN4A-EL].)
26	Starter does not work	Starter does not work even when in P or N position is selected.	(See 05-03A-31 NO.26 STARTER DOES NOT WORK[FN4A-EL].)
27	Gear position indicator light does not illuminate in D or M range	Gear position indicator light in instrument cluster does not illuminate in D or M range with ignition switch at ON.	(See 05-03A-32 NO.27 GEAR POSITION INDICATOR LIGHT DOES NOT ILLUMINATE IN D OR M RANGE[FN4A-EL].)
28	Gear position indicator light illuminate in P, R and N position	Gear position indicator light in instrument cluster illuminate in P, R and N position with ignition switch at ON.	(See 05-03A-33 NO.28 GEAR POSITION INDICATOR LIGHT ILLUMINATE IN P, R AND N POSITION[FN4A-EL].)
29	Does not upshift in M range	Gear position indlcator light in instrument cluster illuminates but vehicle does not upshift when selector lever is pushed to "+" side.	(See 05-03A-34 NO.29 DOES NOT UPSHIFT IN M RANGE[FN4A-EL].)
30	Does not downshift in M range	Gear position indicator light in instrument cluster illuminates but vehicle does not downshift when selector lever is pushed to "–" side.	(See 05-03A-34 NO.30 DOES NOT DOWNSHIFT IN M RANGE[FN4A-EL].)

QUICK DIAGNOSIS CHART[FN4A-EL]

id0503a1800500

X : Applied

No.	Item	Selector lever mis-adjusted	Parking mechanism malfunction	Not within line pressure specification	Not within idle speed specification	Excessive amount of ATF	Electrical system components							
							ATX outer parts							
							APP sensor		Input/turbine speed sensor		VSS		ECT sensor	
							No signal input	Abnormal signal input	No signal input	Abnormal signal input	No signal input	Abnormal signal input	No signal input	Abnormal signal input
1	Vehicle does not move in D range, or in R position	X		X		X								
2	Vehicle moves in N position	X												
3	Vehicle moves in P position, or parking gear does not disengage when P is disengaged	X												
4	Excessive creep		X		X	X								
5	No creep at all			X		X	X	X	X	X	X	X		
6	Low maximum speed and poor acceleration		X	X			X	X	X	X	X	X		
7	No shifting			X			X	X	X	X	X	X		
8	Does not shift to 4GR	X		X			X	X	X	X	X	X	X	X
9	Abnormal shifting	X		X		X	X	X	X	X	X	X

am3uuw0000008

NO.1 VEHICLE DOES NOT MOVE IN D RANGE, OR IN R POSITION[FN4A-EL]

id0503a1800600

1	Vehicle does not move in D range, or in R position
DESCRIPTION	• Vehicle does not move when the accelerator pedal is depressed.
POSSIBLE CAUSE	• If the vehicle does not move in D range or R position, basically, the malfunction is in the ATX. (Vehicle will move even with a malfunction in the PCM.) Since a malfunction is in the sensor circuit or output circuit is the cause of the malfunction in the ATX, inspect the sensors, output circuit, and the related wiring harnesses. 1. Clutch slippage, worn (D range-Forward clutch, R position-Reverse clutch, Low and reverse brake) • Line pressure low • Shift solenoid D malfunction • Shift solenoid E malfunction • Shift solenoid A malfunction • Shift solenoid B malfunction • Pressure control solenoid malfunction • Body GND malfunction • Control valve body malfunction 2. Selector lever malfunction 3. Improper operation of parking mechanism 4. Torque converter malfunction **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05-03A-6 BASIC INSPECTION[FN4A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	When the vehicle is stopped on a flat, level road and the engine is off, does the vehicle move when pushed? (in D range or N, R positions with the brake pedal released)	Yes	Go to the next step.
		No	Inspect for parking mechanism. (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
2	Disconnect the PCM connector. Is the resistance between the ground terminals (1AZ, 1BB, 1BD, 1BH, 2BH*1) at the PCM connector and the body ground **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair open ground circuit.
3	Inspect the pressure control solenoid circuit. (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].) Is it normal?	Yes	Overhaul the control valve body and repair or replace any malfunctioning parts. (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).) If any problem remains, overhaul the transaxle and repair or replace any malfunctioning parts. (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
		No	Repair or replace any malfunctioning parts.
4	• Verify test results. — If normal, return to the diagnostic index to service any additional symptoms. — If malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)		

*1 : California emission regulation applicable model
*2 : Except for California emission regulation applicable model

NO.2 VEHICLE MOVES IN N POSITION[FN4A-EL]

id0503a1800700

2	Vehicle moves in N position
DESCRIPTION	• Vehicle creeps in N position. • Vehicle creeps if brake pedal is not depressed in N position.
POSSIBLE CAUSE	• If the vehicle moves in N position, basically, the malfunction is in the ATX. Since a malfunction in the sensor circuit or output circuit is the cause of the malfunction in the ATX, inspect the sensors, output circuit, and the related wiring harnesses. 1. Clutch burnt (Forward clutch) • Control valve body malfunction 2. Selector lever position disparity (Although the selector indicator shows N position, the hydraulic circuit shows D range or R position) **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05-03A-6 BASIC INSPECTION[FN4A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Does the vehicle creep when selector lever is moved slightly in N position?	Yes	Go to the next step.
		No	Adjust the selector lever. (See 05-18-5 SELECTOR CABLE ADJUSTMENT.)
2	Disconnect the PCM connector. Is the resistance between the ground terminals (1AZ, 1BB, 1BD, 1BH, 2BH*1) at the PCM connector and the body ground **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair open ground circuit. Reconnect the PCM.
3	Inspect the pressure control solenoid circuit. (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].) Is it normal?	Yes	Overhaul the control valve body and repair or replace any malfunctioning parts. (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).) If any problem remains, overhaul the transaxle and repair or replace any malfunctioning parts. (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
		No	Repair or replace any malfunctioning parts.
4	• Verify test results. — If normal, return to the diagnostic index to service any additional symptoms. — If malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)

*2 : Except for California emission regulation applicable model

NO.3 VEHICLE MOVES IN P POSITION, OR PARKING GEAR DOES NOT DISENGAGE WHEN P IS DISENGAGED[FN4A-EL]

id0503a1800800

3	Vehicle moves in P position, or parking gear does not disengage when P is disengaged
DESCRIPTION	• Vehicle rolls on a downward slope in P position. • Tires are locked when P is disengaged. Vehicle does not move in D range, and R position when the accelerator pedal is depressed, and the engine remains in a stalled condition.
POSSIBLE CAUSE	1. Parking mechanism malfunction (May have effect on noise or shock from transaxle) 2. Improper adjustment of selector lever 3. If vehicle moves in N position, perform No.2 "VEHICLE MOVES IN N POSITION"

NO.4 EXCESSIVE CREEP[FN4A-EL]

id0503a1800900

4	Excessive creep
DESCRIPTION	• Vehicle accelerates in D range, and R position when accelerator pedal is not depressed.
POSSIBLE CAUSE	1. Engine idle speed is high (transaxle system is not cause of problem) 2. Go to No.9 "FAST IDLE/RUNS ON" (See 01-03A-35 NO.9 FAST IDLE/RUNS ON[LF, L3].)

NO.5 NO CREEP AT ALL[FN4A-EL]

id0503a1801000

5	No creep at all
DESCRIPTION	• Vehicle does not move in D range and R position when idling on a flat paved road.
POSSIBLE CAUSE	• Either transaxle is stuck in 3GR or 4GR position, or there is clutch slippage due to a stuck 3–4 clutch. 1. Clutch burnt • Line pressure low • Shift solenoid D malfunction • Shift solenoid A malfunction • Shift solenoid B malfunction • Shift solenoid C malfunction • Pressure control solenoid malfunction • Body GND malfunction • Control valve body malfunction 2. Transaxle fixed in 3GR (Operation of fail-safe function) • Short or open circuit in wiring harness • Poor connection of connector • Malfunction of electronic parts of output and input system 3. There is no engine torque • Torque converter malfunction **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05-03A-6 BASIC INSPECTION[FN4A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Does the vehicle creep in any range/position?	Yes	Go to the next step.
		No	Inspect or adjust the selector lever. (See 05-18-6 SELECTOR LEVER COMPONENT REMOVAL/INSTALLATION.)
2	Inspect the value at the following PCM PIDs using the M-MDS. (See 01-40A-13 PCM INSPECTION[LF, L3].) • APP1 • APP2 • TP1 Is the PID value normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts.
3	Disconnect the PCM connector. Is the resistance between the ground terminals (1AZ, 1BB, 1BD, 1BH, 2BH*1) at the PCM connector and the body ground **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair open ground circuit.
4	Inspect the pressure control solenoid circuit. (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].) Is it normal?	Yes	Overhaul the control valve body and repair or replace any malfunctioning parts. (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).) If any problem remains, overhaul the transaxle and repair or replace any malfunctioning parts. (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
		No	Repair or replace any malfunctioning parts.
5	• Verify test results. — If normal, return to the diagnostic index to service any additional symptoms. — If malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)		

*1 : California emission regulation applicable model
*2. Except for California emission regulation applicable model

NO.6 LOW MAXIMUM SPEED AND POOR ACCELERATION[FN4A-EL]

id0503a1801100

6	Low maximum speed and poor acceleration
DESCRIPTION	• Vehicle acceleration is poor at start. • Delayed acceleration when accelerator pedal is depressed while driving.
POSSIBLE CAUSE	• If the clutch is stuck or does not stay in 3GR or 4GR, the malfunction is in engine circuit. 1. Clutch slippage, burnt • Line pressure low • Shift solenoid D malfunction • Shift solenoid E malfunction • Shift solenoid A malfunction • Shift solenoid B malfunction • Shift solenoid C malfunction • Pressure control solenoid malfunction • Body GND malfunction • Control valve body malfunction 2. Signal malfunction • Vehicle speed sensor malfunction • Sensor GND malfunction • Accelerator pedal position sensor malfunction • TP sensor malfunction • Input/turbine speed sensor malfunction 3. Transaxle fixed in 3GR (Operation of fail-safe function) • Short or open circuit in wiring harness • Poor connection of connector • Malfunction of electronic parts of output and input system 4. Transaxle fixed in 4GR (Operation of fail-safe function) • Forward clutch slippage • Vehicle speed sensor malfunction • Shift solenoid A malfunction (stuck ON) • Poor connection of connector 5. Insufficient starting torque (Suspected when in-gear condition, shift control and engine circuit are normal) • Torque converter malfunction (Poor operation, stuck) 6. Engagement of TCC operation range (Operation of fail-safe function) • Transaxle fluid temperature sensor malfunction (Short or open circuit) 7. Transaxle fixed in M range • M range switch malfunction 8. TR switch adjustment incorrect **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05-03A-6 BASIC INSPECTION[FN4A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	With the ignition switch at the ON position, does the gear position indicator light indication correspond to the selector lever position?	Yes	Go to the next step.
		No	Go to No.27 "GEAR POSITION INDICATOR LIGHT DOES NOT ILLUMINATE IN M RANGE", or No.30 "GEAR POSITION INDICATOR LIGHT ILLUMINATES IN D RANGE OR P, N, R POSITIONS."
2	Go to No.12 "LACK/LOSS OF POWER-ACCELERATION/CRUISE". (See 01-03A-42 NO.12 LACK/LOSS OF POWER-ACCELERATION/CRUISE[LF, L3].) Is the CIS system normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts.
3	Disconnect the transaxle connector. Does the vehicle operate as follows? **D range: 3GR (fixed)** **R position: Reverse**	Yes	Go to the next step.
		No	Overhaul the control valve body and repair or replace any malfunctioning parts. (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).) If any problem remains, overhaul the transaxle and repair or replace any malfunctioning parts. (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)

STEP	INSPECTION		ACTION
4	Drive the vehicle in D range. Does the vehicle start from stop in first gear?	Yes	Go to the next step.
		No	Inspect the value at the following. (See 01-40A-13 PCM INSPECTION[LF, L3].) PCM PIDs (using the M-MDS): • APP1 • APP2 • TP1 • VSS PCM terminal voltage: • 1AO*1, 1AG*1, 1M*2, 1Q*2 (input/TSS) • 1S (TR switch) Repair or replace any malfunctioning parts.
5	Stop the engine. Inspect the shift solenoid A, B or C. (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].) Are they normal?	Yes	Go to the next step.
		No	Inspect for the shift solenoid mechanical stuck. — If the shift solenoids normal, inspect for open or short circuit between the PCM connector terminals 1A*1, 1E*1, 1AD*1, 1B*2, 1C*2, 1D*2 and the control valve body terminals A, C or G.
6	Perform the stall test. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) Is stall speed normal?	Yes	Reverify symptoms of malfunction.
		No	Overhaul the transaxle and repair or replace any malfunctioning parts. (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
7	• Verify test results. — If normal, return to the diagnostic index to service any additional symptoms. — If malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)		

*1 : California emission regulation applicable model
*2 : Except for California emission regulation applicable model

NO.7 NO SHIFTING[FN4A-EL]

id0503a1801200

7	No shifting
DESCRIPTION	• Single shift range only. • Sometimes it shifts correctly.
POSSIBLE CAUSE	• When the gear position is fixed in 3GR or 4GR due to the fail-safe operation, the malfunction is in the ATX. • Perform malfunction diagnosis according to No.6 "LOW MAXIMUM SPEED AND POOR ACCELERATION". 1. Clutch slippage, burnt • Line pressure low • Shift solenoid D malfunction • Shift solenoid E malfunction • Shift solenoid A malfunction • Shift solenoid B malfunction • Shift solenoid C malfunction • Pressure control solenoid malfunction • Body GND malfunction • Control valve body malfunction 2. Signal malfunction • Vehicle speed sensor malfunction • Sensor GND malfunction • Accelerator pedal position sensor malfunction • TP sensor malfunction • Input/turbine speed sensor malfunction 3. Transaxle fixed in 3GR (Operation in fail-safe function) • Short or open circuit in wiring harness • Poor connection of connector • Disconnected shift solenoid connector • Poor ground of shift solenoid 4. Transaxle fixed in 4GR (Operation in fail-safe function) • Forward clutch slippage • Vehicle speed sensor malfunction • Shift solenoid A malfunction (stuck ON) • Poor connection of connector 5. Transaxle fixed in M range • M range switch malfunction

NO.8 DOES NOT SHIFT TO 4GR[FN4A-EL]

id0503a1808200

8	Does not shift to 4GR
DESCRIPTION	• Vehicle does not upshift from 3GR to 4GR even though vehicle speed is increased. • Vehicle does not shift to 4GR even though accelerator pedal is released in D range at **60 km/h {37 mph}**.
POSSIBLE CAUSE	• Basically, TCC does not operate when the fail-safe is operating. Verify the DTCs first. If the TCC operates when driving at high speeds only, the malfunction (improper adjustment) is in the M range switch circuit or TR switch circuit. **Caution** • **If the TCC is stuck, inspect it. In addition, inspect the oil cooler for foreign particles which may have mixed in with the ATF.** 1. TCC piston slippage, burnt • Line pressure low • TP sensor malfunction • Engine coolant temperature sensor malfunction • Vehicle speed sensor malfunction • Input/turbine speed sensor malfunction • Sensor GND malfunction 2. Transaxle fluid temperature sensor malfunction • Short or open circuit in wiring harness • Poor connection of connector • Sensor malfunction 3. TR switch malfunction • Short or open circuit in wiring harness • Poor connection of connector • Sensor malfunction • Selector lever adjustment incorrect • TR switch adjustment incorrect 4. Shift solenoid A, shift solenoid B, shift solenoid D valve malfunction • Short or open circuit in wiring harness • Poor connection of connector • Solenoid valve stuck 5. M range switch malfunction 6. Control valve body malfunction **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05-03A-6 BASIC INSPECTION[FN4A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	With the ignition switch at the ON position, does the gear position indicator light indication correspond to the selector lever position?	Yes	Go to the next step.
		No	Go to No.27 "GEAR POSITION INDICATOR LIGHT DOES NOT ILLUMINATE IN M RANGE", or No. 28 "GEAR POSITION INDICATOR LIGHT ILLUMINATE IN D RANGE."
2	Inspect the voltage at the following PCM terminal. (See 01-40A-13 PCM INSPECTION[LF, L3].) • Terminal 1U (TFT sensor) Is the voltage normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts.
3	Inspect the shift solenoid A, B or D. (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].) Are they normal?	Yes	Inspect for the shift solenoid mechanical stuck. — If the shift solenoids normal, inspect for open or short circuit between the PCM connector terminals 1A[*1], 1E[*1], 1AD[*1], 1B[*2], 1C[*2], 1D[*2] and the control valve body terminals A, C or B.
		No	Go to the next step.
4	Disconnect the PCM connector. Is the resistance between the ground terminals (1AZ, 1BB, 1BD, 1BH, 2BH[*1]) at the PCM connector and the body ground **less than 5.0 ohms**?	Yes	Inspect the value at the following PCM PID using the M-MDS. (See 01-40A-13 PCM INSPECTION[LF, L3].) • VSS Repair or replace any malfunctioning parts.
		No	Repair open ground circuit. Reconnect the PCM.

STEP	INSPECTION	ACTION
5	• Verify test results. — If normal, return to the diagnostic index to service any additional symptoms. — If malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)	

*1 : California emission regulation applicable model
*2 : Except for California emission regulation applicable model

NO.9 ABNORMAL SHIFTING[FN4A-EL]

id0503a1801400

9	Abnormal shifting
DESCRIPTION	• Shift incorrectly (incorrect shift pattern).
POSSIBLE CAUSE	• There is a malfunction in the signal circuit which controls shifting (accelerator pedal position sensor, TP sensor, input/turbine speed sensor, vehicle speed sensor), the control valve is stuck, the accumulator (forward or servo apply) is stuck, or the clutch circuit is stuck. 1. Clutch slipped, burnt • Line pressure low • Control valve body malfunction • Shift solenoid D malfunction • Shift solenoid E malfunction • Shift solenoid A malfunction • Shift solenoid B malfunction • Shift solenoid C malfunction • Body GND malfunction 2. Signal malfunction • Vehicle speed sensor malfunction • Sensor GND malfunction • TP sensor malfunction or mis-adjustment • Accelerator pedal position sensor malfunction or mis-adjustment • Input/turbine speed sensor malfunction 3. TR switch malfunction • Selector lever adjustment incorrect • TR switch adjustment incorrect **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05-03A-6 BASIC INSPECTION[FN4A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Disconnect the PCM connector. Is the resistance between the ground terminals (1AZ, 1BB, 1BD, 1BH, 2BH*1) at the PCM connector and the body ground **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair open ground circuit. Reconnect the PCM.
2	Inspect the value at the following. (See 01-40A-13 PCM INSPECTION[LF, L3].) PCM PIDs (using M-MDS): • APP1 • APP2 • TP1 PCM terminal voltage: • 1AO*1, 1AG*1, 1M*2, 1Q*2 (Input/TSS) Are they normal?	Yes	Overhaul the control valve body and repair or replace any malfunctioning parts. (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).) If any problem remains, overhaul the transaxle and repair or replace any malfunctioning parts. (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
		No	Repair or replace any malfunctioning parts.
3	• Verify test results. — If normal, return to the diagnostic index to service any additional symptoms. — If malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)		

*1 : California emission regulation applicable model
*2 : Except for California emission regulation applicable model

NO.10 FREQUENT SHIFTING[FN4A-EL]

id0503a1801500

10	Frequent shifting
DESCRIPTION	• Downshifting occurs suddenly even when accelerator pedal is depressed slightly in D range.
POSSIBLE CAUSE	• The malfunctioning circuit is basically the same as No.9 "ABNORMAL SHIFTING". However, a malfunction of the input signal to the accelerator pedal position sensor, TP sensor, input/turbine speed sensor, vehicle speed sensor (including the sensor GND, sensor wiring harness and connector), or clutch slippage (clutch stuck, low pressure in line) may also be the cause.

NO.11 SHIFT POINT IS HIGH OR LOW[FN4A-EL]

id0503a1801600

11	Shift point is high or low
DESCRIPTION	• Shift point considerably different from automatic shift diagram. • Shift delays when accelerating. • Shift occurs quickly when accelerating and engine speed does not increase.
POSSIBLE CAUSE	• If the transaxle does not shift abnormally, there is a malfunction of the input signal to the accelerator pedal position sensor, TP sensor, input/turbine speed sensor, or vehicle speed sensor (including sensor GND). • If the engine speed is high or low, regardless of normal shifting, inspect the tachometer. • Verify that the output signal of the accelerator pedal position sensor and TP sensor change linearly.

NO.12 TORQUE CONVERTER CLUTCH (TCC) NON-OPERATION[FN4A-EL]

id0503a1801700

12	Torque converter clutch (TCC) non-operation
DESCRIPTION	• TCC does not operate when vehicle reaches TCC operation range.
POSSIBLE CAUSE	• Basically, the TCC does not operate when the fail-safe is operating. Verify the DTC first. **Caution** **• If the TCC is stuck, inspect it. In addition, inspect the oil cooler for foreign particles which may have mixed in with the ATF.** 1. TCC burnt (1) Input sensor system malfunction • Transaxle fluid temperature sensor • Vehicle speed sensor • Input/turbine speed sensor • Sensor GND (2) Output solenoid valve system malfunction (Sticking) • Shift solenoid E malfunction • Shift solenoid A malfunction (3) Control valve body malfunction system (Poor operation, stuck) • TCC hydraulic pressure system 2. TP sensor malfunction (Not operating linear) 3. Accelerator pedal position sensor malfunction (Not operating linear) 4. Input/turbine speed sensor or vehicle speed sensor malfunction 5. Brake switch malfunction (Always ON) 6. ECT sensor malfunction **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05-03A-6 BASIC INSPECTION[FN4A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	With the ignition switch at the ON position, does the gear position indicator light indication correspond to the selector lever position?	Yes	Go to the next step.
		No	Go to No.27 "GEAR POSITION INDICATOR LIGHT DOES NOT ILLUMINATE IN M RANGE", or No.28 "GEAR POSITION INDICATOR LIGHT ILLUMINATE IN D RANGE."
2	Inspect the value at the following. (See 01-40A-13 PCM INSPECTION[LF, L3].) PCM PIDs (using M-MDS): • APP1 • APP2 • TP1 • VSS PCM terminal voltage: • 1AO*1, 1AG*1, 1M*2, 1Q*2 (Input/TSS) Are they normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts.
3	Disconnect the PCM connector. Is the resistance between the ground terminals (1AZ, 1BB, 1BD, 1BH, 2BH*1) at the PCM connector and the body ground **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair the wiring harness.
4	Inspect the resistance between shift solenoid A and E circuit at the PCM connector and transaxle connector. Are the resistances **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair the shift solenoid A or E circuit. Reconnect the PCM.
5	Inspect the shift solenoid A and E. (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].) Are the shift solenoids operating properly?	Yes	Replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Overhaul the control valve body and repair or replace any malfunctioning parts. (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).) If any problem remains, overhaul the transaxle and repair or replace any malfunctioning parts. (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
6	• Verify test results. — If normal, return to the diagnostic index to service any additional symptoms. — If malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)		

*1 : California emission regulation applicable model
*2 : Except for California emission regulation applicable model

NO.13 NO KICKDOWN[FN4A-EL]

id0503a1801800

13	No kickdown
DESCRIPTION	• Does not downshift when accelerator pedal is fully depressed within kickdown range.
POSSIBLE CAUSE	• If transaxle does not downshift though shifting is normal, the malfunction is in the accelerator pedal position sensor or TP sensor circuit (including sensor GND, sensor wiring harness and connector).

NO.14 ENGINE FLARES UP OR SLIPS WHEN UPSHIFTING OR DOWNSHIFTING[FN4A-EL]

id0503a1801900

14	Engine flares up or slips when upshifting or downshifting
DESCRIPTION	• When the accelerator pedal is depressed for acceleration from standstill, engine speed increases but vehicle speed increases slowly. • When the accelerator pedal is depressed while driving, engine speed increases but the vehicle speed does not.
POSSIBLE CAUSE	• There is clutch slippage because the clutch is stuck or the line pressure is low. 1. Clutch stuck, slippage (forward clutch, 3–4 clutch, 2–4 brake band, one-way clutch) • Line pressure low • Shift solenoid D malfunction • Shift solenoid E malfunction • Shift solenoid A malfunction • Shift solenoid B malfunction • Shift solenoid C malfunction • Pressure control solenoid malfunction • Body GND malfunction • Control valve body malfunction 2. Signal malfunction • Vehicle speed sensor malfunction • Sensor GND malfunction • TP sensor malfunction or mis-adjustment • Accelerator pedal position sensor malfunction or mis-adjustment • Input/turbine speed sensor malfunction 3. Poor operation of mechanical pressure • Selector lever position disparity • TR switch position disparity **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05-03A-6 BASIC INSPECTION[FN4A-EL].)

05-03A

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Is shift point normal?	Yes	Go to the next step.
		No	Go to No.9 "ABNORMAL SHIFTING".
2	Inspect the value at the following PCM PIDs using the M-MDS. (See 01-40A-13 PCM INSPECTION[LF, L3].) • APP1 • APP2 • TP1 Are the PIDs values normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts.
3	Disconnect the PCM connector. Is the resistance between the ground terminals (1AZ, 1BB, 1BD, 1BH, 2BH*1) at the PCM connector and the body ground **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair the wiring harness. Reconnect the PCM.
4	Inspect the pressure control solenoid circuit. (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].) Is it normal?	Yes	Overhaul the control valve body and repair or replace any malfunctioning parts. (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).) If any problem remains, overhaul the transaxle and repair or replace any malfunctioning parts. (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
		No	Repair or replace any malfunctioning parts.
5	• Verify test results. — If normal, return to the diagnostic index to service any additional symptoms. — If malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)		

*1 : California emission regulation applicable model
*2 : Except for California emission regulation applicable model

NO.15 ENGINE FLARES UP OR SLIPS WHEN ACCELERATING VEHICLE[FN4A-EL]

id0503a1802000

15	Engine flares up or slips when accelerating the vehicle
DESCRIPTION	• Engine flares up when the accelerator pedal is depressed for upshifting. • Engine flares up suddenly when the accelerator pedal is depressed for downshifting.
POSSIBLE CAUSE	• The malfunction is basically the same as for No.14 "ENGINE FLARES UP OR SLIPS WHEN UPSHIFTING OR DOWNSHIFTING". If conditions for No.14 worsen, the malfunction will develop to No.15.

NO.16 JUDDER UPON TORQUE CONVERTER CLUTCH (TCC) OPERATION[FN4A-EL]

id0503a1802100

16	Judder upon torque converter clutch (TCC) operation
DESCRIPTION	• Vehicle jolts when TCC is engaged.
POSSIBLE CAUSE	• Poor TCC engagement due to either slippage because the TCC is stuck or the line pressure is low **Caution** **• If the TCC is stuck, inspect it. In addition, inspect the oil cooler for foreign particles which may have mixed in with the ATF.** 1. Torque converter clutch piston slippage, burnt • Line pressure high • Shift solenoid A malfunction • Control valve body malfunction • Body GND malfunction • Pressure control solenoid malfunction 2. Signal malfunction • Vehicle speed sensor malfunction • Sensor GND malfunction • TFT sensor malfunction • TP sensor malfunction or mis-adjustment • Accelerator pedal position sensor malfunction or mis-adjustment • Input/turbine speed sensor malfunction 3. Torque converter malfunction **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05-03A-6 BASIC INSPECTION[FN4A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Inspect the following PCM terminal voltage. (See 01-40A-13 PCM INSPECTION[LF, L3].) • 1AO*1, 1AG*1, 1M*2, 1Q*2 (Input/TSS) Are they normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts.
2	Disconnect the PCM connector. Is the resistance between the ground terminals (1AZ, 1BB, 1BD, 1BH, 2BH*1) at the PCM connector and the body ground **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair the wiring harness.
3	Inspect the resistance between shift solenoid A circuit terminal 1A*1, 1B*2 at the PCM connector and terminal A at the transaxle connector. Are the resistance **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair the shift solenoid A circuit.
4	Inspect the shift solenoid. (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].) Is the solenoid valve operating properly?	Yes	Go to the next step.
		No	Overhaul the control valve body and repair or replace any malfunctioning parts. (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).) If any problem remains, overhaul the transaxle and repair or replace any malfunctioning parts. (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)

STEP	INSPECTION		ACTION
5	Inspect the pressure control solenoid circuit. (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].) Is it normal?	Yes	Overhaul the control valve body and repair or replace any malfunctioning parts. (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).) If any problem remains, overhaul the transaxle and repair or replace any malfunctioning parts. (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
		No	Replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
6	• Verify test results. — If normal, return to the diagnostic index to service any additional symptoms. — If malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)

*2 : Except for California emission regulation applicable model

NO.17 EXCESSIVE SHIFT SHOCK FROM N TO D OR N TO R POSITION/RANGE[FN4A-EL]

id0503a1802200

17	Excessive shift shock from N to D or N to R position/range
DESCRIPTION	• Strong shock felt when shifting from N to D or N to R position/range.
POSSIBLE CAUSE	• Shift shock may worsen when the fail-safe is operating. If no DTC is output, the shift shock may worsen due to poor operation of the control valve body or sticking of the clutch. 1. Clutch burnt (N→D: Forward clutch, N→R: Reverse clutch or low and reverse brake) • Line pressure low, high • TP sensor malfunction • Accelerator pedal position sensor malfunction or mis-adjustment • Vehicle speed sensor malfunction • Input/turbine speed sensor malfunction • Shift solenoid B malfunction • Shift solenoid D malfunction • Shift solenoid A malfunction • Shift solenoid C malfunction • Pressure control solenoid malfunction • Control valve body malfunction • Sensor GND malfunction • Body GND malfunction 2. Poor hydraulic operation (Malfunction in range change) • Forward accumulator malfunction • Servo apply accumulator malfunction 3. Idle speed high 4. Poor tightening torque of engine mount, exhaust mount 5. Poor operation of mechanical pressure • Selector lever position disparity **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05-03A-6 BASIC INSPECTION[FN4A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Does the shift shock occur only when the engine is cold?	Yes	Go to the next step.
		No	Go to Step 3.
2	Disconnect the PCM connector. Is the resistance between the ground terminals (1AZ, 1BB, 1BD, 1BH, 2BH*1) at the PCM connector and the body ground **less than 5.0 ohms**?	Yes	Inspect the value at the following. (See 01-40A-13 PCM INSPECTION[LF, L3].) PCM PIDs (using M-MDS): • APP1 • APP2 • TP1 PCM terminal voltage: • 2AC*1, 1U*2 (TFT sensor) Repair or replace any malfunctioning parts.
		No	Repair the wiring harness. Reconnect the PCM.
3	Perform the stall test. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) Is stall speed normal?	Yes	Go to the next step.
		No	Go to Step 5.
4	Inspect the voltage at the following PCM terminal. (See 01-40A-13 PCM INSPECTION[LF, L3].) • 1AH*1, 1S*2 (TR switch) Is the voltage normal?	Yes	Overhaul the control valve body and repair or replace any malfunctioning parts. (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).) If any problem remains, overhaul the transaxle and repair or replace any malfunctioning parts. (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
		No	Repair or replace any malfunctioning parts.
5	Inspect the value at the following PCM PIDs using the M-MDS. (See 01-40A-13 PCM INSPECTION[LF, L3].) • APP1 • APP2 • TP1 Are the PIDs values normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts.
6	Disconnect the PCM connector. Is the resistance between the ground terminals (1AZ, 1BB, 1BD, 1BH, 2BH*1) at the PCM connector and the body ground **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair the wiring harness. Reconnect the PCM.
7	Inspect the pressure control solenoid circuit. (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].) Is it normal?	Yes	Overhaul the control valve body and repair or replace any malfunctioning parts. (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).) If any problem remains, overhaul the transaxle and repair or replace any malfunctioning parts. (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
		No	Repair or replace any malfunctioning parts.
8	• Verify test results. — If normal, return to the diagnostic index to service any additional symptoms. — If malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)		

*1 : California emission regulation applicable model
*2 : Except for California emission regulation applicable model

NO.18 EXCESSIVE SHIFT SHOCK IS FELT WHEN UPSHIFTING AND DOWNSHIFTING[FN4A-EL]

id0503a1804600

18	**Excessive shift shock is felt when upshifting and downshifting**
DESCRIPTION	• Excessive shift shock is felt when depressing the accelerator pedal at upshifting. During cruising, excessive shift shock is felt when depressing accelerator pedal at downshifting.
POSSIBLE CAUSE	• Shift shock may worsen when the fail-safe is operating. The shift shock has worsened if the accelerator pedal position sensor, TP sensor, input/turbine speed sensor, or vehicle speed sensor signal malfunctions. 1. Clutch slippage, burnt (Forward clutch, 2–4 brake band, 3–4 clutch) • Line pressure low, high • Shift solenoid D malfunction • Shift solenoid E malfunction • Shift solenoid A malfunction • Shift solenoid B malfunction • Shift solenoid C malfunction • Pressure control solenoid malfunction • Accelerator pedal position sensor mis-adjustment • Control valve body malfunction • Body GND malfunction 2. Signal malfunction • Transaxle temperature sensor malfunction • Vehicle speed sensor malfunction • Sensor GND malfunction • TP sensor malfunction • Accelerator pedal position sensor mis-adjustment • Input/turbine speed sensor malfunction 3. Poor hydraulic operation (Malfunction in range change) • Forward accumulator malfunction • Servo apply accumulator malfunction **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05-03A-6 BASIC INSPECTION[FN4A-EL].)

05-03A

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Perform the stall test. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) Is the stall speed normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts.
2	Inspect the value at the following PCM PIDs using the M-MDS. (See 01-40A-13 PCM INSPECTION[LF, L3].) • APP1 • APP2 • TP1 Are the PIDs values normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts.
3	Disconnect the PCM connector. Is the resistance between the ground terminals (1AZ, 1BB, 1BD, 1BH, 2BH*1) at the PCM connector and the body ground **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair the wiring harness. Reconnect the PCM.
4	Inspect the pressure control solenoid circuit. (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].) Is it normal?	Yes	Overhaul the control valve body and repair or replace any malfunctioning parts. (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).) If any problem remains, overhaul the transaxle and repair or replace any malfunctioning parts. (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
		No	Repair or replace any malfunctioning parts.
5	• Verify test results. — If normal, return to the diagnostic index to service any additional symptoms. — If malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)

*2 : Except for California emission regulation applicable model

NO.19 EXCESSIVE SHIFT SHOCK ON TORQUE CONVERTER CLUTCH (TCC)[FN4A-EL]

id0503a1802400

19	Excessive shift shock on torque converter clutch (TCC)
DESCRIPTION	• Strong shock is felt when the TCC is engaged.
POSSIBLE CAUSE	• The troubleshooting flow is the same as No.16 "JUDDER UPON TORQUE CONVERTER CLUTCH (TCC) OPERATION".

NO.20 NOISE OCCURS AT IDLE WHEN VEHICLE IS STOPPED IN ALL POSITIONS/RANGES[FN4A-EL]

id0503a1802500

20	Noise occurs at idle when vehicle is stopped in all positions/ranges
DESCRIPTION	• Transaxle is noisy in all positions and ranges when the vehicle is idling.
POSSIBLE CAUSE	• The malfunction is in the oil pump which causes a high-pitched noise to be emitted from the transaxle at idle. **Note** • If a noise is emitted during shifting only, the malfunction is in the shift solenoid D, E or shift solenoid A, B, C. If a noise is emitted during shifting at certain gears only or during deceleration only, it is gear noise. • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05-03A-6 BASIC INSPECTION[FN4A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Inspect engine condition. Is there any engine concern (i. e. rough idle)?	Yes	Go to appropriate symptom troubleshooting. (See 01-03A-11 ENGINE SYMPTOM TROUBLESHOOTING[LF, L3].)
		No	Go to the next step.
2	Does the noise stop when the transaxle connector is disconnected?	Yes	Go to the next step.
		No	Overhaul the control valve body and repair or replace any malfunctioning parts. (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).) If any problem remains, overhaul the transaxle and repair or replace any malfunctioning parts. (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
3	Inspect the value at the following. (See 01-40A-13 PCM INSPECTION[LF, L3].) PCM PIDs (using M-MDS): • APP1 • APP2 • TP1 • VSS PCM terminal voltage: • 1AO*1, 1AG*1, 1M*2, 1Q*2 (Input/TSS) Are they normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts.
4	Disconnect the PCM connector. Is the resistance between the ground terminals (1AZ, 1BB, 1BD, 1BH, 2BH*1) at the PCM connector and the body ground **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair the wiring harness. Reconnect the PCM.
5	Inspect the pressure control solenoid circuit. (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].) Is it normal?	Yes	Overhaul the control valve body and repair or replace any malfunctioning parts. (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).) If any problem remains, overhaul the transaxle and repair or replace any malfunctioning parts. (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
		No	Repair or replace any malfunctioning parts.
6	• Verify test results. — If normal, return to the diagnostic index to service any additional symptoms. — If malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)		

*1 : California emission regulation applicable model
*2 : Except for California emission regulation applicable model

NO.21 NOISE OCCURS AT IDLE WHEN VEHICLE IS STOPPED IN D RANGE, OR IN R POSITION[FN4A-EL]

id0503a1802600

21	Noise occurs at idle when vehicle is stopped in D range, or in R position
DESCRIPTION	• Transaxle is noisy in D range, or in R position when vehicle is idling.
POSSIBLE CAUSE	• Although the malfunction is basically the same as No.20 "NOISE OCCURS AT IDLE WHEN VEHICLE IS STOPPED IN ALL POSITIONS/RANGES", other causes may include selector lever position disparity or TR switch position disparity. **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05-03A-6 BASIC INSPECTION[FN4A-EL].)

NO.22 NO ENGINE BRAKING IN 1GR POSITION OF M RANGE[FN4A-EL]

id0503a1802700

22	No engine braking in 1GR position of M range
DESCRIPTION	• Engine speed drops to idle but the vehicle coasts when the accelerator pedal is released when in 1GR of M range at low vehicle speed.
POSSIBLE CAUSE	1. Clutch slippage, burnt (low and reverse brake) • Line pressure low • Shift solenoid D malfunction • Shift solenoid E malfunction • Shift solenoid C malfunction • Control valve body malfunction • Body GND malfunction 2. Signal malfunction • TP sensor malfunction • Accelerator pedal position sensor malfunction • Vehicle speed sensor malfunction • Sensor GND malfunction • Input/turbine speed sensor malfunction 3. M range switch ON not judged by the PCM (short, or open circuit, poor operation) • M range switch signal malfunction **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05-03A-6 BASIC INSPECTION[FN4A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Do the following symptoms occur concurrently? • Engine flares up or slips during acceleration. • Engine flares up or slips when shifting.	Yes	Go to symptom troubleshooting NO.14 "ENGINE FLARES UP OR SLIPS WHEN UPSHIFTING OR DOWNSHIFTING" or No.15 "ENGINE FLARES UP OR SLIPS WHEN ACCELERATING VEHICLE".
		No	Repeat basic inspection and repair or replace any malfunctioning parts according to the inspection result. (See 05-03A-6 BASIC INSPECTION[FN4A-EL].)
2	• Verify test results. — If normal, return to the diagnostic index to service any additional symptoms. — If malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)		

NO.23 TRANSAXLE OVERHEATS[FN4A-EL]

id0503a1802800

23	Transaxle overheats
DESCRIPTION	• Burnt smell emitted from transaxle. • Smoke emitted from transaxle.
POSSIBLE CAUSE	• The malfunction is restricted to the hindrance of coolant at the oil cooler. In addition, overheating of the transaxle may be caused by a malfunction of the transaxle fluid temperature sensor. 1. Burnt (TCC) • Line pressure low • Control valve body malfunction 2. Oil cooler malfunction (Foreign material mixed in ATF) 3. Transaxle fluid temperature sensor malfunction 4. Excessive amount of ATF 5. Torque converter malfunction **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05-03A-6 BASIC INSPECTION[FN4A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Inspect for bending, damage, corrosion or kinks of the oil cooler pipes. Are oil cooler pipes normal?	Yes	Go to the next step.
		No	Replace any malfunctioning parts.
2	Perform the stall test. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].) Is the stall speed normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts.
3	Inspect value at the following PCM PIDs using the M-MDS. (See 01-40A-13 PCM INSPECTION[LF, L3].) • APP1 • APP2 • TP1 Are the PID values normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts.
4	Disconnect the PCM connector. Is the resistance between the ground terminals (1AZ, 1BB, 1BD, 1BH, 2BH[*1]) at the PCM connector and the body ground **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair the wiring harness. Reconnect the PCM.
5	Inspect the pressure control solenoid circuit. (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].) Is it normal?	Yes	Overhaul the control valve body and repair or replace any malfunctioning parts. (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).) If any problem remains, overhaul the transaxle and repair or replace any malfunctioning parts. (See ATX Workshop Manual FN4A-EL (9999-95-FN4A-04).)
		No	Repair or replace any malfunctioning parts.
6	• Verify test results. — If normal, return to the diagnostic index to service any additional symptoms. — If malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)

NO.24 ENGINE STALLS WHEN SHIFTED TO D RANGE, OR IN R POSITION[FN4A-EL]

id0503a1802900

24	Engine stalls when shifted to D range, or in R position
DESCRIPTION	• Engine stalls when shifting from N or P position to D range or R position at idle.
POSSIBLE CAUSE	• The malfunction is on the engine control side (i.e. Electronic throttle control system). Otherwise, the malfunction is in the input/turbine speed sensor (engine sometimes starts) or the TCC circuit (engine always stalls).

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Go to symptom troubleshooting No.10 "LOW IDLE/STALLS DURING DECELERATION". (See 01-03A-36 NO.10 LOW IDLE/STALLS DURING DECELERATION[LF, L3].) Is the engine control system normal?	Yes	Repeat the basic inspection and repair or replace any malfunctioning parts according to the inspection result. (See 05-03A-6 BASIC INSPECTION[FN4A-EL].)
		No	Repair or replace any malfunctioning parts according to the inspection results.
2	• Verify test results. — If normal, return to the diagnostic index to service any additional symptoms. — If malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)		

NO.25 ENGINE STALLS WHEN DRIVING AT SLOW SPEEDS OR STOPPING[FN4A-EL]

id0503a1805800

25	Engine stalls when driving at slow speeds or stopping
DESCRIPTION	• Engine stalls when the brake pedal is depressed while driving at low speed or stopping.
POSSIBLE CAUSE	• The malfunction is in the engine control system (e.g. Fuel injection control, Electronic throttle control system). Otherwise, the malfunction is in the control valve body, shift solenoid E or TCC.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Go to symptom troubleshooting No.10 "LOW IDLE/STALLS DURING DECELERATION". (See 01-03A-36 NO.10 LOW IDLE/STALLS DURING DECELERATION[LF, L3].) Is the engine control system normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection results.
2	Go to symptom troubleshooting No.5 "ENGINE STALLS-AFTER START/AT IDLE". (See 01-03A-23 NO.5 ENGINE STALLS-AFTER START/AT IDLE[LF, L3].) Is the engine control system normal?	Yes	Repeat the basic inspection and repair or replace any malfunctioning parts according to the inspection result. (See 05-03A-6 BASIC INSPECTION[FN4A-EL].)
		No	Repair or replace any malfunctioning parts according to the inspection results.
3	• Verify test results. — If normal, return to the diagnostic index to service any additional symptoms. — If malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)		

NO.26 STARTER DOES NOT WORK[FN4A-EL]

id0503a1803100

26	Starter does not work
DESCRIPTION	• Starter does not work even when in P or N position.
POSSIBLE CAUSE	• Selector lever mis-adjustment • TR switch mis-adjustment • Open or short circuit in the TR switch

NO.27 GEAR POSITION INDICATOR LIGHT DOES NOT ILLUMINATE IN D OR M RANGE[FN4A-EL]

id0503a1808800

27	Gear position indicator light does not illuminate in D or M range
DESCRIPTION	• Gear position indicator light in instrument cluster does not illuminate in D or M range with the ignition switch at ON.
POSSIBLE CAUSE	• M range switch, TR switch, instrument cluster, or related wiring harness malfunction **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle ON-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05-03A-6 BASIC INSPECTION[FN4A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	With the ignition switch at ON, When selector lever is moved, does selector illumination indicate synchronized position to lever location?	Yes	Go to the next step.
		No	Check value at the following. PCM terminal voltage: • 1AH*1, 1S*2 (TR switch) Repair or replace any defective parts.
2	Inspect the voltage at PCM terminal 1AN*1, 1O*2 (M range switch). (See 01-40A-13 PCM INSPECTION[LF, L3].) Is voltage normal?	Yes	Go to the next step.
		No	Repair or replace any defective part.
3	Inspect the instrument cluster. (See 09-22-4 INSTRUMENT CLUSTER INSPECTION.) Is instrument cluster normal?	Yes	Go to the next step.
		No	Repair or replace any defective part.
4	Disconnect the PCM and instrument cluster connector. • Turn the ignition switch off. • Check continuity between the following circuits: — PCM terminal 1AM and body GND — PCM terminal 1AI and body GND — Instrument cluster terminal 1W and body GND — Instrument cluster terminal 1X and body GND • Is there continuity?	Yes	Repair or replace harness for short to GND, then go to the next step.
		No	Go to the next step.
5	Disconnect the PCM and instrument cluster connector. • Turn the ignition switch off. • Check continuity between the following circuits: — PCM terminal 1AM and instrument cluster terminal 1W — PCM terminal 1AI and instrument cluster terminal 1X • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to the next step.
6	• Verify the test results. — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM.		

*1 : California emission regulation applicable model.

*2 : Except for California emission regulation applicable model.

NO.28 GEAR POSITION INDICATOR LIGHT ILLUMINATE IN P, R AND N POSITION[FN4A-EL]

id0503a1808900

28	Gear position indicator light illuminate in P, R and N position
DESCRIPTION	• Gear position indicator light in instrument cluster illuminates in P, R and N position with the ignition switch at ON.
POSSIBLE CAUSE	• M range switch, TR switch, instrument cluster, or related wiring harness malfunction **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle ON-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05-03A-6 BASIC INSPECTION[FN4A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	With the ignition switch at ON, When selector lever is moved, does selector illumination indicate synchronized position to lever location?	Yes	Go to the next step.
		No	Check value at the following. PCM terminal voltage: • 1AH*1, 1S*2 (TR switch) Repair or replace any defective parts.
2	Inspect the voltage at PCM terminal 1AN*1, 1O*2 (M range switch). (See 01-40A-13 PCM INSPECTION[LF, L3].) Is voltage normal?	Yes	Go to the next step.
		No	Repair or replace any defective part.
3	Inspect the instrument cluster. (See 09-22-4 INSTRUMENT CLUSTER INSPECTION.) Is instrument cluster normal?	Yes	Go to the next step.
		No	Repair or replace any defective part.
4	Disconnect the PCM and instrument cluster connector. • Turn the ignition switch off. • Check continuity between the following circuits: — PCM terminal 1AM and body GND — PCM terminal 1AI and body GND — Instrument cluster terminal 1W and body GND — Instrument cluster terminal 1X and body GND • Is there continuity?	Yes	Repair or replace harness for short to GND, then go to the next step.
		No	Go to the next step.
5	Disconnect the PCM and instrument cluster connector. • Turn the ignition switch off. • Check continuity between the following circuits: — PCM terminal 1AM and instrument cluster terminal 1W — PCM terminal 1AI and instrument cluster terminal 1X • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to the next step.
6	• Verify the test results. — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM.		

*1 : California emission regulation applicable model.

*2 : Except for California emission regulation applicable model.

NO.29 DOES NOT UPSHIFT IN M RANGE[FN4A-EL]

id0503a1803400

29	Does not upshift in M range
DESCRIPTION	• Gear position indicator light in instrument cluster illuminates, but the vehicle does not upshift when the selector lever is pushed to "+" side.
POSSIBLE CAUSE	• Up switch or related wiring harness malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Inspect the voltage at the PCM terminal 1AJ*1, 1K*2. (See 01-40A-13 PCM INSPECTION[LF, L3].) Is the voltage normal?	Yes	Inspect the instrument cluster.
		No	Inspect the up switch. • If the up switch is normal, inspect for continuity between the up switch and PCM terminal 1AJ*1, 1K*2.
2	• Verify test results. — If normal, return to the diagnostic index to service any additional symptoms. — If malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)		

*1 : California emission regulation applicable model
*2 : Except for California emission regulation applicable model

NO.30 DOES NOT DOWNSHIFT IN M RANGE[FN4A-EL]

id0503a1803500

30	Does not downshift in M range
DESCRIPTION	• Gear position indicator light in instrument cluster illuminates, but the vehicle does not downshift when the selector lever is pushed to "–" side.
POSSIBLE CAUSE	• Down switch or related wiring harness malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Inspect the voltage at the PCM terminal 1AF*1, 1P*2. (See 01-40A-13 PCM INSPECTION[LF, L3].) Is the voltage normal?	Yes	Inspect the instrument cluster.
		No	Inspect the down switch. • If the down switch is normal, inspect for continuity between the down switch and PCM terminal 1AF*1, 1P*2.
2	• Verify test results. — If normal, return to the diagnostic index to service any additional symptoms. — If malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)

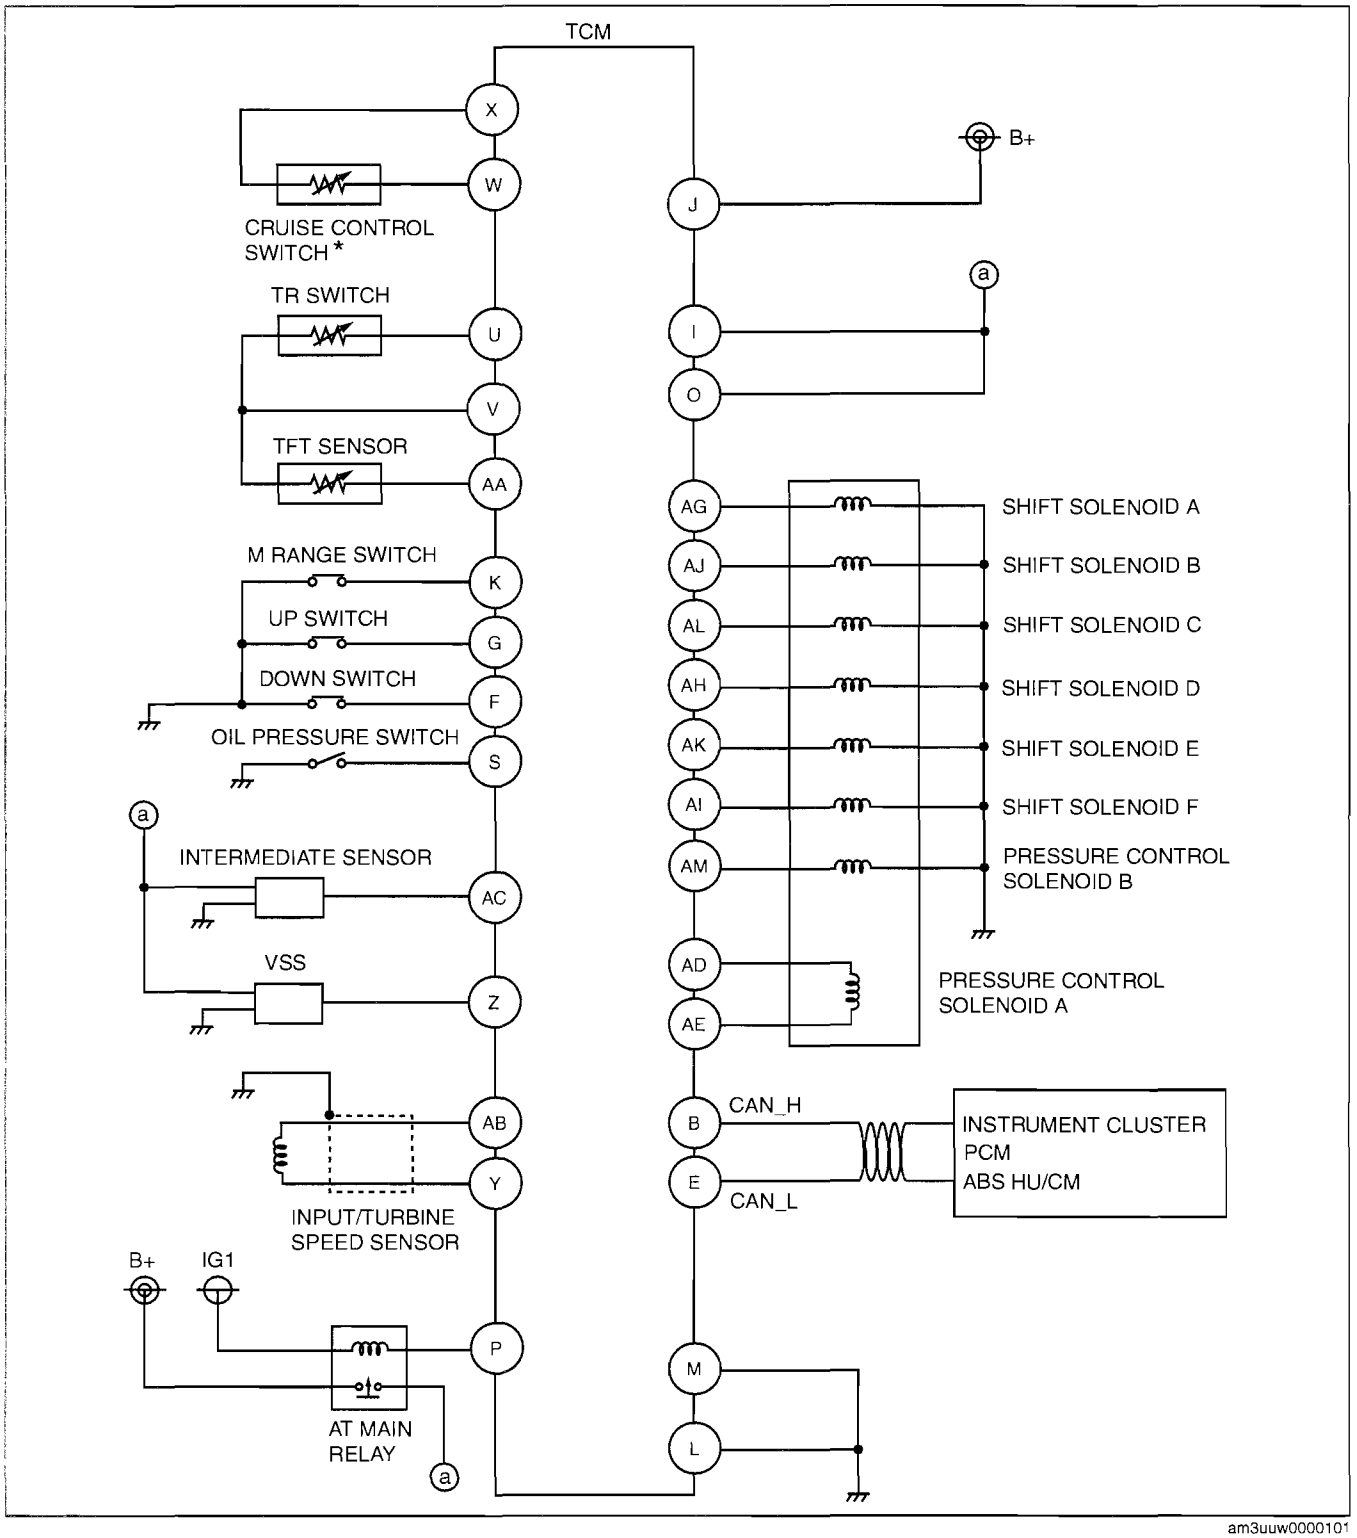
05-03B SYMPTOM TROUBLESHOOTING [FS5A-EL]

AUTOMATIC TRANSAXLE CONTROL SYSTEM WIRING DIAGRAM[FS5A-EL]

id050308800100



am3uuw0000101

* : Except for California emission regulation applicable model

FOREWORD[FS5A-EL]

id050308800200

- Refer to 00-00 section and thoroughly read and understand the basic flow of troubleshooting in order to properly perform the procedures.

BASIC INSPECTION[FS5A-EL]

id050308800300

STEP	INSPECTION		ACTION
1	Perform the mechanical system test. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) Is the mechanical system normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection result.
2	Turn the ignition switch to the ON position. When the selector lever is moved, does the gear position indicator light indication correspond to the selector lever position? Also, when other ranges are selected from N or P during idling, does the vehicle move **within 1—2 s**?	Yes	Go to the next step.
		No	Inspect the selector lever and TR switch. Repair or replace malfunctioning parts. (See 05-18-3 SELECTOR LEVER INSPECTION.) (See 05-17B-11 TRANSAXLE RANGE (TR) SWITCH INSPECTION[FS5A-EL].) If the selector lever and TR switch are normal, go to the next step.
3	Inspect the ATF color and condition. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].) Are the ATF color and odor normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection result. Flush the ATX and cooler line if necessary.
4	Perform the line pressure test. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) Is the line pressure normal?	Yes	Go to the next step.
		No	Adjust the accelerator cable if necessary. Repair or replace any malfunctioning parts according to the inspection result.
5	Perform the stall test. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) Is the stall speed normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection result.
6	Inspect the value at the following PCM and TCM PIDs using the M-MDS. (See 01-40A-13 PCM INSPECTION[LF, L3].) (See 05-17B-36 TCM INSPECTION[FS5A-EL].) **PCM PIDs:** • APP • TP REL • ECT • RPM • VPWR **TCM PIDs:** • TFT • TFTV • TR • TR_SENS • MNL SW • DWN SW • UP SW • THOP • TSS • OSS • VPWR TCM Are the PID values normal?	Yes	Perform the symptom troubleshooting and follow the procedures.
		No	Repair or replace any malfunctioning parts according to the inspection result.

SYMPTOM TROUBLESHOOTING ITEM TABLE[FS5A-EL]

id050308800400

- Use the chart below to verify the symptoms of the trouble in order to diagnose the appropriate area.

No.	TROUBLESHOOTING ITEM	DESCRIPTION	PAGE
1	Vehicle does not move in D, M ranges, or in R position	Vehicle does not move when accelerator pedal is depressed.	(See 05-03B-9 NO.1 VEHICLE DOES NOT MOVE IN D, M RANGES, OR IN R POSITION[FS5A-EL].)
2	Vehicle moves in N position	Vehicle creeps in N position. Vehicle creeps if brake pedal is not depressed in N position.	(See 05-03B-10 NO.2 VEHICLE MOVES IN N POSITION[FS5A-EL].)
3	Vehicle moves in P position, or parking gear does not disengage when P position is disengaged	Vehicle rolls when on a downward slope and tires do not lock in P position. Tires locked when P position is disengaged, vehicle does not move in D, M ranges, and R position when accelerator pedal is depressed, and engine remains in stalled condition.	(See 05-03B-10 NO.3 VEHICLE MOVES IN P POSITION, OR PARKING GEAR DOES NOT DISENGAGE WHEN P IS DISENGAGED[FS5A-EL].)
4	Excessive creep	Vehicle accelerates in D, M ranges and R position when accelerator pedal is not depressed.	(See 05-03B-10 NO.4 EXCESSIVE CREEP[FS5A-EL].)
5	No creep at all	Vehicle does not move in D, M ranges, or R position when idling on flat paved road.	(See 05-03B-11 NO.5 NO CREEP AT ALL[FS5A-EL].)
6	Low maximum speed and poor acceleration	Vehicle acceleration is poor at start. Delayed acceleration when accelerator pedal is depressed while driving.	(See 05-03B-12 NO.6 LOW MAXIMUM SPEED AND POOR ACCELERATION[FS5A-EL].)
7	No shifting	Single shift range only. Sometimes shifts correctly.	(See 05-03B-14 NO.7 NO SHIFTING[FS5A-EL].)
8	Does not shift to 5GR	Vehicle does not upshift from 4GR to 5GR even though vehicle speed is increased. Vehicle does not shift to 5GR even though accelerator pedal is released in D range at **60 km/h {37 mph}**.	(See 05-03B-15 NO.8 DOES NOT SHIFT TO 5GR[FS5A-EL].)
9	Abnormal shifting	Shifts incorrectly (incorrect shift pattern).	(See 05-03B-16 NO.9 ABNORMAL SHIFTING[FS5A-EL].)
10	Frequent shifting	Downshifting occurs suddenly even when accelerator pedal is depressed slightly in D range.	(See 05-03B-17 NO.10 FREQUENT SHIFTING[FS5A-EL].)
11	Shift point is high or low	Shift point considerably different from automatic shift diagram. Shift delays when accelerating. Shift occurs suddenly when accelerating and engine speed does not increase.	(See 05-03B-17 NO.11 SHIFT POINT IS HIGH OR LOW[FS5A-EL].)
12	Torque converter clutch (TCC) non-operation	TCC does not operate when vehicle reaches TCC operation range.	(See 05-03B-18 NO.12 TORQUE CONVERTER CLUTCH (TCC) NON-OPERATION[FS5A-EL].)
13	No kickdown	Does not downshift when accelerator pedal is fully depressed within kickdown range.	(See 05-03B-19 NO.13 NO KICKDOWN[FS5A-EL].)
14	Engine flares up or slips when upshifting or downshifting	When accelerator pedal is depressed, engine speed increases normally but vehicle speed increases slowly. When accelerator pedal is depressed while driving, engine speed increases but vehicle speed does not.	(See 05-03B-19 NO.14 ENGINE FLARES UP OR SLIPS WHEN UPSHIFTING OR DOWNSHIFTING[FS5A-EL].)
15	Engine flares up or slips when accelerating vehicle	Engine flares up when accelerator pedal is depressed for upshifting. Engine flares up suddenly when accelerator pedal is depressed for downshifting.	(See 05-03B-20 NO.15 ENGINE FLARES UP OR SLIPS WHEN ACCELERATING VEHICLE[FS5A-EL].)
16	Judder upon torque converter clutch (TCC) operation	Vehicle jolts when TCC is engaged.	(See 05-03B-20 NO.16 JUDDER UPON TORQUE CONVERTER CLUTCH (TCC) OPERATION[FS5A-EL].)

No.	TROUBLESHOOTING ITEM	DESCRIPTION	PAGE
17	Excessive shift shock from N to D or N to R position/range	Strong shock is felt when shifting from N to D or N to R position/range at idle.	(See 05-03B-22 NO.17 EXCESSIVE SHIFT SHOCK FROM N TO D OR N TO R POSITION/RANGE[FS5A-EL].)
18	Excessive shift shock is felt when upshifting and downshifting	Excessive shift shock is felt when depressing accelerator pedal to accelerate at upshifting. During cruising, excessive shift shock is felt when depressing accelerator pedal at downshifting.	(See 05-03B-23 NO.18 EXCESSIVE SHIFT SHOCK IS FELT WHEN UPSHIFTING AND DOWNSHIFTING[FS5A-EL].)
19	Excessive shift shock on torque converter clutch (TCC)	Strong shock is felt when TCC is engaged.	(See 05-03B-24 NO.19 EXCESSIVE SHIFT SHOCK ON TORQUE CONVERTER CLUTCH (TCC)[FS5A-EL].)
20	Noise occurs at idle when vehicle is stopped in all positions/ranges	Transaxle is noisy in all positions and ranges when vehicle idling.	(See 05-03B-24 NO.20 NOISE OCCURS AT IDLE WHEN VEHICLE IS STOPPED IN ALL POSITIONS/RANGES[FS5A-EL].)
21	Noise occurs at idle when vehicle is stopped in D, M ranges, or in R position	Transaxle is noisy in driving ranges when vehicle is idling.	(See 05-03B-25 NO.21 NOISE OCCURS AT IDLE WHEN VEHICLE IS STOPPED IN D, M RANGES, OR IN R POSITION[FS5A-EL].)
22	No engine braking in 1GR position of M range	Engine speed drops to idle but vehicle coasts when accelerator pedal is released when in M range (1GR) at low vehicle speed.	(See 05-03B-26 NO.22 NO ENGINE BRAKING IN 1GR POSITION OF M RANGE[FS5A-EL].)
23	Transaxle overheats	Burnt smell emitted from the transaxle. Smoke is emitted from the transaxle.	(See 05-03B-26 NO.23 TRANSAXLE OVERHEATS[FS5A-EL].)
24	Engine stalls when shifted to D, M ranges, or in R position	Engine stalls when shifting from N or P position to D, M ranges or R position at idle.	(See 05-03B-27 NO.24 ENGINE STALLS WHEN SHIFTED TO D, M RANGES, OR IN R POSITION[FS5A-EL].)
25	Engine stalls when driving at slow speeds or stopping	Engine stalls when brake pedal is depressed while driving at low speed or stopping.	(See 05-03B-28 NO.25 ENGINE STALLS WHEN DRIVING AT SLOW SPEEDS OR STOPPING[FS5A-EL].)
26	Starter does not work	Starter does not work even when in P or N position.	(See 05-03B-28 NO.26 STARTER DOES NOT WORK[FS5A-EL].)
27	Gear position indicator light does not illuminate in D or M range	Gear position indicator light in instrument cluster does not illuminate in D or M range with ignition switch at ON.	(See 05-03B-29 NO.27 GEAR POSITION INDICATOR LIGHT DOES NOT ILLUMINATE IN D OR M RANGE[FS5A-EL].)
28	Gear position indicator light illuminates in P, R and N position	Gear position indicator light in instrument cluster illuminates in P, R and N position with ignition switch at ON.	(See 05-03B-30 NO.28 GEAR POSITION INDICATOR LIGHT ILLUMINATE IN P, R AND N POSITION[FS5A-EL].)
29	Does not upshift in M range	Gear position indicator light in instrument cluster illuminates but vehicle does not upshift when selector lever is pushed to "+" side.	(See 05-03B-31 NO.29 DOES NOT UPSHIFT IN M RANGE[FS5A-EL].)
30	Does not downshift in M range	Gear position indicator light in instrument cluster illuminates but vehicle does not downshift when selector lever is pushed to "–" side.	(See 05-03B-31 NO.30 DOES NOT DOWNSHIFT IN M RANGE[FS5A-EL].)

QUICK DIAGNOSIS CHART[FS5A-EL]

NO.1 VEHICLE DOES NOT MOVE IN D, M RANGES, OR IN R POSITION[FS5A-EL]

id050308808500

1	Vehicle does not move in D, M ranges, or in R position
DESCRIPTION	• Vehicle does not move when the accelerator pedal is depressed.
POSSIBLE CAUSE	• If the vehicle does not move in D, M ranges or R position, basically, the malfunction is in the ATX. (Vehicle will move even with a malfunction in the TCM.) Since a malfunction is in the sensor circuit or output circuit is the cause of the malfunction in the ATX, inspect the sensors, output circuit, and the related wiring harnesses. 1. Clutch slippage, worn (D, M ranges-Forward clutch, R position-Reverse clutch, Low and reverse brake) • Line pressure low • Shift solenoid D malfunction • Shift solenoid A malfunction • Shift solenoid B malfunction • Pressure control solenoid A malfunction • Pressure control solenoid B malfunction • Body GND malfunction • Control valve body malfunction 2. Selector lever malfunction 3. Improper operation of parking mechanism 4. Torque converter malfunction **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted.

05-03B

Diagnostic procedure

STEP	INSPECTION		ACTION
1	When the vehicle is stopped on a flat, level road and the engine is off, does the vehicle move when pushed? (in D range or N, R positions with the brake pedal released)	Yes	Go to the next step.
		No	Inspect for parking mechanism. (See ATX workshop manual [FS5A-EL].)
2	Disconnect the TCM connector. Is the resistance between the ground terminal at the TCM connector and the body ground **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair open ground circuit.
3	Inspect the value at the following TCM PID using the M-MDS. (See 05-17B-36 TCM INSPECTION[FS5A-EL].) • LPS Is the LPS PID value normal?	Yes	Overhaul the control valve body and repair or replace any malfunctioning parts. (See ATX workshop manual [FS5A-EL].) If any problem remains, overhaul the transaxle and repair or replace any malfunctioning parts. (See ATX workshop manual [FS5A-EL].)
		No	Repair or replace any malfunctioning parts.
4	• Verify the test results. — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.		

NO.2 VEHICLE MOVES IN N POSITION[FS5A-EL]

id050308800700

2	Vehicle moves in N position
DESCRIPTION	• Vehicle creeps in N position. • Vehicle creeps if brake pedal is not depressed in N position.
POSSIBLE CAUSE	• If the vehicle moves in N position, basically, the malfunction is in the ATX. Since a malfunction in the sensor circuit or output circuit is the cause of the malfunction in the ATX, inspect the sensors, output circuit, and the related wiring harnesses. 1. Clutch burnt (Forward clutch) • Control valve body malfunction 2. Selector lever position disparity (Although the selector indicator shows N position, the hydraulic circuit shows D range or R position) **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Does the vehicle creep when the selector lever is moved slightly in N position?	Yes	Go to the next step.
		No	Adjust the selector lever. (See 05-18-5 SELECTOR CABLE ADJUSTMENT.)
2	Disconnect the TCM connector. Is the resistance between the ground terminal at the TCM connector and the body ground **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair open ground circuit. Reconnect the TCM.
3	Inspect the value at the following TCM PID using the M-MDS. (See 05-17B-36 TCM INSPECTION[FS5A-EL].) • LPS Is the LPS PID value normal?	Yes	Overhaul the control valve body and repair or replace any malfunctioning parts. (See ATX workshop manual [FS5A-EL].) If any problem remains, overhaul the transaxle and repair or replace any malfunctioning parts. (See ATX workshop manual [FS5A-EL].)
		No	Repair or replace any malfunctioning parts.
4	• Verify the test results. — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.		

NO.3 VEHICLE MOVES IN P POSITION, OR PARKING GEAR DOES NOT DISENGAGE WHEN P IS DISENGAGED[FS5A-EL]

id050308800800

3	Vehicle moves in P position, or parking gear does not disengage when P is disengaged
DESCRIPTION	• Vehicle rolls on a downward slope in P position. • Tires are locked when P is disengaged. Vehicle does not move in D, M ranges, and R position when the accelerator pedal is depressed, and the engine remains in a stalled condition.
POSSIBLE CAUSE	1. Parking mechanism malfunction (May have effect on noise or shock from transaxle) 2. Improper adjustment of selector lever 3. If vehicle moves in N position, perform No.2 "VEHICLE MOVES IN N POSITION"

NO.4 EXCESSIVE CREEP[FS5A-EL]

id050308800900

4	Excessive creep
DESCRIPTION	• Vehicle accelerates in D, M ranges and R position when accelerator pedal is not depressed.
POSSIBLE CAUSE	1. Engine idle speed is high (transaxle system is not cause of problem) 2. Go to No.9 "FAST IDLE/RUNS ON" (See 01-03A-35 NO.9 FAST IDLE/RUNS ON[LF, L3].)

NO.5 NO CREEP AT ALL[FS5A-EL]

id050308801000

5	No creep at all
DESCRIPTION	• Vehicle does not move in D, M ranges and R position when idling on a flat paved road.
POSSIBLE CAUSE	• Either transaxle is stuck in 3GR or 4GR position, or there is clutch circuit slippage due to a stuck 3–4 clutch. 1. Clutch burnt • Line pressure low • Shift solenoid D malfunction • Shift solenoid A malfunction • Shift solenoid B malfunction • Shift solenoid C malfunction • Pressure control solenoid A malfunction • Body GND malfunction • Control valve body malfunction 2. Transaxle fixed in 3GR (Operation of fail-safe function) • Short or open circuit in wiring harness • Poor connection of connector • Malfunction of electronic parts of output and input system 3. There is no engine torque • Torque converter malfunction **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Does the vehicle creep in any range/position?	Yes	Go to the next step.
		No	Inspect or adjust the selector lever. (See 05-18-3 SELECTOR LEVER INSPECTION.) (See 05-18-5 SELECTOR CABLE ADJUSTMENT.)
2	Inspect the value at the following TCM PID using the M-MDS. (See 05-17B-36 TCM INSPECTION[FS5A-EL].) • THOP Is the PID value normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts.
3	Disconnect the TCM connector. Is the resistance between the ground terminal at the TCM connector and the body ground **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair open ground circuit.
4	Inspect the value at the following TCM PID using the M-MDS. (See 05-17B-36 TCM INSPECTION[FS5A-EL].) • LPS Is the LPS PID value normal?	Yes	Overhaul the control valve body and repair or replace any malfunctioning parts. (See ATX workshop manual [FS5A-EL].) If any problem remains, overhaul the transaxle and repair or replace any malfunctioning parts. (See ATX workshop manual [FS5A-EL].)
		No	Repair or replace any malfunctioning parts.
5	• Verify the test results. — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.		

NO.6 LOW MAXIMUM SPEED AND POOR ACCELERATION[FS5A-EL]

id050308801100

6	Low maximum speed and poor acceleration
DESCRIPTION	• Vehicle acceleration is poor at start. • Delayed acceleration when accelerator pedal is depressed while driving.
POSSIBLE CAUSE	• If the clutch is stuck or does not stay in 3GR, the malfunction is in the engine circuit. 1. Clutch slippage, burnt • Line pressure low • Shift solenoid D malfunction • Shift solenoid A malfunction • Shift solenoid B malfunction • Shift solenoid C malfunction • Shift solenoid F malfunction • Pressure control solenoid A malfunction • Body GND malfunction • Control valve body malfunction 2. Signal malfunction • Vehicle speed sensor malfunction • Sensor GND malfunction • TP sensor malfunction • APP sensor malfunction • Input/turbine speed sensor malfunction 3. Transaxle fixed in 3GR (Operation of fail-safe function) • Short or open circuit in wiring harness • Poor connection of connector • Malfunction of electronic parts of output and input system 4. Transaxle fixed in 4GR (Operation of fail-safe function) • Forward clutch slippage • Vehicle speed sensor malfunction • Shift solenoid A malfunction (Stuck on) • Poor connection of connector 5. Insufficient starting torque (Suspected when in-gear condition, shift control and engine circuit are normal) • Torque converter malfunction (Poor operation, stuck) 6. Engagement of TCC operation range (Operation of fail-safe function) • Transaxle fluid temperature sensor malfunction (Short or open circuit) 7. Transaxle fixed in M range • M range switch malfunction 8. TR switch adjustment incorrect **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	With the ignition switch at the ON position, does the gear position indicator light indication correspond to the selector lever position?	Yes	Go to the next step.
		No	Go to No.27 "GEAR POSITION INDICATOR LIGHT DOES NOT ILLUMINATE IN M RANGE" or No.28 "GEAR POSITION INDICATOR LIGHT ILLUMINATES IN D RANGE OR P, N, R POSITIONS"
2	Go to No.12 "LACK/LOSS OF POWER". (See 01-03A-42 NO.12 LACK/LOSS OF POWER-ACCELERATION/CRUISE[LF, L3].) Is the CIS system normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts.
3	Disconnect the solenoid connector. Does the vehicle operate as follows? **D range: 3GR (fixed)** **R position: Reverse**	Yes	Go to the next step.
		No	Overhaul the control valve body and repair or replace any malfunctioning parts. (See ATX workshop manual [FS5A-EL].) If any problem remains, overhaul the transaxle and repair or replace any malfunctioning parts. (See ATX workshop manual [FS5A-EL].)

STEP	INSPECTION		ACTION
4	Drive the vehicle in D range. Does the vehicle start from stop in first gear?	Yes	Go to the next step.
		No	Inspect the value at the following PCM and TCM PIDs using the M-MDS. (See 01-40A-13 PCM INSPECTION[LF, L3].) (See 05-17B-36 TCM INSPECTION[FS5A-EL].) **PCM PIDs:** • APP • TP REL **TCM PIDs:** • THOP • OSS • TSS • TR Repair or replace any malfunctioning parts.
5	Inspect the value at the following TCM PIDs using the M-MDS. (See 05-17B-36 TCM INSPECTION[FS5A-EL].) • SSA/SS1 • SSB/SS2 • SSC/SS3 • SSF_SS6 Are the PID values normal?	Yes	Go to the next step.
		No	Inspect the value at the following PCM and TCM PIDs using the M-MDS. (See 01-40A-13 PCM INSPECTION[LF, L3].) (See 05-17B-36 TCM INSPECTION[FS5A-EL].) **PCM PIDs:** • APP • TP REL **TCM PIDs:** • THOP • OSS • TSS Repair or replace any malfunctioning parts.
6	Perform the stall test. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) Is stall speed normal?	Yes	Reverify symptoms of malfunction.
		No	Overhaul the transaxle and repair or replace any malfunctioning parts. (See ATX workshop manual [FS5A-EL].)
7	• Verify the test results. — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.		

NO.7 NO SHIFTING[FS5A-EL]

id050308801200

7	No shifting
DESCRIPTION	• Single shift range only. • Sometimes it shifts correctly.
POSSIBLE CAUSE	• When the gear position is fixed in 3GR due to the fail-safe operation, the malfunction is in the ATX. • Perform malfunction diagnosis according to No.6 “Low maximum speed and poor acceleration”. 1. Clutch slippage, burnt • Line pressure low • Shift solenoid D malfunction • Shift solenoid A malfunction • Shift solenoid B malfunction • Shift solenoid C malfunction • Shift solenoid F malfunction • Pressure control solenoid A malfunction • Pressure control solenoid B malfunction • Body GND malfunction • Control valve body malfunction 2. Signal malfunction • Vehicle speed sensor malfunction • Sensor GND malfunction • APP sensor malfunction • TP sensor malfunction • Input/turbine speed sensor malfunction 3. Transaxle fixed in 3GR (Operation of fail-safe function) • Short or open circuit in wiring harness • Poor connection of connector • Disconnected shift solenoid connector • Poor ground of shift solenoid 4. Transaxle fixed in 4GR (Operation of fail-safe function) • Forward clutch slippage • Vehicle speed sensor malfunction • Shift solenoid A malfunction (Stuck on) • Poor connection of connector 5. Transaxle fixed in M range • M range switch malfunction

NO.8 DOES NOT SHIFT TO 5GR[FS5A-EL]

id050308809300

8	Does not shift to 5GR
DESCRIPTION	• Vehicle does not upshift from 4GR to 5GR even though vehicle speed is increased. • Vehicle does not shift to 5GR even though accelerator pedal is released in D range at **60 km/h {37 mph}**.
POSSIBLE CAUSE	• Basically, TCC does not operate when the fail-safe is operating. Verify the DTCs first. If the TCC operates when driving at high speeds only, the malfunction (improper adjustment) is in the TR switch circuit. **Caution** • **If the TCC is stuck, inspect it. In addition, inspect the oil cooler for foreign particles which may have mixed in with the ATF.** 1. TCC piston slippage, burned • Line pressure low • TP sensor malfunction • APP sensor malfunction • Engine coolant temperature sensor malfunction • Vehicle speed sensor malfunction • Input/turbine speed sensor malfunction • Sensor GND malfunction 2. Transaxle fluid temperature sensor malfunction • Short or open circuit in wiring harness • Poor connection of connector • Sensor malfunction 3. TR switch malfunction • Short or open circuit in wiring harness • Poor connection of connector • Sensor malfunction • Selector lever adjustment incorrect • TR switch adjustment incorrect 4. Shift solenoid A, shift solenoid B, shift solenoid D, Shift solenoid F valve malfunction • Short or open circuit in wiring harness • Poor connection of connector • Solenoid valve stuck 5. M range switch malfunction 6. Control valve body malfunction **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	With the ignition switch at the ON position, does the gear position indicator light indication correspond to the selector lever position?	Yes	Go to the next step.
		No	Go to No.27 "GEAR POSITION INDICATOR LIGHT DOES NOT ILLUMINATE IN M RANGE" or No. 28 "GEAR POSITION INDICATOR LIGHT ILLUMINATES IN D RANGE OR P, N, R POSITIONS"
2	Inspect the value at the following TCM PIDs using the M-MDS. (See 05-17B-36 TCM INSPECTION[FS5A-EL].) • TFT • TFTV Are the PID values normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts.
3	Inspect the value at the following TCM PIDs using the M-MDS. (See 05-17B-36 TCM INSPECTION[FS5A-EL].) • SSA/SS1 • SSB/SS2 • SSD/SS4 • SSF_SS6 Are the PID values normal?	Yes	Overhaul the control valve body and repair or replace any malfunctioning parts. (See ATX workshop manual [FS5A-EL].) If any problem remains, overhaul the transaxle and repair or replace any malfunctioning parts. (See ATX workshop manual [FS5A-EL].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
4	Disconnect the TCM connector. Is the resistance between the ground terminal at the TCM connector and the body ground **less than 5.0 ohms**?	Yes	Inspect the value at the following TCM PIDs using the M-MDS. (See 05-17B-36 TCM INSPECTION[FS5A-EL].) • TR • TSS • OSS Repair or replace any malfunctioning parts.
		No	Repair open ground circuit. Reconnect the TCM.
5	• Verify the test results. — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.		

NO.9 ABNORMAL SHIFTING[FS5A-EL]

id050308801400

9	Abnormal shifting
DESCRIPTION	• Shifts incorrectly (incorrect shift pattern).
POSSIBLE CAUSE	• There is a malfunction in the signal circuit which controls shifting (TP sensor, input/turbine speed sensor, vehicle speed sensor), the control valve is stuck, the accumulator (forward or servo apply) is stuck, or the clutch circuit is stuck. 1. Clutch slippage, burnt • Line pressure low • Control valve body malfunction • Shift solenoid D malfunction • Shift solenoid E malfunction • Shift solenoid F malfunction • Shift solenoid A malfunction • Shift solenoid B malfunction • Shift solenoid C malfunction • Pressure control solenoid B malfunction • Body GND malfunction • Accelerator cable mis-adjustment 2. Signal malfunction • Vehicle speed sensor malfunction • Sensor GND malfunction • APP sensor malfunction • TP sensor malfunction • Input/turbine speed sensor malfunction 3. TR switch malfunction • Selector lever adjustment incorrect • TR switch adjustment incorrect **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Disconnect the TCM connector. Is the resistance between the ground terminal at the TCM connector and the body ground **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair open ground circuit. Reconnect the TCM.
2	Inspect the value at the following PCM and TCM PIDs using the M-MDS. (See 01-40A-13 PCM INSPECTION[LF, L3].) (See 05-17B-36 TCM INSPECTION[FS5A-EL].) **PCM PIDs:** • APP • TP REL **TCM PIDs:** • THOP • TSS • OSS • VSS Are the PID values normal?	Yes	Overhaul the control valve body and repair or replace any malfunctioning parts. (See ATX workshop manual [FS5A-EL].) If any problem remains, overhaul the transaxle and repair or replace any malfunctioning parts. (See ATX workshop manual [FS5A-EL].)
		No	Repair or replace any malfunctioning parts.
3	• Verify the test results. — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.		

05-03B

NO.10 FREQUENT SHIFTING[FS5A-EL]

id050308801500

10	Frequent shifting
DESCRIPTION	• Downshifting occurs suddenly even when accelerator pedal is depressed slightly in D range.
POSSIBLE CAUSE	• The malfunctioning circuit is basically the same as No.9 "ABNORMAL SHIFTING". However, a malfunction of the input signal to the TP sensor, APP sensor, input/turbine speed sensor, vehicle speed sensor (including the sensor GND, sensor wiring harness and connector), or clutch slippage (clutch stuck, low pressure in line) may also be the cause.

NO.11 SHIFT POINT IS HIGH OR LOW[FS5A-EL]

id050308801600

11	Shift point is high or low
DESCRIPTION	• Shift point considerably different from automatic shift diagram. • Shift delays when accelerating. • Shift occurs quickly when accelerating and engine speed does not increase.
POSSIBLE CAUSE	• If the transaxle does not shift abnormally, there is a malfunction of the input signal to the TP sensor, APP sensor, input/turbine speed sensor, or vehicle speed sensor (including sensor GND). • If the engine speed is high or low, regardless of normal shifting, inspect the tachometer. • Verify that the output signal of the TP sensor and APP sensor changes linearly.

NO.12 TORQUE CONVERTER CLUTCH (TCC) NON-OPERATION[FS5A-EL]

id050308801700

12	Torque converter clutch (TCC) non-operation
DESCRIPTION	• TCC does not operate when vehicle reaches TCC operation range.
POSSIBLE CAUSE	• Basically, the TCC does not operate when the fail-safe is operating. Verify the DTC first. **Caution** • **If the TCC is stuck, inspect it. In addition, inspect the oil cooler for foreign particles which may have mixed in with the ATF.** 1. TCC burnt (1) Input sensor system malfunction • Transaxle fluid temperature sensor • Vehicle speed sensor • Input/turbine speed sensor • Sensor GND (2) Output solenoid valve system malfunction (Sticking) • Shift solenoid E malfunction • Shift solenoid A malfunction (3) Control valve body malfunction system (Poor operation, stuck) • TCC hydraulic pressure system 2. TP sensor malfunction (Not operating linear) 3. APP sensor malfunction (Not operating linear) 4. Input/turbine speed sensor or vehicle speed sensor malfunction 5. Brake switch malfunction (Always ON) 6. ECT sensor malfunction **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	With the ignition switch at the ON position, does the gear position indicator light indication correspond to the selector lever position?	Yes	Go to the next step.
		No	Go to No.27 "GEAR POSITION INDICATOR LIGHT DOES NOT ILLUMINATE IN M RANGE" or No.28 "GEAR POSITION INDICATOR LIGHT ILLUMINATES IN D RANGE OR P, N, R POSITIONS"
2	Inspect the value at the following PCM and TCM PIDs using the M-MDS. (See 01-40A-13 PCM INSPECTION[LF, L3].) (See 05-17B-36 TCM INSPECTION[FS5A-EL].) **PCM PIDs:** • APP • TP REL **TCM PIDs:** • THOP • OSS • TSS Are the PID values normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts.
3	Disconnect the TCM connector. Is the resistance between the ground terminal at the TCM connector and the body ground **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair the open ground circuit.
4	Inspect the resistance between shift solenoid A and E control circuit at the TCM connector and control valve body connector. Inspect resistance between shift solenoid A and E circuit at the TCM connector and control valve body connector. Are the resistances **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair the shift solenoid A or E control. Reconnect the TCM.
5	Inspect the shift solenoid A and E. (See 05-17B-30 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].) Are the shift solenoids operating properly?	Yes	Replace the TCM.
		No	Overhaul the control valve body and repair or replace any malfunctioning parts. (See ATX workshop manual [FS5A-EL].) If any problem remains, overhaul the transaxle and repair or replace any malfunctioning parts. (See ATX workshop manual [FS5A-EL].)

STEP	INSPECTION	ACTION
6	• Verify the test results. — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.	

NO.13 NO KICKDOWN[FS5A-EL]

id050308801800

13	No kickdown
DESCRIPTION	• Does not downshift when accelerator pedal is fully depressed within kickdown range.
POSSIBLE CAUSE	• If transaxle does not downshift though shifting is normal, the malfunction is in the TP sensor and APP sensor circuit (including sensor GND, sensor wiring harness and connector).

NO.14 ENGINE FLARES UP OR SLIPS WHEN UPSHIFTING OR DOWNSHIFTING[FS5A-EL]

id050308801900

14	Engine flares up or slips when upshifting or downshifting
DESCRIPTION	• When the accelerator pedal is depressed for driveaway, engine speed increases but vehicle speed increases slowly. • When the accelerator pedal is depressed while driving, engine speed increases but the vehicle does not.
POSSIBLE CAUSE	• There is clutch slippage because the clutch is stuck or the line pressure is low. 1. Clutch stuck, slippage (forward clutch, 3–4 clutch, 2–4 brake band, one-way clutch) • Line pressure low • Shift solenoid D malfunction • Shift solenoid E malfunction • Shift solenoid F malfunction • Shift solenoid A malfunction • Shift solenoid B malfunction • Shift solenoid C malfunction • Pressure control solenoid A malfunction • Body GND malfunction • Control valve body malfunction 2. Signal malfunction • Vehicle speed sensor malfunction • Sensor GND malfunction • APP sensor malfunction • TP sensor malfunction • Input/turbine speed sensor malfunction 3. Poor operation of mechanical pressure • Selector lever position disparity • TR switch position disparity **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Is shift point normal?	Yes	Go to the next step.
		No	Go to No.9 "ABNORMAL SHIFTING".
2	Inspect the value at the following TCM PID using the M-MDS. (See 05-17B-36 TCM INSPECTION[FS5A-EL].) • THOP Is the PID value normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts.
3	Disconnect the TCM connector. Is the resistance between the ground terminal at the TCM connector and the body ground **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair the open ground circuit. Reconnect the TCM.
4	Inspect the value at the following TCM PID using the M-MDS. (See 05-17B-36 TCM INSPECTION[FS5A-EL].) • LPS Is the LPS PID value normal?	Yes	Overhaul the control valve body and repair or replace any malfunctioning parts. (See ATX workshop manual [FS5A-EL].) If any problem remains, overhaul the transaxle and repair or replace any malfunctioning parts. (See ATX workshop manual [FS5A-EL].)
		No	Repair or replace any malfunctioning parts.
5	• Verify the test results. — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.		

NO.15 ENGINE FLARES UP OR SLIPS WHEN ACCELERATING VEHICLE[FS5A-EL]

id050308802000

15	Engine flares up or slips when accelerating the vehicle
DESCRIPTION	• Engine flares up when the accelerator pedal is depressed for upshifting. • Engine flares up suddenly when the accelerator pedal is depressed for downshifting.
POSSIBLE CAUSE	• The malfunction is basically the same as for No.14 "ENGINE FLARES UP OR SLIPS WHEN UPSHIFTING OR DOWNSHIFTING". If conditions for No.14 worsen, the malfunction will develop to No.15.

NO.16 JUDDER UPON TORQUE CONVERTER CLUTCH (TCC) OPERATION[FS5A-EL]

id050308802100

16	Judder upon torque converter clutch (TCC) operation
DESCRIPTION	• Vehicle jolts when TCC is engaged.
POSSIBLE CAUSE	• Poor TCC engagement due to either slippage because the TCC is stuck or the line pressure is low **Caution** • **If the TCC is stuck, inspect it. In addition, inspect the oil cooler for foreign particles which may have mixed in with the ATF.** 1. Torque converter clutch piston slippage, burnt • Line pressure high • Shift solenoid A malfunction • Shift solenoid E malfunction • Control valve body malfunction • Body GND malfunction • Pressure control solenoid A malfunction 2. Signal malfunction • Vehicle speed sensor malfunction • Sensor GND malfunction • TFT sensor malfunction • APP sensor malfunction • TP sensor malfunction • Input/turbine speed sensor malfunction 3. Torque converter malfunction **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Inspect the value at the following TCM PID using the M-MDS. (See 05-17B-36 TCM INSPECTION[FS5A-EL].) • TSS Is the PID value normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts.
2	Disconnect the TCM connector. Is the resistance between the ground terminal at the TCM connector and the body ground **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair the open ground circuit.
3	Inspect the resistance between shift solenoid A and E control circuit at the TCM connector and control valve body connector. Inspect the resistance between shift solenoid A/E circuit at the TCM connector and control valve body connector. Are the resistances **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair the shift solenoid A and/or E circuit.
4	Inspect the shift solenoid. (See 05-17B-30 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].) Is the solenoid valve operating properly?	Yes	Go to the next step.
		No	Overhaul the control valve body and repair or replace any malfunctioning parts. (See ATX workshop manual [FS5A-EL].) If any problem remains, overhaul the transaxle and repair or replace any malfunctioning parts. (See ATX workshop manual [FS5A-EL].)
5	Inspect the value at the following TCM PID using the M-MDS. (See 05-17B-36 TCM INSPECTION[FS5A-EL].) • LPS Is the LPS PID value normal?	Yes	Overhaul the control valve body and repair or replace any malfunctioning parts. (See ATX workshop manual [FS5A-EL].) If any problem remains, overhaul the transaxle and repair or replace any malfunctioning parts. (See ATX workshop manual [FS5A-EL].)
		No	Replace the TCM.
6	• Verify the test results. — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.		

NO.17 EXCESSIVE SHIFT SHOCK FROM N TO D OR N TO R POSITION/RANGE[FS5A-EL]

id050308802200

17	Excessive shift shock from N to D or N to R position/range
DESCRIPTION	• Strong shock felt when shifting from N to D or N to R position/range.
POSSIBLE CAUSE	• Shift shock may worsen when the fail-safe is operating. If no DTC is output, the shift shock may worsen due to poor operation of the control valve body or sticking of the clutch. 1. Clutch burnt (N→D: Forward clutch, N→R: Reverse clutch or low and reverse brake) • Line pressure low, high • APP sensor malfunction • TP sensor malfunction • Vehicle speed sensor malfunction • Input/turbine speed sensor malfunction • Shift solenoid B malfunction • Shift solenoid D malfunction • Shift solenoid A malfunction • Shift solenoid C malfunction • Pressure control solenoid A malfunction • Control valve body malfunction • Sensor GND malfunction • Body GND malfunction 2. Poor hydraulic operation (Malfunction in range change) • Forward accumulator malfunction • Servo apply accumulator malfunction • Pressure switch malfunction 3. Idle speed high 4. Poor tightening torque of engine mount, exhaust mount 5. Poor operation of mechanical pressure • Selector lever position disparity **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Does the shift shock occur only when the engine is cold?	Yes	Go to the next step.
		No	Go to Step 3.
2	Disconnect the TCM connector. Is the resistance between the ground terminal at the TCM connector and the body ground **less than 5.0 ohms**?	Yes	Inspect the value at the following PCM and TCM PIDs using the M-MDS. (See 01-40A-13 PCM INSPECTION[LF, L3].) (See 05-17B-36 TCM INSPECTION[FS5A-EL].) **PCM PIDs:** • APP • TP REL **TCM PIDs:** • THOP • TFT • TFTV Repair or replace any malfunctioning parts.
		No	Repair the open ground circuit. Reconnect the TCM.
3	Perform the stall test. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) Is the stall speed normal?	Yes	Go to the next step.
		No	Go to Step 5.
4	Inspect the value at the following TCM PID using the M-MDS. (See 05-17B-36 TCM INSPECTION[FS5A-EL].) • TR Is the PID value normal?	Yes	Overhaul the control valve body and repair or replace any malfunctioning parts. (See ATX workshop manual [FS5A-EL].) If any problem remains, overhaul the transaxle and repair or replace any malfunctioning parts. (See ATX workshop manual [FS5A-EL].)
		No	Repair or replace any malfunctioning parts.
5	Inspect the value at the following TCM PID using the M-MDS. (See 05-17B-36 TCM INSPECTION[FS5A-EL].) • THOP Is the PID value normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts.

STEP	INSPECTION		ACTION
6	Disconnect the TCM connector. Is the resistance between the ground terminal at the TCM connector and the body ground **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair the open ground circuit. Reconnect the TCM.
7	Inspect the value at the following TCM PID using the M-MDS. (See 05-17B-36 TCM INSPECTION[FS5A-EL].) • LPS Is the LPS PID value normal?	Yes	Overhaul the control valve body and repair or replace any malfunctioning parts. (See ATX workshop manual [FS5A-EL].) If any problem remains, overhaul the transaxle and repair or replace any malfunctioning parts. (See ATX workshop manual [FS5A-EL].)
		No	Repair or replace any malfunctioning parts.
8	• Verify the test results. — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.		

NO.18 EXCESSIVE SHIFT SHOCK IS FELT WHEN UPSHIFTING AND DOWNSHIFTING[FS5A-EL]

id050308804600

18	Excessive shift shock is felt when upshifting and downshifting
DESCRIPTION	• Excessive shift shock is felt when depressing the accelerator pedal at upshifting. During cruising, excessive shift shock is felt when depressing the accelerator pedal at downshifting.
POSSIBLE CAUSE	• Shift shock may worsen when the fail-safe is operating. The shift shock has worsened if the TP sensor, input/turbine speed sensor, or vehicle speed sensor signal malfunctions. 1. Clutch slippage, burnt (Forward clutch, 2–4 brake band, 3–4 clutch) • Line pressure low, high • Shift solenoid D malfunction • Shift solenoid E malfunction • Shift solenoid A malfunction • Shift solenoid B malfunction • Shift solenoid C malfunction • Pressure control solenoid B malfunction • Pressure control solenoid A malfunction • Accelerator cable mis-adjustment • Control valve body malfunction • Body GND malfunction 2. Signal malfunction • Transaxle temperature sensor malfunction • Vehicle speed sensor malfunction • Sensor GND malfunction • TP sensor malfunction • APP sensor malfunction • Input/turbine speed sensor malfunction 3. Poor hydraulic operation (Malfunction in range change) • Pressure switch malfunction • Forward accumulator malfunction • Servo apply accumulator malfunction 4. Engine mounts installation • Loose attaching bolts • Worn parts **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Inspect the engine mounts for loose tightening bolts or worn parts. Are all engine mounts normal?	Yes	Go to the next step.
		No	Readjust, retighten or replace engine mounts.
2	Perform the stall test. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) Is the stall speed normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts.
3	Inspect the value at the following PCM PID using the M-MDS. (See 01-40A-13 PCM INSPECTION[LF, L3].) • APP • TP REL Is the PID value normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts.
4	Disconnect the TCM connector. Is the resistance between the ground terminal at the TCM connector and the body ground **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair the open ground circuit. Reconnect the TCM.
5	Inspect the value at the following TCM PID using the M-MDS. (See 05-17B-36 TCM INSPECTION[FS5A-EL].) • LPS Is the LPS PID value normal?	Yes	Overhaul the control valve body and repair or replace any malfunctioning parts. (See ATX workshop manual [FS5A-EL].) If any problem remains, overhaul the transaxle and repair or replace any malfunctioning parts. (See ATX workshop manual [FS5A-EL].)
		No	Repair or replace any malfunctioning parts.
6	• Verify the test results. — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.		

NO.19 EXCESSIVE SHIFT SHOCK ON TORQUE CONVERTER CLUTCH (TCC)[FS5A-EL]

id050308802400

19	Excessive shift shock on torque converter clutch (TCC)
DESCRIPTION	• Strong shock is felt when the TCC is engaged.
POSSIBLE CAUSE	• The troubleshooting flow is the same as No.16 "JUDDER UPON TCC OPERATION".

NO.20 NOISE OCCURS AT IDLE WHEN VEHICLE IS STOPPED IN ALL POSITIONS/RANGES[FS5A-EL]

id050308802500

20	Noise occurs at idle when vehicle is stopped in all positions/ranges
DESCRIPTION	• Transaxle is noisy in all positions and ranges when the vehicle is idling.
POSSIBLE CAUSE	• The malfunction is in the oil pump which causes a high-pitched noise to be emitted from the transaxle at idle. **Note** • If a noise is emitted during shifting only, the malfunction is in shift solenoid D, E or shift solenoid A, B, C. If a noise is emitted during shifting at certain gears only or during deceleration only, it is gear noise. • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Inspect engine condition. Is there any engine concern (i. e. rough idle)?	Yes	Go to appropriate symptom troubleshooting. (See 01-03A-11 ENGINE SYMPTOM TROUBLESHOOTING[LF, L3].)
		No	Go to the next step.
2	Does the noise stop when the solenoid connector is disconnected?	Yes	Go to the next step.
		No	Overhaul the control valve body and repair or replace any malfunctioning parts. (See ATX workshop manual [FS5A-EL].) If any problem remains, overhaul the transaxle and repair or replace any malfunctioning parts. (See ATX workshop manual [FS5A-EL].)
3	Inspect the value at the following PCM and TCM PIDs using the M-MDS. (See 01-40A-13 PCM INSPECTION[LF, L3].) (See 05-17B-36 TCM INSPECTION[FS5A-EL].) **PCM PIDs:** • APP • TP REL **TCM PIDs:** • THOP • OSS • TSS Are the PID values normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts.
4	Disconnect the TCM connector. Is the resistance between the ground terminal at the TCM connector and the body ground **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair the open ground circuit. Reconnect the TCM.
5	Inspect the value at the following TCM PID using the M-MDS. (See 05-17B-36 TCM INSPECTION[FS5A-EL].) • LPS Is the LPS PID value normal?	Yes	Overhaul the control valve body and repair or replace any malfunctioning parts. (See ATX workshop manual [FS5A-EL].) If any problem remains, overhaul the transaxle and repair or replace any malfunctioning parts. (See ATX workshop manual [FS5A-EL].)
		No	Repair or replace any malfunctioning parts.
6	• Verify the test results. — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.		

NO.21 NOISE OCCURS AT IDLE WHEN VEHICLE IS STOPPED IN D, M RANGES, OR IN R POSITION[FS5A-EL]

id050308808600

21	Noise occurs at idle when vehicle is stopped in D, M ranges, or in R position
DESCRIPTION	• Transaxle is noisy in D, M ranges, or in R position when vehicle is idling.
POSSIBLE CAUSE	• Although the malfunction is basically the same as No.20 "NOISE OCCURS AT IDLE WHEN VEHICLE IS STOPPED IN ALL POSITIONS/RANGES", other causes may include selector lever position disparity or TR switch position disparity.

NO.22 NO ENGINE BRAKING IN 1GR POSITION OF M RANGE[FS5A-EL]

id050308802700

22	No engine braking in 1GR position of M range
DESCRIPTION	• Engine speed drops to idle but the vehicle coasts when the accelerator pedal is released when in 1GR of M range at low vehicle speed.
POSSIBLE CAUSE	1. Clutch slippage, burnt (low and reverse brake) • Line pressure low • Shift solenoid D malfunction • Shift solenoid E malfunction • Shift solenoid C malfunction • Pressure control solenoid B malfunction • Control valve body malfunction • Body GND malfunction 2. Signal malfunction • TP sensor malfunction • APP sensor malfunction • Vehicle speed sensor malfunction • Sensor GND malfunction • Input/turbine speed sensor malfunction 3. TCM does not determine that the M range switch is ON (short, or open circuit, poor operation) • M range switch signal malfunction **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Do the following symptoms occur concurrently? • Engine flares up or slips during acceleration. • Engine flares up or slips when shifting.	Yes	Go to symptom troubleshooting NO.14 "ENGINE FLARES UP OR SLIPS WHEN UPSHIFTING OR DOWNSHIFTING" or No.15 "ENGINE FLARES UP OR SLIPS WHEN ACCELERATING VEHICLE".
		No	Repeat basic inspection and repair or replace any malfunctioning parts according to the inspection result. (See 05-03B-3 BASIC INSPECTION[FS5A-EL].)
2	• Verify the test results. — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.		

NO.23 TRANSAXLE OVERHEATS[FS5A-EL]

id050308802800

23	Transaxle overheats
DESCRIPTION	• Burnt smell emitted from transaxle. • Smoke emitted from transaxle.
POSSIBLE CAUSE	• The malfunction is restricted to the hindrance of coolant at the oil cooler. In addition, overheating of the transaxle may be caused by a malfunction of the transaxle fluid temperature sensor. 1. Burnt (TCC) • Line pressure low • Control valve body malfunction • Accelerator cable mis-adjustment 2. Oil cooler malfunction (Foreign material mixed in ATF) 3. Transaxle fluid temperature sensor malfunction 4. Excessive amount of ATF 5. Torque converter malfunction **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Inspect for bending, damage, corrosion or kinks of the oil cooler pipes. Are oil cooler pipes normal?	Yes	Go to the next step.
		No	Replace any malfunctioning parts.
2	Perform the stall test. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) Is the stall speed normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts.
3	Inspect the value at the following PCM PID using the M-MDS. (See 01-40A-13 PCM INSPECTION[LF, L3].) • APP • TP REL Is the PID value normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts.
4	Disconnect the TCM connector. Is the resistance between the ground terminal at the TCM connector and the body ground **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair the open ground circuit. Reconnect the TCM.
5	Inspect the value at the following TCM PID using the M-MDS. (See 05-17B-36 TCM INSPECTION[FS5A-EL].) • LPS Is the LPS PID value normal?	Yes	Overhaul the control valve body and repair or replace any malfunctioning parts. (See ATX workshop manual [FS5A-EL].) If any problem remains, overhaul the transaxle and repair or replace any malfunctioning parts. (See ATX workshop manual [FS5A-EL].)
		No	Repair or replace any malfunctioning parts.
6	• Verify the test results. — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.		

NO.24 ENGINE STALLS WHEN SHIFTED TO D, M RANGES, OR IN R POSITION[FS5A-EL]

id050308808700

24	Engine stalls when shifted to D, M ranges, or in R position
DESCRIPTION	• Engine stalls when shifting from N or P position to D, M ranges or R position at idle.
POSSIBLE CAUSE	• The malfunction is on the engine control side (i.e. electronic throttle control system). Otherwise, the malfunction is in the input/turbine speed sensor (engine sometimes starts) or the TCC circuit (engine always stalls).

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Go to symptom troubleshooting No.10 "LOW IDLE/STALLS DURING DECELERATION". (See 01-03A-36 NO.10 LOW IDLE/STALLS DURING DECELERATION[LF, L3].) Is the engine control system normal?	Yes	Repeat the basic inspection and repair or replace any malfunctioning parts according to the inspection result. (See 05-03B-3 BASIC INSPECTION[FS5A-EL].)
		No	Repair or replace any malfunctioning parts according to the inspection results.
2	• Verify the test results. — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.		

NO.25 ENGINE STALLS WHEN DRIVING AT SLOW SPEEDS OR STOPPING[FS5A-EL]

id050308805800

25	Engine stalls when driving at slow speeds or stopping
DESCRIPTION	• Engine stalls when the brake pedal is depressed while driving at low speed or stopping.
POSSIBLE CAUSE	• Malfunction is in engine control system (e.g. Fuel injection control, electronic throttle control system). Otherwise, the malfunction is in the control valve body, shift solenoid E or TCC.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Go to symptom troubleshooting No.10 "LOW IDLE/STALLS DURING DECELERATION". (See 01-03A-36 NO.10 LOW IDLE/STALLS DURING DECELERATION[LF, L3].) (See 01-40A-13 PCM INSPECTION[LF, L3].) Is the engine control system normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection results.
2	Go to symptom troubleshooting No.5 "ENGINE STALLS-AFTER START/AT IDLE" (See 01-03A-23 NO.5 ENGINE STALLS-AFTER START/AT IDLE[LF, L3].) (See 01-40A-13 PCM INSPECTION[LF, L3].) Is the engine control system normal?	Yes	Repeat the basic inspection and repair or replace any malfunctioning parts according to the inspection result. (See 05-03B-3 BASIC INSPECTION[FS5A-EL].)
		No	Repair or replace any malfunctioning parts according to the inspection results.
3	• Verify the test results. — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.		

NO.26 STARTER DOES NOT WORK[FS5A-EL]

id050308803100

26	Starter does not work
DESCRIPTION	• Starter does not work even when in P or N position.
POSSIBLE CAUSE	• Selector lever mis-adjustment • TR switch mis-adjustment • Open or short circuit in the TR switch terminal

NO.27 GEAR POSITION INDICATOR LIGHT DOES NOT ILLUMINATE IN D OR M RANGE[FS5A-EL]

id050308808800

27	Gear position indicator light does not illuminate in D or M range
DESCRIPTION	• Gear position indicator light in instrument cluster does not illuminate in D or M range with the ignition switch at ON.
POSSIBLE CAUSE	• M range switch, TR switch, instrument cluster, or related wiring harness malfunction **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle ON-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05-03B-3 BASIC INSPECTION[FS5A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	With the ignition switch at ON, When selector lever is moved, does selector illumination indicate synchronized position to lever location?	Yes	Go to the next step.
		No	Check value at the following. TCM terminal voltage: • 1U (TR switch) Repair or replace any defective parts.
2	Inspect the voltage at TCM terminal 1K (M range switch). (See 05-17B-36 TCM INSPECTION[FS5A-EL].) Is voltage normal?	Yes	Go to the next step.
		No	Repair or replace any defective part.
3	Inspect the instrument cluster. (See 09-22-4 INSTRUMENT CLUSTER INSPECTION.) Is instrument cluster normal?	Yes	Go to the next step.
		No	Repair or replace any defective part.
4	Disconnect the TCM and instrument cluster connector. • Turn the ignition switch off. • Check continuity between the following circuits: — TCM terminal 1B and body GND — TCM terminal 1E and body GND — Instrument cluster terminal 1I and body GND — Instrument cluster terminal 1K and body GND • Is there continuity?	Yes	Repair or replace harness for short to GND, then go to the next step.
		No	Go to the next step.
5	Disconnect the TCM and instrument cluster connector. • Turn the ignition switch off. • Check continuity between the following circuits: — TCM terminal 1B and instrument cluster terminal 1I — TCM terminal 1E and instrument cluster terminal 1K • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to the next step.
6	• Verify the test results. — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.		

NO.28 GEAR POSITION INDICATOR LIGHT ILLUMINATE IN P, R AND N POSITION[FS5A-EL]

id050308808900

28	Gear position indicator light illuminate in P, R and N position
DESCRIPTION	• Gear position indicator light in instrument cluster illuminates in P, R and N position with the ignition switch at ON.
POSSIBLE CAUSE	• M range switch, TR switch, instrument cluster, or related wiring harness malfunction **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle ON-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05-03B-3 BASIC INSPECTION[FS5A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	With the ignition switch at ON, When selector lever is moved, does selector illumination indicate synchronized position to lever location?	Yes	Go to the next step.
		No	Check value at the following. TCM terminal voltage: • 1U (TR switch) Repair or replace any defective parts.
2	Inspect the voltage at TCM terminal 1K (M range switch). (See 05-17B-36 TCM INSPECTION[FS5A-EL].) Is voltage normal?	Yes	Go to the next step.
		No	Repair or replace any defective part.
3	Inspect the instrument cluster. (See 09-22-4 INSTRUMENT CLUSTER INSPECTION.) Is instrument cluster normal?	Yes	Go to the next step.
		No	Repair or replace any defective part.
4	Disconnect the TCM and instrument cluster connector. • Turn the ignition switch off. • Check continuity between the following circuits: — TCM terminal 1B and body GND — TCM terminal 1E and body GND — Instrument cluster terminal 1I and body GND — Instrument cluster terminal 1K and body GND • Is there continuity?	Yes	Repair or replace harness for short to GND, then go to the next step.
		No	Go to the next step.
5	Disconnect the TCM and instrument cluster connector. • Turn the ignition switch off. • Check continuity between the following circuits: — TCM terminal 1B and instrument cluster terminal 1I — TCM terminal 1E and instrument cluster terminal 1K • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to the next step.
6	• Verify the test results. — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.		

NO.29 DOES NOT UPSHIFT IN M RANGE[FS5A-EL]

id050308803400

29	Does not upshift in M range
DESCRIPTION	• Gear position indicator light in instrument cluster illuminates, but the vehicle does not upshift when the selector lever is pushed to "+" side.
POSSIBLE CAUSE	• Up switch or related wiring harness malfunction **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-board Diagnostic and Automatic Transaxle Basic Inspection are conducted.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Inspect the UP SW PID value using the M-MDS. (See 05-17B-36 TCM INSPECTION[FS5A-EL].) Is the UP SW PID value normal?	Yes	Inspect the instrument cluster.
		No	Inspect the up switch. If the up switch is normal, inspect for continuity between the up switch and TCM terminal G.
2	• Verify the test results. — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.		

NO.30 DOES NOT DOWNSHIFT IN M RANGE[FS5A-EL]

id050308803500

30	Does not downshift in M range
DESCRIPTION	• Gear position indicator light in instrument cluster illuminates, but the vehicle does not downshift when the selector lever is pushed to "–" side.
POSSIBLE CAUSE	• Down switch or related wiring harness malfunction **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-board Diagnostic and Automatic Transaxle Basic Inspection are conducted.

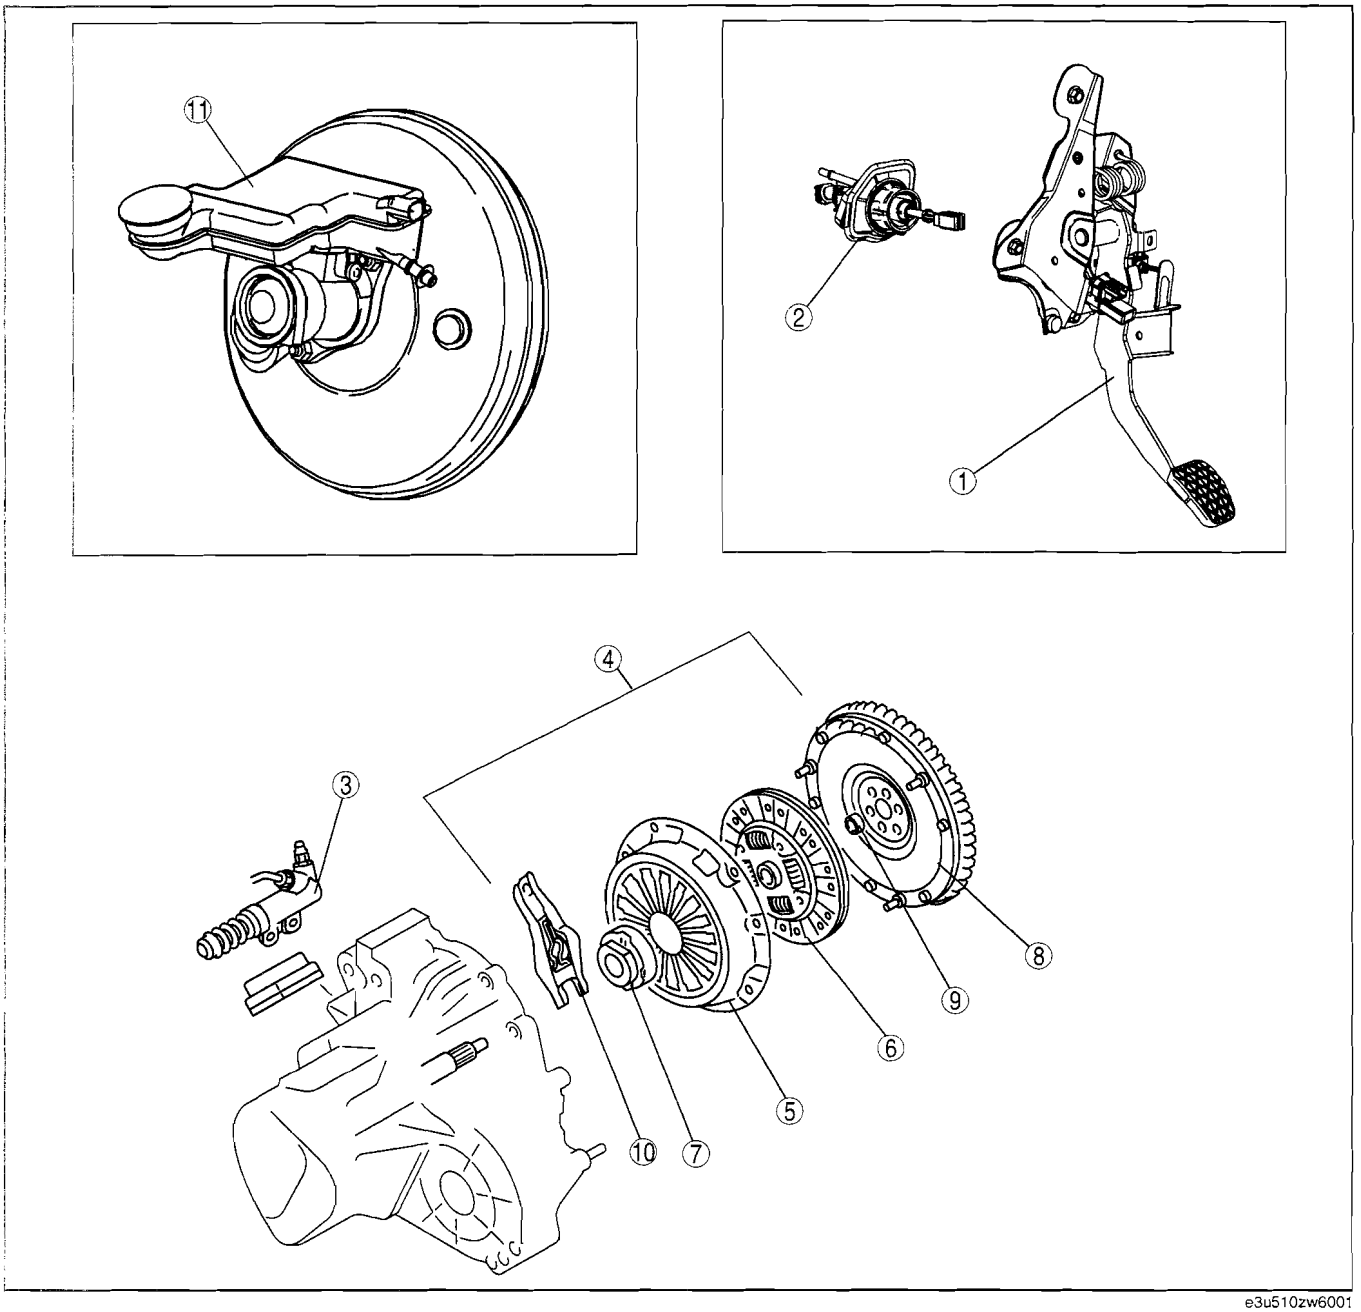
Diagnostic procedure

STEP	INSPECTION		ACTION
1	Inspect the DWN SW PID value using the M-MDS. (See 05-17B-36 TCM INSPECTION[FS5A-EL].) Is the DWN SW PID value normal?	Yes	Inspect the instrument cluster.
		No	Inspect the down switch. If the down switch is normal, inspect for continuity between the down switch and TCM terminal F.
2	• Verify the test results. — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.		

05-10 CLUTCH

CLUTCH LOCATION INDEX

id051000800400



e3u510zw6001

1	Clutch pedal (See 05-10-4 CLUTCH PEDAL INSPECTION.) (See 05-10-4 CLUTCH PEDAL REMOVAL/ INSTALLATION.)
2	Clutch master cylinder (See 05-10-6 CLUTCH MASTER CYLINDER REMOVAL/INSTALLATION.)
3	Clutch release cylinder (See 05-10-9 CLUTCH RELEASE CYLINDER REMOVAL/INSTALLATION.)
4	Clutch unit (See 05-10-11 CLUTCH UNIT REMOVAL/ INSTALLATION.)
5	Clutch cover (See 05-10-14 CLUTCH COVER INSPECTION.)
6	Clutch disc (See 05-10-15 CLUTCH DISC INSPECTION.)

7	Clutch release collar (See 05-10-15 CLUTCH RELEASE COLLAR INSPECTION.)
8	Flywheel [LF, L3] or dual-mass flywheel [L3 WITH TC] (See 05-10-16 FLYWHEEL INSPECTION[LF, L3].) (See 05-10-16 DUAL-MASS FLYWHEEL INSPECTION[L3 WITH TC].)
9	Pilot bearing (See 05-10-16 PILOT BEARING INSPECTION.)
10	Clutch release fork (See 05-10-11 CLUTCH UNIT REMOVAL/ INSTALLATION.)
11	Reserve tank (See 05-10-3 CLUTCH FLUID INSPECTION.) (See 05-10-3 CLUTCH FLUID AIR BLEEDING/ REPLACEMENT.)

GENERAL PROCEDURES (CLUTCH)

id051000800500

Note
- A common reservoir is used for the clutch and brake system fluid.

Caution
- **If clutch pipes have been disconnected any time during the procedure, add clutch fluid (brake fluid), bleed the air, and inspect for leakage after the procedure has been completed.**

CLUTCH FLUID INSPECTION

id051000800600

Note
- A common reservoir is used for the clutch and brake system fluid.
- The fluid in the reservoir must be maintained between the MIN/MAX level during replacement.

CLUTCH FLUID AIR BLEEDING/REPLACEMENT

id051000800700

Caution
- **Fluid will damage painted surfaces. Be careful not to spill any on painted surfaces. If it is spilled, wipe it off immediately.**

Note
- Do not mix different brands of clutch fluid.
- Do not reuse the clutch fluid that was drained out.

Clutch fluid
SAE J1703, FMVSS 116 DOT-3

1. Remove the under cover. (L3 WITH TC)
2. Draw the fluid from the reservoir tank with a suction pump.
3. Remove the bleeder cap from the bleeder plug and attach a vinyl hose to the bleeder plug.
4. Place the other end of the vinyl hose into a container.
5. Slowly pump the clutch pedal several times.
6. With the clutch pedal depressed, loosen the bleeder screw to let fluid escape.
7. Tighten the bleeder screw to stop the fluid.
8. Repeat Steps 5, 6 and 7 until only clean fluid without air is seen.
9. Tighten the bleeder screw.

Tightening torque
5.0—10.0 N·m
{51—101 kgf·cm, 45—88 in·lbf}

10. Add fluid to the MAX mark.
11. Verify the correct clutch operation.

CLUTCH PEDAL INSPECTION

id051000801100

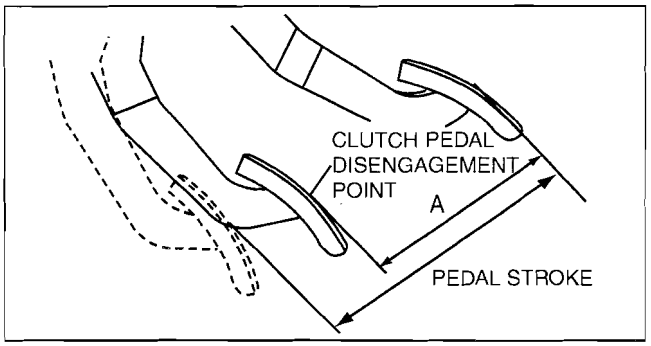
Clutch Pedal Disengagement Point Inspection

Warning
- **When performing the following procedure, make sure that the area around the vehicle is free of people or objects as the vehicle might move suddenly.**

1. Apply the parking brake and fix the front and rear of the wheels with the wheel chocks.
2. Start the engine at idle.
3. Without depressing the clutch pedal, move the shift lever slowly to the reverse position.
4. Hold the lever when the gear noise is heard.
5. Depress the clutch pedal slowly.
6. Hold the pedal when the gear noise stops (clutch pedal disengagement point).
7. Measure distance A, verify that they are within specification.

Clutch pedal disengagement stroke
90—110 mm {3.55—4.33 in} (Reference value)

Clutch pedal stroke
135 mm {5.31 in} (Reference value)



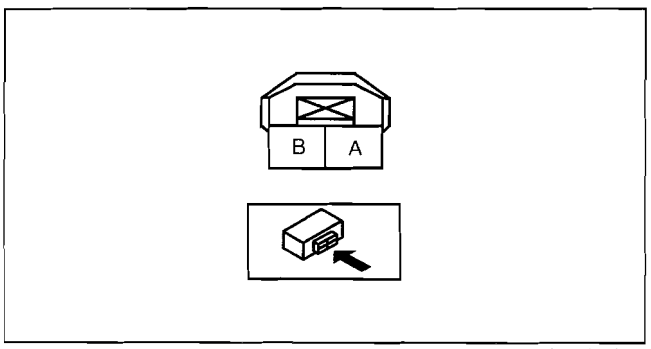
am3uuw0000069

Clutch Pedal Position Switch Inspection

1. Disconnect the negative battery cable.
2. Disconnect the clutch pedal position switch connector.
3. Verify continuity as indicated in the table.

O—O : Continuity

Condition	Connector terminal	
	A	B
Clutch pedal is depressed	O	O
Clutch pedal is not depressed		



am3uuw0000069

am3uuw0000069

- If there is any malfunction, replace the clutch switch. (See 05-10-4 CLUTCH PEDAL REMOVAL/INSTALLATION.)

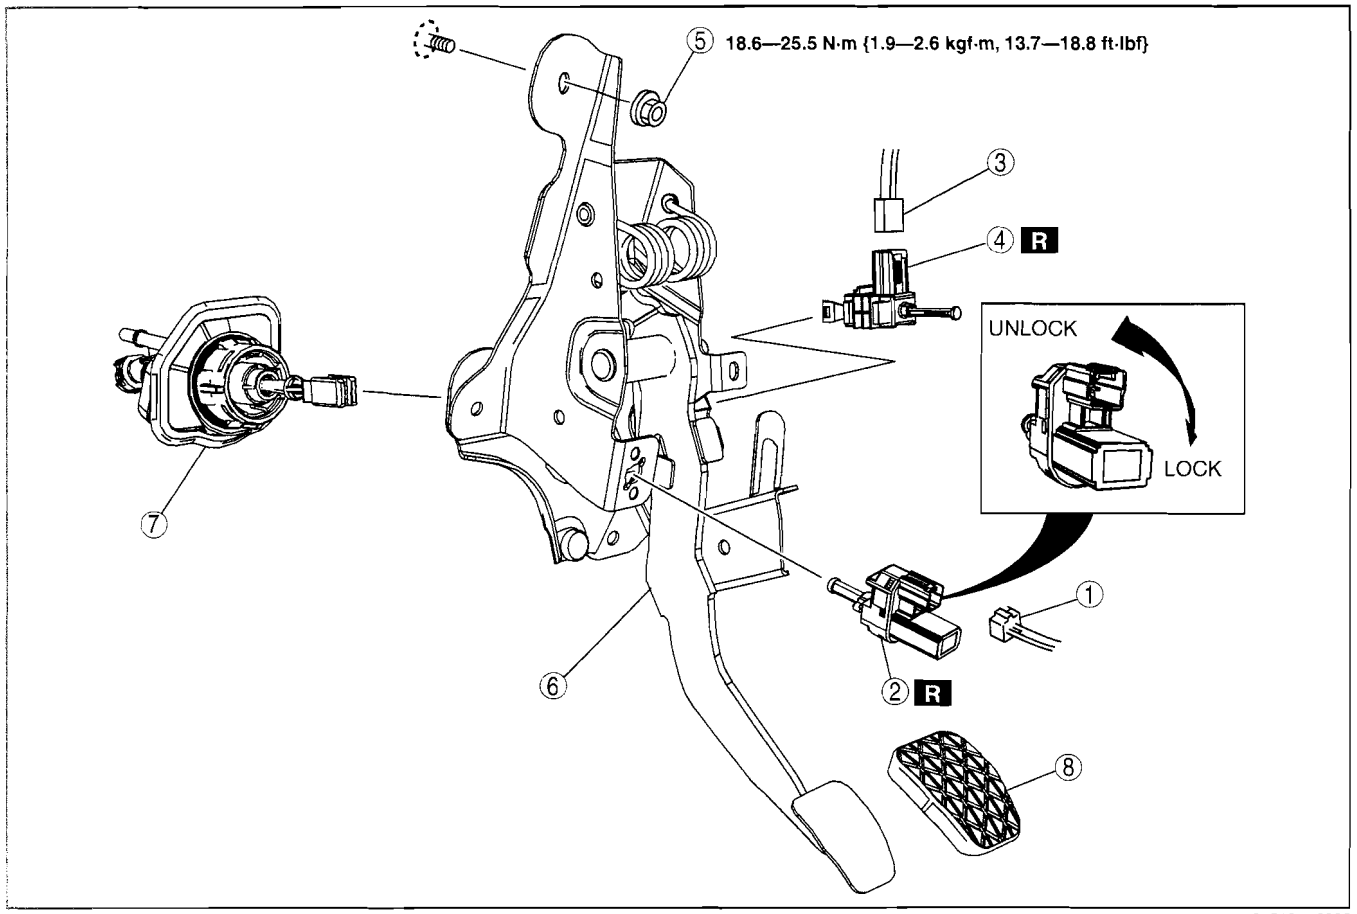
CLUTCH PEDAL REMOVAL/INSTALLATION

id051000801200

Caution
- **Fluid will damage painted surfaces. Be careful not to spill any on painted surfaces. If it is spilled, wipe it off immediately.**

1. Remove the battery and battery tray.
   (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
   (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
2. Separate the steering shaft.
3. Separate the clutch pipe and reserve hose.
   (See 05-10-6 CLUTCH MASTER CYLINDER REMOVAL/INSTALLATION.)
4. Remove in the order indicated in the table.
5. Install in the reverse order of removal.
6. Bleed the air from the system. (See 05-10-3 CLUTCH FLUID AIR BLEEDING/REPLACEMENT.)

7. After installation, inspect the clutch pedal. (See 05-10-4 CLUTCH PEDAL INSPECTION.)



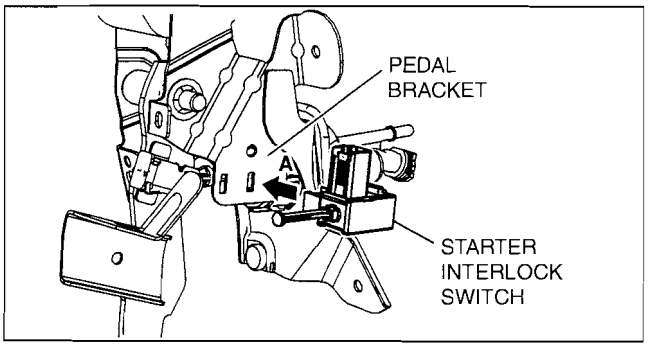
e3u510zw6002

1	Clutch pedal position switch connector
2	Clutch pedal position switch (See 05-10-6 Clutch Pedal Position Switch Installation Note.)
3	Starter interlock switch connector
4	Starter interlock switch (See 05-10-5 Starter Interlock Switch Installation Note.)

5	Nuts
6	Clutch pedal component
7	Clutch master cylinder (See 05-10-6 CLUTCH MASTER CYLINDER REMOVAL/INSTALLATION.)
8	Pedal pad

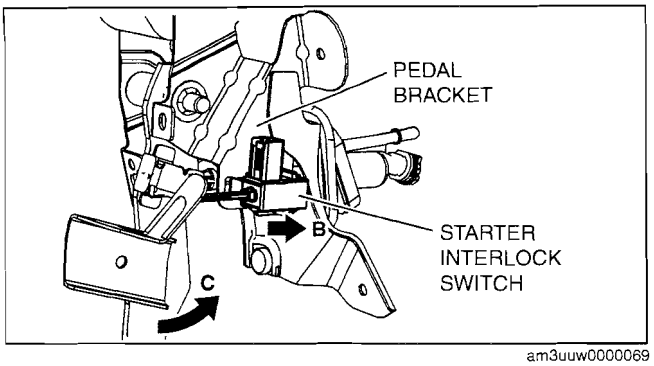
Starter Interlock Switch Installation Note

1. Insert the new starter interlock switch into the pedal bracket hole in the direction indicated by arrow A.



am3uuw0000069

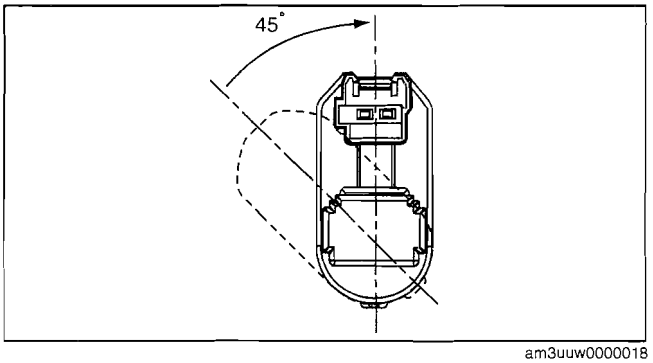
2. Slide the starter interlock switch pressing it in the direction indicated by arrow B until it is locked.
3. Press the clutch pedal fully in the direction indicated by arrow C and adjust the starter interlock switch terminal.



am3uuw0000069

Clutch Pedal Position Switch Installation Note

1. Insert the new clutch pedal position switch into the pedal bracket hole until the switch stops.
2. Rotate the clutch pedal position switch **45°** clockwise.
3. Verify that the clutch pedal position switch is locked securely.



am3uuw0000018

CLUTCH MASTER CYLINDER REMOVAL/INSTALLATION

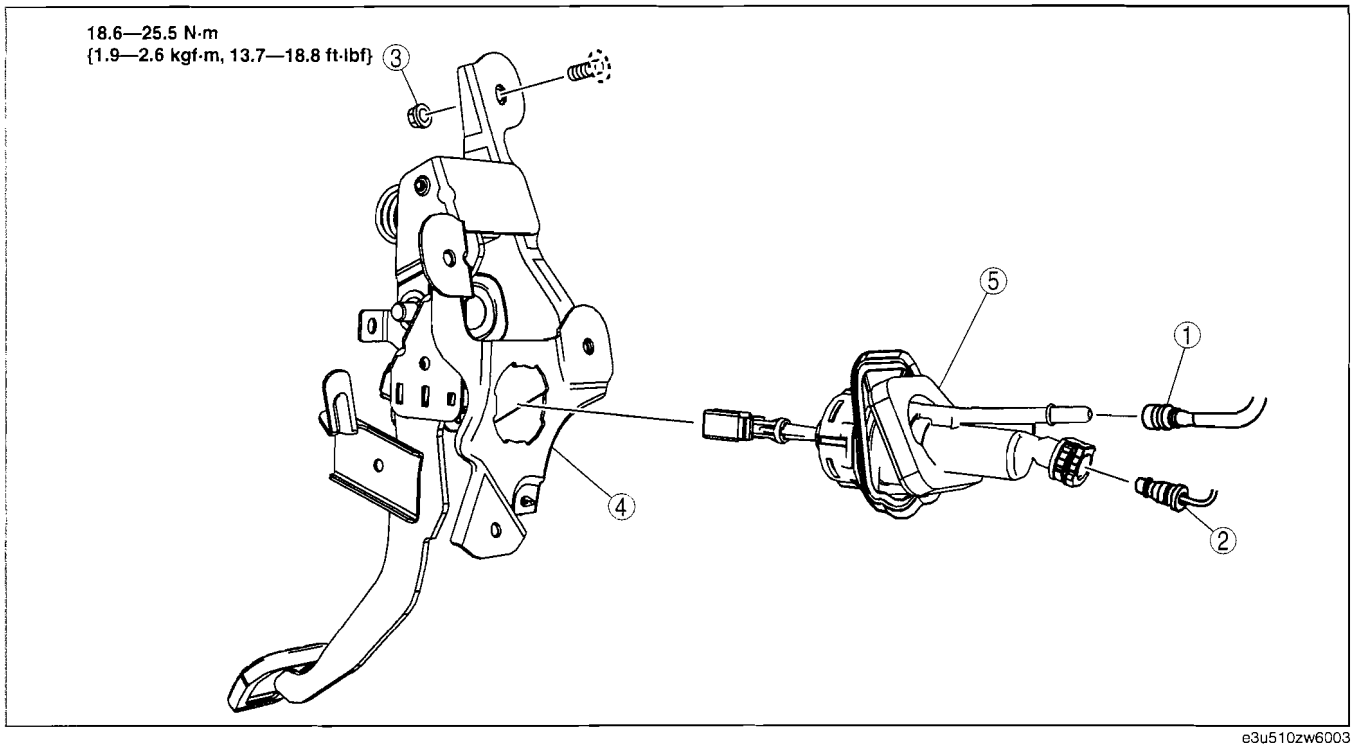
id051000801400

Caution

- **Fluid will damage painted surfaces. Be careful not to spill any on painted surfaces. If it is spilled, wipe it off immediately.**

1. Remove the battery and battery tray.
   (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
   (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
2. Separate the steering shaft.
3. Remove in the order indicated in the table.
4. Plug the clutch pipe after removing it to avoid leakage.
5. Install in the reverse order of removal.
6. Bleed the air from the system. (See 05-10-3 CLUTCH FLUID AIR BLEEDING/REPLACEMENT.)

7. After installation, inspect the clutch pedal. (See 05-10-4 CLUTCH PEDAL INSPECTION.)

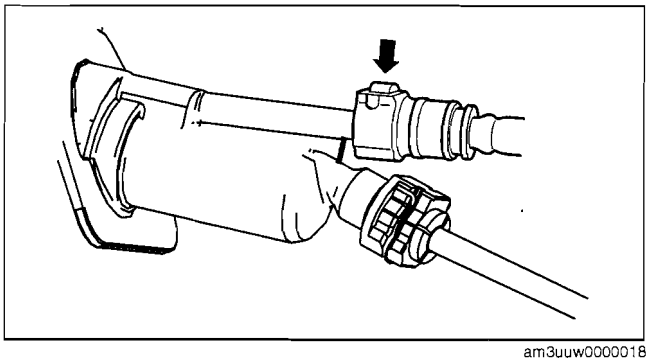


e3u510zw6003

1	Reserve hose (See 05-10-7 Clutch Pipe And Clutch Reserve Hose Removal Note.) (See 05-10-9 Clutch Pipe And Clutch Reserve Hose Installation Note.)
2	Clutch pipe (See 05-10-7 Clutch Pipe And Clutch Reserve Hose Removal Note.) (See 05-10-9 Clutch Pipe And Clutch Reserve Hose Installation Note.)
3	Nuts
4	Clutch pedal component (See 05-10-4 CLUTCH PEDAL REMOVAL/ INSTALLATION.)
5	Clutch master cylinder (See 05-10-8 Clutch Master Cylinder Removal Note.) (See 05-10-8 Clutch Master Cylinder Installation Note.)

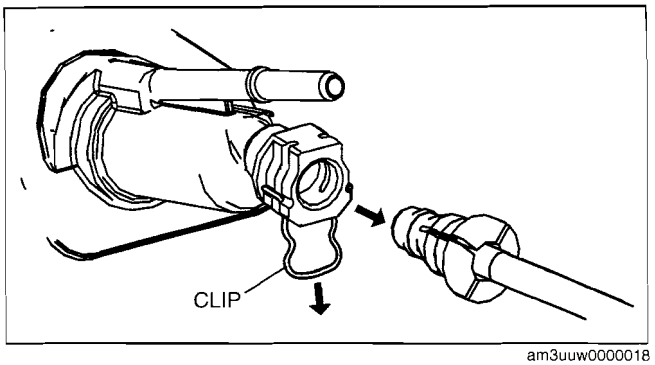
Clutch Pipe And Clutch Reserve Hose Removal Note

1. Remove the reserve hose from the master cylinder while pressing the point indicated by the arrow in the figure.



am3uuw0000018

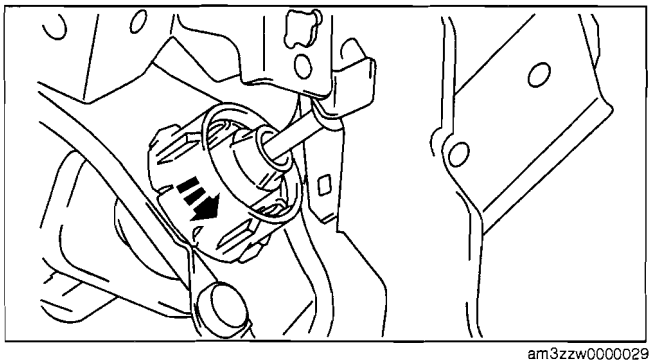
2. Pull the clutch master cylinder clip to the position shown in the figure and pull out the clutch pipe connector straight to detach it.



am3uuw0000018

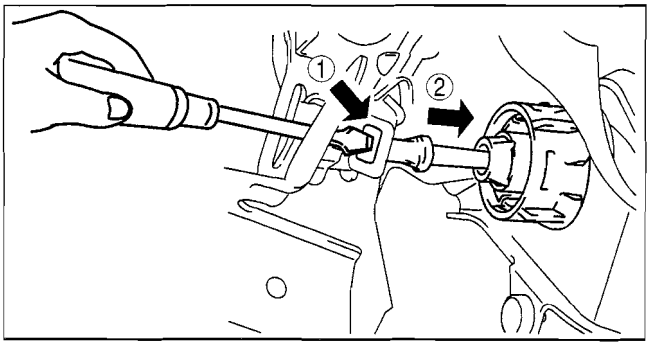
Clutch Master Cylinder Removal Note

1. Rotate the clutch master cylinder in the direction shown and remove.



am3zzw0000029

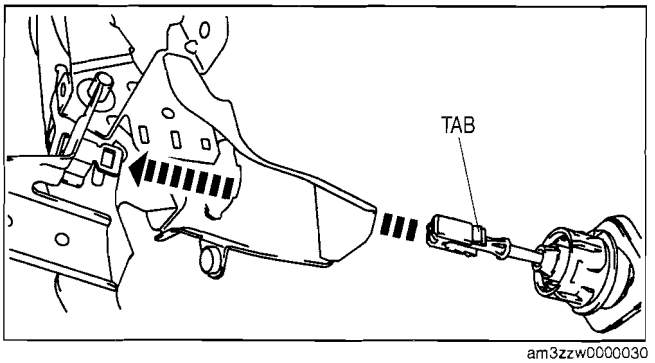
2. Press on the tabs on the left and right sides of the push rod using a flathead screwdriver and remove the rod.



am3zzw0000030

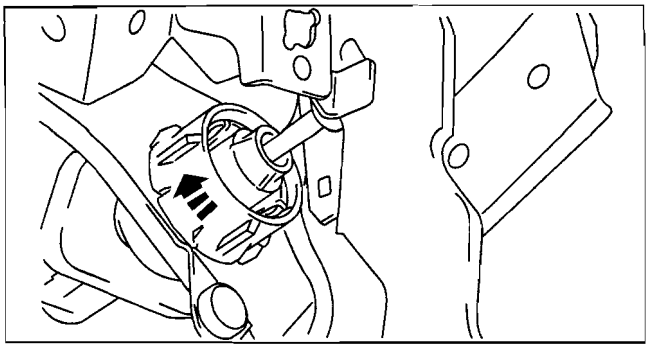
Clutch Master Cylinder Installation Note

1. Push the push rod in until the tabs lock.



am3zzw0000030

2. Rotate the clutch master cylinder in the direction shown until it stops.



am3zzw0000030

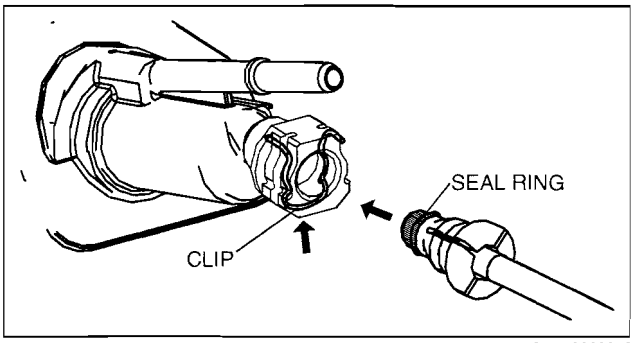
Clutch Pipe And Clutch Reserve Hose Installation Note

1. Return the clutch master cylinder clip to the position shown in the figure.

Caution

- **Verify that there is no chipping or damage to the seal ring of the clutch pipe connector.**

2. Insert the clutch pipe connector straight.
3. Pull the clutch pipe to verify that it does not come off, and reinsert it completely.
4. Insert the reserve hose connector straight until a click is heard.
5. Pull the reserve hose to verify that it does not come off, and reinsert it completely.



am3uuw0000019

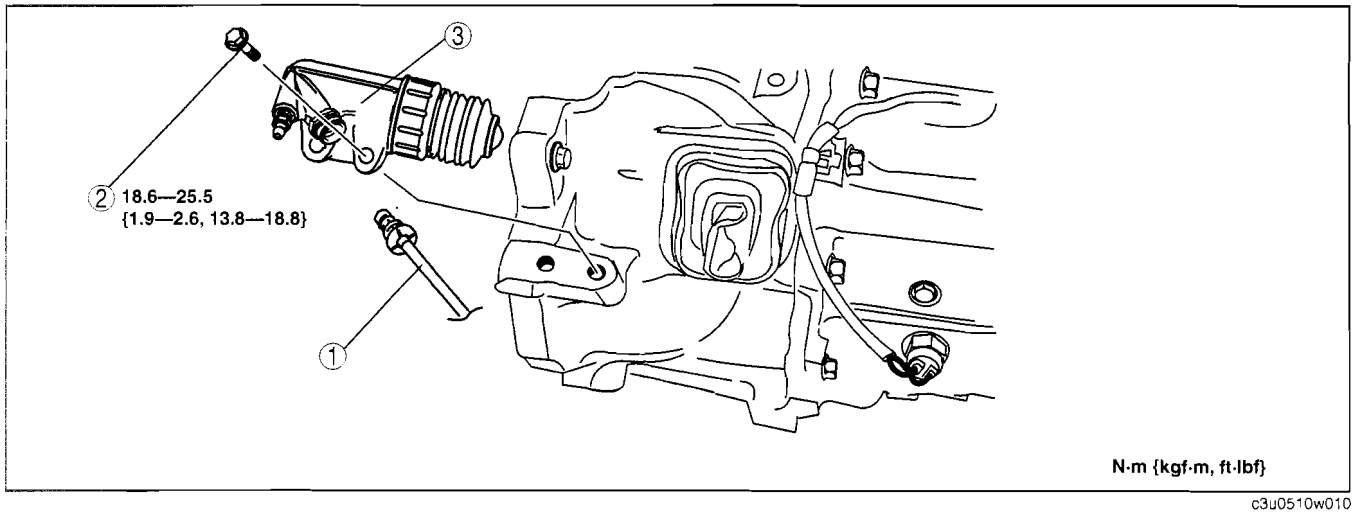
CLUTCH RELEASE CYLINDER REMOVAL/INSTALLATION

id051000801300

Caution

- **Fluid will damage painted surfaces. Be careful not to spill any on painted surfaces. If it is spilled, wipe it off immediately.**

1. Remove the under cover.
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.
4. Bleed the air from the system. (See 05-10-3 CLUTCH FLUID AIR BLEEDING/REPLACEMENT.)
5. After installation, inspect the clutch pedal. (See 05-10-4 CLUTCH PEDAL INSPECTION.)



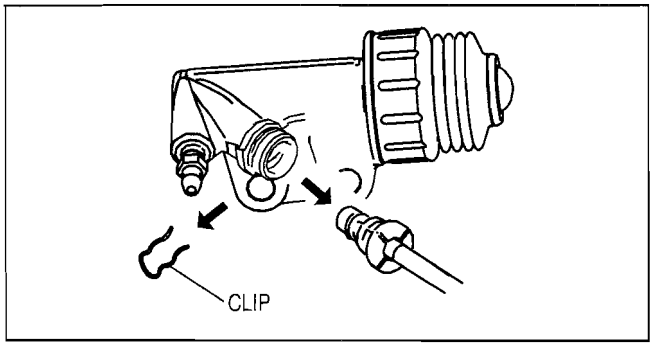
c3u0510w010

1	Clutch pipe (See 05-10-10 Clutch Pipe Removal Note.) (See 05-10-10 Clutch Pipe Installation Note.)

2	Bolt
3	Clutch release cylinder

Clutch Pipe Removal Note

1. Pull out the clip and, then pull out the clutch pipe connector straight to detach it.



am3uuw0000069

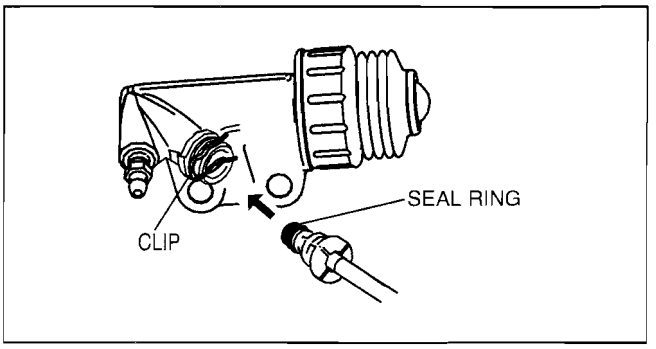
Clutch Pipe Installation Note

1. Return the clip to the position shown in the figure.

Caution

- **Verify that there is no chipping or damage to the seal ring of the clutch pipe connector.**

2. Insert the clutch pipe connector straight.
3. Pull the clutch pipe to verify that it does not come off, and reinsert it completely.

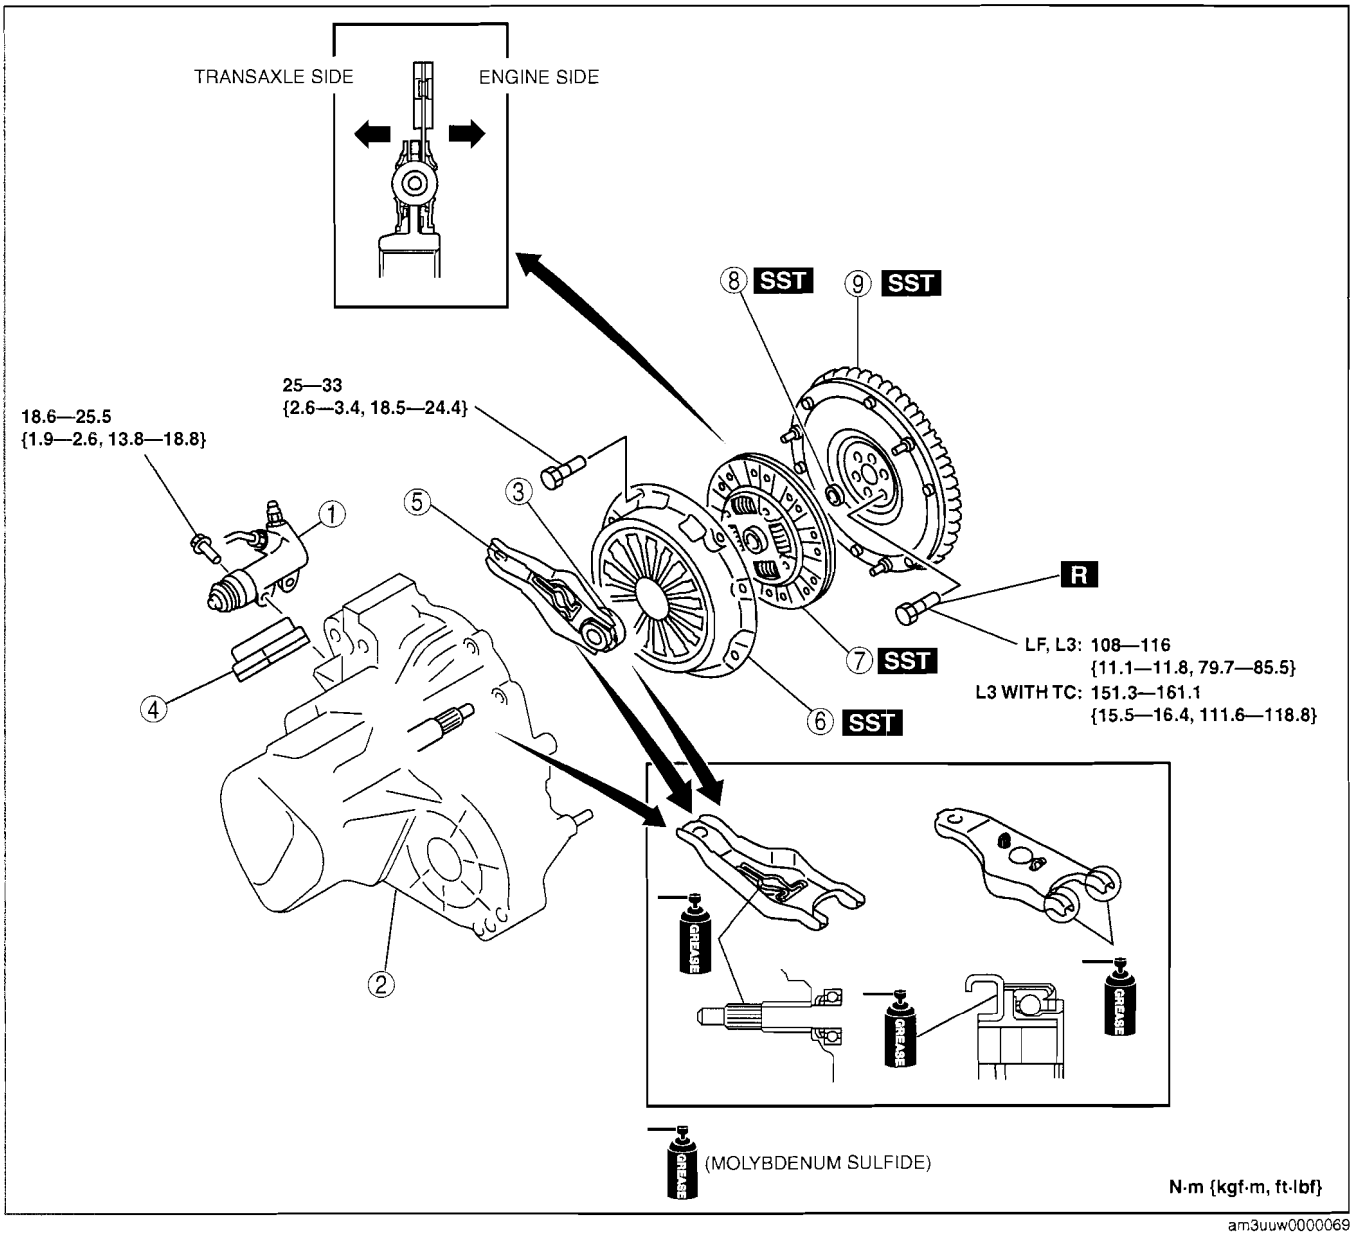


am3uuw0000069

CLUTCH UNIT REMOVAL/INSTALLATION

id051000800300

1. Remove in the order indicated in the table.
2. Install in the reverse order of removal.



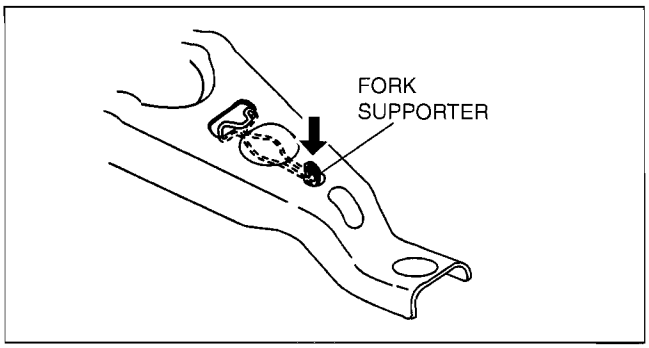
am3uuw0000069

1	Clutch release cylinder (See 05-10-9 CLUTCH RELEASE CYLINDER REMOVAL/INSTALLATION.)
2	Manual transaxle (See 05-15A-5 MANUAL TRANSAXLE REMOVAL/INSTALLATION[G35M-R].) (See 05-15B-5 MANUAL TRANSAXLE REMOVAL/INSTALLATION[A26M-R].)
3	Clutch release collar (See 05-10-15 CLUTCH RELEASE COLLAR INSPECTION.)
4	Boot
5	Clutch release fork (See 05-10-12 Clutch Release Fork Removal Note.)

6	Clutch cover (See 05-10-12 Clutch Cover and Disc Removal Note.) (See 05-10-14 Clutch Cover Installation Note.)
7	Clutch disc (See 05-10-12 Clutch Cover and Disc Removal Note.) (See 05-10-14 Clutch Disc Installation Note.)
8	Pilot bearing (See 05-10-12 Pilot Bearing Removal Note.) (See 05-10-13 Pilot Bearing Installation Note.)
9	Flywheel [LF, L3] or dual-mass flywheel [L3 WITH TC] (See 05-10-13 Flywheel or Dual-mass Flywheel Removal Note.) (See 05-10-13 Flywheel or Dual-mass Flywheel Installation Note.)

Clutch Release Fork Removal Note

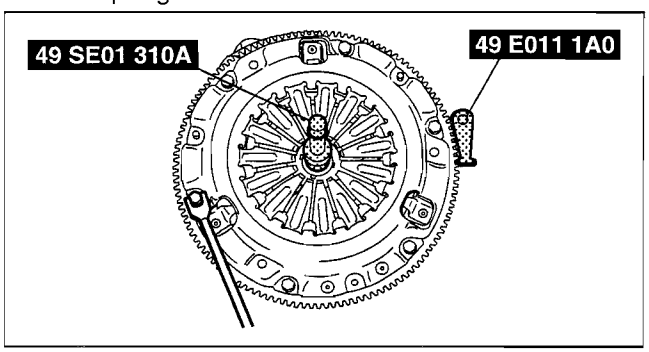
1. Remove the fork supporter before disassembling the release fork.



am3uuw0000019

Clutch Cover and Disc Removal Note

1. Install the **SSTs**.
2. Loosen each bolt one turn at a time in a crisscross pattern until spring tension is released.
3. Remove the clutch cover and disc.



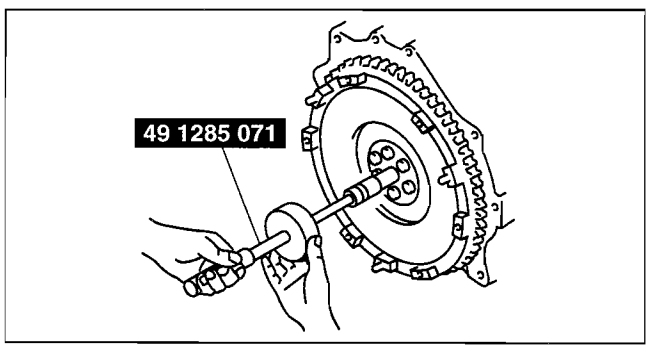
am3uuw0000019

Pilot Bearing Removal Note

Note

- The pilot bearing does not need to be removed unless you are replacing it.

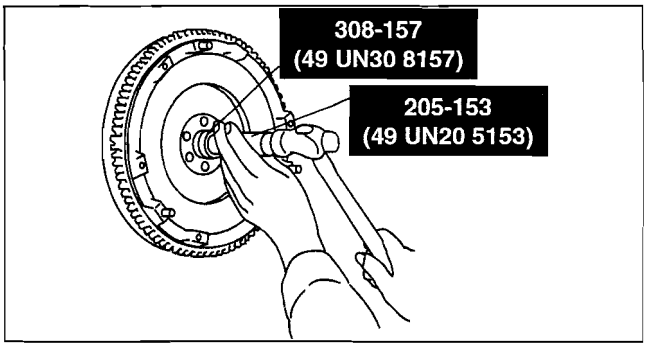
1. Use the **SST** to remove the pilot bearing.



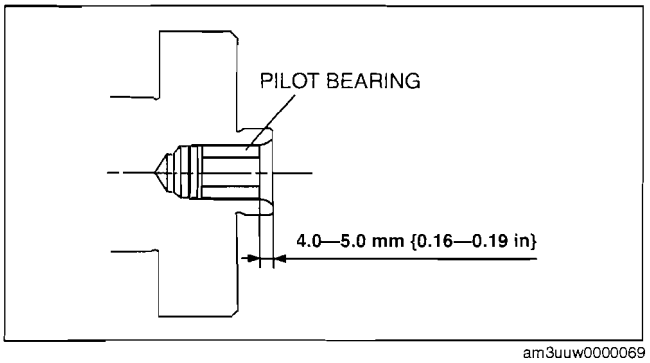
am3uuw0000020

Pilot Bearing Installation Note

1. Use the **SSTs** to install the pilot bearing.



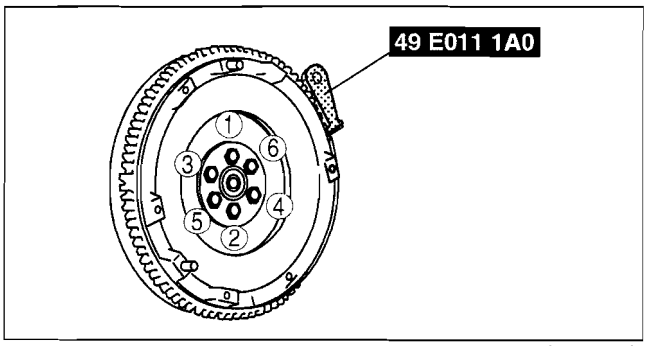
am3uuw0000020



am3uuw0000069

Flywheel or Dual-mass Flywheel Removal Note

1. Hold the flywheel or dual-mass flywheel using the **SST**.
2. Remove the bolts evenly and gradually in a crisscross pattern.
3. Remove the flywheel or dual-mass flywheel.
4. Inspect for oil leakage from the crankshaft rear oil seal.
   - If there is any malfunction, replace the crankshaft rear oil seal.
     (See 01-10A-27 REAR OIL SEAL REPLACEMENT[LF, L3].)
     (See 01-10B-27 REAR OIL SEAL REPLACEMENT[L3 WITH TC].)

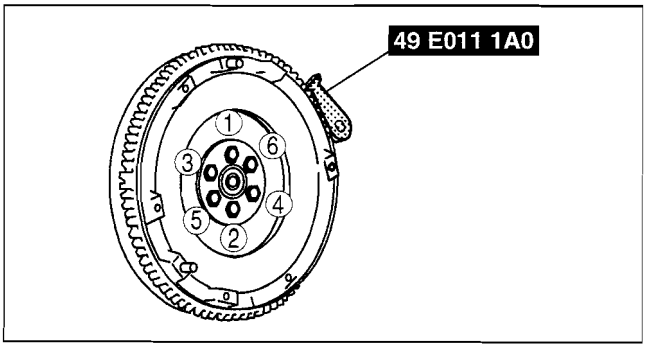


am3uuw0000020

Flywheel or Dual-mass Flywheel Installation Note

1. Install the flywheel or dual-mass flywheel to the crankshaft.
2. Clean the crankshaft thread holes before installing the new lock bolts.
3. Hand-tighten the flywheel lock bolts or dual-mass flywheel lock bolts.
4. Install the **SST** to the flywheel or dual-mass flywheel.
5. Gradually tighten the flywheel lock bolts or dual-mass flywheel lock bolts in a crisscross pattern.

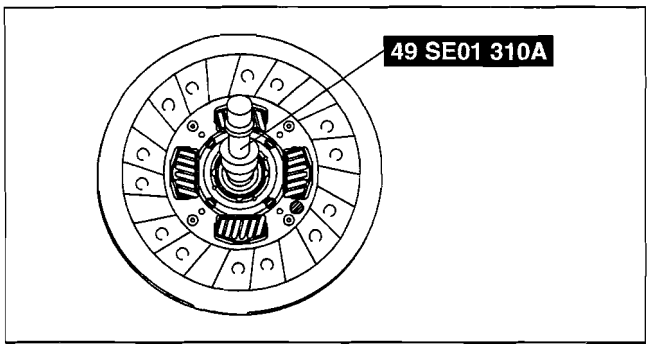
Tightening torque
LF, L3: 108—116 N·m
{11.1—11.8 kgf·m, 79.7—85.5 ft·lbf}
L3 WITH TC: 151.3—161.1 N·m
{15.5—16.4 kgf·m, 111.6—118.8 ft·lbf}



am3uuw0000020

Clutch Disc Installation Note

1. Hold the clutch disc position using the **SST**.

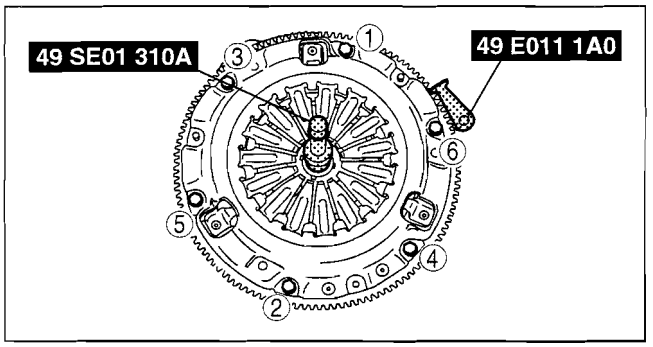


am3uuw0000020

Clutch Cover Installation Note

1. Install the **SSTs**.
2. Tighten the bolts evenly and gradually in a crisscross pattern.

Tightening torque
25—33 N·m
{2.6—3.4 kgf·m, 18.5—24.4 ft·lbf}



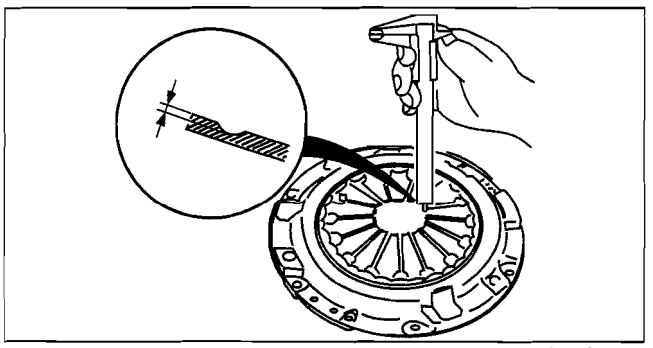
am3uuw0000020

CLUTCH COVER INSPECTION

id051000800800

1. Measure the wear of the diaphragm spring fingers.
   - If it exceeds the maximum specification, replace the clutch cover.

Clutch cover diaphragm spring fingers maximum depth
0.6 mm {0.024 in}

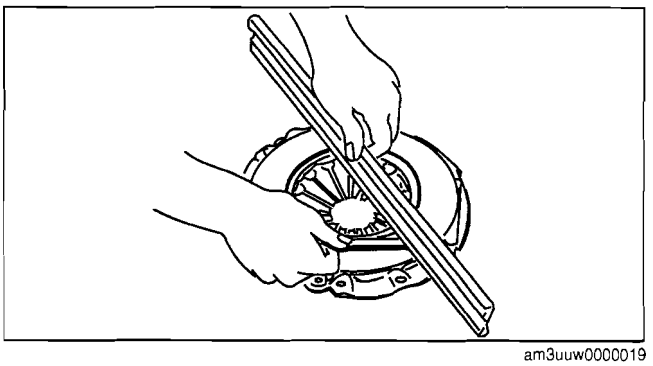


am3uuw0000019

2. Measure the flatness of the pressure plate with a straight edge and a feeler gauge.
   - If it exceeds the maximum specification, replace the clutch cover.

Maximum clearance of flatness of the pressure plate
LF, L3: 0.5 mm {0.020 in}
L3 WITH TC: 0.3 mm {0.012 in}

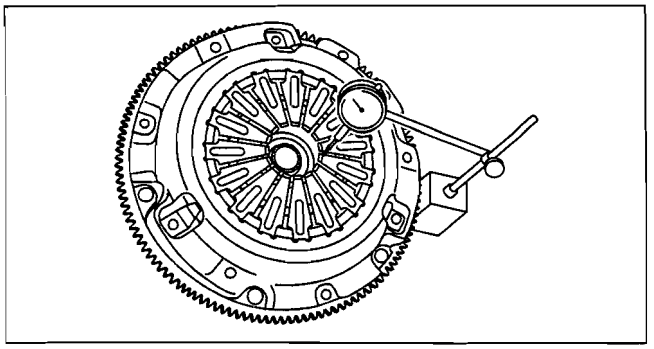
3. When checking the diaphragm spring fingers, mount a dial indicator on the cylinder block.



am3uuw0000019

4. Rotate the flywheel and check for misaligned diaphragm spring fingers.
   - If it exceeds the maximum specification, replace the clutch cover.

Clutch cover diaphragm spring fingers maximum height difference
1.0 mm {0.039 in}



am3uuw0000019

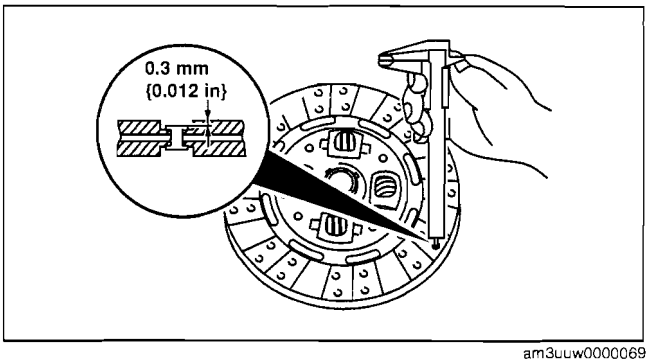
CLUTCH DISC INSPECTION

id051000800900

1. Remove the clutch disc.
2. Inspect the lining surface for discoloration and grease adhesion.
3. Inspect the torsion spring for weakness and the rivet for looseness.
4. Using a vernier caliper, measure the depth between the lining surface and the rivet head.

Clutch disc minimum depth
0.3 mm {0.012 in}

- If it is less than the minimum specification, replace the clutch disc.



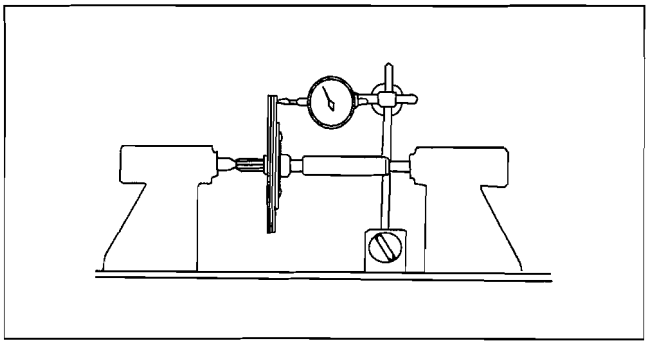
am3uuw0000069

5. Measure the clutch disc runout using a dial gauge.

Clutch disc maximum runout
0.7 mm {0.028 in}

- If it exceeds the maximum specification, replace the clutch disc.

6. Install the clutch disc.



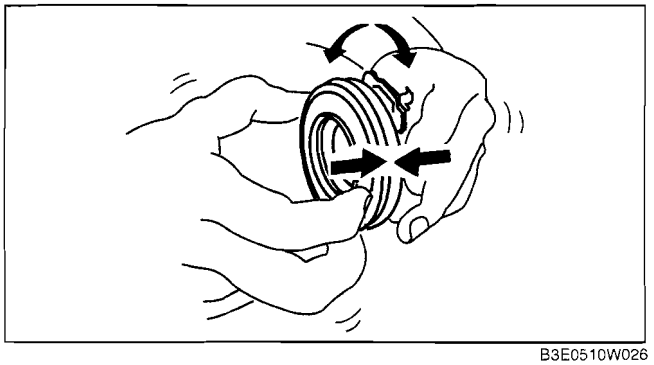
am3uuw0000070

CLUTCH RELEASE COLLAR INSPECTION

id051000801000

Caution
- **Do not clean the clutch release collar with cleaning fluids or a steam cleaner because it is filled with grease.**

1. Remove the clutch release collar.
2. Turn the collar while applying force in the axial direction, and inspect for sticking, excessive resistance, and an abnormal noise.
   - If there is any malfunction, replace the clutch release collar.
3. Install the clutch release collar.

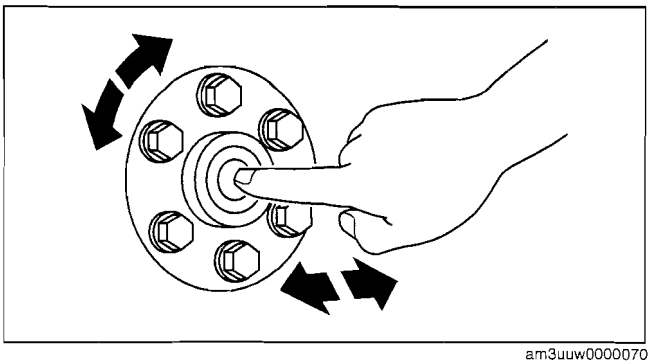


B3E0510W026

PILOT BEARING INSPECTION

id051000800200

1. Without removing the pilot bearing, turn the bearing while applying force in the axial direction.
   - If there is any malfunction, replace the pilot bearing.



am3uuw0000070

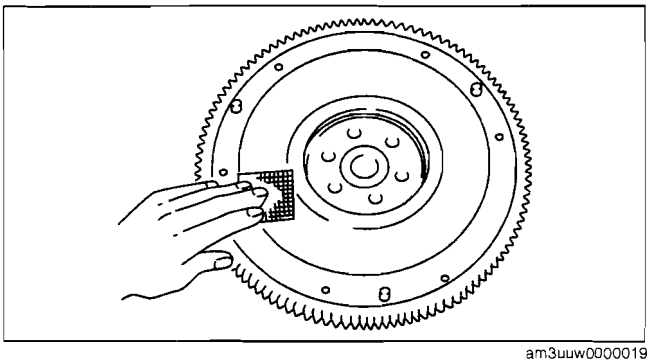
FLYWHEEL INSPECTION[LF, L3]

id0510008001d1

1. Remove the flywheel.

Note
- Correct slight scratches and discoloration using sandpaper.
- Inspect the runout of the surface that contacts the clutch disc with the flywheel installed to the crankshaft.

2. Inspect the surface that contacts the clutch disc for scratches, nicks, and discoloration.
3. Inspect the ring gear teeth for damage and wear.
4. Install the flywheel.

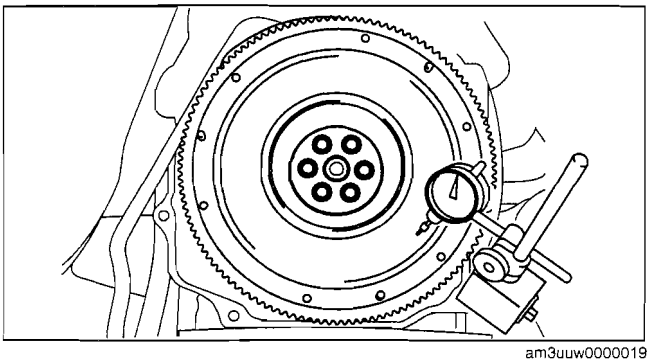


am3uuw0000019

5. Measure the runout of the surface that contacts the clutch disc using a dial gauge.

Flywheel maximum runout [LF, L3]
0.1 mm {0.004 in}

- If it exceeds the maximum specification, replace the flywheel.



am3uuw0000019

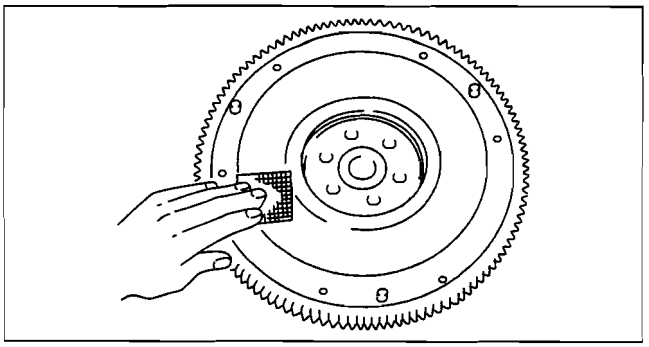
DUAL-MASS FLYWHEEL INSPECTION[L3 WITH TC]

id0510008020d5

Caution
- **Do not rework the dual-mass flywheel if it is distorted.**
- **Do not clean the dual-mass flywheel with any kind of fluid. Clean the dual-mass flywheel with a dry cloth only.**
- **Do not clean the gap between the primary and secondary mass. Only clean the bolt connection surface and the clutch surface.**

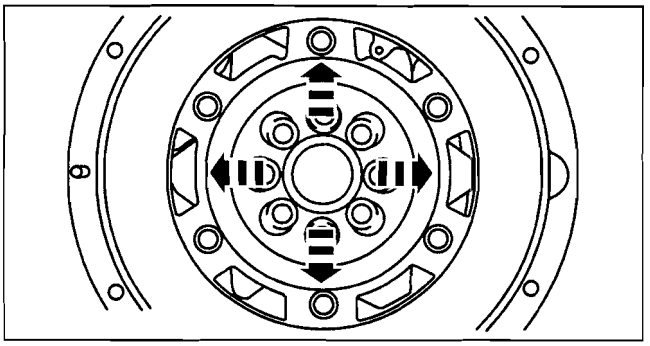
1. Remove the dual-mass flywheel.

Note
- Correct slight scratches and discoloration using sandpaper.
- Inspect the runout of the surface that contacts the clutch disc with the dual-mass flywheel installed to the crankshaft.



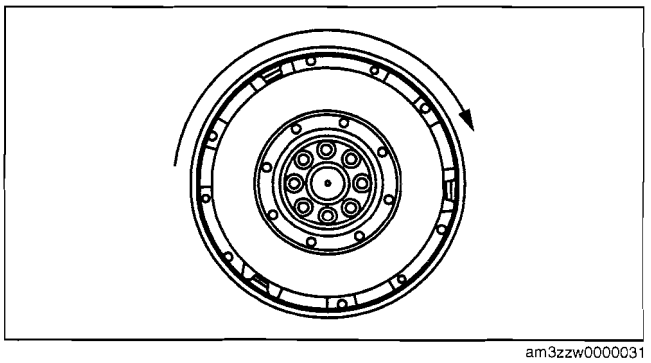
am3zzw0000031

2. Inspect the dual-mass flywheel.
   — Cracks
   — Worn ring gear teeth
   — Chipped or cracked ring gear teeth
   — Surface that contacts the clutch disc for scratches, nicks, and discoloration.
   - If there is any malfunction, replace the dual-mass flywheel.
3. Verify that the center of the dual-mass flywheel does not move.
   (1) Rotate the dual-mass flywheel or attempt to move it up and down, and left and right to verify that the center of the dual-mass flywheel does not move.
   - If there is any movement as indicated by the arrows in the figure, replace the dual-mass flywheel with a new one.



am3zzw0000031

4. Verify that the secondary mass rotates by 15 teeth or more.
   - If it rotates by 15 teeth or more, replace the dual-mass flywheel.

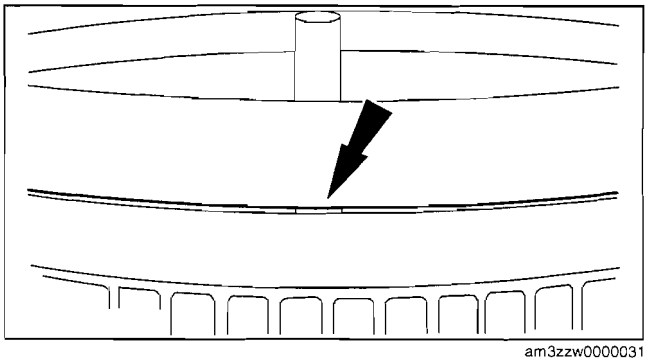


am3zzw0000031

5. Inspect for locating dowels touching the primary mass of the dual-mass flywheel.

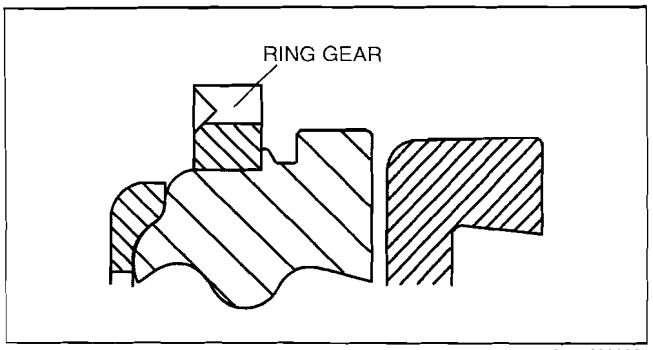
Caution
- **Make sure that the three locating dowels are installed.**

- If the locating dowels are touching the primary mass of the dual-mass flywheel, replace the dual-mass flywheel with a new one.
6. Visually inspect the secondary mass.
   - If there is any damage, replace the dual-mass flywheel.



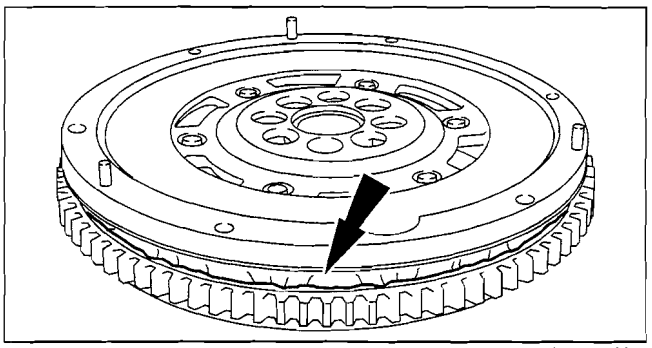
am3zzw0000031

7. Visually inspect the ring gear on the dual-mass flywheel.
   - If there is any damage, replace the dual-mass flywheel.



am3zzw0000031

8. Inspect the welded area of the dual-mass flywheel for grease leakage.
   - If there is grease leakage, replace the dual-mass flywheel.

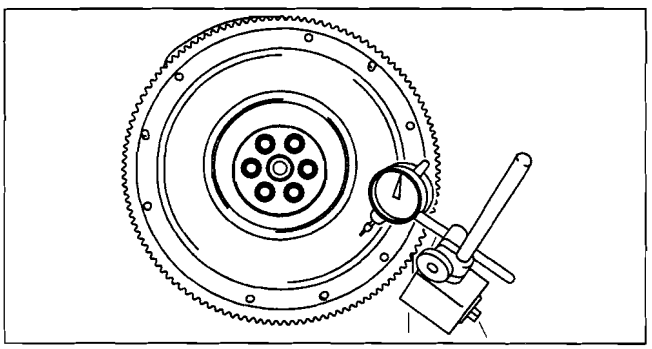


am3zzw0000031

9. Inspect the dual-mass flywheel runout.

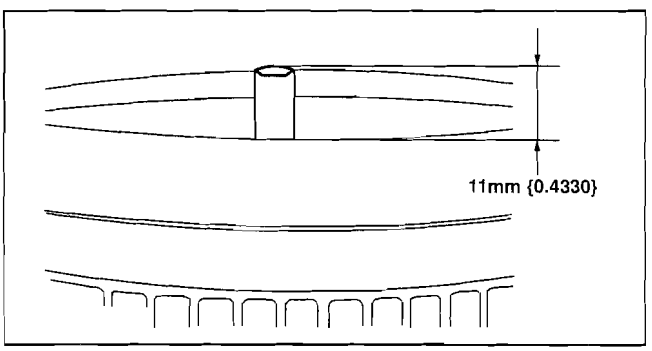
   Dual-mass flywheel maximum runout [A26M-R]
   1.5 mm {0.059 in}

   - If it is more than the maximum specification, replace the dual-mass flywheel.



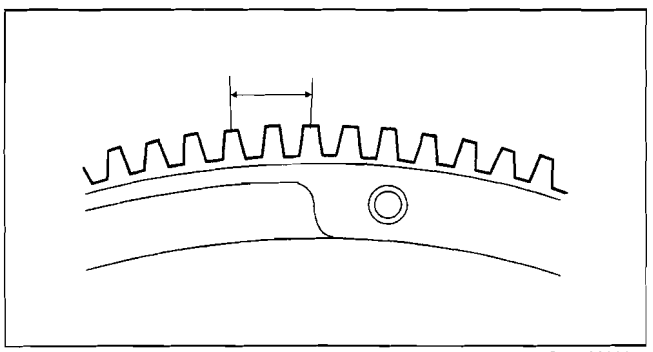
am3zzw0000031

10. Inspect the dual-mass flywheel for the amount of guide pin projection.
    - If not within the specification, replace the dual-mass flywheel.



am3zzw0000031

11. Rotate the secondary mass left and right and verify that it rotates within a range of three teeth without resistance.
    - If there is any malfunction, replace the dual-mass flywheel.
12. Inspect the dual-mass flywheel for cracks.
    - If there are cracks, replace the dual-mass flywheel.

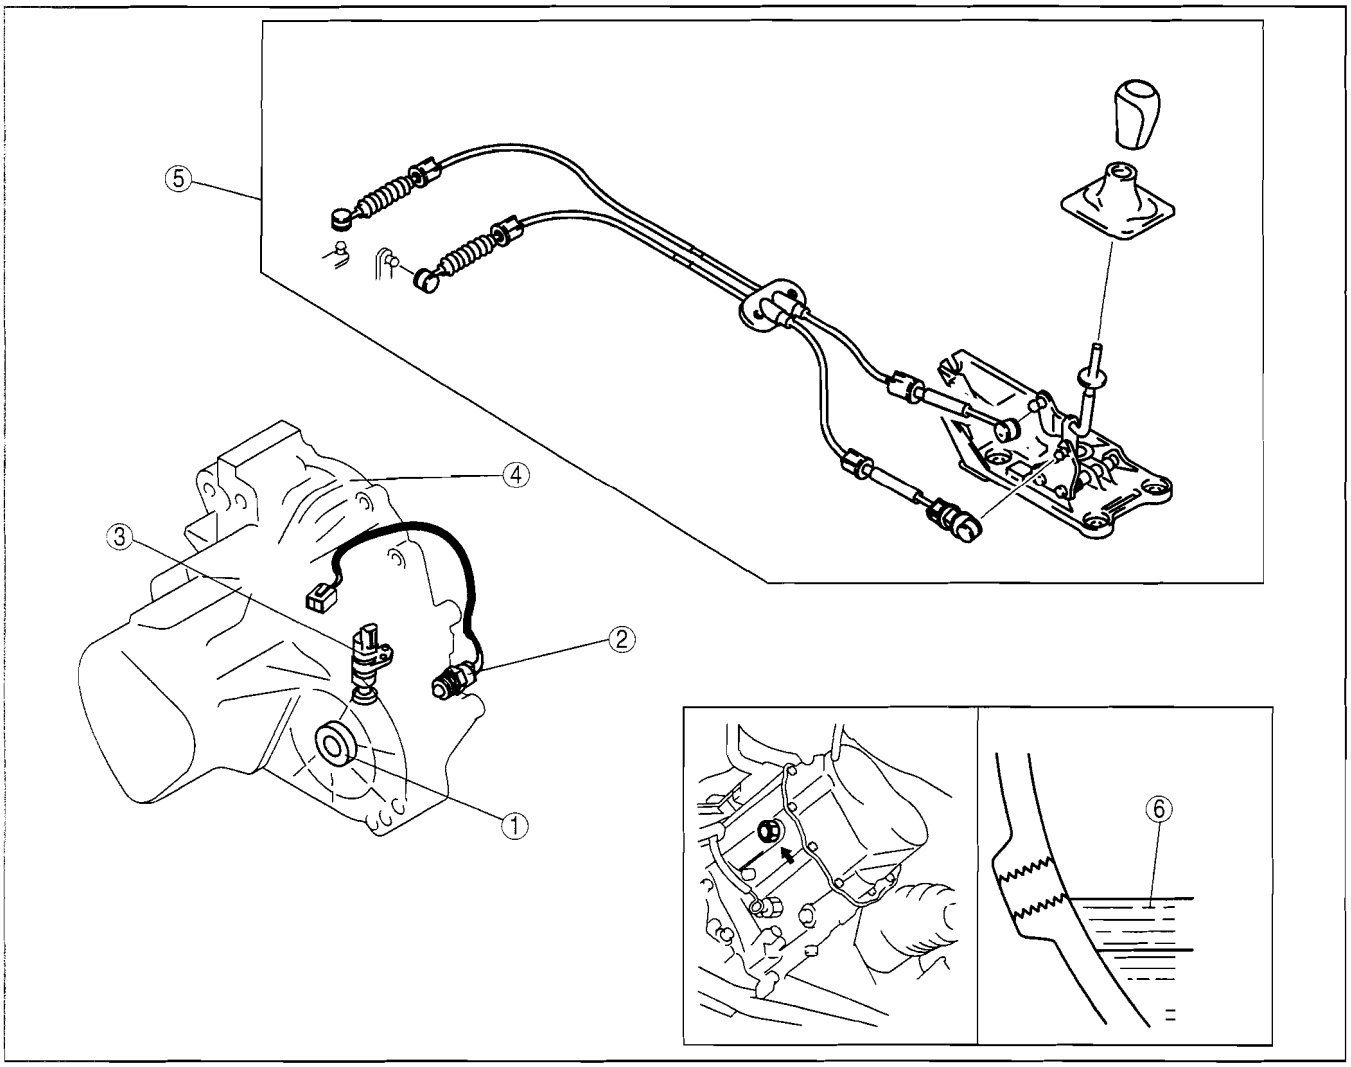


am3uuw0000018

05-15A MANUAL TRANSAXLE [G35M-R]

MANUAL TRANSAXLE LOCATION INDEX[G35M-R]

id0515b1800500



c3u0515w001

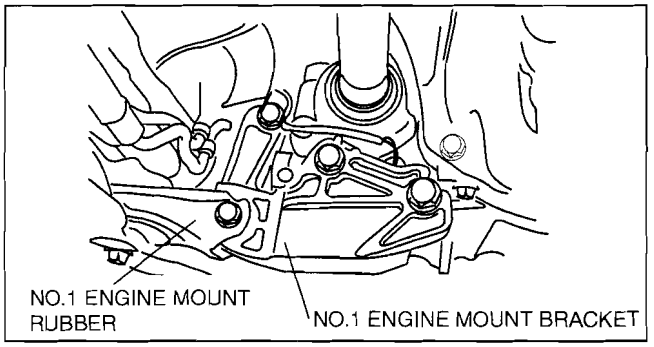
1	Oil seal (differential) (See 05-15A-4 OIL SEAL (DIFFERENTIAL) REPLACEMENT[G35M-R])
2	Neutral switch (See 05-15A-2 NEUTRAL SWITCH REMOVAL/INSTALLATION[G35M-R].) (See 01-40A-46 NEUTRAL SWITCH INSPECTION[LF, L3].)

3	Vehicle speed sensor (See 05-15A-4 VEHICLE SPEED SENSOR REMOVAL/INSTALLATION (WITHOUT ABS)[G35M-R].) (See 05-15A-5 VEHICLE SPEED SENSOR INSPECTION (WITHOUT ABS)[G35M-R].)
4	Manual transaxle (See 05-15A-5 MANUAL TRANSAXLE REMOVAL/INSTALLATION[G35M-R])
5	Shift mechanism (See 05-16-1 SHIFT MECHANISM REMOVAL/INSTALLATION[G35M-R])
6	Transaxle oil (See 05-15A-3 TRANSAXLE OIL INSPECTION[G35M-R]) (See 05-15A-3 TRANSAXLE OIL REPLACEMENT[G35M-R])

NEUTRAL SWITCH REMOVAL/INSTALLATION[G35M-R]

id0515b1800700

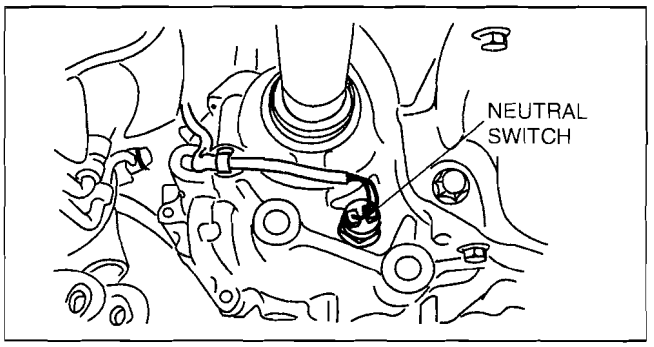
1. Remove the under cover.
2. Remove the No.1 engine mount rubber and No.1 engine mount bracket.



am3uuw0000071

3. Remove the neutral switch.
4. Install the neutral switch (with a new packing) to the transaxle case.

Tightening torque
19.6—29.4 N·m
{2.0—2.9 kgf·m, 14.5—21.6 ft·lbf}

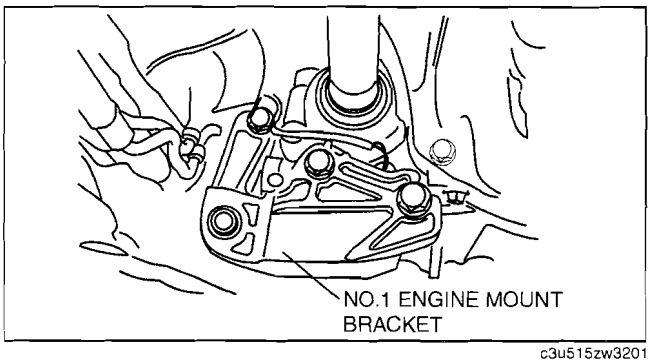


am3uuw0000072

5. Install the No.1 engine mount bracket.

Tightening torque
93.1—116.6 N·m
{9.5—11.8 kgf·m, 68.7—85.9 ft·lbf}

6. Install the No.1 engine mount rubber. (See 05-15A-5 MANUAL TRANSAXLE REMOVAL/INSTALLATION[G35M-R].)
7. Install the under cover.



c3u515zw3201

TRANSAXLE OIL INSPECTION[G35M-R]

id0515b1800000

1. Park the vehicle on level ground.
2. Remove the under cover.
3. Remove the oil level plug and washer.
4. Verify that the oil is near the brim of the plug port.
   - If the oil level is lower than the low level, add the specified amount and type of oil through the oil level plug hole.

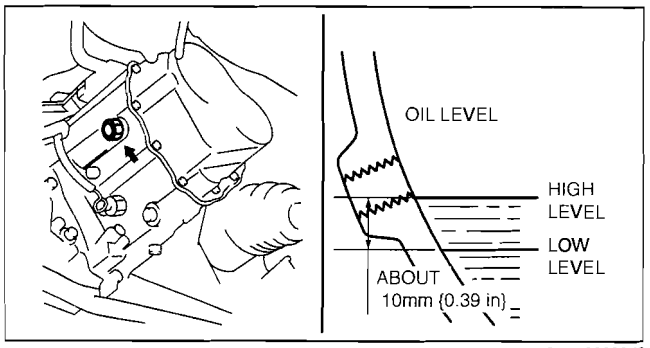
   Specified oil grade
   API Service GL-4 or GL-5

   Specified oil viscosity
   All-season: SAE 75W-90
   Above 10 °C {50 °F}: SAE 80W-90

5. Install a new washer and the oil level plug.

   Tightening torque
   39—59 N·m {4.0—6.0 kgf·m, 29—43 ft·lbf}

6. Install the under cover.



am3uuw0000072

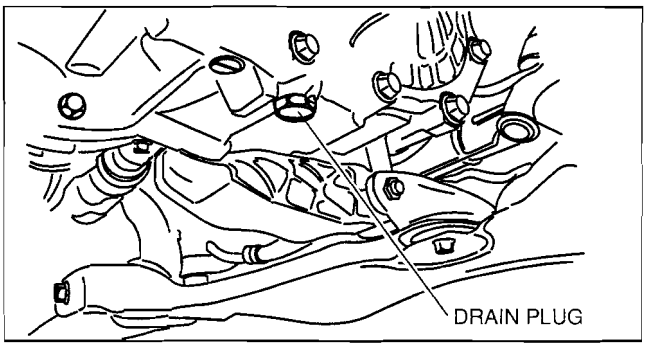
05-15A

TRANSAXLE OIL REPLACEMENT[G35M-R]

id0515b1800100

1. Remove the under cover.
2. Remove the drain plug with the washer.
3. Drain the oil into a suitable container.
4. Install a new washer and the drain plug.

   Tightening torque
   39—59 N·m {4.0—6.0 kgf·m, 29—43 ft·lbf}



c3u0515w101

5. Remove the oil level plug with washer and add the specified amount and type of oil through the oil level plug hole until the level reaches the bottom of the oil level plug hole.

   Manual transaxle oil Grade
   API Service GL-4 or GL-5

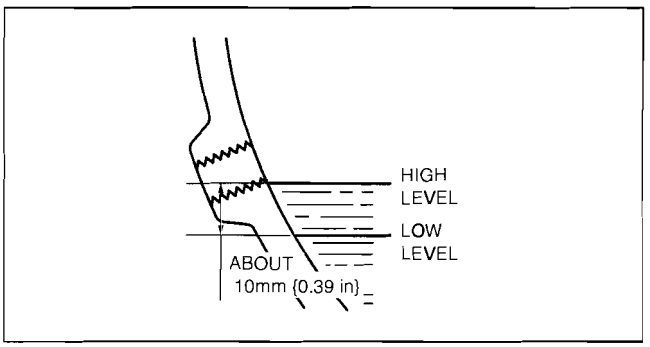
   Manual transaxle oil Viscosity
   All-season: SAE 75W-90
   Above 10 °C {50 °F}: SAE 80W-90

   Manual transaxle oil capacity (approx. quantity)
   2.87 L {3.03 US qt, 2.53 Imp qt}

6. Install a new washer and the oil level plug.

   Tightening torque
   39—59 N·m {4.0—6.0 kgf·m, 29—43 ft·lbf}

7. Install the under cover.

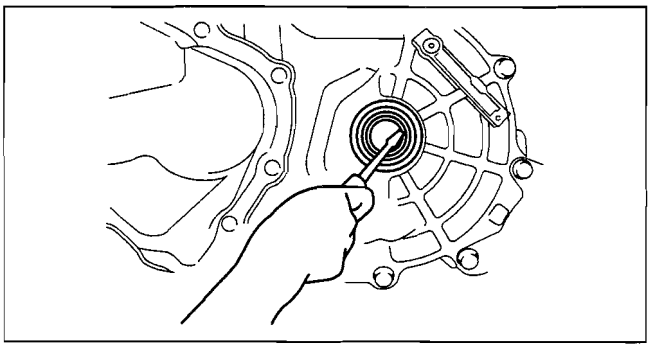


a6e5112w008

OIL SEAL (DIFFERENTIAL) REPLACEMENT[G35M-R]

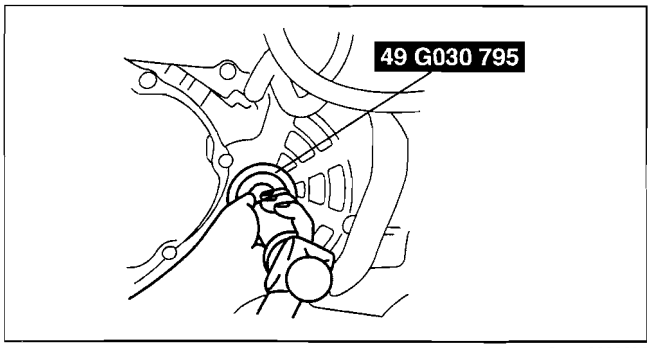
id0515b1800200

1. On level ground, jack up the vehicle and support it evenly on safety stands.
2. Drain the oil from the transaxle.
3. Remove the front wheels and splash shields.
4. Separate the drive shaft and joint shaft from the transaxle. (See 03-13-9 DRIVE SHAFT REMOVAL/INSTALLATION.) (See 03-13-2 JOINT SHAFT REMOVAL/INSTALLATION[LF].) (See 03-13-4 JOINT SHAFT REMOVAL/INSTALLATION[L3, L3 WITH TC].)
5. Remove the oil seals using a screwdriver.



am3uuw0000072

6. Using the **SST** and a hammer, tap each new oil seal in evenly until the **SST** contacts the transaxle case.
7. Coat the lip of each oil seal with transaxle oil.
8. Insert the drive shaft and joint shaft to the transaxle. (See 03-13-9 DRIVE SHAFT REMOVAL/INSTALLATION.) (See 03-13-2 JOINT SHAFT REMOVAL/INSTALLATION[LF].) (See 03-13-4 JOINT SHAFT REMOVAL/INSTALLATION[L3, L3 WITH TC].)
9. Install the wheels and splash shields.
10. Add the specified amount and type of oil. (See 05-15A-3 TRANSAXLE OIL REPLACEMENT[G35M-R].)



am3uuw0000072

VEHICLE SPEED SENSOR REMOVAL/INSTALLATION (WITHOUT ABS)[G35M-R]

id0515b1801000

1. Disconnect the negative battery cable.
2. Remove the air cleaner component, battery and battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
3. Disconnect the vehicle speed sensor connector.
4. Remove the vehicle speed sensor.
5. Apply transaxle oil to a new O-ring and install it on a new vehicle speed sensor.
6. Install the vehicle speed sensor.

Tightening torque
7.9—11.2 N·m {80—115 kgf·cm, 69.5—99.8 in·lbf}

7. Connect the vehicle speed sensor connector.
8. Install the battery and battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
9. Connect the negative battery cable.

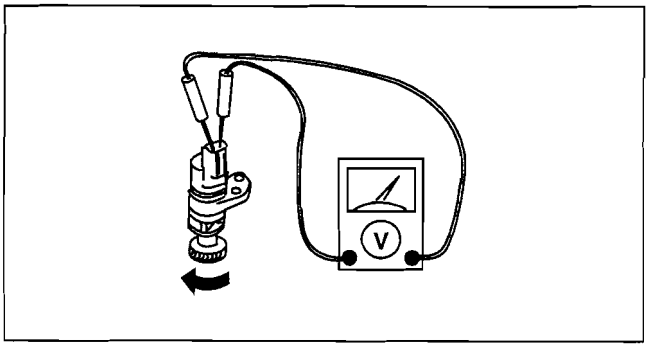
VEHICLE SPEED SENSOR INSPECTION (WITHOUT ABS)[G35M-R]

id0515b1801100

1. Remove the vehicle speed sensor.
   (See 05-15A-4 VEHICLE SPEED SENSOR REMOVAL/INSTALLATION (WITHOUT ABS)[G35M-R].)
2. Measure the voltage between the vehicle speed sensor terminals while the gear is turning.

Meter needle	Action
Moves slightly under 5 V (AC)	Inspect wiring harness between instrument cluster and vehicle speed sensor.
Does not move	Replace vehicle speed sensor.

3. Install the vehicle speed sensor.
   (See 05-15A-4 VEHICLE SPEED SENSOR REMOVAL/INSTALLATION (WITHOUT ABS)[G35M-R].)



am3uuw0000070

MANUAL TRANSAXLE REMOVAL/INSTALLATION[G35M-R]

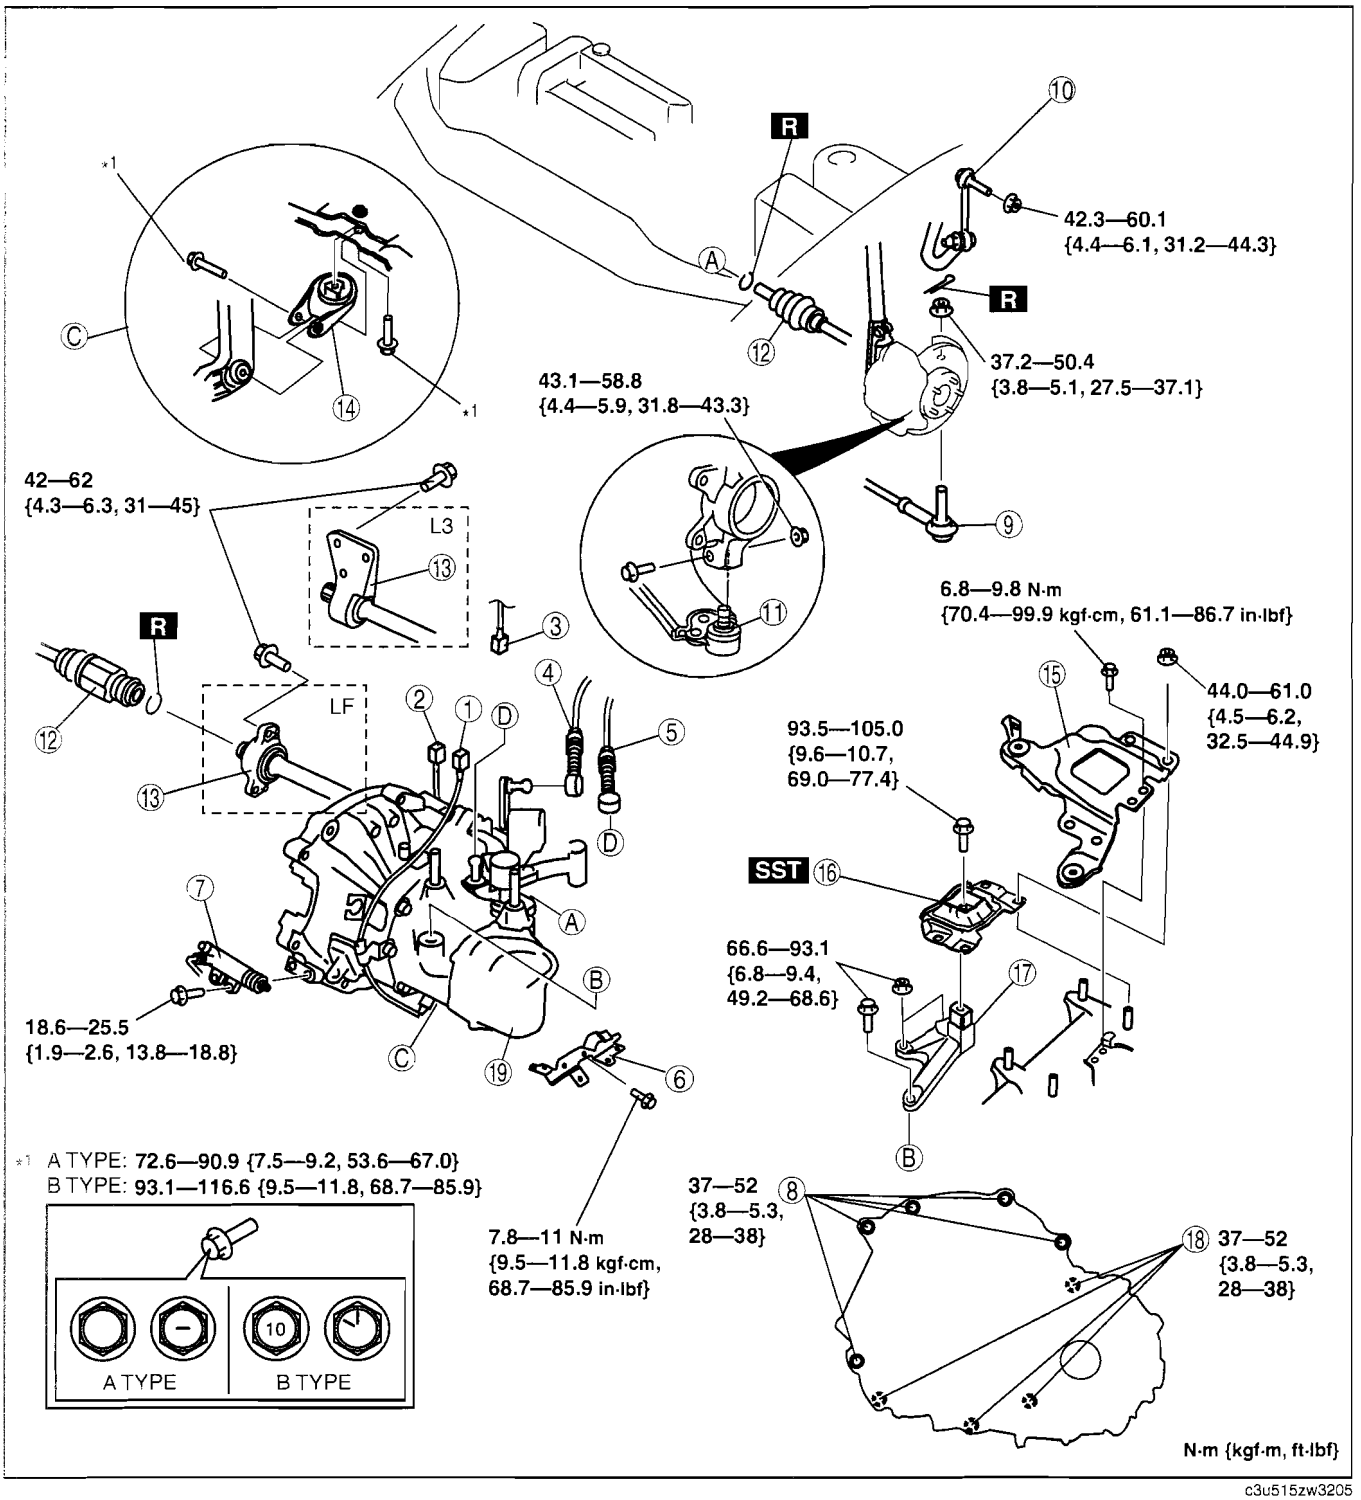
id0515b1800600

1. Remove the following parts:
   (1) Battery and battery tray
   (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
   (2) Air cleaner component
   (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[LF, L3].)
   (3) Exhaust manifold insulator
   (4) Wheels, tires and splash shields
   (5) Under cover
   (6) Starter
   (See 01-19A-2 STARTER REMOVAL/INSTALLATION[LF, L3].)
2. Drain the transaxle oil into a suitable container.
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.

5. Add the specified amount of specified transaxle oil.

Note

- If the transaxle is overhauled, perform the "INSPECTION AFTER TRANSAXLE INSTALLATION" and verify that there is no abnormality.
  (See 05-15A-11 INSPECTION AFTER TRANSAXLE INSTALLATION[G35M-R].)



c3u515zw3205

1	Back-up light switch connector
2	Neutral switch connector
3	Vehicle speed sensor connector (without ABS)

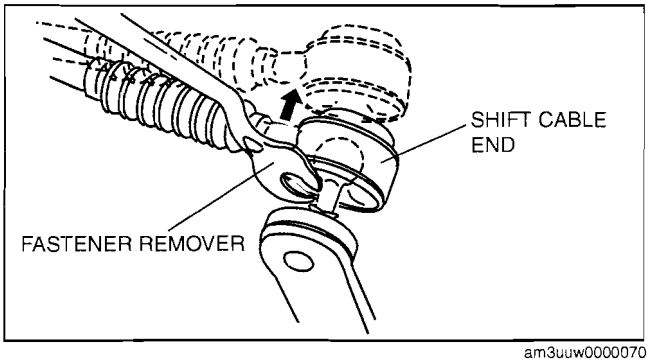
17	No.4 engine mount bracket (See 05-15A-8 No.4 Engine Mount Removal Note.) (See 05-15A-10 No.1 Engine Mount and No.4 Engine Mount Installation Note.)
18	Transaxle mounting bolt (lower side)
19	Manual transaxle (See 05-15A-9 Manual Transaxle Removal Note.) (See 05-15A-10 Manual Transaxle Installation Note.)

Shift Cable And Select Cable Removal Note

1. Remove the both shift cable end and select cable end using a fastener remover.



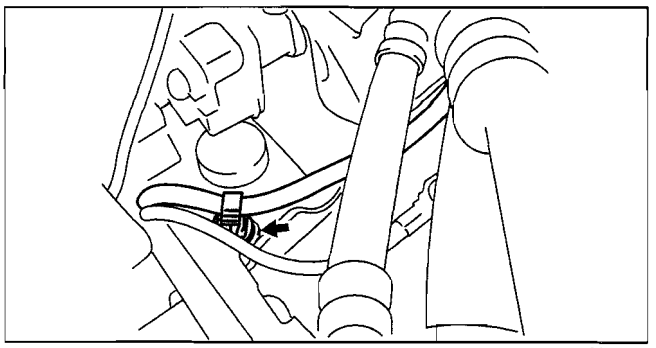
am3uuw0000070

No.4 Engine Mount Removal Note

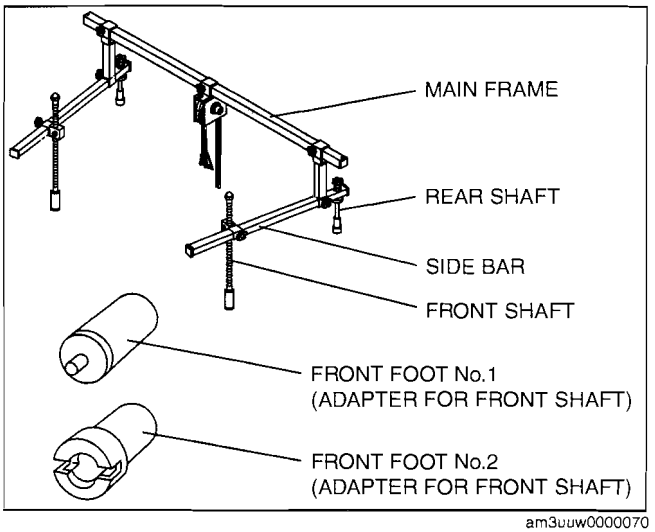
1. To install the front shaft (RH) of the **SST** (49 C017 5A0), remove the clip shown in the figure.
2. Install the **SST** using the following procedure.

Caution

- **Refer to the SST instruction manual for the basic handing procedure.**

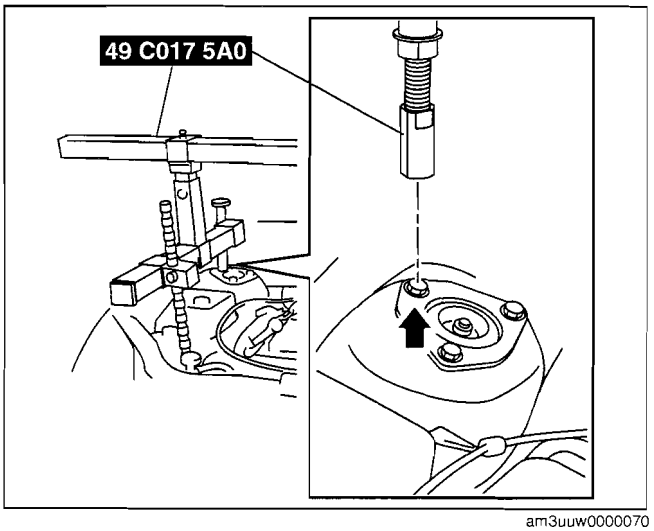


am3uuw0000070



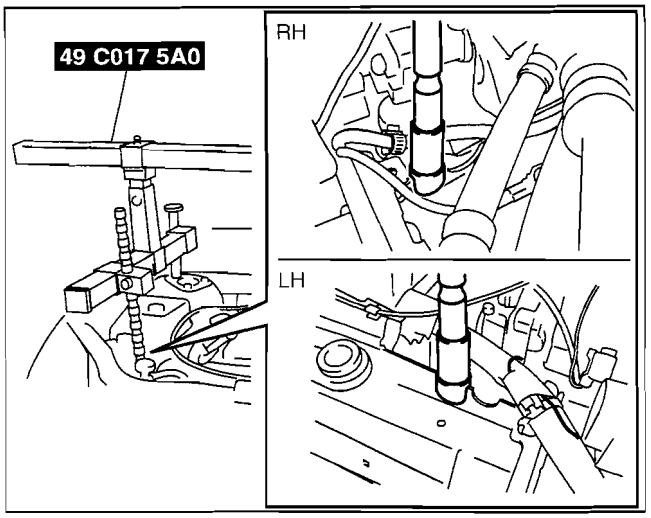
am3uuw0000070

(1) Install the right rear shaft of the **SST** to the bolt of the right shock absorber as shown in the figure.
(2) Install the left rear shaft of the **SST** to the bolt of the left shock absorber (identical position to right side).



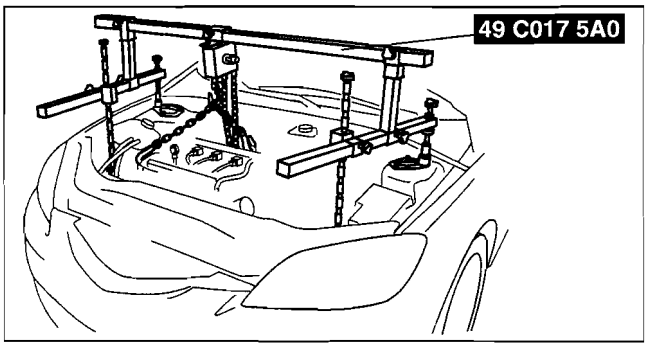
am3uuw0000070

(3) Install front foot No.2 to the left/right front shaft of the **SST**, then align the groove of the front shaft of the **SST** with the folded up part of the vehicle as shown in the figure.
(4) Adjust the positions of the **SST** side bars so that they are the same height (left and right) and horizontal.
(5) Make sure each joint is securely tightened.



am3uuw0000070

3. Suspend the engine using the **SST**.
4. Remove the battery tray bracket, No.4 engine mount rubber and bracket.

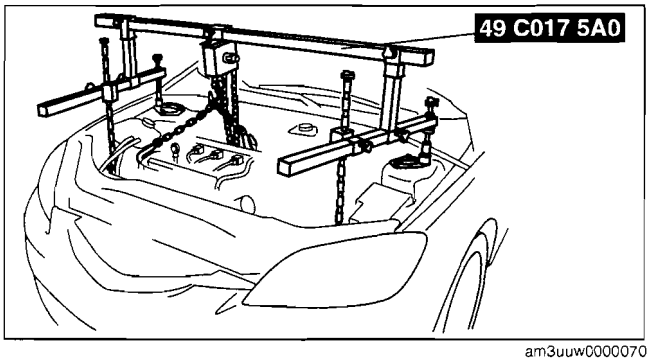


am3uuw0000070

Manual Transaxle Removal Note

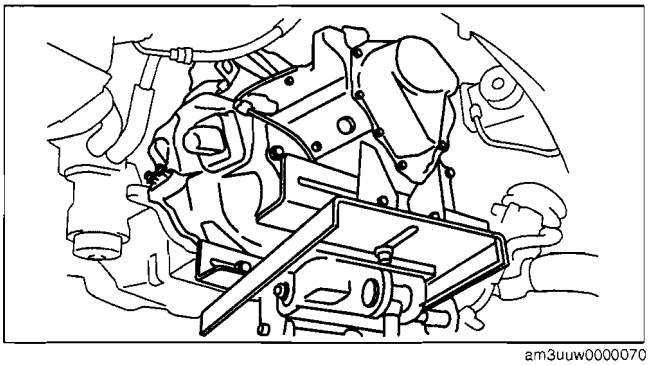
Warning
- **Remove the transaxle carefully, holding it steady. If the transaxle falls it could be damaged or cause injury.**

1. Lean the engine toward the transaxle.



am3uuw0000070

2. Support the transaxle on a jack.
3. Remove the transaxle mounting bolts.
4. Remove the transaxle.



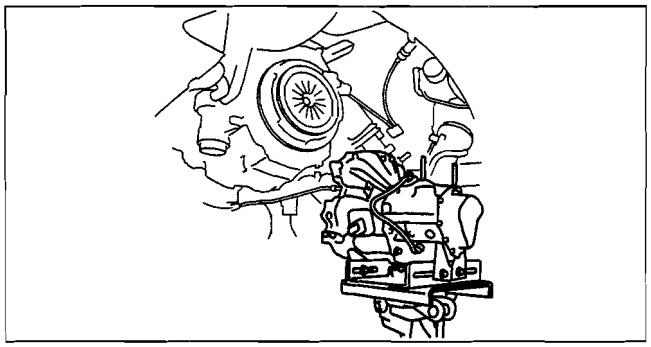
am3uuw0000070

Manual Transaxle Installation Note

Warning

- **Install the transaxle carefully, holding it steady. If the transaxle falls it could be damaged or cause injury.**

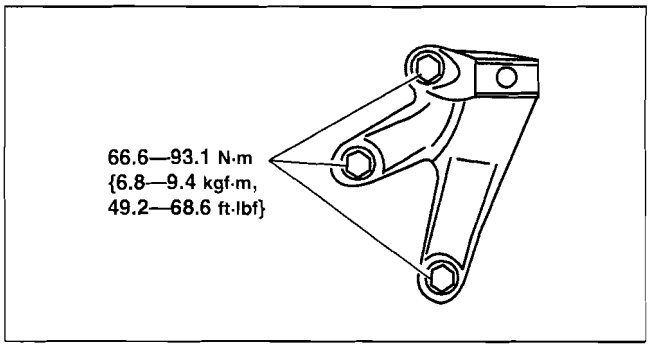
1. Set the transaxle on a jack and lift into place.
2. Install the transaxle mounting bolts.
3. Adjust the **SST** (49 C017 5A0) so that the engine is located at the specified position.



am3uuw0000071

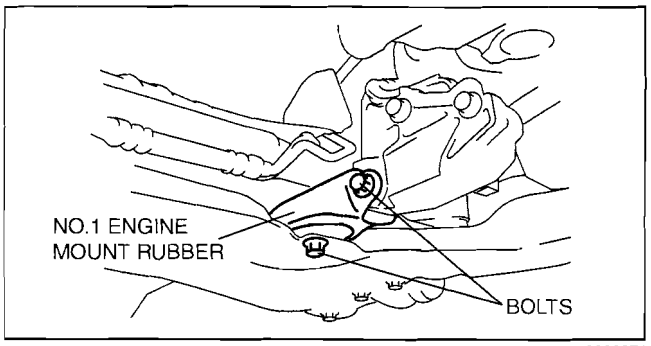
No.1 Engine Mount and No.4 Engine Mount Installation Note

1. Install the No.4 engine mount bracket on the transaxle case and tighten bolt and nuts.



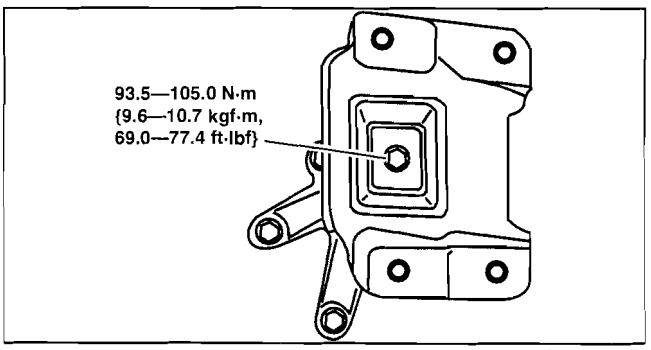
am3uuw0000071

2. install the No.1 engine mount rubber to the cross member and temporarily tighten bolts.



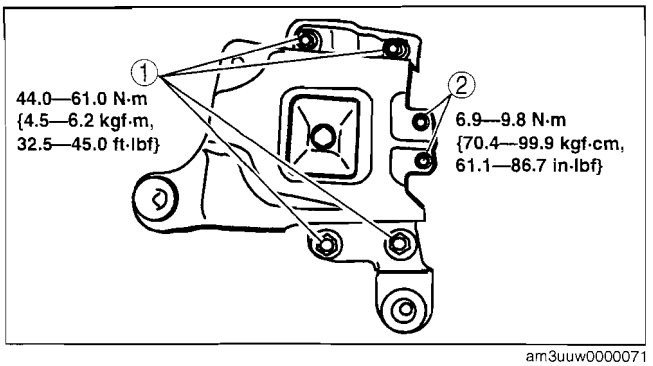
am3uuw0000071

3. Place the No.4 engine mount rubber with the body stud bolts passing through the holes and tighten the bolt in the figure.



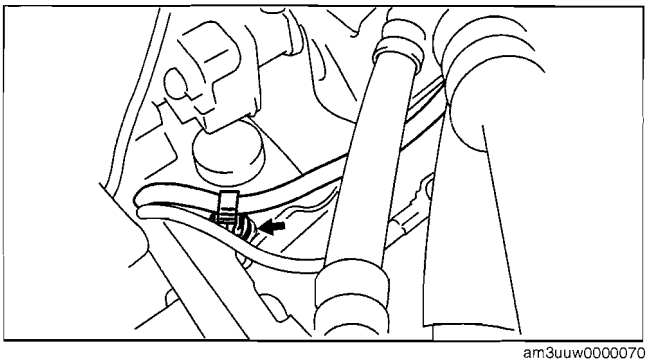
am3uuw0000071

4. Place the battery tray bracket on the No.4 Engine mount rubber with the body stud bolts passing through the holes and tighten bolts and nuts in the order shown in the figure.
5. Remove the **SST** (49 C017 5A0).



am3uuw0000071

6. Install the clip as shown in the figure.



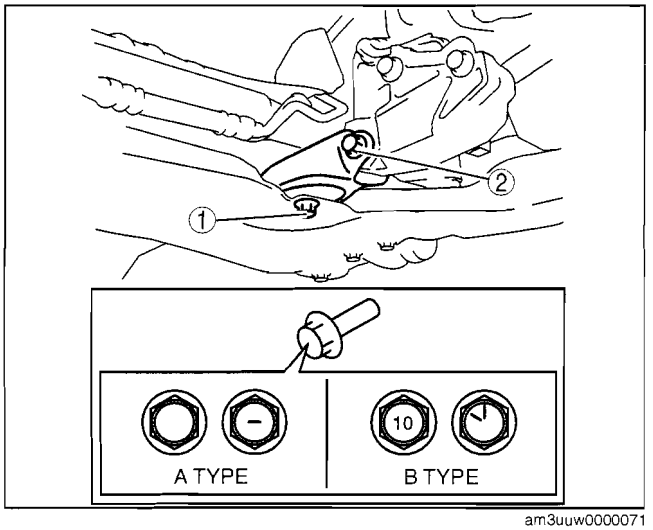
am3uuw0000070

7. Fully tighten the bolts.

Caution
- **Tighten the bolts in the order shown in the figure to prevent abnormal noise and vibration after assembly.**
- **Tighten the bolts while being careful of their length to prevent interference between the steering gear housing and bolt.**

Bolt length (measured from below the head)
Front crossmember side: 62 mm {2.441 in}
No.1 engine mount bracket side: 65 mm {2.559 in}

Tightening torque
A type: 72.6—90.9 N.m {7.5—9.2 kgf.m, 53.6—67.0 ft.lbf}
B type: 93.1—116.6 N·m {9.5—11.8 kgf·m, 68.7—85.9 ft·lbf}



am3uuw0000071

INSPECTION AFTER TRANSAXLE INSTALLATION[G35M-R]

id0515b1800300

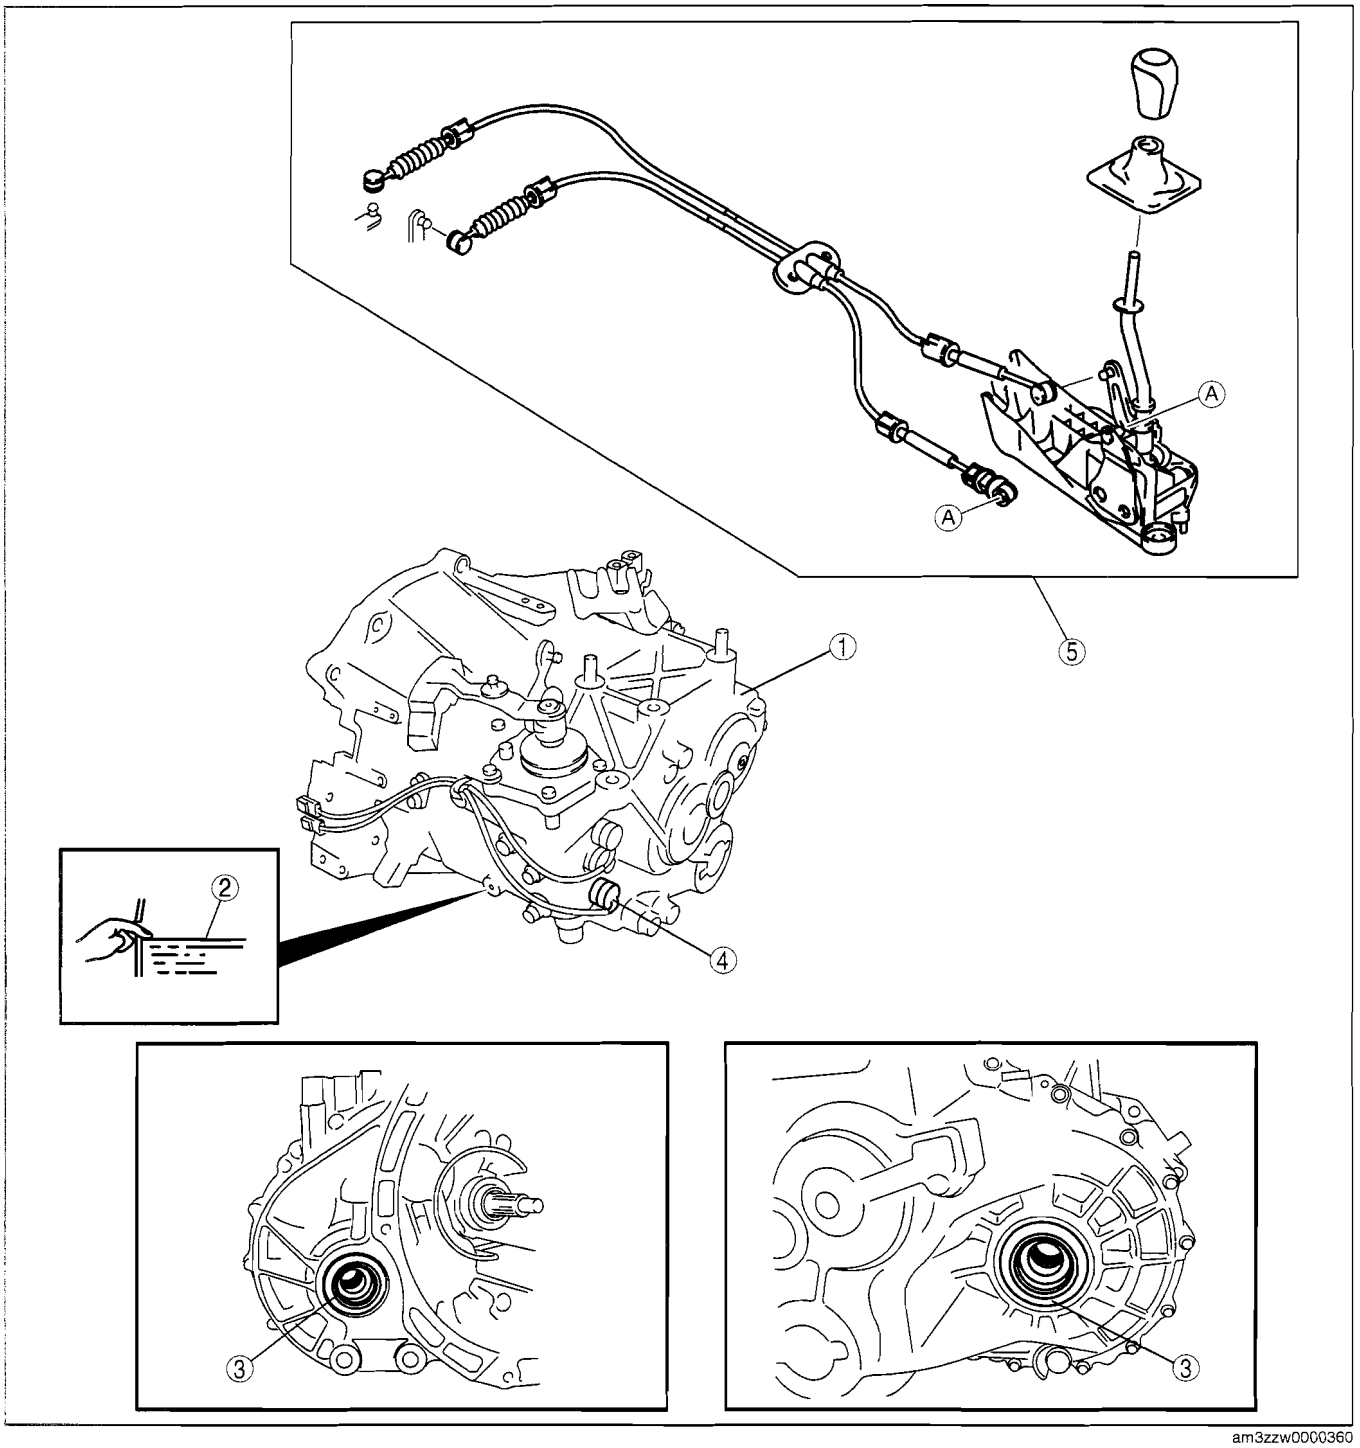
Note
- Perform the following inspection only when the transaxle has been overhauled.

1. Perform a road test and inspect the following items:
   (1) No abnormal noise in each shift position.
   (2) Smooth shift operation when shifting gears.
   (3) No gear slipout after shifting gears.
   (4) Back-up light switch operates correctly.

05-15B MANUAL TRANSAXLE [A26M-R]

MANUAL TRANSAXLE LOCATION INDEX[A26M-R]

id0515l1800500



am3zzw0000360

1	Manual transaxle (See 05-15B-5 MANUAL TRANSAXLE REMOVAL/ INSTALLATION[A26M-R])
2	Transaxle oil (See 05-15B-3 TRANSAXLE OIL INSPECTION[A26M-R]) (See 05-15B-3 TRANSAXLE OIL REPLACEMENT[A26M-R])
3	Oil seal (differential) (See 05-15B-4 OIL SEAL (DIFFERENTIAL) REPLACEMENT[A26M-R])

4	Neutral switch (See 05-15B-3 NEUTRAL SWITCH REMOVAL/ INSTALLATION[A26M-R]) (See 01-40B-22 NEUTRAL SWITCH INSPECTION[L3 WITH TC])
5	Shift mechanism (See 05-16-2 SHIFT MECHANISM REMOVAL/ INSTALLATION[A26M-R])

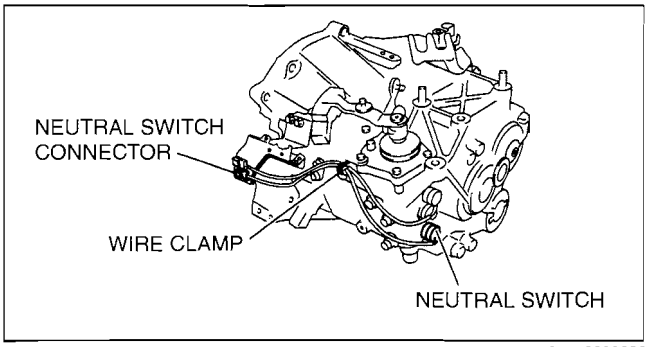
NEUTRAL SWITCH REMOVAL/INSTALLATION[A26M-R]

id0515l1800700

1. Disconnect the negative battery cable.
2. Remove the under cover.
3. Disconnect the neutral switch connector.
4. Remove the neutral switch.
5. Install the neutral switch to the transaxle case.

Tightening torque
28.1—52.3 N·m {2.9—5.3 kgf·m, 20.8—38.5 ft·lbf}

6. Clamp both the neutral switch and back-up light switch wiring harnesses as shown in the figure.
7. Install the under cover.
8. Connect the negative battery cable.



am3zzw0000296

TRANSAXLE OIL INSPECTION[A26M-R]

id0515l1800000

1. Park the vehicle on level ground.
2. Remove the under cover.
3. Remove the oil level plug and washer.
4. Verify that the oil is near the brim of the plug port.
   - If the oil level is low, add the specified amount and type of oil through the filler plug hole.

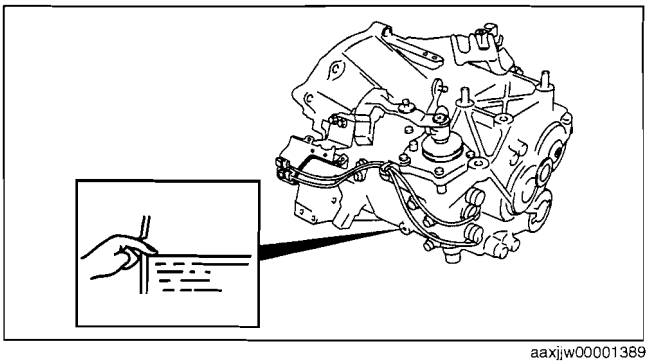
Manual transaxle oil Grade
API Service GL-4 or GL-5

Manual transaxle oil Viscosity
All-season: SAE 75W-90

5. Tighten the oil level plug with a new washer.

Tightening torque
27.5—50.9 N·m {2.8—5.1 kgf·m, 37.5—20.2 ft·lbf}

6. Install the under cover.



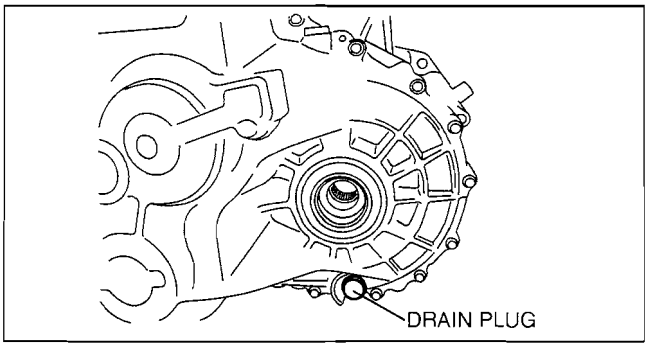
aaxjjw00001389

TRANSAXLE OIL REPLACEMENT[A26M-R]

id0515l1800100

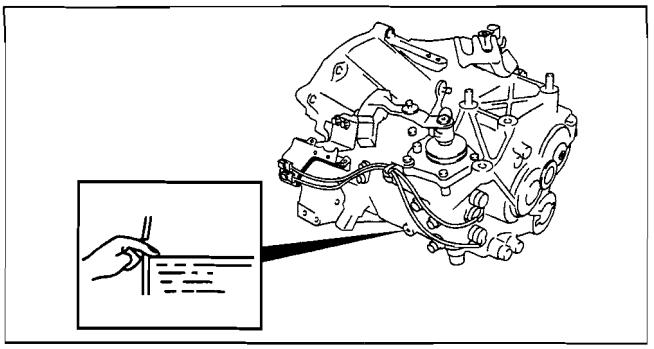
1. Park the vehicle on level ground.
2. Remove the under cover.
3. Remove the drain plug with the washer.
4. Drain the oil into a suitable container.
5. Install a new washer and the drain plug.

Tightening torque
27.5—50.9 N·m {2.8—5.1 kgf·m, 37.5—20.2 ft·lbf}



am3zzw0000314

6. Remove the oil level plug with washer and add the specified amount and type of oil through the oil level plug hole until the level reaches the bottom of the oil level plug hole.



aaxjjw00001389

Manual transaxle oil Grade
API Service GL-4 or GL-5

Manual transaxle oil Viscosity
All-season: SAE 75W-90

Manual transaxle oil Capacity (approx. quantity)
2.5 L {2.6 US qt, 2.2 Imp qt}

7. Install a new washer and the oil level plug.

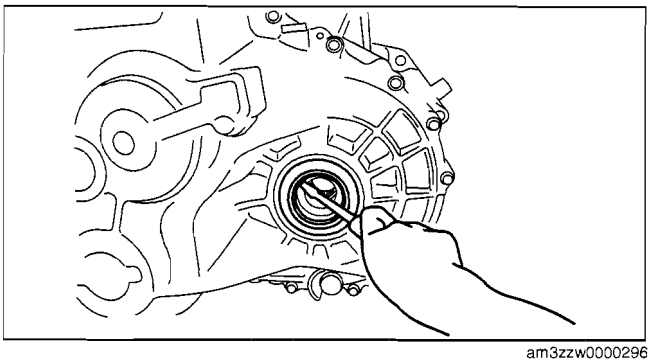
Tightening torque
27.5—50.9 N·m {2.8—5.1 kgf·m, 37.5—20.2 ft·lbf}

8. Install the under cover.

OIL SEAL (DIFFERENTIAL) REPLACEMENT[A26M-R]

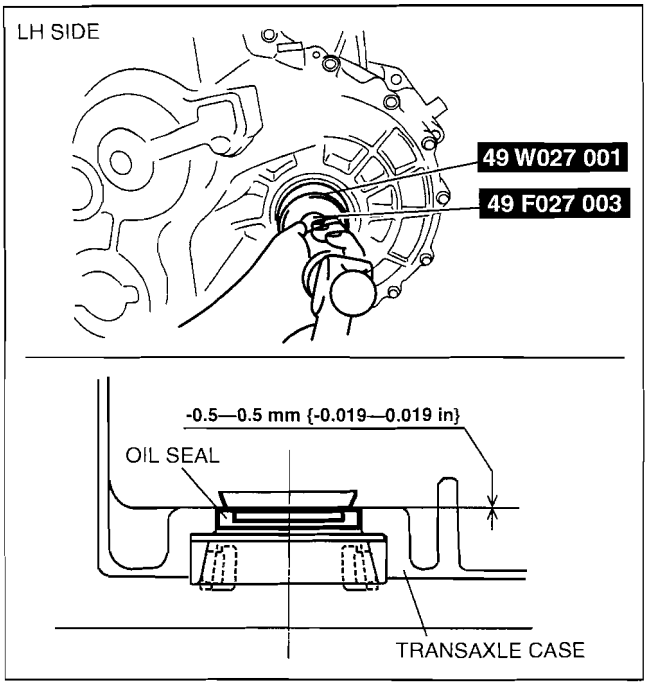
id0515l1800200

1. On level ground, jack up the vehicle and support it evenly on safety stands.
2. Remove the under cover.
3. Drain the oil from the transaxle.
4. Remove the front wheels and splash shields.
5. Separate the drive shaft and joint shaft from the transaxle. (See 03-13-9 DRIVE SHAFT REMOVAL/INSTALLATION) (See 03-13-4 JOINT SHAFT REMOVAL/INSTALLATION[L3, L3 WITH TC])
6. Remove the oil seals using a screwdriver.



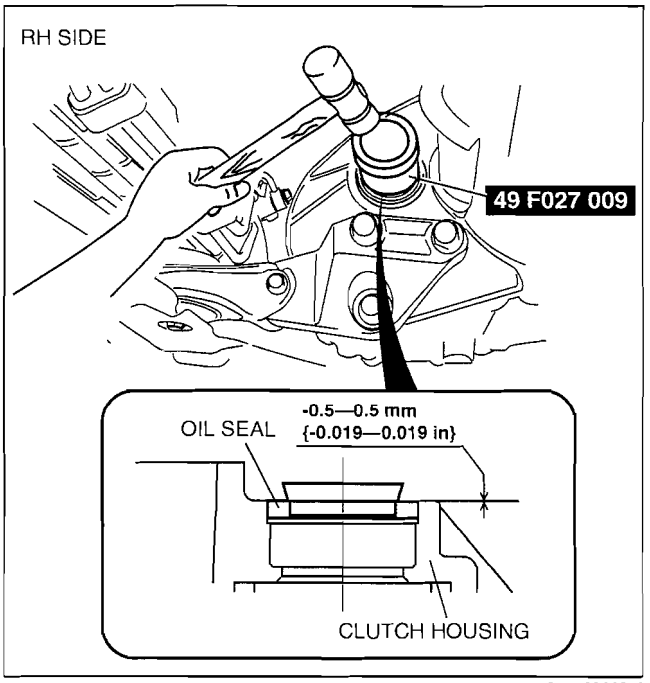
am3zzw0000296

7. Using the **SSTs** and a hammer, tap each new oil seal in evenly until the **SSTs** contact the transaxle case.



am3zzw0000348

8. Coat the lip of each oil seal with transaxle oil.
9. Insert the drive shaft and joint shaft to the transaxle. (See 03-13-9 DRIVE SHAFT REMOVAL/INSTALLATION) (See 03-13-4 JOINT SHAFT REMOVAL/INSTALLATION[L3, L3 WITH TC])
10. Install the wheels and splash shields.
11. Add the specified amount and type of oil. (See 05-15B-3 TRANSAXLE OIL REPLACEMENT[A26M-R].)
12. Install the under cover.



am3zzw0000349

MANUAL TRANSAXLE REMOVAL/INSTALLATION[A26M-R]

id0515l1800600

1. Disconnect the negative battery cable.
2. Remove the battery and battery tray. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC])
3. Remove the air cleaner component. (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC])
4. Remove the charge air cooler. (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC])
5. Remove in the fuel pump resistor. (See 01-14B-20 FUEL PUMP RESISTOR REMOVAL/INSTALLATION[L3 WITH TC].)
6. Remove the front wheels.
7. Remove the under cover and splash shields.
8. Remove the mudguard. (LF side)
9. Remove the starter. (See 01-19B-2 STARTER REMOVAL/INSTALLATION[L3 WITH TC].)
10. Drain the transaxle oil into a suitable container.
11. Remove in the order indicated in the figure.
12. Install in the reverse order of removal.

13. Add the specified amount of specified transaxle oil. (See 05-15B-3 TRANSAXLE OIL REPLACEMENT[A26M-R].)

Note

- If the transaxle is overhauled and installed to the vehicle, perform the 'INSPECTION AFTER TRANSAXLE INSTALLATION' and verify that there is no abnormality.
  (See 05-15B-11 INSPECTION AFTER TRANSAXLE INSTALLATION[A26M-R].)

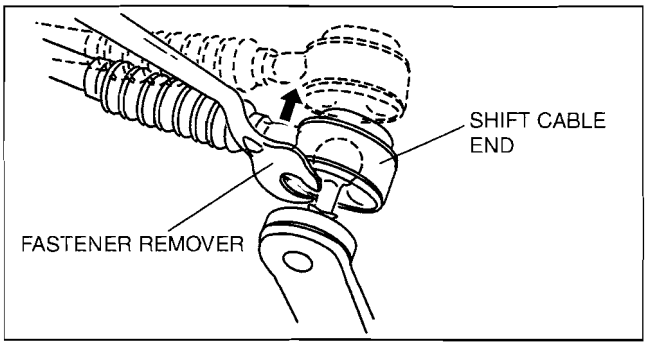
23	Manual transaxle (See 05-15B-9 Manual Transaxle Removal Note.) (See 05-15B-10 Manual Transaxle Installation Note.)

Shift Cable And Select Cable Removal Note

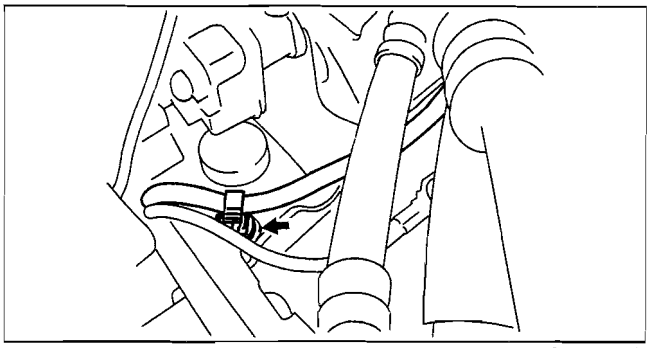
1. Remove the both shift cable end and select cable end using a fastener remover.



am3zzw0000041

No.4 Engine Mount Removal Note

1. To install the front shaft (RH) of the **SST** (49 C017 5A0), remove the clip shown in the figure.

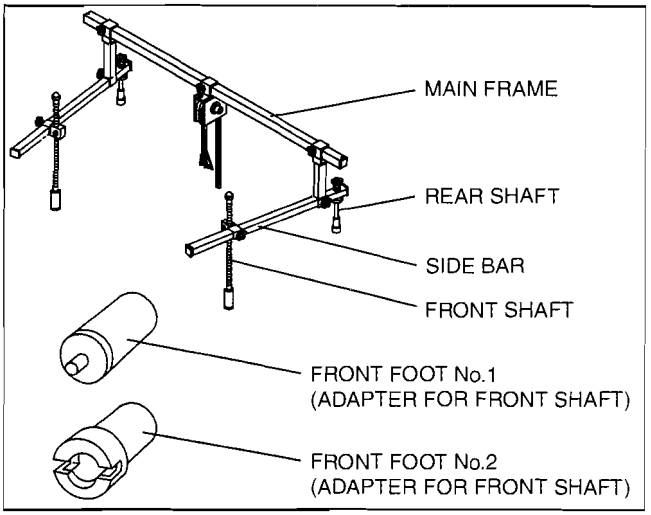


am3zzw0000042

2. Install the SST using the following procedure.

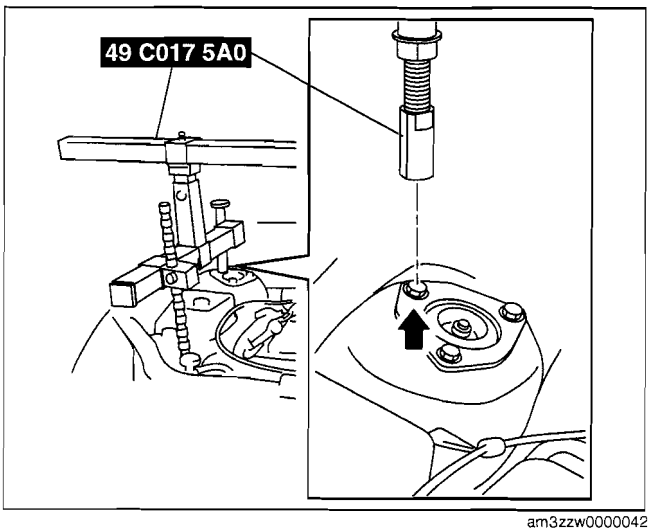
Caution

- **Refer to the SST instruction manual for the basic handing procedure.**



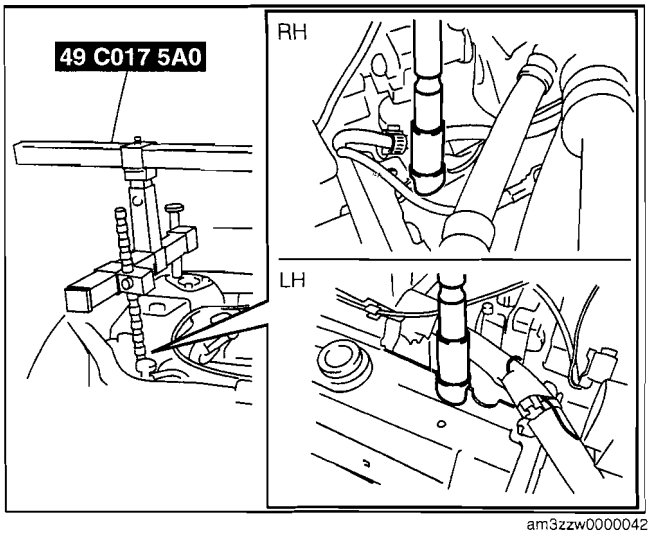
am3zzw0000042

(1) Install the right rear shaft of the **SST** to the bolt of the right shock absorber as shown in the figure.
(2) Install the left rear shaft of the **SST** to the bolt of the left shock absorber (Identical position to right side).



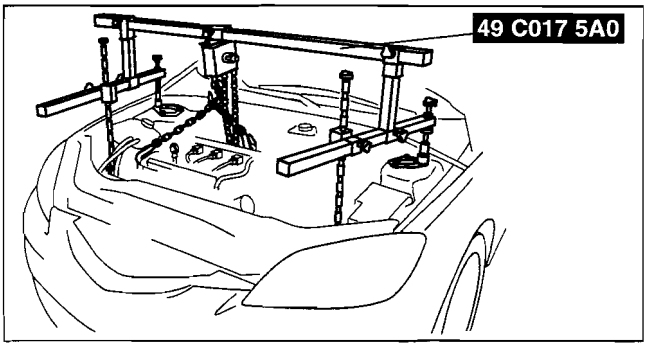
am3zzw0000042

(3) Install front foot No.2 to the left/right front shaft of the **SST**, then align the groove of the front shaft of the **SST** with the folded up part of the vehicle as shown in the figure.
(4) Adjust the positions of the **SST** side bars so that they are the same height (left and right) and horizontal.
(5) Make sure each joint is securely tightened.



am3zzw0000042

3. Support the engine using the **SST**.
4. Remove the battery tray bracket, No.4 engine mount rubber and bracket.

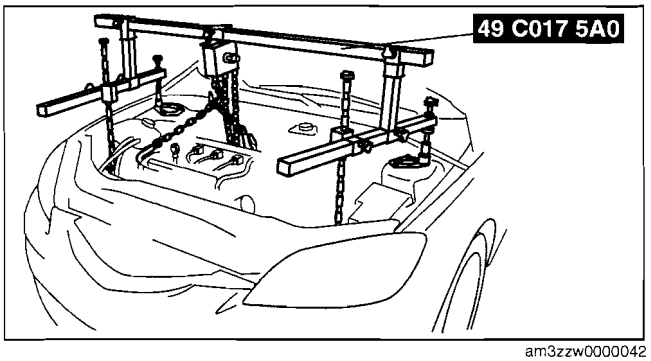


am3zzw0000042

Manual Transaxle Removal Note

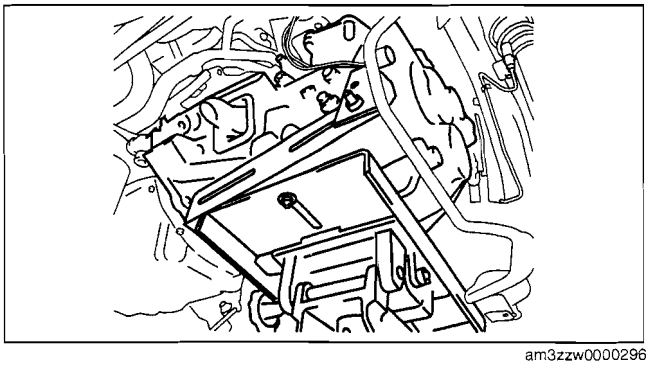
Warning
- **Remove the transaxle carefully, holding it steady. If the transaxle falls it could be damaged or cause injury.**

1. Adjust the **SST** and lean the engine toward the transaxle.



am3zzw0000042

2. Support the transaxle on a jack.
3. Remove the transaxle mounting bolts.
4. Remove the transaxle.



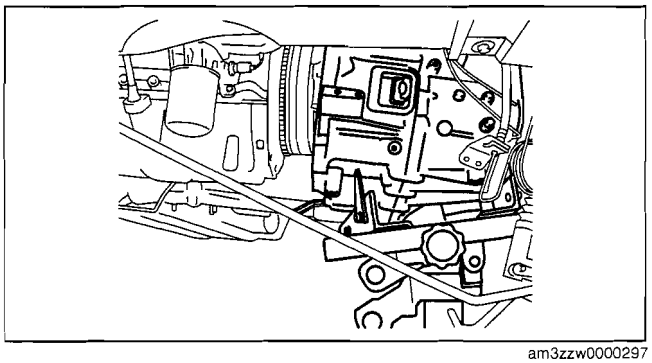
am3zzw0000296

Manual Transaxle Installation Note

Warning

- **Install the transaxle carefully, holding it steady. If the transaxle falls it could be damaged or cause injury.**

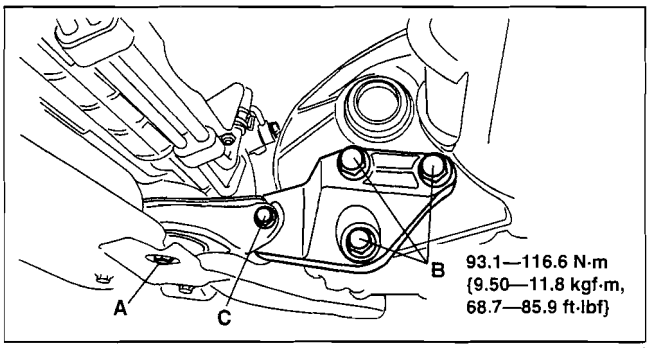
1. Set the transaxle on a jack and lift into place.
2. Install the transaxle mounting bolts.
3. Adjust the **SST** (49 C017 5A0) so that the engine is located at the specified position.



am3zzw0000297

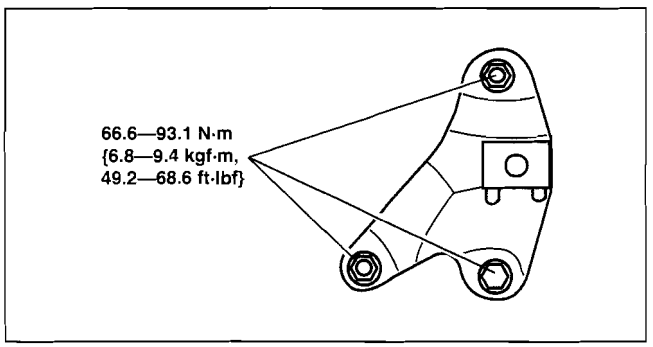
No.1 Engine Mount and No.4 Engine Mount Installation Note

1. Install the No.1 engine mount bracket to the transaxle.
2. Install the No.1 engine mount rubber.
3. Tighten the bolts B, and then temporarily tighten the bolt A and C.



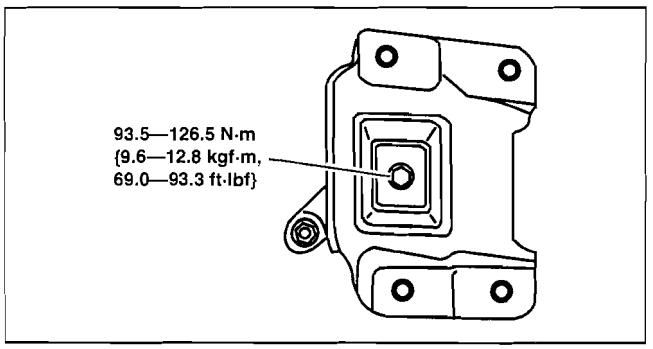
am3zzw0000298

4. Install the No.4 engine mount bracket on the transaxle case and tighten bolt and nuts.



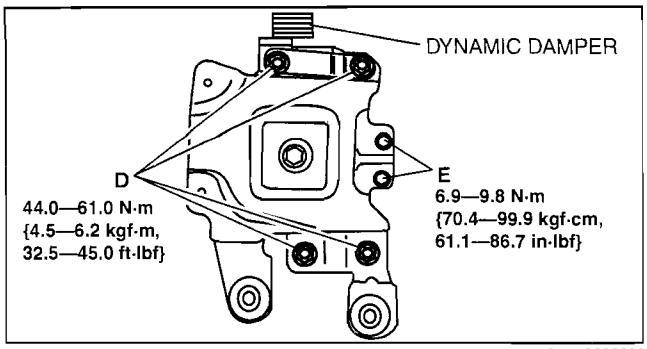
am3zzw0000298

5. Place the No.4 engine mount rubber with the body stud bolts passing through the holes and tighten the bolt as shown in the figure.
6. Place the battery tray bracket over the No.4 engine mount bracket with the body stud bolts passing through the holes.



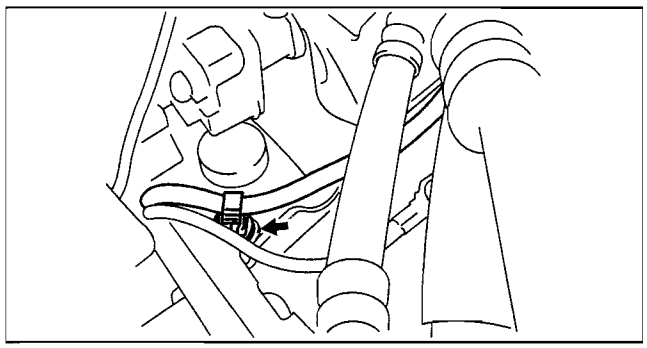
am3zzw0000298

7. Place the dynamic damper over the battery tray bracket with the body stud bolts passing through the holes, then tighten the bolts and nuts in the order of D, E.
8. Remove the **SST** (49 C017 5A0).



am3zzw0000298

9. Install the clip as shown in the figure.



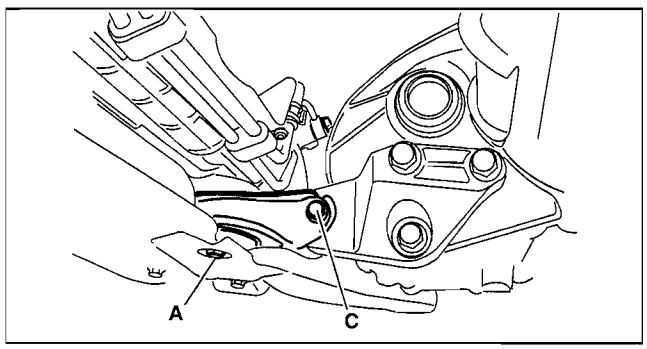
am3zzw0000042

10. Fully tighten the bolts in the order of A, C.

Caution
- **Tighten the bolts in the order shown in the figure to prevent abnormal noise and vibration after assembly.**
- **Tighten the bolts while being careful of their length to prevent interference between the steering gear housing and bolt.**

Bolt length (measured from below the head)
Front crossmember side: 62 mm {2.441 in}
No.1 engine mount bracket side: 65 mm {2.559 in}

Tightening torque
72.6—90.9 N·m {7.5—9.2 kgf·m, 53.6—67.0 ft·lbf}



am3zzw0000298

INSPECTION AFTER TRANSAXLE INSTALLATION[A26M-R]

id0515l1800300

Note
- Perform the following inspection only when the transaxle has been overhauled.

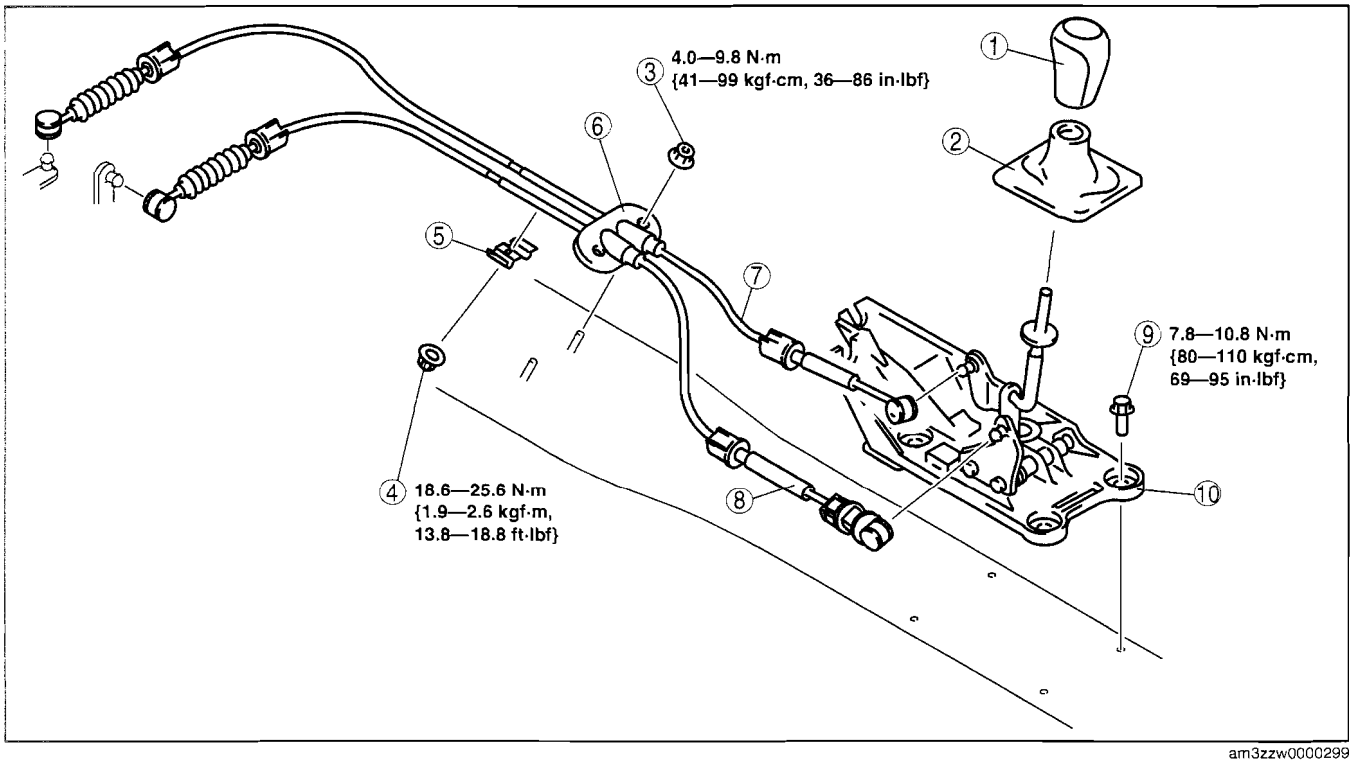
1. Perform a road test and inspect the following items:
   (1) No abnormal noise in each shift position.
   (2) Smooth shift operation when shifting gears.
   (3) No gear slipout after shifting gears.
   (4) Back-up light switch operates correctly.

05-16 MANUAL TRANSAXLE SHIFT MECHANISM

SHIFT MECHANISM REMOVAL/INSTALLATION[G35M-R]

id0516008000b5

1. Remove the following parts:
   (1) battery and battery tray
   (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
   (2) Center console
   (See 09-17-10 CONSOLE REMOVAL/INSTALLATION.)
   (3) Heat insulator (Front)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.
4. After installation, verify that the shift lever can be shifted smoothly into each position.



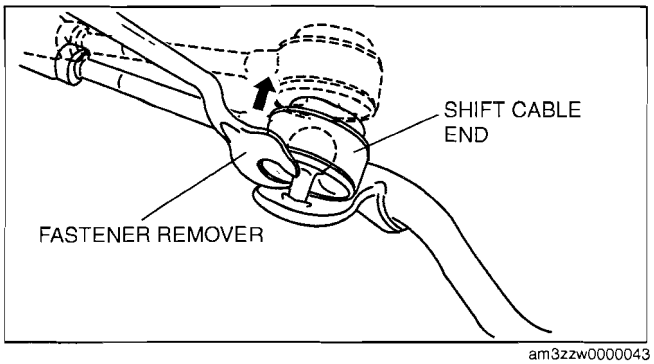
am3zzw0000299

1	Shift lever knob
2	Boot panel
3	Nuts
4	Nut
5	Bracket
6	Seal plate

7	Main shift cable (See 05-16-2 Main Shift Cable and Main Select Cable Removal Note.)
8	Main select cable (See 05-16-2 Main Shift Cable and Main Select Cable Removal Note.) (See 05-16-2 Select Cable Installation Note.)
9	Bolts
10	Sift lever component

Main Shift Cable and Main Select Cable Removal Note

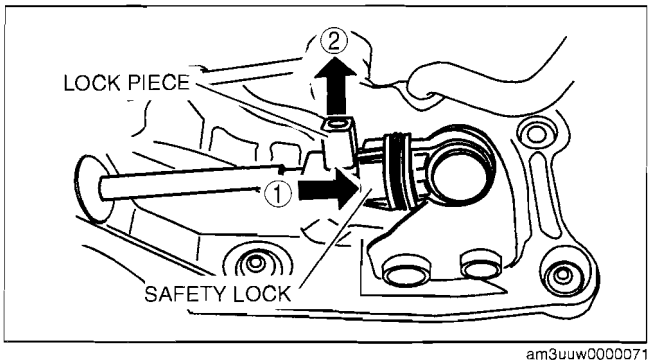
1. Remove the both shift cable end and select cable end using a fastener remover.



am3zzw0000043

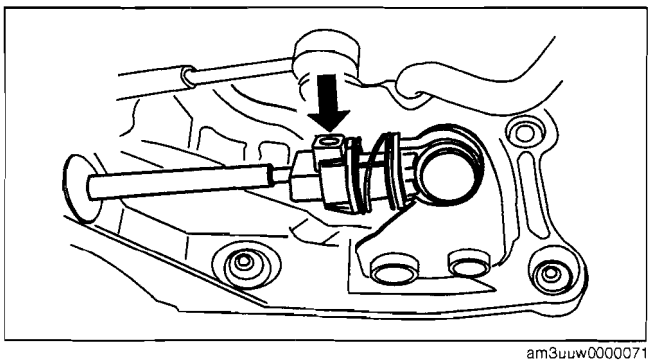
Select Cable Installation Note

1. Make sure that the shift lever (transaxle side) is in neutral.
2. Push the safety lock, then unlock the lock piece of the select cable in the order shown in the figure.
3. Shift the sift lever to neutral.



am3uuw0000071

4. Lock the lock piece of the selector cable in the figure.
5. Shift the shift lever from neutral to other position, and make sure that there are no other components in that area to interfere with the lever.



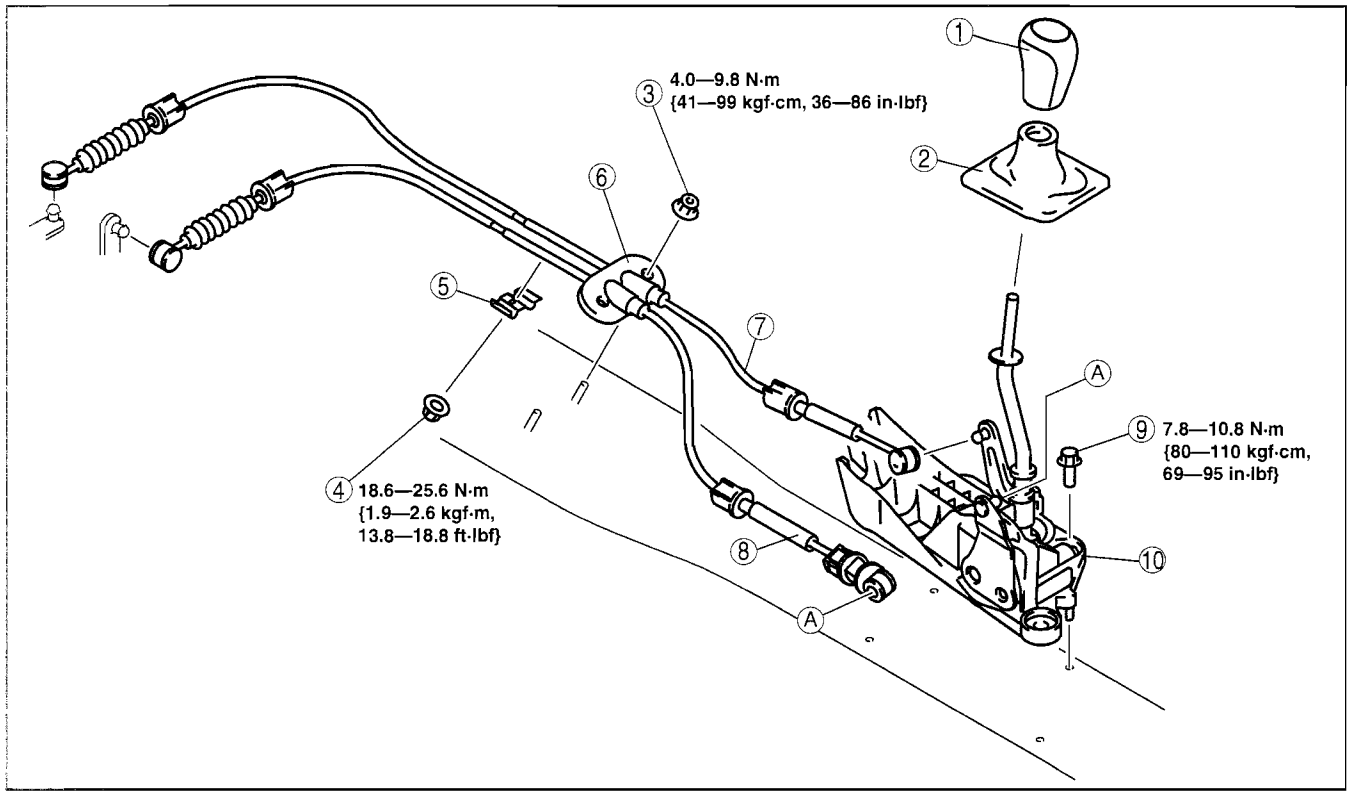
am3uuw0000071

SHIFT MECHANISM REMOVAL/INSTALLATION[A26M-R]

id0516008000c5

1. Remove the following parts:
   (1) Battery and battery tray
   (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)
   (2) Air cleaner component
   (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
   (3) Console
   (See 09-17-10 CONSOLE REMOVAL/INSTALLATION.)
2. When replacing the main shift cable and main select cable, perform the following procedure:
   (1) Remove the dashboard
   (See 09-17-4 DASHBOARD REMOVAL/INSTALLATION.)
   (2) Remove the A/C unit
   (See 07-11-3 A/C UNIT REMOVAL/INSTALLATION.)
   (3) Remove the tunnel member
   (See 01-15B-2 EXHAUST SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
   (4) Remove the member
   (See 01-15B-2 EXHAUST SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
   (5) Remove the TWC
   (See 01-15B-2 EXHAUST SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
   (6) Remove the heat insulator (Front)
   (7) Remove the heat insulator (Center)

3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.
5. After installation, verify that the shift lever can be shifted smoothly into each position.



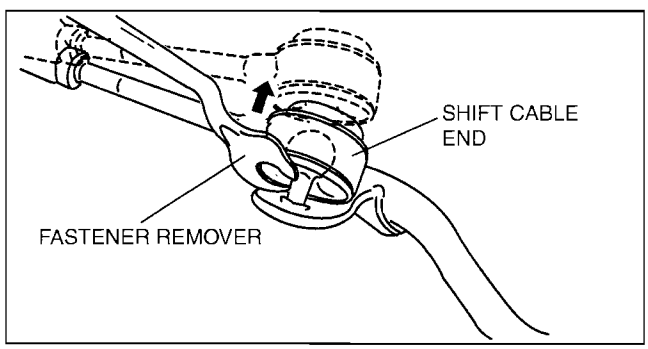
am3zzw0000310

1	Shift lever knob
2	Boot panel
3	Nuts
4	Nut
5	Bracket
6	Seal plate

7	Main shift cable (See 05-16-3 Main Shift Cable and Main Select Cable Removal Note.)
8	Main select cable (See 05-16-3 Main Shift Cable and Main Select Cable Removal Note.) (See 05-16-4 Select Cable Installation Note.)
9	Bolts
10	Sift lever component

Main Shift Cable and Main Select Cable Removal Note

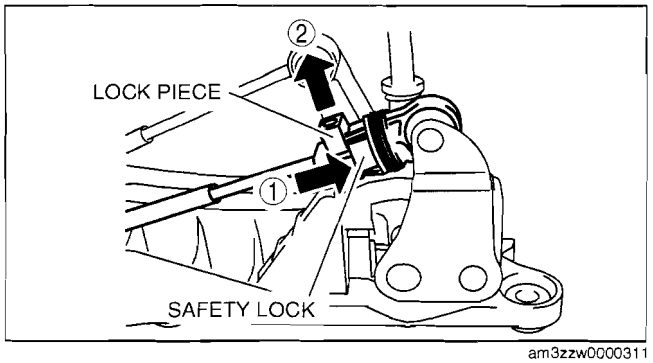
1. Remove the both shift cable end and select cable end using a fastener remover.



am3zzw0000043

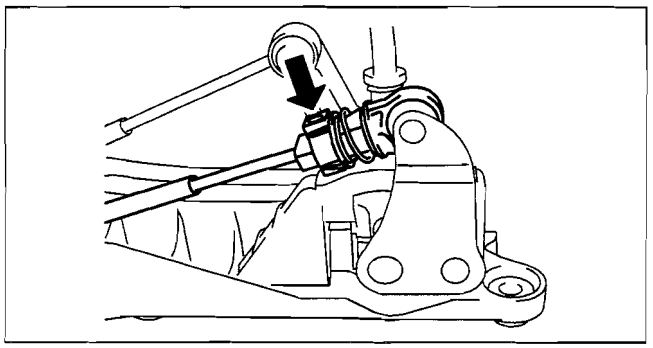
Select Cable Installation Note

1. Make sure that the shift lever (transaxle side) is in neutral.
2. Push the safety lock, then unlock the lock piece of the select cable in the order shown in the figure.
3. Shift the sift lever to neutral.



am3zzw0000311

4. Lock the lock piece of the selector cable in the figure.
5. Shift the shift lever from neutral to other position, and make sure that there are no other components in that area to interfere with the lever.

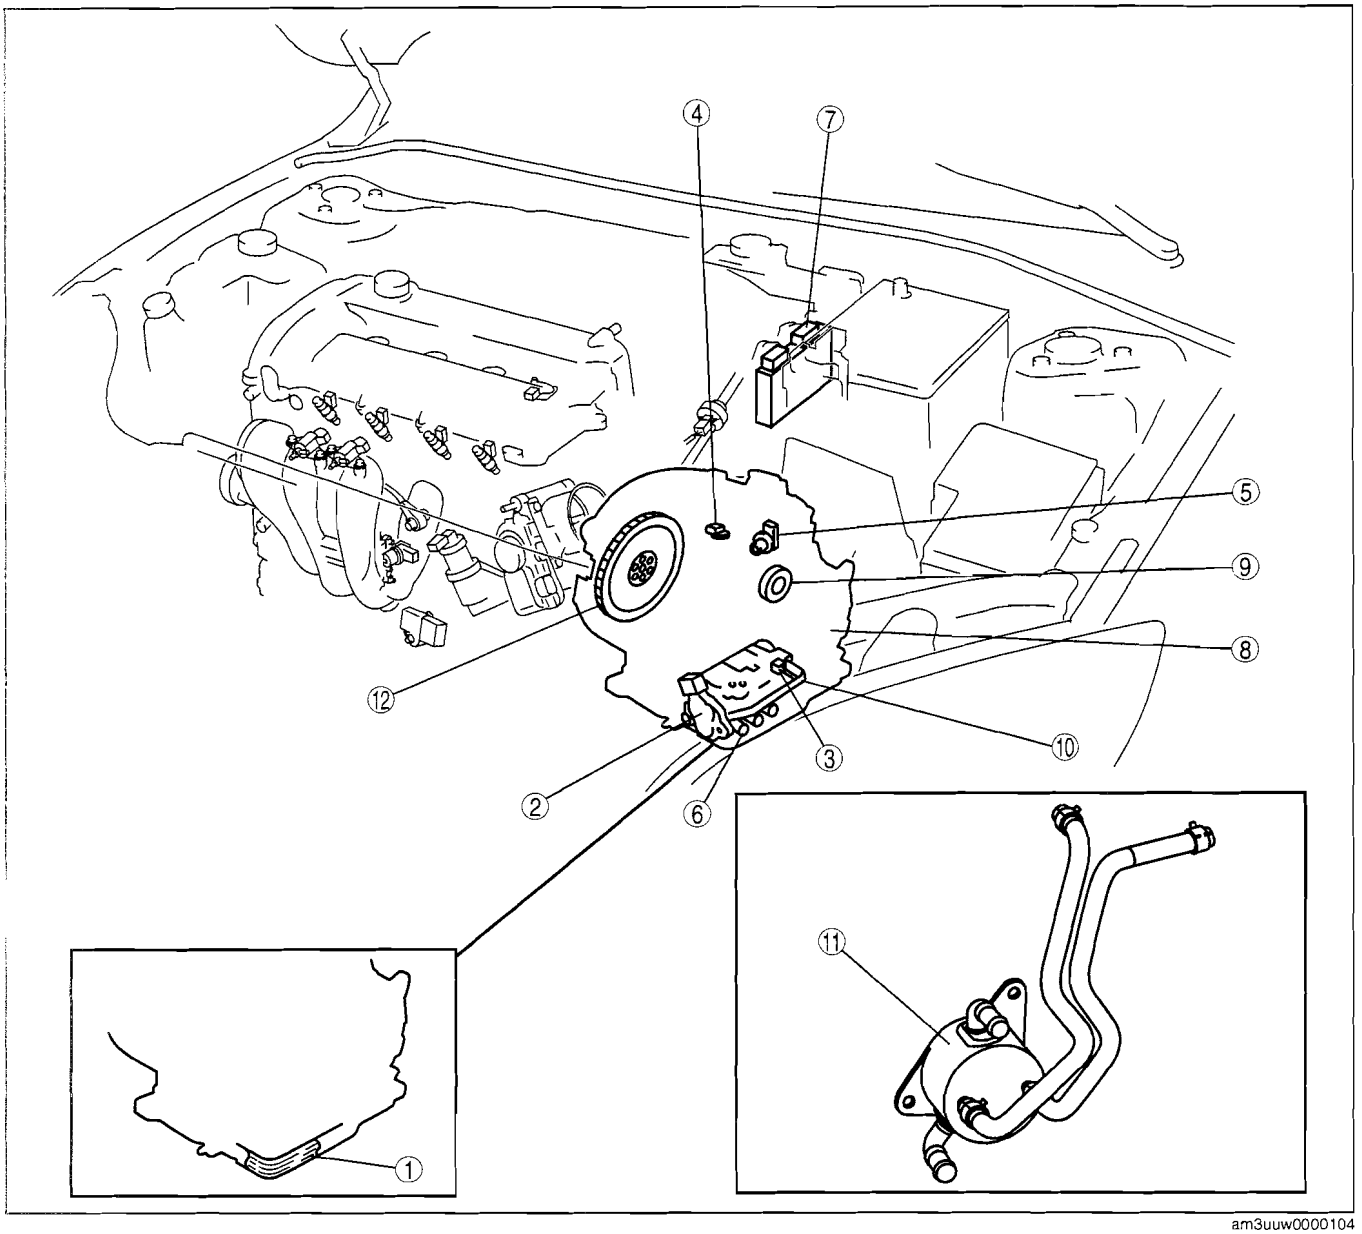


am3zzw0000311

05-17A AUTOMATIC TRANSAXLE [FN4A-EL]

AUTOMATIC TRANSAXLE LOCATION INDEX[FN4A-EL]

id0517a1802000



am3uuw0000104

1	Automatic transaxle fluid (ATF) (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].) (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)
2	Transaxle range (TR) switch (See 05-17A-10 TRANSAXLE RANGE (TR) SWITCH INSPECTION[FN4A-EL].) (See 05-17A-12 TRANSAXLE RANGE (TR) SWITCH REMOVAL/INSTALLATION[FN4A-EL].) (See 05-17A-16 TRANSAXLE RANGE (TR) SWITCH ADJUSTMENT[FN4A-EL].)
3	Transaxle fluid temperature (TFT) sensor (See 05-17A-18 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR INSPECTION[FN4A-EL].) (See 05-17A-20 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR REMOVAL/ INSTALLATION[FN4A-EL].)
4	Input/turbine speed sensor (See 05-17A-20 INPUT/TURBINE SPEED SENSOR INSPECTION[FN4A-EL].) (See 05-17A-21 INPUT/TURBINE SPEED SENSOR REMOVAL/INSTALLATION[FN4A-EL].)
5	Vehicle speed sensor (See 05-17A-21 VEHICLE SPEED SENSOR (VSS) INSPECTION[FN4A-EL].) (See 05-17A-23 VEHICLE SPEED SENSOR (VSS) REMOVAL/INSTALLATION[FN4A-EL].)
6	Solenoid valve (See 05-17A-24 SOLENOID VALVE INSPECTION[FN4A-EL].) (See 05-17A-27 SOLENOID VALVE REMOVAL/ INSTALLATION[FN4A-EL].)
7	PCM (See 05-17A-27 PCM INSPECTION[FN4A-EL].) (See 05-17A-27 PCM REMOVAL/ INSTALLATION[FN4A-EL].)

8	Automatic transaxle (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].)
9	Oil seal (See 05-17A-36 OIL SEAL REPLACEMENT[FN4A-EL].)
10	Control valve body (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].) (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].)
11	Oil cooler (See 05-17A-39 OIL COOLER FLUSHING[FN4A-EL].) (See 05-17A-40 OIL COOLER REMOVAL/INSTALLATION[FN4A-EL].)
12	Drive plate (See 05-17A-42 DRIVE PLATE REMOVAL/INSTALLATION[FN4A-EL].)

MECHANICAL SYSTEM TEST[FN4A-EL]

id0517a1802100

Mechanical System Test Preparation

1. Engage the parking brake and use wheel chocks at the front and rear of the wheels.
2. Inspect the engine coolant level. (See 01-12A-2 COOLING SYSTEM SERVICE WARNINGS[LF, L3].) (See 01-12A-2 ENGINE COOLANT LEVEL INSPECTION[LF, L3].)
3. Inspect the engine oil level. (See 01-11A-2 ENGINE OIL LEVEL INSPECTION[LF, L3].)
4. Inspect the ATF level. (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)
5. Inspect the idle speed. (See 01-10A-37 ENGINE TUNE-UP[LF, L3].)
6. Inspect the ignition timing. (See 01-10A-37 ENGINE TUNE-UP[LF, L3].)

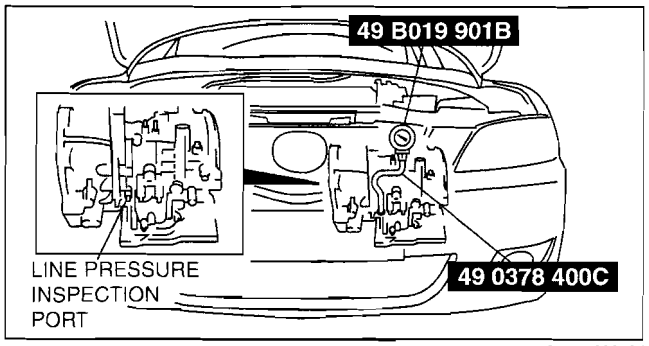
Line Pressure Test

1. Perform mechanical system test preparation. (See 05-17A-3 Mechanical System Test Preparation.)

Warning

- **Removing the square head plug when the ATF is hot can be dangerous. Hot ATF can come out of the opening and badly burn you. Before removing the square head plug, allow the ATF to cool.**

2. Connect the **SSTs** (49 0378 400C) to the line pressure inspection port and replace the gauge of the **SST** (49 0378 400C) with the **SST** (49 B019 901B).
3. Start the engine and warm it up until the ATF reaches **60—70 °C {140—158 °F}**.
4. Shift the selector lever to the D range.
5. Read the line pressure while the engine is idling for the D range.
6. Read the line pressure while the engine is idling for the R position and M (1GR, 2GR) range in the same manner as in Steps 4—5.
7. Stop the engine, then replace the **SST** (49 B019 901B) with the gauge of the **SST** (49 0378 400C).
8. Start the engine.
9. Firmly depress the brake pedal with the left foot.
10. Shift the selector lever to the D range.



am3uuw0000004

Caution

- **If the accelerator pedal is pressed for more than 5 s while the brake pedal is pressed, the transaxle could be damaged. Therefore, perform Steps 11 and 12 within 5 s.**

11. Gradually depress the accelerator pedal with the right foot.
12. When the engine speed no longer increases, quickly read the line pressure and release the accelerator pedal.
13. Shift the selector lever to the N position and idle the engine for **1 min or more** to cool the ATF.

14. Read the line pressure at the engine stall speed for the M (1GR, 2GR) range and R position in the same manner as in Steps 9—13.

Line pressure specification

Position/range		Line pressure (kPa {kgf/cm^2, psi})
D, M (1GR, 2GR)	Idle	330—470 {3.4—4.7, 48—68}
	Stall	1,160—1,320 {11.8—13.4, 168—191}
R	Idle	490—710 {5.0—7.2, 72—102}
	Stall	1,680—2,020 {17.2—20.5, 244—292}

Warning

- **Removing the SST when the ATF is hot can be dangerous. Hot ATF can come out of the opening and badly burn you. Before removing the SST, allow the ATF to cool.**

15. Remove the **SSTs.**
16. Install a new square head plug in the inspection port.

Tightening torque
4.8—9.8 N·m {49—99 kgf·cm, 43—85 in·lbf}

Evaluation of line pressure test

Condition	Possible cause
Low pressure in all positions/ranges	• Worn oil pump • Oil leaking from oil pump, control valve body, and/or transaxle case • Pressure regulator valve stuck • Pressure control solenoid malfunction • Solenoid reducing valve stuck
Low pressure in D, M (1GR, 2GR) only	• Oil leaking from forward clutch hydraulic circuit
Low pressure in M (2GR) only	• Oil leaking from 2-4 brake band hydraulic circuit
Low pressure in M (1GR), R only	• Oil leaking from low and reverse brake hydraulic circuit
Low pressure in R only	• Oil leaking from reverse clutch hydraulic circuit
Higher pressure in all positions/ranges	• Pressure control solenoid malfunction and/or open harness • Pressure regulator valve stuck • TCM malfunction

Stall Test

1. Perform mechanical system test preparation. (See 05-17A-3 Mechanical System Test Preparation.)
2. Start the engine.
3. Firmly depress the brake pedal with the left foot.
4. Shift the selector lever to the D range.

Caution

- **If the accelerator pedal is depressed for more than 5 s while the brake pedal is depressed, the transaxle could be damaged. Therefore, perform Steps 5 and 6 within 5 s.**

5. Gently depress the accelerator pedal with the right foot.
6. When the engine speed no longer increases, quickly read the engine speed and release the accelerator pedal.
7. Shift the selector lever to the N position and idle the engine for **1 min or more** to cool the ATF.
8. Perform a stall test of the M range and R position in the same manner as in Steps 3—7.
9. Turn off the engine.

Engine stall speed

Position/range	Engine stall speed (rpm)
D, M (1GR, 2GR)	2,200—2,800
R	

Evaluation of stall test

Condition		Possible cause
Above specification	Insufficient line pressure, torque converter pressure	• Worn oil pump
		• Oil leaking from oil pump, control valve, and/or transaxle case
		• Pressure regulator valve sticking
		• Converter relief valve sticking
		• Pressure control solenoid malfunction
	In D, M (1GR, 2GR) ranges	• Forward clutch slipping
	In M (2GR) range	• 2-4 brake band slipping
	In M (1GR) range and R position	• Low and reverse brake slipping
	In R position	• Low and reverse brake slipping • Reverse clutch slipping • Perform road test to determine whether problem is in low and reverse brake or reverse clutch • Engine braking felt in M (1GR) range: Reverse clutch is defective. • Engine braking not felt in M (1GR) range: Low and reverse brake is defective.
Below specification		• Engine lack of power

Time Lag Test

1. Perform mechanical system test preparation. (See 05-17A-3 Mechanical System Test Preparation.)
2. Start the engine.
3. Warm up the engine until the ATF temperature reaches **60—70 °C {140—158 °F}**.
4. Shift the selector lever from the N position to D range.
5. Use a stopwatch to measure the time it takes from shifting until shock is felt. Take three measurements for each test and average from the results using the following formula.

   Formula
   Average time lag = (Time 1 + Time 2 + Time 3) / 3

6. Perform the test for the following shifts in the same manner as in Step 5.
   - N position → R position

   Average time lag
   N position→D range: 0.4—0.7 s
   N position→R position: 0.4—0.7 s

Evaluation of time lag test

Condition		Possible cause
N→D shift	More than specification	• Low line pressure • Forward clutch slipping • Oil leaking from forward clutch fluid circuit • Shift solenoid A not operating properly
	Less than specification	• Forward accumulator not operating properly • Shift solenoid A not operating properly • Excessive line pressure
N→R shift	More than specification	• Low line pressure • Low and reverse brake slipping • Reverse clutch slipping • Shift solenoid B not operating properly
	Less than specification	• Servo apply accumulator not operating properly • Shift solenoid B not operating properly • Excessive line pressure

ROAD TEST[FN4A-EL]

id0517a1802200

Warning

- **When performing a road test, be aware of other vehicles, people, impediments to avoid an accident.**

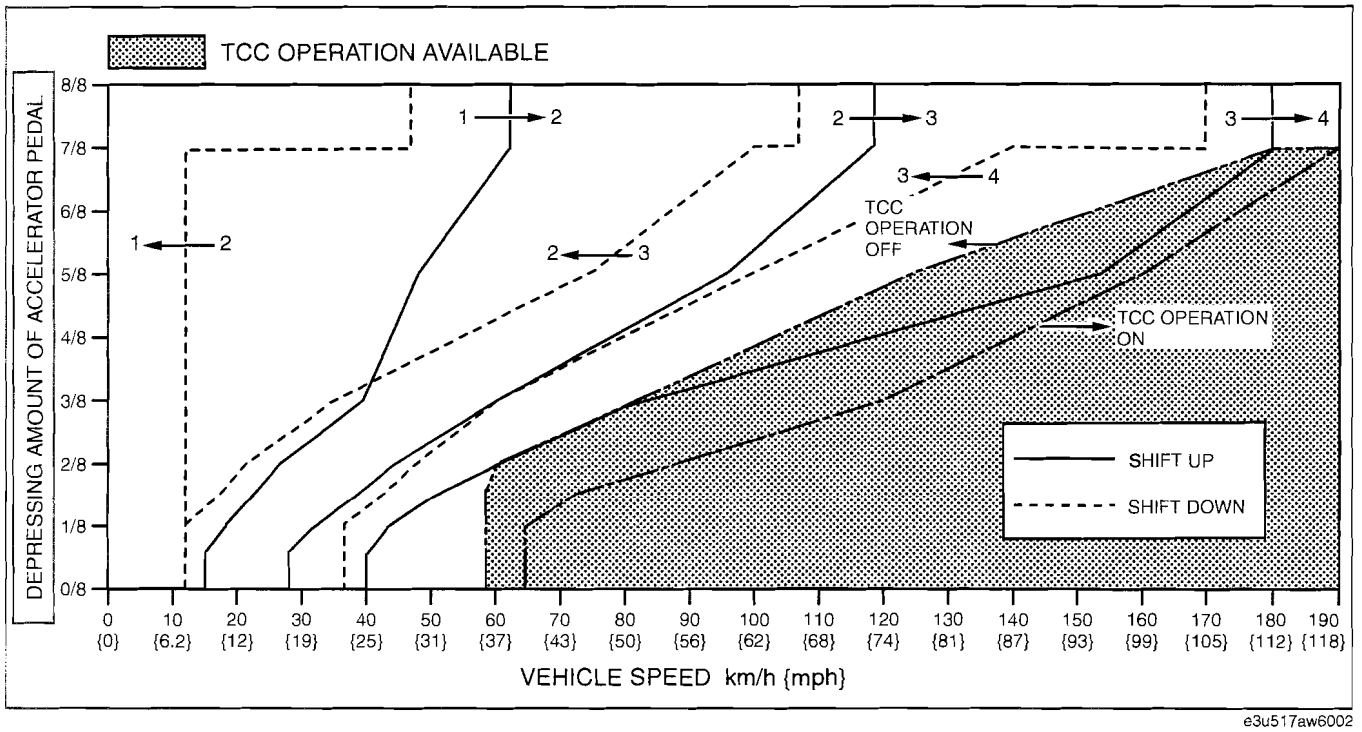
Note

- When the legal speed limit must be exceeded, use a chassis dynamometer instead of performing a road test.

Road Test Preparation

1. Inspect the engine coolant level. (See 01-12A-2 COOLING SYSTEM SERVICE WARNINGS[LF, L3].) (See 01-12A-2 ENGINE COOLANT LEVEL INSPECTION[LF, L3].)
2. Inspect the engine oil level. (See 01-11A-2 ENGINE OIL LEVEL INSPECTION[LF, L3].)
3. Inspect the ATF level. (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)
4. Inspect the idle speed. (See 01-10A-37 ENGINE TUNE-UP[LF, L3].)
5. Inspect the ignition timing. (See 01-10A-37 ENGINE TUNE-UP[LF, L3].)
6. Bring up the engine and transaxle to normal operating temperature.

Shift Diagram
D range (normal mode)



e3u517aw6002

D Range Test

1. Perform road test preparation. (See 05-17A-6 Road Test Preparation.)
2. Shift the selector lever to D range.
3. Accelerate with the depressing amount of accelerator pedal half and then fully depress.
4. Verify that 1→2, 2→3, and 3→4 upshifts and downshifts are obtained. The shift points must be as shown in the table below.
   - If there is any malfunction, inspect the PCM and ATX. (See 05-03A-7 SYMPTOM TROUBLESHOOTING ITEM TABLE[FN4A-EL].)
5. Drive the vehicle in 4GR, 3GR, and 2GR and verify that kickdown occurs for 4→3, 3→2, 2→1 downshifts, and that the shift points are as shown in the table below.
   - If there is any malfunction, inspect the PCM and ATX. (See 05-03A-7 SYMPTOM TROUBLESHOOTING ITEM TABLE[FN4A-EL].)
6. Decelerate the vehicle and verify that engine braking effect is felt in 2GR, 3GR and 4GR.
   - If there is any malfunction, inspect the PCM and ATX. (See 05-03A-7 SYMPTOM TROUBLESHOOTING ITEM TABLE[FN4A-EL].)

7. Drive the vehicle and verify that TCC operation is obtained. The operation points must be as shown in the table below.
   - If there is any malfunction, inspect the PCM and ATX. (See 05-03A-7 SYMPTOM TROUBLESHOOTING ITEM TABLE[FN4A-EL].)

Vehicle speed at shift point table

Range	Mode	Depressing amount of accelerator pedal condition	Shift	Vehicle speed (km/h {mph})	Turbine speed (rpm)
D	NORMAL	Fully depress	$D_1 \rightarrow D_2$	60—66 {38—40}	5,450—5,950
			$D_2 \rightarrow D_3$	117—125 {73—77}	5,650—5,950
			$D_3 \rightarrow D_4$	177—187 {110—115}	5,700—5,950
		Half depress	$D_1 \rightarrow D_2$	40—47 {25—29}	3,600—4,250
			$D_2 \rightarrow D_3$	68—88 {43—54}	3,250—4,200
			$D_3 \rightarrow D_4$	100—135 {62—83}	3,200—4,350
			TCC ON (D_4)	126—154 {79—95}	2,950—3.550
		Released	$D_4 \rightarrow D_3$	33—39 {21—24}	800—900
			$D_3 \rightarrow D_1$	9—15 {6—9}	300—450
		Kickdown	$D_4 \rightarrow D_3$	165—175 {103—108}	3,850—4,050
			$D_3 \rightarrow D_2$	103—111 {64—68}	3,300—3,550
			$D_2 \rightarrow D_1$	44—50 {28—31}	2,150—2,350
	POWER	Fully depress	$D_1 \rightarrow D_2$	60—66 {38—40}	5,450—5,950
			$D_2 \rightarrow D_3$	117—125 {73—77}	5,650—5,950
			$D_3 \rightarrow D_4$	177—187 {110—115}	5,700—5,950
		Half depress	$D_1 \rightarrow D_2$	42—50 {27—31}	3,800—4,500
			$D_2 \rightarrow D_3$	87—108 {54—66}	4,150—5,200
			$D_3 \rightarrow D_4$	130—159 {81—98}	4,150—5,100
		Released	$D_4 \rightarrow D_3$	40—46 {25—28}	950—1,050
			$D_3 \rightarrow D_1$	9—15 {6—9}	300—450
		Kickdown	$D_4 \rightarrow D_3$	165—175 {103—108}	3,850—4,050
			$D_3 \rightarrow D_2$	103—111 {64—68}	3.350—3,550
			$D_2 \rightarrow D_1$	44—50 {28—31}	2,150—2,350

M Range Test

1. Perform road test preparation. (See 05-17A-6 Road Test Preparation.)
2. Shift the selector lever to M range.
3. Verify that 1→2, 2→3, and 3→4 upshifts and 4→3, 3→2, and 2→1 downshifts are obtained by manual shifting of the selector lever forward and back.
   - If there is any malfunction, inspect the PCM and ATX. (See 05-03A-7 SYMPTOM TROUBLESHOOTING ITEM TABLE[FN4A-EL].)
4. Decelerate the vehicle and verify that 4→3, 3→1 downshifts are obtained. The shift points must be as shown in the table below.
   - If there is any malfunction, inspect the PCM and ATX. (See 05-03A-7 SYMPTOM TROUBLESHOOTING ITEM TABLE[FN4A-EL].)
5. Decelerate the vehicle and verify that engine braking effect is felt in all gears.
   - If there is any malfunction, inspect the PCM and ATX. (See 05-03A-7 SYMPTOM TROUBLESHOOTING ITEM TABLE[FN4A-EL].)
6. Drive the vehicle and verify that TCC operation is obtained in 4GR. The operation points must be as shown in the table below.
   - If there is any malfunction, inspect the PCM and ATX. (See 05-03A-7 SYMPTOM TROUBLESHOOTING ITEM TABLE[FN4A-EL].)
7. Drive the vehicle in 4GR and 3GR and verify that kickdown occurs for 4→3, 3→2 downshifts, and that the shift points are as shown in the table below.
   - If there is any malfunction, inspect the PCM and ATX. (See 05-03A-7 SYMPTOM TROUBLESHOOTING ITEM TABLE[FN4A-EL].)

Vehicle speed at shift point table

Range	Mode	Depressing amount of accelerator pedal condition	Shift	Vehicle speed km/h {mph}	Turbine speed (rpm)
M	Manual	Half depress	TCC ON (M_4)	126—154 {79—95}	2,950—3,550
		All round	$M_4 \rightarrow M_3$	33—39 {21—24}	800—900
			$M_3 \rightarrow M_1$	9—15 {6—9}	300—450
		Kickdown	$M_4 \rightarrow M_3$	165—175 {103—108}	3,850—4,050
			$M_3 \rightarrow M_2$	68—76 {43—47}	2,200—2,400

P Position Test

1. Shift into P position on a gentle slope. Release the brake and verify that the vehicle does not roll.
   - If there is any malfunction, inspect the ATX. (See 05-03A-7 SYMPTOM TROUBLESHOOTING ITEM TABLE[FN4A-EL].)

AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL]

id0517a1800500

Automatic Transaxle Fluid (ATF) Condition Inspection

1. Inspect the ATF for the following to determine whether the transaxle should be disassembled.
   - The ATF is muddy.
   - The ATF smells strange or unusual.

ATF Condition

Condition			Possible cause
Clear dark red		Normal	—
Light red (pink)		Contaminated with water	• Damaged oil cooler • Poor filler tube installation: Problem could occur to parts inside the transaxle by water contamination. It is necessary to overhaul the transaxle and detect defected parts. If necessary, replace the transaxle.
Reddish brown	Has burnt smell and metal particles are found	Deteriorated ATF	Defective powertrain components inside the transaxle: Particles cause wide range of problems by plugging up in oil pipe, control valve body and oil cooler. • When large amount of metal particles are found, overhaul the transaxle and inspect for defective parts. If necessary, replace the transaxle. • Implement flushing operation as there is a possibility to have particles plugging up the oil pipe or oil cooler.
	Has no burnt smell	Normal	• Discoloration by oxidation

Automatic Transaxle Fluid (ATF) Level Inspection

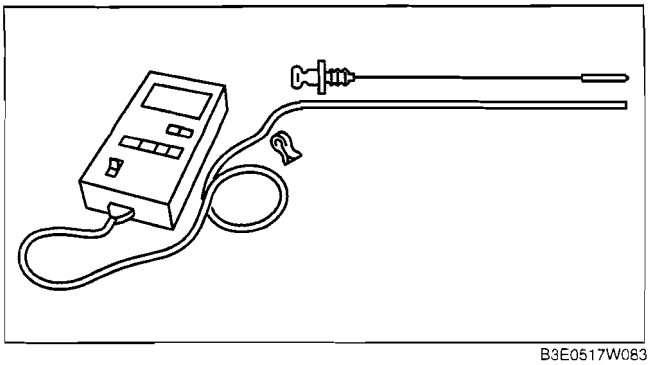
Caution

- **The ATF amount varies according to ATF temperature. Therefore, when checking the ATF level or replacing the ATF, use a thermometer to measure the temperature then adjust the ATF amount to the specified level according to the specified temperature.**

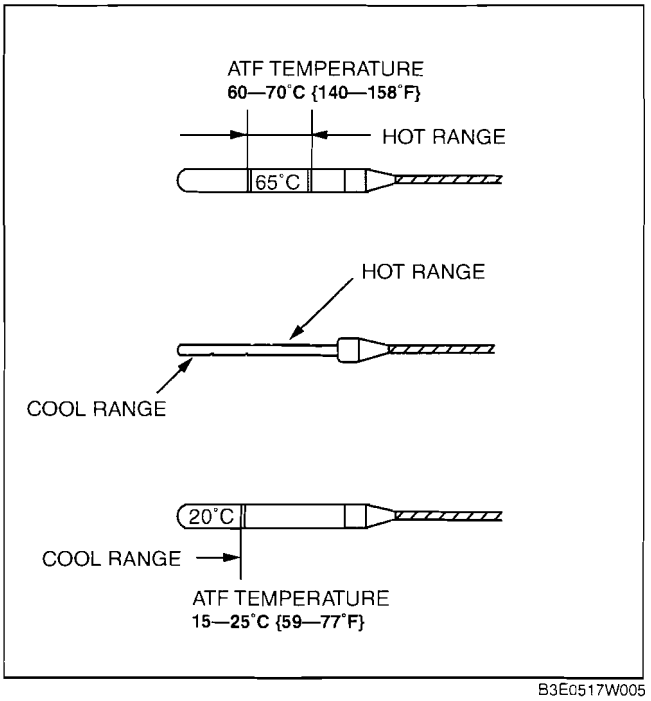
1. Place the vehicle on level ground.
2. Apply the parking brake and position wheel chocks securely to prevent the vehicle from rolling.

3. Adjust the length or thermometer probe so that the length is the same as the depth gauge, and hold the probe with a paper holder. Insert into the filler tube and measure the temperature.
   - If necessary, inspect the ATF before warming up the engine. In this case, use the cool range **(15—25 °C {59—77 °F})**.
4. Warm up the engine until the ATF reaches **60—70 °C {140—158 °F}**.
5. Shift the selector lever and pause momentarily in each range (P—D) while depressing the brake pedal.
6. Shift the selector lever to P position.
7. Verify that the ATF level is in the HOT range **(65 °C {149 °F})** while the engine is idling.
   - If necessary, add ATF to the specification.

ATF type
ATF M-V



B3E0517W083



B3E0517W005

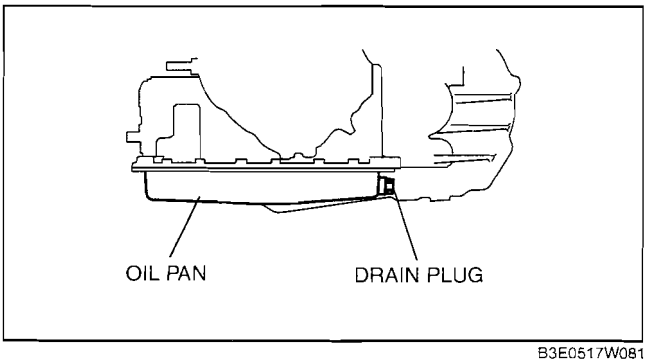
AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FN4A-EL]

id0517a1800600

Warning
- **A hot transaxle and ATF can cause severe burns. Turn off the engine and wait until they are cool before replacing the ATF.**

1. Remove the oil dipstick.
2. Remove the oil drain plug and washer.
3. Drain the ATF into a container.
4. Install a new washer and the drain plug.

Tightening torque
29.4—41.2 N·m
{3.0—4.2 kgf·m, 21.7—30.3 ft·lbf}



B3E0517W081

5. Add the specified ATF until ATF level reaches lower notch of dipstick type of ATF through the oil filler tube.

ATF type
ATF M-V

Capacity (Approx. quantity)
7.2 L {7.6 US qt, 6.3 Imp qt}

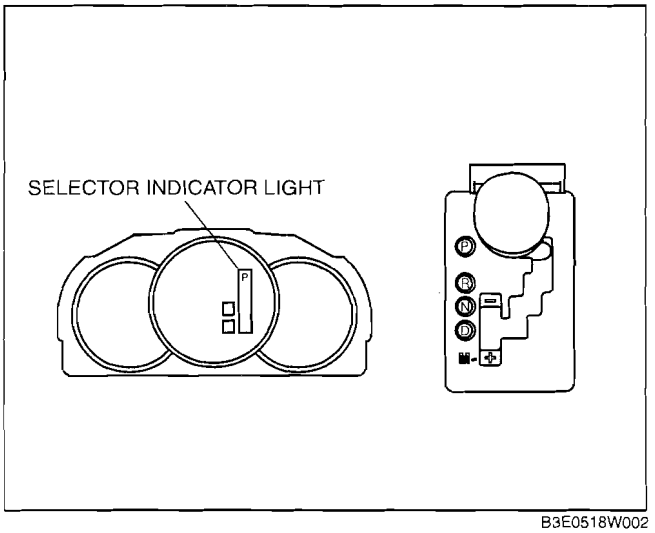
6. Ensure that the ATF level is in the HOT range **(65 °C {149 °F})**.
   - Add ATF to the specified level as necessary.

TRANSAXLE RANGE (TR) SWITCH INSPECTION[FN4A-EL]

id0517a1800900

Operating Inspection

1. Verify that the starter operates only when the ignition switch is turned to the START position with the selector lever in P or N position.
   - If there is any malfunction, adjust the TR switch.
2. Verify that the back-up lights illuminate when shifted to R position with the ignition switch at the ON position.
   - If there is any malfunction, adjust the TR switch.
3. Verify that the positions of the selector lever and the indicator are aligned.
   - If there is any malfunction, adjust the TR switch.



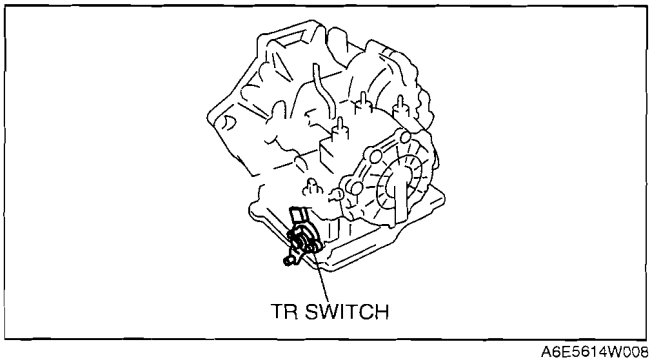
B3E0518W002

Continuity Inspection

Caution

- **Water or foreign material entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign material on the connector when disconnecting it.**

1. Remove the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the under cover.
4. Disconnect the TR switch connector.



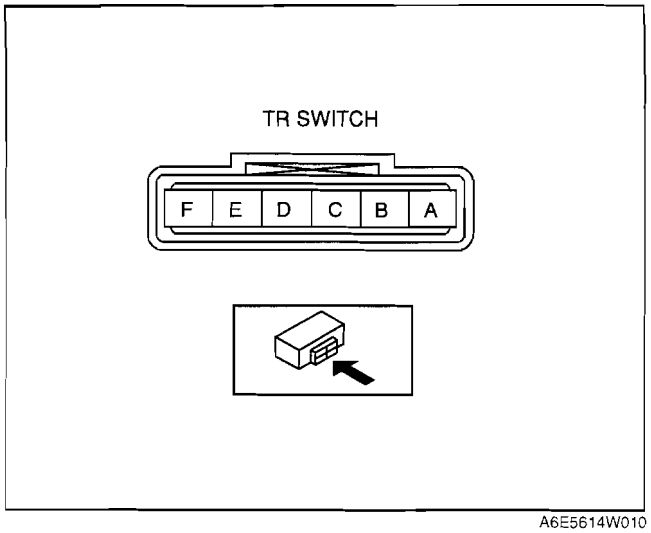
A6E5614W008

5. Verify that the continuity is as indicated in the table.
   - If there is any malfunction, adjust the TR switch and go to Step 5.

O—O : Continuity

Position/Range	Connector terminal			
	A	F	D	E
P	O—O			
R			O—O	
N	O—O			
D				

B3E0517W006



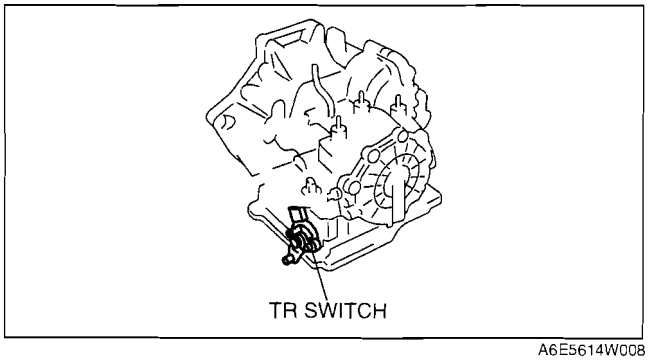
A6E5614W010

6. Reinspect for continuity at TR switch.
   - If there is any malfunction, replace the TR switch. (See 05-17A-12 TRANSAXLE RANGE (TR) SWITCH REMOVAL/INSTALLATION[FN4A-EL].)
7. Connect the TR switch connector.
8. Install the under cover.
9. Connect the negative battery cable.
10. Install the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)

Resistance Inspection (On-Vehicle Inspection)

Caution
- **Water or foreign material entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign material on the connector when disconnecting it.**

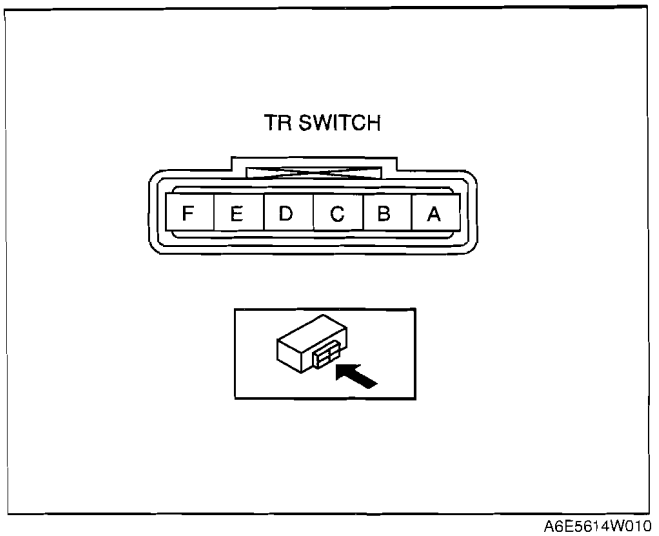
1. Remove the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the under cover.
4. Disconnect the TR switch connector.



A6E5614W008

5. Measure the resistance between the following terminals.
   - If there is any malfunction, inspect the ground, then perform the operating inspection.

Terminal	Position/Range	Resistance (ohm)
B—C	P	4,085—4,515
	R	1,425—1,575
	N	713—788
	D	371—409



A6E5614W010

6. Connect the TR switch connector.
7. Install the under cover.
8. Connect the negative battery cable.
9. Install the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)

TRANSAXLE RANGE (TR) SWITCH REMOVAL/INSTALLATION[FN4A-EL]

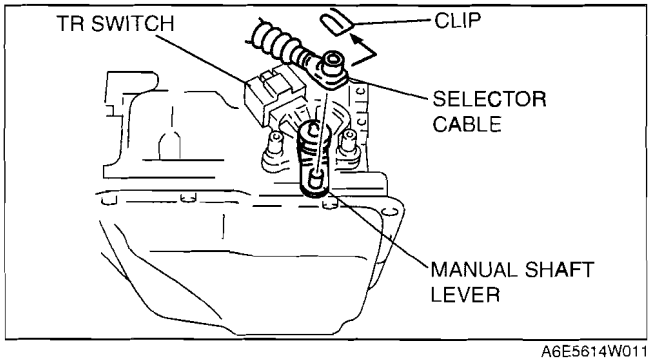
id0517a1804000

1. Remove the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the under cover.

Caution
- **Water or foreign material entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign material on the connector when disconnecting it.**

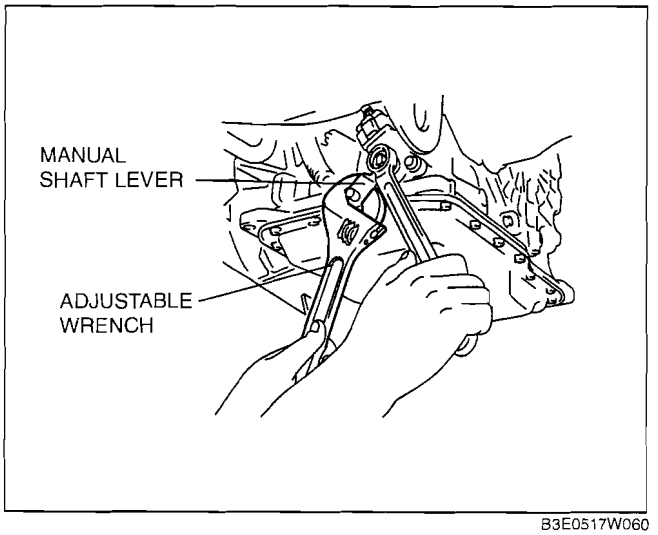
4. Disconnect the TR switch connector.
5. Remove the clip and disconnect the selector cable.

Caution
- **Do not use an impact wrench. Hold the manual shaft lever when removing the manual shaft nut, or the transaxle may be damaged.**



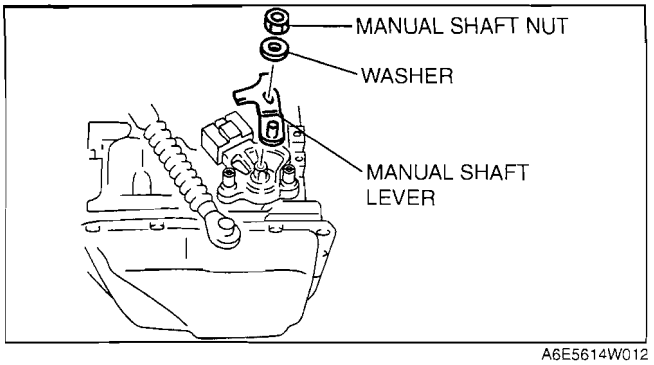
A6E5614W011

6. Set the adjustable wrench as shown in the figure to hold the manual shaft lever.
7. Remove the manual shaft nut and washer.



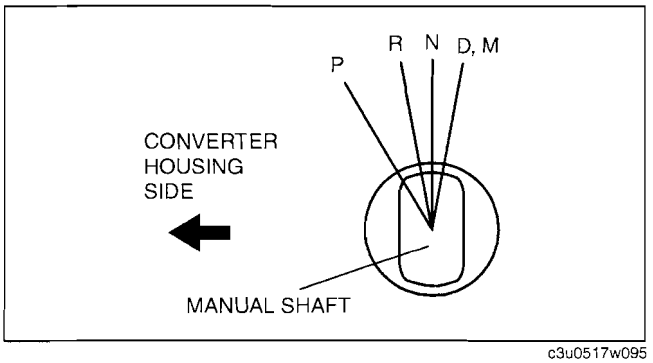
B3E0517W060

8. Remove the manual shaft lever.
9. Remove the TR switch.



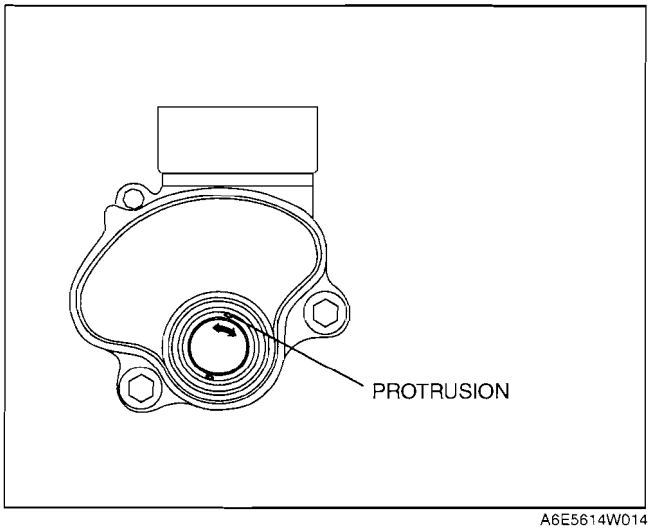
A6E5614W012

10. Rotate the manual shaft to the converter housing side fully, then return two notches to set the N position.

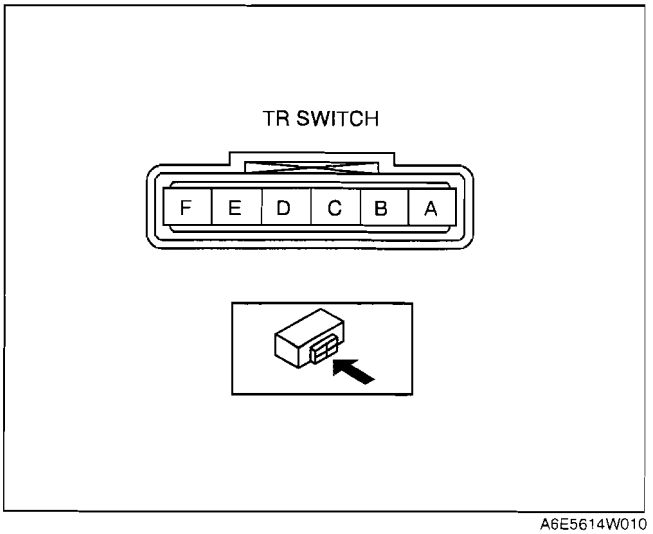


c3u0517w095

11. Turn the protrusion between the TR switch terminals B and C until the resistance becomes **750 ohms**.

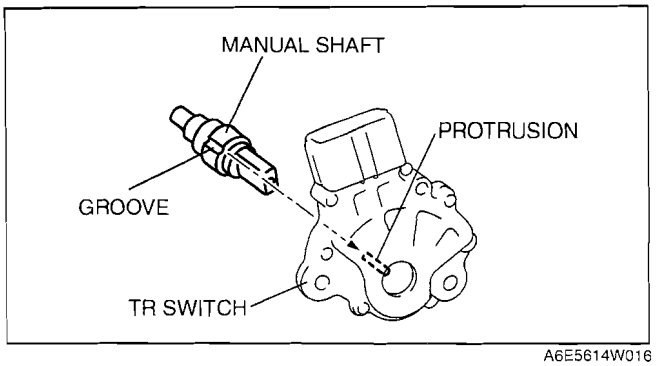


A6E5614W014



A6E5614W010

12. Install the TR switch while aligning the protrusion and groove as shown in the figure.
13. Hand-tighten the TR switch mounting bolts.



A6E5614W016

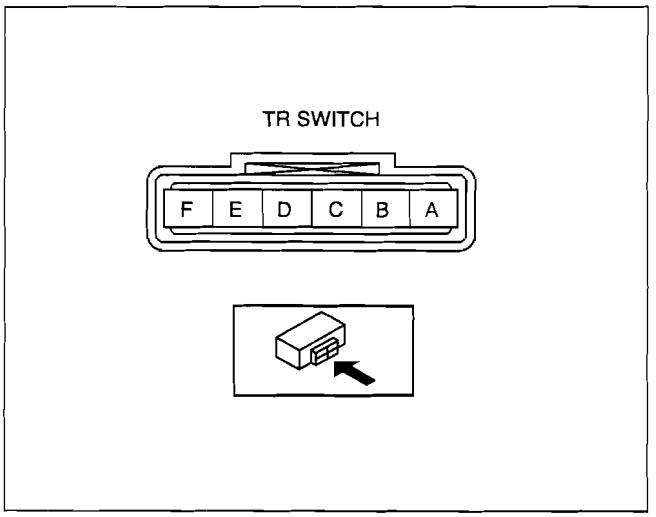
14. Inspect the resistance between the TR switch terminals B and C.
    - If there is any malfunction, readjust the TR switch. (See 05-17A-16 TRANSAXLE RANGE (TR) SWITCH ADJUSTMENT[FN4A-EL].)

    Resistance
    750 ohms

15. Tighten the TR switch mounting bolts.

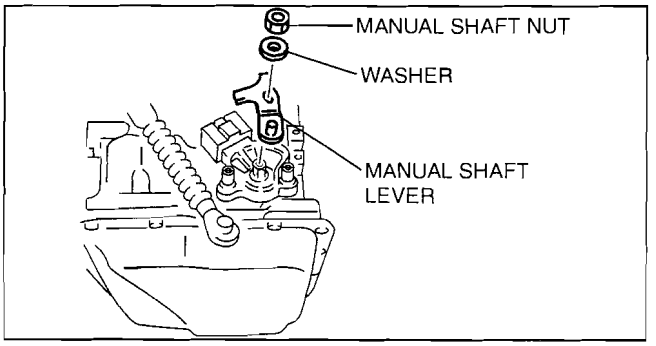
    Tightening torque
    8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

    Caution
    - **Do not use an impact wrench. Hold the manual shaft lever when removing the manual shaft nut, or the transaxle may be damaged.**



A6E5614W010

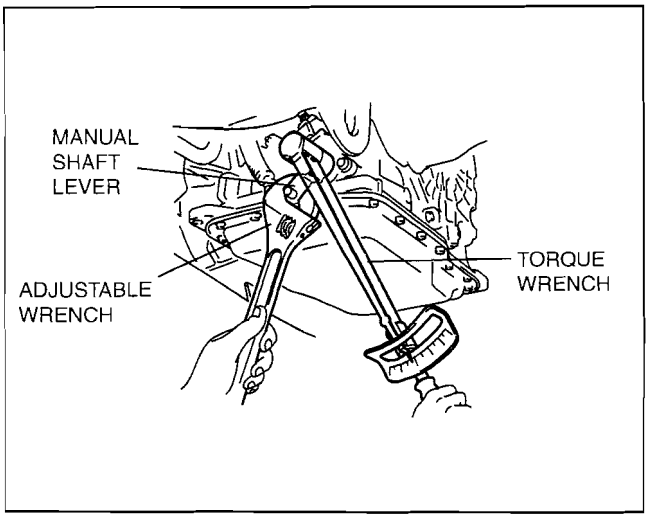
16. Install the manual shaft lever and the washer.



A6E5614W012

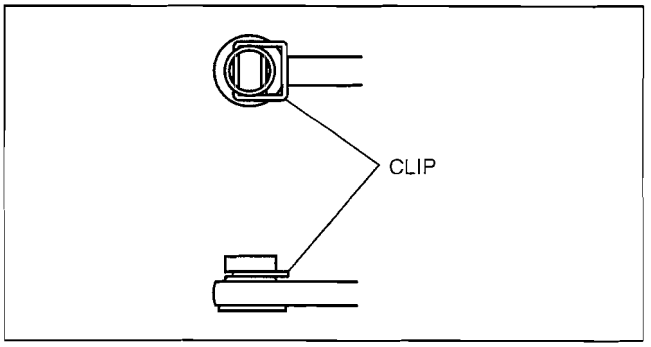
17. Set the adjustable wrench as shown in the figure to hold the manual shaft lever, and tighten the manual shaft nut.

    Tightening torque
    31.4—46.1 N·m
    {3.2—4.7 kgf·m, 23.2—33.9 ft·lbf}



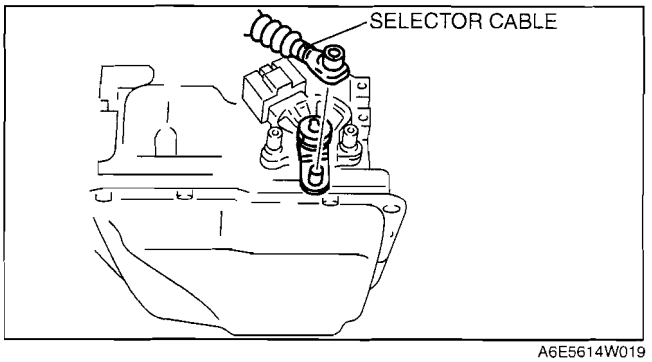
B3E0517W061

18. Install the clip to the selector cable as shown in the figure.
19. Shift the selector lever to P position.
20. Turn the manual shaft lever to P position.



B3E0517W091

21. Connect the selector cable.
22. Inspect for continuity at the TR switch. (See 05-17A-10 TRANSAXLE RANGE (TR) SWITCH INSPECTION[FN4A-EL].)
    - If there is any malfunction, readjust the TR switch. (See 05-17A-16 TRANSAXLE RANGE (TR) SWITCH ADJUSTMENT[FN4A-EL].)
23. Connect the TR switch connector.
24. Install the under cover.
25. Connect the negative battery cable.
26. Install the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)



A6E5614W019

27. Inspect operation of the TR switch. (See 05-17A-10 TRANSAXLE RANGE (TR) SWITCH INSPECTION[FN4A-EL].)
    - If there is any malfunction, readjust the TR switch. (See 05-17A-16 TRANSAXLE RANGE (TR) SWITCH ADJUSTMENT[FN4A-EL].)

TRANSAXLE RANGE (TR) SWITCH ADJUSTMENT[FN4A-EL]

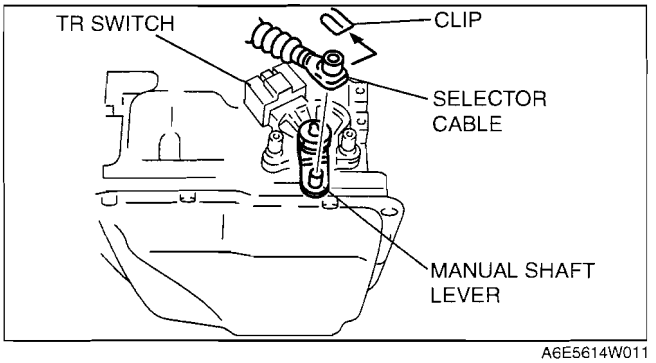
id0517a1803700

1. Remove the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the under cover.

Caution

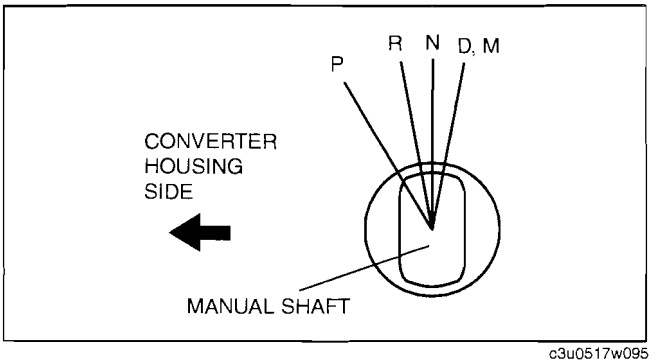
- **Water or foreign material entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign material on the connector when disconnecting it.**

4. Remove the clip and disconnect the selector cable.



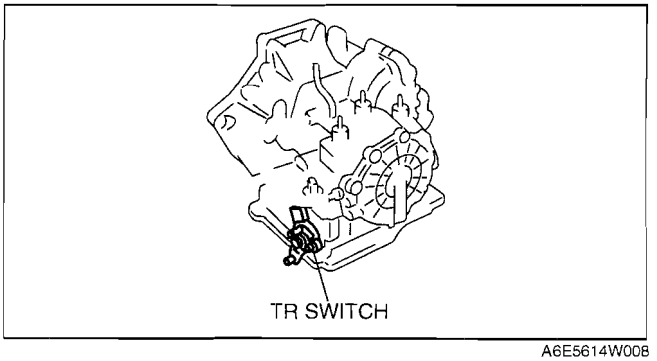
A6E5614W011

5. Rotate the manual shaft to the converter housing side fully, then return two notches to set the N position.



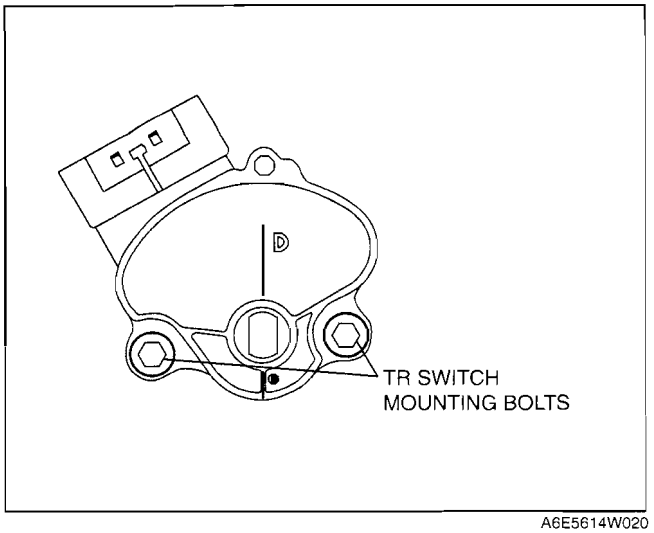
c3u0517w095

6. Disconnect the TR switch connector.



A6E5614W008

7. Loosen the TR switch mounting bolts.



A6E5614W020

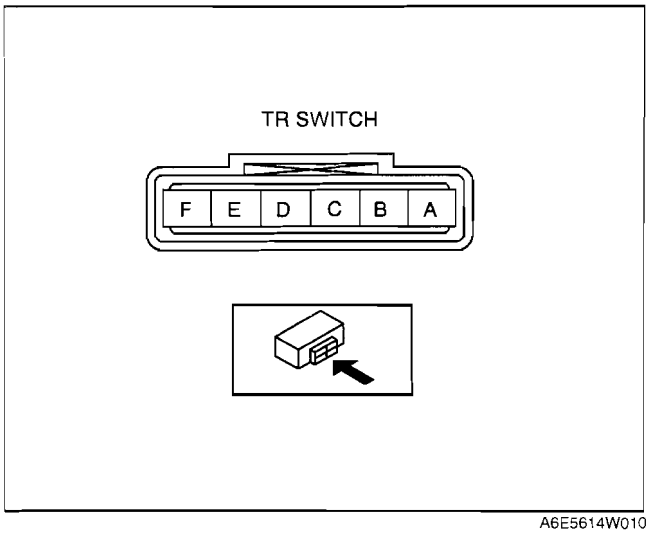
8. Measure the resistance between the TR switch terminals B and C.
9. Adjust the switch to the point as follows.

Resistance
750 ohms

10. Tighten the TR switch mounting bolts.

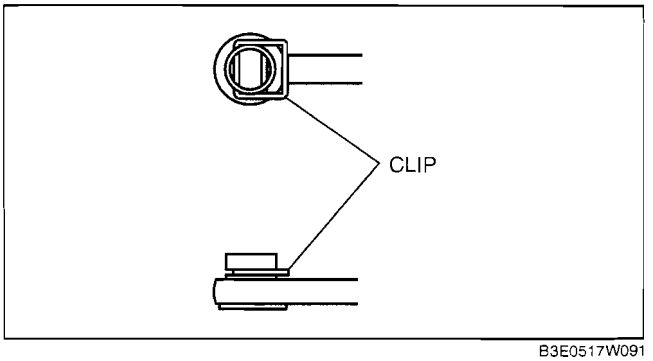
Tightening torque
8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

11. Move the selector lever to N position.
12. Verify that the TR switch is aligned with N position.
13. Connect the TR switch connector.



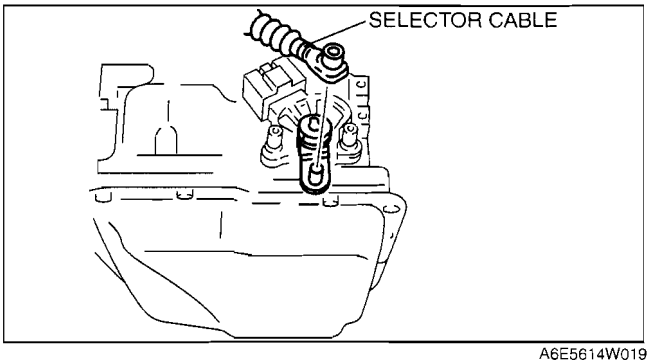
A6E5614W010

14. Install the clip to the selector cable as shown in the figure.



B3E0517W091

15. Connect the selector cable to the manual shaft lever as shown in the figure.
16. Inspect the TR switch operation. (See 05-17A-10 TRANSAXLE RANGE (TR) SWITCH INSPECTION[FN4A-EL].)
    - If there is any malfunction, readjust the TR switch.
17. Install the under cover.
18. Connect the negative battery cable.
19. Install the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)



A6E5614W019

TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR INSPECTION[FN4A-EL]

id0517a1801000

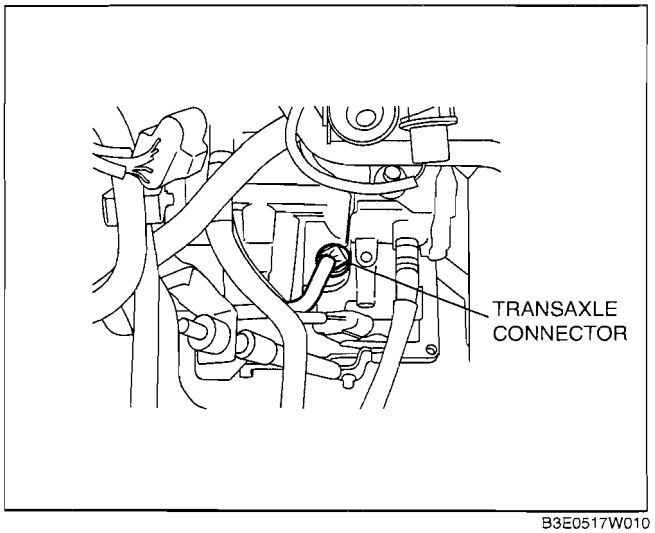
On-Vehicle Inspection

1. Remove the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the under cover.

Caution

- **Water or foreign material entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign material on the connector when disconnecting it.**

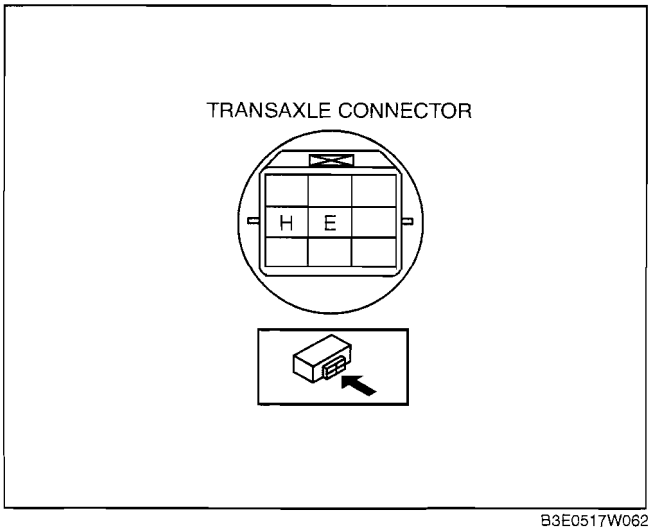
4. Disconnect the transaxle connector.



B3E0517W010

5. Measure the resistance between the transaxle connector terminals E and H.
   - If there is any malfunction, perform the off-vehicle inspection of TFT sensor. (See 05-17A-20 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR REMOVAL/INSTALLATION[FN4A-EL].)

ATF temperature (°C {°F})	Resistance (kilohm)
–20 {–4}	236—324
0 {32}	84.3—110
20 {68}	33.5—42.0
40 {104}	14.7—17.9
60 {140}	7.08—8.17
80 {176}	3.61—4.15
100 {212}	1.96—2.24
120 {248}	1.13—1.28
130 {266}	0.87—0.98



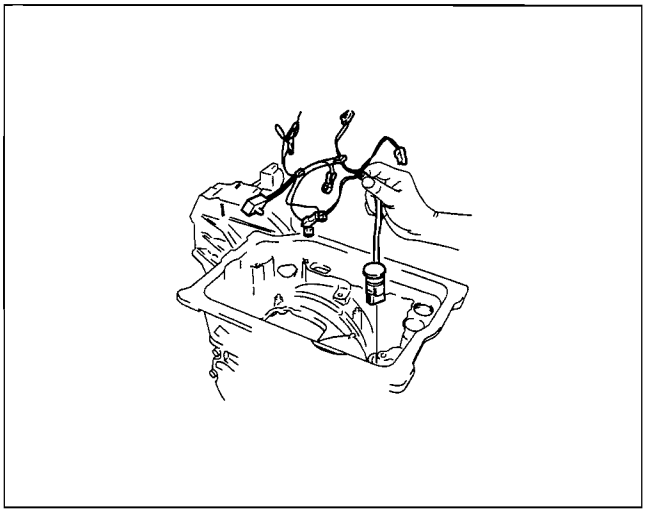
B3E0517W062

6. Install the under cover.
7. Connect the negative battery cable.
8. Install the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)

Off-Vehicle Inspection

Warning
- **A hot transaxle and ATF can cause severe burns. Turn off the engine and wait until they are cool before replacing the ATF.**

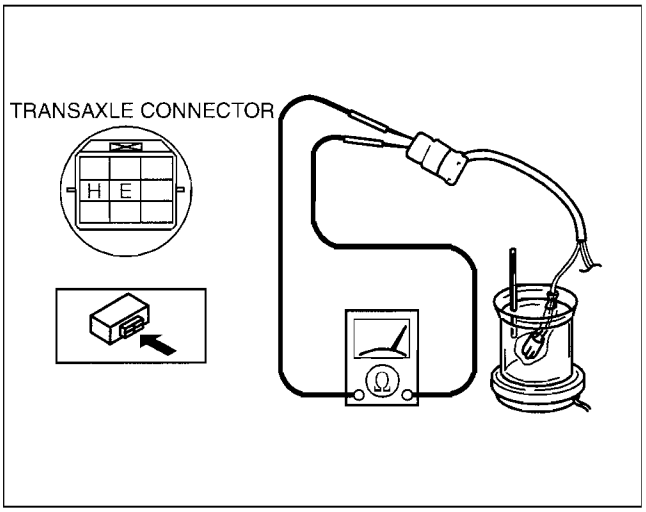
1. Remove the control valve body. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].)
2. Remove the coupler component.
3. Place the TFT sensor and a thermometer in ATF as shown in the figure, and heat the ATF gradually.



B3E0517W082

4. Measure the resistance between the terminals of the TFT sensor.
   - If there is any malfunction, replace the TFT sensor. (See 05-17A-20 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR REMOVAL/ INSTALLATION[FN4A-EL].)

ATF temperature (°C {°F})	Resistance (kilohm)
–20 {–4}	236—324
0 {32}	84.3—110
20 {68}	33.5—42.0
40 {104}	14.7—17.9
60 {140}	7.08—8.17
80 {176}	3.61—4.15
100 {212}	1.96—2.24
120 {248}	1.13—1.28
130 {266}	0.87—0.98



B3E0517W064

5. Install the coupler component.
6. Install the control valve body. (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].)

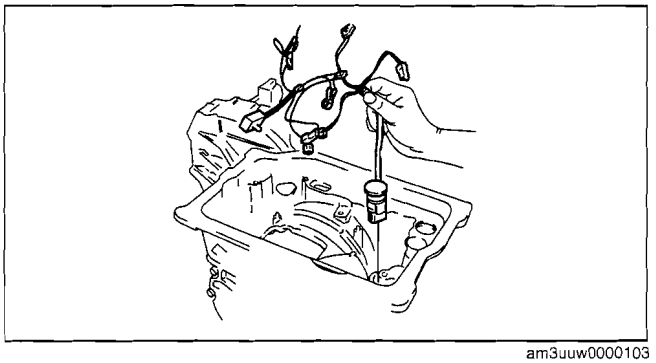
TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR REMOVAL/INSTALLATION[FN4A-EL]

id0517a1801100

Warning

- **A hot transaxle and ATF can cause severe burns. Turn off the engine and wait until they are cool before replacing the ATF.**

1. Remove the oil pan. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].)
2. Remove the control valve body. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].)
3. Remove the coupler component.
4. Install a coupler component.
5. Install the control valve body. (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].)
6. Install the oil pan. (See 05-17A-37 CONTROL VALVE BODY INSTALLATION[FN4A-EL].)
7. Perform the mechanical system test. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].)



am3uuw0000103

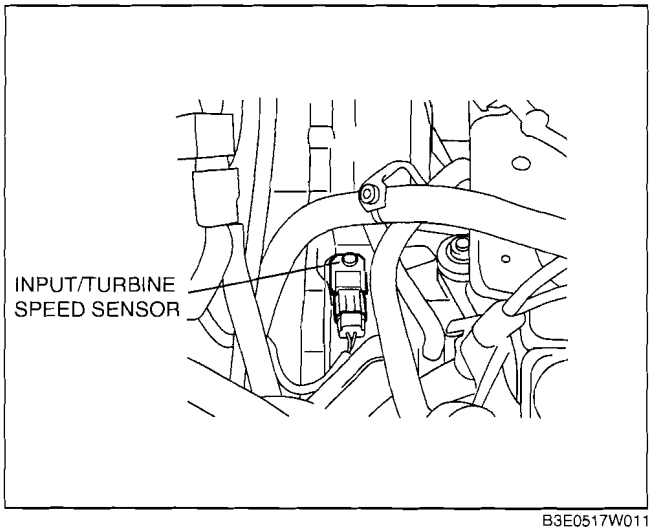
INPUT/TURBINE SPEED SENSOR INSPECTION[FN4A-EL]

id0517a1801200

Caution

- **Water or foreign material entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign material on the connector when disconnecting it.**

1. Remove the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Remove the battery, battery box and battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
3. Disconnect the input/turbine speed sensor connector.

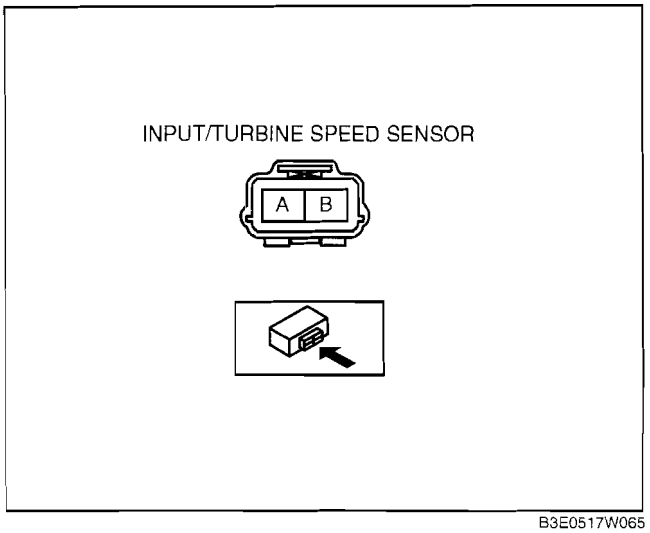


B3E0517W011

4. Measure the resistance between the input/turbine speed sensor terminals.
   - If there is any malfunction, replace the input/turbine speed sensor.

   Resistance
   250—600 ohms (ATF temperature: –40—160 °C {–40—320 °F})

5. Connect the input/turbine speed sensor connector.
6. Install the battery, battery box and battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
7. Install the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)



B3E0517W065

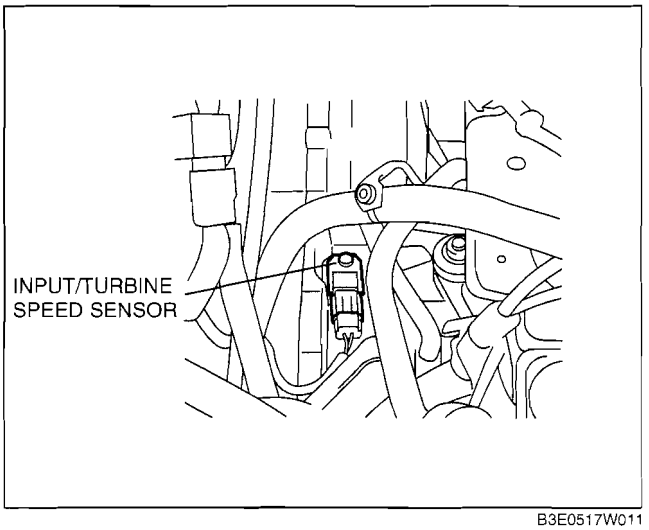
INPUT/TURBINE SPEED SENSOR REMOVAL/INSTALLATION[FN4A-EL]

id0517a1801300

1. Remove the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Remove the battery, battery box and battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
3. Disconnect the input/turbine speed sensor connector.
4. Remove the input/turbine speed sensor.
5. Apply ATF to a new O-ring and install it on a new input/turbine speed sensor.
6. Install the input/turbine speed sensor.

   Tightening torque
   8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

7. Connect the input/turbine speed sensor connector.
8. Install the battery, battery box and battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
9. Install the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)



B3E0517W011

VEHICLE SPEED SENSOR (VSS) INSPECTION[FN4A-EL]

id0517a1801400

1. Connect the M-MDS, drive the vehicle, and verify the input value of the OSS PID.
   - If the input value is 0 rpm, perform the "Power Supply Voltage Inspection", "Open Circuit Inspection", or "Short Circuit Inspection".
   - If the input value is other than 0 rpm, perform the "Visual Inspection" or "Wave Profile Inspection".

Visual Inspection

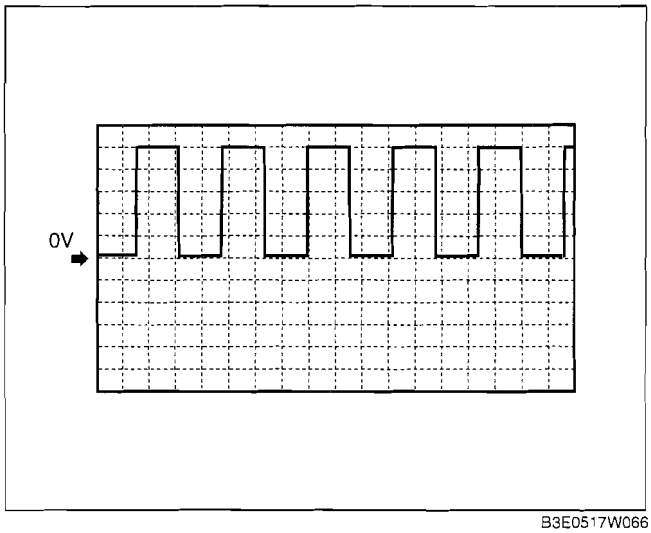
1. Remove the VSS. (See 05-17A-23 VEHICLE SPEED SENSOR (VSS) REMOVAL/INSTALLATION[FN4A-EL].)
2. Verify that the sensor is free of any metallic shavings or particles.
   - If there is any malfunction, clean them off.
3. Install the VSS. (See 05-17A-23 VEHICLE SPEED SENSOR (VSS) REMOVAL/INSTALLATION[FN4A-EL].)

Wave Profile Inspection

1. Remove the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
2. Connect M-MDS to DLC-2.
3. Connect oscilloscope test leads to the following PCM connector terminals.
   - (+) lead: PCM terminal 1AW*1, 1J*2
   - (–) lead: PCM terminal 1BD
4. Start the engine.
5. Monitor VSS PID.
6. Inspect wave profile.
   - PCM terminal:1AW*1 (+)—1BD (–), 1J*2 (+)—1BD (–)
   - Oscilloscope setting: 1 V/DIV (Y), 2.5 ms/DIV (X), DC range
   - Vehicle condition: drive the vehicle at 32 km/h {20 mph}
     — If there is any malfunction, perform the "Open Circuit Inspection" or "Short Circuit Inspection".

*1 : California emission regulation applicable model

*2 : Except for California emission regulation applicable model

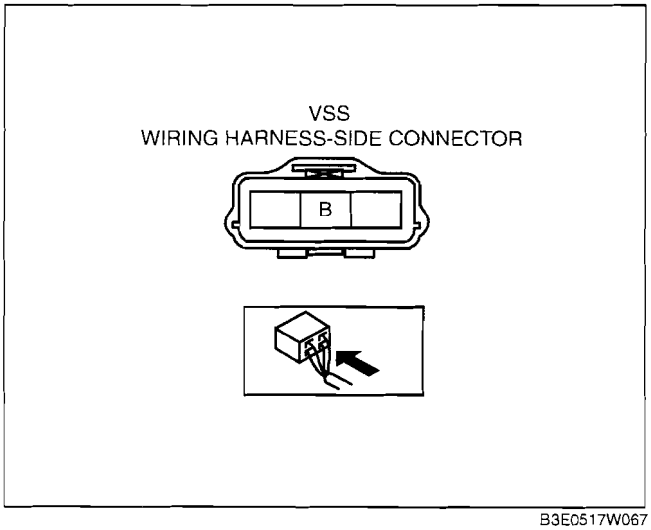


B3E0517W066

Power Supply Voltage Inspection

1. Disconnect the VSS connector.
2. Turn the ignition switch to the ON position.
3. Measure voltage at VSS terminal B.
   - If voltage is normal, go to Open Circuit Inspection and Short Circuit Inspection.
   - If there is any malfunction, repair wiring harness between VSS and PCM.

Specification
4.5—5.5 V



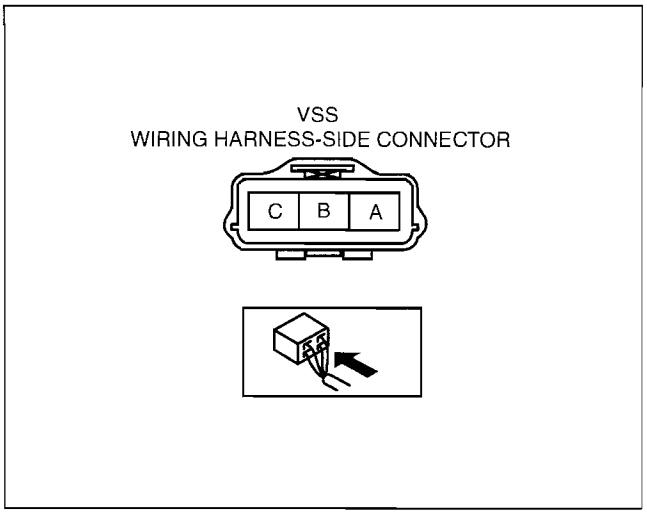
B3E0517W067

Open Circuit Inspection

1. Inspect the following circuit for open.
   - Power circuit (VSS terminal A to main relay terminal D)
   - Ground circuit (VSS terminal C to GND)
   - If an open circuit or short circuit is found, repair the malfunctioning wiring harness.
   - If there are no open or short circuits, perform the sensor rotor inspection.

Short Circuit Inspection

1. Inspect the following circuit for short circuit.
   - Power circuit (VSS terminal A to main relay terminal D)
   - If an open circuit or short circuit is found, repair the malfunctioning wiring harness.
   - If there are no open or short circuits, perform the sensor rotor inspection.



B3E0517W068

Sensor Rotor Inspection

1. Remove the VSS. (See 05-17A-23 VEHICLE SPEED SENSOR (VSS) REMOVAL/INSTALLATION[FN4A-EL].)
2. Shift the selector lever to N position.
3. Inspect sensor rotor surface via VSS installation hole while rotating the front tire manually.
   (1) Is the sensor rotor free of damage and cracks?
   (2) Is the sensor rotor free of any metallic shavings or particles?
   - If the sensor rotor is normal, replace the VSS.
   - If there is any malfunction, clean or replace the sensor rotor.

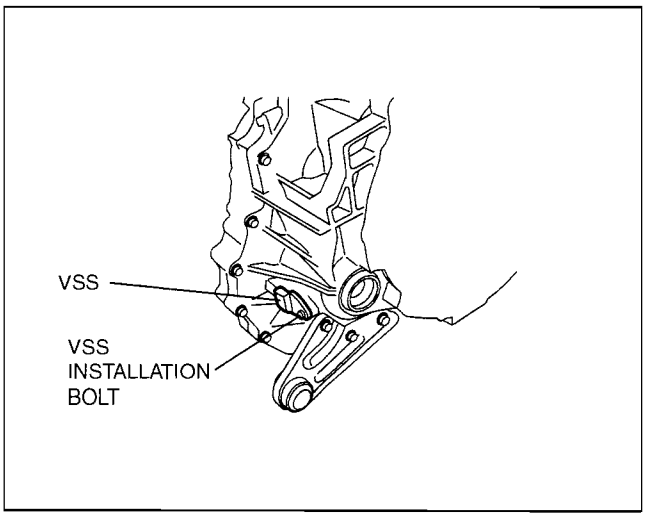
VEHICLE SPEED SENSOR (VSS) REMOVAL/INSTALLATION[FN4A-EL]

id0517a1806100

Caution

- **Water or foreign material entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign material on the connector when disconnecting it.**
- **If foreign materials are stuck to the VSS, disturbance by magnetic flux can cause sensor output to be abnormal and thereby negatively affect control. Make sure that foreign materials such as iron filings are not stuck to the VSS during installation.**

1. Remove the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the under cover.
4. Disconnect the VSS connector.
5. Remove the VSS.
6. Apply ATF to a new O-ring and install it on a new VSS.

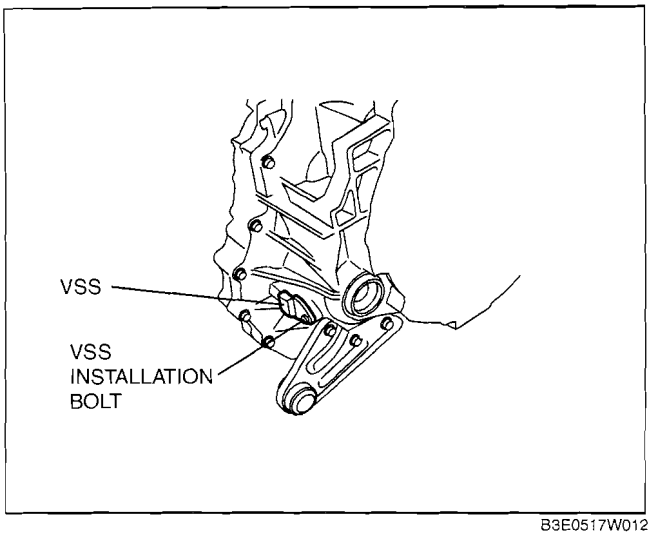


B3E0517W012

7. Install the VSS.

Tightening torque
8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

8. Connect the VSS connector.
9. Install the under cover.
10. Connect the negative battery cable.
11. Install the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)



B3E0517W012

SOLENOID VALVE INSPECTION[FN4A-EL]

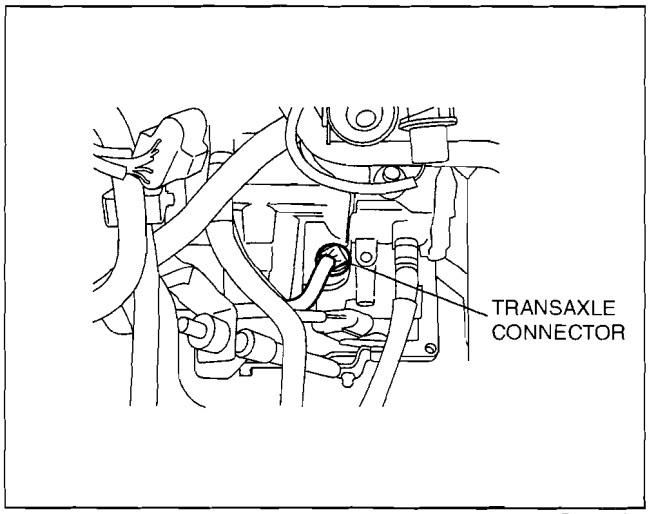
id0517a1801900

Resistance Inspection (On-Vehicle Inspection)

Caution
- **Water or foreign material entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign material on the connector when disconnecting it.**

1. Remove the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the under cover.
4. Disconnect the transaxle connector.

Note
- When inspecting the pressure control solenoid, connect the ground connection to the ground terminal (terminal I) of the pressure control solenoid inside the solenoid valve connector.

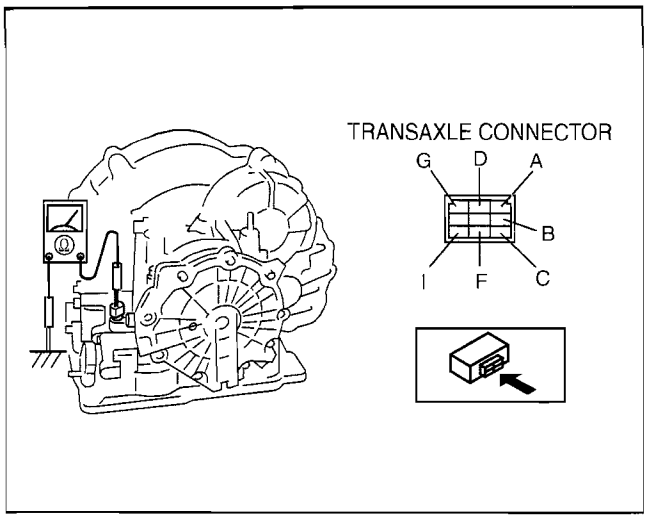


B3E0517W010

5. Measure the resistance between the following terminals.
   - If there is any malfunction, inspect the ground, then perform the operating inspection.

ATF temperature: –40—150 °C {–40—302 °F}

Terminal	Solenoid valve	Resistance (ohm)
A—GND	Shift solenoid A	1.0—4.2
C—GND	Shift solenoid B	1.0—4.2
G—GND	Shift solenoid C	1.0—4.2
B—GND	Shift solenoid D	10.9—26.2
F—GND	Shift solenoid E	10.9—26.2
D—I	Pressure control	2.4—7.3



B3E0517W069

6. Connect the transaxle connector.
7. Install the under cover.
8. Connect the negative battery cable.
9. Install the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)

Operating Inspection

1. Disconnect the transaxle connector.

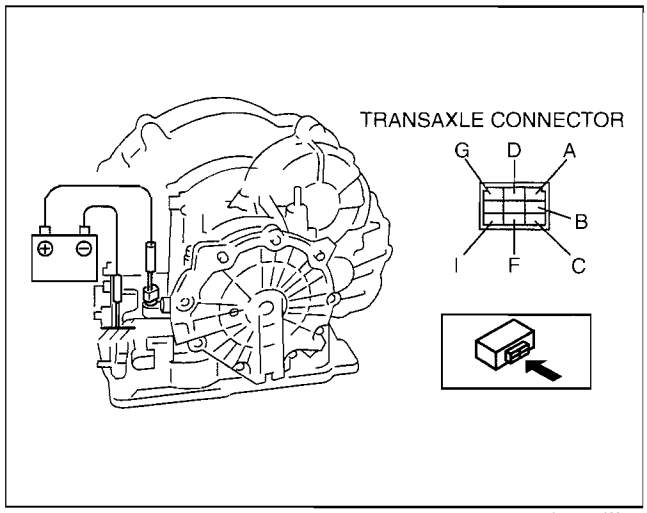
Caution

- **Do not apply battery position voltage to terminals A, B, C, D, F and G for more than 3 s.**

Note

- Because the operation sound of the valves is small, perform inspection in a quiet place.

2. Apply battery positive voltage to the transaxle connector terminals A, B, C, F or G and battery negative voltage to GND, and verify that operating sound is heard from the solenoid.
   - If the "click" is not heard, inspect the transaxle harness.
     — If the transaxle harness is normal, perform the resistance inspection (off-vehicle inspection).
     — If there is any malfunction, repair or replace the transaxle harness.
3. Apply battery positive voltage to the transaxle connector terminal D and battery negative voltage to the transaxle connector terminal I, and verify that operating sound is heard from solenoid.
   - If the "click" is not heard, inspect the transaxle harness.
     — If transaxle harness is normal, perform the resistance inspection (off-vehicle inspection).
     — If there is any malfunction, repair or replace the transaxle harness.



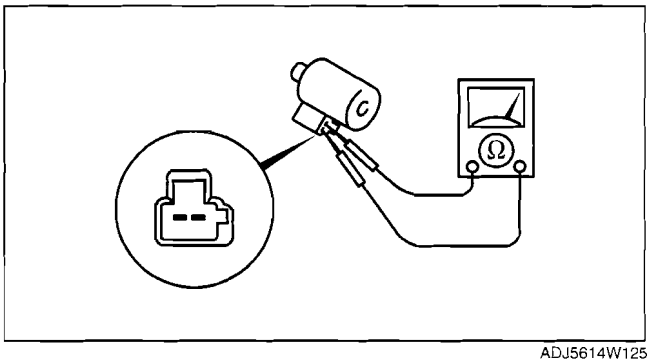
B3E0517W070

Resistance Inspection (Off-Vehicle Inspection)

1. Remove the control valve body. (See 05-17A-27 SOLENOID VALVE REMOVAL/INSTALLATION[FN4A-EL].)
2. Measure the resistance of each solenoid valve individually.
   - If there is any malfunction, replace the solenoid valve.
3. Install the control valve body. (See 05-17A-27 SOLENOID VALVE REMOVAL/INSTALLATION[FN4A-EL].)

Pressure control solenoid

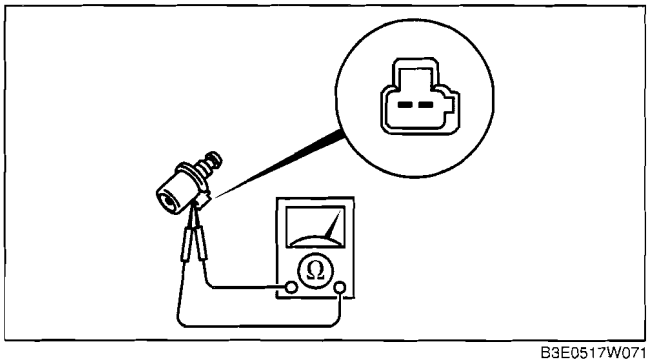
Resistance
2.4—7.3 ohms
(ATF temperature: –40—150 °C {–40—302 °F})



ADJ5614W125

Shift solenoid A, B, C

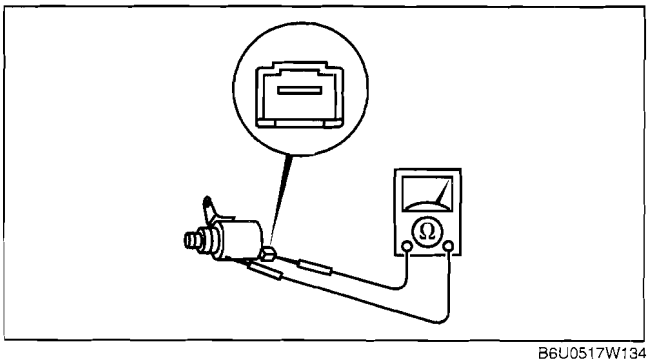
Resistance
1.0—4.2 ohms
(ATF temperature: –40—150 °C {–40—302 °F})



B3E0517W071

Shift solenoid D, E

Resistance
10.9—26.2 ohms
(ATF temperature: –40—150 °C {–40—302 °F})

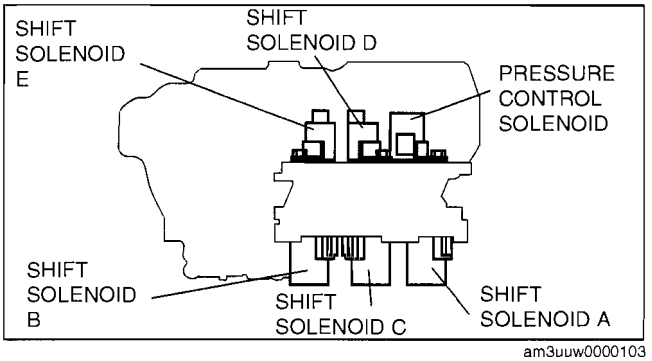


B6U0517W134

SOLENOID VALVE REMOVAL/INSTALLATION[FN4A-EL]

id0517a1804600

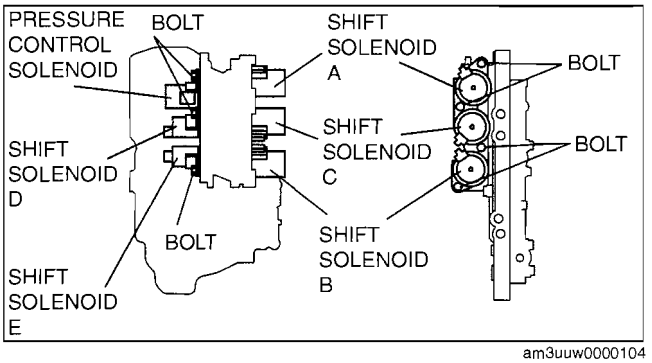
1. Remove the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the under cover.
4. Remove the control valve body. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].)
5. Remove the solenoid valve (s).
6. Apply ATF to a new O-ring and install it on the solenoid valve.



am3uuw0000103

7. Install the solenoid valve in the control valve body.

   Tightening torque
   7.8—10.8 N·m
   {80—110 kgf·cm, 69.5—95.4 in·lbf}



am3uuw0000104

8. Install the control valve body. (See 05-17A-36 CONTROL VALVE BODY REMOVAL[FN4A-EL].)
9. Install the under cover.
10. Connect the negative battery cable.
11. Install the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
12. Add ATF and, with the engine idling, inspect the ATF level and inspect for leakage. (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)
13. Perform the mechanical system test. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].)

PCM INSPECTION[FN4A-EL]

id0517a1802900

1. Inspect the PCM. (See 01-40A-13 PCM INSPECTION[LF, L3].)

PCM REMOVAL/INSTALLATION[FN4A-EL]

id0517a1803000

1. Remove and install the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)

AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL]

id0517a1802400

1. Remove the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Remove the following parts.
   (1) Battery, battery tray and battery box. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
   (2) Air cleaner component. (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[LF, L3].)
   (3) Exhaust manifold insulator.
   (4) Front tires and splash shield.
   (5) Under cover.
3. Drain the ATF. (See 05-17A-9 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FN4A-EL].)

Warning

- **Improperly jacking a transaxle is dangerous. It can slip off the jack and may cause serious injury.**

Caution

- **To prevent the torque converter and transaxle from separating, remove the transaxle without tilting it toward the torque converter.**

4. Remove in the order indicated in the table.
5. Install in the reverse order of removal.
6. Add ATF to the specified level. (See 05-17A-9 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FN4A-EL].)
7. Perform the following test. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].)(See 05-17A-6 ROAD TEST[FN4A-EL].)

Service item	Test item			
	Line pressure test	Stall test	Time lag test	Road test
ATX replacement	X			
ATX overhaul	X	X	X	X
Torque converter replacement	X	X		
Oil pump replacement	X			
Clutch system replacement	X		X	X

X : Test to be performed after the service work

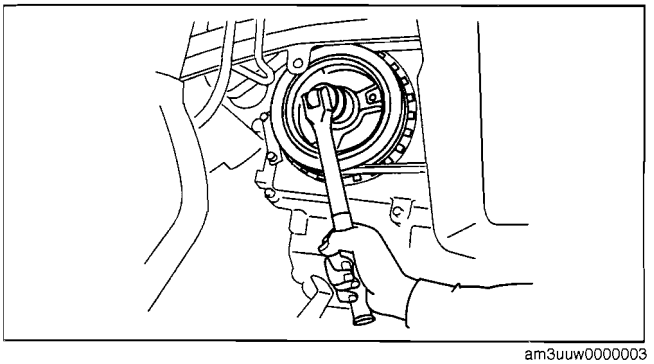
27	Transaxle (See 05-17A-32 Transaxle Removal Note.) (See 05-17A-33 Transaxle Installation Note.)

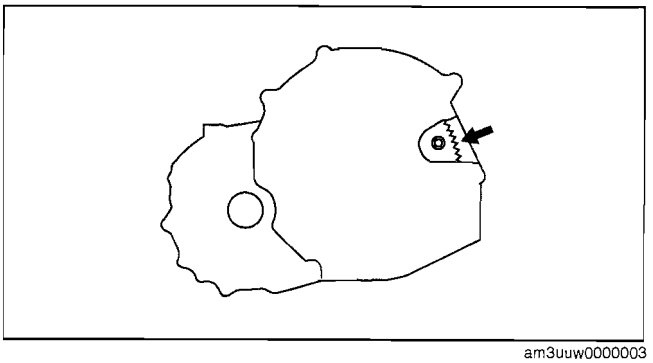
Torque Converter Nuts Removal Note

1. Hold the crankshaft pulley to prevent the drive plate from rotating.



am3uuw0000003

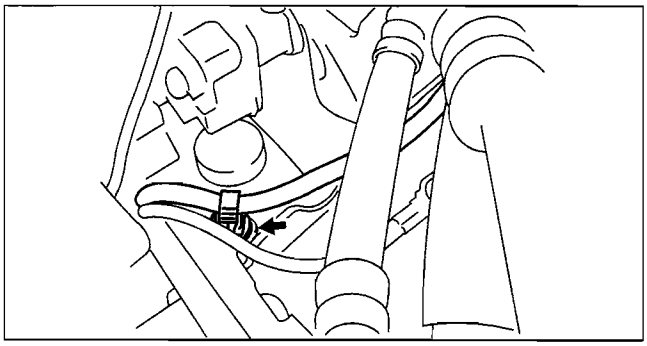
2. Remove the torque converter nuts from the starter installation hole.



am3uuw0000003

No.4 Engine Mount Removal Note

1. To install the front shaft (RH) of the **SST** (49 C017 5A0), remove the clip shown in the figure.

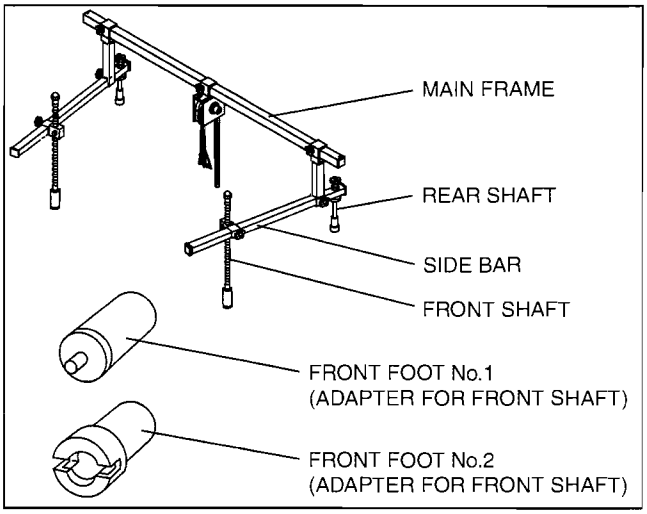


am3uuw0000003

2. Install the SST using the following procedure.

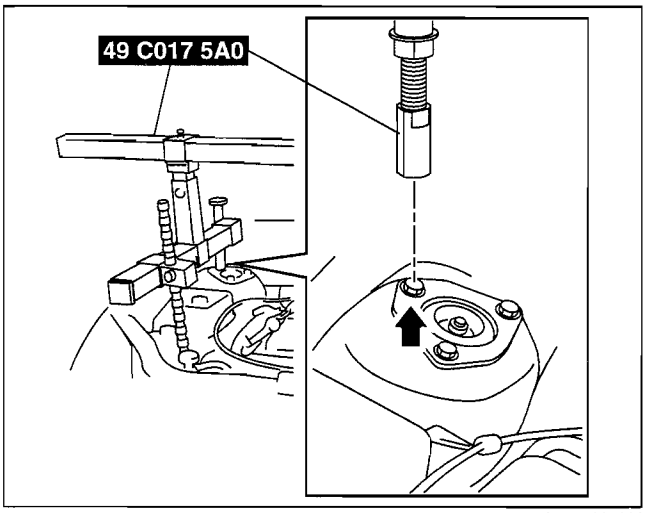
Caution

- **Refer to the SST instruction manual for the basic handing procedure.**



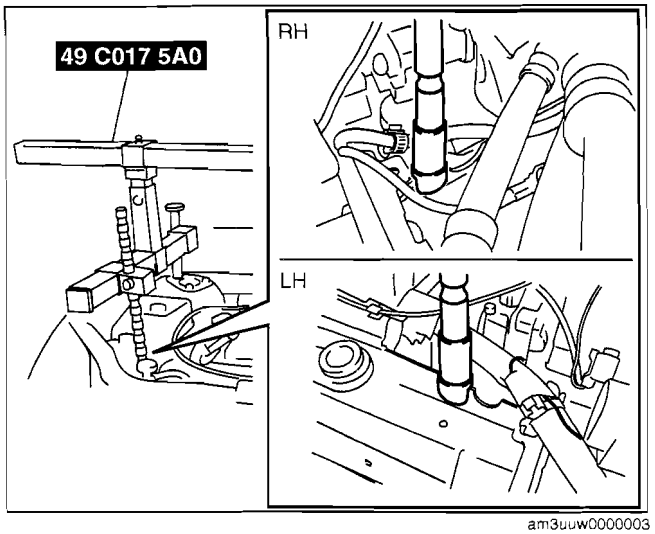
am3uuw0000003

(1) Install the right rear shaft of the **SST** to the bolt of the right shock absorber as shown in the figure.
(2) Install the left rear shaft of the **SST** to the bolt of the left shock absorber (identical position to right side).



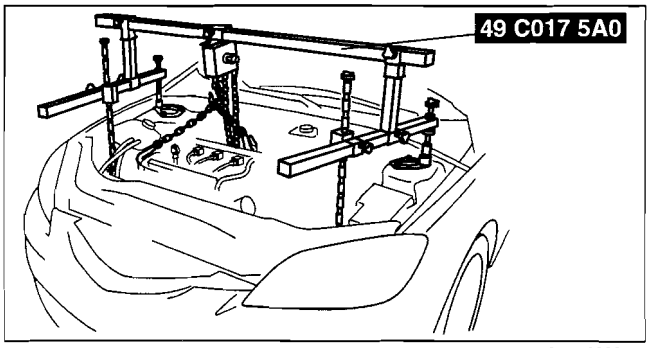
am3uuw0000003

(3) Install front foot No.2 to the left/right front shaft of the **SST**, then align the groove of the front shaft of the **SST** with the folded up part of the vehicle as shown in the figure.
(4) Adjust the positions of the **SST** side bars so that they are the same height (left and right) and horizontal.
(5) Make sure each joint is securely tightened.



am3uuw0000003

3. Suspend the engine using the **SST**.
4. Remove the battery tray bracket, No.4 engine mount rubber and bracket.



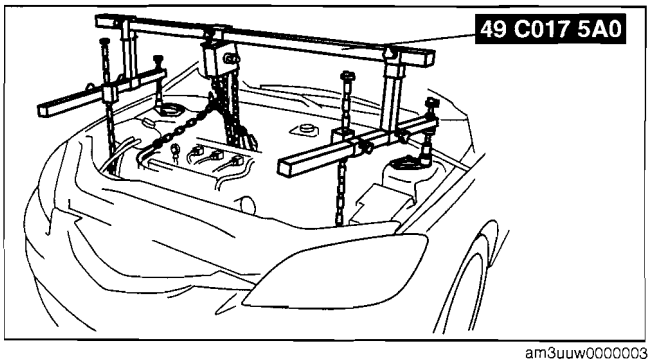
am3uuw0000003

Transaxle Removal Note

Warning
- **Remove the transaxle carefully, holding it steady. If the transmission falls it could be damaged or cause injury.**

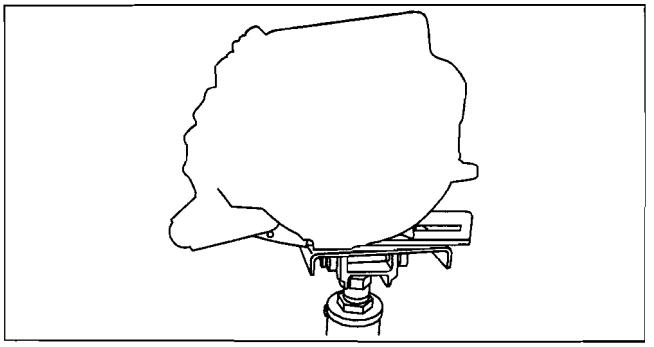
Caution
- **To prevent the torque converter and transmission from separating, remove the transmission without tilting it toward the torque converter.**

1. Lean the engine toward the transaxle.
2. Support the transaxle on a jack.
3. Remove the transaxle mounting bolts.



am3uuw0000003

4. Remove the transaxle.



am3uuw0000004

Transaxle Installation Note

Warning

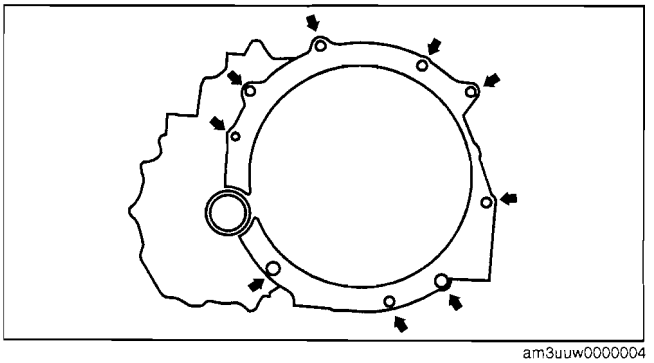
- **Install the transaxle carefully, holding it steady. If the transmission falls it could be damaged or cause injury.**

Caution

- **To prevent the torque converter and transmission from separating, install the transmission without tilting it toward the torque converter.**

1. Set the transaxle on a jack and lift it.
2. Install the transaxle mounting bolts.

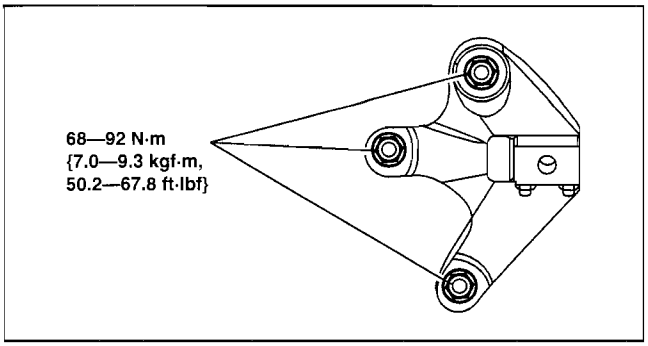
Tightening torque
37.3—52.0 N·m
{3.8—5.3 kgf·m, 27.6—38.3 ft·lbf}



am3uuw0000004

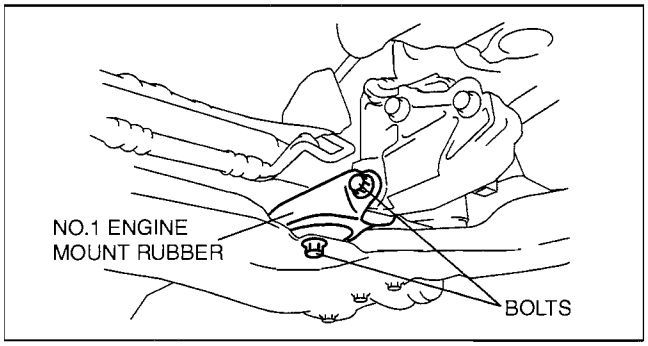
No.1 Engine Mount and No.4 Engine Mount Installation Note

1. Install the No.4 engine mount bracket on the transaxle case and tighten nuts.



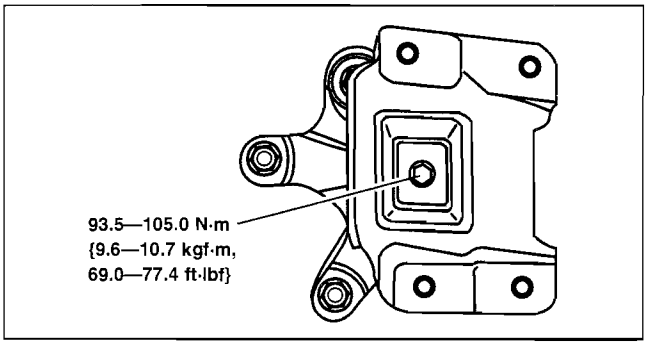
am3uuw0000074

2. Install the No.1 engine mount rubber to the crossmember and temporarily tighten bolts.



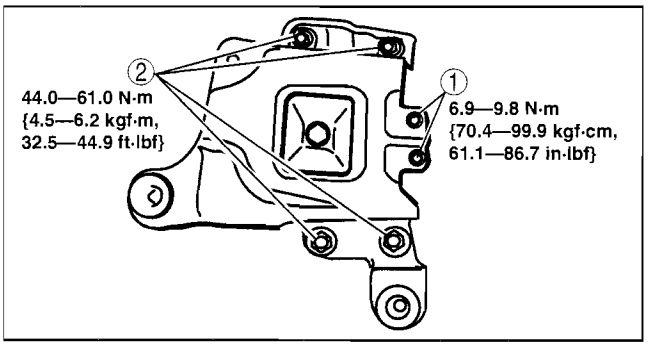
am3uuw0000004

3. Place the No.4 engine mount rubber with the body stud bolts passing through the holes and tighten the bolt as shown in the figure.



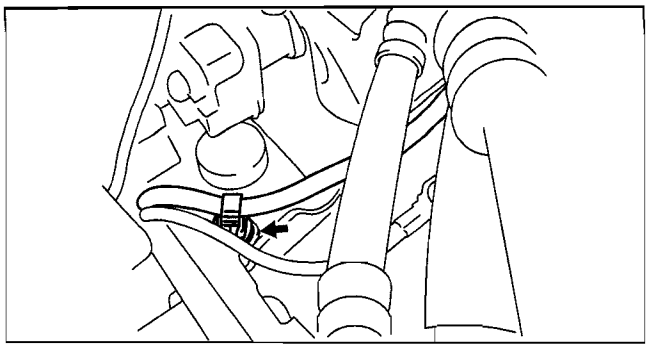
am3uuw0000004

4. Place the battery tray bracket on the No.4 engine mount rubber with body stud bolts passing through the holes and tighten bolts and nuts in the order as shown in the figure.
5. Remove the **SST**.



am3uuw0000004

6. Install the clip as shown in the figure.



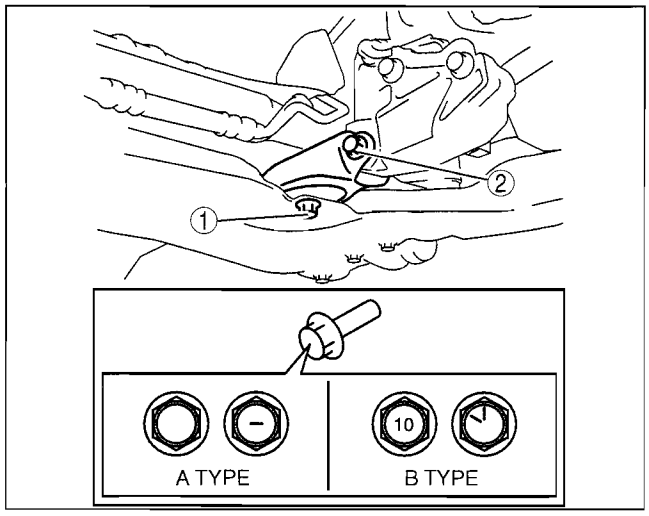
am3uuw0000003

7. Fully tighten the bolts

Caution
- **Tighten the bolts in the order shown in the figure to prevent abnormal noise and vibration after assembly.**
- **Tighten the bolts while being careful of their length to prevent interference between the steering gear housing and bolt.**

Bolt length (measured from below the head)
Front crossmember side: 62 mm {2.441 in}
No.1 engine mount bracket side: 65 mm {2.559 in}

Tightening torque
A type: 72.6—90.9 N.m {7.5—9.2 kgf.m, 53.6—67.0 ft.lbf}
B type: 93.1—116.6 N·m {9.5—11.8 kgf·m, 68.7—85.9 ft·lbf}

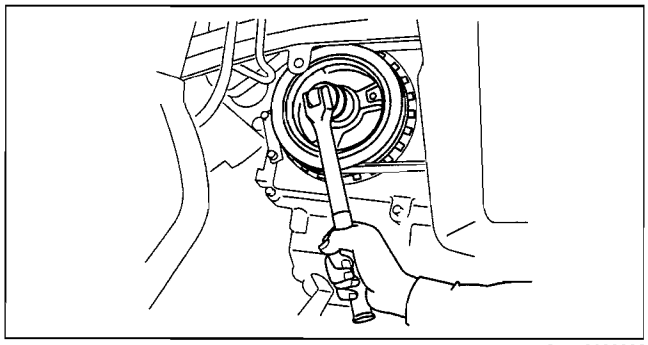


c3u515zw3204

Torque Converter Nuts Installation Note

1. Hold the crankshaft pulley to prevent the drive plate from rotating.

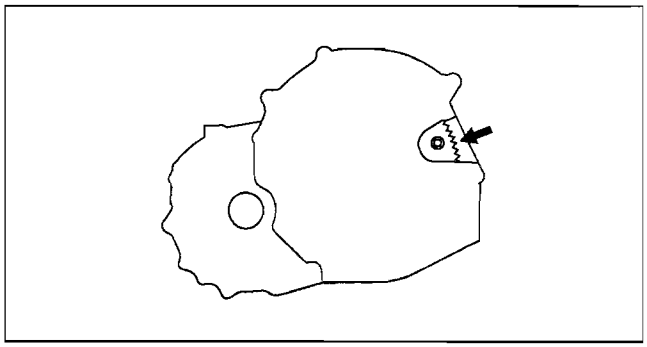
Caution
- **Loosely and equally tighten the torque converter nuts, then further tighten them to the specified tightening torque.**



am3uuw0000003

2. Tighten the torque converter mounting nuts.

Tightening torque
40.5—54.7 N·m {4.2—5.5 kgf·m, 29.9—40.3 ft·lbf}



am3uuw0000004

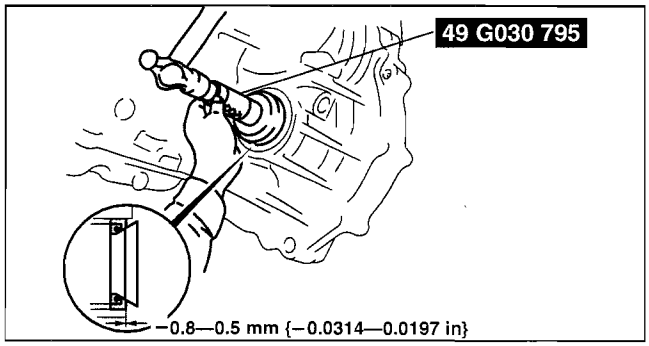
OIL SEAL REPLACEMENT[FN4A-EL]

id0517a1804400

1. Drain the ATF. (See 05-17A-9 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FN4A-EL].)

Caution
- **The oil seal is easily damaged by the sharp edges of the drive shaft splines. Do not let the splines contact the oil seal.**

2. Remove the drive shaft and joint shaft. (See 03-13-9 DRIVE SHAFT REMOVAL/INSTALLATION.) (See 03-13-2 JOINT SHAFT REMOVAL/INSTALLATION[LF].)
3. Remove the oil seal.
4. Using the **SST** and a hammer, tap a new oil seal in evenly until the **SST** contacts the transaxle case.
5. Coat the lip of the oil seal with transaxle oil.
6. Install the drive shaft and joint shaft. (See 03-13-9 DRIVE SHAFT REMOVAL/INSTALLATION.) (See 03-13-2 JOINT SHAFT REMOVAL/INSTALLATION[LF].)
7. Add ATF to the specified level. (See 05-17A-9 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FN4A-EL].)
8. Perform the mechanical system test. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].)



am3uuw0000103

CONTROL VALVE BODY REMOVAL[FN4A-EL]

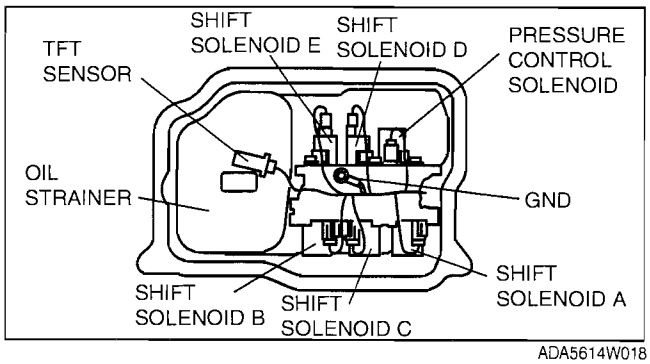
id0517a1806300

On-Vehicle Removal

Warning
- **Using compressed air can cause dirt and other particles to fly out, causing injury to the eyes. Wear protective eyeglasses whenever using compressed air.**

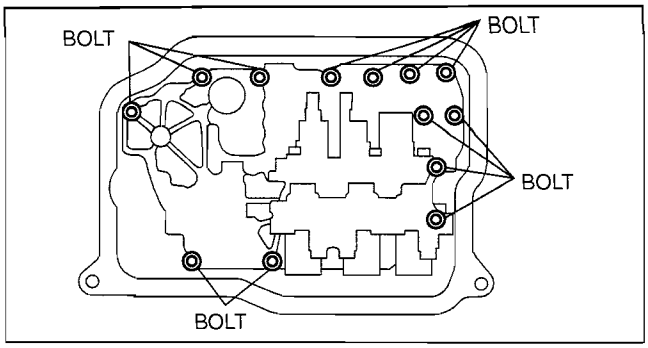
Caution
- **Clean the transaxle exterior throughout with a steam cleaner or cleaning solvents before removal.**
- **If any old sealant gets into the transaxle during installation of the oil pan, trouble may occur in the transaxle case and oil pan. Clean with cleaning fluids.**

1. Remove the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Drain the ATF into a separate suitable container. (See 05-17A-9 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FN4A-EL].)
4. Remove the under cover.
5. Remove the oil pan.
6. Disconnect the solenoid connectors and GND.
7. Remove the oil strainer.



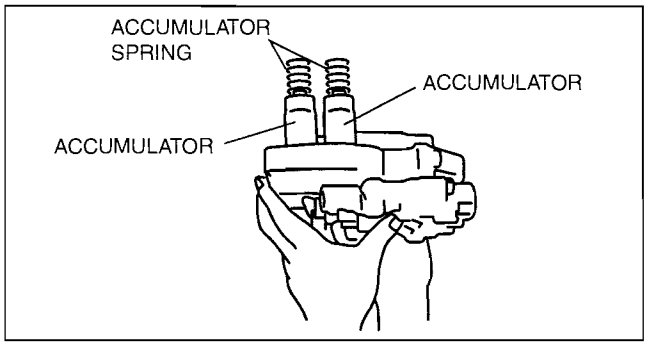
ADA5614W018

8. Remove the control valve body installation bolts as shown in the figure, then remove the control valve body component as shown in the figure.



B3E0517W074

9. Remove the accumulators and accumulator springs.



B3E0517W075

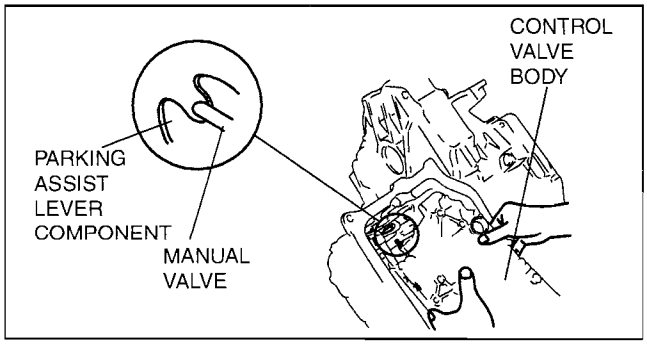
CONTROL VALVE BODY INSTALLATION[FN4A-EL]

id0517a1806200

On-Vehicle Installation

Caution

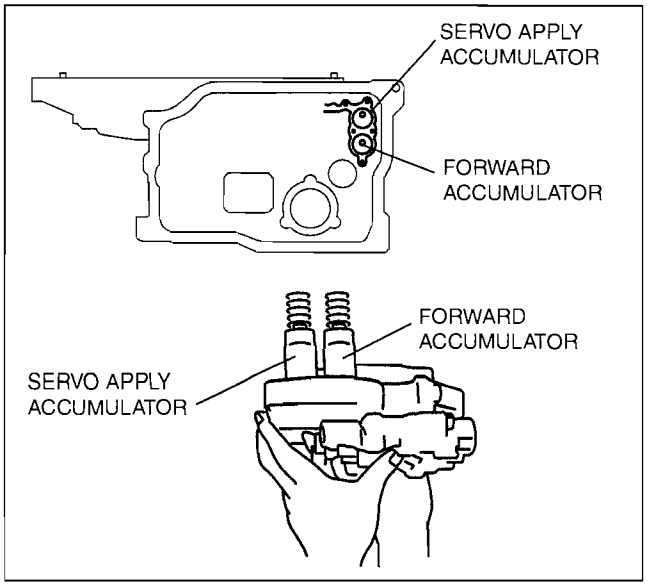
- **Be sure to align the parking rod and the manual valve.**



B6U0517W023

1. Install the accumulator springs and accumulators into the transaxle case.

Spring	Outer diameter (mm {in})	Free Length (mm {in})	No. of coils	Wire diameter (mm {in})
Servo apply accumulator large spring	21.0 {0.827}	67.8 {2.669}	10.3	3.5 {0.138}
Servo apply accumulator small spring	13.0 {0.512}	67.8 {2.669}	17.1	2.2 {0.087}
Forward accumulator large spring	21.0 {0.827}	75.0 {2.953}	10.7	2.3 {0.091}
Forward accumulator small spring	15.6 {0.614}	49.0 {1.929}	7.7	2.4 {0.094}

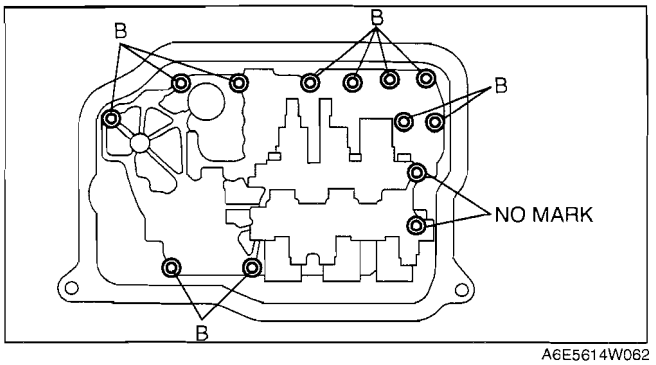


B3E0517W076

2. Install the control valve body component.

Tightening torque
7.8—10.8 N·m
{80—110 kgf·cm, 69.5—95.4 in·lbf}

Bolt length (measured from below the head)
Mark B: 40 mm {1.575 in}
No mark: 70 mm {2.756 in}

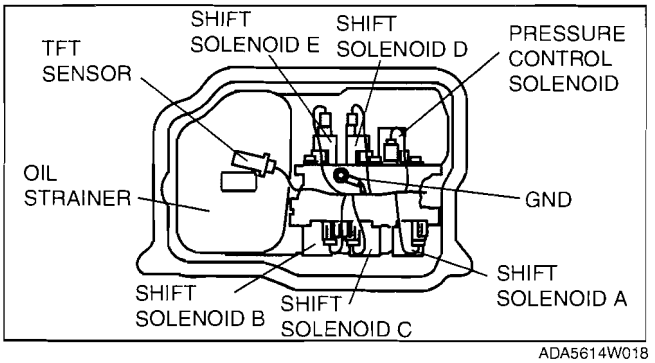


A6E5614W062

3. Install the oil strainer.

4. Match the harness colors, then connect the solenoid connectors and GND, and install the TFT sensor.

Spring	Color of connector (harness side)
Pressure control solenoid	Black
Shift solenoid A	White
Shift solenoid B	Blue
Shift solenoid C	Green
Shift solenoid D	White
Shift solenoid E	Black



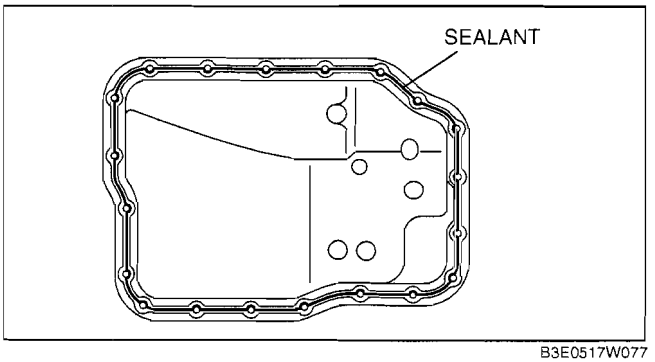
ADA5614W018

5. Install the GND.

Tightening torque
8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

6. Apply a light coat of silicon sealant to the contact surfaces of the oil pan and transaxle case.
7. Install the oil pan.

Tightening torque
6—8 N·m {62—81 kgf·cm, 53—70 in·lbf}



B3E0517W077

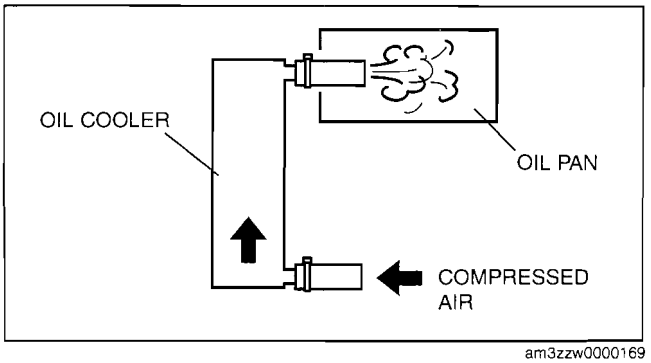
8. Install the under cover.
9. Connect the negative battery cable.
10. Install the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
11. Add ATF and with the engine idling, inspect the ATF level. (See 05-17A-9 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FN4A-EL].)
12. Perform the mechanical system test. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].)

OIL COOLER FLUSHING[FN4A-EL]

id0517a1801500

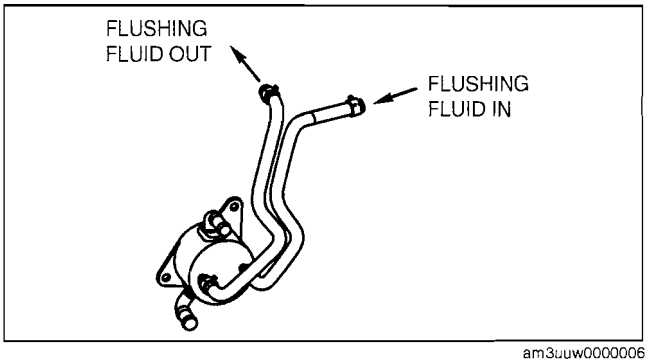
Note
- If the automatic transaxle is replaced, flush and inspect the oil cooler.
- When replacing the automatic transaxle, inspect the oil cooler together with flushing it using the following procedure, and with the oil cooler hose removed.

1. Disconnect the oil cooler hose.
2. Set a clean oil pan up to the oil cooler hose inlet.



am3zzw0000169

3. Blow **491—882 kPa {5—9 kgf/cm^2, 72—127 psi}** of compressed air from the oil cooler hose outlet to drain remaining oil.
4. Add new ATF from the oil cooler hose outlet and blow **491—882 kPa {5—9 kgf/cm^2, 72—127 psi}** of compressed air to flush. (Repeat 2 or 3 times)
5. Verify that none of the following foreign material is mixed in with the drained ATF:
   - Large metal fragments of ϕ 0.5 mm {0.02 mm} or more that cannot pass through the oil strainer
   - Fibrous clutch facing
6. Repeat the procedures from Step 3 to 4 and flush the inside of the oil cooler.



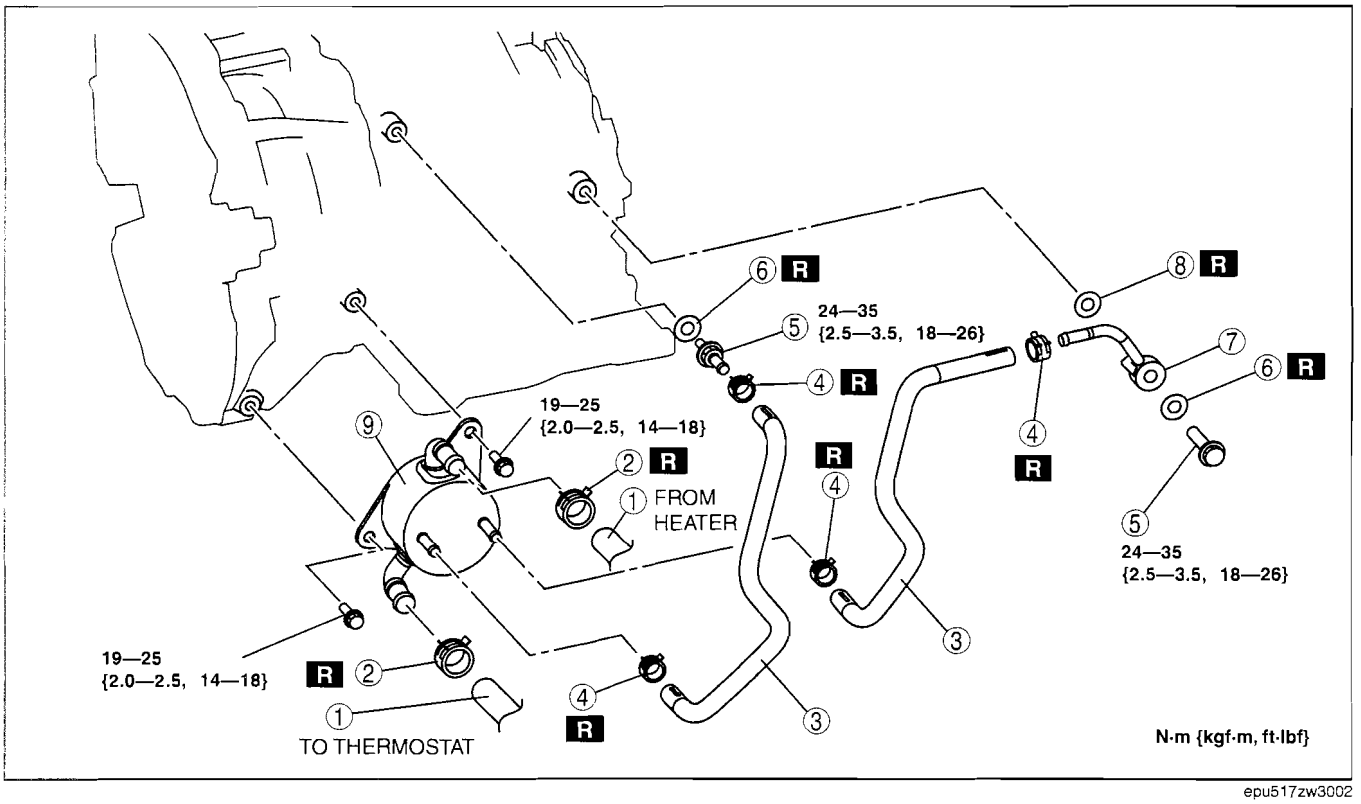
am3uuw0000006

7. If foreign material such as metal fragments or clutch facing remains even after the oil cooler is flushed repeatedly, replace the oil cooler (radiator).

OIL COOLER REMOVAL/INSTALLATION[FN4A-EL]

id0517a1801600

1. Remove the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the air cleaner component. (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[LF, L3].)
4. Remove the under cover.
5. Drain the engine coolant. (See 01-12A-3 ENGINE COOLANT REPLACEMENT[LF, L3].)
6. Drain the ATF into a container. (See 05-17A-9 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FN4A-EL].)
7. Remove in the order indicated in the table.
8. Install in the reverse order of removal.
9. Refill the engine coolant. (See 01-12A-3 ENGINE COOLANT REPLACEMENT[LF, L3].)
10. Inspect the engine coolant leakage. (See 01-12A-4 ENGINE COOLANT LEAKAGE INSPECTION[LF, L3].)
11. Add ATF to the specified level. (See 05-17A-9 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FN4A-EL].)
12. Inspect for oil leakage from the oil pipes and oil hoses.
13. Inspect for coolant from the hoses.
14. Inspect the ATF level and condition. (See 05-17A-8 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FN4A-EL].)
15. Perform the line pressure test. (See 05-17A-3 MECHANICAL SYSTEM TEST[FN4A-EL].)



epu517zw3002

1	Water hose
2	Hose clamp
3	Oil hose (See05-17A-41 Oil Pipe, Hose Clamp, Oil Hose Installation Note.)
4	Hose clamp (See 05-17A-41 Oil Pipe, Hose Clamp, Oil Hose Installation Note.)

5	Connector bolt
6	Packing
7	Oil pipe
8	Packing
9	Oil cooler (See 05-17A-41 Oil Cooler Installation Note.)

Oil Cooler Installation Note

1. The automatic transaxle oil cooler flushing must be performed whenever a transaxle is removed for service because the existing fluid may be contaminated, and to prevent contamination of new fluid.

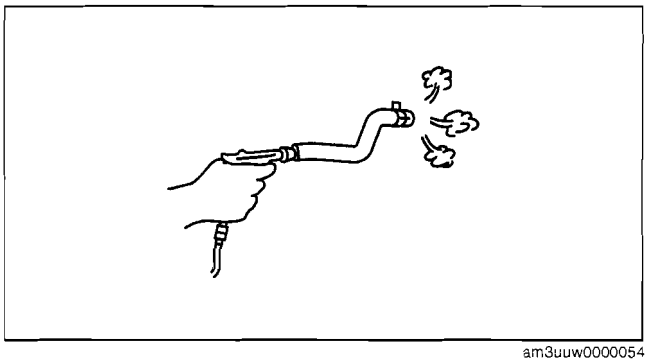
Note

- Flushing must be performed after installation of the overhauled or replaced transaxle.

2. Follow the instructions in the manufacturer's publication for flushing operation.

Oil Pipe, Hose Clamp, Oil Hose Installation Note

1. Apply compressed air to the cooler-side opening, and blow any remaining grime and foreign material from the cooler pipes. Compressed air should be applied for no **less than 1 min**.

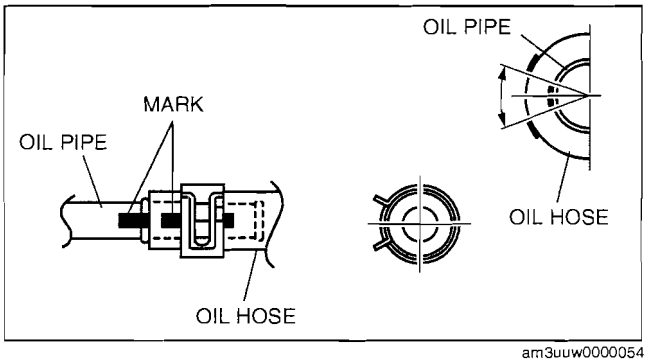


am3uuw0000054

2. Align the marks, and slide the oil hose onto the oil pipe until it is fully seated as shown.

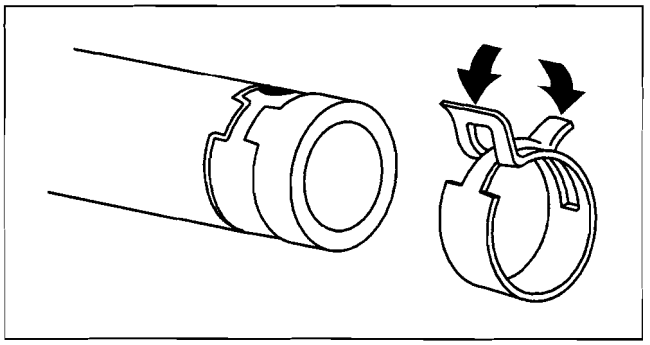
Note

- If reusing the hose, install the new hose clamp exactly on the mark left by the previous hose clamp. Then apply force to the hose clamp in the direction of the arrow in order to fit the clamp in place.



am3uuw0000054

3. Install the new hose clamp onto the hose.
4. Verify that the hose clamp does not interfere with any other components.



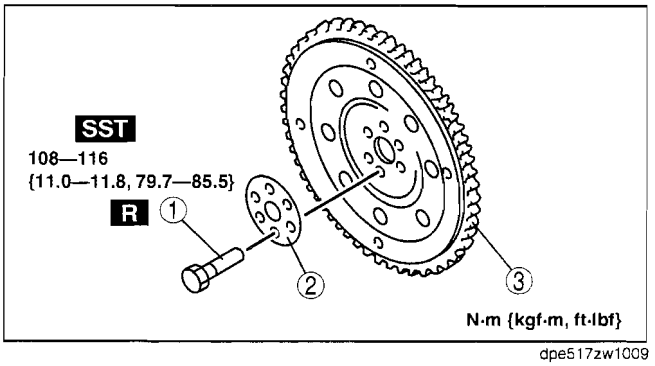
am3uuw0000054

DRIVE PLATE REMOVAL/INSTALLATION[FN4A-EL]

id0517a1802500

1. Remove the transaxle. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.

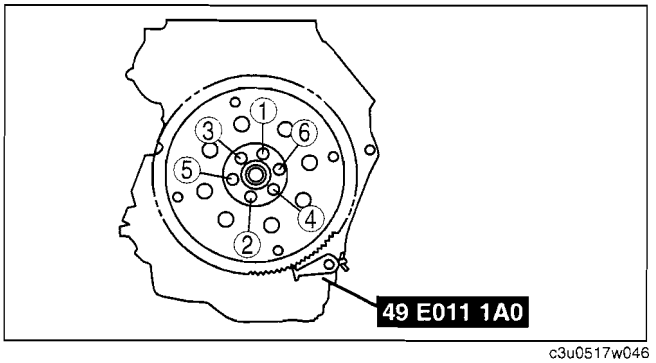
1	Drive plate mounting bolts (See 05-17A-42 Drive Plate Mounting Bolts Removal Note.)
2	Backing plate
3	Drive plate (See 05-17A-42 Drive Plate Installation Note.)



dpe517zw1009

Drive Plate Mounting Bolts Removal Note

1. Set the **SST** or equivalent against the drive plate.
2. Remove the bolts and the drive plate.



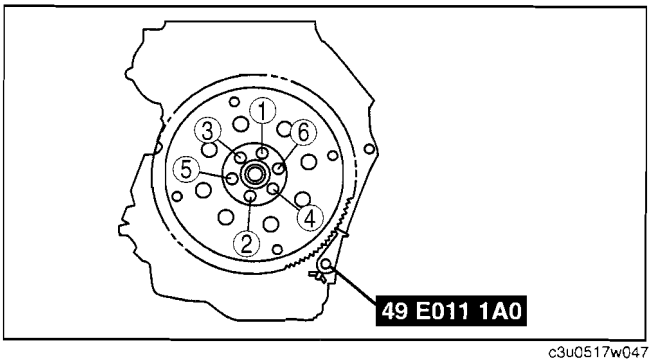
c3u0517w046

Drive Plate Installation Note

1. Remove the sealant from bolt holes in the crankshaft and from the drive plate mounting bolts.
2. Install the drive plate.
3. Install the backing plate.
4. Set the **SST** or equivalent against the drive plate.
5. Tighten the drive plate mounting bolts in two or three steps in the order as shown in the figure.

   Tightening torque
   108—116 N·m
   {11.0—11.8 kgf·m, 79.7—85.5 ft·lbf}

6. Install the transaxle. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION[FN4A-EL].)



c3u0517w047

MECHANICAL SYSTEM TEST[FS5A-EL]

id051721802100

Mechanical System Test Preparation

1. Apply the parking brake and use wheel chocks at the front and rear of the wheels.
2. Inspect the engine coolant. (See 01-12A-2 COOLING SYSTEM SERVICE WARNINGS[LF, L3].) (See 01-12A-2 ENGINE COOLANT LEVEL INSPECTION[LF, L3].)
3. Inspect the engine oil. (See 01-11A-2 ENGINE OIL LEVEL INSPECTION[LF, L3].)
4. Inspect the ATF levels. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)
5. Inspect the idle speed. (See 01-10A-37 ENGINE TUNE-UP[LF, L3].)
6. Inspect the ignition timing. (See 01-10A-37 ENGINE TUNE-UP[LF, L3].)

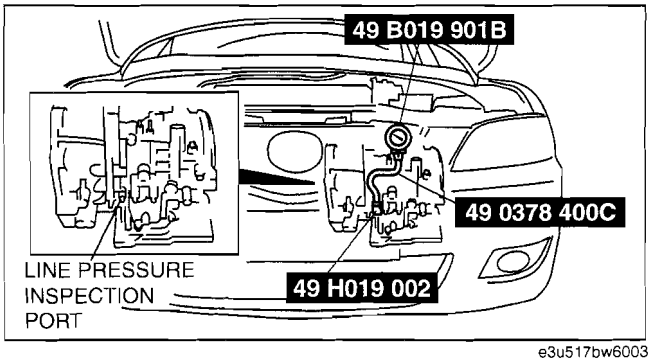
Line Pressure Test

1. Perform mechanical system test preparation. (See 05-17B-3 Mechanical System Test Preparation.)

Warning

- **Removing the square head plug when the ATF is hot can be dangerous. Hot ATF can come out of the opening and badly burn you. Before removing the square head plug, allow the ATF to cool.**

2. Connect the **SSTs** (49 H019 002 and, 49 0378 400C) to the line pressure inspection port and replace the gauge of the **SST** (49 0378 400C) with the **SST** (49 B019 901B).
3. Start the engine and warm it up until the ATF reaches **60—70 °C {140—158 °F}**.
4. Shift the selector lever to the D range.
5. Read the line pressure while the engine is idling for the D range.
6. Read the line pressure while the engine is idling for the R position and M (1GR, 2GR) range in the same manner as in Steps 4—5.
7. Stop the engine, then replace the **SST** (49 B019 901B) with the gauge of the **SST** (49 0378 400C).
8. Start the engine.
9. Firmly depress the brake pedal with the left foot.
10. Shift the selector lever to the D range.



e3u517bw6003

Caution

- **If the accelerator pedal is pressed for more than 5 s while the brake pedal is pressed, the transaxle could be damaged. Therefore, perform Steps 11 and 12 within 5 s.**

11. Gradually depress the accelerator pedal with the right foot.
12. When the engine speed no longer increases, quickly read the line pressure and release the accelerator pedal.
13. Shift the selector lever to the N position and idle the engine for **1 min or more** to cool the ATF.
14. Read the line pressure at the engine stall speed for the M (1GR, 2GR) range and R position in the same manner as in Steps 9—13.

Line pressure specification

Position/range	Line pressure (kPa {kgf/cm^2, psi})	
	Idle	Stall
D, M (1GR, 2GR)	330—470 {3.4—4.8, 48—68}	1,200—1,320 {12.2—13.5, 174—191}
R	490—710 {5.0—7.2, 71—102}	1,640—1,860 {16.8—18.9, 238—269}

Warning

- **Removing the SST when the ATF is hot can be dangerous. Hot ATF can come out of the opening and badly burn you. Before removing the SST, allow the ATF to cool.**

15. Remove the **SSTs**.
16. Install a new square head plug in the inspection port.

Tightening torque

4.8—9.8 N·m {49—99 kgf·cm, 43—85 in·lbf}

Evaluation of line pressure test

Condition	Possible cause
Low pressure in all positions/ranges	• Worn oil pump • Oil leaking from oil pump, control valve body, and/or transaxle case • Pressure regulator valve stuck • Pressure control solenoid malfunction • Solenoid reducing valve stuck
Low pressure in D, M (1GR, 2GR) only	• Oil leaking from forward clutch hydraulic circuit
Low pressure in M (2GR) only	• Oil leaking from 2-4 brake band hydraulic circuit
Low pressure in M (1GR), R only	• Oil leaking from low and reverse brake hydraulic circuit
Low pressure in R only	• Oil leaking from reverse clutch hydraulic circuit
Higher pressure in all positions/ranges	• Pressure control solenoid malfunction and/or open harness • Pressure regulator valve stuck • TCM malfunction

Stall Test

1. Perform mechanical system test preparation. (See 05-17B-3 Mechanical System Test Preparation.)
2. Start the engine and shift the selector lever to R position.

Caution

- **Do not maintain WOT in any position/range for more than 5 seconds, or transaxle damage will occur.**

3. Firmly depress the brake pedal with the left foot, and depress the accelerator pedal to floor (WOT) with the right.
4. When the engine speed no longer increases, quickly read the engine speed and release the accelerator pedal.
5. Shift the selector lever to N position and let the engine idle for **1 minute** or more to cool the ATF.
6. Perform stall tests of D, M (1GR, 2GR) ranges in the same manner.
7. Turn off the engine.

Engine stall speed

Position/range	Engine stall speed (rpm)
D, M (1GR, 2GR)	2,200—2,800
R	

Evaluation of stall test

Condition		Possible cause
Above specification	Insufficient line pressure, torque converter pressure	• Worn oil pump
		• Oil leaking from oil pump, control valve, and/or transaxle case
		• Pressure regulator valve sticking
		• Converter relief valve sticking
		• Pressure control solenoid malfunction
	In D, M (1GR, 2GR) ranges	• Forward clutch slipping
	In M (2GR) range	• 2-4 brake band slipping
	In M (1GR) range and R position	• Low and reverse brake slipping
	In R position	• Low and reverse brake slipping • Reverse clutch slipping • Perform road test to determine whether problem is in low and reverse brake or reverse clutch • Engine braking felt in M (1GR) range: Reverse clutch is defective. • Engine braking not felt in M (1GR) range: Low and reverse brake is defective.
Below specification		• Engine lack of power

Time Lag Test

1. Perform mechanical system test preparation. (See 05-17B-3 Mechanical System Test Preparation.)
2. Start the engine and warm up the engine until the ATF temperature reaches **60—70 °C {141— 158 °F}**.
3. Shift the selector lever from N position to D range.
4. Use a stopwatch to measure the time it takes from shifting until engagement is felt. Take 3 measurements for each test and average the results using the following formula.

Formula

$$\text{Average time lag} = \frac{\text{Time 1} + \text{Time 2} + \text{Time 3}}{3}$$

x3u517wd8

5. Perform the test for the following shifts in the same manner.
   - N position→R position

Average time lag

N position→D range: 0.4—0.7 sec.
N position→R position: 0.4—0.7 sec.

Evaluation of time lag test

Condition		Possible cause
N→D shift	More than specification	• Low line pressure • Forward clutch slipping • Oil leaking from forward clutch fluid circuit • Shift solenoid A not operating properly
	Less than specification	• Forward accumulator not operating properly • Shift solenoid A not operating properly • Excessive line pressure
N→R shift	More than specification	• Low line pressure • Low and reverse brake slipping • Reverse clutch slipping • Shift solenoid B not operating properly
	Less than specification	• Servo apply accumulator not operating properly • Shift solenoid B not operating properly • Excessive line pressure

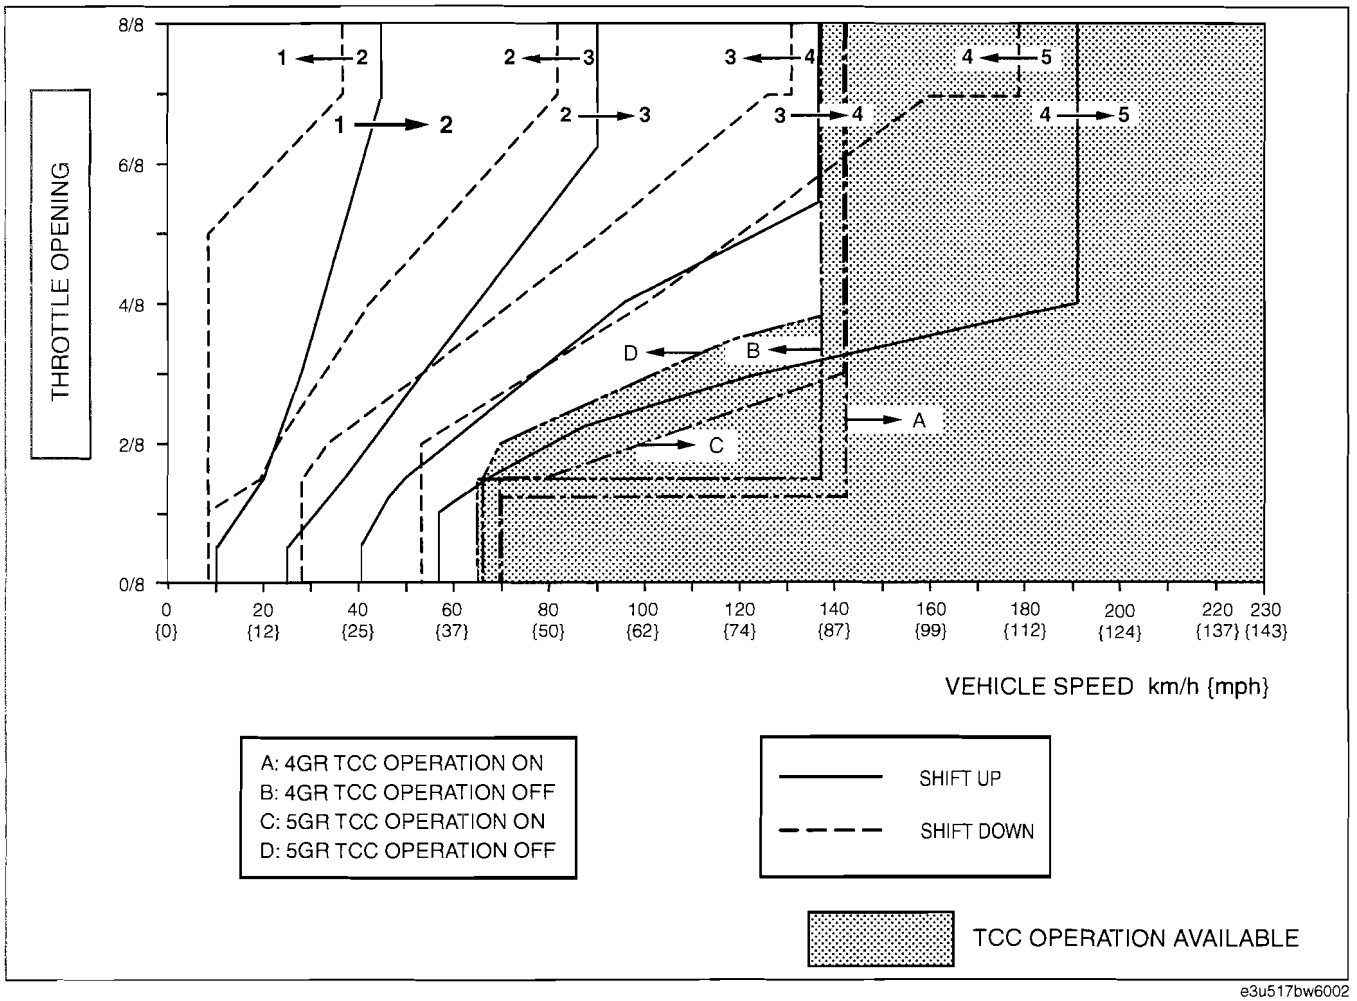
ROAD TEST[FS5A-EL]

id051721802200

Road Test Preparation

1. Inspect the engine coolant. (See 01-12A-2 COOLING SYSTEM SERVICE WARNINGS[LF, L3].) (See 01-12A-2 ENGINE COOLANT LEVEL INSPECTION[LF, L3].)
2. Inspect the engine oil level. (See 01-11A-2 ENGINE OIL LEVEL INSPECTION[LF, L3].)
3. Inspect the ATF level. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)
4. Inspect the idle speed. (See 01-10A-37 ENGINE TUNE-UP[LF, L3].)
5. Inspect the ignition timing. (See 01-10A-37 ENGINE TUNE-UP[LF, L3].)
6. Bring up the engine and transaxle to normal operating temperature.

Shift Diagram
D range (normal mode)



e3u517bw6002

D Range Test

1. Perform road test preparation. (See 05-17B-6 Road Test Preparation.)
2. Shift the selector lever to D range.
3. Accelerate the vehicle at half and wide open.
4. Verify that 1→2, 2→3, 3→4 and 4→5 upshifts and downshifts are obtained. The shift points must be as shown in the table below.
   - If there is any malfunction, inspect the TCM and ATX. (See 05-17B-36 TCM INSPECTION[FS5A-EL].) (See ATX Workshop Manual.)
5. Drive the vehicle in 5GR, 4GR, 3GR, and 2GR and verify that kickdown occurs for 5→4, 4→3, 3→2, 2→1 downshifts, and that the shift points are as shown in the table below.
   - If there is any malfunction, inspect the TCM and ATX. (See 05-17B-36 TCM INSPECTION[FS5A-EL].) (See ATX Workshop Manual.)
6. Decelerate the vehicle and verify that engine braking effect is felt in 2GR, 3GR, 4GR and 5GR.
   - If there is any malfunction, inspect the TCM and ATX. (See 05-17B-36 TCM INSPECTION[FS5A-EL].) (See ATX Workshop Manual.)
7. Drive the vehicle and verify that TCC operation is obtained. The operation points must be as shown in the table below.
   - If there is any malfunction, inspect the TCM and ATX. (See 05-17B-36 TCM INSPECTION[FS5A-EL].) (See ATX Workshop Manual.)

Vehicle speed at shift point table

Range	Mode	Throttle condition	Shift	Vehicle speed (km/h {mph})	Turbine speed (rpm)
D	NORMAL	Wide open throttle	$D_1 \rightarrow D_2$	44—49 {28—30}	5,250—5,950
			$D_2 \rightarrow D_3$	88—95 {55—58}	5,700—6,150
			$D_3 \rightarrow D_4$	134—144 {84—89}	5,800—6,200
			TCC ON (D_4)	139—149 {87—92}	4,400—4,650
			$D_4 \rightarrow D_5$	189—198 {118—122}	5,950—6,200
			TCC ON (D_5)	139—149 {87—92}	3,250—3,450
		Half throttle	$D_1 \rightarrow D_2$	28—36 {18—22}	3,450—4,350
			$D_2 \rightarrow D_3$	56—72 {35—44}	3,600—4,700
			$D_3 \rightarrow D_4$	84—114 {53—70}	3,650—4,900
			TCC ON (D_4)	133—151 {83—93}	4,200—4,700
			$D_4 \rightarrow D_5$	140—174 {87—107}	4,400—5,450
			TCC ON (D_5)	133—151 {83—93}	3,100—3,500
		Closed throttle position	$D_5 \rightarrow D_4$	50—56 {31—34}	1,200—1,300
			$D_4 \rightarrow D_3$	25—31 {16—19}	800—950
			$D_3 \rightarrow D_2$	5—11 {4—6}	250—450
			$D_2 \rightarrow D_1$	5—11 {4—6}	350—700
			$D_3 \rightarrow D_1$	5—11 {4—6}	250—450
		Kickdown	$D_5 \rightarrow D_4$	174—183 {108—113}	4,050—4,250
			$D_4 \rightarrow D_3$	126—135 {79—83}	3,950—4,250
			$D_3 \rightarrow D_2$	78—85 {49—52}	3,350—3,650
			$D_2 \rightarrow D_1$	34—39 {22—24}	2,150—2,500
	POWER	Wide open throttle	$D_1 \rightarrow D_2$	44—49 {28—30}	5,250—5,950
			$D_2 \rightarrow D_3$	88—95 {55—58}	5,700—6,150
			$D_3 \rightarrow D_4$	135—144 {84—89}	5,850—6,200
		Half throttle	$D_1 \rightarrow D_2$	30—38 {19—23}	3,700—4,600
			$D_2 \rightarrow D_3$	61—80 {38—49}	3,950—5,150
			$D_3 \rightarrow D_4$	89—117 {56—72}	3,850—5,050
		Closed throttle position	$D_4 \rightarrow D_3$	32—38 {20—23}	1,050—1,150
			$D_3 \rightarrow D_2$	5—11 {4—6}	250—450
			$D_2 \rightarrow D_1$	5—11 {4—6}	350—700
			$D_3 \rightarrow D_1$	5—11 {4—6}	250—450
		Kickdown	$D_4 \rightarrow D_3$	126—135 {79—83}	3,950—4,250
			$D_3 \rightarrow D_2$	78—85 {49—52}	3,350—3,650
			$D_2 \rightarrow D_1$	34—39 {22—24}	2,150—2,500

M Range Test

1. Perform road test preparation. (See 05-17B-6 Road Test Preparation.)
2. Shift the selector lever to M range.
3. Verify that 1→2, 2→3, 3→4 and 4→5 upshifts and 5→4, 4→3, 3→2, and 2→1 downshifts are obtained by manual shifting of the selector lever forward and back.
   - If there is any malfunction, inspect the TCM and ATX. (See 05-17B-36 TCM INSPECTION[FS5A-EL].) (See ATX Workshop Manual.)
4. Decelerate the vehicle and verify that 5→4, 4→3 3→2, 2→1 and 3→1 downshifts are obtained. The shift points must be as shown in the table below.
   - If there is any malfunction, inspect the TCM and ATX. (See 05-17B-36 TCM INSPECTION[FS5A-EL].) (See ATX Workshop Manual.)
5. Decelerate the vehicle and verify that engine braking effect is felt in all gears.
   - If there is any malfunction, inspect the TCM and ATX. (See 05-17B-36 TCM INSPECTION[FS5A-EL].) (See ATX Workshop Manual.)

6. Drive the vehicle and verify that TCC operation is obtained in 4GR and 5GR. The operation points must be as shown in the table below.
   - If there is any malfunction, inspect the TCM and ATX. (See 05-17B-36 TCM INSPECTION[FS5A-EL].) (See ATX Workshop Manual.)

Vehicle speed at shift point table

Range	Mode	Throttle condition	Shift	Vehicle speed km/h {mph}	Turbine speed (rpm)
M	Manual	Half throttle	TCC ON (M_4)	133—151 {83—93}	4,200—4,700
			TCC ON (M_5)	137—147 {85—91}	3,200—3,400
		All round	$M_5 \rightarrow M_4$	27—33 {17—20}	650—750
			$M_4 \rightarrow M_3$	27—33 {17—20}	850—1,000
			$M_3 \rightarrow M_2$	7—13 {5—8}	350—550
			$M_2 \rightarrow M_1$	7—13 {5—8}	500—800
			$M_3 \rightarrow M_1$	7—13 {5—8}	350—550
		Kickdown	$M_5 \rightarrow M_4$	177—187 {110—115}	4150—4350
			$M_4 \rightarrow M_3$	128—138 {80—85}	4050—4300
			$M_3 \rightarrow M_2$	44—52 {28—32}	1950—2200
			$M_2 \rightarrow M_1$	9—15 {6—9}	600—950

P Position Test

1. Shift into P position on a gentle slope. Release the brake and verify that the vehicle does not roll.
   - If the vehicle rolls, inspect the ATX. (See ATX Workshop Manual.)

AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL]

id051721800500

Automatic Transaxle Fluid (ATF) Condition Inspection

1. One way of determining whether the transaxle should be disassembled is by noting:
   - If the ATF is muddy or varnished.
   - If the ATF smells strange or unusual.

ATF Condition

Condition			Possible cause
Clear red		Normal	—
Light red: pink		Contaminated with water	• Broken oil cooler inside of radiator • Poor filler tube installation: Problem could be occurring to parts inside the transaxle by water contamination. It is necessary to overhaul transaxle and detect defected parts. If necessary, exchange transaxle.
Reddish brown	Has burnt smell and metal specks are found	Deteriorated ATF	Defect powertrain components inside of transaxle: Specks cause wide range of problems by plugging up in oil pipe, control valve body and oil cooler in radiator. • When large amount of metal specks are found, overhaul transaxle and detect defected parts. If necessary, exchange transaxle. • Implement flushing operation as there is a possibility to have specks plugging up oil pipe and/or oil cooler inside of radiator.
	Has no burnt smell	Normal	• Discoloration by oxidation

Automatic Transaxle Fluid (ATF) Level Inspection

Caution
- **If there is no ATF adhering to the dipstick after warming up the engine, there is insufficient ATF. Therefore do not drive the vehicle as it could damage the ATX.**
- **If a final inspection of the ATF level is performed without driving the vehicle, or the ATF amount is inspected while the ATF temperature is not at about 60—70 °C {140—158 °F}, the ATX could be damaged because the ATF level inspection would be incorrect.**
- **If too much ATF is added, the ATF temperature will increase and oil could leak from the breather hose.**

Note
- The dipstick of the FS5A-EL type measures the ATF level on the differential side and, under the condition that the ATF temperature on the differential side does not rise even after warming up the engine, ATF adhering to the end of the dipstick is normal.

1. Park the vehicle on level ground.
2. Apply the parking brake and position wheel chocks securely to prevent the vehicle from rolling.
3. Verify visually that there is no ATF leakage from the oil hose or housing.

Caution
- **If the oil level decreases dramatically while warming up the engine, do not shift the selector lever as it could damage the ATX.**

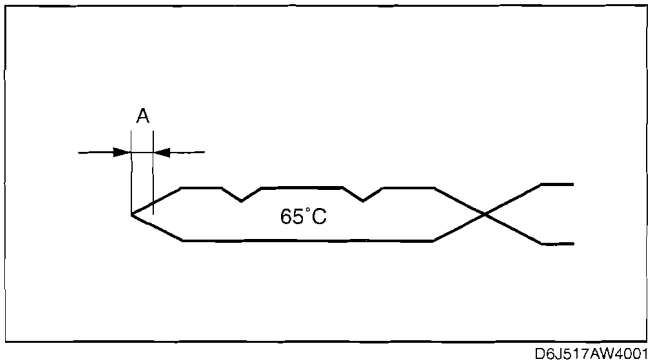
4. Start the engine and warm it up in the P position.
5. Verify that the ATF level is in the range while the engine is idling.

ATF adherence range
A: Within 5 mm {0.197 in}

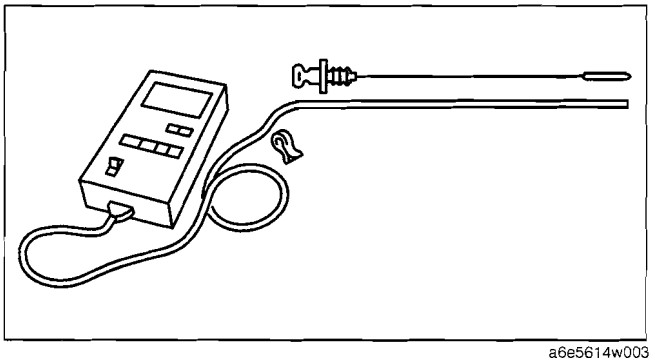
- If necessary, add ATF to the specification.

ATF type
ATF M-V

6. Shift the selector lever and pause momentarily in each range (P—M) while depressing the brake pedal.
7. Shift the selector lever to P position.
8. Drive on city roads at a minimum of 5 km.
9. Adjust the length or thermometer probe so that the length is the same as the depth gauge, and hold the probe with a paper holder. Insert into the filler tube and measure the temperature.
10. Warm up the engine until the ATF reaches **60—70 °C {140—158 °F}**.



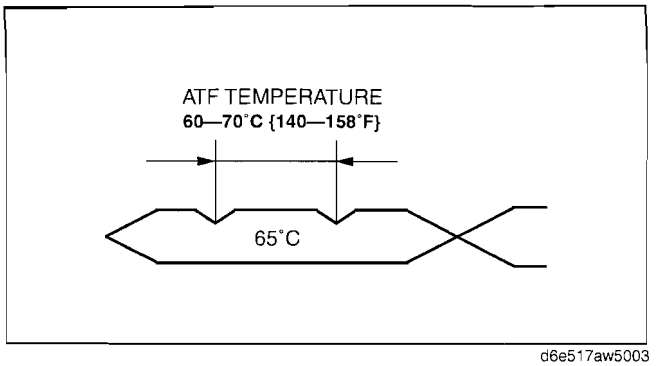
D6J517AW4001



a6e5614w003

11. Verify that the ATF level is in the range while the engine is idling.
    - If necessary, add ATF to the specification.

ATF type
ATF M-V



d6e517aw5003

AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FS5A-EL]

id051721800600

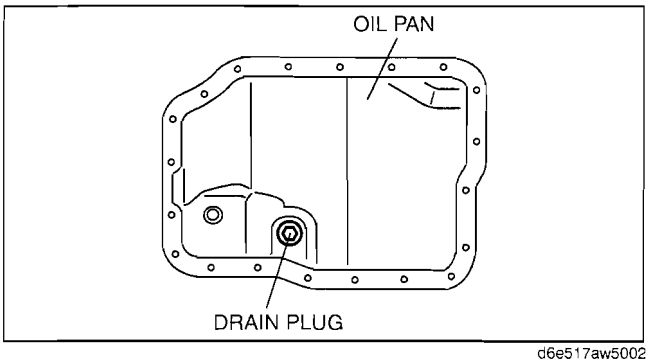
Warning
- **When the transaxle and ATF are hot, they can badly burn you. Turn off the engine and wait until they are cool before changing the ATF.**

1. Remove the oil dipstick.
2. Remove the oil drain plug and washer.
3. Drain the ATF into a container.
4. Install a new washer and drain plug.

Tightening torque
29.4—41.2 N·m {3.0—4.2 kgf·m, 22—30 ft·lbf}

5. Add the specified ATF until ATF level reaches lower notch of dipstick type of ATF through the oil filler tube.

ATF type
ATF M-V



d6e517aw5002

Capacity (approx. quantity)
Draining ATF from drain plug: 3.0 L {3.2 US qt, 2.4 Imp qt}
Overhauling ATX: 5.0 L {5.3 US qt, 4.4 Imp qt}

6. Adjust the ATF amount to within the specified range according to the ATF inspection procedure. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)

Note
- The full amount of ATF for the ATX is as follows

Capacity (approx. quantity)
8.14 L {8.6 US qt, 7.2 Imp qt}

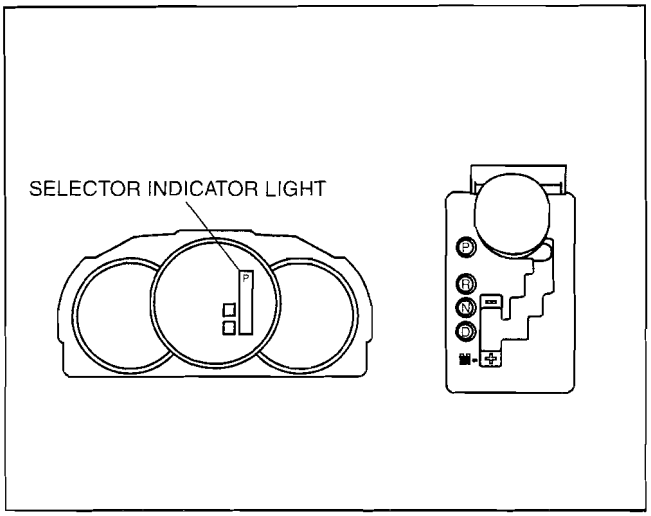
TRANSAXLE RANGE (TR) SWITCH INSPECTION[FS5A-EL]

id051721800900

Operating Inspection

1. Verify that the starter operates only when the ignition switch is turned to the START position with the selector lever in P or N position.
   - If there is any malfunction, adjust the TR switch.
2. Verify that the back-up lights illuminate when shifted to R position with the ignition switch at the ON position.
   - If there is any malfunction, adjust the TR switch.

3. Verify that the positions of the selector lever and the indicator are aligned.
   - If there is any malfunction, adjust the TR switch.

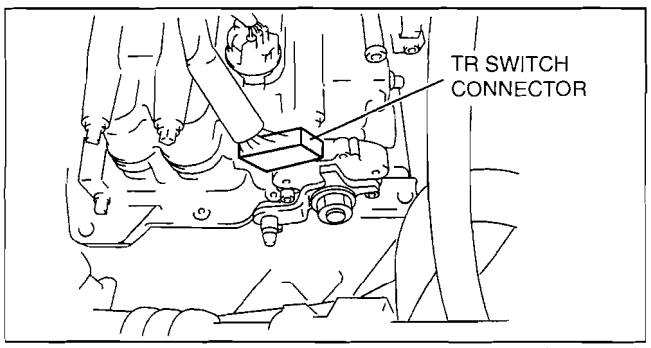


B3E0518W002

Continuity Inspection

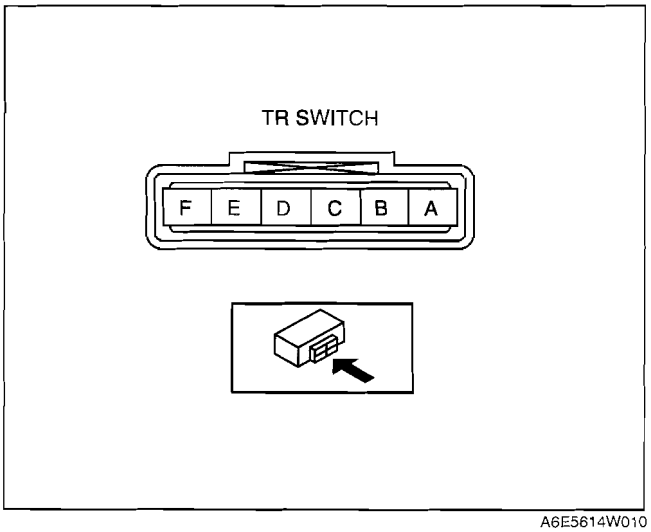
Caution
- **Water or foreign material entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign material on the connector when disconnecting it.**

1. Remove the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the under cover.
4. Disconnect the TR switch connector.



d6e517aw5004

5. Verify that the continuity is as indicated in the table.
   - If there is any malfunction, adjust the TR switch and go to Step 5.



A6E5614W010

○—○ : Continuity

Position/Range	Connector terminal			
	A	F	D	E
P	○—○			
R			○—○	
N	○—○			
D				

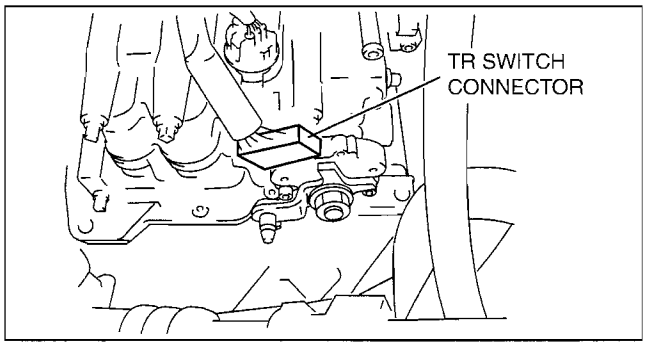
B3E0517W006

6. Reinspect for continuity at TR switch.
   - If there is any malfunction, replace the TR switch. (See 05-17B-14 TRANSAXLE RANGE (TR) SWITCH REMOVAL/INSTALLATION[FS5A-EL].)
7. Connect the TR switch connector.
8. Install the under cover.
9. Connect the negative battery cable.
10. Install the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)

Resistance Inspection (On-Vehicle Inspection)

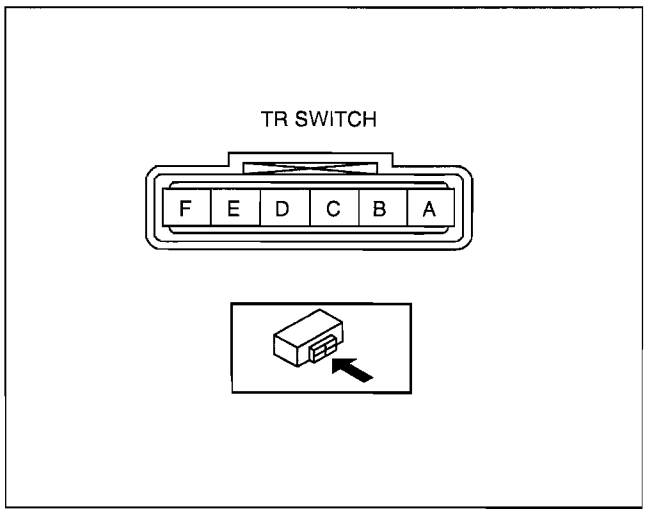
Caution
- **Water or foreign material entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign material on the connector when disconnecting it.**

1. Remove the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the under cover.
4. Disconnect the TR switch connector.



d6e517aw5004

5. Measure the resistance between the following terminals.
   - If there is any malfunction, inspect the ground, then perform the operating inspection.



A6E5614W010

Transaxle range (TR) switch

Terminal	Position/Range	Resistance (ohm)
B—C	P	4,085—4,515
	R	1,425—1,575
	N	713—788
	D	371—409

6. Connect the TR switch connector.
7. Install the under cover.
8. Connect the negative battery cable.
9. Install the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)

TRANSAXLE RANGE (TR) SWITCH REMOVAL/INSTALLATION[FS5A-EL]

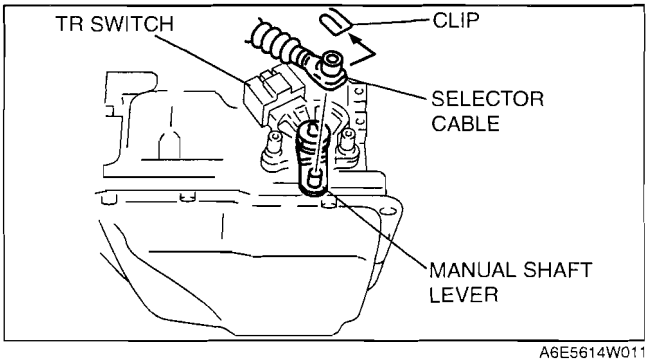
id051721804000

1. Remove the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the under cover.

Caution
- **Water or foreign material entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign material on the connector when disconnecting it.**

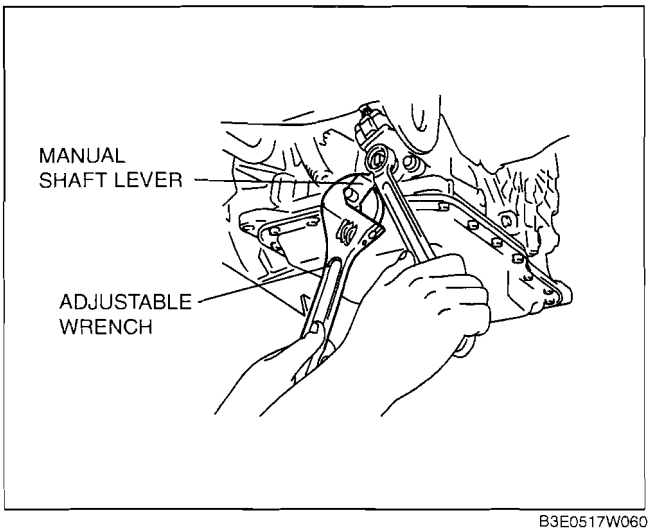
4. Disconnect the TR switch connector.
5. Remove the clip and disconnect the selector cable.

Caution
- **Do not use an impact wrench. Hold the manual shaft lever when removing the manual shaft nut, or the transaxle may be damaged.**



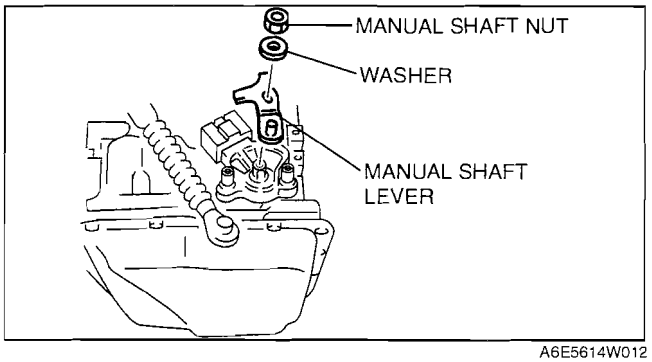
A6E5614W011

6. Set the adjustable wrench as shown in the figure to hold the manual shaft lever.
7. Remove the manual shaft nut and washer.



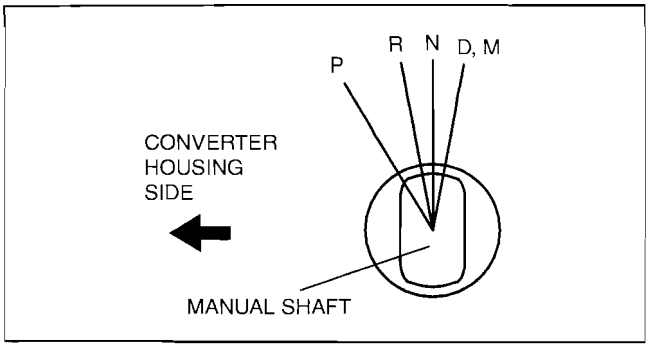
B3E0517W060

8. Remove the manual shaft lever.
9. Remove the TR switch.



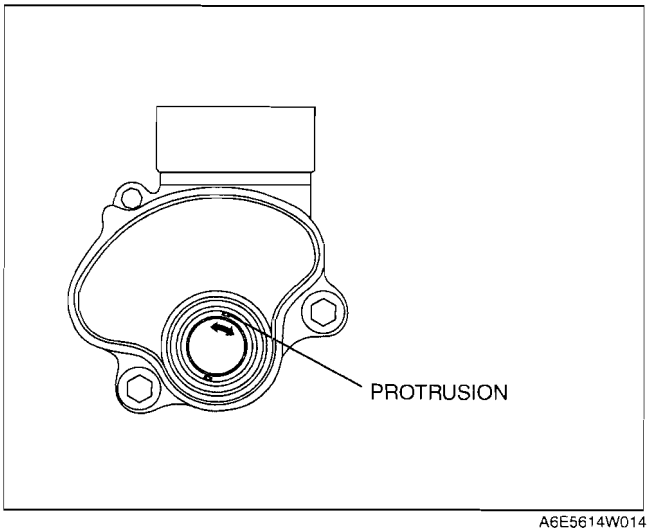
A6E5614W012

10. Rotate the manual shaft to the converter housing side fully, then return two notches to set the N position.

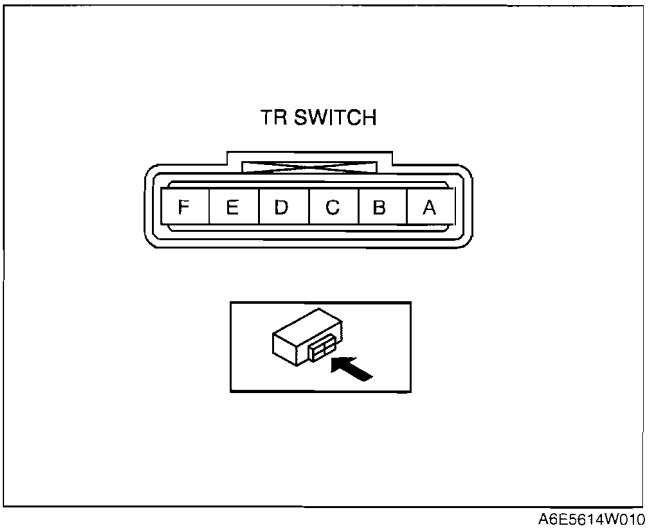


c3u0517w095

11. Turn the protrusion between the TR switch terminals B and C until the resistance becomes **750 ohms**.

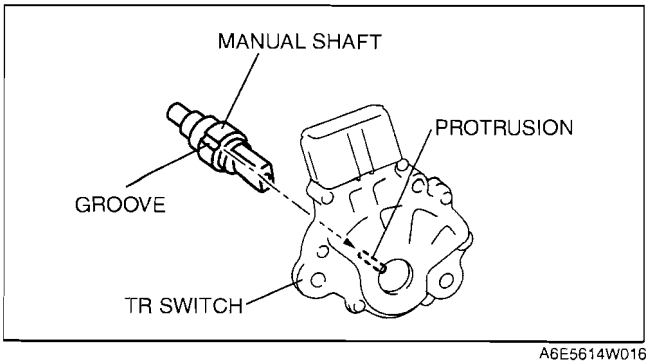


A6E5614W014



A6E5614W010

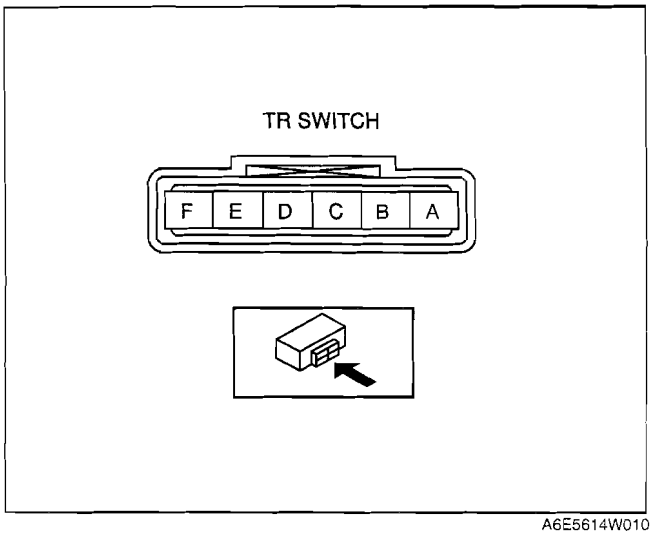
12. Install the TR switch while aligning the protrusion and groove as shown in the figure.
13. Hand-tighten the TR switch mounting bolts.



A6E5614W016

14. Inspect the resistance between the TR switch terminals B and C.
    - If there is any malfunction, readjust the TR switch. (See 05-17B-17 TRANSAXLE RANGE (TR) SWITCH ADJUSTMENT[FS5A-EL].)

    Resistance
    750 ohms



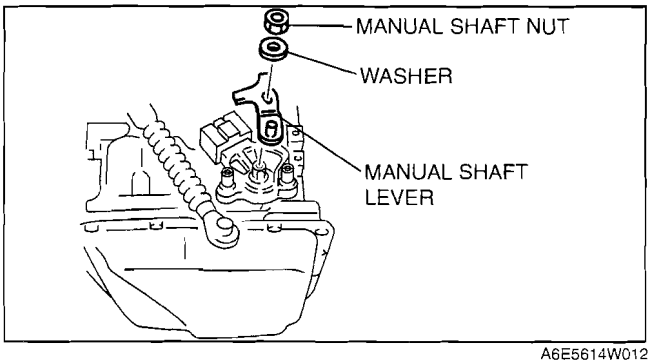
A6E5614W010

15. Tighten the TR switch mounting bolts.

    Tightening torque
    8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

    Caution
    - **Do not use an impact wrench. Hold the manual shaft lever when removing the manual shaft nut, or the transaxle may be damaged.**

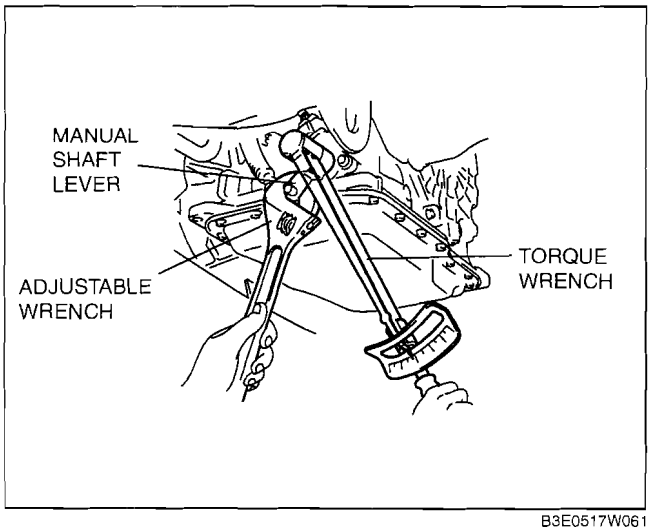
16. Install the manual shaft lever and the washer.



A6E5614W012

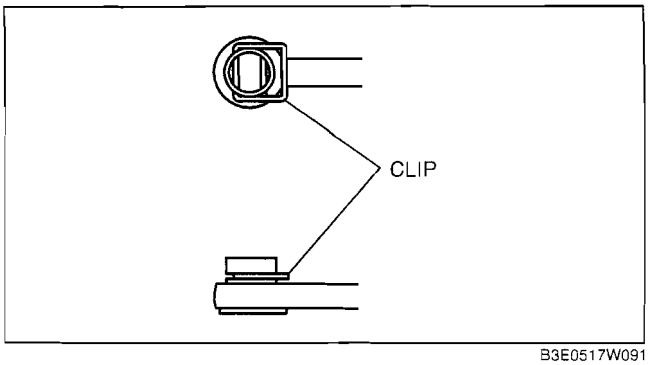
17. Set the adjustable wrench as shown in the figure to hold the manual shaft lever, and tighten the manual shaft nut.

    Tightening torque
    31.4—46.1 N·m
    {3.2—4.7 kgf·m, 23.2—33.9 ft·lbf}



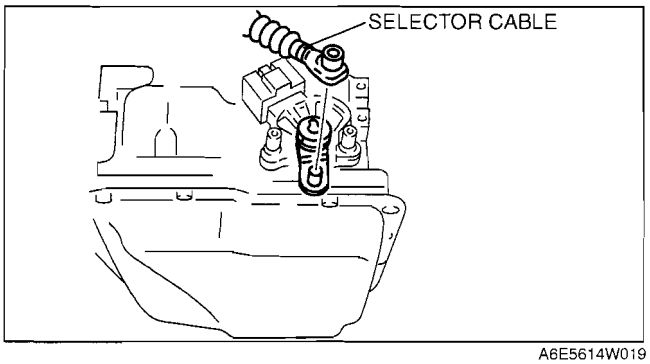
B3E0517W061

18. Install the clip to the selector cable as shown in the figure.
19. Shift the selector lever to P position.
20. Turn the manual shaft lever to P position.



B3E0517W091

21. Connect the selector cable.
22. Inspect for continuity at the TR switch. (See 05-17B-11 TRANSAXLE RANGE (TR) SWITCH INSPECTION[FS5A-EL].)
    - If there is any malfunction, readjust the TR switch. (See 05-17B-17 TRANSAXLE RANGE (TR) SWITCH ADJUSTMENT[FS5A-EL].)
23. Connect the TR switch connector.
24. Install the under cover.
25. Connect the negative battery cable.
26. Install the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)



A6E5614W019

27. Inspect operation of the TR switch. (See 05-17B-11 TRANSAXLE RANGE (TR) SWITCH INSPECTION[FS5A-EL].)
    - If there is any malfunction, readjust the TR switch. (See 05-17B-17 TRANSAXLE RANGE (TR) SWITCH ADJUSTMENT[FS5A-EL].)

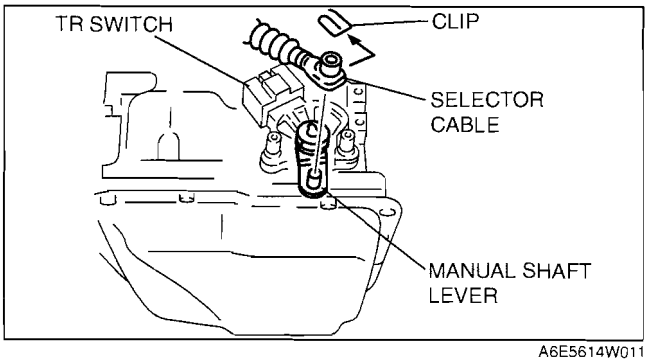
TRANSAXLE RANGE (TR) SWITCH ADJUSTMENT[FS5A-EL]

id051721803700

1. Remove the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the under cover.

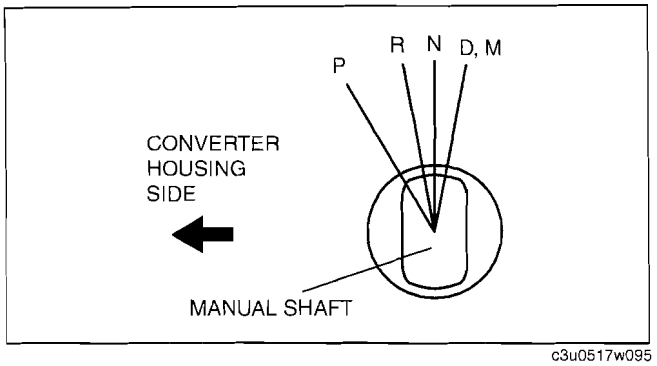
Caution
- **Water or foreign material entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign material on the connector when disconnecting it.**

4. Remove the clip and disconnect the selector cable.



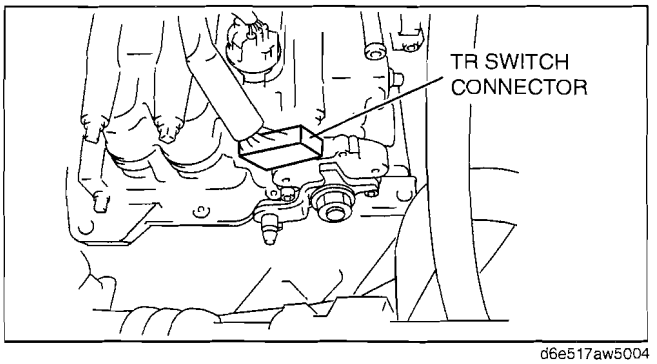
A6E5614W011

5. Rotate the manual shaft to the converter housing side fully, then return two notches to set the N position.



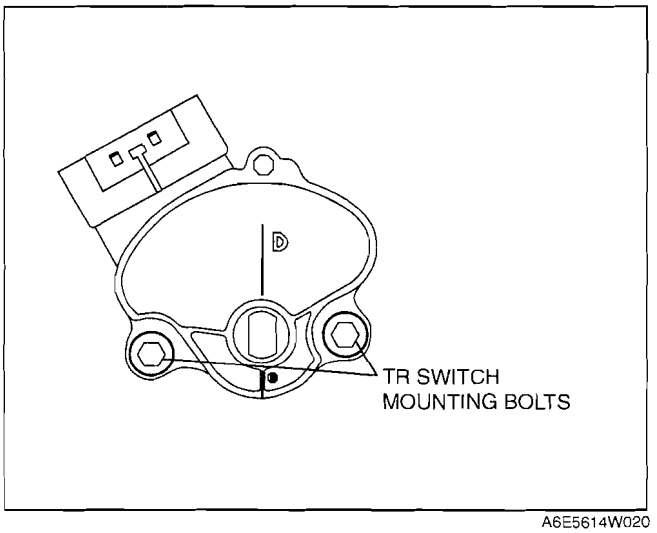
c3u0517w095

6. Disconnect the TR switch connector.



d6e517aw5004

7. Loosen the TR switch mounting bolts.



A6E5614W020

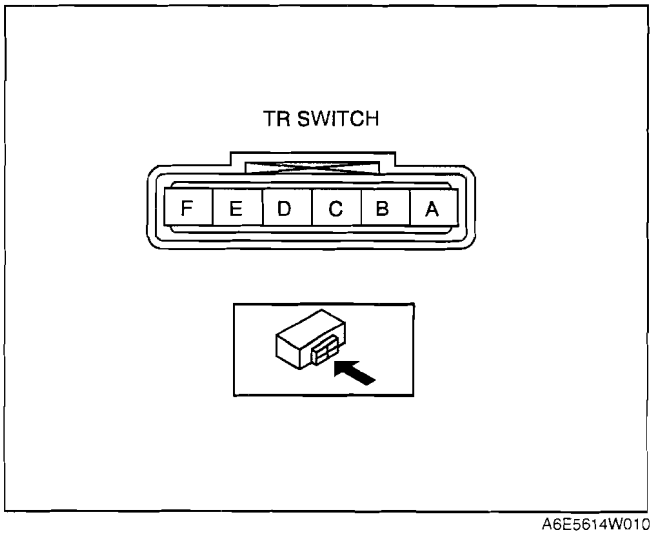
8. Measure the resistance between the TR switch terminals B and C.
9. Adjust the switch to the point as follows.

Resistance
750 ohms

10. Tighten the TR switch mounting bolts.

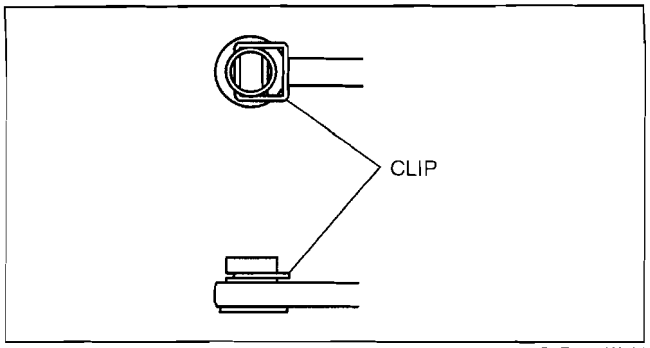
Tightening torque
8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

11. Move the selector lever to N position.
12. Verify that the TR switch is aligned with N position.
13. Connect the TR switch connector.



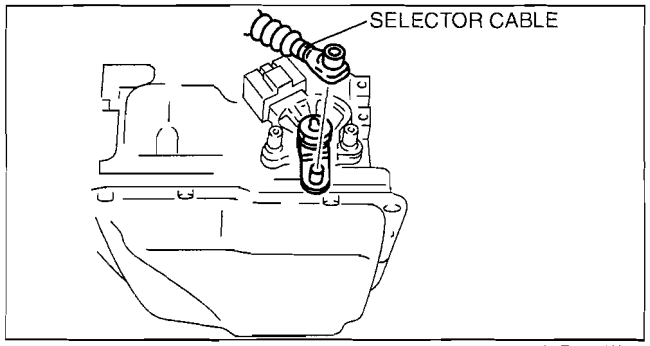
A6E5614W010

14. Install the clip to the selector cable as shown in the figure.



B3E0517W091

15. Connect the selector cable to the manual shaft lever as shown in the figure.
16. Inspect the TR switch operation. (See 05-17B-11 TRANSAXLE RANGE (TR) SWITCH INSPECTION[FS5A-EL].)
    - If there is any malfunction, readjust the TR switch.
17. Install the under cover.
18. Connect the negative battery cable.
19. Install the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)



A6E5614W019

TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR INSPECTION[FS5A-EL]

id051721801000

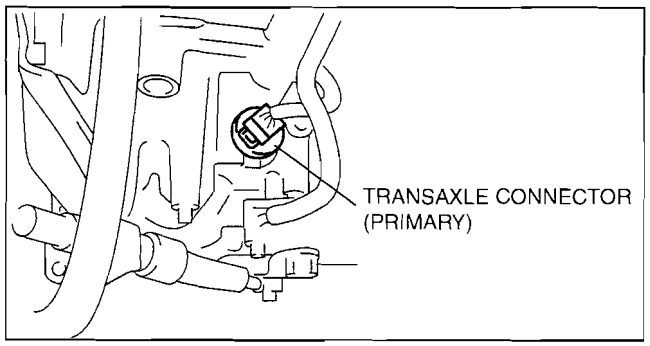
On-Vehicle Inspection

1. Remove the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the air cleaner component. (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[LF, L3].)

Caution

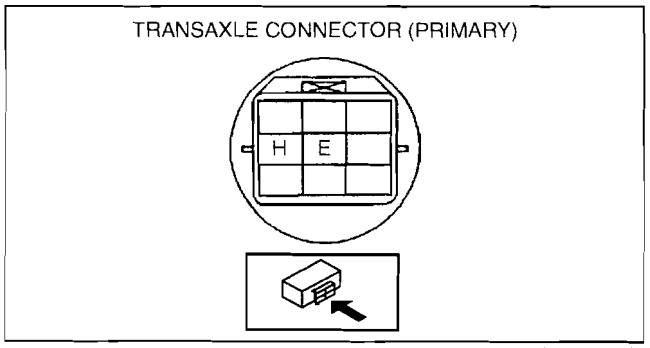
- **Water or foreign objects entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign objects on the connector when disconnecting it.**

4. Disconnect the transaxle connector (primary).



d6e517aw5008

5. Measure the resistance between the terminals E and H.
    - If it is out of specification, perform the off-vehicle inspection of TFT sensor. (See 05-17B-21 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR REMOVAL/INSTALLATION[FS5A-EL].)



d6e517aw5009

Transaxle fluid temperature (TFT) sensor

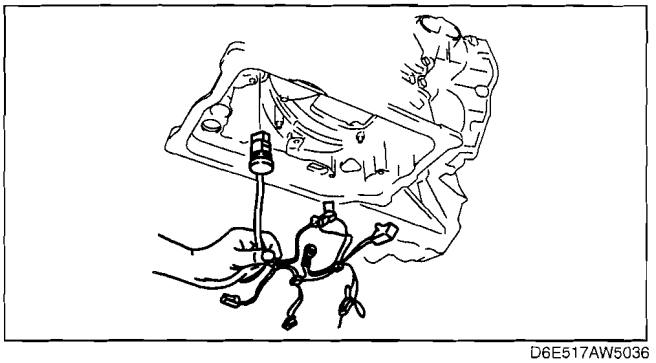
ATF temperature (°C {°F})	Resistance (kilohm)
–20 {–4}	236—324
0 {32}	84.3—110
20 {68}	33.5—42.0
40 {104}	14.7—17.9
60 {140}	7.08—8.17
80 {176}	3.61—4.15
100 {212}	1.96—2.24
120 {248}	1.13—1.28
130 {266}	0.87—0.98

6. Install the air cleaner component. (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[LF, L3].)
7. Connect the negative battery cable.
8. Install the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)

Off-Vehicle Inspection

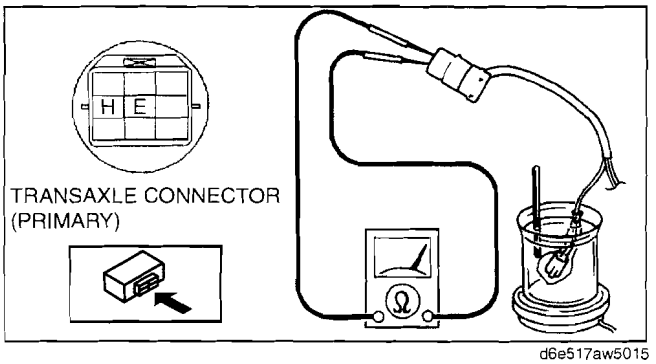
Warning
- **When the transaxle and ATF are hot, they can badly burn. Turn off the engine and wait until they are cool before replacing ATF.**

1. Remove the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the coupler component. (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].)
4. Place the TFT sensor and a thermometer in ATF as shown, and heat the ATF gradually.



D6E517AW5036

5. Measure resistance between the terminals of the TFT sensor.
   - If not as specified, replace the TFT sensor. (See 05-17B-21 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR REMOVAL/INSTALLATION[FS5A-EL].)



d6e517aw5015

Transaxle fluid temperature (TFT) sensor

ATF temperature (°C {°F})	Resistance (kilohm)
-20 {-4}	236—324
0 {32}	84.3—110
20 {68}	33.5—42.0
40 {104}	14.7—17.9
60 {140}	7.08—8.17
80 {176}	3.61—4.15
100 {212}	1.96—2.24
120 {248}	1.13—1.28
130 {266}	0.87—0.98

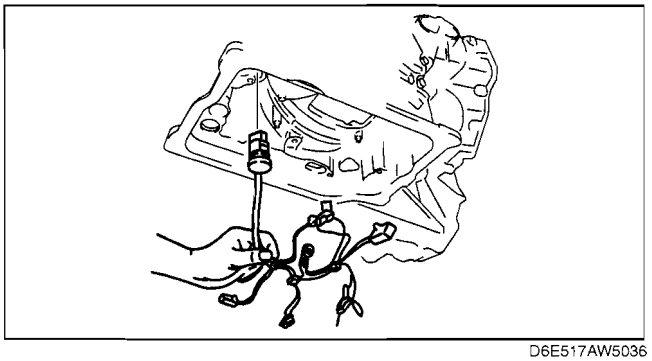
TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR REMOVAL/INSTALLATION[FS5A-EL]

id051721801100

Warning

- **When the transaxle and ATF are hot, they can badly burn. Turn off the engine and wait until they are cool before replacing the ATF.**

1. Remove the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the under cover.
4. Drain the ATF.
5. Remove the oil pan.
6. Remove the primary control valve body. (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].)
7. Remove the coupler component.
8. Install the coupler component.
9. Install the primary control valve body. (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].)
10. Install the oil pan. (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].)
11. Install the under cover.
12. Connect the negative battery cable.
13. Install the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
14. Add ATF. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FS5A-EL].)
15. Perform the mechanical system test. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].)
16. Perform the road test. (See 05-17B-6 ROAD TEST[FS5A-EL].)



D6E517AW5036

OIL PRESSURE SWITCH INSPECTION[FS5A-EL]

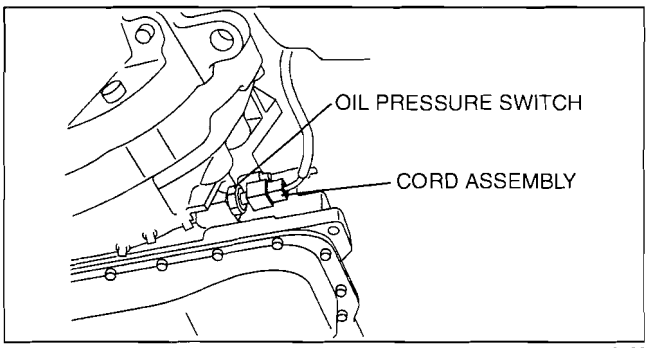
id051721805900

Caution

- **Water or foreign objects entering the connector can cause poor connection or corrosion. Be sure not to drop water or foreign objects on the connector when disconnecting it.**

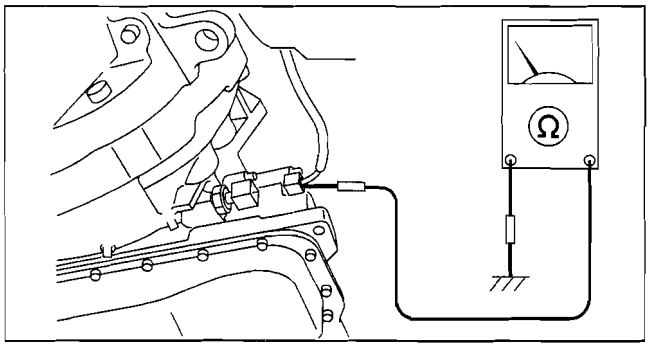
On-vehicle Inspection (harness inspection)

1. Remove the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the under cover.
4. Disconnect the cord assembly connector.



am3uuw0000103

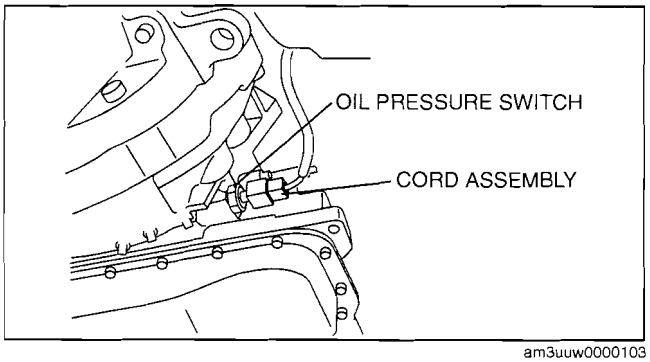
5. Verify that there is no continuity between cord assembly terminal and ground.
   - If as continuity, inspect the cord assembly.
   - If the cord assembly is okay, inspect the oil pressure switch. (See 05-17B-22 On-vehicle Inspection (oil pressure switch inspection).)
6. Connect the cord assembly connector.
7. Install the under cover.
8. Connect the negative battery cable.
9. Install the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)



am3uuw0000103

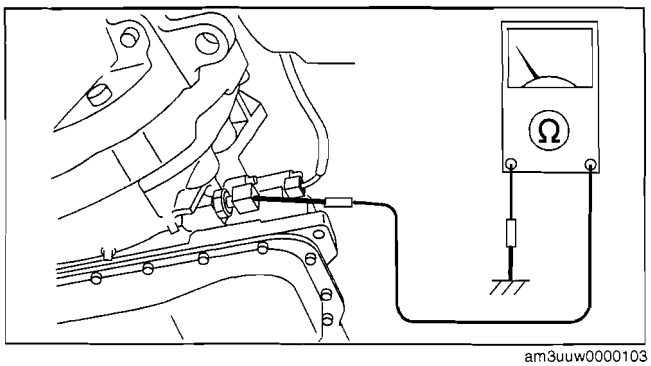
On-vehicle Inspection (oil pressure switch inspection)

1. Remove the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the under cover.
4. Disconnect the cord assembly connector.
5. Start the engine, with gear position in N or P.
6. Reaffirm that there is no continuity between cord assembly terminal and ground.
7. Firmly depress the brake pedal with the left foot.
8. Shift the selector lever to D range.



am3uuw0000103

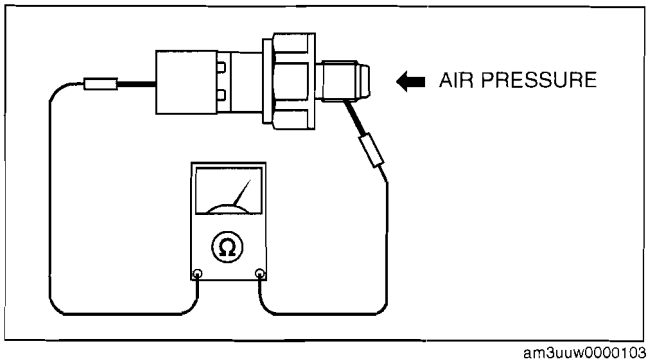
9. Verify that there is continuity between oil pressure switch terminal and ground.
   - If not as specified, replace the oil pressure switch. (See 05-17B-23 OIL PRESSURE SWITCH REMOVAL/INSTALLATION[FS5A-EL].)
10. Connect the oil pressure switch connector.
11. Install the under cover.
12. Connect the negative battery cable.
13. Install the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)



am3uuw0000103

Off-vehicle inspection

1. Remove the oil pressure switch.
2. Apply air pressure at **400—440 kPa {4.1—4.4 kgf/cm^2,58—63 psi}**
3. Inspect continuity the between oil pressure switch terminal and screw part.
   - If not as continuity, replace the oil pressure switch. (See 05-17B-23 OIL PRESSURE SWITCH REMOVAL/INSTALLATION[FS5A-EL].)
4. Install the oil pressure switch.



am3uuw0000103

OIL PRESSURE SWITCH REMOVAL/INSTALLATION[FS5A-EL]

id051721806000

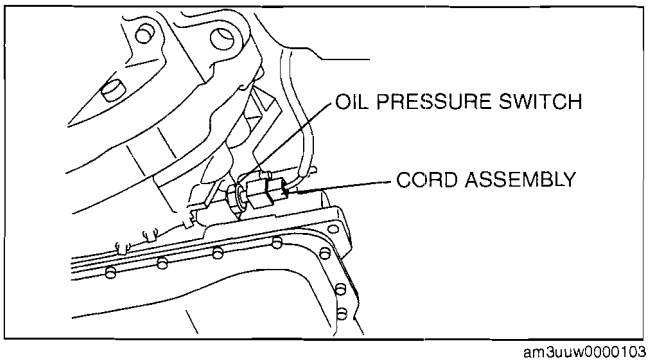
Warning

- **When the transaxle and ATF are hot, they can badly burn. Turn off the engine and wait until they are cool before replacing ATF.**

1. Remove the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the under cover.
4. Disconnect the cord assembly connector.
5. Remove the oil pressure switch.
6. Install the oil pressure switch.

Tightening torque
17.1—22.1N·m {1.75—2.25 kgf·m, 13—16 ft·lbf}

7. Connect the oil pressure switch connector.
8. Install the under cover.
9. Connect the negative battery cable.
10. Install the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)



am3uuw0000103

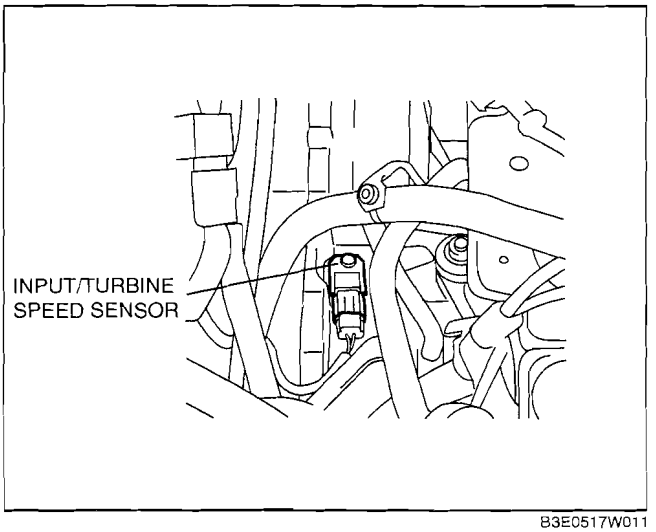
INPUT/TURBINE SPEED SENSOR INSPECTION[FS5A-EL]

id051721801200

Caution

- **Water or foreign objects entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign objects on the connector when disconnecting it.**

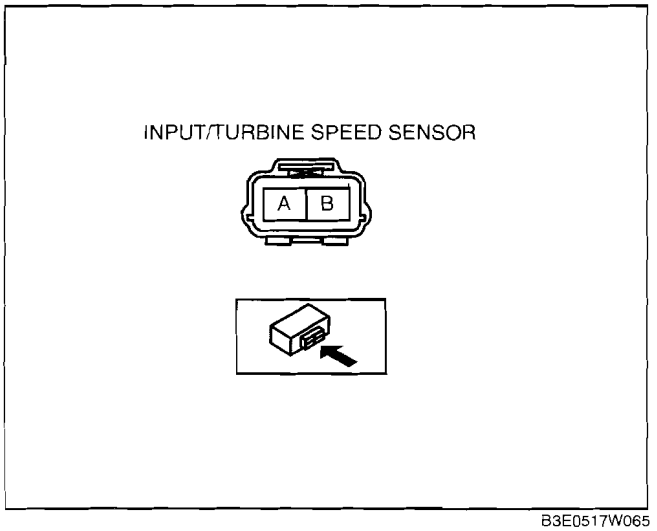
1. Remove the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the battery, battery box and battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
4. Remove the air cleaner component. (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[LF, L3].)
5. Disconnect the input/turbine speed sensor connector.



B3E0517W011

6. Measure resistance between the terminals of the input/turbine speed sensor.
   - If not as specified, replace the input/turbine speed sensor.

   Input/turbine speed sensor resistance
   250—600 ohms (ATF temperature: –40—160 °C {–40—320 °F})



B3E0517W065

7. Connect the input/turbine speed sensor connector.
8. Install the air cleaner component. (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[LF, L3].)
9. Install the battery, battery box and battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
10. Connect the negative battery cable.
11. Install the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)

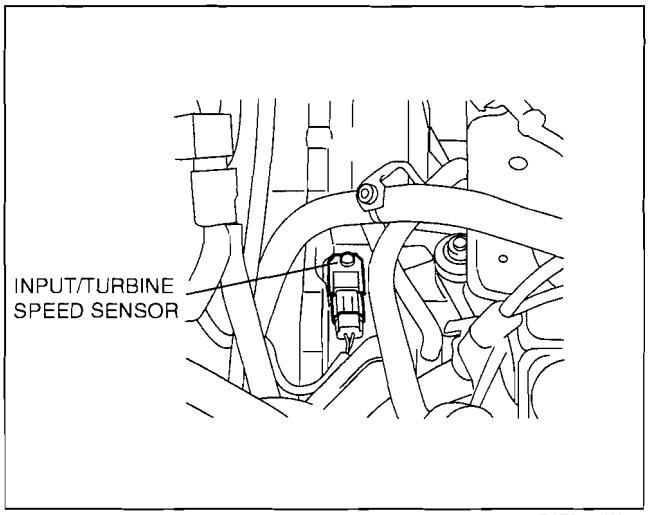
INPUT/TURBINE SPEED SENSOR REMOVAL/INSTALLATION[FS5A-EL]

id051721801300

1. Remove the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the battery, battery box and battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
4. Remove the air cleaner component. (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[LF, L3].)
5. Disconnect the input/turbine speed sensor connector.
6. Remove the input/turbine speed sensor.
7. Apply ATF to a new O-ring and install it on a new input/turbine speed sensor.
8. Install the input/turbine speed sensor.

   Tightening torque
   8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

9. Connect the input/turbine speed sensor connector.
10. Install the air cleaner component. (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[LF, L3].)
11. Install the battery, battery box and battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
12. Connect the negative battery cable.
13. Install the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)



B3E0517W011

INTERMEDIATE SENSOR INSPECTION[FS5A-EL]

id051721807100

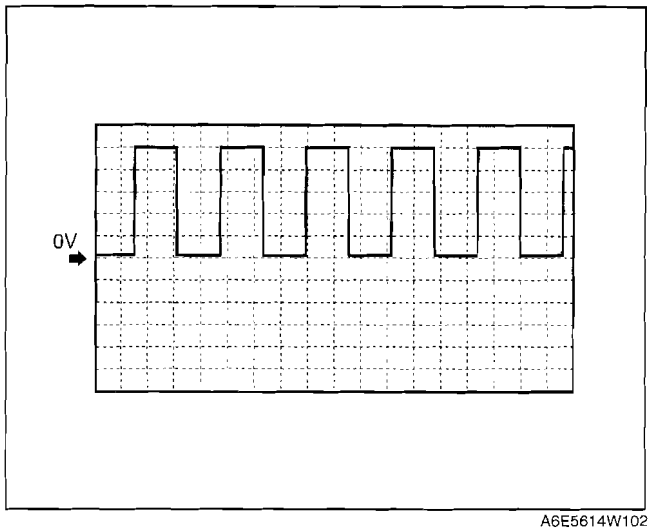
1. Connect the M-MDS, drive the vehicle, and verify the input value of the ISS PID.
   - If the input value is 0 rpm, perform the "Power Supply Voltage Inspection", "Open Circuit Inspection", or "Short Circuit Inspection".
   - If the input value is other than 0 rpm, perform the "Visual Inspection" or "Wave Profile Inspection".

Visual Inspection

1. Remove the intermediate sensor. (See 05-17B-27 INTERMEDIATE SENSOR REMOVAL/INSTALLATION[FS5A-EL].)
2. Make sure that the sensor is free of any metallic shavings or particles.
   - If any are found on the sensor, clean them off.
3. Install the intermediate sensor. (See 05-17B-27 INTERMEDIATE SENSOR REMOVAL/INSTALLATION[FS5A-EL].)

Wave profile Inspection

1. Remove the TCM. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
2. Connect M-MDS to DLC connector.
3. Connect oscilloscope test leads to the following TCM connector terminals.
   - (+) lead: TCM terminal AC
   - (-) lead: TCM terminal M
4. Start the engine.
5. Monitor VSS PID.
6. Inspect wave profile.
   - TCM terminal: AC (+) - M (-)
   - Oscilloscope setting: 1 V/DIV (Y), 2.5 ms/DIV (X), DC range
   - Vehicle condition: drive the vehicle with 32 km/h{20 mph}
     — If wave profile or voltage are out of specifications, carry out the "Open Circuit Inspection" or "Short Circuit Inspection"



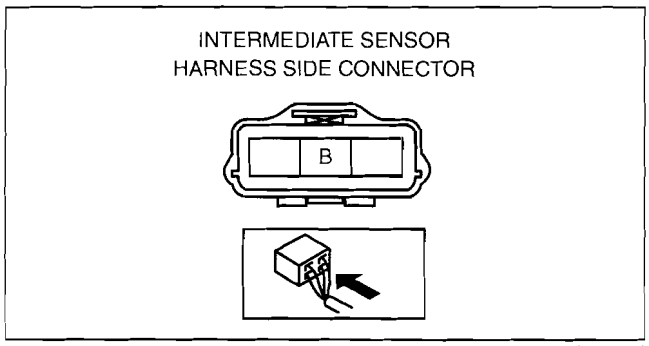
A6E5614W102

Power Supply Voltage Inspection

1. Disconnect the intermediate sensor connector.
2. Turn the ignition switch to ON.
3. Measure voltage at intermediate sensor connector terminal B (wiring harness side).

   Intermediate sensor voltage
   4.5—5.5 V

   - If voltage is okay, go to Open Circuit Inspection and Short Circuit Inspection.
   - If voltage is wrong, repair wiring harness between intermediate sensor and TCM.



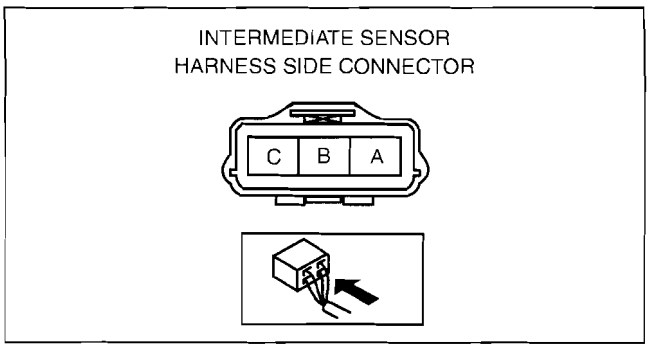
d6e517aw5013

Open Circuit Inspection

1. Inspect the following circuit for open.
   - Power circuit (intermediate sensor connector terminal A to main relay terminal D)
   - Ground circuit (intermediate sensor connector terminal C to GND)
   - If an open circuit or short circuit is found, repair the malfunctioning wiring harness.
   - If there are no open or short circuits, perform the sensor rotor inspection.

Short Circuit Inspection

1. Inspect the following circuit for short.
   - Power circuit (intermediate sensor connector terminal A to main relay terminal D)
   - If an open circuit or short circuit is found, repair the malfunctioning wiring harness.
   - If there are no open or short circuits, perform the sensor rotor inspection.



d6e517aw5014

Secondary Gear Inspection

1. Remove the intermediate sensor. (See 05-17B-27 INTERMEDIATE SENSOR REMOVAL/INSTALLATION[FS5A-EL].)
2. Shift the selector lever to N position.
3. Inspect secondary gear surface via intermediate sensor installation hole while rotating the front tire manually.
   (1) Is secondary gear free of damage and cracks?
   (2) Is secondary gear free of any metallic shavings or particles?
      - If secondary gear is okay, replace the intermediate sensor.
      - If there is a problem, clean or replace the secondary gear.

INTERMEDIATE SENSOR REMOVAL/INSTALLATION[FS5A-EL]

id051721807200

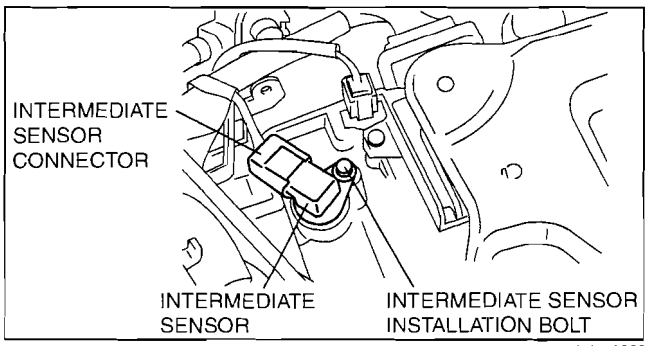
Caution

- **Water or foreign objects entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign objects on the connector when disconnecting it.**
- **If foreign materials are stuck to the intermediate sensor, disturbance by magnetic flux can cause sensor output to be abnormal and thereby negatively affect control. Make sure that foreign materials such as iron filings are not stuck to the intermediate sensor during installation.**

1. Remove the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the battery, battery box and battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
4. Disconnect the intermediate sensor connector.
5. Remove the intermediate sensor.
6. Apply ATF to a new O-ring and install it on a new intermediate sensor.
7. Install the intermediate sensor.

   Tightening torque
   8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

8. Connect the intermediate sensor connector.
9. Install the battery, battery box and battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
10. Connect the negative battery cable.
11. Install the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)



e3u517bw6008

VEHICLE SPEED SENSOR (VSS) INSPECTION[FS5A-EL]

id051721801400

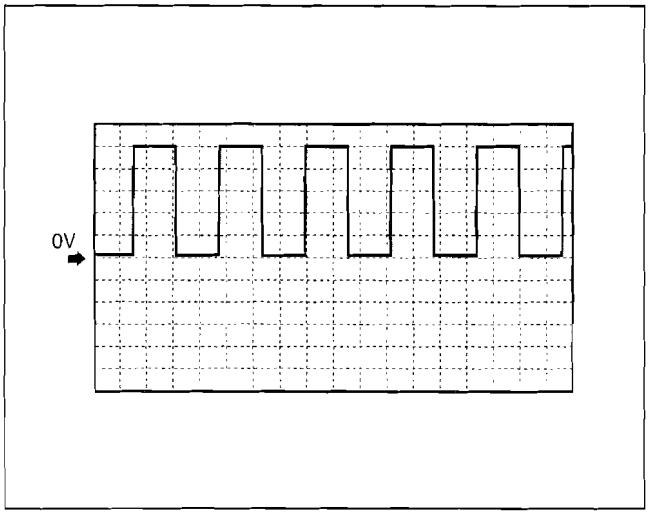
1. Connect the M-MDS, drive the vehicle, and verify the input value of the OSS PID.
   - If the input value is 0 rpm, perform the "Power Supply Voltage Inspection", "Open Circuit Inspection", or "Short Circuit Inspection".
   - If the input value is other than 0 rpm, perform the "Visual Inspection" or "Wave Profile Inspection".

Visual Inspection

1. Remove the VSS. (See 05-17B-29 VEHICLE SPEED SENSOR (VSS) REMOVAL/INSTALLATION[FS5A-EL].)
2. Make sure that the sensor is free of any metallic shavings or particles.
   - If any are found on the sensor, clean them off.
3. Install the VSS. (See 05-17B-29 VEHICLE SPEED SENSOR (VSS) REMOVAL/INSTALLATION[FS5A-EL].)

Wave profile Inspection

1. Remove the TCM. (See 05-17B-42 TCM REMOVAL/INSTALLATION[FS5A-EL].)
2. Connect M-MDS to DLC connector.
3. Connect oscilloscope test leads to the following TCM connector terminals.
   - (+) lead: TCM terminal Z
   - (-) lead: TCM terminal M
4. Start the engine.
5. Monitor VSS PID.
6. Inspect wave profile.
   - TCM terminal: Z (+) - M (-)
   - Oscilloscope setting: 1 V/DIV (Y), 2.5 ms/DIV (X), DC range
   - Vehicle condition: drive the vehicle with 32 km/h{20 mph}
     — If wave profile or voltage are out of specifications, carry out the "Open Circuit Inspection" or "Short Circuit Inspection"



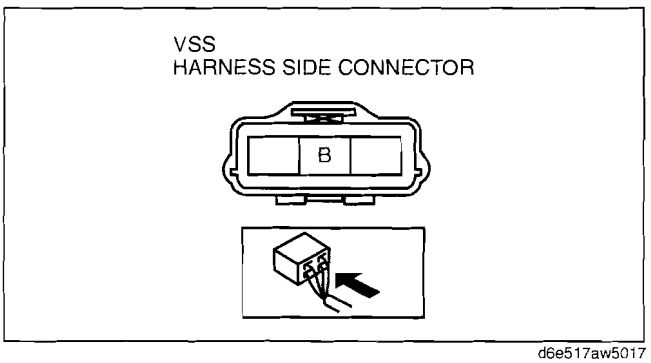
A6E5614W102

Power Supply Voltage Inspection

1. Disconnect the VSS connector.
2. Turn the ignition switch to ON.
3. Measure voltage at VSS connector terminal B (wiring harness side).

Vehicle speed sensor (VSS) voltage
4.5—5.5 V

- If voltage is okay, go to Open Circuit Inspection and Short Circuit Inspection.
- If voltage is wrong, repair wiring harness between VSS and TCM.



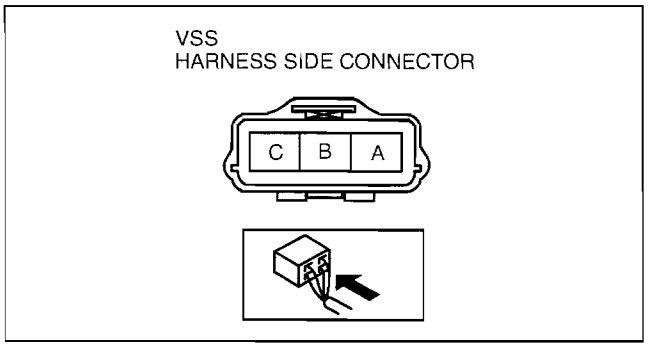
d6e517aw5017

Open Circuit Inspection

1. Inspect the following circuit for open.
   - Power circuit (VSS connector terminal A to main relay terminal D)
   - Ground circuit (VSS connector terminal C to GND)
   - If an open circuit or short circuit is found, repair the malfunctioning wiring harness.
   - If there are no open or short circuits, perform the sensor rotor inspection.

Short Circuit Inspection

1. Inspect the following circuit for short.
   - Power circuit (VSS connector terminal A to main relay terminal D)
   - If an open circuit or short circuit is found, repair the malfunctioning wiring harness.
   - If there are no open or short circuits, perform the sensor rotor inspection.



d6e517aw5018

Sensor Rotor Inspection

1. Remove the VSS. (See 05-17B-29 VEHICLE SPEED SENSOR (VSS) REMOVAL/INSTALLATION[FS5A-EL].)
2. Shift the selector lever to N position.
3. Inspect sensor rotor surface via VSS installation hole while rotating the front tire manually.
   (1) Is sensor rotor free of damage and cracks?
   (2) Is sensor rotor free of any metallic shavings or particles?
      - If sensor rotor is okay, replace the VSS.
      - If there is a problem, clean or replace the sensor rotor.

VEHICLE SPEED SENSOR (VSS) REMOVAL/INSTALLATION[FS5A-EL]

id051721806100

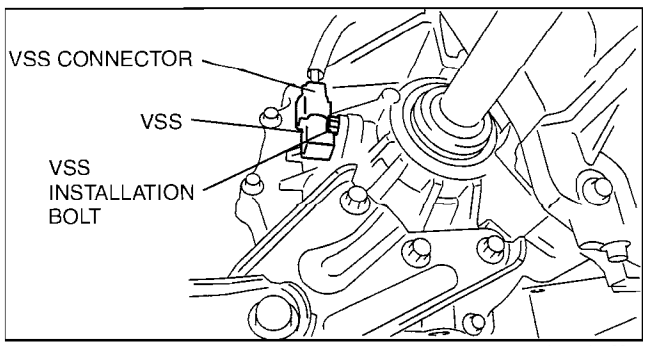
Caution

- **Water or foreign objects entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign objects on the connector when disconnecting it.**
- **If foreign materials are stuck to the VSS, disturbance by magnetic flux can cause sensor output to be abnormal and thereby negatively affect control. Make sure that foreign materials such as iron filings are not stuck to the VSS during installation.**

1. Remove the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the under cover.
4. Disconnect the VSS connector.
5. Remove the VSS.
6. Apply ATF to a new O-ring and install it on a new VSS.
7. Install the VSS.

   Tightening torque
   8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

8. Connect the VSS connector.
9. Install the under cover.
10. Connect the negative battery cable.
11. Install the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)



e3u517bw6010

SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY)[FS5A-EL]

id051721807700

Resistance Inspection (On-Vehicle Inspection)

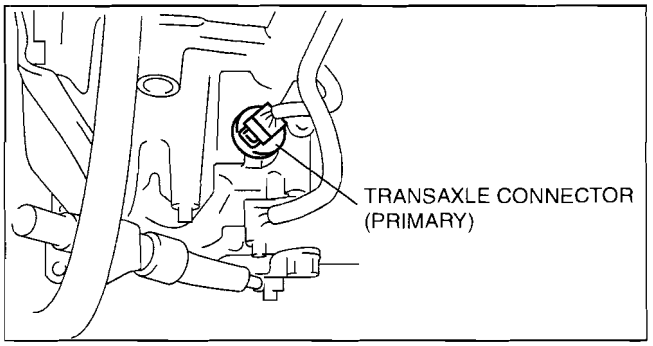
Caution

- **Water or foreign objects entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign objects on the connector when disconnecting it.**

1. Remove the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the air cleaner component. (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[LF, L3].)
4. Disconnect the transaxle connector (primary).

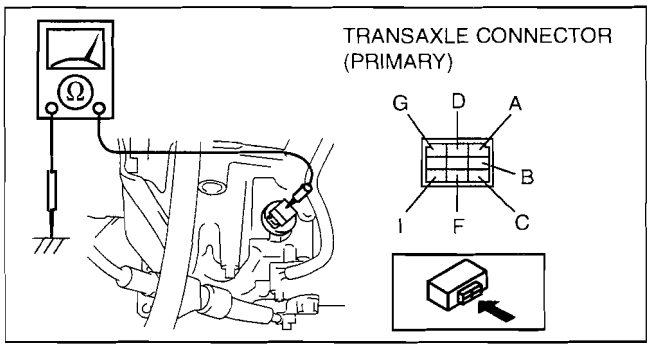
Note

- When inspecting the pressure control solenoid, connect the ground connection to the ground terminal (terminal I) of the pressure control solenoid inside the solenoid valve connector.



d6e517aw5008

5. Measure the resistance between the following terminals.
   - If not as specified, inspect the ground, then perform the operating inspection.



d6e517aw5020

Primary control valve body (ATF temperature: –40—150 °C {–40—302 °F})

Terminal	Solenoid valve	Resistance (ohm)
A—GND	Shift solenoid A	1.0—4.2
C—GND	Shift solenoid B	1.0—4.2
G—GND	Shift solenoid C	1.0—4.2
B—GND	Shift solenoid D	10.9—26.2
F—GND	Shift solenoid E	10.9—26.2
D—I	Pressure control solenoid A	2.4—7.3

6. Connect the transaxle connector (primary).
7. Install the air cleaner component. (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[LF, L3].)
8. Connect the negative battery cable.
9. Install the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)

Operating Inspection

1. Disconnect the transaxle connector (primary).

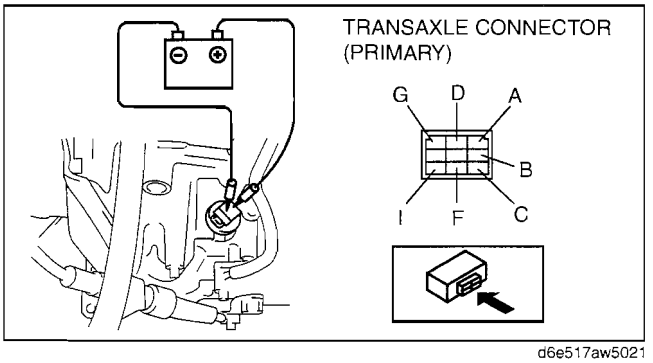
Caution

- **Do not apply battery position voltage to terminals A, B, C, D, F and G for more than three seconds.**

Note

- Because the operation sound of the valves is small, perform inspection in a quiet place.

2. Apply battery positive voltage to terminals A,B,C, F or G and battery negative voltage to GND, and verify that operating sound is heard from solenoid.
   - If the "click" is not heard, inspect the transaxle harness.
     — If the transaxle harness is okay, perform the resistance inspection (off-vehicle inspection).
     — If there is a problem, repair or replace the transaxle harness.
3. Apply battery positive voltage to terminal D and battery negative voltage to terminal I, and verify that operating sound is heard from solenoid.
   - If the "click" is not heard, inspect the transaxle harness.
     — If transaxle harness is okay, perform the resistance inspection (off-vehicle inspection)
     — If there is a problem, repair or replace the transaxle harness.



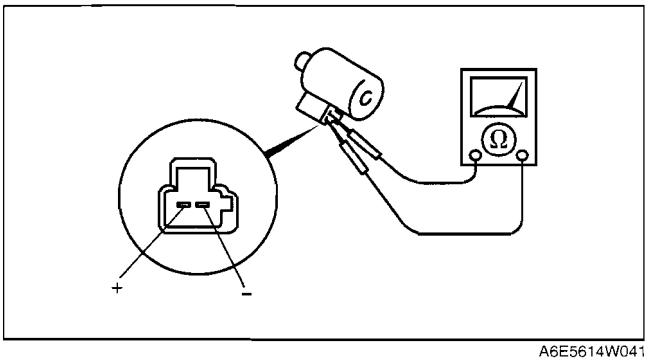
d6e517aw5021

Resistance Inspection (Off-Vehicle Inspection)

1. Remove the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the solenoid valve(s). (See 05-17B-32 SOLENOID VALVE REMOVAL/INSTALLATION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].)
4. Measure the resistance of each solenoid valve individually.
   - If not as specified, replace the solenoid valve.
5. Install the solenoid valve(s). (See 05-17B-32 SOLENOID VALVE REMOVAL/INSTALLATION (PRIMARY CONTROL VALVE BODY)[FS5A-EL].)
6. Connect the negative battery cable.
7. Install the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)

Pressure control solenoid A

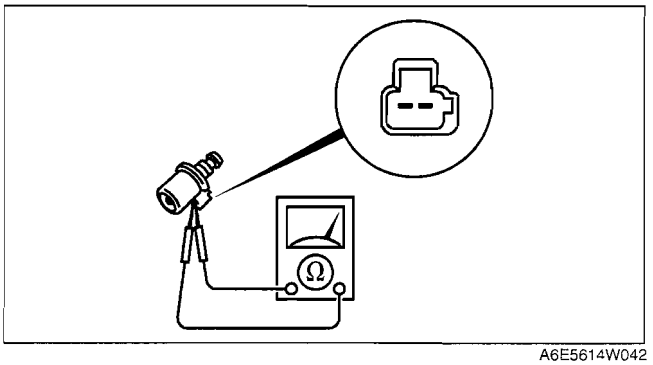
Resistance
2.4—7.3 ohms
(ATF temperature: –40—150 °C {–40—302 °F})



A6E5614W041

Shift solenoid A, B, C

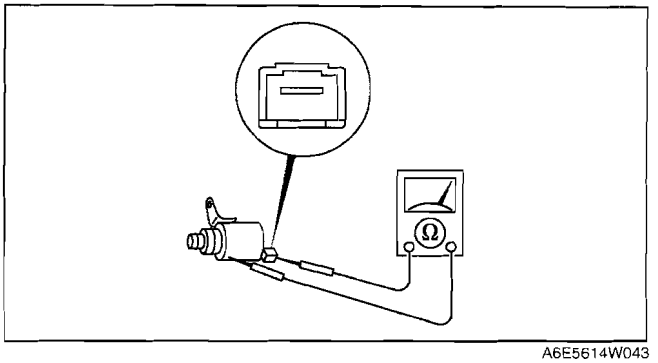
Resistance
1.0—4.2 ohms
(ATF temperature: –40—150 °C {–40—302 °F})



A6E5614W042

Shift solenoid D, E

Resistance
10.9—26.2 ohms
(ATF temperature: –40—150 °C {–40—302 °F})

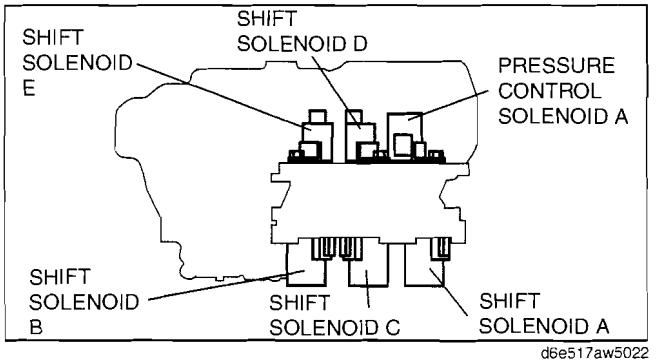


A6E5614W043

SOLENOID VALVE REMOVAL/INSTALLATION (PRIMARY CONTROL VALVE BODY)[FS5A-EL]

id051721807800

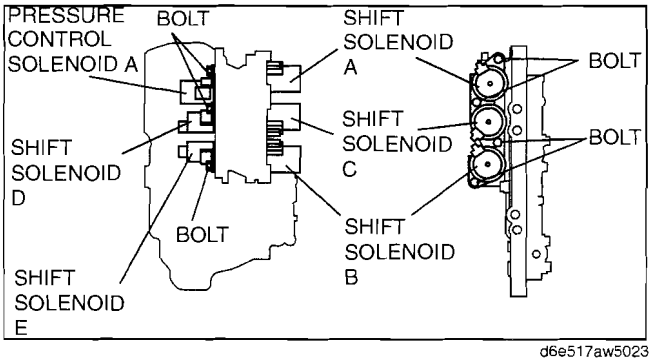
1. Remove the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the under cover.
4. Drain the ATF.
5. Remove the oil pan.
6. Remove the primary control valve body. (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].)
7. Remove the solenoid valve(s).
8. Apply ATF to a new O-ring and install it on the solenoid valve.



d6e517aw5022

9. Install the solenoid valve in the primary control valve body.

Tightening torque
7.8—10.8 N·m
{80—110 kgf·cm, 70—95.4 in·lbf}



d6e517aw5023

10. Install the primary control valve body. (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].)
11. Install the oil pan. (See 05-17B-51 PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL].)
12. Install the under cover.
13. Connect the negative battery cable.
14. Install the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
15. Add ATF. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FS5A-EL].)
16. Perform the mechanical system test. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].)
17. Perform the road test. (See 05-17B-6 ROAD TEST[FS5A-EL].)

SOLENOID VALVE INSPECTION (SECONDARY CONTROL VALVE BODY)[FS5A-EL]

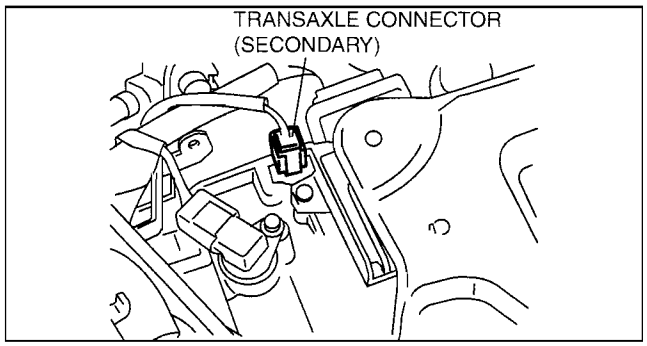
id051721807900

Resistance Inspection (On-Vehicle Inspection)

Caution
- **Water or foreign objects entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign objects on the connector when disconnecting it.**

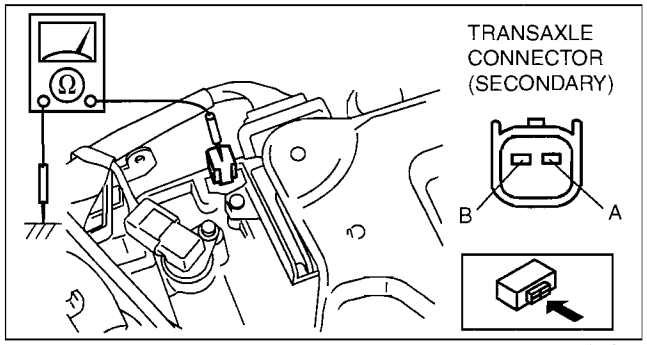
1. Remove the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the battery, battery box and battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
4. Disconnect the transaxle connector (secondary).

Note
- When inspecting the pressure control solenoid, connect the ground connection to the ground terminal (terminal I) of the pressure control solenoid inside the solenoid valve connector.



e3u517bw6006

5. Measure the resistance between the following terminals.
   - If not as specified, inspect the ground, then perform the operating inspection.



e3u517bw6007

Secondary control valve body (ATF temperature: –40—150 °C {–40—302 °F})

Terminal	Solenoid valve	Resistance (ohm)
A—GND	Pressure control solenoid B	1.0—4.2
B—GND	Shift solenoid F	8.4—21.8

6. Connect the transaxle connector (secondary).
7. Install the battery, battery box and battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
8. Connect the negative battery cable.
9. Install the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)

Operating Inspection

1. Disconnect the transaxle connector (secondary).

Caution
- **Do not apply battery position voltage to terminals A and B for more than three seconds.**

Note
- Because the operation sound of the valves is small, perform inspection in a quiet place.

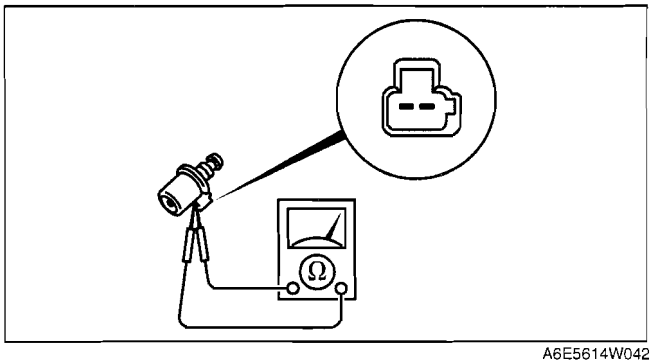
2. Apply battery positive voltage to terminals A and B and battery negative voltage to GND, and verify that operating sound is heard from solenoid.
   - If the "click" is not heard, inspect the transaxle harness.
     — If the transaxle harness is okay, perform the resistance inspection (off-vehicle inspection).
     — If there is a problem, repair or replace the transaxle harness.

Resistance Inspection (Off-Vehicle Inspection)

1. Remove the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the battery, battery box and battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
4. Remove the solenoid valve(s). (See 05-17B-34 SOLENOID VALVE REMOVAL/INSTALLATION (SECONDARY CONTROL VALVE BODY)[FS5A-EL].)
5. Measure the resistance of each solenoid valve individually.
   - If not as specified, replace the solenoid valve.
6. Install the solenoid valve(s). (See 05-17B-34 SOLENOID VALVE REMOVAL/INSTALLATION (SECONDARY CONTROL VALVE BODY)[FS5A-EL].)
7. Install the battery, battery box and battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
8. Connect the negative battery cable.
9. Install the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)

Pressure control solenoid B

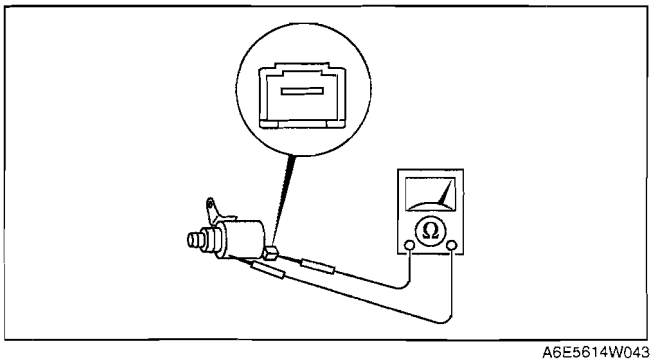
Resistance
1.0—4.2 ohms
(ATF temperature: –40—150 °C {–40—302 °F})



A6E5614W042

Shift solenoid F

Resistance
8.4—21.8 ohms
(ATF temperature: –40—150 °C {–40—302 °F})



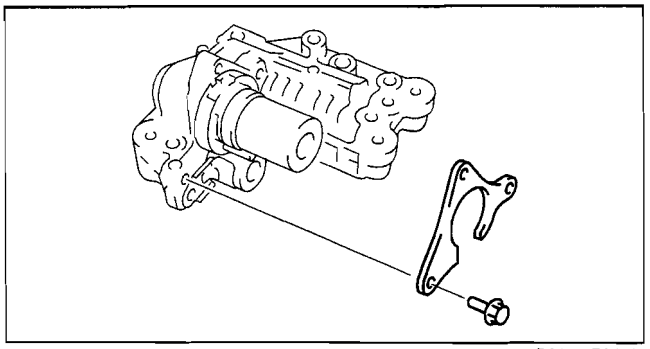
A6E5614W043

SOLENOID VALVE REMOVAL/INSTALLATION (SECONDARY CONTROL VALVE BODY)[FS5A-EL]

id051721808000

1. Remove the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the battery, battery box and battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
4. Remove the under cover.
5. Drain the ATF.
6. Remove the oil cover.
7. Remove the secondary control valve body. (See 05-17B-54 SECONDARY CONTROL VALVE BODY REMOVAL[FS5A-EL].)

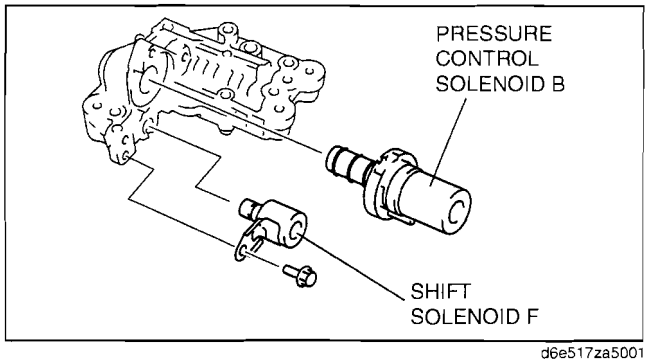
8. Remove the bracket.



D6J517ZA4115

9. Remove the solenoid valve(s).
10. Apply ATF to a new O-ring and install it on the solenoid valve.
11. Install the solenoid valve in the secondary control valve body.

Tightening torque
7.8—10.8 N·m
{80—110 kgf·cm, 70—95.4 in·lbf}



d6e517za5001

12. Install the secondary control valve body. (See 05-17B-54 SECONDARY CONTROL VALVE BODY REMOVAL[FS5A-EL].)
13. Install the oil cover. (See 05-17B-54 SECONDARY CONTROL VALVE BODY REMOVAL[FS5A-EL].)
14. Install the under cover.
15. Install the battery, battery box and battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
16. Connect the negative battery cable.
17. Install the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
18. Add ATF. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FS5A-EL].)
19. Perform the mechanical system test. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].)
20. Perform the road test. (See 05-17B-6 ROAD TEST[FS5A-EL].)

TCM INSPECTION[FS5A-EL]

id051721800300

Caution

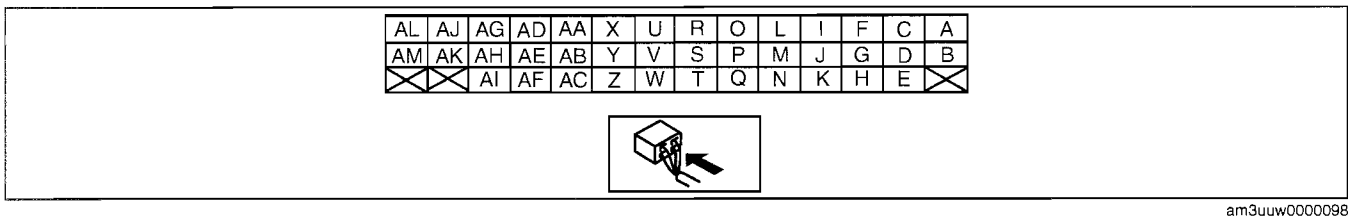
- **The TCM terminal voltages vary with changes in measuring and vehicle conditions. Always carry out a total inspection of the input and output systems, and the TCM to determine the cause of trouble. Otherwise, a mis-diagnosis could occur.**

1. Measure the voltage at each terminal.
   - If any incorrect voltage is detected, inspect the related system(s), wiring harnesses and connector(s) referring to the Action column in the terminal voltage table.

Terminal Voltage Table (Reference)

Note

- Use the ground of terminal L and M of the TCM when measuring terminal voltage, as an error may occur when connecting the negative circuit tester to ground.



am3uuw0000098

Terminal	Signal	Connected to	Test condition		Voltage (V)	Action
A	—	—	—		—	—
B	CAN_H	Instrument cluster, ABS HU/CM, ABS/TCS HU/CM, DSC HU/CM	Because this terminal is for CAN, adequate determination by terminal voltage is not possible.			—
C	—	—	—		—	—
D	—	—	—		—	—
E	CAN_L	Instrument cluster, ABS HU/CM, ABS/TCS HU/CM, DSC HU/CM	Because this terminal is for CAN, adequate determination by terminal voltage is not possible.			—
F	Manual down	Down switch	Ignition switch ON	Detects down-shift operation of selector lever in M range	Below 1.0	• Inspect down switch (See 05-18-4 SELECTOR LEVER COMPONENT INSPECTION.) • Inspect related harness
				Other	B+	
G	Manual up	Up switch	Ignition switch ON	Detects up-shift operation of selector lever in M range	Below 1.0	• Inspect up switch (See 05-18-4 SELECTOR LEVER COMPONENT INSPECTION.) • Inspect related harness

			Other		Below 1.0	
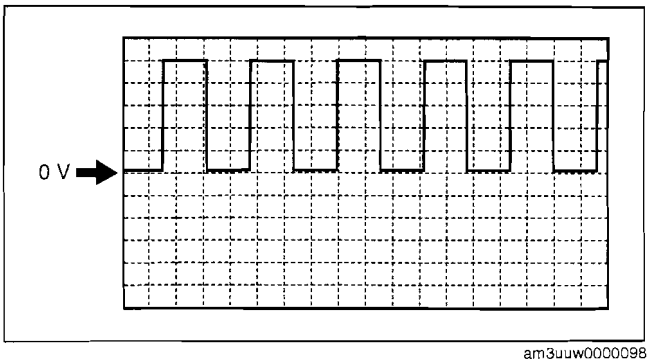
AL	Shift solenoid C control	Shift solenoid C	• Inspect using the wave profile. (See 05-17B-39 Inspection Using an Oscilloscope (Reference).)			• Inspect shift solenoid C • Inspect related harness
AM	Pressure control solenoid B	Pressure control solenoid B	• Inspect using the wave profile. (See 05-17B-39 Inspection Using an Oscilloscope (Reference).)			• Inspect pressure control solenoid B • Inspect related harness

Inspection Using an Oscilloscope (Reference)
Secondary gear rotating speed signal
TCM terminals
- AC (+)—M (–)

Oscilloscope setting
- 1 V/DIV (Y), 2.5 ms/DIV (X), DC range

Vehicle condition
- Drive the vehicle at approx. 32 km/h {19.9 mph}

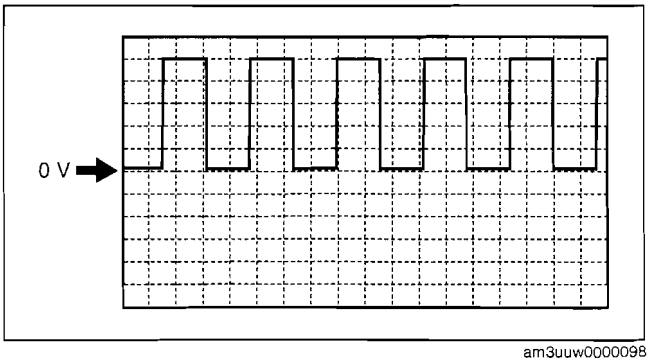


am3uuw0000098

VSS signal
TCM terminals
- Z (+)—M (–)

Oscilloscope setting
- 1 V/DIV (Y), 2.5 ms/DIV (X), DC range

Vehicle condition
- Drive the vehicle at approx. 32 km/h {19.9 mph}

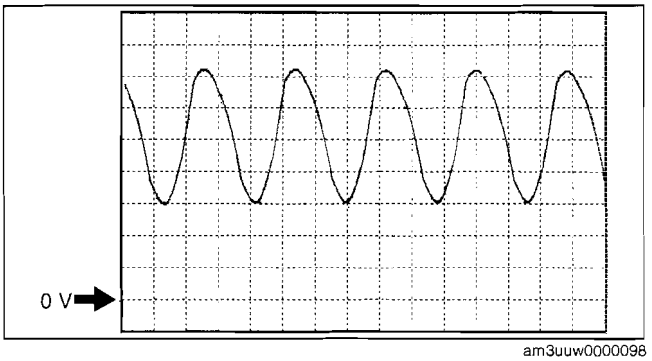


am3uuw0000098

Input/turbine speed sensor signal
TCM terminals
- AB (+)—M (–)

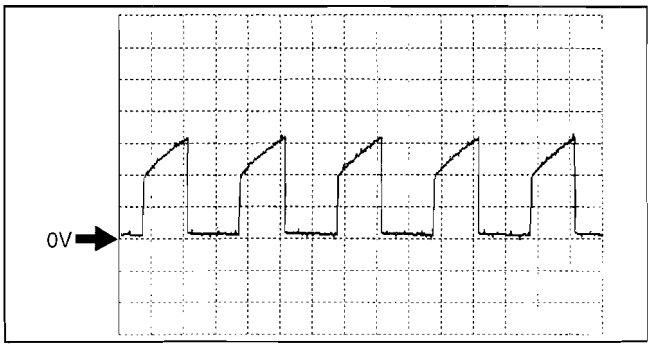
Oscilloscope setting
- 500 mV/DIV (Y), 1 ms/DIV (X), DC range

Vehicle condition
- Idle after warm up (engine speed approx. 700 rpm, no load, P/S off, A/C off)



am3uuw0000098

Pressure control solenoid A signal
(–)
TCM terminals
AE (+)—M (–)
Oscilloscope setting
200 mV/DIV (Y), 1 ms/DIV (X), DC range
Vehicle condition
- Idle after warm up (engine speed approx. 700 rpm, no load, P/S off, A/C off)

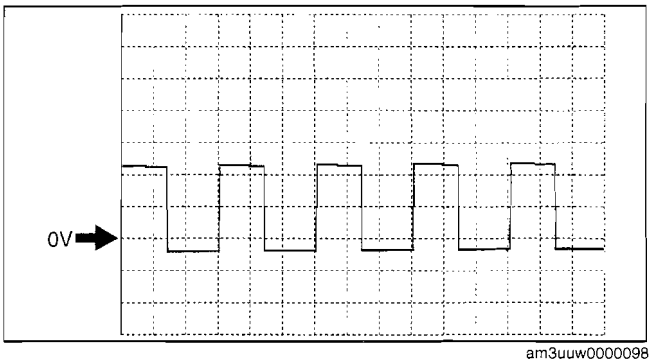


am3uuw0000098

(+)
TCM terminals
- AD (+)—M (–)

Oscilloscope setting
- 5 V/DIV (Y), 1 ms/DIV (X), DC range

Vehicle condition
- Idle after warm up (engine speed approx. 700 rpm, no load, P/S off, A/C off)

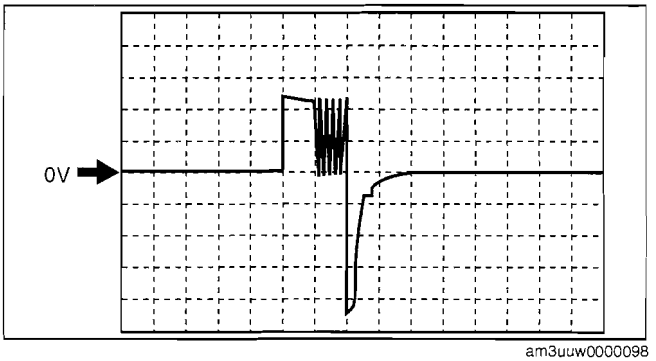


am3uuw0000098

Pressure control solenoid B signal
TCM terminals
- AM (+)—M (–)

Oscilloscope setting
- 5 V/DIV (Y), 5 ms/DIV (X), DC range

Vehicle condition
- 4GR→5GR, 5GR→4GR

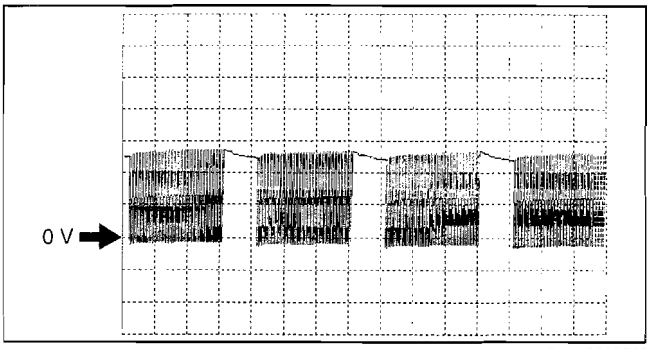


am3uuw0000098

Shift solenoid A control
TCM terminals
- AG (+)—M (–)

Oscilloscope setting
- 5 V/DIV (Y), 5 ms/DIV (X), DC range

Vehicle condition
- 4GR (D range)

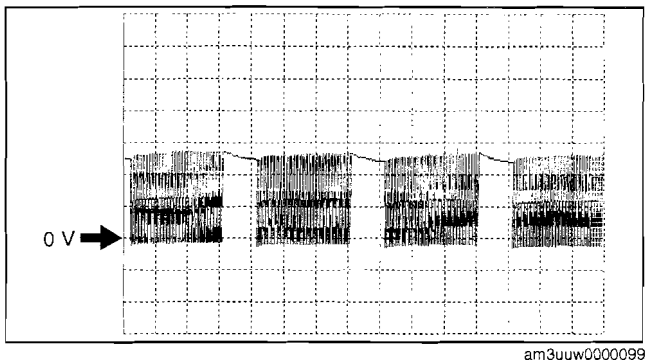


am3uuw0000098

Shift solenoid B control
TCM terminals
- AJ (+)—M (–)

Oscilloscope setting
- 5 V/DIV (Y), 5 ms/DIV (X), DC range

Vehicle condition
- 1GR (D range)



am3uuw0000099

Shift solenoid C control
TCM terminals
- AL (+)—M (–)

Oscilloscope setting
- 5 V/DIV (Y), 5 ms/DIV (X), DC range

Vehicle condition
- 1GR or 2GR

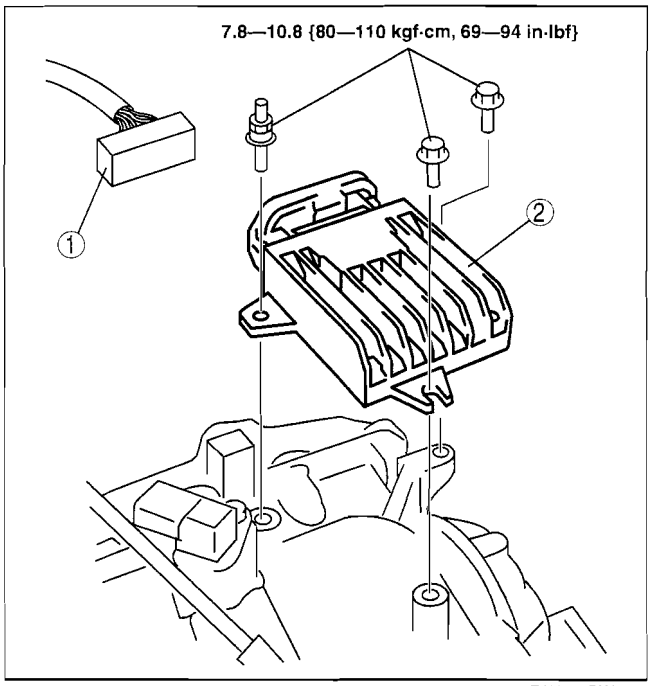
TCM REMOVAL/INSTALLATION[FS5A-EL]

id051721800400

Caution
- **Do not apply a shock to or touch the projection on the TCM, otherwise it may not operate normally.**

1. Remove the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the battery, battery box and battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
4. Remove in the order indicated in the table.
5. Install in the reverse order of removal.

1	TCM connector
2	TCM



E3U517BW6009

AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FS5A-EL]

id051721802400

1. Remove the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the following parts.
   (1) Battery, battery tray and battery box. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
   (2) Air cleaner component. (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[LF, L3].)
   (3) Exhaust manifold insulator.
   (4) Front tires and splash shield.
   (5) Under cover.
4. Drain the ATF. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FS5A-EL].)

Warning
- **Improperly jacking a transaxle is dangerous. It can slip off the jack and may cause serious injury.**

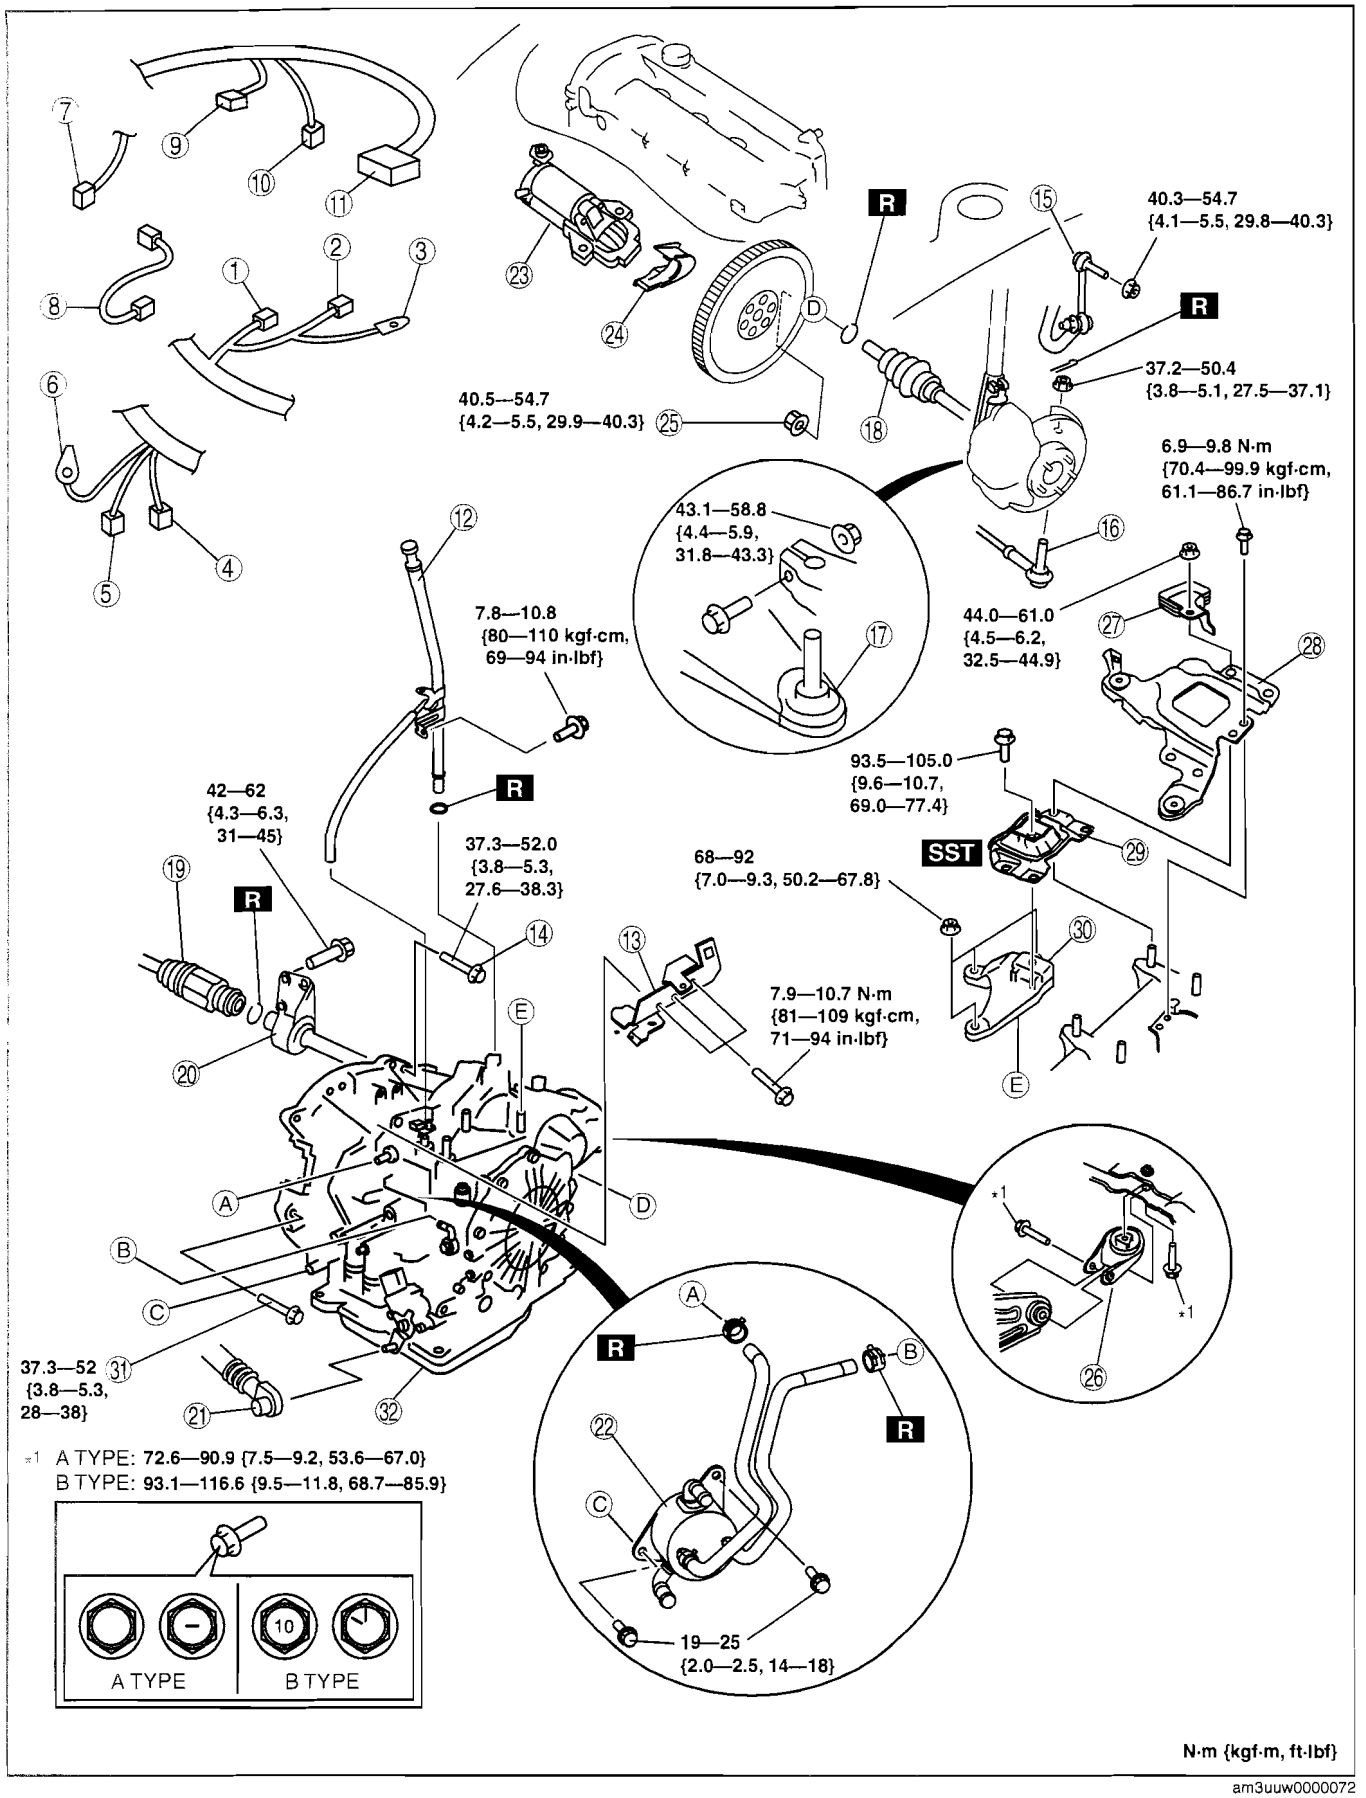
Caution
- **To prevent the torque converter and transaxle from separating, remove the transaxle without tilting it toward the torque converter.**

5. Remove in the order indicated in the table.
6. Install in the reverse order of removal.
7. Add ATF to the specified level. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FS5A-EL].)

8. Perform the following test. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].) (See 05-17B-6 ROAD TEST[FS5A-EL].)

Service item	Test item			
	Line pressure test	Stall test	Time lag test	Road test
ATX replacement	X			
ATX overhaul	X	X	X	X
Torque converter replacement	X	X		
Oil pump replacement	X			
Clutch system replacement	X		X	X

X : Test to be performed after the service work



am3uuw0000072

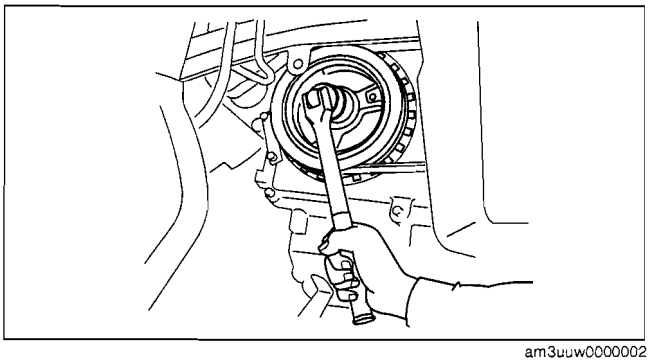
31	Transaxle mounting bolt (lower side)
32	Transaxle (See 05-17B-47 Transaxle Removal Note.) (See 05-17B-48 Transaxle Installation Note.)

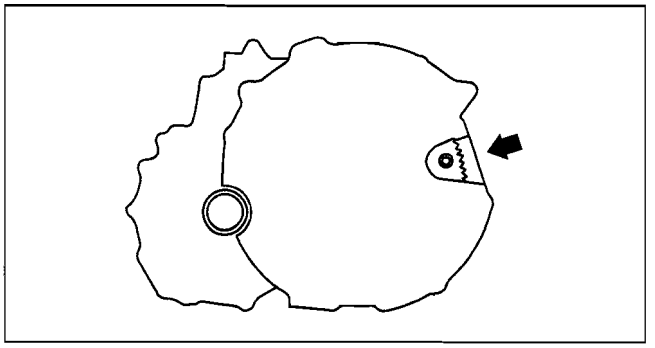
Torque Converter Nuts Removal Note

1. Hold the crankshaft pulley to prevent the drive plate from rotating.



am3uuw0000002

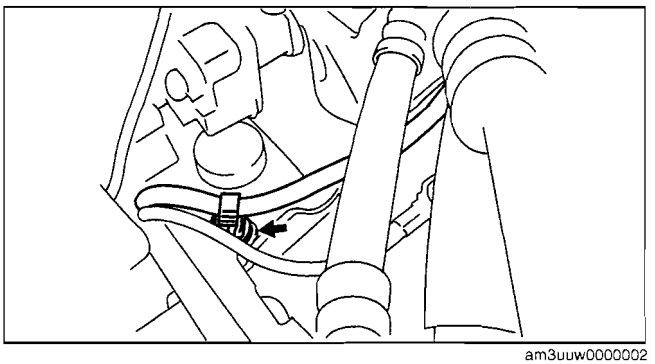
2. Remove the torque converter nuts from the starter installation hole.



am3uuw0000002

No.4 Engine Mount Removal Note

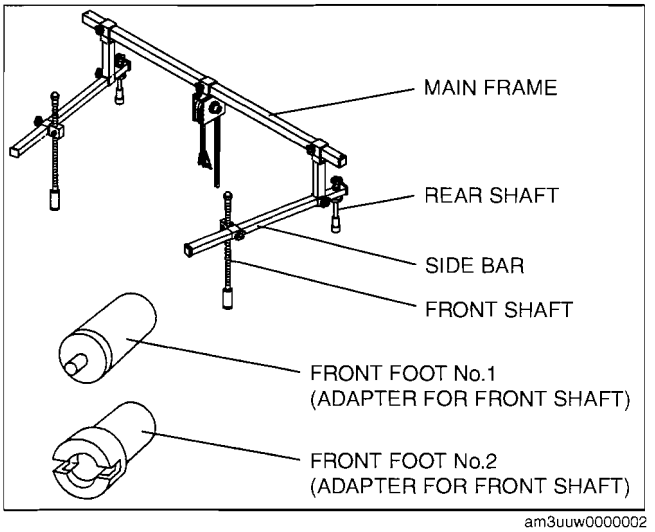
1. To install the front shaft (RH) of the **SST** (49 C017 5A0), remove the clip shown in the figure.
2. Install the **SST** using the following procedure.



am3uuw0000002

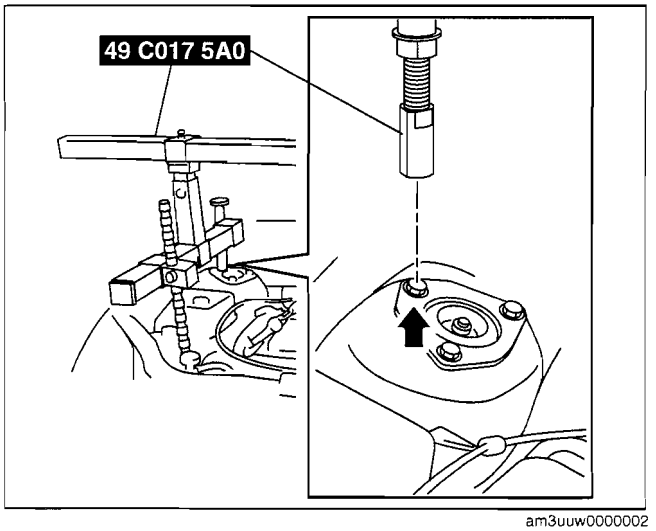
Caution

- **Refer to the SST instruction manual for the basic handing procedure.**



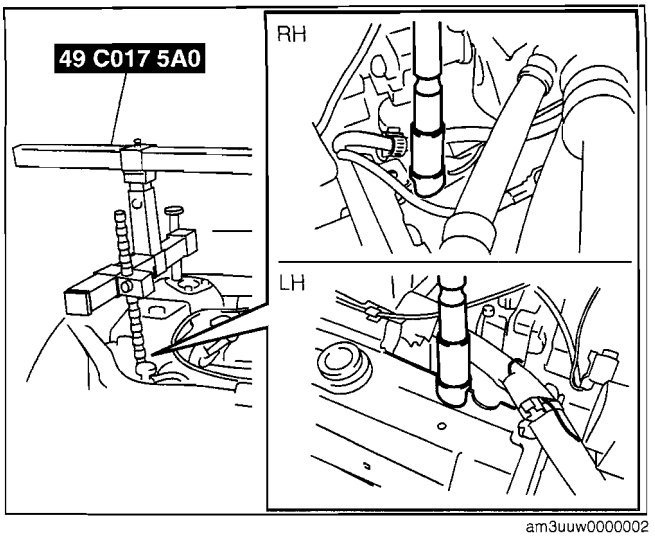
am3uuw0000002

(1) Install the right rear shaft of the **SST** to the bolt of the right shock absorber as shown in the figure.
(2) Install the left rear shaft of the **SST** to the bolt of the left shock absorber (identical position to right side).



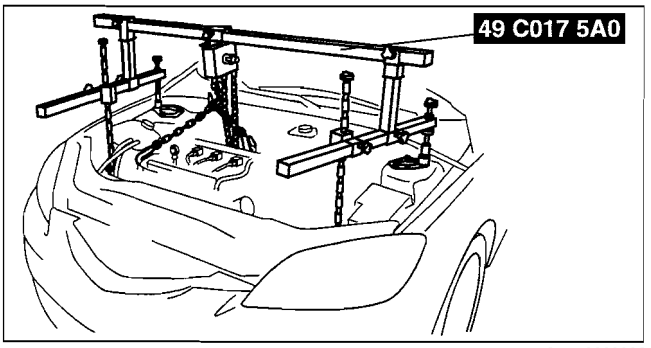
am3uuw0000002

(3) Install front foot No.2 to the left/right front shaft of the **SST**, then align the groove of the front shaft of the **SST** with the folded up part of the vehicle as shown in the figure.
(4) Adjust the positions of the **SST** side bars so that they are the same height (left and right) and horizontal.
(5) Make sure each joint is securely tightened.



am3uuw0000002

3. Suspend the engine using the **SST**.
4. Remove the battery tray bracket, No.4 engine mount rubber and bracket.



am3uuw0000002

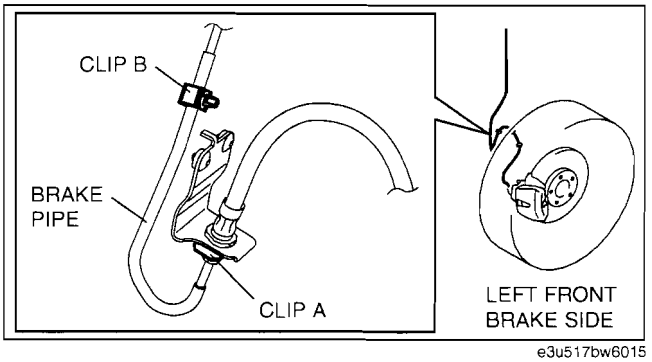
Transaxle Removal Note

Warning
- **Remove the transaxle carefully, holding it steady. If the transmission falls it could be damaged or cause injury.**

Caution
- **To prevent the torque converter and transmission from separating, remove the transmission without tilting it toward the torque converter.**

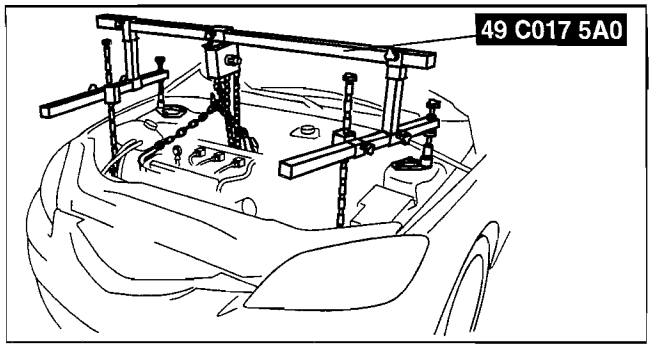
1. Remove the clip A.
2. Remove the clip B from the brake pipe (LF).

Note
- To prevent interference with the ATX, move the brake pipe (LF) and secure a space.



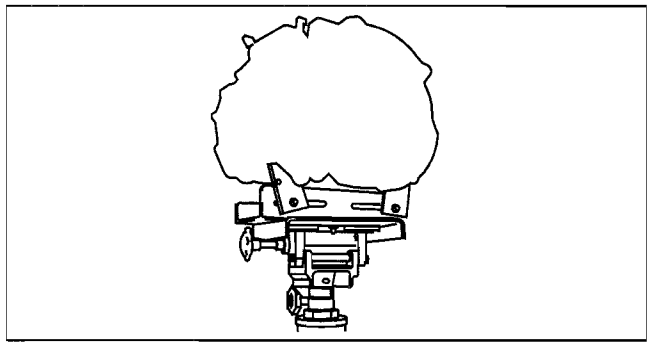
e3u517bw6015

3. Lean the engine toward the transaxle.
4. Support the transaxle on a jack.
5. Remove the transaxle mounting bolts.



am3uuw0000002

6. Remove the transaxle.



am3uuw0000004

Transaxle Installation Note

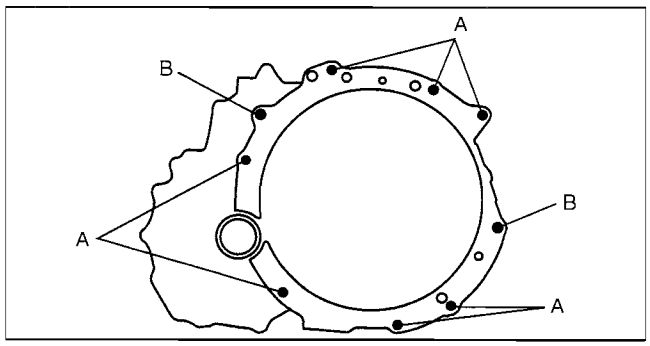
Warning
- **Install the transaxle carefully, holding it steady. If the transmission falls it could be damaged or cause injury.**

Caution
- **To prevent the torque converter and transmission from separating, install the transmission without tilting it toward the torque converter.**

1. Set the transaxle on a jack and lift it.
2. Install the transaxle mounting bolts.

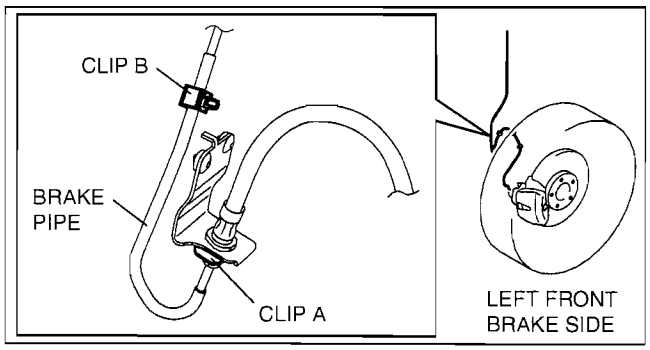
Bolt length (measured from below the head)
A: 50 mm {1.967 in}
B: 65 mm {2.559 in}

Tightening torque
37.3—52.0 N·m
{3.8—5.3 kgf·m, 27.6—38.3 ft·lbf}



am3uuw0000002

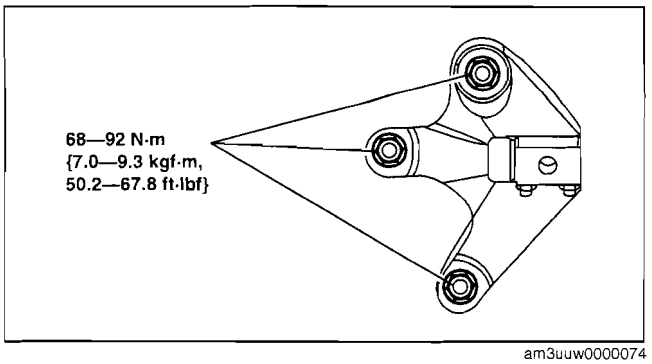
3. Install the brake pipe (LF) to the clip B.
4. Install the clip A.



e3u517bw6015

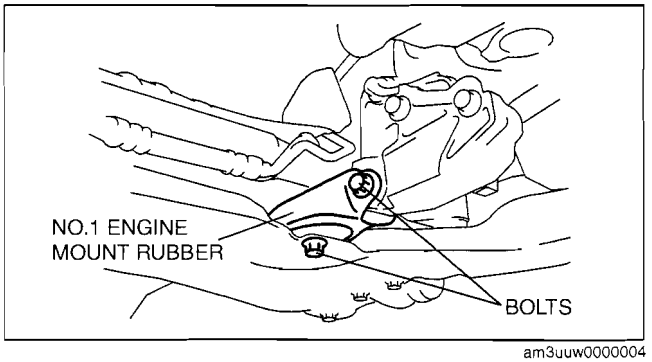
No.1 Engine Mount and No.4 Engine Mount Installation Note

1. Install the No.4 engine mount bracket on the transaxle case and tighten nuts.



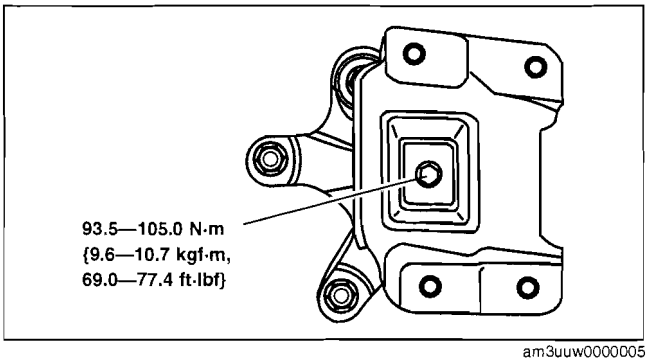
am3uuw0000074

2. Install the No.1 engine mount rubber to the crossmember and temporarily tighten bolts.



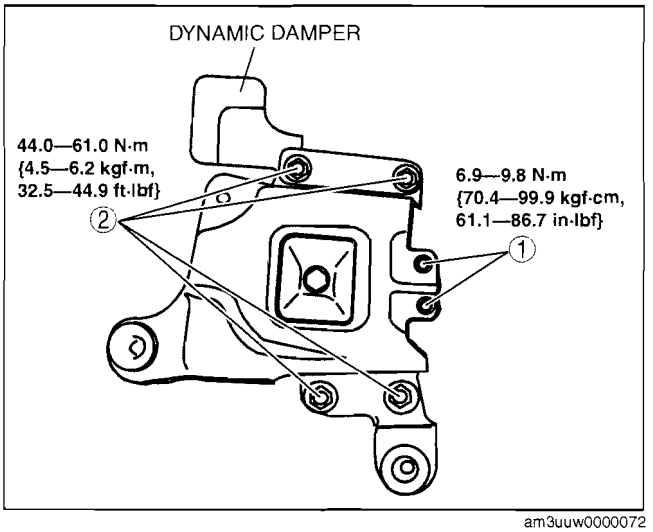
am3uuw0000004

3. Place the No.4 engine mount rubber with the body stud bolts passing through the holes and tighten the bolt as shown in the figure.
4. Place the battery tray bracket over the No.4 engine mount bracket with the body stud bolts passing through the holes.



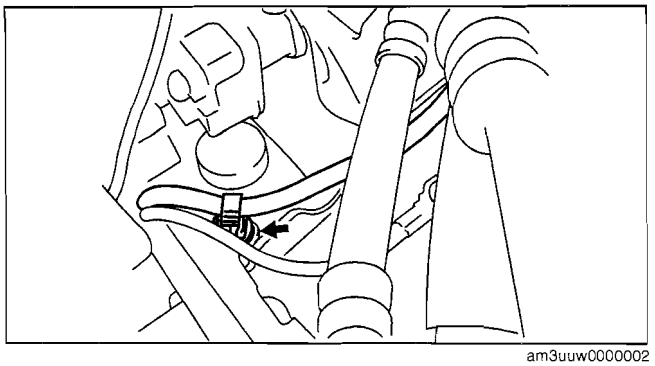
am3uuw0000005

5. Place the dynamic damper over the battery tray bracket with the body stud bolts passing through the holes, then tighten the bolts and nuts in the order shown in the figure.
6. Remove the **SST**.



am3uuw0000072

7. Install the clip as shown in the figure.



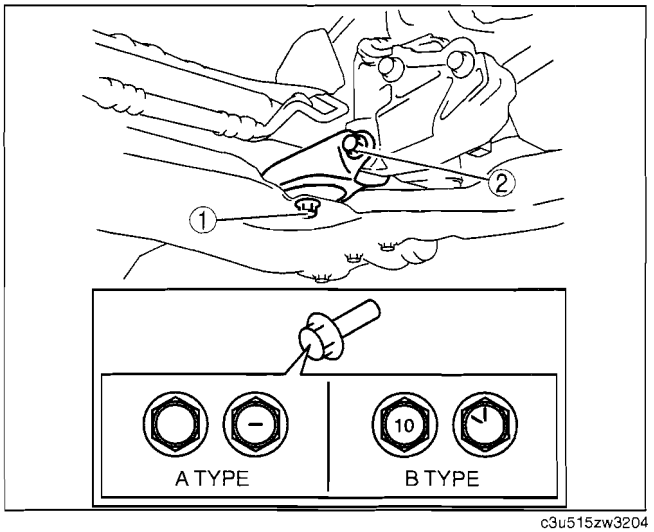
am3uuw0000002

8. Fully tighten the bolts

Caution
- **Tighten the bolts in the order shown in the figure to prevent abnormal noise and vibration after assembly.**
- **Tighten the bolts while being careful of their length to prevent interference between the steering gear housing and bolt.**

Bolt length (measured from below the head)
Front crossmember side: 62 mm {2.441 in}
No.1 engine mount bracket side: 65 mm {2.559 in}

Tightening torque
A type: 72.6—90.9 N.m {7.5—9.2 kgf.m, 53.6—67.0 ft.lbf}
B type: 93.1—116.6 N·m {9.5—11.8 kgf·m, 68.7—85.9 ft·lbf}

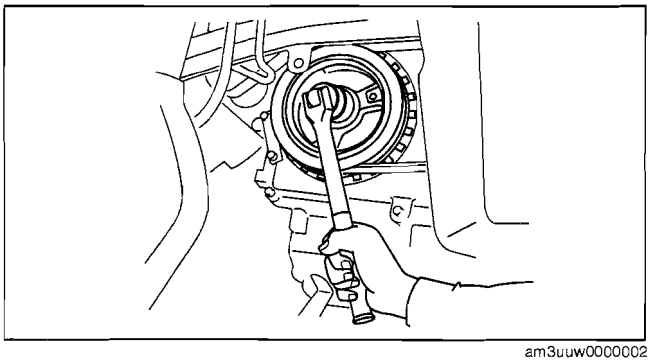


c3u515zw3204

Torque Converter Nuts Installation Note

1. Hold the crankshaft pulley to prevent the drive plate from rotating.

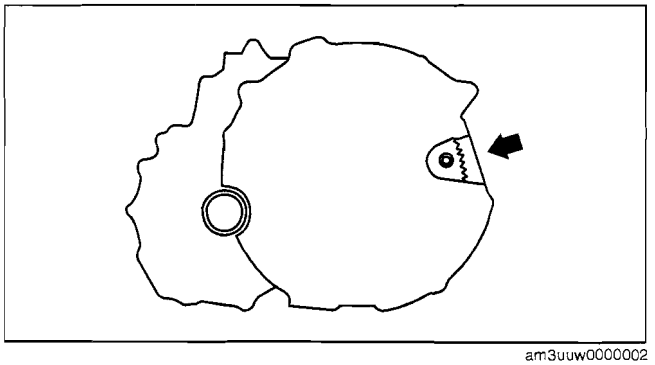
Caution
- **Loosely and equally tighten the torque converter nuts, then further tighten them to the specified tightening torque.**



am3uuw0000002

2. Tighten the torque converter mounting nuts.

Tightening torque
40.5—54.7 N·m {4.2—5.5 kgf·m, 29.9—40.3 ft·lbf}



am3uuw0000002

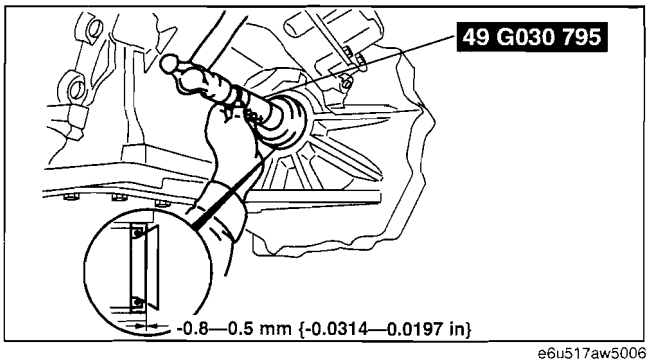
OIL SEAL REPLACEMENT[FS5A-EL]

id051721804400

1. Drain the ATF. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FS5A-EL].)

Caution
- **The oil seal is easily damaged by the sharp edges of the drive shaft splines. Do not let the splines contact the oil seal.**

2. Remove the drive shaft and joint shaft. (See 03-13-9 DRIVE SHAFT REMOVAL/INSTALLATION.) (See 03-13-4 JOINT SHAFT REMOVAL/INSTALLATION[L3, L3 WITH TC].)
3. Remove the oil seal.
4. Using the **SST** and a hammer, tap a new oil seal in evenly until the **SST** contacts the transaxle case.
5. Coat the lip of the oil seal with transaxle oil.
6. Install the drive shaft and joint shaft. (See 03-13-9 DRIVE SHAFT REMOVAL/INSTALLATION.) (See 03-13-4 JOINT SHAFT REMOVAL/INSTALLATION[L3, L3 WITH TC].)
7. Add ATF to the specified level. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FS5A-EL].)
8. Perform the mechanical system test. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].)



e6u517aw5006

PRIMARY CONTROL VALVE BODY REMOVAL[FS5A-EL]

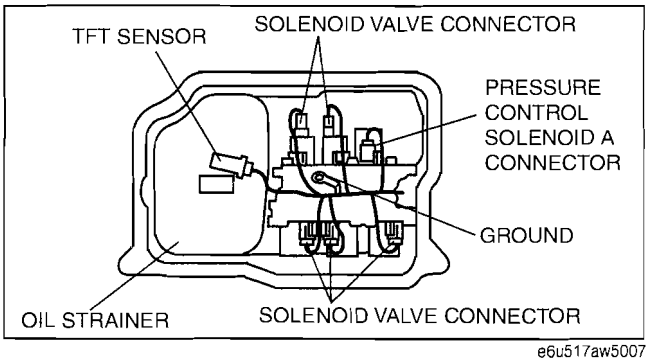
id051721807300

On-Vehicle Removal

Warning
- **Using compressed air can cause dirt and other particles to fly out, causing injury to the eyes. Wear protective eyes whenever using compressed air.**

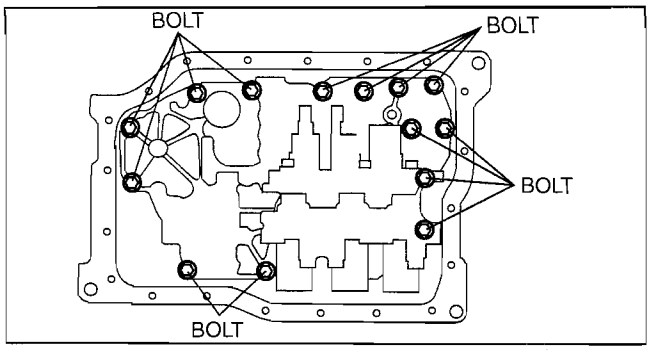
Caution
- **Clean the transaxle exterior throughout with a steam cleaner or cleaning solvents before removal.**
- **If any old sealant gets into the transaxle during installation of the oil pan, trouble may occur in the transaxle case and oil pan. Clean with cleaning fluids.**

1. Remove the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Drain the ATF into a separate suitable container. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FS5A-EL].)
4. Remove the under cover.
5. Remove the oil pan.
6. Disconnect the solenoid connectors and GND.
7. Remove the oil strainer.



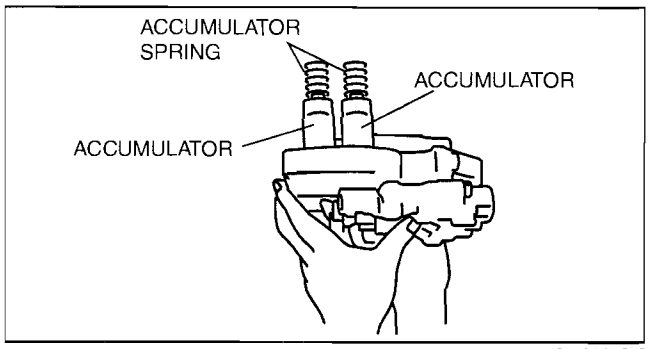
e6u517aw5007

8. Remove the primary control valve body installation bolts as shown, then remove the primary control valve body component as shown.



d6e517aw5029

9. Remove the accumulators and accumulator springs.



a6e5614w059

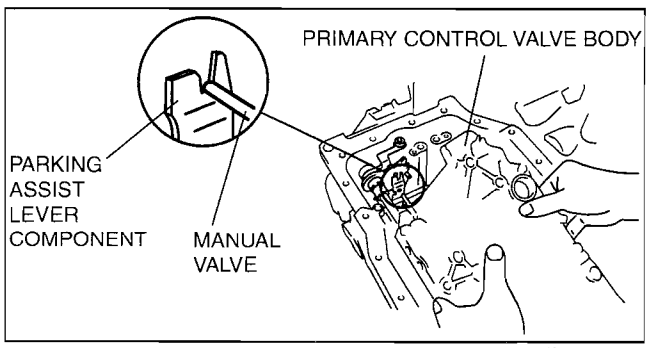
PRIMARY CONTROL VALVE BODY INSTALLATION[FS5A-EL]

id051721807400

On-Vehicle Installation

Caution

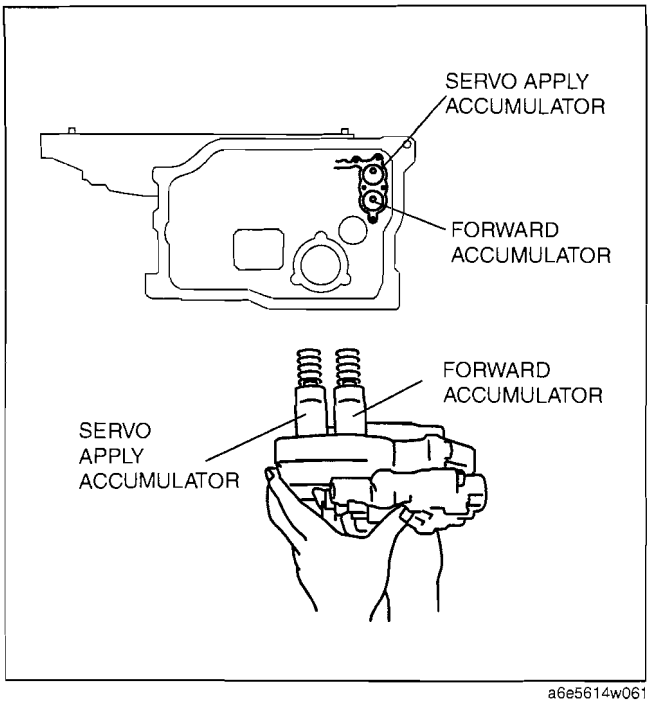
- **Be sure to align the parking rod and the manual valve.**



d6e517za5002

1. Install the accumulator springs and accumulators into the transaxle case.

Spring	Outer diameter (mm {in})	Free Length (mm {in})	No. of coils	Wire diameter (mm {in})
Servo apply accumulator large spring	21.0 {0.827}	67.8 {2.669}	10.3	3.5 {0.138}
Servo apply accumulator small spring	13.0 {0.512}	67.8 {2.669}	17.1	2.2 {0.087}
Forward accumulator large spring	21.0 {0.827}	75.0 {2.953}	10.7	2.3 {0.091}
Forward accumulator small spring	15.6 {0.614}	49.0 {1.929}	7.7	2.4 {0.094}

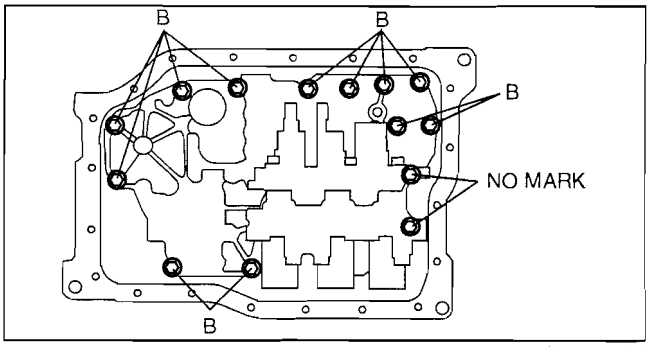


a6e5614w061

2. Install the primary control valve body component.

Tightening torque
7.8—10.8 N·m
{80—110 kgf·cm, 70—95 in·lbf}

Bolt length (measured from below the head)
B: 40 mm {1.575 in}
No mark: 70 mm {2.756 in}

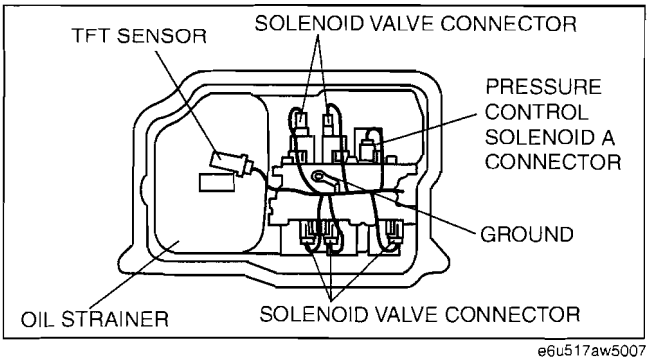


d6e517za5003

3. Install the oil strainer.

4. Match the harness colors, then connect the solenoid connectors and GND, and install the TFT sensor.

Spring	Color of connector (harness side)
Pressure control solenoid A	Black
Shift solenoid A	White
Shift solenoid B	Blue
Shift solenoid C	Green
Shift solenoid D	White
Shift solenoid E	Black

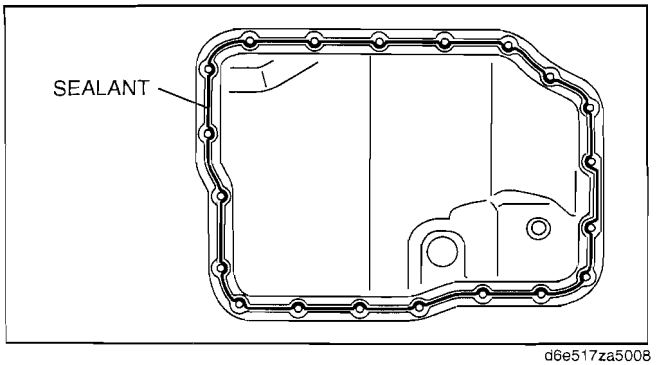


e6u517aw5007

Tightening torque
7.8—10.8 N·m {80—110 kgf·cm, 70—95 in·lbf}

5. Apply a light coat of silicon sealant to the contact surfaces of the oil pan and transaxle case.
6. Install the oil pan.

Tightening torque
6—8 N·m {62—81 kgf·cm, 53—70 in·lbf}



d6e517za5008

7. Install the under cover.
8. Connect the negative battery cable.
9. Install the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
10. Add ATF. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FS5A-EL].)
11. Carry out the mechanical system test. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].)
12. Carry out the road test. (See 05-17B-6 ROAD TEST[FS5A-EL].)

SECONDARY CONTROL VALVE BODY REMOVAL[FS5A-EL]

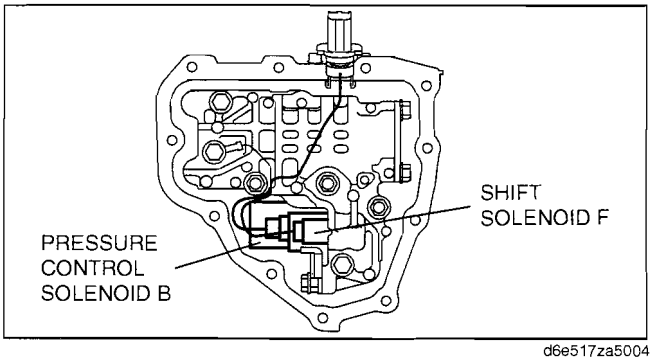
id051721807500

On-Vehicle Removal

Warning
- **Using compressed air can cause dirt and other particles to fly out, causing injury to the eyes. Wear protective eyes whenever using compressed air.**

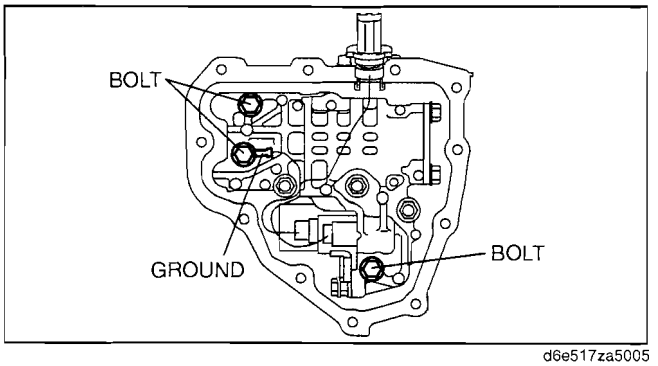
Caution
- **Clean the transaxle exterior throughout with a steam cleaner or cleaning solvents before removal.**
- **If any old sealant gets into the transaxle during installation of the oil pan, trouble may occur in the transaxle case and oil pan. Clean with cleaning fluids.**

1. Remove the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the battery, battery box and battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
4. Drain the ATF into a separate suitable container. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FS5A-EL].)
5. Remove the oil cover.
6. Disconnect the transaxle connectors.



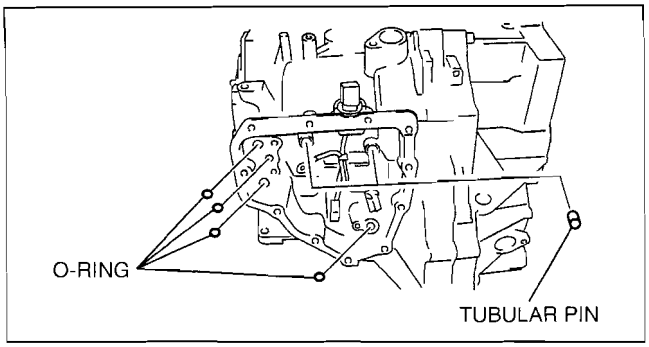
d6e517za5004

7. Remove the secondary control valve body installation bolts as shown, then remove the secondary control valve body component and ground as shown.



d6e517za5005

8. Remove the tubular pin and O-ring.



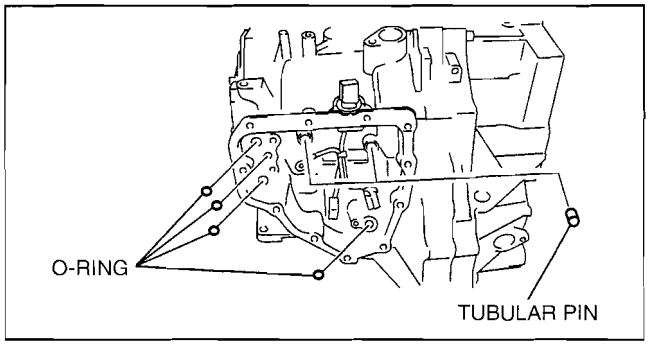
d6e517aw5031

SECONDARY CONTROL VALVE BODY INSTALLATION[FS5A-EL]

id051721807600

On-Vehicle Installation

1. Install the tubular pin and O-ring to the transaxle case.

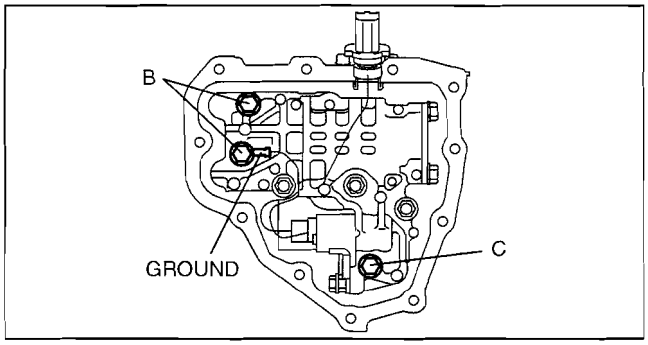


d6e517aw5031

2. Install the secondary control valve body component and ground.

Tightening torque
7.8—10.8 N·m
{80—110 kgf·cm, 70—95 in·lbf}

Bolt length (measured from below the head)
B: 40 mm {1.575 in}
C: 50 mm {1.967 in}



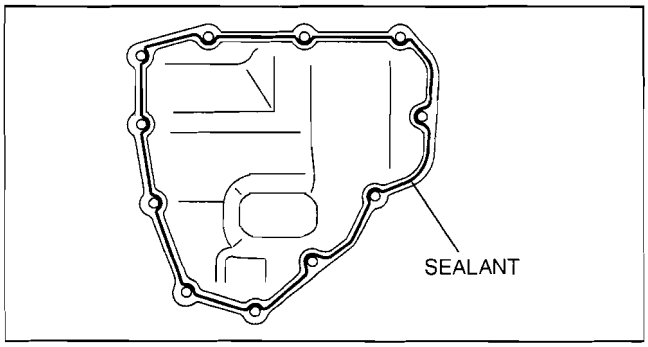
d6e517za5006

3. Match the harness colors, then connect the solenoid connector.

Spring	Color of connector (harness side)
Pressure control solenoid B	White
Shift solenoid F	Black

4. Apply a light coat of silicon sealant to the contact surfaces of the oil cover and transaxle case.
5. Install the oil cover.

Tightening torque
7.8—10.8 N·m {80—109 kgf·cm, 70—95 in·lbf}



d6e517za5007

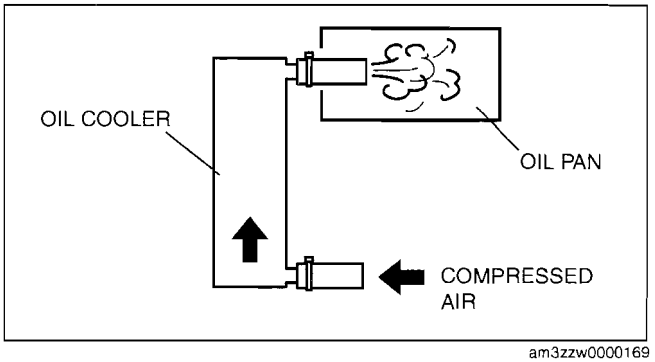
6. Install the battery, battery box and battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
7. Connect the negative battery cable.
8. Install the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
9. Add ATF. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FS5A-EL].)
10. Carry out the mechanical system test. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].)
11. Carry out the road test. (See 05-17B-6 ROAD TEST[FS5A-EL].)

OIL COOLER FLUSHING[FS5A-EL]

id051721801500

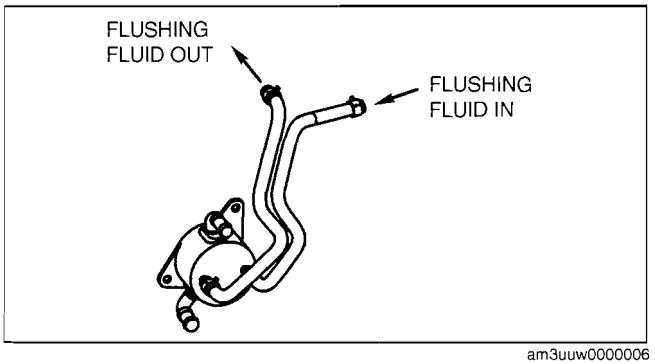
Note
- If the automatic transaxle is replaced, flush and inspect the oil cooler.
- When replacing the automatic transaxle, inspect the oil cooler together with flushing it using the following procedure, and with the oil cooler hose removed.

1. Disconnect the oil cooler hose.
2. Set a clean oil pan up to the oil cooler hose inlet.



am3zzw0000169

3. Blow **491—882 kPa {5—9 kgf/cm^2, 72—127 psi}** of compressed air from the oil cooler hose outlet to drain remaining oil.
4. Add new ATF from the oil cooler hose outlet and blow **491—882 kPa {5—9 kgf/cm^2, 72—127 psi}** of compressed air to flush. (Repeat 2 or 3 times)
5. Verify that none of the following foreign material is mixed in with the drained ATF:
   - Large metal fragments of ϕ 0.5 mm {0.02 mm} or more that cannot pass through the oil strainer
   - Fibrous clutch facing
6. Repeat the procedures from Step 3 to 4 and flush the inside of the oil cooler.
7. If foreign material such as metal fragments or clutch facing remains even after the oil cooler is flushed repeatedly, replace the oil cooler (radiator).

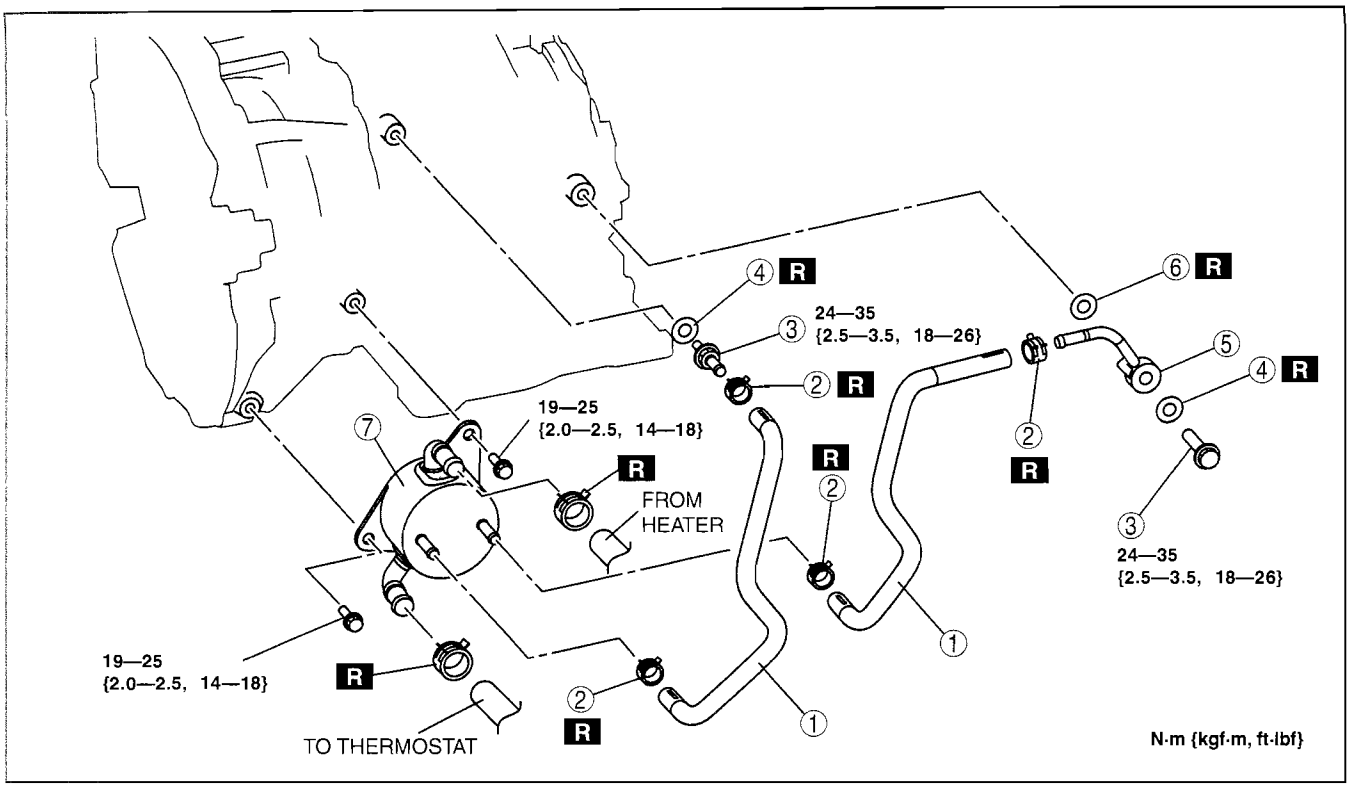


am3uuw0000006

OIL COOLER REMOVAL/INSTALLATION[FS5A-EL]

id051721801600

1. Remove the battery duct and battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the air cleaner component. (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[LF, L3].)
4. Remove the under cover.
5. Drain the engine coolant. (See 01-12A-3 ENGINE COOLANT REPLACEMENT[LF, L3].)
6. Drain the ATF into a container. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FS5A-EL].)
7. Disconnect the water hose.
8. Remove in the order indicated in the table.
9. Install in the reverse order of removal.
10. Refill the engine coolant. (See 01-12A-3 ENGINE COOLANT REPLACEMENT[LF, L3].)
11. Inspect the engine coolant leakage. (See 01-12A-4 ENGINE COOLANT LEAKAGE INSPECTION[LF, L3].)
12. Add ATF to the specified level. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FS5A-EL].)
13. Inspect for oil leakage from the oil pipes and oil hoses.
14. Inspect for coolant from the hoses.
15. Inspect the ATF level and condition. (See 05-17B-9 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION[FS5A-EL].)
16. Perform the line pressure test. (See 05-17B-3 MECHANICAL SYSTEM TEST[FS5A-EL].)



am3uuw0000053

1	Oil hose (See 05-17B-57 Oil Pipe, Hose Clamp, Oil Hose Installation Note.)
2	Hose clamp (See 05-17B-57 Oil Pipe, Hose Clamp, Oil Hose Installation Note.)

3	Connector bolt
4	Packing
5	Oil pipe
6	Packing
7	Oil cooler (See 05-17B-57 Oil Cooler Installation Note.)

Oil Cooler Installation Note

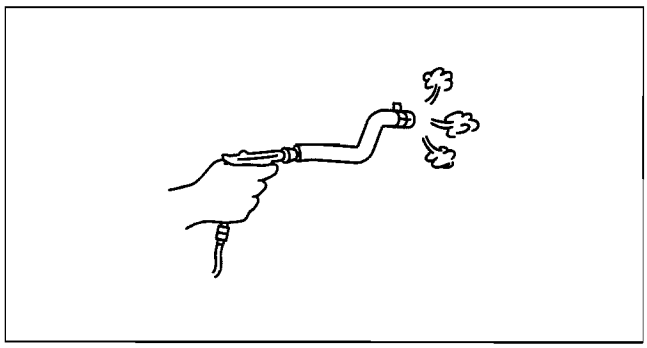
1. The automatic transaxle oil cooler flushing must be performed whenever a transaxle is removed for service because the existing fluid may be contaminated, and to prevent contamination of new fluid.

   Note
   - Flushing must be performed after installation of the overhauled or replaced transaxle.

2. Follow the instructions in the manufacturer's publication for flushing operation.

Oil Pipe, Hose Clamp, Oil Hose Installation Note

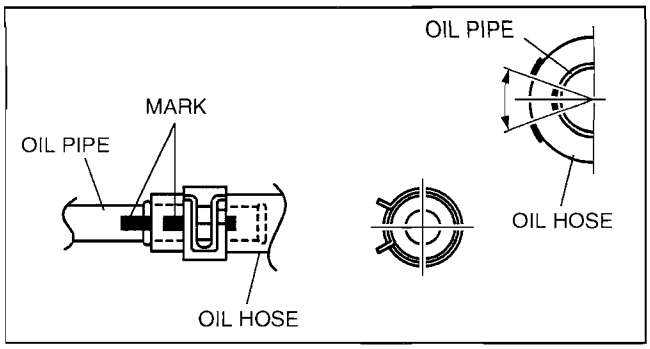
1. Apply compressed air to the cooler-side opening, and blow any remaining grime and foreign material from the cooler pipes. Compressed air should be applied for no **less than 1 min**.



am3uuw0000053

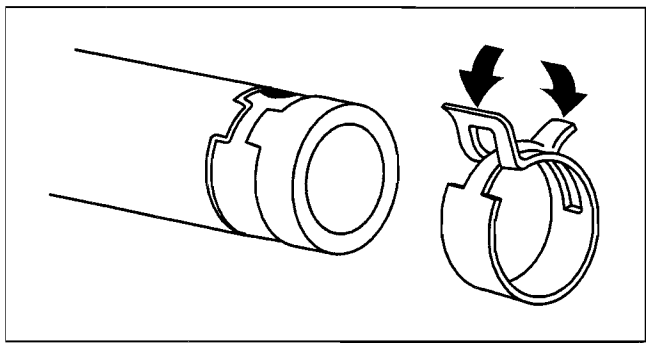
2. Align the marks, and slide the oil hose onto the oil pipe until it is fully seated as shown.

Note
- If reusing the hose, install the new hose clamp exactly on the mark left by the previous hose clamp. Then apply force to the hose clamp in the direction of the arrow in order to fit the clamp in place.



am3uuw0000054

3. Install the new hose clamp onto the hose.
4. Verify that the hose clamp does not interfere with any other components.



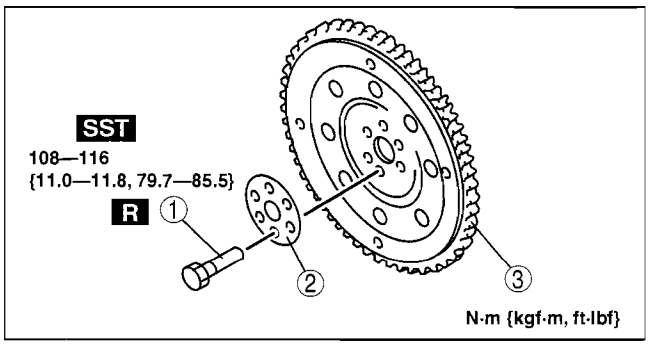
am3uuw0000053

DRIVE PLATE REMOVAL/INSTALLATION[FS5A-EL]

id051721802500

1. Remove the transaxle. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FS5A-EL].)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.

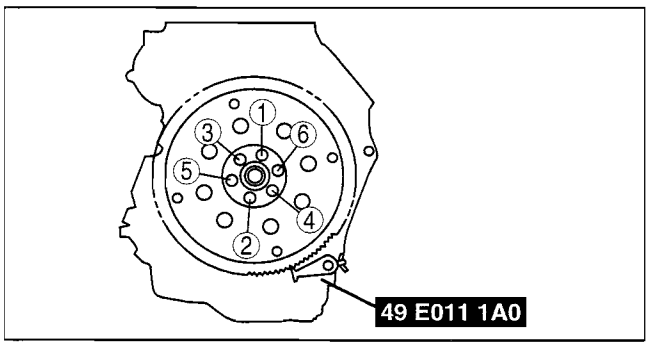
1	Drive plate mounting bolts (See 05-17B-58 Drive Plate Mounting Bolts Removal Note.)
2	Adapter
3	Drive plate (See 05-17B-59 Drive Plate Installation Note.)



dpe517zw1009

Drive Plate Mounting Bolts Removal Note

1. Set the **SST** or equivalent against the drive plate.
2. Remove the bolts and the drive plate.



c3u0517w046

Drive Plate Installation Note

Caution

- **Clean the crankshaft threads before tightening the bolts.The threads may be damaged if the bolts are tightened with any old sealant remaining.**

1. Clean the crankshaft thread holes.
2. Install the drive plate.
3. Install the adapter.
4. Set the **SST** or equivalent against the drive plate.
5. Tighten the drive plate mounting bolts in two or three steps in the order as shown in the figure.

Tightening torque
108—116 N·m
{11.0—11.8 kgf·m, 79.7—85.5 ft·lbf}

6. Install the transaxle. (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION[FS5A-EL].)

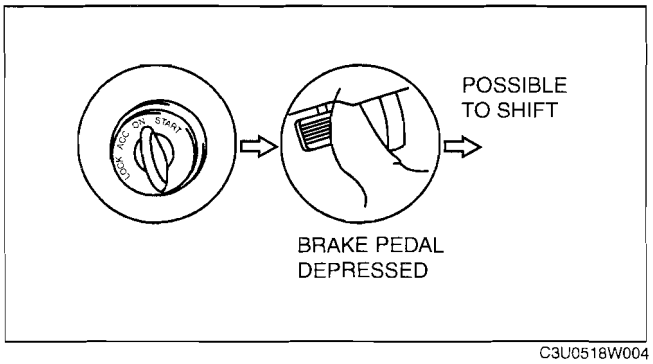
5	Selector cable (See 05-18-5 SELECTOR CABLE ADJUSTMENT.)

SHIFT-LOCK INSPECTION

id051800800400

1. Turn the ignition switch to the ON position (engine off).
2. Verify that the selector lever is in the P position.
3. Without the brake pedal depressed, verify that the selector lever cannot be shifted from the P position.
4. Depress the brake pedal and verify that the selector lever can be shifted from the P position.
   - If there is any malfunction, inspect the selector lever component. (See 05-18-4 SELECTOR LEVER COMPONENT INSPECTION.)

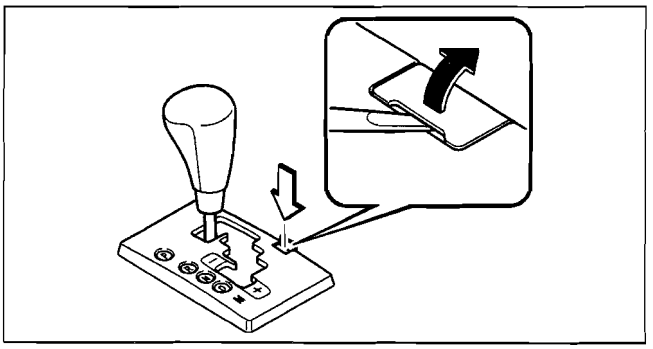


C3U0518W004

EMERGENCY OVERRIDE BUTTON INSPECTION

id051800802100

1. Turn the ignition switch to the LOCK position.
2. Verify that the selector lever is in the P position.
3. Without the brake pedal depressed, verify that the selector lever cannot be shifted from the P position.
4. Remove the panel cover using a screwdriver as shown in the figure.
5. Insert the screwdriver into the emergency override hole and push it down. Verify that the selector lever can be shifted from the P position.
   - If there is any malfunction, replace the selector lever component. (See 05-18-6 SELECTOR LEVER COMPONENT REMOVAL/INSTALLATION.)

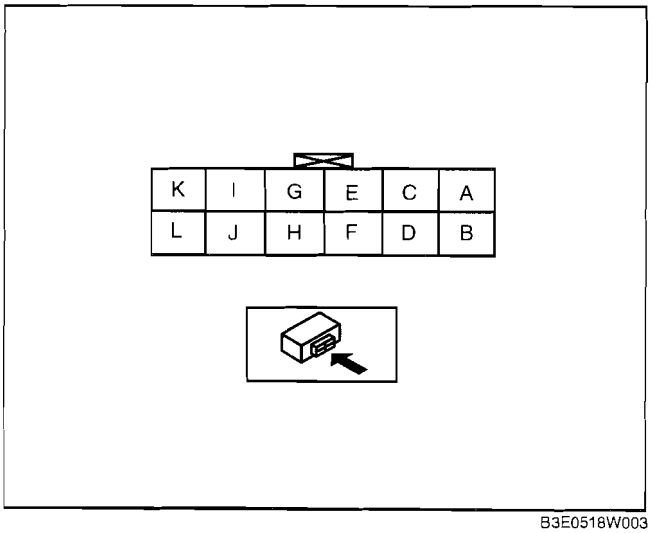


c3u0518w001

SHIFT-LOCK SOLENOID INSPECTION

id051800802200

1. Disconnect the negative battery cable.
2. Remove the console. (See 09-17-10 CONSOLE REMOVAL/INSTALLATION.)
3. Disconnect the selector lever component connector.
4. Measure the continuity between terminals E and F.
   - If there is any malfunction, replace the selector lever component. (See 05-18-6 SELECTOR LEVER COMPONENT REMOVAL/INSTALLATION.)

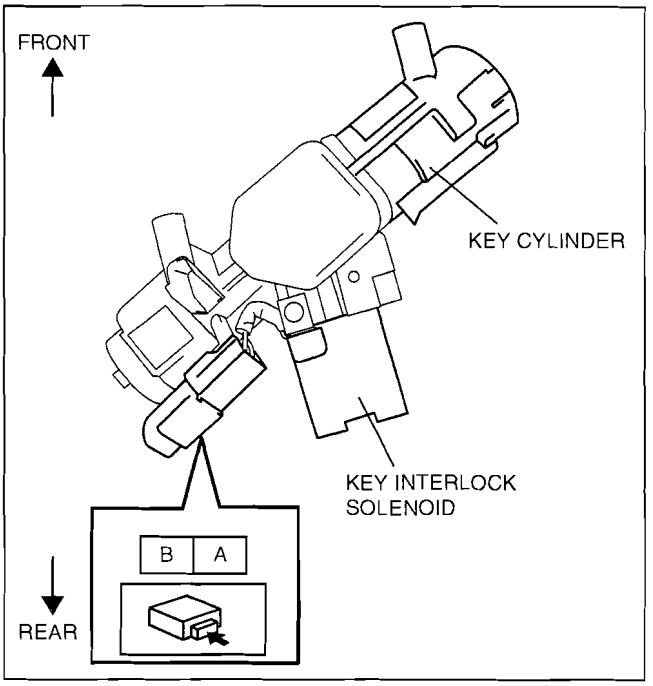


B3E0518W003

KEY INTERLOCK SOLENOID INSPECTION

id051800801100

1. Disconnect the negative battery cable.
2. Remove the column cover. (See 09-17-7 COLUMN COVER REMOVAL/INSTALLATION.)
3. Disconnect the key interlock solenoid connector.
4. Measure the continuity between terminals A and B.
   - If there is any malfunction, replace the key cylinder. (See 06-14-8 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)

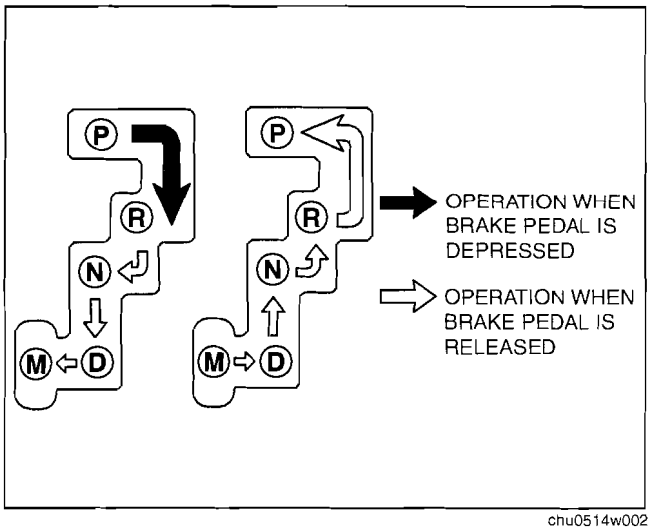


dpe518zw1007

SELECTOR LEVER INSPECTION

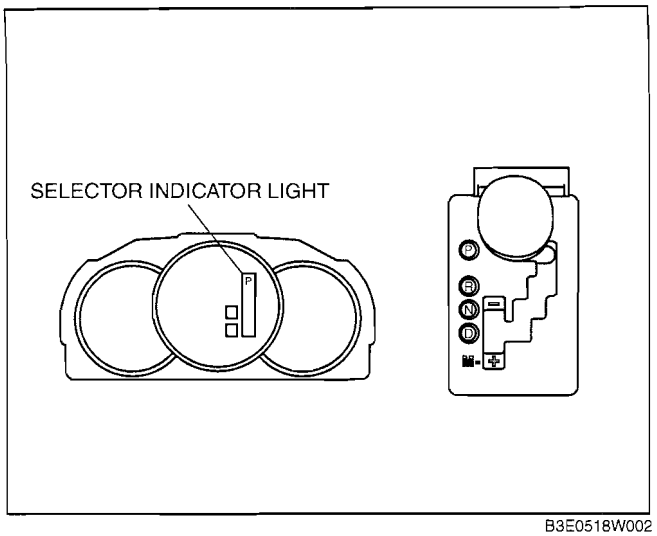
id051800800500

1. Turn the ignition switch to the ON position (engine OFF).
2. With the brake pedal depressed, verify that there is a "click" at each range when shifted.
3. Verify that the selector lever can be shifted.
4. Verify that there is a "click" at each position when shifted from the P position to M range.



chu0514w002

5. Verify that the positions of the selector lever and the indicator are aligned.
   - If there is any malfunction, adjust the TR switch. (See 05-17A-16 TRANSAXLE RANGE (TR) SWITCH ADJUSTMENT[FN4A-EL].)(See 05-17B-17 TRANSAXLE RANGE (TR) SWITCH ADJUSTMENT[FS5A-EL].)
6. Verify that the vehicle operates in each selected range.

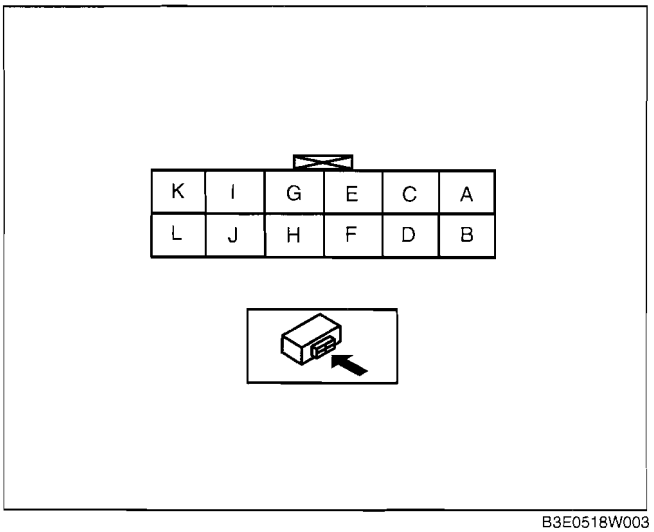


B3E0518W002

SELECTOR LEVER COMPONENT INSPECTION

id051800800600

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the console. (See 09-17-10 CONSOLE REMOVAL/INSTALLATION.)
4. Disconnect the selector lever component connector.
5. Verify that the continuity is as indicated in the table.
   - If there is any malfunction, replace the selector lever component. (See 05-18-6 SELECTOR LEVER COMPONENT REMOVAL/INSTALLATION.)



B3E0518W003

O—O : Continuity

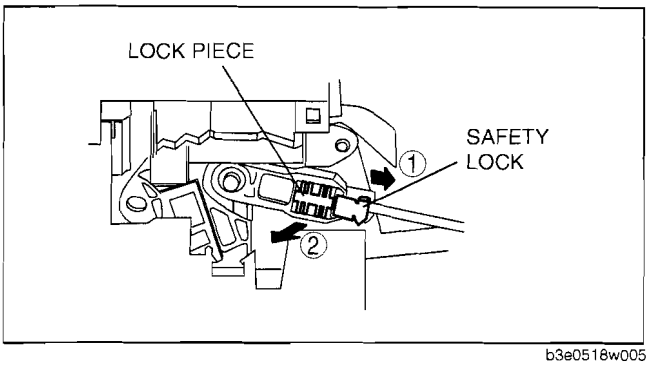
Selector lever position/range		Connector terminal											
		A	B	C	D	E	F	G	H	I	J	K	L
M range	- M			O								O	
	Center M	O										O	
	+ M		O									O	
P position									O	O			
Except P position								O	O				

C3U0518W002

SELECTOR CABLE ADJUSTMENT

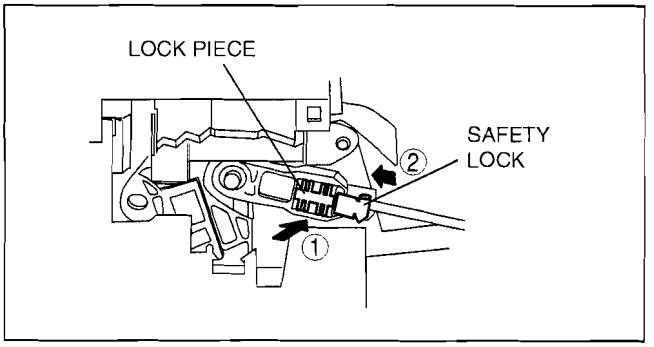
id051800800700

1. Remove the console. (See 09-17-10 CONSOLE REMOVAL/INSTALLATION.)
2. Shift the selector lever to P position.
3. Unlock the lock piece of the selector cable (selector lever side) in the order as shown in the figure.
4. Verify that the manual shaft is in the P position.



b3e0518w005

5. Lock the lock piece and safety lock of the selector cable (selector lever side) in the order as shown in the figure.
6. Install the console. (See 09-17-10 CONSOLE REMOVAL/INSTALLATION.)
7. Shift the selector lever from the P position to M range, and make sure that there are no other components in that area to interfere with the lever.

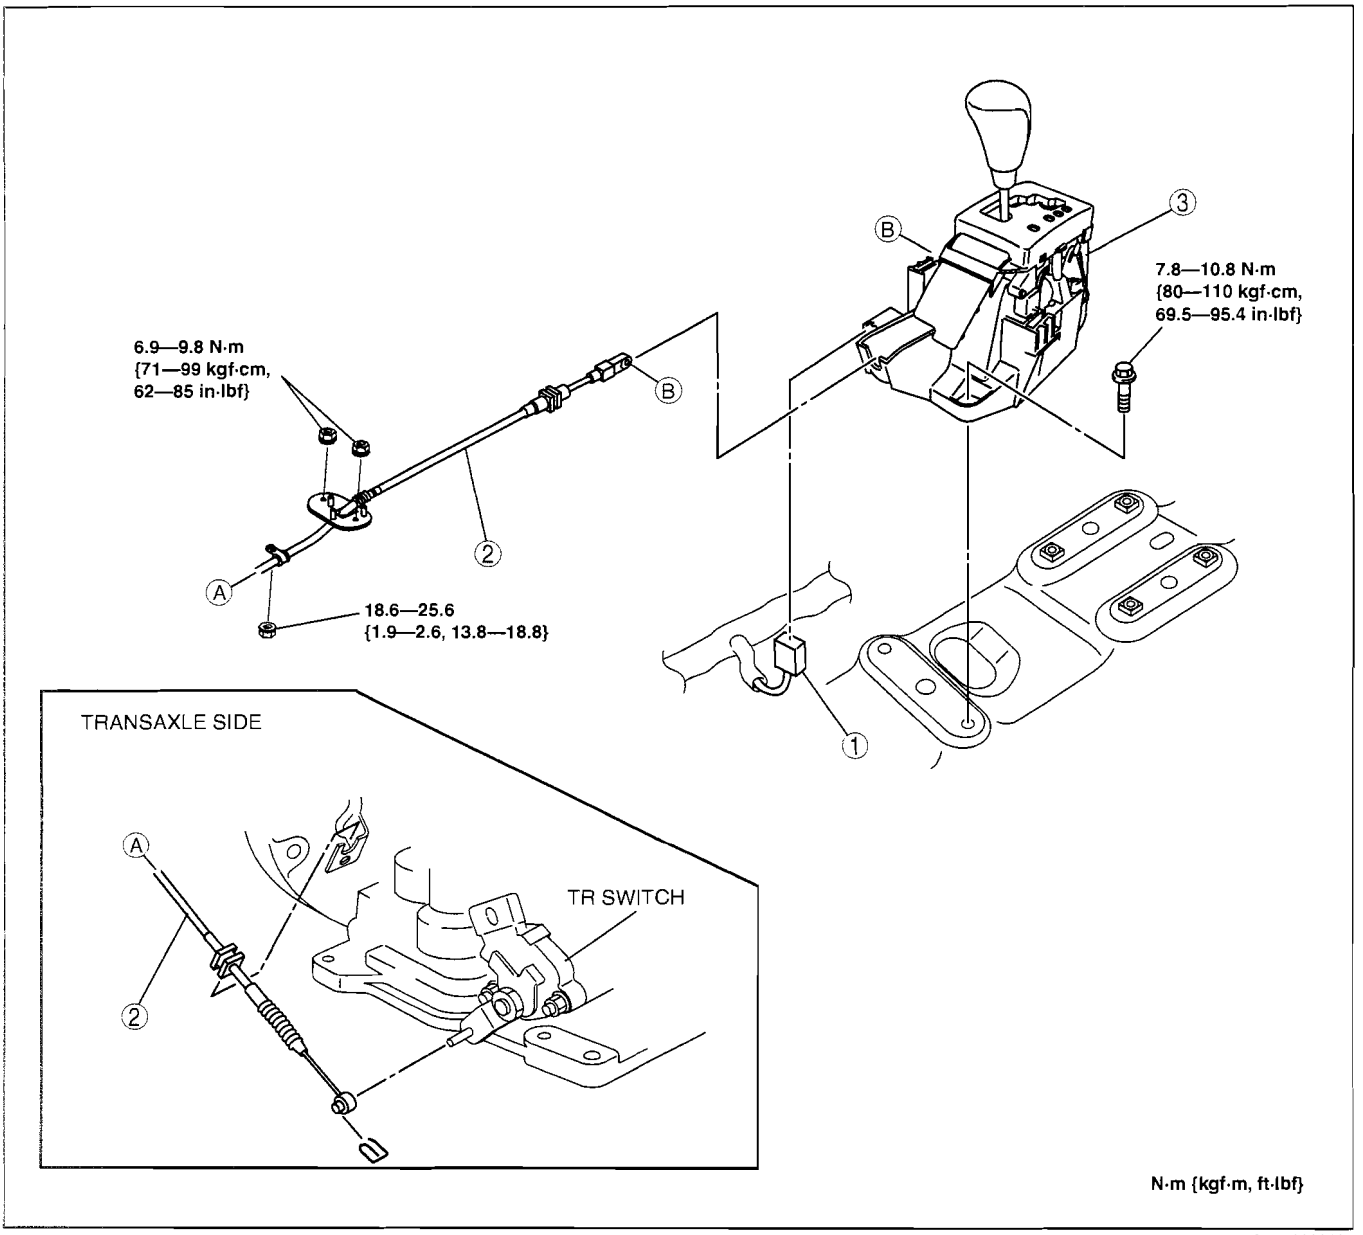


b3e0518w006

SELECTOR LEVER COMPONENT REMOVAL/INSTALLATION

id051800800800

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the battery, battery box and battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
4. Remove the air cleaner component. (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[LF, L3].)
5. Remove the console. (See 09-17-10 CONSOLE REMOVAL/INSTALLATION.)
6. Remove the heat insulator (front and center).
7. Remove in the order indicated in the table.
8. Install in the reverse order of removal.

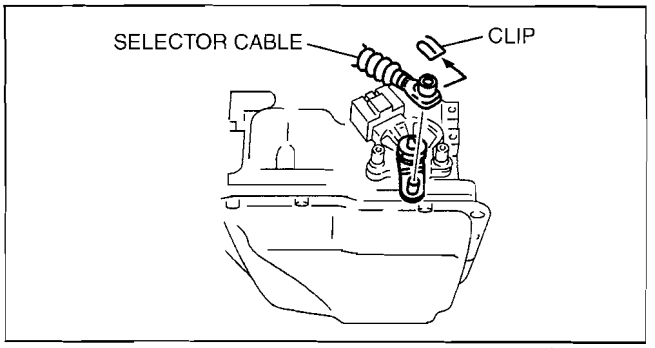


am3uuw0000104

1	Selector lever component connector
2	Selector cable (See 05-18-7 Selector Cable Removal Note.) (See 05-18-7 Selector Cable Installation Note.)
3	Selector lever component (See 05-18-7 Selector Lever Component Installation Note.)

Selector Cable Removal Note

1. Remove the clip.
2. Remove the selector cable.

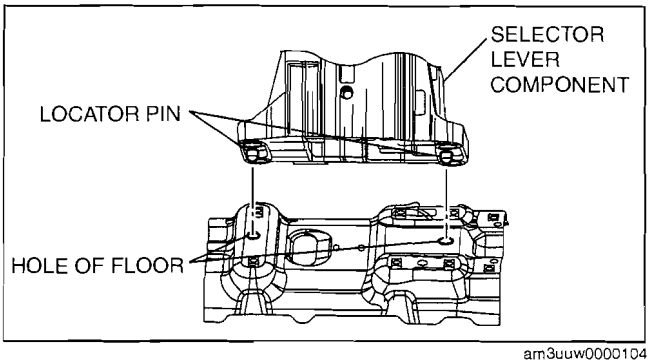


am3uuw0000104

Selector Lever Component Installation Note

1. Insert the location pin of selector lever component to the hole of the floor.
2. Tighten the selector lever component installation bolts.

Tightening torque
7.8—10.8 N·m
{80—110 kgf·cm, 69.5—95.4 in·lbf}



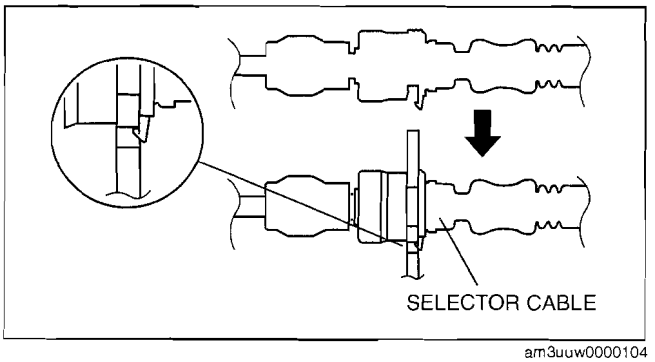
am3uuw0000104

Selector Cable Installation Note

1. Install the selector cable to the selector lever securely.
2. Install the selector cable to the bracket securely.

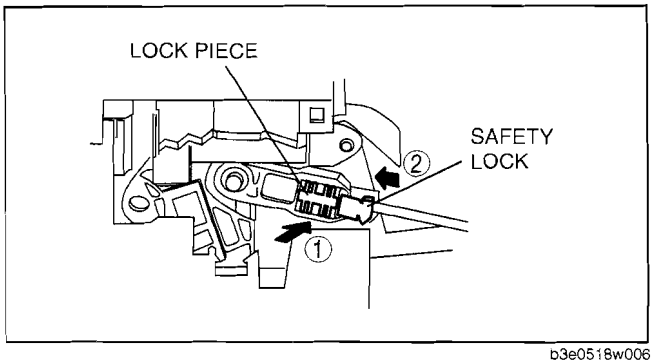
Note
- Steps 3 and 4 are for the selector cable replacement only.

3. Verify that the selector lever is in the P position.



am3uuw0000104

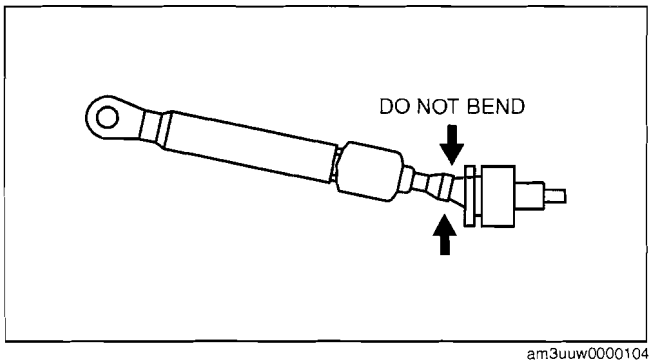
4. Lock the lock piece and safety lock of the selector cable (selector lever side) in the order as shown in the figure.



b3e0518w006

5. Verify that the manual shaft is in the P position.

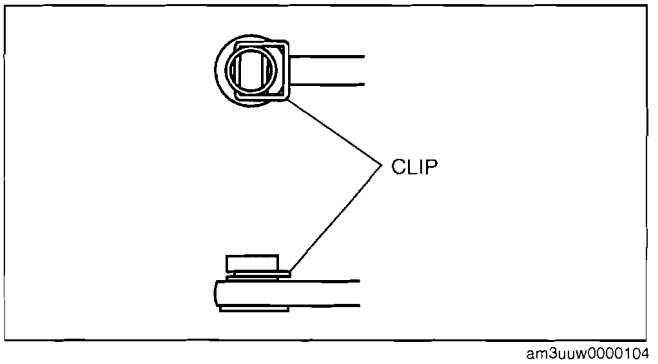
Caution
- **Bending the selector cable in the manner shown in the figure will damage the cable and it may become loose when shifted. When installing the selector cable, hold it straight.**



am3uuw0000104

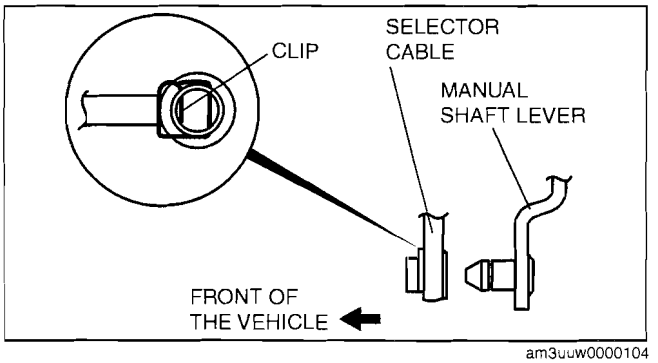
6. Install the clip as shown in the figure.

Note
- Install the selector cable to the manual shaft cable with the clip side of the selector cable end facing the front of the vehicle.



am3uuw0000104

7. Install the selector cable to the manual shaft lever in such a way that the selector cable does not bear a load.
8. Confirm that the end of the manual shift lever projects from the end of the selector cable.
9. Install the selector cable to the selector cable bracket securely.



am3uuw0000104

SELECTOR LEVER DISASSEMBLY/ASSEMBLY

id051800800900

		Shift solenoid D	10.9—26.2
		Shift solenoid E	10.9—26.2
		Pressure control	2.4—7.3

AUTOMATIC TRANSAXLE [FS5A-EL]

Item	Specification
Average time lag	N position→D range: 0.4—0.7 sec. N position→R position: 0.4—0.7 sec.
ATF type	ATF M-V
Capacity (approx. quantity)	8.14 L {8.6 US qt, 7.2 Imp qt}
Input/turbine speed sensor resistance	250—600 ohms (ATF temperature: –40—160 °C {–40—320 °F})
Intermediate sensor voltage	4.5—5.5 V
Vehicle speed sensor (VSS) voltage	4.5—5.5 V

Line pressure specification

Position/range	Line pressure (kPa {kgf/cm^2, psi})	
	Idle	Stall
D, M (1GR, 2GR)	330—470 {3.4—4.8, 48—68}	1,200—1,320 {12.2—13.5, 174—191}
R	490—710 {5.0—7.2, 71—102}	1,640—1,860 {16.8—18.9, 238—269}

Engine stall speed

Position/range	Engine stall speed (rpm)
D, M (1GR, 2GR)	2,200—2,800
R	

Transaxle range (TR) switch

Terminal	Position/Range	Resistance (ohm)
B—C	P	4,085—4,515
	R	1,425—1,575
	N	713—788
	D	371—409

Transaxle fluid temperature (TFT) sensor

ATF temperature (°C {°F})	Resistance (kilohm)
–20 {–4}	236—324
0 {32}	84.3—110
20 {68}	33.5—42.0
40 {104}	14.7—17.9
60 {140}	7.08—8.17
80 {176}	3.61—4.15
100 {212}	1.96—2.24
120 {248}	1.13—1.28
130 {266}	0.87—0.98

Primary control valve body (ATF temperature: –40—150 °C {–40—302 °F})

Terminal	Solenoid valve	Resistance (ohm)
A—GND	Shift solenoid A	1.0—4.2
C—GND	Shift solenoid B	1.0—4.2
G—GND	Shift solenoid C	1.0—4.2
B—GND	Shift solenoid D	10.9—26.2
F—GND	Shift solenoid E	10.9—26.2
D—I	Pressure control solenoid A	2.4—7.3

Secondary control valve body (ATF temperature: –40—150 °C {–40—302 °F})

Terminal	Solenoid valve	Resistance (ohm)
A—GND	Pressure control solenoid B	1.0—4.2
B—GND	Shift solenoid F	8.4—21.8

ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) ON-BOARD DIAGNOSIS[ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS)]

id0602b1800800

On-Board Diagnostic (OBD) Test Description

- The OBD test inspects the integrity and function of the EHPAS and outputs the results when requested by the specific tests.
- On-board diagnostic test also:
  - — Provides a quick inspection of the EHPAS usually performed at the start of each diagnostic procedure.
  - — Provides verification after repairs to ensure that no other faults occurred during service.
- The OBD test is divided into 2 tests:
  - — Read/clear diagnostic results, PID monitor and record.

Read/clear diagnostic results

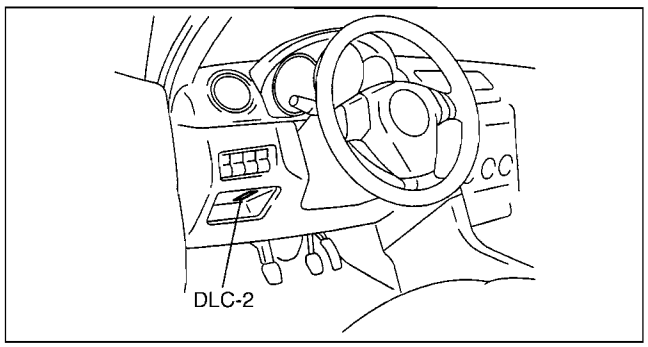
- This function allows reading or clearing of DTCs in the EHPAS control module memory.

PID/Data monitor and record

- This function allows access of certain data values, input signals, calculated values, and system status information.

Reading DTCs Procedure

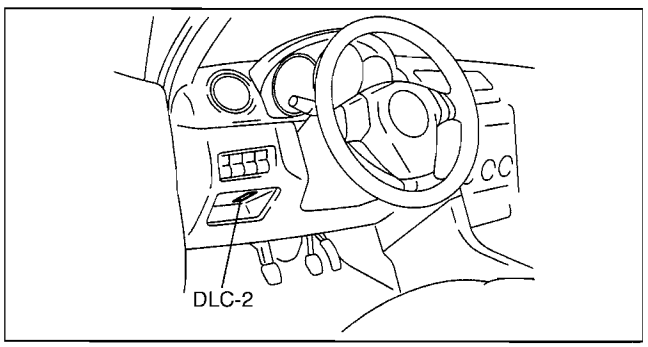
1. Connect the M-MDS to the DLC-2 connector.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Toolbox" tab.
     2. Select "Self Test".
     3. Select "Modules".
     4. Select "EPS".
   - When using the PDS (Pocket PC)
     1. Select "Module Tests".
     2. Select "EPS".
     3. Select "Self Test".
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
4. After completion of repairs, clear all DTCs stored in the DSC. (See 06-02-3 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) ON-BOARD DIAGNOSIS[ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS)].)



am3uuw0000022

Clearing DTCs Procedure

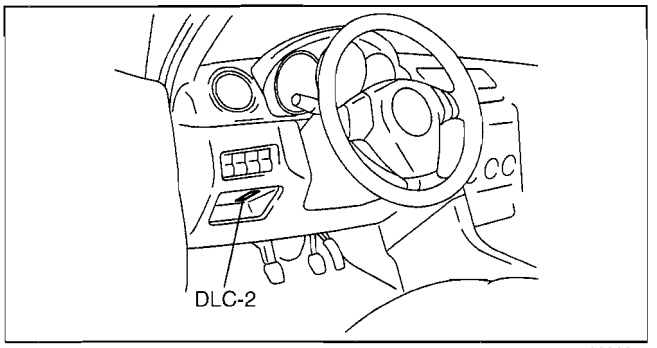
1. Connect the M-MDS to the DLC-2 connector.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Toolbox" tab.
     2. Select "Self Test".
     3. Select "Modules".
     4. Select "EPS".
   - When using the PDS (Pocket PC)
     1. Select "Module Tests".
     2. Select "EPS".
     3. Select "Self Test".
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Verify that no DTCs are displayed.



am3uuw0000022

PID/Data Monitor and Record Procedure

1. Connect the M-MDS to the DLC-2 connector.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Toolbox" tab.
     2. Select "DataLogger".
     3. Select "Modules".
     4. Select "EPS".
   - When using the PDS (Pocket PC)
     1. Select "Module Tests".
     2. Select "EPS".
     3. Select "DataLogger".
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the directions on the screen.



am3uuw0000022

Note

- The PID/Data monitor function is used for monitoring the calculated value. Therefore, if the monitored value of the output parts is not within the specification, inspection of the monitored value of input parts corresponding to applicable output part control is necessary. In addition, because the system does not display output part malfunction as abnormality in the monitored value, it is necessary to inspect the output part individually.

DTC Table

DTC M-MDS	Diagnosis system component	Page
B1238	EHPAS control module	(See 06-02-6 DTC B1238[ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS)].)
B1317	Battery power supply	(See 06-02-6 DTC B1317, B1318[ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS)].)
B1318	Battery power supply	(See 06-02-6 DTC B1317, B1318[ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS)].)
B1342	EHPAS control module	(See 06-02-8 DTC B1342[ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS)].)
B1352	Ignition power supply	(See 06-02-8 DTC B1352[ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS)].)
B2477	EHPAS control module configuration	(See 06-02-9 DTC B2477[ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS)].)
C1099	Electric power steering oil pump (motor)	(See 06-02-10 DTC C1099[ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS)].)
C1278	Steering angle sensor	(See 06-02-11 DTC C1278[ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS)].)
U0073	CAN bus communication error	(See 09-02B-1 MULTIPLEX COMMUNICATION SYSTEM[MULTIPLEX COMMUNICATION SYSTEM].)
U0100	Lost communication with the PCM	(See 09-02B-1 MULTIPLEX COMMUNICATION SYSTEM[MULTIPLEX COMMUNICATION SYSTEM].)
U2023	Fault received from other modules	(See 09-02B-1 MULTIPLEX COMMUNICATION SYSTEM[MULTIPLEX COMMUNICATION SYSTEM].)

PID/DATA Monitor Table

PID Name (Definition)	Unit/ Condition	Condition/Specification	Action	EHPAS control module terminal
CCNT (Number of continuous codes)	—	• DTCs are detected: **1—255** • No DTCs are detected: **0**	Perform inspection using appropriate DTC.	—
ENGRPM (Engine speed signal)	RPM	• Engine speed 1,000 rpm: **1000 RPM**	Inspect the PCM. (See 01-40A-13 PCM INSPECTION[LF, L3].)	—
MTR_AMP (Pump Motor Operation Current)	A	• Indicates pump motor operation current.	Replace the EHPAS control module. (See 06-14-21 ELECTRIC POWER STEERING OIL PUMP REMOVAL/ INSTALLATION[LF, L3].)	—
RPM_ACT (Actual pump motor revolution per minutes)	RPM	• Indicates pump motor revolution per minutes.	Replace the EHPAS control module. (See 06-14-21 ELECTRIC POWER STEERING OIL PUMP REMOVAL/ INSTALLATION[LF, L3].)	—
RPM_TGT (Target pump motor revolution per minutes)	RPM	• Indicates pump motor target revolution per minutes.	Replace the EHPAS control module. (See 06-14-21 ELECTRIC POWER STEERING OIL PUMP REMOVAL/ INSTALLATION[LF, L3].)	—
STEER_RATE (Steering wheel rotation rate)	°/s	• Indicates steering wheel rotation rate.	Inspect steering angle sensor. (See 06-14-27 STEERING ANGLE SENSOR INSPECTION.)	3B, 3D
TEMP_BOARD (Printed circuit board temperature)	°F/°C	• Indicates circuit temperature.	Replace the EHPAS control module. (See 06-14-21 ELECTRIC POWER STEERING OIL PUMP REMOVAL/ INSTALLATION[LF, L3].)	—
VPWR (Module supply voltage)	V	• IG switch ON: **B+**	Inspect the battery. (See 01-17A-4 BATTERY INSPECTION[LF, L3].)	1B, 2F
VSS (Vehicle speed)	KPH/MPH	• Vehicle is stopped: **0 KPH/0 MPH** • Vehicle speed **20 km/h {12 mph}**: **20 KPH/12 MPH**	Inspect the PCM. (See 01-40A-13 PCM INSPECTION[LF, L3].) Inspect the instrument cluster. (See 09-22-4 INSTRUMENT CLUSTER INSPECTION.)	—

DTC B1238[ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS)]

id0602b1800100

DTC B1238	Electro hydraulic power assist steering (EHPAS) control module
DETECTION CONDITION	• Excessive load to electric power steering oil pump
POSSIBLE CAUSE	• Due to the continuously static steering, being turned to the lock end, or other causes, the internal temperature of the electric power steering oil pump is more than the specified value.

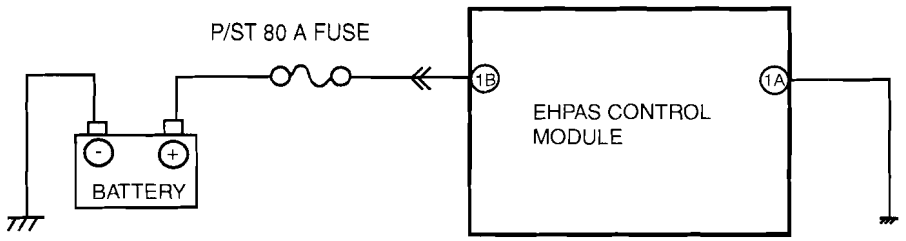
Diagnostic procedure

STEP	INSPECTION		ACTION
1	TURN IGNITION SWITCH OFF AND ALLOW ELECTRIC POWER STEERING OIL PUMP TO COOL DOWN.		
2	VERIFY THAT THE SAME DTC IS NOT PRESENT • Turn the ignition switch to the ON position. • Clear the DTC from the memory. (See 06-02-3 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) ON-BOARD DIAGNOSIS[ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS)].) • Is the same DTC present?	Yes	Replace the electric power steering oil pump, then go to the next step. (See 06-14-21 ELECTRIC POWER STEERING OIL PUMP REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
3	VERIFY THAT NO OTHER DTCS ARE PRESENT • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 06-02-3 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) ON-BOARD DIAGNOSIS[ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS)].)
		No	DTC troubleshooting completed.

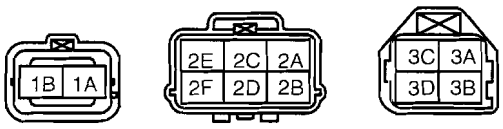
DTC B1317, B1318[ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS)]

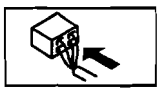
id0602b1800200

DTC B1317, B1318	Battery power supply
DETECTION CONDITION	• Low voltage or high voltage are detected at the voltage monitor.
POSSIBLE CAUSE	• Open or short circuit in wiring harness between electro hydraulic power assist steering (EHPAS) control module terminal 1B and battery positive terminal • Battery and/or generator malfunction



EHPAS CONTROL MODULE HARNESS-SIDE CONNECTOR





Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT BATTERY VOLTAGE** • Is the battery terminal voltage normal?	Yes	Make sure that battery terminal connection is okay. Go to the next step.
		No	Charge or replace the battery, then go to Step 6.
2	**INSPECT BATTERY GRAVITY** • Is the battery specific gravity as specified?	Yes	Go to the next step.
		No	Replace the battery, then go to Step 6.
3	**INSPECT CHARGING SYSTEM** • Are the generator and drive belt tension normal?	Yes	Go to the next step.
		No	Replace the generator and/or drive belt if necessary. Go to step 6.
4	**INSPECT EHPAS CONTROL MODULE POWER SUPPLY CIRCUIT FOR OPEN OR SHORT CIRCUIT** • Start the engine. • Measure the voltage between following EHPAS control module terminal (wiring harness-side) and ground. — EHPAS control module: 1B—ground • Is the voltage **9 V or more**?	Yes	Go to the next Step.
		No	Repair or replace the wiring harness for open circuit between the EHPAS control module and ground, then go to Step 6.
5	**INSPECT EHPAS CONTROL MODULE GROUND CIRCUIT FOR POOR GROUND OR OPEN CIRCUIT** • Turn the ignition switch off. • Measure the resistance between the following EHPAS control module terminal (wiring harness-side) and ground. — EHPAS control module: 1A—ground • Is the resistance **within 0—1 ohm**?	Yes	Go to the next step.
		No	If there is no continuity: • Repair or replace the wiring harness for open circuit between the EHPAS control module and ground, then go to the next step. If the resistance is not **within 0—1 ohm**: • Repair or replace the wiring harness for poor ground, then go to the next step.
6	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the memory. (See 06-02-3 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) ON-BOARD DIAGNOSIS[ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS)].) • Is the same DTC present?	Yes	Replace the electric power steering oil pump, then go to the next step. (See 06-14-21 ELECTRIC POWER STEERING OIL PUMP REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
7	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 06-02-3 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) ON-BOARD DIAGNOSIS[ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS)].)
		No	DTC troubleshooting completed.

DTC B1342[ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS)]

id0602b1800300

DTC B1342	Electro hydraulic power assist steering (EHPAS) control module
DETECTION CONDITION	• The EHPAS control module on-board diagnostic function detects system malfunction.
POSSIBLE CAUSE	• EHPAS control module internal malfunction • Poor connection at connectors

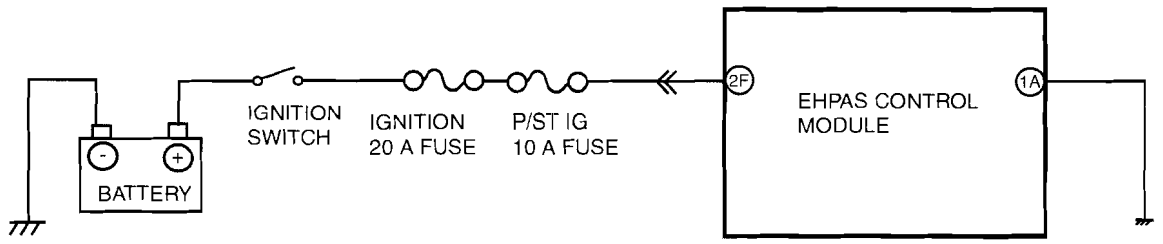
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTC from the memory. (See 06-02-3 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) ON-BOARD DIAGNOSIS[ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS)].) • Is the same DTC present?	Yes	Replace the electric power steering oil pump, then go to the next step. (See 06-14-21 ELECTRIC POWER STEERING OIL PUMP REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
2	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 06-02-3 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) ON-BOARD DIAGNOSIS[ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS)].)
		No	DTC troubleshooting completed.

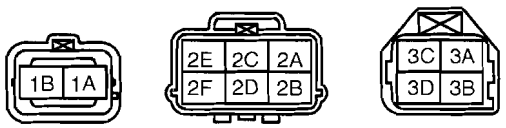
DTC B1352[ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS)]

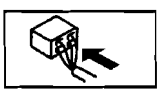
id0602b1800400

DTC B1352	Ignition power supply
DETECTION CONDITION	• **Less than 2.5 V** detected at the voltage monitor of the electro hydraulic power assist steering (EHPAS) control module
POSSIBLE CAUSE	• Short to ground in wiring harness between EHPAS control module terminal 2F and ignition switch • Open circuit in wiring harness between EHPAS control module terminal 2F and ignition switch • Poor connection at connectors



EHPAS CONTROL MODULE HARNESS-SIDE CONNECTOR





Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FUSES** • Are the fuses normal?	Yes	Go to the next step.
		No	Replace the fuses, then go to the step 3.
2	**INSPECT EHPAS CONTROL MODULE POWER SUPPLY CIRCUIT FOR OPEN OR SHORT CIRCUIT** • Start the engine. • Measure the voltage between following EHPAS control module terminal (wiring harness-side) and ground. — EHPAS control module: 2F—ground • Is voltage **10 V or more**?	Yes	Go to the next step.
		No	Repair or replace the harness for open circuit between EHPAS control module and ground, then go to next step.
3	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the memory. (See 06-02-3 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) ON-BOARD DIAGNOSIS[ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS)].) • Is same DTC present?	Yes	Replace the electric power steering oil pump, then go to the next step. (See 06-14-21 ELECTRIC POWER STEERING OIL PUMP REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
4	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 06-02-3 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) ON-BOARD DIAGNOSIS[ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS)].)
		No	Troubleshooting completed.

DTC B2477[ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS)]

id0602b1801600

DTC B2477	**Electro hydraulic power assist steering (EHPAS) control module configuration**
DETECTION CONDITION	• Configuration setting failure is detected.
POSSIBLE CAUSE	• Module configuration procedure was not completed properly.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY CONFIGURATION** • Has the EHPAS control module configuration been performed?	Yes	Go to the next step.
		No	Perform configuration using the M-MDS. (See 06-14-21 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) CONTROL MODULE CONFIGURATION[LF, L3].)
2	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTC from the memory. (See 06-02-3 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) ON-BOARD DIAGNOSIS[ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS)].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the EHPAS control module. (See 06-14-21 ELECTRIC POWER STEERING OIL PUMP REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
3	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 06-02-3 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) ON-BOARD DIAGNOSIS[ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS)].)
		No	DTC troubleshooting completed.

DTC C1099[ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS)]

id0602b1800600

DTC C1099	Electric power steering oil pump (motor)
DETECTION CONDITION	• The electro hydraulic power assist steering (EHPAS) control module detects that the motor speed is less than the specified value.
POSSIBLE CAUSE	• Motor internal malfunction

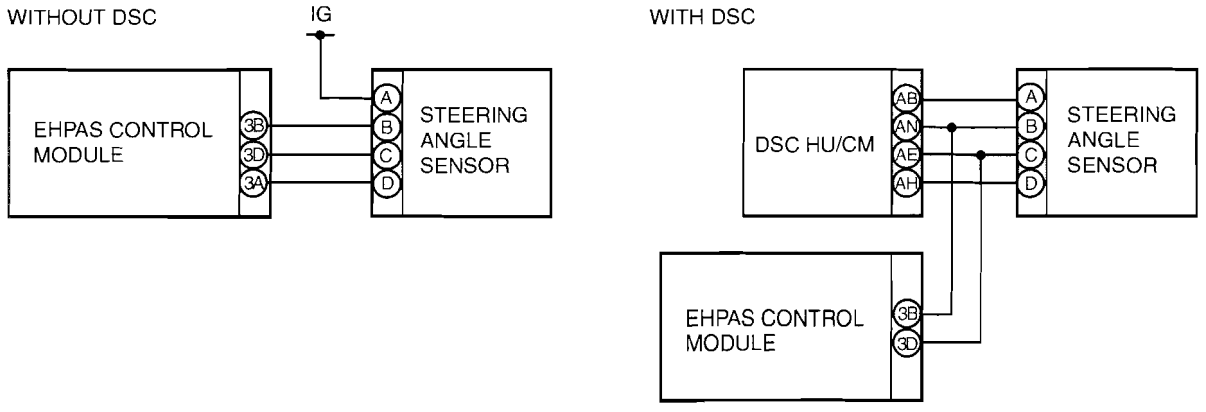
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**REPLACE ELECTRIC POWER STEERING OIL PUMP** • Replace the electric power steering oil pump, then go to the next step. (See 06-14-21 ELECTRIC POWER STEERING OIL PUMP REMOVAL/INSTALLATION[LF, L3].)		
2	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 06-02-3 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) ON-BOARD DIAGNOSIS[ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS)].)
		No	DTC troubleshooting completed.

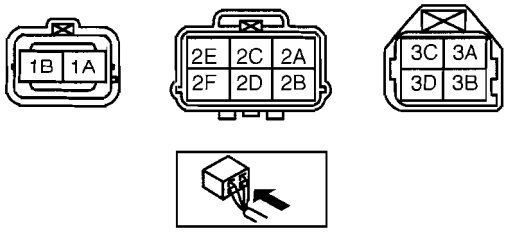
DTC C1278[ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS)]

id0602b1801000

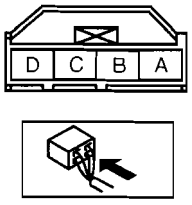
DTC C1278	Steering angle sensor
DETECTION CONDITION	• The EHPAS control module detects that the monitor voltage from the steering angle sensor is **more than 4.9 V** or **less than 0.8 V** • The EHPAS control module detects that the two monitor voltages modulate at the same phase a specified amount of phases or more. • The EHPAS control module detects that the EHPAS sensor signal dose not change.
POSSIBLE CAUSE	• Short to power supply, open circuit, or short to ground in wiring harness between EHPAS control module terminal 3B and steering angle sensor B • Short to power supply, open circuit, or short to ground in wiring harness between EHPAS control module terminal 3D and steering angle sensor terminal C • Open circuit in wiring harness between EHPAS control module terminal 3A and steering angle sensor terminal D (without DSC) • Open circuit in wiring harness between DSC HU/CM terminal AH and steering angle sensor terminal D (with DSC) • Short circuit in wiring harness between steering angle sensor terminal A and D • Steering angle sensor malfunction. • Steering angle sensor ring has fallen off.



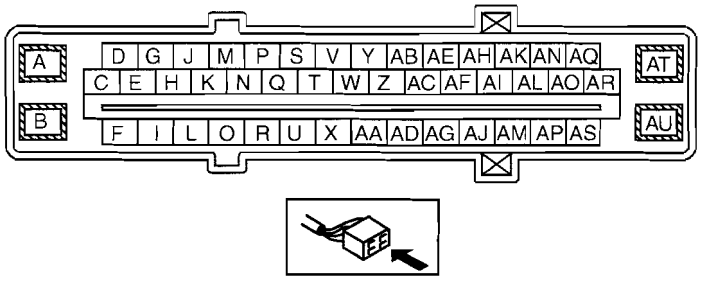
EHPAS CONTROL MODULE HARNESS-SIDE CONNECTOR



STEERING ANGLE SENSOR HARNESS-SIDE CONNECTOR



DSC HU/CM HARNESS-SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT PID FOR STEERING ANGLE SENSOR MALFUNCTION USING M-MDS** • Turn the ignition switch off. • Connect the M-MDS to the DLC-2. • Select the "STEER_RATE" PID. • Verify that the M-MDS display changes correctly according to steering wheel operation. • Does it change correctly?	Yes	Go to the next step.
		No	Replace the steering angle sensor. (See 08-10-14 CLOCK SPRING REMOVAL/ INSTALLATION.)
2	**INSPECT POWER SUPPLY VOLTAGE OF STEERING ANGLE SENSOR** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between steering angle sensor terminal A and ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Without DSC • Repair or replace the wiring harness between ignition switch and steering angle sensor terminal A, then go to the step 7. With DSC • Repair or replace the wiring harness between DSC HU/ CM terminal AB and steering angle sensor terminal A, then go to the step 7.
3	**INSPECT GROUND CIRCUIT OF STEERING ANGLE SENSOR FOR OPEN CIRCUIT** • Turn the ignition switch off. • Disconnect the EHPAS control module (without DSC) or DSC HU/CM (with DSC) and steering angle sensor connectors. • Inspect for continuity between EHPAS control module terminal 3A (without DSC) or DSC HU/CM terminal AH (with DSC) and steering angle sensor terminal D. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between EHPAS control module terminal 3A (without DSC) or DSC HU/CM terminal AH (with DSC) and steering angle sensor terminal D, then go to the step 7.
4	**INSPECT STEERING ANGLE SENSOR SIGNAL CIRCUIT FOR SHORT TO POWER** • Turn ignition key to ON (engine OFF). • Measure the voltage between the EHPAS control module and body ground at the following: — Sensor 1: EHPAS control module terminal 3B and body ground — Sensor 2: EHPAS control module terminal 3D and body ground • Is voltage **B+**?	Yes	Repair or replace the related wiring harnesses between the EHPAS control module and steering angle sensor, then go to the step 7.
		No	Go to next step.
5	**INSPECT STEERING ANGLE SENSOR SIGNAL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect continuity between the EHPAS control module and body ground at the following: — Sensor 1: EHPAS control module terminal 3B and body ground — Sensor 2: EHPAS control module terminal 3D and body ground • Is there continuity?	Yes	Repair or replace the related wiring harnesses between the EHPAS control module and steering angle sensor, then go to the step 7.
		No	Go to the next step.
6	**INSPECT SENSORS 1 AND 2 OF THE STEERING ANGLE SENSOR FOR CONTINUITY** • Turn the ignition switch off. • Disconnect the EHPAS control module and steering angle sensor connectors. • Inspect for continuity between steering angle sensor terminals B and C. • Is there continuity?	Yes	Replace the steering angle sensor, then go to the step 7. (See 08-10-14 CLOCK SPRING REMOVAL/ INSTALLATION.)
		No	Go to the next step.

STEP	INSPECTION		ACTION
7	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Reconnect all disconnected connectors. • Clear the DTC from the memory. (See 06-02-3 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) ON-BOARD DIAGNOSIS[ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS)].) • Is the same DTC present?	Yes	• Repeat the inspection from Step 1. • If the malfunction recurs, replace the electric power steering oil pump. (See 06-14-21 ELECTRIC POWER STEERING OIL PUMP REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 06-02-3 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) ON-BOARD DIAGNOSIS[ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS)].)
		No	DTC troubleshooting completed.

06-03 SYMPTOM TROUBLESHOOTING [ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS)]

SYSTEM WIRING DIAGRAM[ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS)]

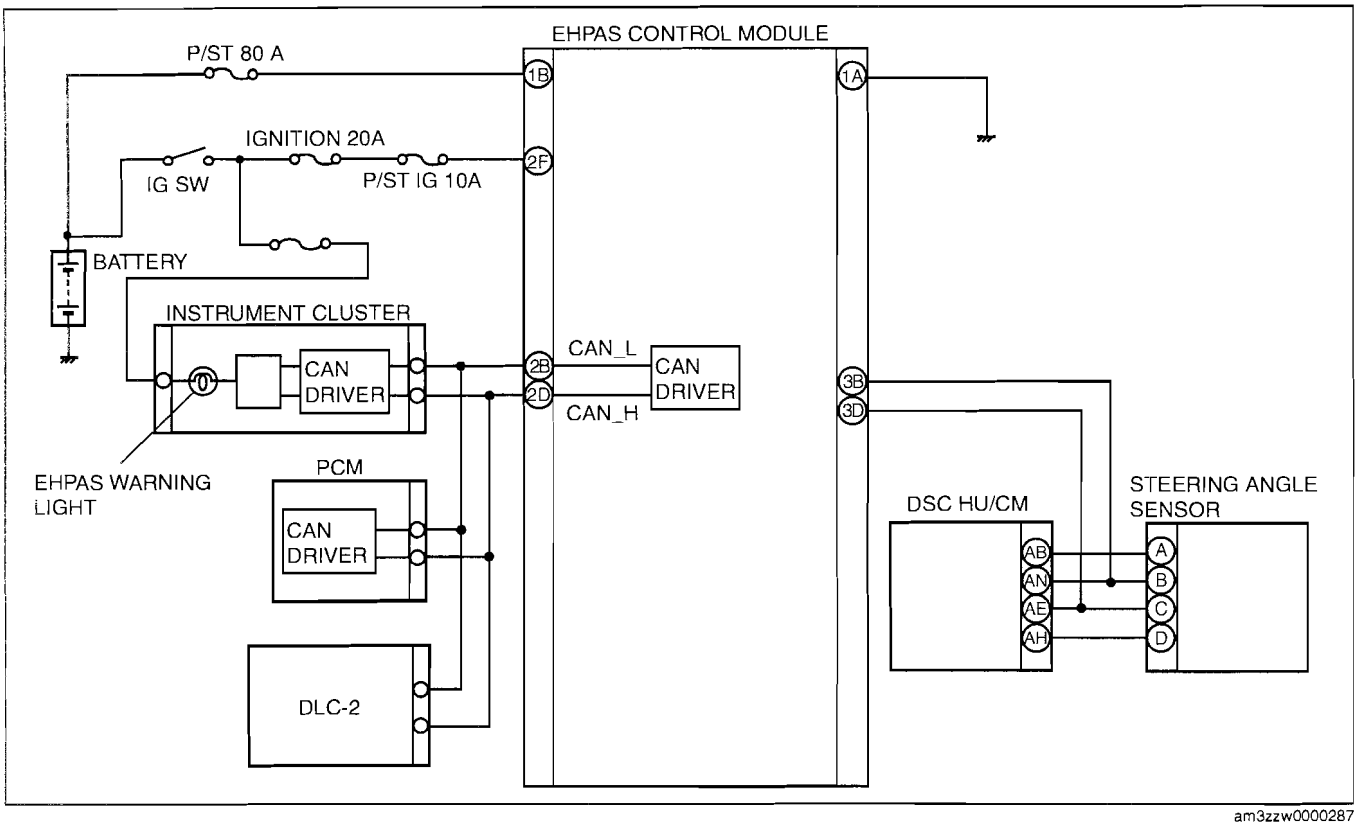
am3zzw0000171

With DSC



am3zzw0000287

FOREWORD[ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS)]

id0603a1800100

- Before performing the steps in Symptom Troubleshooting, perform the On-board Diagnostic Inspection. To inspect the DTC, follow the DTC Inspection steps. (See 06-02-3 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) ON-BOARD DIAGNOSIS[ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS)].)

PRECAUTION[ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS)]

id0603a1800300

Intermittent Concern Troubleshooting

Vibration method

- If a malfunction occurs or becomes worse while driving on a rough road or when the engine is vibrating, perform the following steps.

Note

- There are several reasons why vehicle or engine vibration could cause an electrical malfunction. Inspect the following:
  - — Connectors not fully seated.
  - — Wiring harnesses not having full play.
  - — Wires laying across brackets or moving parts.
  - — Wires routed too close to hot parts.
- An improperly routed, improperly clamped, or loose wiring harness can cause wiring to become pinched between parts.
- The connector joints, points of vibration, and places where wiring harness pass through the firewall, body panels and other panels are the major areas to be inspected.

Inspection method for switch and/or sensor connectors or wires

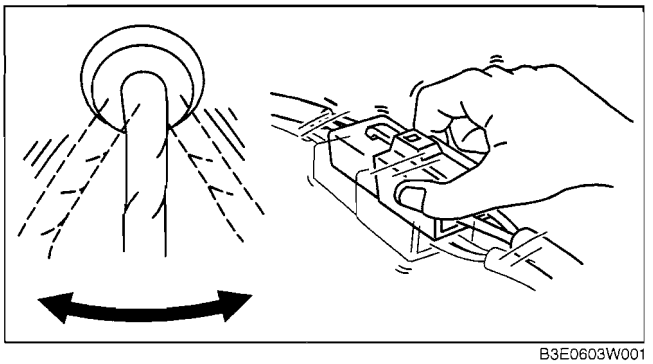
1. Connect the M-MDS to the DLC-2.
2. Turn the ignition switch to the ON position (engine off).

Note

- If the engine starts and runs, perform the following steps at idle.

3. Access PIDs for the switch you are inspecting.

4. Turn the switch on manually.
5. Slightly shake each connector or wiring harness vertically and horizontally while monitoring the PID.
   - If the PID value is unstable, inspect for poor connection.



B3E0603W001

Inspection method for sensors

1. Connect the M-MDS to the DLC-2.
2. Turn the ignition switch to the ON position (engine off).

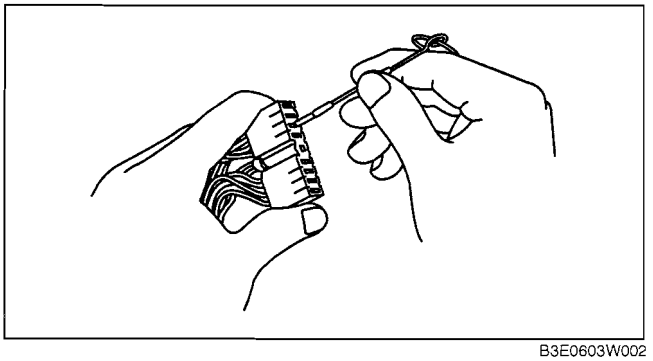
Note

- If the engine starts and runs, perform the following steps at idle.

3. Access PIDs for the switch you are inspecting.
4. Vibrate the sensor slightly with your finger.
   - If the PID value is unstable or a malfunction occurs, inspect for poor connection and/or poorly mounted sensor.

Connector terminal inspection method

1. Inspect the connection of each female terminal.
2. Insert the male terminal to the female terminal and inspect the female terminal for looseness.



B3E0603W002

SYMPTOM TROUBLESHOOTING[ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS)]

id0603a1800400

- Verify the symptom, and perform troubleshooting according to the appropriate number.

No.	Symptom
1	Poor power steering assist
2	Excessive noise from electric power steering oil pump

NO.1 POOR POWER STEERING ASSIST[ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS)]

id0603a1800200

1	POOR POWER STEERING ASSIST

TROUBLESHOOTING HINTS

- Power steering fluid leakage from electro hydraulic power assist steering (EHPAS) fluid line
- Steering gear and linkage malfunction
- EHPAS control module malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**RETRIEVE DTC FROM EHPAS CONTROL MODULE** • Are any DTCs present?	Yes	Record all DTC and go to the applicable DTC inspection.
		No	Go to the next step.
2	**INSPECT STEERING WHEEL ASSIST FUNCTION** • Disconnect the EHPAS control module connector (2-pin). • Is the power steering assist function changed?	Yes	Go to the next step.
		No	Visually inspect the steering gear and linkage. Replace it if the malfunction is found.
3	**INSPECT IF THERE IS ANY FLUID LEAK FROM THE EHPAS FLUID LINE** • Is there fluid leakage?	Yes	Replace it if necessary.
		No	Replace the EHPAS control module. (See 06-14-21 ELECTRIC POWER STEERING OIL PUMP REMOVAL/INSTALLATION[LF, L3].)

NO.2 EXCESSIVE NOISE FROM ELECTRIC POWER STEERING OIL PUMP[ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS)]

id0603a1800600

2	Excessive noise from electric power steering pump

TROUBLESHOOTING HINTS

- Air in EHPAS fluid line
- Low power steering fluid level
- Electric power steering oil pump is poor installation
- Mount rubber (on bracket) is deterioration

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT POWER STEERING FLUID LEVEL** • Inspect power steering fluid level when engine is cold. • Is power steering fluid level between MAX and MIN of the reserve tank?	Yes	Go to the next step.
		No	Perform the Fluid Leakage Inspection and add the fluid. (See 06-14-4 POWER STEERING FLUID INSPECTION.)
2	**INSPECT AIR IN EHPAS FLUID LINE** • Perform the air bleed. (See 06-14-4 AIR BLEEDING.) • Is the symptom solved?	Yes	Troubleshooting completed.
		No	Go to next step.
3	**INSPECT ELECTRIC POWER STEERING OIL PUMP INSTALLATION** • Inspect the electric power steering oil pump installation condition. • Is the electric power steering oil pump installed properly?	Yes	Inspect the mount rubber condition. If the mount rubber is deterioration, replace the mount rubber.
		No	Install the electric power steering oil pump properly.

06-10 GENERAL PROCEDURES

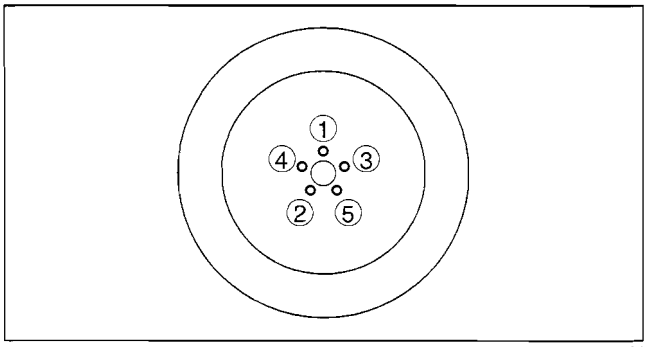
GENERAL PROCEDURES (STEERING)

id061000800100

Wheel and Tire Installation

1. When installing the wheels and tires, tighten the wheel nuts in a criss-cross pattern to the following tightening torque.

   Tightening torque
   88.2—117.6 N·m {9.00—11.99kgf·m, 65.06—86.73 ft·lbf}



am3uuw0000006

Connector Disconnection

1. Disconnect the negative battery cable before performing any work that requires handling of connectors. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].) (See 01-17B-2 BATTERY REMOVAL/INSTALLATION[L3 WITH TC].)

Suspension Links Removal/Installation

1. For the joint sections with rubber bushings, raise the vehicle using a lift, and then temporarily tighten the installation bolts and nuts. Lower the vehicle to the ground and tighten them completely with the specified torque.

Power Steering Related Parts Installation

1. If any power steering fluid line has been disconnected, perform the following after installation of the power steering components. (See 04-11-3 AIR BLEEDING.) (See 06-14-4 POWER STEERING FLUID INSPECTION.)
   — Power steering fluid amount inspection
   — Power steering fluid leakage inspection
   — Air bleeding

Electro Hydraulic Power Assist Steering (EHPAS) Related Parts

Warning
- **If the configuration procedure is not completed, the EHPAS will not operate properly and it might cause an unexpected accident. Therefore, when replacing or removing the electric power steering oil pump, make sure to perform the configuration procedure to ensure the proper EHPAS operation.**

1. Make sure that there are no DTCs in the EHPAS memory after working on EHPAS related parts. If there are any codes in the memory, clear them.
2. When replacing or removing the electric power steering oil pump, perform the configuration procedures. (See 06-14-21 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) CONTROL MODULE CONFIGURATION[LF, L3].)

AIR BLEEDING

id061400800200

Caution

- **Do not maintain the steering wheel fully turned for 5 s or more. It is possible that oil temperature can rise and this will negatively affect the oil pump.**

1. Inspect the fluid level. (See 06-14-4 POWER STEERING FLUID INSPECTION.)
2. Turn the steering wheel fully to the left and right several times.
3. Reinspect the fluid level.
   - If the fluid level has dropped, add fluid.
4. Repeat Steps 2—3 until the fluid level stabilizes.
5. Start the engine and let it idle.
6. Turn the steering wheel fully to the left and right several times.
7. Repeat Step 6 until the fluid is not foamy and the fluid level has not dropped.
8. Inspect the fluid level, and If the fluid level has dropped, add fluid to a level between MAX and MIN of the reserve tank.

POWER STEERING FLUID INSPECTION

id061400800500

Fluid Level Inspection

1. Verify that the fluid level is between MAX and MIN of the reserve tank when the engine is cold.
   - If the fluid is not at the specified level, adjust the fluid level (MIN-MAX on reserve tank) by adding/draining the fluid.

Power steering fluid type
ATF M-III or equivalent (e.g. Dexron ® II)

Power steering fluid capacity (approximate quantity)
LF, L3: 0.8 L {0.9 US qt, 0.7 Imp qt}
L3 WITH TC: 1.10 L {1.16 US qt, 0.96 Imp qt}

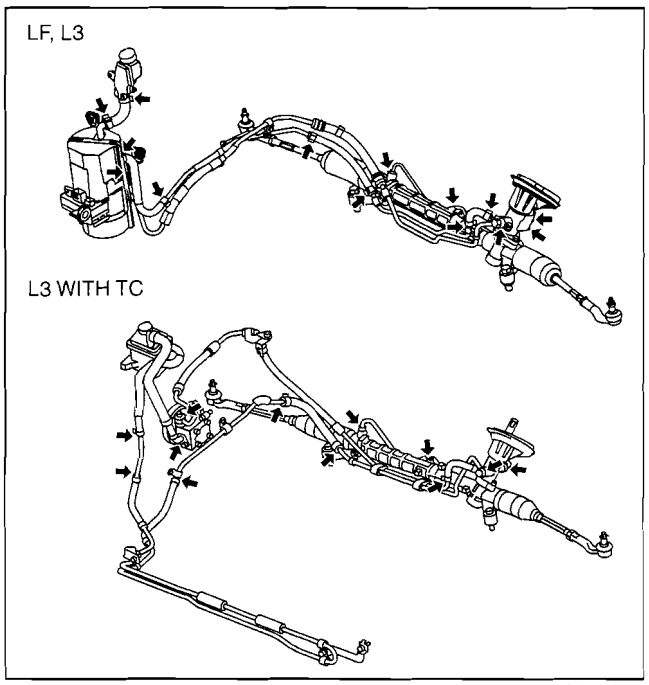
Fluid Leakage Inspection

1. Start the engine and idle it.
2. Turn the steering wheel fully to left or right, to generate the fluid pressure.

Caution

- **Do not maintain the steering wheel fully turned for 5 s or more. It is possible that oil temperature can rise and this will negatively affect the oil pump.**

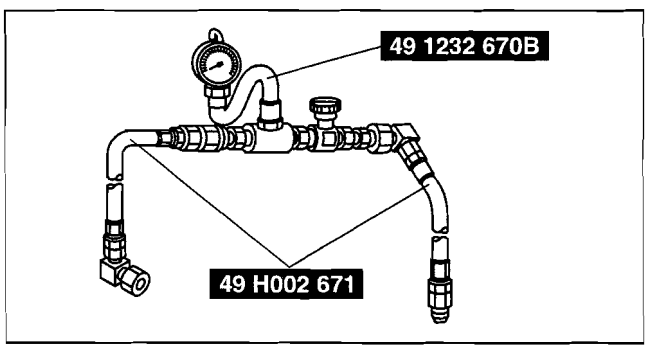
3. Inspect for the fluid leakage at the points indicated in the figure.
   - If fluid leakage is found, repair the related parts.



epu614zw3002

Fluid Pressure Inspection (L3 WITH TC)

1. Set the **SSTs** so that the valve of the **SST** faces toward the gear housing side as shown in the figure.

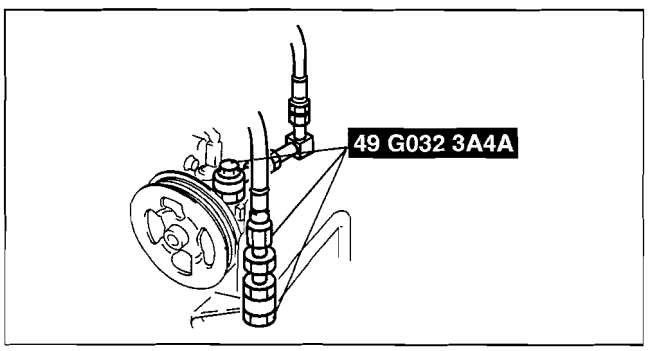


am3uuw0000005

2. Disconnect the oil pump side joint of the pressure hose, connect the **SSTs** set in the Step 1.

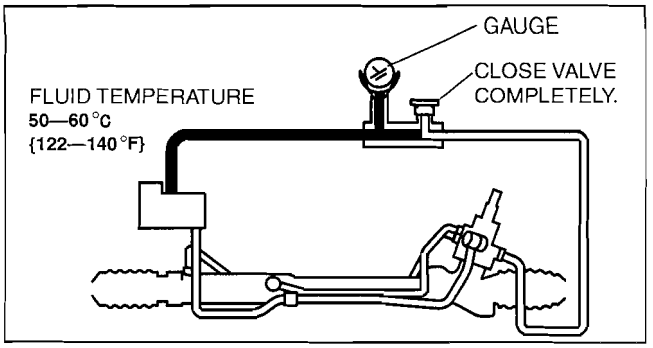
   Tightening torque
   29.4—44.1 N·m {3.00—4.49 kgf·m, 21.6—32.5 ft·lbf}

3. Bleed the air from the system.
4. Open the gauge valve fully.
5. Start the engine, turn the steering wheel to the left and right to raise the power steering fluid to the appropriate temperature (**50—60 °C {122—140 °F}**).



am3uuw0000005

6. Close the gauge valve fully.
7. Increase the engine speed to **1,000—1,500 rpm** and measure the fluid pressure generated at the oil pump.
   - If it is less than the specification, replace the oil pump as a single unit.

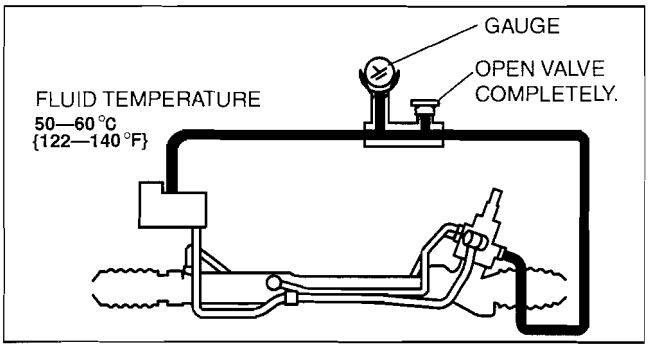


am3uuw0000005

Caution
- **Do not maintain the gauge valve fully closed for 5 s or more. It is possible that oil temperature can rise and this will negatively affect the oil pump.**

Oil pump fluid pressure (oil temperature 50—60 °C {122—140 °F})
9.7—10.2 MPa {99.0—104.0 kgf/cm^2, 1,407—1,479 psi}

8. Open the gauge valve fully and increase the engine speed to **1,000—1,500 rpm**.
9. Turn the steering wheel fully to the left and right, then measure the fluid pressure generated at the gear housing.



am3uuw0000005

Caution
- **Do not maintain the steering wheel fully turned for 5 s or more. It is possible that oil temperature can rise and this will negatively affect the oil pump.**

Note
- If the fluid pressure is less than the specification, it is possible that the oil pump or gear housing is not operating correctly. Replace the oil pump as a single unit.

Gear housing fluid pressure (oil temperature 50—60 °C {122—140 °F})
9.7—10.2 MPa {99.0—104.0 kgf/cm^2, 1,407—1,479 psi}

10. After removing the **SSTs**, tighten the oil pump side joint of the pressure hose to the specified torque.

Tightening torque
29.4—44.1 N·m {3.00—4.49 kgf·m, 21.7—32.5 ft·lbf}

11. Bleed the air from the system.

STEERING WHEEL AND COLUMN INSPECTION

id061400800300

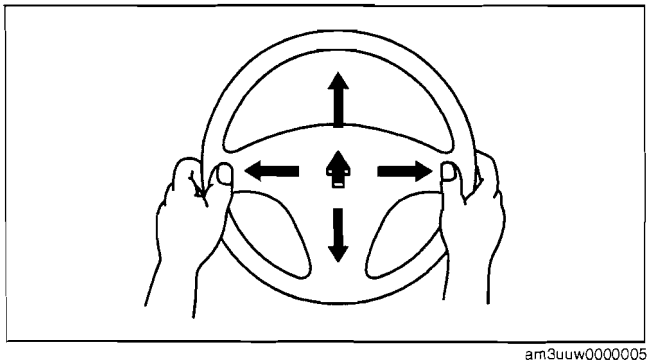
Play Inspection

1. With the wheels in the straight-ahead position, start the engine.
2. Turn the steering wheel to the left and right gently, then verify that the steering wheel play is within the specification.

Steering wheel play
0—30 mm {0—1.18 in} (When hydraulic operating)

Looseness, Excessive Play Inspection

1. Inspect the steering wheel for looseness or excessive play in the axial direction of the shaft and four locations around the steering wheel.
   - If there is any malfunction, inspect the following, and repair or replace the applicable part.
     — Column bearing wear
     — Looseness of the steering wheel installation part
     — Looseness of the column installation area
     — Excessive play of the steering shaft joint
     — Excessive play of the steering gear



am3uuw0000005

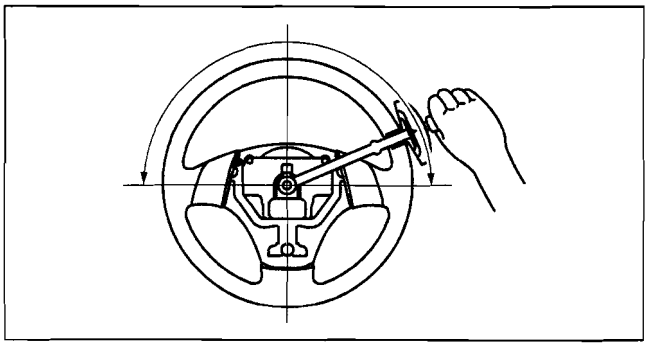
Steering Force Inspection

1. Verify that the equipped tire size and tire air pressure is as specified.
2. With the vehicle on a hard, level surface, put the wheels in the straight-ahead position.

Warning

- **Handling the air bag module improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings before handling the air bag module. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**

3. Remove the air bag module. (See 08-10-7 DRIVER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
4. Start the engine and idle it.
5. Verify that the EHPAS warning light does not illuminate.
6. Inspect the steering force using a torque wrench.
   - If not within the specification, verify the following:
     — No air in steering system
     — No fluid leakage at hose or connectors
     — Function of oil pump and steering gear



am3uuw0000005

Steering wheel force (reference value)
7.8 N·m {80 kgf·cm, 69 in·lbf} or less

Note

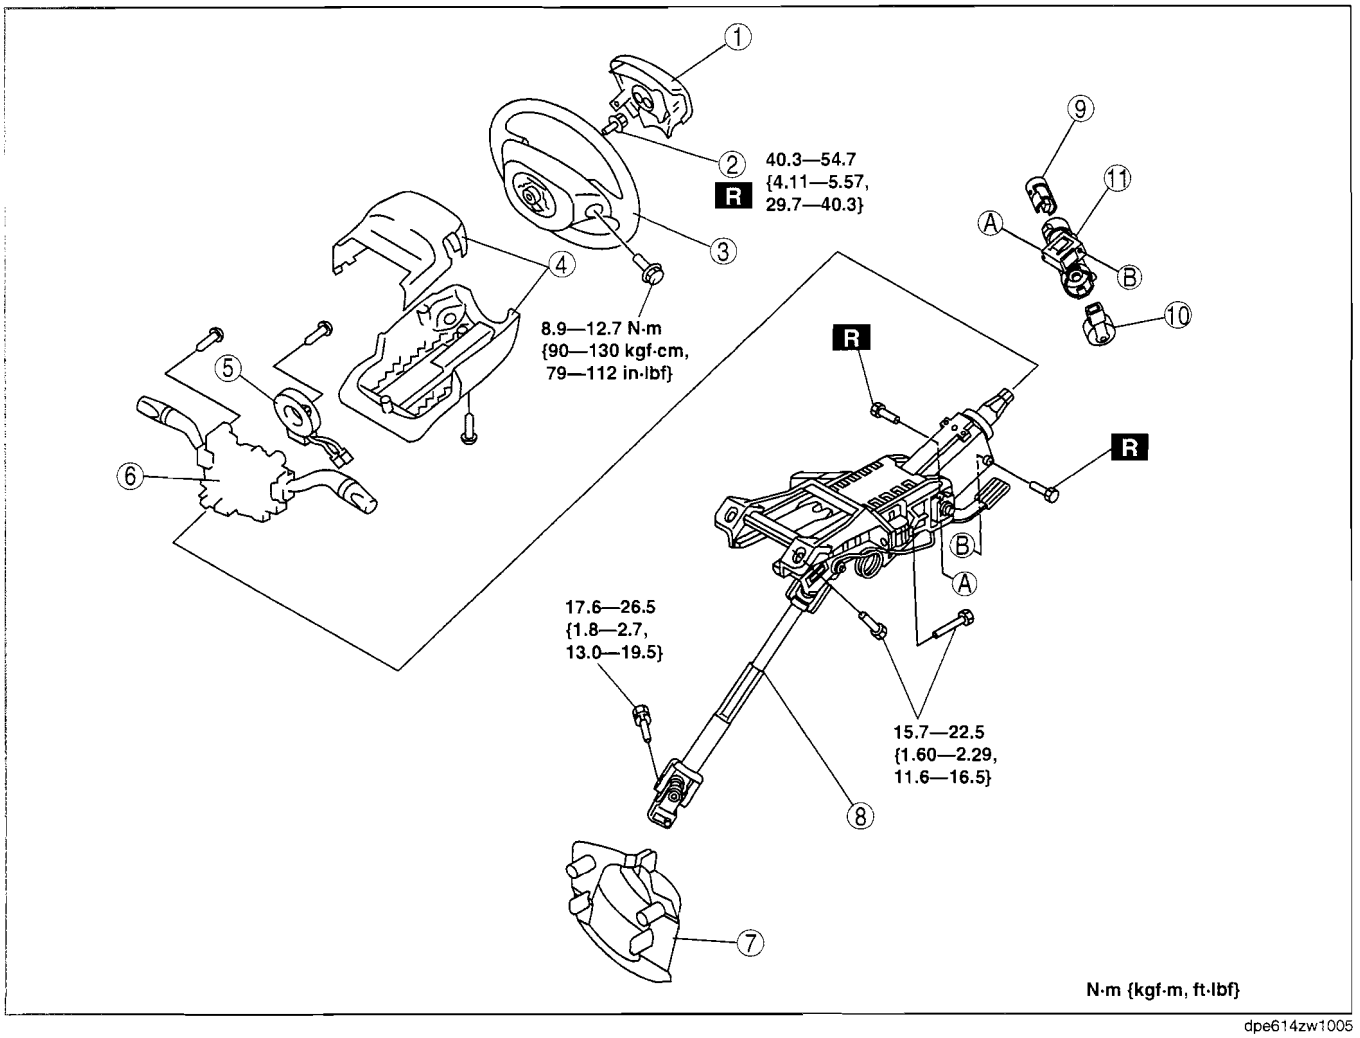
- Comparing another vehicle of the same model under the same conditions is an acceptable inspection method.
- The steering force varies with conditions indicated below.
  — Road conditions: Such as dry, wet, asphalt, or concrete
  — Tire condition: such as brand, wear, and tire pressure

STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION

id061400800400

Warning

- **Handling the air bag module improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings before handling the air bag module. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**



dpe614zw1005

1	Air bag module (See 08-10-7 DRIVER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
2	Lockbolt
3	Steering wheel (See 06-14-9 Steering Wheel Removal Note.) (See 06-14-10 Steering Wheel Installation Note.)
4	Column cover (See 09-17-7 COLUMN COVER REMOVAL/INSTALLATION.)
5	Clock spring (containing steering angle sensor) (See 08-10-14 CLOCK SPRING REMOVAL/INSTALLATION.)
6	Combination switch (See 09-18-19 COMBINATION SWITCH REMOVAL/INSTALLATION.)

7	Dust cover
8	Steering shaft (See 06-14-10 Steering Shaft Installation Note.)
9	Outer cylinder (See 06-14-9 Outer Cylinder Removal Note.)
10	Ignition switch (See 09-21-1 IGNITION SWITCH REMOVAL/INSTALLATION.)
11	Steering lock component (See 06-14-9 Steering Lock Component Removal Note.) (See 06-14-9 Steering Lock component Installation Note.)

Steering Wheel Removal Note

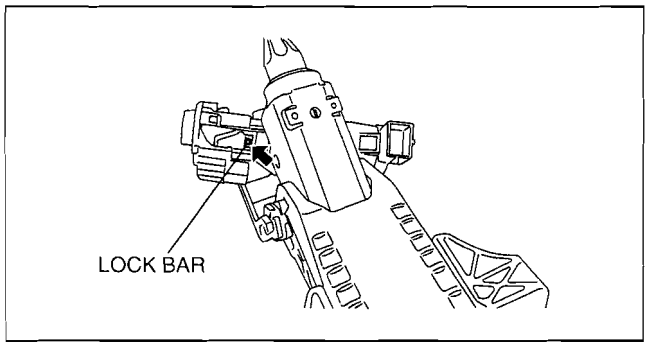
Caution

- **Do not try to remove the steering wheel by hitting the shaft with a hammer. The column will be damaged.**

1. Set the wheels in the straight-ahead position.
2. Remove the steering wheel using any commercially available puller.

Outer Cylinder Removal Note

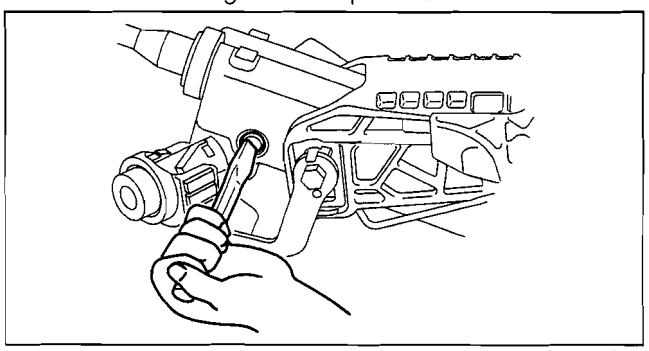
1. Insert the key into the key cylinder and turn it to the ACC position.
2. Insert a pin from the position indicated by the arrow in the figure, and while pressing the lock bar with the pin, remove the key cylinder from the steering lock component.



am3uuw0000006

Steering Lock Component Removal Note

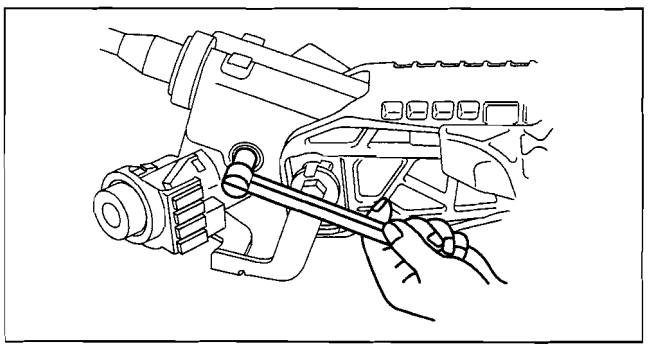
1. Remove the bolt using a flathead screwdriver, and then remove the steering lock component.
2. Make a groove in the heads of the steering lock mounting bolts using a chisel and hammer.
3. Remove the steering lock component.



am3uuw0000041

Steering Lock component Installation Note

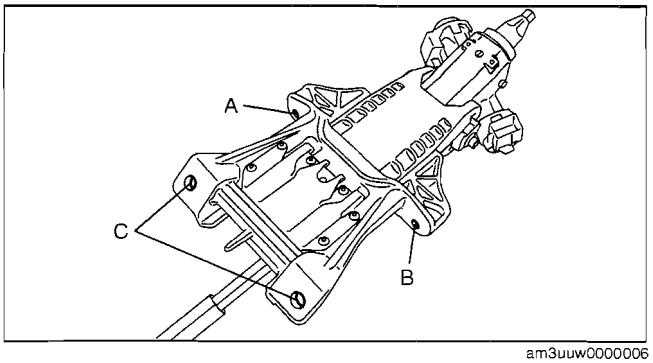
1. Install the steering lock component to the steering shaft.
2. Verify that the lock operates correctly.
3. Install new steering lock mounting bolts.
4. Tighten the bolts until the heads break off.



am3uuw0000006

Steering Shaft Installation Note

1. Verify that the tilt / telescope lever is in the LOCK position.
2. Tighten the bolts in alphabetical order.



am3uuw0000006

Steering Wheel Installation Note

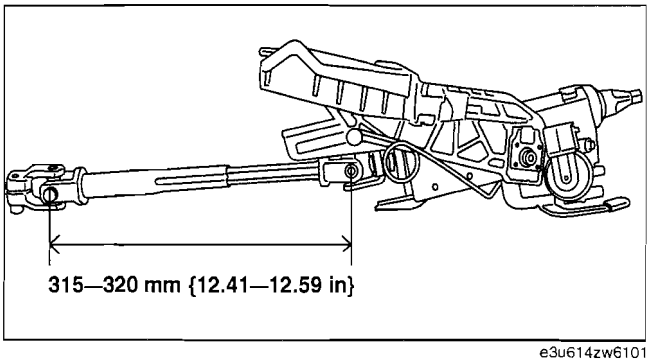
1. Set the wheels in the straight-ahead position and install the steering wheel.

STEERING SHAFT INSPECTION

id061400800600

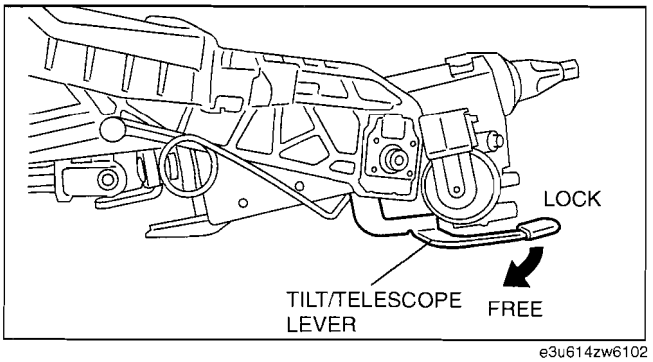
1. Inspect the column bearing for excessive play and damage.
2. Verify that the measurement of the steering shaft indicated in the figure is as specified.
   - If not within the specification replace the steering shaft component.

   Steering shaft length
   315—320 mm {12.41—12.59 in}



e3u614zw6101

3. Inspect the tilt/telescope mechanism operation for the following.
   (1) Tilt/telescope lever moves smoothly from the lock to the unlock position.
   (2) Steering shaft is fixed firmly when the tilt/ telescope lever is locked.
      - If there is any malfunction, replace the steering shaft.



e3u614zw6102

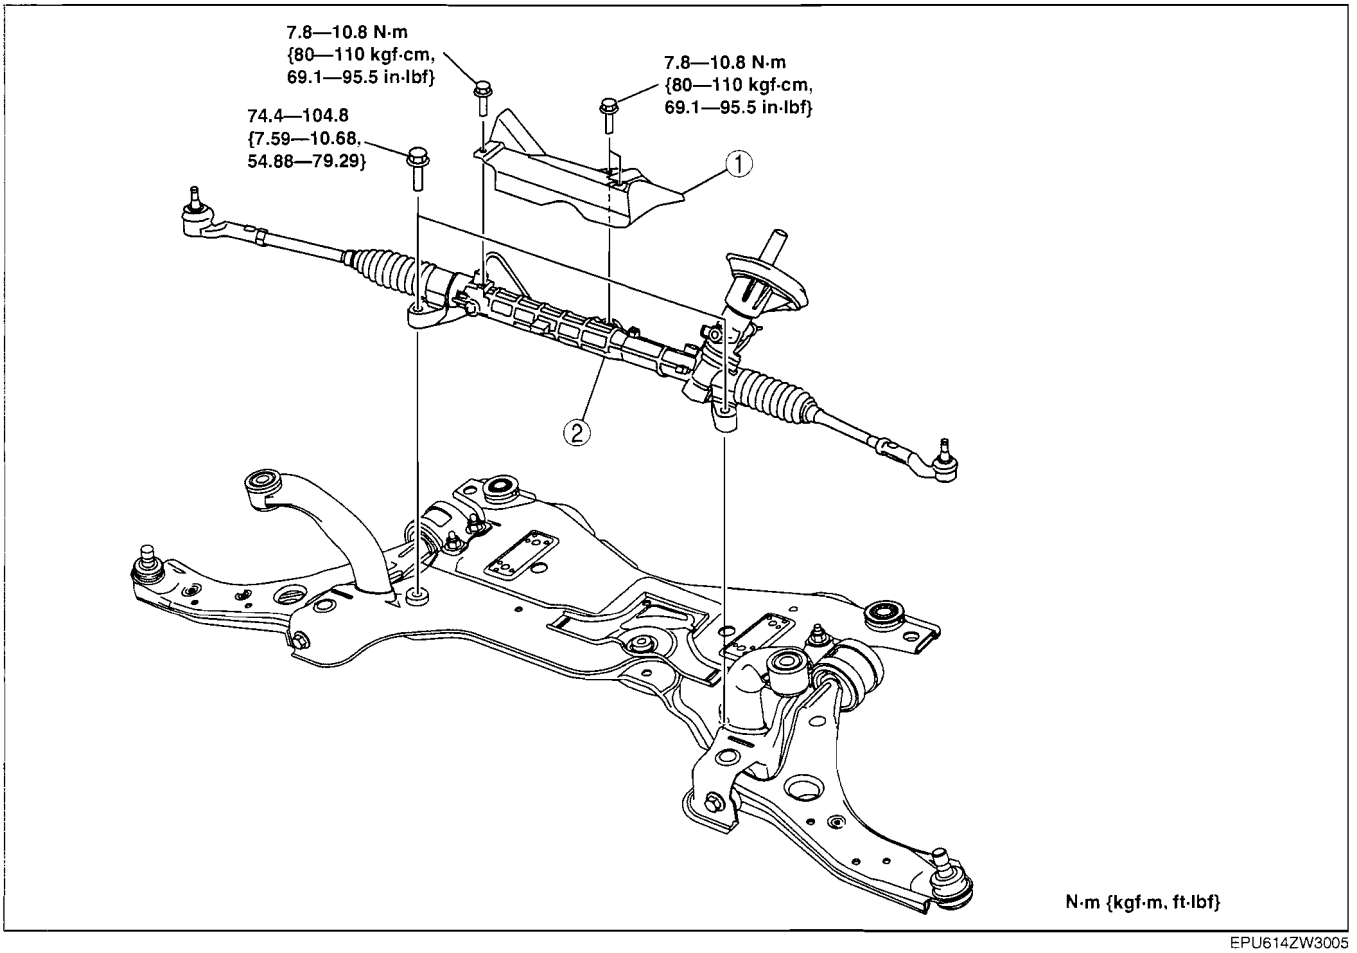
STEERING GEAR AND LINKAGE REMOVAL/INSTALLATION

id061400800900

Caution

- **Performing the following procedures without first removing the ABS wheel-speed sensor may possibly cause an open circuit in the wiring harness if it is pulled by mistake. Before performing the following procedures, disconnect the ABS wheel-speed sensor connector (axle side) and fix the wiring harness to an appropriate place where it will not be pulled by mistake while servicing the vehicle.**

1. Remove the front crossmember, lower arm, front stabilizer, and steering gear and linkage as a single unit. (See 02-13-14 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
2. Remove the front stabilizer from the crossmember component. (See 02-13-11 FRONT STABILIZER REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.
5. After installation, inspect the front wheel alignment and adjust it if necessary. (See 02-11-2 FRONT WHEEL ALIGNMENT.)



EPU614ZW3005

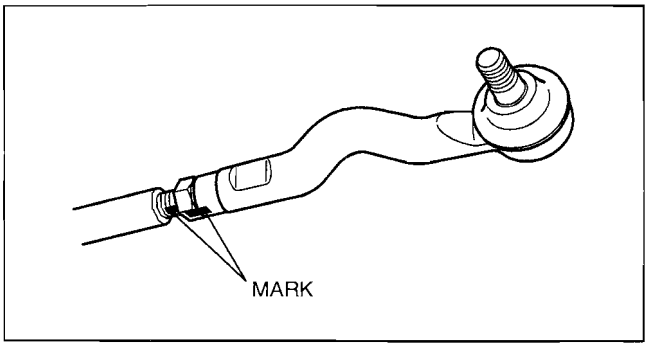
10	Adjusting cover (See 06-14-13 Locknut (on Adjusting Cover), Adjusting Cover Disassembly Note.)
11	Yoke spring

12	Support yoke
13	Housing cover
14	Locknut (on pinion shaft)
15	Pinion shaft and valve housing component
16	Return pipe
17	Clip
18	Stopper
19	Steering rack
20	Rack bushing
21	Oil seal (See 06-14-14 Oil Seal Disassembly Note.)
22	Mounting rubber (See 06-14-14 Mounting Rubber Disassembly Note.)
23	Gear housing

Tie-rod End Disassembly Note

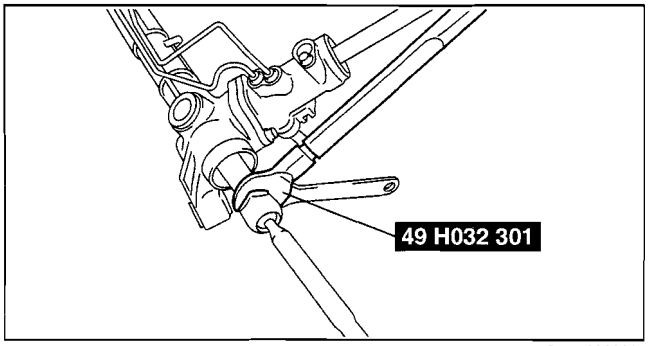
1. Place alignment marks as shown in the figure for proper installation.



am3uuw0000092

Tie Rod Disassembly Note

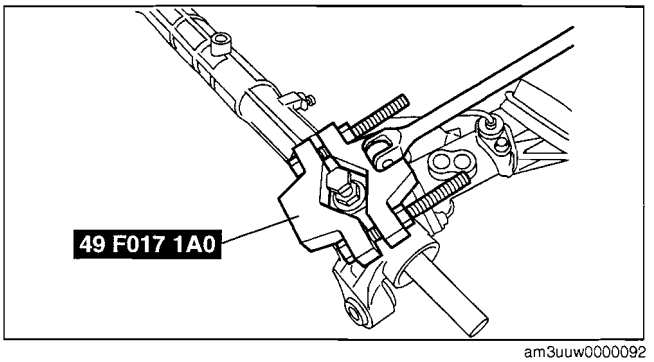
1. Fix the steering rack and remove the tie rod using the **SST**.



am3uuw0000092

Locknut (on Adjusting Cover), Adjusting Cover Disassembly Note

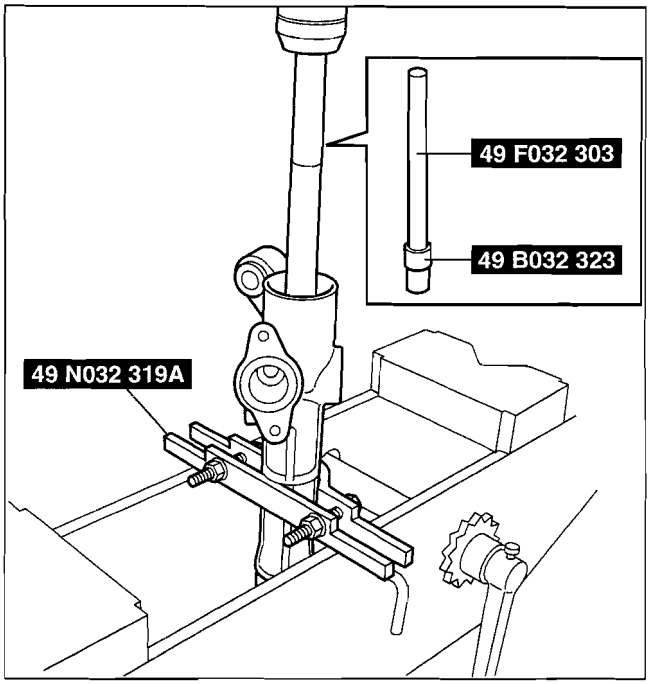
1. Remove the locknut using the **SST**.
2. Remove the adjusting cover.



am3uuw0000092

Oil Seal Disassembly Note

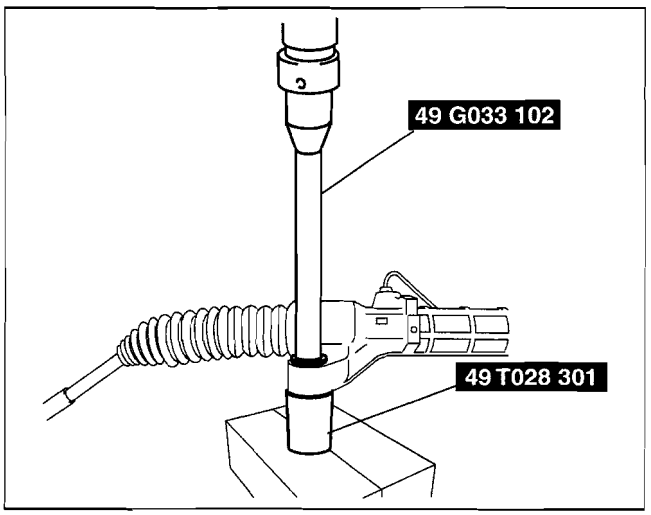
1. Install the **SST** (49 N032 319A) to the gear housing with the raised part facing up as shown in the figure.
2. Insert the **SSTs** (49 F032 303, 49 B032 323) into the valve housing side.
3. Remove the oil seal using a press.



am3uuw0000092

Mounting Rubber Disassembly Note

1. Press the mounting rubber out from the gear housing using the **SSTs** and a press.



am3uuw0000092

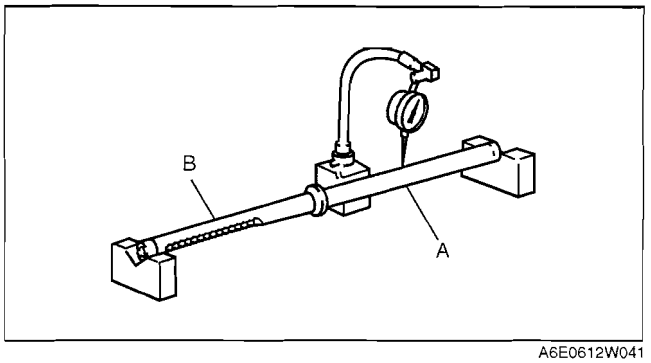
STEERING GEAR AND LINKAGE INSPECTION

id061400801100

Steering Rack Inspection

1. Inspect for cracking, damage, and tooth wear.
   - If there is any malfunction, replace the steering rack.
2. Measure the steering rack warp.
   - If it exceeds the maximum specification, replace the steering rack.

Steering rack runout
Large diameter portion (near point A): 0.15 mm {0.006 in} max.
Small diameter portion (near point B): 0.20 mm {0.008 in} max.

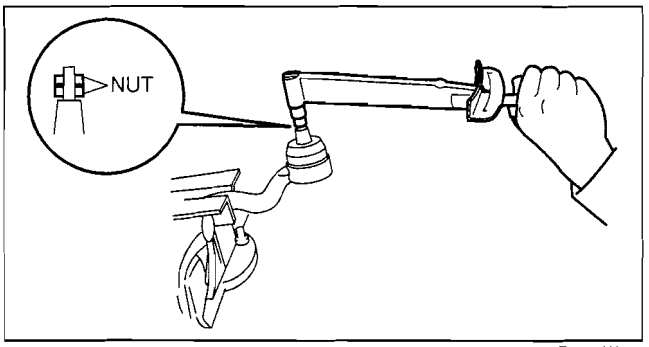


A6E0612W041

Tie-rod End Inspection

1. Inspect the tie-rod end for damage and the boot for cracks.
   - If there is any malfunction, replace the tie-rod end.
2. Inspect for excessive play.
   - If there is any malfunction, replace the tie-rod end.
3. Rotate the ball joint **10 times**.
4. Install two nuts to the ball joint and measure the tie-rod end rotational torque using a torque wrench.
   - If not within the specification, replace the tie-rod end.

Tie-rod end rotational torque
0.5—3.0 N·m {6—30 kgf·cm, 5—26 in·lbf}

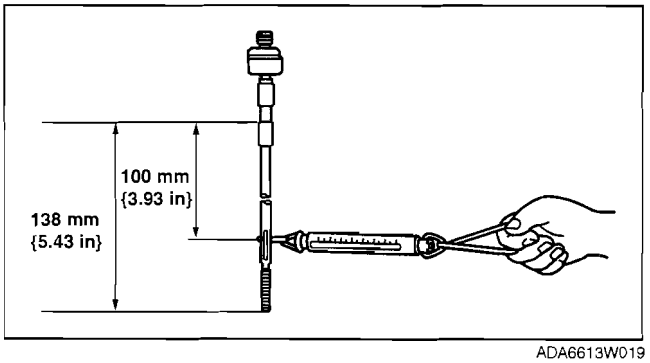


B3E0614W046

Tie rod Inspection

1. Inspect for bending and damage.
   - If there is any malfunction, replace the tie rod.
2. Inspect for excessive play.
   - If there is any malfunction, replace the tie rod.
3. Swing the ball joint **10 times**.
4. Measure the ball joint swing torque using a pull scale.
   - If it exceeds the specification, replace the tie rod.

Tie rod swing torque
0.4—4.0 N·m {5—40 kgf·cm, 4—35 in·lbf}
[Pull scale reading 0.6—29.3 N {0.06—2.98 kgf, 0.14—6.58 lbf}]



ADA6613W019

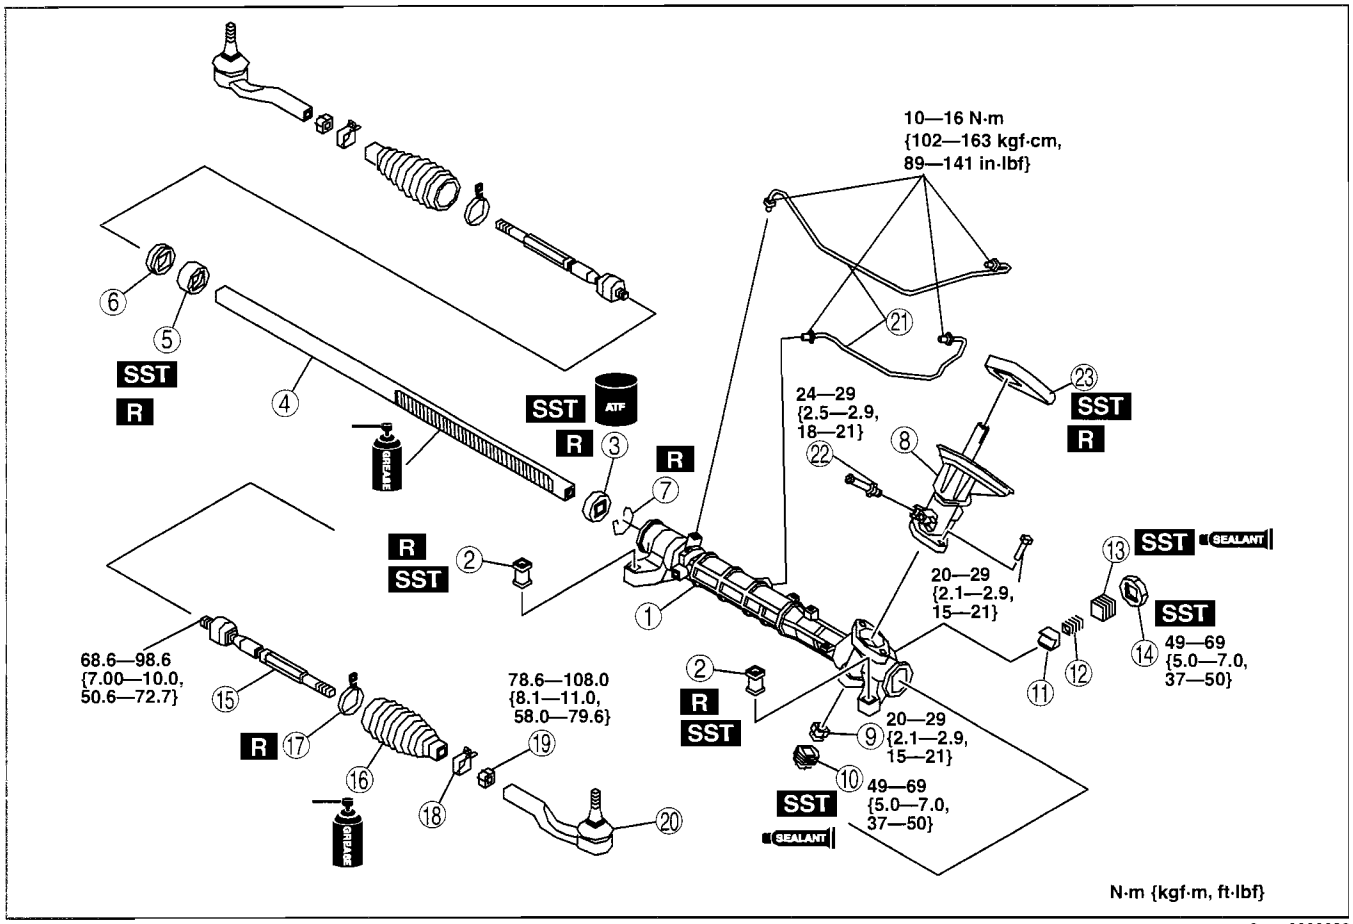
STEERING GEAR AND LINKAGE ASSEMBLY

id061400801200

Caution

- **Place copper plates, rag, or similar material in a vise, when securing the mounting bracket portion of the steering gear.**

1. Assemble in the order indicated in the table.



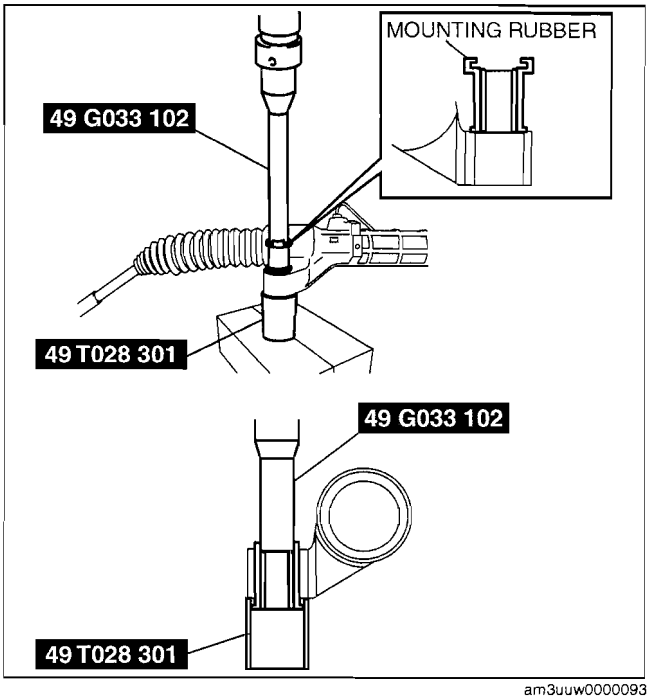
am3uuw0000093

1	Gear housing
2	Mounting rubber (See 06-14-17 Mounting Rubber Assembly Note.)
3	Oil seal (See 06-14-18 Oil Seal Assembly Note.)
4	Steering rack (See 06-14-18 Steering Rack Assembly Note.)
5	Rack bushing (See 06-14-18 Rack Bushing Assembly Note.)
6	Stopper (See 06-14-19 Stopper Assembly Note.)
7	Clip
8	Pinion shaft and valve housing component (See 06-14-19 Pinion Shaft and Valve Housing Component Assembly Note.)
9	Locknut
10	Housing cover (See 06-14-19 Housing Cover Assembly Note.)

11	Support yoke
12	Yoke spring
13	Adjusting cover (See 06-14-19 Adjusting Cover Assembly Note.)
14	Locknut (on adjusting cover) (See 06-14-20 Locknut (on Adjusting Cover) Assembly Note.)
15	Tie rod
16	Boot (See 06-14-20 Boot Assembly Note.)
17	Boot band
18	Boot clamp
19	Locknut
20	Tie-rod end
21	Oil pipe
22	Return pipe
23	Floor seal (See 06-14-20 Floor Seal Assembly Note.)

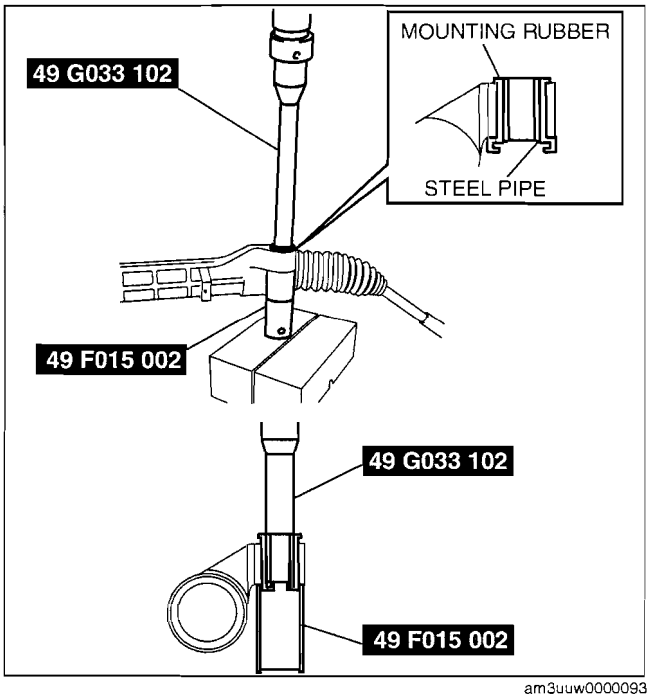
Mounting Rubber Assembly Note

1. Apply soapy water to the rubber part of the mounting rubber.
2. Install the mounting rubber so that two notches of the mounting rubber are parallel to the steering rack.
3. Press the mounting rubber until the mounting rubber end comes out completely from the gear housing using the **SSTs** and a press.



am3uuw0000093

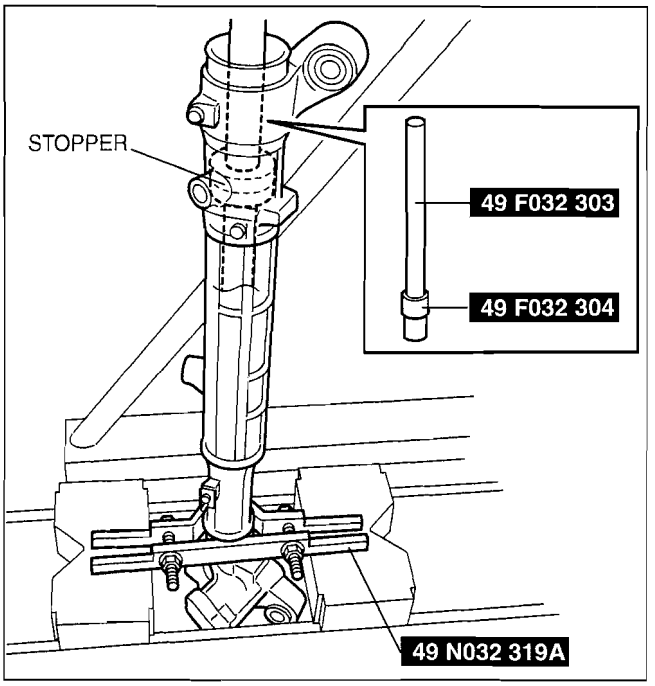
4. Reverse the gear housing, then press the mounting rubber until the mounting rubber end comes out completely from the other side. At this time, make sure that the mounting rubber and steel pipe are aligned.



am3uuw0000093

Oil Seal Assembly Note

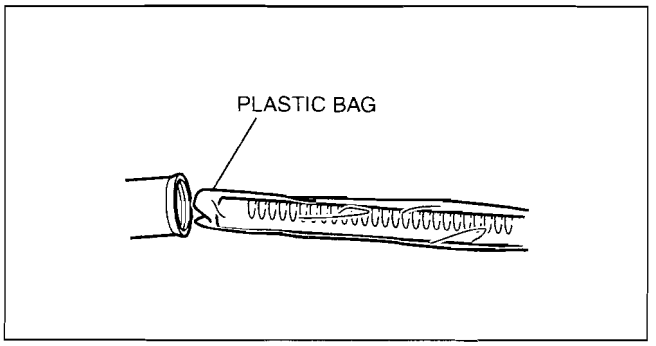
1. Apply ATF to the lip of a new oil seal.
2. Install the **SST** (49 N032 319A) to the gear housing with the raised part facing up as shown in the figure.
3. Set the stopper into the gear housing to hold the **SSTs** as shown in the figure.
4. Install the oil seal using the **SSTs** (49 F032 303, 49 F032 304) and a press.



am3uuw0000093

Steering Rack Assembly Note

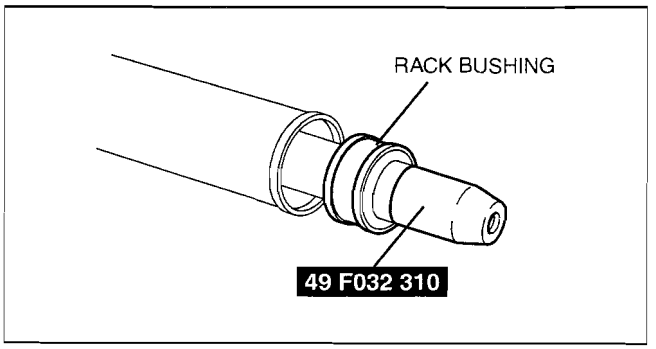
1. Apply multipurpose grease to the rack teeth.
2. Install a plastic bag to the rack teeth and insert the steering rack in the gear housing.



am3uuw0000093

Rack Bushing Assembly Note

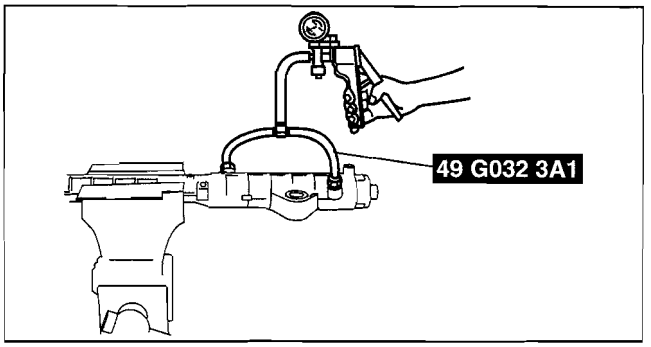
1. After installing the **SST** to the steering rack end, assemble the rack bushing to the rack housing.



am3uuw0000093

Stopper Assembly Note

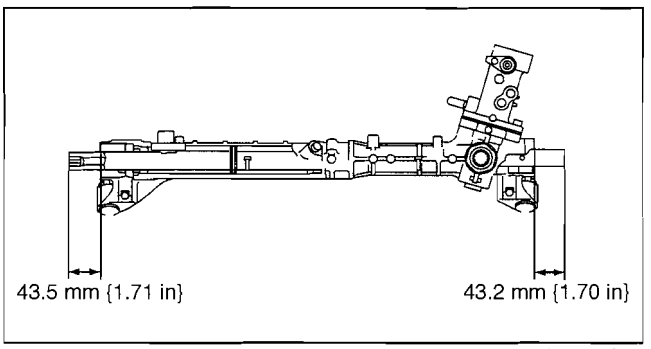
1. Assemble the stopper.
2. Inspect airtightness.
   (1) Connect the **SST** to the power cylinder section of the gear housing.
   (2) Apply **53.3 kPa {400 mmHg, 15.8 inHg}** vacuum with a vacuum pump and verify that it is held for **30 s**.
   - If the vacuum is not held, replace the oil seal.



am3uuw0000093

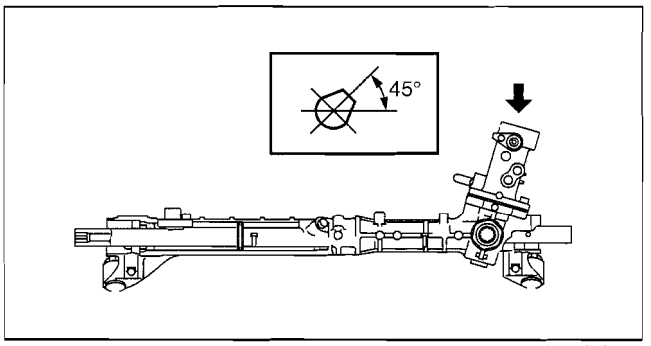
Pinion Shaft and Valve Housing Component Assembly Note

1. Set the rack in the center with the measurement between rack housing end and rack end as shown in the figure.



am3uuw0000093

2. When the pinion shaft position is as shown in the figure with the rack in the center, insert the pinion shaft and valve housing component.



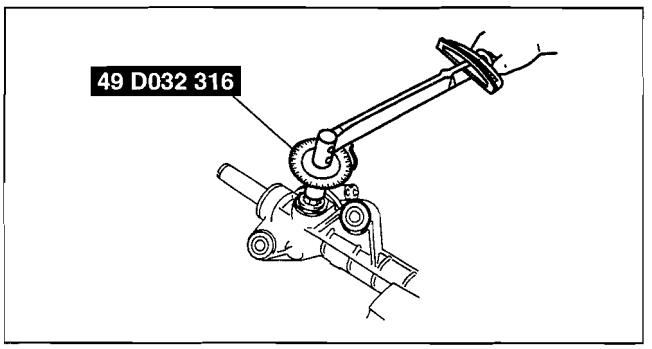
am3uuw0000093

Housing Cover Assembly Note

1. Apply silicone sealant to the threads of the housing cover.
2. Assemble the housing cover.

Adjusting Cover Assembly Note

1. Apply sealant to the threads of the adjusting cover.
2. Using the **SST**, tighten the adjusting cover with a tightening torque of **20.0 N·m {2.0 kgf·m, 14.8 ft·lbf}**.
3. Using the **SST**, loosen the adjusting cover to **25—30°**.

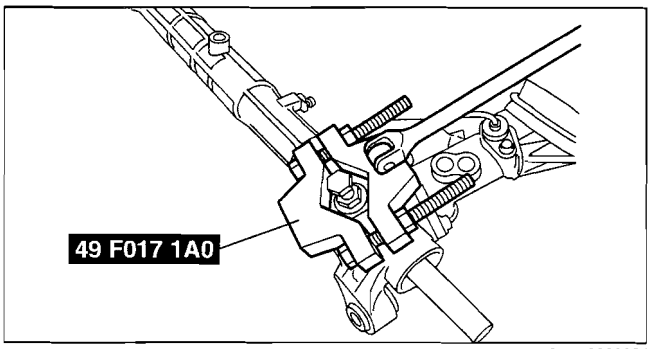


am3uuw0000093

Locknut (on Adjusting Cover) Assembly Note

Caution
- **Be sure that the adjusting cover will not turn together with the locknut.**

1. Fix the adjusting cover and tighten the locknut.

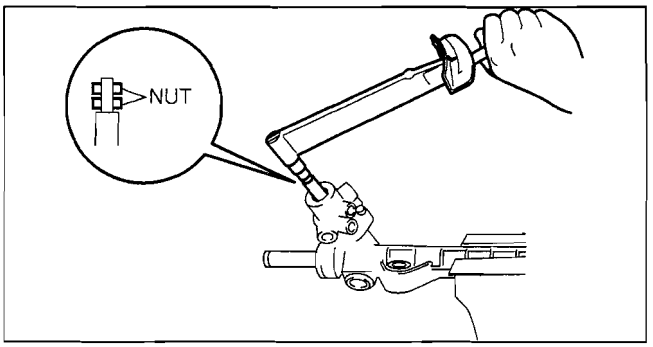


am3uuw0000094

2. Measure the pinion torque using the torque wrench.

   Pinion shaft rotation torque
   Center of rack ± 90°: 0.88—1.48 N·m {8.98—15.0 kgf·cm, 7.79—13.0 in·lbf}

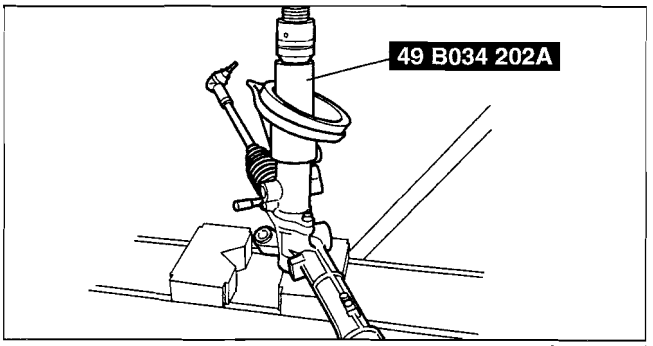
3. If not as specified, remove the locknut and adjust the adjust cover.



am3uuw0000094

Boot Assembly Note
1. Apply silicone grease to the rubber lip groove.
2. Assemble the boot.

Floor Seal Assembly Note
1. Assemble a new floor seal using the **SST** and a press.

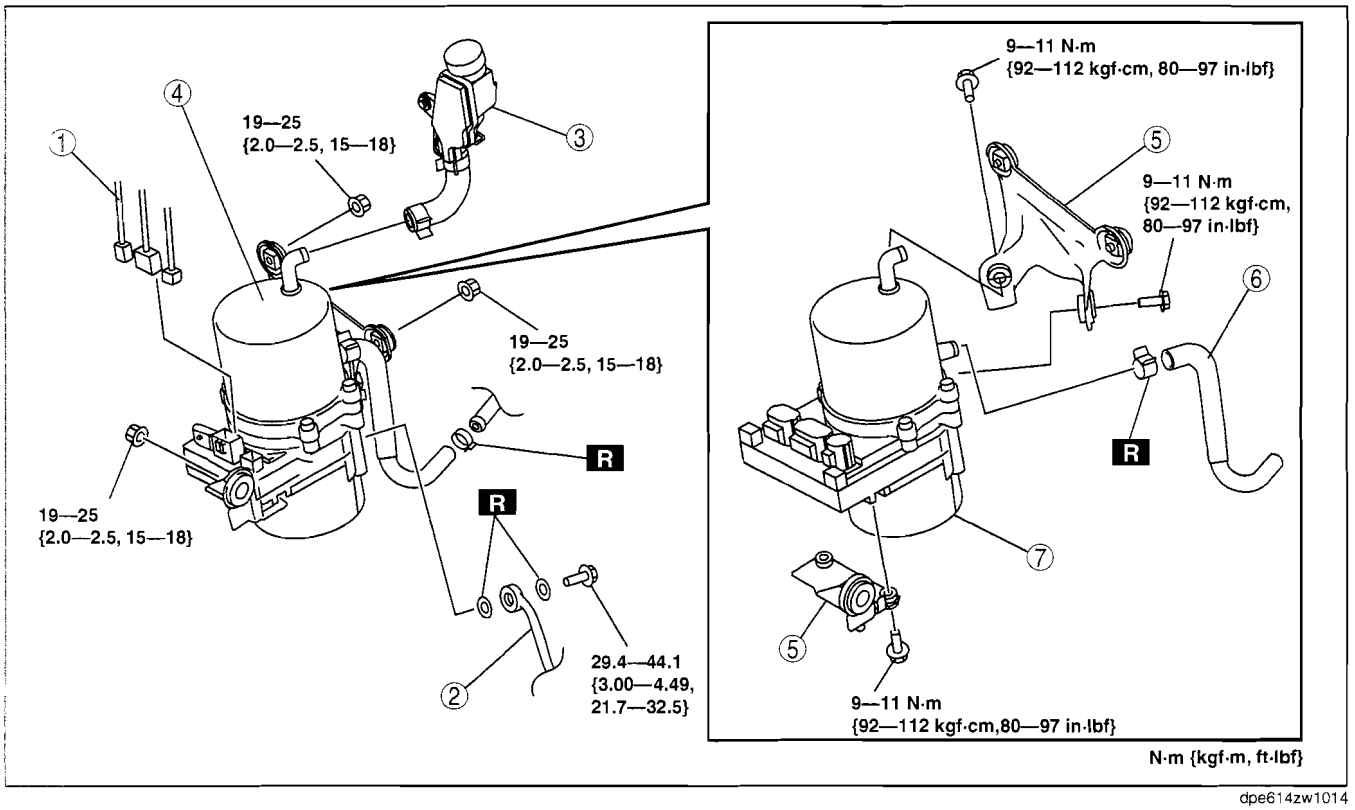


am3uuw0000094

ELECTRIC POWER STEERING OIL PUMP REMOVAL/INSTALLATION[LF, L3]

id0614008032b0

1. Remove the under cover, splash shield and mudguard.
2. Remove the front bumper. (See 09-10-8 FRONT BUMPER REMOVAL/INSTALLATION.)
3. Remove the washer tank. (See 09-19-7 WASHER TANK REMOVAL/INSTALLATION.)
4. Remove in the order indicated in the table.
5. Install in the reverse order of removal.
6. After installation, perform the Electric Power Steering OIL PUMP (EHPAS) control module configuration procedure.



dpe614zw1014

1	Connector
2	Pressure pipe
3	Power steering fluid reserve tank
4	Electric power steering oil pump and bracket component

5	Bracket
6	Return hose
7	Electric power steering oil pump

ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) CONTROL MODULE CONFIGURATION[LF, L3]

id0614008024b0

1. Connect the M-MDS to the DLC-2 connector.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Module Programming".
   - When using the PDS (Pocket PC)
     1. Select the "Programming".
     2. Select the "Module Programming".
3. Then, select the "Programmable Module installation" and "EPS" from the screen menu.
4. Perform the configuration according to the directions on the screen.
5. Retrieve DTCs using the M-MDS, then verify if DTCs are present.
   - If a DTC is present, perform the applicable DTC inspection. (See 06-02-3 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) ON-BOARD DIAGNOSIS[ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS)].)

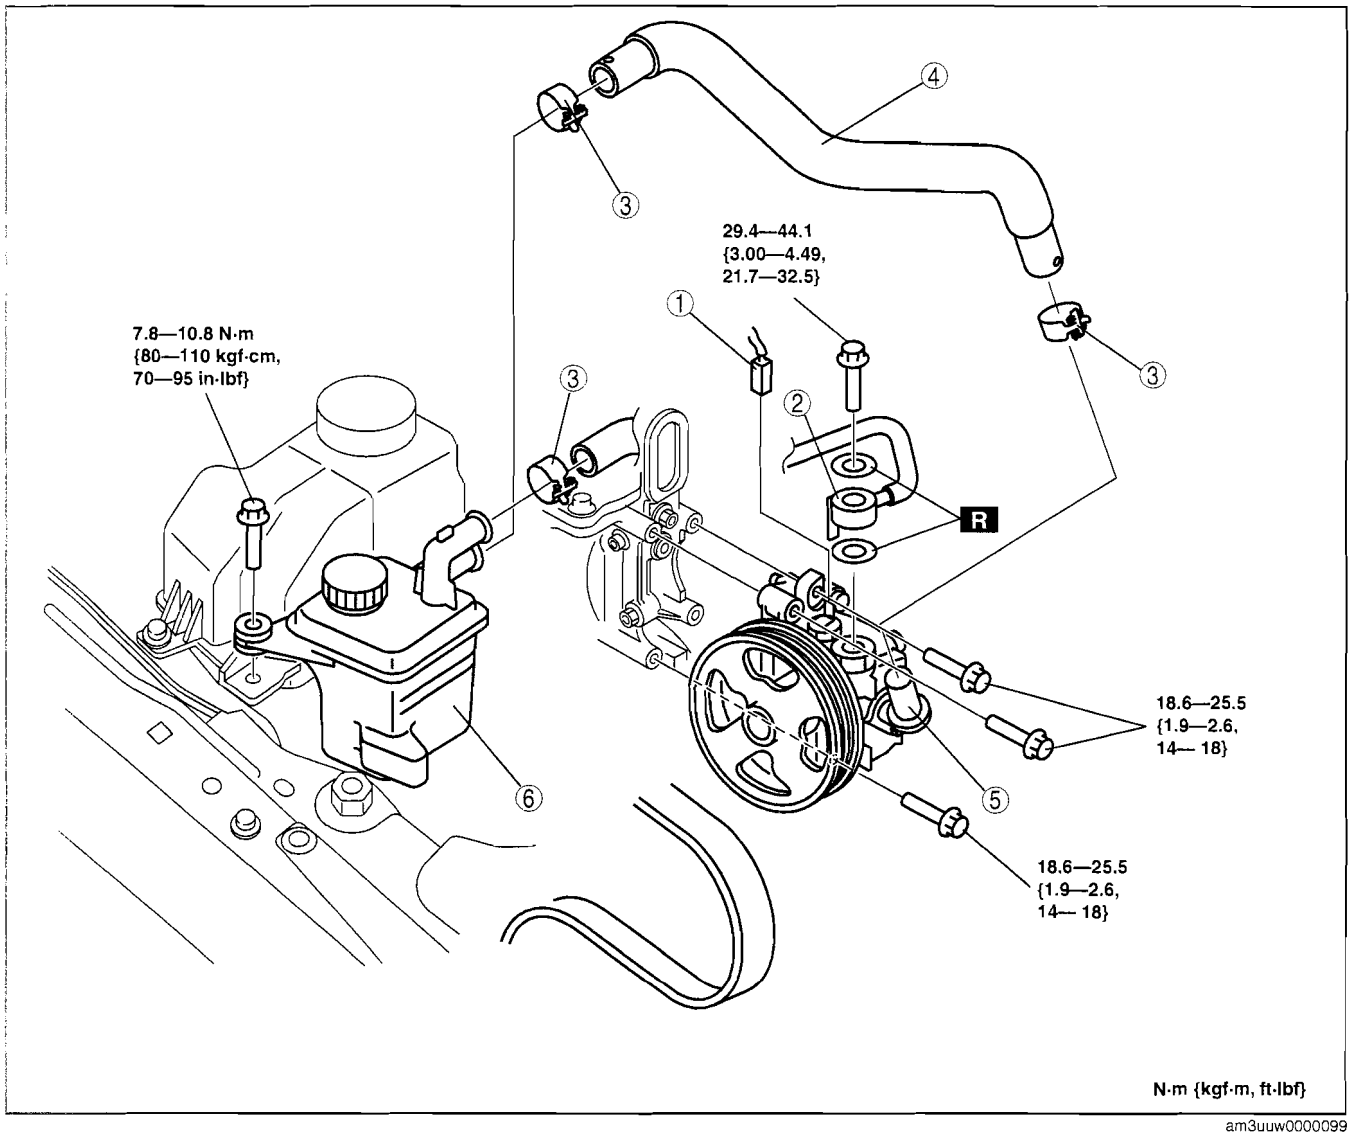
POWER STEERING OIL PUMP REMOVAL/INSTALLATION[L3 WITH TC]

id0614008007b1

1. Remove the drive belt. (See 01-10B-3 DRIVE BELT REMOVAL/INSTALLATION[L3 WITH TC].)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.



am3uuw0000099

1	Pressure switch connector
2	Pressure pipe
3	Hose band

4	Suction hose
5	Power steering oil pump
6	Power steering reserve tank

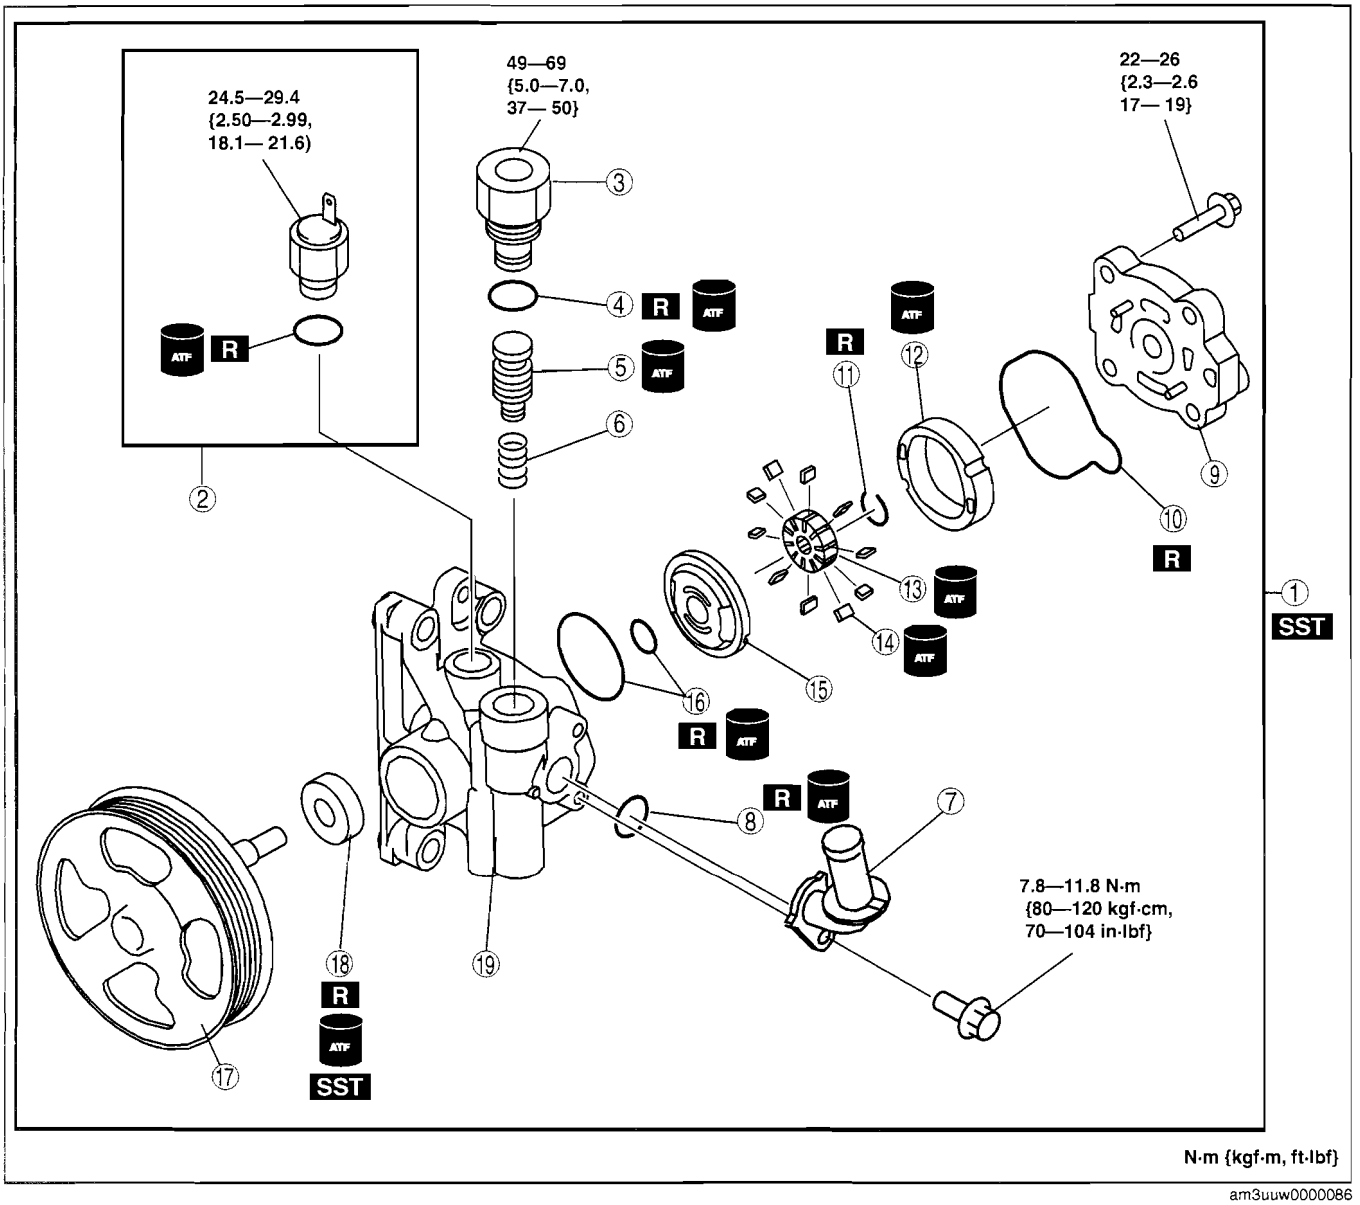
POWER STEERING OIL PUMP DISASSEMBLY/ASSEMBLY[L3 WITH TC]

id0614008008b1

Note

- The following procedure is for replacement of the O-ring and oil seal only. Replace the pump component if other repairs are necessary.

1. Disassemble in the order indicated in the table.
2. Assemble in the reverse order of disassembly.



am3uuw0000086

1	Power steering oil pump component (See 06-14-25 Power Steering Oil Pump Component Disassembly Note.)
2	Pressure switch component
3	Connector
4	O-rings
5	Control valve
6	Spring
7	Suction pipe
8	O-ring
9	Rear pump body (See 06-14-26 Rear Pump Body Assembly Note.)

10	O-ring
11	Clip
12	Cam ring (See 06-14-26 Cam Ring Assembly Note.)
13	Rotor (See 06-14-26 Rotor Assembly Note.)
14	Vane
15	Side plate (See 06-14-26 Side Plate Assembly Note.)
16	O-rings
17	Shaft component (See 06-14-25 Shaft Assembly Disassembly Note.)

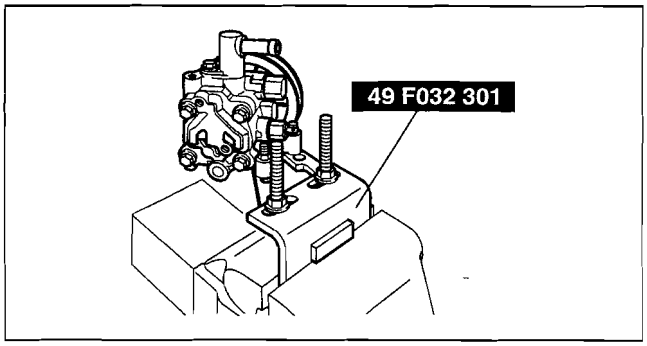
18	Oil seal (See 06-14-25 Oil seal Disassembly Note.) (See 06-14-25 Oil Seal Assembly Note.)
19	Front pump body

Power Steering Oil Pump Component Disassembly Note

1. Secure the power pressure oil pump using the **SST**.

Caution

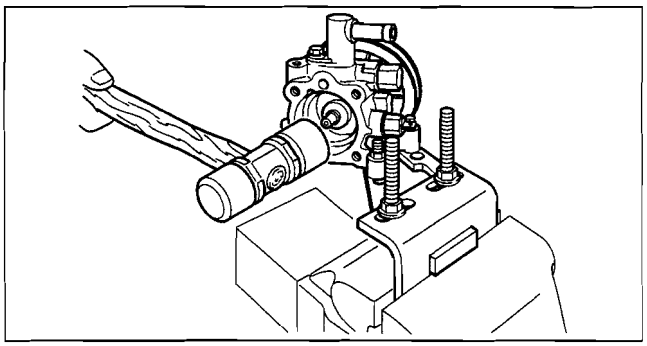
- **Use the SST to prevent damage to the pump when securing it in a vise.**



am8rrw00000898

Shaft Assembly Disassembly Note

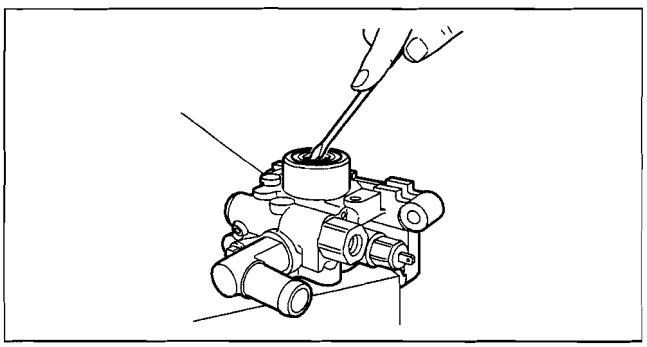
1. Using a plastic hammer, tap out the shaft component from the front pump body.



am8rrw00000899

Oil seal Disassembly Note

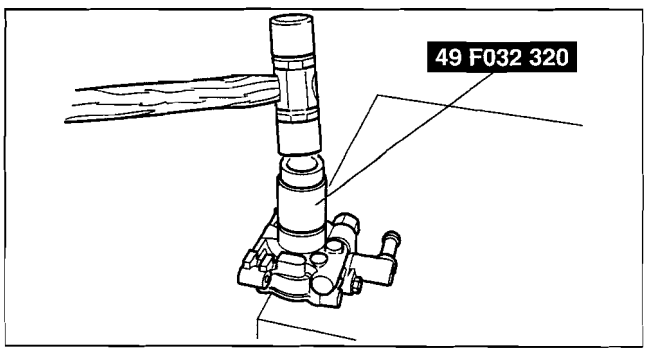
1. Remove the oil seal from the front pump body using a flathead screwdriver.



am8rrw00000900

Oil Seal Assembly Note

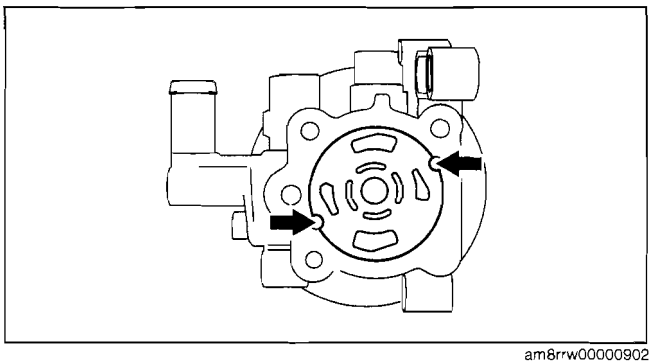
1. Install the oil seal in the front pump body using the **SST** and plastic hammer.



am3uuw0000012

Side Plate Assembly Note

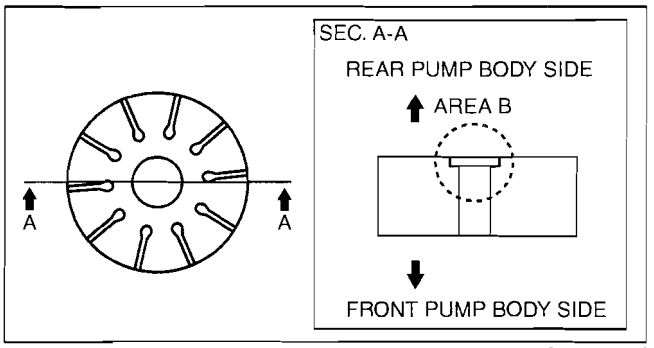
1. Install the side plate in the position shown in the figure.



am8rrw00000902

Rotor Assembly Note

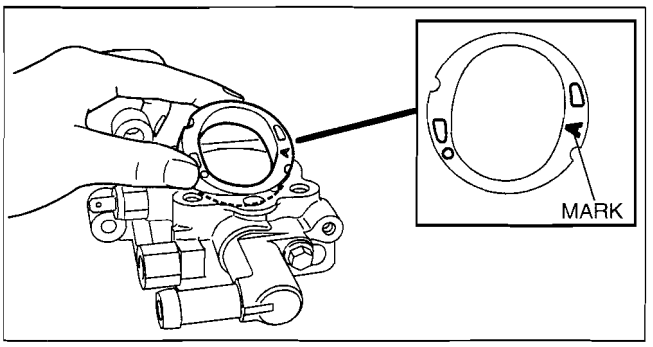
1. Install to the front pump body so that area B of the groove is on the rear pump body side as shown in the figure.



am8rrw00000903

Cam Ring Assembly Note

1. Install the cam ring in the front pump body with the mark facing upward.



am8rrw00000904

Rear Pump Body Assembly Note

1. After installing the rear body, manually turn the shaft to verify that it rotates smoothly.

STEERING ANGLE SENSOR REMOVAL/INSTALLATION

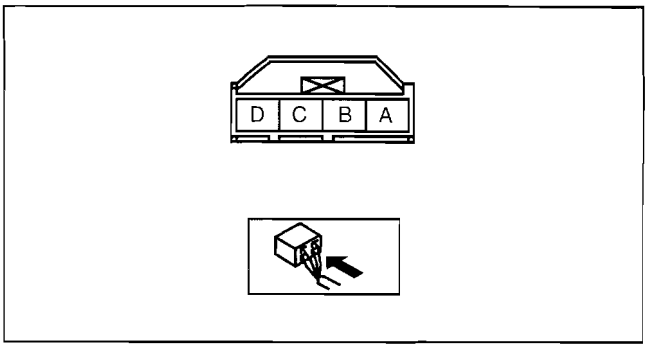
id061400802200

1. When removing or installing the steering angle sensor, refer to the clock spring removal/installation procedure. (See 08-10-14 CLOCK SPRING REMOVAL/INSTALLATION.)

STEERING ANGLE SENSOR INSPECTION

id061400802100

1. Remove the column cover.
2. Turn the ignition switch to the ON position and measure the voltage between steering angle sensor terminal A and ground.
   - If there is any malfunction, inspect the wiring harness between steering angle sensor terminal A and ignition switch. Repair or replace if necessary. (without DSC)
   - If there is any malfunction, inspect the wiring harness between steering angle sensor terminal A and DSC HU/CM terminal AB. Repair or replace if necessary. (with DSC)



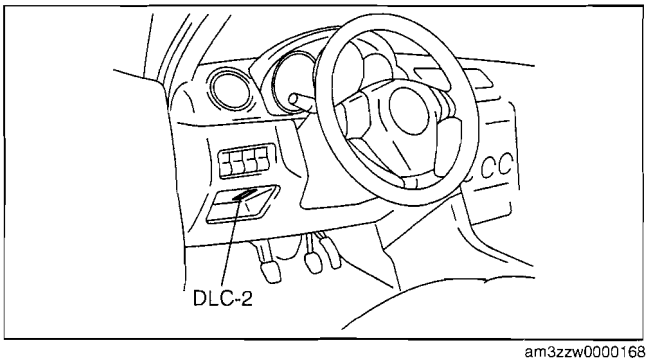
am3zzw0000168

Standard voltage
B+

3. Measure the voltage between steering angle sensor terminal D and ground.
   - If there is any malfunction, inspect the wiring harness between steering angle sensor terminal D and EHPAS control module terminal 3A. Repair or replace if necessary. (without DSC)
   - If there is any malfunction, inspect the wiring harness between steering angle sensor terminal D and DSC HU/CM terminal AH. Repair or replace if necessary. (with DSC)

Standard voltage
0 V

4. Turn the ignition switch off.
5. Connect the M-MDS to the DLC-2.
6. Select the STEER_RATE PID. (see 06-02-3 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) ON-BOARD DIAGNOSIS[ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS)].)
7. Verify the STEER_RATE changes when the steering wheel is turned to the left and right.
   - If there is any malfunction, replace the steering angle sensor. (See 08-10-14 CLOCK SPRING REMOVAL/INSTALLATION.)



am3zzw0000168

Standard
When the steering wheel is turned to the left:
STEER_RATE changes positively.
When the steering wheel is turned to the right:
STEER_RATE changes negatively.

06-50 TECHNICAL DATA

STEERING TECHNICAL DATA

id065000800200

Item	Specification
Power steering fluid type	ATF M-III or equivalent (e.g. Dexron ® II)
Power steering fluid capacity (approximate quantity)	LF, L3: 0.8 L {0.9 US qt, 0.7 Imp qt} L3 WITH TC: 1.10 L {1.16 US qt, 0.96 Imp qt}
Oil pump fluid pressure (L3 WITH TC) (oil temperature 50—60 °C {122—140 °F})	9.7—10.2 MPa {99.0—104.0 kgf/cm^2, 1,407—1,479 psi}
Gear housing fluid pressure (L3 WITH TC) (oil temperature 50—60 °C {122—140 °F})	9.7—10.2 MPa {99.0—104.0 kgf/cm^2, 1,407—1,479 psi}
Steering wheel play	0—30 mm {0—1.18 in} (When hydraulic operating)
Steering wheel force (reference value)	7.8 N·m {80 kgf·cm, 69 in·lbf} or less
Steering shaft length	315—320 mm {12.41—12.59 in}
Steering rack runout	Large diameter portion: 0.15 mm {0.006 in} max. Small diameter portion: 0.20 mm {0.008 in} max.
Tie-rod end rotational torque	0.5—3.0 N·m {6—30 kgf·cm, 5—26 in·lbf}
Tie rod swing torque	0.4—4.0 N·m {5—40 kgf·cm, 4—35 in·lbf} [Pull scale reading 0.6—29.3 N {0.06—2.98 kgf, 0.14—6.58 lbf}]
Pinion shaft rotation torque	Center of rack ± 90°: 0.88—1.48 N·m {8.98—15.0 kgf·cm, 7.79—13.0 in·lbf}

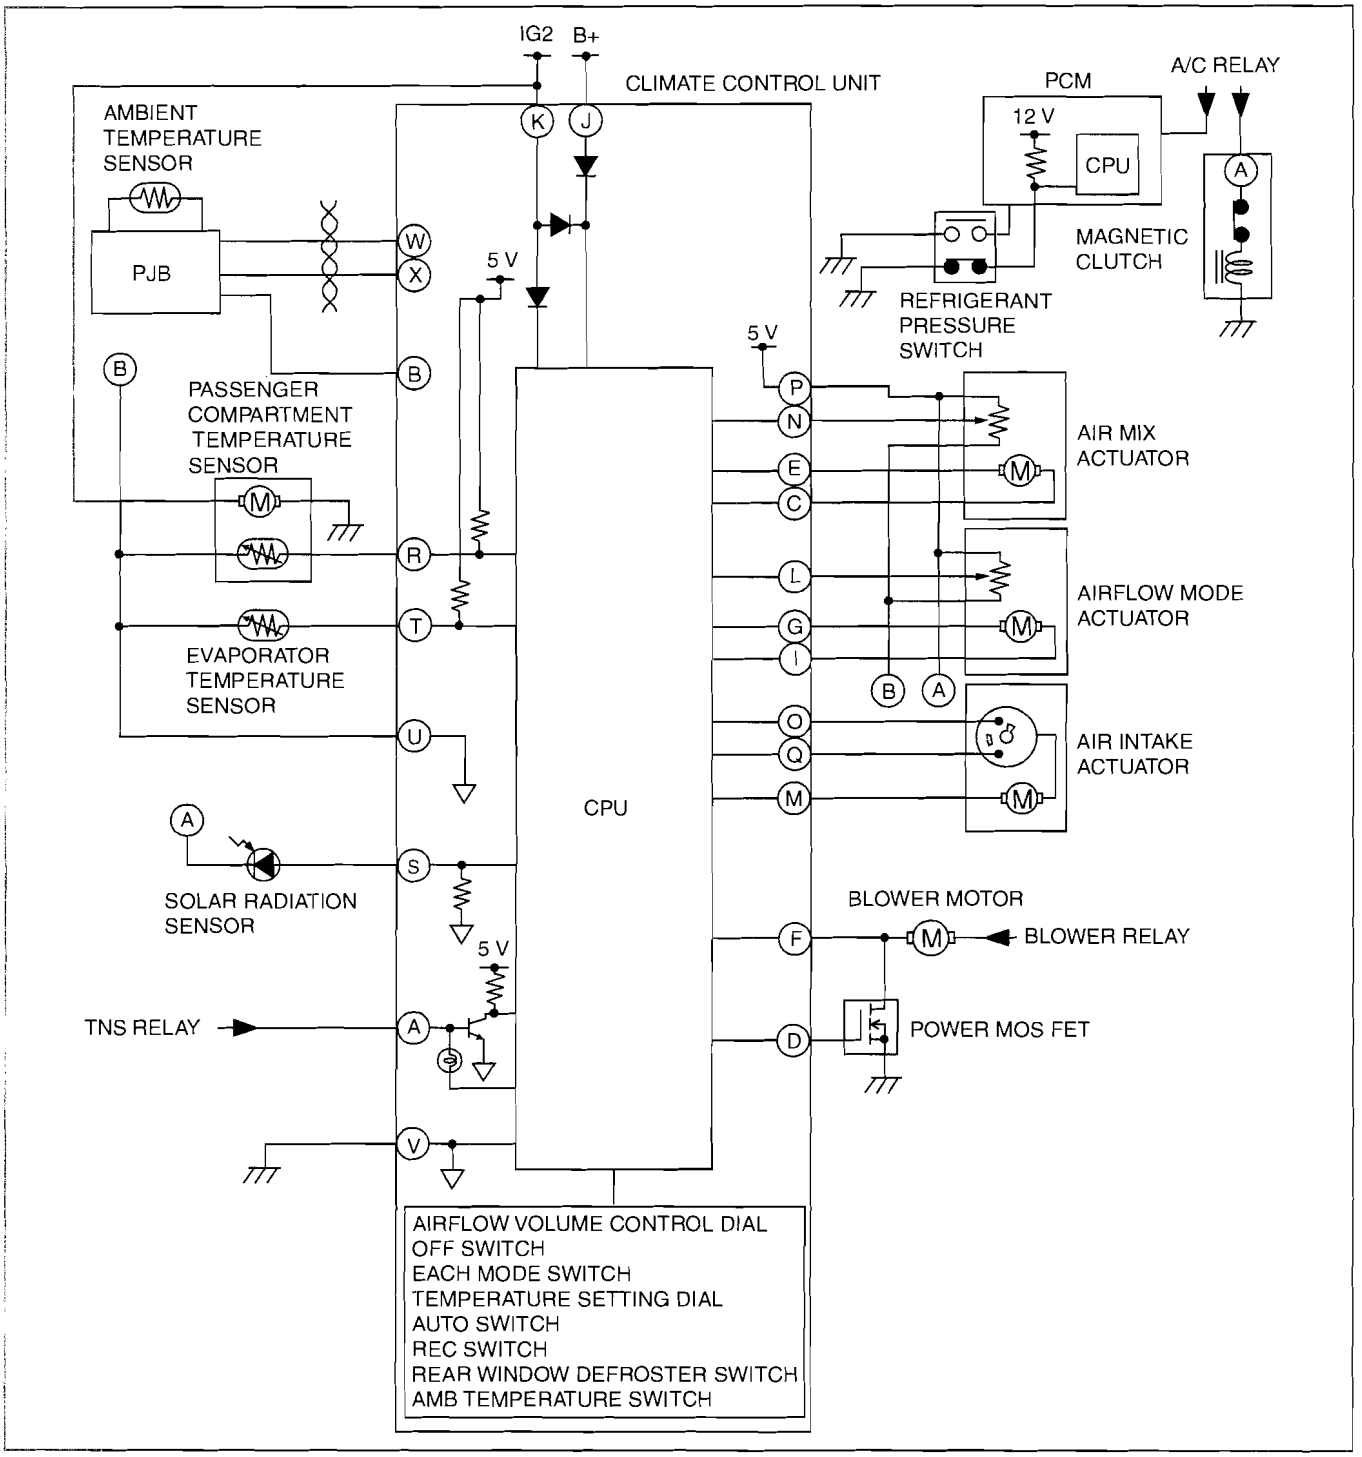
HVAC SYSTEM WIRING DIAGRAM

id070200800100



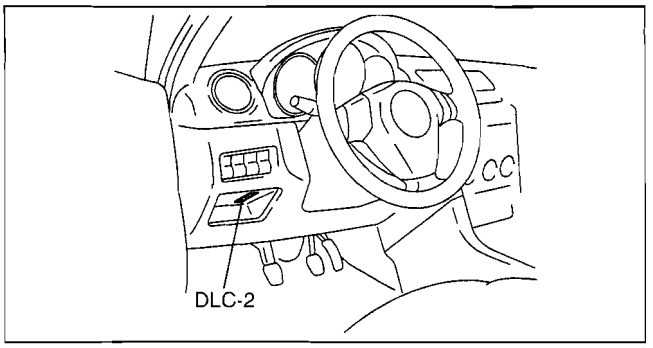
am3uuw0000068

DTC DISPLAY

id070200801500

1. Connect the M-MDS to the DLC-2 connector.
2. Shine a **fluorescent light directly onto the solar radiation sensor**.

Note
- If influorescent light is not shone on the solar radiation sensor, the climate control unit determines a malfunction and indicates DTC "B1260, B1261".



am3uuw0000059

3. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     - — Select the "Toolbox" tab.
     - — Select the "Self Test".
     - — Select the "Modules".
     - — Select the "EATC".
   - When using the PDS (Pocket PC)
     - — Select "Module Tests".
     - — Select the "Optional" tab.
     - — Select the "EATC".
     - — Select the "Self Test".
4. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
5. After completion of repairs, clear all DTCs stored in the climate control unit. (See 07-02-4 CLEARING DTC.)

07-02

DTC TABLE

id070200801700

DTC	Malfunction location	Detected condition	Memory function	Page
B1251	Passenger compartment temperature sensor	Passenger compartment temperature sensor circuit open	X	(See 07-02-5 DTC B1251, B1253.) (See 07-02-6 DTC B1251, B1253, B1274, B1275, B1282, B1283, B1947, B2014 (MULTIPLE DTCS INDICATED).)
B1253		Passenger compartment temperature sensor circuit short (body ground)	X	
B1260	Solar radiation sensor	Solar radiation sensor circuit short (power supply)	X	(See 07-02-7 DTC B1260, B1261.) (See 07-02-8 DTC B1260, B1261, B1274, B1275, B1282, B1283 (MULTIPLE DTCS INDICATED).)
B1261		Solar radiation sensor circuit short (body ground)	—	
B1274	Airflow mode actuator (potentiometer)	Airflow mode actuator (potentiometer) circuit short (power supply)	X	(See 07-02-9 DTC B1274, B1275.) (See 07-02-6 DTC B1251, B1253, B1274, B1275, B1282, B1283, B1947, B2014 (MULTIPLE DTCS INDICATED).) (See 07-02-8 DTC B1260, B1261, B1274, B1275, B1282, B1283 (MULTIPLE DTCS INDICATED).)

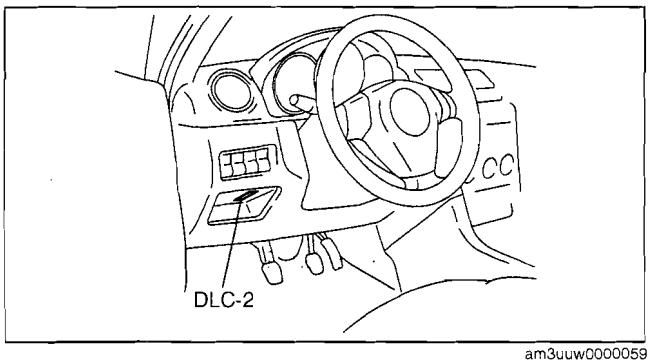
U0155		Reception error in signal from ICM (HEC)	X	—
U0156		Reception error in signal from MC (DISP)	X	—
U0516		BUS OFF error	X	—

CLEARING DTC

id070200801600



am3uuw0000059

1. Connect the M-MDS to the DLC-2 connector.
2. Shine a **fluorescent light directly onto the solar radiation sensor**.

   Note
   - If influorescent light is not shone on the solar radiation sensor, the climate control unit determines a malfunction and indicates DTC "B1260, B1261".

3. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     - — Select the "Toolbox" tab.
     - — Select the "Self Test".
     - — Select the "Modules".
     - — Select the "EATC".
   - When using the PDS (Pocket PC)
     - — Select "Module Tests".
     - — Select the "Optional" tab.
     - — Select the "EATC".
     - — Select the "Self Test".
4. Verify the DTC according to the directions on the screen.
5. Press the clear button on the DTC screen to clear the DTC.
6. Verify that no DTCs are displayed.

DTC B1251, B1253

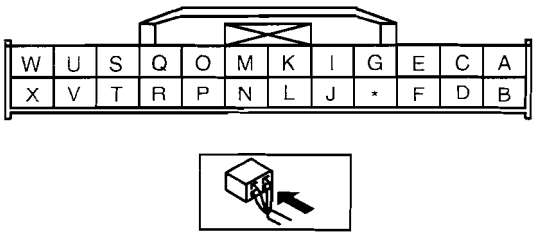
id070200800300

DTC B1251, B1253	Passenger compartment temperature sensor system
POSSIBLE CAUSE	• Passenger compartment temperature sensor malfunction • Open or short circuit in wiring harness between climate control unit and passenger compartment temperature sensor

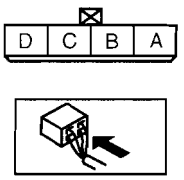
Diagnostic Procedure

STEP	INSPECTION		ACTION
1	• Inspect the passenger compartment temperature sensor. (See 07-40-25 PASSENGER COMPARTMENT TEMPERATURE SENSOR INSPECTION.) • Is it normal?	Yes	Go to the next step.
		No	Replace the passenger compartment temperature sensor. (See 07-40-25 PASSENGER COMPARTMENT TEMPERATURE SENSOR REMOVAL/ INSTALLATION.)
2	• Disconnect the climate control unit connector and the passenger compartment temperature sensor connector. • Is there an open circuit in the wiring harness between the following terminals of the climate control unit and the passenger compartment temperature sensor? — R—D — U—B	Yes	Repair the wiring harness.
		No	Go to the next step.
3	• Is there a short circuit to ground in the wiring harness between climate control unit terminal R and passenger compartment temperature sensor terminal D?	Yes	Repair the wiring harness.
		No	Connect the climate control unit connector, then go to the next step.
4	• Turn the ignition switch to the ON position. • Inspect the voltage at the following climate control unit terminal (wiring harness-side). — Terminal R (passenger compartment temperature sensor input signal) • Is the voltage normal? (**Approx. 5 V**)	Yes	The system is normal at present. (Clear the past malfunction from the memory.)
		No	Inspect the connection of the climate control unit connector. (See 07-40-34 CLIMATE CONTROL UNIT INSPECTION[FULL-AUTO AIR CONDITIONER].)

CLIMATE CONTROL UNIT CONNECTOR



PASSENGER COMPARTMENT TEMPERATURE SENSOR



DTC B1251, B1253, B1274, B1275, B1282, B1283, B1947, B2014 (MULTIPLE DTCS INDICATED)

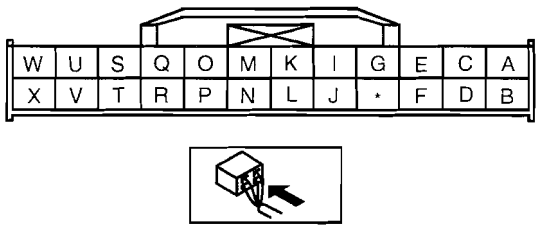
id070200805300

DTC B1251, B1253, B1947, B2014, B1282, B1283, B1274, B1275	**Climate control unit (+5 V power supply or sensor ground) system**
POSSIBLE CAUSE	• Open circuit in wiring harnesses between climate control unit and each temperature sensor, air mix actuator, or airflow mode actuator

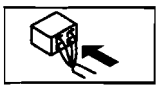
Diagnostic Procedure

STEP	INSPECTION		ACTION
1	• Disconnect the climate control unit connector and the evaporator temperature sensor connector. • Is there an open circuit in the wiring harness between climate control unit terminal U and evaporator temperature sensor terminal A?	Yes	Repair the wiring harness.
		No	The system is normal at present. (Clear the past malfunction from the memory.)

CLIMATE CONTROL UNIT CONNECTOR



EVAPORATOR TEMPERATURE SENSOR CONNECTOR



DTC B1260, B1261

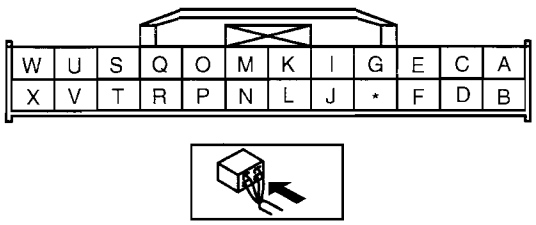
id070200800500

DTC B1260, B1261	Solar radiation sensor system
POSSIBLE CAUSE	• Solar radiation sensor malfunction • Open or short circuit in wiring harness between climate control unit and solar radiation sensor

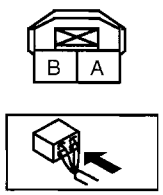
Diagnostic Procedure

STEP	INSPECTION		ACTION
1	• Inspect the solar radiation sensor. (See 07-40-23 SOLAR RADIATION SENSOR INSPECTION.) • Is it normal?	Yes	Go to the next step.
		No	Replace the solar radiation sensor. (See 07-40-23 SOLAR RADIATION SENSOR REMOVAL/ INSTALLATION.)
2	• Disconnect the climate control unit connector and the solar radiation sensor connector. • Is there continuity between the following terminals of the climate control unit and the solar radiation sensor? — S—B — P—A	Yes	Go to the next step.
		No	Repair the wiring harness.
3	• Is there a short circuit to ground in the wiring harness between climate control unit terminal S and solar radiation sensor terminal B?	Yes	Repair the wiring harness.
		No	Inspect the connection of the climate control unit connector. (See 07-40-34 CLIMATE CONTROL UNIT INSPECTION[FULL-AUTO AIR CONDITIONER].)

CLIMATE CONTROL UNIT CONNECTOR



SOLAR RADIATION SENSOR CONNECTOR



07-02

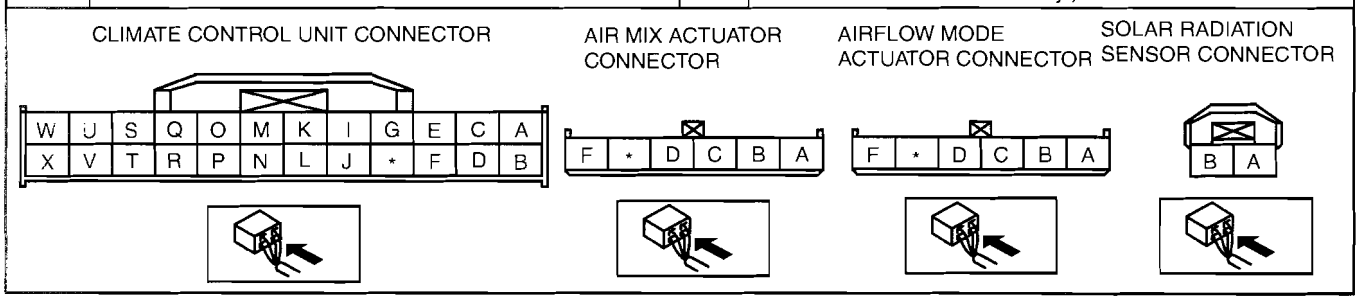
DTC B1260, B1261, B1274, B1275, B1282, B1283 (MULTIPLE DTCS INDICATED)

id070200800700

DTC B1260, B1261, B1282, B1283, B1274, B1275	**Climate control unit (+5 V power supply) system**
POSSIBLE CAUSE	• Open or short circuit in wiring harnesses between climate control unit and solar radiation sensor, air mix actuator, or airflow mode actuator

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	• Disconnect the climate control unit connector and the airflow mode actuator connector. • Is there an open circuit in the wiring harness between climate control unit terminal P and airflow mode actuator terminal A?	Yes	Repair the wiring harness.
		No	Go to the next step.
2	• Is there a short circuit to ground in the wiring harness between climate control unit terminal P and airflow mode actuator terminal A?	Yes	Repair the wiring harness.
		No	Go to the next step.
3	• Is there a short circuit to ground in the wiring harness between climate control unit terminal P and air mix actuator terminal A?	Yes	Repair the wiring harness.
		No	Go to the next step.
4	• Is there a short circuit to ground in the wiring harness between climate control unit terminal P and solar radiation sensor terminal A?	Yes	Repair the wiring harness.
		No	The system is normal at present. (Clear the past malfunction from the memory.)



DTC B1274, B1275

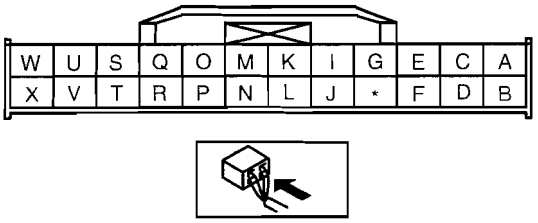
id070200800800

DTC B1274, B1275	Airflow mode actuator (potentiometer) system
POSSIBLE CAUSE	• Airflow mode actuator malfunction • Open circuit in wiring harness between climate control unit and airflow mode actuator • Short circuit in wiring harness between climate control unit (terminal L) and airflow mode actuator (terminal C)

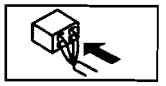
Diagnostic Procedure

STEP	INSPECTION		ACTION
1	• Inspect the airflow mode actuator. (See 07-40-9 AIRFLOW MODE ACTUATOR INSPECTION.) • Is it normal?	Yes	Go to the next step.
		No	Replace the airflow mode actuator. (See 07-40-9 AIRFLOW MODE ACTUATOR REMOVAL/ INSTALLATION.)
2	• Disconnect the climate control unit connector and the airflow mode actuator connector. • Is there an open circuit in the wiring harness between the following terminals of the climate control unit and the airflow mode actuator? — P—A — L—C — U—B	Yes	Repair the wiring harness.
		No	Go to the next step.
3	• Is there a short circuit to ground in the wiring harness between climate control unit terminal L and airflow mode actuator terminal C?	Yes	Repair the wiring harness.
		No	The system is normal at present. (Clear the past malfunction from the memory.)

CLIMATE CONTROL UNIT CONNECTOR



AIRFLOW MODE ACTUATOR CONNECTOR



07-02

DTC B1282, B1283

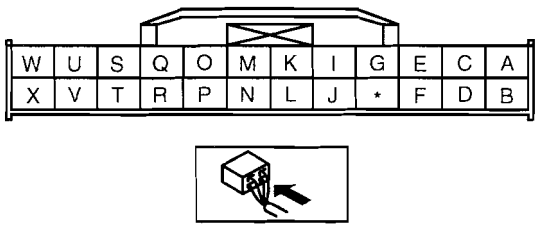
id070200800900

DTC B1282, B1283	Air mix actuator (potentiometer) system
POSSIBLE CAUSE	• Air mix actuator malfunction • Open circuit in wiring harness between climate control unit and air mix actuator • Short circuit in wiring harness between climate control unit (terminal N) and air mix actuator (terminal C)

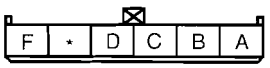
Diagnostic Procedure

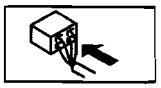
STEP	INSPECTION		ACTION
1	• Inspect the air mix actuator. (See 07-40-8 AIR MIX ACTUATOR INSPECTION.) • Is it normal?	Yes	Go to the next step.
		No	Replace the air mix actuator. (See 07-40-6 AIR MIX ACTUATOR REMOVAL/INSTALLATION.)
2	• Disconnect the climate control unit connector and the air mix actuator connector. • Is there an open circuit in the wiring harness between the following terminals of the climate control unit and the air mix actuator? — P—A — N—C — U—B	Yes	Repair the wiring harness.
		No	Go to the next step.
3	• Is there a short circuit to ground in the wiring harness between climate control unit terminal N and air mix actuator terminal C?	Yes	Repair the wiring harness.
		No	The system is normal at present. (Clear the past malfunction from the memory.)

CLIMATE CONTROL UNIT CONNECTOR



AIR MIX ACTUATOR CONNECTOR





DTC B1947, B2014

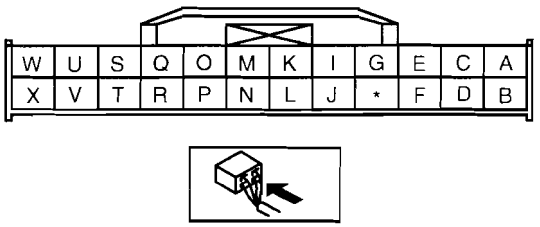
id070200801000

DTC B1947, B2014	Evaporator temperature sensor system
POSSIBLE CAUSE	• Evaporator temperature sensor malfunction • Open or short circuit in wiring harness between climate control unit and evaporator temperature sensor

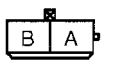
Diagnostic Procedure

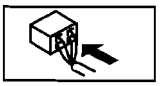
STEP	INSPECTION		ACTION
1	• Inspect the evaporator temperature sensor. (See 07-40-26 EVAPORATOR TEMPERATURE SENSOR INSPECTION.) • Is it normal?	Yes	Go to the next step.
		No	Replace the evaporator temperature sensor. (See 07-40-26 EVAPORATOR TEMPERATURE SENSOR REMOVAL/INSTALLATION.)
2	• Disconnect the climate control unit connector and the evaporator temperature sensor connector. • Is there an open circuit in the wiring harness between the following terminals of the climate control unit and the evaporator temperature sensor? — T—B — U—A	Yes	Repair the wiring harness.
		No	Go to the next step.
3	• Is there a short circuit to ground in the wiring harness between climate control unit terminal T and evaporator temperature sensor terminal B?	Yes	Repair the wiring harness.
		No	Connect the climate control unit connector, then go to the next step.
4	• Turn the ignition switch to the ON position. • Inspect the voltage at the following climate control unit terminal (wiring harness-side). — Terminal T (evaporator temperature sensor input signal) • Is the voltage normal? (**Approx. 5 V**)	Yes	The system is normal at present. (Clear the past malfunction from the memory.)
		No	Inspect the connection of the climate control unit connector. (See 07-40-34 CLIMATE CONTROL UNIT INSPECTION[FULL-AUTO AIR CONDITIONER].)

CLIMATE CONTROL UNIT CONNECTOR



EVAPORATOR TEMPERATURE SENSOR CONNECTOR





07-02

DTC B2832

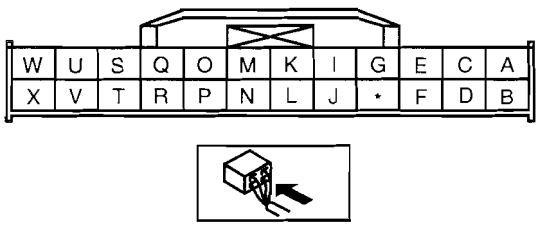
id070200801100

DTC B2832	**Airflow mode actuator (motor lock) system** Note • **DTC B2832 will be detected when the ignition switch is turned to the ON position and approx. 30 s have passed since the airflow mode actuator is operated.**
POSSIBLE CAUSE	• Airflow mode actuator malfunction • A/C unit (airflow mode link and airflow mode crank) malfunction • Open or short circuit in wiring harness between climate control unit and airflow mode actuator

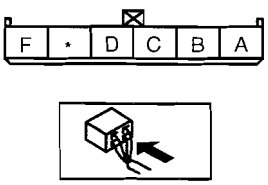
Diagnostic Procedure

STEP	INSPECTION		ACTION
1	• Disconnect the airflow mode actuator connector. • Connect battery positive voltage to airflow mode actuator terminal D (or terminal F) and terminal F (or terminal D) to ground. • Does the airflow mode actuator operate?	Yes	Connect the connector, then go to Step 3.
		No	Go to the next step.
2	• Remove the airflow mode actuator. • Operate the airflow mode main link manually. • Does the airflow mode main link operate smoothly?	Yes	Replace the airflow mode actuator. (See 07-40-9 AIRFLOW MODE ACTUATOR REMOVAL/ INSTALLATION.)
		No	Replace the airflow mode main link, airflow mode sub link, and the airflow mode crank.
3	• Disconnect the climate control unit connector. • Connect battery positive voltage to climate control unit terminal I (or terminal G) and terminal G (or terminal I) to ground. • Does the airflow mode actuator operate?	Yes	Inspect the connection of the climate control unit connector. (See 07-40-34 CLIMATE CONTROL UNIT INSPECTION[FULL-AUTO AIR CONDITIONER].)
		No	Repair the wiring harness.

CLIMATE CONTROL UNIT CONNECTOR



AIRFLOW MODE ACTUATOR CONNECTOR



DTC B2834

id070200801200

DTC B2834	**Air mix actuator (motor lock) system** **Note** • **DTC B2834 will be detected when the ignition switch is turned to the ON position and approx. 30 s have passed since the air mix actuator is operated.**
POSSIBLE CAUSE	• Air mix actuator malfunction • A/C unit (air mix link and air mix crank) malfunction • Open or short circuit in wiring harness between climate control unit and air mix actuator

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	• Disconnect the air mix actuator connector. • Connect battery positive voltage to air mix actuator terminal F (or terminal D) and terminal D (or terminal F) to ground. • Does the air mix actuator operate?	Yes	Connect the connector, then go to Step 3.
		No	Go to the next step.
2	• Remove the air mix actuator. • Operate the air mix link manually. • Does the air mix link operate smoothly?	Yes	Replace the air mix actuator. (See 07-40-6 AIR MIX ACTUATOR REMOVAL/INSTALLATION.)
		No	Replace the air mix link and the air mix crank.
3	• Disconnect the climate control unit connector. • Connect battery positive voltage to climate control unit terminal D (or terminal C) and terminal C (or terminal D) to ground. • Does the air mix actuator operate?	Yes	Inspect the connection of the climate control unit connector. (See 07-40-34 CLIMATE CONTROL UNIT INSPECTION[FULL-AUTO AIR CONDITIONER].)
		No	Repair the wiring harness.

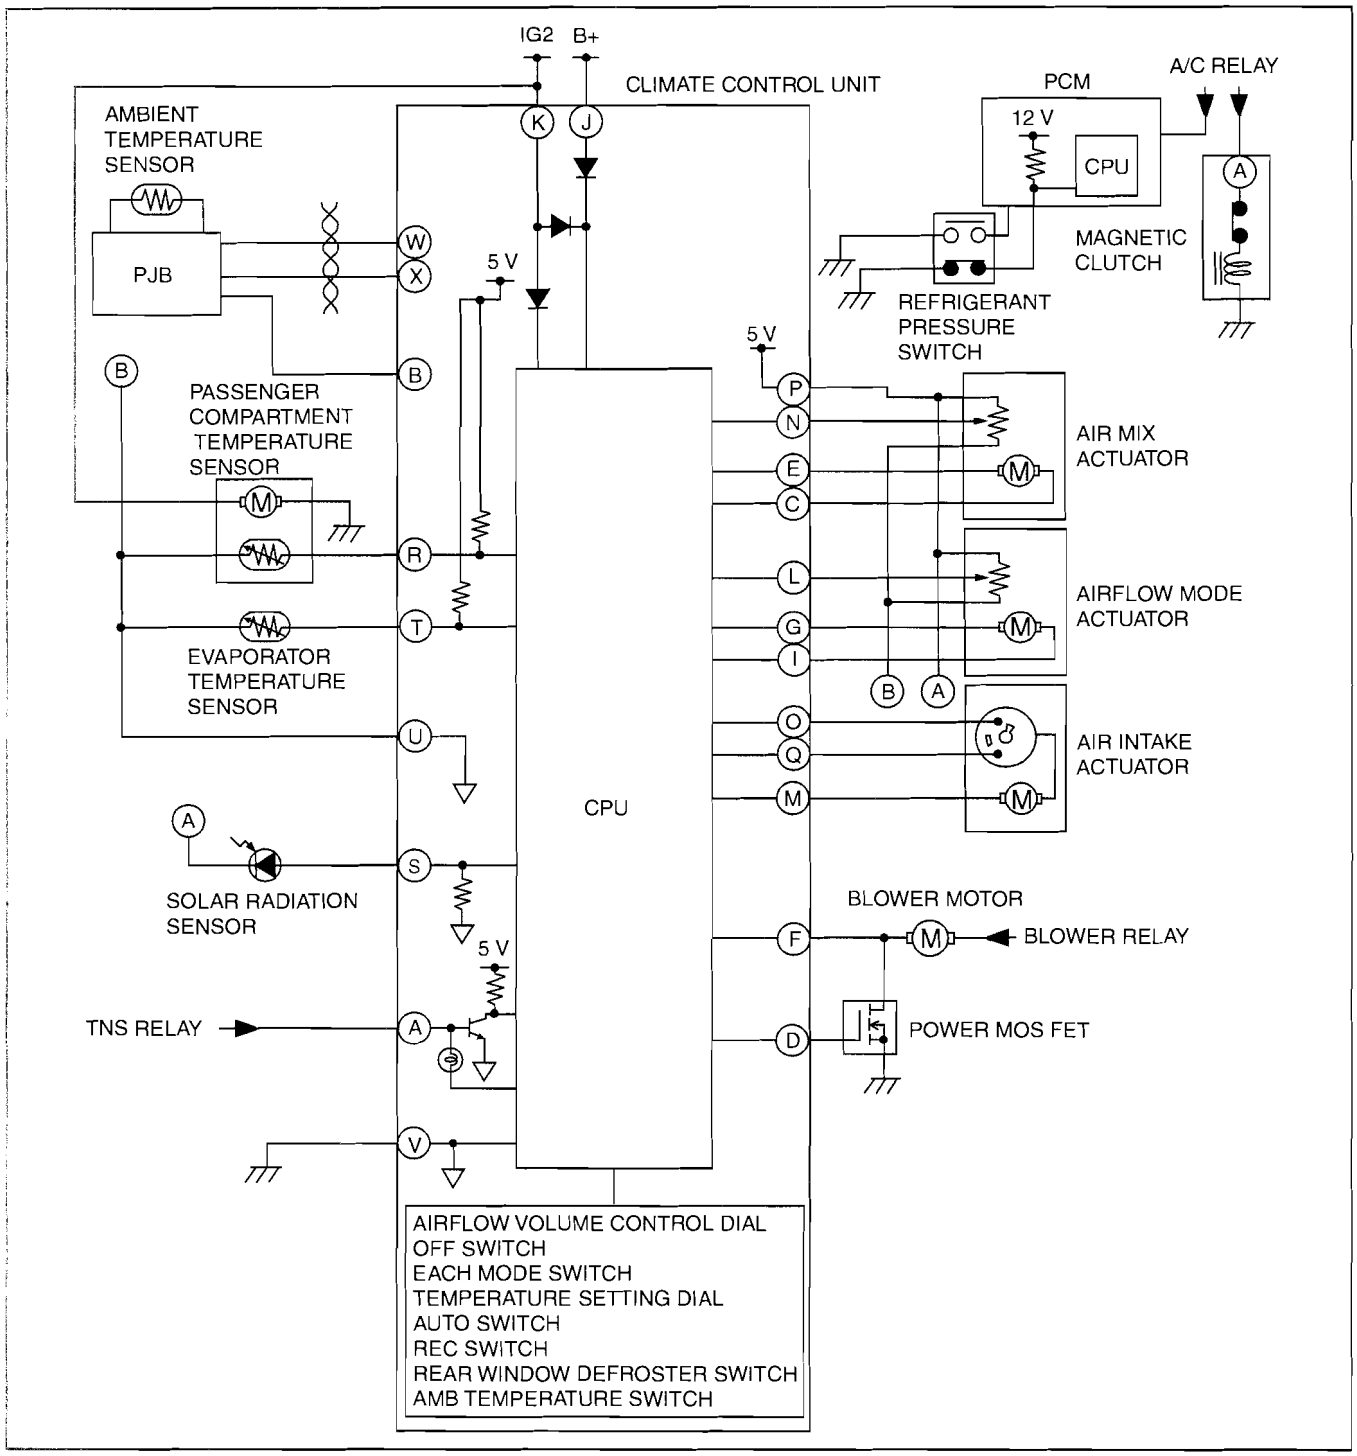
07-03 SYMPTOM TROUBLESHOOTING

HVAC SYSTEM WIRING DIAGRAM

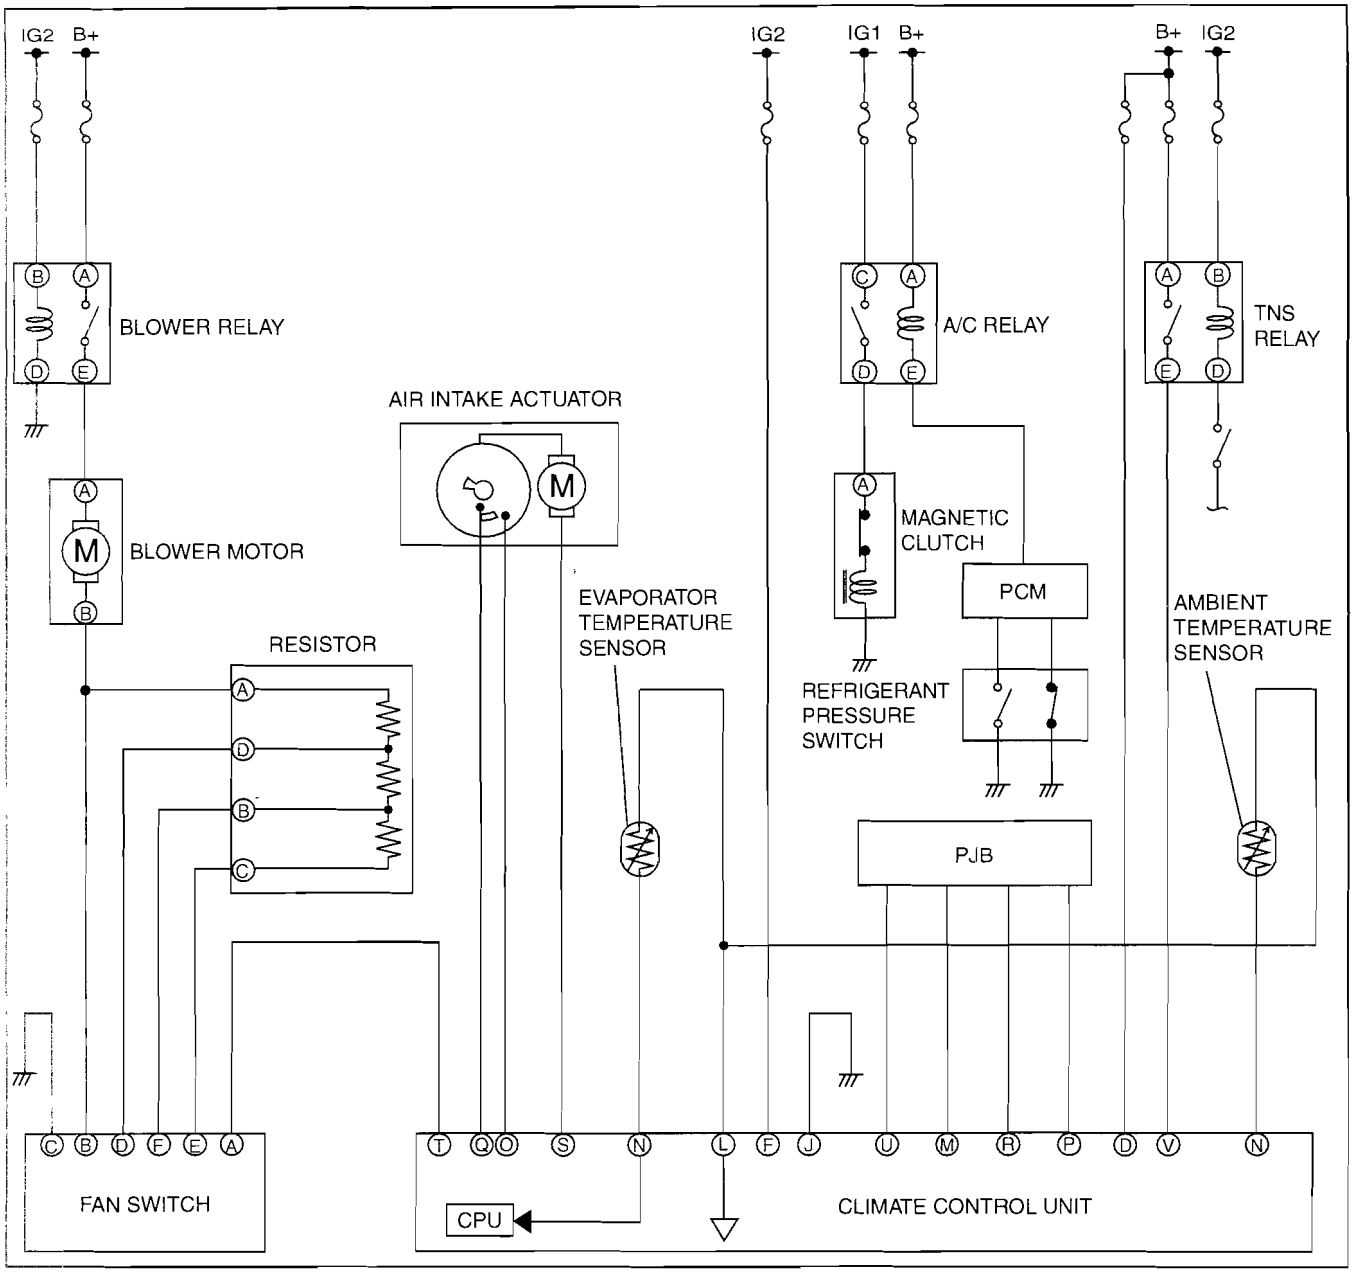
id070300800100

Full-auto Air Conditioner



am3uuw0000068

Manual Air Conditioner



am3uuw0000060

FOREWORD

id070300800200

- The areas for inspection (steps) are given according to various circuit malfunctions. Use the following chart to verify the symptoms of the trouble in order to diagnose the appropriate area.

TROUBLESHOOTING INDEX

id070300800300

No.	TROUBLESHOOTING ITEM	DESCRIPTION
1	Insufficient air (or no air) blown from vents	• Problem with each vent or duct or both. • Airflow mode does not change.
2	Amount of air blown from vents does not change. (Full-auto air conditioner)	• Malfunction in blower system
3	Amount of air blown from vents does not change. (Manual air conditioner)	• Malfunction in blower system
4	Air intake mode does not change.	• Air intake mode does not change when switching REC/FRESH mode.
5	No temperature control with climate control unit	• Malfunction in A/C unit and/or climate control unit air mix system or both
6	Windshield fogged.	• A/C compressor does not operate while airflow mode is in DEFROSTER or HEAT/DEF modes. • Air intake mode does not change to FRESH while airflow mode is in DEFROSTER or HEAT/DEF modes.
7	Air from vents not cold enough	• Magnetic clutch operates but A/C system malfunctions.
8	No cool air	• Magnetic clutch does not operate.
9	Noise while operating A/C system	• Noise from magnetic clutch, A/C compressor, hose or refrigerant line

NO.1 INSUFFICIENT AIR (OR NO AIR) BLOWN FROM VENTS

id070300800400

1	Insufficient air (or no air) blown from vents
DESCRIPTION	• Problem with each vent or duct or both. • Airflow mode dose not change.
POSSIBLE CAUSE	• Malfunction in airflow mode actuator • Malfunction in VENT mode system • Malfunction in HEAT mode system • Malfunction in DEFROSTER mode system

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT AIRFLOW MODE ACTUATOR** • Inspect airflow mode actuator. • Is it normal?	Yes	Go to the next step.
		No	Repair or replace malfunctioning part in accordance with further inspection result.
2	**INSPECT TO SEE WHETHER MALFUNCTION IS IN VENT MODE OR OTHER MODES** • Dose air blow out when in VENT mode?	Yes	Go to Step 5.
		No	Go to the next step.
3	**INSPECT VENT** • Is vent clogged?	Yes	Remove obstruction, then go to Step 9.
		No	Go to the next step.
4	**VERIFY THAT DUCT IN DASHBOARD IS INSTALLED** • Is duct in dashboard properly installed?	Yes	Inspect the duct for clogging, deformation and air leakage, then go to Step 9.
		No	Install the duct securely in the proper position, then go to Step 9.
5	**INSPECT TO SEE WHETHER MALFUNCTION IS IN HEAT MODE OR DEFROSTER MODE** • Does air blow out when in the HEAT mode?	Yes	Go to the next step.
		No	Inspect the vent for clogging, then go to Step 9.
6	**INSPECT DEFROSTER MODE** • Does air blow out when in the DEFROSTER mode?	Yes	Operation is normal. Recheck malfunction symptoms.
		No	Go to the next step.
7	**INSPECT VENT** • Is vent clogged?	Yes	Remove obstruction, then go to Step 9.
		No	Go to the next step.
8	**VERIFY THAT DEFROSTER DUCT IS INSTALLED** • Is the defroster duct properly installed?	Yes	Inspect the duct for clogging, deformity, and air leakage, then go to the next step.
		No	Install the duct securely in proper position, then go to the next step.
9	**CONFIRM THAT MALFUNCTION SYMPTOMS DO NOT RECUR AFTER REPAIR** • Does air blow out?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

NO.2 AMOUNT OF AIR BLOWN FROM VENTS DOES NOT CHANGE

id070300800500

Full-auto Air Conditioner

2	Amount of air blown from vents does not change.
DESCRIPTION	• Malfunction in blower system
POSSIBLE CAUSE	• A/C unit malfunction • Blower motor malfunction • Malfunction in power MOS FET system • Climate control unit malfunction

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, inspect make sure connectors, terminals and wiring harnesses are connected correctly and undamaged.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT HEATER 40 A FUSE** • Inspect the HEATER 40 A fuse. • Is it normal?	Yes	Go to the next step.
		No	Replace the fuse, then go to Step 15. If the fuse burns out immediately, go to the next step.
2	**INSPECT TO SEE WHETHER MALFUNCTION IS IN A/C UNIT OR ELSEWHERE** • Turn the ignition switch to the ON position. • Recirculate air inside the vehicle. • Does the blower motor rotate smoothly?	Yes	Go to Step 4.
		No	Go to the next step.
3	**INSPECT A/C UNIT INTAKE VENT** • Is A/C unit intake vent clogged?	Yes	Remove obstruction, then go to Step 15.
		No	Inspect if there are any obstruction in the A/C unit passage, then go to Step 15.
4*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN BLOWER RELAY SYSTEM OR POWER MOS FET SYSTEM** • Turn the ignition switch to ON position. • Measure the voltage at the following blower motor terminal. — Terminal B (blower motor operation signal) • Is voltage **approx. 12 V**?	Yes	Go to Step 8.
		No	Go to the next step.
5*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN FUSE BLOCK AND BLOWER RELAY) OR ELSEWHERE** • Measure the voltage at the following blower relay terminals. — Terminal B (IG2 signal) — Terminal A (B+ signal) • Is the voltage **approx. 12 V**?	Yes	Go to the next step.
		No	Repair the wiring harness between the blower relay and HEATER 40 A fuse, then go to Step 15.
6*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN BLOWER RELAY AND GROUND) OR ELSEWHERE** • Measure the voltage at the following blower relay terminal. — Terminal D (GND signal) • Is the voltage **approx. 0 V**?	Yes	Go to the next step.
		No	Repair the wiring harness between the blower relay and ground, then go to Step 15.
7*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN BLOWER RELAY AND BLOWER MOTOR) OR BLOWER RELAY** • Measure the voltage at the following blower relay terminal. — Terminal E (blower motor operation signal) • Is the voltage **approx. 12 V**?	Yes	Repair the wiring harness between the blower relay and blower motor, then go to Step 15.
		No	Replace the blower relay, then go to Step 15.

STEP	INSPECTION		ACTION
8*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN BLOWER MOTOR OR ELSEWHERE** • Measure the voltage at the following blower motor terminal. — Terminal B (blower motor operation signal) • Is the voltage **approx. 12 V**?	Yes	Go to the next step.
		No	Inspect the blower motor, then go to Step 15.
9*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN BLOWER MOTOR AND POWER MOS FET) OR ELSEWHERE** • Measure the voltage at the following terminal of power MOS FET. — Terminal B (blower motor operation signal) • Is voltage **approx. 12 V**?	Yes	Go to the next step.
		No	Repair the wiring harness between the blower motor and power MOS FET, then go to Step 15.
10*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN POWER MOS FET AND GROUND) OR ELSEWHERE** • Measure the voltage at the following power MOS FET terminal. — Terminal A (blower motor operation signal) • Is the voltage **approx. 0 V**?	Yes	Go to the next step.
		No	Repair the wiring harness between the power MOS FET and ground, then go to Step 15.
11	**INSPECT A/C UNIT** • Inspect the fan in A/C unit. — Is the fan free of interference with the A/C unit case? — Is the fan free of foreign material and obstruction? • Is the fan normal?	Yes	Go to the next step.
		No	Remove obstruction, repair or replace the fan and A/C unit case, then go to Step 15.
12*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN POWER MOS FET OR ELSEWHERE** • Disconnect power MOS FET connector. • Measure the voltage at the following power MOS FET terminal. — Terminal B (blower motor control signal) • Is voltage **approx. 10 V**?	Yes	Replace the power MOS FET, then go to Step 15.
		No	Go to the next step.
13*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN POWER MOS FET AND CLIMATE CONTROL UNIT) OR ELSEWHERE** • Turn the ignition switch to the LOCK position. • Disconnect climate control unit connector. • Inspect for continuity at the following terminals between the power MOS FET and climate control unit. — Terminal B—F (blower motor control signal) — Terminal C—D (blower motor feedback signal) • Is there continuity?	Yes	Go to the next step.
		No	Repair the wiring harness between the power MOS FET and climate control unit, then go to Step 15.
14*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN CLIMATE CONTROL UNIT OR WIRING HARNESS (SHORT TO GROUND IN WIRING HARNESS BETWEEN POWER MOS FET AND CLIMATE CONTROL UNIT)** • Inspect for continuity at the following terminal between the power MOS FET and ground. — Terminal B (blower motor control signal)—ground • Is there continuity?	Yes	Repair the wiring harness between the power MOS FET and ground, then go to the next step.
		No	Replace the climate control unit, then go to the next step.

STEP	INSPECTION		ACTION
15	**CONFIRM THAT MALFUNCTION SYMPTOM DOES NOT RECUR AFTER REPAIR** • Is air discharged from vent?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

NO.3 AMOUNT OF AIR BLOWN FROM VENTS DOES NOT CHANGE

id070300800600

Manual Air Conditioner

3	**Amount of air blown from vents does not change.**
DESCRIPTION	• Malfunction in blower system
POSSIBLE CAUSE	• Blower relay, blower motor, resistor, fan switch malfunction • A/C unit malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT BLOWER SYSTEM** • Inspect the following systems and electrical parts. — Blower relay (See 09-21-3 RELAY INSPECTION.) — Blower motor (See 07-40-17 BLOWER MOTOR INSPECTION.) — Resistor (See 07-40-19 RESISTOR INSPECTION.) — Fan switch (See 07-40-40 FAN SWITCH INSPECTION.) — Related wiring harnesses • Are they normal?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part, then go to Step 5.
2	**INSPECT TO SEE WHETHER MALFUNCTION IS IN A/C UNIT OR ELSEWHERE** • Turn the ignition switch to the ON position. • Turn the fan switch on. • Recirculate air inside the vehicle. • Does the blower fan rotate smoothly?	Yes	Go to Step 4.
		No	Go to the next step.
3	**INSPECT A/C UNIT** • Inspect blower fan. — Is the fan free of interference from the A/C unit case? — Is the fan free of foreign material and obstructions? • Is the fan normal?	Yes	Go to the next step.
		No	Remove obstruction, repair or replace the fan and A/C unit case, then go to Step 5.
4	**INSPECT A/C UNIT INTAKE VENT** • Is the A/C unit intake vent clogged?	Yes	Remove obstruction, then go to the next step.
		No	Inspect if there are any obstructions in the A/C unit passage, then go to the next step.
5	**VERIFY THAT MALFUNCTION SYMPTOM OCCURS AFTER REPAIR** • Does air blow out?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

NO.4 AIR INTAKE MODE DOES NOT CHANGE

id070300800700

4	Air intake mode does not change.
DESCRIPTION	• Air intake mode does not change when switching REC/FRESH mode.
POSSIBLE CAUSE	• Air intake actuator malfunction • Air intake door malfunction

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, inspect to make sure connectors, terminals and wiring harnesses are connected correctly and undamaged.

Diagnostic procedure

STEP	INSPECTION		ACTION
1*	**INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN AIR INTAKE ACTUATOR, WIRING HARNESS (BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR) OR ELSEWHERE** • Turn the ignition switch to the ON position. • Measure the voltages at the following climate control unit terminals. — Terminal O (24-pin, FRESH motor drive signal) — Terminal Q (24-pin, RECIRCULATE motor drive signal) (See 07-40-34 CLIMATE CONTROL UNIT INSPECTION[FULL-AUTO AIR CONDITIONER].) (See 07-40-38 CLIMATE CONTROL UNIT INSPECTION[MANUAL AIR CONDITIONER].) • Are voltages normal?	Yes	Go to the next step.
		No	Go to Step 3.
2*	**INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN AIR INTAKE ACTUATOR OR WIRING HARNESS (BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR)** • Measure the voltages at the following air intake actuator terminals. (See 07-40-5 AIR INTAKE ACTUATOR INSPECTION.) — Terminal E (FRESH motor drive signal) — Terminal C (RECIRCULATE motor drive signal) • Are voltages as shown below? (See 07-40-5 AIR INTAKE ACTUATOR INSPECTION.) — Terminal E: **approx. 0.5 V** during RECIRCULATE and **approx. 10 V** during FRESH — Terminal C: **approx. 10 V** during RECIRCULATE and **approx. 0.5 V** during FRESH	Yes	Replace the air intake actuator, then go to Step 8.
		No	Repair the wiring harness between the climate control unit and air intake actuator, then go to Step 8.
3	**INSPECT TO SEE WHETHER MALFUNCTION IS IN AIR INTAKE ACTUATOR OR ELSEWHERE** • Disconnect the air intake actuator connector. • Measure the voltages at the following climate control unit terminals. (See 07-40-34 CLIMATE CONTROL UNIT INSPECTION[FULL-AUTO AIR CONDITIONER].) (See 07-40-38 CLIMATE CONTROL UNIT INSPECTION[MANUAL AIR CONDITIONER].) — Terminal O (FRESH motor drive signal) — Terminal Q (RECIRCULATE motor drive signal) • Are voltages normal?	Yes	Inspect the air intake actuator, then go to Step 8.
		No	Go to the next step.

STEP	INSPECTION		ACTION
4	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (SHORT TO B+ BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR) OR ELSEWHERE** • Disconnect the climate control unit connector. • Measure the voltages at the following climate control unit terminals. (See 07-40-34 CLIMATE CONTROL UNIT INSPECTION[FULL-AUTO AIR CONDITIONER].) (See 07-40-38 CLIMATE CONTROL UNIT INSPECTION[MANUAL AIR CONDITIONER].) — Terminal O (FRESH motor drive signal) — Terminal Q (RECIRCULATE motor drive signal) • Are voltages **approx. 0 V**?	Yes	Go to the next step.
		No	Repair the wiring harness between the climate control unit and air intake actuator, then go to Step 8.
5	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (SHORT TO GROUND BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR) OR ELSEWHERE** • Turn the ignition switch to the LOCK position. • Inspect for continuity at the following terminals between the climate control unit and ground. (See 07-40-34 CLIMATE CONTROL UNIT INSPECTION[FULL-AUTO AIR CONDITIONER].) (See 07-40-38 CLIMATE CONTROL UNIT INSPECTION[MANUAL AIR CONDITIONER].) — Terminal O (FRESH motor drive signal) — Terminal Q (RECIRCULATE motor drive signal) • Is there continuity?	Yes	Repair the wiring harness between the climate control unit and air intake actuator, then go to Step 8.
		No	Go to the next step.
6	**INSPECT AIR INTAKE LINK** • Inspect the air intake links. — Is there grease on link? — Are the links securely and properly installed? — Are the links free of obstructions and hindrances? • Are the above items normal?	Yes	Go to the next step.
		No	Apply grease to the links. If any the links are damaged, replace the air intake actuator, then go to Step 8.
7	**INSPECT TO SEE WHETHER MALFUNCTION IS IN CLIMATE CONTROL UNIT OR AIR INTAKE DOOR** • Inspect the A/C unit air intake door. — Is the door free of obstructions, cracks, and damage? — Are the doors securely and properly installed? • Are the above items normal?	Yes	Replace the climate control unit, then go to the next step. (See 07-40-29 CLIMATE CONTROL UNIT REMOVAL/ INSTALLATION[FULL-AUTO AIR CONDITIONER].) (See 07-40-29 CLIMATE CONTROL UNIT REMOVAL[MANUAL AIR CONDITIONER].) (See 07-40-31 CLIMATE CONTROL UNIT INSTALLATION[MANUAL AIR CONDITIONER].)
		No	Remove obstruction, or install the doors in the proper position. If any doors are cracked or damaged, replace them, then go to the next step.
8	**CONFIRM THAT MALFUNCTION SYMPTOMS DO NOT RECUR AFTER REPAIR** • Does the air intake mode change smoothly?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

NO.5 TEMPERATURE CONTROL WITH CLIMATE CONTROL UNIT

id070300802800

5	**No temperature control with climate control unit**
DESCRIPTION	• Malfunction in A/C unit and/or climate control unit air mix system
POSSIBLE CAUSE	• A/C unit air mix link, air mix crank, air mix rod, air mix wire, wire clamp malfunction • Climate control unit rack-and-pinion, air mix wire malfunction • A/C unit air mix door malfunction • Heater piping malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT COOLANT TEMPERATURE** • Is the coolant sufficiently warmed up?	Yes	Go to the next step.
		No	Warm up the engine, then go to Step 8.
2	**INSPECT A/C UNIT AIR MIX SYSTEM** • Inspect the A/C unit air mix links, air mix cranks, air mix rods, air mix actuator, and wire clamp. — Is there grease on links and cranks? — Are links, cranks, and rods securely installed in their proper positions? — Is wire clamp free of deformation? • Are the above items normal?	Yes	Go to the next step.
		No	Apply grease or install the links, cranks, and rods securely in their proper positions, repair or replace the air mix actuator or wire clamp, then go to Step 8.
3	**VERIFY THAT AIR MIX WIRE FROM A/C UNIT IS POSITIONED SECURELY AND CORRECTLY (IF AVAILABLE)** • Is the air mix wire securely installed in the correct position in relation to the A/C unit air mix links?	Yes	Go to the next step.
		No	Adjust the air mix wire or install securely in the correct position, then go to Step 8.
4	**INSPECT CLIMATE CONTROL UNIT** • Inspect the climate control unit. (See 07-40-34 CLIMATE CONTROL UNIT INSPECTION[FULL-AUTO AIR CONDITIONER].) (See 07-40-38 CLIMATE CONTROL UNIT INSPECTION[MANUAL AIR CONDITIONER].) • Is the climate control unit normal?	Yes	Go to the next step.
		No	Repair or replace the climate control unit, then go to Step 8. (See 07-40-29 CLIMATE CONTROL UNIT REMOVAL/ INSTALLATION[FULL-AUTO AIR CONDITIONER].) (See 07-40-29 CLIMATE CONTROL UNIT REMOVAL[MANUAL AIR CONDITIONER].) (See 07-40-31 CLIMATE CONTROL UNIT INSTALLATION[MANUAL AIR CONDITIONER].)
5	**INSPECT A/C UNIT** • Is there any foreign material or obstruction in the A/C unit air mix doors?	Yes	Remove obstruction, then go to Step 8.
		No	Go to the next step.
6	**INSPECT A/C UNIT AIR MIX DOOR** • Is the A/C unit air mix door securely and properly installed?	Yes	Inspect the air mix door for cracks or damage, then go to the next step.
		No	Install the air mix door securely in the proper position, then go to the next step.
7	**INSPECT HEATER LINE** • Inspect the heater lines. — Is the heater piping free of damage and cracks? — Are the heater piping connections free of engine coolant leakage? — Are the heater piping connections securely tightened? — Are the heater piping installation points on A/C unit free of engine coolant leakage? • Are the above items normal?	Yes	Operation is normal. Recheck malfunction symptoms.
		No	If heater piping connections are loose, tighten the connections to the specified torque. Repair or replace the heater piping, then go to the next step.
8	**VERIFY THAT MALFUNCTION SYMPTOM OCCURS AFTER REPAIR** • Does the unit operate in every temperature setting?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

NO.6 WINDSHIELD FOGGED

id070300800900

6	Windshield fogged.
DESCRIPTION	• A/C compressor does not operate while airflow mode is in DEFROSTER or HEAT/DEF modes. • Air intake mode does not change to FRESH while airflow mode is in DEFROSTER or HEAT/DEF modes.
POSSIBLE CAUSE	• Climate control unit (B+ signal) system malfunction • Air intake actuator malfunction • Climate control unit (RECIRCULATE, FRESH signal) system malfunction • A/C unit air intake door malfunction

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while doing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, inspect to make sure connectors, terminals and wiring harness are connected correctly and undamaged.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**COOL AIR BLOW OUT INSPECTION** • When both the A/C and fan switch in the climate control unit are on, does cool air blow out from the front vent?	Yes	Go to the next step.
		No	Go to Step 1 of troubleshooting index No.7.
2	**INSPECT CLIMATE CONTROL UNIT POWER SUPPLY FUSE FOR B+ SIGNAL** • Is the climate control unit power supply fuse for B+ signal normal?	Yes	Go to the next step.
		No	Inspect for a short to ground on blown fuse circuit. • Repair or replace if necessary. Install appropriate amperage fuse.
3	**INSPECT AIR INTAKE ACTUATOR** • Inspect the air intake actuator. — Is there grease on the link? — Is the link securely and properly positioned? — Is the link free of obstructions? • Are the above items normal?	Yes	Go to the next step.
		No	Apply grease or install the link properly and securely, remove obstruction, then go to Step 14.
*4	**INSPECT WIRING HARNESS BETWEEN FUSE BLOCK AND CLIMATE CONTROL UNIT FOR CONTINUITY** • Disconnect the climate control unit connector (24-pin). • Turn the ignition switch to the ON position. • Measure the voltage at climate control unit terminal J (B+ signal). (See 07-40-34 CLIMATE CONTROL UNIT INSPECTION[FULL-AUTO AIR CONDITIONER].) (See 07-40-38 CLIMATE CONTROL UNIT INSPECTION[MANUAL AIR CONDITIONER].) • Is the voltage **approx. 12 V**?	Yes	Go to the next step.
		No	Repair the wiring harness between the fuse block and climate control unit, then go to Step 14.
*5	**INSPECT WIRING HARNESS BETWEEN CLIMATE CONTROL UNIT AND GROUND FOR VOLTAGE** • Measure the voltage at climate control unit terminal V (Ground). (See 07-40-34 CLIMATE CONTROL UNIT INSPECTION[FULL-AUTO AIR CONDITIONER].) (See 07-40-38 CLIMATE CONTROL UNIT INSPECTION[MANUAL AIR CONDITIONER].) • Is the voltage **approx. 0V**?	Yes	Go to the next step.
		No	Repair the wiring harness between the climate control unit and ground, then go to Step 14.

STEP	INSPECTION		ACTION
6	**VERIFY WHETHER MALFUNCTION IS IN A/C UNIT AIR INTAKE DOOR OR ELSEWHERE** • Turn the ignition switch to the LOCK position. • Connect the climate control unit connector (24-pin). • Remove the air intake actuator. • Turn the ignition switch to the ON position. • Set the fan switch to 4th position. • Does the air intake mode (RECIRCULATE, FRESH) change smoothly when the air intake link is operated by hand?	Yes	Go to the next step.
		No	Go to Step 12.
7	**INSPECT AIR INTAKE ACTUATOR** • Inspect the air intake actuator. (See 07-40-5 AIR INTAKE ACTUATOR INSPECTION.) • Is it normal?	Yes	Go to the next step.
		No	Replace the air intake actuator, go to Step 14.
8	**INSPECT AIR INTAKE SELECTOR SWITCH AND DEFROSTER SWITCH IN CLIMATE CONTROL UNIT** • Measure the voltage at climate control unit connector (24-pin) terminals O and Q. (See 07-40-34 CLIMATE CONTROL UNIT INSPECTION[FULL-AUTO AIR CONDITIONER].) (See 07-40-38 CLIMATE CONTROL UNIT INSPECTION[MANUAL AIR CONDITIONER].) • Is it normal?	Yes	Go to the next step.
		No	Replace the climate control unit, then go to Step 14. (See 07-40-29 CLIMATE CONTROL UNIT REMOVAL/ INSTALLATION[FULL-AUTO AIR CONDITIONER].) (See 07-40-29 CLIMATE CONTROL UNIT REMOVAL[MANUAL AIR CONDITIONER].) (See 07-40-31 CLIMATE CONTROL UNIT INSTALLATION[MANUAL AIR CONDITIONER].)
*9	**INSPECT WIRING HARNESS BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR FOR CONTINUITY** • Turn the ignition switch to the LOCK position. • Is there continuity between the following climate control unit terminals and air intake actuator terminals? (See 07-40-34 CLIMATE CONTROL UNIT INSPECTION[FULL-AUTO AIR CONDITIONER].) (See 07-40-38 CLIMATE CONTROL UNIT INSPECTION[MANUAL AIR CONDITIONER].) (See 07-40-5 AIR INTAKE ACTUATOR INSPECTION.) — Terminal E —Terminal O (FRESH signal) — Terminal C —Terminal Q (RECIRCULATE signal)	Yes	Go to the next step.
		No	Repair the wiring harness between the climate control unit and air intake actuator, then go to Step 14.
*10	**INSPECT WIRING HARNESS BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR FOR SHORT TO GROUND** • Is there continuity between the following climate control unit terminals and ground? (See 07-40-34 CLIMATE CONTROL UNIT INSPECTION[FULL-AUTO AIR CONDITIONER].) (See 07-40-38 CLIMATE CONTROL UNIT INSPECTION[MANUAL AIR CONDITIONER].) — Terminal O (FRESH signal) — Terminal Q (RECIRCULATE signal)	Yes	Repair the wiring harness between the climate control unit and air intake actuator, then go to Step 14.
		No	Go to the next step.

STEP	INSPECTION		ACTION
*11	**INSPECT WIRING HARNESS BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR FOR SHORT TO B+** • Turn the ignition switch to the ON position. • Measure the voltage at the following climate control unit terminals. (See 07-40-34 CLIMATE CONTROL UNIT INSPECTION[FULL-AUTO AIR CONDITIONER].) (See 07-40-38 CLIMATE CONTROL UNIT INSPECTION[MANUAL AIR CONDITIONER].) — Terminal O (FRESH signal) — Terminal Q (RECIRCULATE signal) • Is the voltage **approx. 12 V**?	Yes	Repair the wiring harness between the climate control unit and air intake actuator, then go to Step 14.
		No	Replace the climate control unit, then go to Step 14. (See 07-40-29 CLIMATE CONTROL UNIT REMOVAL/ INSTALLATION[FULL-AUTO AIR CONDITIONER].) (See 07-40-29 CLIMATE CONTROL UNIT REMOVAL[MANUAL AIR CONDITIONER].) (See 07-40-31 CLIMATE CONTROL UNIT INSTALLATION[MANUAL AIR CONDITIONER].)
12	**INSPECT A/C UNIT AIR INTAKE DOOR** • Is there any foreign material or obstruction in the A/C unit air intake door?	Yes	Remove obstruction, then go to Step 14.
		No	Go to the next step.
13	**VERIFY THAT A/C UNIT AIR INTAKE DOOR IS POSITIONED SECURELY AND PROPERLY** • Is the A/C unit air intake door securely and properly positioned?	Yes	Inspect the air intake door for cracks or damage, then go to the next step.
		No	Install the air intake door securely in the proper position, then go to the next step.
14	**VERIFY THAT MALFUNCTION SYMPTOM OCCURS AFTER REPAIR** • Does the malfunction disappear?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

NO.7 AIR FROM VENTS NOT COLD ENOUGH

id070300801000

7	Air from vents not cold enough.
DESCRIPTION	• Magnetic clutch operates but A/C system malfunctions.
POSSIBLE CAUSE	• Drive belt malfunction • A/C unit or condenser malfunction • Receiver/drier or expansion valve malfunction (valve closes too much) • Malfunction in refrigerant lines • A/C compressor system malfunction, insufficient compressor oil • Over filling of compressor oil, malfunction in expansion valve or A/C unit air mix link system

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT DRIVE BELT** • Inspect the drive belt. (See 01-10A-3 DRIVE BELT INSPECTION[LF, L3].) • Is it normal?	Yes	Go to the next step.
		No	Adjust or replace the drive belt, then go to Step 20.
2	**INSPECT REFRIGERANT SYSTEM PERFORMANCE** • Perform refrigerant system performance test. (See 07-10-7 REFRIGERANT SYSTEM PERFORMANCE TEST.) • Is the operation normal?	Yes	Operation is normal. (Recheck malfunction symptoms.)
		No	Go to the next step.
3	**INSPECT TO SEE WHETHER MALFUNCTION IS IN A/C UNIT INTAKE AND CONDENSER OR ELSEWHERE** • Are the refrigerant high-pressure and low-pressure values both high?	Yes	Go to the next step.
		No	Go to Step 6.
4	**INSPECT A/C UNIT INTAKE** • Is the A/C unit intake clogged?	Yes	Remove obstruction, then go to Step 20. (If air does not reach the evaporator in the A/C unit, heat exchange does not occur and refrigerant pressure becomes high. Therefore, removal of obstruction is necessary.)
		No	Go to the next step.
5	**INSPECT CONDENSER** • Inspect the condenser. (See 07-11-19 CONDENSER INSPECTION.) • Is it normal?	Yes	Adjust refrigerant to the specified amount, then go to Step 20. (Excessive amount of refrigerant.)
		No	Replace the condenser, or repair and clean the condenser fins, then go to Step 20.
6	**INSPECT TO SEE WHETHER MALFUNCTION IS IN EXPANSION VALVE, RECEIVER/DRIER AND REFRIGERANT LINES OR ELSEWHERE** • Are the refrigerant high-pressure and low-pressure values low?	Yes	Go to the next step.
		No	Go to Step 14.
7	**INSPECT TO SEE WHETHER MALFUNCTION IS IN EXPANSION VALVE AND RECEIVER/ DRIER OR ELSEWHERE** • Immediately after the A/C compressor operates, does the refrigerant high-pressure value momentarily rise to correct value, then fall and stay below it? (Is there negative pressure on low-pressure side?)	Yes	Go to the next step.
		No	Go to Step 10.
8	**INSPECT TO SEE WHETHER MALFUNCTION IS IN EXPANSION VALVE OR RECEIVER/ DRIER** • Turn the A/C switch off and let the air conditioner stop for **10 min.** • Start the engine. • Turn the both A/C switch and fan switch on. • Does the malfunction occur after the A/C compressor turns on?	Yes	Go to the next step.
		No	Replace the condenser and bleed refrigerant line for **30 min or more** using a vacuum pump, add refrigerant to the specified level, then go to Step 20. (Since water has intermixed in the receiver/drier and it is saturated, replacement is necessary.)
9	**VERIFY THAT EXPANSION VALVE HEAT-SENSING TUBE WITHIN A/C UNIT IS POSITIONED SECURELY AND CORRECTLY** • Is the expansion valve heat-sensing tube in the A/C unit securely installed in the proper position?	Yes	Replace the expansion valve, then go to Step 20. (Since the valve closes too much, replacement is necessary.)
		No	Install the heat-sensing tube securely in the proper position, then go to Step 20.

STEP	INSPECTION		ACTION
10	**INSPECT REFRIGERANT LINE** • Inspect the refrigerant lines. — Is the piping free of damage and cracks? — Are the piping connections free of oil grime? (Visual inspection) — Are the piping connections free of gas leakage? — Are the piping installation points on the condenser free of gas leakage? — Are the piping installation points on the receiver/drier free of gas leakage? — Are the piping installation points on the A/C compressor free of gas leakage? — Are the piping installation points on the A/C unit free of gas leakage? — Perform gas leakage inspection using a gas leak tester. • Are the above items normal?	Yes	Go to the next step.
		No	If the piping or A/C component (s) are damaged or cracked, replace them. Then go to Step 20. If there is no damage, go to Step 13.
11	**INSPECT EVAPORATOR PIPING CONNECTION IN A/C UNIT FOR GAS LEAKAGE** • Are piping the connections for the evaporator in the A/C unit free of gas leakage?	Yes	If the vane makes a noise, add **10 ml {10 cc, 0.34 fl oz}** of compressor oil to the A/C compressor. Verify that the noise is no longer heard. Adjust refrigerant to the specified amount, then go to Step 20.
		No	If the piping is damaged or cracked, replace it. Then go to Step 20. If there is no damage, go to the next step.
12	**INSPECT EVAPORATOR PIPING CONNECTION IN A/C UNIT FOR LOOSE** • Are the piping connections for the evaporator in the A/C unit loose?	Yes	Tighten the connections to the specified torque, adjust both compressor oil and refrigerant to the specified amount, then go to Step 20.
		No	If the vane makes a noise, add **10 ml {10 cc, 0.34 fl oz}** of compressor oil to the A/C compressor. Verify that the noise is no longer heard. Replace the O-ring on piping, adjust refrigerant to the specified amount, then go to Step 20.
13	**INSPECT PIPING CONNECTION FOR LOOSE** • Are the piping connections loose?	Yes	Tighten the connections to the specified torque, adjust both compressor oil and refrigerant to the specified amount, then go to Step 20.
		No	If the vane makes a noise, add **10 ml {10 cc, 0.34 fl oz}** of compressor oil to the A/C compressor. Verify that the noise is no longer heard. Replace O-ring on piping, adjust refrigerant to specified amount, then go to Step 20.
14	**INSPECT TO SEE WHETHER MALFUNCTION IS IN EXPANSION VALVE, AIR MIX ACTUATOR AND COMPRESSOR OIL OR ELSEWHERE** • Does the refrigerant high-pressure value hardly increase?	Yes	Go to the next step. (Pressure hardly increases.)
		No	Go to Step 17.
15	**INSPECT TO SEE WHETHER MALFUNCTION IS IN COMPRESSOR OIL AMOUNT AND A/C COMPRESSOR OR ELSEWHERE** • When the engine is racing, does the high-pressure value increase?	Yes	Return to Step 3.
		No	Go to the next step.
16	**INSPECT TO SEE WHETHER MALFUNCTION IS IN COMPRESSOR OIL AMOUNT OR A/C COMPRESSOR** • After compressor oil is replenished each **10 ml {10 cc, 0.34 fl oz}**, does high-pressure value increase?	Yes	Troubleshooting completed. (Explain to customer that cause was insufficient compressor oil.)
		No	Replace the A/C compressor, then go to Step 20. (Cause is defective A/C compressor.)
17	**INSPECT TO SEE WHETHER MALFUNCTION IS IN EXPANSION VALVE OR ELSEWHERE** • Is only refrigerant low-pressure value high?	Yes	Go to Step 19.
		No	Go to the next step.

STEP	INSPECTION		ACTION
18	**VERIFY THAT AIR MIX IS INSTALLED SECURELY AND PROPERLY** • Are the A/C unit air mix links, air mix cranks, and air mix rods securely and properly installed?	Yes	Set the fan switch to 4th position. Turn the A/C switch on. Set FRESH mode. Set temperature control to MAX COLD. Set VENT mode. (1)Start and run the engine at **1,500 rpm** for **10 min**. (2)Run the engine at idle for **1 min**. (3)Within **12 s**, idle → **4,000 rpm** → idle. Perform cycle **5 times**. (4) Run the engine at idle for **30 s**. (5)Drain the compressor oil completely from the A/C compressor and verify the amount. • If there is **approx. 90 ml {90 cc, 3.0 fl oz}** of compressor oil, go to Step 20. • If there is **more than 90 ml {90 cc, 3.0 fl oz}** of compressor oil, remove surplus oil and fill the A/C compressor with **90 ml {90 cc, 3.0 fl oz}** of compressor oil. Repeat Steps (1) to (5). (Cause is excessive amount of compressor oil.)
		No	Repair or install the links, cranks and rods securely in the proper position, then go to Step 20.
19	**VERIFY THAT EXPANSION VALVE HEAT-SENSING TUBE WITHIN A/C UNIT IS POSITIONED SECURELY AND CORRECTLY** • Is the expansion valve heat-sensing tube in the A/C unit securely installed in the proper position?	Yes	Replace the expansion valve, then go to the next step. (Since the valve opens too much, replacement is necessary.)
		No	Install the heat-sensing tube securely in the proper position, then go to the next step.
20	**VERIFY THAT MALFUNCTION SYMPTOM OCCURS AFTER REPAIR** • Does cool air blow out? (Are results of refrigerant system performance test normal?)	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

NO.8 NO COOL AIR

id070300801100

8	No cool air
DESCRIPTION	• Magnetic clutch does not operate.
POSSIBLE CAUSE	• Malfunction in PCM A/C cut control system • Malfunction in climate control unit • Malfunction in refrigerant pressure switch • Malfunction in magnetic clutch • Malfunction in PCM (IG1 signal) • Malfunction in A/C compressor • Malfunction in A/C relay • Malfunction in evaporator temperature sensor

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT AIR BLOW OUT** • Does air blow out?	Yes	Go to the next step.
		No	Go to Step 1 of troubleshooting indexes No.1 and 2.
2	**INSPECT FUSE** • Are the A/C relay power supply fuses normal?	Yes	Go to the next step.
		No	Replace the fuse, then go to Step 5. If fuse burns out immediately, go to the next step.
3	**INSPECT A/C COMPRESSOR OPERATION** • Start the engine. • Turn the A/C switch and fan switch on. • Does the A/C compressor operate?	Yes	Go to Step 1 of troubleshooting index No.7.
		No	Go to Step1 of troubleshooting index No.23. (See 01-03A-58 NO.23 A/C DOES NOT WORK SUFFICIENTLY[LF, L3].)
4	**INSPECT EVAPORATOR TEMPERATURE SENSOR** • Inspect the evaporator temperature sensor. • Is it normal?	Yes	Go to the next step.
		No	Replace the evaporator temperature sensor, then go to the next step.
5	**CONFIRM THAT MALFUNCTION SYMPTOMS DO NOT RECUR AFTER REPAIR** • Does cool air blow out? (Are the results of refrigerant system performance test normal?)	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

NO.9 NOISE WHILE OPERATING A/C SYSTEM

id070300801200

9	Noise while operating A/C system.
DESCRIPTION	• Noise from magnetic clutch, A/C compressor, hose or refrigerant line.
POSSIBLE CAUSE	• Magnetic clutch operation noise • A/C compressor slippage noise • Hose or refrigerant line interference noise

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT A/C COMPRESSOR SLIPPAGE NOISE** • Is there a squeaking or whirling sound (A/C compressor slippage noise)?	Yes	Go to Step 12.
		No	Go to the next step.
2	**INSPECT A/C COMPRESSOR INTERFERENCE NOISE** • Is there a rattling or vibrating sound (interference noise)?	Yes	Go to Step 16.
		No	Go to the next step.
3	**INSPECT MAGNETIC CLUTCH OPERATION NOISE** • Is there a clicking sound (magnetic clutch operation noise)?	Yes	Adjust the clearance between the pressure plate of magnetic clutch and A/C compressor pulley, then go to Step 17. (See 07-40-21 MAGNETIC CLUTCH ADJUSTMENT.)
		No	Condition is normal. (Recheck malfunction symptoms.) Go to the next step.
4	**INSPECT IDLE SPEED** • Inspect idle speed. (See 01-10A-37 ENGINE TUNE-UP[LF, L3].) • Is it normal?	Yes	Go to the next step.
		No	Follow the repair instruction described in section 01-40, then go to Step 17.
5	**INSPECT REFRIGERANT AMOUNT** • Inspect refrigerant amount. • Is it normal?	Yes	Go to Step 8.
		No	Go to the next step.
6	**INSPECT REFRIGERANT LINES** • Inspect the refrigerant lines. — Is the piping free of damage and cracks? — Are the piping connections free of oil grime? (Visual inspection) — Are piping connections free of gas leakage? — Are the piping installation points on the condenser free of gas leakage? — Are the piping installation points on the receiver/drier free of gas leakage? — Are the piping installation points on the A/C compressor free of gas leakage? — Are the piping installation points on the A/C unit free of gas leakage — Perform gas leakage inspection using a gas leak tester. • Are the above items normal?	Yes	Go to the next step.
		No	If the piping or A/C component (s) is damaged or cracked, replace them, then go to Step 17. If there is gas leakage, repair or replace connection and replace the condenser*, then go to Step 17.
7	**INSPECT EVAPORATOR PIPING CONNECTIONS IN A/C UNIT FOR GAS LEAKAGE** • Are the piping connections for the evaporator in the A/C unit free of gas leakage?	Yes	Adjust refrigerant amount to the specified level, then go to Step 17.
		No	If the piping is damaged or cracked, replace it them, then go to Step 17. If there is gas leakage, repair or replace the connecting parts and replace the condenser*, then go to Step 17.
8	**INSPECT TO SEE WHETHER MALFUNCTION IS IN COMPRESSOR OIL OR ELSEWHERE** • Add **20 ml {20 cc, 0.8 fl oz}** of compressor oil. • Is noise heard when racing the engine?	Yes	Go to the next step.
		No	Troubleshooting completed. Explain repair to customer.
9	**INSPECT TO SEE WHETHER MALFUNCTION IS IN A/C COMPRESSOR OR ELSEWHERE** • Drain compressor oil. • Is it contaminated with metal particles?	Yes	Go to the next step.
		No	Replace the A/C compressor, then go to Step 17.

STEP	INSPECTION		ACTION
10	**INSPECT TO SEE WHETHER MALFUNCTION IS SOMEWHERE IN A/C SYSTEM OR ELSEWHERE** • Is compressor oil whitish and mixed with water?	Yes	Replace entire A/C system (excluding heater), then go to Step 17.
		No	Go to the next step.
11	**INSPECT A/C COMPRESSOR OIL** • Is compressor oil darker than normal and contaminated with aluminum chips?	Yes	Replace the A/C compressor and condenser, then go to Step 17. (Since the A/C compressor may be worn and receiver/drier may be clogged, replacement of the receiver/drier is necessary.)
		No	Condition is normal. Recheck malfunction symptoms.
12	**INSPECT TO SEE WHETHER MALFUNCTION IS IN A/C COMPRESSOR OR ELSEWHERE** • Is noise heard immediately after the A/C compressor is stopped?	Yes	Replace the A/C compressor, then go to Step 17. (A/C compressor discharge valve left open)
		No	Go to the next step.
13	**INSPECT DRIVE BELT** • Inspect drive belt. (See 01-10A-3 DRIVE BELT INSPECTION[LF, L3].) • Is it normal?	Yes	Go to the next step.
		No	Adjust or replace drive belt, then go to Step 17.
14	**INSPECT DRIVE BELT CONDITION** • Is the drive belt worn? • Does it have foreign material imbedded in it, or have oil on it?	Yes	Remove obstruction, remove oil, or replace the drive belt, then go to Step 17.
		No	Go to the next step.
15	**INSPECT MAGNETIC CLUTCH** • Inspect the magnetic clutch. (See 07-40-22 MAGNETIC CLUTCH INSPECTION[LF, L3].) • Is it normal?	Yes	Replace the A/C compressor (excluding the pressure plate, A/C compressor pulley, and stator), then go to Step 17.
		No	Replace the magnetic clutch, then go to Step 17.
16	**INSPECT TO SEE WHETHER MALFUNCTION IS IN A/C COMPRESSOR OR REFRIGERANT LINE** • Is noise emitted from the A/C compressor?	Yes	Visually inspect the A/C compressor, replace appropriate parts if necessary, then go to the next step.
		No	If noise is due to refrigerant lines, repair detached or missing clips, tighten loose bolts, then go to the next step.
17	**VERIFY THAT MALFUNCTION SYMPTOM OCCURS AFTER REPAIR** • Has A/C compressor noise stopped?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

* : If there is gas leakage, air enters into the A/C system. The desiccant within the receiver/drier absorbs the moisture from the air and becomes saturated. If the A/C system is used in this condition, the inside of the A/C compressor will begin to rust due to this moisture, which may cause lock up or noise to occur. Therefore, replacement of the receiver/drier is necessary.

07-10 REFRIGERANT SYSTEM

REFRIGERANT SYSTEM SERVICE WARNINGS

id071000800100

Handling Refrigerant

- **Avoid breathing air conditioning refrigerant or lubricant vapor. Exposure may irritate eyes, nose and throat. Also, due to environmental concerns, we urge use of recovery/recycling/recharging equipment when draining R-134a from the air conditioning system. If accidental system discharge occurs, ventilate work area before resuming service.**
- **Do not perform pressure test or leak test for R-134a service equipment and/or vehicle air conditioning system using compressed air. Some mixtures of air and R-134a have been shown to be combustible at elevated pressures. These mixtures, if ignited, may cause injury or property damage. Additional health and safety information may be obtained from refrigerant manufacturers.**
- **Do not allow the refrigerant to leak near fire or any kind of heat. A poisonous gas may be generated if the refrigerant gas contacts fire or heat such as from cigarettes and heaters. When carrying out any operation that can cause refrigerant leakage, extinguish or remove the above-mentioned heat sources and maintain adequate ventilation.**
- **Handling liquid refrigerant is dangerous. A drop of it on the skin can result in localized frostbite. When handling the refrigerant, wear gloves and safety goggles. If refrigerant splashes into the eyes, immediately wash them with clean water and consult a doctor.**

Storing Refrigerant

- **The refrigerant container is highly pressurized. If it is subjected to high heat, it could explode, scattering metal fragments and liquid refrigerant that can seriously injure you. Store the refrigerant at temperatures below 40 °C {104 °F}.**

REFRIGERANT SYSTEM SERVICE CAUTIONS

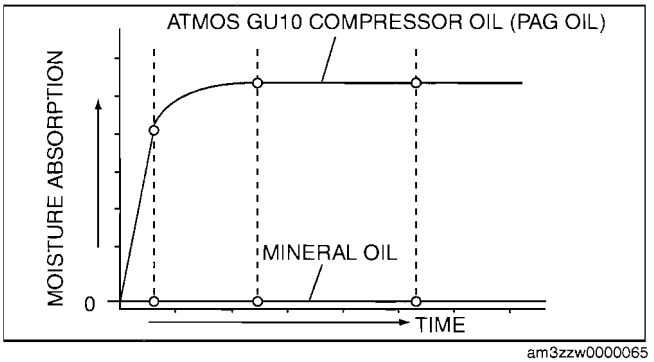
id071000800200

Handling Insufficient Refrigerant Level

- **If an insufficient refrigerant level is detected at troubleshooting, do not charge (add) the refrigerant. Because an accurate amount of refrigerant cannot be determined from the pressure indicated on the manifold gauge, never charge the refrigerant. If there is too much or too little refrigerant from the refilling, there may be secondary problems such as damage to the refrigerant cycle parts, or a decrease of cooling performance. Therefore, if it is determined that the refrigerant level is insufficient, completely remove refrigerant from the refrigerant cycle and refill with refrigerant to the specified amount.**

Handling Compressor Oil

- **Use only ATMOS GU10 compressor oil for this vehicle. Using a PAG oil other than ATMOS GU10 compressor oil can damage the A/C compressor.**
- **Do not spill ATMOS GU10 compressor oil on the vehicle. A drop of compressor oil on the vehicle surface can eat away at the paint. If oil gets on the vehicle, wipe it off immediately.**
- **ATMOS GU10 compressor oil (PAG oil) has a higher moisture absorption efficiency than the previously used mineral oil. If moisture mixes with the compressor oil, the refrigerant system could be damaged. Therefore, install caps immediately after using the compressor oil or removing refrigerant system parts to prevent moisture absorption.**
- **If the refrigerant gas is completely discharged from the system for reasons such as a malfunction during A/C operation, repair or replace the malfunctioning part, charge the refrigerant to the specified amount and always add 60 ml {60 cc, 2.03 fl oz} of compressor. If the compressor oil is not adequately replenished, the A/C compressor may quickly deteriorate, abnormal noise may develop, cooling performance may be affected or, in the worst case, the A/C compressor may seize.**

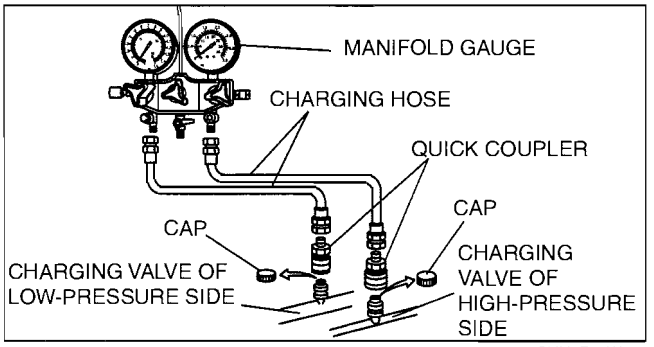


am3zzw0000065

REFRIGERANT SYSTEM GENERAL PROCEDURES

id071000800300

1. Fully close the valves of the manifold gauge.
2. Connect the charging hoses to the high- and low-pressure side joints of the manifold gauge.
3. Connect the quick couplers to the ends of the charging hoses.
4. Connect the quick couplers to the charging valves.



CHU0710W004

REFRIGERANT CHARGING

id071000800400

Caution

- **Do not exceed the specification when charging the system with refrigerant. Doing so will decrease the efficiency of the air conditioner or damage the refrigeration cycle parts.**

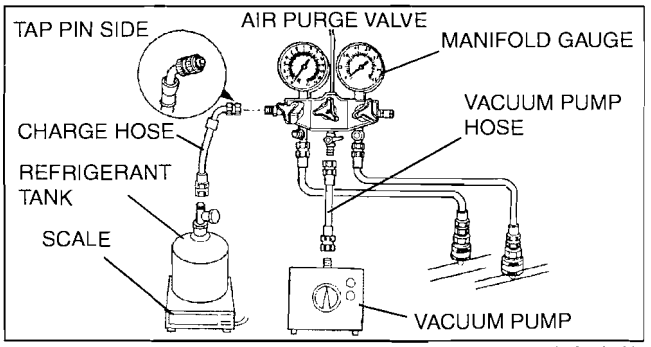
Charging Recycled R-134a Refrigerant

1. Connect an R-134a recovery/recycling/recharging device to the vehicle and follow the device manufacturer's instructions.

Charging Preparation

1. Install the manifold gauge set.
2. Connect the tap pin side of the charging hose to the air purge valve of the manifold gauge.
3. Connect the vacuum pump hose to the center joint of the manifold gauge.
4. Connect the vacuum pump hose to the vacuum pump.
5. Connect the charging hose to the refrigerant tank.
6. Place the refrigerant tank on the scale.

Regular amount of refrigerant (approx. quantity)
475—525 g {16.8—18.5 oz}



chu0710w008

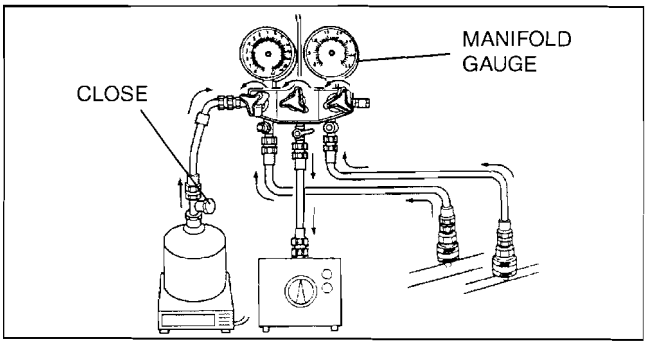
Evacuation

1. Open all the valves of the manifold gauge.

Caution

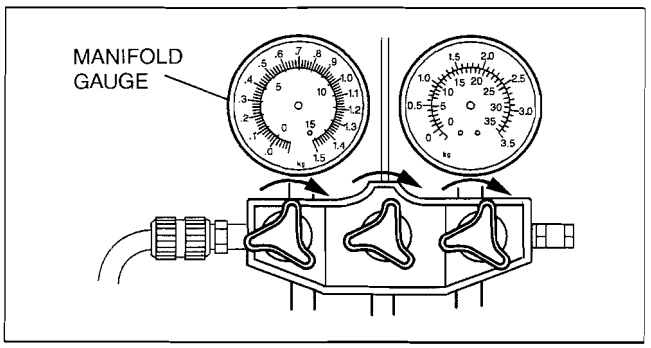
- **Close the manifold gauge valve immediately after stopping the vacuum pump. If the valve is left open, the vacuum pump oil will flow back into the refrigeration cycle and cause a decrease in the efficiency of the air conditioner.**

2. Start the vacuum pump and let it operate for **15 min**.



chu0710w009

3. Verify that high- and low-pressure side readings of the manifold gauge are at **–101 kPa {–760 mmHg, –29.9 inHg}**. Close each valve of the manifold gauge.



am3uuw0000081

Airtightness Check

1. Stop the vacuum pump and wait for **5 min**.
2. Check the high- and low-pressure side readings of the manifold gauge.
   - If the reading has changed, inspect for leakage and go to Evacuation. (See 07-10-3 Evacuation.)
   - If the reading has not changed, go to Charging New R-134a Refrigerant. (See 07-10-4 Charging New R-134a Refrigerant.)

Charging New R-134a Refrigerant

1. Open the valve of the refrigerant tank.
2. Weigh the refrigerant tank to charge the suitable amount of refrigerant.

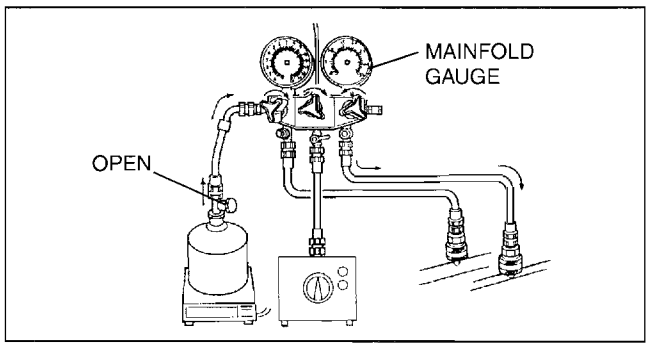
Warning

- **If the refrigerant system is charged with a large amount of refrigerant when inspecting for gas leakage, and if any leakage should occur, the refrigerant will be released into the atmosphere. In order to prevent the accidental release of refrigerant which can destroy the ozone layer in the stratosphere, follow the proper procedures and charge with only a small amount of refrigerant when inspecting for gas leakage.**
- **If charging the system with refrigerant using service cans, running the engine with the high-pressure side valve open is dangerous. Pressure within the service cans will increase and the cans could explode, scattering metal fragments and liquid refrigerant that can seriously injure you. Therefore, do not open the high-pressure side valve while the engine is running.**

Caution

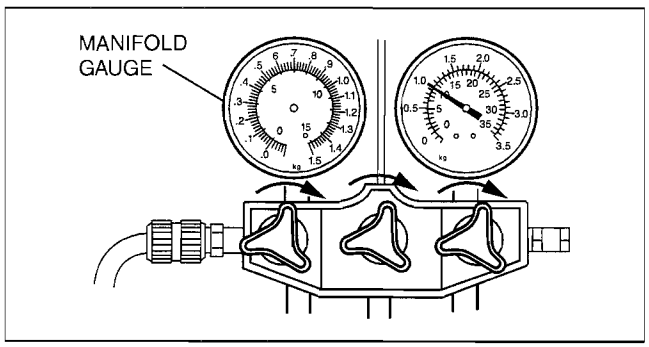
- **Always being charging of refrigerant from the high-pressure side. If changing is begun from the low-pressure side, the vanes of the A/C compressor will not be released and abnormal noise may result.**

3. Open the high-pressure side valve of the manifold gauge.



c3u0710w008

4. When the low-pressure side reading increases to **0.098 MPa {1.0 kgf/cm^2, 14 psi}**, close the high-pressure side valve of the manifold gauge.
5. Inspect for leakage from the cooler pipe/hose connections using a gas leak tester.
   - If there is no leakage, go to Step 7.
   - If leakage is found at a loose joint, tighten the joint, then go to the next step.
6. Inspect for leakage again.
   - If there is no leakage after tightening the joint, go to the next step.
   - If there is still a leakage at the same joint, discharge the refrigerant and then repair the joint. Repeat the charging procedure from evacuation.

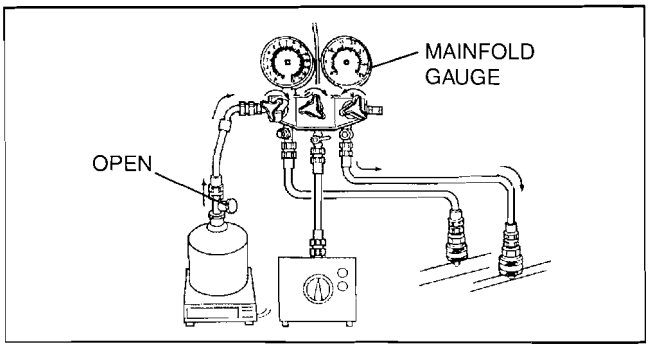


am3uuw0000081

Warning

- **If charging the system with refrigerant using service cans, running the engine with the high-pressure side valve open is dangerous. Pressure within the service cans will increase and the cans could explode, scattering metal fragments and liquid refrigerant that can seriously injure you. Therefore, do not open the high-pressure side valve while the engine is running.**

7. Open the high-pressure side valve of the manifold gauge and charge with refrigerant until the weight of refrigerant tank has decreased **238—263 g {8.40—9.28 oz}** from the amount in Step 2.

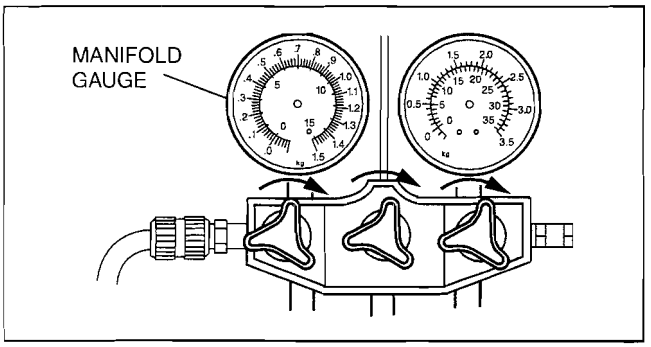


c3u0710w008

8. Close the low-pressure side valve of the manifold gauge.

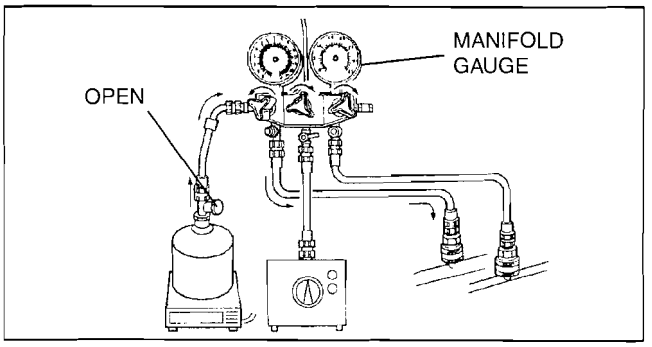
Warning

- **If charging the system with refrigerant using service cans, running the engine with the high-pressure side valve open is dangerous. Pressure within the service cans will increase and the cans could explode, scattering metal fragments and liquid refrigerant that can seriously injure you. Therefore, do not open the high-pressure side valve while the engine is running.**



am3uuw0000081

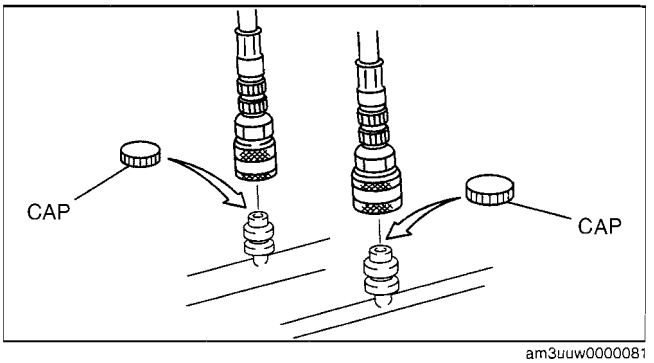
9. Start the engine and actuate the A/C compressor.
10. Open the low-pressure side valve of the manifold gauge and charge with refrigerant until the weight of the refrigerant tank has decreased regular amount from the amount in Step 2.
11. Close the low-pressure side valve of the manifold gauge and the valve of the refrigerant tank.
12. Stop the engine and A/C compressor.



chu0710w010

Leak Test

1. Inspect for leakage using the a gas leak tester.
   - If there is no leakage, go to Step 3.
   - If leakage is found at a loose joint, tighten the joint, then go to the next step.
2. Inspect for leakage again.
   - If there is no leakage after tightening the joint, go to the next step.
   - If there is still leakage at the same joint, discharge the refrigerant and then repair the joint. Repeat the charging procedure from evacuation.
3. Disconnect the manifold gauge from the charging valves.
4. Install the caps to the charging valves.



am3uuw0000081

REFRIGERANT RECOVERY

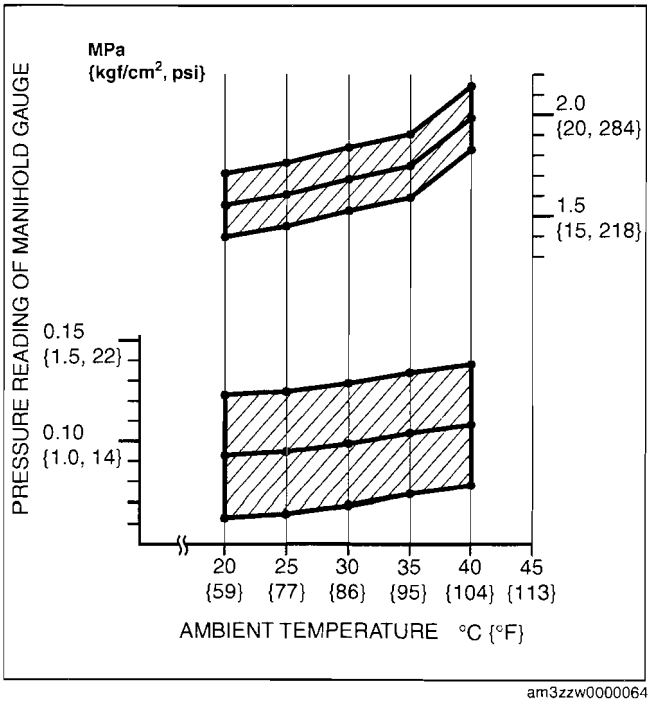
id071000800500

1. Connect an R-134a recovery/recycling/recharging device to the vehicle and follow the device manufacturer's instructions.

REFRIGERANT PRESSURE CHECK

id071000800600

1. Install the manifold gauge. (See 07-10-2 REFRIGERANT SYSTEM GENERAL PROCEDURES.)
2. Start the engine and after it is warmed up, run it at a constant **1,500 rpm**.
3. Set the fan speed MAX HI.
4. Turn the A/C switch on.
5. Set to RECIRCULATE mode.
6. Set the temperature control to MAX COLD.
7. Set to VENT mode.
8. Close all the doors and all the windows.
9. Measure the ambient temperature and high- and low- pressure side reading of the manifold gauge.
10. Verify that the intersection of the pressure reading of the manifold gauge and ambient temperature is in the shaded zone.
    - If there is any malfunction, inspect the refrigerant system according to the troubleshooting chart.



am3zzw0000064

REFRIGERANT SYSTEM PERFORMANCE TEST

id071000800700

1. Inspect the refrigerant pressure. (See 07-10-6 REFRIGERANT PRESSURE CHECK.)
2. Place a dry-bulb thermometer in the driver-side center ventilator outlet.
3. Start the engine and after it is warmed up, run it at a constant **1,500 rpm**.
4. Set the fan speed to MAX HI.
5. Turn the A/C switch on.
6. Set to RECIRCULATE mode.
7. Set the temperature control to MAX COLD.
8. Set to VENT mode.
9. Close all the doors and windows.
10. Wait until the air conditioner output temperature stabilizes.
    Stabilized condition
    - The A/C compressor repeatedly turns on and off at regular intervals.
11. After the blower air is stabilized, read the dry-bulb thermometer.
12. Verify the ambient temperature.
13. Verify that the temperature reading is in the shaded zone.
    - If the there is any malfunction, inspect the refrigerant system according to the troubleshooting chart.

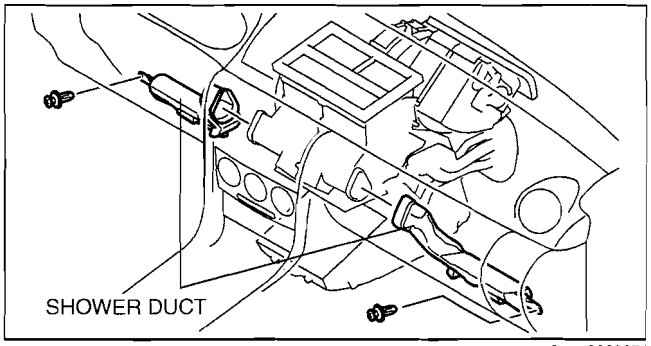
(14)Hood release lever from the lower panel
(15)Lower panel (See 09-17-7 LOWER PANEL REMOVAL/INSTALLATION.)
(16)Shower ducts (LH, RH)
(17)Driver-side air bag module (See 08-10-7 DRIVER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
(18)Column cover (See 09-17-7 COLUMN COVER REMOVAL/INSTALLATION.)
(19)Meter hood (See 09-17-8 METER HOOD REMOVAL/INSTALLATION.)
(20)Instrument cluster (See 09-22-2 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
(21)Steering shaft (See 06-14-8 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)

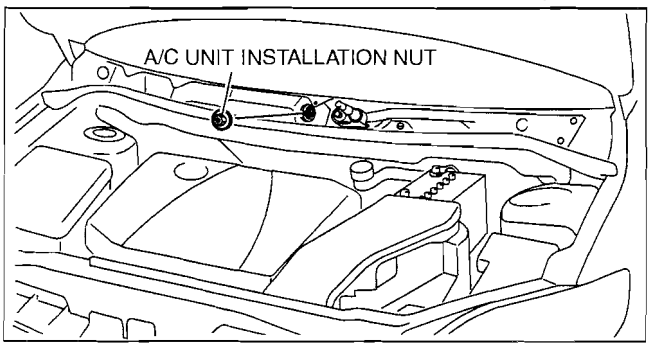


am3zzw0000071

(22)A-pillar trim (See 09-17-11 A-PILLAR TRIM REMOVAL/INSTALLATION.)
(23)Windshield wiper arm and blade (See 09-19-3 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
(24)Cowl grille (See 09-16-7 COWL GRILLE REMOVAL/INSTALLATION.)
(25)Cowl panel (See 09-10-20 COWL PANEL REMOVAL/INSTALLATION.)
(26)Windshield wiper motor (See 09-19-4 WINDSHIELD WIPER MOTOR REMOVAL/INSTALLATION.)

7. Remove the A/C unit installation nut from the engine compartment, then remove the A/C unit.

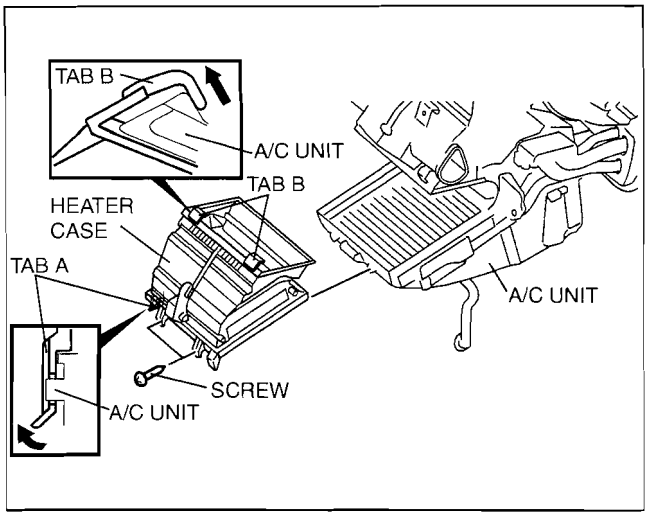
Caution
- **If moisture or foreign material enters the refrigeration cycle, cooling ability will be lowered and abnormal noise or other malfunction could occur. Always plug open fittings immediately after removing any refrigeration cycle parts.**



am3zzw0000071

8. Remove the rear heat duct (1).
9. Disconnect the drain hose connected to the A/C unit. (See 07-11-6 Drain Hose Installation Note.)
10. Remove the nuts and bolts for installing the dashboard to the body.
11. Remove the dashboard with A/C unit. (See 09-17-4 DASHBOARD REMOVAL/INSTALLATION.)
12. Disconnect the air mix wire and airflow mode wire from the A/C unit with the wire clamps installed. (Manual air conditioner) (See 07-40-29 CLIMATE CONTROL UNIT REMOVAL[MANUAL AIR CONDITIONER].) (See 07-40-31 CLIMATE CONTROL UNIT INSTALLATION[MANUAL AIR CONDITIONER].)
13. Disconnect the following connectors:
    — Blower motor connector
    — Power MOS FET connector (Full-auto air conditioner)
    — Evaporator temperature sensor connector
    — Air intake actuator connector
    — Air mix actuator connector (Full-auto air conditioner)
    — Airflow mode actuator connector (Full-auto air conditioner)
    — Resistor connector. (Manual air conditioner)

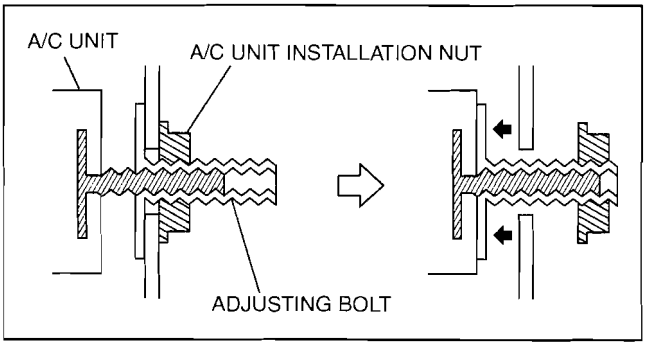
14. Remove the heater case.
    1. Remove the screws.
    2. Pull up tab A in the direction shown by the arrow in the figure and remove it from the A/C unit.
    3. Pull up tabs B in the direction shown by the arrow in the figure and remove it from the A/C unit.
15. Remove the nuts and bolts for installing the A/C unit to the dashboard.
16. Install in the reverse order of removal.
17. Inspect for engine coolant leakage. (See 01-12A-4 ENGINE COOLANT LEAKAGE INSPECTION[LF, L3].) (See 01-12B-6 ENGINE COOLANT LEAKAGE INSPECTION[L3 WITH TC].)
18. Perform the refrigerant system performance test. (See 07-10-7 REFRIGERANT SYSTEM PERFORMANCE TEST.)



am3zzw0000071

A/C Unit Installation Nut Removal Note

Note
- If the adjusting bolt rotates when removing the A/C unit nut, keep rotating the nut. The adjusting bolt stops rotating when it contacts the A/C unit and the nut can be removed.



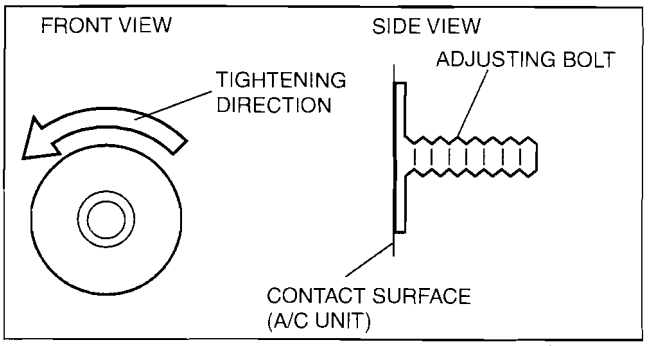
am3zzw0000071

A/C Unit Installation Note

1. When replacing the A/C unit or evaporator, add compressor oil to the refrigerant cycle.

   Supplemental oil amount (approx. quantity)
   25 ml {25 cc, 0.8 fl oz}

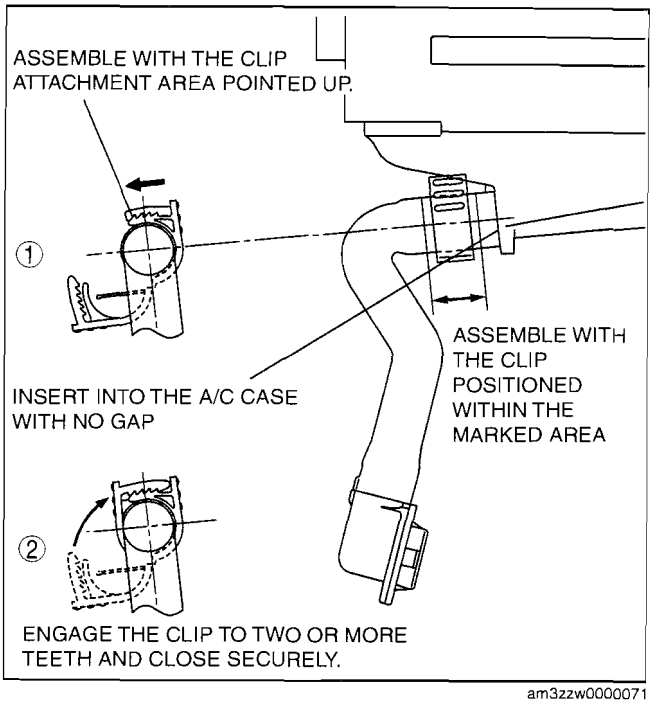
2. Tighten the A/C unit adjusting bolt until it lightly touches the A/C unit.



am3zzw0000071

Drain Hose Installation Note

1. Install the clip as shown in the figure.



am3zzw0000071

A/C UNIT DISASSEMBLY/ASSEMBLY[FULL-AUTO AIR CONDITIONER]

id0711008003a1

1. Disassemble in the order indicated in the table.

Caution

- **If a non-specified grease is used, it may result in abnormal noise or improper operation of the links. Apply only the specified grease to each link.**

2. Assemble in the reverse order of disassembly.

EXPANSION VALVE REMOVAL/INSTALLATION

id071100800400

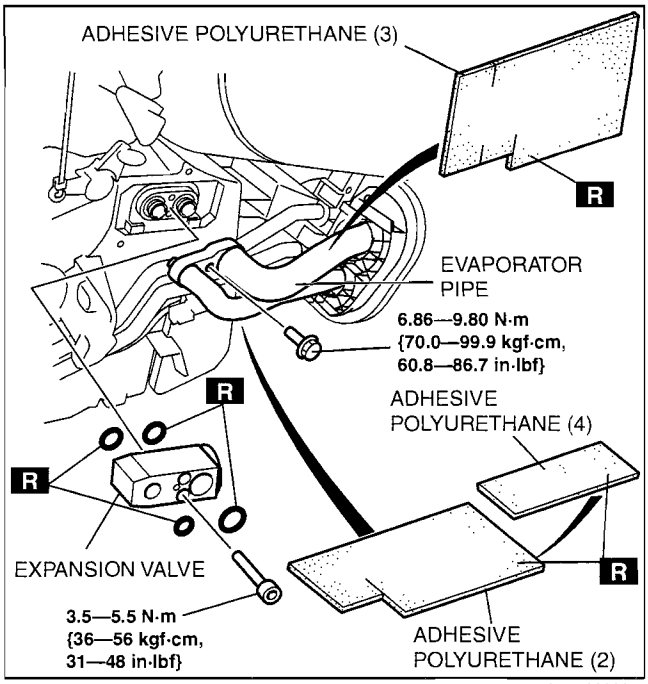
1. Disconnect the negative battery cable.
2. Discharge the refrigerant from the system. (See 07-10-2 REFRIGERANT CHARGING.)

Caution

- **If moisture or foreign material enters the refrigeration cycle, cooling ability will be lowered and abnormal noise will occur. Always immediately plug all open fittings after removing any refrigeration cycle parts to keep moisture or foreign material out of the cycle.**

3. Disconnect the cooler hose (LO) and cooler pipe. Do not allow compressor oil to spill. (See 07-11-21 REFRIGERANT LINES REMOVAL/INSTALLATION[LF, L3].)
4. Remove the following parts:
   (1) Front side trim (RH) (See 09-17-17 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (2) Front scuff plate (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (3) Decoration panel (See 09-17-17 DECORATION PANEL REMOVAL/INSTALLATION.)
   (4) Glove compartment (See 09-17-7 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
   (5) PJB and PJB bracket (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
   (6) Car-navigation unit (See 09-20-6 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.)
   (7) Auto leveling control module
5. Remove the blower case.

6. Remove the expansion valve. Do not allow compressor oil to spill.
7. Install in the reverse order of removal.
8. Perform the refrigerant system performance test. (See 07-10-7 REFRIGERANT SYSTEM PERFORMANCE TEST.)



am3uuw0000061

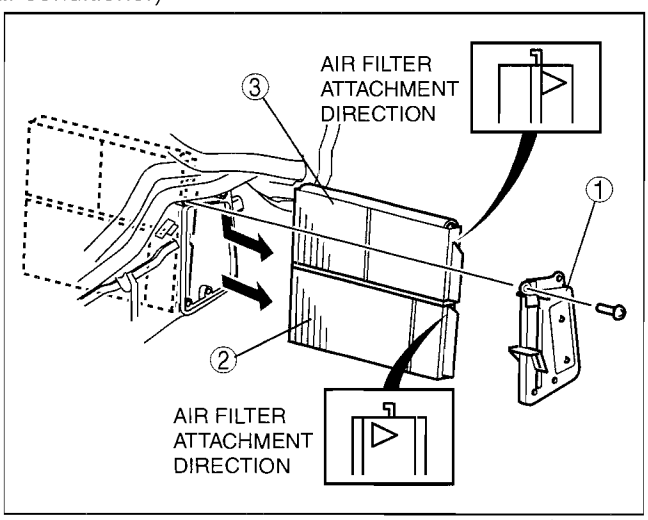
CABIN AIR FILTER REMOVAL/INSTALLATION

id071100806700

1. Disconnect the negative battery cable.
2. Remove the PJB and PJB bracket. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
3. Remove the side wall. (See 09-17-9 SIDE WALL REMOVAL/INSTALLATION.)
4. Disconnect the evaporator temperature sensor connector.
5. Disconnect the power MOS FET connector. (Full-auto air conditioner)
6. Remove in the order indicated in the table.

1	Cabin air filter cover
2	Cabin air filter (1)
3	Cabin air filter (2)

7. Install in the reverse order of removal.



am3zzw0000066

CABIN AIR FILTER INSPECTION

id071100806800

1. Verify that there is no damage, excessive dirt, or abnormal odor on the cabin air filter.
   - If there is any malfunction, replace the cabin air filter.

Note

- The cabin air filter cannot be reused by cleaning it with water or compressed air.

EVAPORATOR INSPECTION

id071100801500

1. Inspect the evaporator for damage, cracks, and oil leakage.
   - If there is any malfunction, replace the evaporator.
2. Visually inspect the fins for bending.
   - If there is any bending, use the end of a flathead screwdriver to straighten the fins.

HEATER CORE INSPECTION

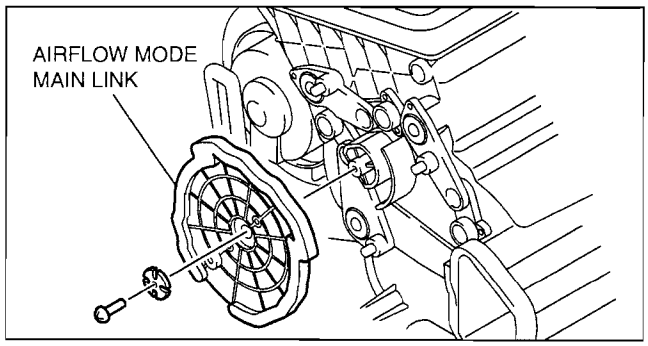
id071100801600

1. Inspect the heater core for damage, cracks, and water leakage.
   - If there is any malfunction, replace the heater core.
2. Visually inspect the fins for bending.
   - If there is any bending, use the end of a flathead screwdriver to straighten the fins.
3. Visually inspect the heater hose for deformation.
   - Repair with pliers if there is deformation. If there is any malfunction, replace the heater core.

AIRFLOW MODE MAIN LINK REMOVAL/INSTALLATION

id071100801800

1. Disconnect the negative battery cable.
2. Detach the hood release lever from the lower panel. (See 09-14-22 HOOD LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
3. Remove the front scuff plate (LH). (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
4. Remove the front side trim (LH). (See 09-17-17 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
5. Remove the lower panel. (See 09-17-7 LOWER PANEL REMOVAL/INSTALLATION.)
6. Remove the shower duct (LH).
7. Remove the airflow mode actuator. (full-auto air conditioner) (See 07-40-9 AIRFLOW MODE ACTUATOR REMOVAL/INSTALLATION.)
8. Disconnect the airflow mode wire. (manual air conditioner) (See 07-40-29 CLIMATE CONTROL UNIT REMOVAL[MANUAL AIR CONDITIONER].)
9. Remove the airflow mode rod.
10. Remove the airflow mode main link.
11. Install in the reverse order of removal.
12. Adjust the airflow mode wire. (manual air conditioner) (See 07-40-33 CLIMATE CONTROL UNIT WIRE ADJUSTMENT.)



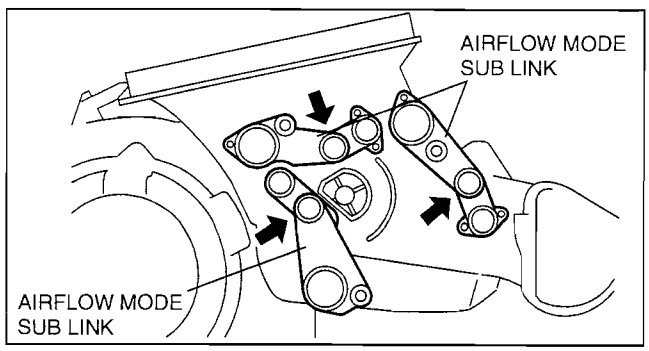
am3uuw0000062

Airflow Mode Main Link Installation Note

Caution

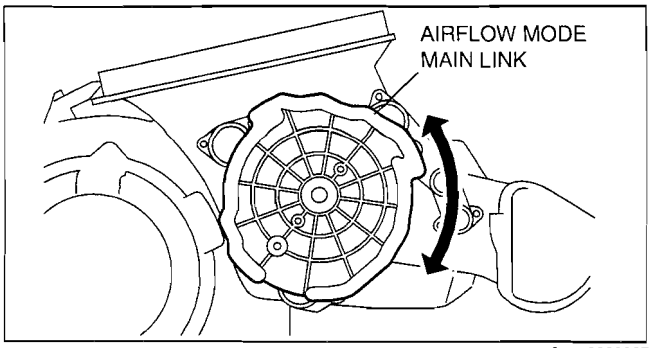
- **Apply only the specified grease to links. Otherwise abnormal noise or improper operation may result.**

1. Push and hold each airflow mode sub link in the direction of the arrow.
2. Set the airflow mode main link to the A/C unit as shown in the figure.
3. Press the airflow mode main link lightly to the A/C unit it in the direction shown by the arrow, then set the projections of each airflow mode sub link into the grooves of the airflow mode main link.



am3zzw0000067

4. Rotate airflow mode main link and verify that each mode is accessed properly.



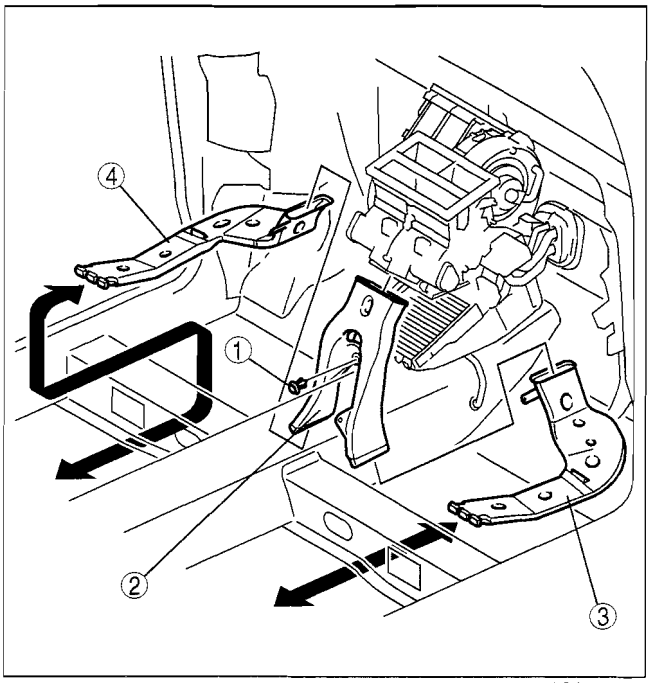
am3zzw0000067

REAR HEAT DUCT REMOVAL/INSTALLATION

id071100800900

1. Disconnect the negative battery cable.
2. Remove the following parts:
   (1) Front seat (See 09-13-2 FRONT SEAT REMOVAL/INSTALLATION.)
   (2) Audio amplifier (Bose) (See 09-20-7 AUDIO AMPLIFIER REMOVAL/INSTALLATION.)
   (3) Woofer (Bose) (See 09-20-10 WOOFER REMOVAL/INSTALLATION.)
   (4) Front scuff plate (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (5) Console (See 09-17-10 CONSOLE REMOVAL/INSTALLATION.)
   (6) Front side trim (See 09-17-17 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (7) Rear scuff plate (See 09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (8) B-pillar lower trim (See 09-17-12 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (9) Lower anchor of the front seat belt (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (10)Tire house trim (See 09-17-15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
   (11)Fuel-filler lid opener lever cover (See 09-14-15 FUEL-FILLER LID OPENER REMOVAL/INSTALLATION.)
   (12)Floor covering (See 09-17-26 FLOOR COVERING REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.

1	Fastener
2	Rear heat duct (1)
3	Rear heat duct (2)
4	Rear heat duct (3)



b3j0711w027

4. Install in the reverse order of removal.

A/C COMPRESSOR REMOVAL/INSTALLATION[LF, L3]

id0711008010c2

1. Disconnect the negative battery cable.
2. Discharge the refrigerant. (See 07-10-2 REFRIGERANT CHARGING.)
3. Remove the splash shield.
4. Remove the A/C drive belt. (See 01-10A-4 DRIVE BELT REPLACEMENT[LF, L3].) (See 01-10B-3 DRIVE BELT REMOVAL/INSTALLATION[L3 WITH TC].)
5. Detach the two wiring harness clamps.
6. Disconnect the magnetic clutch connector.
7. Remove the A/C compressor protector.
8. Disconnect the cooler hose (LO) and cooler hose (HI). Do not allow remaining compressor oil in the refrigerant line to spill. (See 07-11-21 REFRIGERANT LINES REMOVAL/INSTALLATION[LF, L3].)

Caution

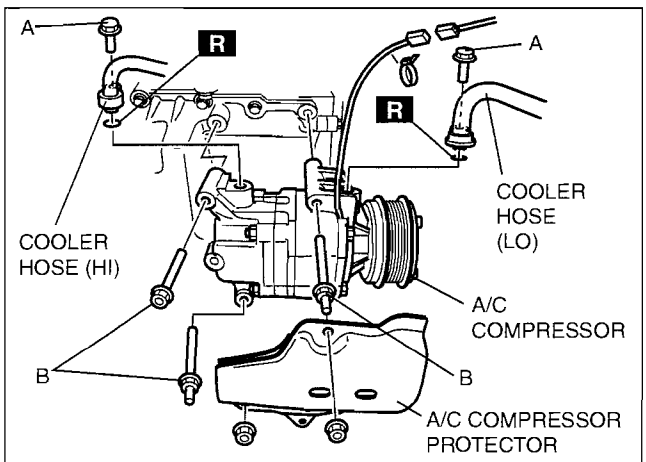
- **If moisture or foreign material enters the refrigeration cycle, cooling ability will be lowered and abnormal noise or other malfunction could occur. Always plug open fittings immediately after removing any refrigeration cycle parts.**

9. Remove the compressor protector.
10. Remove in the order indicated in the table. Do not allow remaining compressor oil in the A/C compressor to spill.

Caution

- **If moisture or foreign material enters the refrigeration cycle, cooling ability will be lowered and abnormal noise or other malfunction could occur. Always plug open fittings immediately after removing any refrigeration cycle parts.**

11. Install in the reverse order of removal.
12. Perform the refrigerant system performance test. (See 07-10-7 REFRIGERANT SYSTEM PERFORMANCE TEST.)



A: 6.86—9.80 N·m {70.0—99.9 kgf·cm, 60.8—86.7 in·lbf}
B: 17.6—26.5 N·m {1.80—2.70 kgf·m, 13.0—19.5 ft·lbf}

b3a0711w011

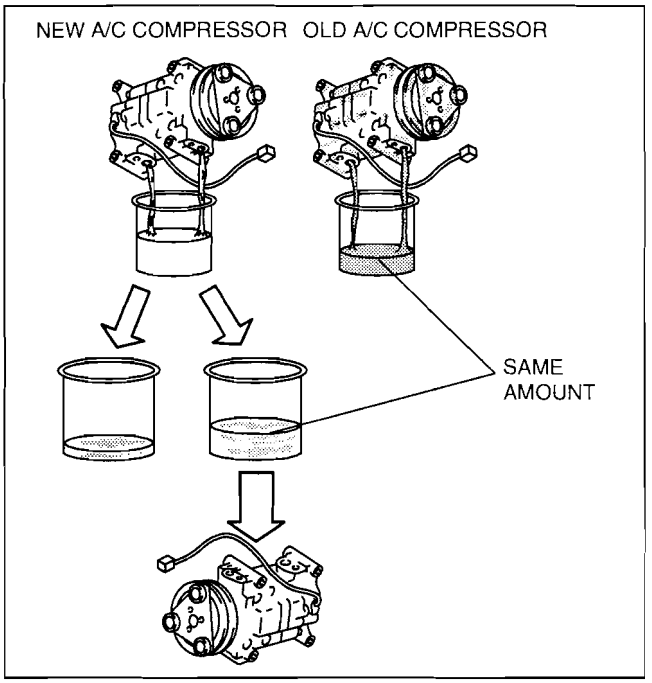
A/C Compressor Installation Note

Caution
- **Due to the high moisture-absorption characteristics of the compressor oil, it may absorb moisture if left over a long period of time thereby negatively affecting A/C operation. Drain the compressor oil and refill within 10 min. of each other.**

1. Rotate new A/C compressor shaft six to eight revolutions while collecting refrigerant oil in a clean measuring device. Use this refrigerant oil to refill new compressor. Do not allow refrigerant oil to become contaminated.
2. Rotate old A/C compressor shaft six to eight revolutions while collecting refrigerant oil in a separate, clean measuring device.
3. Compare those oil amounts. The amount of the oil drained from the new A/C compressor should be greater than the old one.
4. Pour the same amount oil of drained from the old A/C compressor back into the new A/C compressor.

A/C compressor oil type
- **ATMOS GU10**

A/C compressor oil sealed volume (approx. quantity)
- **150 ml {150 cc, 5.07 fl oz}**



am3uuw0000061

A/C COMPRESSOR REMOVAL/INSTALLATION[L3 WITH TC]

id071100801039

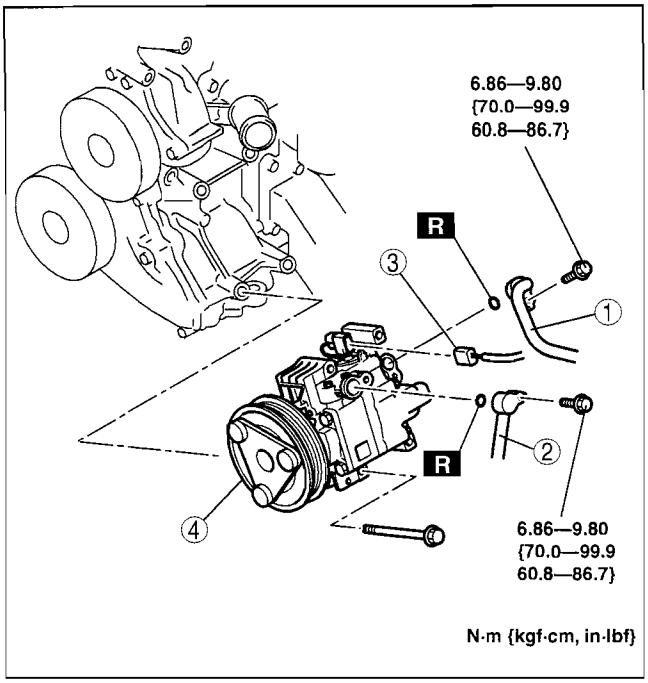
1. Disconnect the negative battery cable.
2. Discharge the refrigerant from the system. (See 07-10-2 REFRIGERANT CHARGING.)
3. Remove the right side splash shield and mudguard.
4. Loosen the drive belt and remove it. (See 01-10B-3 DRIVE BELT REMOVAL/INSTALLATION[L3 WITH TC].)

Caution
- **If moisture or foreign material enters the refrigeration cycle, cooling ability will be lowered and abnormal noise will occur. Always immediately plug open fittings after removing any refrigeration cycle parts to keep moisture or foreign material out of the cycle.**

5. Remove in the order indicated in the table. Do not allow compressor oil to spill.

1	Cooler hose (HI) (See 07-11-20 REFRIGERANT LINES REMOVAL/ INSTALLATION[L3 WITH TC].)
2	Cooler hose (LO) (See 07-11-20 REFRIGERANT LINES REMOVAL/ INSTALLATION[L3 WITH TC].)
3	Magnetic clutch connector
4	A/C compressor (See 07-11-17 A/C Compressor Installation Note.)

6. Install in the reverse order of removal.
7. Adjust the drive belt.
8. Perform the refrigerant system performance test. (See 07-10-7 REFRIGERANT SYSTEM PERFORMANCE TEST.)



am3uuw0000061

07-11

A/C Compressor Installation Note

Caution

- **Due to the high moisture-absorption characteristics of the compressor oil, it may absorb moisture if left over a long period of time thereby negatively affecting A/C operation. Drain the compressor oil and refill within 10 min. of each other.**

1. Rotate new A/C compressor shaft six to eight revolutions while collecting refrigerant oil in a clean measuring device. Use this refrigerant oil to refill new compressor. Do not allow refrigerant oil to become contaminated.
2. Rotate old A/C compressor shaft six to eight revolutions while collecting refrigerant oil in a separate, clean measuring device.
3. Compare those oil amounts. The amount of the oil drained from the new A/C compressor should be greater than the old one.
4. Pour the same amount oil of drained from the old A/C compressor back into the new A/C compressor.

A/C compressor oil type

am3uuw0000061

CONDENSER REMOVAL/INSTALLATION

id071100801200

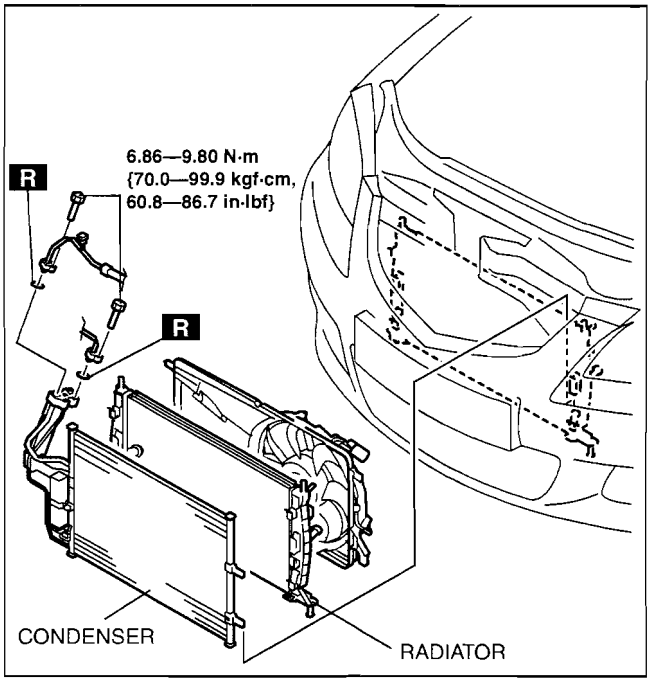
1. Disconnect the negative battery cable.
2. Discharge the refrigerant. (See 07-10-2 REFRIGERANT CHARGING.)
3. Drain the engine coolant. (See 01-12A-3 ENGINE COOLANT REPLACEMENT[LF, L3].) (See 01-12B-4 ENGINE COOLANT REPLACEMENT[L3 WITH TC].)
4. Remove the air cleaner. (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[LF, L3].) (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
5. Remove the splash shield.
6. Disconnect the cooler hose (HI) and cooler pipe. Do not allow remaining compressor oil in the refrigerant line to spill. (See 07-11-21 REFRIGERANT LINES REMOVAL/INSTALLATION[LF, L3].)

Caution
- **If moisture or foreign material enters the refrigeration cycle, cooling ability will be lowered and abnormal noise or other malfunction could occur. Always plug open fittings immediately after removing any refrigeration cycle parts.**

7. Disconnect the radiator hose from the radiator.
8. Remove the cooling fan.
9. Remove the radiator with the condenser installed. (See 01-12A-6 RADIATOR REMOVAL/INSTALLATION[LF, L3].) (See 01-12B-7 RADIATOR REMOVAL/INSTALLATION[L3 WITH TC].)
10. Release the radiator hook and pull the condenser up, being careful not to allow remaining compressor oil in the condenser to spill. (See 07-11-18 Condenser Installation Note.)

Caution
- **If moisture or foreign material enters the refrigeration cycle, cooling ability will be lowered and abnormal noise or other malfunction could occur. Always plug open fittings immediately after removing any refrigeration cycle parts.**

11. Install in the reverse order of removal.
12. Inspect for engine coolant leakage. (See 01-12A-4 ENGINE COOLANT LEAKAGE INSPECTION[LF, L3].) (See 01-12B-6 ENGINE COOLANT LEAKAGE INSPECTION[L3 WITH TC].)
13. Perform the refrigerant system performance test. (See 07-10-7 REFRIGERANT SYSTEM PERFORMANCE TEST.)



am3uuw0000062

Condenser Installation Note

1. After replacing the condenser, add compressor oil to the refrigeration cycle.

Supplemental oil amount (approx. quantity)
20 ml {20 cc, 0.7 fl oz}

CONDENSER INSPECTION

id071100801300

1. Inspect the condenser for cracks, damage, and oil leakage.
   - If there is any malfunction, replace the condenser.
2. Visually inspect the fins for clogging of foreign material.
   - If any fins are clogged, remove the foreign material.
3. Visually inspect the fins for bending.
   - If there is any bending, use the end of a flathead screwdriver to straighten fins.

RECEIVER/DRIER REMOVAL/INSTALLATION

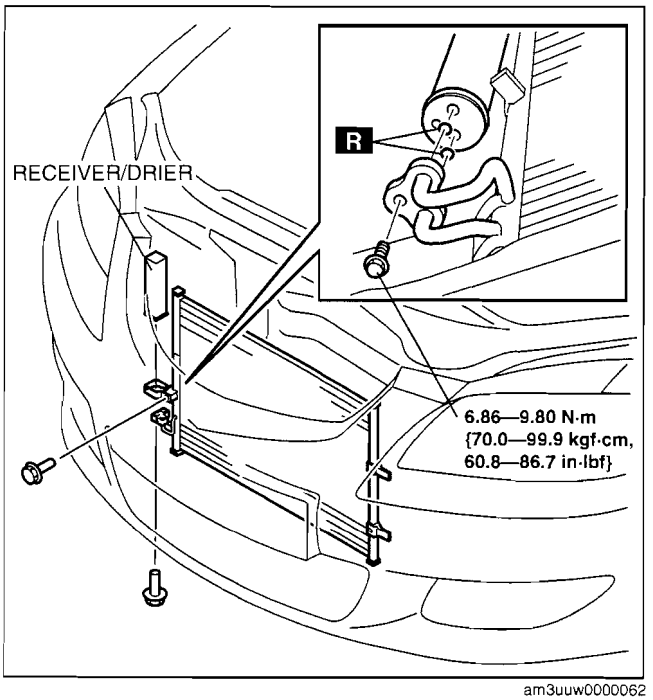
id071100801400

1. Disconnect the negative battery cable.
2. Discharge the refrigerant from the system. (See 07-10-6 REFRIGERANT RECOVERY.) (See 07-10-2 REFRIGERANT CHARGING.)
3. Remove the under cover.

Caution

- **If moisture or foreign material enters the refrigeration cycle, cooling ability will be lowered and abnormal noise will occur. Always immediately plug all open fittings after removing any refrigeration cycle parts to keep moisture or foreign material out of the cycle.**

4. Remove the receiver/drier. Do not allow compressor oil to spill.
5. Install in the reverse order of removal.
6. Perform the refrigerant system performance test. (See 07-10-7 REFRIGERANT SYSTEM PERFORMANCE TEST.)



am3uuw0000062

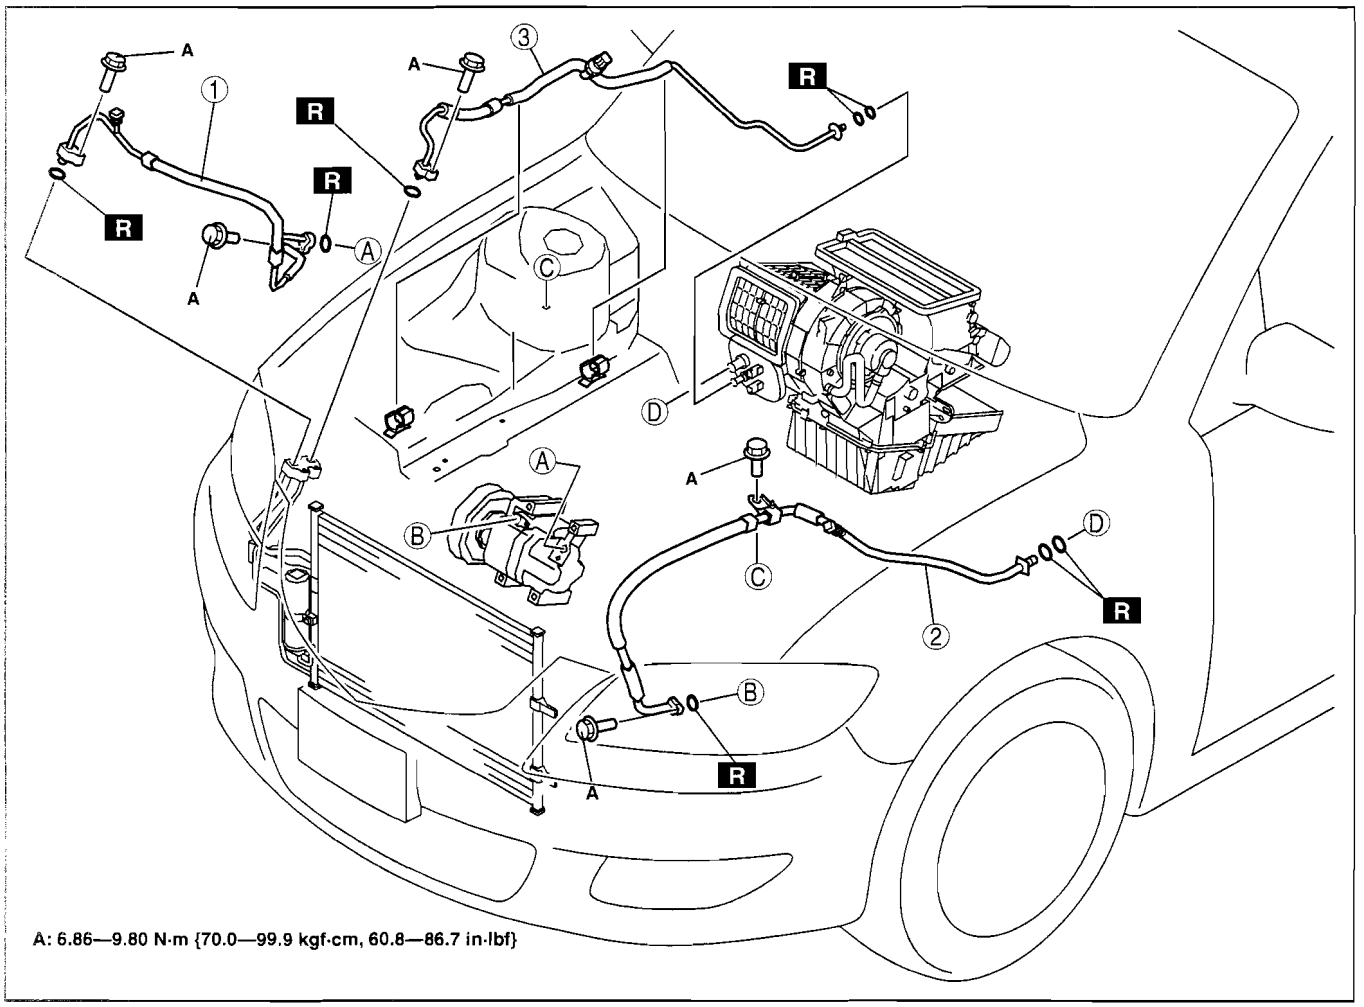
REFRIGERANT LINES REMOVAL/INSTALLATION[L3 WITH TC]

id071100801139

1. Disconnect the negative battery cable.
2. Discharge the refrigerant from the system. (See 07-10-2 REFRIGERANT CHARGING.)
3. Remove the P/S fluid reserve tank.
4. Remove the coolant reserve tank. (See 01-12B-7 COOLANT RESERVE TANK REMOVAL/INSTALLATION[L3 WITH TC].)
5. Remove the splash shield.
6. Remove the charge air cooler cover.
7. Remove the insulator.
8. Remove in the order indicated in the table. Do not allow compressor oil to spill.

Caution

- **If moisture or foreign material enters the refrigeration cycle, cooling ability will be lowered and abnormal noise will occur. Always immediately plug all open fittings after removing any refrigeration cycle parts to keep moisture or foreign material out of the cycle.**



am3uuw0000061

1	Cooler hose (HI) (See 07-11-20 REFRIGERANT LINES REMOVAL/ INSTALLATION[L3 WITH TC].)
2	Cooler hose (LO) (See 07-11-20 REFRIGERANT LINES REMOVAL/ INSTALLATION[L3 WITH TC].)
3	Cooler pipe (See 07-11-20 REFRIGERANT LINES REMOVAL/ INSTALLATION[L3 WITH TC].)

9. Install in the reverse order of removal.
10. Perform the refrigerant system performance test. (See 07-10-7 REFRIGERANT SYSTEM PERFORMANCE TEST.)

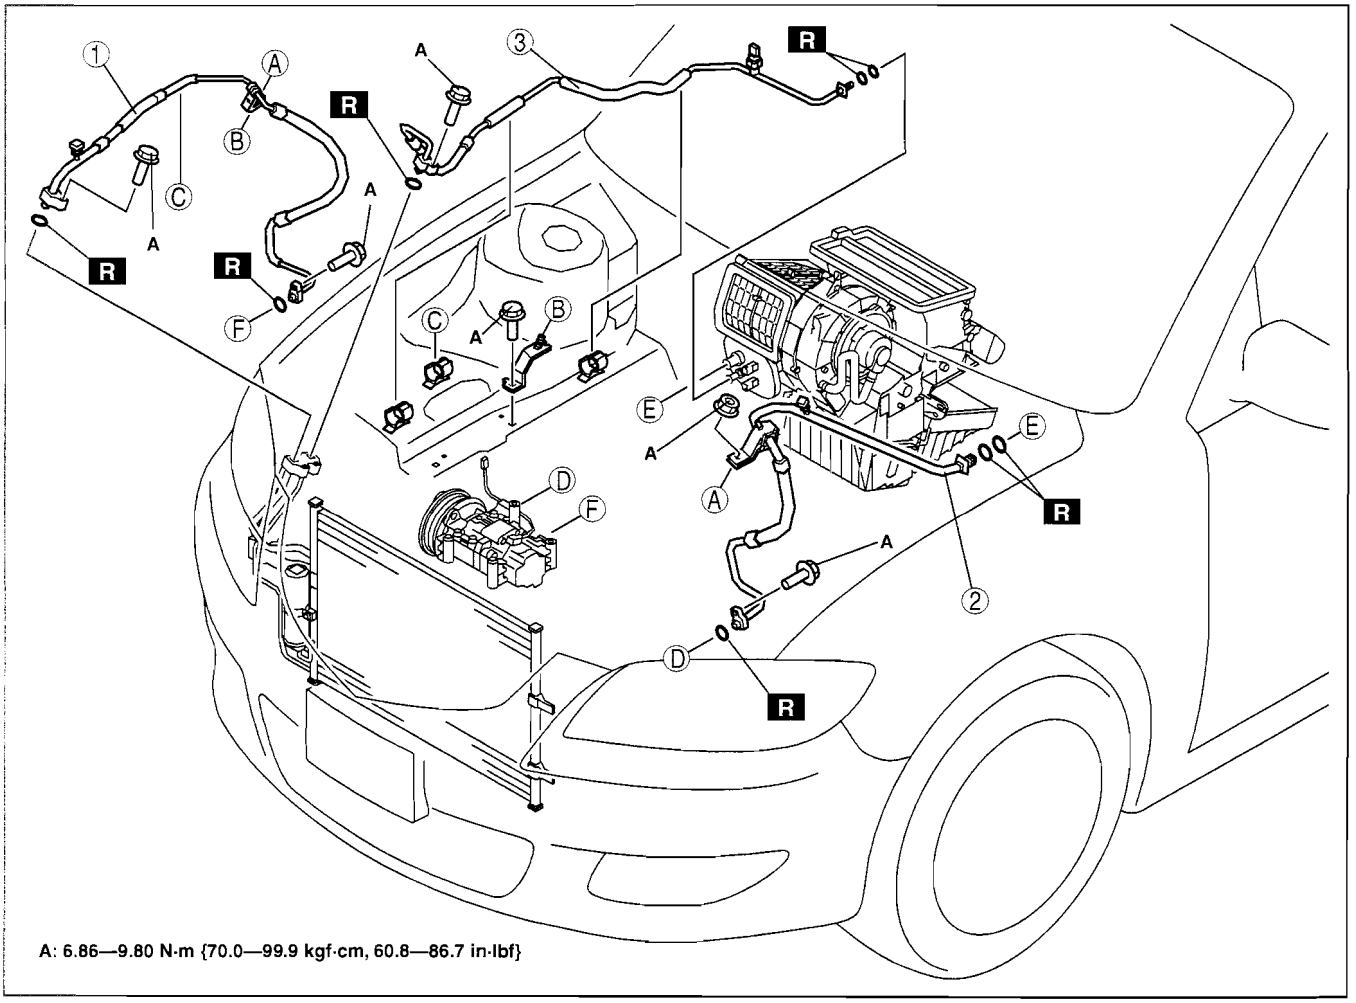
REFRIGERANT LINES REMOVAL/INSTALLATION[LF, L3]

id0711008011c2

1. Disconnect the negative battery cable.
2. Discharge the refrigerant from the system. (See 07-10-2 REFRIGERANT CHARGING.)
3. Remove the P/S fluid reserve tank.
4. Remove the coolant reserve tank. (See 01-12A-5 COOLANT RESERVE TANK REMOVAL/INSTALLATION[LF, L3].)
5. Remove the accelerator cable.
6. Remove the P/S fluid hose bracket.
7. Remove the under cover.
8. Remove in the order indicated in the table. Do not allow compressor oil to spill.

Caution

- **If moisture or foreign material enters the refrigeration cycle, cooling ability will be lowered and abnormal noise will occur. Always immediately plug all open fittings after removing any refrigeration cycle parts to keep moisture or foreign material out of the cycle.**



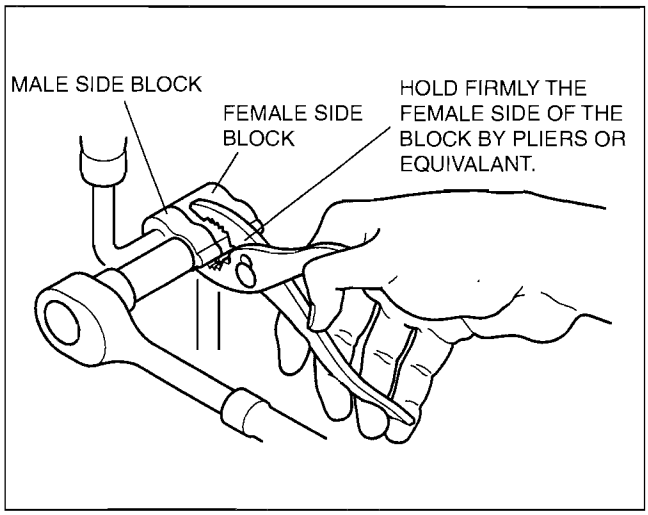
am3uuw0000061

1	Cooler hose (HI) (See 07-11-22 Refrigerant Line Removal Note.) (See 07-11-23 Refrigerant Line Installation Note.)
2	Cooler hose (LO) (See 07-11-22 Refrigerant Line Removal Note.) (See 07-11-23 Refrigerant Line Installation Note.)
3	Cooler pipe (See 07-11-22 Refrigerant Line Removal Note.) (See 07-11-23 Refrigerant Line Installation Note.)

9. Install in the reverse order of removal.
10. Perform the refrigerant system performance test. (See 07-10-7 REFRIGERANT SYSTEM PERFORMANCE TEST.)

Refrigerant Line Removal Note
Block joint type

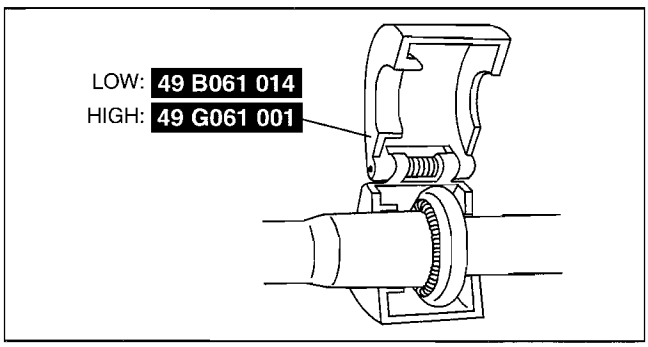
1. Disconnect the block joint type pipes by grasping female side of the block with pliers or similar tool and holding firmly, then remove the connection bolt or nut.



am3uuw0000061

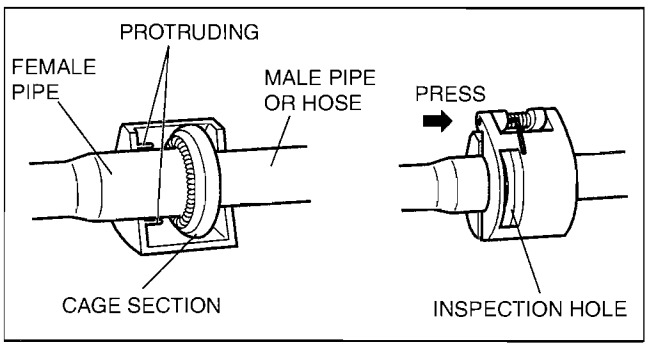
Spring-lock coupling type

1. Set the **SST**.



am3zzw0000072

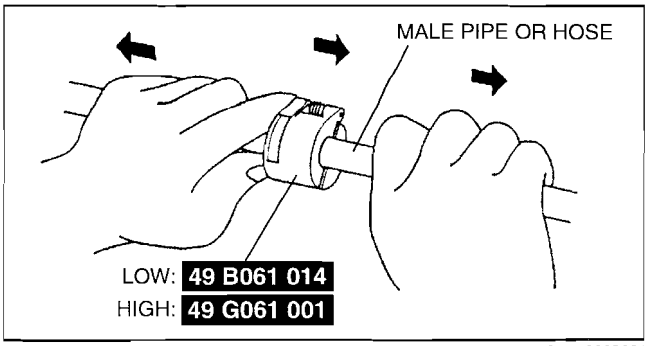
2. While looking through the inspection hole of the **SST**, insert the protruding part of the **SST** until it makes contact with the cage section.



am3zzw0000072

3. Use the **SST** to disconnect the male pipe or hose from the female by pulling the male pipe or hose.

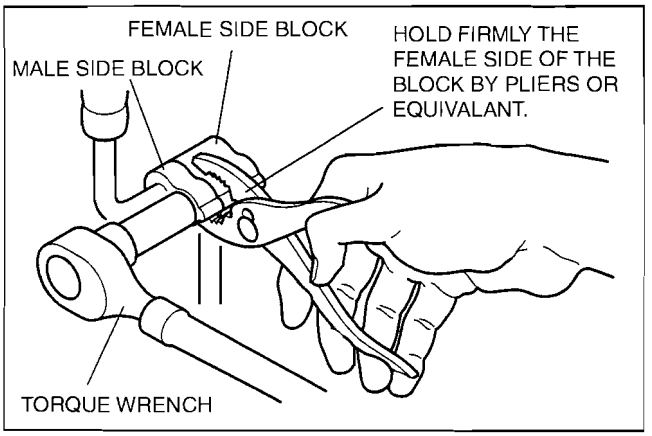
Note
- The male pipe or hose can be disconnected easily from the female pipe by pulling from the male pipe or hose while maintaining the pressure of the protruding part of the **SST**.



am3uuw0000061

Refrigerant Line Installation Note
1. Apply compressor oil to the O-rings and connect the joints.
2. Tighten the joints.

Block joint type
1. Tighten the bolt of joint by hand.
2. Connect the block joint type pipes by grasping the female side of the block with pliers or similar tool and holding firmly, then tighten the connection bolt or nut with a torque wrench.



am3uuw0000061

Spring-lock coupling type
1. Connect the male pipe or hose by twisting it onto female pipe until the garter spring at the male pipe or hose is over the flared end of female pipe.

Note
- When the male pipe or hose is replaced, the indicator ring comes out after connecting to indicate that it is locked.

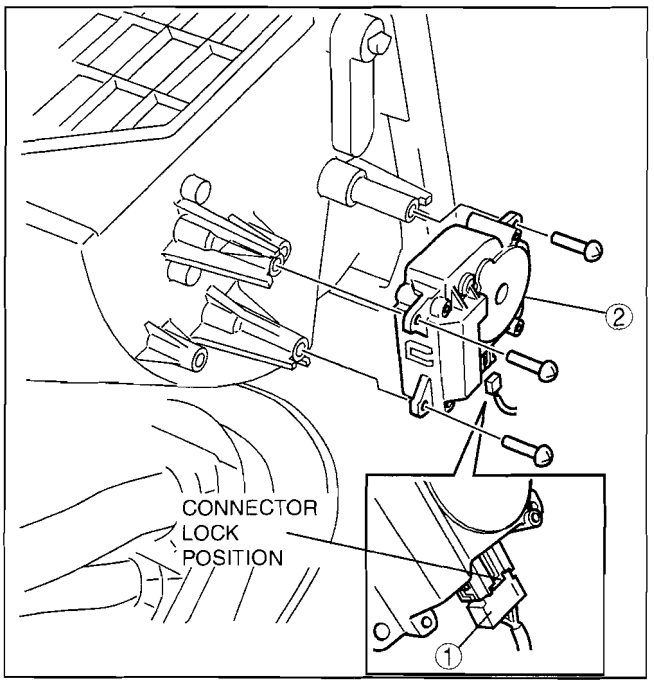
AIR INTAKE ACTUATOR REMOVAL/INSTALLATION

id074000801400

1. Disconnect the negative battery cable.
2. Remove the following parts:
   (1) Front scuff plate (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (2) Front side trim (See 09-17-17 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (3) Decoration panel (See 09-17-17 DECORATION PANEL REMOVAL/INSTALLATION.)
   (4) Glove compartment (See 09-17-7 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
   (5) Car-navigation unit (See 09-20-6 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.)
3. Slide the blower case to the position shown in the figure. (L3 with TC)
4. Remove in the order indicated in the table.

LF, L3

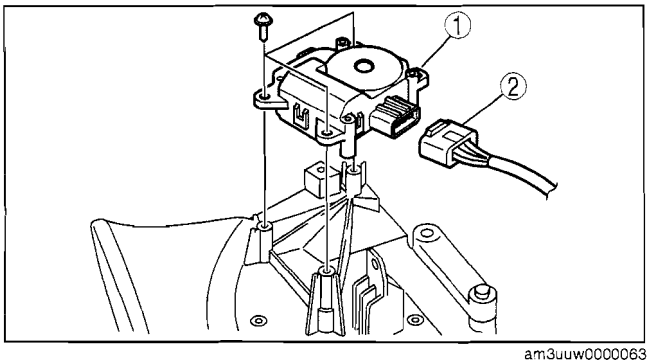


am3uuw0000062

L3 with TC

1	Air intake actuator connector
2	Air intake actuator

5. Install in the reverse order of removal.



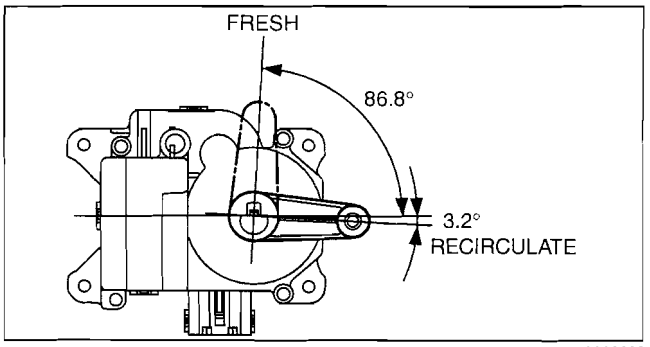
am3uuw0000063

AIR INTAKE ACTUATOR INSPECTION

id074000801500

1. Connect battery positive voltage to air intake actuator terminal C (or G), connect terminal G (or E) to ground, and then verify that the air intake actuator operates as shown in the table.
   - If the operation condition is not normal, replace the air intake actuator.

LF, L3



am3uuw0000063

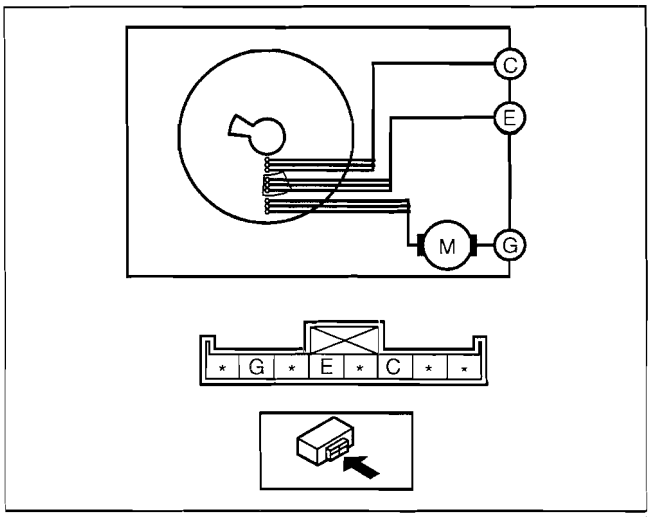
Terminal			Air intake actuator operation
C	E	G	
B+	–	Ground	FRESH → RECIRCULATE
–	Ground	B+	RECIRCULATE → FRESH



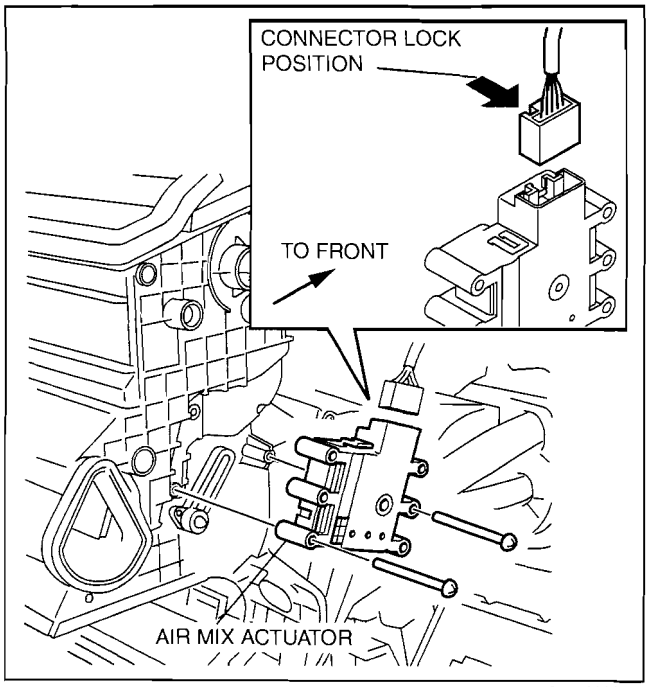
am3uuw0000063

AIR MIX ACTUATOR REMOVAL/INSTALLATION

id074000802400

1. Disconnect the negative battery cable.
2. Remove the following parts:
   (1) Front doors (See 09-11-3 FRONT DOOR REMOVAL/INSTALLATION.)
   (2) Front scuff plate (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (3) Front side trim (See 09-17-17 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (4) Decoration panel (See 09-17-17 DECORATION PANEL REMOVAL/INSTALLATION.)
   (5) Glove compartment (See 09-17-7 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
   (6) PJB (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
   (7) Car-navigation unit (See 09-20-6 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.)
   (8) Side wall (See 09-17-9 SIDE WALL REMOVAL/INSTALLATION.)
   (9) Ashtray panel
   (10)Console (See 09-17-10 CONSOLE REMOVAL/INSTALLATION.)
   (11)Shift lever component (MTX) (See 05-16-1 SHIFT MECHANISM REMOVAL/INSTALLATION[G35M-R]05-16-2 SHIFT MECHANISM REMOVAL/INSTALLATION[A26M-R].)
   (12)Selector lever component (ATX) (See 05-18-6 SELECTOR LEVER COMPONENT REMOVAL/INSTALLATION.)
   (13)Center panel unit (See 09-20-4 CENTER PANEL UNIT REMOVAL/INSTALLATION.)
   (14)Hood release lever from the lower panel
   (15)Lower panel (See 09-17-7 LOWER PANEL REMOVAL/INSTALLATION.)
   (16)Shower ducts (LH, RH)
   (17)Driver-side air bag module (See 08-10-7 DRIVER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
   (18)Column cover (See 09-17-7 COLUMN COVER REMOVAL/INSTALLATION.)
   (19)Meter hood (See 09-17-8 METER HOOD REMOVAL/INSTALLATION.)
   (20)Instrument cluster (See 09-22-2 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
   (21)Steering shaft (See 06-14-8 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
   (22)A-pillar trim (See 09-17-11 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (23)Windshield wiper arm and blade (See 09-19-3 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
   (24)Cowl grille (See 09-16-7 COWL GRILLE REMOVAL/INSTALLATION.)
   (25)Cowl panel (See 09-10-20 COWL PANEL REMOVAL/INSTALLATION.)
   (26)Windshield wiper motor (See 09-19-4 WINDSHIELD WIPER MOTOR REMOVAL/INSTALLATION.)
3. Disconnect the following connectors:
   — Blower motor connector
   — Power MOS FET connector
   — Evaporator temperature sensor connector
   — Air intake actuator connector
   — Air mix actuator connector
   — Airflow mode actuator connector
4. Remove the rear heat duct (1).
5. Remove the heater case. (See 07-11-3 A/C UNIT REMOVAL/INSTALLATION.)
6. Remove the nuts and bolts for installing the dashboard to the body.
7. Slide the dashboard.

8. Remove in the air mix actuator.
9. Install in the reverse order of removal.



am3zzw0000075

AIR MIX ACTUATOR INSPECTION

id074000802500

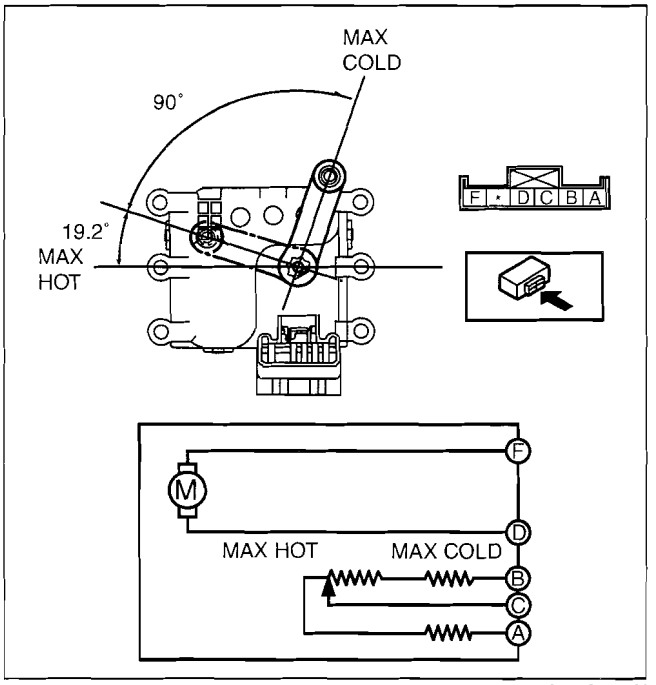
Caution

- **If the lever position exceeds the operation range shown in the figure, the circuit in the actuator could be damaged. Always perform an actuator operation inspection with the lever movement within the range shown in the figure.**

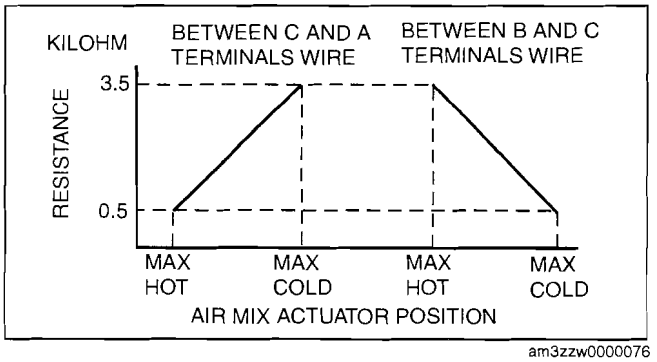
1. Connect battery positive voltage to air mix actuator terminal D (or F), connect terminal F (or D) to ground, and then verify that the air mix actuator operates as shown in the table.
   - If the operation condition is not normal, replace the air mix actuator.

Terminal		Air mix actuator operation
D	F	
B+	Ground	HOT → COLD
Ground	B+	COLD → HOT

2. Verify that the resistance between terminals B and C, C and A matches the air mix actuator operation as shown in the graph.
   - If the operation condition and resistance are not normal, replace the air mix actuator.



am3uuw0000066



am3zzw0000076

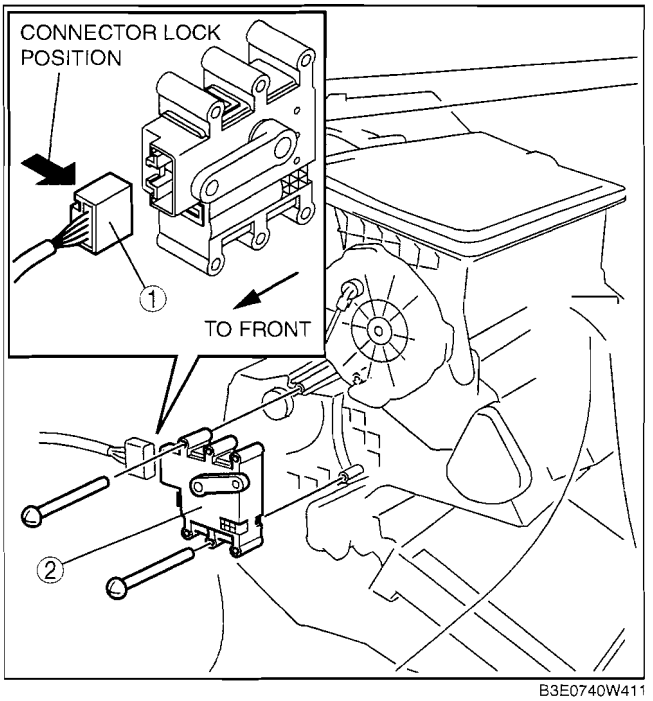
AIRFLOW MODE ACTUATOR REMOVAL/INSTALLATION

id074000801600

1. Disconnect the negative battery cable.
2. Remove the airflow mode rod from the airflow mode actuator.
3. Remove in the order indicated in the table.

1	Airflow mode actuator connector
2	Airflow mode actuator

4. Install in the reverse order of removal.



B3E0740W411

AIRFLOW MODE ACTUATOR INSPECTION

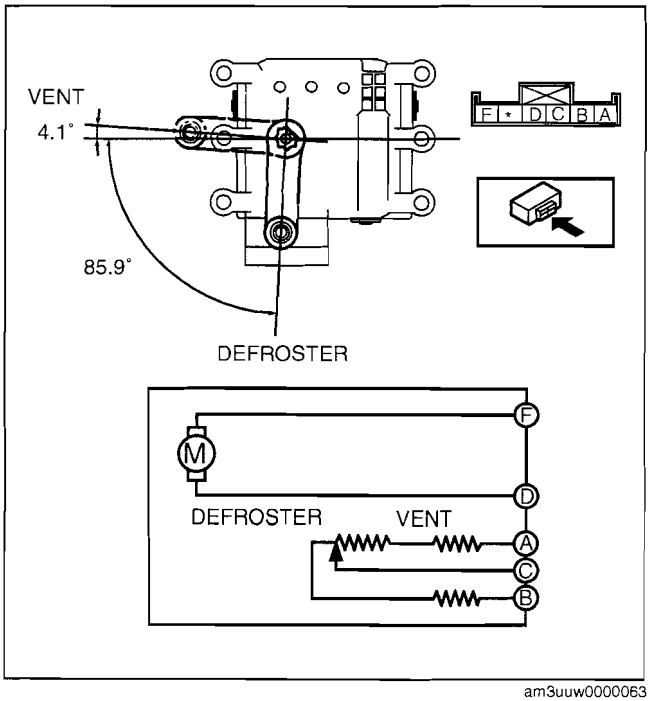
id074000801700

Caution

- **If the lever position exceeds the operation range shown in the figure, the circuit in the actuator could be damaged. Always perform an actuator operation inspection with the lever movement within the range shown in the figure.**

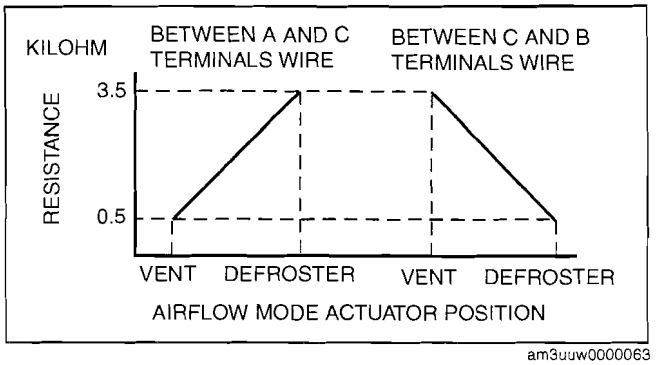
1. Connect battery positive voltage to airflow mode actuator terminal D (or F), connect terminal F (or D) to ground, and then verify that the airflow mode actuator operates as shown in the table.
   - If the operation condition is not normal, replace the airflow mode actuator.

Terminal		Airflow mode actuator operation
D	F	
B+	Ground	VENT → DEFROSTER
Ground	B+	DEFROSTER → VENT



am3uuw0000063

2. Verify that the resistance between terminals A and C, C and B matches the airflow mode actuator operation as shown in the graph.
   - If the operation condition and resistance are not normal, replace the airflow mode actuator.

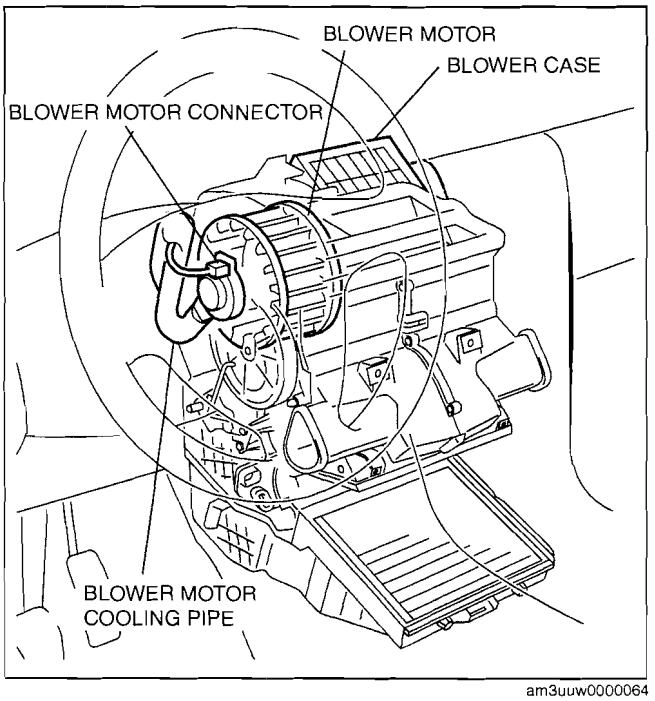


am3uuw0000063

BLOWER MOTOR REMOVAL

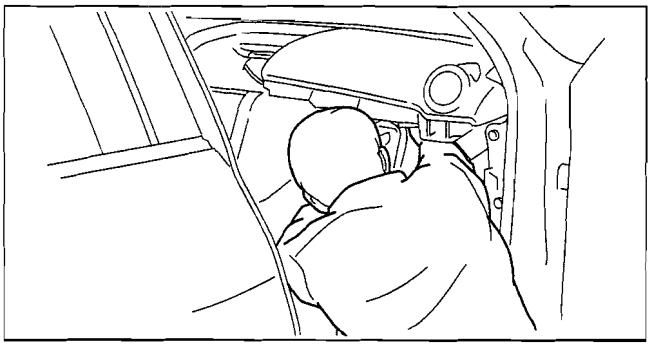
id074000807300

Note
- The blower motor is located on the A/C unit as shown in the figure.



am3uuw0000064

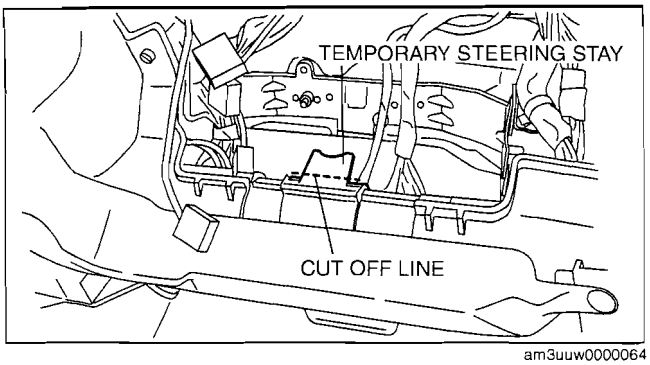
- Perform the work from the front passenger's side in the posture shown in the figure.



am3uuw0000064

1. Set the air intake mode to FRESH.
2. Disconnect the negative battery cable.
3. Remove the following parts:
   (1) Front scuff plate (RH) (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (2) Front side trim (RH) (See 09-17-17 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (3) Decoration panel (See 09-17-17 DECORATION PANEL REMOVAL/ INSTALLATION.)
   (4) Glove compartment (See 09-17-7 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
   (5) PJB and PJB bracket (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
   (6) Car-navigation unit (See 09-20-6 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.)
   (7) Auto leveling control module

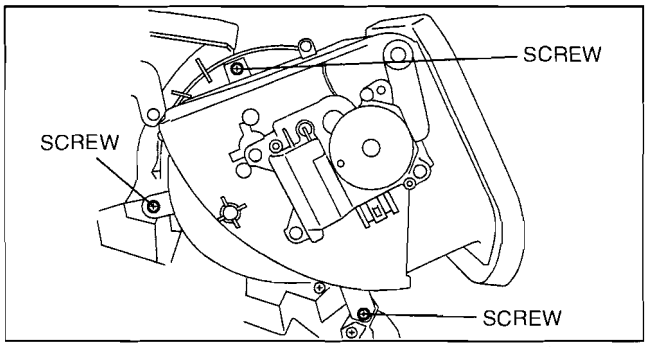
4. Cut off the temporary steering stay on the passenger's side.
5. Detach the hood release lever from the lower panel. (See 09-14-22 HOOD LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
6. Remove the lower panel. (See 09-17-7 LOWER PANEL REMOVAL/INSTALLATION.)



am3uuw0000064

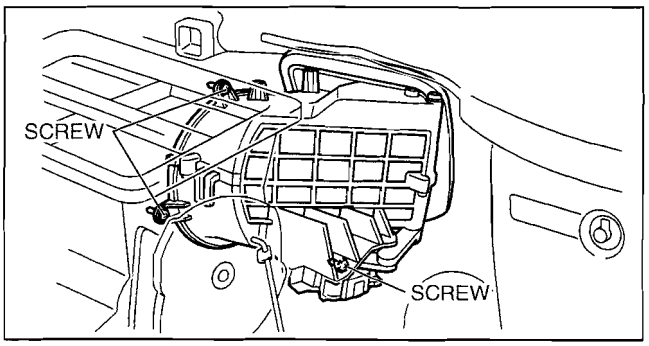
7. Remove the screws shown in the figure and slide the blower case.

LF, L3



am3uuw0000064

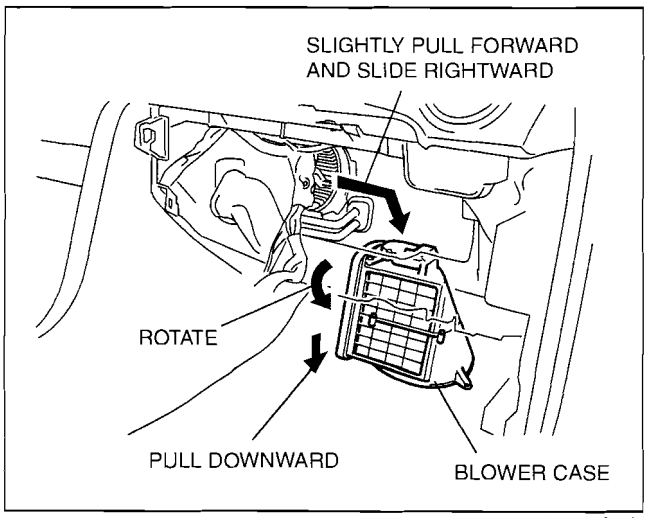
L3 with TC



am3uuw0000064

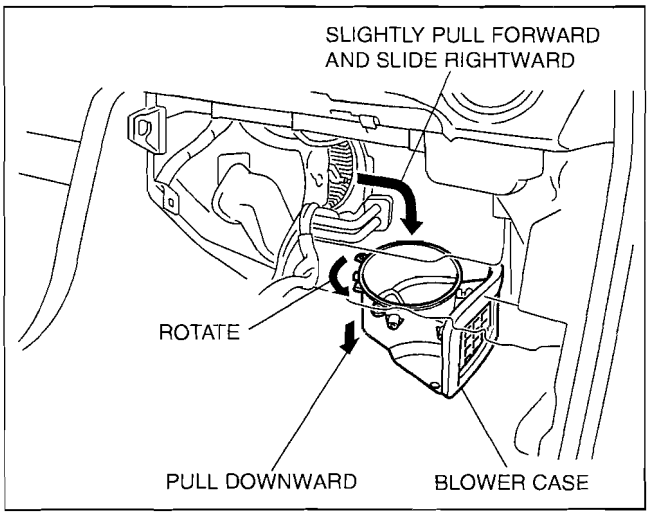
8. Disconnect the air intake actuator connector.
9. Remove the blower case shown in the figure.

LF, L3



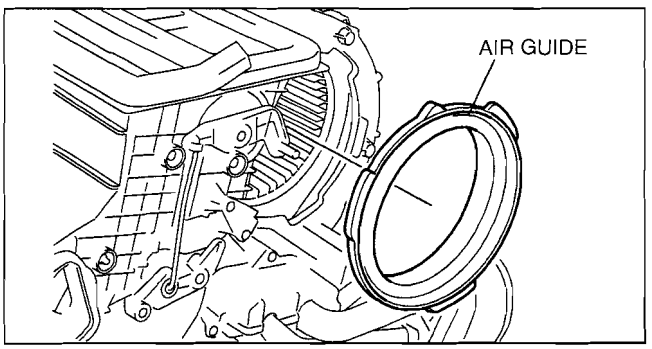
am3uuw0000065

L3 with TC



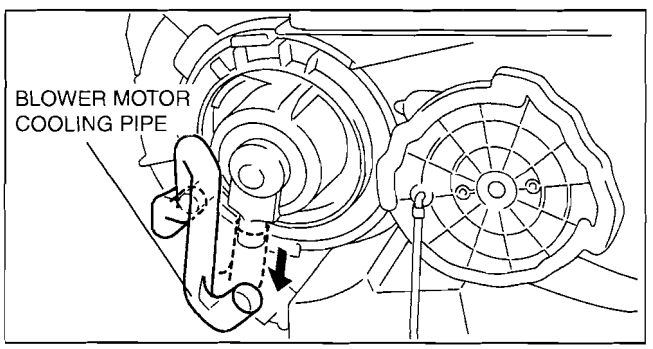
am3uuw0000065

10. Remove the air guide.
11. Install the **SST (49 B061 015)** to the blower motor. (See 07-40-13 SST Installation Note.)
12. Disconnect the resistor connector. (Manual air conditioner)



am3uuw0000065

13. Disconnect the blower motor cooling pipe connected to the blower motor.
14. Remove the airflow mode actuator. (See 07-40-9 AIRFLOW MODE ACTUATOR REMOVAL/ INSTALLATION.)

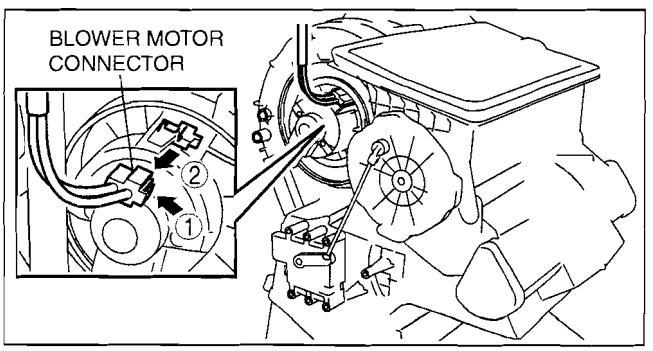


am3uuw0000065

15. Disconnect the blower motor connector as shown in the figure.
16. Remove the blower motor cover. (See 07-40-14 Blower Motor Cover Removal Note.)

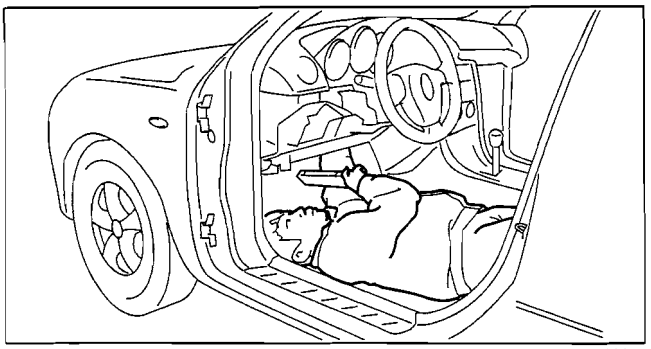
Caution

- **When the blower motor cover is removed, the blower motor could fall in the A/C unit case causing the sirocco fan to be damaged. Therefore another person must hold the blower motor at the installation position.**



am3zzw0000084

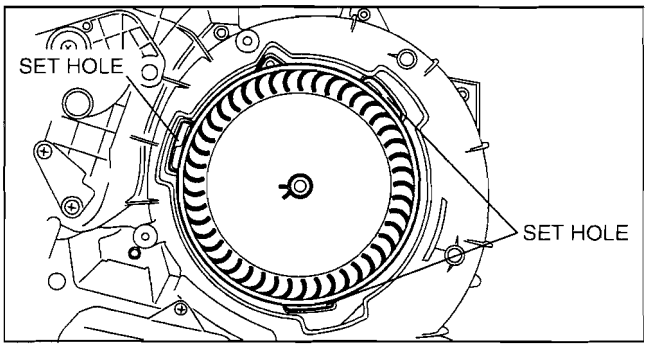
17. Remove the blower motor by pulling it out. (See 07-40-14 Blower Motor Removal Note.)



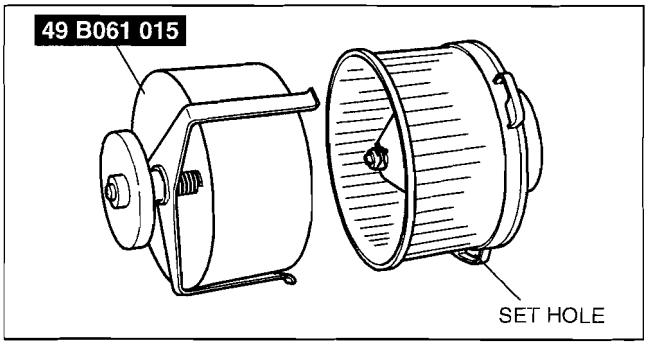
am3uuw0000065

SST Installation Note

1. Align the **SST** guide with the sirocco fan clip position and press the **SST** tabs **(3)** into the three set holes on the blower motor until they are inserted.

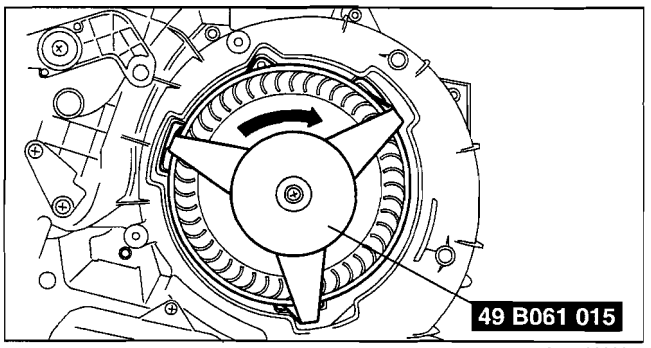


am3uuw0000065



am3zzw0000085

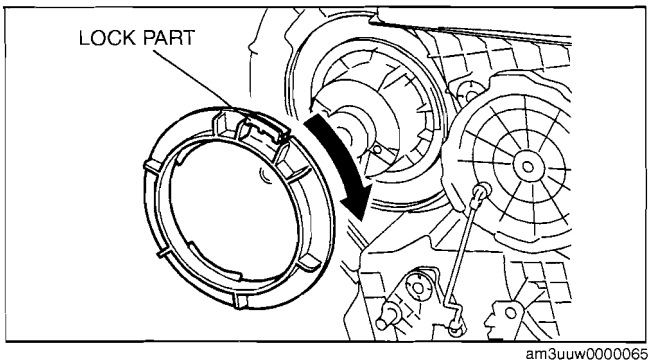
2. Rotate the **SST (49 B061 015)** clockwise to lock the **SST** and blower motor.



am3uuw0000065

Blower Motor Cover Removal Note

1. Pull the lock on the top of the blower motor cover and rotate the blower motor cover.

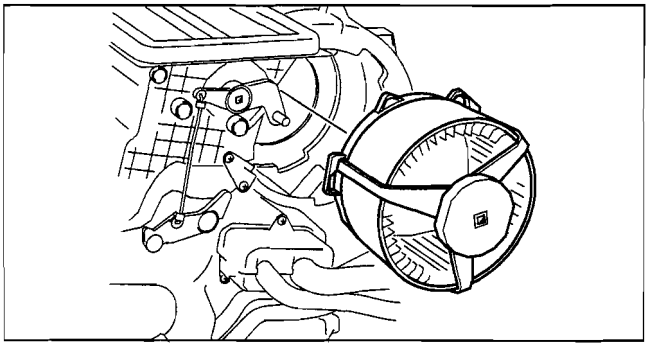


am3uuw0000065

Blower Motor Removal Note

Caution

- **To prevent damage to the sirocco fan, pull the blower motor out being careful that the blower motor does not interfere with the A/C unit.**

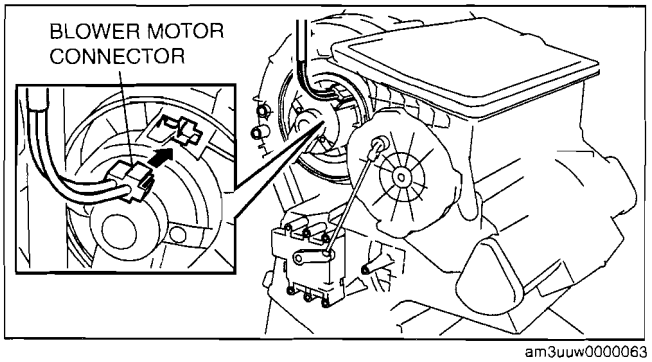


am3uuw0000065

BLOWER MOTOR INSTALLATION

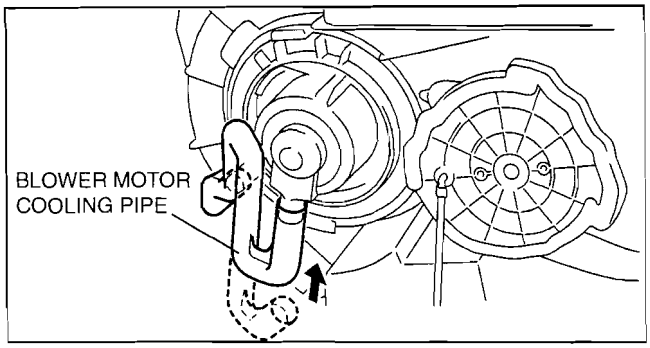
id074000807200

1. Install the **SST** to the blower motor. (See 07-40-10 BLOWER MOTOR REMOVAL.)
2. Install the blower motor with the **SST (49 B061 015)** installed, to the A/C unit. (See 07-40-15 Blower Motor Installation Note.)
3. Install the blower motor cover from the driver's side. (See 07-40-15 Blower Motor Cover Installation Note.)
4. Connect the blower motor connector as shown in the figure.



am3uuw0000063

5. Install the blower motor cooling pipe.
6. Remove the **SST (49 B061 015)** from the blower motor.
7. Install the airflow mode actuator. (See 07-40-9 AIRFLOW MODE ACTUATOR REMOVAL/INSTALLATION.)
8. Install the air guide.
9. Connect the resistor connector. (Manual air conditioner)
10. Install the lower panel. (See 09-17-7 LOWER PANEL REMOVAL/INSTALLATION.)
11. Install the hood release lever from the lower panel. (See 09-14-22 HOOD LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
12. Install the blower case.



am3uuw0000064

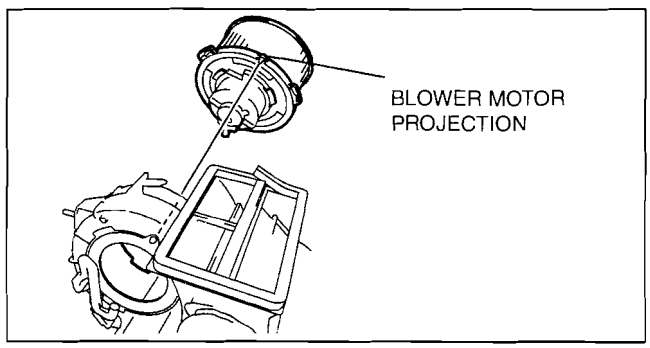
Caution
- **Install the blower case while pressing the dashboard insulator, otherwise the blower case could be damaged.**

13. Connect the air intake actuator connector.
14. Install the following parts:
    (1) Auto leveling control module
    (2) Car-navigation unit (See 09-20-6 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.)
    (3) PJB and PJB bracket (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
    (4) Glove compartment (See 09-17-7 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
    (5) Decoration panel (See 09-17-17 DECORATION PANEL REMOVAL/INSTALLATION.)
    (6) Front side trim (RH) (See 09-17-17 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
    (7) Front scuff plate (RH) (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)

Blower Motor Installation Note

1. Position the blower motor projection upward and install the blower motor to the A/C unit.

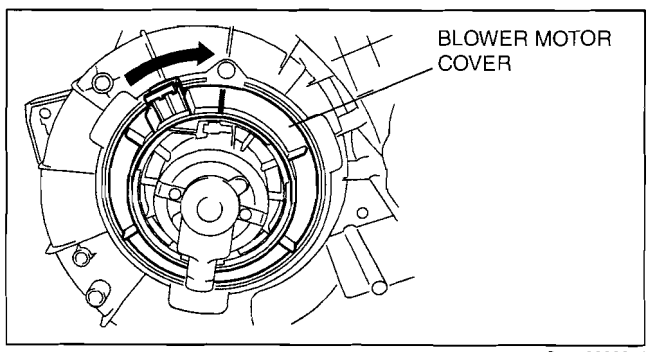
Caution
- **To prevent damage to the sirocco fan, install the blower motor being careful that the blower motor does not interfere with the A/C unit. Also, another person must hold the blower motor at the installation position.**



am3uuw0000064

Blower Motor Cover Installation Note

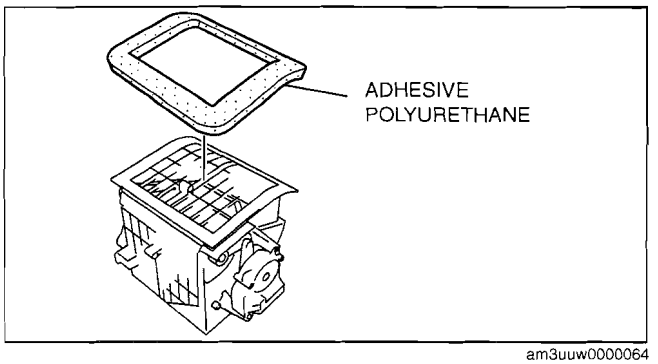
1. To install, rotate the blower motor cover until a click is heard.



am3uuw0000064

Blower Case Installation Note

1. If not replacing the blower case, replace the adhesive polyurethane on the fresh-air inlet of the blower case.



am3uuw0000064

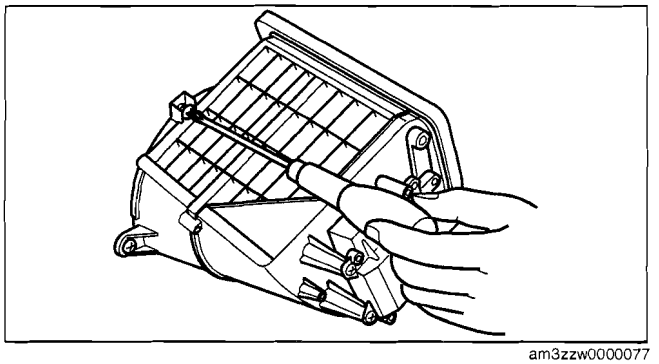
Caution

- **To adhere new polyurethane properly, be sure to remove the adhesive agent and adhesive polyurethane completely.**

Note

- If the blower case is removed or installed, the adhesive polyurethane can be damaged. Damaged adhesive polyurethane could cause abnormal noise or other malfunctions, therefore replace it.

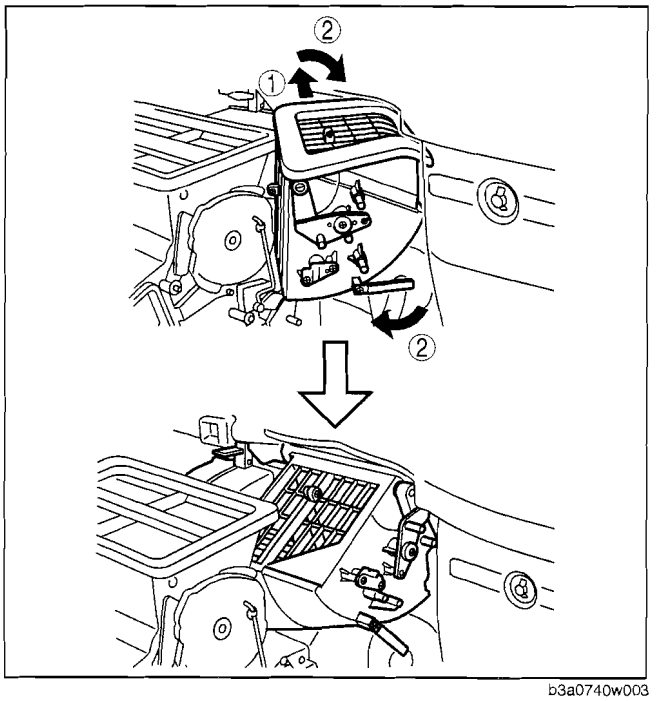
2. Insert the screw into the blower case and install the case to the A/C unit.



am3zzw0000077

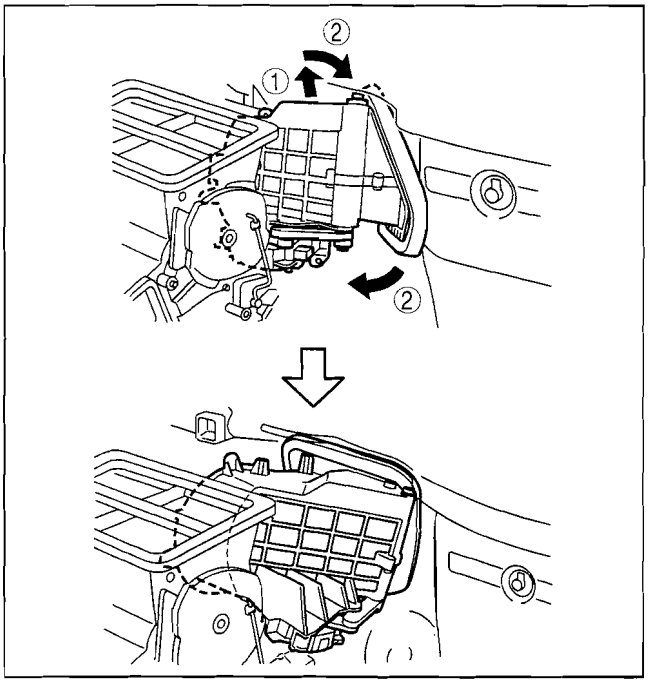
3. Install the blower case by inserting and rotating it in the directions of the arrows shown in the figure.

LF, L3



b3a0740w003

L3 with TC



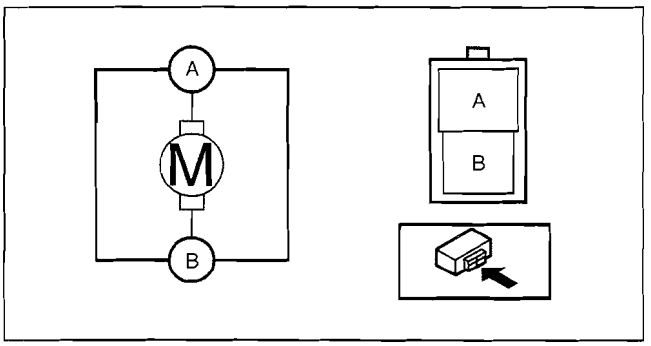
am3uuw0000064

BLOWER MOTOR INSPECTION

id074000801000

Connect battery positive voltage to blower motor terminal A, connect terminal B to ground, and then verify its operation.

- If there is any malfunction, replace the blower motor.



am3uuw0000062

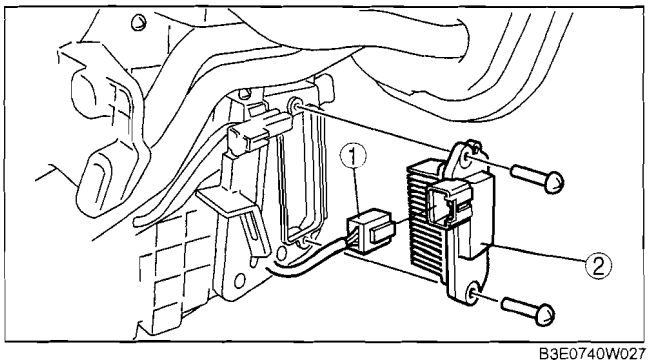
POWER METAL OXIDE SEMICONDUCTOR FIELD EFFECT TRANSISTOR (POWER MOS FET) REMOVAL/ INSTALLATION

id074000800200

1. Disconnect the negative battery cable.
2. Remove the PJB and PJB bracket. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/ INSTALLATION.)
3. Remove in the order indicated in the table.

1	Power MOS FET connector
2	Power MOS FET

4. Install in the reverse order of removal.



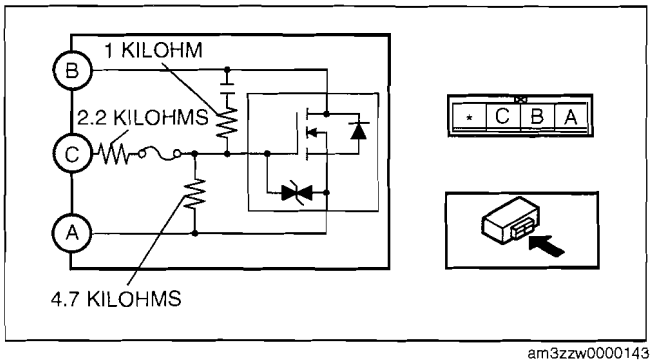
B3E0740W027

POWER METAL OXIDE SEMICONDUCTOR FIELD EFFECT TRANSISTOR (POWER MOS FET) INSPECTION

id074000800300

1. Verify that the continuity between the power MOS FET terminals is as indicated in the table.
   - If there is any malfunction, replace the power MOS FET.
   - If the blower motor operation is not normal even though no malfunction can be verified, inspect the climate control unit. (See 07-40-34 CLIMATE CONTROL UNIT INSPECTION[FULL-AUTO AIR CONDITIONER].)

Tester lead		Resistance (kilohm)
+	-	
A	B	∞
A	C	6.9
B	A	Continuity detected
B	C	Continuity detected
C	A	6.9
C	B	∞

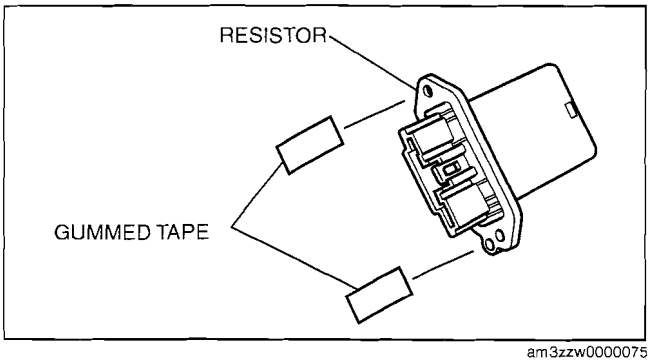


am3zzw0000143

RESISTOR REMOVAL/INSTALLATION

id074000800700

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the following parts:
   (1) Side wall (See 09-17-9 SIDE WALL REMOVAL/INSTALLATION.)
   (2) Accelerator pedal
4. Disconnect the blower motor cooling pipe connected to the blower motor.
5. Disconnect the resistor connector.
6. Remove the resistor.
7. Affix the gummed tape to the thread hole area as shown in the figure. (Do not wrap the packing tape around the backside of the resistor.)

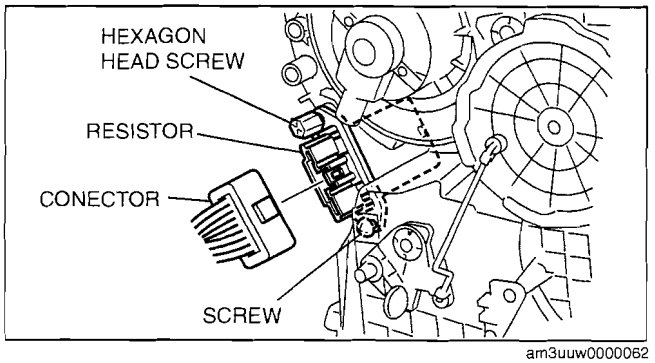


am3zzw0000075

8. Stick the screw into the thread hole.
9. Set the resistor to the A/C unit and temporarily tighten the hexagon head screw.

Caution

- **While setting the resistor, be careful not to damage the pattern surface. Otherwise it could cause a resistor operation malfunction.**



am3uuw0000062

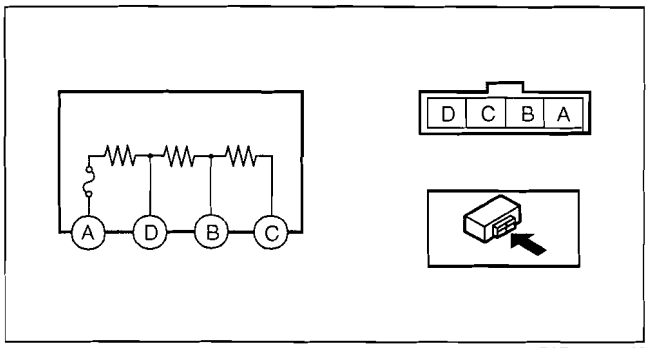
10. Tighten the lower screw.
11. Tighten the hexagon head screw.
12. Connect the resistor connector.
13. Connect the blower motor cooling pipe.
14. Install the following parts:
    (1) Accelerator pedal
    (2) Side wall (See 09-17-9 SIDE WALL REMOVAL/INSTALLATION.)
15. Connect the negative battery cable.
16. Install the battery cover.

RESISTOR INSPECTION

id074000800800

1. Verify that the resistance between the resistor terminals is as shown in the table.
   - If there is any malfunction, replace the resistor.

Terminal	Resistance (ohm)
A—D	0.27—0.30
A—B	1.30—1.49
A—C	2.10—2.40



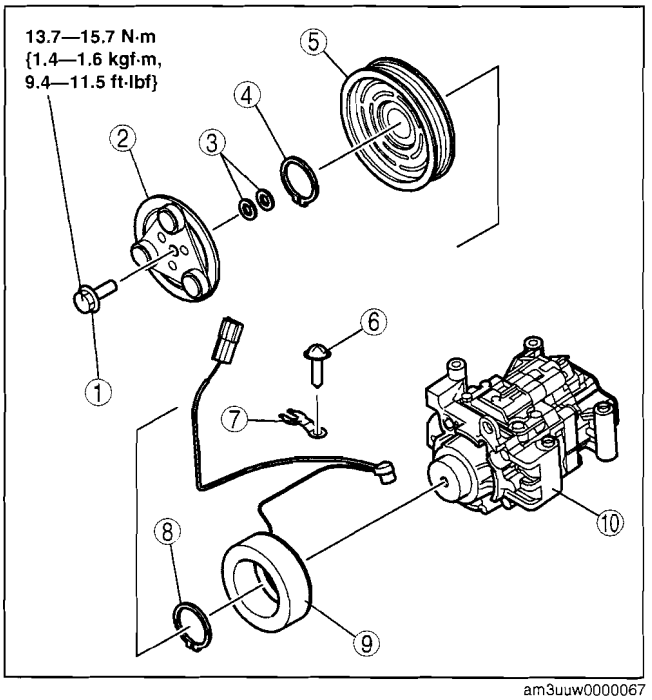
B3E0740W030

MAGNETIC CLUTCH DISASSEMBLY/ASSEMBLY[LF, L3]

id0740008004c2

1. Disassemble in the order indicated in the table.

1	Bolt (See 07-40-19 Bolt Removal/Installation Note.)
2	Pressure plate
3	Shim
4	Snap ring (See 07-40-20 Snap Ring Installation Note.)
5	A/C compressor pulley
6	Screw (See 07-40-20 Screw Installation Note.)
7	Clamp (See 07-40-20 Clamp Installation Note.)
8	Snap ring (See 07-40-20 Snap Ring Installation Note.)
9	Stator and thermal protector (See 07-40-19 Stator and Thermal Protector Removal Note.) (See 07-40-20 Stator and Thermal Protector Installation Note.)
10	A/C compressor body

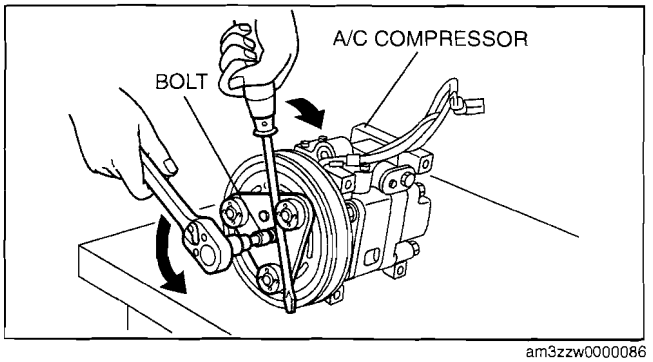


am3uuw0000067

2. Assemble in the reverse order of disassembly.
3. Adjust the magnetic clutch clearance. (See 07-40-21 MAGNETIC CLUTCH ADJUSTMENT.)

Bolt Removal/Installation Note

1. When removing or installing the bolt, hold the pressure plate in place as shown in the figure.
2. When installing a new A/C compressor body, replace the recommended bolt.



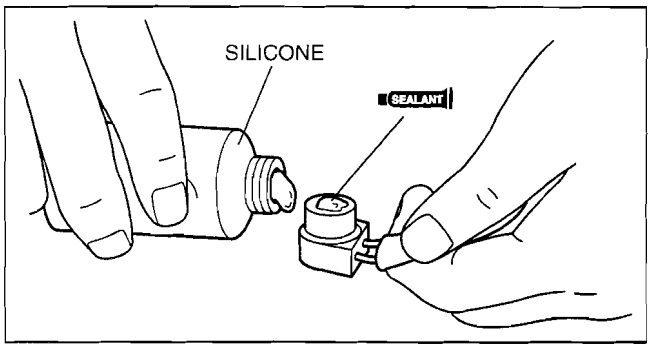
am3zzw0000086

Stator and Thermal Protector Removal Note

1. After removing the stator and thermal protector, completely remove the silicone adhering to the A/C compressor side.

Stator and Thermal Protector Installation Note

1. Apply **approx. 1 g {0.04 oz}** of silicone (Shin-Etsu Silicone KE-347W or similar) to the contact surface of the thermal protector, then thoroughly install it onto the A/C compressor, leaving no gaps.



am3zzw0000086

Screw Installation Note

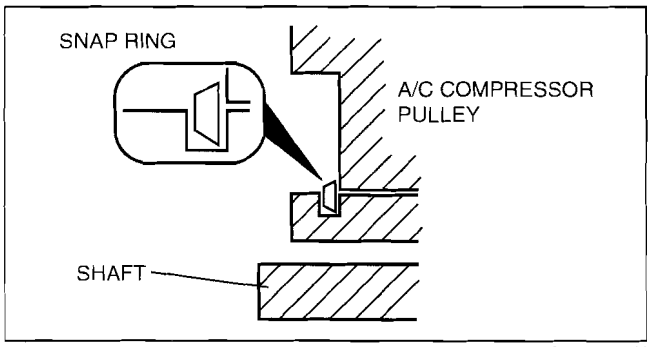
1. When installing a new stator and thermal protector, replace the screw.

Clamp Installation Note

1. When installing a new stator and thermal protector, replace the clamp.

Snap Ring Installation Note

1. When installing a new pressure plate, A/C compressor pulley, stator, or A/C compressor body, replace the snap ring.



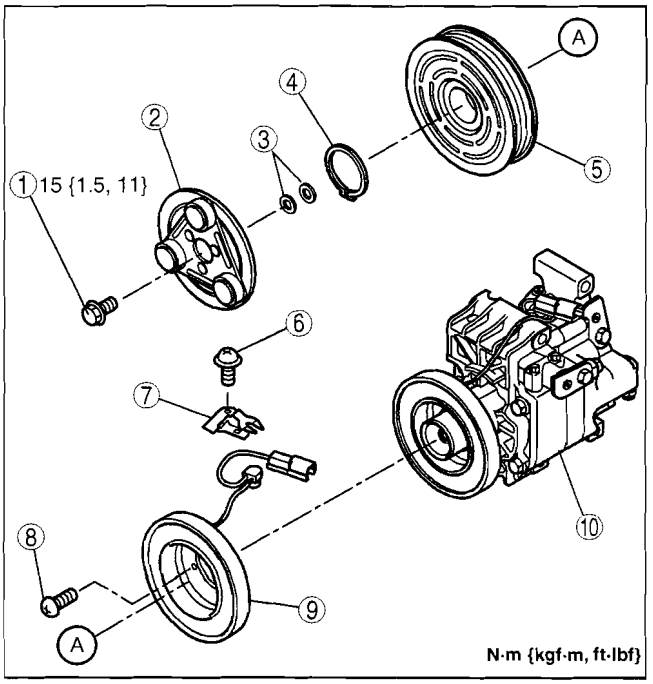
am3zzw0000086

MAGNETIC CLUTCH DISASSEMBLY/ASSEMBLY[L3 WITH TC]

id074000800439

1. Disassemble in the order indicated in the table.

1	Bolt (See 07-40-21 Bolt Removal/Installation Note.)
2	Pressure plate
3	Shim
4	Snap ring (See 07-40-20 MAGNETIC CLUTCH DISASSEMBLY/ASSEMBLY[L3 WITH TC].)
5	A/C compressor pulley
6	Screw (See 07-40-20 MAGNETIC CLUTCH DISASSEMBLY/ASSEMBLY[L3 WITH TC].)
7	Clamp (See 07-40-20 MAGNETIC CLUTCH DISASSEMBLY/ASSEMBLY[L3 WITH TC].)
8	Screw
9	Stator and thermal protector (See 07-40-20 MAGNETIC CLUTCH DISASSEMBLY/ASSEMBLY[L3 WITH TC].)
10	A/C compressor body



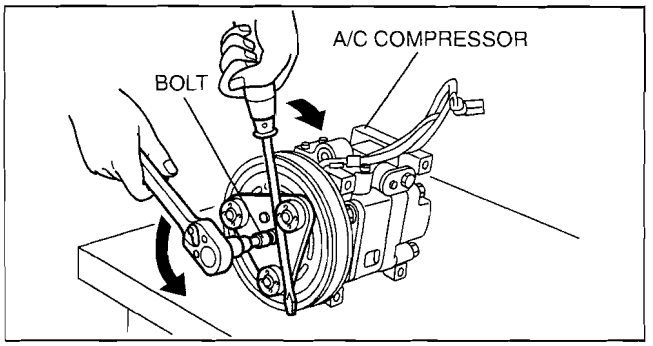
am3uuw0000062

2. Assemble in the reverse order of disassembly.
3. Adjust the magnetic clutch clearance. (See 07-40-21 MAGNETIC CLUTCH ADJUSTMENT.)

Bolt Removal/Installation Note

Note
- If there are only 2 prepackaged bolts available when replacing the compression with a repair part, select bolts from the replaced unit of the same length as the prepackaged bolts.

1. When removing or installing the bolt, hold the pressure plate in place as shown in the figure.
2. When installing a new A/C compressor body, replace the bolt.

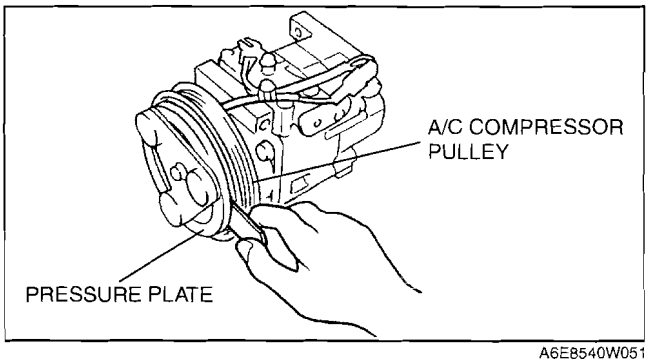


am3zzw0000086

MAGNETIC CLUTCH ADJUSTMENT

id074000800500

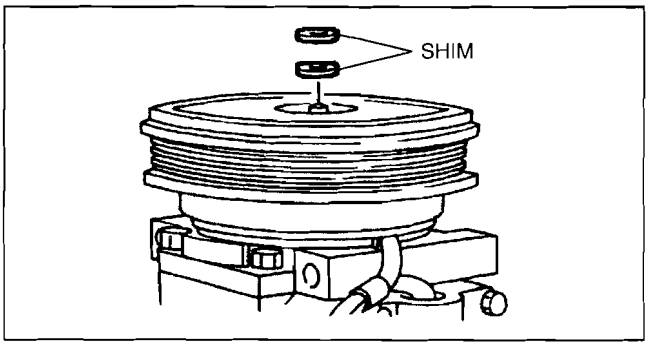
1. Measure the clearance around the entire circumference between the pressure plate and A/C compressor pulley using a thickness gauge.



A6E8540W051

2. Verify that the clearance.
   - If not within the specification, remove the pressure plate and adjust the clearance by changing the shim (**0.2 mm {0.008 in}, 0.5 mm {0.02 in}**) or the number of shims.

Clearance
0.3—0.5 mm {0.012—0.019 in}

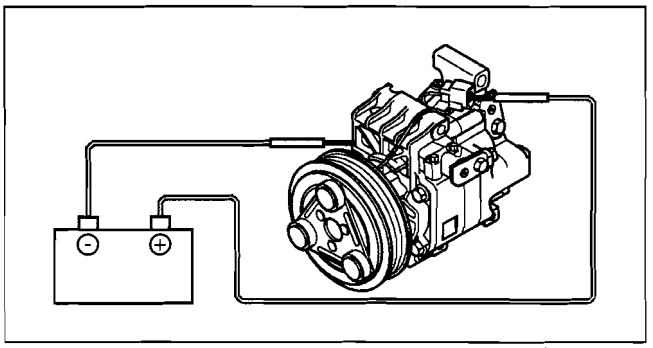


a6e8540w052

MAGNETIC CLUTCH INSPECTION[L3 WITH TC]

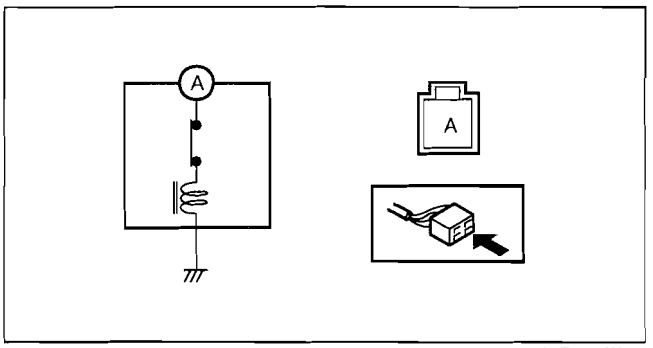
id074000800639

1. Connect battery positive voltage to terminal A of magnetic clutch and ground to A/C compressor body.



A6E8540W015

2. Verify that the magnetic clutch operates.
   - If there is any malfunction, replace the stator and thermal protector.

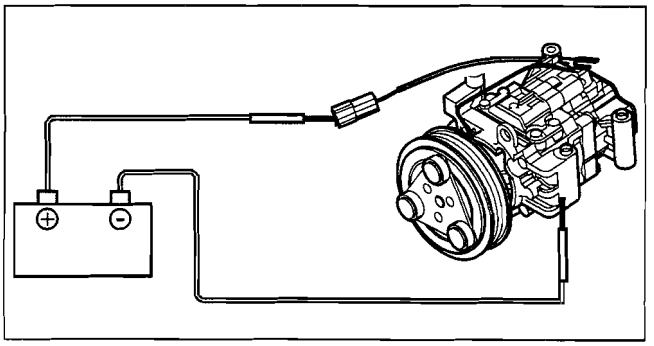


A6E8540W016

MAGNETIC CLUTCH INSPECTION[LF, L3]

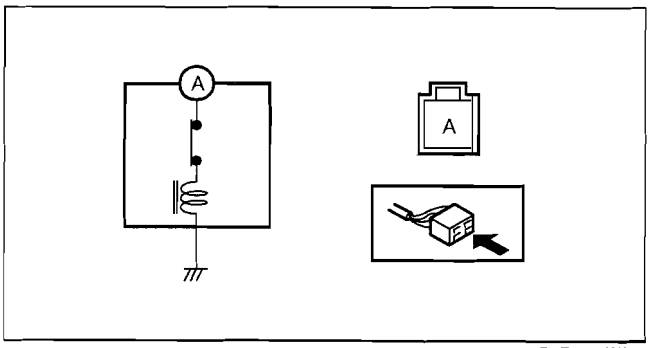
id0740008006c2

1. Connect battery positive voltage to magnetic clutch terminal A and the A/C compressor body to ground.



B3E0740W064

2. Verify that the magnetic clutch operates.
   - If there is any malfunction, replace the stator and thermal protector.



B3E0740W034

SOLAR RADIATION SENSOR REMOVAL/INSTALLATION

id074000802800

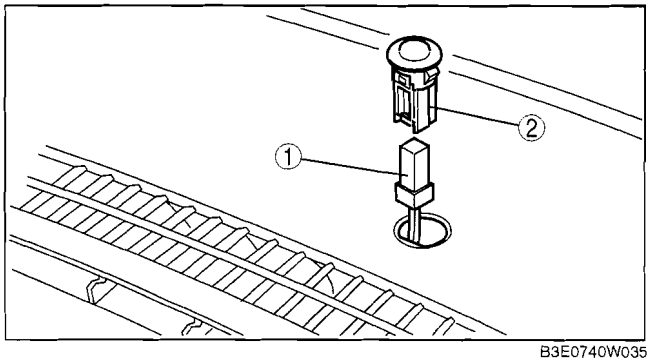
1. Disconnect the negative battery cable.
2. Pry the solar radiation sensor from the dashboard using a flathead screwdriver wrapped with protective tape.
3. Remove in the order indicated in the table.

Caution

- **After the solar radiation sensor removal, the sensor connector could fall in the dashboard making the installation difficult. Therefore, hold the rooted end of the sensor connector using a clip or similar tool to prevent it from falling.**

1	Solar radiation sensor connector
2	Solar radiation sensor

4. Install in the reverse order of removal.

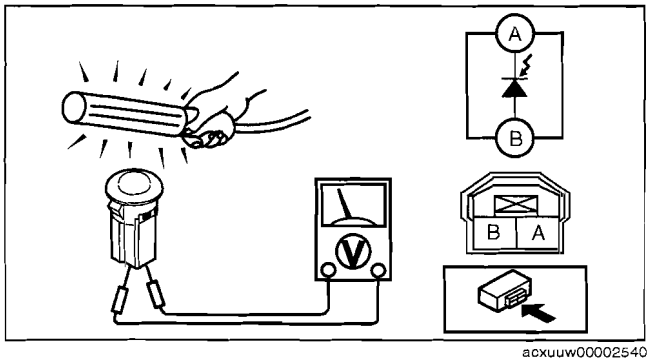


B3E0740W035

SOLAR RADIATION SENSOR INSPECTION

id074000802900

1. Shine a fluorescent light or expose the solar radiation sensor to natural sunlight.
2. Connect the positive (+) lead to terminal A and the negative (–) lead to terminal B of the solar radiation sensor, and verify that the voltages are as shown in the table.
   - If the voltage is not as specified, replace the solar radiation sensor.



acxuuw00002540

O—O: Continuity

Test condition	Voltage (V)
Sensor subject to fluorescent light or natural sunlight	0.1—0.45
Sensor covered by a cloth	0.1 or less

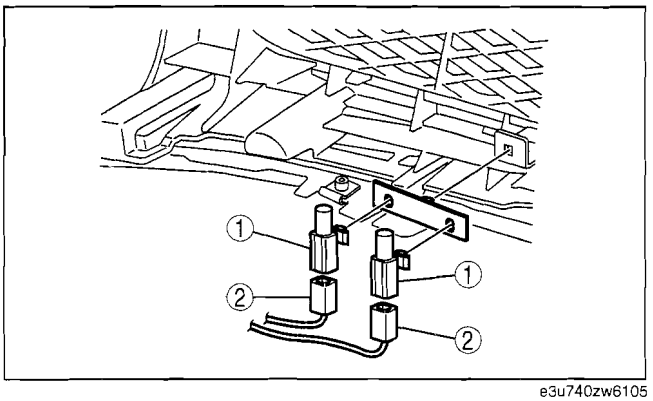
acxuuw00002541

AMBIENT TEMPERATURE SENSOR REMOVAL/INSTALLATION

id074000803200

1. Disconnect the negative battery cable.
2. Remove in the order indicated in the table.

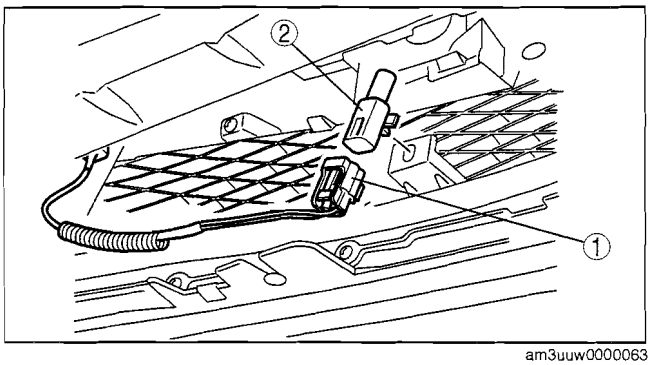
LF, L3



e3u740zw6105

L3 with TC

1	Ambient temperature sensor connector
2	Ambient temperature sensor



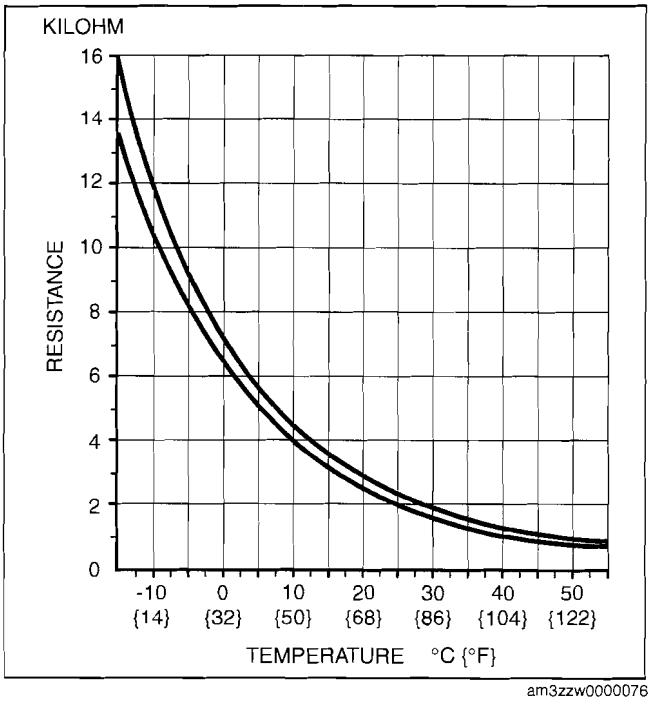
am3uuw0000063

3. Install in the reverse order of removal.

AMBIENT TEMPERATURE SENSOR INSPECTION

id074000803300

1. Measure the temperature around the ambient temperature sensor and measure the resistance between the ambient temperature sensor terminal.
   - If the characteristics of the ambient temperature sensor are not as shown in the graph, replace the ambient temperature sensor.



am3zzw0000076

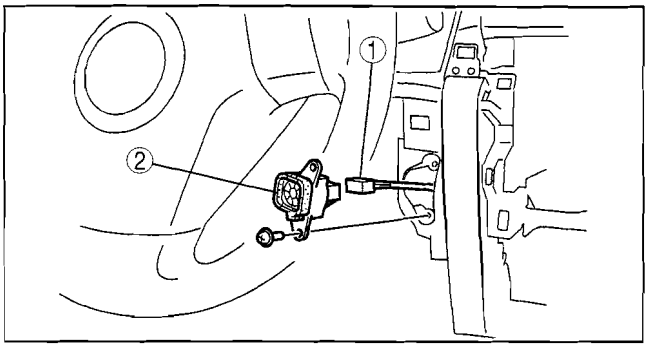
PASSENGER COMPARTMENT TEMPERATURE SENSOR REMOVAL/INSTALLATION

id074000803000

1. Disconnect the negative battery cable.
2. Remove the lower panel. (See 09-17-7 LOWER PANEL REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.

1	Passenger compartment temperature sensor connector
2	Passenger compartment temperature sensor

4. install in the reverse order of removal.

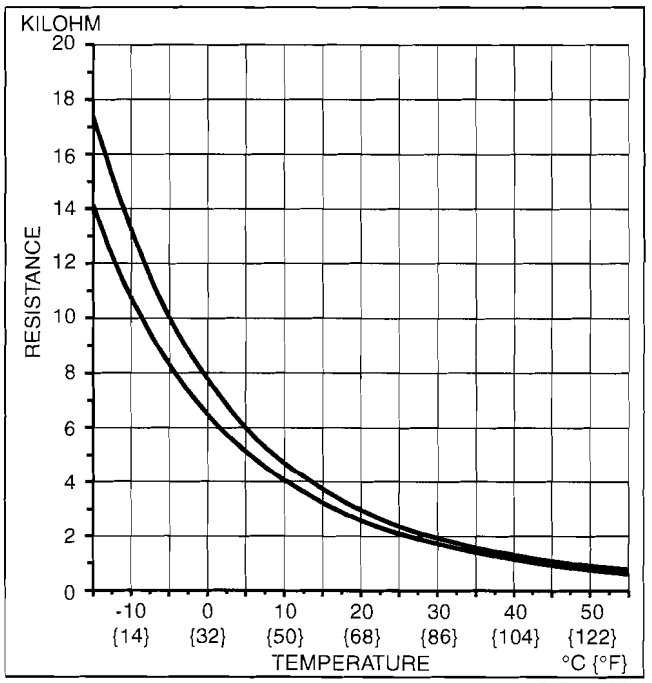


B3E0740W038

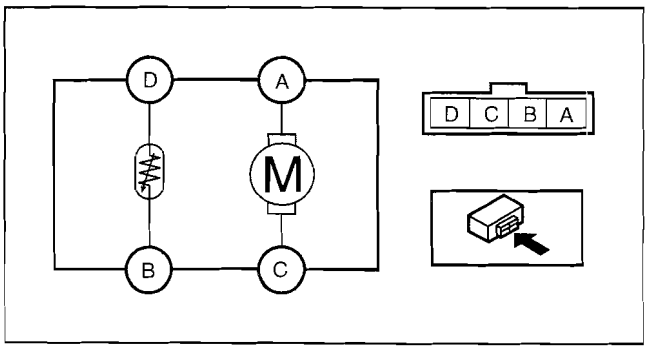
PASSENGER COMPARTMENT TEMPERATURE SENSOR INSPECTION

id074000803100

1. Measure the temperature around the passenger compartment temperature sensor and measure the resistance between passenger compartment temperature sensor terminals B and D.
   - If the characteristics of the passenger compartment temperature sensor are not as shown in the graph, replace the passenger compartment temperature sensor.
2. Connect battery positive voltage to passenger compartment temperature sensor terminal A and connect terminal C to ground to verify fan operation.
   - If there is any malfunction, replace the passenger compartment temperature sensor.



B3E0740W039



B3E0740W040

07-40

EVAPORATOR TEMPERATURE SENSOR REMOVAL/INSTALLATION

id074000801100

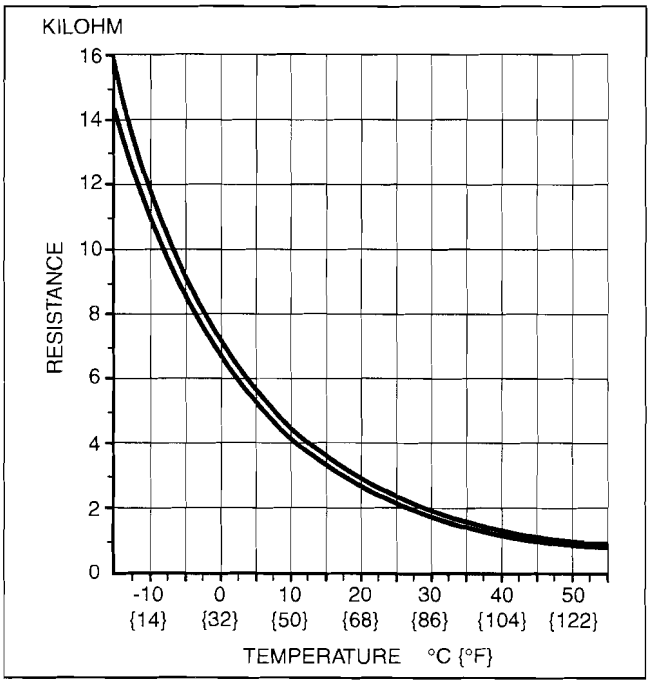
1. Remove the evaporator temperature sensor from the A/C unit. (See 07-11-7 A/C UNIT DISASSEMBLY/ASSEMBLY[FULL-AUTO AIR CONDITIONER].) (See 07-11-10 A/C UNIT DISASSEMBLY/ASSEMBLY[MANUAL AIR CONDITIONER].)

EVAPORATOR TEMPERATURE SENSOR INSPECTION

id074000801200

Note
- Inspect the evaporator temperature sensor when it is installed to the A/C unit.

1. Set the fan speed MAX HI.
2. Set the temperature control at MAX COLD.
3. Set the RECIRCULATE mode.
4. Turn the A/C switch off.
5. Close all doors and windows.
6. Wait for **5 min**.
7. Disconnect the evaporator temperature sensor connector.
8. Measure the temperature at the blower inlet.
9. Measure the resistance between the evaporator temperature sensor terminals.
   - If the resistance is not as shown in the graph, replace the evaporator temperature sensor.



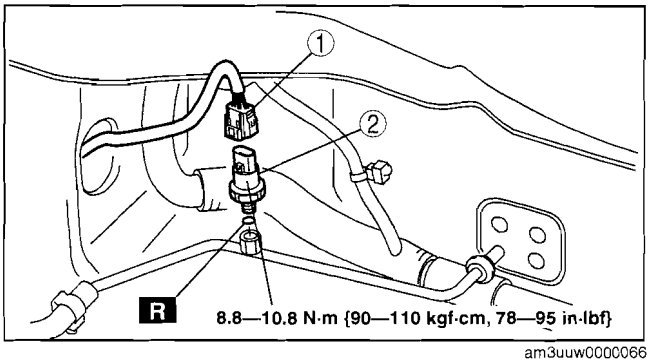
am3zzw0000075

REFRIGERANT PRESSURE SWITCH REMOVAL/INSTALLATION

id074000802600

1. Disconnect the negative battery cable.
2. Discharge the refrigerant from the system. (See 07-10-2 REFRIGERANT CHARGING.)
3. Remove the P/S fluid reserve tank. (L3 with TC)
4. Remove the coolant reserve tank. (L3 with TC)
5. Loosen the refrigerant pressure switch using two spanners.
6. Remove in the order indicated in the table.

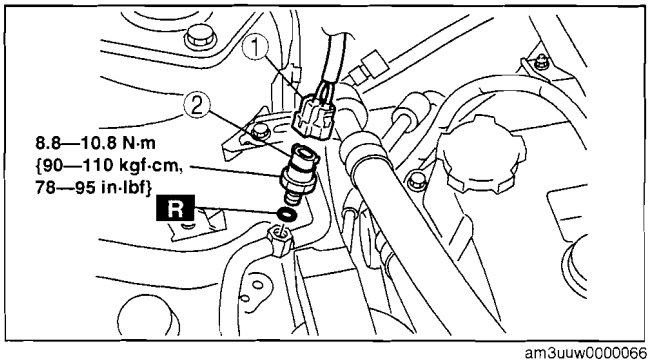
LF, L3



am3uuw0000066

L3 with TC

1	Refrigerant pressure switch connector
2	Refrigerant pressure switch (See 07-40-27 Refrigerant Pressure Switch Installation Note.)



am3uuw0000066

7. Install in the reverse order of removal.

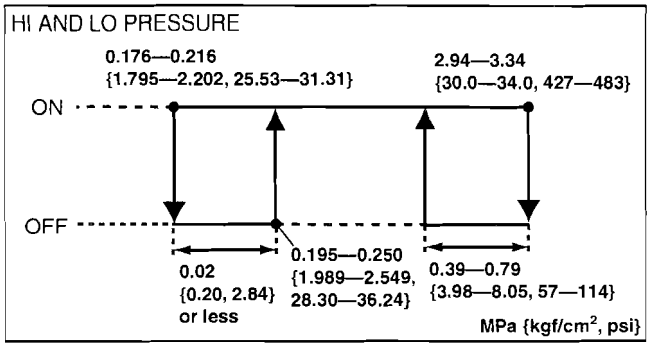
Refrigerant Pressure Switch Installation Note

1. Apply compressor oil to O-ring and connect the joint.

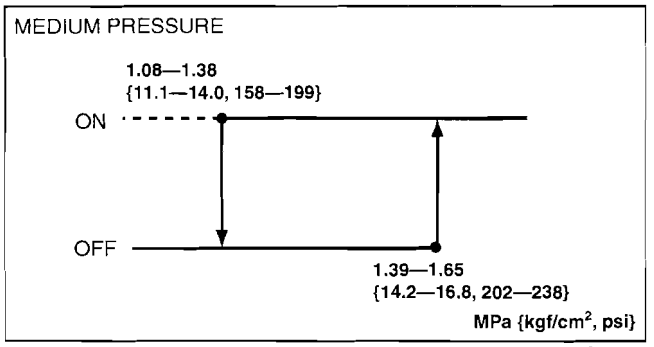
REFRIGERANT PRESSURE SWITCH INSPECTION

id074000802700

1. Install the gas charging set.
2. Disconnect the refrigerant pressure switch connector.
3. Verify the high-pressure side reading of the manifold gauge and continuity between the refrigerant pressure switch terminals.
   - If there is any malfunction, replace the refrigerant pressure switch.



am3zzw0000076



am3uuw0000066

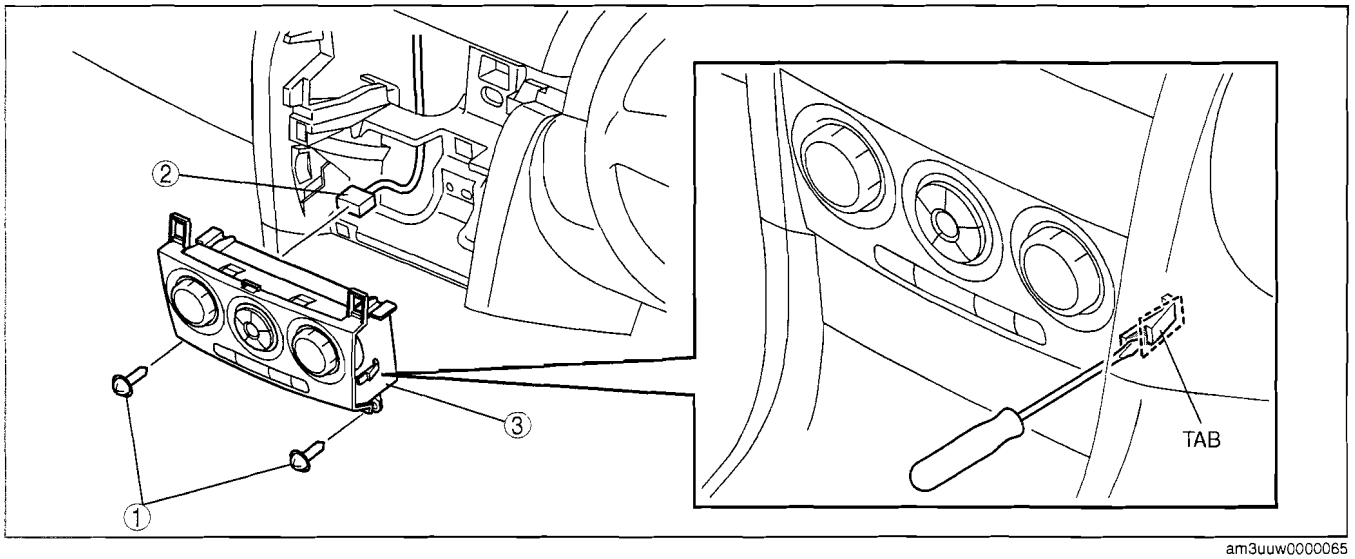
CLIMATE CONTROL UNIT REMOVAL/INSTALLATION[FULL-AUTO AIR CONDITIONER]

id0740008074a1

1. Disconnect the negative battery cable.
2. Remove the ashtray panel.
3. Remove the console. (See 09-17-10 CONSOLE REMOVAL/INSTALLATION.)
4. Remove the decoration panel. (See 09-17-17 DECORATION PANEL REMOVAL/INSTALLATION.)
5. Remove the center panel module. (See 09-20-4 CENTER PANEL UNIT REMOVAL/INSTALLATION.)
6. Release the left and right tabs and remove as shown in the figure.



am3uuw0000065

1	Screw
2	Climate control unit connector

3	Climate control unit

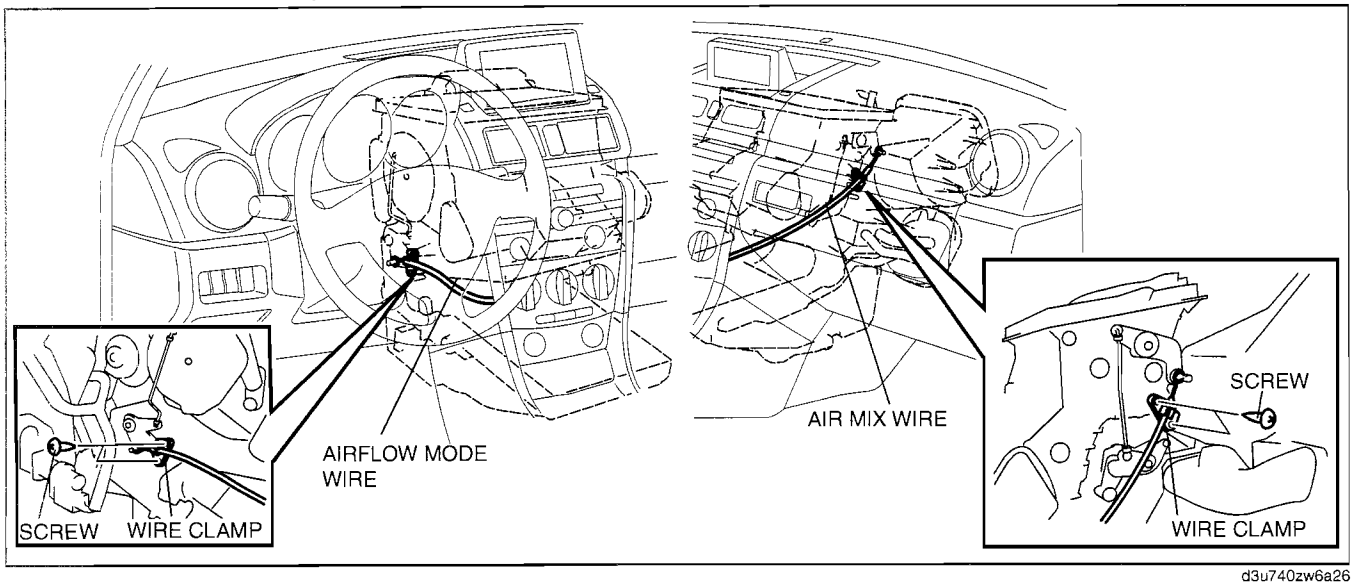
7. Install in the reverse order of removal.

CLIMATE CONTROL UNIT REMOVAL[MANUAL AIR CONDITIONER]

id0740008018a2

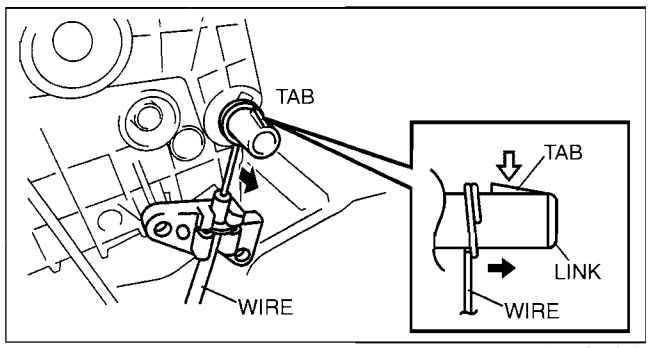
1. Disconnect the negative battery cable.
2. Remove the following parts:
   (1) Ashtray panel
   (2) Detach the hood release lever from the lower panel. (See 09-14-22 HOOD LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
   (3) Front scuff plate (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (4) Front side trim (See 09-17-17 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (5) Lower panel (See 09-17-7 LOWER PANEL REMOVAL/INSTALLATION.)
   (6) Decoration panel (See 09-17-17 DECORATION PANEL REMOVAL/INSTALLATION.)
   (7) Glove compartment (See 09-17-7 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
   (8) PJB and PJB bracket (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
   (9) Console (See 09-17-10 CONSOLE REMOVAL/INSTALLATION.)
3. Detach the PJB wiring harness clamp from the dashboard.
4. Remove the center panel module. (See 09-20-4 CENTER PANEL UNIT REMOVAL/INSTALLATION.)

5. Remove the wire clamp screws from the A/C unit at the positions shown in the figure.

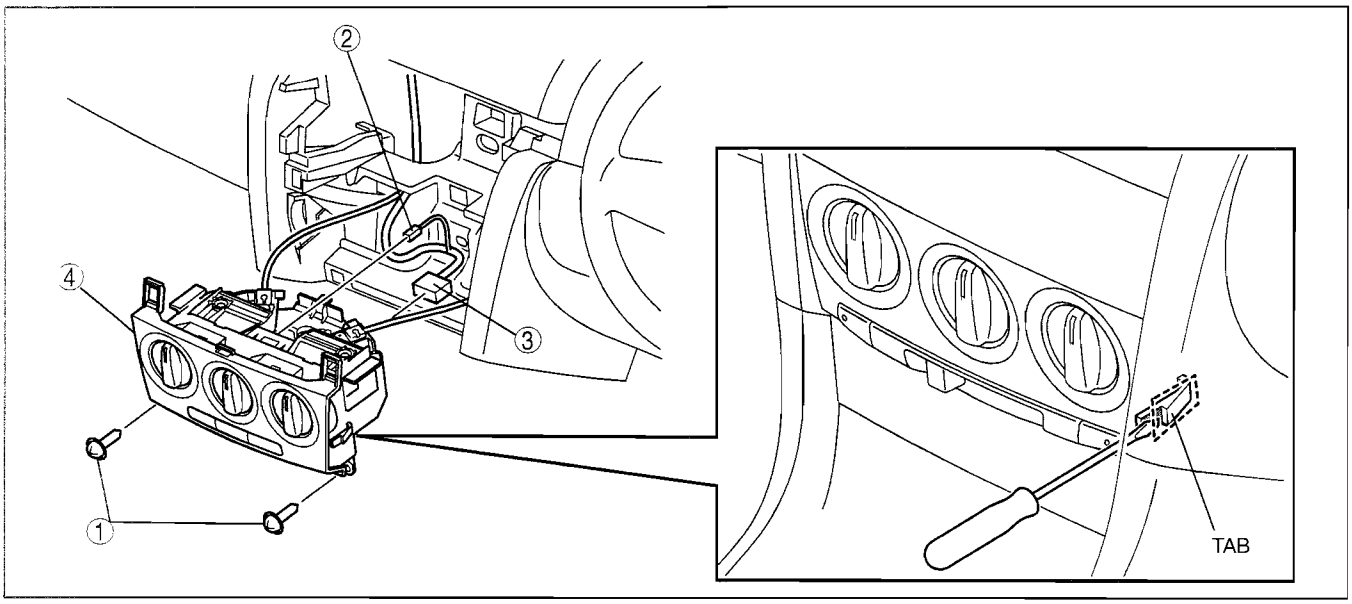


d3u740zw6a26

6. Remove the air mix wire and airflow mode wire.
   (1) Pull the wire in the direction shown by the arrow and remove it while pressing the link tab.
7. Release the left and right tabs and remove in the order indicated in the table.



d3u740zw6a27

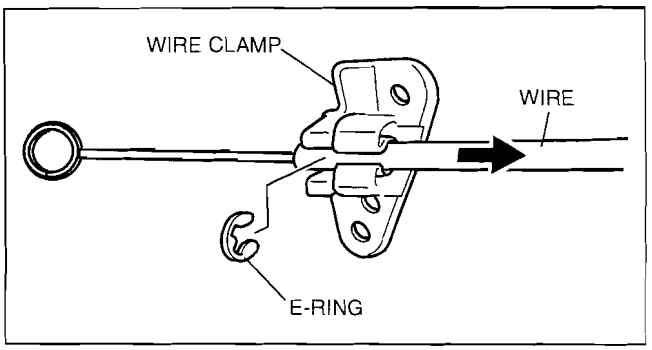


am3uuw0000066

1	Screw
2	Fan switch connector

3	Climate control unit connector
4	Climate control unit

8. Remove the E-rings from the air mix wire and airflow mode wire, slide the wires in the direction shown by the arrow, then remove the wire clamps from the air mix wire and airflow mode wire.

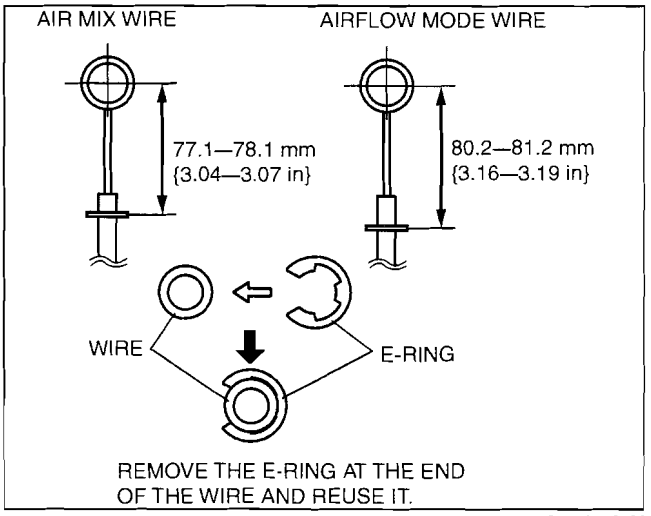


d3u740zw6a10

CLIMATE CONTROL UNIT INSTALLATION[MANUAL AIR CONDITIONER]

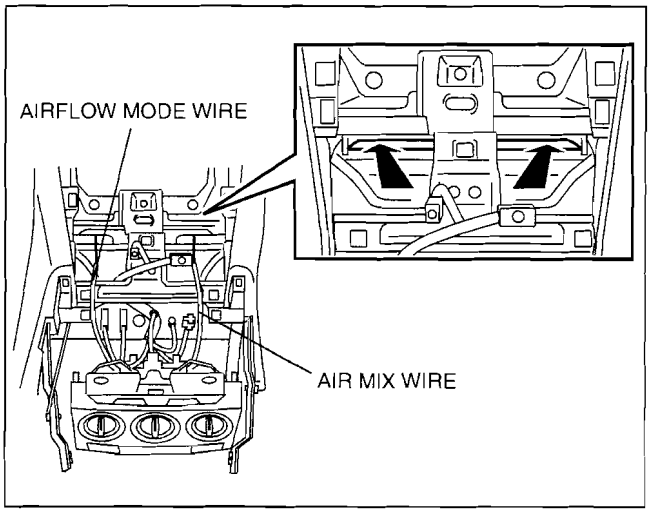
id0740008019a2

1. Install the wire clamp to the A/C unit.
2. Set the temperature control dial at MAX COLD.
3. Set the airflow mode selector dial at defroster.
4. Install the E-rings to each position on the wires shown in the figure.



e3u740zw6a20

5. Pass each wire through the following routes and connect to A/C unit.
6. Connect the climate control unit connectors.
7. Install the climate control unit.
8. Adjust the climate control unit wires. (See 07-40-33 CLIMATE CONTROL UNIT WIRE ADJUSTMENT.)
9. Install the center panel module.
10. Attach the PJB wiring harness clamp to dashboard.
11. Install the following parts:
    (1) Console (See 09-17-10 CONSOLE REMOVAL/INSTALLATION.)
    (2) PJB and PJB bracket. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
    (3) Glove compartment (See 09-17-7 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
    (4) Decoration panel (See 09-17-17 DECORATION PANEL REMOVAL/INSTALLATION.)
    (5) Lower panel (See 09-17-7 LOWER PANEL REMOVAL/INSTALLATION.)
    (6) Front side trim (See 09-17-17 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
    (7) Front scuff plate (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
    (8) Detach the hood release lever from the lower panel. (See 09-14-22 HOOD LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
    (9) Ashtray panel
12. Connect the negative battery cable.



am3uuw0000066

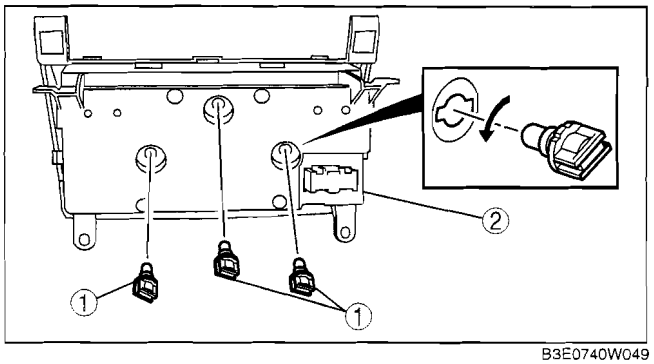
CLIMATE CONTROL UNIT DISASSEMBLY/ASSEMBLY[FULL-AUTO AIR CONDITIONER]

id0740008020a1

1. Disassemble in the order indicated in the table.

1	Bulb
2	Body

2. Assemble in the reverse order of disassembly.

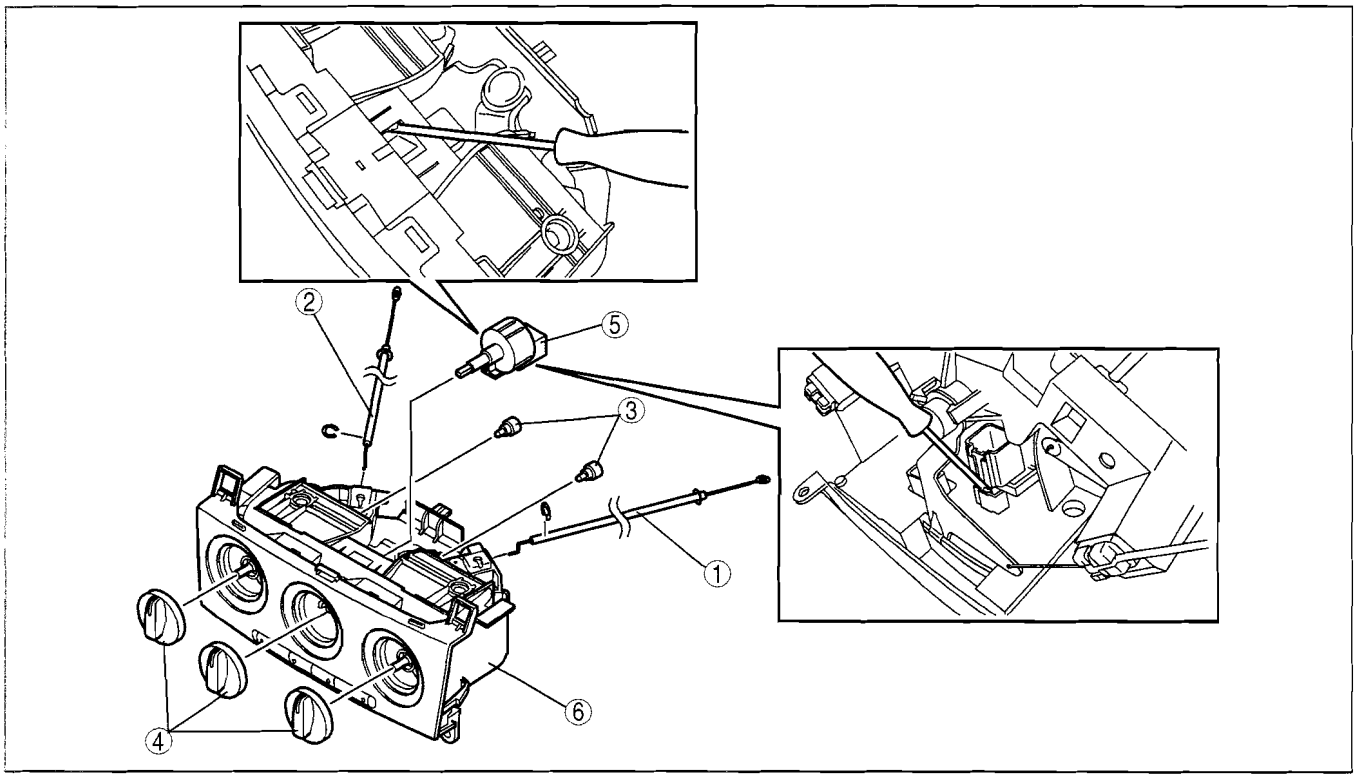


B3E0740W049

CLIMATE CONTROL UNIT DISASSEMBLY/ASSEMBLY[MANUAL AIR CONDITIONER]

id0740008020a2

1. Disassemble in the order indicated in the table.



am3uuw0000066

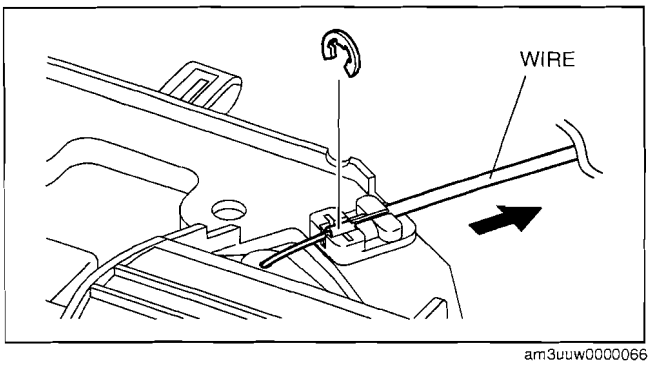
1	Air mix wire (See 07-40-33 Wire Disassembly Note.) (See 07-40-33 Wire Assembly Note.)
2	Airflow mode wire (See 07-40-33 Wire Disassembly Note.) (See 07-40-33 Wire Assembly Note.)

3	Illumination bulb
4	Knob
5	Fan switch
6	Body

2. Assemble in the reverse order of disassembly.

Wire Disassembly Note

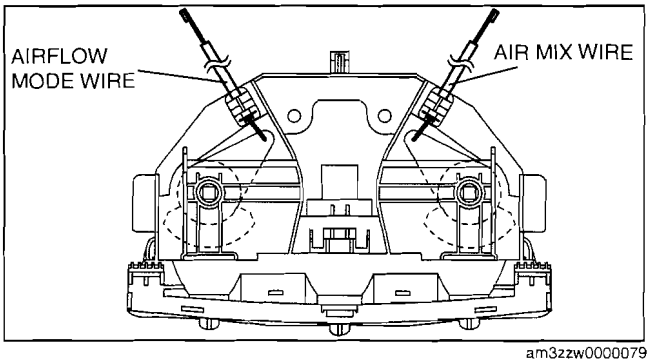
1. Disassemble the wires as shown in the figure.



am3uuw0000066

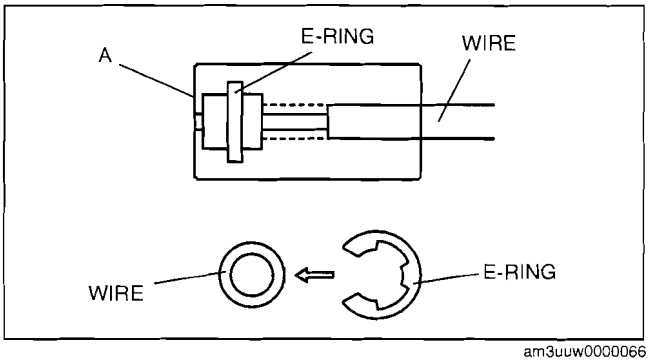
Wire Assembly Note

1. Assemble the wires at the positions shown in the figure.



am3zzw0000079

2. Assemble E-ring with the wire pressed against surface A.
   - If the E-ring has beer lost, the one at the wire end can be removed and reused.



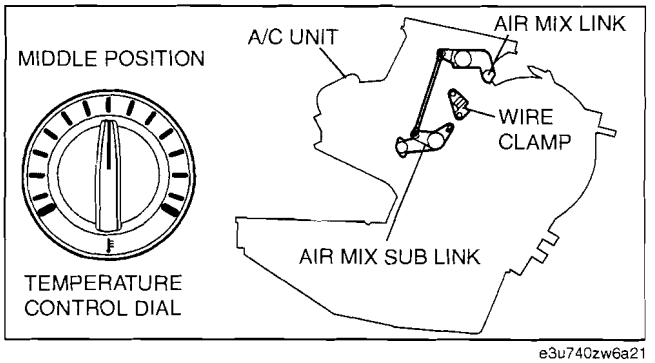
am3uuw0000066

CLIMATE CONTROL UNIT WIRE ADJUSTMENT

id074000802100

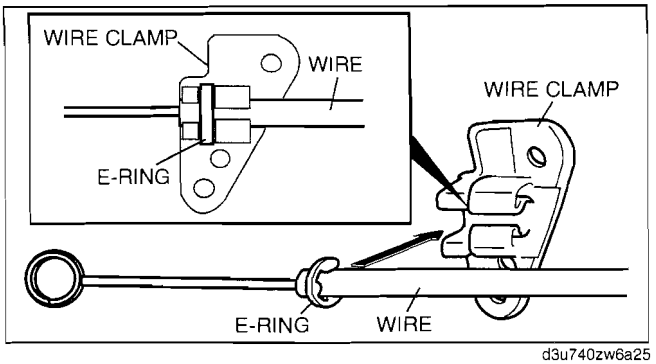
Air Mix Wire

1. Set the temperature control dial at middle position (MAX HOT—MAX COLD).
2. Connect the air mix wire to air mix link.



e3u740zw6a21

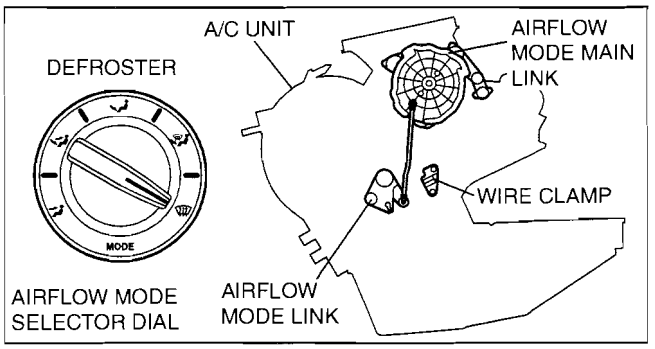
3. Install the air mix wire to the wire clamp as shown in the figure.
4. Remove the screwdriver and verify that the temperature control dial can move its full stroke.



d3u740zw6a25

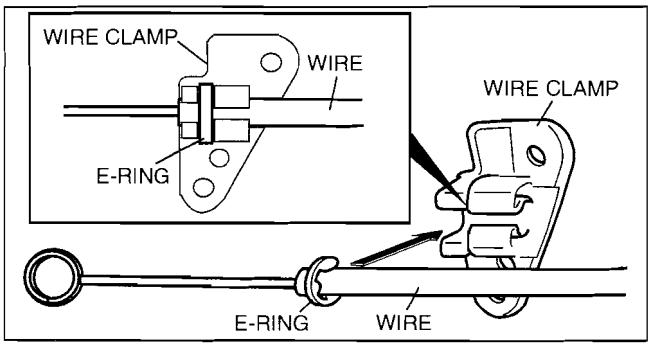
Airflow Mode Wire

1. Set the airflow mode selector dial at defroster.
2. Connect the airflow mode wire to airflow mode link.



e3u740zw6a22

3. Install the airflow mode wire to the wire clamp as shown in the figure.
4. Remove the screwdriver and verify that the airflow mode selector dial can move its full stroke.



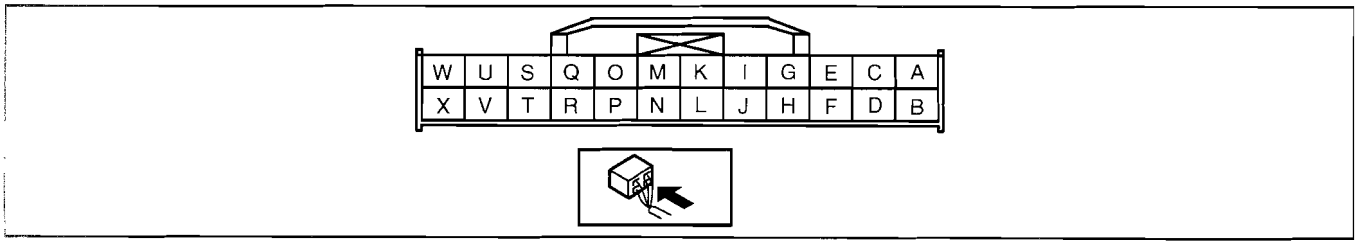
d3u740zw6a25

CLIMATE CONTROL UNIT INSPECTION[FULL-AUTO AIR CONDITIONER]

id0740008022a1

1. Turn the ignition switch to the ON position.
2. Connect the negative (-) lead of the tester to body ground.
3. By inserting the positive (+) lead of the tester into each climate control unit terminal, measure the voltage according to the terminal voltage table.
   - If there is any malfunction, inspect the parts under "Inspection item (s)".
     — If the parts under "Inspection item (s)" are found to be normal (except for terminal F), replace the climate control unit.
     — For terminal F, first try replacing the power MOS FET. If there is still any malfunction, replace the climate control unit.

Terminal Voltage Table (Reference)



am3uuw0000017

Terminal	Signal name	Connected to	Measurement condition	Voltage (V)	Inspection item (s)
A	TNS signal	PJB	Headlight switch OFF	1.0 or less	• Wiring harness: short circuit (Climate control unit—PJB: A—J-03 H) • Panel light control switch • Headlight switch
			Headlight switch ON	B+	• Wiring harness: continuity, short circuit (Climate control unit—PJB: A—J-03 H) • Panel light control switch • Headlight switch
B	TNS signal	Panel light control switch	Headlight switch ON and panel light control switch at max. illumination	1.0 or less	• Wiring harness: continuity (Climate control unit—panel light control switch: B—F) • Panel light control switch • Climate control unit: terminal voltage (A)
			Headlight switch ON and panel light control switch at min. illumination	12	• Wiring harness: short circuit (Climate control unit—panel light control switch: B—F)
C	Motor operation	Air mix actuator	Moving towards COLD	12	• Wiring harness: continuity, short circuit (Climate control unit—air mix actuator: C—D, E—F) • Air mix actuator
			Moving towards HOT	1.0 or less	
D	Blower fan speed control	Power MOS FET	Fan stopped	1.0 or less	• Climate control unit: terminal voltage (F)
			Fan: manual LO	2.9	
			Fan: manual HI	9.7	
E	Motor operation	Air mix actuator	fluorescent light shined directly on the solar radiation sensor	0.1—0.45	• Wiring harness: continuity, short circuit (Climate control unit—air mix actuator: E—F, C—D) • Air mix actuator
			Blocking light to solar radiation sensor	0.1 or less	
F	Blower motor feedback	• Blower motor • Power MOS FET	Fan stopped	B+	1. Wiring harness: continuity, short circuit (Climate control unit—blower motor: F—B) (Climate control unit—power MOS FET: F—B, D—C) (Blower motor—blower relay: A—E) (Blower relay—fuse: A—HEATER 40 A, B—A/C 10 A) 2. Wiring harness: continuity (Power MOS FET—body ground: A—GND) (Blower relay—body ground: D—GND) 3. Power MOS FET 4. Blower motor 5. Blower relay 6. A/C 10 A fuse 7. HEATER 40 A fuse 8. Power MOS FET replacement
			Fan: manual LO	9.8	
			Fan: manual HI	0.5	
G	Motor operation	Airflow mode actuator	Switched to DEFROSTER	12	• Wiring harness: continuity, short circuit (Climate control unit—airflow mode actuator: G—D, I—F) • Airflow mode actuator
			Switched to VENT	1.0 or less	
H	—	—	—	—	—
I	Motor operation	Airflow mode actuator	Switched to DEFROSTER	1.0 or less	• Wiring harness: continuity, short circuit (Climate control unit—airflow mode actuator: I—F, G—D) • Airflow mode actuator
			Switched to VENT	12	
J	B+	ROOM 15 A fuse	Under any condition	B+	• Wiring harness: continuity, short circuit (Climate control unit— fuse: J—ROOM 15 A) • ROOM 15 A fuse

Terminal	Signal name	Connected to	Measurement condition	Voltage (V)	Inspection item (s)
K	IG2	A/C 10 A fuse	IG SW ON	B+	• Wiring harness: continuity, short circuit (Climate control unit— fuse: K—A/C 10 A) • A/C 10 A fuse

08-02 ON-BOARD DIAGNOSTIC

FOREWORD

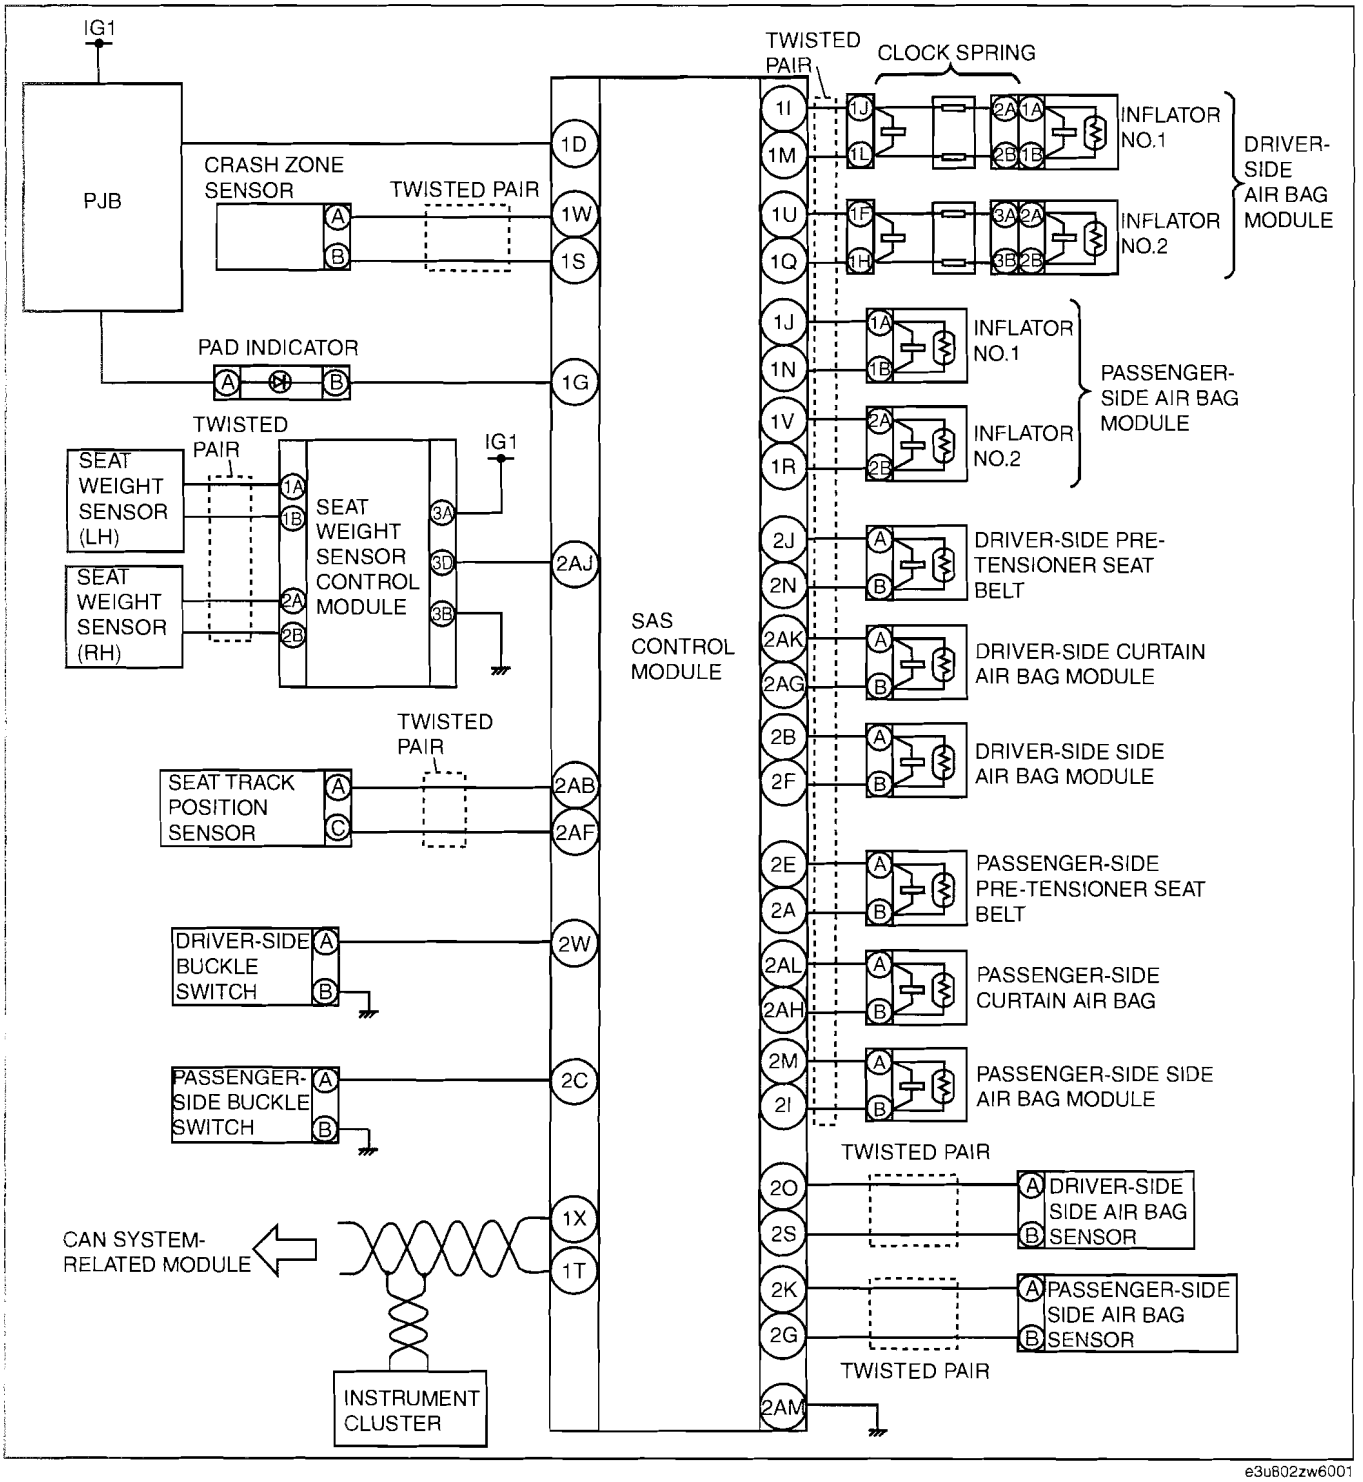
id080200800100

Outline

- The OBD (on-board diagnostic) system has the following functions:
  - — Malfunction detection function: Detects malfunctions in the air bag system and outputs DTCs.
  - — Data monitor function: Reads out specific input/output signals and the system status.
- Diagnostic DTCs can be read/cleared using the M-MDS.

AIR BAG SYSTEM WIRING DIAGRAM (ON-BOARD DIAGNOSTIC)

id080200808800

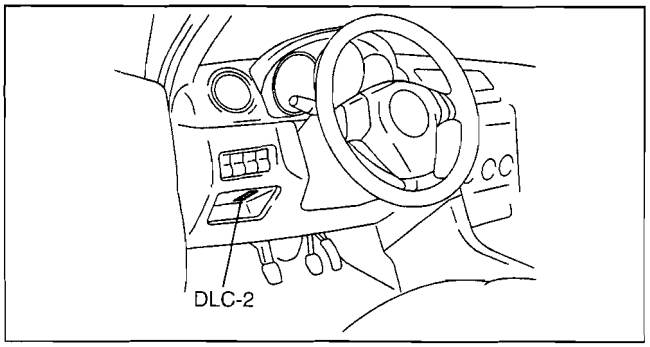


e3u802zw6001

DTC DISPLAY

id080200800400

1. Connect the M-MDS to the DLC-2 connector.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     - — Select the "Toolbox" tab.
     - — Select "Self Test".
     - — Select "Modules".
     - — Select "RCM".
   - When using the PDS (Pocket PC)
     - — Select "Module Tests".
     - — Select "RCM".
     - — Select "Self Test".
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
4. After completion of repairs, clear all DTCs stored in the SAS control module. (See 08-02-3 CLEARING DTC.)



am3uuw0000050

CLEARING DTC

id080200800500

1. After repairs have been made, retrieve DTCs.
2. Using the M-MDS, clear DTCs from the memory.
3. Perform the DTC inspection again and verify that no DTC is displayed.

DTC TABLE

id080200800600

08-02

DTC M-MDS display	System malfunction location	Page
B1013	Seat weight sensor calibration error	(See 08-02-8 DTC B1013.)
B1046	Driver-side curtain air bag module and other air bag module circuits short	(See 08-02-9 DTC B1046, B2773, B2774, B2775, B2776.)
B1047	Driver-side side air bag module and other air bag module circuits short	(See 08-02-10 DTC B1047, B1992, B1993, B1994, B1995.)
B1048	Passenger-side air bag module (inflator No.1) and other air bag module circuits short	(See 08-02-12 DTC B1048, B1925, B1933, B1935, B1938.)
B1049	Passenger-side pre-tensioner seat belt and other air bag module circuits short	(See 08-02-14 DTC B1049, B1881, B1882, B1883, B1886.)
B104B	Driver-side side air bag sensor and other sensor circuits short to power supply	(See 08-02-16 DTC B104B, B104E, B1051, U2017.)
B104C	Passenger-side side air bag sensor and other sensor circuits short to power supply	(See 08-02-18 DTC B104C, B104F, B1050, U2018.)
B104D	Crash zone sensor and other sensor circuits short to power supply	(See 08-02-20 DTC B104D, B2226, B2227, B2855.)
B104E	Driver-side side air bag sensor (internal circuit abnormal)	(See 08-02-16 DTC B104B, B104E, B1051, U2017.)
B104F	Passenger-side side air bag sensor (internal circuit abnormal)	(See 08-02-18 DTC B104C, B104F, B1050, U2018.)
B1050	Passenger-side side air bag sensor circuit open or short	
B1051	Driver-side side air bag sensor circuit open or short	(See 08-02-16 DTC B104B, B104E, B1051, U2017.)
B1052	Passenger-side front buckle switch and other sensor circuits short to power supply	(See 08-02-22 DTC B1051, U2017DTC B1052, B2436, B2437, B2438, B2439.)
B1053	Driver-side front buckle switch and other sensor circuits short to power supply	(See 08-02-24 DTC B1053, B2432, B2433, B2434, B2435.)
B1054	Driver-side pre-tensioner seat belt and other air bag module circuits short	(See 08-02-26 DTC B1054, B1877, B1878, B1879, B1885.)
B1055	Passenger-side side air bag module and other air bag module circuits short	(See 08-02-28 DTC B1055, B1996, B1997, B1998, B1999.)
B1056	Passenger-side curtain air bag module and other air bag module circuits short	(See 08-02-30 DTC B1056, B2777, B2778, B2779, B2780.)
B1057	Driver-side air bag module (inflator No.1) and other air bag module circuits short	(See 08-02-32 DTC B1057, B1916, B1932, B1934, B1936.)

DTC M-MDS display	System malfunction location	Page
B1058	Driver-side air bag module (inflator No.2) and other air bag module circuits short	(See 08-02-34 DTC B1058, B2228, B2230, B2232, B2234.)
B1059	Passenger-side air bag module (inflator No.2) and other air bag module circuits short	(See 08-02-36 DTC B1059, B2229, B2231, B2233, B2235.)
B105A	SAS control module activation (deployment) control frequency error	(See 08-02-38 DTC B105A.)
B1231	SAS control module activation (deployment) control freeze	(See 08-02-38 DTC B1231.)
B1317	SAS control module power supply voltage increases (16.1 V or more)	(See 08-02-38 DTC B1317, B1318.)
B1318	SAS control module power supply voltage decreases (less than 9 V)	
B1342	SAS control module	(See 08-02-40 DTC B1342.)
B1877	Driver-side pre-tensioner seat belt circuit resistance high	(See 08-02-26 DTC B1054, B1877, B1878, B1879, B1885.)
B1878	Driver-side pre-tensioner seat belt circuit short to power supply	
B1879	Driver-side pre-tensioner seat belt circuit short to body ground	
B1881	Passenger-side pre-tensioner seat belt circuit resistance high	(See 08-02-14 DTC B1049, B1881, B1882, B1883, B1886.)
B1882	Passenger-side pre-tensioner seat belt circuit short to power supply	
B1883	Passenger-side pre-tensioner seat belt circuit short to body ground	
B1884	Passenger air bag deactivation (PAD) indicator circuit open or short to body ground	(See 08-02-41 DTC B1884, B1890.)
B1885	Driver-side pre-tensioner seat belt circuit resistance low	(See 08-02-26 DTC B1054, B1877, B1878, B1879, B1885.)
B1886	Passenger-side pre-tensioner seat belt circuit resistance low	(See 08-02-14 DTC B1049, B1881, B1882, B1883, B1886.)
B1890	Passenger air bag deactivation (PAD) indicator circuit short to power supply	(See 08-02-41 DTC B1884, B1890.)
B1916	Driver-side air bag module (inflator No.1) circuit short to power supply	(See 08-02-32 DTC B1057, B1916, B1932, B1934, B1936.)
B1925	Passenger-side air bag module (inflator No.1) circuit short to power supply	(See 08-02-12 DTC B1048, B1925, B1933, B1935, B1938.)
B1932	Driver-side air bag module (inflator No.1) circuit resistance high	(See 08-02-32 DTC B1057, B1916, B1932, B1934, B1936.)
B1933	Passenger-side air bag module (inflator No.1) circuit resistance high	(See 08-02-12 DTC B1048, B1925, B1933, B1935, B1938.)
B1934	Driver-side air bag module (inflator No.1) circuit resistance low	(See 08-02-32 DTC B1057, B1916, B1932, B1934, B1936.)
B1935	Passenger-side air bag module (inflator No.1) circuit resistance low	(See 08-02-12 DTC B1048, B1925, B1933, B1935, B1938.)
B1936	Driver-side air bag module (inflator No.1) circuit short to body ground	(See 08-02-32 DTC B1057, B1916, B1932, B1934, B1936.)
B1938	Passenger-side air bag module (inflator No.1) circuit short to body ground	(See 08-02-12 DTC B1048, B1925, B1933, B1935, B1938.)
B1992	Driver-side side air bag module circuit short to power supply	(See 08-02-10 DTC B1047, B1992, B1993, B1994, B1995.)
B1993	Driver-side side air bag module circuit short to body ground	
B1994	Driver-side side air bag module circuit resistance high	
B1995	Driver-side side air bag module circuit resistance low	
B1996	Passenger-side side air bag module circuit short to power supply	(See 08-02-28 DTC B1055, B1996, B1997, B1998, B1999.)
B1997	Passenger-side side air bag module circuit short to body ground	
B1998	Passenger-side side air bag module circuit resistance high	
B1999	Passenger-side side air bag module circuit resistance low	
B2226	Crash zone sensor (internal circuit abnormal)	(See 08-02-20 DTC B104D, B2226, B2227, B2855.)
B2227	Crash zone sensor (communication error)	
B2228	Driver-side air bag module (inflator No.2) circuit short to body ground	(See 08-02-34 DTC B1058, B2228, B2230, B2232, B2234.)
B2229	Passenger-side air bag module (inflator No.2) circuit short to body ground	(See 08-02-36 DTC B1059, B2229, B2231, B2233, B2235.)
B2230	Driver-side air bag module (inflator No.2) circuit short to power supply	(See 08-02-34 DTC B1058, B2228, B2230, B2232, B2234.)
B2231	Passenger-side air bag module (inflator No.2) circuit short to power supply	(See 08-02-36 DTC B1059, B2229, B2231, B2233, B2235.)

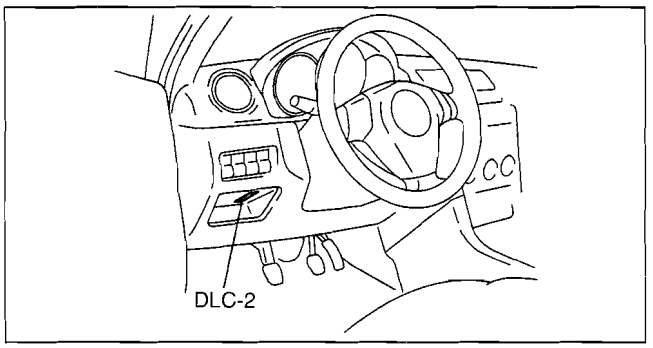
PID/DATA MONITOR DISPLAY

id080200800700

1. Connect the M-MDS to the DLC-2 connector.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     - — Select the "Toolbox" tab.
     - — Select "DataLogger".
     - — Select "Modules".
     - — Select "RCM".
   - When using the PDS (Pocket PC)
     - — Select "Module Tests".
     - — Select "RCM".
     - — Select "DataLogger".
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the directions on the screen.



am3uuw0000050

Note

- The PID data screen function is used for monitoring the calculated value. Therefore, if the monitored value of the output parts is not within the specification, inspection of the monitored value of input parts corresponding to applicable output part control is necessary. In addition, because the system does not display output part malfunction as abnormality in the monitored value, it is necessary to inspect the output part individually.

PID/DATA MONITOR TABLE

id080200800800

PID name (definition)	Unit/Condition	Operation Condition (Reference)	Terminal
CCNT_RCM (Number of continuous DTCs)	—	• DTCs detected: 1—255 • No DTCs detected: 0	—
CRSH_RC (Number of collisions detected)	—	• Collisions detected: 1—255 • No collisions detected: 0	—
D_ABAGR2 (Driver-side air bag module (inflator No.2) resistance)	Ohm	Under any condition: 1.5—3.7 ohms	1U, 1Q
DABAGR (Driver-side air bag module (inflator No.1) resistance)	Ohm	Under any condition: 1.5—3.7 ohms	1I, 1M
DFCURTRES (Driver-side curtain air bag module resistance)	Ohm	Under any condition: 1.4—3.2 ohms	2AG, 2AK
DR_BUKL (Driver-side buckle switch status)	Buckled/ Unbuckled	• Driver-side buckle switch on: Buckled • Driver-side buckle switch off: Unbuckled	2W
DR_PTENS (Driver-side pre-tensioner seat belt resistance)	Ohm	Under any condition: 1.5—3.1 ohms	2J, 2N
DS_AB (Driver-side side air bag module resistance)	Ohm	Under any condition: 1.4—3.2 ohms	2B, 2F

PID name (definition)	Unit/Condition	Operation Condition (Reference)	Terminal
OCS_CAL_ST* (Seat weight sensor calibration status)	Started/ Calibrated/ FL_Other/ FL_Voltage/ FL_Weight/ FL_Timeout/ In Progress FL_OCS	• Seat weight sensor calibration start-up: Started • Seat weight sensor calibration completed normally: Calibrated • Seat weight sensor calibration command being sent: FL_Other • Voltage malfunction during seat weight sensor calibration: FL_Voltage • Weight error during seat weight sensor calibration: FL_Weight • Seat weight sensor calibration time limit passed: FL_Timeout • Seat weight sensor calibration being processed: In Progress • Seat weight sensor or Seat weight sensor control module malfunction: FL_OCS	2AJ
OCS_DTC_ST* (Seat weight sensor status)	Started/ Cleared/ In Progress/ Failed	Fault information cleared at seat weight sensor	2AJ
OCS_FLT (Passenger sensing system status)	MOD_FAIL/ COMM_FAIL/ CAL_FAIL/ LHS_FAIL/ RHS_FAIL/ BTS_FAIL/ No_Fault	• Seat weight sensor control module malfunction: MOD_FAIL • Seat weight sensor control module communication error: COMM_FAIL • Seat weight sensor calibration error: CAL_FAIL • Seat weight sensor (LH) malfunction: LHS_FAIL • Seat weight sensor (RH) malfunction: RHS_FAIL • Passenger-side front buckle switch malfunction: BTS_FAIL • Passenger sensing system is normal: No_Fault	2AJ
OCSSTAT* (Seat weight sensor status)	Empty/ Below Threshold/ Indeterminate/ Above Throshold/ Invalid	Occupant classification status determined by seat weight sensor	2AJ
P_ABAGR2 (Passenger-side air bag module (inflator No.2) resistance)	Ohm	Under any condition: 1.4—2.9 ohms	1R, 1V
PABAGR (Passenger-side air bag module (inflator No.1) resistance)	Ohm	Under any condition: 1.4—2.9 ohms	1J, 1N
PFCURTRES (Passenger-side curtain air bag module resistance)	Ohm	Under any condition: 1.4—3.2 ohms	2AH, 2AL
PS_AB (Passenger-side side air bag module resistance)	Ohm	Under any condition: 1.4—3.2 ohms	2I, 2M
PS_BUKL (Passenger-side buckle switch status)	Buckled/ UNbuckled	• Passenger-side buckle switch on: Buckled • Passenger-side buckle switch off: Unbuckled	2C
PS_PTENS (Passenger-side pre-tensioner seat belt resistance)	Ohm	Under any condition: 1.5—3.1 ohms	2A, 2E
PS_WEIGHT (Seat weight sensor measured weight of passenger)	Kg	Display of load (body weight) on passenger-side seat	2AJ
TRAK_SW (Seat track position sensor state)	Forward/ Rearward	• Front seat front position: Forward • Front seat rear position: Rearward	2AB, 2AF
VBATTRCM (SAS control module input voltage)	V	Ignition switch is at ON: B+	1D

* : Used during seat weight sensor calibration setting. Not necessary for diagnostic.

DTC B1013

id080200800900

DTC B1013	Seat weight sensor calibration error
DETECTION CONDITION	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Calibration set value not within valid range.
POSSIBLE CAUSE	• Weight acting on passenger-side front seat during calibration • Improperly installed passenger-side front seat part at time of calibration • Deformed floor where attached to passenger-side front seat • Deformed passenger-side front seat under-bracket or frame • Seat weight sensor deformed or malfunction • Seat weight sensor control module malfunction • SAS control module malfunction

Diagnostic procedure

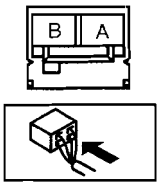
STEP	INSPECTION		ACTION
1	**INSPECT SEAT WEIGHT SENSOR** Properly install the passenger-side front seat. Inspect the seat weight sensor. (See 08-10-12 SEAT WEIGHT SENSOR CALIBRATION.) Is the seat weight sensor normal?	Yes	Replace the SAS control module. (See: 08-10-11 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	**INSPECT PASSENGER-SIDE FRONT SEAT** Turn the ignition switch to the LOCK position. Disconnect the negative battery cable and wait for **1 min or more**. Remove the passenger-side front seat and visually inspect for the following: — Seat under-bracket deformation — Seat frame deformation — Seat weight sensor deformation — Foreign objects stuck in seat Are any of the parts deformed or are any foreign objects stuck in the seat?	Yes	Replace any deformed parts or remove any foreign objects. • After replacement, perform seat weight sensor calibration and reperform the DTC inspection. If the DTC is displayed, go the next step. (See 08-10-12 SEAT WEIGHT SENSOR CALIBRATION.)
		No	Go to the next step.
3	**INSPECT FLOOR** Visually inspect the installation parts of the passenger-side front seat for the following: — Abnormal floor deformation — Installation hole of passenger-side front seat is improperly positioned Is the floor normal?	Yes	Go to the next step.
		No	Repair floor deformation. • After repair, perform seat weight sensor calibration and reperform the DTC inspection. If the DTC is displayed even though the floor has been repaired, go the next step. (See 08-10-12 SEAT WEIGHT SENSOR CALIBRATION.)
4	**INSPECT SEAT WEIGHT SENSOR CONTROL MODULE** Replace the seat weight sensor. After replacement, perform seat weight sensor calibration. (See 08-10-12 SEAT WEIGHT SENSOR CALIBRATION.) Reperform the DTC inspection. Is DTC B1013 indicated?	Yes	Replace the seat weight sensor control module. (See 08-10-12 SEAT WEIGHT SENSOR CONTROL MODULE REMOVAL/INSTALLATION.) • After replacement, perform seat weight sensor calibration and reperform the DTC inspection. If the DTC is displayed even though the seat weight sensor control module has been replaced, replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B1046, B2773, B2774, B2775, B2776

id080200808900

DTC	B1046	Driver-side curtain air bag module and other air bag module circuits short
	B2773	Driver-side curtain air bag module circuit resistance low
	B2774	Driver-side curtain air bag module circuit resistance high
	B2775	Driver-side curtain air bag module circuit short to body ground
	B2776	Driver-side curtain air bag module circuit short to power supply
DETECTION CONDITION		Warning • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Resistance other than **1.4—3.2 ohms** detected in driver-side curtain air bag module circuit • Malfunction in wiring harness between driver-side curtain air bag module and SAS control module
POSSIBLE CAUSE		• Open or short circuit in wiring harness between driver-side curtain air bag module and SAS control module • Driver-side curtain air bag module malfunction • SAS control module malfunction

DRIVER-SIDE CURTAIN AIR BAG MODULE
WIRING HARNESS-SIDE CONNECTOR



08-02

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT DRIVER-SIDE CURTAIN AIR BAG MODULE** • Using the M-MDS, verify the following PID/DATA monitor. (See 08-02-6 PID/DATA MONITOR TABLE.) — DFCURTRES • Is the resistance of the driver-side curtain air bag module normal? — Resistance: **1.4—3.2 ohms**	Yes	Replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	**INSPECT DRIVER-SIDE CURTAIN AIR BAG MODULE CONNECTOR** **Warning** • **Handling the air bag system components improperly can accidentally deploy the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** • Turn the ignition switch to the LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Disconnect the driver-side curtain air bag module connector. • Is there any malfunction of the driver-side curtain air bag module connector?	Yes	Replace the air bag wiring harness.
		No	Go to the next step.

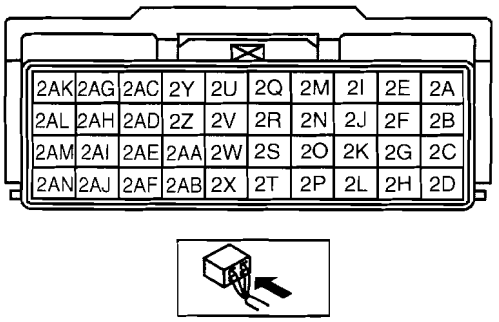
STEP	INSPECTION		ACTION
3	**VERIFY WHETHER MALFUNCTION IS IN DRIVER-SIDE CURTAIN AIR BAG MODULE OR RELATED WIRING HARNESS** • Connect the leads of the **SST** (Fuel and thermometer checker) or apply **2-ohm** resistance to driver-side curtain air bag module connector terminals A and B. • Set the resistance of the **SST** (Fuel and thermometer checker) to the **2-ohm** position. • Connect the negative battery cable. • Turn the ignition switch to the ON position. • Are DTCs B1046, B2773, B2774, B2775 and/or B2776 indicated?	Yes	Replace the air bag wiring harness, then go to the next step.
		No	Replace the driver-side curtain air bag module. (See 08-10-9 CURTAIN AIR BAG MODULE REMOVAL/ INSTALLATION.)
4	**INSPECT SAS CONTROL MODULE** • Turn the ignition switch to the LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Connect the driver-side curtain air bag module connector. • Are DTCs B1046, B2773, B2774, B2775 and/or B2776 indicated?	Yes	Replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/ INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B1047, B1992, B1993, B1994, B1995

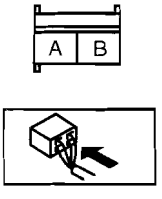
id080200809000

DTC	B1047	**Driver-side side air bag module and other air bag module circuits short**
	B1992	**Driver-side side air bag module circuit short to power supply**
	B1993	**Driver-side side air bag module circuit short to body ground**
	B1994	**Driver-side side air bag module circuit resistance high**
	B1995	**Driver-side side air bag module circuit resistance low**
DETECTION CONDITION	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Resistance other than **1.4—3.2 ohms** detected in driver-side side air bag module circuit • Malfunction in wiring harness between driver-side side air bag module and SAS control module	
POSSIBLE CAUSE	• Open or short circuit in wiring harness between driver-side side air bag module and SAS control module • Driver-side side air bag module malfunction • SAS control module malfunction	

SAS CONTROL MODULE WIRING HARNESS-SIDE CONNECTOR



DRIVER-SIDE SIDE AIR BAG MODULE WIRING HARNESS-SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT DRIVER-SIDE SIDE AIR BAG MODULE** • Using the M-MDS, verify the following PID/DATA monitor. (See 08-02-6 PID/DATA MONITOR TABLE.) — DS_AB • Is the resistance of the driver-side side air bag module normal? — Resistance: **1.4—3.2 ohms**	Yes	Replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	**INSPECT DRIVER-SIDE SIDE AIR BAG MODULE CONNECTOR** **Warning** • **Handling the air bag system components improperly can accidentally deploy the air bag modules and pre-tensioner seats belts, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag system components.** **(See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.)** **(See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** • Turn the ignition switch to the LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Disconnect the driver-side side air bag module connector. • Is there any malfunction of the driver-side side air bag module connector?	Yes	Replace the air bag wiring harness.
		No	Go to the next step.
3	**VERIFY WHETHER MALFUNCTION IS IN DRIVER-SIDE SIDE AIR BAG MODULE OR RELATED WIRING HARNESS** • Connect the leads of the **SST** (Fuel and thermometer checker) or apply **2-ohm** resistance to driver-side side air bag module connector terminals A and B. • Set the resistance of the **SST** (Fuel and thermometer checker) to the **2-ohm** position. • Connect the negative battery cable. • Turn the ignition switch to the ON position. • Are DTCs B1047, B1992, B1993, B1994, and/or B1995 indicated?	Yes	Go to the next step.
		No	Replace the driver-side side air bag module. (See 08-10-8 SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)

STEP	INSPECTION		ACTION
4	**INSPECT WIRING HARNESS BETWEEN DRIVER-SIDE SIDE AIR BAG MODULE AND SAS CONTROL MODULE** • Turn the ignition switch to the LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Remove the column cover. • Disconnect the clock spring connector. • Remove the glove compartment. • Disconnect the passenger-side air bag module connector. • Disconnect the driver and passenger-side front seat connectors. • Disconnect the driver and passenger-side curtain air bag module connectors. • Remove the B-pillar lower trim. • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. • Remove the console. • Inspect the wiring harness between SAS control module terminal 2B and driver-side side air bag module terminal A, SAS control module terminal 2F and driver-side side air bag module terminal B for the following: — Short to ground — Short to power supply — Open circuit • Is the wiring harness normal?	Yes	Replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/ INSTALLATION.)
		No	Replace the air bag wiring harness.

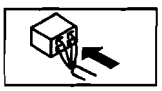
DTC B1048, B1925, B1933, B1935, B1938

id080200810600

DTC	B1048	**Passenger-side air bag module (inflator No.1) and other air bag module circuits short**
	B1925	**Passenger-side air bag module (inflator No.1) circuit short to power supply**
	B1933	**Passenger-side air bag module (inflator No.1) circuit resistance high**
	B1935	**Passenger-side air bag module (inflator No.1) circuit resistance low**
	B1938	**Passenger-side air bag module (inflator No.1) circuit short to body ground**
DETECTION CONDITION		Warning • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Resistance other than **1.4—2.9 ohms** detected in passenger-side air bag module (inflator No.1) circuit • Malfunction in wiring harness between passenger-side air bag module (inflator No.1) and SAS control module
POSSIBLE CAUSE		• Open or short circuit in wiring harness between passenger-side air bag module (inflator No.1) and SAS control module • Passenger-side air bag module (inflator No.1) malfunction • SAS control module malfunction

PASSENGER-SIDE AIR BAG MODULE WIRING HARNESS-SIDE CONNECTOR

(INFLATOR NO.1) (INFLATOR NO.2)



Diagnostic procedure

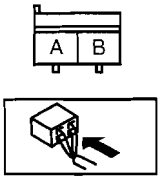
STEP	INSPECTION		ACTION
1	**INSPECT PASSENGER-SIDE AIR BAG MODULE (INFLATOR NO.1)** • Using the M-MDS, verify the following PID/DATA monitor. (See 08-02-6 PID/DATA MONITOR TABLE.) — PABAGR • Is the resistance of the passenger-side air bag module normal? — Resistance: **1.4—2.9 ohms**	Yes	Replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	**INSPECT PASSENGER-SIDE AIR BAG MODULE (INFLATOR NO.1) CONNECTOR** **Warning** • **Handling the air bag system components improperly can accidentally deploy the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag system components.** **(See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.)** **(See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** • Turn the ignition switch to the LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Remove the glove compartment. • Disconnect the passenger-side air bag module connector. • Is there any malfunction of the passenger-side air bag module connector?	Yes	Replace the air bag wiring harness.
		No	Go to the next step.
3	**VERIFY WHETHER MALFUNCTION IS IN PASSENGER-SIDE AIR BAG MODULE (INFLATOR NO.1) OR RELATED WIRING HARNESS** • Connect the leads of the **SST** (Fuel and thermometer checker) or apply **2-ohm** resistance to passenger-side air bag module (inflator No.1) connector terminals 1A and 1B, and passenger-side air bag module (inflator No.2) connector terminals 2A and 2B. • Set the resistance of the **SST** (Fuel and thermometer checker) to the **2-ohm** position. • Connect the negative battery cable. • Turn the ignition switch to the ON position. • Are DTCs B1048, B1925, B1933, B1935 and/or B1938 indicated?	Yes	Replace the air bag wiring harness, then go to the next step.
		No	Replace the passenger-side air bag module. (See 08-10-7 PASSENGER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
4	**INSPECT SAS CONTROL MODULE** • Turn the ignition switch to the LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Connect the passenger-side air bag module connector. • Are DTCs B1048, B1925, B1933, B1935 and/or B1938 indicated?	Yes	Replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B1049, B1881, B1882, B1883, B1886

id080200810700

DTC	B1049	Passenger-side pre-tensioner seat belt and other air bag module circuits short
	B1881	Passenger-side pre-tensioner seat belt circuit resistance high
	B1882	Passenger-side pre-tensioner seat belt circuit short to power supply
	B1883	Passenger-side pre-tensioner seat belt circuit short to body ground
	B1886	Passenger-side pre-tensioner seat belt circuit resistance low
DETECTION CONDITION		**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Resistance other than **1.5—3.1 ohms** detected in passenger-side pre-tensioner seat belt circuit • Malfunction in wiring harness between passenger-side pre-tensioner seat belt and SAS control module
POSSIBLE CAUSE		• Open or short circuit in wiring harness between passenger-side pre-tensioner seat belt and SAS control module • Passenger-side pre-tensioner seat belt malfunction • SAS control module malfunction

PASSENGER-SIDE PRE-TENSIONER
SEAT BELT WIRING
HARNESS-SIDE CONNECTOR



Diagnostic procedure

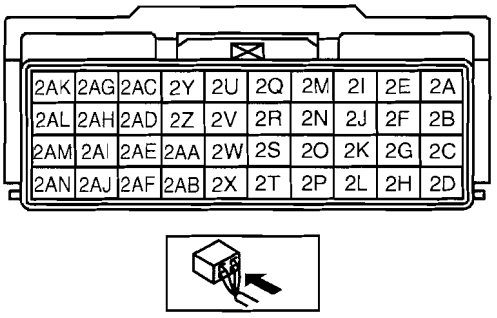
STEP	INSPECTION		ACTION
1	**INSPECT PASSENGER-SIDE PRE-TENSIONER SEAT BELT** • Using the M-MDS, verify the following PID/DATA monitor. (See 08-02-6 PID/DATA MONITOR TABLE.) — PS_PTENS • Is the resistance of the passenger-side pre-tensioner seat belt normal? — Resistance: **1.5—3.1 ohms**	Yes	Replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	**INSPECT PASSENGER-SIDE PRE-TENSIONER SEAT BELT CONNECTOR** **Warning** • **Handling the air bag system components improperly can accidentally deploy the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** • Turn the ignition switch to the LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Remove the B-pillar lower trim. • Disconnect the passenger-side pre-tensioner seat belt connector. • Is there any malfunction of the passenger-side pre-tensioner seat belt connector?	Yes	Replace the air bag wiring harness.
		No	Go to the next step.
3	**VERIFY WHETHER MALFUNCTION IS IN PASSENGER-SIDE PRE-TENSIONER SEAT BELT OR RELATED WIRING HARNESS** • Connect the leads of the **SST** (Fuel and thermometer checker) or apply **2-ohm** resistance to passenger-side pre-tensioner seat belt connector terminals A and B. • Set the resistance of the **SST** (Fuel and thermometer checker) to the **2-ohm** position. • Connect the negative battery cable. • Turn the ignition switch to the ON position. • Are DTCs B1049, B1881, B1882, B1883, and/or B1886 indicated?	Yes	Replace the air bag wiring harness, then go to the next step.
		No	Replace the passenger-side pre-tensioner seat belt. (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
4	**INSPECT SAS CONTROL MODULE** • Turn the ignition switch to the LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Connect the passenger-side pre-tensioner seat belt connector. • Are DTCs B1049, B1881, B1882, B1883, and/or B1886 indicated?	Yes	Replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B104B, B104E, B1051, U2017

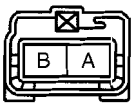
id080200810800

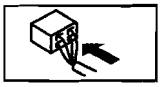
DTC	B104B	Driver-side side air bag sensor and other sensor circuits short to power supply
	B104E	Driver-side side air bag sensor circuit open or short
	B1051	Driver-side side air bag sensor (internal circuit abnormal)
	U2017	Driver-side side air bag sensor (communication error)
DETECTION CONDITION		**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Malfunction in wiring harness between driver-side side air bag sensor and SAS control module • Malfunction in driver-side side air bag sensor circuit
POSSIBLE CAUSE		• Open or short circuit in wiring harness between driver-side side air bag sensor and SAS control module • Driver-side side air bag sensor malfunction • SAS control module malfunction

SAS CONTROL MODULE WIRING HARNESS-SIDE CONNECTOR



DRIVER-SIDE SIDE AIR BAG SENSOR WIRING HARNESS-SIDE CONNECTOR





Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT DRIVER-SIDE SIDE AIR BAG SENSOR** • Using the M-MDS, verify the following PID/DATA monitor. (See 08-02-6 PID/DATA MONITOR TABLE.) — DS_AB • Is the resistance of the driver-side side air bag sensor normal? — Resistance: **1.5—3.7 ohms**	Yes	Replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.

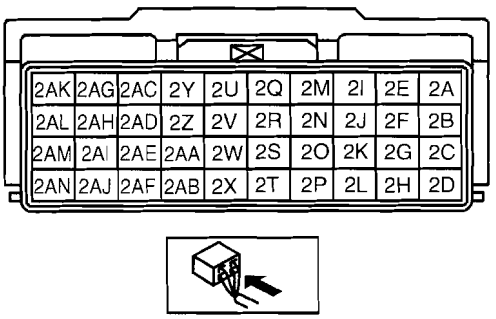
STEP	INSPECTION		ACTION
2	**INSPECT WIRING HARNESS BETWEEN DRIVER-SIDE SIDE AIR BAG SENSOR AND SAS CONTROL MODULE** **Warning** • **Handling the air bag system components improperly can accidentally deploy the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** • Turn the ignition switch to the LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Remove the column cover. • Disconnect the clock spring connector. • Remove the glove compartment. • Disconnect the passenger-side air bag module connector. • Disconnect the driver and passenger-side front seat connectors. • Disconnect the driver and passenger-side curtain air bag module connectors. • Remove the B-pillar lower trim. • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. • Remove the console. • Disconnect the SAS control module connector. • Disconnect the driver-side side air bag sensor connector. • Connect the negative battery cable. • Inspect the wiring harnesses between SAS control module terminal 2O and driver-side side air bag sensor terminal A, SAS control module terminal 2S and driver-side side air bag sensor terminal B for the following: — Short to ground — Short to power supply — Open circuit • Is the wiring harness normal?	Yes	Replace the driver-side side air bag sensor, then go to the next step. (See 08-10-14 SIDE AIR BAG SENSOR REMOVAL/ INSTALLATION.)
		No	Replace the air bag wiring harness.
3	**INSPECT SAS CONTROL MODULE** • Turn the ignition switch to the LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Connect the SAS control module connector. • Connect the driver-side side air bag sensor connector. • Are DTCs B104B, B104E, B1051 and/or U2017 indicated?	Yes	Replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/ INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B104C, B104F, B1050, U2018

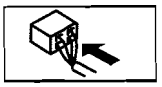
id080200810900

DTC	B104C	**Passenger-side side air bag sensor and other sensor circuits short to power supply**
	B104F	**Passenger-side side air bag sensor (internal circuit abnormal)**
	B1050	**Passenger-side side air bag sensor circuit open or short**
	U2018	**Passenger-side side air bag sensor (communication error)**
DETECTION CONDITION		**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Malfunction in wiring harness between passenger-side side air bag sensor and SAS control module • Malfunction in passenger-side side air bag sensor circuit
POSSIBLE CAUSE		• Open or short circuit in wiring harness between passenger-side side air bag sensor and SAS control module • Passenger-side side air bag sensor malfunction • SAS control module malfunction

SAS CONTROL MODULE WIRING HARNESS-SIDE CONNECTOR



PASSENGER-SIDE SIDE AIR BAG SENSOR WIRING HARNESS-SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT PASSENGER-SIDE SIDE AIR BAG SENSOR** • Using the M-MDS, verify the following PID/DATA monitor. (See 08-02-6 PID/DATA MONITOR TABLE.) — PS_AB • Is the resistance of the passenger-side side air bag sensor normal? — Resistance: **1.5—3.7 ohms**	Yes	Replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.

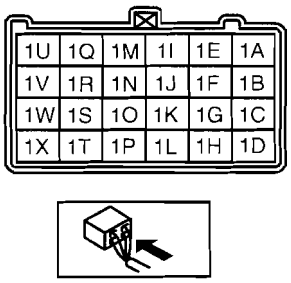
STEP	INSPECTION		ACTION
2	**INSPECT WIRING HARNESS BETWEEN PASSENGER-SIDE AIR BAG SENSOR AND SAS CONTROL MODULE** **Warning** • **Handling the air bag system components improperly can accidentally deploy the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** • Turn the ignition switch to the LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Remove the column cover. • Disconnect the clock spring connector. • Remove the glove compartment. • Disconnect the passenger-side air bag module connector. • Disconnect the driver and passenger-side front seat connectors. • Disconnect the driver and passenger-side curtain air bag module connectors. • Remove the B-pillar lower trim. • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. • Remove the console. • Disconnect the SAS control module connector. • Disconnect the passenger-side side air bag sensor connector. • Connect the negative battery cable. • Inspect the wiring harnesses between SAS control module terminal 2K and passenger-side side air bag sensor terminal A, SAS control module terminal 2G and passenger-side side air bag sensor terminal B for the following: — Short to ground — Short to power supply — Open circuit • Is the wiring harness normal?	Yes	Replace the passenger-side side air bag sensor, then go to the next step. (See 08-10-14 SIDE AIR BAG SENSOR REMOVAL/ INSTALLATION.)
		No	Replace the air bag wiring harness.
3	**INSPECT SAS CONTROL MODULE** • Turn the ignition switch to the LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Connect the passenger-side side air bag sensor connector. • Are DTCs B104C, B104F, B1050 and/or U2018 indicated?	Yes	Replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/ INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B104D, B2226, B2227, B2855

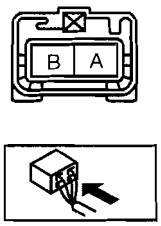
id080200811000

DTC	B104D	Crash zone sensor and other sensor circuits short to power supply
	B2226	Crash zone sensor (internal circuit abnormal)
	B2227	Crash zone sensor (communication error)
	B2855	Crash zone sensor circuit short
DETECTION CONDITION		Warning • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Malfunction in wiring harness between crash zone sensor and SAS control module • Malfunction in crash zone sensor circuit
POSSIBLE CAUSE		• Open or short circuit in wiring harness between crash zone sensor and SAS control module • Crash zone sensor malfunction • SAS control module malfunction

SAS CONTROL MODULE WIRING HARNESS-SIDE CONNECTOR



CRASH ZONE SENSOR WIRING HARNESS-SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT CRASH ZONE SENSOR CONNECTOR** Warning • **Handling the air bag system components improperly can accidentally deploy the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** • Turn the ignition switch to the LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Disconnect the crash zone sensor connector. • Is there any malfunction of the crash zone sensor connector?	Yes	Replace the air bag wiring harness.
		No	Go to the next step.

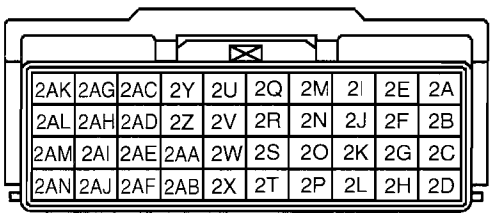
STEP	INSPECTION		ACTION
2	**INSPECT WIRING HARNESS BETWEEN CRASH ZONE SENSOR AND SAS CONTROL MODULE** • Turn the ignition switch to the LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Remove the column cover. • Disconnect the clock spring connector. • Remove the glove compartment. • Disconnect the passenger-side air bag module connector. • Disconnect the driver and passenger-side front seat connectors. • Disconnect the driver and passenger-side curtain air bag module connectors. • Remove the B-pillar lower trim. • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. • Remove the console. • Disconnect the SAS control module SAS control module connector. • Disconnect the crash zone sensor connector. • Connect the negative battery cable. • Inspect the wiring harnesses between SAS control module terminal 1W and crash zone sensor terminal A, SAS control module terminal 1S and crash zone sensor terminal B for the following: — Short to ground — Short to power supply — Open circuit • Is the wiring harness normal?	Yes	Replace the crash zone sensor, then go to the next step. (See 08-10-10 CRASH ZONE SENSOR REMOVAL/ INSTALLATION.)
		No	Replace the air bag wiring harness.
3	**INSPECT SAS CONTROL MODULE** • Turn the ignition switch to the LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Connect the SAS control module connector. • Connect the crash zone sensor connector. • Is DTC B104D, B2226, B2227 and/or B2855 indicated?	Yes	Replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/ INSTALLATION.)
		No	DTC troubleshooting completed.

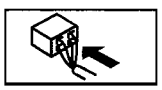
DTC B1051, U2017DTC B1052, B2436, B2437, B2438, B2439

id080200820100

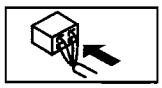
DTC	B1052	Passenger-side front buckle switch and other sensor circuits short to power supply
	B2436	Passenger-side front buckle switch circuit open
	B2437	Passenger-side front buckle switch circuit open or short to power supply
	B2438	Passenger-side front buckle switch circuit short to body ground
	B2439	Passenger-side front buckle switch circuit resistance not within specification
DETECTION CONDITION		**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Malfunction in the wiring harness between the passenger-side front buckle switch and SAS control module • Malfunction in passenger-side front buckle switch circuit
POSSIBLE CAUSE		• Malfunction of connectors between passenger-side front buckle switch and SAS control module • Open or short circuit in wiring harness between passenger-side front buckle switch and SAS control module • Passenger-side front buckle switch malfunction • SAS control module malfunction

SAS CONTROL MODULE WIRING HARNESS-SIDE CONNECTOR





PASSENGER-SIDE FRONT BUCKLE SWITCH WIRING HARNESS-SIDE CONNECTOR



Diagnostic procedure

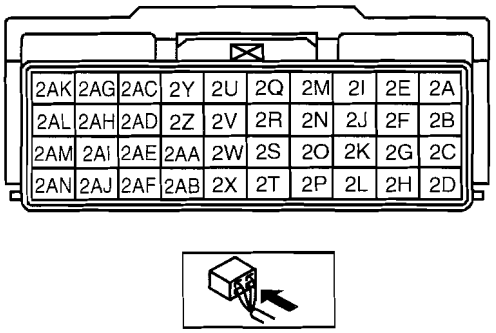
STEP	INSPECTION		ACTION
1	**INSPECT DRIVER-SIDE BUCKLE SWITCH CIRCUIT** • Using the M-MDS, verify the following PID/DATA monitor. (See 08-02-6 PID/DATA MONITOR TABLE.) — PS_BUKL • Is the passenger-side front buckle switch normal?	Yes	Replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	**INSPECT WIRING HARNESS BETWEEN PASSENGER-SIDE BUCKLE SWITCH AND GROUND** **Warning** • **Handling the air bag system components improperly can accidentally deploy the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** • Turn the ignition switch to the LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Disconnect the passenger-side front buckle switch connector. • Inspect the wiring harness between passenger-side front buckle switch terminal B and ground for the following: — Short to power supply — Open circuit • Is the wiring harness normal?	Yes	Go to the next step.
		No	Replace the wiring harness.
3	**INSPECT WIRING HARNESS BETWEEN PASSENGER-SIDE BUCKLE SWITCH AND SAS CONTROL MODULE** • Disconnect the driver and passenger-side front seat connectors. • Disconnect the driver and passenger-side curtain air bag module connectors. • Remove the B-pillar lower trim. • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. • Remove the console. • Disconnect the SAS control module connector. • Inspect the wiring harness between SAS control module terminal 2C and passenger-side front buckle switch terminal A for the following: — Short to ground — Short to power supply — Open circuit • Is the wiring harness normal?	Yes	Replace the passenger-side front buckle. (See 08-11-6 FRONT BUCKLE REMOVAL/INSTALLATION.) If the DTC is displayed even after the buckle switch is replaced, replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Replace the wiring harness.

DTC B1053, B2432, B2433, B2434, B2435

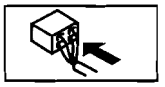
id080200811100

DTC	B1053	Driver-side front buckle switch and other sensor circuits short to power supply
	B2432	Driver-side front buckle switch circuit open
	B2433	Driver-side front buckle switch circuit open or short to power supply
	B2434	Driver-side front buckle switch circuit short to body ground
	B2435	Driver-side front buckle switch circuit resistance not within specification
DETECTION CONDITION		**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Malfunction in driver-side front buckle switch circuit
POSSIBLE CAUSE		• Malfunction of connectors between driver-side front buckle switch and SAS control module • Open or short circuit in wiring harness between driver-side front buckle switch and SAS control module • Driver-side front buckle switch malfunction • SAS control module malfunction

SAS CONTROL MODULE WIRING HARNESS-SIDE CONNECTOR



DRIVER-SIDE FRONT BUCKLE SWITCH WIRING HARNESS-SIDE CONNECTOR



Diagnostic procedure

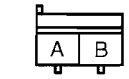
STEP	INSPECTION		ACTION
1	**INSPECT DRIVER-SIDE BUCKLE SWITCH CIRCUIT** • Using the M-MDS, verify the following PID/DATA monitor. (See 08-02-6 PID/DATA MONITOR TABLE.) — DR_BUKL • Is the driver-side front buckle switch normal?	Yes	Replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	**INSPECT WIRING HARNESS BETWEEN DRIVER-SIDE BUCKLE SWITCH AND GROUND** **Warning** • **Handling the air bag system components improperly can accidentally deploy the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** • Turn the ignition switch to the LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Disconnect the driver-side front buckle switch connector. • Inspect the wiring harness between driver-side front buckle switch terminal B and ground for the following: — Short to power supply — Open circuit • Is the wiring harness normal?	Yes	Go to the next step.
		No	Replace the wiring harness.
3	**INSPECT WIRING HARNESS BETWEEN DRIVER-SIDE BUCKLE SWITCH AND SAS CONTROL MODULE** • Disconnect the driver and passenger-side front seat connectors. • Disconnect the driver and passenger-side curtain air bag module connectors. • Remove the B-pillar lower trim. • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. • Remove the console. • Disconnect the SAS control module connector. • Inspect the wiring harness between SAS control module terminal 2W and driver-side front buckle switch terminal A for the following: — Short to ground — Short to power supply — Open circuit • Is the wiring harness normal?	Yes	Replace the driver-side front buckle. (See 08-11-6 FRONT BUCKLE REMOVAL/INSTALLATION.) If the DTC is displayed even after the buckle switch is replaced, replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Replace the wiring harness.

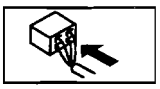
DTC B1054, B1877, B1878, B1879, B1885

id080200811200

DTC	B1054	Driver-side pre-tensioner seat belt and other air bag module circuits short
	B1877	Driver-side pre-tensioner seat belt circuit resistance high
	B1878	Driver-side pre-tensioner seat belt circuit short to power supply
	B1879	Driver-side pre-tensioner seat belt circuit short to body ground
	B1885	Driver-side pre-tensioner seat belt circuit resistance low
DETECTION CONDITION		Warning • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Resistance other than **1.5—3.1 ohms** detected in driver-side pre-tensioner seat belt circuit • Malfunction in the wiring harness between driver-side pre-tensioner seat belt and SAS control module
POSSIBLE CAUSE		• Open or short circuit in wiring harness between driver-side pre-tensioner seat belt and SAS control module • Driver-side pre-tensioner seat belt malfunction • SAS control module malfunction

DRIVER-SIDE PRE-TENSIONER
SEAT BELT WIRING
HARNESS-SIDE CONNECTOR





Diagnostic procedure

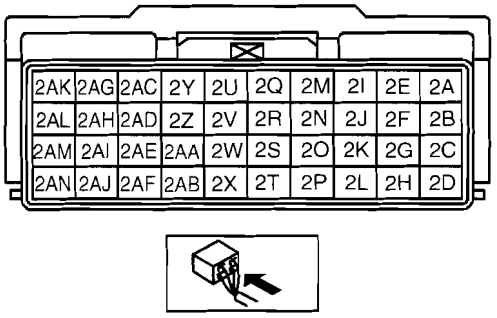
STEP	INSPECTION		ACTION
1	**INSPECT DRIVER-SIDE PRE-TENSIONER SEAT BELT** • Using the M-MDS, verify the following PID/DATA monitor. (See 08-02-6 PID/DATA MONITOR TABLE.) — DR_PTENS • Is the driver-side pre-tensioner seat belt resistance normal? — Resistance: **1.5—3.1 ohms**	Yes	Replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	**INSPECT DRIVER-SIDE PRE-TENSIONER SEAT BELT CONNECTOR** **Warning** • **Handling the air bag system components improperly can accidentally deploy the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** • Turn the ignition switch to the LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Remove the B-pillar lower trim. • Disconnect the driver-side pre-tensioner seat belt connector. • Is there any malfunction of the driver-side pre-tensioner front buckle connector?	Yes	Replace the air bag wiring harness.
		No	Go to the next step.
3	**VERIFY WHETHER MALFUNCTION IS IN DRIVER-SIDE PRE-TENSIONER SEAT BELT OR RELATED WIRING HARNESS** • Connect the leads of the **SST** (Fuel and thermometer checker) or apply **2-ohm** resistance to driver-side pre-tensioner seat belt connector terminals A and B. • Set the resistance of the **SST** (Fuel and thermometer checker) to the **2-ohm** position. • Connect the negative battery cable. • Turn the ignition switch to the ON position. • Are DTCs B1054, B1877, B1878, B1879, and/or B1885 indicated?	Yes	Replace the air bag wiring harness, then go to the next step.
		No	Replace the driver-side pre-tensioner seat belt. (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
4	**INSPECT SAS CONTROL MODULE** • Turn the ignition switch to the LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Connect the driver-side pre-tensioner seat belt connector. • Are DTCs B1054, B1877, B1878, B1879, and/or B1885 indicated?	Yes	Replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B1055, B1996, B1997, B1998, B1999

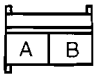
id080200809400

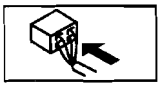
DTC	B1055	Passenger-side side air bag module and other air bag module circuits short
	B1996	Passenger-side side air bag module circuit short to power supply
	B1997	Passenger-side side air bag module circuit short to body ground
	B1998	Passenger-side side air bag module circuit resistance high
	B1999	Passenger-side side air bag module circuit resistance low
DETECTION CONDITION		**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Resistance other than **1.4—3.2 ohms** detected in passenger-side side air bag module circuit • Malfunction in wiring harness between passenger-side side air bag module and SAS control module
POSSIBLE CAUSE		• Open or short circuit in wiring harness between passenger-side side air bag module and SAS control module • Passenger-side side air bag module malfunction • SAS control module malfunction

SAS CONTROL MODULE WIRING HARNESS-SIDE CONNECTOR



PASSENGER-SIDE SIDE AIR BAG MODULE WIRING HARNESS-SIDE CONNECTOR





Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT PASSENGER-SIDE SIDE AIR BAG MODULE** • Using the M-MDS, verify the following PID/DATA monitor. (See 08-02-6 PID/DATA MONITOR TABLE.) — PS_AB • Is the resistance of the passenger-side side air bag module normal? — Resistance: **1.4—3.2 ohms**	Yes	Replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.

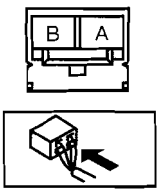
STEP	INSPECTION		ACTION
2	**INSPECT PASSENGER-SIDE SIDE AIR BAG MODULE CONNECTOR** **Warning** • **Handling the air bag system components improperly can accidentally deploy the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** • Turn the ignition switch to the LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Disconnect the passenger-side side air bag module connector. • Is there any malfunction of the passenger-side side air bag module connector?	Yes	Replace the air bag wiring harness.
		No	Go to the next step.
3	**VERIFY WHETHER MALFUNCTION IS IN PASSENGER-SIDE SIDE AIR BAG MODULE OR RELATED WIRING HARNESS** • Connect the leads of the **SST** (Fuel and thermometer checker) or apply **2-ohm** resistance to passenger-side side air bag module connector terminals A and B. • Set the resistance of the **SST** (Fuel and thermometer checker) to the **2-ohm** position. • Connect the negative battery cable. • Turn the ignition switch to the ON position. • Are DTCs B1055, B1996, B1997, B1998 and/or B1999 indicated?	Yes	Go to the next step.
		No	Replace the passenger-side side air bag module. (See 08-10-8 SIDE AIR BAG MODULE REMOVAL/ INSTALLATION.)
4	**INSPECT WIRING HARNESS BETWEEN PASSENGER-SIDE SIDE AIR BAG MODULE AND SAS CONTROL MODULE** • Turn the ignition switch to the LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Remove the column cover. • Disconnect the clock spring connector. • Remove the glove compartment. • Disconnect the passenger-side air bag module connector. • Disconnect the driver and passenger-side front seat connectors. • Disconnect the driver and passenger-side curtain air bag module connectors. • Remove the B-pillar lower trim. • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. • Remove the console. • Inspect the wiring harness between SAS control module terminal 2M and passenger-side side air bag module terminal A, SAS control module terminal 2I and passenger-side side air bag module terminal B for the following: — Short to ground — Short to power supply — Open circuit • Is the wiring harness normal?	Yes	Replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/ INSTALLATION.)
		No	Replace the air bag wiring harness.

DTC B1056, B2777, B2778, B2779, B2780

id080200809500

DTC	B1056	**Passenger-side curtain air bag module and other air bag module circuits short**
	B2777	**Passenger-side curtain air bag module circuit resistance low**
	B2778	**Passenger-side curtain air bag module circuit resistance high**
	B2779	**Passenger-side curtain air bag module circuit short to body ground**
	B2780	**Passenger-side curtain air bag module circuit short to power supply**
DETECTION CONDITION		Warning • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Resistance other than **1.4—3.2 ohms** detected in passenger-side curtain air bag module circuit • Malfunction in wiring harness between passenger-side curtain air bag module and SAS control module
POSSIBLE CAUSE		• Open or short circuit in wiring harness between passenger-side curtain air bag module and SAS control module • Passenger-side curtain air bag module malfunction • SAS control module malfunction

PASSENGER-SIDE CURTAIN AIR BAG MODULE
WIRING HARNESS-SIDE CONNECTOR



Diagnostic procedure

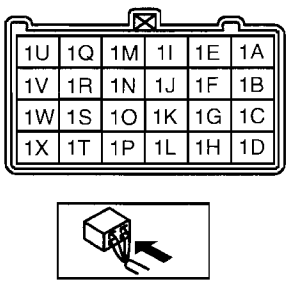
STEP	INSPECTION		ACTION
1	**INSPECT PASSENGER-SIDE CURTAIN AIR BAG MODULE** • Using the M-MDS, verify the following PID/DATA monitor. (See 08-02-6 PID/DATA MONITOR TABLE.) — PFCURTRES • Is the resistance of the passenger-side curtain air bag module normal? — Resistance: **1.4—3.2 ohms**	Yes	Replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	**INSPECT PASSENGER-SIDE CURTAIN AIR BAG MODULE CONNECTOR** **Warning** • **Handling the air bag system components improperly can accidentally deploy the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** • Turn the ignition switch to the LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Disconnect the passenger-side curtain air bag module connector. • Is there any malfunction of the passenger-side curtain air bag module connector?	Yes	Replace the air bag wiring harness.
		No	Go to the next step.
3	**VERIFY WHETHER MALFUNCTION IS IN PASSENGER-SIDE CURTAIN AIR BAG MODULE OR RELATED WIRING HARNESS** • Connect the leads of the **SST** (Fuel and thermometer checker) or apply **2-ohm** resistance to passenger-side curtain air bag module connector terminals A and B. • Set the resistance of the **SST** (Fuel and thermometer checker) to the **2-ohm** position. • Connect the negative battery cable. • Turn the ignition switch to the ON position. • Are DTCs B1056, B2777, B2778, B2779 and/or B2780 indicated?	Yes	Replace the air bag wiring harness, then go to the next step.
		No	Replace the passenger-side curtain air bag module. (See 08-10-9 CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION.)
4	**INSPECT SAS CONTROL MODULE** • Turn the ignition switch to the LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Connect the passenger-side curtain air bag module connector. • Are DTCs B1056, B2777, B2778, B2779 and/or B2780 indicated?	Yes	Replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B1057, B1916, B1932, B1934, B1936

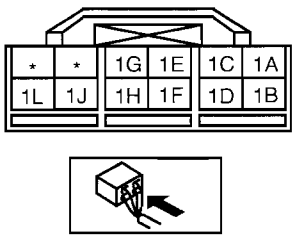
id080200811300

DTC	B1057	Driver-side air bag module (inflator No.1) and other air bag module circuits short
	B1916	Driver-side air bag module (inflator No.1) circuit short to power supply
	B1932	Driver-side air bag module (inflator No.1) circuit resistance high
	B1934	Driver-side air bag module (inflator No.1) circuit resistance low
	B1936	Driver-side air bag module (inflator No.1) circuit short to body ground
DETECTION CONDITION		**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Resistance other than **1.5—3.7 ohms** detected in driver-side air bag module (inflator No.1) circuit • Malfunction in wiring harness between driver-side air bag module (inflator No.1) and SAS control module
POSSIBLE CAUSE		• Open or short circuit in wiring harness between clock spring and SAS control module • Clock spring malfunction • Driver-side air bag module (inflator No.1) malfunction • SAS control module malfunction

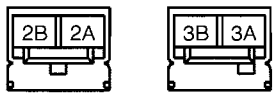
SAS CONTROL MODULE WIRING HARNESS-SIDE CONNECTOR



CLOCK SPRING WIRING HARNESS-SIDE CONNECTOR



DRIVER-SIDE AIR BAG MODULE WIRING HARNESS-SIDE CONNECTOR (CLOCK SPRING) (INFLATOR NO.1) (INFLATOR NO.2)



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT DRIVER-SIDE AIR BAG MODULE (INFLATOR NO.1)** • Using the M-MDS, verify the following PID/DATA monitor. (See 08-02-6 PID/DATA MONITOR TABLE.) — DABAGR • Is the resistance of the driver-side air bag module normal? — Resistance: **1.5—3.7 ohms**	Yes	Replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.

STEP	INSPECTION		ACTION
2	**INSPECT DRIVER-SIDE AIR BAG MODULE CONNECTOR (CLOCK SPRING)** **Warning** • **Handling the air bag system components improperly can accidentally deploy the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** • Turn the ignition switch to the LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Remove the driver-side air bag module. • Is there any malfunction of the driver-side air bag module connector?	Yes	Replace the air bag wiring harness.
		No	Go to the next step.
3	**VERIFY WHETHER MALFUNCTION IS IN DRIVER-SIDE AIR BAG MODULE (INFLATOR NO.1) OR RELATED WIRING HARNESS** • Connect the leads of the **SST** (Fuel and thermometer checker) or apply **2-ohm** resistance to driver-side air bag module (inflator No.1) connector terminals 2A and 2B, and driver-side air bag module (inflator No.2) connector terminals 3A and 3B. • Set the resistance of the **SST** (Fuel and thermometer checker) to the **2-ohm** position. • Connect the negative battery cable. • Turn the ignition switch to the ON position. • Are DTCs B1057, B1916, B1932, B1934 and/or B1936?	Yes	Go to the next step.
		No	Replace the driver-side air bag module. (See 08-10-7 DRIVER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
4	**INSPECT CLOCK SPRING** • Inspect the clock spring. (See 08-10-16 CLOCK SPRING INSPECTION.) • Is the clock spring normal?	Yes	Go to the next step.
		No	Replace the clock spring. (See 08-10-14 CLOCK SPRING REMOVAL/INSTALLATION.)

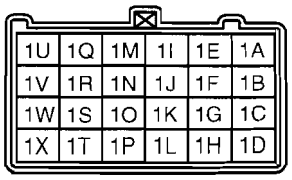
STEP	INSPECTION		ACTION
5	**INSPECT WIRING HARNESS BETWEEN CLOCK SPRING AND SAS CONTROL MODULE** • Turn the ignition switch to the LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Remove the column cover. • Disconnect the clock spring connector. • Remove the glove compartment. • Disconnect the passenger-side air bag module connector. • Disconnect the driver and passenger-side front seat connectors. • Disconnect the driver and passenger-side curtain air bag module connectors. • Remove the B-pillar lower trim. • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. • Remove the console. • Inspect the wiring harness between SAS control module terminal 1M and clock spring terminal 1L, SAS control module terminal 1I and clock spring terminal 1J for the following: — Short to ground — Short to power supply — Open circuit • Is the wiring harness normal?	Yes	Replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/ INSTALLATION.)
		No	Replace the air bag wiring harness.

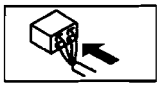
DTC B1058, B2228, B2230, B2232, B2234

id080200809600

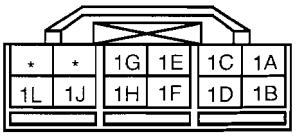
DTC	**B1058**	**Driver-side air bag module (inflator No.2) and other air bag module circuits short**
	B2228	**Driver-side air bag module (inflator No.2) circuit short to body ground**
	B2230	**Driver-side air bag module (inflator No.2) circuit short to power supply**
	B2232	**Driver-side air bag module (inflator No.2) circuit resistance high**
	B2234	**Driver-side air bag module (inflator No.2) circuit resistance low**
DETECTION CONDITION		**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Resistance other than **1.5—3.7 ohms** detected in driver-side air bag module (inflator No.2) circuit • Malfunction in wiring harness between driver-side air bag module (inflator No.2) and SAS control module
POSSIBLE CAUSE		• Open or short circuit in wiring harness between clock spring and SAS control module • Clock spring malfunction • Driver-side air bag module (inflator No.2) malfunction • SAS control module malfunction

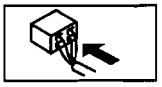
SAS CONTROL MODULE WIRING HARNESS-SIDE CONNECTOR



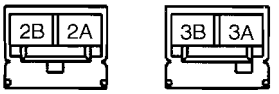


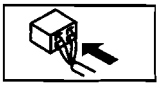
CLOCK SPRING WIRING HARNESS-SIDE CONNECTOR





DRIVER-SIDE AIR BAG MODULE WIRING HARNESS-SIDE CONNECTOR (CLOCK SPRING) (INFLATOR NO.1) (INFLATOR NO.2)





Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT DRIVER-SIDE AIR BAG MODULE (INFLATOR NO.2)** • Using the M-MDS, verify the following PID/DATA monitor. (See 08-02-6 PID/DATA MONITOR TABLE.) — D_ABAGR2 • Is the resistance of the driver-side air bag module normal? — Resistance: **1.5—3.7 ohms**	Yes	Replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	**INSPECT DRIVER-SIDE AIR BAG MODULE CONNECTOR (CLOCK SPRING)** **Warning** • **Handling the air bag system components improperly can accidentally deploy the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag system components.** **(See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.)** **(See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** • Turn the ignition switch to the LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Disconnect the driver-side air bag module connector. • Is there any malfunction of the driver-side air bag module connector?	Yes	Replace the air bag wiring harness.
		No	Go to the next step.
3	**VERIFY WHETHER MALFUNCTION IS IN DRIVER-SIDE AIR BAG MODULE (INFLATOR NO.2) OR RELATED WIRING HARNESS** • Connect the leads of the **SST** (Fuel and thermometer checker) or apply **2-ohm** resistance to driver-side air bag module (inflator No.1) connector terminals 2A and 2B, and driver-side air bag module (inflator No.2) connector terminals 3A and 3B. • Set the resistance of the **SST** (Fuel and thermometer checker) to the **2-ohm** position. • Connect the negative battery cable. • Turn the ignition switch to the ON position. • Are DTCs B1058, B2228, B2230, B2232 and/or B2234 indicated?	Yes	Go to the next step.
		No	Replace the driver-side air bag module. (See 08-10-7 DRIVER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
4	**INSPECT CLOCK SPRING** • Inspect the clock spring. (See 08-10-16 CLOCK SPRING INSPECTION.) • Is the clock spring normal?	Yes	Go to the next step.
		No	Replace the clock spring. (See 08-10-14 CLOCK SPRING REMOVAL/INSTALLATION.)

STEP	INSPECTION		ACTION
5	**INSPECT WIRING HARNESS BETWEEN CLOCK SPRING AND SAS CONTROL MODULE** • Turn the ignition switch to the LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Remove the column cover. • Disconnect the clock spring connector. • Remove the glove compartment. • Disconnect the passenger-side air bag module connector. • Disconnect the driver and passenger-side front seat connectors. • Remove the B-pillar lower trim. • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. • Disconnect the driver and passenger-side curtain air bag module connectors. • Remove the console. • Disconnect the SAS control module connector. • Inspect the wiring harness between SAS control module terminal 1Q and clock spring terminal 1H, SAS control module terminal 1U and clock spring terminal 1F for the following: — Short to ground — Short to power supply — Open circuit • Is the wiring harness normal?	Yes	Replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/ INSTALLATION.)
		No	Replace the air bag wiring harness.

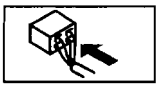
DTC B1059, B2229, B2231, B2233, B2235

id080200809700

DTC	B1059	**Passenger-side air bag module (inflator No.2) and other air bag module circuits short**
	B2229	**Passenger-side air bag module (inflator No.2) circuit short to body ground**
	B2231	**Passenger-side air bag module (inflator No.2) circuit short to power supply**
	B2233	**Passenger-side air bag module (inflator No.2) circuit resistance high**
	B2235	**Passenger-side air bag module (inflator No.2) circuit resistance low**
DETECTION CONDITION		**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Resistance other than **1.4—2.9 ohms** detected in passenger-side side air bag module circuit • Malfunction in wiring harness between passenger-side air bag module (inflator No.2) and SAS control module
POSSIBLE CAUSE		• Open or short circuit in wiring harness between passenger-side air bag module (inflator No.2) and SAS control module • Passenger-side air bag module (inflator No.2) malfunction • SAS control module malfunction

PASSENGER-SIDE AIR BAG MODULE WIRING HARNESS-SIDE CONNECTOR

(INFLATOR NO.1) (INFLATOR NO.2)



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT PASSENGER-SIDE AIR BAG MODULE (INFLATOR NO.2)** • Using the M-MDS, verify the following PID/DATA monitor. (See 08-02-6 PID/DATA MONITOR TABLE.) — P_ABAGR2 • Is the resistance of the passenger-side air bag module normal? — Resistance: **1.4—2.9 ohms**	Yes	Replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	**INSPECT PASSENGER-SIDE AIR BAG MODULE (INFLATOR NO.2) CONNECTOR** **Warning** • **Handling the air bag system components improperly can accidentally deploy the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag system components.** **(See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.)** **(See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** • Turn the ignition switch to the LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Remove the glove compartment. • Disconnect the passenger-side air bag module connector. • Is there any malfunction of the passenger-side air bag module connector?	Yes	Replace the air bag wiring harness.
		No	Go to the next step.
3	**VERIFY WHETHER MALFUNCTION IS IN PASSENGER-SIDE AIR BAG MODULE (INFLATOR NO.2) OR RELATED WIRING HARNESS** • Connect the leads of the **SST** (Fuel and thermometer checker) or apply **2-ohm** resistance to passenger-side air bag module (inflator No.1) connector terminals 1A and 1B, and passenger-side air bag module (inflator No.2) connector terminals 2A and 2B. • Set the resistance of the **SST** (Fuel and thermometer checker) to the **2-ohm** position. • Connect the negative battery cable. • Turn the ignition switch to the ON position. • Are DTCs B1059, B2229, B2231, B2233 and/or B2235 indicated?	Yes	Replace the air bag wiring harness, then go to the next step.
		No	Replace the passenger-side air bag module. (See 08-10-7 PASSENGER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
4	**INSPECT SAS CONTROL MODULE** • Turn the ignition switch to the LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Connect the passenger-side air bag module connector. • Are DTCs B1059, B2229, B2231, B2233 and/or B2235 indicated?	Yes	Replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B105A

id080200811400

DTC B105A	SAS control module activation (deployment) control frequency error
DETECTION CONDITION	Warning • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection with only detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • The SAS control module has enabled the air bag module or pre-tensioner seat belt to operate (deploy) five times or more.
POSSIBLE CAUSE	• SAS control module malfunction

Diagnostic procedure

ACTION
Replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/INSTALLATION.)

DTC B1231

id080200801000

DTC B1231	SAS control module activation (deployment) control freeze
DETECTION CONDITION	Warning • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection with only detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • SAS control module determined collision

Diagnostic procedure

ACTION
Replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/INSTALLATION.)

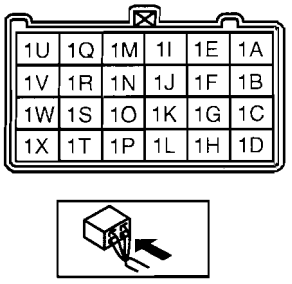
DTC B1317, B1318

id080200811500

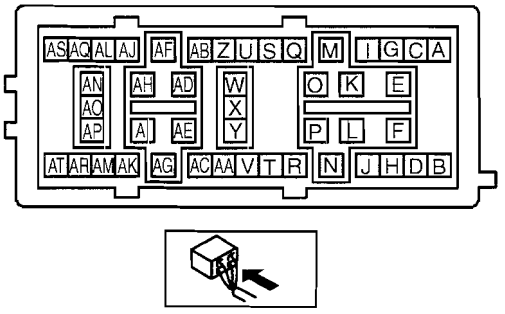
DTC	B1317	SAS control module power supply voltage increases (16.1 V or more)
	B1318	SAS control module power supply voltage decreases (less than 9 V)
DETECTION CONDITION		Warning • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection with only detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • When the SAS control module power supply voltage is not **within 9—16 V**.
POSSIBLE CAUSE		• Open or short circuit in wiring harness between battery and SAS control module • SAS 10 A fuse malfunction • Battery malfunction • SAS control module malfunction

DTC	B1317	SAS control module power supply voltage increases (16.1 V or more)
	B1318	SAS control module power supply voltage decreases (less than 9 V)

SAS CONTROL MODULE WIRING HARNESS-SIDE CONNECTOR



PJB WIRING HARNESS-SIDE CONNTCTOR (J-03)



Diagnostic procedure

Step	Inspection		Action
1	**INSPECT FUSE** • Remove the SAS 10 A fuse. • Is the fuse normal?	Yes	Go to the next step.
		No	Replace the fuse.
2	**INSPECT BATTERY** • Measure the battery positive voltage. • Is the voltage **9 V—16 V**?	Yes	Go to the next step.
		No	The battery has a malfunction. Inspect the charge/discharge system.
3	**INSPECT WIRING HARNESS BETWEEN BATTERY AND PJB** • Turn the ignition switch to the ON position. • Measure the PJB terminal J-03 AP voltage. • Is the voltage **9 V—16 V**?	Yes	Install the fuse, then go to the next step.
		No	Repair the wiring harness between the PJB and battery.

Step	Inspection		Action
4	**INSPECT PJB** **Warning** • **Handling the air bag system components improperly can accidentally deploy the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the air bag system service warnings before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** • Turn the ignition switch to the LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Remove the column cover. • Disconnect the clock spring connector. • Disconnect the passenger-side air bag module connector. • Disconnect the driver and passenger-side front seat connector. • Disconnect the driver and passenger-side curtain air bag module connector. • Remove the B-pillar lower trim. • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. • Remove the console. • Disconnect the SAS control module connector. • Measure the voltage at the PJB terminal J-03 AM. • Is the voltage **9 V—16 V**?	Yes	Go to the next step.
		No	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
5	**INSPECT WIRING HARNESS BETWEEN PJB AND SAS CONTROL MODULE** • Turn the ignition switch to the ON position. • Measure the SAS control module terminal 1D voltage. • Is the voltage **9 V—16 V**?	Yes	Replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Repair the wiring harness between the PJB and SAS control module.

DTC B1342

id080200801100

DTC B1342	SAS control module
DETECTION CONDITION	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection with only detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Malfunction in the SAS control module internal circuit
POSSIBLE CAUSE	• SAS control module malfunction

Diagnostic procedure

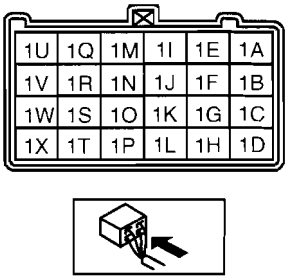
ACTION
Replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/INSTALLATION.)

DTC B1884, B1890

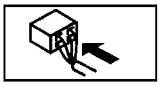
id080200801600

DTC	B1884	Passenger air bag deactivation (PAD) indicator circuit open or short to body ground
	B1890	Passenger air bag deactivation (PAD) indicator circuit short to power supply
DETECTION CONDITION		**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Malfunction in PAD indicator circuit
POSSIBLE CAUSE		• Open or short circuit in wiring harness between PAD indicator and SAS control module • Open circuit in wiring harness between battery and PAD indicator • PAD indicator malfunction • SAS control module malfunction

SAS CONTROL MODULE WIRING HARNESS-SIDE CONNECTOR



PAD INDICATOR WIRING HARNESS-SIDE CONNECTOR



08-02

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT OPERATION OF PAD INDICATOR** • Turn the ignition switch to the ON position. • Does the PAD indicator illuminate?	Yes	Go to the next step.
		No	Go to Step 6.
2	**INSPECT FUSE** • Remove the SAS 10 A fuse. • Is the fuse normal?	Yes	Install the fuse, then go to the next step.
		No	Replace the fuse.
3	**INSPECT BATTERY** • Measure the battery positive voltage. • Is the voltage **9 V—16 V**?	Yes	Go to the next step.
		No	Battery is malfunctioning Inspect the charge/discharge system.
4	**INSPECT WIRING HARNESS BETWEEN BATTERY AND PAD INDICATOR** • Turn the ignition switch to the ON position. • Measure the PAD indicator terminal A voltage. • Is the voltage **9 V or more**?	Yes	Go to the next step.
		No	Repair the wiring harness between the battery and PAD indicator.
5	**INSPECT PAD INDICATOR** • Ground PAD indicator connector terminal B using a jumper wire. • Turn the ignition switch to the ON position. • Does the PAD indicator illuminate?	Yes	Go to the next step.
		No	Replace the air bag wiring harness.

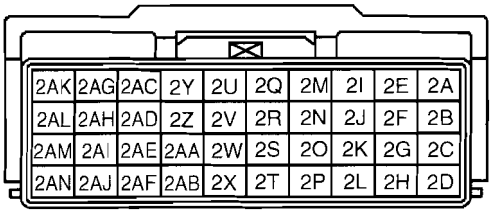
STEP	INSPECTION		ACTION
6	**INSPECT WIRING HARNESS BETWEEN PAD INDICATOR AND SAS CONTROL MODULE** **Warning** • **Handling the air bag system components improperly can accidentally deploy the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the air bag system service warnings before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** • Turn the ignition switch to the LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Remove the column cover. • Disconnect the clock spring connector. • Disconnect the passenger-side air bag module connector. • Disconnect the driver and passenger-side front seat connector. • Disconnect the driver and passenger-side curtain air bag module connector. • Remove the B-pillar lower trim. • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. • Remove the console. • Disconnect the SAS control module connector. • Inspect the wiring harness between PAD indicator terminal B and SAS control module terminal 1G for the following: — Short to ground — Short to power supply — Open circuit • Is the wiring harness normal?	Yes	Replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/ INSTALLATION.)
		No	Replace the air bag wiring harness.

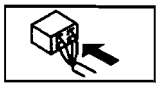
DTC C1946, C1947, C1948, C1981, C1982

id080200820200

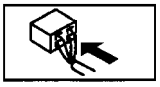
DTC	C1946	Seat track position sensor circuit open
	C1947	Seat track position sensor circuit short to body ground
	C1948	Seat track position sensor circuit resistance not within specification
	C1981	Seat track position sensor circuit malfunction
	C1982	Seat track position sensor circuit short to power supply
DETECTION CONDITION		Warning • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Malfunction in seat track position sensor circuit.
POSSIBLE CAUSE		• Malfunction of connector between seat track position sensor and SAS control module. • Open or short circuit in wiring harness between seat track position sensor and SAS control module. • Seat track position sensor malfunction • SAS control module malfunction

SAS CONTROL MODULE WIRING HARNESS-SIDE CONNECTOR





SEAT TRACK POSITION SENSOR WIRING HARNESS-SIDE CONNECTOR



08-02

Diagnostic procedure

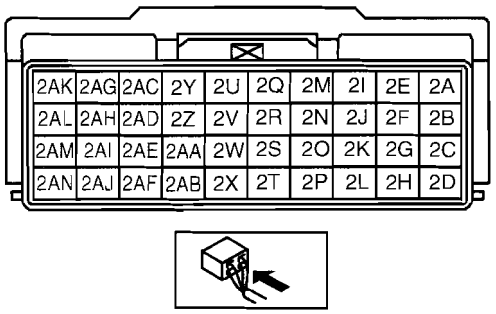
STEP	INSPECTION		ACTION
1	**INSPECT SEAT TRACK POSITION SENSOR CIRCUIT** • Using the M-MDS, verify the following PID/DATA monitor. (See 08-02-6 PID/DATA MONITOR TABLE.) — TRAK_SW • Is the seat track position sensor circuit normal?	Yes	Replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to next step.
2	**INSPECT WIRING HARNESS BETWEEN SEAT TRACK POSITION SENSOR AND SAS CONTROL MODULE** **Warning** • **Handling the air bag system components improperly can accidentally deploy the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag system components.** **(See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.)** **(See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** • Turn the ignition switch to the LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Remove the column cover. • Disconnect the clock spring connector. • Remove the glove compartment. • Disconnect the passenger-side air bag module connector. • Disconnect the driver and passenger-side front seat connectors. • Disconnect the driver and passenger-side curtain air bag module connectors. • Remove the B-pillar lower trim. • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. • Disconnect the seat track position sensor connector • Inspect the wiring harness between SAS control module terminal and seat track position sensor terminals for short to ground, short to power supply, and open circuit: — 2AB—A — 2AF—C • Is the wiring harness normal?	Yes	Replace the seat track position sensor, then go to next step.
		No	Replace wiring harness, then go to next step.
3	**INSPECT SAS CONTROL MODULE** • Connect the SAS control module connector. • Connect the clock spring connector. • Connect the passenger-side air bag module connector. • Connect the driver-and passenger-side front seat connectors. • Connect the driver-and passenger-side curtain air bag module connectors. • Connect the driver-and passenger-side pre tensioner seat belt connectors. • Connect the seat track position sensor connector. • Are DTCs C1946, C1947, C1948, C1981 and/or C1982 indicated?	Yes	Replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B2290

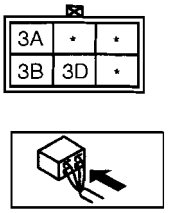
id080200802300

DTC B2290	Passenger sensing system malfunction
DETECTION CONDITION	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Passenger sensing system circuit malfunction
POSSIBLE CAUSE	• Seat weight sensor calibration not properly set • Communication error between SAS control module and seat weight sensor control module • Seat weight sensor control module internal malfunction • LH or RH seat weight sensor malfunction

SAS CONTROL MODULE
HARNESS SIDE CONNECTOR



SWS CONTROL MODULE
HARNESS SIDE CONNECTOR



STEP	INSPECTION		ACTION
1	**INSPECT SEAT WEIGHT SENSOR CONTROL MODULE CONNECTOR** **Warning** • **Handling the air bag system components improperly can accidentally operate (deploy) the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** Turn the ignition switch to the LOCK position. Disconnect the negative battery cable and wait for **1 min or more**. Disconnect the seat weight sensor control module connector. Is there any malfunction of the seat weight sensor control module connector?	Yes	Repair or replace the wiring harness. After replacement, reperform the DTC inspection and verify that no DTCs are displayed.
		No	Go to the next step.
2	**INSPECTION WIRING HARNESS** Disconnect the SAS control module connector. Verify continuity in the following wiring harnesses: — Between SAS control module terminal 2AJ and seat weight sensor control module terminal 3D — Between the battery and seat weight sensor control module terminal 3A — Between seat weight sensor control module terminal 3B and body ground Is the continuity normal?	Yes	Go to the next step.
		No	If there is any malfunction in the wiring harnesses, repair or replace the applicable wiring harness. After replacement, reperform the DTC inspection and verify that no DTCs are displayed.

STEP	INSPECTION		ACTION
3	**INSPECT PASSENGER SENSING SYSTEM** Connect the seat weight sensor control module connector. Connect the SAS control module. Connect the negative battery cable. Verify the following PIDs using the M-MDS. (See 08-02-6 PID/DATA MONITOR DISPLAY.) — OCS_FLT Is NO_Fail displayed?	Yes	Go to the next step.
		No	Replace the following parts according to the M-MDS screen: • If MOD_Fail or COMM_Fail is displayed: — Seat weight sensor control module (See 08-10-12 SEAT WEIGHT SENSOR CONTROL MODULE REMOVAL/INSTALLATION.) • If SNS_Fail_L is displayed: — Seat weight sensor (LH) (See: 09-13-3 FRONT SEAT DISASSEMBLY/ASSEMBLY.) • If SNS_Fail_R is displayed: — Seat weight sensor (RH) (See 09-13-3 FRONT SEAT DISASSEMBLY/ASSEMBLY.) • If SNS_Fail is displayed: — Seat weight sensor (See 09-13-3 FRONT SEAT DISASSEMBLY/ASSEMBLY.) • If CAL_Fail is displayed: — Perform seat weight sensor calibration (See 08-10-12 SEAT WEIGHT SENSOR CALIBRATION.)
4	**INSPECT SAS CONTROL MODULE** Reperform the DTC inspection. Is DTC B2290 indicated?	Yes	Replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B2477

id080200810500

DTC B2477	**Configuration error**
DETECTION CONDITION	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • SAS control module configuration has not been performed correctly.
POSSIBLE CAUSE	• SAS control module configuration error • SAS control module malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT SAS CONTROL MODULE** • Using the M-MDS, perform SAS control module configuration. • Is DTC B2477 indicated?	Yes	Replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B2856, B2886, B2887

id080200811600

DTC	B2856	Crash zone sensor ID mismatch
	B2886	Passenger-side side air bag sensor ID mismatch
	B2887	Driver-side side air bag sensor ID mismatch
DETECTION CONDITION		Warning • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • The SAS control module detects an error of impact magnitude set in the sensor, which occurs due to installation mismatch of the crash zone sensor or side air bag sensors.
POSSIBLE CAUSE		• Crash zone sensor misinstalled with wrong sensor • Driver-side side air bag sensor misinstalled with wrong sensor • Passenger-side side air bag sensor misinstalled with wrong sensor

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT EACH SENSOR FOR INSTALLATION POSITION** • Verify that the crash zone sensor or side air bag sensor is installed in the correct position. • Is each sensor installed correctly?	Yes	Go to the next step.
		No	Install the each sensor correctly, then go to the next step.
2	**INSPECT SAS CONTROL MODULE** • Turn the ignition switch to the LOCK position. • Disconnect the negative battery cable and wait for **1 min or more.** • Are DTCs B2856, B2886 and/or B2887 indicated?	Yes	Replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/ INSTALLATION.)
		No	DTC troubleshooting completed.

08-03 SYMPTOM TROUBLESHOOTING

TROUBLESHOOTING INDEX

id080300802000

- Use the chart below verify the symptoms of the trouble in order to diagnose the appropriate area.

No.	Troubleshooting item	Description	Page
1	Air bag system warning light does not illuminate.	Malfunction in air bag system warning light circuit.	(See 08-03-1 NO.1 AIR BAG SYSTEM WARNING LIGHT DOES NOT ILLUMINATE.)
2	Air bag system warning light illuminates constantly.	Malfunction in air bag system warning light circuit.	(See 08-03-2 NO.2 AIR BAG SYSTEM WARNING LIGHT ILLUMINATES CONSTANTLY.)

NO.1 AIR BAG SYSTEM WARNING LIGHT DOES NOT ILLUMINATE

id080300800200

1	**Air bag system warning light does not illuminate.**
DETECTION CONDITION	Malfunction in air bag system warning light circuit
POSSIBLE CAUSE	• SAS control module malfunction • Instrument cluster malfunction • CAN communication network malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**CONFIRM DTC U0151 USING M-MDS** • Retrieve DTC from the instrument cluster. • Is DTC U0151 retrieved?	Yes	Network communication for related systems has a malfunction. Repair or replace if necessary.
		No	Inspect the instrument cluster. If the instrument cluster is normal, go to the next step. If the instrument cluster has a malfunction, replace the instrument cluster. (See 09-22-2 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
2	**CONFIRM DTC B2477 FOR INSTRUMENT CLUSTER USING M-MDS** • Is DTC B2477 retrieved?	Yes	Re-configure the instrument cluster. (See 09-22-2 INSTRUMENT CLUSTER CONFIGURATION.)
		No	Replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/INSTALLATION.)

NO.2 AIR BAG SYSTEM WARNING LIGHT ILLUMINATES CONSTANTLY

id080300800300

2	**Air bag system warning light illuminates constantly.**
DETECTION CONDITION	Malfunction in air bag system warning light circuit
POSSIBLE CAUSE	• SAS control module malfunction • Instrument cluster (circuit board) malfunction • CAN communication network malfunction

Diagnostic Procedure

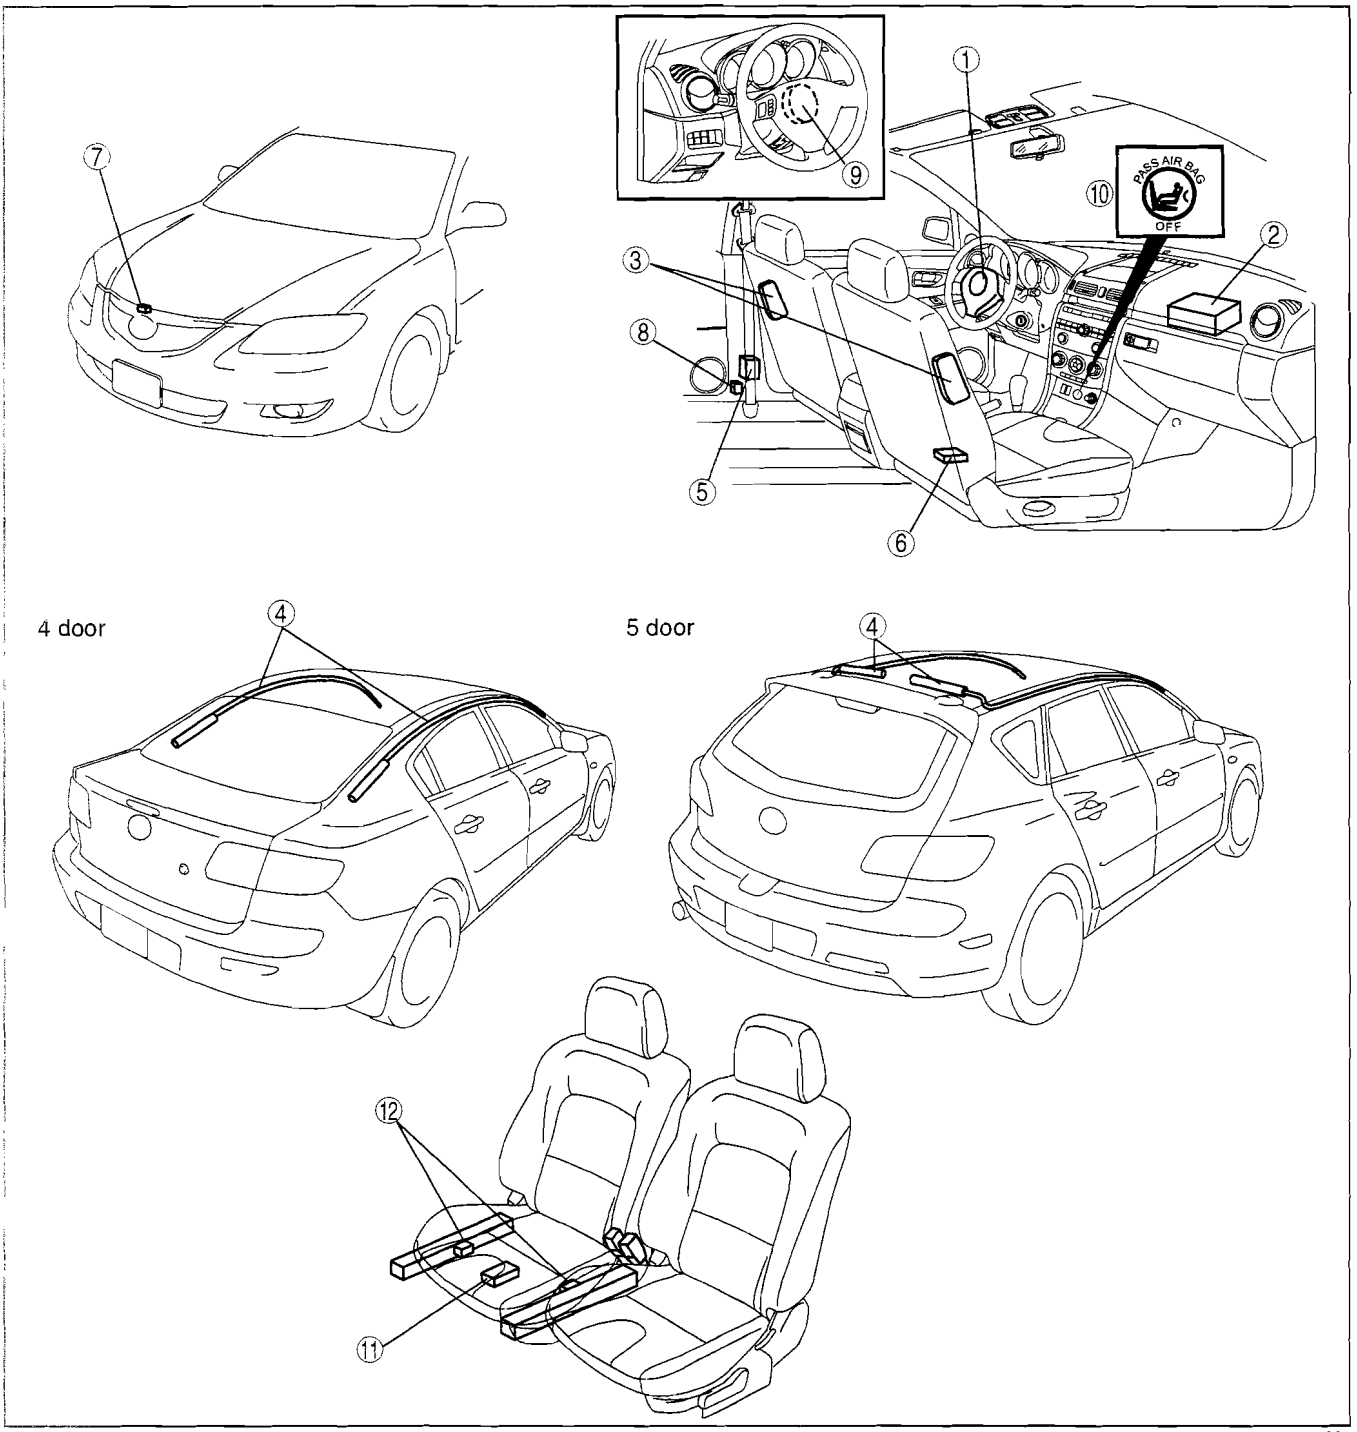
- When performing an asterisked (*) troubleshooting inspection, slightly shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunction. If there is a problem, verify that the connectors, terminals and wiring harness are connected correctly and undamaged.

STEP	INSPECTION		ACTION
1	**VERIFY DTC IN SAS CONTROL MODULE MEMORY** • Have DTCs been record in the memory?	Yes	Perform inspection using appropriate DTC. (See 08-02-3 DTC TABLE.)
		No	Inspect the instrument cluster. (See 09-22-2 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION) If the instrument cluster is normal, go to the next step. If the instrument cluster has a malfunction, replace the instrument cluster.
*2	**INSPECT AIR BAG SYSTEM WARNING LIGHT CIRCUIT IN INSTRUMENT CLUSTER** • Turn the ignition switch to the ON position. • Does air bag system warning light go out?	Yes	Inspect the connectors and terminals of the SAS control module. Repair or replace if necessary.
		No	Go to the next step.
*3	**INSPECT SAS CONTROL MODULE** • Disconnect the SAS control module connector. • Turn the ignition switch to the ON position. • Verify the voltage at terminal 1D. • Is the voltage **B+**?	Yes	Replace the SAS control module. (See 08-10-11 SAS CONTROL MODULE REMOVAL/ INSTALLATION.)
		No	Inspect the battery power supply circuit and ground circuit.

08-10 AIR BAG SYSTEM

LOCATION INDEX

id081000800100



e3u810zw6001

1	Driver-side air bag module (See 08-10-7 DRIVER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.) (See 08-10-17 AIR BAG MODULE AND PRE-TENSIONER SEAT BELT DEPLOYMENT PROCEDURES.)
2	Passenger-side air bag module (See 08-10-7 PASSENGER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.) (See 08-10-17 AIR BAG MODULE AND PRE-TENSIONER SEAT BELT DEPLOYMENT PROCEDURES.)

3	Side air bag module (See 08-10-8 SIDE AIR BAG MODULE REMOVAL/INSTALLATION.) (See 08-10-17 AIR BAG MODULE AND PRE-TENSIONER SEAT BELT DEPLOYMENT PROCEDURES.)
4	Curtain air bag module (See 08-10-9 CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION.) (See 08-10-17 AIR BAG MODULE AND PRE-TENSIONER SEAT BELT DEPLOYMENT PROCEDURES.)

5	Pre-tensioner seat belt (See 08-10-17 AIR BAG MODULE AND PRE-TENSIONER SEAT BELT DEPLOYMENT PROCEDURES.)
6	SAS control module (See 08-10-11 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
7	Crash zone sensor (See 08-10-10 CRASH ZONE SENSOR REMOVAL/INSTALLATION.)
8	Side air bag sensor (See 08-10-14 SIDE AIR BAG SENSOR REMOVAL/INSTALLATION.)

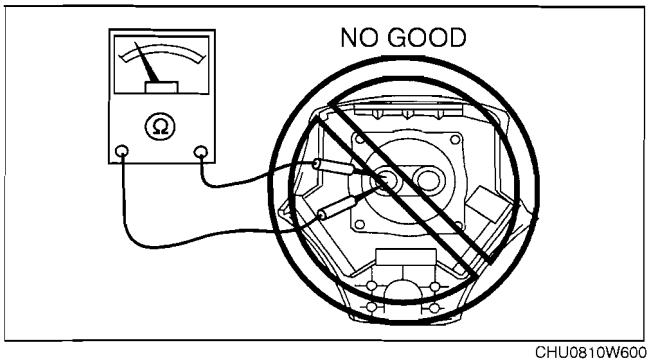
9	Clock spring (See 08-10-14 CLOCK SPRING REMOVAL/INSTALLATION.) (See 08-10-16 CLOCK SPRING INSPECTION.) (See 08-10-15 CLOCK SPRING ADJUSTMENT.)
10	Passenger air bag deactivation (PAD) indicator
11	Seat weight sensor control module (See 08-10-12 SEAT WEIGHT SENSOR CONTROL MODULE REMOVAL/INSTALLATION.)
12	Seat weight sensor (See 08-10-12 SEAT WEIGHT SENSOR CALIBRATION.) (See 08-10-13 SEAT WEIGHT SENSOR INSPECTION.)

AIR BAG SYSTEM SERVICE WARNINGS

id081000800200

Air Bag Module Inspection

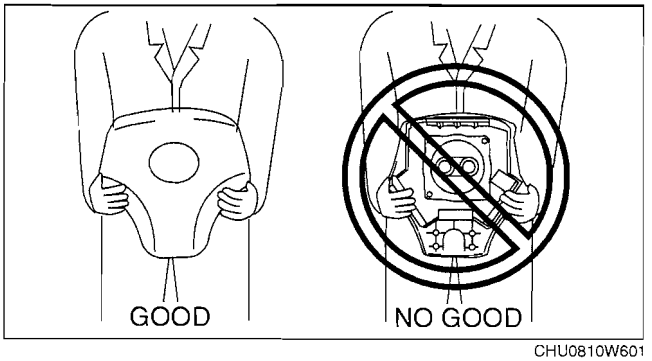
- **Inspecting an air bag module using a tester can operate (deploy) the air bag module, which may cause serious injury. Do not use a tester to inspect an air bag module. Always use the on-board diagnostic function to diagnose the air bag module for malfunctions.**



CHU0810W600

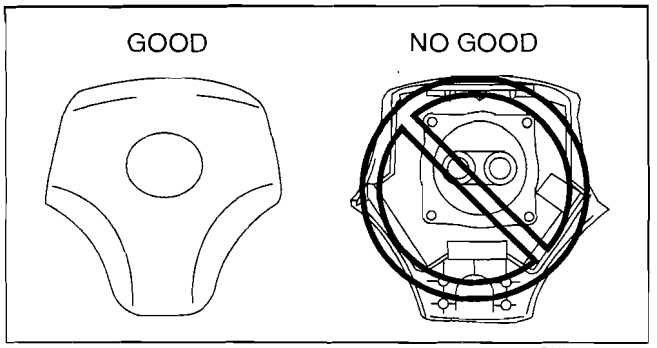
Air Bag Module Handling

- **Before removing the air bag module or disconnecting the air bag module connector, always turn the ignition switch to the LOCK position, disconnect the negative battery cable, and then wait for 1 min or more to allow the backup power supply of the SAS control module to deplete its stored power.**
- **Handling a live (undeployed) air bag module that is pointed toward your body could result in serious injury if the air bag module were to accidentally operate (deploy). When carrying a live (undeployed) air bag module, point the deployment surface away from your body to lessen the chance of injury in case it operates (deploys).**



CHU0810W601

- A live (undeployed) air bag module placed with its deployment surface to ground is dangerous. If the air bag module were to accidentally operate (deploy), it could cause serious injury. Always place a live (undeployed) air bag module with its deployment surface up.



CHU0810W602

Side Air Bag Module Handling
- Before removing the side air bag module or disconnecting the side air bag module connector, always turn the ignition switch to the LOCK position, disconnect the negative battery cable, and then wait for 1 min or more to allow the backup power supply of the SAS control module to deplete its stored power.
- When a side air bag module operates (deploys) due to a collision, the interior of the seat back (pad, frame, trim) may become damaged. If a side air bag does not operate (deploy) normally from a seat back that has been reused, a serious accident may result. After a side air bag has operated (deployed), always replace both the side air bag module and the seat back (pad, frame, trim) with new parts. After servicing, verify that the seat operates normally and that the wiring harness is not caught.

Seat Weight Sensor Handling
- The passenger-side seat and the seat weight sensor may become deformed or otherwise damaged due to operation (deployment) of the front or side air bag in an accident. This may cause the passenger sensing function to operate improperly and result in a serious accident. Always replace the passenger seat and seat weight sensor with new ones after the front or side air bags have operated (deployed). After servicing, verify that the seat operates normally and that the wiring harness is not caught. If the collision is not hard enough to cause the front or side air bags to operate (deploy), inspect the seat weight sensor and replace it if there is any malfunction.

SAS Control Module Handling
- Removing the SAS control module or disconnecting the SAS control module connector with the ignition switch at the ON position can activate the sensor in the SAS control module and operate (deploy) the air bags and pre-tensioner seat belts, which may cause serious injury. Before removing the SAS control module or disconnecting the SAS control module connector, always turn the ignition switch to the LOCK position, disconnect the negative battery cable, and then wait for 1 min or more to allow the backup power supply of the SAS control module to deplete its stored power.
- Connecting the SAS control module connector with the SAS control module not securely fixed to the vehicle is dangerous. The sensor in the SAS control module could send an electrical signal to the air bag modules and pre-tensioner seat belts. This will operate (deploy) the air bags and pre-tensioner seat belts, which may result in serious injury. Therefore, before connecting the connector, securely fix the SAS control module to the vehicle.
- Because a sensor is built into the SAS control module, once the air bags and pre-tensioner seat belts have operated (deployed) due to a collision or other causes, the SAS control module must be replaced with a new one even if the used one does not have any visible external damage or deformation. The used SAS control module may have been damaged internally, which may cause improper operation. If the SAS control module is reused, the air bags and pre-tensioner seat belts may not operate (deploy) normally, which could result in a serious accident. Always replace the SAS control module with a new one. The SAS control module cannot be bench-checked or self-checked.

Crash Zone Sensor Handling
- Removing the crash zone sensor or disconnecting the crash zone sensor connector with the ignition switch at the ON position can activate the crash zone sensor and operate (deploy) the air bags and pre-tensioner seat belts, which may cause serious injury. Before removing the crash zone sensor or disconnecting the crash zone sensor connector, always turn the ignition switch to the LOCK position, disconnect the negative battery cable, and then wait for 1 min or more to allow the backup power supply of the SAS control module to deplete its stored power.
- If the crash zone sensor is subjected to shock or the sensor is disassembled, the air bags and pre-tensioner seat belts may accidentally operate (deploy) and cause injury, or the system may fail to operate normally and cause a serious accident. Do not subject the crash zone sensor to shock or disassemble the sensor.

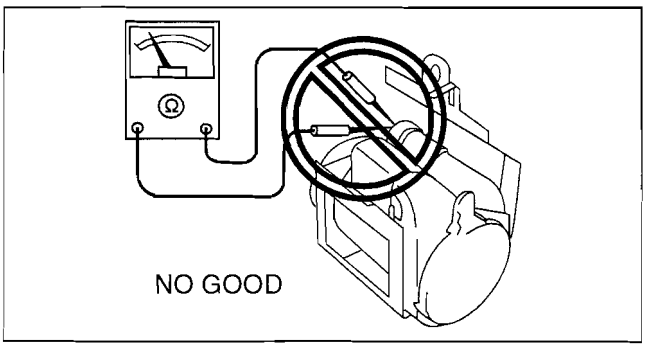
- Because a sensor is built into the crash zone sensor, once the air bags and pre-tensioner seat belts have operated (deployed) due to a collision or other causes, the crash zone sensor must be replaced with a new one even if the used one does not have any visible external damage or deformation. If the crash zone sensor is reused, the air bags and pre-tensioner seat belts may not operate (deploy) normally, which could result in a serious accident. Always replace the crash zone sensor with a new one. The crash zone sensor cannot be bench-checked or self-checked.

Side Air Bag Sensor Handling

- Removing the side air bag sensor or disconnecting the side air bag sensor connector with the ignition switch at the ON position can activate the side air bag sensor and operate (deploy) the side air bag, which may cause serious injury. Before removing the side air bag sensor or disconnecting the side air bag sensor connector, always turn the ignition switch to the LOCK position, disconnect the negative battery cable, and then wait for 1 min or more to allow the backup power supply of the SAS control module to deplete its stored power.
- If the side air bag sensor is subjected to shock or the sensor is disassembled, the side air bag may accidentally operate (deploy) and cause injury, or the system may fail to operate normally and cause a serious accident. Do not subject the side air bag sensor to shock or disassemble the sensor.
- Because a sensor is built into the side air bag sensor, once the air bag has operated (deployed) due to a collision or other causes, the side air bag sensor must be replaced with a new one even if the used one does not have any visible external damage or deformation. If the side air bag sensor is reused, the side air bag may not operate (deploy) normally, which could result in a serious accident. Always replace the side air bag sensor with a new one. The side air bag sensor cannot be bench-checked or self-checked.

Pre-tensioner Seat Belt Inspection

- Inspecting a pre-tensioner seat belt using a tester can operate (deploy) the pre-tensioner seat belt, which may cause serious injury. Do not use a tester to inspect a pre-tensioner seat belt. Always use the on-board diagnostic function to diagnose the pre-tensioner seat belt for malfunctions.



e3u810zw6004

AIR BAG SYSTEM SERVICE CAUTIONS

id081000800300

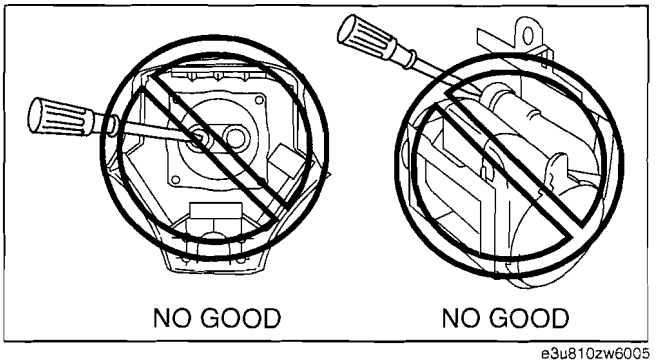
Air Bag System Component Disassembly

- Disassembling the air bag system components could cause it to not operate (deploy) normally. Never disassemble any air bag system components.

CHU0810W604

Air Bag Module, Pre-tensioner Seat Belt Handling

- Oil, grease, or water on the air bag modules may cause the air bags and pre-tensioner seat belts to fail to operate (deploy) in an accident. Never allow oil, grease, or water to get on the air bag modules or pre-tensioner seat belts.
- Inserting a screwdriver or similar object into the connector of an air bag module or a pre-tensioner seat belt may damage the connector and cause the air bag module or the pre-tensioner seat belt to operate (deploy) improperly, which may cause serious injury. Never insert any foreign objects into the air bag module or seat belt connectors.



e3u810zw6005

Seat Weight Sensor Handling

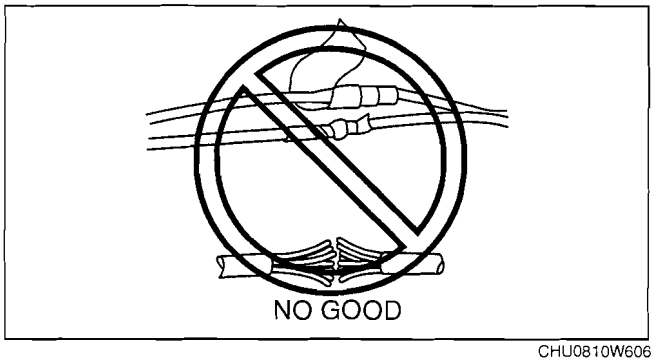
- The seat weight sensor has a built-in strain gauge which may operate improperly if the sensor is dropped by itself or when installed to the seat. If it is dropped, replace the seat weight sensor with a new one.
- Oil, grease, or water on the seat weight sensor may cause the system to operate (deploy) improperly. Never allow oil, grease, or water to get on the seat weight sensor.
- Foreign material in the seat weight sensor components may cause the system to operate (deploy) improperly. Always make sure that no foreign material can get into the seat weight sensor.
- Disassembling the seat weight sensor, or tightening any of the nuts and bolts installed to the sensor body may cause it to operate (deploy) improperly. Never disassemble the seat weight sensor or tighten any of the nuts or bolts installed to the body of the sensor.

Air Bag Module. Pre-tensioner Seat Belt Reuse

- Even if an air bag module or a pre-tensioner seat belt does not operate (deploy) in a collision and does not have any external signs of damage, it may have been damaged internally, which may cause improper operation. Before reusing a live (undeployed) air bag module and the pre-tensioner seat belts, always use the on-board diagnostic to diagnose the air bag module and the pre-tensioner seat belts to verify that they have no malfunction.

Air Bag Wiring Harness Repair

- Incorrectly repairing an air bag wiring harness can accidentally operate (deploy) the air bag module and pre-tensioner seat belts. If a problem is found in the air bag wiring harness, always replace the wiring harness with a new one.



CHU0810W606

DRIVER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION

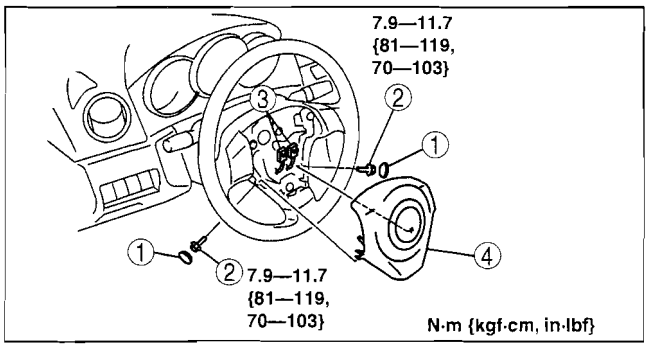
id081000801300

Warning

- **Handling the air bag module improperly can accidentally deploy the air bag module, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag module. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**

1. Turn the ignition switch to the LOCK position.
2. Disconnect the negative battery cable and wait for **1 min or more**.
3. Remove in the order indicated in the table.

1	Cover
2	Bolt
3	Connector (See 08-10-7 Connector Removal Note.)
4	Driver-side air bag module

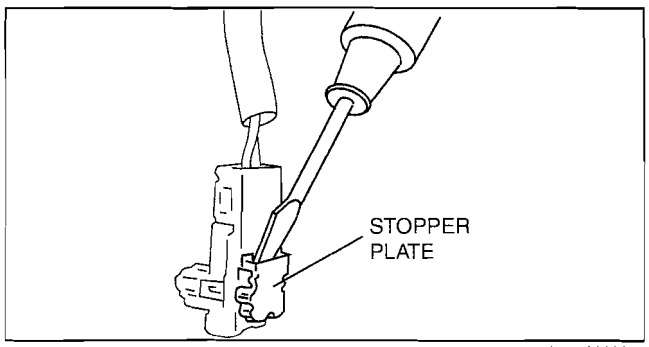


c3u0810w204

4. Install in the reverse order of removal.
5. Turn the ignition switch to the ON position.
6. Verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.
   - If the air bag system warning light does not operate normally, refer to the on-board diagnostic system (air bag system) and perform inspection of the system.

Connector Removal Note

1. Using a flathead screwdriver, pry out the connector stopper plate.
2. Disconnect the connector.



am3uuw0000081

PASSENGER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION

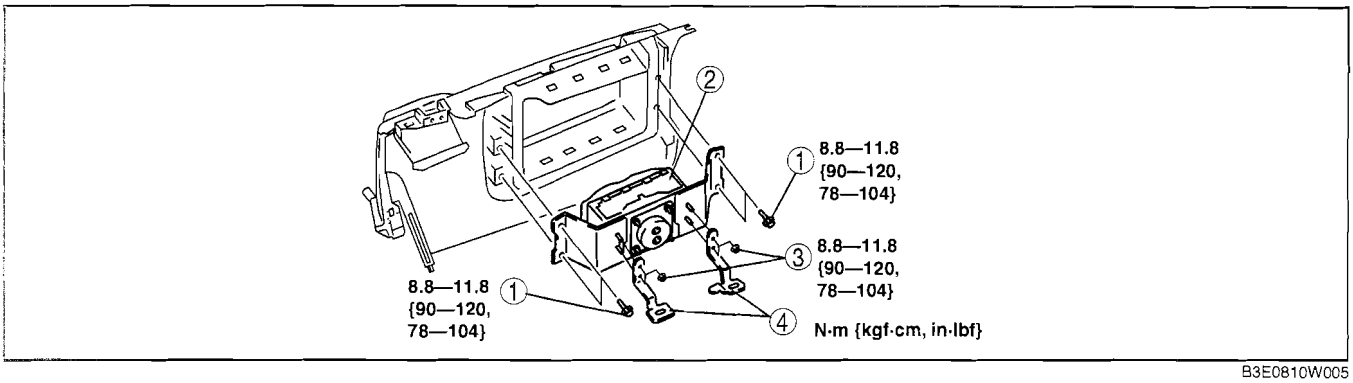
id081000801900

Warning

- **Handling the air bag module improperly can accidentally deploy the air bag module, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag module. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**
- **Due to the adoption of 2-step deployment control in the passenger-side air bag module, depending on the impact force, it is possible that inflator No.2 might not deploy. In such cases, before disposing of the air bag module, make sure to follow the inflator deployment procedures and verify complete deployment of inflators No.1 and 2.**

1. Turn the ignition switch to the LOCK position.
2. Disconnect the negative battery cable and wait for **1 min or more**.
3. Remove the following parts:
   (1) A-pillar trim (See 09-17-11 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (2) Front scuff plate (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (3) Front side trim (See 09-17-17 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (4) Decoration panel (See 09-17-17 DECORATION PANEL REMOVAL/INSTALLATION.)
   (5) Glove compartment (See 09-17-7 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
   (6) Dashboard center panel (without car-navigation system) (See 09-17-15 DASHBOARD CENTER PANEL REMOVAL/INSTALLATION.)
   (7) LCD unit (with car-navigation system) (See 09-20-6 LCD UNIT REMOVAL/INSTALLATION.)
   (8) Dashboard garnish (See 09-17-13 DASHBOARD GARNISH REMOVAL/INSTALLATION.)

4. Remove in the order indicated in the table.



B3E0810W005

5. Install in the reverse order of removal.
6. Turn the ignition switch to the ON position.
7. Verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.
   - If the air bag system warning light does not operate, refer to the on-board diagnostic system (air bag system) and perform inspection of the system.

SIDE AIR BAG MODULE REMOVAL/INSTALLATION

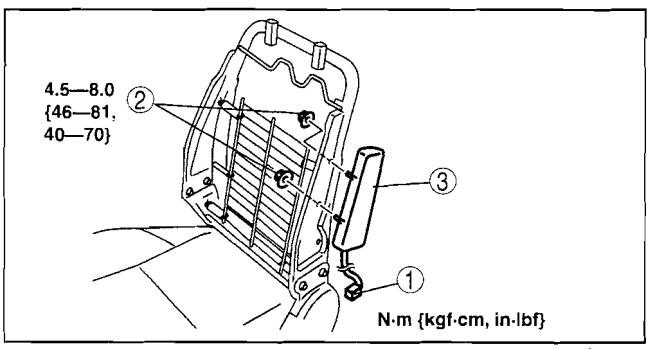
id081000800800

Warning

- **Handling the air bag module improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag module. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**
- **If the side air bag module is installed with debris in the seat back, the foreign material may be scattered when the side air bag module operates (deploys), causing injury. Verify that there is no foreign material in the seat back before installing the side air bag module.**

1. Turn the ignition switch to the LOCK position.
2. Disconnect the negative battery cable and wait for **1 min or more**.
3. Remove the front seat. (See 09-13-2 FRONT SEAT REMOVAL/INSTALLATION.)
4. Remove the seat cushion frame. (See 09-13-3 FRONT SEAT DISASSEMBLY/ASSEMBLY.)
5. Partially peel back the seat back trim.
6. Partially peel back the seat back pad.
7. Remove in the order indicated in the table.

1	Connector (See 08-10-9 Connector Removal Note.)
2	Nut
3	Side air bag module

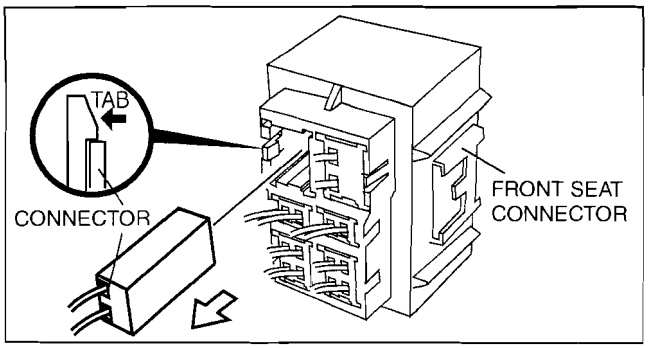


am3uuw0000081

8. Install in the reverse order of removal.
9. Turn the ignition switch to the ON position.
10. Verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.
    - If the air bag system warning light does not operate normally, refer to the on-board diagnostic system (air bag system) and perform inspection of the system.

Connector Removal Note

1. Detach the tab as shown in the figure and remove the connector from the front seat connector.



am3uuw0000081

CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION

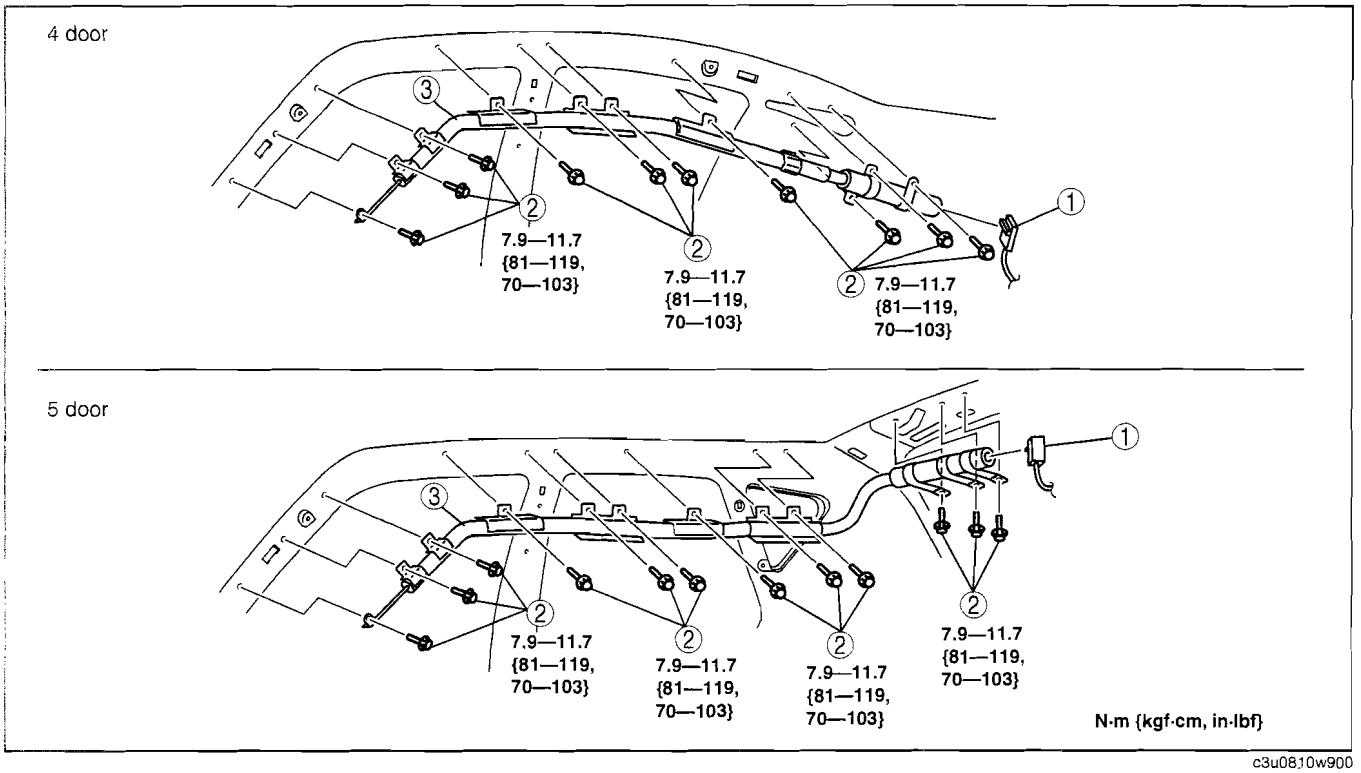
id081000800900

Warning

- **Handling the air bag module improperly can accidentally deploy the air bag module, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag module. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**

1. Turn the ignition switch to the LOCK position.
2. Disconnect the negative battery cable and wait for **1 min or more.**
3. Remove the following parts:
   (1) Console (4 door) (See 09-17-10 CONSOLE REMOVAL/INSTALLATION.)
   (2) A-pillar trim (See 09-17-11 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (3) Front scuff plate (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (4) Rear scuff plate (See 09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (5) B-pillar lower trim (See 09-17-12 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (6) Upper anchor of the front seat belt (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (7) B-pillar upper trim (See 09-17-12 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
   (8) Rear seat (See 09-13-6 REAR SEAT REMOVAL/INSTALLATION.)
   (9) Tire house trim (See 09-17-15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
   (10)Trunk side upper trim (5 door) (See 09-17-20 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
   (11)C-pillar trim (See 09-17-13 C-PILLAR TRIM REMOVAL/INSTALLATION.)
   (12)Map light (See 09-18-23 MAP LIGHT REMOVAL/INSTALLATION.)
   (13)Interior light (See 09-18-24 INTERIOR LIGHT REMOVAL/INSTALLATION.)
   (14)Sunvisor (See 09-17-23 SUNVISOR REMOVAL/INSTALLATION.)
   (15)Assist handle (See 09-17-24 ASSIST HANDLE REMOVAL/INSTALLATION.)
   (16)Headliner (See 09-17-24 HEADLINER REMOVAL/INSTALLATION.)
   (17)Head impact pad (See 09-17-16 HEAD IMPACT PAD REMOVAL/INSTALLATION.)

4. Remove in the order indicated in the table.



c3u08;10w900

1	Connector
2	Bolt
3	Curtain air bag module

5. Install in the reverse order of removal.
6. When the ignition switch is turned to the ON position verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.
   - If the air bag system warning light does not operate normally, refer to the on-board diagnostic system (air bag system) and perform inspection of the system.

CRASH ZONE SENSOR REMOVAL/INSTALLATION

id081000800500

Warning

- **Handling the crash zone sensor improperly can accidentally deploy the air bags and pre-tensioner seat belts, which may seriously injure you. Read the air bag system service warnings and cautions before handling the crash zone sensor. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**

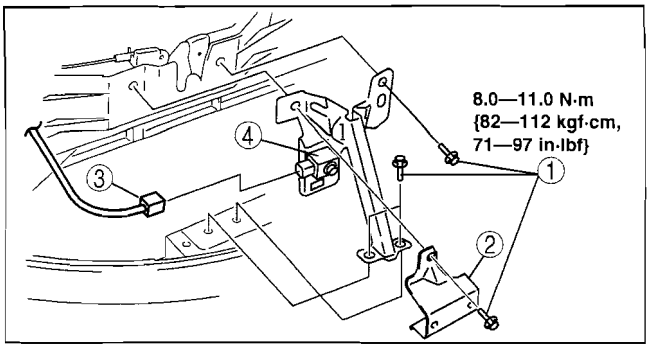
Note

- The hood latch is attached together with the crash zone sensor and is therefore removed when the sensor is removed. This may cause incorrect positioning of the hood after installation of the sensor. To ensure proper positioning of the hood, place alignment marks on the hood latch and shroud panel before removing the crash zone sensor.

1. Place alignment marks on the hood latch and shroud panel.
2. Turn the ignition switch to the LOCK position.
3. Disconnect the negative battery cable and wait for **1 min or more**.

4. Remove in the order indicated in the table.

1	Bolt
2	Cover
3	Connector
4	Crash zone sensor (See 08-10-11 Crash Zone Sensor Installation Note.)



am3uuw0000081

5. Install in the reverse order of removal.
6. Turn the ignition switch to the ON position.
7. Verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.
   - If the air bag system warning light does not operate normally, refer to the on-board diagnostic system (air bag system) and perform inspection of the system.

Crash Zone Sensor Installation Note

1. Align the alignment marks on the hood latch and shroud panel made prior to removal, and install the crash zone sensor.
2. Refer to "HOOD ADJUSTMENT" and verify that the gap and height difference between the hood and body are within the specifications. Adjust the hood if necessary. (See 09-10-4 HOOD ADJUSTMENT.)

SAS CONTROL MODULE REMOVAL/INSTALLATION

id081000801400

Warning

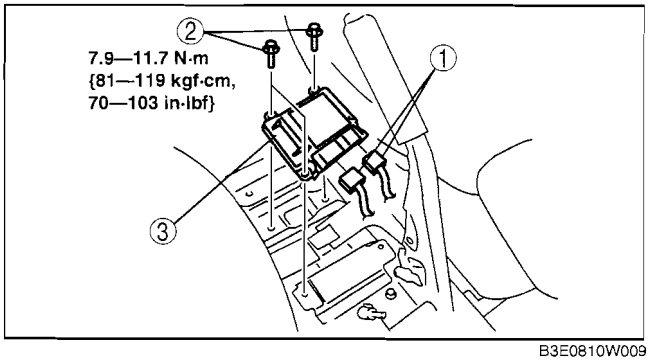
- **Handling the SAS control module improperly can accidentally deploy the air bag modules and pretensioner seat belt, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag module. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**

Caution

- **Handling the SAS control module improperly can accidentally deploy the air bag modules and pretensioner seat belt, which may seriously injure you. If configuration is not completed before removing the SAS control module, DTC B2477 will be displayed.**

1. Perform SAS control module configuration when replacing it. (See 08-10-12 SAS CONTROL MODULE CONFIGURATIONS.)
2. Turn the ignition switch to the LOCK position.
3. Disconnect the negative battery cable and wait for **1 min or more**.
4. Remove the console. (See 09-17-10 CONSOLE REMOVAL/INSTALLATION.)
5. Remove in the order indicated in the table.

1	Connector
2	Bolt
3	SAS control module



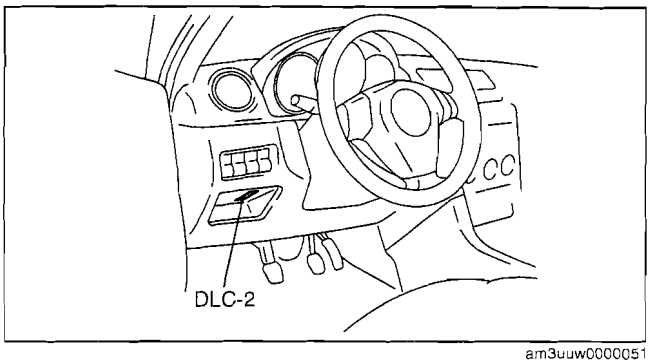
B3E0810W009

6. Install in the reverse order of removal.
7. Turn the ignition switch to the ON position.
   - If the SAS control module is replaced, turn the ignition switch to the ON position for **20 s or more** after completing the configuration. (See 08-10-12 SAS CONTROL MODULE CONFIGURATION.)
8. Verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.
   - If the air bag system warning light does not operate normally, refer to the on-board diagnostic system (air bag system) and perform inspection of the system.

SAS CONTROL MODULE CONFIGURATION

id081000801500

1. Connect the M-MDS to the DLC-2 connector.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select "Module Programming".
   - When using the PDS (Pocket PC)
     1. Select "Programming".
     2. Select "Module Programming".
3. Then, select items from the screen menu in the following order.
   1. Select "Programmable Module Installation".
   2. Select "RCM".
4. Perform the configuration according to the directions on the screen.



am3uuw0000051

SEAT WEIGHT SENSOR CONTROL MODULE REMOVAL/INSTALLATION

id081000801600

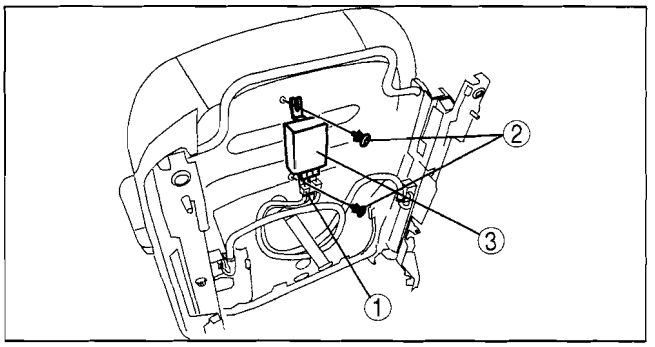
Caution

- **When the seat weight sensor control module is replaced with a new one, perform the seat weight sensor calibration using the M-MDS. (See 08-10-12 SEAT WEIGHT SENSOR CALIBRATION.)**

1. Turn the ignition switch to the LOCK position.
2. Disconnect the negative battery cable and wait for **1 min or more**.
3. Remove the front passenger's seat. (See 09-13-2 FRONT SEAT REMOVAL/INSTALLATION.)
4. Remove in the order indicated in the table.

1	Connector
2	Fasner
3	Seat weight sensor control module

5. Install in the reverse order of removal.



c3u0810w520

SEAT WEIGHT SENSOR CALIBRATION

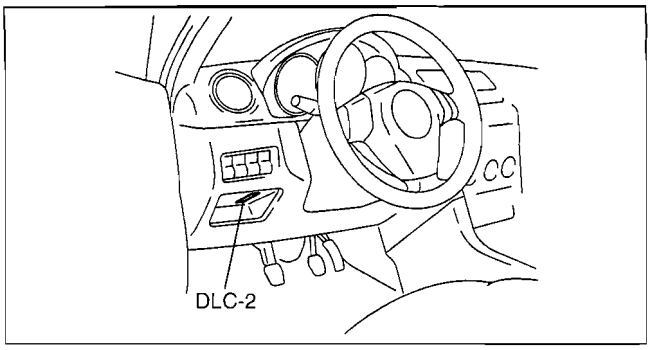
id081000801700

Caution

- **If any of the following work is performed, perform the seat weight sensor calibration using the M-MDS.**
  - **— Replacement with a new seat weight sensor**
  - **— Replacement with a new seat weight sensor control module**
  - **— Replacement with new passenger-side seat parts**
  - **— Disassembly of the passenger-side seat**
- **If any of the following work is performed, perform the seat weight sensor inspection using the M-MDS. (See 08-10-13 SEAT WEIGHT SENSOR INSPECTION.)**
  - **— Removal of the passenger-side seat**
  - **— Loosening and retightening of passenger's seat fixing bolts**
  - **— Or, the vehicle is involved in a collision**

1. Have two **20 kg {44 lb}** weights ready to use.

2. Connect the M-MDS to the DLC-2 connector.
3. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select "Body".
     2. Select "Restraints".
   - When using the PDS (Pocket PC)
     1. Select "All Tests and Calibrations".
4. Then, select item from the screen menu in the following order.
   1. Select "Passenger Seat Weight Sensor ReZero".
5. Perform calibration following the procedures on the M-MDS screen.



am3uuw0000051

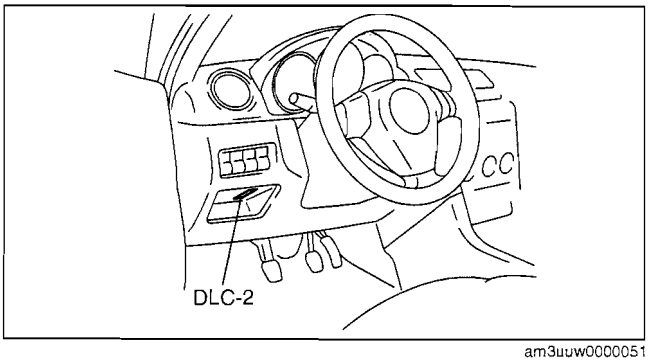
Note
- When "Lightly pat the passenger seat cushion" is displayed on the M-MDS screen, lightly pat horizontally approx. five times on the headrest or upper side of the seat back trim of the passenger-side front seat.

SEAT WEIGHT SENSOR INSPECTION

id081000801800

Caution
- **If any of the following work is performed, perform the seat weight sensor inspection using the M-MDS.**
  - **— Removal of the passenger-side seat**
  - **— Loosening and retightening of passenger's seat fixing bolts**
  - **— Or, the vehicle is involved in a collision**
- **If any of the following work is performed, perform the seat weight sensor calibration using the M-MDS. (See 08-10-12 SEAT WEIGHT SENSOR CALIBRATION.)**
  - **— Replacement with a new seat weight sensor**
  - **— Replacement with a new seat weight sensor control module**
  - **— Replacement with new passenger-side seat parts**
  - **— Disassembly of the passenger-side seat**

1. Connect the M-MDS to the DLC-2 connector.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select "Body".
     2. Select "Restraints".
   - When using the PDS (Pocket PC)
     1. Select "All Tests and Calibrations".
3. Then, select item from the screen menu in the following order.
   1. Select "Passenger Seat Weight Sensor ReZero".
4. Perform inspection following the procedures on the M-MDS screen.



am3uuw0000051

SIDE AIR BAG SENSOR REMOVAL/INSTALLATION

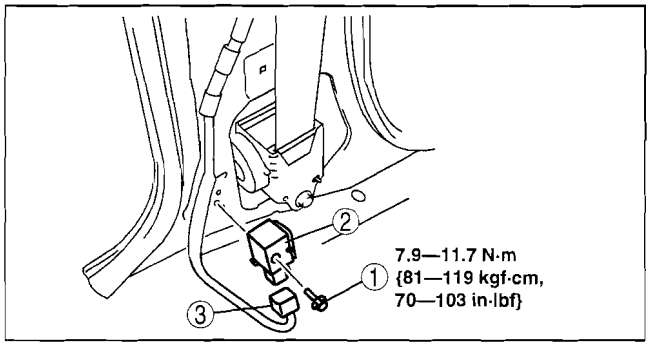
id081000804200

Warning

- **Handling the side air bag sensor improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the air bag system service warnings and cautions before handling the side air bag sensor. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**

1. Turn the ignition switch to the LOCK position.
2. Disconnect the negative battery cable and wait for **1 min or more**.
3. Remove the front scuff plate. (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
4. Remove the rear scuff plate. (See 09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
5. Remove the B-pillar lower trim. (See 09-17-12 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
6. Remove in the order indicated in the table.

1	Bolt
2	Side air bag sensor
3	Connector



B3E0810W010

7. Install in the reverse order of removal.
8. Turn the ignition switch to the ON position and hold for **5 s or more**.

Caution

- **When turning the ignition switch to the ON position after replacing the side air bag sensor, performing the following operations will cancel the sensor code over-write, which could cause the air bags to fail to operate (deploy).**
  - **— The ignition switch is turned to the LOCK position before the ignition switch is held in the ON position for 5 s or more.**
  - **— The engine is started.**
- **If the above operations are performed and the sensor code over-write is canceled, it will be necessary to replace the sensor again.**

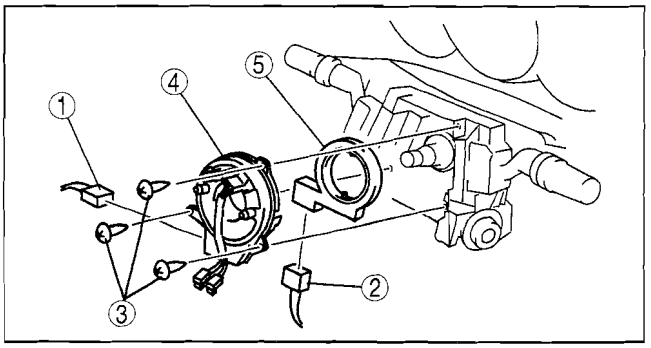
9. Verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.
   - If the air bag system warning light does not operate normally, refer to the on-board diagnostic system (air bag system) and perform inspection of the system.

CLOCK SPRING REMOVAL/INSTALLATION

id081000802000

1. Disconnect the negative battery cable and wait for **1 min or more**.
2. Remove the following parts:
   (1) Driver-side air bag module (See 08-10-7 DRIVER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
   (2) Steering wheel (See 06-14-8 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
   (3) Front scuff plate (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION
   (4) Front side trim (See 09-17-17 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (5) Lower panel (See 09-17-7 LOWER PANEL REMOVAL/INSTALLATION.)
   (6) Column cover (See 09-17-7 COLUMN COVER REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.

1	Clock spring connector
2	Steering angle sensor connector (With steering angle sensor)
3	Screw
4	Clock spring (See 08-10-15 Clock Spring Installation Note.)
5	Steering angle sensor (With steering angle sensor) (See 08-10-15 Steering Angle Sensor Removal Note.)



am3uuw0000081

4. Install in the reverse order of removal.
5. Turn the ignition switch to the ON position.

6. Verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.
   - If the air bag system warning light does not operate normally, refer to the on-board diagnostic system (air bag system) and perform inspection of the system.

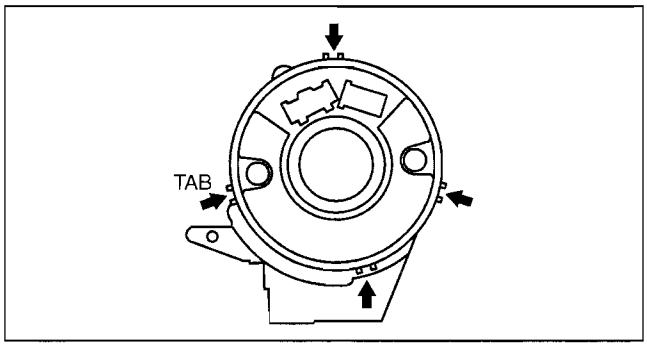
Clock Spring Installation Note

Caution
- **If the clock spring is not adjusted, the spring wire in the clock spring could over-wind and break when the steering wheel is turned. Always adjust the clock spring after installing it.**

1. Adjust the clock spring after installing it. (See 08-10-15 CLOCK SPRING ADJUSTMENT.)

Steering Angle Sensor Removal Note

1. Detach the tabs at the four locations shown in the figure and remove the steering angle sensor.



am3uuw0000082

CLOCK SPRING ADJUSTMENT

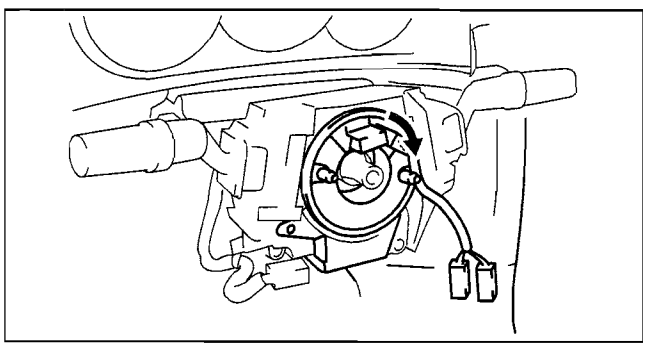
id081000802100

Note
- The adjustment procedure is also specified on the caution label of the clock spring.

1. Set the front tires straight-ahead.

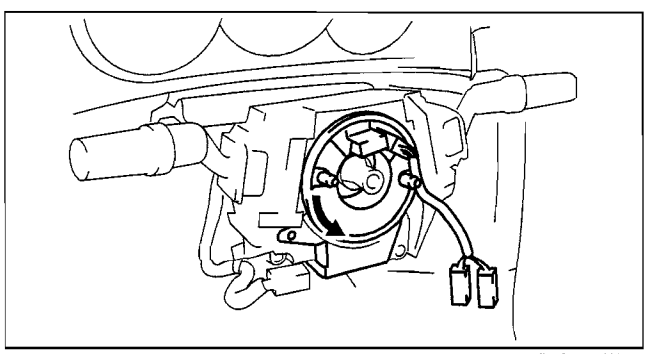
Caution
- **The clock spring will break if over-wound. Do not forcibly turn the clock spring.**

2. Turn the clock spring clockwise until it stops.



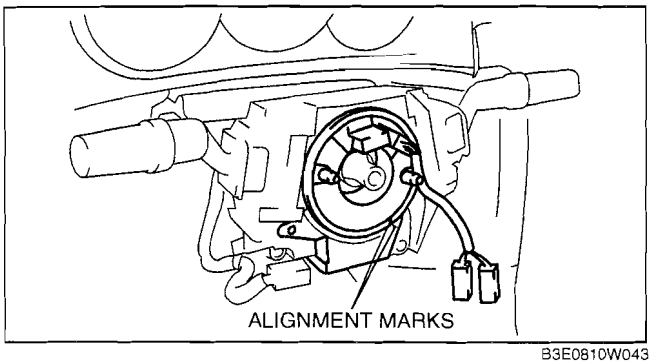
B3E0810W013

3. From the stopped position, turn the clock spring counterclockwise **2 3/4 turns**.



B3E0810W014

4. Align the marks.



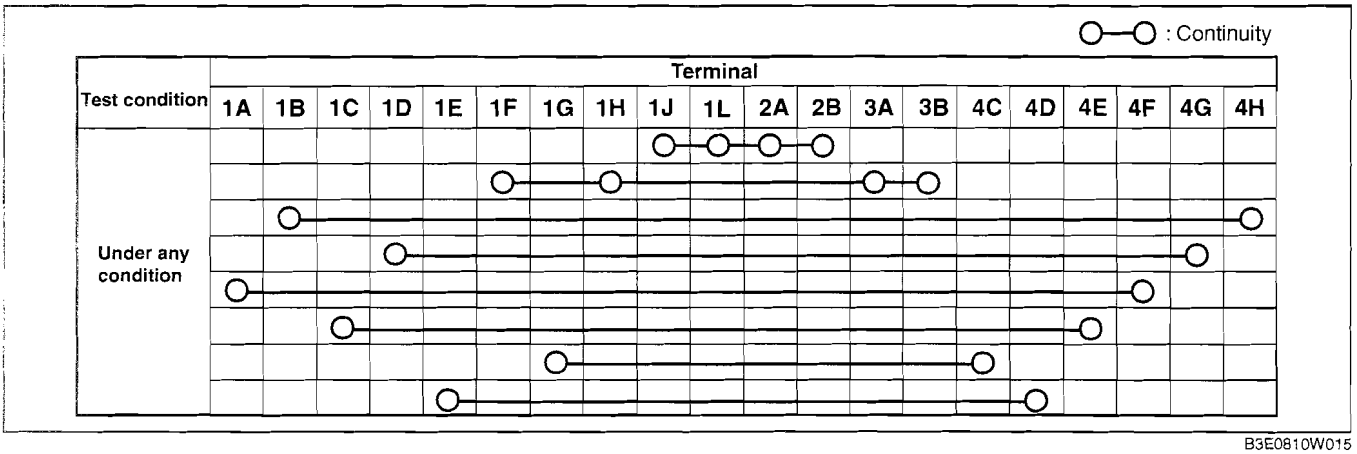
B3E0810W043

CLOCK SPRING INSPECTION

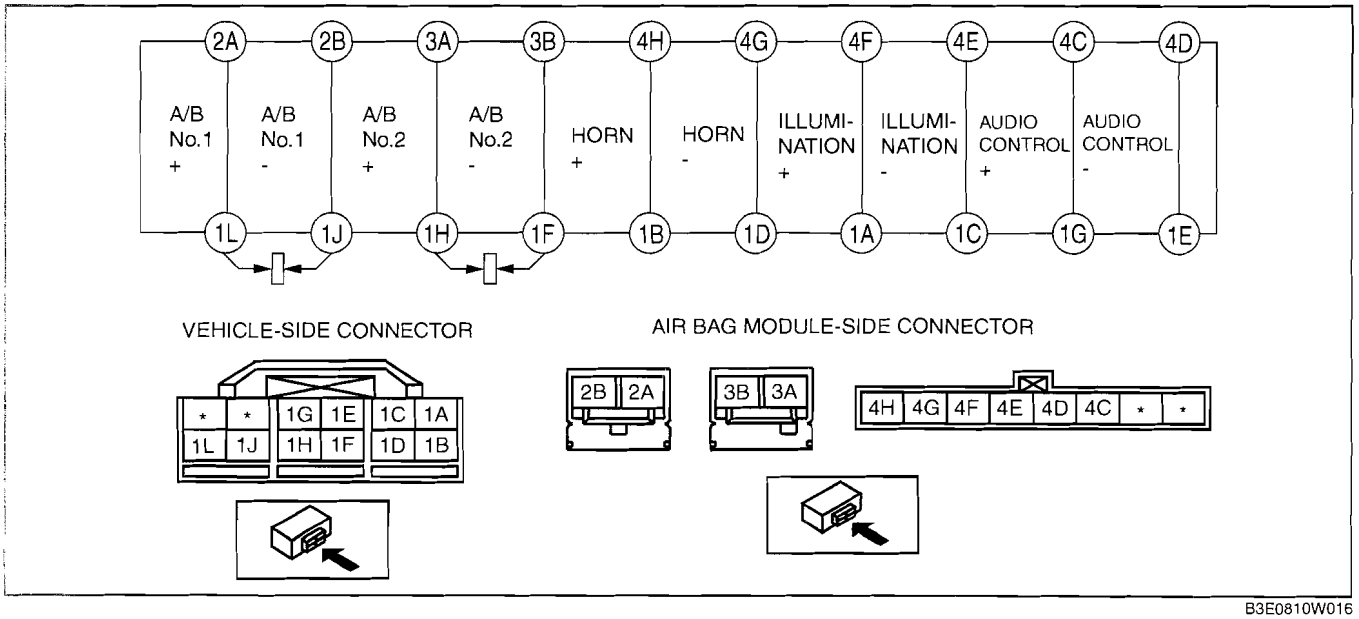
id081000802200

1. Verify that the continuity is as indicated in the table.
   - If not as indicated in the table, replace the clock spring.

Note
- When the vehicle-side connector for the clock spring is disconnected, terminals 1F, 1H, 1J and 1L are shorted to prevent unexpected operation (deployment) of the air bag module.



B3E0810W015



B3E0810W016

AIR BAG MODULE AND PRE-TENSIONER SEAT BELT DEPLOYMENT PROCEDURES

id081000801100

Warning

- **A live (undeployed) air bag module or pre-tensioner seat belt may accidentally operate (deploy) when it is disposed of and cause serious injury. Do not dispose of a live (undeployed) air bag module and pre-tensioner seat belt. If the SSTs (Deployment tool and Adapter harness) are not available, consult the nearest Mazda representative for assistance.**

Caution

- **Deploying the air bag modules and pre-tensioner seat belts inside the vehicle may cause damage to the vehicle interior. When the vehicle is not to be scrapped, always deploy the air bag modules and pre-tensioner seat belts outside the vehicle.**

- If the vehicle is to be scrapped, or when disposing of any air bag modules or pre-tensioner seat belts, operate (deploy) them inside the vehicle by following the deployment procedure below and using the **SST** (Deployment tool).
- When disposing of a operated (deployed) air bag module and pre-tensioner seat belt, refer to "AIR BAG MODULE AND PRE-TENSIONER SEAT BELT DISPOSAL PROCEDURES".

Deployment Procedure for Inside of Vehicle

1. Inspect the **SST** (Deployment tool). (See 08-10-31 INSPECTION OF SST (DEPLOYMENT TOOL).)
2. Move the vehicle to an open space, away from strong winds, and close all of the vehicle doors and windows.
3. Turn the ignition switch to the LOCK position.
4. Disconnect the negative battery cable and wait for **1 min or more**.
5. Follow the procedure below for operating (deploying) the applicable air bag module or pre-tensioner seat belt.

Driver-side air bag module

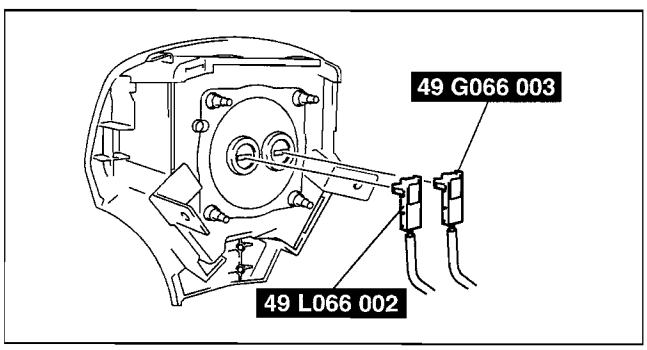
Warning

- **The driver-side air bag module is a dual inflator type. If one inflator is forced to operate (deploy), the other may operate (deploy) accidentally. To prevent injury while disposing of the air bag module, make sure to operate (deploy) both driver-side air bag module inflators simultaneously, following the procedure below.**

Note

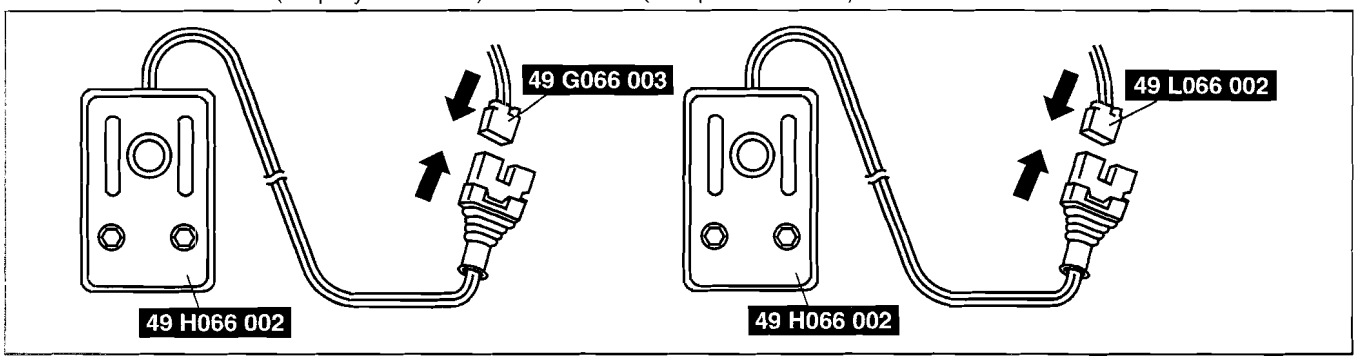
- The **SSTs**, two types of adapter harnesses (for inflators No.1 and No.2) and two deployment tools are to be used to operate (deploy) the driver-side air bag module.

1. Remove the driver-side air bag module. (See 08-10-7 DRIVER-SIDE AIR BAG MODULE REMOVAL/ INSTALLATION.)
2. Connect the **SSTs** (Adapter harness) to the driver-side air bag module as shown in the figure.
3. Install the driver-side air bag module. (See 08-10-7 DRIVER-SIDE AIR BAG MODULE REMOVAL/ INSTALLATION.)



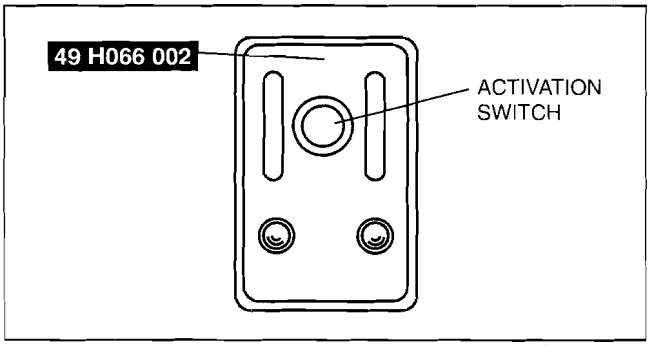
e3u810zw6008

4. Connect the **SSTs** (Deployment tool) to the **SSTs** (Adapter harness).



B3E0810W020

5. Connect both **SSTs** (Deployment tool) to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.
6. Verify that the red lamp on both **SSTs** (Deployment tool) is illuminated.
7. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.
8. Press the activation switch on the **SST** (Deployment tool) connected with 49 L066 002 (a yellow connector) of the **SST** (Adapter harness), and **after 3 s**, press the activation switch on the other **SST** (Deployment tool) to operate (deploy) the air bag module (both inflators).



A6E8130W028

Warning

- **Verify that air bag module operation (explosive) sound occurs twice. If no operation (explosive) sound was heard or a single operation (explosive) sound was heard, both inflators would not have operated (deployed) properly. This may cause serious injury because the air bag module may operate (deploy) accidentally. If the two operation (explosive) sounds are not heard, perform Step 8 again. In case that the two operation (explosive) sounds in total are not verified even though Step 8 is performed again, leave the air bag module alone for 30 min or more before getting near it again.**
- **The air bag module is very hot immediately after it is operated (deployed). You can get burned. Do not touch the air bag module for at least 15 min after deployment.**

9. Disconnect the **SSTs** (Deployment tool) from the **SSTs** (Adapter harness).

Passenger-side air bag module

Warning

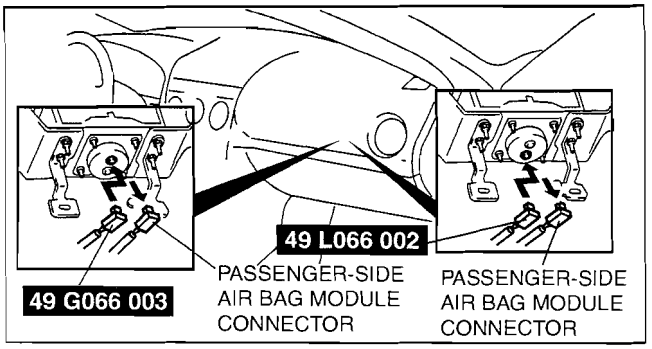
- **The passenger-side air bag module is a dual inflator type. If one inflator is forced to operate (deploy), the other may operate (deploy) accidentally. To prevent injury while disposing of the air bag module, make sure to operate (deploy) both passenger-side air bag module inflators simultaneously, following the procedure below.**

Note

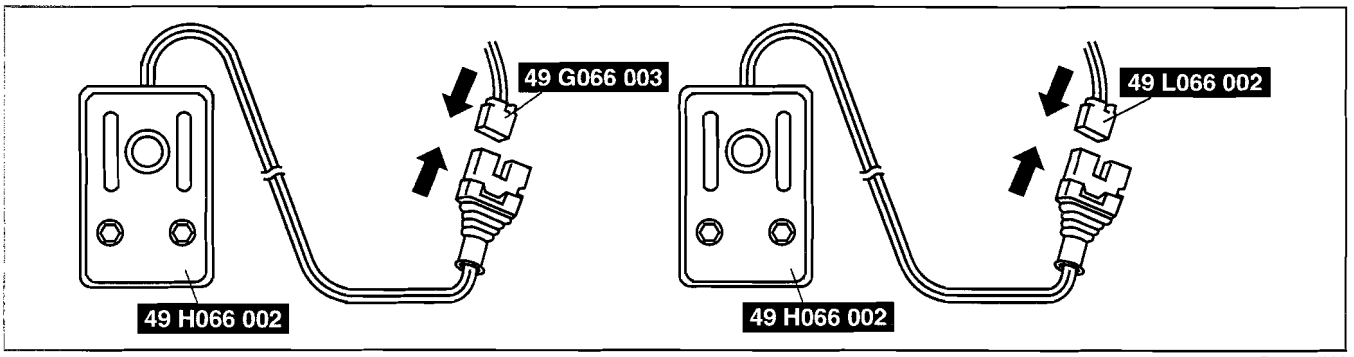
- The **SSTs**, two types of adapter harnesses (for inflators No.1 and No.2) and two deployment tools are to be used to operate (deploy) the passenger-side air bag module.

1. Remove the glove compartment. (See 09-17-7 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
2. Disconnect the passenger-side air bag module connector.

3. Connect the **SSTs** (Adapter harness) to the passenger-side air bag module as shown in the figure.
4. Connect the **SSTs** (Deployment tool) to the **SSTs** (Adapter harness).

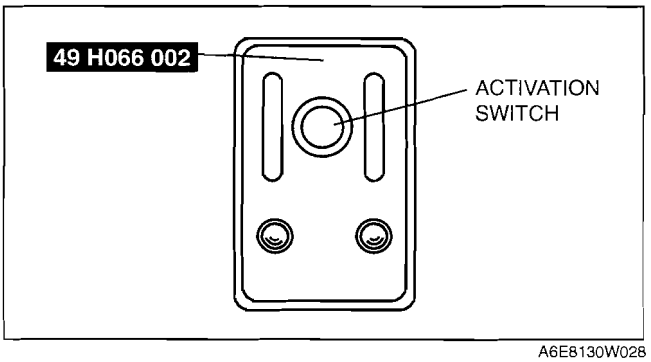


B3E0810W021



B3E0810W020

5. Connect both **SSTs** (Deployment tool) to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.
6. Verify that the red lamp on both **SSTs** (Deployment tool) is illuminated.
7. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.
8. Press the activation switch on the **SST** (Deployment tool) connected with 49 L066 002 (a yellow connector) of the **SST** (Adapter harness), and **after 3 s**, press the activation switch on the other **SST** (Deployment tool) to operate (deploy) the air bag module (both inflators).



A6E8130W028

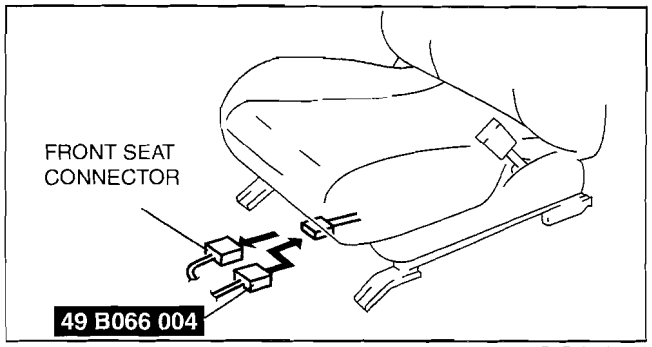
Warning

- **Verify that air bag module operation (explosive) sound occurs twice. If no operation (explosive) sound was heard or a single operation (explosive) sound was heard, both inflators would not have operated (deployed) properly. This may cause serious injury because the air bag module may operate (deploy) accidentally. If the two operation (explosive) sounds are not heard, perform Step 8 again. In case that the two operation (explosive) sounds in total are not verified even though Step 8 is performed again, leave the air bag module alone for 30 min or more before getting near it again.**
- **The air bag module is very hot immediately after it is operated (deployed). You can be burned. Do not touch the air bag module for at least 15 min after deployment.**

9. Disconnect the **SSTs** (Deployment tool) from the **SSTs** (Adapter harness).

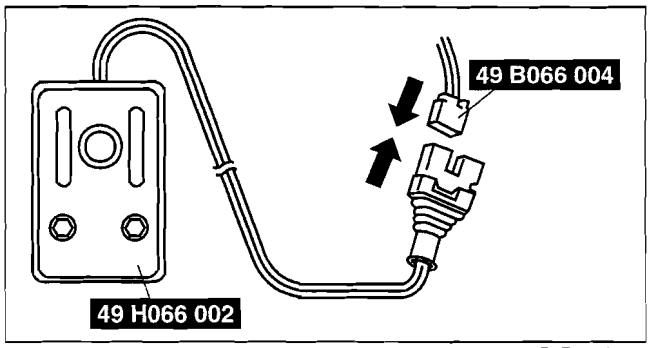
Side air bag module

1. Disconnect the front seat connector.
2. Connect the **SST** (Adapter harness) to the side air bag module as shown in the figure.



B3E0810W022

3. Connect the **SST** (Deployment tool) to the **SST** (Adapter harness).
4. Connect the **SST** (Deployment tool) to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.
5. Verify that the red lamp on the **SST** (Deployment tool) is illuminated.
6. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.

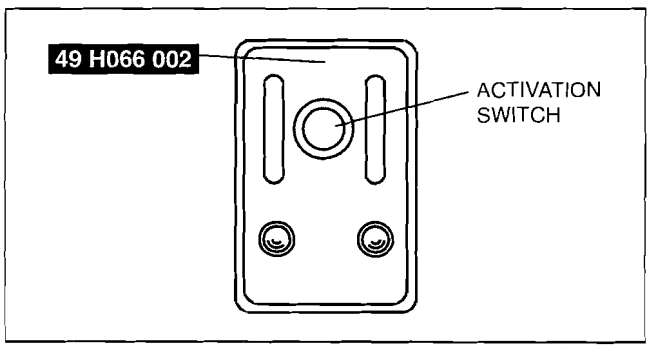


B3E0810W023

7. Press the activation switch on the **SST** (Deployment tool) to operate (deploy) the side air bag module.

   Warning
   - **The air bag module is very hot immediately after it is operated (deployed). You can be burned. Do not touch the air bag module for at least 15 min after deployment.**

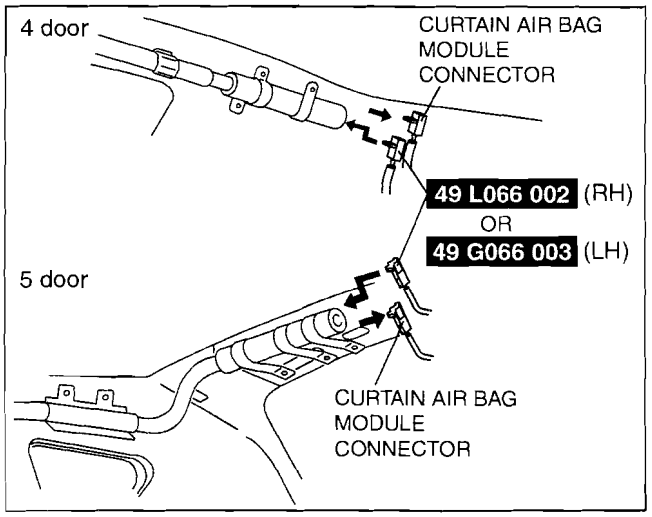
8. Disconnect the **SSTs** (Deployment tool) from the **SSTs** (Adapter harness).



A6E8130W028

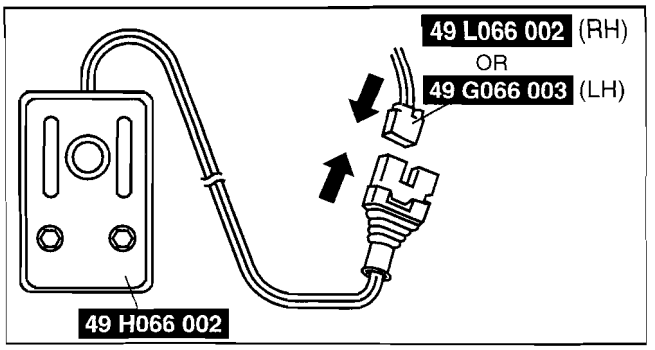
Curtain air bag module

1. Remove the C-pillar trim. (4 door) (See 09-17-13 C-PILLAR TRIM REMOVAL/INSTALLATION.)
2. Partially peel back the headliner. (5 door)
3. Disconnect the curtain air bag module connector.
4. Connect the **SST** (Adapter harness) to the curtain air bag module as shown in the figure.



e3u810zw6009

5. Connect the **SST** (Deployment tool) to the **SST** (Adapter harness).
6. Connect the **SST** (Deployment tool) to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.
7. Verify that the red lamp on the **SST** (Deployment tool) is illuminated.
8. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.

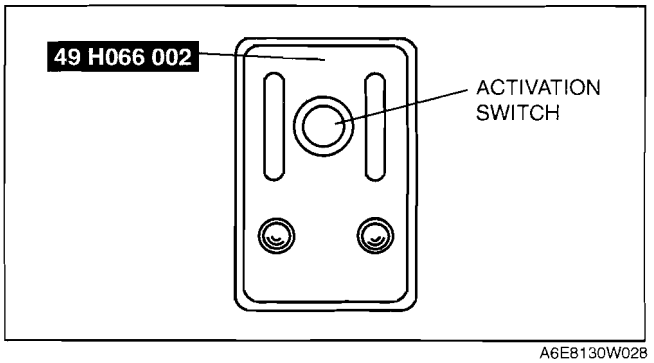


e3u810zw6016

9. Press the activation switch on the **SST** (Deployment tool) to operate (deploy) the curtain air bag module.

Warning
- **The air bag module is very hot immediately after it is operated (deployed). You can be burned. Do not touch the air bag module for at least 15 min after deployment.**

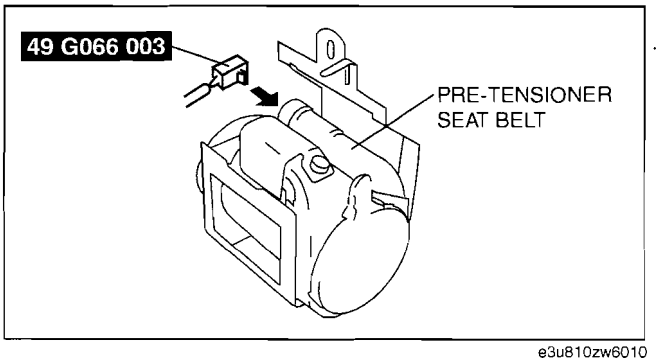
10. Disconnect the **SSTs** (Deployment tool) from the **SSTs** (Adapter harness).



A6E8130W028

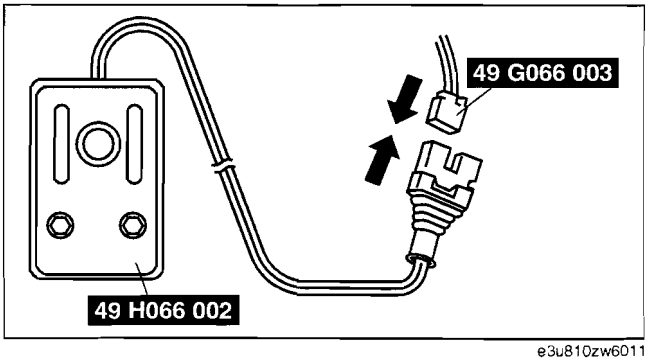
Pre-tensioner seat belt

1. Remove the B-pillar lower trim. (See 09-17-12 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
2. Disconnect the pre-tensioner seat belt connector.
3. Connect **the SST** (Adapter harness) to the pre-tensioner seat belt module as shown in the figure.



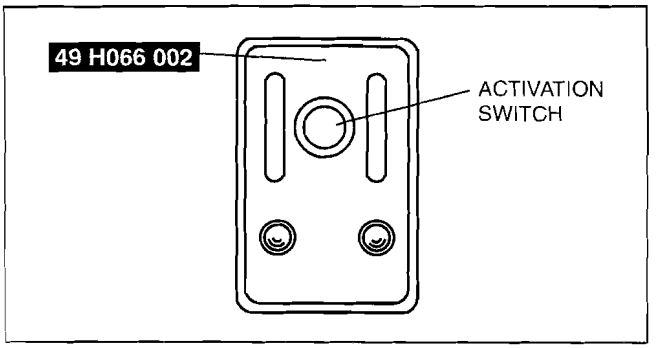
e3u810zw6010

4. Connect the **SST** (Deployment tool) to the **SST** (Adapter harness).
5. Connect the **SST** (Deployment tool) to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.
6. Verify that the red lamp on the **SST** (Deployment tool) is illuminated.
7. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.



e3u810zw6011

8. Press the activation switch on the **SST** (Deployment tool) to operate (deploy) the pre-tensioner seat belt.



A6E8130W028

Warning
- **The pre-tensioner seat belt is very hot immediately after it is operated (deployed). You can be burned. Do not touch the pre-tensioner seat belt for at least 15 min after deployment.**

9. Disconnect the **SSTs** (Deployment tool) from the **SSTs** (Adapter harness).

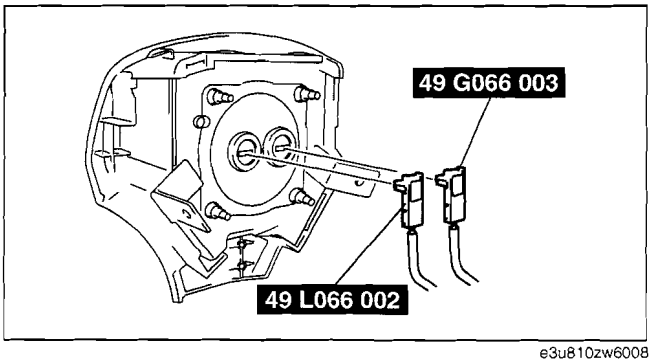
Deployment Procedure for Outside of Vehicle

1. Inspect the **SST** (Deployment tool). (See 08-10-31 INSPECTION OF SST (DEPLOYMENT TOOL).)
2. Turn the ignition switch to the LOCK position.
3. Disconnect the negative battery cable and wait for **1 min or more**.
4. Follow the procedure below for operating (deploying) the applicable air bag module or pre-tensioner seat belt.

Driver-side air bag module

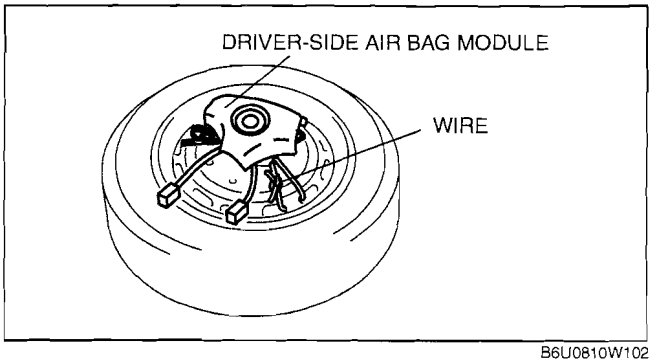
Warning
- **The driver-side air bag module is a dual inflator type. If one inflator is forced to operate (deploy), the other may operate (deploy) accidentally. To prevent injury while disposing of the air bag module, make sure to operate (deploy) both driver-side air bag module inflators simultaneously, following the procedure below.**

1. Remove the driver-side air bag module. (See 08-10-7 DRIVER-SIDE AIR BAG MODULE REMOVAL/ INSTALLATION.)
2. Connect the **SSTs** (Adapter harness) to the driver-side air bag module as shown in the figure.



e3u810zw6008

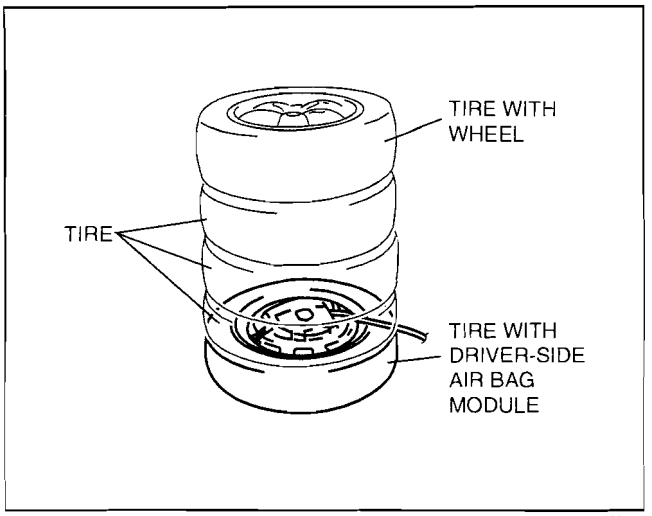
3. Place the driver-side air bag module on the center of the tire wheel with the padded surface facing up. To secure the air bag module to the tire wheel, wrap a wire (cross section **1.25 mm^2 {0.002 in^2} or more**) through the wheel and the bolt installation holes of the air bag module **at least 4 times**.



B6U0810W102

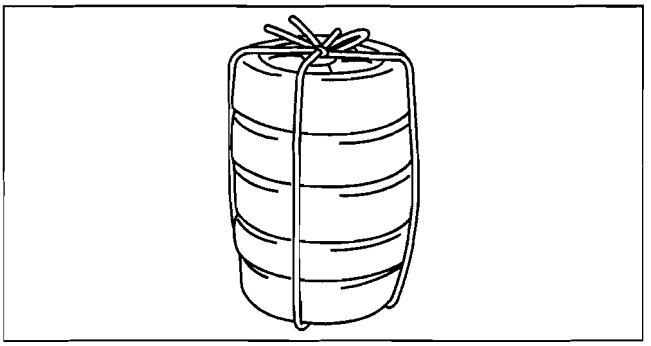
Warning
- **If the air bag module is not properly installed to the tire wheel, serious injury may occur when the module is operated (deployed). When installing the air bag module to the tire wheel, make sure the padded surface is facing up.**

4. Stack three tires without wheels on top of the tire with the driver-side air bag module, and then stack another tire with a wheel on the very top.



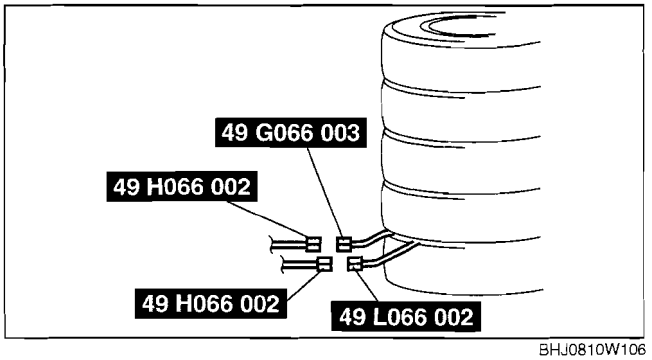
A6E8130W033

5. Secure the tires with wire.



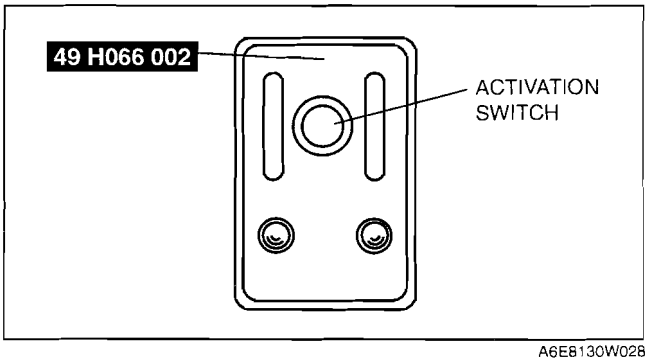
A6E8130W034

6. Connect the **SSTs** (Deployment tool) to the **SSTs** (Adapter harness).
7. Connect both **SSTs** (Deployment tool) to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.
8. Verify that the red lamp on both **SSTs** (Deployment tool) is illuminated.
9. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.



BHJ0810W106

10. Press the activation switch on the **SST** (Deployment tool) connected with 49 L066 002 (a yellow connector) of the **SST** (Adapter harness), and **after 3 s**, press the activation switch on the other **SST** (Deployment tool) to operate (deploy) the air bag module (both inflators).



A6E8130W028

Warning

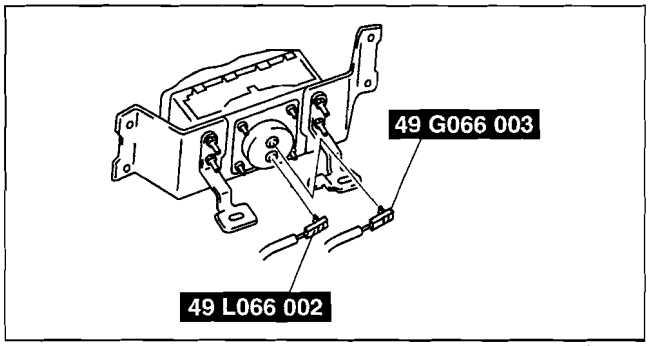
- **Verify that air bag module operation (explosive) sound occurs twice. If no operation (explosive) sound was heard or a single operation (explosive) sound was heard, both inflators would not have operated (deployed) properly. This may cause serious injury because the air bag module may operate (deploy) accidentally. If the two operation (explosive) sounds are not heard, perform Step 10 again. In case that the two operation (explosive) sounds in total are not verified even though Step 10 is performed again, leave the air bag module alone for 30 min or more before getting near it again.**
- **The air bag module is very hot immediately after it is operated (deployed). You can be burned. Do not touch the air bag module for at least 15 min after deployment.**

11. Disconnect the **SSTs** (Deployment tool) from the **SSTs** (Adapter harness).

Passenger-side air bag module

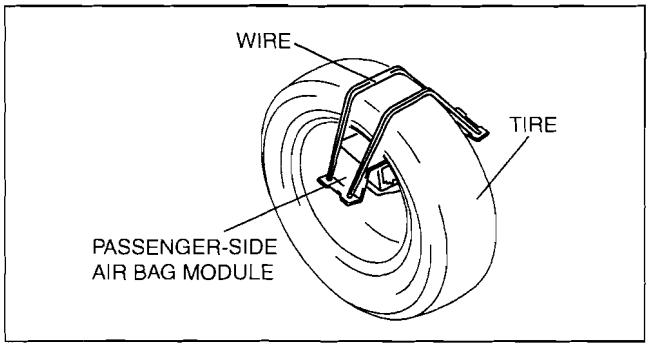
Warning
- **The passenger-side air bag module is a dual inflator type. If one inflator is forced to operate (deploy), the other may operate (deploy) accidentally. To prevent injury while disposing of the air bag module, make sure to operate (deploy) both passenger-side air bag module inflators simultaneously, following the procedure below.**

1. Remove the passenger-side air bag module. (See 08-10-7 PASSENGER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
2. Connect the **SSTs** (Adapter harness) to the passenger-side air bag module as shown in the figure.



e3u810zw6012

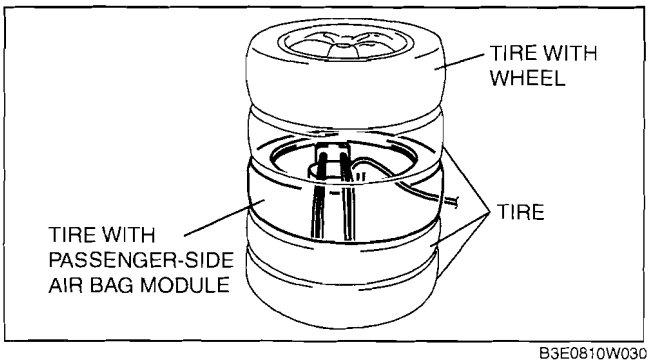
3. Place the padded surface of the passenger-side air bag module facing the center of the tire as shown in the figure. To secure the air bag module to the tire wheel, wrap a wire (cross section **1.25 mm^2 {0.002 in^2} or more**) through the tire and the bolt installation holes **at least 4 times** as shown in the figure.



B3E0810W029

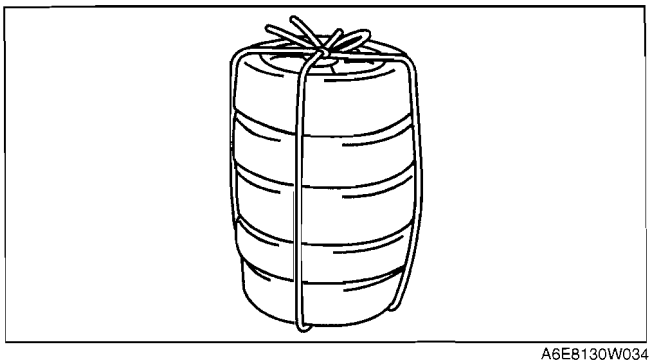
Warning
- **If the air bag module is not properly installed to the tire, serious injury may occur when the module is operated (deployed). When installing the air bag module to the tire, make sure the padded surface is facing the center of the tire.**

4. Stack the tire with the passenger-side air bag module on top of two tires without wheels. Stack a tire without a wheel on top of the tire with the passenger-side air bag module, and then stack another tire with a wheel on the very top.



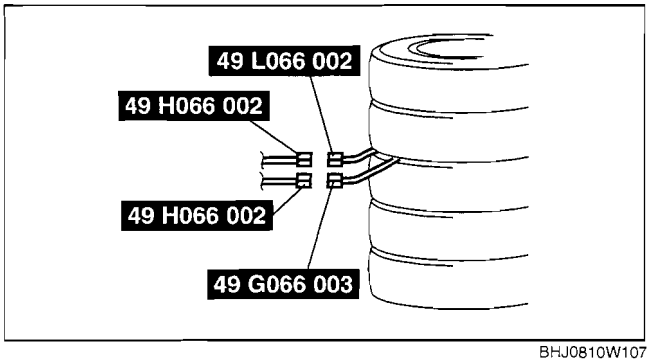
B3E0810W030

5. Secure the tires with wire.



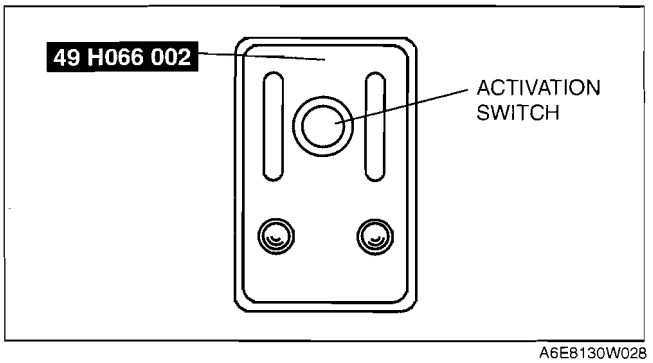
A6E8130W034

6. Connect the **SSTs** (Deployment tool) to the **SSTs** (Adapter harness).
7. Connect both **SSTs** (Deployment tool) to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.
8. Verify that the red lamp on both **SSTs** (Deployment tool) is illuminated.
9. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.



BHJ0810W107

10. Press the activation switch on the **SST** (Deployment tool) connected with 49 L066 002 (a yellow connector) of the **SST** (Adapter harness), and **after 3 s**, press the activation switch on the other **SST** (Deployment tool) to operate (deploy) the air bag module (both inflators).



A6E8130W028

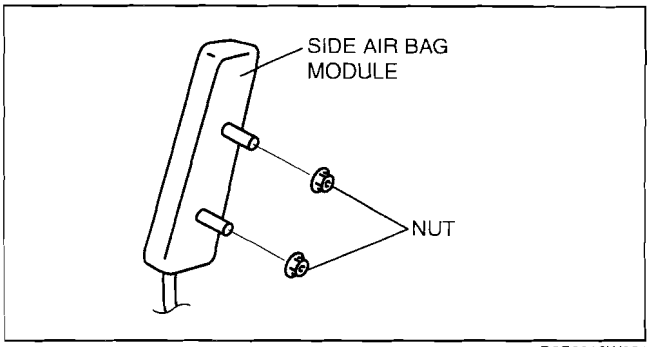
Warning

- **Verify that air bag module operation (explosive) sound occurs twice. If no operation (explosive) sound was heard or a single operation (explosive) sound was heard, both inflators would not have operated (deployed) properly. This may cause serious injury because the air bag module may operate (deploy) accidentally. If the two operation (explosive) sounds are not heard, perform Step 11 again. In case that the two operation (explosive) sounds in total are not verified even though Step 11 is performed again, leave the air bag module alone for 30 min or more before getting near it again.**
- **The air bag module is very hot immediately after it is operated (deployed). You can be burned. Do not touch the air bag module for at least 15 min after deployment.**

11. Disconnect the **SSTs** (Deployment tool) from the **SSTs** (Adapter harness).

Side air bag module

1. Remove the side air bag module. (See 08-10-8 SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
2. Install the nuts to the side air bag module.

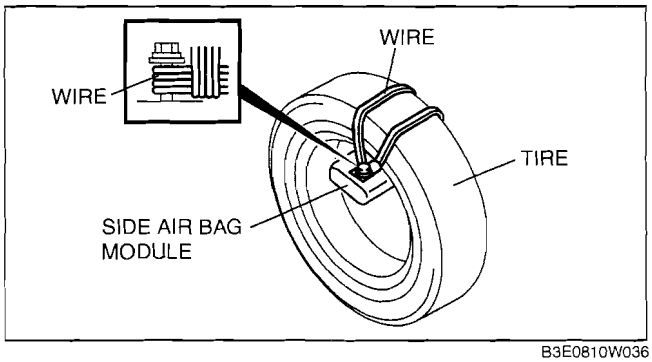


B3E0810W031

3. Place the padded surface of the side air bag module facing the center of the tire as shown in the figure. To secure the air bag module to the tire wheel, wrap a wire (cross section 1.25 mm2 {0.002 in2} or more) through the tire and around the bolts at least 4 times.

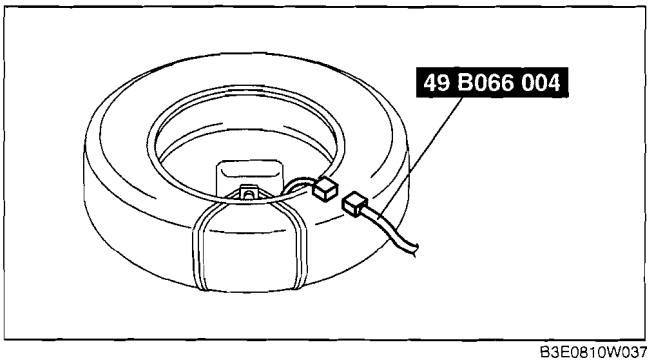
Warning

- **If the air bag module is not properly installed to the tire, serious injury may occur when the module is operated (deployed). When installing the air bag module to the tire, make sure the padded surface is facing the center of the tire.**



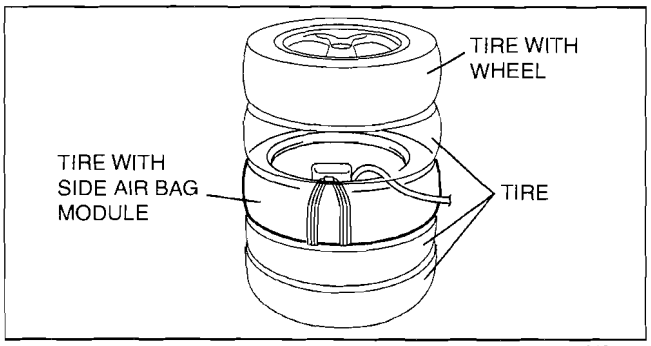
B3E0810W036

4. Connect the **SST** (Adapter harness) to the side air bag module as shown in the figure.



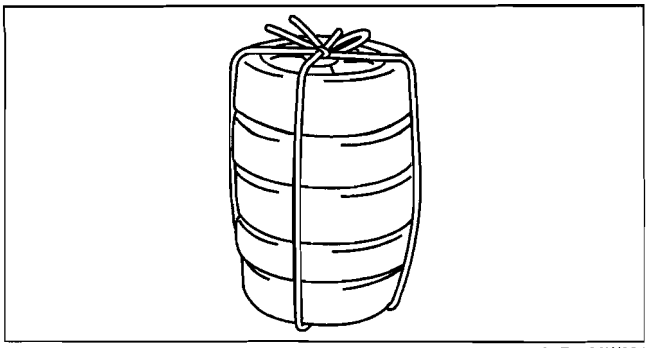
B3E0810W037

5. Stack the tire with the side air bag module on top of two tires without wheels. Stack a tire without a wheel on top of the tire with the side air bag module, and then stack another tire with a wheel on the very top.



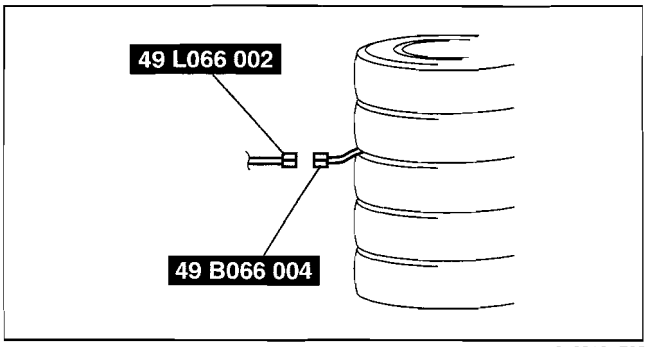
c3u0810w700

6. Secure the tires with wire.



A6E8130W034

7. Connect the **SST** (Deployment tool) to the **SST** (Adapter harness).
8. Connect the **SST** (Deployment tool) to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.
9. Verify that the red lamp on the **SST** (Deployment tool) is illuminated.
10. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.

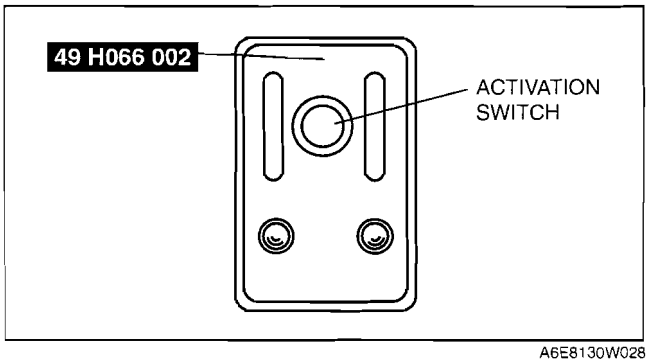


c3u0810w706

11. Press the activation switch on the **SST** (Deployment tool) to operate (deploy) the side air bag module.

Warning
- **The air bag module is very hot immediately after it is operated (deployed). You can be burned. Do not touch the air bag module for at least 15 min after deployment.**

12. Disconnect the **SSTs** (Deployment tool) from the **SSTs** (Adapter harness).

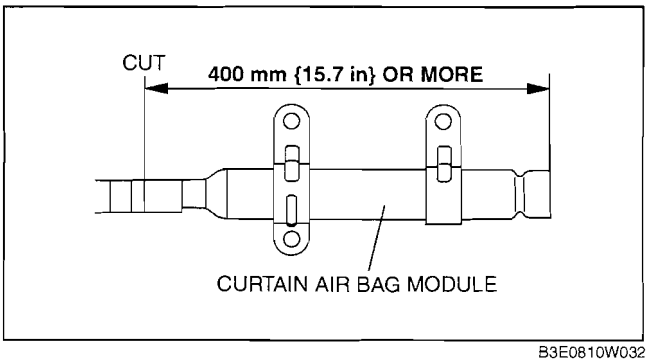


A6E8130W028

Curtain air bag module

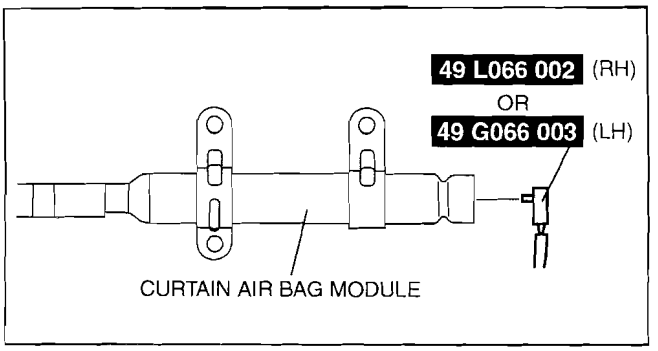
1. Remove the curtain air bag module. (See 08-10-9 CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION.)
2. Secure the curtain air bag module in a vise, and cut off the deployment section, as shown in the figure.

Warning
- **Be sure not to crush the pipe on the side where it is cut. If it is crushed completely, the interior pressure of the pipe will build up and can cause it to explode during air bag module operation (deployment).**



B3E0810W032

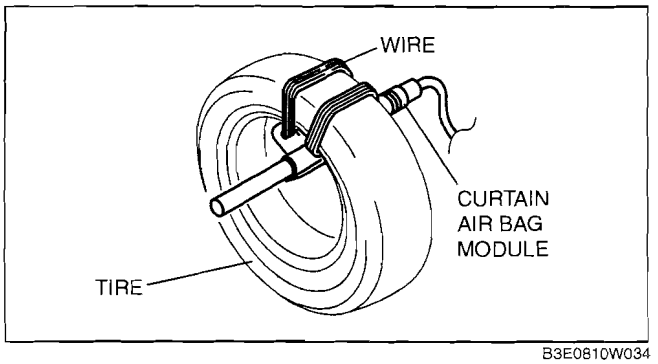
3. Connect the **SST** (Adapter harness) to the curtain air bag module as shown in the figure.



e3u810zw6013

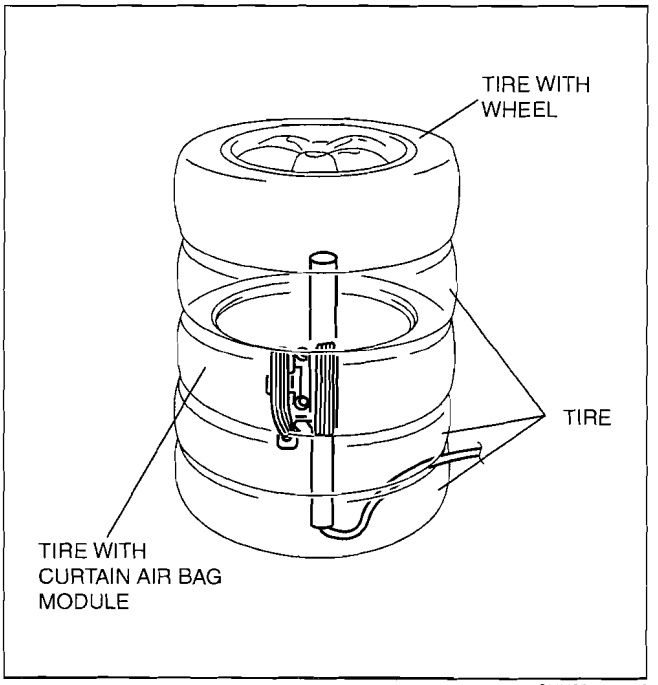
4. Secure the curtain air bag module to the tire, by wrapping a wire (cross section **1.25 mm^2 {0.002 in^2} or more**) through the tire and the bolt installation holes **at least 4 times** as shown in the figure.

Warning
- **If the air bag module is not properly installed to the tire, serious injury may occur when the module is operated (deployed). Make sure to install the air bag module securely.**



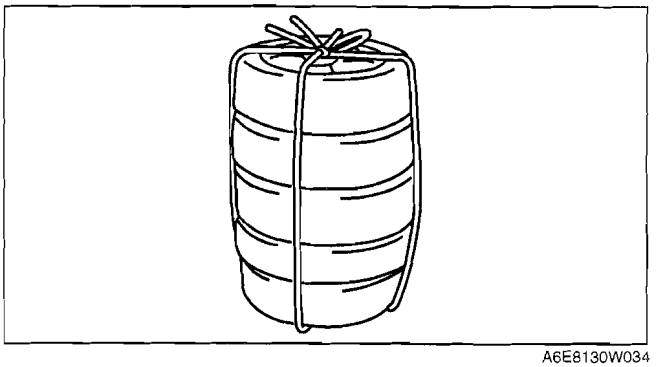
B3E0810W034

5. Stack the tire with the curtain air bag module on top of two tires without wheels. Stack a tire without a wheel on top of the tire with the curtain air bag module, and then stack another tire with a wheel on the very top.



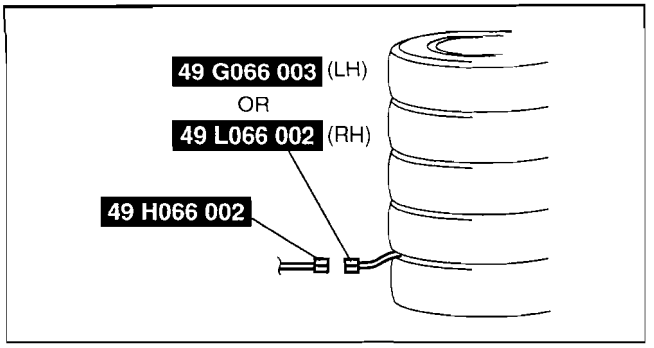
CHU0810W119

6. Secure the tires with wire.



A6E8130W034

7. Connect the **SST** (Deployment tool) to the **SST** (Adapter harness).
8. Connect the **SST** (Deployment tool) to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.
9. Verify that the red lamp on the **SST** (Deployment tool) is illuminated.
10. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.

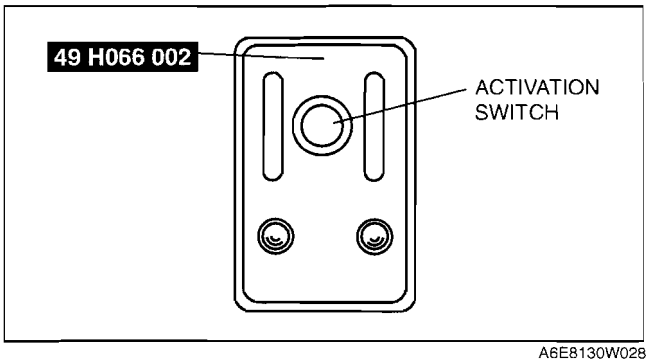


e3u810zw6014

11. Press the activation switch on the **SST** (Deployment tool) to operate (deploy) the curtain air bag module.

Warning
- **The air bag module is very hot immediately after it is operated (deployed). You can be burned. Do not touch the air bag module for at least 15 min after deployment.**

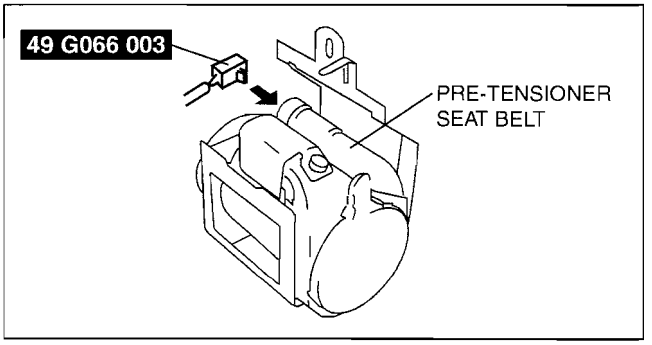
12. Disconnect the **SSTs** (Deployment tool) from the **SSTs** (Adapter harness).



A6E8130W028

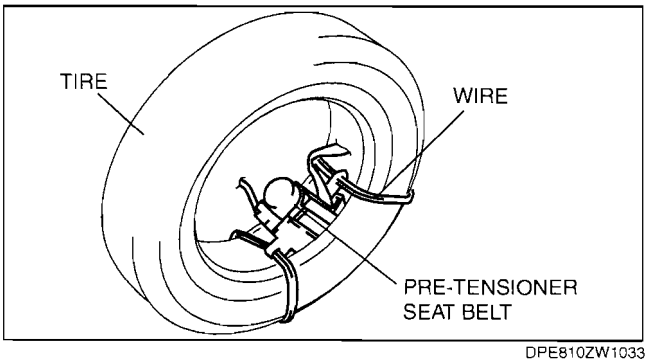
Pre-tensioner seat belt

1. Remove the pre-tensioner seat belt. (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
2. Connect the **SST** (Adapter harness) to the pre-tensioner seat belt as shown in the figure.



e3u810zw6010

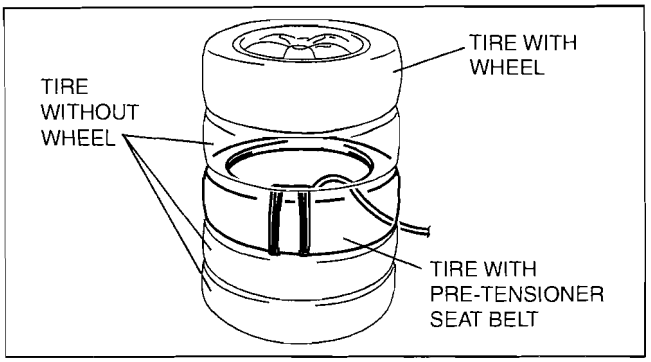
3. Place the pre-tensioner seat belt on the center of the tire wheel with the padded surface facing up. To secure the pre-tensioner seat belt to the tire wheel, wrap a wire (cross section **1.25mm^2 {0.002 in^2} or more**) through the wheel and the bolt installation holes of the pre-tensioner seat belt **at least 4 times**.



DPE810ZW1033

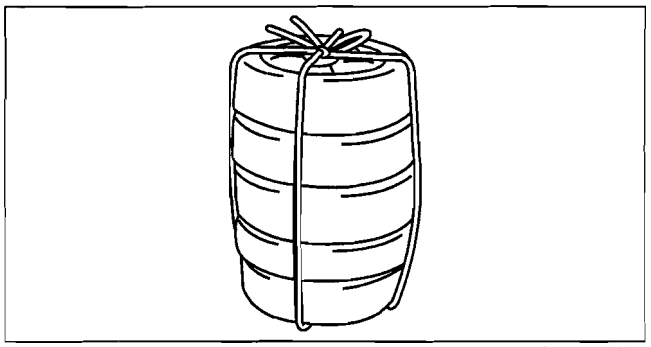
Warning
- **If the pre-tensioner seat belt is not properly secured to the tire, serious injury may occur when the pre-tensioner part is deployed. When installing the pre-tensioner seat belt to the tire, make sure the pre-tensioner part is inside the tire.**

4. Stack the tire with the pre-tensioner seat belt on top of two tires without wheels. Stack a tire without a wheel on top of the tire with the pre-tensioner seat belt, and then stack another tire with a wheel on the very top.



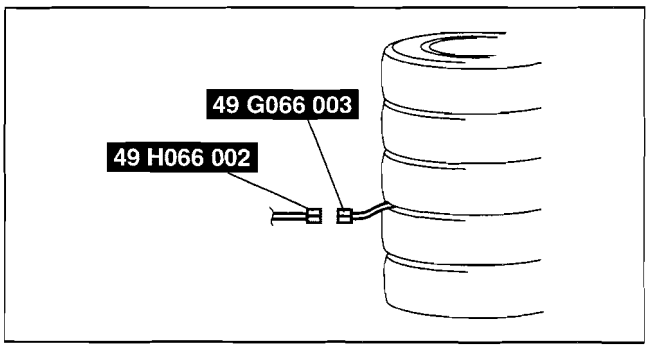
DPE810ZW1034

5. Secure the tires with wire.



A6E8130W034

6. Connect the **SST** (Deployment tool) to the SST (Adapter harness).
7. Connect the **SST** (Deployment tool) to the battery. Connect the power supply red clip to the positive battery terminal, and black clip to the negative battery terminal.
8. Verify that the red lamp on the **SST** (Deployment tool) is illuminated.
9. Verify that all persons are standing **at least 6 m {20 ft} away from the vehicle.**

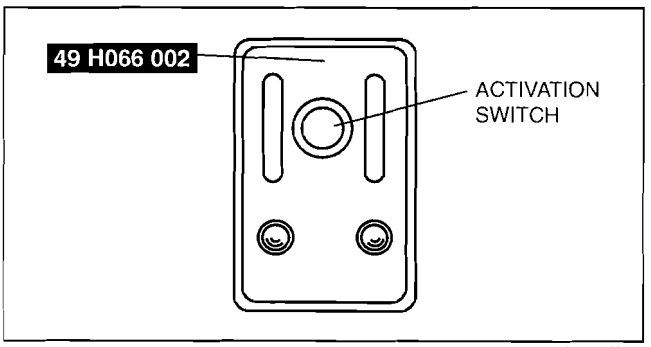


e3u810zw6015

10. Press the activation switch on the **SST** (Deployment tool) to operate (deploy) the pre-tensioner seat belt.

Warning
- **The pre-tensioner seat belt is very hot immediately after it is operated (deployed). You can be burned. Do not touch the pre-tensioner seat belt for at least 15 min after deployment.**

11. Disconnect the SSTs (Deployment tool) from the SSTs (Adapter harness).



A6E8130W028

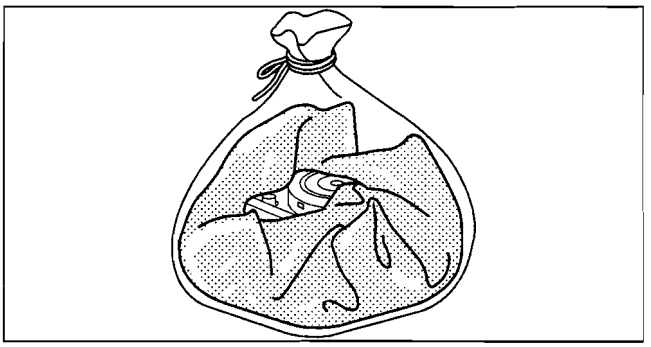
AIR BAG MODULE AND PRE-TENSIONER SEAT BELT DISPOSAL PROCEDURES

id081000801200

Warning

- **A live (undeployed) air bag module or pre-tensioner seat belt may accidentally operate (deploy) when it is disposed of and cause serious injury. Always refer to the "AIR BAG MODULE AND PRE-TENSIONER SEAT BELT DEPLOYMENT PROCEDURES" and dispose of air bag modules and pre-tensioner seat belts in a deployed condition.**
- **The air bag modules and the pre-tensioner seat belts are very hot immediately after they are deployed. You can be burned. Do not touch an air bag module and pre-tensioner seat belt for at least 15 min after deployment.**
- **Pouring water on the deployed air bag module and pre-tensioner seat belt is dangerous. The water will mix with the residual gases to form a gas that can make breathing difficult. Do not pour water on the deployed air bag module and pre-tensioner seat belt.**
- **The deployed air bag module or pre-tensioner seat belt may contain deposits of sodium hydroxide, a caustic byproduct of the gas-generated combustion. If this substance gets into your eyes or on your hands, it can cause irritation and itching. When handling the deployed air bag module and pre-tensioner seat belt, wear gloves and safety glasses.**
- **Due to the adoption of 2-step deployment control in both the driver and passenger-side air bag modules, depending on the impact force, it is possible that inflator No.2 might not operate (deploy). Before disposing of the air bag module, always follow the inflator deployment procedures and verify the complete operation (deployment) of inflators No.1 and 2.**

1. Remove the deployed air bag module or pre-tensioner seat belt.
2. Put the air bag module or pre-tensioner seat belt in a plastic bag, seal the bag, and then dispose of it.

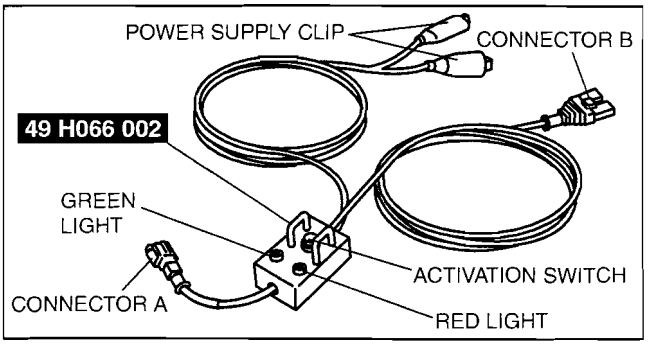


BHJ0810W023

INSPECTION OF SST (DEPLOYMENT TOOL)

id081000801000

1. Before using the **SST** (49 H066 002), inspect its operation.



EPU810ZW3011

Inspection Procedure

1. Follow the steps below to inspect the SST (49 H066 002).
   - If not as indicated in the table, replace the **SST** (49 H066 002) because it has a malfunction.

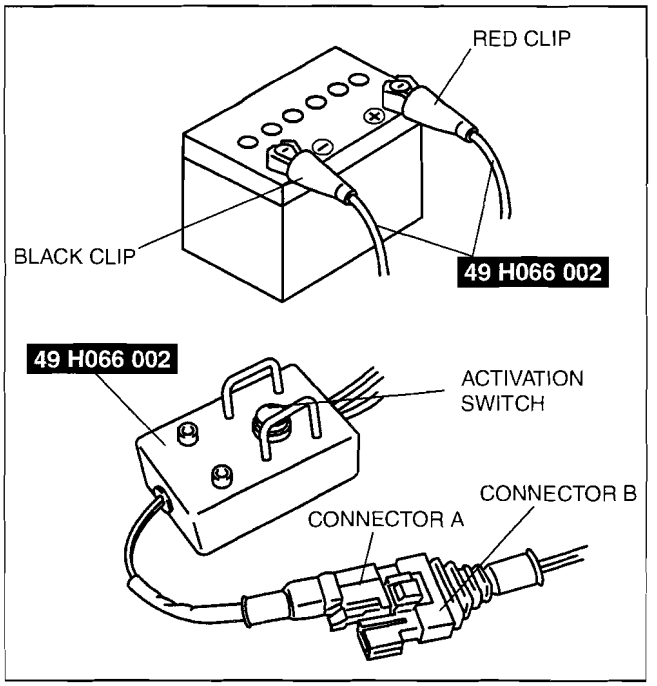
Warning

- **Do not use a malfunctioning SST (49 H066 002), otherwise it could cause the air bag module or pre-tensioner seat belt to accidentally operate (deploy).**

Caution

- **Because the permissible voltage for the SST (49 H066 002) is 12 V, do not connect a 24 V power source because it will damage the SST. Always connect only a 12 V power source.**

Step	Inspection procedure	Light condition	
		Green	Red
1	Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.	On	Off
2	Connect connectors A and B.	Off	On
3	Press the activation switch.	On	Off

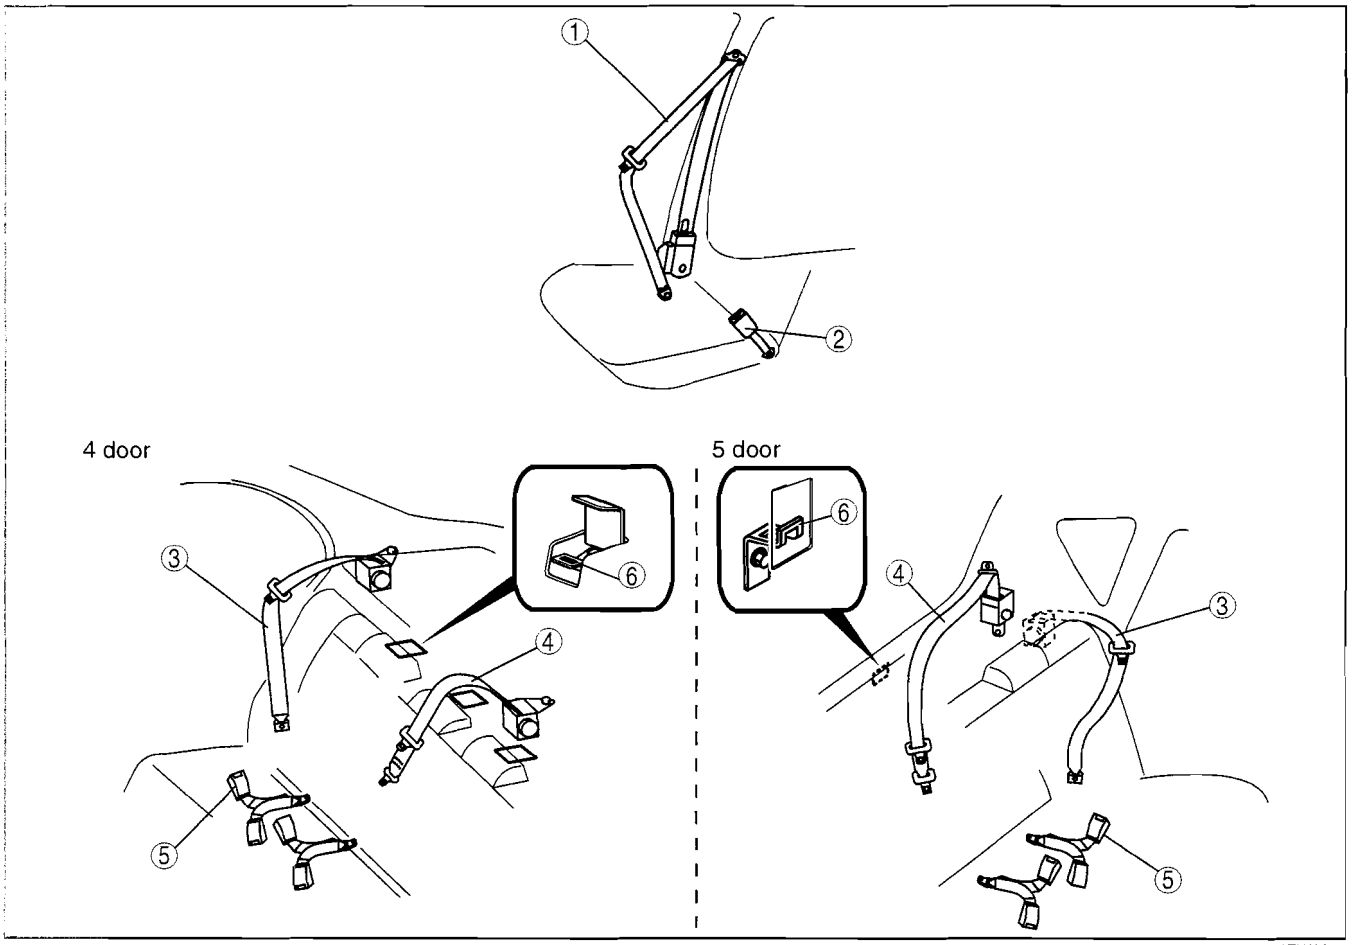


e5u810zw5050

08-11 SEAT BELT

LOCATION INDEX

id081100800200



E3U811ZW6005

1	Front seat belt (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.) (See 08-11-5 SEAT BELT INSPECTION.)
2	Front buckle (See 08-11-6 FRONT BUCKLE REMOVAL/INSTALLATION.)
3	Rear seat belt (See 08-11-3 REAR SEAT BELT REMOVAL/INSTALLATION.) (See 08-11-5 SEAT BELT INSPECTION.)

4	Rear center seat belt (See 08-11-4 REAR CENTER SEAT BELT REMOVAL/INSTALLATION.) (See 08-11-5 SEAT BELT INSPECTION.)
5	Rear buckle (See 08-11-7 REAR BUCKLE REMOVAL/INSTALLATION.)
6	Child-restraint seat anchor (See 08-11-7 CHILD-RESTRAINT SEAT ANCHOR REMOVAL/INSTALLATION.)

FRONT SEAT BELT REMOVAL/INSTALLATION

id081100800600

Warning

- **Handling the front seat belt (pre-tensioner seat belt) improperly can accidentally deploy the pre-tensioner seat belt, which may seriously injure you. Read the air bag system service warnings and cautions before handling the front seat belt. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**

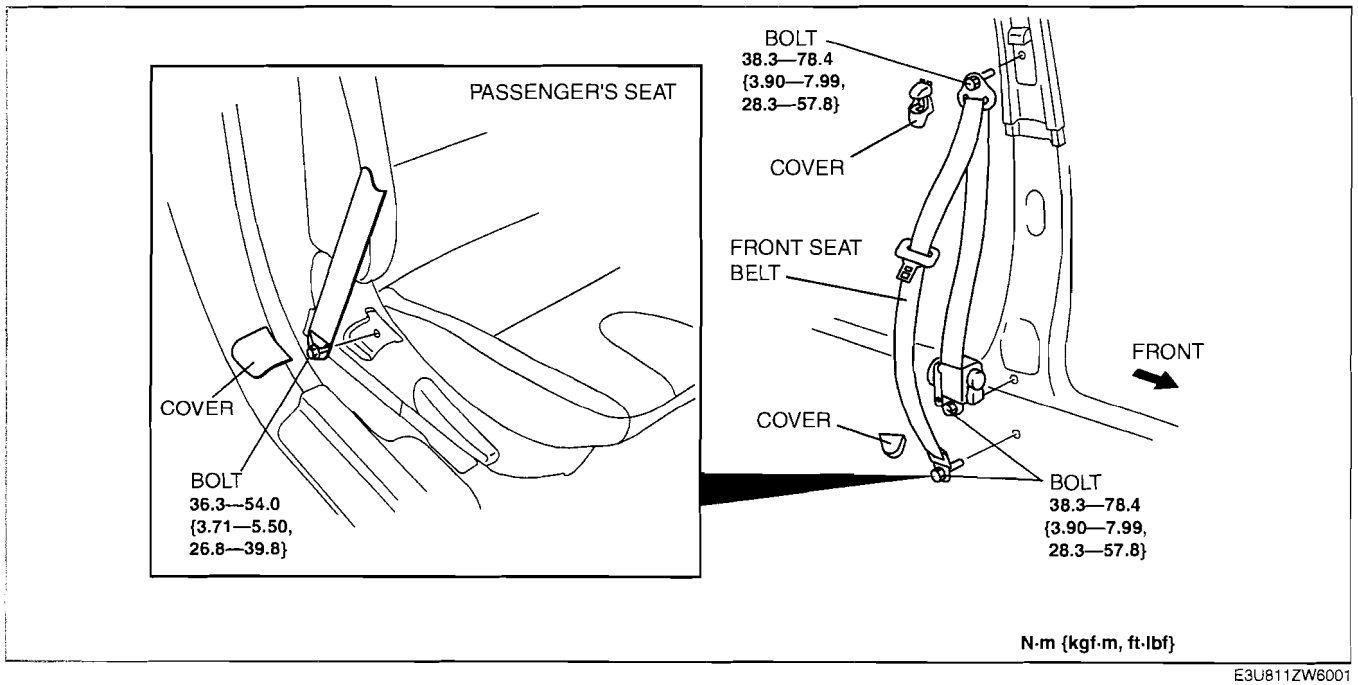
Warning

- **The side air bag sensor is attached to the lower part of the B-pillar. When working around the B-pillar, disconnect the negative battery cable avoiding excessive impact to the lower part of the B-pillar.**

Caution

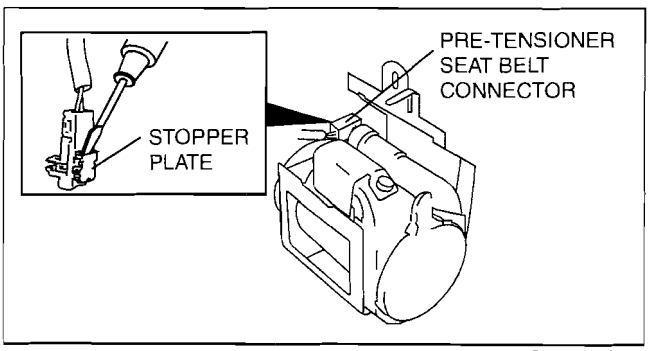
- **The ELR (emergency locking retractor) has a spring that will unwind if the retractor cover is removed. The spring cannot be rewound by hand. If this occurs, the ELR will not work properly. Therefore, do not disassemble the retractor.**

1. Turn the ignition switch to the LOCK position.
2. Disconnect the negative battery cable and wait for **1min or more**.
3. Remove the front scuff plate. (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
4. Remove the rear scuff plate. (See 09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
5. Remove the B-pillar lower trim. (See 09-17-12 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
6. Remove the cover.



E3U811ZW6001

7. Remove the bolt, then remove the front seat belt.
8. Using a screwdriver, pry out the pre-tensioner seat belt connector's stopper plate.
9. Disconnect the pre-tensioner seat belt connector.
10. Install in the reverse order of removal.
11. Turn the ignition switch to the ON position.
12. Verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.
    - If the air bag system warning light dose not operate, refer to the on-board diagnostic system (air bag system) and perform inspection of the system.



E3U811ZW6007

REAR SEAT BELT REMOVAL/INSTALLATION

id081100800800

Caution

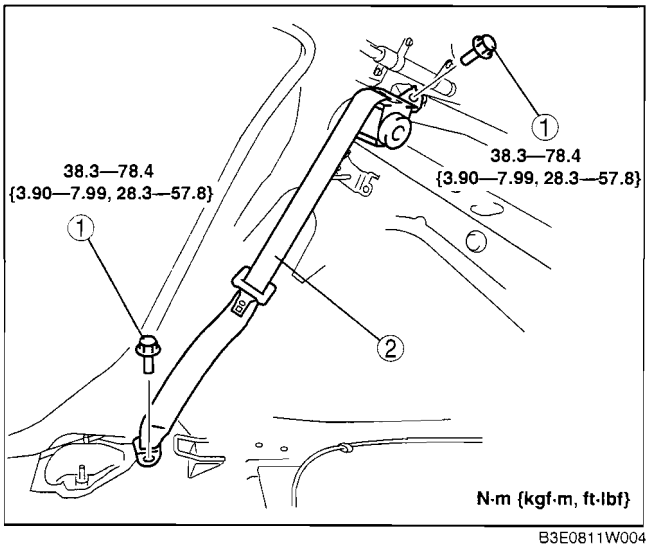
- **The ELR (emergency locking retractor) has a spring that will unwind if the retractor cover is removed. The spring cannot be rewound by hand. If this occurs, the ELR will not work properly. Therefore, do not disassemble the retractor.**

4 door

1. Remove the following parts:
   (1) Rear seat (See 09-13-6 REAR SEAT REMOVAL/INSTALLATION.)
   (2) Rear scuff plate (See 09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (3) Tire house trim (See 09-17-15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
   (4) C-pillar trim (See 09-17-13 C-PILLAR TRIM REMOVAL/INSTALLATION.)
   (5) Rear package trim (See 09-17-16 REAR PACKAGE TRIM REMOVAL/INSTALLATION.)
2. Remove in the order indicated in the table.

1	Bolt
2	Rear seat belt

3. Install in the reverse order of removal.



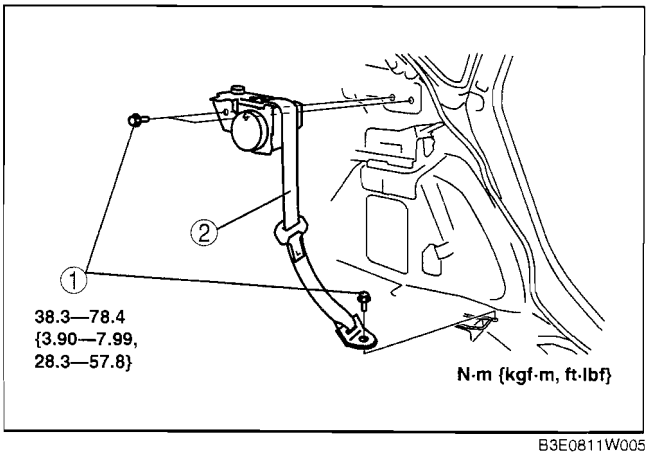
B3E0811W004

5 door

1. Remove the following parts:
   (1) Rear seat (See 09-13-6 REAR SEAT REMOVAL/INSTALLATION.)
   (2) Rear scuff plate (See 09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (3) Tire house trim (See 09-17-15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
   (4) Trunk side upper trim (See 09-17-21 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION.)
   (5) C-pillar trim (See 09-17-13 C-PILLAR TRIM REMOVAL/INSTALLATION.)
2. Remove in the order indicated in the table.

1	Bolt
2	Rear seat belt

3. Install in the reverse order of removal.



B3E0811W005

REAR CENTER SEAT BELT REMOVAL/INSTALLATION

id081100800900

Caution

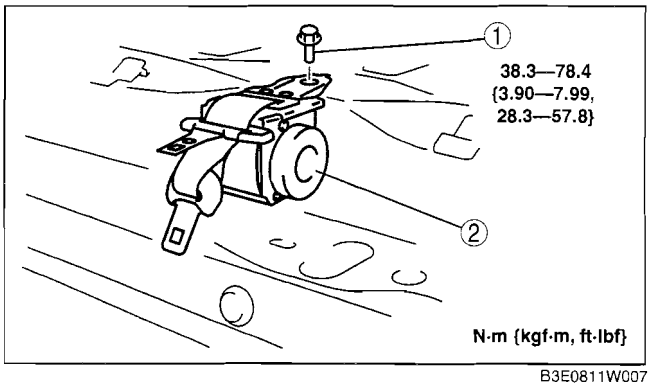
- **The ELR (emergency locking retractor) has a spring that will unwind if the retractor cover is removed. The spring cannot be rewound by hand. If this occurs, the ELR will not work properly. Therefore, do not disassemble the retractor.**

4 door

1. Remove the following parts:
   (1) Rear seat (See 09-13-6 REAR SEAT REMOVAL/INSTALLATION.)
   (2) Rear scuff plate (See 09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (3) Tire house trim (See 09-17-15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
   (4) C-pillar trim (See 09-17-13 C-PILLAR TRIM REMOVAL/INSTALLATION.)
   (5) Rear package trim (See 09-17-16 REAR PACKAGE TRIM REMOVAL/INSTALLATION.)
2. Remove in the order indicated in the table.

1	Bolt
2	Rear center seat belt

3. Install in the reverse order of removal.



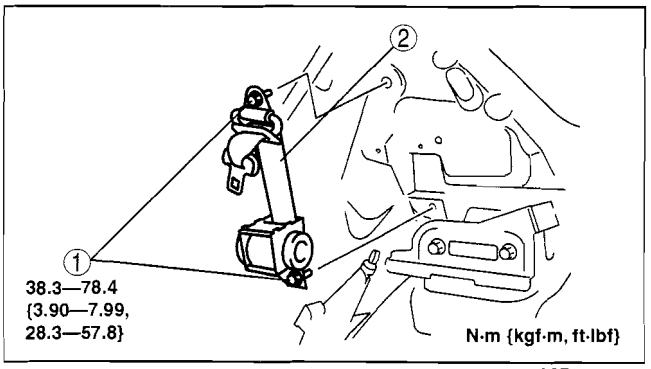
B3E0811W007

5 door

1. Remove the following parts:
   (1) Rear seat (See 09-13-6 REAR SEAT REMOVAL/INSTALLATION.)
   (2) Rear scuff plate (See 09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (3) Tire house trim (See 09-17-15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
   (4) Trunk side upper trim (See 09-17-21 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION.)
   (5) C-pillar trim (See 09-17-13 C-PILLAR TRIM REMOVAL/INSTALLATION.)
2. Remove in the order indicated in the table.

1	Bolt
2	Rear center seat belt

3. Install in the reverse order of removal.



B3E0811W006

SEAT BELT INSPECTION

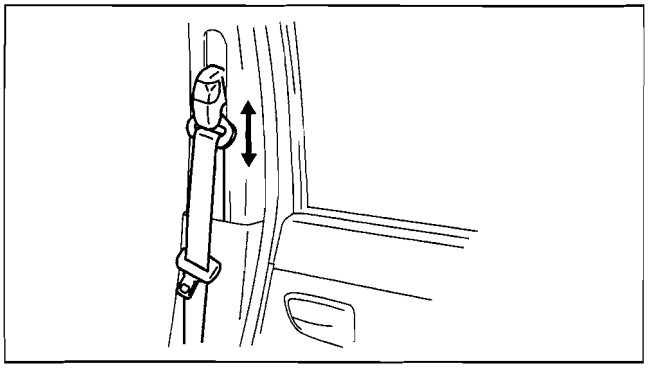
id081100800300

Belt

1. Verify that the belt is installed properly with no twists or kinks.
2. Verify that there is no damage to the seat belt and no deformation of the metal fittings.
   - If there is any malfunction, replace the seat belt.

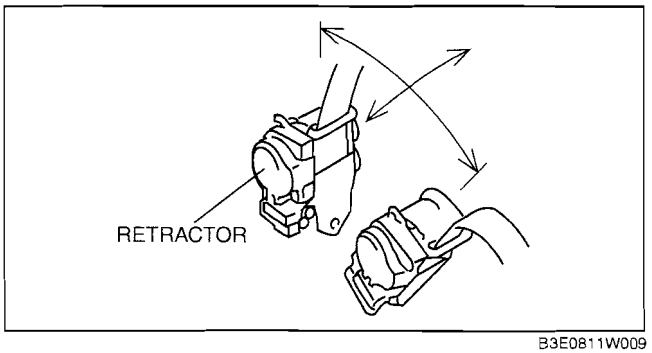
ELR

1. Verify that the belt can be pulled out smoothly, and that it retracts smoothly.
   - If there is any malfunction, replace the seat belt.
2. Verify that the retractor locks when the belt is pulled quickly.
   - If there is any malfunction, replace the seat belt.
3. Remove the retractor.



B3E0811W011

4. While pulling the seat belt out, make sure that the seat belt does not lock when the retractor is tilted slowly **up to 15°** from the mounted position and locks when the retractor is tilted **40° or more**.
   - If there is any malfunction, replace the seat belt.



B3E0811W009

ALR

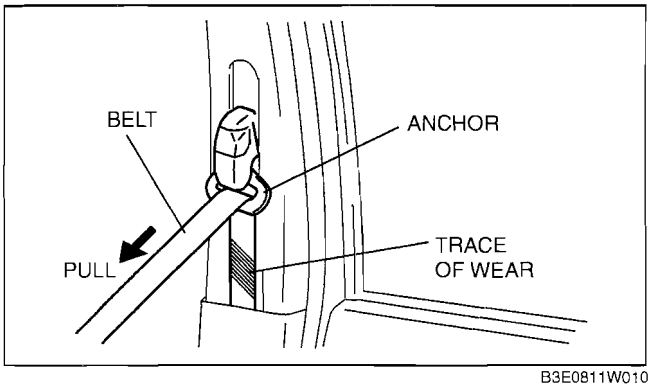
1. Pull the belt out fully to change the lock mode from ELR to ALR.
2. Verify that retractor makes a clicking sound as the belt slowly retracts. If no sound is heard, the lock mode has not changed to ALR. If necessary, repeat Step 1.
   - If there is any malfunction, replace the seat belt.
3. Verify that the retractor locks when pulled.
   - If there is any malfunction, replace the seat belt.
4. Verify that the lock mode changes to ELR when the belt is fully pulled out.
   - If there is any malfunction, replace the seat belt.

Load Limiter Retractor

Warning

- **When the load limiter operates, the belt and anchor rub against each other strongly leaving wear tracks. If the seat belt is used in this state, the seat belt will not function at its full capability and there is the possibility of serious injury to passengers. Be sure to replace the seat belt once the load limiter operates.**

1. If the vehicle has been subjected to a shock in an accident, pull the belt from the retractor and confirm that there are no wear tracks (the load limiter has not operated) by visually inspecting and feeling the belt.
   - If there is any malfunction, replace the seat belt.

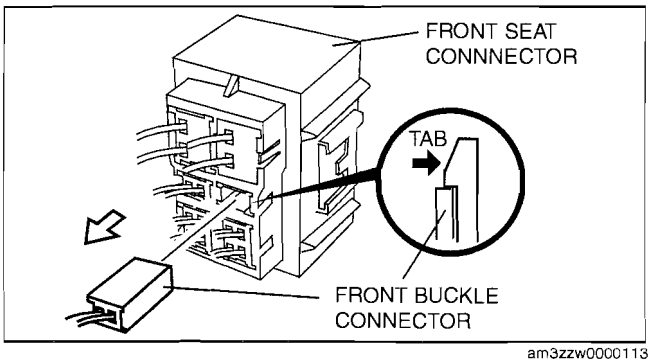


B3E0811W010

FRONT BUCKLE REMOVAL/INSTALLATION

id081100800400

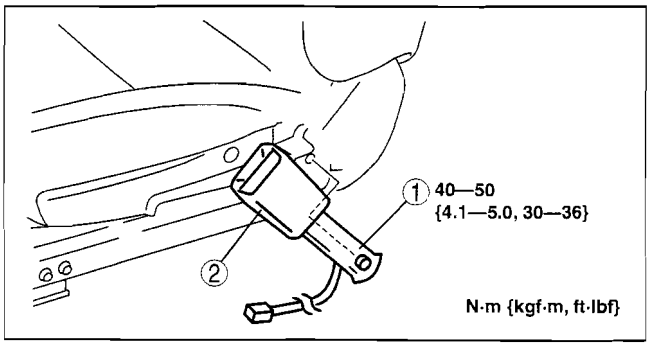
1. Turn the ignition switch to the LOCK position.
2. Disconnect the negative battery cable.
3. Remove the front seat. (See 09-13-2 FRONT SEAT REMOVAL/INSTALLATION.)
4. Detach the tab as shown in the figure and remove the connector from the front seat connector.



am3zzw0000113

5. Remove in the order indicated in the table.

1	Bolt
2	Front buckle



am3zzw0000113

6. Install in the reverse order of removal.

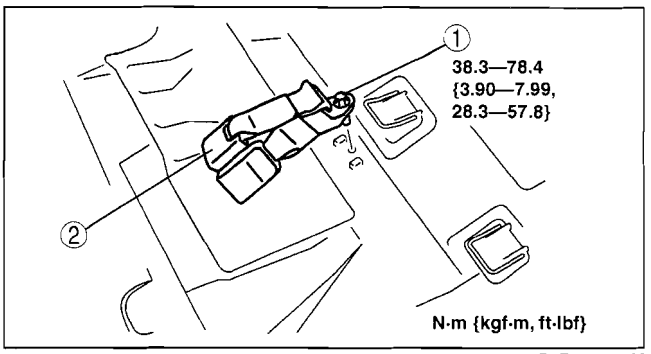
REAR BUCKLE REMOVAL/INSTALLATION

id081100800700

1. Remove the rear seat cushion. (See 09-13-6 REAR SEAT REMOVAL/INSTALLATION.)
2. Remove in the order indicated in the table.

1	Bolt
2	Rear buckle

3. Install in the reverse order of removal.



B3E0811W008

FRONT BUCKLE INSPECTION

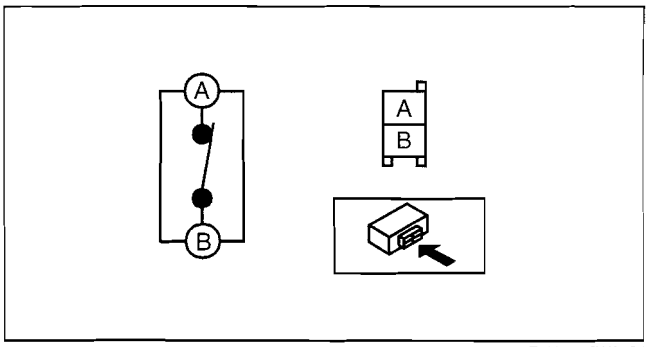
id081100800500

1. Inspect for continuity between the buckle switch terminals using a tester.
   - If not as indicated in the table, replace the front buckle.

O—O : Continuity

Seat belt	Terminal	
	A	B
Fastened		
Unfastened	O	O

A6E7750W009



E3U811ZW6004

CHILD-RESTRAINT SEAT ANCHOR REMOVAL/INSTALLATION

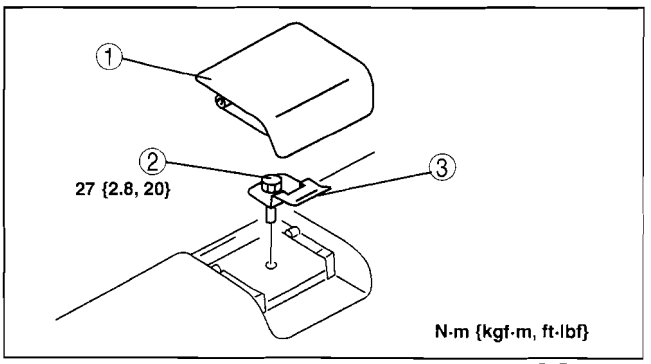
id081100800100

4 door

1. Remove in the order indicated in the table.

1	Cover
2	Bolt
3	Child-restraint seat anchor

2. Install in the reverse order of removal.



B3E0811W504

5 door

1. Remove the trunk end trim. (See 09-17-21 TRUNK END TRIM REMOVAL/INSTALLATION.)
2. Remove in the order indicated in the table.

1	Bolt
2	Child-restraint seat anchor

3. Install in the reverse order of removal.

BODY & ACCESSORIES

09 SECTION

09-02A ON-BOARD DIAGNOSTIC [IMMOBILIZER SYSTEM]

ON-BOARD DIAGNOSTIC [IMMOBILIZER SYSTEM]

FOREWORD[IMMOBILIZER SYSTEM]

id0902e4800100

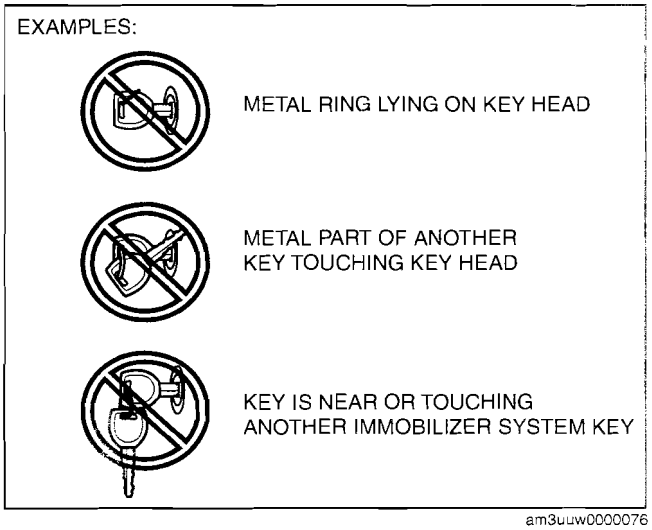
- Malfunction diagnosis occurs automatically when the ignition switch is turned from the LOCK (ACC) to the ON (START) position.
- If the results of the malfunction diagnosis show a malfunction, the security light displays a DTC and the PCM stores the DTC. DTCs stored in the PCM can be verified using the M-MDS.
- DTCs for the immobilizer system that are stored in the PCM are cleared when the ignition switch is turned from the ON to the LOCK (ACC) position.
- There are certain DTCs which can only be verified using the M-MDS, not the security light.
- The PID/data monitor function can be used to verify the number of keys registered for a single vehicle.
- If DTCs are not displayed even though the engine does not start, perform the following symptom troubleshooting:
  — 01-03A-19 NO.3 WILL NOT CRANK[LF, L3]

Caution

- **Always use the M-MDS to verify DTCs even if the DTCs are verified by the security light display. If the security light has a malfunction, it is possible that a DTC may not be properly displayed.**
- **Always use the M-MDS to verify DTCs because there are certain DTCs which cannot be verified using the security light.**
- **If any of the following items are touching or near the key head, signal communication between the key and vehicle is negatively affected, resulting in the engine not starting. Do not start the engine if any of the following items are touching or near the key head.**
  — **Any metallic object**
  — **Spare keys or keys for other vehicles equipped with an immobilizer system**
  — **Any electronic device, or any credit or other cards with magnetic strips**

Note

- If multiple DTCs are detected as a result of malfunction diagnosis, only the DTC with the lowest number of those detected will be displayed by the security light. The PCM stores multiple DTCs at the same time.
- If two or more immobilizer system DTCs are verified, first repair the part indicated by the security light displayed DTC. After repairing one location, turn the ignition switch from the LOCK to the ON position and perform an immobilizer system malfunction diagnosis.



am3uuw0000076

DTC INSPECTION[IMMOBILIZER SYSTEM]

id0902e4800200

Security Light

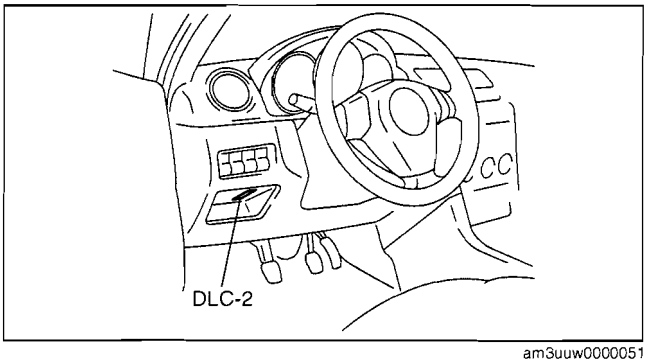
1. Turn the ignition switch to the ON position.
2. Verify the security light state.
   - If there is any malfunction:
     — After any malfunction is detected, the security light will function as follows **for approx. 1 min**.
       - DTC 16 and lower: Flashes
       - DTC 21 and higher: Illuminated
   - If there is no malfunction:
     — The security light illuminates **for approx. 3 s** and goes out.
3. When any malfunction has been detected, read DTCs via flashing patterns displayed after the security light flashes or is illuminated **for approx. 1 min**.
   - Perform troubleshooting according to the corresponding DTC inspection.

Note

- A verified DTC is flashed 10 times repeatedly by the security light.
- If multiple DTCs are verified, the security light displays only the smallest DTC.

M-MDS

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   - When using the IDS (laptop PC)
     — Select the "Toolbox" tab.
     — Select "Self Test".
     — Select "Modules".
     — Select "IC".
   - When using the PDS (Pocket PC)
     — Select "Module Tests".
     — Select "IC".
     — Select "Self Test".
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
4. Disconnect the M-MDS.



am3uuw0000051

DTC TABLE[IMMOBILIZER SYSTEM]

id0902e4800300

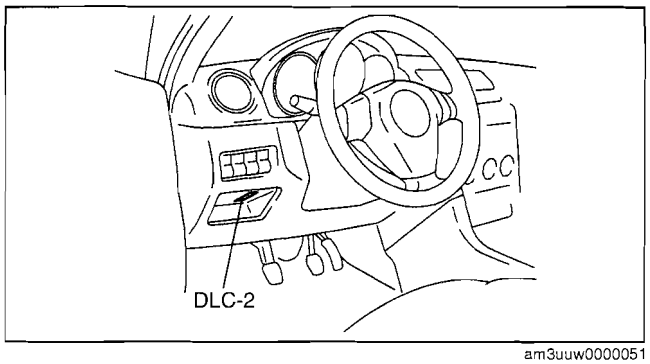
DTC				Detection condition	Page
Security light flashing pattern		M-MDS display*			
		Instrument cluster	PCM		
11		B1681	P1260	No detected communication with the coil antenna	09-02A-6 SECURITY LIGHT 11, DTC B1681/ P1260[IMMOBILIZER SYSTEM]
12		B2103	P1260	• Coil antenna malfunction • The PCM determined a malfunction in the coil antenna even though it is normal.	09-02A-8 SECURITY LIGHT 12, DTC B2103/ P1260[IMMOBILIZER SYSTEM]
13		B1600	P1260	The key ID number data cannot be read.	09-02A-8 SECURITY LIGHT 13, DTC B1600/ P1260[IMMOBILIZER SYSTEM]
		B2431	P1260	Key ID number registration error	09-02A-10 SECURITY LIGHT 13, DTC B2431/ P1260[IMMOBILIZER SYSTEM]
14		B1602	P1260	The instrument cluster cannot read key ID number data normally.	09-02A-11 SECURITY LIGHT 14, DTC B1602/ P1260[IMMOBILIZER SYSTEM]
15		B1601	P1260	The instrument cluster has detected unregistered key ID number.	09-02A-12 SECURITY LIGHT 15, DTC B1601/ P1260[IMMOBILIZER SYSTEM]
16		U2510	P1260	Communication error between the instrument cluster and the PCM (no response)	09-02A-12 SECURITY LIGHT 16, DTC U2510/ P1260, U1147/ P1260[IMMOBILIZER SYSTEM]
		U1147	P1260	Communication error between the instrument cluster and the PCM (mismatched conditions)	
21		B1213	P1260	Only one key ID number is registered.	09-02A-13 SECURITY LIGHT 21, DTC B1213/ P1260[IMMOBILIZER SYSTEM]
22		B2141	P1260	Communication error between the instrument cluster and the PCM (data transfer error)	09-02A-14 SECURITY LIGHT 22, DTC B2141/ P1260[IMMOBILIZER SYSTEM]
23		B2139	P1260	ID number data in the PCM and the instrument cluster do not match.	09-02A-15 SECURITY LIGHT 23, DTC B2139/ P1260[IMMOBILIZER SYSTEM]
Not illuminated		B1342	-	Instrument cluster malfunction	09-02A-15 DTC B1342[IMMOBILIZER SYSTEM]

* : The letters at the beginning of each DTC are only displayed when using the M-MDS, and refer to the following: B= Body system, P= Powertrain system, U= Network communication system.

PID/DATA MONITOR INSPECTION[IMMOBILIZER SYSTEM]

id0902e4400500

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   - When using the IDS (laptop PC)
     - — Select the "Toolbox" tab.
     - — Select "DataLogger".
     - — Select "Modules".
     - — Select "IC".
   - When using the PDS (Pocket PC)
     - — Select "Module Tests".
     - — Select "IC".
     - — Select "DataLogger".
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the directions on the screen.



am3uuw0000051

Note

- The PID data screen function is used for monitoring the calculated value. Therefore, if the monitored value of the output parts is not within the specification, inspection of the monitored value of input parts corresponding to applicable output part control is necessary. In addition, because the system does not display output part malfunction as abnormality in the monitored value, it is necessary to inspect the output part individually.

PID/DATA MONITOR TABLE[IMMOBILIZER SYSTEM]

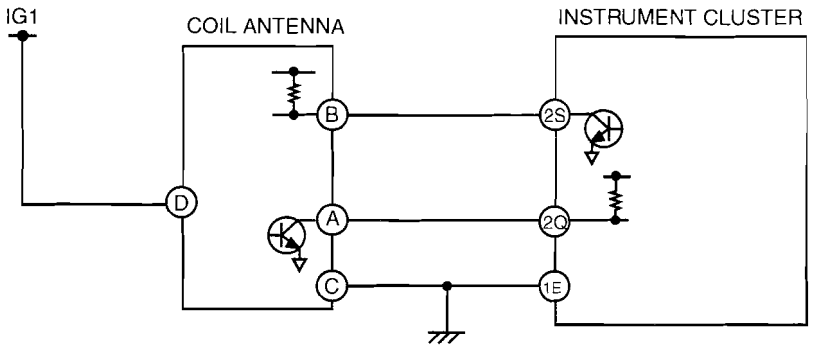
id0902e4800500

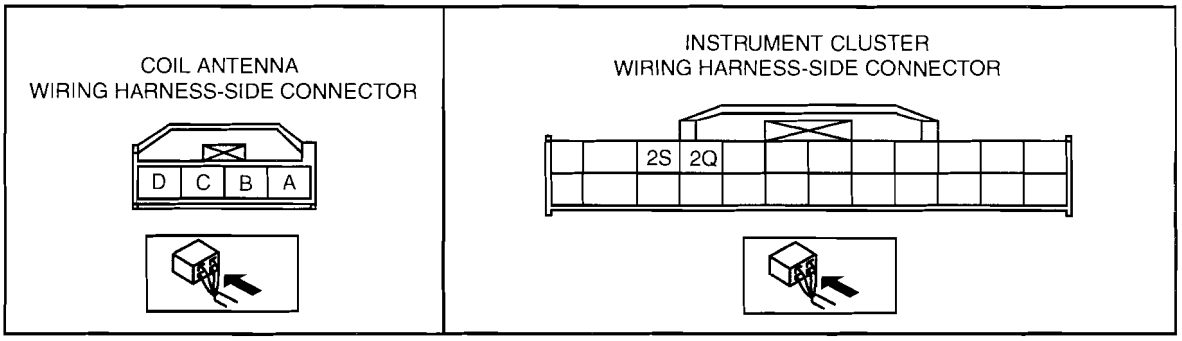
PID name (definition)	Detection condition
NUMKEYS (Number of key ID numbers registered in the instrument cluster)	Number of key ID numbers registered: 0—8

SECURITY LIGHT 11, DTC B1681/P1260[IMMOBILIZER SYSTEM]

id0902e4800600

SECURITY LIGHT: 11 **DTC: B1681/P1260**	No detected communication with the coil antenna
DETECTION CONDITION	• No detected communication with the coil antenna
POSSIBLE CAUSE	• Coil antenna malfunction • Instrument cluster malfunction • Malfunction in the related wiring harnesses





Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**INSPECT COIL ANTENNA POWER SUPPLY SYSTEM** • Disconnect the coil antenna connector. • Turn the ignition switch to the ON position. • Measure the voltage at coil antenna terminal D. — Is the voltage **8 V or more**?	Yes	Go to the next step.
		No	Repair the wiring harness.
2	**INSPECT WIRING HARNESS BETWEEN COIL ANTENNA AND GROUND** • Turn the ignition switch to the LOCK position. • Inspect the wiring harness between coil antenna terminal C and ground for the following: — Short to power supply — Open circuit • Is the wiring harness normal?	Yes	Go to the next step.
		No	Repair the wiring harness.
3	**INSPECT COIL ANTENNA INPUT SIGNAL CIRCUIT** • Connect the coil antenna connector. • Turn the ignition switch to the ON position. • Measure the voltage at coil antenna terminal B. — Is the voltage **8 V or more**?	Yes	Go to Step 7.
		No	Go to the next step.

STEP	INSPECTION		ACTION
4	**INSPECT COIL ANTENNA INPUT SIGNAL CIRCUIT** • Turn the ignition switch to the LOCK position. • Disconnect the instrument cluster connector. • Turn the ignition switch to the ON position. • Measure the voltage at instrument cluster terminal 2S. — Is the voltage **8 V or more**?	Yes	Replace the instrument cluster and perform the resetting procedure for the immobilizer system when replacing the instrument cluster. (See 09-22-2 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.) (See 09-14-17 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING.)
		No	Go to the next step.
5	**INSPECT COMMUNICATION CIRCUIT (INPUT) FOR CONTINUITY** • Turn the ignition switch to the LOCK position. • Is there continuity between coil antenna terminal B and instrument cluster terminal 2S?	Yes	Go to the next step.
		No	Repair the wiring harness.
6	**INSPECT COIL ANTENNA INPUT SIGNAL CIRCUIT** • Measure the resistance between coil antenna terminal B and ground. — Is the resistance **10 kilohms or more**?	Yes	Replace the coil antenna. (See 09-14-16 COIL ANTENNA REMOVAL/INSTALLATION.)
		No	Repair the wiring harness.
7	**INSPECT COIL ANTENNA OUTPUT SIGNAL CIRCUIT** • Connect the coil antenna connector and the instrument cluster connector. • Turn the ignition switch to the ON position. • Measure the voltage at coil antenna terminal A. — Is the voltage **8 V or more**?	Yes	Replace the coil antenna. (See 09-14-16 COIL ANTENNA REMOVAL/INSTALLATION.)
		No	Go to the next step.
8	**INSPECT COIL ANTENNA OUTPUT SIGNAL CIRCUIT** • Turn the ignition switch to the LOCK position. • Disconnect the coil antenna connector. • Turn the ignition switch to the ON position. • Measure the voltage at coil antenna terminal A. — Is the voltage **8 V or more**?	Yes	Replace the coil antenna. (See 09-14-16 COIL ANTENNA REMOVAL/INSTALLATION.)
		No	Go to the next step.
9	**INSPECT COMMUNICATION CIRCUIT (OUTPUT) FOR CONTINUITY** • Turn the ignition switch to the LOCK position. • Disconnect the instrument cluster connector. • Is there continuity between coil antenna terminal A and instrument cluster terminal 2Q?	Yes	Repair the wiring harness.
		No	Go to the next step.
10	**INSPECT COIL ANTENNA OUTPUT SIGNAL CIRCUIT** • Measure the resistance between instrument cluster terminal 2Q and ground. — Is the resistance **10 kilohms or more**?	Yes	Replace the instrument cluster and perform the resetting procedure for the immobilizer system when replacing the instrument cluster. (See 09-22-2 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.) (See 09-14-17 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING.)
		No	Repair the wiring harness.

SECURITY LIGHT 12, DTC B2103/P1260[IMMOBILIZER SYSTEM]

id0902e4800700

SECURITY LIGHT: 12 **DTC: B2103/P1260**	• Coil antenna malfunction • The PCM determined a malfunction in the coil antenna even though it is normal.
DETECTION CONDITION	• Coil antenna malfunction • The PCM determined a malfunction in the coil antenna even though it is normal.
POSSIBLE CAUSE	• Coil antenna malfunction • Poor connection of the coil antenna connector • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**INSPECT CONNECTOR CONNECTION** • Are the coil antenna connector and the instrument cluster connector securely connected?	Yes	Replace the coil antenna, then go to the next step. (See 09-14-16 COIL ANTENNA REMOVAL/INSTALLATION.)
		No	Connect the connector securely.
2	**INSPECT PCM** • Turn the ignition switch to the ON position. • Is the DTC displayed? — Security light: 12 — M-MDS: B2103/P1260	Yes	Replace the PCM and perform the resetting procedure for the immobilizer system when replacing the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF. L3].) (See 09-14-17 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING.)
		No	DTC troubleshooting completed.

SECURITY LIGHT 13, DTC B1600/P1260[IMMOBILIZER SYSTEM]

id0902e4800800

SECURITY LIGHT: 13 **DTC: B1600/P1260**	The key ID number data cannot be read.
DETECTION CONDITION	• The key ID number data cannot be read.
POSSIBLE CAUSE	• No transponder in the key • Transponder malfunction (Key ID number is not output) • Coil antenna malfunction • Instrument cluster malfunction • Any of the following items are touching or near the key head. — Spare keys — Keys for other vehicles equipped with an immobilizer system — Any metallic object — Any electronic device, or any credit or other cards with magnetic strips EXAMPLES:  METAL RING LYING ON KEY HEAD  METAL PART OF ANOTHER KEY TOUCHING KEY HEAD  KEY IS NEAR OR TOUCHING ANOTHER IMMOBILIZER SYSTEM KEY

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY DTC** • Is B1600/P1260 displayed?	Yes	Go to Step 3.
		No	Go to the next step.
2	**VERIFY DTC** • Is B2431/P1260 displayed?	Yes	Perform the DTC inspection for "SECURITY LIGHT: 13, M-MDS: B2431/P1260". (See 09-02A-10 SECURITY LIGHT 13, DTC B2431/P1260[IMMOBILIZER SYSTEM].)
		No	Go to the next step.
3	**VERIFY WHETHER KEY IS VALID OR NOT** • Are there any keys with which the engine can be started, other than the key that is a cause of the displayed DTC?	Yes	Go to Step 5.
		No	Go to the next step.
4	**VERIFY WHETHER MALFUNCTION IS IN KEY OR COIL ANTENNA** • Using the M-MDS, register an additional key. (See 09-14-17 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING.) • Using the registered key, turn the ignition switch to the ON position. • Verify the DTC using the M-MDS. — Is B1600/P1260 displayed again?	Yes	Replace the coil antenna, then go to Step 6. (See 09-14-16 COIL ANTENNA REMOVAL/INSTALLATION.)
		No	• Dispose of the malfunctioning key. • Register a new key if necessary. (See 09-14-17 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING.)
5	**VERIFY WHETHER MALFUNCTION IS IN KEY OR COIL ANTENNA** • Using another valid key, turn the ignition switch to the ON position. • Verify the DTC Using the M-MDS. — Is B1600/P1260 displayed again?	Yes	Replace the coil antenna, then go to the next step. (See 09-14-16 COIL ANTENNA REMOVAL/INSTALLATION.)
		No	• Dispose of the malfunctioning key. • Register a new key if necessary. (See 09-14-17 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING.)
6	**INSPECT INSTRUMENT CLUSTER** • Using the registered key, turn the ignition switch to the ON position. — Is B1600/P1260 displayed again?	Yes	Replace the instrument cluster and perform the resetting procedure for the immobilizer system when replacing the instrument cluster. (See 09-22-2 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.) (See 09-14-17 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING.)
		No	DTC troubleshooting completed.

SECURITY LIGHT 13, DTC B2431/P1260[IMMOBILIZER SYSTEM]

id0902e4800900

SECURITY LIGHT: 13 **DTC: B2431/P1260**	Key ID number registration error
DETECTION CONDITION	• Key ID number registration error
POSSIBLE CAUSE	• Errors during key ID number registration procedure • Any of the following items are touching or near the key head. — Spare keys — Keys for other vehicles equipped with an immobilizer system — Any metallic object — Any electronic device, or any credit or other cards with magnetic strips EXAMPLES:  METAL RING LYING ON KEY HEAD  METAL PART OF ANOTHER KEY TOUCHING KEY HEAD  KEY IS NEAR OR TOUCHING ANOTHER IMMOBILIZER SYSTEM KEY

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY DTC** • Is B2431/P1260 displayed?	Yes	Go to Step 3.
		No	Go to the next step.
2	**VERIFY DTC** • Is B1600/P1260 displayed?	Yes	Perform the DTC inspection for "SECURITY LIGHT: 13, M-MDS: B1600/P1260". (See 09-02A-8 SECURITY LIGHT 13, DTC B1600/P1260[IMMOBILIZER SYSTEM].)
		No	Go to the next step.
3	**INSPECT INSTRUMENT CLUSTER** • Using the M-MDS, clear the key ID number and re-register it. (See 09-14-17 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING.) **Note** • Two or more keys must be registered to start the engine. • Using the registered key, turn the ignition switch to the ON position. • Verify the DTC Using the M-MDS. — Is B2431/P1260 displayed again?	Yes	Replace the instrument cluster and perform the resetting procedure for the immobilizer system when replacing the instrument cluster. (See 09-22-2 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.) (See 09-14-17 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING.)
		No	DTC troubleshooting completed.

SECURITY LIGHT 14, DTC B1602/P1260[IMMOBILIZER SYSTEM]

id0902e4801000

SECURITY LIGHT: 14 DTC: B1602/P1260	The instrument cluster cannot read key ID number data normally.
DETECTION CONDITION	• The instrument cluster cannot read key ID number data normally.
POSSIBLE CAUSE	• Transponder (key) malfunction • Coil antenna malfunction • Instrument cluster malfunction • Any of the following items are touching or near the key head. — Spare keys — Keys for other vehicles equipped with an immobilizer system — Any metallic object — Any electronic device, or any credit or other cards with magnetic strips EXAMPLES:  METAL RING LYING ON KEY HEAD  METAL PART OF ANOTHER KEY TOUCHING KEY HEAD  KEY IS NEAR OR TOUCHING ANOTHER IMMOBILIZER SYSTEM KEY

09-02A

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY WHETHER KEY IS VALID OR NOT** • Using another registered key, turn the ignition switch to the ON position. • If there is not another registered key, register an additional key using the M-MDS and turn the ignition key to the ON position using the registered key. (See 09-14-17 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING.) • Is the DTC displayed again? — Security light: 14 — M-MDS: B1602/P1260	Yes	Replace the coil antenna, then go to the next step. (See 09-14-16 COIL ANTENNA REMOVAL/ INSTALLATION.)
		No	• Dispose of the malfunctioning key. • Register a new key if necessary. (See 09-14-17 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING.)
2	**INSPECT INSTRUMENT CLUSTER** • Using another registered key, turn the ignition switch to the ON position. • Is the DTC displayed again? — Security light: 14 — M-MDS: B1602/P1260	Yes	Replace the instrument cluster and perform the resetting procedure for the immobilizer system when replacing the instrument cluster. (See 09-22-2 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.) (See 09-14-17 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING.)
		No	DTC troubleshooting completed.

SECURITY LIGHT 15, DTC B1601/P1260[IMMOBILIZER SYSTEM]

id0902e4801100

SECURITY LIGHT: 15 DTC: B1601/P1260	The instrument cluster has detected unregistered key ID number.
DETECTION CONDITION	• The instrument cluster has detected unregistered key ID number.
POSSIBLE CAUSE	• No keys have been registered after replacing the instrument cluster. • Unregistered key used • Attempt made to register a ninth key • Instrument cluster malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY NUMBER OF REGISTERED KEYS** • Using the M-MDS, perform the PID/data monitor inspection and confirm the number of registered keys. (See 09-02A-5 PID/DATA MONITOR TABLE[IMMOBILIZER SYSTEM].) • Are one or more keys registered?	Yes	Go to the next step.
		No	Go to Step 3.
2	**VERIFY NUMBER OF REGISTERED KEYS** • Using the M-MDS, perform the PID/data monitor inspection and confirm the number of registered keys. (See 09-02A-5 PID/DATA MONITOR TABLE[IMMOBILIZER SYSTEM].) • Are eight keys registered?	Yes	Using the M-MDS, clear the key ID numbers as necessary, then go to the next step.
		No	Go to the next step.
3	**INSPECT INSTRUMENT CLUSTER** • Using the M-MDS, register the key ID number. (See 09-14-17 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING.) **Note** • Two or more keys must be registered to start the engine. • Using the registered key, turn the ignition switch to the ON position. • Is the DTC displayed again? — Security light: 15 — M-MDS: B1601/P1260	Yes	Replace the instrument cluster and perform the resetting procedure for the immobilizer system when replacing the instrument cluster. (See 09-22-2 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.) (See 09-14-17 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING.)
		No	DTC troubleshooting completed.

SECURITY LIGHT 16, DTC U2510/P1260, U1147/P1260[IMMOBILIZER SYSTEM]

id0902e4801200

SECURITY LIGHT: 16	DTC: U2510/P1260	Communication error between the instrument cluster and the PCM (no response)
	DTC: U1147/P1260	Communication error between the instrument cluster and the PCM (mismatched conditions)
DETECTION CONDITION		**Instrument cluster DTC: U2510** • Communication error between the instrument cluster and the PCM (no response) **Instrument cluster DTC: U1147** • Communication error between the instrument cluster and the PCM (mismatched conditions)
POSSIBLE CAUSE		• Malfunction in the wiring harness (CAN line) between the instrument cluster and the PCM • PCM malfunction • Instrument cluster malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY DTC** • Are either U0073, or both, displayed, by either the instrument cluster or the PCM, or both?	Yes	Perform troubleshooting according to the corresponding DTC inspection. (See 09-02B-12 DTC U0073, U0516, U1900, U2516[MULTIPLEX COMMUNICATION SYSTEM].)
		No	Replace the instrument cluster and perform the resetting procedure for the immobilizer system when replacing the instrument cluster. (See 09-22-2 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.) (See 09-14-17 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING.) Go to the next step.
2	**VERIFY DTC** • Using the registered key, turn the ignition switch to the ON position. • Is the DTC displayed? — Security light: 16 — M-MDS: U2510 or U1147/P1260	Yes	Replace the PCM and perform the resetting procedure for the immobilizer system when replacing the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].) (See 09-14-17 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING.)
		No	DTC troubleshooting completed.

SECURITY LIGHT 21, DTC B1213/P1260[IMMOBILIZER SYSTEM]

id0902e4801300

SECURITY LIGHT: 21 **DTC: B1213/P1260**	Only one key ID number is registered.
DETECTION CONDITION	• Only one key is registered.
POSSIBLE CAUSE	• Only one registered key

09-02A

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY NUMBER OF REGISTERED KEYS** • Using the M-MDS, perform the PID/data monitor inspection and confirm the number of registered keys. (See 09-02A-5 PID/DATA MONITOR TABLE[IMMOBILIZER SYSTEM].) • Are two or more keys registered?	Yes	Replace the instrument cluster and perform the resetting procedure for the immobilizer system when replacing the instrument cluster. (See 09-22-2 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.) (See 09-14-17 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING.)
		No	• Using the M-MDS, clear the key ID number and register a new key if necessary. (See 09-14-17 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING.) • Go to the next step.
2	**VERIFY DTC** • Using the registered key, turn the ignition switch to the ON position. • Is the DTC displayed again? — Security light: 21 — M-MDS: B1213/P1260	Yes	Replace the instrument cluster and perform the resetting procedure for the immobilizer system when replacing the instrument cluster. (See 09-22-2 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.) (See 09-14-17 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING.)
		No	DTC troubleshooting completed.

SECURITY LIGHT 22, DTC B2141/P1260[IMMOBILIZER SYSTEM]

id0902e4801400

SECURITY LIGHT: 22 **DTC: B2141/P1260**	Communication error between the instrument cluster and the PCM (data transfer error)
DETECTION CONDITION	• Communication error between the instrument cluster and the PCM (data transfer error)
POSSIBLE CAUSE	• Malfunction in the wiring harness (CAN line) between the instrument cluster and the PCM • Instrument cluster malfunction • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY DTC** • Are either U1900 or U0073, or both displayed, by either the instrument cluster or the PCM, or both?	Yes	Perform troubleshooting according to the corresponding DTC inspection. (See 09-02B-12 DTC U0073, U0516, U1900, U2516[MULTIPLEX COMMUNICATION SYSTEM].)
		No	Go to the next step.
2	**VERIFY DTC** • Using the registered key, turn the ignition switch to the ON position. • Is the DTC displayed? — Security light: 22 — M-MDS: B2141/P1260	Yes	• Replace the PCM and perform the resetting procedure for the immobilizer system when replacing the PCM. (See 09-14-17 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING.) • Go to the next step.
		No	DTC troubleshooting completed.
3	**EXAMINE INSTRUMENT CLUSTER AND PCM** • Is the DTC displayed again? — Security light: 22 — M-MDS: B2141/P1260	Yes	• Replace the instrument cluster and perform the resetting procedure for the immobilizer system when replacing the instrument cluster. (See 09-22-2 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.) (See 09-14-17 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING.) • Go to the next step.
		No	DTC troubleshooting completed.
4	**EXAMINE PCM** • Is the DTC displayed again? — Security light: 22 — M-MDS: B2141/P1260	Yes	• Replace the PCM and perform the resetting procedure for the immobilizer system when replacing the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].) (See 09-14-17 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING.)
		No	DTC troubleshooting completed.

SECURITY LIGHT 23, DTC B2139/P1260[IMMOBILIZER SYSTEM]

id0902e4801500

SECURITY LIGHT: 23 DTC: B2139/P1260	ID number data in the PCM and the instrument cluster do not match.
DETECTION CONDITION	• ID number data in the instrument cluster and the PCM are different.
POSSIBLE CAUSE	• Necessary procedures were not performed using the M-MDS after replacing the PCM. • Instrument cluster malfunction • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY DTC** • Are either U1900 or U0073, or both, displayed, by either the instrument cluster or the PCM, or both?	Yes	Perform troubleshooting according to the corresponding DTC inspection. (See 09-02B-12 DTC U0073, U0516, U1900, U2516[MULTIPLEX COMMUNICATION SYSTEM].)
		No	Go to the next step.
2	**EXAMINE INSTRUMENT CLUSTER AND PCM** • Perform procedures for when replacing the PCM only. (See 09-14-17 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING.) • Using the registered key, turn the ignition switch to the ON position. • Is the DTC displayed? — Security light: 23 — M-MDS: B2139/P1260	Yes	• Replace the instrument cluster and perform the resetting procedure for the immobilizer system when replacing the instrument cluster. (See 09-22-2 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.) (See 09-14-17 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING.) • Go to the next step.
		No	DTC troubleshooting completed.
3	**VERIFY DTC** • Is the DTC displayed again? — Security light: 23 — M-MDS: B2139/P1260	Yes	• Replace the PCM and perform the resetting procedure for the immobilizer system when replacing the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].) (See 09-14-17 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING.)
		No	DTC troubleshooting completed.

09-02A

DTC B1342[IMMOBILIZER SYSTEM]

id0902e4801600

DTC: B1342	Instrument cluster malfunction
DETECTION CONDITION	• Instrument cluster malfunction
POSSIBLE CAUSE	• Instrument cluster malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**EXAMINE INSTRUMENT CLUSTER AND PCM** • Is the DTC displayed? — M-MDS: B1342	Yes	Replace the instrument cluster and perform the resetting procedure for the immobilizer system when replacing the instrument cluster. (See 09-22-2 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.) (See 09-14-17 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING.)
		No	DTC troubleshooting completed.

09-02B ON-BOARD DIAGNOSTIC [MULTIPLEX COMMUNICATION SYSTEM]

MULTIPLEX COMMUNICATION SYSTEM[MULTIPLEX COMMUNICATION SYSTEM]

id0902e6830400

Outline

- If the controller area network (CAN) system is malfunctioning, read the DTCs of the following modules, using the M-MDS to determine the malfunctioning system.
  - — PCM
  - — TCM (FS5A-EL)
  - — EHPAS control module
  - — DSC HU/CM (with DSC)
  - — ABS HU/CM (with ABS)
  - — TPMS control module
  - — Instrument cluster
  - — Climate control unit
  - — SAS control module
  - — Audio unit (base module)
  - — Information display
  - — PJB

Flowchart

- Use the following flowchart to verify the cause of the trouble.

STEP	INSPECTION		ACTION
1	**INSPECT DTC INDICATION** • Using the M-MDS, inspect if DTCs are displayed for the following module: — PCM — TCM — EHPAS control module — DSC HU/CM — ABS HU/CM — TPMS control module — Instrument cluster — Climate control unit — SAS control module — PJB • Using the self-diagnostic function, inspect if DTCs are displayed for the following module: — Information display • Are any DTCs displayed?	Yes	Go to the next step.
		No	Go to Step 5.

STEP	INSPECTION		ACTION
2	**INSPECT CAN SYSTEM-RELATED DTC** • Are any DTCs other than the following displayed? — U0073 — U0100 — U0101 — U0121 — U0127 — U0131 — U0140 — U0151 — U0155 — U0164 — U0181 — U0184 — U0516 — U1900 — U2012 — U2023 — U2202 — U2516 — U2523	Yes	Repair the malfunctioning part by following the related DTC inspection. Go to the next step.
		No	Go to the next step.
3	**INSPECT CAN SYSTEM-RELATED DTC** • Are any of the following DTCs displayed? — PCM: U0073, U0101, U0121, U0155 — TCM: U0073, U0100 — EHPAS control module: U0073, U0100, U2023 — DSC HU/CM or ABS HU/CM: U1900, U2012, U2202, U2523 — TPMS control module: U0073 — Instrument cluster: U0073, U0100, U0101, U0121, U0127, U0131, U0140, U0151, U0184, U2516 — Climate control unit: U0140, U0155, U0184, U0516 — SAS control module: U0073, U1900 — Information display: U0164, U0181, U0184, U2516 — PJB: U1900	Yes	Repair the malfunctioning part by following the DTC inspection. Go to the next step.
		No	Troubleshooting completed.
4	**VERIFY TROUBLESHOOTING COMPLETED** • Clear the DTC from the CAN system-related modules using the M-MDS. • Start the engine. • Are any of the CAN related DTCs displayed?	Yes	Go back to Step 3.
		No	Troubleshooting completed.
5	**INSPECT COMMUNICATION CONDITION** • Is there a response from the following modules? — PCM — TCM — EHPAS control module — DSC HU/CM — ABS HU/CM — TPMS control module — Instrument cluster — Climate control unit — SAS control module — PJB	Yes	Troubleshooting completed.
		No	Go to the next step.
6	**INSPECT MODULES THAT DO NOT RESPOND** • Inspect the power supply and the ground circuit for any units that do not respond. • Are they normal?	Yes	Go to the next step.
		No	Repair the malfunctioning part, then go back to Step 1.

STEP	INSPECTION		ACTION
7	**INSPECT CONNECTOR AND WIRING HARNESS BETWEEN MODULES THAT DO NOT RESPOND AND DLC-2** • Turn the ignition switch to the LOCK position. • Inspect the wiring harness and connector between any module that does not respond and the DLC-2. **PCM—DLC-2** • 1AM—F • 1AI—E **TCM—DLC-2** • B—F • E—E **EHPAS control module—DLC-2** • 2B—F • 2H—E **DSC HU/CM—DLC-2** • P—F • D—E **ABS HU/CM—DLC-2** • H—F • L—E **Instrument cluster—DLC-2** • 1I—F • 1K—E • 1M—L • 1O—K **Climate control unit—DLC-2** • X—L • W—K **SAS control module—DLC-2** • 1X—L • 1T—K **PJB—DLC-2** • J-04 D—L • J-04 B—K	Yes	Go to the next step.
		No	Repair the malfunctioning part, then go back to Step 1.
8	**INSPECT WIRING HARNESS** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between the following terminals. — DLC-2 terminals F and E — DLC-2 terminals L and K • Is the voltage **2.0—3.0 V**?	Yes	Go to the next step.
		No	Go to Step 12.
9	**INSPECT WIRING HARNESS** • Turn the ignition switch to the LOCK position. • Measure the resistance between the following terminals. — DLC-2 terminals F and E — DLC-2 terminals L and K • Is the resistance **59—65 ohms**?	Yes	Replace the modules that do not respond, then go back to Step 1.
		No	Go to the next step.
10	**INSPECT PCM** • Disconnect the PCM connector. • Measure the resistance between following terminals. — PCM terminals 1AM and 1AI (part-side) • Is the resistance **118—130 ohms**?	Yes	Go to the next step.
		No	Replace the PCM, then go to the next step.
11	**INSPECT INSTRUMENT CLUSTER** • Disconnect the instrument cluster connector. • Measure the resistance between the following terminals. — Instrument cluster terminals 1I and 1K (part-side) — Instrument cluster terminals 1M and 1O (part-side) • Is the resistance **118—130 ohms**?	Yes	Go to next step.
		No	Replace the instrument cluster, then go to the next step.

STEP	INSPECTION		ACTION
12	**CLASSIFY WIRING HARNESS MALFUNCTION OR MODULE MALFUNCTION** • Turn the ignition switch to the LOCK position. • Disconnect the connector of any unit that does not respond. (If there are two or more units that do not respond, disconnect only one of the units.) • Turn the ignition switch to the ON position. • Measure the voltage between the following terminals. — DLC-2 terminals F and E — DLC-2 terminals L and K • Is voltage **2.0—3.0 V**?	Yes	Go to the next step.
		No	Retry this step with other module connector disconnected. If all units that do not respond are disconnected, go to Step 14.
13	**INSPECT WIRING HARNESS OF ANY UNIT THAT DOES NOT RESPOND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between the following connector terminals of any disconnected unit. **PCM** • 1AM—other terminals • 1AI—other terminals **TCM** • B—other terminals • E—other terminals **EHPAS control module** • 2B—other terminals • 2H—other terminals **DSC HU/CM** • P—other terminals • D—other terminals **ABS HU/CM** • H—other terminals • L—other terminals **Instrument cluster** • 1I—other terminals • 1K—other terminals • 1M—other terminals • 1O—other terminals **Climate control unit** • X—other terminals • W—other terminals **SAS control module** • 1X—other terminals • 1T—other terminals **PJB** • J-04 D—other terminals • J-04 B—other terminals Is there continuity?	Yes	Repair or replace the wiring harness, then go back to Step 1.
		No	Replace the disconnected unit, then go back to Step 1.
14	**INSPECT CAN RELATED WIRING HARNESS** • Inspect the related wiring harnesses (CAN_L and/or CAN_H) for the short circuit (to power supply or ground). • Is the wiring harness normal?	Yes	Repair or replace the wiring harness, then go back to Step 1.
		No	Go back to Step 1.

DTC TABLE[MULTIPLEX COMMUNICATION SYSTEM]

id0902e6837000

DTC	Malfunction location	DTC output module	Page
U0073	CAN system communication error	• PCM • TCM • EHPAS control module • TPMS control module • Instrument cluster	(See 09-02B-11 DTC U0073, U2012[MULTIPLEX COMMUNICATION SYSTEM].)
		SAS control module	(See 09-02B-12 DTC U0073, U0516, U1900, U2516[MULTIPLEX COMMUNICATION SYSTEM].)
U0100	Communication error to PCM	• TCM • EHPAS control module • Instrument cluster	(See 09-02B-7 PROCEDURES FOR DETERMINING THE LOCATION OF A MALFUNCTION[MULTIPLEX COMMUNICATION SYSTEM].)
U0101	Communication error to TCM	• PCM • Instrument cluster	
U0121	Communication error to DSC HU/CM or ABS HU/CM	• PCM • Instrument cluster	
U0127	Communication error to instrument cluster	TPMS control module	
U0131	Communication error to EHPAS control module	Instrument cluster	
U0140	Communication error to PJB	• Instrument cluster • Climate control unit	
U0151	Communication error to SAS control module	Instrument cluster	
U0155	Communication error to instrument cluster	• PCM • Climate control unit	
U0164	Communication error to climate control unit	Information display	
U0181	Communication error to instrument cluster	Information display	
U0184	Communication error to audio unit (base module)	• Instrument cluster • Climate control unit • Information display	
U0516	CAN system communication error	Climate control unit	(See 09-02B-12 DTC U0073, U0516, U1900, U2516[MULTIPLEX COMMUNICATION SYSTEM].)
U1900	Communication error to PCM	• DSC HU/CM • ABS HU/CM	(See 09-02B-7 PROCEDURES FOR DETERMINING THE LOCATION OF A MALFUNCTION[MULTIPLEX COMMUNICATION SYSTEM].)
	Communication error to instrument cluster	SAS control module	
	CAN system communication error Abnormal message from other modules	PJB	(See 09-02B-7 PROCEDURES FOR DETERMINING THE LOCATION OF A MALFUNCTION[MULTIPLEX COMMUNICATION SYSTEM].) (See 09-02B-12 DTC U0073, U0516, U1900, U2516[MULTIPLEX COMMUNICATION SYSTEM].)
U2012	CAN system communication error	• DSC HU/CM • ABS HU/CM	(See 09-02B-11 DTC U0073, U2012[MULTIPLEX COMMUNICATION SYSTEM].)

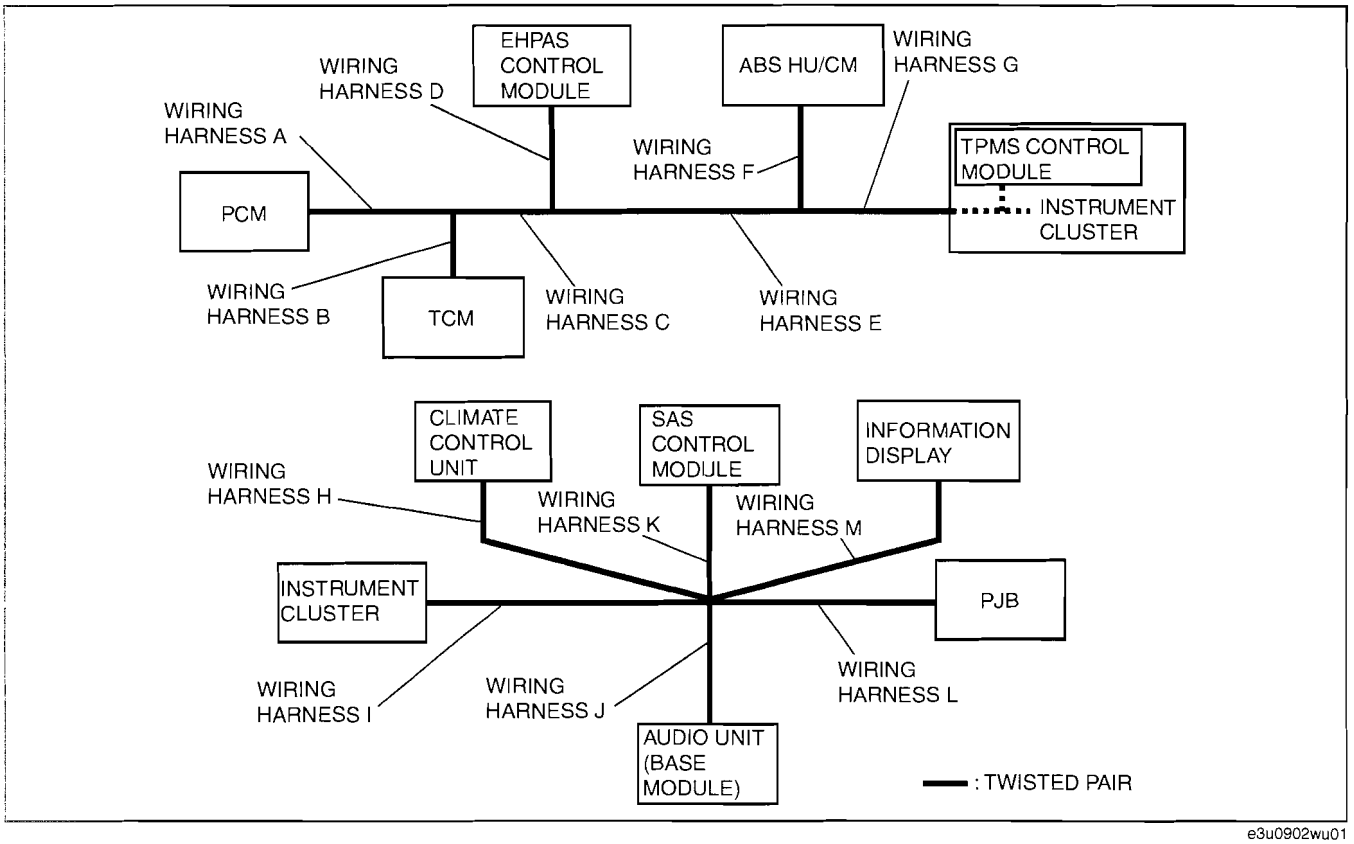
ON-BOARD DIAGNOSTIC [MULTIPLEX COMMUNICATION SYSTEM]

DTC	Malfunction location	DTC output module	Page
U2023	Abnormal message from PCM	EHPAS control module	(See 09-02B-7 PROCEDURES FOR DETERMINING THE LOCATION OF A MALFUNCTION[MULTIPLE X COMMUNICATION SYSTEM].)
	Abnormal message from other modules	Instrument cluster	
U2202	Communication error to PCM	DSC HU/CM	
U2516	CAN system communication error	• Instrument cluster • Information display	(See 09-02B-12 DTC U0073, U0516, U1900, U2516[MULTIPLEX COMMUNICATION SYSTEM].)
U2523	Communication error to PCM	• DSC HU/CM • ABS HU/CM	(See 09-02B-7 PROCEDURES FOR DETERMINING THE LOCATION OF A MALFUNCTION[MULTIPLE X COMMUNICATION SYSTEM].)

PROCEDURES FOR DETERMINING THE LOCATION OF A MALFUNCTION[MULTIPLEX COMMUNICATION SYSTEM]

id0902e6830500

System Wiring Diagram



e3u0902wu01

PCM

1. Inspect the display of DTC U0101, U0121 and/or U0155, using the M-MDS. (See 09-02B-5 DTC TABLE[MULTIPLEX COMMUNICATION SYSTEM].)
2. Referring to the following table, determine the malfunctioning part of the CAN system.

×: Normal
—: Communication error

Module	Communication status			Malfunction location
	TCM	DSC HU/CM ABS HU/CM	Instrument cluster	
PCM	—	—	—	• Wiring harness A • PCM
	—	×	×	• Wiring harness B • TCM
	×	—	—	• Wiring harness C • Wiring harness E
	×	—	×	• Wiring harness F • DSC HU/CM • ABS HU/CM
	×	×	—	• Wiring harness G • Instrument cluster

TCM

1. Inspect the display of DTC U0100 using the M-MDS. (See 09-02B-5 DTC TABLE[MULTIPLEX COMMUNICATION SYSTEM].)
2. Referring to the following table, determine the malfunctioning part of the CAN system.

×: Normal
—: Communication error

Module	Communication status	Malfunction location
	PCM	
TCM	—	• Wiring harness A • Wiring harness B • TCM • PCM

EHPAS Control Module

1. Inspect the display of DTC U0100 and/or U2023, using the M-MDS. (See 09-02B-5 DTC TABLE[MULTIPLEX COMMUNICATION SYSTEM].)
2. Referring to the following table, determine the malfunctioning part of the CAN system.

×: Normal
—: Communication error

Module	Communication status	Malfunction location
	PCM	
EHPAS control module	—	• Wiring harness A • Wiring harness C • Wiring harness D • EHPAS control module • PCM

DSC HU/CM or ABS HU/CM

1. Inspect the display of DTC U1900, U2202 and/or U2523, using the M-MDS. (See 09-02B-5 DTC TABLE[MULTIPLEX COMMUNICATION SYSTEM].)
2. Referring to the following table, determine the malfunctioning part of the CAN system.

×: Normal
—: Communication error

Module	Communication status	Malfunction location
	PCM	
ABS HU/CM	—	• Wiring harness A • Wiring harness C • Wiring harness E • Wiring harness F • PCM

Instrument Cluster

1. Inspect the display of DTC U0100, U0101, U0121, U0127 and/or U0131 using the M-MDS. (See 09-02B-5 DTC TABLE[MULTIPLEX COMMUNICATION SYSTEM].)
2. Referring to the following table, determine the malfunctioning part of the CAN system.

×: Normal
—: Communication error

Module	Communication status					Malfunction location
	PCM	TCM	EHPAS control module	DSC HU/CM ABS HU/CM	TPMS control module	
instrument cluster	—	—	—	—	—	• Instrument cluster
	—	×	×	×	×	• Wiring harness A • PCM
	×	—	×	×	×	• Wiring harness B • TCM
	—	—	×	×	×	• Wiring harness C
	×	×	—	×	×	• Wiring harness D • EHPAS control module
	—	—	—	×	×	• Wiring harness E
	×	×	×	—	×	• Wiring harness F • DSC HU/CM • ABS HU/CM
	×	×	×	×	—	• TPMS control module

3. Inspect the display of DTC U0140, U0151 and/or U0184, using the M-MDS. (See 09-02B-5 DTC TABLE[MULTIPLEX COMMUNICATION SYSTEM].)
4. Referring to the following table, determine the malfunctioning part of the CAN system.

×: Normal
—: Communication error

Module	Communication status			Malfunction location
	PJB	SAS control module	Audio unit (base module)	
instrument cluster	—	—	—	• Wiring harness I • Instrument cluster
	—	×	×	• Wiring harness L • PJB
	×	—	×	• Wiring harness K • SAS control module
	×	×	—	• Wiring harness J • Audio unit (base module)

Climate Control Unit

1. Inspect the display of DTC U0140, U0155 and/or U0184, using the M-MDS. (See 09-02B-5 DTC TABLE[MULTIPLEX COMMUNICATION SYSTEM].)
2. Referring to the following table, determine the malfunctioning part of the CAN system.

×: Normal
—: Communication error

Module	Communication status			Malfunction location
	PJB	Instrument cluster	Audio unit (base module)	
Climate control unit	—	—	—	• Wiring harness H • Climate control unit
	—	×	×	• Wiring harness L • PJB
	×	—	×	• Wiring harness I • Instrument cluster
	×	×	—	• Wiring harness J • Audio unit (base module)

SAS Control Module

1. Inspect the display of DTC U1900 using the M-MDS. (See 09-02B-5 DTC TABLE[MULTIPLEX COMMUNICATION SYSTEM].)
2. Referring to the following table, determine the malfunctioning part of the CAN system.

×: Normal
—: Communication error

Module	Communication status	Malfunction location
	Instrument cluster	
SAS control module	—	• Wiring harness I • Wiring harness K • SAS control module • Instrument cluster

Information Display

1. Inspect the display of DTC U0164, U0181 and/or U0184 using the M-MDS. (See 09-02B-5 DTC TABLE[MULTIPLEX COMMUNICATION SYSTEM].)
2. Referring to the following table, determine the malfunctioning part of the CAN system.

×: Normal
—: Communication error

Module	Communication status			Malfunction location
	Climate control unit	Instrument cluster	Audio unit (base module)	
Information Display	—	—	—	• Wiring harness M • Information Display
	—	×	×	• Wiring harness H • Climate control unit
	×	—	×	• Wiring harness I • Instrument cluster
	×	×	—	• Wiring harness J • Audio unit (base module)

PJB

1. Inspect the display of DTC U1900 using the M-MDS. (See 09-02B-5 DTC TABLE[MULTIPLEX COMMUNICATION SYSTEM].)
2. Referring to the following table, determine the malfunctioning part of the CAN system.

×: Normal
—: Communication error

Module	Communication status	Malfunction location
	Audio unit (base module) Instrument cluster	
PJB	—	• Wiring harness I • Wiring harness J • Wiring harness L • PJB • Audio unit (base module) • Instrument cluster

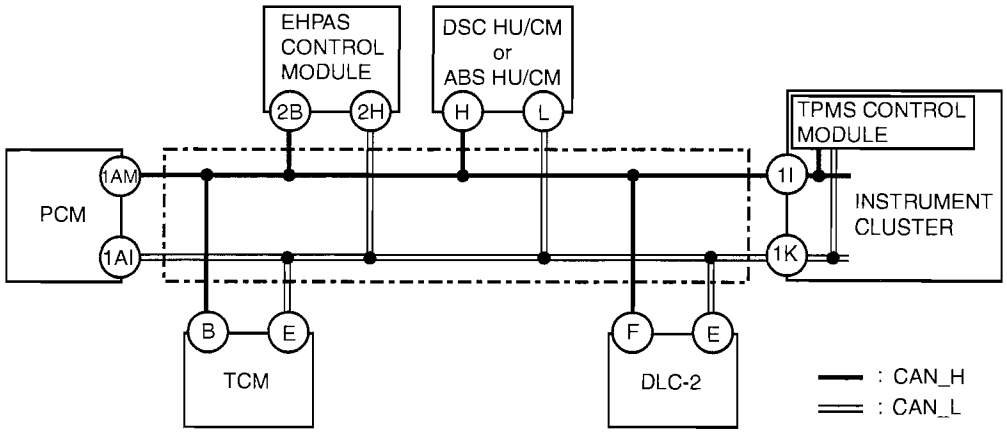
Repair Procedure

1. Inspect the connector of malfunctioning module.
   - If there is any malfunction, repair or replace the connector.
2. Inspect the malfunctioning wiring harnesses as follow:
   - If there is any malfunction, repair or replace the wiring harnesses.
   - If there is no malfunction, replace the malfunctioning module.
     - — Short to GND
     - — Short to power supply
     - — Twisted pair short each other
     - — Open circuit
3. Make sure to reconnect all disconnected connectors.
4. Clear the CAN system related DTCs using the M-MDS.
5. Verify if the CAN system related DTCs are displayed using the M-MDS.
   - If the same following DTCs are present, replace the malfunctioning module.
     - — U0073 (PCM, TCM, EHPAS control module, TPMS control module, instrument cluster, climate control unit, SAS control module)
     - — U0516 (TPMS control module, climate control unit)
     - — U1900 (PJB)
     - — U2012 (DSC HU/CM, ABS HU/CM)
     - — U2516 (Instrument cluster)
   - If other DTC is present, perform the appropriate DTC inspection. (See 09-02B-5 DTC TABLE[MULTIPLEX COMMUNICATION SYSTEM].)

DTC U0073, U2012[MULTIPLEX COMMUNICATION SYSTEM]

id0902e6830200

DTC	**U0073**	**PCM TCM EHPAS control module TPMS control module Instrument cluster**	**CAN system communication error**
	U2012	**DSC HU/CM ABS HU/CM**	
DETECTION CONDITION	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only detection conditions may cause injury due to operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • CAN system related harness malfunction • Related module communication error		
POSSIBLE CAUSE	• Open or short circuit in wiring harness • Malfunction of connectors between PCM, TCM, EHPAS control module, DSC HU/CM, ABS HU/CM TPMS control module, and instrument cluster • PCM malfunction • TCM malfunction • EHPAS control module malfunction • TPMS control module malfunction • DSC HU/CM malfunction • ABS HU/CM malfunction • Instrument cluster malfunction		



09-02B

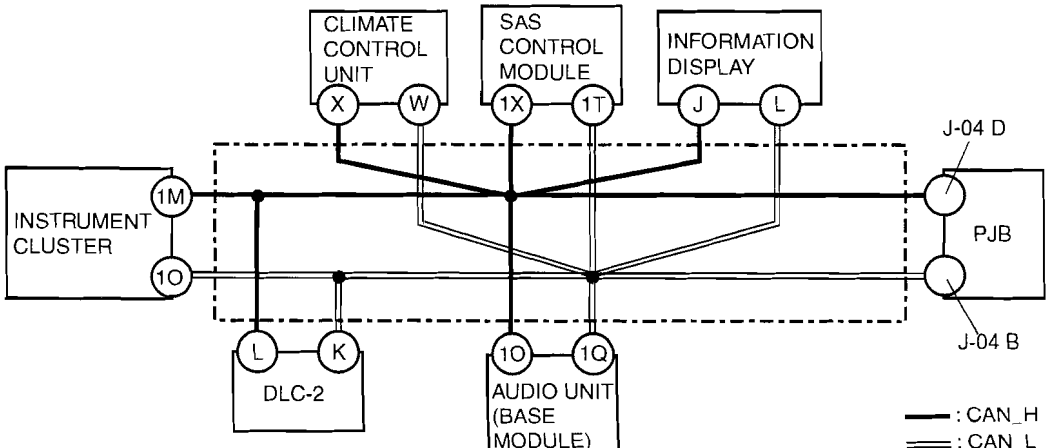
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT CAN SYSTEM-RELATED DTC** • Are any DTCs other than the following displayed? — U0073 — U2012	Yes	Determine malfunctioning part in CAN system. (See 09-02B-7 PROCEDURES FOR DETERMINING THE LOCATION OF A MALFUNCTION[MULTIPLEX COMMUNICATION SYSTEM])
		No	Go to the next step.
2	**INSPECT CONNECTOR** • Inspect the connector of the module that outputs the DTC. • Is it normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 4.
3	**INSPECT WIRING HARNESSES** • Inspect for the following malfunctioning wiring harnesses: — Short to GND — Short to power supply — Twisted pair short each other — Open circuit • Is there any malfunction?	Yes	Repair or replace the wiring harness, then go to the next step.
		No	Go to the next step.
4	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC using the M-MDS. • Is the same DTC present?	Yes	Replace the module that outputs the DTC, then retry this step.
		No	Troubleshooting completed.

DTC U0073, U0516, U1900, U2516[MULTIPLEX COMMUNICATION SYSTEM]

id0902e6833800

DTC	**U0073**	**SAS control module**	**CAN system communication error**
	U0516	**Climate control unit**	
	U1900	**PJB**	
	U2516	**Instrument cluster Information display**	
DETECTION CONDITION	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only detection conditions may cause injury due to operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • CAN system related harness malfunction • Related module communication error		
POSSIBLE CAUSE	• Open or short circuit in wiring harness • Malfunction of connectors between SAS control module, PJB, information display and instrument cluster • SAS control module malfunction • Climate control unit • Information display malfunction • PJB malfunction • Instrument cluster malfunction		



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT CAN SYSTEM-RELATED DTC** • Are any DTCs other than the following displayed? — U0073 — U0516 — U1900 — U2516	Yes	Determine malfunctioning part in CAN system. (See 09-02B-7 PROCEDURES FOR DETERMINING THE LOCATION OF A MALFUNCTION[MULTIPLEX COMMUNICATION SYSTEM].)
		No	Go to the next step.
2	**INSPECT CONNECTOR** • Inspect the connector of the module that outputs the DTC. • Is it normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 4.
3	**INSPECT WIRING HARNESSES** • Inspect for the following malfunctioning wiring harnesses: — Short to GND — Short to power supply — Twisted pair short each other — Open circuit • Is there any malfunction?	Yes	Repair or replace the wiring harness, then go to the next step.
		No	Go to the next step.
4	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC using the M-MDS. • Is the same DTC present?	Yes	Replace the module that outputs the DTC, then retry this step.
		No	Troubleshooting completed.

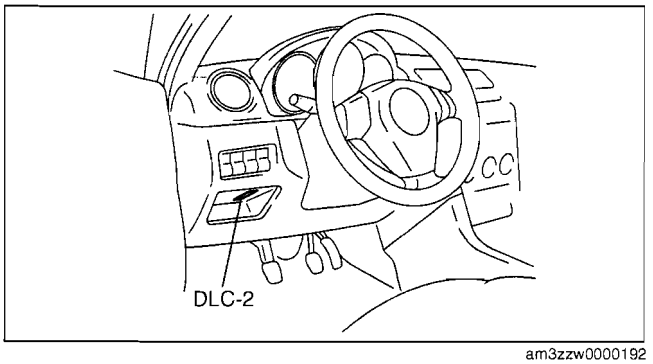
09-02C ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

DTC INSPECTION[INSTRUMENT CLUSTER]

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   When using the IDS (laptop PC)
   - Select the "Toolbox" tab.
   - Select "Self Test".
   - Select "Modules".
   - Select "IC".

   When using the PDS (Pocket PC)
   - Select "Module Tests".
   - Select "IC".
   - Select "Self Test".
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
4. After completion of repairs, clear all DTCs stored in the instrument cluster.

id0902e8800200



am3zzw0000192

ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

DTC TABLE[INSTRUMENT CLUSTER]

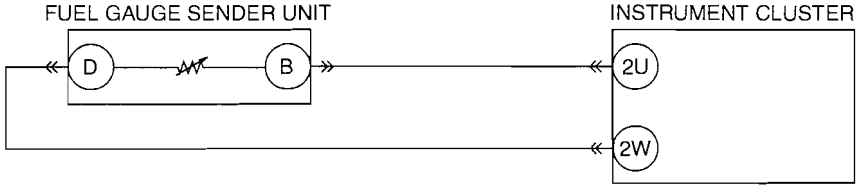
id0902e8800300

DTC	Malfunction location	Freeze frame data	Page
B1202	Fuel gauge sender unit circuit malfunction (open circuit)	—	(See 09-02C-3 DTC B1202[INSTRUMENT CLUSTER].)
B1204	Fuel gauge sender unit circuit malfunction (short to GND)	—	(See 09-02C-4 DTC B1204[INSTRUMENT CLUSTER].)
B1342	Instrument cluster malfunction	—	(See 09-02C-5 DTC B1342[INSTRUMENT CLUSTER].)
B2477	Configuration error	—	(See 09-02C-5 DTC B2477[INSTRUMENT CLUSTER].)
U0073	CAN system communication error (HS-CAN)	—	(See 09-02B-1 MULTIPLEX COMMUNICATION SYSTEM[MULTIPLEX COMMUNICATION SYSTEM].)
U0100	Communication error to PCM	×	
U0101	Communication error to TCM	×	
U0121	Communication error to ABS HU/CM or DSC HU/CM	×	
U0127	Communication error to TPMS control module	—	
U0131	Communication error to EHPAS control module	×	
U0140	Communication error to PJB	—	
U0151	Communication error to SAS control module	×	
U2023	Abnormal message from other module	×	
U2064	Warning light illumination request signal from other modules	×	(See 09-02C-6 DTC U2064[INSTRUMENT CLUSTER].)
U2516	CAN system communication error (MS-CAN)	—	(See 09-02B-1 MULTIPLEX COMMUNICATION SYSTEM[MULTIPLEX COMMUNICATION SYSTEM].)

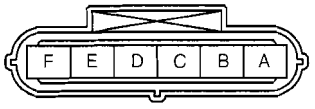
DTC B1202[INSTRUMENT CLUSTER]

id0902e8840200

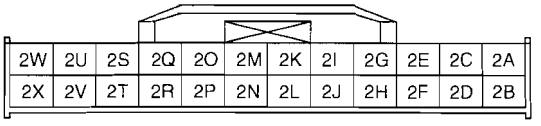
DTC B1202	Fuel gauge sender unit circuit malfunction (open circuit)
DETECTION CONDITION	• The resistance between instrument cluster and fuel gauge sender unit is **more than 600 ohms** for **5 s.**
POSSIBLE CAUSE	• Open circuit in wiring harness between instrument cluster and fuel gauge sender unit • Fuel gauge sender unit malfunction • Instrument cluster malfunction

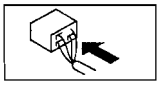


FUEL GAUGE SENDER UNIT WIRING HARNESS-SIDE CONNECTOR



INSTRUMENT CLUSTER WIRING HARNESS-SIDE CONNECTOR





09-02C

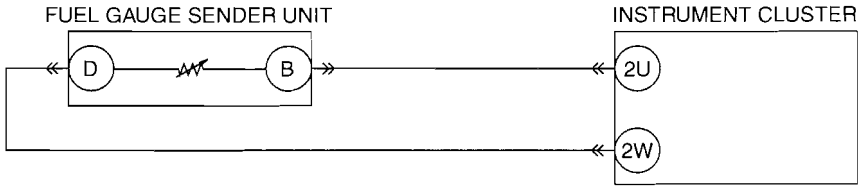
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FUEL GAUGE** • Perform the check code 23 inspection. • Is there any malfunction?	Yes	Replace the instrument cluster.
		No	Go to the next step.
2	**INSPECT INSTRUMENT CLUSTER CONNECTOR** • Turn the ignition switch to the LOCK position. • Disconnect the instrument cluster connector. • Inspect the instrument cluster connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the malfunctioning part.
		No	Go to the next step.
3	**INSPECT FUEL GAUGE SENDER UNIT CONNECTOR** • Turn the ignition switch to the LOCK position. • Disconnect the fuel gauge sender unit connector. • Inspect the fuel gauge sender unit connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the malfunctioning part.
		No	Go to the next step.
4	**INSPECT WIRING HARNESS** • Turn the ignition switch to the LOCK position. • Inspect for continuity between following terminals: — Instrument cluster terminal 2U — fuel gauge sender unit terminal B (wiring harness-side) — Instrument cluster terminal 2W — fuel gauge sender unit terminal D (wiring harness-side) • Is there continuity?	Yes	Inspect the fuel gauge sender unit. • Repair or replace if necessary.
		No	Repair or replace the wiring harness.

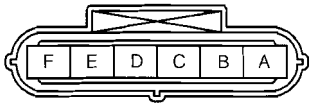
DTC B1204[INSTRUMENT CLUSTER]

id0902e8840300

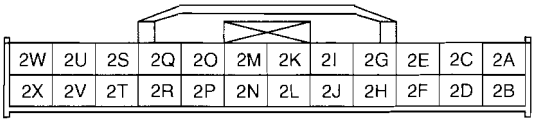
DTC B1204	Fuel gauge sender unit circuit malfunction (short to GND)
DETECTION CONDITION	• The resistance between instrument cluster and fuel gauge sender unit is **less than 6 ohms** for **5 s**.
POSSIBLE CAUSE	• Short to GND in wiring harness between instrument cluster and fuel gauge sender unit • Wiring harness between instrument cluster and fuel gauge sender unit short each other • Fuel gauge sender unit malfunction • Instrument cluster malfunction

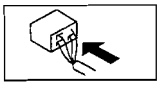


FUEL GAUGE SENDER UNIT WIRING HARNESS-SIDE CONNECTOR



INSTRUMENT CLUSTER WIRING HARNESS-SIDE CONNECTOR





Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FUEL GAUGE** • Perform the check code 23 inspection. • Is there any malfunction?	Yes	Replace the instrument cluster.
		No	Go to the next step.
2	**INSPECT INSTRUMENT CLUSTER CONNECTOR** • Turn the ignition switch to the LOCK position. • Disconnect the instrument cluster connector. • Inspect the instrument cluster connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the malfunctioning part.
		No	Go to the next step.
3	**INSPECT FUEL GAUGE SENDER UNIT CONNECTOR** • Turn the ignition switch to the LOCK position. • Disconnect the fuel gauge sender unit connector. • Inspect the fuel gauge sender unit connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the malfunctioning part.
		No	Go to the next step.
4	**INSPECT WIRING HARNESS** • Turn the ignition switch to the LOCK position. • Inspect for continuity between following terminals: — Instrument cluster terminal 2U (wiring harness-side) — body GND — Instrument cluster terminal 2W (wiring harness-side) — body GND • Is there continuity?	Yes	Repair or replace the wiring harness.
		No	Go to the next step.

STEP	INSPECTION		ACTION
5	**INSPECT WIRING HARNESS** • Turn the ignition switch to the LOCK position. • Inspect for continuity between following terminals: — Instrument cluster terminal 2U — instrument cluster terminal 2W (wiring harness-side) • Is there continuity?	Yes	Repair or replace the wiring harness.
		No	Inspect the fuel gauge sender unit. • Repair or replace if necessary.

DTC B1342[INSTRUMENT CLUSTER]

id0902e8840400

DTC B1342	• **Instrument cluster malfunction**
DETECTION CONDITION	• Malfunction in the instrument cluster internal circuit
POSSIBLE CAUSE	• Instrument cluster malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT INSTRUMENT CLUSTER** • Clear the DTC from the memory. • Turn the ignition switch to the LOCK position. • Turn the ignition switch to the ON position. • Is B1342 displayed?	Yes	Replace the instrument cluster.
		No	DTC troubleshooting completed.

09-02C

DTC B2477[INSTRUMENT CLUSTER]

id0902e8840500

DTC B2477	• **Configuration error**
DETECTION CONDITION	• Configuration error • Malfunction in the instrument cluster internal circuit
POSSIBLE CAUSE	• Instrument cluster malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**PERFORM INSTRUMENT CLUSTER CONFIGURATION** • Perform instrument cluster configuration. • Is B2477 displayed?	Yes	Replace the instrument cluster.
		No	Go to the next step.
2	**VERIFY TROUBLESHOOTING OF DTC B2477 COMPLETED** • Clear the DTC from the memory. • Is B2477 displayed?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC U2064[INSTRUMENT CLUSTER]

id0902e8840600

DTC U2064	Warning light illumination request signal from other modules
DETECTION CONDITION	• Receive warning light illumination request signal
POSSIBLE CAUSE	• CAN-related module malfunction

Diagnostic Procedure

1. Verify the freeze frame data.
2. Determine which unit is thought to be malfunctioning based on the freeze frame data.

Note

- If several warning light illumination requests are received, they will be recorded in one freeze frame data.
- Performing the active command mode inspection for ABS/DSC while the engine is running could result in the DTC U2064 being stored in the instrument cluster.

Freeze frame data		Warning light illumination request unit		
		PCM	ABS HU/CM DSC HU/CM	SAS control module
Illuminated warning light	Air bag system warning light	—	—	×
	Generator warning light	×	—	—
	MIL	×	—	—
	ABS warning light	—	×	—
	Brake system warning light	—	—	—
	AT warning light	×	—	—
Meter, gauge control status	Speedometer	—	—	—
	Tachometer	—	—	—
	Water temperature gauge	—	—	—

3. Inspect the malfunctioning part.
   - Repair or replace if necessary.
4. Clear the DTC from the memory.
5. Turn the ignition switch to the LOCK position.
6. Turn the ignition switch to the ON position.
7. Verify that the DTC U2064 is displayed using the M-MDS.
   - If DTC U2064 is displayed, go back to Step 1.

09-02D ON-BOARD DIAGNOSTIC [AUDIO]

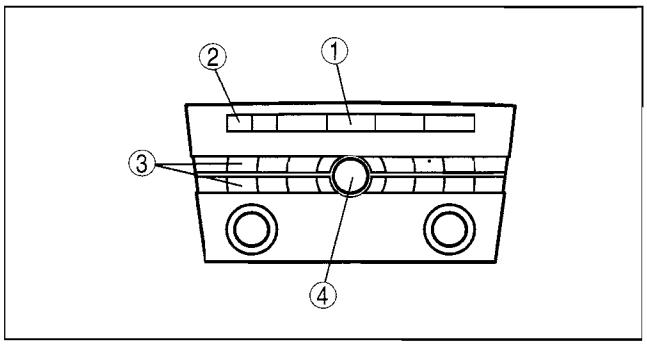
STARTING PROCEDURE FOR ON-BOARD DIAGNOSTIC TEST MODE[AUDIO]

id0902f6803700

Note
- All DTCs displayed in the on-board diagnostic test mode should be entered in the Audio Repair Order Form.

1. Turn the ignition switch to the ACC or ON position.
2. While pressing the POWER button, simultaneously press the AM button and the CLOCK button for **2 s or more**.

1	AM button
2	CLOCK button
3	SEEK button
4	POWER button



c3u0902wm01

Note
- If several DTCs are in the memory, they can be displayed using the SEEK button.

3. To stop the on-board diagnostic test mode, turn the ignition switch to the LOCK position.

ON-BOARD DIAGNOSTIC [AUDIO]

SUPPLIER IDENTIFICATION PROCEDURE[AUDIO]

id0902f6803800

Note
- The supplier can vary with the module. When asking the supplier (service center) for repair or replacement, identify the supplier and fill in the Audio Repair Order Form with the following procedures.

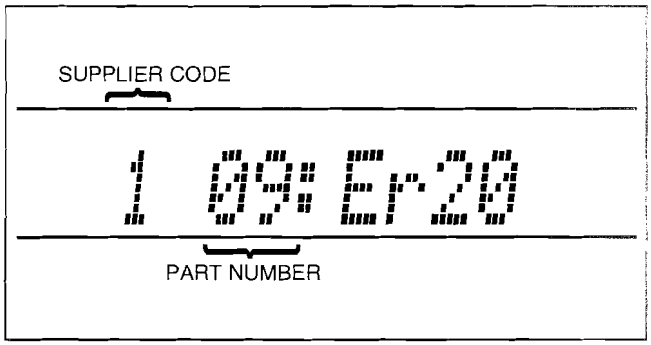
Identification Using the Label or Inscribed Lettering

1. Remove the audio unit.
2. Verify the supplier by referring to the label attached to each unit.

Identification Using the On-board Diagnostic Test Mode.

1. Start the on-board diagnostic test mode.
2. Identify the device and supplier codes by referring to the LCD display.

Note
- If no DTC is stored, no codes will be displayed.



CHU0902WM02

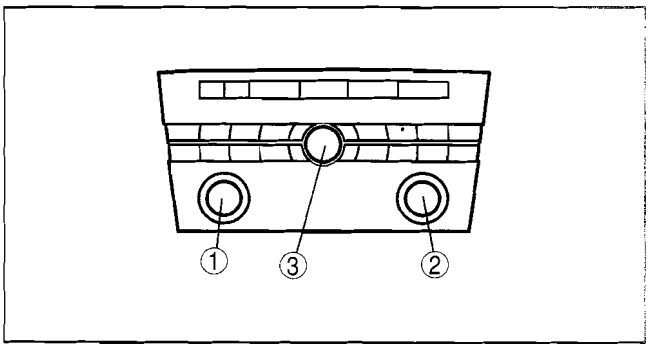
Supplier code	Supplier name
1	FMS audio
2	Panasonic
3	CLARION

Part number	Part name
00	Cassette deck
03	CD player
05	CD changer (external)
06	CD changer (upper module)
07	MD player
09	Base unit
10	MP3 applicable CD player system

MEMORY CLEARING PROCEDURE[AUDIO]

id0902f6803900

1. Start the on-board diagnostic test mode.
2. While pressing the POWER button, simultaneously press the AUDIO CONT button for **2 s or more.**



B3E0902WM04

1	AUDIO CONT button (without RDS)
2	AUDIO CONT button (with RDS)
3	POWER button

Caution
- **Before clearing the memory, be sure to enter all of the DTCs displayed in the on-board diagnostic test mode in the Audio Repair Order Form.**

3. To stop the on-board diagnostic test mode, turn the ignition switch to the LOCK position.

DTC TABLE[AUDIO]

id0902f6800300

Screen display		System malfunction location
DTC (When starting on-board diagnostic test function)	Error message (When error is found)	
09: Er22	—	Base unit (peripheral circuit for tuner)
09: Er20	—	Power supply circuit to base unit
00: Er10	—	Cassette deck communication circuit system
03: Er10	—	CD player communication circuit system
05: Er10	—	CD changer (external) communication circuit system
06: Er10	—	CD changer (upper module) communication circuit system
07: Er10	—	MD player communication circuit system
03: Er01	—	CD player system
03: Er02	CHECK CD	CD player system
03: Er07	CHECK CD	CD player system
00: Er01	—	Cassette deck system
00: Er03	—	Cassette deck system
00: Er04	CHECK TAPE	Cassette tape system
05: Er01	—	CD changer (external) system
05: Er07	CHECK CD	CD changer (external) system
06: Er01	—	CD changer (upper module) system
06: Er02	CHECK CD	CD changer (upper module) system
06: Er07	CHECK CD	CD changer (upper module) system
07: Er01	—	MD player system
07: Er02	CHECK MD	MD player system
07: Er07	CHECK MD	MD player system
07: Er08	CHECK MD	MD system
10: Er01	—	MP3 applicable CD player system
10: Er02	CHECK CD	MP3 applicable CD player system
no Er	—	No DTCs stored

DTC 09:ER22[AUDIO]

id0902f6818600

DTC 09:Er22	Base unit (peripheral circuit for tuner)
DETECTION CONDITION	• Base unit detects malfunction in inner circuit (related to tuner).
POSSIBLE CAUSE	• Base unit malfunction

Diagnostic procedure

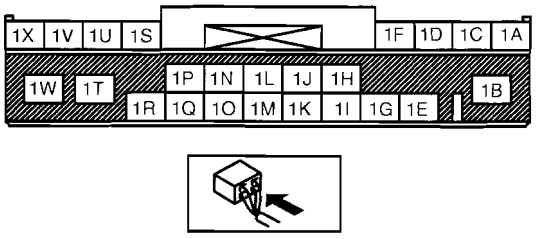
INSPECTION		ACTION
Clear the DTC and operate the radio for **3 s or more**. Is DTC 09: Er22 indicated?	Yes	Replace the base unit.
	No	DTC troubleshooting completed.

DTC 09:ER20[AUDIO]

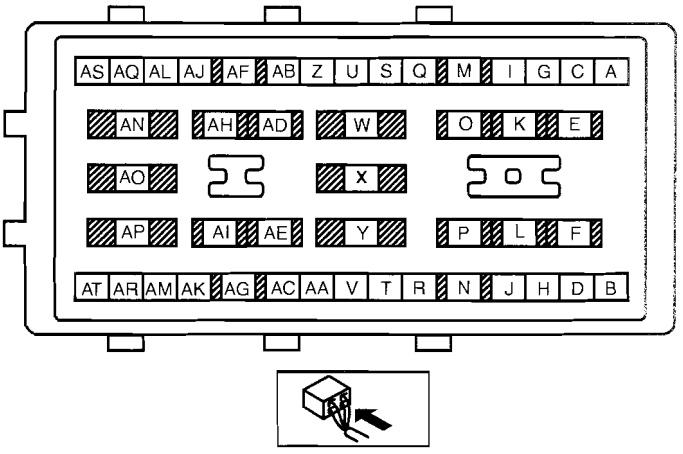
id0902f6818500

DTC 09:Er20	Power supply circuit of base unit
DETECTION CONDITION	• Voltage detected at base unit terminals 1B and 1R is **less than 8.5 V, or more than 16 V (must not be 16V).**
POSSIBLE CAUSE	• Weak battery • Malfunction in wiring harness between battery and base unit

BASE UNIT



PJB



Diagnostic procedure

STEP	INSPECTION		ACTION
1	Remove the ROOM 15 A fuse and METER 7.5 A fuse. Are the fuses normal?	Yes	Go to the next step.
		No	Inspect related wiring harness, then replace the fuse.
2	Measure the battery voltage. — Is the voltage between **8.5—16 V**?	Yes	Go to the next step.
		No	Battery malfunction Inspect the charge/discharge system.
3	Measure the voltage between PJB terminal J-03 P and base unit terminal 1B. — Is the voltage between **8.5—16 V**?	Yes	Go to the next step.
		No	Inspect fuses and related wiring harness between the battery and PJB. • If there is malfunction, repair or replace the applicable part.
4	Install the ROOM 15 A fuse and METER 7.5 A fuse. Turn the ignition switch to the ACC position. Measure the voltage at the base unit terminals 1B and 1R. — Is the voltage between **8.5—16 V**?	Yes	Go to the next step.
		No	Repair the wiring harness between the PJB and base unit.
5	Turn the ignition switch to the ACC or ON position and hold for **30 s or more**. Is DTC 09: Er20 displayed?	Yes	Replace the base unit.
		No	DTC troubleshooting completed.

DTC 00:ER10[AUDIO]

id0902f6817100

DTC 00:Er10	Cassette deck—base unit communication line
DETECTION CONDITION	• Base unit detects communication error with cassette deck.
POSSIBLE CAUSE	• Malfunction of connectors between base unit and cassette deck • Cassette deck malfunction • Base unit malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Remove the cassette deck and verify the connector condition (bent pins, poor female terminal connection, trapped foreign material) Is the connector normal?	Yes	Go to the next step.
		No	Repair the connector and go to the next step.
2	Assemble the cassette deck to the base unit and verify the assembly condition. Is the assembly condition normal?	Yes	Go to the next step.
		No	Repair the assembly and go to the next step.
3	Clear the DTC, turn the ignition switch to the ON position and then hold for **3 s or more**. Is DTC 00: Er10 displayed?	Yes	Replace the base unit and cassette deck.
		No	DTC troubleshooting completed.

DTC 03:ER10[AUDIO]

id0902f6817500

DTC 03:Er10	CD player—base unit communication line
DETECTION CONDITION	• Base unit detects communication error with CD player.
POSSIBLE CAUSE	• Malfunction of connectors between base unit and CD player • CD player malfunction • Base unit malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Remove the CD player and verify the connector condition (bent pins, poor female terminal connection, trapped foreign material). Is the connector normal?	Yes	Go to the next step.
		No	Repair the connector and go to the next step.
2	Assemble the CD player to the base unit and verify assembly condition. Is assembly condition normal?	Yes	Go to the next step.
		No	Repair the assembly condition and go to the next step.
3	Clear the DTC, turn the ignition switch to the ON position and then hold for **3 s or more**. Is DTC 03: Er10 displayed?	Yes	Replace the base unit and CD player.
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [AUDIO]

DTC 06:ER10[AUDIO]

id0902f6817900

DTC 06:Er10	CD changer (upper module)—base unit communication line
DETECTION CONDITION	• Base unit detects communication error with CD changer (upper module).
POSSIBLE CAUSE	• Malfunction of connectors between base unit and CD changer (upper module) • CD changer (upper module) malfunction • Base unit malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Verify the connections of the base unit and CD changer connectors. Are the connections normal?	Yes	Go to the next step.
		No	Repair the connections and go to the next step.
2	Inspect the wiring harness between the base unit and CD changer (external). Is the wiring harness normal?	Yes	Go to the next step.
		No	Repair the wiring harness and go to the next step.
3	Clear the DTC, turn the ignition switch to the ON position and then hold for **3 s or more**. Is DTC 06: Er10 displayed?	Yes	Replace the base unit and CD changer (external).
		No	DTC troubleshooting completed.

DTC 07:ER10[AUDIO]

id0902f6818400

DTC 07:Er10	MD player—base unit communication line
DETECTION CONDITION	• Base unit detects communication error with MD player.
POSSIBLE CAUSE	• Malfunction of connectors between base unit and MD player • MD player malfunction • Base unit malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Remove the MD player and inspect the connector condition (bent pins, poor female terminal connection, trapped foreign material). Is the connector normal?	Yes	Go to the next step.
		No	Repair the connector and go to the next step.
2	Assemble the MD player to the base unit and verify assembly condition. Is assembly condition normal?	Yes	Go to the next step.
		No	Repair the assembly condition and go to the next step.
3	Clear the DTC, turn the ignition switch to the ON position and then hold for **3 s or more**. Is DTC 07: Er10 displayed?	Yes	Replace the base unit and MD player.
		No	DTC troubleshooting completed.

DTC 03:ER01[AUDIO]

id0902f6817200

DTC 03:Er01	CD player
DETECTION CONDITION	• CD player cannot implement insert and eject commands.
POSSIBLE CAUSE	• Defective CD (broken or foreign material stuck/attached) • CD player malfunction

STEP	INSPECTION		ACTION
1	Verify the condition of the CD when the error occurs. Is the CD normal?	Yes	Go to the next step.
		No	Repair (remove foreign material) or replace the CD, and go to the next step.
2	Clear the DTC. Insert then eject a normal CD. Is DTC 03: Er01 displayed?	Yes	Replace the CD player.
		No	DTC troubleshooting completed.

DTC 03:ER02[AUDIO]

id0902f6817300

DTC 03:Er02	CD player
DETECTION CONDITION	**Note** • When error occurs, error message "CHECK CD" is displayed in the LCD. • Cannot play CD normally or change tracks.
POSSIBLE CAUSE	• Defective CD (scratches or dirt) • CD player malfunction

STEP	INSPECTION		ACTION	
1	Play the CD and change tracks. Can tracks be changed?	Yes	Go to Step 3.	
		No	Cannot change to specific tracks.	Go to the next step.
			Cannot change to any track.	Replace the CD and try to change tracks again. • If the function is normal, go to Step 3. • If the function is not normal, replace the CD player.
2	Verify the condition of the CD when the error occurs. Is the CD normal?	Yes	Go to the next step.	
		No	Repair (remove foreign material, clean) or replace the CD, and go to the next step.	
3	Clear the DTC. Play the CD and change tracks. Is DTC 03: Er02 displayed?	Yes	Replace the CD player.	
		No	DTC troubleshooting completed.	

09-02D

DTC 03:ER07[AUDIO]

id0902f6817400

DTC 03:Er07	CD player
DETECTION CONDITION	**Note** • When error occurs, error message "CHECK CD" is displayed in the LCD. • Base unit detects CD reading error.
POSSIBLE CAUSE	• Defective CD (scratches or dirt) • CD player malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Verify the condition of the CD when the error occurs. Is the CD normal?	Yes	Go to the next step.
		No	Repair (remove foreign material, clean) or replace the CD, and go to the next step.
2	Clear the DTC and insert a normal CD. Play the CD. Is DTC 03: Er07 displayed?	Yes	Replace the CD player.
		No	DTC troubleshooting completed.

DTC 00:ER01[AUDIO]

id0902f6816800

DTC 00:Er01	Cassette deck
DETECTION CONDITION	• Cassette deck cannot implement insert and eject commands.
POSSIBLE CAUSE	• Defective cassette tape (deformation, broken, or foreign material stuck/attached) • Cassette deck malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Can cassette tape be ejected?	Yes	Go to the next step.
		No	Replace the cassette deck.
2	Verify condition of the cassette tape when the error occurs. Is the cassette tape normal?	Yes	Go to the next step.
		No	Repair (remove foreign material) or replace the cassette tape, and go to the next step.
3	Clear the DTC. Insert then eject a normal cassette tape. Is DTC 00: Er01 displayed?	Yes	Replace the cassette deck.
		No	DTC troubleshooting completed.

DTC 00:ER03[AUDIO]

id0902f6816900

DTC 00:Er03	Cassette deck
DETECTION CONDITION	• Base unit detects that reel built into cassette deck does not operate.
POSSIBLE CAUSE	• Defective cassette tape (tape slack, pinched tape in internal cassette deck) • Cassette deck malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Verify condition of the cassette tape when the error occurs. Is the cassette tape normal?	Yes	Go to the next step.
		No	Repair (tighten slack, clear pinched tape inside cassette deck) or replace the cassette tape, and go to the next step.
2	Clear the DTC, and then insert a normal cassette tape. Play the cassette tape for **20 s or more**. Is DTC 00: Er03 displayed?	Yes	Replace the cassette deck.
		No	DTC troubleshooting completed.

DTC 00:ER04[AUDIO]

id0902f6817000

DTC 00:Er04	Cassette tape
DETECTION CONDITION	**Note** • When error occurs, error message "CHECK TAPE" is displayed in the LCD. • Cassette tape is worn out.
POSSIBLE CAUSE	• Tape wear • Cassette deck malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Verify condition of the cassette tape when the error occurs. Is the cassette tape normal?	Yes	Go to the next step.
		No	Replace the cassette tape and go to the next step.
2	Clear the DTC, and then insert a normal cassette tape. Play the cassette tape for **20 s or more**. Is DTC 00: Er04 displayed?	Yes	Replace the cassette deck.
		No	DTC troubleshooting completed.

DTC 06:ER01[AUDIO]

id0902f6817600

DTC 06:Er01	CD changer (upper module)
DETECTION CONDITION	• CD changer (upper module) cannot implement insert, eject, and disc change commands.
POSSIBLE CAUSE	• Defective CD (broken or foreign material stuck/attached) • CD changer (upper module) malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Can CD be ejected?	Yes	Go to the next step.
		No	Replace the CD changer (upper module).
2	Verify the condition of the CD when the error occurs. Is the CD normal?	Yes	Go to the next step.
		No	Repair (remove foreign material) or replace the CD, and go to the next step.
3	Clear the DTC. Insert then eject a normal CD. Is DTC 06: Er01 displayed?	Yes	Replace the CD changer (upper module).
		No	DTC troubleshooting completed.

DTC 06:ER02[AUDIO]

id0902f6817700

DTC 06:Er02	CD changer (upper module)
DETECTION CONDITION	**Note** • When error occurs, error message "CHECK CD" is displayed in the LCD. • Cannot play CD normally or change tracks.
POSSIBLE CAUSE	• Defective CD (scratches or dirt) • CD changer (upper module) malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION	
1	Play all the CDs in the changer and change tracks. Can tracks be changed?	Yes	Go to Step 3.	
		No	Cannot change to specific tracks.	Go to the next step.
			Cannot change to any track.	Change the CD and try to change tracks again. • If the function is normal, go to Step 3. • If the function is not normal, replace the CD changer (upper module).
2	Verify the condition of the CD when the error occurs. Is the CD normal?	Yes	Go to the next step.	
		No	Repair (remove foreign material, clean) or replace the CD, and go to the next step.	
3	Clear the DTC. Play the CD and change tracks. Is DTC 06: Er02 displayed?	Yes	Replace the CD changer (upper module).	
		No	DTC troubleshooting completed.	

DTC 06:ER07[AUDIO]

id0902f6817800

DTC 06:Er07	CD changer (upper module)
DETECTION CONDITION	**Note** • When error occurs, error message "CHECK CD" is displayed in the LCD. • Base unit detects CD reading error.
POSSIBLE CAUSE	• Defective CD (scratches or dirt) • CD changer (upper module) malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION	
1	Play all the CDs in the changer. Are they read normally?	Yes	Go to Step 3.	
		No	Cannot read specific CDs.	Go to the next step.
			Cannot read any CD.	Go to Step 3.
2	Verify the condition of the CD when the error occurs. Is the CD normal?	Yes	Go to the next step.	
		No	Repair (remove foreign material, clean) or replace the CD, and go to the next step.	
3	Clear the DTC, and then insert a normal CD. Play the CD for **12 s or more**. Is DTC 06: Er07 displayed?	Yes	Replace the CD changer (upper module).	
		No	DTC troubleshooting completed.	

DTC 07:ER01[AUDIO]

id0902f6818000

DTC 07:Er01	MD player
DETECTION CONDITION	• MD player cannot implement insert and eject commands.
POSSIBLE CAUSE	• Defective MD (broken or foreign material stuck/attached) • MD player malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Can MD be ejected?	Yes	Go to the next step.
		No	Replace the MD player.
2	Verify the condition of the MD when the error occurs. Is the MD normal?	Yes	Go to the next step.
		No	Repair (remove foreign material) or replace the MD, and go to the next step.
3	Clear the DTC. Insert then eject a normal MD. Is DTC 07: Er01 displayed?	Yes	Replace the MD player.
		No	DTC troubleshooting completed.

DTC 07:ER02[AUDIO]

id0902f6818100

DTC 07:Er02	MD player
DETECTION CONDITION	**Note** • When error occurs, error message "CHECK MD" is displayed in the LCD. • Cannot play MD normally or change tracks.
POSSIBLE CAUSE	• Defective MD (scratches or dirt) • MD player malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION	
1	Play the MD and change tracks. Can tracks be changed?	Yes	Go to Step 3.	
		No	Cannot change to specific tracks.	Go to the next step.
			Cannot change to any track.	Change the MD and try to change tracks again. • If the function is normal, go to Step 3. • If the function is not normal, replace the MD player.
2	Verify the condition of the MD when the error occurs. Is the MD normal?	Yes	Go to the next step.	
		No	Repair (remove foreign material, clean) or replace the MD, and go to the next step.	
3	Clear the DTC. Play the MD and change tracks. Is DTC 07: Er02 displayed?	Yes	Replace the MD player.	
		No	DTC troubleshooting completed.	

DTC 07:ER07[AUDIO]

id0902f6818200

DTC 07:Er07	MD player
DETECTION CONDITION	**Note** • When error occurs, error message "CHECK MD" is displayed in the LCD. • Base unit detects MD reading error.
POSSIBLE CAUSE	• Defective MD (scratches or dirt) • MD player malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Verify the condition of the MD when the error occurs. Is the MD normal?	Yes	Go to the next step.
		No	Repair (remove foreign material, clean) or replace the MD, and go to the next step.
2	Clear the DTC, and then insert a normal MD. Play the MD for **12 s or more**. Is DTC 07: Er07 displayed?	Yes	Replace the MD player.
		No	DTC troubleshooting completed.

DTC 07:ER08[AUDIO]

id0902f6818300

DTC 07:Er08	MD
DETECTION CONDITION	• Blank unrecorded MD is inserted.
POSSIBLE CAUSE	• Blank unrecorded MD

Diagnostic procedure

ACTION
• Insert a recorded MD into the MD player. • Inform customer that a blank MD had been inserted into the MD player.

DTC 10:ER01[AUDIO]

id0902f6833500

DTC 10:Er01	MP3 applicable CD player
DETECTION CONDITION	• CD player cannot implement insert and eject commands.
POSSIBLE CAUSE	• Defective CD (broken or foreign material stuck/attached) • MP3 applicable CD player malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Verify the condition of the CD when the error occurs. Is the CD normal?	Yes	Go to the next step.
		No	Repair (remove foreign material, clean) or replace the CD. and go to the next step.
2	Clear the DTC and insert a normal CD. Play the CD. Is DTC 10: Er01 displayed?	Yes	Replace the MP3 applicable CD player.
		No	DTC troubleshooting completed.

DTC 10:ER02[AUDIO]

id0902f6833600

DTC 10:Er02	MP3 applicable CD player
DETECTION CONDITION	**Note** • When error occurs, error message "CHECK CD" is displayed in the LCD. • Cannot play CD normally or change tracks.
POSSIBLE CAUSE	• Defective CD (scratches or dirt) • MP3 applicable CD player malfunction

STEP	INSPECTION		ACTION	
1	Play the CD and change tracks. Can tracks be changed?	Yes	Go to Step 3.	
		No	Cannot change to specific tracks.	Go to the next step.
			Cannot change to any track.	Replace the CD and try to change tracks again. • If the function is normal, go to Step 3. • If the function is not normal, replace the MP3 applicable CD player.
2	Verify the condition of the CD when the error occurs. Is the CD normal?	Yes	Go to the next step.	
		No	Repair (remove foreign material, clean) or replace the CD, and go to the next step.	
3	Clear the DTC. Play the CD and change tracks. Is DTC 10: Er02 displayed?	Yes	Replace the MP3 applicable CD player.	
		No	DTC troubleshooting completed.	

DIAGNOSTIC ASSIST FUNCTION[AUDIO]

09-02D

LCD Inspection

1. With the audio power on, press the POWER button and simultaneously press the SEEK button (upper) for **approx. 1 s**.
2. Inspect according to the following table:

INSPECTION	DISPLAY	ACTION	
Start the LCD inspection mode.		The characters displayed on the LCD are not truncated or faint.	The LCD is normal.
		Except above	Replace the information display.

3. Turn the audio off or the ignition switch to the LOCK position to stop the diagnostic assist function.

Button Inspection

1. With the audio power on, press the POWER button and simultaneously press the CLOCK button for **approx. 1 s**.
2. Inspect according to the following table:

INSPECTION	DISPLAY	ACTION	
• Start the button inspection mode. • Press all buttons.	—	The buzzer sounds.	The button is normal.
		The buzzer does not sound.	Replace the base unit.

3. Turn the audio off or the ignition switch to the LOCK position to stop the diagnostic assist function.

ON-BOARD DIAGNOSTIC [AUDIO]

Speaker Inspection

1. With the audio power on, press the POWER button and simultaneously press the AUTO-M button for **approx. 1 s.**
2. Inspect according to the following table:

INSPECTION	DISPLAY	ACTION	
• Start the speaker inspection mode. • Does each speaker output sound in the following order? 1. Front passenger-side door speaker and tweeter 2. Front driver-side door speaker and tweeter 3. Driver-side rear door speaker 4. Passenger-side rear door speaker	—	Yes	Speakers, and wiring harness between the base unit and speakers are normal.
		No	• Inspect the following parts. — Malfunctioning speaker — Wiring harness between base unit and malfunctioning speaker

3. Turn the audio off or the ignition switch to the LOCK position to stop the diagnostic assist function.

Radio Reception Condition Inspection

1. With the audio power on, press the POWER button and simultaneously press the PRESET 2 button for **approx. 1 s.**
2. Inspect according to the following table:

Caution

- **Even if the system is normal, radio reception may be difficult depending on where the system is inspected (indoors/outdoors, or conditions at the location). Before inspecting the system, verify that radio reception is adequate.**
- **When inspecting, select a frequency band (radio station) with the best reception.**

INSPECTION	DISPLAY	ACTION
Start the radio reception condition inspection mode.	NORMAL CONDITION LEV-5 ↕ LEV-9	Antenna, antenna feeder and base unit are normal
	LEV-3 ↕ LEV-4	Change the frequency (radio station) and inspect again.
	MALFUNCTION PRESENT LEV-0 ↕ LEV-2	Inspect the antenna and antenna feeder. • If either the antenna or the antenna feeder is not normal, replace the malfunctioning part. • If the antenna and antenna feeder are normal, replace the base unit.

3. Turn the audio off or the ignition switch to the LOCK position to stop the diagnostic assist function.

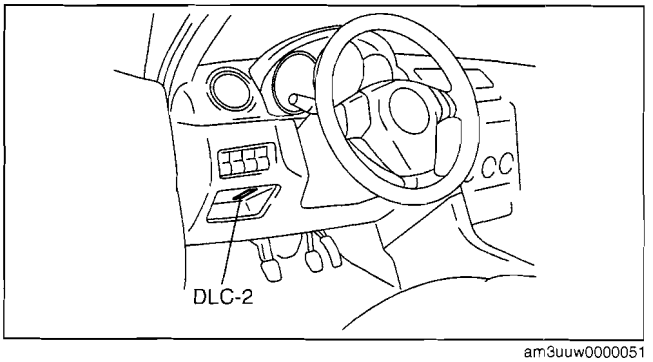
09-02E ON-BOARD DIAGNOSTIC [CONTROL SYSTEM]

DTC INSPECTION (PJB)[CONTROL SYSTEM]

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   When using the IDS (laptop PC)
   - Select the "Toolbox" tab.
   - Select "Self Test".
   - Select "Modules".
   - Select "GEM".

   When using the PDS (Pocket PC)
   - Select "Module Tests".
   - Select "GEM".
   - Select "Self Test".
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
4. After completion of repairs, clear all DTCs stored in the PJB.

id0902j0902700



am3uuw0000051

DTC TABLE (PJB)[CONTROL SYSTEM]

id0902j0902800

DTC table

DTC No.	Description	Detection condition	Page
B1014	Rain sensor error*1	Rain sensor internal malfunction	(See 09-02E-5 DTC B1014[CONTROL SYSTEM].)
B1217	Alarm activation horn circuit failure	Short to GND or power supply in wiring harness between PJB and horn relay	(See 09-02E-5 DTC B1217[CONTROL SYSTEM].)
B1311	Unlock switch circuit open	Open circuit in wiring harness between PJB and driver-side door lock-link switch (unlock signal)	(See 09-02E-7 DTC B1311[CONTROL SYSTEM].)
B1317	Battery voltage high	Input voltage from the battery is excessively high	(See 09-02E-8 DTC B1317[CONTROL SYSTEM].)
B1318	Battery voltage low	Input voltage from the battery is excessively low	(See 09-02E-9 DTC B1318[CONTROL SYSTEM].)
B1320	Door ajar LF circuit open	Open circuit in wiring harness between PJB and front door latch switch (driver-side)	(See 09-02E-10 DTC B1320[CONTROL SYSTEM].)
B1328	Door ajar RF circuit open	Open circuit in wiring harness between PJB and front door latch switch (passenger-side)	(See 09-02E-12 DTC B1328[CONTROL SYSTEM].)
B1336	Door ajar RR circuit open	Open circuit in wiring harness between PJB and rear door latch switch (RH)	(See 09-02E-13 DTC B1336[CONTROL SYSTEM].)
B1342	ECU is faulted	PJB microcomputer malfunction	(See 09-02E-14 DTC B1342[CONTROL SYSTEM].)
B1345	Heated backlite input circuit short to ground	Short to GND in wiring harness between PJB and climate control unit (rear window defroster switch)	(See 09-02E-15 DTC B1345[CONTROL SYSTEM].)
B1350	Heated backlite relay short to ground	Short to GND or power supply in wiring harness between PJB and rear window defroster relay	(See 09-02E-16 DTC B1350[CONTROL SYSTEM].)
B1447	Wiper park sense circuit open	Open circuit in wiring harness between PJB and windshield wiper motor (autostop switch)	(See 09-02E-18 DTC B1447[CONTROL SYSTEM].)
B1472	Headlight on status switch input circuit short to ground	Short to GND in wiring harness between PJB and light switch (low beam)	(See 09-02E-19 DTC B1472[CONTROL SYSTEM].)
B1502	Light turn signal left circuit short to ground	Short to GND in wiring harness between PJB and turn lights	(See 09-02E-20 DTC B1502[CONTROL SYSTEM].)
B1506	Light turn signal right circuit short to ground	Short to GND in wiring harness between PJB and turn switch	(See 09-02E-22 DTC B1506[CONTROL SYSTEM].)
B1520	Hood switch circuit open	Open circuit in wiring harness between PJB and hood latch switch	(See 09-02E-23 DTC B1520[CONTROL SYSTEM].)
B1570	Headlight high beam status input circuit short to battery	Short to power supply in wiring harness between PJB and light switch (high beam)	(See 09-02E-24 DTC B1570[CONTROL SYSTEM].)
B1572	Door ajar LR circuit open	Open circuit in wiring harness between PJB and rear door latch switch (LH)	(See 09-02E-25 DTC B1572[CONTROL SYSTEM].)
B1607	Key illumination circuit short to battery	Short to power supply in wiring harness between PJB and key illumination	(See 09-02E-26 DTC B1607[CONTROL SYSTEM].)
B1614	Rear wiper interval switch input circuit short to ground	Short to GND in wiring harness between PJB and rear wiper and washer switch (INT)	(See 09-02E-27 DTC B1614[CONTROL SYSTEM].)

DTC No.	Description	Detection condition	Page
B1696	Auto light switch input circuit short to ground*1	Short to GND in wiring harness between PJB and light switch (AUTO)	(See 09-02E-29 DTC B1696[CONTROL SYSTEM].)
B1798	Position lights switch (TNS) input circuit short to ground	Short to GND in wiring harness between PJB and light switch (TNS)	(See 09-02E-30 DTC B1798[CONTROL SYSTEM].)
B1812	Backup light switch input circuit short to battery	Short to power supply in wiring harness between PJB and back-up light switch	(See 09-02E-31 DTC B1812[CONTROL SYSTEM].)
B1873	Turn signal/hazard power feed circuit short to ground	Short to GND in wiring harness between PJB and hazard warning switch	(See 09-02E-32 DTC B1873[CONTROL SYSTEM].)
B2017	DRL left output circuit failure	Open circuit or short to GND in wiring harness between PJB and headlight (low beam)	(See 09-02E-33 DTC B2017[CONTROL SYSTEM].)
B2018	DRL right output circuit failure	Open circuit or short to GND in wiring harness between PJB and headlight (low beam)	(See 09-02E-35 DTC B2018[CONTROL SYSTEM].)
B2060	Heated backlite indicator circuit failure	Short to power supply in wiring harness between PJB and climate control unit (rear window defroster indicator)	(See 09-02E-36 DTC B2060[CONTROL SYSTEM].)
B2095	Reset switch circuit failure	Short to GND in wiring harness between PJB and driver-side door key cylinder switch (unlock)	(See 09-02E-37 DTC B2095[CONTROL SYSTEM].)
B2096	Set switch circuit failure	Short to GND in wiring harness between PJB and driver-side door key cylinder switch (lock)	(See 09-02E-39 DTC B2096[CONTROL SYSTEM].)
B2114	Front washer switch input circuit short to battery	Short to power supply in wiring harness between PJB and windshield wiper and washer switch (front washer)	(See 09-02E-40 DTC B2114[CONTROL SYSTEM].)
B2175	A/C request signal circuit short to ground	Short to GND in wiring harness between PJB and climate control unit (A/C ON request)	(See 09-02E-42 DTC B2175[CONTROL SYSTEM].)
B2180	Front wiper switch (slow) circuit short to ground	Short to GND in wiring harness between PJB and windshield wiper and washer switch (low)	(See 09-02E-43 DTC B2180[CONTROL SYSTEM].)
B2181	Front wiper switch (fast) circuit short to ground	Short to GND in wiring harness between PJB and windshield wiper and washer switch (high)	(See 09-02E-44 DTC B2181[CONTROL SYSTEM].)
B2212	Panel light control circuit failure	Input voltage from the panel light control switch is excessively low or high	(See 09-02E-45 DTC B2212[CONTROL SYSTEM].)
B2218	Central locking switch circuit failure	Short to GND in wiring harness between PJB and door lock switch (driver's side and passenger's side)	(See 09-02E-47 DTC B2218[CONTROL SYSTEM].)
B2254	Front fog light switch failure	Short to GND in wiring harness between PJB and fog light switch	(See 09-02E-48 DTC B2254[CONTROL SYSTEM].)
B2259	Front wiper variable intermittent switch circuit failure	Input voltage from the windshield wiper and washer switch (INT volume or sensitivity adjustment volume) is excessively low or high	(See 09-02E-49 DTC B2259[CONTROL SYSTEM].)
B2259	Intermittent wiper circuit failure	Input voltage from the windshield wiper and washer switch (INT) is excessively low or high	(See 09-02E-49 DTC B2259[CONTROL SYSTEM].)
B2259	Intermittent wiper circuit short to ground	Short to GND in wiring harness between PJB and windshield wiper and washer switch (INT)	(See 09-02E-49 DTC B2259[CONTROL SYSTEM].)
B2477	Module configuration failure	PJB data configuration error	(See 09-02E-51 DTC B2477[CONTROL SYSTEM].)
B2479	Park brake switch circuit open	Open circuit in wiring harness between PJB and parking brake switch	(See 09-02E-51 DTC B2479[CONTROL SYSTEM].)

DTC No.	Description	Detection condition	Page
B2512	Front fog relay short to battery	Short to power supply or GND in wiring harness between PJB and front fog light relay	(See 09-02E-53 DTC B2512[CONTROL SYSTEM].)
B2555	Dome light output circuit short to battery	Open circuit or short to power supply in wiring harness between PJB and interior lights	(See 09-02E-54 DTC B2555[CONTROL SYSTEM].)
B2559	Trunk lid lock/unlock switch circuit failure	Short to GND in wiring harness between PJB and trunk lid key cylinder switch	(See 09-02E-56 DTC B2559[CONTROL SYSTEM].)
B2574	Driver door lock switch short to ground	Short to GND in wiring harness between PJB and driver-side door lock-link switch	(See 09-02E-57 DTC B2574[CONTROL SYSTEM].)
B2721	Liftgate/decklid ajar output short to ground	Short to GND in wiring harness between PJB and trunk lid latch switch	(See 09-02E-58 DTC B2721[CONTROL SYSTEM].)
B2897	Auto light relay circuit failure*1	Short to power supply in PJB internal circuit between microcomputer and headlight LO relay	(See 09-02E-59 DTC B2897[CONTROL SYSTEM].)
B2898	Right turn signal indicator output failure	• Open circuit or short to power supply or GND in wiring harness between PJB and turn light • Turn light bulb malfunction	(See 09-02E-60 DTC B2898[CONTROL SYSTEM].)
B2899	Left turn signal indicator output failure	• Open circuit or short to power supply or GND in wiring harness between PJB and turn light • Turn light bulb malfunction	(See 09-02E-62 DTC B2899[CONTROL SYSTEM].)
B2966	Front washer switch stuck	Windshield washer switch stuck ON position	(See 09-02E-64 DTC B2966[CONTROL SYSTEM].)
C1189	Brake fluid level sensor input circuit open	Open circuit in wiring harness between PJB and brake fluid level sensor	(See 09-02E-65 DTC C1189[CONTROL SYSTEM].)
U2030	Rain sensor communication fault*1	Communication error to rain sensor	(See 09-02E-67 DTC U2030[CONTROL SYSTEM].)

*1 : If equipped, for Canada only.

DTC B1014[CONTROL SYSTEM]

id0902j0830700

DTC B1014	Rain sensor error (If equipped, for Canada only.)
DETECTION CONDITION	Rain sensor internal malfunction
POSSIBLE CAUSE	• Rain sensor malfunction • PJB malfunction

Diagnostic procedure

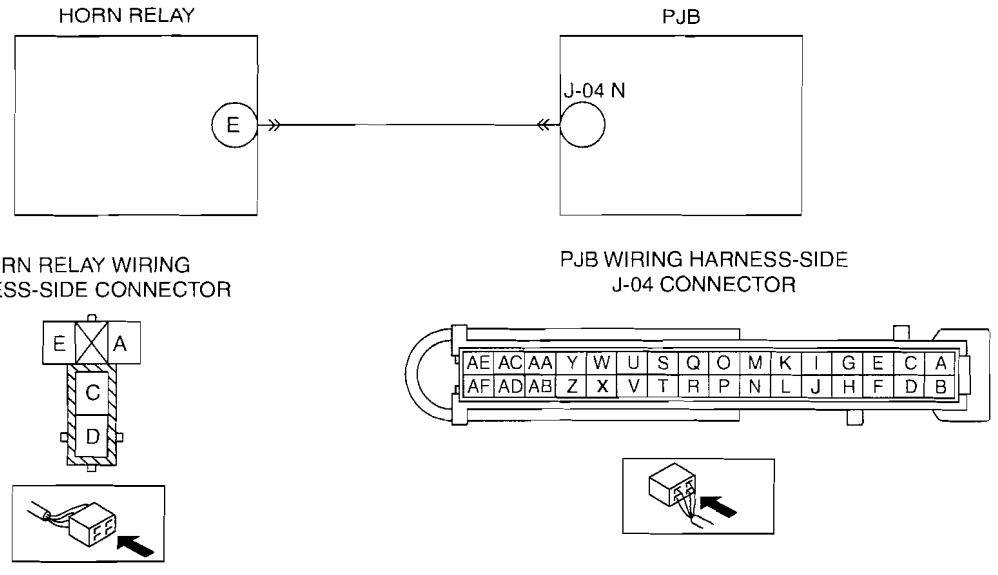
STEP	INSPECTION		ACTION
1	**INSPECT DTC** • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the rain sensor, then go to the next step. (See 09-19-16 RAIN SENSOR REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B1217[CONTROL SYSTEM]

id0902j0902100

09-02E

DTC B1217	Alarm activation horn circuit failure
DETECTION CONDITION	Short to GND or power supply in wiring harness between PJB and horn relay
POSSIBLE CAUSE	• Open circuit in wiring harness between PJB terminal J-04 N and horn relay terminal E • Short to GND in wiring harness between PJB terminal J-04 N and horn relay terminal E • Short to power supply in wiring harness between PJB terminal J-04 N and horn relay terminal E • Horn relay malfunction • PJB malfunction



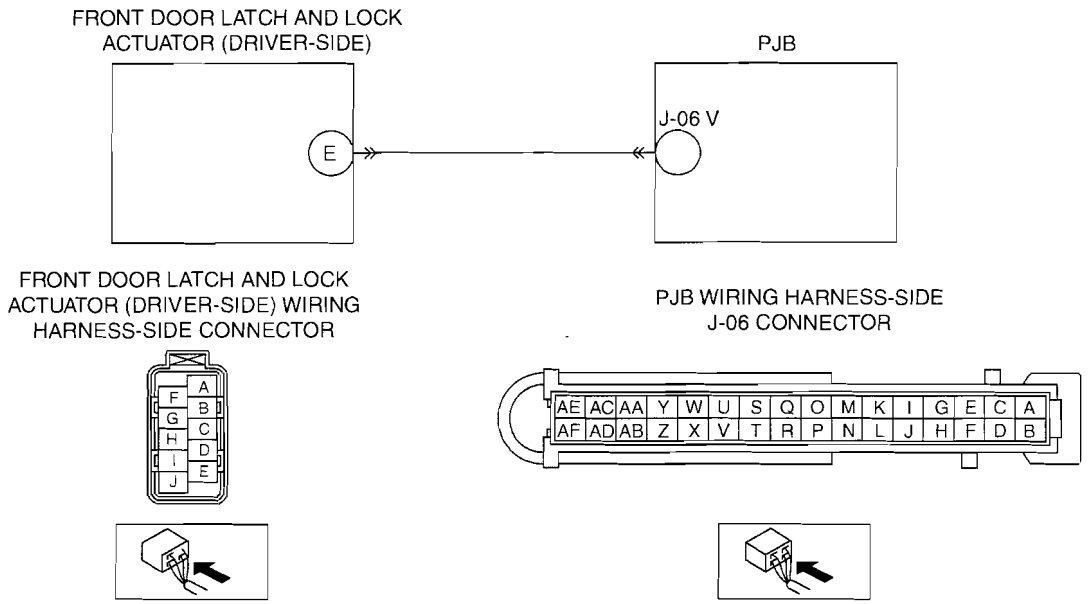
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT HORN RELAY CONNECTOR** • Turn the ignition switch off. • Disconnect the horn relay connector. • Inspect the horn relay connector terminals for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
3	**INSPECT HORN RELAY CONTROL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between PJB terminal J-04 N (wiring harness-side) and horn relay terminal E (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to GND, then go to Step 7.
4	**INSPECT HORN RELAY CONTROL CIRCUIT FOR SHORT TO GND** • Inspect for continuity between PJB terminal J-04 N (wiring harness-side) and body GND. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 7.
		No	Go to the next step.
5	**INSPECT HORN RELAY CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between PJB terminal J-04 N (wiring harness-side) and body GND. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 7.
		No	Go to the next step.
6	**INSPECT HORN RELAY** • Inspect the horn relay. (See 09-21-3 RELAY INSPECTION.) • Is there any malfunction?	Yes	Replace the horn relay, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B1311[CONTROL SYSTEM]

id0902j0830800

DTC B1311	Unlock switch circuit open
DETECTION CONDITION	Open circuit in wiring harness between PJB and driver-side door lock-link switch (unlock signal)
POSSIBLE CAUSE	• Open circuit in wiring harness between PJB terminal J-06 V and front door latch and lock actuator (driver-side) terminal E • Front door latch and lock actuator malfunction • PJB malfunction



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (DRIVER-SIDE) CONNECTOR** • Turn the ignition switch off. • Disconnect the front door latch and lock actuator (driver-side) connector. • Inspect the front door latch and lock actuator (driver-side) connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (DRIVER-SIDE) SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between PJB terminal J-06 V (wiring harness-side) and front door latch and lock actuator (driver-side) terminal E (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 5.
4	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (DRIVER-SIDE)** • Inspect the front door latch and lock actuator (driver-side). (See 09-14-6 FRONT DOOR LATCH AND LOCK ACTUATOR INSPECTION.) • Is there any malfunction?	Yes	Replace the front door latch and lock actuator (driver-side), then go to the next step. (See 09-14-5 FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.)
		No	Go to the next step.

STEP	INSPECTION		ACTION
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B1317[CONTROL SYSTEM]

id0902j0830900

DTC B1317	Battery voltage high
DETECTION CONDITION	Input voltage from the battery is excessively high
POSSIBLE CAUSE	• Battery malfunction • Generator malfunction • PJB malfunction

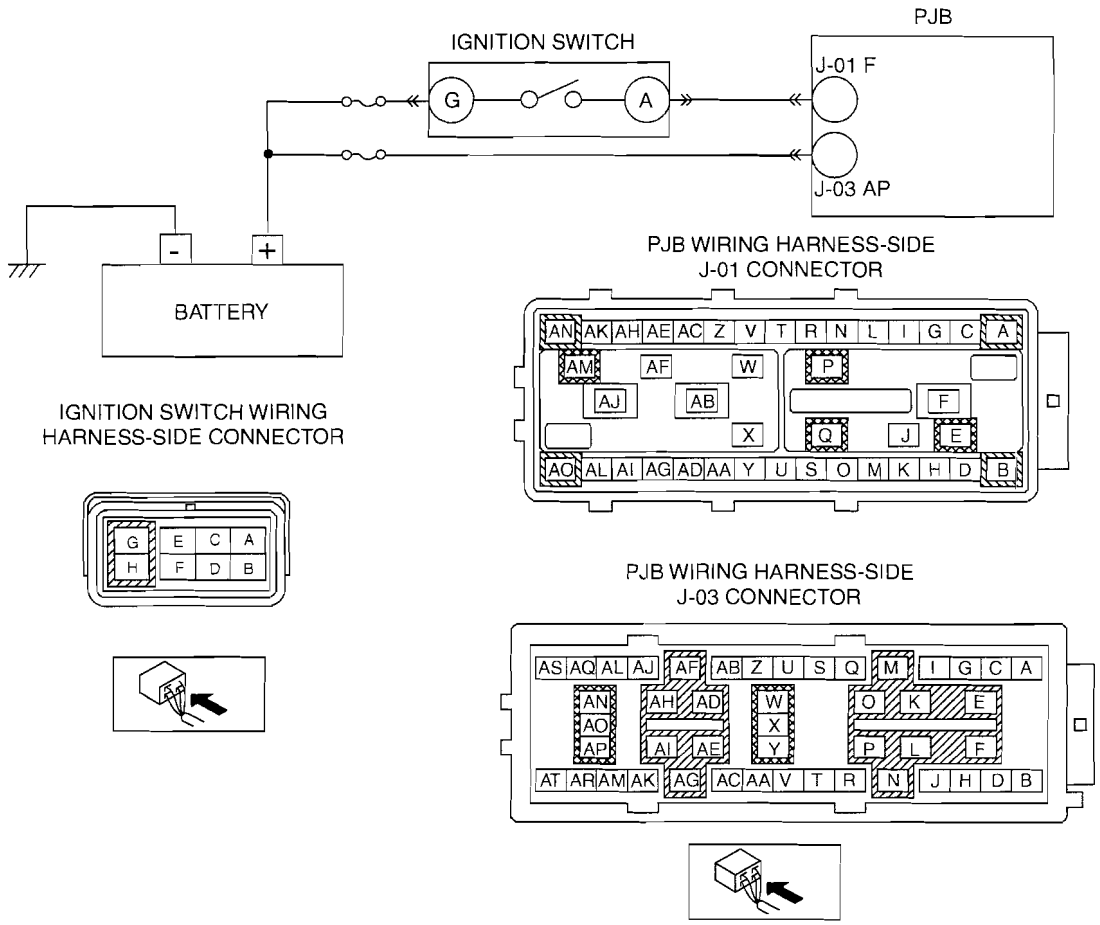
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT DTC FROM PCM** • Connect the M-MDS to the DLC-2. • Are any DTCs from the PCM displayed?	Yes	Perform DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].) Go to the next step.
		No	Go to the next step.
2	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Turn the ignition switch to LOCK position then ON position. • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B1318[CONTROL SYSTEM]

id0902j0831000

DTC B1318	Battery voltage low
DETECTION CONDITION	Input voltage from the battery is excessively low
POSSIBLE CAUSE	• Open circuit in wiring harness between PJB terminal J-01 F and battery • Open circuit in wiring harness between PJB terminal J-03 AP and battery • Short to GND in wiring harness between PJB terminal J-01 F and battery • Short to GND in wiring harness between PJB terminal J-03 AP and battery • Battery malfunction • Generator malfunction • PJB malfunction



09-02E

Diagnostic procedure

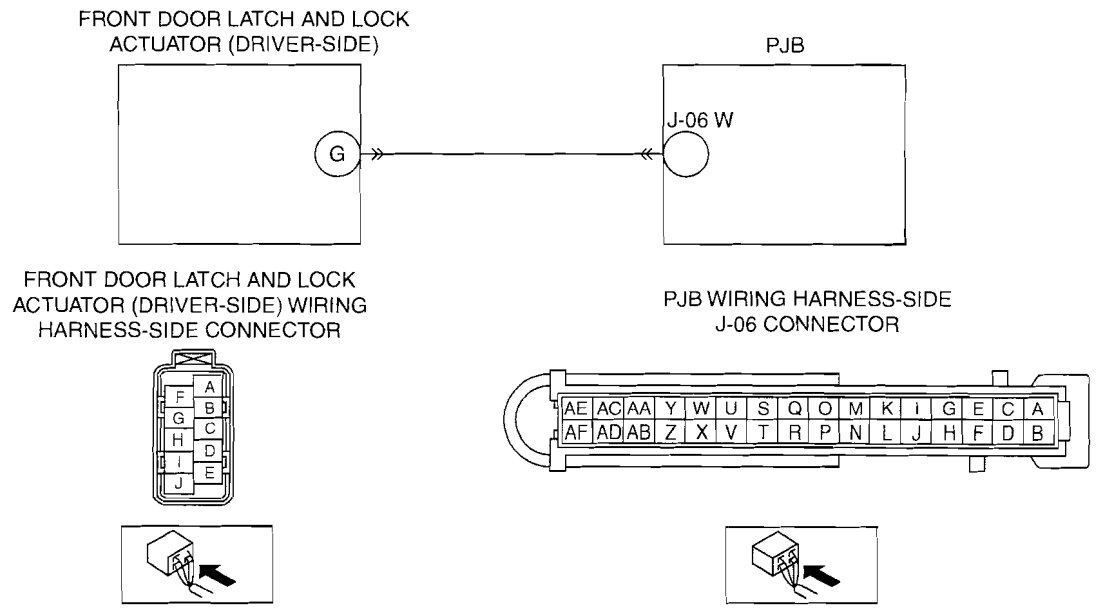
STEP	INSPECTION		ACTION
1	**INSPECT DTC FROM PCM** • Connect the M-MDS to the DLC-2. • Are any DTCs from the PCM displayed?	Yes	Perform DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].) Go to Step 5.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT PJB POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Disconnect the negative battery cable. • Disconnect the positive battery cable. • Inspect for continuity between following terminals: — PJB terminal J-01 F (wiring harness-side) — battery positive terminal (wiring harness-side) — PJB terminal J-03 AP (wiring harness-side) — battery positive terminal (wiring harness-side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 5.
4	**INSPECT PJB POWER SUPPLY CIRCUIT FOR SHORT TO GND** • Inspect for continuity between following terminals: — PJB terminal J-01 F (wiring harness-side) — body GND — PJB terminal J-03 AP (wiring harness-side) — body GND • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to GND, then go to the next step.
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Turn the ignition switch to LOCK position then ON position. • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B1320[CONTROL SYSTEM]

id0902j0831100

DTC B1320	Door ajar LF circuit open
DETECTION CONDITION	Open circuit in wiring harness between PJB and front door latch switch (driver-side)
POSSIBLE CAUSE	• Open circuit in wiring harness between PJB terminal J-06 W and front door latch and lock actuator (driver-side) terminal G • Front door latch and lock actuator malfunction • PJB malfunction



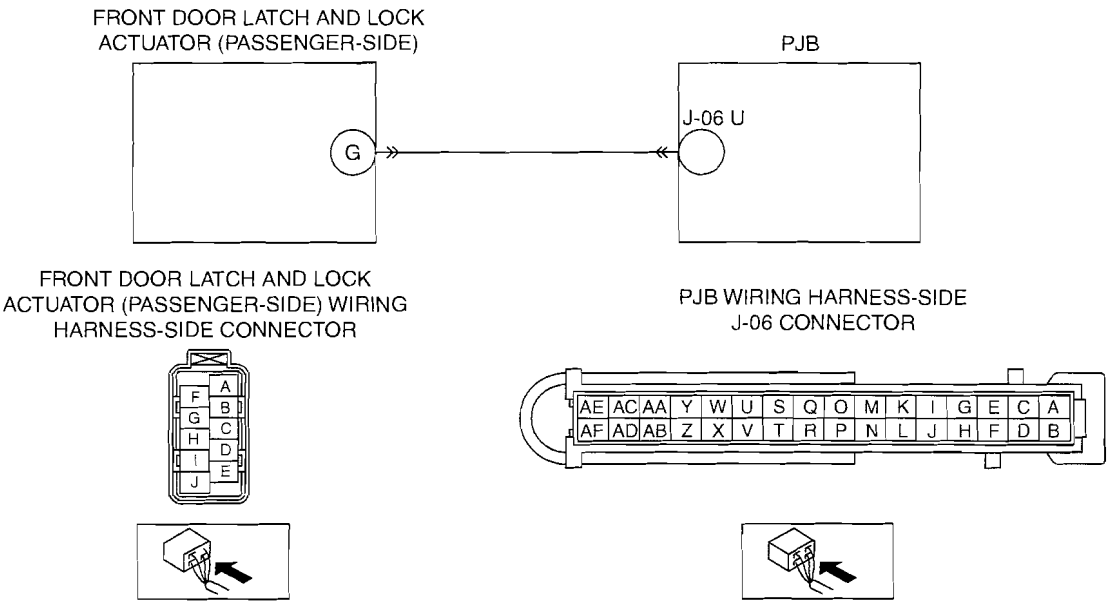
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (DRIVER-SIDE) CONNECTOR** • Turn the ignition switch off. • Disconnect the front door latch and lock actuator (driver-side) connector. • Inspect the front door latch and lock actuator (driver-side) connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (DRIVER-SIDE) SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between PJB terminal J-06 W (wiring harness-side) and front door latch and lock actuator (driver-side) terminal G (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 5.
4	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (DRIVER-SIDE)** • Inspect the front door latch and lock actuator (driver-side). (See 09-14-6 FRONT DOOR LATCH AND LOCK ACTUATOR INSPECTION.) • Is there any malfunction?	Yes	Replace the front door latch and lock actuator (driver-side), then go to the next step. (See 09-14-5 FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B1328[CONTROL SYSTEM]

id0902j0831200

DTC B1328	Door ajar RF circuit open
DETECTION CONDITION	Open circuit in wiring harness between PJB and front door latch switch (passenger-side)
POSSIBLE CAUSE	• Open circuit in wiring harness between PJB terminal J-06 U and front door latch and lock actuator (passenger-side) terminal G • Front door latch and lock actuator malfunction • PJB malfunction



Diagnostic procedure

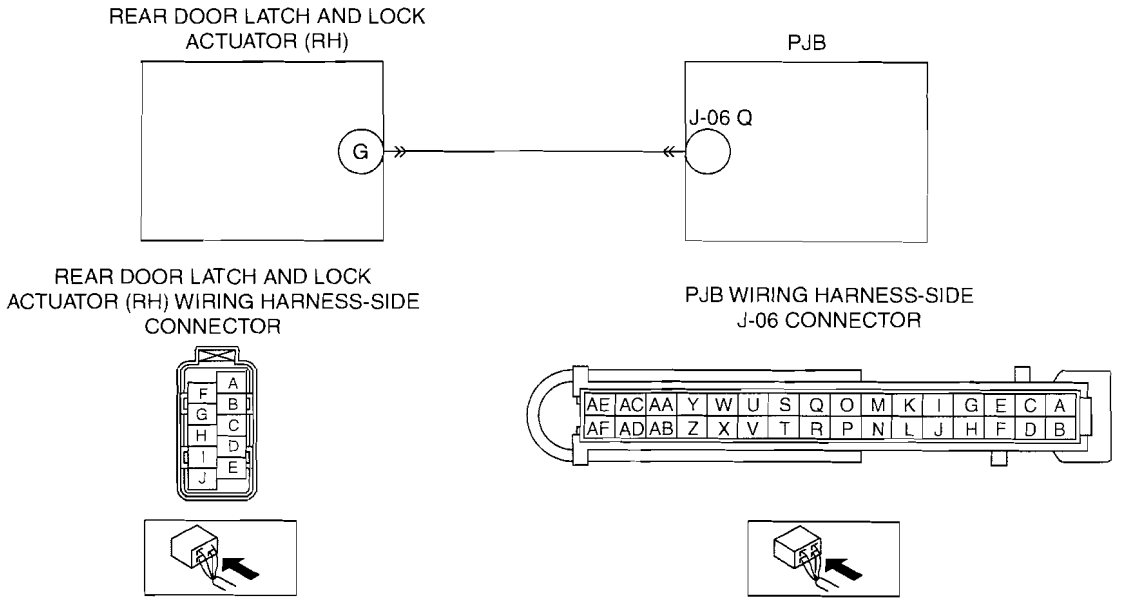
STEP	INSPECTION		ACTION
1	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (PASSENGER-SIDE) CONNECTOR** • Turn the ignition switch off. • Disconnect the front door latch and lock actuator (passenger-side) connector. • Inspect the front door latch and lock actuator (passenger-side) connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (PASSENGER-SIDE) SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between PJB terminal J-06 U (wiring harness-side) and front door latch and lock actuator (passenger-side) terminal G (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 5.

STEP	INSPECTION		ACTION
4	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (PASSENGER-SIDE)** • Inspect the front door latch and lock actuator (passenger-side). (See 09-14-6 FRONT DOOR LATCH AND LOCK ACTUATOR INSPECTION.) • Is there any malfunction?	Yes	Replace the front door latch and lock actuator (passenger-side), then go to the next step. (See 09-14-5 FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B1336[CONTROL SYSTEM]

id0902j0834000

DTC B1336	Door ajar RR circuit open
DETECTION CONDITION	Open circuit in wiring harness between PJB and rear door latch switch (RH)
POSSIBLE CAUSE	• Open circuit in wiring harness between PJB terminal J-06 Q and rear door latch and lock actuator (RH) terminal G • Rear door latch and lock actuator malfunction • PJB malfunction



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT REAR DOOR LATCH AND LOCK ACTUATOR (RH) CONNECTOR** • Turn the ignition switch off. • Disconnect the rear door latch and lock actuator (RH) connector. • Inspect the rear door latch and lock actuator (RH) connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT REAR DOOR LATCH AND LOCK ACTUATOR (RH) SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between PJB terminal J-06 Q (wiring harness-side) and rear door latch and lock actuator (RH) terminal G (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 5.
4	**INSPECT REAR DOOR LATCH AND LOCK ACTUATOR (RIGHT REAR)** • Inspect the rear door latch and lock actuator (RH). (See 09-14-6 REAR DOOR LATCH AND LOCK ACTUATOR INSPECTION.) • Is there any malfunction?	Yes	Replace the rear door latch and lock actuator (RH), then go to the next step. (See 09-14-5 REAR DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B1342[CONTROL SYSTEM]

id0902j0801600

DTC B1342	ECU is faulted
DETECTION CONDITION	PJB microcomputer malfunction
POSSIBLE CAUSE	• PJB microcomputer malfunction

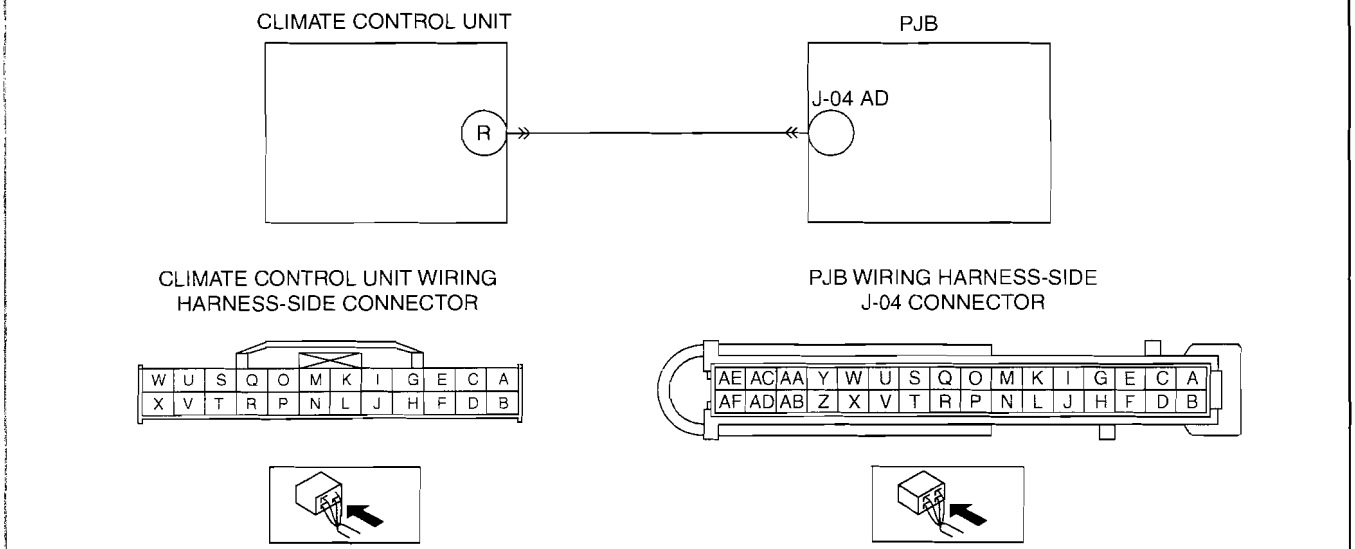
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT DTC** • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B1345[CONTROL SYSTEM]

id0902j0831300

DTC B1345	Heated backlite input circuit short to ground
DETECTION CONDITION	Short to GND in wiring harness between PJB and climate control unit (rear window defroster switch)
POSSIBLE CAUSE	• Short to GND in wiring harness between PJB terminal J-04 AD and climate control unit terminal R • Climate control unit malfunction • PJB malfunction



09-02E

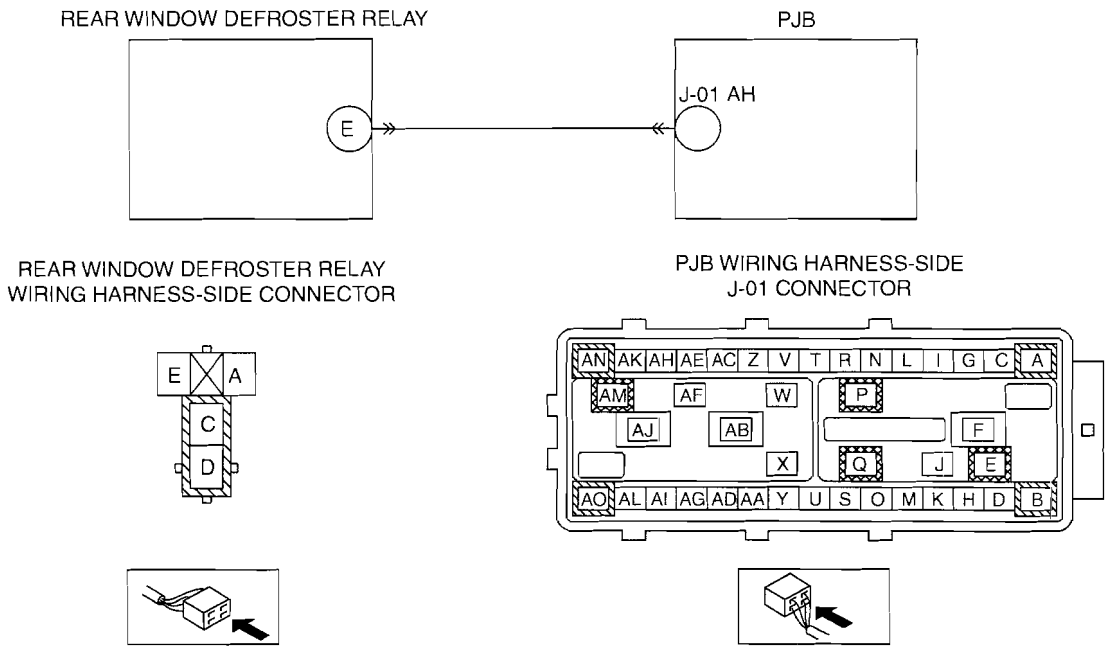
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT CLIMATE CONTROL UNIT CONNECTOR** • Disconnect the climate control unit connector. • Inspect the climate control unit connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT REAR WINDOW DEFROSTER SWITCH SIGNAL CIRCUIT FOR SHORT TO GND** • Inspect for continuity between PJB terminal J-04 AD (wiring harness-side) and body GND. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 5.
		No	Go to the next step.
4	**INSPECT CLIMATE CONTROL UNIT** • Inspect the climate control unit. (See 07-40-31 CLIMATE CONTROL UNIT INSTALLATION[MANUAL AIR CONDITIONER].) • Is there any malfunction?	Yes	Replace the climate control unit, then go to the next step. (See 07-40-29 CLIMATE CONTROL UNIT REMOVAL[MANUAL AIR CONDITIONER], 07-40-31 CLIMATE CONTROL UNIT INSTALLATION[MANUAL AIR CONDITIONER].)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B1350[CONTROL SYSTEM]

id0902j0834100

DTC B1350	Heated backlite relay short to ground
DETECTION CONDITION	Short to GND or power supply in wiring harness between PJB and rear window defroster relay
POSSIBLE CAUSE	• Open circuit in wiring harness between PJB terminal J-01 AH and rear window defroster relay terminal E • Short to GND in wiring harness between PJB terminal J-01 AH and rear window defroster relay terminal E • Short to power supply in wiring harness between PJB terminal J-01 AH and rear window defroster relay terminal E • Rear window defroster relay malfunction • PJB malfunction



Diagnostic procedure

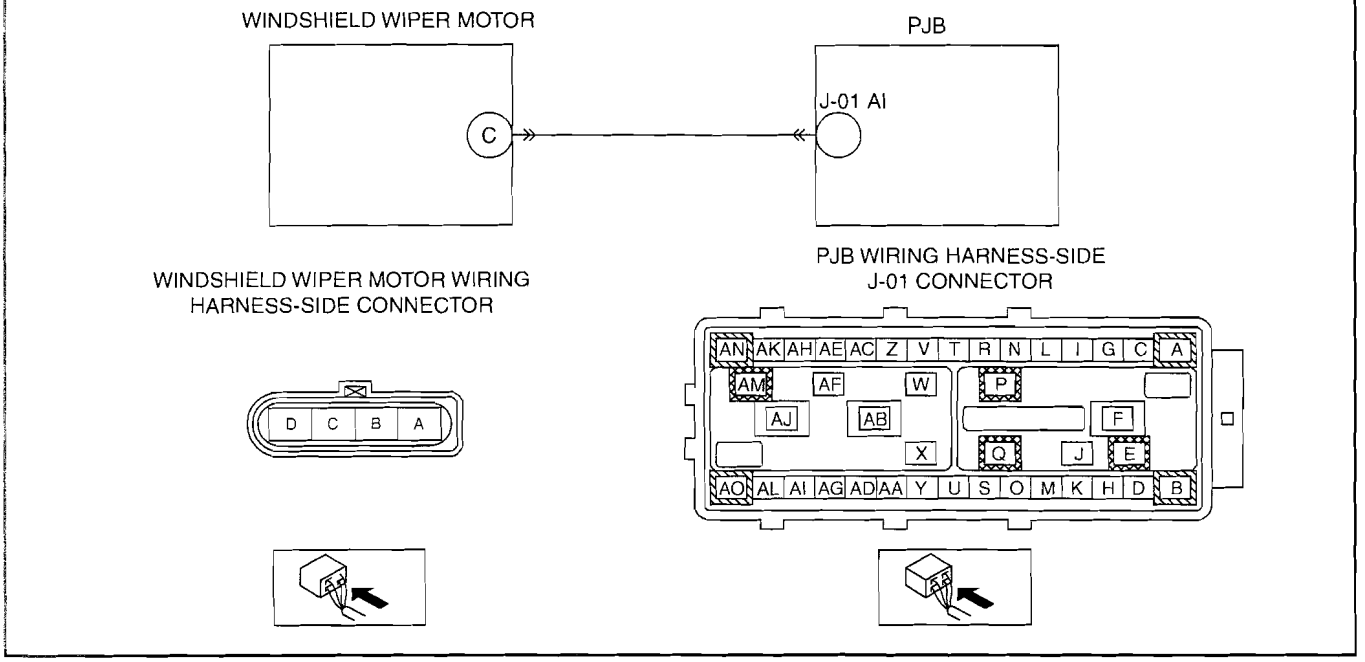
STEP	INSPECTION		ACTION
1	**INSPECT REAR WINDOW DEFROSTER RELAY CONNECTOR** • Turn the ignition switch off. • Disconnect the rear window defroster relay connector. • Inspect the rear window defroster relay connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
3	**INSPECT REAR WINDOW DEFROSTER RELAY CONTROL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between PJB terminal J-01 AH (wiring harness-side) and rear window defroster relay terminal E (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to GND, then go to Step 7.

STEP	INSPECTION		ACTION
4	**INSPECT REAR WINDOW DEFROSTER RELAY CONTROL CIRCUIT FOR SHORT TO GND** • Inspect for continuity between PJB terminal J-01 AH (wiring harness-side) and body GND. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 7.
		No	Go to the next step.
5	**INSPECT REAR WINDOW DEFROSTER RELAY CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between PJB terminal J-01 AH (wiring harness-side) and body GND. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 7.
		No	Go to the next step.
6	**INSPECT REAR WINDOW DEFROSTER RELAY** • Inspect the rear window defroster relay. (See 09-21-3 RELAY INSPECTION.) • Is there any malfunction?	Yes	Replace the rear window defroster relay, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B1447[CONTROL SYSTEM]

id0902j0831400

DTC B1447	Wiper park sense circuit open
DETECTION CONDITION	Open circuit in wiring harness between PJB and windshield wiper motor (autostop switch)
POSSIBLE CAUSE	• Open circuit in wiring harness between PJB terminal J-01 AI and windshield wiper motor terminal C • Windshield wiper motor malfunction • PJB malfunction



Diagnostic procedure

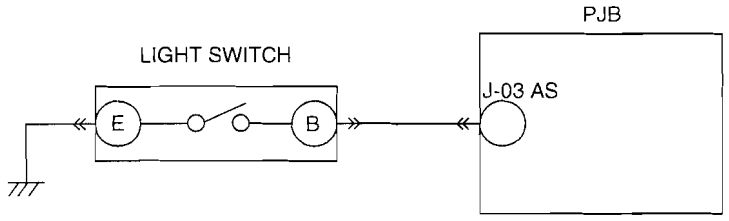
STEP	INSPECTION		ACTION
1	**INSPECT WINDSHIELD WIPER MOTOR CONNECTOR** • Turn the ignition switch off. • Disconnect the windshield wiper motor connector. • Inspect the windshield wiper motor connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT WINDSHIELD WIPER MOTOR SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between PJB terminal J-01 AI (wiring harness-side) and windshield wiper motor terminal C (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 5.
4	**INSPECT WINDSHIELD WIPER MOTOR** • Inspect the windshield wiper motor. (See 09-19-7 WINDSHIELD WIPER MOTOR INSPECTION.) • Is there any malfunction?	Yes	Replace the windshield wiper motor, then go to the next step. (See 09-14-5 FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.)
		No	Go to the next step.

STEP	INSPECTION		ACTION
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

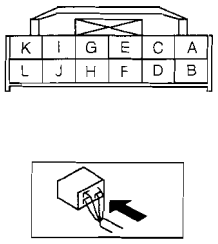
DTC B1472[CONTROL SYSTEM]

id0902j0831500

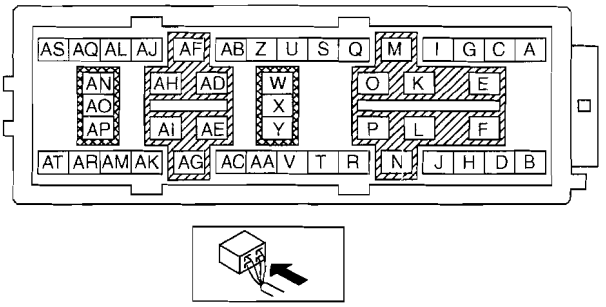
DTC B1472	**Headlight on status switch input circuit short to ground**
DETECTION CONDITION	Short to GND in wiring harness between PJB and light switch (low beam)
POSSIBLE CAUSE	• Short to GND in wiring harness between PJB terminal J-03 AS and light switch terminal B • Light switch malfunction • PJB malfunction



LIGHT SWITCH WIRING HARNESS-SIDE CONNECTOR



PJB WIRING HARNESS-SIDE J-03 CONNECTOR



Diagnostic procedure

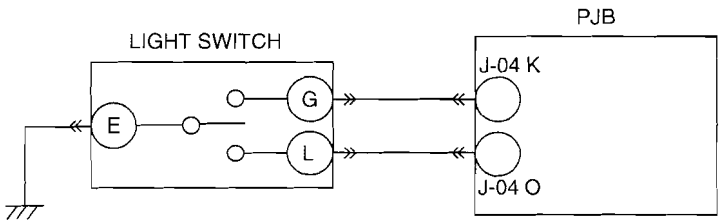
STEP	INSPECTION		ACTION
1	**INSPECT LIGHT SWITCH CONNECTOR** • Disconnect the light switch connector. • Inspect the light switch connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT LIGHT SWITCH SIGNAL CIRCUIT FOR SHORT TO GND** • Inspect for continuity between PJB terminal J-03 AS (wiring harness-side) and body GND. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 5.
		No	Go to the next step.
4	**INSPECT LIGHT SWITCH** • Inspect the light switch. (See 09-18-20 LIGHT SWITCH INSPECTION.) • Is there any malfunction?	Yes	Replace the light switch, then go to the next step. (See 09-18-20 LIGHT SWITCH REMOVAL/ INSTALLATION.)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

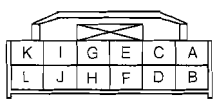
DTC B1502[CONTROL SYSTEM]

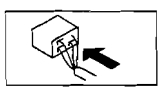
id0902j0834200

DTC B1502	**Light turn signal left circuit short to ground**
DETECTION CONDITION	Short to GND in wiring harness between PJB and turn switch (LH)
POSSIBLE CAUSE	• Short to GND in wiring harness between PJB terminal J-04 O and light switch terminal L • Light switch malfunction • PJB malfunction

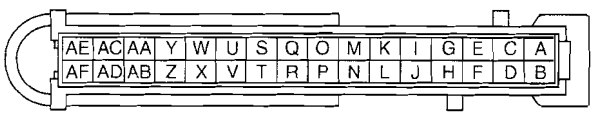


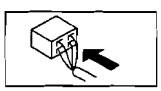
LIGHT SWITCH WIRING HARNESS-SIDE CONNECTOR





PJB WIRING HARNESS-SIDE J-04 CONNECTOR





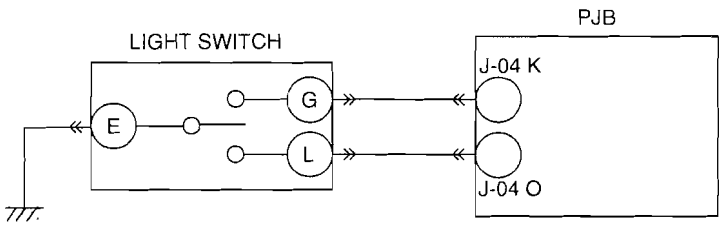
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT LIGHT SWITCH CONNECTOR** • Disconnect the light switch connector. • Inspect the light switch connector terminals for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT LIGHT SWITCH SIGNAL CIRCUIT FOR SHORT TO GND** • Inspect for continuity between following terminals: — PJB terminal J-04 O (wiring harness-side) — body GND • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 5.
		No	Go to the next step.
4	**INSPECT LIGHT SWITCH** • Inspect the light switch. • Is there any malfunction?	Yes	Replace the light switch, then go to the next step.
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

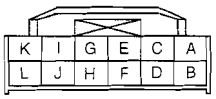
DTC B1506[CONTROL SYSTEM]

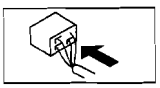
id0902j0831600

DTC B1506	Light turn signal right circuit short to ground
DETECTION CONDITION	Short to GND in wiring harness between PJB and turn switch (RH)
POSSIBLE CAUSE	• Short to GND in wiring harness between PJB terminal J-04 K and light switch terminal G • Light switch malfunction • PJB malfunction

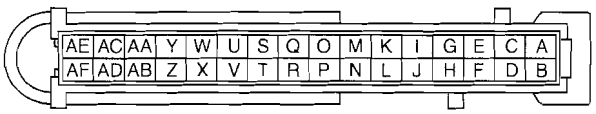


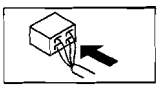
LIGHT SWITCH WIRING HARNESS-SIDE CONNECTOR





PJB WIRING HARNESS-SIDE J-04 CONNECTOR





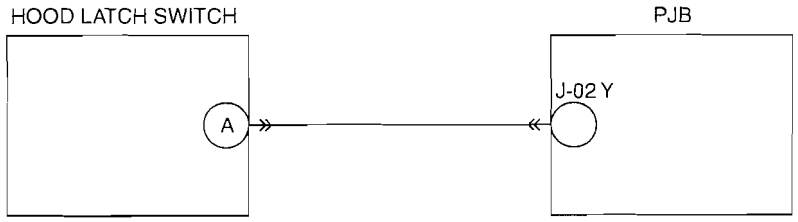
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT LIGHT SWITCH CONNECTOR** • Disconnect the light switch connector. • Inspect the light switch connector terminals for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT LIGHT SWITCH SIGNAL CIRCUIT FOR SHORT TO GND** • Inspect for continuity between following terminals: — PJB terminal J-04 K (wiring harness-side) — body GND • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 5.
		No	Go to the next step.
4	**INSPECT LIGHT SWITCH** • Inspect the light switch. • Is there any malfunction?	Yes	Replace the light switch, then go to the next step. (See 09-18-20 LIGHT SWITCH INSPECTION.)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

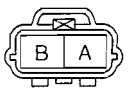
DTC B1520[CONTROL SYSTEM]

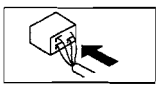
id0902j0834300

DTC B1520	Hood switch circuit open
DETECTION CONDITION	Open circuit in wiring harness between PJB and hood latch switch
POSSIBLE CAUSE	• Open circuit in wiring harness between PJB terminal J-02 Y and hood latch switch terminal A • Hood latch switch malfunction • PJB malfunction

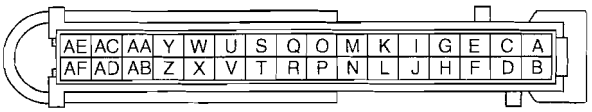


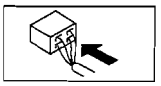
HOOD LATCH SWITCH WIRING HARNESS-SIDE CONNECTOR





PJB WIRING HARNESS-SIDE J-02 CONNECTOR





09-02E

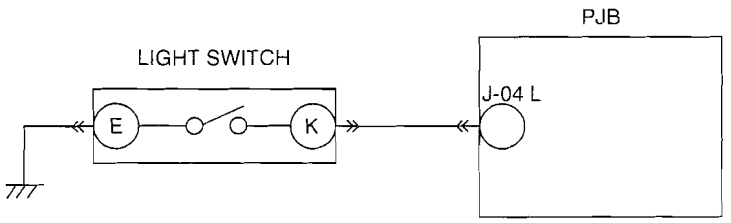
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT HOOD LATCH SWITCH CONNECTOR** • Turn the ignition switch off. • Disconnect the hood latch switch connector. • Inspect the hood latch switch connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT HOOD LATCH SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between PJB terminal J-02 Y (wiring harness-side) and hood latch switch terminal A (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 5.
4	**INSPECT HOOD LATCH SWITCH** • Inspect the hood latch switch. (See 09-14-23 HOOD LATCH SWITCH INSPECTION.) • Is there any malfunction?	Yes	Replace the hood latch switch, then go to the next step. (See 09-14-5 FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

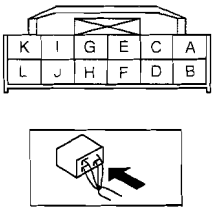
DTC B1570[CONTROL SYSTEM]

id0902j0831700

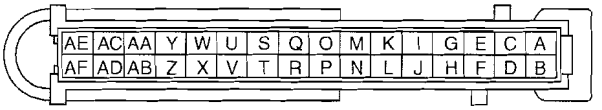
DTC B1570	Headlight high beam status input circuit short to battery
DETECTION CONDITION	Short to power supply in wiring harness between PJB and light switch (high beam)
POSSIBLE CAUSE	• Short to power supply in wiring harness between PJB terminal J-04 L and light switch terminal K • Light switch malfunction • PJB malfunction



LIGHT SWITCH WIRING HARNESS-SIDE CONNECTOR



PJB WIRING HARNESS-SIDE J-04 CONNECTOR



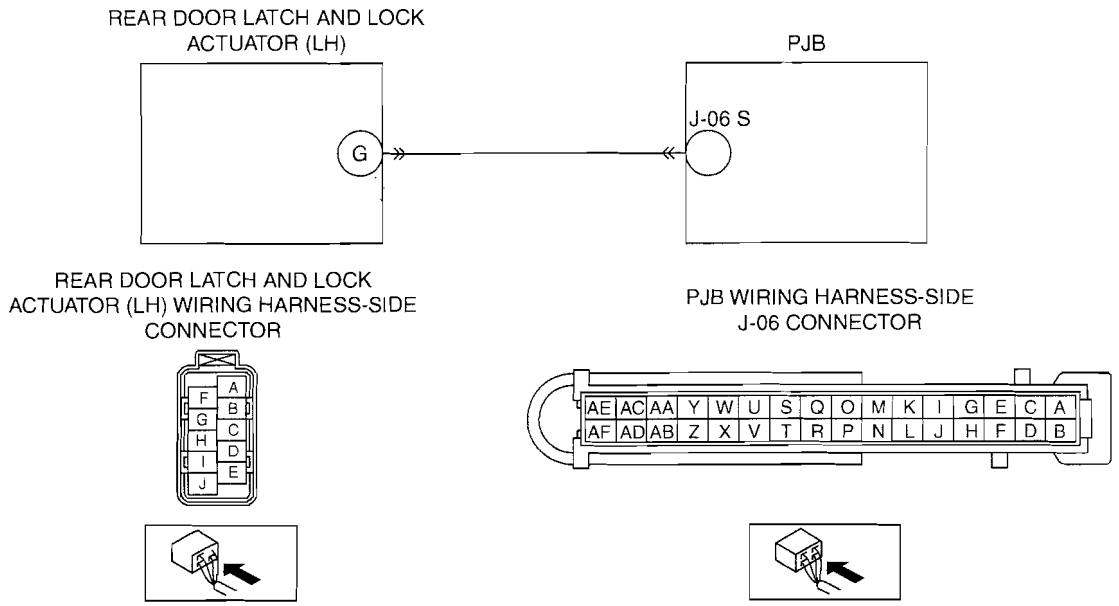
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT LIGHT SWITCH CONNECTOR** • Turn the ignition switch off. • Disconnect the light switch connector. • Inspect the light switch connector terminals for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT LIGHT SWITCH SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between PJB terminal J-04 L (wiring harness-side) and body GND. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 5.
		No	Go to the next step.
4	**INSPECT LIGHT SWITCH** • Inspect the light switch. (See 09-18-20 LIGHT SWITCH INSPECTION.) • Is there any malfunction?	Yes	Replace the light switch, then go to the next step. (See 09-18-20 LIGHT SWITCH REMOVAL/ INSTALLATION.)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B1572[CONTROL SYSTEM]

id0902j0831800

DTC B1572	Door ajar LR circuit open
DETECTION CONDITION	Open circuit in wiring harness between PJB and rear door latch switch (LH)
POSSIBLE CAUSE	• Open circuit in wiring harness between PJB terminal J-06 S and rear door latch and lock actuator (LH) terminal G • Rear door latch and lock actuator malfunction • PJB malfunction



09-02E

Diagnostic procedure

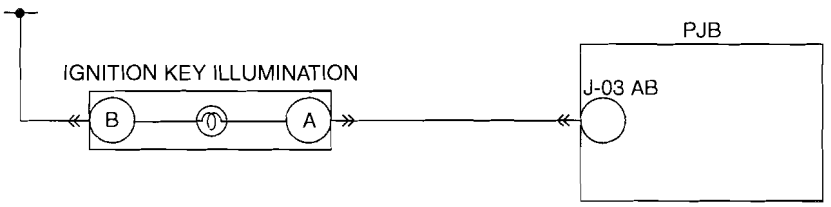
STEP	INSPECTION		ACTION
1	**INSPECT REAR DOOR LATCH AND LOCK ACTUATOR (LH) CONNECTOR** • Turn the ignition switch off. • Disconnect the rear door latch and lock actuator (LH) connector. • Inspect the rear door latch and lock actuator (LH) connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT REAR DOOR LATCH AND LOCK ACTUATOR (LH) SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between PJB terminal J-06 S (wiring harness-side) and rear door latch and lock actuator (LH) terminal G (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 5.
4	**INSPECT REAR DOOR LATCH AND LOCK ACTUATOR (LH)** • Inspect the rear door latch and lock actuator (LH). (See 09-14-6 REAR DOOR LATCH AND LOCK ACTUATOR INSPECTION.) • Is there any malfunction?	Yes	Replace the rear door latch and lock actuator (LH), then go to the next step. (See 09-14-5 REAR DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.)
		No	Go to the next step.

STEP	INSPECTION		ACTION
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

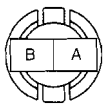
DTC B1607[CONTROL SYSTEM]

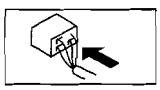
id0902j0834600

DTC B1607	Key illumination circuit short to battery
DETECTION CONDITION	Short to power supply in wiring harness between PJB and key illumination
POSSIBLE CAUSE	• Short to power supply in wiring harness between PJB terminal J-03 AB and key illumination terminal A • Ignition key illumination malfunction • PJB malfunction

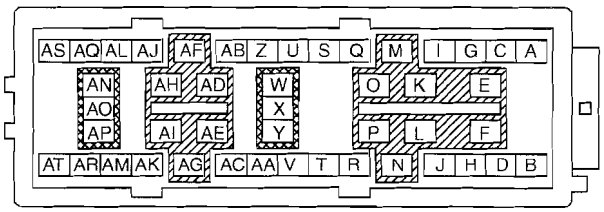


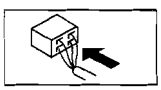
IGNITION KEY ILLUMINATION WIRING HARNESS-SIDE CONNECTOR





PJB WIRING HARNESS-SIDE J-03 CONNECTOR





Diagnostic procedure

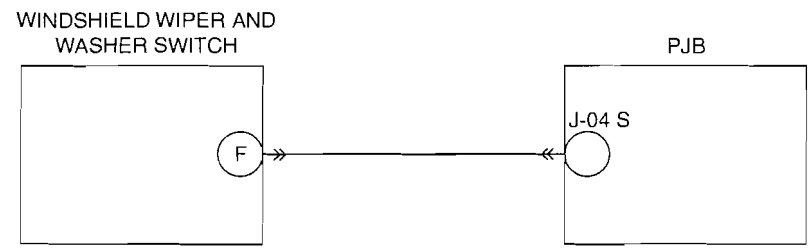
STEP	INSPECTION		ACTION
1	**INSPECT KEY ILLUMINATION CONNECTOR** • Turn the ignition switch off. • Disconnect the key illumination connector. • Inspect the key illumination connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT KEY ILLUMINATION SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between PJB terminal J-03 AB (wiring harness-side) and body GND. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 5.
		No	Go to the next step.
4	**INSPECT KEY ILLUMINATION** • Inspect the key illumination. • Is there any malfunction?	Yes	Replace the key illumination, then go to the next step. (See 09-18-26 IGNITION KEY ILLUMINATION BULB REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

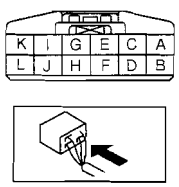
DTC B1614[CONTROL SYSTEM]

id0902j0831900

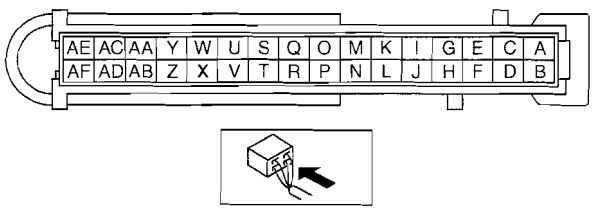
DTC B1614	**Rear wiper interval switch input circuit short to ground**
DETECTION CONDITION	Short to GND in wiring harness between PJB and rear wiper and washer switch (INT)
POSSIBLE CAUSE	• Short to GND in wiring harness between PJB terminal J-04 S and windshield wiper and washer switch terminal F • Windshield wiper and washer switch malfunction • PJB malfunction



WINDSHIELD WIPER AND WASHER SWITCH WIRING HARNESS-SIDE CONNECTOR



PJB WIRING HARNESS-SIDE J-04 CONNECTOR



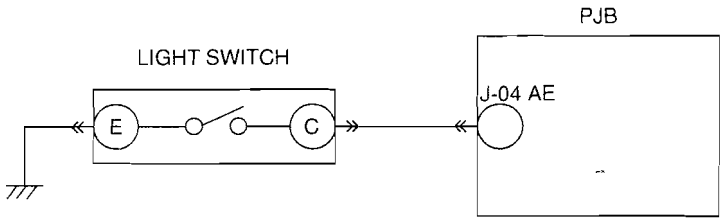
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT WINDSHIELD WIPER AND WASHER SWITCH CONNECTOR** • Disconnect the windshield wiper and washer switch connector. • Inspect the windshield wiper and washer switch connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT WINDSHIELD WIPER AND WASHER SWITCH SIGNAL CIRCUIT FOR SHORT TO GND** • Inspect for continuity between PJB terminal J-04 S (wiring harness-side) and body GND. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 5.
		No	Go to the next step.
4	**INSPECT WINDSHIELD WIPER AND WASHER SWITCH** • Inspect the windshield wiper and washer switch. (See 09-19-11 WINDSHIELD WIPER AND WASHER SWITCH INSPECTION.) • Is there any malfunction?	Yes	Replace the windshield wiper and washer switch, then go to the next step. (See 09-19-11 WIPER AND WASHER SWITCH REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

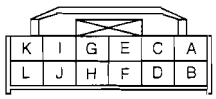
DTC B1696[CONTROL SYSTEM]

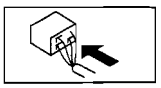
id0902j0832000

DTC B1696	Auto light switch input circuit short to ground (If equipped, for Canada only.)
DETECTION CONDITION	Short to GND in wiring harness between PJB and light switch (AUTO)
POSSIBLE CAUSE	• Short to GND in wiring harness between PJB terminal J-04 AE and light switch terminal C • Light switch malfunction • PJB malfunction

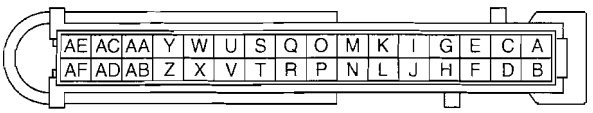


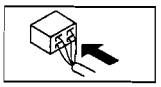
LIGHT SWITCH WIRING HARNESS-SIDE CONNECTOR





PJB WIRING HARNESS-SIDE J-04 CONNECTOR





09-02E

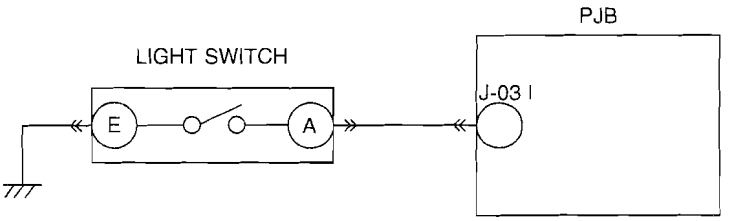
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT LIGHT SWITCH CONNECTOR** • Disconnect the light switch connector. • Inspect the light switch connector terminals for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT LIGHT SWITCH SIGNAL CIRCUIT FOR SHORT TO GND** • Inspect for continuity between PJB terminal J-04 AE (wiring harness-side) and body GND. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 5.
		No	Go to the next step.
4	**INSPECT LIGHT SWITCH** • Inspect the light switch. (See 09-18-20 LIGHT SWITCH INSPECTION.) • Is there any malfunction?	Yes	Replace the light switch, then go to the next step. (See 09-18-20 LIGHT SWITCH REMOVAL/ INSTALLATION.)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

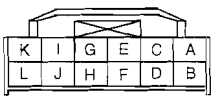
DTC B1798[CONTROL SYSTEM]

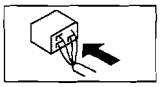
id0902j0832100

DTC B1798	Position lights switch (TNS) input circuit short to ground
DETECTION CONDITION	Short to GND in wiring harness between PJB and light switch (TNS)
POSSIBLE CAUSE	• Short to GND in wiring harness between PJB terminal J-03 I and light switch terminal A • Light switch malfunction • PJB malfunction

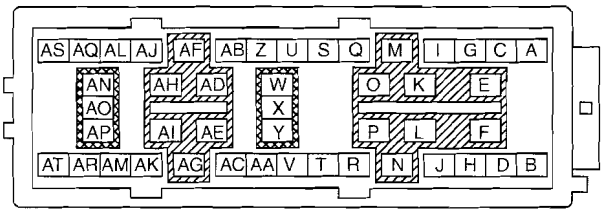


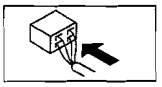
LIGHT SWITCH WIRING HARNESS-SIDE CONNECTOR





PJB WIRING HARNESS-SIDE J-03 CONNECTOR





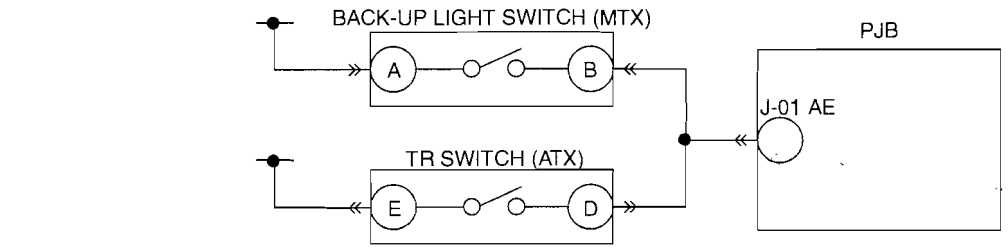
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT LIGHT SWITCH CONNECTOR** • Disconnect the light switch connector. • Inspect the light switch connector terminals for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT LIGHT SWITCH SIGNAL CIRCUIT FOR SHORT TO GND** • Inspect for continuity between PJB terminal J-03 I (wiring harness-side) and body GND. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 5.
		No	Go to the next step.
4	**INSPECT LIGHT SWITCH** • Inspect the light switch. (See 09-18-20 LIGHT SWITCH INSPECTION.) • Is there any malfunction?	Yes	Replace the light switch, then go to the next step. (See 09-18-20 LIGHT SWITCH REMOVAL/ INSTALLATION.)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

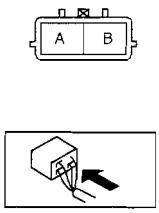
DTC B1812[CONTROL SYSTEM]

id0902j0834700

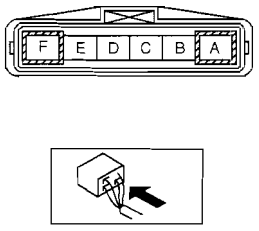
DTC B1812	Backup light switch input circuit short to battery
DETECTION CONDITION	Short to power supply in wiring harness between PJB and back-up light switch
POSSIBLE CAUSE	• Short to power supply in wiring harness between PJB terminal J-01 AE and back-up light switch terminal B (MTX) • Short to power supply in wiring harness between PJB terminal J-01 AE and TR switch terminal D (ATX) • Back-up light switch malfunction (MTX) • TR switch malfunction (ATX) • PJB malfunction



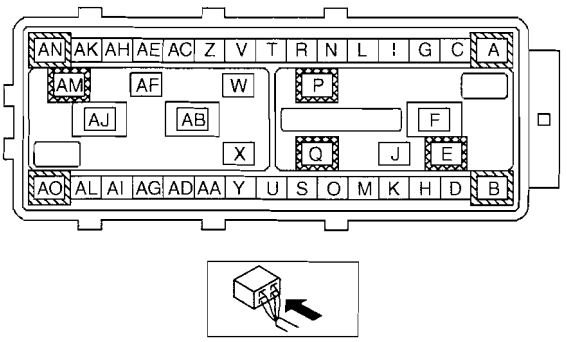
BACK-UP LIGHT SWITCH WIRING HARNESS-SIDE CONNECTOR



TR SWITCH WIRING HARNESS-SIDE CONNECTOR



PJB WIRING HARNESS-SIDE J-01 CONNECTOR



Diagnostic procedure

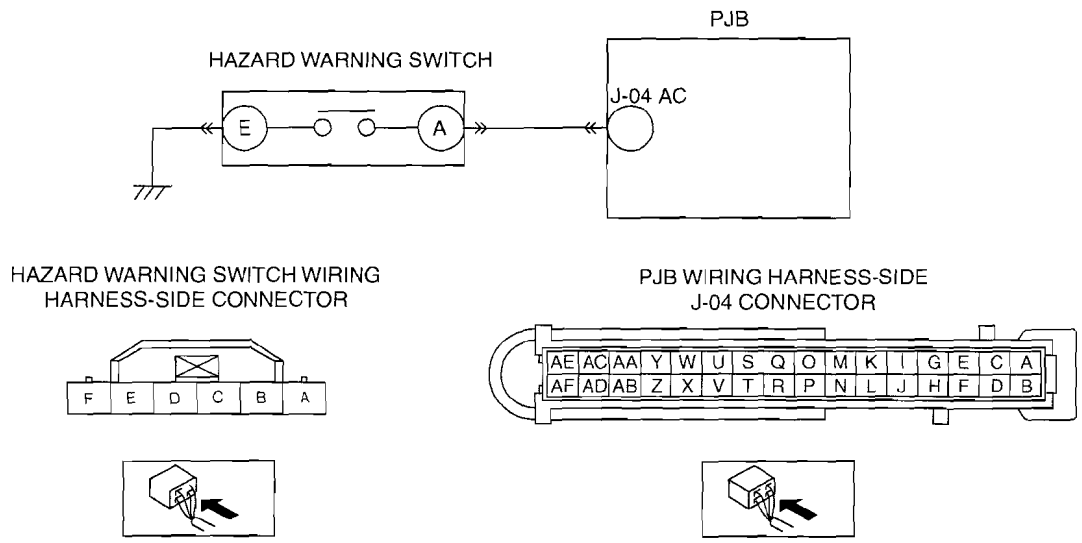
STEP	INSPECTION		ACTION
1	**INSPECT BACK-UP LIGHT SWITCH CONNECTOR** • Turn the ignition switch off. • Disconnect the back-up light switch connector. (MTX) • Disconnect the TR switch connector. (ATX) • Inspect the switch connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT BACK-UP LIGHT SWITCH SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between PJB terminal J-01 AE (wiring harness-side) and body GND. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 5.
		No	Go to the next step.

STEP	INSPECTION		ACTION
4	**INSPECT BACK-UP LIGHT SWITCH** • Inspect the back-up light switch. (MTX) (See 09-18-18 BACK-UP LIGHT SWITCH INSPECTION.) • Inspect the TR switch. (ATX) (See 05-17A-10 TRANSAXLE RANGE (TR) SWITCH INSPECTION[FN4A-EL].) (See 05-17B-11 TRANSAXLE RANGE (TR) SWITCH INSPECTION[FS5A-EL].) • Is there any malfunction?	Yes	Replace the back-up light switch (MTX) or TR switch (ATX), then go to the next step. (See 09-18-18 BACK-UP LIGHT SWITCH REMOVAL/INSTALLATION.) (See 05-17A-12 TRANSAXLE RANGE (TR) SWITCH REMOVAL/INSTALLATION[FN4A-EL].) (See 05-17B-14 TRANSAXLE RANGE (TR) SWITCH REMOVAL/INSTALLATION[FS5A-EL].)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B1873[CONTROL SYSTEM]

id0902j0832200

DTC B1873	Turn signal/hazard power feed circuit short to ground
DETECTION CONDITION	Short to GND in wiring harness between PJB and hazard warning switch
POSSIBLE CAUSE	• Short to GND in wiring harness between PJB terminal J-04 AC and hazard warning switch terminal A • Hazard warning switch malfunction • PJB malfunction



Diagnostic procedure

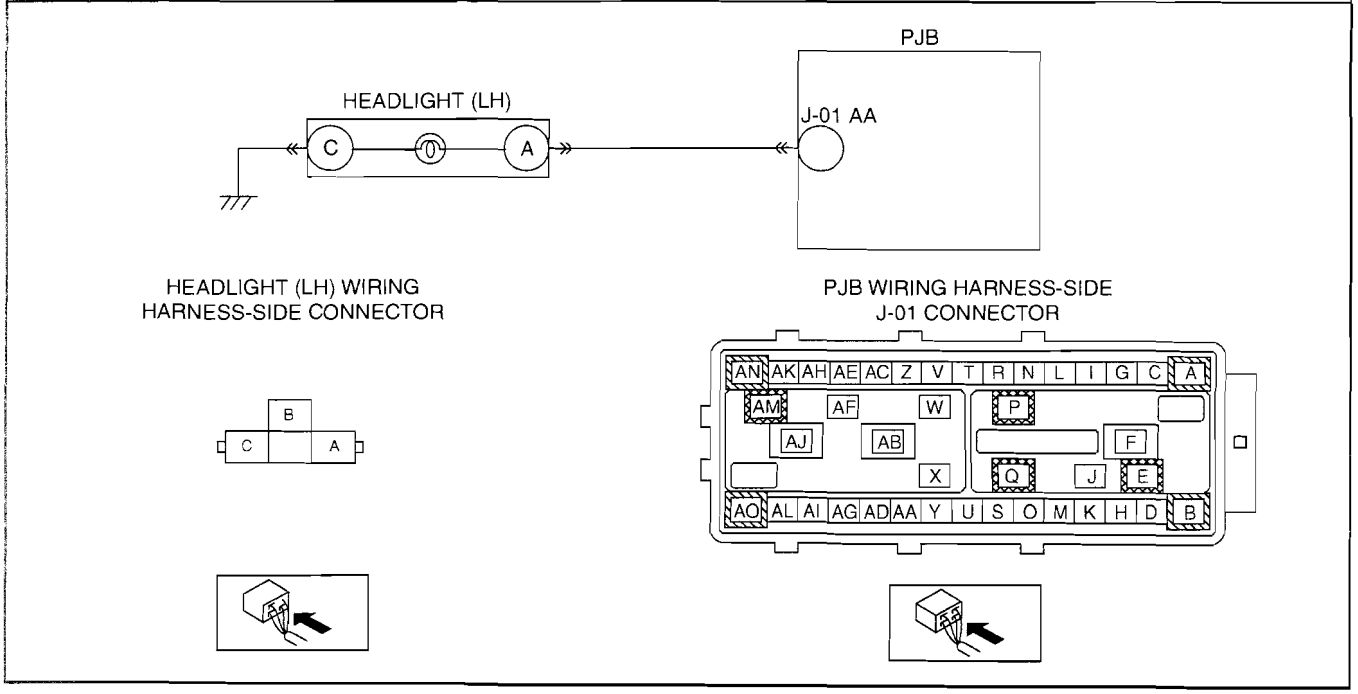
STEP	INSPECTION		ACTION
1	**INSPECT HAZARD WARNING SWITCH CONNECTOR** • Disconnect the hazard warning switch connector. • Inspect the hazard warning switch connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.

STEP	INSPECTION		ACTION
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT HAZARD WARNING SWITCH SIGNAL CIRCUIT FOR SHORT TO GND** • Inspect for continuity between PJB terminal J-04 AC (wiring harness-side) and body GND. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 5.
		No	Go to the next step.
4	**INSPECT HAZARD WARNING SWITCH** • Inspect the hazard warning switch. (See 09-18-21 HAZARD WARNING SWITCH INSPECTION.) • Is there any malfunction?	Yes	Replace the hazard warning switch, then go to the next step. (See 09-18-21 HAZARD WARNING SWITCH REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B2017[CONTROL SYSTEM]

id0902j0902200

DTC B2017	DRL left output circuit failure
DETECTION CONDITION	Open circuit or short to GND in wiring harness between PJB and headlight (low beam)
POSSIBLE CAUSE	• Open circuit in wiring harness between PJB terminal J-01 AA and headlight (LH) terminal A • Short to power supply in wiring harness between PJB terminal J-01 AA and headlight (LH) terminal A • Short to GND in wiring harness between PJB terminal J-01 AA and headlight (LH) terminal A • Headlight malfunction • PJB malfunction



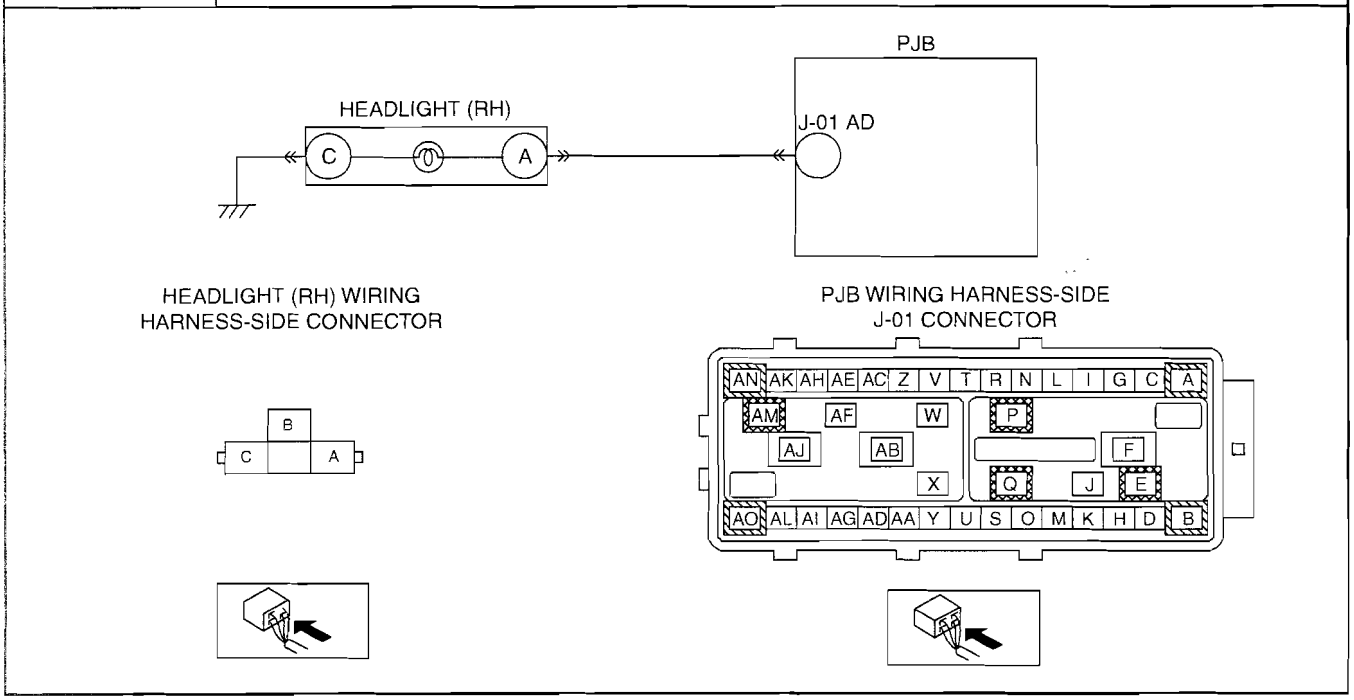
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT HEADLIGHT CONNECTOR** • Turn the ignition switch off. • Disconnect the headlight (LH) connectors. • Inspect the headlight (LH) connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
3	**INSPECT HEADLIGHT CONTROL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between following terminals: — PJB terminal J-01 AA (wiring harness-side) — headlight (LH) terminal A (wiring harness-side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 7.
4	**INSPECT HEADLIGHT CONTROL CIRCUIT FOR SHORT TO GND** • Inspect for continuity between following terminals: — PJB terminal J-01 AA (wiring harness-side) — body GND • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 7.
		No	Go to the next step.
5	**INSPECT HEADLIGHT CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between following terminals: — PJB terminal J-01 AA (wiring harness-side) — body GND • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 7.
		No	Go to the next step.
6	**INSPECT HEADLIGHT** • Inspect all the headlight. • Is there any malfunction?	Yes	Replace the headlight, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B2018[CONTROL SYSTEM]

id0902j0902300

DTC B2018	DRL right output circuit failure
DETECTION CONDITION	Open circuit or short to GND in wiring harness between PJB and headlight (low beam)
POSSIBLE CAUSE	• Open circuit in wiring harness between PJB terminal J-01 AD and headlight (RH) terminal A • Short to power supply in wiring harness between PJB terminal J-01 AD and headlight (RH) terminal A • Short to GND in wiring harness between PJB terminal J-01 AD and headlight (RH) terminal A • Headlight malfunction • PJB malfunction



Diagnostic procedure

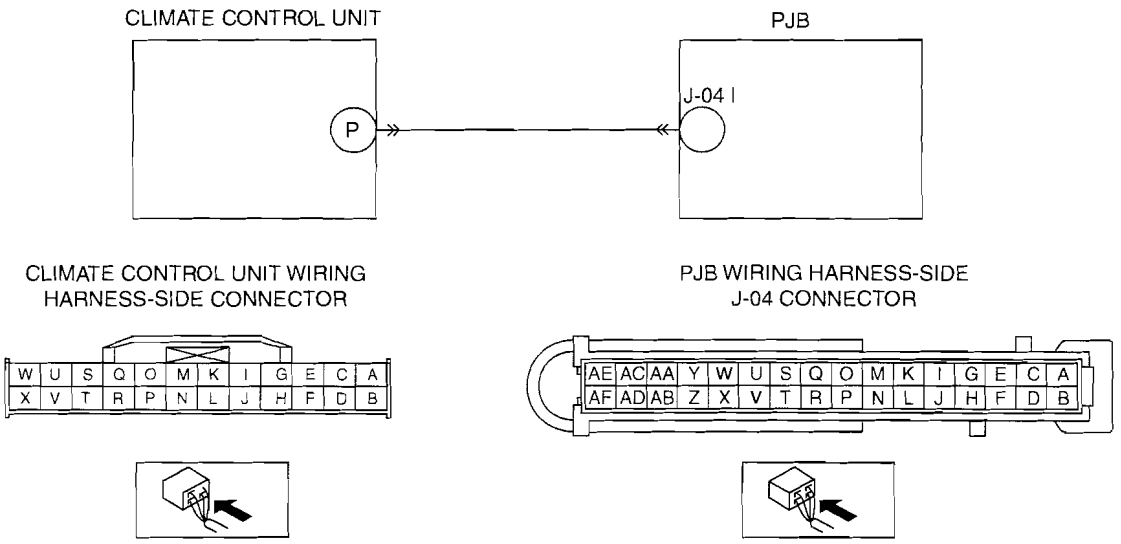
STEP	INSPECTION		ACTION
1	**INSPECT HEADLIGHT CONNECTOR** • Turn the ignition switch off. • Disconnect the headlight (RH) connectors. • Inspect the headlight (RH) connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
3	**INSPECT HEADLIGHT CONTROL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between following terminals: — PJB terminal J-01 AD (wiring harness-side) — headlight (RH) terminal A (wiring harness-side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 7.
4	**INSPECT HEADLIGHT CONTROL CIRCUIT FOR SHORT TO GND** • Inspect for continuity between following terminals: — PJB terminal J-01 AD (wiring harness-side) — body GND • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 7.
		No	Go to the next step.

STEP	INSPECTION		ACTION
5	**INSPECT HEADLIGHT CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between following terminals: — PJB terminal J-01 AD (wiring harness-side) — body GND • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 7.
		No	Go to the next step.
6	**INSPECT HEADLIGHT** • Inspect all the headlight. • Is there any malfunction?	Yes	Replace the headlight, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B2060[CONTROL SYSTEM]

id0902j0834900

DTC B2060	Heated backlite indicator circuit failure
DETECTION CONDITION	Short to power supply in wiring harness between PJB and climate control unit (rear window defroster indicator)
POSSIBLE CAUSE	• Short to power supply in wiring harness between PJB terminal J-04 I and climate control unit terminal P • Climate control unit malfunction • PJB malfunction



Diagnostic procedure

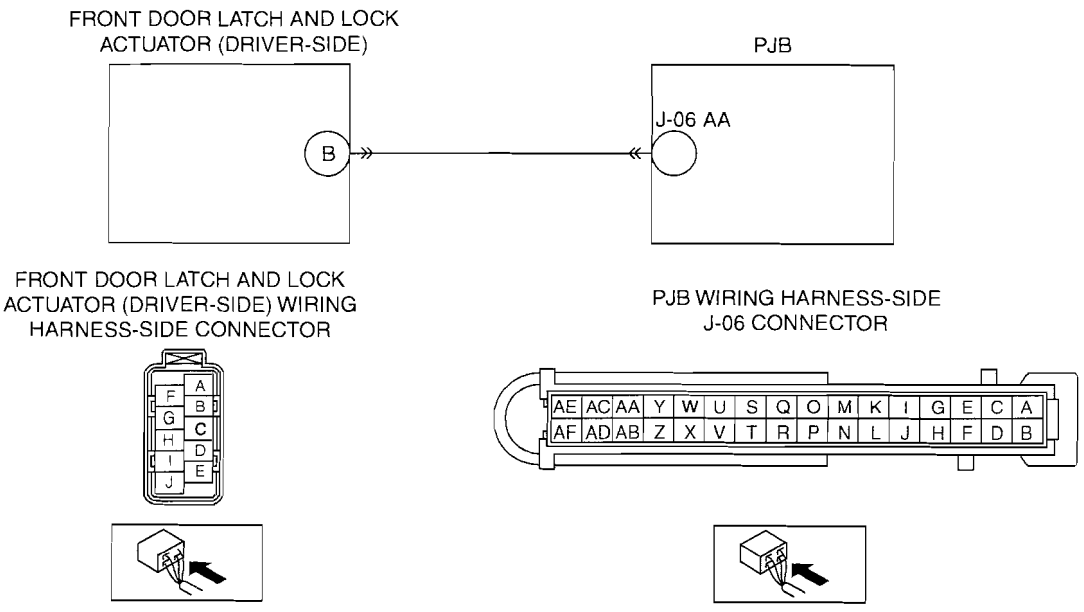
STEP	INSPECTION		ACTION
1	**INSPECT CLIMATE CONTROL UNIT CONNECTOR** • Turn the ignition switch off. • Disconnect the climate control unit connector. • Inspect the climate control unit connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.

STEP	INSPECTION		ACTION
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT CLIMATE CONTROL UNIT SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between PJB terminal J-04 I (wiring harness-side) and body GND. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 5.
		No	Go to the next step.
4	**INSPECT CLIMATE CONTROL UNIT** • Inspect the climate control unit. (See 07-40-38 CLIMATE CONTROL UNIT INSPECTION[MANUAL AIR CONDITIONER].) • Is there any malfunction?	Yes	Replace the climate control unit, then go to the next step. (See 07-40-29 CLIMATE CONTROL UNIT REMOVAL[MANUAL AIR CONDITIONER], 07-40-31 CLIMATE CONTROL UNIT INSTALLATION[MANUAL AIR CONDITIONER].)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B2095[CONTROL SYSTEM]

id0902j0835000

DTC B2095	Reset switch circuit failure
DETECTION CONDITION	Short to GND in wiring harness between PJB and driver-side door key cylinder switch (unlock)
POSSIBLE CAUSE	• Short to GND in wiring harness between PJB terminal J-06 AA and front door latch and lock actuator (driver-side) terminal B • Front door latch and lock actuator (driver-side) malfunction • PJB malfunction



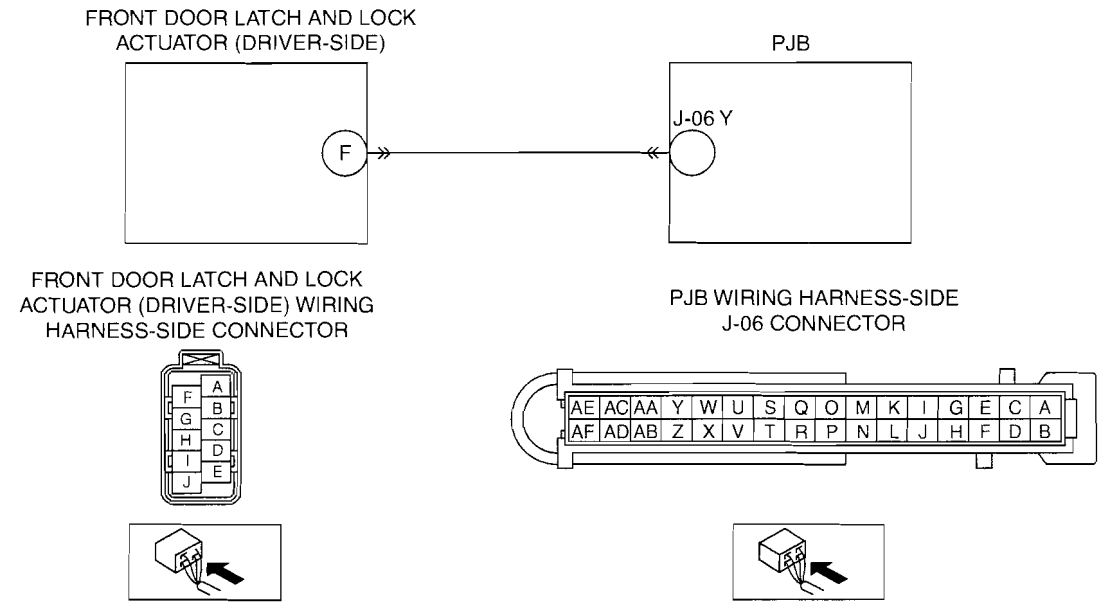
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (DRIVER-SIDE) CONNECTOR** • Disconnect the front door latch and lock actuator (driver-side) connector. • Inspect the front door latch and lock actuator (driver-side) connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (DRIVER-SIDE) SIGNAL CIRCUIT FOR SHORT TO GND** • Inspect for continuity between PJB terminal J-06 AA (wiring harness-side) and body GND. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 5.
		No	Go to the next step.
4	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (DRIVER-SIDE)** • Inspect the front door latch and lock actuator (driver-side). (See 09-14-6 FRONT DOOR LATCH AND LOCK ACTUATOR INSPECTION.) • Is there any malfunction?	Yes	Replace the front door latch and lock actuator (driver-side), then go to the next step. (See 09-14-5 FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETE** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B2096[CONTROL SYSTEM]

id0902j0835100

DTC B2096	Set switch circuit failure
DETECTION CONDITION	Short to GND in wiring harness between PJB and driver-side door key cylinder switch (lock)
POSSIBLE CAUSE	• Short to GND in wiring harness between PJB terminal J-06 Y and front door latch and lock actuator (driver-side) terminal F • Front door latch and lock actuator (driver-side) malfunction • PJB malfunction



Diagnostic procedure

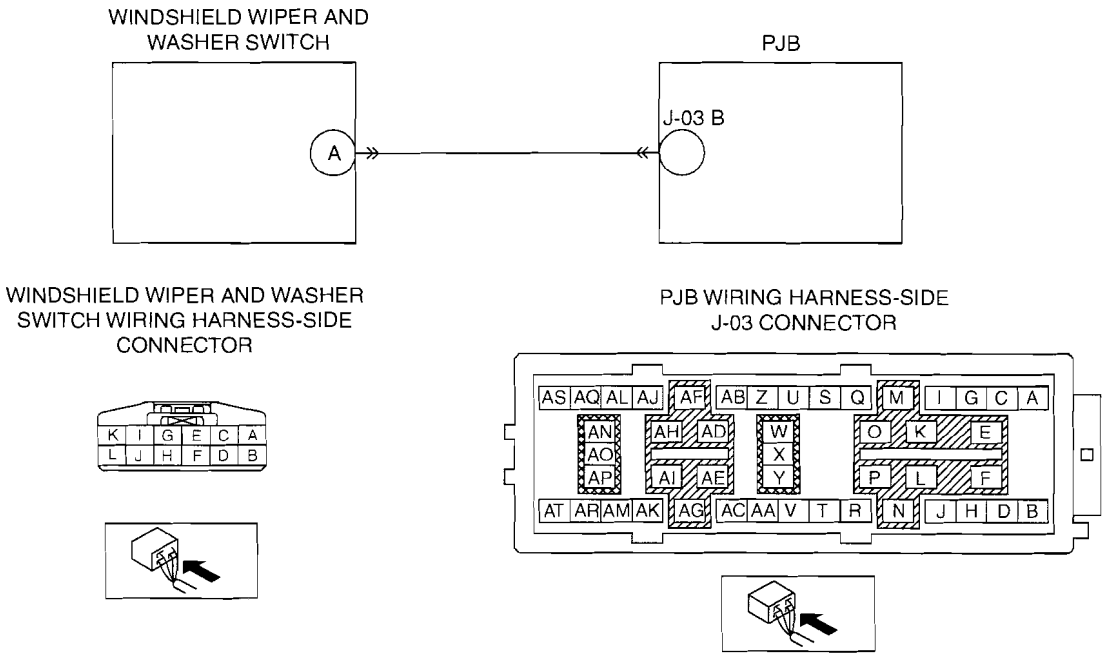
STEP	INSPECTION		ACTION
1	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (DRIVER-SIDE) CONNECTOR** • Disconnect the front door latch and lock actuator (driver-side) connector. • Inspect the front door latch and lock actuator (driver-side) connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (DRIVER-SIDE) SIGNAL CIRCUIT FOR SHORT TO GND** • Inspect for continuity between PJB terminal J-06 Y (wiring harness-side) and body GND. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 5.
		No	Go to the next step.
4	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (DRIVER-SIDE)** • Inspect the front door latch and lock actuator (driver-side). (See 09-14-6 FRONT DOOR LATCH AND LOCK ACTUATOR INSPECTION.) • Is there any malfunction?	Yes	Replace the front door latch and lock actuator (driver-side), then go to the next step. (See 09-14-5 FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.)
		No	Go to the next step.

STEP	INSPECTION		ACTION
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B2114[CONTROL SYSTEM]

id0902j0832300

DTC B2114	Front washer switch input circuit short to battery
DETECTION CONDITION	Short to power supply in wiring harness between PJB and windshield wiper and washer switch (front washer)
POSSIBLE CAUSE	• Short to power supply in wiring harness between PJB terminal J-03 B and windshield wiper and washer switch terminal A • Windshield wiper and washer switch malfunction • PJB malfunction



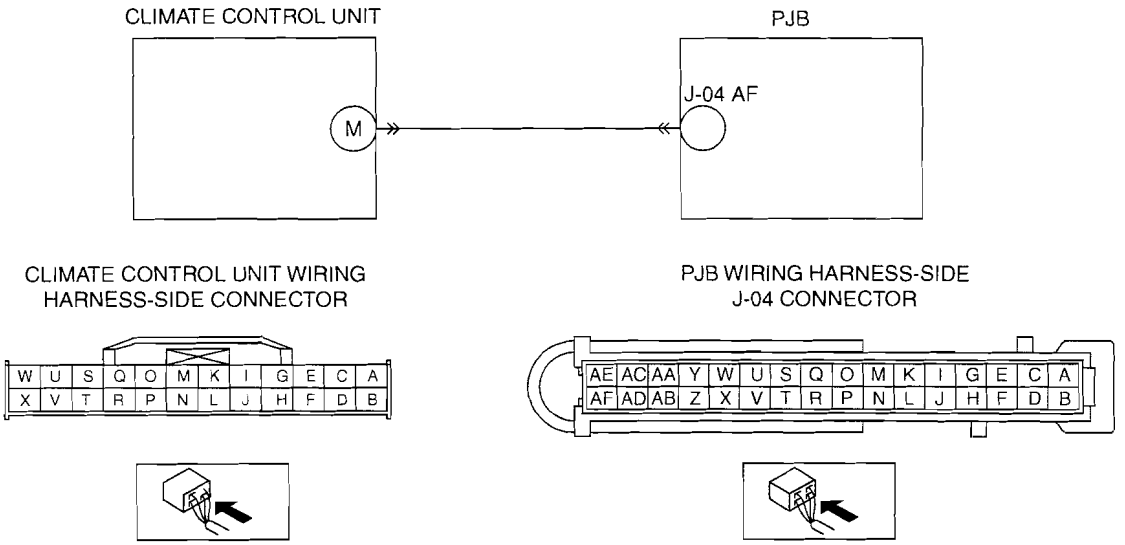
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT WINDSHIELD WIPER AND WASHER SWITCH CONNECTOR** • Turn the ignition switch off. • Disconnect the windshield wiper and washer switch connector. • Inspect the windshield wiper and washer switch connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT WINDSHIELD WIPER AND WASHER SWITCH SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between PJB terminal J-03 B (wiring harness-side) and body GND. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 5.
		No	Go to the next step.
4	**INSPECT WINDSHIELD WIPER AND WASHER SWITCH** • Inspect the windshield wiper and washer switch. (See 09-19-11 WINDSHIELD WIPER AND WASHER SWITCH INSPECTION.) • Is there any malfunction?	Yes	Replace the windshield wiper and washer switch, then go to the next step. (See 09-19-11 WIPER AND WASHER SWITCH REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B2175[CONTROL SYSTEM]

id0902j0832400

DTC B2175	A/C request signal circuit short to ground
DETECTION CONDITION	Short to GND in wiring harness between PJB and climate control unit (A/C ON request)
POSSIBLE CAUSE	• Short to GND in wiring harness between PJB terminal J-04 AF and climate control unit terminal M • Climate control unit malfunction • PJB malfunction



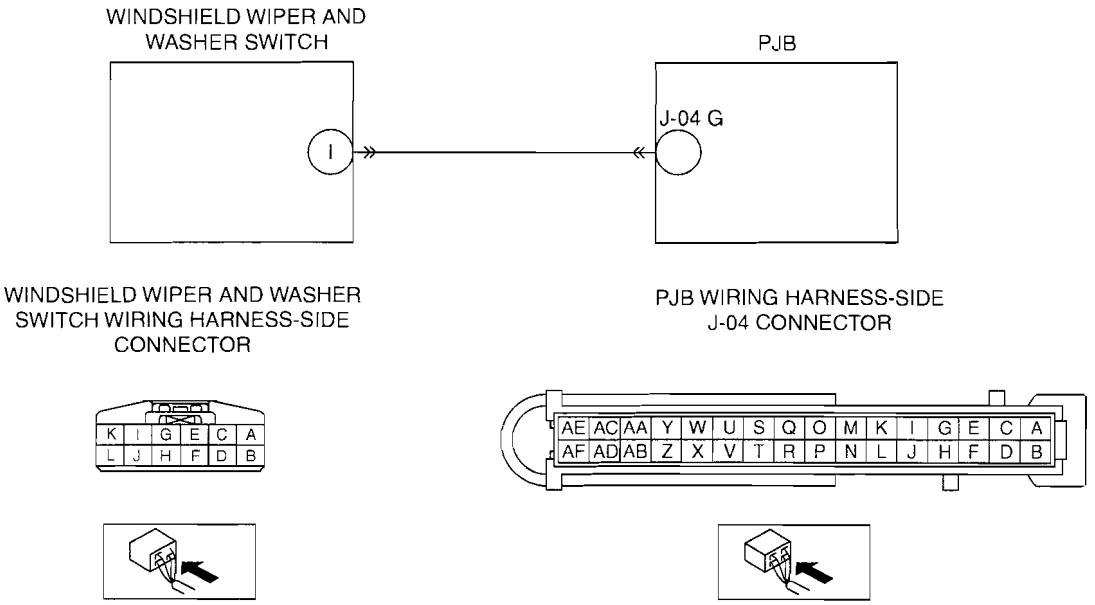
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT CLIMATE CONTROL UNIT CONNECTOR** • Disconnect the climate control unit connector. • Inspect the climate control unit connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT CLIMATE CONTROL UNIT SIGNAL CIRCUIT FOR SHORT TO GND** • Inspect for continuity between PJB terminal J-04 AF (wiring harness-side) and body GND. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 5.
		No	Go to the next step.
4	**INSPECT CLIMATE CONTROL UNIT** • Inspect the climate control unit. (See 07-40-38 CLIMATE CONTROL UNIT INSPECTION[MANUAL AIR CONDITIONER].) • Is there any malfunction?	Yes	Replace the climate control unit, then go to the next step. (See 07-40-29 CLIMATE CONTROL UNIT REMOVAL[MANUAL AIR CONDITIONER], 07-40-31 CLIMATE CONTROL UNIT INSTALLATION[MANUAL AIR CONDITIONER].)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B2180[CONTROL SYSTEM]

id0902j0832600

DTC B2180	Front wiper switch (slow) circuit short to ground
DETECTION CONDITION	Short to GND in wiring harness between PJB and windshield wiper and washer switch (low)
POSSIBLE CAUSE	• Short to GND in wiring harness between PJB terminal J-04 G and windshield wiper and washer switch terminal I • Windshield wiper and washer switch malfunction • PJB malfunction



Diagnostic procedure

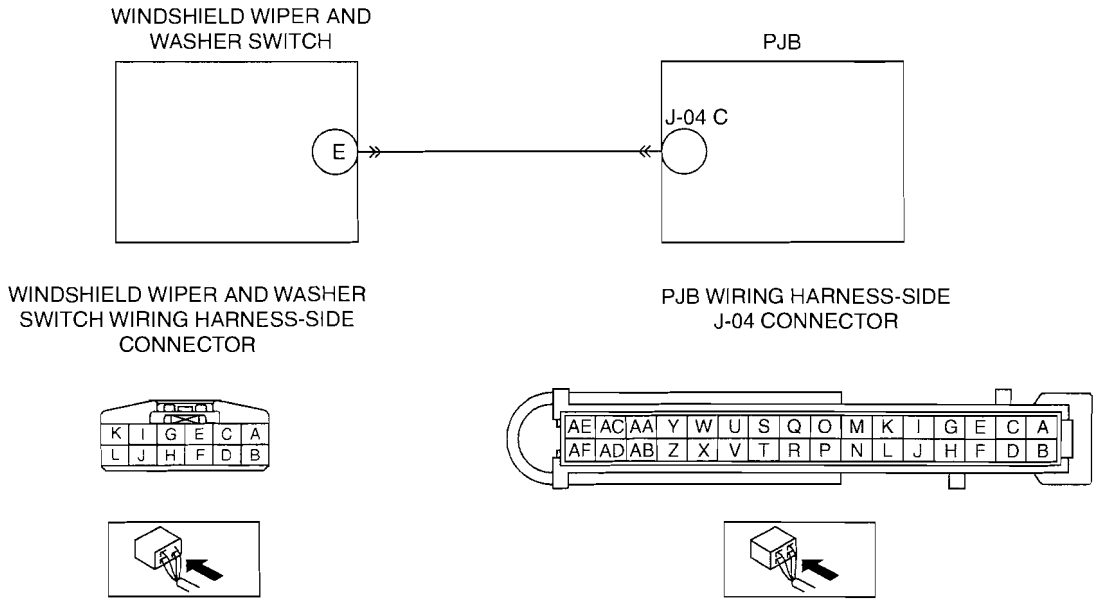
STEP	INSPECTION		ACTION
1	**INSPECT WINDSHIELD WIPER AND WASHER SWITCH CONNECTOR** • Disconnect the windshield wiper and washer switch connector. • Inspect the windshield wiper and washer switch connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT WINDSHIELD WIPER AND WASHER SWITCH SIGNAL CIRCUIT FOR SHORT TO GND** • Inspect for continuity between PJB terminal J-04 G (wiring harness-side) and body GND. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 5.
		No	Go to the next step.
4	**INSPECT WINDSHIELD WIPER AND WASHER SWITCH** • Inspect the windshield wiper and washer switch. (See 09-19-11 WINDSHIELD WIPER AND WASHER SWITCH INSPECTION.) • Is there any malfunction?	Yes	Replace the windshield wiper and washer switch, then go to the next step. (See 09-19-11 WIPER AND WASHER SWITCH REMOVAL/INSTALLATION.)
		No	Go to the next step.

STEP	INSPECTION		ACTION
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B2181[CONTROL SYSTEM]

id0902j0832700

DTC B2181	Front wiper switch (fast) circuit short to ground
DETECTION CONDITION	Short to GND in wiring harness between PJB and windshield wiper and washer switch (high)
POSSIBLE CAUSE	• Short to GND in wiring harness between PJB terminal J-04 C and windshield wiper and washer switch terminal E • Windshield wiper and washer switch malfunction • PJB malfunction



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT WINDSHIELD WIPER AND WASHER SWITCH CONNECTOR** • Disconnect the windshield wiper and washer switch connector. • Inspect the windshield wiper and washer switch connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.

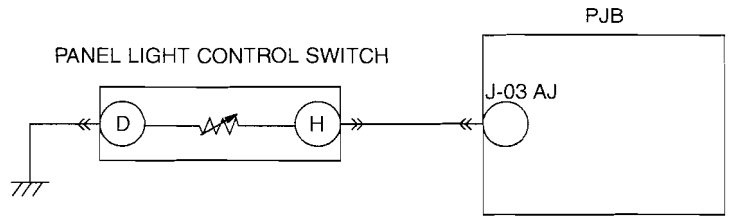
STEP	INSPECTION		ACTION
3	**INSPECT WINDSHIELD WIPER AND WASHER SWITCH SIGNAL CIRCUIT FOR SHORT TO GND** • Inspect for continuity between PJB terminal J-04 C (wiring harness-side) and body GND. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 5.
		No	Go to the next step.
4	**INSPECT WINDSHIELD WIPER AND WASHER SWITCH** • Inspect the windshield wiper and washer switch. (See 09-19-11 WINDSHIELD WIPER AND WASHER SWITCH INSPECTION.) • Is there any malfunction?	Yes	Replace the windshield wiper and washer switch, then go to the next step. (See 09-19-11 WIPER AND WASHER SWITCH REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B2212[CONTROL SYSTEM]

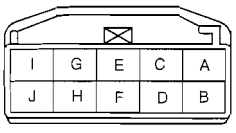
id0902j0835200

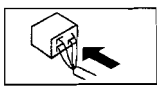
09-02E

DTC B2212	Panel light control circuit failure
DETECTION CONDITION	Input voltage from the panel light control switch is excessively low or high
POSSIBLE CAUSE	• Open circuit in wiring harness between PJB terminal J-03 AJ and panel light control switch terminal H • Short to power supply in wiring harness between PJB terminal J-03 AJ and panel light control switch terminal H • Short to GND in wiring harness between PJB terminal J-03 AJ and panel light control switch terminal H • Panel light control switch malfunction • PJB malfunction

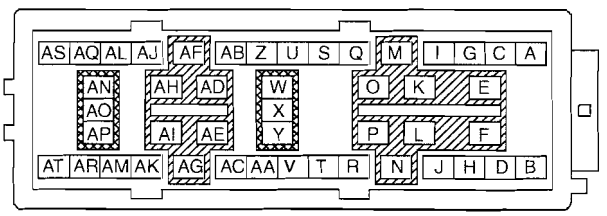


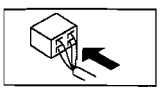
PANEL LIGHT CONTROL SWITCH WIRING HARNESS-SIDE CONNECTOR





PJB WIRING HARNESS-SIDE J-03 CONNECTOR





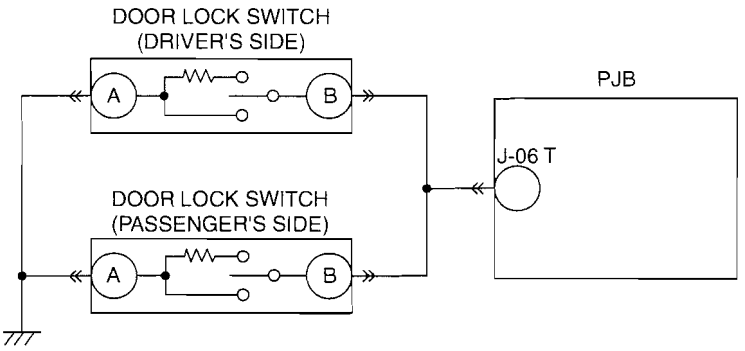
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT PANEL LIGHT CONTROL SWITCH CONNECTOR** • Turn the ignition switch off. • Disconnect the panel light control switch connector. • Inspect the panel light control switch connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
3	**INSPECT PANEL LIGHT CONTROL SWITCH CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between PJB terminal J-03 AJ (wiring harness-side) and panel light control switch terminal H (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 7.
4	**INSPECT PANEL LIGHT CONTROL SWITCH CIRCUIT FOR SHORT TO GND** • Inspect for continuity between PJB terminal J-03 AJ (wiring harness-side) and body GND. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 7.
		No	Go to the next step.
5	**INSPECT PANEL LIGHT CONTROL SWITCH CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between PJB terminal J-03 AJ (wiring harness-side) and body GND. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 7.
		No	Go to the next step.
6	**INSPECT PANEL LIGHT CONTROL SWITCH** • Inspect the panel light control switch. (See 09-18-27 PANEL LIGHT CONTROL SWITCH INSPECTION.) • Is there any malfunction?	Yes	Replace the panel light control switch, then go to the next step. (See 09-18-26 PANEL LIGHT CONTROL SWITCH REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

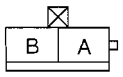
DTC B2218[CONTROL SYSTEM]

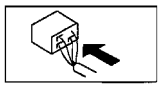
id0902j0839700

DTC B2218	Central locking switch circuit failure
DETECTION CONDITION	Short to GND in wiring harness between PJB and door lock switch (driver's side and passenger's side)
POSSIBLE CAUSE	• Short to GND in wiring harness between PJB terminal J-06 T and door lock switch terminal B • Door lock switch malfunction • PJB malfunction

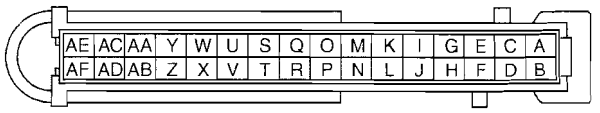


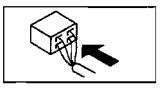
DOOR LOCK SWITCH WIRING HARNESS-SIDE CONNECTOR





PJB WIRING HARNESS-SIDE J-06 CONNECTOR





Diagnostic procedure

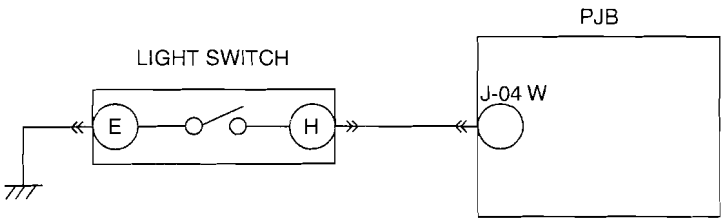
STEP	INSPECTION		ACTION
1	**INSPECT DOOR LOCK SWITCH CONNECTOR** • Disconnect the door lock switch connector. • Inspect the door lock switch connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT DOOR LOCK SWITCH SIGNAL CIRCUIT FOR SHORT TO GND** • Inspect for continuity between PJB terminal J-06 T (wiring harness-side) and body GND. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 5.
		No	Go to the next step.
4	**INSPECT DOOR LOCK SWITCH** • Inspect the door lock switch. (See 09-14-9 DOOR LOCK SWITCH INSPECTION.) • Is there any malfunction?	Yes	Replace the door lock switch, then go to the next step. (See 09-14-9 DOOR LOCK SWITCH REMOVAL/ INSTALLATION.)
		No	Go to the next step.

STEP	INSPECTION		ACTION
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

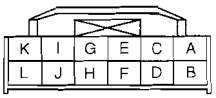
DTC B2254[CONTROL SYSTEM]

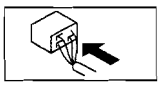
id0902j0835300

DTC B2254	Front fog light switch failure
DETECTION CONDITION	Short to GND in wiring harness between PJB and fog light switch
POSSIBLE CAUSE	• Short to GND in wiring harness between PJB terminal J-04 W and light switch terminal H • Light switch malfunction • PJB malfunction

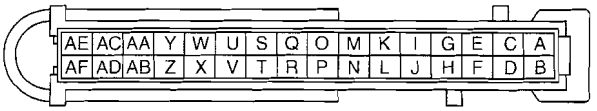


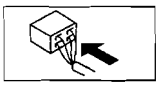
LIGHT SWITCH WIRING HARNESS-SIDE CONNECTOR





PJB WIRING HARNESS-SIDE J-04 CONNECTOR





Diagnostic procedure

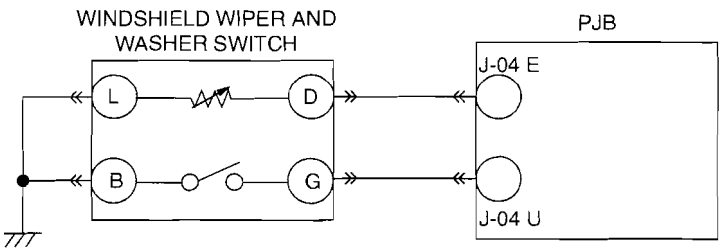
STEP	INSPECTION		ACTION
1	**INSPECT LIGHT SWITCH CONNECTOR** • Disconnect the light switch connector. • Inspect the light switch connector terminals for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT LIGHT SWITCH SIGNAL CIRCUIT FOR SHORT TO GND** • Inspect for continuity between PJB terminal J-04 W (wiring harness-side) and body GND. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 5.
		No	Go to the next step.

STEP	INSPECTION		ACTION
4	**INSPECT LIGHT SWITCH** • Inspect the light switch. (See 09-18-20 LIGHT SWITCH INSPECTION.) • Is there any malfunction?	Yes	Replace the light switch, then go to the next step. (See 09-18-20 LIGHT SWITCH REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

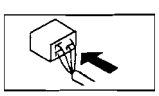
DTC B2259[CONTROL SYSTEM]

id0902j0832800

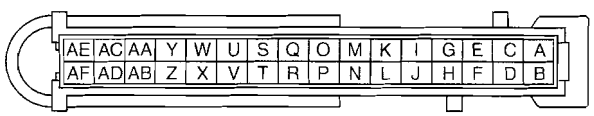
DTC B2259	**Front wiper variable intermittent switch circuit failure** **Intermittent wiper circuit failure**
DETECTION CONDITION	• Input voltage from the windshield wiper and washer switch (INT volume or sensitivity adjustment volume) is excessively low or high • Short to GND in wiring harness between PJB and windshield wiper and washer switch (INT)
POSSIBLE CAUSE	• Open circuit in wiring harness between PJB terminal J-04 U and windshield wiper and washer switch terminal G • Short to power supply in wiring harness between PJB terminal J-04 U and windshield wiper and washer switch terminal G • Short to GND in wiring harness between PJB terminal J-04 U and windshield wiper and washer switch terminal G • Short to GND in wiring harness between PJB terminal J-04 E and windshield wiper and washer switch terminal D • Windshield wiper and washer switch malfunction • PJB malfunction

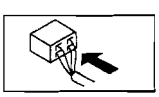


WINDSHIELD WIPER AND WASHER SWITCH WIRING HARNESS-SIDE CONNECTOR



PJB WIRING HARNESS-SIDE J-04 CONNECTOR





09-02E

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT WINDSHIELD WIPER AND WASHER SWITCH CONNECTOR** • Turn the ignition switch off. • Disconnect the windshield wiper and washer switch connector. • Inspect the windshield wiper and washer switch connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
3	**INSPECT WINDSHIELD WIPER AND WASHER SWITCH CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between PJB terminal J-04 U (wiring harness-side) and windshield wiper and washer switch terminal G (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 8.
4	**INSPECT WINDSHIELD WIPER AND WASHER SWITCH CIRCUIT FOR SHORT TO GND** • Inspect for continuity between PJB terminal J-04 U (wiring harness-side) and body GND. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 8.
		No	Go to the next step.
5	**INSPECT WINDSHIELD WIPER AND WASHER SWITCH CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between PJB terminal J-04 U (wiring harness-side) and body GND. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 8.
		No	Go to the next step.
6	**INSPECT WINDSHIELD WIPER AND WASHER SWITCH CIRCUIT FOR SHORT TO GND** • Inspect for continuity between PJB terminal J-04 E (wiring harness-side) and body GND. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 8.
		No	Go to the next step.
7	**INSPECT WINDSHIELD WIPER AND WASHER SWITCH** • Inspect the windshield wiper and washer switch. (See 09-19-11 WINDSHIELD WIPER AND WASHER SWITCH INSPECTION.) • Is there any malfunction?	Yes	Replace the windshield wiper and washer switch, then go to the next step. (See 09-19-11 WIPER AND WASHER SWITCH REMOVAL/INSTALLATION.)
		No	Go to the next step.
8	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B2477[CONTROL SYSTEM]

id0902j0802300

DTC B2477	Module configuration failure
DETECTION CONDITION	PJB data configuration error
POSSIBLE CAUSE	• Configuration has not been completed. • PJB malfunction

Diagnostic procedure

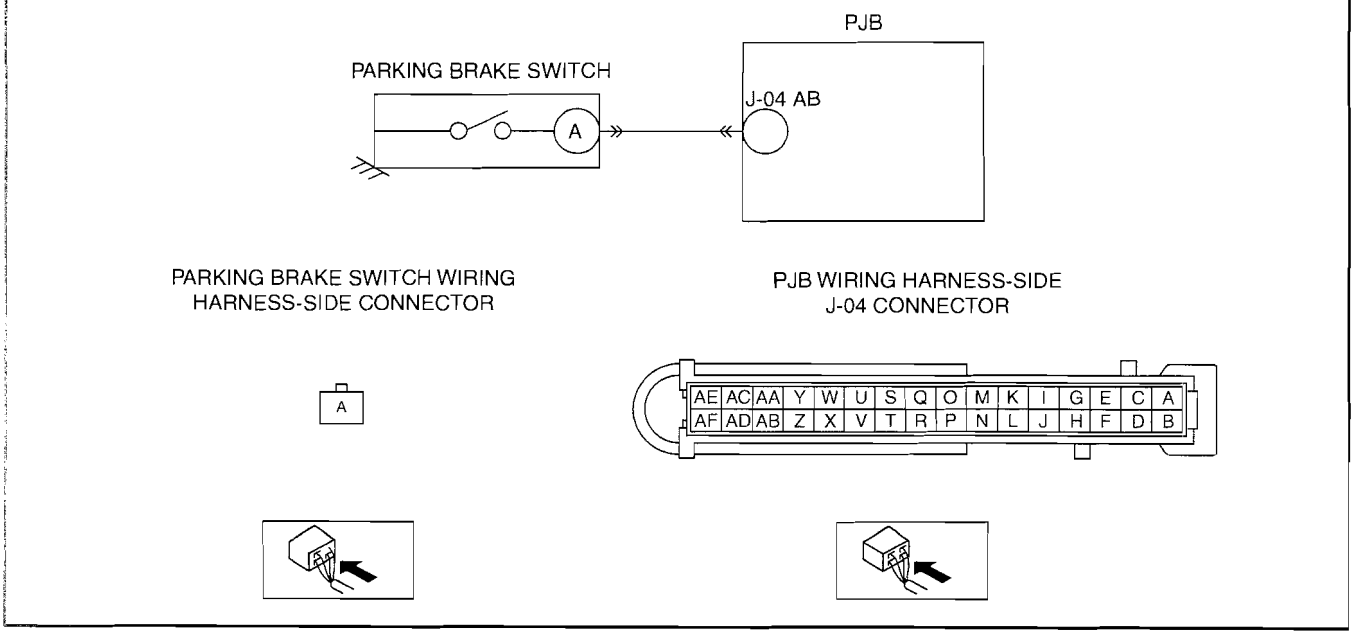
STEP	INSPECTION		ACTION
1	**INSPECT DTC** • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Perform PJB configuration procedure. (See 09-40-16 PASSENGER JUNCTION BOX (PJB) CONFIGURATION.) Go to the next step.
		No	Go to the next step.
2	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

09-02E

DTC B2479[CONTROL SYSTEM]

id0902j0833000

DTC B2479	Park brake switch circuit open
DETECTION CONDITION	Open circuit in wiring harness between PJB and parking brake switch
POSSIBLE CAUSE	• Open circuit in wiring harness between PJB terminal J-04 AB and parking brake switch terminal A • Parking brake switch malfunction • PJB malfunction



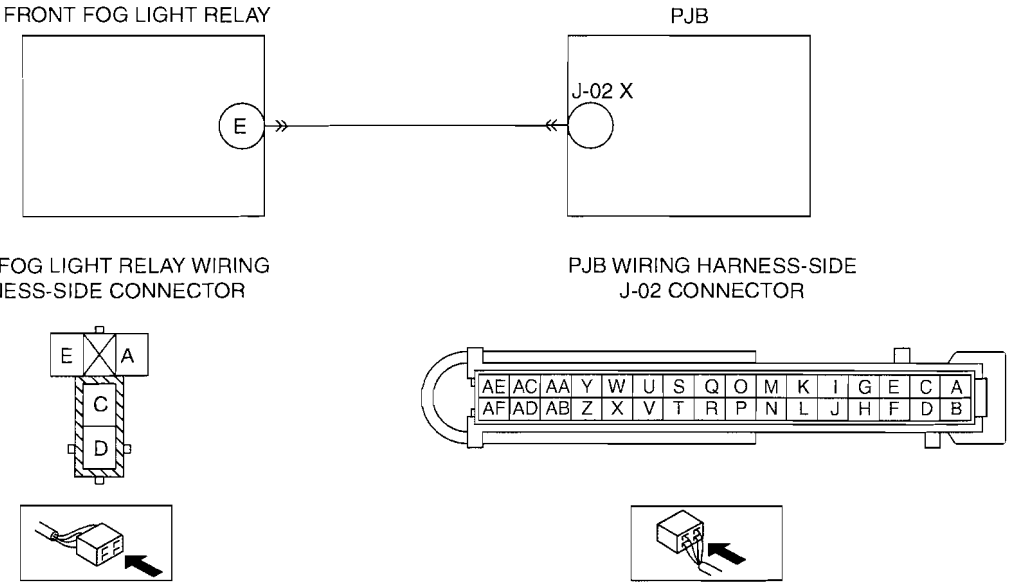
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT PARKING BRAKE SWITCH CONNECTOR** • Turn the ignition switch off. • Disconnect the parking brake switch connector. • Inspect the parking brake switch connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT PARKING BRAKE SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between PJB terminal J-04 AB (wiring harness-side) and parking brake switch terminal A (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 5.
4	**INSPECT PARKING BRAKE SWITCH** • Inspect the parking brake switch. (See 04-12-4 PARKING BRAKE SWITCH INSPECTION.) • Is there any malfunction?	Yes	Replace the parking brake switch, then go to the next step.
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B2512[CONTROL SYSTEM]

id0902j0902400

DTC B2512	Front fog relay short to battery
DETECTION CONDITION	Short to power supply or GND in wiring harness between PJB and front fog light relay
POSSIBLE CAUSE	• Open circuit in wiring harness between PJB terminal J-02 X and front fog light relay terminal E • Short to GND in wiring harness between PJB terminal J-02 X and front fog light relay terminal E • Short to power supply in wiring harness between PJB terminal J-02 X and front fog light relay terminal E • Front fog light relay malfunction • PJB malfunction



Diagnostic procedure

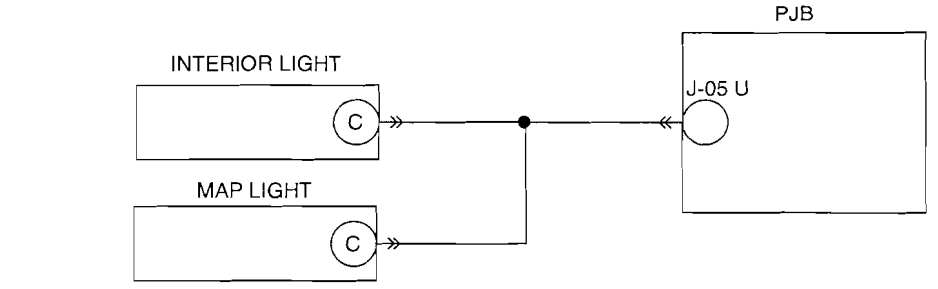
STEP	INSPECTION		ACTION
1	**INSPECT FRONT FOG LIGHT RELAY CONNECTOR** • Turn the ignition switch off. • Disconnect the front fog light relay connector. • Inspect the front fog light relay connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
3	**INSPECT FRONT FOG LIGHT RELAY CONTROL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between PJB terminal J-02 X (wiring harness-side) and front fog light relay terminal E (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open circuit, then go to Step 7.
4	**INSPECT FRONT FOG LIGHT RELAY CONTROL CIRCUIT FOR SHORT TO GND** • Inspect for continuity between PJB terminal J-02 X (wiring harness-side) and body GND. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 7.
		No	Go to the next step.

STEP	INSPECTION		ACTION
5	**INSPECT FRONT FOG LIGHT RELAY CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between PJB terminal J-02 X (wiring harness-side) and body GND. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 7.
		No	Go to the next step.
6	**INSPECT FRONT FOG LIGHT RELAY** • Inspect the front fog light relay. (See 09-21-3 RELAY INSPECTION.) • Is there any malfunction?	Yes	Replace the front fog light relay, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

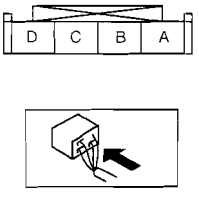
DTC B2555[CONTROL SYSTEM]

id0902j0835500

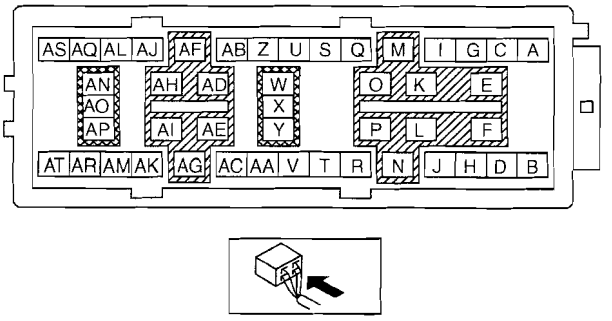
DTC B2555	Dome light output circuit short to battery
DETECTION CONDITION	Open circuit or short to power supply in wiring harness between PJB and interior lights
POSSIBLE CAUSE	• Short to power supply in wiring harness between PJB terminal J-05 U and interior light terminal C • Short to power supply in wiring harness between PJB terminal J-05 U and map light terminal C • Open circuit in wiring harness between PJB terminal J-05 U and interior light terminal C • Open circuit in wiring harness between PJB terminal J-05 U and map light terminal C • Interior light malfunction • Map light malfunction • PJB malfunction



INTERIOR LIGHT OR MAP LIGHT WIRING HARNESS-SIDE CONNECTOR



PJB WIRING HARNESS-SIDE J-05 CONNECTOR



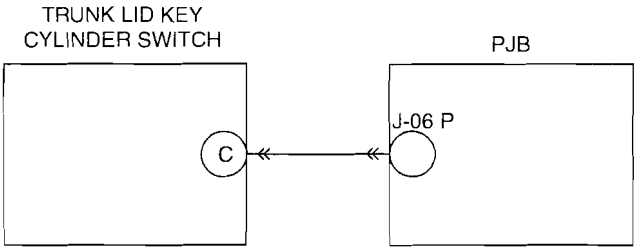
Diagnostic procedure

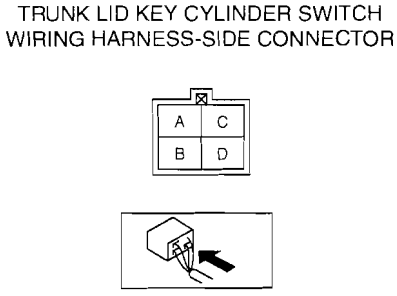
STEP	INSPECTION		ACTION
1	**INSPECT INTERIOR LIGHT AND MAP LIGHT CONNECTORS** • Turn the ignition switch off. • Disconnect the interior light and map light connectors. • Inspect the interior light and map light connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 6.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 6.
		No	Go to the next step.
3	**INSPECT INTERIOR LIGHT AND MAP LIGHT CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between PJB terminal J-05 U (wiring harness-side) and body GND. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 6.
		No	Go to the next step.
4	**INSPECT INTERIOR LIGHT AND MAP LIGHT CONTROL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between following terminals: — PJB terminal J-05 U (wiring harness-side) — interior light terminal C (wiring harness-side) — PJB terminal J-05 U (wiring harness-side) — map light terminal C (wiring harness-side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 6.
5	**INSPECT INTERIOR LIGHT AND MAP LIGHT** • Inspect the interior light and map light. (See 09-18-24 INTERIOR LIGHT INSPECTION, 09-18-23 MAP LIGHT INSPECTION.) • Is there any malfunction?	Yes	Replace the interior light or map light, then go to the next step. (See 09-18-24 INTERIOR LIGHT REMOVAL/INSTALLATION, 09-18-23 MAP LIGHT REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

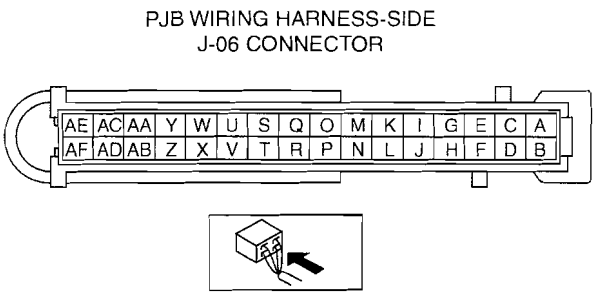
DTC B2559[CONTROL SYSTEM]

id0902j0835600

DTC B2559	Trunk lid lock/unlock switch circuit failure
DETECTION CONDITION	Short to GND in wiring harness between PJB and trunk lid key cylinder switch
POSSIBLE CAUSE	• Short to GND in wiring harness between PJB terminal J-06 P and trunk lid key cylinder switch terminal C • Trunk lid key cylinder switch malfunction • PJB malfunction







Diagnostic procedure

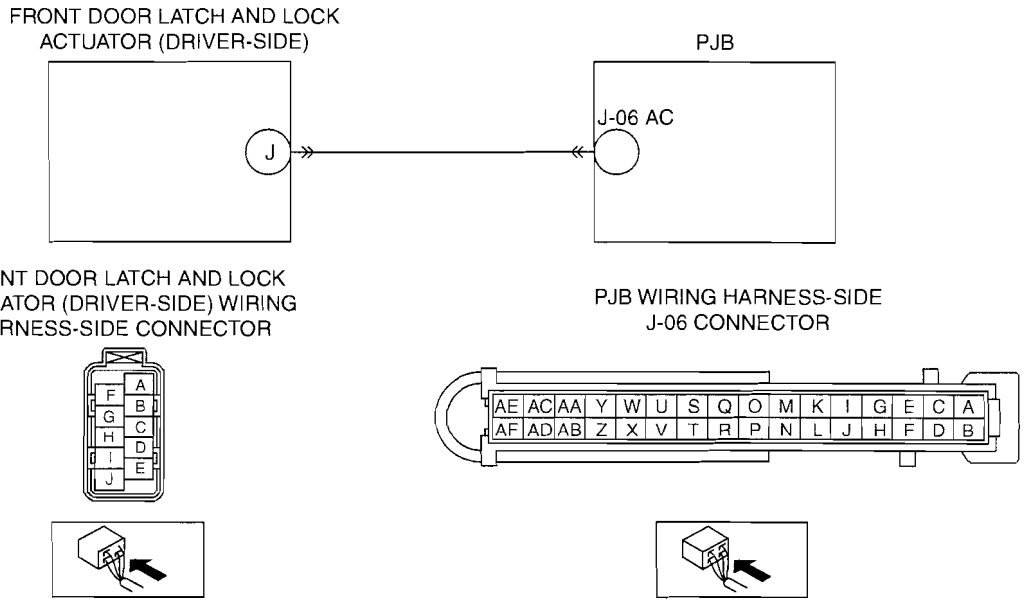
STEP	INSPECTION		ACTION
1	**INSPECT TRUNK LID KEY CYLINDER SWITCH CONNECTOR** • Disconnect the trunk lid key cylinder switch connector. • Inspect the trunk lid key cylinder switch connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT TRUNK LID KEY CYLINDER SWITCH SIGNAL CIRCUIT FOR SHORT TO GND** • Inspect for continuity between PJB terminal J-06 P (wiring harness-side) and body GND. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 5.
		No	Go to the next step.
4	**INSPECT TRUNK LID KEY CYLINDER SWITCH** • Inspect the trunk lid key cylinder switch. (See 09-14-28 TRUNK LID KEY CYLINDER SWITCH INSPECTION.) • Is there any malfunction?	Yes	Replace the trunk lid key cylinder switch, then go to the next step. (See 09-14-28 TRUNK LID KEY CYLINDER REMOVAL/INSTALLATION.)
		No	Go to the next step.

STEP	INSPECTION		ACTION
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B2574[CONTROL SYSTEM]

id0902j0833100

DTC B2574	Driver door lock switch short to ground
DETECTION CONDITION	Short to GND in wiring harness between PJB and driver-side door lock-link switch
POSSIBLE CAUSE	• Short to GND in wiring harness between PJB terminal J-06 AC and front door latch and lock actuator (driver-side) terminal J • Front door latch and lock actuator (driver-side) malfunction • PJB malfunction



Diagnostic procedure

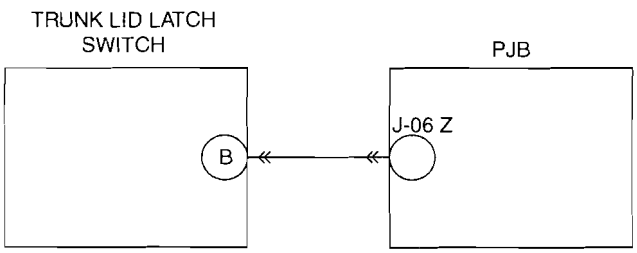
STEP	INSPECTION		ACTION
1	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (DRIVER-SIDE) CONNECTOR** • Disconnect the front door latch and lock actuator (driver-side) connector. • Inspect the front door latch and lock actuator (driver-side) connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.

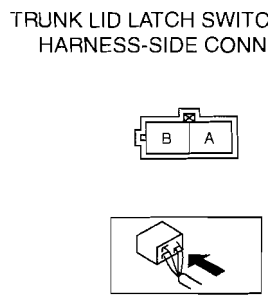
STEP	INSPECTION		ACTION
3	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (DRIVER-SIDE) SIGNAL CIRCUIT FOR SHORT TO GND** • Inspect for continuity between PJB terminal J-06 AC (wiring harness-side) and body GND. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 5.
		No	Go to the next step.
4	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (DRIVER-SIDE)** • Inspect the front door latch and lock actuator (driver-side). (See 09-14-6 FRONT DOOR LATCH AND LOCK ACTUATOR INSPECTION.) • Is there any malfunction?	Yes	Replace the front door latch and lock actuator (driver-side), then go to the next step. (See 09-14-5 FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

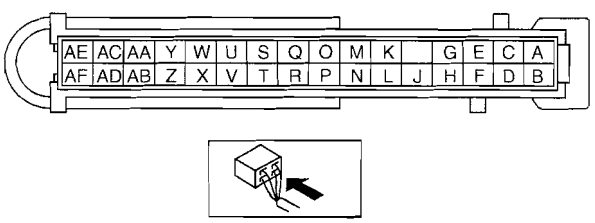
DTC B2721[CONTROL SYSTEM]

id0902j0833300

DTC B2721	**Liftgate/decklid ajar output short to ground**
DETECTION CONDITION	Short to GND in wiring harness between PJB and trunk lid latch switch
POSSIBLE CAUSE	• Short to GND in wiring harness between PJB terminal J-06 Z and trunk lid latch switch terminal B • Trunk lid latch switch malfunction • PJB malfunction







Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT TRUNK LID LATCH SWITCH CONNECTOR** • Disconnect the trunk lid latch switch connector. • Inspect the trunk lid latch switch connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT TRUNK LID LATCH SWITCH SIGNAL CIRCUIT FOR SHORT TO GND** • Inspect for continuity between PJB terminal J-06 Z (wiring harness-side) and body GND. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 5.
		No	Go to the next step.
4	**INSPECT TRUNK LID LATCH SWITCH** • Inspect the trunk lid latch switch. (See 09-14-29 TRUNK LID LATCH SWITCH INSPECTION.) • Is there any malfunction?	Yes	Replace the trunk lid latch switch, then go to the next step. (See 09-14-28 TRUNK LID LATCH REMOVAL/ INSTALLATION.)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B2897[CONTROL SYSTEM]

id0902j0835900

DTC B2897	**Auto light relay circuit failure**
DETECTION CONDITION	Short to power supply in PJB internal circuit between microcomputer and headlight LO relay
POSSIBLE CAUSE	• PJB malfunction

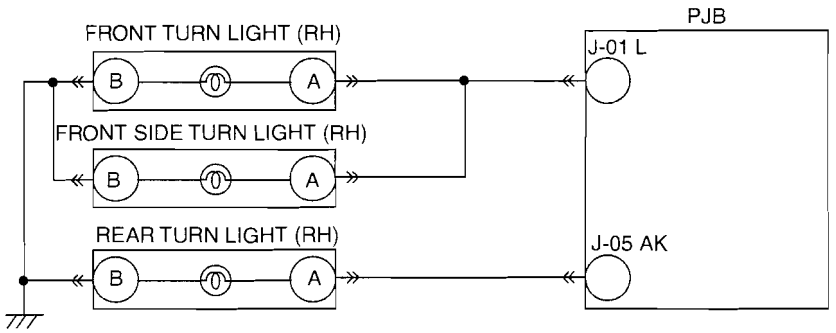
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT DTC** • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B2898[CONTROL SYSTEM]

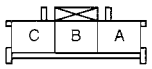
id0902j0836000

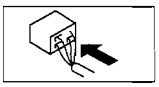
DTC B2898	Right turn signal indicator output failure
DETECTION CONDITION	• Open circuit or short to power supply or GND in wiring harness between PJB and turn light • Turn light bulb malfunction
POSSIBLE CAUSE	• Open circuit in wiring harness between PJB terminal J-01 L and front turn light (RH) terminal A or front side turn light (RH) terminal A • Short to power supply in wiring harness between PJB terminal J-01 L and front turn light (RH) terminal A or front side turn light (RH) terminal A • Short to GND in wiring harness between PJB terminal J-01 L and front turn light (RH) terminal A or front side turn light (RH) terminal A • Open circuit in wiring harness between PJB terminal J-05 AK and rear turn light (RH) terminal A • Short to power supply in wiring harness between PJB terminal J-05 AK and rear turn light (RH) terminal A • Short to GND in wiring harness between PJB terminal J-05 AK and rear turn light (RH) terminal A • Turn lights malfunction • PJB malfunction



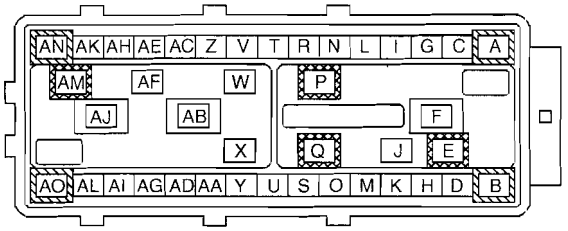
FRONT TURN LIGHT FRONT SIDE TURN LIGHT WIRING HARNESS-SIDE CONNECTOR

REAR TURN LIGHT WIRING HARNESS-SIDE CONNECTOR

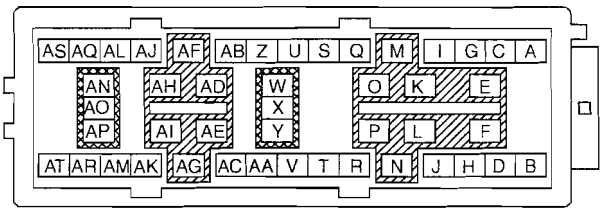


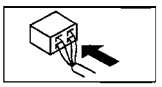


PJB WIRING HARNESS-SIDE J-01 CONNECTOR



PJB WIRING HARNESS-SIDE J-05 CONNECTOR





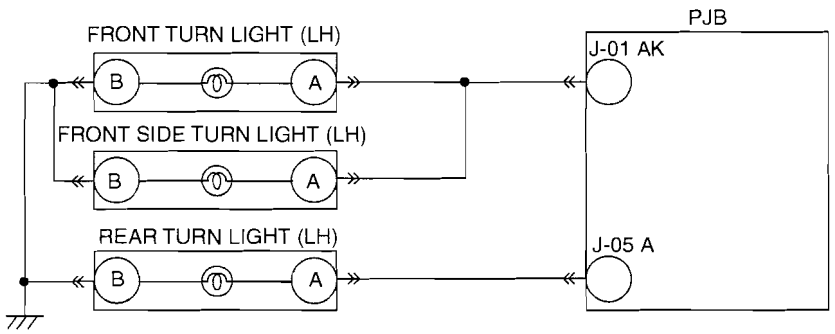
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT TURN LIGHT CONNECTOR** • Turn the ignition switch off. • Disconnect all the turn light (RH) connectors. • Inspect all the turn light (RH) connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
3	**INSPECT TURN LIGHT CONTROL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between following terminals: — PJB terminal J-01 L (wiring harness-side) — front turn light (RH) terminal A (wiring harness-side) — PJB terminal J-01 L (wiring harness-side) — front side turn light (RH) terminal A (wiring harness-side) — PJB terminal J-05 AK (wiring harness-side) — rear turn light (RH) terminal A (wiring harness-side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 7.
4	**INSPECT TURN LIGHT CONTROL CIRCUIT FOR SHORT TO GND** • Inspect for continuity between following terminals: — PJB terminal J-01 L (wiring harness-side) — body GND — PJB terminal J-01 L (wiring harness-side) — body GND — PJB terminal J-05 AK (wiring harness-side) — body GND • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 7.
		No	Go to the next step.
5	**INSPECT TURN LIGHT CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between following terminals: — PJB terminal J-01 L (wiring harness-side) — body GND — PJB terminal J-01 L (wiring harness-side) — body GND — PJB terminal J-05 AK (wiring harness-side) — body GND • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 7.
		No	Go to the next step.
6	**INSPECT TURN LIGHT** • Inspect all the turn lights. • Is there any malfunction?	Yes	Replace the turn lights, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B2899[CONTROL SYSTEM]

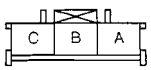
id0902j0836100

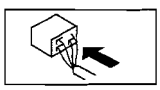
DTC B2899	Left turn signal indicator output failure
DETECTION CONDITION	• Open circuit or short to power supply or GND in wiring harness between PJB and turn light • Turn light bulb malfunction
POSSIBLE CAUSE	• Open circuit in wiring harness between PJB terminal J-01 AK and front turn light (LH) terminal A or front side turn light (LH) terminal A • Short to power supply in wiring harness between PJB terminal J-01 AK and front turn light (LH) terminal A or front side turn light (LH) terminal A • Short to GND in wiring harness between PJB terminal J-01 AK and front turn light (LH) terminal A or front side turn light (LH) terminal A • Open circuit in wiring harness between PJB terminal J-05 A and rear turn light (LH) terminal A • Short to power supply in wiring harness between PJB terminal J-05 A and rear turn light (LH) terminal A • Short to GND in wiring harness between PJB terminal J-05 A and rear turn light (LH) terminal A • Turn lights malfunction • PJB malfunction



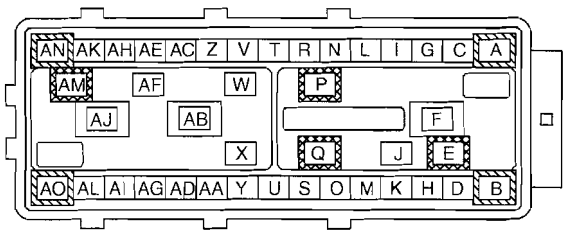
FRONT TURN LIGHT FRONT SIDE TURN LIGHT WIRING HARNESS-SIDE CONNECTOR

REAR TURN LIGHT WIRING HARNESS-SIDE CONNECTOR

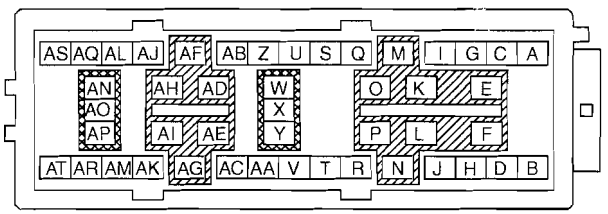


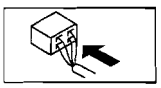


PJB WIRING HARNESS-SIDE J-01 CONNECTOR



PJB WIRING HARNESS-SIDE J-05 CONNECTOR





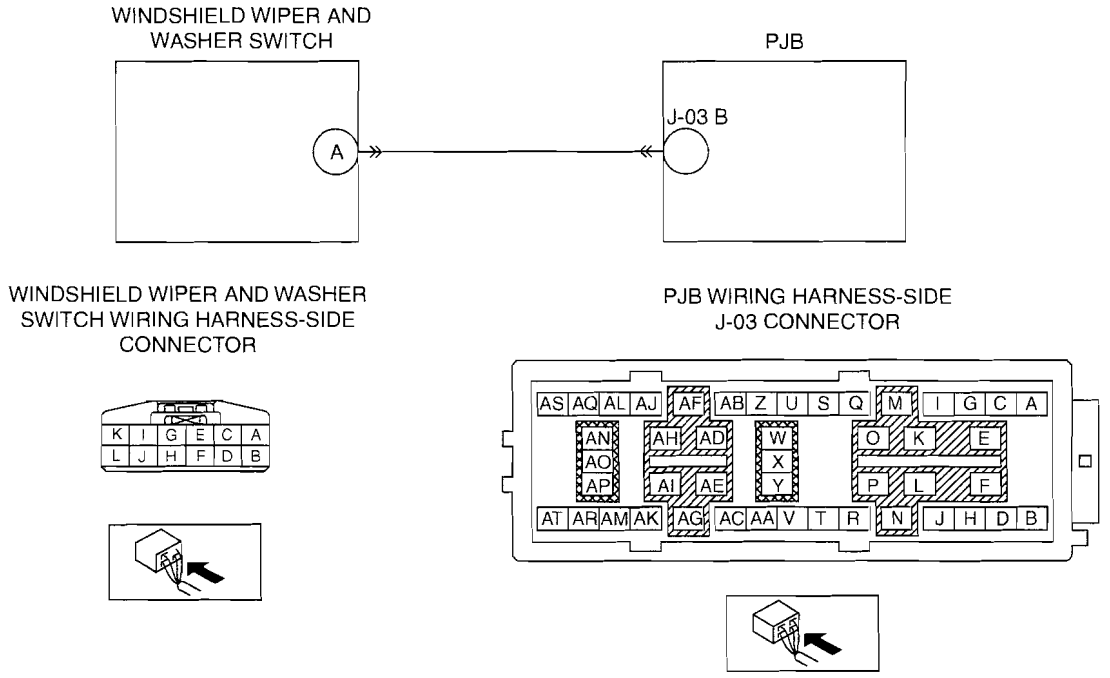
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT TURN LIGHT CONNECTOR** • Turn the ignition switch off. • Disconnect all the turn light (LH) connectors. • Inspect all the turn light (LH) connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
3	**INSPECT TURN LIGHT CONTROL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between following terminals: — PJB terminal J-01 AK (wiring harness-side) — front turn light (LH) terminal A (wiring harness-side) — PJB terminal J-01 AK (wiring harness-side) — front side turn light (LH) terminal A (wiring harness-side) — PJB terminal J-05 A (wiring harness-side) — rear turn light (LH) terminal A (wiring harness-side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 7.
4	**INSPECT TURN LIGHT CONTROL CIRCUIT FOR SHORT TO GND** • Inspect for continuity between following terminals: — PJB terminal J-01 AK (wiring harness-side) — body GND — PJB terminal J-01 AK (wiring harness-side) — body GND — PJB terminal J-05 A (wiring harness-side) — body GND • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 7.
		No	Go to the next step.
5	**INSPECT TURN LIGHT CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between following terminals: — PJB terminal J-01 AK (wiring harness-side) — body GND — PJB terminal J-01 AK (wiring harness-side) — body GND — PJB terminal J-05 A (wiring harness-side) — body GND • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 7.
		No	Go to the next step.
6	**INSPECT TURN LIGHT** • Inspect all the turn lights. • Is there any malfunction?	Yes	Replace the turn lights, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B2966[CONTROL SYSTEM]

id0902j0836200

DTC B2966	Front washer switch stuck
DETECTION CONDITION	Windshield washer switch stuck ON position
POSSIBLE CAUSE	• Short to power supply in wiring harness between PJB terminal J-03 B and windshield wiper and washer switch terminal A • Windshield wiper and washer switch malfunction • PJB malfunction



Diagnostic procedure

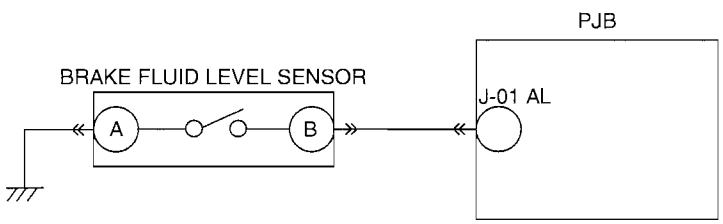
STEP	INSPECTION		ACTION
1	**INSPECT WINDSHIELD WIPER AND WASHER SWITCH CONNECTOR** • Turn the ignition switch off. • Disconnect the windshield wiper and washer switch connector. • Inspect the windshield wiper and washer switch connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT WINDSHIELD WIPER AND WASHER SWITCH SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between PJB terminal J-03 B (wiring harness-side) and body GND. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 5.
		No	Go to the next step.

STEP	INSPECTION		ACTION
4	**INSPECT WINDSHIELD WIPER AND WASHER SWITCH** • Inspect the windshield wiper and washer switch. (See 09-19-11 WINDSHIELD WIPER AND WASHER SWITCH INSPECTION.) • Is there any malfunction?	Yes	Replace the windshield wiper and washer switch, then go to the next step. (See 09-19-11 WIPER AND WASHER SWITCH REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Turn the ignition switch to LOCK position then ON position. • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

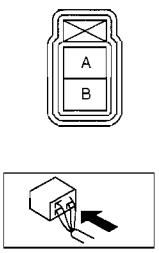
DTC C1189[CONTROL SYSTEM]

id0902j0836600

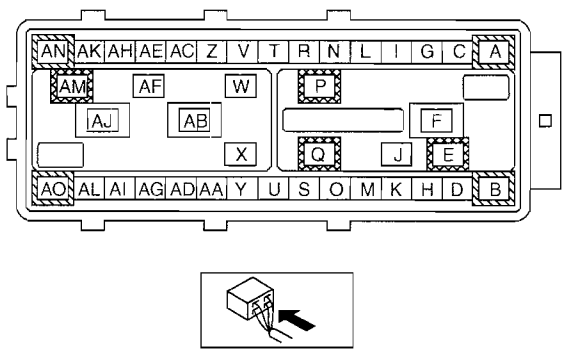
DTC C1189	**Brake fluid level sensor input circuit open**
DETECTION CONDITION	Open circuit in wiring harness between PJB and brake fluid level sensor
POSSIBLE CAUSE	• Open circuit in wiring harness between PJB terminal J-01 AL and brake fluid level sensor terminal B • Open circuit in wiring harness between brake fluid level sensor terminal A and body GND • Brake fluid level sensor malfunction • PJB malfunction



BRAKE FLUID LEVEL SENSOR WIRING HARNESS-SIDE CONNECTOR



PJB WIRING HARNESS-SIDE J-01 CONNECTOR



09-02E

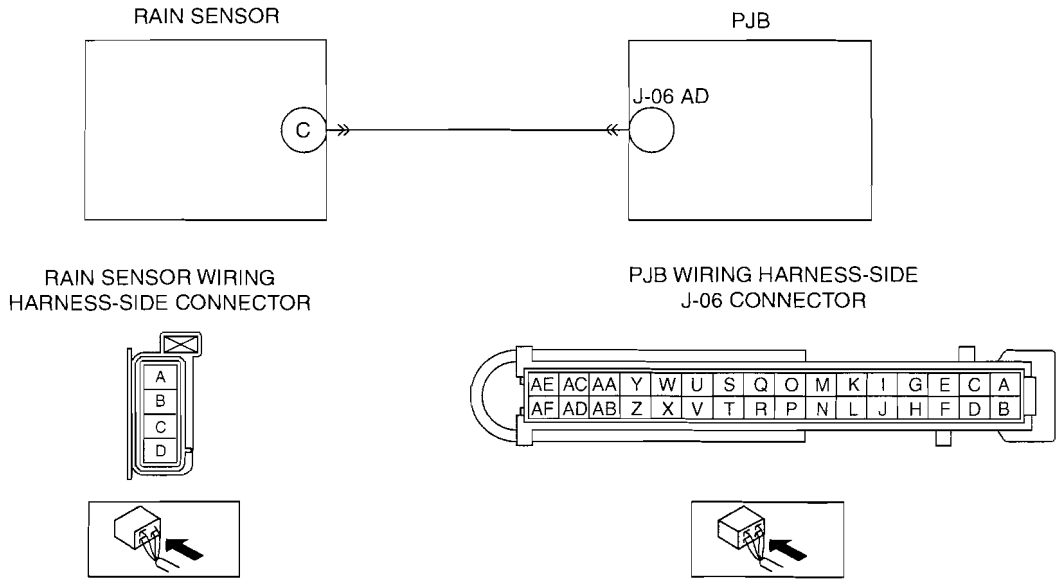
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT BRAKE FLUID LEVEL SENSOR CONNECTOR** • Turn the ignition switch off. • Disconnect the brake fluid level sensor connector. • Inspect the brake fluid level sensor connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT BRAKE FLUID LEVEL SENSOR SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between following terminals: — PJB terminal J-01 AL (wiring harness-side) — brake fluid level sensor terminal B (wiring harness-side) — Brake fluid level sensor terminal A (wiring harness-side) — body GND • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 5.
4	**INSPECT BRAKE FLUID LEVEL SENSOR** • Inspect the brake fluid level sensor. (See 04-11-11 BRAKE FLUID LEVEL SENSOR INSPECTION.) • Is there any malfunction?	Yes	Replace the brake fluid level sensor, then go to the next step.
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	Troubleshooting completed.

DTC U2030[CONTROL SYSTEM]

id0902j0833400

DTC U2030	Rain sensor communication fault (If equipped, for Canada only.)
DETECTION CONDITION	Communication error to rain sensor
POSSIBLE CAUSE	• Open circuit in wiring harness between PJB terminal J-06 AD and rain sensor terminal C • Short to power supply in wiring harness between PJB terminal J-06 AD and rain sensor terminal C • Short to GND in wiring harness between PJB terminal J-06 AD and rain sensor terminal C • Rain sensor malfunction • PJB malfunction



09-02E

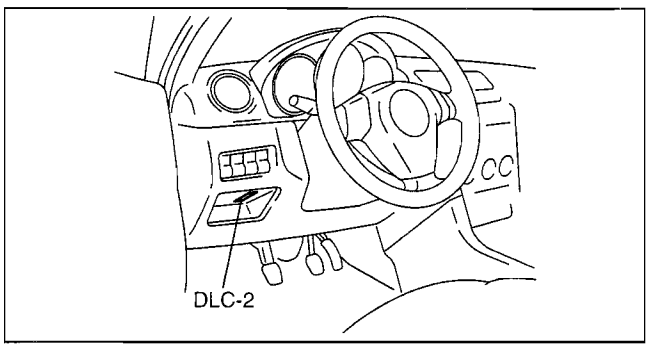
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT RAIN SENSOR CONNECTOR** • Turn the ignition switch off. • Disconnect the rain sensor connector. • Inspect the rain sensor connector terminals for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 6.
		No	Go to the next step.
2	**INSPECT PJB CONNECTOR** • Disconnect the PJB connector. • Inspect the PJB connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 6.
		No	Go to the next step.
3	**INSPECT RAIN SENSOR CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between PJB terminal J-06 AD (wiring harness-side) and rain sensor terminal C (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 6.
4	**INSPECT RAIN SENSOR SIGNAL CIRCUIT FOR SHORT TO GND** • Inspect for continuity between PJB terminal J-06 AD (wiring harness-side) and body GND. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 6.
		No	Go to the next step.

STEP	INSPECTION		ACTION
5	**INSPECT RAIN SENSOR SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between PJB terminal J-06 AD (wiring harness-side) and body GND. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to the next step.
		No	Replace the Rain sensor, then go to the next step. (See 09-19-16 RAIN SENSOR REMOVAL/ INSTALLATION.)
6	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PJB memory using the M-MDS. • Perform the self-test. (See 09-02E-68 PJB SELF-TEST[CONTROL SYSTEM].) • Is the same DTC present?	Yes	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
		No	Troubleshooting completed.

PJB SELF-TEST[CONTROL SYSTEM]

id0902j0836800



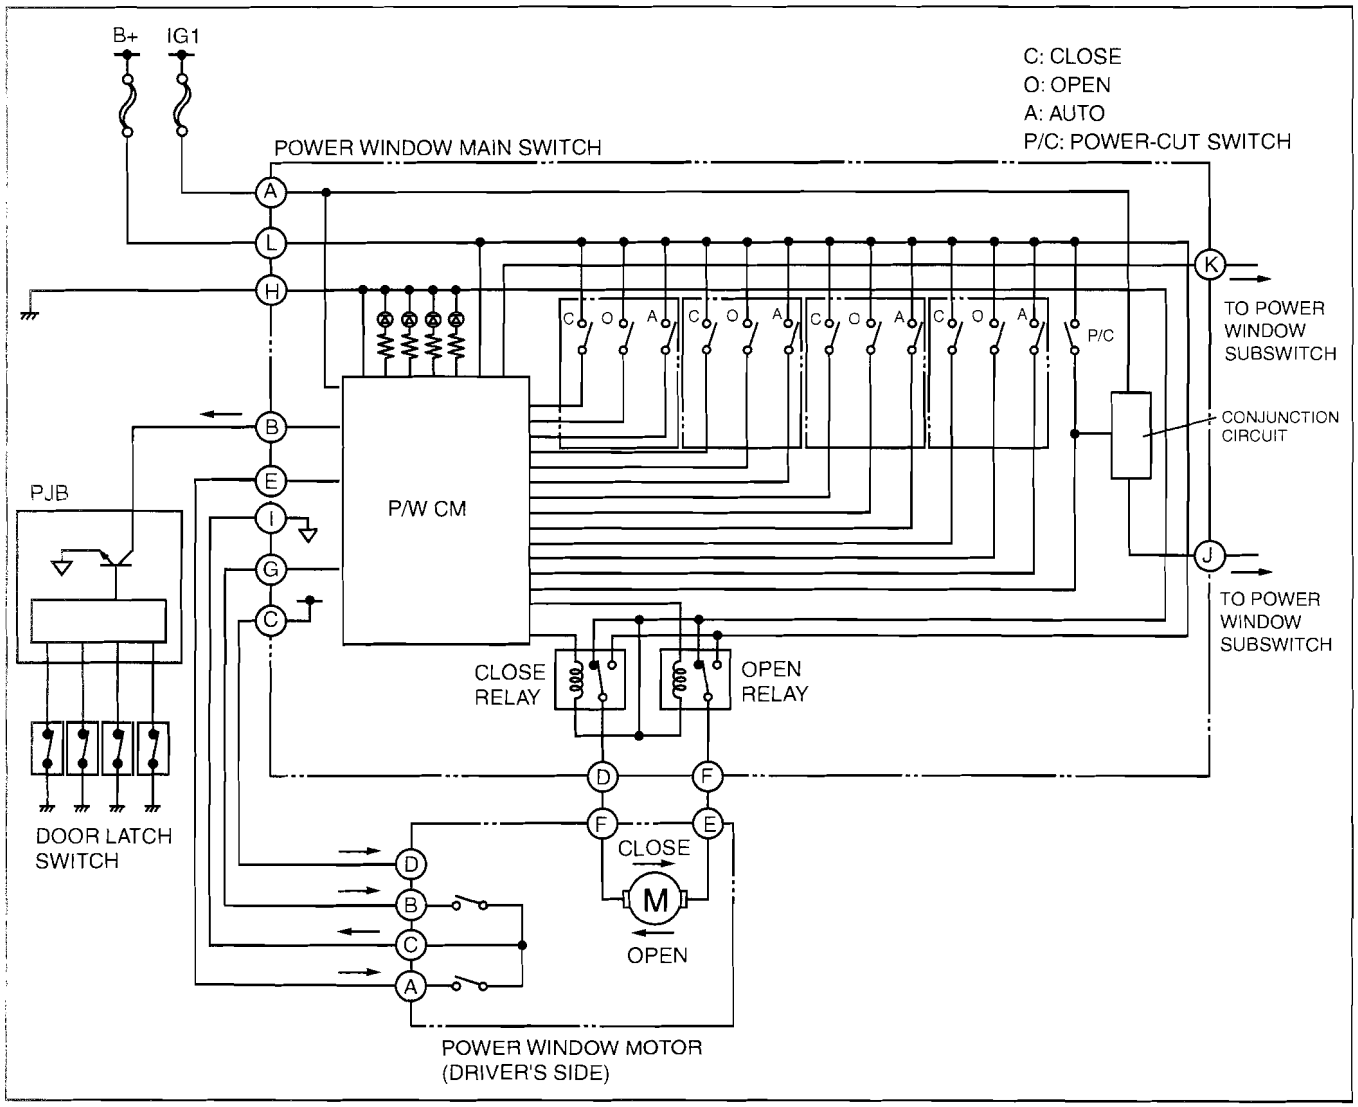
B3E0102W003

1. Connect the M-MDS to the DLC-2.
2. Set up the M-MDS (including the vehicle recognition).
3. Verify the following vehicle conditions:
   - Ignition switch is at ON position.
   - All the switches are turned off (except the ignition switch).
   - All the doors, hood, and trunk lid or liftgate are closed.
   - All the doors, and trunk lid or liftgate are unlocked.
   - Parking brake lever is pulled.
4. Perform procedures according to directions on the M-MDS screen.
5. Verify if any DTCs are displayed.
   - If any DTCs are displayed, perform the troubleshooting according to the corresponding DTC inspection.
6. Disconnect the M-MDS.

09-03A SYMPTOM TROUBLESHOOTING [POWER WINDOW SYSTEM]

POWER WINDOW SYSTEM WIRING DIAGRAM[POWER WINDOW SYSTEM]

id0903a0822500

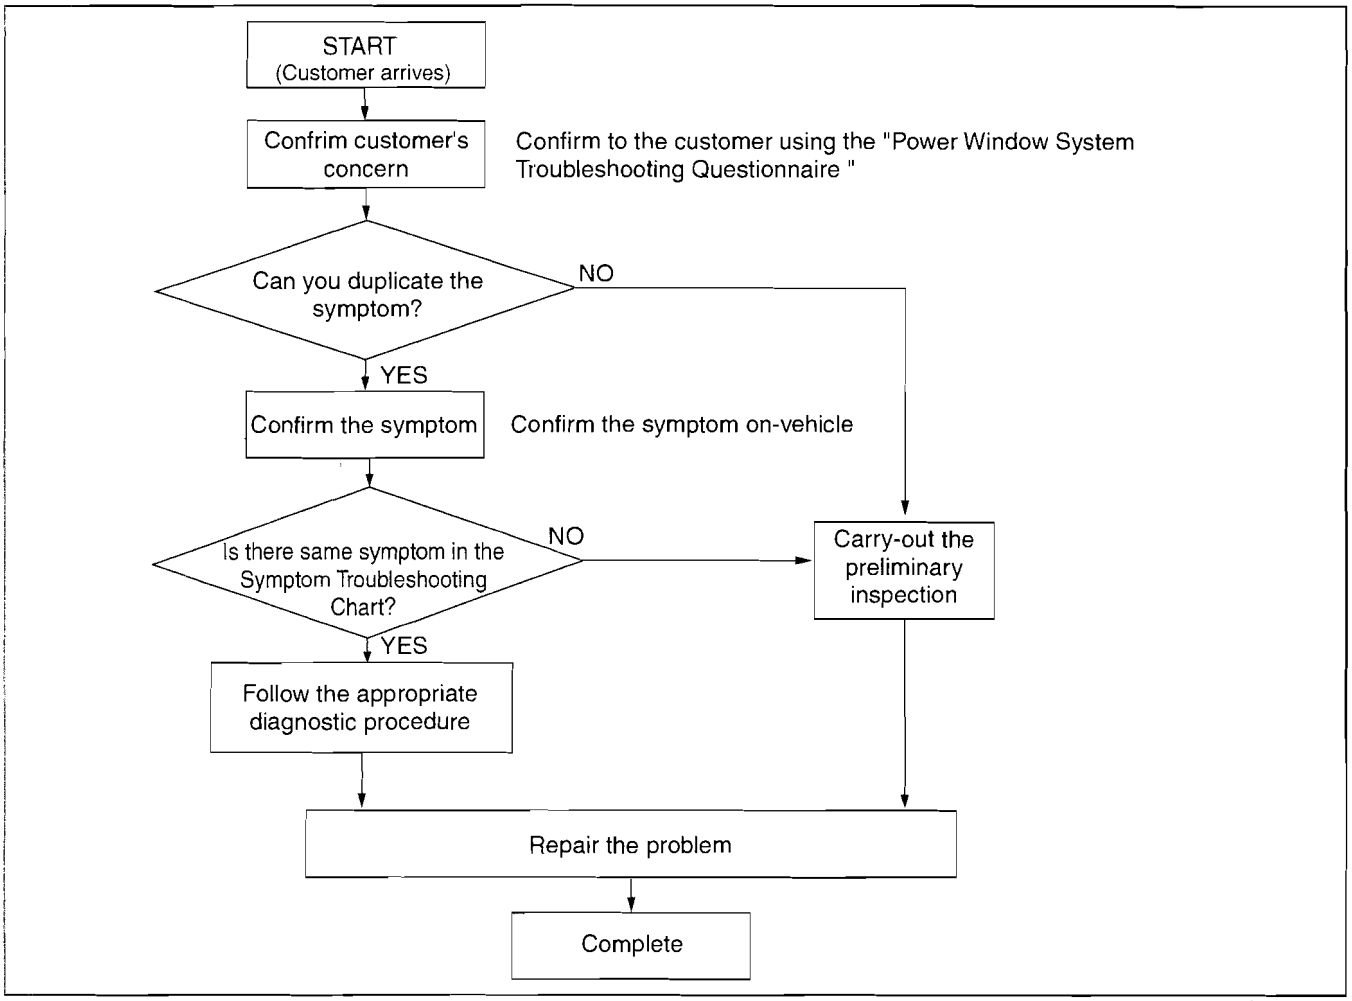


am3zzw0000214

FOREWORD[POWER WINDOW SYSTEM]

id0903a0805400

Troubleshooting Procedure



am3uuw0000015

- Slightly shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions.

POWER WINDOW SYSTEM TROUBLESHOOTING QUESTIONNAIRE[POWER WINDOW SYSTEM]

id0903a0835500

Date :

When did the malfunction first occur ?				
Weather conditions	☐Fair weather ☐Cloudy ☐Rain ☐Snow ☐Other ( )		Outside temperature	Approx. °F
Driving conditions	☐Driving ☐Stopped (Engine is : ☐Running ☐Stopped)			
Duplicate symptom?	☐YES ☐NO	Frequency	☐Always ☐Sometimes (times/month)	
Road conditions	☐City ☐Outer city ☐Freeway ☐Other ( ) / ☐Paved ☐Dirt road			

*Follow the appropriate diagnostic procedures shown below or perform the basic troubleshooting flow.

☐(No.1) The auto open function on the driver's side power window inoperative.

☐(No.2) The driver's side power window is inoperative.

☐(No.3) All power windows other than driver's side do not operate using the power window subswitch.

☐(No.4) All power windows other than driver's side do not operate using the power window main switch.

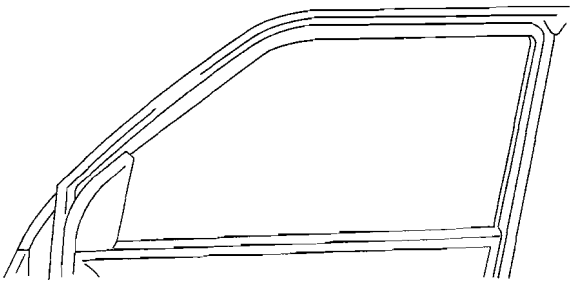
☐(No.5) All power windows are inoperative.

☐(No.6) Door glass reverses even though the glass does not encounter a foreign object while it is moving up in automatic mode.

Please clarify the position where the driver side front door glass opens automatically. ☐Completely closed position
☐Approx. ( )mm lower than completely closed position ☐Approx. ( )mm upper than the completely open position.

☐(No.7) Abnormal noise while the door glass is opening or closing.

☐Other (Describe the symptom below if the symptom does not appear in the above list.)



Please describe the conditions when the malfunction occurs.
(Example) : When the outer mirrors are operated

Please describe the conditions under which the system returns to normal operation after malfunctioning.
(Example) : The ignition switch is turned to the ON position after inserting the ignition key into the key cylinder

am3uuw0000054

SYMPTOM TROUBLESHOOTING CHART[POWER WINDOW SYSTEM]

id0903a0805600

No.	Malfunction symptom
1	09-03A-6 No.1 THE AUTO OPEN FUNCTION ON THE DRIVER'S SIDE POWER WINDOW IS INOPERATIVE[POWER WINDOW SYSTEM]
2	09-03A-6 No.2 THE DRIVER'S SIDE POWER WINDOW IS INOPERATIVE[POWER WINDOW SYSTEM]
3	09-03A-7 No.3 ALL POWER WINDOWS OTHER THAN DRIVER'S SIDE DO NOT OPERATE USING THE POWER WINDOW SUBSWITCH[POWER WINDOW SYSTEM]
4	09-03A-7 No.4 ALL POWER WINDOWS OTHER THAN DRIVER'S SIDE DO NOT OPERATE USING THE POWER WINDOW MAIN SWITCH[POWER WINDOW SYSTEM]
5	09-03A-8 No.5 ALL POWER WINDOWS ARE INOPERATIVE[POWER WINDOW SYSTEM]
6	09-03A-10 No.6 DOOR GLASS REVERSES EVEN THOUGH THE GLASS DOES NOT ENCOUNTER A FOREIGN OBJECT WHILE IT IS MOVING UP IN AUTOMATIC MODE[POWER WINDOW SYSTEM]
7	09-03A-12 No.7 ABNORMAL NOISE WHILE THE DOOR GLASS IS OPENIGN OR CLOSING[POWER WINDOW SYSTEM]

POWER WINDOW SYSTEM PRELIMINARY INSPECTION[POWER WINDOW SYSTEM]

id0903a0831700

Manual Open/close Function Inspection

STEP	INSPECTION		ACTION
1	• Turn the ignition switch to the ON position. • Operate the power window using the manual open/close function on the power window main switch. • Does the power window operate properly?	Yes	Go to the next step.
		No	• Inspect the power window main switch and the wiring harness. • Repair or replace malfunctioning parts.
2	• Set the power cut switch to the UNLOCK position. • Operate the power window using the power window subswitch. • Does the power window operate properly?	Yes	Go to the next step.
		No	• Inspect the power window subswitch and the wiring harness. • Repair or replace malfunctioning parts.
3	• Set the power cut switch to the LOCK position. • Operate all power windows other than the driver side. • Does the power window operate properly?	Yes	• Inspect the power cut switch and the wiring harness. • Replace the power window main switch.
		No	• Manual open/close function is normal. • Perform the auto open/close function inspection.

Auto Open Function (Driver's Side) Inspection

STEP	INSPECTION		ACTION
1	• Turn the ignition switch to the ON position. • Operate the power window using the auto open function on the power window main switch. • Does the power window operate properly?	Yes	Go to the next step.
		No	Go to 09-03A-6 No.1 THE AUTO OPEN FUNCTION ON THE DRIVER'S SIDE POWER WINDOW IS INOPERATIVE[POWER WINDOW SYSTEM].
2	• Operate the power window main switch to the close position while the power window is opening. • Does the power window operation stop?	Yes	Auto open function is normal.
		No	• Replace the power window main switch (power window control unit is malfunctioning.)

No.1 THE AUTO OPEN FUNCTION ON THE DRIVER'S SIDE POWER WINDOW IS INOPERATIVE[POWER WINDOW SYSTEM]

id0903a0841100

1	The auto open function on the driver's side power window is inoperative
POSSIBLE CAUSE	• No power supply to power window main switch • Power window main switch malfunction (power window control unit malfunction, auto switch malfunction)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Perform the Auto Open Function (Driver's side) Inspection in the POWER WINDOW SYSTEM PRELIMINARY INSPECTION. (See 09-03A-5 POWER WINDOW SYSTEM PRELIMINARY INSPECTION[POWER WINDOW SYSTEM].) • Is the malfunctioning part detected?	Yes	Repair or replace malfunctioning part according to inspection results.
		No	Go to NO.2 THE DRIVER'S SIDE POWER WINDOW IS INOPERATIVE.

No.2 THE DRIVER'S SIDE POWER WINDOW IS INOPERATIVE[POWER WINDOW SYSTEM]

id0903a0831100

2	The driver's side power window is inoperative.
POSSIBLE CAUSE	• Power supply circuit or ground circuit malfunction — Burnt fuse — Open or short circuit in wiring harness between fuse and power window main switch — Open or short circuit in wiring harness between power window main switch and power window motor — Open or short circuit in wiring harness between power window main switch and ground • Power window main switch malfunction • Power window motor malfunction • Power window regulator malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Turn the ignition switch to the ON position. • Does the LED on the power window main switch illuminate?	Yes	Go to Step 4.
		No	Go to the next step.
2	• Operate all power windows other than the driver's side window using the power window main switch. • Does the power window operate properly?	Yes	Go to the next step.
		No	Inspect for an open or short circuit in the following wiring harnesses. Inspect the connector connections (damage/pulled-out pins, corrosion): • P/WIND L 30A fuse (at PJB)—PJB terminal AO—Power window main switch terminal E • Power window main switch terminal L—ground. Repair or replace if necessary.
3	• Is the P/WIND L 30 A fuse (at PJB) normal?	Yes	Replace the power window main switch. (See 09-12-13 POWER WINDOW MAIN SWITCH REMOVAL/INSTALLATION.)
		No	Inspect the following: • Short circuit in B+ power supply wiring harness • Short circuit in power window motor Repair or replace if necessary. Replace with the appropriate standard fuse.
4	• Measure the voltage at the power window main switch. (power window motor output terminal) while operating the power window using the power window main switch. • Is the voltage B+? (Open: terminal P/ close: terminal N)	Yes	Go to the next step.
		No	Replace the power window main switch. (See 09-12-13 POWER WINDOW MAIN SWITCH REMOVAL/INSTALLATION.)
5	• Measure the voltage at the power window motor. (battery power supply terminal) while operating the power window using the power window motor. • Is the voltage B+? (Open: terminal E/ close: terminal F)	Yes	Go to the next step.
		No	Inspect for an open or short circuit in the wiring harness between the power window main switch and the power window motor. Inspect the power window main switch and power window motor connector connections. (damage/pulled-out pins, corrosion) Repair or replace if necessary.

STEP	INSPECTION		ACTION
6	• Operate the driver's side power window using the power window main switch. • Does the power window motor operate (rotate)? **Caution** • **If the power window motor temperature is high, the motor may not rotate due to the motor internal bimetal function. Leave it untouched for about 3 min to cool it down, then reinspect.**	Yes	Go to the next step.
		No	Replace the power window motor. (See 09-12-12 POWER WINDOW MOTOR REMOVAL/INSTALLATION.)
7	• Remove the door glass from the carrier plate. • Make sure that the door glass moves smoothly using your hand. • Does the door glass move smoothly?	Yes	Replace the power window regulator. (See 09-12-8 FRONT POWER WINDOW REGULATOR REMOVAL/ INSTALLATION.)
		No	Inspect for a bent regulator guide or other possible malfunction. If normal, replace the door glass run-channel.

No.3 ALL POWER WINDOWS OTHER THAN DRIVER'S SIDE DO NOT OPERATE USING THE POWER WINDOW SUBSWITCH[POWER WINDOW SYSTEM]

id0903a0831200

3	**All power windows other than driver's side do not operate using the power window subswitch.**
POSSIBLE CAUSE	• Open or short circuit in power window subswitch wiring harness (battery power supply circuit). • Power window subswitch malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Turn the ignition switch to the ON position. • Set the power cut-switch to the UNLOCK position. • Measure the voltage at power window subswitch terminal A. • Is the voltage B+?	Yes	Replace the power window subswitch. (See 09-12-15 POWER WINDOW SUBSWITCH REMOVAL/ INSTALLATION.)
		No	Inspect for an open or short circuit in the wiring harness between PJM terminal AO (left rear), terminal AN (right front, right rear) and the power window subswitch. Inspect the power window subswitch connector connection. (damage/pulled-out pins, corrosion) Repair or replace if necessary.

No.4 ALL POWER WINDOWS OTHER THAN DRIVER'S SIDE DO NOT OPERATE USING THE POWER WINDOW MAIN SWITCH[POWER WINDOW SYSTEM]

id0903a0831300

4	**All power windows other than driver's side do not operate using the power window main switch**
POSSIBLE CAUSE	• Open or short circuit in wiring harness between ignition switch (IG1) and power window main switch (IG1). • Power window main switch malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Turn the ignition switch to the ON position. • Set the power cut-switch to the UNLOCK position. • Operate all power windows other than the driver's side using the power window main switch. • Do any power windows operate?	Yes	Replace the power window main switch. (See 09-12-13 POWER WINDOW MAIN SWITCH REMOVAL/ INSTALLATION.)
		No	Inspect for an open or short circuit in the power window main switch wiring harness (battery power supply). Inspect the power window main switch connector connection. (damage/pulled-out pins, corrosion) Repair or replace if necessary.

No.5 ALL POWER WINDOWS ARE INOPERATIVE[POWER WINDOW SYSTEM]

id0903a0831400

5	**All power windows are inoperative.**
POSSIBLE CAUSE	• Power supply circuit or ground circuit malfunction — Burnt fuse — Open or short circuit in wiring harness between ignition switch and power window main switch — Open or short circuit in wiring harness between power window main switch and power window subswitch — Open or short circuit in wiring harness between power window main switch and power window motor — Open or short circuit in wiring harness between power window main switch and ground • Power window main switch malfunction (power cut-off switch malfunction, switch malfunction) • Power window subswitch malfunction • Power window motor malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Turn the ignition switch to the ON position. • Set the power cut-off switch to the UNLOCK position. • Inspect the power window system operation again. • Does the system operate properly?	Yes	System is now normal (power cut-off switch is not set properly.)
		No	Go to the next step.
2	• Operate all power windows other than driver's side window using the power window main switch. • Does any power window operate?	Yes	Go to Step 5.
		No	Go to the next step.
3	• Operate the driver's side power window using the power window main switch. • Does the power window operate?	Yes	Go to the next step.
		No	Inspect for an open circuit in the wiring harness between the power window main switch and the body ground. Inspect the power window main switch connector connection. (damage/pulled-out pins, corrosion) Repair or replace if necessary
4	• Are P/WIND L 30A fuse and P/WIND R 30A fuse (at PJB) normal?	Yes	Replace the power window main switch. (See 09-12-13 POWER WINDOW MAIN SWITCH REMOVAL/INSTALLATION.)
		No	Replace with the appropriate standard fuse. If the fuse is melted, inspect the wiring harness for a short to ground. Repair or replace the wiring harness, then replace the fuse.
5	• Identify the inoperative power window. • Measure the voltage at the suspect power window motor (battery power supply) while operating the power window motor using the suspect power window subswitch • Is the voltage B+? (Open: terminal E/ close: terminal F)	Yes	Go to the next step.
		No	Go to Step 8.
6	• Operate the power window using the power window subswitch • Does the power window motor operate (rotate)? **Caution** • **If the power window motor temperature is high, the motor may not rotate due to the motor internal bimetal function. Leave it untouched for about 3 min to cool it down, then reinspect.**	Yes	Go to the next step.
		No	Replace the power window motor. (See 09-12-12 POWER WINDOW MOTOR REMOVAL/INSTALLATION.)
7	• Remove the door glass from the carrier plate. • Make sure that the door glass moves smoothly using your hand. • Does the door glass move smoothly?	Yes	Replace the power window regulator guide.
		No	Inspect for a bent regulator guide or other possible malfunction. If normal, replace the glass run channel

STEP	INSPECTION		ACTION
8	• Measure the voltage at the power window subswitch (power window motor output) while operating the power window subswitch. • Is the voltage B+? (Open: terminal F/ close: terminal C)	Yes	Inspect for an open or short circuit in the wiring harness between the power window subswitch and power window motor Inspect the power window subswitch and power window motor connector connections. (damage/pulled-out pins, corrosion) Repair or replace if necessary.
		No	Go to the next step.
9	**Note** • Do not operate the power window subswitch during the following inspection. • Inspect the continuity between power window subswitch terminal D (vehicle harness-side) and ground. • Is there continuity?	Yes	Go to the next step.
		No	Inspect for an open or short circuit in the power window subswitch wiring harness. Inspect the power window subswitch connector connection. (damage/pulled-out pins, corrosion) Repair or replace if necessary. Then go to Step 12.
10	**Note** • Do not operate the power window subswitch during the following inspection. • Inspect the continuity between power window subswitch terminal E and ground. • Is there continuity?	Yes	Replace the power window subswitch. (See 09-12-15 POWER WINDOW SUBSWITCH REMOVAL/ INSTALLATION.)
		No	Inspect for an open or short circuit in the power window subswitch wiring harness. Inspect the power window subswitch connector connection. (damage/pulled-out pins, corrosion) Repair or replace if necessary. Then go to the next step.
11	**Note** • Do not operate the power window main switch during the following inspection. • Inspect the continuity between the power window main switch terminal (up-side A, D, K) and ground. • Is there continuity?	Yes	Go to the next step.
		No	Replace the power window main switch. (See 09-12-13 POWER WINDOW MAIN SWITCH REMOVAL/ INSTALLATION.)
12	**Note** • Do not operate the power window main switch during the following inspection. • Inspect the continuity between the power window main switch terminal (down-side B, C, M) and ground. • Is there continuity?	Yes	Inspect for an open or short circuit in the wiring harness between the power window main switch and power window subswitch. Inspect the power window main switch and subswitch connector connections. (damage/pulled-out pins, corrosion) Repair or replace if necessary.
		No	Replace the power window main switch. (See 09-12-13 POWER WINDOW MAIN SWITCH REMOVAL/ INSTALLATION.)

No.6 DOOR GLASS REVERSES EVEN THOUGH THE GLASS DOES NOT ENCOUNTER A FOREIGN OBJECT WHILE IT IS MOVING UP IN AUTOMATIC MODE[POWER WINDOW SYSTEM]

id0903a0831500

Note

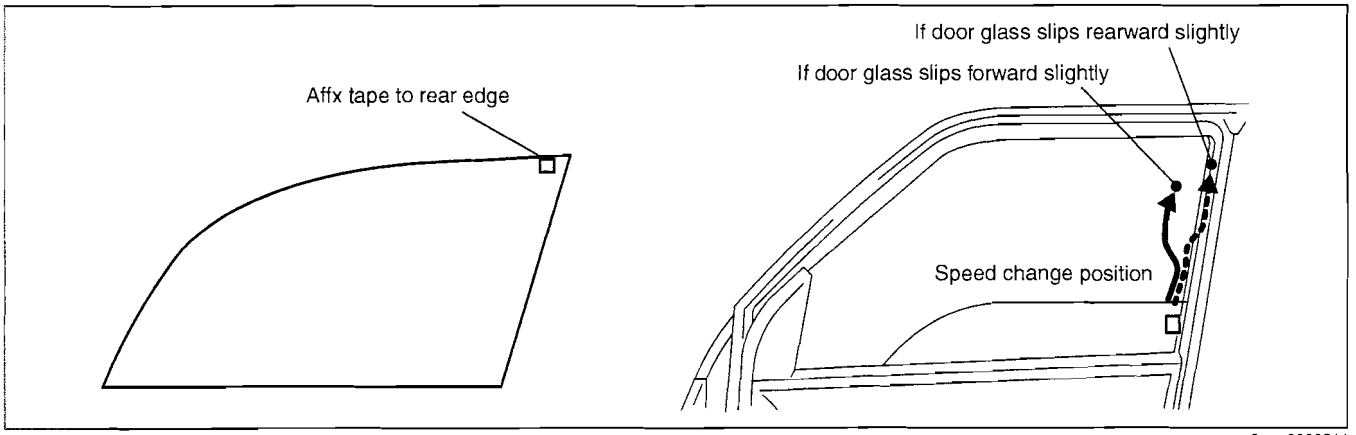
- Perform the following inspection for the power window system component parts of windows where the door glass reverses even though the glass does not encounter a foreign object while it is moving up in automatic mode.

6	**Door glass reverses even though the glass does not encounter a foreign object while it is moving up in automatic mode.**
POSSIBLE CAUSE	• Extreme change in the sliding resistance of the glass while the door glass is closing. — Improper installation of the acrylic door visor. — Power window motor malfunction — Object caught between the glass run channel and the door glass. — Insufficient tightening of the door glass to the carrier plate. — Glass run channel malfunction. — Glass guide related malfunction. **Note** • The auto-reverse pinch protection function is a mechanism that automatically reverses (opens) the door glass while it is closing when the power window main switch detects the signal from the power window motor indicating that an object is obstructing the door glass movement. • The auto-reverse pinch protection function may operate if the sliding resistance of the door glass increases causing the closing speed to decrease. • If the door glass closing speed has changed, concentrate the inspection on the following locations: (Slip occurrence) — If the door glass is slipping forward, inspect the front side of the glass guide or glass run channel. — If the door glass is slipping rearward, inspect the rear side of the glass guide or glass run channel.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT MALFUNCTION SYMPTOM** • Does the malfunction symptom occur only under the following special conditions?: — Driving over railroad tracks — Driving on bumpy roads. — Opening/closing the door.	Yes	The system is normal (Explain to the customer that this does not indicate a malfunction because the system is designed to reverse the door glass while it is closing if it receives vibration when the vehicle is crossing railroad tracks, driving on a bumpy road, or when the door is opened/closed.)
		No	Go to the next step.
2	**INSPECT ACRYLIC DOOR VISOR INSTALLATION CONDITION** • Is the acrylic door visor normal?	Yes	Go to the next step.
		No	Install the side visor properly, then go to the next step.
3	**INSPECT DOOR GLASS CLOSING SPEED** • Affix tape to the rear edge of the door glass as shown in the figure for placing marks (to facilitate seeing the door glass movement) • Start the engine and idle it (to ensure a stabilized operational voltage). • Does the door glass hesitate only once while its closing?	Yes	Mark the point where the door glass closing speed changed, then go to Step 5.
		No	Go to the next step.
4	**REINSPECT DOOR GLASS CLOSING SPEED** • Does the door glass hesitate periodically (5-6 times) while it is closing?	Yes	Replace the power window motor, then go to Step 8 (See 09-12-12 POWER WINDOW MOTOR REMOVAL/ INSTALLATION.)
		No	Go to Step 8.
5	**INSPECT GLASS RUN CHANNEL AND DOOR GLASS SLIDING SURFACE** • Is there an object caught between the glass run channel and the door glass, or is there roughness on the sliding surface (rubber surface)?	Yes	**Object is caught between glass run channel and door glass:** • Remove the object. **Roughness on the sliding surface (rubber surface):** • Replace the glass run channel. After performing one of the above actions, reinspect. If the malfunction is not corrected, go to Step 3.
		No	Go to the next step.

STEP	INSPECTION		ACTION
6	**INSPECT TIGHTENING OF DOOR GLASS TO CARRIER PLATE** • Is it normal?	Yes	Go to the next step.
		No	After tightening correctly, reinspect. If the malfunction is not corrected, go to Step 3.
7	**INSPECT CONDITION OF GLASS RUN CHANNEL AND DOOR GLASS** • Is it normal?	Yes	Go to the next step.
		No	Assemble the glass run channel and door glass securely, and reinspect. If the malfunction is not corrected, go to Step 3.
8	**INSPECT DOOR GLASS CLOSING SPEED** • Does the door glass hesitate at any location?	Yes	Repeat the inspection from Step 3.
		No	Troubleshooting completed.



am3zzw0000211

No.7 ABNORMAL NOISE WHILE THE DOOR GLASS IS OPENIGN OR CLOSING[POWER WINDOW SYSTEM]

id0903a0831600

7	Abnormal noise while the door glass is opening or closing
POSSIBLE CAUSE	• Installation screw is loose between the door glass and carrier plate. • Deformity in the power window regulator plastic part due to use. — Scratching, wear marks to the power window regulator resin part due to twisting of the cable. — Gear deformity in the power window motor. **Note** • Identify the location of the noise using a stethoscope or similar device.

Diagnostic procedure

Noise type	Time of occurrence	Possible cause	Location of noise	Action
Clanking noise	Door glass begins to move	Insufficiently tightened installation screw between the door glass and carrier plate.	Between door glass lower edge and carrier plate.	Securely tighten the installation screw.
Groaning noise (Sound increases due to use)	While door glass is operating	Vibration caused by wear on the resin part from cable twisting due to use of the power window regulator. **Note** • Noise does not occur if a roller is equipped to power window regulator resin part.	Power window regulator	Replace the power window regulator (See 09-12-8 FRONT POWER WINDOW REGULATOR REMOVAL/ INSTALLATION.) (See 09-12-10 REAR POWER WINDOW REGULATOR REMOVAL/ INSTALLATION.)
Whining noise Clicking noise (Periodic noise)		Gear inside power window motor is deformed due to use.	Gear in power window motor	Replace the power window motor (See 09-12-12 POWER WINDOW MOTOR REMOVAL/ INSTALLATION.)

am3uuw0000062

SYMPTOM TROUBLESHOOTING CHART[KEYLESS ENTRY SYSTEM]

id0903d2805600

No.	Troubleshooting item	Description
1	One or more on-board diagnostic functions inoperative	• Malfunction in door lock linkage system
2	All on-board diagnostic functions inoperative	• Malfunction in PJB power supply circuit, door latch switch circuit, PJB ground circuit, or keyless control module.
3	Transmitter ID code cannot be reprogrammed	• Malfunction in transmitter battery, transmitter, PJB circuit, or keyless control module circuit.

KEYLESS ENTRY SYSTEM ON-BOARD DIAGNOSIS[KEYLESS ENTRY SYSTEM]

09-03B

KEYLESS ENTRY SYSTEM PRELIMINARY INSPECTION[KEYLESS ENTRY SYSTEM]

id0903d2800300

- Perform the following preliminary inspection before troubleshooting.

STEP	INSPECTION		ACTION
1	• Is an after-market system installed?	Yes	Perform troubleshooting according to the after-market keyless entry system manual.
		No	Go to the next step.
2	• Did the customer activate the keyless entry system with the key inserted into the steering lock?	Yes	• Explain to the customer that the system does not work with the key inserted into the steering lock. • Go to the next step.
		No	Go to the next step.
3	• Did the customer use the keyless entry system in particular area, such as being near TV towers, power plants, power lines, or factories?	Yes	Attempt to lock/unlock the doors with the transmitter in a non-interference area. **If system operates:** • Area of operation is suspect. Explain effect of outside interference on the transmitter to the customer. **If system does not operate:** • Go to the next step.
		No	Go to the next step.
4	• Are any of the following after-market electrical parts on the vehicle? — Cellular phone — Radio-wave equipment — Remote engine starter — TV — Other	Yes	Disconnect the after-market electrical part connectors and attempt to lock/unlock the doors with the transmitter. **If system operates:** • The after-market electrical parts are interfering with the keyless entry system. **If system does not operate:** • Go to the next step.
		No	Go to the next step.
5	• Perform the on-board diagnostic function. (See 09-03B-3 KEYLESS ENTRY SYSTEM ON-BOARD DIAGNOSIS[KEYLESS ENTRY SYSTEM].) • Does the on-board diagnostic function work?	Yes	Go to the next step.
		No	• Go to Step 1 of troubleshooting NO. 1. (See 09-03B-5 NO.1 ONE OR MORE ON-BOARD DIAGNOSTIC FUNCTIONS INOPERATIVE[KEYLESS ENTRY SYSTEM].) • Go to Step 1 of troubleshooting NO. 2. (See 09-03B-7 NO.2 ALL ON-BOARD DIAGNOSTIC FUNCTIONS INOPERATIVE[KEYLESS ENTRY SYSTEM].)
6	• Attempt to reprogram the transmitter ID code. • Can the transmitter ID code be reprogrammed?	Yes	The system is normal.
		No	Go to Step 1 of troubleshooting NO. 3. (See 09-03B-10 NO.3 TRANSMITTER ID CODE CANNOT BE REPROGRAMMED[KEYLESS ENTRY SYSTEM].)

NO.1 ONE OR MORE ON-BOARD DIAGNOSTIC FUNCTIONS INOPERATIVE[KEYLESS ENTRY SYSTEM]

id0903d2800600

- When performing an asterisked (*) troubleshooting inspection, slightly shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, verify that the connectors, terminals and wiring harnesses are connected correctly and undamaged.

1	**One or more on-board diagnostic functions inoperative**
DESCRIPTION	• Malfunction in door lock linkage system
POSSIBLE CAUSE	• Malfunction in door lock linkage • Malfunction in PJB door lock/unlock signal circuit — PJB malfunction

WIRING HARNESS-SIDE CONNECTOR

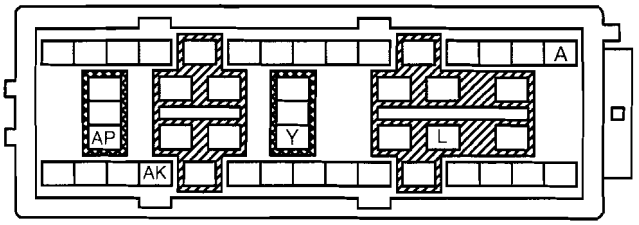
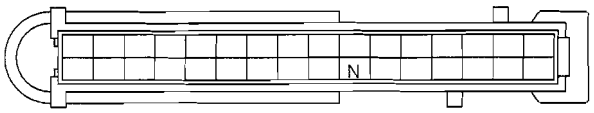
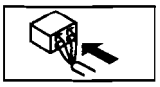
PJB (J-05)
WIRING HARNESS-SIDE CONNECTOR



PJB (J-04)
WIRING HARNESS-SIDE CONNECTOR





09-03B

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**CHECK HORN, AND HAZARD WARNING LIGHT OPERATION DURING ON-BOARD DIAGNOSIS** • Did all of the following items work during on-board diagnostic function operation? — Hazard warning lights flashed — Horns sounded intermittently	Yes	Go to Step 8.
		No	Go to next step.
2	**INSPECT HAZARD WARNING LIGHT OPERATION DURING ON-BOARD DIAGNOSIS** • Did hazard warning lights flash during on-board diagnostic function operation?	Yes	Go to Step 5.
		No	Go to next step.
3	**INSPECT HAZARD WARNING LIGHT CIRCUIT** • Do hazard warning lights flash when hazard warning switch is on?	Yes	Go to next step.
		No	Inspect hazard warning light circuit.
*4	**INSPECT IF MALFUNCTION IS IN WIRING HARNESS (BETWEEN PJB AND TURN LIGHTS) OR PJB** • Measure the voltage at PJB terminals J-01 AK, J-01 L, J-05 AK and J-05 A during on-board diagnostic function operation. — When hazard warning light flashed: **Alternates between B+ and below 1.0 V** • Are the voltage as above?	Yes	Recheck malfunction symptoms, then repeat from Step 1 if malfunction reoccurs.
		No	• Inspect wiring harness between PJB and turn lights. — If wiring harness is normal, replace the PJB, then go to Step 11. — If wiring harness malfunction, repair wiring harness, then go to Step 11.
5	**INSPECT HORN OPERATION DURING ON-BOARD DIAGNOSIS** • Did horns sound intermittently during on-board diagnostic function operation?	Yes	Go to Step 8.
		No	Go to next step.
6	**INSPECT HORN CIRCUIT** • Do horns sound when depressing horn switch on vehicle?	Yes	Go to next step.
		No	Inspect horn circuit.
*7	**INSPECT IF MALFUNCTION IS IN WIRING HARNESS (NO CONTINUITY BETWEEN PJB AND HORN RELAY) OR PJB** • Turn ignition switch to LOCK position. • Disconnect the PJB connector and horn relay connector. • Is there continuity between PJB J-04 N and horn relay connector?	Yes	Replace PJB, then go to Step 11.
		No	Repair wiring harness between PJB and horn relay, then go to Step 11.
8	**VERIFY THAT ALL DOORS LOCK AND UNLOCK DURING ON-BOARD DIAGNOSIS** • Do all doors unlock and lock during on-board diagnostic function operation?	Yes	Reinspect the malfunction symptoms, then repeat from Step 1 if the malfunction recurs.
		No	Go to the next step.
9	**INSPECT DOOR LOCK LINKAGE** • Operate the door lock knob and verify the door locks and unlocks manually. • Does every door lock system work?	Yes	Go to the next step.
		No	Inspect the door lock linkage.
*10	**INSPECT IF MALFUNCTION IS IN DOOR LOCK ACTUATOR, PJB GROUND CIRCUIT OR ELSEWHERE** • Measure the voltage at PJB terminals J-05 AP, and J-05 Y. — All doors locked: **1.0 V or less → B+ → 1.0 V or less** (terminal J-05 AP) — Driver-side door unlocked: **1.0 V or less → B+ → 1.0 V or less** (terminal J-05 L) — All doors door unlocked: **B+**→1.0 V or less→**B+** (terminal J-05 Y) • Is the voltage as above?	Yes	Reinspect the malfunction symptoms, then repeat from Step 1 if the malfunction recurs.
		No	• Inspect the PJB connector. • Inspect the wiring harness between the PJB and door lock actuator. — If the above parts are normal, go to the next step. — If any of above parts are malfunctioning, repair the malfunctioning part.
11	**REINSPECT MALFUNCTION SYMPTOM AFTER REPAIR** • Does the keyless entry system operate properly?	Yes	• Troubleshooting completed. • Explain repairs to the customer.
		No	Reinspect the malfunction symptoms, then repeat from Step 1 if malfunction recurs.

NO.2 ALL ON-BOARD DIAGNOSTIC FUNCTIONS INOPERATIVE[KEYLESS ENTRY SYSTEM]

id0903d2800700

- When performing an asterisked (*) troubleshooting inspection, slightly shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, verify that the connectors, terminals and wiring harnesses are connected correctly and undamaged.

2	**All on-board diagnostic functions inoperative**
DESCRIPTION	• Malfunction in PJB power supply circuit, door latch switch circuit, PJB ground circuit, or keyless control module.
POSSIBLE CAUSE	• Malfunction in IG1 or power supply signal circuit of PJB — PJB power supply fuse malfunction — Malfunction in wiring harness between PJB power supply fuses and PJB • Malfunction in door open/closed signal circuit of PJB — Door latch switch system malfunction — PJB malfunction — Malfunction in wiring harness between PJB and door latch switch • Malfunction in PJB GND signal circuit — Malfunction in wiring harness between PJB and ground • Malfunction in keyless control module — Keyless control module malfunction — Malfunction in wiring harness between keyless control module and PJB

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT PJB POWER SUPPLY FUSES** • Are the PJB power supply fuses normal?	Yes	Go to the next step.
		No	Install an appropriate amperage fuse.
*2	**INSPECT IF MALFUNCTION IS IN WIRING HARNESS (NO CONTINUITY BETWEEN FUSE BLOCK AND PJB) OR ELSEWHERE** • Turn the ignition switch to the ON position. • Measure the voltage at the following PJB terminals: — IG1 signal (terminal J-03 AP) — Power supply signal (terminal J-01 F) • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair the wiring harness between the fuse block and PJB, then go to Step 11.
*3	**INSPECT IF MALFUNCTION IS IN WIRING HARNESS (SHORT TO POWER SUPPLY BETWEEN FUSE BLOCK AND PJB, OR BETWEEN PJB AND GROUND) OR ELSEWHERE** • Turn the ignition switch to the LOCK position. • Disconnect the PJB connector. • Measure the voltage at the following PJB terminal (wiring harness-side): — IG1 signal (terminal J-03 AP) • Is the voltage **B+**?	Yes	Repair the malfunctioning wiring harness, then go to Step 11.
		No	Go to the next step.
*4	**INSPECT IF MALFUNCTION IS IN WIRING HARNESS (NO CONTINUITY BETWEEN PJB AND GROUND) OR ELSEWHERE** • Is there continuity between PJB terminal J-03 C, J-03 X and ground?	Yes	Go to the next step.
		No	Repair the wiring harness between the PJB and ground, then go to Step 11.
5	**INSPECT PJB OR WIRING HARNESS (BETWEEN PJB AND DOOR LATCH SWITCHES FOR CONTINUITY)** • Is there continuity between PJB terminals J-06 P, J-06 S, J-06 U, J-06 W, J-06 X and ground?	Yes	Go to the next step.
		No	Repair the wiring harness between the PJB and door latch switches, then go to Step 11.
6	**INSPECT LATCH SWITCHES** • Inspect the door latch switches. • Are there normal?	Yes	Replace the PJB, then go to the next step.
		No	Repair latch switch system, then go to the next step.
7	**INSPECT IF MALFUNCTION IS IN WIRING HARNESS (NO CONTINUITY BETWEEN FUSE BLOCK AND KEYLESS CONTROL MODULE) OR ELSEWHERE** • Turn the ignition switch to the ON position. • Measure the voltage at the following keyless control module terminal: — Power supply signal (terminal A) • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair the wiring harness between the fuse block and keyless control module, then go to Step 11.
8	**INSPECT IF MALFUNCTION IS IN WIRING HARNESS (NO CONTINUITY BETWEEN KEYLESS CONTROL MODULE AND GROUND) OR ELSEWHERE** • Is there continuity between keyless control module terminal E and ground?	Yes	Go to the next step.
		No	Repair the wiring harness between the keyless control module and ground, then go to Step 11.
9	**INSPECT IF MALFUNCTION IS IN WIRING HARNESS (NO CONTINUITY BETWEEN KEYLESS CONTROL MODULE AND PJB) OR ELSEWHERE** • Turn the ignition switch to the ON position. • Disconnect the keyless control module connector and PJB connector. • Is there continuity between the following terminals? — J-04 F (PJB connector)—C (keyless control module connector)	Yes	Go to the next step.
		No	Repair the wiring harness between the keyless control module and PJB, then go to Step 11.

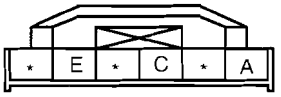
STEP	INSPECTION		ACTION
10	**INSPECT IF MALFUNCTION IS IN WIRING HARNESS (NO CONTINUITY BETWEEN KEYLESS CONTROL MODULE AND PJB) OR PJB** • Measure the voltage at keyless control module terminal C. — When transmitter operated: • Any transmitter button is operated **0.5 V** • Any transmitter button is not operated: **3.5 V** • Is the voltage normal?	Yes	Replace the PJB, then go to the next step.
		No	Replace the keyless control module, then go to the next step.
11	**REINSPECT MALFUNCTION SYMPTOM AFTER REPAIR** • Does the keyless entry system operate properly?	Yes	Troubleshooting completed. Explain repairs to the customer.
		No	Reinspect the malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

NO.3 TRANSMITTER ID CODE CANNOT BE REPROGRAMMED[KEYLESS ENTRY SYSTEM]

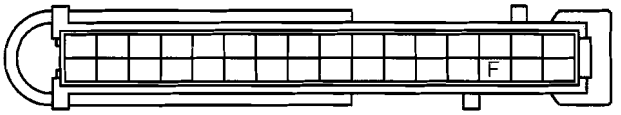
id0903d2800800

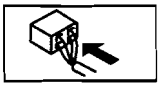
3	Transmitter ID code cannot be reprogrammed
DESCRIPTION	• Malfunction in transmitter battery, transmitter, PJB circuit, or keyless control module circuit.
POSSIBLE CAUSE	• Malfunction in transmitter battery, transmitter, PJB, or keyless control module.

KEYLESS CONTROL MODULE
WIRING HARNESS-SIDE CONNECTOR



PJB (J-04)
WIRING HARNESS-SIDE CONNECTOR





Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT TRANSMITTER BATTERY INSTALLATION AND TYPE** • Visually inspect the transmitter battery. • Are the below items correct? — Transmitter battery installation (correct polarity) — Battery type (CR2025)	Yes	Go to the next step.
		No	Install the transmitter battery properly or replace with the specified transmitter battery (CR2025), then go to Step 11.
2	**INSPECT TRANSMITTER BATTERY TERMINALS FOR RUST AND POOR CONNECTION** • Visually inspect the transmitter. — Is there rust on the transmitter battery terminals (positive or negative)? — Is there poor connection between the terminals and battery?	Yes	Replace the transmitter battery or repair the transmitter battery terminal, then go to Step 11.
		No	Go to the next step.
3	**INSPECT TRANSMITTER BATTERY** • Inspect the transmitter battery. • Is the battery voltage normal?	Yes	Go to the next step.
		No	Replace the transmitter battery, then go to Step 11.
4	**INSPECT IF MALFUNCTION IS IN TRANSMITTER BATTERY OR ELSEWHERE** • Replace with a transmitter battery known to be good. • Does the keyless entry system operate properly?	Yes	Replace the transmitter battery, then go to Step 11.
		No	Go to the next step.
5	**INSPECT IF MALFUNCTION IS IN TRANSMITTER OR PJB** • Reprogram the transmitter ID code using another known good transmitter. • Does the keyless entry system operate properly?	Yes	Replace the transmitter and reprogram the transmitter ID code, then go to Step 11.
		No	Go to the next step.
6	**INSPECT POWER SUPPLY FUSE** • Is the keyless control module power supply fuse normal?	Yes	Go to the next step.
		No	Install an appropriate amperage fuse, then go to Step 11.
7	**INSPECT IF MALFUNCTION IS IN WIRING HARNESS (NO CONTINUITY BETWEEN FUSE BLOCK AND KEYLESS CONTROL MODULE) OR ELSEWHERE** • Measure the voltage at the following keyless control module terminal: — Power supply signal (terminal A) • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair the wiring harness between the fuse block and keyless control module, then go to Step 11.

STEP	INSPECTION		ACTION
8	**INSPECT IF MALFUNCTION IS IN WIRING HARNESS (NO CONTINUITY BETWEEN KEYLESS CONTROL MODULE AND GROUND) OR ELSEWHERE** • Is there continuity between keyless control module terminal E and ground?	Yes	Go to the next step.
		No	Repair the wiring harness between the keyless control module and ground, then go to Step 11.
9	**INSPECT IF MALFUNCTION IS IN WIRING HARNESS (NO CONTINUITY BETWEEN KEYLESS CONTROL MODULE AND PJB) OR ELSEWHERE** • Disconnect the keyless control module connector and PJB connector. • Is there continuity between the following terminals? — J-04-F (PJB connector)—C (keyless control module connector)	Yes	Go to the next step.
		No	Repair the wiring harness between the keyless control module and PJB, then go to Step 11.
10	**INSPECT IF MALFUNCTION IS IN WIRING HARNESS (NO CONTINUITY BETWEEN KEYLESS CONTROL MODULE AND PJB) OR PJB** • Measure the voltage at keyless control module terminal C. — When transmitter operated: • Any transmitter button is operated: **0.5 V** • Any transmitter button is not operated: **3.5 V** • Is the voltage normal?	Yes	Replace the PJB, then go to the next step.
		No	Replace the keyless control module, then go to the next step.
11	**REINSPECT MALFUNCTION SYMPTOM AFTER REPAIR** • Does the keyless entry system operate properly?	Yes	Troubleshooting completed. Explain repairs to the customer.
		No	Reinspect the malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

09-03C SYMPTOM TROUBLESHOOTING [INSTRUMENT CLUSTER]

SYMPTOM TROUBLESHOOTING[INSTRUMENT CLUSTER]

id0903d5807200

No.	TROUBLESHOOTING ITEM	PAGE
1	Fuel gauge needle position incorrect	(See 09-03C-3 NO. 1 FUEL GAUGE NEEDLE POSITION INCORRECT[INSTRUMENT CLUSTER].)
2	All meters and gauges do not operate	(See 09-03C-4 NO. 2 ALL METERS AND GAUGES DO NOT OPERATE[INSTRUMENT CLUSTER].)
3	ABS warning light illuminates	(See 09-03C-5 NO. 3 ABS WARNING LIGHT ILLUMINATES[INSTRUMENT CLUSTER].)
4	MIL illuminates	(See 09-03C-6 NO. 4 MIL ILLUMINATES[INSTRUMENT CLUSTER].)
5	Brake system warning light illuminates	(See 09-03C-7 NO. 5 BRAKE SYSTEM WARNING LIGHT ILLUMINATES[INSTRUMENT CLUSTER].)
6	Instrument cluster illumination does not illuminate	(See 09-03C-8 NO. 6 INSTRUMENT CLUSTER ILLUMINATION DOES NOT ILLUMINATE[INSTRUMENT CLUSTER].)

e6u903ew5o01

NO. 1 FUEL GAUGE NEEDLE POSITION INCORRECT[INSTRUMENT CLUSTER]

id0903d5807400

1	Fuel gauge needle position incorrect
POSSIBLE CAUSE	• Fuel gauge sender unit malfunction • Instrument cluster malfunction • BCM malfunction • Connector or pin malfunction • Fuel gauge sender unit is improperly installed • Open or short circuit in wiring harness between instrument cluster and ground • Open or short circuit in wiring harness between instrument cluster and fuel gauge sender unit

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Turn the ignition switch to the ON position. • Verify that the fuel gauge needle does not move after ignition switch is turned off, or the display does not indicate F even though the fuel tank is full. • Is the fuel gauge normal?	Yes	Troubleshooting completed.
		No	Go to the next step.
2	• Start the instrument cluster input/output check mode. • Select the check code 22. • Display value is **12—129**?	Yes	Go to the next step.
		No	Go to Step 4.
3	• Perform the check code 23 inspection. • Is there any malfunction?	Yes	Replace the instrument cluster.
		No	Go to the next step.
4	• Perform the check code 22 inspection. • Is there any malfunction?	Yes	Go to the next step.
		No	Go to Step 6.
5	• Turn the ignition switch off. • Inspect the instrument cluster connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Are the terminals normal?  	Yes	Replace the instrument cluster.
		No	Repair or replace the terminal.
6	• Turn the ignition switch to the LOCK position. • Remove the instrument cluster. • Disconnect the instrument cluster connector. • Inspect for continuity between the following wiring harnesses. — 2M terminal—ground — 2D terminal—ground • Is there continuity?	Yes	Repair or replace the wiring harness between the instrument cluster and ground.
		No	Go to the next step.
7	• Turn the ignition switch off. • Inspect the fuel gauge sender unit connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Are the terminals normal?	Yes	Go to the next step.
		No	Repair or replace the terminal.
8	• Turn the ignition switch to the LOCK position. • Inspect for continuity between the following wiring harnesses the instrument cluster and fuel gauge sender unit. — 2M terminal—C terminal — 2D terminal—A terminal • Is there continuity?	Yes	Go to the next step.
		No	Inspect the BCM and BCM terminals. • If there is a malfunction, replace the BCM. • If there is no malfunction, repair or replace the wiring harness between the instrument cluster and the fuel gauge sender unit.
9	• Turn the ignition switch off. • Is the fuel gauge sender unit installed properly?	Yes	Inspect the fuel gauge sender unit.
		No	Reinstall the fuel gauge sender unit.

NO. 2 ALL METERS AND GAUGES DO NOT OPERATE[INSTRUMENT CLUSTER]

id0903d5807500

2	All meters and gauges do not operate
POSSIBLE CAUSE	• Instrument cluster malfunction • Connector or pin malfunction • Fuse malfunction • Open or short circuit in power supply (IG1) wiring harness • Open or short circuit in ground wiring harness

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Turn the ignition switch to the ON position. • Inspect the following: — Does the odometer/tripmeter illuminate? — Does the fuel gauge operate? — Dose the MIL illumination turn off within **approx. 3 s**?	Yes	Troubleshooting completed.
		No	Go to the next step.
2	• Inspect the METER fuse. • Is the fuse normal?	Yes	Go to the next step.
		No	Replace the fuse. • If the fuse is melted, inspect the wiring harness for a short to ground. Repair or replace the wiring harness, then replace the fuse.
3	• Turn the ignition switch to LOCK position. • Remove the instrument cluster. • Disconnect the instrument cluster connector. • Inspect the voltage between instrument cluster wiring harness-side connector terminal 2F and terminal 2V. • Turn the ignition switch to the ON position. • Is the voltage B+?  	Yes	Go to the next step.
		No	Inspect the suspected wiring harness, then repair or replace.
4	• Turn the ignition switch off. • Inspect the instrument cluster connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Are the terminals normal?	Yes	Replace the instrument cluster.
		No	Repair or replace the terminal.

NO. 3 ABS WARNING LIGHT ILLUMINATES[INSTRUMENT CLUSTER]

id0903d5807600

3	ABS warning light illuminates
POSSIBLE CAUSE	• ABS/TCS HU/CM malfunction • Instrument cluster malfunction • Connector or pin malfunction • Short circuit in wiring harness between CAN-L, CAN-H and ground • Open circuit in CAN wiring harness (CAN-L, CAN-H) • CAN wiring harness (CAN-L, CAN-H) short to each other

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Start the engine. • Does the ABS warning light turn off?	Yes	Troubleshooting completed.
		No	Go to the next step.
2	• Are there a number of warning lights illuminated?	Yes	Go to Step 4.
		No	Go to the next step.
3	• Start the instrument cluster input/output check mode. • Does the ABS warning light turn off with a check code other than 26?	Yes	Inspect the ABS/TCS HU/CM.
		No	Replace the instrument cluster.
4	• Disconnect the negative battery cable. • Measure the resistance between DLC-2 terminals F and E. • Is the resistance **54—66 ohms**?	Yes	Go to the next step.
		No	Go to Step 6.
5	• Inspect DLC-2 terminals F and E for a short to power supply or ground. • Is there any malfunction?	Yes	Inspect the wiring harness and CAN system-related module. Repair or replace the malfunctioning part.
		No	Replace the instrument cluster.
6	• Turn the ignition switch off. • Inspect the instrument cluster connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Are the terminals normal?  	Yes	Replace the instrument cluster.
		No	Repair or replace the terminal.

NO. 4 MIL ILLUMINATES[INSTRUMENT CLUSTER]

id0903d5807700

4	MIL illuminates
POSSIBLE CAUSE	• PCM malfunction • Instrument cluster malfunction • Connector or pin malfunction • Short circuit in wiring harness between CAN-L, CAN-H and ground • Open circuit in CAN wiring harness (CAN-L, CAN-H) • CAN wiring harness (CAN-L, CAN-H) short to each other

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Start the engine. • Does the MIL turn off?	Yes	Troubleshooting completed.
		No	Go to the next step.
2	• Are there a number of warning lights illuminated?	Yes	Go to Step 4.
		No	Go to the next step.
3	• Start the instrument cluster input/output check mode. • Does the MIL turn off with a check code other than 26?	Yes	Inspect the PCM.
		No	Replace the instrument cluster.
4	• Disconnect the negative battery cable. • Measure the resistance between DLC-2 terminals F and E. • Is the resistance **54—66 ohms**?	Yes	Go to the next step.
		No	Go to Step 6.
5	• Inspect DLC-2 terminals F and E for short to power supply or ground. • Is there any malfunction?	Yes	Inspect the wiring harness and CAN system-related module. Repair or replace the malfunctioning part.
		No	Replace the instrument cluster.
6	• Turn the ignition switch off. • Inspect the instrument cluster connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Are the terminals normal? 	Yes	Replace the instrument cluster.
		No	Repair or replace the terminal.

NO. 5 BRAKE SYSTEM WARNING LIGHT ILLUMINATES[INSTRUMENT CLUSTER]

id0903d5807800

5	Brake system warning light illuminates
POSSIBLE CAUSE	• ABS/TCS HU/CM malfunction • Brake fluid level sensor malfunction • Parking brake switch malfunction • Instrument cluster malfunction • Connector or pin malfunction • Short circuit in wiring harness between CAN-L, CAN-H and ground • Open circuit in CAN wiring harness (CAN-L, CAN-H) • CAN wiring harness (CAN-L, CAN-H) short to each other

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Start the engine. • release the parking brake. • Does the brake system warning light turn off?	Yes	Troubleshooting completed.
		No	Go to the next step.
2	• Are there a number of warning lights illuminated?	Yes	Go to Step 5.
		No	Go to the next step.
3	• Does the brake fluid need replenishment?	Yes	Add brake fluid.
		No	Go to the next step.
4	• Start the instrument cluster input/output check mode. • Does the brake system warning light turn off with a check code other than 26?	Yes	Inspect the ABS/TCS HU/CM, brake fluid level sensor, parking brake switch or connectors.
		No	Replace the instrument cluster.
5	• Disconnect the negative battery cable. • Measure the resistance between DLC-2 terminals F and E. • Is the resistance **54—66 ohms**?	Yes	Go to the next step.
		No	Go to Step 7.
6	• Inspect DLC-2 terminals F and E for short to power supply or ground. • Is there any malfunction?	Yes	Inspect the wiring harness and CAN system-related module. Repair or replace the malfunctioning part.
		No	Replace the instrument cluster.
7	• Turn the ignition switch off. • Inspect the instrument cluster connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Are the terminals normal? 	Yes	Replace the instrument cluster.
		No	Repair or replace the terminal.

NO. 6 INSTRUMENT CLUSTER ILLUMINATION DOES NOT ILLUMINATE[INSTRUMENT CLUSTER]

id0903d5807900

6	Instrument cluster illumination does not illuminate
POSSIBLE CAUSE	• Instrument cluster malfunction • Connector or pin malfunction • Fuse malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Turn the light switch to the TNS position. • Does the instrument cluster illumination turn on?	Yes	Troubleshooting completed.
		No	Go to the next step.
2	• Does the non-illumination include the entire instrument cluster?	Yes	Go to the next step.
		No	Replace the instrument cluster.
3	• Inspect the ROOM and ILLUMI fuse. • Are the fuses normal?	Yes	Go to the next step.
		No	Replace the fuse. • If the fuse is melted, inspect the wiring harness for a short to ground. Repair or replace the wiring harness, then replace the fuse.
4	• Turn the ignition switch off. • Inspect the instrument cluster connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Are the terminals normal?  	Yes	Replace the instrument cluster.
		No	Repair or replace the terminal.

NO. 7 SPEEDOMETER INDICATION IS DEFECTIVE[INSTRUMENT CLUSTER]

id0903d5808000

7	Speedometer indication is defective
POSSIBLE CAUSE	• ABS HU/CM or DSC HU/CM malfunction • PCM malfunction • Instrument cluster malfunction • Connector or pin malfunction • Short circuit in wiring harness between CAN-L, CAN-H and ground • Open circuit in CAN wiring harness (CAN-L, CAN-H) • CAN wiring harness (CAN-L, CAN-H) short to each other

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Start the engine, and drive the vehicle. — Does the speedometer needle move smoothly? — Does the speedometer needle indicate correct speed?	Yes	Troubleshooting completed.
		No	Go to the next step.
2	• Do the tachometer and the water temperature gauge operate normally?	Yes	Go to Step 5.
		No	Go to the next step.
3	• Inspect the DTC for the instrument cluster ON-BOARD DIAGNOSTIC SYSTEM. • Has a DTC been recorded in memory?	Yes	Go to the applicable DTC troubleshooting procedure. (See 09-02C-2 DTC TABLE[INSTRUMENT CLUSTER].)
		No	Go to the next step.
4	• Inspect the DTC for the PCM and ABS HU/CM or DSC HU/CM ON-BOARD DIAGNOSTIC SYSTEM. • Has a DTC been recorded in memory?	Yes	Go to the applicable DTC troubleshooting procedure. (See 01-02A-22 DTC TABLE[LF, L3].) (See 01-02B-14 DTC TABLE[L3 WITH TC].) (See 04-02A-2 ON-BOARD DIAGNOSIS[ABS].) (See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].)
		No	Go to the next step.
5	• Start the instrument cluster input/output check mode. • Inspect the speedometer using the check code 12. (See 09-22-5 INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE.) • Is the speedometer normal?	Yes	Go to the next step.
		No	Replace the instrument cluster.
6	• Disconnect the negative battery cable. • Measure the resistance between DLC-2 terminals F and E. • Is the resistance **54—66 ohms**?	Yes	Go to the next step.
		No	Go to Step 8.
7	• Disconnect the negative battery cable. • Inspect DLC-2 terminals F and E for short to power supply or ground. • Is there any malfunction?	Yes	Inspect the wiring harness and CAN system-related module. Repair or replace the malfunctioning part.
		No	Replace the instrument cluster.
8	• Turn the ignition switch off. • Inspect the instrument cluster connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Are the terminals normal?	Yes	Go to the next step.
		No	Repair or replace the terminal.
9	• Disconnect the negative battery cable. • Measure the resistance between instrument cluster connector terminals 1I and 1K. • Is the resistance **114—126 ohms?**  	Yes	Inspect the wiring harness and CAN system-related module. Repair or replace the malfunctioning part.
		No	Replace the instrument cluster.

NO. 8 TACHOMETER INDICATION IS DEFECTIVE[INSTRUMENT CLUSTER]

id0903d5808100

8	Tachometer indication is defective
POSSIBLE CAUSE	• PCM malfunction • Instrument cluster malfunction • Connector or pin malfunction • Short circuit in wiring harness between CAN-L, CAN-H and ground • Open circuit in CAN wiring harness (CAN-L, CAN-H) • CAN wiring harness (CAN-L, CAN-H) short to each other

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Start the engine. — Does the tachometer needle move smoothly? — Does the tachometer needle indicate the correct engine speed?	Yes	Troubleshooting completed.
		No	Go to the next step.
2	• Do the speedometer and the water temperature gauges operate normally?	Yes	Go to Step 5.
		No	Go to the next step.
3	• Inspect the DTC for the instrument cluster ON-BOARD DIAGNOSTIC SYSTEM. • Has a DTC been recorded in memory?	Yes	Go to the applicable DTC troubleshooting procedure. (See 09-02C-2 DTC TABLE[INSTRUMENT CLUSTER].)
		No	Go to the next step.
4	• Inspect the DTC for the PCM ON-BOARD DIAGNOSTIC SYSTEM. • Has a DTC been recorded in memory?	Yes	Go to the applicable DTC troubleshooting procedure. (See 01-02A-22 DTC TABLE[LF, L3].) (See 01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Go to the next step.
5	• Start the instrument cluster input/output check mode. • Inspect the tachometer using the check code 13. (See 09-22-5 INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE.) • Is the tachometer normal?	Yes	Go to the next step.
		No	Replace the instrument cluster.
6	• Disconnect the negative battery cable. • Measure the resistance between DLC-2 terminals F and E. • Is the resistance **54—66 ohms?**	Yes	Go to the next step.
		No	Go to Step 8.
7	• Disconnect the negative battery cable. • Inspect DLC-2 terminals F and E for short to power supply or ground. • Is there any malfunction?	Yes	Inspect the wiring harness and CAN system-related module. Repair or replace the malfunctioning part.
		No	Replace the instrument cluster.
8	• Turn the ignition switch off. • Inspect the instrument cluster connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Are the terminals normal?	Yes	Go to the next step.
		No	Repair or replace the terminal.
9	• Disconnect the negative battery cable. • Measure the resistance between instrument cluster connector terminals 1I and 1K. • Is the resistance **114—126 ohms?** 	Yes	Inspect the wiring harness and CAN system-related module. Repair or replace the malfunctioning part.
		No	Replace the instrument cluster.

NO. 9 WATER TEMPERATURE GAUGE INDICATION IS DEFECTIVE[INSTRUMENT CLUSTER]

id0903d5808200

9	Water temperature gauge indication is defective
POSSIBLE CAUSE	• PCM malfunction • Instrument cluster malfunction • Connector or pin malfunction • Short circuit in wiring harness between CAN-L, CAN-H and ground • Open circuit in CAN wiring harness (CAN-L, CAN-H) • CAN wiring harness (CAN-L, CAN-H) short to each other

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Start the engine. • Does the water temperature gauge needle move to medium range gradually and stay there?	Yes	Troubleshooting completed.
		No	Go to the next step.
2	• Do the speedometer and the tachometer operate normally?	Yes	Go to Step 5.
		No	Go to the next step.
3	• Inspect the DTC for the instrument cluster ON-BOARD DIAGNOSTIC SYSTEM. • Has a DTC been recorded in memory?	Yes	Go to the applicable DTC troubleshooting procedure. (See 09-02C-2 DTC TABLE[INSTRUMENT CLUSTER].)
		No	Go to the next step.
4	• Inspect the DTC for the PCM ON-BOARD DIAGNOSTIC SYSTEM. • Has a DTC been recorded in memory?	Yes	Go to the applicable DTC troubleshooting procedure. (See 01-02A-22 DTC TABLE[LF, L3].) (See 01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Go to the next step.
5	• Start the instrument cluster input/output check mode. (See 09-22-5 INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE.) • Inspect the water temperature gauge using check code 25. • Is the water temperature gauge normal?	Yes	Go to the next step.
		No	Replace the instrument cluster.
6	• Disconnect the negative battery cable. • Measure the resistance between DLC-2 terminals F and E. • Is the resistance **54—66 ohms?**	Yes	Go to the next step.
		No	Go to Step 8.
7	• Disconnect the negative battery cable. • Inspect DLC-2 terminals F and E for short to power supply or ground. • Is there any malfunction?	Yes	Inspect the wiring harness and CAN system-related module. Repair or replace the malfunctioning part.
		No	Replace the instrument cluster.
8	• Turn the ignition switch off. • Inspect the instrument cluster connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Are the terminals normal?	Yes	Go to the next step.
		No	Repair or replace the terminal.
9	• Disconnect the negative battery cable. • Measure the resistance between instrument cluster connector terminals 1I and 1K. • Is the resistance **114—126 ohms?**  	Yes	Inspect the wiring harness and CAN system-related module. Repair or replace the malfunctioning part.
		No	Replace the instrument cluster.

09-03D SYMPTOM TROUBLESHOOTING [ENTIRE AUDIO SYSTEM]

FOREWORD[ENTIRE AUDIO SYSTEM]

id0903e2801000

Note

- Note down all radio programs set by the customer prior to the repairs. Reset all radio programs and adjust the time after the repairs.

Troubleshooting Index

No.	Symptom	Possible DTC
1	AF noise or POP noise at all sources (Radio, CD)	09:Er20, 09:Er21
2	No power to the entire audio system	09:Er20
3	No sound from all the speakers	03:Er07, 03:Er10, 09:Er20, 09:Er21
4	No sound from some speakers	—
5	Sound break-up or poor sound quality	09:Er21
6	Volume increases/decreases while driving the vehicle	—
7	ALC function is inoperative	—
8	No audio system illumination	09:Er20, 21:Er19

Quick Diagnostic Chart (Entire Audio System)

X: Applicable

Possible factor \ Troubleshooting item	1 AF noise or POP noise at all sources (Radio, CD)	2 No power to the entire audio system	3 No sound from all the speakers	4 No sound from some speakers	5 Sound break-up or poor sound quality	6 Volume increases/decreases while driving the vehicle	7 ALC function is inoperative	8 No audio system illumination

CONFIRMATION STEP 1: AUDIO PANEL SWITCH CONFIRMATION[ENTIRE AUDIO SYSTEM]

id0903e2802800

- Verify the customer complaint and identify the malfunction as occurring from either the center panel or the audio unit.

How to activate audio panel switch confirmation mode

1. Turn the audio system on.
2. Press the POWER button and simultaneously pull up the CLOCK switch for **approx. 1 s.**
3. The audio panel switch confirmation mode is now activated.

STEP	INSPECTION		ACTION
1	• Press each button on the center panel. • Does the buzzer sound when a button is pressed?	Yes	Verify the customer complaint and then go to the appropriate symptom troubleshooting procedure.
		No	Go to the next step.
2	• Disassemble and reassemble the center panel and audio unit. • Activate the audio panel switch confirmation mode. • Does the buzzer sound when a button is pressed?	Yes	Go to the next step.
		No	Replace the center panel. (See 09-20-4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.)
3	• Does the audio system operate properly?	Yes	The system is normal.
		No	Verify the customer complaint and then go to the appropriate symptom troubleshooting procedure.

CONFIRMATION STEP 2: AUDIO CONTROL SWITCH CONFIRMATION[ENTIRE AUDIO SYSTEM]

id0903e2802900

- Verify the customer complaint and identify the malfunction as occuring from either the audio control switch or the audio unit.

09-03D

STEP	INSPECTION		ACTION
1	• Is the symptom related to either the audio control switch or the audio panel operation?	Yes	Verify the customer complaint and then go to the appropriate symptom troubleshooting procedure.
		No	**The symptom is related to the audio panel operation:** • Follow "Confirmation Step 1". **The symptom is related to the audio control switch operation:** • Go to the next step.
2	• Disconnect the audio unit connector (24-pin). • Inspect both the audio unit and the wiring harness-side connectors for a poor connection. (such as damaged/pulled-out pins, corrosion). — Terminal N (ST SW1) — Terminal P (ST SW2) • Are all the pins normal?	Yes	Go to the next step.
		No	**If the audio unit side connector is malfunctioning:** • Replace the audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ ASSEMBLY.) **If the wiring harness-side connector is malfunctioning:** • Repair or replace the pins and/or the connector.
3	• Inspect the continuity between audio unit wiring harness-side connector terminals N and P while operating the audio control switch. • Does the resistance change?	Yes	Verify the customer complaint and then go to the appropriate symptom troubleshooting procedure.
		No	Go to the next step.
4	• Turn the ignition switch to the LOCK position. • Remove the audio control switch. • Inspect the continuity between the audio unit wiring harness-side connector (24-pin) terminal and the audio control switch wiring harness-side connector (8-pin) terminal. — Terminal N (24-pin) — Terminal C (8-pin) — Terminal P (24-pin) — Terminal D (8-pin) • Is there continuity?	Yes	Replace the audio control switch. (See 09-20-14 AUDIO CONTROL SWITCH REMOVAL/ INSTALLATION.)
		No	Repair or replace the related wiring harnesses.

NO.1 AF NOISE OR POP NOISE AT ALL SOURCES (RADIO, CD)[ENTIRE AUDIO SYSTEM]

id0903e2817600

1	AF noise or POP noise at all sources (Radio, CD)/Possible DTC: 09:Er20, 09:Er21

Troubleshooting hints

- Low vehicle battery voltage.
- Jammed radio signals from after market equipment.
- Speaker malfunction (e.g., foreign material penetration, damage)
- Improper speaker installation
- Audio unit malfunction
- Audio amplifier malfunction (with Bose)
- Poor connection of audio unit connector, terminal damage
- Poor connection of audio amplifier connector, terminal damage
- Antenna malfunction (e.g., poor ground)
- Open or short circuit in wiring harness between audio amplifier and ground (with Bose)

Note

- AF noise is a snapping noise that generally occurs during ON/OFF switching operations of electrical equipment other than the audio unit, or a continual rasping noise that occurs when electrical equipment is operated. This is caused by noise interference in the power supply wiring, signal wiring, speaker cable or head of cassette deck. Therefore noise can be heard regardless of radio wave conditions or the audio volume position. The noise will start after one click from the minimum position of the volume button but normally does not change even when volume is turned to a higher position.
- POP noise is snapping or popping noise that occurs during ON/OFF switching operation of the audio unit, or when switching from radio to CD. Even a normal audio unit sometimes emits a little noise depending on the conditions.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Inspect the vehicle battery voltage. • Is the vehicle battery voltage normal? **Specification:** **Ignition switch ON: 11.5 V or more** **Idle: 12.5 V or more**	Yes	Go to the next step.
		No	Charge the battery, then go to the next step.
2	• Turn the audio system on. • Is there any noise?	Yes	Go to the next step.
		No	The system is normal. Explain to the customer that the vehicle battery voltage was low.
3	• Are any of the following after-market equipment installed? (Inspect especially near the antenna.) — Radar detector — Remote engine starter — Anti-theft device — Other	Yes	Go to the next step.
		No	Go to the Step 5.
4	• Remove the after-market equipment. • Turn the audio system on. • Is there any noise?	Yes	Go to the next step.
		No	The system is normal. The after-market electrical devices might be the cause of the noise.
5	• Is there noise coming from all the speakers?	Yes	Go to the Step 7.
		No	Go to the next step.
6	• Inspect the suspect speaker. • Is the speaker normal?	Yes	Go to the next step.
		No	**If there is any foreign material adhering to the speaker:** • Remove the foreign material from the speaker. **If the speaker is malfunctioning:** • Replace the speaker. (See 09-20-7 FRONT DOOR SPEAKER REMOVAL/ INSTALLATION.) (See 09-20-8 REAR DOOR SPEAKER REMOVAL/ INSTALLATION.) **If the speaker is not installed properly:** • Install the speaker properly.

STEP	INSPECTION		ACTION
7	• Attempt to duplicate the symptom on another vehicle. • Does the noise level improve compared to the customer's vehicle?	Yes	Go to the next step.
		No	The system is normal. Explain the noise generation mechanism to the customer. **Note** • The noise level that may be heard varies depending on the operating speed of the audio power and/or mode switches.
8	• Turn the ignition switch to the LOCK position. • Remove the audio unit (without Bose) or the audio amplifier (with Bose). • Inspect the connection of the audio unit connector (without Bose, 24-pin) or the audio amplifier connector (with Bose, 24-pin) (for sound signal line). • Is the connector connected securely?	Yes	Go to the next step.
		No	Repair or replace the terminal or connector. Go to the next step.
9	• Is there any noise?	Yes	Go to the next step.
		No	The system is normal.
10	• Inspect the ground condition of the manual antenna. • Is the ground condition normal?	Yes	Repair or replace the ground. Go to the next step.
		No	Go to the next step.
11	• Is there any noise?	Yes	**Without Bose** • Replace the audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ ASSEMBLY.) **With Bose** • Replace the audio amplifier if any of the following occur: (See 09-20-7 AUDIO AMPLIFIER REMOVAL/ INSTALLATION.) — The noise occurs from a specific speaker. — Noise occurs when the volume is minimized. • Replace the audio unit if any of the following occur: (See 09-20-4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ ASSEMBLY.) — The noise occurs from two or more speakers. — No noise occurs when the volume is minimized.
		No	The system is normal.

NO.2 NO POWER TO THE ENTIRE AUDIO SYSTEM[ENTIRE AUDIO SYSTEM]

id0903e2817800

2	No power to the entire audio system/Possible DTC: 09:Er20

Troubleshooting hints

- Poor connection of audio unit connector, terminal damage
- Audio unit malfunction
- Burnt fuse (B+)
- Burnt fuse (ACC)
- Open or short circuit in power supply (B+) wiring harness
- Open or short circuit in power supply (ACC) wiring harness

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Turn the ignition switch to the LOCK position. • Inspect the following fuses: — ACC — ROOM • Are the fuses normal?	Yes	Go to the next step.
		No	Replace with the appropriate standard fuse. • If the fuse is melted, inspect the wiring harness for a short to ground. Repair or replace the wiring harness, then replace the fuse.
2	• Remove the audio unit. • Inspect the connection of the audio unit connector (24-pin). • Disconnect the audio unit connector and inspect both the audio unit and the wiring harness-side connectors for a poor connection. (such as damaged/pulled-out pins, corrosion). — Terminal 1B (B+) — Terminal 1R (ACC) — Terminal 1W (GND) • Are all the pins normal?	Yes	Go to the next step.
		No	**If audio unit connector has a poor connection:** • Securely connect the audio unit connector. **If the audio unit side connector is malfunctioning:** • Replace the audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ ASSEMBLY.) **If the wiring harness-side connector is malfunctioning:** • Repair or replace the pins and/or the connector.
3	• Connect the audio unit connector. • Inspect the voltage for the power supply line (B+, ACC). **Specification:** **Ignition switch ON: 11.5 V or more** **Idle: 12.5 V or more** • Is the voltage normal?	Yes	Go to the next step.
		No	Repair or replace the related wiring harnesses.
4	• Turn the ignition switch to the LOCK position. • Remove the audio unit connector (24-pin). • Inspect the continuity between audio unit wiring harness-side connector terminal 1W and the ground. • Is there continuity?	Yes	Replace the audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Repair or replace the wiring harness.

NO.3 NO SOUND FROM ALL SPEAKERS[ENTIRE AUDIO SYSTEM]

id0903e2803200

Vehicles With Bose

3	No sound from all the speakers/Possible DTC: 03:Er07, 03:Er10, 09:Er20, 09:Er21

Troubleshooting hints

- Speaker malfunction (e.g., foreign material penetration, damage)
- Audio amplifier malfunction
- Open or short circuit in wiring harness between audio amplifier and speaker
- Open or short circuit in wiring harness between audio amplifier and audio unit.
- Short circuit inside speaker

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Press the AUDIO CONT button for **2 s or more**. • Play the CD or radio. • Adjust the volume between "10" and "15". • Is there sound?	Yes	The system is normal.
		No	Go to the next step.
2	• Measure the voltage at audio amplifier terminal A (8-pin). (vehicle wiring harness-side) • Is the voltage B+?	Yes	Go to Step 4.
		No	Repair or replace the wiring harness between the audio amplifier and fuse. Go to the next step.
3	• Is there any sound?	Yes	The system is normal.
		No	Go to the next step.
4	• Turn the ignition switch to the LOCK position. • Disconnect the audio amplifier connector (8-pin, 24-pin). • Inspect the continuity between the following terminals of the audio amplifier connector and the speaker connector: **For front speaker (LH)** — Terminal 1Q — Terminal B — Terminal 1S — Terminal A **For front speaker (RH)** — Terminal 1U — Terminal B — Terminal 1W — Terminal A **For tweeter (LH)** — Terminal 1Q — Terminal B — Terminal 1S — Terminal A **For tweeter (RH)** — Terminal 1U — Terminal B — Terminal 1W — Terminal A **For rear speaker (LH)** — Terminal 1I — Terminal B — Terminal 1K — Terminal A **For rear speaker (RH)** — Terminal 1M — Terminal B — Terminal 1O — Terminal A **For woofer** — Terminal 2D — Terminal B — Terminal 2C — Terminal A • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the related wiring harnesses.

STEP	INSPECTION		ACTION
5	• Turn the ignition switch to the LOCK position. • Disconnect the audio amplifier connector (8-pin, 24-pin). • Inspect the continuity between the audio amplifier connector and ground: **For front speakers and tweeters** — Terminal 1Q (24-pin, LH OUT+) — GND — Terminal 1S (24-pin, LH OUT-) — GND — Terminal 1U (24-pin, RH OUT+) — GND — Terminal 1W (24-pin, RH OUT-) — GND **For rear speakers** — Terminal 1I (24-pin, LH OUT+) — GND — Terminal 1K (24-pin, LH OUT-) — GND — Terminal 1M (24-pin, OUT+) — GND — Terminal 1O (24-pin, OUT-) — GND **For woofer** — Terminal 2D (8-pin, OUT+) — GND — Terminal 2C (8-pin, OUT-) — GND • Is there continuity?	Yes	Repair or replace the related wiring harnesses or the speaker unit. **Note** • If there is a short circuit between the speaker wiring harnesses or the speaker lead wire and ground, the protector circuit inside the audio unit operates to cut the sound.
		No	Go to the next step.
6	• Turn the ignition switch to the LOCK position. • Disconnect the audio amplifier connector (24-pin) and audio unit connector (24-pin). • Inspect the continuity between audio amplifier terminal 1V (vehicle wiring harness-side) and the audio unit terminal 1J (vehicle wiring harness-side). • Is there continuity?	Yes	Replace the audio amplifier. (See 09-20-7 AUDIO AMPLIFIER REMOVAL/INSTALLATION.)
		No	Repair or replace the wiring harness between the audio amplifier and the audio unit. Go to the next step.
7	• Is there any sound?	Yes	The system is normal.
		No	Replace the audio amplifier. (See 09-20-7 AUDIO AMPLIFIER REMOVAL/INSTALLATION.)

Vehicles Without Bose

3	**No sound from all speakers/Possible DTC: 03:Er07, 03:Er10, 09:Er20, 09:Er21**

Troubleshooting hints

- Speaker malfunction (e.g., foreign material penetration, damage)
- Audio unit malfunction
- Short circuit in wiring harness between audio unit and speaker
- Short circuit inside speaker

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Press the AUDIO CONT button for **2 s or more**. • Play the CD or radio. • Adjust the volume between "10" and "15". • Is there any sound?	Yes	The system is normal.
		No	Go to the next step.
2	• Turn the ignition switch to the LOCK position. • Remove the audio unit. • Disconnect the audio connector (24-pin). • Inspect the continuity between the audio unit wiring harness-side connector terminal and ground: **For front speakers** — Terminal 1A (LH+) — GND — Terminal 1C (LH-) — GND — Terminal 1D (RH+) — GND — Terminal 1F (RH-) — GND **For rear speakers** — Terminal 1S (LH+) — GND — Terminal 1U (LH-) — GND — Terminal 1V (RH+) — GND — Terminal 1X (RH-) — GND — Is there continuity?	Yes	Repair or replace the related wiring harnesses or the speaker unit. **Note** • If there is a short circuit between the speaker wiring harnesses or the speaker lead wire and ground, the protector circuit inside the audio unit operates to cut the sound.
		No	Replace the audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)

NO.4 NO SOUND FROM SOME SPEAKERS[ENTIRE AUDIO SYSTEM]

id0903e2818100

Vehicles With Bose

4	No sound from some speakers/Possible DTC: —

Troubleshooting hints

- Speaker malfunction (e.g., foreign material penetration, damage)
- Audio amplifier malfunction
- Short circuit inside speaker
- Open or short circuit in wiring harness between audio amplifier and speaker
- Open or short circuit in wiring harness between audio amplifier and audio unit
- Poor connection of audio unit connector, terminal damage
- Poor connection of audio amplifier connector

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Turn the audio unit on. • Press the AUDIO CONT button **1 s or more** (BAL/FAD cancel mode). • Press the POWER button and simultaneously press down the AUTO-M switch for approx. 1 s. **Note** • This function outputs sound to each speaker sequentially to allow determination of which speaker is not emitting sound. • Is there any speaker that does not output sound?	Yes	**If there is no sound from some speakers:** • Go to the next step. **If there is no sound at all:** • Go to troubleshooting "No.3 No sound from all speakers".
		No	The troubleshooting is completed.
2	• Does the same speaker output no sound if the audio source is changed? (Radio, CD)	Yes	Go to the next step.
		No	Replace the audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.) **Note** • If a different speaker outputs no sound, the audio unit is malfunctioning.
3	• Turn the ignition switch to the LOCK position. • Inspect the connection of the audio unit connector (24-pin). (For sound signal line) • Is the connector connected securely?	Yes	Go to the next step.
		No	Connect the audio unit connector (24-pin) securely.
4	• Turn the ignition switch to the LOCK position. • Remove the audio unit. • Disconnect the audio unit connector (24-pin). • Inspect the continuity between the audio unit wiring harness-side connector and ground. **For door speakers** — Terminal 1A (LH+) — GND — Terminal 1C (LH-) — GND — Terminal 1D (RH+) — GND — Terminal 1F (RH-) — GND **For rear speakers** — Terminal 1S (LH+) — GND — Terminal 1U (LH-) — GND — Terminal 1V (RH+) — GND — Terminal 1X (RH-) — GND • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 6.

STEP	INSPECTION		ACTION
5	• Inspect the continuity between the following terminals of the audio amplifier wiring harness-side connector (24-pin) and the audio unit wiring harness-side connector (24-pin). **For door speakers** — Terminal 1T (LH+) — Terminal 1A (LH+) — Terminal 1R (LH-) — Terminal 1C (LH-) — Terminal 1P (RH+) — Terminal 1D (RH+) — Terminal 1N (RH-) — Terminal 1F (RH-) **For rear speakers** — Terminal 1L (LH+) — Terminal 1S (LH+) — Terminal 1J (LH-) — Terminal 1U (LH-) — Terminal 1H (RH+) —Terminal 1X (RH-) — Terminal 1F (RH-) — Terminal 1V (RH+) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the related wiring harnesses between the audio amplifier and the audio unit. Go to the next step.
6	• Inspect the connection of the audio amplifier connector (24-pin, 8-pin). • Is the connector connected securely?	Yes	Go to the next step.
		No	Connect the audio amplifier connector (24-pin, 8-pin) securely.
7	• Disconnect the audio amplifier (8-pin, 24-pin) and the speaker connector. • Inspect the continuity between the following terminals of the audio amplifier connector (8-pin, 24-pin) and the speaker connector. **For front speaker (LH)** — Terminal 1Q — Terminal B — Terminal 1S — Terminal A **For front speaker (RH)** — Terminal 1U — Terminal B — Terminal 1W — Terminal A **For tweeter (LH)** — Terminal 1Q — Terminal B — Terminal 1S — Terminal A **For tweeter (RH)** — Terminal 1U — Terminal B — Terminal 1W — Terminal A **For rear speaker (LH)** — Terminal 1I — Terminal B — Terminal 1K — Terminal A **For rear speaker (RH)** — Terminal 1M — Terminal B — Terminal 1O — Terminal A **For woofer** — Terminal 2D — Terminal B — Terminal 2C — Terminal A • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the related wiring harnesses.
8	• Inspect the continuity between the following terminals of the audio amplifier wiring harness-side connector (8-pin, 24-pin) and ground. **For front speakers and tweeter** — Terminal 1Q (LH OUT+) — GND — Terminal 1S (LH OUT-) — GND — Terminal 1U (RH OUT+) — GND — Terminal 1W (RH OUT-) — GND **For rear speakers** — Terminal 1I (LH OUT+) — GND — Terminal 1K (LH OUT-) — GND — Terminal 1M (RH OUT+) — GND — Terminal 1O (RH OUT-) — GND **For woofer** — Terminal 2D (OUT+) — GND — Terminal 2C (OUT-) — GND • Is there continuity?	Yes	Repair or replace for a short circuit between the audio amplifier and speaker wiring harnesses or inside the speaker unit. **Note** • If there is a short circuit between the speaker wiring harnesses or the speaker lead wire and ground, the protector circuit inside the audio amplifier operates to cut the sound.
		No	Go to the next step.

STEP	INSPECTION		ACTION
9	• Remove the suspect speaker. • Disconnect the speaker connector (2-pin) and inspect the resistance of the speaker. • Is the resistance normal? **Specification:** • Speaker resistance + wiring harness resistance **Note** • If the speaker lead wire contacts either the ground or vehicle frame, replace the speaker.	Yes	Replace the audio amplifier. (See 09-20-7 AUDIO AMPLIFIER REMOVAL/INSTALLATION.)
		No	Replace the speaker. (See 09-20-7 FRONT DOOR SPEAKER REMOVAL/INSTALLATION.) (See 09-20-8 REAR DOOR SPEAKER REMOVAL/INSTALLATION.)

Vehicles Without Bose

4	**No sound from some speakers/Possible DTC: —**

Troubleshooting hints

- Speaker malfunction (e.g., foreign material penetration, damage)
- Audio unit malfunction
- Short circuit inside speaker
- Open or short circuit in wiring harness between audio unit and speaker
- Poor connection of audio unit connector, terminal damage

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Turn the audio unit on. • Press the AUDIO CONT button **1 s or more** (BAL/FAD cancel mode). • Press the POWER button and simultaneously press down the AUTO-M switch for approx. 1 s. **Note** • The speaker outputting sound changes in the order of front passenger-side door. • Is there any speaker that does not output sound?	Yes	**If no sound from some speaker:** • Go to the next step. **If no sound at all:** • Go to the troubleshooting of "No.3 No sound from all speakers".
		No	The troubleshooting is completed.
2	• Does the same speaker output no sound if the audio source is changed? (Radio, CD)	Yes	Go to the next step.
		No	Replace the audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.) **Note** • If a different speaker outputs no sound, the audio unit is malfunctioning.
3	• Turn the ignition switch to the LOCK position. • Inspect the connection of the audio unit connector (24-pin). (for sound signal line) • Is the connector connected securely?	Yes	Go to the next step.
		No	Connect the audio unit connector (24-pin) securely.

STEP	INSPECTION		ACTION
4	• Turn the ignition switch to the LOCK position. • Remove the audio unit. • Disconnect the audio unit connector (24-pin). • Inspect the continuity between the audio unit wiring harness-side connector and ground. **For door speakers** — Terminal 1A (LH+) — GND — Terminal 1C (LH-) — GND — Terminal 1D (RH+) — GND — Terminal 1F (RH-) — GND **For rear speakers** — Terminal 1S (LH+) — GND — Terminal 1U (LH-) — GND — Terminal 1V (RH+) — GND — Terminal 1X (RH-) — GND • Is there continuity?	Yes	Repair or replace the related wiring harnesses or speaker unit. **Note** • If there is a short circuit between the speaker wiring harnesses or the speaker lead wire and ground, the protector circuit inside the audio unit operates to cut the sound.
		No	Go to the next step.
5	• Remove the suspect speaker. • Disconnect the speaker connector (2-pin) and inspect the resistance of the speaker. • Is the resistance normal? **Specification:** • Speaker resistance + wiring harness resistance **Note** • If the speaker lead wire contacts either the ground or vehicle frame, replace the speaker.	Yes	Replace the speaker. (See 09-20-7 FRONT DOOR SPEAKER REMOVAL/ INSTALLATION.) (See 09-20-8 REAR DOOR SPEAKER REMOVAL/ INSTALLATION.)
		No	Replace the audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)

NO.5 SOUND BREAK-UP OR POOR SOUND QUALITY[ENTIRE AUDIO SYSTEM]

id0903e2818300

5	Sound break-up or poor sound quality/Possible DTC: 09:Er21

Troubleshooting hints

- Speaker malfunction (e.g., foreign material penetration, damage)
- Improper speaker installation
- Audio unit malfunction
- Audio amplifier malfunction (with Bose)
- Door trim and/or package trim vibration

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Is there sound break-up or poor sound quality from all speakers?	Yes	Go to the next step.
		No	Go to Step 5.
2	• Inspect the sound while adjusting the sound volume. • Is there sound break-up or poor sound quality between "15" and "20"?	Yes	Go to the next step.
		No	The system is normal.
3	• Inspect the BASS/TREB. • Is there poor sound quality between "-3 — +3" of the "BASS/TREB"? **Note** • When the AUDIO CONT button is pressed for a few seconds, BASS/TREB is set to "0".	Yes	Go to the next step.
		No	If there is sound break-up between "-6—+6" of the BASS/ TREB at the maximum volume, the system is normal.

STEP	INSPECTION		ACTION
4	• Attempt to duplicate the symptom on another vehicle. • Is the sound quality better than the customer's vehicle?	Yes	**Without Bose** • Replace the audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ ASSEMBLY.) **With Bose** • Replace the audio amplifier if the following occurs: (See 09-20-7 AUDIO AMPLIFIER REMOVAL/ INSTALLATION.) — Noise occurs from a specific speaker. • Replace the audio unit if the following occurs: (See 09-20-4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ ASSEMBLY.) — Noise occurs from two or more speakers.
		No	The system is normal.
5	• Identify the speaker with sound break-up by adjusting BAL/FADE. • Is the suspect speaker pointed upward?	Yes	Go to Step 7.
		No	Go to the next step.
6	• Inspect the speaker installation condition. • Is the speaker installed properly?	Yes	Go to the next step.
		No	Install the speaker properly.
7	• Remove the speaker. • Is there any foreign material penetration or damage to the speaker?	Yes	Repair or replace the suspect speaker.
		No	Go to the next step.
8	• Inspect the sound again. • Is there sound break-up?	Yes	Go to the next step.
		No	Inspect for vibration from the door trim and/or package trim. Repair or replace the suspect trim if necessary.
9	• Replace with a speaker known to be operational. (e.g., swap right and left speakers) • Is the sound break-up heard at the same location?	Yes	**Without Bose** • Replace the audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ ASSEMBLY.) **With Bose** • Replace the audio amplifier if the following occurs: (See 09-20-7 AUDIO AMPLIFIER REMOVAL/ INSTALLATION.) — Noise occurs from a specific speaker. • Replace the audio unit if the following occurs: (See 09-20-4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ ASSEMBLY.) — Noise occurs from two or more speakers.
		No	Replace the speaker. (See 09-20-7 FRONT DOOR SPEAKER REMOVAL/ INSTALLATION.) (See 09-20-8 REAR DOOR SPEAKER REMOVAL/ INSTALLATION.)

NO.6 VOLUME INCREASES/DECREASES WHILE DRIVING THE VEHICLE[ENTIRE AUDIO SYSTEM]

id0903e2818500

6	Volume increases/decreases while driving the vehicle/Possible DTC: —

Troubleshooting hints

- Audio unit malfunction (without Bose)
- Audio amplifier malfunction (with Bose)

Note

- Inspect the ALC function while driving the vehicle and playing a CD.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Does the ALC function turn on?	Yes	Go to the next step.
		No	**Without Bose** • Replace the audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.) **With Bose** • Replace the audio amplifier if the following occurs: (See 09-20-7 AUDIO AMPLIFIER REMOVAL/INSTALLATION.) — The volume changes suddenly.
2	• Turn the ALC function off. • Does the sound change while driving the vehicle?	Yes	Replace the audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	The system is normal. Explain the ALC function to the customer.

NO.7 ALC FUNCTION IS INOPERATIVE[ENTIRE AUDIO SYSTEM]

id0903e2803600

7	ALC function is inoperative/Possible DTC: —

Troubleshooting hints

- Audio unit malfunction
- Open or short circuit in vehicle speed signal wiring harness (e. g., instrument cluster)

Note

- Inspect the ALC function while driving the vehicle and playing a CD.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Turn the ALC function on. • Inspect the ALC function operation while driving the vehicle. (ALC level 3) • Does the ALC system operate properly?.	Yes	The system is normal. Explain the ALC function to the customer.
		No	Go to the next step.
2	• Verify DTC for audio unit using ON-BOARD DIAGNOSTIC TEST MODE. (See 09-02D-1 STARTING PROCEDURE FOR ON-BOARD DIAGNOSTIC TEST MODE[AUDIO].) • Is DTC 16:Er12 displayed?	Yes	Inspect and repair MULTIPLEX COMMUNICATION SYSTEM.
		No	Replace the audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)

NO.8 NO AUDIO SYSTEM ILLUMINATION[ENTIRE AUDIO SYSTEM]

id0903e2818700

8	No audio system illumination/Possible DTC: 09:Er20, 21:Er19

Troubleshooting hints

- Poor connection of audio unit connector, terminal damage
- Audio unit malfunction
- Burnt fuse (TNS signal)
- Open or short circuit in TNS signal wiring harness
- Center panel malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Is all the illumination on the audio unit turned off?	Yes	Go to the next step.
		No	Replace the center panel. (See 09-20-4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.)
2	• Turn the ignition switch to the LOCK position. • Inspect the fuse (ILLUMI). • Is the fuse normal?	Yes	Go to the Step 4.
		No	Go to the next step.
3	• Turn the ignition switch to the LOCK position. • Disconnect the audio unit connector (24-pin) and inspect the continuity between the audio unit wiring harness-side connector terminal 1E (TNS) and the ground. • Is there continuity?	Yes	Repair or replace the short circuit in the suspect wiring harness. After repairing the wiring harness, replace with the appropriate standard fuse.
		No	Go to the next step.
4	• Inspect the connection of the audio unit connector (24-pin). • Inspect both the audio unit and wiring harness-side connector terminal 1E for a poor connection (such as damaged/pulled-out pins, corrosion). • Are all the pins normal?	Yes	Go to the next step.
		No	**If audio unit connector has a poor connection:** • Securely connect the audio unit connector. **If the audio unit side connector is malfunctioning:** • Replace the audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ ASSEMBLY.) **If the wiring harness-side connector is malfunctioning:** • Repair or replace the pins and/or the connector.
5	• Connect the audio unit connector (24-pin). • Turn the ignition switch to the ACC position. • Inspect the voltage at the audio unit connector terminal 1E (TNS). • Is the voltage **B+** when the light switch is turned to the TNS position?	Yes	Replace the audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Repair or replace the related wiring harness (TNS signal).

DTC TABLE[ENTIRE AUDIO SYSTEM]

id0903e2856000

Screen display DTC (When starting on-board diagnostic test function)	Detection condition	Possible cause/inspection
03: Er01	CD player cannot implement insert and eject commands.	CD player malfunction
03: Er02	Cannot change tracks.	CD player malfunction
03: Er07	CD reading error.	• Defective CD (scratches or dirt) • CD player malfunction
03: Er10	CD player does not operate.	• Malfunction of connectors between base unit and CD player • CD player malfunction
05: Er01	CD changer (external) cannot implement insert, eject, and disc change commands.	• Defective CD (curved, broken or foreign material stuck/attached, etc.) • CD changer (external) malfunction
05: Er07	CD reading error.	• Defective CD (curved, broken or foreign material stuck/attached, etc.) • CD changer (external) malfunction
05: Er10	CD changer (external) does not operate.	• Defective CD (curved, broken or foreign material stuck/attached, etc.) • CD changer (external) malfunction
07: Er01	MD player cannot implement insert and eject commands.	MD player malfunction
07: Er02	Cannot change tracks.	MD player malfunction
07: Er07	MD reading error.	Defective MD
07: Er08	Blank unrecorded MD is inserted.	Defective MD
07: Er10	MD player does not operate.	• Malfunction of connectors between base unit and MD player • MD player malfunction
09: Er20	Audio system does not operate.	Voltage at base unit is low.
09: Er21	Broken sound/No sound	Inspect the audio system operation according to vehicle condition.
09: Er22	No radio reception	Inspect the radio operation according to vehicle condition.
16: Er12	Maltiplex communication system malfunction.	CAN system
21: Er19	Communication error between base unit and center panel	Malfunction of connectors between base unit and center panel
no Err	No DTCs stored	No DTCs stored

09-03E SYMPTOM TROUBLESHOOTING [RADIO]

FOREWORD[RADIO]

id0903e3801000

Note

- If the case location, time, and broadcasting station etc. can be specified through interview with the customer, there is the possibility that the signal reception environment is the cause of the problem.
- Perform confirmation of the symptom and evaluate under the conditions that the customer reported (location, time, broadcasting station etc.). If this is not possible, perform it under equivalent conditions.
- Before inspection or repair, record the broadcasting stations that customer has preset and reset them accordingly after the inspection or repair. Adjust the clock too.

Troubleshooting Index

No.	Symptom	Possible DTC
1	No radio reception (AM/FM)/No or low volume	09:Er20, 09:Er22
2	Noise from radio (AM only)	09:Er22
3	Noise from radio (FM only)	09:Er22
4	Cannot tune (SEEK does not stop)	09:Er20, 09:Er22
5	Cannot preset (preset function does not operate)	21:Er19
6	Reception frequency of radio slips	09:Er22

Quick Diagnostic Chart (Radio)

CONFIRMATION STEP 1: RECEPTION CONDITION SYMPTOM (EXAMPLE)[RADIO]

id0903e3804000

Symptom	Antenna signal condition	Source
Only a buzzing sound from the speakers	• There is no radio station broadcasting. • Signals from the antenna to the audio unit are not transmitted.	• Electric noise caused by the operation of internal circuit from the audio unit itself • Atmospheric noise
A buzzing or crunching sound and normal sound produced at the same time from the speakers	• Though signals are transmitted from the antenna to the audio unit, electrical noise from other sources is greater.	• Electrical noise caused by the operation of electrical components on the vehicle • Electrical noise from high tension wires, transformer substation (factory), electrical feeder line (street car), or motorcycle.
A thumping sound and normal sound produced at the same time from the speakers (FM only)	• Noise occurs due to radio wave environment at specific places (e.g. in valleys between buildings). Noise varies when the vehicle itself or surrounding vehicles move. (FM only)	• Interference between direct and reflected waves of FM signals causes noise (Multipass noise).

CONFIRMATION STEP 2: ANTENNA SYSTEM SYMPTOM (EXAMPLE)[RADIO]

id0903e3804100

Possible cause	AM reception condition	FM reception condition
• Antenna feeder axis, open circuit • Antenna feeder plug not attached	NG: No reception	YES: Reception possible. (Sensitivity decreases, but reception is possible under strong electric field.)
• Antenna feeder axis (+) to ground (-), open circuit	NG: No reception	NG: No reception
• Antenna feeder and antenna, poor ground	YES: Reception possible (Noise may occur)	YES: Reception possible (Sensitivity decreases, but reception is possible under strong electric field.)
• Antenna feeder, jack and plug poor connection	NG: No reception (Depending on connection conditions)	YES: Reception possible (Depending on connection conditions)

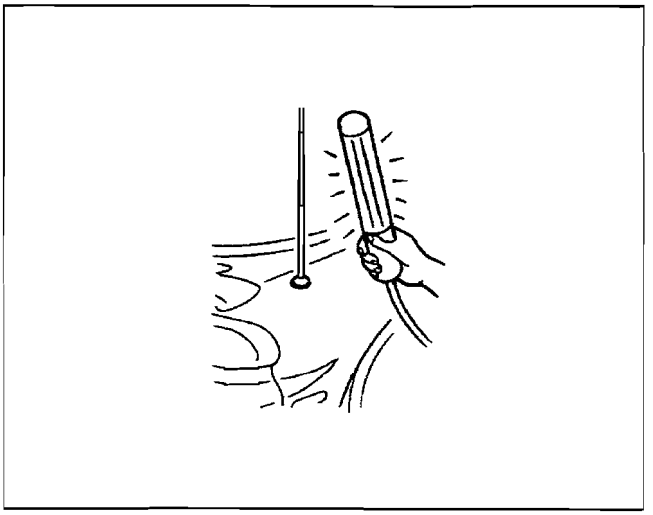
CONFIRMATION STEP 3: ANTENNA SYSTEM SIMPLE INSPECTION[RADIO]

id0903e3804200

- Because the antenna system is equipped with a capacitor, the continuity cannot be checked. Therefore proceed with the following simple inspection.
  1. Turn the AM radio on.
  2. Tune to the frequency that there is no broadcast and you will hear a buzzing sound.
  3. Turn a fluorescent light on and shake it around the antenna rod (around **10—20 mm**)

Note
- Use a fluorescent light type for the inspection. Accurate diagnostic cannot be done with a different type of light.

4. If a whirring sound from the speaker synchronized to the work light movement is confirmed, the antenna system is normal.



am3uuw0000017

NO.1 NO RADIO RECEPTION (AM/FM)/NO OR LOW VOLUME[RADIO]

id0903e3804300

1	No radio reception (AM/FM)/no or low volume/Possible DTC: 09:Er20, 09:Er22
POSSIBLE CAUSE	• Jamming from aftermarket electronic equipment (two-way radio, navigation system, mobile phone, etc.) • Audio unit malfunction • Poor connection of antenna feeder plug • Antenna feeder malfunction • Open or short circuit in wiring harness between audio unit and manual antenna (antenna amplifier power supply system) • Electronic jamming from outside, or inferior condition of broadcasting station radio wave • Antenna rod is not installed (standard parts)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Turn the audio unit on. • Is the LCD indicated correctly?	Yes	Go to Step 3.
		No	Go to the next step.
2	• Measure the voltage at B+ and ACC terminals. • Is the voltage normal? **Specification** **With ignition switch ON: 11.5 V or more** **At idling: 12.5 V or more**	Yes	Go to the next step.
		No	Follow the diagnostic procedure for symptom No. 2 (Entire audio system).
3	• Set the volume between 10 and 15. • Is a buzzing sound or voice confirmed?	Yes	Go to the next step.
		No	Follow the diagnostic procedure for symptom No. 3 (Entire audio system) or No. 4 (Entire audio system).
4	• Tune to a local broadcasting station and check the reception condition. • Is the reception normal?	Yes	Go to the next step.
		No	Go to Step 6.
5	• Push the PRESET buttons and check the preset conditions. • Have preset stations been stored?	Yes	The system is normal.
		No	Preset broadcasting stations.
6	• Is aftermarket electronic equipment (two-way radio, navigation system, mobile phone, etc.) installed? **Note** • A TV antenna located close to the audio antenna can be the cause of noise. Relocate the TV antenna.	Yes	Go to the next step.
		No	Go to Step 8.
7	• Remove aftermarket electronic equipment. • Turn the audio unit on and check the reception condition. • Does reception improve?	Yes	The system is normal. (Explain to the customer that aftermarket electronic equipment is the cause of the noise)
		No	Go to the next step.
8	• Refer to confirmation Step 3, and inspect the antenna system. • Is a whirring sound present?	Yes	Replace the audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Go to the next step.
9	• Inspect the antenna feeder plug connection condition. • Is the connection normal?	Yes	Go to the next step.
		No	Insert the antenna feeder plug securely.
10	• Turn the ignition switch to the LOCK position. • Measure the continuity between the antenna feeder axis and ground. • Is there any continuity?	Yes	Replace the antenna feeder. (See 09-20-13 ANTENNA FEEDER LOCATION.)
		No	Go to the next step.
11	• Measure the voltage at audio unit terminal H (24-pin) to verify the antenna amplifier power supply. • Is the voltage B+?	Yes	Go to the next step.
		No	Replace the audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)

STEP	INSPECTION		ACTION
12	• Turn the ignition switch to the LOCK position. • Inspect the continuity between audio unit terminal H (24-pin) and manual antenna terminal A. • Is there any continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between the audio unit and the manual antenna (antenna amplifier power supply system), then verify the reception condition. If the reception has improved, troubleshooting is completed. If the reception has not improved, go to the next step.
13	• Compare the reception with another audio unit on the same model (model/unit) under the same problem conditions. • Is the reception equivalent to the customer's unit? **Note** • Due to the following differences, you may sense a difference in reception efficiency. **(Vehicle factor)** — Antenna installation location, height, feeder wiring routing, optional electrical equipment **(Audio unit factor)** — High-tone setting: Decreases effective volume range when signals become weak. (Noise is easy to be conspicuous) — Noise restraint setting: Widens effective volume range when signals become weak. (Noise is not conspicuous.)	Yes	The system is normal. (It is caused by electronic jamming from outside, or inferior broadcasting station signal condition.)
		No	Replace audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)

NO.2 NOISE FROM RADIO (AM ONLY)[RADIO]

id0903e3804400

2	Noise from radio (am only)/Possible DTC: 09:Er22
POSSIBLE CAUSE	• Antenna rod is not installed (standard part) • Jamming from aftermarket electronic equipment (two-way radio, navigation system, mobile phone, etc.) • Noise from electrical system on vehicle (e.g. fuel pump) • Battery malfunction • Charging system malfunction • Audio unit malfunction • Poor connection of antenna feeder plug • Antenna feeder malfunction • Open or short circuit in wiring harness between audio unit and manual antenna (antenna amplifier power supply system) • Electronic jamming from outside, or inferior condition of broadcasting station radio wave • Antenna installation loosened

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Tune to a local broadcasting station and check the reception condition. • Is the reception normal?	Yes	Tune to the correct frequency for the broadcasting station. If not preset, preset it.
		No	Go to the next step.
2	• Inspect the antenna rod condition. • Is the antenna rod installed?	Yes	Go to the next step.
		No	Advise the customer to install the antenna rod when the radio is used. (It the antenna rod is not a standard part, replace it.)
3	• Is aftermarket electronic equipment (two-way radio, navigation system, mobile phone, etc.) installed? **Note** • A TV antenna located close to the audio antenna can be the cause of noise. Relocate the TV antenna.	Yes	Go to the next step.
		No	Go to Step 5.
4	• Remove aftermarket electronic equipment. • Turn the audio unit on and check the reception condition. • Does reception improve?	Yes	The system is normal. (Explain to the customer that aftermarket electronic equipment is the cause of the noise)
		No	Go to the next step.
5	• Measure the battery voltage. • Is battery voltage normal? **Standard** **With ignition switch ON: 11.5 V or more** **At idling: 12.5 V or more** **Note** • Verify that the battery cables are connected to the terminals securely.	Yes	Go to the next step.
		No	Charge the battery. Inspect the charging system, and repair or replace if necessary.
6	• Does the noise occur only when the vehicle electrical system (e.g. fuel pump) operates? **Note** • Identify the suspect electrical component by disconnecting fuses, turning switches on & off, or disconnecting and connecting connectors. • It is easier to use the simulation function on the M-MDS.	Yes	Go to the next step.
		No	Go to Step 8.

STEP	INSPECTION		ACTION
7	• Verify the condition of the power supply and ground of the electric components, and the noise prevention capacitor. • Is noise present after the inspection? **Note** • Inspect the following: — Power supply to electrical component for voltage drop (compare with battery voltage) — Resistance between ground of electrical component and body. (Should be close to 0 ohm) — Installation condition of noise prevention capacitor for fuel pump.	Yes	Go to the next step.
		No	Troubleshooting completed. **Note** • The audio unit supplies 12 V battery power to the antenna amplifier for AM radio reception in the radio mode. The audio unit cannot receive AM signals without the 12 V battery power to the antenna amplifier. If the AM signals strengthen, the audio unit may receive the signals with noise.
8	• Inspect the antenna feeder plug connection condition. • Is the connection normal?	Yes	Go to the next step.
		No	Insert the antenna feeder plug securely.
9	• Turn the ignition switch to the LOCK position. • Measure the continuity between the antenna the feeder axis and ground. • Is there any continuity?	Yes	Replace antenna feeder. (See 09-20-13 ANTENNA FEEDER LOCATION.)
		No	Go to the next step.
10	• Measure the voltage at audio unit terminal H (24-pin) to verify the antenna amplifier power supply. • Is the voltage B+?	Yes	Go to the next step.
		No	Replace the audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
11	• Turn the ignition switch to the LOCK position. • Inspect the continuity between audio unit terminal H (24-pin) and manual antenna terminal A. • Is there any continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between the audio unit and the manual antenna (antenna amplifier power supply system), then verify the reception conditon. If the reception has improved, troubleshooting is completed. If the reception has not improved, go to the next step.
12	Compare the reception with another audio unit on same model (model/unit) under the same problem conditions. • Is the reception equivalent to the customer's unit? **Note** • Due to the following differences, you may sense a difference in reception efficiency. **(Vehicle factor)** — Antenna installation location, height, feeder wiring routing, optional electrical equipment **(Audio unit factor)** — High-tone setting: Decreases effective volume range when signals become weak. (Noise is easy to be conspicuous) — Noise restraint setting: Widens effective volume range when signals become weak. (Noise is not conspicuous.)	Yes	The system is normal (It is caused by electronic jamming from outside, or inferior broadcasting station signal condition).
		No	Go to the next step.
13	• Retighten the ground for the antenna and antenna amplifier. Retighten the antenna rod. • Is the noise present after retightening?	Yes	Replace the audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Troubleshooting completed.

NO.3 NOISE FROM RADIO (FM ONLY)[RADIO]

id0903e3804500

3	Noise from radio (FM only)/Possible DTC: 09:Er22
POSSIBLE CAUSE	• Antenna rod is not installed (standard part) • Jamming from aftermarket electronic equipment (two-way radio, navigation system, mobile phone, etc.) • Noise from electrical system on vehicle (e.g. fuel pump) • Battery malfunction • Charging system malfunction • Audio unit malfunction • Poor connection of antenna feeder plug • Antenna feeder malfunction • Open or short circuit in wiring harness between audio unit and manual antenna (antenna amplifier power supply system) • Electronic jamming from outside, or inferior condition of broadcasting station radio wave • Antenna installation loosened **Note** • FM broadcasts are known for good sound quality and resistance to noise, but FM broadcasts do carry characteristic noise. Though the audio unit is designed to reduce noise, there are times when noise occurs due to reception conditions.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Tune to a local broadcasting station and check the reception condition. • Is the reception normal?	Yes	Tune to the correct frequency for the broadcasting station. If not preset, preset it.
		No	Go to the next step.
2	• Inspect the antenna rod condition. • Is the antenna rod installed?	Yes	Go to the next step.
		No	Advise the customer to install the antenna rod when the radio is used. (It the antenna rod is not a standard part, replace it.)
3	• Is aftermarket electronic equipment (two-way radio, navigation system, mobile phone, etc.) installed?	Yes	Go to the next step.
		No	Go to Step 5.
4	• Remove aftermarket electronic equipment. • Turn the audio unit on and check the reception condition. • Does the reception improve?	Yes	The system is normal. (Explain to the customer that the aftermarket electronic equipment is the cause of the noise)
		No	Go to the next step.
5	• Measure the battery voltage. • Is the battery voltage normal? **Standard** **With ignition switch ON: 11.5 V or more** **At idling: 12.5 V or more** **Note** • Verify that the battery cables are connected to the terminals securely.	Yes	Go to the next step.
		No	Charge the battery. Inspect the charging system, and repair or replace if necessary.
6	• Does the noise occur only when the vehicle's electrical system (e.g. fuel pump) operates? **Note** • Identify the suspect electrical component by disconnecting fuses, turning switches on & off, or disconnecting and connecting connectors. • It is easier to use the simulation function on the M-MDS.	Yes	Go to the next step.
		No	Go to Step 8.

STEP	INSPECTION		ACTION
7	• Verify the condition of the power supply and ground of the electric components, and the noise prevention capacitor. • Is the noise present after inspection? **Note** • Inspect the following: — Power supply to electrical component for voltage drop (compare with battery voltage) — Resistance between ground of electrical component and body. (Should be close to 0 ohm) — Installation condition of noise prevention capacitor for fuel pump.	Yes	Go to the next step.
		No	Troubleshooting completed.
8	• Inspect the antenna feeder plug connection condition. • Is the connection normal?	Yes	Go to the next step.
		No	Insert the antenna feeder plug securely.
9	• Turn the ignition switch to the LOCK position. • Measure the continuity between the antenna feeder axis and ground. • Is there any continuity?	Yes	Replace the antenna feeder. (See 09-20-13 ANTENNA FEEDER LOCATION.)
		No	Go to the next step.
10	• Turn the ignition switch to the LOCK position. • Inspect the continuity between audio unit terminal H (24-pin) and manual antenna terminal A. • Is there any continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between the audio unit and the manual antenna (antenna amplifier power supply system), then verify the reception condition. If the reception has improved, troubleshooting is completed. If the reception has not improved, go to the next step.
11	• Measure the voltage at audio unit terminal H (24-pin) to verify the antenna amplifier power supply. • Is the voltage B+? **Note** • 12 V is supplied from the audio unit to the antenna amplifier. (In radio mode) • Even if the power supply voltage is not supplied, FM reception is possible, however, noise interference occurs more easily.	Yes	Go to the next step.
		No	Replace the audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
12	• Compare the reception with another audio unit on the same model (model/unit) under the same problem conditions. • Is the reception equivalent to the customer's unit?	Yes	The system is normal (It is caused by electronic jamming from outside, or inferior broadcasting station signal condition).
		No	Go to the next step.
13	• Retighten the ground for the antenna installation part and antenna amplifier. Retighten the antenna rod. • Is the noise present, after retightening? **Note** • When the antenna is not grounded properly, FM noise is likely to be noticed.	Yes	Replace the audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Troubleshooting completed.

NO.4 CANNOT TUNE (SEEK DOES NOT STOP)[RADIO]

id0903e3804600

4	Cannot tune (seek does not stop)/Possible DTC: 09:Er20, 09:Er22
POSSIBLE CAUSE	• Center panel malfunction • Poor connection of antenna feeder plug • Antenna feeder malfunction • Audio unit malfunction • Electronic jamming from outside, or inferior condition of broadcasting station radio wave • Antenna rod is not installed • Open or short circuit in wiring harness between audio unit and manual antenna (antenna amplifier power supply system)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Verify that the SEEK switch is normal when the switch is operated. • Is it normal?	Yes	Go to the next step.
		No	Perform confirmation Step 1: audio panel switch confirmation. Replace the center panel if necessary.
2	• Inspect the indication on the information display. • Does the frequency indication increase or decrease when the SEEK switch is operated?	Yes	Go to the next step.
		No	Perform confirmation Step 1: audio panel switch confirmation. Replace the center panel if necessary.
3	• Manually tune to a local broadcasting station and check the reception condition. • Is the reception normal?	Yes	Go to Step 6.
		No	Go to the next step.
4	• Inspect the antenna feeder plug connection condition. • Is the connection normal?	Yes	Go to the next step.
		No	Insert the antenna feeder plug securely.
5	• Turn the ignition switch to the LOCK position. • Measure the continuity between the antenna feeder axis and ground. • Is there any continuity?	Yes	Replace antenna feeder. (See 09-20-13 ANTENNA FEEDER LOCATION.)
		No	Go to the next step.
6	• Turn the ignition switch to the LOCK position. • Inspect the continuity between audio unit terminal H (24-pin) and manual antenna terminal A. • Is there any continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between the audio unit and the manual antenna (antenna amplifier power supply system), then verify the reception condition. If the reception has improved, troubleshooting is completed. If the reception has not improved, go to the next step.
7	• Measure the voltage at audio unit terminal H (24-pin) to verify the antenna amplifier power supply. • Is the voltage B+?	Yes	Go to the next step.
		No	Replace the audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
8	• Check if the number of broadcasting stations changes depending on time and place. • Does it change?	Yes	The system is normal. (Explain to customer that SEEK sometimes does not stop depending on the signal reception condition.) **Note** • Signals tend to reach longer distances at night. (It is conspicuous in AM signals, several audio functions may stop due to foreign broadcasting station or noise.) Though the audio system restrains sensitivity of SEEK and SCAN functions at night, the audio system may select broadcasting stations other than those desired when signals are considerably strong. This function is linked to the parking light. When the parking light or the headlights are turned on, SEEK and SCAN may not function for weak signals.
		No	Replace audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)

NO.5 CANNOT PRESET (PRESET FUNCTION DOES NOT OPERATE)[RADIO]

id0903e3804700

5	Cannot preset (preset function does not operate)/Possible DTC: 21:Er19
POSSIBLE CAUSE	• Audio unit malfunction • Center panel malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Tune to the desired station and press channel preset button 1 for **about 2 s** to store it. • Repeat the above for other stations using channel preset buttons 2 to 5. • Press channel preset button 1 to 6 one by one. • Are the stored stations present?	Yes	Go to the next step.
		No	Go to Step 3.
2	• Turn the ignition switch to the LOCK position, and then to ACC. • Check if the preset stations are stored by pressing the preset buttons. • Are the stations stored?	Yes	The system is normal. (Explain preset procedure to customer using Owner's Manual)
		No	Replace the audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
3	• Remove the center panel from the audio unit, and reinstall the center panel to the audio unit to check the connector connections. • Turn the audio power switch on. • Press the POWER button and simultaneously pull up the CLOCK switch at same time for **approximately 1 s** to enter the system to switch to the check mode. • Press all buttons and check if a buzzing sound occur. • Are all the buttons normal?	Yes	Replace the audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Replace the center panel. (See 09-20-4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.)

09-03E

NO.6 RECEPTION FREQUENCY OF RADIO SLIPS[RADIO]

id0903e3804800

6	Reception frequency of radio slip/Possible DTC: 09:Er22
POSSIBLE CAUSE	• Audio unit malfunction • Electronic jamming from outside, or inferior condition of broadcasting station radio wave

Diagnostic procedure

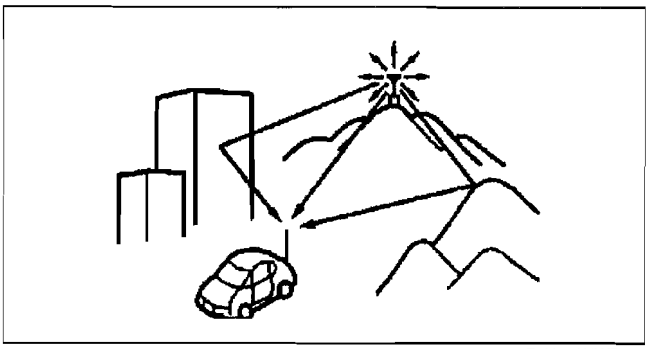
STEP	INSPECTION		ACTION
1	• Operate the SEEK switch and check if the desired broadcasting station is tuned. • Is it normal?	Yes	Go to Step 3.
		No	Go to the next step.
2	• Check if another broadcasting station is received at a certain location when the indication of the reception frequency remains. • Are other station received? **Note** • While receiving a weak signal from one broadcasting station and approaching a broadcasting antenna which emits a strong signal, broadcasting from the strong signal is sometimes received.	Yes	Go to the next step.
		No	Replace audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
3	• Compare the reception with another audio unit on the same model (model/unit) under the same problem conditions. • Is the reception equivalent to the customer's unit?	Yes	Troubleshooting completed (Audio unit is normal).
		No	Replace the audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)

RADIO[RADIO]

id0903e3807000

1. Multipath Noise

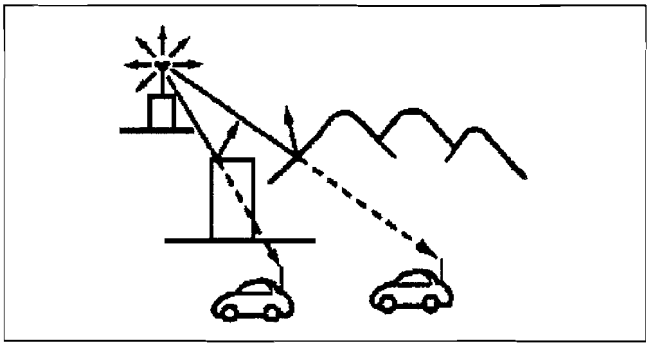
- Signals from an FM transmitter are high frequency and similar to beams of light because they do not bend around corners, but they do reflect. Since FM signals can be reflected by obstructions, it is possible to receive both the direct signal and the reflected signal at the same time. This causes a slight delay in reception and may be heard as a broken sound or a distortion.



E6U902HWB007

2. Flutter/Skip Noise

- Signals become weak in valleys between mountains, tall buildings, and other obstacles. When the vehicle passes through such an area, the reception conditions may change suddenly, resulting in annoying noise.



E6U902HWB008

3. Stereo and Monaural Receptions

- As signals become weak, noise may appear more in stereo reception. Compared to stereo reception, noise in monaural reception is relatively less apparent.

Audio Reception Improvement Measures

Separation control

- Utilizing the characteristic of monaural reception that noise is relatively less apparent than stereo reception, the audio system automatically changes the reception from stereo to monaural and lessens annoying noise when signals become weak or a multipath phenomenon occurs.

High tone control

- When signals become weak or a multipath phenomenon occurs, the audio system restrains the volume level in the high frequency band and lessens the annoying noise.

Effect Setting for Separation Control and High Tone Control

- The separation and high tone controls influence sound quality, Therefore they are specifically tuned to the individual model. (Comparison of characteristic must be done on the same models)

High tone setting	⇨	Less effective range	⇨	Noise is conspicuous
Noise restraint setting	⇨	Wider effective range	⇨	Noise is less conspicuous

DPE903EW1V0A

Remarks

- Signals tend to reach longer distances at night. This is particularly true for AM signals where foreign broadcasts or noise may cause inadvertent operation. Though the audio system restrains the sensitivity of the SEEK and SCAN functions at night, the audio system may select other than desired broadcasting stations other than those desired when signals are considerably strong. This function is linked to the parking light. When the parking light or the headlights are turned on, SEEK and SCAN may not function for weak signals.

NO.1 CD PLAYER/CHANGER DOES NOT LOAD THE CD OR EJECTS THE CD IMMEDIATELY[CD PLAYER/CHANGER]

id0903e5826100

1	**CD player/changer does not load the CD or ejects the CD immediately/ Possible DTC: 03:Er01, 03:Er10**

Troubleshooting hints

- CD is inserted upside down
- Audio unit is malfunctioning
- Defective CD (e.g., cracked, badly bent, rough edges, scratch, dirty CD, condensation)
- Non-conventional discs (e.g., 8 cm (3 in) CD, 8 cm (3 in) disc adapter, heart-shaped disc, octagonal disc)
- Poor connection of audio unit connector or terminal (e.g., damaged, bent, pulled-out pin, corrosion)
- Deformed disc is used (e.g., out of specification (thickness), bent disc)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Is CD inserted properly, label-side up?	Yes	Go to the next step.
		No	Explain to the customer that the CD should be inserted into the slot label-side up.
2	• Replace with a CD known to be operational. • Does the CD player/changer load the CD?	Yes	Go to the next step.
		No	Replace the audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
3	Visually inspect the CD. — Is there any dirt, scratches or deformation on the CD? — Is the CD a non-conventional disc?	Yes	Explain to the customer that the defective CD or non-conventional disc cannot be used.
		No	Go to the next step.
4	• Turn the ignition switch to the LOCK position. • Inspect the connection of the audio unit connector (24-pin). • Inspect both the audio unit connector and wiring harness-side connector for a poor connection. (such as damaged/bent/pulled-out pins, corrosion) • All the pins and connector normal?	Yes	Replace the audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	**If the audio unit connector/pin is malfunctioning:** • Replace the audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ ASSEMBLY.) **If the wiring harness-side connector/pin is malfunctioning:** • Repair or replace the pins and/or the connector.

NO.2 CD PLAYER/CHANGER DOES NOT EJECT THE CD[CD PLAYER/CHANGER]

id0903e5826200

2	CD player/changer does not eject the CD/Possible DTC:03:Er01

Troubleshooting hints

- Audio units is malfunctioning
- Defective CD. (e.g., cracked, badly bent, rough edges, scratch, dirty CD, condensation)
- Non-conventional discs (e.g., 8 cm (3 in) CD, 8 cm (3 in) disc adapter, heart-shaped disc, octagonal disc)
- Poor connection of audio unit connector or terminal (e.g., damaged, bent, pulled-out pin, corrosion)
- Improper center panel installation
- Improper CD cover installation
- Deformed disc is used (e.g., out of specification (thickness), bent disc).
- Multiple CDs are inserted into the CD player at the same time

Note

- The CD may be malfunctioning if the CD player/changer does not eject a certain CD only. Inspect the CD player/changer operation using a CD known to be operational.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Inspect the operation of the audio system other than the CD player/changer (e.g. Radio). • Does the other audio system operate?	Yes	Go to Step 3.
		No	Go to the next step.
2	• Turn the ignition switch to the LOCK position. • Inspect the connection of the audio unit connector (24-pin). • Inspect both audio unit connector and wiring harness-side connector for poor connection. (such as damaged/bent/pulled-out pins, corrosion) • Are all the pins and connectors normal?	Yes	Go to the next step.
		No	**If the audio unit connector/pin is malfunctioning:** • Replace the audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ ASSEMBLY.) **If the wiring harness-side connector/pin is malfunctioning:** • Repair or replace the pins and/or the connector.
3	• Eject the CD. • Is the CD ejected from the CD player/ changer?	Yes	Go to the next step.
		No	Inspect the center panel and CD cover installation. Securely install the center panel and/or CD cover if necessary.
4	• Insert the CD into the CD player/changer. • Does the CD insert into the CD player/ changer smoothly?	Yes	Replace the audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Install the center panel and/or CD cover properly, then go to the next step.
5	• Is the CD ejected from the CD player/ changer?	Yes	Troubleshooting completed. Explain repairs to the customers.
		No	Replace the audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)

NO.3 CD PLAYER/CHANGER DOES NOT PLAY THE CD/NO SOUND[CD PLAYER/CHANGER]

id0903e5806100

3	CD player/changer does not play the CD/No sound/Possible DTC:03:Er07, 03:Er10

Troubleshooting hints

- CD is inserted upside down
- Audio units is malfunctioning
- Defective CD (e.g., cracked, badly bent, rough edges, scratch, dirty CD, condensation)
- Non-conventional discs (e.g., 8 cm (3 in) CD, 8 cm (3 in) disc adapter, heart-shaped disc, octagonal disc)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Turn the radio on and check for sound. • Is there sound output? **Note** • Check the volume dial position.	Yes	Go to the next step.
		No	Go to symptom troubleshooting No.3 (Audio system).
2	• Was the CD inserted properly, label-side up?	Yes	Go to the next step.
		No	Explain to the customer that the CD should be inserted into the slot label-side up.
3	• Replace with a CD known to be operational. • Does the CD player/changer load the CD?	Yes	Go to the next step.
		No	Replace the audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
4	• Visually inspect the CD. — Is there any dirt, scratches or deformation on the CD? — Is the CD a non-conventional disc?	Yes	Explain to the customer that the defective CD or non-conventional disc cannot be use.
		No	Replace the audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)

NO.4 SOUND JUMPS[CD PLAYER/CHANGER]

id0903e5806200

4	Sound jumps/Possible DTC:03:Er02

Troubleshooting hints

- Audio unit is malfunctioning
- Defective CD (e.g., cracked, badly bent, rough edges, scratch, dirty CD, condensation)
- Improper audio unit installation (e.g., rattle, loose)
- Inadequate tire pressure

Note

- The CD may be malfunctioning if the sound jumps on a certain CD only. Inspect the CD player/changer operation using a CD known to be operational.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Does the sound jump when the vehicle is stopped?	Yes	Go to the Step 6.
		No	Go to the next step.
2	• Drive the vehicle. • Does the sound jump when driving over uneven surfaces?	Yes	Go to the next step.
		No	Go to the Step 6.
3	• Is the audio unit installed securely?	Yes	Go to the next step.
		No	Install the audio unit securely.
4	• Inspect the tire pressure. • Is the tire pressure normal?	Yes	Replace the audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Go to the next step.
5	• Adjust the tire pressure within specification. • Does the sound jump when driving the vehicle?	Yes	Replace the audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Audio system is normal. Explain repairs to the customers.
6	• Replace with a CD other than the one known to be operational. • Does the sound jump when driving the vehicle?	Yes	Replace the audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Audio system is normal. Explain to the customer that the CD is malfunctioning.

NO.5 SCRATCHES ON THE CD[CD PLAYER/CHANGER]

id0903e5818200

5	Scratches on the CD/Possible DTC:03:Er02

Troubleshooting hints

- Audio unit is malfunctioning
- Deformed disc is used (e.g., out of specification (thickness), bent disc)
- Multiple CDs are inserted into the CD player at the same time

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Were multiple CDs inserted into the CD player at the same time?	Yes	Explain to the customer to insert CDs one by one.
		No	Go to the next step.
2	• Visually inspect the CD. • Is the CD deformed disc (e.g., out of specification (thickness), bent disc)?	Yes	Audio system is normal. Explain to the customer that the CD is malfunctioning.
		No	Replace the audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)

NO.6 DISC CHANGE IS INOPERATIVE[CD PLAYER/CHANGER]

id0903e5806400

6	Disc change is inoperative/Possible DTC: —

Troubleshooting hints

- Audio unit is malfunctioning
- Improper center panel installation
- Center panel is malfunctioning

09-03F

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Inspect the CD changer operation. • Does the CD changer operate properly?	Yes	Go to the next step.
		No	Go to symptom troubleshooting "No.3 CD player/changer does not play the CD/No sound".
2	• Inspect the following: — Is the display shown properly when operating the disc change button? — Does the radio band selection operate properly?	Yes	Replace the audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Go to the next step.
3	• Inspect the center panel installation. • Does the CD changer change the disc properly after re-installing the center panel?	Yes	Install the center panel securely and properly.
		No	Go to "No.1 Audio panel switch inspection" in this section. Replace the center panel if necessary.

NO.7 TRACK CHANGE IS INOPERATIVE[CD PLAYER/CHANGER]

id0903e5806900

7	Track change is inoperative/Possible DTC:03:Er02

Troubleshooting hints

- Audio unit is malfunctioning
- Defective CD (e.g., cracked, badly bent, rough edges, scratch, dirty CD, condensation)
- Non-conventional discs (e.g., 8 cm (3 in) CD, 8 cm (3 in) disc adapter, heart-shaped disc, octagonal disc)
- Center panel is malfunctioning
- MP3 applicable CD player is malfunctioning

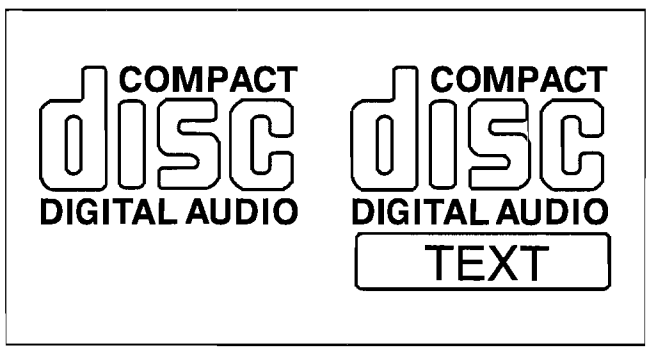
Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Replace with a CD known to be operational. • Does the CD player change the track?	Yes	Explain to the customer that the defective CD or a non-conventional disc cannot be used.
		No	Go to the next step.
2	• Inspect the center panel installation. • Does the CD player change the track number on the display when pressing the track up or down button?	Yes	Replace the audio unit. (See 09-20-4 CENTER PANEL UNIT REMOVAL/INSTALLATION.) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ASSEMBLY.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Go to the "No.1 Audio panel switch inspection" in this section. Replace the center panel if necessary.

AUDIO CD[CD PLAYER/CHANGER]

id0903e5807100

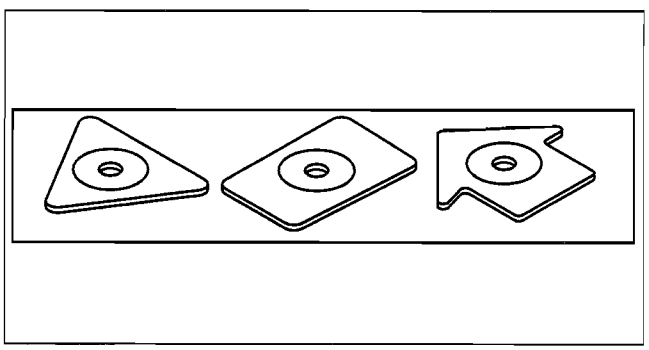
- The CD player/changer has been designed to play CDs bearing the identification logo, COMPACT DISC DIGITAL AUDIO, as shown. No other discs can be played on the CD player/changer other than MP3 applicable ones.
- The CD player/changer may not play the following types of CDs:
  - — Defective CDs (e.g., cracked, badly bent, rough edges, scratch, dirty CD condensation)
  - — 8 cm (3 in) CD accessories (e.g., 8 cm (3 in) disc adapter, sticker, label)
  - — Nonstandard CDs (e.g., Diameter/thickness is out of specification)
    Specification: 119.7—120.3 mm (4.668—4.692 in) of diameter, 1.2+0.3 or -0.1 mm (0.047+0.012 or 0.004 in) of thickness
- Do not use non-conventional discs. The CD player/changer could be damaged.



am3uuw0000016

Examples:

- Although the same physical size as the compact disc, SACDs use a different kind of digital audio signal called Direct Stream Digital.
- The CD player/changer may not play the CD-R/RW properly due to the disc condition (excluding MP3).



am3uuw0000016

09-03G SYMPTOM TROUBLESHOOTING [CAR-NAVIGATION SYSTEM]

CAR-NAVIGATION SYSTEM[CAR-NAVIGATION SYSTEM]

id0903e8801600

Troubleshooting Index

- Use the chart below and verify the trouble in order to diagnose the appropriate area.

No.	Malfunction symptom
1	Display screen does not open even if the ignition switch is turned to the ACC position.
2	Display screen changes to black.
3	Display screen changes to white.
4	System does not load map disc.
5	Vehicle position deviates from the route map.
6	Car-navigation control switch is inoperative.
7	No voice navigation
8	Display screen does not change to the night mode. (Front and rear combination lights operate normally.)

Quick diagnostic chart

X: Applicable

Possible factor \ Troubleshooting item	1	2	3	4	5	6	7	8
	Display screen does not open even if the ignition switch is turned to the ACC position.	Display screen changes to black.	Display screen changes to white.	System does not load the map disc.	Vehicle position deviates from the route map.	Car-navigation control switch is inoperative.	No voice navigation.	Display screen does not change to the night mode.
Open or short circuit in power supply (B+) wiring harness, or burnt fuse	X

NO.1 DISPLAY SCREEN DOES NOT OPEN EVEN IF THE IGNITION SWITCH IS TURNED TO THE ACC POSITION.[CAR-NAVIGATION SYSTEM]

id0903e8801700

1	Display screen does not open even if the ignition switch is turned to the ACC position.
POSSIBLE CAUSE	• Open or short circuit in power supply (B+ or ACC) wiring harness or burnt fuse • Open or short circuit in ground wiring harness • LCD unit malfunction • Poor connection of LCD unit connector, terminal damage • Short circuit in car-navigation control switch wiring harness **Caution** • **Forcibly opening/closing, or placing an object on the display screen may cause the display screen to become inoperable.**

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Turn the ignition switch to the ACC position. • Press the OPEN/CLOSE button on the LCD unit. • Does the display screen open?	Yes	The system is normal. **Note** • If the display screen is closed by pressing the OPEN/CLOSE button of the LCD unit with the ignition switch in the ACC position, the display screen will remain closed when the ignition switch is turned to the ACC position again.
		No	Go to the next step.
2	• Turn the ignition switch to the LOCK position. • Inspect the following fuses: — RADIO 15 A fuse — ROOM 15 A fuse • Are the fuses damaged?	Yes	Go to the next step.
		No	• Replace with the appropriate standard fuse. — If the fuse is melted, inspect the wiring harness for a short to ground. Repair or replace the wiring harness, then replace the fuse.
3	• Remove the car-navigation control switch. • Disconnect the car-navigation control switch connector (6-pin). • Turn the ignition switch to the ACC position. • Inspect the voltage between the car-navigation control switch wiring harness-side connector (6-pin) terminal A (POWER) and B (ground). • Is the voltage B+?	Yes	Go to Step 5.
		No	Go to the next step.
4	• Turn the ignition switch to the LOCK position. • Inspect the continuity between terminal A (POWER) and B (ground) at the car-navigation control switch wiring harness-side connector. • Is there continuity?	Yes	Repair or replace the suspected wiring harness. Replace the LCD unit. (ACC protector circuit inside LCD unit broken.)
		No	Go to the next step.
5	• Remove the LCD unit. • Inspect the connection of the LCD unit connector (24-pin). • Is the connector securely connected?	Yes	Go to the next step.
		No	Securely connect the LCD unit connector (24-pin).
6	• Disconnect the LCD unit connector (24-pin). • Inspect both LCD unit connector and wiring harness-side connector for poor connection (such as damaged/pulled-out pins, corrosion). • Are all the pins normal?	Yes	Go to the next step.
		No	**If the LCD unit connector is wrong:** • Replace the LCD unit. (See 09-20-6 LCD UNIT REMOVAL/INSTALLATION.) **If the wiring harness-side connector is wrong:** • Repair or replace the pins and/or the connector.
7	• Inspect the voltage between LCD unit wiring harness-side connector (24-pin) terminal Q (B+) and P (ground) • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the suspect wiring harness, then repair or replace the wiring harness.
8	• Turn the ignition switch to the ACC position. • Inspect the voltage between LCD unit wiring harness-side connector (24-pin) terminal O (ACC) and P (ground). • Is the voltage **B+**?	Yes	Replace the LCD unit. (See 09-20-6 LCD UNIT REMOVAL/INSTALLATION.)
		No	Inspect the suspect wiring harness, then repair or replace the wiring harness.

NO.2 DISPLAY SCREEN CHANGES TO BLACK.[CAR-NAVIGATION SYSTEM]

id0903e8801800

2	Display screen changes to black.
POSSIBLE CAUSE	• Open or short circuit in car-navigation unit (power supply (B+)) wiring harness • Open or short circuit in car-navigation unit (power supply (ACC)) wiring harness • Open or short circuit in car-navigation unit (ground) wiring harness • Open or short circuit in wiring harness between LCD unit and car-navigation unit • Poor connection of car-navigation unit connector, terminal damage • Poor connection of LCD unit connector, terminal damage • Car-navigation unit malfunction • LCD unit malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Turn the ignition switch to the ON position. • Does the display screen change from blank to NAVI mode when pressing the joystick of the car-navigation control switch?	Yes	The system is normal. **Note** • If the "VOICE" button is pressed for **approx. 2 s or more**, the "DISP OFF" menu appears on the bottom-left side of screen. If "DISP OFF" mode is selected, the LCD unit will not display anything. "DISP OFF" mode is cancelled when the ignition switch is turned to the LOCK position or the joystick of the car-navigation control switch is pressed.
		No	Go to the next step.
2	• Turn the ignition switch to the LOCK position. • Remove the car-navigation unit. • Inspect the car-navigation unit connector (24-pin). • Is the car-navigation unit connector connected securely?	Yes	Go to the next step.
		No	Securely connect the car-navigation unit connector (24-pin).
3	• Disconnect the car-navigation unit connector. • Inspect both car-navigation unit connector and wiring harness-side connector for poor connection (such as damaged/pulled-out pins, corrosion). • Are all the pins normal?	Yes	Go to the next step.
		No	**If the car-navigation unit connector is wrong:** • Replace the car-navigation unit. **If the wiring harness-side connector is wrong:** • Repair or replace the pins and/or the connector.
4	• Inspect the voltage between the car-navigation unit wiring harness-side connector (16-pin) terminals B (B+) and A (ground). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the suspect wiring harness and repair or replace the wiring harness if necessary.
5	• Turn the ignition switch to the ACC position. • Inspect the voltage between the car-navigation unit wiring harness-side connector (16-pin) terminals D (ACC) and A (ground). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the suspect wiring harness and repair or replace the wiring harness if necessary.
6	• Turn the ignition switch to the LOCK position. • Remove the LCD unit. • Inspect the LCD unit connector (24-pin). • Is the LCD unit connector connected securely?	Yes	Go to the next step.
		No	Securely connect the LCD unit connector (24-pin).
7	• Disconnect the LCD unit connector (24-pin). • Inspect both LCD unit connector and wiring harness-side connector for poor connection (such as damaged/pulled-out pins, corrosion). • Are all the pins normal?	Yes	Go to the next step.
		No	**If the LCD unit connector is wrong:** • Replace the LCD unit. **If the wiring harness-side connector is wrong:** • Repair or replace the pins and/or the connector.

STEP	INSPECTION		ACTION
8	• Inspect the following wiring harnesses between the LCD unit and navigation unit. — Terminal A (24-pin, B)—terminal T (24-pin, B) — Terminal B (24-pin, G)—terminal V (24-pin, G) — Terminal C (24-pin, SYNC)—terminal R (24-pin, SYNC) — Terminal D (24-pin, R)—terminal X (24-pin, R) — Terminal E (24-pin, VGND1)—terminal U (24-pin, VGND1) • Is there an open or short circuit?	Yes	Go to the next step.
		No	Repair or replace the suspected wiring harness.
9	• Inspect the following wiring harnesses between the LCD unit and car-navigation unit. — Terminal I (24-pin, SI01)—terminal N (24-pin, SI01) — Terminal K (24-pin, SI02)—terminal P (24-pin, SI02) • Is there an open or short circuit?	Yes	Replace the LCD unit, then go to the next step.
		No	Repair or replace the suspected wiring harness.
10	• Does system work properly?	Yes	Troubleshooting is completed.
		No	Replace the car-navigation unit.

NO.3 DISPLAY SCREEN CHANGES TO WHITE.[CAR-NAVIGATION SYSTEM]

id0903e8801900

09-03G

3	Display screen changes to white.
POSSIBLE CAUSE	• Car-navigation unit malfunction • LCD unit malfunction • Improper adjustment of the screen contrast

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Does the display screen change to "display quality adjustment" mode when pressing the MODE button for **approx. 2 s or more**? • Does system work properly?	Yes	Go to the next step.
		No	Replace the LCD unit.
2	• Select "default display" or "display quality adjustment" mode in the NAVI mode. • Press "ENTER" button. • Does system work properly?	Yes	Troubleshooting is completed.
		No	Replace the LCD unit, then go to the next step.
3	• Does system work properly?	Yes	Troubleshooting is completed.
		No	Replace the car-navigation unit.

NO.4 SYSTEM DOES NOT LOAD THE MAP DISC.[CAR-NAVIGATION SYSTEM]

id0903e8802000

4	System does not load the map disc.
POSSIBLE CAUSE	• Car-navigation unit malfunction • Map disc malfunction • Moisture inside of car-navigation unit • Non-designated disc is inserted **Note** • If dewdrops are formed inside of the car-navigation unit, the display screen shows the "The disc installed is not a map DVD" message. Remove the map disc, ventilate or remove moisture from the passenger compartment, and then leave it **for approx. 1 h**. The dewdrops will be removed and the car-navigation unit will operate normally. • In case of a dirty/damaged map disc or car-navigation unit malfunction, the display screen will show the "Please insert a map DVD" message for few seconds to 1 min, then change to "The disc installed is not a map DVD" message after the ignition switch is turned to the ACC position. • If a non-designated disc is inserted, the display screen shows the "The disc installed is not a map DVD" message.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Eject the map disc. • Is the map disc normal?	Yes	Go to the next step.
		No	Insert a designated disc, then go to the next step.
2	• Eject the map disc then insert it again. • Does the system load the map disc?	Yes	Troubleshooting is completed.
		No	Go to the next step.
3	• Eject the map disc and clean the surface of map disc with a soft cloth. • Insert map disc again. • Does the system load the map disc?	Yes	Troubleshooting is completed.
		No	Replace car-navigation unit and map disc at the same time. (consult distributor) (See 09-20-6 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.)

NO.5 VEHICLE POSITION DEVIATES FROM THE ROUTE MAP.[CAR-NAVIGATION SYSTEM]

id0903e8802100

5	Vehicle position deviates from the route map.
POSSIBLE CAUSE	• Jammed radio signals from after market equipment (radar, remote engine starter, anti-theft device or other.) • Open or short circuit in the wiring harness (vehicle speed signal related). • Car-navigation unit malfunction. • Poor connection of the GPS antenna connector, terminal damage • GPS antenna malfunction. • Open or short circuit in feeder line between GPS antenna and car-navigation unit. • Poor connection of the car-navigation unit connector, terminal damage.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Is any of the following after-market equipment installed? (Inspect especially near the GPS antenna.) — Radar — Remote engine starter — Anti-theft device — Other	Yes	Go to the next step.
		No	Go to Step 3.
2	• Remove the after-market equipment. **Note** • The procedure requires an assistant. • Drive the vehicle without any obstacles. • Does the vehicle indicator follow the steering wheel direction?	Yes	System is normal. The after-market electrical device might be interrupting the GPS reception.
		No	Go to the next step.
3	• Position the vehicle without any obstacles and receive GPS for **5 min** at idle. • Does "GPS" show up on the left lower side of the display screen?	Yes	Go to the next step.
		No	Go to Step 8.

STEP	INSPECTION		ACTION
4	**Caution** • **This procedure requires an assistant.** • Start the diagnostic function. • Drive the vehicle. • Check the "Speed" on the diagnosis screen. • Does the "Speed" change according to the vehicle speed? **Note** • If the engine is started after the diagnostic function is activated, the diagnostic function mode is reset.	Yes	Go to the next step.
		No	Go to Step 6.
5	**Caution** • **This procedure requires an assistant.** • Drive the vehicle and turn the steering wheel to the left and/or right. • Does the vehicle indicator follow the steering direction?	Yes	The system is normal. **Note** • The vehicle indicator might be out of position in the following areas: — Parallel road, high-level road, loop road, tower type parking, high-rise buildings lot
		No	Replace the car-navigation unit. (See 09-20-6 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.)
6	• Turn the ignition switch to the LOCK position. • Remove the car-navigation unit. (See 09-20-6 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.) • Inspect the connection of the car-navigation unit connector (16-pin). • Is the connector securely connected?	Yes	Go to the next step.
		No	Securely connect the car-navigation unit connector (16-pin).
7	• Disconnect the car-navigation unit connector (16-pin). • Inspect both car-navigation unit connector and wiring harness-side connector terminal H for poor connection (such as damaged/pulled-out pins, corrosion). • Are all the pins normal?	Yes	Inspect for vehicle speed signal input circuit. Repair or replace if necessary.
		No	**If the car-navigation unit connector is wrong:** • Replace the car-navigation unit. (See 09-20-6 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.) **If the wiring harness-side connector is wrong:** • Repair or replace the pins and/or the connector.
8	**Note** • If the engine is started after the diagnostic function is activated, the diagnostic function mode is reset. • Turn the ignition switch to the ON position. • Start the diagnostic function. • Inspect the "GPS antenna" on diagnosis screen. • Is "OK" indicated?	Yes	Replace the car-navigation unit.
		No	Go to the next step.
9	• Turn the ignition switch to the LOCK position. • Remove the car-navigation unit. (See 09-20-6 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.) • Inspect the connection of the car-navigation unit connector and GPS antenna connector. • Is the connector securely connected?	Yes	Go to the next step.
		No	Securely connect the GPS antenna connector (2-pin).
10	• Disconnect the GPS antenna connector. • Inspect both GPS antenna connector and car-navigation unit connector for poor connection (such as damaged/pulled-out pins, corrosion). • Are all the pins normal?	Yes	Go to the next step.
		No	**If the wiring harness-side connector is wrong:** • Repair or replace the suspected wiring harness. **If the car-navigation unit side connector is wrong:** • Replace the car-navigation unit. (See 09-20-6 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.)
11	• Inspect the continuity between the car-navigation unit wiring harness-side connector terminal and the GPS antenna wiring harness side connector terminal. • Is there continuity?	Yes	Replace the car-navigation unit.
		No	Repair or replace the wiring harness.

NO.6 CAR-NAVIGATION CONTROL SWITCH IS INOPERATIVE.[CAR-NAVIGATION SYSTEM]

id0903e8802200

6	Car-navigation control switch is inoperative.
POSSIBLE CAUSE	• Car-navigation control switch malfunction • Open or short circuit in the wiring harness (remote control signal) • Poor connection of the car-navigation control switch connector, terminal damage • Poor connection of the LCD unit connector, terminal damage • LCD unit malfunction **Note** • The car-navigation control switch is inoperative if the following circuit has a malfunction — LCD unit connector (24-pin) terminal I (SI01)—car-navigation unit connector (24-pin) terminal N (SI01) — LCD unit connector (24-pin) terminal K (SI02)—car-navigation unit connector (24-pin) terminal P (SI02) • If the ignition switch is turned off, then ACC position while above circuits are malfunctioning, display screen changes to black.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Are the switches only partly inoperative?	Yes	Replace the car-navigation control switch. (See 09-20-6 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	• Turn the ignition switch to the LOCK position. • Remove the car-navigation control switch. • Inspect the connection of the car-navigation control switch connector (6-pin). • Is the connector securely connected?	Yes	Go to the next step.
		No	Securely connect the car-navigation control switch connector (6-pin).
3	• Turn the ignition switch to the LOCK position. • Disconnect the car-navigation control switch connector (6-pin). • Inspect both the car-navigation control switch and wiring harness-side connector for poor connection (such as damaged/pulled-out pins, corrosion). • Are all the pins normal?	Yes	Go to the next step.
		No	**If the car-navigation control switch side connector is wrong:** • Replace the car-navigation control switch. (See 09-20-6 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.) **If the wiring harness-side connector is wrong:** • Repair or replace the pins and/or the connector.
4	• Remove the LCD unit. (See 09-20-6 LCD UNIT REMOVAL/INSTALLATION.) • Inspect the LCD unit connector (6-pin). • Is the connector securely connected?	Yes	Go to the next step.
		No	Securely connect the LCD unit connector.
5	• Disconnect the LCD unit connector (6-pin). • Inspect both the LCD unit and wiring harness-side connector for poor connection (such as damaged/pulled-out pins, corrosion). • Are all the pins normal?	Yes	Connect the LCD unit connector, then go to the next step.
		No	**If the LCD unit side connector is wrong:** • Replace LCD unit. (See 09-20-6 LCD UNIT REMOVAL/INSTALLATION.) **If the wiring harness-side connector is wrong:** • Repair or replace the pins and/or the connector.
6	• Turn the ignition switch to the LOCK position. • Disconnect the LCD unit connector (6-pin). • Disconnect the car-navigation control switch connector (16-pin). • Inspect for continuity between car-navigation control switch wiring harness-side connector terminal E and the LCD unit wiring harness-side connector terminal E. • Is there continuity?	Yes	Inspect for a short circuit in the wiring harness. If there is a short circuit, repair or replace the suspected wiring harness. If the wiring harness is normal, go to the next step.
		No	Repair or replace the suspected wiring harness.
7	• Connect the LCD unit connector (6-pin). • Turn the ignition switch to the ON position. • Inspect the voltage between the car-navigation control switch wiring harness-side connector terminal A (POWER) and B (P.ground). • Is the voltage **B+**?	Yes	Replace the car-navigation control switch.
		No	Go to the next step.

STEP	INSPECTION		ACTION
8	• Turn the ignition switch to the LOCK position. • Disconnect the LCD unit connector (6-pin). • Turn the ignition switch to the ON position. • Inspect the voltage between the car-navigation control switch harness-side connector (16-pin) terminal A (power) and body ground. • Is the voltage **B+**?	Yes	Inspect the car-navigation control switch wiring harness (power supply). Repair or replace if necessary.
		No	Replace the LCD unit.

NO.7 NO VOICE NAVIGATION[CAR-NAVIGATION SYSTEM]

id0903e8802300

7	**No voice navigation**
POSSIBLE CAUSE	• Improper adjustment of the NAVI voice volume • Car-navigation unit malfunction • Poor connection of the driver-side front door speaker connector, terminal damage • Driver-side front door speaker malfunction • Poor connection of the car-navigation unit connector, terminal damage • Open or short circuit in driver-side front door speaker wiring harness

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Is the voice navigation volume from "1" to "7"?	Yes	Go to the next step.
		No	Adjust the volume from "1" to "7".
2	• Turn the audio power switch (CD, MD, radio) to ON. • Does the driver-side front door speaker work?	Yes	Replace the car-navigation unit. (See 09-20-6 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	• Turn the ignition switch to the LOCK position. • Remove the driver-side front door speaker. (See 09-20-7 FRONT DOOR SPEAKER REMOVAL/INSTALLATION.) • Inspect the connection of the driver-side front door speaker connector (2-pin). • Is the connector securely connected?	Yes	Go to the next step.
		No	• Securely connect the driver-side front door speaker connector
4	• Disconnect the driver-side front door speaker connector (2-pin). • Inspect both the driver-side front door speaker and wiring harness-side connector for poor connection (such as damaged/ pulled-out pins, corrosion). • Are all the pins normal?	Yes	Go to the next step.
		No	**If the driver-side front door speaker side connector is wrong:** • Replace the driver-side front door speaker. (See 09-20-7 FRONT DOOR SPEAKER REMOVAL/INSTALLATION.) **If the wiring harness-side connector is wrong:** • Repair or replace the pins and/or the connector.
5	• Remove the car-navigation unit. (See 09-20-6 CAR-NAVIGATION UNIT REMOVAL/ INSTALLATION.) • Inspect the connection of the car-navigation unit connector (16-pin). • Is the connector securely connected?	Yes	Go to the next step.
		No	Securely connect the car-navigation unit connector.
6	• Disconnect the car-navigation unit connector (16-pin). • Inspect both the car-navigation unit and wiring harness-side connector terminals M and N (without Bose) or I and K (with Bose) for poor connection (such as damaged/ pulled-out pins, corrosion). • Are all the pins normal?	Yes	Go to the next step.
		No	**If the car-navigation unit side connector is wrong:** • Replace the car-navigation unit. (See 09-20-6 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.) **If the wiring harness-side connector is wrong:** • Repair or replace the pins and/or the connector.
7	• Inspect for continuity between car-navigation unit and the driver-side front door speaker. • Is there continuity?	Yes	Inspect for a short circuit in the wiring harness. If there is a short circuit, repair or replace the suspected wiring harness. If the wiring harness is normal, go to the next step.
		No	Repair or replace the wiring harness.
8	• Inspect the driver-side front door speaker. (See 09-20-8 FRONT DOOR SPEAKER INSPECTION.) • Is it normal?	Yes	Replace the car-navigation unit. (See 09-20-6 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.)
		No	Replace the driver-side front door speaker. (See 09-20-7 FRONT DOOR SPEAKER REMOVAL/INSTALLATION.)

NO.8 DISPLAY SCREEN DOES NOT CHANGE TO THE NIGHT MODE. (FRONT AND REAR COMBINATION LIGHTS OPERATE NORMALLY.)[CAR-NAVIGATION SYSTEM]

id0903e8802400

8	**Display screen does not change to the night mode. (Front and rear combination lights operate normally.)**
POSSIBLE CAUSE	• Improper setting of NAVI map indication • Open or short circuit in TNS signal wiring harness (TNS signal related) • LCD unit malfunction • Poor connection of the LCD unit connector, terminal damage • car-navigation unit malfunction **Note** • The car-navigation control switch is inoperative if the following circuit has malfunction — LCD unit connector (24-pin) terminal I (SI01)—car-navigation unit connector (24-pin) terminal N (SI01) — LCD unit connector (24-pin) terminal K (SI02)—car-navigation unit connector (24-pin) terminal P (SI02) • If the ignition switch is turned off, then to the ACC position while the above circuits are malfunctioning, the display screen changes to black

Diagnostic procedure

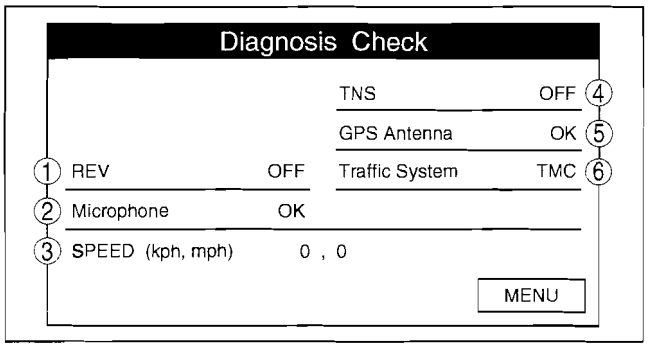
STEP	INSPECTION		ACTION
1	• Turn the ignition switch to the ACC position. • Does the display screen change to the night mode when the light switch is turned to the TNS position, and the dimmer cancel switch is turned off?	Yes	The system is normal.
		No	Go to the next step.
2	• Press the "MENU" button. • Select "Navigation Set Up". • Select "User Setting". • Inspect "MAP Mode". • Is the "MAP Mode" set to "Auto"?.	Yes	Go to the next step.
		No	System is normal. Set the "MAP Mode" to "Auto".
3	• Start the diagnostic function. • Turn the light switch to the TNS position. • Inspect the "TNS" on the diagnosis check screen. • Does the "TNS" indicate "ON"?	Yes	Replace the car-navigation unit. (See 09-20-6 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	• Turn the ignition switch to the LOCK position. • Remove the LCD unit. (See 09-20-6 LCD UNIT REMOVAL/INSTALLATION.) • Inspect the connection of the LCD unit connector (24-pin). • Is the connector securely connected?	Yes	Go to the next step.
		No	Securely connect the LCD unit connector.
5	• Disconnect the LCD unit connector (24-pin). • Inspect both the LCD unit and wiring harness-side connector terminal V for poor connection (such as damaged/pulled-out pins, corrosion). • Are all the pins normal?	Yes	Go to the next step.
		No	**If the LCD unit side connector is wrong** • Replace the LCD unit. (See 09-20-6 LCD UNIT REMOVAL/INSTALLATION.) **If the wiring harness-side connector is wrong** • Repair or replace the pins and/or the connector.
6	• Inspect the voltage of the LCD unit wiring harness-side connector (24-pin) terminal V (TNS signal). • Is the voltage **B+** when the light switch is turned to the TNS position?	Yes	Replace the LCD unit, then go to the next step. (See 09-20-6 LCD UNIT REMOVAL/INSTALLATION.)
		No	Inspect the TNS signal circuit. Repair or replace if necessary.
7	• Does system work properly?	Yes	Troubleshooting is completed.
		No	Replace the car-navigation unit.

REFERENCE INFORMATION[CAR-NAVIGATION SYSTEM]

id0903e8802600

Starting Procedure For Diagnostic Function

1. Turn the ignition switch to the ACC or ON position.
2. Press the MENU button.
3. Select "Navigation Set Up".
4. Select "Calibration".
5. Select "Map Version".
6. Press the joystick up **two times**, then down **two times**.
7. "Diagnosis Check" is displayed on the screen.
8. Select the "Diagnosis Check".



am3uuw0000016

No.	Display item	Description
1	REV	Indicate Reverse signal state. • ON: Reverse • OFF: Others
2	Microphone	Indicate the connection state of a microphone. • OK: Connect • NCON: Disconnect
3	Speed*	Indicate the present vehicle speed by kph/mph (a maximum of 3 digits).
4	TNS*	Indicate TNS signal state. • ON: Turn TNS ON • OFF: Turn TNS OFF
5	GPS Antenna*	Indicate the connection state of a GPS antenna. • OK: Connect • NCON: Disconnect
6	Traffic System	Indicate the RDS-TMC system availability on the vehicle. • None: Not equip.

* : It is used for symptom troubleshooting. (Troubleshooting index No. 5 and No. 8)

Finishing Procedure For Diagnostic Function

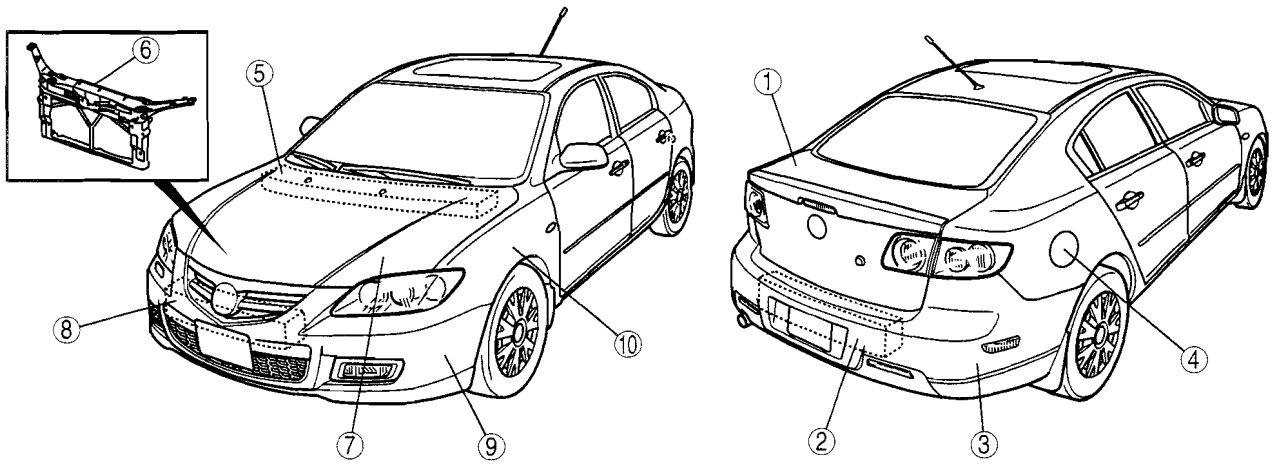
1. Turn the ignition switch to the LOCK position.
2. Turn the ignition switch to the ACC or ON position.
3. Return to the normal screen.

09-10 BODY PANELS

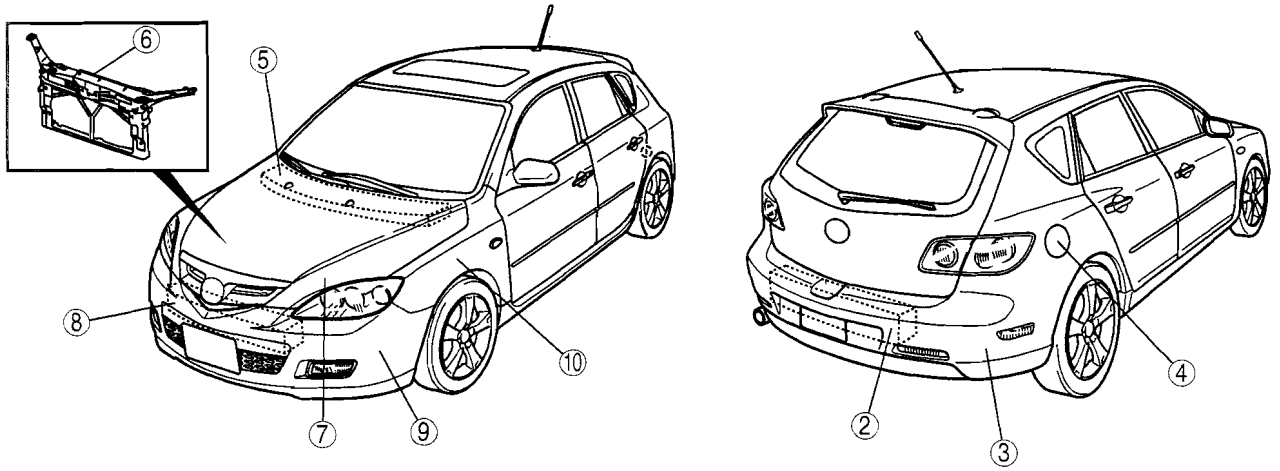
BODY PANELS LOCATION INDEX

id091000802600

4 DOOR



5 DOOR



am3uuw0000046

1	Trunk lid (See 09-10-6 TRUNK LID REMOVAL/ INSTALLATION.) (See 09-10-7 TRUNK LID ADJUSTMENT.) (See 09-10-7 TRUNK LID STAY DAMPER DISPOSAL.)
2	Rear bumper reinforcement (See 09-10-20 REAR BUMPER REINFORCEMENT REMOVAL/INSTALLATION.)
3	Rear bumper (See 09-10-15 REAR BUMPER REMOVAL/ INSTALLATION.)
4	Fuel-filler lid (See 09-10-7 FUEL-FILLER LID REMOVAL/ INSTALLATION.) (See 09-10-8 FUEL-FILLER LID ADJUSTMENT.)
5	Cowl panel (See 09-10-20 COWL PANEL REMOVAL/ INSTALLATION.)

6	Shroud panel (See 09-10-21 SHROUD PANEL REMOVAL/ INSTALLATION.)
7	Hood (See 09-10-3 HOOD REMOVAL/INSTALLATION.) (See 09-10-4 HOOD ADJUSTMENT.)
8	Front bumper reinforcement (See 09-10-18 FRONT BUMPER REINFORCEMENT REMOVAL/INSTALLATION.)
9	Front bumper (See 09-10-8 FRONT BUMPER REMOVAL/ INSTALLATION.) (See 09-10-11 FRONT BUMPER DISASSEMBLY/ ASSEMBLY.)
10	Front fender panel (See 09-10-21 FRONT FENDER PANEL REMOVAL/INSTALLATION.)

HOOD REMOVAL/INSTALLATION

id091000801200

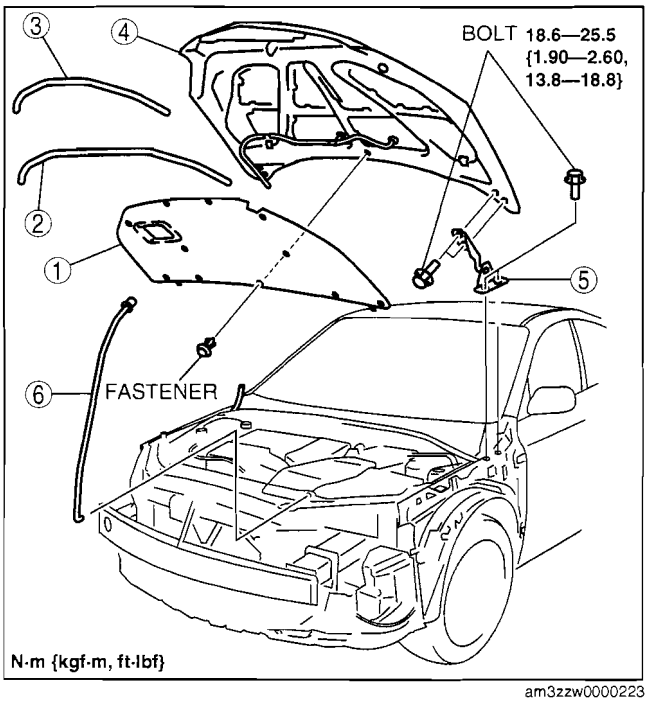
Warning

- **Removing the hood without proper support can be dangerous. The hood may fall and injure you. Always perform the following procedure with at least another person.**

1. To remove the hood hinge, remove the following parts:
   (1) Front side turn lights (See09-18-14 FRONT SIDE TURN LIGHT REMOVAL/INSTALLATION.)
   (2) Front bumper (See09-10-8 FRONT BUMPER REMOVAL/INSTALLATION.)
   (3) Front combination lights (See09-18-5 FRONT COMBINATION LIGHT REMOVAL/INSTALLATION.)
   (4) Front fender panel (See09-10-21 FRONT FENDER PANEL REMOVAL/INSTALLATION.)
   (5) Charge air cooler duct (Mazdaspeed3) (See01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
2. Disconnect the windshield washer hose.
3. Remove in the order indicated in the table.

1	Hood insulator
2	Shroud seal weatherstrip
3	Parting seal weatherstrip (4 door) (Mazdaspeed3)
4	Hood
5	Hood hinge
6	Hood stay

4. Install in the reverse order of removal.
5. Adjust the hood. (See09-10-4 HOOD ADJUSTMENT.)



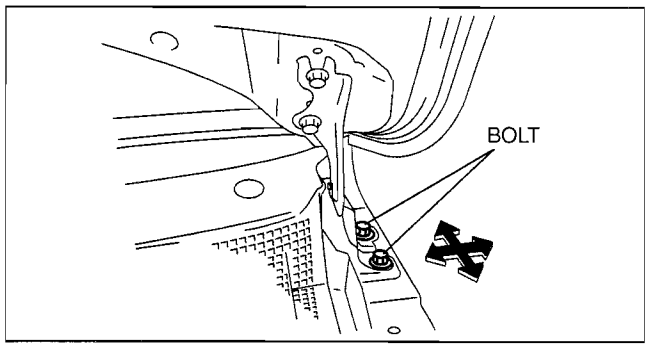
am3zzw0000223

HOOD ADJUSTMENT

id091000801400

Gap Adjustment

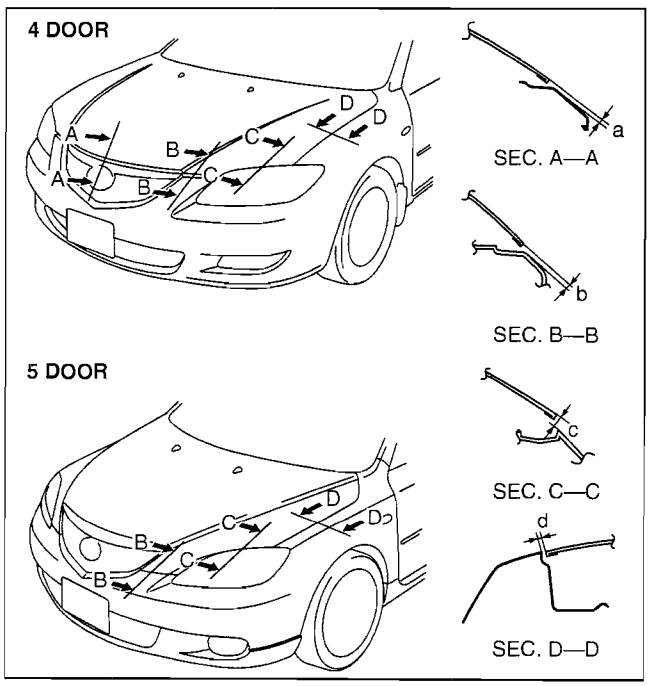
1. Remove the following parts:
   (1) Front side turn lights (See09-18-14 FRONT SIDE TURN LIGHT REMOVAL/INSTALLATION.)
   (2) Front bumper (See09-10-8 FRONT BUMPER REMOVAL/INSTALLATION.)
   (3) Front combination lights (See09-18-5 FRONT COMBINATION LIGHT REMOVAL/INSTALLATION.)
   (4) Front fender panel (See09-10-21 FRONT FENDER PANEL REMOVAL/INSTALLATION.)
2. Loosen the hood hinge installation bolts and adjust the hood.
3. Tighten the bolts.



am3uuw0000045

4. Verify that the gap between the hood and the body is within the specification.

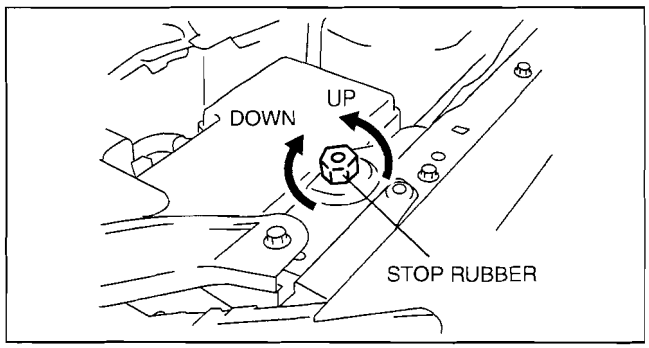
Standard clearance
a: 0.2—3.8 mm {0.0079—0.14 in}
b: −1.0—3.0 mm {−0.039—0.11 in} (4 door)
b: −1.5—2.5 mm {−0.059—0.098 in} (5 door)
c: −0.5—2.5 mm {−0.019—0.098 in} (4 door)
c: −1.0—2.0 mm {−0.039—0.078 in} (5 door)
d: 2.5—4.5 mm {0.10—0.17 in}



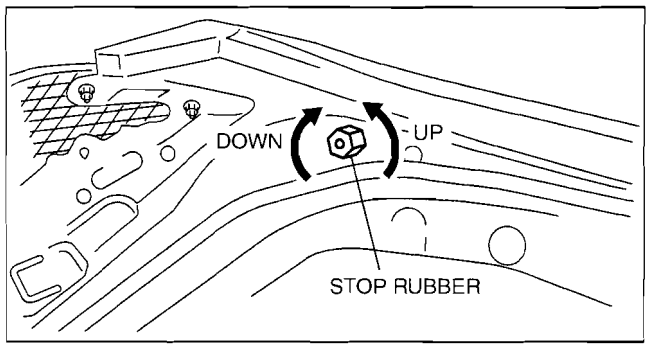
c3u0910w104

Height Difference Adjustment

1. Turn the stop rubber to adjust the height of the hood.

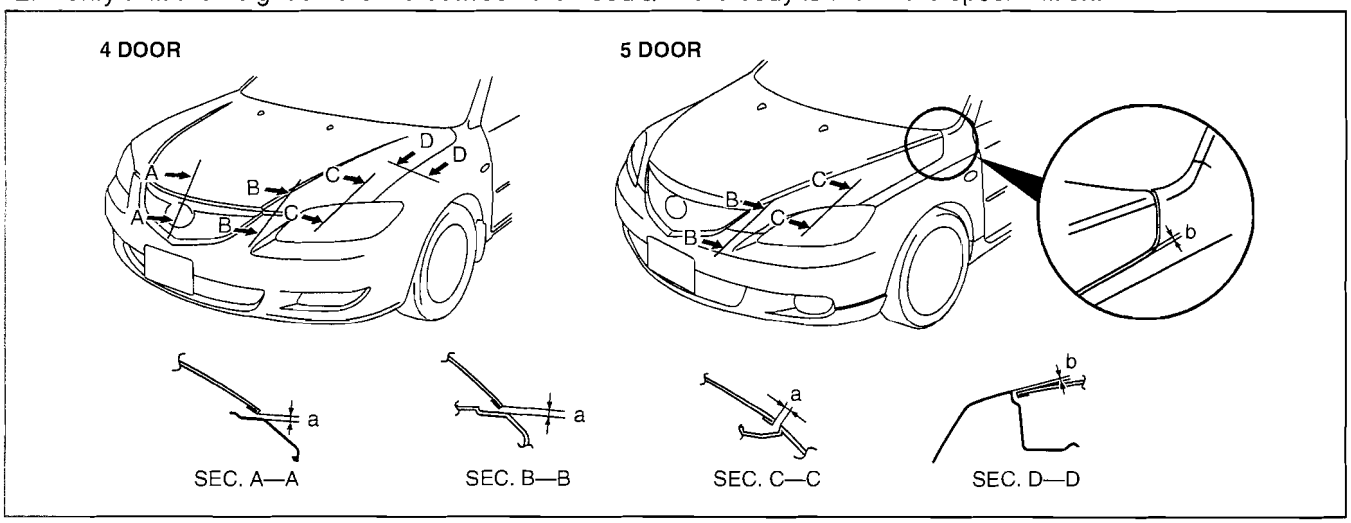


am3uuw0000046



am3uuw0000046

2. Verify that the height difference between the hood and the body is within the specification.



c3u0910w106

Standard clearance

a: 3.0—6.0 mm {0.12—0.23 in}

b: −1.5—0.5 mm {−0.059—0.019 in}

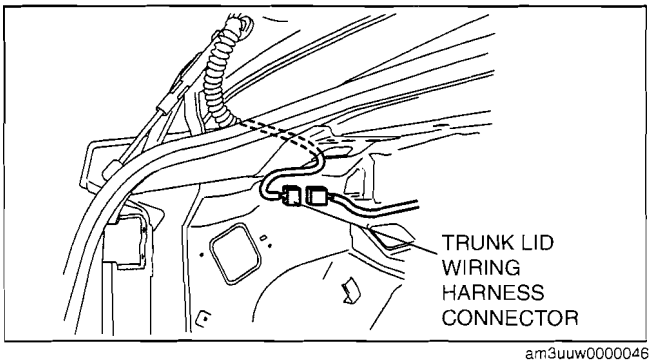
TRUNK LID REMOVAL/INSTALLATION

id091000801600

Warning

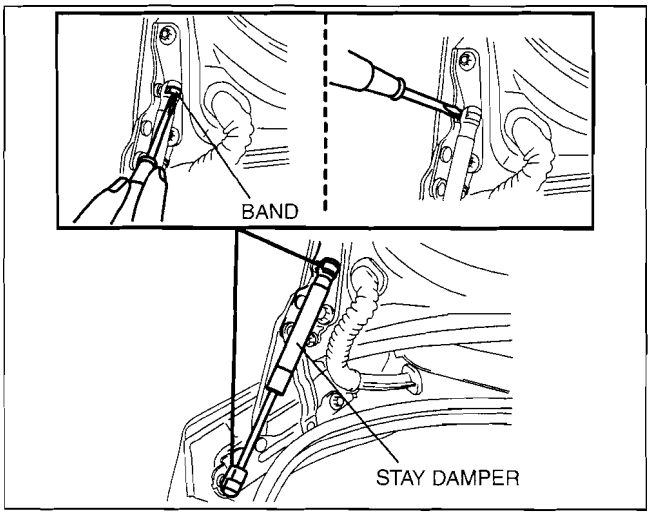
- **Removing the stay damper without supporting the trunk lid can be dangerous. The trunk lid may fall and injure you. Be sure to open the trunk lid completely and support it securely before removing the stay damper.**

1. Disconnect the negative battery cable.
2. Remove the trunk end trim. (See09-17-21 TRUNK END TRIM REMOVAL/INSTALLATION.)
3. Remove the trunk side trim (LH). (See09-17-20 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
4. Disconnect the trunk lid wiring harness connector, then take the trunk lid wiring harness out from the vehicle.



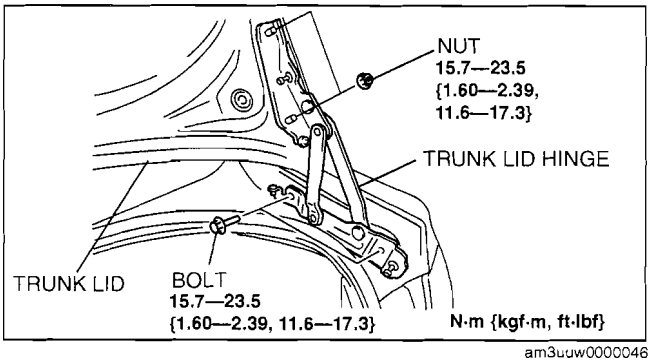
am3uuw0000046

5. Pry off the stay damper band using a flathead screwdriver.
6. Pry out the connecting parts of the stay damper out of the hinge with a flathead screwdriver, then remove the stay damper.



am3uuw0000046

7. Remove the nuts, then remove the trunk lid.
8. Remove the bolts, then remove the trunk lid hinge.
9. Install in the reverse order of removal.
10. Adjust the trunk lid. (See09-10-7 TRUNK LID ADJUSTMENT.)



am3uuw0000046

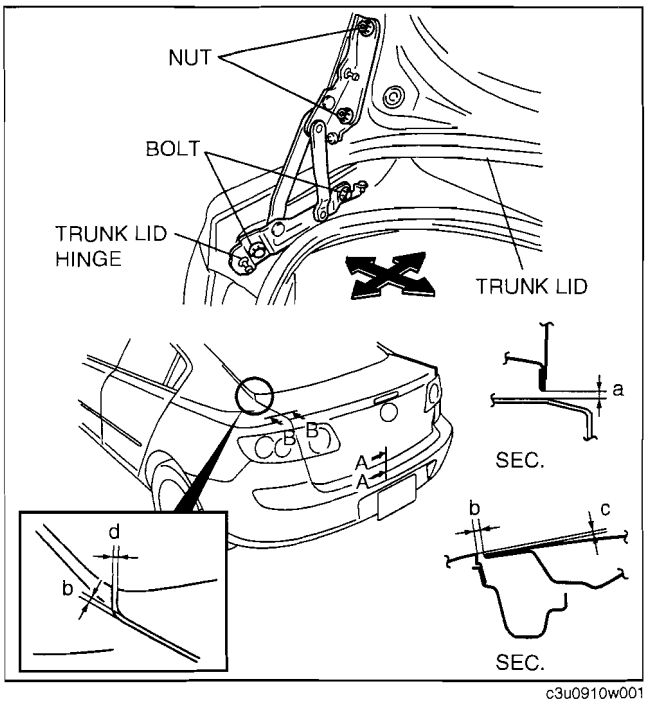
TRUNK LID ADJUSTMENT

id091000801700

1. Measure the gap and height difference between the trunk lid and the body.
2. Loosen the trunk lid hinge installation bolts or nuts and adjust the trunk lid.
   - If necessary, loosen the trunk lid lock striker installation bolts and adjust the trunk lid. (See09-14-29 TRUNK LID LOCK STRIKER REMOVAL/INSTALLATION.)

   Standard clearance
   a: 4.0—8.0 mm {0.16—0.31 in}
   b: 2.5—4.5 mm {0.10—0.17 in}
   c: −0.5—1.5 mm {−0.019—0.059 in}
   d: 3.3—5.3 mm {0.13—0.20 in}

3. Tighten the bolts or nuts.



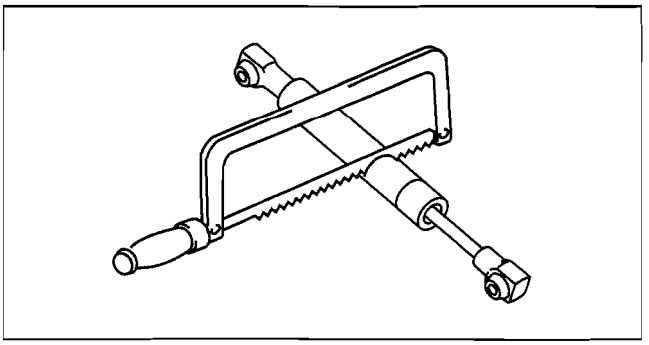
c3u0910w001

TRUNK LID STAY DAMPER DISPOSAL

id091000802700

Note
- The gas in the stay damper is colorless, odorless, and non-toxic.

1. Wear protective eye wear.
2. Lay the stay damper flat.
3. Saw **2—3 mm {0.08—0.11 in}** into the stay damper using a hacksaw, and allow the gas to escape from the stay damper.
4. Verify that the gas has escaped from the stay damper.
5. Discard the stay damper.

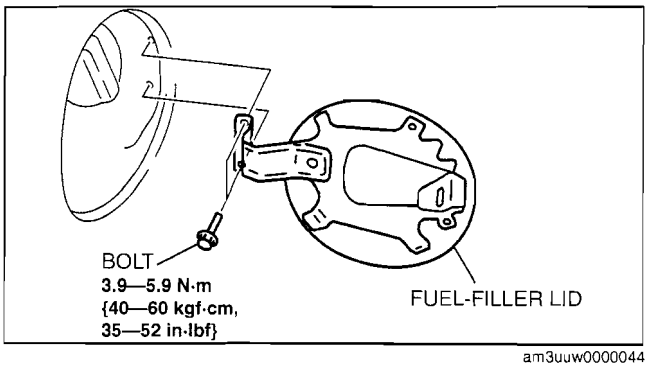


B6U0910W018

FUEL-FILLER LID REMOVAL/INSTALLATION

id091000800100

1. Remove the bolts.
2. Remove the fuel-filler lid.
3. Install in the reverse order of removal.
4. Adjust the fuel-filler lid. (See09-10-8 FUEL-FILLER LID ADJUSTMENT.)



am3uuw0000044

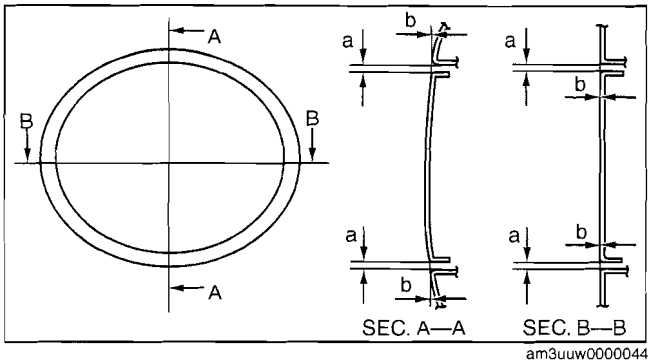
FUEL-FILLER LID ADJUSTMENT

id091000800200

1. Measure the gap and height difference between the fuel-filler lid and the body.
2. Loosen the fuel-filler lid installation bolts, and adjust the fuel-filler lid.

   Standard clearance
   a: 1.7—3.7 mm {0.067—0.14 in}
   b: –0.5—1.5 mm {–0.019—0.059 in}

3. Tighten the bolts.



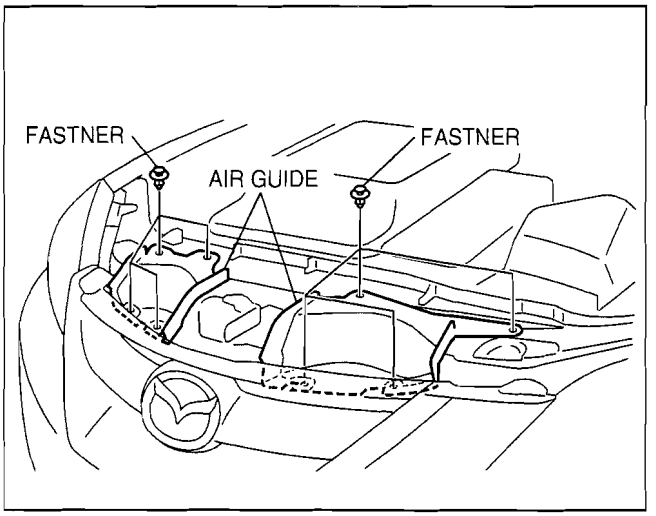
am3uuw0000044

FRONT BUMPER REMOVAL/INSTALLATION

id091000800300

4 DOOR/Mazdaspeed3

1. Disconnect the negative battery cable.
2. Remove the fastener, then remove the air guide. (Mazdaspeed3)

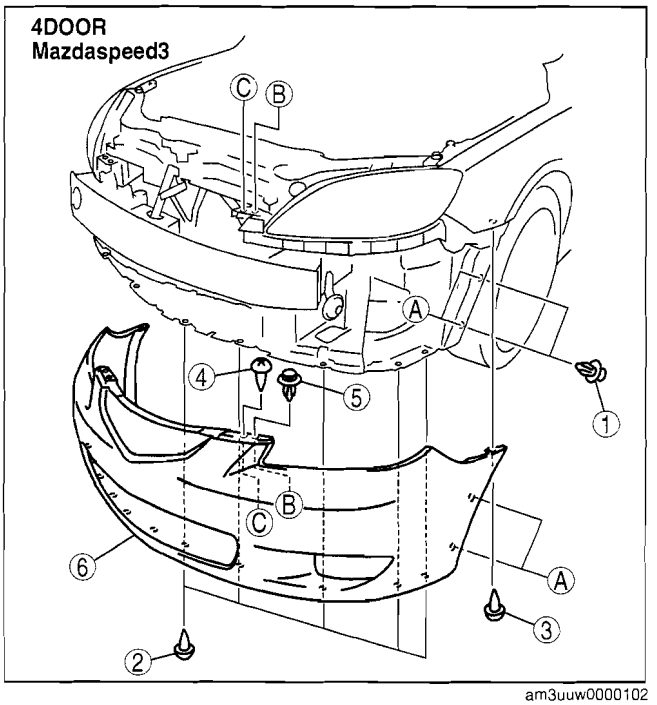


am3uuw0000044

3. Remove in the order indicated in the table.

1	Fastener A
2	Screw A
3	Screw B
4	Screw C
5	Fastener B
6	Front bumper (See 09-10-10 Front Bumper Removal Note.) (See 09-10-10 Front Bumper Installation Note.)

4. Disconnect the ambient temperature sensor connector.
5. Disconnect the front fog light connectors for vehicles with the front fog lights.
6. Install in the reverse order of removal.
7. Adjust the front fog light aiming for vehicles with the front fog lights. (See 09-18-13 FRONT FOG LIGHT AIMING.)



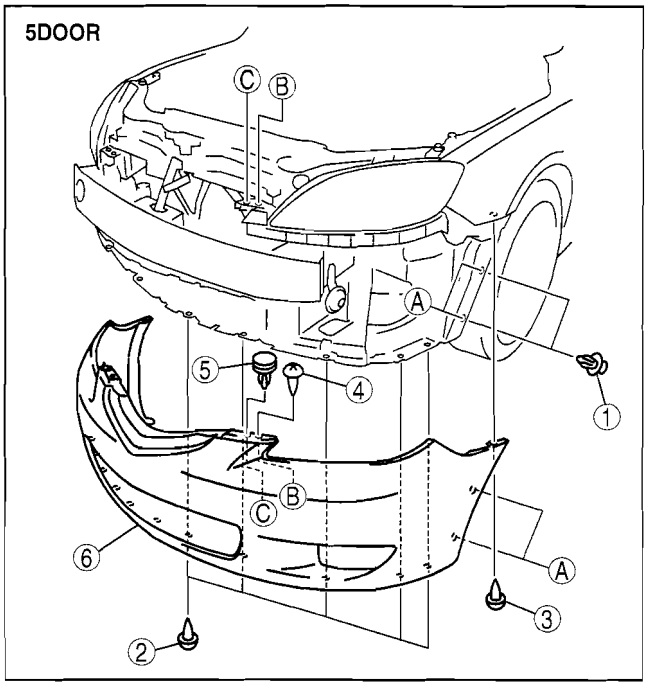
am3uuw0000102

5 DOOR

1. Disconnect the negative battery cable.
2. Remove in the order indicated in the table.

1	Fastener A
2	Screw A
3	Screw B
4	Screw C
5	Fastener B (See 09-10-9 Fastener B Removal Note (5 DOOR).)
6	Front bumper (See 09-10-10 Front Bumper Removal Note.) (See 09-10-10 Front Bumper Installation Note.)

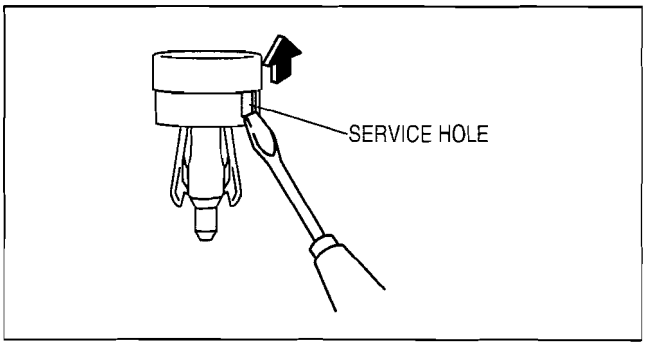
3. Disconnect the front fog light connector.
4. Install in the reverse order of removal.
5. Adjust the front fog light aiming for vehicles with the front fog lights. (See 09-18-13 FRONT FOG LIGHT AIMING.)



am3uuw0000102

Fastener B Removal Note (5 DOOR)

1. Remove fastener B by inserting a small flathead screwdriver into the service hole as shown in the figure.



am3zzw0000221

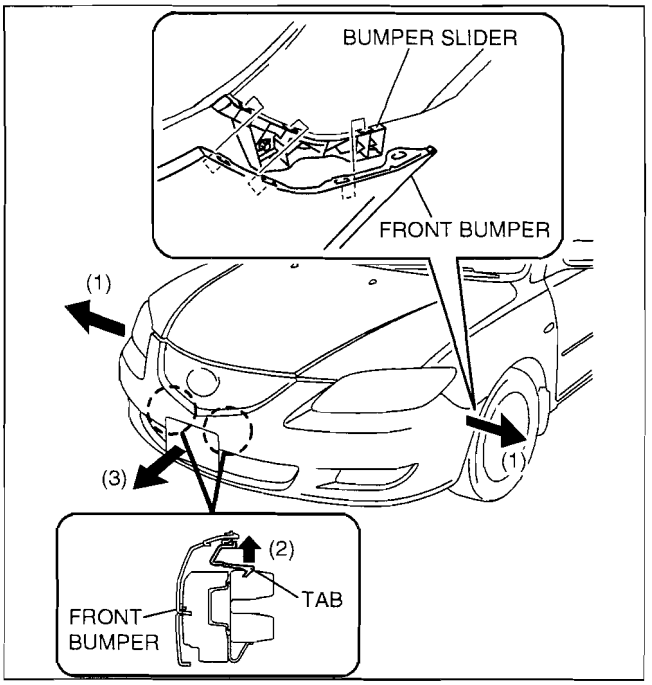
Front Bumper Removal Note

1. Pull the front bumper ends (wheel arch) outward to detach from the bumper slider.

Caution

- **When detaching the front bumper from the bumper slider, the front bumper could fall and be damaged. Secure the front bumper so that it does not fall.**

2. Pull the tabs in the direction of the arrow.
3. Remove the front bumper from the body.



am3uuw0000044

Front Bumper Installation Note

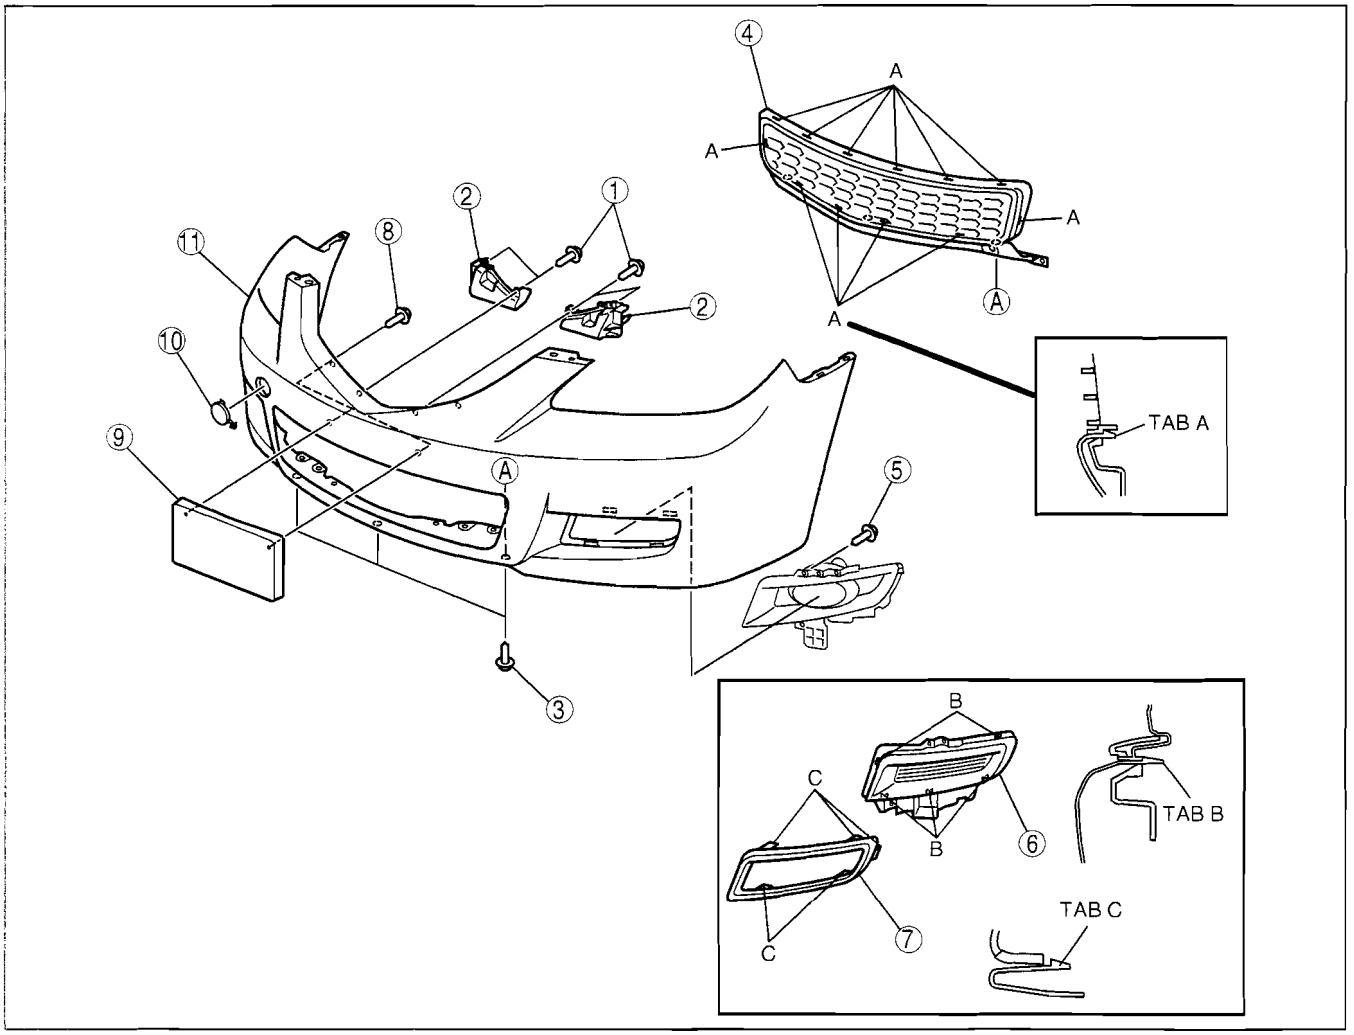
1. Spread the front bumper ends apart.
2. Attach the front bumper to the body.
3. Press the front bumper connecting area into the body to engage with the bumper slider.

FRONT BUMPER DISASSEMBLY/ASSEMBLY

id091000800400

4 DOOR/Standard Type

1. Remove the following parts:
   (1) Front fog lights (Vehicles with the front fog lights) (See 09-18-11 FRONT FOG LIGHT REMOVAL/INSTALLATION.)
   (2) Radiator grille (See 09-16-5 RADIATOR GRILLE REMOVAL/INSTALLATION.)
2. Disassemble in the order indicated in the table.



am3uuw0000044

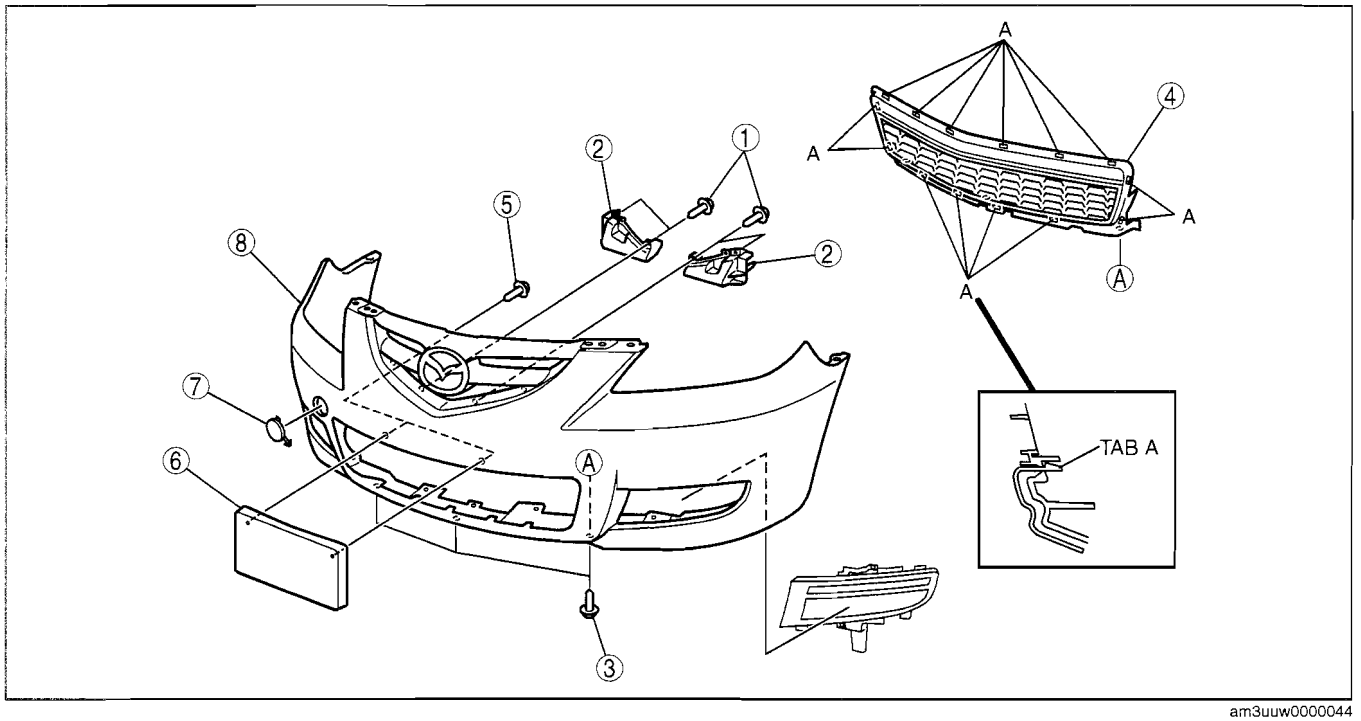
1	Screw A
2	Set plate
3	Screw B
4	Front bumper mesh
5	Screw C
6	Front fog light hole cover A (vehicles without the front fog lights)

7	Front fog light hole cover B (vehicles with the front fog lights)
8	Screw D
9	License plate holder
10	Towing hook cover
11	Front bumper fascia

3. Assemble in the reverse order of disassembly.

4 DOOR/Sports Type

1. Remove the following parts:
   (1) Front fog lights (See 09-18-11 FRONT FOG LIGHT REMOVAL/INSTALLATION.)
   (2) Radiator grille (See 09-16-5 RADIATOR GRILLE REMOVAL/INSTALLATION.)
2. Disassemble in the order indicated in the table.



am3uuw0000044

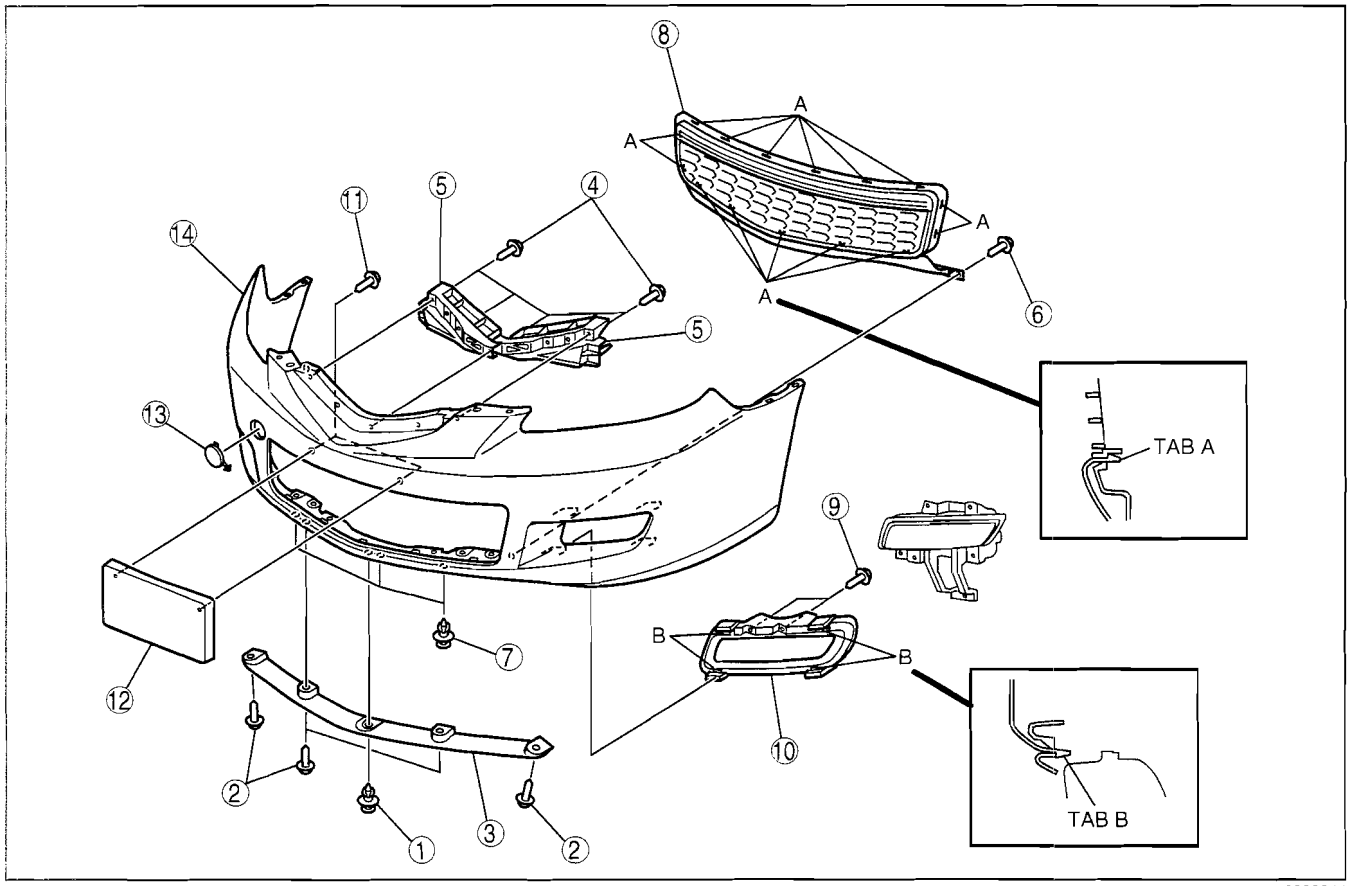
1	Screw A
2	Set plate
3	Screw B
4	Front bumper mesh

5	Screw C
6	License plate holder
7	Towing hook cover
8	Front bumper fascia

3. Assemble in the reverse order of disassembly.

5 DOOR

1. Remove the Front fog light (See 09-18-11 FRONT FOG LIGHT REMOVAL/INSTALLATION.)
2. Disassemble in the order indicated in the table.



am3uuw0000044

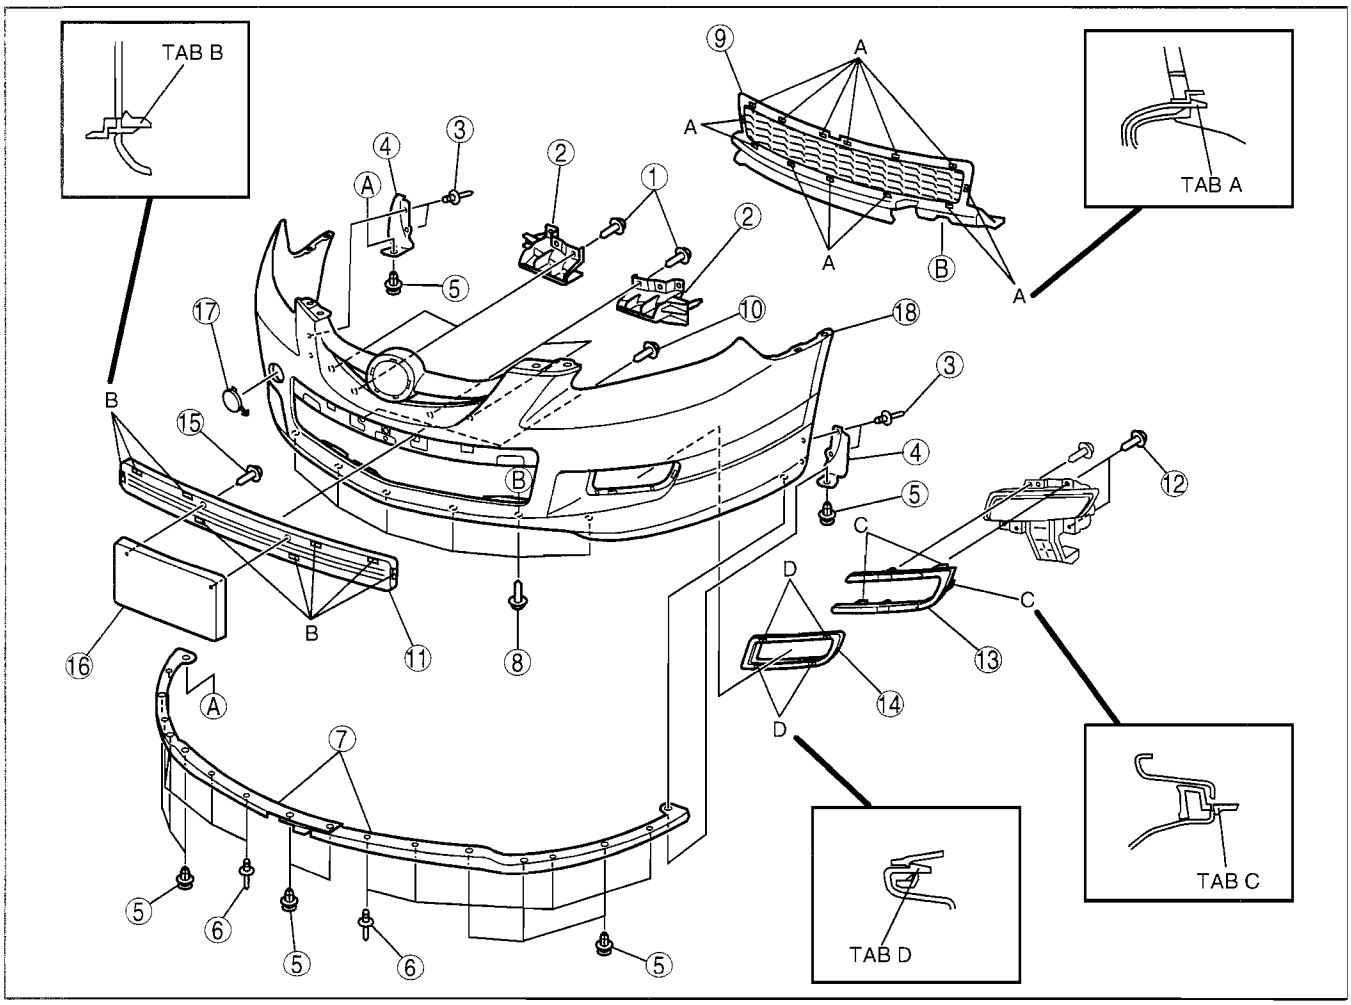
1	Fastener A
2	Screw A
3	Airdam skirt
4	Screw B
5	Set plate
6	Screw C
7	Fastener B

8	Front bumper mesh
9	Screw D
10	Front fog light hole cover
11	Screw E
12	License plate holder
13	Towing hook cover
14	Front bumper fascia

3. Assemble in the reverse order of disassembly.

Mazdaspeed3

1. Remove the following parts:
   (1) Front fog lights (See 09-18-11 FRONT FOG LIGHT REMOVAL/INSTALLATION.)
   (2) Radiator grille (See 09-16-5 RADIATOR GRILLE REMOVAL/INSTALLATION.)
2. Disassemble in the order indicated in the table.



am3uuw0000044

1	Screw A
2	Set plate
3	Rivet A
4	Front bumper deflector
5	Fastener
6	Rivet B
7	Airdam skirt
8	Screw B
9	Front bumper mesh

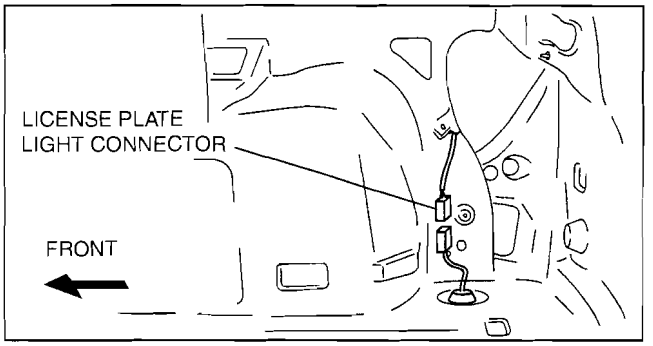
10	Screw C
11	Front bumper protector
12	Screw D
13	Front fog light hole cover A
14	Front fog light hole cover B
15	Screw E
16	License plate holder
17	Towing hook cover
18	Front bumper fascia

3. Assemble in the reverse order of disassembly.

REAR BUMPER REMOVAL/INSTALLATION

id091000800700

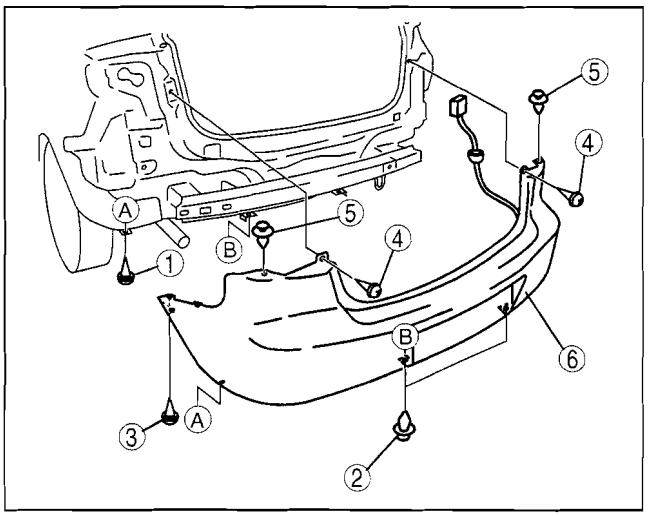
1. Disconnect the negative battery cable.
2. Remove the trunk end trim. (See 09-17-21 TRUNK END TRIM REMOVAL/INSTALLATION.)
3. Remove the fasteners and slightly bend back the trunk side trim (RH).
4. Remove the fasteners and slightly bend back the trim (LH). (4 DOOR)
5. Remove the service hole cover (LH). (5 DOOR)
6. Remove the rear combination light. (See 09-18-14 REAR COMBINATION LIGHT REMOVAL/INSTALLATION.)
7. Disconnect the license plate light connector.



am3uuw0000045

8. Remove in the order indicated in the table.

1	Screw A
2	Fastener A
3	Screw B
4	Screw C
5	Fastener B
6	Rear bumper (See 09-10-15 Rear Bumper Removal Note.) (See 09-10-15 Rear Bumper Installation Note.)



am3uuw0000045

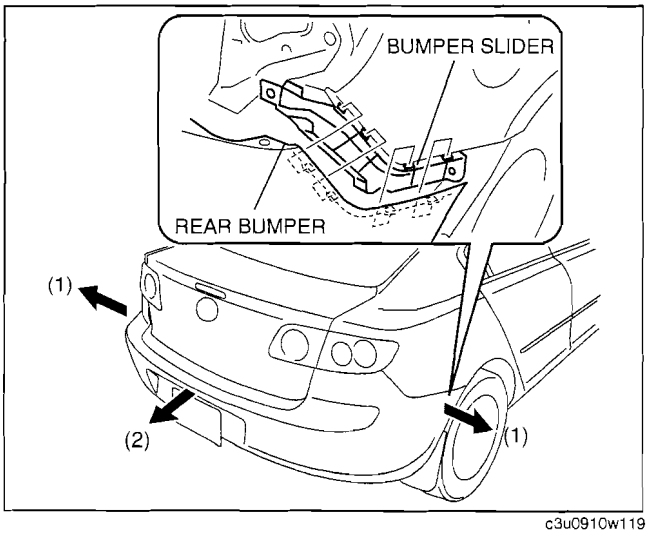
9. Install in the reverse order of removal.

Rear Bumper Removal Note

1. Pull the rear bumper ends (wheel arch) outward to detach from the bumper slider.

Caution

- **When detaching the rear bumper from the bumper slider, the rear bumper could fall and be damaged. Secure the rear bumper so that it does not fall.**



c3u0910w119

Rear Bumper Installation Note

1. Spread the rear bumper ends (wheel arches) apart.
2. Attach the rear bumper to the body.
3. Press the rear bumper connecting area into the body to engage with the bumper slider.

REAR BUMPER DISASSEMBLY/ASSEMBLY

id091000800800

4 DOOR

1. Remove the License plate lights. (See 09-18-17 LICENSE PLATE LIGHT REMOVAL/INSTALLATION.)
2. Disassemble in the order indicated in the table.

1	Fastener
2	Rivet
3	Splash shield
4	Locator pin
5	Screw A

14	Screw C
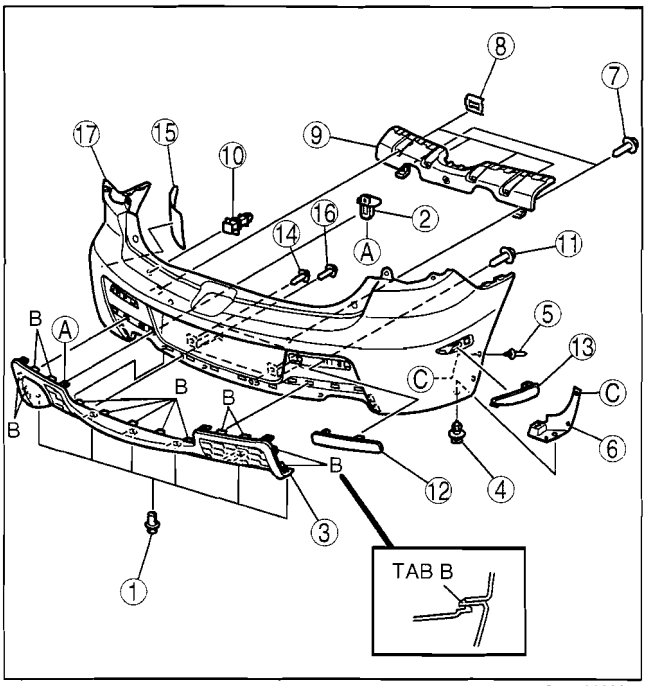
15	Insulator
16	Screw D
17	Rear bumper fascia

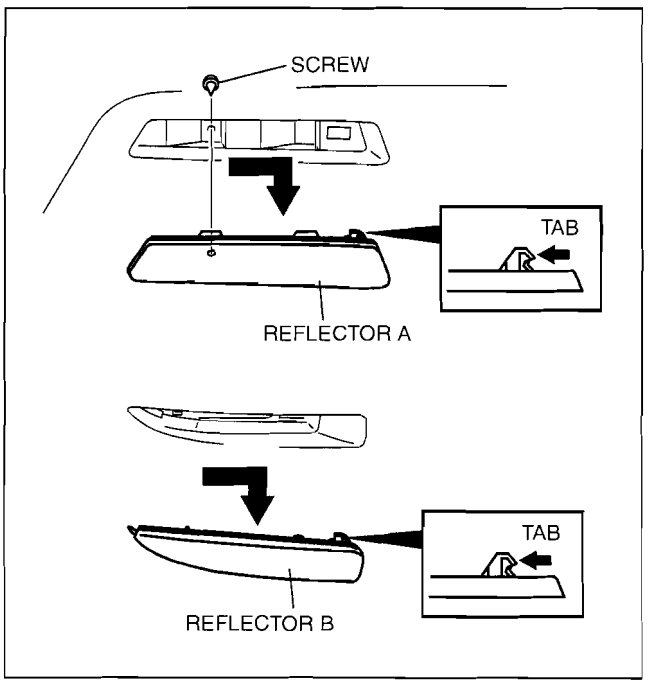


am3uuw0000045

3. Assemble in the reverse order of disassembly.

Reflector Removal Note

1. Remove the screws.
2. Lift the reflector up in the direction of the arrow, then unhook it from the rear bumper.



am3uuw0000074

FRONT BUMPER REINFORCEMENT REMOVAL/INSTALLATION

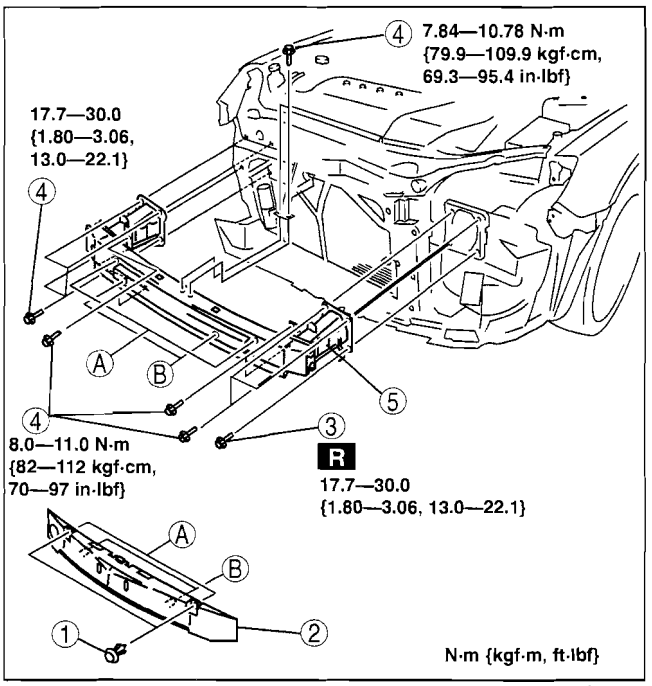
id091000800600

1. Remove the front bumper. (See 09-10-8 FRONT BUMPER REMOVAL/INSTALLATION.)
2. Remove the front combination light. (See 09-18-5 FRONT COMBINATION LIGHT REMOVAL/INSTALLATION.)
3. Remove the horn. (See 09-22-12 HORN REMOVAL/INSTALLATION.)
4. Set the following parts out of the way:
   (1) Under cover
   (2) Electric power steering oil pump
   (3) Washer tank
5. Remove in the order indicated in the table.

Caution

- **If bolt A (only one location on the lower left) is removed, always replace it with the specialized replacement part (Part No. BPYK 50 0Z2) to ensure proper horn ground connection.**

1	Fastener
2	Energy-absorbing foam
3	Bolt A
4	Bolt B
5	Front bumper reinforcement (See 09-10-18 Front Bumper Reinforcement Installation Note.)



am3uuw0000045

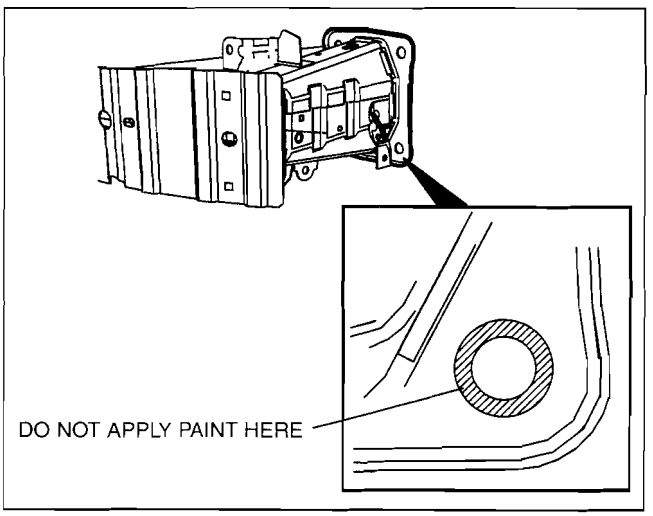
6. Install in the reverse order of removal.
7. After installation, verify that the horn functions normally.

Front Bumper Reinforcement Installation Note

Reusing The Front Bumper Reinforcement

Caution

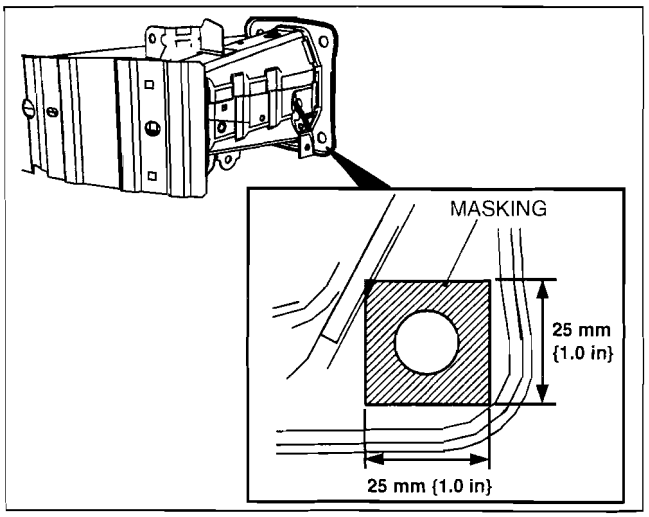
- **In order to ensure proper body ground connection, do not apply paint in the area where the bolt A flange contacts the front bumper reinforcement.**



am3uuw0000045

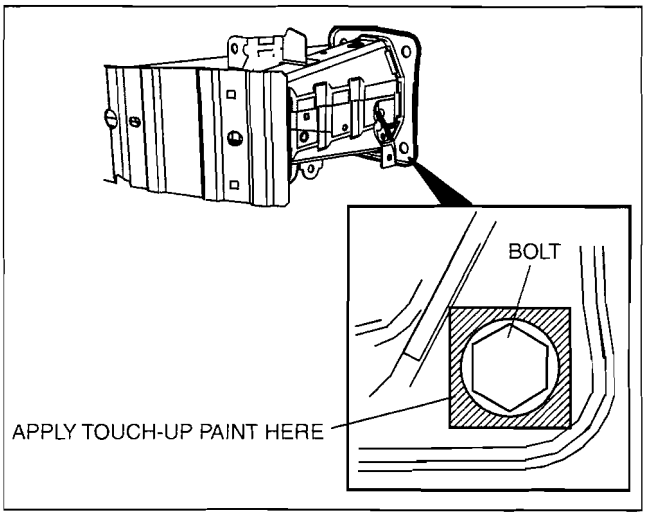
Installing A New Front Bumper Reinforcement

1. Remove the masking tape from the front bumper reinforcement.
   - If the masking tape has already peeled off, scrape off any rust or paint residue from the masked area.



am3uuw0000045

2. After installing bolt A, apply touch-up paint to the area of the front bumper reinforcement that has remained unpainted.

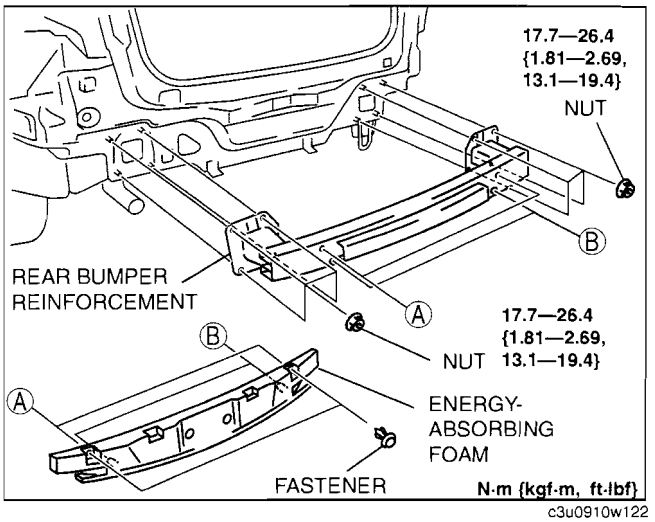


am3uuw0000045

REAR BUMPER REINFORCEMENT REMOVAL/INSTALLATION

id091000800900

1. Remove the following parts:
   (1) Trunk end trim (See 09-17-21 TRUNK END TRIM REMOVAL/INSTALLATION.)
   (2) Trunk side trim (4 door) (See 09-17-20 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
   (3) Trunk side trim (RH) (5 door) (See 09-17-20 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
   (4) Service hole cover (LH) (5 door)
   (5) Rear combination lights (See 09-18-14 REAR COMBINATION LIGHT REMOVAL/INSTALLATION.)
   (6) Rear bumper (See 09-10-15 REAR BUMPER REMOVAL/INSTALLATION.)
2. Remove the fasteners, then remove the energy absorbing foam.
3. Remove the nuts, then remove the rear bumper reinforcement.
4. Install in the reverse order of removal.

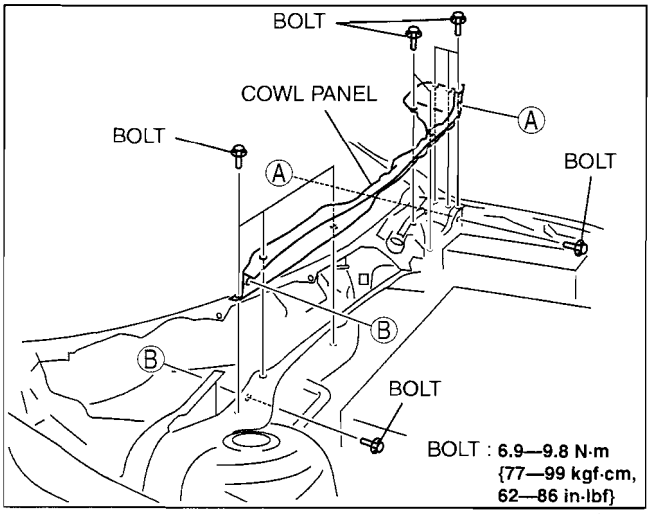


c3u0910w122

COWL PANEL REMOVAL/INSTALLATION

id091000802000

1. Remove the windshield wiper arm and blade. (See09-19-3 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
2. Remove the cowl grille. (See09-16-7 COWL GRILLE REMOVAL/INSTALLATION.)
3. Remove the bolts, then remove the cowl panel.
4. install in the reverse order of removal.



am3uuw0000046

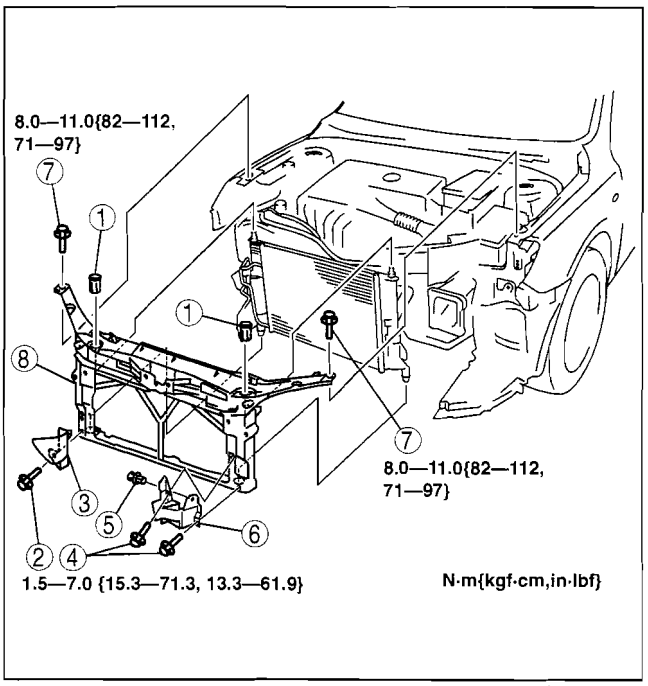
SHROUD PANEL REMOVAL/INSTALLATION

id091000801900

1. Disconnect the negative battery cable.
2. Remove the following parts:
   (1) Front bumper (See 09-10-8 FRONT BUMPER REMOVAL/INSTALLATION.)
   (2) Front combination light (See 09-18-5 FRONT COMBINATION LIGHT REMOVAL/INSTALLATION.)
   (3) Front bumper reinforcement (See 09-10-18 FRONT BUMPER REINFORCEMENT REMOVAL/INSTALLATION.)
   (4) Hood latch (See 09-14-22 HOOD LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.

1	Radiator mount cap
2	Bolt A
3	Seal platel
4	Bolt B
5	Fastener
6	Air guide
7	Bolt C
8	Shroud panel

4. Install in the reverse order of removal.



am3uuw0000046

FRONT FENDER PANEL REMOVAL/INSTALLATION

id091000801000

1. Disconnect the negative battery cable.
2. Remove the following parts:
   (1) Windshield wiper arm and blade (See09-19-3 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
   (2) Cowl grille (See09-16-7 COWL GRILLE REMOVAL/INSTALLATION.)
   (3) Front side turn lights (See09-18-14 FRONT SIDE TURN LIGHT REMOVAL/INSTALLATION.)
   (4) Front bumper (See09-10-8 FRONT BUMPER REMOVAL/INSTALLATION.)
   (5) Front combination lights (See09-18-5 FRONT COMBINATION LIGHT REMOVAL/INSTALLATION.)
   (6) Side step molding (Vehicle with the side step molding) (See09-16-6 SIDE STEP MOLDING REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.

1	Fastener
2	Bolt A
3	Bolt B
4	Bolt C
5	Bolt D
6	Front fender panel

4. Install in the reverse order of removal.

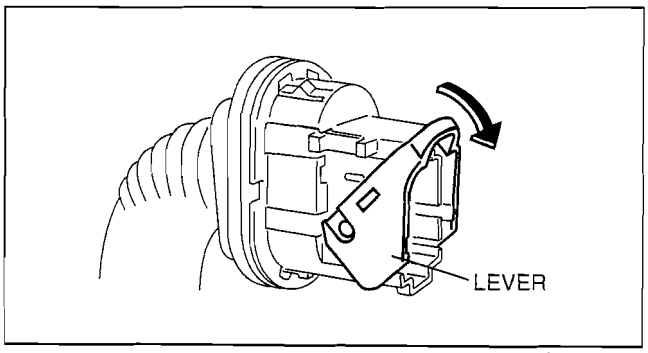
7	Bolt D
8	Front door hinge

Connector Removal Note

1. Pull down the lever in the direction indicated by the arrow and disconnect the connector.

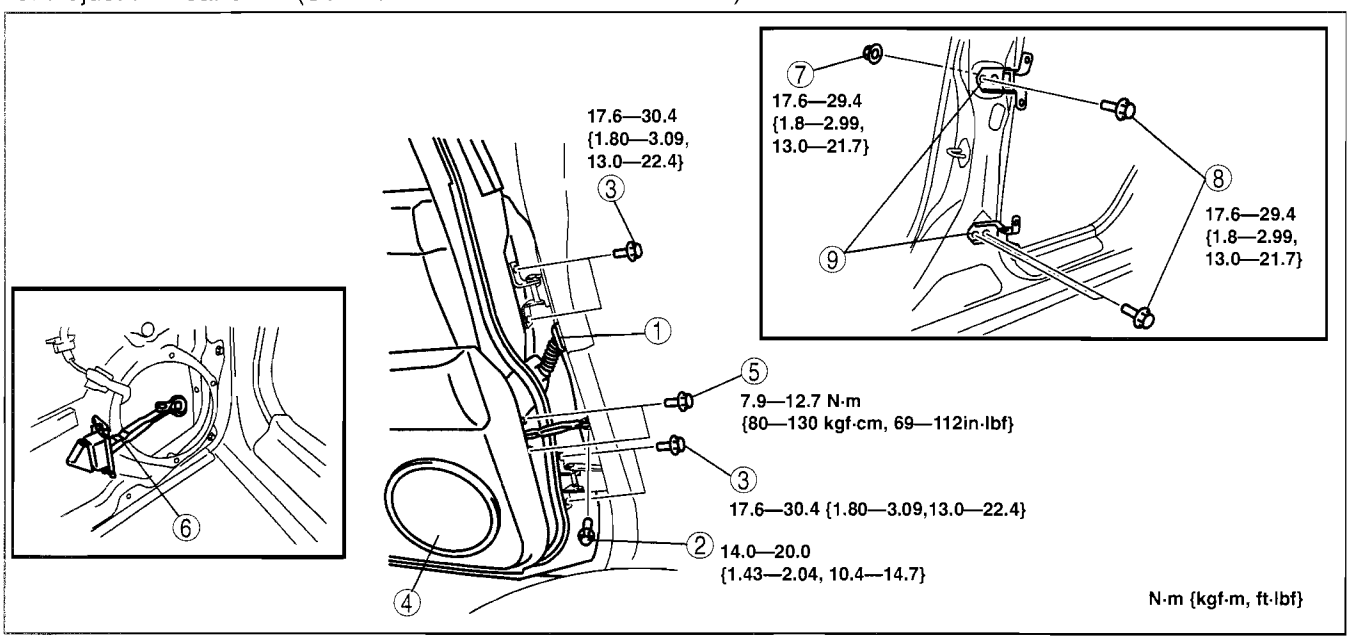


am3uuw0000082

REAR DOOR REMOVAL/INSTALLATION

id091100800300

1. Disconnect the negative battery cable.
2. To remove the checker, remove the following parts:
   (1) Regulator handle (Vehicles with manual window system) (See 09-12-11 REGULATOR HANDLE REMOVAL.) (See 09-12-12 REGULATOR HANDLE INSTALLATION.)
   (2) Rear door trim (See 09-17-19 REAR DOOR TRIM REMOVAL/INSTALLATION.)
   (3) Rear door speaker (See 09-20-8 REAR DOOR SPEAKER REMOVAL/INSTALLATION.)
3. To remove the hinges, remove the following parts:
   (1) Front scuff plate (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (2) Rear scuff plate (See 09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (3) B-pillar lower trim (See 09-17-12 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
4. Remove in the order indicated in the table.
5. Install in the reverse order of removal.
6. Adjust the rear door. (See 09-11-5 DOOR ADJUSTMENT.)



b3e0911w004

1	Connector
2	Bolt A
3	Bolt B
4	Rear door
5	Bolt C

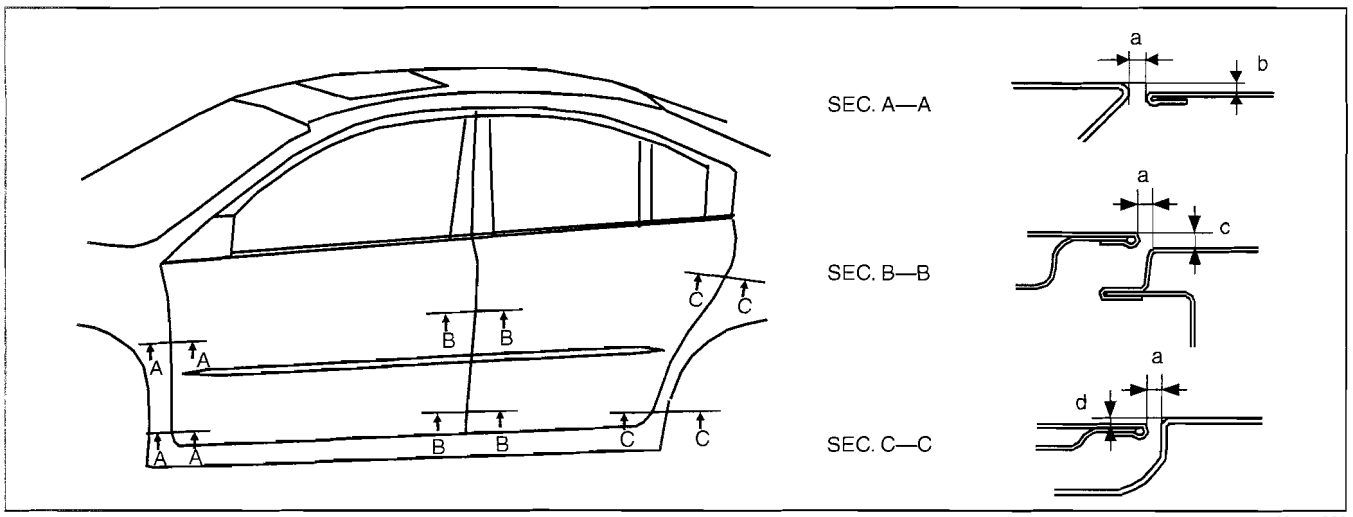
6	Checker
7	Nut
8	Bolt D
9	Rear door hinge

DOOR ADJUSTMENT

id091100800400

1. Measure the gap and height difference between the front or rear door and the body.
2. Loosen the door hinge installation bolts or the door lock striker installation screws, and adjust the door.

Standard clearance
a: 2.7—4.7 mm {0.11—0.18 in}
b (sec. A—A top): -1.0—1.0 mm {-0.040—0.039 in}
b (sec. A—A bottom): -0.3—1.3 mm {-0.027—0.051 in}
c: -1.0—1.0 mm {-0.040—0.039 in}
d (sec. C—C top): -1.0—1.0 mm {-0.040—0.039 in}
d (sec. C—C bottom): -0.5—1.5 mm {-0.020—0.059 in}



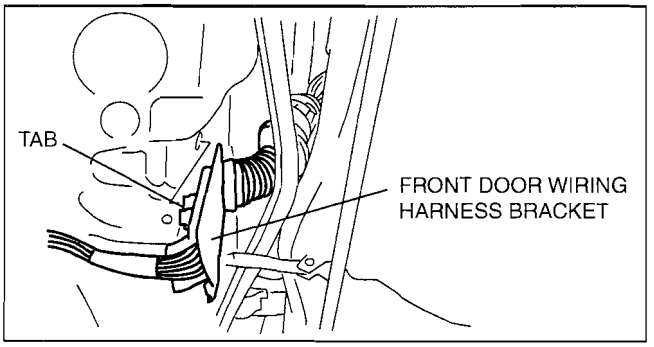
c3u0911w002

3. Tighten the bolts or screws.

FRONT DOOR UNIT REMOVAL/INSTALLATION

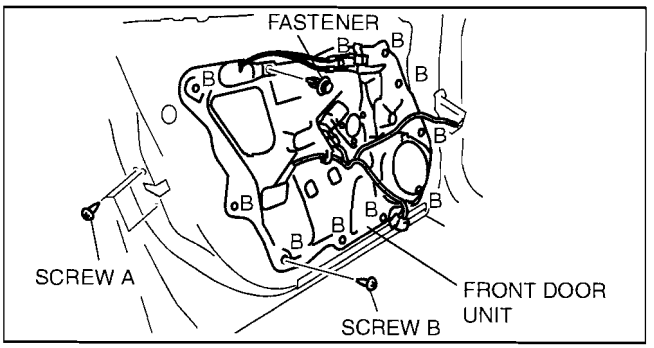
id091100800500

1. Remove the following parts:
   (1) Inner garnish (See09-17-18 INNER GARNISH REMOVAL/INSTALLATION.)
   (2) Regulator handle (Vehicles with manual window system) (See09-12-11 REGULATOR HANDLE REMOVAL.) (See09-12-12 REGULATOR HANDLE INSTALLATION.)
   (3) Front door trim (See09-17-18 FRONT DOOR TRIM REMOVAL/INSTALLATION.)
   (4) Front beltline molding (See09-16-3 FRONT BELTLINE MOLDING REMOVAL/INSTALLATION.)
   (5) Front door glass (See09-12-4 FRONT DOOR GLASS REMOVAL/INSTALLATION.)
   (6) Front door speaker (See09-20-7 FRONT DOOR SPEAKER REMOVAL/INSTALLATION.)
   (7) Rod protector (See09-14-4 FRONT DOOR KEY CYLINDER REMOVAL/INSTALLATION.)
2. Remove the rod from the front outer handle and front door key cylinder.
3. Disconnect the power outer mirror connector.
4. Disconnect the front door wiring harness connector.
5. Remove the tab, then remove the front door wiring harness bracket.



am3uuw0000046

6. Remove screws A, B, and the fastener.
7. Remove the front door unit.
8. Install in the reverse order of removal.

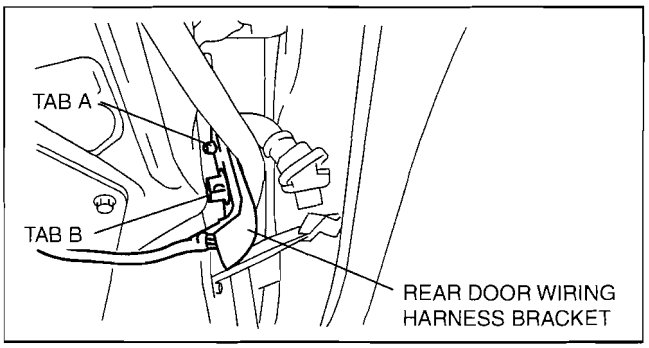


c3u0911w001

REAR DOOR UNIT REMOVAL/INSTALLATION

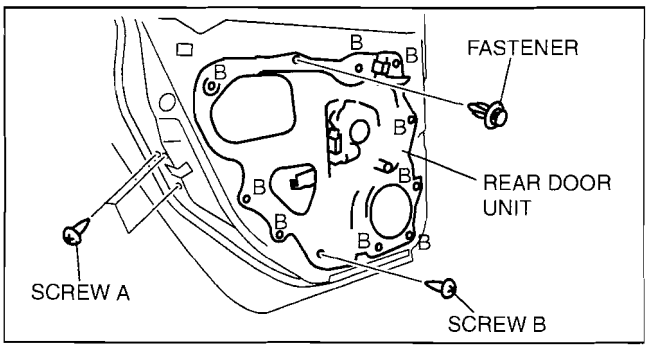
id091100800600

1. Remove the following parts:
   (1) Sail garnish (5 door) (See09-17-9 SAIL GARNISH REMOVAL/INSTALLATION.)
   (2) Regulator handle (Vehicles with manual window system) (See09-12-11 REGULATOR HANDLE REMOVAL.) (See09-12-12 REGULATOR HANDLE INSTALLATION.)
   (3) Rear door trim (See09-17-19 REAR DOOR TRIM REMOVAL/INSTALLATION.)
   (4) Rear door garnish (5 door) (See09-16-3 REAR DOOR GARNISH REMOVAL/INSTALLATION.)
   (5) Rear beltline molding (See09-16-3 REAR BELTLINE MOLDING REMOVAL/INSTALLATION.)
   (6) Rear door glass (See09-12-5 REAR DOOR GLASS REMOVAL/INSTALLATION.)
   (7) Rear door speaker (See09-20-8 REAR DOOR SPEAKER REMOVAL/INSTALLATION.)
2. Remove the rod from the outer handle.
3. Disconnect the rear door wiring harness connector.
4. Remove tabs A and B, then remove the rear door wiring harness bracket.



am3uuw0000046

5. Remove screws A, B, and the fastener.
6. Remove the rear door unit.
7. Install in the reverse order of removal.



am3uuw0000047

LIFTGATE REMOVAL/INSTALLATION

id091100800700

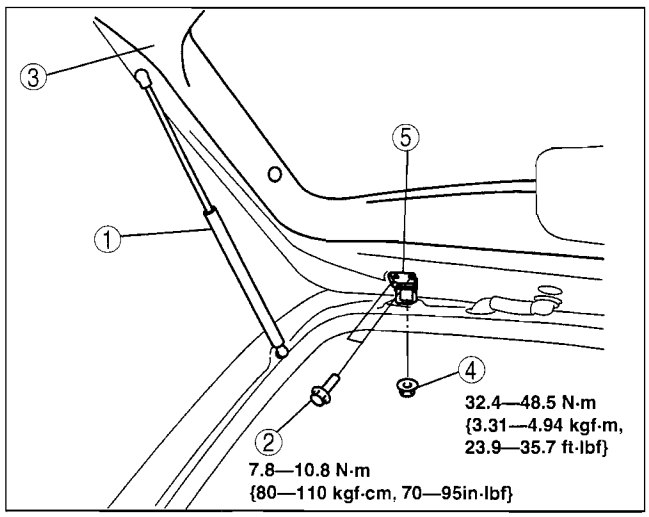
Warning

- **Removing the stay damper without supporting the liftgate can be dangerous. The liftgate may fall and injure you. Always perform the following procedure with at least another person.**

1. Disconnect the negative battery cable.
2. Remove the trunk side upper trims. (See 09-17-21 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION.)
3. Remove the C-pillar trims. (See 09-17-13 C-PILLAR TRIM REMOVAL/INSTALLATION.)
4. Remove the fasteners on the rear part of the headliner and disconnect the following parts while partially peeling back the headliner.
   - Rear washer hose
   - Liftgate wiring harness connector
5. Remove the grommets from the liftgate.
6. Remove in the order indicated in the table.

1	Stay damper (See 09-11-8 Stay Damper Removal Note.)
2	Bolt
3	Liftgate
4	Nut
5	Liftgate hinge

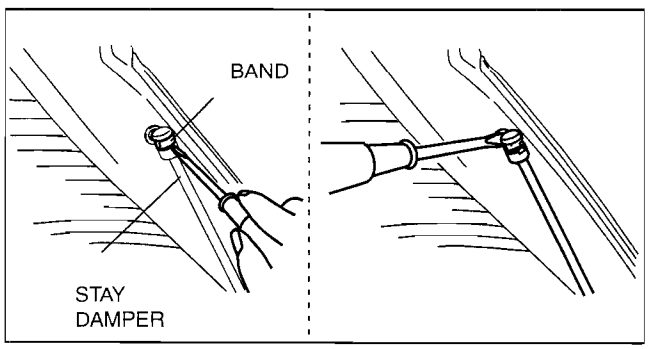
7. Install in the reverse order of removal.
8. Adjust the liftgate. (See 09-11-9 LIFTGATE ADJUSTMENT.)



am3uuw0000047

Stay Damper Removal Note

1. Pry off the stay damper band using a flathead screwdriver.
2. Pry out the connecting parts of the stay damper out of the liftgate with a flathead screwdriver and then remove the stay damper.



am3uuw0000047

LIFTGATE ADJUSTMENT

id091100800900

1. Measure the gap and height difference between the liftgate and the body.
2. Loosen the liftgate hinge installation nuts and adjust the liftgate.
   - If necessary, loosen the liftgate lock striker installation bolts and adjust the liftgate. (See 09-14-14 LIFTGATE LOCK STRIKER REMOVAL/INSTALLATION.)

   Standard clearance
   a: 5.0—7.0 mm {0.20—0.27 in}
   b: -2.0—0 mm {-0.07—0 in}
   c: 3.5—6.5 mm {0.14—0.25 in}
   d: -1.7—0.7 mm {-0.067—0.027 in}
   e: 4.0—8.0 mm {0.16—0.31 in}

3. Tighten the nuts or bolts.

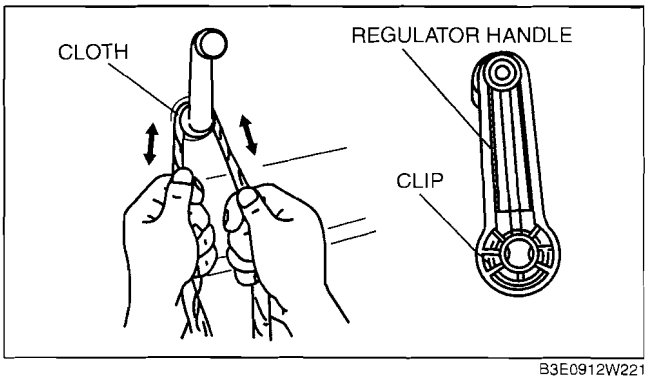
09-12

REGULATOR HANDLE REMOVAL

id091200806300

1. Using a cloth, remove the regulator handle installation clip and remove the regulator handle.

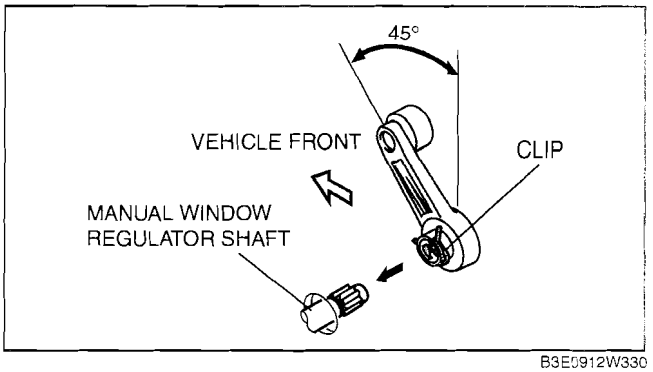


B3E0912W221

REGULATOR HANDLE INSTALLATION

id091200806200

1. Fully raise the door glass.
2. Install the clip to the regulator handle.
3. Install the regulator handle while tilting it as shown in the figure and press it onto the shaft.



B3E0912W330

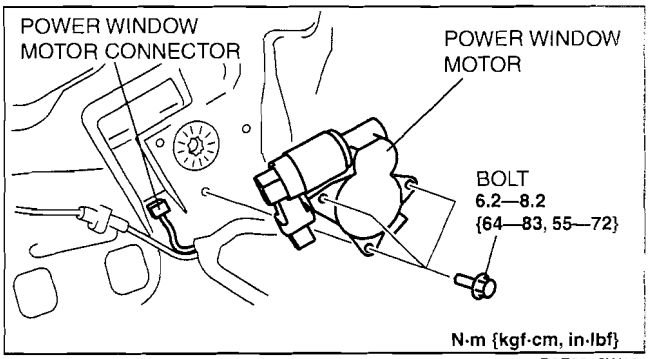
POWER WINDOW MOTOR REMOVAL/INSTALLATION

id091200803700

1. Disconnect the negative battery cable.
2. Remove the following parts:
   Front door
   - Inner garnish (See 09-17-18 INNER GARNISH REMOVAL/INSTALLATION.)
   - Front door trim (See 09-17-18 FRONT DOOR TRIM REMOVAL/INSTALLATION.)

   Rear door
   - Sail garnish (5 door) (See 09-17-18 INNER GARNISH REMOVAL/INSTALLATION.)
   - Rear door trim (See 09-17-19 REAR DOOR TRIM REMOVAL/INSTALLATION.)
3. Remove the bolts.
4. Remove the power window motor from the power window regulator drum.
5. Disconnect the power window motor connector.
6. Install in the reverse order of removal.

Note
- When installing the power window motor to the power window regulator drum, the drum housing tab may come off the door unit. If this happens, remove the door speaker, insert your hand in the speaker installation hole, connect the drum housing tabs, and while supporting the drum housing, install the power window motor to the drum.



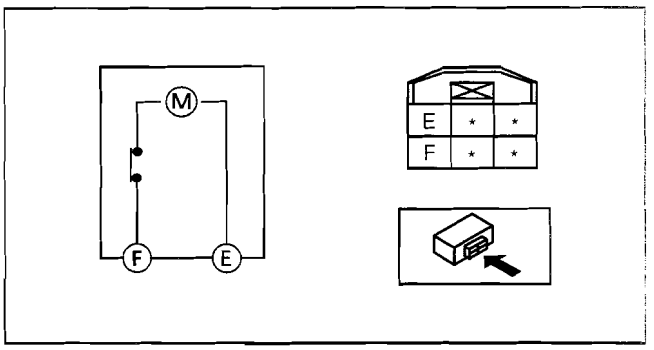
B3E0912W104

POWER WINDOW MOTOR INSPECTION

id091200800800

1. Apply battery positive voltage and connect ground to power window motor terminals E and F, and then inspect the power window motor operation.
   - If the power window motor does not operate as indicated in the table, replace it.

Operation	Terminal	
	Front: F Rear: E	Front: E Rear: F
Open	GND	B+
Closed	B+	GND

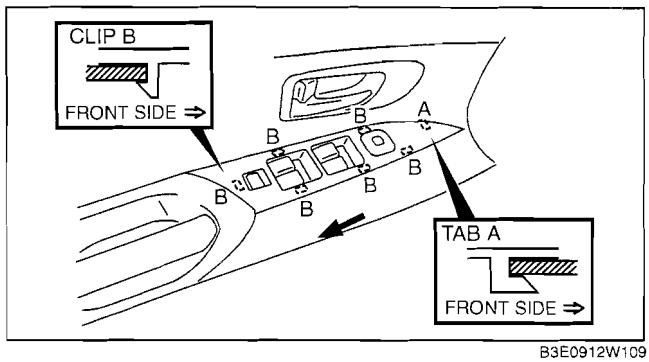


c3u0912w102

POWER WINDOW MAIN SWITCH REMOVAL/INSTALLATION

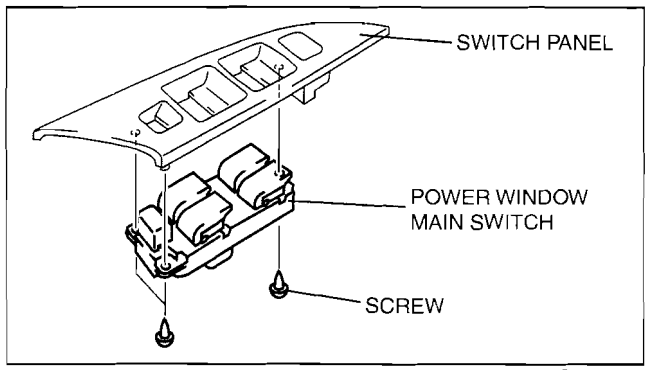
id091200801900

1. Disconnect the negative battery cable.
2. Remove the clips B using a flathead screwdriver wrapped with protective tape.
3. Remove the switch panel from the front door trim while sliding it in the direction of the arrow as shown in the figure.
4. Disconnect the power window main switch connector and the power outer mirror switch connector.



B3E0912W109

5. Remove the screws, then remove the power window main switch.
6. Install in the reverse order of removal.



B3E0912W113

POWER WINDOW MAIN SWITCH INSPECTION

id091200802000

1. When inspecting the passenger-side and rear power windows, turn the power-cut switch to UNLOCK.
2. Inspect for continuity between the power window main switch terminals.
   - If not as specified, replace the power window main switch.
3. Connect battery positive voltage to terminal E and ground to terminal I. Verify that there is continuity.
   - If not as specified, replace the power window main switch.

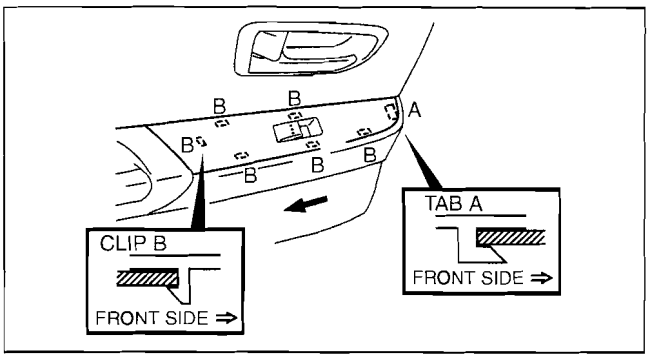
POWER WINDOW SUBSWITCH REMOVAL/INSTALLATION

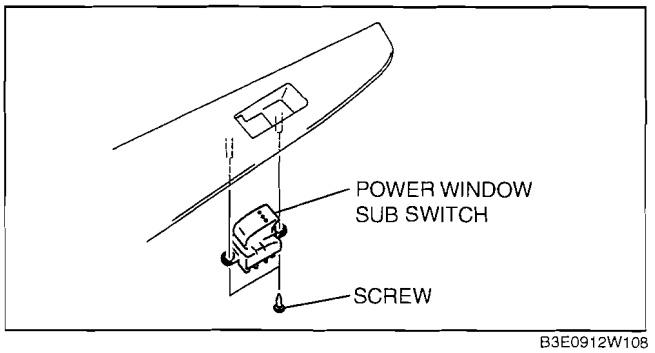
id091200802100

1. Disconnect the negative battery cable.
2. Remove the clips B using a flathead screwdriver wrapped with protective tape.
3. Remove the switch panel from the door trim while sliding it in the direction of the arrow as shown in the figure.
4. Disconnect the power window subswitch connector.



B3E0912W110

5. Remove the screws, then remove the power window subswitch.
6. Install in the reverse order of removal.



B3E0912W108

POWER WINDOW SUBSWITCH INSPECTION

id091200802200

1. Verify continuity as indicated in the table.
   - If not as indicated in the table, replace the power window subswitch.

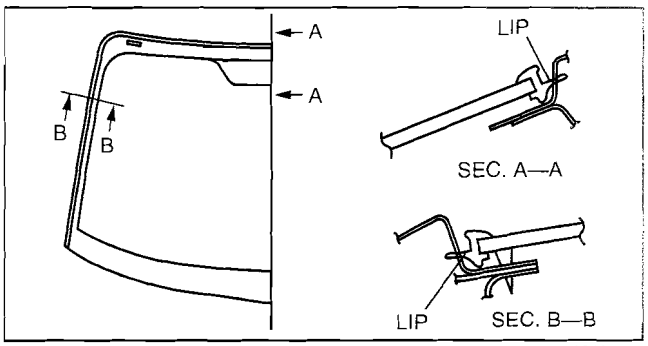
c3u0912w104

WINDSHIELD REMOVAL

id091200801300

1. Disconnect the negative battery cable.
2. Remove the following parts:
   (1) Windshield wiper arm and blade (See 09-19-3 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
   (2) Cowl grille (See 09-16-7 COWL GRILLE REMOVAL/INSTALLATION.)
   (3) Rearview mirror (See 09-12-36 REARVIEW MIRROR REMOVAL/INSTALLATION.)
   (4) Rain sensor (Vehicles with auto wiper system) (See 09-19-16 RAIN SENSOR REMOVAL/INSTALLATION.)
   (5) A-pillar trim (See 09-17-11 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (6) Sunvisor (See 09-17-23 SUNVISOR REMOVAL/INSTALLATION.)
   (7) Map light (See 09-18-23 MAP LIGHT REMOVAL/INSTALLATION.)
3. Set the headliner out of the way.
4. Apply protective tape along the edge of the body.
5. Apply protective tape to the dashboard to protect it from damage.
6. Cut the windshield molding lip using a razor.



c3u0912w114

Warning

- **Using a razor with bare hands can cause injury. Always wear gloves when using a razor.**

Note

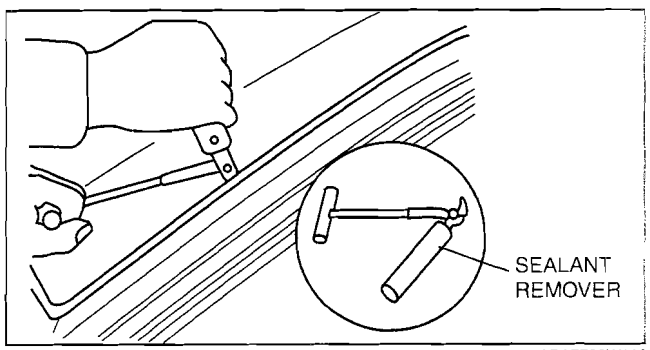
- The windshield molding is a replacement part.
- Vehicles with the auto wiper system have a lens sensor which is embedded in the windshield. If the lens sensor has a malfunction, it must be replaced together with the windshield. Since once the rain sensor initial setting has been performed, it cannot be used with any other lens sensor, also replace the rain sensor with a new one.

Not Reusing Windshield

Note

- For the areas of the sealant that are difficult to cut, use the **SST** (piano wire) and follow the procedure under "Reusing Windshield".

1. Cut out the sealant all around the glass using a sealant remover.
2. Remove the sealant by pulling it off.
3. Remove the windshield.

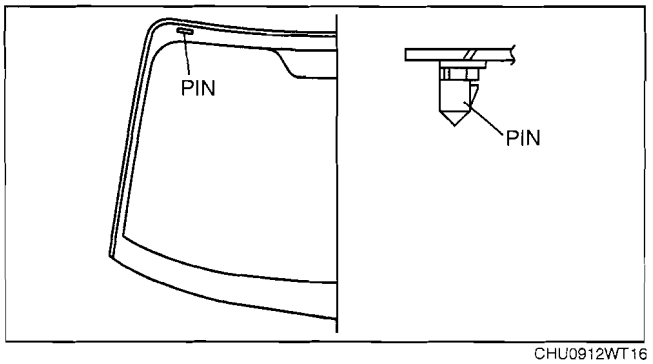


ADA7738W002

Reusing Windshield

Note
- Before removing the windshield from the body, mark the position of the windshield by affixing tape to the windshield and body panel.

1. Make a hole through the sealant from the inside of the vehicle using an awl, avoiding the pins.

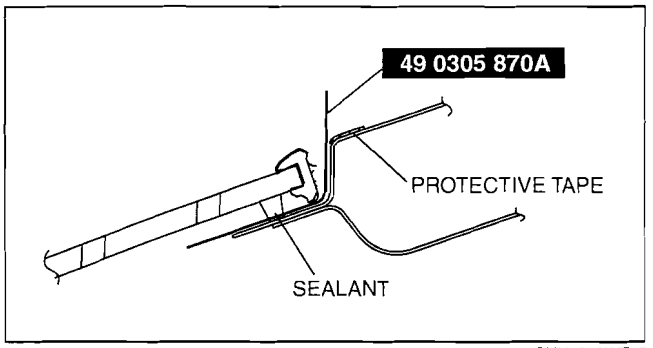


CHU0912WT16

2. Pass the **SST** (piano wire), cut to sufficient length, through the hole.

Warning
- **Using the SST (piano wire) with bare hands can cause injury. Always wear gloves when using the SST (piano wire).**

3. Wind each end of the **SST** (piano wire) around a bar.

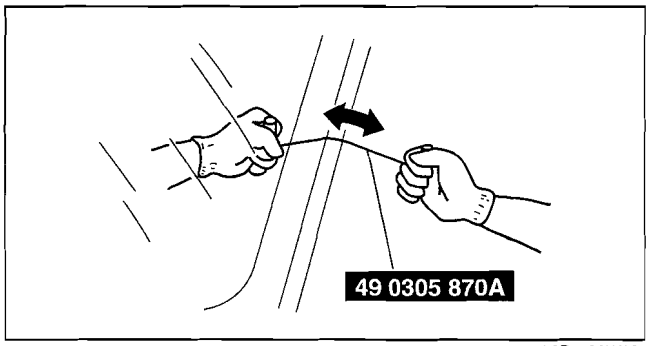


CHU0912WT17

Note
- Use a long sawing action to spread the work over the whole length of the **SST** (piano wire) to prevent it from breaking due to localized heating.

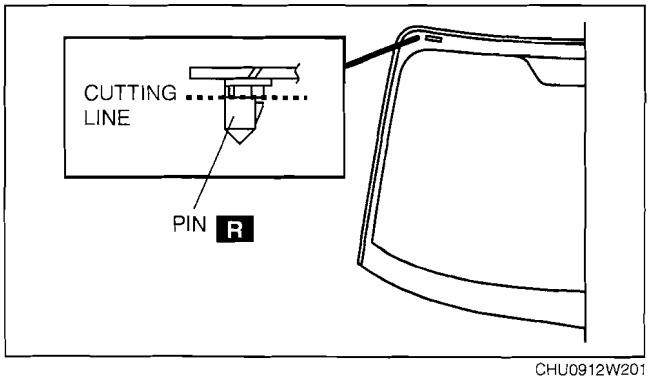
4. Fix one end of the **SST** (piano wire), and while pulling the other end, cut the sealant around the windshield.

Note
- As the upper part of the pin adheres to the sealant, cut it using the **SST** (piano wire).



A6E7738W021

5. Cut the pins out.
6. Remove the windshield.
7. Mark the seating positions of the pins and remove the pins from the windshield.
8. Remove the windshield molding from the windshield.



CHU0912W201

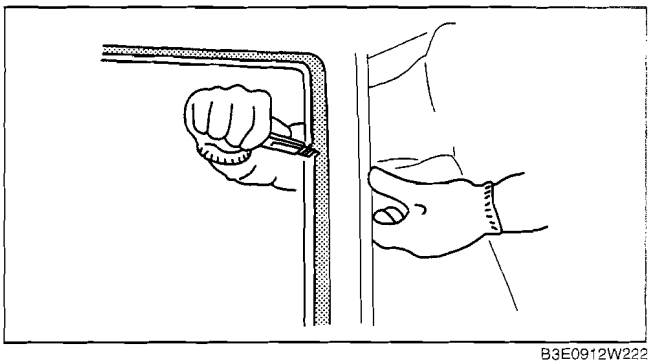
WINDSHIELD INSTALLATION

id091200801400

Warning
- **Using a razor with bare hands can cause injury. Always wear gloves when using a razor.**

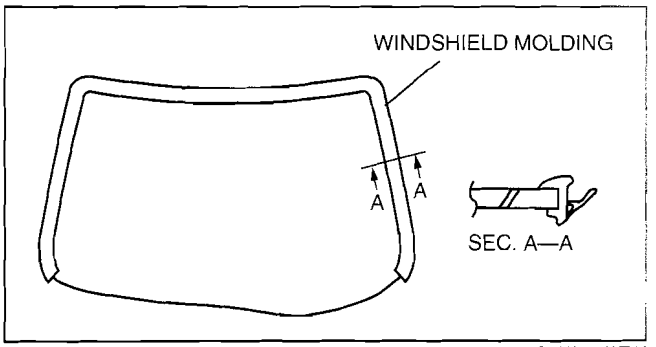
Caution
- **Proper installation of the windshield may be difficult if sealant is cracked or the glass is pushed out by air pressure when a door is opened/closed with all the window glass closed. Leave all the windows open until the windshield is installed completely.**

1. Cut away the old sealant using a razor so that a **1—2 mm {0.04—0.07 in}** thickness of sealant remains along the perimeter of the frame.
2. If the sealant has come off completely in any one place, apply some primer after degreasing, and allow it to dry for **approx. 30 min**. Then apply a **2 mm {0.08 in}** thickness of sealant.
3. Clean and degrease an **approx. 50 mm {1.97 in}** wide strip along the perimeter of the windshield and the bonding area on the body.



B3E0912W222

4. If installing a reused windshield, perform the following procedure:
   (1) Attach the pins to the seating positions marked during removal.
   (2) Install the windshield molding.

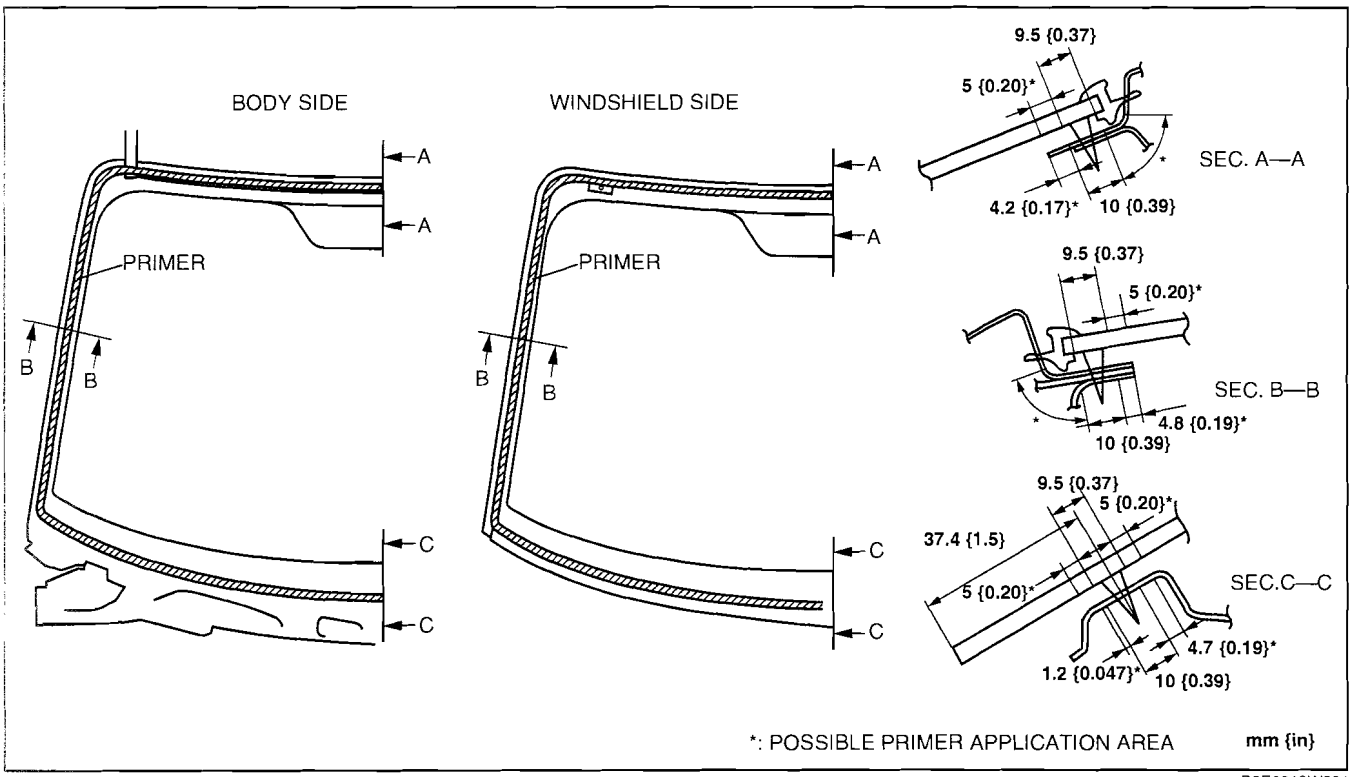


CHU0912W112

5. Apply glass primer on the glass, and body primer on the body and the molding, then allow it to dry for **approx. 30 min.**

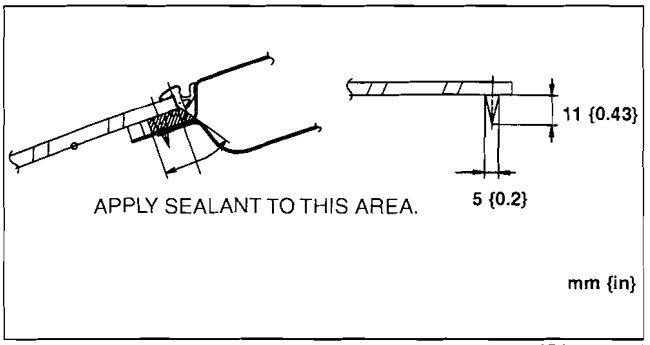
Caution

- **Keep the area free of dirt and grease, and do not touch the surface. Otherwise, the primer may not properly bond to the surface of the glass and body, which may cause leakage.**



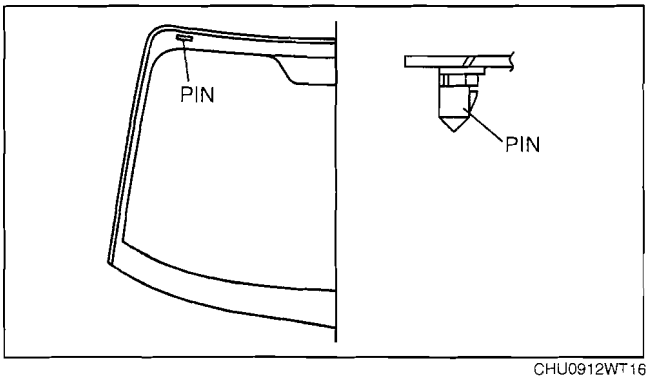
B3E0912W304

6. Apply sealant to the glass surface as shown in the figure.
7. Insert the positioning pins into the body, then install the windshield.



ADA7738W009

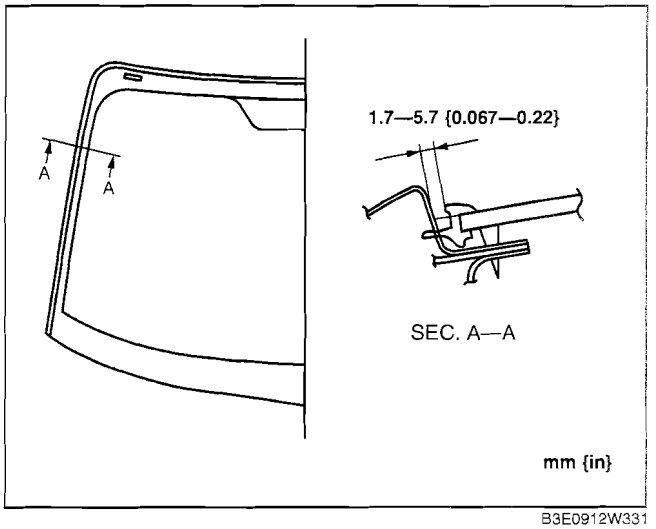
8. Press the windshield pins to engage the tabs to the body.



CHU0912W016

9. Press completely along the perimeter of the glass so that the measurement of the molding lip gap is within the specification.
10. Install the following parts:
    (1) Map light (See 09-18-23 MAP LIGHT REMOVAL/INSTALLATION.)
    (2) A-pillar trim (See 09-17-11 A-PILLAR TRIM REMOVAL/INSTALLATION.)
    (3) Sunvisor (See 09-17-23 SUNVISOR REMOVAL/INSTALLATION.)
    (4) Rain sensor (With automatic wiper system) (See 09-19-16 RAIN SENSOR REMOVAL/INSTALLATION.)
    (5) Rearview mirror (See 09-12-36 REARVIEW MIRROR REMOVAL/INSTALLATION.)
    (6) Cowl grille (See 09-16-7 COWL GRILLE REMOVAL/INSTALLATION.)
    (7) Windshield wiper arm and blade (See 09-19-3 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
11. Allow the sealant to harden completely.

Sealant hardening time: 24 h



B3E0912W331

REAR WINDOW GLASS REMOVAL

id091200801500

4 Door

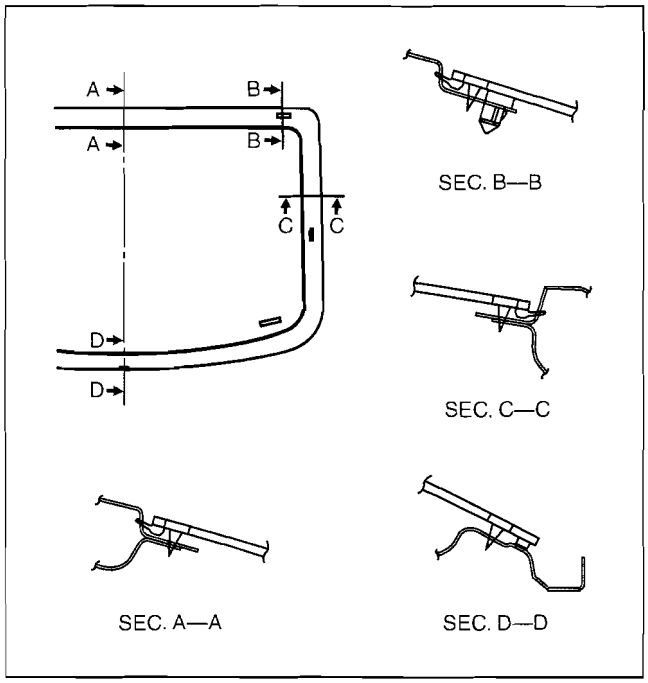
1. Disconnect the negative battery cable.
2. Remove the following parts:
   (1) Rear seat (See 09-13-6 REAR SEAT REMOVAL/INSTALLATION.)
   (2) Rear scuff plate (See 09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (3) Tire house trim (See 09-17-15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
   (4) C-pillar trim (See 09-17-13 C-PILLAR TRIM REMOVAL/INSTALLATION.)
   (5) Rear package trim (See 09-17-16 REAR PACKAGE TRIM REMOVAL/INSTALLATION.)
3. Disconnect the filament connector.
4. Set the headliner out of the way.
5. Apply protective tape along the edge of the body.
6. Cut the rear window glass molding lip using a razor.

Warning

- **Using a razor with bare hands can cause injury. Always wear gloves when using a razor.**

Note

- The rear window glass molding is a replacement part.



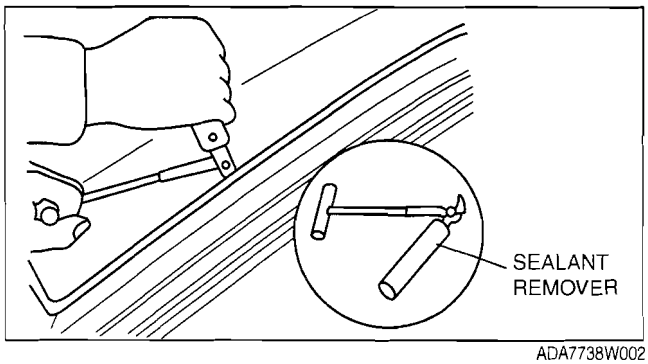
B3E0912W308

Not Reusing Rear Window Glass

Note

- For the areas of the sealant that are difficult to cut, use the **SST** (piano wire) and follow the procedure under "Reusing Rear Window Glass".

1. Cut out the sealant all around the glass using a sealant remover.
2. Remove the sealant by pulling it off.
3. Remove the rear window glass.

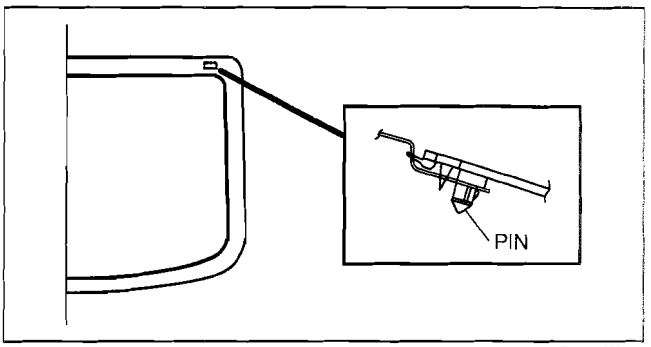


ADA7738W002

Reusing Rear Window Glass

Note
- Before removing the rear window glass from the body, mark the position of the glass by affixing tape to the glass and body panel.

1. Make a hole through the sealant from the inside of the vehicle using an awl, avoiding the pins.

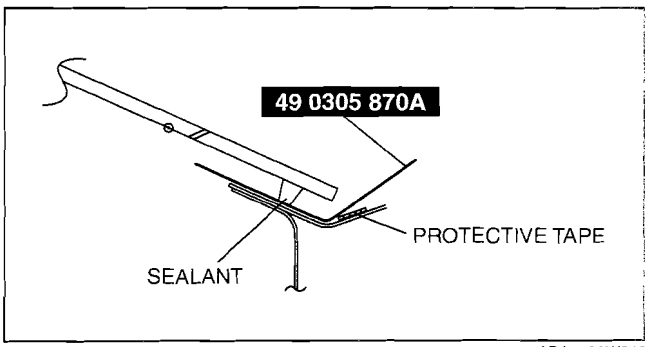


B3E0912W309

2. Pass the **SST** (piano wire), cut to sufficient length, through the hole.

Warning
- **Using the SST (piano wire) with bare hands can cause injury. Always wear gloves when using the SST (piano wire).**

3. Wind each end of the **SST** (piano wire) around a bar.

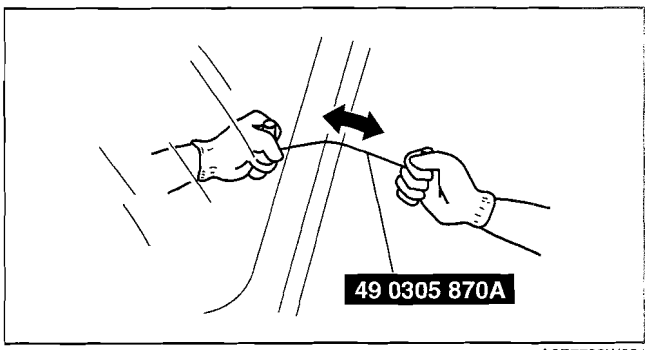


ADA7738W013

Note
- Use a long sawing action to spread the work over the whole length of the **SST** (piano wire) to prevent it from breaking due to localized heating.

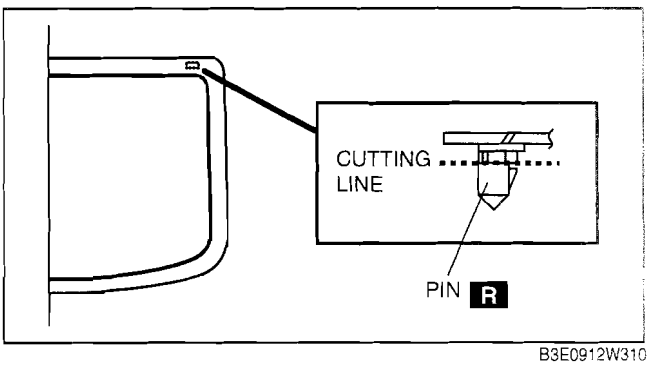
4. Fix one end of the **SST** (piano wire), and while pulling the other end, cut the sealant around the rear window glass.

Note
- As the upper part of the pin adheres to the sealant, cut it using the **SST** (piano wire).



A6E7738W021

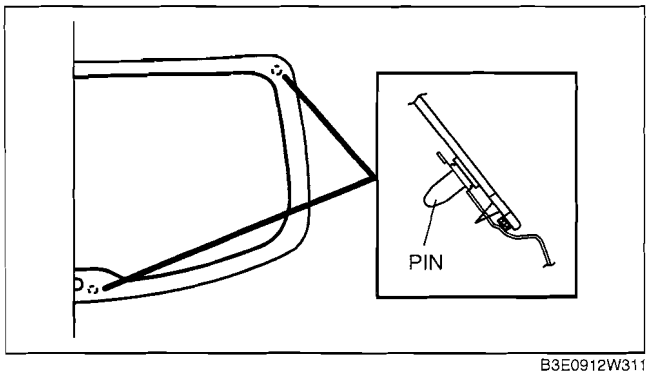
5. Cut the pins out.
6. Remove the rear window glass.
7. Mark the seating positions of the pins and remove the pins from the rear window glass.
8. Remove the rear window glass molding from the rear window glass.



B3E0912W310

5 Door

1. Disconnect the negative battery cable.
2. Remove the following parts:
   (1) Liftgate upper trim (See 09-17-22 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)
   (2) Liftgate side trim (See 09-17-22 LIFTGATE SIDE TRIM REMOVAL/INSTALLATION.)
   (3) Liftgate lower trim (See 09-17-23 LIFTGATE LOWER TRIM REMOVAL/INSTALLATION.)
   (4) High-mount brake light (See 09-18-16 HIGH-MOUNT BRAKE LIGHT REMOVAL/INSTALLATION.)
   (5) Rear wiper arm and blade (See 09-19-3 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
   (6) Rear wiper motor (See 09-19-13 REAR WIPER MOTOR REMOVAL/INSTALLATION.)
   (7) Rear spoiler (See 09-16-9 REAR SPOILER REMOVAL/INSTALLATION.)
3. Disconnect the filament connector.
4. Apply protective tape along the edge of the body.
5. Mark the position of the glass by affixing tape to the glass and body panel.
6. Make a hole through the sealant from the inside of the vehicle using an awl, avoiding the pins.



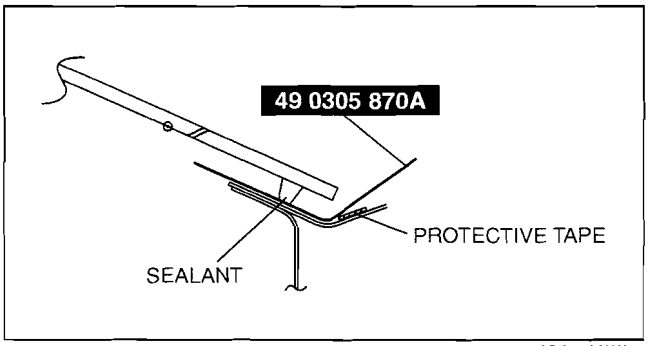
B3E0912W311

7. Pass the **SST** (piano wire), cut to sufficient length, through the hole.

   Warning
   - **Using the SST (piano wire) with bare hands can cause injury. Always wear gloves when using the SST (piano wire).**

8. Wind each end of the **SST** (piano wire) around a bar.

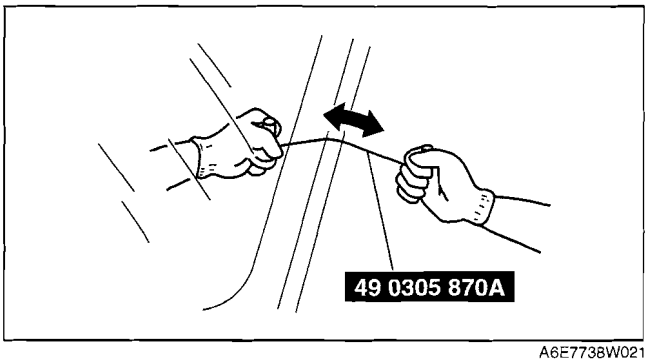
   Note
   - Use a long sawing action to spread the work over the whole length of the **SST** (piano wire) to prevent it from breaking due to localized heating.



ADA7738W013

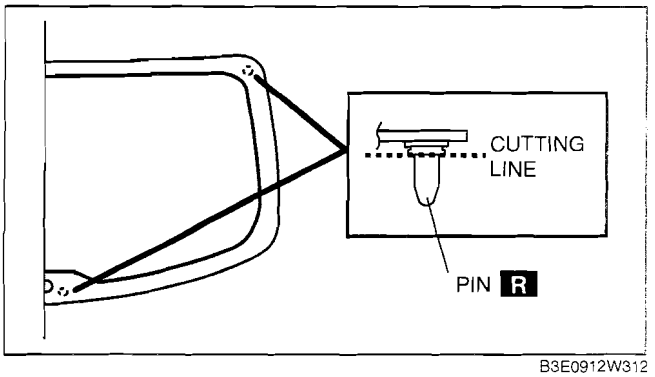
9. Fix one end of the **SST** (piano wire), and while pulling the other end, cut the sealant around the rear window glass.

   Note
   - As the upper part of the pin adheres to the sealant, cut it using the **SST** (piano wire).



A6E7738W021

10. Cut the pins out.
11. Remove the rear window glass.
12. Mark the seating positions of the pins and remove the pins from the rear window glass.



B3E0912W312

REAR WINDOW GLASS INSTALLATION

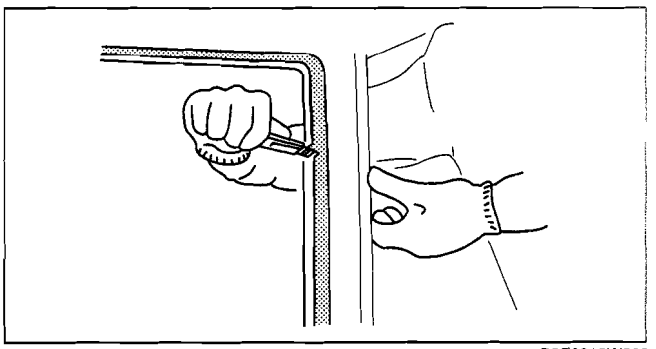
id091200801600

4 Door

Caution
- **Proper installation of the rear window glass may be difficult if sealant is cracked or the glass is pushed out by air pressure when a door is opened/closed with all the window glass closed. Leave all the windows open until the rear window glass is installed completely.**

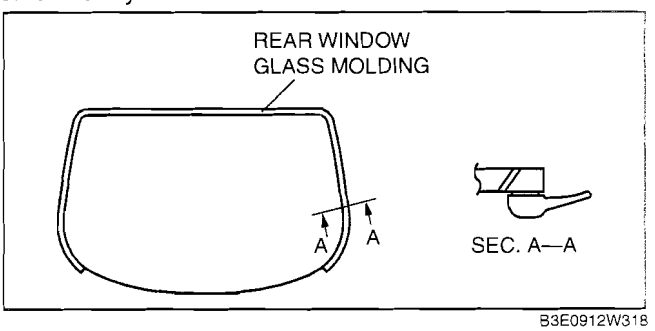
1. Cut away the old sealant using a razor so that a **1—2 mm {0.04—0.07 in}** thickness of sealant remains along the perimeter of the frame.

   Warning
   - **Using a razor with bare hands can cause injury. Always wear gloves when using a razor.**



B3E0912W222

2. If the sealant has come off completely in any one place, apply some primer after degreasing, and allow it to dry for **approx. 30 min**. Then apply a **2 mm {0.08 in}** thickness of sealant.
3. Clean and degrease the perimeter **approx. 50 mm {1.97 in}** from the glass end and the bonding area on the body.
4. If installing a reused rear window glass, install the rear window glass molding according to the following procedure.
   (1) Clean and degrease the rear window glass molding installation area of the rear window glass.
   (2) Apply the glass primer to the rear window glass molding installation area of the rear window glass.

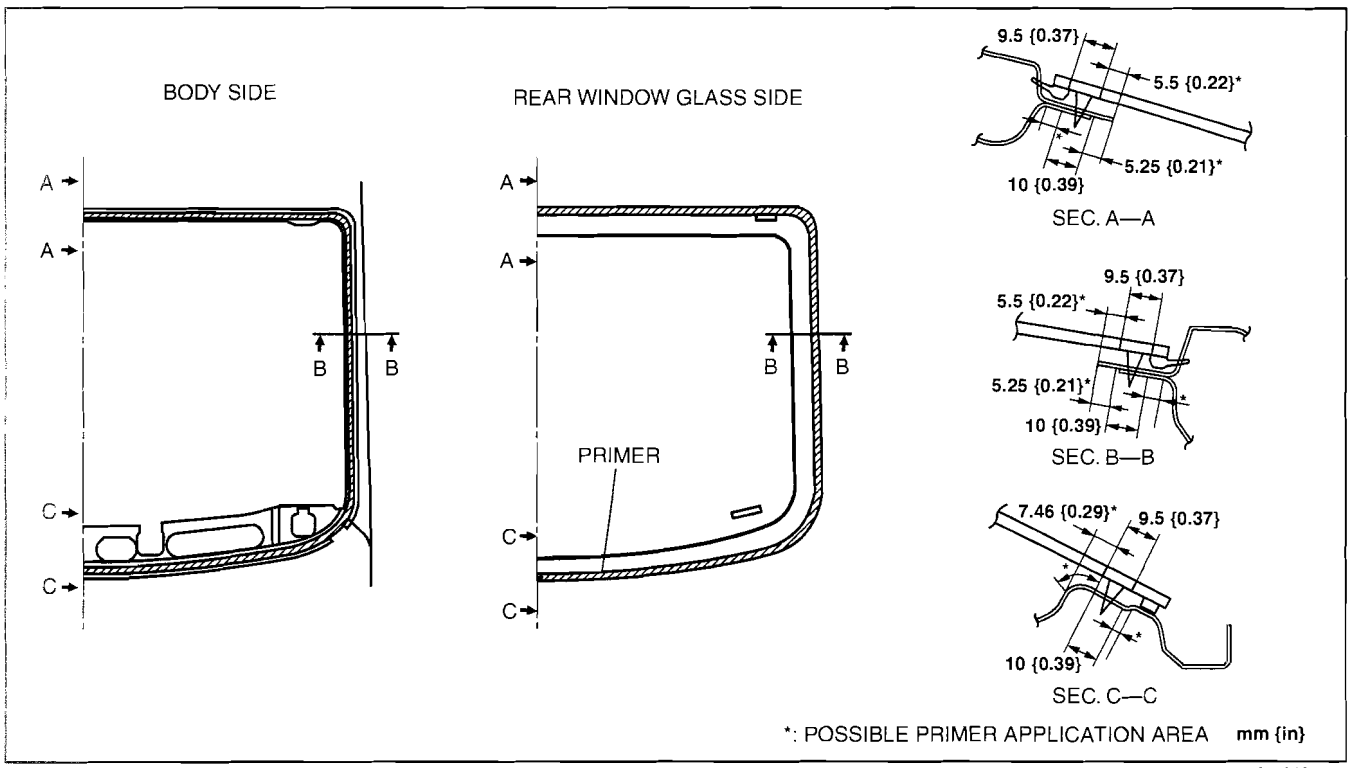


B3E0912W318

5. Apply glass primer on the rear window glass, and body primer on the rear window glass molding as shown in the figure. Allow it to dry for **approx. 30 min**.

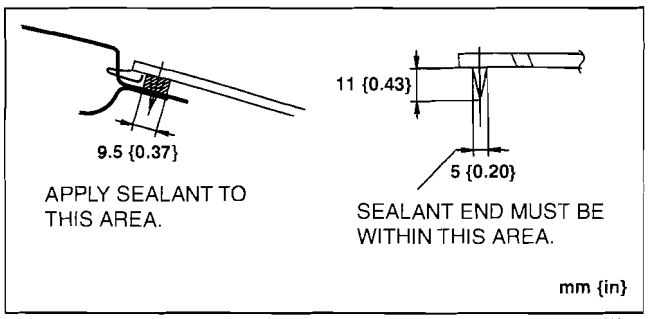
Caution

- **Keep the area free of dirt and grease, and do not touch the surface. Otherwise, the primer may not properly bond to the surface of the glass and body, which may cause leakage.**



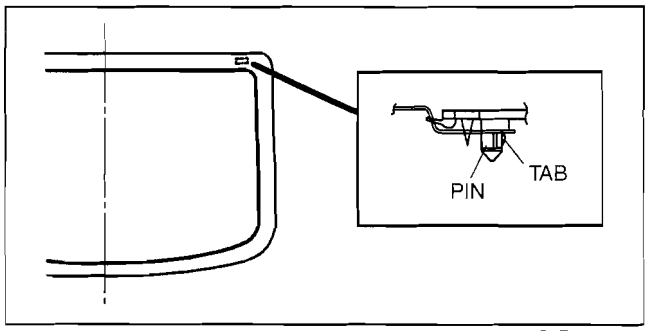
c3u0912w115

6. Apply sealant to the glass surface as shown in the figure.
7. Insert the positioning pins into the body, then install the rear window.



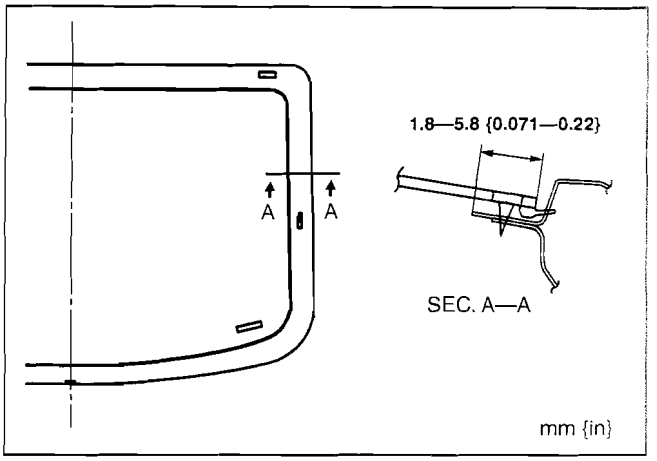
B3E0912W206

8. Press the rear window pins to engage the tabs to the body.



B3E0912W314

9. Press completely along the perimeter of the glass so that the measurement of the molding lip gap is within the specification.
10. Connect the filament connector.
11. Install the following parts:
    (1) Rear package trim (See 09-17-16 REAR PACKAGE TRIM REMOVAL/INSTALLATION.)
    (2) C-pillar trim (See 09-17-13 C-PILLAR TRIM REMOVAL/INSTALLATION.)
    (3) Tire house trim (See 09-17-15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
    (4) Rear scuff plate (See 09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
    (5) Rear seat (See 09-13-6 REAR SEAT REMOVAL/INSTALLATION.)
12. Allow the sealant to harden completely.



c3u0912w116

Sealant hardening time: 24 h

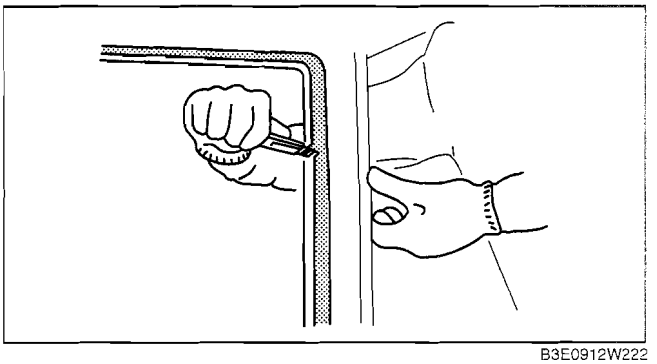
13. Apply soapy water to the rear window glass molding side and blow air from the interior, then verify that there are no bubbles or air leakage.
    - If there are any bubbles or air leakage, repair the damaged part of the sealant and verify it again.

5 Door

Caution
- **Proper installation of the rear window glass may be difficult if sealant is cracked or the glass is pushed out by air pressure when a door is opened/closed with all the window glass closed. Leave all the windows open until the rear window glass is installed completely.**

1. Cut away the old sealant using a razor so that a **1—2 mm {0.04—0.07 in}** thickness of sealant remains along the perimeter of the frame.

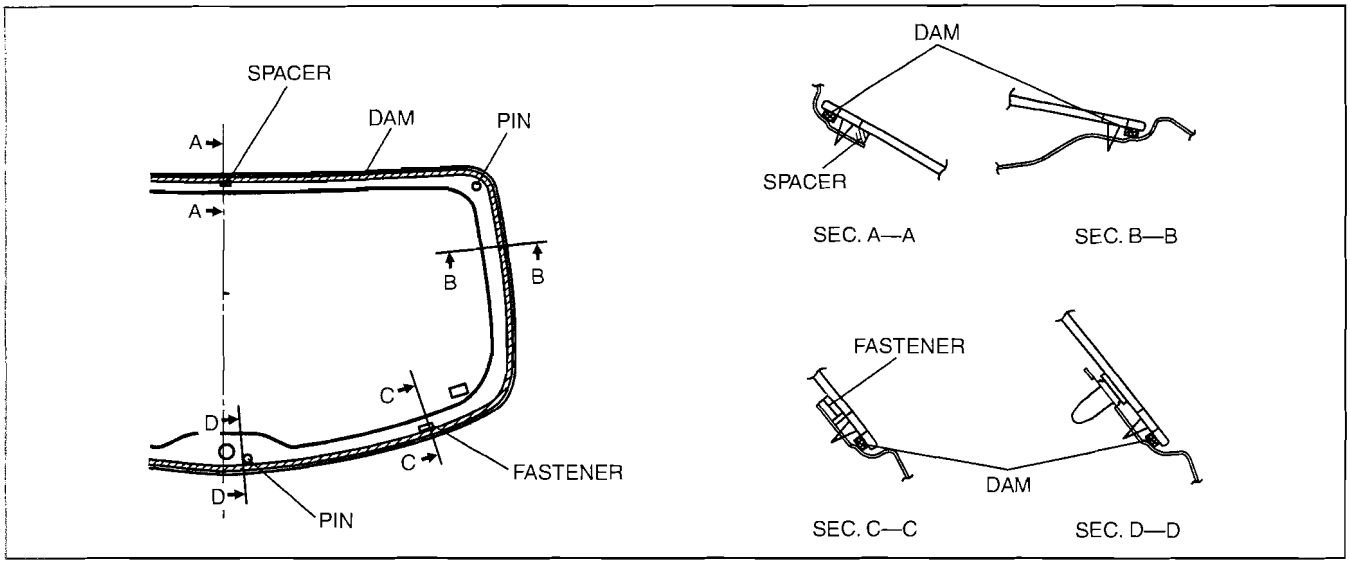
Warning
- **Using a razor with bare hands can cause injury. Always wear gloves when using a razor.**



B3E0912W222

2. If the sealant has come off completely in any one place, apply some primer after degreasing, and allow it to dry for **approx. 30 min**. Then apply a **2 mm {0.08 in}** thickness of sealant.
3. Clean and degrease the perimeter **approx. 50 mm {1.97 in}** from the glass end and the bonding area on the body.

4. Install the dam along the perimeter of the glass.



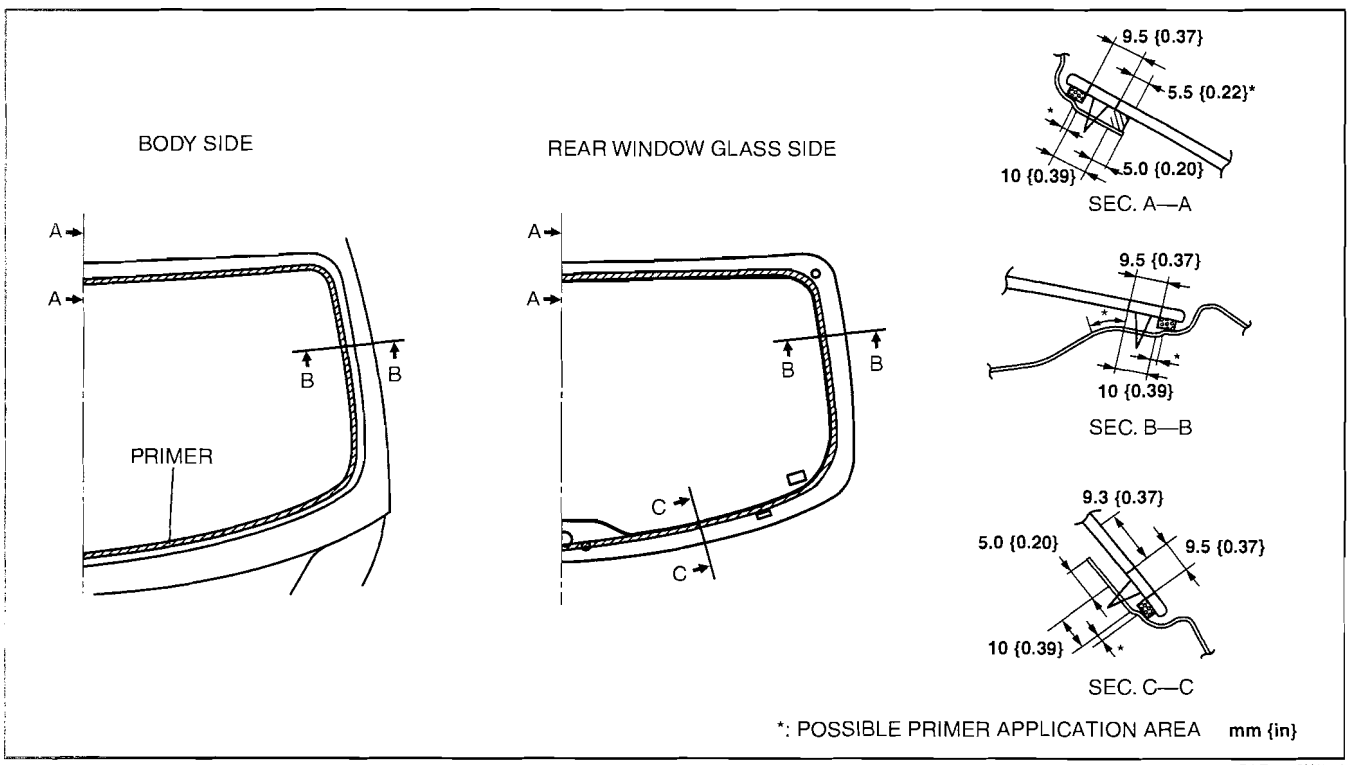
B3E0912W317

5. Attach the fasteners and spacer to the area shown in the figure.
6. Attach the pins to the seating positions where marked during removal.
7. Apply glass primer on the rear window glass, and body primer on the rear window glass molding as shown in the figure. Allow it to dry for **approx. 30 min**.

Caution

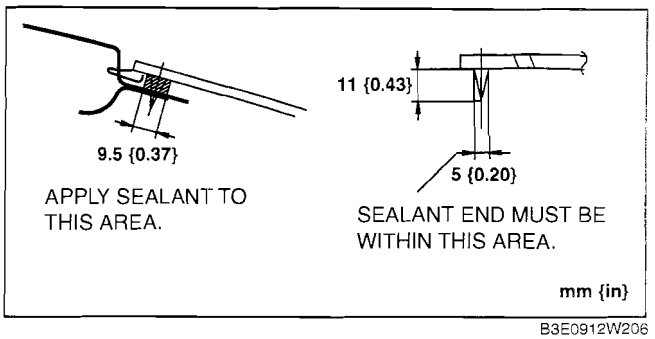
- **Keep the area free of dirt and grease, and do not touch the surface. Otherwise, the primer may not properly bond to the surface of the glass and body, which may cause leakage.**

09-12



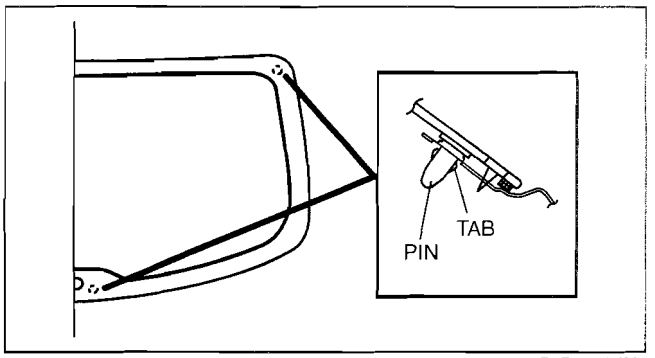
B3E0912W316

8. Apply sealant to the glass surface as shown in the figure.
9. Insert the positioning pins into the body, then install the rear window.



B3E0912W206

10. Press the rear window pins to engage the tabs to the body.
11. Press completely along the perimeter of the glass.
12. Connect the filament connector.
13. Install the following parts:
    (1) Rear spoiler (See 09-16-9 REAR SPOILER REMOVAL/INSTALLATION.)
    (2) Rear wiper motor (See 09-19-13 REAR WIPER MOTOR REMOVAL/INSTALLATION.)
    (3) Rear wiper arm and blade (See 09-19-3 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
    (4) High-mount brake light (See 09-18-16 HIGH-MOUNT BRAKE LIGHT REMOVAL/INSTALLATION.)
    (5) Liftgate lower trim (See 09-17-23 LIFTGATE LOWER TRIM REMOVAL/INSTALLATION.)
    (6) Liftgate side trim (See 09-17-22 LIFTGATE SIDE TRIM REMOVAL/INSTALLATION.)
    (7) Liftgate upper trim (See 09-17-22 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)
14. Allow the sealant to harden completely.



B3E0912W207

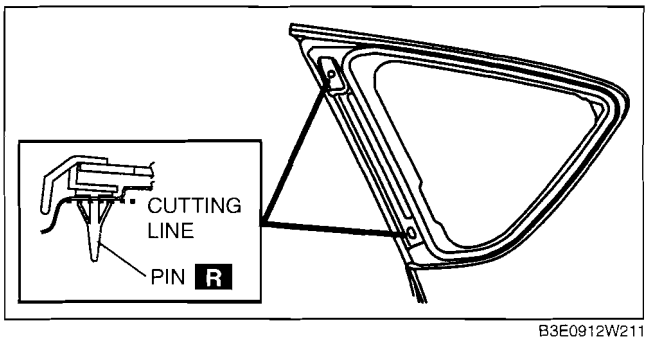
Sealant hardening time: 24 h

15. Apply soapy water to the rear window glass molding side and blow air from the interior, then verify that there are no bubbles or air leakage.
    - If there are any bubbles or air leakage, repair the damaged part of the sealant and verify it again.

QUARTER WINDOW GLASS REMOVAL

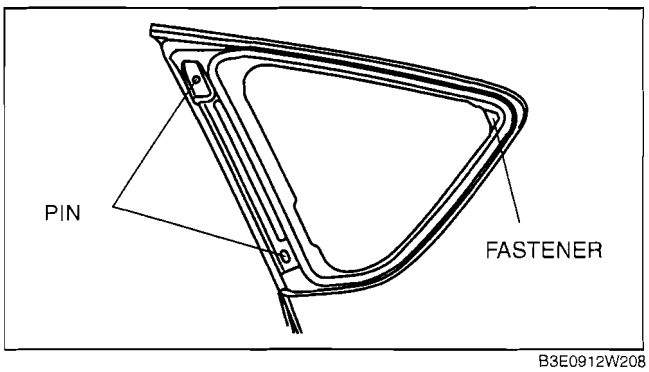
id091200801700

1. Remove the following parts:
   (1) Rear seat (See 09-13-6 REAR SEAT REMOVAL/INSTALLATION.)
   (2) Rear scuff plate (See 09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (3) Tire house trim (See 09-17-15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
   (4) Trunk side upper trim (See 09-17-21 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION.)
   (5) C-pillar trim (See 09-17-13 C-PILLAR TRIM REMOVAL/INSTALLATION.)
2. Set the headliner out of the way.
3. Apply protective tape along the edge of the body and the quarter window glass.
4. Cut off the pins.



B3E0912W211

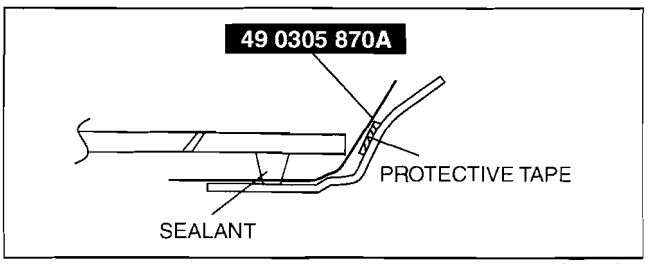
5. Make a hole through the sealant from the inside of the vehicle using an awl, avoiding the pins and fastener.



B3E0912W208

6. Pass the **SST** (piano wire), cut to sufficient length, through the hole.

   Warning
   - **Using the SST (piano wire) with bare hands can cause injury. Always wear gloves when using the SST (piano wire).**



B3E0912W230

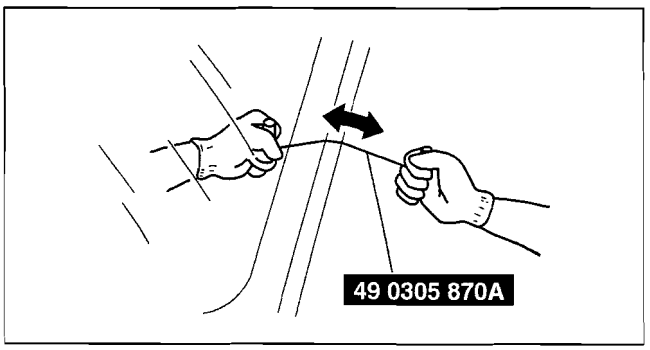
7. Wind each end of the **SST** (piano wire) around a bar.

   Note
   - Use a long sawing action to spread the work over the whole length of the **SST** (piano wire) to prevent it from breaking due to localized heating.

8. Fix one end of the SST (piano wire), and while pulling the other end, cut the sealant around the quarter window glass.

   Note
   - As the upper part of the pin adheres to the sealant, cut it using the **SST** (piano wire).

9. Remove the quarter window glass.



A6E7738W021

QUARTER WINDOW GLASS INSTALLATION

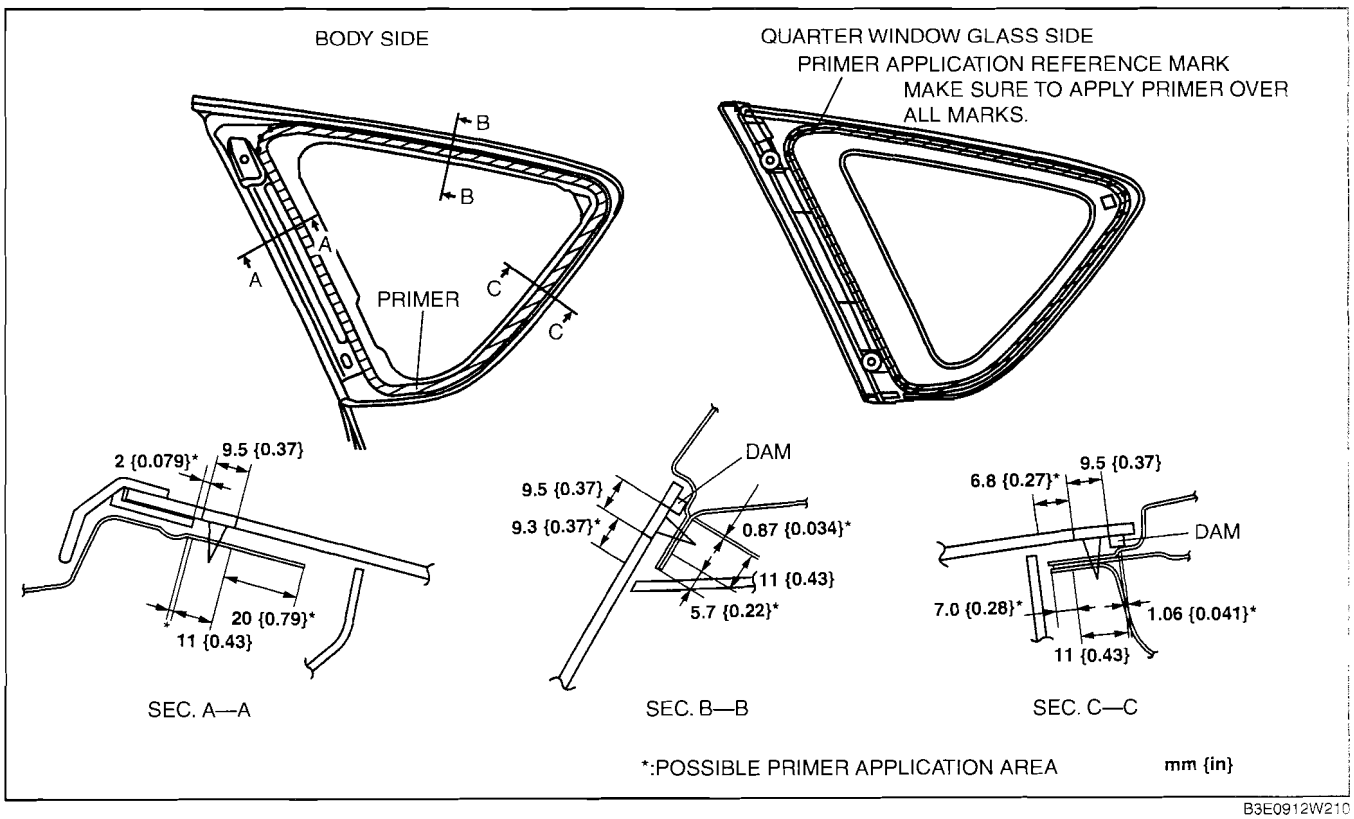
id091200801800

Warning
- **Using a razor with bare hands can cause injury. Always wear gloves when using a razor.**

Caution
- **Proper installation of the glass may be difficult if sealant is cracked or the glass is pushed out by air pressure when a door is opened/closed with all the window glass closed. Leave all the windows open until the quarter window glass is installed completely.**

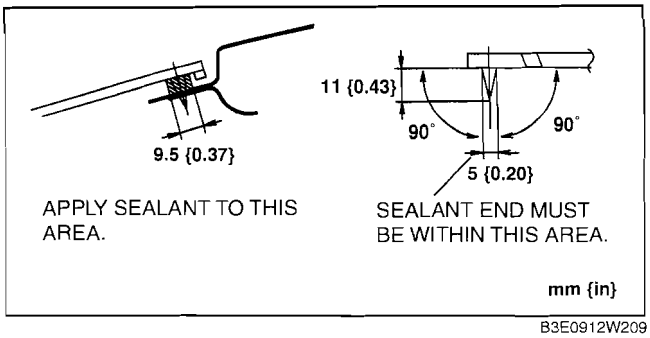
1. Cut away the old sealant using a razor so that **1—2 mm {0.04—0.07 in}** thickness of sealant remains along the perimeter of the frame.
2. If the sealant has come off completely in any one place, apply some primer after degreasing, and allow it **approx. 30 min** to dry. Then apply **2 mm {0.08 in}** thickness of new sealant.
3. Clean and degrease an **approx. 50 mm {2.0 in}** wide strip along the perimeter of the glass and the bonding area on the body.
4. Install the dam along the perimeter of the glass.
5. Use only glass primer on the quarter window glass, and body primer on the body, then allow it to dry for **approx. 30 min**.

Caution
- **To prevent weakening of the primer adhesion, keep the bonding surface free of dirt, moisture, and grease. Do not touch the surface with your hand.**



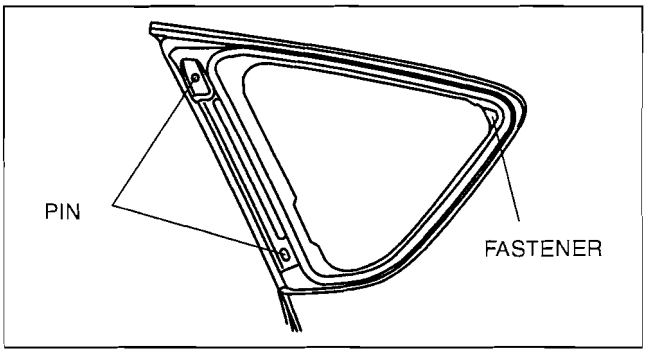
B3E0912W210

6. Apply sealant to the area of the glass surface as shown in the figure.



B3E0912W209

7. Insert the positioning pins and fastener to the body and install the quarter window glass.
8. Press the areas where the pins are located on the quarter window glass to allow the pin tabs to be engaged with the body.
9. Install the following parts:
   (1) C-pillar trim (See 09-17-13 C-PILLAR TRIM REMOVAL/INSTALLATION.)
   (2) Trunk side upper trim (See 09-17-21 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION.)
   (3) Tire house trim (See 09-17-15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
   (4) Rear scuff plate (See 09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (5) Rear seat (See 09-13-6 REAR SEAT REMOVAL/INSTALLATION.)
10. Allow the sealant to harden completely.



B3E0912W208

Sealant hardening time: 24 h

FILAMENT INSPECTION

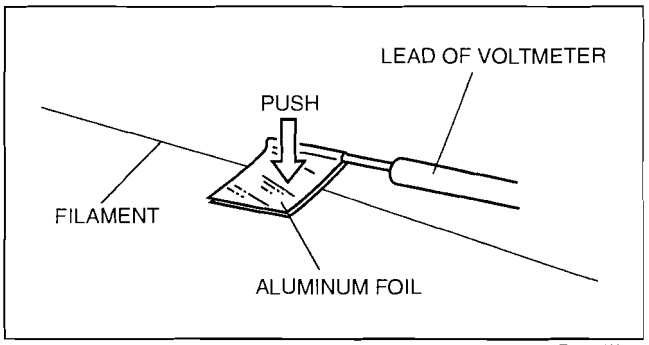
id091200801000

1. Turn the ignition switch to the ON position.
2. Turn the rear window defroster switch on.

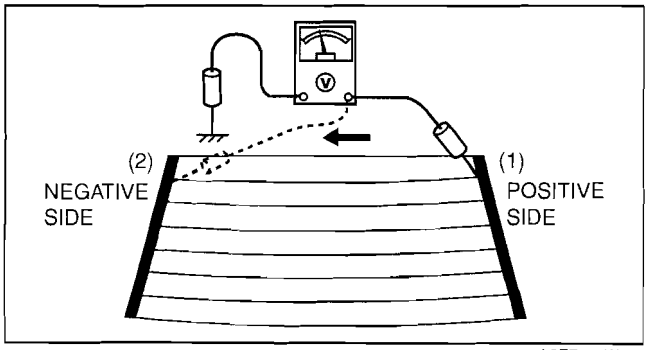
Caution
- **Directly touching the rear window defroster filament with the lead of the tester could damage it. Wrap aluminum foil around the end of the lead and inspect the filament by touching it with the foil.**

3. Connect the positive lead of the tester to the positive side of each filament and the negative lead to ground.
4. Gradually slide the positive lead from the positive side to the negative side and verify that the voltage decreases accordingly.
   - If the voltage changes rapidly, the filament has a malfunction. Repair the filament.

Measured part	Voltage (Reference)
(1) to (2)	Approx. 12 V to 0 V



A6E7736W001



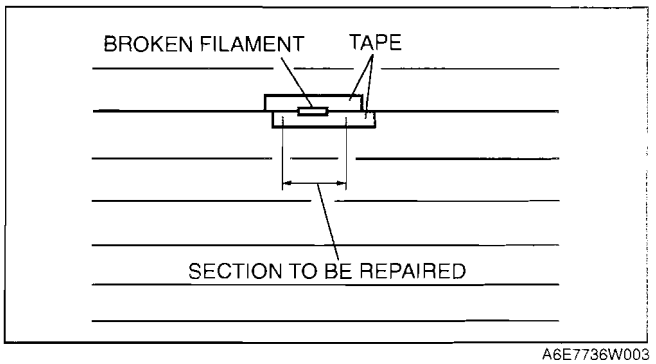
A6E7736W002

FILAMENT REPAIR

id091200801100

1. Clean the filament using isopropyl alcohol.
2. Attach tape to both sides of the filament.
3. Using a small brush or marking pen, apply silver paint.
4. After **2—3 min**, carefully remove the tape without damaging the applied area.

Caution
- **Do not operate the rear window defroster until the paint is completely dry. It may cause other malfunctions if it is used before the paint is dry.**



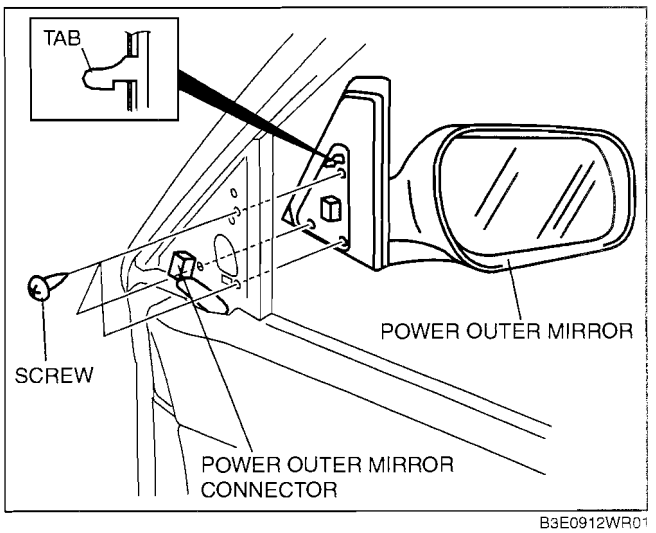
A6E7736W003

5. Dry the repaired part according to the following procedure.
   - When the room temperature is **25 °C {77 °F}**, leave it as it is for **24 h**.
   - When a hot air blower is used, dry with the **150 °C {302 °F}** air for **30 min**.

POWER OUTER MIRROR REMOVAL/INSTALLATION

id091200802500

1. Disconnect the negative battery cable.
2. Remove the inner garnish. (See 09-17-18 INNER GARNISH REMOVAL/INSTALLATION.)
3. Disconnect the power outer mirror connector.
4. Remove the screws.
5. Push the power outer mirror against the vehicle and detach the tab while lifting the mirror up to remove.
6. Install in the reverse order of removal.

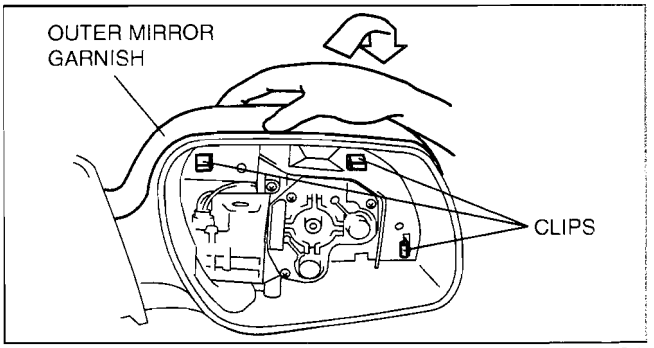


B3E0912WR01

OUTER MIRROR GARNISH REMOVAL

id091200802800

1. Remove the mirror glass from the outer mirror.
2. Pinch the clip ends using pincers and detach the clips by pushing them forward.
3. Grasp the upper side of the outer mirror garnish and remove it by pulling it in the direction of the arrow.

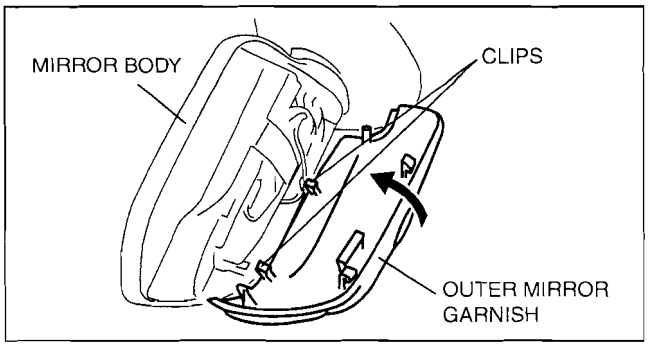


c3u912zw5si1

OUTER MIRROR GARNISH INSTALLATION

1. Position the outer mirror garnish against the mirror body in the direction of the arrow shown in the figure, and insert the outer mirror garnish clips (6 locations) into the mirror body.
2. Install the outer mirror garnish so that there are no gaps around the component.

id091200802900



c3u912zw5si2

POWER OUTER MIRROR DISASSEMBLY/ASSEMBLY

1. Disassemble in the order indicated in the table.

1	Outer mirror glass (See 09-12-33 Outer Mirror Glass Disassembly Note09-12-33 Outer Mirror Glass Disassembly Note.) (See 09-12-34 Outer Mirror Glass Assembly Note09-12-34 Outer Mirror Glass Assembly Note.)
2	Connector (Vehicles with heated outer mirrors)

2. Assemble in the reverse order of disassembly.

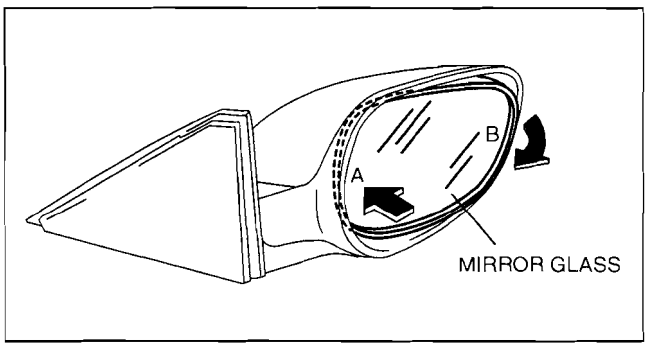
09-12

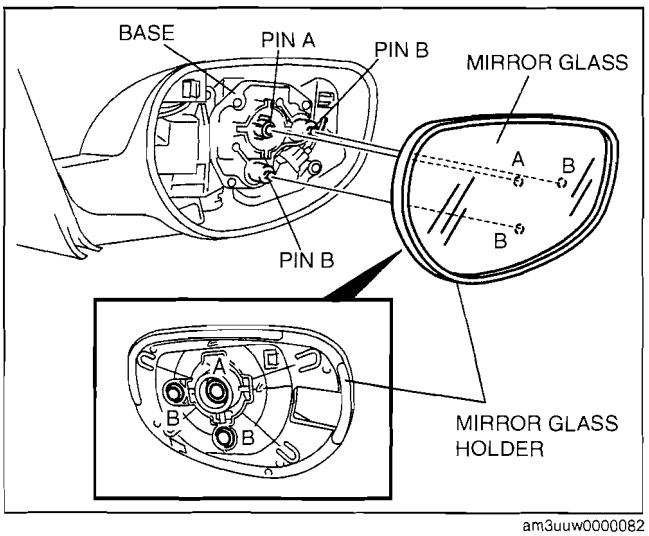
Outer Mirror Glass Disassembly Note

1. Press area A of the mirror glass so that area B moves outward.



am3uuw0000082

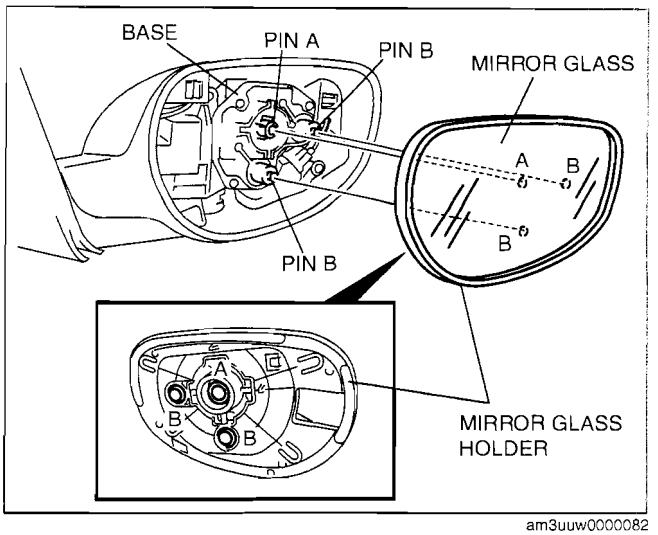
2. Detach pin A while lifting up the inside of the mirror glass holder.
3. Pull out the mirror glass holder and detach pins B.
4. Remove the mirror glass holder and the mirror glass as a single unit.



am3uuw0000082

Outer Mirror Glass Assembly Note

1. Press area A of the mirror glass into the base to attach pin A.
2. Press areas B of the mirror glass into the base to attach pins B.



am3uuw0000082

POWER OUTER MIRROR INSPECTION

1. Apply battery positive voltage to the power outer mirror terminals and inspect the operation of the power outer mirror.
   - If not as specified, replace the power outer mirror.

Mirror operation	Terminal	
	B+	GND
Up	B	D
Down	D	B
Left	F	D
Right	D	F

id091200803000

FRONT SEAT REMOVAL/INSTALLATION

id091300800200

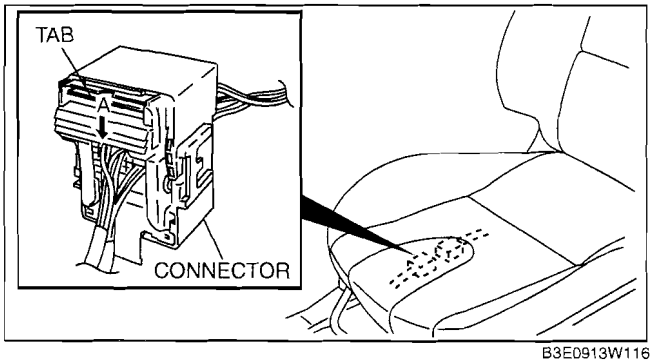
Warning

- **Handling the front seat (side air bag) improperly can accidently deploy the side air bag, which may seriously injure you. Read service warnings and cautions before handling the front seat. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS, 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**

Caution

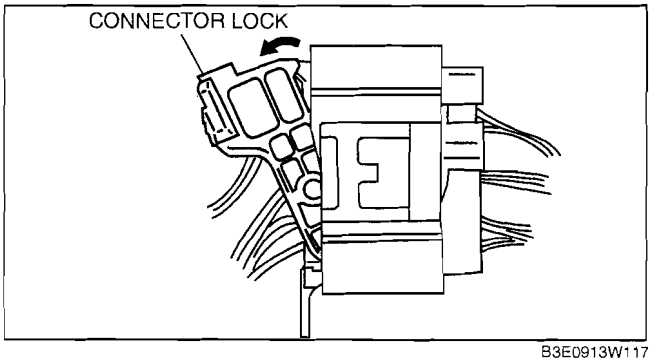
- **For vehicles with the two-step deployment air bag system, when the passenger's seat is removed, perform the seat weight sensor inspection using the M-MDS after installing the passenger's seat. (See 08-10-13 SEAT WEIGHT SENSOR INSPECTION.)**
- **For vehicles with the two-step deployment air bag system, when the passenger's seat is replaced with a new one, perform the seat weight sensor calibration using the M-MDS. (See 08-10-12 SEAT WEIGHT SENSOR CALIBRATION.)**

1. Turn the ignition switch to the LOCK position.
2. Disconnect the negative battery cable and wait for **1 min or more**.
3. Press connector tab A in the direction of the arrow.



B3E0913W116

4. Pull out the connector lock in the direction of the arrow and disconnect the connector.
5. Remove the seat belt anchor (RH). (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)



B3E0913W117

6. Remove the covers.
7. Remove the bolts, then remove the front seat.
8. Install in the reverse order of removal.
9. Perform the weight sensor initialization procedure. (See 08-10-12 SEAT WEIGHT SENSOR CALIBRATION.)

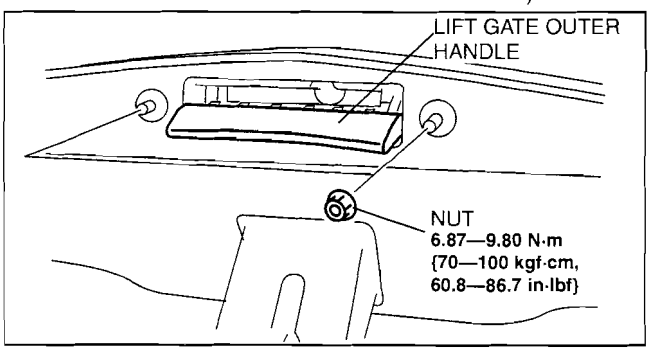
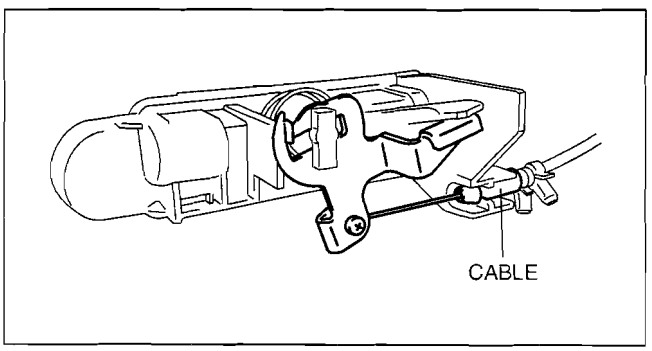
3. Remove the liftgate lower trim. (See 09-17-23 LIFTGATE LOWER TRIM REMOVAL/INSTALLATION.)
4. Remove the nuts.



B3E0914W032

5. Detach the cable.
6. Install in the reverse order of removal.

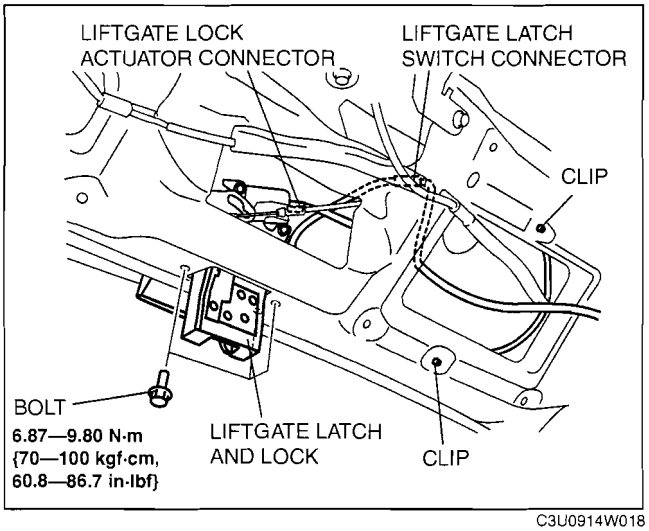


B3E0914W033

LIFTGATE LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION

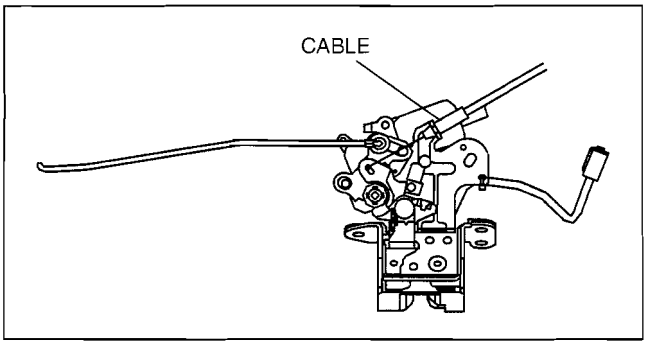
id091400803800

1. Disconnect the negative battery cable.
2. Remove the liftgate upper trim. (See 09-17-22 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)
3. Remove the liftgate side trim. (See 09-17-22 LIFTGATE SIDE TRIM REMOVAL/INSTALLATION.)
4. Remove the liftgate lower trim. (See 09-17-23 LIFTGATE LOWER TRIM REMOVAL/INSTALLATION.)
5. Disconnect the liftgate lock actuator connector and liftgate latch switch connector.
6. Detach the rod from the liftgate key cylinder.
7. Remove the clips.
8. Remove the bolts.
9. Remove the liftgate latch and lock actuator



C3U0914W018

10. Detach the cable from the liftgate latch and lock actuator.
11. Install in the reverse order of removal.



B3E0914W035

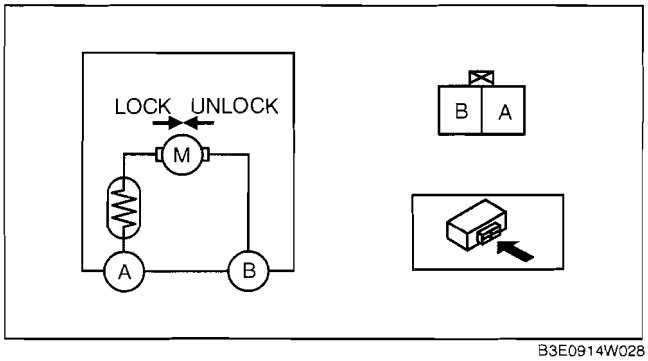
09-14

LIFTGATE LOCK ACTUATOR INSPECTION

id091400803900

1. Apply battery positive voltage and connect ground to the corresponding liftgate lock actuator terminals, and inspect the liftgate lock actuator operation.
   - If not as specified, replace the liftgate latch and lock actuator.

Lock actuator operation	Connection	
	B+	GND
Lock	A	B
Unlock	B	A

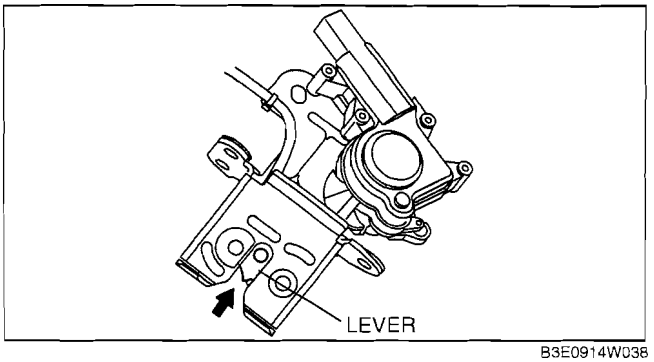


B3E0914W028

LIFTGATE LATCH SWITCH INSPECTION

id091400804000

1. When inspecting the latch, press the latch lever using a flathead screwdriver or a similar tool.



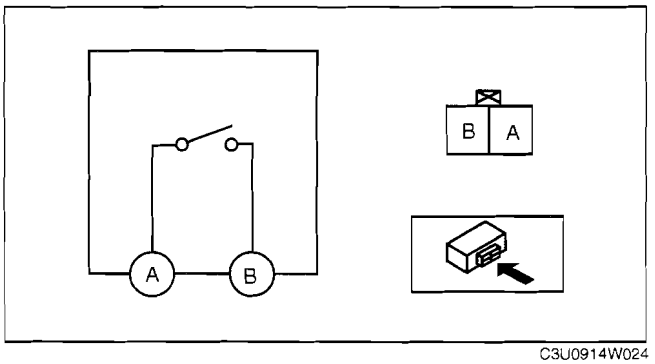
B3E0914W038

2. Inspect for continuity between the liftgate latch switch terminals.
   - If not as specified, replace the liftgate latch and lock actuator.

O—O : Continuity

Latch condition	Terminal	
	A	B
Latch (liftgate is closed)		
Unlatch (liftgate is open)	O	O

B3E0914W021

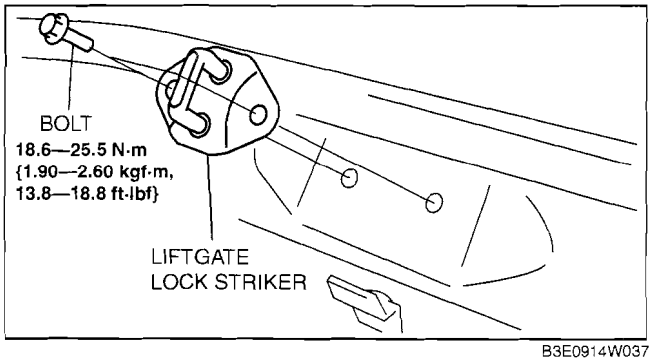


C3U0914W024

LIFTGATE LOCK STRIKER REMOVAL/INSTALLATION

id091400804100

1. Remove the trunk end trim. (See 09-17-21 TRUNK END TRIM REMOVAL/INSTALLATION.)
2. Remove the bolts, then remove the liftgate lock striker.
3. Install in the reverse order of removal.
4. Adjust the liftgate. (See 09-11-9 LIFTGATE ADJUSTMENT.)

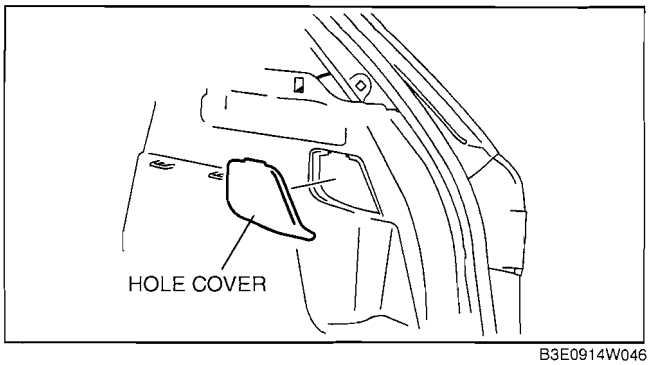


B3E0914W037

FUEL-FILLER LID OPENER REMOVAL/INSTALLATION

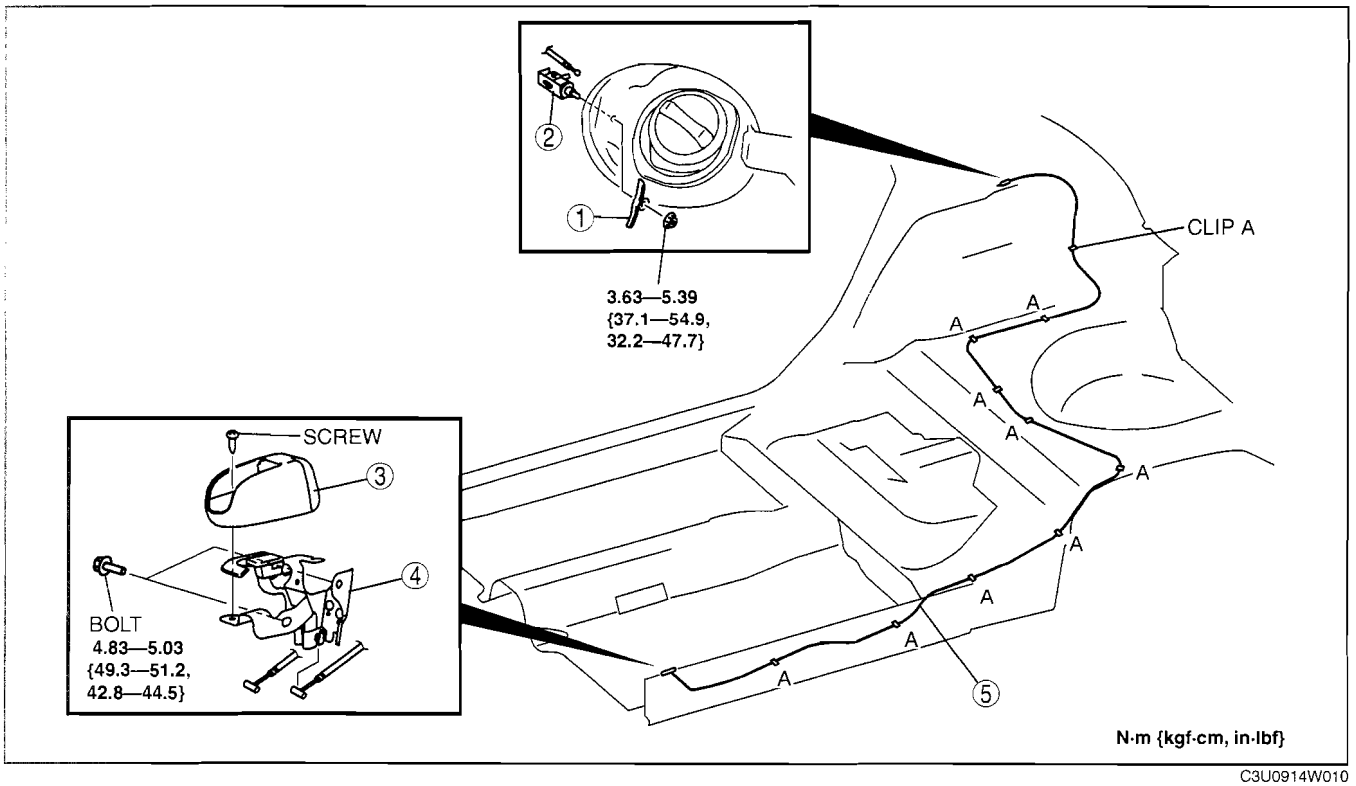
id091400804700

1. To remove the fuel-filler lid opener, remove the following procedure:
   - 5 door
     - — Remove the hole cover on the trunk side trim. (RH)
   - 4 door
     - — Remove the trunk end trim (See 09-17-21 TRUNK END TRIM REMOVAL/INSTALLATION.)
     - — Slightly bend back the trunk side trim. (RH) (See 09-17-20 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
2. To remove the fuel-filler lid opener lever, remove the following part:.
   (1) Front scuff plate (Driver's side) (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)



B3E0914W046

3. When removing the fuel-filler lid opener cable, perform the following procedure:
   (1) Remove the following parts:
      1) Rear seat (See 09-13-6 REAR SEAT REMOVAL/INSTALLATION.)
      2) Rear scuff plate (Driver's side) (See 09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
      3) Tire house trim (Driver's side) (See 09-17-15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
      4) B-pillar lower trim (Driver's side) (See 09-17-12 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (2) Partially peel back the floor covering so that the fuel-filler lid opener cable can be removed.
   (3) Remove the fuel-filler lid opener cable from clips A.
4. Remove in the order indicated in the table.
5. Install in the reverse order of removal.



C3U0914W010

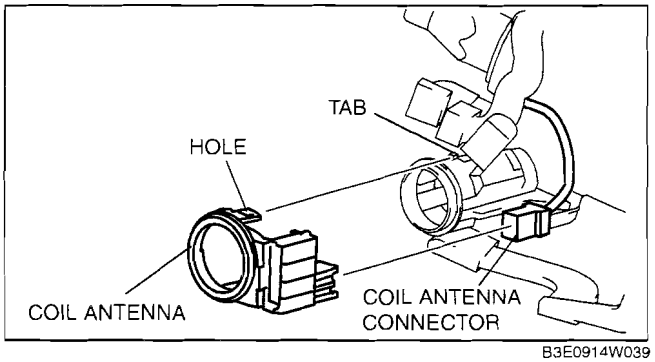
1	Lift spring
2	Fuel-filler lid opener
3	Opener lever cover
4	Fuel-filler lid opener lever and trunk lid opener lever
5	Fuel-filler lid opener cable

COIL ANTENNA REMOVAL/INSTALLATION

id091400804900

Note
- Do not remove the coil antenna unless you are replacing it.

1. Disconnect the negative battery cable.
2. Remove the following parts:
   (1) Hood release lever (See09-14-22 HOOD LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
   (2) Front scuff plate (Driver's side) (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (3) Front side trim (Driver's side) (See 09-17-17 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (4) Lower panel (See 09-17-7 LOWER PANEL REMOVAL/INSTALLATION.)
   (5) Column cover (See 09-17-7 COLUMN COVER REMOVAL/INSTALLATION.)
3. Disconnect the coil antenna connector.
4. Detach the steering lock tabs from the holes on the coil antenna.
5. Install in the reverse order of removal.



B3E0914W039

IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING

id091400805000

Foreword

- When performing the following procedures, the immobilizer resetting procedure using the M-MDS must also always be performed: "instrument cluster replacement", "PCM replacement", "instrument cluster and PCM joint replacement", "Key ID number clearing". The engine will not start unless all work is performed using the M-MDS.
- There are two methods for registering an additional key: Using the M-MDS and using two keys that are able to start the engine.
- When replacing any of the immobilizer system component parts, adding/erasing keys or performing other functions, refer to the following table and perform the applicable procedure (No.1 to 5).

Reference number	Situation	Required items	Cautionary notes
1	Making a spare key when the customer has two or more keys that can start the engine. Or registering an additional key.	• Registration key	• If the additional key registration method has been changed to "Customer spare key programming disabled" (inhibiting the method that uses two keys that are able to start the engine), the M-MDS is required when registering the additional key. In that case, perform procedure No.2.
2	Making a spare key when the customer has one key that can start the engine or no keys. Or registering an additional key.	• Registration key • M-MDS	-
3	Clearing previously registered key ID numbers.	• Registration keys (two or more) • M-MDS	• All the key ID numbers registered in the vehicle will be cleared. • Unless keys are re-registered after clearing the key ID numbers, the engine cannot be started. Before beginning the procedure, verify that the customer has turned in all of the keys for the vehicle. • Unless two or more keys are registered after replacement, the engine cannot be started. • The keys (two or more keys) readied before beginning the procedure do not have to be new keys. Any key that is capable of starting the engine before beginning the procedure can be used.
3	Replace all the keys. (Key cylinder replacement)	• Registration keys (two or more) • M-MDS	• When replacing the key cylinder, have two or more keys ready for registration before beginning the procedure, since the previous keys will be invalid.
4	Changing the method for registering additional keys. (Method for registering other keys using two keys that can start the engine is disabled.)	• M-MDS	• After performing this procedure it is not possible to register additional keys according to procedure No.1. The system can be returned to the original setting. The M-MDS must always be used to change the system setting.
4	Changing the method for registering additional keys. (Method for registering other keys using two keys that can start the engine is enabled.)	• M-MDS	• This is the default setting on new vehicles.
5	Replacing the instrument cluster.	• Replacement instrument cluster • Registration keys (two or more) • M-MDS	• Unless keys are registered after replacing the steering lock, the engine cannot be started. Before beginning the procedure, verify that the customer has turned in all of the keys for the vehicle. • Unless two or more keys are registered after replacement, the engine cannot be started. • The keys (two or more keys) readied before beginning the procedure do not have to be new keys. Any key that is capable of starting the engine before beginning the procedure can be used.
5	Replacing the PCM.	• Replacement PCM • M-MDS	-

Reference number	Situation	Required items	Cautionary notes
5	Replacing the PCM and instrument cluster.	• Replacement PCM • Replacement instrument cluster • Registration keys (two or more) • M-MDS	• Unless keys are registered after replacing the steering lock, the engine cannot be started. Before beginning the procedure, verify that the customer has turned in all of the keys for the vehicle. • Unless two or more keys are registered after replacement, the engine cannot be started. • The keys (two or more keys) readied before beginning the procedure do not have to be new keys. Any key that is capable of starting the engine before beginning the procedure can be used.
	Replacing the coil antenna.	• New coil antenna	• It is not necessary to reset the immobilizer system.

Caution

- **If any of the following items are touching or near the key head, signal communication between the key and vehicle is negatively affected, resulting in the engine not starting or the key registration failure. Do not perform the procedure if any of the following items are touching or near the key head.**
  - **— Any metallic object**
  - **— Spare keys or keys for other vehicles equipped with an immobilizer system**
  - **— Any electronic device, or any credit or other cards with magnetic strips**

EXAMPLES:

METAL RING LYING ON KEY HEAD

METAL PART OF ANOTHER KEY TOUCHING KEY HEAD

KEY IS NEAR OR TOUCHING ANOTHER IMMOBILIZER SYSTEM KEY

am3uuw0000082

Note

- Within the following procedures, the term a "valid key" means a "key that can start the engine".
- After adding/registering keys, clearing ID numbers or replacing any component part of the immobilizer system, verify that all keys can start the engine **within 5 s**.
- When verifying that the keys can start the engine, wait at least **5 s or more** between inserting them.
- If the engine cannot be started using a registered key, repeat the procedure from the beginning.
- Do not start the engine until the key registration procedure for all the necessary keys is completed. If the engine is started during the registration procedure, registration is stopped at that point. Repeat the procedure starting from the beginning if the engine is started before completion.
- Two or more key ID numbers must be registered for the engine to start.
- A maximum of eight key ID numbers can be registered for one vehicle. The M-MDS can be used to verify the number of key ID numbers registered to a single vehicle.
- Do not select screen menus of the M-MDS that are not indicated within the procedures.

No.1 Additional Key Registration Procedure (Using Two Valid Keys)

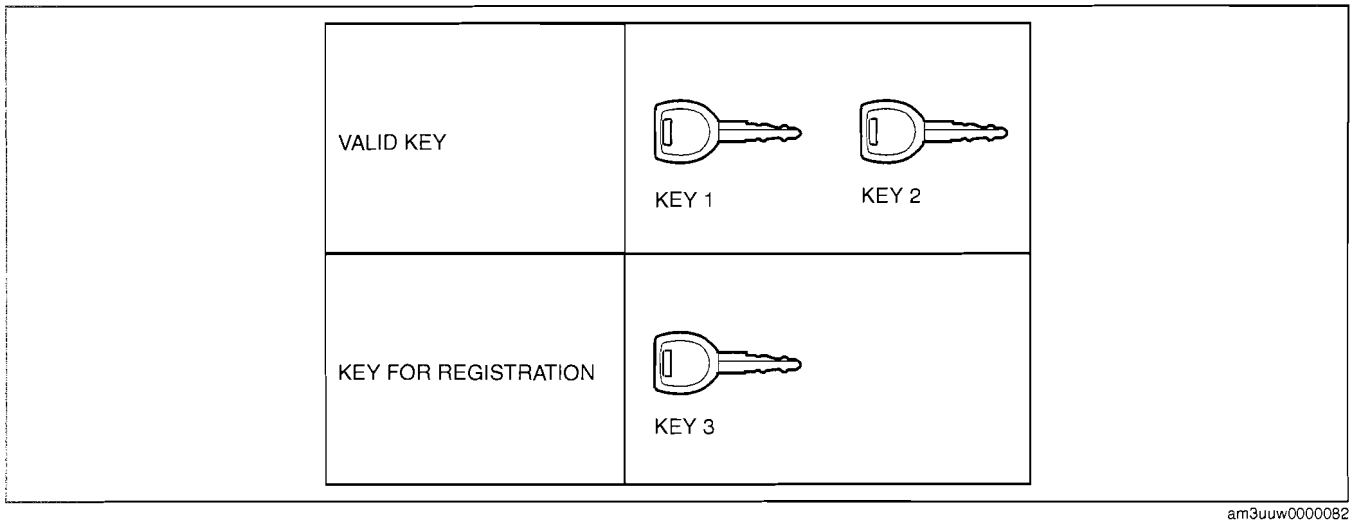
Conditions

- Customer has two or more valid keys.

Note

- A maximum of eight keys can be registered for any one vehicle. If key registration is not successful and DTC 15 appears even though the procedure was performed properly, use the PID/data monitor function of the M-MDS and verify the number of keys that have been registered.
- If eight keys have already been registered, and it is necessary to register other keys, the previously registered key ID numbers must first be cleared. To clear the key ID numbers, refer to "09-14-20 No.3 Key Replacement Procedure (Clearing Previously Registered Key ID Numbers, Key Re-registration)".

Procedure



am3uuw0000082

1. Have one key (key 3) ready for registration.
2. Using key 1, turn the ignition switch to the ON position.
3. Verify that the security light illuminates for **approx. 3 s** and then goes out.
4. Using key 1, turn the ignition switch to the LOCK position **within approx. 4 s** after the security light goes out.
5. Remove key 1
6. Repeat Steps 2—5 using key 2.
7. Repeat Steps 2—5 using key 3.
8. If additional keys need to be registered, repeat Steps 1—7 in the same manner as key 3.

No.2 Additional Key Registration Procedure (Using the M-MDS)

Conditions

- Customer has only one valid key. Or customer has no valid keys. (Can also be performed even if there are two or more valid keys)

Note

- A maximum of eight keys can be registered for any one vehicle. If key registration is not successful and DTC 15 appears even though the procedure was performed properly, use the PID/data monitor function of the M-MDS and verify the number of keys that have been registered.
- If eight keys have already been registered, and it is necessary to register other keys, the previously registered key ID numbers must first be cleared. To clear the key ID numbers, refer to "09-14-20 No.3 Key Replacement Procedure (Clearing Previously Registered Key ID Numbers, Key Re-registration)".

Procedure

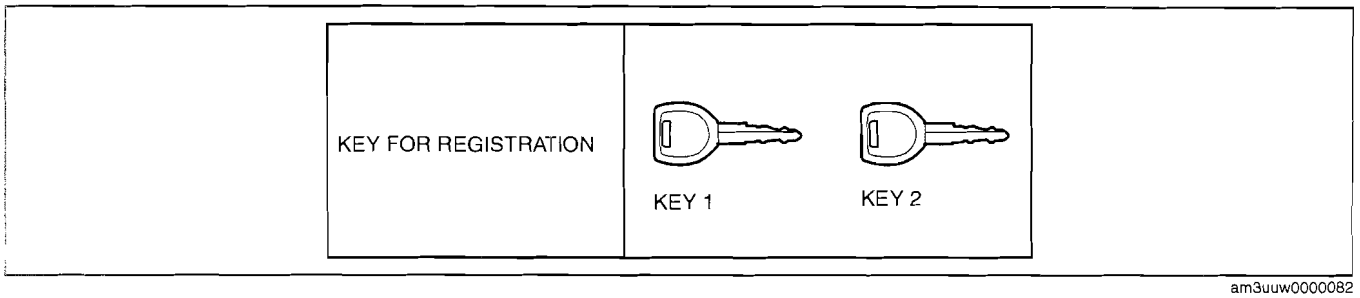
1. Have one key (key 1) ready for registration.
2. Using key 1, turn the ignition switch to the ON position.

Note

- Although the security light flashes and DTC 15 is displayed, this does not indicate an improper procedure. Continue to perform the procedure as indicated.

3. Connect the M-MDS to the DLC-2.
4. Select "Body/Security/PATS function" from the M-MDS screen menu.
5. Perform security access as indicated on the M-MDS screen. (See 09-14-21 No.6 Security Access Procedure.)
6. Select "Program Additional Ignition Key" from the M-MDS screen menu.

No.3 Key Replacement Procedure (Clearing Previously Registered Key ID Numbers, Key Re-registration) Procedure



am3uuw0000082

1. Have two or more keys (key 1, key 2) ready for registration after the clearing the key ID numbers.
2. Using key 1, turn the ignition switch to the ON position.

Note
- Although the security light flashes and DTC 15 is displayed, this does not indicate an improper procedure. Continue to perform the procedure as indicated.

3. Connect the M-MDS to the DLC-2.
4. Select "Body/Security/PATS function" from the M-MDS screen menu.
5. Perform security access as indicated on the M-MDS screen. (See 09-14-21 No.6 Security Access Procedure.)
6. Select "Ignition key ID number Erase" from the M-MDS screen menu and perform the tasks according to the M-MDS screen.

No.4 Changing the Method for Registering Additional Keys

Note
- This procedure is for changing the enable/disable setting of the "No.1 Additional Key Registration Procedure (Using Two Valid Keys)".
- The default setting for new vehicles and new instrument cluster replacement is "Enabled".
- By disabling the "No.1 Additional Key Registration Procedure (Using Two Valid Keys)", only the M-MDS can be used to register additional keys, thereby preventing two valid keys from being used to create an unauthorized spare key. This function is for use by rental car or other companies with vehicle fleets.

Procedure

1. Using any key, turn the ignition switch to the ON position. (Either a valid or an unregistered key can be used.)

Note
- When using an unregistered key, although the security light flashes and DTC 15 is displayed, this does not indicate an improper procedure. Continue to perform the procedure as indicated.

2. Connect the M-MDS to the DLC-2.
3. Select "Body/Security/PATS function" from the M-MDS screen menu.
4. Perform security access as indicated on the M-MDS screen. (See 09-14-21 No.6 Security Access Procedure.)
5. Select either "Customer Spare Key Programming Enable" or "Customer Spare Key Programming Disable" from the M-MDS screen menu. Depending on the selected menu, the additional key registration method is as shown below:

Setting	Additional key registration method	
	Procedure using two valid keys	Procedure using the M-MDS
Customer spare key programming enable	x	x
Customer spare key programming disable	-	x

x : Procedure is possible
- : Procedure is not possible

6. After verifying that the PATS function menu is displayed again on the M-MDS screen, select "Exit" to complete the M-MDS function.
7. After Step 6, wait **10 s or more** and then turn the ignition switch to the LOCK position.

No.5 Resetting Procedure for the Immobilizer System when Replacing the PCM or Instrument Cluster

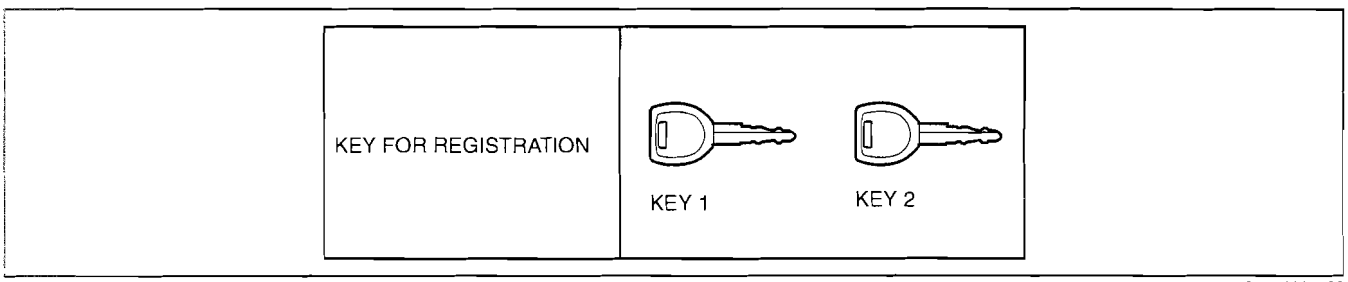
Conditions

- When replacing only the PCM: No conditions.
- When replacing only the instrument cluster: Customer has two or more valid keys after replacement tasks.
- When replacing the PCM and the instrument cluster: Customer has two or more valid keys after replacement.

Caution

- **When replacing the PCM and the instrument cluster at the same time, follow the same instructions described in the procedure for "when replacing the instrument cluster".**
- **When replacing only the PCM, start from Step 2. Also, when key 1 is indicated within the procedure, any valid key can be used.**
- **Before starting Step 1, complete the procedure for PCM and instrument cluster replacement.**

Procedure



am3uuw0000082

1. Have two or more keys (key 1, key 2) ready for registration.
2. Using key 1, turn the ignition switch to the ON position.

Note

- When replacing only the PCM: The security light illuminates **for 3 s** and then goes out.
- When replacing the instrument cluster: Although the security light flashes and DTC 15 is displayed, this does not indicate an improper procedure. Continue to perform the procedure as indicated.

3. Connect the M-MDS to the DLC-2.
4. Select "Body/Security/PATS function" from the M-MDS screen menu.
5. Perform security access as indicated on the M-MDS screen. (See 09-14-21 No.6 Security Access Procedure.)
6. Select "Parameter Reset" from the M-MDS screen menu.
7. Perform security access again as indicated on the M-MDS screen. (See 09-14-21 No.6 Security Access Procedure.)
8. Select the replaced part as indicated on the M-MDS screen.
   - When replacing only the PCM: Select "PCM".
   - When replacing only the instrument cluster: Select "HEC".

Note

- At this time, do not select any other parts from the M-MDS screen menu.

9. Perform the tasks according to the M-MDS screen.

No.6 Security Access Procedure

Note

- Security access must be performed when performing the following functions: "Program Additional Ignition Key", "Ignition Key ID Number Erase", "Customer Spare Key Programming Enable/Disable" and "Parameter Reset".

Procedure

1. Connect the M-MDS to the DLC-2.
2. Select "Body/Security/PATS function" from the M-MDS screen menu.
3. Security access is started and the M-MDS displays "Outcode".

Caution

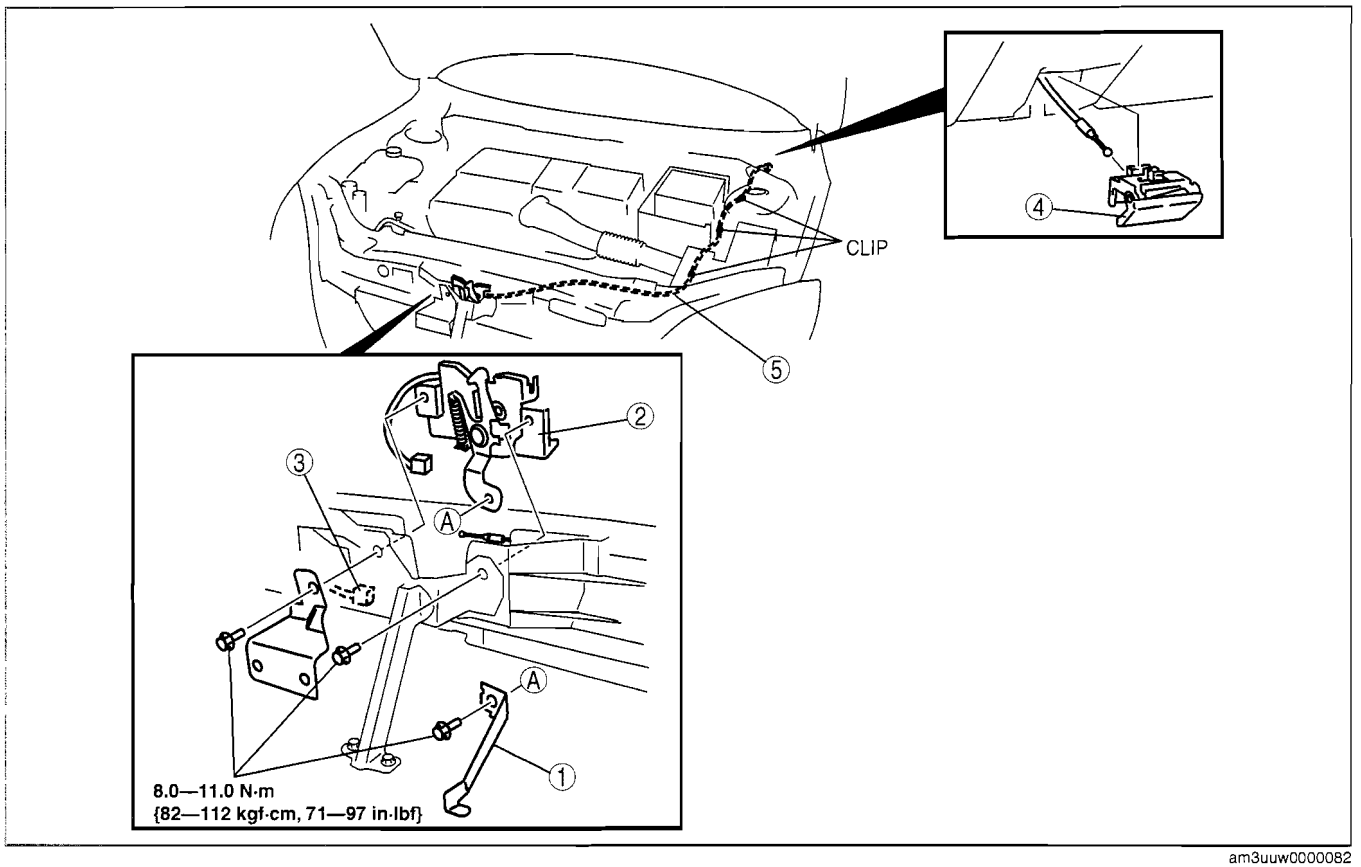
- **After reading out the outcode, do not turn ignition switch from LOCK to ON position 5 times, otherwise the outcode value will be changed.**

4. Input the corresponding "Incode" for the "Outcode" displayed on the M-MDS screen.
5. After successfully performing security access, "Program Additional Ignition Key", "Ignition key ID number Erase" or "Customer Spare Key Programming Enable/Disable" is displayed on the M-MDS screen. When performing "Parameter Reset", security access is requested two times and after successfully performing it the second time, "Replacement Module" is displayed.

HOOD LATCH AND RELEASE LEVER REMOVAL/INSTALLATION

id091400805300

1. To remove the hood release cable, remove the following parts:
   (1) Battery (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
   (2) Fresh-air duct (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[LF, L3].)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.
4. Adjust the hood. (See 09-10-4 HOOD ADJUSTMENT.)



am3uuw0000082

1	Lever (5 door)
2	Hood latch
3	Hood latch switch connector

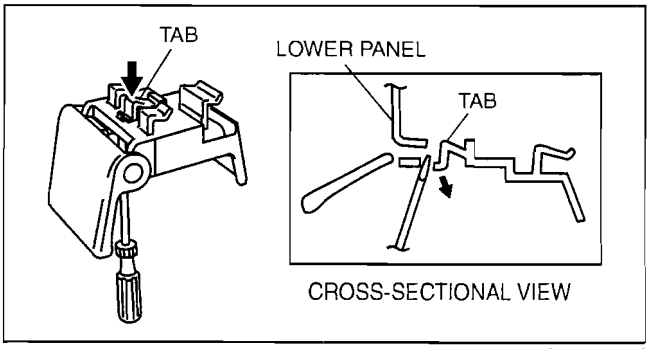
4	Hood release lever (See 09-14-22 Hood Release Lever Removal Note.)
5	Hood release cable

Hood Release Lever Removal Note

1. Pull the lever.
2. While pushing the tab in the direction of the arrow using a tape-wrapped, small flathead screwdriver, detach it from the lower panel.

   Caution
   - **Be careful not to damage the hood release cable when removing the hood release lever with the flathead screwdriver.**

3. Under the condition in Step 2, pull the hood release lever outward, then remove it from the lower panel.

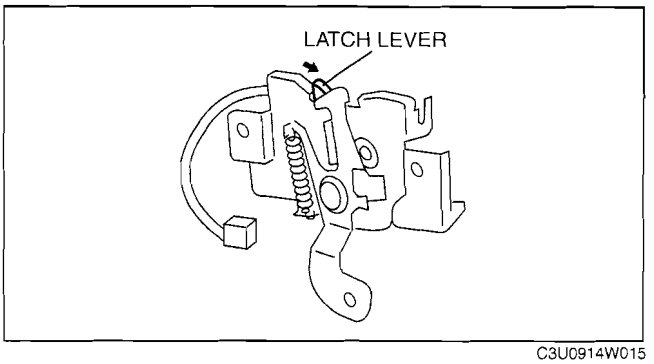


am3uuw0000083

HOOD LATCH SWITCH INSPECTION

id091400805400

1. When inspecting the latch, press the latch lever using a flathead screwdriver or a similar tool.



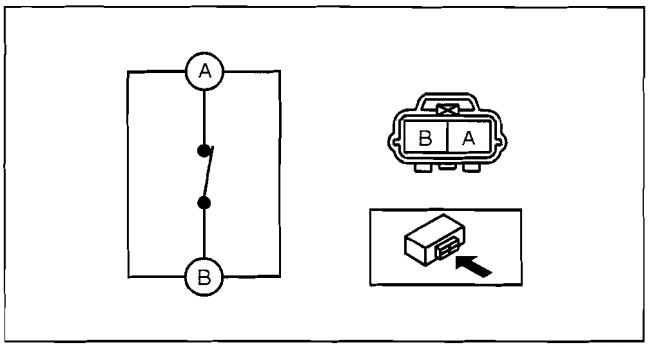
C3U0914W015

2. Inspect for continuity between the hood latch switch terminals.
   - If not as specified, replace the hood latch.

O—O : Continuity

Latch condition	Terminal	
	A	B
Latch (hood is closed)		
Unlatch (hood is open)	O	O

C3U0914W123

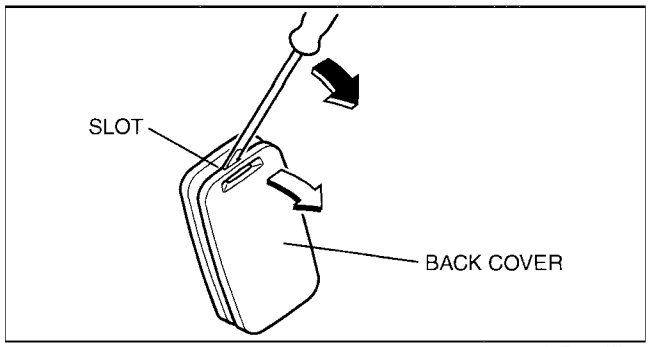


C3U0914W114

TRANSMITTER BATTERY REPLACEMENT

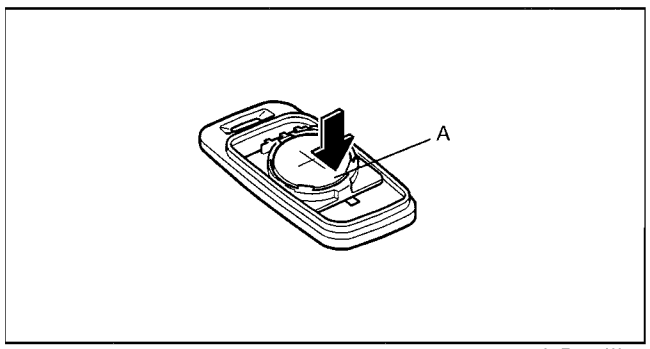
id091400805700

1. Insert a small flathead screwdriver into the slot and gently pry open the transmitter.



A6E7718W001

2. Press the portion of the battery indicated by A and remove the battery.
3. Install a new battery (CR2025) into the front portion of the holder with the positive pole (+) facing up. Press on the B portion of the battery to set the battery.

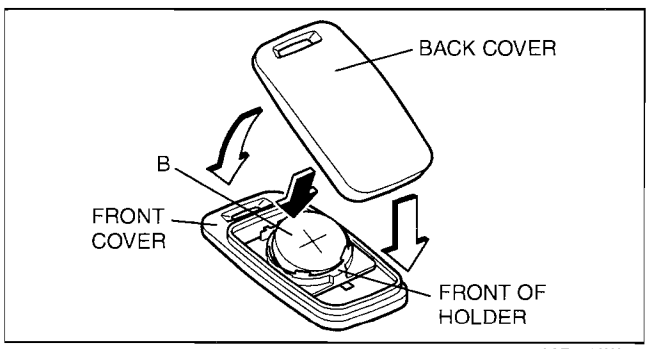


A6E7718W002

4. Align the front and back covers and snap the transmitter shut.

Battery specification
Lithium CR2025 × 1

Note
- The batteries will last about **2 years** when used **10 times** a day.



A6E7718W003

TRANSMITTER BATTERY INSPECTION

id091400805800

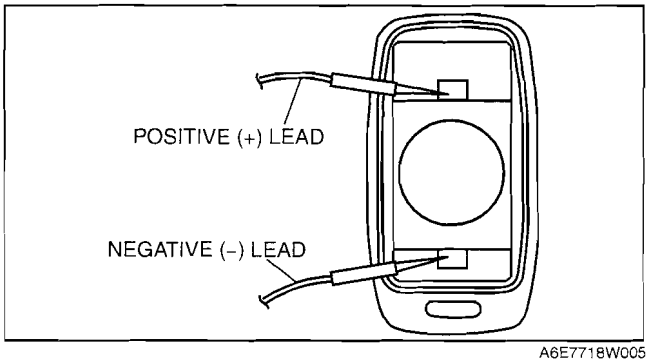
Caution

- **Since the battery voltage does not drop fully if the button is pushed for only 4 s or less, sufficient battery voltage cannot be determined. Always push the button for 5 s.**

Note

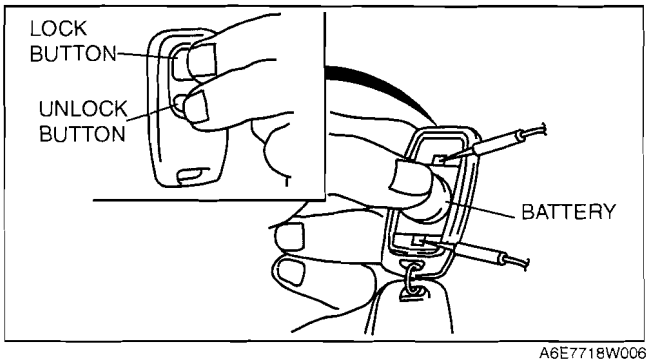
- A correct measurement cannot be obtained if the battery temperature is low. Make sure the battery is at **18 °C {64 °F} or more** for **at least 30 min** before reinspecting if a measurement value is under the standard voltage.

1. Remove the transmitter cover.
2. Apply the ohmmeter leads to the positions as indicated in the figure.



A6E7718W005

3. While pressing the battery as shown in the figure, press the LOCK and UNLOCK buttons on the transmitter at the same time to start measurement of the voltage.
4. Release the buttons after **5 s**.
5. Verify that the minimum voltage is the standard voltage or more for **10 s** after starting measurement.
   - If the voltage is under the standard voltage, replace the battery.



A6E7718W006

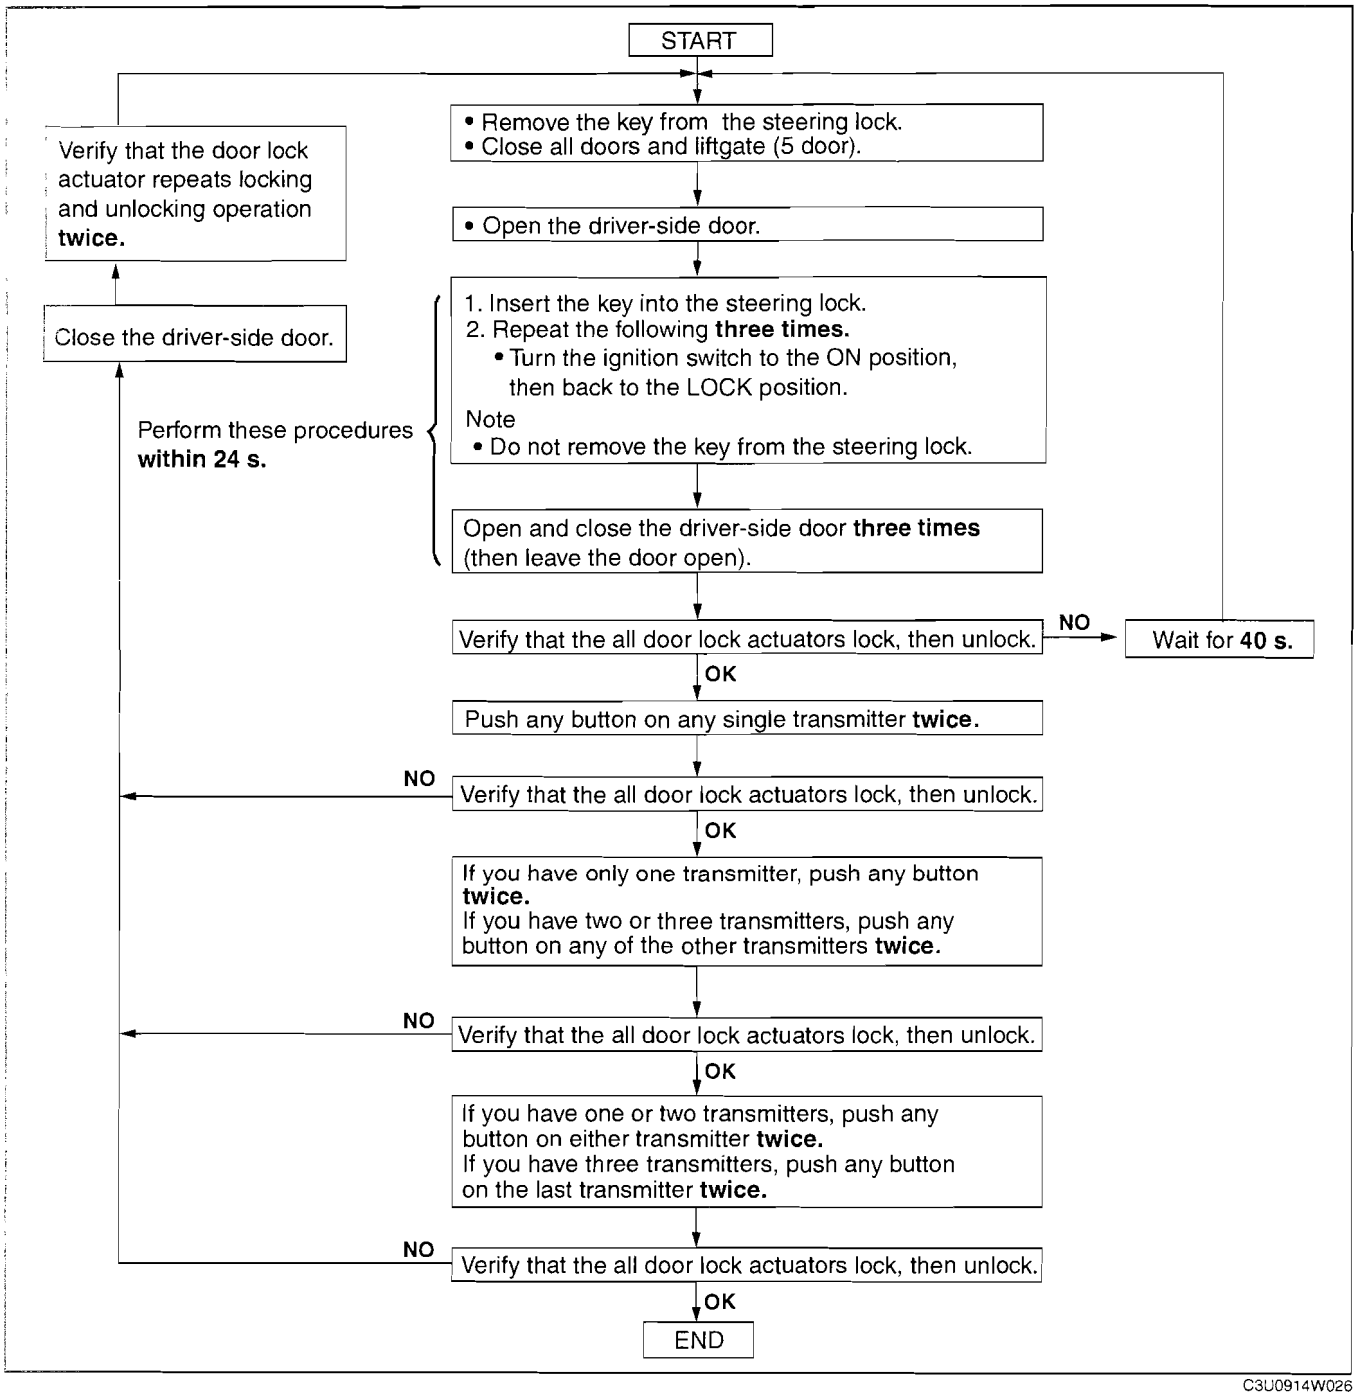
Standard voltage
2.7 V

TRANSMITTER ID CODE REGISTRATION

id091400805900

Note

- When registering the ID code into a keyless control module, verify that other transmitters are not being operated in the vicinity.
- After ID code registering, remove the key from the steering lock and verify that all doors lock/unlock normally using the transmitter.

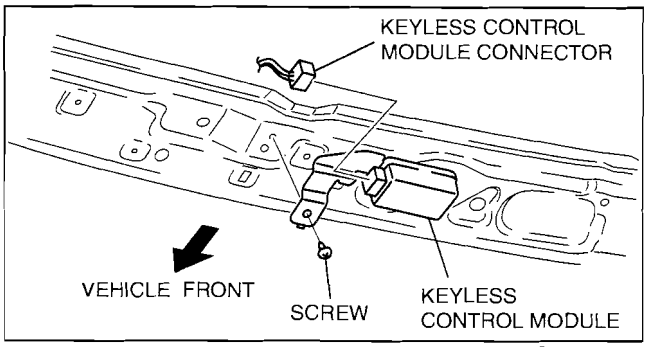


C3U0914W026

KEYLESS CONTROL MODULE REMOVAL/INSTALLATION

id091400806300

1. Disconnect the negative battery cable.
2. Remove the map light. (See 09-18-23 MAP LIGHT REMOVAL/INSTALLATION.)
3. Disconnect the keyless control module connector.
4. Remove the screw, then remove the keyless control module.
5. Install in the reverse order of removal.
6. When replacing the keyless control module, register the transmitter ID codes. (See 09-14-26 TRANSMITTER ID CODE REGISTRATION.)



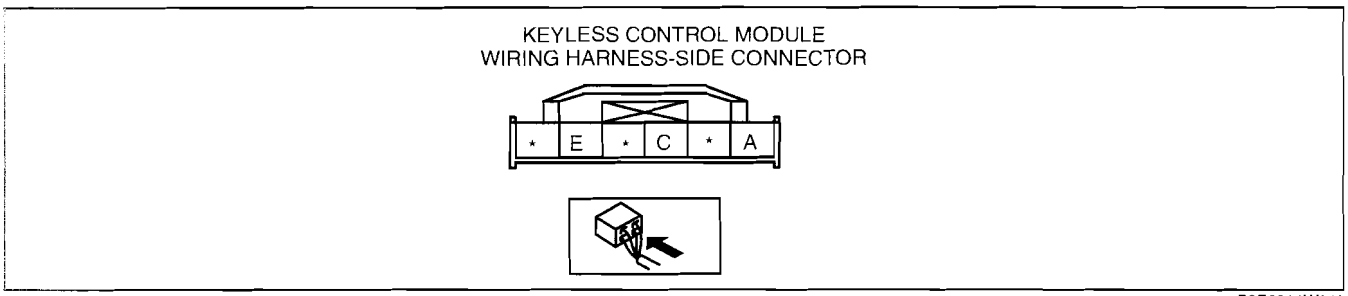
C3U0914W013

KEYLESS CONTROL MODULE INSPECTION

id091400806400

1. Measure the voltage or inspect for continuity according to the Terminal Voltage Table (Reference).
   - If the voltage is not as specified in the Terminal Voltage Table (Reference), inspect the parts under "Inspection item(s)" and related wiring harnesses.
2. If the system does not work properly even though the inspection items or related wiring harnesses do not have any malfunction, perform symptom troubleshooting [KEYLESS ENTRY SYSTEM].

Terminal Voltage Table (Reference)



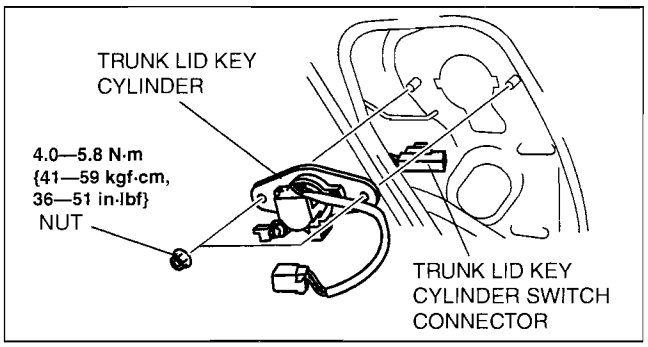
B3E0914W049

Terminal	Signal name	Connected to	Measured condition	Voltage (V)/ Continuity	Inspection item(s)
A	Power supply	PJB	Under any condition	B+	• PJB (See 09-40-3 PASSENGER JUNCTION BOX (PJB) INSPECTION.) • Related wiring harnesses
C	Data	PJB	Under any condition: Inspect the wiring harness between the keyless control module and PJB terminal J-04 F for continuity.	Continuity detected	• PJB (See 09-40-3 PASSENGER JUNCTION BOX (PJB) INSPECTION.) • transmitter (See 09-14-25 TRANSMITTER BATTERY INSPECTION.) • Related wiring harnesses
E	GND	Body ground	Under any condition: Inspect for continuity to ground.	Continuity detected	GND

TRUNK LID KEY CYLINDER REMOVAL/INSTALLATION

id091400810900

1. Disconnect the negative battery cable.
2. Remove the trunk lid trim. (See 09-17-22 TRUNK LID TRIM REMOVAL/INSTALLATION.)
3. Detach the rod from the trunk lid key cylinder.
4. Disconnect the trunk lid key cylinder connector.
5. Remove the nuts, then remove the trunk lid key cylinder.
6. Install in the reverse order of removal.



B3E0914W007

TRUNK LID KEY CYLINDER SWITCH INSPECTION

id091400811000

1. Inspect for continuity between the trunk lid key cylinder push switch terminals.
   - If not as specified, replace the trunk lid key cylinder.

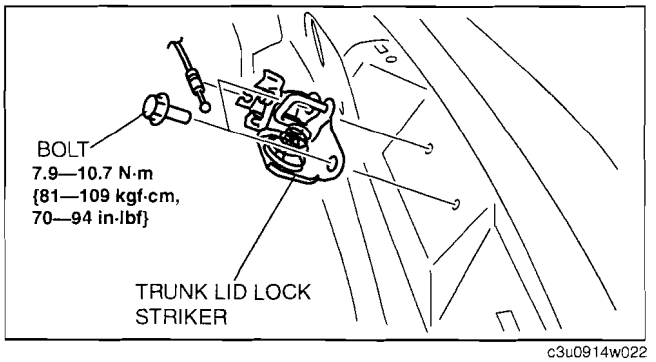
TRUNK LID LOCK STRIKER REMOVAL/INSTALLATION

id091400811300

1. Remove the trunk end trim. (See 09-17-21 TRUNK END TRIM REMOVAL/INSTALLATION.)
2. Detach the trunk lid opener cable.
3. Remove the bolts, then remove the trunk lid striker.
4. Install in the reverse order of removal.
5. Adjust the trunk lid. (See 09-10-7 TRUNK LID ADJUSTMENT.)



c3u0914w022

TRUNK LID OPENER REMOVAL/INSTALLATION

id091400812100

1. To remove the trunk lid opener lever, remove the following part:
   (1) Front scuff plate (Driver's side) (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
2. When removing the trunk lid opener cable, perform the following procedure:
   (1) Remove the following parts:
      1) Trunk end trim (See 09-17-21 TRUNK END TRIM REMOVAL/INSTALLATION.)
      2) Rear seat (See 09-13-6 REAR SEAT REMOVAL/INSTALLATION.)
      3) Rear scuff plate (Driver's side) (See 09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
      4) Tire house trim (Driver's side) (See 09-17-15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
      5) B-pillar lower trim (Driver's side) (See 09-17-12 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (2) Partially peel back the floor covering so that the trunk lid opener cable can be removed.
   (3) Remove the trunk lid opener cable from the trunk lid lock striker.
   (4) Remove the trunk lid opener cable from the clips A.
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.

SUNROOF SWITCH REMOVAL/INSTALLATION

id091500800200

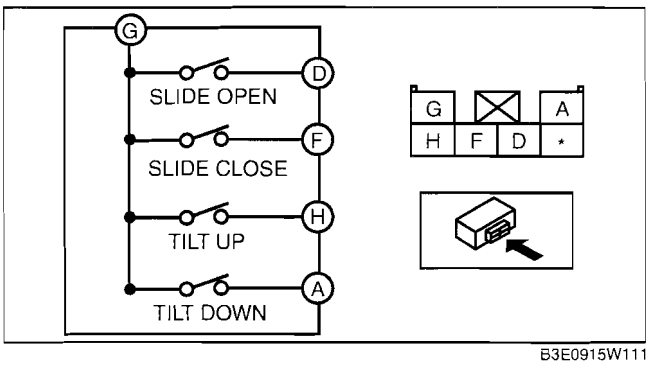
Note
- The sunroof switch and the map light are a single unit.

1. Disconnect the negative battery cable.
2. Remove the map light from the headliner. (See 09-18-23 MAP LIGHT REMOVAL/INSTALLATION.)
3. Install in the reverse order of removal.

SUNROOF SWITCH INSPECTION

id091500800300

1. Verify that the continuity between the sunroof switch terminals is as indicated in the table.
   - If not as indicated in the table, replace the sunroof switch.



B3E0915W111

○—○ : Continuity

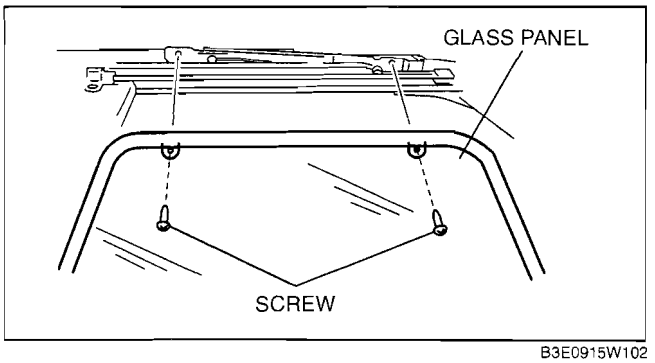
Switch position	Terminal				
	A	D	F	H	G
Slide open		○			○
Slide close			○		○
Tilt up				○	○
Tilt down	○				○
OFF					

B3E0915W112

GLASS PANEL REMOVAL/INSTALLATION

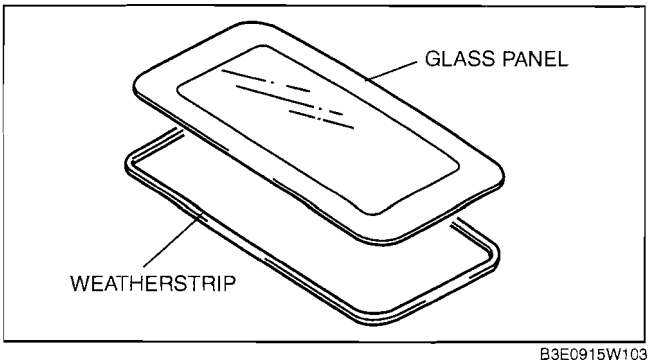
id091500800500

1. Fully close the glass panel.
2. Fully open the sunshade.
3. Remove the screws, then remove the glass panel.



B3E0915W102

4. Remove the weatherstrip from the glass panel.
5. Install in the reverse order of removal.
6. Adjust the glass panel. (See 09-15-3 GLASS PANEL ADJUSTMENT.)



B3E0915W103

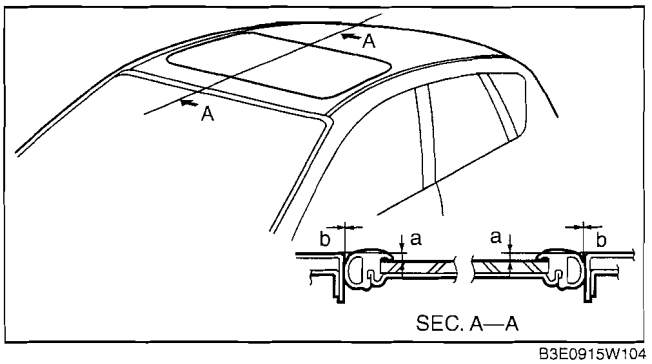
GLASS PANEL ADJUSTMENT

id091500800600

1. Fully close the glass panel.
2. Measure the gap and height difference between the glass panel and the body.
3. Loosen the glass panel installation screws and move the glass panel to adjust.

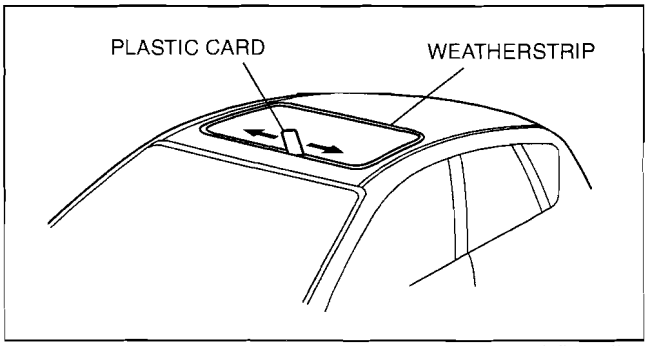
   Standard clearance
   a: 0.2—2.2 mm {0.008—0.08 in}
   b: 0 mm {0 in}

4. Tighten the screws.



B3E0915W104

5. Insert any available thin plastic card between the weatherstrip and the body, and verify that they are sealed. (There is resistance when the plastic card is moved.)
   - If they are not sealed, perform Steps 3—4 and adjust again.

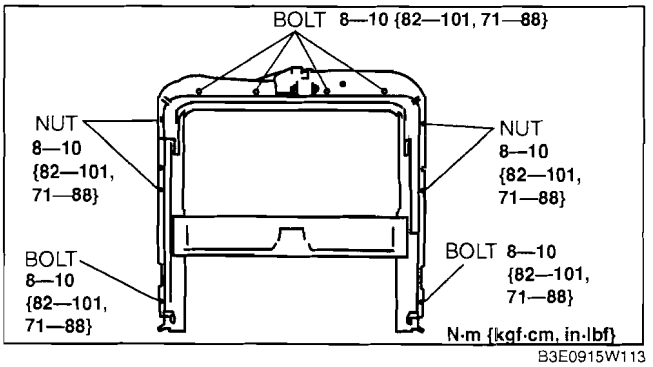


B3E0915W105

SUNROOF UNIT REMOVAL/INSTALLATION

id091500800700

1. Disconnect the negative battery cable.
2. Remove the following parts:
   (1) Console (4 door) (See 09-17-10 CONSOLE REMOVAL/INSTALLATION.)
   (2) A-pillar trim (See 09-17-11 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (3) Upper anchor of the front seat belt (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (4) Front scuff plate (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (5) Rear scuff plate (See 09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (6) B-pillar lower trim (See 09-17-12 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (7) B-pillar upper trim (See 09-17-12 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
   (8) Rear seat (See 09-13-6 REAR SEAT REMOVAL/INSTALLATION.)
   (9) Tire house trim (See 09-17-15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
   (10)Trunk side upper trim (5 door) (See 09-17-21 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION.)
   (11)C-pillar trim (See 09-17-13 C-PILLAR TRIM REMOVAL/INSTALLATION.)
   (12)Map light (See 09-18-23 MAP LIGHT REMOVAL/INSTALLATION.)
   (13)Sunvisor (See 09-17-23 SUNVISOR REMOVAL/INSTALLATION.)
   (14)Assist handle (See 09-17-24 ASSIST HANDLE REMOVAL/INSTALLATION.)
   (15)Headliner (See 09-17-24 HEADLINER REMOVAL/INSTALLATION.)
   (16)Head impact pad (See 09-17-16 HEAD IMPACT PAD REMOVAL/INSTALLATION.)
   (17)Glass panel (See 09-15-2 GLASS PANEL REMOVAL/INSTALLATION.)
3. Disconnect the front and rear drain hoses from the sunroof frame.
4. Remove the bolts and nuts, then remove the sunroof unit.
5. Install in the reverse order of removal.
6. Adjust the glass panel. (See 09-15-3 GLASS PANEL ADJUSTMENT.)

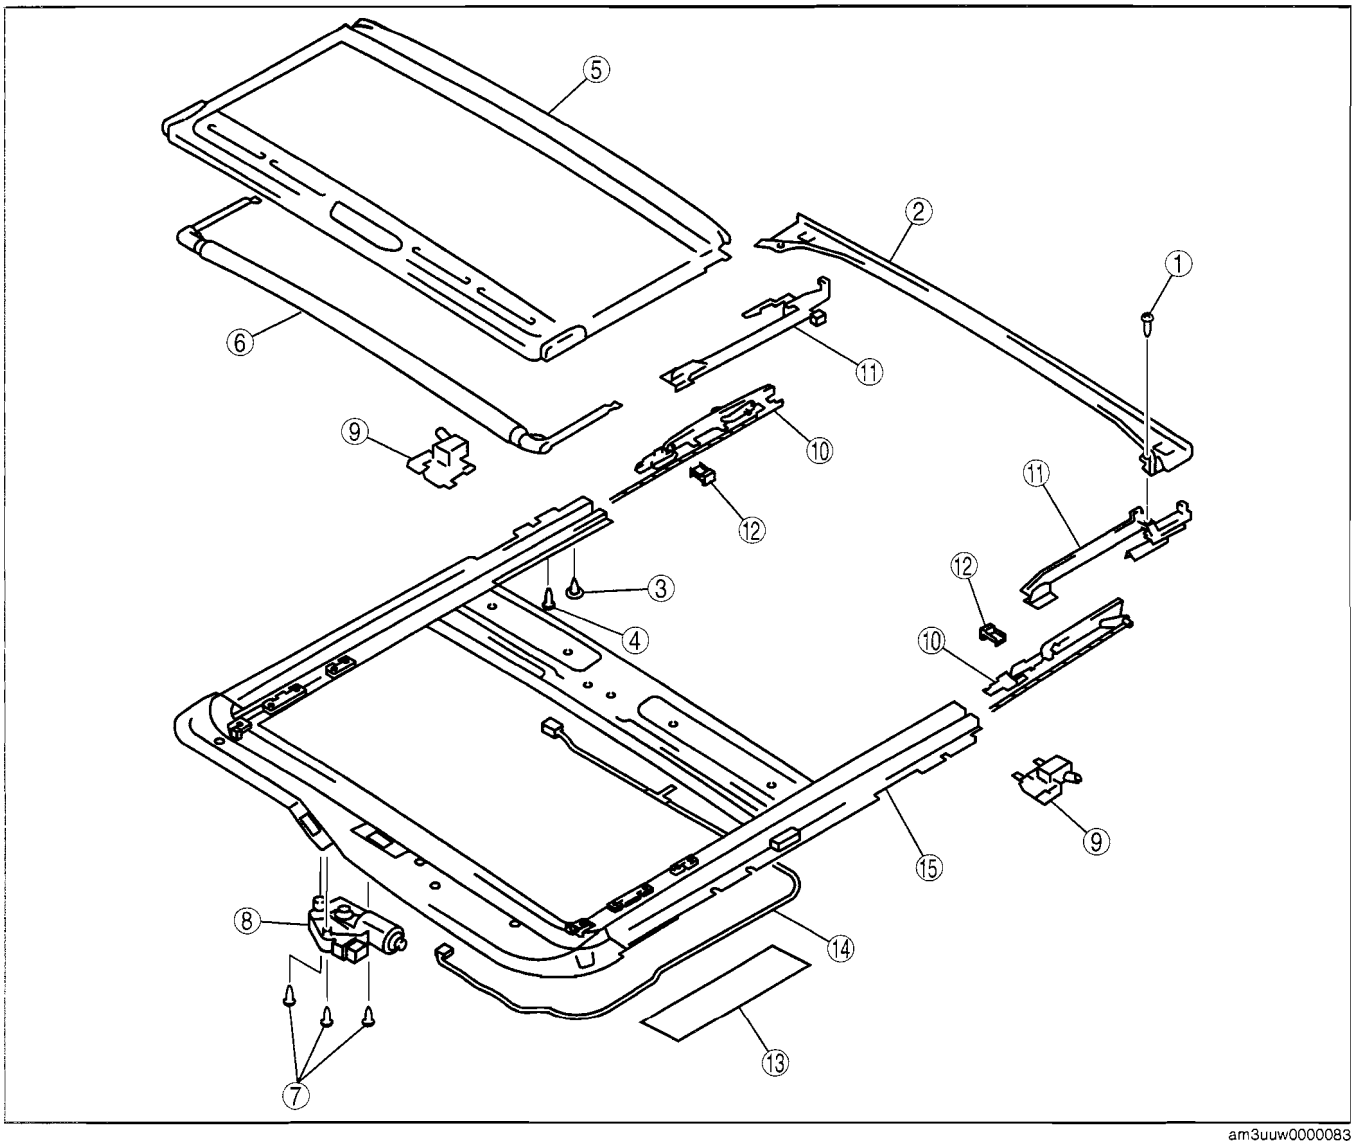


B3E0915W113

SUNROOF UNIT DISASSEMBLY/ASSEMBLY

id091500800800

1. Disassemble in the order indicated in the table.
2. Assemble in the reverse order of disassembly.



am3uuw0000083

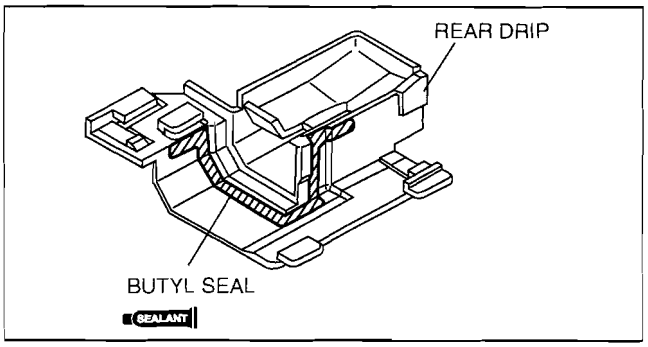
1	Screw A
2	Drip rail
3	Sunshade stopper
4	Screw B
5	Sunshade
6	Deflector
7	Screw C
8	Sunroof motor (See 09-15-5 Sunroof Motor Assembly Note.)

9	Rear drip (See 09-15-5 Rear Drip Assembly Note.)
10	Guide
11	Decoration link
12	Front drip
13	Tape protector
14	Short cord
15	Frame

Rear Drip Assembly Note

Note
- If the rear drip is removed, butyl seal must be applied when re-installing.

1. Apply a **6.0—8.0 mm {0.24—0.31 in}** wide line of butyl seal to the area shown in the figure.



am3uuw0000083

Sunroof Motor Assembly Note

Note
- If the guide is removed, initial position setting of the sunroof motor will be required. After installing the sunroof unit, perform initial position setting using the following procedure.

1. Press the TILT UP switch to fully tilt up the glass panel.
2. When the glass panel reaches the fully tilt up position, temporarily release the TILT UP switch and press it again **for approx. 13 s** continuously. Continue pressing the switch until the glass panel automatically stops at the fully tilt up position after reaching the mechanical lock position.
3. When the glass panel stops at the fully tilt up position, temporarily release the TILT UP switch, then press it again **within 5 s** and hold.

Note
- Press the TILT UP switch continuously until the glass panel opens to the fully open position, returns to the fully closed position and then stops.

4. Release the TILT UP switch when the glass panel stops at the fully closed position.

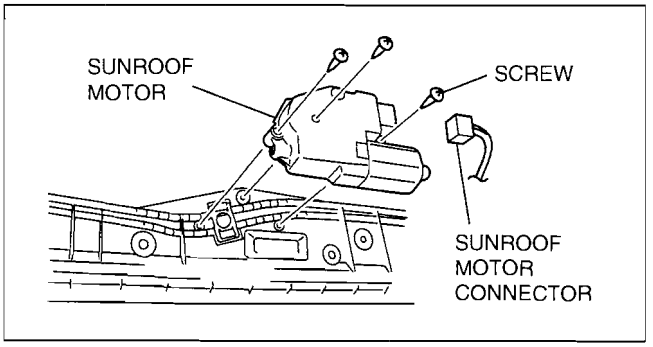
SUNROOF MOTOR REMOVAL/INSTALLATION

id091500805000

1. Disconnect the negative battery cable.
2. Remove the following parts:
   (1) Console (4 door) (See 09-17-10 CONSOLE REMOVAL/INSTALLATION.)
   (2) A-pillar trim (See 09-17-11 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (3) Upper anchor of the front seat belt (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (4) Front scuff plate (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (5) Rear scuff plate (See 09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (6) B-pillar lower trim (See 09-17-12 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (7) B-pillar upper trim (See 09-17-12 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
   (8) Rear seat (See 09-13-6 REAR SEAT REMOVAL/INSTALLATION.)
   (9) Tire house trim (See 09-17-15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
   (10)Trunk side upper trim (5 door) (See 09-17-21 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION.)
   (11)C-pillar trim (See 09-17-13 C-PILLAR TRIM REMOVAL/INSTALLATION.)
   (12)Map light (See 09-18-23 MAP LIGHT REMOVAL/INSTALLATION.)
   (13)Sunvisor (See 09-17-23 SUNVISOR REMOVAL/INSTALLATION.)
   (14)Assist handle (See 09-17-24 ASSIST HANDLE REMOVAL/INSTALLATION.)
   (15)Headliner (See 09-17-24 HEADLINER REMOVAL/INSTALLATION.)
3. Disconnect the sunroof motor connector.
4. Remove the screws, then remove the sunroof motor.
5. Install in the reverse order of removal.

Note

- If the glass panel or the sunroof motor is moved with the sunroof motor removed, initial position setting of the sunroof motor will be required. Perform initial position setting referring to the Sunroof Motor Assembly Note. (See 09-15-4 SUNROOF UNIT DISASSEMBLY/ASSEMBLY.)



am3uuw0000083

SUNROOF MOTOR INSPECTION

id091500801100

1. Measure the voltage at each terminal (other than terminal G).
   - If not as specified, inspect the parts listed under "Inspection item" and the related wiring harnesses.
2. Disconnect the negative battery cable.
3. Verify that continuity at terminal G is as indicated in the Terminal Voltage Table (Reference).
4. If the parts and wiring harnesses are normal but the system still does not work properly, replace the sunroof relay.

Terminal voltage table (Reference)

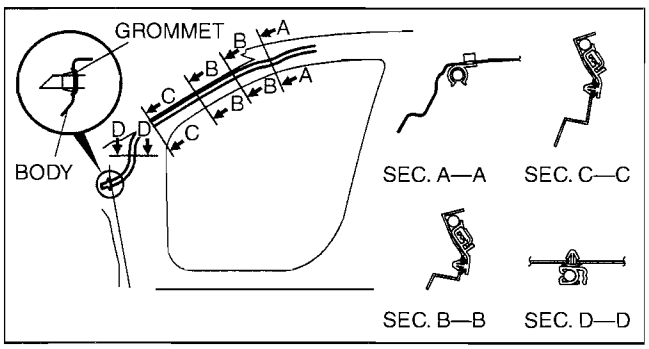
FRONT DRAIN HOSE REMOVAL

id091500801300

1. Remove the following parts:
   (1) Console (4 door) (See 09-17-10 CONSOLE REMOVAL/INSTALLATION.)
   (2) A-pillar trim (See 09-17-11 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (3) Upper anchor of the front seat belt (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (4) Front scuff plate (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (5) Rear scuff plate (See 09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (6) B-pillar lower trim (See 09-17-12 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (7) B-pillar upper trim (See 09-17-12 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
   (8) Rear seat (See 09-13-6 REAR SEAT REMOVAL/INSTALLATION.)
   (9) Tire house trim (See 09-17-15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
   (10)Trunk side upper trim (5 door) (See 09-17-21 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION.)
   (11)C-pillar trim (See 09-17-13 C-PILLAR TRIM REMOVAL/INSTALLATION.)
   (12)Map light (See 09-18-23 MAP LIGHT REMOVAL/INSTALLATION.)
   (13)Sunvisor (See 09-17-23 SUNVISOR REMOVAL/INSTALLATION.)
   (14)Assist handle (See 09-17-24 ASSIST HANDLE REMOVAL/INSTALLATION.)
   (15)Headliner (See 09-17-24 HEADLINER REMOVAL/INSTALLATION.)
   (16)Front door (See 09-11-3 FRONT DOOR REMOVAL/INSTALLATION.)
   (17)Dashboard (See 09-17-4 DASHBOARD REMOVAL/INSTALLATION.)
2. Disconnect the front drain hose from the sunroof frame.
3. Remove the front drain hose from the clips.
4. Pull the front drain hose into the vehicle interior and remove the front drain hose.



B3E0915W106

FRONT DRAIN HOSE INSTALLATION

id091500801400

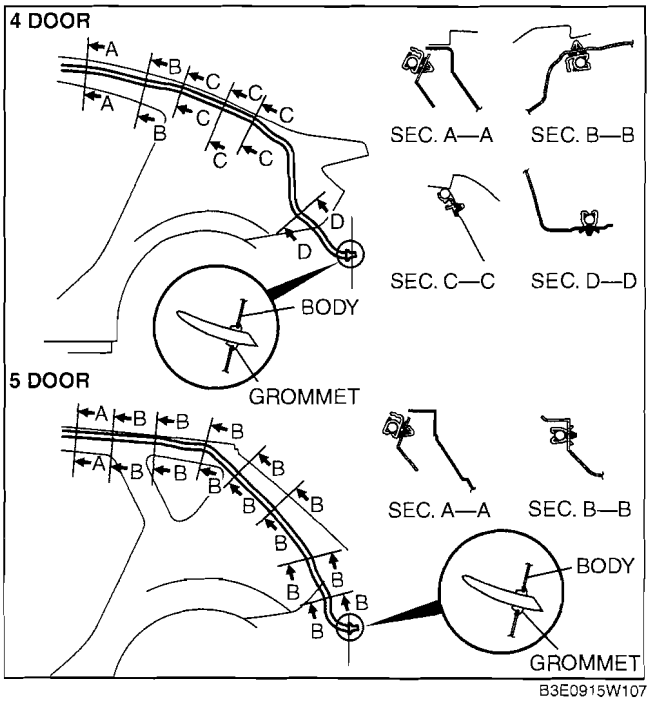
Caution
- **If the front drain hose is pinched or bent at any point, the water in the hose may not drain and could leak inside the vehicle. During and after installation of the trims and headliner, always make sure there is no interference with the front drain hose. Correct any abnormality if found.**

1. Apply soapy water to the part of the sunroof frame where the front drain hose is inserted.
2. Insert the front drain hose end into the sunroof frame.
3. Install the front drain hose to the clips parallel to the pillar and free of looseness.
4. Insert the front drain hose grommet into the hole of the inner hinge pillar.
5. Install the following parts:
   (1) Dashboard (See 09-17-4 DASHBOARD REMOVAL/INSTALLATION.)
   (2) Front door (See 09-11-3 FRONT DOOR REMOVAL/INSTALLATION.)
   (3) Headliner (See 09-17-24 HEADLINER REMOVAL/INSTALLATION.)
   (4) Assist handle (See 09-17-24 ASSIST HANDLE REMOVAL/INSTALLATION.)
   (5) Sunvisor (See 09-17-23 SUNVISOR REMOVAL/INSTALLATION.)
   (6) Map light (See 09-18-23 MAP LIGHT REMOVAL/INSTALLATION.)
   (7) C-pillar trim (See 09-17-13 C-PILLAR TRIM REMOVAL/INSTALLATION.)
   (8) Trunk side upper trim (5 door) (See 09-17-21 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION.)
   (9) Tire house trim (See 09-17-15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
   (10)Rear seat (See 09-13-6 REAR SEAT REMOVAL/INSTALLATION.)
   (11)B-pillar upper trim (See 09-17-12 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
   (12)B-pillar lower trim (See 09-17-12 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (13)Rear scuff plate (See 09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (14)Front scuff plate (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (15)Upper anchor of the front seat belt (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (16)A-pillar trim (See 09-17-11 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (17)Console (4 door) (See 09-17-10 CONSOLE REMOVAL/INSTALLATION.)

REAR DRAIN HOSE REMOVAL

id091500801500

1. Remove the following parts:
   (1) Console (4 door) (See 09-17-10 CONSOLE REMOVAL/INSTALLATION.)
   (2) A-pillar trim (See 09-17-11 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (3) Upper anchor of the front seat belt (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (4) Front scuff plate (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (5) Rear scuff plate (See 09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (6) B-pillar lower trim (See 09-17-12 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (7) B-pillar upper trim (See 09-17-12 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
   (8) Rear seat (See 09-13-6 REAR SEAT REMOVAL/INSTALLATION.)
   (9) Tire house trim (See 09-17-15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
   (10)Trunk end trim (See 09-17-21 TRUNK END TRIM REMOVAL/INSTALLATION.)
   (11)Trunk side upper trim (5 door) (See 09-17-21 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION.)
   (12)Trunk side trim (See 09-17-20 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
   (13)C-pillar trim (See 09-17-13 C-PILLAR TRIM REMOVAL/INSTALLATION.)
   (14)Map light (See 09-18-23 MAP LIGHT REMOVAL/INSTALLATION.)
   (15)Sunvisor (See 09-17-23 SUNVISOR REMOVAL/INSTALLATION.)
   (16)Assist handle (See 09-17-24 ASSIST HANDLE REMOVAL/INSTALLATION.)
   (17)Headliner (See 09-17-24 HEADLINER REMOVAL/INSTALLATION.)
2. Remove the sunroof frame from the rear drain hose.
3. Remove the rear drain hose from the clips.
4. Pull the rear drain hose into the vehicle interior and remove the rear drain hose.



B3E0915W107

REAR DRAIN HOSE INSTALLATION

id091500801600

Caution

- **If the rear drain hose is pinched or bent at any point, the water in the hose may not drain and could leak inside the vehicle. During and after installation of the trims and headliner, always make sure there is no interference with the rear drain hose. Correct any abnormality if found.**

1. Apply soapy water to the part of the sunroof frame where the rear drain hose is inserted.
2. Insert the rear drain hose end into the sunroof frame.
3. Install the rear drain hose to the clips parallel to the pillar and free of looseness.
4. Insert the rear drain hose grommet into the hole of the inner rear pillar.
5. Install the following parts:
   (1) Headliner (See 09-17-24 HEADLINER REMOVAL/INSTALLATION.)
   (2) Assist handle (See 09-17-24 ASSIST HANDLE REMOVAL/INSTALLATION.)
   (3) Sunvisor (See 09-17-23 SUNVISOR REMOVAL/INSTALLATION.)

FRONT SEAT REMOVAL/INSTALLATION

id091300800200

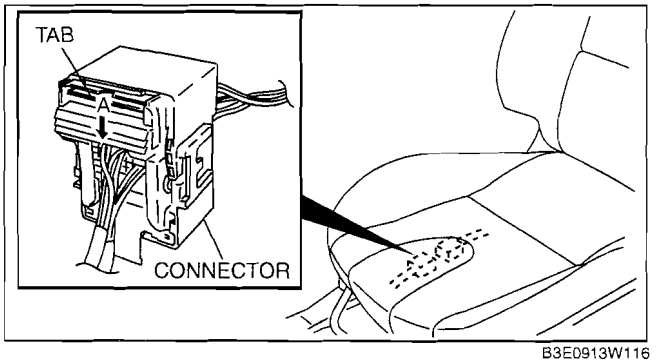
Warning

- **Handling the front seat (side air bag) improperly can accidently deploy the side air bag, which may seriously injure you. Read service warnings and cautions before handling the front seat. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS, 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**

Caution

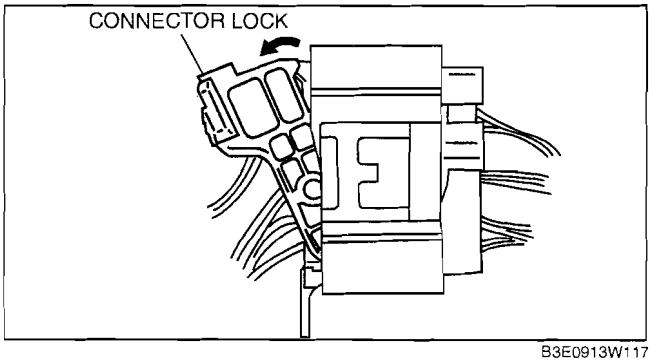
- **For vehicles with the two-step deployment air bag system, when the passenger's seat is removed, perform the seat weight sensor inspection using the M-MDS after installing the passenger's seat. (See 08-10-13 SEAT WEIGHT SENSOR INSPECTION.)**
- **For vehicles with the two-step deployment air bag system, when the passenger's seat is replaced with a new one, perform the seat weight sensor calibration using the M-MDS. (See 08-10-12 SEAT WEIGHT SENSOR CALIBRATION.)**

1. Turn the ignition switch to the LOCK position.
2. Disconnect the negative battery cable and wait for **1 min or more**.
3. Press connector tab A in the direction of the arrow.



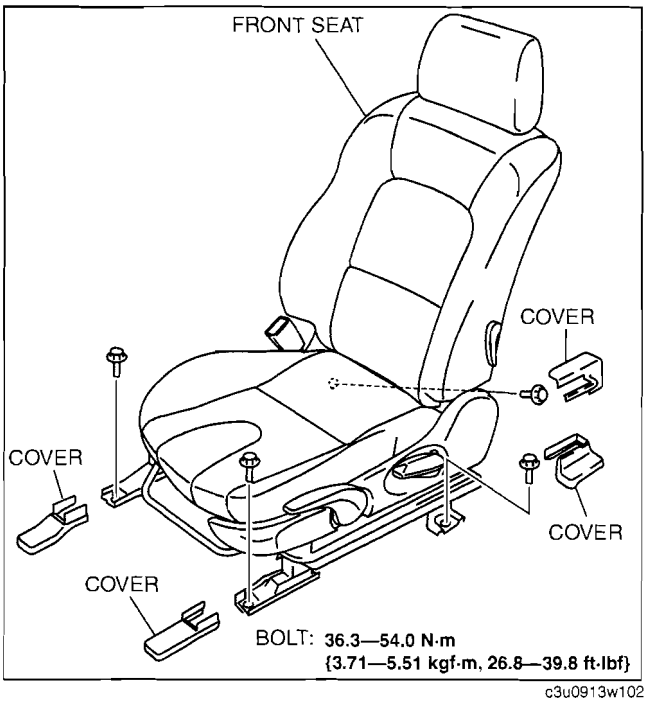
B3E0913W116

4. Pull out the connector lock in the direction of the arrow and disconnect the connector.
5. Remove the seat belt anchor (RH). (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)



B3E0913W117

6. Remove the covers.
7. Remove the bolts, then remove the front seat.
8. Install in the reverse order of removal.
9. Perform the weight sensor initialization procedure. (See 08-10-12 SEAT WEIGHT SENSOR CALIBRATION.)



c3u0913w102

FRONT SEAT DISASSEMBLY/ASSEMBLY

id091300800300

Warning

- **Handling the front seat (side air bag, seat weight sensor) improperly can accidentally deploy the side air bag, which may seriously injure you. Read the service warnings and cautions before handling the air bag module. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**

Caution

- **For vehicles with the two-step deployment air bag system, if any of the following work is performed, perform the seat weight sensor calibration using the M-MDS. (See 08-10-12 SEAT WEIGHT SENSOR CALIBRATION.)**
  - **— Replacement with a new seat weight sensor**
  - **— Replacement with a new seat weight sensor control module**
  - **— Replacement with new passenger-side seat parts**
  - **— Disassembly of the passenger-side seat**
- **For vehicles with the two-step deployment air bag system, if any of the following work is performed, perform the seat weight sensor inspection using the M-MDS. (See 08-10-13 SEAT WEIGHT SENSOR INSPECTION.)**
  - **— Removal of the passenger-side seat**
  - **— Loosening and retightening of passenger's seat fixing bolts**

1. Disassemble in the order indicated in the table.
2. Assemble in the reverse order of disassembly.

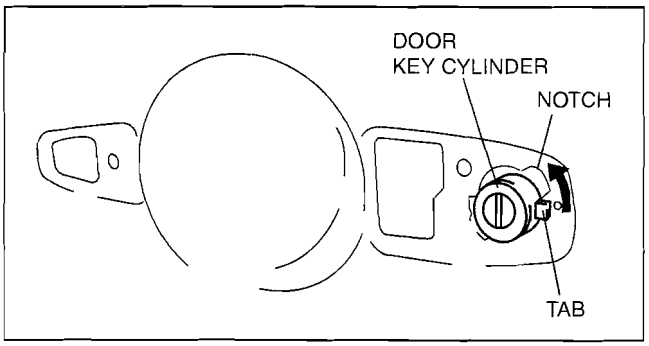
FRONT DOOR KEY CYLINDER REMOVAL/INSTALLATION

id091400800300

1. Disconnect the negative battery cable. (Vehicles with power window system or power outer mirror)
2. Fully roll up the front door glass.
3. Remove the following parts:
   (1) Inner garnish (See 09-17-18 INNER GARNISH REMOVAL/INSTALLATION.)
   (2) Regulator handle (Vehicles with manual window system) (See 09-12-11 REGULATOR HANDLE REMOVAL.) (See 09-12-12 REGULATOR HANDLE INSTALLATION.)
   (3) Front door trim (See 09-17-18 FRONT DOOR TRIM REMOVAL/INSTALLATION.)
   (4) Front outer handle (See 09-14-10 FRONT OUTER HANDLE REMOVAL/INSTALLATION.)
4. Remove the rod from the front door key cylinder.
5. Turn the key cylinder in the direction indicated by the arrow and move the tab to the notch.
6. Pull the front door key cylinder outward to remove it.
7. Install in the reverse order of removal.



B6U0914WS20

FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION

id091400800400

1. Disconnect the negative battery cable.
2. Remove the following parts:
   (1) Inner garnish (See 09-17-18 INNER GARNISH REMOVAL/INSTALLATION.)
   (2) Regulator handle (Vehicles with manual window system) (See 09-12-11 REGULATOR HANDLE REMOVAL.) (See 09-12-12 REGULATOR HANDLE INSTALLATION.)
   (3) Front door trim (See 09-17-18 FRONT DOOR TRIM REMOVAL/INSTALLATION.)
   (4) Front door glass (See 09-12-4 FRONT DOOR GLASS REMOVAL/INSTALLATION.)
   (5) Front door speaker (See 09-20-7 FRONT DOOR SPEAKER REMOVAL/INSTALLATION.)
   (6) Inner handle (See 09-14-12 INNER HANDLE REMOVAL/INSTALLATION.)
   (7) Front door unit (See 09-11-6 FRONT DOOR UNIT REMOVAL/INSTALLATION.)
3. Pull the stopper of the front door lock actuator connector in the direction of the arrow (1).
4. Disconnect the front door lock actuator connector while pushing at point A.
5. Remove the front door latch and lock actuator from the front door unit.
6. Install in the reverse order of removal.

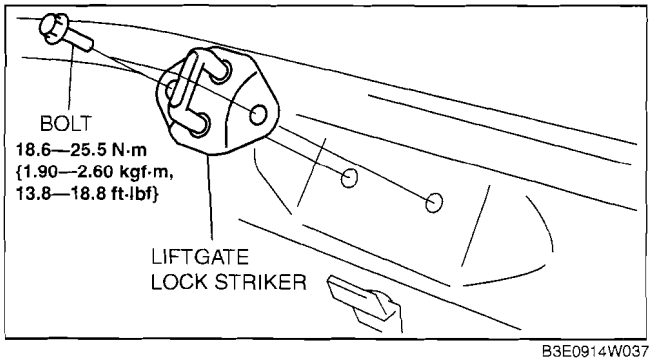
1. Remove the trunk end trim. (See 09-17-21 TRUNK END TRIM REMOVAL/INSTALLATION.)
2. Remove the bolts, then remove the liftgate lock striker.
3. Install in the reverse order of removal.
4. Adjust the liftgate. (See 09-11-9 LIFTGATE ADJUSTMENT.)

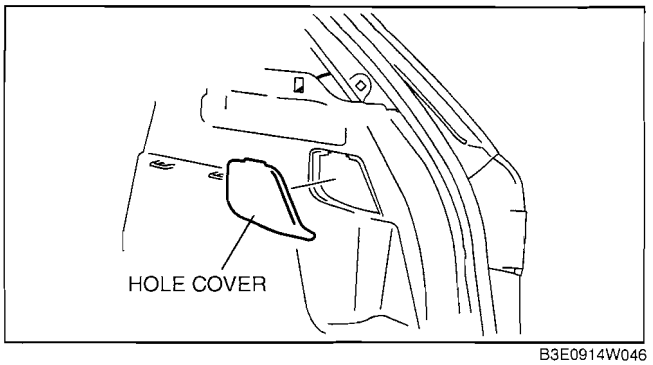


B3E0914W037

FUEL-FILLER LID OPENER REMOVAL/INSTALLATION

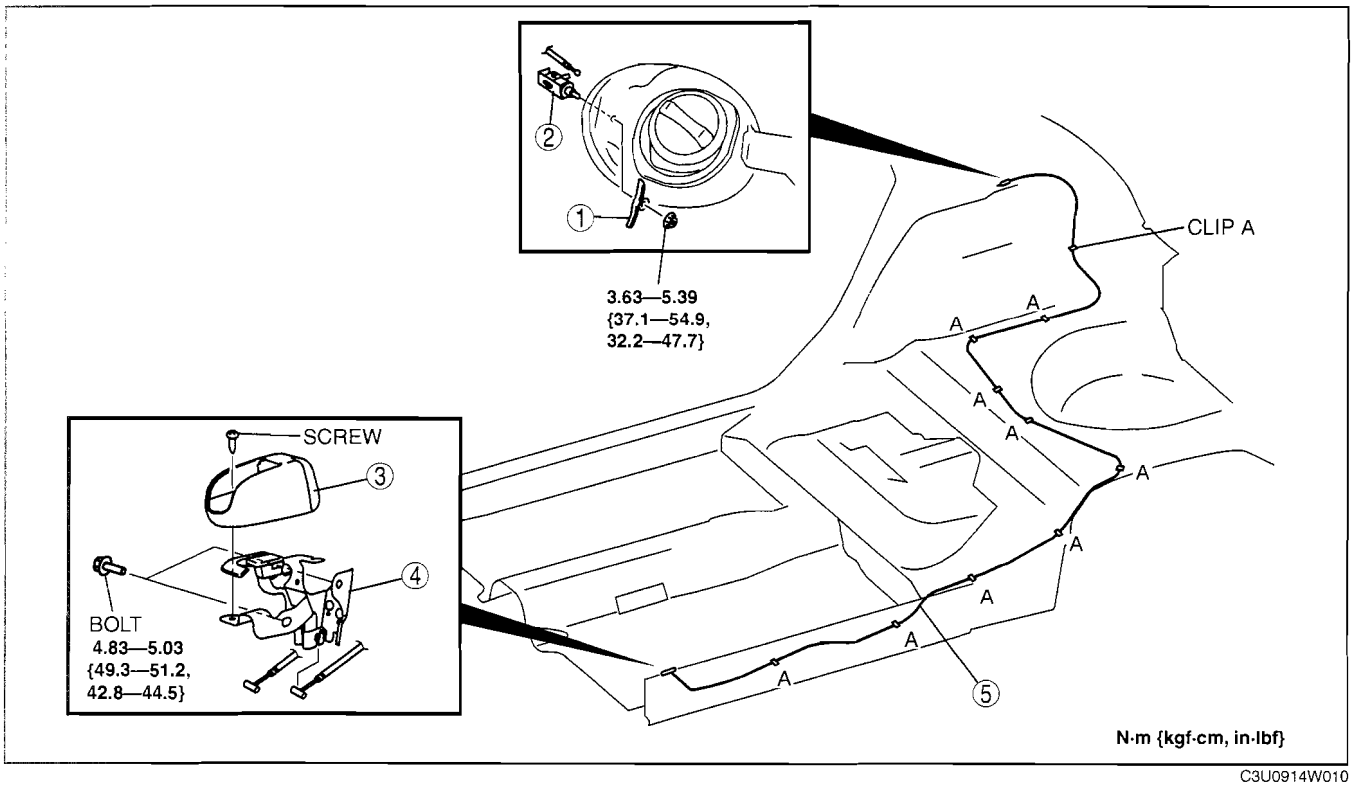
id091400804700

1. To remove the fuel-filler lid opener, remove the following procedure:
   - 5 door
     - — Remove the hole cover on the trunk side trim. (RH)
   - 4 door
     - — Remove the trunk end trim (See 09-17-21 TRUNK END TRIM REMOVAL/INSTALLATION.)
     - — Slightly bend back the trunk side trim. (RH) (See 09-17-20 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
2. To remove the fuel-filler lid opener lever, remove the following part:.
   (1) Front scuff plate (Driver's side) (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)



B3E0914W046

3. When removing the fuel-filler lid opener cable, perform the following procedure:
   (1) Remove the following parts:
      1) Rear seat (See 09-13-6 REAR SEAT REMOVAL/INSTALLATION.)
      2) Rear scuff plate (Driver's side) (See 09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
      3) Tire house trim (Driver's side) (See 09-17-15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
      4) B-pillar lower trim (Driver's side) (See 09-17-12 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (2) Partially peel back the floor covering so that the fuel-filler lid opener cable can be removed.
   (3) Remove the fuel-filler lid opener cable from clips A.
4. Remove in the order indicated in the table.
5. Install in the reverse order of removal.



C3U0914W010

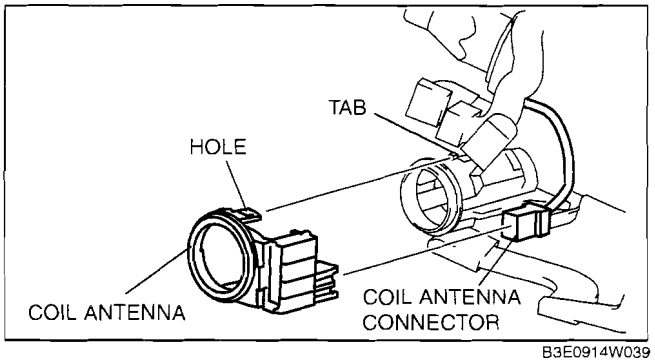
COIL ANTENNA REMOVAL/INSTALLATION

id091400804900

Note
- Do not remove the coil antenna unless you are replacing it.

1. Disconnect the negative battery cable.
2. Remove the following parts:
   (1) Hood release lever (See09-14-22 HOOD LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
   (2) Front scuff plate (Driver's side) (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (3) Front side trim (Driver's side) (See 09-17-17 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (4) Lower panel (See 09-17-7 LOWER PANEL REMOVAL/INSTALLATION.)
   (5) Column cover (See 09-17-7 COLUMN COVER REMOVAL/INSTALLATION.)
3. Disconnect the coil antenna connector.
4. Detach the steering lock tabs from the holes on the coil antenna.
5. Install in the reverse order of removal.



B3E0914W039

IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING

id091400805000

Foreword

- When performing the following procedures, the immobilizer resetting procedure using the M-MDS must also always be performed: "instrument cluster replacement", "PCM replacement", "instrument cluster and PCM joint replacement", "Key ID number clearing". The engine will not start unless all work is performed using the M-MDS.
- There are two methods for registering an additional key: Using the M-MDS and using two keys that are able to start the engine.
- When replacing any of the immobilizer system component parts, adding/erasing keys or performing other functions, refer to the following table and perform the applicable procedure (No.1 to 5).

Reference number	Situation	Required items	Cautionary notes
1	Making a spare key when the customer has two or more keys that can start the engine. Or registering an additional key.	• Registration key	• If the additional key registration method has been changed to "Customer spare key programming disabled" (inhibiting the method that uses two keys that are able to start the engine), the M-MDS is required when registering the additional key. In that case, perform procedure No.2.
2	Making a spare key when the customer has one key that can start the engine or no keys. Or registering an additional key.	• Registration key • M-MDS	-
3	Clearing previously registered key ID numbers.	• Registration keys (two or more) • M-MDS	• All the key ID numbers registered in the vehicle will be cleared. • Unless keys are re-registered after clearing the key ID numbers, the engine cannot be started. Before beginning the procedure, verify that the customer has turned in all of the keys for the vehicle. • Unless two or more keys are registered after replacement, the engine cannot be started. • The keys (two or more keys) readied before beginning the procedure do not have to be new keys. Any key that is capable of starting the engine before beginning the procedure can be used.
3	Replace all the keys. (Key cylinder replacement)	• Registration keys (two or more) • M-MDS	• When replacing the key cylinder, have two or more keys ready for registration before beginning the procedure, since the previous keys will be invalid.
4	Changing the method for registering additional keys. (Method for registering other keys using two keys that can start the engine is disabled.)	• M-MDS	• After performing this procedure it is not possible to register additional keys according to procedure No.1. The system can be returned to the original setting. The M-MDS must always be used to change the system setting.
4	Changing the method for registering additional keys. (Method for registering other keys using two keys that can start the engine is enabled.)	• M-MDS	• This is the default setting on new vehicles.
5	Replacing the instrument cluster.	• Replacement instrument cluster • Registration keys (two or more) • M-MDS	• Unless keys are registered after replacing the steering lock, the engine cannot be started. Before beginning the procedure, verify that the customer has turned in all of the keys for the vehicle. • Unless two or more keys are registered after replacement, the engine cannot be started. • The keys (two or more keys) readied before beginning the procedure do not have to be new keys. Any key that is capable of starting the engine before beginning the procedure can be used.
5	Replacing the PCM.	• Replacement PCM • M-MDS	-

Reference number	Situation	Required items	Cautionary notes
5	Replacing the PCM and instrument cluster.	• Replacement PCM • Replacement instrument cluster • Registration keys (two or more) • M-MDS	• Unless keys are registered after replacing the steering lock, the engine cannot be started. Before beginning the procedure, verify that the customer has turned in all of the keys for the vehicle. • Unless two or more keys are registered after replacement, the engine cannot be started. • The keys (two or more keys) readied before beginning the procedure do not have to be new keys. Any key that is capable of starting the engine before beginning the procedure can be used.
	Replacing the coil antenna.	• New coil antenna	• It is not necessary to reset the immobilizer system.

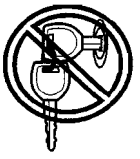
Caution

- **If any of the following items are touching or near the key head, signal communication between the key and vehicle is negatively affected, resulting in the engine not starting or the key registration failure. Do not perform the procedure if any of the following items are touching or near the key head.**
  - **— Any metallic object**
  - **— Spare keys or keys for other vehicles equipped with an immobilizer system**
  - **— Any electronic device, or any credit or other cards with magnetic strips**

EXAMPLES:

METAL RING LYING ON KEY HEAD

METAL PART OF ANOTHER KEY TOUCHING KEY HEAD



KEY IS NEAR OR TOUCHING ANOTHER IMMOBILIZER SYSTEM KEY

am3uuw0000082

Note

- Within the following procedures, the term a "valid key" means a "key that can start the engine".
- After adding/registering keys, clearing ID numbers or replacing any component part of the immobilizer system, verify that all keys can start the engine **within 5 s**.
- When verifying that the keys can start the engine, wait at least **5 s or more** between inserting them.
- If the engine cannot be started using a registered key, repeat the procedure from the beginning.
- Do not start the engine until the key registration procedure for all the necessary keys is completed. If the engine is started during the registration procedure, registration is stopped at that point. Repeat the procedure starting from the beginning if the engine is started before completion.
- Two or more key ID numbers must be registered for the engine to start.
- A maximum of eight key ID numbers can be registered for one vehicle. The M-MDS can be used to verify the number of key ID numbers registered to a single vehicle.
- Do not select screen menus of the M-MDS that are not indicated within the procedures.

No.1 Additional Key Registration Procedure (Using Two Valid Keys)

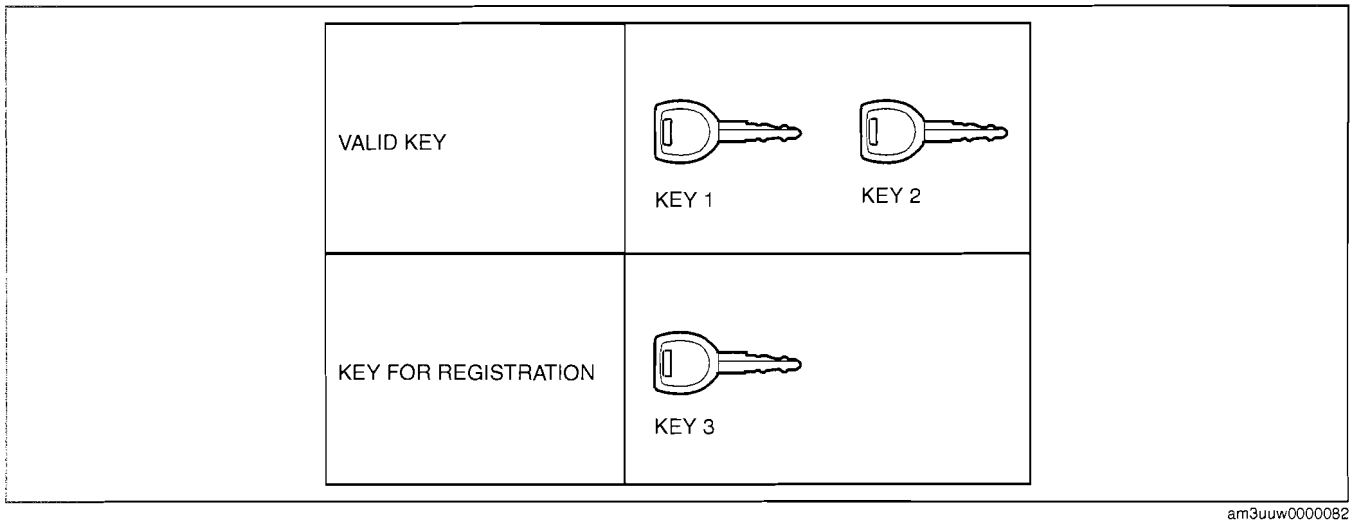
Conditions

- Customer has two or more valid keys.

Note

- A maximum of eight keys can be registered for any one vehicle. If key registration is not successful and DTC 15 appears even though the procedure was performed properly, use the PID/data monitor function of the M-MDS and verify the number of keys that have been registered.
- If eight keys have already been registered, and it is necessary to register other keys, the previously registered key ID numbers must first be cleared. To clear the key ID numbers, refer to "09-14-20 No.3 Key Replacement Procedure (Clearing Previously Registered Key ID Numbers, Key Re-registration)".

Procedure



am3uuw0000082

1. Have one key (key 3) ready for registration.
2. Using key 1, turn the ignition switch to the ON position.
3. Verify that the security light illuminates for **approx. 3 s** and then goes out.
4. Using key 1, turn the ignition switch to the LOCK position **within approx. 4 s** after the security light goes out.
5. Remove key 1
6. Repeat Steps 2—5 using key 2.
7. Repeat Steps 2—5 using key 3.
8. If additional keys need to be registered, repeat Steps 1—7 in the same manner as key 3.

No.2 Additional Key Registration Procedure (Using the M-MDS)

Conditions

- Customer has only one valid key. Or customer has no valid keys. (Can also be performed even if there are two or more valid keys)

Note

- A maximum of eight keys can be registered for any one vehicle. If key registration is not successful and DTC 15 appears even though the procedure was performed properly, use the PID/data monitor function of the M-MDS and verify the number of keys that have been registered.
- If eight keys have already been registered, and it is necessary to register other keys, the previously registered key ID numbers must first be cleared. To clear the key ID numbers, refer to "09-14-20 No.3 Key Replacement Procedure (Clearing Previously Registered Key ID Numbers, Key Re-registration)".

Procedure

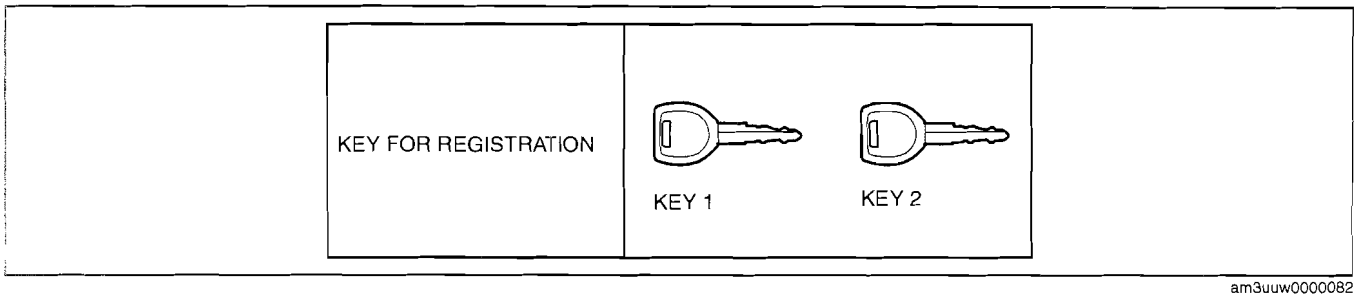
1. Have one key (key 1) ready for registration.
2. Using key 1, turn the ignition switch to the ON position.

Note

- Although the security light flashes and DTC 15 is displayed, this does not indicate an improper procedure. Continue to perform the procedure as indicated.

3. Connect the M-MDS to the DLC-2.
4. Select "Body/Security/PATS function" from the M-MDS screen menu.
5. Perform security access as indicated on the M-MDS screen. (See 09-14-21 No.6 Security Access Procedure.)
6. Select "Program Additional Ignition Key" from the M-MDS screen menu.

No.3 Key Replacement Procedure (Clearing Previously Registered Key ID Numbers, Key Re-registration) Procedure



am3uuw0000082

1. Have two or more keys (key 1, key 2) ready for registration after the clearing the key ID numbers.
2. Using key 1, turn the ignition switch to the ON position.

Note
- Although the security light flashes and DTC 15 is displayed, this does not indicate an improper procedure. Continue to perform the procedure as indicated.

3. Connect the M-MDS to the DLC-2.
4. Select "Body/Security/PATS function" from the M-MDS screen menu.
5. Perform security access as indicated on the M-MDS screen. (See 09-14-21 No.6 Security Access Procedure.)
6. Select "Ignition key ID number Erase" from the M-MDS screen menu and perform the tasks according to the M-MDS screen.

No.4 Changing the Method for Registering Additional Keys

Note
- This procedure is for changing the enable/disable setting of the "No.1 Additional Key Registration Procedure (Using Two Valid Keys)".
- The default setting for new vehicles and new instrument cluster replacement is "Enabled".
- By disabling the "No.1 Additional Key Registration Procedure (Using Two Valid Keys)", only the M-MDS can be used to register additional keys, thereby preventing two valid keys from being used to create an unauthorized spare key. This function is for use by rental car or other companies with vehicle fleets.

Procedure

1. Using any key, turn the ignition switch to the ON position. (Either a valid or an unregistered key can be used.)

Note
- When using an unregistered key, although the security light flashes and DTC 15 is displayed, this does not indicate an improper procedure. Continue to perform the procedure as indicated.

2. Connect the M-MDS to the DLC-2.
3. Select "Body/Security/PATS function" from the M-MDS screen menu.
4. Perform security access as indicated on the M-MDS screen. (See 09-14-21 No.6 Security Access Procedure.)
5. Select either "Customer Spare Key Programming Enable" or "Customer Spare Key Programming Disable" from the M-MDS screen menu. Depending on the selected menu, the additional key registration method is as shown below:

Setting	Additional key registration method	
	Procedure using two valid keys	Procedure using the M-MDS
Customer spare key programming enable	x	x
Customer spare key programming disable	-	x

x : Procedure is possible
- : Procedure is not possible

6. After verifying that the PATS function menu is displayed again on the M-MDS screen, select "Exit" to complete the M-MDS function.
7. After Step 6, wait **10 s or more** and then turn the ignition switch to the LOCK position.

No.5 Resetting Procedure for the Immobilizer System when Replacing the PCM or Instrument Cluster

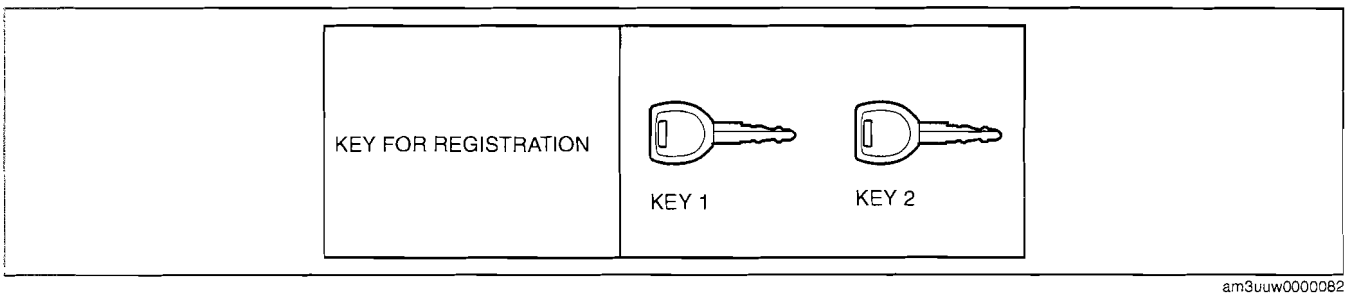
Conditions

- When replacing only the PCM: No conditions.
- When replacing only the instrument cluster: Customer has two or more valid keys after replacement tasks.
- When replacing the PCM and the instrument cluster: Customer has two or more valid keys after replacement.

Caution

- **When replacing the PCM and the instrument cluster at the same time, follow the same instructions described in the procedure for "when replacing the instrument cluster".**
- **When replacing only the PCM, start from Step 2. Also, when key 1 is indicated within the procedure, any valid key can be used.**
- **Before starting Step 1, complete the procedure for PCM and instrument cluster replacement.**

Procedure



am3uuw0000082

1. Have two or more keys (key 1, key 2) ready for registration.
2. Using key 1, turn the ignition switch to the ON position.

Note

- When replacing only the PCM: The security light illuminates **for 3 s** and then goes out.
- When replacing the instrument cluster: Although the security light flashes and DTC 15 is displayed, this does not indicate an improper procedure. Continue to perform the procedure as indicated.

3. Connect the M-MDS to the DLC-2.
4. Select "Body/Security/PATS function" from the M-MDS screen menu.
5. Perform security access as indicated on the M-MDS screen. (See 09-14-21 No.6 Security Access Procedure.)
6. Select "Parameter Reset" from the M-MDS screen menu.
7. Perform security access again as indicated on the M-MDS screen. (See 09-14-21 No.6 Security Access Procedure.)
8. Select the replaced part as indicated on the M-MDS screen.
   - When replacing only the PCM: Select "PCM".
   - When replacing only the instrument cluster: Select "HEC".

Note

- At this time, do not select any other parts from the M-MDS screen menu.

9. Perform the tasks according to the M-MDS screen.

No.6 Security Access Procedure

Note

- Security access must be performed when performing the following functions: "Program Additional Ignition Key", "Ignition Key ID Number Erase", "Customer Spare Key Programming Enable/Disable" and "Parameter Reset".

Procedure

1. Connect the M-MDS to the DLC-2.
2. Select "Body/Security/PATS function" from the M-MDS screen menu.
3. Security access is started and the M-MDS displays "Outcode".

Caution

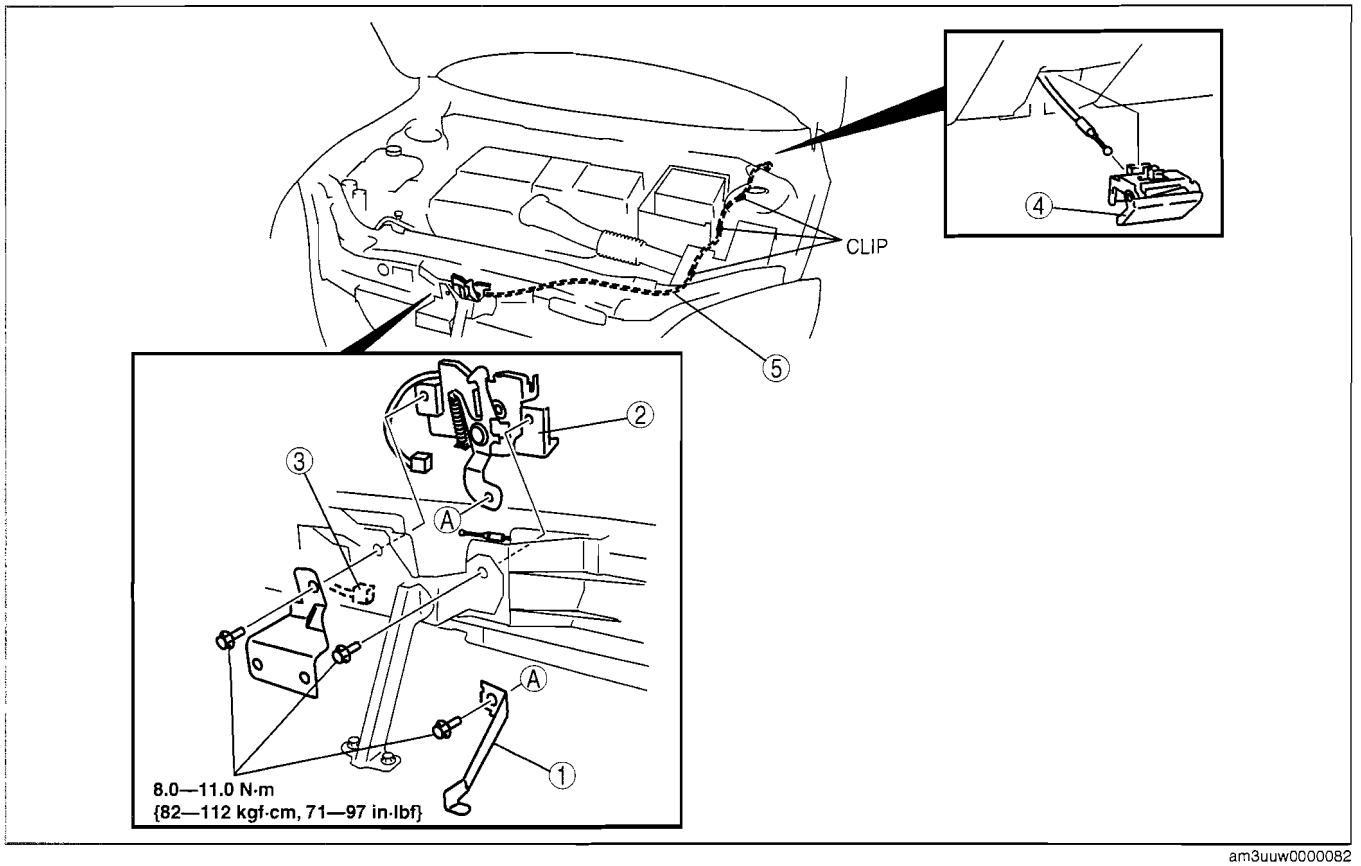
- **After reading out the outcode, do not turn ignition switch from LOCK to ON position 5 times, otherwise the outcode value will be changed.**

4. Input the corresponding "Incode" for the "Outcode" displayed on the M-MDS screen.
5. After successfully performing security access, "Program Additional Ignition Key", "Ignition key ID number Erase" or "Customer Spare Key Programming Enable/Disable" is displayed on the M-MDS screen. When performing "Parameter Reset", security access is requested two times and after successfully performing it the second time, "Replacement Module" is displayed.

HOOD LATCH AND RELEASE LEVER REMOVAL/INSTALLATION

id091400805300

1. To remove the hood release cable, remove the following parts:
   (1) Battery (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
   (2) Fresh-air duct (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[LF, L3].)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.
4. Adjust the hood. (See 09-10-4 HOOD ADJUSTMENT.)



am3uuw0000082

1	Lever (5 door)
2	Hood latch
3	Hood latch switch connector

4	Hood release lever (See 09-14-22 Hood Release Lever Removal Note.)
5	Hood release cable

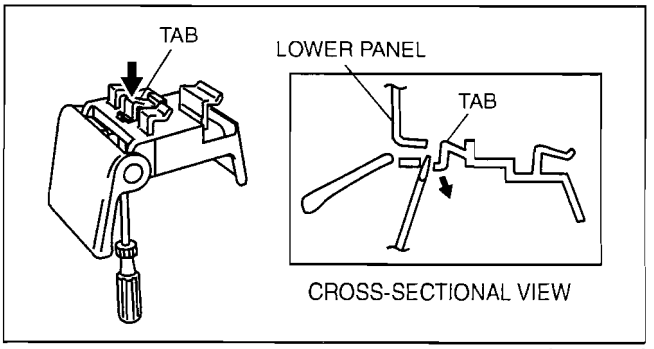
Hood Release Lever Removal Note

1. Pull the lever.
2. While pushing the tab in the direction of the arrow using a tape-wrapped, small flathead screwdriver, detach it from the lower panel.

Caution

- **Be careful not to damage the hood release cable when removing the hood release lever with the flathead screwdriver.**

3. Under the condition in Step 2, pull the hood release lever outward, then remove it from the lower panel.

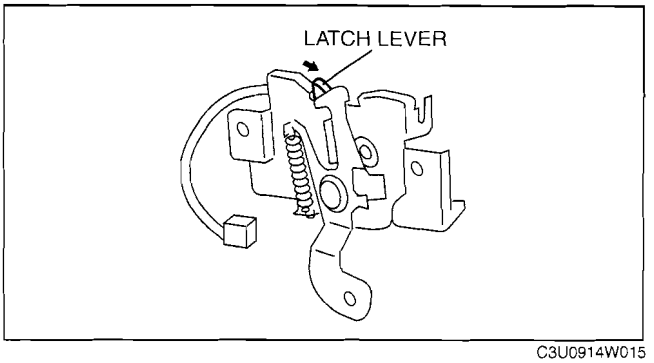


am3uuw0000083

HOOD LATCH SWITCH INSPECTION

id091400805400

1. When inspecting the latch, press the latch lever using a flathead screwdriver or a similar tool.



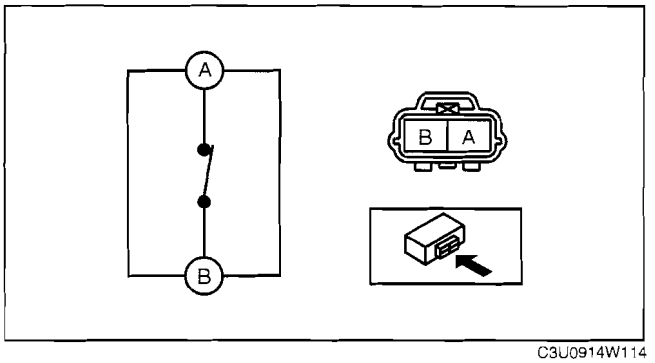
C3U0914W015

2. Inspect for continuity between the hood latch switch terminals.
   - If not as specified, replace the hood latch.

O—O : Continuity

Latch condition	Terminal	
	A	B
Latch (hood is closed)		
Unlatch (hood is open)	O	O

C3U0914W123

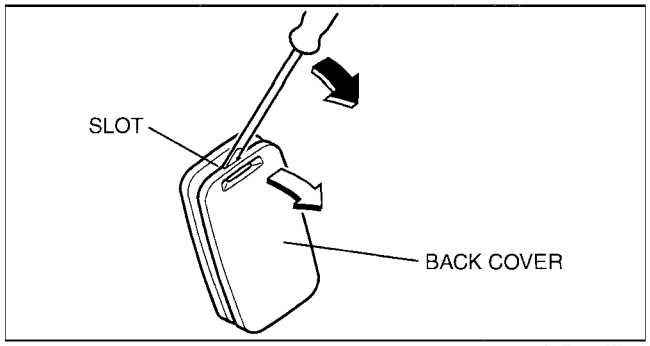


C3U0914W114

TRANSMITTER BATTERY REPLACEMENT

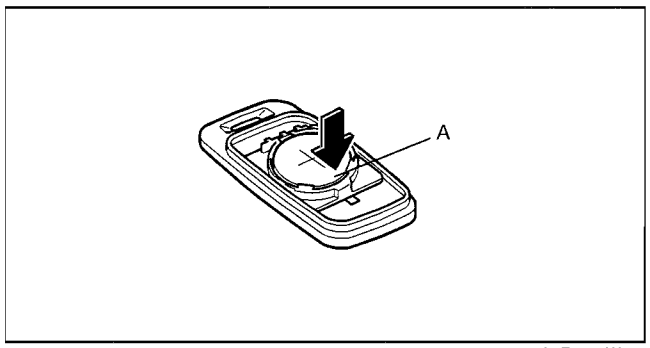
id091400805700

1. Insert a small flathead screwdriver into the slot and gently pry open the transmitter.



A6E7718W001

2. Press the portion of the battery indicated by A and remove the battery.
3. Install a new battery (CR2025) into the front portion of the holder with the positive pole (+) facing up. Press on the B portion of the battery to set the battery.



A6E7718W002

4. Align the front and back covers and snap the transmitter shut.

Battery specification
Lithium CR2025 × 1

Note
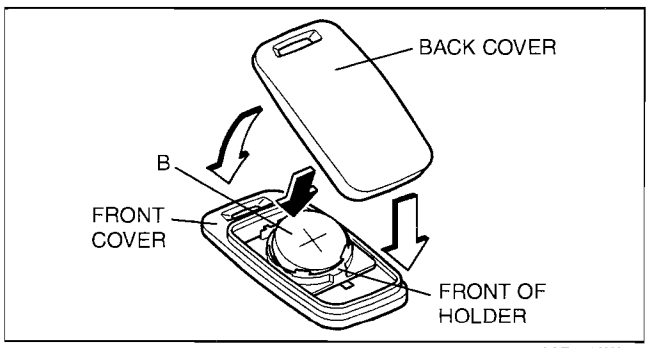
- The batteries will last about **2 years** when used **10 times** a day.



A6E7718W003

TRANSMITTER BATTERY INSPECTION

id091400805800

Caution

- **Since the battery voltage does not drop fully if the button is pushed for only 4 s or less, sufficient battery voltage cannot be determined. Always push the button for 5 s.**

Note

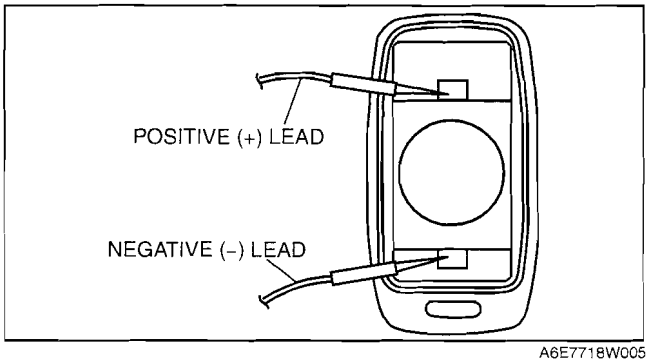
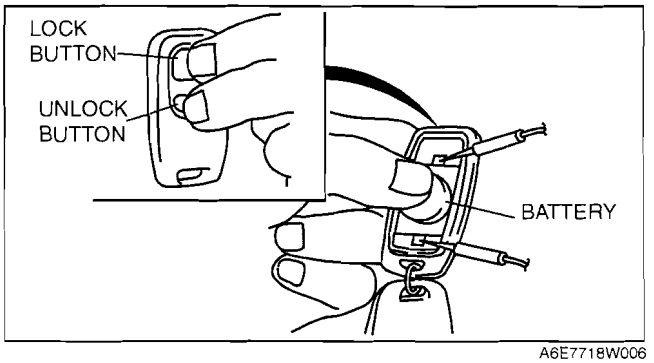
- A correct measurement cannot be obtained if the battery temperature is low. Make sure the battery is at **18 °C {64 °F} or more** for **at least 30 min** before reinspecting if a measurement value is under the standard voltage.

1. Remove the transmitter cover.
2. Apply the ohmmeter leads to the positions as indicated in the figure.



A6E7718W005

3. While pressing the battery as shown in the figure, press the LOCK and UNLOCK buttons on the transmitter at the same time to start measurement of the voltage.
4. Release the buttons after **5 s**.
5. Verify that the minimum voltage is the standard voltage or more for **10 s** after starting measurement.
   - If the voltage is under the standard voltage, replace the battery.



A6E7718W006

Standard voltage
2.7 V

TRANSMITTER ID CODE REGISTRATION

id091400805900

Note

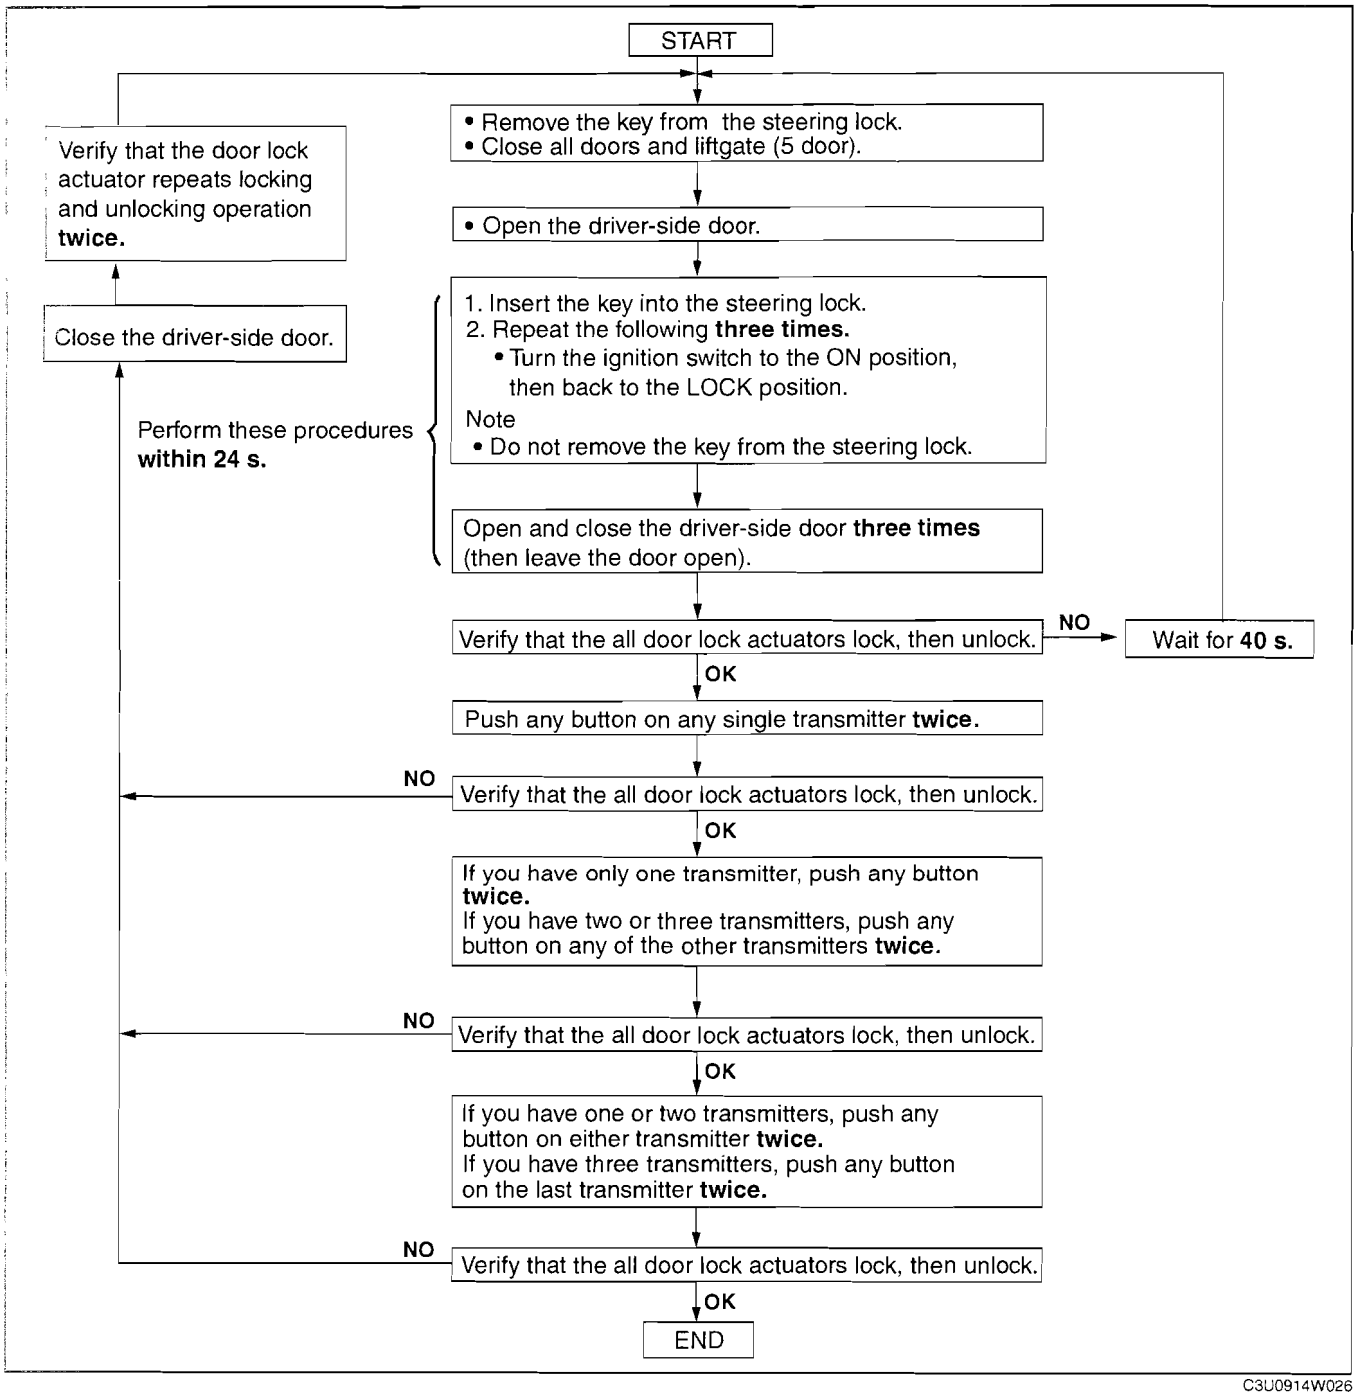
- When registering the ID code into a keyless control module, verify that other transmitters are not being operated in the vicinity.
- After ID code registering, remove the key from the steering lock and verify that all doors lock/unlock normally using the transmitter.

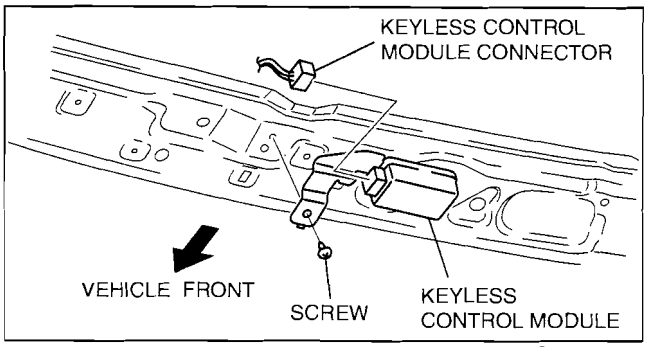


C3U0914W026

KEYLESS CONTROL MODULE REMOVAL/INSTALLATION

id091400806300

1. Disconnect the negative battery cable.
2. Remove the map light. (See 09-18-23 MAP LIGHT REMOVAL/INSTALLATION.)
3. Disconnect the keyless control module connector.
4. Remove the screw, then remove the keyless control module.
5. Install in the reverse order of removal.
6. When replacing the keyless control module, register the transmitter ID codes. (See 09-14-26 TRANSMITTER ID CODE REGISTRATION.)



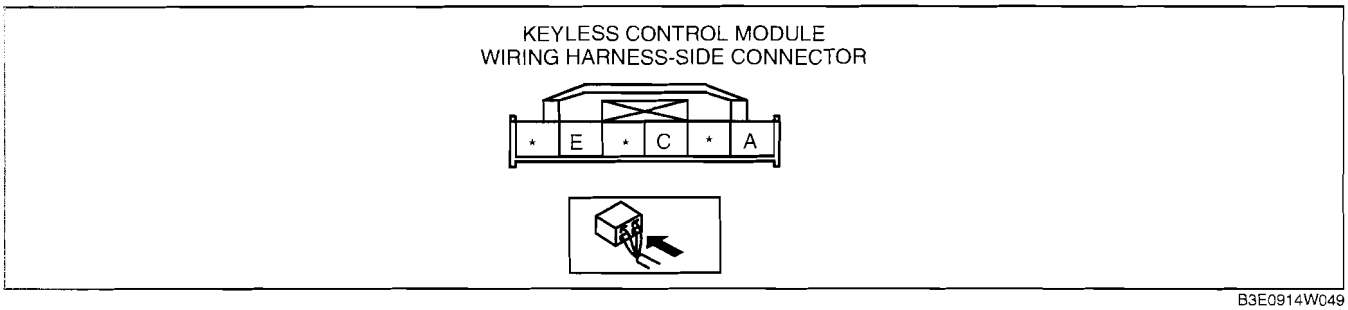
C3U0914W013

KEYLESS CONTROL MODULE INSPECTION

id091400806400

1. Measure the voltage or inspect for continuity according to the Terminal Voltage Table (Reference).
   - If the voltage is not as specified in the Terminal Voltage Table (Reference), inspect the parts under "Inspection item(s)" and related wiring harnesses.
2. If the system does not work properly even though the inspection items or related wiring harnesses do not have any malfunction, perform symptom troubleshooting [KEYLESS ENTRY SYSTEM].

Terminal Voltage Table (Reference)



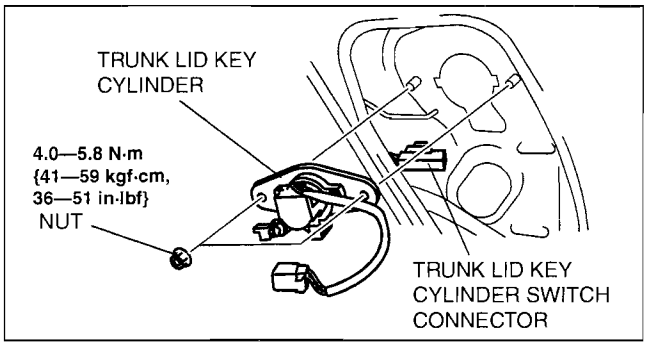
B3E0914W049

Terminal	Signal name	Connected to	Measured condition	Voltage (V)/ Continuity	Inspection item(s)
A	Power supply	PJB	Under any condition	B+	• PJB (See 09-40-3 PASSENGER JUNCTION BOX (PJB) INSPECTION.) • Related wiring harnesses
C	Data	PJB	Under any condition: Inspect the wiring harness between the keyless control module and PJB terminal J-04 F for continuity.	Continuity detected	• PJB (See 09-40-3 PASSENGER JUNCTION BOX (PJB) INSPECTION.) • transmitter (See 09-14-25 TRANSMITTER BATTERY INSPECTION.) • Related wiring harnesses
E	GND	Body ground	Under any condition: Inspect for continuity to ground.	Continuity detected	GND

TRUNK LID KEY CYLINDER REMOVAL/INSTALLATION

id091400810900

1. Disconnect the negative battery cable.
2. Remove the trunk lid trim. (See 09-17-22 TRUNK LID TRIM REMOVAL/INSTALLATION.)
3. Detach the rod from the trunk lid key cylinder.
4. Disconnect the trunk lid key cylinder connector.
5. Remove the nuts, then remove the trunk lid key cylinder.
6. Install in the reverse order of removal.



B3E0914W007

TRUNK LID KEY CYLINDER SWITCH INSPECTION

id091400811000

1. Inspect for continuity between the trunk lid key cylinder push switch terminals.
   - If not as specified, replace the trunk lid key cylinder.

O—O : Continuity

Operation	Terminal	
	A	B
On (Unlock)	O	O
Off

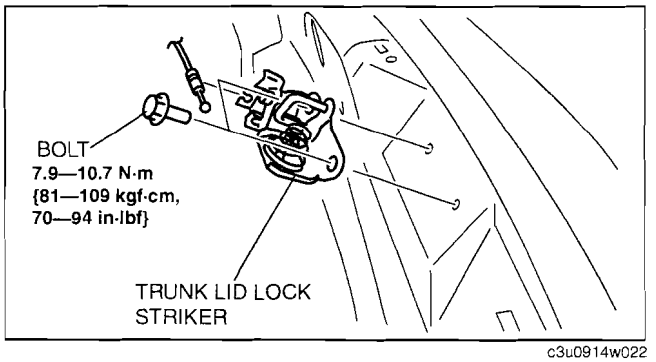
TRUNK LID LOCK STRIKER REMOVAL/INSTALLATION

id091400811300

1. Remove the trunk end trim. (See 09-17-21 TRUNK END TRIM REMOVAL/INSTALLATION.)
2. Detach the trunk lid opener cable.
3. Remove the bolts, then remove the trunk lid striker.
4. Install in the reverse order of removal.
5. Adjust the trunk lid. (See 09-10-7 TRUNK LID ADJUSTMENT.)



c3u0914w022

TRUNK LID OPENER REMOVAL/INSTALLATION

id091400812100

1. To remove the trunk lid opener lever, remove the following part:
   (1) Front scuff plate (Driver's side) (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
2. When removing the trunk lid opener cable, perform the following procedure:
   (1) Remove the following parts:
      1) Trunk end trim (See 09-17-21 TRUNK END TRIM REMOVAL/INSTALLATION.)
      2) Rear seat (See 09-13-6 REAR SEAT REMOVAL/INSTALLATION.)
      3) Rear scuff plate (Driver's side) (See 09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
      4) Tire house trim (Driver's side) (See 09-17-15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
      5) B-pillar lower trim (Driver's side) (See 09-17-12 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (2) Partially peel back the floor covering so that the trunk lid opener cable can be removed.
   (3) Remove the trunk lid opener cable from the trunk lid lock striker.
   (4) Remove the trunk lid opener cable from the clips A.
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.

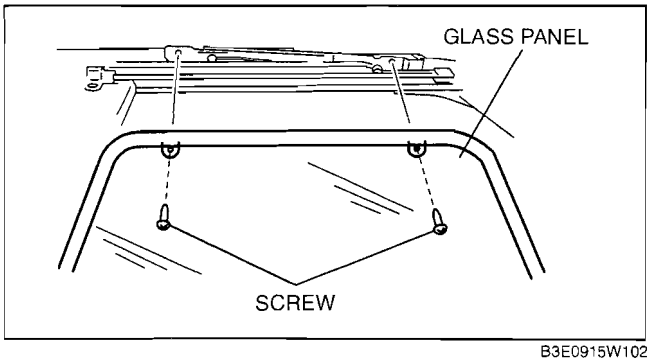
GLASS PANEL REMOVAL/INSTALLATION

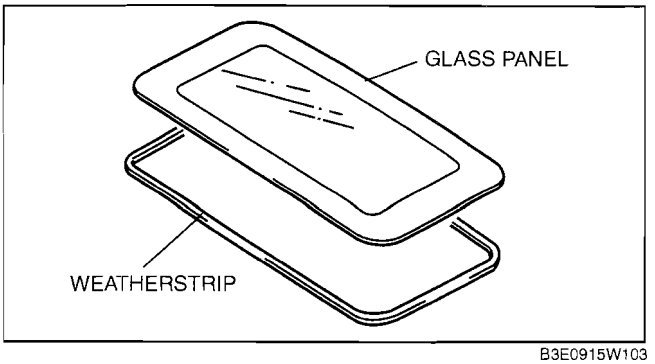
id091500800500

1. Fully close the glass panel.
2. Fully open the sunshade.
3. Remove the screws, then remove the glass panel.



B3E0915W102

4. Remove the weatherstrip from the glass panel.
5. Install in the reverse order of removal.
6. Adjust the glass panel. (See 09-15-3 GLASS PANEL ADJUSTMENT.)



B3E0915W103

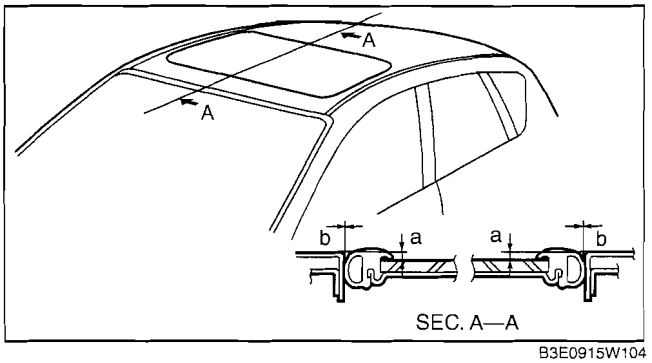
GLASS PANEL ADJUSTMENT

id091500800600

1. Fully close the glass panel.
2. Measure the gap and height difference between the glass panel and the body.
3. Loosen the glass panel installation screws and move the glass panel to adjust.

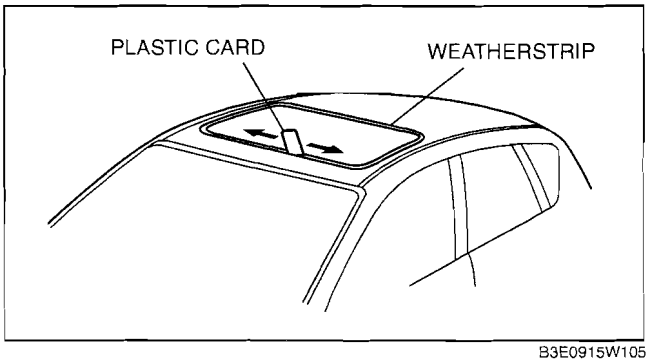
   Standard clearance
   a: 0.2—2.2 mm {0.008—0.08 in}
   b: 0 mm {0 in}

4. Tighten the screws.



B3E0915W104

5. Insert any available thin plastic card between the weatherstrip and the body, and verify that they are sealed. (There is resistance when the plastic card is moved.)
   - If they are not sealed, perform Steps 3—4 and adjust again.

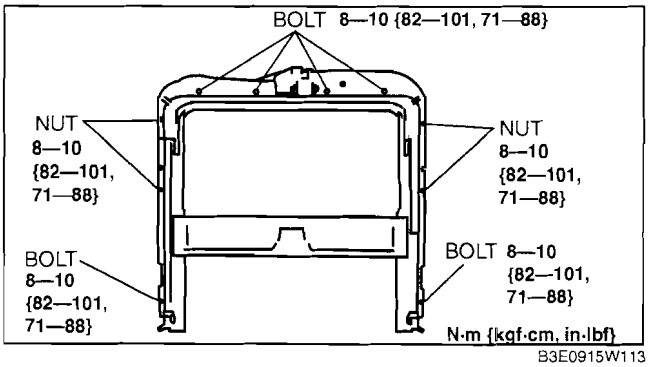


B3E0915W105

SUNROOF UNIT REMOVAL/INSTALLATION

id091500800700

1. Disconnect the negative battery cable.
2. Remove the following parts:
   (1) Console (4 door) (See 09-17-10 CONSOLE REMOVAL/INSTALLATION.)
   (2) A-pillar trim (See 09-17-11 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (3) Upper anchor of the front seat belt (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (4) Front scuff plate (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (5) Rear scuff plate (See 09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (6) B-pillar lower trim (See 09-17-12 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (7) B-pillar upper trim (See 09-17-12 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
   (8) Rear seat (See 09-13-6 REAR SEAT REMOVAL/INSTALLATION.)
   (9) Tire house trim (See 09-17-15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
   (10)Trunk side upper trim (5 door) (See 09-17-21 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION.)
   (11)C-pillar trim (See 09-17-13 C-PILLAR TRIM REMOVAL/INSTALLATION.)
   (12)Map light (See 09-18-23 MAP LIGHT REMOVAL/INSTALLATION.)
   (13)Sunvisor (See 09-17-23 SUNVISOR REMOVAL/INSTALLATION.)
   (14)Assist handle (See 09-17-24 ASSIST HANDLE REMOVAL/INSTALLATION.)
   (15)Headliner (See 09-17-24 HEADLINER REMOVAL/INSTALLATION.)
   (16)Head impact pad (See 09-17-16 HEAD IMPACT PAD REMOVAL/INSTALLATION.)
   (17)Glass panel (See 09-15-2 GLASS PANEL REMOVAL/INSTALLATION.)
3. Disconnect the front and rear drain hoses from the sunroof frame.
4. Remove the bolts and nuts, then remove the sunroof unit.
5. Install in the reverse order of removal.
6. Adjust the glass panel. (See 09-15-3 GLASS PANEL ADJUSTMENT.)

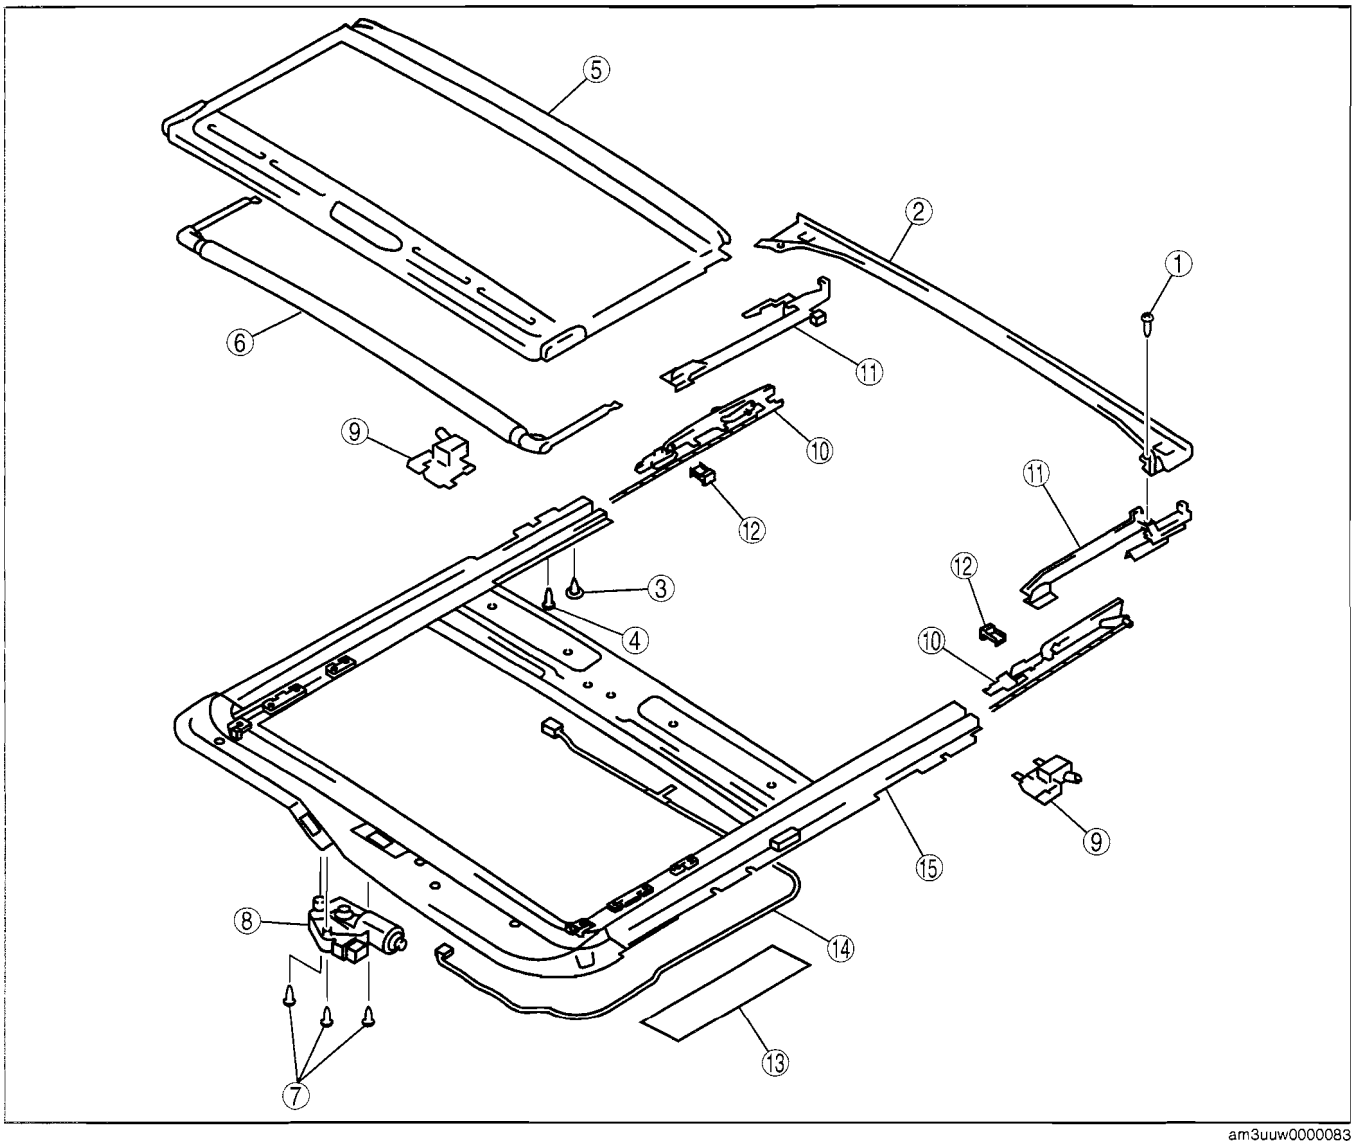


B3E0915W113

SUNROOF UNIT DISASSEMBLY/ASSEMBLY

id091500800800

1. Disassemble in the order indicated in the table.
2. Assemble in the reverse order of disassembly.



am3uuw0000083

1	Screw A
2	Drip rail
3	Sunshade stopper
4	Screw B
5	Sunshade
6	Deflector
7	Screw C
8	Sunroof motor (See 09-15-5 Sunroof Motor Assembly Note.)

9	Rear drip (See 09-15-5 Rear Drip Assembly Note.)
10	Guide
11	Decoration link
12	Front drip
13	Tape protector
14	Short cord
15	Frame

Rear Drip Assembly Note

Note
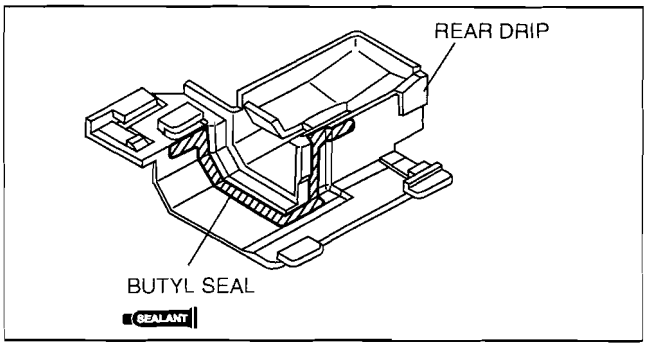
- If the rear drip is removed, butyl seal must be applied when re-installing.

1. Apply a **6.0—8.0 mm {0.24—0.31 in}** wide line of butyl seal to the area shown in the figure.



am3uuw0000083

Sunroof Motor Assembly Note

Note
- If the guide is removed, initial position setting of the sunroof motor will be required. After installing the sunroof unit, perform initial position setting using the following procedure.

1. Press the TILT UP switch to fully tilt up the glass panel.
2. When the glass panel reaches the fully tilt up position, temporarily release the TILT UP switch and press it again **for approx. 13 s** continuously. Continue pressing the switch until the glass panel automatically stops at the fully tilt up position after reaching the mechanical lock position.
3. When the glass panel stops at the fully tilt up position, temporarily release the TILT UP switch, then press it again **within 5 s** and hold.

Note
- Press the TILT UP switch continuously until the glass panel opens to the fully open position, returns to the fully closed position and then stops.

4. Release the TILT UP switch when the glass panel stops at the fully closed position.

SUNROOF MOTOR REMOVAL/INSTALLATION

id091500805000

1. Disconnect the negative battery cable.
2. Remove the following parts:
   (1) Console (4 door) (See 09-17-10 CONSOLE REMOVAL/INSTALLATION.)
   (2) A-pillar trim (See 09-17-11 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (3) Upper anchor of the front seat belt (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (4) Front scuff plate (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (5) Rear scuff plate (See 09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (6) B-pillar lower trim (See 09-17-12 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (7) B-pillar upper trim (See 09-17-12 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
   (8) Rear seat (See 09-13-6 REAR SEAT REMOVAL/INSTALLATION.)
   (9) Tire house trim (See 09-17-15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
   (10)Trunk side upper trim (5 door) (See 09-17-21 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION.)
   (11)C-pillar trim (See 09-17-13 C-PILLAR TRIM REMOVAL/INSTALLATION.)
   (12)Map light (See 09-18-23 MAP LIGHT REMOVAL/INSTALLATION.)
   (13)Sunvisor (See 09-17-23 SUNVISOR REMOVAL/INSTALLATION.)
   (14)Assist handle (See 09-17-24 ASSIST HANDLE REMOVAL/INSTALLATION.)
   (15)Headliner (See 09-17-24 HEADLINER REMOVAL/INSTALLATION.)
3. Disconnect the sunroof motor connector.
4. Remove the screws, then remove the sunroof motor.
5. Install in the reverse order of removal.

Note

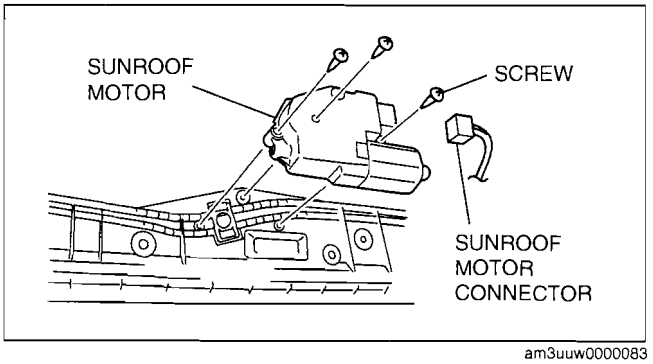
- If the glass panel or the sunroof motor is moved with the sunroof motor removed, initial position setting of the sunroof motor will be required. Perform initial position setting referring to the Sunroof Motor Assembly Note. (See 09-15-4 SUNROOF UNIT DISASSEMBLY/ASSEMBLY.)



am3uuw0000083

SUNROOF MOTOR INSPECTION

id091500801100

1. Measure the voltage at each terminal (other than terminal G).
   - If not as specified, inspect the parts listed under "Inspection item" and the related wiring harnesses.
2. Disconnect the negative battery cable.
3. Verify that continuity at terminal G is as indicated in the Terminal Voltage Table (Reference).
4. If the parts and wiring harnesses are normal but the system still does not work properly, replace the sunroof relay.

Terminal voltage table (Reference)

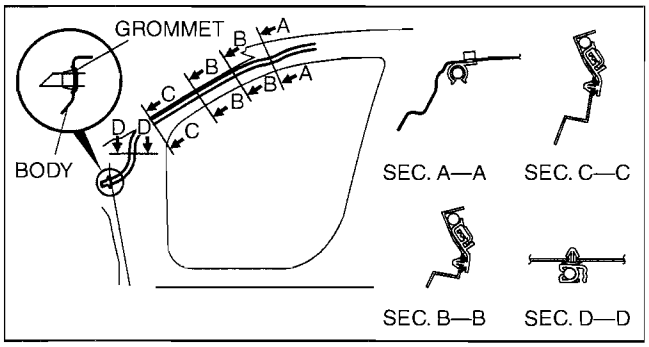
FRONT DRAIN HOSE REMOVAL

id091500801300

1. Remove the following parts:
   (1) Console (4 door) (See 09-17-10 CONSOLE REMOVAL/INSTALLATION.)
   (2) A-pillar trim (See 09-17-11 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (3) Upper anchor of the front seat belt (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (4) Front scuff plate (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (5) Rear scuff plate (See 09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (6) B-pillar lower trim (See 09-17-12 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (7) B-pillar upper trim (See 09-17-12 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
   (8) Rear seat (See 09-13-6 REAR SEAT REMOVAL/INSTALLATION.)
   (9) Tire house trim (See 09-17-15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
   (10)Trunk side upper trim (5 door) (See 09-17-21 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION.)
   (11)C-pillar trim (See 09-17-13 C-PILLAR TRIM REMOVAL/INSTALLATION.)
   (12)Map light (See 09-18-23 MAP LIGHT REMOVAL/INSTALLATION.)
   (13)Sunvisor (See 09-17-23 SUNVISOR REMOVAL/INSTALLATION.)
   (14)Assist handle (See 09-17-24 ASSIST HANDLE REMOVAL/INSTALLATION.)
   (15)Headliner (See 09-17-24 HEADLINER REMOVAL/INSTALLATION.)
   (16)Front door (See 09-11-3 FRONT DOOR REMOVAL/INSTALLATION.)
   (17)Dashboard (See 09-17-4 DASHBOARD REMOVAL/INSTALLATION.)
2. Disconnect the front drain hose from the sunroof frame.
3. Remove the front drain hose from the clips.
4. Pull the front drain hose into the vehicle interior and remove the front drain hose.



B3E0915W106

FRONT DRAIN HOSE INSTALLATION

id091500801400

Caution
- **If the front drain hose is pinched or bent at any point, the water in the hose may not drain and could leak inside the vehicle. During and after installation of the trims and headliner, always make sure there is no interference with the front drain hose. Correct any abnormality if found.**

1. Apply soapy water to the part of the sunroof frame where the front drain hose is inserted.
2. Insert the front drain hose end into the sunroof frame.
3. Install the front drain hose to the clips parallel to the pillar and free of looseness.
4. Insert the front drain hose grommet into the hole of the inner hinge pillar.
5. Install the following parts:
   (1) Dashboard (See 09-17-4 DASHBOARD REMOVAL/INSTALLATION.)
   (2) Front door (See 09-11-3 FRONT DOOR REMOVAL/INSTALLATION.)
   (3) Headliner (See 09-17-24 HEADLINER REMOVAL/INSTALLATION.)
   (4) Assist handle (See 09-17-24 ASSIST HANDLE REMOVAL/INSTALLATION.)
   (5) Sunvisor (See 09-17-23 SUNVISOR REMOVAL/INSTALLATION.)
   (6) Map light (See 09-18-23 MAP LIGHT REMOVAL/INSTALLATION.)
   (7) C-pillar trim (See 09-17-13 C-PILLAR TRIM REMOVAL/INSTALLATION.)

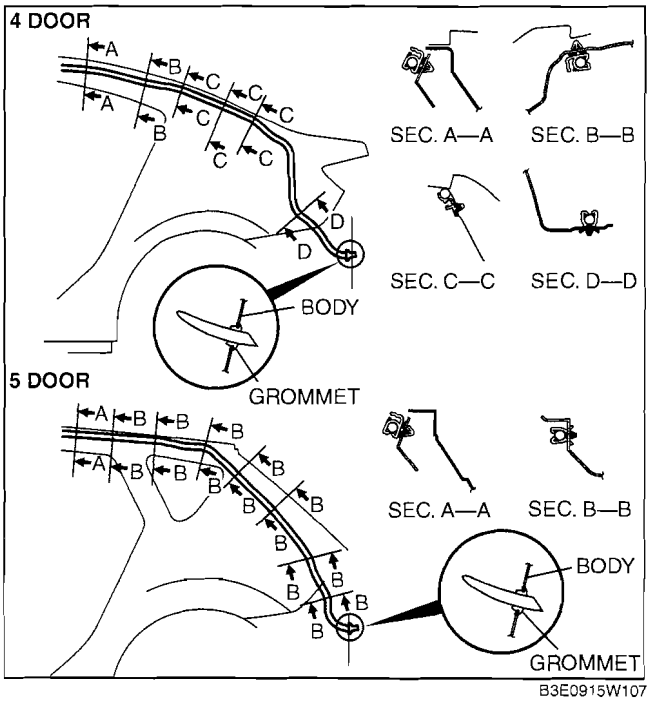
REAR DRAIN HOSE REMOVAL

id091500801500

1. Remove the following parts:
   (1) Console (4 door) (See 09-17-10 CONSOLE REMOVAL/INSTALLATION.)
   (2) A-pillar trim (See 09-17-11 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (3) Upper anchor of the front seat belt (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (4) Front scuff plate (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (5) Rear scuff plate (See 09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (6) B-pillar lower trim (See 09-17-12 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (7) B-pillar upper trim (See 09-17-12 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
   (8) Rear seat (See 09-13-6 REAR SEAT REMOVAL/INSTALLATION.)
   (9) Tire house trim (See 09-17-15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
   (10)Trunk end trim (See 09-17-21 TRUNK END TRIM REMOVAL/INSTALLATION.)
   (11)Trunk side upper trim (5 door) (See 09-17-21 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION.)
   (12)Trunk side trim (See 09-17-20 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
   (13)C-pillar trim (See 09-17-13 C-PILLAR TRIM REMOVAL/INSTALLATION.)
   (14)Map light (See 09-18-23 MAP LIGHT REMOVAL/INSTALLATION.)
   (15)Sunvisor (See 09-17-23 SUNVISOR REMOVAL/INSTALLATION.)
   (16)Assist handle (See 09-17-24 ASSIST HANDLE REMOVAL/INSTALLATION.)
   (17)Headliner (See 09-17-24 HEADLINER REMOVAL/INSTALLATION.)
2. Remove the sunroof frame from the rear drain hose.
3. Remove the rear drain hose from the clips.
4. Pull the rear drain hose into the vehicle interior and remove the rear drain hose.



B3E0915W107

REAR DRAIN HOSE INSTALLATION

id091500801600

Caution

- **If the rear drain hose is pinched or bent at any point, the water in the hose may not drain and could leak inside the vehicle. During and after installation of the trims and headliner, always make sure there is no interference with the rear drain hose. Correct any abnormality if found.**

1. Apply soapy water to the part of the sunroof frame where the rear drain hose is inserted.
2. Insert the rear drain hose end into the sunroof frame.
3. Install the rear drain hose to the clips parallel to the pillar and free of looseness.
4. Insert the rear drain hose grommet into the hole of the inner rear pillar.
5. Install the following parts:
   (1) Headliner (See 09-17-24 HEADLINER REMOVAL/INSTALLATION.)
   (2) Assist handle (See 09-17-24 ASSIST HANDLE REMOVAL/INSTALLATION.)
   (3) Sunvisor (See 09-17-23 SUNVISOR REMOVAL/INSTALLATION.)
   (4) Map light (See 09-18-23 MAP LIGHT REMOVAL/INSTALLATION.)
   (5) C-pillar trim (See 09-17-13 C-PILLAR TRIM REMOVAL/INSTALLATION.)
   (6) Trunk side trim (See 09-17-20 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
   (7) Trunk side upper trim (5 door) (See 09-17-21 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION.)
   (8) Trunk end trim (See 09-17-21 TRUNK END TRIM REMOVAL/INSTALLATION.)
   (9) Tire house trim (See 09-17-15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
   (10)Rear seat (See 09-13-6 REAR SEAT REMOVAL/INSTALLATION.)
   (11)B-pillar upper trim (See 09-17-12 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
   (12)B-pillar lower trim (See 09-17-12 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (13)Rear scuff plate (See 09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (14)Front scuff plate (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (15)Upper anchor of the front seat belt (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)

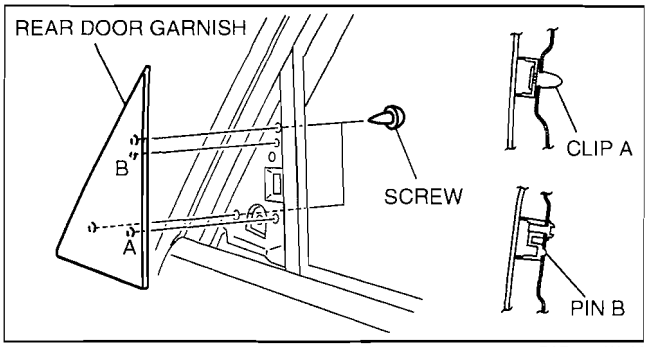
REAR DOOR GARNISH REMOVAL/INSTALLATION

id091600804200

1. Remove the sail garnish. (See09-17-9 SAIL GARNISH REMOVAL/INSTALLATION.)
2. Remove the screws.
3. Disengage clip A from the body by squeezing it from inside of the vehicle, and remove the rear door garnish.
4. Install in the reverse order of removal.

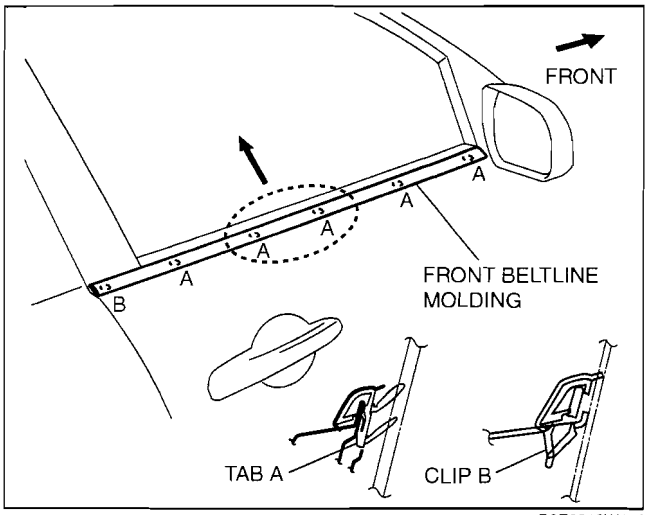


B3E0916W108

FRONT BELTLINE MOLDING REMOVAL/INSTALLATION

id091600804800

1. Remove the inner garnish. (See 09-17-18 INNER GARNISH REMOVAL/INSTALLATION.)
2. Remove the power outer mirror installation screws and move the mirror to access the front end of the front beltline molding. (See 09-12-32 POWER OUTER MIRROR REMOVAL/INSTALLATION.)
3. Raise the center of the front beltline molding and detach tabs A.
4. Using a small flathead screwdriver, detach clip B and remove the front beltline molding.
5. Install in the reverse order of removal.

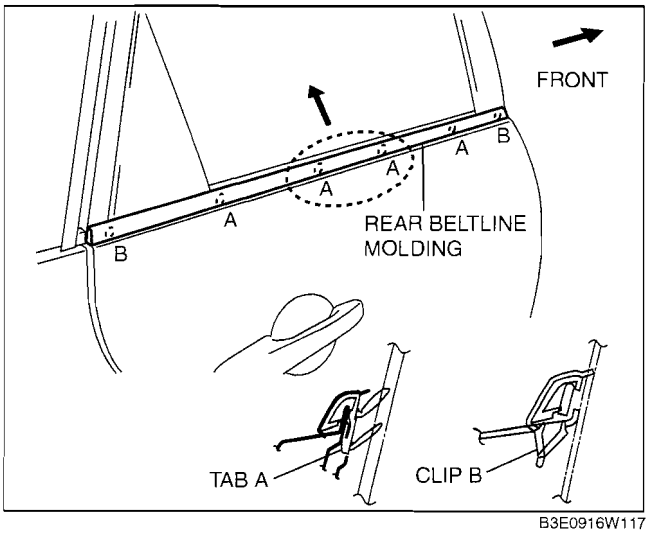


B3E0916W116

REAR BELTLINE MOLDING REMOVAL/INSTALLATION

id091600804700

1. Raise the center of the rear beltline molding and detach tabs A.
2. Using a small flathead screwdriver, detach clip B and remove the rear beltline molding.
3. Install in the reverse order of removal.

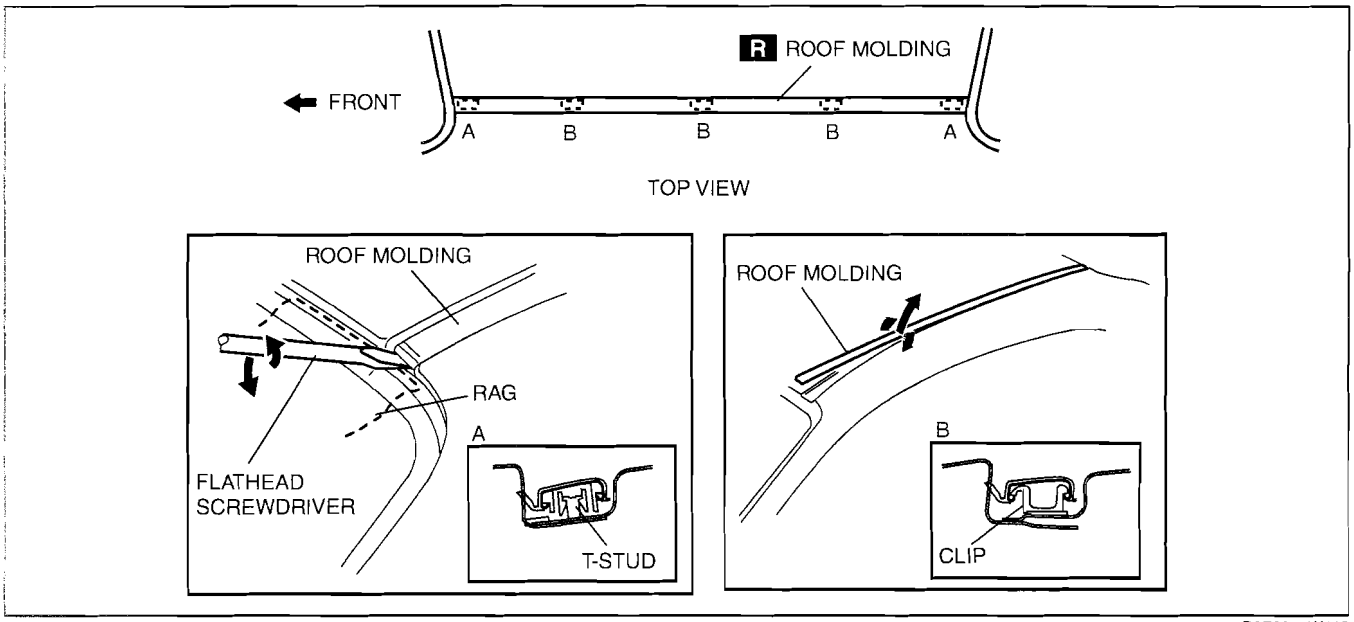


B3E0916W117

ROOF MOLDING REMOVAL

id091600800700

1. Detach the roof molding from the T-stud at section A, using a flathead screwdriver or equivalent tool.
2. While pulling the roof molding up, detach it from the clips at sections B, and then remove the roof molding.

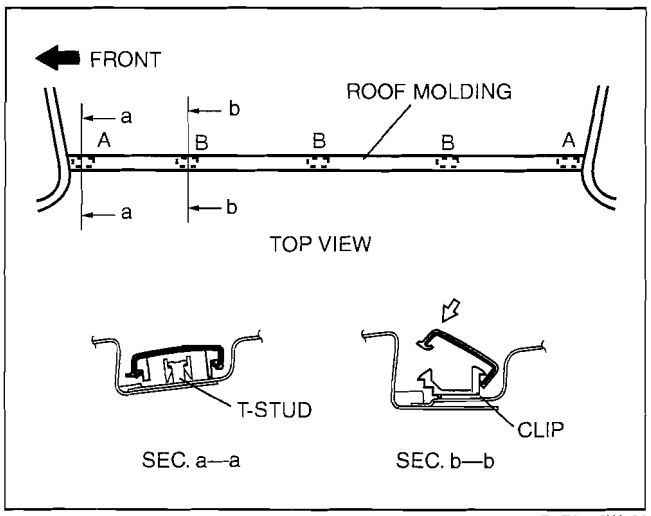


B3E0916W119

ROOF MOLDING INSTALLATION

id091600800800

1. Attach the roof molding to the T-stud at section A.
2. Hook the roof molding to clips B and press it in to attach.
3. Attach the roof molding to the T-stud at the rear portion of section A.



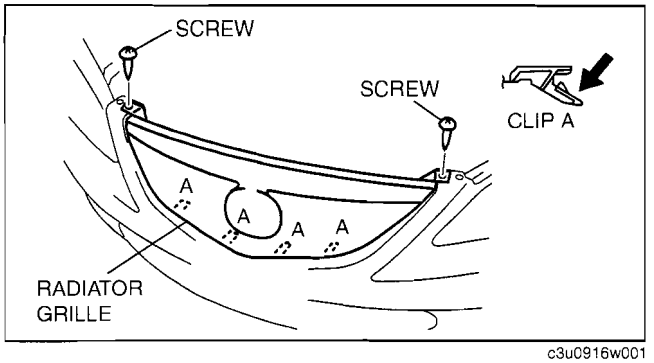
B3E0916W120

RADIATOR GRILLE REMOVAL/INSTALLATION

id091600800900

4 Door

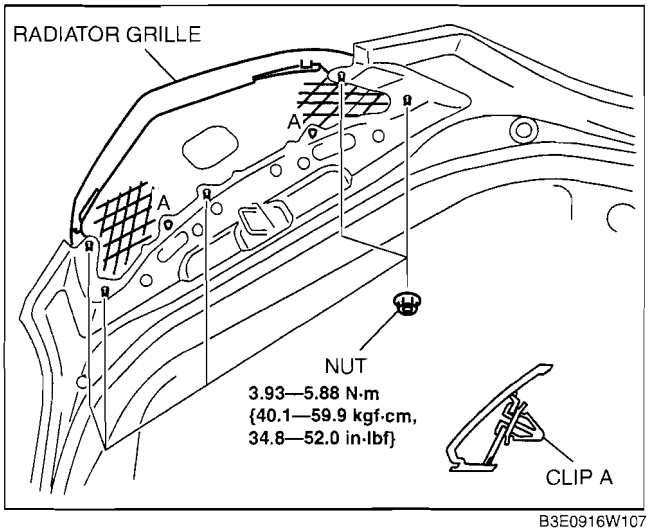
1. Remove the screws.
2. Press clip A in the direction of the arrow, pull the radiator grille outward and remove from the front bumper.
3. Install in the reverse order of removal.



c3u0916w001

5 Door

1. Remove the nuts.
2. Detach clips A and remove the radiator grille.
3. Install in the reverse order of removal.

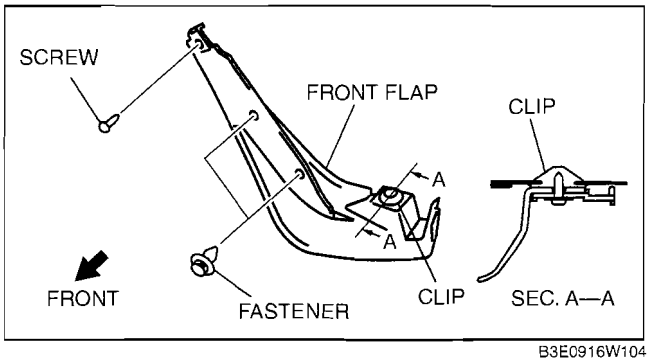


B3E0916W107

FRONT FLAP REMOVAL/INSTALLATION

id091600801900

1. Remove the screw and fasteners.
2. Detach the clip, then remove the front flap.
3. Install in the reverse order of removal.



B3E0916W104

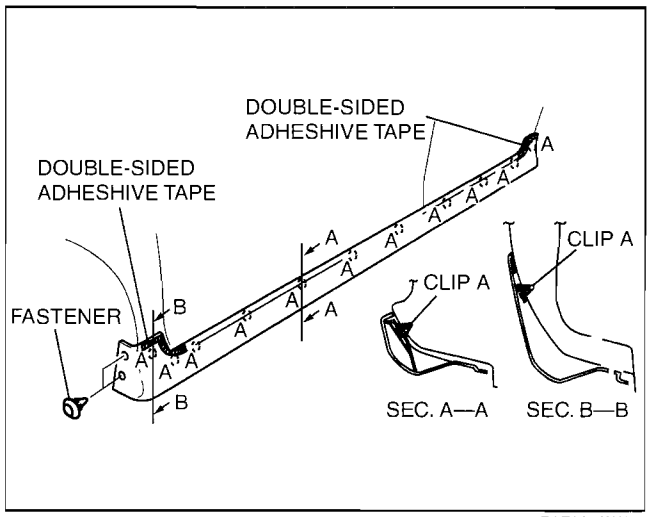
SIDE STEP MOLDING REMOVAL/INSTALLATION

id091600801800

1. Remove the fasteners.
2. While cutting the double-sided adhesive tape using a flathead screwdriver or a razor, separate the side step molding from the body.

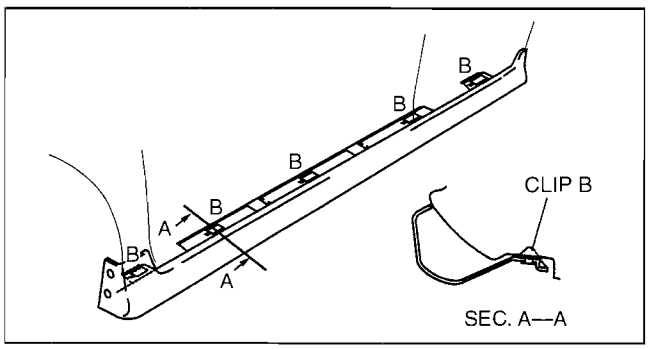
   Warning
   - **Using a razor with bare hands can cause injury. Always wear gloves when using a razor.**

3. Pull the side step molding outward, then disengage clips A from the body.



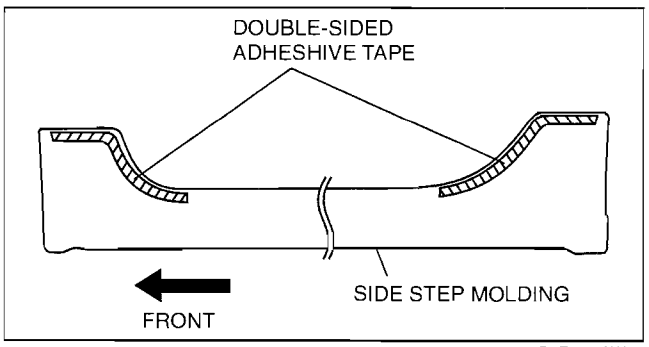
B3E0916W112

4. Slide the side step molding towards the front of the vehicle and remove clips B from the side step molding.
5. Remove the side step molding.



c3u0916w002

6. Install in the reverse order of removal.
   (1) Attach double-sided adhesive tape to the side step molding as shown in the figure.

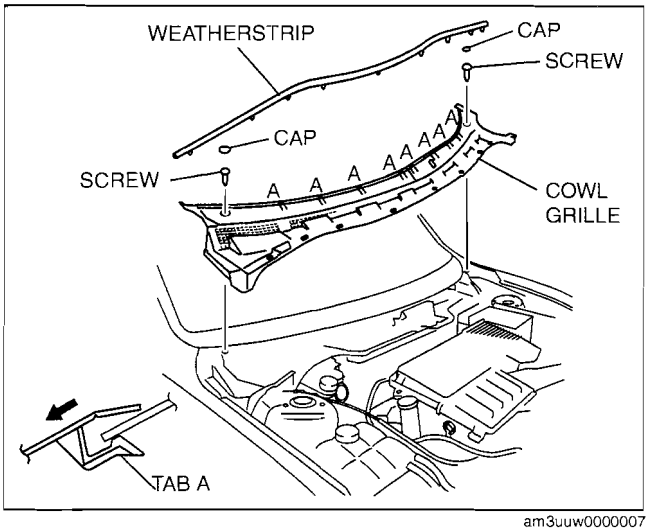


B3E0916W127

COWL GRILLE REMOVAL/INSTALLATION

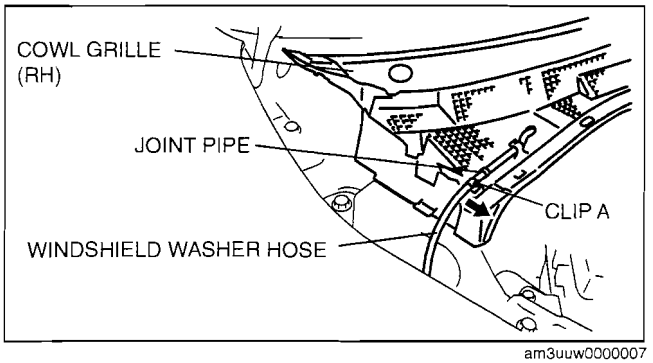
id091600801000

1. Remove the windshield wiper arm and blade. (See 09-19-3 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
2. Using a small flathead screwdriver, remove the caps.
3. Remove the screws.
4. Remove the weatherstrip.
5. Move the cowl grille in the direction indicated by the arrow and disengage tabs A from the windshield.



am3uuw0000007

6. Disconnect the joint pipe, then pull the windshield hose in the direction of the arrow and remove it from clip A.(Mazdaspeed3)
7. Remove the cowl grille.
8. Install in the reverse order of removal.



am3uuw0000007

SIDE PROTECTOR REMOVAL

id091600801100

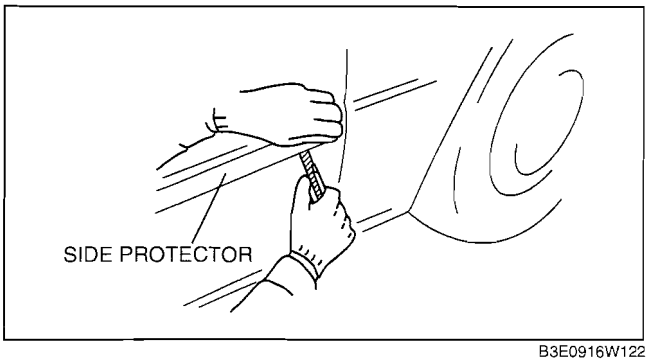
1. Pry the side protector end 20—30 mm {0.8—1.1 in} using a flathead screwdriver or a razor.

Warning

- **Using a razor with bare hands can cause injury. Always wear gloves when using a razor.**

Note

- The side protector is installed with double-sided adhesive tape. If the side protector is difficult to remove, warm the double-sided adhesive tape using a hot air blower.



B3E0916W122

2. Pull the side protector outward, then remove it from the body.

SIDE PROTECTOR INSTALLATION

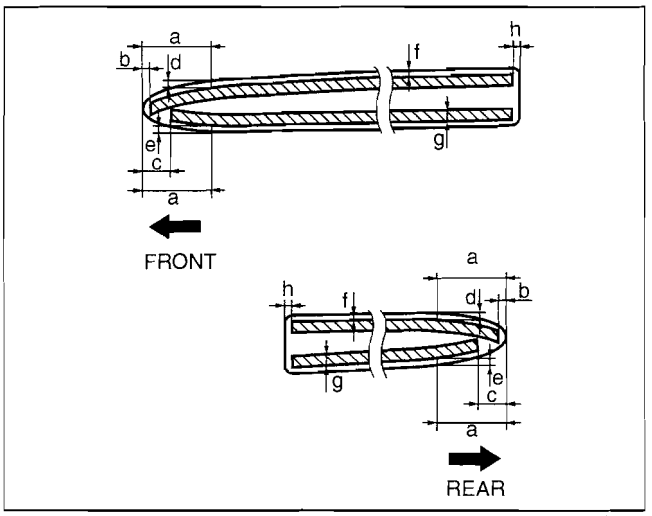
id091600801200

1. Remove the adhesive remaining on the side protector and the body using a razor.

Warning
- **Using a razor with bare hands can cause injury. Always wear gloves when using a razor.**

2. Remove any grease or dirt from the adhesion surface of the side protector and the body.
3. Attach double-sided adhesive tape to the side protector as shown in the figure.

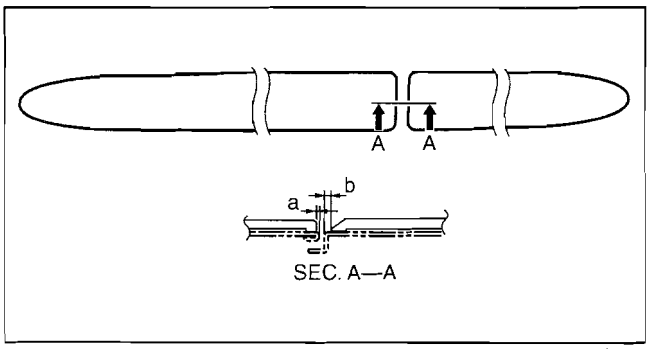
Clearance
a: 30 mm {1.2 in}
b: 2.0 mm {0.08 in}
c: 12 mm {0.47 in}
d: 3.0 mm {0.12 in}
e: 3.0 mm {0.12 in}
f: 1.0—3.0 mm {0.04—0.11 in}
g: 5.0 mm {0.2 in}
h: 1.0 mm {0.04 in}



B3E0916W110

4. Peel off the backing paper from the double-sided adhesive tape and attach the side protector onto the body as shown in the figure.

Clearance
a: 1.4—4.4 mm {0.056—0.17 in}
b: 3.0—6.0 mm {0.12—0.23 in}

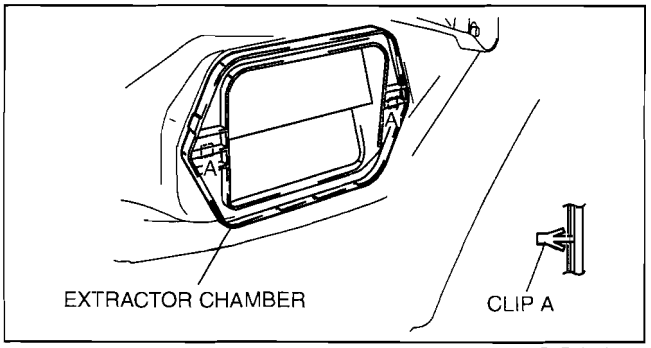


B3E0916W111

EXTRACTOR CHAMBER REMOVAL/INSTALLATION

id091600801500

1. Remove the following parts:
   (1) Trunk end trim (See 09-17-21 TRUNK END TRIM REMOVAL/INSTALLATION.)
   (2) Trunk side trim (See 09-17-20 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
   (3) Rear combination light (See 09-18-14 REAR COMBINATION LIGHT REMOVAL/INSTALLATION.)
   (4) Rear bumper (See 09-10-15 REAR BUMPER REMOVAL/INSTALLATION.)
2. Detach clips A by squeezing them from inside the vehicle, and remove the extractor chamber from the body.
3. Install in the reverse order of removal.



B3E0916W103

REAR SPOILER REMOVAL/INSTALLATION

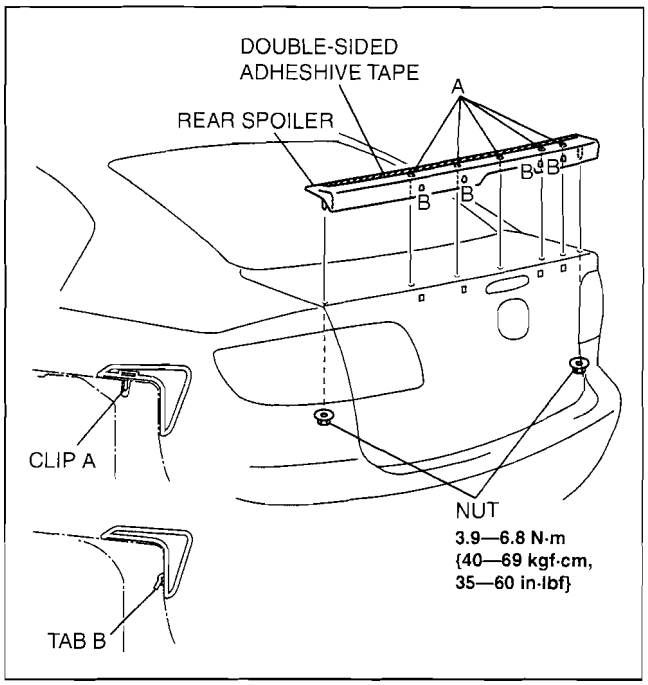
id091600801600

4 DOOR

1. Remove the nuts.
2. While cutting the double-sided adhesive tape using a flathead screwdriver or a razor, separate the rear spoiler from the trunk lid.

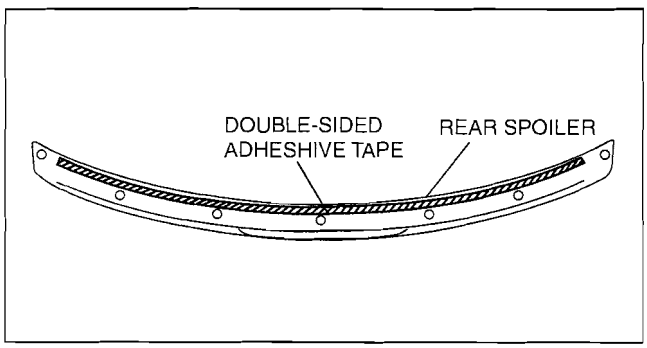
   Warning
   - **Using a razor with bare hands can cause injury. Always wear gloves when using a razor.**

3. Pull the rear spoiler upward, then disengage clips A and tabs B from the trunk lid.
4. Remove the rear spoiler.



am3uuw0000007

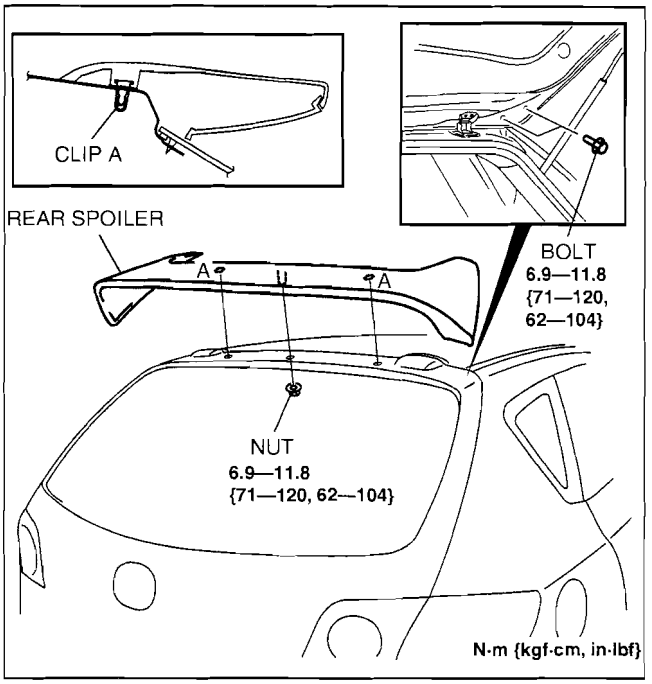
5. Install in the reverse order of removal.
   (1) Attach double-sided adhesive tape to the rear spoiler as shown in the figure.



am3uuw0000007

5 DOOR

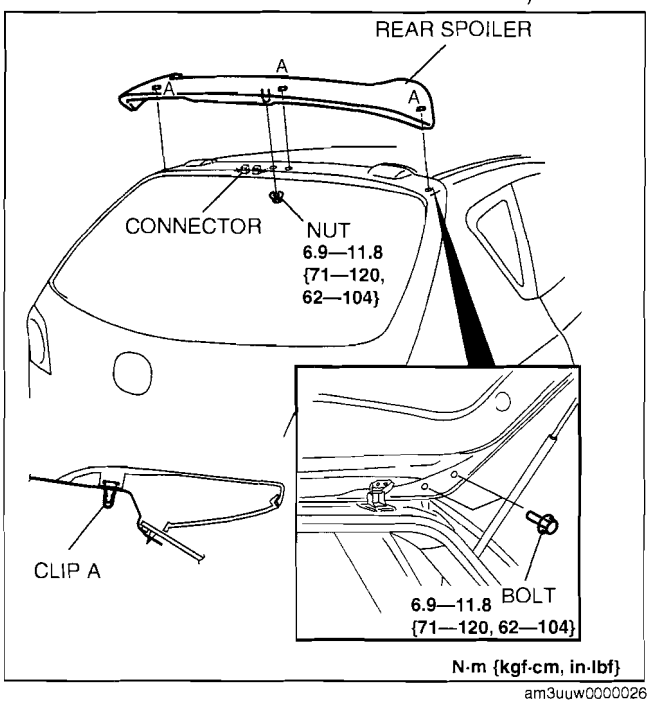
1. Remove the liftgate upper trim. (See09-17-22 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)
2. Remove the bolts and nut.
3. Pull the rear spoiler upward, then disengage clips A from the liftgate.
4. Remove the rear spoiler.
5. Install in the reverse order of removal.



am3uuw0000007

Mazdaspeed3

1. Disconnect the negative battery cable.
2. Remove the liftgate upper trim. (See 09-17-22 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)
3. Disconnect the connector.
4. Remove the bolts and nut.
5. Pull the rear spoiler upward, then disengage clips A from the liftgate.
6. Remove the rear spoiler.
7. Install in the reverse order of removal.



am3uuw0000026

REAR SPOILER DISASSEMBLY/ASSEMBLY

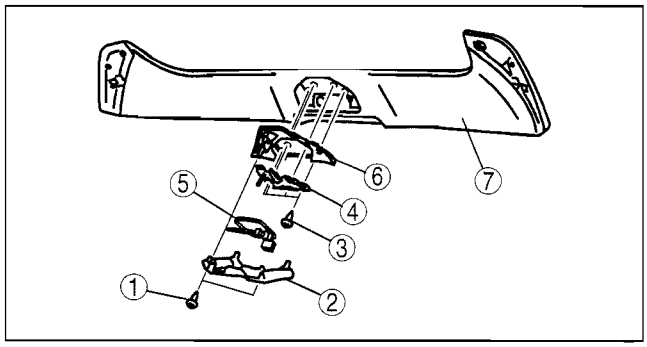
id091600803000

Mazdaspeed3

1. Disassemble in the order indicated in the table.

1	Screw
2	Cover
3	Screw
4	Bracket
5	Connector
6	Cover
7	Rear spoiler

2. Assemble in the reverse order of disassembly.



am3uuw0000026

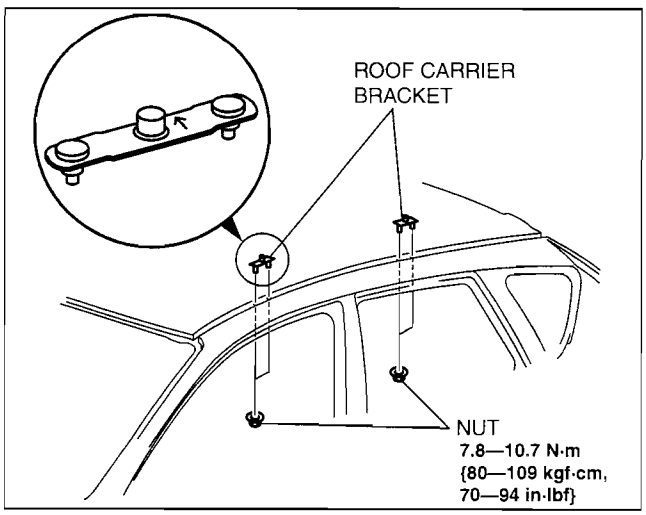
ROOF CARRIER BRACKET REMOVAL/INSTALLATION

id091600801700

1. Remove the following parts:
   (1) Console (4 door) (See 09-17-10 CONSOLE REMOVAL/INSTALLATION.)
   (2) A-pillar trim (See 09-17-11 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (3) Upper anchor of the front seat belt (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (4) Front scuff plate (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (5) Rear scuff plate (See 09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (6) B-pillar lower trim (See 09-17-12 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (7) B-pillar upper trim (See 09-17-12 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
   (8) Rear seat (See 09-13-6 REAR SEAT REMOVAL/INSTALLATION.)
   (9) Tire house trim (See 09-17-15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
   (10)Trunk side upper trim (5 door) (See 09-17-21 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION.)
   (11)C-pillar trim (See 09-17-13 C-PILLAR TRIM REMOVAL/INSTALLATION.)
   (12)Map light (See 09-18-23 MAP LIGHT REMOVAL/INSTALLATION.)
   (13)Sunvisor (See 09-17-23 SUNVISOR REMOVAL/INSTALLATION.)
   (14)Assist handle (See 09-17-24 ASSIST HANDLE REMOVAL/INSTALLATION.)
   (15)Headliner (See 09-17-24 HEADLINER REMOVAL/INSTALLATION.)
   (16)Roof molding (See 09-16-4 ROOF MOLDING REMOVAL.) (See09-16-4 ROOF MOLDING INSTALLATION.)
2. Remove the nuts.
3. Remove the roof carrier bracket.
4. install in the reverse order of removal.

Note

- Install the roof carrier bracket so that the arrow on it faces inward.



B3E0916W121

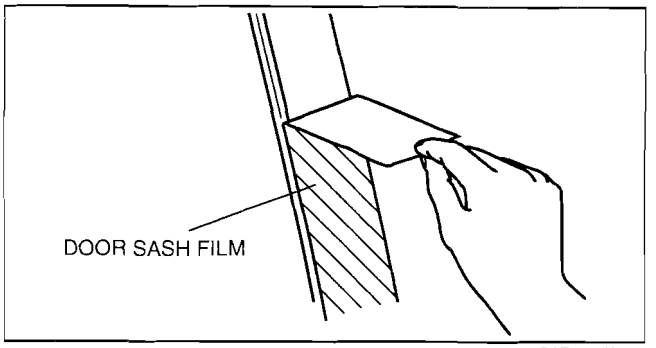
DOOR SASH FILM REMOVAL

id091600805600

1. Partially peel back the glass run channel.
2. Warm up the door sash film using a hot air blower.
3. Peel off the door sash film by pulling outward from one end.

Note

- Be sure to remove the door sash film slowly, because it can easily tear.

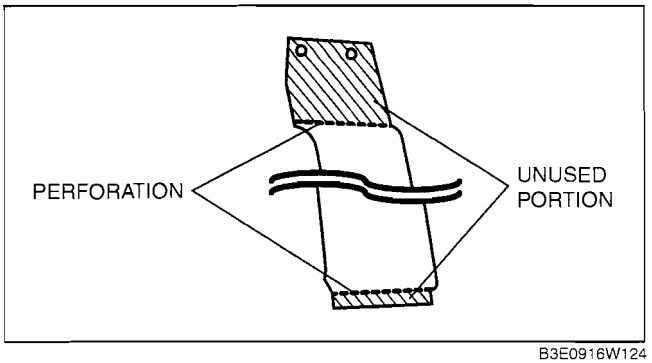


B3E0916W123

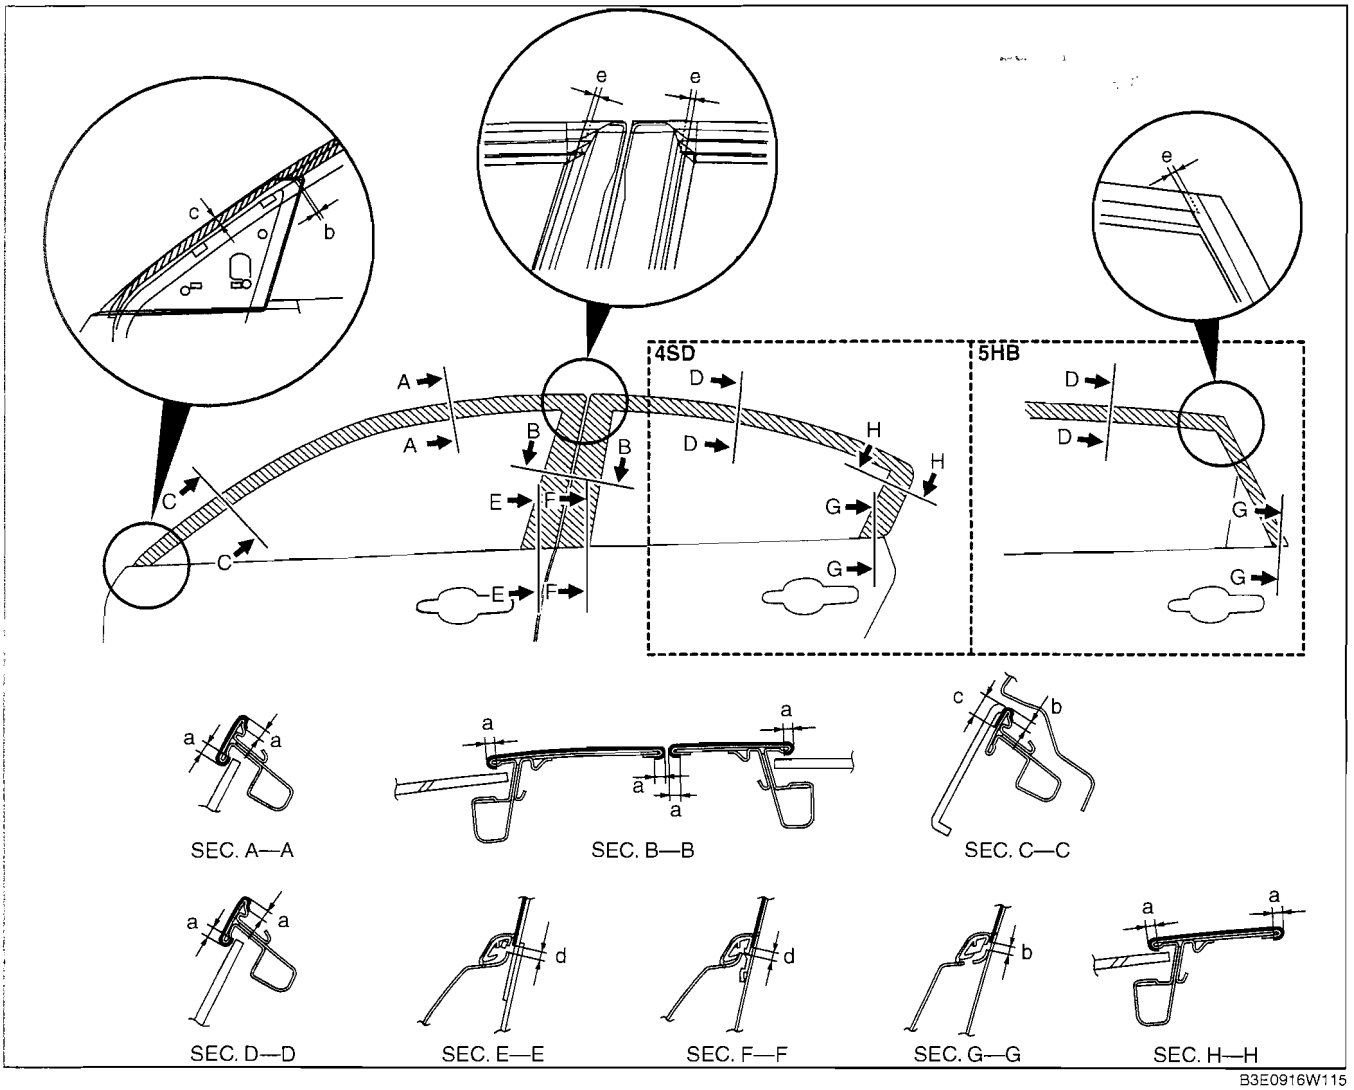
DOOR SASH FILM INSTALLATION

id091600805500

1. Remove any grease or dirt from the affixing surface of the door.
2. Cut away the unused portion along the dotted lines.
3. Peel off the backing paper and attach the door sash film onto the door as shown in the figure.



B3E0916W124



B3E0916W115

Standard clearance
a: 3.0—5.0 mm {0.12—0.19 in}
b: 3.0 mm {0.12 in}
c: 10.0 mm {0.39 in}
d: 3.0 mm {0.12 in} or less
e: 2.5—4.0 mm {0.10—0.15 in}

4. Peel off the transparent protective film on the door sash film.

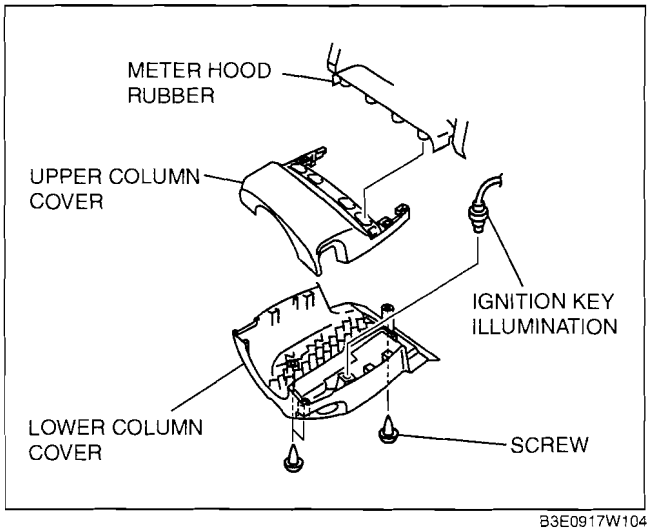
COLUMN COVER REMOVAL/INSTALLATION

id091700800800

1. Remove the following parts:
   (1) Front scuff plate (Driver's side) (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (2) Front side trim (Driver's side) (See 09-17-17 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (3) Hood release lever (See 09-14-22 HOOD LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
   (4) Lower panel (See 09-17-7 LOWER PANEL REMOVAL/INSTALLATION.)
2. Detach the fit of the upper column cover from the meter hood rubber.
3. Remove the upper column cover.
4. Remove the ignition key illumination.
5. Remove the screws.
6. Remove the lower column cover.
7. Install in the reverse order of removal.

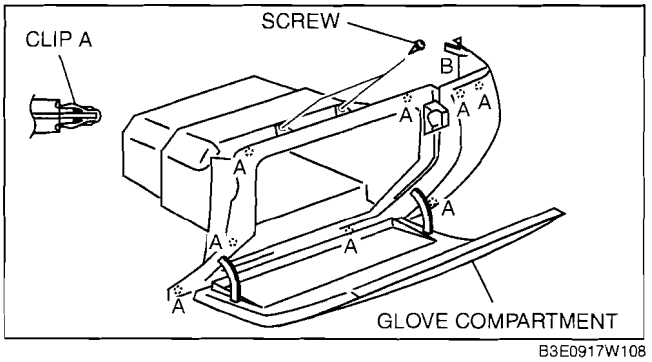


B3E0917W104

GLOVE COMPARTMENT REMOVAL/INSTALLATION

id091700800700

1. Remove the front scuff plate. (Passenger's side) (See09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
2. Remove the front side trim. (Passenger's side) (See09-17-17 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
3. Remove the decoration panel. (See09-17-17 DECORATION PANEL REMOVAL/INSTALLATION.)
4. Remove the screws.
5. Pull the glove compartment outward and detach clips A and tab B.
6. Remove the glove compartment.
7. Install in the reverse order of removal.

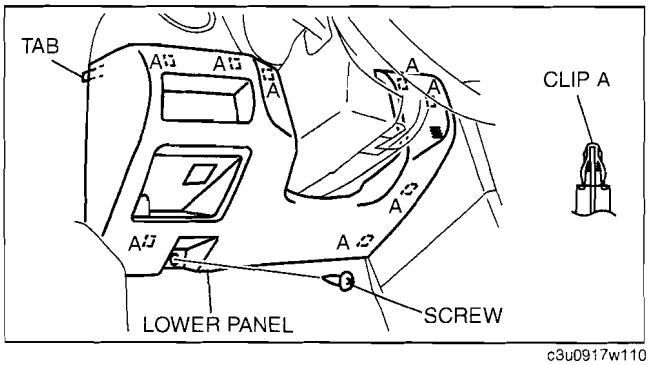


B3E0917W108

LOWER PANEL REMOVAL/INSTALLATION

id091700801100

1. Disconnect the negative battery cable.
2. Detach the hood release lever from the lower panel. (See09-14-22 HOOD LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
3. Remove the front scuff plate. (Driver's side) (See09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
4. Remove the front side trim. (Driver's side) (See09-17-17 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
5. Remove the screw.
6. Pull the lower panel outward, and detach clips A and tab.
7. Disconnect the panel light control switch connector and the headlight leveling switch connector.
8. Remove the lower panel.
9. Install in the reverse order of removal.

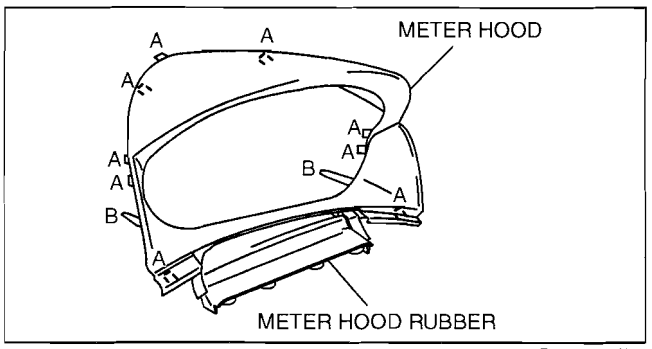


c3u0917w110

METER HOOD REMOVAL/INSTALLATION

id091700800900

1. Remove the following parts:
   (1) Front scuff plate (Driver's side) (See09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (2) Front side trim (Driver's side) (See09-17-17 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (3) Decoration panel (See09-17-17 DECORATION PANEL REMOVAL/INSTALLATION.)
   (4) Hood release lever (See 09-14-22 HOOD LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
   (5) Lower panel (See09-17-7 LOWER PANEL REMOVAL/INSTALLATION.)
2. Detach the fit of the meter hood rubber from the upper column cover.
3. Pull the meter hood outward and detach the tabs A and locator pins B.
4. Remove the meter hood.
5. Install in the reverse order of removal.



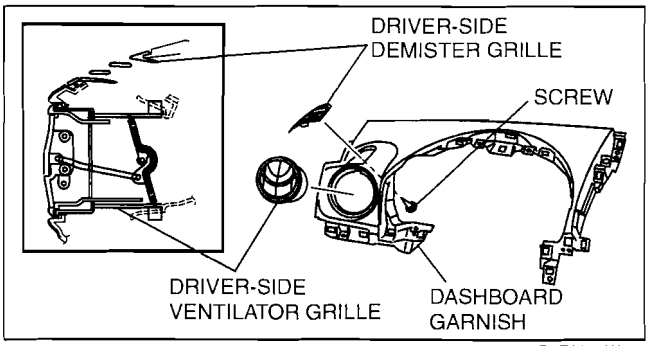
B3E0917W105

VENTILATOR GRILLE REMOVAL/INSTALLATION

id091700804600

Driver's Side

1. Disconnect the negative battery cable.
2. Remove the following parts:
   (1) A-pillar trim (See 09-17-11 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (2) Front scuff plate (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (3) Front side trim (See 09-17-17 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (4) Hood release lever (See 09-14-22 HOOD LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
   (5) Lower panel (See 09-17-7 LOWER PANEL REMOVAL/INSTALLATION.)
   (6) Decoration panel (See 09-17-17 DECORATION PANEL REMOVAL/INSTALLATION.)
   (7) Dashboard center panel (See 09-17-15 DASHBOARD CENTER PANEL REMOVAL/INSTALLATION.)
   (8) Meter hood (See 09-17-8 METER HOOD REMOVAL/INSTALLATION.)
   (9) Instrument cluster (See 09-22-2 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
   (10)Dashboard garnish (See 09-17-13 DASHBOARD GARNISH REMOVAL/INSTALLATION.)
3. Pull the driver-side ventilator grille outward and remove it.
4. Remove the screw, then remove the driver-side demister grille.
5. Install in the reverse order of removal.

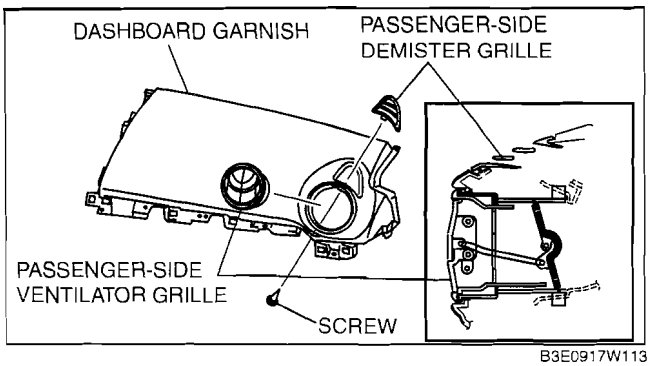


B3E0917W112

Passenger's Side

1. Disconnect the negative battery cable.
2. Remove the following parts:
   (1) A-pillar trim (See 09-17-11 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (2) Front scuff plate (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (3) Front side trim (See 09-17-17 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (4) Glove compartment (See 09-17-7 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
   (5) Decoration panel (See 09-17-17 DECORATION PANEL REMOVAL/INSTALLATION.)
   (6) Dashboard center panel (See 09-17-15 DASHBOARD CENTER PANEL REMOVAL/INSTALLATION.)
   (7) Dashboard garnish (See 09-17-13 DASHBOARD GARNISH REMOVAL/INSTALLATION.)
3. Pull the passenger-side ventilator grille outward and remove it.

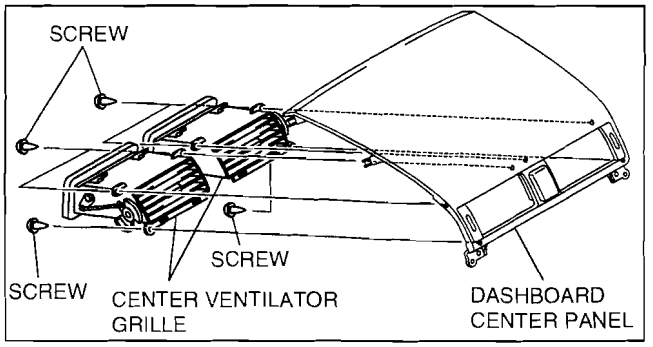
4. Remove the screw, then remove the passenger-side demister grille.
5. Install in the reverse order of removal.



B3E0917W113

Center

1. Remove the decoration panel. (See 09-17-17 DECORATION PANEL REMOVAL/INSTALLATION.)
2. Remove the dashboard center panel. (See 09-17-15 DASHBOARD CENTER PANEL REMOVAL/INSTALLATION.)
3. Remove the screws, then remove the center ventilator grilles.
4. Install in the reverse order of removal.

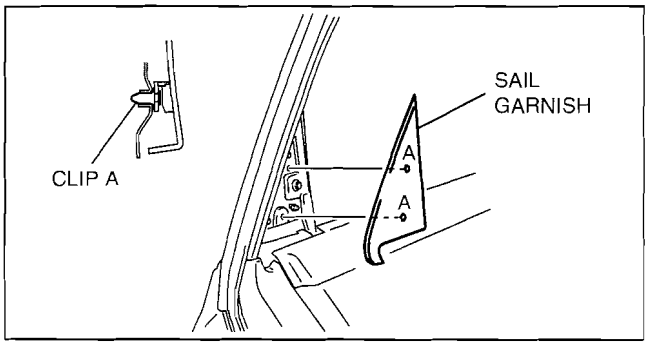


B3E0917W114

SAIL GARNISH REMOVAL/INSTALLATION

id091700805000

1. Pull the sail garnish outward and detach clips A.
2. Remove the sail garnish.
3. Install in the reverse order of removal.

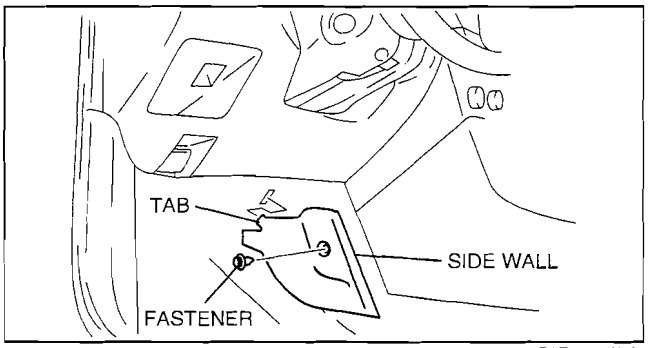


B3E0917W146

SIDE WALL REMOVAL/INSTALLATION

id091700805400

1. Remove the fastener.
2. Detach the tab and remove the side wall.
3. Install in the reverse order of removal.

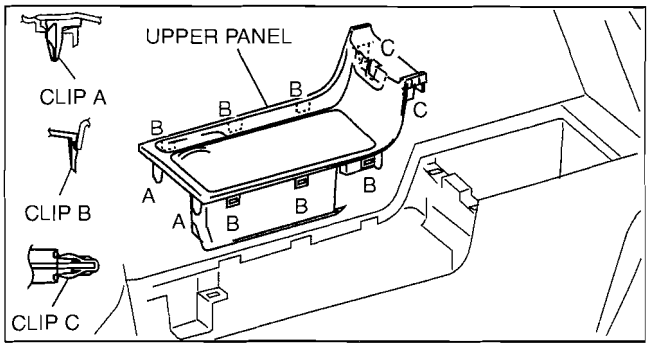


B3E0917W161

CONSOLE REMOVAL/INSTALLATION

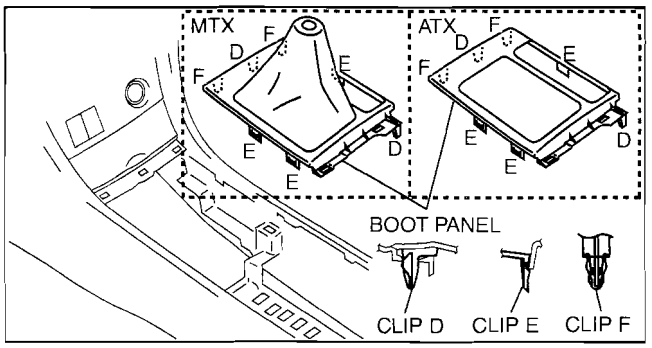
id091700801200

1. Disconnect the negative battery cable.
2. Detach clips A, B and C and remove the upper panel.



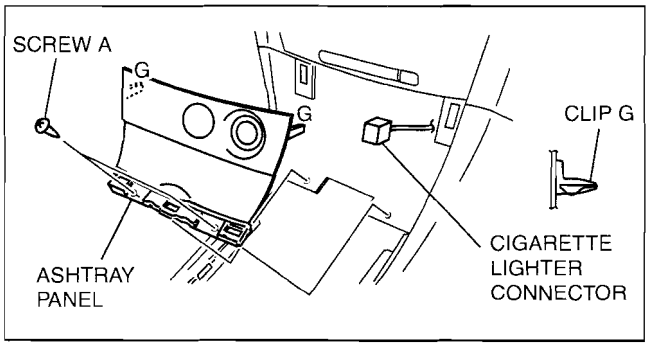
am3uuw0000073

3. Detach clips D, E and F and remove the boot panel.



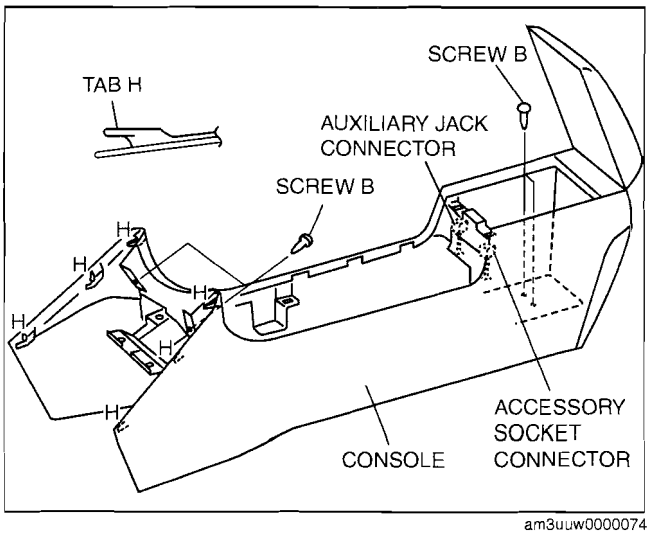
am3uuw0000073

4. Remove screws A.
5. Detach clips G.
6. Disconnect the cigarette lighter connector.
7. Remove the ashtray illumination, then remove the ashtray panel.



c3u0917w155

8. Remove the screws B.
9. Detach tabs H and remove the console.
10. Disconnect the auxiliary jack connector.
11. Disconnect the accessory socket connector.
12. Install in the reverse order of removal.



am3uuw0000074

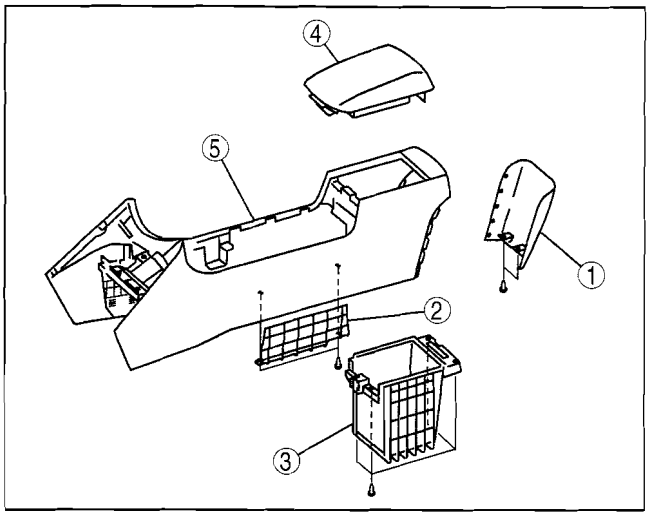
CONSOLE DISASSEMBLY/ASSEMBLY

1. Disassemble in the order indicated in the table.

1	Console panel
2	Plate
3	Rear console box
4	Console lid
5	Console

2. Assemble in the reverse order of disassembly.

id091700801300

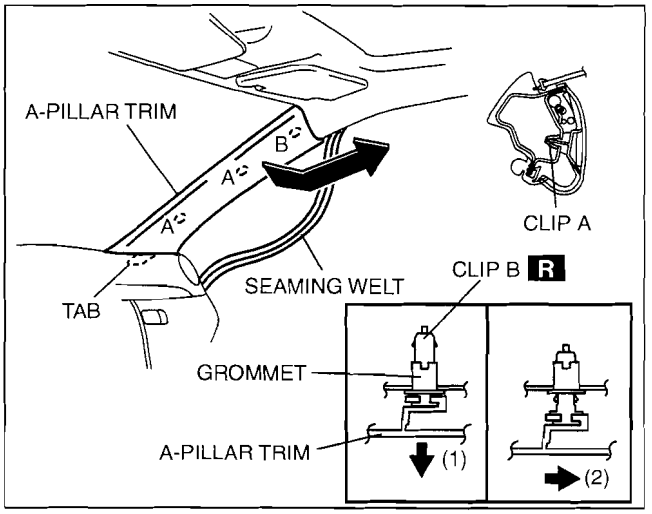


c3u0917w106

A-PILLAR TRIM REMOVAL/INSTALLATION

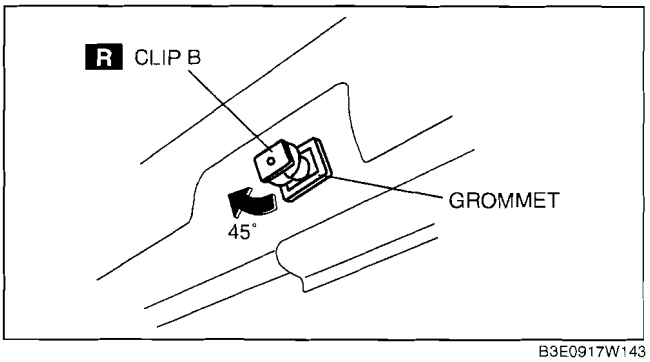
1. Partially peel back the seaming welt.
2. Detach clips A using a fastener remover.
3. Pull the A-pillar trim and detach clip B (1).
4. Pull the A-pillar trim upward and remove clip B from the A-pillar trim (2).

id091700801900



B3E0917W125

5. Pull clip B out and rotate it **45°**.
6. Remove clip B from the grommet by pulling it upward.
7. Install in the reverse order of removal.



B3E0917W143

B-PILLAR LOWER TRIM REMOVAL/INSTALLATION

id091700802000

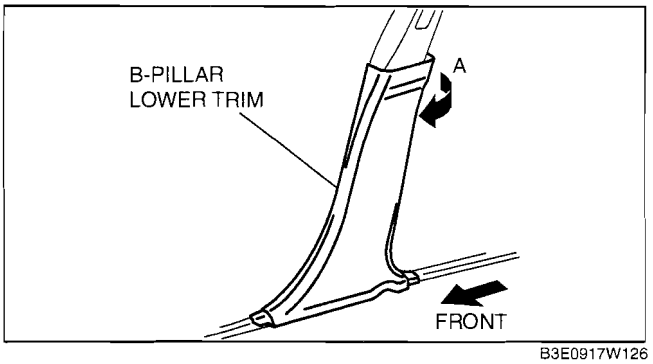
Warning

- **Handling the side air bag sensor improperly can accidentally deploy the side air bag module, which may seriously injure you. Read AIR BAG SYSTEM SERVICE WARNINGS before working around the B-pillar areas. (See08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.)**

Note

- The side air bag sensor is located in the B-pillar.

1. Remove the front scuff plate. (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
2. Remove the rear scuff plate. (See 09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
3. Pull the area marked A, then remove one side of the B-pillar lower trim.
4. Pull the B-pillar lower trim outward and remove it.
5. Install in the reverse order of removal.

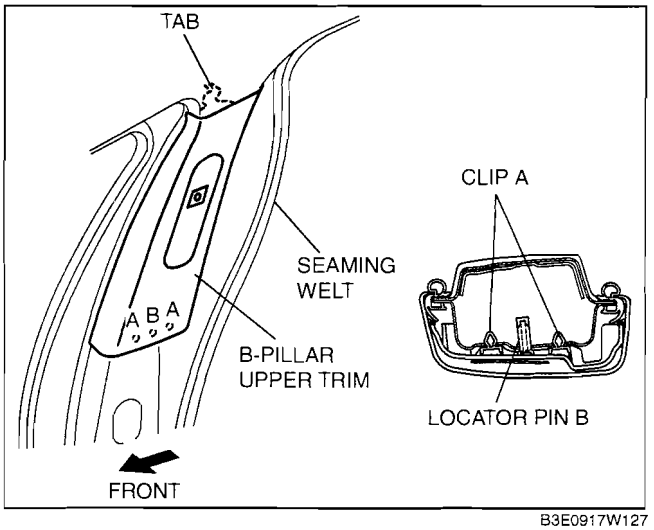


B3E0917W126

B-PILLAR UPPER TRIM REMOVAL/INSTALLATION

id091700802100

1. Remove the following parts:
   (1) Upper anchor of the front seat belt (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (2) Front scuff plate (See09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (3) Rear scuff plate (See09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (4) B-pillar lower trim (See 09-17-12 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
2. Partially peel back the seaming welt.
3. Pull the B-pillar upper trim outward and detach clips A and locator pin B from the body.
4. Detach the tab from the body and remove the B-pillar trim.
5. Install in the reverse order of removal.



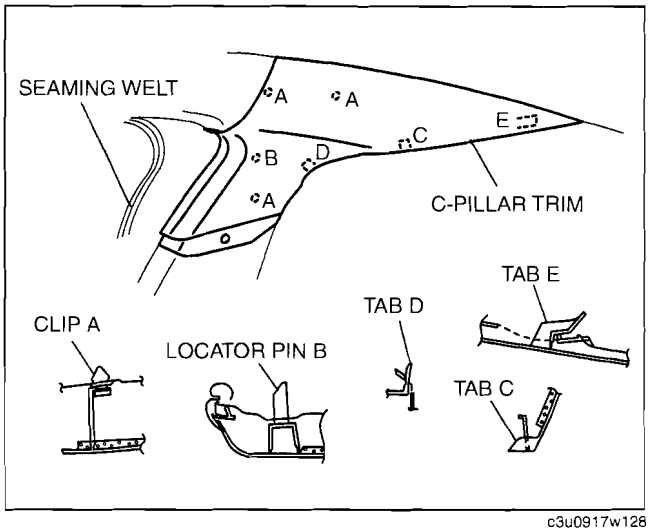
B3E0917W127

C-PILLAR TRIM REMOVAL/INSTALLATION

id091700802200

4 Door

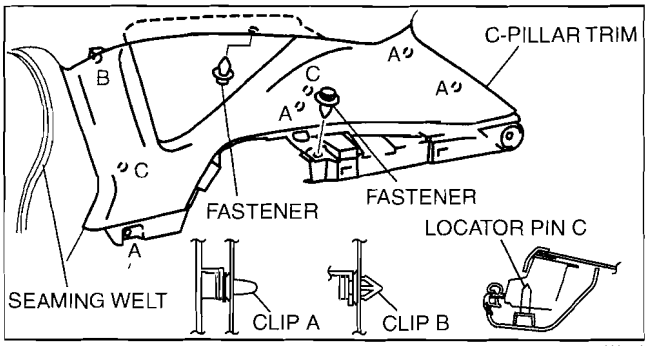
1. Remove the rear seat. (See 09-13-6 REAR SEAT REMOVAL/INSTALLATION.)
2. Remove the rear scuff plate. (See 09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
3. Remove the tire house trim. (See 09-17-15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
4. Partially peel back the seaming welt.
5. Detach clips A and locator pin B, using a fastener remover.
6. Detach tabs C, D and E from the body and remove the C-pillar trim.
7. Install in the reverse order of removal.



c3u0917w128

5 Door

1. Remove the following parts:
   (1) Rear seat (See 09-13-6 REAR SEAT REMOVAL/INSTALLATION.)
   (2) Rear scuff plate (See 09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (3) Tire house trim (See 09-17-15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
   (4) Trunk side upper trim (See 09-17-21 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION.)
2. Partially peel back the seaming welt.
3. Remove the fasteners.
4. Detach clips A, B and locator pins C, using a fastener remover.
5. Remove the C-pillar trim.
6. Install in the reverse order of removal.



B3E0917W139

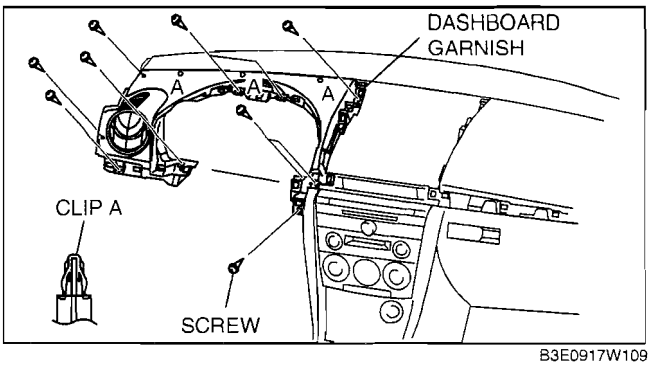
DASHBOARD GARNISH REMOVAL/INSTALLATION

id091700804700

Driver's Side

1. Disconnect the negative battery cable.
2. Remove the following parts:
   (1) A-pillar trim (See 09-17-11 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (2) Front scuff plate (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (3) Front side trim (See 09-17-17 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (4) Hood release lever (See 09-14-22 HOOD LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
   (5) Lower panel (See 09-17-7 LOWER PANEL REMOVAL/INSTALLATION.)
   (6) Decoration panel (See 09-17-17 DECORATION PANEL REMOVAL/INSTALLATION.)
   (7) Dashboard center panel (See 09-17-15 DASHBOARD CENTER PANEL REMOVAL/INSTALLATION.)
   (8) Meter hood (See 09-17-8 METER HOOD REMOVAL/INSTALLATION.)
   (9) Instrument cluster (See 09-22-2 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)

3. Remove the screws.
4. Pull the dashboard garnish outward, and detach clips A.
5. Remove the dashboard garnish.
6. Install in the reverse order of removal.



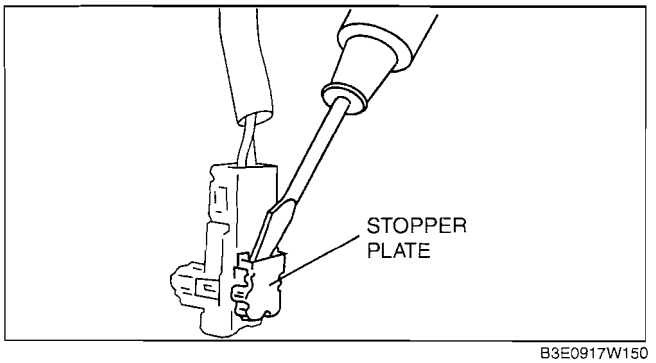
B3E0917W109

Passenger's Side

Warning

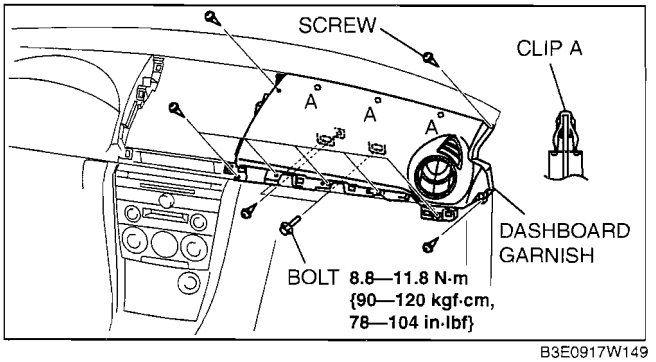
- **Handling the air bag module improperly can accidentally deploy the air bag module, which may seriously injure you. Read the service warnings and cautions before handling the air bag module. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**

1. Disconnect the negative battery cable and wait for **1 min or more**.
2. Remove the following parts:
   (1) A-pillar trim (See 09-17-11 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (2) Front scuff plate (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (3) Front side trim (See 09-17-17 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (4) Decoration panel (See 09-17-17 DECORATION PANEL REMOVAL/INSTALLATION.)
   (5) Glove compartment (See 09-17-7 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
   (6) Dashboard center panel (See 09-17-15 DASHBOARD CENTER PANEL REMOVAL/INSTALLATION.)
3. Using a flathead screwdriver, pry out the connector stopper plate.
4. Disconnect the passenger-side air bag module connector.



B3E0917W150

5. Remove the bolts and screws.
6. Pull the dashboard garnish outward, and detach clips A.
7. Remove the dashboard garnish.
8. Install in the reverse order of removal.

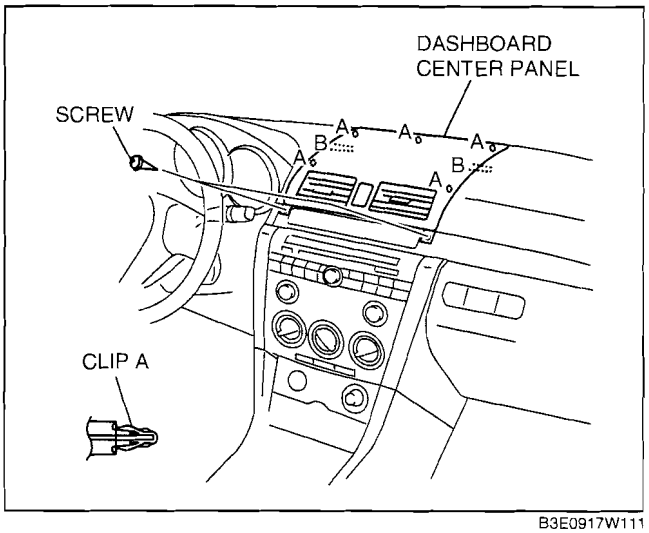


B3E0917W149

DASHBOARD CENTER PANEL REMOVAL/INSTALLATION

id091700805800

1. Disconnect the negative battery cable.
2. Remove the decoration panel. (See09-17-17 DECORATION PANEL REMOVAL/INSTALLATION.)
3. Remove the screws.
4. Pull the dashboard center panel outward and detach clips A and locator pins B.
5. Disconnect the hazard warning switch connector.
6. Remove the dashboard center panel.
7. Install in the reverse order of removal.

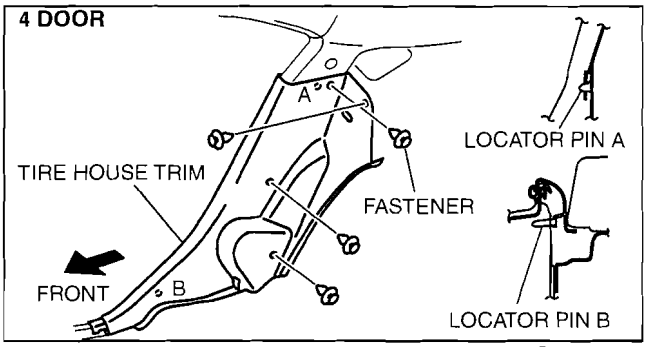


B3E0917W111

TIRE HOUSE TRIM REMOVAL/INSTALLATION

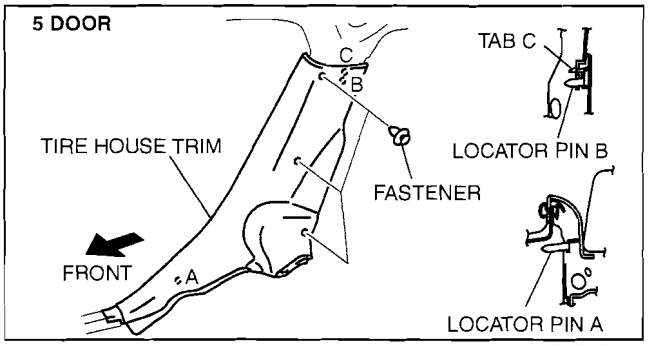
id091700802700

1. Remove the rear seat. (See 09-13-6 REAR SEAT REMOVAL/INSTALLATION.)
2. Remove the rear scuff plate. (See 09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
3. Remove the fasteners.



B3E0917W132

4. Pull the tire house trim outward and detach locator pins A and B. (4 door)
5. Pull the tire house trim outward and detach locator pins A, B and tab C. (5 door)
6. Remove the tire house trim.
7. Install in the reverse order of removal.

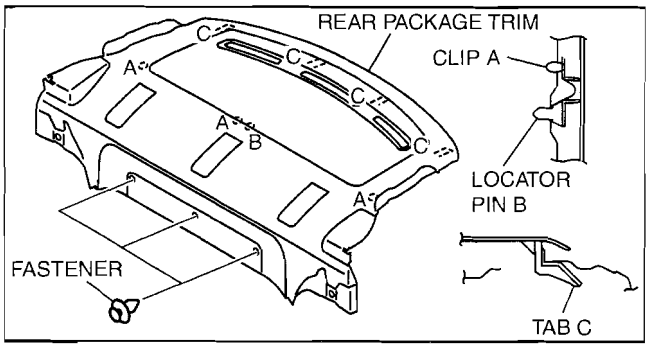


c3u0917w142

REAR PACKAGE TRIM REMOVAL/INSTALLATION

id091700802800

1. Remove the following parts:
   (1) Rear seat (See 09-13-6 REAR SEAT REMOVAL/INSTALLATION.)
   (2) Rear scuff plate (See 09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (3) Tire house trim (See 09-17-15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
   (4) C-pillar trim (See 09-17-13 C-PILLAR TRIM REMOVAL/INSTALLATION.)
2. Remove the fasteners.
3. Pull the rear package trim upward and detach clips A and locator pin B from the body.
4. Detach tabs C from the body and remove the rear package trim.
5. Install in the reverse order of removal.

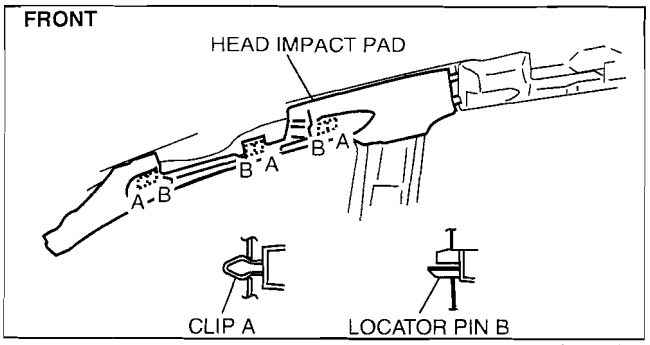


B3E0917W133

HEAD IMPACT PAD REMOVAL/INSTALLATION

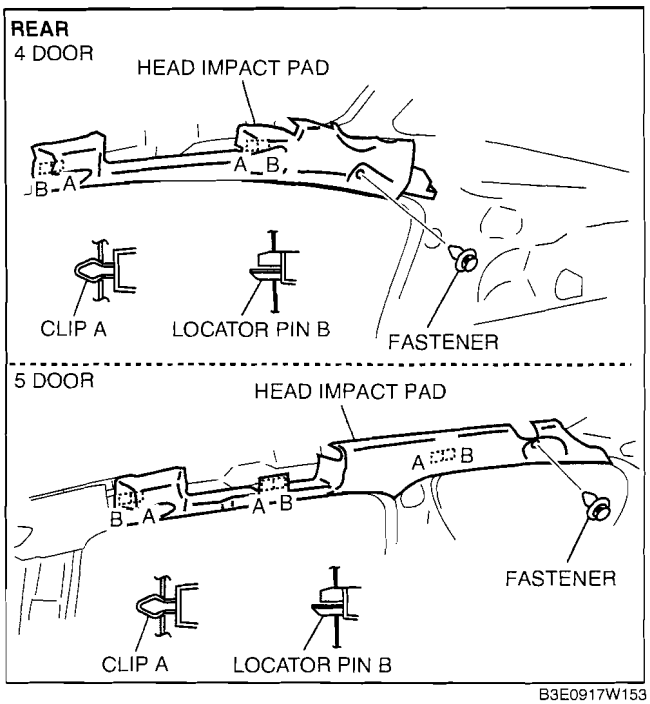
id091700806500

1. Remove the following parts:
   (1) Console (4 door) (See 09-17-10 CONSOLE REMOVAL/INSTALLATION.)
   (2) A-pillar trim (See 09-17-11 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (3) Front scuff plate (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (4) Rear scuff plate (See 09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (5) B-pillar lower trim (See 09-17-12 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (6) Upper anchor of the front seat belt (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (7) B-pillar upper trim (See 09-17-12 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
   (8) Rear seat (See 09-13-6 REAR SEAT REMOVAL/INSTALLATION.)
   (9) Tire house trim (See 09-17-15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
   (10)Trunk side upper trim (5 door) (See 09-17-21 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION.)
   (11)C-pillar trim (See 09-17-13 C-PILLAR TRIM REMOVAL/INSTALLATION.)
   (12)Map light (See 09-18-23 MAP LIGHT REMOVAL/INSTALLATION.)
   (13)Sunvisor (See 09-17-23 SUNVISOR REMOVAL/INSTALLATION.)
   (14)Assist handle (See 09-17-24 ASSIST HANDLE REMOVAL/INSTALLATION.)
   (15)Headliner (See 09-17-24 HEADLINER REMOVAL/INSTALLATION.)
2. Remove the fastener. (Rear)



B3E0917W135

3. Pull the head impact pad outward and detach the clips A and the locator pins B.
4. Remove the head impact pad.
5. Install in the reverse order of removal.

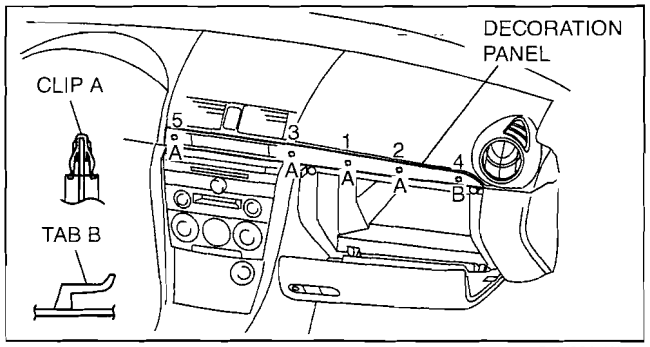


B3E0917W153

DECORATION PANEL REMOVAL/INSTALLATION

id091700806600

1. Pull the decoration panel outward and detach the clips A and tab B in the order shown in the figure.
2. Remove the decoration panel.
3. Install in the reverse order of removal.

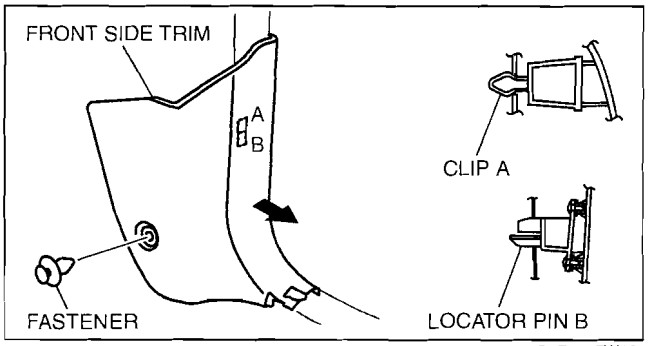


C3U0917W151

FRONT SIDE TRIM REMOVAL/INSTALLATION

id091700802400

1. Remove the front scuff plate. (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
2. Remove the fastener.
3. Pull the front side trim in the direction of the arrow and detach clip A and locator pin B.
4. Install in the reverse order of removal.

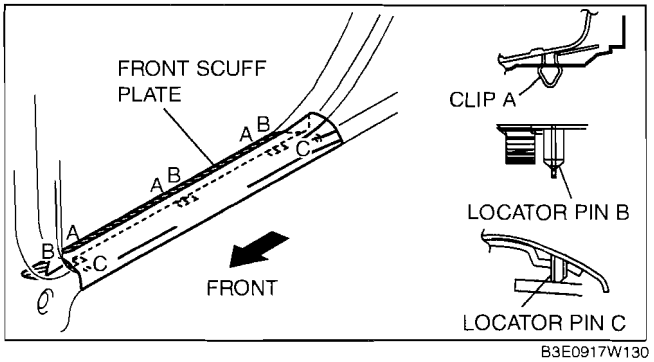


B3E0917W129

FRONT SCUFF PLATE REMOVAL/INSTALLATION

id091700801400

1. Pull the front scuff plate upward, detach clips A, locator pins B and C from the body, and then remove the front scuff plate.
2. Install in the reverse order of removal.

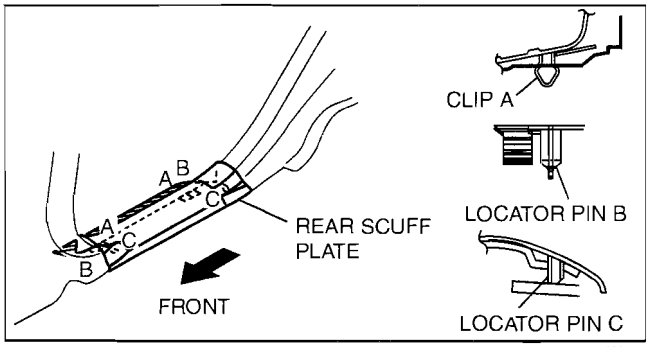


B3E0917W130

REAR SCUFF PLATE REMOVAL/INSTALLATION

id091700801500

1. Pull the rear scuff plate upward, detach clips A, locator pins B and C from the body, and then remove the rear scuff plate.
2. Install in the reverse order of removal.

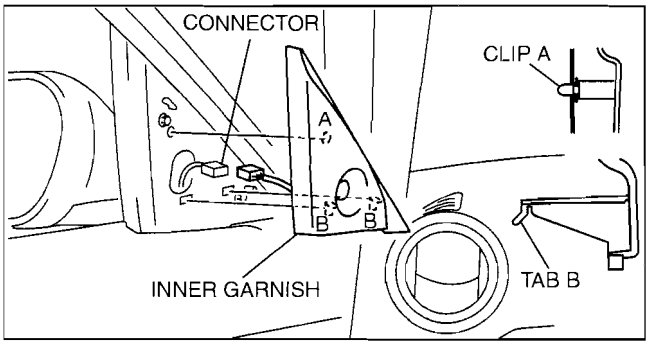


B3E0917W131

INNER GARNISH REMOVAL/INSTALLATION

id091700801000

1. Disconnect the negative battery cable.
2. Pull the inner garnish outward and detach clip A.
3. Disconnect the connector.
4. Detach the tabs B and remove the inner garnish.
5. Install in the reverse order of removal.

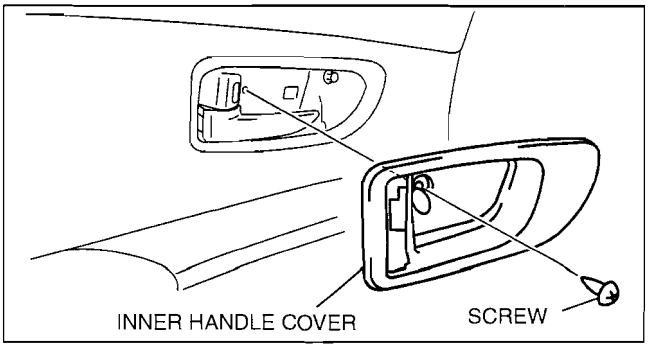


B3E0917W117

FRONT DOOR TRIM REMOVAL/INSTALLATION

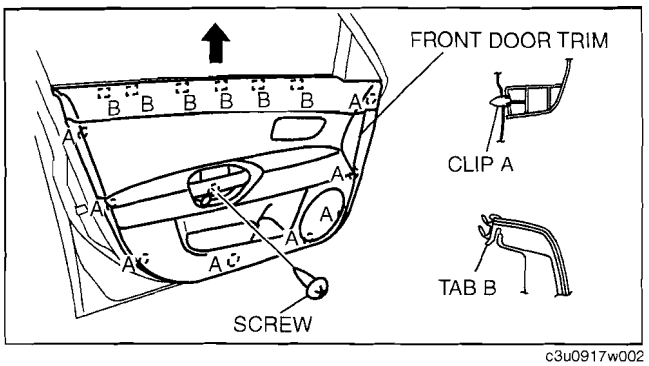
id091700802500

1. Disconnect the negative battery cable. (Vehicle with power window system or power outer mirror)
2. Using a small flathead screwdriver, open the cap and remove the screw, then remove the inner handle cover.
3. Remove the inner garnish. (See 09-17-18 INNER GARNISH REMOVAL/INSTALLATION.)
4. Remove the regulator handle. (Vehicle without power window system) (See 09-12-11 REGULATOR HANDLE REMOVAL.) (See09-12-12 REGULATOR HANDLE INSTALLATION.)



c3u0917w115

5. Using a small flathead screwdriver, open the cap and remove the screw.
6. Detach clips A from the front door using a fastener remover.
7. Pull the front door trim upward and detach tabs B from the front door.
8. Disconnect the power window main switch connector and power outer mirror switch connector (LH). (Vehicle with power window system or power outer mirror)
9. Disconnect the power window subswitch connector (RH). (Vehicle with power window system)
10. Remove the front door trim.
11. Install in the reverse order of removal.

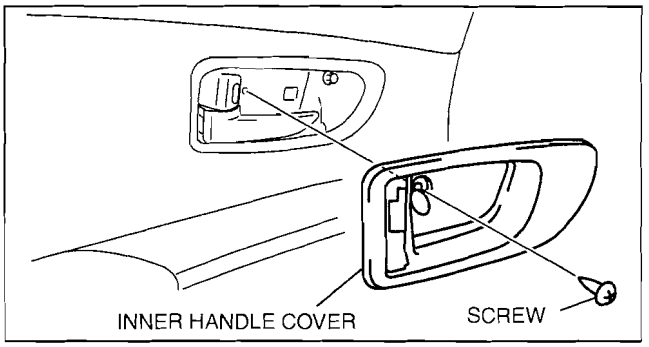


c3u0917w002

REAR DOOR TRIM REMOVAL/INSTALLATION

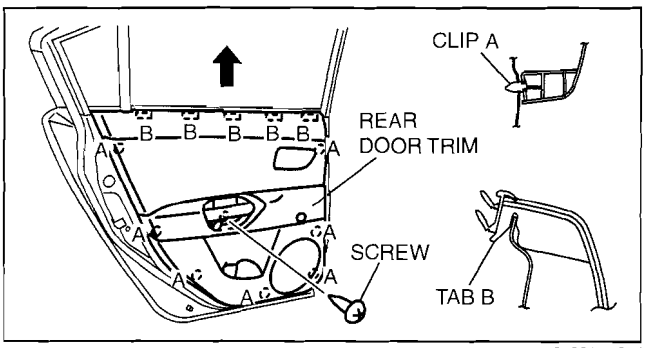
id091700802600

1. Disconnect the negative battery cable. (Vehicle with power window system)
2. Using a small flathead screwdriver, open the cap and remove the screw, then remove the inner handle cover.
3. Remove the sail garnish. (5 door) (See 09-17-9 SAIL GARNISH REMOVAL/INSTALLATION.)
4. Remove the regulator handle. (Vehicle without power window system) (See 09-12-11 REGULATOR HANDLE REMOVAL.) (See09-12-12 REGULATOR HANDLE INSTALLATION.)



c3u0917w115

5. Using a small flathead screwdriver, open the cap and remove the screw.
6. Detach clips A from the front door using a fastener remover.
7. Pull the rear door trim upward and detach tabs B from the rear door.
8. Disconnect the power window subswitch connector. (Vehicle with power window system)
9. Remove the rear door trim.
10. Install in the reverse order of removal.



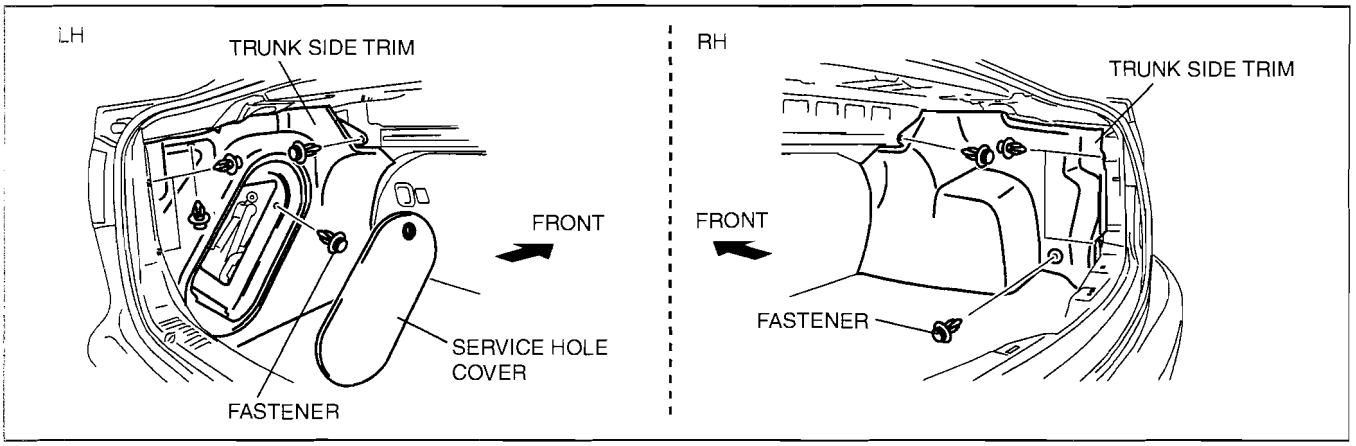
c3u0917w003

TRUNK SIDE TRIM REMOVAL/INSTALLATION

id091700803100

4 Door

1. Remove the following parts:
   (1) Rear seat (See 09-13-6 REAR SEAT REMOVAL/INSTALLATION.)
   (2) Rear scuff plate (See 09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (3) Tire house trim (See 09-17-15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
   (4) Trunk end trim (See 09-17-21 TRUNK END TRIM REMOVAL/INSTALLATION.)
   (5) Service hole cover (LH)
2. Remove the fasteners, then remove the trunk side trim.

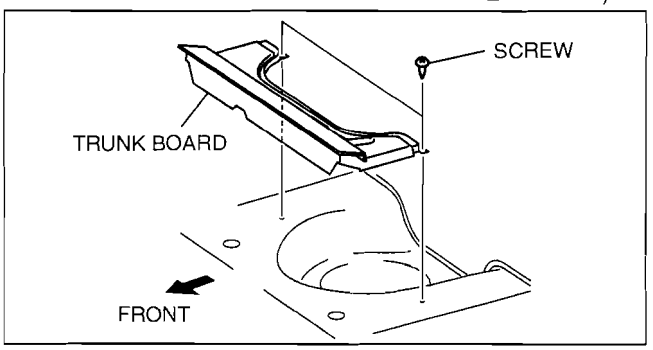


c3u0917w001

3. Install in the reverse order of removal.

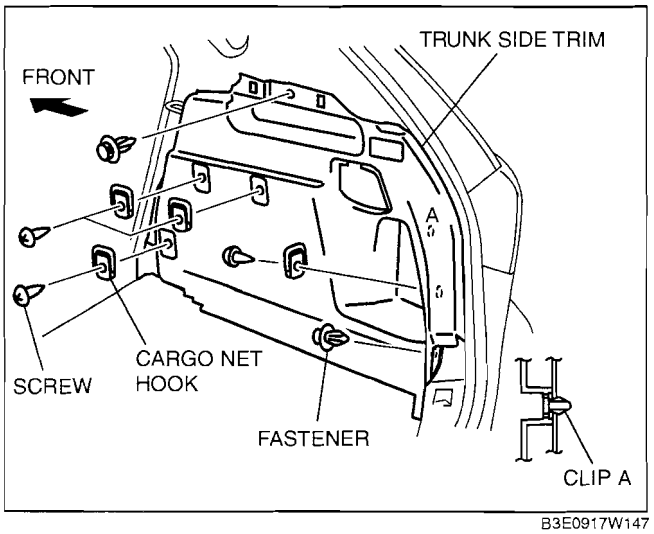
5 Door

1. Remove the following parts:
   (1) Rear seat (See 09-13-6 REAR SEAT REMOVAL/INSTALLATION.)
   (2) Rear scuff plate (See 09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (3) Tire house trim (See 09-17-15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
   (4) Trunk end trim (See 09-17-21 TRUNK END TRIM REMOVAL/INSTALLATION.)
   (5) Trunk side upper trim (See 09-17-21 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION.)
   (6) Cargo compartment light (See 09-18-25 CARGO COMPARTMENT LIGHT REMOVAL/INSTALLATION.)
2. Remove the screws, then remove the trunk board.



B3E0917W157

3. Remove the screws, then remove the cargo net hooks.
4. Remove the fasteners.
5. Detach the clip A and remove the trunk side trim.
6. Install in the reverse order of removal.

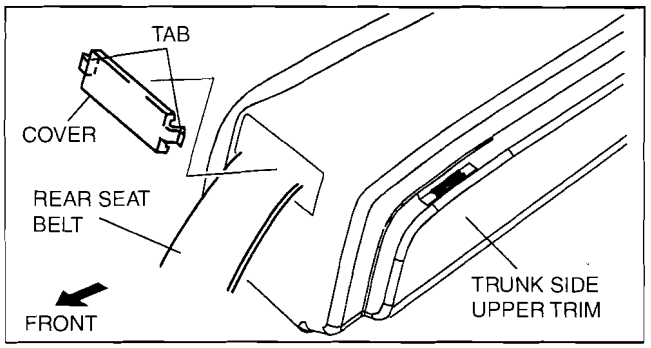


B3E0917W147

TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION

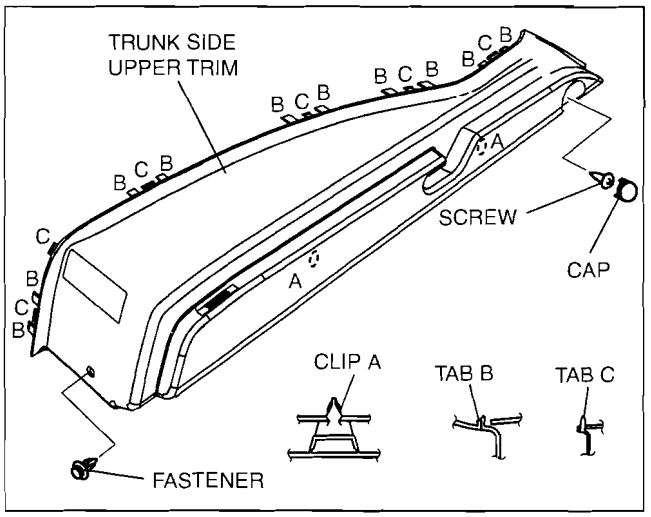
id091700803200

1. Disconnect the negative battery cable. (RH only)
2. Remove the rear seat belt lower bolt.
3. Detach the tabs and remove the cover from the trunk side upper trim.



c3u0917w160

4. Remove the cap and remove the screw.
5. Remove the fastener.
6. Pull the trunk side upper trim outward, then disengage tabs B and C from the C-pillar trim.
7. Pull the trunk side upper trim outward, then disengage clips A from the body.
8. Install in the reverse order of removal.

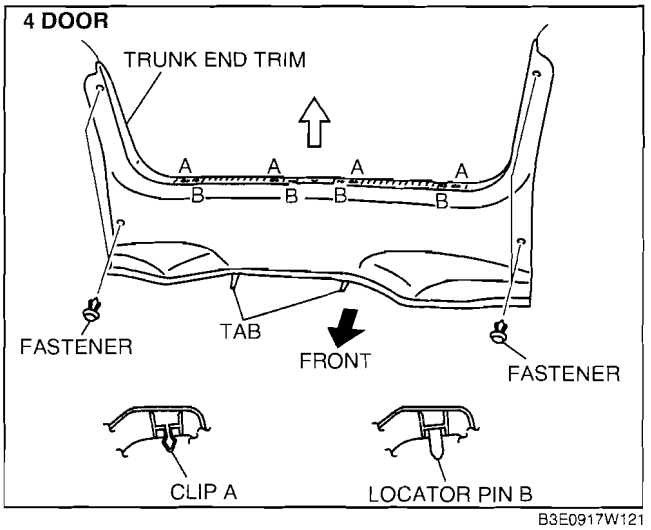


c3u0917w148

TRUNK END TRIM REMOVAL/INSTALLATION

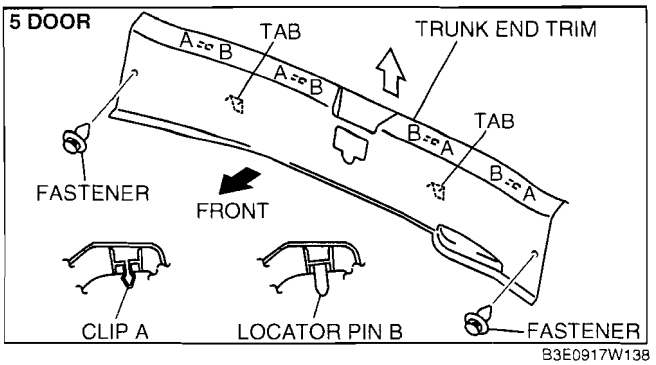
id091700803400

1. Remove the fasteners.



B3E0917W121

2. Pull the trunk end trim upward, then detach clips A, locator pins B and tabs.
3. Remove the trunk end trim.
4. Install in the reverse order of removal.

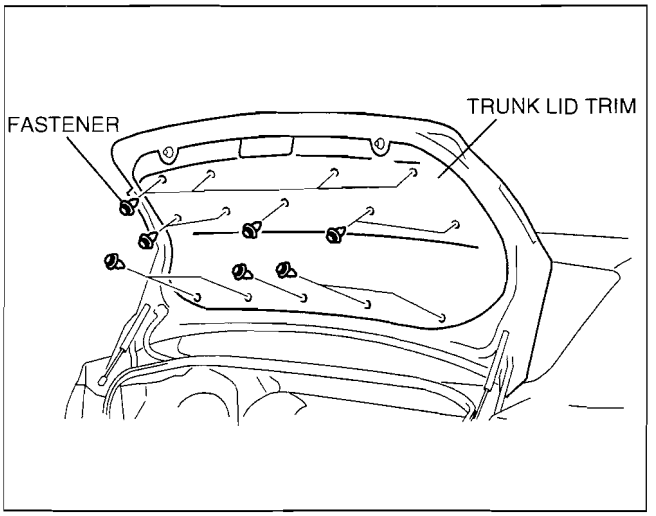


B3E0917W138

TRUNK LID TRIM REMOVAL/INSTALLATION

id091700803500

1. Remove the fasteners, then remove the trunk lid trim.
2. Install in the reverse order of removal.

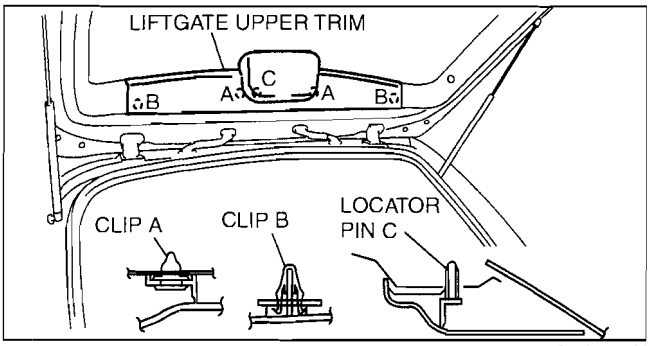


B3E0917W119

LIFTGATE UPPER TRIM REMOVAL/INSTALLATION

id091700803600

1. Pull the liftgate upper trim outward, then detach the clips A, B and the locator pin C from the liftgate.
2. Remove the liftgate upper trim.
3. install in the reverse order of removal.

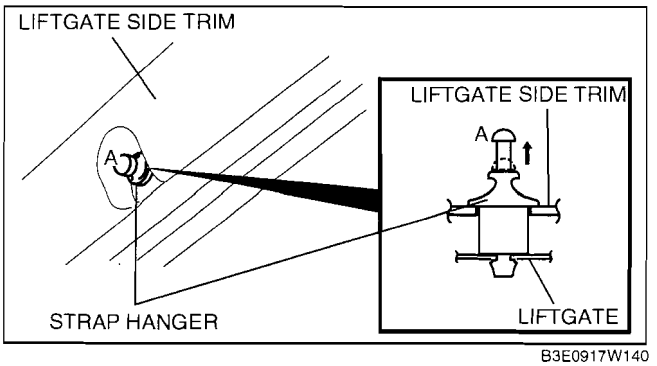


c3u0917w122

LIFTGATE SIDE TRIM REMOVAL/INSTALLATION

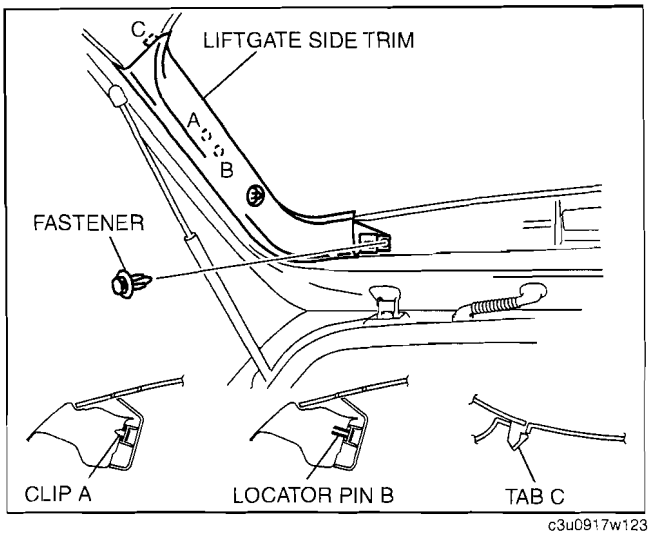
id091700803700

1. Remove the liftgate upper trim. (See09-17-22 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)
2. Pull the point A of the strap hanger as shown in the figure.
3. Remove the strap hanger.



B3E0917W140

4. Pull the liftgate side trim outward and detach clip A, locator pin B.
5. Detach the tab C and remove the liftgate side trim.
6. Install in the reverse order of removal.

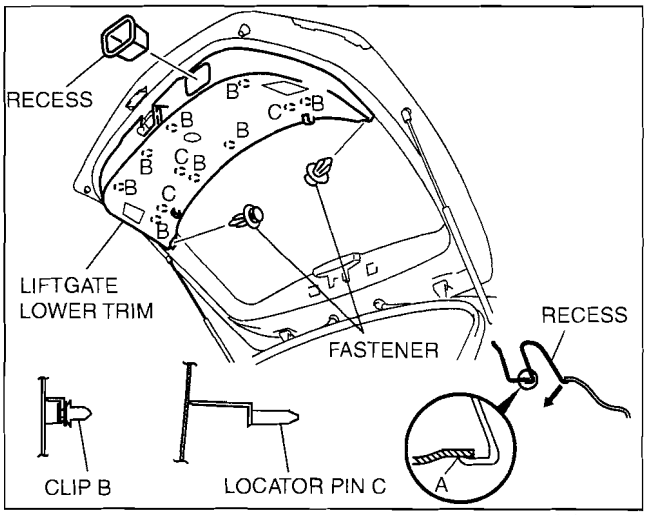


c3u0917w123

LIFTGATE LOWER TRIM REMOVAL/INSTALLATION

id091700803800

1. Remove the liftgate upper trim. (See09-17-22 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)
2. Remove the liftgate side trim. (See09-17-22 LIFTGATE SIDE TRIM REMOVAL/INSTALLATION.)
3. While supporting at point A, pull the recess in the direction of the arrow and remove it.
4. Remove the fasteners.
5. Pull the liftgate lower trim outward, then detach clips B and locator pins C from the liftgate.
6. Remove the liftgate lower trim.
7. Install in the reverse order of removal.

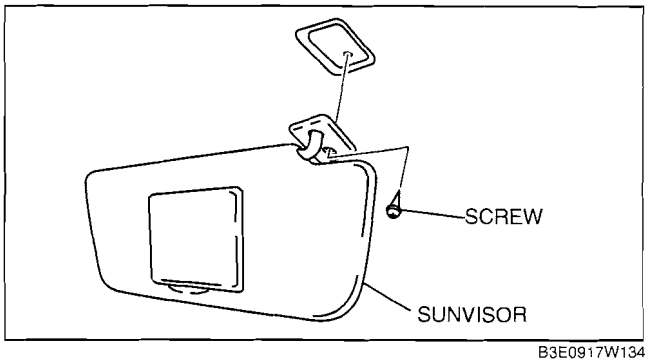


c3u0917w124

SUNVISOR REMOVAL/INSTALLATION

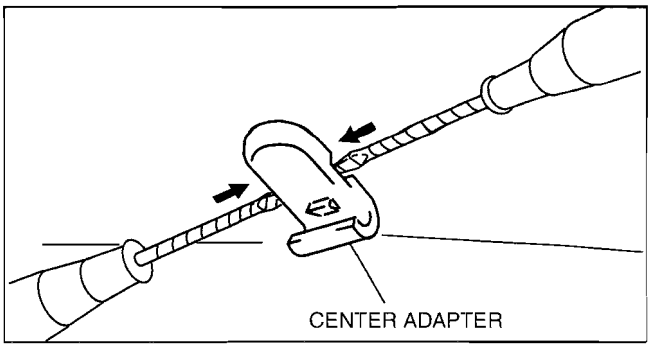
id091700801700

1. Remove the screw, then remove the sunvisor.



B3E0917W134

2. Press the center adapter tabs in the directions of the arrows using two tape-wrapped flathead screwdrivers and remove it.
3. Install in the reverse order of removal.

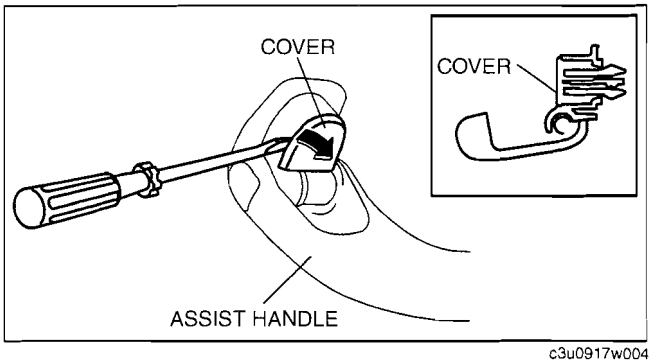


B3E0917W144

ASSIST HANDLE REMOVAL/INSTALLATION

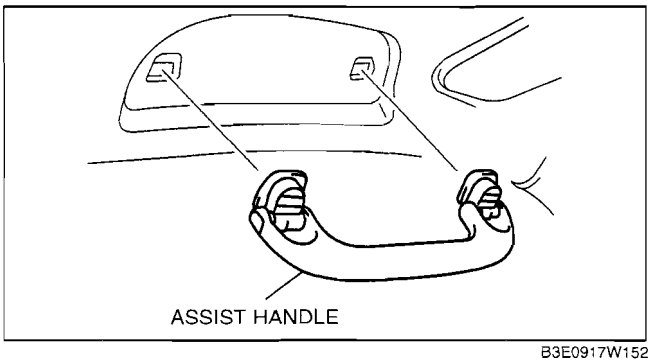
id091700801800

1. Insert a flathead screwdriver into the assist handle notch and remove the cover.



c3u0917w004

2. Pull the assist handle outward and remove it.
3. Install in the reverse order of removal.



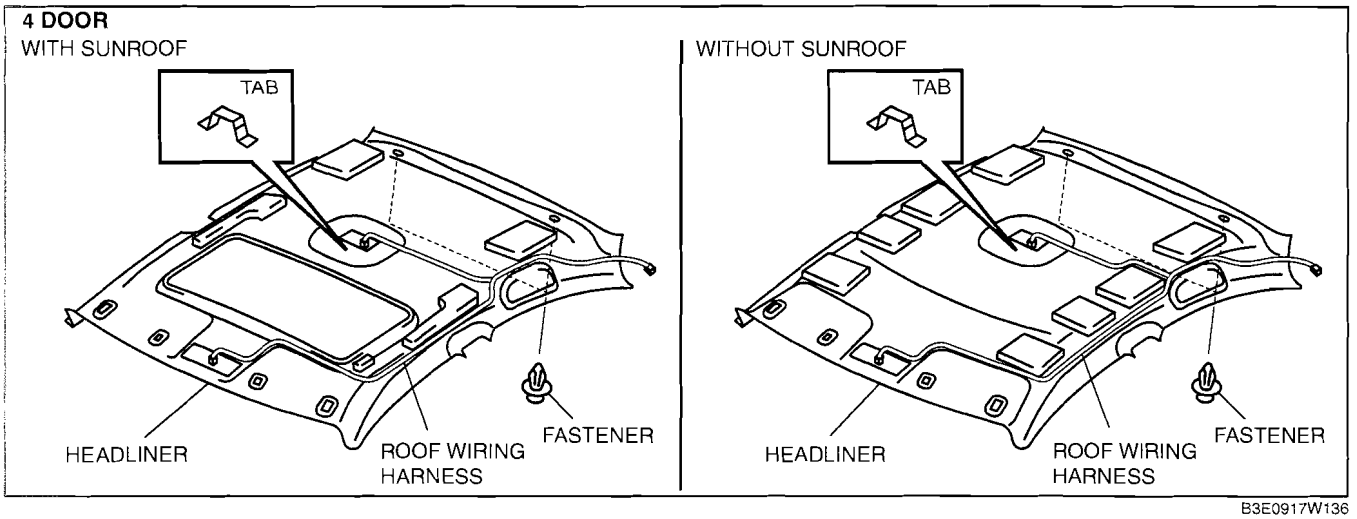
B3E0917W152

HEADLINER REMOVAL/INSTALLATION

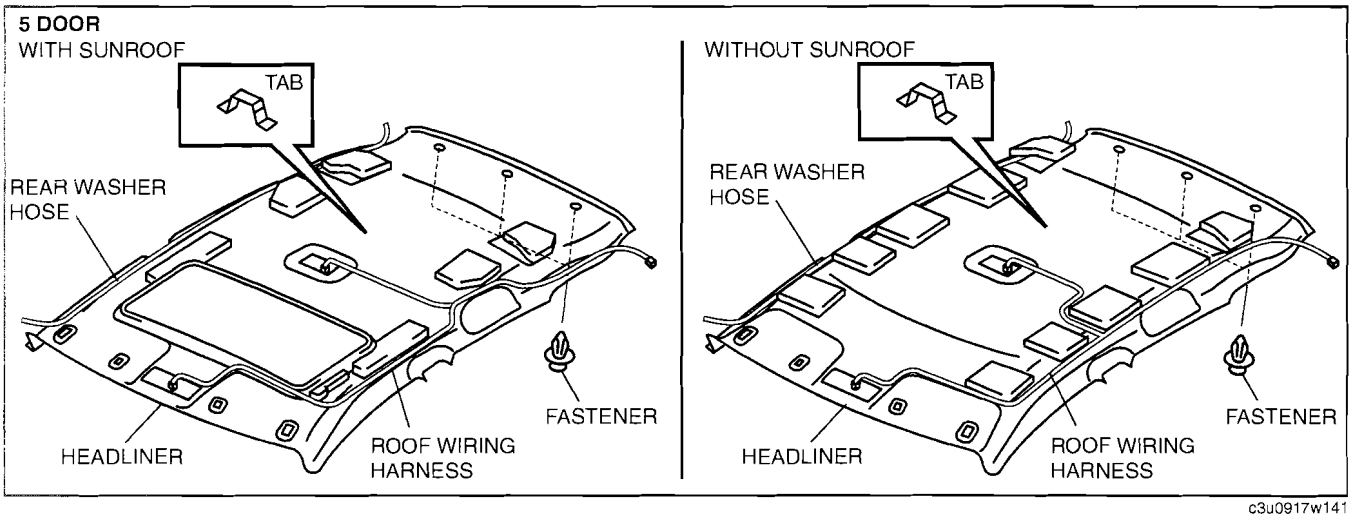
id091700801600

1. Shift to the D (ATX) or 4th gear (MTX) position. (4 door)
2. Disconnect the negative battery cable.
3. Partially peel back the seaming welts.
4. Remove the following parts:
   (1) Sunroof seaming welt (vehicles with sunroof)
   (2) Console (4 door) (See 09-17-10 CONSOLE REMOVAL/INSTALLATION.)
   (3) A-pillar trim (See 09-17-11 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (4) Upper anchor of the front seat belt (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (5) Front scuff plate (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (6) Rear scuff plate (See 09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (7) B-pillar lower trim (See 09-17-12 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (8) B-pillar upper trim (See 09-17-12 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
   (9) Rear seat (See 09-13-6 REAR SEAT REMOVAL/INSTALLATION.)
   (10)Tire house trim (See 09-17-15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
   (11)Trunk side upper trim (5 door) (See 09-17-21 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION.)
   (12)C-pillar trim (See 09-17-13 C-PILLAR TRIM REMOVAL/INSTALLATION.)
   (13)Map light (See 09-18-23 MAP LIGHT REMOVAL/INSTALLATION.)
   (14)Interior light (See 09-18-24 INTERIOR LIGHT REMOVAL/INSTALLATION.)
   (15)Sunvisor (See 09-17-23 SUNVISOR REMOVAL/INSTALLATION.)
   (16)Assist handle (See 09-17-24 ASSIST HANDLE REMOVAL/INSTALLATION.)
5. Disconnect the roof wiring harness connector and remove the roof wiring harness connector clip from the body.
6. Disconnect the rear washer hose. (5 door)

7. Remove the fasteners.

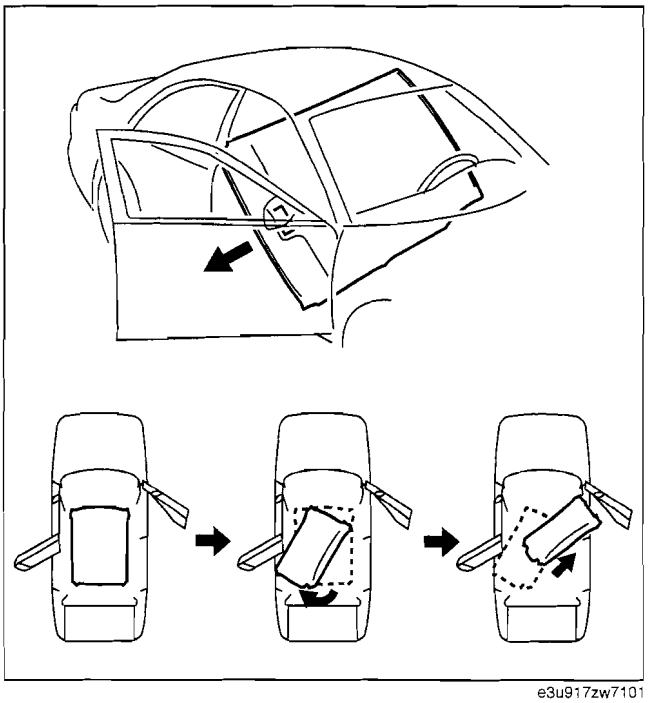


B3E0917W136



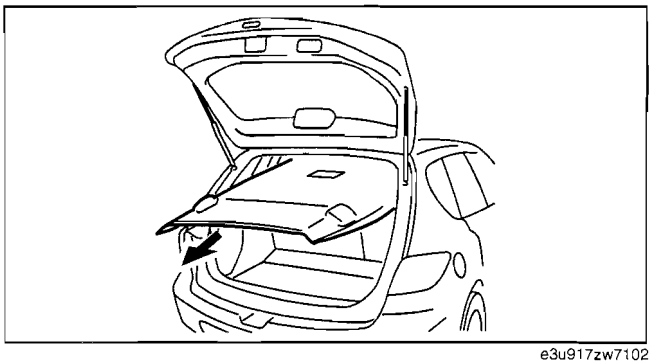
c3u0917w141

8. Detach the tab from the roof panel and remove the headliner.
9. Take the headliner out from the opened front passenger-side door. (4 door)



e3u917zw7101

10. Take the headliner out from the opened liftgate. (5 door)
11. Install in the reverse order of removal.



e3u917zw7102

FLOOR COVERING REMOVAL/INSTALLATION

id091700803000

1. Disconnect the negative battery cable.
2. Remove the following parts:
   (1) Front seat (See 09-13-2 FRONT SEAT REMOVAL/INSTALLATION.)
   (2) Audio amplifier (BOSE) (See 09-20-7 AUDIO AMPLIFIER REMOVAL/INSTALLATION.)
   (3) Woofer (BOSE) (See 09-20-10 WOOFER REMOVAL/INSTALLATION.)
   (4) Rear seat (See 09-13-6 REAR SEAT REMOVAL/INSTALLATION.)
   (5) Front scuff plate (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (6) Console (See 09-17-10 CONSOLE REMOVAL/INSTALLATION.)
   (7) Front side trim (See 09-17-17 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (8) Rear scuff plate (See 09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (9) B-pillar lower trim (See 09-17-12 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (10)Lower anchor of the front seat belt (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (11)Tire house trim (See 09-17-15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
   (12)Fuel-filler lid opener lever cover (See 09-14-15 FUEL-FILLER LID OPENER REMOVAL/INSTALLATION.)
   (13)Side wall (See 09-17-9 SIDE WALL REMOVAL/INSTALLATION.)
3. Remove fasteners A, B, and C.
4. Take the floor covering out from the opened door.
5. Install in the reverse order of removal.

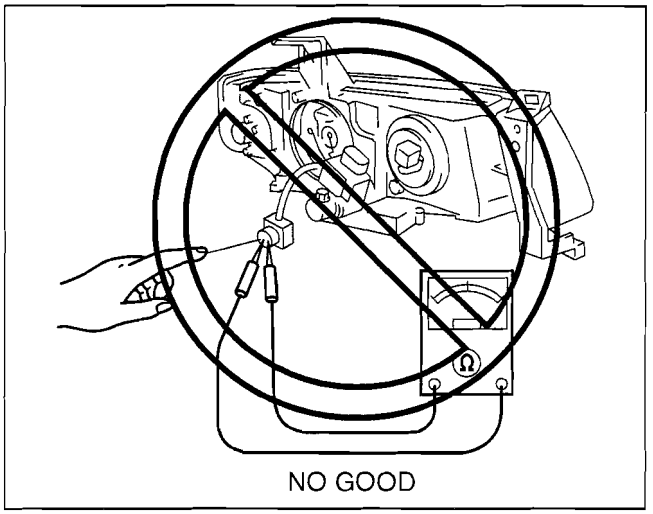
19	Ashtray illumination (See 09-18-25 ASHTRAY ILLUMINATION BULB REMOVAL/INSTALLATION.)
20	Panel light control switch (See 09-18-26 PANEL LIGHT CONTROL SWITCH REMOVAL/INSTALLATION.) (See 09-18-27 PANEL LIGHT CONTROL SWITCH INSPECTION.)
21	Headlight leveling switch (See 09-18-22 HEADLIGHT LEVELING SWITCH REMOVAL/INSTALLATION.) (See 09-18-22 HEADLIGHT LEVELING SWITCH INSPECTION.)
22	Light sensor (See 09-19-16 RAIN SENSOR REMOVAL/INSTALLATION.)

DISCHARGE HEADLIGHT SERVICE WARNINGS

id091800804900

DISCHARGE HEADLIGHT BULB SERVICE WARNINGS

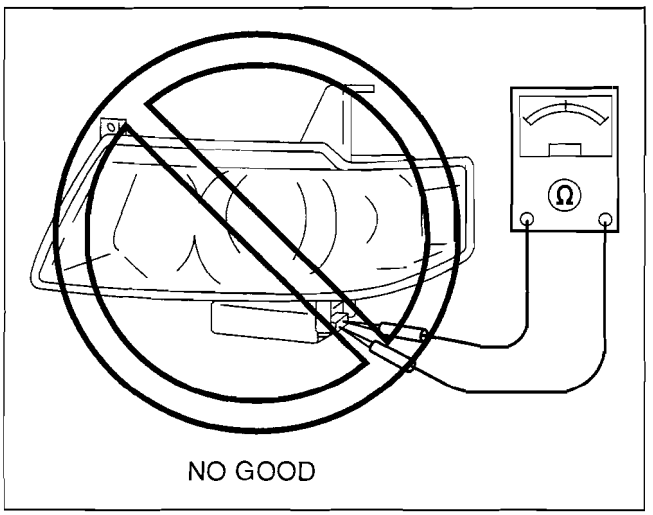
- To prevent electrical shock when replacing the discharge headlight bulb, dry hands thoroughly, and perform the work in an area out of rain.
- When the light switch is on, approx. 25,000 V of high voltage passes through the discharge headlight bulb socket. Because of the danger of electrical shock, do not insert fingers or a tester.
- When the headlights are on, high voltage flows around the socket and bulb. When turning on the discharge headlights while working, always leave the headlights in the vehicle-installed condition to prevent electrical shock.



bhe0918w172

DISCHARGE HEADLIGHT CONTROL MODULE SERVICE WARNINGS

- Because of the danger of electrical shock, when inspecting with a tester, do not inspect the discharge headlight control module as a single unit or disassemble it.



bhe0918w173

DISCHARGE HEADLIGHT CONTROL MODULE REUSE

- If the discharge headlight control module is dented or damaged in any way, replace the module with a new one to prevent electrical shock and improper operation.
- Although the control module may temporarily operate normally even though it has received an impact, it is possible that the interior may have been damaged. When reusing the control module, inspect the following items regarding discharge headlight illumination to verify that there are no malfunctions.
  - — Verify that the discharge headlights illuminate normally by testing them several times under cold illumination (headlights off for approx. 10 min or more and then turned on) and hot illumination (headlights on for approx. 15 min or more, turned off for approx. 1 min, and then turned on again) conditions.
  - — Inspect the headlight illumination in the period from directly after cold illumination until they are uniformly illuminated (approx. 5 min) and verify that there is no flickering or inconsistent brightness.
  - — Turn on the headlights for approx. 30 min with normal condition bulbs and verify that there is no brightness difference between the right and left, and that illumination is consistent.

FRONT COMBINATION LIGHT REMOVAL/INSTALLATION

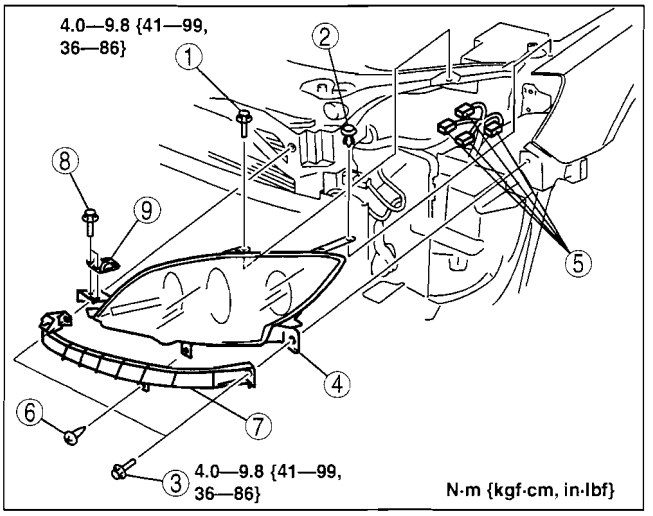
id091800800700

Warning

- **Incorrect servicing of the discharge headlights could result in electrical shock. Before servicing the discharge headlights, always refer to the discharge headlight service warnings. (See 09-18-4 DISCHARGE HEADLIGHT SERVICE WARNINGS.)**

1. Disconnect the negative battery cable.
2. Remove the front bumper. (See 09-10-8 FRONT BUMPER REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.

1	Bolt A
2	Fastener
3	Bolt B
4	Front combination light
5	Connector
6	Bolt C
7	Cover
8	Bolt D (Mazdaspeed3)
9	Bracket (Mazdaspeed3)



am3uuw0000006

4. Install in the reverse order of removal.
5. Adjust the headlight aiming. (See09-18-6 HEADLIGHT AIMING)

FRONT COMBINATION LIGHT BRACKET REPLACEMENT

id091800800800

Note

- Verify that the front combination light is not damaged before using the repair bracket for installation when the original brackets are damaged. If the front combination light component is damaged, replace the light as a single unit.

1. Cut off the front combination light brackets at the locations shown in the figure.

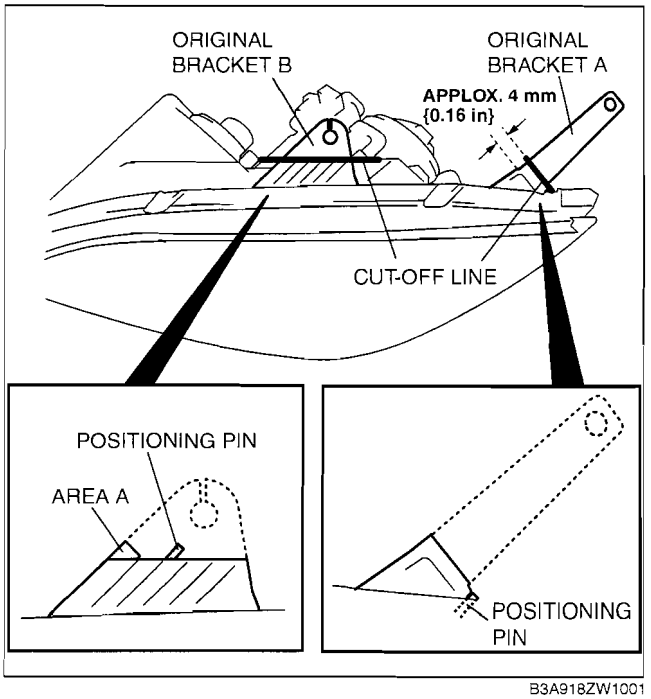
Caution

- **Be careful that area A shown in the figure (screw installation hole) and the positioning pins are not cut off.**

Note

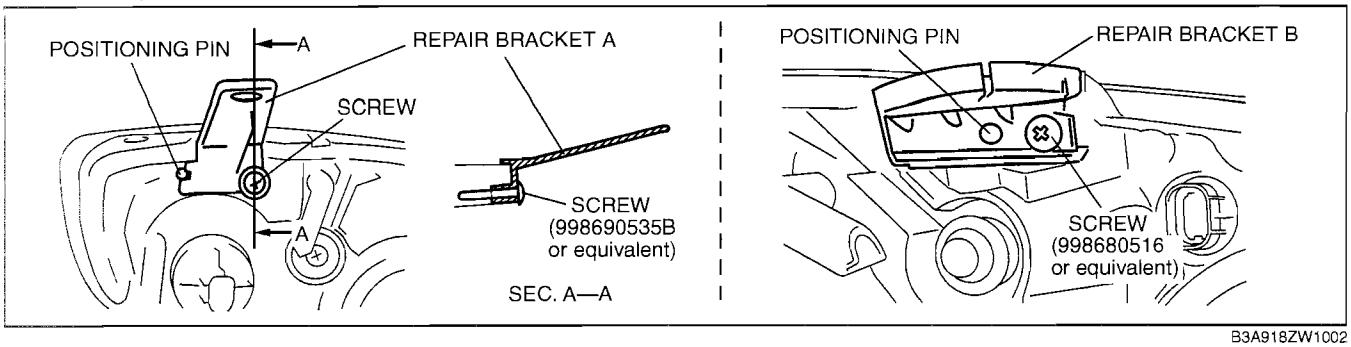
- After roughly cutting off the brackets, position the repair bracket using the positioning pins, and gradually smoothen any rough areas to create a shape that facilitates installation.

2. Smoothen the cut surfaces using sandpaper so that the repair bracket can be properly installed.



B3A918ZW1001

3. Securely attach the repair bracket to the front combination light using the screws.

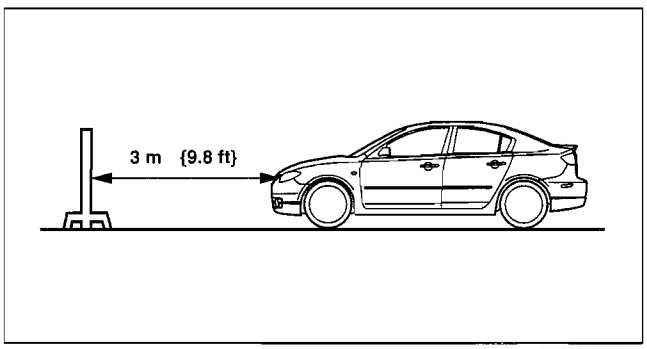


B3A918ZW1002

HEADLIGHT AIMING

id091800800400

1. Adjust the tire pressure to the specification.
2. Position the unloaded vehicle on a flat, level surface.
3. Seat one person in the driver's seat.
4. Position the vehicle straight ahead and perpendicular to the white screen.
5. Set the headlights **3 m {9.8 ft}** from the white screen.
6. Place an object in front of the headlight not being adjusted to block its light beam.
7. Start the engine so that the battery remains charged.
8. Turn on the low-beam headlight.
9. Set the headlight leveling switch to the 0 position. (Vehicles with discharge headlights)

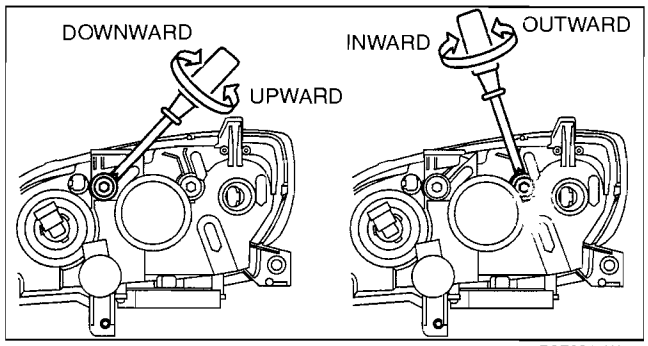


B3E0918W103

10. Adjust the headlight by loosening the adjusting screws as shown in the figure.

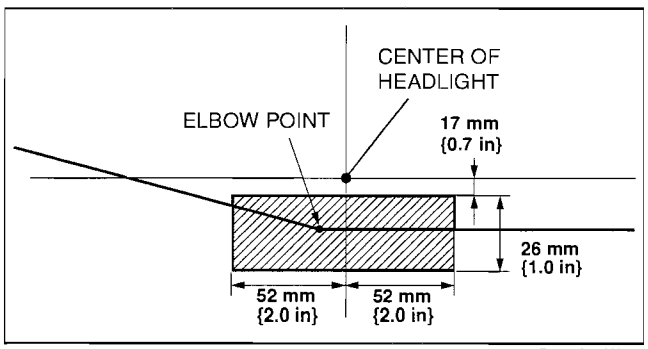
Note

- If the adjusting screws are tightened first, then loosened, they will continue to loosen when the vehicle is in motion and may cause the headlights to become misaligned. Always turn the screws in the tightening direction.



B3E0918W104

11. Turn the adjusting screws to adjust the headlight so that the elbow point is in the shaded area shown in the figure.



B3E0918W174

HEADLIGHT BULB REMOVAL/INSTALLATION

id091800800500

Low-beam

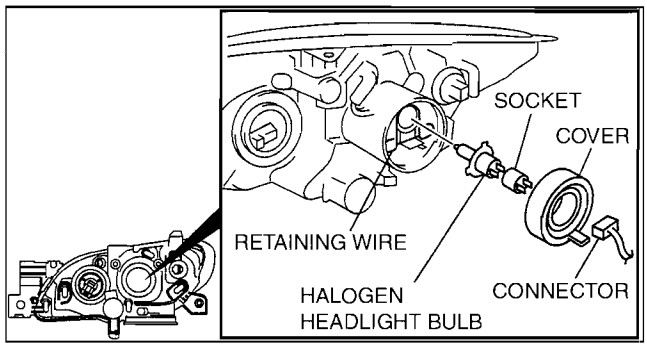
Halogen type

1. Disconnect the negative battery cable.
2. Disconnect the connector.

Caution

- **A halogen bulb generates extremely high heat when it is illuminated. If the surface of the bulb is soiled, excessive heat will build up and the life of the bulb will be shortened. When replacing the bulb, hold the metal flange, not the glass.**

3. Remove the cover.
4. Remove the socket, then remove the headlight bulb.
5. Install in the reverse order of removal.



B3E0918W105

Discharge type

Warning

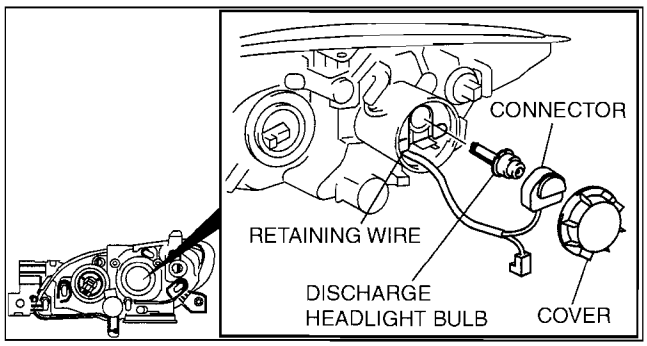
- **Incorrect servicing of the discharge headlights could result in electrical shock. Before servicing the discharge headlights, always refer to the discharge headlight service warnings. (See 09-18-4 DISCHARGE HEADLIGHT SERVICE WARNINGS.)**

1. Disconnect the negative battery cable.
2. Remove the front bumper. (See09-10-8 FRONT BUMPER REMOVAL/INSTALLATION.)
3. Remove the front combination light. (See09-18-5 FRONT COMBINATION LIGHT REMOVAL/INSTALLATION.)
4. Remove the cover.

Caution

- **The bulb generates extremely high heat when it is illuminated. If the surface of the bulb is soiled, excessive heat will build up and the life of the bulb will be shortened. When replacing the bulb, hold the metal flange, not the glass.**

5. Remove the connector, then remove the discharge headlight bulb.
6. Install in the reverse order of removal.



B3E0918W106

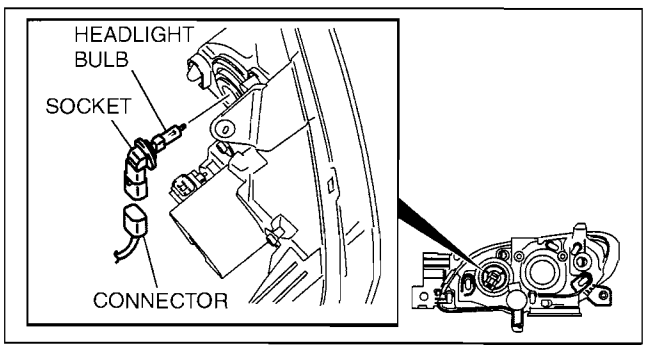
High-beam

1. Disconnect the negative battery cable.
2. Disconnect the connector.

Caution

- **A halogen bulb generates extremely high heat when it is illuminated. If the surface of the bulb is soiled, excessive heat will build up and the life of the bulb will be shortened. When replacing the bulb, hold the metal flange, not the glass.**

3. Remove the socket, then remove the headlight bulb.
4. Install in the reverse order of removal.



B3E0918W107

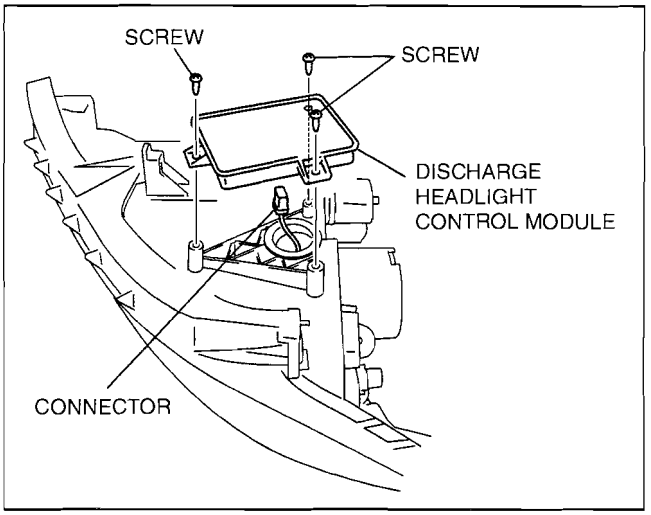
DISCHARGE HEADLIGHT CONTROL MODULE REMOVAL/INSTALLATION

id091800805300

Warning

- **Incorrect servicing of the discharge headlights could result in electrical shock. Before servicing the discharge headlights, always refer to the discharge headlight service warnings. (See 09-18-4 DISCHARGE HEADLIGHT SERVICE WARNINGS.)**

1. Disconnect the negative battery cable.
2. Remove the front bumper. (See 09-10-8 FRONT BUMPER REMOVAL/INSTALLATION.)
3. Remove the front combination light. (See 09-18-5 FRONT COMBINATION LIGHT REMOVAL/INSTALLATION.)
4. Remove screws.
5. Disconnect the connector.
6. Remove the discharge headlight control module.
7. Install in the reverse order of removal.



b3e0918w108

DISCHARGE HEADLIGHT SYSTEM INSPECTION

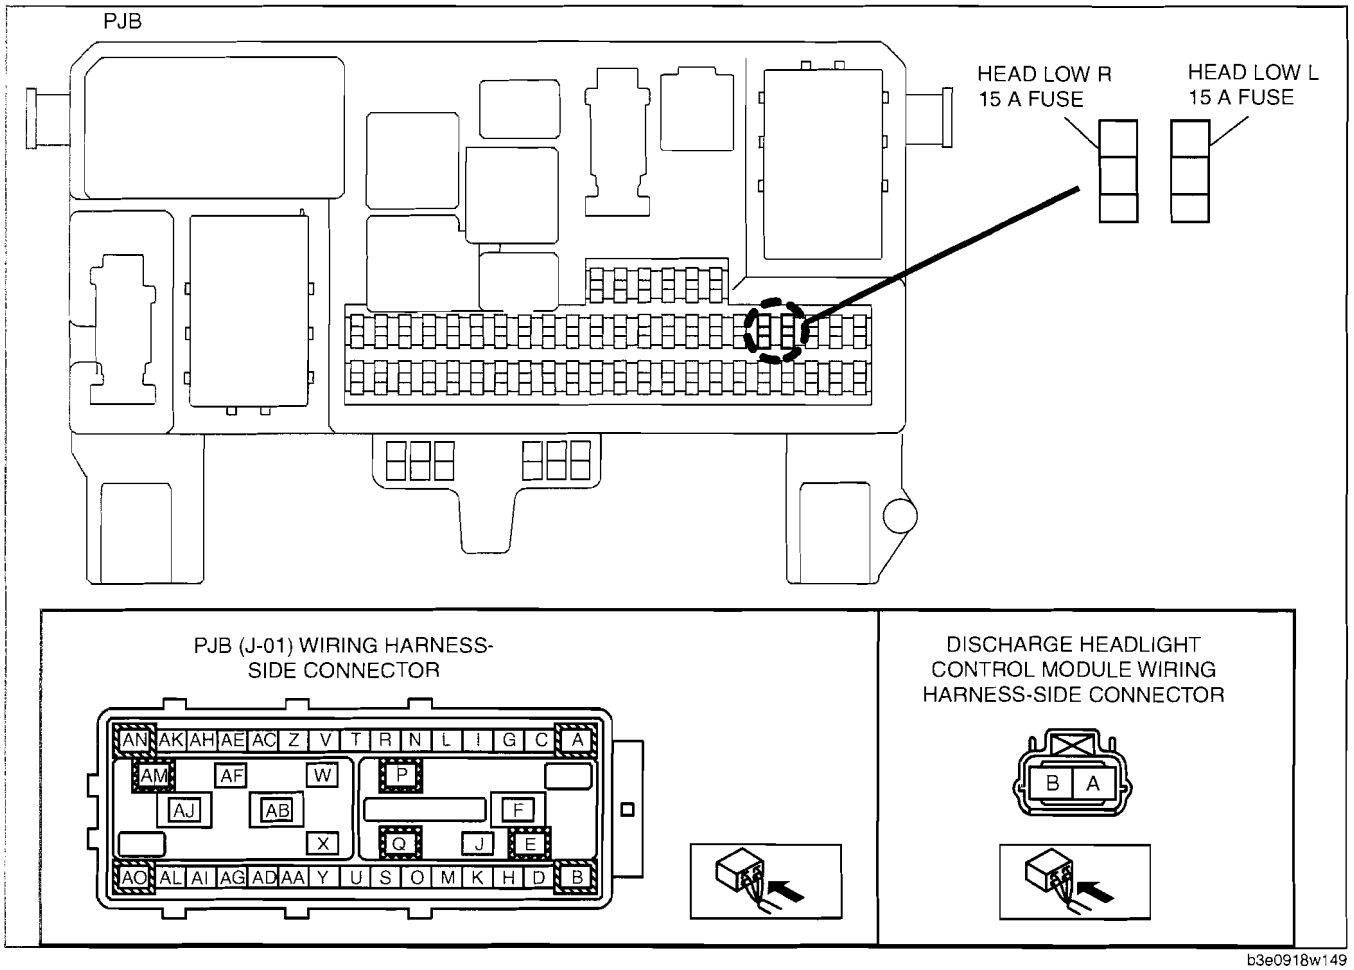
id091800805400

Discharge Headlight Inoperative

Warning

- **Incorrect servicing of the discharge headlights could result in electrical shock. Before servicing the discharge headlights, always refer to the discharge headlight service warnings. (See 09-18-4 DISCHARGE HEADLIGHT SERVICE WARNINGS.)**

Terminal layout



b3e0918w149

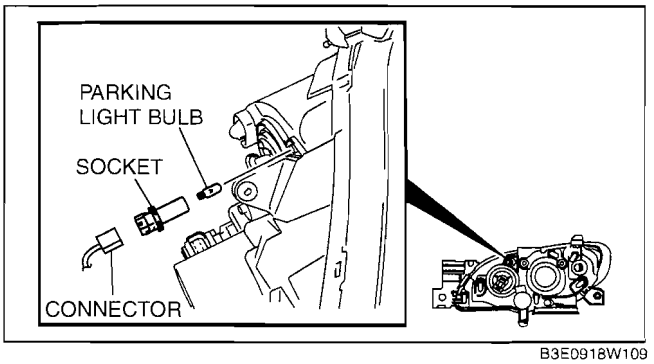
inspection procedure

STEP	INSPECTION		ACTION
1	**INSPECT POWER SUPPLY CIRCUIT OF DISCHARGE HEADLIGHT CONTROL MODULE** • Disconnect the discharge headlight control module connector. • Turn the headlight switch to the HEADLIGHT (LO) position. • Measure the voltage at discharge headlight control module terminal A (wiring harness-side). • Is the voltage **approx. 12 V**?	Yes	Go to Step 6.
		No	Go to the next step.
2	**INSPECT FUSE** • Turn the headlight switch to the OFF position. • Remove the HEAD LOW R 15 A fuse (RH) or HEAD LOW L 15 A fuse (LH). • Inspect the fuses. • Are the fuses normal?	Yes	Go to the next step.
		No	Replace the fuse.
3	**INSPECT HEADLIGHT RELAY** • Inspect the PJB. (See 09-40-3 PASSENGER JUNCTION BOX (PJB) INSPECTION.) • Is the headlight relay normal?	Yes	Go to the next step.
		No	Replace the PJB. (See 09-40-1 PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION.)
4	**INSPECT LIGHT SWITCH** • Inspect the light switch. (See 09-18-20 LIGHT SWITCH INSPECTION.) • Is the light switch normal?	Yes	Go to the next step.
		No	Replace the light switch. (See 09-18-20 LIGHT SWITCH REMOVAL/INSTALLATION.)
5	**INSPECT WIRING HARNESS BETWEEN BATTERY AND DISCHARGE HEADLIGHT CONTROL MODULE** • Disconnect the negative battery cable. • Inspect for continuity between the following terminals: — Battery (positive terminal) and PJB (terminal J-01 AM) — HEAD LOW R 15 A fuse (RH) and discharge headlight control module terminal A — HEAD LOW L 15 A fuse (LH) discharge headlight control module terminal A • Are the wiring harnesses normal?	Yes	Go to the next step.
		No	Replace the related wiring harness.
6	**INSPECT WIRING HARNESS BETWEEN DISCHARGE HEADLIGHT CONTROL MODULE AND GROUND** • Inspect the wiring harness between discharge headlight control module terminal B and ground for the following: — Short to power supply — Open circuit • Is the wiring harness normal?	Yes	Go to the next step.
		No	Replace the related wiring harness.
7	**VERIFY WHETHER MALFUNCTION IS IN DISCHARGE HEADLIGHT BULB OR DISCHARGE HEADLIGHT CONTROL MODULE** • Install any other discharge headlight bulb (low-beam). (See 09-18-7 HEADLIGHT BULB REMOVAL/INSTALLATION.) • Connect the discharge headlight control module connector. • Turn the headlight switch to the HEADLIGHT (LO) position. • Does the headlight (low-beam) illuminate?	Yes	System inspection completed.
		No	Replace the discharge headlight control module. (See 09-18-8 DISCHARGE HEADLIGHT CONTROL MODULE REMOVAL/INSTALLATION.)

PARKING LIGHT BULB REMOVAL/INSTALLATION

id091800804200

1. Disconnect the negative battery cable.
2. Disconnect the connector.
3. Remove the socket, then remove the parking light bulb.
4. Install in the reverse order of removal.

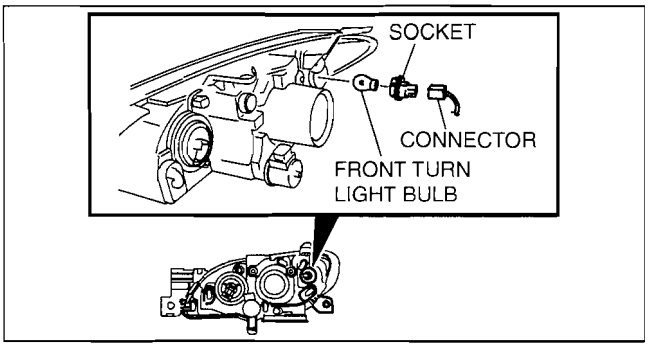


B3E0918W109

FRONT TURN LIGHT BULB REMOVAL/INSTALLATION

id091800805000

1. Disconnect the negative battery cable.
2. Remove the fasteners and slightly bend back the mudguard.
3. Disconnect the connector.
4. Remove the socket, then remove the front turn light bulb.
5. Install in the reverse order of removal.



B3E0918W110

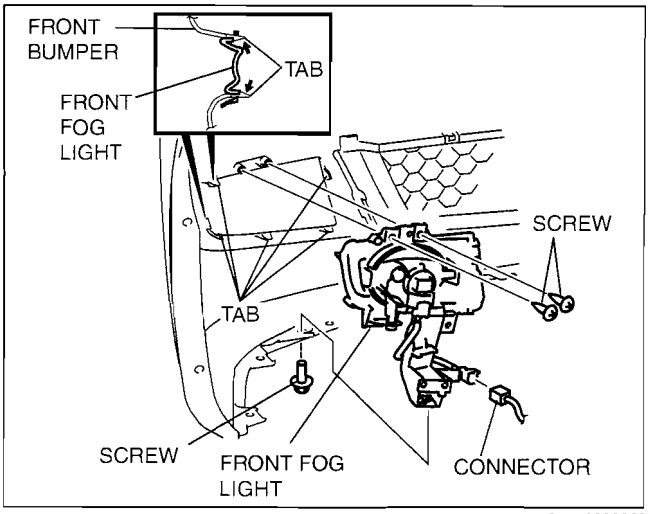
FRONT FOG LIGHT REMOVAL/INSTALLATION

id091800802100

4 DOOR

Standard type

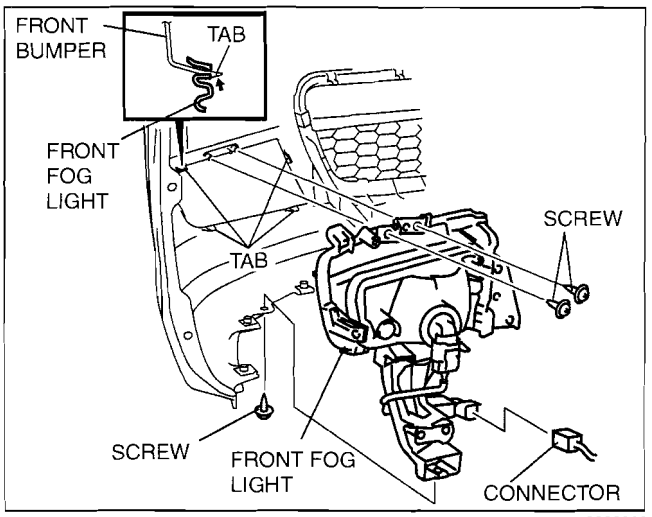
1. Disconnect the negative battery cable.
2. Remove the under cover.
3. Slightly bend back the mudguard.
4. Disconnect the connector.
5. Remove the screws.
6. Remove tabs and then remove the front fog light.
7. Install in the reverse order of removal.
8. Adjust the front fog light aiming. (See 09-18-13 FRONT FOG LIGHT AIMING.)



am3zzw0000262

Sport Type

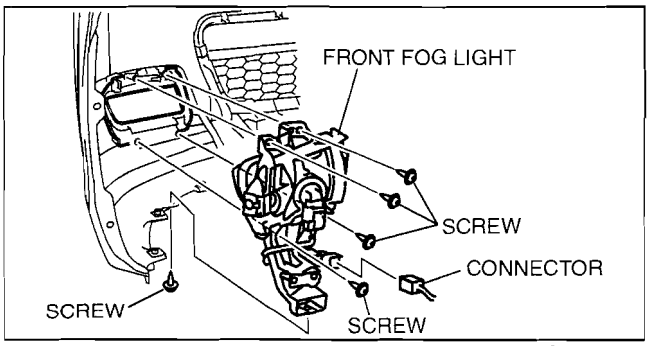
1. Disconnect the negative battery cable.
2. Remove the under cover.
3. Slightly bend back the mudguard.
4. Disconnect the connector.
5. Remove the screws.
6. Remove tabs and then remove the front fog light.
7. Install in the reverse order of removal.
8. Adjust the front fog light aiming. (See 09-18-13 FRONT FOG LIGHT AIMING.)



am3zzw0000262

5 DOOR

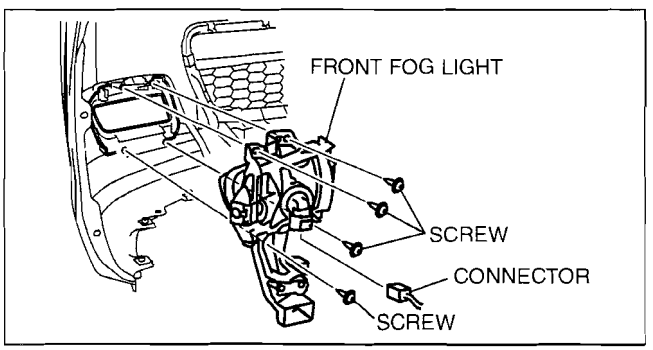
1. Disconnect the negative battery cable.
2. Remove the under cover.
3. Slightly bend back the mudguard.
4. Disconnect the connector.
5. Remove the screws.
6. Remove the front fog light.
7. Install in the reverse order of removal.
8. Adjust the front fog light aiming. (See 09-18-13 FRONT FOG LIGHT AIMING.)



am3zzw0000183

Mazdaspeed3

1. Disconnect the negative battery cable.
2. Remove the under cover.
3. Slightly bend back the mudguard.
4. Disconnect the connector.
5. Remove the screws.
6. Remove the front fog light.
7. Install in the reverse order of removal.
8. Adjust the front fog light aiming. (See 09-18-13 FRONT FOG LIGHT AIMING.)

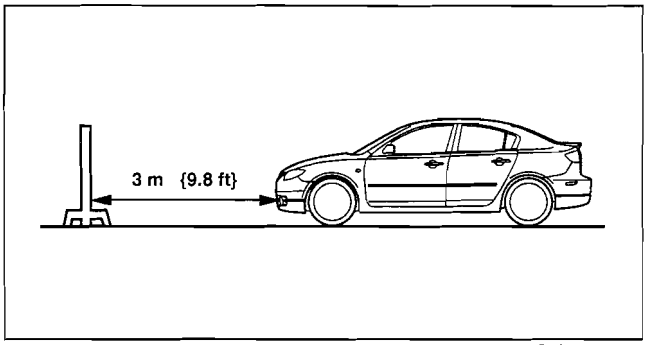


am3uuw0000086

FRONT FOG LIGHT AIMING

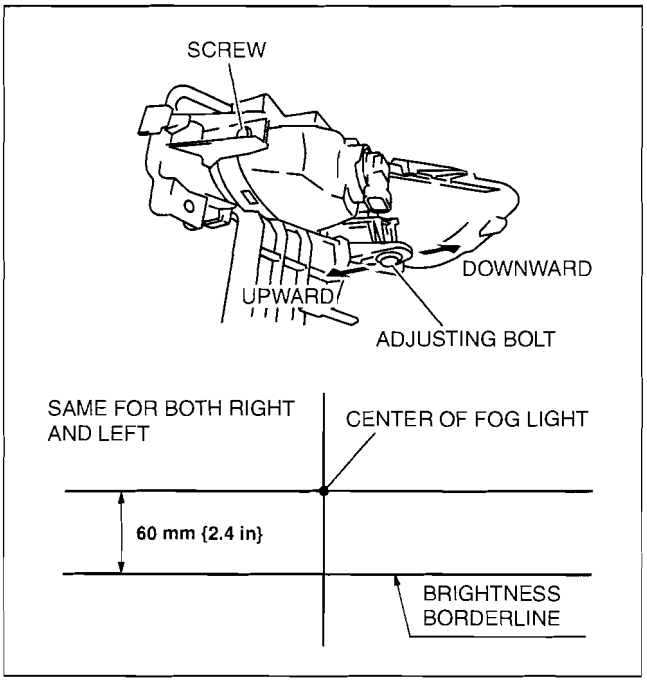
id091800802200

1. Adjust the tire pressure to the specification.
2. Position the unloaded vehicle on a flat, level surface.
3. Seat one person in the driver's seat.
4. Position the vehicle straight ahead and perpendicular to a white screen.
5. Set the fog lights **3 m {9.8 ft}** from the white screen.
6. Place an object in front of the fog light not being adjusted to block its light beam.
7. Start the engine so that the battery remains charged.
8. Turn the front fog lights on.
9. Loosen the screw and the adjusting bolt, move the front fog light in the direction of the arrows, and adjust the front fog light beam to the position shown in the figure.



B3E0918W113

10. Tighten the adjusting bolt, then tighten the screw.



c3u918zw7001

FRONT FOG LIGHT BULB REMOVAL/INSTALLATION

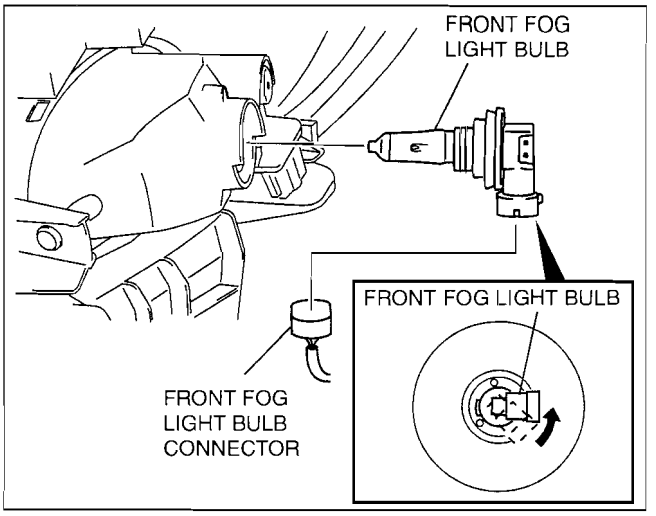
id091800802300

1. Disconnect the negative battery cable.
2. Slightly bend back the mudguard.
3. Disconnect the front fog light bulb connector and remove the front fog light bulb by turning it in the direction of the arrow.

Caution

- **A halogen bulb generates extremely high heat when it is illuminated. If the surface of the bulb is soiled, excessive heat will build up and the life of the bulb will be shortened. When handling the bulb, hold the flange, not the glass.**

4. Install in the reverse order of removal.

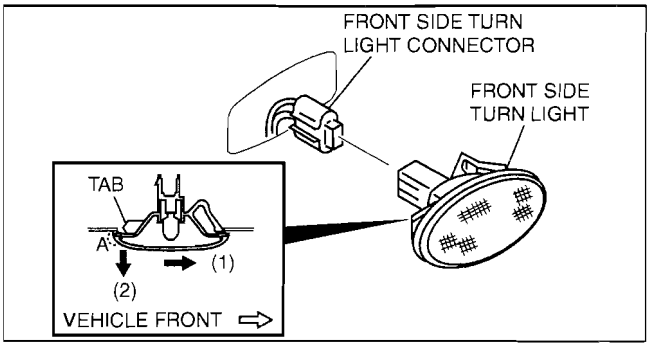


b3e0918w112

FRONT SIDE TURN LIGHT REMOVAL/INSTALLATION

id091800800900

1. Disconnect the negative battery cable.
2. Move the front side turn light in the direction of the arrow (1) and detach the tab.
3. Pull area A of the front side turn light in the direction of the arrow (2) and remove the front side turn light.
4. Disconnect the front side turn light connector.
5. Install in the reverse order of removal.



B3E0918W115

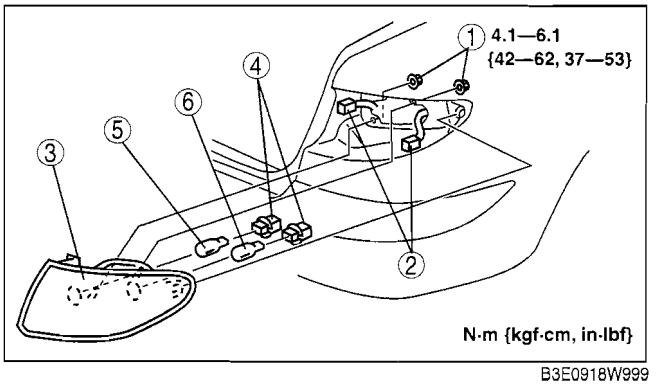
REAR COMBINATION LIGHT REMOVAL/INSTALLATION

id091800801000

1. Disconnect the negative battery cable.
2. Remove the trunk end trim. (4 door) (See 09-17-21 TRUNK END TRIM REMOVAL/INSTALLATION.)
3. Remove the fasteners and slightly bend back the trunk side trim. (4 door)
4. Remove the service hole cover. (5 door)
5. Remove in the order indicated in the table.

1	Nut
2	Connector
3	Rear combination light
4	Socket
5	Rear turn light bulb
6	Brake light/taillight bulb

6. Install in the reverse order of removal.



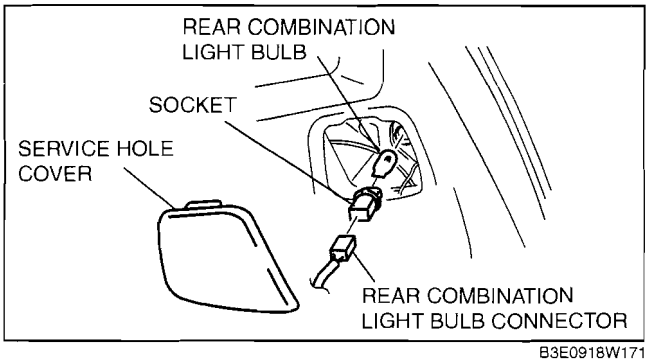
B3E0918W999

REAR COMBINATION LIGHT BULB REMOVAL/INSTALLATION

id091800805900

5 Door

1. Disconnect the negative battery cable.
2. Remove the service hole cover.
3. Disconnect the rear combination light bulb connector.
4. Remove the socket.
5. Remove the rear combination light bulb.
6. Install in the reverse order of removal.



B3E0918W171

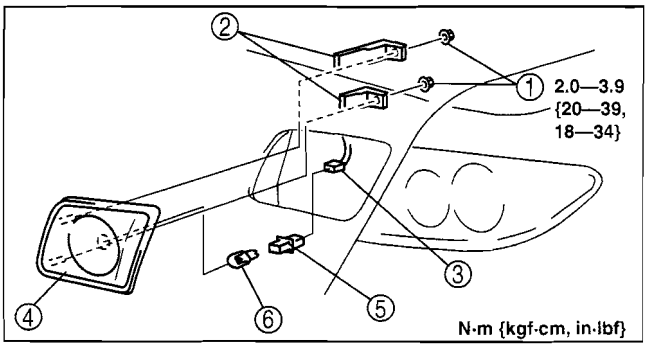
INBOARD LIGHT REMOVAL/INSTALLATION

id091800806100

1. Disconnect the negative battery cable.
2. Remove the trunk lid trim. (4 door) (See09-17-22 TRUNK LID TRIM REMOVAL/INSTALLATION.)
3. Remove the service hole cover. (5 door)
4. Remove in the order indicated in the table.

1	Nut
2	Bracket
3	Connector
4	Inboard light (See 09-18-15 Inboard Light Installation Note.)
5	Socket
6	Back-up light bulb

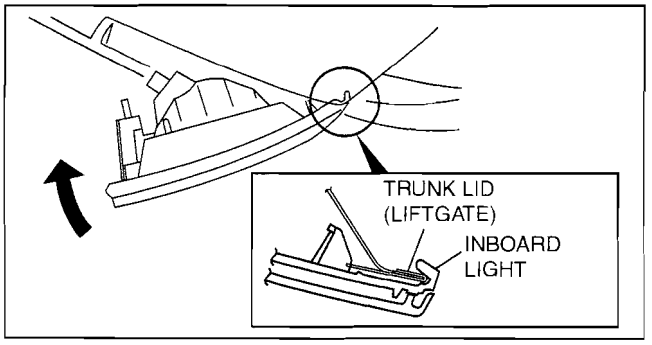
5. Install in the reverse order of removal.



b3e0918w117

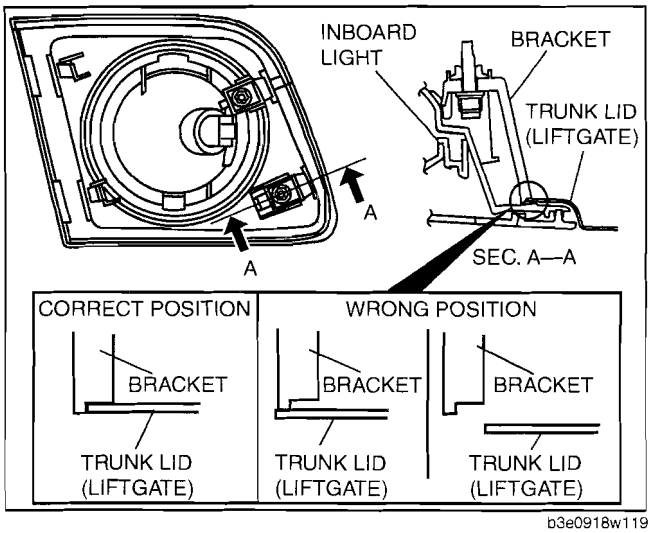
Inboard Light Installation Note

1. Insert the inboard light into the trunk lid (liftgate) as shown in the figure, then pivot it inward and fix in place.



am3uuw0000083

2. Push the bracket onto the trunk lid (liftgate) as shown in the figure and install.



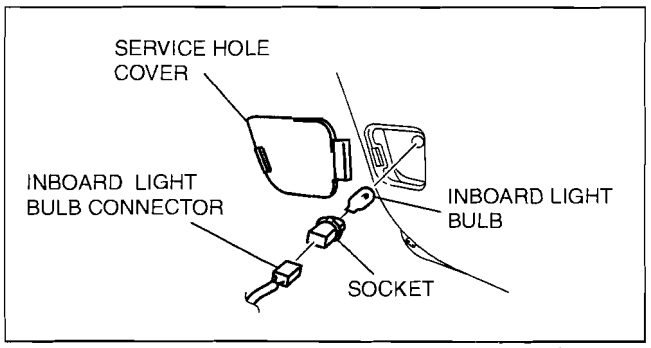
b3e0918w119

INBOARD LIGHT BULB REMOVAL/INSTALLATION

id091800806000

5 Door

1. Disconnect the negative battery cable.
2. Remove the service hole cover.
3. Disconnect the inboard light bulb connector.
4. Remove the socket.
5. Remove the inboard light bulb.
6. Install in the reverse order of removal.



c3u0918w170

HIGH-MOUNT BRAKE LIGHT REMOVAL/INSTALLATION

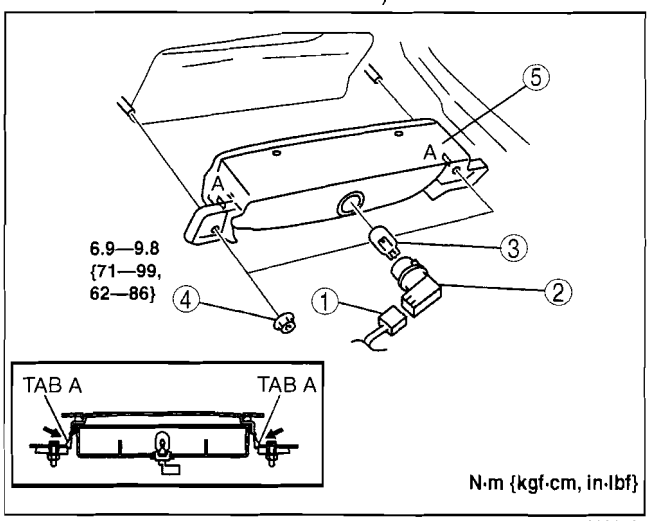
id091800802000

4 DOOR

1. Disconnect the negative battery cable.
2. Remove the trunk lid trim. (See 09-17-22 TRUNK LID TRIM REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.

1	Connector
2	Socket
3	High-mount brake light bulb
4	Nut
5	High-mount brake light

4. Install in the reverse order of removal.



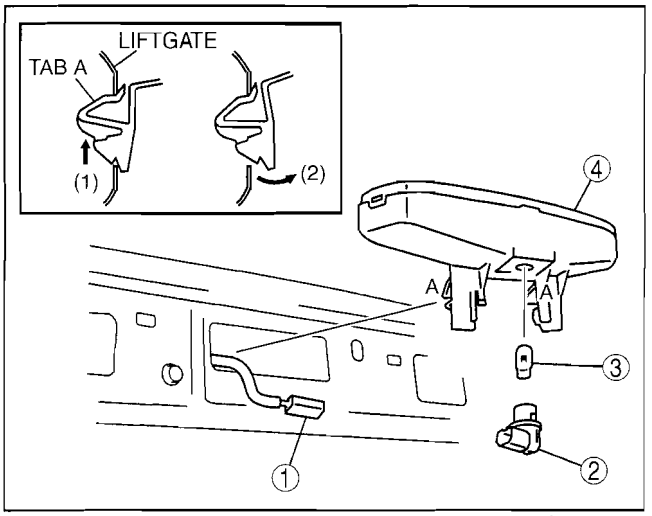
am3uuw0000007

5 DOOR

1. Disconnect the negative battery cable.
2. Remove the liftgate upper trim. (See 09-17-22 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.

1	Connector
2	Socket
3	High-mount brake light bulb
4	High-mount brake light

4. Install in the reverse order of removal.



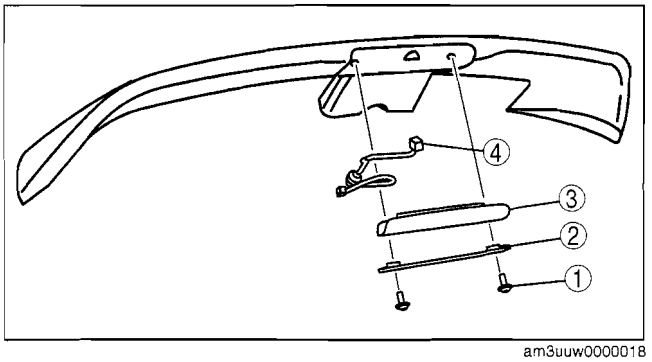
am3uuw0000007

Mazdaspeed3

1. Disconnect the negative battery cable.
2. To remove the wiring harness, remove the following parts.:
   - Liftgate upper trim (See 09-17-22 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)
   - Rear spoiler (See 09-16-9 REAR SPOILER REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.

1	Screw
2	Bracket
3	High-mount brake light
4	Connector

4. Install in the reverse order of removal.

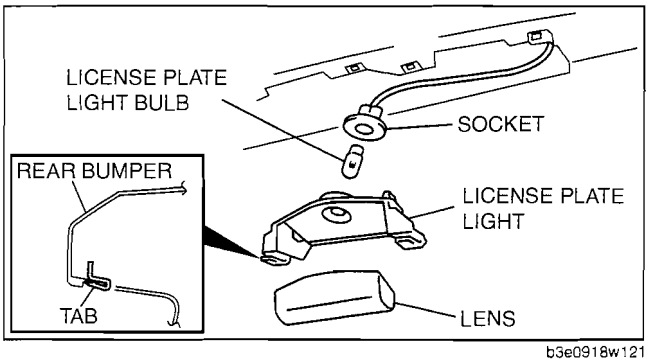


am3uuw0000018

LICENSE PLATE LIGHT REMOVAL/INSTALLATION

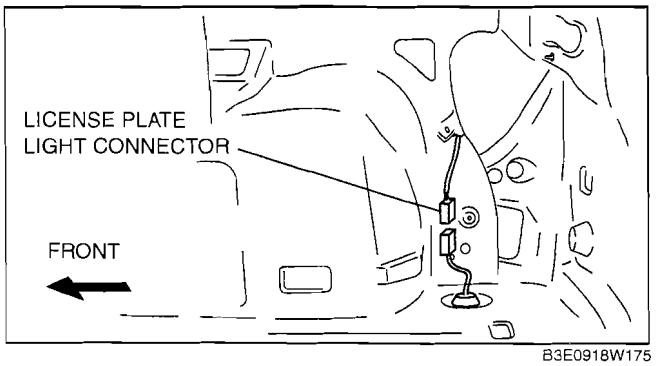
id091800801100

1. Disconnect the negative battery cable.
2. Remove the lens, then remove the license plate light bulb.
3. Remove the license plate light from the rear bumper.
4. Remove the trunk end trim. (See 09-17-21 TRUNK END TRIM REMOVAL/INSTALLATION.)
5. Remove the fasteners and slightly bend back the trunk side trim (RH).
6. Remove the fasteners and slightly bend back the trunk side trim (LH). (4 door)
7. Remove the service hole cover (LH). (5 door)
8. Remove the rear combination light. (See 09-18-14 REAR COMBINATION LIGHT REMOVAL/INSTALLATION.)



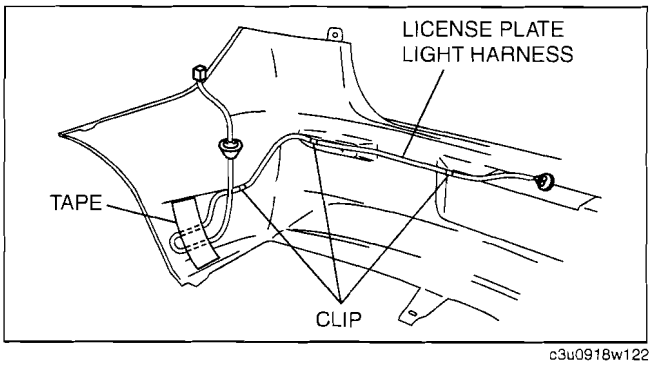
b3e0918w121

9. Disconnect the license plate light connector.
10. Remove the rear bumper. (See 09-10-15 REAR BUMPER REMOVAL/INSTALLATION.)



B3E0918W175

11. Detach the clips from the rear bumper.
12. Remove the license plate light harness and tape.
13. Install in the reverse order of removal.

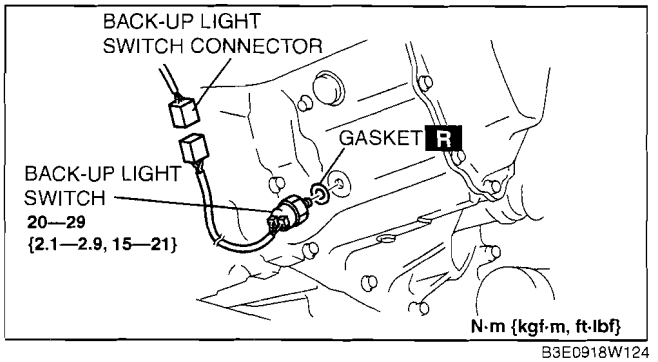


c3u0918w122

BACK-UP LIGHT SWITCH REMOVAL/INSTALLATION

id091800800200

1. Disconnect the negative battery cable.
2. Remove the under cover.
3. Disconnect the back-up light switch connector and remove the back-up light switch.
4. Install in the reverse order of removal.



B3E0918W124

BACK-UP LIGHT SWITCH INSPECTION

id091800800300

1. Verify that the continuity between the back-up light switch terminals is as indicated in the table.
   - If not as indicated in the table, replace the back-up light switch.

O—O : Continuity

Shift lever position	Terminal	
	A	B
Reverse	O	O
Except above

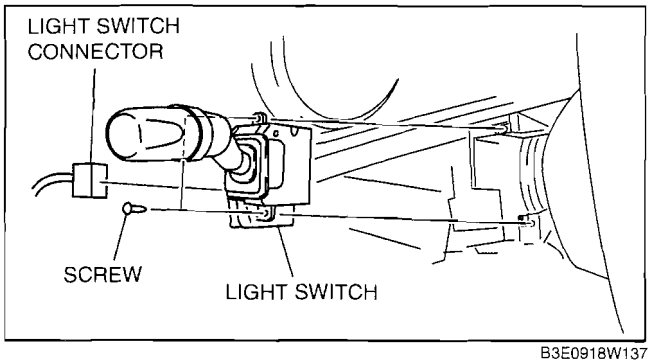
LIGHT SWITCH REMOVAL/INSTALLATION

id091800802800

1. Disconnect the negative battery cable.
2. Remove the following parts:
   (1) Front scuff plate (Driver's side) (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (2) Front side trim (Driver's side) (See 09-17-17 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (3) Hood release lever (See 09-14-22 HOOD LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
   (4) Lower panel (See 09-17-7 LOWER PANEL REMOVAL/INSTALLATION.)
   (5) Column cover (See 09-17-7 COLUMN COVER REMOVAL/INSTALLATION.)
3. Disconnect the light switch connector.
4. Remove the screws, then remove the light switch.
5. Install in the reverse order of removal.



B3E0918W137

LIGHT SWITCH INSPECTION

id091800802900

1. Verify that the continuity between the light switch terminals is as indicated in the table.

Headlight Switch

- If not as indicated in the table, replace the light switch.

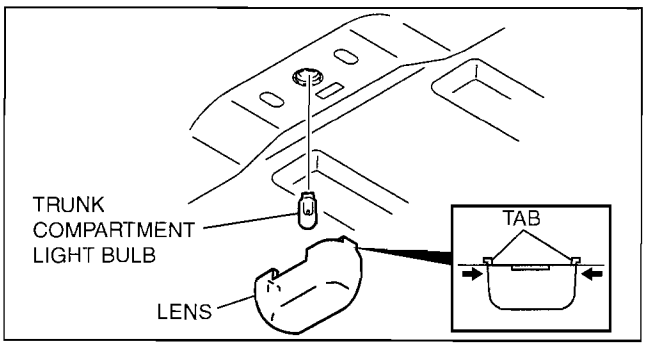
TRUNK COMPARTMENT LIGHT BULB REMOVAL/INSTALLATION

id091800806200

1. Disconnect the negative battery cable.
2. Disengage the tabs by pressing both ends of the lens in the directions indicated by the arrows and remove the lens.
3. Install in the reverse order of removal.

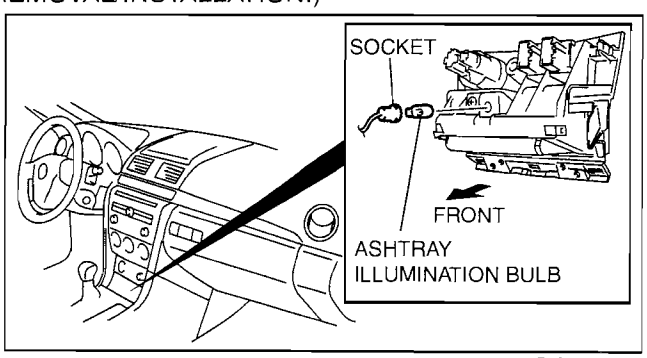


b3e0918w155

ASHTRAY ILLUMINATION BULB REMOVAL/INSTALLATION

id091800806300

1. Disconnect the negative battery cable.
2. Remove the ashtray panel. (See 09-17-10 CONSOLE REMOVAL/INSTALLATION.)
3. Remove the socket, then remove the ashtray illumination bulb.
4. Install in the reverse order of removal.

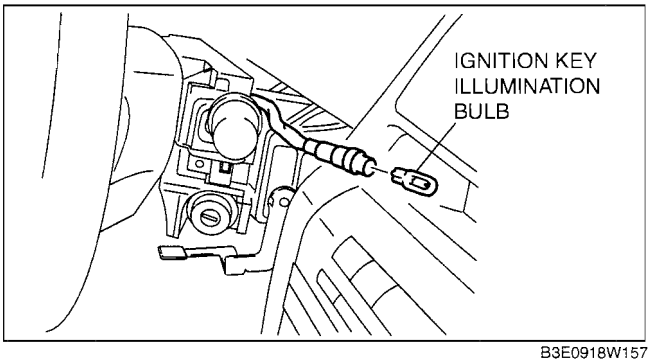


B3E0918W156

IGNITION KEY ILLUMINATION BULB REMOVAL/INSTALLATION

id091800802400

1. Disconnect the negative battery cable.
2. Remove the following parts:
   (1) Front scuff plate (Driver's side) (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (2) Front side trim (Driver's side) (See 09-17-17 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (3) Hood release lever (See 09-14-22 HOOD LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
   (4) Lower panel (See 09-17-7 LOWER PANEL REMOVAL/INSTALLATION.)
   (5) Column cover (See 09-17-7 COLUMN COVER REMOVAL/INSTALLATION.)
3. Remove the ignition key illumination bulb.
4. Install in the reverse order of removal.

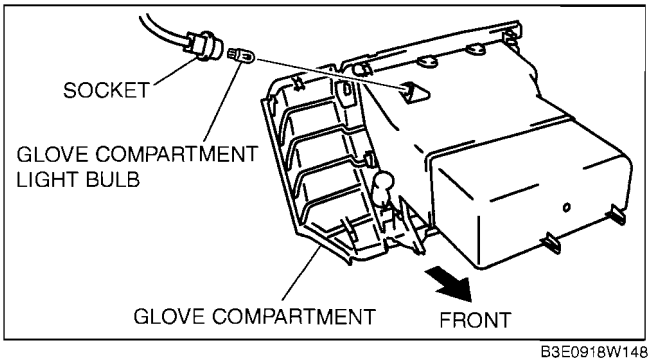


B3E0918W157

GLOVE COMPARTMENT LIGHT BULB REMOVAL/INSTALLATION

id091800801900

1. Disconnect the negative battery cable.
2. Remove the following parts:
   (1) Front scuff plate (Passenger's side) (See09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (2) Front side trim (Passenger's side) (See09-17-17 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (3) Decoration panel (See09-17-17 DECORATION PANEL REMOVAL/INSTALLATION.)
   (4) Glove compartment (See09-17-7 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
3. Remove the socket, then remove the glove compartment light bulb.
4. Install in the reverse order of removal.

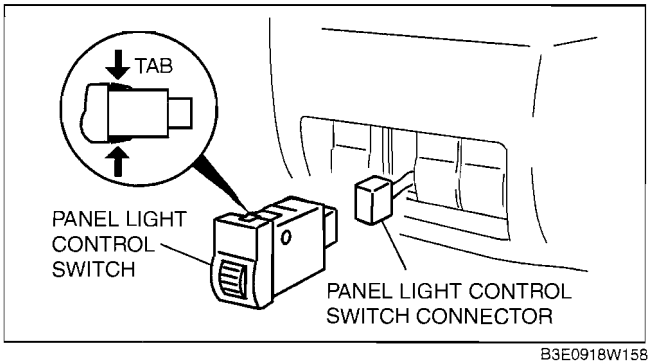


B3E0918W148

PANEL LIGHT CONTROL SWITCH REMOVAL/INSTALLATION

id091800806500

1. Disconnect the negative battery cable.
2. Detach the hood release lever from the lower panel. (See09-14-22 HOOD LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
3. Remove the front scuff plate. (Driver's side) (See09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
4. Remove the front side trim. (Driver's side) (See09-17-17 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
5. Remove the lower panel. (See09-17-7 LOWER PANEL REMOVAL/INSTALLATION.)
6. Remove the panel light control switch.
7. Disconnect the panel light control switch connector.
8. Install in the reverse order of removal.



B3E0918W158

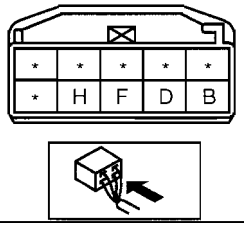
PANEL LIGHT CONTROL SWITCH INSPECTION

id091800806400

1. Measure the voltage at each terminal (other than terminal D).
   - If the voltage is not as specified in the Terminal Voltage Table (Reference), inspect the parts under "Inspection item(s)".
2. Disconnect the panel light control switch connector.
3. Verify that continuity at terminal D is as indicated in the Terminal Voltage Table (Reference).
   - If there is any malfunction, inspect the parts under "Inspection item(s)".
     — If the system does not work properly even though the parts or related wiring harnesses do not have any malfunction, replace the panel light control switch.

Terminal Voltage Table (Reference)

PANEL LIGHT CONTROL SWITCH
HARNESS SIDE CONNECTOR

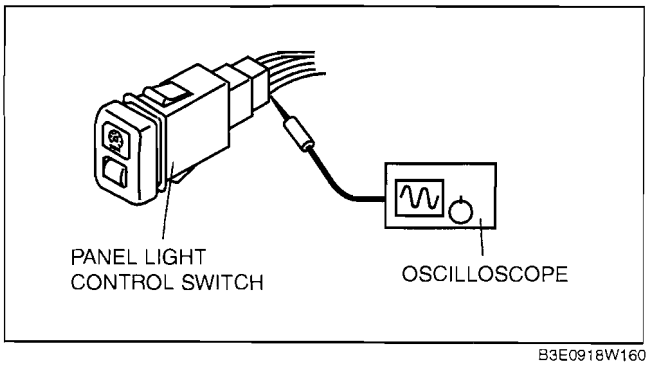


B3E0918W173

Terminal	Signal name	Connected to	Measured condition	Voltage (V)/ Continuity	Inspection item(s)
B	TNS	PJB	Turn the light switch to the TNS or ON position.	B+	• PJB (See 09-40-3 PASSENGER JUNCTION BOX (PJB) INSPECTION.) • ILLUMI 7.5 A fuse • Related wiring harnesses
			Turn the light switch to the OFF position.	1.0 or less	
D	GND	Body ground	Under any condition: Inspect for continuity to ground.	Continuity detected	• GND • Related wiring harnesses
F	Panel light control	Illumination bulb	Panel light control switch turn to the brightest setting.	GND	• PJB (See 09-40-3 PASSENGER JUNCTION BOX (PJB) INSPECTION.) • Related wiring harnesses
			Panel light control switch turn to the darkest setting.	(See 09-40-3 PASSENGER JUNCTION BOX (PJB) INSPECTION.)	
H	Panel light control input	Panel light control switch	Panel light control switch turn to the brightest setting.	Approx. 4.5	• PJB (See 09-40-3 PASSENGER JUNCTION BOX (PJB) INSPECTION.) • Related wiring harnesses
			Panel light control switch turn to the darkest setting.	1.0 or less	

Terminals H Inspection

1. Measure the wave pattern of panel light control switch terminals H using a tester.
2. Turn the light switch to the TNS or ON position.
3. Verify that the resistance changes smoothly while turning the panel light control switch from the brightest to the darkest setting.



B3E0918W160

WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION

id091900800700

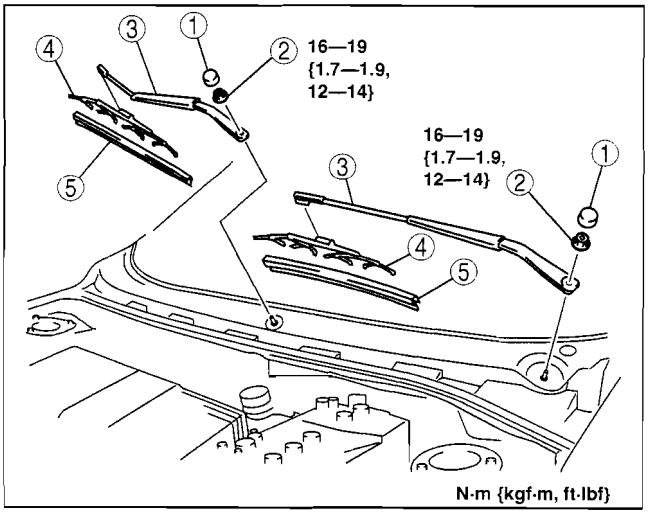
Warning

- **When the ignition switch is turned to the ON position, and the wiper and washer switch is in the AUTO position, the windshield wipers may operate automatically in the following cases. Always turn the ignition switch, and the wiper and washer switch off before handling the windshield wipers; otherwise a pinched hand or fingers could result in injury or a wiper system malfunction:**
  - **— The upper part of the windshield rain sensor is touched.**
  - **— The windshield receives an impact.**
  - **— The rain sensor receives an impact from the cabin.**

1. Remove in the order indicated in the table.

1	Cap
2	Nut
3	Windshield wiper arm (See 09-19-4 Windshield Wiper Arm Installation Note.)
4	Windshield wiper blade
5	Rubber brush

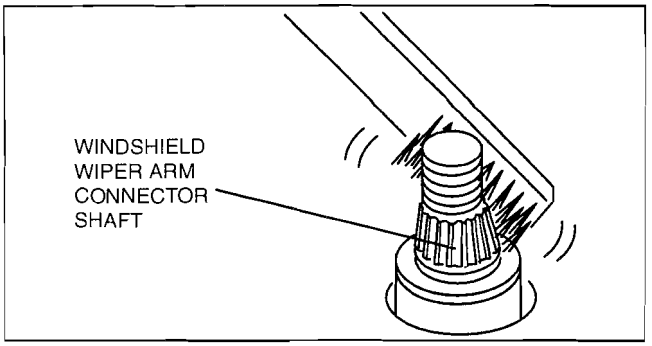
2. Install in the reverse order of removal.
3. Adjust the windshield wiper arm and blade. (See 09-19-4 WINDSHIELD WIPER ARM AND BLADE ADJUSTMENT.)



c3u0919w102

Windshield Wiper Arm Installation Note

1. Clean the windshield wiper arm connector shafts using a wire brush before installing the windshield wiper arms.

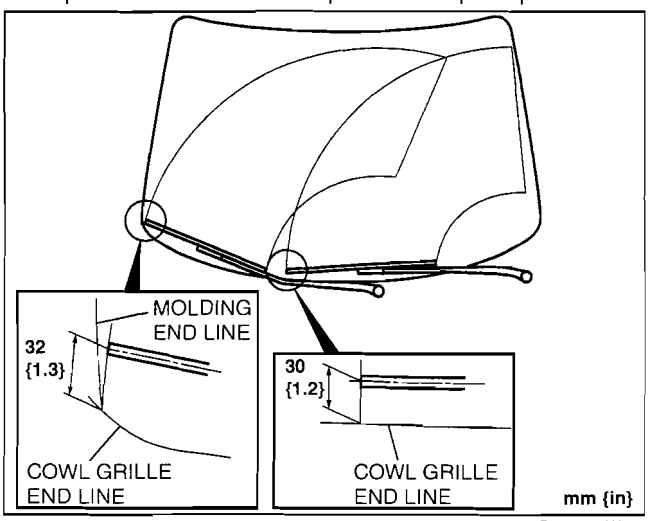


am3uuw0000083

WINDSHIELD WIPER ARM AND BLADE ADJUSTMENT

id091900800800

1. Operate the windshield wipers, and turn off the windshield wiper motor to set the wipers in the park position.
2. Adjust the windshield wiper arm connector shafts to set the arm heights as shown.

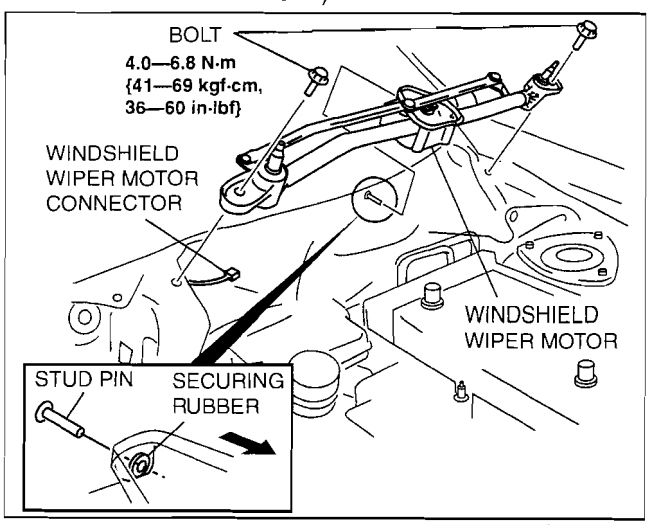


B3E0919W103

WINDSHIELD WIPER MOTOR REMOVAL/INSTALLATION

id091900800900

1. Disconnect the negative battery cable.
2. Remove the windshield wiper arm and blade. (See 09-19-3 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
3. Remove the cowl grille. (See 09-16-7 COWL GRILLE REMOVAL/INSTALLATION.)
4. Remove the cowl panel. (See 09-10-20 COWL PANEL REMOVAL/INSTALLATION.)
5. Remove the bolts.
6. Move the windshield wiper motor in the direction of the arrow, remove the securing rubber from the stud pin (for connecting the motor securing rubber), and then remove the windshield wiper motor.
7. Disconnect the windshield wiper motor connector.
8. Install in the reverse order of removal.



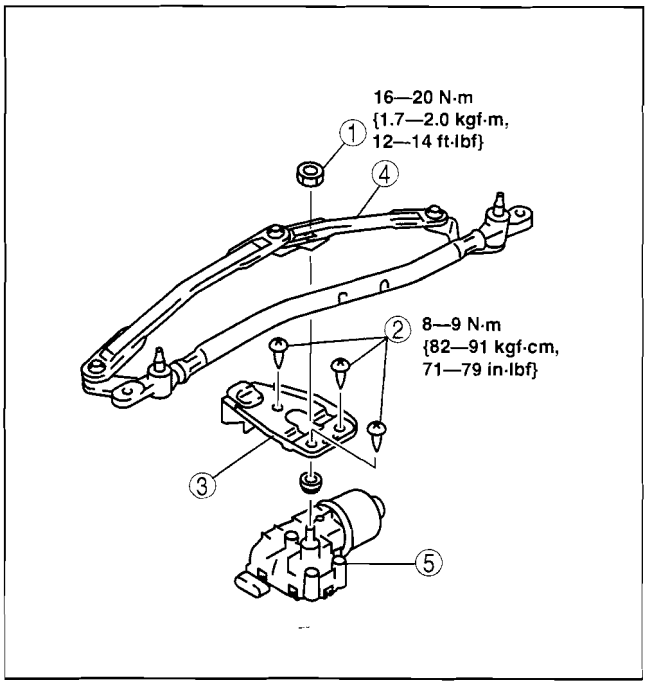
b3e0919w104

WINDSHIELD WIPER MOTOR DISASSEMBLY/ASSEMBLY

id091900801000

1. Disassemble in the order indicated in the table.
2. Assemble in the reverse order of disassembly.

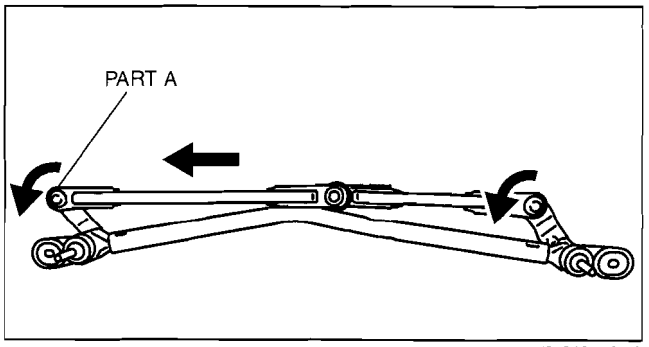
1	Nut
2	Screw
3	Bracket
4	Windshield wiper link
5	Windshield wiper motor (See 09-19-5 Windshield Wiper Motor Assembly Note.)



d3u919zw600a

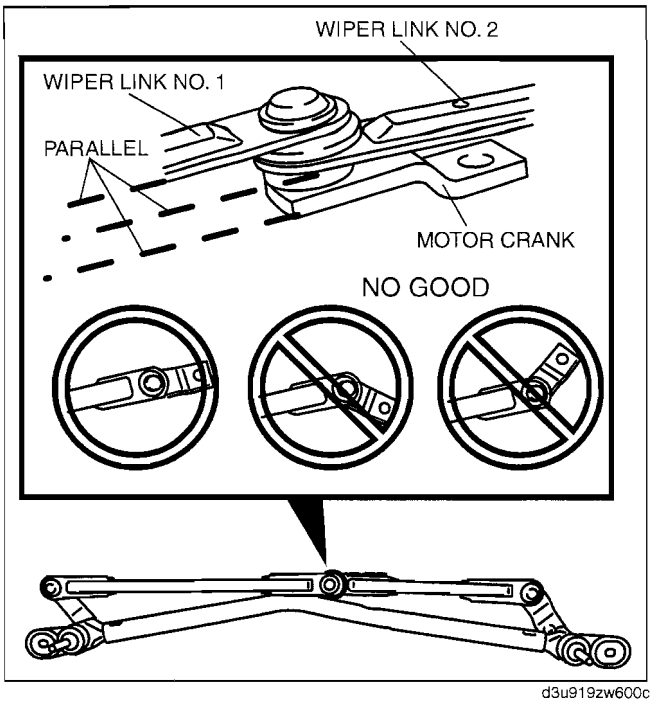
Windshield Wiper Motor Assembly Note

1. Connect the windshield wiper motor to the vehicle wiring harness connector. operate the windshield wipers and then stop them in the auto-stop position.
2. Rotate the windshield wiper link so that part A shown in the figure is as far to the left as possible.
3. Assemble the windshield wiper link and bracket to the windshield wiper motor.



d3u919zw600b

4. Adjust the motor crank and wiper link No. 1 so that they are parallel with each other as shown in the figure and assemble them to the windshield wiper motor shaft.



d3u919zw600c

WINDSHIELD WIPER LINK DISASSEMBLY/ASSEMBLY

id091900803600

Disassembly

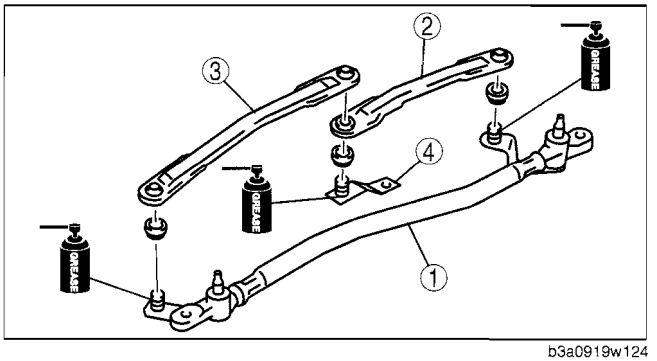
Note

- Do not replace link parts individually. If it is necessary to replace any part, replace the windshield wiper link as a single unit.

Assembly

1. Assemble in the order indicated in the table.

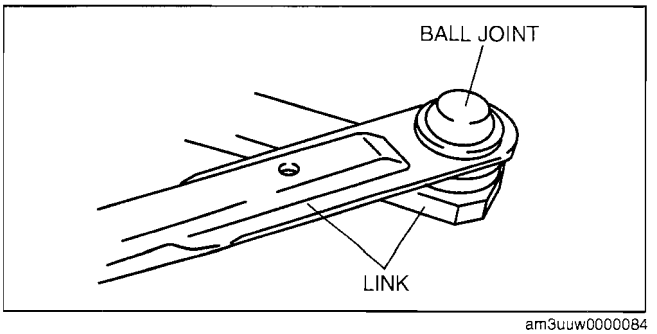
1	Main link (See 09-19-6 Ball Joint Assembly Note.)
2	Wiper link No. 2 (See 09-19-6 Ball Joint Assembly Note.)
3	Wiper link No. 1 (See 09-19-6 Ball Joint Assembly Note.) (See 09-19-7 Wiper Link No. 1 Assembly Note.)
4	Motor crank (See 09-19-6 Ball Joint Assembly Note.)



b3a0919w124

Ball Joint Assembly Note

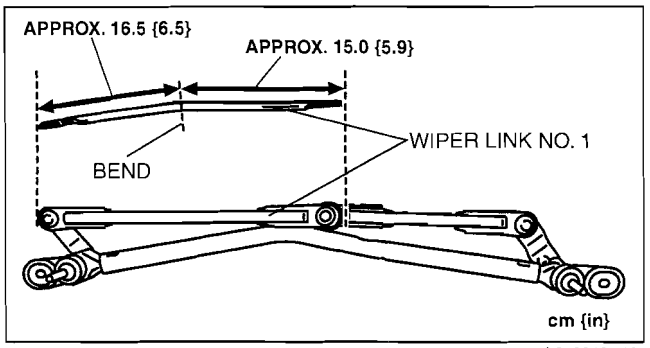
1. Use a clean rag to protect the link and squeeze using pliers.



am3uuw0000084

Wiper Link No. 1 Assembly Note

1. Assemble the wiper link No. 1 positioned as shown in the figure.



b3a0919w125

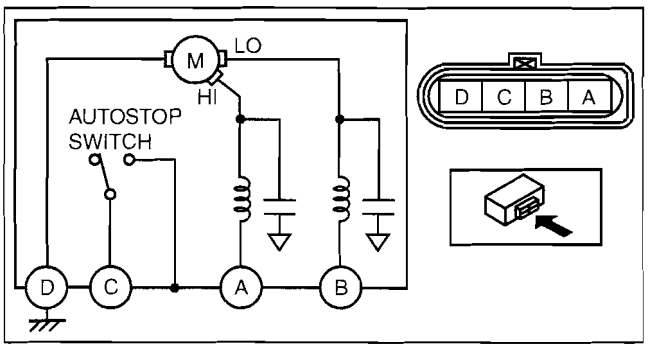
WINDSHIELD WIPER MOTOR INSPECTION

id091900801100

1. Disconnect the windshield wiper motor connector.
2. Connect battery positive voltage to windshield wiper motor terminal A or B, and ground to terminal D, then verify that the windshield wipers operate as shown in the table.
   - If the windshield wipers do not operate as indicated in the table, replace the windshield wiper motor.

Terminal connected to battery positive voltage	Operation condition
A	HI
B	LO

B3E0919W107

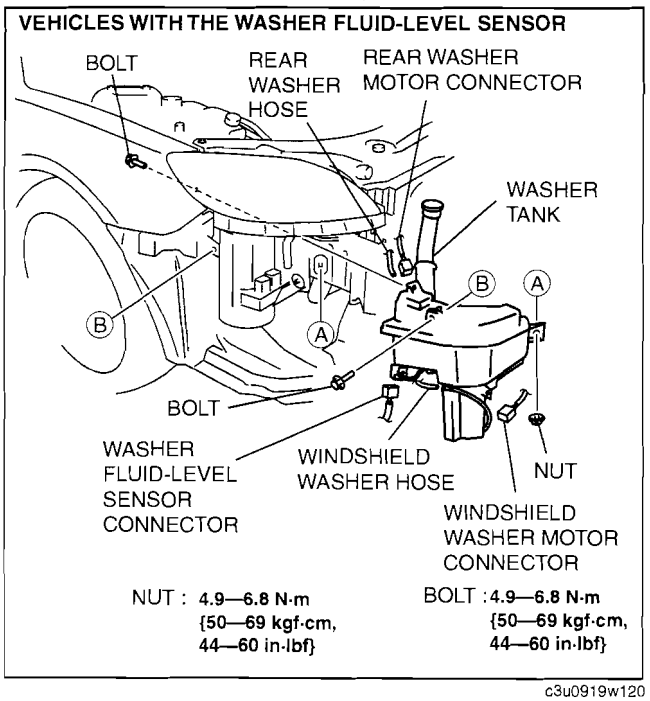


B3E0919W106

WASHER TANK REMOVAL/INSTALLATION

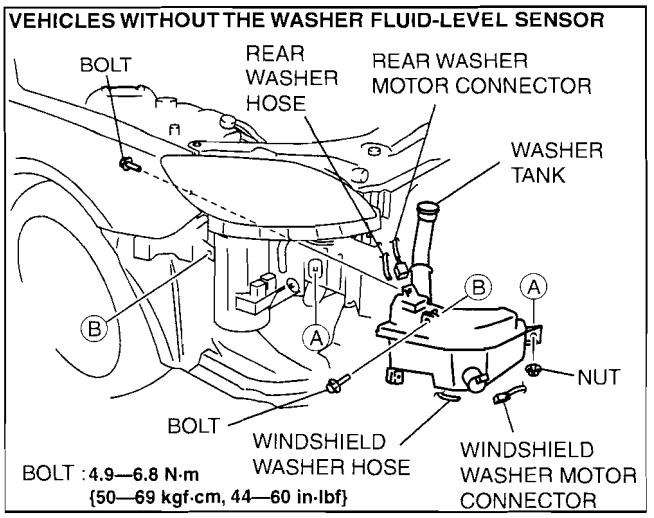
id091900801700

1. Disconnect the negative battery cable.
2. Remove the front bumper. (See09-10-8 FRONT BUMPER REMOVAL/INSTALLATION.)
3. Disconnect the windshield washer motor connector and windshield washer hose.



c3u0919w120

4. Disconnect the rear washer motor connector and rear washer hose. (5 door)
5. Disconnect the washer fluid-level sensor connector. (Vehicles with the washer fluid-level sensor)
6. Remove the bolts and nut, then remove the washer tank.
7. Install in the reverse order of removal.

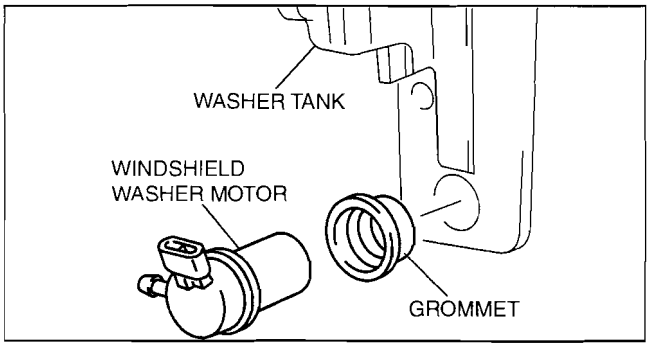


c3u0919w121

WINDSHIELD WASHER MOTOR REMOVAL/INSTALLATION

id091900802400

1. Disconnect the negative battery cable.
2. Remove the washer tank. (See 09-19-7 WASHER TANK REMOVAL/INSTALLATION.)
3. Remove the windshield washer motor, then remove the grommet.
4. Install in the reverse order of removal.

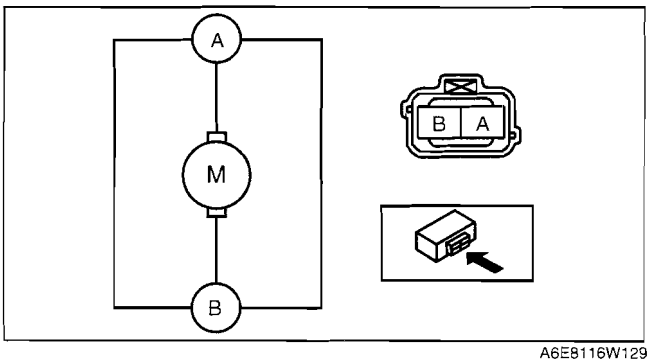


B3E0919W122

WINDSHIELD WASHER MOTOR INSPECTION

id091900802500

1. Connect battery positive voltage to windshield washer motor terminal A and terminal B to ground.
2. Verify that the windshield washer motor operates normally.
   - If there is any malfunction, replace the windshield washer motor.

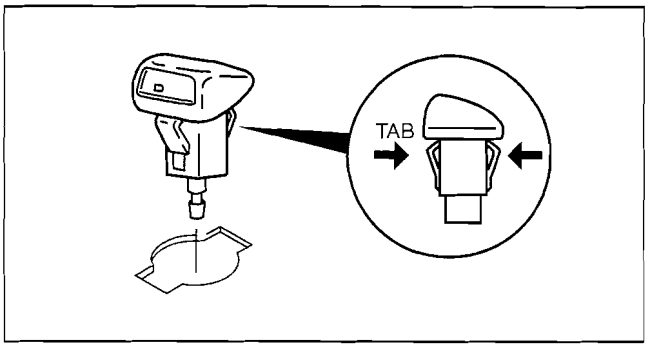


A6E8116W129

WINDSHIELD WASHER NOZZLE REMOVAL/INSTALLATION

id091900802000

1. Remove the windshield wiper arm and blade. (See 09-19-3 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
2. Remove the cowl grille. (See 09-16-7 COWL GRILLE REMOVAL/INSTALLATION.)
3. Remove the windshield washer hose from the windshield washer nozzle.
4. Squeeze the tabs of the windshield washer nozzle.
5. Pull the windshield washer nozzle out to remove it.
6. Install in the reverse order of removal.



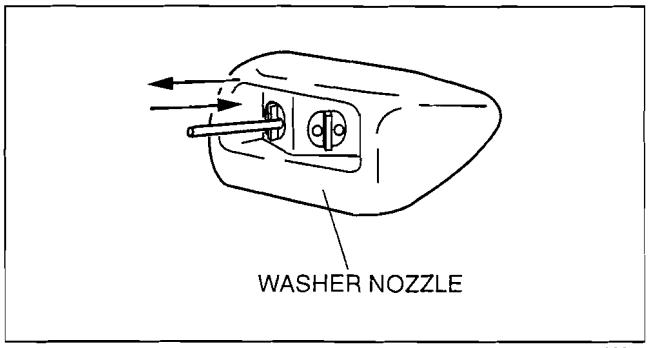
am3uuw0000006

WINDSHIELD WASHER NOZZLE CLEANING

id091900803800

Except Mazdaspeed3

1. Clean the washer nozzle by inserting and moving a needle or an equivalent tool back and forth.
   - If the nozzle becomes clogged again after cleaning, remove the hose from washer nozzle. Make sure there is enough washer fluid. Then turn the washer switch on and flush the inside of the hose.



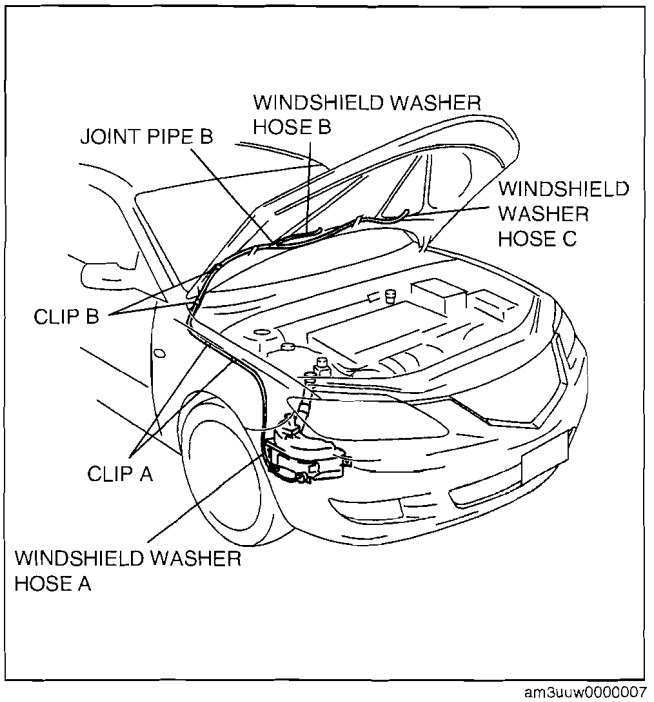
am3uuw0000012

WINDSHIELD WASHER HOSE REMOVAL/INSTALLATION

id091900802100

Except Mazdaspeed3

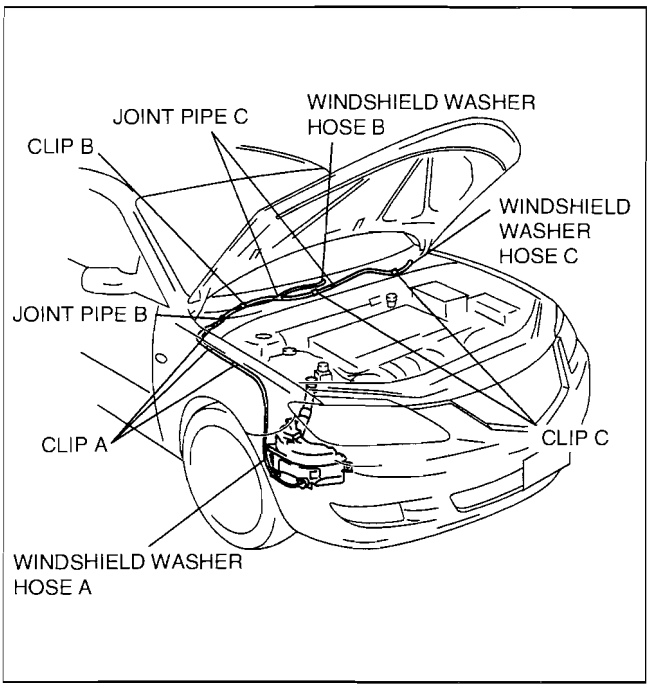
1. Remove the hood insulator. (See 09-10-3 HOOD REMOVAL/INSTALLATION)
2. Slightly bend back the mudguard.
3. Disconnect joint pipe A.
4. Remove windshield washer hose A from clips A.
5. Remove clips B.
6. Disconnect windshield washer hose B from the washer nozzle.
7. Disconnect windshield washer hose C from the washer nozzle.
8. Disconnect joint pipe B, then remove windshield washer hose A, B and C.
9. Install in the reverse order removal.



am3uuw0000007

Mazdaspeed3

1. Remove the windshield wiper arm and blade (See 09-19-3 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
2. Remove the cowl grille (See 09-16-7 COWL GRILLE REMOVAL/INSTALLATION.)
3. Disconnect windshield washer hose A from the washer tank.
4. Remove the windshield washer hose A from clips A.
5. Remove the joint pipe B.
6. Remove the clip B.
7. Remove the joint pipes C.
8. Remove the clips C.
9. Disconnect windshield washer hose B from the washer nozzle.
10. Disconnect windshield washer hose C from the washer nozzle.
11. Disconnect joint pipe B, then remove windshield washer hose A, B and C.
12. Install in the reverse order of removal.

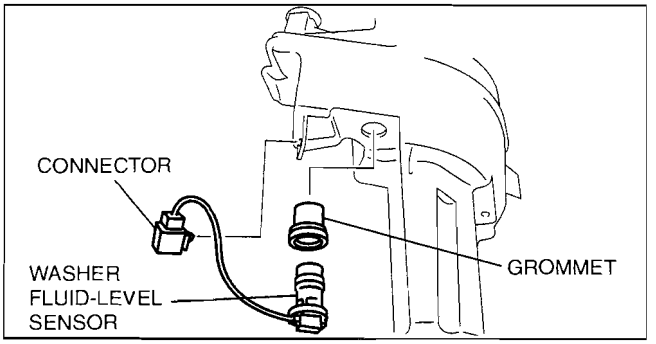


c3u0919w125

WASHER FLUID-LEVEL SENSOR REMOVAL/INSTALLATION

id091900801800

1. Disconnect the negative battery cable.
2. Remove the washer tank. (See 09-19-7 WASHER TANK REMOVAL/INSTALLATION)
3. Disconnect the connector.
4. Remove the washer fluid-level sensor.
5. Remove the grommet.
6. Install in the reverse order of removal.



B3E0919W123

WASHER FLUID-LEVEL SENSOR INSPECTION

id091900801900

1. Disconnect the negative battery cable.
2. Inspect for continuity between the washer fluid-level sensor terminals using an ohmmeter.
   - If not as specified, replace the washer fluid-level sensor.

O—O : Continuity

Fluid level	Terminal

B3E0919W152

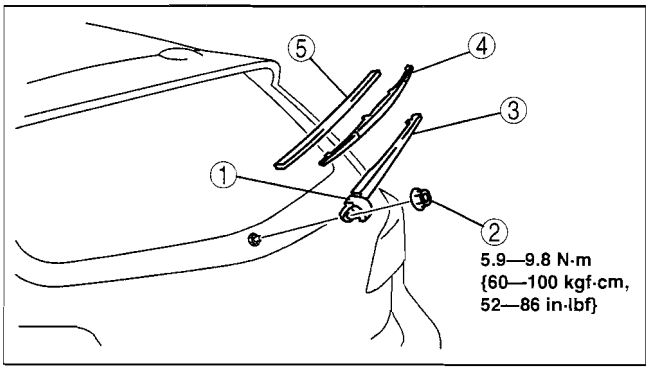
REAR WIPER ARM AND BLADE REMOVAL/INSTALLATION

id091900801200

1. Remove in the order indicated in the table.

1	Cap
2	Nut
3	Rear wiper arm (See 09-19-13 Rear Wiper Arm Installation Note.)
4	Rear wiper blade
5	Rubber brush

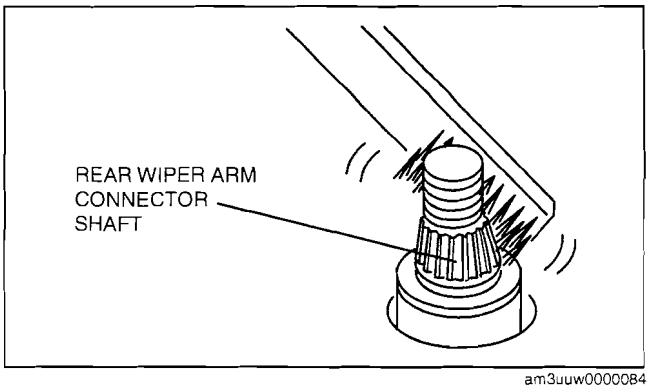
2. Install in the reverse order of removal.
3. Adjust the rear wiper arm and blade. (See 09-19-13 REAR WIPER ARM AND BLADE ADJUSTMENT.)



am3uuw0000084

Rear Wiper Arm Installation Note

1. Clean the rear wiper arm connector shaft using a wire brush before installing the rear wiper arm.

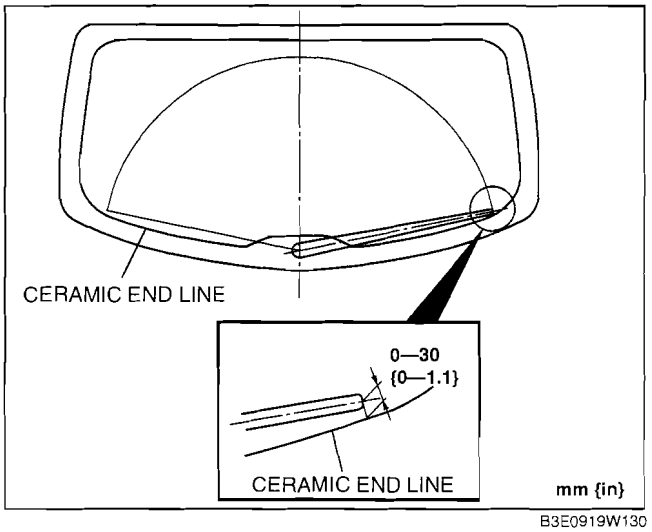


am3uuw0000084

REAR WIPER ARM AND BLADE ADJUSTMENT

id091900801300

1. Operate the rear wiper motor to set the wiper in the park position.
2. Set the rear wiper arm onto the ceramic end line.

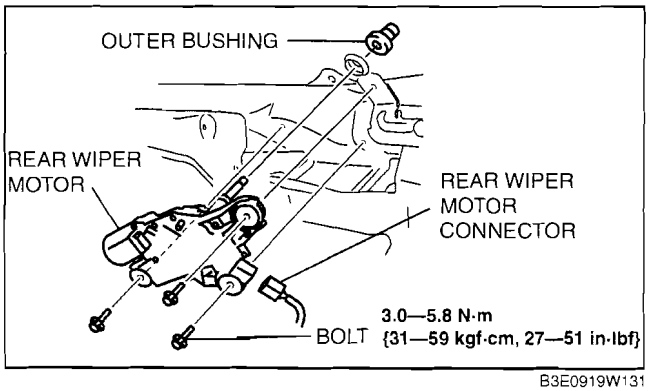


B3E0919W130

REAR WIPER MOTOR REMOVAL/INSTALLATION

id091900801400

1. Disconnect the negative battery cable.
2. Remove the following parts:
   (1) Rear wiper arm and blade (See 09-19-12 REAR WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
   (2) Liftgate upper trim (See 09-17-22 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)
   (3) Liftgate side trim (See 09-17-22 LIFTGATE SIDE TRIM REMOVAL/INSTALLATION.)
   (4) Liftgate lower trim (See 09-17-23 LIFTGATE LOWER TRIM REMOVAL/INSTALLATION.)
3. Disconnect the rear wiper motor connector.
4. Remove the bolts, then remove the rear wiper motor.
5. Remove the outer bushing.
6. install in the reverse order of removal.

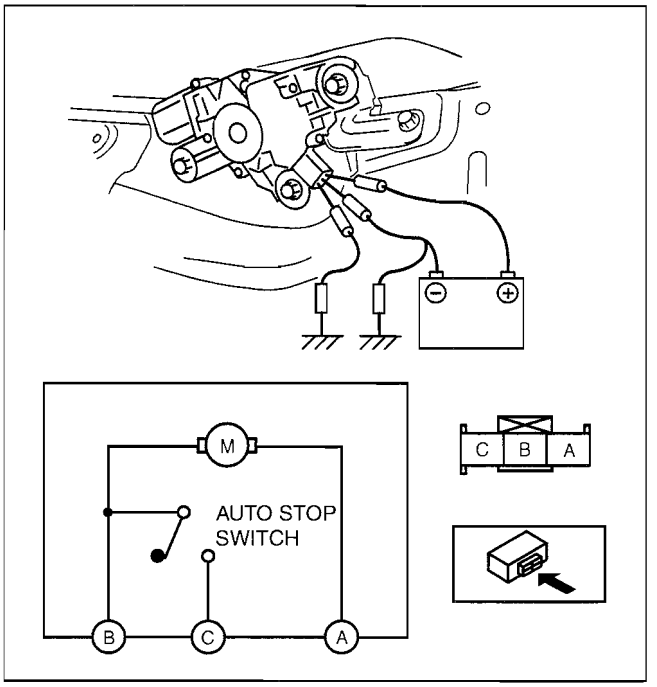


B3E0919W131

REAR WIPER MOTOR INSPECTION

id091900801500

1. Connect battery positive voltage to the rear wiper motor terminal B, and ground the rear wiper motor terminal A.
2. Verify that the rear wiper motor operates.
   - If there is any malfunction, replace the rear wiper motor.

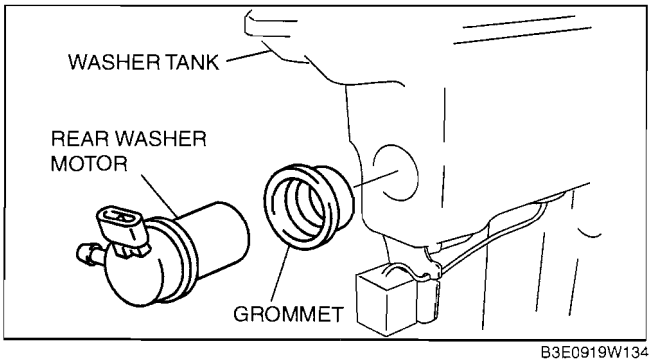


b3e0919w132

REAR WASHER MOTOR REMOVAL/INSTALLATION

id091900802600

1. Disconnect the negative battery cable.
2. Remove the washer tank. (See 09-19-7 WASHER TANK REMOVAL/INSTALLATION)
3. Remove the rear washer motor, then remove the grommet.
4. Install in the reverse order of removal.

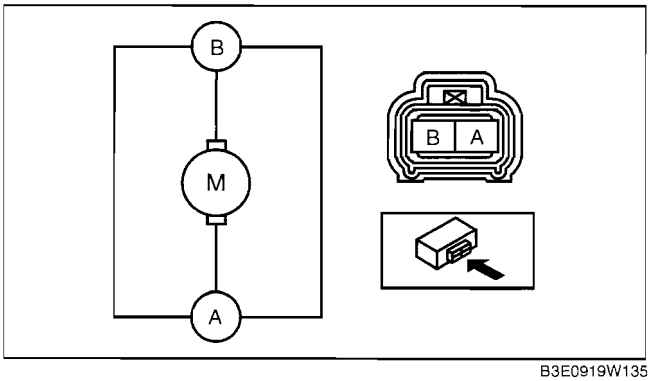


B3E0919W134

REAR WASHER MOTOR INSPECTION

id091900802700

1. Connect battery positive voltage to rear washer motor terminal A and terminal B to ground.
2. Verify that the rear washer motor operates normally.
   - If there is any malfunction, replace the rear washer motor.

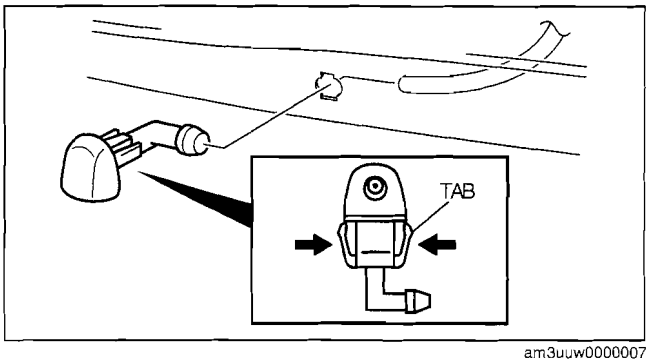


B3E0919W135

REAR WASHER NOZZLE REMOVAL/INSTALLATION

id091900802200

1. Disconnect the negative battery cable.
2. Remove the liftgate upper trim. (See 09-17-22 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)
3. Remove the rear spoiler. (See 09-16-9 REAR SPOILER REMOVAL/INSTALLATION.)
4. Squeeze the tabs, then remove the rear washer nozzle.
5. Install in the reverse order of removal.
6. Adjust the rear washer nozzle. (See 09-19-15 REAR WASHER NOZZLE ADJUSTMENT.)

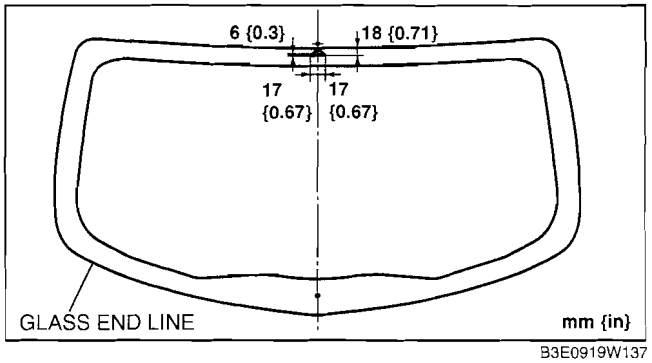


am3uuw0000007

REAR WASHER NOZZLE ADJUSTMENT

id091900802300

1. Insert a needle or an equivalent tool into the spray hole of the rear washer nozzle and adjust the nozzle direction as shown.



B3E0919W137

REAR WASHER NOZZLE CLEANING

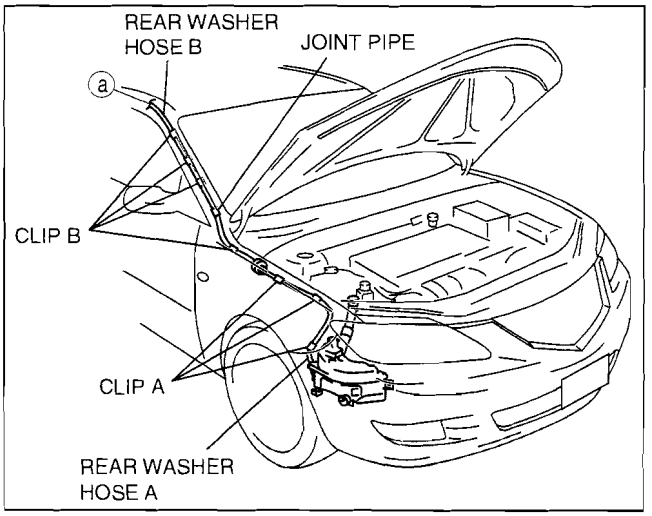
id091900803900

1. Clean the rear washer nozzle. (See 09-19-9 WINDSHIELD WASHER NOZZLE CLEANING.)

REAR WASHER HOSE REMOVAL/INSTALLATION

id091900801600

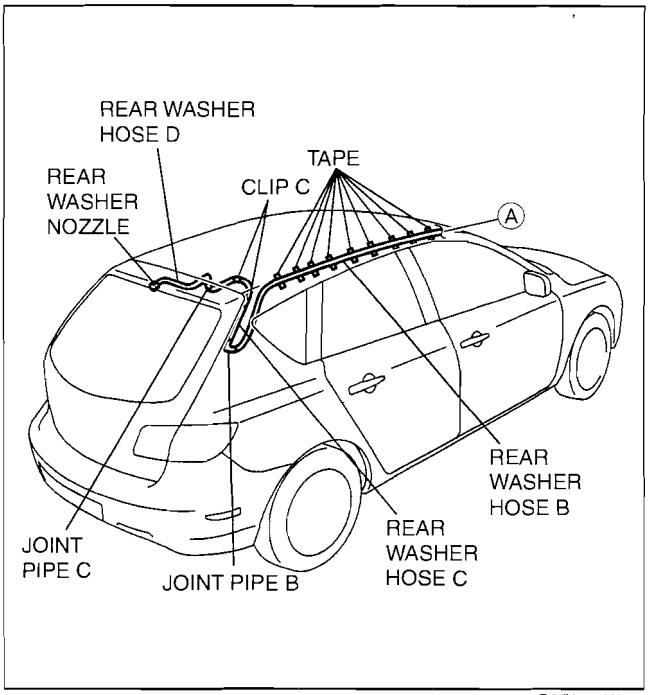
1. Disconnect the negative battery cable.
2. Slightly bend back the mudguard (RH).
3. Disconnect the rear washer hose A from the washer tank.
4. Remove rear washer hose A from clips A.
5. Remove A-pillar trim (RH). (See 09-17-11 A-PILLAR TRIM REMOVAL/INSTALLATION.)
6. Remove the glove compartment. (See 09-17-7 GLOVE COMPARTMENT REMOVAL/INSTALLATION)
7. Remove the dashboard garnish. (See 09-17-13 DASHBOARD GARNISH REMOVAL/INSTALLATION)
8. Disconnect joint pipe, then remove the rear washer hose A.
9. Remove rear washer hose B from the clips B.
10. Remove the following parts:
    (1) Upper anchor of the front seat belt (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
    (2) Front scuff plate (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
    (3) Rear scuff plate (See 09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
    (4) B-pillar lower trim (See 09-17-12 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
    (5) B-pillar upper trim (See 09-17-12 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
    (6) Rear seat (See 09-13-6 REAR SEAT REMOVAL/INSTALLATION.)
    (7) Tire house trim (See 09-17-15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)



c3u0919w138

(8) Trunk side upper trim (See 09-17-21 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION.)
(9) C-pillar trim (See 09-17-13 C-PILLAR TRIM REMOVAL/INSTALLATION.)
(10)Map light (See 09-18-23 MAP LIGHT REMOVAL/INSTALLATION.)
(11)Sunvisor (See 09-17-23 SUNVISOR REMOVAL/INSTALLATION.)
(12)Assist handle (See 09-17-24 ASSIST HANDLE REMOVAL/INSTALLATION.)

11. Disconnect the joint pipe B.
12. Remove the headliner. (See 09-17-24 HEADLINER REMOVAL/INSTALLATION)
13. Remove rear washer hose B and the tapes.
14. Remove clips C from the body.
15. Disconnect the joint pipe C, then remove rear washer hose C.
16. Remove rear washer hose D from the rear washer nozzle.
17. Install in the reverse order of removal.



B3E0919W139

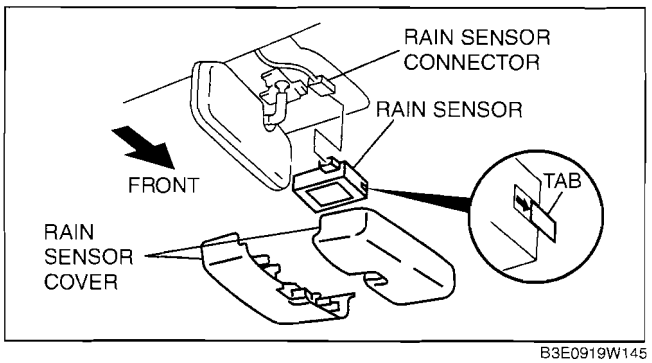
RAIN SENSOR REMOVAL/INSTALLATION

id091900800500

Caution

- **If the ignition switch is turned to the ON position after replacing a rain sensor with a new one, the rain sensor determines that there is no raindrops or dirt on the windshield and performs the initial setting. When replacing a rain sensor with a new one, thoroughly wipe off raindrops and dirt from the windshield.**

1. Disconnect the negative battery cable.
2. Remove the rain sensor cover.
3. Disconnect the rain sensor connector.
4. Slide the tab in the direction of the arrow and remove the rain sensor.
5. Install in the reverse order of removal.



B3E0919W145

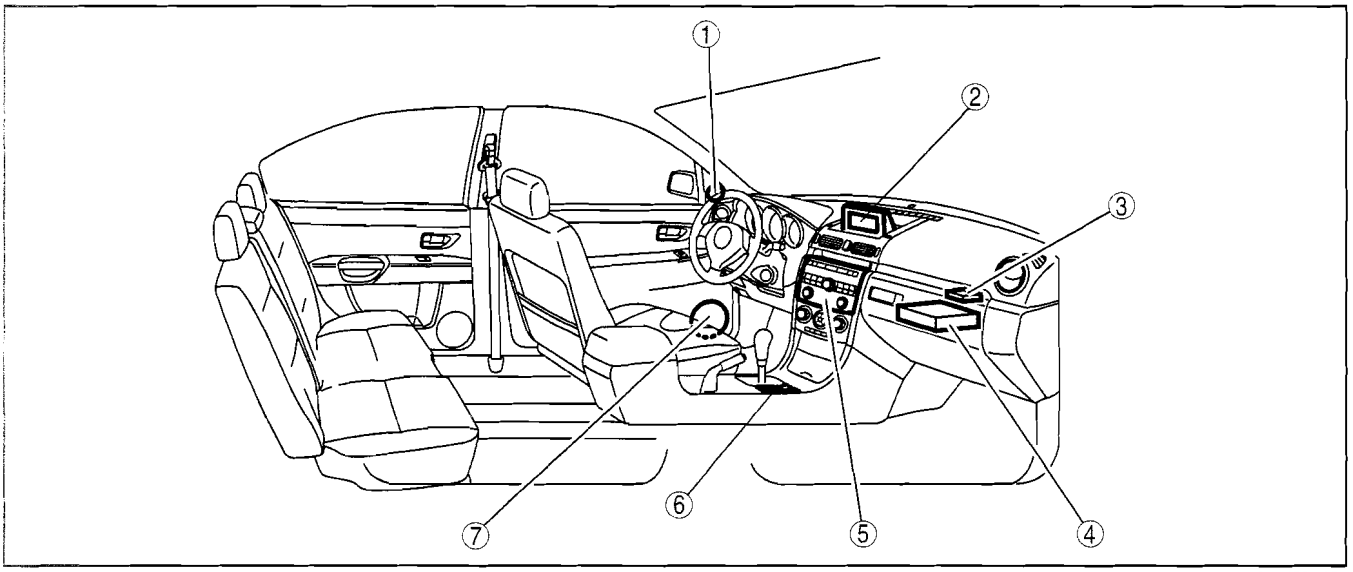
10	Condenser (See 09-20-11 CONDENSER REMOVAL/ INSTALLATION)
11	Auxiliary jack (See 09-20-18 AUXILIARY JACK REMOVAL/ INSTALLATION)
12	Accessory socket (See 09-20-18 ACCESSORY SOCKET REMOVAL/ INSTALLATION) (See 09-20-18 ACCESSORY SOCKET INSPECTION)

Car-navigation System



c3u0920w104

1	Front tweeter (See 09-20-9 FRONT TWEETER REMOVAL/ INSTALLATION) (See 09-20-9 FRONT TWEETER INSPECTION)
2	LCD unit (See 09-20-6 LCD UNIT REMOVAL/ INSTALLATION)
3	GPS antenna (See 09-20-13 GPS ANTENNA REMOVAL/ INSTALLATION)
4	Car-navigation unit (See 09-20-6 CAR-NAVIGATION UNIT REMOVAL/ INSTALLATION)

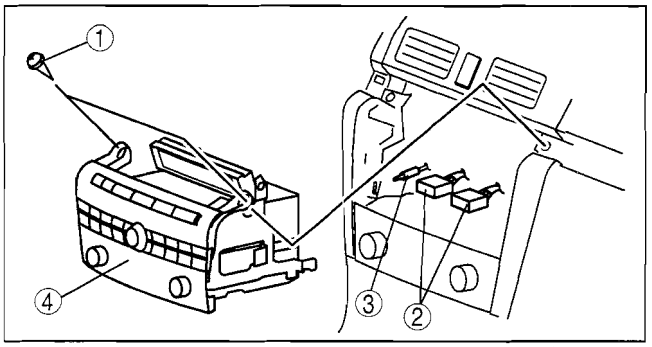
5	Center panel module (See 09-20-4 CENTER PANEL UNIT REMOVAL/ INSTALLATION) (See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ASSEMBLY) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ ASSEMBLY)
6	Car-navigation control switch (See 09-20-15 CAR-NAVIGATION CONTROL SWITCH REMOVAL/INSTALLATION) (See 09-20-16 CAR-NAVIGATION CONTROL SWITCH INSPECTION)
7	Front door speaker (See 09-20-7 FRONT DOOR SPEAKER REMOVAL/ INSTALLATION) (See 09-20-8 FRONT DOOR SPEAKER INSPECTION)

CENTER PANEL UNIT REMOVAL/INSTALLATION

id092000800600

1. Disconnect the negative battery cable.
2. Remove the decoration panel. (See 09-17-17 DECORATION PANEL REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.

1	Screw
2	Connector
3	Antenna feeder
4	Center panel unit (See 09-20-4 Center Panel Unit Removal Note.)



am3zzw0000138

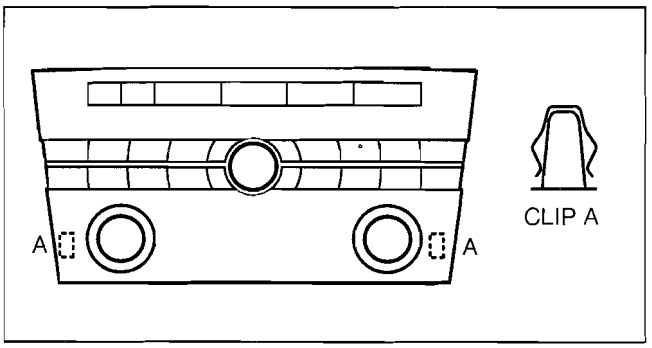
4. Install in the reverse order of removal.

Caution

- **When installing the center panel unit, make sure that the wiring harness and antenna feeder are not caught between the unit and dashboard.If the wiring harness or the antenna feeder is caught between the unit and dashboard, it may cause malfunctions.**

Center Panel Unit Removal Note

1. Pull the center panel unit outward, detach clip A from the dashboard, and then remove the center panel unit.



am3zzw0000139

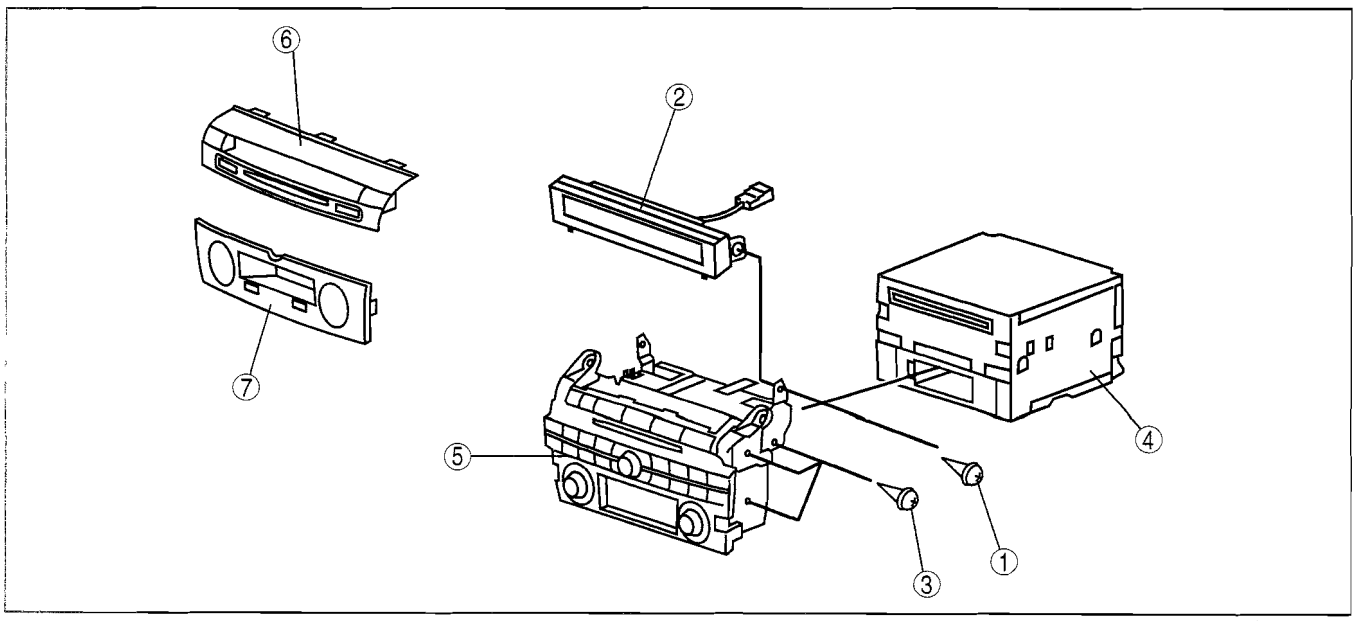
CENTER PANEL UNIT DISASSEMBLY/ASSEMBLY

id092000800700

Caution

- **Before disassembling the center panel unit, spread a cloth on the floor to put the disassembled parts on. This protects the surface of the panel from scratches or dirt.**

1. Disassemble in the order indicated in the table.
2. Assemble in the reverse order of disassembly.

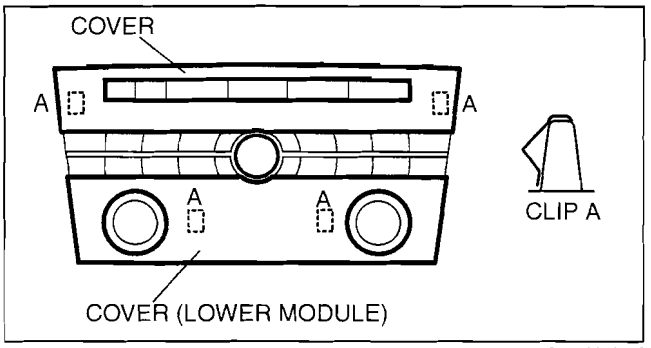


am3zzw0000139

1	Screw A
2	Information display
3	Screw B
4	Audio unit
5	Center panel
6	Cover (See 09-20-5 Cover Removal Note.)
7	Cover (lower module) (See 09-20-5 Cover Removal Note.)

Cover Removal Note

1. Pull the cover outward, detach clip A from the center panel, and then remove the cover.



am3zzw0000139

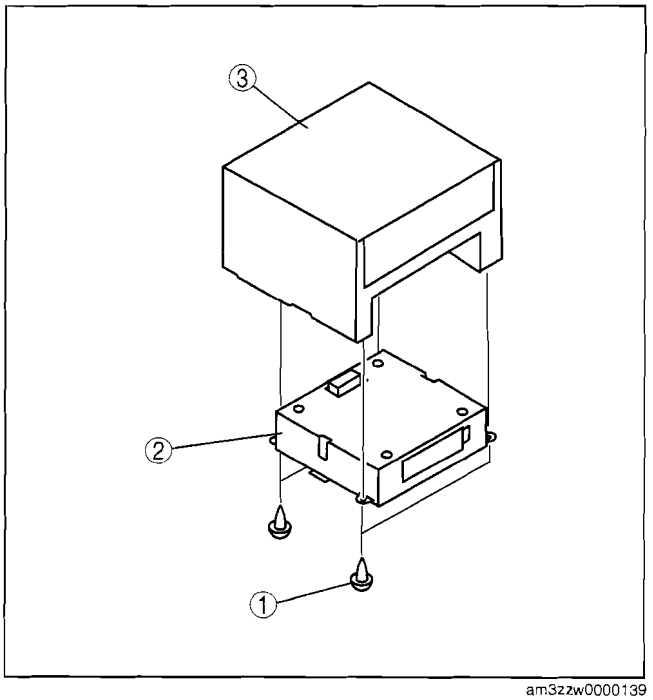
AUDIO UNIT DISASSEMBLY/ASSEMBLY

id092000800800

1. Disassemble in the order indicated in the table.

1	Screw
2	Lower module
3	Base unit

2. Assemble in the reverse order of disassembly.



am3zzw0000139

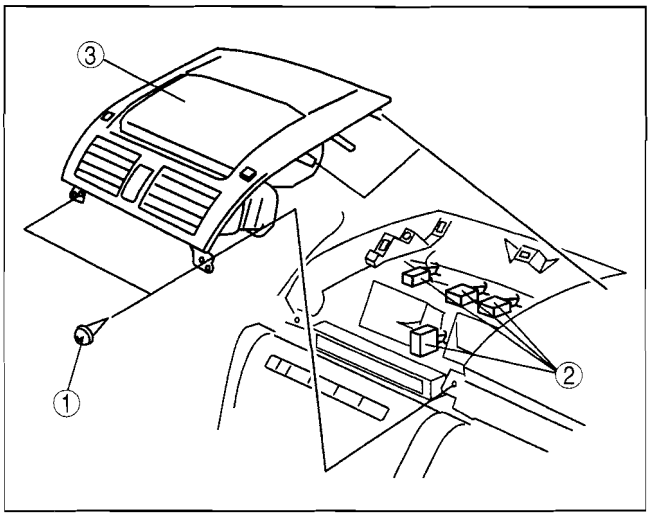
LCD UNIT REMOVAL/INSTALLATION

id092000800900

1. Disconnect the negative battery cable.
2. Remove the decoration panel. (See 09-17-17 DECORATION PANEL REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.

1	Screw
2	Connector
3	LCD unit (See 09-20-6 LCD Unit Removal Note.)

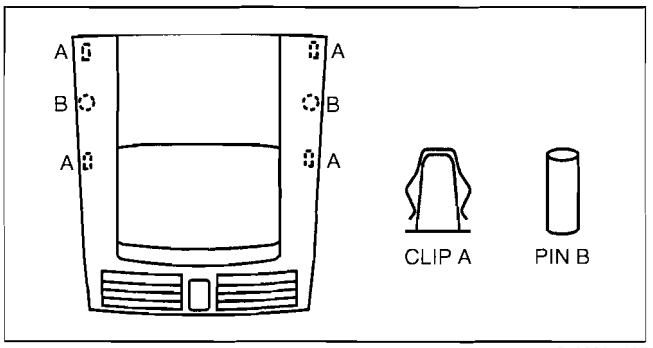
4. Install in the reverse order of removal.



am3uuw0000084

LCD Unit Removal Note

1. Pull the lower LCD unit outward, detach clip A and pin B from the dashboard, and then remove the LCD unit.



c3u0920w107

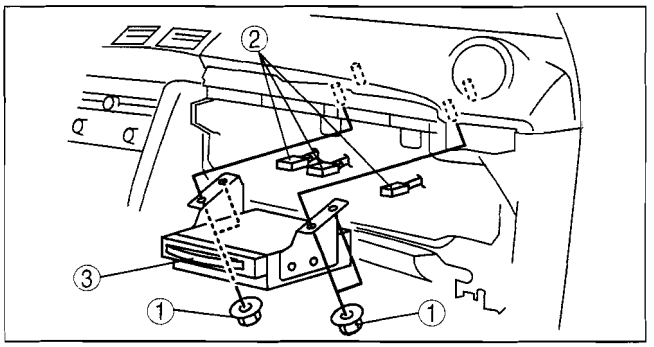
CAR-NAVIGATION UNIT REMOVAL/INSTALLATION

id092000801000

1. Disconnect the negative battery cable.
2. Remove the following parts:
   (1) Decoration panel (See 09-17-17 DECORATION PANEL REMOVAL/INSTALLATION.)
   (2) Front scuff plate (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (3) Front side trim (See 09-17-17 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (4) Glove compartment (See 09-17-7 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.

1	Nut
2	Connector
3	Car-navigation unit

4. Install in the reverse order of removal.



B3E0920W010

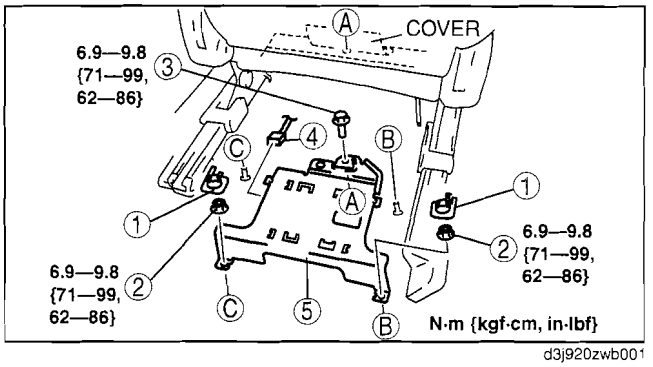
AUDIO AMPLIFIER REMOVAL/INSTALLATION

id092000801100

1. Disconnect the negative battery cable.
2. Pull the cover outward.
3. Remove in the order indicated in the table.

1	Nut cover
2	Nut
3	Bolt
4	Connector
5	Audio amplifier

4. Install in the reverse order of removal.



d3j920zwb001

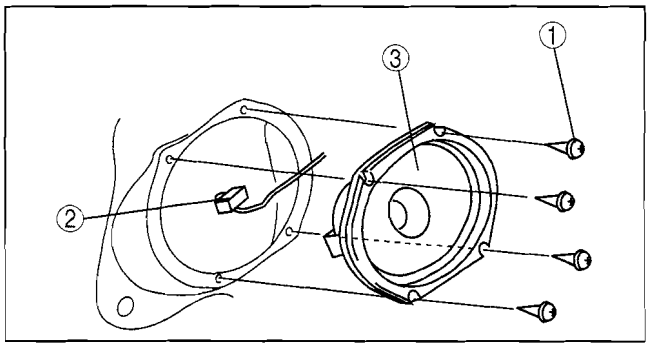
FRONT DOOR SPEAKER REMOVAL/INSTALLATION

id092000802200

1. Disconnect the negative battery cable.
2. Remove the inner garnish. (See 09-17-18 INNER GARNISH REMOVAL/INSTALLATION.)
3. Remove the regulator handle. (Vehicle without power window system) (See 09-12-11 REGULATOR HANDLE REMOVAL.) (See09-12-12 REGULATOR HANDLE INSTALLATION.)
4. Remove the front door trim. (See 09-17-18 FRONT DOOR TRIM REMOVAL/INSTALLATION.)
5. Remove in the order indicated in the table.

1	Screw
2	Connector
3	Front door speaker (See 09-20-7 Front Door Speaker Installation Note.)

6. Install in the reverse order of removal.



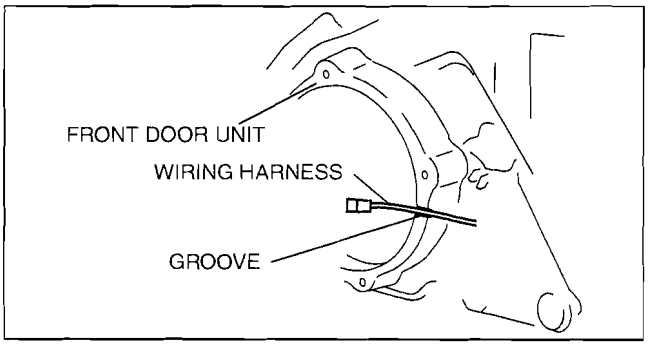
am3uuw0000084

Front Door Speaker Installation Note

1. Remove the speaker with the wiring harness passing through the groove of the front door module.

Caution

- **If the speaker is installed with the wiring harness out of the groove, an open circuit in the wiring harness could occur.**



am3uuw0000084

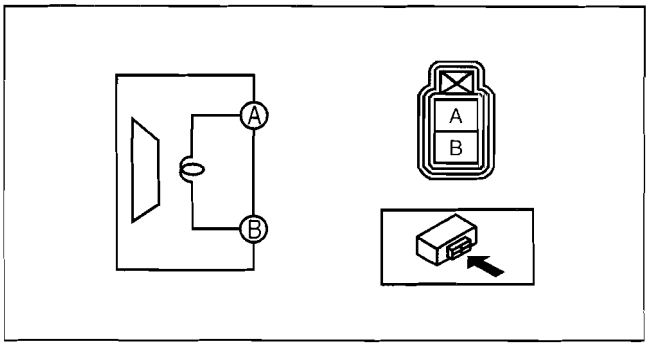
FRONT DOOR SPEAKER INSPECTION

id092000802300

1. Verify the resistance between front door speaker terminals.
   - If the resistance is not within the specification, replace the front door speaker.

   Resistance
   Standard: 4 ohms
   Bose: 2.15 ohms

2. Connect a **1.5 V** battery to the front door speaker and verify that noise is sound from the front door speaker.
   - If no sound is output, replace the front door speaker.



BHJ0920W040

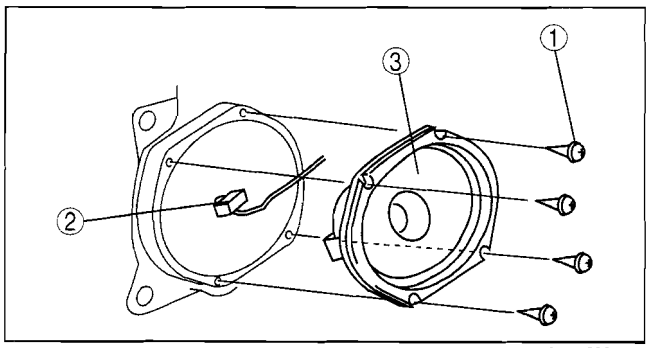
REAR DOOR SPEAKER REMOVAL/INSTALLATION

id092000805000

1. Disconnect the negative battery cable.
2. Remove the sail garnish. (5 door) (See 09-17-9 SAIL GARNISH REMOVAL/INSTALLATION.)
3. Remove the regulator handle. (Vehicle without power window system) (See 09-12-11 REGULATOR HANDLE REMOVAL.) (See09-12-12 REGULATOR HANDLE INSTALLATION.)
4. Remove the rear door trim. (See 09-17-19 REAR DOOR TRIM REMOVAL/INSTALLATION.)
5. Remove in the order indicated in the table.

1	Screw
2	Connector
3	Rear door speaker (See 09-20-8 Rear Door Speaker Installation Note.)

6. Install in the reverse order of removal.

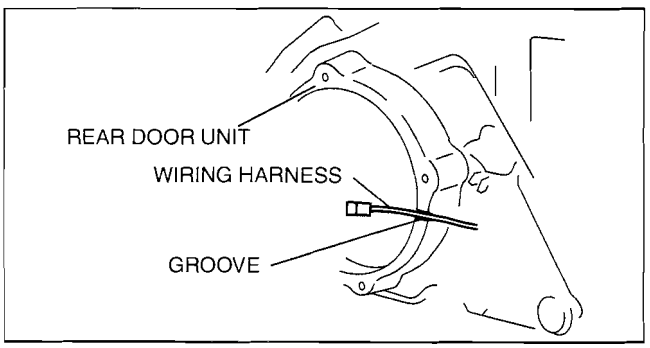


am3uuw0000085

Rear Door Speaker Installation Note

1. Remove the speaker with the wiring harness passing through the groove of the rear door module.

   Caution
   - **If the speaker is installed with the wiring harness out of the groove, an open circuit in the wiring harness could occur.**



am3uuw0000085

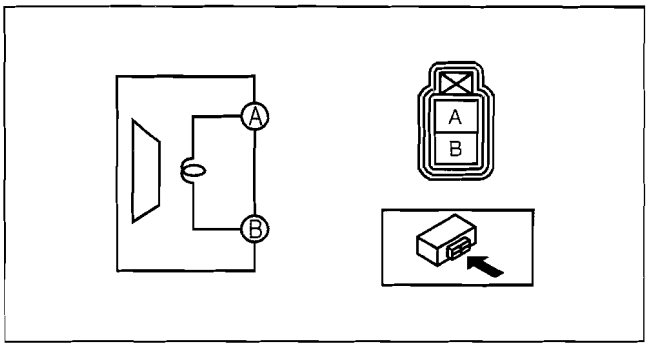
REAR DOOR SPEAKER INSPECTION

id092000804900

1. Verify the resistance between rear door speaker terminals.
   - If the resistance is not within the specification, replace the rear door speaker.

   Resistance
   Standard: 4 ohms
   Bose: 2.15 ohms

2. Connect a **1.5 V** battery to the rear door speaker and verify that noise is sound from the rear door speaker.
   - If no sound is output, replace the rear door speaker.

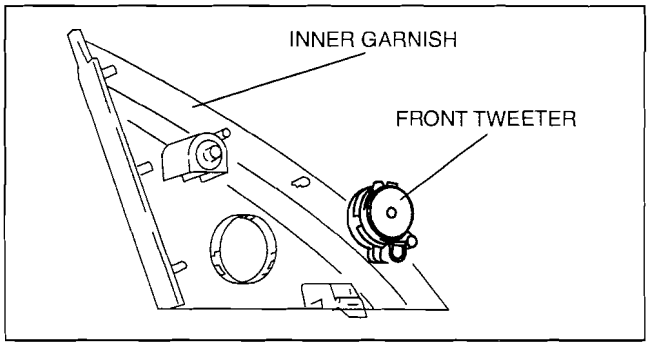


BHJ0920W040

FRONT TWEETER REMOVAL/INSTALLATION

id092000802600

1. Disconnect the negative battery cable.
2. Remove the inner garnish. (See 09-17-18 INNER GARNISH REMOVAL/INSTALLATION.)
3. Remove the front tweeter.
4. Install in the reverse order of removal.



c3u0920w113

FRONT TWEETER INSPECTION

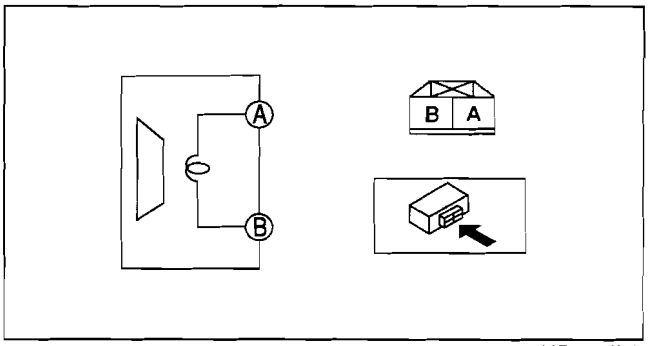
id092000802700

Standard

1. Verify the resistance between front tweeter terminals.
   - If the resistance is not within the specification, replace the front tweeter.

   Resistance
   4 ohms

2. Connect a **1.5 V** battery to the front tweeter and verify that noise is sound from the front tweeter.
   - If no sound is output, replace the front tweeter.



A6E8124W041

Bose

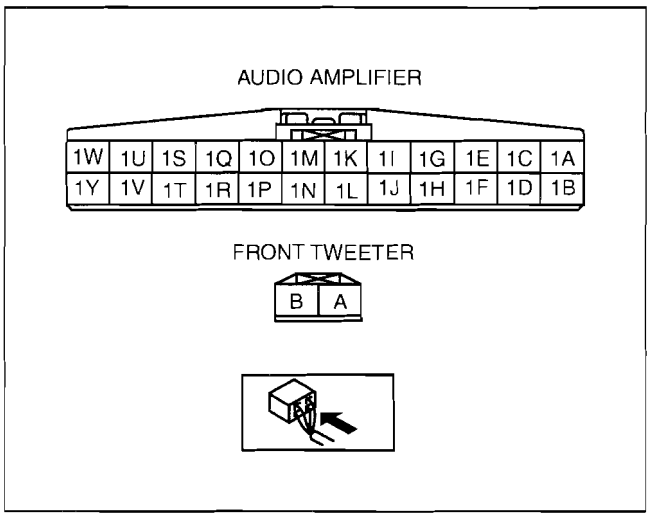
1. Verify that sound is output from the front door speaker.
   - If sound is output, go to the next step.
   - If no sound is not output, inspect the front door speaker and the related wiring harnesses.
2. Remove the following parts:
   (1) Remove the audio amplifier. (See 09-20-7 AUDIO AMPLIFIER REMOVAL/INSTALLATION)
3. Verify that the continuity between the front tweeter and the audio amplifier is as indicated in the table.
   - If the continuity is not as indicated in the table, repair or related wiring harnesses.
   - If the continuity is as indicated in the table, replace the front tweeter.

O—O: Continuity

Step	Front tweeter		Audio amplifier	
	A	B	1S (1W)	1Q (1U)
1	O		O	
2		O		O

RH (LH)

d3u913zwa011



d3u913zwa010

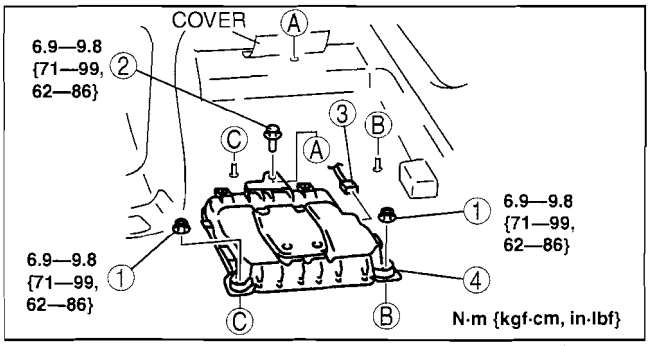
WOOFER REMOVAL/INSTALLATION

id092000805200

1. Disconnect the negative battery cable.
2. Remove the front seat. (passenger-side) (See 09-13-2 FRONT SEAT REMOVAL/INSTALLATION.)
3. Pull the cover outward.
4. Remove in the order indicated in the table.

1	Nut
2	Bolt
3	Connector
4	Woofer

5. Install in the reverse order of removal.



d3j920zwb002

WOOFER INSPECTION

id092000805100

1. Verify that the continuity between the audio amplifier and woofer is as indicated in the table.
   - If not as specified in the table, replace the related wiring harnesses.

O—O: Continuity

Step	Terminal			
	Woofer		Audio amplifier	
	A	B	2C	2D
1	O		O

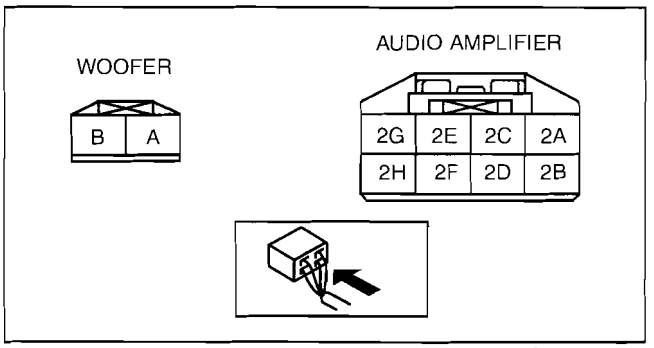
D3J920ZWB004



D3J920ZWB003

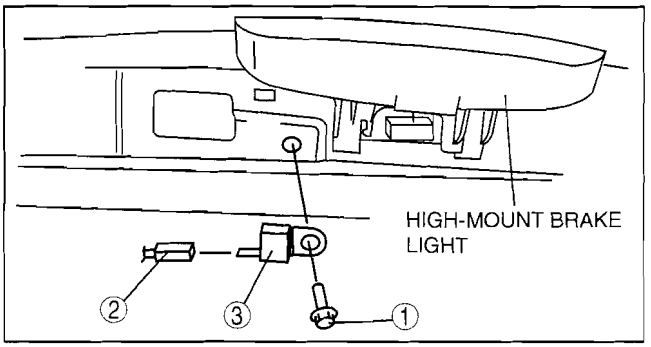
CONDENSER REMOVAL/INSTALLATION

id092000803000

1. Disconnect the negative battery cable.
2. Remove the liftgate upper trim. (See 09-17-22 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.

1	Bolt
2	Connector
3	Condenser

4. Install in the reverse order of removal.

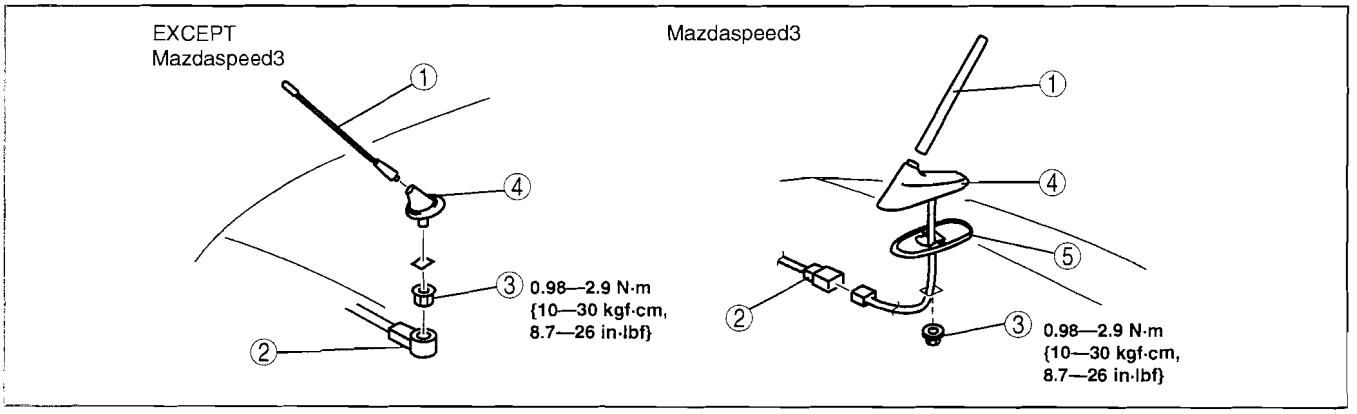


c3u0920w114

CENTER ROOF ANTENNA REMOVAL/INSTALLATION

id092000801600

1. Disconnect the negative battery cable.
2. Remove the following parts:
   (1) Sunroof seaming welt (Vehicles with sunroof)
   (2) Console (4 door)(See 09-17-10 CONSOLE REMOVAL/INSTALLATION.)
   (3) A-pillar trim (See 09-17-11 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (4) Upper anchor of the front seat belt (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (5) Front scuff plate (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (6) Rear scuff plate inner (See 09-17-18 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (7) B-pillar lower trim (See 09-17-12 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (8) B-pillar upper trim (See 09-17-12 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
   (9) Rear seat (See 09-13-6 REAR SEAT REMOVAL/INSTALLATION.)
   (10)Tire house trim (See 09-17-15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
   (11)Trunk side upper trim (5 door)(See 09-17-21 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION.)
   (12)C-pillar trim (See 09-17-13 C-PILLAR TRIM REMOVAL/INSTALLATION.)
   (13)Map light (See 09-18-23 MAP LIGHT REMOVAL/INSTALLATION.)
   (14)Sunvisor (See 09-17-23 SUNVISOR REMOVAL/INSTALLATION.)
   (15)Assist handle (See 09-17-24 ASSIST HANDLE REMOVAL/INSTALLATION.)
   (16)Headliner (See 09-17-24 HEADLINER REMOVAL/INSTALLATION.)
3. Partially peel back the headliner.
4. Remove in the order indicated in the table.



am3uuw0000015

1	Antenna rod
2	Antenna feeder (except Mazdaspeed3)
	Connector (Mazdaspeed3)
3	Nut

4	Center roof antenna
5	Rubber (Mazdaspeed3)

5. Install in the reverse order of removal.
6. After installation, verify that the rubber of the center roof antenna is installed to the roof panel with no space between them.

CENTER ROOF ANTENNA INSPECTION

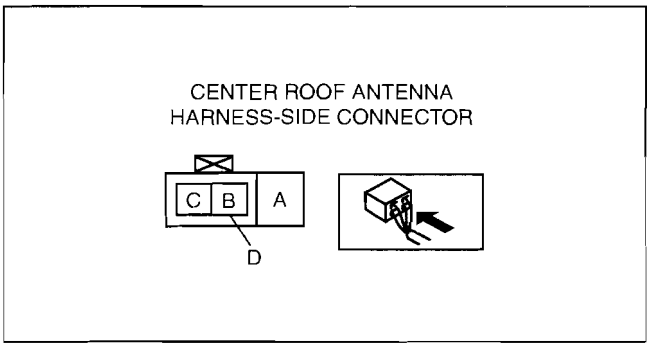
id092000801700

Mazdaspeed3

Note
- The center roof antenna has a built-in antenna amplifier.

Antenna Amplifier Inspection

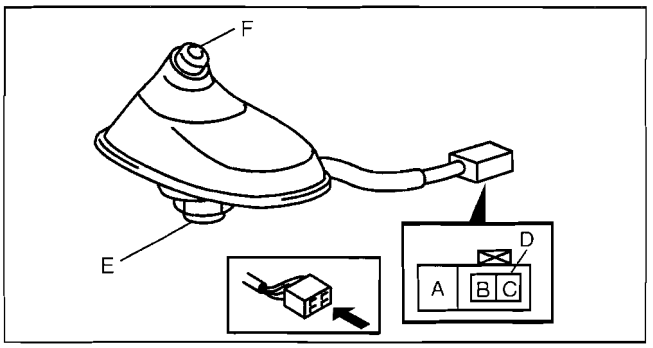
1. Turn the audio unit on and select the radio, then measure the voltage at center roof antenna connector terminal A.
- If the voltage is B+, go to the Feeder Line Inspection.
- If the voltage is not B+, inspect the audio unit or antenna feeder.



am3uuw0000015

Feeder Line Inspection

1. Verify that there is no continuity between the center roof antenna terminals A and E using an ohmmeter.
2. Inspect for continuity between the center roof antenna terminals using an ohmmeter.
   - If not as indicated in the table, replace the center roof antenna.



am3uuw0000075

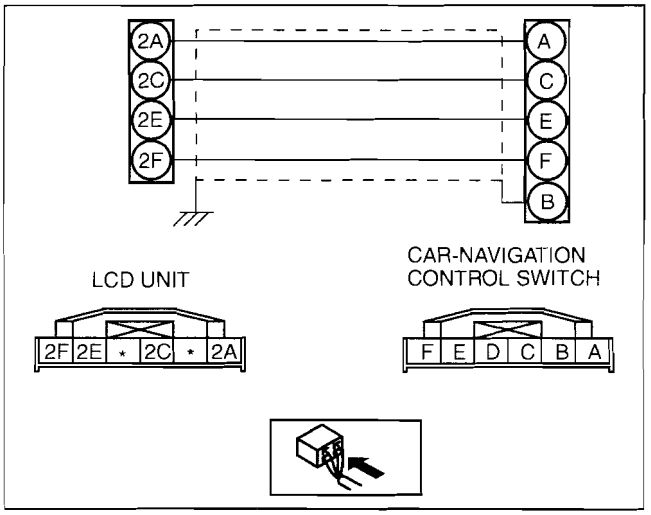
CAR-NAVIGATION CONTROL SWITCH INSPECTION

id092000801300

1. Operate the car-navigation control switch and verify that the car-navigation system operates normally.
   - If the system does not operate normally, go to the next step.
2. Inspect the wiring harness between the LCD unit and the car-navigation control switch for an open circuit, power short, or a short to ground.
   - If there is any malfunction in the wiring harnesses, repair or replace the applicable wiring harness.
   - If the wiring harnesses are normal, replace the car-navigation control switch.



c3u0920w112

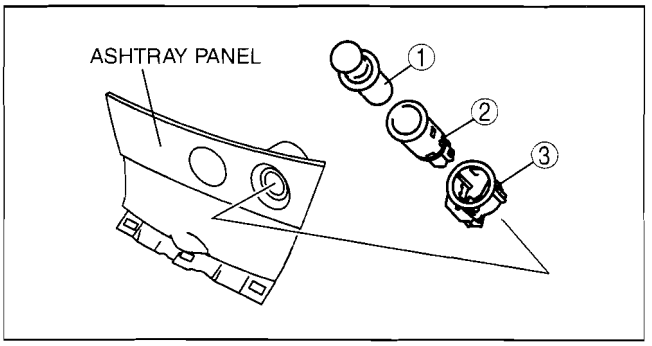
CIGARETTE LIGHTER REMOVAL/INSTALLATION

id092000803100

1. Disconnect the negative battery cable.
2. Remove the ashtray panel. (See 09-17-10 CONSOLE REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.

1	Cigarette lighter plug
2	Socket (See 09-20-17 Socket Removal Note.)
3	Ring (See 09-20-17 Ring Removal Note.)

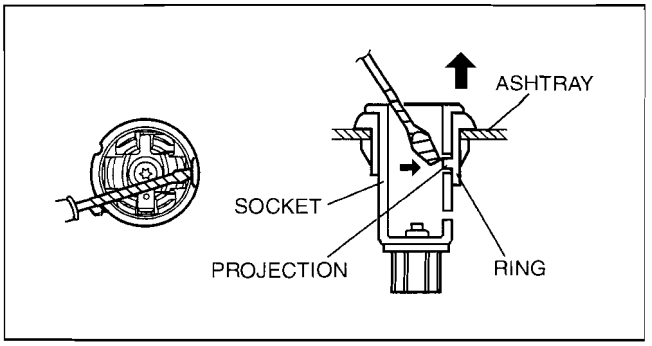
4. Install in the reverse order of removal.



am3uuw0000084

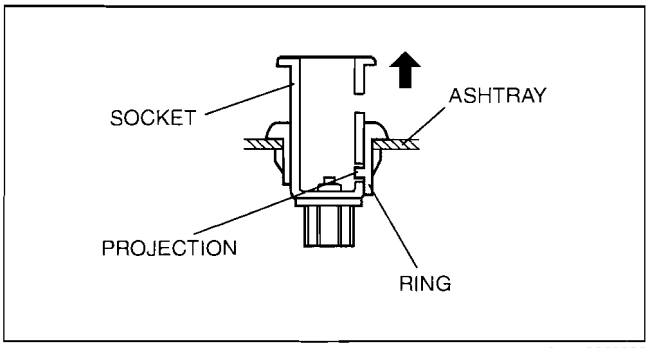
Socket Removal Note

1. Insert a tape-wrapped flathead screwdriver into the socket hole and push on the ring projection to lift the socket outward.



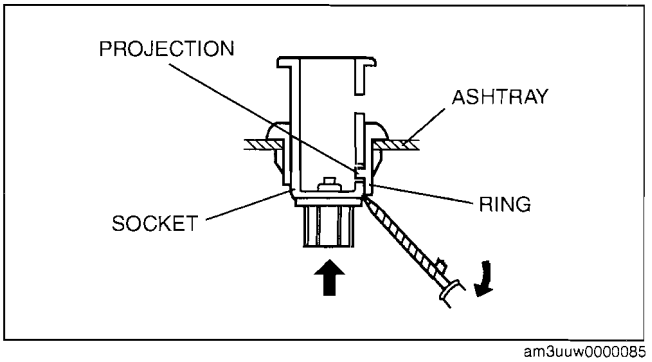
am3uuw0000085

2. Lift out the socket until the ring projection locks into the lower socket hole as shown in the figure.



am3uuw0000085

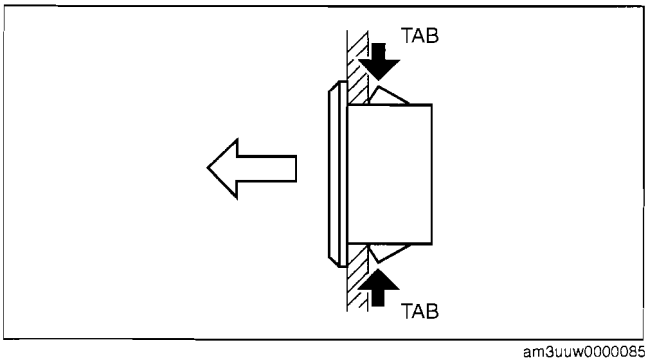
3. From the rear of the ashtray, insert a tape-wrapped flathead screwdriver between the socket and the ring as shown in the figure.
4. While lifting the ring projection with the flathead screwdriver, push out and remove the socket.



am3uuw0000085

Ring Removal Note

1. Pull the ring outward while pressing the tabs.



am3uuw0000085

CIGARETTE LIGHTER INSPECTION

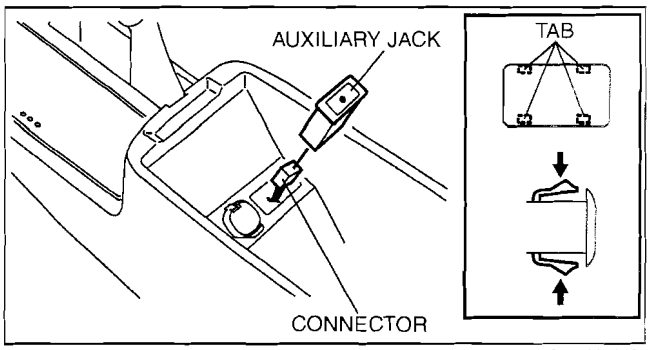
id092000803200

1. Turn the ignition switch to the ACC position.
2. Press the cigarette lighter into the socket and verify that it returns to its original position in **10—20 s**.
   - If the cigarette lighter does not operate normally, replace the cigarette lighter and the socket.

AUXILIARY JACK REMOVAL/INSTALLATION

id092000809900

1. Disconnect the negative battery cable.
2. Remove the console. (See 09-17-10 CONSOLE REMOVAL/INSTALLATION.)
3. Disconnect the auxiliary jack connector.
4. Squeeze the tabs of auxiliary jack and pull it outward to remove it.
5. Install in the reverse order of removal.



am3zzw0000301

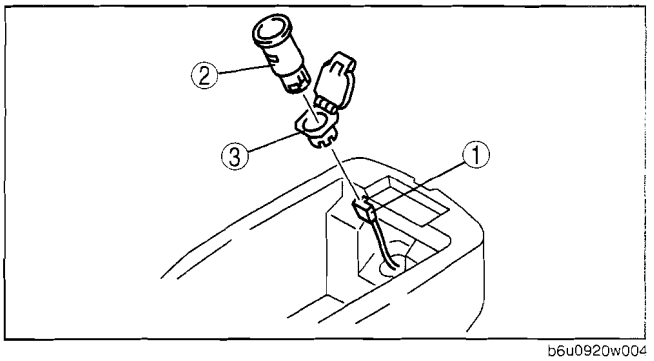
ACCESSORY SOCKET REMOVAL/INSTALLATION

id092000800400

1. Disconnect the negative battery cable.
2. Remove the console. (See 09-17-10 CONSOLE REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.

1	Connector
2	Socket (See 09-20-18 Socket removal note.)
3	Cap (See 09-20-18 Cap removal note.)

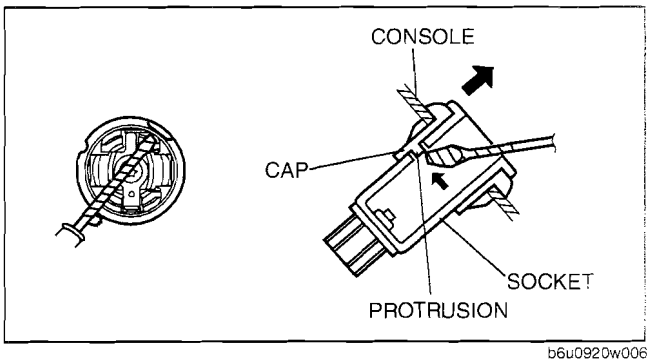
4. Install in the reverse order of removal.



b6u0920w004

Socket removal note

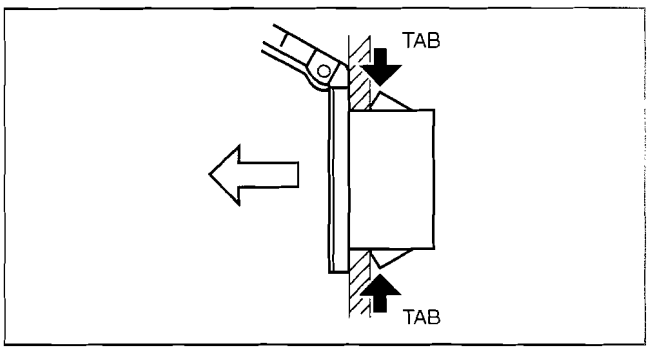
1. Remove the socket by pushing on the protrusion with a tape-wrapped flathead screwdriver inserted through the socket hole, and pulling the socket toward you.



b6u0920w006

Cap removal note

1. Pull the cap forward while squeezing the tabs.



b6u0920w007

ACCESSORY SOCKET INSPECTION

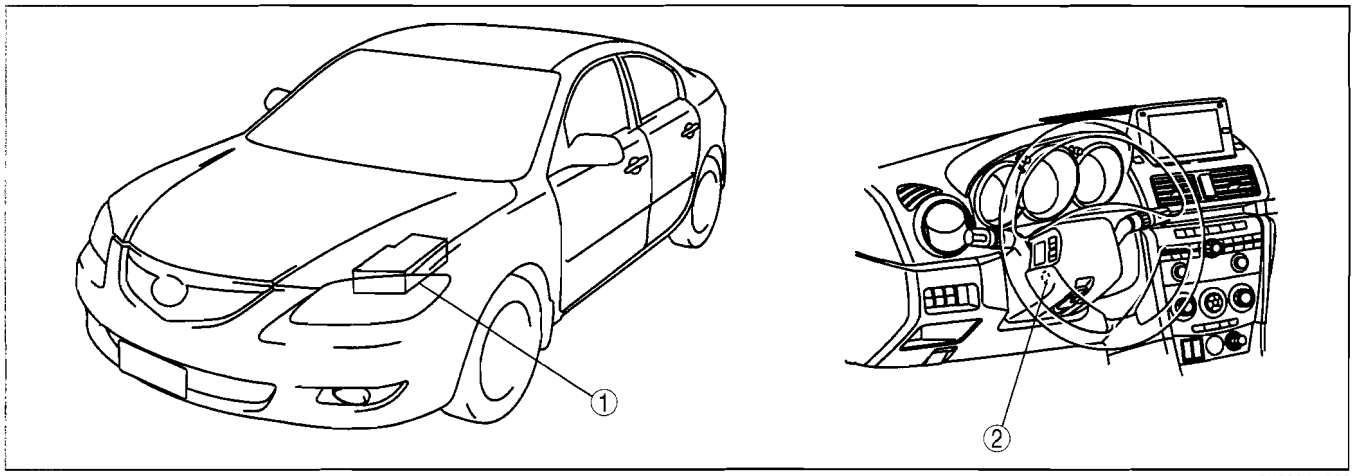
id092000800500

- See 09-20-17 CIGARETTE LIGHTER INSPECTION.

09-21 POWER SYSTEMS

POWER SYSTEM LOCATION INDEX

id092100800700



c3u0921w002

1	Main fuse block (See 09-21-3 RELAY LOCATION.) (See 09-21-3 RELAY INSPECTION.)

2	Ignition switch (See 09-21-1 IGNITION SWITCH REMOVAL/INSTALLATION) (See 09-21-2 IGNITION SWITCH INSPECTION.)

FUSE SERVICE CAUTIONS

id092100800400

Caution

- **Determine and correct the cause of the burnt fuse before replacing it with the specified type. If the fuse is replaced before doing this, it may burn again.**

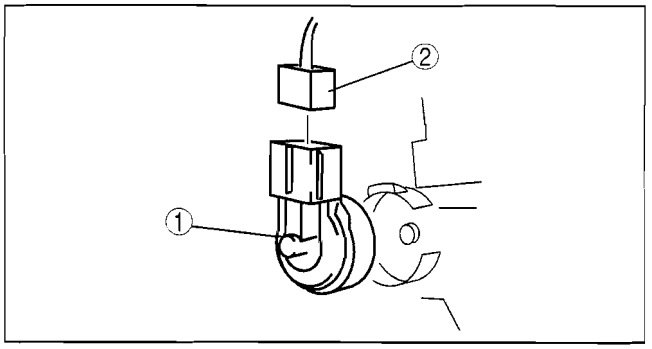
IGNITION SWITCH REMOVAL/INSTALLATION

id092100800200

1. Disconnect the negative battery cable.
2. Remove the column cover. (See 09-17-7 COLUMN COVER REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.

1	Ignition switch
2	Connector (See 09-21-2 Connector Removal Note.) (See 09-21-2 Connector Installation Note.)

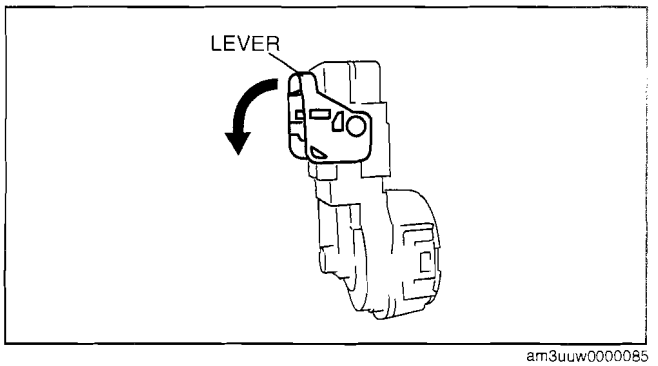
4. Install in the reverse order of removal.



am3uuw0000085

Connector Removal Note

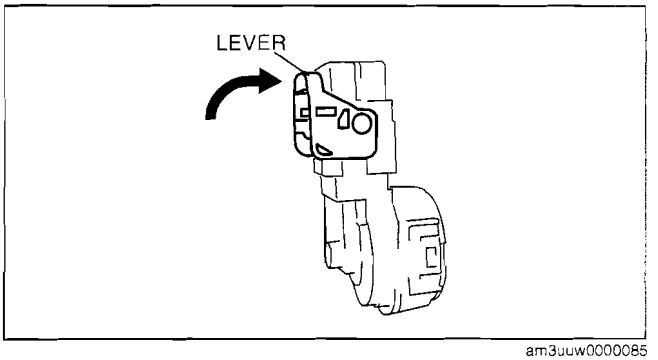
1. Rotate the lever in the direction of the arrow and remove the connector.



am3uuw0000085

Connector Installation Note

1. After connecting the connector, rotate the lever in the direction of the arrow to install the connector.



am3uuw0000085

IGNITION SWITCH INSPECTION

1. Verify that the continuity between the ignition switch terminals is as indicated in the table.
   - If not as indicated in the table, replace the ignition switch.

O—O: Continuity

Ignition key position	Terminal							
	A	B	C	D	E	F	G	H
LOCK

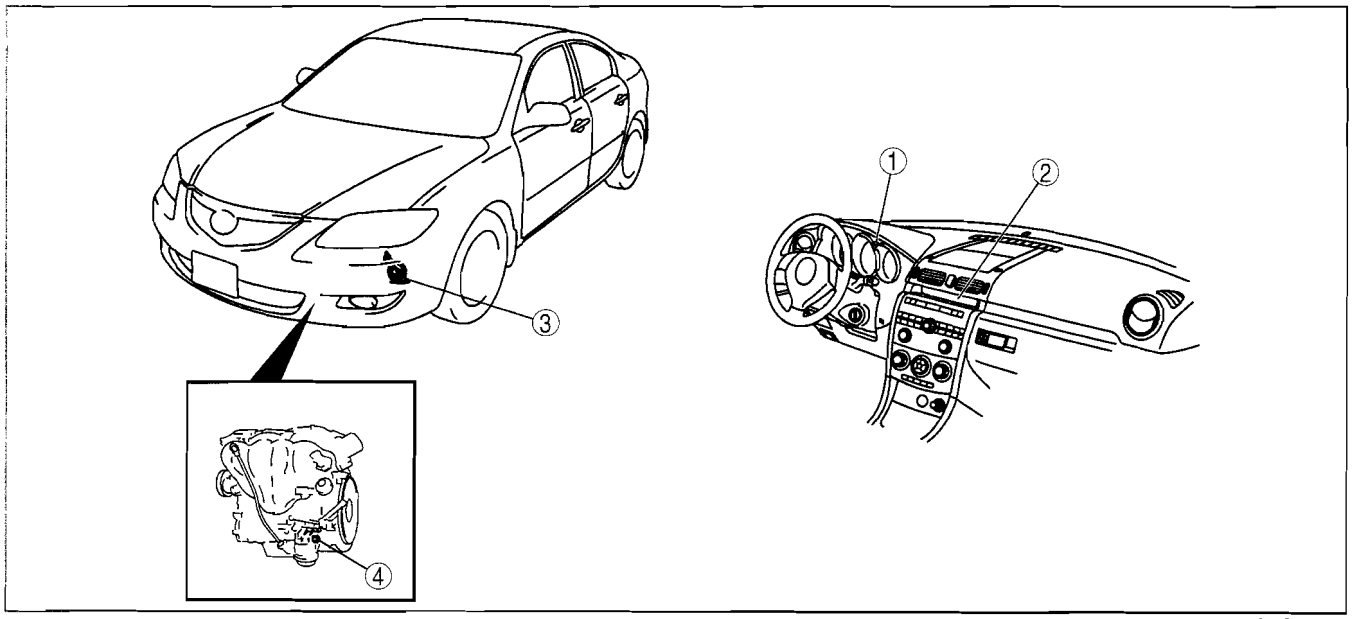
09-22 INSTRUMENTATION/DRIVER INFO.

INSTRUMENTATION/DRIVER INFO. LOCATION INDEX

id092200801000



c3u0922w101

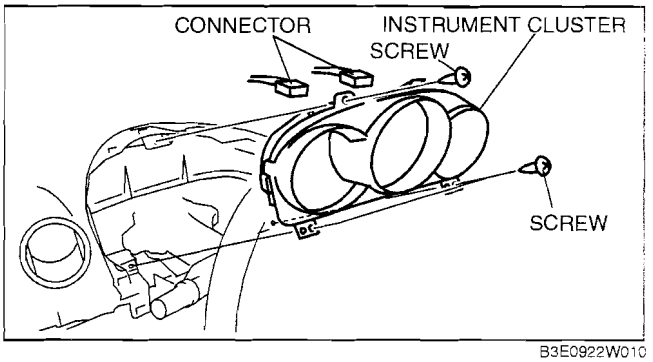
1	Instrument cluster (See 09-22-2 INSTRUMENT CLUSTER REMOVAL/INSTALLATION) (See 09-22-3 INSTRUMENT CLUSTER DISASSEMBLY/ASSEMBLY) (See 09-22-4 INSTRUMENT CLUSTER INSPECTION) (See 09-22-5 INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE)

2	Information display (See 09-22-12 INFORMATION DISPLAY REMOVAL/INSTALLATION)
3	Horn (See 09-22-12 HORN REMOVAL/INSTALLATION)
4	Oil pressure switch (See 09-22-11 OIL PRESSURE SWITCH INSPECTION)

INSTRUMENT CLUSTER REMOVAL/INSTALLATION

id092200800500

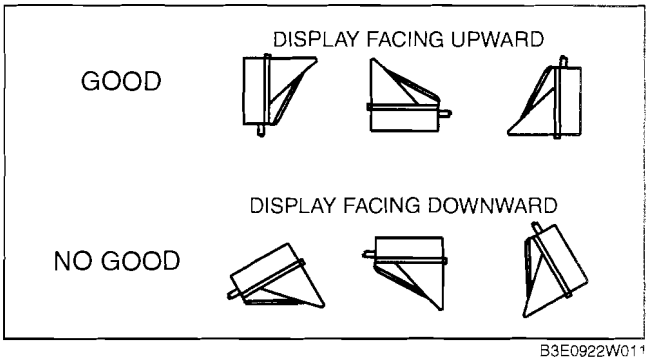
1. Perform the instrument cluster configuration when replacing it. (See 09-22-2 INSTRUMENT CLUSTER CONFIGURATION.)
2. Disconnect the negative battery cable.
3. Remove the following parts:
   (1) Front scuff plate (Driver's side) (See 09-17-18 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (2) Front side trim (Driver's side) (See 09-17-17 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (3) Hood release lever (See 09-14-22 HOOD LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
   (4) Lower panel (See 09-17-7 LOWER PANEL REMOVAL/INSTALLATION.)
   (5) Meter hood (See 09-17-8 METER HOOD REMOVAL/INSTALLATION.)
4. Remove the screw.
5. Remove the instrument cluster.
6. Disconnect the connector.
7. Install in the reverse order of removal.
8. When replacing the instrument cluster of vehicles with the immobilizer system, perform the following procedure:
   - 09-14-17 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING.



B3E0922W010

Caution

- **The removed instrument cluster should be placed with the display side up to prevent grease from leaking from the meters.**



B3E0922W011

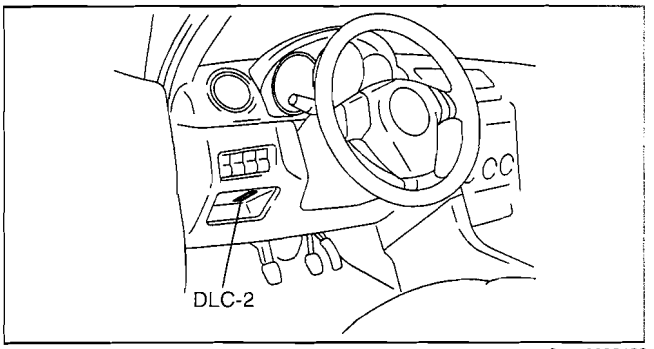
INSTRUMENT CLUSTER CONFIGURATION

id092200800300

Note

- If all the following conditions are met, the odometer data (total traveled distance) in the previous instrument cluster is automatically transferred to a new instrument cluster during the configuration. If any of the conditions are not met, odometer-data transfer cannot be performed.
  Previous instrument cluster
  — No malfunction (Configuration data can be read using the M-MDS.)
  New instrument cluster
  — Odometer display is **less than 100 km**
  — Odometer has no malfunction

1. Connect the M-MDS to the DLC-2.
2. After set up the M-MDS (including the vehicle recognition), the following can be selected from the M-MDS screen.
   When using the IDS (laptop PC):
   - "Module Programming"
   When using the PDS (Pocket PC):
   - "Programming", "Module Programming"
3. Select "Programmable Module Installation".



am3zzw0000192

4. Select "IC" and perform procedures according to directions on the M-MDS screen.
   - If odometer data is to be transferred to a new instrument cluster, perform the following procedure:
     1. Select "Programmable Parameters" from the menu.
     2. Select "Odometer Write", and perform the procedure following the screen.

Note
- During the odometer data writing procedure, As-Built Data (VIN and Vehicle Data) input is requested. Obtain the As-Built Sheet for the vehicle, and input the necessary data.

5. After the instrument cluster configuration, perform the wheel unit ID registration. (See 02-12-5 WHEEL UNIT ID REGISTRATION.)
6. Retrieve DTCs using the M-MDS and verify that there is no DTC present.
   - If any DTC is present, perform applicable DTC inspection. (See 09-02C-2 DTC TABLE[INSTRUMENT CLUSTER].)

INSTRUMENT CLUSTER DISASSEMBLY/ASSEMBLY

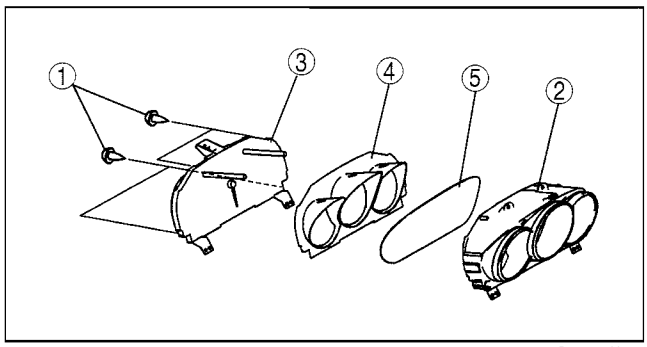
id092200801600

Caution
- **Do not drop the instrument cluster or damage the printed board. This will lead to a system malfunction.**

1. Disassemble in the order indicated in the table.

1	Screw
2	Cover
3	Instrument cluster unit
4	Hood
5	Lens

2. Assemble in the reverse order of disassembly.



B3E0922W001

INSTRUMENT CLUSTER INSPECTION

id092200800400

Speedometer

Using the input/output check mode

1. Inspect the speedometer by setting it to check code 12 of the input/output check mode. (See 09-22-5 INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE.)

Using a speedometer tester

1. Adjust the tire pressure to the specification.
2. Using a speedometer tester, verify that the tester reading is as indicated in the table below.

Speedometer tester indication (km/h)	Allowable range (km/h)	
	L3 with TC	Except L3 with TC
20	18—22	18—22
40	38—41	38—41
60	58—62	58—62
80	77—82	78—82
100	97—102	97—102
120	117—122	117—122
140	136—143	137—142

Speedometer tester indication (mph)	Allowable range (mph)	
	L3 with TC	Except L3 with TC
10	8.6—11	8.7—11
20	19—21	19—21
30	29—31	29—31
40	39—41	39—41
50	49—51	49—51
60	59—61	59—61
70	68—72	69—71
80	78—82	78—82

3. Verify that the speedometer reading is within the range indicated in the table.
   - If the speedometer does not move or the indication is not within the allowable range, inspect the PCM and related wiring harnesses.
     — If the PCM and related wiring harnesses are normal, replace the instrument cluster.

Tachometer

Using the input/output check mode

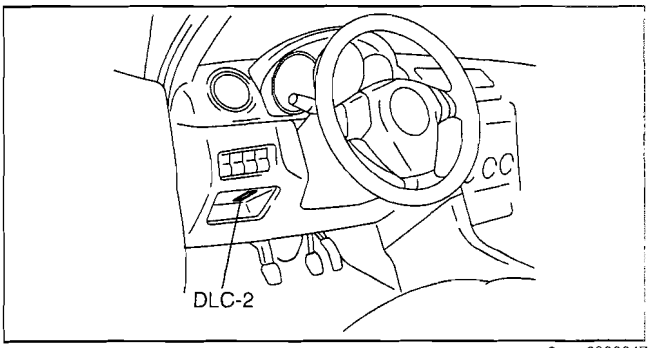
1. Inspect the tachometer by setting it to check code 13 of the input/output check mode. (See 09-22-5 INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE.)

Using M-MDS or external diagnostic equipment

Caution

- **If the engine speed exceeds the allowable range, the engine could be damaged. Therefore, when inspecting the tachometer, do not allow the engine speed to exceed the allowable range indication on the tachometer.**

1. Connect the M-MDS to the DLC2.
2. Compare the data monitor item (RPM) with the tachometer indication.
   - If the tachometer does not operate properly, inspect the PCM and related wiring harnesses.
     — If the PCM and related harnesses do not have any malfunction, replace the instrument cluster.



am3uuw0000047

Fuel gauge

1. Inspect the fuel gauge by setting it to check code 23 of the input/output check mode. (See 09-22-5 INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE.)

Water temperature gauge

1. Inspect the water temperature gauge by setting it to check code 25 of the input/output check mode. (See 09-22-5 INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE.)

INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE

id092200801700

Note

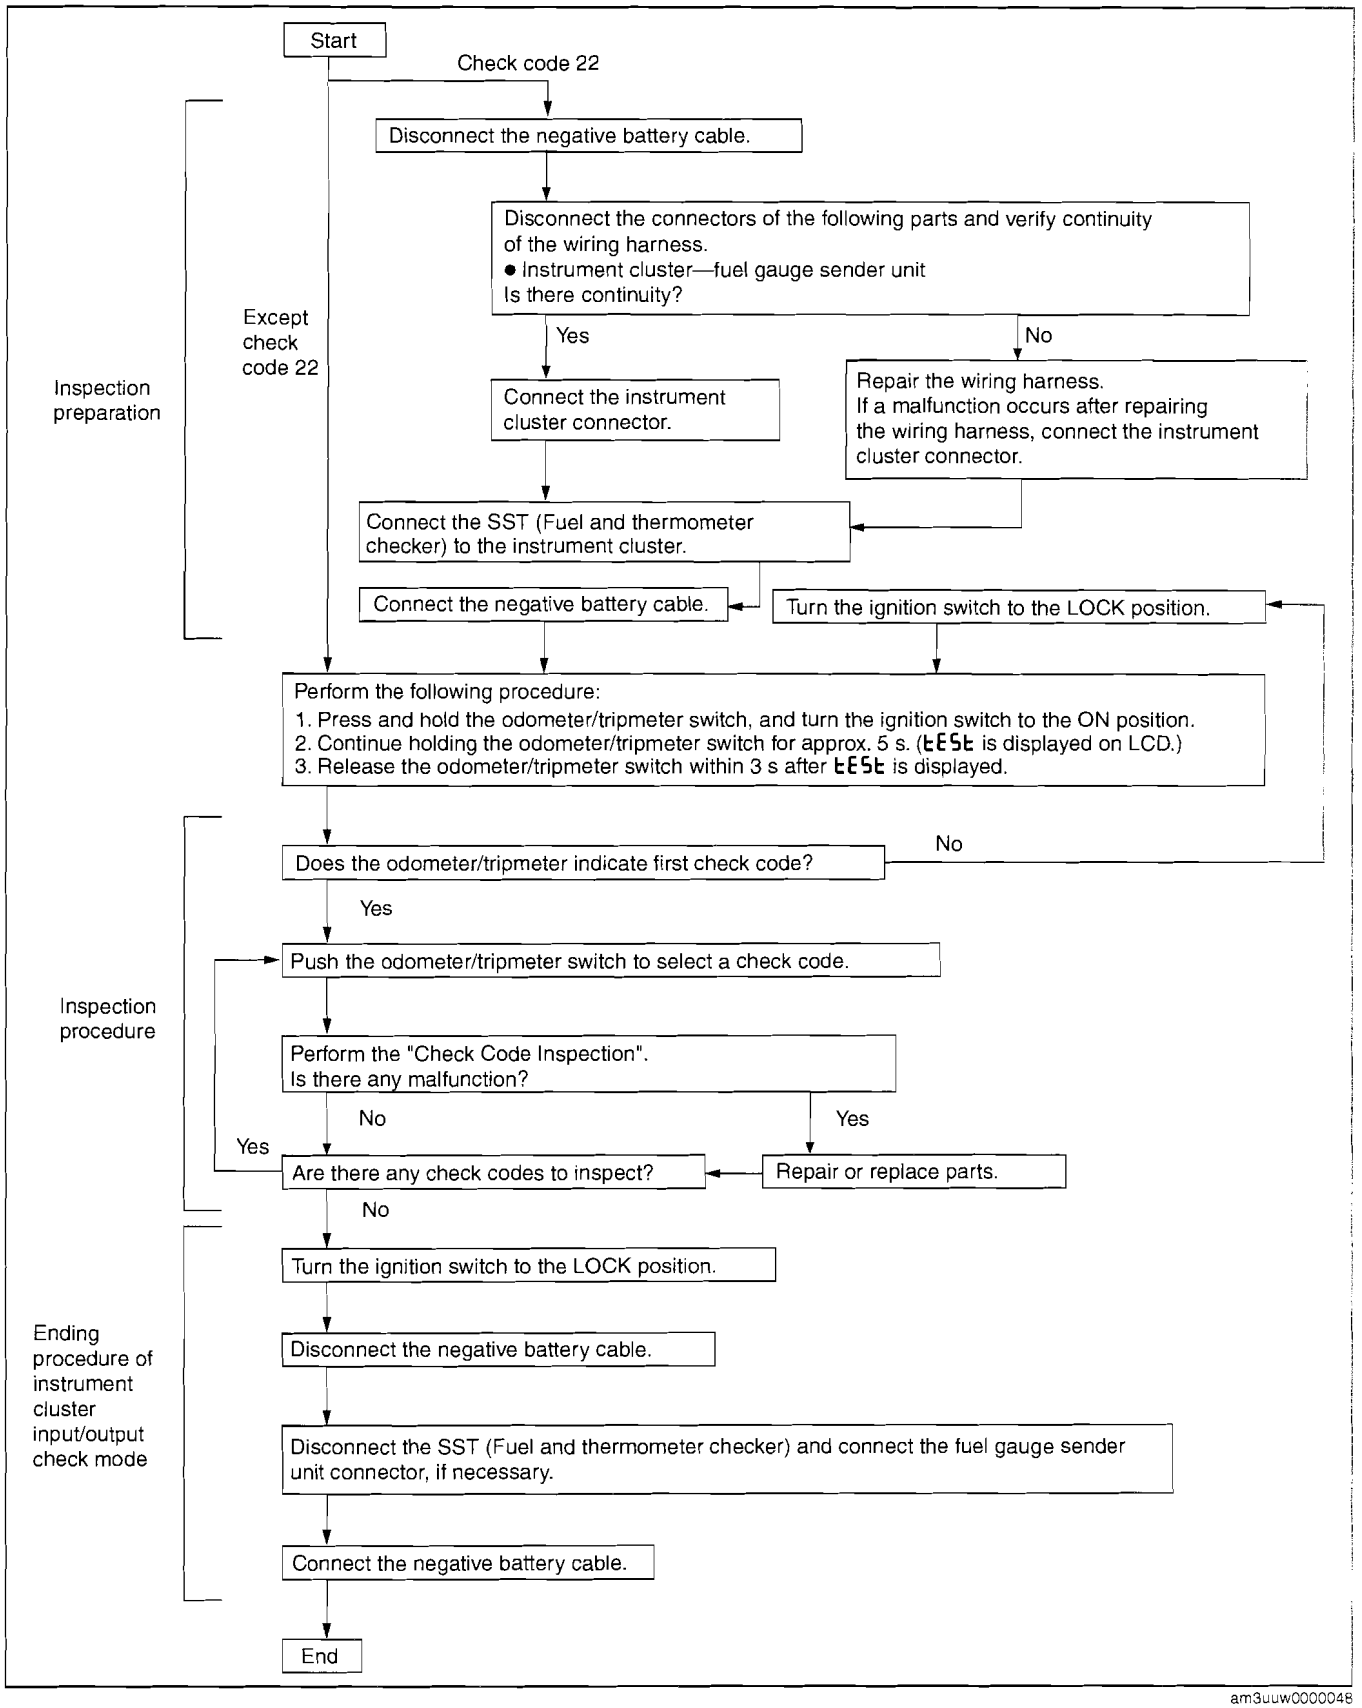
- In this mode, it is possible to verify the items in the following chart.

Check Code Table

Check code	Check item	Related items
08	TNS relay	• Lights-on reminder warning alarm • Each illumination light
12	Speedometer	Speedometer
13	Tachometer	Tachometer
14	Buzzer	Buzzer
16	Fuel-level warning light	Fuel-level warning light
22	Fuel gauge sender unit	Fuel gauge
23	Fuel gauge	Fuel gauge
25	Water temperature gauge	Water temperature gauge
26	• Odometer/tripmeter (LCD) • Warning and indicator light	• Odometer/tripmeter (LCD) • Warning and indicator light
31	Key reminder switch	Key reminder warning alarm
32	Indicator buzzer	Indicator buzzer
55	Dimmer switch	Panel light control

Note

- Check codes which are not listed may be indicated, but they cannot be inspected.
- The check codes are displayed in numerical order. (While performing the inspection, if you want to inspect a check code with a number smaller than the code number you are currently inspecting, terminate the check mode then repeat the inspection from the beginning.)
- If a speed signal is input to the instrument cluster (the wheels are rotated) while a code other than check code 50 or 51 is displayed, the input/output check mode will be cancelled.
- The check codes can be fast-forwarded by pushing and holding the odometer/tripmeter switch for **1 s or more**.



am3uuw0000048

Checking Order

Note
- When inspecting more than two check codes, begin with the code with the highest ranking.

Priority order of inspection	Ignition switch position	Check code
1	ON	22
2		08, 12, 13, 14, 16, 23, 25, 26, 55
3	LOCK	31, 32

Check Code Inspection
Check code 08

Check code 08	TNS relay ON/OFF signal		
STEP	**INSPECTION CONDITION**	**DISPLAY**	**ACTION**
1	Turn the headlight switch to the TNS position. (TNS relay ON)		Go to the next step.
			Verify that the voltage of instrument cluster terminal 1L is **B+**. • If the voltage is as specified, replace the instrument cluster. • If the voltage is not as specified, inspect the following parts: — TNS relay — Wiring harness (Battery—TNS relay—instrument cluster)
2	Turn the headlight switch off. (TNS relay OFF)		Verify that the voltage of the instrument cluster terminal 1L is **1.0 V or less**. • If the voltage is as specified, replace the instrument cluster. • If the voltage is not as specified, inspect the following parts: — TNS relay — Wiring harness (TNS relay—instrument cluster)
			Input signal to the instrument cluster is normal.

Check code 12

Check code 12	Speedometer display signal		
INSPECTION CONDITION	**DISPLAY**	**ACTION**	
After selecting check code 12, wait for **approx. 2 s**.		The speedometer needle moves full scale then returns to **approx. 60 km/h**.	The speedometer is normal.
		Except above	Replace the instrument cluster.
		—	

Check code 13

Check code 13	Tachometer operation signal		
INSPECTION CONDITION	**DISPLAY**	**ACTION**	
After selecting check code 13, wait for **approx. 2 s**.		The tachometer needle moves full scale then returns to **approx. 3,000 rpm**.	The tachometer is normal.
		Except above	Replace the instrument cluster.
		—	

Check code 14

Check code 14	Buzzer operation signal		
INSPECTION CONDITION	DISPLAY	ACTION	
After selecting check code 14, wait **approx. 2 s.**	01	The buzzer sounds.	The buzzer is normal.
		The buzzer does not sound.	Replace the instrument cluster.

Check code 16

Check code 16	Fuel-level warning light flashing signal		
INSPECTION CONDITION	DISPLAY	ACTION	
After selecting check code 16, wait **approx. 2 s.**	01 (FLASHING)	Fuel-level warning light flashes **three times.**	The fuel-level warning light is normal.
		Except above	Replace the instrument cluster.

Check code 22

Check code 22	Fuel level signal		
STEP	INSPECTION CONDITION	DISPLAY	ACTION
1	Select check code 22 with the fuel gauge sender unit connector disconnected.	252 | 255	Go to the next step.
		Except above	Replace the instrument cluster.
2	Connect terminals 2U and 2W of the instrument cluster.	000 | 003	Go to the next step.
		Except above	Replace the instrument cluster.
3	Using the **SST** (Fuel and thermometer checker) or resistor, input **20 ohms** between instrument cluster terminals 2U and 2W.	017 | 023	Go to the next step.
		Except above	Replace the instrument cluster.
4	Using the **SST** (Fuel and thermometer checker) or resistor, input **100 ohms** between instrument cluster terminals 2U and 2W.	097 | 103	Go to the next step.
		Except above	Replace the instrument cluster.

Check code 22	Fuel level signal		
STEP	INSPECTION CONDITION	DISPLAY	ACTION
5	Using the **SST** (Fuel and thermometer checker) or resistor, input **200 ohms** between instrument cluster terminals 2U and 2W.		Inspect the fuel gauge sender unit.
		Except above	Replace the instrument cluster.

Check code 23

Check code 23	Fuel gauge operation signal		
INSPECTION CONDITION	DISPLAY	ACTION	
After selecting check code 23, wait **approx. 2 s**.		The fuel gauge indicates status in the following order **approx. every 2 s**. • F → 1/2 → E → F (fixed)	The fuel gauge is normal.
		Except above	Replace the instrument cluster.
		Replace the instrument cluster.	

Check code 25

Check code 25	Water temperature gauge operation signal		
INSPECTION CONDITION	DISPLAY	ACTION	
After selecting check code 25, wait approx. **2 s**.		The water temperature gauge indicates status in the following order **approx. every 2 s**. • H → Center → C → H (fixed)	The water temperature gauge is normal.
		Except above	Replace the instrument cluster.
		Replace the instrument cluster.	

Check code 26

Check code 26	Odometer/tripmeter display signal		
INSPECTION CONDITION	**DISPLAY**	**ACTION**	
Select check code 26.		• Display is normal. • Warning and indicator light illuminated. — Generator warning light — AT warning light — ABS warning light — DSC indicator light — DSC OFF light — Brake system warning light — Selector indicator light — MIL — EHPAS warning light — Cruise main indicator light — Cruise set indicator light — Security light — Door ajar warning light — Air bag system warning light — Turn indicator lights — Seat belt warning light — High-beam indicator light	• The odometer/tripmeter is normal. • Warning and indicator is normal.
		Except above	Replace the instrument cluster.

Check code 31

Check code 31	Key reminder switch ON/OFF signal		
STEP	**INSPECTION CONDITION**	**DISPLAY**	**ACTION**
1	Remove the key from the steering lock, then reinsert the key into the steering lock after selecting check code 31. (The key reminder switch is on.)		Go to the next step.
			Verify that the voltage of instrument cluster terminal 2C is **B+**. • If the voltage is as specified, replace the instrument cluster. • If the voltage is not as specified, inspect the following parts: — Key reminder switch (Ignition switch) — Wiring harness (Battery—ignition switch—instrument cluster)
2	Remove the key from the steering lock. (The key reminder switch is off.)		Verify that the voltage of instrument cluster terminal 2C is **1.0 V or less**. • If the voltage is as specified, replace the instrument cluster. • If the voltage is not as specified, inspect the following parts: — Key reminder switch (Ignition switch) — Wiring harness (Ignition switch—instrument cluster)
			Input signal to the instrument cluster is normal.

Check code 32

Check code 32	Indicator buzzer		
INSPECTION CONDITION	**DISPLAY**	**ACTION**	
After selecting check code 32, wait **approx. 2 s**.		Indicator buzzer sounds **three times**.	The buzzer is normal.
		The buzzer does not sound.	Replace the instrument

Check code 55

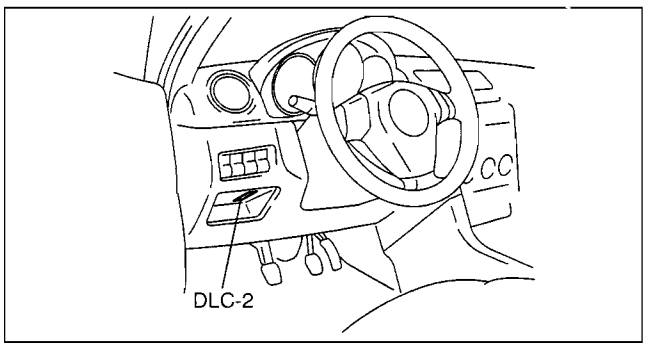
Check code 55	Dimmer switch ON/OFF signal		
STEP	INSPECTION CONDITION	DISPLAY	ACTION
1	After selecting the check code 55, press and hold the dimmer switch. (Dimmer switch ON)	On	Go to the next step.
		oFF	Replace the instrument cluster.
2	Release the dimmer switch. (Dimmer switch OFF)	On	Replace the instrument cluster.
		oFF	Input signal to the instrument cluster is normal.

DATA MONITORING AND RECORDING PROCEDURE

id092200801500

1. Connect the M-MDS or equivalent to the DLC-2 (16-pin).
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   When using the IDS (laptop PC)
   - Select the "Toolbox" tab.
   - Select "DataLogger".
   - Select "Modules".
   - Select "IC".

   When using the PDS (Pocket PC)
   - Select "Module Tests".
   - Select "IC".
   - Select "DataLogger".
3. Verify the data monitor items.



am3zzw0000192

Indication Item Table

Monitor item	Input-output signal/part name	Unit/State		Terminal
CCNT_HE	Number of continuous DTCs	—		—
ECT_GAUGE	Water temperature gauge	°F	°C	1I, 1K
NUMKEYS	Number of key ID numbers registered with the vehicle	—		—
ODO COUNT	Odometer	m		1I, 1K
TACH	Tachometer	RPM		
SPDOMETER	Speedometer	MPH	KPH	

OIL PRESSURE SWITCH INSPECTION

id092200801200

1. Verify that the oil pressure warning light illuminates when the ignition switch is at the ON position.
2. Verify that the oil pressure warning light goes out when the engine is started.
   - If the oil pressure warning light does not illuminate or remains illuminated, inspect the related wiring harness.
     — If the related wiring harness is normal, inspect the oil pressure. (See 01-11A-3 OIL PRESSURE INSPECTION[LF, L3].)
       - If the oil pressure is normal, replace the oil pressure switch.

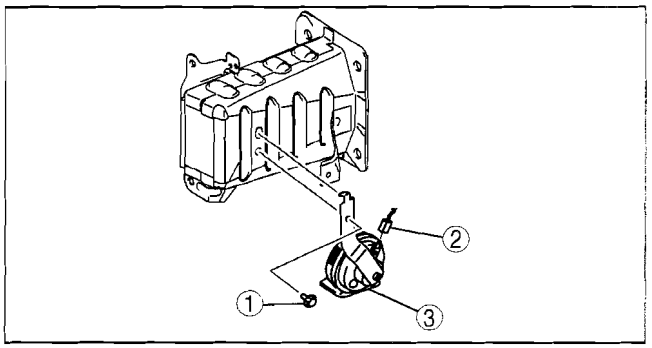
HORN REMOVAL/INSTALLATION

id092200800900

1. Disconnect the negative battery cable.
2. Slightly bend back the mudguard.
3. Remove in the order indicated in the table.

1	Bolt
2	Connector
3	Horn

4. Install in the reverse order of removal.



c3u0922w102

INFORMATION DISPLAY REMOVAL/INSTALLATION

id092200801400

(See 09-20-4 CENTER PANEL UNIT DISASSEMBLY/ASSEMBLY.)

INFORMATION DISPLAY INPUT/OUTPUT CHECK MODE

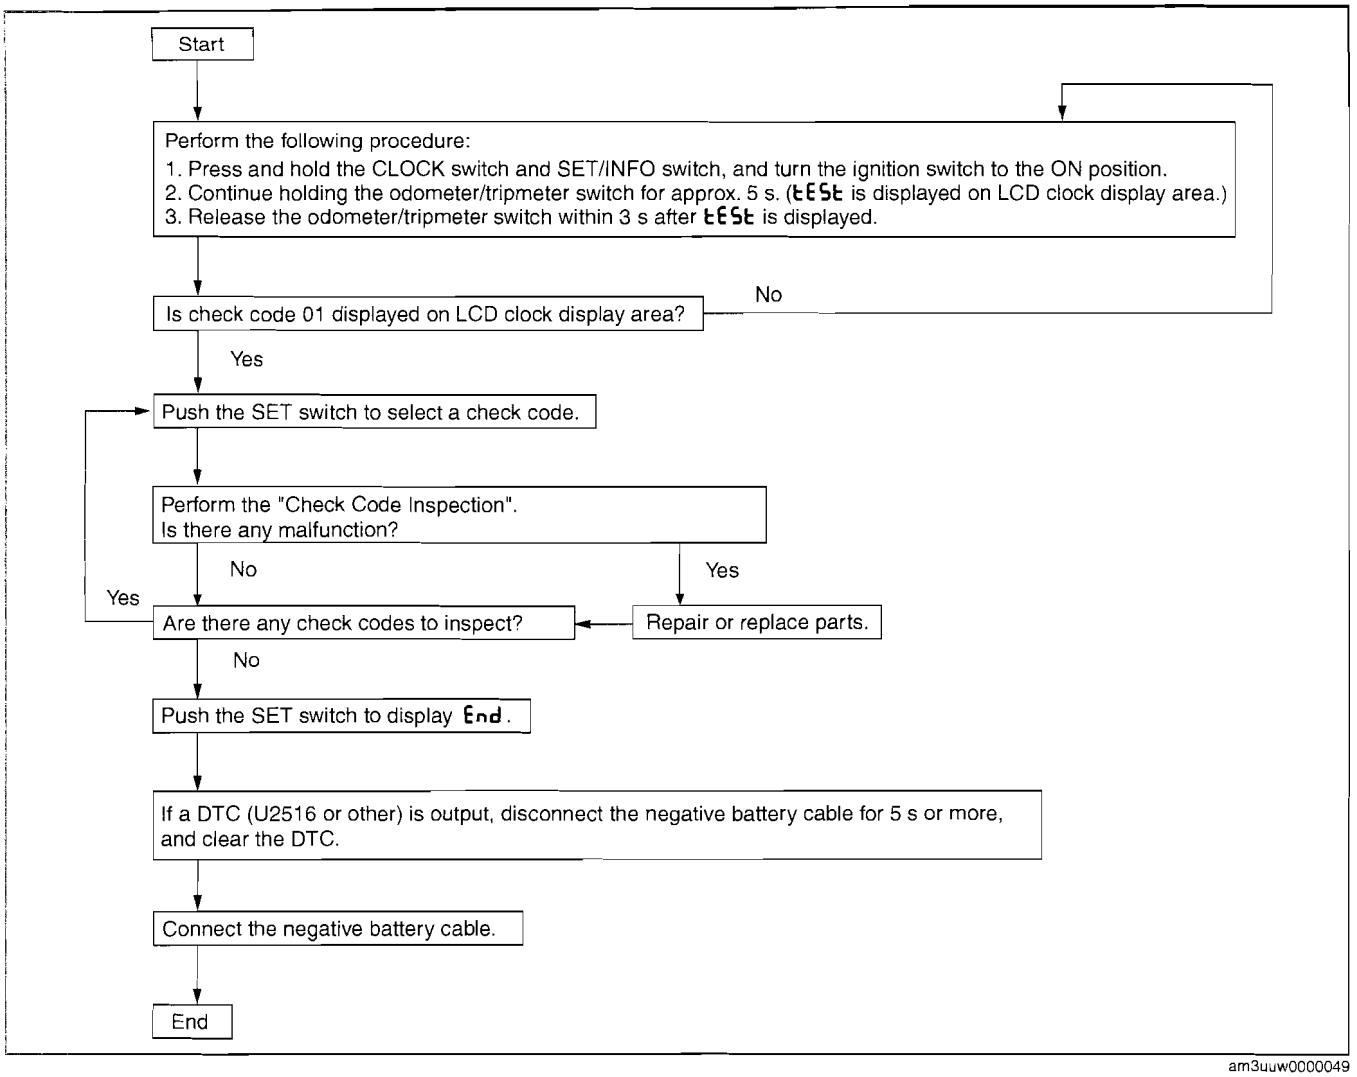
id092200801300

Note
- In this mode, it is possible to verify the items in the following chart.

Check Code Table

Check code	Check item	Related items
01	Information display	CAN system • DTC U2516: CAN system communication error
02	• Audio unit • Climate control unit • Instrument cluster	CAN system • DTCU0184: Communication error to audio unit • DTCU0164: Communication error to climate control unit • DTCU0181: Communication error to instrument cluster
04	TNS relay	• TNS relay • BCM • TNS signal wiring harness
—	LCD	LCD

Note
- The check codes are displayed in numerical order. (While performing the inspection, if you want to inspect a check code with a number smaller than the code number you are currently inspecting, terminate the check mode then repeat the inspection from the beginning.)



am3uuw0000049

Check Code Inspection

Check code 01

Check code 01	CAN system	
INSPECTION CONDITION	**DISPLAY**	**ACTION**
Select the check code 01.	OK	CAN system of information display is normal.
	U2516	CAN system communication error. (DTC U2516) (See 09-02B-5 DTC TABLE[MULTIPLEX COMMUNICATION SYSTEM])

Check code 02

Check code 02	• Communication status to audio unit • Communication status to climate control unit • Communication status to instrument cluster		
INSPECTION CONDITION	**DISPLAY**		**ACTION**
Select the check code 02. (The diagnostic results will be displayed once each in the order of audio unit, heater control unit, and instrument cluster.)	Audio unit	OK ACU	Communication to audio unit is normal.
		U0184	Communication error to audio unit. (DTC U0184) (See 09-02B-5 DTC TABLE[MULTIPLEX COMMUNICATION SYSTEM])
		None ACU	Vehicle without audio unit.
	Climate control unit	OK ATC	Communication to climate control unit is normal.
		U0164	Communication error to climate control unit. (DTC U0164) (See 09-02B-5 DTC TABLE[MULTIPLEX COMMUNICATION SYSTEM])
		None ATC	Vehicle without climate control unit.
	Instrument cluster	OK MET	Communication to instrument cluster is normal.
		U0181	Communication error to instrument cluster. (DTC U0181) (See 09-02B-5 DTC TABLE[MULTIPLEX COMMUNICATION SYSTEM])

Check code 04

Check code 04	TNS relay ON/OFF signal		
STEP	**INSPECTION CONDITION**	**DISPLAY**	**ACTION**
1	Turn the headlight switch to the TNS position. (TNS relay ON)	ON	Go to the next step.
		OFF	Verify that the voltage of information display terminal C is **B+**. • If the voltage is as specified, replace the information display. • If the voltage is not as specified, inspect the following parts: — TNS relay — Wiring harness (Battery—TNS relay—information display)
2	Turn the headlight switch off. (TNS relay OFF)	ON	Verify that the voltage of the information display terminal C is **1.0 V or less**. • If the voltage is as specified, replace the information display. • If the voltage is not as specified, inspect the following parts: — TNS relay — Wiring harness (TNS relay—information display)
		OFF	Input signal to the information display is normal.

Check code —

Check code 03	LCD		
INSPECTION CONDITION	**DISPLAY**	**ACTION**	
Select the check code 03.		All segments and dots illuminated.	LCD is normal.
		Except above	Replace the information display.

09-40 CONTROL SYSTEM

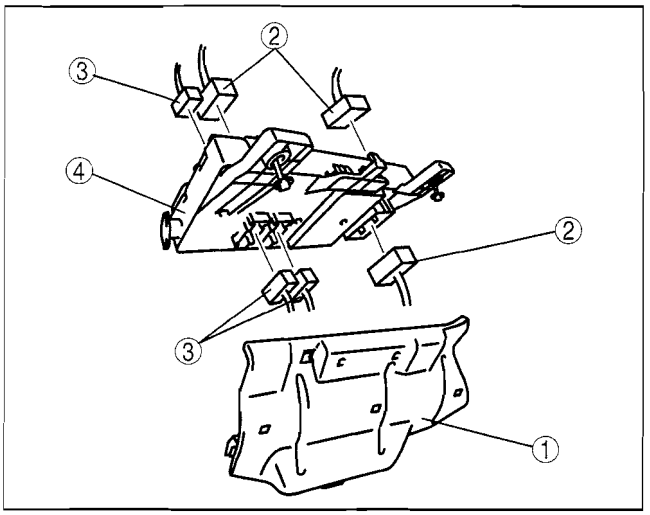
PASSENGER JUNCTION BOX (PJB) REMOVAL/INSTALLATION

id094000800700

1. When replacing the PJB, perform the following:
   - PJB configuration (See 09-40-16 PASSENGER JUNCTION BOX (PJB) CONFIGURATION.)
2. Disconnect the negative battery cable.
3. Remove in the order indicated in the table.

1	Cover
2	Connector A (See 09-40-1 Connector A Removal Note.) (See 09-40-3 Connector A Installation Note.)
3	Connector B (See 09-40-2 Connector B Removal Note.) (See 09-40-2 Connector B Installation Note.)
4	PJB (See 09-40-2 PJB Removal Note.)

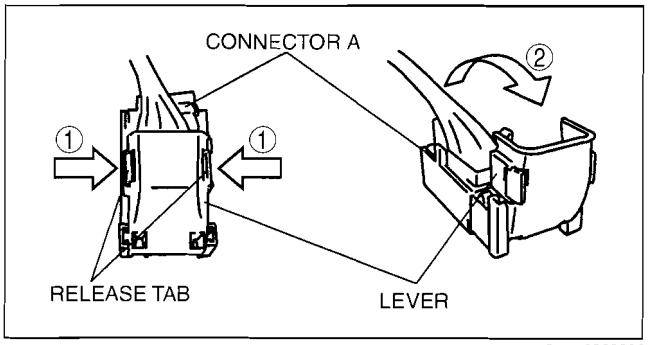
4. Install in the reverse order of removal.



am3uuw0000085

Connector A Removal Note

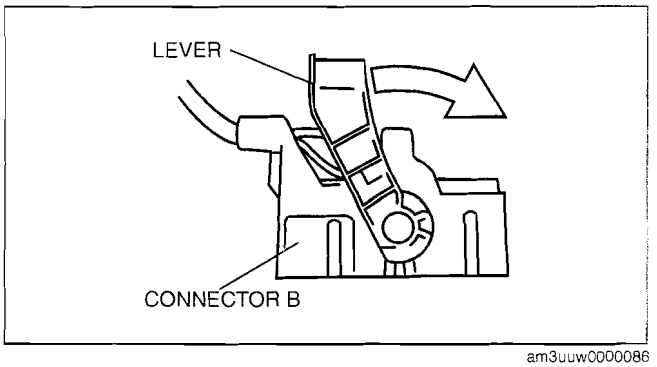
1. Push the release tab in the direction of the arrow.
2. Rotate the lever in the direction of the arrow and remove connector A.



am3uuw0000086

Connector B Removal Note

1. Rotate the lever in the direction of the arrow and remove connector B.

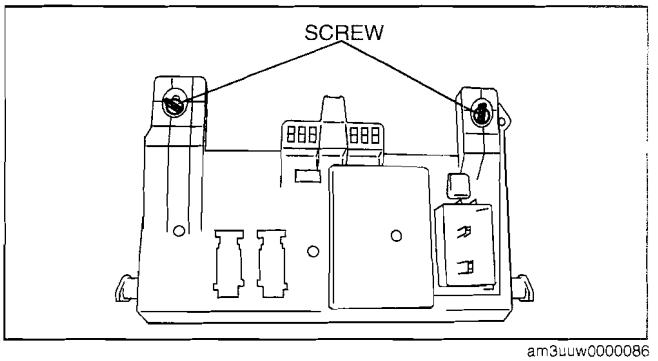


am3uuw0000086

PJB Removal Note

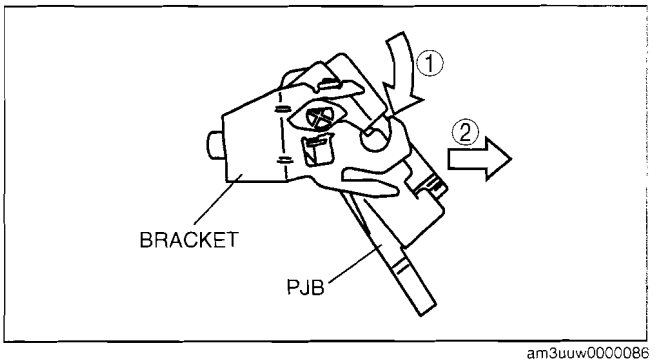
1. Turn the screws counterclockwise to remove the PJB.

Note
- Screws cannot be removed from the PJB.



am3uuw0000086

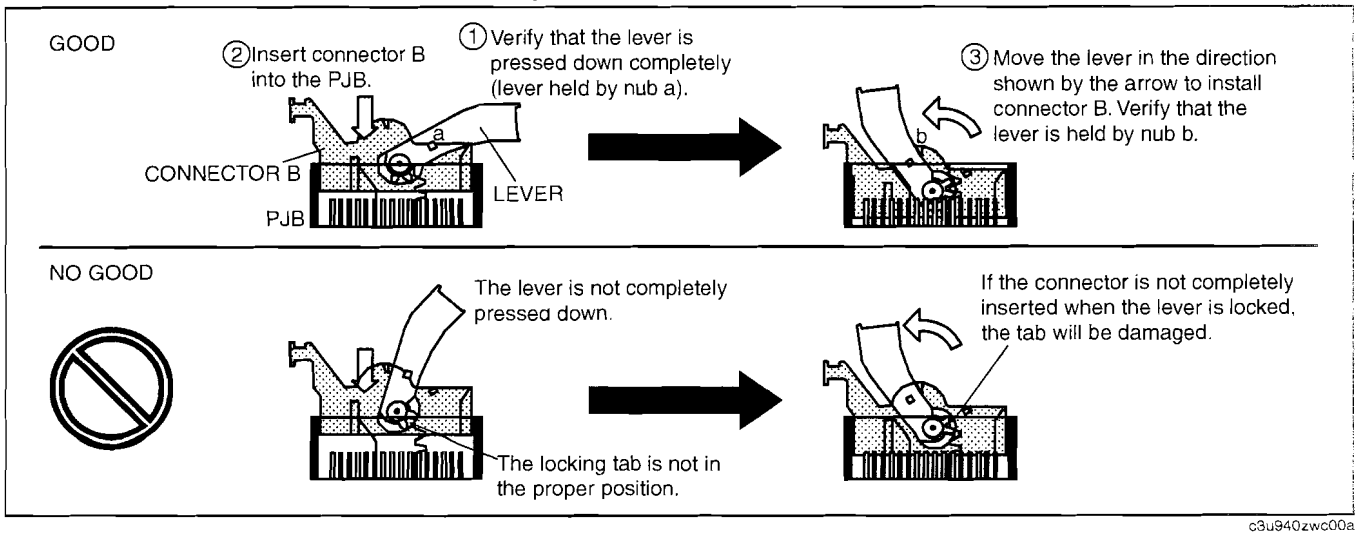
2. Remove the PJB as shown in the figure.



am3uuw0000086

Connector B Installation Note

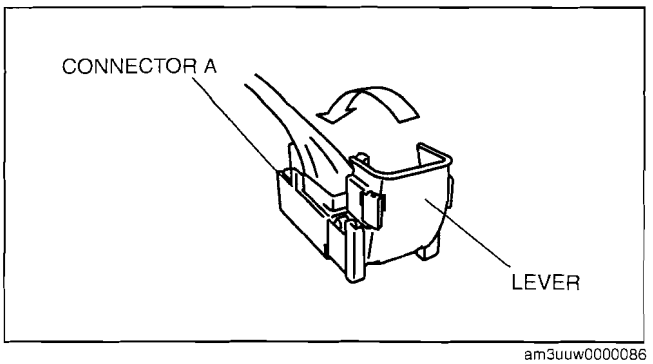
1. Install the connector B as shown in the figure.



c3u940zwc00a

Connector A Installation Note

1. After connecting the connector, rotate the lever in the direction of the arrow to install connector A.



am3uuw0000086

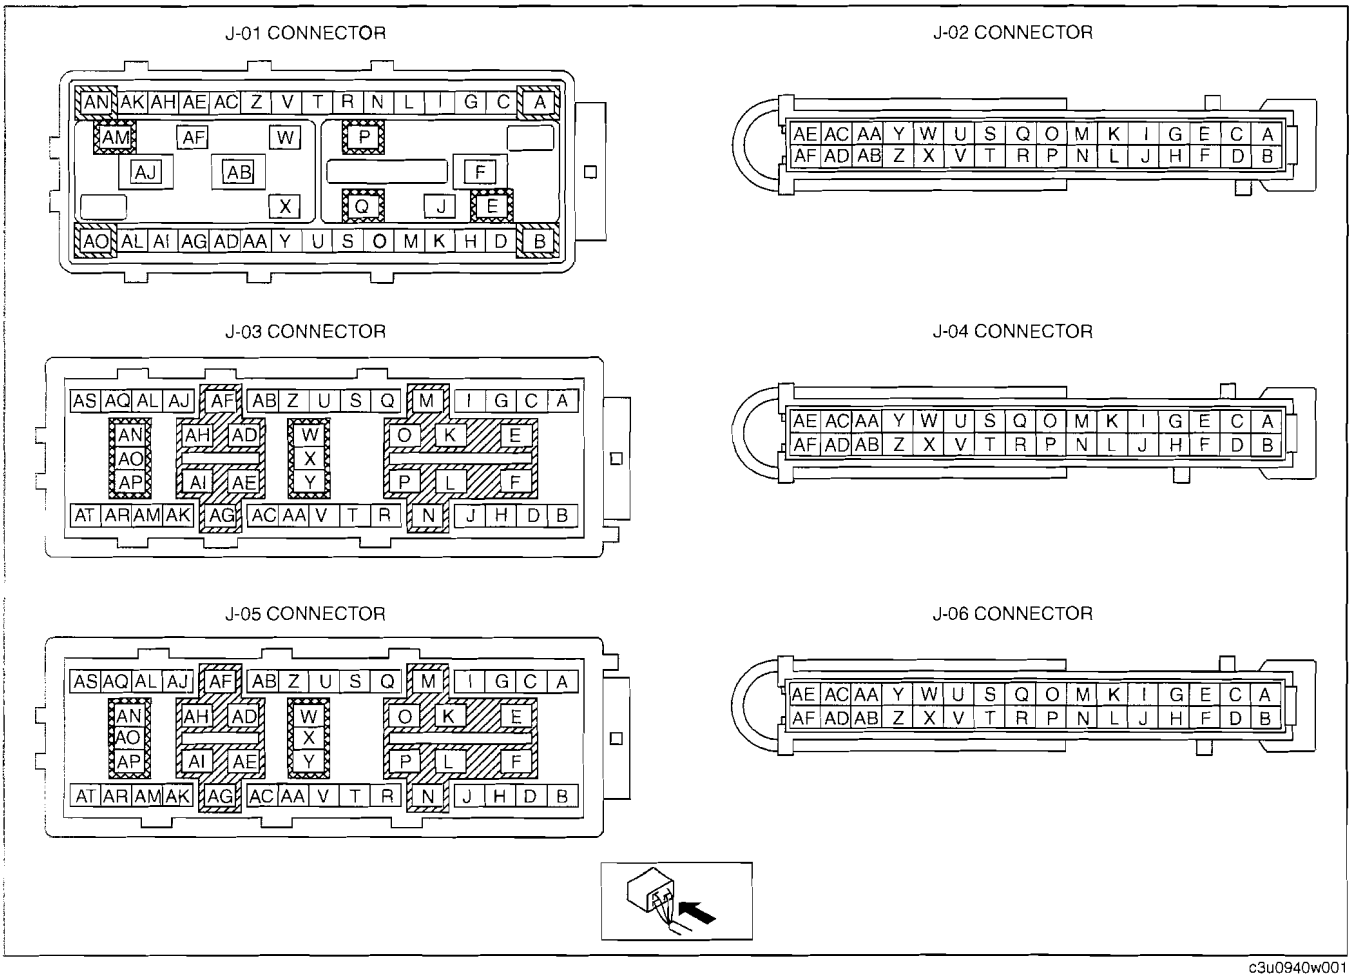
PASSENGER JUNCTION BOX (PJB) INSPECTION

id094000800600

Without Using the SST

1. Remove the glove compartment.
2. Remove the PJB with the connector connected.
3. Measure the voltage at each terminal and inspect for the continuity between the terminals and ground is as indicated in the Terminal Voltage Tables (Reference).
   - If the voltage or continuity is not as specified in the Terminal Voltage Table (Reference), inspect the parts under "Inspection item (s)".
     — If the system does not work properly even though the parts or related wiring harnesses do not have any malfunction, replace the PJB.

Terminal voltage table (reference)



c3u0940w001

Terminal	Signal	Connected to	Measurement condition		Voltage (V)/ Continuity	Inspection item (s)
J-01 A	—	—	—		—	—
J-01 B	Power supply	Main fuse block	Ignition switch at ON		B+	• Ignition switch • Related wiring harnesses
			Ignition switch off		1.0 or less	
J-01 C*2	Headlight (RH) control	Headlight (RH) (low beam)	Light switch at headlight position		B+	• Headlight (RH) (low beam) • Related wiring harnesses
			Light switch off		1.0 or less	
J-01 D*2	Headlight (LH) control	Headlight (LH) (low beam)	Light switch at headlight position		B+	• Headlight (LH) (low beam) • Related wiring harnesses
			Light switch off		1.0 or less	
J-01 E	Windshield wiper motor control	Windshield wiper motor (high speed)	Wiper switch at high position		B+	• Windshield wiper motor • Related wiring harnesses
			Other		1.0 or less	
J-01 F	PJB power supply	Main fuse block	Under any condition		B+	• Related wiring harnesses
J-01 G	Blower relay, rear window defroster relay power supply	Blower relay, rear window defroster relay	Ignition switch at ON		B+	• Blower relay • Rear window defroster relay • Related wiring harnesses
			Ignition switch off		1.0 or less	
J-01 H	Back-up light power supply	Back-up light switch	Ignition switch at ON		B+	• Back-up light switch • Related wiring harnesses
			Ignition switch off		1.0 or less	
J-01 I	—	—	—		—	—

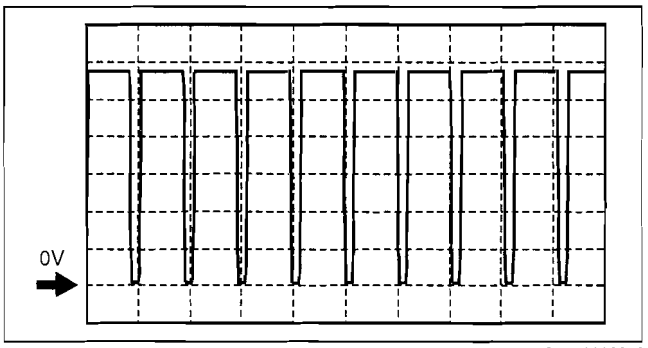
*2 : Without DRL
*3 : With auto light and auto wiper system
*4 : 4 door
*5 : 5 door

Inspection using an oscilloscope (reference)
Panel light control

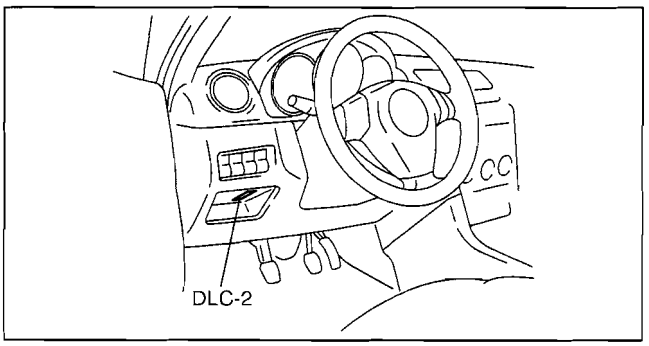
- Terminal connected: J-03 AI (+)—Negative battery terminal
- Oscilloscope setting: 2 V/DIV (Y): 5 ms/DIV (X), DC range
- Measurement condition: Panel light control switch turned to the darkest position.



am3uuw0000052

Using SST (M-MDS)

1. Connect the M-MDS to the DLC-2 connector.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   - When using the IDS (laptop PC)
     — Select the "Toolbox" tab.
     — Select "DataLogger".
     — Select "Modules".
     — Select "GEM".
   - When using the PDS (Pocket PC)
     — Select "Module Tests".
     — Select "GEM".
     — Select "DataLogger".
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the directions on the screen.



am3uuw0000052

Note

- The PID data screen function is used for monitoring the calculated value. Therefore, if the monitored value of the output parts is not within the specification, inspection of the monitored value of input parts corresponding to applicable output part control is necessary. In addition, because the system does not display output part malfunction as abnormality in the monitored value, it is necessary to inspect the output part individually.

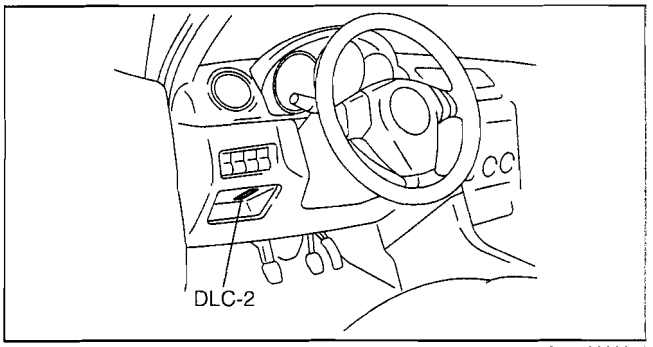
PASSENGER JUNCTION BOX (PJB) CONFIGURATION

id094000800500



am3uuw0000051

1. Connect the M-MDS to the DLC-2 (16-pin).
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   When using the IDS (laptop PC)
   - Select "Module Programming".

   When using the PDS (Pocket PC)
   - Select "Programming".
   - Select "Module Programming".
3. Then, select items from the screen menu in the following order.
   1. Select "Programmable Module Installation".
   2. Select "GEM".
4. Perform the configuration according to the directions on the screen.
5. select items from the screen menu in the following order.
   1. Select "Programmable Parameters".
   2. Select "GEM".
   3. Select "Module Reset".
6. Perform procedures according to the directions on the screen.
7. Retrieve DTCs using the M-MDS and verify that there is no DTC present.
   - If any DTC is present, perform applicable DTC inspection. (See 09-02E-2 DTC TABLE (PJB)[CONTROL
