2007 Mazda3 MAZDASPEED3 Workshop Manual

FOREWORD

This manual contains on-vehicle service and/or diagnosis procedures for the Mazda3, MAZDASPEED3.

For proper repair and maintenance, a thorough familiarization with this manual is important, and it should always be kept in a handy place for quick and easy reference.

All the contents of this manual, including drawings and specifications, are the latest available at the time of printing.
As modifications affecting repair or maintenance occur, relevant information supplementary to this volume will be made available at Mazda dealers. This manual should be kept up-to-date.

Mazda Motor Corporation reserves the right to alter the specifications and contents of this manual without obligation or advance notice.

Mazda Motor Corporation
HIROSHIMA, JAPAN

APPLICATION:
This manual is applicable to vehicles beginning with the Vehicle Identification Numbers (VIN), and related materials shown on the following page.

HOW TO USE THIS MANUAL

id000000800100

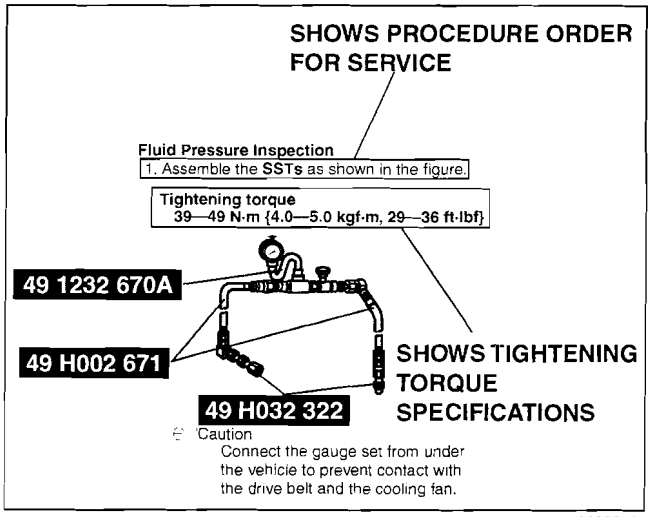
Range of Topics

- This manual contains procedures for performing all required service operations. The procedures are divided into the following five basic operations:
  - — Removal/Installation
  - — Disassembly/Assembly
  - — Replacement
  - — Inspection
  - — Adjustment
- Simple operations which can be performed easily just by looking at the vehicle (i.e., removal/installation of parts, jacking, vehicle lifting, cleaning of parts, and visual inspection) have been omitted.

Service Procedure

Inspection, adjustment

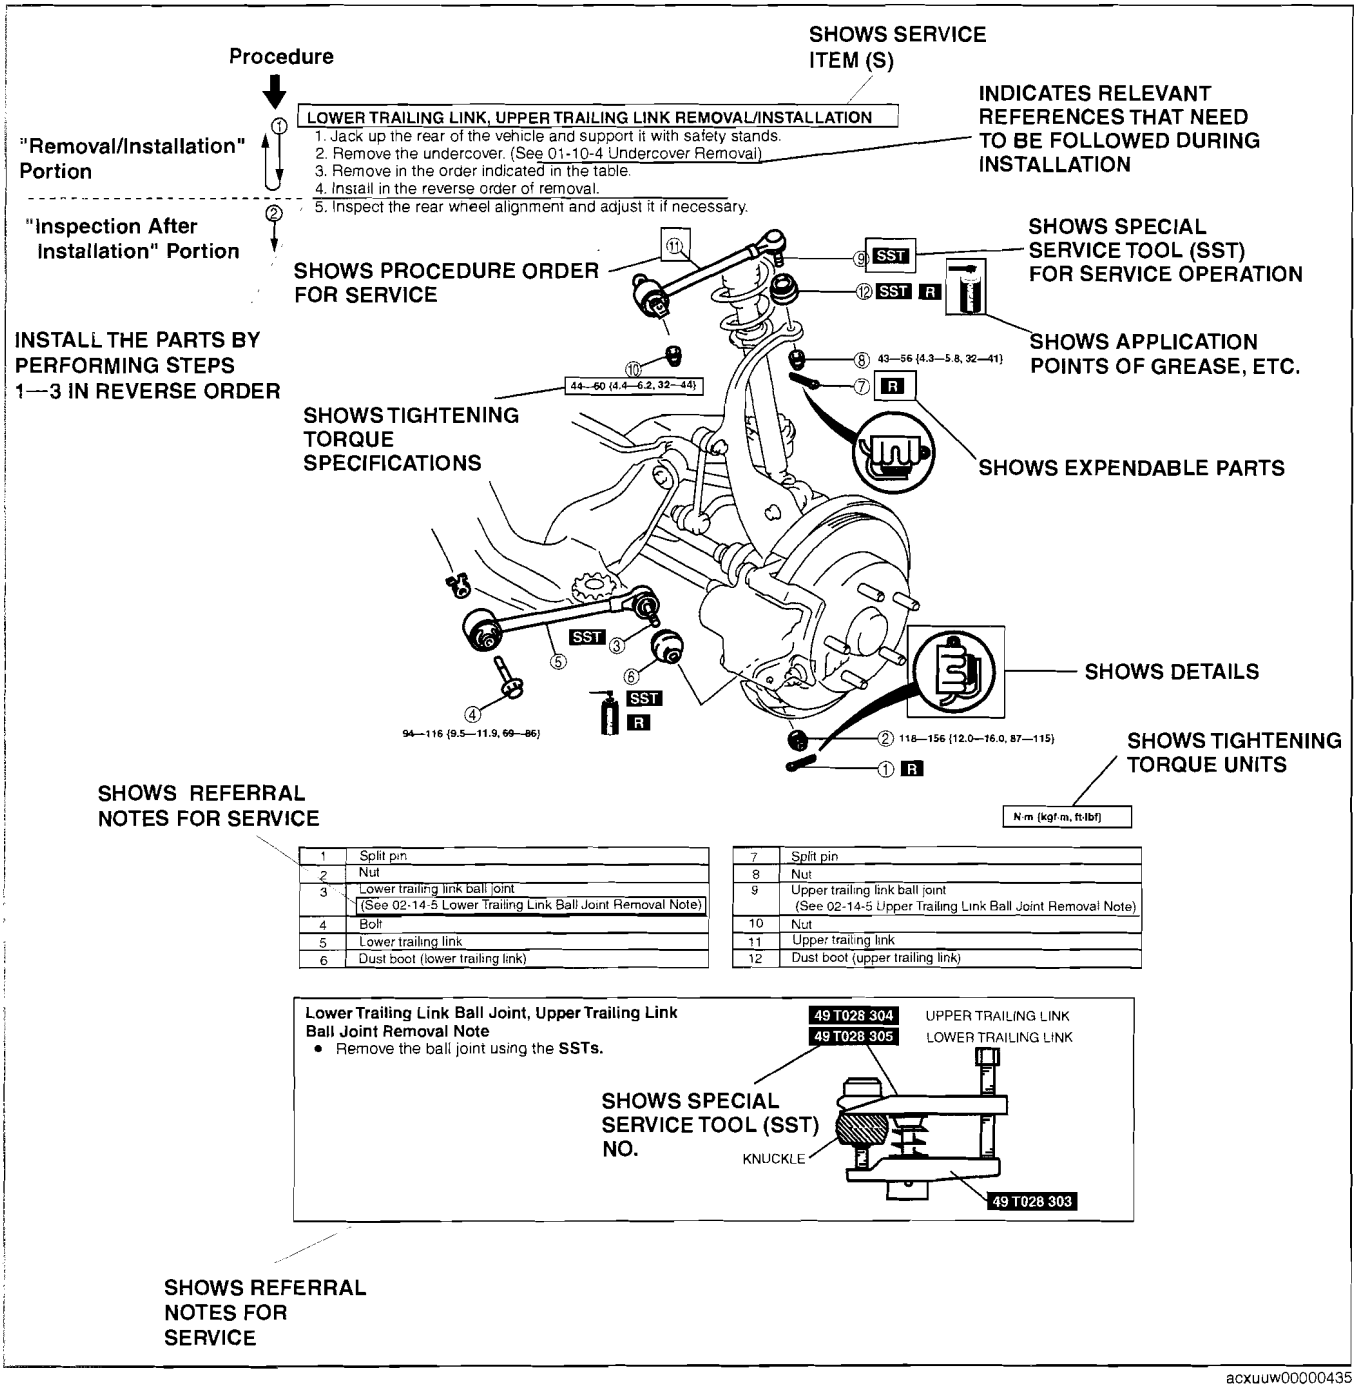
- Inspection and adjustment procedures are divided into steps. Important points regarding the location and contents of the procedures are explained in detail and shown in the illustrations.



acxuuw00000434

Repair procedure

1. Most repair operations begin with an overview illustration. It identifies the components, shows how the parts fit together, and describes visual part inspection. However, only removal/installation procedures that need to be performed methodically have written instructions.
2. Expendable parts, tightening torques, and symbols for oil, grease, and sealant are shown in the overview illustration. In addition, symbols indicating parts requiring the use of special service tools or equivalent are also shown.
3. Procedure steps are numbered and the part that is the main point of that procedure is shown in the illustration with the corresponding number. Occasionally, there are important points or additional information concerning a procedure. Refer to this information when servicing the related part.



1	Split pin
2	Nut
3	Lower trailing link ball joint (See 02-14-5 Lower Trailing Link Ball Joint Removal Note)
4	Bolt
5	Lower trailing link
6	Dust boot (lower trailing link)

7	Split pin
8	Nut
9	Upper trailing link ball joint (See 02-14-5 Upper Trailing Link Ball Joint Removal Note)
10	Nut
11	Upper trailing link
12	Dust boot (upper trailing link)

acxuuw00000435

Symbols

- There are eight symbols indicating oil, grease, fluids, sealant, and the use of **SST** or equivalent. These symbols show application points or use of these materials during service.

Symbol	Meaning	Kind
	Apply oil	New appropriate engine oil or gear oil
	Apply brake fluid	New appropriate brake fluid
	Apply automatic transaxle/ transmission fluid	New appropriate automatic transaxle/ transmission fluid
	Apply grease	Appropriate grease
	Apply sealant	Appropriate sealant
	Apply petroleum jelly	Appropriate petroleum jelly
	Replace part	O-ring, gasket, etc.
	Use SST or equivalent	Appropriate tools

Advisory Messages

- You will find several **Warnings**, **Cautions**, **Notes**, **Specifications** and **Upper and Lower Limits** in this manual.

Warning

- A Warning indicates a situation in which serious injury or death could result if the warning is ignored.

Caution

- A Caution indicates a situation in which damage to the vehicle or parts could result if the caution is ignored.

Note

- A Note provides added information that will help you to complete a particular procedure.

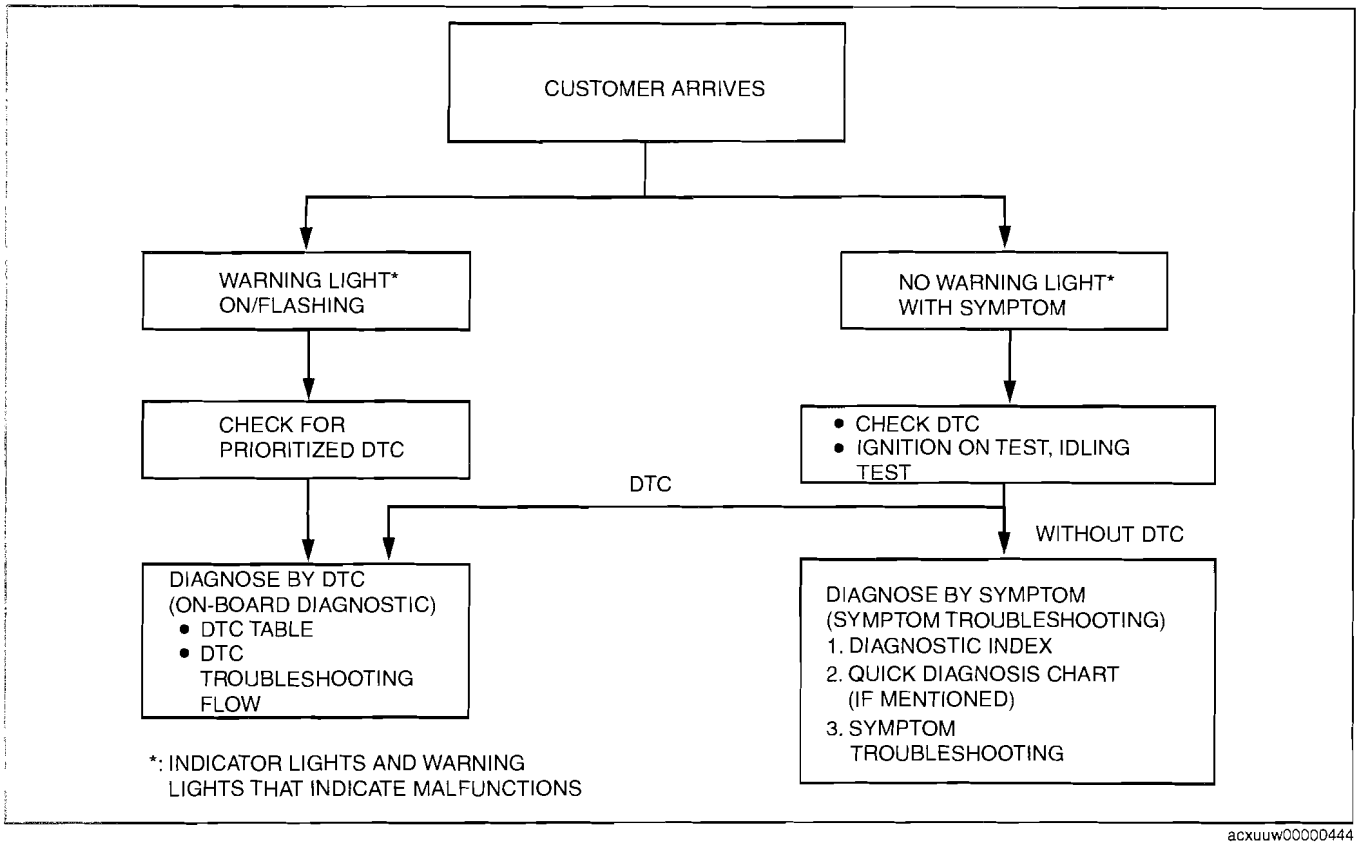
Specification

- The values indicate the allowable range when performing inspections or adjustments.

Upper and lower limits

- The values indicate the upper and lower limits that must not be exceeded when performing inspections or adjustments.

Troubleshooting Procedure
Basic flow of troubleshooting



acxuuw00000444

DTC troubleshooting flow (on-board diagnostic)
- Diagnostic trouble codes (DTCs) are important hints for repairing malfunctions that are difficult to simulate. Perform the specific DTC diagnostic inspection to quickly and accurately diagnose the malfunction.
- The on-board diagnostic function is used during inspection. When a DTC is shown specifying the cause of a malfunction, continue the diagnostic inspection according to the items indicated by the on-board diagnostic function.

Diagnostic index
- The diagnostic index lists the symptoms of specific malfunctions. Select the symptoms related or most closely relating to the malfunction.

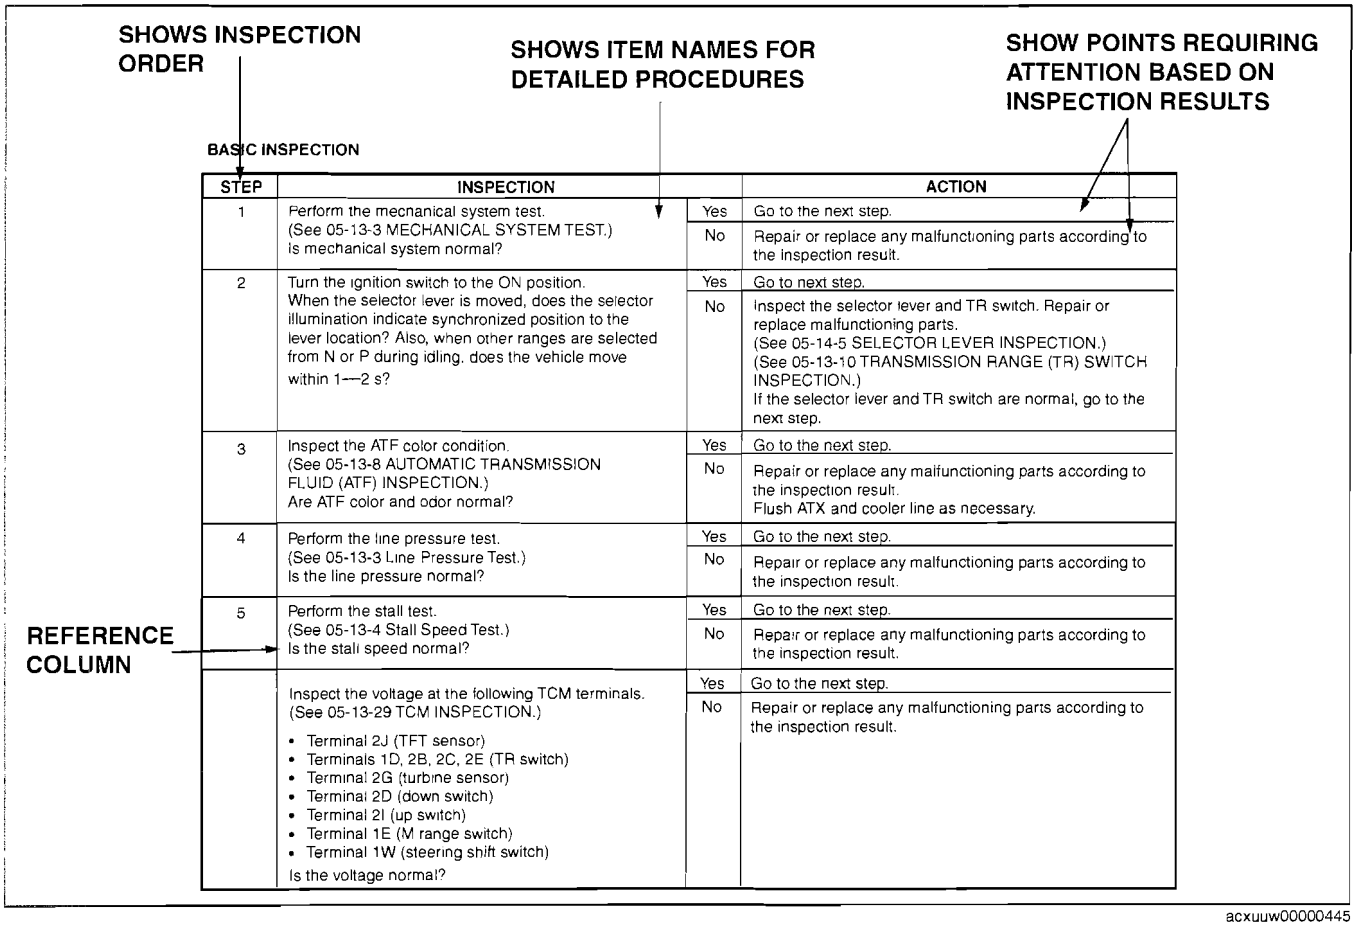
Quick diagnosis chart (If mentioned)
- The quick diagnosis chart lists diagnosis and inspection procedures to be performed specifically relating to the cause of the malfunction.

Symptom troubleshooting
- Symptom troubleshooting quickly determines the location of the malfunction according to symptom type.

Procedures for Use

Using the basic inspection (section 05)

- Perform the basic inspection procedure before symptom troubleshooting.
- Perform each step in the order shown.
- The reference column lists the location of the detailed procedure for each basic inspection.
- Although inspections and adjustments are performed according to the reference column procedures, if the cause of the malfunction is discovered during basic inspection, continue the procedures as indicated in the action column.



BASIC INSPECTION

STEP	INSPECTION		ACTION
1	Perform the mechanical system test. (See 05-13-3 MECHANICAL SYSTEM TEST.) Is mechanical system normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection result.
2	Turn the ignition switch to the ON position. When the selector lever is moved, does the selector illumination indicate synchronized position to the lever location? Also, when other ranges are selected from N or P during idling, does the vehicle move within 1—2 s?	Yes	Go to next step.
		No	Inspect the selector lever and TR switch. Repair or replace malfunctioning parts. (See 05-14-5 SELECTOR LEVER INSPECTION.) (See 05-13-10 TRANSMISSION RANGE (TR) SWITCH INSPECTION.) If the selector lever and TR switch are normal, go to the next step.
3	Inspect the ATF color condition. (See 05-13-8 AUTOMATIC TRANSMISSION FLUID (ATF) INSPECTION.) Are ATF color and odor normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection result. Flush ATX and cooler line as necessary.
4	Perform the line pressure test. (See 05-13-3 Line Pressure Test.) Is the line pressure normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection result.
5	Perform the stall test. (See 05-13-4 Stall Speed Test.) Is the stall speed normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection result.
	Inspect the voltage at the following TCM terminals. (See 05-13-29 TCM INSPECTION.) • Terminal 2J (TFT sensor) • Terminals 1D, 2B, 2C, 2E (TR switch) • Terminal 2G (turbine sensor) • Terminal 2D (down switch) • Terminal 2I (up switch) • Terminal 1E (M range switch) • Terminal 1W (steering shift switch) Is the voltage normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection result.

acxuuw00000445

Using the DTC troubleshooting flow

- DTC troubleshooting flow shows diagnostic procedures, inspection methods, and proper action to take for each DTC.

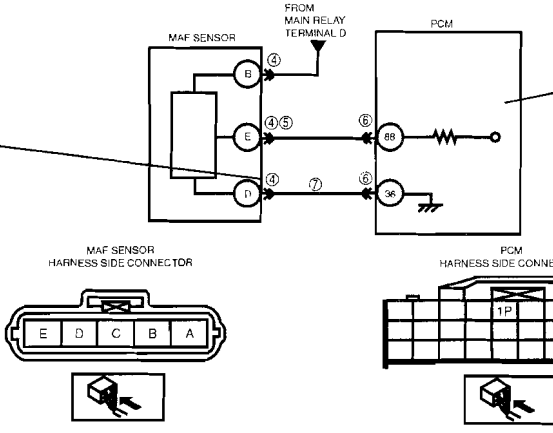
TROUBLE CONDITION

DETECTION CONDITION describes the condition under which the DTC is detected.

DTC P0103

DTC P0103	MAF circuit high input
DETECTION CONDITION	PCM monitors input voltage from TP sensor after ignition key is turned on. If input voltage at PCM terminal 68 is above 8.25 V, PCM determines that TP circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects the above malfunction during first drive cycle. Therefore, PENDING CODE is not available. • FREEZE FRAME DATE is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• MAF sensor malfunction • Connector or terminal malfunction • Open circuit in wiring between MAF sensor terminal D and PCM terminal 36 • Open circuit in MAF sensor ground circuit

POSSIBLE CAUSE describes possible point(s) of malfunction



Indicates the circuit to be inspected (01 and 05 section)

Indicates the inspection step No. to be performed (01 and 05 section)

Indicates the connector related to the inspection

STEP shows the order of troubleshooting

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to next step.
		No	Record FREEZE FRAME DATA on repair order, then go to next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Are related Service Bulletins and/or on-line repair information available?	Yes	Perform repair or diagnosis according to available repair information. If vehicle is not repaired, then go to next step.
		No	Go to next step.
3	**VERIFY CURRENT INPUT SIGNAL STATUS IS CONCERN INTERMITTENT OR CONSTANT** • Connect diagnostic tool to DLC-2. • Start engine. • Access MAF V PID using diagnostic tool. • Is MAF V PID within 0.2 - 8.3 V?	Yes	Intermittent concern is existing. Go to INTERMITTENT CONCERNS TROUBLESHOOTING procedure. (See 01-03-33 INTERMITTENT CONCERN TROUBLESHOOTING)
		No	Go to next step.
4	**INSPECT POOR CONNECTION OF MAF SENSOR CONNECTOR** • Turn ignition key to OFF. • Disconnect MAF sensor connector. • Check for poor connection (damaged, pulled-out terminals, corrosion etc.). • Are there any malfunctions?	Yes	Repair or replace terminals, then go to Step 8.

ACTION describes the appropriate action to be taken according to the result (Yes/No) of the INSPECTION.

INSPECTION describes the method to quickly determine the malfunctioning part(s).

Reference item(s) to perform ACTION.

acxuuw00000446

Using the diagnostic index

- The symptoms of the malfunctions are listed in the diagnostic index for symptom troubleshooting.
- The exact malfunction symptoms can be selected by following the index.

No.	TROUBLESHOOTING ITEM		DESCRIPTION	Page
1	Melting of main or other fuses		—	(See 01-03-6 MELT NO.1 MAIN OR OTHER FUSE)
2	MIL comes on		MIL is illuminated incorrectly.	(See 01-03-7 NO.2 MIL COMES ON)
3	Will not crank		Starter does not work.	(See 01-03-8 NO. 3 WILL NOT CRANK)
4	Hard start/long crank/erratic start/erratic crank		Starter cranks engine at normal speed but engine requires excessive cranking time before starting.	(See 01-03-9 NO. 4 HARD START/ LONG CRANK/ERRATIC CRANK)
5	Engine stalls.	After start/at idle	Engine stops unexpectedly at idle and/or after start.	(See 01-03-11 NO. 5 ENGINE-STALLS AFTER START/AT IDLE)
6	Cranks normally but will not start		Starter cranks engine at normal speed but engine will not run.	(See 01-03-15 NO.6 CRANKS NORMALLY BUT WILL NOT START)
7	Slow return to idle		Engine takes more time than normal to return to idle speed.	(See 01-03-19 NO. 7 SLOW RERUN TO IDLE)
8	Engine runs rough/rotling		Engine speed fluctuates between specified idle speed and lower speed and engine shakes excessively.	(See 01-03-20 NO. 8 ENGINE RUNS ROUGH/ROLLING IDLE)
9	Fast idle/runs on		Engine speed continues at fast idle after warm-up. Engine runs after ignition key is turned to OFF.	(See 01-03-23 NO. 9 FAST IDLE/RUNS ON)
10	Low idle/stalls during deceleration		Engine stops unexpectedly at beginning of deceleration or recovery from deceleration.	(See 01-03-24 NO. 10 LOW IDLE/ STALLS DURING DECELERATION)

acxuuw00000447

Using the quick diagnosis chart

- The chart lists the relation between the symptom and the cause of the malfunction.
- The chart is effective in quickly narrowing down the relation between symptom and cause of the malfunction. It also specifies the area of the common cause when multiple malfunction symptoms occur.
- The appropriate diagnostic inspection relating to malfunction cause as specified by the symptoms can be selected by looking down the diagnostic inspection column of the chart.

② PARTS WHICH MAY BE THE CAUSE OF PROBLEMS

SYMPTOM QUICK DIAGNOSTIC CHART

PART WHICH MAY BE THE SYMPTOM

① CHOOSE THE ACTUALSYMPTOM

Troubleshooting item \ Possible factor			Starter motor malfunction (Mechanical or electrical)	Starter circuit including ignition switch open	Improper engine oil level	Low or dead battery	Charging system malfunction	Improper engine compression	Improper valve timing	Hydrolocked engine	Improper engine oil viscosity	Improper dipstick	Base engine malfunction	Drive plate or flywheel seized	Improper tension or damaged drive belts	Improper engine coolant level	Water and anti-freeze mixture improperly	Cooling system malfunction (Radiator, hoses, overflow system, thermostat, etc.)	Cooling fan system malfunction	Engine or transaxle mounts improperly installed	Cooling fan or condenser fan seat improperly	Accelerator cable free play mis-adjustment	Fuel quality

28	Fuel filling shut off issues																						
29	Intermittent concerns					x																	
30	Constant voltage																						
31	Spark plug condition							x			x		x				x						x
32	Automatic transaxle concerns	Upshift/downshift/ engagement	(See 05-01 AUTOMATIC TRANSAXLE SYMPTOM TROUBLESOOTING)																				

acxuuw00000448

Using the symptom troubleshooting

- Symptom troubleshooting shows diagnostic procedures, inspection methods, and proper action to take for each trouble symptom.

DESCRIPTION describes what kind of TROUBLE SYMPTOM

TROUBLE SYMPTOM

14	Engine flares up or slips when upshifting or down shifting
DESCRIPTION	• When accelerator pedal is depressed for driveway, engine speed increase but vehicle speed increase slowly. • When accelerator is depressed while driving, engine speed increases but vehicle not.
POSSIBLE CAUSE	• There is clutch slip because clutch is stuck or line pressure is low. — Clutch stuck, slippage (forward clutch, 3-4 clutch, 2-4 brake band, one-way clutch 1, one-way clutch 2) • Line pressure low • Malfunction or mis-adjustment of TP sensor • Malfunction of VSS • Malfunction of input/turbine speed sensor • Malfunction of sensor grouno • Malfunction of shift solenoid A, B or C • Malfunction of TCC solenoid valve • Malfunction of body ground • Malfunction of throttle cable • Malfunction of throttle valve body — Poor operating of mechanical pressure • Selector lever position disparity • TR switch position disparity Note • Before following troubleshooting steps, make sure that Automatic Transaxle On-board Diagnostic and Automatic Transaxle Basic Inspection are conducted.

POSSIBLE CAUSE describes possible point of malfunction

STEP shows the order of troubleshooting.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Is line pressure okay?	Yes	Go to next step.
		No	Repair or replace any defective parts according to inspection results.
2	• Is shift point okay? (See 05-17-5 ROAD TEST)	Yes	Go to next step
		No	Go to symptom troubleshooting No.9 "Abnormal shift".
3	• Stop engine and turn ignition switch on. • Connect diagnostic tool to DLC-2. • Simulate SHIFT A, SHIFT B and SHIFT C PIDs for ON. • Is operating sound of shift solenoids heard?	Yes	• Overhaul control valve body and repair or replace any defective parts. (See ATX Workshop Manual GF4A-EL (1666-1A-99F)) • If problem remains, replace or overhaul transaxle and repair or replace defective parts. (See 05-17-15 AUTOMATIC TRANSAXLE REMOVEVAL/INSTALLATiON)
		No	• Inspect for bend, damage, corrosion or loose connection if shift solenoid A, B, or C terminal on ATX. • Inspect for shift solenoid mechanical stuck. (See 05-17-14 Inspection of Operation) • If shift solenoids are okay, inspect for open or short circuit between PCM connector terminal A, B or C.
4	• Verify test results. — If okay, return to diagnostic index to service any additional symptoms. — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. — If vehicle is repaired, troubleshooting completed. — If vehicle is not repaired or additional diagnostic information is not available, replace or reprogram PCM.		

Reference item(s) for additional information to perform INSPECTION.

INSPECTION describes the method to quickly determine the malfunctioning part(s).

ACTION describes the appropriate action to be taken according to the result (Yes/No) of the INSPECTION.

How to perform ACTION is described in the relative material shown.

Reference item(s) to perform ACTION.

acxuuw00000449

UNITS

id000000801600

Electric current	A (ampere)
Electric power	W (watt)
Electric resistance	ohm
Electric voltage	V (volt)
Length	mm (millimeter)
	in (inch)
Negative pressure	kPa (kilo pascal)
	mmHg (millimeters of mercury)
	inHg (inches of mercury)
Positive pressure	kPa (kilo pascal)
	kgf/cm^2 (kilogram force per square centimeter)
	psi (pounds per square inch)
Number of revolutions	rpm (revolutions per minute)
Torque	N·m (Newton meter)
	kgf·m (kilogram force meter)
	kgf·cm (kilogram force centimeter)
	ft·lbf (foot pound force)
	in·lbf (inch pound force)
Volume	L (liter)
	US qt (U.S. quart)
	Imp qt (Imperial quart)
	ml (milliliter)
	cc (cubic centimeter)
	cu in (cubic inch)
	fl oz (fluid ounce)
Weight	g (gram)
	oz (ounce)

Conversion to SI Units (Système International d'Unités)

- All numerical values in this manual are based on SI units. Numbers shown in conventional units are converted from these values.

Rounding Off

- Converted values are rounded off to the same number of places as the SI unit value. For example, if the SI unit value is 17.2 and the value after conversion is 37.84, the converted value will be rounded off to 37.8.

Upper and Lower Limits

- When the data indicates upper and lower limits, the converted values are rounded down if the SI unit value is an upper limit and rounded up if the SI unit value is a lower limit. Therefore, converted values for the same SI unit value may differ after conversion. For example, consider 2.7 kgf/cm^2 in the following specifications:

  210—260 kPa {2.1—2.7 kgf/cm^2, 30—38 psi}
  270—310 kPa {2.7—3.2 kgf/cm^2, 39—45 psi}

- The actual converted values for 2.7 kgf/cm^2 are 264 kPa and 38.4 psi. In the first specification, 2.7 is used as an upper limit, so the converted values are rounded down to 260 and 38. In the second specification, 2.7 is used as a lower limit, so the converted values are rounded up to 270 and 39.

SERVICE CAUTIONS

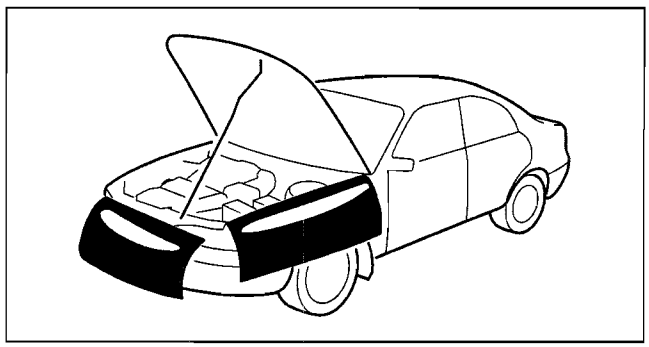
id000000800200

Injury/damage Prevention Precautions

- Depending on the vehicle, the cooling fan may operate suddenly even when the ignition switch is turned off. Therefore, keep hands and tools away from the cooling fan even if the cooling fan is not operating to prevent injury to personnel or damage to the cooling fan. Always disconnect the negative battery cable when servicing the cooling fan or parts near the cooling fan.

Protection of the Vehicle

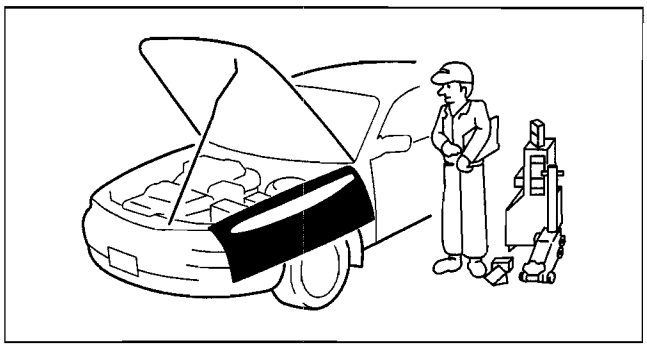
- Always be sure to cover fenders, seats and floor areas before starting work.



am3uuw0000010

Preparation of Tools and Measuring Equipment

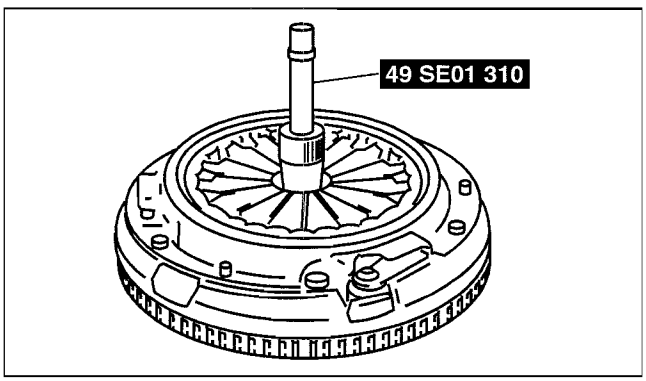
- Be sure that all necessary tools and measuring equipment are available before starting any work.



am3uuw0000010

Special Service Tools

- Use special service tools or equivalent when they are required.



am3uuw0000010

Malfunction Diagnosis System

- Use the Mazda modular diagnostic system (M-MDS) or equivalent for malfunction diagnosis.

Disconnection of the Negative Battery Cable

- When working with the negative battery cable disconnected, wait for 1 min or more to allow the back up power supply of the SAS control module to deplete its stored power after the cable is disconnected.
- Disconnecting the battery cable will delete the memories of the clock, audio, and DTCs, etc. Therefore, it is necessary to note down the information stored in those memories before disconnecting the cable.
- When the ignition switch is turned to the ON position with the negative battery cable connected, the car navigation unit starts program reading. To prevent a car navigation unit malfunction, do not start the engine while "Program reading. Do not turn the power off" is displayed on the screen (**approx. 10 sec.**).

Oil Leakage Inspection

- Use either of the following procedures to identify the type of oil that is leaking:

Using UV light (black light)

1. Remove any oil on the engine or transaxle/transmission.

Note

- Referring to the fluorescent dye instruction manual, mix the specified amount of dye into the engine oil or ATF (or transaxle/transmission oil).

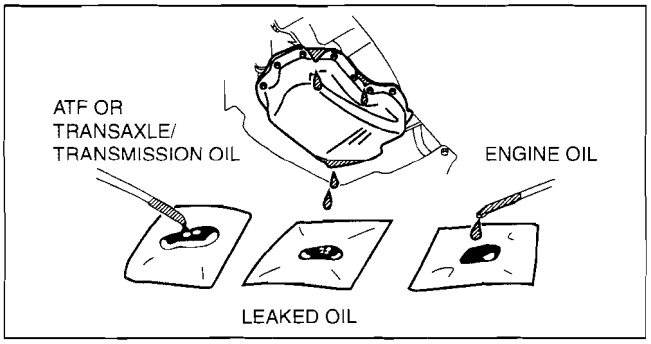
2. Pour the fluorescent dye into the engine oil or ATF (or transaxle/transmission oil).
3. Allow the engine to run for 30 min.
4. Inspect for dye leakage by irradiating with UV light (black light), and identify the type of oil that is leaking.
5. If no dye leakage is found, allow the engine to run for another 30 min. or drive the vehicle then reinspect.
6. Find where the oil is leaking from, then make necessary repairs.

Note

- To determine whether it is necessary to replace the oil after adding the fluorescent dye, refer to the fluorescent dye instruction manual.

Not using UV light (black light)

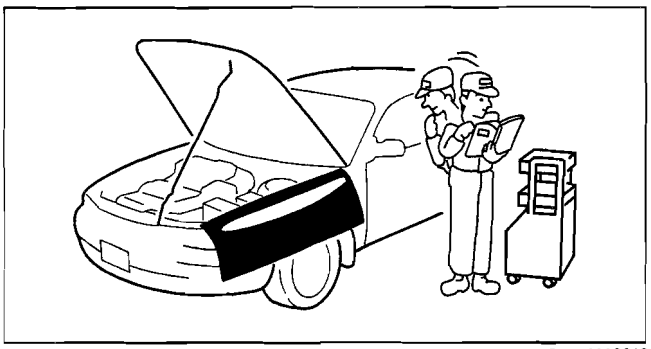
1. Gather some of the leaking oil using an absorbent white tissue.
2. Take samples of engine oil and ATF (or transaxle/transmission oil), both from the dipstick, and place them next to the leaked oil already gathered on the tissue.
3. Compare the appearance and smell, and identify the type of oil that is leaking.
4. Remove any oil on the engine or transaxle/transmission.
5. Allow the engine to run for 30 min.
6. Check the area where the oil is leaking, then make necessary repairs.



am3uuw0000010

Removal of Parts

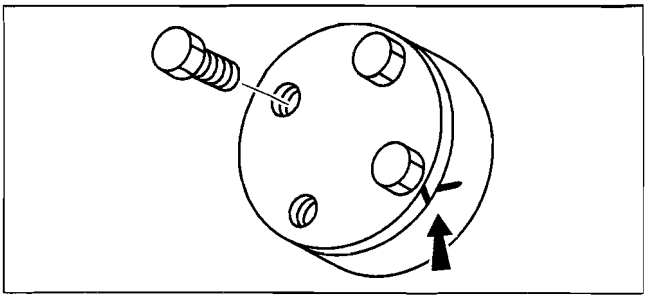
- While correcting a problem, also try to determine its cause. Begin work only after first learning which parts and subassemblies must be removed and disassembled for replacement or repair. After removing the part, plug all holes and ports to prevent foreign material from entering.



am3uuw0000010

Disassembly

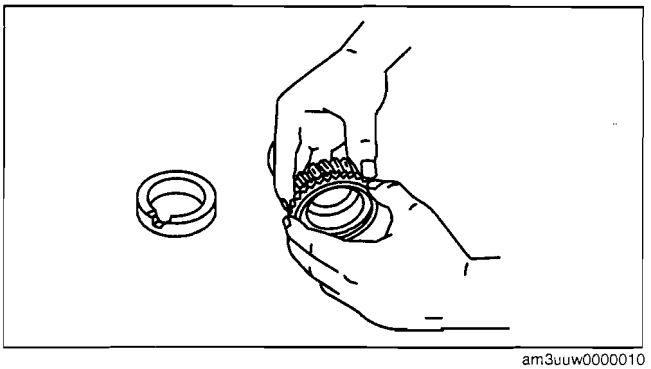
- If the disassembly procedure is complex, requiring many parts to be disassembled, all parts should be marked in a place that will not affect their performance or external appearance and identified so that reassembly can be performed easily and efficiently.



am3uuw0000010

Inspection During Removal, Disassembly

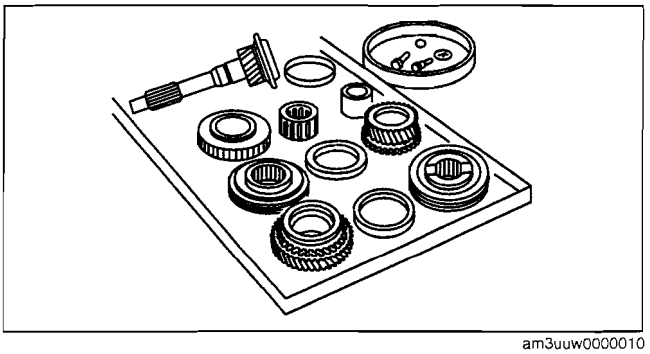
- When removed, each part should be carefully inspected for malfunction, deformation, damage and other problems.



am3uuw0000010

Arrangement of Parts

- All disassembled parts should be carefully arranged for reassembly.
- Be sure to separate or otherwise identify the parts to be replaced from those that will be reused.



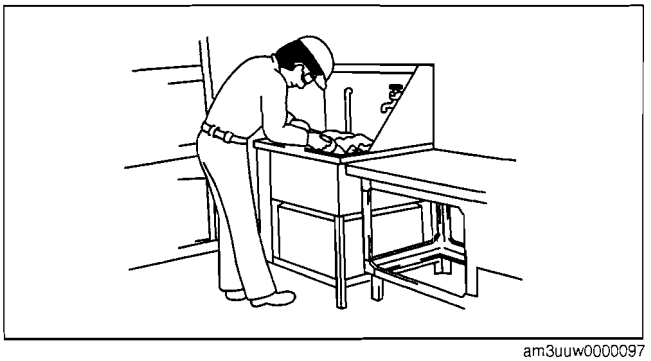
am3uuw0000010

Cleaning of Parts

- All parts to be reused should be carefully and thoroughly cleaned in the appropriate method.

  Warning

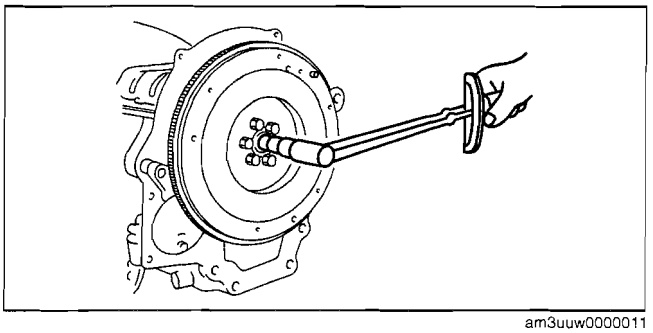
  - **Using compressed air can cause dirt and other particles to fly out causing injury to the eyes. Wear protective eye wear whenever using compressed air.**



am3uuw0000097

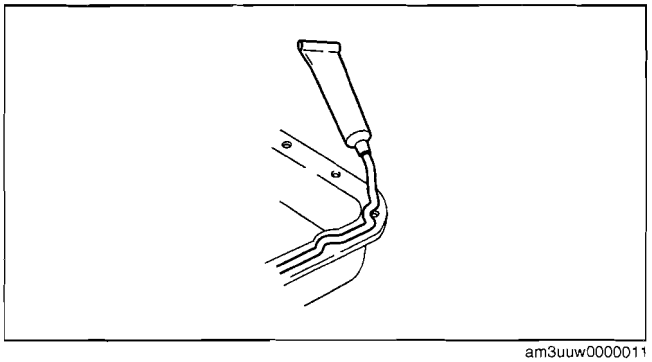
Reassembly

- Standard values, such as torques and certain adjustments, must be strictly observed in the reassembly of all parts.
- If removed, the following parts should be replaced with new ones:
  - Oil seals
  - Gaskets
  - O-rings
  - Lock washers
  - Cotter pins
  - Nylon nuts



am3uuw0000011

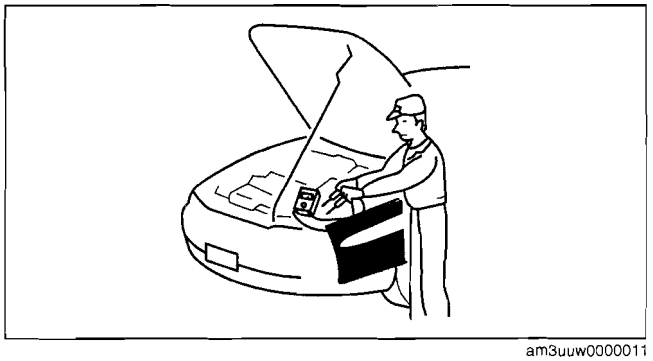
- Depending on location:
  - Sealant and gaskets, or both, should be applied to specified locations. When sealant is applied, parts should be installed before sealant hardens to prevent leakage.
  - Oil should be applied to the moving components of parts.
  - Specified oil or grease should be applied at the prescribed locations (such as oil seals) before reassembly.



am3uuw0000011

Adjustment

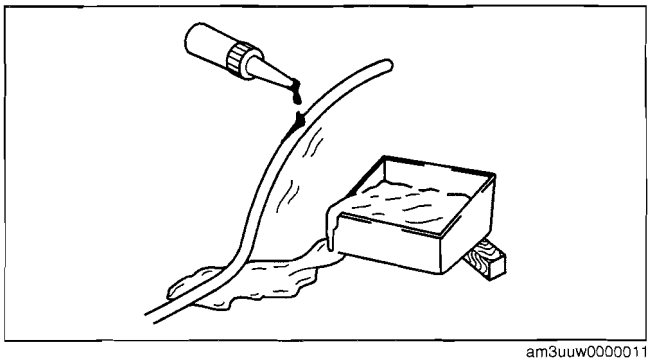
- Use suitable gauges and testers when making adjustments.



am3uuw0000011

Rubber Parts and Tubing

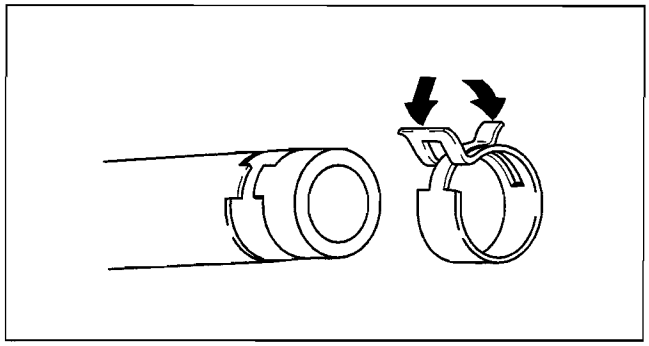
- Prevent gasoline or oil from getting on rubber parts or tubing.



am3uuw0000011

Hose Clamps

- When reinstalling, position the hose clamp in the original location on the hose and squeeze the clamp lightly with large pliers to ensure a good fit.

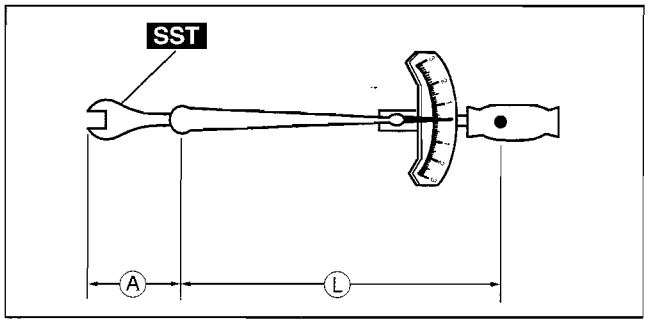


am3uuw0000011

Torque Formulas

- When using a torque wrench-**SST** or equivalent combination, the written torque must be recalculated due to the extra length that the **SST** or equivalent adds to the torque wrench. Recalculate the torque by using the following formulas. Choose the formula that applies to you.

Torque Unit	Formula
N·m	N·m × [L/(L+A)]
kgf·m	kgf·m × [L/(L+A)]
kgf·cm	kgf·cm × [L/(L+A)]
ft·lbf	ft·lbf × [L/(L+A)]
in·lbf	in·lbf × [L/(L+A)]

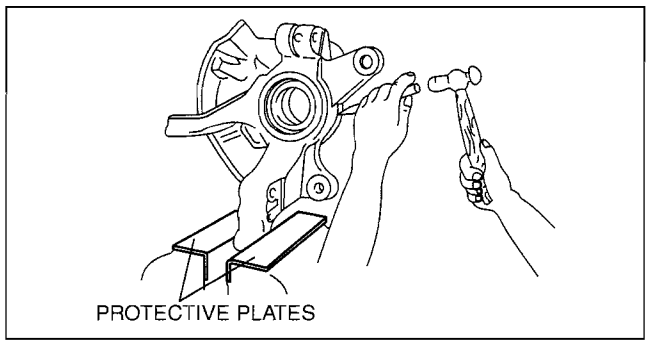


am3uuw0000011

A : The length of the **SST** past the torque wrench drive.
L : The length of the torque wrench.

Vise

- When using a vise, put protective plates in the jaws of the vise to prevent damage to parts.



am3uuw0000011

Dynamometer

- When inspecting and servicing the power train on the dynamometer or speed meter tester, pay attention to the following:
  - Place a fan, preferably a vehicle-speed proportional type, in front of the vehicle.
  - Make sure the vehicle is in a facility with an exhaust gas ventilation system.
  - Since the rear bumper might deform from the heat, cool the rear with a fan. (Surface of the bumper must be below **70°C {158°F} degrees**.)
  - Keep the area around the vehicle uncluttered so that heat does not build up.
  - Watch the water temperature gauge and don't overheat the engine.
  - Avoid added load to the engine and maintain normal driving conditions as much as possible.

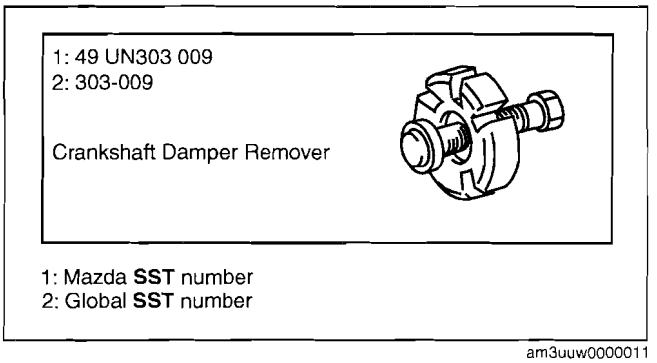
Note

- When only the front or rear wheels are rotated on a chassis dynamometer or equivalent, the ABS CM determines that there is a malfunction in the ABS and illuminates the following lights:
  - Vehicles with ABS
    - ABS warning light
    - Brake system warning light
  - Vehicles with DSC
    - ABS warning light
    - Brake system warning light
    - DSC indicator light
- If the above lights are illuminated, dismount the vehicle from the chassis dynamometer and turn the ignition switch to the LOCK position. Then, turn the ignition switch back to the ON position, run the vehicle at 10 km/h or more and verify that the warning lights go out. In this case, a DTC will be stored in the memory. Clear the DTC from the memory by following the memory clearing procedure [ABS]/[DSC] in the on-board diagnostic system. (See 04-02A-2 ON-BOARD DIAGNOSIS[ABS].)(See 04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].)

SST

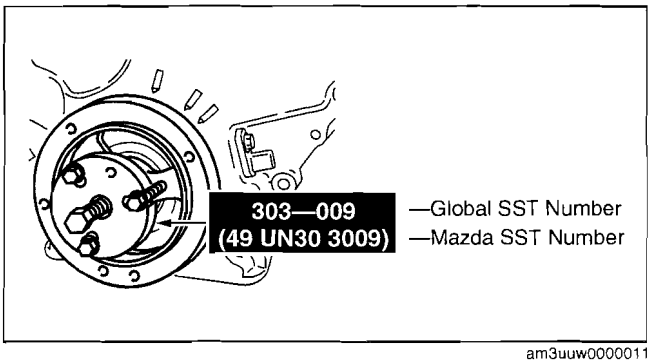
- Some global **SST** or equivalent are used as **SSTs** necessary for engine repair. Note that these **SSTs** are marked with global **SST** numbers.
- Note that a global **SST** number is written together with a corresponding Mazda **SST** number as shown below.

Example (section **-60)



am3uuw0000011

Example (except section **-60)



am3uuw0000011

INSTALLATION OF RADIO SYSTEM

id000000800300

- If a radio system is installed improperly or if a high-powered type is used, the CIS and other systems may be affected. When the vehicle is to be equipped with a radio, observe the following precautions:
  - — Install the antenna at the farthest point from control modules.
  - — Install the antenna feeder as far as possible from the control module harnesses.
  - — Ensure that the antenna and feeder are properly adjusted.
  - — Do not install a high-powered radio system.

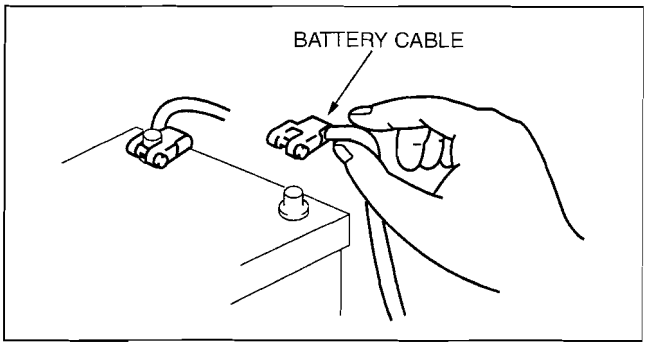
ELECTRICAL SYSTEM

id000000800400

Electrical Parts

Battery cable

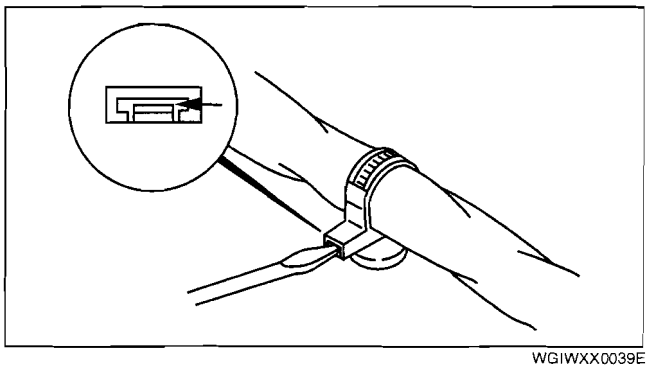
- Before disconnecting connectors or removing electrical parts, disconnect the negative battery cable.



am3uuw00001087

Wiring Harness

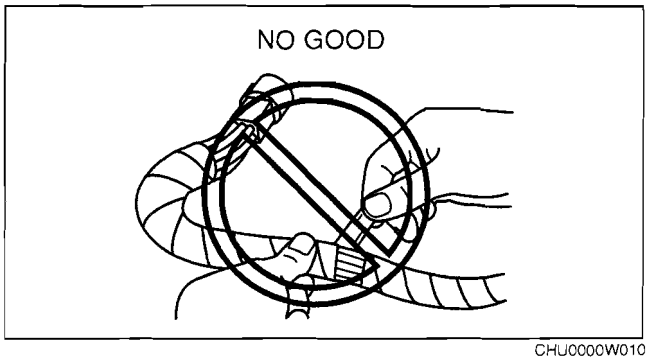
- To remove the wiring harness from the clip in the engine room, pry up the hook of the clip using a flathead screwdriver.



WGIWXX0039E

Caution

- **Do not remove the harness protective tape. Otherwise, the wires could rub against the body, which could result in water penetration and electrical shorting.**

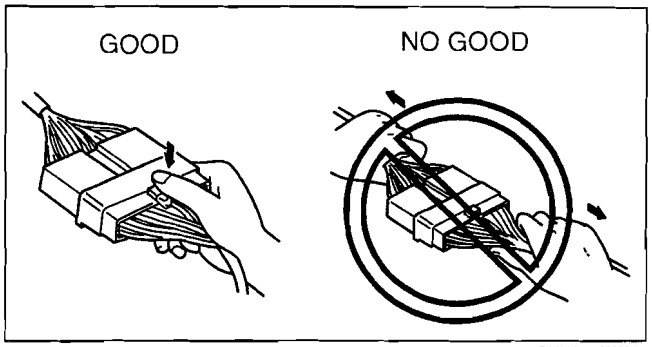


CHU0000W010

Connectors

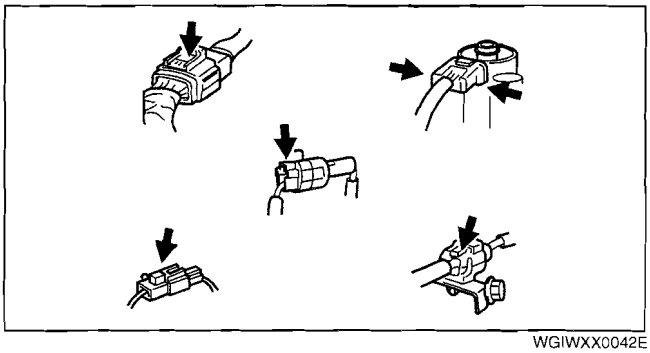
Disconnecting connectors

- When disconnecting connector, grasp the connectors, not the wires.



CHU0000W014

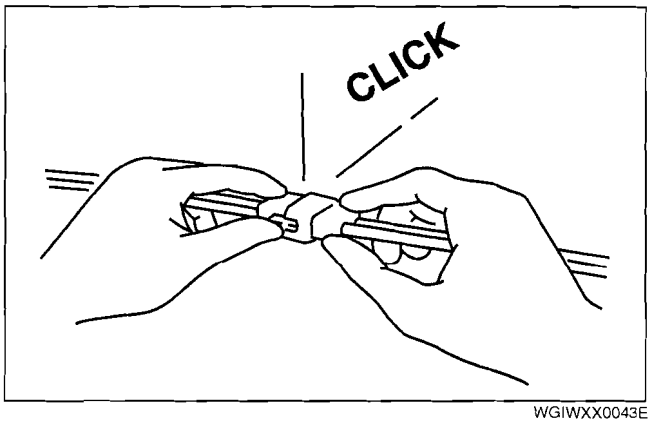
- Connectors can be disconnected by pressing or pulling the lock lever as shown.



WGIWXX0042E

Locking connector

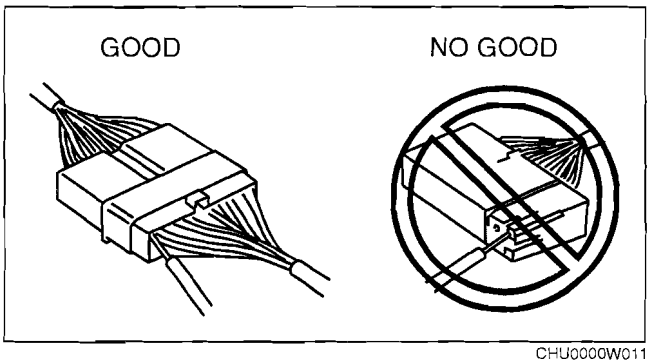
- When locking connectors, listen for a click indicating they are securely locked.



WGIWXX0043E

Inspection

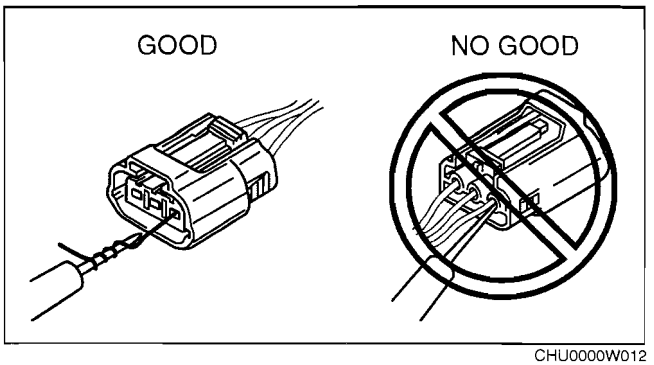
- When a tester is used to inspect for continuity or measuring voltage, insert the tester probe from the wiring harness side.



CHU0000W011

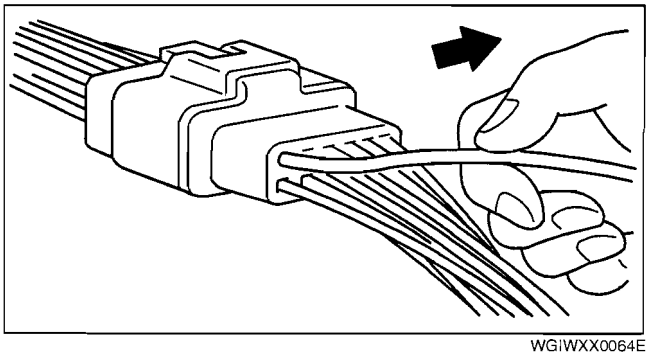
- Inspect the terminals of waterproof connectors from the connector side since they cannot be accessed from the wiring harness side.

Caution
- **To prevent damage to the terminal, wrap a thin wire around the tester probe before inserting into terminal.**



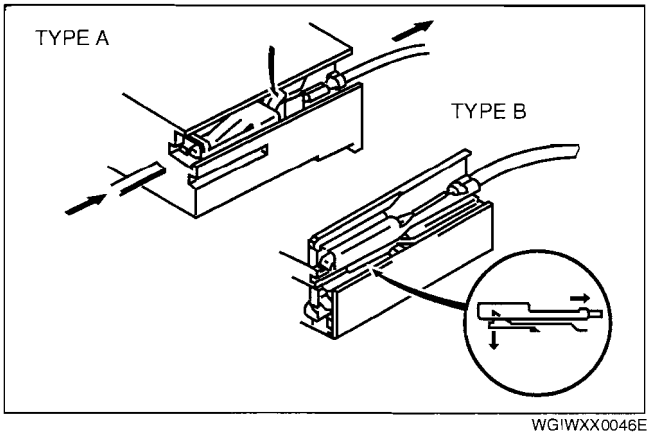
CHU0000W012

Terminals
Inspection
- Pull lightly on individual wires to verify that they are secured in the terminal.



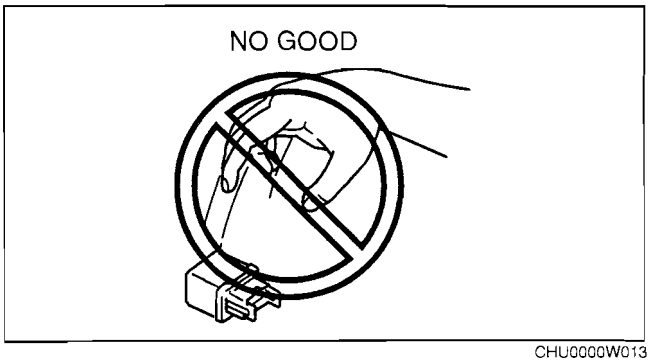
WGIWXX0064E

Replacement
- Use the appropriate tools to remove a terminal as shown. When installing a terminal, be sure to insert it until it locks securely.
- Insert a thin piece of metal from the terminal side of the connector and with the terminal locking tab pressed down, pull the terminal out from the connector.



WGIWXX0046E

Sensors, Switches, and Relays
- Handle sensors, switches, and relays carefully. Do not drop them or strike them against other objects.



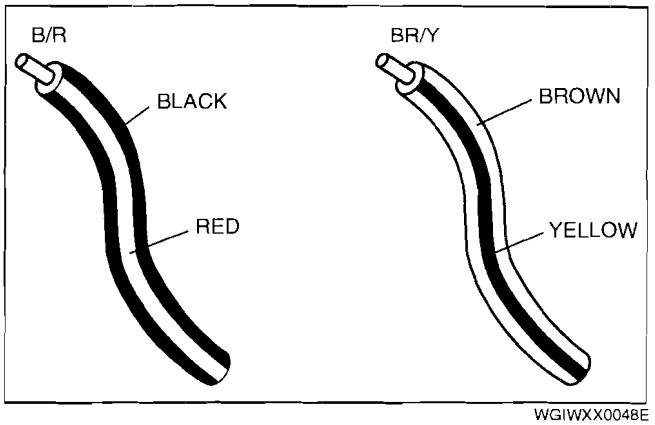
CHU0000W013

Wiring Harness

Wiring color codes

- Two-color wires are indicated by a two-color code symbol.
- The first letter indicates the base color of the wire and the second the color of the stripe.

CODE	COLOR	CODE	COLOR
B	Black	O	Orange
BR	Brown	P	Pink
G	Green	R	Red
GY	Gray	V	Violet
L	Blue	W	White
LB	Light Blue	Y	Yellow
LG	Light Green	–	–

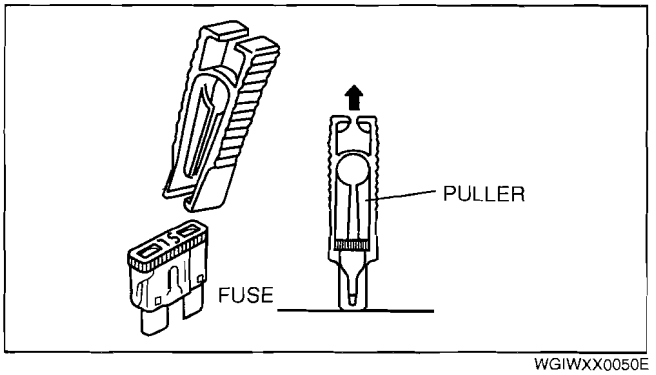


WGIWXX0048E

Fuse

Replacement

- When replacing a fuse, be sure to replace it with one of the same capacity. If a fuse fails again, the circuit probably has a short and the wiring should be inspected.
- Be sure the negative battery terminal is disconnected before replacing a main fuse.
- When replacing a pullout fuse, use the fuse puller.



WGIWXX0050E

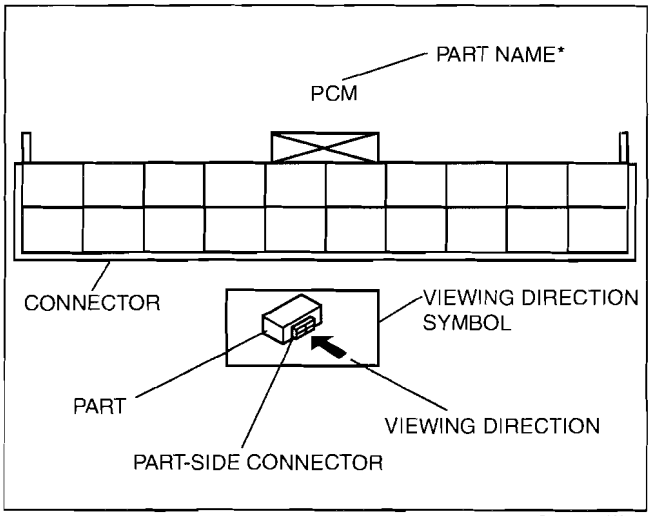
Direction of View for Connector

- The viewing direction of connectors is indicated with a symbol.
- The figures showing the viewing direction are the same as those used in Wiring Diagrams.
- The viewing directions are shown in the following three ways:

Part-side connector

The viewing direction of part-side connectors is from the terminal side.

* : Part names are shown only when there are multiple connector drawings.

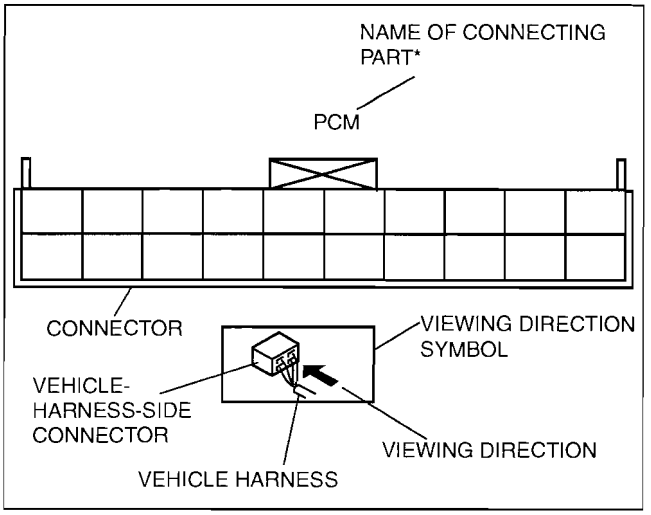


CHU0000W001

Vehicle harness-side connector

The viewing direction of vehicle harness-side connectors is from the harness side.

* : Part names are shown only when there are multiple connector drawings.

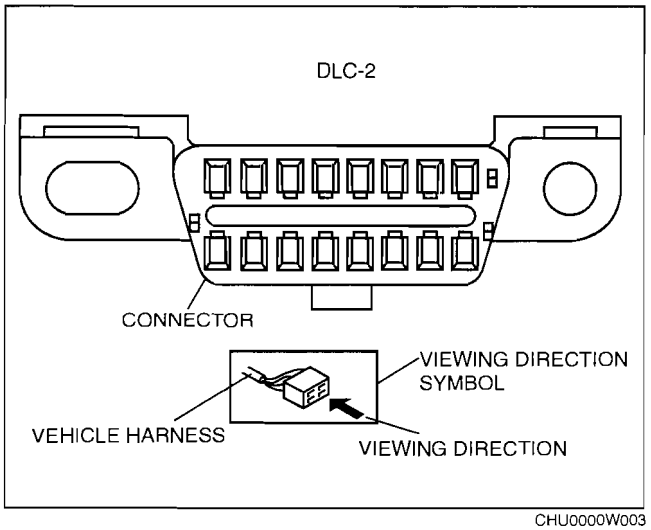


CHU0000W002

Other

When it is necessary to show the terminal side of vehicle harness-side connectors, such as the following connectors, the viewing direction is from the terminal side.

- Main fuse block and the main fuse block relays
- Data link connector
- Check connector
- Relay box



CHU0000W003

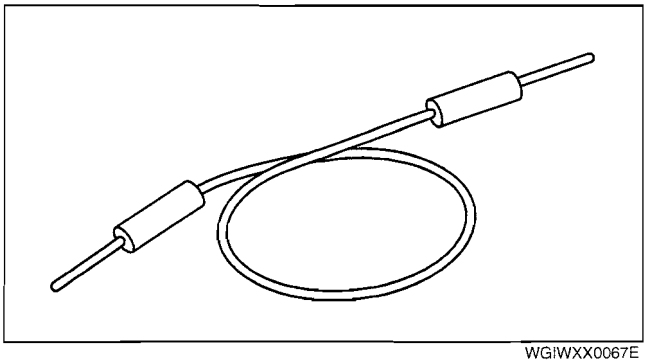
Electrical Troubleshooting Tools

Jumper wire

Caution

- **Do not connect a jumper wire from the power source line to a body ground. This may cause burning or other damage to wiring harnesses or electronic components.**

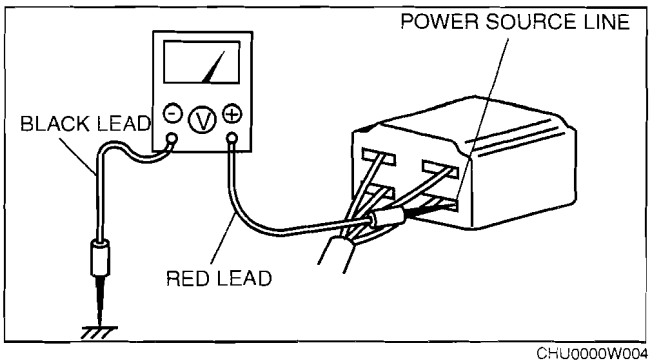
- A jumper wire is used to create a temporary circuit. Connect the jumper wire between the terminals of a circuit to bypass a switch.



WGIWXX0067E

Voltmeter

- The DC voltmeter is used to measure circuit voltage. A voltmeter with a range of **15 V or more** is used by connecting the positive (+) probe (red lead wire) to the point where voltage will be measured and the negative (-) probe (black lead wire) to a body ground.



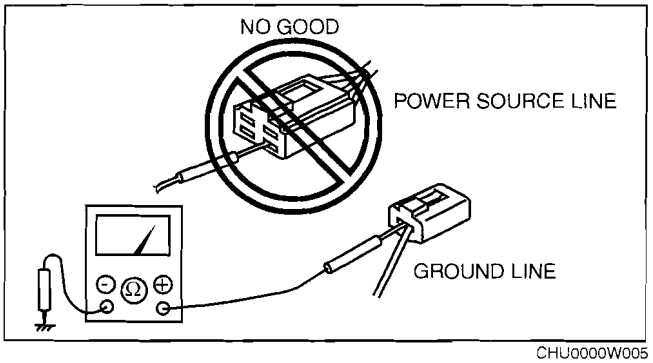
CHU0000W004

Ohmmeter

Caution

- **Do not connect the ohmmeter to any circuit where voltage is applied. This will damage the ohmmeter.**

- The ohmmeter is used to measure the resistance between two points in a circuit and to inspect for continuity and short circuits.

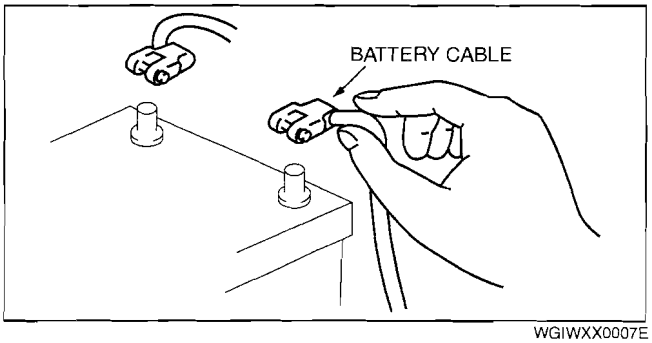


CHU0000W005

Precautions Before Welding

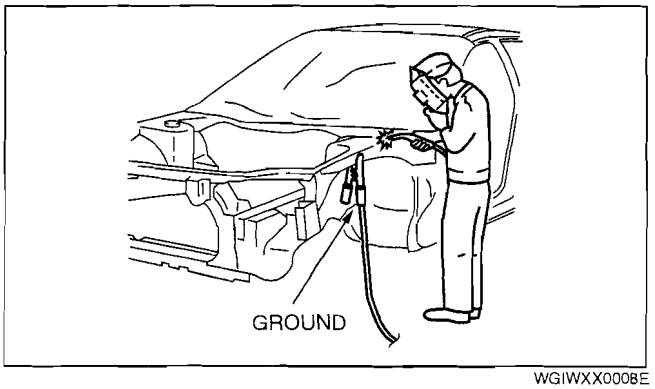
A vehicle has various electrical parts. To protect the parts from excessive current generated when welding, be sure to perform the following procedure.

1. Turn the ignition switch to the LOCK position.
2. Disconnect the battery cables.



WGIWXX0007E

3. Securely connect the welding machine ground near the welding area.
4. Cover the peripheral parts of the welding area to protect them from weld spatter.



WGIWXX0008E

JACKING POSITIONS, VEHICLE LIFT (2 SUPPORTS) AND SAFETY STAND (RIGID RACK) POSITIONS

id000000800500

Jacking Positions

Warning

- **Improperly jacking a vehicle is dangerous. The vehicle can slip off the jack and cause serious injury. Use only the correct front and rear jacking points and block the wheels.**

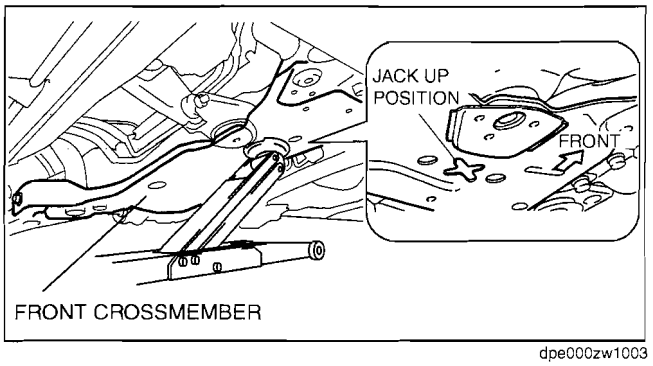
- Use safety stands to support the vehicle after it has been lifted.

Front

Note

- To prevent obstruction between the jack body and front bumper when the jack body is inserted, use a low-floor type jack.

- Near the center of the front crossmember.



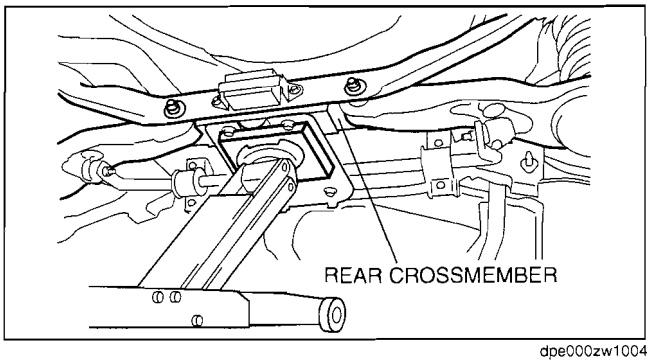
dpe000zw1003

Rear

Caution

- **Place a board (approx. 20 mm {0.78 in} thick) between the rear crossmember and the jack to prevent damage to the crossmember.**

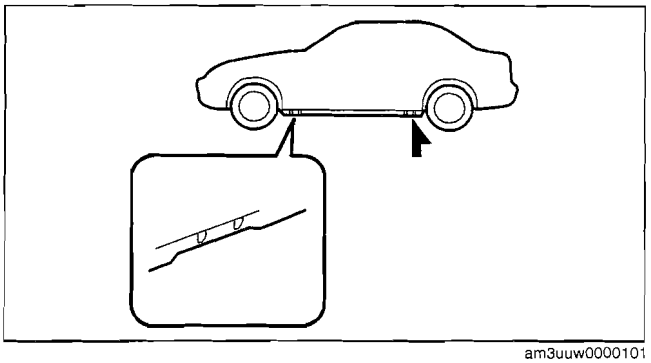
- At the center of the rear crossmember.



dpe000zw1004

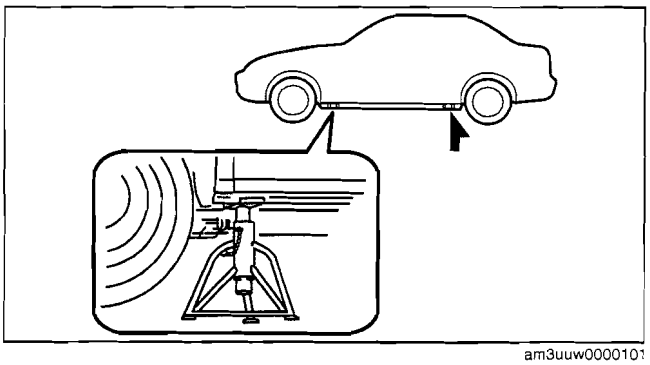
Vehicle Lift Positions
Front and rear

Warning
- **Unstably lifting a vehicle is dangerous. The vehicle can slip off the lift and cause serious injury and/or vehicle damage. Make sure that the vehicle is on the lift horizontally by adjusting the height of support at the end of the arm of the lift.**



am3uuw0000101

Safety Stand Positions
Front and rear
- Both sides of the vehicle, on side sills.



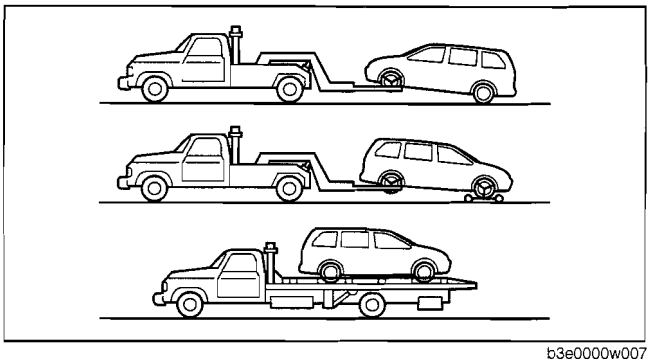
am3uuw0000101

TOWING

id000000800600

Towing

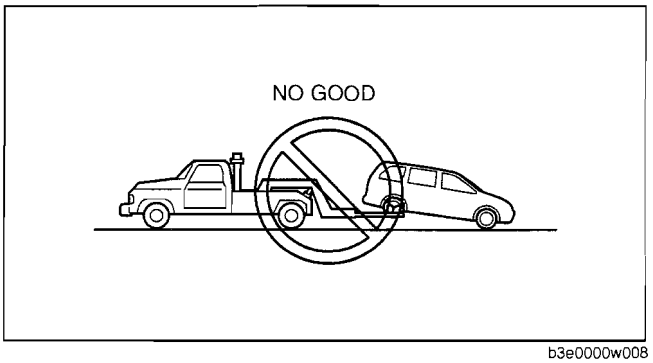
- Proper lifting and towing are necessary to prevent damage to the vehicle. State and local laws must be followed.
- A towed vehicle usually should have its front wheels off the ground. If excessive damage or other conditions prevent this, use wheel dollies.
- When towing with the rear wheels on the ground, release the parking brake.



b3e0000w007

Caution

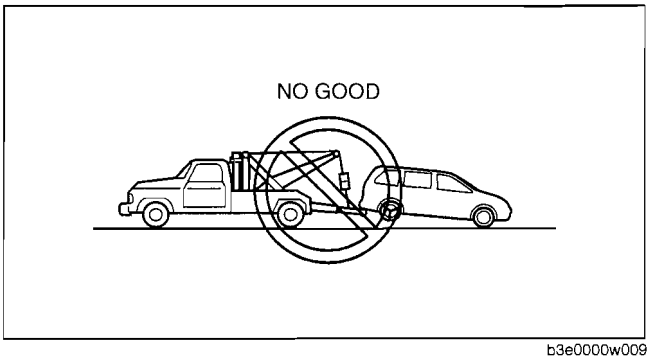
- **Do not tow the vehicle pointed backward with driving wheel on the ground. This may cause internal damage to the transaxle.**



b3e0000w008

Caution

- **Do not tow with sling-type equipment. This could damage your vehicle. Use wheel-lift or flatbed equipment.**



b3e0000w009

Tiedown Hooks

Caution

- **Don't use the tiding hook under the rear for tiedown. It is designed ONLY for tying down the vehicle when it's being transported. Using it for tiedown will damage the bumper.**

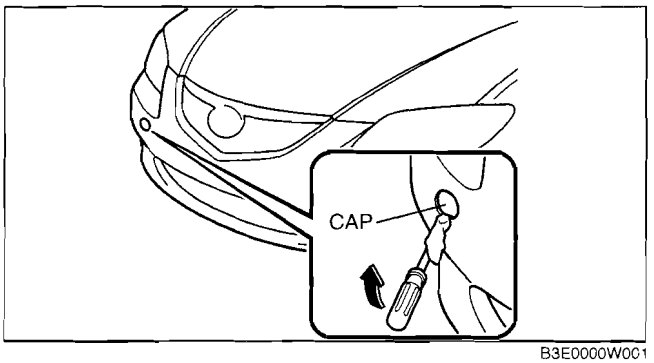
Note

- When tiedown with chain or cable, wrap the chain or cable with a soft cloth near the bumper to prevent damage to the bumper.

1. Remove the tiedown eyelet from trunk.
2. Wrap a screwdriver or similar tool with a soft cloth to prevent damage to the painted bumper and open the cap located on the front bumper.

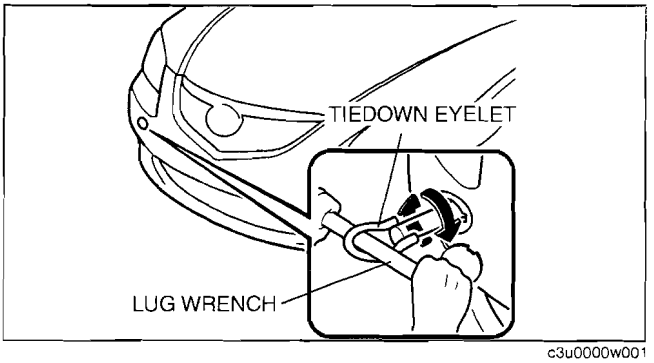
Caution

- **The cap cannot be completely removed. Do not use excessive force as it may damage the cap or scratch the painted bumper surface.**



B3E0000W001

3. Securely install the tiedown eyelet using the wheel brace.

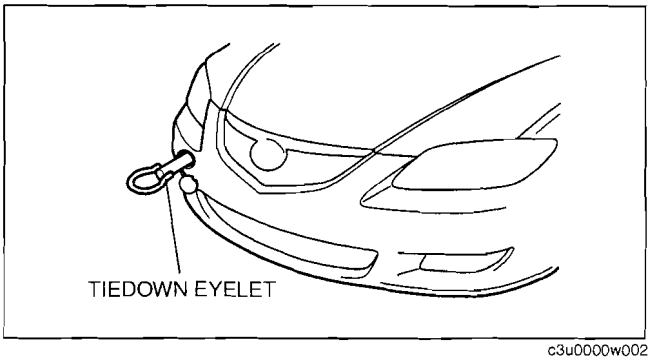


c3u0000w001

4. Hook the tying rope to the tiedown eyelet.

Caution

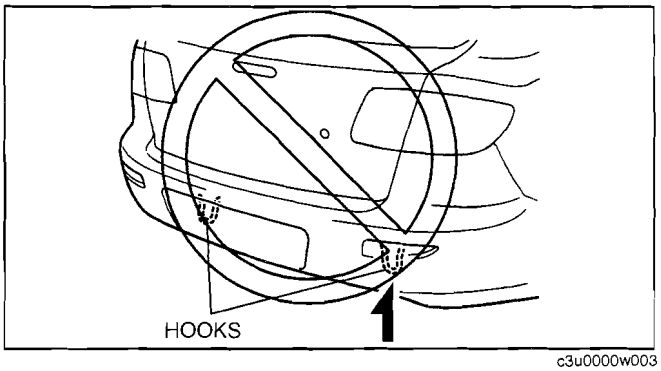
- **If the tiedown eyelet is not securely tightened, it may loosen or disengage from the bumper when tying down the vehicle. Make sure that the tiedown eyelet is securely tightened to the bumper.**



c3u0000w002

Caution

- **Do not use the hooks under the rear bumper for towing and tying down, as they cannot hold the load and it will damage the bumper.**



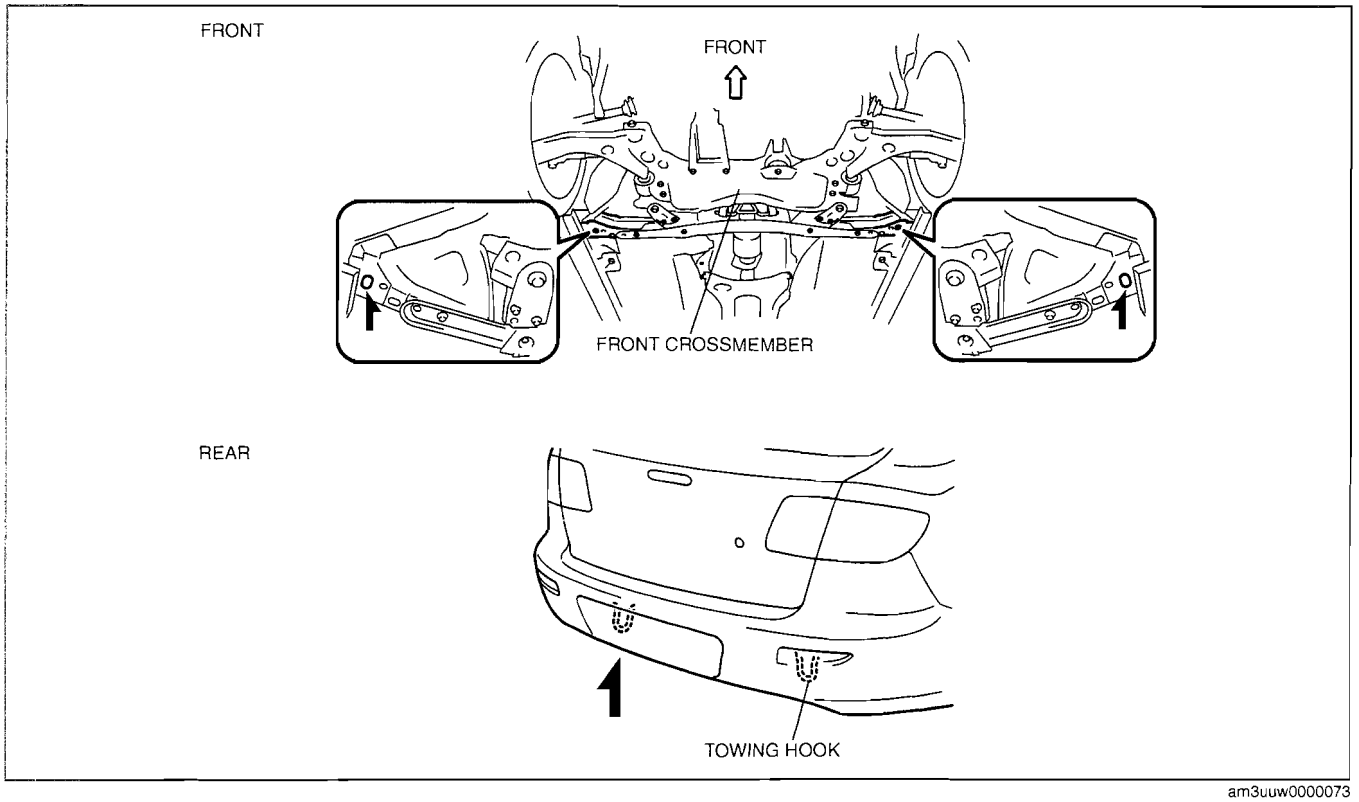
c3u0000w003

TIEDOWN HOOK

id000000800700

Caution

- **Do not use the tie down hook for towing the vehicle. Use it only for securing the vehicle.**



am3uuw0000073

SAE STANDARDS

id000000800900

- In accordance with new regulations, SAE (Society of Automotive Engineers) standard names and abbreviations are now used in this manual. The table below lists the names and abbreviations that have been used in Mazda manuals up to now and their SAE equivalents.

SAE Standard		Remark		SAE Standard		Remark
Abbreviation	Name			Abbreviation	Name	
AP	Accelerator Pedal			MAP	Manifold Absolute Pressure	
APP	Accelerator Pedal Position			MAF sensor	Mass Air Flow Sensor	
ACL	Air Cleaner			MFL	Multiport Fuel Injection	
A/C	Air Conditioning			OBD	On-board Diagnostic System	
BARO	Barometric Pressure			OL	Open Loop	
B+	Battery Positive Voltage			OC	Oxidation Catalytic Converter	
CMP sensor	Camshaft Position Sensor			O2S	Oxygen sensor	
CAC	Charge Air Cooler			PNP	Park/Neutral Position	
CLS	Closed Loop System			PSP	Power Steering Pressure	
CTP	Closed Throttle Position			PCM	Powertrain Control Module	#3
CPP	Clutch Pedal Position			PAIR	Pulsed Secondary Air Injection	Pulsed injection
CIS	Continuous Fuel Injection System			AIR	Secondary Air Injection	Injection with air pump
CKP sensor	Crankshaft Position Sensor			SAPV	Secondary Air Pulse Valve	
DLC	Data Link Connector			SFI	Sequential Multiport Fuel Injection	
DTM	Diagnostic Test Mode	#1		3GR	Third Gear	
DTC	Diagnostic Test Code(s)			TWC	Three Way Catalytic Converter	
DI	Distributor Ignition			TB	Throttle Body	
DLI	Distributorless Ignition			TP sensor	Throttle Position Sensor	
EI	Electronic Ignition	#2		TCC	Torque Converter Clutch	
ECT	Engine Coolant Temperature			TCM	Transmission (Transaxle) Control Module	
EM	Engine Modification			TR	Transmission (Transaxle) Range	
EVAP	Evaporative Emission			TC	Turbocharger	
EGR	Exhaust Gas Recirculation			VSS	Vehicle Speed Sensor	
FC	Fan Control			VR	Voltage Regulator	
FF	Flexible Fuel			VAF sensor	Volume Air Flow Sensor	
4GR	Fourth Gear			WU-TWC	Warm Up Three Way Catalytic Converter	#4
GEN	Generator			WOP	Wide Open Throttle	
GND	Ground					
HO2S	Heated Oxygen Sensor	With heater				
IAC	Idle Air Control					
IAT	Intake Air Temperature					
KS	Knock Sensor					
MIL	Malfunction Indicator Lamp					

#1: Diagnostic trouble codes depend on the diagnostic test mode.
#2: Controlled by the PCM
#3: Device that controls engine and powertrain
#4: Directly connected to exhaust manifold

PRE-DELIVERY INSPECTION

id000000801100

Pre-Delivery Inspection Table

Exterior

INSPECT and **ADJUST**, if necessary, the following items to specification:

- ❑Glass, exterior bright metal and paint for damage
- ❑Wheel lug nuts
- ❑All weatherstrips for damage or detachment
- ❑Tire pressures
- ❑Headlight cleaner and fluid level (if equipped)
- ❑Operation of hood release and lock
- ❑Operation of trunk lid and fuel-filler lid opener
- ❑Door operation and alignment including side door and back door
- ❑Headlight aiming

INSTALL the following parts:

- ❑Flap (if equipped)

Under hood—engine off

INSPECT and **ADJUST**, if necessary, the following items to specification:

- ❑Fuel, engine coolant, and hydraulic lines, fittings, connections, and components for leaks
- ❑Engine oil level
- ❑Brake and clutch fluid level
- ❑Windshield washer reservoir fluid level
- ❑Coolant level and specific gravity
- ❑Tightness of water hose clamps
- ❑Tightness of battery terminals, electrolyte level and specific gravity

❑Tension of drive belt

Interior
INSTALL the following items:
❑Fuse for accessories
INSPECT the operations of the following items:
❑Seat controls (slide and recline) and headrests
❑Folding rear seat
❑Door locks, including childproof door locks
❑Seat belts and warning system
❑Ignition switch and steering lock
❑Transaxle range switch
❑Warning buzzers
❑Ignition key reminder alarm
❑Air bag system using warning light
❑Cruise control system (if equipped)
❑Power door lock
❑Shift-lock system (if equipped)
❑Starter interlock
❑All lights including warning, and indicator lights
❑Horn, wipers, and washers
❑Wiper blades performance
Clean wiper blades and windshield, if necessary
❑Audio system
❑Cigarette lighter and clock
❑Power windows (if equipped)
❑Heater, defroster, and air conditioner at various mode selections (if equipped)
INSPECT the following items:
❑Presence of spare fuse
❑Upholstery and interior finish
INSPECT and **ADJUST**, if necessary, the following items:
❑Operation and fit of windows
❑Pedal height and free play of clutch and brake pedal
❑Parking brake

Under hood—engine running at operating temperature
INSPECT the following items:
❑Automatic transaxle fluid level
❑Operation of idle-up system for electrical load, air conditioner or power steering (if equipped)
❑Ignition timing
❑Idle speed
❑Operation of throttle position sensor

On hoist
INSPECT the following items:
❑Manual transaxle oil level
❑Underside fuel, coolant and hydraulic lines, fittings, connections, and components for leaks
❑Tires for cuts or bruises
❑Steering linkage, suspension, exhaust system, and all underside hardware for looseness or damage

Road test
INSPECT the following items:
❑Brake operation
❑Operation of gauges
❑Engine general performance
❑Emergency locking retractors and automatic locking retractors
❑Cruise control system (if equipped)
❑Operation of meters and gauges, squeaks, rattles, and abnormal noises

After road test
INSPECT for necessary owner information materials, tools, and spare tire in vehicle
The following items must be completed just before delivery to your customer.
❑Load test battery and charge if necessary (Load test result: Volts)
❑Adjust tire pressure to specification
❑Install fuses for accessories

SCHEDULED MAINTENANCE

id000000801200

Scheduled Maintenance Table for U.S.A., CANADA and Puerto Rico
Schedule 1: Normal driving conditions (U.S.A. only)

- The vehicle is mainly operated where none of the "unique driving conditions" apply.

Maintenance Interval		Number of months or kilometers (miles), whichever comes first							
	Months	6	12	18	24	30	36	42	48
	×1000 km	12	24	36	48	60	72	84	96
	×1000 miles	7.5	15	22.5	30	37.5	45	52.5	60
ENGINE									
Engine valve clearance		Audible inspect every 120,000 km (75,000 miles), if noisy, adjust							
Drive belts (tension)						I			
Engine oil		R	R	R	R	R	R	R	R
Engine oil filter		R	R	R	R	R	R	R	R
COOLING SYSTEM									
Cooling system					I				I
Engine coolant	FL22 type*1	Replace at first 192,000 km (120,000 miles) or 10 years; after that, every 96,000 km (60,000 miles) or 5 years							
	Others	Replace at first 96,000 km (60,000 miles) or 4 years; after that, every 2 years							
FUEL SYSTEM									
Air cleaner element						R			
Fuel lines and hoses*2					I				I
Hoses and tubes for emission*2									I
IGNITION SYSTEM									
Spark plugs		Replace every 120,000 km (75,000 miles)							
CHASSIS and BODY									
Brake lines, hoses and connections					I				I
Disc brakes			I		I		I		I
Tire (Rotation)		Rotate every 12,000 km (7,500 miles)							
Steering operation and linkages					I				I
Front and rear suspension, ball joints and wheel bearing axial play					I				I
Driveshaft dust boots					I				I
Exhaust system and heat shields		Inspect every 72,000 km (45,000 miles) or 5 years							
All locks and hinges		L	L	L	L	L	L	L	L
Bolts and nuts on chassis and body					T				T
AIR CONDITIONER SYSTEM (if installed)									
Cabin air filter		Replace every 40,000 km (25,000 miles) or 2 years							

Chart symbols
I: Inspect and repair, clean, adjust, or replace if necessary.
R: Replace
L: Lubricate
T: Tighten

Remarks

- After the prescribed period, continue to follow the described maintenance at the recommended intervals.
- Refer below for a description of items marked* in the maintenance chart.

*1: Use FL22 type coolant in vehicles with the inscription "FL22" on the radiator cap itself or the surrounding area. Use FL22 when replacing the coolant.

*2: According to state/provincial and federal regulations, failure to perform maintenance on these items will not void your emissions warranties. However, Mazda recommends that all maintenance services be performed at the recommended time or mileage/kilometer period to ensure long-term reliability.

Schedule 2: Unique driving conditions (For U.S.A. unique conditions and CANADA/Puerto Rico all conditions)

- Repeated short-distance driving
- Driving in dusty conditions
- Driving with extended use of brakes
- Driving in areas where salt or other corrosive materials are used
- Driving on rough or muddy roads
- Extended periods of idling or low-speed operation
- Driving for long periods in cold temperatures or extremely humid climates

Maintenance Interval		Number of months or kilometers (miles), whichever comes first											
	Months	4	8	12	16	20	24	28	32	36	40	44	48
	×1000 km	8	16	24	32	40	48	56	64	72	80	88	96
	×1000 miles	5	10	15	20	25	30	35	40	45	50	55	60
ENGINE													
Engine valve clearance		Audible inspect every 120,000 km (75,000 miles), if noisy, adjust											
Drive belts (tension)								I					
Engine oil	Puerto Rico	Replace every 5,000 km (3,000 miles) or 3 months											
	Others	R	R	R	R	R	R	R	R	R	R	R	R
Engine oil filter		R	R	R	R	R	R	R	R	R	R	R	R
COOLING SYSTEM													
Cooling system							I						I
Engine coolant	FL22 type*1	Replace at first 192,000 km (120,000 miles) or 10 years; after that, every 96,000 km (60,000 miles) or 5 years											
	Others	Replace at first 96,000 km (60,000 miles) or 4 years; after that, every 2 years

Fuel lines and hoses*2							I						I
Hoses and tubes for emission*2													I
IGNITION SYSTEM													
Spark plugs (for LF/L3 engine)		Replace every 120,000 km (75,000 miles)											
Spark plugs (for L3 WITH TC engine)	USA	Replace every 96,000 km (60,000 miles)											
	Others*3	Replace every 120,000 km (75,000 miles)											
ELECTRICAL SYSTEM													
Function of all lights		I	I	I	I	I	I	I	I	I	I	I	I
CHASSIS and BODY													
Brake lines, hoses and connections							I						I
Brake and clutch fluid level		I	I	I	I	I	I	I	I	I	I	I	I
Disc brakes				I			I			I			I
Tire (Rotation)		Rotate every 8,000 km (5,000 miles)											
Tire inflation pressure and tire wear		I	I	I	I	I	I	I	I	I	I	I	I
Steering operation and linkages							I						I
Power steering fluid level		I	I	I	I	I	I	I	I	I	I	I	I
Front and rear suspension, ball joints and wheel bearing axial play							I						I
Driveshaft dust boots							I						I
Exhaust system and heat shields		Inspect every 72,000 km (45,000 miles) or 5 years											
All locks and hinges		L	L	L	L	L	L	L	L	L	L	L	L
Washer fluid level		I	I	I	I	I	I	I	I	I	I	I	I
Bolts and nuts on chassis and body							T						T
AIR CONDITIONER SYSTEM (if installed)													
Cabin air filter		Replace every 40,000 km (25,000 miles) or 2 years											

Chart symbols
I: Inspect and repair, clean, adjust, or replace if necessary.
R: Replace
L: Lubricate
T: Tighten

Remarks
- After the prescribed period, continue to follow the described maintenance at the recommended intervals.
- Refer below for a description of items marked* in the maintenance chart.

*1: Use FL22 type coolant in vehicles with the inscription "FL22" on the radiator cap itself or the surrounding area. Use FL22 when replacing the coolant.

*2: According to state/provincial and federal regulations, failure to perform maintenance on these items will not void your emissions warranties. However, Mazda recommends that all maintenance services be performed at the recommended time or mileage/kilometer period to ensure long-term reliability.

*3: If the vehicle is operated under any of the following conditions, replace the spark plugs every 96,000 km (60,000 miles) or shorter.
a. Repeated short-distance driving
b. Extended periods of idling or low-speed operation
c. Driving for long periods in cold temperatures or extremely humid climates

Scheduled Maintenance Table for Mexico
Schedule 1: Normal driving conditions
- The vehicle is mainly operated where none of the "unique driving conditions" apply.

Maintenance Interval		Number of months or kilometers, whichever comes first											
	Months	6	12	18	24	30	36	42	48	54	60	66	72

Cabin air filter					R				R				R

Chart symbols:
I: Inspect and repair, clean, adjust, or replace if necessary.
R: Replace
L: Lubricate
C: Clean
T: Tighten

Remarks

- After the prescribed period, continue to follow the described maintenance at the recommended intervals.
- Refer below for a description of items marked* in the maintenance chart.

*1: Use FL22 type coolant in vehicles with the inscription "FL22" on the radiator cap itself or the surrounding area. Use FL22 when replacing the coolant.

*2: According to state/provincial and federal regulations, failure to perform maintenance on these items will not void your emissions warranties. However, Mazda recommends that all maintenance services be performed at the recommended time or kilometer period to ensure long-term reliability.

Schedule 2: Unique Driving Conditions

- Repeated short-distance driving
- Driving in dusty conditions
- Driving with extended use of brakes
- Driving in areas where salt or other corrosive materials are used
- Driving on rough or muddy roads
- Extended periods of idling or low-speed operation
- Driving for long periods in cold temperatures or extremely humid climates
- Driving in extremely hot conditions
- Driving in mountainous conditions continually

Maintenance Interval		Number of months or kilometers, whichever comes first											
	Months	3	6	9	12	15	18	21	24	27	30	33	36
	×1000 km	5	10	15	20	25	30	35	40	45	50	55	60

OBD PENDING TROUBLE CODE[LF, L3]

id0102a3816200

- These appear when a problem is detected in a monitored system. The code for a failed system is stored in the PCM memory in the first drive cycle. This code is called the pending code. If the PCM judges that the system returned to normal or the problem was mistakenly detected, and deletes the pending code. If the problem is found in a second drive cycle too, the PCM judges that the system has failed, and the DTC is stored.

OBD FREEZE FRAME DATA[LF, L3]

id0102a3815900

- This is the technical data which indicates the engine condition at the time of the first malfunction. This data will remain in the memory even if another emission-related DTC is stored, with the exception of Fuel system or Misfire DTCs. Once freeze frame data for Fuel system or Misfire DTC is stored, it will overwrite any previous data and the freeze frame will not be overwritten again.

OBD ON-BOARD SYSTEM READINESS TEST[LF, L3]

id0102a3816000

- This shows the OBD systems operating status. If any monitor function is incomplete, M-MDS will identify which monitor function has not been completed. The Fuel system, Misfire and CCM are continuous monitoring-type functions. The HO2S, EGR system and Catalyst will be monitored under drive cycles. The OBD diagnostic system is initialized by performing the DTC cancellation procedure or disconnecting the negative battery cable.

OBD READ/CLEAR DIAGNOSTIC TEST RESULT[LF, L3]

id0102a3816300

- This retrieves all stored DTCs in the PCM and clears the on-board readiness test results, freeze frame data, DTC and pending trouble code.

OBD PARAMETER IDENTIFICATION (PID) ACCESS[LF, L3]

id0102a3816100

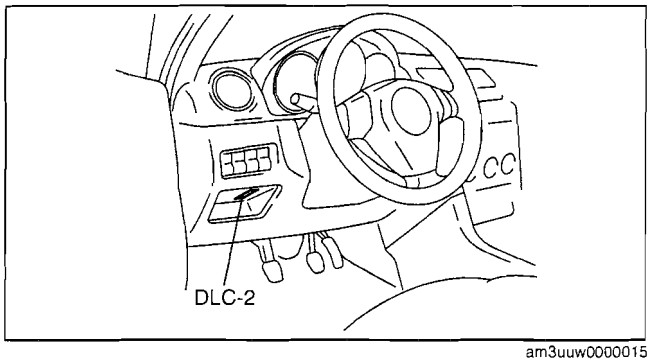
- The PID mode allows access to certain data values, analog and digital inputs and outputs, calculated values and system status information. Since the PID values for output devices are the PCM internal data values, inspect each device to identify which output devices are malfunctioning.

ON-BOARD DIAGNOSTIC TEST[LF, L3]

id0102a3801000

DTC Reading Procedure

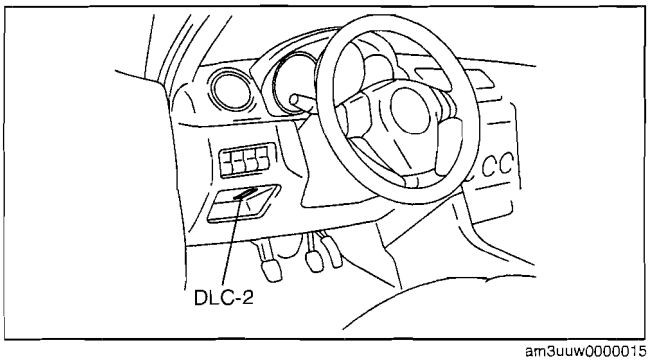
1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Toolbox" tab.
     2. Select "Self Test".
     3. Select "Modules".
     4. Select "PCM".
   - When using the PDS (Pocket PC)
     1. Select "Module Tests".
     2. Select "PCM".
     3. Select "Self Test".
3. Then, select the "Retrieve CMDTCs" and perform procedures according to directions on the M-MDS screen.
4. Verify the DTC according to the directions on the M-MDS screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
5. After completion of repairs, clear all DTCs stored in the PCM, while referring to "AFTER REPAIR PROCEDURE".



am3uuw0000015

Pending Trouble Code Access Procedure

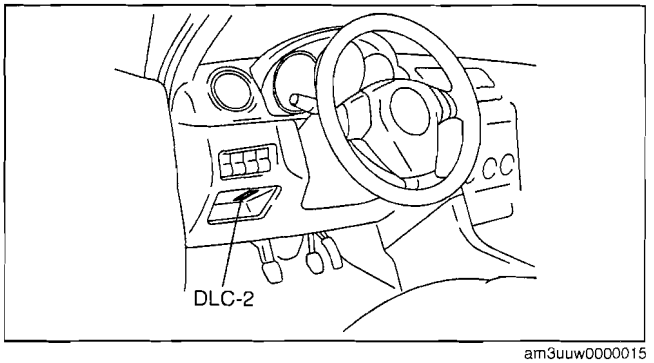
1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Toolbox" tab.
     2. Select "Self Test".
     3. Select "Modules".
     4. Select "PCM".
   - When using the PDS (Pocket PC)
     1. Select "Module Tests".
     2. Select "PCM".
     3. Select "Self Test".
3. Then, select the "Retrieve CMDTCs" and perform procedures according to directions on the M-MDS screen.
4. Retrieve the pending trouble codes according to the directions on the M-MDS screen.



am3uuw0000015

Freeze Frame PID Data Access Procedure

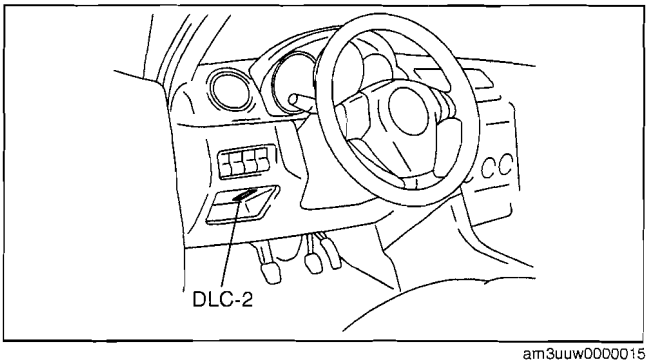
1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Toolbox" tab.
     2. Select "Self Test".
     3. Select "Modules".
     4. Select "PCM".
   - When using the PDS (Pocket PC)
     1. Select "Module Tests".
     2. Select "PCM".
     3. Select "Self Test".
3. Then, select the "Retrieve CMDTCs" and perform procedures according to directions on the M-MDS screen.
4. Retrieve the freeze frame PID data according to the directions on the M-MDS screen.



am3uuw0000015

On-Board System Readiness Tests Access Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Toolbox" tab.
     2. Select "Powertrain".
     3. Select "OBD Test Modes".
     4. Select "Mode 1 Powertrain Data".
     5. Select "PCM".
   - When using the PDS (Pocket PC)
     1. Select "OBDII Modes".
     2. Select "Mode 1 Powertrain Data".
     3. Select "PCM".
3. Then, select the "***SUP" and "***EVAL" PIDs in the PID selection screen.
4. Monitor those PIDs and check it system monitor is completed.



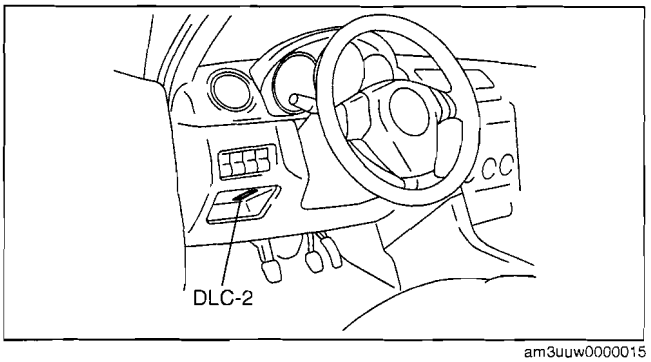
am3uuw0000015

PID/DATA Monitor and Record Procedure

Note

- The PID/DATA MONITOR function monitors the calculated value of the input/output signals in the PCM. Therefore, an output device malfunction is not directly indicated as a malfunction of the monitored value for the output device. If a monitored value of an output device is out of specification, inspect the monitored value of the input device related to the output control.

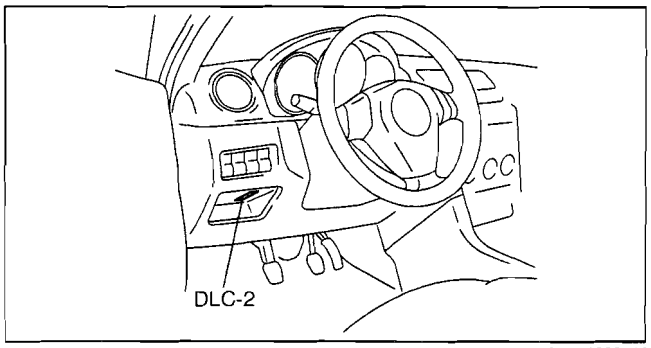
1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Toolbox" tab.
     2. Select "DataLogger".
     3. Select "Modules".
     4. Select "PCM".
   - When using the PDS (Pocket PC)
     1. Select "Module Tests".
     2. Select "PCM".
     3. Select "DataLogger".
3. Select the PID from the PID table.
4. Verify the PID data according to the directions on the screen.



am3uuw0000015

Diagnostic Monitoring Test Results Access Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Toolbox" tab.
     2. Select "Powertrain".
     3. Select "OBD Test Modes".
     4. Select "Mode 6 On-Board Test Results".
   - When using the PDS (Pocket PC)
     1. Select "OBDII Modes".
     2. Select "Mode 6 On-Board Test Results".
3. Verify the diagnostic monitoring test results according to the directions on the screen.

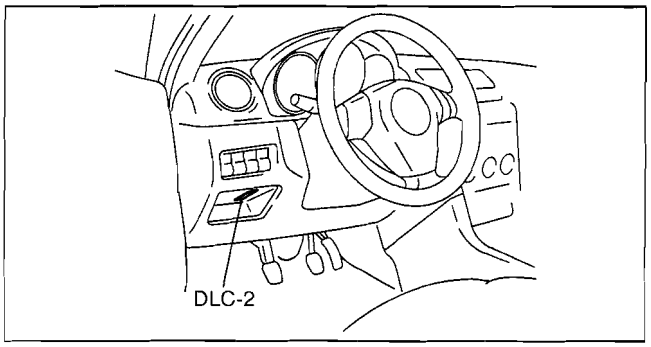


am3uuw0000015

AFTER REPAIR PROCEDURE[LF, L3]

id0102a3801100

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Toolbox" tab.
     2. Select "Self Test".
     3. Select "Modules".
     4. Select "PCM".
     5. Select "Retrieve CMDTCs".
   - When using the PDS (Pocket PC)
     1. Select "Module Tests".
     2. Select "PCM".
     3. Select "Self Test".
     4. Select "Retrieve CMDTCs".
3. Verify the DTC according to the directions on the M-MDS screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Verify that no DTCs are displayed.

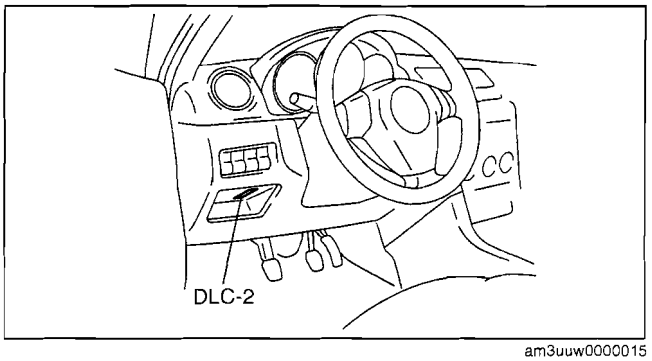


am3uuw0000015

KOEO/KOER SELF TEST[LF, L3]

id0102a3801200

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Toolbox" tab.
     2. Select "Self Test".
     3. Select "Modules".
     4. Select "PCM".
   - When using the PDS (Pocket PC)
     1. Select "Module Tests".
     2. Select "PCM".
     3. Select "Self Test".
3. Then, select the "KOEO On Demand Self Test" or "KOER On Demand Self Test" and perform procedures according to directions on the M-MDS screen.
4. Verify the DTC according to the directions on the M-MDS screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
5. After completion of repairs, clear all DTCs stored in the PCM, while referring to "AFTER REPAIR PROCEDURE".



am3uuw0000015

OBD-II DRIVE MODE[LF, L3]

id0102a3801300

- Using the OBD-II drive mode, the monitoring item requested by OBD-II regulations can be easily diagnosed.
- Performing the Drive Mode inspects the OBD-II system for proper operation and must be performed to ensure that no additional DTCs are present.
- The OBD-II drive mode is divided into the specific drive mode and single drive mode.
- For the specific drive mode, specified drive modes have been set for each individual monitoring item requested by OBD-II regulations, and they can be diagnosed individually. For the single drive mode, the entire monitoring item requested by OBD-II regulations can be diagnosed.
- The following modes are in the specific drive mode. The applicable system is diagnosed by driving in the following drive modes.
  - PCM Adaptive Memory Produce Drive Mode
  - EGR System Repair Verification Drive Mode
  - HO2S heater, HO2S, and TWC Repair Verification Drive Mode
  - EVAP System Repair Verification Drive Mode
- The following systems are diagnosed with the single drive mode.
  - EGR system
  - Oxygen sensor (HO2S)
  - Oxygen sensor heater
  - Catalytic converter (TWC)
  - Fuel, misfire and evaporative (EVAP) system

Caution

- **While performing the Drive Mode, always operate the vehicle in a safe and lawful manner.**
- **When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD function and inspect later.**

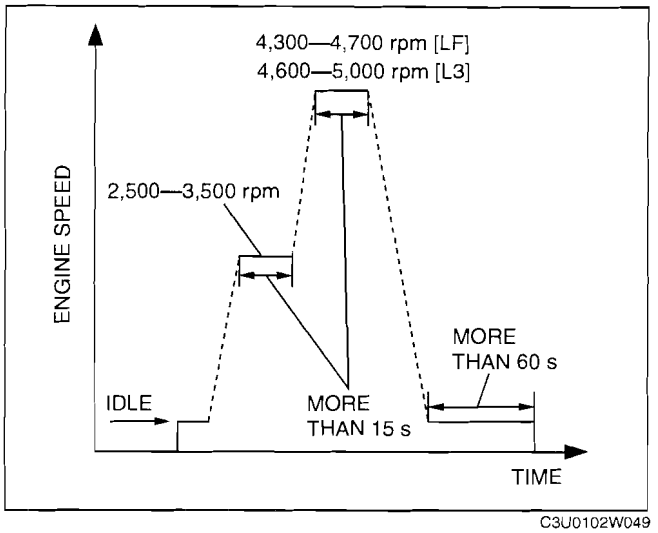
Note

- Vehicle speed and engine speed detected by the PCM may differ from that indicated by the speedometer and tachometer. Use the M-MDS to monitor vehicle speed.
- If the OBD-II system inspection is not completed during the Drive Mode, the following causes are considered:
  - The OBD-II system detects the malfunction.
  - The Drive Mode procedure is not completed correctly.
- Disconnecting the battery will reset the memory. Do not disconnect the battery during and after Drive Mode.
- The M-MDS can be used at anytime through the course of the Drive Mode to monitor the completion status. Monitoring can be done by viewing the ON BOARD SYSTEM READINESS menu.
- The OBD monitoring status can be confirmed with the ignition switch operation. During KOEO, the MIL illuminates for a fail-light inspection for **approx. 17 s**. The OBD monitoring status is confirmed after the fail-light inspection.
  - If all of the diagnosis is completed even one time, the MIL will continue to illuminate.
  - If all of the diagnosis is not completed, the MIL flashes for **approx. 7 s**, and then it illuminates until the engine is started.

PCM Adaptive Memory Production Drive Mode

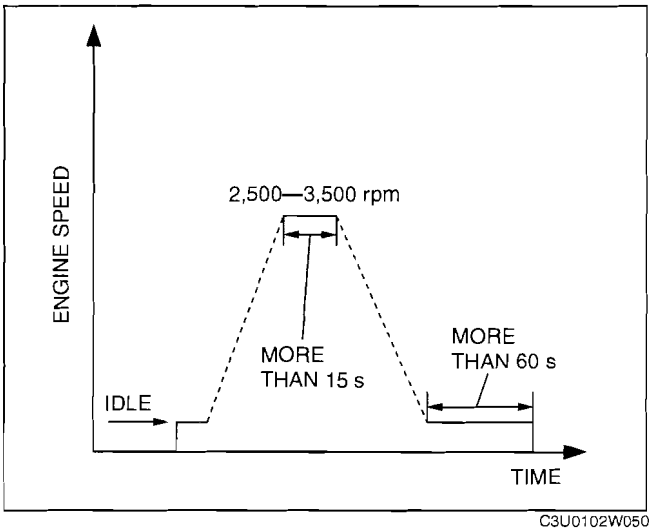
1. Start the engine and warm it up completely.
2. Verify the following conditions and correct if necessary:
   - All accessory loads (A/C, headlights, blower fan, rear window defroster) are off.
3. Perform no load racing at the engine speed shown in the graph, then idle the engine for more than **60 s** after the cooling fan has stopped. If possible, monitor RPM PID for engine speed during this procedure.

Except for California emission regulation applicable model



C3U0102W049

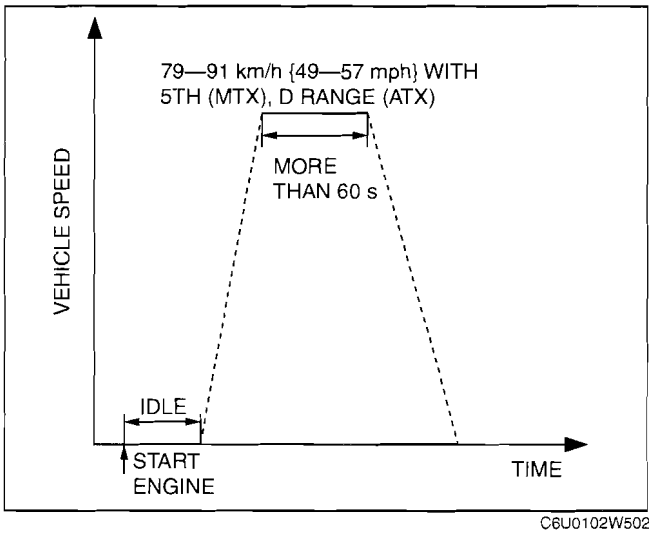
California emission regulation applicable model



C3U0102W050

EGR System Repair Verification Drive Mode

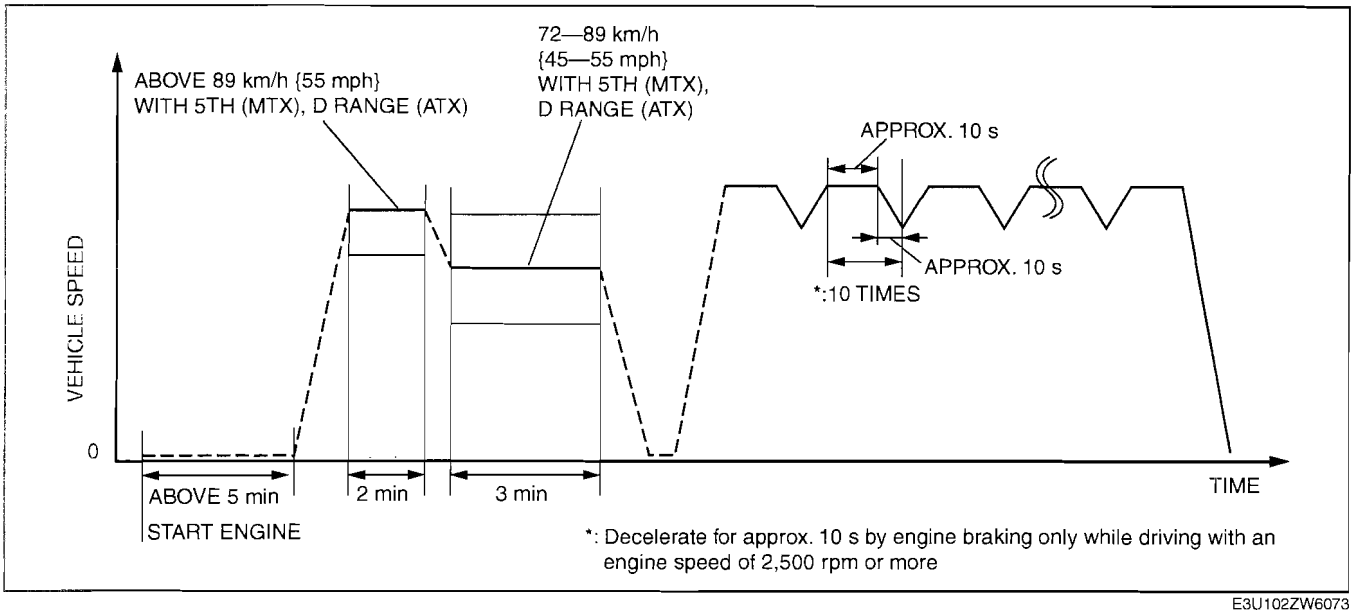
1. Perform "PCM Adaptive Memory Production Drive Mode" first.
2. Verify all accessory loads (A/C, headlights, blower fan, rear window defroster) are off.
3. Drive the vehicle as shown in the graph.
4. Stop the vehicle and access ON BOARD SYSTEM READINESS menu of GENERIC OBD-II FUNCTION to verify the OBD monitoring status.
   - If completed, the OBD monitoring status items change from non-completed to completed.
   - If not completed, turn the ignition switch off then repeat from Step 3.
5. Access DIAGNOSTIC MONITORING TEST RESULTS menu of GENERIC OBD-II FUNCTIONS to verify the monitor results.
   - If detected values are not within specification, repair has not been completed.
6. Verify no DTCs are available.



C6U0102W502

HO2S heater, HO2S, and TWC Repair Verification Drive Mode

1. Perform "PCM Adaptive Memory Production Drive Mode" first.
2. Verify all accessory loads (A/C, headlights, blower fan, rear window defroster) are off.
3. Drive the vehicle as shown in the graph. The driving conditions before driving at constant speed are not specified.



E3U102ZW6073

4. Stop the vehicle and access ON BOARD SYSTEM READINESS menu of GENERIC OBD-II FUNCTION to verify the OBD monitoring status.
   - If completed, the OBD monitoring status items change from non-completed to completed.
   - If not completed, turn the ignition switch off then repeat from Step 3.
5. Access DIAGNOSTIC MONITORING TEST RESULTS menu of GENERIC OBD-II FUNCTIONS to verify the monitor results.
   - If detected values are not within the specification, repair has not been completed.
6. Verify no DTCs are available.

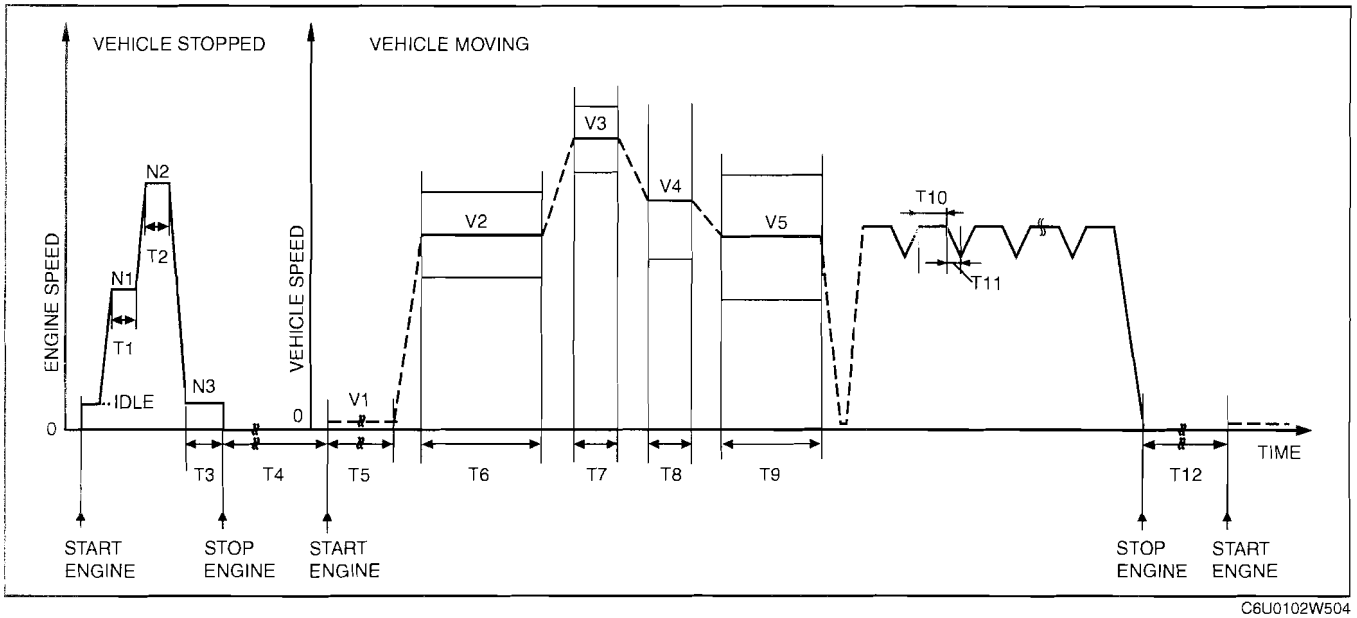
EVAP System Repair Verification Drive Mode

Note
- If "EVAP System Repair Verification Drive Mode" cannot be performed (it is impossible to drive the vehicle under this drive mode condition), perform evaporative system test procedure as an alternative. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].)

1. Verify that all of the following PIDs are within the following specifications. All PIDs must be within specifications before engine is started to initiate the evaporative system test.
   - BARO: **72.3 kPa {542 mmHg, 21.3 inHg}** or higher
   - IAT: **5—40 °C {41—104 °F}**
   - FTL: **15—85%**
   - B+: **above 10.9 V**
2. Clear DTC from PCM memory using M-MDS.
3. Start the engine and idle it for **more than 10 s**, then turn the ignition switch off.
4. Leave vehicle for **5 hours or more**.
5. Start the engine and idle for **more than 15 min**.
6. Drive the vehicle at an engine speed of **65—80 km/h {40—50 mph}** for **more than 5 min**.
7. Stop the vehicle and turn the ignition switch off.
8. Leave vehicle as it is for **10 min or more**.
9. Start the engine.
10. Access the ON BOARD SYSTEM READINESS to verify the OBD monitoring status.
    - If completed, the OBD monitoring status items change from non-completed to completed.
    - If not completed, turn the ignition switch off then go back to Step 1.
11. Access the DIAGNOSTIC MONITORING TEST RESULTS to verify the monitor results.
    - If detected values are not within specification, repair has not completed.
12. Verify no DTCs are available.

PCM Adaptive Memory Production, EGR, HO2S heater, HO2S, TWC, and EVAP System Repair Verification Drive Mode

1. Start the engine and warm it up completely.
2. Clear the DTC from the PCM memory using the M-MDS.
3. Verify the following conditions and correct if necessary:
   - All accessory loads (A/C, headlights, blower fan, rear window defroster) are off.
4. Verify that all of the following PIDs are within the following specifications. All PIDs must be within specifications from Step 5 to Step 6.
   - BARO: **more than 72.3 kPa {542 mmHg, 21.3 inHg}**
   - IAT: **5—40 °C {41—104 °F}**
   - FTL: **15—85%**
   - B+: **above 10.9 V**
5. With the vehicle stopped, race the engine at the engine speed indicated, and then drive the vehicle as shown in the graph. The driving conditions before driving at constant speed are not specified. If possible, monitor RPM PID for engine speed during this procedure.



C6U0102W504

Step	Time	Engine speed (rpm)	Vehicle speed (km/h {mph})	Vehicle condition
1	T1: More than 15 s	N1: 2,500—3,500	0 {0}	—
2*	T2: More than 15 s	N2: 4,300—4,700 [LF] 4,600—5,000 [L3]	0 {0}	—
3	T3: More than 60 s	N3: Idle	0 {0}	Idle the engine after the cooling fan has stopped
4	T4: More than 5 h	0	0 {0}	Keep the ignition switch off
5	T5: More than 15 min	Idle	V1: 0 {0}	—
6	T6: 5 min	—	V2: 65—80 {40—50}	MTX: 5TH ATX: D range
7	T7: 1 min	—	V3: 79—91 {49—57}	MTX: 5TH ATX: D range
8	T8: 2 min	—	V4: Above 89 {55}	MTX: 5TH ATX: D range
9	T9: 3 min	—	V5: 72—89 {45—55}	MTX: 5TH ATX: D range
10	T10: Approx. 10 s	Above 2,500	—	—
11	T11: Approx. 10 s	—	—	Decelerate by engine braking only (10 times)
12	T12: More than 10 min	0	0 {0}	Keep the ignition switch off

* : California emission regulation applicable model is not applicable.

6. Turn the ignition switch off.
7. Access the ON BOARD SYSTEM READINESS to verify the OBD monitoring status.
   - If completed, all of the OBD monitoring status items change from non-completed to completed.
   - If not completed, turn the ignition switch off, then perform the applicable specific drive mode for any monitoring item that was not in the detection condition.
8. Access the DIAGNOSTIC MONITORING TEST RESULTS to verify the monitor results.
   - If detected values are not within specification, repair has not been completed.

DIAGNOSTIC MONITORING TEST RESULTS[LF, L3]

id0102a3801400

- The purpose of this test mode is to confirm the result of OBD-II monitor diagnostic test results. The result values stored when particular monitor is completed are displayed. If the monitor is not completed, initial value is displayed.

TEST ID	Description	Related system
10:01:80	HO2S (Front) lean-to-rich slow response (calculated)	HO2S
10:01:81	HO2S (Front) rich-to-lean slow response (calculated)	
10:01:82	HO2S (Front) lean-to-rich delayed response (calculated)	
10:01:83	HO2S (Front) rich-to-lean delayed response (calculated)	
10:02:03*2	Low HO2S (Rear) voltage for switch time calculation (constant)	
10:02:04*2	High HO2S (Rear) voltage for switch time calculation (constant)	
10:02:05*2	HO2S (Rear) rich-to-lean response time (calculated)	
10:02:85*1	HO2S (Rear) rich-to-lean response time (calculated)	
10:21:80	HO2S (Front) and HO2S (Rear) switching time ratio	Catalyst
10:31:83	EGR pressure variation	EGR
10:3A:80	EVAP system leak detection pump gross leak check	EVAP
10:3B:80	EVAP system leak detection pump small leak check	
10:3C:80*1	EVAP system leak detection pump very small leak check	
10:3D:80	Purge flow monitor	
10:A2:0B	Cylinder No.1 average misfire counts for last 10 DC	Misfire
10:A2:0C	Cylinder No.1 misfire counts for last/current DC	
10:A3:0B	Cylinder No.2 average misfire counts for last 10 DC	
10:A3:0C	Cylinder No.2 misfire counts for last/current DC	
10:A4:0B	Cylinder No.3 average misfire counts for last 10 DC	
10:A4:0C	Cylinder No.3 misfire counts for last/current DC	
10:A5:0B	Cylinder No.4 average misfire counts for last 10 DC	
10:A5:0C	Cylinder No.4 misfire counts for last/current DC	
10:E1:80	Heat radiation ratio	Thermostat
10:E1:81	Engine coolant temperature	

*1 : California emission regulation applicable model
*2 : Except for California emission regulation applicable model

DTC TABLE[LF, L3]

DTC B1342[LF, L3]

id0102a3815700

DTC B1342	PCM malfunction
DETECTION CONDITION	• Malfunction in the PCM internal circuit.
POSSIBLE CAUSE	• PCM internal malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY CURRENT STATUS OF MALFUNCTION** • Clear the DTC from the PCM memory using the M-MDS. • Is same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
2	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P0011[LF, L3]

id0102a3801600

DTC P0011	CMP Timing over-advanced
DETECTION CONDITION	**California emission regulation applicable model** • Actual valve timing is over-advanced by **10 ° (when the following conditions are met)** from target valve timing when the OCV is controlled in the maximum valve timing retard condition. **MONITORING CONDITION** — Engine coolant temperature is **above 20 °C {68 °F}**. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
	Except for California emission regulation applicable model • The actual valve timing is over-advanced by **15 ° (when the following conditions are met)** from the target valve timing when the OCV is controlled in the maximum valve timing retard condition. **Monitoring condition** — Engine speed is **below 4,000 rpm** — Engine coolant temperature is **70—110°C {158—230°F}** **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in during first drive cycles. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Oil control valve (OCV) malfunction • Spool valve in OCV is stuck in advance position • Variable valve timing actuator is stuck in advance position • Loose timing chain or improper valve timing due to timing chain slippage • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT OCV FOR MALFUNCTION** • Start the engine. • Increase the engine speed. • Stop the engine. • Remove the OCV. (See 01-10A-35 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION[LF, L3].) • Inspect the position of the spool valve in the OCV. (See 01-10A-35 OIL CONTROL VALVE (OCV) INSPECTION[LF, L3].) • Is the spool valve located at the valve retard position?	Yes	Go to the next step.
		No	Replace the OCV, then go to Step 6. (See 01-10A-35 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION[LF, L3].)
4	**INSPECT STOPPER PIN MECHANISM** • Remove the timing chain. • Inspect the stopper pin. (See 01-10A-33 VARIABLE VALVE TIMING ACTUATOR INSPECTION[LF, L3].) • Is the stopper pin mechanism normal?	Yes	Go to the next step.
		No	Replace variable valve timing actuator, then go to Step 6.
5	**INSPECT ROTOR POSITION** • Remove the variable valve timing actuator. • Is the rotor position at the maximum valve timing retard?	Yes	**VARIABLE VALVE TIMING MECHANISM IS NORMAL** **Note** • This DTC detected by intermittent concern. • Intermittent concern might be removed by cleaning mode of the variable valve timing control function. Go to the next step.
		No	Replace the variable valve timing actuator, go to the next step.
6	**VERIFY TROUBLESHOOTING OF DTC P0011 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Turn the ignition switch off. • Start the engine and warm it up completely. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is there any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P0012[LF, L3]

id0102a3801700

DTC P0012	CMP Timing over-retarded
DETECTION CONDITION	**California emission regulation applicable model** • Actual valve timing is over-retarded by **10** ° (when the following conditions are met) from target valve timing for **5 s** when the OCV system control is within feed-back range. **MONITORING CONDITION** — Engine coolant temperature is **above 20 °C {68 °F}**. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
	Except for California emission regulation applicable model • Actual valve timing is over-retarded by **10°** from the target valve timing for **5 s** when the OCV system control is within the feed-back range. **Monitoring condition** — Engine speed is **below 4,000 rpm** — Engine coolant temperature is **70—110°C {158—230°F}** **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Oil control valve (OCV) malfunction • Low engine oil pressure • Spool valve in the OCV is stuck in retard position. • Variable valve timing actuator is stuck in retard position. • Following oil runners are clogged or have leakage. **Oil runners** — Between the oil pressure switch and the OCV — Between the OCV and the variable valve timing actuator — In variable valve timing actuator • Loose timing chain or improper valve timing due to the timing chain slippage • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Is DTC P2088 or P2089 present?	Yes	Go to the appropriate DTC troubleshooting procedure. (See 01-02A-211 DTC P2088[LF, L3] or 01-02A-213 DTC P2089[LF, L3].)
		No	Go to the next step.
4	**VERIFY ENGINE OIL PRESSURE** • Start the engine. • Does the oil pressure warning light illuminate?	Yes	Inspect the engine oil pressure, then go to Step 8. (See 01-11A-3 OIL PRESSURE INSPECTION[LF, L3].)
		No	Go to the next step.
5	**VERIFY TIMING CHAIN INSTALLATION** • Stop the engine. • Remove the timing chain cover. • Is the camshaft timing mark at correct point? (See 01-10A-12 TIMING CHAIN REMOVAL/INSTALLATION[LF, L3].)	Yes	Go to the next step.
		No	Reinstall the timing chain, then go to Step 8.
6	**INSPECT OCV FOR MALFUNCTION** • Stop the engine. • Remove the OCV. • Inspect the position of the spool valve in the OCV. • Is the spool valve located at the valve retard position?	Yes	**VARIABLE VALVE TIMING MECHANISM IS NORMAL** **Note** • This DTC detected by intermittent concern. • Intermittent concern might be removed by cleaning mode of the variable valve timing control function. Go to the next step.
		No	Replace the OCV, then go to Step 8.
7	**INSPECT ENGINE OIL RUNNER** • Inspect the following engine oil runners for clogging or leakage. — Between oil pressure switch and OCV — Between OCV and variable valve timing actuator — In variable valve timing actuator • Is there any clogging or leakage?	Yes	Repair or replace the suspected runner, then go to the next step.
		No	**VARIABLE VALVE TIMING MECHANISM IS NORMAL** **Note** • This DTC is detected by intermittent concern. • Intermittent concern might be removed by cleaning mode of the variable valve timing control function. Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0012 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Turn the ignition switch off. • Start the engine and warm it up completely. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is there any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P0016[LF, L3]

id0102a3801800

DTC P0016	CKP-CMP correlation
DETECTION CONDITION	• The PCM monitors the input pulses from the CKP sensor and CMP sensor. If the input pulse pick-up timing do not match each other, the PCM determines that the camshaft position does not coincide with the crankshaft position. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Poor connection of connector • CMP sensor malfunction • CKP sensor malfunction • Damaged or scratched CMP sensor pulse wheel • Damaged or scratched CKP sensor pulse wheel • Foreign material on CMP sensor • Foreign material on CKP sensor • Improper valve timing

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT CMP SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the CMP sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 13.
		No	Go to the next step.
4	**INSPECT CMP SENSOR FOR FOREIGN MATERIAL** • Remove the CMP sensor. • Inspect the CMP sensor for foreign materials. • Is there any foreign material on the CMP sensor?	Yes	Remove foreign material from the CMP sensor, then go to Step 13.
		No	Go to the next step.
5	**INSPECT CMP SENSOR PULSE WHEEL** • Visually inspect the CMP sensor pulse wheel. • Are there any damage or scratches at the CMP sensor pulse wheel?	Yes	Replace the camshaft, then go to Step 13. (See 01-10A-20 CYLINDER HEAD GASKET REPLACEMENT[LF, L3].)
		No	Go to the next step.
6	**INSPECT CMP SENSOR** • Inspect the CMP sensor. (See 01-40A-70 CAMSHAFT POSITION (CMP) SENSOR INSPECTION[LF, L3].) • Is the CMP sensor normal?	Yes	Go to the next step.
		No	Replace the CMP, then go to Step 13.
7	**INSPECT CKP SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the CKP sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 13.
		No	Go to the next step.

STEP	INSPECTION		ACTION
8	**INSPECT CKP SENSOR FOR FOREIGN MATERIAL** • Remove the CKP sensor. • Inspect the CKP sensor for foreign material. • Is there any foreign material on the CKP sensor?	Yes	Remove foreign material from the CKP sensor, then go to Step 13.
		No	Go to the next step.
9	**INSPECT CKP SENSOR PULSE WHEEL** • Visually inspect the CKP sensor pulse wheel. • Are there any damage or scratches on the CKP sensor pulse wheel?	Yes	Replace the CKP sensor pulse wheel, then go to Step 13. (See 01-10A-12 TIMING CHAIN REMOVAL/ INSTALLATION[LF, L3].)
		No	Go to the next step.
10	**INSPECT CKP SENSOR** • Inspect the CKP sensor. (See 01-40A-68 CRANKSHAFT POSITION (CKP) SENSOR INSPECTION[LF, L3].) • Is the CKP sensor normal?	Yes	Go to the next step.
		No	Replace the CKP sensor, then go to Step 13. (See 01-40A-67 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/ INSTALLATION[LF, L3].)
11	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 13.
		No	Go to the next step.
12	**INSPECT VALVE TIMING** • Inspect valve timing. (See 01-10A-12 TIMING CHAIN REMOVAL/INSTALLATION[LF, L3].) • Is valve timing normal?	Yes	Go to the next step.
		No	Adjust the valve timing properly, then go to the next step. (See 01-10A-12 TIMING CHAIN REMOVAL/ INSTALLATION[LF, L3].)
13	**VERIFY TROUBLESHOOTING OF DTC P0016 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine and run it at the idle. • Retrieve the DTC using the M-MDS. • Is the PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
14	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is there any DTC present?	Yes	Go to applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P0030[LF, L3]

id0102a3801900

California Emission Regulation Applicable Model

DTC P0030	Front HO2S heater control circuit problem
DETECTION CONDITION	• The PCM monitors the front HO2S impedance when under the front HO2S heater control for **200 s**. If the impedance is **more than 44 ohms**, the PCM determines that there is a front HO2S heater control circuit problem. **Diagnostic support note** • This is an intermittent monitor (HO2S heater). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S heater malfunction • Connector or terminal malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Are other DTCs present?	Yes	Go to the appropriate DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
4	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
5	**INSPECT FRONT HO2S HEATER** • Inspect the front HO2S heater. (See 01-40A-57 HEATED OXYGEN SENSOR (HO2S) INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the front HO2S, then go to Step 7. (See 01-40A-66 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0030 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

Except for California Emission Regulation Applicable Model

DTC P0030	Front HO2S heater control circuit problem
DETECTION CONDITION	• OBD system monitors the output signal voltage from oxygen sensor which is proportion to the element impedance of oxygen sensor. • If the output signal voltage isn't between **0.75 V** and **1.5 V** after specified time from engine start, heater performance considered failed. **MONITORING CONDITIONS** — Battery voltage: **10—18 V** — Time from engine start is **74 s or more** **Diagnostic support note** • This is an intermittent monitor (HO2S heater). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S heater malfunction • Connector or terminal malfunction • Short to ground in wiring harness between front HO2S terminal E and PCM terminal 2G*1, 2BG*2 • Short to power supply in wiring harness between front HO2S terminal E and PCM terminal 2G*1, 2BG*2 • Open circuit in wiring harness between front HO2S terminal D and PCM terminal 2AC • Open circuit in wiring harness between front HO2S terminal E and PCM terminal 2G*1, 2BG*2 • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available Service information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the related PENDING CODE or stored DTCs using the M-MDS. • Is the DTC P0031 or P0032 also present?	Yes	Go to appropriate DTC troubleshooting procedure. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0030 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting for DTC on FREEZE FRAME DATA. (See 01-02A-22 DTC TABLE[LF, L3].)
5	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 11.
		No	Go to the next step.
6	**INSPECT FRONT HO2S HEATER CONTROL CIRCUIT FOR SHORT TO GROUND** • Front HO2S connector disconnected. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there continuity?	Yes	Repair or replace for short to ground, then go to Step 11.
		No	Go to the next step.
7	**INSPECT FRONT HO2S HEATER** • Inspect the front HO2S heater. (See 01-40A-57 HEATED OXYGEN SENSOR (HO2S) INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the front HO2S, then go to Step 11. (See 01-15A-1 EXHAUST SYSTEM REMOVAL/ INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step11.
		No	Go to the next step.
9	**INSPECT FRONT HO2S CIRCUIT FOR OPEN** • Front HO2S and PCM connectors disconnected. • Measure the continuity following circuit at wiring harness-side terminal. — Between front HO2S terminal E and PCM terminal 2G*1, 2BG*2 — Between front HO2S terminal D and PCM terminal 2AC • Are there continuity?	Yes	Go to the next step.
		No	Repair or replace for open, then go to Step 11.

STEP	INSPECTION		ACTION
10	**INSPECT FRONT HO2S HEATER CONTROL CIRCUIT FOR SHORT TO POWER** • Front HO2S and PCM connectors disconnected. • Measure the voltage between front HO2S sensor terminal E (wiring harness-side) and ground? • Is the voltage greater than **1.5V**	Yes	Repair or replace for short to power, then go to the next step.
		No	Go to the next step.
11	**VERIFY TROUBLESHOOTING OF DTC P0030 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the KOEO or KOER self-test. (See 01-02A-16 KOEO/KOER SELF TEST[LF, L3].) • Is the DTC P0030 present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

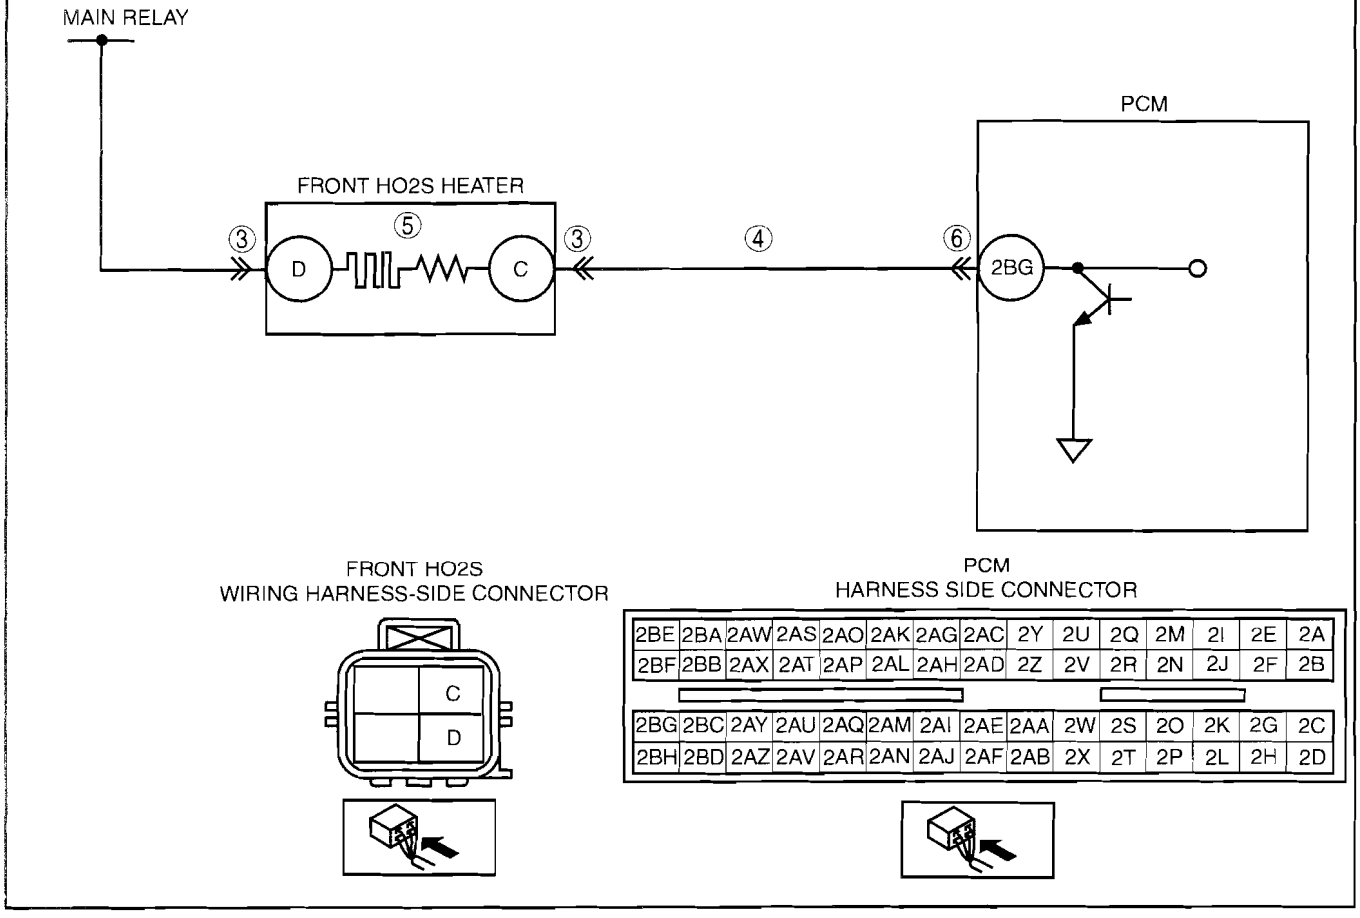
*1 : LF ATX
*2 : LF MTX, L3

DTC P0031[LF, L3]

id0102a3802000

California Emission Regulation Applicable Model

DTC P0031	Front HO2S heater circuit low input
DETECTION CONDITION	• The PCM monitors the front HO2S heater control voltage when the PCM turns the front HO2S heater off. If the control voltage **exceeds 50%** of the battery voltage, the PCM determines that the front HO2S heater control circuit voltage is low. **Diagnostic support note** • This is a continuous monitor (HO2S heater). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S heater malfunction • Connector or terminal malfunction • Short to power supply in wiring harness between front HO2S terminal C and PCM terminal 2BG • PCM malfunction



Diagnostic procedure

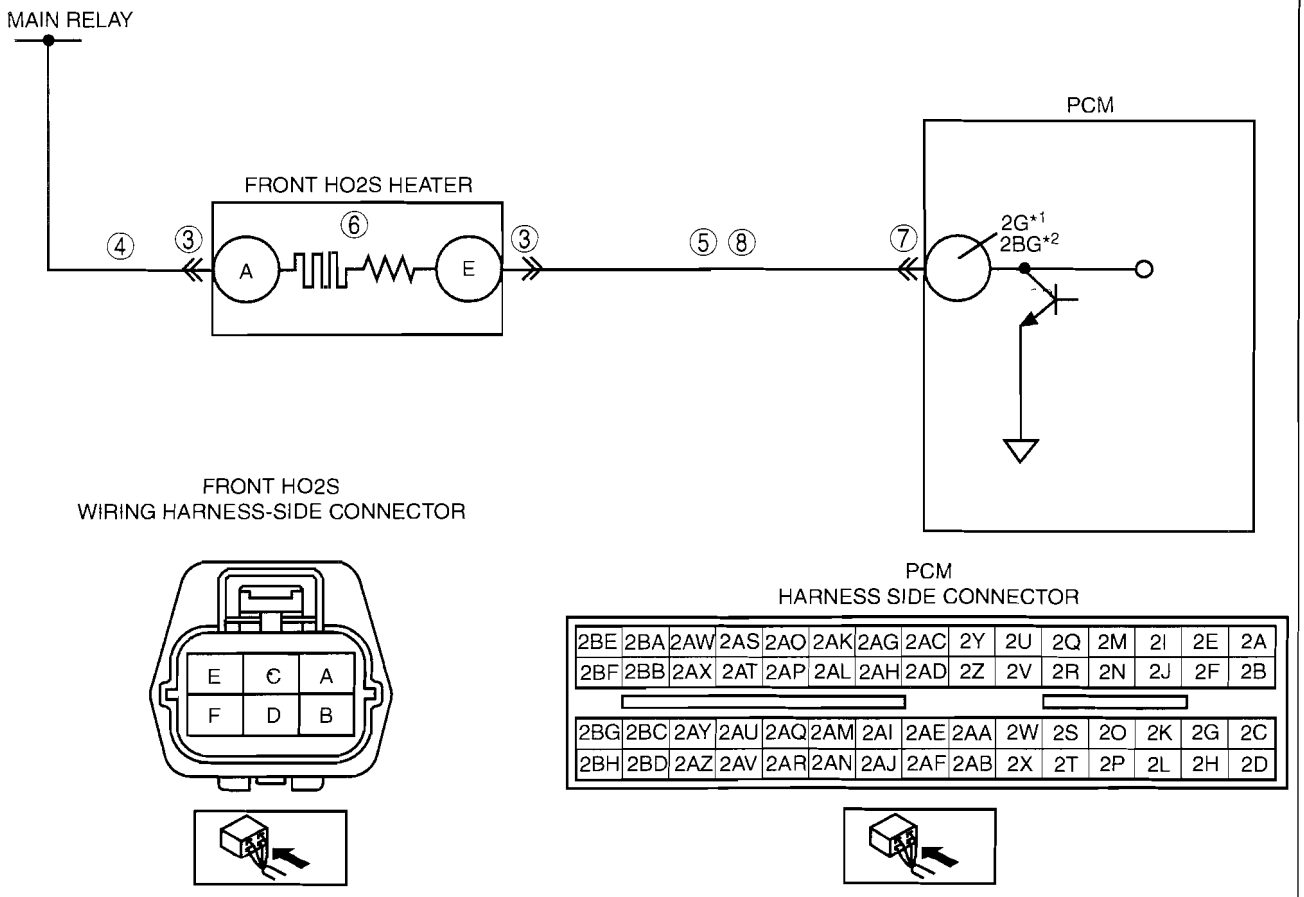
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT FRONT HO2S HEATER CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between front HO2S terminal C (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 7.
		No	Go to the next step.
5	**INSPECT FRONT HO2S HEATER** • Inspect the front HO2S heater. (See 01-40A-57 HEATED OXYGEN SENSOR (HO2S) INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the front HO2S, then go to Step 7. (See 01-40A-66 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0031 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the KOEO or KOER self-test with M-MDS, or HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

Except for California Emission Regulation Applicable Model

DTC P0031	Front HO2S heater circuit low input
DETECTION CONDITION	• The PCM monitors the front HO2S heater output voltage. if the PCM turns the front HO2S heater off or on but the front HO2S heater circuit remains low voltage, the PCM determines that the front HO2S heater circuit has a malfunction. **Note** • The front HO2S heater is controlled by duty signal. **Diagnostic support note** • This is a continuous monitor (HO2S heater). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.

DTC P0031	Front HO2S heater circuit low input
POSSIBLE CAUSE	• Front HO2S heater malfunction • Connector or terminal malfunction • Open circuit in wiring harness between main relay and front HO2S terminal A • Short to ground in wiring harness between main relay and front HO2S terminal A • Open circuit in wiring harness between front HO2S terminal E and PCM terminal 2G*1, 2BG*2 • Short to ground in wiring harness between front HO2S terminal E and PCM terminal 2G*1, 2BG*2 • PCM malfunction



*1 : LF ATX
*2 : LF MTX, L3

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** - Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.

STEP	INSPECTION		ACTION
4	**INSPECT FRONT HO2S HEATER POWER CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GROUND** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between front HO2S terminal A (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit or short to ground, then go to Step 9.
5	**INSPECT FRONT HO2S HEATER CONTROL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between front HO2S terminal E (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 9.
		No	Go to the next step.
6	**INSPECT FRONT HO2S HEATER** • Inspect the front HO2S heater. (See 01-40A-57 HEATED OXYGEN SENSOR (HO2S) INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the front HO2S, then go to Step 9. (See 01-15A-1 EXHAUST SYSTEM REMOVAL/ INSTALLATION[LF, L3].)
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
8	**INSPECT FRONT HO2S HEATER CONTROL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between front HO2S terminal E (wiring harness-side) and PCM terminal 2G*1, 2BG*2 (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0031 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the KOEO or KOER self-test. (See 01-02A-16 KOEO/KOER SELF TEST[LF, L3].) • Is the DTC P0031 present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

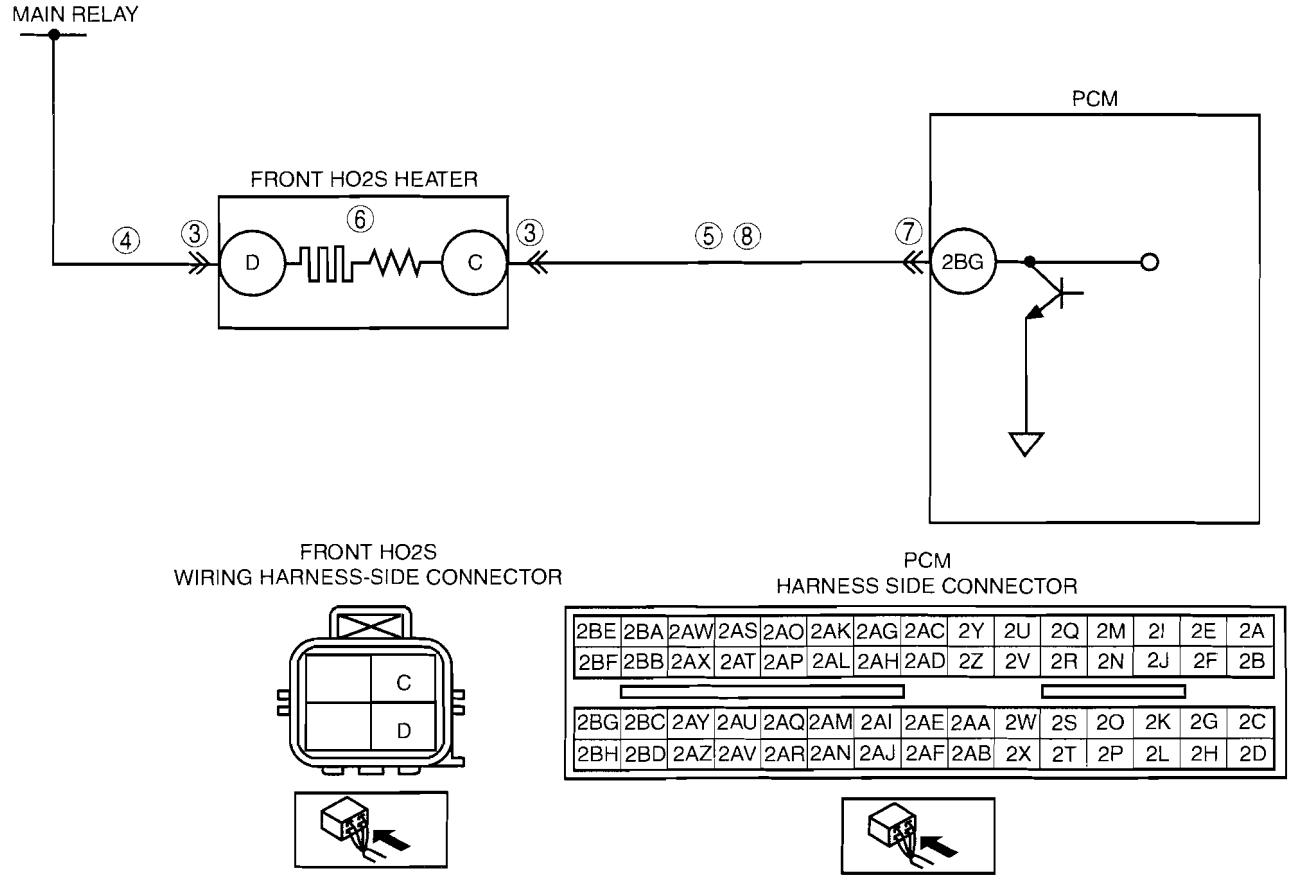
*1 : LF ATX
*2 : LF MTX, L3

DTC P0032[LF, L3]

id0102a3802100

California Emission Regulation Applicable Model

DTC P0032	Front HO2S heater circuit high input
DETECTION CONDITION	• The PCM monitors the front HO2S heater control voltage when the PCM turns the front HO2S heater on. If the control voltage is **less than 50%** of the battery voltage, the PCM determines that the front HO2S heater control circuit voltage is high. **Diagnostic support note** • This is a continuous monitor (HO2S heater). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S heater malfunction • Connector or terminal malfunction • Open circuit in wiring harness between main relay and front HO2S terminal D • Short to ground in wiring harness between main relay and front HO2S terminal D • Open circuit in wiring harness between front HO2S terminal C and PCM terminal 2BG • Short to ground in wiring harness between front HO2S terminal C and PCM terminal 2BG • PCM malfunction



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.

STEP	INSPECTION		ACTION
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT FRONT HO2S HEATER POWER CIRCUIT FOR OPEN CIRCUIT OR SHORT TO ground** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between front HO2S terminal D (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit or short to ground, then go to Step 9.
5	**INSPECT FRONT HO2S HEATER CONTROL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between front HO2S terminal C (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 9.
		No	Go to the next step.
6	**INSPECT FRONT HO2S HEATER** • Inspect the front HO2S heater. (See 01-40A-57 HEATED OXYGEN SENSOR (HO2S) INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the front HO2S, then go to Step 9. (See 01-40A-66 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
8	**INSPECT FRONT HO2S HEATER CONTROL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between front HO2S terminal C (wiring harness-side) and PCM terminal 2BG (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0032 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the KOEO or KOER self-test with M-MDS, or HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

		No	Go to the next step.
4	**INSPECT FRONT HO2S HEATER CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between front HO2S terminal E (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 7.
		No	Go to the next step.
5	**INSPECT FRONT HO2S HEATER** • Inspect the front HO2S heater. (See 01-40A-57 HEATED OXYGEN SENSOR (HO2S) INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the front HO2S, then go to Step 7. (See 01-15A-1 EXHAUST SYSTEM REMOVAL/ INSTALLATION[LF, L3].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0032 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the KOEO or KOER self-test. (See 01-02A-16 KOEO/KOER SELF TEST[LF, L3].) • Is the DTC P0032 present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

DTC P0037[LF, L3]

id0102a3802200

California Emission Regulation Applicable Model

DTC P0037	Middle HO2S heater circuit low input
DETECTION CONDITION	• The PCM monitors the middle HO2S heater control voltage when the PCM turns the middle HO2S heater off. If the control voltage **exceeds 25%** of the battery voltage, the PCM determines that the middle HO2S heater control circuit voltage is low. **Diagnostic support note** • This is a continuous monitor (HO2S heater). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Middle HO2S heater malfunction • Connector or terminal malfunction • Short to power supply in wiring harness between middle HO2S terminal D and PCM terminal 2BF • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT MIDDLE HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the middle HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT MIDDLE HO2S HEATER CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between rear HO2S terminal D (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 7.
		No	Go to the next step.
5	**INSPECT MIDDLE HO2S HEATER** • Inspect the middle HO2S heater. (See 01-40A-57 HEATED OXYGEN SENSOR (HO2S) INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the middle HO2S, then go to Step 7. (See 01-40A-66 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0037 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the KOEO or KOER self-test with M-MDS, or HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

Except for California Emission Regulation Applicable Model

DTC P0037	Rear HO2S heater circuit low input
DETECTION CONDITION	• The PCM monitors the rear HO2S heater output voltage. if the PCM turns the rear HO2S heater off or on but the rear HO2S heater circuit remains low voltage, the PCM determines that the rear HO2S heater circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (HO2S heater). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Rear HO2S heater malfunction • Connector or terminal malfunction • Open circuit in wiring harness between main relay and rear HO2S terminal C • Short to ground in wiring harness between main relay and rear HO2S terminal C • Open circuit in wiring harness between rear HO2S terminal D and PCM terminal 2C*1, 2BE*2 • Short to ground in wiring harness between rear HO2S terminal D and PCM terminal 2C*1, 2BE*2 • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.

STEP	INSPECTION		ACTION
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT REAR HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the rear HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT REAR HO2S HEATER POWER CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GROUND** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between rear HO2S terminal C (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit or short to ground, then go to Step 9.
5	**INSPECT REAR HO2S HEATER CONTROL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between rear HO2S terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 9.
		No	Go to the next step.
6	**INSPECT REAR HO2S HEATER** • Inspect the rear HO2S heater. (See 01-40A-57 HEATED OXYGEN SENSOR (HO2S) INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the rear HO2S, then go to Step 9. (See 01-15A-1 EXHAUST SYSTEM REMOVAL/ INSTALLATION[LF, L3].)
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
8	**INSPECT REAR HO2S HEATER CONTROL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between rear HO2S terminal D (wiring harness-side) and PCM terminal 2C*1, 2BE*2 (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0037 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the KOEO or KOER self-test. (See 01-02A-16 KOEO/KOER SELF TEST[LF, L3].) • Is the DTC P0037 present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

*1 : LF ATX
*2 : LF MTX, L3

DTC P0038[LF, L3]

id0102a3802300

California Emission Regulation Applicable Model

DTC P0038	Middle HO2S heater circuit high input
DETECTION CONDITION	• The PCM monitors the middle HO2S heater control voltage when the PCM turns the middle HO2S heater on. If the control voltage is **less than 57%** of the battery voltage, the PCM determines that the middle HO2S heater control circuit voltage is high. **Diagnostic support note** • This is a continuous monitor (HO2S heater). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Middle HO2S heater malfunction • Connector or terminal malfunction • Open circuit in wiring harness between main relay and middle HO2S terminal C • Short to ground in wiring harness between main relay and middle HO2S terminal C • Open circuit in wiring harness between middle HO2S terminal D and PCM terminal 2BF • Short to ground in wiring harness between middle HO2S terminal D and PCM terminal 2BF • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.

STEP	INSPECTION		ACTION
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT MIDDLE HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the middle HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT MIDDLE HO2S HEATER POWER CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GROUND** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between middle HO2S terminal C (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit or short to ground, then go to Step 9.
5	**INSPECT MIDDLE HO2S HEATER CONTROL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between middle HO2S terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 9.
		No	Go to the next step.
6	**INSPECT MIDDLE HO2S HEATER** • Inspect the rear HO2S heater. (See 01-40A-57 HEATED OXYGEN SENSOR (HO2S) INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the middle HO2S, then go to Step 9. (See 01-40A-66 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
8	**INSPECT MIDDLE HO2S HEATER CONTROL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between middle HO2S terminal D (wiring harness-side) and PCM terminal 2BF (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0038 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the KOEO or KOER self-test with M-MDS, or HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

Except for California Emission Regulation Applicable Model

DTC P0038	Rear HO2S heater circuit high input
DETECTION CONDITION	• The PCM monitors the rear HO2S heater output voltage. if the PCM turns the rear HO2S heater off or on but the rear HO2S heater circuit remains high voltage, the PCM determines that the rear HO2S heater circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (HO2S heater). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Rear HO2S heater malfunction • Connector or terminal malfunction • Short to power supply in wiring harness between rear HO2S terminal D and PCM terminal 2C*1, 2BE*2 • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT REAR HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the rear HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT REAR HO2S HEATER CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between rear HO2S terminal D (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 7.
		No	Go to the next step.
5	**INSPECT REAR HO2S HEATER** • Inspect the rear HO2S heater. (See 01-40A-57 HEATED OXYGEN SENSOR (HO2S) INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the rear HO2S, then go to Step 7. (See 01-15A-1 EXHAUST SYSTEM REMOVAL/ INSTALLATION[LF, L3].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0038 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the KOEO or KOER self-test. (See 01-02A-16 KOEO/KOER SELF TEST[LF, L3].) • Is the DTC P0038 present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

DTC P0043[LF, L3]

id0102a3828500

California Emission Regulation Applicable Model

DTC P0043	Rear HO2S heater circuit low input
DETECTION CONDITION	• The PCM monitors the rear HO2S heater control voltage when the PCM turns the rear HO2S heater off. If the control voltage **exceeds 25%** of the battery voltage, the PCM determines that the rear HO2S heater control circuit voltage is low. **Diagnostic support note** • This is a continuous monitor (HO2S heater). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Rear HO2S heater malfunction • Connector or terminal malfunction • Short to power supply in wiring harness between rear HO2S terminal D and PCM terminal 2BE • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT REAR HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the rear HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT REAR HO2S HEATER CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between rear HO2S terminal D (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 7.
		No	Go to the next step.
5	**INSPECT REAR HO2S HEATER** • Inspect the rear HO2S heater. (See 01-40A-57 HEATED OXYGEN SENSOR (HO2S) INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the rear HO2S, then go to Step 7. (See 01-40A-66 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0043 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the KOEO or KOER self-test with M-MDS, or HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

DTC P0044[LF, L3]

id0102a3828600

California Emission Regulation Applicable Model

DTC P0044	Rear HO2S heater circuit high input
DETECTION CONDITION	• The PCM monitors the rear HO2S heater control voltage when the PCM turns the rear HO2S heater on. If the control voltage is **less than 57%** of the battery voltage, the PCM determines that the rear HO2S heater control circuit voltage is high. **Diagnostic support note** • This is a continuous monitor (HO2S heater). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Rear HO2S heater malfunction • Connector or terminal malfunction • Open circuit in wiring harness between main relay and rear HO2S terminal C • Short to ground in wiring harness between main relay and rear HO2S terminal C • Open circuit in wiring harness between rear HO2S terminal D and PCM terminal 2BE • Short to ground in wiring harness between rear HO2S terminal D and PCM terminal 2BE • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.

STEP	INSPECTION		ACTION
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT REAR HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the rear HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT REAR HO2S HEATER POWER CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GROUND** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between rear HO2S terminal C (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit or short to ground, then go to Step 9.
5	**INSPECT REAR HO2S HEATER CONTROL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between rear HO2S terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 9.
		No	Go to the next step.
6	**INSPECT REAR HO2S HEATER** • Inspect the rear HO2S heater. (See 01-40A-57 HEATED OXYGEN SENSOR (HO2S) INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the rear HO2S, then go to Step 9. (See 01-40A-66 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
8	**INSPECT REAR HO2S HEATER CONTROL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between rear HO2S terminal D (wiring harness-side) and PCM terminal 2BE (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0044 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the KOEO or KOER self-test with M-MDS, or HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

DTC P0069[LF, L3]

id0102a3802400

DTC P0069	Manifold absolute pressure/atmospheric pressure correlation
DETECTION CONDITION	• PCM monitors differences between intake manifold vacuum and atmospheric pressure. If the difference is **below –12 kPa {–90 mmHg, –3.5 inHg}** or **above 12 kPa {90 mmHg, 3.5 inHg}** when the following conditions are met, the PCM determines that there is a MAP sensor performance problem. **MONITORING CONDITION** — **12—15 s** from when ignition switch is turned off. — Intake air temperature is **above -10°C {14°F}**. — Engine coolant temperature is **above 70°C {158°F}**. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• MAP sensor malfunction • BARO sensor malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
	VERIFY RELATED REPAIR INFORMATION AVAILABILITY • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY STORED DTC** • Turn the ignition switch to off then start the engine. • Have DTC P0107, P0108, P2228 or P2229 been stored?	Yes	Inspect and repair DTC P0107, P0108, P2228 or P2229.
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0069 on the FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for the DTC on the FREEZE FRAME DATA.
5	**INSPECT MAP SENSOR STUCK OPEN OR CLOSED** • Inspect MAP sensor. (See 01-40A-53 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION[LF, L3].) • Is the MAP sensor normal?	Yes	Go to the next step.
		No	Replace the MAP sensor, then go to step 7. (See 01-40A-53 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR REMOVAL/INSTALLATION[LF, L3].)
6	**INSPECT BARO SENSOR** • Inspect the BARO sensor. (See 01-40A-72 BAROMETRIC PRESSURE (BARO) SENSOR INSPECTION[LF, L3].) • Is the BARO sensor normal?	Yes	Go to the next step.
		No	Replace the PCM, then go to the next step. (See PCM REMOVAL/INSTALLATION [LF, L3].)
7	**VERIFY TROUBLESHOOTING OF DTC P0069 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

DTC P0101[LF, L3]

id0102a3803100

DTC P0101	MAF circuit range/performance problem
DETECTION CONDITION	• The PCM monitors mass intake air flow amount when the engine is running. — If mass intake air flow amount is **above 50 l/s (L3), above 42 l/s (LF)** for **5 s** and engine speed is **below 2,000 rpm** with engine running, PCM determines that detected mass intake air flow amount is too high. — If mass intake air flow amount is **below 6.0—57.8 l/s(L3) below 5.5—49.6 l/s (LF)** (The value depends on engine speed.) for **5 s** and engine speed is **above 1,000 rpm** with engine running and throttle opening angle is **above 50%**, PCM determines that detected mass intake air flow amount is too low. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• MAF sensor malfunction • Electrical corrosion in MAF RETURN circuit • Voltage drops in ground circuit

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to next step.
		No	Record FREEZE FRAME DATA on repair order, then go to next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to available repair information. • If vehicle is not repaired, go to next step.
		No	Go to next step.
3	**VERIFY CURRENT INPUT SIGNAL STATUS IS CONCERN INTERMITTENT OR CONSTANT** • Connect M-MDS to DLC-2. • Start the engine. • Access ECT, MAF, TP and RPM PIDs using M-MDS. • Warm-up engine until ECT PID is **above 70°C {158°F}**. • Idle engine for **5 s or more**. **Caution** • **While driving, always operate the vehicle in a safe and lawful manner.** • Drive the vehicle under the following two conditions: **Condition 1** — TP PID: **50—87.5%** — RPM PID: **above 1,000 rpm** — 4th gear (MTX), D range (ATX) **Condition 2** — TP PID: **above 80%** — RPM PID: **below 2,000 rpm** — Gear in • Is PENDING CODE for this DTC present?	Yes	Go to next step.
		No	Intermittent concern exists. Go to INTERMITTENT CONCERNS TROUBLESHOOTING procedure. (See 01-03A-66 INTERMITTENT CONCERN TROUBLESHOOTING[LF, L3])

STEP	INSPECTION		ACTION
4	**CHECK MAF SENSOR TERMINALS FOR ELECTRICAL CORROSION** • Turn ignition switch to OFF. • Disconnect MAF sensor connector. • Check for poor connection (damaged, pulled-out terminals, corrosion, etc.). • Is any problem corrosion found?	Yes	Repair or replace suspected terminal or MAF sensor, then go to Step 6.
		No	Go to next step.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect PCM connector. • Check for poor connection (damaged, pulled-out pins, corrosion, etc.). • Is there any malfunction?	Yes	Repair terminal, then go to next step.
		No	Go to next step.
6	**VERIFY TROUBLESHOOTING OF DTC P0101 COMPLETED** • Make sure to connect all disconnected connectors. • Turn ignition switch to ON (Engine OFF). • Clear DTC from PCM memory using M-MDS. • Start the engine. • Warm-up engine until ECT PID is **above 70°C {158°F}**. • Idle engine for **5 s or more**. **Caution** • **While performing the Drive Mode, always operate the vehicle in a safe and lawful manner.** • Drive the vehicle under the following two conditions: **Condition 1** — TP PID: **50—87.5%** — RPM PID: **above 1,000 rpm** — 4th gear (MTX), D range (ATX) **Condition 2** — TP PID: **above 80%** — RPM PID: **below 2,000 rpm** — Gear in • Is PENDING CODE for this DTC present?	Yes	Replace PCM, then go to next step.
		No	Go to next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3]) • Is any DTC present?	Yes	Go to applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3])
		No	Troubleshooting completed.

DTC P0102[LF, L3]

id0102a3803200

DTC P0102	MAF sensor circuit low input
DETECTION CONDITION	• The PCM monitors input voltage from the MAF sensor when the engine running. If the input voltage is **below 0.21 V**, the PCM determines that the MAF circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• MAF sensor malfunction • Connector or terminal malfunction • Short to ground in wiring harness between MAF/IAT sensor terminal C and PCM terminal 1AK*1, 1AC*2 • Open circuit in wiring harness between MAF/IAT sensor terminal C and PCM terminal 1AK*1, 1AC*2 • Open circuit in wiring harness between main relay and MAF/IAT sensor terminal A • PCM malfunction

*2 : Except for California emission regulation applicable model with LF ATX

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT POOR CONNECTION OF MAF SENSOR CONNECTOR** • Turn the ignition switch off. • Disconnect the MAF/IAT sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion.) • Is there any malfunction?	Yes	Repair or replace the terminals, then go to Step 8.
		No	Go to the next step.
4	**INSPECT POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch to the ON position. (Engine off) • Inspect voltage at the MAF/IAT sensor terminal A (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect for open circuit in wiring harness between MAF/IAT sensor terminal B (wiring harness-side) and main relay. Repair or replace wiring harness, then go to Step 8.
5	**INSPECT POOR CONNECTION OF PCM CONNECTOR** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion.) • Is there any malfunction?	Yes	Repair the terminal, then go to Step 8.
		No	Go to the next step.
6	**INSPECT MAF SENSOR SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Remove the PCM with the PCM connector connected. • Inspect for continuity between MAF/IAT sensor terminal C (wiring harness-side) and PCM terminal 1AK*1, 1AC*2 (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 8.
7	**INSPECT MAF SENSOR SIGNAL CIRCUIT FOR SHORTS** • Inspect for continuity between following terminals: — MAF/IAT sensor terminal C (wiring harness-side) and body ground — MAF/IAT sensor connector terminal C (wiring harness-side) and B (wiring harness-side) • Is there continuity?	Yes	Repair or the wiring harness, then go to the next step.
		No	Replace the MAF/IAT sensor, then go to the next step. (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/ INSTALLATION[LF, L3].)
8	**VERIFY TROUBLESHOOTING OF DTC P0102 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

*1 : LF MTX, L3 and California emission regulation applicable model with LF ATX
*2 : Except for California emission regulation applicable model with LF ATX

DTC P0103[LF, L3]

id0102a3803300

DTC P0103	MAF sensor circuit high input
DETECTION CONDITION	• The PCM monitors the input voltage from the MAF sensor when the engine running. If the input voltage is **above 4.9 V**, the PCM determines that the MAF circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• MAF sensor malfunction • Connector or terminal malfunction • Short to power supply in wiring harness between MAF/IAT sensor terminal C and PCM terminal 1AK*1, 1AC*2 • Open circuit in wiring harness between MAF/IAT sensor terminal B and PCM terminal 1AR*1, 1AE*2 • PCM malfunction

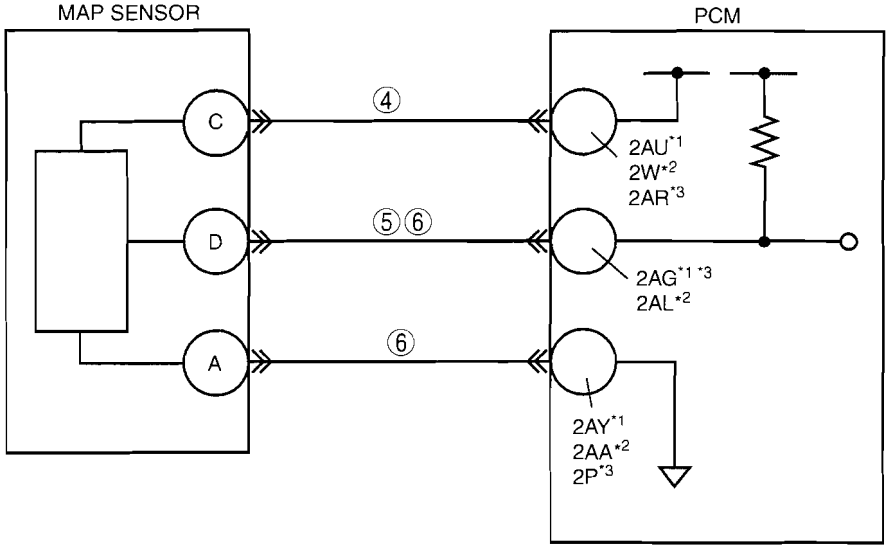
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT POOR CONNECTION OF MAF SENSOR CONNECTOR** • Turn the ignition switch off. • Disconnect the MAF/IAT sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion.) • Is there any malfunction?	Yes	Repair or replace the terminals, then go to Step 7.
		No	Go to the next step.
4	**INSPECT MAF SIGNAL CIRCUIT FOR SHORT TO POWER CIRCUIT** • Turn the ignition switch to the ON position. (Engine off) • Measure the voltage between MAF/IAT sensor terminal C (wiring harness-side) and body ground. • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 7.
5	**INSPECT POOR CONNECTION OF PCM CONNECTOR** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion.) • Is there any malfunction?	Yes	Repair the terminal, then go to Step 7.
		No	Go to the next step.
6	**INSPECT MAF SENSOR GROUND FOR OPEN CIRCUIT** • Remove the PCM with the PCM connector connected. • Inspect for continuity between MAF/IAT sensor terminal B (wiring harness-side) and ground. • Is there continuity?	Yes	Replace MAF/IAT sensor, then go to the next step. (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/ INSTALLATION[LF, L3].)
		No	Repair or replace the wiring harness, then go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0103 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P0107[LF, L3]

id0102a3803400

DTC P0107	MAP sensor circuit low input
DETECTION CONDITION	• The PCM monitors the input voltage from the MAP sensor when the intake air temperature is **above -10 °C {14 °F}**. If the input voltage is below 0.1V, the PCM determines that the MAP sensor circuit has a malfunction. **MONITORING CONDITIONS** — Calculated load: **13—32 %** **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• MAP sensor malfunction • Connector or terminal malfunction • Short to ground in wiring harness between MAP sensor terminal D and PCM terminal 2AG*1 *3, 2AL*2 • MAP sensor signal circuit and MAP sensor ground circuit are shorted each other • PCM malfunction



MAP SENSOR

*1 : California emission regulation applicable model
*2 : Except for California emission regulation applicable model with LF ATX
*3 : Except for California emission regulation applicable model with LF MTX, L3

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY MAP PID WHEN MAP SENSOR CONNECTOR IS DISCONNECTED** • Connect the M-MDS to DLC-2. • Access MAP PID. • Disconnect the MAP sensor connector. • Is the voltage **above 4.9 V**?	Yes	Go to the next step.
		No	Go to Step 5.
4	**INSPECT POWER SUPPLY CIRCUIT VOLTAGE AT MAP SENSOR CONNECTOR** **Note** • If DTC P0122 and P2228 are also retrieved with P0107, go to CONSTANT VOLTAGE troubleshooting procedure. • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between MAP sensor terminal C (wiring harness-side) and body ground. • Is the voltage **within 4.5—5.5 V?**	Yes	Inspect for poor connection at MAP sensor terminal C (wiring harness-side). • Repair or replace the terminal if necessary. • If there is no malfunction, replace the MAP sensor. Then go to Step 7.
		No	Inspect for open circuit in wiring harness between PCM terminal 2AU*1, 2W*2, 2AR*3 (wiring harness-side) and MAP sensor terminal C (wiring harness-side). Repair or replace suspected wiring harness, then go to Step 7.
5	**INSPECT MAP SENSOR SIGNAL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for continuity between MAP sensor terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 7.
		No	Go to the next step.
6	**INSPECT MAP SENSOR SIGNAL AND GROUND CIRCUIT FOR SHORT EACH OTHER** • Inspect for continuity between MAP sensor terminals D and A (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0107 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. (Engine off) • Clear the DTC from the memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

*3 : Except for California emission regulation applicable model with LF MTX, L3

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.

STEP	INSPECTION		ACTION
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT CONNECTION OF MAP SENSOR CONNECTOR** • Turn the ignition switch off. • Verify that the MAP sensor connector is connected securely. • Is connection normal?	Yes	Go to the next step.
		No	Reconnect the connector, then go to Step 9.
4	**INSPECT POOR CONNECTION OF MAP SENSOR CONNECTOR** • Disconnect the MAP sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion.) • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
5	**VERIFY MAP SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between the MAP sensor terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Inspect for open circuit in wiring harness between PCM terminal 2AY*1, 2AA*2, 2P*3 (wiring harness-side) and MAP sensor terminal A (wiring harness-side). Repair or replace suspected harness, then go to Step 9.
6	**INSPECT PCM CONNECTOR** • Disconnect the PCM connector. • Inspect for poor connection at terminals (such as damaged/pulled-out pins, corrosion.) • Is there any malfunction?	Yes	Repair the terminal, then go to Step 9.
		No	Go to the next step.
7	**VERIFY MAP SENSOR SIGNAL CIRCUIT FOR SHORT TO CONSTANT VOLTAGE CIRCUIT** • Inspect for continuity between MAP sensor terminal D and C (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 9.
		No	Go to the next step.
8	**VERIFY MAP SENSOR SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between following: — MAP sensor terminal D (wiring harness-side) and PCM terminal 2AG*1*3, 2AL*2 (wiring harness-side) — MAP sensor terminal C (wiring harness-side) and PCM terminal 2AU*1, 2W*2, 2AR*3 (wiring harness-side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0108 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

*2 : Except for California emission regulation applicable model with LF ATX
*3 : Except for California emission regulation applicable model with LF MTX, L3

DTC P0111[LF, L3]

id0102a3803600

DTC P0111	IAT circuit range/performance problem
DETECTION CONDITION	• If intake air temperature is higher than engine coolant temperature by **18 °C {32.4 °F} for 1.2 s** with ignition switch on*, the PCM determines that there is a intake air temperature sensor circuit range/performance problem. *: Ignition switch on when **6 h** or more has passed since the previous ignition switch off **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• IAT sensor malfunction • Poor connection at MAF/IAT sensor or PCM connector • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify for related service Bulletins and/or on-line repair information availability. • Is any related service information available?	Yes	Perform repair or diagnosis according to the available service information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT POOR CONNECTION OF MAF/IAT SENSOR CONNECTOR** • Turn the ignition switch off. • Disconnect the MAF/IAT sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion.) • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 6.
		No	Go to the next step.
4	**INSPECT IAT SENSOR** • Inspect the IAT sensor. (See 01-40A-52 INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION[LF, L3]) • Is the IAT sensor normal?	Yes	Replace the MAF/IAT sensor, then go to Step 6. (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/ INSTALLATION[LF, L3].)
		No	Go to the next step.
5	**INSPECT POOR CONNECTION OF PCM CONNECTOR** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion.) • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
6	**VERIFY TROUBLESHOOTING OF DTC P0111 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine and run the engine under FREEZE FRAME DATA condition. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P0112[LF, L3]

id0102a3803700

DTC P0112	IAT sensor circuit low input
DETECTION CONDITION	• The PCM monitors the IAT sensor signal. If the PCM detects the IAT sensor voltage **below 0.16 V**, the PCM determines that the IAT sensor circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• IAT sensor malfunction • Poor connection at MAF/IAT sensor or PCM connector • Short to ground in wiring harness between MAF/IAT sensor terminal D and PCM terminal 1AT*1, *3, 1AH*2 • Short each wiring harness IAT signal circuit and IAT ground circuit • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT IAT SENSOR TERMINAL** • Turn the ignition switch off. • Disconnect the MAF/IAT sensor connector. • Inspect for bent terminal of MAF/IAT sensor terminals D and E (part-side). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**CLASSIFY IAT SENSOR MALFUNCTION OR WIRING HARNESS MALFUNCTION** • Connect the M-MDS to DLC-2. • Access IAT PID. • Verify IAT value when disconnecting the MAF/IAT sensor connector. • Does IAT value change?	Yes	Replace the MAF/IAT sensor, then go to Step 7. (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
5	**INSPECT IAT SIGNAL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for continuity between MAF/IAT sensor terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for short to ground, then go to Step 7.
		No	Go to the next step.
6	**INSPECT IAT CIRCUITS FOR SHORT** • Inspect for continuity between MAF/IAT sensor terminals D and E (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for short, then go to Step 7.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0112 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P0113[LF, L3]

id0102a3803800

DTC P0113	IAT sensor circuit high input
DETECTION CONDITION	• The PCM monitors the IAT sensor signal. If the PCM detects the IAT sensor voltage **above 4.84 V**, the PCM determines that IAT sensor circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• IAT sensor malfunction • Poor connection at MAF/IAT sensor or PCM connector • Open circuit in wiring harness between MAF/IAT sensor terminal D and PCM terminal 1AT*1, *3, 1AH*2 • Short to power supply in wiring harness between MAF/IAT sensor terminal D and PCM terminal 1AT*1, *3, 1AH*2 • Open circuit in wiring harness between MAF/IAT sensor terminal E and PCM terminal 1AS*1, 1AA*2, 1AV*3 • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT POOR CONNECTION OF IAT SENSOR CONNECTOR** • Turn the ignition switch off. • Disconnect the MAF/IAT sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion.) • Is there any malfunction?	Yes	Repair or replace the replace the wiring terminal, then go to Step 9.
		No	Go to the next step.
4	**CLASSIFY IAT SENSOR MALFUNCTION OR WIRING HARNESS MALFUNCTION** • Connect the M-MDS to DLC-2. • Access IAT PID. • Connect a jumper wire between MAF/IAT sensor terminals D and E. • Verify IAT value • Is the voltage **below 4.8 V**?	Yes	Replace the MAF/IAT sensor, then go to Step 9. (See 01-40A-49 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
5	**INSPECT IAT SENSOR SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between MAF/IAT sensor terminal D (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for short to power supply, then go to Step 9.
		No	Go to the next step.
6	**INSPECT POOR CONNECTION OF PCM CONNECTOR** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect PCM terminals 1AT*1, *3, 1AH*2 and 1AS*1, 1AA*2, 1AV*3 (wiring harness-side) for tightness using feeler tool. • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
7	**INSPECT IAT SENSOR SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between MAF/IAT sensor terminal D (wiring harness-side) and PCM terminal 1AT*1*3, 1AH*2. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open circuit, then go to Step 9.
8	**INSPECT IAT SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between MAF/IAT sensor terminal E (wiring harness-side) and PCM terminal 1AS*1, 1AA*2, 1AV*3. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0113 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

*1 : California emission regulation applicable model
*2 : Except for California emission regulation applicable model with LF ATX
*3 : Except for California emission regulation applicable model with LF MTX, L3

DTC P0116[LF, L3]

id0102a3803900

DTC P0116	Engine coolant temperature circuit range/performance
DETECTION CONDITION	• The PCM monitors the maximum value and minimum value of engine coolant temperature when the engine is started and **5 min** have been passed after leaving the vehicle **6 h or more**. If difference between maximum and minimum values of engine coolant temperature is **below 6 °C {10.8 °F}** the PCM determines that there is an ECT circuit range/performance problem. **Diagnostic support note** • This is a continuous monitor. (Engine cooling system) • The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ECT sensor malfunction • Connector or terminal malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Engine cooling system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. If the vehicle is not repaired, go to next step.
		No	Go to the next step.
3	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0116 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting for DTC on FREEZE FRAME DATA. (See 01-02A-22 DTC TABLE[LF, L3].)
4	**INSPECT ECT SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect ECT sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
5	**INSPECT ECT SENSOR** • Inspect the ECT sensor. (See 01-40A-49 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the ECT sensor, then go to Step 8.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion.) • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.

STEP	INSPECTION		ACTION
7	**COMPARE ECT PID VALUE** • Prepare a new ECT sensor. • Clear the DTC from the PCM memory using the M-MDS. • Connect the ECT sensor connector to the new ECT sensor without installing to the engine. • Turn the ignition switch to the ON position and record the ECT PID value. • Replace the malfunction ECT sensor with new one. • Start the engine and wait for 5 min. • Record the ECT PID value. • Is the difference between ECT PID values more than 6 °C {42 °F}?	Yes	Go to the next step.
		No	Inspect the thermostat. • If the thermostat is normal, go to the next step. • If the thermostat is not normal, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0116 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using M-MDS. • Start the engine and warm it up to completely. • Is the PENDING CODE for this DTC present?	Yes	Replace PCM, then go to next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is there any DTC present?	Yes	Go to applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P0117[LF, L3]

id0102a3804000

DTC P0117	ECT sensor circuit low input
DETECTION CONDITION	• The PCM monitors the ECT sensor signal. If the PCM detects the ECT sensor voltage **below 0.2 V**, the PCM determines that the ECT sensor circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (Engine cooling system). • The MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ECT sensor malfunction • Connect or terminal malfunction • Short to ground in wiring harness between ECT sensor terminal A and PCM connector terminal 2AH*1 *3, 2AK*2 • Short each wiring harness ECT signal circuit and ECT ground circuit • PCM malfunction

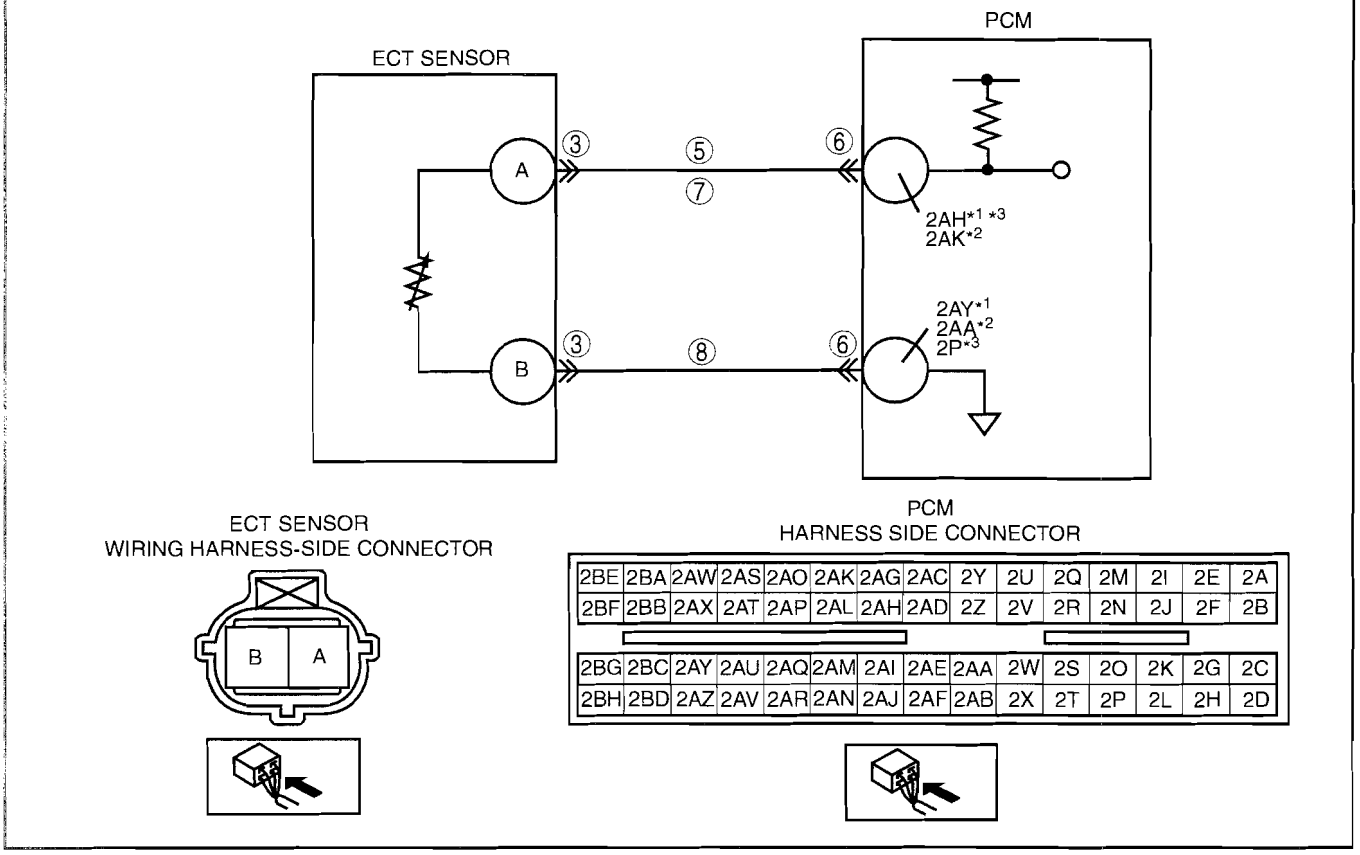
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Engine cooling system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TERMINAL BENT** • Turn the ignition switch off. • Disconnect the ECT sensor connector. • Inspect for bent of ECT sensor terminals A and B (part-side). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**CLASSIFY ECT SENSOR MALFUNCTION OR WIRING HARNESS MALFUNCTION** • Connect the M-MDS to DLC-2. • Access ECT PID. • Verify ECT value when disconnecting ECT sensor connector. • Does the ECT value change?	Yes	Replace the ECT sensor, then go to Step 7. (See 01-40A-49 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
5	**INSPECT ECT SIGNAL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between ECT sensor terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for short to ground, then go to Step 7.
		No	Go to the next step.
6	**INSPECT ECT CIRCUIT FOR SHORT WIRING HARNESSES** • Inspect for continuity between ECT sensor terminal A and B (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for short, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0117 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine, or perform the KOEO or KOER self-test. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P0118[LF, L3]

id0102a3804100

DTC P0118	ECT sensor circuit high input
DETECTION CONDITION	• The PCM monitors the ECT sensor signal. If the PCM detects the ECT sensor voltage is **above 4.58 V**, the PCM determines that the ECT sensor circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (Engine cooling system). • The MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ECT sensor malfunction • Connect or terminal malfunction • Open circuit in wiring harness between ECT sensor terminal A and PCM terminal 2AH*1 *3, 2AK*2 • Short to power supply in wiring harness between ECT sensor terminal A and PCM terminal 2AH*1 *3, 2AK*2 • Open circuit in wiring harness between ECT sensor terminal B and PCM terminal 2AY*1, 2AA*2, 2P*3 • PCM malfunction



*1 : California emission regulation applicable model
*2 : Except for California emission regulation applicable model with LF ATX
*3 : Except for California emission regulation applicable model with LF MTX, L3

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Engine cooling system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.

STEP	INSPECTION		ACTION
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT POOR CONNECTION OF ECT SENSOR CONNECTOR** • Turn the ignition switch off. • Disconnect ECT sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion.) • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**CLASSIFY ECT SENSOR MALFUNCTION OR WIRING HARNESS MALFUNCTION** • Connect the M-MDS to the DLC-2. • Access ECT PID. • Connect a jumper wire between ECT sensor terminals A and B. • Verify the ECT value. • Is the voltage **4.6 V or below**?	Yes	Replace the ECT sensor, then go to Step 9.
		No	Go to the next step.
5	**INSPECT ECT SENSOR SIGNAL CIRCUIT FOR SHORT TO POWER** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between ECT sensor terminal A (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for short to power supply, then go to Step 9.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion.) • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
7	**INSPECT ECT SENSOR SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect the continuity between ECT sensor terminal A (wiring harness-side) and PCM terminal 2AH*1, 2AK*2, 2AH*3. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open circuit, then go to Step 9.
8	**INSPECT ECT SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between ECT sensor terminal B (wiring harness-side) and PCM terminal 2AY*1, 2AA*2, 2P*3. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0118 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine, or perform the KOEO or KOER self-test. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

*3 : Except for California emission regulation applicable model with LF MTX, L3

DTC P0122[LF, L3]

id0102a3804200

DTC P0122	TP sensor No.1 circuit low input
DETECTION CONDITION	• If the PCM detects the TP sensor voltage is **below 0.1 V*3, 0.2 V*4** while the engine running to on, the PCM determines that the TP circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction conditions in first drive cycles. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• TP sensor malfunction • Connector or terminal malfunction • Short to ground in wiring harness between TP sensor terminal A and PCM terminal 2AK*1, 2M*2 • Open circuit in wiring harness between TP sensor terminal A and PCM terminal 2AK*1, 2M*2 • Short to ground in wiring harness between TP sensor terminal B and PCM terminal 2AO*1, 2K*2 • Open circuit in wiring harness between TP sensor terminal B and PCM terminal 2AO*1, 2K*2

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to available repair information. • If vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**CLASSIFY TP SENSOR OR HARNESS MALFUNCTION** • Connect M-MDS. • Access TP1 PID. • Disconnect throttle body connector. • Connect a jumper wire between throttle body terminals A and B (wiring harness-side). • Is the voltage **above 4.9 V**?	Yes	Go to the next step.
		No	Go to Step 5.
4	**INSPECT TP SENSOR** • Inspect the TP sensor. (See 01-40A-54 THROTTLE POSITION (TP) SENSOR INSPECTION[LF, L3].) • Is TP sensor okay?	Yes	Inspect for poor throttle body connector terminal B connection. Repair or replace if necessary, then go to Step 8.
		No	Replace the throttle body, then go to Step 8.
5	**INSPECT POWER SUPPLY CIRCUIT VOLTAGE AT THROTTLE BODY CONNECTOR** **Note** • If DTC P0107 and P2228 are also retrieved with P0122, go to CONSTANT VOLTAGE troubleshooting procedure. • Turn the ignition switch to the ON position (Engine off). • Measure the voltage at throttle body terminal B (wiring harness-side). • Is the voltage **within 4.5—5.5 V**?	Yes	Go to next step.
		No	Repair or replace open circuit between throttle body connector terminal B (wiring harness-side) and PCM connector terminal 2AO*1, 2K*2 (wiring harness-side). Then, then go to Step 8.
6	**VERIFY TP1 SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between the following terminals: — Throttle body terminal A (wiring harness-side) and PCM terminal 2AK*1, 2M*2 (wiring harness-side) — Throttle body terminal B (wiring harness-side) and PCM terminal 2AO*1, 2K*2 (wiring harness-side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the harness, then go to Step 8.
7	**VERIFY TP1 SIGNAL CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between the following terminals and body ground: — Throttle body terminal A (wiring harness-side) and body ground. — Throttle body terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the harness, then go to the next step.
		No	Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0122 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the M-MDS. • Start the engine and warm it up completely. • Is the same DTC present?	Yes	Replace the PCM, then go to next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to available repair information. • If vehicle is not repaired, go to the next step.
		No	Go to next step.

STEP	INSPECTION		ACTION
3	**INSPECT THROTTLE BODY CONNECTOR** • Turn the ignition switch off. • Verify that the throttle body connector is connected securely. • Is the connector normal?	Yes	Go to the next step.
		No	Connect the connector securely, then go to Step 10.
4	**INSPECT THROTTLE BODY CONNECTION FOR POOR CONNECTION** • Disconnect the throttle body connector. • Inspect for poor connection (such as damaged, pulled-out terminals, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
5	**INSPECT TP SENSOR** • Inspect the TP sensor. (See 01-40A-54 THROTTLE POSITION (TP) SENSOR INSPECTION[LF, L3]) • Is the TP sensor okay?	Yes	Go to the next step.
		No	Replace the throttle body, then go to Step 10.
6	**INSPECT TP1 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between throttle body terminal A (wiring harness-side) and body ground. • Is the voltage **above 4.9 V**?	Yes	Repair or replace short to power supply. Then, go to Step 10.
		No	Go to the next step.
7	**VERIFY TP SIGNAL CIRCUIT FOR SHORT TO CONSTANT VOLTAGE CIRCUIT** • Inspect for continuity between throttle body terminals A and B (wiring harness-side). • Is there continuity?	Yes	Repair or replace suspected harness, then go to Step 10.
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged, pulled-out terminals, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 10.
		No	Go to the next step.
9	**VERIFY TP SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between throttle body connector terminal D (wiring harness-side) and PCM connector terminal 2AP*1, 2AO*2 (wiring harness-side). • Is there continuity?	Yes	Repair or replace open circuit between TP sensor connector terminal A (wiring harness-side) and PCM connector terminal 2AP*1, 2O*2 (wiring harness-side). Then, go to the step.
		No	Go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0123 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the M-MDS. • Start the engine and warm it up completely. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

*1 : LF MTX, L3 and California emission regulation applicable model with LF ATX
*2 : Except for California emission regulation applicable model with LF ATX

DTC P0125[LF, L3]

id0102a3804400

DTC P0125	Excessive time to enter closed loop fuel control
DETECTION CONDITION	• The PCM monitors the ECT sensor signal after engine is started at the engine is cold. If the engine coolant temperature does not reach the expected temperature for specified period, the PCM determines that it has taken an excessive amount of time for the engine coolant temperature to reach the temperature necessary to start closed-loop fuel control. **Diagnostic support note** • This is a continuous monitor (Engine cooling system). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ECT sensor malfunction • Cooling system malfunction • Poor connection of connectors • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Engine cooling system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to available Service Information. • If vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY CURRENT INPUT SIGNAL STATUS: IS CONCERN INTERMITTENT OR CONSTANT** • Start the engine. • Warm up the engine completely. • Access ECT PID using the M-MDS. • Is ECT PID **above 60 °C {140 °F}**?	Yes	Intermittent concern exists. Go to INTERMITTENT CONCERNS TROUBLESHOOTING procedure. (See 01-03A-66 INTERMITTENT CONCERN TROUBLESHOOTING[LF, L3].)
		No	Go to the next step.
4	**INSPECT POOR CONNECTION OF ECT SENSOR CONNECTOR** • Turn the ignition switch off. • Disconnect the ECT sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion.) • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
5	**INSPECT ECT SENSOR** • Inspect the ECT sensor. (See 01-40A-49 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION[LF, L3].) • Is it normal?	Yes	Go to the next step.
		No	Replace the ECT sensor, then go to Step 7.
6	**INSPECT POOR CONNECTION OF PCM CONNECTOR** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion.) • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
7	**VERIFY TROUBLESHOOTING OF DTC P0125 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Turn the ignition switch to the ON position (Engine off). • Access ECT PID using the M-MDS. • Wait until ECT PID **below 8 °C {46 °F}***1**/below 19 °C {66 °F}***2. • Start the engine and warm it up completely. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

*1 : California emission regulation applicable model
*2 : Except for California emission regulation applicable model

DTC P0126, P0128[LF, L3]

id0102a3815400

DTC P0126 DTC P0128	Coolant thermostat stuck open
DETECTION CONDITION	**DTC P0126** • If the ECT signal never exceeds **71 °C {160 °F}** after engine start for specified period, PCM determines that the coolant thermostat is stuck open. **MONITORING CONDITIONS** — IAT: **above –10 °C {14 °F}** — Vehicle speed: **over 6.0 km/h {3.7 mph}** **DTC P0128** • The PCM monitors MAF, IAT, VSS and EAT signals and calculate radiator's heat radiation ratio while following monitoring conditions are met. If calculated value exceeds threshold, PCM determines that the coolant thermostat is stuck open. **MONITORING CONDITIONS** — IAT: **above –10°C {14 °F}** — ECT at engine start: **Below 36 °C {97 °F}** — Difference between ECT at engine start and minimum IAT: **Below 6 °C {10.8 °F}** — Vehicle speed: **over 30 km/h {18.6 mph}** **Diagnostic support note** • This is an intermittent monitor (Engine cooling system). • The MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory. • DIAGNOSTIC MONITORING TEST RESULT is available.
POSSIBLE CAUSE	• ECT sensor malfunction • Cooling system malfunction • Coolant thermostat malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Engine cooling system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to available repair information. • If vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FOR OTHER DTCS** • Have other DTCs been stored?	Yes	Repair circuit malfunction for applicable DTCs.
		No	Go to the next step.
4	**INSPECT COOLANT THERMOSTAT FOR WHETHER STUCK OPEN** • Perform coolant thermostat inspection. (See 01-12A-8 THERMOSTAT INSPECTION[LF, L3].) • Is coolant thermostat normal?	Yes	Inspect ECT sensor. Replace ECT sensor if necessary, then go to the next step.
		No	Replace coolant thermostat, then go to the next step.
5	**VERIFY MONITORING CONDITION FOR REPAIR VERIFICATION** • Make sure to reconnect all disconnected connectors. • Cool down engine. **Note** • If workshop inside and outside temperature difference is significant, PCM might not operate thermostat monitor. Therefore, it is recommended to cool down engine out of workshop. • Turn the ignition switch to the ON position (Engine off). • Clear DTC from PCM memory using M-MDS. • Access ECT, IAT PIDs and make sure that each value is within following specifications. — ECT: **below 36 °C {97 °F}** (for P0128 only) — Difference between ECT and IAT: **Below 6 °C {43°F}** • Is there any PID that is out of specification?	Yes	Take corrective action (e.g. cool down engine), then repeat this step.
		No	Go to the next step for DTC P0126 or go to Step 7 for DTC P0128.

STEP	INSPECTION		ACTION
6	**VERIFY TROUBLESHOOTING OF DTC P0126 COMPLETED** • Start engine and turn off E/L and A/C. • Access DIAGNOSTIC MONITORING TEST RESULTS using M-MDS and monitor TEST #10:E1:81 (ECT). **Note** • This test requires actual driving. Chassis roller cannot be used for this test. • During test drive, constant speed should be maintained, although 2 or 3 stops during every **5 minutes** of driving time (e.g. for traffic signals) is acceptable. Stop-and-go (e.g. in case of traffic congestion) is not acceptable during the test period. • Test period depends on ECT at engine start. (e.g. if ECT is **–10 °C {14 °F}**, monitoring period is **20 minutes** and ECT is **30 °C {86 °F}**, monitoring period is **8 minutes**) • Verify TEST #10:E1:81 (ECT) value. • Is value above minimum value?	Yes	Go to Step 8.
		No	Replace PCM, then go to Step 8. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
7	**VERIFY TROUBLESHOOTING OF DTC P0128 COMPLETED** • Start engine and turn off E/L and A/C. • Access DIAGNOSTIC MONITORING TEST RESULTS using M-MDS and monitor TEST #10:E1:80 (Heat radiation ratio) or #10:E1:81 (ECT). **Note** • This test requires actual driving. Chassis roller cannot be used for this test. • During test drive, constant speed should be maintained, although 2 or 3 stops (e.g. for traffic signals) is acceptable. Stop-and-go (e.g. in case of traffic congestion) is not acceptable during the test period. • Verify TEST #10:E1:80 (Heat radiation ratio) and #10:E1:81 (ECT) value. • Are value of TEST #10:E1:80 (Heat radiation ratio) below maximum value and value of TEST #10:E1:81 (ECT) above minimum value?	Yes	Go to the next step.
		No	Replace PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is there any DTC present?	Yes	Go to applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P0130[LF, L3]

id0102a3829500

California Emission Regulation Applicable Mode

DTC P0130	Front HO2S circuit problem
DETECTION CONDITION	• The PCM monitors the front HO2S impedance when under the front HO2S heater control. If the impedance is **more than 500 ohms**, the PCM determines that there is a front HO2S circuit problem. **Diagnostic support note** • This is a continuous monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S malfunction • Connector or terminal malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 6.
		No	Go to the next step.
4	**INSPECT FRONT HO2S** • Inspect the front HO2S. (See 01-40A-57 HEATED OXYGEN SENSOR (HO2S) INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the front HO2S, then go to Step 6. (See 01-40A-66 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
6	**VERIFY TROUBLESHOOTING OF DTC P0130 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the KOEO or KOER self-test with M-MDS, or HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

DTC P0131[LF, L3]

id0102a3804600

California Emission Regulation Applicable Mode

DTC P0131	Front HO2S circuit low input
DETECTION CONDITION	• The PCM monitors the input voltage from the front HO2S and the front HO2S output current when the engine is running. If the input voltage is **less than 1.8 V** or the output current is **less than –5 mA**, the PCM determines that the front HO2S circuit voltage is low. **Diagnostic support note** • This is a continuous monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S malfunction • Connector or terminal malfunction • Open circuit in wiring harness between front HO2S terminal A and PCM terminal 2AD • Short to ground in wiring harness between front HO2S terminal A and PCM terminal 2AD • Open circuit in wiring harness between front HO2S terminal B and PCM terminal 2Z • Short to ground in wiring harness between front HO2S terminal B and PCM terminal 2Z • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**VERIFY RELATED PENDING OR STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the pending code or stored DTCs using the M-MDS. • Is other DTC present?	Yes	Go to the appropriate DTC troubleshooting procedures. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0131 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA. (See 01-02A-22 DTC TABLE[LF, L3].)
5	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
6	**INSPECT FRONT HO2S CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between the front HO2S terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 10.
		No	Go to the next step.
7	**INSPECT FRONT HO2S** • Inspect the front HO2S. (See 01-40A-57 HEATED OXYGEN SENSOR (HO2S) INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the front HO2S, then go to Step 10. (See 01-40A-66 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
9	**INSPECT FRONT HO2S CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between the following circuits: — Front HO2S terminal A (wiring harness-side) and PCM terminal 2AD (wiring harness-side) — Front HO2S terminal B (wiring harness-side) and PCM terminal 2Z (wiring harness-side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0131 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the KOEO or KOER self-test with M-MDS, or HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

Except for California Emission Regulation Applicable Model

DTC P0131	Front HO2S circuit low input
DETECTION CONDITION	• The PCM monitors the input voltage from the front HO2S while the engine is running. If the input voltage is **above 1.0 V** for **2 s**, the PCM determines that the front HO2S circuit voltage is low. **Diagnostic support note** • This is a continuous monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • Are any DTCs is stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S malfunction • Connector or terminal malfunction • Open circuit in wiring harness between front HO2S terminal F and PCM terminal 2Z • Short to ground in wiring harness between front HO2S terminal F and PCM terminal 2Z • Open circuit in wiring harness between front HO2S terminal D and PCM terminal 2AC • Short to ground in wiring harness between front HO2S terminal D and PCM terminal 2AC • Open circuit in wiring harness between front HO2S terminal B and PCM terminal 2AD • Short to ground in wiring harness between front HO2S terminal B and PCM terminal 2AD • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**VERIFY RELATED PENDING OR STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the pending code or stored DTCs using the M-MDS. • Are other DTCs present?	Yes	Go to the appropriate DTC troubleshooting procedures. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is the DTC P0131 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA. (See 01-02A-22 DTC TABLE[LF, L3].)
5	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
6	**INSPECT FRONT HO2S CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between the following terminals and body ground: — Front HO2S terminal B (wiring harness-side) and body ground — Front HO2S terminal D (wiring harness-side) and body ground — Front HO2S terminal F (wiring harness-side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 10.
		No	Go to the next step.
7	**INSPECT FRONT HO2S** • Inspect the front HO2S. (See 01-40A-57 HEATED OXYGEN SENSOR (HO2S) INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the front HO2S, then go to Step 10. (See 01-15A-1 EXHAUST SYSTEM REMOVAL/ INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
9	**INSPECT FRONT HO2S CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between the following circuits: — Front HO2S terminal B (wiring harness-side) and PCM terminal 2AD (wiring harness-side) — Front HO2S terminal D (wiring harness-side) and PCM terminal 2AC (wiring harness-side) — Front HO2S terminal F (wiring harness-side) and PCM terminal 2Z (wiring harness-side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0131 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the KOEO or KOER self-test. (See 01-02A-16 KOEO/KOER SELF TEST[LF, L3].) • Is the DTC P0131 present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

DTC P0132[LF, L3]

id0102a3804700

California Emission Regulation Applicable Model

DTC P0132	Front HO2S circuit high input
DETECTION CONDITION	• The PCM monitors the input voltage from the front HO2S and the front HO2S output current when the engine is running. If the input voltage is **more than 3.8 V** or the output current is **more than 5 mA**, the PCM determines that the front HO2S circuit voltage is high. **Diagnostic support note** • This is a continuous monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S malfunction • Connector or terminal malfunction • Short to power supply in wiring harness between front HO2S terminal A and PCM terminal 2AD • Short to power supply in wiring harness between front HO2S terminal B and PCM terminal 2Z • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING OR STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the pending code or stored DTCs using the M-MDS. • Is other DTC present?	Yes	Go to the appropriate DTC troubleshooting procedures. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0132 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA. (See 01-02A-22 DTC TABLE[LF, L3].)
5	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
6	**INSPECT FRONT HO2S CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between the following terminals and body ground: — Front HO2S terminal A (wiring harness-side) and body ground — Front HO2S terminal B (wiring harness-side) and body ground • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 9.
		No	Go to the next step.
7	**INSPECT FRONT HO2S** • Inspect the front HO2S. (See 01-40A-57 HEATED OXYGEN SENSOR (HO2S) INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the front HO2S, then go to Step 9. (See 01-40A-66 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0132 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the KOEO or KOER self-test with M-MDS, or HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

Except for California Emission Regulation Applicable Model

DTC P0132	Front HO2S circuit high input
DETECTION CONDITION	• The PCM monitors the input voltage from the front HO2S when the engine is running. If the input voltage is **less than 1.0 V** for **2 s**, the PCM determines that the front HO2S circuit voltage is high. **Diagnostic support note** • This is a continuous monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • Are any DTCs is stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S malfunction • Connector or terminal malfunction • Short to power supply in wiring harness between front HO2S terminal F and PCM terminal 2Z • Short to power supply in wiring harness between front HO2S terminal D and PCM terminal 2AC • Short to power supply in wiring harness between front HO2S terminal B and PCM terminal 2AD • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.

STEP	INSPECTION		ACTION
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING OR STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the pending code or stored DTCs using the M-MDS. • Are other DTCs present?	Yes	Go to the appropriate DTC troubleshooting procedures. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is the DTC P0132 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA. (See 01-02A-22 DTC TABLE[LF, L3].)
5	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
6	**INSPECT FRONT HO2S CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between the following terminals and body ground: — Front HO2S terminal B (wiring harness-side) and body ground — Front HO2S terminal D (wiring harness-side) and body ground — Front HO2S terminal F (wiring harness-side) and body ground • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 9.
		No	Go to the next step.
7	**INSPECT FRONT HO2S** • Inspect the front HO2S. (See 01-40A-57 HEATED OXYGEN SENSOR (HO2S) INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the front HO2S, then go to Step 9. (See 01-15A-1 EXHAUST SYSTEM REMOVAL/ INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0132 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the KOEO or KOER self-test. (See 01-02A-16 KOEO/KOER SELF TEST[LF, L3].) • Is the DTC P0132 present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

DTC P0133[LF, L3]

id0102a3804800

DTC P0133	Front HO2S circuit problem
DETECTION CONDITION	• The PCM monitors the peak differential value of oxygen sensor signal after A/F fluctuation being provided when the following conditions are met. If the peak differential value is lower than the threshold value. • The PCM determines that the front HO2S circuit is slow **MONITORING CONDITIONS** — HO2S heater, HO2S, and TWC Repair Verification Drive Mode — Following conditions are met: • Front HO2S heater monitor is completed. • Fuel system loop status is closed loop fuel control. — Engine speed: **1,500—3,500 rpm (MTX), 1,350—3,500 rpm (ATX)** — Charging efficiency: **18—60 % *1, 21—60 % *2** (at engine speed: **2,500 rpm**) — Intake air volume: **5—40 g/s** — Engine coolant temperature **above 70 °C {158 °F}** **Diagnostic support note** • This is an intermittent monitor. (HO2S) • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • DIAGNOSTIC MONITORING TEST RESULTS is available. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S deterioration • Front HO2S malfunction • Front HO2S looseness • Fuel pump malfunction • Clogged or restricted fuel filter (built-in fuel pump unit) • Fuel leakage in fuel line between fuel distribution pipe and fuel pump • Exhaust system leakage • Purge solenoid valve malfunction • Improper connection purge solenoid hose • Insufficient compression • Engine malfunction (Engine coolant leakage)

*1 : California emission regulation applicable model
*2 : Except for California emission regulation applicable model

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service information. If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING AND STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the pending or stored DTCs using the M-MDS. • Is the DTC P0443 also present?	Yes	Go to DTC P0443 troubleshooting procedures, then go to Step 13.
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is the DTC P0133 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA. (See 01-02A-22 DTC TABLE[LF, L3].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Warm up the engine. • Access O2S11 PID using the M-MDS. • Inspect PID under following accelerator pedal conditions in PARK (ATX) or NEUTRAL (MTX). • Is PID normal? — **−1.0 —1.0 A** when idle — **More than 0.25 mA** just after release of accelerator pedal (lean condition).	Yes	Go to Step 8.
		No	Go to the next step.
6	**INSPECT INSTALLATION OF FRONT HO2S** • Inspect if the front HO2S is loosely installed. • Is the front HO2S installed securely?	Yes	Go to the next step.
		No	Retighten the front HO2S, then go to Step 13.
7	**INSPECT GAS LEAKAGE FROM EXHAUST SYSTEM** • Visually inspect if there is any gas leakage is found between the exhaust manifold and front HO2S. • Is there gas leakage?	Yes	Repair or replace the malfunctioning exhaust part, then go to Step 13.
		No	Replace the sensor, then go to Step 13.
8	**INSPECT LONG TERM FUEL TRIM** • Access the LONGFT1 PID. • Compare it with FREEZE FRAME DATA recorded at Step 1. • Is it below FFD value?	Yes	The engine is driven under rich condition. Go to the next step.
		No	The engine is driven under lean condition. Go to Step 10.
9	**INSPECT FUEL LINE PRESSURE (EXCESSIVE FUEL LINE PRESSURE)** • Turn the ignition switch off. • Inspect the fuel line pressure while the engine running. (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].) • Is the fuel line pressure normal?	Yes	Go to Step 12.
		No	Inspect the fuel pump maximum pressure, and fuel return pipe for clogging. (See 01-14A-20 FUEL PUMP UNIT INSPECTION[LF, L3].) • If there is any problem, repair or replace the parts. • If all items above are normal, replace the fuel pump unit. Then go to Step 13.
10	**INSPECT FUEL LINE PRESSURE (LOW FUEL LINE PRESSURE)** • Turn the ignition switch off. • Inspect the fuel line pressure while the engine running. (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].) • Is the fuel line pressure normal?	Yes	Go to Step 12.
		No	Go to the next step.

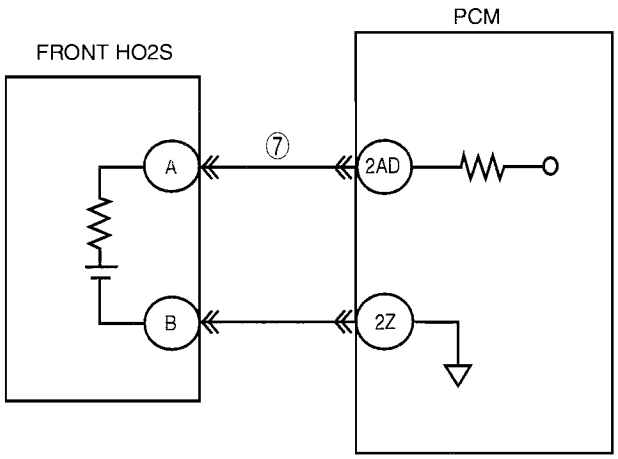
STEP	INSPECTION		ACTION
11	**INSPECT FUEL LINE FROM FUEL PUMP TO FUEL DELIVERY PIPE** • Visually inspect the fuel line for any leakage. • Is there fuel leakage?	Yes	Replace the fuel line, then go to Step 13.
		No	Inspect the fuel filters for the following: • Foreign material or stain inside the fuel filter (low-pressure side) Perform the following actions according to the result. • If foreign material or stain is found inside the fuel filter (low-pressure side), clean the fuel tank and fuel filter. • If normal, replace the fuel pump unit. Then go to Step 13.
12	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** • Perform the "ENGINE COOLANT LEAKAGE INSPECTION". (See 01-12A-4 ENGINE COOLANT LEAKAGE INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results. Then go to the next step.
13	**VERIFY TROUBLESHOOTING OF DTC P0133 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. (Engine off) • Clear the DTC from the memory using the M-MDS. • Perform the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
14	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P0134[LF, L3]

id0102a3804900

California Emission Regulation Applicable Model

DTC P0134	Front HO2S no activity detected
DETECTION CONDITION	• The PCM monitors the front HO2S element impedance when the following conditions are met. If the front HO2S element impedance is **150 ohms or more**, the PCM determines that front HO2S is not activated. **MONITORING CONDITIONS** — HO2S, HO2S heater and TWC Repair Verification Drive Mode — Following conditions are met • Time from engine start is **above 30 s** (ECT when engine start is **20 °C {68 °F}**). **Diagnostic support note** • This is an intermittent monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S deterioration • Front HO2S heater malfunction • Open circuit or short to ground in wiring harness between front HO2S terminal A and PCM terminal 2AD • Engine malfunction



FRONT HO2S
WIRING HARNESS-SIDE CONNECTOR

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.

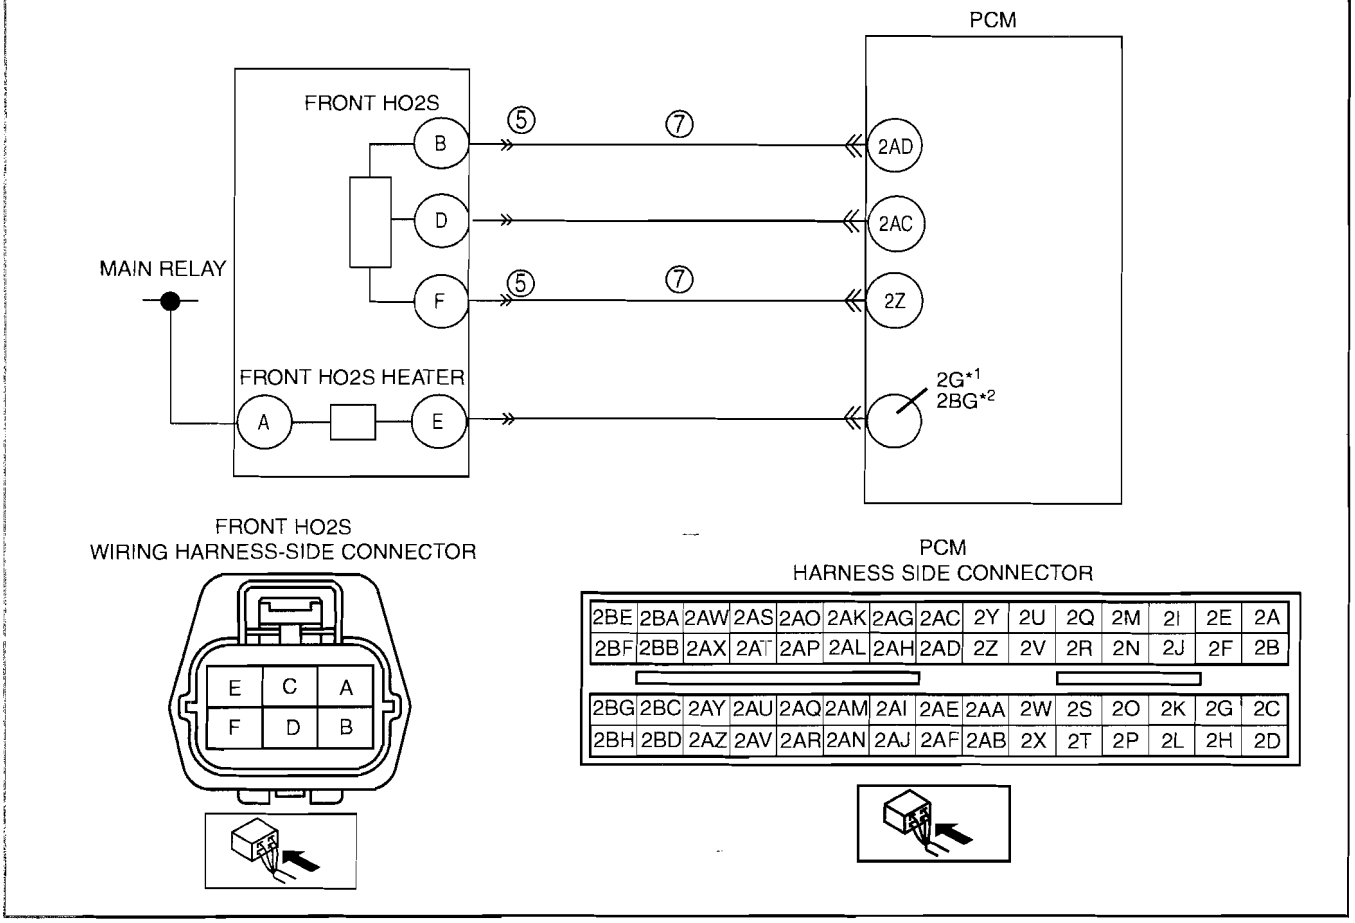
STEP	INSPECTION		ACTION
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING AND STORED DTC** **Note** • If fuel monitor DTC, DTC P0132 is retrieved, ignore it until P0134 is fixed. • Turn the ignition switch off, then to the ON position. (Engine off) • Verify pending and stored DTCs using the M-MDS. • Is other DTC present?	Yes	Go to the appropriate DTC troubleshooting procedures.
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0134 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA. (See 01-02A-22 DTC TABLE[LF, L3].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Warm up engine. • Access O2S11 PID using M-MDS. • Verify PID while racing engine in PARK (ATX) or NEUTRAL (MTX). • Is PID normal? — **Less than 1 mA** when suddenly depressing accelerator pedal (rich condition) — **More than 1 mA** just after releasing the of accelerator pedal (lean condition)	Yes	Go to Step 8.
		No	Go to the next step.
6	**INSPECT INSTALLATION OF FRONT HO2S** • Inspect if the front HO2S is loosely installed. • Is the sensor installed securely?	Yes	Go to the next step.
		No	Install sensor securely, then go to Step 10.
7	**INSPECT GAS LEAKAGE FROM EXHAUST SYSTEM** • Visually inspect if the re is any gas leakage between the exhaust manifold and front HO2S. • Is there gas leakage?	Yes	Repair or replace any malfunctioning exhaust part, then go to Step 10.
		No	• Inspect the following harnesses for open circuit or short to ground, repair or replace wiring harness if necessary. — Front HO2S terminal A (wiring harness-side) to PCM terminal 2AD (wiring harness-side) • If all items above are normal, replace malfunctioning sensor. Then go to Step 10.
8	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** • Perform the ENGINE COOLANT LEAKAGE INSPECTION. (See 01-12A-4 ENGINE COOLANT LEAKAGE INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to inspection results, then go to Step 10.
		No	Go to the next step.
9	**INSPECT ENGINE COMPRESSION** • Inspect engine compression. (See 01-10A-11 COMPRESSION INSPECTION[LF, L3].) • Is it normal?	Yes	Go to the next step.
		No	Perform engine overhaul for repairs, then go to the next step.

STEP	INSPECTION		ACTION
10	**VERIFY TROUBLESHOOTING OF DTC P0134 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. (Engine off) • Clear the DTC from memory using the M-MDS. • Perform the KOEO self-test with M-MDS, or PCM Adaptive Memory Produce Drive Mode and the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

Except for California Emission Regulation Applicable Model

DTC P0134	Front HO2S no activity detected
DETECTION CONDITION	• The PCM monitors the input voltage from front HO2S when the following conditions are met. Under the following monitoring conditions, the input voltage **more than 3.22 V**, the PCM determines that the front HO2S is not activated. **MONITORING CONDITIONS** — HO2S, HO2S heater and TWC Repair Verification Drive Mode — Following conditions are met • Front HO2S heater is turned on **for more than 30 s**. • Battery voltage: **10 —18 V** **Diagnostic support note** • This is an intermittent monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S deterioration • Front HO2S heater malfunction • Leakage exhaust system • Open or short circuit in wiring harness between front HO2S terminal D and PCM terminal 2AC • Open or short circuit in wiring harness between front HO2S terminal B and PCM terminal 2AD • Insufficient compression • Engine malfunction

DTC P0134	Front HO2S no activity detected



*1 : LF ATX
*2 : LF MTX, L3

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING AND STORED DTC** **Note** • If fuel monitor DTC, DTC P0132 is retrieved, ignore it until P0134 is fixed. • Turn the ignition switch off, then to the ON position. (Engine off) • Verify pending and stored DTCs using the M-MDS. • Is the DTC P2237 or P2251 also present?	Yes	Go to the appropriate DTC troubleshooting procedures.
		No	Go to the next step.

STEP	INSPECTION		ACTION
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0134 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA. (See 01-02A-22 DTC TABLE[LF, L3].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Warm up engine. • Access O2S11 PID using the M-MDS. • Verify PID while racing engine in PARK (ATX) or NEUTRAL (MTX). • Is PID normal? — **−1.0 —1.0 A** when idle — **More than 0.25 mA** just after releasing the of accelerator pedal (lean condition)	Yes	Go to Step 8.
		No	Go to the next step.
6	**INSPECT INSTALLATION OF FRONT HO2S** • Inspect if the front HO2S is loosely installed. • Is the sensor installed securely?	Yes	Go to the next step.
		No	Install sensor securely, then go to Step 10.
7	**INSPECT GAS LEAKAGE FROM EXHAUST SYSTEM** • Visually inspect if there is any gas leakage between the exhaust manifold and front HO2S. • Is there gas leakage?	Yes	Repair or replace any malfunctioning exhaust part, then go to Step 10.
		No	• Inspect the following harnesses at wiring harness-side connector terminals for open or short circuit, repair or replace wiring harness if necessary. — Front HO2S terminal B and PCM terminal 2AD — Front HO2S terminal D and PCM terminal 2AC — Front HO2S terminal F and PCM terminal 2Z — Front HO2S terminal E and PCM terminal 2G*1, 2BG*2 • If all items above are normal, replace malfunctioning sensor. Then go to Step 10.
8	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** • Perform the ENGINE COOLANT LEAKAGE INSPECTION. (See 01-12A-4 ENGINE COOLANT LEAKAGE INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to inspection results, then go to Step 10.
		No	Go to the next step.
9	**INSPECT ENGINE COMPRESSION** • Inspect engine compression. (See 01-10A-11 COMPRESSION INSPECTION[LF, L3].) • Is it normal?	Yes	Go to the next step.
		No	Perform engine overhaul for repairs, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0134 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. (Engine off) • Clear the DTC from memory using the M-MDS. • Perform the KOER self-test. (See 01-02A-16 KOEO/KOER SELF TEST[LF, L3].) • Is the DTC P0134 present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

*2 : LF MTX, L3

DTC P0137[LF, L3]

id0102a3805000

Except for California Emission Regulation Applicable Model

DTC P0137	Rear HO2S circuit low input
DETECTION CONDITION	• The PCM monitors input voltage from rear HO2S. If the input voltage from the rear HO2S is below **0.1 V** for **35.2 s** the PCM determines that circuit input is low. **MONITORING CONDITIONS** — HO2S, HO2S heater and TWC repair verification drive mode — Following conditions are met. • Engine speed is **above 1,500 rpm**. • Engine coolant temperature is **above 70 °C {158 °F}**. • Fuel injector control in rear HO2S closed loop control. • The PCM monitors the input voltage from the rear HO2S when the following conditions are met. Under the following monitoring conditions, if the input voltage from the rear HO2S does not even **exceed 0.1 V** though the short term fuel trim is controlled up to **20.5 %** for **9.6 s**, the PCM determines that sensor circuit input is low. **MONITORING CONDITIONS** — HO2S, HO2S heater and TWC repair verification drive mode — Following conditions are met for **above 20.8 s**. • Engine speed is **above 1,500 rpm**. • Engine coolant temperature is **above 70 °C {158 °F}**. **Diagnostic support note** • This is a continuous monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Rear HO2S malfunction • Short to ground in wiring between HO2S terminal A and PCM terminal 2AH*1, 2Q*2 • Open circuit in wiring between rear HO2S terminal A and PCM terminal 2AH*1, 2Q*2 • Open circuit in wiring between rear HO2S terminal B and PCM terminal 2P • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING AND STORED DTC** • Turn the ignition switch off, then to the ON position. (Engine off) • Verify the related PENDING CODE or stored DTCs using M-MDS. • Is other DTC present?	Yes	Go to the appropriate DTC troubleshooting procedures. (See01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0137 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting for DTC on FREEZE FRAME DATA. (See 01-02A-22 DTC TABLE[LF, L3].)
5	**INSPECT REAR HO2S SIGNAL CIRCUIT FOR SHORT TO GROUND AT HARNESS** • Turn the ignition switch to the off. • Disconnect rear HO2S and PCM connectors. • Verify the continuity between following HO2S terminal A (wiring harness side) and body ground. • Is there continuity?	Yes	Replace short to ground circuit, then go to step 8.
		No	Go to the next step.
6	**INSPECT REAR HO2S CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch to the off. • Inspect for continuity between the following terminals: — Rear HO2S terminal A (wiring harness-side) and PCM terminal 2Q (wiring harness-side) — Rear HO2S terminal B (wiring harness-side) and PCM terminal 2P (wiring harness-side) • Is there any continuity?	Yes	Go to next step.
		No	Repair or replace harness for open circuit, then go to Step 8.
7	**INSPECT REAR HO2S SIGNAL CIRCUIT FOR SHORT TO AT REAR HO2S** • Rear HO2S connector disconnected. • Verify the continuity between following rear HO2S sensor terminal A (part side) and body ground. • Is there continuity?	Yes	Replace suspected HO2S then go to the next step.
		No	Go to the next step
8	**VERIFY TROUBLESHOOTING OF DTC P0137 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from memory using the M-MDS. • Perform the KOEO or KOER self-test • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is there any DTC present?	Yes	Go to applicable DTC inspection. (See01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P0138[LF, L3]

id0102a3805100

DTC P0138	Middle*1/Rear*2*3 HO2S circuit high input
DETECTION CONDITION	• The PCM monitors input voltage from middle*1/rear*2*3 HO2S. If the input voltage from the middle*1/rear*2*3 HO2S sensor is **above 1.2 V** for **0.5 s*1/0.8 s*2*3**, the PCM determines that circuit input is high. **Diagnostic support note** • This is a continues monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Middle*1/Rear*2*3 HO2S malfunction • Short to power supply in wiring harness between middle*1/rear*2*3 HO2S terminal A and PCM terminal 2R*1, 2AH*2, 2Q*3 • Middle*1/Rear*2*3 HO2S or PCM terminal shorted • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related service bulletins and/or repair Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to available Service Information. • If vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING OR STORED DTC** • Turn the ignition switch off, then to the ON position. (Engine off) • Verify pending code or stored DTCs using M-MDS. • Is other DTC present?	Yes	Go to the appropriate DTC troubleshooting procedures. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0138 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA. (See 01-02A-22 DTC TABLE[LF, L3].)
5	**INSPECT MIDDLE*1 /REAR*2*3 HO2S SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch off. • Disconnect middle*1/rear*2*3 HO2S connector. • Turn the ignition switch to the ON position. (Engine off) • Measure the voltage between middle*1/rear*2*3 HO2S terminal A (wiring harness-side) and body ground. • Is there any voltage?	Yes	Replace short to power supply, then go to Step 7.
		No	Go to the next step.
6	**VERIFY CURRENT INPUT SIGNAL STATUS** • Start engine. • Access O2S12 PID using M-MDS. • Verify PID while racing engine at least **10 times** in PARK (ATX) or NEUTRAL (MTX). • Does PID stay **above 0.55 V**?	Yes	Replace sensor, then go to the next step. (See 01-40A-66 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0138 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. (Engine off) • Clear the DTC from the memory using the M-MDS. • Run the KOEO or KOER self-test with M-MDS, or PCM adaptive memory procedure drive mode and HO2S heater, HO2S, and TWC repair verification drive mode. (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

*3 : Except for California emission regulation applicable model with LF MTX, L3

DTC P0139[LF, L3]

id0102a3805200

California Emission Regulation Applicable Model

DTC P0139	Middle HO2S circuit problem
DETECTION CONDITION	• The PCM monitors inversion cycle period, middle HO2S output voltage inclination. The PCM detects that the voltage inclinations are below threshold consecutive **5 times** when following conditions are met, the PCM determines that circuit has malfunction. Under the following monitoring conditions, if **0.3 V or more** is detected three times even if fuel cut is performed for **3 s or more**, a circuit malfunction is determined. **MONITORING CONDITIONS** — PCM Adaptive Memory Production, HO2S heater, HO2S, and TWC Repair Verification Drive Mode — Following conditions are met: • Engine speed is **above 500 rpm**. • Engine coolant temperature is **above 70 °C {158 °F}**. **Diagnostic support note** • This is an intermittent monitor. (HO2S) • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • DIAGNOSTIC MONITORING TEST RESULTS is available. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Middle HO2S deterioration • Middle HO2S malfunction • Looseness middle HO2S • Pressure regulator (built-in fuel pump unit) malfunction • Fuel pump malfunction • Fuel filter (built-in fuel pump unit) clogged or restricted • Fuel leakage on fuel line from fuel distribution pipe and fuel pump • Leakage exhaust system • Purge solenoid valve malfunction • Purge solenoid hoses improper connection • Insufficient compression • Engine malfunction (Leakage engine coolant)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING AND STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify pending and /or stored DTCs using the M-MDS. • Is DTC P0443 also present?	Yes	Go to DTC P0443 troubleshooting procedures, then go to Step 13.
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0139 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA. (See 01-02A-22 DTC TABLE[LF, L3].)

STEP	INSPECTION		ACTION
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Warm up the engine. • Access O2S12 PID using M-MDS. • Inspect PID under following accelerator pedal conditions in PARK (ATX) or NEUTRAL (MTX). • Is PID normal? — **More than 0.55 V** when suddenly depress accelerator pedal (rich condition). — **Less than 0.55 V** just after release of accelerator pedal (lean condition).	Yes	Go to Step 8.
		No	Go to the next step.
6	**INSPECT INSTALLATION OF MIDDLE HO2S** • Inspect if the middle HO2S is loosely installed. • Is the sensor installed securely?	Yes	Go to the next step.
		No	Retighten the sensor, then go to Step 13.
7	**INSPECT GAS LEAKAGE FROM EXHAUST SYSTEM** • Visually inspect if there is any gas leakage is found between the exhaust manifold and middle HO2S. • Is there gas leakage?	Yes	Repair or replace malfunctioning faulty exhaust part, then go to Step 13.
		No	Replace sensor, then go to Step 13.
8	**INSPECT LONG TERM FUEL TRIM** • Access LONGFT1 PIDs • Compare it with FREEZE FRAME DATA recorded at Step 1. • Is it below FFD value?	Yes	Engine is driven under rich condition. Go to the next step.
		No	Engine is driven under lean condition. Go to Step 10.
9	**INSPECT FUEL LINE PRESSURE (Excessive fuel line pressure)** • Turn the ignition switch off. • Inspect fuel line pressure while the engine running. (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].) • Is the fuel line pressure normal?	Yes	Go to Step 12.
		No	Inspect fuel pump maximum pressure and fuel return pipe for clogging. (See 01-14A-20 FUEL PUMP UNIT INSPECTION[LF, L3].) • If there is any problem, repair or replace the parts. • If all items above are normal, replace fuel pump unit. Then go to Step 13.
10	**INSPECT FUEL LINE PRESSURE (Low fuel line pressure)** • Turn the ignition switch off. • Inspect fuel line pressure while the engine running. (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].) • Is fuel line pressure normal?	Yes	Go to Step 12.
		No	Go to the next step.
11	**INSPECT FUEL LINE FROM FUEL PUMP TO FUEL DELIVERY PIPE** • Visually inspect the fuel line for any leakage. • Is there fuel leakage?	Yes	Replace the fuel line, then go to Step 13.
		No	Inspect the fuel filters for the following: • Foreign materials or stain inside fuel filter (low-pressure side) Perform the following actions according to the result. • If foreign material or stain is found inside fuel filter (low-pressure side), clean the fuel tank and filter. • If normal, replace fuel pump unit. Then go to Step 13.
12	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** • Perform "ENGINE COOLANT LEAKAGE INSPECTION." (See 01-12A-4 ENGINE COOLANT LEAKAGE INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection results. Then go to the next step.

STEP	INSPECTION		ACTION
13	**VERIFY TROUBLESHOOTING OF DTC P0139 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. (Engine off) • Clear the DTC from the memory using M-MDS. • Perform the "PCM Adaptive Memory Produce Drive Mode" and "HO2S heater, HO2S, and TWC Repair Verification Drive Mode". (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
14	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

Except for California Emission Regulation Applicable Model

DTC P0139	Rear HO2S circuit problem
DETECTION CONDITION	• The PCM monitors the rich (**0.4 V**) to lean (**0.3 V**) response time of the rear HO2S. The PCM measures the response time when the following conditions are met. The PCM determines a rear HO2S response deterioration malfunction when the measured response time is more than the threshold value (**80 ms**) five consecutive times. **MONITORING CONDITIONS** — PCM Adaptive Memory Production, HO2S heater, HO2S, and TWC Repair Verification Drive Mode — Following conditions are met: • During deceleration fuel cut • Engine speed is **above 500 rpm**. • Engine coolant temperature is **above 70 °C {158 °F}**. • Rear HO2S output voltage ia **above 0.4 V**. • The PCM monitors for a time-out malfunction (when rear HO2S remains **above 0.3 V** for longer than a specified period of time during fuel cut control). The PCM measures the amount of time from when the following conditions are met until the rear HO2S output voltage drops **below 0.3 V**. The PCM determines a rear HO2S time-out malfunction when the detected time is more than the threshold value (**6 s**) three consecutive times. **MONITORING CONDITIONS** — PCM Adaptive Memory Production, HO2S heater, HO2S, and TWC Repair Verification Drive Mode — Following conditions are met: • During deceleration fuel cut • Engine speed is **above 500 rpm**. • Engine coolant temperature is **above 70 °C {158 °F}**. • Rear HO2S is activated (**more than 0.55 V**) **Diagnostic support note** • This is an intermittent monitor. (HO2S) • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • DIAGNOSTIC MONITORING TEST RESULTS is available. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Rear HO2S deterioration • Rear HO2S malfunction • Looseness rear HO2S • Pressure regulator (built-in fuel pump unit) malfunction • Fuel pump malfunction • Fuel filter (built-in fuel pump unit) clogged or restricted • Fuel leakage on fuel line from fuel distribution pipe and fuel pump • Leakage exhaust system • Purge solenoid valve malfunction • Purge solenoid hoses improper connection • Insufficient compression • Engine malfunction (Leakage engine coolant)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING AND STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify pending and /or stored DTCs using the M-MDS. • Is DTC P0443 also present?	Yes	Go to DTC P0443 troubleshooting procedures, then go to Step 13.
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0139 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA. (See 01-02A-22 DTC TABLE[LF, L3].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Warm up the engine. • Access O2S12 PID using M-MDS. • Inspect PID under following accelerator pedal conditions in PARK (ATX) or NEUTRAL (MTX). • Is PID normal? — **More than 0.55 V** when suddenly depress accelerator pedal (rich condition). — **Less than 0.55 V** just after release of accelerator pedal (lean condition).	Yes	Go to Step 8.
		No	Go to the next step.
6	**INSPECT INSTALLATION OF REAR HO2S** • Inspect if the rear HO2S is loosely installed. • Is the sensor installed securely?	Yes	Go to the next step.
		No	Retighten the sensor, then go to Step 13.
7	**INSPECT GAS LEAKAGE FROM EXHAUST SYSTEM** • Visually inspect if there is any gas leakage is found between the exhaust manifold and rear HO2S. • Is there gas leakage?	Yes	Repair or replace malfunctioning faulty exhaust part, then go to Step 13.
		No	Replace sensor, then go to Step 13.
8	**INSPECT LONG TERM FUEL TRIM** • Access LONGFT1 PIDs • Compare it with FREEZE FRAME DATA recorded at Step 1. • Is it below FFD value?	Yes	Engine is driven under rich condition. Go to the next step.
		No	Engine is driven under lean condition. Go to Step 10.
9	**INSPECT FUEL LINE PRESSURE (Excessive fuel line pressure)** • Turn the ignition switch off. • Inspect fuel line pressure while the engine running. (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].) • Is the fuel line pressure normal?	Yes	Go to Step 12.
		No	Inspect fuel pump maximum pressure and fuel return pipe for clogging. (See 01-14A-20 FUEL PUMP UNIT INSPECTION[LF, L3].) • If there is any problem, repair or replace the parts. • If all items above are normal, replace fuel pump unit. Then go to Step 13.
10	**INSPECT FUEL LINE PRESSURE (Low fuel line pressure)** • Turn the ignition switch off. • Inspect fuel line pressure while the engine running. (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].) • Is fuel line pressure normal?	Yes	Go to Step 12.
		No	Go to the next step.

STEP	INSPECTION		ACTION
11	**INSPECT FUEL LINE FROM FUEL PUMP TO FUEL DELIVERY PIPE** • Visually inspect the fuel line for any leakage. • Is there fuel leakage?	Yes	Replace the fuel line, then go to Step 13.
		No	Inspect the fuel filters for the following: • Foreign materials or stain inside fuel filter (low-pressure side) Perform the following actions according to the result. • If foreign material or stain is found inside fuel filter (low-pressure side), clean the fuel tank and filter. • If normal, replace fuel pump unit. Then go to Step 13.
12	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** • Perform "ENGINE COOLANT LEAKAGE INSPECTION." (See 01-12A-4 ENGINE COOLANT LEAKAGE INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection results. Then go to the next step.
13	**VERIFY TROUBLESHOOTING OF DTC P0139 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. (Engine off) • Clear the DTC from the memory using M-MDS. • Perform the "PCM Adaptive Memory Produce Drive Mode" and "HO2S heater, HO2S, and TWC Repair Verification Drive Mode". (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
14	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

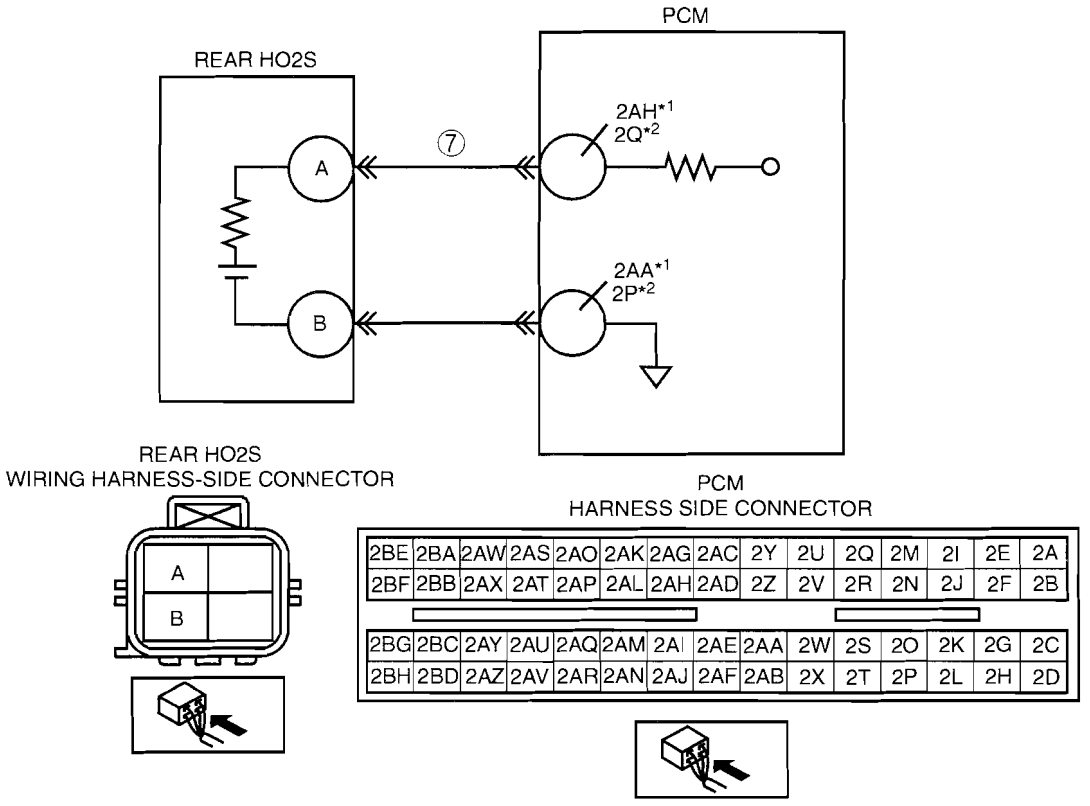
DTC P0140[LF, L3]

id0102a3805300

Except for California Emission Regulation Applicable Model

DTC P0140	Rear HO2S no activity detected
DETECTION CONDITION	• The PCM monitors the input voltage from the rear HO2S when the following conditions are met. if the input voltage never **exceed 0.55 V** though the short term fuel trim is controlled up to **20.5 %** for **9.6 s**, the PCM determines that sensor circuit is not activated. **MONITORING CONDITIONS** — HO2S, HO2S heater and TWC repair verification drive mode — Following conditions are met for above 20.8 s • Engine speed is **above 1,500 rpm**. • Engine coolant temperature is **above 70 °C {158 °F}**. • Rear HO2S voltage is **above 0.1 V** **Diagnostic support note** • This is an intermittent monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.

DTC P0140	Rear HO2S no activity detected
POSSIBLE CAUSE	• Rear HO2S deterioration • Rear HO2S heater malfunction • Leakage exhaust system • Open circuit or short to ground in wiring harness between rear HO2S terminal A and PCM terminal 2AH*1, 2Q*2 • Insufficient compression • Engine malfunction



*1 : LF ATX
*2 : LF MTX, L3

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**VERIFY RELATED PENDING AND STORED DTC** **Note** • If fuel monitor DTC, DTC P0132 is retrieved, ignore it until P0140 is fixed. • Turn the ignition switch off, then to the ON position. (Engine off) • Verify pending and stored DTCs using M-MDS. • Is other DTC present?	Yes	Go to the appropriate DTC troubleshooting procedures. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0140 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA. (See 01-02A-22 DTC TABLE[LF, L3].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Warm up the engine. • Access O2S12 for P0140 PID using the M-MDS. • Verify PID while racing the engine at least **10 times** in PARK (ATX) or NEUTRAL (MTX). • Is PID reading normal? — **More than 0.55 V** at least once during engine racing	Yes	Go to Step 8.
		No	Go to the next step.
6	**INSPECT INSTALLATION OF REAR HO2S** • Check if rear HO2S is loosely installed. • Is sensor installed securely?	Yes	Go to the next step.
		No	Install sensor securely, then go to Step 10.
7	**INSPECT GAS LEAKAGE FROM EXHAUST SYSTEM** • Visually check if any gas leakage is found between exhaust pipe and rear HO2S. • Is there any gas leakage?	Yes	Repair or replace any malfunctioning exhaust part, then go to Step 10.
		No	• Inspect the following wiring harnesses for open or short to ground circuit, repair or replace wiring harness if necessary. — Rear HO2S terminal A (wiring harness-side) to PCM terminal 2AH*1, 2Q*2 (wiring harness-side) • Repair or replace wiring harness if necessary. • If all items above are normal, replace malfunctioning sensor. Then go to Step 10.
8	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** **Warning** • **Removing the radiator cap when the radiator is hot is dangerous. Scalding coolant and steam may shoot out and cause serious injury.** • **When removing the radiator cap, wrap a thick cloth around and turn it slowly.** • Remove radiator cap. • Perform procedure to bleed air from the engine coolant, then run the engine at idle. • Is there any small bubble, which makes the engine coolant white at filling opening? **Note** • Large bubbles are normal since they are remaining air coming out from the engine coolant passage.	Yes	Air gets in from poor sealing on head gasket or other areas between combustion chamber and engine coolant passage. Repair or replace the malfunctioning part, then go to Step 10.
		No	Go to the next step.
9	**INSPECT ENGINE COMPRESSION** • Inspect engine compression. (See 01-10A-11 COMPRESSION INSPECTION[LF, L3].) • Is it normal?	Yes	Go to the next step.
		No	Perform engine overhaul for repairs, then go to the next step.

STEP	INSPECTION		ACTION
10	**VERIFY TROUBLESHOOTING OF DTC P0140 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. (Engine off) • Clear the DTC from the memory using the M-MDS. • Perform the KOER self-test or HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

*1 : LF ATX
*2 : LF MTX, L3

DTC P0144[LF, L3]

id0102a3829600

California Emission Regulation Applicable Model

DTC P0144	Rear HO2S circuit high input
DETECTION CONDITION	• The PCM monitors input voltage from rear HO2S. If the input voltage from the rear HO2S sensor is **above 1.2 V** for **0.5 s**, the PCM determines that circuit input is high. **Diagnostic support note** • This is a continues monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Rear HO2S malfunction • Short to power supply in wiring harness between rear HO2S terminal A and PCM terminal 2Q • Rear HO2S or PCM terminal shorted • PCM malfunction

DTC P0144	Rear HO2S circuit high input

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or repair Information availability. • Is any related repair Information available?	Yes	Perform repair or diagnosis according to available Service Information. • If vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING OR STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify pending code or stored DTCs using M-MDS. • Is other DTC present?	Yes	Go to the appropriate DTC troubleshooting procedures. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0144 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA. (See 01-02A-22 DTC TABLE[LF, L3].)
5	**INSPECT REAR HO2S SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch off. • Disconnect rear HO2S connector. • Turn the ignition switch to the ON position. (Engine off) • Measure the voltage between rear HO2S terminal A (wiring harness-side) and body ground. • Is any voltage reading?	Yes	Replace short to power supply, then go to Step 7.
		No	Go to the next step.

STEP	INSPECTION		ACTION
6	**VERIFY CURRENT INPUT SIGNAL STATUS** • Start engine. • Access O2S13 PID using M-MDS. • Verify PID while racing engine at least **10 times** in PARK (ATX) or NEUTRAL (MTX). • Does PID stay **above 0.55 V**?	Yes	Repair or replace sensor, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0144 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. (Engine off) • Clear the DTC from the memory using the M-MDS. • Perform the KOEO or KOER self-test or HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P0171[LF, L3]

id0102a3818400

California Emission Regulation Applicable Model

DTC P0171	Fuel trim system too lean
DETECTION CONDITION	• PCM monitors short term fuel trim (SHRTFT) and long term fuel trim (LONGFT) values when closed loop fuel control. If the LONGFT and the sum total of these fuel trims exceed preprogrammed criteria, PCM determines that the fuel system is too lean. **Diagnostic support note** • This is a continuous monitor. (Fuel system) • The MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction conditions during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Misfire • Front HO2S deterioration • Front HO2S heater malfunction • MAF sensor malfunction • Pressure regulator malfunction • Fuel pump malfunction • Fuel filter clogged or restricted • Fuel leakage on fuel line from fuel delivery pipe and fuel pump • Fuel return hose clogged • Leakage exhaust system • Purge solenoid valve malfunction • Purge solenoid hoses improper connection • Insufficient compression • Variable valve timing control system improper operation • Air suction in intake-air system malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Fuel system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to available repair information. • If vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn the ignition switch off, then to the ON position (Engine off). • Verify related PENDING CODE or stored DTCs. • Is other DTCs present?	Yes	If misfire DTC is present, go to Step 8. If other DTC is present, go to appropriate DTC troubleshooting procedures. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	If drive ability concern is present, go to Step 8. If not, go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0171 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA.
5	**VERIFY CURRENT INPUT SIGNAL STATUS (IGNITION KEY TO ON/IDLE)** • Access APP1, APP2, ECT, MAF, TP1 and VSS PIDs using M-MDS. (See 01-40A-13 PCM INSPECTION[LF, L3].) • Is there any signal that is far out of specification when ignition switch is ON and engine runs?	Yes	Inspect suspected sensor and excessive resistance in related wiring harnesses. Repair or replace if necessary. Then go to Step 16.
		No	Go to the next step.
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION** • Inspect same PIDs as Step 5 while simulating FREEZE FRAME DATA condition. • Is there any input signal which causes drastic changes?	Yes	Inspect suspected sensor and related wiring harnesses, and repair or replace it. Then go to Step 16.
		No	Go to the next step.
7	**VERIFY CURRENT INPUT SIGNAL STATUS OF FRONT HO2S** • Access O2S11 for P0171 PID using M-MDS. • Check PID under following accelerator pedal condition (in PARK (ATX) or NEUTRAL (MTX)). • Is PID reading normal? — **Less than 1 mA** when accelerator pedal is suddenly depress (rich condition) — **More than 1 mA** just after release of accelerator pedal (lean condition)	Yes	Inspect for air suction at followings due to cracks, damages and loosening parts: • From air cleaner to throttle body • From throttle body to dynamic chamber • From dynamic chamber to intake manifold • Vacuum hoses **Note** • Engine speed may change when rust penetrating agent is sprayed on the air suction area. Repair or replace any faulty part, then go to Step 16.
		No	Visually inspect for any gas leakage between exhaust manifold and front HO2S. • If there is no leakage, replace FRONT HO2S. Then go to Step 16.
8	**INSPECT MAF PID** • Start engine. • Access MAF PID using M-MDS. • Verify that MAF PID changes quickly according to race engine RPM. • Is MAF PID response normal?	Yes	Go to the next step.
		No	Replace Mass air flow sensor, then go to Step 16.
9	**INSPECT FOR EXCESSIVE AIR SUCTION OF INTAKE AIR SYSTEM** • Visually inspect for loosen, cracks or damages hoses on intake air system. • Is there any malfunction?	Yes	Repair or replace source of air suction, then go to Step 16.
		No	Go to the next step.

STEP	INSPECTION		ACTION
10	**INSPECT FUEL LINE PRESSURE** • Turn the ignition switch off. **Note** • If engine won't start, inspect fuel line pressure with ignition switch ON. • Inspect fuel line pressure while engine running. (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].) • Is fuel line pressure normal?	Yes	Go to Step 12.
		No	• If fuel line pressure is too high: Replace fuel pump unit, then go to Step 16. • If fuel line pressure is too low: Go to the next step.
11	**INSPECT FUEL LINE FROM FUEL PUMP TO FUEL DELIVERY PIPE** • Visually inspect fuel line for any leakage. • Is fuel leakage found?	Yes	Replace suspected fuel line, then go to Step 16.
		No	Inspect low-pressure side fuel filter for follows: • Foreign materials or stain inside fuel filter Perform following actions as result. • If foreign materials or stain is found inside fuel filter (low-pressure side), clean of fuel tank and filter. • If normal, replace fuel pump unit. Then go to Step 16.
12	**INSPECT IGNITION COIL HARNESSES** • Inspect the ignition coil related harness condition (intermittent open or short) for all cylinders. • Are harness conditions normal?	Yes	Go to the next step.
		No	Repair suspected wiring harnesses, then go to Step 16.
13	**INSPECT IGNITION SYSTEM OPERATION** • Carry out spark test. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3]) • Is strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace malfunctioning part according to spark test result. Then go to Step 16.
14	**INSPECT ENGINE COMPRESSION** • Inspect engine compression. (See 01-10A-11 COMPRESSION INSPECTION[LF, L3].) • Is it normal?	Yes	Go to the next step.
		No	Implement engine overhaul for repairs, then go to Step 19.
15	**INSPECT FUEL INJECTOR OPERATION** • Remove fuel injector. • Inspect injector operation. • Is fuel injector normal?	Yes	Go to the next step.
		No	Replace injector, then go to the next step.
16	**VERIFY TROUBLESHOOTING OF DTC P0171 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using M-MDS. • Perform the "PCM Adaptive Memory Produce Drive Mode" and "HO2S heater, HO2S, and TWC Repair Verification Drive Mode". (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Stop vehicle and access ON BOARD READINESS TEST to inspect DRIVE MODE completion status. • Verify FUEL_EVAL PID changes to yes. — If not, perform the "HO2S heater, HO2S, and TWC Repair Verification Drive Mode" again. • Access PENDING CODE. • Is the PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
17	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is there any DTC present?	Yes	Go to applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P0172[LF, L3]

id0102a3818500

California Emission Regulation Applicable Model

DTC P0172	Fuel trim system too rich
DETECTION CONDITION	• The PCM monitors short fuel trim (SHRTFT) and long fuel trim (LONGFT) values when closed loop fuel control. If the LONGFT and the sum total of these fuel trims exceed preprogrammed criteria, PCM determines that the fuel system is too rich. **Diagnostic support note** • This is a continuous monitor. (Fuel system) • The MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Misfire • Front HO2S deterioration • Front HO2S heater malfunction • MAF sensor malfunction • EGR valve improper operation • Variable tumble solenoid valve improper operation • Purge solenoid valve improper operation • Pressure regulator malfunction • Fuel pump malfunction • Fuel return hose clogged • Purge solenoid valve malfunction • Purge solenoid hoses improper connection • PCV valve malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Fuel system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to available repair information. • If vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn the ignition switch off, then to the ON position (Engine off). • Verify related pending code or stored DTCs. • Is other DTCs present?	Yes	Go to appropriate DTC troubleshooting procedures.
		No	If drive ability concern is present, go to Step 9. If not, go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0172 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA.
5	**VERIFY CURRENT INPUT SIGNAL STATUS (IGNITION KEY TO ON/IDLE)** • Access APP1, APP2, ECT, MAF, TP1 and VSS PIDs using M-MDS. • Is there any signal that is far out of specification when ignition switch is ON and engine runs?	Yes	Inspect the sensor and excessive resistance in related wiring harnesses. Repair or replace if necessary. Then go to Step 11.
		No	Go to the next step.
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION** • Inspect PID data while simulating FREEZE FRAME DATA condition. • Is there any input signal which causes drastic changes?	Yes	Inspect the sensor and related wiring harnesses, and repair or replace it. Then go to Step 11.
		No	Go to the next step.

STEP	INSPECTION		ACTION
7	**VERIFY CURRENT INPUT SIGNAL STATUS OF FRONT HO2S** • Access O2S11 PID using M-MDS. • Verify PID while racing engine (in PARK (ATX) or NEUTRAL (MTX)). • Is PID reading normal? — **Less than 1 mA** when accelerator pedal is suddenly depress (rich condition) — **More than 1 mA** just after release of accelerator pedal (lean condition)	Yes	Go to the next step.
		No	Replace the front HO2S. Then go to Step 11.
8	**INSPECT FUEL LINE PRESSURE** • Turn the ignition switch off. • Inspect fuel line pressure while engine running. (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].) • Is fuel line pressure normal?	Yes	Go to the next step.
		No	Replace the fuel pump unit, then go to Step 11.
9	**INSPECT LONG TERM FUEL TRIM** • Turn the ignition switch off. • Disconnect purge hose from intake manifold and plug opening end of hose and intake manifold. • Access LONGFT1 PID. • Does it shift to positive value?	Yes	Inspect the purge solenoid valve. Repair or replace it if necessary, then go to Step 11.
		No	Go to the next step.
10	**INSPECT PCV VALVE OPERATION** • Inspect PCV valve operation. (See 01-16A-15 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION[LF, L3].)	Yes	Go to the next step.
		No	Replace the PCV valve, then go to the next step.
11	**VERIFY TROUBLESHOOTING OF DTC P0172 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using M-MDS. • Perform the "HO2S heater, HO2S, and TWC Repair Verification Drive Mode". (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Stop vehicle and access ON BOARD READINESS TEST to inspect DRIVE MODE completion status. • Verify FUEL_EVAL PID changes to yes. — If not, perform the "HO2S heater, HO2S, and TWC Repair Verification Drive Mode" again. • Access PENDING CODE. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is there any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P0222[LF, L3]

id0102a3806000

DTC P0222	TP sensor No.2 circuit low input
DETECTION CONDITION	• The PCM monitors the input voltage from TP sensor No.2 when the engine is running. If the input voltage is **below 0.1 V*3, 0.2 V*4**, the PCM determines that the TP sensor No.2 circuit input voltage is low. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• TP sensor No.2 malfunction • Connector or terminal malfunction • Open circuit in wiring harness between throttle body terminal B and PCM terminal 2AO*1, 2K*2 • Short to ground in wiring harness between throttle body terminal B and PCM terminal 2AO*1, 2K*2 • Open circuit in wiring harness between throttle body terminal C and PCM terminal 2AL*1, 2I*2 • Short to ground in wiring harness between throttle body terminal C and PCM terminal 2AL*1, 2I*2 • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT THROTTLE BODY CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the throttle body connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
4	**INSPECT TP SENSOR NO.2 CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between the following circuits: — Throttle body terminal B (wiring harness-side) and body ground — Throttle body terminal C (wiring harness-side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 8.
		No	Go to the next step.
5	**INSPECT TP SENSOR NO.2** • Inspect TP sensor No.2. (See 01-40A-54 THROTTLE POSITION (TP) SENSOR INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the throttle body, then go to Step 8. (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/ INSTALLATION[LF, L3].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
7	**INSPECT TP SENSOR NO.2 CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between the following terminals: — Throttle body terminal B (wiring harness-side) and PCM terminal 2AO*1, 2K*2 (wiring harness-side) — Throttle body terminal C (wiring harness-side) and PCM terminal 2AL*1, 2I*2 (wiring harness-side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0222 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

*1 : LF MTX, L3 and California emission regulation applicable model with LF ATX
*2 : Except for California emission regulation applicable model with LF ATX

DTC P0223[LF, L3]

id0102a3806100

DTC P0223	TP sensor No.2 circuit high input
DETECTION CONDITION	• The PCM monitors the input voltage from TP sensor No.2 when the engine is running. If the input voltage is **above 4.9 V**[*3]**, 4.85 V**[*4], the PCM determines that the TP sensor No.2 circuit input voltage is high. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• TP sensor No.2 malfunction • Connector or terminal malfunction • Short to power supply in wiring harness between throttle body terminal C and PCM terminal 2AL[*1], 2I[*2] • Open circuit in wiring harness between throttle body terminal D and PCM terminal 2AP[*1], 2O[*2] • PCM malfunction

*4 : Except for California emission regulation applicable model

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT THROTTLE BODY CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the throttle body connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
4	**INSPECT TP SENSOR NO.2 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between throttle body terminal C (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 8.
		No	Go to the next step.
5	**INSPECT TP SENSOR NO.2** • Inspect TP sensor No.2. (See 01-40A-54 THROTTLE POSITION (TP) SENSOR INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the throttle body, then go to Step 8. (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/ INSTALLATION[LF, L3].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
7	**INSPECT TP SENSOR NO.2 GROUND CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between throttle body terminal D (wiring harness-side) and PCM terminal 2AP*1, 2O*2 (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0223 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

*1 : LF MTX, L3 and California emission regulation applicable model with LF ATX
*2 : Except for California emission regulation applicable model with LF ATX

DTC P0300[LF, L3]

id0102a3806500

DTC P0300	Random misfire detected
DETECTION CONDITION	• The PCM monitors CKP sensor input signal interval time. The PCM calculates change of interval time for each cylinder. If change of interval time exceeds preprogrammed criteria, the PCM detects misfire in the corresponding cylinder. While the engine is running, the PCM counts number of misfires that occurred at **200 crankshaft revolutions** and **1,000 crankshaft revolutions** and calculates misfire ratio for each crankshaft revolution. If the ratio exceeds the preprogrammed criteria, the PCM determines that a misfire, which can damage catalytic converter or affect emission performance, has occurred. **Diagnostic support note** • This is a continuous monitor (Misfire). • The MIL illuminates if the PCM detects the misfire which affects emission performance in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • The MIL flashes if the PCM detects the misfire which can damage the catalytic converter during first drive cycle. • PENDING CODE is available if the PCM detects the misfire which affects emission performance during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• CKP sensor malfunction • CMP sensor malfunction • Ignition coil malfunction • Ignition system malfunction • MAF sensor contamination • Excess air suction in intake air system (between MAF sensor and intake manifold) • Fuel pump malfunction • Fuel pressure regulator (built-in fuel pump unit) malfunction • Fuel line clogged • Fuel filter clogged • Fuel leakage in fuel line • Fuel runout • Poor quality fuel • Purge control solenoid valve malfunction • PCV valve malfunction • EGR valve malfunction • Vacuum hoses damages or improper connection • Related connector and terminal malfunction • Related wiring harness malfunction • Insufficient compression • Variable valve timing control system improper (L3)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Misfire related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off then to the ON position (Engine off). • Verify related pending code or stored DTCs. • Are other DTCs present?	Yes	Go to the appropriate DTC troubleshooting. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
4	**VERIFY CURRENT INPUT SIGNAL STATUS (KEY TO ON/IDLE)** • Access APP1, APP2, ECT, IAT, MAF, RPM, TP, and VSS PIDs using M-MDS. (See 01-40A-13 PCM INSPECTION[LF, L3].) • Is there any signal that is far out of specification when the ignition switch is turned to the ON position and the engine idles?	Yes	Inspect suspected circuit and/or part according to inspection results. (See 01-40A-13 PCM INSPECTION[LF, L3].) Then go to Step 20.
		No	Go to the next step.
5	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION** • Inspect the same PIDs as in Step 4 while simulating FREEZE FRAME DATA condition. • Is there any signal which causes drastic changes?	Yes	Inspect suspected circuit and/or part according to inspection results. (See 01-40A-13 PCM INSPECTION[LF, L3].) Then go to Step 20.
		No	Go to the next step.
6	**INSPECT CMP SENSOR** • Inspect CMP sensor. (See 01-40A-70 CAMSHAFT POSITION (CMP) SENSOR INSPECTION[LF, L3].) • Is CMP sensor normal?	Yes	Go to the next step.
		No	Inspect installation condition and damages on timing chain and gears, repair the malfunctioning part. • If it is normal, replace the CMP sensor. Then go to Step 20.
7	**VERIFY CKP SENSOR INSTALLATION CONDITION** • Inspect for CKP sensor looseness. • Is CKP sensor loosen?	Yes	Retighten the CKP sensor, then go to Step.
		No	Go to the next step.
8	**INSPECT IGNITION COIL HARNESSES** • Inspect the ignition coil related harness condition (intermittent open or short) for all cylinders. • Are harness conditions normal?	Yes	Go to the next step.
		No	Repair suspected wiring harnesses, then go to Step 20.
9	**INSPECT IGNITION SYSTEM OPERATION** • Carry out spark test. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3]) • Is strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace malfunctioning part according to spark test result. Then go to Step 20.
10	**INSPECT MAF PID** • Start the engine. • Access MAF PID using the M-MDS. • Race the engine and verify that MAF PID changes quickly according to change in the engine speed. • Is MAF PID response normal?	Yes	Go to the next step.
		No	Replace the MAF sensor, then go to Step 20.
11	**INSPECT EXCESSIVE AIR SUCTION IN INTAKE AIR SYSTEM** • Inspect for air leakage at following: — Between the MAF sensor and throttle body — Between throttle body and intake manifold • Is there any malfunction?	Yes	Repair or replace suspected part, then go to Step 20.
		No	Go to the next step.
12	**INSPECT FUEL LINE PRESSURE** • Inspect fuel line pressure. (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].) • Is fuel line pressure normal?	Yes	Go to Step 14.
		No	If the fuel line pressure is too low, go to the next step. If the fuel line pressure is excess high, replace the fuel pump unit, then go to Step 20.
13	**INSPECT FUEL LINE FROM FUEL PUMP TO FUEL DELIVERY PIPE** • Visually inspect fuel line for fuel leakage. • Is there any fuel leakage?	Yes	Replace suspected fuel line, then go to Step 20.
		No	Inspect fuel filters for following: • Foreign materials or stain inside fuel filter (low-pressure side) Perform following actions depend on the result above. • If foreign materials or stain is found inside fuel filter (low-pressure side), clean the fuel tank and filter (low-pressure side). • If normal, replace the fuel pump unit. Then, go to Step 20.

STEP	INSPECTION		ACTION
14	**INSPECT ENGINE COMPRESSION** • Inspect engine compression. (See 01-10A-11 COMPRESSION INSPECTION[LF, L3].) • Is it normal?	Yes	Go to the next step. (L3) Go to Step 16. (LF)
		No	Perform engine overhaul for repairs, then go to Step 20.
15	**INSPECT VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Inspect variable valve timing control system operation. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3]) • Does variable valve timing control system work properly?	Yes	Go to the next step.
		No	Repair or replace malfunctioning part according to variable valve timing control system inspection results, then go to Step 20.
16	**INSPECT OPERATION OF PURGE CONTROL SOLENOID VALVE** • Turn the ignition switch off. • Connect the vacuum pump to purge control solenoid valve and apply vacuum to solenoid. • Verify that solenoid holds vacuum. • Turn the ignition switch to the ON position (Engine off). • Access EVAPCP PID in SIMULATION TEST using the M-MDS. • Set duty value to **100%** for EVAPCP PID. • Apply vacuum while turning solenoid from OFF to ON and simulating EVAPCP PID with **100%** duty value. • Verify that solenoid releases vacuum while solenoid is turned ON. • Is purge control solenoid valve operation normal?	Yes	Go to the next step.
		No	Replace the purge control solenoid valve, then go to Step 20.
17	**INSPECT PCV VALVE OPERATION** • Turn the ignition switch off. • Remove PCV valve and inspect valve operation. (See 01-16A-15 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION[LF, L3].) • Is PCV valve operation normal?	Yes	Replace the PCV valve, then go to Step 20.
		No	Go to the next step.
18	**INSPECT OPERATION OF EGR VALVE** • Remove the EGR valve. • Visually inspect the EGR valve for stuck to open. • Is EGR valve stuck to open?	Yes	Repair or replace the EGR valve, then go to Step 20.
		No	Go to the next step.
19	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** • Perform "ENGINE COOLANT LEAKAGE INSPECTION." (See 01-12A-4 ENGINE COOLANT LEAKAGE INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Repair or replace malfunctioning part according to inspection results. Then go to the next step.
		No	Go to the next step.
20	**VERIFY TROUBLESHOOTING OF MISFIRE DTC COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the memory using the M-MDS. • Perform the KOER self-test or the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
21	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P0301, P0302, P0303, P0304[LF, L3]

id0102a3806600

DTC P0301 **DTC P0302** **DTC P0303** **DTC P0304**	**Cylinder No.1 misfire detected** **Cylinder No.2 misfire detected** **Cylinder No.3 misfire detected** **Cylinder No.4 misfire detected**
DETECTION CONDITION	• The PCM monitors CKP sensor input signal interval time. The PCM calculates the change of interval time for each cylinder. If the change of interval time exceeds the preprogrammed criteria, the PCM detects a misfire in the corresponding cylinder. While the engine is running, the PCM counts number of misfires that occurred at **200 crankshaft revolutions** and **1,000 crankshaft revolutions** and calculates misfire ratio for each crankshaft revolution. If the ratio exceeds the preprogrammed criteria, the PCM determines that a misfire, which can damage catalytic converter or affect emission performance, has occurred. **Diagnostic support note** • This is a continuous monitor (Misfire). • The MIL illuminates if the PCM detects the misfire which affects emission performance in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • The MIL flashes if the PCM detects the misfire which can damage the catalytic converter during first drive cycle. • PENDING CODE is available if the PCM detects the misfire which affects emission performance during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Spark plug malfunction • Ignition system malfunction • Fuel injector malfunction • Air suction in intake air system (between dynamic chamber and cylinder head) • Inadequate engine compression due to engine internal malfunction • Related connector or terminal malfunction • Related wiring harness malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Misfire related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off then to the ON position (Engine off). • Verify related pending code or stored DTCs. • Is other DTCs present?	Yes	Go to the appropriate DTC troubleshooting. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
4	**VERIFY CURRENT INPUT SIGNAL STATUS (KEY TO ON /IDLE)** • Access APP1, APP2, ECT, IAT, MAF, RPM, TP and VSS PIDs using M-MDS. (See 01-40A-13 PCM INSPECTION[LF, L3].) • Is there any signal that is far out of specification when ignition switch is turned to the ON position and engine idles?	Yes	Inspect suspected circuit and/or part according to inspection results. Then go to Step 14. (See 01-40A-13 PCM INSPECTION[LF, L3].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
5	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION** • Inspect same PIDs as in Step 4 while simulating FREEZE FRAME DATA condition. • Is there any signal which causes drastic changes?	Yes	Inspect suspected circuit and/or part according to inspection results. Then go to Step 14. (See 01-40A-13 PCM INSPECTION[LF, L3].)
		No	Go to the next step.
6	**INSPECT SPARK PLUG CONDITION** • Turn the ignition switch off. • Remove spark plug from suspected cylinder. • Inspect spark plug condition: — Cracks — Excess wear — Gap — Wet • Is any problem found on spark plug?	Yes	• If spark plug is wet, fuel flooding is suspected. Then go to Step 14. • If spark plug has a cracks, excessive wear or improper gap, replace the malfunctioning spark plug. Then go to Step 14.
		No	Go to the next step.
7	**INSPECT IGNITION COIL HARNESSES** • Inspect the ignition coil related harness condition (intermittent open or short) for suspected cylinder. • Are harness conditions normal?	Yes	Go to the next step.
		No	Repair suspected wiring harnesses, then go to Step 14.
8	**INSPECT IGNITION SYSTEM OPERATION** • Carry out spark test. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) • Is strong blue spark visible at suspected cylinder?	Yes	Go to the next step.
		No	Repair or replace malfunctioning part according to spark test result. Then go to Step 14.
9	**INSPECT FOR AIR SUCTION AT INTAKE-AIR SYSTEM** • Inspect for air leakage at following: — Around connection of dynamic chamber and intake manifold — Around connection of intake manifold and cylinder head • Is air leakage found?	Yes	Repair or replace suspected part, then go to Step 14.
		No	Go to the next step.
10	**INSPECT FUEL INJECTOR WIRING HARNESS** • Remove intake air system parts. • Disconnect the fuel injector connector on suspected cylinder. • Connect NOID LIGHT to fuel injector terminals. • Inspect dim of light during cranking. • Does noid light illuminate?	Yes	Go to the next step.
		No	Inspect for fuel injector wiring harnesses. Repair or replace it if necessary, then go to Step 14.
11	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** • Perform "ENGINE COOLANT LEAKAGE INSPECTION." (See 01-12A-4 ENGINE COOLANT LEAKAGE INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Repair or replace malfunctioning part according to inspection results. Then go to Step 14.
		No	Go to the next step.
12	**INSPECT ENGINE COMPRESSION** • Inspect engine compression. (See 01-10A-11 COMPRESSION INSPECTION[LF, L3].) • Is engine compression normal?	Yes	Go to the next step.
		No	Overhaul the engine, then go to the next step.
13	**INSPECT FUEL INJECTOR OPERATION** • Remove the fuel injector from suspected cylinder. • Switch the injector with the injector on other cylinder. • Start the engine and idle it. • Is misfire DTC for cylinder which has a suspected fuel injector?	Yes	Replace the injector, then go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
14	**VERIFY TROUBLESHOOTING OF MISFIRE DTC COMPLETED** • Make sure to reconnect all disconnected connectors. • Start the engine. • Clear the DTC from the PCM memory using the M-MDS. • Perform the KOER self-test or the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
15	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P0327[LF, L3]

id0102a3806700

DTC P0327	KS circuit low input
DETECTION CONDITION	• The PCM monitors input signal from the KS when the engine is running. If the input voltage between PCM terminals for the KS circuit is **below 0.01 V**[*1], **below 0.06 V**[*2] the PCM determines that the KS circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• KS malfunction • Connector or terminal malfunction • Open circuit or short to ground in wiring harness between KS connector terminal A and PCM terminal 2U[*3], 2Q[*4] • Open circuit or short to ground in wiring harness between KS connector terminal B and PCM terminal 2V[*3], 2R[*4] • Short KS two wires • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT KS CONNECTOR TERMINAL** • Turn the ignition switch off. • Disconnect the KS connector. • Inspect for poor connection at terminals A and B (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT KS** • Perform KS inspection. (See 01-40A-72 KNOCK SENSOR (KS) INSPECTION[LF, L3].) • Is KS normal?	Yes	Go to the next step.
		No	Replace the KS, then go to the next step.

STEP	INSPECTION		ACTION
5	**INSPECT KS CIRCUITS FOR SHORT TO GROUND** • Inspect the continuity between following terminals: — KS female terminal A (wiring harness-side) and body ground — KS female terminal B (wiring harness-side) and body ground • Is there continuity?	Yes	Repair or replace suspected wiring harness, then go to Step 9.
		No	Go to the next step.
6	**INSPECT FOR SHORT CIRCUITS** • Inspect for continuity between KS female terminals A and B (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 9.
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR TERMINAL** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection at terminals 2U*3 and 2V*3, 2Q*4 and 2R*4 (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to Step 9.
		No	Go to the next step.
8	**INSPECT KS CIRCUITS FOR OPEN CIRCUIT** • Disconnect the PCM connector. • Inspect for continuity between the following terminals: — KS female terminal A (wiring harness-side) and PCM terminal 2U*3, 2Q*4 (wiring harness-side) — KS female terminal B (wiring harness-side) and PCM terminal 2V*3, 2R*4 (wiring harness-side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 9.
9	**VERIFY TROUBLESHOOTING OF DTC P0327 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P0328[LF, L3]

id0102a3806800

DTC P0328	KS circuit high input
DETECTION CONDITION	• The PCM monitors the input signal from the KS when the engine is running. If the input voltage between PCM terminals for the KS circuit is **above 4.77 V***1, **above 4.9 V***2 the PCM determines that KS circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction conditions during first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• KS malfunction • Connector or terminal malfunction • Short to power supply in wiring harness between KS terminal A and PCM terminal 2U*3, 2Q*4 • Short to power supply in wiring harness between KS terminal B and PCM terminal 2V*3, 2R*4 • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT KS CONNECTOR TERMINAL** • Turn the ignition switch off. • Disconnect KS connector. • Inspect for poor connection at terminals A and B (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT KS** • Perform KS inspection. (See 01-40A-72 KNOCK SENSOR (KS) INSPECTION[LF, L3].) • Is the KS normal?	Yes	Go to the next step.
		No	Replace the KS, then go to Step 7.
5	**INSPECT KNOCK SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between KS terminal A (wiring harness-side) and body ground and KS terminal B (wiring harness-side) and body ground? • Is any voltage reading?	Yes	Repair or replace wiring harness for short to power supply, then go to Step 7.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR** • Disconnect PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0328 COMPLETED** • Make sure to connect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P0335[LF, L3]

id0102a3806900

DTC P0335	CKP sensor circuit problem
DETECTION CONDITION	• If the PCM does not receive the input voltage from the CKP sensor for **4.2 s** while the MAF is **1.95 g/s {0.25 lb/min.} or above**, the PCM determines that the CKP sensor circuit has a malfunction. • If a malfunction is detected in the input pulse pattern from the CKP sensor. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• CKP sensor malfunction • Connector or terminal malfunction • CKP sensor is dirty. • Short to the power supply between CKP sensor terminal B and PCM terminal 2W*1, 2U*2 • Short to ground between CKP sensor terminal C and PCM terminal 2AQ*1, 2T*2 • Short to ground between CKP sensor terminal B and PCM terminal 2W*1, 2U*2 • Open circuit between CKP sensor terminal A and body ground • Open circuit between CKP sensor terminal B and PCM terminal 2W*1, 2U*2 • Open circuit between CKP sensor terminal C and PCM terminal 2AQ*1, 2T*2 • CKP sensor pulse wheel malfunction • Both CKP sensor wires are shorted to each other • PCM malfunction

*1 : LF MTX, L3 and California emission regulation applicable model with LF ATX
*2 : Except for California emission regulation applicable model with LF ATX

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY CKP SENSOR VOLTAGE** • Disconnect the CKP sensor connector. • Connect the voltmeter between the CKP sensor connector terminals B and C (sensor-side). • Inspect the voltage in the AC range while cranking the engine. • Is there any voltage?	Yes	Go to the next step.
		No	Go to step 10.
4	**INSPECT CKP SENSOR CONNECTOR FOR POOR CONNECTION** • Verify that the CKP sensor connector is connected securely. • Is connector normal?	Yes	Go to the next step.
		No	Reconnect the connector, then go to Step 11.
5	**INSPECT CKP CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch off • Disconnect the CKP sensor connector. • Turn ignition switch to the ON position (Engine off). • Measure the voltage between following terminals (wiring harness-side): — CKP sensor terminal B • Is the voltage **B+**?	Yes	Repair or replace the suspected wiring harness, then go to Step 11.
		No	Go to the next step.
6	**INSPECT CKP CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between following terminal and body ground: — CKP sensor connector terminal C (wiring harness-side) — CKP sensor connector terminal B (wiring harness-side) • Is there continuity?	Yes	Repair or replace the suspected wiring harness, then go to Step 11.
		No	Go to the next step.
7	**INSPECT CKP CIRCUITS FOR SHORT CIRCUIT** • Inspect for continuity between CKP sensor connector terminals B and C (wiring harness-side). • Is there continuity?	Yes	Repair or replace the suspected wiring harness, then go to Step 11.
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 11.
		No	Go to the next step.
9	**INSPECT CKP CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between the following circuits: — CKP sensor terminal A (wiring harness-side) and body ground — CKP sensor terminal B (wiring harness-side) and PCM terminal 2W*1, 2U*2 (wiring harness-side) — CKP sensor terminal C (wiring harness-side) and PCM terminal 2AQ*1, 2T*2 • Are there continuity?	Yes	Go to Step 11.
		No	Repair or replace the suspected wiring harness, then go to Step 11.

STEP	INSPECTION		ACTION
10	**INSPECT CKP SENSOR** • Turn the ignition switch off. • Perform the CKP sensor inspection. (See 01-40A-68 CRANKSHAFT POSITION (CKP) SENSOR INSPECTION[LF, L3]) • Is the CKP sensor normal?	Yes	Go to the next step.
		No	Inspect the CKP sensor pulse wheel for damage. Replace the CKP sensor pulse wheel and go to the next step.
11	**VERIFY TROUBLESHOOTING OF DTC P0335 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Access the MAF PID using the M-MDS. **Note** • The MAF PID should indicate **1.95 g/s {0.25 lb/min.} or above** during this test • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

*2 : Except for California emission regulation applicable model with LF ATX

DTC P0340[LF, L3]

id0102a3807000

DTC P0340	CMP sensor circuit problem
DETECTION CONDITION	• The PCM monitors the input voltage from the CMP sensor when the engine is running. If the PCM does not receive the input voltage from the CMP sensor while the PCM receives the input signal from the CKP sensor, the PCM determines that the CMP circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• CMP sensor malfunction • Connector or terminal malfunction • CMP sensor is dirty • Short to the power circuit between CMP sensor terminal B and PCM terminal 2S*1, 2V*2 • Short to ground circuit between CMP sensor terminal C and PCM terminal 2AM*1, 2X*2 • Short to ground circuit between CMP sensor terminal B and PCM terminal 2S*1, 2V*2 • Open circuit between CMP sensor terminal A and body ground • Open circuit between CMP sensor terminal B and PCM terminal 2S*1, 2V*2 • Open circuit between CMP sensor terminal C and PCM terminal 2AM*1, 2X*2 • Both CMP sensor wires are shorted to each other • CKP sensor pulse wheel malfunction • CKP sensor misinstallation • Timing chain misinstallation • Loose timing chain or improper valve timing • Loose camshaft sprocket lock bolt • Loose crankshaft pulley lock bolt • PCM malfunction

*2 : Except for California emission regulation applicable model with LF ATX

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY CMP SENSOR VOLTAGE** • Disconnect the CMP sensor connector. • Connect a voltmeter between CMP sensor connector terminals B and C (sensor-side). • Inspect the voltage in AC range while cranking the engine. • Is there any voltage?	Yes	Go to the next step.
		No	Go to step 10.
4	**INSPECT CMP SENSOR CONNECTOR FOR POOR CONNECTION** • Verify that the CMP sensor connector is connected securely. • Is the connector normal?	Yes	Go to the next step.
		No	Reconnect the connector, then go to Step 15.

STEP	INSPECTION		ACTION
5	**INSPECT CMP CIRCUIT FOR SHORT TO POWER** • Turn the ignition switch off. • Disconnect the CMP sensor connector. • Turn ignition switch to the ON position (Engine off) • Measure voltage between the CMP sensor connector terminal B (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the suspected wiring harness, then go to Step 15.
		No	Go to the next step.
6	**INSPECT CMP CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between the following terminal and body ground: — CMP sensor connector terminal B (wiring harness-side) — CMP sensor connector terminal C (wiring harness-side) • Is there continuity?	Yes	Repair or replace the suspected wiring harness, then go to Step 15.
		No	Go to the next step.
7	**INSPECT CMP CIRCUITS FOR SHORT CIRCUIT** • Inspect for continuity between CMP sensor connector terminals B and C (wiring harness-side). • Is there continuity?	Yes	Repair or replace the suspected wiring harness, then go to Step 15.
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (damaged, pulled-out terminals, corrosion, etc.). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 15.
		No	Go to the next step.
9	**INSPECT CMP CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between the following circuits: — CMP sensor terminal A (wiring harness-side) and body ground — CMP sensor terminal B (wiring harness-side) and PCM terminal 2S*1, 2V*2 (wiring harness-side) — CMP sensor terminal C (wiring harness-side) and PCM terminal 2AM*1, 2X*2 (wiring harness-side) • Is there continuity?	Yes	Go to Step 11.
		No	Repair or replace the suspected wiring harness, then go to Step 15.
10	**INSPECT CMP SENSOR** • Turn the ignition switch off. • Perform the CMP sensor inspection. (See 01-40A-70 CAMSHAFT POSITION (CMP) SENSOR INSPECTION[LF, L3].) • Is the CMP sensor normal?	Yes	Go to the Step 15.
		No	Replace the CMP sensor and go to Step 15.
11	**VERIFY CKP SENSOR INSTALLATION** • Verify the CKP sensor installation. (See 01-40A-67 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/ INSTALLATION[LF, L3].) • Is the CKP sensor installed correctly?	Yes	Go to the next step.
		No	Reinstall the CKP sensor and go to Step 15.
12	**VERIFY VALVE TIMING MECHANISM INSTALLATION** • Verify the valve timing mechanism installation for the following parts: — Timing chain misinstallation — Loose camshaft sprocket lock bolt — Loose crankshaft pulley lock bolt • Is the valve timing mechanism installed correctly?	Yes	Go to the next step.
		No	Reinstall the following parts and go to Step 15. • Timing chain • Camshaft sprocket • Crankshaft pulley

STEP	INSPECTION		ACTION
13	**INSPECT STOPPER PIN MECHANISM (LF, L3)** • Remove the timing chain. • Inspect the stopper pin. (See 01-10A-33 VARIABLE VALVE TIMING ACTUATOR INSPECTION[LF, L3].) • Is the stopper pin mechanism normal?	Yes	Go to the next step.
		No	Replace the variable valve timing actuator, then go to Step 15.
14	**INSPECT ROTOR POSITION (LF, L3)** • Remove the variable valve timing actuator. (See 01-10A-34 VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION[LF, L3]) • Is the rotor position at the maximum valve timing retard?	Yes	**VARIABLE VALVE TIMING MECHANISM NORMAL** **Note** • This DTC is detected as an intermittent concern. • The intermittent concern might be removed by cleaning the variable valve timing mode control function. Go to the next step.
		No	Replace the variable valve timing actuator, then go to the next step.
15	**VERIFY TROUBLESHOOTING OF DTC P0340 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Access the MAF PID using the M-MDS. **Note** • The MAF PID should indicate **1.95 g/s {0.25 lb/min.} or above** during this test • Is same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
16	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

*1 : LF MTX, L3 and California emission regulation applicable model with LF ATX
*2 : Except for California emission regulation applicable model with LF ATX

DTC P0401[LF, L3]

id0102a3815300

DTC P0401	EGR flow insufficient detected
DETECTION CONDITION	• The PCM monitors difference in intake manifold pressures when EGR is operated and when it is stopped. If the difference is too small, PCM determines that EGR flow insufficient. **Diagnostic support note** • This is an intermittent monitor (EGR system). • The MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• EGR valve malfunction • MAP sensor malfunction • EGR gasket malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (EGR system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to available repair information. • If vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FOR OTHER DTCS** • Turn the ignition switch off then to the ON position (Engine off). • Have other DTCs been stored?	Yes	Repair circuit malfunction for applicable DTCs.
		No	Go to the next step.
4	**INSPECT VACUUM HOSE CONDITION** • Inspect vacuum hoses for clogs, any damages, frozen, or vacuum leakage. • Is there any malfunction?	Yes	Replace vacuum hoses, then go to Step 8.
		No	Go to the next step.
5	**INSPECT EGR VALVE MALFUNCTION** • Inspect the EGR valve. (See 01-16A-14 EGR VALVE INSPECTION[LF, L3].) • Is the EGR valve normal?	Yes	Go to the next step.
		No	Replace the EGR valve, then go to Step 8.
6	**INSPECT MAP SENSOR MALFUNCTION** • Perform MAP sensor inspection. (See 01-40A-53 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION[LF, L3].) • Is EGR valve normal?	Yes	Go to the next step.
		No	Replace MAP sensor, then go to Step 8.
7	**INSPECT EGR VALVE PASSAGE** • Turn the ignition switch off. • Remove the EGR valve. • Is gasket installation normal?	Yes	Go to the next step.
		No	Install gasket correctly, then go to the next step.
8	**MONITOR EGR SYSTEM BY DRIVE MODE** • Clear DTC from PCM memory using M-MDS. • Run PCM Adaptive Memory Procedure Drive Mode. (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Stop vehicle and access ON BOARD READINESS TEST to inspect DRIVE MODE completion status. • Verify FUEL_EVAL and EGR_EVAL PIDs status. • Does FUEL_EVAL and EGR_EVAL PIDs change to Yes?	Yes	Go to the next step.
		No	Retry this step.
9	**VERIFY TROUBLESHOOTING OF DTC P0401 COMPLETED** • Make sure to reconnect all disconnected connectors. • Access DIAGNOSTIC MONITORING TEST RESULTS. (See 01-02A-14 ON-BOARD DIAGNOSTIC TEST[LF, L3].) • Verify TEST #10:31:83 (EGR pressure variation) value. • Is value within the specification?	Yes	Go to the next step.
		No	Replace the PCM, then go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is there any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P0403[LF, L3]

id0102a3807100

DTC P0403	EGR valve (stepper motor) circuit problem
DETECTION CONDITION	**California emission regulation applicable model** • The PCM monitors the EGR valve control signal voltage and current. If the following conditions are met, the PCM determines that there is the EGR control circuit problem. — The PCM turns the EGR valve off, but the voltage of the EGR valve control signal remains low. — The PCM turns the EGR valve on, but the current of the EGR valve control signal remains high. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction conditions in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
	Except for California emission regulation applicable model • The PCM monitors the input voltage from EGR valve. If voltage remain low or high, the PCM determines that the EGR valve circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction conditions in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• EGR valve malfunction • Connector or terminal malfunction • Short to power supply in wiring harness between EGR valve terminal E and PCM terminal 2K*1, 2AU*2 • Short to power supply in wiring harness between EGR valve terminal A and PCM terminal 2G*1, 2AR*2 • Short to power supply in wiring harness between EGR valve terminal B and PCM terminal 2L*1, 2AY*2 • Short to power supply in wiring harness between EGR valve terminal F and PCM terminal 2H*1, 2AV*2 • Short to ground circuit in wiring harness between EGR valve terminal E and PCM terminal 2K*1, 2AU*2 • Short to ground circuit in wiring harness between EGR valve terminal A and PCM terminal 2G*1, 2AR*2 • Short to ground circuit in wiring harness between EGR valve terminal B and PCM terminal 2L*1, 2AY*2 • Short to ground circuit in wiring harness between EGR valve terminal F and PCM terminal 2H*1, 2AV*2 • Open circuit in wiring harness between EGR valve terminal E and PCM terminal 2K*1, 2AU*2 • Open circuit in wiring harness between EGR valve terminal A and PCM terminal 2G*1, 2AR*2 • Open circuit in wiring harness between EGR valve terminal B and PCM terminal 2L*1, 2AY*2 • Open circuit in wiring harness between EGR valve terminal F and PCM terminal 2H*1, 2AV*2 • Open circuit in wiring harness between main relay terminal D and EGR valve terminal C • Open circuit in wiring harness between main relay terminal D and EGR valve terminal D • PCM malfunction

*2 : Except for California emission regulation applicable model with LF ATX

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT POOR CONNECTION OF EGR VALVE** • Turn the ignition switch off. • Disconnect EGR valve connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminals and/or connector, then go to Step 10.
		No	Go to the next step.
4	**INSPECT POWER CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage following terminal and body ground. — EGR valve terminal C — EGR valve terminal D • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit then go to Step 10.

STEP	INSPECTION		ACTION
5	**INSPECT EGR VALVE** • Inspect the EGR valve. (See 01-16A-14 EGR VALVE INSPECTION[LF, L3].) • Is the EGR valve normal?	Yes	Go to the next step.
		No	Replace the EGR valve, then go to Step 10.
6	**INSPECT FOR CONTROL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity following terminal and body ground: — EGR valve terminal E — EGR valve terminal A — EGR valve terminal B — EGR valve terminal F • is there continuity?	Yes	Repair or replace wiring harness for short to ground, then go to Step 10.
		No	Go to the next step.
7	**INSPECT FOR CONTROL CIRCUIT FOR SHORT TO POWER** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage following terminal and body ground: — EGR valve terminal E — EGR valve terminal A — EGR valve terminal B — EGR valve terminal F • Is the voltage **B+**?	Yes	Repair or replace wiring harness for short to power supply, then go to Step 10.
		No	Go to the next step.
8	**INSPECT POOR CONNECTION OF PCM** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminals and/or connector, then go to Step 10.
		No	Go to the next step.
9	**INSPECT CONTROL CIRCUIT FOR OPEN CIRCUIT** • Remove the PCM with the PCM connector connected. • Inspect for continuity following terminals: — Between EGR valve terminal E and PCM terminal 2K[*1], 2AU[*2] — Between EGR valve terminal A and PCM terminal 2G[*1], 2AR[*2] — Between EGR valve terminal B and PCM terminal 2L[*1], 2AY[*2] — Between EGR valve terminal F and PCM terminal 2H[*1], 2AV[*2] • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open circuit then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0403 COMPLETED** • Make sure to reconnect all disconnected connectors. Clear The DTC from the PCM memory using the M-MDS. • Start the engine. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

[*1] : LF MTX, L3 and California emission regulation applicable model with LF ATX
[*2] : Except for California emission regulation applicable model with LF ATX

DTC P0421[LF, L3]

id0102a3807300

California Emission Regulation Applicable Model

DTC P0421	Warm up catalyst system efficiency below threshold
DETECTION CONDITION	• The PCM monitors the input voltage from the middle HO2S and the rear HO2S output current when the following conditions are met. If the input voltage change is extremely large compared to the output current change, the PCM determines that the catalyst system has deteriorated. **MONITORING CONDITION** — ECT: **more than 70 °C {158 °F}** — Calculated TWC temperature: **more than 350 °C {662 °F}** — Engine speed: **1,500—3,000 rpm (MTX), 1,350—3,000 rpm (ATX)** — LOAD: **19—56%** (at engine speed 2,000 rpm) — Time with purge control system does not operate: **more than 5 s** **Diagnostic support note** • This is an intermittent monitor (Catalyst). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • DIAGNOSTIC MONITORING TEST RESULTS is available. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• TWC deterioration or malfunction • Exhaust gas leakage • Loose front HO2S • Loose middle HO2S • Loose rear HO2S • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Catalyst related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Are other DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
4	**INSPECT EXHAUST SYSTEM FOR EXHAUST GAS LEAKAGE** • Visually inspect exhaust gas leakage in the exhaust system. • Is there exhaust gas leakage?	Yes	Repair or replace the malfunctioning part, then go to Step 7.
		No	Go to the next step.
5	**INSPECT INSTALLATION OF MIDDLE AND REAR HO2S** • Inspect the middle and rear HO2S for looseness. • Is it normal?	Yes	Go to the next step.
		No	Retighten the sensor, then go to Step 7. (See 01-40A-66 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION[LF, L3].)

STEP	INSPECTION		ACTION
6	**INSPECT TWC** • Clear the DTC using the M-MDS generic OBD function. • Turn the ignition switch off then back to the ON position. • Inspect the TWC. (See 01-16A-15 WARM-UP THREE-WAY CATALYTIC CONVERTER (WU-TWC) INSPECTION[LF, L3].) • Is it normal?	Yes	Replace the heated oxygen sensor, then go to the next step.
		No	Replace the TWC, then go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0421 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the memory using the M-MDS. • Perform the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

Except for California Emission Regulation Applicable Model

DTC P0421	Warm up catalyst system efficiency below threshold
DETECTION CONDITION	• The PCM compares the number of front HO2S and rear HO2S inversions for a predetermined time. The PCM monitors the rear HO2S inversion ratio when the following conditions are met: The PCM detects inversion ratio. If the inversion ratio is below threshold, the PCM determine that catalyst system has deteriorated. — The front HO2S inversion ratio is as prescribed when the following monitoring conditions are met: — The accumulated occurrence time of the following monitoring conditions has exceeded the prescribed time limit: **MONITORING CONDITION** — Engine speed is **1,600—3,000 rpm**. — Calculated TWC temperature is **above 400 °C {752 °F}**. — Calculated load is **15—48%** (at engine speed **2,000 rpm**) **Diagnostic support note** • This is a intermittent monitor. (Catalyst) • The MIL illuminates if the PCM detects the above malfunction conditions in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • DIAGNOSTIC MONITORING TEST RESULTS is available. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• TWC deterioration or malfunction • Exhaust gas leakage • Loose front HO2S • Loose rear HO2S • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Catalyst related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off then to the ON position (Engine off). • Verify related pending code or stored DTCs. • Are other DTCs present?	Yes	Go to appropriate DTC troubleshooting.
		No	Go to the next step.
4	**INSPECT GAS LEAKAGE OF EXHAUST SYSTEM** • Visually inspect exhaust gas leakage in the exhaust system. • Is there gas leakage?	Yes	Repair or replace the malfunctioning exhaust part, then go to Step 7.
		No	Go to the next step.
5	**INSPECT INSTALLATION OF FRONT AND REAR OXYGEN SENSORS** • Inspect for looseness of front and rear oxygen sensors. • Is it normal?	Yes	Go to the next step.
		No	Retighten the sensor, then go to Step 7.
6	**INSPECT TWC** • Clear the DTC using the M-MDS generic OBD function. • Turn the ignition switch off then back to the ON position. • Inspect the TWC. (See 01-16A-15 WARM-UP THREE-WAY CATALYTIC CONVERTER (WU-TWC) INSPECTION[LF, L3].) • Is it normal?	Yes	Replace the heated oxygen sensor, then go to the next step.
		No	Replace the TWC, then go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0421 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the memory using the M-MDS. • Perform the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P0441[LF, L3]

id0102a3041100

DTC P0441	Evaporative emission control system incorrect purge flow
DETECTION CONDITION	• PCM measures the purge line pressure, which is the vacuum when a following condition. If vacuum between charcoal canister and intake manifold does not reach the specified, PCM determines that the EVAP system has clogging. **MONITORING CONDITION** — Engine speed*1: **1,500—3,650 rpm [MT]/1,220—3,200 rpm [AT]** — Engine speed*2: **1,500—3,650 rpm [MT]/1,220—3,200 rpm [LF, AT]/1,220—3,800 rpm [L3, AT]** — Throttle opening angle: **19 %** (at engine speed is **2500 rpm**) — Vehicle speed: **70—136 km/h {43.4—84.5 mph} [MT]/35—136 km/h {21.7—84.5 mph} [AT]** **Diagnostic support note** • This is an intermittent monitor (EVAP system). • The MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory. • DIAGNOSTIC MONITORING TEST RESULT is available.
POSSIBLE CAUSE	• Purge solenoid valve malfunction • Evaporative emission system leak detection pump malfunction • Charcoal canister malfunction • EVAP hose damaged or loose • EVAP pipe damaged • PCM malfunction

*1 : California emission regulation applicable model
*2 : Except for California emission regulation applicable model

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (EVAP system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to available repair information. • If vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn the ignition switch off then to the ON position (Engine off). • Verify related pending code or stored DTCs. • Is DTC P0443 present?	Yes	Go to the appropriate DTC inspection.
		No	Go to the next step.
4	**DETERMINE IF LEAK CONCERN OR BLOCKAGE CONCERN** • Perform evaporative system leak inspection. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) • Is system test result failed?	Yes	Go to Step 6.
		No	Go to the next step.
5	**INSPECT PURGE SOLENOID VALVE STUCK CLOSED** • Inspect the purge solenoid valve for stuck closed. (See 01-16A-13 PURGE SOLENOID VALVE INSPECTION[LF, L3].) • Is the purge solenoid valve normal?	Yes	Inspect the following parts for clogging. • Vacuum hoses between intake manifold to charcoal canister • Catch tank • Charcoal canister Repair or replace the part, then go to Step 11.
		No	Replace the purge solenoid valve, then go to Step 11.

STEP	INSPECTION		ACTION
6	**LOCATE LEAK POINT** • Inspect the following for leakage using Ultrasonic leak detector. — Charcoal canister — Catch tank — Fuel filler cap — EVAP hoses and pipes — Fuel tank • Is leakage found?	Yes	Repair leakage or replace part, then go to Step 10.
		No	Go to the next step.
7	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP** • Connect all disconnected connectors and hoses. • Place clamp on EVAP system leak detection pump hose between EVAP system leak detection pump and air filter. • Perform evaporative system leak inspection. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) • Is test result failed (red light turns on)?	Yes	Go to Step 9.
		No	Go to the next step.
8	**CONFIRM EVAP SYSTEM LEAK DETECTION PUMP LEAKAGE** • Remove clamp. • Perform evaporative system leak inspection. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) • Is test result failed (red light turns on)?	Yes	Replace the EVAP system leak detection pump, then go to Step 10.
		No	Go to the next step.
9	**INSPECT FUEL PUMP UNIT INSTALLATION** • Remove the fuel tank. • Visually inspect for damage, insufficient sealing or poorly installed pump unit. • Is it normal?	Yes	Go to the next step.
		No	Repair or replace the fuel tank or sealing, then go to the next step.
10	**PERFORM LEAK INSPECTION** • Connect all disconnected connectors and hoses. • Perform evaporative system leak inspection. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) • Is test result failed (red light turns on)?	Yes	Leakage still exists. Locate leak point and repair. Then go to the next step.
		No	Go to the next step
11	**VERIFY TROUBLESHOOTING OF DTC P0441 COMPLETED** • Start the engine and let it idle. • Clear DTC using M-MDS. • Turn the ignition switch off. • Perform the KOER self-test or the "EVAP System Repair Verification Drive Mode". (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Is PENDING CODE of same DTC present?	Yes	Replace the PCM, then go to the next step.
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is there any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P0442[LF, L3]

id0102a3807500

DTC P0442	Evaporative emission control system leak detected (small leak)
DETECTION CONDITION	• The PCM measures the pump load current (EVAP line pressure) when the specified period has passed after EVAP system is sealed when monitoring conditions are met. If the load does not reach the reference current value within the specified period, PCM determines that the EVAP system has small leak. **MONITORING CONDITION** — The ignition switch is turned off. — IAT: **5—35 °C {40—95 °F}** — Battery voltage: **11 V or above** — Atmospheric pressure: **72.2 kPa {542 mmHg, 21.3 inHg} or above** — Fuel tank level: **15—85%** **Diagnostic support note** • This is an intermittent monitor (EVAP system). • The MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory. • DIAGNOSTIC MONITORING TEST RESULT is available.
POSSIBLE CAUSE	• Purge solenoid valve malfunction • EVAP system leak detection pump malfunction • Charcoal canister malfunction • Fuel filler cap malfunction • Fuel tank malfunction • Fuel pump unit poor seal • EVAP hose damaged or loose • EVAP pipe damaged

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (EVAP system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to available repair information. • If vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn the ignition switch off then to the ON position (Engine off). • Verify related PENDING CODE or stored DTCs. • Is other DTC present?	Yes	Go to the appropriate DTC inspection.
		No	Go to the next step.
4	**CLASSIFY INTERMITTENT CONCERN OR CONTINUOUS CONCERN** • Perform evaporative system leak inspection. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) • Is system test result failed?	Yes	Go to the next step.
		No	Intermittent concern exists. Inspect purge solenoid valve and EVAP system leak detection pump circuit for intermittent concern. (See 01-03A-66 INTERMITTENT CONCERN TROUBLESHOOTING[LF, L3].)
5	**LOCATE LEAK POINT** • Inspect leakage for the following using Evaporative Emissions Tester — Charcoal canister — Catch tank — Fuel filler cap — EVAP hoses and pipes — Fuel tank • Is leakage found?	Yes	Repair leakage or replace part, then go to Step 10.
		No	Go to the next step.

STEP	INSPECTION		ACTION
6	**INSPECT PURGE SOLENOID VALVE** • Inspect the purge solenoid valve is stuck closed. (See 01-16A-13 PURGE SOLENOID VALVE INSPECTION[LF, L3].) • Is the purge solenoid valve normal?	Yes	Go to the next step.
		No	Replace the purge solenoid valve, then go to Step 10.
7	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP** • Connect all disconnected connectors and hoses. • Place clamp on EVAP system leak detection pump hose between EVAP system leak detection pump and air filter. • Perform evaporative system leak inspection. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) • Is test result failed?	Yes	Go to Step 9.
		No	Go to the next step.
8	**CONFIRM EVAP SYSTEM LEAK DETECTION PUMP LEAKAGE** • Remove clamp. • Perform evaporative system leak inspection. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) • Is test result failed?	Yes	Replace the EVAP system leak detection pump, then go to Step 10.
		No	Go to the next step.
9	**INSPECT FUEL PUMP UNIT INSTALLATION** • Remove the fuel tank. • Visually inspect for damage, insufficient sealing or poorly installed pump unit. • Is it normal?	Yes	Go to the next step.
		No	Repair or replace fuel tank or sealing, then go to the next step.
10	**PERFORM LEAK INSPECTION** • Connect all disconnected connectors and hoses. • Perform evaporative system leak inspection. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) • Is test result failed?	Yes	Leakage still exists. Locate leak point and repair. Then go to the next step.
		No	Go to the next step
11	**VERIFY TROUBLESHOOTING OF DTC P0442 COMPLETED** • Start the engine and let it idle. • Clear DTC using M-MDS. • Turn the ignition switch off. • Perform the KOER self-test or the "EVAP System Repair Verification Drive Mode". (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Is PENDING CODE of same DTC present?	Yes	Replace the PCM, then go to the next step.
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is there any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P0443[LF, L3]

id0102a3807600

DTC P0443	Purge solenoid valve circuit problem
DETECTION CONDITION	**California emission regulation applicable model** • The PCM monitors the purge solenoid valve control signal voltage and current. If the following conditions are met, the PCM determines that there is the purge solenoid valve control circuit problem. — The PCM turns the purge solenoid valve off, but the voltage of the purge solenoid valve control signal remains low. — The PCM turns the purge solenoid valve on, but the current of the purge solenoid valve control signal remains high. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
	Except for California emission regulation applicable model • The PCM monitors the input voltages from the purge solenoid valve. If the voltage remains low or high, the PCM determines that the purge solenoid valve circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • Are any DTCs is stored in the PCM memory.
POSSIBLE CAUSE	• Purge solenoid valve malfunction • Connector or terminal malfunction • Short to ground in wiring harness between purge solenoid valve terminal A and PCM terminal 2C*1, 2AN*2 • Open circuit in wiring harness between main relay and purge solenoid valve terminal B • Open circuit in wiring harness between purge solenoid valve terminal A and PCM terminal 2C*1, 2AN*2 • Short to power supply in wiring harness between purge solenoid valve terminal A and PCM terminal 2C*1, 2AN*2 • PCM malfunction

*1 : LF MTX, L3 and California emission regulation applicable model with LF ATX
*2 : Except for California emission regulation applicable model with LF ATX

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CLASSIFY OPEN CIRCUIT OR SHORT TO GROUND MALFUNCTION** • Disconnect purge solenoid valve tube that is connected to intake manifold. • Connect vacuum pump to purge solenoid valve. • Pump vacuum pump several times and stop. • Wait **a few seconds**. • Is vacuum maintained?	Yes	Go to Step 5.
		No	Go to the next step.
4	**INSPECT PASSAGE CONTROL OF PURGE SOLENOID VALVE** • Turn the ignition switch off. • Disconnect purge solenoid valve connector. • Pump vacuum pump several times and wait **a few seconds**. • Is vacuum maintained?	Yes	Repair or replace wiring harness for short to ground, then go to Step 10.
		No	Replace the purge solenoid valve, then go to Step 10.
5	**INSPECT PURGE SOLENOID VALVE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
6	**INSPECT PURGE SOLENOID VALVE** • Perform purge solenoid valve inspection. (See 01-16A-13 PURGE SOLENOID VALVE INSPECTION[LF, L3].) • Is purge solenoid valve normal?	Yes	Go to the next step.
		No	Replace the purge solenoid valve, then go to Step 10.
7	**INSPECT PURGE SOLENOID VALVE POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between purge solenoid valve terminal B and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open circuit, then go to Step 10.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
9	**INSPECT PURGE SOLENOID VALVE CONTROL CIRCUIT** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between purge solenoid valve terminal A (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for short to power supply, then go to the next step.
		No	Inspect for continuity between purge solenoid valve terminal A (wiring harness-side) and PCM terminal 2C[*1], 2AN[*2] (wiring harness-side). • If there is continuity, go to the next step. • If there is no continuity, repair or replace wiring harness for open circuit, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0443 COMPLETED** • Make sure to reconnect all disconnected connectors. • Start the engine. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

*1 : LF MTX, L3 and California emission regulation applicable model with LF ATX
*2 : Except for California emission regulation applicable model with LF ATX

DTC P0446[LF, L3]

id0102a3807700

DTC P0446	Change over valve (COV) (EVAP system leak detection pump) stuck close
DETECTION CONDITION	• The PCM monitors pump load current (EVAP line pressure), while evaporative leak monitor is operating. When the decrease in pump load current is less than the specification after the reference current value has been obtained, the PCM determines change over valve (COV) in EVAP system leak detection pump has a malfunction. **Diagnostic support note** • This is an intermittent monitor (CCM). • The MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Damaged COV (in EVAP system leak detection pump.) • Short to power circuit between the EVAP system leak detection pump terminal C and PCM terminal 1AJ • Damaged PCM

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (CCM related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnostic according to available repair information. • If vehicle is not repaired, then go to the next step.
		No	Go to the next step.
3	**CHECK COV CONTROL (EVAP SYSTEM LEAK DETECTION PUMP CIRCUIT FOR SHORT TO POWER)** • Turn the ignition switch to the ON position (Engine off). • Disconnect the EVAP system leak detection pump connector. • Measure the voltage between EVAP system leak detection pump connector terminal C (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness, then go to Step 5.
		No	Go to the next step.
4	**INSPECT COV (EVAP SYSTEM LEAK DETECTION PUMP)** • Inspect the EVAP system leak detection pump. (See 01-16A-10 EVAPORATIVE EMISSION (EVAP) SYSTEM LEAK DETECTION PUMP INSPECTION[LF, L3].) • Is the COV (EVAP system leak detection pump) normal?	Yes	Go to the next step.
		No	Replace the EVAP system leak detection pump, then go to the next step.

STEP	INSPECTION		ACTION
5	**VERIFY TROUBLESHOOTING OF DTC P0446 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off) • Clear the DTC from the PCM memory using the M-MDS. • Perform the evaporative emission test using the M-MDS. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) • Is the same DTC present? **Note** • If evaporative system test function is not available, perform the following procedure: — Perform the EVAP System Repair Verification Drive Mode. (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) — Is the PENDING CODE the same as the DTC present?	Yes	Replace the PCM, then go to the next step.
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P0455[LF, L3]

id0102a3815500

DTC P0455	Evaporative emission control system leak detected (gross leak)
DETECTION CONDITION	• The PCM measures the pump load current (EVAP line pressure) when the specified period has passed after EVAP system is sealed when monitoring conditions are met. If the load does not reach the reference current value within the specified period, PCM determines that the EVAP system has gross leak. **MONITORING CONDITION** — IG switch OFF — IAT: **5—35 °C {40—95 °F}** — Battery voltage: **11 V or above** — Atmospheric pressure: **72.2 kPa {542 mmHg, 21.3 inHg} or above** — Fuel tank level: **15—85%** **Diagnostic support note** • This is an intermittent monitor (EVAP system). • The MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory. • DIAGNOSTIC MONITORING TEST RESULT is available.
POSSIBLE CAUSE	• Purge solenoid vaive malfunction • EVAP system leak detection pump malfunction • Loose, missing or defective fuel filler cap • Charcoal canister malfunction • Fuel tank malfunction • EVAP hose damaged or loose • Poor connection or damaged vacuum hose

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (EVAP system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to available repair information. • If vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn the ignition switch to off then to the ON position (Engine off). • Verify related PENDING CODE or stored DTCs. • Is DTCs P0443 and/or P0446 present?	Yes	Go to appropriate DTC troubleshooting procedure.
		No	Go to the next step.
4	**CLASSIFY INTERMITTENT CONCERN OR CONTINUOUS CONCERN** • Perform Evaporative System Leak Inspection. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) • Is test result failed?	Yes	Go to the next step.
		No	Intermittent concern exists. Inspect purge solenoid valve and EVAP system leak detection pump circuit for intermittent concern. (See 01-03A-66 INTERMITTENT CONCERN TROUBLESHOOTING[LF, L3].)
5	**INSPECT FUEL FILLER CAP** • Verify the fuel-filler cap is not either disconnected, loose or damaged. • Is it normal? **Note** • When the fuel-filler caps other than OEM caps are attached, it is considered malfunction.	Yes	Go to the next step.
		No	Retighten the fuel-filler cap or replace it, if it is damaged. Go to Step 18.
6	**INSPECT PURGE SOLENOID VALVE FOR BEING STUCK** • Inspect the purge solenoid valve. • Is the purge solenoid valve normal?	Yes	Go to the next step.
		No	Replace the purge solenoid valve, then go to Step 18.
7	**INSPECT COV (EVAP SYSTEM LEAK DETECTION PUMP)** • Inspect the EVAP system leak detection pump. • Is the COV (EVAP leak detection pump) normal?	Yes	Go to the next step.
		No	Replace the EVAP system leak detection pump, then go to Step 18.
8	**DETERMINE IF EVAP CONTROL SYSTEM FOR LEAKAGE OR BLOCKAGE** **Note** • If evaporative emission tester is not available, then go to the next step. • Perform Evaporative System Leak Inspection. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) • Is system test normal?	Yes	Repair or replace malfunctioning area, then go to Step 18.
		No	Go to the next step.
9	**INSPECT LEAKAGE OF CHARCOAL CANISTER TO FUEL PUMP** • Disconnect the fuel tank side vacuum hose at charcoal canister. • Apply vacuum **1.7 kPa {13 mmHg, 0.5 inHg}** to disconnected vacuum hose using vacuum pump. • Does vacuum hold for minimum of **2 min**?	Yes	Go to Step 13.
		No	Go to the next step.

STEP	INSPECTION		ACTION
10	**VERIFY POOR CONNECTION OF VACUUM HOSE** • Verify vacuum hose installation condition between fuel tank and charcoal canister. • Is there poor connection detected?	Yes	Connect vacuum hose correctly, then go to Step 18.
		No	Go to the next step
11	**INSPECT FUEL TANK INSTALLATION** • Remove the fuel tank. • Visually inspect for damage, insufficient sealing or poorly installed fuel pump unit. • Is it normal?	Yes	Go to the next step.
		No	Repair or replace fuel tank or sealing, then go to Step 18.
12	**INSPECT FUEL TANK** • Inspect the fuel tank. • Is it normal?	Yes	Replace vacuum hose from charcoal canister and fuel tank, then go to the next step.
		No	Replace the fuel tank, then go to the next step.
13	**INSPECT LEAKAGE FROM CHARCOAL CANISTER TO PURGE SOLENOID VALVE** • Disconnect purge solenoid valve side vacuum hose at charcoal canister. • Apply vacuum **3.3 kPa {25 mmHg, 1.0 inHg}** to disconnected vacuum hose using vacuum pump. • Does vacuum hold for minimum of **2 min**?	Yes	Go to Step 18.
		No	Go to the next step.
14	**VERIFY POOR CONNECTION OF VACUUM HOSE** • Verify vacuum hose installation condition between purge solenoid valve and charcoal canister. • Is there poor connection detected?	Yes	Connect vacuum hose correctly, then go to Step 18.
		No	Go to the next step.
15	**INSPECT PURGE SOLENOID VALVE FOR DAMAGE OR AIR LEAK** • Remove the purge solenoid valve and inspect for damage and air leak. • Is it normal?	Yes	Go to the next step.
		No	Replace the purge solenoid valve, then go to Step18.
16	**INSPECT CATCH TANK** • Remove the catch tank and inspect for plugging, damages and pinhole using vacuum pump. • Is it normal?	Yes	Go to the next step.
		No	Replace the catch tank, then go to Step 18.
17	**INSPECT CHARCOAL CANISTER** • Remove the charcoal canister and inspect for plugging, damage and pinhole. • Is it normal?	Yes	Replace vacuum hose from the charcoal canister to the purge solenoid valve, then go to the next step.
		No	Replace the charcoal canister, then go to the next step.
18	**PERFORM LEAK INSPECTION** • Connect all disconnected connectors. • Perform Evaporative System Leak Inspection. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) • Is test result failed?	Yes	Leakage still exists. Locate leak point and repair. Then go to the next step.
		No	Go to the next step.
19	**VERIFY TROUBLESHOOTING OF DTC P0455 COMPLETED** • Start the engine and let it idle. • Clear DTC using M-MDS. • Turn the ignition switch off. • Perform the KOER self-test or the "EVAP System Repair Verification Drive Mode". (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Is PENDING CODE of same DTC present?	Yes	Replace the PCM, then go to the next step.
		No	Go to the next step.
20	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is there any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P0456[LF, L3]

id0102a3807900

DTC P0456	Evaporative emission control system leak detected (very small leak)
DETECTION CONDITION	• The PCM measure the pump load current (EVAP line pressure) when a specified period has passed after EVAP system is sealed when monitoring conditions are met. If the load does not reach the reference load value or rate of the load increase lower than the specified within a specified period, PCM determines that the EVAP system has very small leak. **MONITORING CONDITION** — IG switch OFF — IAT: **5—35 °C {40—95 °F}** — Battery voltage: **11 V or above** — Atmospheric pressure: **72.2 kPa {542 mmHg, 21.3 inHg} or above** — Fuel tank level: **15—85%** **Diagnostic support note** • This is an intermittent monitor (EVAP system). • The MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory. • DIAGNOSTIC MONITORING TEST RESULT is available.
POSSIBLE CAUSE	• Purge solenoid valve malfunction • EVAP system leak detection pump malfunction • Charcoal canister malfunction • Fuel cap malfunction • Fuel tank malfunction • Fuel pump unit poor seal • EVAP hose damaged or loose • EVAP pipe damaged

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (EVAP system related) been recorded?	Yes	Go to next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to available repair information. • If vehicle is not repaired, go to next step.
		No	Go to next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn ignition switch OFF then ON (Engine OFF). • Verify related PENDING CODE or stored DTCs. • Is other DTC present?	Yes	Go to appropriate DTC inspection.
		No	Go to next step
4	**CLASSIFY INTERMITTENT CONCERN OR CONTINUOUS CONCERN** • Perform evaporative system leak inspection. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) • Is system test result failed?	Yes	Go to next step.
		No	Intermittent concern exists. Inspect purge solenoid valve and EVAP system leak detection pump circuit for intermittent concern. (See 01-03A-66 INTERMITTENT CONCERN TROUBLESHOOTING[LF, L3].)
5	**LOCATE LEAK POINT** • Check leakage for the following using. Evaporative emission Tester — Charcoal canister — Catch tank — Fuel filler cap — EVAP hoses and pipes — Fuel tank • Is leakage found?	Yes	Repair leakage or replace part, then go to Step 10.
		No	Go to next step.

STEP	INSPECTION		ACTION
6	**INSPECT PURGE SOLENOID VALVE** • Inspect if purge solenoid valve is stuck closed. (See 01-16A-13 PURGE SOLENOID VALVE INSPECTION[LF, L3].) • Is purge solenoid valve okay?	Yes	Go to next step.
		No	Replace purge solenoid valve, then go to Step 10.
7	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP** • Connect all disconnected connectors and hoses. • Place clamp on EVAP system leak detection pump hose between EVAP system leak detection pump and air filter. • Perform evaporative system leak inspection. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) • Is test result failed?	Yes	Go to Step 9.
		No	Go to next step.
8	**CONFIRM EVAP SYSTEM LEAK DETECTION PUMP LEAKAGE** • Remove clamp. • Perform evaporative system leak inspection. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) • Is test result failed?	Yes	Replace EVAP system leak detection pump, then go to Step 10.
		No	Go to next step.
9	**INSPECT FUEL PUMP UNIT INSTALLATION** • Remove fuel tank. • Visually inspect for damage, insufficient sealing or poorly installed pump unit. • Is it okay?	Yes	Go to next step.
		No	Repair or replace fuel tank or sealing, then go to next step.
10	**PERFORM LEAK INSPECTION** • Connect all disconnected connectors and hoses. • Perform evaporative system leak inspection. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) • Is test result failed?	Yes	Leakage still exists. Locate leak point and repair. Then go to next step.
		No	Go to next step
11	**VERIFY TROUBLESHOOTING OF DTC P0456 COMPLETED** • Start the engine and let it idle. • Clear DTC using M-MDS. • Turn the ignition switch off. • Perform the KOER self-test or the "EVAP System Repair Verification Drive Mode". (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Is PENDING CODE of same DTC present?	Yes	Replace the PCM, then go to the next step.
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is there any DTC present?	Yes	Go to applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P0461[LF, L3]

id0102a3808000

DTC P0461	Fuel gauge sender unit circuit range/performance problem
DETECTION CONDITION	• The PCM monitors the fuel tank level difference before and after the PCM-calculated fuel consumption has reached **more than 24.5 L {25.9 US qt, 21.6 Imp qt}**. If the difference is **less than 5%**, the PCM determines that there is a fuel gauge sender unit circuit range/performance problem. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Fuel gauge sender unit malfunction • Instrument cluster malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT INSTRUMENT CLUSTER** • Perform the "INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE". (See 09-22-5 INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE.) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part, then go to Step 5.
		No	Go to the next step.
4	**INSPECT FUEL GAUGE SENDER UNIT** • Inspect the fuel gauge sender unit. (See 09-22-5 INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE.) • Is there any malfunction?	Yes	Replace the fuel tank, then go to the next step. (See 01-14A-8 FUEL TANK REMOVAL/INSTALLATION[LF, L3].)
		No	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

DTC P0462[LF, L3]

id0102a3808100

DTC P0462	Fuel gauge sender unit circuit low input
DETECTION CONDITION	• The PCM monitors the fuel level signal and fuel gauge sender unit output voltage from the instrument cluster. If the PCM detects a fuel level or fuel gauge sender unit output voltage that is too low, the PCM determines that the fuel gauge sender unit circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Fuel gauge sender unit malfunction • Instrument cluster malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT INSTRUMENT CLUSTER** • Perform the "INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE". (See 09-22-5 INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE.) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part, then go to Step 5.
		No	Go to the next step.
4	**INSPECT FUEL GAUGE SENDER UNIT** • Inspect the fuel gauge sender unit. (See 09-22-5 INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE.) • Is there any malfunction?	Yes	Replace the fuel tank, then go to the next step. (See 01-14A-8 FUEL TANK REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING OF DTC P0462 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Drive the vehicle under the FREEZE FRAME DATA condition. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

DTC P0463[LF, L3]

id0102a3808200

DTC P0463	Fuel gauge sender unit circuit high input
DETECTION CONDITION	• The PCM monitors the fuel level signal and fuel gauge sender unit output voltage from the instrument cluster. If the PCM detects a fuel level or fuel gauge sender unit output voltage that is too high, the PCM determines that the fuel gauge sender unit circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Fuel gauge sender unit malfunction • Instrument cluster malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT INSTRUMENT CLUSTER** • Perform the "INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE". (See 09-22-5 INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE.) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part, then go to Step 5.
		No	Go to the next step.
4	**INSPECT FUEL GAUGE SENDER UNIT** • Inspect the fuel gauge sender unit. (See 09-22-5 INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE.) • Is there any malfunction?	Yes	Replace the fuel tank, then go to the next step. (See 01-14A-8 FUEL TANK REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING OF DTC P0463 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Drive the vehicle under the FREEZE FRAME DATA condition. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

DTC P0480[LF, L3]

id0102a3807400

DTC P0480	Fan control circuit problem
DETECTION CONDITION	• The PCM monitors the input voltages from the fan control module. If the voltage at PCM terminal 1W remains low or high, the PCM determines that fan control circuit has malfunction. **Diagnostic support note** • This is an continuous monitor (Other). • The MIL does not illuminate. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is not available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Fan control module malfunction • Connector or terminal malfunction • Short to power supply in wiring harness between fan control module terminal B and PCM terminal 1Y*1, 1W*2, 1R*3 • Short to ground in wiring harness between fan control module terminal B and PCM terminal 1Y*1, 1W*2, 1R*3 • Open circuit in wiring harness between fan control module terminal B and PCM terminal 1Y*1, 1W*2, 1R*3 • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FAN CONTROL MODULE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect fan control module connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT FAN CONTROL MODULE SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between fan control module terminal B (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for open circuit, then go to Step 9.
		No	Go to the next step.
5	**INSPECT FAN CONTROL MODULE SIGNAL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between fan control module terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for open circuit, then go to Step 9.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
7	**INSPECT FAN CONTROL MODULE SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between fan control module terminal B (wiring harness-side) and PCM terminal 1Y*1, 1W*2, 1R*3. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace wiring harness for open circuit, then go to Step 9.
8	**INSPECT FAN CONTROL MODULE** • Perform fan control module inspection. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) • Is fan control module normal?	Yes	Go to the next step.
		No	Replace the fan control module, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0480 COMPLETED** • Clear the DTC from the PCM memory using the M-MDS. • Perform the KOEO or KOER self-test. • Turn A/C switch to ON. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

*3 : Except for California emission regulation applicable model with LF MTX, L3

DTC P0500[LF, L3]

id0102a3808400

DTC P0500	VSS circuit problem
DETECTION CONDITION	**With ABS HU/CM** • If an error in the wheel speed signal from the ABS HU/CM is detected by CAN when the following conditions are met: — Shift range in except P, N or R range (ATX) — Neutral switch and clutch switch are OFF (MTX) — Load is above **40%** — Engine speed is **2,000 rpm or above** — Brake switch is OFF **Without ABS HU/CM MTX** • Vehicle speed signal from vehicle speed sensor is **below 3.7 km/h {2.3 mph}** when following conditions are met: — Neutral switch and clutch switch are OFF — Load is above **40%** — Engine speed is **2,000 rpm or above** — Brake switch is OFF **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	**With ABS HU/CM** • Front ABS wheel-speed sensor malfunction • ABS HU/CM malfunction • Connector or terminal malfunction • PCM malfunction **Without ABS HU/CM MTX** • VSS malfunction • Connector or terminal malfunction • Open circuit between PCM terminal 2N and VSS terminal A • Open circuit between PCM terminal 2M and VSS terminal B • Short to ground between PCM terminal 2N and VSS terminal A • Short to ground between PCM terminal 2M and VSS terminal B • Short to power between PCM terminal 2N and VSS terminal A • Short to power between PCM terminal 2M and VSS terminal B • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME PID DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME PID DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to available repair information. • If vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY CURRENT INPUT SIGNAL STATUS-IS CONCERN INTERMITTENT OR CONSTANT** • Connect the M-MDS to DLC-2. • Start the engine. • Access VSS PID using the M-MDS. — Vehicle speed **20 km/h {12.4 mph}: 20km/h {12.4 mph}** — Vehicle speed **40 km/h {24.8 mph}: 40km/h {24.8 mph}** • Are PID readings within specification?	Yes	Go to intermittent concern troubleshooting procedure. (See 01-03A-66 INTERMITTENT CONCERN TROUBLESHOOTING[LF, L3].)
		No	Go to the next step.
4	**INSPECT VSS CONNECTOR FOR POOR CONNECTION** • Verify that the VSS connector is connected securely. • Is connector normal?	Yes	Go to the next step.
		No	Reconnect the connector, then go to Step 11.

STEP	INSPECTION		ACTION
5	**INSPECT THE VSS** • Perform VSS inspection. (See 05-17A-21 VEHICLE SPEED SENSOR (VSS) INSPECTION[FN4A-EL], 05-17B-28 VEHICLE SPEED SENSOR (VSS) INSPECTION[FS5A-EL].) • Is the VSS normal?	Yes	Go to the next step.
		No	Replace VSS, then go to Step 11.
6	**INSPECT VSS CIRCUIT FOR SHORT TO POWER** • Turn the ignition switch off. • Disconnect the VSS connector. • Turn the ignition switch to the ON position (Engine off). • Measure the voltage following terminals: — VSS terminal A (wiring harness-side) — VSS terminal B (wiring harness-side) • Is any voltage reading?	Yes	Repair or replace suspected harness, then go to Step 11.
		No	Go to the next step.
7	**INSPECT VSS CIRCUIT FOR SHORT TO GROUND** • Inspect continuity between following terminal and body ground: — VSS terminal A (wiring harness-side) — VSS terminal B (wiring harness-side) • Is there any continuity?	Yes	Repair or replace suspected harness, then go to Step 11.
		No	Go to the next step.
8	**INSPECT VSS CIRCUITS FOR SHORTS** • Inspect continuity between the VSS connector terminals A and B (wiring harness-side). • Is there any continuity?	Yes	Repair or replace suspected harness, then go to Step 11.
		No	Go to the next step.
9	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to Step 11.
		No	Go to the next step.
10	**INSPECT VSS CIRCUIT FOR OPEN CIRCUIT** • Inspect continuity between following terminals (wiring harness-side): — VSS terminal A and PCM terminal 2N — VSS terminal B and PCM terminal 2M • Is there continuity?	Yes	Inspect VSS pulse wheel for damage. Replace VSS pulse wheel and go to the next step.
		No	Repair or replace suspected harness, then go to the next step.
11	**VERIFY TROUBLESHOOTING OF DTC P0500 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear DTC from PCM memory using M-MDS. • Warm up the engine. • Access RPM and LOAD PID using M-MDS. • Drive vehicle under following conditions for **18s**. — Engine speed: **2,000 rpm or above** — Gear: Gear is in other than NEUTRAL — Load: **40% or above** • Is PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is there any DTC present?	Yes	Go to applicable DTC troubleshooting. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P0505[LF, L3]

id0102a3808500

DTC P0505	IAC system problem
DETECTION CONDITION	• The PCM cannot control idle speed toward target idle speed while KOER self test.
POSSIBLE CAUSE	• Air cleaner element clogged • Air intake passage clogged • A/C relay control circuit malfunction • Generator control circuit malfunction • Low engine compression (Over capacity of blow-by gas) • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to available repair information. • If vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY RELATED PENDING OR STORED DTC** • Turn the ignition switch off then to the ON position. (Engine off) • Verify pending code or stored DTCs using the M-MDS. • Does DTC P0506, P0507, P0638, P2100*2, P2101, P2102*2, P2103*2, P2108, P2109*1, P2112*1 or P2119 presents?	Yes	Perform the applicable DTC troubleshooting. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
3	**INSPECT A/C MAGNETIC CLUTCH OPERATION** **Note** • The following test should be performed for the A/C. Go to the next step for vehicles without A/C • Turn the fan switch off. • Is the magnetic clutch still on?	Yes	Go to "A/C ALWAYS ON / A/C COMPRESSOR RUNS CONTINUOUSLY." of ENGINE SYMPTOM TROUBLESHOOTING then go to Step 8. (See 01-03A-11 ENGINE SYMPTOM TROUBLESHOOTING[LF, L3].)
		No	Go to the next step.
4	**INSPECT GENERATOR CONTROL CIRCUIT MALFUNCTION** • Apply electrical load. • Is the engine speed increased?	Yes	Go to the next step.
		No	Repair short to power supply in generator control circuit, then go to Step 8.
5	**INSPECT AIR CLEANER ELEMENT** • Remove air cleaner element with the engine running. Is the engine speed increased?	Yes	Clean or replace the air cleaner element, then go to Step 8.
		No	Go to the next step.
6	**INSPECT THROTTLE BODY PASSAGE** • Is the throttle body clogged?	Yes	Clean or replace the throttle body passage, then go to Step 8.
		No	Go to the next step.
7	**INSPECT ENGINE COMPRESSION** • Inspect engine compression. (See 01-10A-11 COMPRESSION INSPECTION[LF, L3].) • Is engine compression normal?	Yes	Go to the next step.
		No	Overhaul the engine, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0505 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC using the M-MDS. • Perform the KOER Self-Test. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

*1 : California emission regulation applicable model
*2 : Except for California emission regulation applicable model

DTC P0506[LF, L3]

id0102a3808600

DTC P0506	Idle control system RPM lower than expected
DETECTION CONDITION	• Actual idle speed is lower than expected by **100 rpm** for **14 s**, when brake pedal is depressed (brake switch is on). **Note** • If atmospheric pressure is **less than 72.3 kPa {542 mmHg, 21.3 inHg}** or intake air temperature is **below -10 °C {14 °F}**, the PCM cancels diagnosis of P0506. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction conditions in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Electronic throttle control system malfunction • Air cleaner element clogged • Air intake passage clogged • A/C relay control circuit malfunction • Generator malfunction • Purge solenoid valve malfunction • Low engine compression (Over capacity of blow-by gas) • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to available repair information. • If vehicle is not repaired, then go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING OR STORED DTCS** • Turn the ignition switch off, then to the ON position (Engine off). • Verify PENDING CODE or stored DTCs using M-MDS. • Is other DTC present?	Yes	Repair the applicable DTCs. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
4	**INSPECT A/C MAGNET CLUTCH OPERATION** • Turn the fan switch off. • Is the magnet clutch still on?	Yes	Refer to "A/C is always on or A/C compressor runs continuously." of ENGINE SYMPTOM TROUBLESHOOTING, then go to Step 9. (See 01-03A-59 NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY[LF, L3].)
		No	Go to the next step.
5	**INSPECT PURGE SOLENOID VALVE MALFUNCTION** • Inspect the purge solenoid valve. (See 01-16A-13 PURGE SOLENOID VALVE INSPECTION[LF, L3].) • Is purge solenoid valve normal?	Yes	Go to the next step.
		No	Replace the purge solenoid valve, then go to Step 9.
6	**INSPECT AIR CLEANER ELEMENT** • Remove the air cleaner element with the engine running. • Is the engine speed increased?	Yes	Replace the air cleaner element, then go to Step 9.
		No	Go to the next step.
7	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression. (See 01-10A-11 COMPRESSION INSPECTION[LF, L3].) • Is the engine compression normal?	Yes	Go to the next step.
		No	Overhaul the engine, then go to Step 9.

STEP	INSPECTION		ACTION
8	**INSPECT GENERATOR** • Inspect the generator. (See 01-17A-7 GENERATOR INSPECTION[LF, L3].) • Is the generator normal?	Yes	Go to the next step.
		No	Repair or replace the related part, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0506 COMPLETED** • Make sure to reconnect all disconnected connectors. • Start the engine. • Clear the DTC from the PCM memory using the M-MDS. • Depress the brake pedal for **14 s or more.** • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P0507[LF, L3]

id0102a3808700

DTC P0507	Idle control system RPM higher than expected
DETECTION CONDITION	• Actual idle speed is higher than expected by **200 rpm** for **14 s**, when the brake pedal is depressed (brake switch is on). **Note** • If atmospheric pressure is **less than 72.3 kPa {542 mmHg, 21.3 inHg}** or intake air temperature is **below -10 °C {14 °F}**, the PCM cancels diagnosis of P0507. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction conditions in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Electronic throttle control system malfunction • Vacuum hose misconnection • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to available repair information. • If vehicle is not repaired, then go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING OR STORED DTCS** • Turn the ignition switch off, then to the ON position (Engine off). • Verify PENDING CODE or stored DTCs using the M-MDS. • Is other DTC present?	Yes	Repair the applicable DTCs. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
4	**INSPECT VACUUM HOSE CONNECTION** • Are vacuum hoses connecting accurately? (See 01-13A-4 INTAKE AIR SYSTEM MANIFOLD VACUUM INSPECTION[LF, L3].)	Yes	Go to the next step.
		No	Reconnect vacuum hose accurately, then go to Step 5.

STEP	INSPECTION		ACTION
5	**VERIFY TROUBLESHOOTING OF DTC P0507 COMPLETED** • Make sure to reconnect all disconnected connectors. • Start the engine. • Clear the DTC from the PCM memory using the M-MDS. • Depress the brake pedal for **14 s or more.** • Is the PENDING CODE for this DTC present?	Yes	Replace this PCM, then go to the next step.
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is there any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P050A[LF, L3]

id0102a3800000

DTC P050A	Cold start idle air control system performance
DETECTION CONDITION	• Actual idle speed is lower than expected by **100 rpm** for **8.4 s** when the target idle speed correction value for cold start is **above 0 rpm** or ignition retard value is **above 8.9 deg.CA**. **Note** • If atmospheric pressure is **less than 72.3 kPa {542 mmHg, 21.3 inHg}** or intake air temperature is **below -10 °C {14 °F}**, the PCM cancels diagnosis of P050A. **Diagnostic support note** • This is an intermittent monitor (Cold start emission reduction strategy monitoring). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Electronic throttle control system malfunction • Throttle valve stuck or blockage • Air suction in intake air system • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (CCM related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and diagnostic monitoring test results on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is P050A on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA. (See01-02A-22 DTC TABLE[LF, L3].)
4	**CHECK AIR SUCTION IN INTAKE AIR SYSTEM** • Start the engine. • Check air suction between MAF sensor and intake manifold. • Is there any air suction in the intake air system?	Yes	Repair or replace malfunctioning part, then go to Step 7.
		No	Go to the next step.

STEP	INSPECTION		ACTION
5	**VERIFY ELECTRONIC THROTTLE CONTROL SYSTEM OPERATION** • Perform the Electronic Throttle Control System Operation Inspection. (See01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3], Electronic Throttle Control System Inspection.) • Does the electronic throttle control system operate properly?	Yes	Go to the next step.
		No	Repair or replace malfunctioning part according to inspection result. Then go to Step 7.
6	**VERIFY THROTTLE VALVE** • Turn the ignition switch off. • Remove the throttle valve with connector connected. • Access ETC_DSD PID using the M-MDS. • Turn the ignition switch to ON position (Engine off). • Move the throttle valve using the ETC_DSD PID simulation function. • Dose the throttle valve move smoothly?	Yes	Go to the next step.
		No	Clean the throttle valve and retest. If the problem does not resolve, replace the throttle body. Then go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P050A COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from the PCM memory using the M-MDS. • Perform the KOER self-test using the M-MDS. (See01-02A-22 DTC TABLE[LF, L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the AFTER REPAIR PROCEDURE. (See01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTC present?	Yes	Go to the applicable DTC troubleshooting.(See01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.

DTC P050B[LF, L3]

id0102a3799900

DTC P050B	Cold start ignition timing performance
DETECTION CONDITION	• The PCM monitors actual ignition timing using the CKP sensor while electronic spark advance control fast idle correction operating. If the ignition timing is out of specified range, the PCM determines that the ignition timing at cold condition has performance problem. **Diagnostic support note** • This is an intermittent monitor (Cold start emission reduction strategy monitoring). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Damaged CKP sensor • Damaged CMP sensor • Damaged or chipped CKP sensor pulse wheel • Damaged or chipped CMP sensor pulse wheel • PCM malfunction

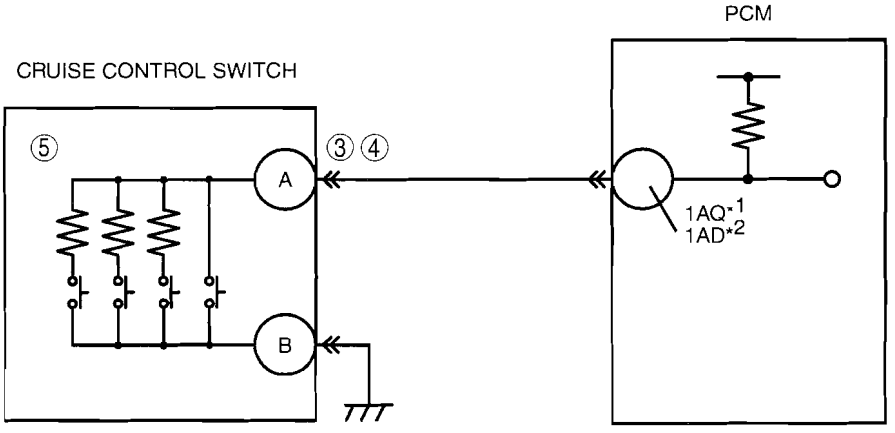
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (CCM related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and diagnostic monitoring test results on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is P050B on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA. (See01-02A-22 DTC TABLE[LF, L3].)
4	**VISUALLY INSPECT CKP SENSOR AND PULSE WHEEL** • Visually inspect for CKP sensor and pulse wheel. • Is there any damage or chip on CKP sensor and pulse wheel?	Yes	Replace the suspected part, then go to Step 8.
		No	Go to the next step.
5	**INSPECT CKP SENSOR** • Inspect CKP sensor. (See01-40A-68 CRANKSHAFT POSITION (CKP) SENSOR INSPECTION[LF, L3].) • Is the CKP sensor normal?	Yes	Go to the next step.
		No	Replace the CKP sensor, then go to Step 8.
6	**VISUALLY INSPECT CMP SENSOR AND PULSE WHEEL** • Visually inspect for CMP sensor and pulse wheel. • Is there any damage or chip on CMP sensor and pulse wheel?	Yes	Replace the suspected part, then go to Step 8.
		No	Go to the next step.
7	**INSPECT CMP SENSOR** • Inspect CMP sensor. (See01-40A-70 CAMSHAFT POSITION (CMP) SENSOR INSPECTION[LF, L3].) • Is the CMP sensor normal?	Yes	Go to the next step.
		No	Replace the CMP sensor, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P050B COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from the PCM memory using the M-MDS. • Perform the KOER self-test using the M-MDS. (See01-02A-22 DTC TABLE[LF, L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the AFTER REPAIR PROCEDURE. (See01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTC present?	Yes	Go to the applicable DTC troubleshooting. (See01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P0564[LF, L3]

id0102a3808900

DTC P0564	Cruise control switch circuit malfunction
DETECTION CONDITION	• The PCM monitors the cruise control switch signal at PCM terminal 1AQ*1, 1AD*2, 1AQ*3. If the PCM detects that any one of following switches (Main, CANCEL, SET/COAST, RESUME/ACCEL) remains on for **2 min**, the PCM determines that the cruise control switch circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (Other). • MIL does not comes on. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is not available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• Cruise control switch malfunction • Connector or terminal malfunction • Short to power circuit in wiring from cruise control switch terminal A and PCM terminal 1AQ*1, 1AD*2 • Short to ground circuit in wiring from cruise control switch terminal A and PCM terminal 1AQ*1, 1AD*2 • PCM malfunction



CRUISE CONTROL SWITCH WIRING HARNESS-SIDE CONNECTOR

*1 : LF MTX, L3 and California emission regulation applicable model with LF ATX
*2 : Except for California emission regulation applicable model with LF ATX

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to available repair information. • If vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
2	**INSPECT CRUISE CONTROL SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Inspect for poor connection (such as damaged, pulled-out terminals, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 6.
		No	Go to the next step.
3	**INSPECT CRUISE CONTROL SWITCH SIGNAL CIRCUIT FOR SHORT TO GROUND** • Disconnect cruise control switch and PCM connectors. • Inspect for continuity between cruise control switch terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace short to ground, then go to Step 6.
		No	Go to the next step.
4	**INSPECT CRUISE CONTROL SWITCH SIGNAL CIRCUIT FOR SHORT TO POWER** • Turn the ignition switch to the ON position (Engine off). • Inspect the voltage between cruise control switch terminal A (wiring harness-side) and body ground. • Is the voltage **below 1.0 V**?	Yes	Go to the next step.
		No	Repair or replace short to power supply, then go to Step 6.
5	**INSPECT CRUISE CONTROL SWITCH OPERATION** • Inspect the cruise control switch. (See 01-20A-1 CRUISE CONTROL SWITCH INSPECTION[LF, L3].) • Is the cruise control switch normal?	Yes	Go to the next step.
		No	Replace the cruise control switch, then go to the next step.
6	**VERIFY TROUBLESHOOTING OF P0564 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Drive the vehicle with cruise control **2 min. or more**. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is there any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P0571[LF, L3]

id0102a3809000

DTC P0571	Brake switch circuit problem
DETECTION CONDITION	• The PCM monitors changes in input voltage for brake switch No.1 and No.2 (signal from instrument cluster). If the PCM detects that both brake switches No.1 and No.2 remain on or off for **15 s**, it determines that the brake switch circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (Other). • MIL does not comes on. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is not available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• Brake switch malfunction • Open circuit between brake switch terminal B and instrument cluster terminal 2M • Open circuit between brake switch terminal C and body ground • Short to power between brake switch terminal B and instrument cluster terminal 2M • Short to ground circuit between brake switch terminal B and instrument cluster terminal 2M • Communication error between PCM and instrument cluster • PCM malfunction

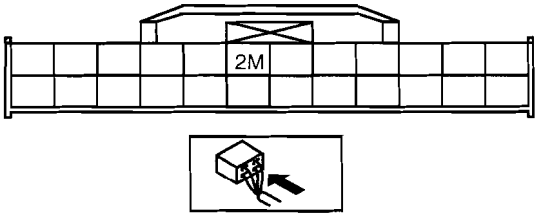
INSTRUMENT CLUSTER
WIRING HARNESS-SIDE CONNECTOR



*1 : LF MTX, L3 and California emission regulation applicable model with LF ATX
*2 : Except for California emission regulation applicable model with LF ATX

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to available repair information. • If vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY DTC FOR MODULE COMMUNICATION** • Connect M-MDS to DLC-2. • Turn the ignition switch to the ON position (Engine off). • Verify stored DTC. • Is DTC U0155 stored?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
4	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off then to the ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Is the DTC P0703 also present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
5	**INSPECT BRAKE SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the brake switch connector. • Inspect for poor connection (such as damaged, pull-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 11.
		No	Go to the next step.
6	**INSPECT BRAKE SWITCH** • Inspect the brake switch. • Is the brake switch normal?	Yes	Go to the next step.
		No	Replace brake switch, then go to Step 11.
7	**INSPECT GROUND CIRCUIT OF BRAKE SWITCH NO.2 FOR OPEN CIRCUIT** • Inspect for continuity between brake switch terminal C (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open circuit, then go to Step 11.
8	**INSPECT SIGNAL CIRCUIT OF BRAKE SWITCH NO.2 FOR SHORT TO GROUND** • Inspect for continuity between brake switch terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for short to ground circuit, then go to Step 11.
		No	Go to the next step.
9	**INSPECT INSTRUMENT CLUSTER CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect instrument cluster connector. • Inspect for poor connection (such as damaged, pull-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 11.
		No	Go to the next step.
10	**INSPECT SIGNAL CIRCUIT OF BRAKE SWITCH NO.2 FOR OPEN CIRCUIT** • Inspect for continuity between brake switch terminal B (wiring harness-side) and instrument cluster terminal 2M (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open circuit, then go to Step 11.
11	**INSPECT SIGNAL CIRCUIT OF BRAKE SWITCH NO.2 FOR SHORT TO POWER** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between brake switch terminal B (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for short to power circuit, then go to the next step.
		No	Go to the next step.
12	**VERIFY TROUBLESHOOTING OF P0571 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Turn the ignition switch to the ON position (Engine off). • Depress and release the brake pedal **more than 5 times**. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
13	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P0601[LF, L3]

id0102a3809100

DTC P0601	PCM memory check sum error
DETECTION CONDITION	• The PCM internal memory check sum error **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• PCM internal memory malfunction • PCM internal CPU malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY TROUBLESHOOTING OF P0601 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

DTC P0602[LF, L3]

id0102a3809200

DTC P0602	PCM programming error
DETECTION CONDITION	• No configuration data in the PCM **Note** • If the "PCM CONFIGURATION" is successful, the PCM stores DTC P0602 and illuminates the MIL (system is normal). Clear DTC P0602 using the M-MDS after the "PCM CONFIGURATION". • The MIL goes out after three drive cycles with no failure (DTCs remain in PCM). **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Configuration has not been completed • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY TROUBLESHOOTING OF DTC P0602 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the M-MDS. • Perform the KOEO or KOER self-test or the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC troubleshooting. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P0604[LF, L3]

id0102a3809300

DTC P0604	PCM random access memory error
DETECTION CONDITION	• The PCM internal random access memory error **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• PCM internal RAM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY TROUBLESHOOTING OF P0604 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

DTC P0606[LF, L3]

id0102a3809400

DTC P0606	ECM/PCM processor
DETECTION CONDITION	• The PCM internal CPU malfunction **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• PCM internal CPU malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY TROUBLESHOOTING OF P0606 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is there any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P0607[LF, L3]

id0102a3809500

Except for California Emission Regulation Applicable Model

DTC P0607	PCM performance problem
DETECTION CONDITION	• The PCM internal malfunction **Diagnostic support note** • This is a continuous monitor (Other). • MIL does not comes on. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is not available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• PCM internal malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to available repair information. • If vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY TROUBLESHOOTING OF P0607 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using M-MDS. • Start the engine, or perform the KOEO or KOER self-test • Is same DTC present?	Yes	Replace PCM, go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P0610[LF, L3]

id0102a3809600

DTC P0610	PCM vehicle options error
DETECTION CONDITION	• The PCM data configuration error **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• Configuration procedure has not been completed • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to available repair information. • If vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY TROUBLESHOOTING OF DTC P0610 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC troubleshooting. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P0638[LF, L3]

id0102a3809800

DTC P0638	Throttle actuator control circuit range/performance problem
DETECTION CONDITION	• The PCM compares the actual TP with the target TP when the engine is running. If the difference is more than the specification, the PCM determines that there is a throttle actuator control circuit range/performance problem. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Throttle actuator malfunction • Throttle valve malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Are other DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
4	**VERIFY TROUBLESHOOTING OF P0638 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

DTC P0661[LF, L3]

id0102a3821700

DTC P0661	Variable intake air solenoid valve circuit low input
DETECTION CONDITION	• The PCM monitors the variable intake air solenoid valve control signal. If the PCM turns variable intake air solenoid valve off but voltage still remains low, the PCM determines that variable intake air solenoid valve circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (Other). • The MIL does not illuminate. • PENDING CODE is available if the PCM detects the above malfunction condition. • The FREEZE FRAME DATA is not available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Variable intake air solenoid valve malfunction • Open circuit in wiring harness between main relay and variable intake air solenoid valve terminal B • Open circuit in wiring harness between variable intake air solenoid valve terminal A and PCM terminal 2J*1, 2AJ*2 • Short to ground in wiring harness between variable intake air solenoid valve terminal A and PCM terminal 2J*1, 2AJ*2 • Connector or terminal malfunction • PCM malfunction

*1 : LF MTX, L3 and California emission regulation applicable model with LF ATX
*2 : Except for California emission regulation applicable model with LF ATX

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

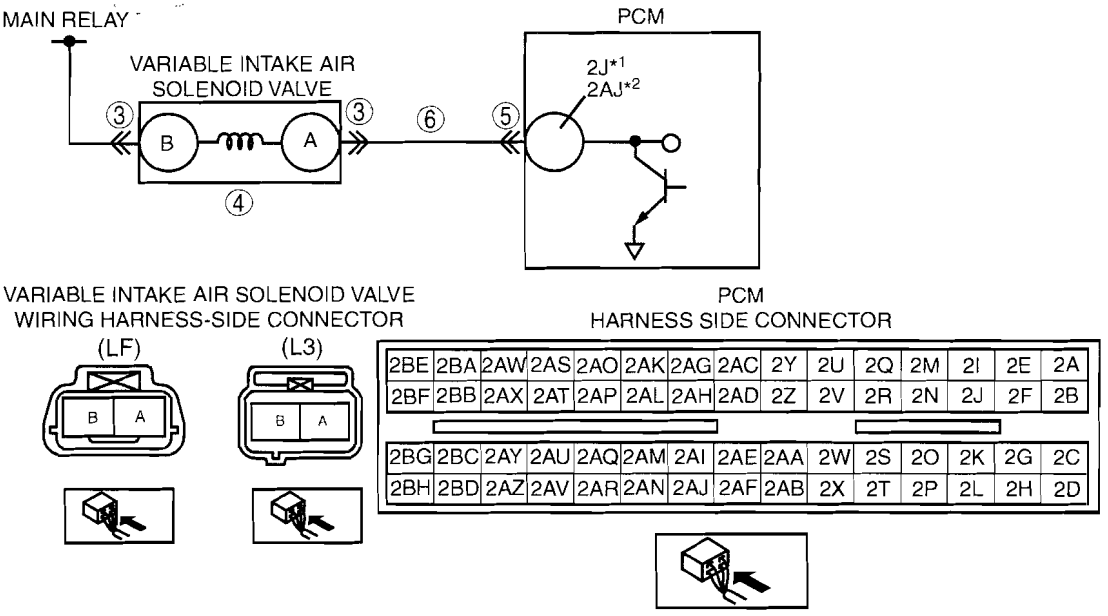
STEP	INSPECTION		ACTION
3	**INSPECT VARIABLE INTAKE AIR SOLENOID VALVE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the variable intake-air solenoid valve connector. • Inspect for poor connection (damaged/pulled-out pins, corrosion, etc.). • Is there malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT VARIABLE INTAKE AIR SOLENOID VALVE MALFUNCTION** • Inspect the variable intake air solenoid valve. (See 01-13A-8 VARIABLE INTAKE AIR SOLENOID VALVE INSPECTION[LF, L3].) • Is the variable intake air solenoid valve normal?	Yes	Go to the next step.
		No	Replace the variable intake air solenoid valve, then go to Step 9.
5	**INSPECT VARIABLE INTAKE AIR SOLENOID VALVE POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between variable intake air solenoid valve terminal B (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open, then go to Step 9.
6	**INSPECT VARIABLE INTAKE AIR SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between variable intake air solenoid valve terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for short to ground, then go to Step 9.
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection at terminal 2J*1, 2AJ*2 (damaged/pulled-out pins, corrosion, etc.). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 9.
		No	Go to the next step.
8	**INSPECT VARIABLE INTAKE AIR SOLENOID VALVE CONTROL CIRCUIT FOR OPEN** • Inspect for continuity between variable intake air solenoid valve terminal A (wiring harness-side) and PCM terminal 2J*1, 2AJ*2 (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0661 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the M-MDS. — Access RPM PID. — Increase the engine speed **4,750 rpm or more** for **10 times**. • Perform the KOEO or KOER self-test. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC troubleshooting. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

*1 : LF MTX, L3 and California emission regulation applicable model with LF ATX
*2 : Except for California emission regulation applicable model with LF ATX

DTC P0662[LF, L3]

id0102a3821800

DTC P0662	Variable intake air solenoid valve circuit high input
DETECTION CONDITION	• The PCM monitors the variable intake air solenoid valve control signal. If the PCM turns variable intake air solenoid valve on but voltage at PCM terminal still remains high, the PCM determines that the variable intake air solenoid valve circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (Other). • The MIL does not illuminate. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is not available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Variable intake air solenoid valve malfunction • Short to power supply in wiring harness between variable intake air solenoid valve terminal A and PCM terminal 2J*1, 2AJ*2 • Shorted variable intake air solenoid valve or PCM connector • PCM malfunction



*1 : LF MTX, L3 and California emission regulation applicable model with LF ATX
*2 : Except for California emission regulation applicable model with LF ATX

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT VARIABLE INTAKE AIR SOLENOID VALVE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the variable intake air solenoid valve connector. • Inspect for poor connection (damaged/pulled-out pins, corrosion, etc.). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.

STEP	INSPECTION		ACTION
4	**INSPECT VARIABLE INTAKE AIR SOLENOID VALVE MALFUNCTION** • Inspect the variable intake air solenoid valve. (See 01-13A-8 VARIABLE INTAKE AIR SOLENOID VALVE INSPECTION[LF, L3].) • Is the variable intake air solenoid valve normal?	Yes	Go to the next step.
		No	Replace the variable intake air solenoid valve, then go to Step 7.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection at terminal 2J*1, 2AJ*2 (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 7.
		No	Go to the next step.
6	**INSPECT VARIABLE INTAKE AIR SOLENOID VALVE CONTROL CIRCUIT SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between variable intake air solenoid valve terminal A (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for short to power supply, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0662 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the M-MDS. — Access RPM PID. — Increase the engine speed **4,750 rpm or more** for **10 times**. • Perform the KOEO or KOER self-test. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

*1 : LF MTX, L3 and California emission regulation applicable model with LF ATX
*2 : Except for California emission regulation applicable model with LF ATX

DTC P0703[LF, L3]

id0102a3809900

DTC P0703	Brake switch input circuit problem
DETECTION CONDITION	• The PCM monitors changes in input voltage from the brake switch. If the PCM does not detect the voltage changes while alternately accelerating and decelerating **8 times**, the PCM determines that brake switch circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Brake switch malfunction • Poor connection of brake switch connector or PCM connector • Short to power supply in wiring harness between brake switch terminal D and PCM connector terminal 1AB*1, 1AU*2 • Open circuit in wiring harness between brake switch terminal D and PCM connector terminal 1AB*1, 1AU*2 • Open circuit in wiring harness between battery positive terminal and brake switch terminal A • PCM malfunction

*1 : LF MTX, L3 and California emission regulation applicable model with LF ATX
*2 : Except for California emission regulation applicable model with LF ATX

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**CLASSIFY HIGH INPUT OR LOW INPUT** • Connect the M-MDS to DLC-2. • Access BOO PID. • Verify BOO PID during brake pedal operation. • Is BOO PID always OFF?	Yes	Go to the next step.
		No	Go to Step 10.
4	**INSPECT BRAKE SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the brake switch connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 14.
		No	Go to the next step.
5	**CLASSIFY BRAKE SWITCH OR CIRCUIT** • Connect the M-MDS to DLC-2. • Access BOO PID. • Connect a jumper wire between brake switch terminal A and D. • Is BOO PID on?	Yes	Go to the next step.
		No	Go to Step 7.
6	**INSPECT BRAKE SWITCH** • Inspect the brake switch. (See 04-11-8 BRAKE SWITCH INSPECTION.) • Is the brake switch normal?	Yes	Go to Step 14.
		No	Replace the brake switch, then go to Step 14.
7	**INSPECT BRAKE SWITCH POWER CIRCUIT FOR OPEN CIRCUIT** • Measure the voltage between brake switch terminal A and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the brake switch power circuit for open, then Go to Step 14.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 14.
		No	Go to the next step.
9	**INSPECT BRAKE SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between brake switch terminal D and PCM terminal 1AB*1, 1AU*2. • Is there continuity?	Yes	Repair or replace the wiring harness for open circuit, then go to Step 14.
		No	Go to Step 14.
10	**INSPECT BRAKE SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the brake switch connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 14.
		No	Go to the next step.
11	**CLASSIFY BRAKE SWITCH OR CIRCUIT** • Connect the M-MDS to DLC-2. • Access BOO PID. • Verify that BOO PID changes from ON to OFF when the brake switch connector disconnected. • Does BOO PID change from ON to OFF?	Yes	Go to the next step.
		No	Go to Step 13.
12	**INSPECT BRAKE SWITCH** • Inspect the brake switch. (See 04-11-8 BRAKE SWITCH INSPECTION.) • Is the brake switch normal?	Yes	Go to Step 14.
		No	Replace the brake switch, then go to Step 14.
13	**INSPECT BRAKE SWITCH SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Measure the voltage between brake switch terminal D and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for short to power supply, then go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
14	**VERIFY TROUBLESHOOTING OF DTC P0703 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Drive the vehicle **30 km/h {18.6 mph} or more**. • Depress and release the brake pedal **more than 8 times** while driving vehicle. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
15	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

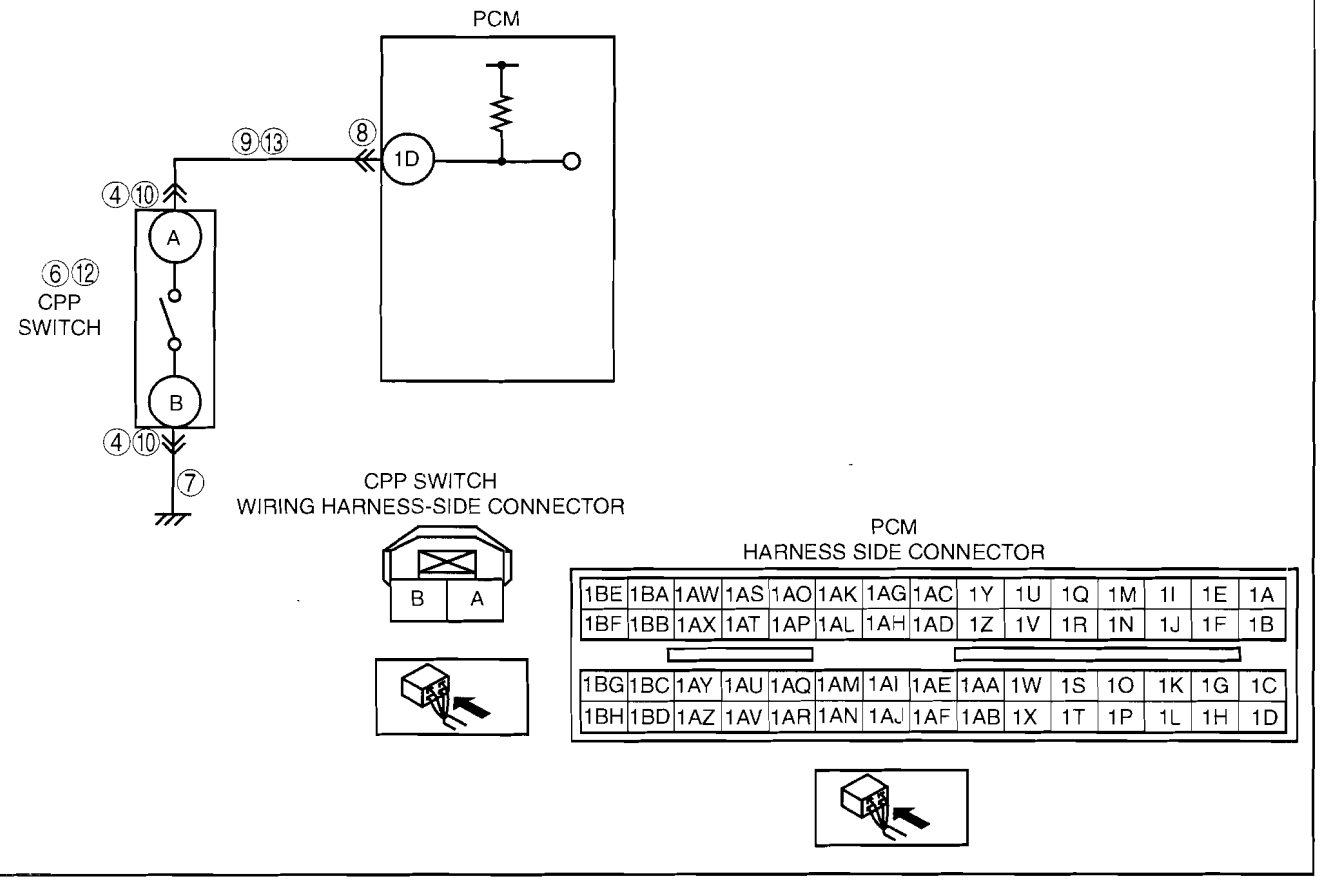
*1 : LF MTX, L3 and California emission regulation applicable model with LF ATX
*2 : Except for California emission regulation applicable model with LF ATX

DTC P0704[LF, L3]

id0102a3810000

DTC P0704	Clutch pedal position (CPP) switch input circuit problem
DETECTION CONDITION	• The PCM monitors changes in input voltage from the CPP switch. If the PCM does not detect the voltage changes while the vehicle runs with vehicle speed **above 30 km/h {19 mph}** and stops **8 times** alternately, the PCM determines that the CPP switch circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• CPP switch malfunction • Poor connection of CPP switch connector or PCM connector • Short to ground in wiring harness between CPP switch terminal A and PCM terminal 1D • Open circuit in wiring harness between CPP switch terminal A and PCM terminal 1D • Open circuit in wiring harness between ground and CPP switch terminal B • PCM malfunction

DTC P0704	Clutch pedal position (CPP) switch input circuit problem



Diagnostic procedure

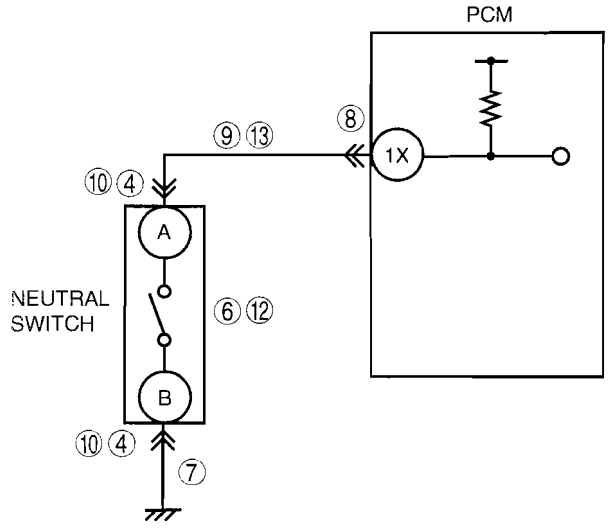
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CLASSIFY HIGH INPUT OR LOW INPUT** • Connect the M-MDS to DLC-2. • Access CPP PID. • Verify CPP PID during clutch pedal operation. • Is CPP PID always OFF?.	Yes	Go to the next step.
		No	Go to Step 10.
4	**INSPECT CPP SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the CPP switch connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 14.
		No	Go to the next step.
5	**CLASSIFY CPP SWITCH OR CIRCUIT** • Connect the M-MDS to DLC-2. • Access CPP PID. • Connect a jumper wire between CPP switch terminal A and B. • Is CPP PID on?	Yes	Go to the next step.
		No	Go to Step 7.

STEP	INSPECTION		ACTION
6	**INSPECT CPP SWITCH** • Inspect the CPP switch. (See 01-40A-47 CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION[LF, L3].) • Is the CPP switch normal?	Yes	Go to Step 14.
		No	Replace the CPP switch, then go to Step 14.
7	**INSPECT CPP SWITCH GROUND CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between CPP switch terminal B and ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the CPP switch power supply for open circuit, then Go to Step 14.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 14.
		No	Go to the next step.
9	**INSPECT CPP SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between CPP switch terminal A and PCM terminal 1D. • Is there continuity?	Yes	Repair or replace the wiring harness for open circuit, then go to Step 14.
		No	Go to Step 14.
10	**INSPECT CPP SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the CPP switch connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 14.
		No	Go to the next step.
11	**CLASSIFY CPP SWITCH OR CIRCUIT** • Connect the M-MDS to DLC-2. • Access CPP PID. • Verify that CPP PID changes from ON to OFF when CPP switch connector disconnected. • Does CPP PID change from ON to OFF?	Yes	Go to the next step.
		No	Go to Step 13.
12	**INSPECT CPP SWITCH** • Inspect the CPP switch. (See 01-40A-47 CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION[LF, L3].) • Is the CPP switch normal?	Yes	Go to Step 14.
		No	Replace the CPP switch, then go to Step 14.
13	**INSPECT CPP SWITCH SIGNAL CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between CPP switch terminal A and ground. • Is there continuity?	Yes	Repair or replace the wiring harness for short to ground, then go to Step 14.
		No	Go to the next step.
14	**VERIFY TROUBLESHOOTING OF DTC P0704 COMPLETED** • Make sure to reconnect all disconnected connectors. • Start the engine. • Clear the DTC from the PCM memory using the M-MDS. • Operate the clutch pedal while the vehicle runs and stops **8 times** alternately. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
15	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

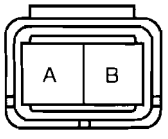
DTC P0850[LF, L3]

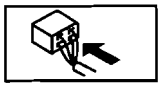
id0102a3810100

DTC P0850	Neutral switch input circuit problem
DETECTION CONDITION	• The PCM monitors changes in input voltage from the neutral switch. If the PCM does not detect the voltage changes while running vehicle with vehicle speed **above 30 km/h {19 mph}** and clutch pedal turns press and depress **10 times** repeatedly, the PCM determines that the neutral switch circuit has malfunction **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Neutral switch malfunction • Poor connection of neutral switch connector or PCM connector • Short to ground in wiring harness between neutral switch terminal A and PCM terminal 1X • Open circuit in wiring harness between neutral switch terminal A and PCM terminal 1X • Open circuit in wiring harness between ground and neutral switch terminal B • PCM malfunction



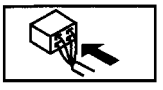
NEUTRAL SWITCH WIRING HARNESS-SIDE CONNECTOR





PCM HARNESS SIDE CONNECTOR

1BE	1BA	1AW	1AS	1AO	1AK	1AG	1AC	1Y	1U	1Q	1M	1I	1E	1A
1BF	1BB	1AX	1AT	1AP	1AL	1AH	1AD	1Z	1V	1R	1N	1J	1F	1B
1BG	1BC	1AY	1AU	1AQ	1AM	1AI	1AE	1AA	1W	1S	1O	1K	1G	1C
1BH	1BD	1AZ	1AV	1AR	1AN	1AJ	1AF	1AB	1X	1T	1P	1L	1H	1D



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**CLASSIFY HIGH INPUT OR LOW INPUT** • Connect the M-MDS to DLC-2. • Access CPP/PNP PID. • Verify CPP/PNP PID when gear is neutral position. • Is CPP/PNP PID always off?	Yes	Go to the next step.
		No	Go to Step 10.
4	**INSPECT NEUTRAL SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect neutral switch connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 14.
		No	Go to the next step.
5	**CLASSIFY NEUTRAL SWITCH OR CIRCUIT** • Connect the M-MDS to the DLC-2. • Access CPP/PNP PID. • Connect a jumper wire between neutral switch terminal A and B. • Is CPP/PNP PID on?	Yes	Go to the next step.
		No	Go to Step 7.
6	**INSPECT NEUTRAL SWITCH** • Inspect the neutral switch. (See 01-40A-46 NEUTRAL SWITCH INSPECTION[LF, L3].) • Is the neutral switch normal?	Yes	Go to Step 14.
		No	Replace the neutral switch, then go to Step 14.
7	**INSPECT NEUTRAL SWITCH GROUND CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between neutral switch terminal B and ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the neutral switch ground circuit for open circuit, then Go to Step 14.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 14.
		No	Go to the next step.
9	**INSPECT NEUTRAL SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between neutral switch terminal A and PCM terminal 1X. • Is there continuity?	Yes	Repair or replace the wiring harness for open circuit, then go to Step 14.
		No	Go to Step 14.
10	**INSPECT NEUTRAL SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the neutral switch connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 14.
		No	Go to the next step.
11	**CLASSIFY NEUTRAL SWITCH OR CIRCUIT** • Connect the M-MDS to DLC-2. • Access CPP/PNP PID. • Verify that CPP/PNP PID changes from ON to OFF when the neutral switch connector disconnected. • Does CPP/PNP PID change from ON to OFF?	Yes	Go to the next step.
		No	Go to Step 13.
12	**INSPECT NEUTRAL SWITCH** • Inspect the neutral switch. (See 01-40A-46 NEUTRAL SWITCH INSPECTION[LF, L3].) • Is the neutral switch normal?	Yes	Go to Step 14.
		No	Replace the neutral switch, then go to Step 14.
13	**INSPECT NEUTRAL SWITCH SIGNAL CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between neutral switch terminal A and ground. • Is there continuity?	Yes	Repair or replace the wiring harness for short to ground, then go to Step 14.
		No	Go to the next step.

STEP	INSPECTION		ACTION
14	**VERIFY TROUBLESHOOTING OF DTC P0850 COMPLETED** • Make sure to reconnect all disconnected connectors. • Start the engine. • Clear the DTC from the PCM memory using the M-MDS. • Drive the vehicle **above 30 km/h {19 mph}** and stop vehicle. • Depress and release the clutch pedal **more than 10 times** during drive cycle. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
15	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P1260[LF, L3]

id0102a3815600

DTC P1260	Immobilizer system problem
DETECTION CONDITION	• The instrument cluster detects an immobilizer system malfunction. **Diagnostic support note** • This is a continuous monitor (Other). • The MIL does not illuminate. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is not available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Immobilizer system malfunction • PCM malfunction

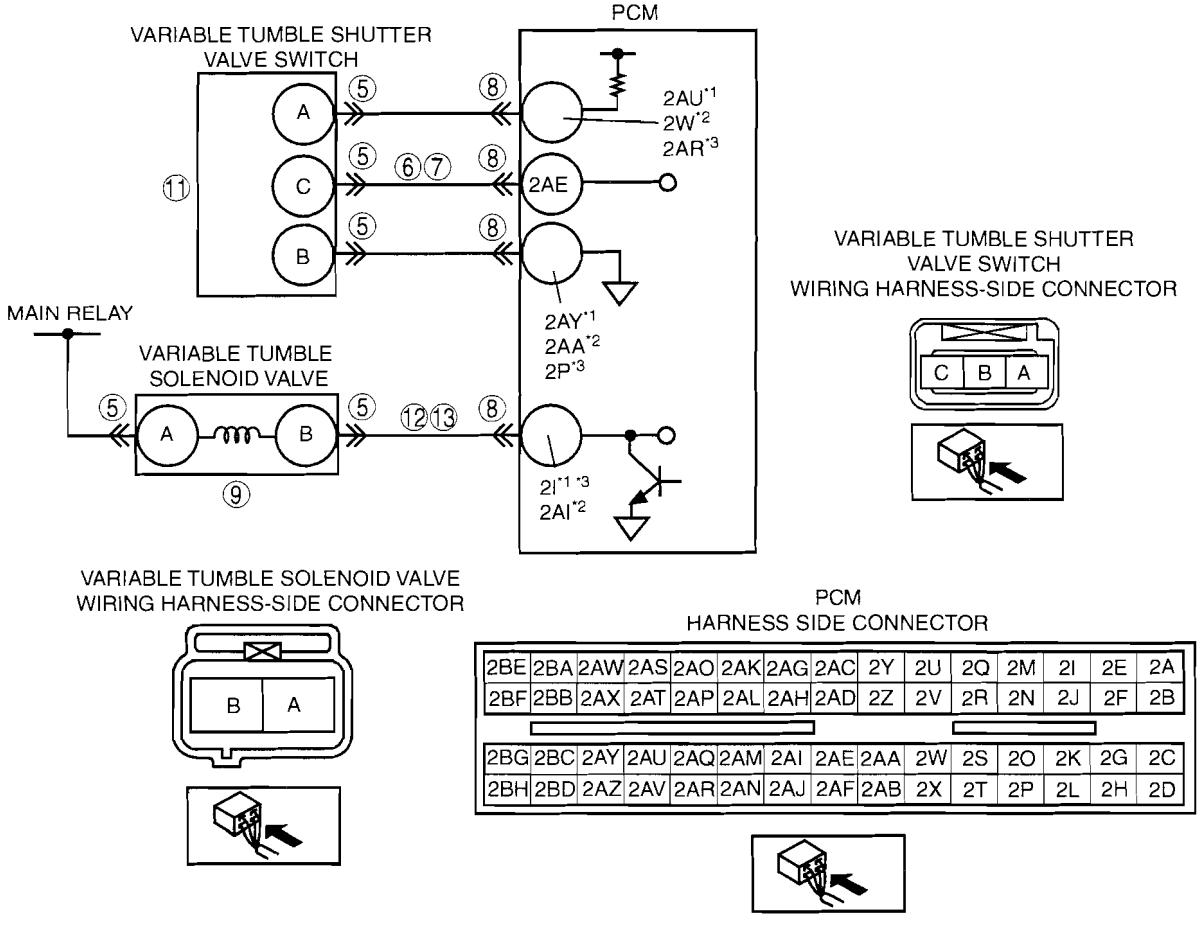
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY STORED DTC IN INSTRUMENT CLUSTER** • Turn the ignition switch to the ON position (Engine off). • Verify stored DTCs in instrument cluster. (See 09-02A-3 DTC INSPECTION[IMMOBILIZER SYSTEM].) • Are DTCs stored?	Yes	Go to the applicable DTC inspection. (See 09-02A-4 DTC TABLE[IMMOBILIZER SYSTEM].)
		No	Go to the next step.
4	**VERIFY TROUBLESHOOTING OF DTC P1260 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

DTC P2004[LF, L3]

id0102a3810200

DTC P2004	Variable tumble shutter valve stuck open
DETECTION CONDITION	• The PCM monitors mass the variable tumble shutter valve position using the variable tumble position sensor. If PCM turns the variable tumble solenoid valve on but the variable tumble position still remain open (the variable tumble position sensor off), PCM determines that the variable tumble shutter valve has been stuck open. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• VTC shutter valve actuator malfunction (stuck open) • Missconnecting or pull out the vacuum hose • Variable tumble solenoid valve malfunction • Variable tumble shutter valve switch malfunction • Open circuit in wiring harness between the variable tumble shutter valve switch terminal C and the PCM terminal 2AE • Short to power in wiring harness between the variable tumble shutter valve switch terminal C and the PCM terminal 2AE • Open circuit in wiring harness between the variable tumble solenoid valve terminal B and the PCM terminal 2I[*1 *3], 2AI[*2] • Short to power in wiring harness between the variable tumble solenoid valve terminal B and the PCM terminal 2I[*1 *3], 2AI[*2] • PCM malfunction



*1 : California emission regulation applicable model
*2 : Except for California emission regulation applicable model with LF ATX
*3 : Except for California emission regulation applicable model with LF MTX, L3

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to next step.
		No	Record FREEZE FRAME DATA on repair order, then go to next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to available repair information. • If vehicle is not repaired, go to next step.
		No	Go to next step.
3	**CLASSIFY INTERMITTENT CONCERN OR CONTINUOUS CONCERN** • Clear the DTC from the PCM memory using the M-MDS. • Drive the vehicle under the following conditions: — Engine coolant temperature is **above 63 °C {145 °F}**. — Engine speed: **below 3,750 rpm** — Throttle opening angle is below as followings • Engine speed **below 1,500 rpm**: **above 35%** • Engine speed **between 1,500–2,500 rpm**: **between 25–35%** • Engine speed **above 2,500**: **below 25%** • Is the PENDING CODE for this DTC present?	Yes	Go to next step.
		No	Intermittent concern exists. Go to INTERMITTENT CONCERN TROUBLESHOOTING procedure. (See 01-03A-66 INTERMITTENT CONCERN TROUBLESHOOTING[LF, L3].)
4	**VERIFY STORED OTHER DTCS** • Verify stored DTCs using M-MDS. • Is DTC P2088 or P2089 present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to next step.
5	**INSPECT VARIABLE TUMBLE SHUTTER VALVE SWITCH CONNECTOR AND VARIABLE TUMBLE SOLENOID VALVE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 15.
		No	Go to the next step.
6	**INSPECT VARIABLE TUMBLE SHUTTER VALVE SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Disconnect the variable tumble shutter valve switch connector. • Inspect for continuity between the variable tumble shutter valve switch terminal C (wiring harness side) and the PCM terminal 2AE (wiring harness side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open circuit, then go to Step 15.
7	**INSPECT VARIABLE TUMBLE SHUTTER VALVE SWITCH SIGNAL CIRCUIT FOR SHORT TO POWER** • Connect the variable tumble shutter valve switch connector. • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between PCM terminal 2AE (wiring harness side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for open circuit, then go to Step 15.
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection at PCM terminals (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 15.
		No	Go to the next step.

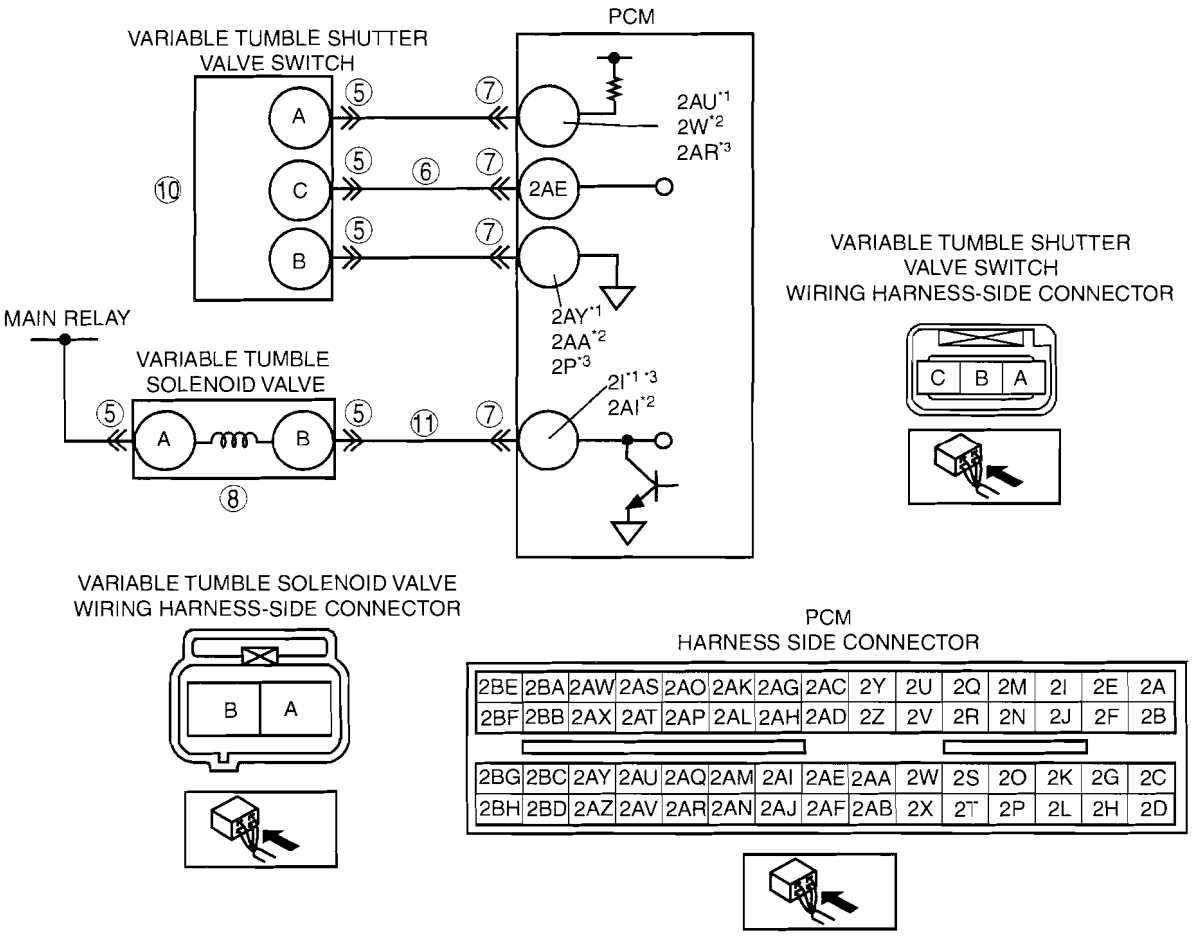
STEP	INSPECTION		ACTION
9	**INSPECT VARIABLE TUMBLE SOLENOID VALVE** • Perform "VARIABLE TUMBLE SOLENOID VALVE INSPECTION". (See 01-13A-9 VARIABLE TUMBLE SOLENOID VALVE INSPECTION[LF, L3].) • Is the variable tumble solenoid valve okay?	Yes	Go to next step.
		No	Replace the variable tumble solenoid valve, then go to Step 15.
10	**INSPECT VARIABLE TUMBLE SHUTTER VALVE ACTUATOR** • Perform "VTC SHUTTER VALVE ACTUATOR INSPECTION". (See 01-13A-10 VARIABLE TUMBLE SHUTTER VALVE ACTUATOR INSPECTION[LF, L3].) • Is the variable tumble shutter valve actuator okay?	Yes	Go to next step.
		No	Replace the Intake manifold, then go to Step 15.
11	**INSPECT VARIABLE TUMBLE SHUTTER VALVE SWITCH** • Perform "VARIABLE TUMBLE SHUTTER VALVE SWITCH INSPECTION". (See 01-40A-48 VARIABLE TUMBLE SHUTTER VALVE SWITCH INSPECTION[LF, L3].) • Is the variable tumble shutter valve switch normal?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open circuit, then go to Step 15.
12	**INSPECT VARIABLE TUMBLE SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO POWER** • Connect variable tumble solenoid valve connector. • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between PCM terminal 2AI (wiring harness side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for open circuit, then go to Step 15.
		No	Go to the next step.
13	**INSPECT VARIABLE TUMBLE SOLENOID VALVE CONTROL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between variable tumble solenoid valve terminal B (wiring harness-side) and PCM terminal 2I[*1 *3], 2AI[*2] (wiring harness side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open circuit, then go to Step 15.
14	**VERIFY CONNECTION OF VACUUM HOSE ROUTING** • Verify that the vacuum hoses are connected properly. (See 01-13A-4 INTAKE AIR SYSTEM MANIFOLD VACUUM INSPECTION[LF, L3].) • Are the vacuum hoses connected properly?	Yes	Go to next step.
		No	Connect the vacuum hoses properly, then go to next step.

STEP	INSPECTION		ACTION
15	**VERIFY TROUBLESHOOTING OF DTC P2004 COMPLETED** • Make sure to reconnect all disconnected connectors. • Start the engine. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Drive the vehicle under following conditions: — Engine coolant temperature is **above 63 °C {145 °F}**. — Engine speed: **below 3,750 rpm** — Throttle opening angle is below as followings • Engine speed **below 1,500 rpm: above 35%** • Engine speed **between 1,500–2,500 rpm: between 25–35%** • Engine speed **above 2,500: below 25%** • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to next step.
16	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P2006[LF, L3]

id0102a3810300

DTC P2006	Variable tumble shutter valve stuck closed
DETECTION CONDITION	• The PCM monitors mass the variable tumble shutter valve position using the variable tumble position sensor. If PCM turns the variable tumble solenoid valve off but the variable tumble position still remain close (the variable tumble position sensor on), PCM determines that the variable tumble shutter valve has been stuck closed. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Variable tumble solenoid valve malfunction • Variable tumble shutter valve malfunction (stuck closed) • Variable tumble shutter valve switch malfunction • Variable tumble shutter valve actuator malfunction (stuck closed) • Short to ground in wiring harness between variable tumble shutter valve switch terminal C and PCM terminal 2AE • Short to ground in wiring harness between variable tumble solenoid valve terminal B and PCM terminal 2I*1 *3, 2AI*2 • PCM malfunction



*1 : California emission regulation applicable model
*2 : Except for California emission regulation applicable model with LF ATX
*3 : Except for California emission regulation applicable model with LF MTX, L3

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CLASSIFY INTERMITTENT CONCERN OR CONTINUOUS CONCERN** • Clear the DTC from the PCM memory using the M-MDS. • Drive the vehicle under the following conditions: — Engine coolant temperature is **above 70 °C {158 °F}**. — Engine speed: **3,500 rpm or more** — Throttle opening angle is below as following • Engine speed **below 1,500 rpm: above 35%** • Engine speed **between 1,500–2,500 rpm: between 25–35%** • Engine speed **above 2,500: below 25%** • Is the PENDING CODE for this DTC present?	Yes	Go to the next step.
		No	Intermittent concern exists. Go to INTERMITTENT CONCERN TROUBLESHOOTING procedure. (See 01-03A-66 INTERMITTENT CONCERN TROUBLESHOOTING[LF, L3].)
4	**VERIFY STORED OTHER DTCS** • Verify the stored DTCs using the M-MDS. • Is other DTC present except P0117, P0118, P0122, P0123 and/or P0335?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
5	**INSPECT VARIABLE TUMBLE SHUTTER VALVE SWITCH CONNECTOR AND VARIABLE TUMBLE SOLENOID VALVE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 12.
		No	Go to the next step.
6	**INSPECT VARIABLE TUMBLE SHUTTER VALVE SWITCH SIGNAL CIRCUIT FOR SHORT TO GROUND** • Disconnect the variable tumble shutter valve switch connector. • Inspect for continuity between the variable tumble shutter valve switch terminal C (wiring harness side) and ground. • Is there continuity?	Yes	Repair or replace the wiring harness for open circuit, then go to Step 12.
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection at PCM terminals (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 12.
		No	Go to the next step.
8	**INSPECT VARIABLE TUMBLE SOLENOID VALVE** • Perform "VARIABLE TUMBLE SOLENOID VALVE INSPECTION". (See 01-13A-9 VARIABLE TUMBLE SOLENOID VALVE INSPECTION[LF, L3].) • Is the variable tumble solenoid valve okay?	Yes	Go to next step.
		No	Replace the variable tumble solenoid valve, then go to Step 12.

STEP	INSPECTION		ACTION
9	**INSPECT VARIABLE TUMBLE SHUTTER VALVE ACTUATOR** • Perform "VTC SHUTTER VALVE ACTUATOR INSPECTION". (See 01-13A-10 VARIABLE TUMBLE SHUTTER VALVE ACTUATOR INSPECTION[LF, L3].) • Is the variable tumble shutter valve actuator okay?	Yes	Go to next step.
		No	Replace the Intake manifold, then go to Step 12.
10	**INSPECT VARIABLE TUMBLE SHUTTER VALVE SWITCH** • Perform "VARIABLE TUMBLE SHUTTER VALVE SWITCH INSPECTION". (See 01-40A-48 VARIABLE TUMBLE SHUTTER VALVE SWITCH INSPECTION[LF, L3].) • Is the variable tumble shutter valve switch normal?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open circuit, then go to Step 12.
11	**INSPECT VARIABLE TUMBLE SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Disconnect the variable tumble solenoid valve connector. • Inspect for continuity between the variable tumble solenoid valve terminal B (wiring harness side) and ground. • Is there continuity?	Yes	Repair or replace the wiring harness for open circuit, then go to the next step.
		No	Go to the next step.
12	**VERIFY TROUBLESHOOTING OF DTC P2006 COMPLETED** • Make sure to reconnect all disconnected connectors. • Start the engine. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Drive the vehicle under following conditions: — Engine coolant temperature is **above 70 °C {158 °F}**. — Engine speed: **below 3,500 rpm** — Throttle opening angle is below as following • Engine speed **below 1,500 rpm**: **above 35%** • Engine speed **between 1,500–2,500 rpm**: **between 25–35%** • Engine speed **above 2,500**: **below 25%** • Is PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
13	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

*2 : Except for California emission regulation applicable model with LF ATX
*3 : Except for California emission regulation applicable model with LF MTX, L3

DTC P2009[LF, L3]

id0102a3810400

DTC P2009	Variable tumble solenoid valve circuit low input
DETECTION CONDITION	• The PCM monitors variable tumble solenoid valve control signal. If the PCM turns variable tumble solenoid valve off but voltage still remains low, the PCM determines that variable tumble solenoid valve circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Poor connection of connectors at PCM and/or variable tumble solenoid valve • Short to ground in wiring harness between variable tumble solenoid valve terminal B and PCM terminal 2I*1, 2AI*2 • Open circuit in wiring harness between main relay and variable tumble solenoid valve terminal A • Open circuit in wiring harness between variable tumble solenoid valve terminal B and PCM terminal 2I*1, 2AI*2 • Variable tumble solenoid valve malfunction • PCM malfunction

*2 : Except for California emission regulation applicable model with LF ATX

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT VARIABLE TUMBLE SOLENOID VALVE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.

STEP	INSPECTION		ACTION
4	**INSPECT VARIABLE TUMBLE SOLENOID VALVE** • Perform the variable tumble solenoid valve inspection. (See 01-13A-9 VARIABLE TUMBLE SOLENOID VALVE INSPECTION[LF, L3].) • Is variable tumble solenoid valve normal?	Yes	Go to the next step.
		No	Replace the variable tumble solenoid valve, then go to Step 9.
5	**INSPECT VARIABLE TUMBLE SOLENOID VALVE POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Disconnect the variable tumble solenoid valve connector. • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between variable tumble solenoid valve terminal A (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open circuit, then go to Step 9.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection at PCM terminal 2I*1, 2AI*2 (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 9.
		No	Go to the next step.
7	**INSPECT VARIABLE TUMBLE SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between variable tumble solenoid valve terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for short to ground, then go to Step 9.
		No	Go to the next step.
8	**INSPECT VARIABLE TUMBLE SOLENOID VALVE CONTROL CIRCUIT FOR OPEN CIRCUIT** • Connect variable tumble solenoid valve connector. • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between PCM terminal 2I*1, 2AI*2 (wiring harness side) and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P2009 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

*2 : Except for California emission regulation applicable model with LF ATX

DTC P2010[LF, L3]

id0102a3810500

DTC P2010	Variable tumble solenoid valve circuit high input
DETECTION CONDITION	• The PCM monitors the variable tumble solenoid valve control signal. If the PCM turns variable tumble solenoid valve on but the voltage still remains high, the PCM determines that the variable tumble solenoid valve circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Poor connection of connectors at PCM and/or variable tumble solenoid valve • Short to power supply in wiring harness between variable tumble solenoid valve terminal B and PCM terminal 2I*1, 2AI*2 • Variable tumble solenoid valve malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT POOR CONNECTION OF VARIABLE TUMBLE SOLENOID VALVE CONNECTOR** • Turn the ignition switch off. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT VARIABLE TUMBLE SOLENOID VALVE** • Inspect the variable tumble solenoid valve. (See 01-13A-9 VARIABLE TUMBLE SOLENOID VALVE INSPECTION[LF, L3].) • Is the variable tumble solenoid valve normal?	Yes	Go to the next step.
		No	Replace the variable tumble solenoid valve, then go to Step 7.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection at PCM terminal 2I*1, 2AI*2. (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 7.
		No	Go to the next step.
6	**INSPECT VARIABLE TUMBLE SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Remove the variable tumble solenoid valve. • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between PCM terminal 2I*1, 2AI*2 and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness with short to power supply, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P2010 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

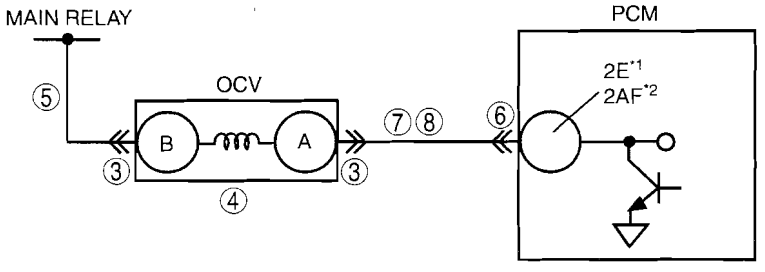
*2 : Except for California emission regulation applicable model with LF ATX

DTC P2088[LF, L3]

id0102a3810600

DTC P2088	Oil control valve (OCV) circuit low
DETECTION CONDITION	• The PCM monitors the OCV voltage. If the PCM detects the OCV control voltage (calculated from the OCV) is below the threshold voltage (calculated from the battery positive voltage), the PCM determines that the OCV circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Poor connection at the PCM or OCV connector • Short to ground in wiring between OCV terminal A and PCM terminal 2E*1, 2AF*2 • Open circuit in wiring between the main relay and OCV terminal B • Open circuit in wiring between OCV terminal A and PCM terminal 2E*1, 2AF*2 • OCV malfunction • PCM malfunction



OCV HARNESS SIDE CONNECTOR

*1 : LF MTX, L3 and California emission regulation applicable model with LF ATX
*2 : Except for California emission regulation applicable model with LF ATX

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT OCV CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Inspect for poor connection (such as damaged, pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.

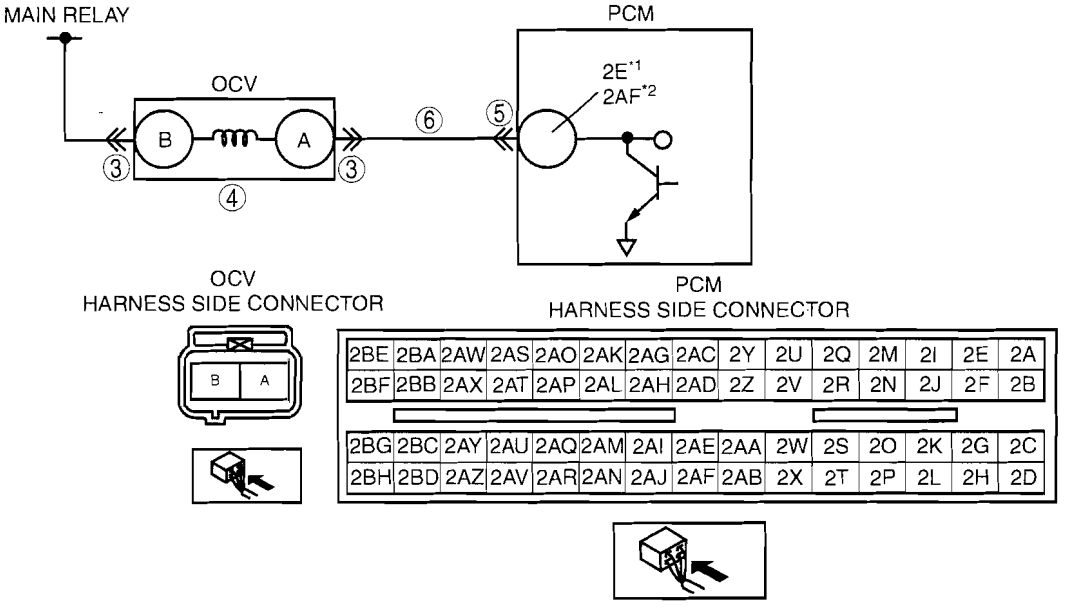
STEP	INSPECTION		ACTION
4	**INSPECT OCV** • Inspect the OCV. (See 01-10A-35 OIL CONTROL VALVE (OCV) INSPECTION[LF, L3].) • Is the OCV normal?	Yes	Go to the next step.
		No	Replace the OCV, then go to Step 9.
5	**INSPECT OCV POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Disconnect the OCV connector. • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between variable tumble control solenoid valve terminal B (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open circuit, then go to Step 9.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection at PCM terminal 2E*1, 2AF*2 (such as damaged, pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 9.
		No	Go to the next step.
7	**INSPECT OCV CONTROL CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between OCV terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for short to ground, then go to Step 9.
		No	Go to the next step.
8	**INSPECT OCV CONTROL CIRCUIT FOR OPEN CIRCUIT** • Connect the OCV connector. • Turn the ignition switch to the ON position (Engine off). • Inspect for continuity between OCV terminal A (wiring harness-side) and PCM terminal 2E*1, 2AF*2 (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open or short circuit to ground, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P2088 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Turn the ignition switch off. • Start the engine and warm it up completely. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is there any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

*1 : LF MTX, L3 and California emission regulation applicable model with LF ATX
*2 : Except for California emission regulation applicable model with LF ATX

DTC P2089[LF, L3]

id0102a3810700

DTC P2089	Oil control valve (OCV) circuit high
DETECTION CONDITION	• The PCM monitors the OCV voltage. If the PCM detects the OCV control voltage (calculated from the OCV) is above the threshold voltage (calculated from battery positive voltage), the PCM determines that the OCV circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Poor connection at the PCM or OCV connector • Short to power circuit in wiring between OCV terminal A and PCM terminal 2E*1, 2AF*2 • OCV malfunction • PCM malfunction



*1 : LF MTX, L3 and California emission regulation applicable model with LF ATX
*2 : Except for California emission regulation applicable model with LF ATX

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT OCV CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Inspect for poor connection (such as damaged, pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT OCV** • Inspect the OCV. (See 01-10A-35 OIL CONTROL VALVE (OCV) INSPECTION[LF, L3].) • Is the OCV normal?	Yes	Go to the next step.
		No	Replace the OCV, then go to Step 7.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection at PCM terminal 2AF (such as damaged, pulled-out pins, corrosion). • Is there malfunction?	Yes	Repair the terminal, then go to Step 7.
		No	Go to the next step.
6	**INSPECT OCV CONTROL CIRCUIT FOR SHORT TO POWER** • Remove the OCV. • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between PCM terminal 2E[*1], 2AF[*2] and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for short to power circuit, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P2089 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Turn the ignition switch off. • Start the engine and warm it up completely. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is there any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

[*1] : LF MTX, L3 and California emission regulation applicable model with LF ATX
[*2] . Except for California emission regulation applicable model with LF ATX

DTC P2096[LF, L3]

id0102a3810800

California Emission Regulation Applicable Model

DTC P2096	Target A/F feedback system too lean
DETECTION CONDITION	• The PCM monitors the target A/F fuel trim when under the target A/F feedback control. If the fuel trim is less than the specification, the PCM determines that the target A/F feedback system is too lean. **MONITORING CONDITION** — Rear HO2S voltage is **above 0.1 V** **Diagnostic support note** • This is a continuous monitor (Fuel system). • The MIL illuminates if the PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Leakage exhaust gas • Middle HO2S malfunction • IAT sensor malfunction • ECT sensor malfunction • Air suction in intake-air system • Front HO2S malfunction • MAF sensor malfunction • Insufficient fuel line pressure • Fuel pump unit malfunction • Leakage fuel • Improper operation ignition system • Insufficient engine compression • Fuel injector malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Fuel system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY REPAIR INFORMATION AVAILABILITY** • Verify related service repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off then to the ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Is the DTC P2177 or P2187 also present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2096 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to FREEZE FRAME DATA DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS OF REAR HO2S** • Connect the M-MDS to the DLC-2. • Start the engine and warm it up completely. • Access O2S12 PID. • Read O2S12 PID under the following accelerator pedal condition (in NEUTRAL). — **More than 0.45 V** when accelerator pedal is suddenly depressed (rich condition). — **Less than 0.45 V** just after release of accelerator pedal (lean condition) • Is the PID normal?	Yes	Go to the next step.
		No	Visually inspect for the exhaust gas leakage between the TWC and middle HO2S. • If there is no leakage, replace the rear HO2S. (See 01-40A-66 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION[LF, L3].) Then go to Step 17.

STEP	INSPECTION		ACTION
6	**VERIFY CURRENT INPUT SIGNAL STATUS** • Connect the M-MDS to the DLC-2. • Verify the following PIDs. (See 01-40A-13 PCM INSPECTION[LF, L3].) — ECT — MAF — TP1 — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 17.
7	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER FREEZE FRAME DATA CONDITION** • Connect the M-MDS to the DLC-2. • Verify the following PIDs under the FREEZE FRAME DATA condition. (See 01-40A-13 PCM INSPECTION[LF, L3].) — ECT — MAF — TP1 — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 17.
	VERIFY CURRENT INPUT SIGNAL STATUS OF FRONT HO2S • Connect the M-MDS to the DLC-2. • Start the engine and warm it up completely. • Access O2S11 PID. • Read O2S11 PID under following accelerator pedal condition (in NEUTRAL). — **Less than 1 mA** when accelerator pedal is suddenly depressed (rich condition). — **More than 1 mA** just after release of accelerator pedal (lean condition). • Is the PID normal?	Yes	Go to the next step.
		No	Visually inspect for the exhaust gas leakage between the exhaust manifold and front HO2S. • If there is no leakage, replace front HO2S. (See 01-40A-66 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION[LF, L3].) Then go to Step 17.
9	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Connect the M-MDS to the DLC-2. • Start the engine. • Access the MAF PID. • Verify that the MAF PID changes quickly according to engine speed. • Is the PID normal?	Yes	Go to the next step.
		No	Replace the MAF/IAT sensor, then go to Step 17.
10	**INSPECT INTAKE-AIR SYSTEM FOR EXCESSIVE AIR SUCTION** • Visually inspect the hose in intake-air system for iooseness, cracks or damages. • Is there any malfunction?	Yes	Repair or replace the malfunctioning part, then go to Step 17.
		No	Go to the next step.
11	**INSPECT FUEL LINE PRESSURE** • Perform the "FUEL LINE PRESSURE INSPECTION". (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Go to the next step.
		No	Go to Step 13.
12	**INSPECT FUEL SYSTEM FOR FUEL LEAKAGE** • Visually inspect fuel leakage in the fuel system. • Is there fuel leakage?	Yes	Repair or replace the malfunctioning part, then go to Step 17.
		No	Replace the fuel pump unit, then go to Step 17. (See 01-14A-14 FUEL PUMP UNIT REMOVAL/ INSTALLATION[LF, L3].)
13	**INSPECT IGNITION COIL WIRING HARNESSES** • Inspect the ignition coil related wiring harness condition (intermittent open or short circuit) for all cylinders. • Are wiring harness conditions normal?	Yes	Go to the next step.
		No	Repair the wiring harnesses, then go to Step 17.

STEP	INSPECTION		ACTION
14	**INSPECT IGNITION SYSTEM OPERATION** • Perform spark test. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) • Is strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to spark test result. Then go to Step 17.
15	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression. (See 01-10A-11 COMPRESSION INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Go to the next step.
		No	Overhaul the engine, then go to Step 17.
16	**INSPECT FUEL INJECTOR** • Inspect the fuel injector. (See 01-14A-27 FUEL INJECTOR INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the fuel injector, then go to the next step. (See 01-14A-25 FUEL INJECTOR REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
17	**VERIFY TROUBLESHOOTING OF DTC P2096 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the PCM Adaptive Memory Produce Drive Mode. (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
18	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

Except for California Emission Regulation Applicable Model

DTC P2096	Target A/F feedback system too lean
DETECTION CONDITION	• The PCM monitors the target A/F fuel trim when under the target A/F feedback control. If the fuel trim is more than the specification, the PCM determines that the target A/F feedback system is too lean. **Diagnostic support note** • This is a continuous monitor (Fuel system). • The MIL illuminates if the PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • Are any DTCs is stored in the PCM memory.
POSSIBLE CAUSE	• Leakage exhaust gas • Rear HO2S malfunction • IAT sensor malfunction • ECT sensor malfunction • Air suction in intake-air system • Front HO2S malfunction • MAF sensor malfunction • Insufficient fuel line pressure • Fuel pump unit malfunction • Leakage fuel • Improper operation ignition system • Insufficient engine compression • Fuel injector malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Fuel system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service repair information availability • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off then to the ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Is the DTC P2177 or P2187 also present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is the DTC P2096 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to FREEZE FRAME DATA DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS OF REAR HO2S** • Connect the M-MDS to the DLC-2. • Start the engine and warm it up completely. • Access O2S12 PID. • Read O2S12 PID under the following accelerator pedal condition (in NEUTRAL). — **More than 0.45 V** when accelerator pedal is suddenly depressed (rich condition). — **Less than 0.45 V** just after release of accelerator pedal (lean condition) • Is the PID normal?	Yes	Go to the next step.
		No	Visually inspect for the exhaust gas leakage between the TWC and rear HO2S. • If there is no leakage, replace the rear HO2S. (See 01-15A-1 EXHAUST SYSTEM REMOVAL/ INSTALLATION[LF, L3].) Then go to Step 17.
6	**VERIFY CURRENT INPUT SIGNAL STATUS** • Connect the M-MDS to the DLC-2. • Verify the following PIDs. (See 01-40A-13 PCM INSPECTION[LF, L3].) — ECT — MAF — TP1 — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 17.
7	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER FREEZE FRAME DATA CONDITION** • Connect the M-MDS to the DLC-2. • Verify the following PIDs under the FREEZE FRAME DATA condition. (See 01-40A-13 PCM INSPECTION[LF, L3].) — ECT — MAF — TP1 — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 17.
8	**VERIFY CURRENT INPUT SIGNAL STATUS OF FRONT HO2S** • Connect the M-MDS to the DLC-2. • Start the engine and warm it up completely. • Access O2S11 PID. • Read O2S11 PID under following accelerator pedal condition (in NEUTRAL). — **- 1.0 —1.0 A** when idle. — **More than 0.25 mA** just after release of accelerator pedal (lean condition). • Is the PID normal?	Yes	Go to the next step.
		No	Visually inspect for the exhaust gas leakage between the exhaust manifold and front HO2S. • If there is no leakage, replace front HO2S. (See 01-15A-1 EXHAUST SYSTEM REMOVAL/ INSTALLATION[LF, L3].) Then go to Step 17.

STEP	INSPECTION		ACTION
9	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Connect the M-MDS to the DLC-2. • Start the engine. • Access the MAF PID. • Verify that the MAF PID changes quickly according to engine speed. • Is the PID normal?	Yes	Go to the next step.
		No	Replace the MAF/IAT sensor, then go to Step 17.
10	**INSPECT INTAKE-AIR SYSTEM FOR EXCESSIVE AIR SUCTION** • Visually inspect the hose in intake-air system for looseness, cracks or damages. • Is there any malfunction?	Yes	Repair or replace the malfunctioning part, then go to Step 17.
		No	Go to the next step.
11	**INSPECT FUEL LINE PRESSURE** • Perform the "FUEL LINE PRESSURE INSPECTION". (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Go to the next step.
		No	Go to Step 13.
12	**INSPECT FUEL SYSTEM FOR FUEL LEAKAGE** • Visually inspect fuel leakage in the fuel system. • Is there fuel leakage?	Yes	Repair or replace the malfunctioning part, then go to Step 17.
		No	Replace the fuel pump unit, then go to Step 17. (See 01-14A-14 FUEL PUMP UNIT REMOVAL/ INSTALLATION[LF, L3].)
13	**INSPECT IGNITION COIL WIRING HARNESSES** • Inspect the ignition coil related wiring harness condition (intermittent open or short circuit) for all cylinders. • Are wiring harness conditions normal?	Yes	Go to the next step.
		No	Repair the wiring harnesses, then go to Step 17.
14	**INSPECT IGNITION SYSTEM OPERATION** • Perform the spark test. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) • Is strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to spark test result. Then go to Step 17.
15	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression. (See 01-10A-11 COMPRESSION INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Go to the next step.
		No	Overhaul the engine, then go to Step 17.
16	**INSPECT FUEL INJECTOR** • Inspect the fuel injector. (See 01-14A-27 FUEL INJECTOR INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the fuel injector, then go to the next step. (See 01-14A-25 FUEL INJECTOR REMOVAL/ INSTALLATION[LF, L3].)
		No	Go to the next step.
17	**VERIFY TROUBLESHOOTING OF DTC P2096 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the PCM Adaptive Memory Produce Drive Mode. (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
18	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P2097[LF, L3]

id0102a3810900

California Emission Regulation Applicable Model

DTC P2097	Target A/F feedback system too rich
DETECTION CONDITION	• The PCM monitors the target A/F fuel trim when under the target A/F feedback control. If the fuel trim is more than specification, the PCM determines that the target A/F feedback system is too rich. **Diagnostic support note** • This is a continuous monitor. (Fuel system) • The MIL illuminates if the PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction conditions during first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Leakage exhaust gas • Middle HO2S malfunction • IAT sensor malfunction • ECT sensor malfunction • Front HO2S malfunction • Excessive fuel line pressure • Fuel pump unit malfunction • Purge valve malfunction • Insufficient engine compression • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Fuel system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY REPAIR INFORMATION AVAILABILITY** • Verify related service repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Is the DTC P2178 or P2188 also present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2097 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to FREEZE FRAME DATA DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS OF REAR HO2S** • Connect the M-MDS to the DLC-2. • Start the engine and warm it up completely. • Access O2S12 PID. • Read O2S12 PID under following accelerator pedal condition (in NEUTRAL). — **More than 0.45 V** when accelerator pedal is suddenly depressed (rich condition). — **Less than 0.45 V** just after release of accelerator pedal (lean condition) • Is the PID normal?	Yes	Go to the next step.
		No	Visually inspect for the exhaust gas leakage between TWC and middle HO2S. • If there is no leakage, replace rear HO2S. (See 01-40A-66 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION[LF, L3].) Then go to Step 11.

STEP	INSPECTION		ACTION
6	**VERIFY CURRENT INPUT SIGNAL STATUS** • Connect the M-MDS to the DLC-2. • Verify the following PIDs: (See 01-40A-13 PCM INSPECTION[LF, L3].) — ECT — MAF — TP1 — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 11.
7	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER FREEZE FRAME DATA CONDITION** • Connect the M-MDS to the DLC-2. • Verify the following PIDs under FREEZE FRAME DATA condition. (See 01-40A-13 PCM INSPECTION[LF, L3].) — ECT — MAF — TP1 — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 11.
8	**VERIFY CURRENT INPUT SIGNAL STATUS OF FRONT HO2S** • Connect the M-MDS to the DLC-2. • Start the engine and warm it up completely. • Access O2S11 PID. • Read O2S11 PID under following accelerator pedal condition (in NEUTRAL). — **Less than 1 mA** when accelerator pedal is suddenly depressed (rich condition). — **More than 1 mA** just after release of accelerator pedal (lean condition). • Is the PID normal?	Yes	Go to the next step.
		No	Visually inspect for exhaust gas leakage between the exhaust manifold and front HO2S. • If there is no leakage, replace front HO2S. (See 01-40A-66 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION[LF, L3].) Then go to Step 11.
9	**INSPECT FUEL LINE PRESSURE** • Perform the "FUEL LINE PRESSURE INSPECTION". (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the fuel pump unit, then go to Step 11. (See 01-14A-14 FUEL PUMP UNIT REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
10	**INSPECT LONG TERM FUEL TRIM** • Connect the M-MDS to the DLC-2. • Access LONGFT1 PID. • Compare the LONGFT1 PID with recorded FREEZE FRAME DATA at Step 1. • Is the LONGFT1 PID above FREEZE FRAME DATA?	Yes	Inspect the purge valve. (See 01-16A-13 PURGE SOLENOID VALVE INSPECTION[LF, L3].) • If there is any malfunction, replace the purge valve. (See 01-13A-3 INTAKE AIR SYSTEM HOSE ROUTING DIAGRAM[LF, L3].) Then go to Step 11.
		No	Go to the next step.
11	**VERIFY TROUBLESHOOTING OF DTC P2097 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the PCM Adaptive Memory Produce Drive Mode. (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

Except for California Emission Regulation Applicable Model

DTC P2097	Target A/F feedback system too rich
DETECTION CONDITION	• The PCM monitors the target A/F fuel trim when under the target A/F feedback control. If the fuel trim is less than specification, the PCM determines that the target A/F feedback system is too rich. **Diagnostic support note** • This is a continuous monitor. (Fuel system) • The MIL illuminates if the PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction conditions during first drive cycle. • FREEZE FRAME DATA is available. • Are any DTCs is stored in the PCM memory.
POSSIBLE CAUSE	• Leakage exhaust gas • Rear HO2S malfunction • IAT sensor malfunction • ECT sensor malfunction • Front HO2S malfunction • Excessive fuel line pressure • Fuel pump unit malfunction • Purge valve malfunction • Insufficient engine compression • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Fuel system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
	VERIFY RELATED REPAIR INFORMATION AVAILABILITY • Verify related service repair information availability • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Is the DTC P2178 or P2188 also present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is the DTC P2097 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to FREEZE FRAME DATA DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS OF REAR HO2S** • Connect the M-MDS to the DLC-2. • Start the engine and warm it up completely. • Access O2S12 PID. • Read O2S12 PID under following accelerator pedal condition (in NEUTRAL). — **More than 0.45 V** when accelerator pedal is suddenly depressed (rich condition). — **Less than 0.45 V** just after release of accelerator pedal (lean condition) • Is the PID normal?	Yes	Go to the next step.
		No	Visually inspect for the exhaust gas leakage between TWC and rear HO2S. • If there is no leakage, replace the rear HO2S. (See 01-15A-1 EXHAUST SYSTEM REMOVAL/ INSTALLATION[LF, L3].) Then go to Step 11.
6	**VERIFY CURRENT INPUT SIGNAL STATUS** • Connect the M-MDS to the DLC-2. • Verify the following PIDs: (See 01-40A-13 PCM INSPECTION[LF, L3].) — ECT — MAF — TP1 — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 11.

STEP	INSPECTION		ACTION
7	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER FREEZE FRAME DATA CONDITION** • Connect the M-MDS to the DLC-2. • Verify the following PIDs under FREEZE FRAME DATA condition. (See 01-40A-13 PCM INSPECTION[LF, L3].) — ECT — MAF — TP1 — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 11.
8	**VERIFY CURRENT INPUT SIGNAL STATUS OF FRONT HO2S** • Connect the M-MDS to the DLC-2. • Start the engine and warm it up completely. • Access O2S11 PID. • Read O2S11 PID under following accelerator pedal condition (in NEUTRAL). — **–1.0 —1.0 A** when idle. — **More than 0.25 mA** just after release of accelerator pedal (lean condition). • Is the PID normal?	Yes	Go to the next step.
		No	Visually inspect for exhaust gas leakage between the exhaust manifold and front HO2S. • If there is no leakage, replace the front HO2S. (See 01-15A-1 EXHAUST SYSTEM REMOVAL/ INSTALLATION[LF, L3].) Then go to Step 11.
9	**INSPECT FUEL LINE PRESSURE** • Perform the "FUEL LINE PRESSURE INSPECTION". (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the fuel pump unit, then go to Step 11. (See 01-14A-14 FUEL PUMP UNIT REMOVAL/ INSTALLATION[LF, L3].)
		No	Go to the next step.
10	**INSPECT LONG TERM FUEL TRIM** • Connect the M-MDS to the DLC-2. • Access LONGFT1 PID. • Compare the LONGFT1 PID with recorded FREEZE FRAME DATA at Step 1. • Is the LONGFT1 PID above FREEZE FRAME DATA?	Yes	Inspect the purge valve. (See 01-16A-13 PURGE SOLENOID VALVE INSPECTION[LF, L3].) • If there is any malfunction, replace the purge valve. (See 01-13A-3 INTAKE AIR SYSTEM HOSE ROUTING DIAGRAM[LF, L3].) Then go to Step 11.
		No	Go to the next step.
11	**VERIFY TROUBLESHOOTING OF DTC P2097 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the PCM Adaptive Memory Produce Drive Mode. (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P2100[LF, L3]

id0102a3811000

DTC P2100	Throttle actuator circuit open
DETECTION CONDITION	• The PCM monitors the electronic throttle valve motor current. If the PCM detects the electronic throttle valve motor current is below the threshold current, the PCM determines that the electronic throttle valve motor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Throttle valve motor malfunction • Open circuit between throttle body terminal F and PCM terminal 2A • Open circuit between throttle body terminal E and PCM terminal 2B • Poor connection of the throttle body connector or the PCM connector • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CLASSIFY INTERMITTENT CONCERN OR CONTINUOUS CONCERN** • Clear the DTC using the M-MDS. • Start the engine and idle it. • Is the PENDING CODE for this DTC present?	Yes	Go to the next step.
		No	Go to INTERMITTENT CONCERNS TROUBLESHOOTING procedure. (See 01-03A-66 INTERMITTENT CONCERN TROUBLESHOOTING[LF, L3].)

STEP	INSPECTION		ACTION
4	**INSPECT THROTTLE BODY CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect throttle body connector. • Inspect for poor connection (such as damaged, pulled out terminals, corrosion). • Is there any malfunctions?	Yes	Repair or replace the terminal, then go to Step 11.
		No	Go to the next step.
5	**INSPECT THROTTLE VALVE ELECTRICAL MALFUNCTION** • Measure the resistance between throttle body terminal E and F (part-side). • Is the resistance **approx. 1.3 ohms**?	Yes	Go to the next step.
		No	Replace the throttle body, then go to Step 11.
6	**CLASSIFY MALFUNCTION ET POWER SUPPLY CIRCUIT OR CONTROL CIRCUIT** • Turn the ignition switch to the ON position (Engine off). • Measure voltage between throttle body terminal F (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	There is a malfunction at the control circuit. Go to Step 9.
		No	There is a malfunction at the power supply. Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged, pulled out terminals, corrosion). • Is there any malfunctions?	Yes	Repair the terminal, then go to Step 11.
		No	Go to the next step.
8	**INSPECT POWER CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between throttle body terminal F (wiring harness-side) and PCM terminal 2A (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open circuit, then go to Step 11.
9	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged, pulled out terminals, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 11.
		No	Go to the next step.
10	**INSPECT CONTROL CIRCUIT MALFUNCTION FOR OPEN CIRCUIT** • Inspect for continuity between throttle body terminal E (wiring harness-side) and PCM terminal 2B (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open circuit, then go to the next step.
11	**VERIFY TROUBLESHOOTING OF DTC P2100 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the M-MDS. • Start the engine and warm it up completely. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is there any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P2101[LF, L3]

id0102a3811100

DTC P2101	Throttle actuator circuit range/performance
DETECTION CONDITION	**California emission regulation applicable model** • The PCM monitors the input voltage from the drive-by-wire relay when the PCM turns the drive-by-wire relay on. If the input voltage is **less than 5.0 V**, the PCM determines that the drive-by-wire relay control circuit voltage is low. • The PCM monitors the input voltage from the drive-by-wire relay when the PCM turns the drive-by-wire relay off. If the input voltage is **more than 5.0 V**, the PCM determines that the drive-by-wire relay control circuit voltage is high. **Diagnostic support note** • This is a continuous monitor. (CCM) • The MIL illuminates if the PCM detects the above malfunction conditions during first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
	Except for California emission regulation applicable model • If any of the following conditions continue for a specified period of time or more the PCM detects a malfunction in the throttle actuator. — The voltage of the motor power supply is **4 V or less** while the motor relay is on — There is a system error in the electrical throttle control system of the PCM — The temperature of the electrical throttle control system in the PCM is **180 °C {356 °F}** **Diagnostic support note** • This is a continuous monitor. (CCM) • MIL illuminates if PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.

DTC P2101	Throttle actuator circuit range/performance
POSSIBLE CAUSE	• Drive-by-wire relay and related circuit malfunction • Main relay and related circuit malfunction • Throttle position sensor No.1 and related circuit malfunction • Throttle position sensor No.2 and related circuit malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING AND STORED DTCS** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the pending and stored DTCs using the M-MDS. • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].).
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2101 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to the troubleshooting procedures for DTC on FREEZE FRAME DATA.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged, pulled out terminals, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 22.
		No	Go to the next step.
6	**INSPECT MAIN RELAY OUTPUT VOLTAGE** • Turn the ignition switch off. • Connect the PCM connector. • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between PCM terminal 1BE and body ground. • Is the voltage **B+**?	Yes	Go to Step 13.
		No	Go to the next step.
7	**INSPECT MAIN RELAY CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the main relay. • Inspect for poor connection (such as damaged, pulled out terminals, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 22.
		No	Go to the next step.
8	**INSPECT POWER SUPPLY OF MAIN RELAY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between main relay terminal B (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open circuit, then go to Step 22.
9	**INSPECT POWER SUPPLY FOR CONTROL CIRCUIT OF MAIN RELAY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between main relay terminal A (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Go to Step 22.
10	**INSPECT MAIN RELAY** • Inspect the main relay. (See 09-21-3 RELAY INSPECTION.) • Is the main relay normal?	Yes	Go to the next step.
		No	Replace the main relay, then go to Step 22.

STEP	INSPECTION		ACTION
11	**INSPECT POWER CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Disconnect the main relay and the PCM connector. • Inspect for continuity between main relay terminal E (wiring harness-side) and PCM terminal 1BE (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open circuit, then go to Step 22.
12	**INSPECT CONTROL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between main relay terminal D (wiring harness-side) and PCM terminal 1Q*1, 1AT*2 (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for open circuit, then go to Step 22.
		No	Go to Step 22.
13	**INSPECT DRIVE-BY-WIRE RELAY OUTPUT VOLTAGE** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between PCM terminal 1BF (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Go to Step 20.
		No	Go to the next step.
14	**INSPECT POOR CONNECTION OF DRIVE-BY-WIRE RELAY CONNECTOR** • Turn the ignition switch off. • Disconnect the drive-by-wire relay. • Inspect the drive-by-wire relay connector (wiring harness-side) for poor connection (such as damaged, pulled out terminals, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 22.
		No	Go to the next step.
15	**INSPECT POWER SUPPLY OF DRIVE-BY-WIRE RELAY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between drive-by-wire relay terminal D (wiring harness-side) and body ground.	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open circuit, then go to Step 22.
16	**INSPECT POWER SUPPLY FOR CONTROL CIRCUIT OF DRIVE-BY-WIRE RELAY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between drive-by-wire relay terminal A (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open circuit between drive-by-wire relay terminal A and main relay terminal C, then go to Step 22.
17	**INSPECT DRIVE-BY-WIRE RELAY** • Inspect the drive-by-wire relay. (See 09-21-3 RELAY INSPECTION.) • Is the drive-by-wire relay normal?	Yes	Go to the next step.
		No	Replace the drive-by-wire relay, then go to Step 22.
18	**INSPECT POWER CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between drive-by-wire relay terminal C (wiring harness-side) and PCM terminal 1BF (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace wiring harness for open circuit, then go to Step 22.
19	**INSPECT CONTROL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between drive-by-wire relay E (wiring harness-side) and PCM terminal 1BE (wiring harness-side).	Yes	Go to the next step.
		No	Repair or replace wiring harness for open circuit, then go to Step 22.

STEP	INSPECTION		ACTION
20	**INSPECT THROTTLE POSITION SENSOR NO.1 OUTPUT VOLTAGE** • Turn the ignition switch off. • Connect the PCM connector. • Turn the ignition switch to the ON position (Engine off). • Inspect the voltage between PCM terminal 2AK*1, 2M*2 and body ground. • Is the voltage **0.40—0.60 V**?	Yes	Go to the next step.
		No	Inspect throttle position sensor No.1 and the related circuits and terminals. (See 01-40A-54 THROTTLE POSITION (TP) SENSOR INSPECTION[LF, L3].) Repair or replace if necessary, then go to Step 22.
21	**INSPECT THROTTLE POSITION SENSOR NO.2 OUTPUT VOLTAGE** • Turn the ignition switch to the ON position (Engine off). • Inspect the voltage between PCM terminal 2AL*1, 2I*2 and body ground. • Is the voltage **4.40—4.60 V**?	Yes	Go to the next step.
		No	Check throttle position sensor No.2 and the related circuits and terminals. (See 01-40A-54 THROTTLE POSITION (TP) SENSOR INSPECTION[LF, L3].) Repair or replace if necessary, then go to the next step.
22	**VERIFY TROUBLESHOOTING OF DTC P2101 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the M-MDS. • Start the engine and idle it. • Turn the ignition switch off, then to the ON position (Engine off). • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
23	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is there any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

*1 : LF MTX, L3 and California emission regulation applicable model with LF ATX
*2 : Except for California emission regulation applicable model with LF ATX

DTC P2102[LF, L3]

id0102a3811200

DTC P2102	Throttle actuator circuit low input
DETECTION CONDITION	• The PCM monitors the throttle actuator circuit current. If the PCM detects that throttle actuator circuit current is excessive low, the PCM determines that the throttle actuator circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • The PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Short to ground circuit between the throttle body terminal F and the PCM terminal 2A • Short to ground circuit between the throttle body terminal E and the PCM terminal 2B • Poor connection of the throttle body or the PCM connector • Throttle valve motor malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE AND STORED DTCS** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the pending or stored DTCs using the M-MDS. • Is DTC P2100 also present?	Yes	Go to the appropriate DTC inspection, then go to Step 9. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
4	**INSPECT THROTTLE BODY CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the throttle body connector. • Inspect for poor connection (such as damaged, pulled-put pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
5	**INSPECT POWER SUPPLY CIRCUIT OF THROTTLE ACTUATOR FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between throttle body terminal F (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for short to ground, then go to Step 9.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged, pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
7	**INSPECT CONTROL CIRCUIT OF THROTTLE ACTUATOR FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between throttle body terminal E (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for short to ground, then go to Step 9.
		No	Go to the next step.
8	**INSPECT THROTTLE ACTUATOR** • Inspect the throttle actuator. (See 01-13A-7 THROTTLE BODY INSPECTION[LF, L3].) • Is it normal?	Yes	Go to the next step.
		No	Replace the throttle body, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P2102 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the M-MDS. • Start the engine and warm it up completely. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P2103[LF, L3]

id0102a3811300

DTC P2103	Throttle actuator circuit high input
DETECTION CONDITION	• The PCM monitors the throttle actuator circuit current. If the PCM detects that throttle actuator circuit current is excessive high, the PCM determines that the electronic throttle actuator circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction conditions during the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Short to power circuit between throttle body terminal E and PCM terminal 2B • Throttle valve motor malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT CONTROL CIRCUIT OF THROTTLE ACTUATOR FOR SHORT TO POWER SUPPLY** • Turn the ignition switch off. • Disconnect the throttle body and PCM connectors. • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between the following terminals and body ground: — Throttle body terminal E (wiring harness-side) — Throttle body terminal F (wiring harness-side) • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for short circuit to power supply, then go to Step 5.
		No	Go to the next step.
4	**INSPECT THROTTLE ACTUATOR** • Inspect the throttle actuator. (See 01-13A-7 THROTTLE BODY INSPECTION[LF, L3].) • Is it normal?	Yes	Go to the next step.
		No	Replace the throttle body, then go to the next step.
5	**VERIFY TROUBLESHOOTING OF DTC P2103 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the M-MDS. • Start the engine and warm it up completely. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P2107[LF, L3]

id0102a3811400

DTC P2107	Throttle actuator control module processor error
DETECTION CONDITION	• Throttle actuator control module internal processor error **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Throttle actuator control module internal processor malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY TROUBLESHOOTING OF P2107 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

DTC P2108[LF, L3]

id0102a3811500

California Emission Regulation Applicable Model

DTC P2108	Throttle actuator control module performance error
DETECTION CONDITION	• Throttle actuator control module internal communication error • The PCM internal communication error • APP sensor internal communication error **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• PCM internal malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY TROUBLESHOOTING OF P2108 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

Except for California Emission Regulation Applicable Model

DTC P2108	Throttle actuator control module performance problem
DETECTION CONDITION	• PCM detects either following conditions, PCM determines that throttle actuator control system has malfunction. — TP sensor power supply voltage **below 4.4 V** — TP sensor No.1 output voltage **below 0.20 V or above 4.85 V** (DTC P0122 or P0123) — TP sensor No.2 output voltage **below 0.20 V or above 4.85 V** (DTC P0222 or P0223) — PCM internal circuit for TP sensor No.1 input circuit malfunction. **Diagnostic support note** • This is a continues monitor (CCM). • MIL illuminates if PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• TP sensor No.1 malfunction • TP sensor No.2 malfunction • Connector or terminal malfunction • Open circuit between throttle body terminal A and PCM terminal 2AK • Short to ground between throttle body terminal A and PCM terminal 2AK • Open circuit between throttle body terminal B and PCM terminal 2AO • Open circuit between throttle body terminal D and PCM terminal 2AP • Short to constant voltage supply between throttle body terminal A and PCM terminal 2AK • Short to constant voltage supply between throttle body terminal C and PCM terminal 2AL • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE AND STORED DTCS** • Turn ignition switch to OFF, then ON (Engine off). • Verify pending and/or stored DTCs using the M-MDS. • Is the DTC P0122, P0123, P0222 or P0223 also present?	Yes	Go to appropriate DTC troubleshooting procedure, then go to Step 7.
		No	Go to the next step.
4	**VERIFY INTERMITTENT MALFUNCTION AT TP SENSOR NO.1 CIRCUIT** • Perform INTERMITTENT TROUBLESHOOTING procedure to TP sensor No.1 related harnesses and connectors. (See 01-03A-66 INTERMITTENT CONCERN TROUBLESHOOTING[LF, L3].) • Is there any malfunction?	Yes	Repair or replace malfunctioning part, according to inspection result, the go to Step 7.
		No	Go to the next step.
5	**VERIFY INTERMITTENT MALFUNCTION AT TP SENSOR NO.2 CIRCUIT** • Perform INTERMITTENT TROUBLESHOOTING procedure to TP sensor No.2 related harnesses and connectors. (See 01-03A-66 INTERMITTENT CONCERN TROUBLESHOOTING[LF, L3].) • Is there any malfunction	Yes	Repair or replace malfunctioning part, according to inspection result, the go to Step 7.
		No	Go to the next step.
6	**INSPECT TP SENSOR** • Inspect TP sensor. • Is TP sensor normal?	Yes	Go to the next step.
		No	Replace throttle body, then go to nest step.
7	**VERIFY TROUBLESHOOTING OF DTC P2108 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Turn ignition switch to ON (Engine off). • Is PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P2109[LF, L3]

id0102a3840200

DTC P2109	TP sensor minimum stop range/performance problem
DETECTION CONDITION	• The PCM monitors the minimum TP when the closed TP learning is completed. If the TP is **less than 6.03%** or **more than 18.7%**, the PCM determines that there is a TP sensor minimum stop range/ performance problem. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Throttle actuator malfunction • Throttle valve malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT THROTTLE ACTUATOR** • Inspect the throttle actuator. (See 01-13A-7 THROTTLE BODY INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the throttle body, then go to Step 5. (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/ INSTALLATION[LF, L3].)
		No	Go to the next step.
4	**INSPECT THROTTLE VALVE** • Inspect the throttle valve. (See 01-13A-7 THROTTLE BODY INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the throttle body, then go to the next step. (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/ INSTALLATION[LF, L3].)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING OF DTC P2109 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

DTC P2112[LF, L3]

id0102a3840300

DTC P2112	Throttle actuator control system range/performance problem
DETECTION CONDITION	• The PCM monitors the throttle actuator control duty ratio when the engine is running. If the duty ratio is **more than 95%**, the PCM determines that there is a throttle actuator control system range/performance problem. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Throttle actuator control module malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY TROUBLESHOOTING OF P2112 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

DTC P2119[LF, L3]

id0102a3811600

DTC P2119	Throttle actuator control throttle body range/performance problem
DETECTION CONDITION	**California emission regulation applicable model** • The PCM compares the TP with the default TP when the ignition switch is off. If the different between TP is default TP is lower than threshold, the PCM determines that there is a throttle actuator control throttle body range/performance problem. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
	Except for California emission regulation applicable model • The PCM compares the TP with the default TP when the ignition switch is off. If the TP is higher than the default TP, the PCM determines that there is a throttle actuator control throttle body range/performance problem. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Throttle actuator malfunction • Throttle valve malfunction • PCM malfunction

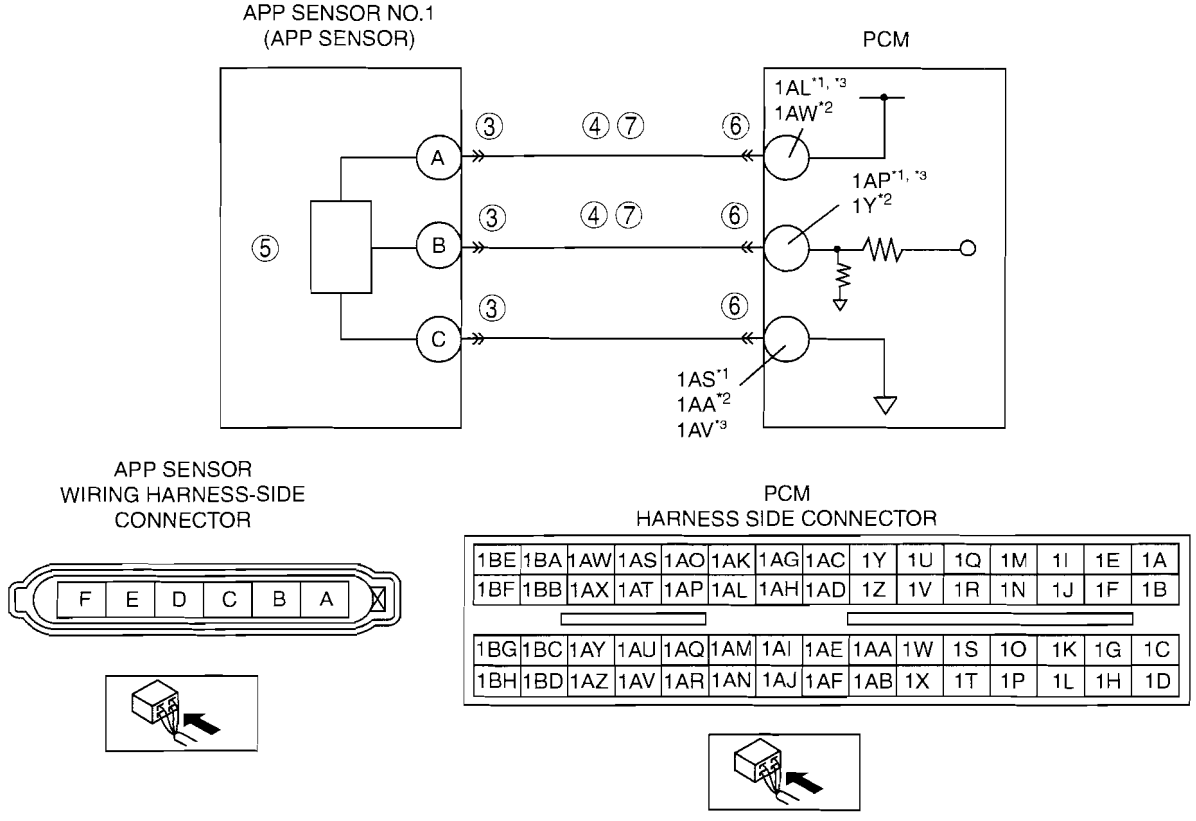
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT THROTTLE ACTUATOR** • Inspect the throttle actuator. (See 01-13A-7 THROTTLE BODY INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the throttle body, then go to Step 5. (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/ INSTALLATION[LF, L3].)
		No	Go to the next step.
4	**INSPECT THROTTLE VALVE** • Inspect the throttle valve. (See 01-13A-7 THROTTLE BODY INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the throttle body, then go to the next step. (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/ INSTALLATION[LF, L3].)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING OF DTC P2119 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Turn the ignition switch to the ON position (Engine off), then off. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

DTC P2122[LF, L3]

id0102a3811700

DTC P2122	Accelerator pedal position (APP) sensor No.1 circuit low input
DETECTION CONDITION	• The PCM monitors the input voltage from APP sensor No.1 when the engine is running. If the input voltage is **less than 0.12 V**, the PCM determines that the APP sensor No.1 circuit input voltage is low. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• APP sensor No.1 malfunction • Connector or terminal malfunction • Open circuit in wiring harness between APP sensor terminal A and PCM terminal 1AL*1, *3, 1AW*2 • Short to ground in wiring harness between APP sensor terminal A and PCM terminal 1AL*1, *3, 1AW*2 • Open circuit in wiring harness between APP sensor terminal B and PCM terminal 1AP*1, *3, 1Y*2 • Short to ground in wiring harness between APP sensor terminal B and PCM terminal 1AP*1, *3, 1Y*2 • PCM malfunction



*1 : California emission regulation applicable model
*2 : Except for California emission regulation applicable model with LF ATX
*3 : Except for California emission regulation applicable model with LF MTX, L3

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT APP SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the APP sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
4	**INSPECT APP SENSOR NO.1 CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between the following terminals and body ground: — APP sensor terminal A (wiring harness-side) and body ground — APP sensor terminal B (wiring harness-side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 8.
		No	Go to the next step.
5	**INSPECT APP SENSOR NO.1** • Inspect APP sensor No.1. (See 01-40A-56 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the APP sensor, then go to Step 8. (See 01-13A-11 ACCELERATOR PEDAL REMOVAL/ INSTALLATION[LF, L3].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
7	**INSPECT APP SENSOR NO.1 CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between the following terminals: — APP sensor terminal A (wiring harness-side) and PCM terminal 1AL*1, *3, 1AW*2 (wiring harness-side) — APP sensor terminal B (wiring harness-side) and PCM terminal 1AP*1, *3, 1Y*2 (wiring harness-side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P2122 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

*2 : Except for California emission regulation applicable model with LF ATX
*3 : Except for California emission regulation applicable model with LF MTX, L3

DTC P2123[LF, L3]

id0102a3811800

DTC P2123	Accelerator pedal position (APP) sensor No.1 circuit high input
DETECTION CONDITION	• The PCM monitors the input voltage from APP sensor No.1 when the engine is running. If the input voltage is **above 4.8 V**, the PCM determines that the APP sensor No.1 circuit input voltage is high. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• APP sensor No.1 malfunction • Connector or terminal malfunction • Short to power supply in wiring harness between APP sensor terminal B and PCM terminal 1AP*1, *3, 1Y*2 • Open circuit in wiring harness between APP sensor terminal C and PCM terminal 1AS*1, 1AA*2, 1AV*3 • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT APP SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the APP sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
4	**INSPECT APP SENSOR NO.1 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between APP sensor terminal B (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 8.
		No	Go to the next step.
5	**INSPECT APP SENSOR NO.1** • Inspect APP sensor No.1. (See 01-40A-56 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the APP sensor, then go to Step 8. (See 01-13A-11 ACCELERATOR PEDAL REMOVAL/ INSTALLATION[LF, L3].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
7	**INSPECT APP SENSOR NO.1 GROUND CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between APP sensor terminal C (wiring harness-side) and PCM terminal 1AS*1, 1AA*2, 1AV*3 (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P2123 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

DTC P2126[LF, L3]

id0102a3840400

DTC P2126	Accelerator pedal position (APP) sensor No.2 range/performance problem
DETECTION CONDITION	• The PCM monitors the APP sensor duty signal. If the input signal (duty signal) is too high or too low than the set value, or the input signal intervals are too short or too long, the PCM determines that the APP sensor No.2 has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• APP sensor No.2 malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT APP SENSOR NO.2** • Inspect the APP sensor No.2. (See 01-40A-56 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the APP sensor, then go to Step 4. (See 01-13A-11 ACCELERATOR PEDAL REMOVAL/ INSTALLATION[LF, L3].)
		No	Go to the next step.
4	**VERIFY TROUBLESHOOTING OF DTC P2126 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

DTC P2127[LF, L3]

id0102a3811900

DTC P2127	Accelerator pedal position (APP) sensor No.2 circuit low input
DETECTION CONDITION	• The PCM monitors the input voltage from APP sensor No.2 when the engine is running. If the input voltage is **below 6 V[*1]/5.28 V[*2, *3]** for **1s**, the PCM determines that the APP sensor No.2 circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• APP sensor No.2 malfunction • Connector or terminal malfunction • Short to ground in wiring harness between APP sensor terminal E and PCM terminal 1AC[*1], 1AL[*2], 1AO[*3] • PCM malfunction

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT APP SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the APP sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT APP SENSOR NO.2 CIRCUIT FOR SHORT TO ground** • Turn the ignition switch off. • Inspect for continuity between the following circuits: — APP sensor terminal E (wiring harness-side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 7.
		No	Go to the next step.
5	**INSPECT APP SENSOR NO.2** • Inspect the APP sensor No.2. (See 01-40A-56 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the APP sensor, then go to Step 7. (See 01-13A-11 ACCELERATOR PEDAL REMOVAL/ INSTALLATION[LF, L3].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P2127 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

DTC P2128[LF, L3]

id0102a3812000

DTC P2128	Accelerator pedal position (APP) sensor No.2 circuit high input
DETECTION CONDITION	• The PCM monitors the input voltage from APP sensor No.2 when the engine is running. If the input voltage is **more than 6 V*1/7.2 V*2, *3for 1 s**, the PCM determines that the APP sensor No.2 circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• APP sensor No.2 malfunction • Connector or terminal malfunction • Open circuit in wiring harness between APP sensor terminal F and main relay • Open circuit in wiring harness between APP sensor terminal D and body ground • Open circuit in wiring harness between APP sensor terminal E and PCM terminal 1AC*1, 1AL*2, 1AO*3 • Short to power supply in wiring harness between APP sensor terminal E and PCM 1AC*1, 1AL*2, 1AO*3 • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is a[illegible]ated repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT APP SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the APP sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
4	**INSPECT APP SENSOR NO.2 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between APP sensor terminal E (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 8.
		No	Go to the next step.
5	**INSPECT APP SENSOR NO.2** • Inspect APP sensor No.2. (See 01-40A-56 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the APP sensor, then go to Step 8. (See 01-13A-11 ACCELERATOR PEDAL REMOVAL/ INSTALLATION[LF, L3].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
7	**INSPECT APP SENSOR NO.2 GROUND CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between the following circuits: — APP sensor terminal D (wiring harness-side) and body ground — APP sensor terminal E (wiring harness-side) and PCM 1AC*1, 1AL*2, 1AO*3 (wiring harness-side) — APP sensor terminal F (wiring harness-side) and main relay • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P2128 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

DTC P2135[LF, L3]

id0102a3812100

DTC P2135	TP sensor No.1/No.2 voltage correlation problem
DETECTION CONDITION	• The PCM compares the input voltage from TP sensor No.1 with the input voltage from TP sensor No.2 when the engine is running. If the difference is more than the specification, the PCM determines that there is a TP sensor No.1/No.2 voltage correlation problem. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• TP sensor No.1 malfunction • TP sensor No.2 malfunction • Connector or terminal malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT THROTTLE BODY CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the throttle body connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 6.
		No	Go to the next step.
4	**INSPECT TP SENSOR** • Inspect the TP sensor. (See 01-40A-54 THROTTLE POSITION (TP) SENSOR INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the throttle body, then go to Step 6. (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/ INSTALLATION[LF, L3].)
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
6	**VERIFY TROUBLESHOOTING OF DTC P2135 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

DTC P2138[LF, L3]

id0102a3812200

DTC P2138	APP sensor No.1/No.2 voltage correlation problem
DETECTION CONDITION	• The PCM compares the input voltage from APP sensor No.1 with the input voltage from APP sensor No.2 when the engine is running. If the difference is more than the specification, the PCM determines that there is an APP sensor No.1/No.2 angle correlation problem. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• APP sensor No.1 malfunction • APP sensor No.2 malfunction • Connector or terminal malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT APP SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the APP sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 6.
		No	Go to the next step.
4	**INSPECT APP SENSOR** • Inspect the APP sensor. (See 01-40A-56 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the APP sensor, then go to Step 6. (See 01-13A-11 ACCELERATOR PEDAL REMOVAL/ INSTALLATION[LF, L3].)
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
6	**VERIFY TROUBLESHOOTING OF DTC P2138 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

DTC P2177[LF, L3]

id0102a3812300

DTC P2177	Fuel system too lean at off idle
DETECTION CONDITION	• The PCM monitors short term fuel trim (SHRTFT), long term fuel trim (LONGFT) during closed loop fuel control at off-idle. If the LONGFT and the sum total of these fuel trims exceed preprogrammed criteria. PCM determines that fuel system is too lean at off-idle. **Diagnostic support note** • This is a continuous monitor (Fuel system). • The MIL illuminates if PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if PCM detects the above malfunction conditions during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Misfire • Front HO2S deterioration • Front HO2S heater malfunction • MAF sensor malfunction • Pressure regulator (built-in fuel injection pump) malfunction • Fuel pump malfunction • Fuel filter clogged or restricted • Fuel leakage on fuel line from fuel delivery pipe and fuel pump • Leakage exhaust system • Purge solenoid valve improper operation • Purge solenoid valve malfunction (stuck open) • Purge solenoid hoses improper connection • Air suction in intake-air system • Insufficient engine compression • Variable valve timing control system improper operation. • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Fuel system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn the ignition switch off, then to the ON position (Engine off). • Verify related pending code or stored DTCs. • Is other DTC present?	Yes	If misfire DTC is present, go to Step 8. If other DTC is present, go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	If driveability concern is present, go to Step 8. If not, go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2177 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA.
5	**VERIFY CURRENT INPUT SIGNAL STATUS (IGNITION SWITCH TO THE ON POSITION/ IDLE)** • Access APP1, APP2, ECT, MAF, TP and VSS PIDs using M-MDS. • Is there any signal that is far out of specification when the ignition switch is at the ON position and the engine runs?	Yes	Inspect the sensor and excessive resistance in related wiring harnesses. Repair if necessary. Then go to Step 17.
		No	Go to the next step.
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION** • Inspect the same PIDs as Step 5 while simulating FREEZE FRAME DATA condition. • Is there any signal which causes drastic changes?	Yes	Inspect the sensor and related wiring harnesses repair or replace it. Then go to Step 17.
		No	Go to the next step.

STEP	INSPECTION		ACTION
7	**VERIFY CURRENT INPUT SIGNAL STATUS OF FRONT HO2S** • Access O2S11 for P2177 PID using M-MDS. • Check PID under following accelerator pedal condition (in PARK (ATX) or NEUTRAL (MTX)). • Is PID reading normal? — **Less than 1 mA** when accelerator pedal is suddenly depressed (rich condition). — **More than 1 mA** just after release of accelerator pedal (lean condition).	Yes	Go to the next step.
		No	Visually inspect for any gas leakage between the exhaust manifold and the front HO2S. Then go to Step 17.
8	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Connect the M-MDS to the DLC-2. • Start the engine. • Access the MAF PID. • Verify that the MAF PID changes quickly according to engine speed. • Is the PID normal?	Yes	Go to the next step.
		No	Replace MAF/IAT sensor, then go to Step 17.
9	**INSPECT FOR EXCESSIVE AIR SUCTION OF INTAKE AIR SYSTEM** • Visually inspect for loosen, cracks or damages hoses on intake-air system. • Is there any malfunction?	Yes	Repair or replace source of air suction, then go to Step 17.
		No	Go to the next step.
10	**INSPECT PURGE SOLENOID OPERATION** • Perform Purge Control System Inspection. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) • Does the purge control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection result, then go to Step 17.
11	**INSPECT FUEL LINE PRESSURE** • Turn the ignition switch off. • Inspect the fuel line pressure. (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].) • Is the fuel line pressure normal?	Yes	Go to Step 12.
		No	If the fuel pressure is too high, replace fuel pump unit, then go to Step 17. If the fuel line pressure is low, go to the next step.
12	**INSPECT FUEL LINE FROM FUEL PUMP TO FUEL DELIVERY PIPE** • Visually inspect fuel line for any leakage. • Is fuel leakage found?	Yes	Replace suspected fuel line, then go to Step 17.
		No	Inspect for foreign materials or stain inside fuel filter (low-pressure). If for foreign materials or stain inside fuel filter (low-pressure), clean of fuel tank and filter. Then go to Step 17.
13	**INSPECT IGNITION SYSTEM** • Perform spark test. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) • Is strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to spark test result, then go to Step 17.
14	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression. (See 01-10A-11 COMPRESSION INSPECTION[LF, L3].) • Is it normal?	Yes	Go to the next step.
		No	Implement the engine overhaul for repairs, then go to Step 17.
15	**INSPECT VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Inspect variable valve timing control system operation. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) • Does variable valve timing control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection results, then go to Step 17.
16	**INSPECT FUEL INJECTOR OPERATION** • Remove the fuel injector. • Inspect the fuel injector (resistance, injection amount). (See 01-14A-27 FUEL INJECTOR INSPECTION[LF, L3].) • Is the fuel injector normal?	Yes	Go to the next step.
		No	Replace the fuel injector, then go to the next step.

STEP	INSPECTION		ACTION
17	**VERIFY TROUBLESHOOTING OF DTC P2177 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the KOER self-test or the PCM Adaptive Memory Produce Drive Mode. (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
18	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is there any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P2178[LF, L3]

id0102a3812400

DTC P2178	Fuel system too rich at off idle
DETECTION CONDITION	• The PCM monitors short term fuel trim (SHRTFT), long term fuel trim (LONGFT) during closed loop fuel control at off-idle. If the LONGFT and the sum total of these fuel trims exceed preprogrammed criteria. PCM determines that fuel system is too rich at off-idle. **Diagnostic support note** • This is a continuous monitor (Fuel system). • The MIL illuminates if PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if PCM detects the above malfunction conditions during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Misfire • Front HO2S deterioration • Front HO2S heater malfunction • MAF sensor malfunction • Pressure regulator (built-in fuel injection pump) malfunction • Fuel pump malfunction • EGR valve improper operation • Variable tumble solenoid valve improper operation • Purge solenoid valve improper operation • Purge solenoid valve malfunction (stuck open) • Purge solenoid hoses improper connection • PCV valve malfunction • Variable valve timing control system improper operation • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Fuel system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn the ignition switch off, then to the ON position (Engine off). • Verify related pending code or stored DTCs. • Is other DTC present?	Yes	If misfire DTC is present, go to Step 8. If other DTC is present, go to applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	If driveability concern is present, go to Step 8. If not, go to the next step.

STEP	INSPECTION		ACTION
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2178 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA.
5	**VERIFY CURRENT INPUT SIGNAL STATUS (IGNITION SWITCH TO THE ON POSITION/ IDLE)** • Access APP1, APP2, ECT, MAF, TP1 and VSS PIDs using M-MDS. • Is there any signal that is far out of specification when the ignition switch is at the ON position and the engine runs?	Yes	Inspect the sensor and excessive resistance in related wiring harnesses. Repair if necessary. Then go to Step 16.
		No	Go to the next step.
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION** • Inspect the same PIDs as Step 5 while simulating FREEZE FRAME DATA condition. • Is there any signal which causes drastic changes?	Yes	Inspect the sensor and related wiring harnesses, repair or replace it. Then go to Step 16.
		No	Go to the next step.
7	**VERIFY CURRENT INPUT SIGNAL STATUS OF FRONT HO2S** • Access O2S11 for P2177 PID using M-MDS. • Check PID under following accelerator pedal condition (in PARK (ATX) or NEUTRAL (MTX)). • Is PID reading normal? — **Less than 1 mA** when accelerator pedal is suddenly depressed (rich condition). — **More than 1 mA** just after release of accelerator pedal (lean condition)	Yes	Go to the next step.
		No	Visually inspect for any gas leakage between the exhaust manifold and the front HO2S. Then go to Step 16.
8	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Connect the M-MDS to the DLC-2 • Start the engine. • Access the MAF PID. • Verify that the MAF PID changes quickly according to engine speed. • Is the PID normal?	Yes	Go to the next step.
		No	Replace the MAF/IAT sensor, then go to Step 16.
9	**INSPECT PURGE SOLENOID OPERATION** • Perform Purge Control System Inspection. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) • Does purge control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection result, then go to Step 16.
10	**INSPECT PCV VALVE OPERATION** • Inspect the PCV valve operation. (See 01-16A-15 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION[LF, L3].) • Is the PCV valve normal?	Yes	Go to the next step.
		No	Replace the PCV valve, then go to Step 16.
11	**INSPECT EGR VALVE OPERATION** • Perform EGR Control System Inspection. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) • Does the EGR control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection result, then go to Step 16.
12	**INSPECT VTCS OPERATION** • Perform Variable Tumble Control Operation Inspection. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) • Does the VTCS work properly?	Yes	Go to Step 15.
		No	Repair or replace the malfunctioning part according to inspection result, then go to Step 16.
13	**INSPECT FUEL LINE PRESSURE** • Turn the ignition switch off. • Inspect the fuel line pressure. (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].) • Is the fuel line pressure normal?	Yes	Go to the next step.
		No	If the fuel pressure is too high, replace fuel pump unit, then go to Step 16. If the fuel line pressure is low, go to the next step.

STEP	INSPECTION		ACTION
14	**INSPECT FUEL LINE FROM FUEL PUMP TO FUEL DELIVERY PIPE** • Visually inspect the fuel line for any leakage. • Is fuel leakage found?	Yes	Replace suspected fuel line, then go to the next step.
		No	Inspect for foreign materials or stain inside fuel filter (low-pressure). If for foreign materials or stain inside fuel filter (low-pressure), clean off the fuel tank and filter. Then go to the next step.
15	**INSPECT VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Inspect variable valve timing control system operation. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) • Does variable valve timing control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection results, then go to the next step.
16	**VERIFY TROUBLESHOOTING OF DTC P2178 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the KOER self-test or the PCM Adaptive Memory Produce Drive Mode. (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
17	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is there any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P2187[LF, L3]

id0102a3812500

DTC P2187	Fuel system too lean at idle
DETECTION CONDITION	• The PCM monitors short term fuel trim (SHRTFT) and long term fuel trim (LONGFT) during closed loop fuel control at idle. If the LONGFT and the sum total of these fuel trims exceed preprogrammed criteria. PCM determines that fuel system is too lean at idle. **Diagnostic support note** • This is a continuous monitor (Fuel system). • The MIL illuminates if PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if PCM detects the above malfunction conditions during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Misfire • Front HO2S deterioration • Front HO2S heater malfunction • MAF sensor malfunction • Pressure regulator (built-in fuel injection pump) malfunction • Fuel pump malfunction • Fuel filter clogged or restricted • Fuel leakage on fuel line from fuel delivery pipe and fuel pump • Leakage exhaust system • Purge solenoid valve malfunction • Purge solenoid hoses improper connection • Air suction in intake-air system • Insufficient engine compression • Variable valve timing control system improper operation • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Fuel system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn the ignition switch off, then to the ON position (Engine off). • Verify related pending code or stored DTCs. • Is other DTC present?	Yes	If misfire DTC is present, go to Step 8. If other DTC is present, go to applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	If driveability concern is present, go to Step 8. If not, go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2177 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA.
5	**VERIFY CURRENT INPUT SIGNAL STATUS (IGNITION SWITCH TO THE ON POSITION/ IDLE)** • Access APP1, APP2, ECT, MAF and TP1 PIDs using M-MDS.) • Is there any signal that is far out of specification when the ignition switch is at the ON position and the engine runs?	Yes	Inspect the sensor and excessive resistance in related wiring harnesses. Repair if necessary. Then go to Step 17.
		No	Go to the next step.
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION** • Inspect the same PIDs as Step 4 while simulating FREEZE FRAME DATA condition. • Is there any signal which causes drastic changes?	Yes	Inspect the sensor and related wiring harnesses, repair or replace it. Then go to Step 17.
		No	Go to the next step.
7	**VERIFY CURRENT INPUT SIGNAL STATUS OF FRONT HO2S** • Access O2S11 for P2177 PID using M-MDS. • Check PID under following accelerator pedal condition (in PARK (ATX) or NEUTRAL (MTX)). • Is PID reading normal? — **Less than 1 mA** when accelerator pedal is suddenly depressed (rich condition). — **More than 1 mA** just after release of accelerator pedal (lean condition)	Yes	Go to the next step.
		No	Visually inspect for any gas leakage between exhaust manifold and front HO2S. Then go to Step 17.
8	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Connect the M-MDS to the DLC-2. • Start the engine. • Access the MAF PID. • Verify that the MAF PID changes quickly according to engine speed. • Is the PID normal?	Yes	Go to the next step.
		No	Replace the MAF/IAT sensor, then go to Step 17.
9	**INSPECT FOR EXCESSIVE AIR SUCTION OF INTAKE AIR SYSTEM** • Visually inspect for loosen, cracks or damages hoses on intake-air system. • Is there any malfunction?	Yes	Repair or replace source of air suction, then go to Step 17.
		No	Go to the next step.

STEP	INSPECTION		ACTION
10	**INSPECT PURGE SOLENOID VALVE STUCK OPEN** • Turn the ignition switch off. • Disconnect both hoses from purge solenoid valve. • Blow air through purge solenoid valve. • Does air blow through?	Yes	Replace the purge solenoid valve. Then go to Step 17.
		No	Go to the next step.
11	**INSPECT FUEL LINE PRESSURE** • Turn the ignition switch off. • Inspect the fuel line pressure. (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].) • Is the fuel line pressure normal?	Yes	Go to Step 13.
		No	If the fuel pressure is too high, replace fuel pump unit, then go to Step 17. If the fuel line pressure is low, go to the next step.
12	**INSPECT FUEL LINE FROM FUEL PUMP TO FUEL DELIVERY PIPE** • Visually inspect fuel line for any leakage. • Is fuel leakage found?	Yes	Replace suspected fuel line, then go to Step 17.
		No	Inspect for foreign materials or stain inside fuel filter (low-pressure). If for foreign materials or stain inside fuel filter (low-pressure), clean off the fuel tank and filter. Then go to Step 17.
13	**INSPECT IGNITION SYSTEM** • Perform spark test. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) • Is strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to spark test results, then go to Step 17.
14	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression. (See 01-10A-11 COMPRESSION INSPECTION[LF, L3].) • Is it normal?	Yes	Go to the next step.
		No	Implement the engine overhaul for repairs, then go to Step 17.
15	**INSPECT VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Inspect variable valve timing control system operation. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) • Does variable valve timing control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection results, then go to Step 17.
16	**INSPECT FUEL INJECTOR OPERATION** • Remove the fuel injector. • Inspect the fuel injector (resistance, injection amount). (See 01-14A-27 FUEL INJECTOR INSPECTION[LF, L3].) • Is the fuel injector normal?	Yes	Go to the next step.
		No	Replace the fuel injector, then go to the next step.
17	**VERIFY TROUBLESHOOTING OF DTC P2187 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the KOER self-test or the PCM Adaptive Memory Produce Drive Mode. (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
18	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is there any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P2188[LF, L3]

id0102a3812600

DTC P2188	Fuel system too rich at idle
DETECTION CONDITION	• The PCM monitors short term fuel trim (SHRTFT), long term fuel trim (LONGFT) during closed loop fuel control at idle. If the LONGFT and the sum total of these fuel trims exceed preprogrammed criteria. PCM determines that fuel system is too rich at idle. **Diagnostic support note** • This is a continuous monitor (Fuel system). • The MIL illuminates if PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if PCM detects the above malfunction conditions during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Misfire • Front HO2S deterioration • Front HO2S heater malfunction • MAF sensor malfunction • Pressure regulator (built-in fuel injection pump) malfunction • Fuel pump malfunction • EGR valve stuck open • VTCS improper operation • Purge solenoid valve improper operation • Purge solenoid valve malfunction (stuck open) • Purge solenoid hoses improper connection • PCV valve malfunction • Variable valve timing control system improper operation • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Fuel system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn the ignition switch off, then to the ON position (Engine off). • Verify related pending code or stored DTCs. • Is other DTC present?	Yes	If misfire DTC is present, go to Step 8. If other DTC is present, go to applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	If driveability concern is present, go to Step 8. If not, go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2178 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA.
5	**VERIFY CURRENT INPUT SIGNAL STATUS (IGNITION SWITCH TO THE ON POSITION/ IDLE)** • Access APP1, APP2, ECT, MAF, TP1 and VSS PIDs using M-MDS. • Is there any signal that is far out of specification when the ignition switch is at the ON position and engine runs?	Yes	Inspect the sensor and excessive resistance in related wiring harnesses. Repair or if necessary. Then go to Step 16.
		No	Go to the next step.
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION** • Inspect the same PIDs as Step 5 while simulating FREEZE FRAME DATA condition. • Is there any signal which causes drastic changes?	Yes	Inspect the sensor and related wiring harnesses, repair or replace it. Then go to Step 16.
		No	Go to the next step.

STEP	INSPECTION		ACTION
7	**VERIFY CURRENT INPUT SIGNAL STATUS OF FRONT HO2S** • Access O2S11 for P2177 PID using M-MDS. • Check PID under following accelerator pedal condition (in PARK (ATX) or NEUTRAL (MTX)). • Is PID reading normal? — **Less than 1 mA** when accelerator pedal is suddenly depressed (rich condition). — **More than 1 mA** just after release of accelerator pedal (lean condition).	Yes	Go to the next step.
		No	Visually inspect for any gas leakage between the exhaust manifold and the front HO2S. Then go to Step 16.
8	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Connect the M-MDS to the DLC-2. • Start the engine. • Access the MAF PID. • Verify that the MAF PID changes quickly according to engine speed. • Is the PID normal?	Yes	Go to the next step.
		No	Replace the MAF/IAT sensor, then go to Step 16.
9	**INSPECT PURGE SOLENOID OPERATION** • Perform Purge Control System Inspection. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) • Does purge control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection result, then go to Step 16.
10	**INSPECT PCV VALVE OPERATION** • Inspect the PCV valve operation. (See 01-16A-15 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION[LF, L3].) • Is the PCV valve normal?	Yes	Go to the next step.
		No	Replace the PCV valve, then go to Step 16.
11	**INSPECT VTCS OPERATION** • Perform Variable Tumble Control Operation Inspection. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) • Does the VTCS work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection result, then go to Step 16.
12	**INSPECT FUEL LINE PRESSURE** • Turn the ignition switch off. • Inspect the fuel line pressure. (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].) • Is the fuel line pressure normal?	Yes	Go to Step 14.
		No	If the fuel pressure is too high, replace fuel pump unit, then go to Step 16. If the fuel line pressure is low, go to the next step.
13	**INSPECT FUEL LINE FROM FUEL PUMP TO FUEL DELIVERY PIPE** • Visually inspect fuel line for any leakage. • Is fuel leakage found?	Yes	Replace the fuel line, then go to Step 16.
		No	Inspect for foreign materials or stain inside fuel filter (low-pressure). If for foreign materials or stain inside fuel filter (low-pressure), clean off fuel tank and filter. Then go to Step 16.
14	**INSPECT VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Inspect variable valve timing control system operation. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) • Does variable valve timing control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection results, then go to Step 16.
15	**INSPECT IF EGR VALVE IS STUCK OPEN** • Remove the EGR valve. • Does the EGR valve stuck open?	Yes	Clean or replace the EGR valve, then go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
16	**VERIFY TROUBLESHOOTING OF DTC P2188 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the KOER self-test or the PCM Adaptive Memory Produce Drive Mode. (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
17	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is there any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P2195[LF, L3]

id0102a3812700

California Emission Regulation Applicable Model

DTC P2195	Front HO2S signal stuck lean
DETECTION CONDITION	• The PCM monitors the front HO2S output current when the following conditions are met. If the average output current is **more than 1.2 A** for **25 s**, the PCM determines that the front HO2S signal remains lean. **MONITORING CONDITION** — ECT: more than **70 °C {158 °F}** — Engine speed: **1,000—3,200 rpm** — MAF amount: **6—80 g/s {0.80—10.58 lb/min}** — Target A/F feedback system status: feedback control — Output voltage from the middle HO2S: **more than 0.2 V** **Diagnostic support note** • This is an intermittent monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S malfunction • Fuel injector malfunction • Insufficient fuel line pressure • Leakage exhaust gas • Air suction at intake-air system malfunction • Leakage fuel • MAF sensor malfunction • ECT sensor malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then to ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Is the DTC P2177 or P2187 also present?	Yes	Go to applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2195 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to FREEZE FRAME DATA DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Connect the M-MDS to the DLC-2. • Verify the following PIDs. (See 01-40A-13 PCM INSPECTION[LF, L3].) — APP1 — APP2 — ECT — MAF — TP1 — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 14.
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER FREEZE FRAME DATA CONDITION** • Connect the M-MDS to the DLC-2. • Verify the following PIDs under FREEZE FRAME DATA condition. (See 01-40A-13 PCM INSPECTION[LF, L3].) — APP1 — APP2 — ECT — MAF — TP1 — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 14.
7	**INSPECT INTAKE-AIR SYSTEM FOR EXCESSIVE AIR SUCTION** • Visually inspect for loosen, cracks or damages hose in intake-air system. • Is there any malfunction?	Yes	Repair or replace the malfunctioning part, then go to Step 14.
		No	Go to the next step.
8	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Connect the M-MDS to the DLC-2. • Start the engine. • Access the MAF PID. • Verify that the MAF PID changes quickly according to engine speed. • Is the PID normal?	Yes	Go to the next step.
		No	Replace the MAF/IAT sensor, then go to Step 14.
9	**INSPECT FRONT HO2S** • Inspect front HO2S. (See 01-40A-57 HEATED OXYGEN SENSOR (HO2S) INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace front HO2S, then go to Step 14. (See 01-40A-66 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
10	**INSPECT FUEL INJECTOR** • Inspect fuel injector. (See 01-14A-27 FUEL INJECTOR INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace suspected fuel injector, then go to Step 14. (See 01-14A-25 FUEL INJECTOR REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
11	**INSPECT FUEL LINE PRESSURE** • Perform the "FUEL LINE PRESSURE INSPECTION". (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Go to the next step.
		No	Go to Step 13.

STEP	INSPECTION		ACTION
12	**INSPECT FUEL SYSTEM FOR FUEL LEAKAGE** • Visually inspect fuel leakage in the fuel system. • Is there fuel leakage?	Yes	Repair or replace the malfunctioning part, then go to the next step.
		No	Replace the fuel pump unit, then go to the next step. (See 01-14A-14 FUEL PUMP UNIT REMOVAL/ INSTALLATION[LF, L3].)
13	**VERIFY TROUBLESHOOTING OF DTC P2195 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the KOEO self-test with M-MDS, or PCM Adopted Memory Produce Drive Mode and HO2S heater, and TWC Repair Verification Drive Mode. (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
14	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

Except for California Emission Regulation Applicable Model

DTC P2195	Front HO2S signal stuck lean
DETECTION CONDITION	• The PCM monitors the front HO2S output current when the following conditions are met. If the average output current is **more than 1.2 A** for **25 s**, the PCM determines that the front HO2S signal remains lean. **MONITORING CONDITION** — ECT: more than **70 °C {158 °F}** — Engine speed: **1,000—3,200 rpm** — Target A/F feedback system status: feedback control — Charging efficiency: **20—62.5 %** — Output voltage from the front HO2S: **more than 0.2 V** **Diagnostic support note** • This is an intermittent monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • Are any DTCs is stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S malfunction • Fuel injector malfunction • Insufficient fuel line pressure • Leakage exhaust gas • Air suction at intake-air system malfunction • Leakage fuel • MAF sensor malfunction • ECT sensor malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then to ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Is the DTC P2177 or P2187 also present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2195 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to FREEZE FRAME DATA DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Connect the M-MDS to the DLC-2. • Verify the following PIDs. (See 01-40A-13 PCM INSPECTION[LF, L3].) — APP1 — APP2 — ECT — MAF — TP1 — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 13.
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER FREEZE FRAME DATA CONDITION** • Connect the M-MDS to the DLC-2. • Verify the following PIDs under FREEZE FRAME DATA condition. (See 01-40A-13 PCM INSPECTION[LF, L3].) — APP1 — APP2 — ECT — MAF — TP1 — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 13.
7	**INSPECT INTAKE-AIR SYSTEM FOR EXCESSIVE AIR SUCTION** • Visually inspect for looseness, cracks or damage hose in intake-air system. • Is there any malfunction?	Yes	Repair or replace the malfunctioning part, then go to Step 13.
		No	Go to the next step.
8	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Connect the M-MDS to the DLC-2. • Start the engine. • Access the MAF PID. • Verify that the MAF PID changes quickly according to engine speed. • Is the PID normal?	Yes	Go to the next step.
		No	Replace the MAF/IAT sensor, then go to Step 13.
9	**INSPECT FRONT HO2S** • Inspect front HO2S. (See 01-40A-57 HEATED OXYGEN SENSOR (HO2S) INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the front HO2S, then go to Step 13. (See 01-15A-1 EXHAUST SYSTEM REMOVAL/ INSTALLATION[LF, L3].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
10	**INSPECT FUEL INJECTOR** • Inspect fuel injector. (See 01-14A-27 FUEL INJECTOR INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace suspected fuel injector, then go to Step 13. (See 01-14A-25 FUEL INJECTOR REMOVAL/ INSTALLATION[LF, L3].)
		No	Go to the next step.
11	**INSPECT FUEL LINE PRESSURE** • Perform the "FUEL LINE PRESSURE INSPECTION". (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Go to the next step.
		No	Go to Step 13.
12	**INSPECT FUEL SYSTEM FOR FUEL LEAKAGE** • Visually inspect fuel leakage in the fuel system. • Is there fuel leakage?	Yes	Repair or replace the malfunctioning part, then go to the next step.
		No	Replace the fuel pump unit, then go to the next step. (See 01-14A-14 FUEL PUMP UNIT REMOVAL/ INSTALLATION[LF, L3].)
13	**VERIFY TROUBLESHOOTING OF DTC P2195 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the PCM Adopted Memory Produce Drive Mode and HO2S heater, and TWC Repair Verification Drive Mode. (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
14	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P2196[LF, L3]

id0102a3812800

California Emission Regulation Applicable Model

DTC P2196	Front HO2S signal stuck rich
DETECTION CONDITION	• The PCM monitors the front HO2S output current when the following conditions are met. If the average output current is **less than 0.85 A** for **25 s**, the PCM determines that the front HO2S signal remains rich. **MONITORING CONDITION** — ECT: **more than 70 °C {158 °F}** — Engine speed: **1,000—3,200 rpm** — MAF amount: **6—80 g/s {0.80—10.58 lb/min}** — Target A/F feedback system status: feedback control — Output voltage from the middle HO2S: **less than 0.8 V** **Diagnostic support note** • This is an intermittent monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S malfunction • Fuel injector malfunction • Excessive fuel pressure • Restriction in intake-air system • MAF sensor malfunction • ECT sensor malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Is the DTC P2177 or P2187 also present?	Yes	Go to the appropriate DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2196 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to FREEZE FRAME DATA DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Connect the M-MDS to the DLC-2. • Verify the following PIDs. (See 01-40A-13 PCM INSPECTION[LF, L3].) — APP1 — APP2 — ECT — MAF — TP1 — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 11.
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER FREEZE FRAME DATA CONDITION** • Connect the M-MDS to the DLC-2. • Verify the following PIDs under the FREEZE FRAME DATA condition. — APP1 — APP2 — ECT — MAF — TP1 — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 11.
7	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Connect the M-MDS to the DLC-2. • Start the engine. • Access the MAF PID. • Verify that the MAF PID changes quickly according to engine speed. • Is the PID normal?	Yes	Go to the next step.
		No	Replace the MAF/IAT sensor, then go to Step 11.
8	**INSPECT FRONT HO2S** • Inspect the front HO2S. (See 01-40A-57 HEATED OXYGEN SENSOR (HO2S) INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace front HO2S, then go to Step 11. (See 01-40A-66 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
9	**INSPECT FUEL INJECTOR** • Inspect fuel injector. (See 01-14A-27 FUEL INJECTOR INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace suspected fuel injector, then go to Step 11. (See 01-14A-25 FUEL INJECTOR REMOVAL/ INSTALLATION[LF, L3].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
10	**INSPECT FUEL LINE PRESSURE** • Perform the "FUEL LINE PRESSURE INSPECTION". (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the fuel pump unit, then go to the next step. (See 01-14A-14 FUEL PUMP UNIT REMOVAL/ INSTALLATION[LF, L3].)
		No	Go to the next step.
11	**VERIFY TROUBLESHOOTING OF DTC P2196 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the KOEO self-test with M-MDS, or PCM Adopted Memory Produce Drive Mode and HO2S heater, and TWC Repair Verification Drive Mode. (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

Except for California Emission Regulation Applicable Model

DTC P2196	Front HO2S signal stuck rich
DETECTION CONDITION	• The PCM monitors the front HO2S output current when the following conditions are met. If the average output current is **less than 0.85 A** for **25 s**, the PCM determines that the front HO2S signal remains rich. **MONITORING CONDITION** — ECT: **more than 70 °C {158 °F}** — Engine speed: **1,000—3,200 rpm** — Charging efficiency: **20—62.5 %** — Output voltage from the front HO2S: **less than 0.7 V** **Diagnostic support note** • This is an intermittent monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • Are any DTCs is stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S malfunction • Fuel injector malfunction • Excessive fuel pressure • Restriction in intake-air system • MAF sensor malfunction • ECT sensor malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Is the DTC P2177 or P2187 also present?	Yes	Go to the appropriate DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2196 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to FREEZE FRAME DATA DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Connect the M-MDS to the DLC-2. • Verify the following PIDs. (See 01-40A-13 PCM INSPECTION[LF, L3].) — APP1 — APP2 — ECT — MAF — TP1 — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 11.
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER FREEZE FRAME DATA CONDITION** • Connect the M-MDS to the DLC-2. • Verify the following PIDs under the FREEZE FRAME DATA condition. — APP1 — APP2 — ECT — MAF — TP1 — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 11.
7	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Connect the M-MDS to the DLC-2. • Start the engine. • Access the MAF PID. • Verify that the MAF PID changes quickly according to engine speed. • Is the PID normal?	Yes	Go to the next step.
		No	Replace the MAF/IAT sensor, then go to Step 11.
8	**INSPECT FRONT HO2S** • Inspect the front HO2S. (See 01-40A-57 HEATED OXYGEN SENSOR (HO2S) INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the front HO2S, then go to Step 11. (See 01-15A-1 EXHAUST SYSTEM REMOVAL/ INSTALLATION[LF, L3].)
		No	Go to the next step.
9	**INSPECT FUEL INJECTOR** • Inspect fuel injector. (See 01-14A-27 FUEL INJECTOR INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace suspected fuel injector, then go to Step 11. (See 01-14A-25 FUEL INJECTOR REMOVAL/ INSTALLATION[LF, L3].)
		No	Go to the next step.
10	**INSPECT FUEL LINE PRESSURE** • Perform the "FUEL LINE PRESSURE INSPECTION". (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the fuel pump unit, then go to the next step. (See 01-14A-14 FUEL PUMP UNIT REMOVAL/ INSTALLATION[LF, L3].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
11	**VERIFY TROUBLESHOOTING OF DTC P2196 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the PCM Adopted Memory Produce Drive Mode and HO2S heater, and TWC Repair Verification Drive Mode. (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P2228[LF, L3]

id0102a3812900

DTC P2228	BARO sensor circuit low input
DETECTION CONDITION	• The PCM monitors input voltage from BARO sensor into the PCM. If input voltage is **below 2.1 V*1, 1.95 V*2**, PCM determines that BARO sensor circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• BARO sensor malfunction • PCM malfunction

*1 : California emission regulation applicable model
*2 : Except for California emission regulation applicable model

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT BARO SENSOR MALFUNCTION** • Inspect the BARO sensor. (See 01-40A-72 BAROMETRIC PRESSURE (BARO) SENSOR INSPECTION[LF, L3].) • Is the BARO sensor okay?	Yes	Go to the next step.
		No	Replace the PCM, then go to the next step.
4	**VERIFY TROUBLESHOOTING OF DTC P2228 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	No concern is detected. Go to the next step.

STEP	INSPECTION		ACTION
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is there any DTC present?	Yes	Go to applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P2229[LF, L3]

id0102a3813000

DTC P2229	BARO sensor circuit high input
DETECTION CONDITION	• The PCM monitors input voltage from BARO sensor into the PCM. If input voltage is **above 4.0 V*1, 4.45 V*2**, PCM determines that BARO sensor circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• BARO sensor malfunction • PCM malfunction

*1 : California emission regulation applicable model
*2 : Except for California emission regulation applicable model

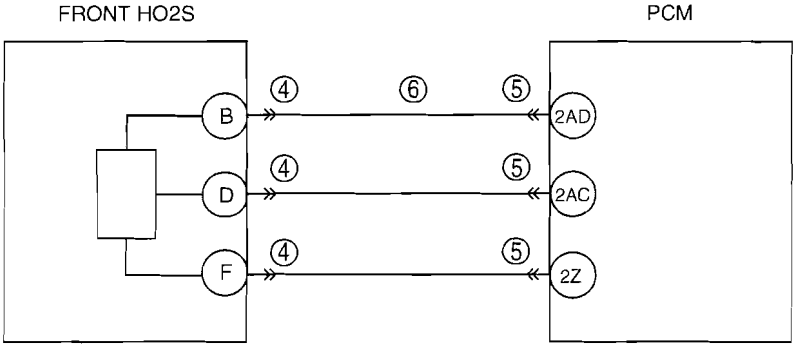
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT BARO SENSOR MALFUNCTION** • Inspect the BARO sensor. (See 01-40A-72 BAROMETRIC PRESSURE (BARO) SENSOR INSPECTION[LF, L3].) • Is the BARO sensor okay?	Yes	Go to the next step.
		No	Replace the PCM, then go to the next step.
4	**VERIFY TROUBLESHOOTING OF DTC P2229 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	No concern is detected. Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

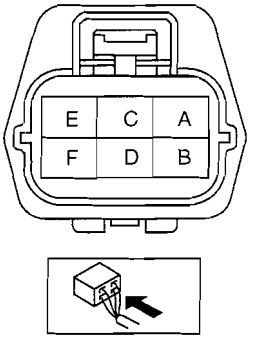
DTC P2237[LF, L3]

id0102a3813100

DTC P2237	Front HO2S positive current control circuit open
DETECTION CONDITION	• The PCM monitors front HO2S positive current control circuit voltage. If the voltage is not changed against the PCM control value while the engine running, the PCM determines that the front HO2S positive current control circuit is open. **Diagnostic support note** • This is a continuous monitor (HO2S). • The MIL illuminates if PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if PCM detects the above malfunction conditions during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S malfunction • Connector or terminal malfunction • Open circuit between PCM terminal 2AD and front HO2S terminal B • PCM malfunction



FRONT HO2S
WIRING HARNESS-SIDE CONNECTOR



PCM

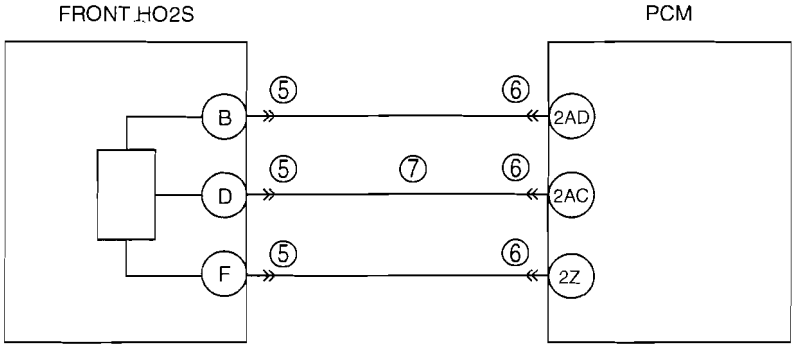
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2237 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting for DTC on FREEZE FRAME DATA. (See01-02A-22 DTC TABLE[LF, L3].)
4	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion) • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
6	**INSPECT FRONT HO2S POSITIVE CURRENT CIRCUIT FOR OPEN CIRCUIT** • Front HO2S and PCM connectors disconnected. • Verify the continuity between PCM terminal 2AD (wiring harness-side) and front HO2S terminal B (wiring harness-side). • Is there continuity?	Yes	Replace the front HO2S, then go to the next step.
		No	Repair or replace wiring harness for open, then go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P2237 COMPLETED** • Make sure to reconnect all disconnected • Clear the DTC from the PCM memory using the M-MDS. • Perform the KOEO or KOER self-test. (See 01-02A-16 KOEO/KOER SELF TEST[LF, L3].) • Is the DTC P2237 present?	Yes	Replace PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

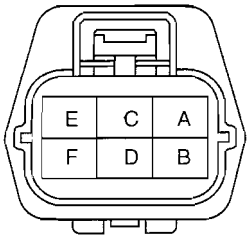
DTC P2251[LF, L3]

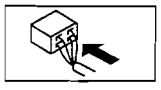
id0102a3813400

DTC P2251	Front HO2S negative current control circuit open
DETECTION CONDITION	• The PCM monitors front HO2S negative current control circuit voltage. If the voltage is not changed against the PCM control value while the engine running, the PCM determines that the front HO2S negative current control circuit is open. **Diagnostic support note** • This is a continuous monitor (HO2S). • The MIL illuminates if PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if PCM detects the above malfunction conditions during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory
POSSIBLE CAUSE	• Front HO2S malfunction • Connector or terminal malfunction • Open circuit between PCM terminal 2AC and front HO2S terminal D • Front HO2S heater can not be controlled • PCM malfunction



FRONT HO2S
WIRING HARNESS-SIDE CONNECTOR





PCM
HARNESS SIDE CONNECTOR

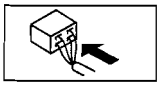
2BH	2BD	2AZ	2AV	2AR	2AN	2AJ	2AF	2AB	2X	2T	2P	2L	2H	2D



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then ON position (Engine off). • Verify the related PENDING CODE or stored DTCs using the M-MDS. • Is the DTC P0030, P0031 or P0032 also present?	Yes	Go to appropriate DTC troubleshooting procedure. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is the DTC P2251 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting for DTC on FREEZE FRAME DATA. (See 01-02A-22 DTC TABLE[LF, L3].)
5	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
7	**INSPECT FRONT HO2S NEGATIVE CURRENT CONTROL CIRCUIT FOR OPEN CIRCUIT** • Front HO2S and PCM connectors disconnected. • Verify the continuity between PCM terminal 2AC and D at wiring harness-side connectors. • Is there continuity?	Yes	Replace the front HO2S, then go to the next step.
		No	Repair or replace for an open circuit, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P2251 COMPLETED** • Make sure to reconnect all disconnected connectors • Clear the DTC from the PCM memory using the M-MDS. • Perform the KOEO or KOER self-test. (See 01-02A-16 KOEO/KOER SELF TEST[LF, L3].) • Is the DTC P2251 present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P2270[LF, L3]

id0102a3827200

DTC P2270	Middle HO2S signal stuck lean
DETECTION CONDITION	• The PCM monitors the middle HO2S input voltage when the following conditions are met. If the subtracted input voltage from the target voltage (calculated by PCM) is **0.4 V or less** for **30 s**, the PCM determines that the front HO2S signal remains lean. **MONITORING CONDITION** — ECT: **more than 70 °C {158 °F}** — Engine speed: **more than 1,500 rpm** — MAF amount: **more than 10 g/s {1.32 lb/min}** — Short term fuel trim: **–20—20%** — Long term fuel trim: **–15—15%** — Fuel injection system status: feedback control **Diagnostic support note** • This is a intermittent monitor (HO2S). • The MIL illuminates if PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if PCM detects the above malfunction conditions during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Leakage exhaust gas • Middle HO2S malfunction • Leakage fuel • Fuel injector malfunction • Air suction at intake-air system • MAF sensor malfunction • ECT sensor malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Is the DTC P2195 present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2270 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to FREEZE FRAME DATA DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS OF THE MIDDLE HO2S** • Start the engine and warm it up completely. • Access O2S12 PID using M-MDS. • Check PID under following accelerator pedal condition (in PARK (ATX) or NEUTRAL (MTX)). • Is PID reading okay? — **More than 0.45V** when accelerator pedal is suddenly depressed (rich condition). — **Less than 0.45V** just after release of accelerator pedal (lean condition)	Yes	Go to the next step.
		No	Visually inspect for any gas leakage between the exhaust manifold and the middle HO2S. • If there is no leakage, replace the middle HO2S. (See 01-40A-66 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION[LF, L3].) Then go to the next step.

STEP	INSPECTION		ACTION
6	**VERIFY TROUBLESHOOTING OF DTC P2270 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Stop the vehicle and access ON BOARD READINESS TEST to inspect drive mode completion status. • Verify O2S_EVAL PID changes to yes. — If not, perform the DRIVE MODE again. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P2271[LF, L3]

id0102a3827300

DTC P2271	Middle HO2S signal stuck rich
DETECTION CONDITION	• The PCM monitors the middle HO2S input voltage when the following conditions are met. If the subtracted input voltage from the target voltage (calculated by PCM) is **0.85 V or more** for **25 s**, or is **above 0.3 V** when the fuel cut, the PCM determines that the front HO2S signal remains rich. **MONITORING CONDITION** — ECT: **more than 70 °C {158 °F}** — Engine speed: **more than 1,500 rpm** — MAF amount: **more than 10 g/s {1.32 lb/min}** — Short term fuel trim: **-20 — 20%** — Long term fuel trim: **-15 — 15%** — Fuel injection system status: feedback control **Diagnostic support note** • This is a intermittent monitor (HO2S). • The MIL illuminates if PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if PCM detects the above malfunction conditions during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Leakage exhaust gas • Middle HO2S malfunction • Front HO2S malfunction • Rear HO2S malfunction • Front HO2S heater malfunction • Middle HO2S heater malfunction • Rear HO2S heater malfunction • Fuel pump control malfunction • Fuel pressure malfunction • Fuel injector malfunction • Leakage exhaust gas • Leakage engine coolant • Purge solenoid valve malfunction • Purge solenoid valve hoses improper connection • Restriction in intake-air system • Insufficient compression — Engine oil malfunction — Increase oil pressure — Metering oil pump malfunction — Metering oil pump control malfunction — Engine malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Is DTC P2196 present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2270 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to FREEZE FRAME DATA DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS OF MIDDLE HO2S** • Start the engine and warm it up completely. • Access O2S12 PID using M-MDS. • Check PID under following accelerator pedal condition (in PARK (ATX) or NEUTRAL (MTX)). • Is PID reading normal? — **More than 0.45 V** when accelerator pedal is suddenly depressed (rich condition). — **Less than 0.45 V** just after release of accelerator pedal (lean condition)	Yes	Go to the next step.
		No	Visually inspect for any gas leakage between the exhaust manifold and the middle HO2S. • If there is no leakage, replace the middle HO2S. (See 01-40A-66 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION[LF, L3].) Then go to the next step.
6	**VERIFY TROUBLESHOOTING OF DTC P2271 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Stop the vehicle and access ON BOARD READINESS TEST to inspect drive mode completion status. • Verify O2S_EVAL PID changes to yes. — If not, perform the DRIVE MODE again. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P2274[LF, L3]

id0102a3840800

DTC P2274	Rear HO2S signal stuck lean
DETECTION CONDITION	• The PCM monitors the rear HO2S input voltage when the following conditions are met. If the subtracted input voltage from the target voltage (calculated by PCM) is **below 0.17 V** even after recovery from fuel cut, the PCM determines that the front HO2S signal remains lean. **Diagnostic support note** • This is an intermittent monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Leakage exhaust gas • Rear HO2S malfunction • Fuel injector malfunction • Leakage fuel • MAF sensor malfunction • ECT sensor malfunction • Air suction at intake-air system • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Are other DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2274 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to the FREEZE FRAME DATA DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS OF REAR HO2S** • Start the engine and warm it up completely. • Access O2S13 PID using M-MDS. • Check PID under following the accelerator pedal condition (in PARK (ATX) or NEUTRAL (MTX)). • Is PID reading normal? — **More than 0.45 V** when accelerator pedal is suddenly depressed (rich condition). — **Less than 0.45 V** just after release of the accelerator pedal (lean condition)	Yes	Go to the next step.
		No	Visually inspect for any gas leakage between the TWC and the rear HO2S. • If there is no leakage, replace the rear HO2S. (See 01-40A-66 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION[LF, L3].) Then go to Step 10.
6	**INSPECT THE FUEL LINE PRESSURE** • Perform the "FUEL LINE PRESSURE INSPECTION". (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Inspect the malfunctioning part according to the inspection results. Then go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
7	**INSPECT THE PURGE SOLENOID VALVE** • Inspect the purge solenoid valve. (See 01-16A-13 PURGE SOLENOID VALVE INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the purge solenoid valve, then go to Step 10. (See 01-13A-3 INTAKE AIR SYSTEM HOSE ROUTING DIAGRAM[LF, L3].)
		No	Go to the next step.
8	**INSPECT THE FUEL INJECTOR** • Inspect the fuel injector. (See 01-14A-27 FUEL INJECTOR INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the fuel injector, then go to Step 10. (See 01-14A-25 FUEL INJECTOR REMOVAL/ INSTALLATION[LF, L3].)
		No	Go to the next step.
9	**INSPECT THE ENGINE COOLANT PASSAGE FOR THE ENGINE COOLANT LEAKAGE** • Perform the engine coolant leakage inspection. (See 01-12A-4 ENGINE COOLANT LEAKAGE INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results. Then go to the next step.
		No	Go to the next step.
10	**VERIFY TROUBLESHOOTING OF THE DTC P2274 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Stop the vehicle and access ON BOARD READINESS TEST to inspect drive mode completion status. • Verify O2S_EVAL PID changes to yes. — If not, perform the DRIVE MODE again. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P2275[LF, L3]

id0102a3840900

DTC P2275	Rear HO2S signal stuck rich
DETECTION CONDITION	• The PCM monitors the rear HO2S input voltage when the following conditions are met. If the subtracted input voltage from the target voltage (calculated by PCM) is **above 0.17 V** when the fuel cut, the PCM determines that the front HO2S signal remains rich. **Diagnostic support note** • This is a intermittent monitor (HO2S). • The MIL illuminates if PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if PCM detects the above malfunction conditions during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Rear HO2S malfunction • Rear HO2S heater malfunction • Pressure regulator malfunction (built-in fuel pump unit) • Fuel injector malfunction • Leakage exhaust gas • Purge solenoid valve malfunction • Purge solenoid valve hoses improper connection • Insufficient engine compression • Engine malfunction (leakage engine coolant) • Restriction in intake-air system • MAF sensor malfunction • ECT sensor malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Are there any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2275 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to FREEZE FRAME DATA DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS OF THE REAR HO2S** • Start engine and warm it up completely. • Access O2S13 PID using the M-MDS. • Check PID under following the accelerator pedal condition (in PARK (ATX) or NEUTRAL (MTX)). • Is PID reading normal? — **More than 0.45 V** when accelerator pedal is suddenly depressed (rich condition). — **Less than 0.45 V** just after release of accelerator pedal (lean condition)	Yes	Go to the next step.
		No	Visually inspect for any gas leakage between the TWC and the rear HO2S. • If there is no leakage, replace rear HO2S. (See 01-40A-66 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION[LF, L3].) Then go to Step 11.

STEP	INSPECTION		ACTION
6	**INSPECT THE PURGE SOLENOID VALVE** • Inspect the purge solenoid valve. (See 01-16A-13 PURGE SOLENOID VALVE INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the purge solenoid valve, then go to Step 11. (See 01-13A-3 INTAKE AIR SYSTEM HOSE ROUTING DIAGRAM[LF, L3].)
		No	Go to the next step.
7	**INSPECT THE FUEL LINE PRESSURE** • Perform the "FUEL LINE PRESSURE INSPECTION". (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Go to the next step.
		No	Go to Step 9.
8	**INSPECT THE FUEL SYSTEM FOR FUEL LEAKAGE** • Visually inspect fuel leakage in the fuel system. • Is there fuel leakage?	Yes	Repair or replace malfunctioning part, then go to Step 11.
		No	Replace fuel pump, then go to Step 11.
9	**INSPECT THE FUEL INJECTOR** • Inspect fuel injector. (See 01-14A-27 FUEL INJECTOR INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the fuel injector, then go to Step11. (See 01-14A-25 FUEL INJECTOR REMOVAL/ INSTALLATION[LF, L3].)
		No	Go to the next step.
10	**INSPECT THE ENGINE COOLANT PASSAGE FOR ENGINE COOLANT LEAKAGE** • Perform the engine coolant leakage inspection. (See 01-12A-4 ENGINE COOLANT LEAKAGE INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results. Then go to the next step.
		No	Go to the next step.
11	**VERIFY TROUBLESHOOTING OF DTC P2275 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Stop vehicle and access ON BOARD READINESS TEST to inspect drive mode completion status. • Verify O2S_EVAL PID changes to yes. — If not, perform the DRIVE MODE again. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is there any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P2401[LF, L3]

id0102a3813500

DTC P2401	EVAP system leak detection pump motor circuit low
DETECTION CONDITION	• The PCM monitors pump load current (EVAP line pressure), while evaporative leak monitor is operating. If the pump load current is lower than specified, the PCM determines EVAP system leak detection pump motor circuit has a malfunction. **Diagnostic support note** • This is a intermittent monitor (CCM). • The MIL illuminates if PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• EVAP system leak detection pump malfunction • Open circuit between the main relay and EVAP system leak detection pump terminal A • Open circuit between the EVAP system leak detection pump terminal D and PCM terminal 1U*1, 1AF*2 • Short to ground circuit between the EVAP system leak detection pump terminal D and PCM terminal 1U*1, 1AF*2 • Poor connection at EVAP system leak detection pump or PCM connector • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (CCM related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to available repair information. • If vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify related PENDING CODE or stored DTC. • Is DTC P2405 present?	Yes	Go to the applicable DTC inspection. (See 01-02A-288 DTC P2405[LF, L3].)
		No	Go to the next step.
4	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect EVAP system leak detection pump connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
5	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP MOTOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between EVAP system leak detection pimp terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace wiring harness for open circuit, then go to Step 10.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged, pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 10.
		No	Go to the next step.
7	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP MOTOR CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between EVAP system leak detection pump terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for short to ground, then go to Step 10.
		No	Go to the next step.
8	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP MOTOR CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between EVAP system leak detection pump terminal D (wiring harness-side) and PCM terminal 1U[*1], 1AF[*2] (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace wiring harness for open circuit, then go to Step 10.
9	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP** • Perform EVAP system leak detection pump inspection. (See 01-16A-10 EVAPORATIVE EMISSION (EVAP) SYSTEM LEAK DETECTION PUMP INSPECTION[LF, L3].) • Is the EVAP system leak detection pump normal?	Yes	Go to the next step.
		No	Replace the EVAP system leak detection pump, then go to the next step.

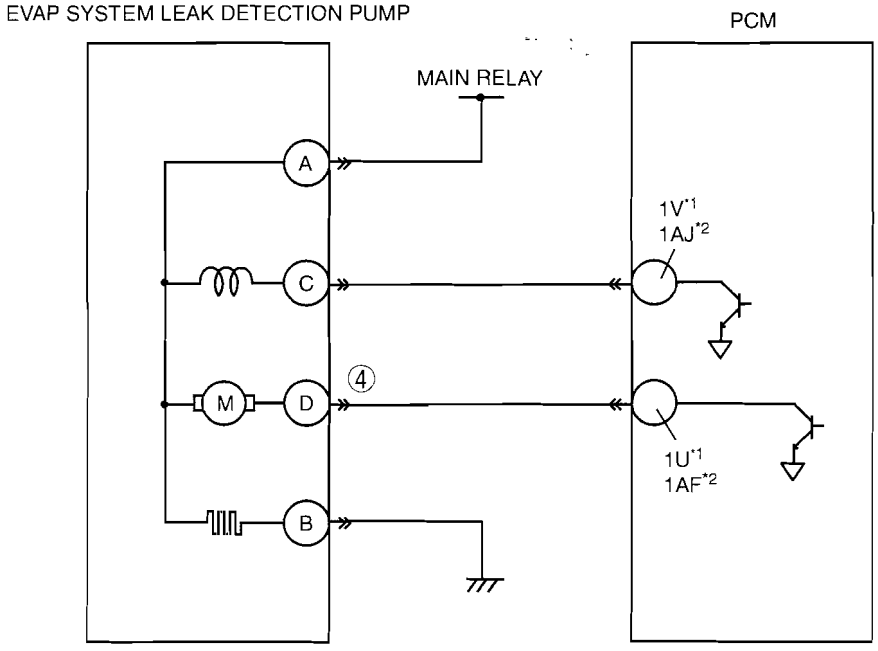
STEP	INSPECTION		ACTION
10	**VERIFY TROUBLESHOOTING OF DTC P2401 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the evaporative emission test using the M-MDS. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) • Is the same DTC present? **Note** • If evaporative system test function is not available, perform the following procedure: — Perform the EVAP System Repair Verification Drive Mode. (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) — Is the PENDING CODE the same as the DTC present?	Yes	Replace the PCM, then go to the next step.
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

*1 : LF MTX, L3 and California emission regulation applicable model with LF ATX
*2 : Except for California emission regulation applicable model with LF ATX

DTC P2402[LF, L3]

id0102a3813600

DTC P2402	EVAP system leak detection pump motor circuit high
DETECTION CONDITION	• The PCM monitors pump load current (EVAP line pressure), while evaporative leak monitor is operating. If the pump load current is higher than specified, the PCM determines EVAP system leak detection pump motor circuit has a malfunction. **Diagnostic support note** • This is a intermittent monitor (CCM). • The MIL illuminates if PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• EVAP system leak detection pump malfunction • Short to power circuit between the EVAP system leak detection pump terminal D and PCM terminal 1U*1, 1AF*2 • PCM malfunction



EVAP SYSTEM DETECTION PUMP HARNESS SIDE CONNECTOR

*2 : Except for California emission regulation applicable model with LF ATX

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (CCM related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnostic according to available repair information. • If vehicle is not repaired, then go to the next step.
		No	Go to the next step.
3	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP CIRCUIT FOR SHORT TO POWER** • Turn the ignition switch to the ON position. • Disconnect the EVAP system leak detection pump connector. • Measure the voltage between EVAP system leak detection pump terminal D (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness, then go to the next step.
		No	Go to the next step.
4	**VERIFY TROUBLESHOOTING OF DTC P2402 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the evaporative system test using the M-MDS. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) • Is the same DTC present? **Note** • If evaporative system test function is not available, perform the following procedure: — Perform the EVAP System Repair Verification Drive Mode. (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) — Is the PENDING CODE the same as the DTC present?	Yes	Replace the PCM, then go to the next step.
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

*1 : LF MTX, L3 and California emission regulation applicable model with LF ATX
*2 : Except for California emission regulation applicable model with LF ATX

DTC P2404[LF, L3]

id0102a3813700

DTC P2404	EVAP system leak detection pump sense circuit problem
DETECTION CONDITION	• The PCM monitors pump load current (EVAP line pressure), while evaporative leak monitor is operating. After obtaining the reference current value, if the time in which the pump load current reaches the reference current value is less than the specification, the PCM determines air filter has a malfunction. **Diagnostic support note** • This is a intermittent monitor (CCM). • The MIL illuminates if PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• Air filter clogging • EVAP hose bending • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (CCM related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnostic according to available repair information. • If vehicle is not repaired, then go to the next step.
		No	Go to the next step.
3	**INSPECT EVAP HOSE BENDING** • Inspect the EVAP hose for bending. • Is the EVAP hose normal?	Yes	Go to the next step.
		No	Repair or replace the hose, then go to Step 5.
4	**INSPECT AIR FILTER FOR CLOGGING** • Inspect the air filter for clogging. • Is the air filter normal?	Yes	Go to the next step.
		No	Replace the air filter, then go to the next step.
5	**VERIFY TROUBLESHOOTING OF DTC P2404 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the evaporative system test using the M-MDS. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) • Is the same DTC present? **Note** • If evaporative system test function is not available, perform the following procedure: — Perform the EVAP System Repair Verification Drive Mode. (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) — Is the PENDING CODE the same as the DTC present?	Yes	Replace the PCM, then go to the next step.
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P2405[LF, L3]

id0102a3813800

DTC P2405	EVAP system leak detection pump sense circuit low input
DETECTION CONDITION	• The PCM monitors pump load current (EVAP line pressure), while evaporative leak monitor is operating. If the current is lower than the specification while the PCM obtains the reference current value, the PCM determines EVAP system leak detection pump orifice has a malfunction. **Diagnostic support note** • This is a intermittent monitor (CCM). • The MIL illuminates if PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• EVAP system leak detection pump orifice fallen off • EVAP system leak detection pump motor malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (CCM related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to available repair information. • If vehicle is not repaired, go to the next step.
		No	Replace the EVAP system leak detection pump, then go to the next step.
3	**VERIFY TROUBLESHOOTING OF DTC P2405 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the evaporative emission test using the M-MDS. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) • Is the same DTC present? **Note** • If evaporative system test function is not available, perform the following procedure: — Perform the EVAP System Repair Verification Drive Mode. (See 01-02A-17 OBD-II DRIVE MODE[LF, L3].) — Is the PENDING CODE the same as the DTC present?	Yes	Replace the PCM, then go to the next step.
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P2407[LF, L3]

id0102a3813900

DTC P2407	EVAP system leak detection pump sense circuit intermittent
DETECTION CONDITION	• The PCM monitors pump load current (EVAP line pressure), while evaporative leak monitor is operating. When either of the following is detected 6 times or more successively, the PCM determines EVAP system leak detection pump heater has a malfunction: — While obtaining the reference current value, the change in pump load current exceeds the specification. — After obtaining the reference current value, the pump load current is kept lower than the maximum pump load current for more than the specified time. **Diagnostic support note** • This is a intermittent monitor (CCM). • The MIL illuminates if PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• EVAP system leak detection pump heater malfunction • PCM malfunction

Diagnostic procedure

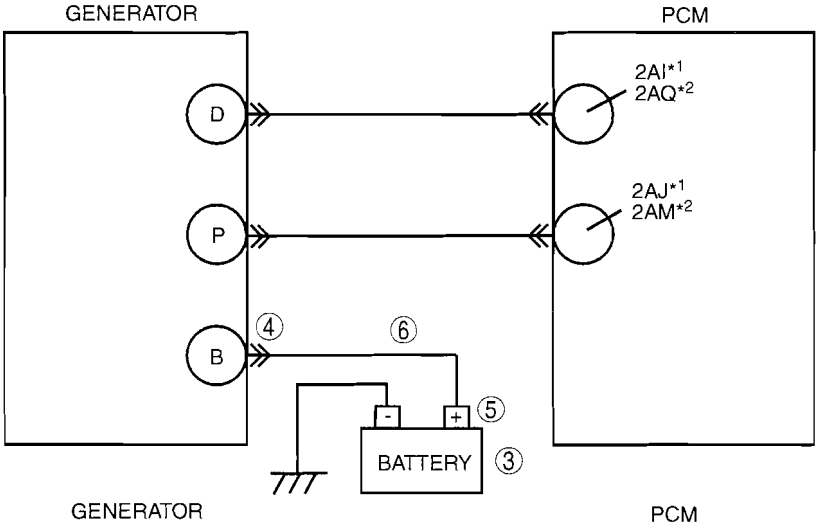
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (CCM related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to available repair information. • If vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP HEATER** • Perform EVAP system leak detection pump inspection. (See 01-16A-10 EVAPORATIVE EMISSION (EVAP) SYSTEM LEAK DETECTION PUMP INSPECTION[LF, L3].) • Is the EVAP system leak detection pump normal?	Yes	Replace the EVAP system leak detection pump, then go to the next step.
		No	Go to the next step.
4	**VERIFY TROUBLESHOOTING OF DTC P2407 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the evaporative emission test using the M-MDS. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) • Is the same DTC present? **Note** • If evaporative system test function is not available, perform the following procedure: — Perform the EVAP System Repair Verification Drive Mode. (See 01-02A-17 OBD-II DRIVE MODE[LF, L3]) — Is the PENDING CODE the same as the DTC present?	Yes	Replace the PCM, then go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is there any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

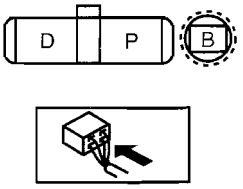
DTC P2502[LF, L3]

id0102a3814000

DTC P2502	Charging system voltage problem
DETECTION CONDITION	• The PCM judges generator output voltage is **above 17 V** or battery voltage is **below 11 V** during engine running. **Diagnostic support note** • This is a continuous monitor (Other). • The MIL does not illuminate. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is not available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Open circuit between generator terminal B and battery positive terminal • Battery malfunction • Generator malfunction • PCM is poorly connected • PCM, generator and/or battery are poorly connected



GENERATOR WIRING HARNESS-SIDE CONNECTOR



PCM HARNESS SIDE CONNECTOR

*1 : LF MTX, L3 and California emission regulation applicable model with LF ATX
*2 : Except for California emission regulation applicable model with LF ATX

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT BATTERY** • Turn the ignition switch off. • Inspect the battery. • Is the battery normal?	Yes	Go to the next step.
		No	Replace the battery, then go to Step 7.
4	**INSPECT POOR INSTALLATION OF GENERATOR TERMINAL** • Turn the ignition switch off. • Inspect for looseness of generator terminal B installation nut. • Is nut loose?	Yes	Tighten generator terminal B installation nut, then go to Step 7.
		No	Go to the next step.
5	**INSPECT POOR INSTALLATION OF BATTERY POSITIVE TERMINAL** • Inspect for looseness of battery positive terminal. • Is the terminal loose?	Yes	Connect the battery positive terminal correctly, then go to Step 7.
		No	Go to the next step.
6	**INSPECT BATTERY CHARGING CIRCUIT** • Disconnect the generator terminal B. • Measure the voltage between generator terminal B (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between generator terminal B and battery positive terminal, then go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P2502 COMPLETED** • Make sure to reconnect all connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine, or KOER self-test. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is there any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P2503[LF, L3]

id0102a3814100

DTC P2503	Charging system voltage low
DETECTION CONDITION	• The PCM needs **more than 20 A** from generator, and judges generator output voltage to be **below 8.5 V** during engine running. **Diagnostic support note** • This is a continuous monitor (Other). • The MIL does not illuminate. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is not available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Generator malfunction • PCM and/or generator are poorly connected • Open and/or short to ground in wiring from between generator terminal P and PCM terminal 2AJ*1, 2AM*2, 2AJ*3 • Open and/or short to ground in wiring from between generator terminal D and PCM terminal 2AI*1, 2AQ*2, 2AI*3 • Drive chain misadjustment

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT DRIVE CHAIN CONDITION** • Verify that drive chain auto tensioner indicator mark does not exceed limit. • Is front drive chain normal?	Yes	Go to the next step.
		No	Replace and/or adjust drive chain, then go to Step 10.
4	**INSPECT POOR CONNECTION OF PCM CONNECTOR** • Turn the ignition switch off. • Disconnect PCM connector. • Inspect for poor connection (damaged, pulled-out terminals, corrosion, etc.). • Is there any malfunction?	Yes	Repair the terminals, then go to Step 10.
		No	Go to the next step.
5	**INSPECT POOR CONNECTION OF GENERATOR CONNECTOR** • Disconnect generator connector. • Inspect for poor connection (damaged, pulled-out terminals, corrosion, etc.). • Is there any malfunction?	Yes	Repair or replace the terminals, then go to Step 10.
		No	Go to the next step.
6	**INSPECT GENERATOR CONTROL CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between generator terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for short to ground, then go to Step 10.
		No	Go to the next step.
7	**INSPECT GENERATOR OUTPUT VOLTAGE MONITOR CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between generator terminal P (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for short to ground, then go to Step 10.
		No	Go to the next step.
8	**INSPECT GENERATOR CONTROL CIRCUIT FOR OPEN** • Inspect for continuity between generator terminal D (wiring harness-side) and PCM terminal 2AI*1, 2AQ*2 (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open circuit, then go to Step 10.
9	**INSPECT GENERATOR OUTPUT VOLTAGE MONITOR CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between generator terminal P (wiring harness-side) and PCM terminal 2AJ*1, 2AM*2 (wiring harness-side). • Is there continuity?	Yes	Repair or replace the generator, then go to the next step.
		No	Repair or replace the wiring harness for open circuit, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P2503 COMPLETED** • Make sure to reconnect all connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

*1 : LF MTX, L3 and California emission regulation applicable model with LF ATX
*2 : Except for California emission regulation applicable model with LF ATX

DTC P2504[LF, L3]

id0102a3814200

DTC P2504	Charging system voltage high
DETECTION CONDITION	• The PCM judges generator output voltage is **above 18.5 V** or battery voltage is **above 16.0 V** during engine running. **Diagnostic support note** • This is a continuous monitor (Other). • The MIL does not illuminate. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is not available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Short to power circuit between generator connector terminal D and PCM connector terminal 2AI*1, 2AQ*2, 2AI*3 • Generator malfunction • PCM and/or generator are poorly connected

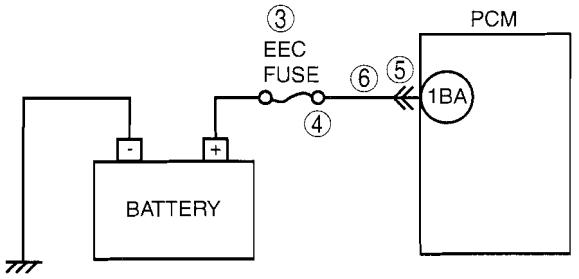
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT POOR CONNECTION OF GENERATOR CONNECTOR** • Turn the ignition switch off. • Disconnect the generator connector. • Inspect for poor connection (damaged/pulled-out terminals, corrosion, etc.). • Is there any malfunction?	Yes	Repair or replace the terminals, then go to Step 8.
		No	Go to the next step.
4	**CLASSIFY GENERATOR MALFUNCTION OR OTHER MALFUNCTION** • Turn the ignition switch to the ON (Engine off). • Measure the voltage between generator terminal D (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	There is a malfunction at the generator. Go to Step 7.
5	**INSPECT POOR CONNECTION OF PCM CONNECTOR** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (damaged/pulled-out terminals, corrosion, etc.). • Is there any malfunction?	Yes	Repair or replace pins, then go to Step 8.
		No	Go to the next step.
6	**INSPECT GENERATOR CONTROL CIRCUIT FOR SHORT TO POWER** • Turn the ignition switch to the ON (engine off). • Measure the voltage between generator terminal D (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for short to power supply, then go to Step 8.
		No	Go to Step 8.
7	**INSPECT GENERATOR CONTROL TERMINAL FOR SHORT TO POWER** • Measure the voltage between generator terminal D (part-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the generator, then go to the next step.
		No	Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P2504 COMPLETED** • Make sure to reconnect all connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine, or KOER self-test with M-MDS. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P2507[LF, L3]

id0102a3814300

DTC P2507	PCM B+ voltage low
DETECTION CONDITION	• The PCM monitors the voltage of back-up battery positive terminal at PCM terminal 1BA. If the PCM detected battery positive terminal voltage **below 2.5 V** for **2 s**, the PCM determines that the backup voltage circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• Meltdown EEC fuse • Open circuit in wiring between EEC fuse and PCM terminal 1BA • Short to ground between EEC fuse and PCM terminal 1BA • Poor connection of PCM connector • PCM malfunction



PCM
HARNESS SIDE CONNECTOR

1BH	1BD	1AZ	1AV	1AR	1AN	1AJ	1AF	1AB	1X	1T	1P	1L	1H	1D

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME PID DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME PID DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to available repair information. • If vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT EEC FUSE** • Turn the ignition switch off. • Inspect EEC fuse for failure and proper. • Is it normal?	Yes	Go to Step 6.
		No	• If EEC fuse has been burnt, then go to the next step. • If EEC fuse is not installed correctly, install it correctly then go to Step 7.
4	**INSPECT MONITOR CIRCUIT FOR SHORT TO GROUND** • Disconnect battery cables. • Inspect for continuity between EEC fuse terminal and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for short to ground and install new fuse, then go to Step 7.
		No	Go to Step 7.

STEP	INSPECTION		ACTION
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect PCM connector. • Inspect for poor connection (such as damaged, pulled-out terminals, corrosion). • Is there any malfunction?	Yes	Repair terminals, then go to Step 7.
		No	Go to the next step.
6	**INSPECT MONITOR CIRCUIT FOR OPEN CIRCUIT** • Disconnect battery cables. • Inspect for continuity between EEC fuse terminal and PCM terminal 1BA (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open circuit, then go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P2507 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the M-MDS. • Start the engine and warm it up completely. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P2610[LF, L3]

id0102a3814400

DTC P2610	PCM internal engine off timer performance
DETECTION CONDITION	• PCM internal engine off timer is damaged. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• PCM internal engine off timer is damaged.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY TROUBLESHOOTING OF DTC P2610 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

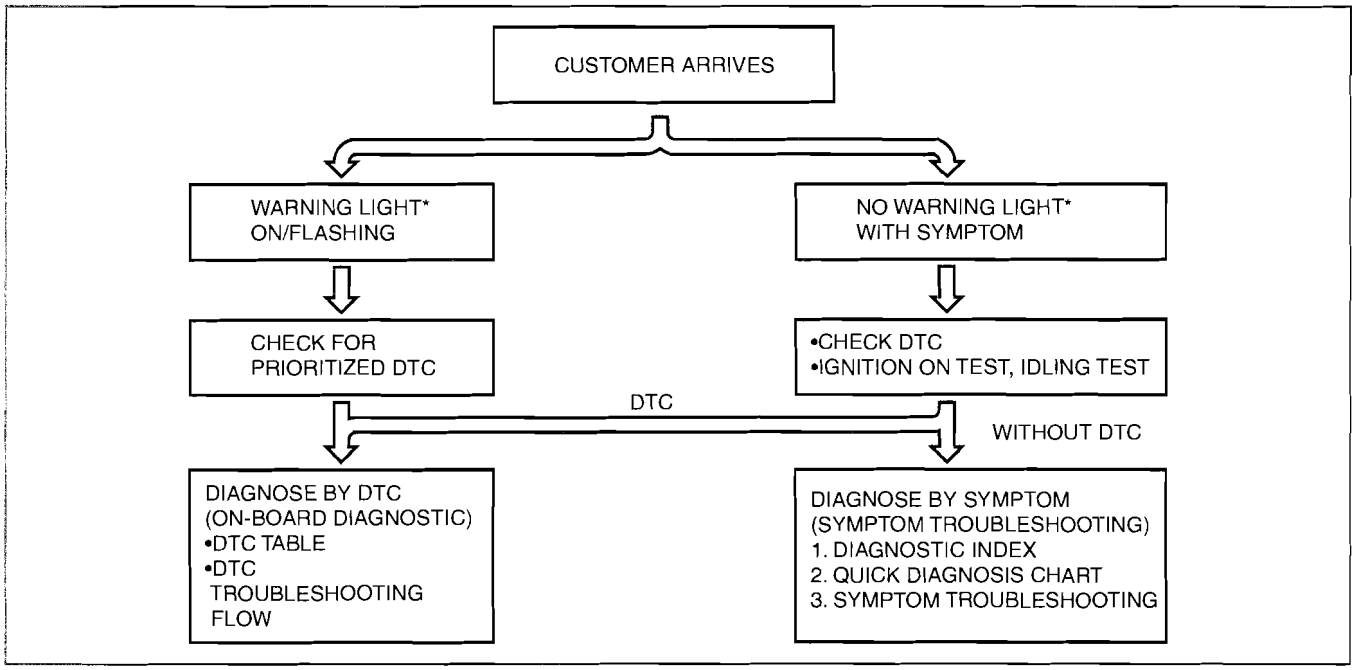
FOREWORD[L3 WITH TC]

id010239800300

- When the customer reports a vehicle malfunction, check the malfunction indicator lamp (MIL) indication and diagnostic trouble code (DTC), then diagnose the malfunction according to the following flowchart.
  - — If a DTC exists, diagnose the applicable DTC inspection. (See 01-02B-14 DTC TABLE[L3 WITH TC].)
  - — If a DTC does not exist and the MIL does not illuminate or flash, diagnose the applicable symptom troubleshooting. (See 01-03B-8 QUICK DIAGNOSTIC CHART[L3 WITH TC].)



acxuuw00002404

*: Malfunction Indicator Lamp (MIL), Generator Warning Light, Security Light

OBD-II PENDING TROUBLE CODE[L3 WITH TC]

id010239800400

- These appear when a problem is detected in a monitored system. The code for a failed system is stored in the PCM memory in the first drive cycle. This code is called the pending code. If the PCM determines that the system has returned to normal or the problem was mistakenly detected, it deletes the pending code. If the problem is found in the second drive cycle, too the PCM determines that the system is malfunctioning, and the DTC is stored.

OBD-II FREEZE FRAME DATA[L3 WITH TC]

id010239800500

- This is technical data which indicates the engine condition at the time of the first malfunction. This data will remain in the memory even if another emission-related DTC is stored, with the exception of the Misfire or Fuel System DTCs. Once freeze frame data for the Misfire or Fuel System DTC is stored, it will overwrite any previous data and the freeze frame will not be overwritten again.

OBD-II ON-BOARD SYSTEM READINESS TEST[L3 WITH TC]

id010239800600

- This shows the OBD-II systems operating status. If any monitor function is incomplete, the M-MDS will identify which monitor function has not been completed. Misfires, Fuel System and Comprehensive Components (CCM) are continuous monitoring-type functions. The catalyst, EGR system, evaporation system and oxygen sensor will be monitored under drive cycles. The OBD-II diagnostic system is initialized by performing the DTC cancellation procedure or disconnecting the negative battery cable.

OBD-II DIAGNOSTIC MONITORING TEST RESULTS[L3 WITH TC]

id010239800700

- These result from the intermittent monitor system technical data, which are used to determine whether the system is normal or not. They also display the system's thresholds and diagnostic results. The intermittent monitor system monitors the oxygen sensor, EVAP purge system, catalyst and the EGR system.

OBD-II READ/CLEAR DIAGNOSTIC TEST RESULTS[L3 WITH TC]

id010239800800

- This retrieves all stored DTCs in the PCM and clears the DTC, Freeze Frame Data, On-Board Readiness Test Results, Diagnostic Monitoring Test Results and Pending Trouble Codes.

OBD-II PARAMETER IDENTIFICATION (PID) ACCESS[L3 WITH TC]

id010239800900

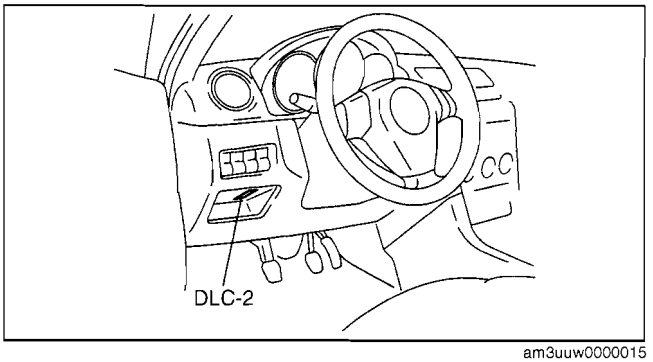
- The PID mode allows access to certain data values, analog and digital inputs and outputs, calculated values and system status information. Since PID values for output devices are PCM internal data values, inspect each device to identify which output devices are malfunctioning.

ON-BOARD DIAGNOSTIC TEST[L3 WITH TC]

id010239801000

DTC Reading Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Toolbox" tab.
     2. Select "Self Test".
     3. Select "Modules".
     4. Select "PCM".
   - When using the PDS (Pocket PC)
     1. Select "Module Tests".
     2. Select "PCM".
     3. Select "Self Test".

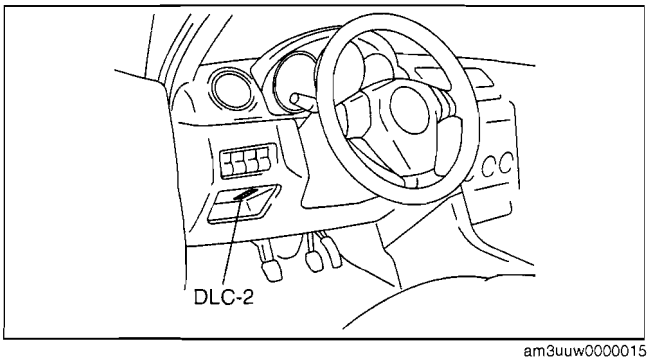


am3uuw0000015

3. Then, select the "Retrieve CMDTCs" and perform procedures according to directions on the M-MDS screen.
4. Verify the DTC according to the directions on the M-MDS screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
5. After completion of repairs, clear all DTCs stored in the PCM, while referring to "AFTER REPAIR PROCEDURE".

Pending Trouble Code Access Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Toolbox" tab.
     2. Select "Self Test".
     3. Select "Modules".
     4. Select "PCM".
   - When using the PDS (Pocket PC)
     1. Select "Module Tests".
     2. Select "PCM".
     3. Select "Self Test".

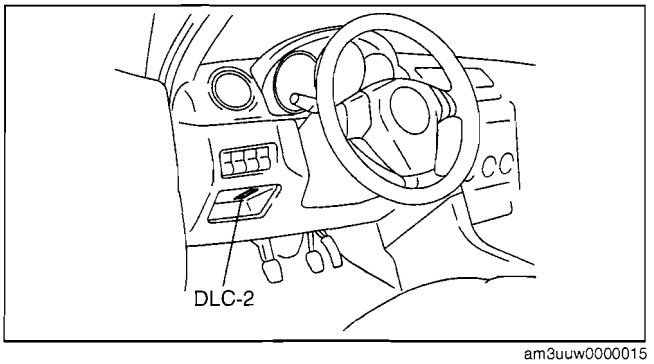


am3uuw0000015

3. Then, select the "Retrieve CMDTCs" and perform procedures according to directions on the M-MDS screen.
4. Retrieve the pending trouble codes according to the directions on the M-MDS screen.

Freeze Frame PID Data Access Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Toolbox" tab.
     2. Select "Self Test".
     3. Select "Modules".
     4. Select "PCM".
   - When using the PDS (Pocket PC)
     1. Select "Module Tests".
     2. Select "PCM".
     3. Select "Self Test".

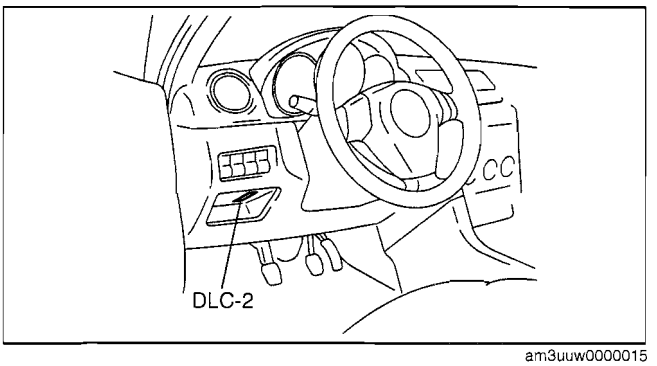


am3uuw0000015

3. Then, select the "Retrieve CMDTCs" and perform procedures according to directions on the M-MDS screen.
4. Retrieve the freeze frame PID data according to the directions on the M-MDS screen.

On-Board System Readiness Tests Access Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Toolbox" tab.
     2. Select "Powertrain".
     3. Select "OBD Test Modes".
     4. Select "Mode 1 Powertrain Data".
   - When using the PDS (Pocket PC)
     1. Select "OBD II Modes".
     2. Select "Mode 1 Powertrain Data".
3. Then, select the "***SUP" and "***EVAL" PIDs in the PID selection screen.
4. Monitor those PIDs and check it system monitor is completed.

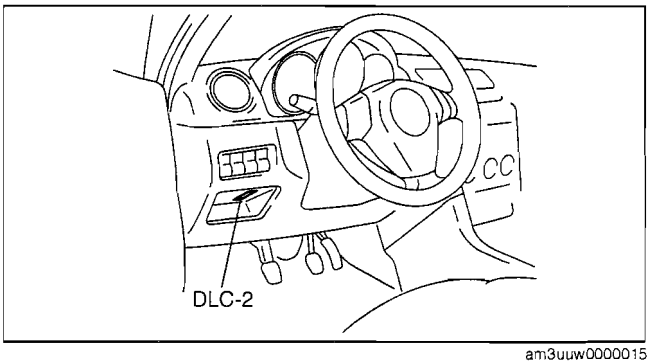


am3uuw0000015

PID/DATA Monitor and Record Procedure

Note
- The PID/DATA MONITOR function monitors the calculated value of the input/output signals in the PCM. Therefore, an output device malfunction is not directly indicated as a malfunction of the monitored value for the output device. If a monitored value of an output device is out of specification, inspect the monitored value of the input device related to the output control.

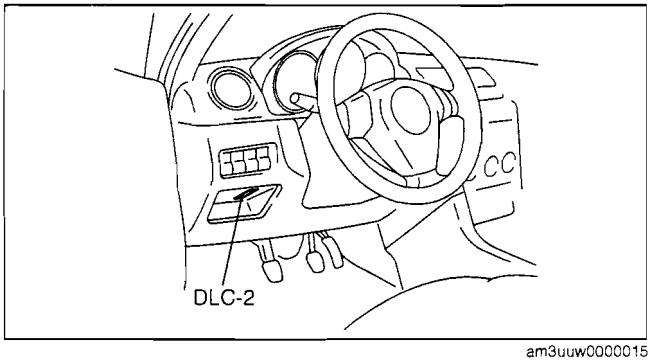
1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Toolbox" tab.
     2. Select "DataLogger".
     3. Select "Modules".
     4. Select "PCM".
   - When using the PDS (Pocket PC)
     1. Select "Module Tests".
     2. Select "PCM".
     3. Select "DataLogger".
3. Select the PID from the PID table.
4. Verify the PID data according to the directions on the screen.



am3uuw0000015

Diagnostic Monitoring Test Results Access Procedure

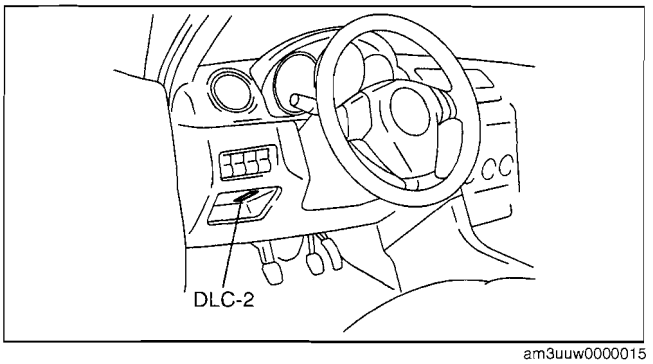
1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Toolbox" tab.
     2. Select "Powertrain".
     3. Select "OBD Test Modes".
     4. Select "Mode 6 On-Board Test Results".
   - When using the PDS (Pocket PC)
     1. Select "OBD II Modes".
     2. Select "Mode 6 On-Board Test Results".
3. Verify the diagnostic monitoring test result according to the directions on the screen.



am3uuw0000015

Simulation Function Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Toolbox" tab.
     2. Select "DataLogger".
     3. Select "Modules".
     4. Select "PCM".
   - When using the PDS (Pocket PC)
     1. Select "Module Tests".
     2. Select "PCM".
     3. Select "DataLogger".
3. Select the simulation items from the PID table.
4. Perform the simulation function, inspect the operations for each parts.
   - If there is no operation sound from the relay, motor, and solenoid after the simulation function inspection is performed, it is possible that there is an open or short circuit in the wiring harness, relay, motor or solenoid, or sticking and operation malfunction.

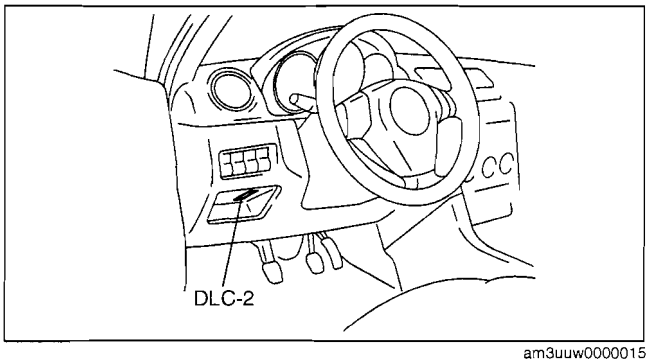


am3uuw0000015

AFTER REPAIR PROCEDURE[L3 WITH TC]

id010239801100

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Toolbox" tab.
     2. Select "Self Test".
     3. Select "Modules".
     4. Select "PCM".
     5. Select "Retrieve CMDTCs".
   - When using the PDS (Pocket PC)
     1. Select "Module Tests".
     2. Select "PCM".
     3. Select "Self Test".
     4. Select "Retrieve CMDTCs".
3. Verify the DTC according to the directions on the M-MDS screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Verify that no DTCs are displayed.

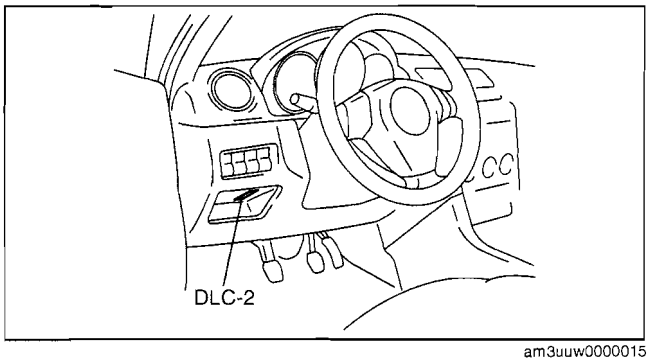


am3uuw0000015

KOEO/KOER SELF TEST[L3 WITH TC]

id010239801200

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - When using the IDS (laptop PC)
     1. Select the "Toolbox" tab.
     2. Select "Self Test".
     3. Select "Modules".
     4. Select "PCM".
   - When using the PDS (Pocket PC)
     1. Select "Module Tests".
     2. Select "PCM".
     3. Select "Self Test".
3. Then, select the "KOEO On Demand Self Test" or "KOER On Demand Self Test" and perform procedures according to directions on the M-MDS screen.
4. Verify the DTC according to the directions on the M-MDS screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
5. After completion of repairs, clear all DTCs stored in the PCM, while referring to "AFTER REPAIR PROCEDURE".



am3uuw0000015

OBD-II DRIVE MODE[L3 WITH TC]

id010239801300

- Using the OBD-II drive mode, the monitoring item requested by OBD-II regulations can be easily diagnosed.
- Performing the Drive Mode inspects the OBD-II system for proper operation and must be performed to ensure that no additional DTCs are present.
- The OBD-II drive mode is divided into the specific drive mode and single drive mode.
- For the specific drive mode, specified drive modes have been set for each individual monitoring item requested by OBD-II regulations, and they can be diagnosed individually. For the single drive mode, the entire monitoring item requested by OBD-II regulations can be diagnosed.
- The following modes are in the specific drive mode. The applicable system is diagnosed by driving in the following drive modes.
  - PCM Adaptive Memory Produce Drive Mode
  - EGR System Repair Verification Drive Mode
  - HO2S heater, HO2S, and TWC Repair Verification Drive Mode
  - EVAP System Repair Verification Drive Mode
- The following systems are diagnosed with the single drive mode.
  - EGR system
  - Oxygen sensor (HO2S)
  - Oxygen sensor heater
  - Catalytic converter (TWC)
  - Fuel, misfire and evaporative (EVAP) system

Caution

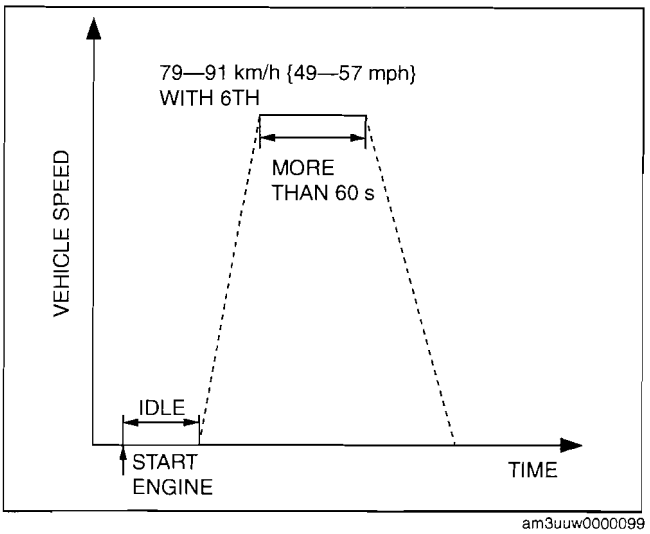
- **While performing the Drive Mode, always operate the vehicle in a safe and lawful manner.**
- **When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD function and inspect later.**

Note

- Vehicle speed and engine speed detected by the PCM may differ from that indicated by the speedometer and tachometer. Use the M-MDS to monitor vehicle speed.
- If the OBD-II system inspection is not completed during the Drive Mode, the following causes are considered:
  - The OBD-II system detects the malfunction.
  - The Drive Mode procedure is not completed correctly.
- Disconnecting the battery will reset the memory. Do not disconnect the battery during and after Drive Mode.
- The M-MDS can be used at anytime through the course of the Drive Mode to monitor the completion status. Monitoring can be done by viewing the ON BOARD SYSTEM READINESS menu.
- The OBD monitoring status can be confirmed with the ignition switch operation. During KOEO, the MIL illuminates for a fail-light inspection for **approx. 17 s**. The OBD monitoring status is confirmed after the fail-light inspection.
  - If all of the diagnosis is completed even one time, the MIL will continue to illuminate.
  - If all of the diagnosis is not completed, the MIL flashes for **approx. 7 s**, and then it illuminates until the engine is started.

EGR System Repair Verification Drive Mode

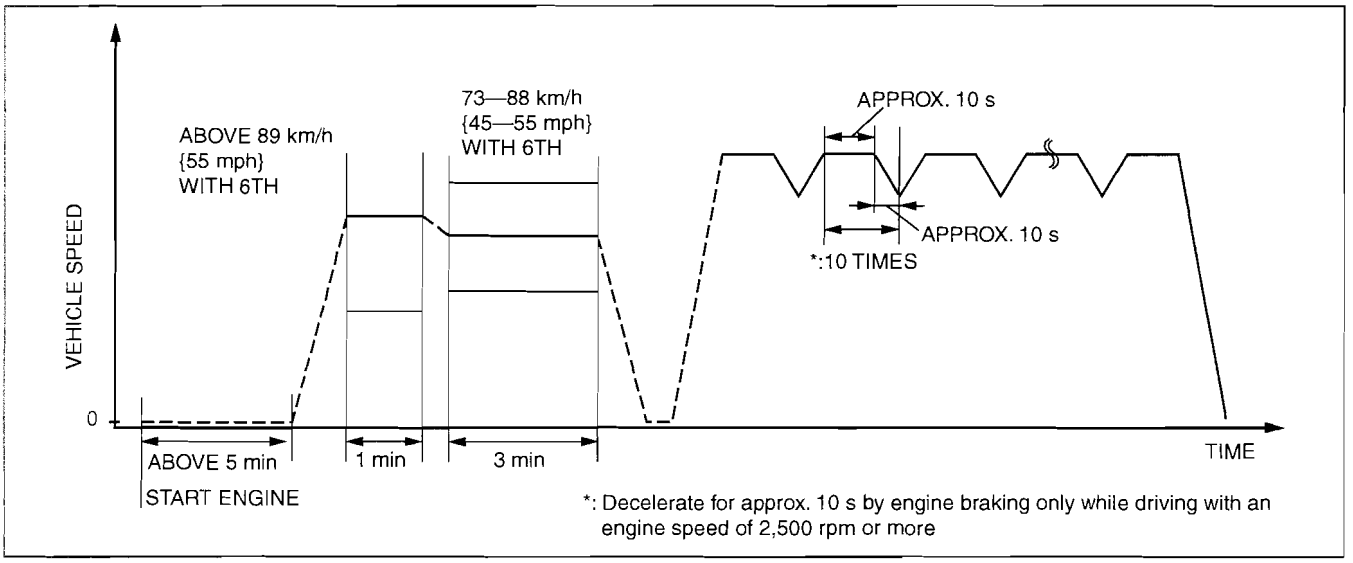
1. Perform "PCM Adaptive Memory Production Drive Mode" first.
2. Verify all accessory loads (A/C, headlights, blower fan, rear window defroster) are off.
3. Drive the vehicle as shown in the graph.
4. Stop the vehicle and access ON BOARD SYSTEM READINESS menu of GENERIC OBD-II FUNCTION to verify the OBD monitoring status.
   - If completed, the OBD monitoring status items change from non-completed to completed.
   - If not completed, turn the ignition switch off then repeat from Step 3.
5. Access DIAGNOSTIC MONITORING TEST RESULTS menu of GENERIC OBD-II FUNCTIONS to verify the monitor results.
   - If detected values are not within specification, repair has not been completed.
6. Verify no DTCs are available.



am3uuw0000099

HO2S heater, HO2S, and TWC Repair Verification Drive Mode

1. Perform "PCM Adaptive Memory Production Drive Mode" first.
2. Verify all accessory loads (A/C, headlights, blower fan, rear window defroster) are off.
3. Drive the vehicle as shown in the graph. The driving conditions before driving at constant speed are not specified.



am3uuw0000099

4. Stop the vehicle and access ON BOARD SYSTEM READINESS menu of GENERIC OBD-II FUNCTION to verify the OBD monitoring status.
   - If completed, the OBD monitoring status items change from non-completed to completed.
   - If not completed, turn the ignition switch off then repeat from Step 3.
5. Access DIAGNOSTIC MONITORING TEST RESULTS menu of GENERIC OBD-II FUNCTIONS to verify the monitor results.
   - If detected values are not within the specification, repair has not been completed.
6. Verify no DTCs are available.

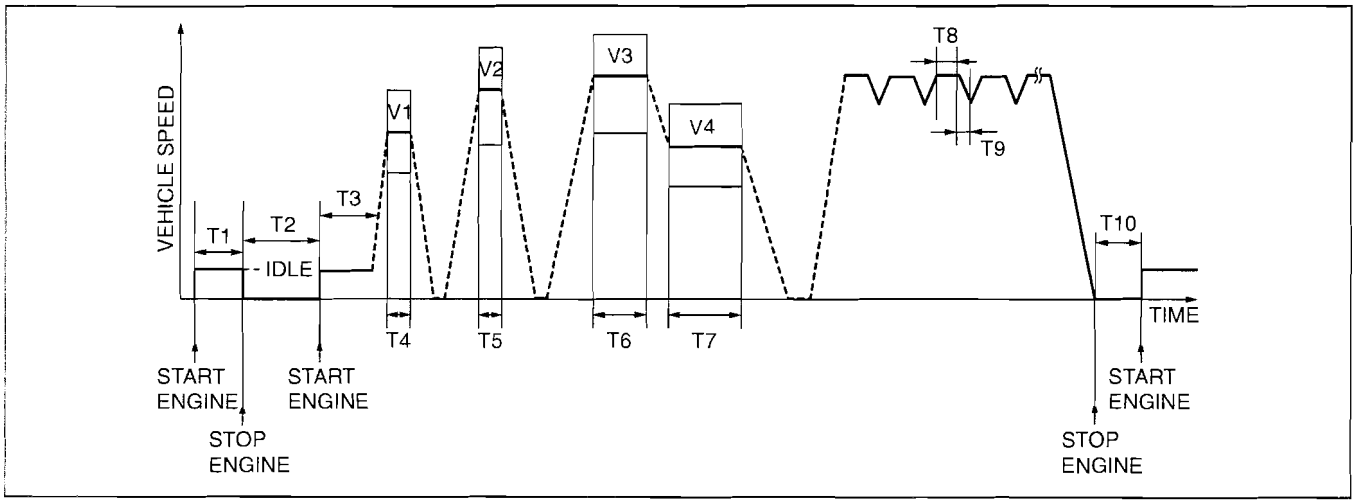
EVAP System Repair Verification Drive Mode

Note
- If "EVAP System Repair Verification Drive Mode" cannot be performed (it is impossible to drive the vehicle under this drive mode condition), perform the EVAP system test procedure as an alternative.

1. Verify that all of the following PIDs are within the following specifications. All PIDs must be within specifications before the engine is started to initiate the EVAP system test.
   - BARO: **above 72.2 kPa {542 mmHg, 21.3 inHg}**
   - IAT: **5—35 °C {41—95 °F}**
   - FTL: **15—85%**
   - B+: **above 10.9 V**
2. Clear the DTC from the PCM memory using the M-MDS.
3. Turn the ignition switch off.
4. Leave the vehicle for **5 hours or more.**
5. Start the engine and idle it for **more than 5 min.**
6. Drive the vehicle at an engine speed of **65—80 km/h {40—50 mph} for more than 5 min.**
7. Stop the vehicle and the turn ignition switch off.
8. Leave vehicle as it is for **5.5 hours or more.**
9. Start the engine.
10. Access the ON BOARD SYSTEM READINESS to verify the OBD monitoring status.
    - If completed, the OBD monitoring status items change from non-completed to completed.
    - If not completed, turn the ignition switch off then go back to Step 1.
11. Access the DIAGNOSTIC MONITORING TEST RESULTS to verify the monitor results.
    - If detected values are not within specification, the repair has not been completed.
12. Verify that no DTCs are present.

PCM Adaptive Memory Production, EGR, HO2S heater, HO2S, TWC, and EVAP System Repair Verification Drive Mode

1. Start the engine and warm it up completely.
2. Clear the DTC from the PCM memory using the M-MDS.
3. Verify the following conditions and correct if necessary:
   - All accessory loads (A/C, headlights, blower fan, rear window defroster) are off.
4. Verify that all of the following PIDs are within the following specifications. All PIDs must be within specifications from Step 5 to 6.
   - BARO: **above 72.2 kPa {542 mmHg, 21.3 inHg}**
   - IAT: **5—35 °C {41—95 °F}**
   - FTL: **15—85%**
   - B+: **above 10.9 V**
5. With the vehicle stopped, race the engine at the engine speed indicated, and then drive the vehicle as shown in the graph. The driving conditions before driving at constant speed are not specified. If possible, monitor RPM PID for engine speed during this procedure.



acxuuw00002357

Step	Time	Engine speed (rpm)	Vehicle speed (km/h {mph})	Vehicle condition
1	T1: More than 10 s	Idle	0 {0}	Idle the engine after the cooling fan has stopped
2	T2: More than 5 h	0	0 {0}	Keep the ignition switch off
3	T3: More than 5 min	Idle	0 {0}	—
4	T4: 5 min	—	V1: 65—80 {40—50}	6th
5	T5: 1 min	—	V2: 79—91 {49—57}	6th
6	T6: 1 min	—	V3: Above 89 {55}	6th
7	T7: 3 min	—	V4: 72—88 {45—55}	6th
8	T8: Approx. 10 s	2,500 or more	—	—
9	T9: Approx. 10 s	—	—	Decelerate by engine braking only (10 times)
10	T10: More than 5.5 h	0	0 {0}	Keep the ignition switch off

6. Turn the ignition switch off.
7. Access the ON BOARD SYSTEM READINESS to verify the OBD monitoring status.
   - If completed, all of the OBD monitoring status items change from non-completed to completed.
   - If not completed, turn the ignition switch off, then perform the applicable specific drive mode for any monitoring item that was not in the detection condition.
8. Access the DIAGNOSTIC MONITORING TEST RESULTS to verify the monitor results.
   - If detected values are not within specification, the repair has not been completed.

DIAGNOSTIC MONITORING TEST RESULTS[L3 WITH TC]

id010239801400

- The purpose of this test mode is to confirm the result of the OBD-II monitor diagnostic test results. The result values stored when a particular monitor is completed are displayed. If the monitor is not completed, the initial value is displayed.

TEST ID	Description	Related system
10: 01: 80	HO2S (Front) lean-to-rich response time (calculated)	HO2S
10: 01: 81	HO2S (Front) rich-to-lean response time (calculated)	
10: 01: 82	HO2S (Front) lean-to-rich response time (calculated)

id010239815700

DTC B1342	PCM malfunction
DETECTION CONDITION	• Malfunction in the PCM internal circuit.
POSSIBLE CAUSE	• PCM internal malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY CURRENT STATUS OF MALFUNCTION** • Clear the DTC from the PCM memory using the M-MDS. • Is same DTC present?	Yes	Replace the PCM, then go to the next step.
		No	Go to the next step.
2	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0011[L3 WITH TC]

id010239801600

DTC P0011	CMP Timing over-advanced
DETECTION CONDITION	• Actual valve timing is over-advanced by **17** ° (when the following conditions are met) from the target valve timing when the OCV is controlled at the maximum valve timing retard condition. **MONITORING CONDITION** — Engine speed is **below 4,000 rpm.** — Engine coolant temperature is **70—110 °C {158—230 °F}.** **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• OCV malfunction • Spool valve in the OCV is stuck in the advance position. • Variable valve timing actuator is stuck in the advance position. • Loose timing chain or improper valve timing due to timing chain slippage • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY TIMING CHAIN INSTALLATION** • Stop the engine. • Remove the timing chain cover. • Is the camshaft timing mark at the correct point? (See 01-10B-10 TIMING CHAIN REMOVAL/ INSTALLATION[L3 WITH TC].)	Yes	Go to the next step.
		No	Reinstall the timing chain, then go to Step 7.

STEP	INSPECTION		ACTION
4	**INSPECT OCV FOR MALFUNCTION** • Start the engine. • Increase the engine speed. • Stop the engine. • Remove the OCV. • Inspect the position of the spool valve in the OCV. • Is the spool valve located at the valve retard position?	Yes	Go to the next step.
		No	Replace the OCV, then go to Step 7.
5	**INSPECT STOPPER PIN MECHANISM** • Remove the timing chain. • Inspect the stopper pin. (See 01-10B-33 VARIABLE VALVE TIMING ACTUATOR INSPECTION[L3 WITH TC].) • Is the stopper pin mechanism normal?	Yes	Go to the next step.
		No	Replace the variable valve timing actuator, then go to Step 7.
6	**INSPECT ROTOR POSITION** • Remove the variable valve timing actuator. • Is the rotor position at the maximum valve timing retard?	Yes	**VARIABLE VALVE TIMING MECHANISM IS NORMAL** **Note** • This DTC is detected as an intermittent concern. • The intermittent concern might be removed using the cleaning mode of the variable valve timing control function. Go to the next step.
		No	Replace the variable valve timing actuator, go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0011 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Turn the ignition switch off. • Start the engine and warm it up completely. • Is PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0012[L3 WITH TC]

id010239801700

DTC P0012	CMP Timing over-retarded
DETECTION CONDITION	• Actual valve timing is over-retarded by **5** ° (when the following conditions are met) from the target valve timing for **5 s** when the OCV system control is within the feed-back range. **MONITORING CONDITION** — Engine speed is **below 4,000 rpm.** — Engine coolant temperature is **70—110 °C {158—230 °F}.** **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• OCV malfunction • Low engine oil pressure • Spool valve in OCV is stuck in the retard position. • Variable valve timing actuator is stuck in the retard position. • Following oil runners are clogged or have leakage. **Oil runners** • Between oil pressure switch and OCV • Between OCV and variable valve timing actuator • In variable valve timing actuator • Loose timing chain or improper valve timing due to timing chain slippage • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Is DTC P2088 or P2089 present?	Yes	Go to the appropriate DTC troubleshooting procedure. (See 01-02B-194 DTC P2088[L3 WITH TC] or 01-02B-196 DTC P2089[L3 WITH TC].)
		No	Go to the next step.
4	**VERIFY ENGINE OIL PRESSURE** • Start the engine. • Does the oil pressure warning light illuminate?	Yes	Inspect engine oil pressure. (See 01-11B-3 OIL PRESSURE INSPECTION[L3 WITH TC].)
		No	Go to the next step.
5	**VERIFY TIMING CHAIN INSTALLATION** • Stop the engine. • Remove the timing chain cover. • Is the camshaft timing mark at the correct point? (See 01-10B-10 TIMING CHAIN REMOVAL/ INSTALLATION[L3 WITH TC].)	Yes	Go to the next step.
		No	Reinstall the timing chain, then go to Step 8.
6	**INSPECT OCV FOR MALFUNCTION** • Stop the engine. • Remove the OCV. • Inspect the position of the spool valve in the OCV. • Is the spool valve located at the valve retard position?	Yes	**VARIABLE VALVE TIMING MECHANISM IS NORMAL** **Note** • This DTC is detected as an intermittent concern. • The intermittent concern might be removed using the cleaning mode of the variable valve timing control function. Go to the next step.
		No	Replace the OCV, then go to Step 8.

STEP	INSPECTION		ACTION
7	**INSPECT ENGINE OIL RUNNER** • Inspect the following engine oil runners for clogging or leakage. — Between the oil pressure switch and the OCV — Between the OCV and the variable valve timing actuator — In the variable valve timing actuator • Is there any clogging or leakage?	Yes	Repair or replace the suspected runner, then go to the next step.
		No	**VARIABLE VALVE TIMING MECHANISM IS NORMAL** **Note** • This DTC is detected as an intermittent concern. • The intermittent concern might be removed using the cleaning mode of the variable valve timing control function. Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0012 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Turn the ignition switch off. • Start the engine and warm it up completely. • Is PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0016[L3 WITH TC]

id010239801800

DTC P0016	CKP-CMP correlation
DETECTION CONDITION	• The PCM monitors the input pulses from the CKP sensor and CMP sensor. If the input pulse pick-up timing do not match each other, the PCM determines that the camshaft position does not coincide with the crankshaft position. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Poor connection of connector • CMP sensor malfunction • CKP sensor malfunction • Damaged or scratched CMP sensor pulse wheel • Damaged or scratched CKP sensor pulse wheel • Foreign material on CMP sensor • Foreign material on CKP sensor • Improper valve timing

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT CMP SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the CMP sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 13.
		No	Go to the next step.
4	**INSPECT CMP SENSOR FOR FOREIGN MATERIAL** • Remove the CMP sensor. • Inspect the CMP sensor for foreign material. • Is there any foreign material on the CMP sensor?	Yes	Remove foreign material from the CMP sensor, then go to Step 13.
		No	Go to the next step.
5	**INSPECT CMP SENSOR PULSE WHEEL** • Visually inspect the CMP sensor pulse wheel. • Is there any damage or scratching to the CMP sensor pulse wheel?	Yes	Replace the camshaft, then go to Step 13. (See01-10B-20 CYLINDER HEAD GASKET REPLACEMENT[L3 WITH TC].)
		No	Go to the next step.
6	**INSPECT CMP SENSOR** • Inspect the CMP sensor. (See01-40B-47 CAMSHAFT POSITION (CMP) SENSOR INSPECTION[L3 WITH TC].) • Is the CMP sensor normal?	Yes	Go to the next step.
		No	Replace the CMP, then go to Step 13.
7	**INSPECT CKP SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the CKP sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 13.
		No	Go to the next step.
8	**INSPECT CKP SENSOR FOR FOREIGN MATERIAL** • Remove the CKP sensor. • Inspect the CKP sensor for foreign material. • Is there any foreign material on the CKP sensor?	Yes	Remove foreign material from the CKP sensor, then go to Step 13.
		No	Go to the next step.
9	**INSPECT CKP SENSOR PULSE WHEEL** • Visually inspect the CKP sensor pulse wheel. • Is there any damage or scratching to the CKP sensor pulse wheel?	Yes	Replace the CKP sensor pulse wheel, then go to Step 13. (See01-10B-10 TIMING CHAIN REMOVAL/ INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
10	**INSPECT CKP SENSOR** • Inspect the CKP sensor. (See01-40B-45 CRANKSHAFT POSITION (CKP) SENSOR INSPECTION[L3 WITH TC].) • Is the CKP sensor normal?	Yes	Go to the next step.
		No	Replace the CKP sensor, then go to Step 13. (See01-40B-44 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION[L3 WITH TC].)
11	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 13.
		No	Go to the next step.

STEP	INSPECTION		ACTION
12	**INSPECT VALVE TIMING** • Inspect valve timing. (See01-10B-10 TIMING CHAIN REMOVAL/ INSTALLATION[L3 WITH TC].) • Is valve timing normal?	Yes	Go to the next step.
		No	Adjust the valve timing properly, then go to the next step. (See01-10B-10 TIMING CHAIN REMOVAL/ INSTALLATION[L3 WITH TC].)
13	**VERIFY TROUBLESHOOTING OF DTC P0016 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
14	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0030[L3 WITH TC]

id010239801900

DTC P0030	Front HO2S heater control circuit problem
DETECTION CONDITION	• OBD system monitors the output signal voltage from oxygen sensor which is in proportion to the element impedance of oxygen sensor. If the output signal voltage is not between **0.75 V** and **1.5 V** after specified time from engine start, heater performance is considered failed. **Monitoring condition** • **74 s** elapsed from engine start • Battery voltage:**10—18 V** **Diagnostic support note** • This is an intermittent monitor (HO2S heater). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S heater malfunction • Connector or terminal malfunction • Open circuit in wiring harness between front HO2S heater terminal 2D and PCM terminal 2C • Short to ground in the wiring harness between front HO2S heater terminal 2D and PCM terminal 2C • Short to power supply in the wiring harness between front HO2S heater terminal 2D and PCM terminal 2C • Open circuit in the wiring harness between front HO2S heater terminal 1B and PCM terminal 2AC • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCs** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the related PENDING CODE or stored DTCs using the M-MDS. • Is DTC P0031 or P0032 also present?	Yes	Go to appropriate DTC troubleshooting procedure. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0030 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting for DTC on FREEZE FRAME DATA. (See01-02B-14 DTC TABLE[L3 WITH TC].)
5	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
6	**INSPECT FRONT HO2S HEATER** • Inspect the front HO2S heater. (See01-40B-39 HEATED OXYGEN SENSOR (HO2S) INSPECTION[L3 WITH TC].) • Is there any malfunction?	Yes	Replace the front HO2S, then go to Step 8. (See01-15B-2 EXHAUST SYSTEM REMOVAL/ INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0030 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See01-02B-10 OBD-II DRIVE MODE[L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0031[L3 WITH TC]

id010239802000

DTC P0031	Front HO2S heater circuit low input
DETECTION CONDITION	• The PCM monitors the front HO2S heater output voltage. If the PCM turns the front HO2S heater off or on but the front HO2S heater circuit voltage remains low the PCM determines that the front HO2S heater circuit has a malfunction. **Note** • The front HO2S heater is controlled by a duty signal. **Diagnostic support note** • This is a continuous monitor (HO2S heater). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S heater malfunction • Connector or terminal malfunction • Open circuit in the wiring harness between main relay and front HO2S terminal 2B • Short to ground in the wiring harness between main relay and front HO2S terminal 2B • Open circuit in the wiring harness between front HO2S terminal 2D and PCM terminal 2C • Short to ground in the wiring harness between front HO2S terminal 2D and PCM terminal 2C • PCM malfunction

Diagnostic procedure

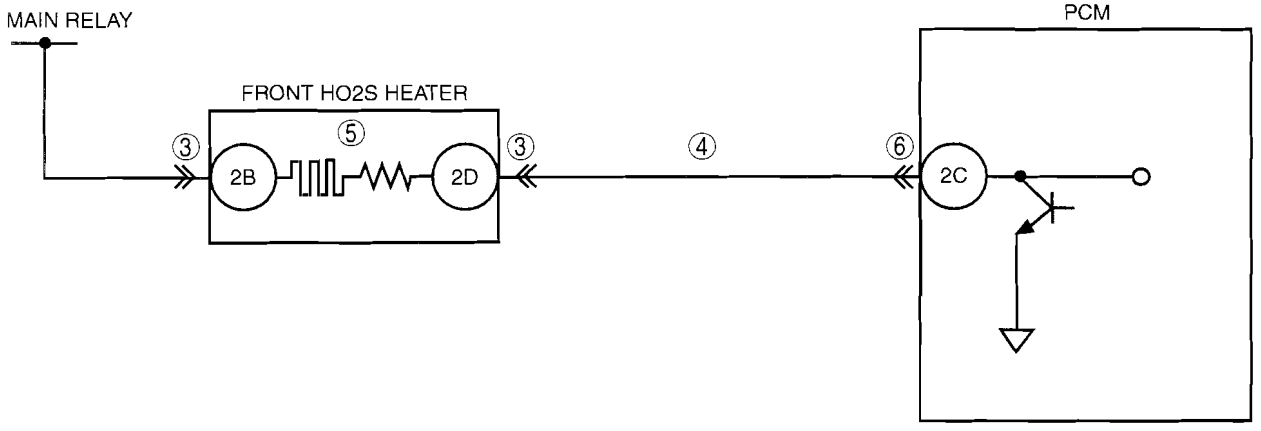
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT FRONT HO2S HEATER POWER CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GROUND** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between front HO2S terminal 2B (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit or short to ground, then go to Step 9.
5	**INSPECT FRONT HO2S HEATER CONTROL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between front HO2S terminal 2D (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 9.
		No	Go to the next step.
6	**INSPECT FRONT HO2S HEATER** • Inspect the front HO2S heater. (See01-40B-39 HEATED OXYGEN SENSOR (HO2S) INSPECTION[L3 WITH TC].) • Is there any malfunction?	Yes	Replace the front HO2S, then go to Step 9. (See01-15B-2 EXHAUST SYSTEM REMOVAL/ INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
8	**INSPECT FRONT HO2S HEATER CONTROL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between front HO2S terminal 2D (wiring harness-side) and PCM terminal 2C (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0031 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See01-02B-10 OBD-II DRIVE MODE[L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0032[L3 WITH TC]

id010239802100

DTC P0032	Front HO2S heater circuit high input
DETECTION CONDITION	• The PCM monitors the front HO2S heater output voltage. If the PCM turns the front HO2S heater on or off but the front HO2S heater circuit voltage remains high the PCM determines that the front HO2S heater circuit has a malfunction. **Note** • The front HO2S heater is controlled by a duty signal. **Diagnostic support note** • This is a continuous monitor (HO2S heater). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S heater malfunction • Connector or terminal malfunction • Short to power supply in the wiring harness between front HO2S terminal 2D and PCM terminal 2C • PCM malfunction



FRONT HO2S

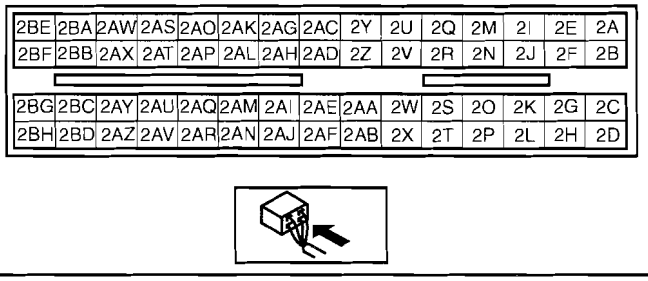
PCM
WIRING HARNESS-SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT FRONT HO2S HEATER CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between front HO2S terminal 2D (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 7.
		No	Go to the next step.
5	**INSPECT FRONT HO2S HEATER** • Inspect the front HO2S heater. (See01-40B-39 HEATED OXYGEN SENSOR (HO2S) INSPECTION[L3 WITH TC].) • Is there any malfunction?	Yes	Replace the front HO2S, then go to Step 7. (See01-15B-2 EXHAUST SYSTEM REMOVAL/ INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0032 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See01-02B-10 OBD-II DRIVE MODE[L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0037[L3 WITH TC]

id010239802200

DTC P0037	Rear HO2S heater circuit low input
DETECTION CONDITION	• The PCM monitors the rear HO2S heater output voltage. If the PCM turns the rear HO2S heater on or off but the rear HO2S heater circuit voltage remains low the PCM determines that the rear HO2S heater circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (HO2S heater). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Rear HO2S heater malfunction • Connector or terminal malfunction • Open circuit in the wiring harness between ignition switch and rear HO2S terminal C • Short to ground in the wiring harness between ignition switch and rear HO2S terminal C • Open circuit in the wiring harness between rear HO2S terminal D and PCM terminal 2D • Short to ground in the wiring harness between rear HO2S terminal D and PCM terminal 2D • PCM malfunction

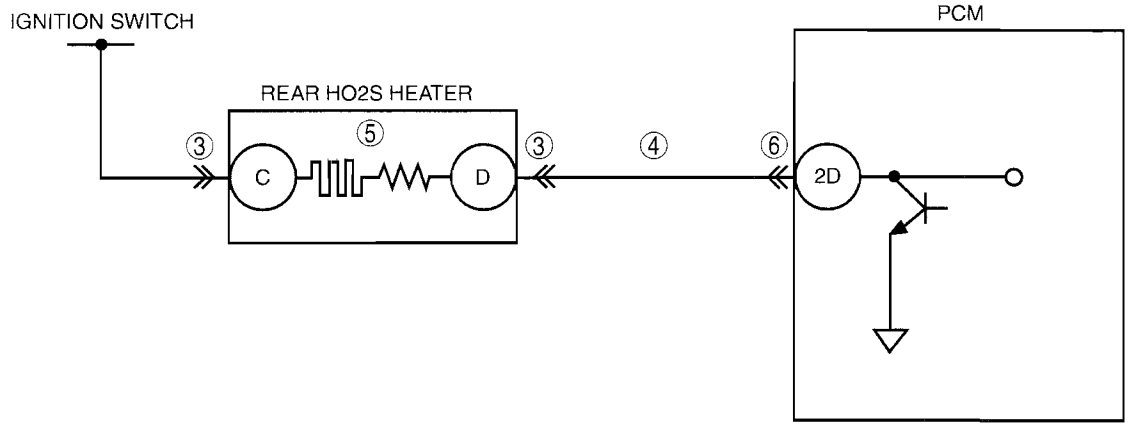
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT REAR HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the rear HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT REAR HO2S HEATER POWER CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GROUND** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between rear HO2S terminal C (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit or short to ground, then go to Step 9.
5	**INSPECT REAR HO2S HEATER CONTROL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between rear HO2S terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 9.
		No	Go to the next step.
6	**INSPECT REAR HO2S HEATER** • Inspect the rear HO2S heater. (See01-40B-39 HEATED OXYGEN SENSOR (HO2S) INSPECTION[L3 WITH TC].) • Is there any malfunction?	Yes	Replace the rear HO2S, then go to Step 9. (See01-15B-2 EXHAUST SYSTEM REMOVAL/ INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
8	**INSPECT REAR HO2S HEATER CONTROL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between rear HO2S terminal D (wiring harness-side) and PCM terminal 2D (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0037 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See01-02B-10 OBD-II DRIVE MODE[L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0038[L3 WITH TC]

id010239802300

DTC P0038	Rear HO2S heater circuit high input
DETECTION CONDITION	• The PCM monitors the rear HO2S heater output voltage. If the PCM turns the rear HO2S heater off but the rear HO2S heater circuit voltage remains high the PCM determines that the rear HO2S heater circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (HO2S heater). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Rear HO2S heater malfunction • Connector or terminal malfunction • Short to power supply in the wiring harness between rear HO2S terminal D and PCM terminal 2D • PCM malfunction



REAR HO2S
WIRING HARNESS-SIDE CONNECTOR

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT REAR HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the rear HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT REAR HO2S HEATER CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between rear HO2S terminal D (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 7.
		No	Go to the next step.
5	**INSPECT REAR HO2S HEATER** • Inspect the rear HO2S heater. (See01-40B-39 HEATED OXYGEN SENSOR (HO2S) INSPECTION[L3 WITH TC].) • Is there any malfunction?	Yes	Replace the rear HO2S, then go to Step 7. (See01-15B-2 EXHAUST SYSTEM REMOVAL/ INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0038 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See01-02B-10 OBD-II DRIVE MODE[L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0069[L3 WITH TC]

id010239802400

DTC P0069	Manifold absolute pressure/atmospheric pressure correlation
DETECTION CONDITION	• PCM monitors differences between intake manifold vacuum and atmospheric pressure. If the difference is **below –12 kPa {–90 mmHg, –3.5 inHg}** or **above 12 kPa {90 mmHg, 3.5 inHg}** when the following conditions are met, the PCM determines that there is a MAP sensor performance problem. **MONITORING CONDITION** — **12—15 s** from when ignition switch is turned off. — Intake air temperature is **above -10°C {14°F}.** — Engine coolant temperature is **above 70°C {158°F}.** **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• MAP sensor malfunction • BARO sensor malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY STORED DTC** • Turn the ignition switch to off then start the engine. • Have DTC P0107, P0108, P2228 or P2229 been stored?	Yes	Inspect and repair DTC P0107, P0108, P2228 or P2229.
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0069 on the FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for the DTC on the FREEZE FRAME DATA.
5	**INSPECT MAP SENSOR STUCK OPEN OR CLOSED** • Inspect MAP sensor. (See01-40B-32 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION[L3 WITH TC].) • Is the MAP sensor normal?	Yes	Go to the next step.
		No	Replace the MAP sensor, then go to step 7. (See01-40B-31 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/BOOST AIR TEMPERATURE SENSOR REMOVAL/INSTALLATION[L3 WITH TC].)
6	**INSPECT BARO SENSOR** • Inspect the BARO sensor. (See01-40B-50 BAROMETRIC PRESSURE (BARO) SENSOR INSPECTION[L3 WITH TC].) • Is the BARO sensor normal?	Yes	Go to the next step.
		No	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
7	**VERIFY TROUBLESHOOTING OF DTC P0069 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0089[L3 WITH TC]

id010239802500

DTC P0089	Fuel pressure regulator performance
DETECTION CONDITION	• If the fuel pressure average value measured by the PCM exceeds the specification when the camshaft is rotating at a specified rate, the PCM determines that there is a fuel pressure regulator performance problem. **Diagnostic support note** • This is a continuous monitor (Other). • The MIL does not illuminate. • FREEZE FRAME DATA is not available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Spill valve control solenoid valve malfunction • Connector or terminal malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT HIGH PRESSURE FUEL PUMP CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the high pressure fuel pump connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminals, then go to Step 6.
		No	Go to the next step.
4	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE** • Inspect the spill valve control solenoid valve. (See01-14B-23 HIGH PRESSURE FUEL PUMP INSPECTION[L3 WITH TC].) • Is there any malfunction?	Yes	Replace the high pressure fuel pump, then go to Step 6. (See01-14B-21 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion.) • Is there any malfunction?	Yes	Repair the terminal, then go to the next step.
		No	Go to the next step.
6	**VERIFY TROUBLESHOOTING OF DTC P0089 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0091[L3 WITH TC]

id010239802600

DTC P0091	Fuel pressure regulator control circuit low
DETECTION CONDITION	• When the PCM turns the spill valve control solenoid valve off but the spill valve control solenoid valve control circuit voltage is low, the PCM determines that the spill valve control solenoid valve control circuit has malfunction. **MONITORING CONDITIONS** — The following conditions are met: • Engine speed is **3,000 rpm or less.** • Battery voltage is **10 V or more.** **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Spill valve control solenoid valve malfunction • Open circuit in the wiring harness between high pressure fuel pump terminal A and PCM terminal 2F • Open circuit in the wiring harness between high pressure fuel pump terminal B and PCM terminal 2G • Short to ground in the wiring harness between high pressure fuel pump terminal A and PCM terminal 2F • Short to ground in the wiring harness between high pressure fuel pump terminal B and PCM terminal 2G • Connector or terminal malfunction • PCM malfunction

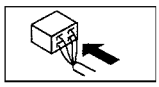
2BH	2BD	2AZ	2AV	2AR	2AN	2AJ	2AF	2AB	2X	2T	2P	2L	2H	2D



Diagnostic procedure

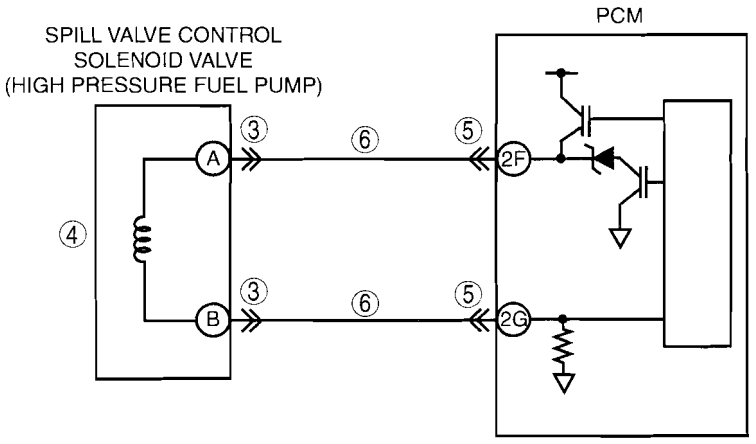
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT HIGH PRESSURE FUEL PUMP CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the high pressure fuel pump connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
4	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between the following terminals: — High pressure fuel pump terminal A (wiring harness-side) and body ground — High pressure fuel pump terminal B (wiring harness-side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 8.
		No	Go to the next step.
5	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE** • Inspect the spill valve control solenoid valve. (See01-14B-23 HIGH PRESSURE FUEL PUMP INSPECTION[L3 WITH TC].) • Is there any malfunction.	Yes	Replace the high pressure fuel pump, then go to Step 8. (See01-14B-21 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
7	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between the following terminals: — High pressure fuel pump terminal A (wiring harness-side) and PCM terminal 2F (wiring harness-side) — High pressure fuel pump terminal B (wiring harness-side) and PCM terminal 2G (wiring harness-side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0091 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	DTC troubleshooting completed.

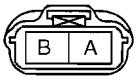
DTC P0092[L3 WITH TC]

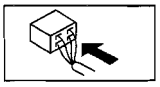
id010239802700

DTC P0092	Fuel pressure regulator control circuit high
DETECTION CONDITION	• When the PCM turns the spill valve control solenoid valve on but the spill valve control solenoid valve circuit voltage is high, the PCM determines that the spill valve control solenoid valve control circuit has malfunction. **MONITORING CONDITIONS** — The following conditions are met: • Engine speed is **3,000 rpm or less**. • Battery voltage is **10 V or more.** **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Spill valve control solenoid valve malfunction • Connector or terminal malfunction • Short to power supply in the wiring harness between high pressure fuel pump terminal B and PCM terminal 2G • PCM malfunction

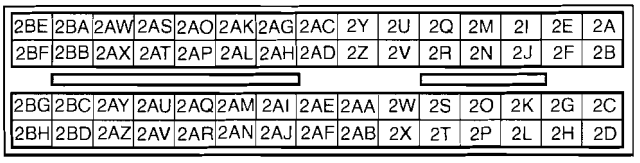


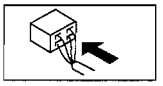
HIGH PRESSURE FUEL PUMP WIRING HARNESS-SIDE CONNECTOR





PCM WIRING HARNESS-SIDE CONNECTOR





Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT HIGH PRESSURE FUEL PUMP CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the high pressure fuel pump connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE** • Inspect the spill valve control solenoid valve. (See01-14B-23 HIGH PRESSURE FUEL PUMP INSPECTION[L3 WITH TC].) • Is there any malfunction.	Yes	Replace the high pressure fuel pump, then go to Step 7. (See01-14B-21 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
6	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between the following terminals: — High pressure fuel pump terminal A (wiring harness-side) and body ground — High pressure fuel pump terminal B (wiring harness-side) and body ground • Is the voltage **B+?**	Yes	Repair or replace the wiring harness for a possible short to the power supply, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0092 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0096[L3 WITH TC]

id010239802800

DTC P0096	Boost air temperature sensor circuit range/performance problem
DETECTION CONDITION	• If the boost air temperature is higher than the engine coolant temperature by **23 °C {41.4 °F}** for **1.2 s** with the ignition switch turn to the ON position*, the PCM determines that there is a boost air temperature sensor circuit range/performance problem. *: Ignition switch on when **6 h or more** has passed since the ignition switch was turned off **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Boost air temperature sensor malfunction • ECT sensor malfunction • Connector or terminal malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT MAP/BOOST AIR TEMPERATURE SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the MAP/boost air temperature sensor connector. • Inspect for poor connection (damaged, pulled-out pins, corrosion, etc.). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT BOOST AIR TEMPERATURE SENSOR** • Inspect the boost air temperature sensor. (See01-40B-33 BOOST AIR TEMPERATURE SENSOR INSPECTION[L3 WITH TC].) • Is there any malfunction?	Yes	Replace the MAP/boost air temperature sensor, then go to Step 7. (See01-40B-31 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/BOOST AIR TEMPERATURE SENSOR REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
5	**INSPECT ECT SENSOR** • Inspect the ECT sensor. (See01-40B-28 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION[L3 WITH TC].) • Is there any malfunction?	Yes	Replace the ECT sensor, then go to Step 7. (See01-40B-27 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (damaged, pulled-out pins, corrosion, etc.). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0096 COMPLETED** • Make sure to connect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine and run it under the FREEZE FRAME DATA condition. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0097[L3 WITH TC]

id010239802900

DTC P0097	Boost air temperature sensor circuit low
DETECTION CONDITION	• If the PCM detects that the boost air temperature sensor voltage is **0.1 V or less**, the PCM determines that the boost air temperature sensor circuit voltage is low. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Boost air temperature sensor malfunction • Short to ground circuit between MAP/boost air temperature sensor terminal B and PCM terminal 2N • Connector or terminal malfunction • PCM malfunction

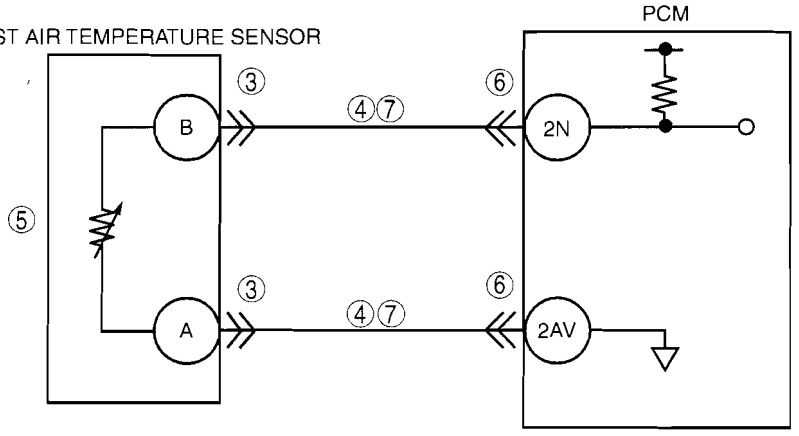
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT MAP/BOOST AIR TEMPERATURE SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the MAP/boost air temperature sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT BOOST AIR TEMPERATURE SENSOR SIGNAL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between the MAP/boost air temperature sensor terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a short to ground, then go to Step 7.
		No	Go to the next step.
5	**INSPECT BOOST AIR TEMPERATURE SENSOR** • Inspect the boost air temperature sensor. (See01-40B-33 BOOST AIR TEMPERATURE SENSOR INSPECTION[L3 WITH TC].) • Is there malfunction?	Yes	Replace the MAP/boost air temperature sensor, then go to Step 7. (See01-40B-31 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/BOOST AIR TEMPERATURE SENSOR REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0097 COMPLETED** • Make sure to connect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0098[L3 WITH TC]

id010239803000

DTC P0098	Boost air temperature sensor circuit high
DETECTION CONDITION	• If the PCM detects that the boost air temperature sensor voltage is **4.96 V or more**, the PCM determines that the boost air temperature sensor circuit voltage is high. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Boost air temperature sensor malfunction • Open circuit between MAP/boost air temperature sensor terminal A and PCM terminal 2AV • Open circuit between MAP/boost air temperature sensor terminal B and PCM terminal 2N • Short to the power circuit between MAP/boost air temperature sensor terminal A and PCM terminal 2AV • Short to the power circuit between MAP/boost air temperature sensor terminal B and PCM terminal 2N • Connector or terminal malfunction • PCM malfunction



MAP/BOOST AIR TEMPERATURE SENSOR WIRING HARNESS-SIDE CONNECTOR

2BH	2BD	2AZ	2AV	2AR	2AN	2AJ	2AF	2AB	2X	2T	2P	2L	2H	2D

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT MAP/BOOST AIR TEMPERATURE SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the MAP/boost air temperature sensor connector. • Inspect for poor connection (damaged, pulled-out pins, corrosion, etc.). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
4	**INSPECT MAP/BOOST AIR TEMPERATURE SENSOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between the following terminals: — MAP/boost air temperature sensor terminal B (wiring harness-side) and body ground — MAP/boost air temperature sensor terminal A (wiring harness-side) and body ground • Is the voltage **B+?**	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 8.
		No	Go to the next step.
5	**INSPECT BOOST AIR TEMPERATURE SENSOR** • Inspect the boost air temperature sensor connector. (See01-40B-33 BOOST AIR TEMPERATURE SENSOR INSPECTION[L3 WITH TC].) • Is there any malfunction?	Yes	Replace the MAP/boost air temperature sensor, then go to Step 8. (See01-40B-31 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/BOOST AIR TEMPERATURE SENSOR REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (damaged, pulled-out pins, corrosion, etc.). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
7	**INSPECT MAP/BOOST AIR TEMPERATURE SENSOR CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Measure the voltage between the following terminals: — MAP/boost air temperature sensor terminal B (wiring harness-side) and PCM terminal 2N (wiring harness-side) — MAP/boost air temperature sensor terminal A (wiring harness-side) and PCM terminal 2AV (wiring harness-side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0098 COMPLETED** • Make sure to connect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0101[L3 WITH TC]

id010239803100

DTC P0101	MAF circuit range/performance problem
DETECTION CONDITION	• PCM monitors the mass intake air flow amount when the engine is running. — If the mass intake air amount is **above 71.8 l/s** for **6 s** and engine speed is **below 2,000 rpm** with the engine running, the PCM determines that detected mass intake air flow amount is too high. — If the mass intake air flow amount is **below 3.0—88.7 l/s** (The value depends on engine speed.) for **6 s** and the engine speed is **above 1,000 rpm** with engine running and the throttle opening angle is **above 50%**, the PCM determines that the detected mass intake air flow amount is too low. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• MAF sensor malfunction • Electrical corrosion in MAF RETURN circuit • Voltage drops in the ground circuit

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY CURRENT INPUT SIGNAL STATUS IS CONCERN INTERMITTENT OR CONSTANT** • Connect the M-MDS to DLC-2. • Start the engine. • Access the ECT, MAF, TP and RPM PIDs using the M-MDS. • Warm-up the engine until the ECT PID is **above 70°C {158°F}.** • Idle engine for**5 s or more.** **Caution** • **While driving, always operate the vehicle in a safe and lawful manner.** • Drive the vehicle under the following two conditions: **Condition 1** — TP PID: **50—87.5%** — RPM PID: **above 1,000 rpm** — 4th gear **Condition 2** — TP PID: **above 80%** — RPM PID: **below 2,000 rpm** — gear in • Is the PENDING CODE for this DTC present?	Yes	Go to the next step.
		No	Intermittent concern exists. Go to INTERMITTENT CONCERNS TROUBLESHOOTING procedure. (See01-03B-77 INTERMITTENT CONCERN TROUBLESHOOTING[L3 WITH TC])
4	**CHECK MAF SENSOR TERMINALS FOR ELECTRICAL CORROSION** • Turn the ignition switch off. • Disconnect the MAF sensor connector. • Check for poor connection (damaged, pulled-out terminals, corrosion, etc.). • Is any problem corrosion found?	Yes	Repair or the replace suspected terminal or MAF sensor, then go to Step 6.
		No	Go to the next step.

STEP	INSPECTION		ACTION
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Check for poor connection (damaged, pulled-out pins, corrosion, etc.). • Is there any malfunction?	Yes	Repair terminal, then go to the next step.
		No	Go to the next step.
6	**VERIFY TROUBLESHOOTING OF DTC P0101 COMPLETED** • Make sure to connect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Warm-up engine until ECT PID is **above 70°C {158°F}.** • Idle engine for **5 s or more.** **Caution** • **While performing the Drive Mode, always operate the vehicle in a safe and lawful manner.** • Drive the vehicle under the following two conditions: **Condition 1** — TP PID:**50—87.5%** — RPM PID: **above 1,000 rpm** — 4th gear **Condition 2** — TP PID: **above 80%** — RPM PID: **below 2,000 rpm** — gear in • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step.
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC]) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC])
		No	Troubleshooting completed.

DTC P0102[L3 WITH TC]

id010239803200

DTC P0102	MAF circuit low input
DETECTION CONDITION	• PCM monitors input voltage from the MAF sensor when engine is running. If the input voltage is **below 0.21 V**, the PCM determines that the MAF circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• MAF sensor malfunction • Connector or terminal malfunction • Short to ground in the wiring harness between MAF/IAT sensor terminal C and PCM terminal 1AK • Open circuit in the wiring harness between MAF/IAT sensor terminal C and PCM terminal 1AK • Open circuit in the wiring harness between main relay and MAF/IAT sensor terminal A

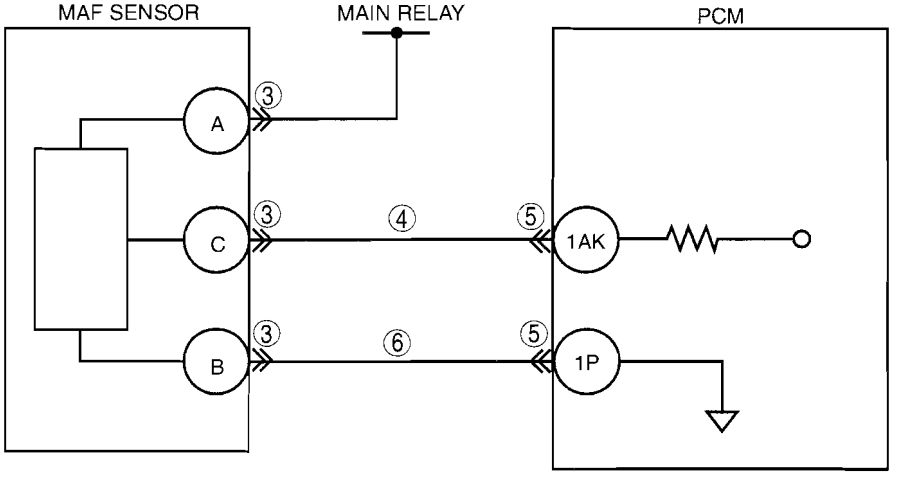
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT MAF SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the MAF/IAT sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace terminals, then go to Step 8.
		No	Go to the next step.
4	**INSPECT POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Turn ignition switch to the ON position (Engine off). • Inspect voltage at MAF/IAT sensor terminal A (harness-side). • Is voltage **B+**?	Yes	Go to the next step.
		No	Inspect for an open circuit in the wiring harness between MAF/IAT sensor terminal A (harness-side) and the main relay. Repair or replace the wiring harness, then go to Step 8.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to Step 8.
		No	Go to the next step.
6	**INSPECT MAF SENSOR SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Remove the PCM with the PCM connector connected. • Inspect for continuity between MAF/IAT sensor terminal C (harness-side) and PCM terminal 1AK (harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or the replace suspected wiring harness, then go to Step 8.
7	**INSPECT MAF SENSOR SIGNAL CIRCUIT FOR SHORT CIRCUIT** • Inspect for continuity between the MAF/IAT sensor terminal C (harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the suspected wiring harness, then go to the next step.
		No	Replace the MAF/IAT sensor, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0102 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the M-MDS. • Start the engine and warm it up completely. • Is the same DTC present?	Yes	Replace PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0103[L3 WITH TC]

id010239803300

DTC P0103	MAF circuit high input
DETECTION CONDITION	• The PCM monitors input voltage from the MAF sensor when the engine is running. If the input voltage is **above 4.9 V**, the PCM determines that the MAF circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• MAF sensor malfunction • Connector or terminal malfunction • Short to power supply in the wiring harness between MAF/IAT sensor terminal C and PCM terminal 1AK • Open circuit in the wiring harness between MAF/IAT sensor terminal B and PCM terminal 1P



MAF/IAT SENSOR
HARNESS SIDE CONNECTOR

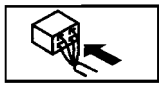
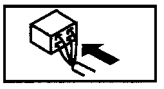
1BH	1BD	1AZ	1AV	1AR	1AN	1AJ	1AF	1AB	1X	1T	1P	1L	1H	1D





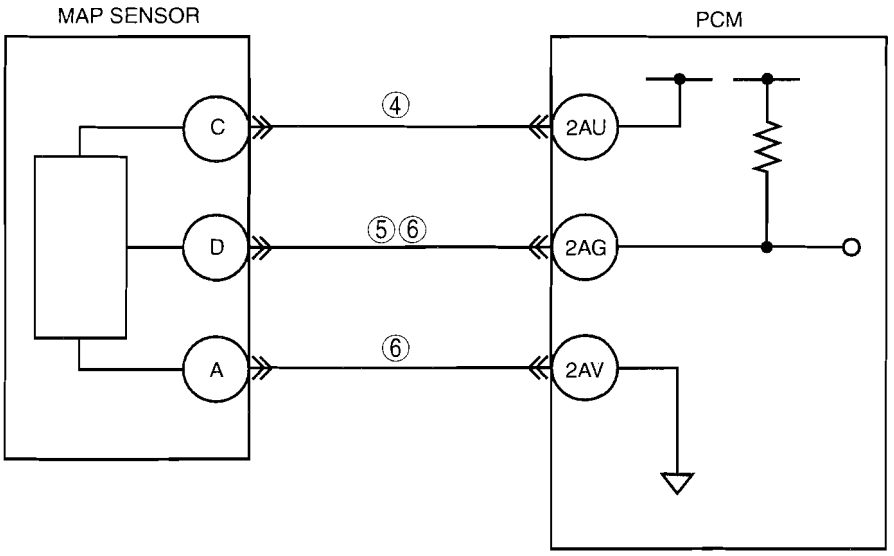
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT MAF SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the MAF/IAT sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace terminals, then go to Step 7.
		No	Go to the next step.
4	**INSPECT MAF SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn ignition switch to the ON position (Engine off). • Measure voltage between MAF/IAT sensor terminal C (harness-side) and body ground. • Is voltage **0 V?**	Yes	Go to the next step.
		No	Repair or replace the suspected wiring harness, then go to Step 7.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 7.
		No	Go to the next step.
6	**INSPECT MAF SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Remove the PCM with the PCM connector connected. • Inspect for continuity between MAF/IAT sensor terminal B (harness-side) and PCM terminal 1P. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the suspected wiring harness, then go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0103 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the M-MDS. • Start the engine and warm it up completely. • Is same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

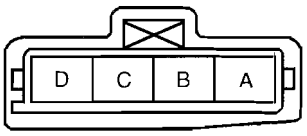
DTC P0107[L3 WITH TC]

id010239803400

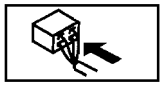
DTC P0107	MAP sensor circuit low input
DETECTION CONDITION	• PCM monitors input voltage from the MAP sensor when the intake air temperature is **above –10 °C {14 °F}**. If the input voltage is **below 0.10 V**, the PCM determines that the MAP sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• MAP sensor malfunction • Connector or terminal malfunction • Short to ground in the wiring harness between MAP sensor terminal D and PCM terminal 2AG • Open circuit in the wiring harness between MAP sensor terminal C and PCM terminal 2AU • MAP sensor signal circuit and MAP sensor ground circuit are shorted to each other. • PCM malfunction

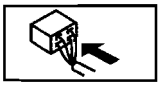


MAP SENSOR
HARNESS SIDE CONNECTOR



PCM
HARNESS SIDE CONNECTOR





Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Recorded FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY MAP PID WHEN MAP SENSOR CONNECTOR IS DISCONNECTED** • Disconnect the MAP sensor connector. • Is the voltage **above 4.9 V?**	Yes	Go to the next step.
		No	Go to step 5.
4	**INSPECT POWER SUPPLY CIRCUIT VOLTAGE AT MAP SENSOR CONNECTOR** **Note** • If DTC P0122 and P2228 are also retrieved with P0107, go to the CONSTANT VOLTAGE troubleshooting procedure. • Turn ignition switch to the ON position (Engine off). • Measure voltage between MAP sensor terminal C (harness-side) and body ground. • Is the voltage **within 4.5—5.5 V?**	Yes	Check for a poor connection of MAP sensor terminal C (harness-side). • Repair or replace the terminal if necessary. • If normal, replace the MAP sensor. Then go to Step 7.
		No	Check for an open circuit between PCM terminal 2K (harness-side) and MAP sensor terminal C (harness-side). Repair or replace the suspected wiring harness, then go to Step 7.
5	**INSPECT MAP SENSOR SIGNAL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for continuity between MAP sensor terminal D (harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the suspected wiring harness, then go to Step 7.
		No	Go to the next step.
6	**INSPECT MAP SENSOR SIGNAL AND GROUND CIRCUIT FOR SHORT EACH OTHER** • Check for continuity between MAP sensor terminals D and A (harness-side). • Is there continuity?	Yes	Repair or replace the suspected wiring harness, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0107 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the M-MDS. • Start engine and warm it up completely. • Is same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0108[L3 WITH TC]

id010239803500

DTC P0108	MAP sensor circuit high input
DETECTION CONDITION	• PCM monitors input voltage from the MAP sensor when the intake air temperature is **above –10 °C {14 °F}**. If the input voltage is **above 4.92 V**, the PCM determines that MAP sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• MAP sensor malfunction • Connector or terminal malfunction • Open circuit in the wiring harness between MAP sensor terminal A and PCM terminal 2AV • Open circuit in the wiring harness between MAP sensor terminal D and PCM terminal 2AG • MAP sensor signal circuit short to the constant voltage supply circuit • PCM malfunction

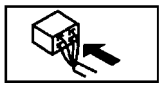
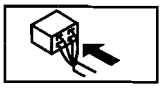
2BH	2BD	2AZ	2AV	2AR	2AN	2AJ	2AF	2AB	2X	2T	2P	2L	2H	2D





Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT CONNECTION OF MAP SENSOR CONNECTOR** • Turn the ignition switch off. • Verify that the MAP sensor connector is connected securely. • Is the connection normal?	Yes	Go to the next step.
		No	Reconnect the connector, then go to Step 9.
4	**INSPECT MAP SENSOR CONNECTOR FOR POOR CONNECTION** • Disconnect the MAP sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the suspected terminal, then go to Step 9.
		No	Go to the next step.
5	**VERIFY MAP SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between MAP sensor terminal A (harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Inspect for an open circuit between PCM terminal 2AV (harness-side) and MAP sensor terminal A (harness-side). Repair or replace the suspected wiring harness, then go to Step 9.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged, pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to Step 9.
		No	Go to the next step.
7	**VERIFY MAP SENSOR SIGNAL CIRCUIT FOR SHORT TO CONSTANT VOLTAGE CIRCUIT** • Inspect for continuity between MAP sensor terminal D and C (harness-side). • Is there continuity?	Yes	Repair or replace the suspected wiring harness, then go to Step 9.
		No	Go to the next step.
8	**VERIFY MAP SENSOR SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between MAP sensor terminal D (harness-side) and PCM terminal 2AG (harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the suspected wiring harness, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0108 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the M-MDS. • Start the engine and warm it up completely. • Is same DTC present?	Yes	Replace PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to applicable inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0111[L3 WITH TC]

id010239803600

DTC P0111	IAT circuit performance problem
DETECTION CONDITION	• If the intake air temperature is higher than the engine coolant temperature by **18 °C {32.4 °F}** for **1.2 s** with the ignition switch turn in the ON position*, the PCM determines that there is an IAT sensor circuit range/performance problem. *: Ignition switch is in the ON position when **6 h or more** have passed since the ignition switch was turned off **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• IAT sensor malfunction • Poor connection at MAF/IAT sensor or PCM connector • PCM malfunction

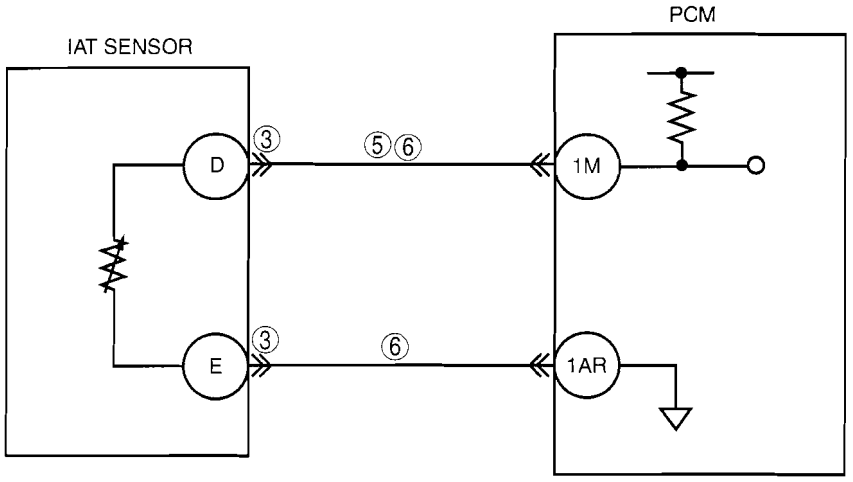
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT MAF/IAT SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the MAF/IAT sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 6.
		No	Go to the next step.
4	**INSPECT IAT SENSOR** • Inspect IAT sensor. (See01-40B-30 INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION[L3 WITH TC].) • Is IAT sensor normal?	Yes	Replace MAF/IAT sensor, then go to Step 6.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
6	**VERIFY TROUBLESHOOTING OF DTC P0111 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine and run the engine under the FREEZE FRAME DATA condition. • Is PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

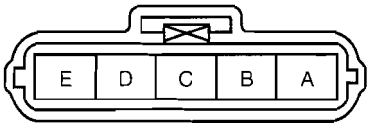
DTC P0112[L3 WITH TC]

id010239803700

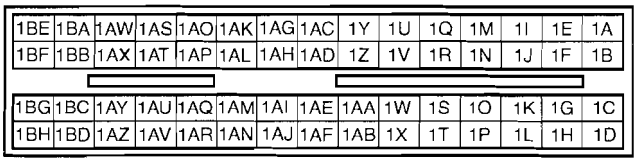
DTC P0112	IAT circuit low input
DETECTION CONDITION	• The PCM monitors the IAT sensor signal. If the PCM detects on IAT sensor voltage is **below 0.06 V**, the PCM determines that the IAT sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• IAT sensor malfunction • Poor connection at the MAF/IAT sensor or PCM connector • Short to ground between MAF/IAT sensor terminal D and PCM terminal 1M • Short to each harness IAT signal circuit and IAT ground circuit. • PCM malfunction

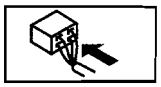


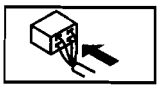
MAF/IAT SENSOR
HARNESS SIDE CONNECTOR



PCM
HARNESS SIDE CONNECTOR







Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT IAT SENSOR TERMINAL** • Turn the ignition switch off. • Disconnect the MAF/IAT sensor connector. • Inspect for bent terminal of MAF/IAT sensor terminals D and E (part-side). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.

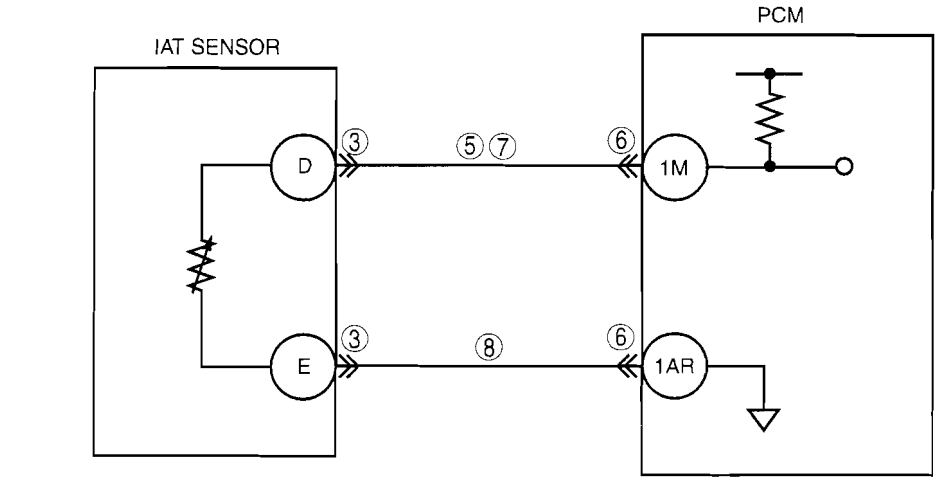
STEP	INSPECTION		ACTION
4	**CLASSIFY IAT SENSOR MALFUNCTION OR WIRING HARNESS MALFUNCTION** • Connect the M-MDS to DLC-2. • Access the IAT PID. • Verify the IAT value when disconnecting the MAF/IAT sensor connector. • Does the IAT value change?	Yes	Replace the MAF/IAT sensor, then go to Step 7.
		No	Go to the next step.
5	**INSPECT IAT SIGNAL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for continuity between MAF/IAT sensor terminal D (harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a short to ground, then go to Step 7.
		No	Go to the next step.
6	**INSPECT IAT CIRCUITS FOR SHORT** • Inspect for continuity between MAF/IAT sensor terminals D and E (harness-side). • Is there continuity?	Yes	Repair or the replace harness for a short, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0112 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the M-MDS. • Start the engine and warm it up completely. • Is same DTC present?	Yes	Replace PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0113[L3 WITH TC]

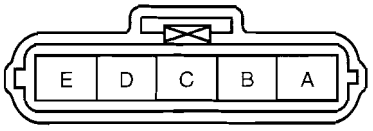
id010239803800

DTC P0113	IAT circuit high input
DETECTION CONDITION	• The PCM monitors the IAT sensor signal. If the PCM detected IAT sensor voltage is **above 4.9 V**, the PCM determines that the IAT sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• IAT sensor malfunction • Open circuit between MAF/IAT sensor terminal D and PCM terminal 1M • Short to the power supply between MAF/IAT sensor terminal D and PCM terminal 1M • Open circuit between MAF/IAT sensor terminal E and PCM terminal 1AR • Poor connection at the MAF/IAT sensor or the PCM connector. • PCM malfunction

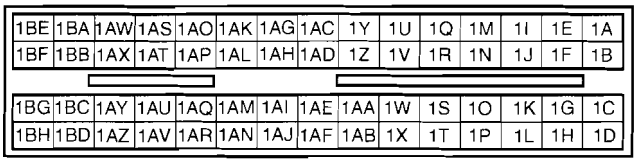
DTC P0113	IAT circuit high input

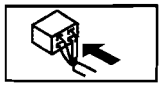


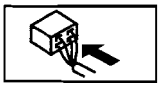
MAF/IAT SENSOR
HARNESS SIDE CONNECTOR



PCM
HARNESS SIDE CONNECTOR







Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT IAT SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the MAF/IAT sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**CLASSIFY IAT SENSOR MALFUNCTION OR HARNESS MALFUNCTION** • Connect the M-MDS to the DLC-2. • Access the IAT PID. • Connect a jumper wire between MAF/IAT sensor terminals D and E (harness-side). • Verify the IAT value. • Is the voltage **below 4.9 V?**	Yes	Replace the MAF/IAT sensor, then go to Step 9.
		No	Go to the next step.

STEP	INSPECTION		ACTION
5	**INSPECT IAT SENSOR SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn ignition switch to the ON position (Engine off). • Measure the voltage between MAF/IAT sensor terminal D (wiring harness-side) and body ground. • Is the voltage **B+?**	Yes	Repair or the wiring replace wiring harness for a short to the power supply, then go to Step 9.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Inspect PCM terminals 1M and 1AR (harness-side) for tightness using a feeler tool. • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
7	**INSPECT IAT SENSOR SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between MAF/IAT sensor terminal D (harness-side) and PCM terminal 1M (harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 9.
8	**INSPECT IAT SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between MAF/IAT sensor terminal E (harness-side) and PCM terminal 1AR (harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wi ring harness for an open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0113 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the M-MDS. • Start the engine and warm it up completely. • Is same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0116[L3 WITH TC]

id010239803900

DTC P0116	ECT circuit range/performance problem
DETECTION CONDITION	• The PCM monitors the maximum value and minimum value of engine coolant temperature when the engine is started and**5 min** have been passed after leaving the vehicle **6 h or more**. If the difference between the maximum and the minimum values of the engine coolant temperature is **below 6 °C {10.8 °F}**, the PCM determines that there is an ECT circuit range/performance problem. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• ECT sensor malfunction • Connector or terminal malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to ne, then go next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ECT SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the ECT sensor connector. • Inspect for poor connection (damaged, pulled-out pins, corrosion, etc.). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 6.
		No	Go to the next step.
4	**INSPECT ECT SENSOR** • Inspect the ECT sensor. (See01-40B-28 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION[L3 WITH TC].) • Is there any malfunction?	Yes	Replace the ECT sensor, then go to Step 6. (See01-40B-27 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (damaged, pulled-out pins, corrosion, etc.). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
6	**VERIFY TROUBLESHOOTING OF DTC P0116 COMPLETED** • Leave vehicle for **8 h.** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine and wait for **5 min.** • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC]) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC])
		No	DTC troubleshooting completed.

DTC P0117[L3 WITH TC]

id010239804000

DTC P0117	ECT sensor circuit low input
DETECTION CONDITION	• The PCM monitors the ECT sensor signal. If the PCM detects the ECT sensor voltage is **below 0.2 V**, the PCM determines that the ECT sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (Engine cooling system). • The MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• ECT sensor malfunction • Connect or terminal malfunction • Short to ground in the wiring harness between ECT sensor terminal A and PCM connector terminal 2AH • Short to each wiring harness in ECT signal circuit and ECT ground circuit • PCM malfunction

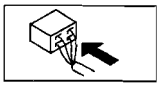
2BH	2BD	2AZ	2AV	2AR	2AN	2AJ	2AF	2AB	2X	2T	2P	2L	2H	2D



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Engine cooling system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ECT SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the ECT sensor connector. • Inspect for poor connection (damaged, pulled-out pins, corrosion, bending, etc.). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**CLASSIFY ECT SENSOR MALFUNCTION OR WIRING HARNESS MALFUNCTION** • Connect the M-MDS to DLC-2. • Access the ECT PID. • Verify the ECT value when disconnecting the ECT sensor connector. • Does the ECT value change?	Yes	Replace the ECT sensor, then go to Step 7. (See01-40B-27 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
5	**INSPECT ECT SIGNAL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between ECT sensor terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a short to ground, then go to Step 7.
		No	Go to the next step.
6	**INSPECT ECT CIRCUIT FOR SHORT TO WIRING HARNESSES** • Inspect for continuity between ECT sensor terminal A and B (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for a short, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0117 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0118[L3 WITH TC]

id010239804100

DTC P0118	ECT sensor circuit high input
DETECTION CONDITION	• The PCM monitors the ECT sensor signal. If the PCM detects the ECT sensor voltage is **above 4.58 V**, the PCM determines that the ECT sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (Engine cooling system). • The MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• ECT sensor malfunction • Connect or terminal malfunction • Open circuit in the wiring harness between ECT sensor terminal A and PCM terminal 2AH • Short to power supply in the wiring harness between ECT sensor terminal A and PCM terminal 2AH • Open circuit in the wiring harness between ECT sensor terminal B and PCM terminal 2AY • PCM malfunction

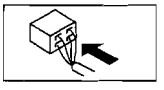
2BH	2BD	2AZ	2AV	2AR	2AN	2AJ	2AF	2AB	2X	2T	2P	2L	2H	2D



Diagnostic procedure

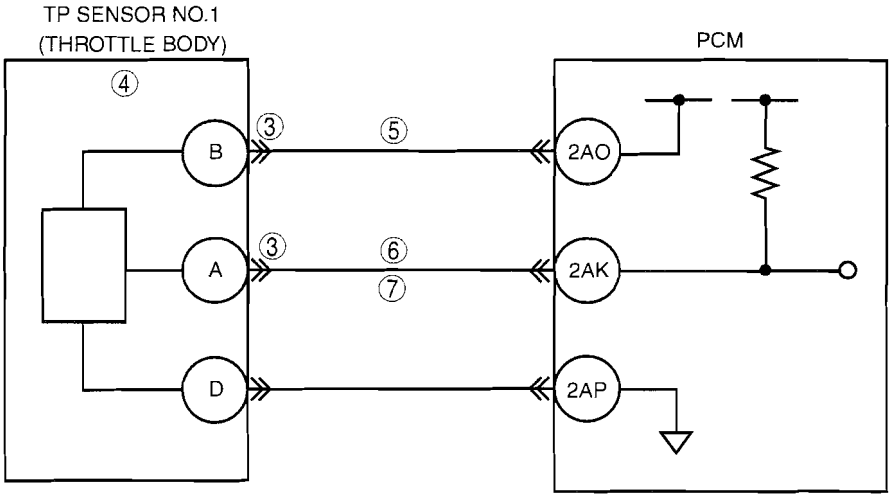
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Engine cooling system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT ECT SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect ECT sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion.) • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**CLASSIFY ECT SENSOR MALFUNCTION OR WIRING HARNESS MALFUNCTION** • Connect the M-MDS to the DLC-2. • Access the ECT PID. • Connect a jumper wire between ECT sensor terminals A and B. • Verify the ECT value. • Is the voltage **4.58 V or below**?	Yes	Replace the ECT sensor, then go to Step 9.
		No	Go to the next step.
5	**INSPECT ECT SENSOR SIGNAL CIRCUIT FOR SHORT TO POWER** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between ECT sensor terminal A (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a short to power supply, then go to Step 9.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion.) • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
7	**INSPECT ECT SENSOR SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect the continuity between ECT sensor terminal A (wiring harness-side) and PCM terminal 2AH. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 9.
8	**INSPECT ECT SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between ECT sensor terminal B (wiring harness-side) and PCM terminal 2AY. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0118 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0122[L3 WITH TC]

id010239804200

DTC P0122	TP sensor No.1 circuit low input
DETECTION CONDITION	• If the PCM detects that the TP sensor No.1 voltage is **below 0.2 V** after the ignition switch is turned to the ON position, the PCM determines that TP circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• TP sensor malfunction • Connector or terminal malfunction • Short to ground between throttle body terminal A and PCM terminal 2AK • Short to ground between throttle body terminal B and PCM terminal 2AO • PCM malfunction



THROTTLE BODY

2BH	2BD	2AZ	2AV	2AR	2AN	2AJ	2AF	2AB	2X	2T	2P	2L	2H	2D

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CLASSIFY TP SENSOR OR HARNESS MALFUNCTION** • Connect the M-MDS. • Access the TP1 PID. • Disconnect the throttle body connector. • Connect a jumper wire between throttle body terminals A and B (harness-side). • Is the voltage **above 4.9 V?**	Yes	Go to the next step.
		No	Go to step 5.
4	**INSPECT TP SENSOR** • Perform the TP sensor inspection. (See01-40B-34 THROTTLE POSITION (TP) SENSOR INSPECTION[L3 WITH TC].) • Is the TP sensor normal?	Yes	Inspect for poor throttle body connector terminal B connection. Repair or replace if necessary, then go to Step 8.
		No	Replace throttle body, then go to Step 8.
5	**INSPECT POWER SUPPLY CIRCUIT VOLTAGE AT THROTTLE BODY CONNECTOR** **Note** • If DTC P0107 and P2228 are also retrieved with P0122, go to CONSTANT VOLTAGE troubleshooting procedure. • Turn ignition switch to the ON position (Engine off). • Measure the voltage at throttle body terminal B (harness-side). • Is the voltage **within 4.5—5.5 V?**	Yes	Go to the next step.
		No	Repair or replace for an open circuit between throttle body connector terminal B (harness-side) and PCM connector terminal 2AO (harness-side). Then, then go to Step 8.
6	**VERIFY TP1 SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between throttle body terminal A (harness-side) and PCM terminal 2AK (harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the suspected harness, then go to Step 8.
7	**VERIFY TP1 SIGNAL CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between throttle body terminal A (harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the suspected wiring harness, then go to the next step.
		No	Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0122 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the M-MDS. • Start the engine and warm it up completely. • Is same DTC present?	Yes	Replace PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0123[L3 WITH TC]

id010239804300

DTC P0123	TP sensor No.1 circuit high input
DETECTION CONDITION	• If the PCM detects that the TP sensor No.1 voltage is **above 4.85 V** after ignition switch to the ON position, PCM determines that TP circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• TP sensor malfunction • Connector or terminal malfunction • Open circuit between throttle body terminal B and PCM terminal 2AO • Open circuit between throttle body terminal D and PCM terminal 2AP • Short to the constant voltage supply circuit between throttle body terminal A and PCM terminal 2AK • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT THROTTLE BODY CONNECTOR** • Turn the ignition switch off. • Verify that the throttle body connector is connected securely. • Is connector normal?	Yes	Go to the next step.
		No	Connect the connector securely, then go to Step 10.
4	**INSPECT THROTTLE BODY CONNECTION FOR POOR CONNECTION** • Disconnect throttle body connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the suspected wiring terminal, then go to Step 10.
		No	Go to the next step.
5	**INSPECT TP SENSOR** • Perform the TP sensor inspection. (See01-40B-34 THROTTLE POSITION (TP) SENSOR INSPECTION[L3 WITH TC]) • Is the TP sensor normal?	Yes	Go to the next step.
		No	Replace the throttle body, then go to Step 10.
6	**INSPECT TP1 SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Turn ignition switch to the ON position (Engine off). • Measure the voltage between throttle body terminal B (harness-side) and body ground. • Is the voltage **above 4.9 V?**	Yes	Go to the next step.
		No	Repair or replace for short to a power supply. Then, go to Step 10.
7	**VERIFY TP SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between throttle body connector terminal D (harness-side) and PCM connector terminal 2AP. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace for an open circuit between TP sensor connector terminal B (harness-side) and PCM connector terminal 3P (harness-side). Then, go to Step 10.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to Step 10.
		No	Go to Step 10.
9	**VERIFY TP SIGNAL CIRCUIT FOR SHORT TO CONSTANT VOLTAGE CIRCUIT** • Inspect for continuity between throttle body terminals A and B (harness-side). • Is there continuity?	Yes	Repair or replace the suspected wiring harness, then go to the next step.
		No	Go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0123 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the M-MDS. • Start the engine and warm it up completely. • Is same DTC present?	Yes	Replace PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0125[L3 WITH TC]

id010239804400

DTC P0125	Excessive time to enter closed loop fuel control
DETECTION CONDITION	• The PCM monitors the ECT sensor signal after the engine is started while the engine is cold. If the engine coolant temperature does not reach the expected temperature for a specified period, the PCM determines that it has taken an excessive amount of time for the engine coolant temperature to reach the temperature necessary to start closed-loop fuel control. **Diagnostic support note** • This is a continuous monitor (Engine cooling system). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• ECT sensor malfunction • Cooling system malfunction • Poor connection of connectors • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Engine cooling system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY CURRENT INPUT SIGNAL STATUS: IS CONCERN INTERMITTENT OR CONSTANT** • Start the engine. • Warm up the engine completely. • Access the ECT PID using the M-MDS. • Is the ECT PID **above 60 °C {140 °F}?**	Yes	Intermittent concern exists. Go to the INTERMITTENT CONCERNS TROUBLESHOOTING procedure. (See01-03B-77 INTERMITTENT CONCERN TROUBLESHOOTING[L3 WITH TC].)
		No	Go to the next step.
4	**INSPECT ECT SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the ECT sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion.) • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
5	**INSPECT ECT SENSOR** • Inspect the ECT sensor. (See01-40B-28 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION[L3 WITH TC].) • Is it normal?	Yes	Go to the next step.
		No	Replace the ECT sensor, then go to Step 7.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion.) • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
7	**VERIFY TROUBLESHOOTING OF DTC P0125 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Turn the ignition switch to the ON position (Engine off). • Access the ECT PID using the M-MDS. • Wait until ECT PID **below 8 °C {46 °F}.** • Start the engine and warm it up completely. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0126, P0128[L3 WITH TC]

id010239815400

DTC P0126 DTC P0128	**Coolant thermostat stuck open**
DETECTION CONDITION	**DTC P0126** • If the ECT signal never exceeds **71 °C {160 °F}** after engine start for specified period, PCM determines that the coolant thermostat is stuck open. **MONITORING CONDITIONS** — IAT: **above –10 °C {14 °F}** — Vehicle speed: **over 6 km/h {3.7 mph}** **DTC P0128** • PCM monitors MAF, IAT, VSS and EAT signals and calculate radiator heat radiation ratio while following monitoring conditions are met. If calculated value exceeds threshold, PCM determines that the coolant thermostat is stuck open. **MONITORING CONDITIONS** — ECT at engine start: **below 36 °C {97 °F}** — IAT: **above –10 °C {14 °F}** — Difference between ECT at engine start and minimum IAT: **below 6 °C {10.8 °F}** — Vehicle speed: **over 30 km/h {18.6 mph}** **Diagnostic support note** • This is an intermittent monitor (Engine cooling system). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first the drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory. • DIAGNOSTIC MONITORING TEST RESULTS is available.
POSSIBLE CAUSE	• ECT sensor malfunction • Cooling system malfunction • Coolant thermostat malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Engine cooling system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FOR OTHER DTCS** • Have other DTCs been stored?	Yes	Repair circuit malfunction for applicable DTCs.
		No	Go to the next step.
4	**INSPECT COOLANT THERMOSTAT FOR WHETHER STUCK OPEN** • Perform coolant thermostat inspection. • Is coolant thermostat normal?	Yes	Inspect ECT sensor. Replace ECT sensor if necessary, then go to the next step.
		No	Replace coolant thermostat, then go to the next step.
5	**VERIFY MONITORING CONDITION FOR REPAIR VERIFICATION** • Make sure to reconnect all disconnected connectors. • Cool down engine. **Note** • If workshop inside and outside temperature difference is significant, PCM might not operate thermostat monitor. Therefore, it is recommended to cool down engine out of workshop. • Turn ignition switch to ON (Engine off). • Clear the DTC from the PCM memory using the M-MDS. • Access ECT, IAT PIDs and make sure that each value is within following specifications. — ECT: **below 36 °C {97 °F}** (for P0128 only) — IAT: **above –10°C {14°F}** — Difference between ECT and IAT: **below 6°C {43°F}** • Is there any PID that is out of specification?	Yes	Take corrective action (e.g. cool down engine), then repeat this step.
		No	Go to the next step for DTC P0126 or go to step 7 for DTC P0128.
6	**VERIFY TROUBLESHOOTING OF DTC P0126 COMPLETED** • Start engine and turn off E/L and A/C. • Access DIAGNOSTIC MONITORING TEST RESULTS using the M-MDS and monitor TEST #10: E1: 81 (ECT). **Note** • This test requires actual driving. Chassis roller cannot be used for this test. • During test drive, constant speed should be maintained, although 2 or 3 stops during every**5 minutes** of driving time (e.g. for traffic signals) is acceptable. Stop-and-go (e.g. in case of traffic congestion) is not acceptable during the test period. • Test period depends on ECT at engine start. (e.g. if ECT is **–10°C {14°F}**, monitoring period is**38 minutes** and ECT is **30 °C {86 °F}**, monitoring period is **8 minutes**) • Verify TEST #10: E1: 81 (ECT) value. • Is value above minimum value?	Yes	Go to Step 8.
		No	Replace PCM, then go to Step 8.

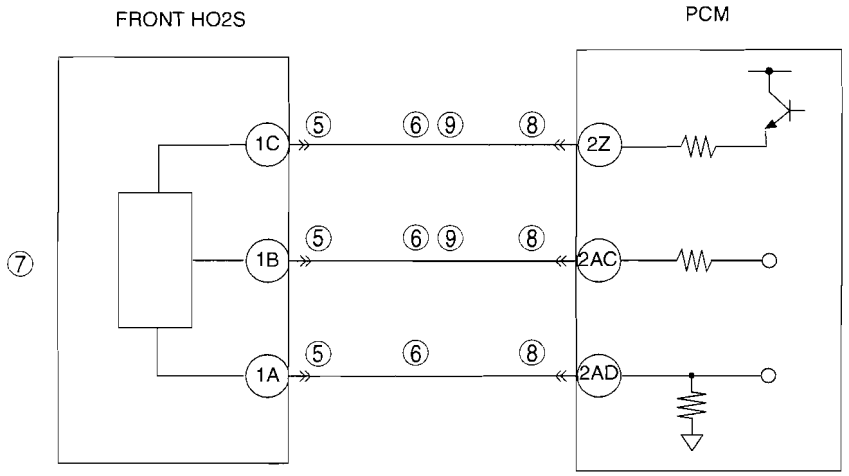
STEP	INSPECTION		ACTION
7	**VERIFY TROUBLESHOOTING OF DTC P0128 COMPLETED** • Start engine and turn off E/L and A/C. • Access DIAGNOSTIC MONITORING TEST RESULTS using the M-MDS and monitor TEST #10: E1: 80 (Heat radiation ratio) or #10: E1: 81 (ECT). **Note** • This test requires actual driving. Chassis roller cannot be used for this test. • During test drive, constant speed should be maintained, although 2 or 3 stops (e.g. for traffic signals) is acceptable. Stop-and-go (e.g. in case of traffic congestion) is not acceptable during the test period. • Verify TEST #10: E1: 80 (Heat radiation ratio) and #10: EI: 81 (ECT) value. • Are value of TEST #10: E1: 80 (Heat radiation ratio) below maximum value and value of TEST #10: E1: 81 (ECT) above minimum value?	Yes	Go to the next step.
		No	Replace PCM, then go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". • Is any DTC present?	Yes	Go to the applicable DTC inspection.
		No	Troubleshooting completed.

DTC P0131[L3 WITH TC]

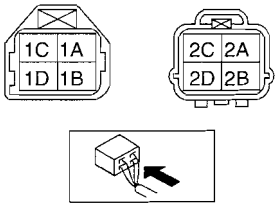
id010239804600

DTC P0131	Front HO2S circuit low input
DETECTION CONDITION	• The PCM monitors the input voltage from the front HO2S when the engine is running. If the input voltage is **above 1.0 V** for **2 s**, the PCM determines that the front HO2S circuit voltage is low. **Diagnostic support note** • This is a continuance monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.

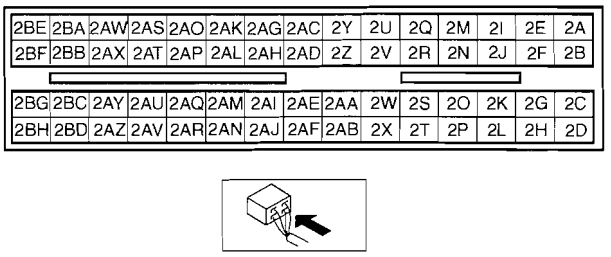
DTC P0131	Front HO2S circuit low input
POSSIBLE CAUSE	• Front HO2S malfunction • Connector or terminal malfunction • Open circuit in the wiring harness between front HO2S terminal 1C and PCM terminal 2Z • Short to ground in the wiring harness between front HO2S terminal 1C and PCM terminal 2Z • Open circuit in the wiring harness between front HO2S terminal 1B and PCM terminal 2AC • Short to ground in the wiring harness between front HO2S terminal 1B and PCM terminal 2AC • Short to ground in the wiring harness between front HO2S terminal 1A and PCM terminal 2AD • PCM malfunction



FRONT HO2S
WIRING HARNESS-SIDE CONNECTOR



PCM
WIRING HARNESS-SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING OR STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the pending code or stored DTCs using the M-MDS. • Are other DTCs present?	Yes	Go to the appropriate DTC troubleshooting procedures. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0131 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for the DTC on the FREEZE FRAME DATA. (See01-02B-14 DTC TABLE[L3 WITH TC].)

STEP	INSPECTION		ACTION
5	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
6	**INSPECT FRONT HO2S CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between the following terminals and body ground: — Front HO2S terminal 1A (wiring harness-side) and body ground — Front HO2S terminal 1B (wiring harness-side) and body ground — Front HO2S terminal 1C (wiring harness-side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 10.
		No	Go to the next step.
7	**INSPECT FRONT HO2S** • Inspect the front HO2S. (See01-40B-39 HEATED OXYGEN SENSOR (HO2S) INSPECTION[L3 WITH TC].) • Is there any malfunction?	Yes	Replace the front HO2S, then go to Step 10. (See01-15B-2 EXHAUST SYSTEM REMOVAL/ INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
9	**INSPECT FRONT HO2S CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between the following circuits: — Front HO2S terminal 1B (wiring harness-side) and PCM terminal 2AC (wiring harness-side) — Front HO2S terminal 1C (wiring harness-side) and PCM terminal 2Z (wiring harness-side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0131 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See01-02B-10 OBD-II DRIVE MODE[L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0132[L3 WITH TC]

id010239804700

DTC P0132	Front HO2S circuit high input
DETECTION CONDITION	• The PCM monitors the input voltage from the front HO2S when the engine is running. If the input voltage is **less than 1.0 V** for **2 s**, the PCM determines that the front HO2S circuit voltage is high. **Diagnostic support note** • This is a continuance monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S malfunction • Connector or terminal malfunction • Short to the power supply in the wiring harness between front HO2S terminal 1C and PCM terminal 2Z • Short to the power supply in the wiring harness between front HO2S terminal 1B and PCM terminal 2AC • Short to the power supply in the wiring harness between front HO2S terminal 1A and PCM terminal 2AD • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**VERIFY RELATED PENDING OR STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the pending code or stored DTCs using the M-MDS. • Are other DTCs present?	Yes	Go to the appropriate DTC troubleshooting procedures. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0132 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for the DTC on the FREEZE FRAME DATA. (See01-02B-14 DTC TABLE[L3 WITH TC].)
5	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
6	**INSPECT FRONT HO2S CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between the following terminals and body ground: — Front HO2S terminal 1A (wiring harness-side) and body ground — Front HO2S terminal 1B (wiring harness-side) and body ground — Front HO2S terminal 1C (wiring harness-side) and body ground • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to the power supply, then go to Step 9.
		No	Go to the next step.
7	**INSPECT FRONT HO2S** • Inspect the front HO2S. (See01-40B-39 HEATED OXYGEN SENSOR (HO2S) INSPECTION[L3 WITH TC].) • Is there any malfunction?	Yes	Replace the front HO2S, then go to Step 9. (See01-15B-2 EXHAUST SYSTEM REMOVAL/ INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0132 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See01-02B-10 OBD-II DRIVE MODE[L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0133[L3 WITH TC]

id010239804800

DTC P0133	Front HO2S circuit slow response
DETECTION CONDITION	• The PCM monitors the peak differential value of oxygen sensor signal after A/F fluctuation being provided when the following conditions are met. If the peak differential value is lower than the threshold value. • The PCM determines that the front HO2S circuit is slow **MONITORING CONDITIONS** — HO2S heater, HO2S, and TWC Repair Verification Drive Mode — Following conditions are met: • Front HO2S heater monitor is completed. • Fuel system loop status is closed loop fuel control. — Engine speed: **1,350—3,500 rpm** — Charging efficiency: **21—71 %** (at engine speed: **2,500 rpm**) — Intake air volume: **5—40 g/s** — Engine coolant temperature **above 70 °C {158 °F}** **Diagnostic support note** • This is an intermittent monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • DIAGNOSTIC MONITORING TEST RESULTS is available. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S deterioration • Front HO2S malfunction • Front HO2S looseness • Fuel pressure sensor malfunction • Clogged or restricted fuel line • Fuel leakage in the fuel line between the fuel delivery pipe and the fuel pump • Exhaust system leakage • Purge solenoid valve malfunction • Improper connection purge solenoid hose • Insufficient compression • Engine malfunction (Engine coolant leakage)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING AND STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the pending or stored DTCs using the M-MDS. • Is DTC P0443 also present?	Yes	Go to DTC P0443 troubleshooting procedures, then go to Step 14.
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0133 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA. (See01-02B-14 DTC TABLE[L3 WITH TC].)

STEP	INSPECTION		ACTION
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Warm up the engine. • Access the O2S11 PID using the M-MDS. • Inspect the PID under the following accelerator pedal conditions in NEUTRAL. • Is the PID normal? — **Less than 1mA** when the accelerator pedal is suddenly depressed (rich condition). — **More than 1mA** just after accelerator pedal is released (lean condition).	Yes	Go to Step 8.
		No	Go to the next step.
6	**INSPECT INSTALLATION OF FRONT HO2S** • Inspect if the front HO2S is loosely installed. • Is the front HO2S installed securely?	Yes	Go to the next step.
		No	Retighten the front HO2S, then go to Step 14.
7	**INSPECT GAS LEAKAGE FROM EXHAUST SYSTEM** • Visually inspect if any gas leakage is found between the exhaust manifold and front HO2S. • Is there gas leakage?	Yes	Repair or replace the malfunctioning exhaust part, then go to Step 14.
		No	Replace sensor, then go to Step 14.
8	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Access and monitor the FUEL PRES PID. • Is the FUEL PRES PID value within the specification? (See01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to Step 13.
		No	Go to the next step.
9	**IDENTIFY CAUSE BY FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 11.
10	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See01-40B-38 FUEL PRESSURE SENSOR INSPECTION[L3 WITH TC].) • Is the fuel pressure sensor normal?	Yes	Go to the next step.
		No	Replace the fuel delivery pipe, then go to Step 14.
11	**INSPECT HIGH PRESSURE FUEL PUMP** • Replace the high pressure fuel pump. • Monitor FUEL_PRES PID. • Is the FUEL_PRES PID value within the specified? (See01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Retest Step 14.
		No	Go to the next step.
12	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See01-40B-38 FUEL PRESSURE SENSOR INSPECTION[L3 WITH TC].) • Is the low side fuel pressure within the specification?	Yes	Go to the next step.
		No	Inspect for the following: • Fuel line restriction • Fuel filter clogging If normal replace the fuel pump. Then go to Step 14.
13	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** • Perform the "ENGINE COOLANT LEAKAGE INSPECTION". (See01-12B-6 ENGINE COOLANT LEAKAGE INSPECTION[L3 WITH TC].) • Is there any malfunction?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results. Then go to the next step.

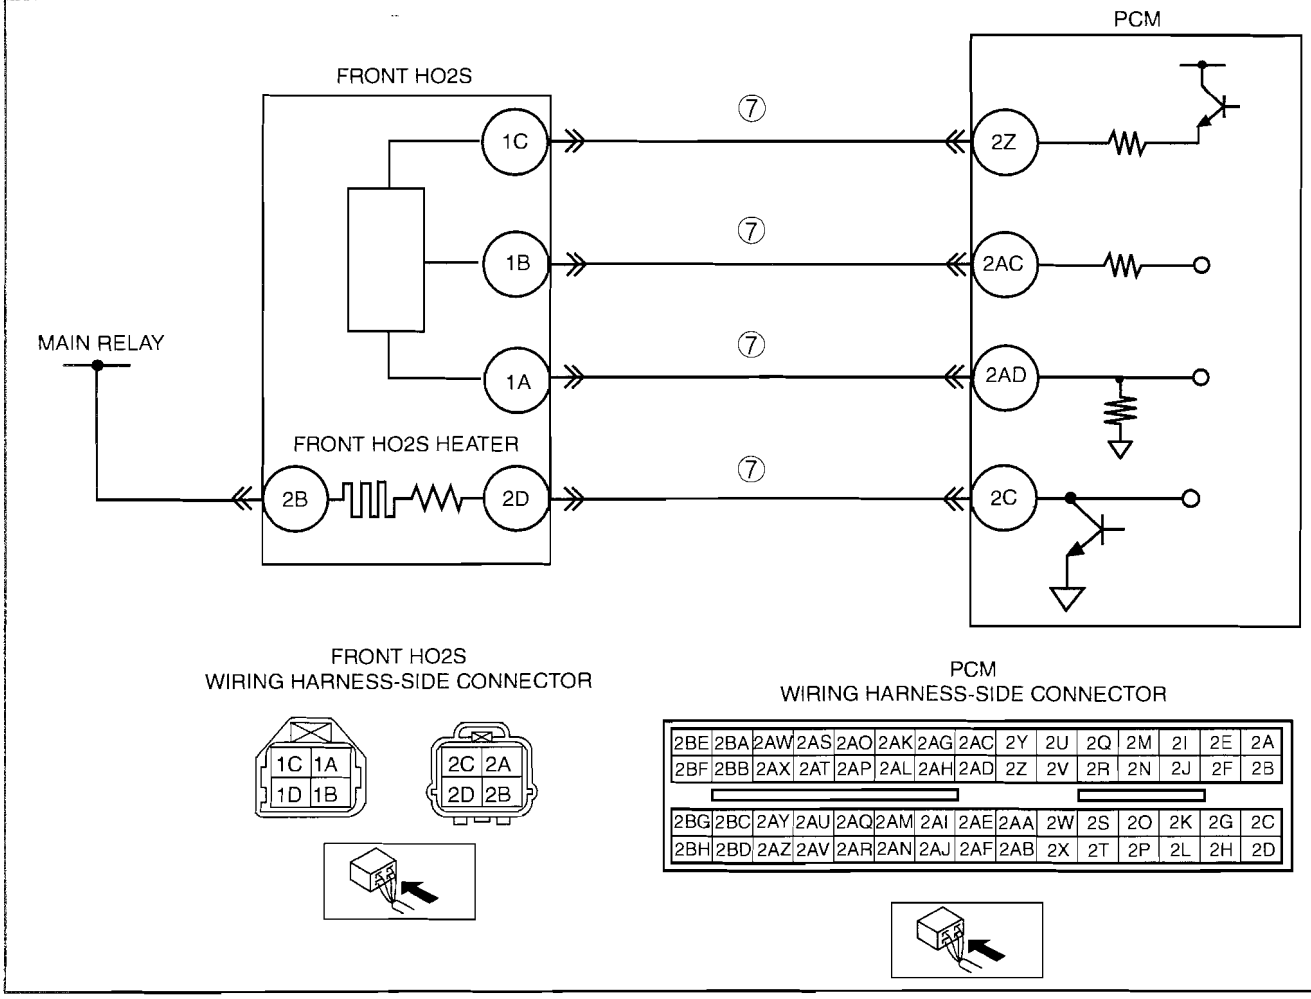
STEP	INSPECTION		ACTION
14	**VERIFY TROUBLESHOOTING OF DTC P0133 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. (Engine off) • Clear the DTC from the memory using the M-MDS. • Perform the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See01-02B-10 OBD-II DRIVE MODE[L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
15	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0134[L3 WITH TC]

id010239804900

DTC P0134	Front HO2S no activity detected
DETECTION CONDITION	• The PCM monitors the input voltage from the HO2S when the following conditions are met. If under the following monitoring conditions, the input voltage **more than 3.22 V**, the PCM determines that the front HO2S is not activated. **MONITORING CONDITIONS** — HO2S, HO2S heater and TWC Repair Verification Drive Mode — The following conditions are met • Front HO2S heater is tuned on for **above 30 s** • Battery voltage: **10—18 V** **Diagnostic support note** • This is an intermittent monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S deterioration • Front HO2S heater malfunction • Leakage exhaust system • Open or short circuit in the wiring harness between front HO2S terminal 2D and PCM terminal 2C • Open or short circuit in the wiring harness between front HO2S terminal 1C and PCM terminal 2Z • Open or short circuit in the wiring harness between front HO2S terminal 1B and PCM terminal 2AC • Open or short circuit in the wiring harness between front HO2S terminal 1A and PCM terminal 2AD • Insufficient compression • Engine malfunction

DTC P0134	Front HO2S no activity detected



Diagnostic procedure

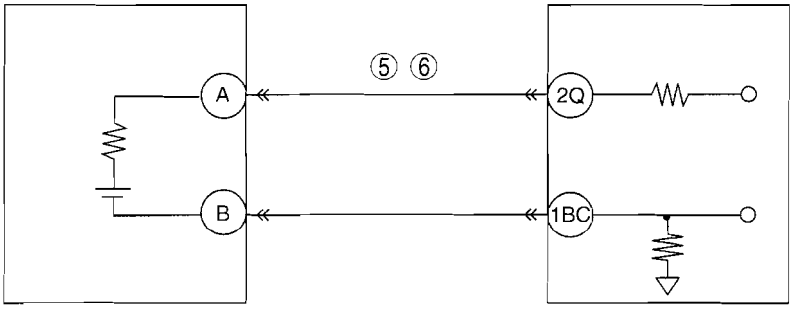
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING AND STORED DTC** **Note** • If fuel monitor, DTC P0132 is retrieved, ignore it until P0134 is fixed. • Turn the ignition switch off, then to the ON position. (Engine off) • Verify pending and stored DTCs using the M-MDS. • Is the DTC P2237 or P2251 also present?	Yes	Go to the appropriate DTC troubleshooting procedures.
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0134 on the FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for the DTC on the FREEZE FRAME DATA. (See01-02B-14 DTC TABLE[L3 WITH TC].)

STEP	INSPECTION		ACTION
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Warm up the engine. • Access O2S11 PID using the M-MDS. • Verify the PID while racing engine in NEUTRAL. • Is the PID normal? — **−1.0—1.0 A** when idle — Engine speed is **more than 3,000 rpm**. — **More than 0.25 mA** just after releasing the of accelerator pedal is released (lean condition)	Yes	Go to Step 8.
		No	Go to the next step.
6	**INSPECT INSTALLATION OF FRONT HO2S** • Inspect if the front HO2S is loosely installed. • Is the sensor installed securely?	Yes	Go to the next step.
		No	Install the sensor securely, then go to Step 10.
7	**INSPECT EXHAUST SYSTEM FOR GAS LEAKAGE** • Visually inspect if there is any gas leakage between the exhaust manifold and front HO2S. • Is there gas leakage?	Yes	Repair or replace any malfunctioning exhaust part, then go to Step 10.
		No	• Inspect the following wiring harnesses at the wiring harness-side connector terminals for an open circuit, repair or the replace wiring harness if necessary. — Front HO2S terminal 1A and PCM terminal 2AD — Front HO2S terminal 1B and PCM terminal 2AC — Front HO2S terminal 1C and PCM terminal 2Z — Front HO2S terminal 2D and PCM terminal 2C • If all the items above are normal, replace the malfunctioning sensor. Then go to Step 10.
8	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** • Perform the ENGINE COOLANT LEAKAGE INSPECTION. (See01-12B-6 ENGINE COOLANT LEAKAGE INSPECTION[L3 WITH TC].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 10.
		No	Go to the next step.
9	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression. (See01-10B-9 COMPRESSION INSPECTION[L3 WITH TC].) • Is it normal?	Yes	Go to the next step.
		No	Perform the engine overhaul for repairs, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0134 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. (Engine off) • Clear the DTC from the memory using the M-MDS. • Perform the PCM Adaptive Memory Produce Drive Mode and the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See01-02B-10 OBD-II DRIVE MODE[L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0137[L3 WITH TC]

id010239805000

DTC P0137	Rear HO2S circuit low input
DETECTION CONDITION	• The PCM monitors the input voltage from the rear HO2S. If the input voltage from the rear HO2S sensor is **below 0.1 V** for **35.2 s**, the PCM determines that the circuit input is low. **MONITORING CONDITIONS** — HO2S,HO2S heater and TWC repair verification drive mode. — The following conditions are met. • Engine speed is above **1,500 rpm**. • Engine coolant temperature is **above 70 °C {158 °F}**. • Fuel injector control in rear HO2S is in closed loop control. • The PCM monitors the input voltage from the rear HO2S when the following conditions are met. Under the following monitoring conditions, if the input voltage from the rear HO2S does not exceed **0.1 V** through the short term fuel trim is controlled up to **20.5%** for **9.6 s**, the PCM determines that the sensor circuit input is low. **MONITORING CONDITIONS** — HO2S,HO2S heater and TWC repair verification drive mode. — The following conditions are met for **more than 20.8 s**. • Engine speed is **more than 1,500 rpm**. • Engine coolant temperature is **more than 70 °C {158 °F}**. **Diagnostic support note** • This is an intermittent monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if PCM detects the above malfunction conditions during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Rear HO2S malfunction • Open circuit or short to ground in wiring between rear HO2S terminal A and PCM terminal 2Q • PCM malfunction



REAR HO2S

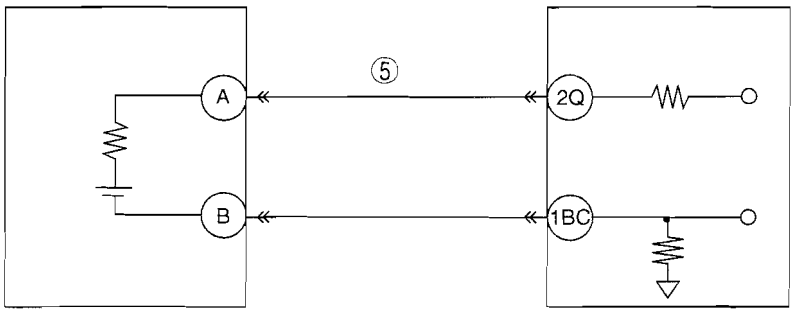
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the related PENDING CODE or stored DTCs using the M-MDS. • Are other DTCs present?	Yes	Go to appropriate DTC troubleshooting procedure. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0137 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to the troubleshooting for the DTC on the FREEZE FRAME DATA. (See01-02B-14 DTC TABLE[L3 WITH TC].)
5	**INSPECT REAR HO2S SIGNAL CIRCUIT FOR SHORT TO GROUND AT HARNESS** • Turn the ignition switch off. • Disconnect rear HO2S and PCM connectors. • Verify the continuity between rear HO2S sensor terminal A (wiring harness side) and body ground. • Is there continuity?	Yes	Repair for a short to ground circuit, then go to Step 7.
		No	Go to the next step.
6	**INSPECT REAR HO2S SIGNAL CIRCUIT FOR SHORT TO GROUND AT REAR HO2S** • Rear HO2S connector disconnected. • Verify the continuity between rear HO2S sensor terminal A (part side) and body ground. • Is there continuity?	Yes	Replace the rear HO2S then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0137 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the HO2S heater, HO2S and TWC Repair Verification Drive Mode. (See01-02B-10 OBD-II DRIVE MODE[L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the AFTER REPAIR PROCEDURE. (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0138[L3 WITH TC]

id010239805100

DTC P0138	Rear HO2S circuit high input
DETECTION CONDITION	• The PCM monitors the input voltage from the rear HO2S. If the input voltage from the rear HO2S sensor is **above 1.2 V** for **0.8 s**, the PCM determines that the circuit input is high. **Diagnostic support note** • This is an intermittent monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Rear HO2S malfunction • Short to power supply in the wiring harness between rear HO2S terminal A and PCM terminal 2Q • Rear HO2S or PCM terminal shorted • PCM malfunction



REAR HO2S

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING OR STORED DTC** • Turn the ignition switch off, then to the ON position. (Engine off) • Verify pending code or stored DTCs using M-MDS. • Is other DTC present?	Yes	Go to the appropriate DTC troubleshooting procedures. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0138 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to the troubleshooting procedures for the DTC on the FREEZE FRAME DATA. (See01-02B-14 DTC TABLE[L3 WITH TC].)
5	**INSPECT REAR HO2S SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch off. • Disconnect rear HO2S connector. • Turn the ignition switch to the ON position. (Engine off) • Measure the voltage between rear HO2S terminal A (wiring harness-side) and body ground. • Is there any voltage?	Yes	Replace short to power supply, then go to Step 7.
		No	Go to the next step.
6	**VERIFY CURRENT INPUT SIGNAL STATUS** • Start the engine. • Access the O2S12 PID using the M-MDS. • Verify the PID while racing the engine at least **10 times** in NEUTRAL. • Does the PID stay **above 0.55 V**?	Yes	Replace the sensor, then go to the next step. (See01-15B-2 EXHAUST SYSTEM REMOVAL/ INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0138 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. (Engine off) • Clear the DTC from the memory using the M-MDS. • Run the PCM adaptive memory procedure drive mode and HO2S heater, HO2S, and TWC repair verification drive mode. (See01-02B-10 OBD-II DRIVE MODE[L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0139[L3 WITH TC]

id010239805200

DTC P0139	Rear HO2S circuit problem
DETECTION CONDITION	• The PCM monitors the rich (**0.4 V**) to lean (**0.3 V**) response time of the rear HO2S. The PCM measures the response time when the following conditions are met. The PCM determines that the rear HO2S response deteriorated when the measured response time is more than the threshold value (**130 ms**) five consecutive times. **MONITORING CONDITIONS** — HO2S heater, HO2S, and TWC Repair Verification Drive Mode or EGR, HO2S heater, HO2S, TWC, and EVAP System Repair Verification Drive Mode — The following conditions are met: • Fuel cut during deceleration • Engine speed is **more than 500 rpm**. • Engine coolant temperature is **more than 70 °C {158 °F}**. • HO2S (rear) output voltage is **more than 0.4 V**. • The PCM monitors for a time-out malfunction (when rear HO2S remains above **0.3 V** for longer than a specified period of time during fuel cut control). The PCM measure the amount of time from when the following conditions are met until the rear HO2S output voltage drops **below 0.3 V**. The PCM determines that a HO2S time-out malfunction has occurred when the detected time is more than the threshold value (**6.4 s**) three consecutive times. **MONITORING CONDITIONS** — HO2S heater, HO2S, and TWC Repair Verification Drive Mode or EGR, HO2S heater, HO2S, TWC, and EVAP System Repair Verification Drive Mode — The following conditions are met: • Fuel cut during deceleration • Engine speed is **more than 500 rpm**. • Engine coolant temperature is **more than 70 °C {158 °F}**. • HO2S (rear) is activated (**more than 0.55 V**). **Diagnostic support note** • This is an intermittent monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • DIAGNOSTIC MONITORING TEST RESULTS is available. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Rear HO2S deterioration • Rear HO2S malfunction • Rear HO2S looseness • Pressure regulator (built-in fuel pump unit) malfunction • Fuel pump malfunction • Fuel filter (built-in fuel pump unit) clogged or restricted • Fuel leakage on fuel line from fuel delivery pipe to fuel pump • Exhaust system leakage • Purge solenoid valve malfunction • Improper connection of purge solenoid hoses • Insufficient compression • Engine malfunction (Leakage engine coolant)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**VERIFY RELATED PENDING AND STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify pending and/or stored DTCs using the M-MDS. • Is DTC P0443 also present?	Yes	Go to DTC P0443 troubleshooting procedures, then go to Step 13.
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0139 on the FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for the DTC on the FREEZE FRAME DATA. (See01-02B-14 DTC TABLE[L3 WITH TC].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Warm up the engine. • Access the O2S12 PID using the M-MDS. • Inspect the PID under the following accelerator pedal conditions or NEUTRAL. • Is the PID normal? — **More than 0.55 V** the accelerator pedal is suddenly depressed (rich condition). — **Less than 0.55 V** just after accelerator pedal is released (lean condition).	Yes	Go to Step 8.
		No	Go to the next step.
6	**INSPECT INSTALLATION OF REAR HO2S** • Inspect if the rear HO2S is loosely installed. • Is the sensor installed securely?	Yes	Go to the next step.
		No	Retighten the sensor, then go to Step 13.
7	**INSPECT GAS LEAKAGE FROM EXHAUST SYSTEM** • Visually inspect if there is any gas leakage between the exhaust manifold and the rear HO2S. • Is there gas leakage?	Yes	Repair or replace the malfunctioning faulty exhaust part, then go to Step 13.
		No	Replace sensor, then go to Step 13.
8	**INSPECT LONG TERM FUEL TRIM** • Access the LONGFT1 PIDs • Compare it with the FREEZE FRAME DATA recorded at Step 1. • Is it below the FFD value?	Yes	The engine is driven under a rich condition. Go to the next step.
		No	The engine is driven under a lean condition. Go to Step 10.
9	**INSPECT FUEL LINE PRESSURE (Excessive fuel line pressure)** • Turn the ignition switch off. • Inspect the fuel line pressure while the engine is running. (See01-14B-6 FUEL LINE PRESSURE INSPECTION[L3 WITH TC].) • Is the fuel line pressure normal?	Yes	Go to Step 12.
		No	Inspect fuel pump maximum pressure and fuel return pipe for clogging. (See01-14B-17 FUEL PUMP UNIT INSPECTION[L3 WITH TC].) • If there is any problem, repair or replace the parts. • If all items above are normal, replace the fuel pump unit. Then go to Step 13.
10	**INSPECT FUEL LINE PRESSURE (Low fuel line pressure)** • Turn the ignition switch off. • Inspect the fuel line pressure while the engine is running. (See01-14B-6 FUEL LINE PRESSURE INSPECTION[L3 WITH TC].) • Is the fuel line pressure normal?	Yes	Go to Step 12.
		No	Go to the next step.
11	**INSPECT FUEL LINE FROM FUEL PUMP TO FUEL DELIVERY PIPE** • Visually inspect the fuel line for any leakage. • Is there fuel leakage?	Yes	Replace the fuel line, then go to Step 13.
		No	Inspect the fuel filters for the following: • Foreign material or staining inside the fuel filter (low-pressure side) Perform the following actions according to the result. • If foreign material or staining is found inside fuel filter (low-pressure side), clean the fuel tank and filter. • If normal, replace fuel pump unit. Then go to Step 13.

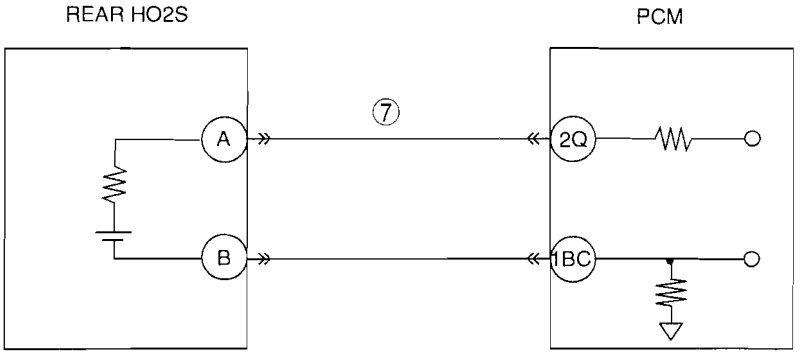
STEP	INSPECTION		ACTION
12	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** • Perform the "ENGINE COOLANT LEAKAGE INSPECTION." (See01-12B-6 ENGINE COOLANT LEAKAGE INSPECTION[L3 WITH TC].) • Is there any malfunction?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection results. Then go to the next step.
13	**VERIFY TROUBLESHOOTING OF DTC P0139 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. (Engine off) • Clear the DTC from the memory using the M-MDS. • Perform the "PCM Adaptive Memory Produce Drive Mode" and "HO2S heater, HO2S, and TWC Repair Verification Drive Mode". (See01-02B-10 OBD-II DRIVE MODE[L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
14	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0140[L3 WITH TC]

id010239805300

DTC P0140	Rear HO2S no activity detected
DETECTION CONDITION	• The PCM monitors the input voltage from the rear HO2S when the following conditions are met. Under the following monitoring conditions, if the input voltage from the rear HO2S does not even **exceed 0.55 V** though the short term fuel trim is controlled up to **20.5%** for **9.6 s**, the PCM determines that sensor circuit is not activated. **MONITORING CONDITIONS** — HO2S, HO2S heater and TWC repair verification drive mode — The following conditions are met for **above 20.8 s**. • Engine speed is **above 1,500 rpm**. • Engine coolant temperature is **above 70 °C {158 °F}**. • Rear HO2S voltage is **above0.1V**. **Diagnostic support note** • This is an intermittent monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.

DTC P0140	Rear HO2S no activity detected
POSSIBLE CAUSE	• Rear HO2S deterioration • Rear HO2S heater malfunction • Exhaust system leakage • Open circuit or short to ground in the wiring harness between rear HO2S terminal A and PCM terminal 2Q • Insufficient compression • Engine malfunction



REAR HO2S

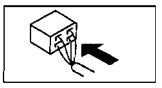
2BH	2BD	2AZ	2AV	2AR	2AN	2AJ	2AF	2AB	2X	2T	2P	2L	2H	2D



Diagnostic procedure

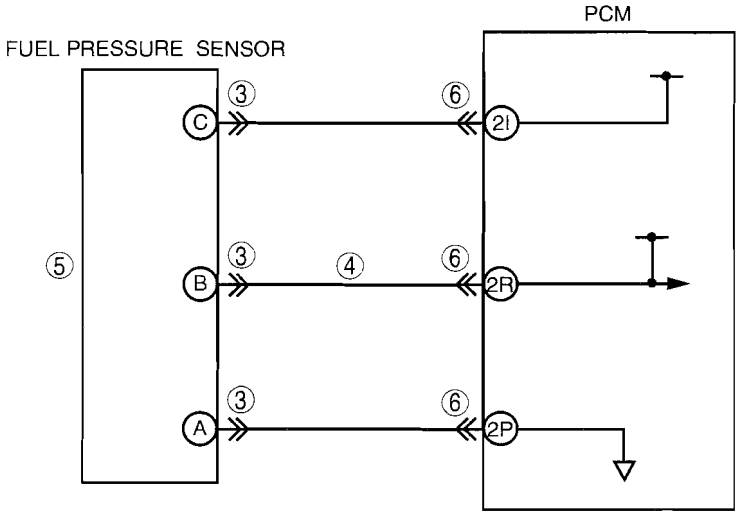
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING AND STORED DTC** **Note** • If the fuel monitor, DTC P0132 is retrieved, ignore it until P0140 is fixed. • Turn the ignition switch off, then to the ON position. (Engine off) • Verify pending and stored DTCs using the M-MDS. • Are other DTCs present?	Yes	Go to the appropriate DTC troubleshooting procedures. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0140 on the FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for the DTC on the FREEZE FRAME DATA. (See01-02B-14 DTC TABLE[L3 WITH TC].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Warm up the engine. • Access the O2S12 or the P0140 PID using the M-MDS. • Verify the PID while racing the engine at least **10 times** in NEUTRAL. • Is the PID reading normal? — **More than 0.55 V** at least once during engine racing	Yes	Go to Step 8.
		No	Go to the next step.
6	**INSPECT INSTALLATION OF REAR HO2S** • Check if the rear HO2S is loosely installed. • Is the sensor installed securely?	Yes	Go to the next step.
		No	Install the sensor securely, then go to Step 10.
7	**INSPECT GAS LEAKAGE FROM EXHAUST SYSTEM** • Visually check if any gas leakage is found between the exhaust pipe and the rear HO2S. • Is there gas leakage?	Yes	Repair or replace any malfunctioning exhaust part, then go to Step 10.
		No	• Inspect the following wiring harness for an open or short to the ground circuit, repair or replace the wiring harness if necessary. — Rear HO2S terminal A (wiring harness-side) to PCM terminal 2Q (wiring harness-side) • Repair or replace the wiring harness if necessary. • If all items above are normal, replace the malfunctioning sensor. Then go to Step 10.
8	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** • Perform the ENGINE COOLANT LEAKAGE INSPECTION. (See01-12B-6 ENGINE COOLANT LEAKAGE INSPECTION[L3 WITH TC].) • Is the cooling system hold pressure normal?	Yes	Repair or the replace the malfunctioning part according to the inspection result. Then go to Step 10.
		No	Go to the next step.
9	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression. (See01-10B-9 COMPRESSION INSPECTION[L3 WITH TC].) • Is it normal?	Yes	Go to the next step.
		No	Perform engine overhaul for repairs, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0140 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. (Engine off) • Clear the DTC from the memory using the M-MDS. • Perform the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See01-02B-10 OBD-II DRIVE MODE[L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0192[L3 WITH TC]

id010239805400

DTC P0192	Fuel pressure sensor circuit low input
DETECTION CONDITION	• If the input voltage from the fuel pressure sensor is less than **0.19 V** for **1.3 s**, the PCM determines that the fuel pressure sensor circuit is low. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Fuel pressure sensor malfunction • Short to ground in wiring harness between fuel pressure sensor terminal B and PCM terminal 2R • Connector or terminal malfunction • PCM malfunction



FUEL PRESSURE SENSOR
WIRING HARNESS-SIDE CONNECTOR

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FUEL PRESSURE SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the fuel pressure sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT FUEL PRESSURE SENSOR SIGNAL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between the fuel pressure sensor terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 7.
		No	Go to the next step.
5	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See01-40B-38 FUEL PRESSURE SENSOR INSPECTION[L3 WITH TC].) • Is there any malfunction?	Yes	Replace the fuel pressure sensor, then go to Step 7. (See01-40B-38 FUEL PRESSURE SENSOR REMOVAL/ INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0192 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0193[L3 WITH TC]

id010239805500

DTC P0193	Fuel pressure sensor circuit high input
DETECTION CONDITION	• If the input voltage from the fuel pressure sensor is more than **4.8 V** for **1.3 s**, the PCM determines that the fuel pressure sensor circuit is high. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Fuel pressure sensor malfunction • Open circuit in the wiring harness between fuel pressure sensor terminal A and PCM terminal 2P • Open circuit in the wiring harness between fuel pressure sensor terminal B and PCM terminal 2R • Short to power in the wiring harness between fuel pressure sensor terminal B and PCM terminal 2R • Connector or terminal malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FUEL PRESSURE SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the fuel pressure sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
4	**INSPECT FUEL PRESSURE SENSOR SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between the fuel pressure sensor terminal B (wiring harness-side) and body ground. • Is the voltage **B+?**	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to the Step 8.
		No	Go to the next step.
5	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See01-40B-38 FUEL PRESSURE SENSOR INSPECTION[L3 WITH TC].) • Is there any malfunction**?**	Yes	Replace the fuel pressure sensor, then go to Step 8. (See01-40B-38 FUEL PRESSURE SENSOR REMOVAL/ INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
7	**INSPECT FUEL PRESSURE SENSOR CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between the fuel pressure sensor terminal A (wiring harness-side) and PCM terminal 2P (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0193 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0201[L3 WITH TC]

id010239805600

DTC P0201	Injector circuit/open cylinder No.1
DETECTION CONDITION	• If the fuel injection verification signal is not input at **255 times** continuously even though the PCM drives the fuel injector No.1, the PCM determines that there is an open circuit in the fuel injector No.1 control circuit. **MONITORING CONDITION** — The following conditions are met: • Engine speed: **4,000 rpm or less** • Battery voltage: **10.03 V or more** • Fuel injection control: except during fuel cut **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Fuel injector No.1 malfunction • Connector or terminal malfunction • Open circuit between fuel injector No.1 terminal B and PCM terminal 2BG • Open circuit between fuel injector No.1 terminal A and PCM terminal 2BB • Short to power supply between fuel injector No.1 terminal A and PCM terminal 2BB • Short to ground between fuel injector No.1 terminal B and PCM terminal 2BG • Short to ground between fuel injector No.1 terminal A and PCM terminal 2BB • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT FUEL INJECTOR NO.1 CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the fuel injector No.1 connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
4	**INSPECT FUEL INJECTOR NO.1 CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between the following terminals: — Fuel injector No.1 terminal B (wiring harness-side) and body ground — Fuel injector No.1 terminal A (wiring harness-side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 10.
		No	Go to the next step.
5	**INSPECT FUEL INJECTOR NO.1 CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between the fuel injector No.1 terminal A (wiring harness-side) and body ground. • Is the voltage **B+?**	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 10.
		No	Go to the next step.
6	**INSPECT FUEL INJECTOR NO.1** • Inspect the fuel injector No.1. (See01-14B-33 FUEL INJECTOR INSPECTION[L3 WITH TC].) • Is there any malfunction**?**	Yes	Replace fuel injector No.1, then go to Step 10. (See01-14B-30 FUEL INJECTOR REMOVAL/ INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
7	**INSPECT PCM** • Inspect the PCM. • Is there malfunction?	Yes	Replace the PCM, then go to Step 10.
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
9	**INSPECT FUEL INJECTOR NO.1 CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between the following terminals: — Fuel injector No.1 terminal B (wiring harness-side) and PCM terminal 2BG (wiring harness-side) — Fuel injector No.1 terminal A (wiring harness-side) and PCM terminal 2BB (wiring harness-side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0201 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0202[L3 WITH TC]

id010239805700

DTC P0202	Injector circuit/open cylinder No.2
DETECTION CONDITION	• If the fuel injection verification signal is not input at **255 times** continuously even though the PCM drives the fuel injector No.2, the PCM determines that there is an open circuit in the fuel injector No.2 control circuit. **MONITORING CONDITION** — The following conditions are met: • Engine speed: **4,000 rpm or less** • Battery voltage: **10.03 V or more** • Fuel injection control: except during fuel cut **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Fuel injector No.2 malfunction • Connector or terminal malfunction • Open circuit between fuel injector No.2 terminal B and PCM terminal 2BH • Open circuit between fuel injector No.2 terminal A and PCM terminal 2BC • Short to power supply between fuel injector No.2 terminal A and PCM terminal 2BC • Short to ground between fuel injector No.2 terminal B and PCM terminal 2BH • Short to ground between fuel injector No.2 terminal A and PCM terminal 2BC • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FUEL INJECTOR NO.2 CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the fuel injector No.2 connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
4	**INSPECT FUEL INJECTOR NO.2 CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between the following terminals: — Fuel injector No.2 terminal B (wiring harness-side) and body ground — Fuel injector No.2 terminal A (wiring harness-side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 10.
		No	Go to the next step.
5	**INSPECT FUEL INJECTOR NO.2 CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between the fuel injector No.2 terminal A (wiring harness-side) and body ground. • Is the voltage **B+?**	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 10.
		No	Go to the next step.
6	**INSPECT FUEL INJECTOR NO.2** • Inspect the fuel injector No.2. (See01-14B-33 FUEL INJECTOR INSPECTION[L3 WITH TC].) • Is there any malfunction**?**	Yes	Replace the fuel injector No.2, then go to Step 10. (See01-14B-30 FUEL INJECTOR REMOVAL/ INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
7	**INSPECT PCM** • Inspect the PCM. • Is there malfunction?	Yes	Replace the PCM, then go to Step 10.
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
9	**INSPECT FUEL INJECTOR NO.2 CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between the following terminals: — Fuel injector No.2 terminal B (wiring harness-side) and PCM terminal 2BH (wiring harness-side) — Fuel injector No.2 terminal A (wiring harness-side) and PCM terminal 2BC (wiring harness-side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.

STEP	INSPECTION		ACTION
10	**VERIFY TROUBLESHOOTING OF DTC P0202 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0203[L3 WITH TC]

id010239805800

DTC P0203	Injector circuit/open cylinder No.3
DETECTION CONDITION	• If the fuel injection verification signal is not input at **255 times** continuously even though the PCM drives fuel injector No.3, the PCM determines that there is an open circuit in the fuel injector No.3 control circuit. **MONITORING CONDITION** — The following conditions are met: • Engine speed: **4,000 rpm or less** • Battery voltage: **10.03 V or more** • Fuel injection control: except during fuel cut **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Fuel injector No.3 malfunction • Connector or terminal malfunction • Open circuit between fuel injector No.3 terminal B and PCM terminal 2BH • Open circuit between fuel injector No.3 terminal A and PCM terminal 2BD • Short to power supply between fuel injector No.3 terminal A and PCM terminal 2BD • Short to ground between fuel injector No.3 terminal B and PCM terminal 2BH • Short to ground between fuel injector No.3 terminal A and PCM terminal 2BD • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FUEL INJECTOR NO.3 CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the fuel injector No.3 connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
4	**INSPECT FUEL INJECTOR NO.3 CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between the following terminals: — Fuel injector No.3 terminal B (wiring harness-side) and body ground — Fuel injector No.3 terminal A (wiring harness-side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 10.
		No	Go to the next step.
5	**INSPECT FUEL INJECTOR NO.3 CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between the fuel injector No.3 terminal A (wiring harness-side) and body ground. • Is the voltage **B+?**	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 10.
		No	Go to the next step.

STEP	INSPECTION		ACTION
6	**INSPECT FUEL INJECTOR NO.3** • Inspect fuel injector No.3. (See01-14B-33 FUEL INJECTOR INSPECTION[L3 WITH TC].) • Is there any malfunction?	Yes	Replace fuel injector No.3, then go to Step 10. (See01-14B-30 FUEL INJECTOR REMOVAL/ INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
7	**INSPECT PCM** • Inspect the PCM. • Is there malfunction?	Yes	Replace the PCM, then go to Step 10.
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
9	**INSPECT FUEL INJECTOR NO.3 CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between the following terminals: — Fuel injector No.3 terminal B (wiring harness-side) and PCM terminal 2BH (wiring harness-side) — Fuel injector No.3 terminal A (wiring harness-side) and PCM terminal 2BD (wiring harness-side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0203 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0204[L3 WITH TC]

id010239805900

DTC P0204	Injector circuit/open cylinder No.4
DETECTION CONDITION	• If the fuel injection verification signal is not input at **255 times** continuously even though the PCM drives fuel injector No.4, the PCM determines that there is an open circuit in the fuel injector No.4 control circuit. **MONITORING CONDITION** — The following conditions are met: • Engine speed: **4,000 rpm or less** • Battery voltage: **10.03 V or more** • Fuel injection control: except during fuel cut **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.

DTC P0204	Injector circuit/open cylinder No.4
POSSIBLE CAUSE	• Fuel injector No.4 malfunction • Connector or terminal malfunction • Open circuit between fuel injector No.4 terminal B and PCM terminal 2BG • Open circuit between fuel injector No.4 terminal A and PCM terminal 2AZ • Short to power supply between fuel injector No.4 terminal A and PCM terminal 2AZ • Short to ground between fuel injector No.4 terminal B and PCM terminal 2BG • Short to ground between fuel injector No.4 terminal A and PCM terminal 2AZ • PCM malfunction

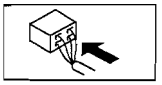
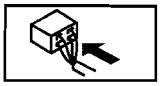
2BH	2BD	2AZ	2AV	2AR	2AN	2AJ	2AF	2AB	2X	2T	2P	2L	2H	2D





Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FUEL INJECTOR NO.4 CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the fuel injector No.4 connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.

STEP	INSPECTION		ACTION
4	**INSPECT FUEL INJECTOR NO.4 CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between the following terminals: — Fuel injector No.4 terminal B (wiring harness-side) and body ground — Fuel injector No.4 terminal A (wiring harness-side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 10.
		No	Go to the next step.
5	**INSPECT FUEL INJECTOR NO.4 CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between the fuel injector No.4 terminal A (wiring harness-side) and body ground. • Is the voltage **B+?**	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 10.
		No	Go to the next step.
6	**INSPECT FUEL INJECTOR NO.4** • Inspect fuel injector No.4. (See01-14B-33 FUEL INJECTOR INSPECTION[L3 WITH TC].) • Is there any malfunction**?**	Yes	Replace fuel injector No.4, then go to Step 10. (See01-14B-30 FUEL INJECTOR REMOVAL/ INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
7	**INSPECT PCM** • Inspect the PCM. • Is there any malfunction?	Yes	Replace the PCM, then go to Step 10.
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
9	**INSPECT FUEL INJECTOR NO.4 CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between the following terminals: — Fuel injector No.4 terminal B (wiring harness-side) and PCM terminal 2BG (wiring harness-side) — Fuel injector No.4 terminal A (wiring harness-side) and PCM terminal 2AZ (wiring harness-side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0204 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0222[L3 WITH TC]

id010239806000

DTC P0222	TP sensor No.2 circuit low input
DETECTION CONDITION	• If PCM detects that the TP sensor No.2 voltage is **below 0.2 V** after the ignition switch to the ON position, the PCM determines that TP circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• TP sensor malfunction • Connector or terminal malfunction • Open circuit between throttle body terminal C and PCM terminal 2AL • Short to ground between throttle body terminal C and PCM terminal 2AL • Open circuit between throttle body terminal B and PCM terminal 2AO • Short to ground between throttle body terminal B and PCM terminal 2AO • PCM malfunction

2BH	2BD	2AZ	2AV	2AR	2AN	2AJ	2AF	2AB	2X	2T	2P	2L	2H	2D

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT TP SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the TP sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
3	**CLASSIFY TP SENSOR OR HARNESS MALFUNCTION** • Connect the M-MDS. • Access the TP2 PID. • Disconnect the throttle body connector. • Connect a jumper wire between throttle body terminals B and C (harness-side). • Is the voltage**above 4.9 V?**	Yes	Go to the next step.
		No	Go to step 5.
4	**INSPECT TP SENSOR** • Perform the TP sensor inspection. (See01-40B-34 THROTTLE POSITION (TP) SENSOR INSPECTION[L3 WITH TC].) • Is the TP sensor normal?	Yes	Inspect throttle body connector terminal B connection for poor connection. Repair or replace if necessary, then go to Step 8.
		No	Replace throttle body, then go to Step 8.
5	**INSPECT POWER SUPPLY CIRCUIT VOLTAGE AT THROTTLE BODY CONNECTOR** **Note** • If DTC P0107 and P2228 are also retrieved with P0122, go to the CONSTANT VOLTAGE troubleshooting procedure. • Turn ignition switch to the ON position (Engine off). • Measure the voltage at throttle body terminal B (harness-side). • Is the voltage**within 4.5—5.5 V?**	Yes	Go to the next step.
		No	Repair or replace for an open circuit between throttle body connector terminal B and PCM connector terminal 2AO (harness-side). Then, then go to Step 8.
6	**INSPECT TP2 SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between throttle body terminal C (harness-side) and PCM terminal 2AL. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the suspected wiring harness, then go to Step 8.
7	**INSPECT TP2 SIGNAL CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between throttle body terminal C (harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the suspected wiring harness, then go to the next step.
		No	Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0222 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the M-MDS. • Start the engine and warm it up completely. • Is same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0223[L3 WITH TC]

id010239806100

DTC P0223	TP sensor No.2 circuit high input
DETECTION CONDITION	• If the PCM detects that the TP sensor No.2 voltage is **above 4.85 V** after the ignition switch to the ON position, the PCM determines that the TP circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• TP sensor malfunction • Connector or terminal malfunction • Open circuit between throttle body terminal D and PCM terminal 2AP • Short to power supply between throttle body terminal C and PCM terminal 2AL • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT THROTTLE BODY CONNECTOR FOR POOR CONNECTION** • Disconnect the throttle body connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the suspected terminal, then go to Step 8.
		No	Go to the next step.
4	**INSPECT TP SENSOR** • Perform the TP sensor inspection. (See01-40B-34 THROTTLE POSITION (TP) SENSOR INSPECTION[L3 WITH TC]) • Is the TP sensor normal?	Yes	Go to the next step.
		No	Replace the throttle body, then go to Step 8.
5	**INSPECT TP2 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn ignition switch to the ON position (Engine off). • Measure the voltage between throttle body terminal C (harness-side) and body ground. • Is the voltage **above 4.9 V?**	Yes	Repair or replace for a short to a power supply. Then, go to Step 8.
		No	Go to the next step.
6	**INSPECT TP SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between throttle body connector terminal D (harness-side) and body ground. • Is there continuity?	Yes	Repair or replace for an open circuit between throttle body terminal D (harness-side) and PCM connector terminal 2AP (harness-side). Then, go to Step 8.
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to the next step.
		No	Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0223 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the M-MDS. • Start the engine and warm it up completely. • Is same DTC present?	Yes	Replace PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0234[L3 WITH TC]

id010239806200

DTC P0234	Turbocharger over boost condition
DETECTION CONDITION	• If the manifold absolute pressure or charging efficiency are more than the specification for the specified period of time, the PCM determines that the turbocharger is in an over boost condition. **MONITORING CONDITIONS** — Engine speed is **2,000 rpm or more.** **Diagnostic support note** • This is a continuous monitor (Other). • The MIL does not illuminate. • FREEZE FRAME DATA is not available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Wastegate control solenoid valve malfunction • Wastegate is stuck close • Vacuum hose looseness or damage • Improper installation of the vacuum hose

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT WASTEGATE CONTROL SOLENOID VALVE** • Inspect the wastegate control solenoid valve. (See01-13B-16 WASTEGATE CONTROL SOLENOID VALVE INSPECTION[L3 WITH TC].) • Is there any malfunction?	Yes	Replace the wastegate control solenoid valve, then go to Step 5. (See01-13B-4 INTAKE AIR SYSTEM REMOVAL/ INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
4	**INSPECT VACUUM HOSE** • Inspect the vacuum hose condition for the following: — Looseness — Damage — Improper installation • Is there any malfunction?	Yes	Repair or replace the suspected part, then go to the next step.
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING OF DTC P0234 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0245[L3 WITH TC]

id010239806300

DTC P0245	Turbocharger wastegate solenoid low
DETECTION CONDITION	• When the PCM turns the wastegate control solenoid valve off but the wastegate control solenoid valve circuit voltage is low, the PCM determines that the wastegate control solenoid valve control circuit voltage is low. **Diagnostic support note** • This is a continuous monitor (Other). • The MIL does not illuminate. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is not available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Wastegate control solenoid valve malfunction • Connector or terminal malfunction • Open circuit in the wiring harness between wastegate control solenoid valve terminal A and main relay • Open circuit in the wiring harness between wastegate control solenoid valve terminal B and PCM terminal 2AA • Short to ground in the wiring harness between wastegate control solenoid valve terminal B and PCM terminal 2AA • PCM malfunction

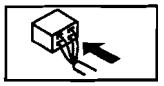
2BH	2BD	2AZ	2AV	2AR	2AN	2AJ	2AF	2AB	2X	2T	2P	2L	2H	2D



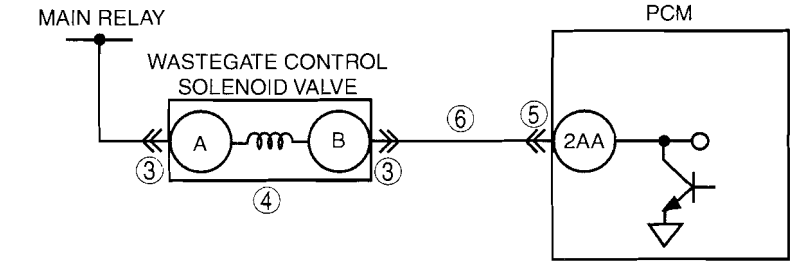
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT WASTEGATE CONTROL SOLENOID VALVE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the wastegate control solenoid valve connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
4	**INSPECT WASTEGATE CONTROL SOLENOID VALVE CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between the wastegate control solenoid valve terminal B and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 8.
		No	Go to the next step.
5	**INSPECT WASTEGATE CONTROL SOLENOID VALVE** • Inspect the wastegate control solenoid valve. (See01-13B-16 WASTEGATE CONTROL SOLENOID VALVE INSPECTION[L3 WITH TC].) • Is there any malfunction?	Yes	Replace the wastegate control solenoid valve, then go to Step 8. (See01-13B-4 INTAKE AIR SYSTEM REMOVAL/ INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
7	**INSPECT WASTEGATE CONTROL SOLENOID VALVE GROUND CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between the following terminals: — Wastegate control solenoid valve terminal A (wiring harness-side) and main relay — Wastegate control solenoid valve terminal B (wiring harness-side) and PCM terminal 2AA (wiring harness-side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0245 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	DTC troubleshooting completed.

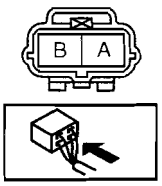
DTC P0246[L3 WITH TC]

id010239806400

DTC P0246	Turbocharger wastegate solenoid high
DETECTION CONDITION	• When the PCM turns the wastegate control solenoid valve on but the wastegate control solenoid valve circuit voltage is high, the PCM determines that the wastegate control solenoid valve control circuit voltage is high. **Diagnostic support note** • This is a continuous monitor (Other). • The MIL does not illuminate. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is not available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Wastegate control solenoid valve malfunction • Connector or terminal malfunction • Short to power supply in the wiring harness between wastegate control solenoid valve terminal B and PCM terminal 2AA • PCM malfunction



WASTEGATE CONTROL SOLENOID VALVE WIRING HARNESS-SIDE CONNECTOR



PCM WIRING HARNESS-SIDE CONNECTOR

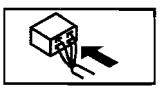
2BH	2BD	2AZ	2AV	2AR	2AN	2AJ	2AF	2AB	2X	2T	2P	2L	2H	2D



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT WASTEGATE CONTROL SOLENOID VALVE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the wastegate control solenoid valve connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT WASTEGATE CONTROL SOLENOID VALVE** • Inspect the wastegate control solenoid valve. (See01-13B-16 WASTEGATE CONTROL SOLENOID VALVE INSPECTION[L3 WITH TC].) • Is there any malfunction?	Yes	Replace the wastegate control solenoid valve, then go to Step 7. (See01-13B-4 INTAKE AIR SYSTEM REMOVAL/ INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
6	**INSPECT WASTEGATE CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position. • Inspect for continuity between the wastegate control solenoid valve terminal B (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0246 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0300[L3 WITH TC]

id010239806500

DTC P0300	Random misfire detected
DETECTION CONDITION	• The PCM monitors the CKP sensor input signal interval time. The PCM calculates the change of interval time for each cylinder. If the change of interval time exceeds the preprogrammed criteria, the PCM detects a misfire in the corresponding cylinder. While the engine is running, the PCM counts the number of misfires that occurred at **200 crankshaft revolutions** and **1,000 crankshaft revolutions** and calculates a misfire ratio for each crankshaft revolution. If the ratio exceeds the preprogrammed criteria, the PCM determines that a misfire, which can damage the catalytic converter or affect emission performance, has occurred. **Diagnostic support note** • This is a continuous monitor (Misfire). • The MIL illuminates if the PCM detects a misfire which affects emission performance in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • The MIL flashes if the PCM detects a misfire which can damage the catalytic converter during the first drive cycle. • PENDING CODE is available if the PCM detects a misfire which affects emission performance during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• CKP sensor malfunction • CMP sensor malfunction • Ignition coil malfunction • Ignition system malfunction • MAF sensor contamination • Excess air suction in intake air system (between MAF sensor and intake manifold) • Fuel pump malfunction • High pressure fuel pump malfunction • Relief valve (built-in fuel delivery pipe) malfunction • Spill valve control solenoid valve (built-in high pressure fuel pump) malfunction • Improper fuel pump speed control operation • Fuel pressure regulator (built-in fuel pump unit) malfunction • Fuel line clogged • Fuel filter clogged • Fuel leakage in fuel line • Fuel runout • Poor quality fuel • Purge control solenoid valve malfunction • PCV valve malfunction • EGR valve malfunction • Vacuum hoses damage or improper connection • Related connector and terminal malfunction • Related wiring harness malfunction • Insufficient compression • Variable valve timing control system improper

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Misfire related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off then to the ON position (Engine off). • Verify related pending code or stored DTCs. • Are other DTCs present?	Yes	Go to the appropriate DTC troubleshooting. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
4	**VERIFY CURRENT INPUT SIGNAL STATUS (KEY TO ON/IDLE)** • Access APP1, APP2, ECT, IAT, MAF, RPM, TP, and VSS PIDs using the M-MDS. (See01-40B-7 PCM INSPECTION[L3 WITH TC].) • Is there any signal that is far out of specification when the ignition switch is turned to the ON position and the engine idles?	Yes	Inspect the suspected circuit and/or part according to the inspection results. (See01-40B-7 PCM INSPECTION[L3 WITH TC].) Then go to Step 26.
		No	Go to the next step.
5	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION** • Inspect the same PIDs as in Step 4 while simulating FREEZE FRAME DATA condition. • Is there any signal which causes drastic changes?	Yes	Inspect the suspected circuit and/or part according to the inspection results. (See01-40B-7 PCM INSPECTION[L3 WITH TC].) Then go to Step 26.
		No	Go to the next step.
6	**INSPECT CMP SENSOR** • Inspect the CMP sensor. (See01-40B-47 CAMSHAFT POSITION (CMP) SENSOR INSPECTION[L3 WITH TC].) • Is the CMP sensor normal?	Yes	Go to the next step.
		No	Inspect the installation condition for damage to the timing chain and gears, repair the malfunctioning part. • If it is normal, replace the CMP sensor. Then go to Step 26.
7	**VERIFY CKP SENSOR INSTALLATION CONDITION** • Inspect the CKP sensor for looseness. • Is the CKP sensor loose?	Yes	Retighten the CKP sensor, then go to Step.
		No	Go to the next step.
8	**INSPECT IGNITION COIL HARNESSES** • Inspect the ignition coil related wiring harness condition (intermittent open or short) for all cylinders. • Are wiring harness conditions normal?	Yes	Go to the next step.
		No	Repair the suspected wiring harnesses, then go to Step 26.
9	**INSPECT IGNITION SYSTEM OPERATION** • Carry the out spark test. (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC]) • Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the spark test result. Then go to Step 26.
10	**INSPECT MAF PID** • Start the engine. • Access the MAF PID using the M-MDS. • Race the engine and verify that the MAF PID changes quickly according to the change in the engine speed. • Is the MAF PID response normal?	Yes	Go to the next step.
		No	Replace the MAF sensor, then go to Step 26.
11	**INSPECT IN INTAKE AIR SYSTEM FOR EXCESSIVE AIR SUCTION** • Inspect for air leakage at the following: — Between the MAF sensor and throttle body — Between throttle body and intake manifold • Is there any malfunction?	Yes	Repair or replace suspected part, then go to Step 26.
		No	Go to the next step.
12	**INSPECT FUEL LINE PRESSURE** • Inspect fuel line pressure. (See01-14B-6 FUEL LINE PRESSURE INSPECTION[L3 WITH TC].) • Is the fuel line pressure normal?	Yes	Go to Step 14.
		No	If the fuel line pressure is too low, go to the next step. If the fuel line pressure is too high, replace the fuel pump unit, then go to Step 26.
13	**INSPECT FUEL LINE FROM FUEL PUMP TO FUEL DELIVERY PIPE** • Visually inspect fuel line for fuel leakage. • Is there any fuel leakage?	Yes	Replace suspected fuel line, then go to Step 20.
		No	Inspect the fuel filters for following: • Foreign material or stain inside fuel filter (low-pressure side) Perform following actions depend on the result above. • If foreign materials or stain is found inside fuel filter (low-pressure side), clean the fuel tank and filter (low-pressure side). • If normal, replace the fuel pump unit. Then, go to Step 26.

STEP	INSPECTION		ACTION
14	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression. (See01-10B-9 COMPRESSION INSPECTION[L3 WITH TC].) • Is it normal?	Yes	Go to the next step.
		No	Perform engine overhaul for repairs, then go to Step 26.
15	**INSPECT VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Inspect variable valve timing control system operation. (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC]) • Does the variable valve timing control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the variable valve timing control system inspection results, then go to Step 26.
16	**INSPECT OPERATION OF PURGE CONTROL SOLENOID VALVE** • Turn the ignition switch off. • Connect the vacuum pump to the purge control solenoid valve and apply vacuum to the solenoid. • Verify that the solenoid holds vacuum. • Turn the ignition switch to the ON position (Engine off). • Access EVAPCP PID in the SIMULATION TEST using the M-MDS. • Set duty value to **100%** for the EVAPCP PID. • Apply vacuum while turning the solenoid from OFF to ON and simulating the EVAPCP PID with a **100%** duty value. • Verify that the solenoid releases vacuum while the solenoid is turned on. • Is the purge control solenoid valve operation normal?	Yes	Go to the next step.
		No	Replace the purge control solenoid valve, then go to Step 26.
17	**INSPECT PCV VALVE OPERATION** • Turn the ignition switch off. • Remove the PCV valve and inspect the valve operation. (See01-16B-15 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION[L3 WITH TC].) • Is the PCV valve operation normal?	Yes	Replace the PCV valve, then go to Step 26.
		No	Go to the next step.
18	**INSPECT OPERATION OF EGR VALVE** • Remove the EGR valve. • Visually inspect the if EGR valve is stuck open. • Is the EGR valve stuck open?	Yes	Repair or replace the EGR valve, then go to Step 26.
		No	Go to the next step.
19	**VERIFY FUEL PUMP SPEED CONTROL OPERATION** • Perform Fuel Pump Speed Control Inspection. (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) • Does the fuel pump speed control work properly?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to inspection results. Then go to Step 26.
20	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Access and monitor the FUEL_PRES PID. • Is the FUEL_PRES PID value within the specification? (See01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to Step 24.
		No	Go to the next step.
21	**IDENTIFY CAUSE BY FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 23.
22	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See01-40B-38 FUEL PRESSURE SENSOR INSPECTION[L3 WITH TC].) • Is the fuel pressure sensor normal?	Yes	Go to the next step.
		No	Replace the fuel delivery pipe, then go to Step 26.

STEP	INSPECTION		ACTION
23	**INSPECT HIGH PRESSURE FUEL PUMP** • Replace the high pressure fuel pump • Monitor FUEL_PRES PID • Is the FUEL_PRES PID value within the specified? (See01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to Step 26.
		No	Go to the next step.
24	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between the fuel pump and the high pressure fuel pump. • Measure the low side fuel pressure. (See01-14B-6 FUEL LINE PRESSURE INSPECTION[L3 WITH TC].) • Is the low side fuel pressure within the specification?	Yes	Go to the next step.
		No	Inspect for the following. • Fuel line restriction • Fuel filter clogging If normal replace the fuel pump.Then go to Step 26.
25	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** • Perform "ENGINE COOLANT LEAKAGE INSPECTION." (See01-12B-6 ENGINE COOLANT LEAKAGE INSPECTION[L3 WITH TC].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results. Then go to the next step.
		No	Go to the next step.
26	**VERIFY TROUBLESHOOTING OF MISFIRE DTC COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the memory using the M-MDS. • Perform the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See01-02B-10 OBD-II DRIVE MODE[L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
27	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0301, P0302, P0303, P0304[L3 WITH TC]

id010239806600

DTC P0301 DTC P0302 DTC P0303 DTC P0304	**Cylinder No.1 misfire detected** **Cylinder No.2 misfire detected** **Cylinder No.3 misfire detected** **Cylinder No.4 misfire detected**
DETECTION CONDITION	• The PCM monitors the CKP sensor input signal interval time. The PCM calculates the change of interval time for each cylinder. If the change of interval time exceeds the preprogrammed criteria, the PCM detects a misfire in the corresponding cylinder. While the engine is running, the PCM counts the number of misfires that occurred at **200 crankshaft revolutions** and **1,000 crankshaft revolutions** and calculates a misfire ratio for each crankshaft revolution. If the ratio exceeds the preprogrammed criteria, the PCM determines that a misfire, which can damage the catalytic converter or affect emission performance, has occurred. **Diagnostic support note** • This is a continuous monitor (Misfire). • The MIL illuminates if the PCM detects a misfire which affects emission performance in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • The MIL flashes if the PCM detects a misfire which can damage the catalytic converter during the first drive cycle. • PENDING CODE is available if the PCM detects a misfire which affects emission performance during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Spark plug malfunction • Ignition coil malfunction • Ignition system malfunction • Fuel injector malfunction • Air suction in intake air system (between dynamic chamber and cylinder head) • Inadequate engine compression due to engine internal malfunction • Related connector or terminal malfunction • Related wiring harness

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Misfire related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCs** • Turn the ignition switch off then to the ON position (Engine off). • Verify related pending code or stored DTCs. • Are other DTCs present?	Yes	Go to the appropriate DTC troubleshooting. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Go to the next step.
4	**VERIFY CURRENT INPUT SIGNAL STATUS (KEY TO ON /IDLE)** • Access APP1, APP2, ECT, IAT, MAF, RPM, TP and VSS PIDs using the M-MDS. (See01-40B-7 PCM INSPECTION[L3 WITH TC].) • Is there any signal that is far out of specification when the ignition switch is turned to the ON position and the engine idles?	Yes	Inspect the suspected circuit and/or part according to inspection results. Then go to Step 14. (See01-40B-7 PCM INSPECTION[L3 WITH TC].)
		No	Go to the next step.
5	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION** • Inspect the same PIDs as in Step 4 while simulating the FREEZE FRAME DATA condition. • Is there any signal which causes drastic changes?	Yes	Inspect the suspected circuit and/or part according to inspection results. Then go to Step 14. (See01-40B-7 PCM INSPECTION[L3 WITH TC].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
6	**INSPECT SPARK PLUG CONDITION** • Turn the ignition switch off. • Remove the spark plug from the suspected cylinder. • Inspect the spark plug condition: — Cracks — Excess wear — Gap — Wetness • Is there any problem found on the spark plug?	Yes	• If a spark plug is wet, fuel flooding is suspected. Then go to Step 14. • If a spark plug has cracks, excessive wear or an improper gap, replace the malfunctioning spark plug. Then go to Step 14.
		No	Go to the next step.
7	**INSPECT INTAKE-AIR SYSTEM FOR AIR SUCTION** • Inspect for air leakage at the following: — Around connection of dynamic chamber and intake manifold — Around connection of intake manifold and cylinder head • Is air leakage found?	Yes	Repair or replace suspected part, then go to Step 14.
		No	Go to the next step.
8	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** • Perform "ENGINE COOLANT LEAKAGE INSPECTION." (See01-12B-6 ENGINE COOLANT LEAKAGE INSPECTION[L3 WITH TC].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results. Then go to Step 14.
		No	Go to the next step.
9	**INSPECT FUEL INJECTOR WIRING HARNESS** • Remove the intake air system parts. • Disconnect the fuel injector connector on suspected cylinder. • Connect the NOID LIGHT to the fuel injector terminals. • Inspect the light dim during cranking. • Does the light not illuminate?	Yes	Go to the next step.
		No	Inspect the fuel injector wiring harnesses. Repair or replace if necessary, then go to Step 14.
10	**INSPECT IGNITION COIL HARNESSES** • Inspect the ignition coil related wiring harness condition (intermittent open or short circuit) of the suspected cylinder. • Are the wiring harness conditions normal?	Yes	Go to the next step.
		No	Repair the suspected wiring harnesses, then go to Step 14.
11	**INSPECT IGNITION SYSTEM OPERATION** • Carry out the spark test. (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC]) • Is a strong blue spark visible at the suspected cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the spark test result. Then go to Step 14.
12	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression. (See01-10B-9 COMPRESSION INSPECTION[L3 WITH TC].) • Is the engine compression normal?	Yes	Go to the next step.
		No	Overhaul the engine, then go to the next step.
13	**INSPECT FUEL INJECTOR OPERATION** • Connect the M-MDS to DLC-2. • Access INJ#1, INJ#2, INJ#3, INJ#4 PIDs. • Start the engine and warm it up to the normal operating temperature. • Turn the fuel injector off from on using the PID simulation function. • Does the engine speed decrease while the fuel injectors are turned off?	Yes	Go to Step 14.
		No	Go to the next step.

STEP	INSPECTION		ACTION
14	**VERIFY IF TROUBLESHOOTING OF MISFIRE DTC COMPLETED** • Make sure to reconnect all disconnected connectors. • Start the engine. • Clear the DTC from the PCM memory using the M-MDS. • Perform the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See01-02B-10 OBD-II DRIVE MODE[L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
15	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0327[L3 WITH TC]

id010239806700

DTC P0327	Knock sensor circuit low input
DETECTION CONDITION	• PCM monitors the input signal from the knock sensor when the engine is running. If the input voltage at the PCM terminals between 2V and 2U is **below 0.12 V**, the PCM determines that the knock sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Knock sensor malfunction • Connector or terminal malfunction • Open or short to ground circuit between knock sensor connector terminal A and PCM terminal 2U • Open or short to ground circuit between knock sensor connector terminal B and PCM terminal 2V • Knock sensor wires (2) shorted • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT KNOCK SENSOR CONNECTOR TERMINAL FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the knock sensor connector. • Check for poor connection at terminals A and B (such as damaged, pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT KNOCK SENSOR** • Perform the knock sensor inspection. (See01-40B-49 KNOCK SENSOR (KS) INSPECTION[L3 WITH TC]) • Is the knock sensor normal?	Yes	Go to the next step.
		No	Replace the knock sensor, then go to the next step.
5	**INSPECT KNOCK SENSOR CIRCUITS FOR OPEN CIRCUIT** • Disconnect the knock sensor connector. • Inspect the continuity between the following circuits: — Knock sensor female terminal A (harness-side) and PCM terminal 2U (harness-side) — Knock sensor female terminal B (harness-side) and PCM terminal 2V (harness-side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the suspected wiring harness, then go to Step 9.
6	**INSPECT KNOCK SENSOR CIRCUITS FOR SHORT TO GROUND** • Inspect the continuity between the following circuits: — Knock sensor female terminal A (harness-side) and body ground — Knock sensor female terminal B (harness-side) and body ground • Is there continuity?	Yes	Repair or replace the suspected wiring harness, then go to Step 9.
		No	Go to the next step.
7	**INSPECT FOR SHORT CIRCUITS** • Inspect for continuity between knock sensor female terminals A and B (harness-side). • Is there continuity?	Yes	Repair or replace the suspected wiring harness, then go to Step 9.
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR TERMINAL FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection at terminals 2V and 2U (such as damaged, pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to the next step.
		No	Go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0327 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the M-MDS. • Start the engine and warm it up completely. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0328[L3 WITH TC]

id010239806800

DTC P0328	Knock sensor circuit high input
DETECTION CONDITION	• PCM monitors the input signal from the knock sensor when the engine is running. If the input voltage at the PCM terminals between 2V and 2U is **above 4.9 V**, the PCM determines that the knock sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Knock sensor malfunction • Connector or terminal malfunction • Short to the power supply in the wiring harness between knock sensor terminal A and PCM terminal 2U • Short to the power supply in the wiring harness between knock sensor terminal B and PCM terminal 2V • PCM malfunction

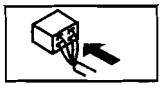
2BH	2BD	2AZ	2AV	2AR	2AN	2AJ	2AF	2AB	2X	2T	2P	2L	2H	2D



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT KNOCK SENSOR CONNECTOR TERMINAL FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the knock sensor connector. • Inspect for poor connection at terminals A and B (such as damaged, pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to step 7.
		No	Go to the next step.
4	**INSPECT KNOCK SENSOR** • Perform the knock sensor inspection. (See01-40B-49 KNOCK SENSOR (KS) INSPECTION[L3 WITH TC]) • Is the knock sensor normal?	Yes	Go to the next step.
		No	Replace the knock sensor, then go to step 7.
5	**INSPECT KNOCK SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn ignition switch to the ON position (Engine off). • Measure the voltage between knock sensor terminal A (harness-side) and body ground and knock sensor terminal B (harness-side) and body ground. • Is there any voltage?	Yes	Repair or replace the wiring harness for a short to the power supply, then go to step 7.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0328 COMPLETED** • Make sure to connect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the M-MDS. • Start the engine and warm it up completely. • Is same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0335[L3 WITH TC]

id010239806900

DTC P0335	CKP sensor circuit malfunction
DETECTION CONDITION	• If the PCM does not receive the input voltage from the CKP sensor for **4.2 s** while the MAF is **2.0 g/s {0.26 lb/min.} or above**, the PCM determines that the CKP sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• CKP sensor malfunction • Connector or terminal malfunction • CKP sensor is dirty. • Short to the power supply between CKP sensor terminal A and PCM terminal 2P • Short to the power supply between CKP sensor terminal B and PCM terminal 2W • Short to ground between CKP sensor terminal C and main relay • Short to ground between CKP sensor terminal B and PCM terminal 2W • Open circuit between CKP sensor terminal A and PCM terminal 2P • Open circuit between CKP sensor terminal B and PCM terminal 2W • Open circuit between CKP sensor terminal C and main relay • CKP sensor pulse wheel malfunction • Both CKP sensor wires are shorted to each other • PCM malfunction

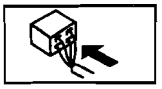
2BH	2BD	2AZ	2AV	2AR	2AN	2AJ	2AF	2AB	2X	2T	2P	2L	2H	2D



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY CKP SENSOR VOLTAGE** • Disconnect the CKP sensor connector. • Connect the voltmeter between the CKP sensor connector terminals B and C (sensor-side). • Inspect the voltage in the AC range while cranking the engine. • Is there any voltage?	Yes	Go to the next step.
		No	Go to step 10.
4	**INSPECT CKP SENSOR CONNECTOR FOR POOR CONNECTION** • Verify that the CKP sensor connector is connected securely. • Is connector normal?	Yes	Go to the next step.
		No	Reconnect the connector, then go to Step 11.
5	**INSPECT CKP CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn ignition switch OFF • Disconnect the CKP sensor connector. • Turn ignition switch to the ON position (Engine off). • Measure the voltage between following terminals (harness-side): — CKP sensor terminal A — CKP sensor terminal B • Is there any voltage?	Yes	Repair or replace the suspected wiring harness, then go to Step 11.
		No	Go to the next step.
6	**INSPECT CKP CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between following terminal and body ground: — CKP sensor connector terminal C (harness-side) — CKP sensor connector terminal B (harness-side) • Is there continuity?	Yes	Repair or replace the suspected wiring harness, then go to Step 11.
		No	Go to the next step.
7	**INSPECT CKP CIRCUITS FOR SHORT CIRCUIT** • Inspect for continuity between CKP sensor connector terminals B and C (harness-side). • Is there continuity?	Yes	Repair or replace the suspected wiring harness, then go to Step 11.
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 11.
		No	Go to the next step.
9	**INSPECT CKP CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between the following circuits: — CKP sensor terminal A (harness-side) and PCM terminal 2P (harness-side) — CKP sensor terminal B (harness-side) and PCM terminal 2W (harness-side) — CKP sensor terminal C (harness-side) and main relay • Are there continuity?	Yes	Go to Step 11.
		No	Repair or replace the suspected wiring harness, then go to Step 11.

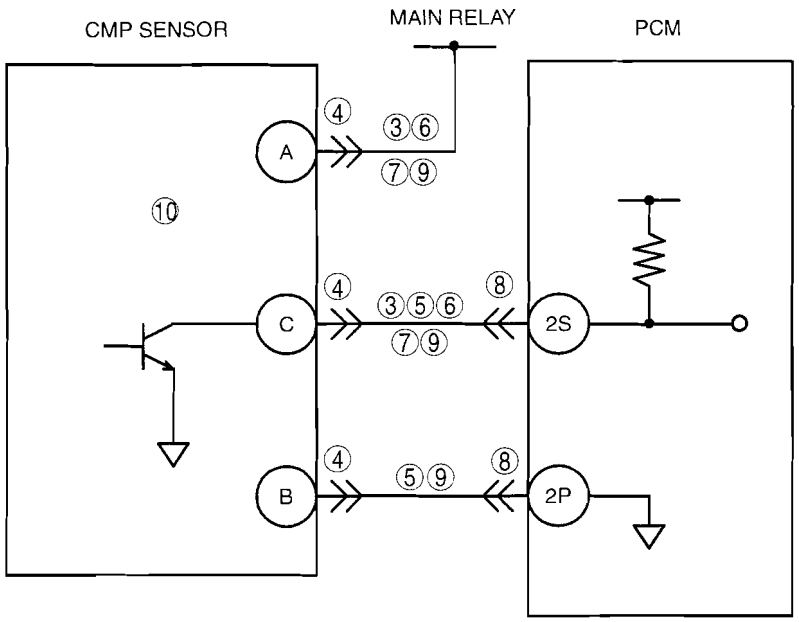
STEP	INSPECTION		ACTION
10	**INSPECT CKP SENSOR** • Turn the ignition switch off. • Perform the CKP sensor inspection. (See01-40B-45 CRANKSHAFT POSITION (CKP) SENSOR INSPECTION[L3 WITH TC]) • Is the CKP sensor normal?	Yes	Go to the next step.
		No	Inspect the CKP sensor pulse wheel for damage. Replace the CKP sensor pulse wheel and go to the next step.
11	**VERIFY TROUBLESHOOTING OF DTC P0335 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Access the MAF PID using the M-MDS. **Note** • The MAF PID should indicate **2.0 g/s {0.26 lb/min.} or above** during this test • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0340[L3 WITH TC]

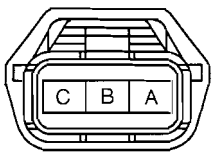
id010239807000

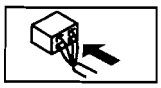
DTC P0340	Camshaft position (CMP) sensor circuit malfunction
DETECTION CONDITION	• PCM monitors the input voltage from the CMP sensor when engine is running. If the PCM does not receive the input voltage from the CMP sensor while the PCM receives the input signal from the CKP sensor, the PCM determines that the CMP circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• CMP sensor malfunction • Connector or terminal malfunction • CMP sensor is dirty • Short to the power circuit between CMP sensor terminal C and PCM terminal 2S • Short to the power circuit between CMP sensor terminal B and PCM terminal 2P • Short to ground circuit between CMP sensor terminal A and main relay • Short to ground circuit between CMP sensor terminal C and PCM terminal 2S • Open circuit between CMP sensor terminal A and main relay • Open circuit between CMP sensor terminal B and PCM terminal 2P • Open circuit between CMP sensor terminal C and PCM terminal 2S • Both CMP sensor wires are shorted to each other • CKP sensor pulse wheel malfunction • CKP sensor misinstallation • Timing chain misinstallation • Loose timing chain or improper valve timing • Loose camshaft sprocket lock bolt • Loose crankshaft pulley lock bolt • PCM malfunction

DTC P0340	Camshaft position (CMP) sensor circuit malfunction

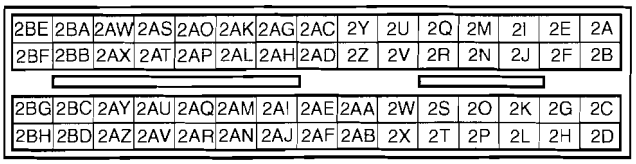


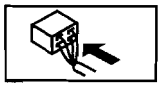
CMP SENSOR
WIRING HARNESS-SIDE CONNECTOR





PCM
WIRING HARNESS SIDE CONNECTOR





Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY CMP SENSOR VOLTAGE** • Disconnect the CMP sensor connector. • Connect a voltmeter between CMP sensor connector terminals A and C (sensor-side). • Inspect the voltage in AC range while cranking the engine. • Is there any voltage?	Yes	Go to the next step.
		No	Go to step 10.
4	**INSPECT CMP SENSOR CONNECTOR FOR POOR CONNECTION** • Verify that the CMP sensor connector is connected securely. • Is the connector normal?	Yes	Go to the next step.
		No	Reconnect the connector, then go to Step 15.

STEP	INSPECTION		ACTION
5	**INSPECT CMP CIRCUIT FOR SHORT TO POWER** • Turn ignition switch OFF. • Disconnect the CMP sensor connector. • Turn ignition switch to the ON position (Engine off) • Measure voltage between the following terminals: — CMP sensor connector terminal C (harness-side) and body ground — CMP sensor connector terminal B (harness-side) and body ground • Is the voltage **B+**?	Yes	Repair or replace the suspected wiring harness, then go to Step 15.
		No	Go to the next step.
6	**INSPECT CMP CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between the following terminal and body ground: — CMP sensor connector terminal A (harness-side) — CMP sensor connector terminal C (harness-side) • Is there continuity?	Yes	Repair or replace the suspected wiring harness, then go to Step 15.
		No	Go to the next step.
7	**INSPECT CMP CIRCUITS FOR SHORT CIRCUIT** • Inspect for continuity between CMP sensor connector terminals A and C (harness-side). • Is there continuity?	Yes	Repair or replace the suspected wiring harness, then go to Step 15.
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (damaged, pulled-out terminals, corrosion, etc.). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 15.
		No	Go to the next step.
9	**INSPECT CMP CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between the following circuits: — CMP sensor terminal A (harness-side) and main relay — CMP sensor terminal B (harness-side) and PCM terminal 2P (harness-side) — CMP sensor terminal C (harness-side) and PCM terminal 2S (harness-side) • Is there continuity?	Yes	Go to Step 11.
		No	Repair or replace the suspected wiring harness, then go to Step 15.
10	**INSPECT CMP SENSOR** • Turn the ignition switch off. • Perform the CMP sensor inspection. (See01-40B-47 CAMSHAFT POSITION (CMP) SENSOR INSPECTION[L3 WITH TC].) • Is the CMP sensor normal?	Yes	Go to the Step 15.
		No	Replace the CMP sensor and go to Step 15.
11	**VERIFY CMP SENSOR INSTALLATION** • Verify the CKP sensor installation. (See01-40B-47 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/ INSTALLATION[L3 WITH TC].) • Is the CMP sensor installed correctly?	Yes	Go to the next step.
		No	Reinstall the CKP sensor and go to Step 15.
12	**VERIFY VALVE TIMING MECHANISM INSTALLATION** • Verify the valve timing mechanism installation for the following parts: — Timing chain misinstallation — Loose camshaft sprocket lock bolt — Loose crankshaft pulley lock bolt • Is the valve timing mechanism installed correctly?	Yes	Go to the next step.
		No	Reinstall the following parts and go to Step 15. • Timing chain • Camshaft sprocket • Crankshaft pulley

STEP	INSPECTION		ACTION
13	**INSPECT STOPPER PIN MECHANISM** • Remove the timing chain. • Inspect the stopper pin. (See01-10B-33 VARIABLE VALVE TIMING ACTUATOR INSPECTION[L3 WITH TC].) • Is the stopper pin mechanism normal?	Yes	Go to the next step.
		No	Replace the variable valve timing actuator, then go to Step 15.
14	**INSPECT ROTOR POSITION** • Remove the variable valve timing actuator. (See01-10B-32 VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION[L3 WITH TC]) • Is the rotor position at the maximum valve timing retard?	Yes	**VARIABLE VALVE TIMING MECHANISM NORMAL** **Note** • This DTC is detected as an intermittent concern. • The intermittent concern might be removed by cleaning the variable valve timing mode control function. Go to the next step.
		No	Replace the variable valve timing actuator, then go to the next step.
15	**VERIFY TROUBLESHOOTING OF DTC P0340 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Access the MAF PID using the M-MDS. **Note** • The MAF PID should indicate **1.95 g/s {0.25 lb/min.} or above** during this test • Is same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
16	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0401[L3 WITH TC]

id010239815300

DTC P0401	EGR flow insufficient detected
DETECTION CONDITION	• PCM monitors the difference in intake manifold pressures when the EGR is operated and when it is stopped. If the difference is too small, the PCM determines that the EGR flow is insufficient. **Diagnostic support note** • This is an intermittent monitor (EGR system). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• EGR valve malfunction • MAP sensor malfunction • EGR gasket malfunction • Vacuum hose looseness or damage • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (EGR system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FOR OTHER DTCS** • Turn the ignition switch off then to the ON position (Engine off). • Have other DTCs been stored?	Yes	Repair the circuit malfunction for applicable DTCs.
		No	Go to the next step.
4	**INSPECT VACUUM HOSE CONDITION** • Inspect freezing vacuum hoses for clogs, damage, frozen, or vacuum leakage. • Is there any malfunction?	Yes	Replace the vacuum hoses, then go to Step 8.
		No	Go to the next step.
5	**INSPECT EGR VALVE MALFUNCTION** • Inspect the EGR valve. (See01-16B-13 EGR VALVE INSPECTION[L3 WITH TC].) • Is the EGR valve normal?	Yes	Go to the next step.
		No	Replace the EGR valve, then go to Step 8.
6	**INSPECT MAP SENSOR MALFUNCTION** • Perform the MAP sensor inspection. (See01-40B-32 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION[L3 WITH TC].) • Is the EGR valve normal?	Yes	Go to the next step.
		No	Replace the MAP sensor, then go to Step 8.
7	**INSPECT EGR VALVE PASSAGE** • Turn the ignition switch off. • Remove the EGR valve. • Is the gasket installation normal?	Yes	Go to the next step.
		No	Install the gasket correctly, then go to the next step.
8	**MONITOR EGR SYSTEM BY DRIVE MODE** • Clear the DTC from the PCM memory using the M-MDS. • Run the PCM Adaptive Memory Procedure Drive Mode. (See01-02B-10 OBD-II DRIVE MODE[L3 WITH TC].) • Stop the vehicle and access the ON BOARD READINESS TEST to inspect the DRIVE MODE completion status. • Verify the FUEL_EVAL and EGR_EVAL PIDs status. • Do the FUEL_EVAL and EGR_EVAL PIDs change to Yes?	Yes	Go to the next step.
		No	Retry this step.
9	**VERIFY TROUBLESHOOTING OF DTC P0401 COMPLETED** • Make sure to reconnect all disconnected connectors. • Access the DIAGNOSTIC MONITORING TEST RESULTS. (See01-02B-7 ON-BOARD DIAGNOSTIC TEST[L3 WITH TC].) • Verify the TEST #10: 31: 83 (EGR pressure variation) value. • Is the value within the specification?	Yes	Go to the next step.
		No	Replace the PCM, then go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0403[L3 WITH TC]

id010239807100

DTC P0403	EGR valve (stepper motor) circuit malfunction
DETECTION CONDITION	• PCM monitors the input voltage from the EGR valve. If the voltage remain low or high, the PCM determines that the EGR valve circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is not available. • DTCs are not stored in the PCM memory.
POSSIBLE CAUSE	• EGR valve malfunction • Connector or terminal malfunction • Short to the power supply in the wiring harness between EGR valve terminal E and PCM terminal 2AQ • Short to the power supply in the wiring harness between EGR valve terminal A and PCM terminal 2AM • Short to the power supply in the wiring harness between EGR valve terminal B and PCM terminal 2AR • Short to the power supply in the wiring harness between EGR valve terminal F and PCM terminal 2AN • Short to ground circuit in wiring harness between EGR valve terminal E and PCM terminal 2AQ • Short to ground circuit in wiring harness between EGR valve terminal A and PCM terminal 2AM • Short to ground circuit in wiring harness between EGR valve terminal B and PCM terminal 2AR • Short to ground circuit in wiring harness between EGR valve terminal F and PCM terminal 2AN • Open circuit in the wiring harness between EGR valve terminal E and PCM terminal 2AQ • Open circuit in the wiring harness between EGR valve terminal A and PCM terminal 2AM • Open circuit in the wiring harness between EGR valve terminal B and PCM terminal 2AR • Open circuit in the wiring harness between EGR valve terminal F and PCM terminal 2AN • Open circuit in the wiring harness between main relay and EGR valve terminal C • Open circuit in the wiring harness between main relay and EGR valve terminal D • PCM malfunction

2BH	2BD	2AZ	2AV	2AR	2AN	2AJ	2AF	2AB	2X	2T	2P	2L	2H	2D

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT EGR VALVE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the EGR valve connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminals and/or connector, then go to Step 10.
		No	Go to the next step.
4	**INSPECT POWER CIRCUIT FOR OPEN CIRCUIT** • Turn ignition switch to the ON position (Engine off). • Measure the voltage following the terminal and body ground. — EGR valve terminal C (harness-side) — EGR valve terminal D (harness-side) • Is voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit then go to Step 10.
5	**INSPECT EGR VALVE** • Perform the EGR valve inspection. (See01-16B-13 EGR VALVE INSPECTION[L3 WITH TC].) • Is the EGR valve normal?	Yes	Go to the next step.
		No	Replace the EGR valve, then go to Step 10.
6	**INSPECT FOR CONTROL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between the following terminals and body ground: — EGR valve terminal E (harness-side) — EGR valve terminal A (harness-side) — EGR valve terminal B (harness-side) — EGR valve terminal F (harness-side) • is there continuity?	Yes	Repair or replace the wiring harness for a short to ground, then go to Step 10.
		No	Go to the next step.
7	**INSPECT FOR CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between the following terminals and body ground: — EGR valve terminal E (harness-side) — EGR valve terminal A (harness-side) — EGR valve terminal B (harness-side) — EGR valve terminal F (harness-side) • Is voltage **B+**?	Yes	Repair or replace wiring harness for a short to power supply, then go to Step 10.
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminals and/or connector, then go to Step 10.
		No	Go to the next step.

STEP	INSPECTION		ACTION
9	**INSPECT CONTROL CIRCUIT FOR OPEN CIRCUIT** • Remove the PCM with PCM connector connected. • Inspect for continuity between the following terminals (harness-side): — Between EGR valve terminal E and PCM terminal 2AQ — Between EGR valve terminal A and PCM terminal 2AM — Between EGR valve terminal B and PCM terminal 2AR — Between EGR valve terminal F and PCM terminal 2AN • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0403 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Turn the ignition switch off. • Start the engine and warm it up completely. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0421[L3 WITH TC]

id010239807300

DTC P0421	Warm up catalyst system efficiency below threshold
DETECTION CONDITION	• The PCM compares the number of front HO2S and rear HO2S inversions for a predetermined time. The PCM monitors the rear HO2S inversion ratio when the following conditions are met: The PCM detects inversion ratio. If the inversion ratio is below threshold, the PCM determine that catalyst system has deteriorated. — The front HO2S inversion ratio is as prescribed when the following monitoring conditions are met: — The accumulated occurrence time of the following monitoring conditions has exceeded the prescribed time limit: **MONITORING CONDITIONS** — Engine speed:**1,500—3,250 rpm** — Calculated TWC temperature: **above 400 °C {752 °F}** — LOAD:**15—48%** (at engine speed of **2,000 rpm**) **Diagnostic support note** • This is an intermittent monitor (Catalyst). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • DIAGNOSTIC MONITORING TEST RESULTS is available. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• TWC deterioration or malfunction • Exhaust gas leakage • Loose front HO2S • Loose rear HO2S • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Catalyst related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Are other DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Go to the next step.
4	**INSPECT EXHAUST SYSTEM FOR EXHAUST GAS LEAKAGE** • Visually inspect for exhaust gas leakage in the exhaust system. • Is there exhaust gas leakage?	Yes	Repair or replace the malfunctioning part, then go to Step 7.
		No	Go to the next step.
5	**INSPECT INSTALLATION OF FRONT AND REAR HO2S** • Inspect the front and rear HO2S for looseness. • Is it normal?	Yes	Go to the next step.
		No	Retighten the sensor, then go to Step 7. (See01-15B-2 EXHAUST SYSTEM REMOVAL/ INSTALLATION[L3 WITH TC].)
6	**INSPECT TWC** • Clear the DTC using the M-MDS generic OBD function. • Turn the ignition switch off then back to the ON position. • Inspect the TWC. (See01-16B-15 WARM-UP THREE-WAY CATALYTIC CONVERTER (WU-TWC) INSPECTION[L3 WITH TC].) • Is it normal?	Yes	Replace the heated oxygen sensor, then go to the next step.
		No	Replace the TWC, then go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0421 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the memory using the M-MDS. • Perform the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See01-02B-10 OBD-II DRIVE MODE[L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0441[L3 WITH TC]

id010239041100

DTC P0441	Evaporative emission control system incorrect purge flow
DETECTION CONDITION	• PCM measures the purge line pressure under the following conditions. If the vacuum between the charcoal canister and the intake manifold does not reach the specification, PCM determines that the EVAP system is clogged. **MONITORING CONDITION** — Engine speed: **1,500—3,500 rpm** — Vehicle speed: **53—136 km/h {32.9—84.5 mph}** — Throttle opening angle: **90% or less** — Difference between barometric pressure and manifold absolute pressure: **6.67 kPa or more** **Diagnostic support note** • This is an intermittent monitor (Evaporative emission system). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory. • DIAGNOSTIC MONITORING TEST RESULT is available.
POSSIBLE CAUSE	• Purge solenoid valve malfunction • Evaporative emission system leak detection pump malfunction • Charcoal canister malfunction • EVAP hose damaged or loose • EVAP pipe damaged • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Evaporative emission system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn the ignition switch off then to the ON position (Engine off). • Verify related pending code or stored DTCs. • Is DTC P0443 present?	Yes	Go to the appropriate DTC inspection.
		No	Go to the next step.
4	**DETERMINE IF LEAK CONCERN OR BLOCKAGE CONCERN** • Perform the evaporative system leak inspection. (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) • Does the system inspection fail?	Yes	Go to Step 6.
		No	Go to the next step.
5	**INSPECT IF PURGE SOLENOID VALVE STUCK CLOSED** • Inspect if the purge solenoid valve is stuck closed. (See01-16B-11 PURGE SOLENOID VALVE INSPECTION[L3 WITH TC].) • Is the purge solenoid valve normal?	Yes	Inspect the following parts for clogging. • Vacuum hoses between the intake manifold to the charcoal canister • Catch tank • Charcoal canister Repair or replace the part, then go to Step 11.
		No	Replace the purge solenoid valve, then go to Step 11.

STEP	INSPECTION		ACTION
6	**LOCATE LEAK POINT** • Inspect the following for leakage using the ultrasonic leak detector. — Charcoal canister — Catch tank — Fuel filler cap — EVAP hoses and pipes — Fuel tank • Is leakage found?	Yes	Repair leakage or replace the part, then go to Step 10.
		No	Go to the next step.
7	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP** • Connect all disconnected connectors and hoses. • Place a clamp on the EVAP system leak detection pump hose between the EVAP system leak detection pump and air filter. • Perform the evaporative system leak inspection. (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) • Does the test result fail (red light turns on)?	Yes	Go to Step 9.
		No	Go to the next step.
8	**CONFIRM EVAP SYSTEM LEAK DETECTION PUMP LEAKAGE** • Remove the clamp. • Perform the evaporative system leak inspection. (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) • Does the test result fail (red light turns on)?	Yes	Replace the EVAP system leak detection pump, then go to Step 10.
		No	Go to the next step.
9	**INSPECT FUEL PUMP UNIT INSTALLATION** • Remove the fuel tank. • Visually inspect for damage, insufficient sealing or a poorly installed pump unit. • Is it normal?	Yes	Go to the next step.
		No	Repair or replace the fuel tank or sealing, then go to the next step.
10	**PERFORM LEAK INSPECTION** • Connect all disconnected connectors and hoses. • Perform the evaporative system leak inspection. (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) • Does the test result fail (red light turns on)?	Yes	Leakage still exists. Locate leak the point and repair. Then go to the next step.
		No	Go to the next step
11	**VERIFY TROUBLESHOOTING OF DTC P0441 COMPLETED** • Start the engine and let it idle. • Clear the DTC using the M-MDS. • Turn the ignition switch off. • Perform the "EVAP System Repair Verification Drive Mode". (See01-02B-10 OBD-II DRIVE MODE[L3 WITH TC]) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step.
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0442[L3 WITH TC]

id010239807500

DTC P0442	Evaporative emission control system leak detected (small leak)
DETECTION CONDITION	• PCM measures the pump load current (EVAP line pressure) when the specified period has passed after the EVAP system is sealed when the monitoring conditions are met. If the load does not reach the reference current value within the specified period, the PCM determines that the EVAP system has a small leak. **MONITORING CONDITION** — The ignition switch is turned off. — IAT: **5—35 °C {40—95 °F}** — Battery voltage: **11 V or more** — Atmospheric pressure: **72.2 kPa {542 mmHg, 21.3 inHg} or above** — Fuel tank level: **15—85%** — Time after engine off: **5 hour 10 min** **Diagnostic support note** • This is an intermittent monitor (Evaporative emission system). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory. • DIAGNOSTIC MONITORING TEST RESULT is available.
POSSIBLE CAUSE	• Purge solenoid valve malfunction • EVAP system leak detection pump malfunction • Charcoal canister malfunction • Fuel filler cap malfunction • Fuel tank malfunction • Fuel pump unit poor seal • EVAP hose damaged or loose • EVAP pipe damaged

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Evaporative emission system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn the ignition switch off then to the ON position (Engine off). • Verify related PENDING CODE or stored DTCs. • Are other DTCs present?	Yes	Go to the appropriate DTC inspection.
		No	Go to the next step.
4	**CLASSIFY INTERMITTENT CONCERN OR CONTINUOUS CONCERN** • Perform evaporative system leak inspection. (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) • Does the test result fail?	Yes	Go to the next step.
		No	Intermittent concern exists. Inspect the purge solenoid valve and the EVAP system leak detection pump circuit for an intermittent concern. (See01-03B-77 INTERMITTENT CONCERN TROUBLESHOOTING[L3 WITH TC].)
5	**LOCATE LEAK POINT** • Inspect for leakage for the following using the Evaporative Emissions Tester. — Charcoal canister — Catch tank — Fuel filler cap — EVAP hoses and pipes — Fuel tank • Is leakage found?	Yes	Repair the leakage or replace the part, then go to Step 10.
		No	Go to the next step.

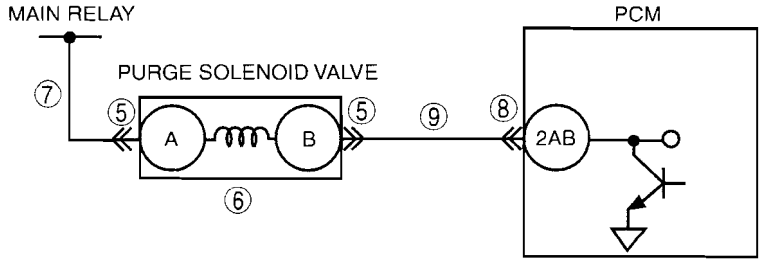
STEP	INSPECTION		ACTION
6	**INSPECT PURGE SOLENOID VALVE** • Inspect purge solenoid valve is stuck closed. (See01-16B-11 PURGE SOLENOID VALVE INSPECTION[L3 WITH TC].) • Is the purge solenoid valve normal?	Yes	Go to the next step.
		No	Replace the purge solenoid valve, then go to Step 10.
7	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP** • Connect all disconnected connectors and hoses. • Place the clamp on the EVAP system leak detection pump hose between the EVAP system leak detection pump and the air filter. • Perform the evaporative system leak inspection. (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) • Does the test result fail?	Yes	Go to Step 9.
		No	Go to the next step.
8	**CONFIRM EVAP SYSTEM LEAK DETECTION PUMP LEAKAGE** • Remove the clamp. • Perform the evaporative system leak inspection. (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) • Does the test result failed?	Yes	Replace the EVAP system leak detection pump, then go to Step 10.
		No	Go to the next step.
9	**INSPECT FUEL PUMP UNIT INSTALLATION** • Remove the fuel tank. • Visually inspect for damage, insufficient sealing or a poorly installed pump unit. • Is it normal?	Yes	Go to the next step.
		No	Repair or replace the fuel tank or sealing, then go to the next step.
10	**PERFORM LEAK INSPECTION** • Connect all disconnected connectors and hoses. • Perform the evaporative system leak inspection. (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) • Does the test result failed?	Yes	Leakage still exists. Locate the leak point and repair. Then go to the next step.
		No	Go to the next step
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0443[L3 WITH TC]

id010239807600

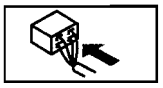
DTC P0443	EVAP control system purge control valve circuit malfunction
DETECTION CONDITION	• PCM monitors the input voltages from the purge solenoid valve. If the voltage remains low or high, the PCM determines that the purge solenoid valve circuit has a malfunction. **Diagnostic support note** • This is an continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Purge solenoid valve malfunction • Connector or terminal malfunction • Short to ground in the wiring harness between purge solenoid valve terminal B and PCM terminal 2AB • Open circuit in the wiring harness between the main relay and purge solenoid valve terminal A • Open circuit in the wiring harness between purge solenoid valve terminal B and PCM terminal 2AB • Short to the power supply between purge solenoid valve terminal B and PCM terminal 2AB • PCM malfunction

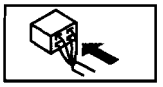
DTC P0443	EVAP control system purge control valve circuit malfunction



PURGE SOLENOID VALVE WIRING HARNESS SIDE CONNECTOR

PCM WIRING HARNESS SIDE CONNECTOR





Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CLASSIFY OPEN CIRCUIT OR SHORT TO GROUND MALFUNCTION** • Disconnect the purge solenoid valve tube that is connected to the intake manifold. • Connect the vacuum pump to the purge solenoid valve. • Pump the vacuum pump several times and stop. • Wait **a few seconds.** • Is the vacuum maintained?	Yes	Go to Step 5.
		No	Go to the next step.
4	**INSPECT PASSAGE CONTROL OF PURGE SOLENOID VALVE** • Turn the ignition switch off. • Disconnect the purge solenoid valve connector. • Pump the vacuum pump several times and wait **a few seconds.** • Is the vacuum maintained?	Yes	Repair or replace the wiring harness for a short to ground, then go to Step 10.
		No	Replace the purge solenoid valve, then go to Step 10.
5	**INSPECT PURGE SOLENOID VALVE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Inspect for poor connection (damaged/pulled-out pins, corrosion, etc.). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
6	**INSPECT PURGE SOLENOID VALVE** • Perform the purge solenoid valve inspection. (See01-16B-11 PURGE SOLENOID VALVE INSPECTION[L3 WITH TC].) • Is the purge solenoid valve normal?	Yes	Go to the next step.
		No	Replace the purge solenoid valve, then go to Step 10.

STEP	INSPECTION		ACTION
7	**INSPECT PURGE SOLENOID VALVE POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Turn ignition switch to the ON position (Engine off). • Measure the voltage between purge solenoid valve connector terminal A and body ground. • Is the voltage **B+?**	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 10.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (damaged/pulled-out pins, corrosion, etc.). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
9	**INSPECT PURGE SOLENOID VALVE CONTROL CIRCUIT** • Turn ignition switch to the ON position (Engine off). • Measure voltage between purge solenoid valve terminal B (harness-side) and body ground. • Is the voltage **B+?**	Yes	Repair or replace the wiring harness for a short to power supply, then go to the next step.
		No	Inspect for continuity between purge solenoid valve terminal B (harness-side) and PCM terminal 2AB (harness-side). • If there is continuity, go to the next step. • If there is no continuity, repair or replace the wiring harness for an open circuit, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0443 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Turn the ignition switch off. • Start the engine and warm it up completely. • Is the PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0446[L3 WITH TC]

id010239807700

DTC P0446	Change over valve (COV) (EVAP system leak detection pump) stuck close
DETECTION CONDITION	• The PCM monitors the pump load current (EVAP line pressure), while the EVAP leak monitor is operating. When the decrease in the pump load current is less than the specification after the reference current value has been obtained, the PCM determines that the change over-valve (COV) in the EVAP system leak detection pump has a malfunction. **Diagnostic support note** • This is an intermittent monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• COV (in EVAP system leak detection pump.) malfunction • Short to the power circuit between the EVAP system leak detection pump terminal C and PCM terminal 1V • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (EVAP system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CHECK COV CONTROL (EVAP SYSTEM LEAK DETECTION PUMP CIRCUIT FOR SHORT TO POWER)** • Turn ignition switch to the ON position (engine OFF). • Disconnect the EVAP system leak detection pump connector. • Measure the voltage between EVAP system leak detection pump connector terminal C (wiring harness-side) and body ground. • Is the voltage **B+?**	Yes	Repair or replace the wiring harness, then go to Step 5.
		No	Go to the next step.
4	**INSPECT COV (EVAP SYSTEM LEAK DETECTION PUMP)** • Inspect the EVAP system leak detection pump. (See01-16B-8 EVAPORATIVE EMISSION (EVAP) SYSTEM LEAK DETECTION PUMP INSPECTION[L3 WITH TC].) • Is the COV (EVAP system leak detection pump) normal?	Yes	Go to the next step.
		No	Replace the EVAP system leak detection pump, then go to the next step.

STEP	INSPECTION		ACTION
5	**VERIFY TROUBLESHOOTING OF DTC P0446 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the M-MDS. • Perform the EVAP system test using the M-MDS. (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) • Is the same DTC present? **Note** • If the EVAP system test function is not available, preform the following procedure: — Perform "EVAP System Repair Verification Drive Mode". (See01-02B-10 OBD-II DRIVE MODE[L3 WITH TC]) — Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step.
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0455[L3 WITH TC]

id010239815500

DTC P0455	Evaporative emission control system leak detected (gross leak)
DETECTION CONDITION	• PCM measures the pump load current (EVAP line pressure) when a specified period has passed after the EVAP system is sealed when monitoring conditions are met. If the load does not reach the reference current value within the specified period, the PCM determines that the EVAP system has a gross leak. **MONITORING CONDITION** — IG switch OFF — IAT: **5—35 °C {40—95 °F}** — Battery voltage: **11 V or more** — Atmospheric pressure: **72.2 kPa {542 mmHg, 21.3 inHg} or above** — Fuel tank level: **15—85%** — Time after engine off: **5 hour 10 min** **Diagnostic support note** • This is an intermittent monitor (Evaporative system monitor). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory. • DIAGNOSTIC MONITORING TEST RESULT is available.
POSSIBLE CAUSE	• Purge solenoid valve malfunction • EVAP system leak detection pump malfunction • Loose, missing or detective fuel filler cap • Charcoal canister malfunction • Fuel tank malfunction • Fuel tank misinstallation • EVAP hose damaged or loose • Poor connection or damaged vacuum hose

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Evaporative emission system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn the ignition switch off then to the ON position (Engine off). • Verify related PENDING CODE or stored DTCs. • Are DTCs P0443 and/or P0446 present?	Yes	Go to the appropriate DTC troubleshooting procedure.
		No	Go to the next step.
4	**CLASSIFY INTERMITTENT CONCERN OR CONTINUOUS CONCERN** • Perform the evaporative system leak inspection. (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) • Does test result fail?	Yes	Go to the next step.
		No	Intermittent concern exists. Inspect the purge solenoid valve and the EVAP system leak detection pump circuit for an intermittent concern. (See01-03B-77 INTERMITTENT CONCERN TROUBLESHOOTING[L3 WITH TC].)
5	**INSPECT FUEL FILLER CAP** • Verify that the fuel-filler cap is neither disconnected nor loose or damaged. • Is it normal? **Note** • When a fuel-filler cap other than an OEM cap is attached, it is considered a malfunction.	Yes	Go to the next step.
		No	Retighten the fuel-filler cap or replace it if it is damaged. Go to Step 17.
6	**INSPECT IF PURGE SOLENOID VALVE IS STUCK** • Inspect the purge solenoid valve. • Is the purge solenoid valve normal?	Yes	Go to the next step.
		No	Replace the purge solenoid valve, then go to Step 17.
7	**INSPECT COV (EVAP SYTEM LEAK DETECTION PUMP)** • Inspect the EVAP system leak detection pump. • Is the COV (EVAP leak detection pump) normal?	Yes	Go to the next step.
		No	Replace the EVAP system leak detection pump, then go to Step 17.
8	**DETERMINE IF EVAP CONTROL SYSTEM FOR LEAKAGE OR BLOCKAGE** **Note** • If the evaporative emission tester is not available, then go to the next step. • Perform the Evaporative System Leak Inspection. • Does the system test fail?	Yes	Repair or replace malfunctioning area, then go to Step 17.
		No	Go to the next step.
9	**INSPECT LEAKAGE OF CHARCOAL CANISTER TO FUEL PUMP** • Disconnect the fuel tank side vacuum hose at the charcoal canister. • Apply vacuum **1.7 KPa {13 mmHg, 0.5 inHg}** to the disconnected vacuum hose using a vacuum pump. • Does the vacuum hold for a minimum of **2 min**?	Yes	Go to the Step 13.
		No	Go to the next step.

STEP	INSPECTION		ACTION
10	**VERIFY POOR CONNECTION OF VACUUM HOSE** • Verify the vacuum hose installation condition between the fuel tank and the charcoal canister. • Is a poor connection detected?	Yes	Connect the vacuum hose correctly, then go to Step 17.
		No	Go to the next step.
11	**INSPECT FUEL TANK INSTALLATION** • Remove the fuel tank. • Visually inspect for damage, insufficient sealing or poorly installed fuel pump unit. • Is it normal?	Yes	Go to the next step.
		No	Repair or replace the fuel tank or sealing, then go to Step 17.
12	**INSPECT FUEL TANK** • Inspect the fuel tank. • Is it normal?	Yes	Replace the vacuum hose from the charcoal canister to the fuel tank, then go to the next step.
		No	Replace the fuel tank, then go to the next step.
13	**INSPECT LEAKAGE FROM CHARCOAL CANISTER TO PURGE SOLENOID VALVE** • Disconnect the purge solenoid valve side vacuum hose at the charcoal canister. • Apply vacuum **3.3 KPa {25 mmHg, 1.0 inHg}** to the disconnected vacuum hose using a vacuum pump. • Does the vacuum hold for a minimum of **2 min**?	Yes	Go to the Step 17.
		No	Go to the next step.
14	**VERIFY POOR CONNECTION OF VACUUM HOSE** • Verify the vacuum hose installation condition between the purge solenoid valve and the charcoal canister. • Is a poor connection detected?	Yes	Connect the vacuum hose correctly, then go to Step 17.
		No	Go to the next step.
15	**INSPECT PURGE SOLENOID VALVE FOR DAMAGE OR AIR LEAKAGE** • Remove the purge solenoid valve and inspect for damage and air leakage. • Is it normal?	Yes	Go to the next step.
		No	Replace the purge solenoid valve, then go to Step 17.
16	**INSPECT CHARCOAL CANISTER** • Remove the charcoal canister and inspect for clogging, damage and pinholes. • Is it normal?	Yes	Replace the vacuum hose from the charcoal canister to the purge solenoid valve, then go to the next step.
		No	Replace the charcoal canister, then go to the next step.
17	**PERFORM LEAK INSPECTION** • Connect all disconnected connectors. • Perform the evaporative system leak inspection. (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) • Does the test result fail?	Yes	Leakage still exists. Locate the leak point and repair. Then go to the next step.
		No	Go to the next step
18	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0456[L3 WITH TC]

id010239807900

DTC P0456	Evaporative emission control system leak detected (very small leak)
DETECTION CONDITION	• PCM measures the pump load current (EVAP line pressure) when a specified period has passed after the EVAP system is sealed when monitoring conditions are met. If the load does not reach the reference load value or the rate of the load increase is lower than the specification within a specified period, the PCM determines that the EVAP system has a very small leak. **MONITORING CONDITION** — IG switch OFF — IAT: **5—35 °C {40—95 °F}** — Battery voltage: **11 V or more** — Atmospheric pressure: **72.2 kPa {542 mmHg, 21.3 inHg} or above** — Fuel tank level: **15—85%** — Time after engine off: **5 hour 10 min** **Diagnostic support note** • This is an intermittent monitor (Evaporative system monitor). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory. • DIAGNOSTIC MONITORING TEST RESULT is available.
POSSIBLE CAUSE	• Purge solenoid valve malfunction • EVAP system leak detection pump malfunction • Charcoal canister malfunction • Fuel cap malfunction • Fuel tank malfunction • Fuel pump unit poor seal • EVAP hose damaged or loose • EVAP pipe damaged

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Evaporative emission system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn the ignition switch off then ON position (Engine off). • Verify related PENDING CODE or stored DTCs. • Are other DTC present?	Yes	Go to the appropriate DTC inspection.
		No	Go to the next step.
4	**CLASSIFY INTERMITTENT CONCERN OR CONTINUOUS CONCERN** • Perform the evaporative system leak inspection. (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) • Does the system test result fail?	Yes	Go to the next step.
		No	Intermittent concern exists. Inspect the purge solenoid valve and the EVAP system leak detection pump circuit for an intermittent concern. (See01-03B-77 INTERMITTENT CONCERN TROUBLESHOOTING[L3 WITH TC].)

STEP	INSPECTION		ACTION
5	**LOCATE LEAK POINT** • Check for leakage for the following using the Evaporative Emission Tester — Charcoal canister — Catch tank — Fuel filler cap — EVAP hoses and pipes — Fuel tank • Is leakage found?	Yes	Repair the leakage or replace the part, then go to Step 10.
		No	Go to the next step.
6	**INSPECT PURGE SOLENOID VALVE** • Inspect if the purge solenoid valve is stuck closed. (See01-16B-11 PURGE SOLENOID VALVE INSPECTION[L3 WITH TC].) • Is the purge solenoid valve normal?	Yes	Go to the next step.
		No	Replace the purge solenoid valve, then go to Step 10.
7	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP** • Connect all disconnected connectors and hoses. • Place a clamp on the EVAP system leak detection pump hose between the EVAP system leak detection pump and the air filter. • Perform the evaporative system leak inspection. (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) • Does the test result fail?	Yes	Go to Step 9.
		No	Go to the next step.
8	**CONFIRM EVAP SYSTEM LEAK DETECTION PUMP LEAKAGE** • Remove the clamp. • Perform the evaporative system leak inspection. (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) • Does the test result fail?	Yes	Replace the EVAP system leak detection pump, then go to Step 10.
		No	Go to the next step.
9	**INSPECT FUEL PUMP UNIT INSTALLATION** • Remove the fuel tank. • Visually inspect for damage, insufficient sealing or a poorly installed pump unit. • Is it normal?	Yes	Go to the next step.
		No	Repair or replace the fuel tank or sealing, then go to the next step.
10	**PERFORM LEAK INSPECTION** • Connect all disconnected connectors and hoses. • Perform the evaporative system leak inspection. (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) • Does the test result fail?	Yes	Leakage still exists. Locate the leak point and repair. Then go to the next step.
		No	Go to next step
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0461[L3 WITH TC]

id010239808000

DTC P0461	Fuel gauge sender unit circuit range/performance
DETECTION CONDITION	• PCM monitors the fuel level voltage difference before and after the PCM-calculated fuel consumption has reached **25 L {26.4 US qt., 22 Imp qt.}**. If the difference is **5%** less than the PCM-calculated fuel consumption, the PCM determines that the fuel gauge sender unit range/performance is in error. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Fuel gauge sender unit malfunction or substandard performance • Instrument cluster malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FUEL GAUGE SENDER UNIT** • Turn the ignition switch off. • Inspect the fuel gauge sender unit. (See 09-22-5 INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE.) • Is the fuel gauge sender unit normal?	Yes	Replace the PCM, then go to the next step.
		No	Repair or replace the fuel gauge sender unit, then go to the next step.
4	**INSPECT INSTRUMENT CLUSTER** • Perform the "INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE" procedure. (See 09-22-5 INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE.) • Is there any malfunction?	Yes	Repair or replace the suspected malfunction, then go to the next step.
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0462[L3 WITH TC]

id010239808100

DTC P0462	Fuel gauge sender unit circuit low input
DETECTION CONDITION	• The PCM monitors the signals of the fuel level and fuel gauge sender unit output voltage from the instrument cluster. If the PCM detects that the fuel level or fuel gauge sender unit output voltage is too low, the PCM determines that the fuel gauge sender unit circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Instrument cluster malfunction • Fuel gauge sender unit malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FUEL GAUGE SENDER UNIT** • Turn the ignition switch off. • Inspect the fuel gauge sender unit. (See 09-22-5 INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE.) • Is the fuel gauge sender unit normal?	Yes	Replace the PCM, then go to the next step.
		No	Repair or replace the fuel gauge sender unit, then go to the next step.
4	**INSPECT INSTRUMENT CLUSTER** • Perform the "INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE" procedure. (See 09-22-5 INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE.) • Is there any malfunction?	Yes	Repair or replace the suspected malfunction, then go to the next step.
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING OF DTC P0462 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the memory using the M-MDS. • Start the engine. • Is the PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step.
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0463[L3 WITH TC]

id010239808200

DTC P0463	Fuel gauge sender unit circuit high input
DETECTION CONDITION	• The PCM monitors the signals of the fuel level and fuel gauge sender unit output voltage from the instrument cluster. If the PCM detects that the fuel level or fuel gauge sender unit output voltage is too high, the PCM determines that the fuel gauge sender unit circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Instrument cluster malfunction • Fuel gauge sender unit malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FUEL GAUGE SENDER UNIT** • Turn the ignition switch off. • Inspect the fuel gauge sender unit. (See 09-22-5 INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE.) • Is the fuel gauge sender unit normal?	Yes	Replace the PCM, then go to the next step.
		No	Repair or replace the fuel gauge sender unit, then go to the next step.
4	**INSPECT INSTRUMENT CLUSTER** • Perform "INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE" procedure. (See 09-22-5 INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE.) • Is there any malfunction?	Yes	Repair or replace the suspected malfunction, then go to the next step.
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING OF DTC P0463 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the memory using the M-MDS. • Start the engine. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step.
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0480[L3 WITH TC]

id010239807400

DTC P0480	Fan control circuit problem
DETECTION CONDITION	• The PCM monitors the input voltage from the fan control module No.1. If the voltage remains low or high, the PCM determines that the fan control circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (Other). • The MIL does not illuminate. • FREEZE FRAME DATA is not available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Fan control module No.1 malfunction • Connector or terminal malfunction • Short to the power supply in the wiring harness between fan control module No.1 terminal 1B and PCM terminal 1AE • Short to ground in the wiring harness between fan control module No.1 terminal 1B and PCM terminal 1AE • Open circuit in the wiring harness between fan control module No.1 terminal 1B and PCM terminal 1AE • PCM malfunction

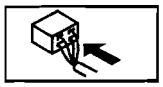
1BH	1BD	1AZ	1AV	1AR	1AN	1AJ	1AF	1AB	1X	1T	1P	1L	1H	1D



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FAN CONTROL MODULE No.1 CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the fan control module No.1 connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT FAN CONTROL MODULE No.1 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between fan control module No.1 terminal 1B (wiring harness-side) and body ground. • Is the voltage **B+?**	Yes	Repair or replace the wiring harness for an open circuit, then go to Step 9.
		No	Go to the next step.
5	**INSPECT FAN CONTROL MODULE No.1 SIGNAL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between fan control module No.1 terminal 1B (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for an open circuit, then go to Step 9.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
7	**INSPECT FAN CONTROL module No.1 SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between fan control module No.1 terminal 1B (wiring harness-side) and PCM terminal 1AE. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 9.
8	**INSPECT FAN CONTROL module No.1** • Perform the fan control module No.1 inspection. (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) • Is the fan control module No.1 normal?	Yes	Go to the next step.
		No	Replace the fan control module No.1, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0480 COMPLETED** • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Turn A/C switch to ON. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0500[L3 WITH TC]

id010239808400

DTC P0500	Vehicle speed sensor (VSS) circuit malfunction
DETECTION CONDITION	• Wheel speed signal from the DSC HU/CM is **below 3.7 km/h {2.3 mph}** when the following conditions are met: — Neutral switch and CPP switch are off — Load is above **40%** — Engine speed is **2,000 rpm or above** — Brake switch is OFF **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• Front ABS wheel-speed sensor malfunction • DSC malfunction • Connector or terminal malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME PID DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME PID DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY STORED DTC IN DSC HU/CM** • Turn the ignition switch to the ON position (Engine off). • Verify stored DTCs in the DSC HU/CM. (See04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].) • Are DTCs stored?	Yes	Go to the appropriate DTC inspection. (See04-02B-2 ON-BOARD DIAGNOSIS[DYNAMIC STABILITY CONTROL (DSC)].)
		No	Go to the next step.
4	**VERIFY TROUBLESHOOTING OF DTC P0500 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the M-MDS. • Warm up the engine. • Access the RPM and LOAD PID using the M-MDS. • Drive the vehicle under the following conditions for **18s.** — Engine speed: **2,000 rpm or above** — Gear: Gear is in other than NEUTRAL — Load: **40% or above** • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0505[L3 WITH TC]

id010239808500

DTC P0505	IAC system problem
DETECTION CONDITION	• The PCM cannot control idle speed toward the target idle speed during the KOER self test.
POSSIBLE CAUSE	• Air cleaner element clogged • Air intake passage clogged • A/C relay control circuit malfunction • Generator control circuit malfunction • Low engine compression (Over capacity of blow-by gas) • Electronic throttle control system improper operation • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY RELATED PENDING OR STORED DTCs** • Turn the ignition switch off then to the ON position.(Engine off) • Verify pending code or stored DTCs using the M-MDS. • Are DTCs P0506, P0507, P0638, P2100, P2101, P2102, P2103, P2108, P2119 present?	Yes	Perform the applicable DTC troubleshooting. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Go to the next step.
3	**VERIFY ELECTRONIC THROTTLE CONTROL SYSTEM OPERATION** • Perform the TP sweep inspection. (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) • Does the electronic throttle control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection result. Then go to Step 9.
4	**INSPECT A/C MAGNETIC CLUTCH OPERATION** **Note** • The following test should be performed for vehicles with A/C. Go to the next step for vehicles without A/C • Turn the fan switch off. • Is the magnetic clutch still on?	Yes	Go to "A/C ALWAYS ON / A/C COMPRESSOR RUNS CONTINUOUSLY." of ENGINE SYMPTOM TROUBLESHOOTING then go to Step 9. (See01-03B-5 ENGINE SYMPTOM TROUBLESHOOTING[L3 WITH TC].)
		No	Go to the next step.
5	**INSPECT GENERATOR CONTROL CIRCUIT MALFUNCTION** • Apply electrical load. • Does the engine speed increase?	Yes	Go to the next step.
		No	Repair for a short to the power supply in the generator control circuit, then go to Step 9.
6	**INSPECT AIR CLEANER ELEMENT** • Remove the air cleaner element with the engine running. • Does the engine speed increase?	Yes	Clean or replace the air cleaner element, then go to Step 9.
		No	Go to the next step.
7	**INSPECT THROTTLE BODY PASSAGE** • Is the throttle body clogged?	Yes	Clean or replace the throttle body passage, then go to Step 9.
		No	Go to the next step.
8	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression. (See01-10B-9 COMPRESSION INSPECTION[L3 WITH TC].) • Is the engine compression normal?	Yes	Go to the next step.
		No	Overhaul the engine, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0505 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC using the M-MDS. • Perform the KOER Self-Test. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0506[L3 WITH TC]

id010239808600

DTC P0506	Idle control system RPM lower than expected
DETECTION CONDITION	• Actual idle speed is lower than expected by **100 rpm** for **14 s** when the brake pedal is depressed (brake switch is on) and the steering wheel is held straight ahead (power steering pressure switch is off). **Note** • If the atmospheric pressure is **less than 72.3 kPa {542 mmHg, 21.3 inHg}** or the intake air temperature is **below –10 °C {14 °F}**, the PCM cancels the diagnosis of P0506. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• Electronic throttle control system malfunction • Air cleaner element clogged • Air intake passage clogged • A/C relay control circuit malfunction • Generator malfunction • Purge solenoid valve malfunction • Low engine compression (Over capacity of blow-by gas) • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING OR STORED DTCS** • Turn ignition switch to OFF, then ON (Engine off). • Verify pending code or stored DTCs using the M-MDS. • Are other DTCs present?	Yes	Repair the applicable DTCs. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Go to the next step.
4	**INSPECT A/C MAGNET CLUTCH OPERATION** • Turn the blower motor switch off. • Is the magnet clutch still on?	Yes	Refer to "A/C is always on or A/C compressor runs continuously." of ENGINE SYMPTOM TROUBLESHOOTING, then go to Step 11. (See01-03B-70 NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY[L3 WITH TC].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
5	**INSPECT ELECTRONIC THROTTLE CONTROL SYSTEM MALFUNCTION** • Inspect the following parts: — APP sensor (See01-40B-36 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION[L3 WITH TC].) — TP sensor (See01-40B-34 THROTTLE POSITION (TP) SENSOR INSPECTION[L3 WITH TC].) • Are they normal?	Yes	Go to the next step.
		No	Replace the necessary parts, then go to Step 11.
6	**INSPECT PURGE SOLENOID VALVE MALFUNCTION** • Perform the purge solenoid valve inspection. (See01-16B-11 PURGE SOLENOID VALVE INSPECTION[L3 WITH TC].) • Is the purge solenoid valve normal?	Yes	Go to the next step.
		No	Replace the purge solenoid valve, then go to Step 11.
7	**INSPECT AIR CLEANER ELEMENT** • Remove the air cleaner element with the engine running. • Does the engine speed increase?	Yes	Replace the air cleaner element, then go to Step 11.
		No	Go to the next step.
8	**INSPECT THROTTLE BODY PASSAGE** • Is the throttle body clogged?	Yes	Clean or replace the throttle body passage, then go to Step 11.
		No	Go to the next step.
9	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression. (See01-10B-9 COMPRESSION INSPECTION[L3 WITH TC].) • Is the engine compression normal?	Yes	Go to the next step.
		No	Overhaul the engine, then go to Step 11.
10	**INSPECT GENERATOR** • Perform the generator inspection. (See01-17B-7 GENERATOR INSPECTION[L3 WITH TC].) • Is the generator normal?	Yes	Go to the next step.
		No	Repair or replace the related part, then go to the next step.
11	**VERIFY TROUBLESHOOTING OF DTC P0506 COMPLETED** • Make sure to reconnect all disconnected connectors. • Start the engine. • Clear the DTC from the PCM memory using the M-MDS. • Depress the brake pedal for **14 s or more.** • Is PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step.
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0507[L3 WITH TC]

id0102398087OO

DTC P0507	Idle control system RPM higher than expected
DETECTION CONDITION	• Actual idle speed is higher than expected by **200 rpm** for **14 s** when the brake pedal is depressed (brake switch is on) and steering wheel is held straight ahead (power steering pressure switch is off). **Note** • If the atmospheric pressure is **less than 72.3 kPa {542 mmHg, 21.3 inHg}** or the intake air temperature is **below –10 °C {14 °F}**, the PCM cancels diagnosis of P0507. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• Electronic throttle control system malfunction • Vacuum hose misconnection • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING OR STORED DTCS** • Turn ignition switch to off, then ON position (Engine off). • Verify pending code or stored DTCs using the M-MDS. • Are other DTCs present?	Yes	Repair applicable DTCs. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Go to the next step.
4	**INSPECT VACUUM HOSE CONNECTION** • Are the vacuum hoses connecting accurately? (See01-13B-4 VACUUM HOSE ROUTING DIAGRAM[L3 WITH TC].)	Yes	Go to the next step.
		No	Reconnect the vacuum hoses correctly, then go to step 6.
5	**INSPECT ELECTRONIC THROTTLE CONTROL SYSTEM MALFUNCTION** • Inspect the following parts: — APP sensor (See01-40B-36 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION[L3 WITH TC].) — TP sensor (See01-40B-34 THROTTLE POSITION (TP) SENSOR INSPECTION[L3 WITH TC].) • Are they normal?	Yes	Go to the next step.
		No	Replace the necessary parts, then go to the next step.
6	**VERIFY TROUBLESHOOTING OF DTC P0507 COMPLETED** • Make sure to reconnect all disconnected connectors. • Start the engine. • Clear the DTC from the PCM memory using the M-MDS. • Depress the brake pedal for **14 s or more.** • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step.
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P050A[L3 WITH TC]

id010239800000

DTC P050A	Cold start idle air control system performance
DETECTION CONDITION	• Actual idle speed is lower than expected by **100 rpm** for **8.4 s** when the target idle speed correction value for cold start is **above 0 rpm** or ignition retard value is **above 8.5 deg.CA**. **Note** • If atmospheric pressure is **less than 72.3 kPa {542 mmHg, 21.3 inHg}** or intake air temperature is **below -10 °C {14 °F}**, the PCM cancels diagnosis of P050A. **Diagnostic support note** • This is an intermittent monitor (Cold start emission reduction strategy monitoring). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Electronic throttle control system malfunction • Throttle valve stuck or blockage • Air suction in intake air system • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (CCM related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and diagnostic monitoring test results on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is P050A on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA. (See01-02B-14 DTC TABLE[L3 WITH TC].)
4	**CHECK AIR SUCTION IN INTAKE AIR SYSTEM** • Start the engine. • Check air suction between MAF sensor and intake manifold. • Is there any air suction in the intake air system?	Yes	Repair or replace malfunctioning part, then go to Step 7.
		No	Go to the next step.
5	**VERIFY ELECTRONIC THROTTLE CONTROL SYSTEM OPERATION** • Perform the Electronic Throttle Control System Operation Inspection. (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC], Electronic Throttle Control System Inspection.) • Does the electronic throttle control system operate properly?	Yes	Go to the next step.
		No	Repair or replace malfunctioning part according to inspection result. Then go to Step 7.
6	**VERIFY THROTTLE VALVE** • Turn the ignition switch off. • Remove the throttle valve with connector connected. • Access ETC_DSD PID using the M-MDS. • Turn the ignition switch to ON position (Engine off). • Move the throttle valve using the ETC_DSD PID simulation function. • Dose the throttle valve move smoothly?	Yes	Go to the next step.
		No	Clean the throttle valve and retest. If the problem does not resolve, replace the throttle body. Then go to the next step.

STEP	INSPECTION		ACTION
7	**VERIFY TROUBLESHOOTING OF DTC P050A COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from the PCM memory using the M-MDS. • Perform the KOER self-test using the M-MDS. (See01-02B-14 DTC TABLE[L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the AFTER REPAIR PROCEDURE. (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTC present?	Yes	Go to the applicable DTC troubleshooting.(See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Go to the next step.

DTC P050B[L3 WITH TC]

id010239799900

DTC P050B	Cold start ignition timing performance
DETECTION CONDITION	• The PCM monitors actual ignition timing while electronic spark advance control fast idle correction operating. If the ignition timing is out of specified range, the PCM determines that the ignition timing at cold condition has performance problem. **Diagnostic support note** • This is an intermittent monitor (Cold start emission reduction strategy monitoring). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Electronic throttle control sys malfunction • Throttle valve stuck or blocka • Air suction in intake air system • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (CCM related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and diagnostic monitoring test results on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is P050B on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA. (See01-02B-14 DTC TABLE[L3 WITH TC].)
4	**VISUALLY INSPECT CKP SENSOR AND PULSE WHEEL** • Visually inspect for CKP sensor and pulse wheel. • Is there any damage or chip on CKP sensor and pulse wheel?	Yes	Replace the suspected part, then go to Step 8.
		No	Go to the next step.
5	**INSPECT CKP SENSOR** • Inspect CKP sensor. (See01-40B-45 CRANKSHAFT POSITION (CKP) SENSOR INSPECTION[L3 WITH TC].) • Is the CKP sensor normal?	Yes	Go to the next step.
		No	Replace the CKP sensor, then go to Step 8.

STEP	INSPECTION		ACTION
6	**VISUALLY INSPECT CMP SENSOR AND PULSE WHEEL** • Visually inspect for CMP sensor and pulse wheel. • Is there any damage or chip on CMP sensor and pulse wheel?	Yes	Replace the suspected part, then go to Step 8.
		No	Go to the next step.
7	**INSPECT CMP SENSOR** • Inspect CMP sensor. (See01-40B-47 CAMSHAFT POSITION (CMP) SENSOR INSPECTION[L3 WITH TC].) • Is the CMP sensor normal?	Yes	Go to the next step.
		No	Replace the CMP sensor, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P050B COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from the PCM memory using the M-MDS. • Perform the KOER self-test using the M-MDS. (See01-02B-14 DTC TABLE[L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the AFTER REPAIR PROCEDURE. (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTC present?	Yes	Go to the applicable DTC troubleshooting. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0550[L3 WITH TC]

id010239808800

DTC P0550	PSP switch circuit malfunction
DETECTION CONDITION	• The PCM monitors the PSP switch signal, If the input voltage is low voltage (switch stays on) for **1 min.** when the VSS is **above 60.0 km/h {37.4 mph}** and the ECT is **above 60 °C {140 °F}**, the PCM determines that the PSP switch circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• PSP switch malfunction • Connector or terminal malfunction • Short to ground in the wiring harness between the PSP switch terminal and PCM terminal 2T • Open circuit in the wiring harness between the PSP switch terminal and PCM terminal 2T • PCM malfunction

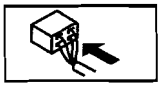
2BH	2BD	2AZ	2AV	2AR	2AN	2AJ	2AF	2AB	2X	2T	2P	2L	2H	2D



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT PSP CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PSP connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
4	**INSPECT PSP SWITCH** • Perform the PSP switch inspection. (See01-40B-24 POWER STEERING PRESSURE (PSP) SWITCH INSPECTION[L3 WITH TC].) • Is the PSP switch normal?	Yes	Go to the next step.
		No	Replace the PSP switch, then go to Step 8.
5	**INSPECT PSP SWITCH SIGNAL CIRCUIT FOR SHORT TO GROUND** • Disconnect the PCM connector. • Inspect for continuity between the PSP switch terminal (harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a short to ground, then go to Step 8.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn ignition switch to OFF • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 8.
		No	Go to the next step.
7	**INSPECT SIGNAL CIRCUIT MALFUNCTION FOR OPEN CIRCUIT** • Inspect for continuity between PSP terminal A (harness-side) and PCM terminal 2T (harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness, then go to the next step.
		No	Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0550 COMPLETED** • Make sure to reconnect all disconnected connectors. • Start the engine. • Clear the DTC from the PCM memory using the M-MDS. • Drive the vehicle **above 60 km/h {37.3 mph}** for**1 min.** • Verify that the ECT PID is **above 60 °C {140 °F}** using the M-MDS. • Is the PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0564[L3 WITH TC]

id010239808900

DTC P0564	Cruise control switch circuit malfunction
DETECTION CONDITION	• The PCM monitors the cruise control switch signal. If the PCM detects that any one of following switches (Main, CANCEL, SET/COAST, RESUME/ACCEL) remains on for **2 min**, the PCM determines that the cruise control switch circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (Other). • The MIL does not illuminate. • FREEZE FRAME DATA is not available. • S are stored in PCM memory.
POSSIBLE CAUSE	• Cruise control switch malfunction • Connector or terminal malfunction • Short to power circuit in wiring harness from cruise control switch terminal A and PCM terminal 1AQ • Short to ground circuit in wiring harness from cruise control switch terminal A and PCM terminal 1AQ • PCM malfunction

1BH	1BD	1AZ	1AV	1AR	1AN	1AJ	1AF	1AB	1X	1T	1P	1L	1H	1D

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT CRUISE CONTROL SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion.) • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 6.
		No	Go to the next step.
3	**INSPECT CRUISE CONTROL SWITCH SIGNAL CIRCUIT FOR SHORT TO GROUND** • Disconnect the cruise control switch and PCM connectors. • Inspect for continuity between cruise control switch terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace for a short to ground, then go to Step 6.
		No	Go to the next step.
4	**INSPECT CRUISE CONTROL SWITCH SIGNAL CIRCUIT FOR SHORT TO POWER** • Turn the ignition switch to the ON position (Engine off). • Inspect the voltage between cruise control switch terminal A (wiring harness-side) and body ground. • Is the voltage **below 1.0 V**?	Yes	Go to the next step.
		No	Repair or replace for a short to the power supply, then go to Step 6.
5	**INSPECT CRUISE CONTROL SWITCH OPERATION** • Inspect the cruise control switch. (See01-20B-2 CRUISE CONTROL SWITCH INSPECTION[L3 WITH TC].) • Is the cruise control switch normal?	Yes	Go to the next step.
		No	Replace the cruise control switch, then go to the next step.
6	**VERIFY TROUBLESHOOTING OF P0564 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Drive the vehicle using cruise control for **2 min. or more**. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0571[L3 WITH TC]

id010239809000

DTC P0571	Brake switch circuit problem
DETECTION CONDITION	• The PCM monitors the change in the input voltage for brake switch No.1 and No.2. If the PCM detects that both brake switches No.1 and No.2 remain on or off for **15 s**, it determines that the brake switch circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (Other). • The MIL does not illuminate. • FREEZE FRAME DATA is not available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• Brake switch malfunction • Open circuit between brake switch terminal B and instrument cluster terminal 2M • Open circuit between brake switch terminal C and body ground • Short to power between brake switch terminal B and instrument cluster terminal 2M • Short to ground circuit between brake switch terminal B and instrument cluster terminal 2M • Communication error between PCM and instrument cluster • PCM malfunction

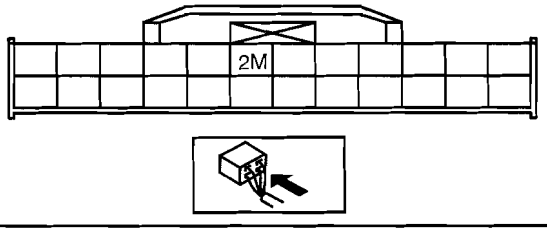
INSTRUMENT CLUSTER
WIRING HARNESS-SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY DTC FOR MODULE COMMUNICATION** • Connect M-MDS to DLC-2. • Turn the ignition switch to the ON position (Engine off). • Verify stored DTC. • Is DTC U0155 stored?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
4	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off then to the ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Is the DTC P0703 also present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
5	**INSPECT BRAKE SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the brake switch connector. • Inspect for poor connection (such as damaged, pull-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 11.
		No	Go to the next step.
6	**INSPECT BRAKE SWITCH** • Inspect the brake switch. • Is the brake switch normal?	Yes	Go to the next step.
		No	Replace brake switch, then go to Step 11.
7	**INSPECT GROUND CIRCUIT OF BRAKE SWITCH NO.2 FOR OPEN CIRCUIT** • Inspect for continuity between brake switch terminal C (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open circuit, then go to Step 11.
8	**INSPECT SIGNAL CIRCUIT OF BRAKE SWITCH NO.2 FOR SHORT TO GROUND** • Inspect for continuity between brake switch terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for short to ground circuit, then go to Step 11.
		No	Go to the next step.
9	**INSPECT INSTRUMENT CLUSTER CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect instrument cluster connector. • Inspect for poor connection (such as damaged, pull-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 11.
		No	Go to the next step.
10	**INSPECT SIGNAL CIRCUIT OF BRAKE SWITCH NO.2 FOR OPEN CIRCUIT** • Inspect for continuity between brake switch terminal B (wiring harness-side) and instrument cluster terminal 2M (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open circuit, then go to Step 11.

STEP	INSPECTION		ACTION
11	**INSPECT SIGNAL CIRCUIT OF BRAKE SWITCH NO.2 FOR SHORT TO POWER** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between brake switch terminal B (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for short to power circuit, then go to the next step.
		No	Go to the next step.
12	**VERIFY TROUBLESHOOTING OF P0571 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Turn the ignition switch to the ON position (Engine off). • Depress and release the brake pedal **more than 5 times**. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
13	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Troubleshooting completed.

DTC P0601[L3 WITH TC]

id010239809100

DTC P0601	Internal control module memory check sum error
DETECTION CONDITION	• PCM internal memory check sum error. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• PCM internal memory malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY TROUBLESHOOTING OF P0601 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is same DTC present?	Yes	Replace the PCM, go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0602[L3 WITH TC]

id010239809200

DTC P0602	PCM programming error
DETECTION CONDITION	• No configuration data in PCM **Note** • If the "PCM CONFIGURATION" is successful, the PCM stores DTC P0602 and illuminates the MIL (System is normal). Clear DTC P0602 using the M-MDS after the "PCM CONFIGURATION". • MIL turns off after three drive cycles with no failure (DTCs remain in PCM). **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• Configuration has not been completed. • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY TROUBLESHOOTING OF DTC P0602 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0604[L3 WITH TC]

id010239809300

DTC P0604	PCM RAM error
DETECTION CONDITION	• PCM internal RAM malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• PCM internal RAM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY TROUBLESHOOTING OF P0604 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0606[L3 WITH TC]

id010239809400

DTC P0606	ECM/PCM processor
DETECTION CONDITION	• PCM internal CPU malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• PCM internal CPU malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY TROUBLESHOOTING OF P0606 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start engine. • Is same DTC present?	Yes	Replace PCM, go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0607[L3 WITH TC]

id010239809500

DTC P0607	PCM performance problem
DETECTION CONDITION	• PCM internal malfunction. **Diagnostic support note** • This is a continuous monitor (Other). • MIL does not illuminate. • FREEZE FRAME DATA is not available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• PCM internal malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BLLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY TROUBLESHOOTING OF P0607 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start engine. • Is same DTC present?	Yes	Replace PCM, go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0610[L3 WITH TC]

id010239809600

DTC P0610	PCM vehicle options error
DETECTION CONDITION	• PCM data configuration error **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• Configuration procedure has not been completed • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY TROUBLESHOOTING OF DTC P0610 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0638[L3 WITH TC]

id010239809800

DTC P0638	Throttle actuator control range/performance
DETECTION CONDITION	• The PCM compares the actual TP with the target TP when the engine is running. If the difference is more than the specification, the PCM determines that there is a throttle actuator control circuit range/ performance problem. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Throttle actuator malfunction • Throttle valve malfunction • PCM malfunction

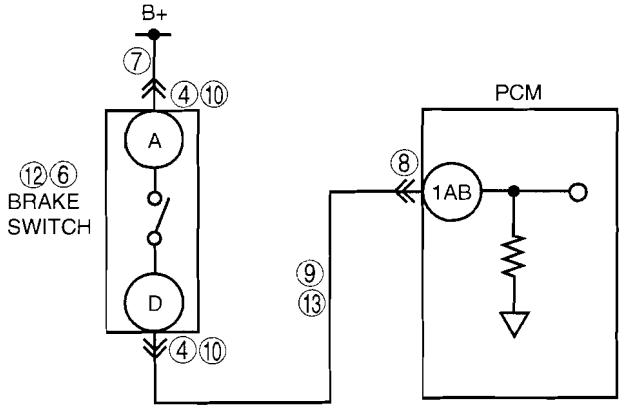
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FOR OTHER DTCS** • Have other DTCs been stored?	Yes	Perform the diagnostic procedure for the applicable DTCs.
		No	Go to the next step.
4	**INSPECT THROTTLE ACTUATOR** • Inspect the throttle actuator. (See 01-13B-13 THROTTLE ACTUATOR INSPECTION[L3 WITH TC]) • Is the throttle actuator normal?	Yes	Go to the next step.
		No	Replace the throttle body, then go to the next step.
5	**VERIFY TROUBLESHOOTING OF P0638 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Turn the ignition switch off. • Start the engine and let it idle. • Is the same DTC present?	Yes	Replace the PCM, go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0703[L3 WITH TC]

id010239809900

DTC P0703	Brake switch No.1 circuit malfunction
DETECTION CONDITION	• PCM monitors changes in the input voltage from the brake switch. If the PCM does not detect the voltage change while alternately accelerating and decelerating **8 times**, the PCM determines that the brake switch circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• Brake switch malfunction • Poor connection of the brake switch connector or the PCM connector • Short to the power supply between brake switch terminal D and PCM connector terminal 1AB • Open circuit between brake switch terminal D and PCM connector terminal 1AB • Open circuit between the battery positive terminal and brake switch terminal A • PCM malfunction



BRAKE SWITCH

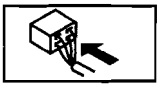
1BH	1BD	1AZ	1AV	1AR	1AN	1AJ	1AF	1AB	1X	1T	1P	1L	1H	1D



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CLASSIFY HIGH INPUT OR LOW INPUT** • Connect the M-MDS to the DLC-2. • Access the BOO PID. • Verify the BOO PID during brake pedal operation. • Is the BOO PID always off?	Yes	Go to the next step.
		No	Go to Step 10.
4	**INSPECT BRAKE SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the brake switch connector. • Inspect for poor connection (such as damaged pulled-out terminals, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 14.
		No	Go to the next step.
5	**CLASSIFY BRAKE SWITCH OR CIRCUIT** • Connect the M-MDS to the DLC-2. • Access the BOO PID. • Connect a jumper wire between brake switch terminal A and D (harness-side). • Is the BOO PID on?	Yes	Go to the next step.
		No	Go to Step 7.
6	**INSPECT BRAKE SWITCH** • Perform the brake switch inspection. (See04-11-8 BRAKE SWITCH INSPECTION.) • Is the brake switch normal?	Yes	Go to Step 14.
		No	Replace the brake switch, then go to Step 14.
7	**INSPECT BRAKE SWITCH POWER CIRCUIT FOR OPEN CIRCUIT** • Measure the voltage between brake switch connector terminal A (harness-side) and body ground. • Is the voltage **B+?**	Yes	Go to the next step.
		No	Repair or replace the brake switch power circuit for an open circuit, then go to Step 14.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 14.
		No	Go to the next step.
9	**INSPECT BRAKE SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between brake switch terminal D (harness-side) and PCM terminal 1AB (harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for an open circuit, then go to Step 14.
		No	Go to Step 14.
10	**INSPECT BRAKE SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect brake switch connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there malfunction?	Yes	Repair or replace the terminal, then go to Step 14.
		No	Go to the next step.

STEP	INSPECTION		ACTION
11	**CLASSIFY BRAKE SWITCH OR CIRCUIT** • Connect the M-MDS to the DLC-2. • Access the BOO PID. • Verify that the BOO PID changes from on to off when the brake switch connector is disconnected. • Does BOO PID change from on to off?	Yes	Go to the next step.
		No	Go to Step 13.
12	**INSPECT BRAKE SWITCH** • Perform the brake switch inspection. (See04-11-8 BRAKE SWITCH INSPECTION.) • Is the brake switch normal?	Yes	Go to Step 14.
		No	Replace the brake switch, then go to Step 14.
13	**INSPECT BRAKE SWITCH SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Measure the voltage between brake switch connector terminal D (harness-side) and body ground. • Is the voltage **B+?**	Yes	Repair or replace the wiring harness for a short to power supply, then go to Step 14.
		No	Go to the next step.
14	**VERIFY TROUBLESHOOTING OF DTC P0703 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the memory using the M-MDS. • Drive vehicle at **30 km/h {18.6 mph} or more.** • Depress and release brake pedal **more than 8 times** while driving the vehicle. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
15	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0704[L3 WITH TC]

id010239810000

DTC P0704	Clutch pedal position switch circuit malfunction
DETECTION CONDITION	• PCM monitors changes in the input voltage from the clutch pedal position (CPP) switch. If the PCM does not detect the voltage change while the vehicle is run with vehicle speed **above 30 km/h {19 mph}** and stopped **8 times** alternately, the PCM determines that the CPP switch circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• Clutch switch malfunction • Poor connection of the CPP switch connector or the PCM connector • Short to ground between CPP switch terminal A and PCM connector terminal 1D • Open circuit between CPP switch terminal A and PCM connector terminal 1D • Open circuit between ground and CPP switch terminal B • PCM malfunction

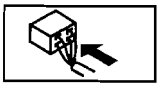
1BH	1BD	1AZ	1AV	1AR	1AN	1AJ	1AF	1AB	1X	1T	1P	1L	1H	1D



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**CLASSIFY HIGH INPUT OR LOW INPUT** • Connect the M-MDS to the DLC-2. • Access the CPP PID. • Verify the CPP PID during clutch pedal operation. • Is the CPP PID always off?.	Yes	Go to Next step.
		No	Go to Step 10.
4	**INSPECT CPP SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the CPP switch connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 14.
		No	Go to the next step.
5	**CLASSIFY CPP SWITCH OR CIRCUIT** • Connect the M-MDS to the DLC-2. • Access the CPP PID. • Connect a jumper wire between CPP switch terminal A and B (harness-side). • Is the CPP PID on?	Yes	Go to the next step.
		No	Go to Step 7.
6	**INSPECT CPP SWITCH** • Perform the CPP switch inspection. (See 01-40B-23 CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION[L3 WITH TC].) • Is the CPP switch normal?	Yes	Go to Step 14.
		No	Replace the CPP switch, then go to Step 14.
7	**INSPECT CPP SWITCH GROUND CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between CPP switch terminal B (harness-side) and ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the CPP switch power circuit for an open circuit, then Go to Step 14.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 14.
		No	Go to the next step.
9	**INSPECT CPP SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between CPP switch terminal A (harness-side) and PCM terminal 1D (harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for an open circuit, then go to Step 14.
		No	Go to Step 14.
10	**INSPECT CPP SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the CPP switch connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 14.
		No	Go to the next step.
11	**CLASSIFY CPP SWITCH OR CIRCUIT** • Connect the M-MDS to the DLC-2. • Access the CPP PID. • Verify that the CPP PID changes from on to off when the CPP switch connector disconnected. • Does the CPP PID change from on to off?	Yes	Go to the next step.
		No	Go to Step 13.
12	**INSPECT CPP switch** • Perform the CPP switch inspection. (See 01-40B-23 CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION[L3 WITH TC].) • Is the CPP switch normal?	Yes	Go to Step 14.
		No	Replace the CPP switch, then go to Step 14.
13	**INSPECT CPP SWITCH SIGNAL CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between CPP switch terminal A and ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a short to ground, then go to Step 14.
		No	Go to Next step.

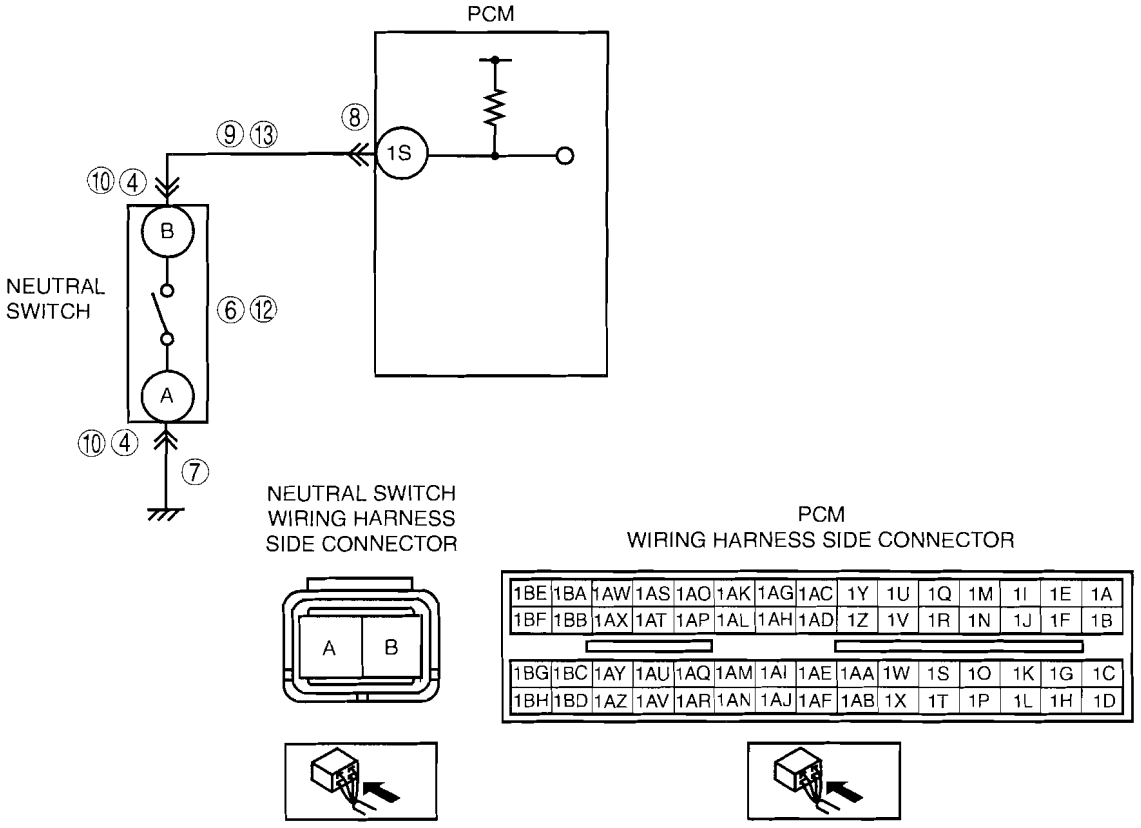
STEP	INSPECTION		ACTION
14	**VERIFY TROUBLESHOOTING OF DTC P0704 COMPLETED** • Make sure to reconnect all disconnected connectors. • Start the engine. • Clear the DTC from the PCM memory using the M-MDS. • Operate the clutch pedal while driving the vehicle **below 30 km/h {19 mph} and stopping 8 times** alternately. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
15	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0850[L3 WITH TC]

id010239810100

DTC P0850	Neutral switch circuit malfunction
DETECTION CONDITION	• PCM monitors changes in the input voltage from the neutral switch. If the PCM does not detect the voltage change while running the vehicle with vehicle speed **above 30 km/h {19 mph}** and the clutch pedal turns release and depress **10 times** repeatedly, the PCM determines that the neutral switch circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.

DTC P0850	Neutral switch circuit malfunction
POSSIBLE CAUSE	• Neutral switch malfunction • Poor connection of the neutral switch connector or PCM connector • Short to ground between neutral switch terminal B and PCM connector terminal 1S • Open circuit in the wiring harness between neutral switch terminal B and PCM connector terminal 1S • Open circuit in the wiring harness between ground and brake switch terminal A. • PCM malfunction



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CLASSIFY HIGH INPUT OR LOW INPUT** • Connect the M-MDS to the DLC-2. • Access the CPP/PNP PID. • Verify the CPP/PNP PID when gear is in the neutral position. • Is the CPP/PNP PID always off?.	Yes	Go to Next step.
		No	Go to Step 10.
4	**INSPECT NEUTRAL SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the neutral switch connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 14.
		No	Go to the next step.

STEP	INSPECTION		ACTION
5	**CLASSIFY NEUTRAL SWITCH OR CIRCUIT** • Connect the M-MDS to the DLC-2. • Access the CPP/PNP PID. • Connect a jumper wire between neutral switch terminal A and B (harness-side). • Is the CPP/PNP PID on?	Yes	Go to the next step.
		No	Go to Step 7.
6	**INSPECT NEUTRAL SWITCH** • Perform the neutral switch inspection. (See 01-40B-22 NEUTRAL SWITCH INSPECTION[L3 WITH TC].) • Is the neutral switch normal?	Yes	Go to Step 14.
		No	Replace the neutral switch, then go to Step 14.
7	**INSPECT NEUTRAL SWITCH GROUND CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between neutral switch terminal A (harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the neutral switch power circuit for an open circuit, then go to Step 14.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 14.
		No	Go to the next step.
9	**INSPECT NEUTRAL SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between neutral switch terminal B (harness-side) and PCM terminal 1S (harness-side). • Is there continuity?	Yes	Repair or replace wiring harness for an open circuit, then go to Step 14.
		No	Go to Step 14.
10	**INSPECT NEUTRAL SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect neutral switch connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 14.
		No	Go to the next step.
11	**CLASSIFY NEUTRAL SWITCH OR CIRCUIT** • Connect the M-MDS to the DLC-2. • Access the CPP/PNP PID. • Verify that the CPP/PNP PID changes from on to off when the neutral switch connector is disconnected. • Does the CPP/PNP PID change from on to off?	Yes	Go to the next step.
		No	Go to Step 13.
12	**INSPECT NEUTRAL SWITCH** • Perform the neutral switch inspection. (See 01-40B-22 NEUTRAL SWITCH INSPECTION[L3 WITH TC].) • Is the neutral switch normal?	Yes	Go to Step 14.
		No	Replace the neutral switch, then go to Step 14.
13	**INSPECT NEUTRAL SWITCH SIGNAL CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between neutral switch terminal B (harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a short to ground, then go to Step 14.
		No	Go to the next step.
14	**VERIFY TROUBLESHOOTING OF DTC P0850 COMPLETED** • Make sure to reconnect all disconnected connectors. • Start the engine. • Clear the DTC from the PCM memory using the M-MDS. • Drive vehicle **above 30 km/h {19 mph}** and stop vehicle. • Depress and release clutch pedal **more than 10 times** during the drive cycle. • Is the PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
15	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P1260[L3 WITH TC]

id010239815600

DTC P1260	Immobilizer system problem
DETECTION CONDITION	• The instrument cluster detects an immobilizer system malfunction. **Diagnostic support note** • This is a continuous monitor (Other). • The MIL does not illuminate. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Immobilizer system malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY STORED DTC IN INSTRUMENT CLUSTER** • Turn the ignition switch to the ON position (Engine off). • Verify stored DTCs in instrument cluster. • Are DTCs stored?	Yes	Go to the applicable DTC inspection.
		No	Go to the next step.
4	**VERIFY TROUBLESHOOTING OF DTC P1260 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine or perform the KOEO self-test with M-MDS. • Is PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2004[L3 WITH TC]

id010239810200

DTC P2004	Variable swirl control system shutter valve stuck open
DETECTION CONDITION	• PCM monitors the mass variable swirl shutter valve position using the variable swirl shutter valve switch. If the PCM turns variable swirl solenoid valve on but variable swirl shutter valve position still remains open (variable swirl shutter valve switch is on), the PCM determines that the variable swirl shutter valve is stuck open. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• Variable swirl shutter valve actuator malfunction (stuck open) • Misconnected or pulled out vacuum hose • Variable swirl shutter valve switch malfunction • Variable swirl solenoid valve malfunction • Connector or terminal malfunction • Open circuit in the wiring harness between variable swirl solenoid valve terminal B and PCM terminal 2AS • Short to power in the wiring harness between variable swirl solenoid valve terminal B and PCM terminal 2AS • Open circuit in the wiring harness between variable swirl shutter valve switch terminal A and PCM terminal 2AE • Short to power in the wiring harness between variable swirl shutter valve switch terminal A and PCM terminal 2AE • PCM malfunction

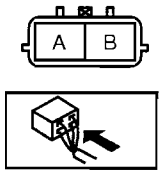
VARIABLE SWIRL SHUTTER VALVE SWITCH WIRING HARNESS SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CLASSIFY INTERMITTENT CONCERN OR CONTINUOUS CONCERN** • Clear the DTC from the PCM memory using the M-MDS. • Drive the vehicle under the following conditions: — Engine coolant temperature is **above 63 °C {145 °F}.** — Engine speed: **below 3,750 rpm** — Throttle opening angle is as follows: • Engine speed **below 1,500 rpm: above 35%** • Engine speed **between 1,500—2,500 rpm: between 25—35%** • Engine speed **above 2,500: below 25%** • Is the PENDING CODE for this DTC present?	Yes	Go to the next step.
		No	Intermittent concern exists. Go to INTERMITTENT CONCERN TROUBLESHOOTING procedure. (See01-03B-77 INTERMITTENT CONCERN TROUBLESHOOTING[L3 WITH TC].)
4	**VERIFY IF STORED OTHER DTCs STORED** • Verify stored DTCs using the M-MDS. • Is DTC P2088 or P2089 present?	Yes	Go to the appropriate DTC troubleshooting procedures.
		No	Go to the next step.
5	**INSPECT VARIABLE SWIRL SOLENOID VALVE** • Perform "VARIABLE SWIRL SOLENOID VALVE INSPECTION". (See01-13B-14 VARIABLE SWIRL SOLENOID VALVE INSPECTION[L3 WITH TC].) • Is the variable swirl solenoid valve normal?	Yes	Go to the next step.
		No	Replace variable swirl solenoid valve, then go to Step 13.
6	**INSPECT VARIABLE SWIRL SHUTTER VALVE ACTUATOR** • Perform "VARIABLE SWIRL SHUTTER VALVE ACTUATOR INSPECTION". (See01-13B-14 VARIABLE SWIRL SHUTTER VALVE ACTUATOR INSPECTION[L3 WITH TC].) • Is the variable swirl shutter valve actuator normal?	Yes	Go to the next step.
		No	Replace the intake manifold, then go to Step 13.
7	**INSPECT VARIABLE SWIRL SHUTTER VALVE SWITCH** • Perform the "VARIABLE SWIRL SHUTTER VALVE SWITCH INSPECTION". (See01-13B-14 VARIABLE SWIRL SHUTTER VALVE ACTUATOR INSPECTION[L3 WITH TC].) • Is the variable swirl shutter valve switch normal?	Yes	Go to the next step.
		No	Replace the intake manifold, then go to Step 13.
8	**VERIFY CONNECTION OF VACUUM HOSE ROUTING** • Verify that the vacuum hoses are connected properly. • Are the vacuum hoses connected properly?	Yes	Go to the next step.
		No	Connect the vacuum hoses properly, then go to the next step.

STEP	INSPECTION		ACTION
9	**INSPECT VARIABLE SWIRL SOLENOID VALVE OR VARIABLE SWIRL SHUTTER VALVE SWICTH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the variable swirl solenoid valve connector and variable swirl shutter valve switch connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 13.
		No	Go to the next step.
10	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 13.
		No	Go to the next step.
11	**INSPECT VARIABLE SWIRL SOLENOID VALVE OR VARIABLE SWIRL SHUTTER VALVE SW SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between the following terminals: — Variable swirl solenoid valve terminal B (harness-side) and PCM terminal 2AS (harness-side). — Variable swirl shutter valve sw terminal A (harness-side) and PCM terminal 2AE (harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 13.
12	**INSPECT VARIABLE SWIRL SOLENOID VALVE OR VARIABLE SWIRL SHUTTER VALVE SWITCH CIRCUIT FOR SHORT TO POWER SUPPLY** • Disconnect the variable swirl solenoid valve connector and variable swirl shutter valve switch connector. • Turn ignition switch to the ON position (Engine off). • Measure the voltage between the following terminals and body ground. — PCM terminal 2AS (harness-side). — PCM terminal 2AE (harness-side). • Is the voltage **B+?**	Yes	Repair or replace the wiring harness for a short to power supply, then go to the next step.
		No	Go to the next step.
13	**VERIFY TROUBLESHOOTING OF DTC P2004 COMPLETED** • Make sure to reconnect all disconnected connectors. • Start the engine. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Drive the vehicle under following conditions: — Engine coolant temperature is **above 63 °C {145 °F}.** — Engine speed: **below 3,750 rpm** — Throttle opening angle is as follows • Engine speed **below 1,500 rpm: above 35%** • Engine speed **between 1,500—2,500 rpm: between 25—35%** • Engine speed **above 2,500:below 25%** • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM INSPECTION[L3 WITH TC].)
		No	Go to the next step.

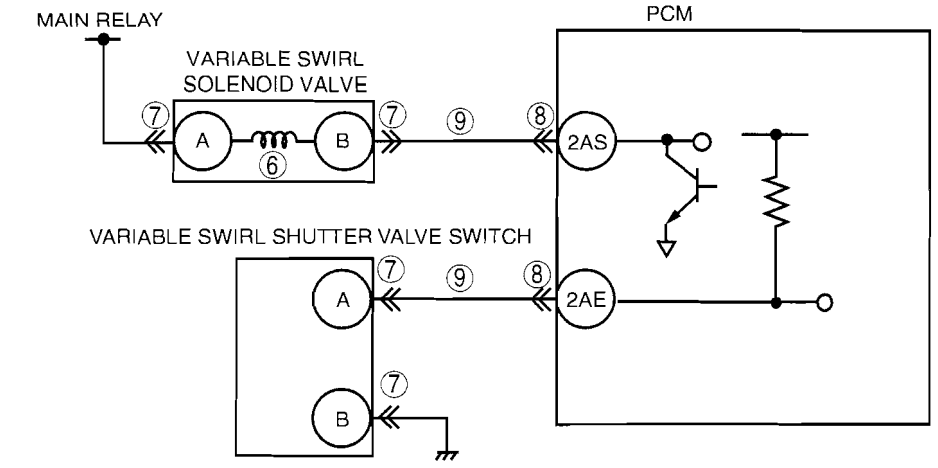
STEP	INSPECTION		ACTION
14	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2006[L3 WITH TC]

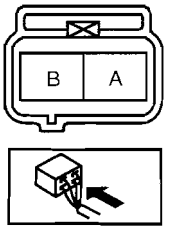
id010239810300

DTC P2006	Variable swirl control system shutter valve stuck closed
DETECTION CONDITION	• PCM monitors the mass variable swirl shutter valve position using the variable swirl shutter valve switch. If PCM turns the variable swirl solenoid valve off but the variable swirl position still remains closed (variable swirl shutter valve switch is off), the PCM determines that the variable swirl shutter valve is stuck closed. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• ECT sensor malfunction • TP sensor malfunction • CKP sensor malfunction • Connector or terminal malfunction • Variable swirl solenoid valve malfunction • Variable swirl shutter valve malfunction (stuck closed) • Variable swirl shutter valve actuator malfunction (stuck closed). • Short to ground circuit between variable swirl solenoid valve terminal B and PCM terminal 2AS • Short to ground in the wiring harness between variable swirl shutter valve switch terminal A and PCM terminal 2AE • PCM malfunction

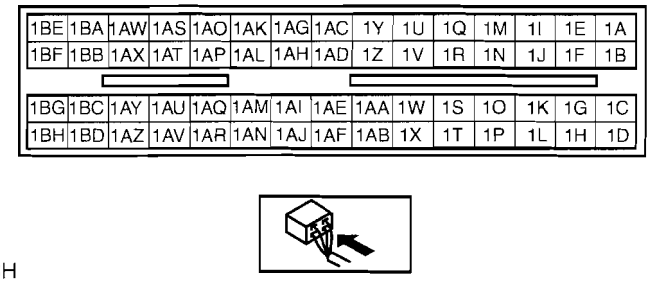
DTC P2006	Variable swirl control system shutter valve stuck closed



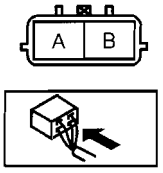
VARIABLE SWIRL SOLENOID VALVE WIRING HARNESS SIDE CONNECTOR



PCM WIRING HARNESS SIDE CONNECTOR



VARIABLE SWIRL SHUTTER VALVE SWITCH WIRING HARNESS SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CLASSIFY INTERMITTENT CONCERN OR CONTINUOUS CONCERN** • Clear the DTC from the PCM memory using the M-MDS. • Drive the vehicle under following conditions: — Engine coolant temperature is **above 63 °C {145 °F}.** — Engine speed: **below 3,750 rpm** — Throttle opening angle is as follows: • Engine speed **below 1,500 rpm: above 35%** • Engine speed **between 1,500—2,500 rpm: between 25—35%** • Engine speed **above 2,500: below 25%** • Is the PENDING CODE for this DTC present?	Yes	Go to the next step.
		No	Intermittent concern exists. Go to INTERMITTENT CONCERN TROUBLESHOOTING procedure. (See01-03B-77 INTERMITTENT CONCERN TROUBLESHOOTING[L3 WITH TC].)

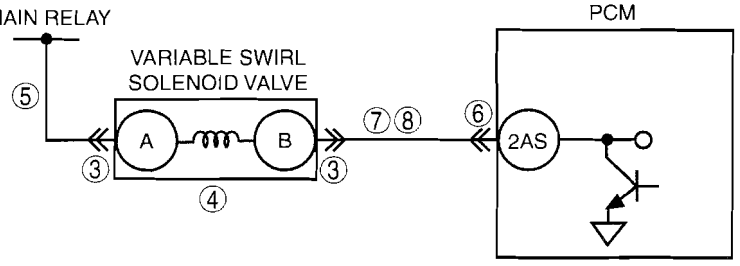
STEP	INSPECTION		ACTION
4	**VERIFY STORED OTHER DTCS** • Verify stored DTCs using M-MDS or equipment. • Is other DTC present except P0117, P0118, P0121, P0122, P0123 and/or P0335?	Yes	Go to appropriate DTC troubleshooting procedures.
		No	Go to the next step.
5	**INSPECT VARIABLE SWIRL SHUTTER VALVE ACTUATOR** • Perform the "Variable Swirl System Operation Inspection". (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) • Is the variable swirl shutter valve actuator normal?	Yes	Go to the next step.
		No	Replace the variable swirl shutter valve actuator, then go to Step 10.
6	**INSPECT VARIABLE SWIRL SOLENOID VALVE** • Perform the "variable swirl solenoid valve airflow inspection". (See01-13B-14 VARIABLE SWIRL SOLENOID VALVE INSPECTION[L3 WITH TC].) • Is the variable swirl solenoid valve normal?	Yes	Go to the next step.
		No	Replace the variable swirl solenoid valve, then go to Step 10.
7	**INSPECT VARIABLE SWIRL SOLENOID VALVE OR VARIABLE SWIRL SHUTTER VALVE SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the variable swirl solenoid valve connector and the variable swirl shutter valve switch connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 10.
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Inspect for poor connection at the PCM terminals (such as damaged, pulled-out terminals, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to Step 10.
		No	Go to the next step.
9	**INSPECT VARIABLE SWIRL SOLENOID VALVE OR VARIABLE SWIRL SHUTTER VALVE SWITCH SIGNAL CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between the following terminals and body ground. — PCM terminal 2AS (harness-side). — PCM terminal 2AE (harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for a short to ground, then go to the next step.
		No	Go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P2006 COMPLETED** • Make sure to reconnect all disconnected connectors. • Start the engine. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Drive the vehicle under the following conditions: — Engine coolant temperature is **above 63 °C {145 °F}.** — Engine speed: **below 3,750 rpm** — Throttle opening angle is as follows: • Engine speed **below 1,500 rpm: above 35%** • Engine speed **between 1,500—2,500 rpm: between 25—35%** • Engine speed **above 2,500: below 25%** • Is the PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2009[L3 WITH TC]

id010239810400

DTC P2009	Variable swirl solenoid valve control circuit low
DETECTION CONDITION	• PCM monitors the variable swirl solenoid valve control signal. If the PCM turns variable swirl solenoid valve off but the voltage still remains low, the PCM determines that the variable swirl solenoid valve control circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• Poor connection of connectors at PCM and/or variable swirl solenoid valve • Short to ground in the wiring harness between variable swirl solenoid valve terminal B and PCM terminal 2AS • Open circuit in the wiring harness between main relay and variable swirl solenoid valve terminal A • Open circuit in the wiring harness between variable swirl solenoid valve terminal B and PCM terminal 2AS • Variable swirl solenoid valve malfunction • PCM malfunction



VARIABLE SWIRL SOLENOID VALVE WIRING HARNESS SIDE CONNECTOR

2BH	2BD	2AZ	2AV	2AR	2AN	2AJ	2AF	2AB	2X	2T	2P	2L	2H	2D

Diagnostic procedure

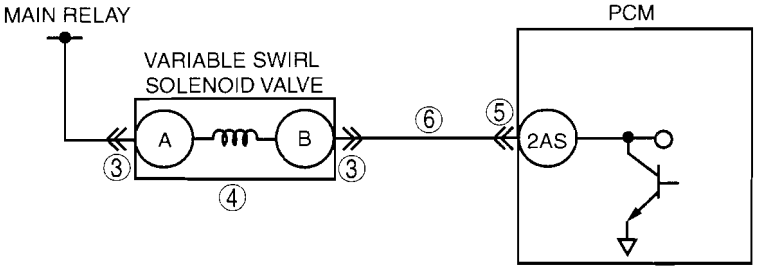
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT VARIABLE SWIRL SOLENOID VALVE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT VARIABLE SWIRL SOLENOID VALVE** • Perform the variable swirl solenoid valve inspection. (See01-13B-14 VARIABLE SWIRL SOLENOID VALVE INSPECTION[L3 WITH TC].) • Is the variable swirl solenoid valve normal?	Yes	Go to the next step.
		No	Replace the variable swirl solenoid valve, then go to Step 9.
5	**INSPECT VARIABLE SWIRL SOLENOID VALVE POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Disconnect the variable swirl solenoid valve connector. • Turn ignition switch to the ON position (Engine off). • Measure voltage between variable swirl solenoid valve terminal A (harness-side) and body ground. • Is the voltage **B+?**	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 9.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection at PCM terminal 2AS. (such as damaged, pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to Step 9.
		No	Go to the next step.
7	**INSPECT VARIABLE SWIRL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between variable swirl solenoid valve terminal B (harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a short to ground, then go to Step 9.
		No	Go to the next step.
8	**INSPECT VARIABLE SWIRL SOLENOID VALVE CONTROL CIRCUIT FOR OPEN CIRCUIT** • Connect variable swirl solenoid valve connector. • Turn ignition switch to the ON position (Engine off). • Measure the voltage between PCM terminal 2AS (harness-side) and body ground. • Is the voltage **B+?**	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open or short to ground circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P2009 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Turn the ignition switch off. • Start the engine and warm it up completely. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

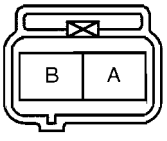
DTC P2010[L3 WITH TC]

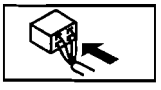
id010239810500

DTC P2010	Variable swirl solenoid valve control circuit high
DETECTION CONDITION	• PCM monitors the variable swirl solenoid valve control signal. If the PCM turns variable swirl solenoid valve on but the voltage still remains high, the PCM determines that the variable swirl solenoid valve control circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• Poor connection of connectors at the PCM and/or the variable swirl solenoid valve • Short to the power supply in the wiring harness between variable swirl solenoid valve terminal B and PCM terminal 2AS • Variable swirl solenoid valve malfunction • PCM malfunction

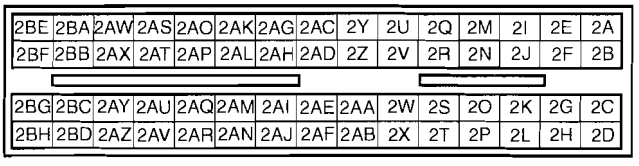


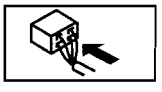
VARIABLE SWIRL SOLENOID VALVE WIRING HARNESS SIDE CONNECTOR





PCM WIRING HARNESS SIDE CONNECTOR





Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT VARIABLE SWIRL SOLENOID VALVE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.

STEP	INSPECTION		ACTION
4	**INSPECT VARIABLE SWIRL SOLENOID VALVE** • Perform variable swirl solenoid valve inspection. (See01-13B-14 VARIABLE SWIRL SOLENOID VALVE INSPECTION[L3 WITH TC].) • Is the variable swirl solenoid valve normal?	Yes	Go to the next step.
		No	Replace the variable swirl solenoid valve, then go to Step 7.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection at PCM terminal 2AS. (such as damaged, pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 7.
		No	Go to the next step.
6	**INSPECT VARIABLE SWIRL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Remove the variable swirl solenoid valve. • Turn ignition switch to the ON position (Engine off). • Measure voltage between PCM terminal 2AS (harness-side) and body ground. • Is the voltage **B+?**	Yes	Repair or replace the wiring harness for a short to power supply, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P2010 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Turn the ignition switch off. • Start the engine and warm it up completely. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2088[L3 WITH TC]

id010239810600

DTC P2088	OCV actuator circuit low
DETECTION CONDITION	• PCM monitors the OCV voltage. If the PCM detects that the OCV control voltage (calculated from OCV) is below the threshold voltage (calculated from battery positive voltage), the PCM determines that the OCV circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Poor connection of connectors at the PCM and/or OCV • Short to ground in the wiring harness between OCV terminal A and PCM terminal 2AF • Open circuit in the wiring harness between main relay and OCV terminal B • Open circuit in the wiring harness between OCV terminal A and PCM terminal 2AF • OCV malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT OCV CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT OCV** • Perform the OCV inspection. (See01-10B-34 OIL CONTROL VALVE (OCV) INSPECTION[L3 WITH TC].) • Is the OCV normal?	Yes	Go to the next step.
		No	Replace OCV, then go to Step 9.
5	**INSPECT OCV POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Disconnect the OCV connector. • Turn ignition switch to the ON position (Engine off). • Measure voltage between OCV terminal B (harness-side) and body ground. • Is the voltage **B+?**	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 9.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection at PCM terminal 2AF. (such as damaged, pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 9.
		No	Go to the next step.

STEP	INSPECTION		ACTION
7	**INSPECT OCV CONTROL CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between OCV terminal A (harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a short to ground, then go to Step 9.
		No	Go to the next step.
8	**INSPECT OCV CONTROL CIRCUIT FOR OPEN CIRCUIT** • Connect the OCV connector. • Turn ignition switch to the ON position (Engine off). • Check for continuity between OCV terminal A (harness-side) and PCM terminal 2AF (harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open or short to ground circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P2088 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Turn the ignition switch off. • Start the engine and warm it up completely. • Is the PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2089[L3 WITH TC]

id010239810700

DTC P2089	OCV actuator circuit high
DETECTION CONDITION	• PCM monitors the OCV voltage. If the PCM detects that the OCV control voltage (calculated from OCV) is above the threshold voltage (calculated from battery positive voltage), the PCM determines that the OCV circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Poor connection at the PCM and/or OCV connectors • Short to the power supply in the wiring harness between OCV terminal A and PCM terminal 2AF • OCV malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT OCV CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT OCV** • Perform the OCV inspection. (See01-10B-34 OIL CONTROL VALVE (OCV) INSPECTION[L3 WITH TC].) • Is the OCV normal?	Yes	Go to the next step.
		No	Replace the OCV, then go to Step 7.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the PCM connector. • Inspect for poor connection at PCM terminal 2AF. (such as damaged, pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to Step 7.
		No	Go to the next step.
6	**INSPECT OCV CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Remove the OCV. • Turn the ignition switch to the ON position (Engine off). • Measure voltage between PCM terminal 2AF and body ground. • Is the voltage **B+?**	Yes	Repair or replace the wiring harness for a short to power supply, then go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
7	**VERIFY TROUBLESHOOTING OF DTC P2089 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Turn the ignition switch to off. • Start the engine and warm it up completely. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2096[L3 WITH TC]

id010239810800

DTC P2096	Target A/F feedback system too lean
DETECTION CONDITION	• The PCM monitors the target A/F fuel trim while under target A/F feedback control. If the fuel trim is more than the specification, the PCM determines that the target A/F feedback system is too lean. • Rear HO2S sensor voltage is **more than 0.1 V** **Diagnostic support note** • This is a continuous monitor (Fuel system). • The MIL does not illuminate. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Exhaust gas leakage • Rear HO2S malfunction • IAT sensor malfunction • ECT sensor malfunction • Air suction in intake-air system • Front HO2S malfunction • MAF sensor malfunction • Insufficient fuel line pressure • Fuel pressure sensor malfunction • Relief valve (built-in fuel delivery pipe) malfunction • Spill valve control solenoid valve (built-in high pressure fuel pump) malfunction • High pressure fuel pump malfunction • Fuel pump malfunction • Leakage fuel • Improper operation ignition system • Insufficient engine compression • Fuel injector malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Fuel system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off then to the ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Is the DTC P2177 or P2187 also present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2096 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to FREEZE FRAME DATA DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS OF REAR HO2S** • Connect the M-MDS to the DLC-2. • Start the engine and warm it up completely. • Access O2S12 PID. • Read O2S12 PID under the following accelerator pedal condition (in NEUTRAL). — **More than 0.45 V** when accelerator pedal is suddenly depressed (rich condition). — **Less than 0.45 V** just after release of accelerator pedal (lean condition) • Is the PID normal?	Yes	Go to the next step.
		No	Visually inspect for the exhaust gas leakage between the TWC and rear HO2S. • If there is no leakage, replace the rear HO2S. (See01-15B-2 EXHAUST SYSTEM REMOVAL/ INSTALLATION[L3 WITH TC].) Then go to Step 20.
6	**VERIFY CURRENT INPUT SIGNAL STATUS** • Connect the M-MDS to the DLC-2. • Verify the following PIDs. (See01-40B-7 PCM INSPECTION[L3 WITH TC].) — ECT — MAF — TP — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 20.
7	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER FREEZE FRAME DATA CONDITION** • Connect the M-MDS to the DLC-2. • Verify the following PIDs under the FREEZE FRAME DATA condition. (See01-40B-7 PCM INSPECTION[L3 WITH TC].) — ECT — MAF — TP — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 20.
8	**VERIFY CURRENT INPUT SIGNAL STATUS OF FRONT HO2S** • Connect the M-MDS to the DLC-2. • Start the engine and warm it up completely. • Access the O2S11 PID. • Read the O2S11 PID under following accelerator pedal condition (in NEUTRAL). — **–0.1—0.1A** when idle. — Engine speed is **more than 3,000 rpm**. — **More than 0.25 mA** just after release of accelerator pedal (lean condition). • Is the PID normal?	Yes	Go to the next step.
		No	Visually inspect for the exhaust gas leakage between the exhaust manifold and front HO2S. • If there is no leakage, replace front HO2S. (See01-15B-2 EXHAUST SYSTEM REMOVAL/ INSTALLATION[L3 WITH TC].) Then go to Step 20.
9	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Connect the M-MDS to the DLC-2. • Start the engine. • Access the MAF PID. • Verify that the MAF PID changes quickly according to engine speed. • Is the PID normal?	Yes	Go to the next step.
		No	Replace the MAF/IAT sensor, then go to Step 20.

STEP	INSPECTION		ACTION
10	**INSPECT INTAKE-AIR SYSTEM FOR EXCESSIVE AIR SUCTION** • Visually inspect the hose in intake-air system for looseness, cracks or damages. • Is there any malfunction?	Yes	Repair or replace the malfunctioning part, then go to Step 20.
		No	Go to the next step.
11	**INSPECT IGNITION COIL WIRING HARNESSES** • Inspect the ignition coil related wiring harness condition (intermittent open or short circuit) for all cylinders. • Are wiring harness conditions normal?	Yes	Go to the next step.
		No	Repair the wiring harnesses, then go to Step 20.
12	**INSPECT IGNITION SYSTEM OPERATION** • Perform the spark test. (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) • Is strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to spark test result. Then go to Step 20.
13	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression. (See01-10B-9 COMPRESSION INSPECTION[L3 WITH TC].) • Is there any malfunction?	Yes	Go to the next step.
		No	Overhaul the engine, then go to Step 20.
14	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Access and monitor FUEL_PRES PID. • Is the FUEL_PRES PID value within the specified? (See01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to Step 18.
		No	Go to the next step.
15	**IDENTIFY CAUSE BY FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 17.
16	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See01-40B-38 FUEL PRESSURE SENSOR INSPECTION[L3 WITH TC].) • Is the fuel pressure sensor normal?	Yes	Go to Step 18.
		No	Replace the fuel delivery pipe, then go to Step 20.
17	**INSPECT HIGH PRESSURE FUEL PUMP** • Replace the high pressure fuel pump. • Monitor FUEL_PRES PID. • Is the FUEL_PRES PID value within the specified? (See01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to Step 20.
		No	Go to the next step.
18	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See01-14B-6 FUEL LINE PRESSURE INSPECTION[L3 WITH TC].) • Is the low side fuel pressure within the specified?	Yes	Go to the next step.
		No	Inspect for following: • Fuel line restriction • Fuel filter clogging If okay replace the fuel pump. Then go to Step 20.
19	**INSPECT FUEL INJECTOR** • Inspect the fuel injector. (See01-14B-33 FUEL INJECTOR INSPECTION[L3 WITH TC].) • Is there any malfunction?	Yes	Replace the fuel injector, then go to the next step. (See01-14B-30 FUEL INJECTOR REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
20	**VERIFY TROUBLESHOOTING OF DTC P2096 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the PCM Adaptive Memory Produce Drive Mode. (See01-02B-10 OBD-II DRIVE MODE[L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
21	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2097[L3 WITH TC]

id010239810900

DTC P2097	Target A/F feedback system too rich
DETECTION CONDITION	• The PCM monitors the target A/F fuel trim while under target A/F feedback control. If the fuel trim is less than specification, the PCM determines that the target A/F feedback system is too rich. **Diagnostic support note** • This is a continuous monitor. (Fuel system) • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction conditions during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Exhaust gas leakage • Rear HO2S malfunction • IAT sensor malfunction • ECT sensor malfunction • Front HO2S malfunction • Excessive fuel line pressure • Fuel pressure sensor malfunction • Relief valve (built-in fuel delivery pipe) malfunction • Spill valve control solenoid valve (built-in high pressure fuel pump) malfunction • High pressure fuel pump malfunction • Fuel pump malfunction • Purge valve malfunction • Insufficient engine compression • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Fuel system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Is the DTC P2178 or P2188 also present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2097 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to FREEZE FRAME DATA DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)

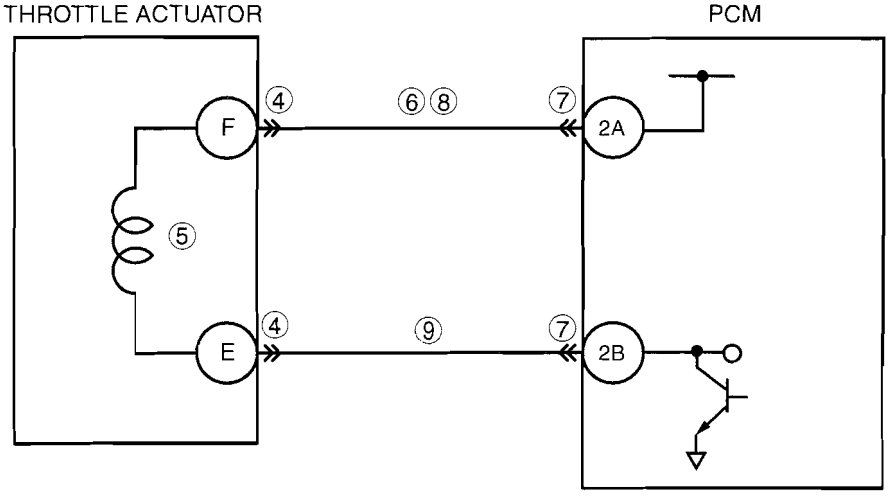
STEP	INSPECTION		ACTION
5	**VERIFY CURRENT INPUT SIGNAL STATUS OF REAR HO2S** • Connect the M-MDS to the DLC-2. • Start the engine and warm it up completely. • Access the O2S12 PID. • Read the O2S12 PID under following accelerator pedal condition (in NEUTRAL). — **More than 0.45 V** when accelerator pedal is suddenly depressed (rich condition). — **Less than 0.45 V** just after release of accelerator pedal (lean condition) • Is the PID normal?	Yes	Go to the next step.
		No	Visually inspect for the exhaust gas leakage between TWC and rear HO2S. • If there is no leakage, replace rear HO2S. (See01-15B-2 EXHAUST SYSTEM REMOVAL/ INSTALLATION[L3 WITH TC].) Then go to Step 15.
6	**VERIFY CURRENT INPUT SIGNAL STATUS** • Connect the M-MDS to the DLC-2. • Verify the following PIDs: (See01-40B-7 PCM INSPECTION[L3 WITH TC].) — ECT — MAF — TP — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 15.
7	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER FREEZE FRAME DATA CONDITION** • Connect the M-MDS to the DLC-2. • Verify the following PIDs under FREEZE FRAME DATA condition. (See01-40B-7 PCM INSPECTION[L3 WITH TC].) — ECT — MAF — TP — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 15.
8	**VERIFY CURRENT INPUT SIGNAL STATUS OF FRONT HO2S** • Connect the M-MDS to the DLC-2. • Start the engine and warm it up completely. • Access the O2S11 PID. • Read the O2S11 PID under following accelerator pedal condition (in NEUTRAL). — **−0.1—0.1A** when idle — Engine speed is **more than 3,000 rpm.** — **More than 0.25 mA** just after release of accelerator pedal (lean condition). • Is the PID normal?	Yes	Go to the next step.
		No	Visually inspect for exhaust gas leakage between the exhaust manifold and front HO2S. • If there is no leakage, replace front HO2S. (See01-15B-2 EXHAUST SYSTEM REMOVAL/ INSTALLATION[L3 WITH TC].) Then go to Step 15.
9	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Access and monitor FUEL_PRES PID. • Is the FUEL_PRES PID value within the specified? (See01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to Step 14.
		No	Go to the next step.
10	**IDENTIFY CAUSE BY FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 12.
11	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See01-40B-38 FUEL PRESSURE SENSOR INSPECTION[L3 WITH TC].) • Is the fuel pressure sensor normal?	Yes	Go to Step 14.
		No	Replace the fuel delivery pipe, then go to Step 15.

STEP	INSPECTION		ACTION
12	**INSPECT HIGH PRESSURE FUEL PUMP** • Replace the high pressure fuel pump. • Monitor FUEL_PRES PID. • Is the FUEL_PRES PID value within the specified? (See01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to Step 15.
		No	Go to the next step.
13	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See01-14B-6 FUEL LINE PRESSURE INSPECTION[L3 WITH TC].) • Is the low side fuel pressure within the specified?	Yes	Go to the next step.
		No	Inspect for following: • Fuel line restriction • Fuel filter clogging If normal replace the fuel pump. Then go to Step 15.
14	**INSPECT LONG TERM FUEL TRIM** • Connect the M-MDS to the DLC_2. • Access LONGFT1 PID. • Compare the LONGFT1 PID with recorded FREEZE FRAME DATA at Step 1. • Is the LONGFT1 PID above FREEZE FRAME DATA?	Yes	Inspect the purge valve. (See01-16B-11 PURGE SOLENOID VALVE INSPECTION[L3 WITH TC].) • If there is any malfunction, replace the purge valve. Then go to the next step.
		No	Go to the next step.
15	**VERIFY TROUBLESHOOTING OF DTC P2097 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the PCM Adaptive Memory Produce Drive Mode. (See01-02B-10 OBD-II DRIVE MODE[L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
16	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

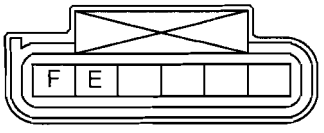
DTC P2100[L3 WITH TC]

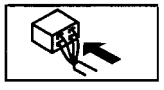
id010239811000

DTC P2100	Throttle actuator circuit open
DETECTION CONDITION	• PCM monitors the electronic throttle valve motor current. If the PCM detects that the electronic throttle valve motor current is below the threshold current, the PCM determines that the electronic throttle valve motor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• Throttle valve motor malfunction • Open circuit between throttle body terminal F and PCM terminal 2A • Open circuit between throttle body terminal E and PCM terminal 2B • Poor connection of throttle body connector or PCM connector • PCM malfunction

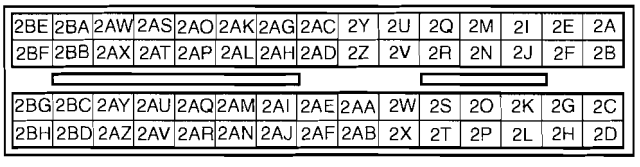


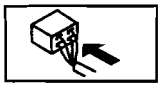
THROTTLE BODY
HARNESS SIDE CONNECTOR





PCM
WIRING HARNESS SIDE CONNECTOR





Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**CLASSIFY INTERMITTENT CONCERN OR CONTINUOUS CONCERN** • Clear the DTC using the M-MDS. • Start the engine and let it idle. • Is the same PENDING CODE present?	Yes	Go to the next step.
		No	Go to INTERMITTENT CONCERNS TROUBLESHOOTING procedure. (See01-03B-77 INTERMITTENT CONCERN TROUBLESHOOTING[L3 WITH TC].)
4	**INSPECT THROTTLE BODY CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the throttle body connector. • Check for poor connection (such as damaged, pulled out terminals, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
5	**INSPECT THROTTLE VALVE ELECTRICAL MALFUNCTION** • Measure resistance between throttle body terminal E and F (part-side). • Is resistance approx.**1.3 ohms?**	Yes	Go to the next step.
		No	Replace the throttle body, then go to Step 10.
6	**CLASSIFY MALFUNCTION ET POWER SUPPLY CIRCUIT OR CONTROL CIRCUIT** • Turn ignition switch to the ON position (Engine off). • Measure the voltage between throttle body terminal F (harness-side) and body ground. • Is the voltage **B+?**	Yes	Malfunction at control circuit. Go to the next step.
		No	Malfunction at power supply circuit. Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the PCM connector. • Check for poor connection (such as damaged, pulled out terminals, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to Step 10.
		No	Go to the next step.
8	**INSPECT POWER CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch to off. • Check for continuity between throttle body terminal F (harness-side) and PCM terminal 2A (harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 10.
9	**INSPECT CONTROL CIRCUIT MALFUNCTION FOR OPEN CIRCUIT** • Check for continuity between throttle body terminal E (harness-side) and PCM terminal 2B (harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P2100 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the M-MDS. • Start engine and warm it up completely. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2101[L3 WITH TC]

id010239811100

DTC P2101	Throttle actuator circuit range/performance
DETECTION CONDITION	• If any of the following conditions continue for a specified period of time or more the PCM detects a malfunction in the throttle actuator. — The voltage of the motor power supply is **4 V or less** while the motor relay is on — There is a system error in the electrical throttle control system of the PCM — The temperature of the electrical throttle control system in the PCM is **180 °C {356 °F}** **Diagnostic support note** • This is a continuous monitor. • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• Drive-by-wire-relay and related circuit malfunction • Main relay and related circuit malfunction • Throttle position sensor No.1 and related circuit malfunction • Throttle position sensor No.2 and related circuit malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING AND STORED DTCS** • Turn ignition switch to OFF, then ON (Engine off). • Verify pending and stored DTCs using the M-MDS. • Are any DTCs present?	Yes	Go to appropriate DTC troubleshooting procedure.
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2101 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged, pulled out terminals, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 22.
		No	Go to the next step.
6	**INSPECT MAIN RELAY OUTPUT VOLTAGE** • Turn the ignition switch to off. • Connect the PCM connector. • Turn ignition switch to the ON position (Engine off). • Measure the voltage between PCM terminal 1BE and body ground. • Is the voltage **B+?**	Yes	Go to Step 13.
		No	Go to the next step.
7	**INSPECT MAIN RELAY CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the main relay. • Inspect for poor connection (such as damaged, pulled out terminals, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 22.
		No	Go to the next step.

STEP	INSPECTION		ACTION
8	**INSPECT POWER SUPPLY OF MAIN RELAY** • Turn ignition switch to the ON position (Engine off). • Measure the voltage between main relay terminal D (harness-side) and body ground. • Is the voltage **B+?**	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 22.
9	**INSPECT POWER SUPPLY FOR CONTROL CIRCUIT OF MAIN RELAY** • Turn ignition switch to the ON position (Engine off). • Measure the voltage between main relay terminal A (harness-side) and body ground. • Is the voltage **B+?**	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 22.
10	**INSPECT MAIN RELAY** • Inspect the main relay. (See09-21-3 RELAY INSPECTION.) • Is the main relay normal?	Yes	Go to the next step.
		No	Replace the main relay, then go to Step 22.
11	**INSPECT POWER CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch to off. • Disconnect the main relay and the PCM connector. • Check for continuity between main relay terminal C (harness-side) and PCM terminal 1BE (harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 22.
12	**INSPECT CONTROL CIRCUIT FOR OPEN CIRCUIT** • Check for continuity between main relay terminal E (harness-side) and PCM terminal 1AT (harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 22.
13	**INSPECT DRIVE-BY-WIRE-RELAY OUTPUT VOLTAGE** • Turn ignition switch to the ON position (Engine off). • Measure the voltage between PCM terminal 1BF (harness-side) and body ground. • Is the voltage **B+?**	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a short to power supply, then go to Step 22.
14	**INSPECT DRIVE-BY-WIRE-RELAY CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the drive-by-wire-relay. • Check drive-by-wire-relay connector (harness-side) for poor connection (such as damaged, pulled out terminals, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 22.
		No	Go to the next step.
15	**INSPECT POWER SUPPLY OF DRIVE-BY-WIRE-RELAY** • Turn ignition switch to the ON position (Engine off). • Measure the voltage between drive-by-wire-relay terminal D (harness-side) and body ground.	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 22.
16	**INSPECT POWER SUPPLY FOR CONTROL CIRCUIT OF DRIVE-BY-WIRE-RELAY** • Turn ignition switch to the ON position (Engine off). • Measure the voltage between drive-by-wire-relay terminal E (harness-side) and body ground. • Is the voltage **B+?**	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit between drive-by-wire-relay terminal E and main relay terminal C, then go to Step 22.
17	**INSPECT DRIVE-BY-WIRE-RELAY** • Inspect the drive-by-wire-relay. (See09-21-3 RELAY INSPECTION.) • Is the drive-by-wire-relay normal?	Yes	Go to the next step.
		No	Replace the drive-by-wire-relay, then go to Step 22.

STEP	INSPECTION		ACTION
18	**INSPECT POWER CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch to off. • Check for continuity between drive-by-wire-relay terminal C (harness-side) and PCM terminal 1BF (harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 22.
19	**INSPECT CONTROL CIRCUIT FOR OPEN CIRCUIT** • Check for continuity between drive-by-wire-relay A (harness-side) and PCM terminal 1AX (harness-side).	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 22.
20	**INSPECT THROTTLE POSITION SENSOR NO.1 OUTPUT VOLTAGE** • Turn the ignition switch to off. • Connect the PCM connector. • Turn ignition switch to the ON position (Engine off). • Check voltage between PCM terminal 2AK and body ground. • Is the voltage **0.40—0.60 V?**	Yes	Go to the next step.
		No	Check the throttle position sensor No.1 and related circuits and terminal. (See01-40B-34 THROTTLE POSITION (TP) SENSOR INSPECTION[L3 WITH TC].) Repair or replace if necessary, then go to Step 22.
21	**INSPECT THROTTLE POSITION SENSOR NO.2 OUTPUT VOLTAGE** • Turn ignition switch to the ON position (Engine off). • Check the voltage between PCM terminal 2AL and body ground. • Is the voltage **4.40—4.60 V?**	Yes	Go to the next step.
		No	Check the throttle position sensor No.2 and related circuits and terminal. (See01-40B-34 THROTTLE POSITION (TP) SENSOR INSPECTION[L3 WITH TC].) Repair or replace as necessary, then go to the next step.
22	**VERIFY TROUBLESHOOTING OF DTC P2101 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the M-MDS. • Start the engine and run it at idle. • Turn ignition switch to OFF then ON (Engine off). • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
23	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2102[L3 WITH TC]

id010239811200

DTC P2102	Throttle actuator circuit low input
DETECTION CONDITION	• PCM monitors the throttle actuator circuit current. If the PCM detects that the throttle actuator circuit current is excessively low, the PCM determines that the throttle actuator circuit was a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• Short to ground circuit between throttle body terminal F and PCM terminal 2A • Short to ground circuit between throttle body terminal E and PCM terminal 2B • Poor connection of throttle body or PCM connector • Throttle actuator malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**VERIFY RELATED PENDING CODE AND STORED DTCS** • Turn ignition switch to OFF, then ON (Engine off). • Verify pending and/or stored DTCs using the M-MDS. • Is the DTC P2100 also present?	Yes	Go to appropriate the DTC troubleshooting procedure, then go to Step 8.
		No	Go to the next step.
4	**INSPECT THROTTLE BODY CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the throttle body connector. • Inspect for poor connection (such as damaged, pulled-put pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
5	**INSPECT POWER SUPPLY CIRCUIT OF THROTTLE ACTUATOR FOR SHORT TO GROUND** • Turn the ignition switch to off. • Check continuity between throttle body terminal E (harness-side) and body ground. • Check continuity between throttle body terminal F (harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a short to ground circuit, then go to Step 8.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
7	**INSPECT THROTTLE ACTUATOR** • Inspect the throttle actuator. (See01-13B-13 THROTTLE ACTUATOR INSPECTION[L3 WITH TC].) • Is it normal?	Yes	Go to the next step.
		No	Replace the throttle body, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P2102 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the M-MDS. • Start engine and warm it up completely. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2103[L3 WITH TC]

id010239811300

DTC P2103	Throttle actuator circuit high input
DETECTION CONDITION	• PCM monitors the throttle actuator circuit current. If the PCM detects that the throttle actuator circuit current is excessively high, the PCM determines that the electronic throttle actuator circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• Short to the power supply between throttle body terminal E and PCM terminal 2B • Throttle actuator malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT CONTROL CIRCUIT OF THROTTLE ACTUATOR FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to off. • Disconnect the throttle body and PCM connectors. • Turn ignition switch to the ON position (Engine off). • Measure the voltage between throttle body terminal E (harness-side) and body ground. • Is the voltage **B+?**	Yes	Repair or replace the wiring harness for a short to power supply, then go to Step 5.
		No	Go to the next step.
4	**INSPECT THROTTLE ACTUATOR** • Inspect the throttle actuator. (See01-13B-13 THROTTLE ACTUATOR INSPECTION[L3 WITH TC].) • Is it normal?	Yes	Go to the next step.
		No	Replace the throttle body, then go to the next step.
5	**VERIFY TROUBLESHOOTING OF DTC P2103 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the M-MDS. • Start the engine and warm it up completely. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2107[L3 WITH TC]

id010239811400

DTC P2107	Throttle actuator control module processor problem
DETECTION CONDITION	• Throttle actuator control module internal processor error **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Throttle actuator control module internal processor malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY TROUBLESHOOTING OF P2107 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P2108[L3 WITH TC]

id010239811500

DTC P2108	Throttle actuator control module performance problem
DETECTION CONDITION	• If the PCM detects either of the following conditions, the PCM determines that throttle actuator control system has a malfunction. — TP sensor power supply voltage **below 4.4 V** — TP sensor No.1 output voltage **below 0.20 V or above 4.85 V** (DTC P0122 or P0123) — TP sensor No.2 output voltage **below 0.20 V or above 4.85 V** (DTC P0222 or P0223) — PCM internal circuit for TP sensor No.1 input circuit malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• TP sensor No.1 malfunction • TP sensor No.2 malfunction • Connector or terminal malfunction • Open circuit between throttle body terminal A and PCM terminal 2AK • Short to ground between throttle body terminal A and PCM terminal 2AK • Open circuit between throttle body terminal B and PCM terminal 2AO • Open circuit between throttle body terminal D and PCM terminal 2AP • Short to the power supply between throttle body terminal A and PCM terminal 2AK • Short to the power supply between throttle body terminal C and PCM terminal 2AL • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE AND STORED DTCS** • Turn ignition switch to OFF, then ON (Engine off). • Verify pending and/or stored DTCs using the M-MDS. • Is the DTC P0122, P0123, P0222 or P0223 also present?	Yes	Go to appropriate DTC troubleshooting procedure, then go to Step 7.
		No	Go to the next step.
4	**VERIFY INTERMITTENT MALFUNCTION AT TP SENSOR NO.1 CIRCUIT** • Perform the INTERMITTENT TROUBLESHOOTING procedure to TP sensor No.1 related harnesses and connectors. (See01-03B-77 INTERMITTENT CONCERN TROUBLESHOOTING[L3 WITH TC].) • Is there any malfunction?	Yes	Repair or replace malfunctioning part, according to inspection result, the go to Step 7.
		No	Go to the next step.
5	**VERIFY INTERMITTENT MALFUNCTION AT TP SENSOR NO.2 CIRCUIT** • Perform the INTERMITTENT TROUBLESHOOTING procedure to TP sensor No.2 related harnesses and connectors. (See01-03B-77 INTERMITTENT CONCERN TROUBLESHOOTING[L3 WITH TC].) • Is there any malfunction	Yes	Repair or replace malfunctioning part, according to inspection result, the go to Step 7.
		No	Go to the next step.

STEP	INSPECTION		ACTION
6	**INSPECT TP SENSOR** • Inspect the TP sensor. • Is the TP sensor normal?	Yes	Go to the next step.
		No	Replace the throttle body, then go to nest step.
7	**VERIFY TROUBLESHOOTING OF DTC P2108 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Turn ignition switch to the ON position (Engine off). • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2119[L3 WITH TC]

id010239811600

DTC P2119	Throttle actuator control throttle body range/performance problem
DETECTION CONDITION	• The PCM compares the TP with the default TP when the ignition switch is off. If the TP is higher than the default TP, the PCM determines that there is a throttle actuator control throttle body range/performance problem. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunctioning condition in the first drive cycles. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Throttle actuator malfunction • Throttle valve malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT THROTTLE ACTUATOR** • Inspect the throttle actuator. (See01-13B-13 THROTTLE ACTUATOR INSPECTION[L3 WITH TC].) • Is there any malfunction?	Yes	Replace the throttle body, then go to Step 5. (See01-13B-4 INTAKE AIR SYSTEM REMOVAL/ INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
4	**INSPECT TP SENSOR** • Inspect the TP sensor. (See01-13B-13 THROTTLE ACTUATOR INSPECTION[L3 WITH TC].) • Is there any malfunction?	Yes	Replace the TP sensor, then go to the next step. (See01-13B-4 INTAKE AIR SYSTEM REMOVAL/ INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING OF DTC P2119 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Turn the ignition switch to the ON position (Engine off), then off. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P2122[L3 WITH TC]

id010239811700

DTC P2122	Accelerator pedal position (APP) sensor No.1 circuit low input
DETECTION CONDITION	• The PCM monitors the input voltage from APP sensor No.1 when the engine is running. If the input voltage is **less than 0.12 V**, the PCM determines that the APP sensor No.1 circuit input voltage is low. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• APP sensor No.1 malfunction • Connector or terminal malfunction • Open circuit in wiring harness between APP sensor terminal A and PCM terminal 1AJ • Short to ground in wiring harness between APP sensor terminal A and PCM terminal 1AJ • Open circuit in wiring harness between APP sensor terminal B and PCM terminal 1Y • Short to ground in wiring harness between APP sensor terminal B and PCM terminal 1Y • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT APP SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the APP sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
4	**INSPECT APP SENSOR NO.1 CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between the following terminals and body ground: — APP sensor terminal A (wiring harness-side) and body ground — APP sensor terminal B (wiring harness-side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 8.
		No	Go to the next step.
5	**INSPECT APP SENSOR NO.1** • Inspect APP sensor No.1. (See 01-40B-36 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION[L3 WITH TC].) • Is there any malfunction?	Yes	Replace the APP sensor, then go to Step 8. (See 01-13B-18 ACCELERATOR PEDAL REMOVAL/ INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
7	**INSPECT APP SENSOR NO.1 CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between the following terminals: — APP sensor terminal A (wiring harness-side) and PCM terminal 1AJ (wiring harness-side) — APP sensor terminal B (wiring harness-side) and PCM terminal 1Y (wiring harness-side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P2122 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02B-14 DTC TABLE[L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P2123[L3 WITH TC]

id010239811800

DTC P2123	Accelerator pedal position (APP) sensor No.1 circuit high input
DETECTION CONDITION	• The PCM monitors the input voltage from APP sensor No.1 when the engine is running. If the input voltage is **above 4.8 V**, the PCM determines that the APP sensor No.1 circuit input voltage is high. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• APP sensor No.1 malfunction • Connector or terminal malfunction • Short to power supply in wiring harness between APP sensor terminal B and PCM terminal 1Y • Open circuit in wiring harness between APP sensor terminal C and PCM terminal 1AV • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT APP SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the APP sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
4	**INSPECT APP SENSOR NO.1 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between APP sensor terminal B (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 8.
		No	Go to the next step.
5	**INSPECT APP SENSOR NO.1** • Inspect APP sensor No.1. (See 01-40B-36 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION[L3 WITH TC].) • Is there any malfunction?	Yes	Replace the APP sensor, then go to Step 8. (See 01-13B-18 ACCELERATOR PEDAL REMOVAL/ INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
7	**INSPECT APP SENSOR NO.1 GROUND CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between APP sensor terminal C (wiring harness-side) and PCM terminal 1AV (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P2123 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02B-14 DTC TABLE[L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P2126[L3 WITH TC]

id010239840400

DTC P2126	Accelerator pedal position (APP) sensor No.2 range/performance problem
DETECTION CONDITION	• The PCM monitors the APP sensor duty signal. If the input signal (duty signal) is too high or too low than the set value, or the input signal intervals are too short or too long, the PCM determines that the APP sensor No.2 has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• APP sensor No.2 malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT APP SENSOR NO.2** • Inspect the APP sensor No.2. (See 01-40B-36 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION[L3 WITH TC].) • Is there any malfunction?	Yes	Replace the APP sensor, then go to Step 4. (See 01-13B-18 ACCELERATOR PEDAL REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
4	**VERIFY TROUBLESHOOTING OF DTC P2126 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02B-14 DTC TABLE[L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P2127[L3 WITH TC]

id010239811900

DTC P2127	Accelerator pedal position (APP) sensor No.2 circuit low input
DETECTION CONDITION	• The PCM monitors the input voltage from APP sensor No.2 when the engine is running. If the input voltage is **below 6.5 V** for **1s**, the PCM determines that the APP sensor No.2 circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• APP sensor No.2 malfunction • Connector or terminal malfunction • Short to ground in wiring harness between APP sensor terminal E and PCM terminal 1AC • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT APP SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the APP sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT APP SENSOR NO.2 CIRCUIT FOR SHORT TO ground** • Turn the ignition switch off. • Inspect for continuity between the following circuits: — APP sensor terminal E (wiring harness-side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 7.
		No	Go to the next step.
5	**INSPECT APP SENSOR NO.2** • Inspect the APP sensor No.2. (See 01-40B-36 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION[L3 WITH TC].) • Is there any malfunction?	Yes	Replace the APP sensor, then go to Step 7. (See 01-13B-18 ACCELERATOR PEDAL REMOVAL/ INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P2127 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02B-14 DTC TABLE[L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P2128[L3 WITH TC]

id010239812000

DTC P2128	Accelerator pedal position (APP) sensor No.2 circuit high input
DETECTION CONDITION	• The PCM monitors the input voltage from APP sensor No.2 when the engine is running. If the input voltage is **more than 6.5 V** for **1s**, the PCM determines that the APP sensor No.2 circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• APP sensor No.2 malfunction • Connector or terminal malfunction • Open circuit in wiring harness between APP sensor terminal F and main relay • Open circuit in wiring harness between APP sensor terminal D and PCM terminal 1U • Open circuit in wiring harness between APP sensor terminal E and PCM terminal 1AC • Short to power supply in wiring harness between APP sensor terminal E and PCM 1AC • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT APP SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the APP sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
4	**INSPECT APP SENSOR NO.2 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between APP sensor terminal E (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 8.
		No	Go to the next step.
5	**INSPECT APP SENSOR NO.2** • Inspect APP sensor No.2. (See 01-40A-56 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION[LF, L3].) • Is there any malfunction?	Yes	Replace the APP sensor, then go to Step 8. (See 01-13A-11 ACCELERATOR PEDAL REMOVAL/ INSTALLATION[LF, L3].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
7	**INSPECT APP SENSOR NO.2 GROUND CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between the following circuits: — APP sensor terminal D (wiring harness-side) and PCM terminal 1U (wiring harness-side) — APP sensor terminal E (wiring harness-side) and PCM terminal 1AC (wiring harness-side) — APP sensor terminal F (wiring harness-side) and main relay • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P2128 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-16 AFTER REPAIR PROCEDURE[LF, L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	DTC troubleshooting completed.

DTC P2135[L3 WITH TC]

id010239812100

DTC P2135	TP sensor No.1/No.2 voltage correlation problem
DETECTION CONDITION	• The PCM compares the input voltage from TP sensor No.1 with the input voltage from TP sensor No.2 when the engine is running. If the difference is more than the specification, the PCM determines that there is a TP sensor No.1/No.2 voltage correlation problem. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• TP sensor No.1 malfunction • TP sensor No.2 malfunction • Connector or terminal malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT THROTTLE BODY CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the throttle body connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 6.
		No	Go to the next step.
4	**INSPECT TP SENSOR** • Inspect the TP sensor. (See01-40B-34 THROTTLE POSITION (TP) SENSOR INSPECTION[L3 WITH TC].) • Is there any malfunction?	Yes	Replace the throttle body, then go to Step 6. (See01-13B-4 INTAKE AIR SYSTEM REMOVAL/ INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
6	**VERIFY TROUBLESHOOTING OF DTC P2135 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P2138[L3 WITH TC]

id010239812200

DTC P2138	APP sensor No.1/No.2 voltage correlation problem
DETECTION CONDITION	• The PCM compares the input voltage from APP sensor No.1 with the input voltage from APP sensor No.2 when the engine is running. If the difference is more than the specification, the PCM determines that there is an APP sensor No.1/No.2 angle correlation problem. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• APP sensor No.1 malfunction • APP sensor No.2 malfunction • Connector or terminal malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT APP SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the APP sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 6.
		No	Go to the next step.
4	**INSPECT APP SENSOR** • Inspect the APP sensor. (See01-40B-36 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION[L3 WITH TC].) • Is there any malfunction?	Yes	Replace the APP sensor, then go to Step 6. (See01-13B-18 ACCELERATOR PEDAL REMOVAL/ INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
6	**VERIFY TROUBLESHOOTING OF DTC P2138 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P2177[L3 WITH TC]

id010239812300

DTC P2177	Fuel system too lean at off idle
DETECTION CONDITION	• PCM monitors the short term fuel trim (SHRTFT) and long term fuel trim (LONGFT) during closed loop fuel control at off-idle. If the LONGFT and the sum total of these fuel trims exceed the preprogrammed criteria, the PCM determines that the fuel system is too lean at off-idle. **Diagnostic support note** • This is a continuous monitor. (Fuel system) • MIL illuminates if the PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction conditions during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Misfire • Front HO2S deterioration • Front HO2S heater malfunction • MAF sensor malfunction • Pressure regulator malfunction • Fuel pressure sensor malfunction • Relief valve (built-in fuel delivery pipe) malfunction • Spill valve control solenoid valve (built-in high pressure fuel pump) malfunction • High pressure fuel pump malfunction • Fuel pump malfunction • Fuel filter clogged or restricted • Fuel leakage on fuel line • Exhaust system leakage • Purge solenoid valve improper operation • Purge solenoid valve malfunction (stuck open) • Purge solenoid hoses improper connection • Air suction in intake-air system • Insufficient engine compression • Variable valve timing control system improper operation • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Fuel system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn the ignition switch to off, then to the ON position (Engine off). • Verify related pending code or stored DTCs. • Are other DTCs present?	Yes	If misfire the DTC is present, go to Step 8. If other DTCs is present, go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	If driveability concern is present, go to Step 8. If not, go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2177 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA.
5	**VERIFY CURRENT INPUT SIGNAL STATUS (IGNITION SWITCH TO THE ON POSITION/ IDLE)** • Access the APP1, APP2, ECT, MAF, TP and VSS PIDs using the M-MDS. • Is there any signal that is far out of specification when the ignition switch is at the ON position and the engine runs?	Yes	Inspect the sensor and excessive resistance in related wiring harnesses. Repair if necessary. Then go to Step 20.
		No	Go to the next step.

STEP	INSPECTION		ACTION
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION** • Inspect the same PIDs as Step 5 while simulating FREEZE FRAME DATA condition. • Is there any signal which causes drastic changes?	Yes	Inspect the sensor and related wiring harnesses repair or replace it. Then go to Step 20.
		No	Go to the next step.
7	**VERIFY CURRENT INPUT SIGNAL STATUS OF FRONT HO2S** • Access the O2S11 for P2177 PID using the M-MDS. • Check the PID under following accelerator pedal condition in NEUTRAL. • Is the PID reading normal? — **–0.1—0.1 A** when idle — Engine speed is **more than 3,000 rpm**. — **More than 0.25 mA** just after release of accelerator pedal (lean condition).	Yes	Go to the next step.
		No	Visually inspect for any gas leakage between the exhaust manifold and the front HO2S. Then go to Step 20.
8	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Connect the M-MDS to the DLC-2. • Start the engine. • Access the MAF PID. • Verify that the MAF PID changes quickly according to engine speed. • Is the PID normal?	Yes	Go to the next step.
		No	Replace the MAF/IAT sensor, then go to Step 20.
9	**INSPECT FOR EXCESSIVE AIR SUCTION OF INTAKE AIR SYSTEM** • Visually inspect for loosen, cracks or damages hoses on intake-air system. • Is there any malfunction?	Yes	Repair or replace the source of air suction, then go to Step 20.
		No	Go to the next step.
10	**INSPECT PURGE SOLENOID OPERATION** • Perform the Purge Control System Inspection. (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) • Does the purge control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection result, then go to Step 20.
11	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Access and monitor FUEL_PRES PID. • Is the FUEL_PRES PID value within the specified? (See01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to Step 15.
		No	Go to the next step.
12	**IDENTIFY CAUSE BY FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 14.
13	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. • Is fuel leakage found? (See01-40B-38 FUEL PRESSURE SENSOR INSPECTION[L3 WITH TC].) • Is the fuel pressure sensor normal?	Yes	Go to Step 15.
		No	Replace the fuel delivery pipe, then go to Step 20.
14	**INSPECT HIGH PRESSURE FUEL PUMP** • Replace the high pressure fuel pump • Monitor FUEL_PRES PID • Is the FUEL_PRES PID value within the specified? (See01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to Step 20.
		No	Go to the next step.
15	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See01-14B-6 FUEL LINE PRESSURE INSPECTION[L3 WITH TC].) • Is the low side fuel pressure within the specified?	Yes	Go to the next step.
		No	Inspect for following: • Fuel line restriction • Fuel filter clogging If okay replace the fuel pump. Then go to Step 20.

STEP	INSPECTION		ACTION
16	**INSPECT IGNITION SYSTEM** • Perform the spark test. (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) • Is strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to spark test result, then go to Step 20.
17	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression. (See01-10B-9 COMPRESSION INSPECTION[L3 WITH TC].) • Is it normal?	Yes	Go to the next step.
		No	Implement the engine overhaul for repairs, then go to Step 20.
18	**INSPECT VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Inspect the variable valve timing control system operation. (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) • Does the variable valve timing control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection results, then go to Step 20.
19	**INSPECT FUEL INJECTOR OPERATION** • Remove the fuel injector. • Inspect the fuel injector (resistance, injection amount). (See01-14B-33 FUEL INJECTOR INSPECTION[L3 WITH TC].) • Is the fuel injector normal?	Yes	Go to the next step.
		No	Replace the fuel injector, then go to the next step.
20	**VERIFY TROUBLESHOOTING OF DTC P2177 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the PCM Adaptive Memory Produce Drive Mode. (See01-02B-10 OBD-II DRIVE MODE[L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
21	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2178[L3 WITH TC]

id010239812400

DTC P2178	Fuel system too rich at off idle
DETECTION CONDITION	• PCM monitors the short term fuel trim (SHRTFT) and long term fuel trim (LONGFT) during closed loop fuel control at off-idle. If the LONGFT and the sum total of these fuel trims exceed the preprogrammed criteria, the PCM determines that fuel system is too rich at off-idle. **Diagnostic support note** • This is a continuous monitor. (Fuel system) • MIL illuminates if the PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction conditions during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Misfire • Front HO2S deterioration • Front HO2S heater malfunction • MAF sensor malfunction • Pressure regulator malfunction • Fuel pressure sensor malfunction • Relief valve (built-in fuel delivery pipe) malfunction • Spill valve control solenoid valve (built-in high pressure fuel pump) malfunction • High pressure fuel pump malfunction • Fuel pump malfunction • EGR valve improper operation • Variable swirl control improper operation • Purge solenoid valve improper operation • Purge solenoid valve malfunction (stuck open) • Purge solenoid hoses improper connection • PCV valve malfunction • Variable valve timing control system improper operation • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Fuel system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn the ignition switch to off, then to the ON position (Engine off). • Verify related pending code or stored DTCs. • Are other DTCs present?	Yes	If misfire the DTC is present, go to Step 8. If other DTCs is present, go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	If driveability concern is present, go to Step 8. If not, go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2178 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA.
5	**VERIFY CURRENT INPUT SIGNAL STATUS (IGNITION SWITCH TO THE ON POSITION/ IDLE)** • Access the APP1, APP2, ECT, MAF, TP and VSS PIDs using the M-MDS. • Is there any signal that is far out of specification when the ignition switch is at the ON position and the engine runs?	Yes	Inspect the sensor and excessive resistance in related wiring harnesses. Repair if necessary. Then go to Step 19.
		No	Go to the next step.

STEP	INSPECTION		ACTION
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION** • Inspect the same PIDs as Step 5 while simulating FREEZE FRAME DATA condition. • Is there any signal which causes drastic changes?	Yes	Inspect the sensor and related wiring harnesses, repair or replace it. Then go to Step 19.
		No	Go to the next step.
7	**VERIFY CURRENT INPUT SIGNAL STATUS OF FRONT HO2S** • Access the O2S11 for P2177 PID using the M-MDS. • Check the PID under following accelerator pedal condition in NEUTRAL. • Is the PID reading normal? — **–0.1—0.1 A** when idle — Engine speed is **more than 3,000 rpm**. — **More than 0.25 mA** just after release of accelerator pedal (lean condition).	Yes	Go to the next step.
		No	Visually inspect for any gas leakage between the exhaust manifold and the front HO2S. Then go to Step 19.
8	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Connect the M-MDS to the DLC-2 • Start the engine. • Access the MAF PID. • Verify that the MAF PID changes quickly according to engine speed. • Is the PID normal?	Yes	Go to the next step.
		No	Replace the MAF/IAT sensor, then go to Step 19.
9	**INSPECT PURGE SOLENOID OPERATION** • Perform the Purge Control System Inspection. (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) • Does the purge control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection result, then go to Step 19.
10	**INSPECT PCV VALVE OPERATION** • Inspect the PCV valve operation. (See01-16B-15 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION[L3 WITH TC].) • Is the PCV valve normal?	Yes	Go to the next step.
		No	Replace the PCV valve, then go to Step 19
11	**INSPECT EGR VALVE OPERATION** • Perform the EGR Control System Inspection. (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) • Does the EGR control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection result, then go to Step 19.
12	**INSPECT VARIABLE SWIRL CONTROL OPERATION** • Perform the Variable Swirl Control Operation Inspection. (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) • Does the variable swirl control work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection result, then go to Step 19.
13	**INSPECT VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Inspect the variable valve timing control system operation. (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) • Does the variable valve timing control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection results, then go to Step 19.
14	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Access and monitor FUEL_PRES PID. • Is the FUEL_PRES PID value within the specified? (See01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to Step 18.
		No	Go to the next step.

STEP	INSPECTION		ACTION
15	**IDENTIFY CAUSE BY FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 17.
16	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See01-40B-38 FUEL PRESSURE SENSOR INSPECTION[L3 WITH TC].) • Is the fuel pressure sensor normal?	Yes	Go to the next step.
		No	Replace the fuel delivery pipe, then go to Step 19.
17	**INSPECT HIGH PRESSURE FUEL PUMP** • Replace the high pressure fuel pump • Monitor FUEL_PRES PID • Is the FUEL_PRES PID value within the specified? (See01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to Step 19.
		No	Go to the next step.
18	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See01-14B-6 FUEL LINE PRESSURE INSPECTION[L3 WITH TC].) • Is the low side fuel pressure within the specified?	Yes	Go to the next step.
		No	Inspect for following: • Fuel line restriction • Fuel filter clogging If okay replace the fuel pump. Then go to the next step.
19	**VERIFY TROUBLESHOOTING OF DTC P2178 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the PCM Adaptive Memory Produce Drive Mode. (See01-02B-10 OBD-II DRIVE MODE[L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
20	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2187[L3 WITH TC]

id010239812500

DTC P2187	Fuel system too lean at idle
DETECTION CONDITION	• PCM monitors the short term fuel trim (SHRTFT) and long term fuel trim (LONGFT) during closed loop fuel control at idle. If the LONGFT and the sum total of these fuel trims exceed the preprogrammed criteria, the PCM determines that fuel system is too lean at idle. **Diagnostic support note** • This is a continuous monitor. (Fuel system) • MIL illuminates if the PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction conditions during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Misfire • Front HO2S deterioration • Front HO2S heater malfunction • MAF sensor malfunction • Pressure regulator malfunction • Fuel pressure sensor malfunction • Relief valve (built-in fuel delivery pipe) malfunction • Spill valve control solenoid valve (built-in high pressure fuel pump) malfunction • High pressure fuel pump malfunction • Fuel pump malfunction • Fuel filter clogged or restricted • Fuel leakage on fuel line from fuel delivery pipe and fuel pump • Exhaust system leakage • Purge solenoid valve malfunction • Purge solenoid hoses improper connection • Air suction in intake-air system • Insufficient engine compression • Variable valve timing control system improper operation • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Fuel system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn the ignition switch to off, then to the ON position (Engine off). • Verify related pending code or stored DTCs. • Are other DTCs present?	Yes	If misfire DTC is present, go to Step 8. If other DTC is present, go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	If driveability concern is present, go to Step 8. If not, go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2177 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA.
5	**VERIFY CURRENT INPUT SIGNAL STATUS (IGNITION SWITCH TO THE ON POSITION/ IDLE)** • Access the APP1, APP2, ECT, MAF and TP PIDs using the M-MDS.) • Is there any signal that is far out of specification when the ignition switch is at the ON position and the engine runs?	Yes	Inspect the sensor and excessive resistance in related wiring harnesses. Repair if necessary. Then go to Step 20.
		No	Go to the next step.

STEP	INSPECTION		ACTION
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION** • Inspect the same PIDs as Step 4 while simulating FREEZE FRAME DATA condition. • Is there any signal which causes drastic changes?	Yes	Inspect the sensor and related wiring harnesses, repair or replace it. Then go to Step 20.
		No	Go to the next step.
7	**VERIFY CURRENT INPUT SIGNAL STATUS OF FRONT HO2S** • Access the O2S11 for P2177 PID using the M-MDS. • Check the PID under following accelerator pedal condition in NEUTRAL. • Is the PID reading normal? — **–0.1—0.1 A** when idle — Engine speed is **more than 3,000 rpm**. — **More than 0.25 mA** just after release of accelerator pedal (lean condition).	Yes	Go to the next step.
		No	Visually inspect for any gas leakage between exhaust manifold and front HO2S. Then go to Step 20.
8	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Connect the M-MDS to the DLC-2. • Start the engine. • Access the MAF PID. • Verify that the MAF PID changes quickly according to engine speed. • Is the PID normal?	Yes	Go to the next step.
		No	Replace the MAF/IAT sensor, then go to Step 20.
9	**INSPECT FOR EXCESSIVE AIR SUCTION OF INTAKE AIR SYSTEM** • Visually inspect for loosen, cracks or damages hoses on intake-air system. • Is there any malfunction?	Yes	Repair or replace the source of air suction, then go to Step 20.
		No	Go to the next step.
10	**INSPECT PURGE SOLENOID VALVE STUCK OPEN** • Turn the ignition switch to off. • Disconnect the both hoses from purge solenoid valve. • Blow the air through purge solenoid valve. • Does the air blow through?	Yes	Replace the purge solenoid valve. Then go to Step 20.
		No	Go to the next step.
11	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Access and monitor FUEL_PRES PID. • Is the FUEL_PRES PID value within the specified? (See01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to Step 15.
		No	Go to the next step.
12	**IDENTIFY CAUSE BY FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 14.
13	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See01-40B-38 FUEL PRESSURE SENSOR INSPECTION[L3 WITH TC].) • Is the fuel pressure sensor normal?	Yes	Go to Step 15.
		No	Replace the fuel delivery pipe, then go to Step 20.
14	**INSPECT HIGH PRESSURE FUEL PUMP** • Replace the high pressure fuel pump • Monitor FUEL_PRES PID • Is the FUEL_PRES PID value within the specified? (See01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to Step 20.
		No	Go to the next step.

STEP	INSPECTION		ACTION
15	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See01-14B-6 FUEL LINE PRESSURE INSPECTION[L3 WITH TC].) • Is the low side fuel pressure within the specified?	Yes	Go to the next step.
		No	Inspect for following: • Fuel line restriction • Fuel filter clogging If okay replace the fuel pump. Then go to Step 20.
16	**INSPECT IGNITION SYSTEM** • Perform the spark test. (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) • Is strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to spark test results, then go to Step 20.
17	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression. (See01-10B-9 COMPRESSION INSPECTION[L3 WITH TC].) • Is it normal?	Yes	Go to the next step.
		No	Implement the engine overhaul for repairs, then go to Step 20.
18	**INSPECT VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Inspect the variable valve timing control system operation. (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) • Does the variable valve timing control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection results, then go to Step 20.
19	**INSPECT FUEL INJECTOR OPERATION** • Remove the fuel injector. • Inspect the fuel injector (resistance, injection amount). (See01-14B-33 FUEL INJECTOR INSPECTION[L3 WITH TC].) • Is the fuel injector normal?	Yes	Go to the next step.
		No	Replace the fuel injector, then go to the next step.
20	**VERIFY TROUBLESHOOTING OF DTC P2187 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the PCM Adaptive Memory Produce Drive Mode. (See01-02B-10 OBD-II DRIVE MODE[L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
21	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2188[L3 WITH TC]

id010239812600

DTC P2188	Fuel system too rich at idle
DETECTION CONDITION	• PCM monitors the short term fuel trim (SHRTFT) and long term fuel trim (LONGFT) during closed loop fuel control at idle. If the LONGFT and the sum total of these fuel trims exceed the preprogrammed criteria, the PCM determines that fuel system is too rich at idle. **Diagnostic support note** • This is a continuous monitor. (Fuel system) • MIL illuminates if the PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction conditions during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Misfire • Front HO2S deterioration • Front HO2S heater malfunction • MAF sensor malfunction • Pressure regulator malfunction • Fuel pressure sensor malfunction • Relief valve (built-in fuel delivery pipe) malfunction • Spill valve control solenoid valve (built-in high pressure fuel pump) malfunction • High pressure fuel pump malfunction • Fuel pump malfunction • EGR valve stuck open • Variable swirl control improper operation • Purge solenoid valve improper operation • Purge solenoid valve malfunction (stuck open) • Purge solenoid hoses improper connection • PCV valve malfunction • Variable valve timing control system improper operation • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Fuel system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn the ignition switch to off, then to the ON position (Engine off). • Verify related pending code or stored DTCs. • Are other DTCs present?	Yes	If misfire the DTC is present, go to Step 8. If other DTCs is present, go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	If driveability concern is present, go to Step 8. If not, go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2178 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA.
5	**VERIFY CURRENT INPUT SIGNAL STATUS (IGNITION SWITCH TO THE ON POSITION/ IDLE)** • Access the APP1, APP2, ECT, MAF, TP and VSS PIDs using the M-MDS. • Is there any signal that is far out of specification when the ignition switch is at the ON position and engine runs?	Yes	Inspect the sensor and excessive resistance in related wiring harnesses. Repair or if necessary. Then go to Step 19.
		No	Go to the next step.

STEP	INSPECTION		ACTION
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION** • Inspect the same PIDs as Step 5 while simulating FREEZE FRAME DATA condition. • Is there any signal which causes drastic changes?	Yes	Inspect the sensor and related wiring harnesses, repair or replace it. Then go to Step 19.
		No	Go to the next step.
7	**VERIFY CURRENT INPUT SIGNAL STATUS OF FRONT HO2S** • Access the O2S11 for P2177 PID using the M-MDS. • Check the PID under following accelerator pedal condition in NEUTRAL. • Is the PID reading normal? — **–0.1—0.1 A** when idle — Engine speed is **more than 3,000 rpm.** — **More than 0.25 mA** just after release of accelerator pedal (lean condition).	Yes	Go to the next step.
		No	Visually inspect for any gas leakage between the exhaust manifold and the front HO2S. Then go to Step 19.
8	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Connect the M-MDS to the DLC-2. • Start the engine. • Access the MAF PID. • Verify that the MAF PID changes quickly according to engine speed. • Is the PID normal?	Yes	Go to the next step.
		No	Replace the MAF/IAT sensor, then go to Step 19.
9	**INSPECT PURGE SOLENOID OPERATION** • Perform the Purge Control System Inspection. (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) • Does the purge control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection result, then go to Step 19.
10	**INSPECT PCV VALVE OPERATION** • Inspect the PCV valve operation. (See01-16B-15 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION[L3 WITH TC].) • Is the PCV valve normal?	Yes	Go to the next step.
		No	Replace the PCV valve, then go to Step 19.
11	**INSPECT VARIABLE SWIRL CONTROL OPERATION** • Perform the Variable Swirl Control Operation Inspection. (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) • Does the variable swirl control work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection result, then go to Step 19.
12	**INSPECT VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Inspect the variable valve timing control system operation. (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) • Does the variable valve timing control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection results, then go to Step 18.
13	**INSPECT IF EGR VALVE IS STUCK OPEN** • Remove the EGR valve. • Does the EGR valve stuck open?	Yes	Clean or replace the EGR valve, then go to Step 19.
		No	Go to the next step.
14	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Access and monitor FUEL_PRES PID. • Is the FUEL_PRES PID value within the specified? (See01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to Step 18.
		No	Go to the next step.
15	**IDENTIFY CAUSE BY FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 17.

STEP	INSPECTION		ACTION
16	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See01-40B-38 FUEL PRESSURE SENSOR INSPECTION[L3 WITH TC].) • Is the fuel pressure sensor normal?	Yes	Go to Step 19.
		No	Replace the fuel delivery pipe, then go to Step 19.
17	**INSPECT HIGH PRESSURE FUEL PUMP** • Replace the high pressure fuel pump • Monitor FUEL_PRES PID • Is the FUEL_PRES PID value within the specified? (See01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to Step 19.
		No	Go to the next step.
18	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See01-14B-6 FUEL LINE PRESSURE INSPECTION[L3 WITH TC].) • Is the low side fuel pressure within the specified?	Yes	Go to the next step.
		No	Inspect for following: • Fuel line restriction • Fuel filter clogging If okay replace the fuel pump. Then go to the next step.
19	**VERIFY TROUBLESHOOTING OF DTC P2188 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the PCM Adaptive Memory Produce Drive Mode. (See01-02B-10 OBD-II DRIVE MODE[L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
20	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2195[L3 WITH TC]

id010239812700

DTC P2195	Front HO2S signal stuck lean
DETECTION CONDITION	• The PCM monitors the front HO2S output when the following conditions are met. If the output is **more than 1.15 A for 25 s**, the PCM determines that the front HO2S has a malfunction. **MONITORING CONDITION** — ECT: more than **70 °C {158 °F}** — Engine speed: **1,000—3,200 rpm** — Charging efficiency: **20—62.5%** — Output voltage from the rear HO2S: **0.2 V or above** **Diagnostic support note** • This is an intermittent monitor (HO2S). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S malfunction • Fuel injector malfunction • Insufficient fuel line pressure • Fuel pressure sensor malfunction • Relief valve (built-in fuel delivery pipe) malfunction • Spill valve control solenoid valve (built-in high pressure fuel pump) malfunction • High pressure fuel pump malfunction • Exhaust gas leakage • Air suction at intake-air system malfunction • Fuel leakage • MAF sensor malfunction • ECT sensor malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch to off, then to ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Is the DTC P2177 or P2187 also present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2195 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to FREEZE FRAME DATA DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Connect the M-MDS to the DLC-2. • Verify the following PIDs. (See01-40B-7 PCM INSPECTION[L3 WITH TC].) — APP1 — APP2 — ECT — MAF — TP — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 16.

STEP	INSPECTION		ACTION
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER FREEZE FRAME DATA CONDITION** • Connect the M-MDS to the DLC-2. • Verify the following PIDs under FREEZE FRAME DATA condition. (See01-40B-7 PCM INSPECTION[L3 WITH TC].) — APP1 — APP2 — ECT — MAF — TP — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 16.
7	**INSPECT INTAKE-AIR SYSTEM FOR EXCESSIVE AIR SUCTION** • Visually inspect for loosen, cracks or damages hose in intake-air system. • Is there any malfunction?	Yes	Repair or replace the malfunctioning part, then go to Step 16.
		No	Go to the next step.
8	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Connect the M-MDS to the DLC-2. • Start the engine. • Access the MAF PID. • Verify that the MAF PID changes quickly according to engine speed. • Is the PID normal?	Yes	Go to the next step.
		No	Replace the MAF/IAT sensor, then go to Step 16.
9	**INSPECT FRONT HO2S** • Inspect the front HO2S. (See01-40B-39 HEATED OXYGEN SENSOR (HO2S) INSPECTION[L3 WITH TC].) • Is there any malfunction?	Yes	Replace the front HO2S, then go to Step 16. (See01-15B-2 EXHAUST SYSTEM REMOVAL/ INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
10	**INSPECT FUEL INJECTOR** • Inspect the fuel injector. (See01-14B-33 FUEL INJECTOR INSPECTION[L3 WITH TC].) • Is there any malfunction?	Yes	Replace the suspected fuel injector, then go to Step 16. (See01-14B-30 FUEL INJECTOR REMOVAL/ INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
11	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Access and monitor FUEL_PRES PID. • Is the FUEL_PRES PID value within the specified? (See01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to Step 15.
		No	Go to the next step.
12	**IDENTIFY CAUSE BY FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 14.
13	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See01-40B-38 FUEL PRESSURE SENSOR INSPECTION[L3 WITH TC].) • Is the fuel pressure sensor normal?	Yes	Go to Step 15.
		No	Replace the fuel delivery pipe, then go to Step 16.
14	**INSPECT HIGH PRESSURE FUEL PUMP** • Replace the high pressure fuel pump • Monitor FUEL_PRES PID • Is the FUEL_PRES PID value within the specified? (See01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to Step 16.
		No	Go to the next step.

STEP	INSPECTION		ACTION
15	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. (See01-14B-23 HIGH PRESSURE FUEL PUMP INSPECTION[L3 WITH TC].) • Measure the low side fuel pressure. (See 01-14B-6 FUEL LINE PRESSURE INSPECTION[L3 WITH TC].) • Is the low side fuel pressure within the specified?	Yes	Go to the next step.
		No	Inspect for following: • Fuel line restriction • Fuel filter clogging If okay replace the fuel pump. Then go to the next step.
16	**VERIFY TROUBLESHOOTING OF DTC P2195 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the PCM Adopted Memory Produce Drive Mode and HO2S heater, and TWC Repair Verification Drive Mode. (See01-02B-10 OBD-II DRIVE MODE[L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
17	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2196[L3 WITH TC]

id010239812800

DTC P2196	Front HO2S signal stuck rich
DETECTION CONDITION	• The PCM monitors the front HO2S output when the following conditions are met. If the output is **less than 0.85 for 25 s**, the PCM determines that the front HO2S has a malfunction. **MONITORING CONDITION** — ECT: **more than 70 °C {158 °F}** — Engine speed: **1,000—3,200 rpm** — Charging efficiency: **20—62.5%** — Output voltage from the rear HO2S: **0.7 V or less** **Diagnostic support note** • This is an intermittent monitor (HO2S). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S malfunction • Fuel injector malfunction • Excessive fuel pressure • Fuel pressure sensor malfunction • Relief valve (built-in fuel delivery pipe) malfunction • Spill valve control solenoid valve (built-in high pressure fuel pump) malfunction • High pressure fuel pump malfunction • Restriction in intake-air system • MAF sensor malfunction • ECT sensor malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch to off, then ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Is the DTC P2177 or P2187 also present?	Yes	Go to the appropriate DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2196 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to FREEZE FRAME DATA DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Connect the M-MDS to the DLC-2. • Verify the following PIDs. (See01-40B-7 PCM INSPECTION[L3 WITH TC].) — APP1 — APP2 — ECT — MAF — TP — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 15.
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER FREEZE FRAME DATA CONDITION** • Connect the M-MDS to the DLC-2. • Verify the following PIDs under the FREEZE FRAME DATA condition. — APP1 — APP2 — ECT — MAF — TP — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 15.
7	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Connect the M-MDS to the DLC-2. • Start the engine. • Access the MAF PID. • Verify that the MAF PID changes quickly according to engine speed. • Is the PID normal?	Yes	Go to the next step.
		No	Replace the MAF/IAT sensor, then go to Step 15.
8	**INSPECT FRONT HO2S** • Inspect the front HO2S. (See01-40B-39 HEATED OXYGEN SENSOR (HO2S) INSPECTION[L3 WITH TC].) • Is there any malfunction?	Yes	Replace the front HO2S, then go to Step 15. (See01-15B-2 EXHAUST SYSTEM REMOVAL/ INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
9	**INSPECT FUEL INJECTOR** • Inspect the fuel injector. (See01-14B-33 FUEL INJECTOR INSPECTION[L3 WITH TC].) • Is there any malfunction?	Yes	Replace the suspected fuel injector, then go to Step 15. (See01-14B-30 FUEL INJECTOR REMOVAL/ INSTALLATION[L3 WITH TC].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
10	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Access and monitor FRP PID. • Is the FRP PID value within the specified? (See01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to Step 14.
		No	Go to the next step.
11	**IDENTIFY CAUSE BY FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 16.
12	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See01-40B-38 FUEL PRESSURE SENSOR INSPECTION[L3 WITH TC].) • Is the fuel pressure sensor normal?	Yes	Go to Step 14.
		No	Replace the fuel delivery pipe, then go to Step 15.
13	**INSPECT HIGH PRESSURE FUEL PUMP** • Replace the high pressure fuel pump • Monitor FUEL_PRES PID • Is the FUEL_PRES PID value within the specified? (See01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to Step 15.
		No	Go to the next step.
14	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See01-14B-6 FUEL LINE PRESSURE INSPECTION[L3 WITH TC].) • Is the low side fuel pressure within the specified?	Yes	Go to the next step.
		No	Inspect for following: • Fuel line restriction • Fuel filter clogging If okay replace the fuel pump. Then go to the next step.
15	**VERIFY TROUBLESHOOTING OF DTC P2196 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the PCM Adopted Memory Produce Drive Mode and HO2S heater, and TWC Repair Verification Drive Mode. (See01-02B-10 OBD-II DRIVE MODE[L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
16	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2228[L3 WITH TC]

id010239812900

DTC P2228	BARO sensor circuit low input
DETECTION CONDITION	• PCM monitors the input voltage from the BARO sensor. If the input voltage at the PCM is **below 1.95 V**, the PCM determines that the BARO sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• BARO sensor malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT BARO SENSOR MALFUNCTION** • Start the engine. • Access the BARO PID using the M-MDS. • Inspect that the BARO PID is within the specification. • Is there any malfunction?	Yes	Replace the PCM, then go to the next step.
		No	Go to the next step.
4	**VERIFY TROUBLESHOOTING OF DTC P2228 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the memory using the M-MDS. • Start the engine and warm it up completely. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	No concern is detected. Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2229[L3 WITH TC]

id010239813000

DTC P2229	BARO sensor circuit high input
DETECTION CONDITION	• PCM monitors the input voltage from the BARO sensor. If the input voltage at the PCM is **above 4.45 V**, the PCM determines that the BARO sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• BARO sensor malfunction • PCM malfunction

Diagnostic procedure

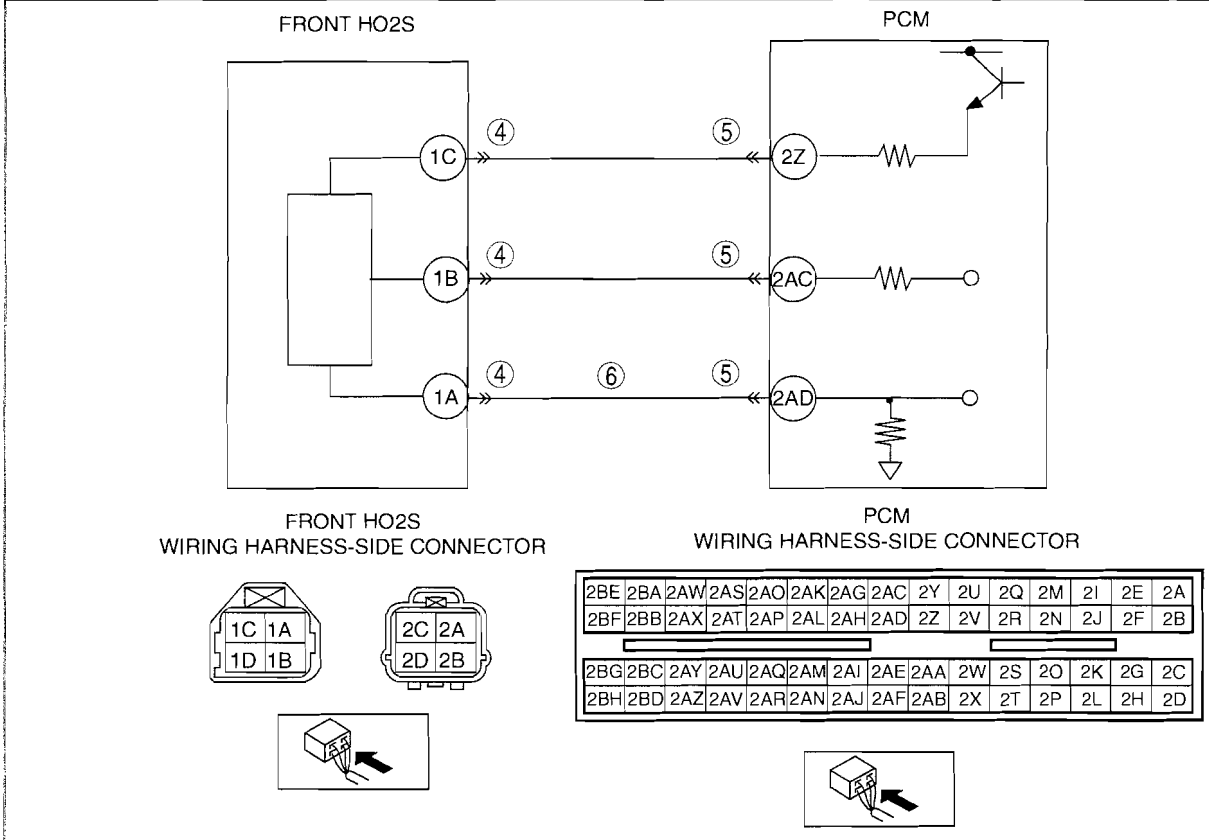
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT BARO SENSOR MALFUNCTION** • Start the engine. • Access the BARO PID using the M-MDS. • Inspect that the BARO PID is within the specification. • Is there any malfunction?	Yes	Replace the PCM, then go to the next step.
		No	Go to the next step.
4	**VERIFY TROUBLESHOOTING OF DTC P2229 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the memory using the M-MDS. • Start engine and warm it up completely. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	No concern is detected. Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2237[L3 WITH TC]

id010239813100

DTC P2237	Front HO2S positive current control circuit open
DETECTION CONDITION	• The PCM monitors the front HO2S positive current control circuit voltage. If the voltage does not change with the PCM control value while the engine is running, the PCM determines that the front HO2S positive current control circuit is open. **Diagnostic support note** • This is a continuous monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction conditions during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S malfunction • Connector or terminal malfunction • Open circuit between PCM terminal 2AD and front HO2S terminal 1A • PCM malfunction

DTC P2237	Front HO2S positive current control circuit open



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2237 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting for DTC on FREEZE FRAME DATA. (See01-02B-14 DTC TABLE[L3 WITH TC].)
4	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step.
		No	Go to the next step.

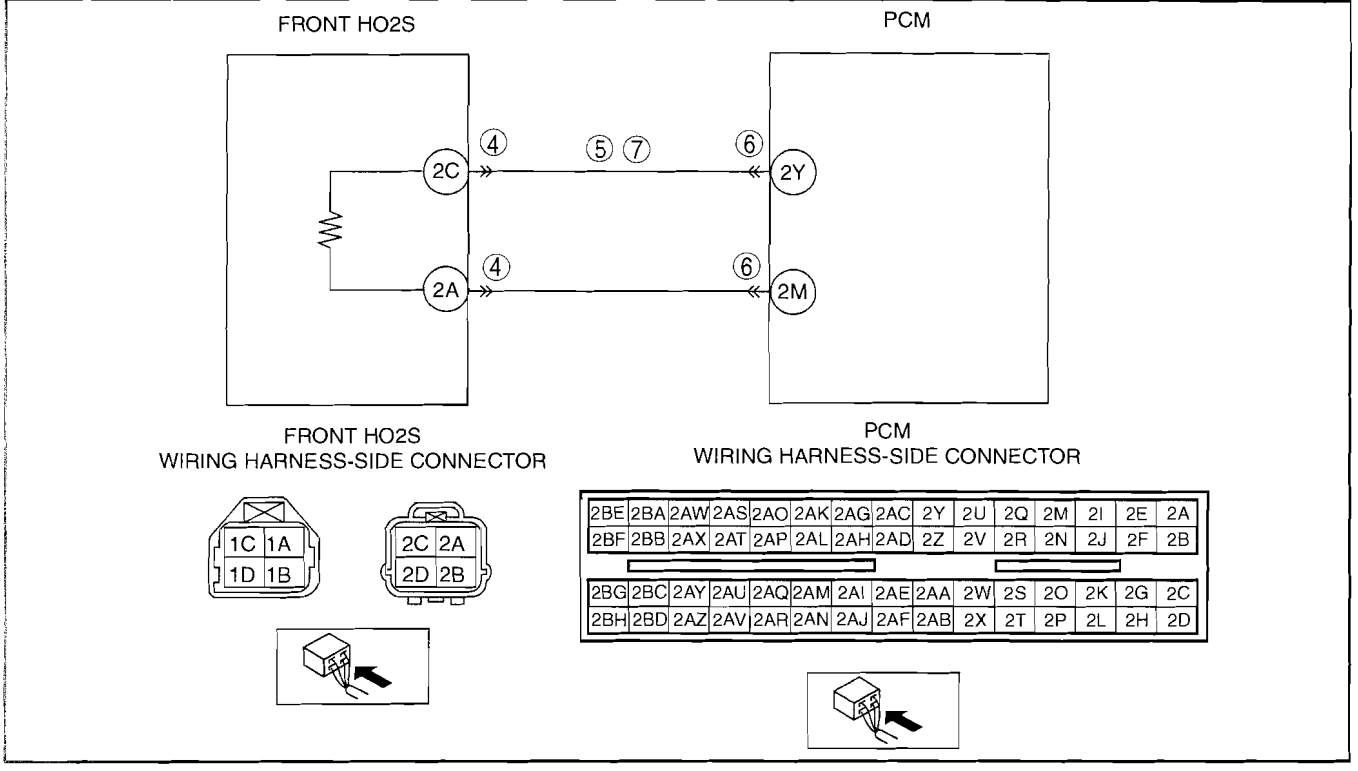
STEP	INSPECTION		ACTION
6	**INSPECT FRONT HO2S POSITIVE CURRENT CIRCUIT FOR OPEN AT PCM - FRONT HO2S** • Front HO2S and PCM connectors disconnected. • Verify the continuity between PCM terminal 2AD and front HO2S terminal 1A. • Is there continuity?	Yes	Replace the front HO2S, then go to the next step.
		No	Repair or replace the wiring harness for an open, then go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P2237 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the HO2S heater, HO2S and TWC Repair Verification Drive Mode. (See01-02B-10 OBD-II DRIVE MODE[L3 WITH TC].) • Is the PENDING CODE same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the AFTER REPAIR PROCEDURE. (See 01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2245[L3 WITH TC]

id010239813200

DTC P2245	Front HO2S sensor reference voltage circuit low input
DETECTION CONDITION	• The PCM monitors is front HO2S sensor reference voltage circuit voltage. If the voltage below the threshold value while the engine is running, the PCM determines that the front HO2S sensor reference voltage circuit is low. **Diagnostic support note** • This is a continuous monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction conditions during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S malfunction • Connector or terminal malfunction • Short to ground circuit between PCM terminal 2Y and front HO2S sensor terminal 2C • PCM malfunction

DTC P2245	Front HO2S sensor reference voltage circuit low input



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2245 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting for DTC on FREEZE FRAME DATA. (See01-02B-14 DTC TABLE[L3 WITH TC].)
4	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
5	**INSPECT FRONT HO2S REFERENCE VOLTAGE CIRCUIT FOR SHORT TO GROUND AT FRONT HO2S** • Turn the ignition switch to the off. • Front HO2S connector disconnected. • Inspect the continuity between front HO2S terminal 2C (part-side) and ground. • Is there continuity?	Yes	Replace the front HO2S, then go to Step 8.
		No	Go to the next step.

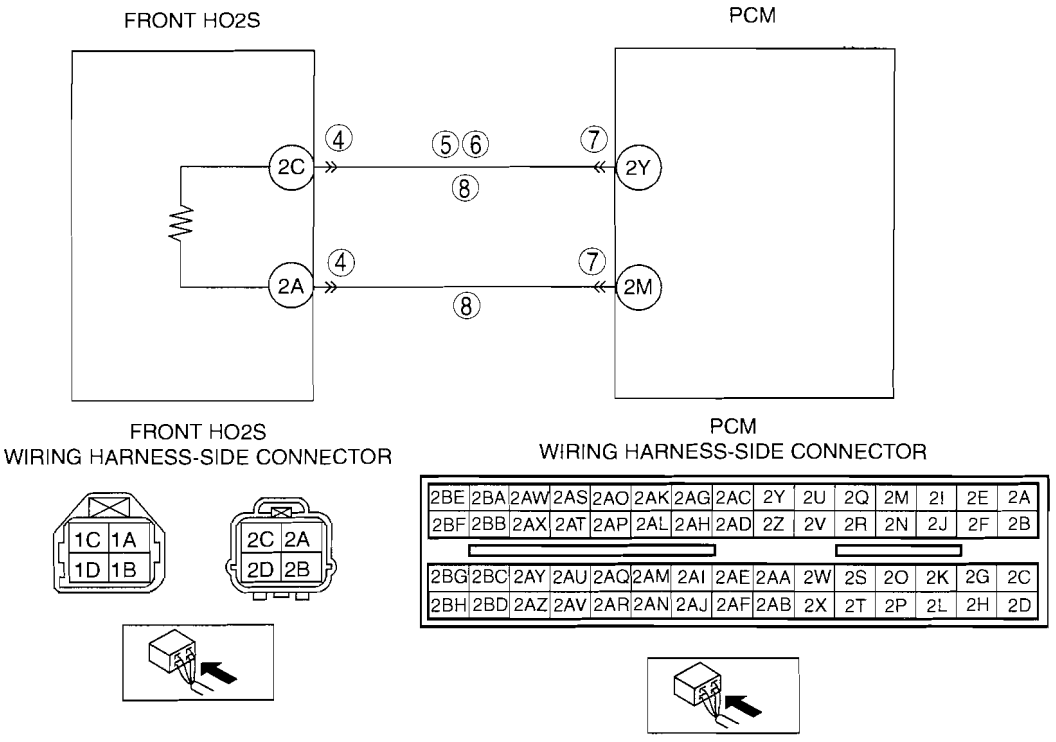
STEP	INSPECTION		ACTION
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
7	**INSPECT FRONT HO2S REFERENCE VOLTAGE CIRCUIT FOR SHORT TO GROUND AT PCM - FRONT HO2S** • Turn the ignition switch to the off. • Front HO2S and PCM connectors disconnected. • Inspect the continuity between front HO2S terminal 2C (harness-side) and ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground between PCM terminal 2Y and front HO2S sensor terminal 2C, then go to the next step.
		No	Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P2245 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the HO2S heater, HO2S and TWC Repair Verification Drive Mode. (See01-02B-10 OBD-II DRIVE MODE[L3 WITH TC].) • Is the PENDING CODE same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the AFTER REPAIR PROCEDURE. (See 01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2246[L3 WITH TC]

id010239813300

DTC P2246	Front HO2S sensor reference voltage circuit high input
DETECTION CONDITION	• The PCM monitors the front HO2S sensor reference voltage circuit voltage. If the voltage is above the threshold value while the engine is running, the PCM determines that the front HO2S sensor reference voltage circuit is high. **Diagnostic support note** • This is a continuous monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction conditions during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S malfunction • Connector or terminal malfunction • Short to the power circuit between PCM terminal 2Y and front HO2S terminal 2C • Open circuit between PCM terminal 2Y and front HO2S terminal 2C • Open circuit between PCM terminal 2M and front HO2S terminal 2A • PCM malfunction

DTC P2246	Front HO2S sensor reference voltage circuit high input



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2246 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting for DTC on FREEZE FRAME DATA. (See 01-02B-14 DTC TABLE[L3 WITH TC].)
4	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
5	**INSPECT FRONT HO2S REFERENCE VOLTAGE CIRCUIT FOR SHORT TO POWER AT FRONT HO2S** • Front HO2S connector disconnected. • Turn the ignition switch to the ON position (engine off). • Measure the voltage between front HO2S terminal 2C (part-side) and ground. • Is the voltage **above 5.0 V**?	Yes	Replace the front HO2S, then go to Step 9.
		No	Go to the next step.

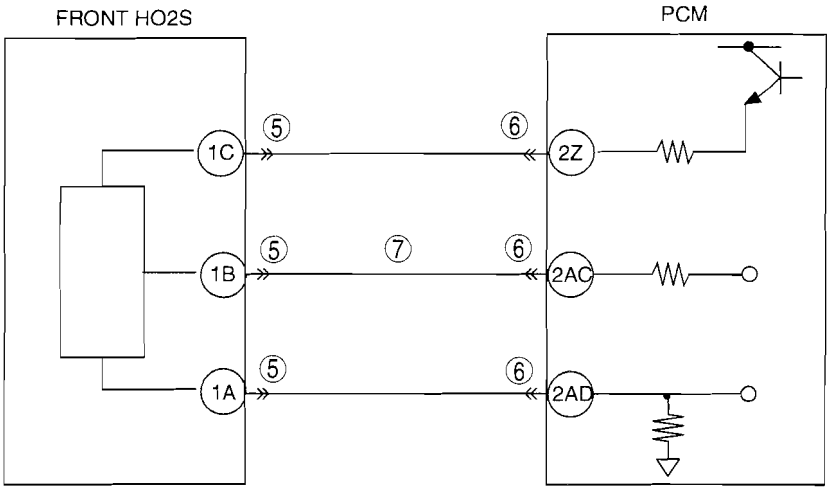
STEP	INSPECTION		ACTION
6	**INSPECT FRONT HO2S REFERENCE VOLTAGE CIRCUIT FOR SHORT TO POWER AT PCM - FRONT HO2S** • Front HO2S connector disconnected. • Turn the ignition switch to the ON position (engine off). • Measure the voltage between front HO2S terminal 2C (harness-side) and ground. • Is the voltage **above 5.0 V**?	Yes	Repair or replace for a short to power, then go to Step 9.
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
8	**INSPECT FRONT HO2S REFERENCE VOLTAGE CIRCUIT FOR OPEN AT PCM - FRONT HO2S** • Front HO2S and PCM connectors disconnected. • Verify the continuity between following terminals at harness-side connectors. — PCM terminal 2Y—front HO2S terminal 2C — PCM terminal 2M—front HO2S terminal 2A • Is there continuity?	Yes	Replace the front HO2S, then go to the next step.
		No	Repair or replace for an open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P2246 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the HO2S heater, HO2S and TWC Repair Verification Drive Mode. (See 01-02B-10 OBD-II DRIVE MODE[L3 WITH TC].) • Is the PENDING CODE same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the AFTER REPAIR PROCEDURE. (See 01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2251[L3 WITH TC]

id010239813400

DTC P2251	Front HO2S negative current control circuit open
DETECTION CONDITION	• The PCM monitors the front HO2S negative current control circuit voltage. If the voltage does not change with the PCM control value while the engine is running, the PCM determines that the front HO2S negative current control circuit is open. **Diagnostic support note** • This is a continuous monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction conditions during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S malfunction • Connector or terminal malfunction • Open circuit between PCM terminal 2AC and front HO2S terminal 1B • Front HO2S heater cannot be controlled • PCM malfunction

DTC P2251	Front HO2S negative current control circuit open



FRONT HO2S

2BH	2BD	2AZ	2AV	2AR	2AN	2AJ	2AF	2AB	2X	2T	2P	2L	2H	2D

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch to off, then ON position (Engine off). • Verify the related PENDING CODE or stored DTCs using the M-MDS. • Is the DTC P0030, P0031 or P0032 also present?	Yes	Go to appropriate DTC troubleshooting procedure. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2251 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting for DTC on FREEZE FRAME DATA. (See01-02B-14 DTC TABLE[L3 WITH TC].)
5	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.

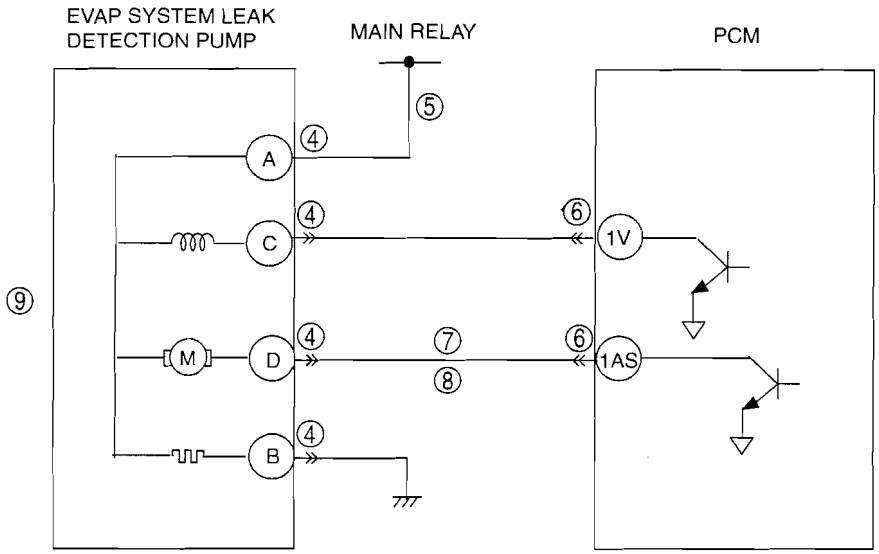
STEP	INSPECTION		ACTION
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
7	**INSPECT FRONT HO2S NEGATIVE CURRENT CONTROL CIRCUIT FOR OPEN AT PCM - FRONT HO2S** • The front HO2S and the PCM connectors disconnected. • Verify the continuity between the PCM terminal 2AC and the front HO2S terminal 1B at harness-side connectors. • Is there continuity?	Yes	Replace the front HO2S, then go to the next step.
		No	Repair or replace for open circuit, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P2251 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the HO2S heater, HO2S and TWC Repair Verification Drive Mode. (See01-02B-10 OBD-II DRIVE MODE[L3 WITH TC].) • Is the PENDING CODE same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the AFTER REPAIR PROCEDURE. (See 01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2401[L3 WITH TC]

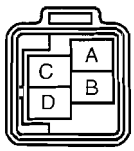
id010239813500

DTC P2401	EVAP system leak detection pump motor circuit low
DETECTION CONDITION	• The PCM monitors the pump load current (EVAP line pressure), while the EVAP leak monitor is operating. If the pump load current is lower than specified, the PCM determines that the EVAP system leak detection pump motor circuit has a malfunction. **Diagnostic support note** • This is a intermittent monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• EVAP system leak detection pump malfunction • Open circuit between main relay and EVAP system leak detection pump terminal A • Open circuit between EVAP system leak detection pump terminal D and PCM terminal 1AS • Short to ground circuit between EVAP system leak detection pump terminal D and PCM terminal 1AS • Poor connection at the EVAP system leak detection pump or the PCM connector • PCM malfunction

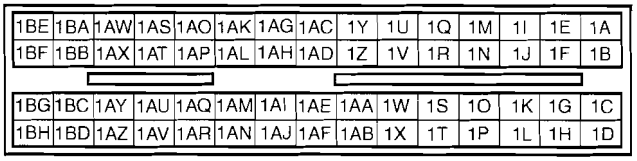
DTC P2401	EVAP system leak detection pump motor circuit low

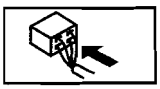


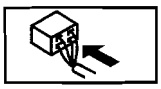
EVAP SYSTEM DETECTION PUMP WIRING HARNESS SIDE CONNECTOR



PCM WIRING HARNESS SIDE CONNECTOR







Diagnostic procedure

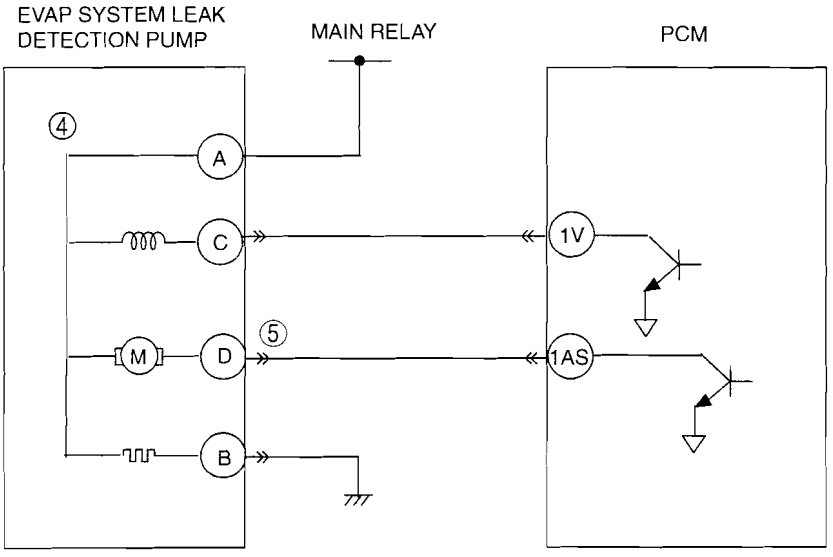
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch to the OFF then ON position (Engine off). • Verify related PENDING CODE or stored DTC. • Is DTC P2405 present?	Yes	Go to appropriate DTC inspection. (See01-02B-258 DTC P2405[L3 WITH TC].)
		No	Go to the next step.
4	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect EVAP system leak detection pump connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.

STEP	INSPECTION		ACTION
5	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP MOTOR CIRCUIT FOR OPEN CIRCUIT** • Disconnect the main relay. • Inspect continuity between EVAP system leak detection pump terminal A (harness-side) and main relay. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 10.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 10.
		No	Go to the next step.
7	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP MOTOR CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between EVAP system leak detection pump terminal D (harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a short to ground, then go to Step 10.
		No	Go to the next step.
8	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP MOTOR CIRCUIT FOR OPEN CIRCUIT** • Inspect continuity between EVAP system leak detection pump terminal D (harness-side) and PCM terminal 1AS (harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 10.
9	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP** • Perform the EVAP system leak detection pump inspection. (See01-16B-8 EVAPORATIVE EMISSION (EVAP) SYSTEM LEAK DETECTION PUMP INSPECTION[L3 WITH TC].) • Is the EVAP system leak detection pump normal?	Yes	Go to the next step.
		No	Replace the EVAP system leak detection pump, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P2401 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the EVAP system test using the M-MDS. (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) • Is the same DTC present? **Note** • If EVAP system test function is not available, take following procedure. — Start the engine and perform the "EVAP System Repair Verification Drive Mode". (See01-02B-10 OBD-II DRIVE MODE[L3 WITH TC].) — Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step.
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

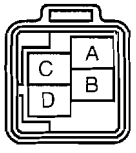
DTC P2402[L3 WITH TC]

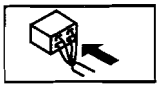
id010239813600

DTC P2402	EVAP system leak detection pump motor circuit high
DETECTION CONDITION	• The PCM monitors the pump load current (EVAP line pressure), while the EVAP leak monitor is operating. If the pump load current is higher than specified, the PCM determines that the EVAP system leak detection pump motor circuit has a malfunction. **Diagnostic support note** • This is a intermittent monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• EVAP system leak detection pump malfunction • Short to the power supply between the EVAP system leak detection pump terminal D and PCM terminal 1AS • PCM malfunction



EVAP SYSTEM DETECTION PUMP WIRING HARNESS SIDE CONNECTOR





PCM WIRING HARNESS SIDE CONNECTOR

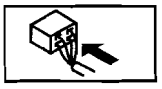
1BH	1BD	1AZ	1AV	1AR	1AN	1AJ	1AF	1AB	1X	1T	1P	1L	1H	1D



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn the ignition switch to the OFF then ON position (Engine off). • Verify related pending code or stored DTCs. • Are other DTCs present?	Yes	Go to the next step.
		No	Replace the EVAP system leak detection pump, then go to step 6. (See 01-16B-7 EVAPORATIVE EMISSION (EVAP) SYSTEM LEAK DETECTION PUMP REMOVAL/ INSTALLATION[L3 WITH TC])
4	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP** • Inspect the EVAP system leak detection pump. (See 01-16B-8 EVAPORATIVE EMISSION (EVAP) SYSTEM LEAK DETECTION PUMP INSPECTION[L3 WITH TC]) • Is the EVAP system leak detection pump normal?	Yes	Go to the appropriate DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Go to the next step.
5	**CHECK EVAP SYSTEM LEAK DETECTION PUMP CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position. • Disconnect the EVAP system leak detection pump connector. • Measure the voltage between EVAP system leak detection pump terminal D (harness-side) and body ground. • Is the voltage **B+?**	Yes	Repair or replace the wiring harness, then go to the next step.
		No	Go to the next step.
6	**VERIFY TROUBLESHOOTING OF DTC P2402 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the EVAP system test using the M-MDS. (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) • Is the same DTC present? **Note** • If EVAP system test function is not available, take following procedure. — Start the engine and perform the "EVAP System Repair Verification Drive Mode". (See01-02B-10 OBD-II DRIVE MODE[L3 WITH TC].) — Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step.
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2404[L3 WITH TC]

id010239813700

DTC P2404	EVAP system leak detection pump sensor circuit malfunction
DETECTION CONDITION	• The PCM monitors the pump load current (EVAP line pressure), while the EVAP leak monitor is operating. After obtaining the reference current value, If the pump load current is greater than or equal to the reference current value plus **1 mA** within the specified time, the PCM determines that the air filter has a malfunction. **Diagnostic support note** • This is a intermittent monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• Air filter clogging • EVAP hose bending • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CHECK EVAP HOSE BENDING** • Inspect the EVAP hose for bending. • Is the EVAP hose normal?	Yes	Go to the next step.
		No	Repair or replace the suspected hose, then go to Step 5.
4	**CHECK AIR FILTER FOR CLOGGING** • Inspect the air filter for clogging. • Is the air filter normal?	Yes	Go to the next step.
		No	Replace the air filter, then go to the next step.
5	**VERIFY TROUBLESHOOTING OF DTC P2404 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the EVAP system test using the M-MDS. (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) • Is the same DTC present? **Note** • If EVAP system test function is not available, take following procedure. — Perform the "EVAP System Repair Verification Drive Mode". (See01-02B-10 OBD-II DRIVE MODE[L3 WITH TC].) — Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step.
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2405[L3 WITH TC]

id010239813800

DTC P2405	EVAP system leak detection pump sensor circuit low input
DETECTION CONDITION	• The PCM monitors the pump load current (EVAP line pressure), while the EVAP leak monitor is operating. If the current is lower than the specification while the PCM obtains the reference current value, the PCM determines that the EVAP system leak detection pump orifice has a malfunction. **Diagnostic support note** • This is a intermittent monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• EVAP system leak detection pump orifice has fallen off • EVAP system leak detection pump motor malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Replace the EVAP system leak detection pump, then go to the next step.
3	**VERIFY TROUBLESHOOTING OF DTC P2405 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the EVAP system test using the M-MDS. (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) • Is the same DTC present? **Note** • If EVAP system test function is not available, take following procedure. — Start the engine and perform the "EVAP System Repair Verification Drive Mode". (See01-02B-10 OBD-II DRIVE MODE[L3 WITH TC].) — Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step.
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2407[L3 WITH TC]

id010239813900

DTC P2407	EVAP system leak detection pump sensor circuit intermittent
DETECTION CONDITION	• The PCM monitors pump the load current (EVAP line pressure), while the EVAP leak monitor is operating. When either of the following is detected**6 times or more successively, the PCM determines that the EVAP system leak detection pump heater has a malfunction:** — While obtaining the reference current value, the change in pump load current exceeds the specification. — After obtaining the reference current value, the pump load current is kept lower than the maximum pump load current for more than the specified time. **Diagnostic support note** • This is a intermittent monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• EVAP system leak detection pump heater malfunction • PCM malfunction

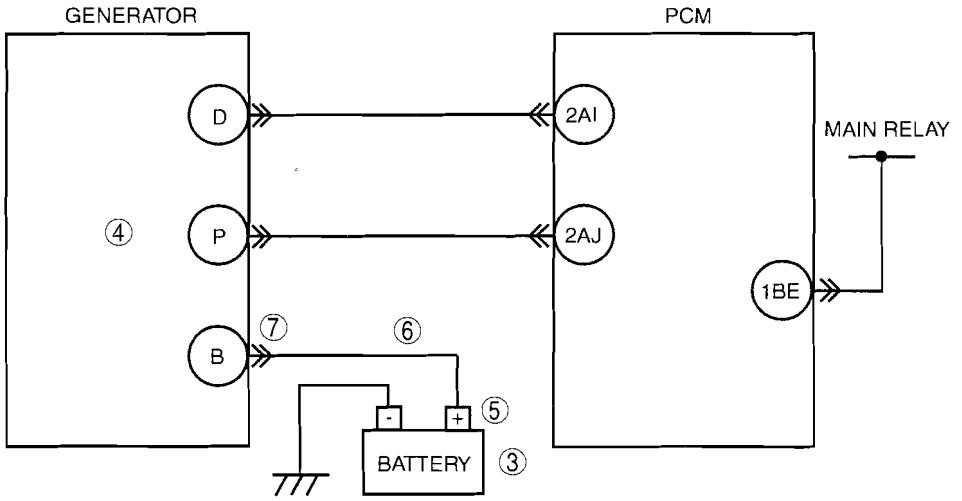
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP HEATER** • Perform the EVAP system leak detection pump inspection. (See01-16B-8 EVAPORATIVE EMISSION (EVAP) SYSTEM LEAK DETECTION PUMP INSPECTION[L3 WITH TC]) • Is the EVAP system leak detection pump normal?	Yes	Replace the EVAP system leak detection pump, then go to the next step.
		No	Go to the next step.
4	**VERIFY TROUBLESHOOTING OF DTC P2407 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the EVAP system test using the M-MDS. (See01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) • Is the same DTC present? **Note** • If EVAP system test function is not available, take following procedure. — Start the engine and perform the "EVAP System Repair Verification Drive Mode". (See01-02B-10 OBD-II DRIVE MODE[L3 WITH TC].) — Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step.
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2502[L3 WITH TC]

id010239814000

DTC P2502	Charging system voltage problem
DETECTION CONDITION	• PCM determines that the generator output voltage is **above 17 V** or the battery voltage is **below 11 V** while the engine is running. **Diagnostic support note** • This is a continuous monitor (Other). • The MIL does not illuminate. • FREEZE FRAME DATA is not available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Open circuit between generator terminal B and battery positive terminal • Battery malfunction • Generator malfunction • PCM is poorly connected • PCM, generator and/or battery are poorly connected



GENERATOR
WIRING HARNESS-SIDE CONNECTOR

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT BATTERY** • Turn the ignition switch off. • Inspect the battery. • Is the battery normal?	Yes	Go to the next step.
		No	Replace the battery, then go to Step 8.
4	**INSPECT GENERATOR** • Inspect the generator. (See 01-17B-7 GENERATOR INSPECTION[L3 WITH TC]) • Is the generator normal?	Yes	Go to the next step.
		No	Replace the generator, then go to Step 8. (See 01-17B-6 GENERATOR REMOVAL/ INSTALLATION[L3 WITH TC])
5	**INSPECT POOR INSTALLATION OF GENERATOR TERMINAL** • Turn the ignition switch to off. • Inspect for looseness of generator terminal B installation nut. • Is the nut loose?	Yes	Tighten the generator terminal B installation nut, then go to Step 8.
		No	Go to the next step.
6	**INSPECT POOR INSTALLATION OF BATTERY POSITIVE TERMINAL** • Inspect for looseness of battery positive terminal. • Is the terminal loose?	Yes	Connect the battery positive terminal correctly, then go to Step 8.
		No	Go to the next step.
7	**INSPECT BATTERY CHARGING CIRCUIT** • Disconnect the generator terminal B. • Measure the voltage between generator terminal B (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between generator terminal B and battery positive terminal, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P2502 COMPLETED** • Make sure to reconnect all connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2503[L3 WITH TC]

id010239814100

DTC P2503	Charging system voltage low
DETECTION CONDITION	• PCM needs **more than 20 A** from the generator, and determines that generator output voltage is **below 8.5 V** while the engine is running. **Diagnostic support note** • This is a continuous monitor (Other). • The MIL does not illuminate. • FREEZE FRAME DATA is not available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Generator malfunction • PCM and/or generator are poorly connected • Open and/or short to ground in the wiring harness from between generator terminal P and PCM terminal 2AJ • Open and/or short to ground in the wiring harness from between generator terminal D and PCM terminal 2AI • Drive chain misadjustment

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT DRIVE CHAIN CONDITION** • Verify that the drive chain auto tensioner indicator mark does not exceed limit. • Is the front drive chain normal?	Yes	Go to the next step.
		No	Replace the and/or adjust drive chain, then go to Step 10.
4	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (damaged, pulled-out terminals, corrosion, etc.). • Is there any malfunction?	Yes	Repair the terminals, then go to Step 10.
		No	Go to the next step.
5	**INSPECT GENERATOR CONNECTOR FOR POOR CONNECTION** • Disconnect the generator connector. • Inspect for poor connection (damaged, pulled-out terminals, corrosion, etc.). • Is there any malfunction?	Yes	Repair or replace the terminals, then go to Step 10.
		No	Go to the next step.
6	**INSPECT GENERATOR CONTROL CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between generator terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a short to ground, then go to Step 10.
		No	Go to the next step.
7	**INSPECT GENERATOR OUTPUT VOLTAGE MONITOR CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between generator terminal P (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a short to ground, then go to Step 10.
		No	Go to the next step.
8	**INSPECT GENERATOR CONTROL CIRCUIT FOR OPEN** • Inspect for continuity between generator terminal D (wiring harness-side) and PCM terminal 2AI (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 10.
9	**INSPECT GENERATOR OUTPUT VOLTAGE MONITOR CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between generator terminal P (wiring harness-side) and PCM terminal 2AJ (wiring harness-side). • Is there continuity?	Yes	Repair or replace the generator, then go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P2503 COMPLETED** • Make sure to reconnect all connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2504[L3 WITH TC]

id010239814200

DTC P2504	Charging system voltage high
DETECTION CONDITION	• PCM determines that the generator output voltage is **above 18.5 V** or the battery voltage is **above 16.0 V** while the engine is running. **Diagnostic support note** • This is a continuous monitor (Other). • The MIL does not illuminate. • FREEZE FRAME DATA is not available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Short to the power circuit between generator connector terminal D and PCM connector terminal 2AI • Generator malfunction • PCM and/or generator are poorly connected

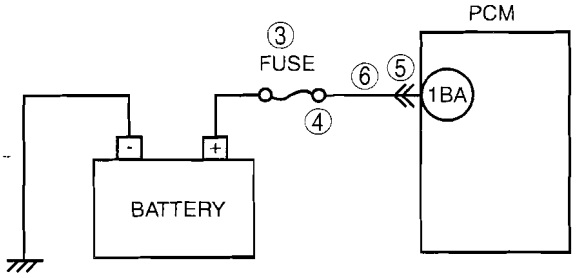
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT GENERATOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the generator connector. • Inspect for poor connection (damaged/pulled-out terminals, corrosion, etc.). • Is there any malfunction?	Yes	Repair or replace the terminals, then go to Step 8.
		No	Go to the next step.
4	**CLASSIFY GENERATOR MALFUNCTION OR OTHER MALFUNCTION** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between generator terminal D (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	There is a malfunction at the generator. Go to Step 7.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (damaged/pulled-out terminals, corrosion, etc.). • Is there any malfunction?	Yes	Repair or replace the pins, then go to Step 8.
		No	Go to the next step.
6	**INSPECT GENERATOR CONTROL CIRCUIT FOR SHORT TO POWER** • Turn the ignition switch to the ON position (engine off). • Measure the voltage between generator terminal D (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a short to power supply, then go to Step 8.
		No	Go to Step 8.
7	**INSPECT GENERATOR CONTROL TERMINAL FOR SHORT TO POWER** • Measure the voltage between generator terminal D (part-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the generator, then go to the next step.
		No	Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P2504 COMPLETED** • Make sure to reconnect all connectors. • Clear the DTC from the PCM memory using the M-MDS. • Perform the KOER self-test. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Ares any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2507[L3 WITH TC]

id010239814300

DTC P2507	PCM +BB (back-up battery) voltage low
DETECTION CONDITION	• The PCM monitors the voltage of the back-up battery positive terminal. If the PCM detects that the battery positive terminal voltage is**below 2.5 V for2 s, the PCM determines that the backup voltage circuit has a malfunction.** **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Melt down fuse • Open circuit in the wiring harness between the fuse and PCM terminal 1BA • Short to ground between the fuse and PCM terminal 1BA • Poor connection of the PCM connector. • PCM malfunction



PCM
WIRING HARNESS SIDE CONNECTOR

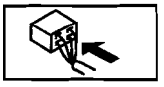
1BH	1BD	1AZ	1AV	1AR	1AN	1AJ	1AF	1AB	1X	1T	1P	1L	1H	1D



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FUSE** • Turn the ignition switch to off. • Inspect the fuse for failure and proper. • Is it normal?	Yes	Go to step 6.
		No	• If the fuse has been melt down, then go to the next step. • If the fuse is not installed correctly, install it correctly then go to Step 7.
4	**INSPECT MONITOR CIRCUIT FOR SHORT TO GROUND** • Disconnect the battery cables. • Inspect for continuity between fuse terminal and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a short to ground and install new fuse, then go to Step 7.
		No	Go to step 7.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair the terminals, then go to Step 7.
		No	Go to the next step.
6	**INSPECT MONITOR CIRCUIT FOR OPEN CIRCUIT** • Disconnect the battery cables. • Inspect for continuity between fuse terminal and PCM terminal 1BA (harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P2507 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the M-MDS. • Start the engine and warm it up completely. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2610[L3 WITH TC]

id010239814400

DTC P2610	PCM internal engine off timer performance
DETECTION CONDITION	• PCM internal engine off timer is damaged. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• PCM internal engine off timer is damaged.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE BULLETINS AVAILABILITY** • Verify related Service Bulletins availability. • Is any related Service Bulletins available?	Yes	Perform the repair or diagnosis according to the available Service Bulletins. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY TROUBLESHOOTING OF DTC P2610 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-9 AFTER REPAIR PROCEDURE[L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See01-02B-14 DTC TABLE[L3 WITH TC].)
		No	DTC troubleshooting completed.

FOREWORD[LF, L3]

id0103a6800300

- When the customer reports a vehicle malfunction, check the malfunction indicator lamp (MIL) indication and diagnostic trouble code (DTC), then diagnose the malfunction according to the following flowchart:
  - If a DTC exists, diagnose the applicable DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
  - If no DTC exists and the MIL does not illuminate or flash, diagnose the applicable symptom troubleshooting. (See 01-03A-13 QUICK DIAGNOSTIC CHART[LF, L3].)

*: Malfunction Indicator Lamp (MIL), Generator Warning Light, Security Light

ENGINE SYMPTOM TROUBLESHOOTING[LF, L3]

id0103a6800500

- Confirm trouble symptom using the following diagnostic index, then go to appropriate troubleshooting chart.

Diagnostic Index

No.	TROUBLESHOOTING ITEM		DESCRIPTION	PAGE
1	Melting of main or other fuses		—	(See 01-03A-17 NO.1 MELTING OF MAIN OR OTHER FUSES[LF, L3].)
2	MIL illuminates		The MIL is illuminated incorrectly.	(See 01-03A-18 NO.2 MIL ILLUMINATES[LF, L3].)
3	Will not crank		The starter does not work.	(See 01-03A-19 NO.3 WILL NOT CRANK[LF, L3].)
4	Hard to start/long crank/erratic start/ erratic crank		The starter cranks the engine at normal speed but the engine requires excessive cranking time before starting.	(See 01-03A-21 NO.4 HARD TO START/LONG CRANK/ERRATIC START/ ERRATIC CRANK[LF, L3].)
5	Engine stalls.	After start/at idle	The engine stops unexpectedly at idle and/or after start or both.	(See 01-03A-23 NO.5 ENGINE STALLS-AFTER START/AT IDLE[LF, L3].)
6	Cranks normally but will not start		The starter cranks engine at normal speed but the engine will not run.	(See 01-03A-27 NO.6 CRANKS NORMALLY BUT WILL NOT START[LF, L3].)
7	Slow return to idle		The engine takes more time than normal to return to idle speed.	(See 01-03A-31 NO.7 SLOW RETURN TO IDLE[LF, L3].)
8	Engine runs rough/rolling idle		The engine speed fluctuates between the specified idle speed and lower speed and the engine shakes excessively.	(See 01-03A-32 NO.8 ENGINE RUNS ROUGH/ ROLLING IDLE[LF, L3].)
9	Fast idle/runs on		The engine speed continues at fast idle after warm-up. The engine runs after the ignition switch is turned off.	(See 01-03A-35 NO.9 FAST IDLE/RUNS ON[LF, L3].)
10	Low idle/stalls during deceleration		The engine stops unexpectedly at the beginning of deceleration or recovery from deceleration.	(See 01-03A-36 NO.10 LOW IDLE/STALLS DURING DECELERATION[LF, L3].)
11	Engine stalls/quits.	Acceleration/cruise	The engine stops unexpectedly at the beginning of acceleration or during acceleration. The engine stops unexpectedly while cruising.	(See 01-03A-37 NO.11 ENGINE STALLS/QUITS, ENGINE RUNS ROUGH, MISSES, BUCK/JERK, HESITATION/STUMBLE, SURGES[LF, L3].)
	Engine runs rough.	Acceleration/cruise	The engine speed fluctuates during acceleration or cruising.	
	Misses	Acceleration/cruise	The engine misses during acceleration or cruising.	
	Buck/jerk	Acceleration/cruise/ deceleration	The vehicle bucks/jerks during acceleration, cruising, or deceleration.	
	Hesitation/stumble	Acceleration	A momentary pause at the beginning of acceleration or during acceleration.	
	Surges	Acceleration/cruise	A momentary minor irregularity in engine output.	
12	Lack/loss of power	Acceleration/cruise	The performance is poor under load (such as power down when climbing hills).	(See 01-03A-42 NO.12 LACK/LOSS OF POWER-ACCELERATION/ CRUISE[LF, L3].)
13	Knocking/pinging	Acceleration/cruise	Sound is produced when the air/fuel mixture is ignited by something other than the spark plug (such as hot spot in combustion chamber).	(See 01-03A-45 NO.13 KNOCKING/PINGING/ DETONATION-ACCELERATION/ CRUISE[LF, L3].)
14	Poor fuel economy		The fuel economy is unsatisfactory.	(See 01-03A-46 NO.14 POOR FUEL ECONOMY[LF, L3].)

No.	TROUBLESHOOTING ITEM		DESCRIPTION	PAGE
15	Emission compliance		Fails emissions test.	(See 01-03A-48 NO.15 EMISSION COMPLIANCE[LF, L3].)
16	High oil consumption/leakage		The oil consumption is excessive.	(See 01-03A-50 NO.16 HIGH OIL CONSUMPTION/ LEAKAGE[LF, L3].)
17	Cooling system concerns	Overheating	The engine runs at higher than normal temperature/overheats.	(See 01-03A-50 NO.17 COOLING SYSTEM CONCERNS-OVERHEATING[LF, L3].)
18	Cooling system concerns	Runs cold	The engine does not reach normal operating temperature.	(See 01-03A-52 NO.18 COOLING SYSTEM CONCERNS-RUNS COLD[LF, L3].)
19	Exhaust smoke		Blue, black, or white smoke from exhaust system	(See 01-03A-53 NO.19 EXHAUST SMOKE[LF, L3].)
20	Fuel odor (in engine compartment)		Gasoline fuel smell or visible leakage	(See 01-03A-55 NO.20 FUEL ODOR (IN ENGINE COMPARTMENT)[LF, L3].)
21	Engine noise		Engine noise from under hood	(See 01-03A-56 NO.21 ENGINE NOISE[LF, L3].)
22	Vibration concerns (engine)		Vibration from under hood or driveline	(See 01-03A-57 NO.22 VIBRATION CONCERNS (ENGINE)[LF, L3].)
23	A/C does not work sufficiently.		The A/C compressor magnetic clutch does not engage when A/C is turned on.	(See 01-03A-58 NO.23 A/C DOES NOT WORK SUFFICIENTLY[LF, L3].)
24	A/C is always on or A/C compressor runs continuously.		The A/C compressor magnetic clutch does not disengage.	(See 01-03A-59 NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY[LF, L3].)
25	A/C is not cut off under WOT conditions.		The A/C compressor magnetic clutch does not disengage under wide open throttle.	(See 01-03A-60 NO.25 A/C DOES NOT CUT OFF UNDER WIDE OPEN THROTTLE CONDITIONS[LF, L3].)
26	Exhaust sulphur smell		Rotten egg smell (sulphur) from exhaust	(See 01-03A-60 NO.26 EXHAUST SULPHUR SMELL[LF, L3].)
27	Fuel refill concerns		The fuel tank does not fill smoothly.	(See 01-03A-62 NO.27 FUEL REFILL CONCERNS[LF, L3].)
28	Fuel filling shut off issues		The fuel does not shut off properly.	(See 01-03A-63 NO.28 FUEL FILLING SHUT OFF CONCERNS[LF, L3].)
29	Spark plug condition		An incorrect spark plug condition.	(See 01-03A-64 NO.29 SPARK PLUG CONDITION[LF, L3].)
30	ATX concerns	Upshift/downshift engagement	ATX concerns not related to engine performance.	(See 05-03A-7 SYMPTOM TROUBLESHOOTING ITEM TABLE[FN4A-EL].) (See 05-03B-4 SYMPTOM TROUBLESHOOTING ITEM TABLE[FS5A-EL].)

QUICK DIAGNOSTIC CHART[LF, L3]

id0103a6800600

X: Applicable

	Troubleshooting item / Possible factor		Starter motor malfunction (Mechanical or electrical)	Starter circuit including ignition switch is open.	Starter interlock switch malfunction (MTX)	Improper engine oil level	Low or dead battery	Charging system malfunction	Improper engine compression	Improper valve timing	Hydrolocked engine	Improper engine oil viscosity	Improper dipstick	Base engine malfunction	Drive plate or flywheel are seized.	Improper tension or damaged drive belts	Improper engine coolant level	Water and anti-freeze mixture is improper.	Cooling system malfunction (Radiator, hoses,overflow system, thermostat, etc.)	Cooling fan system malfunction	Engine or transaxle mounts are improperly installed.	Cooling fan seat is improper.	Cruise control system operation improperly	Fuel quality

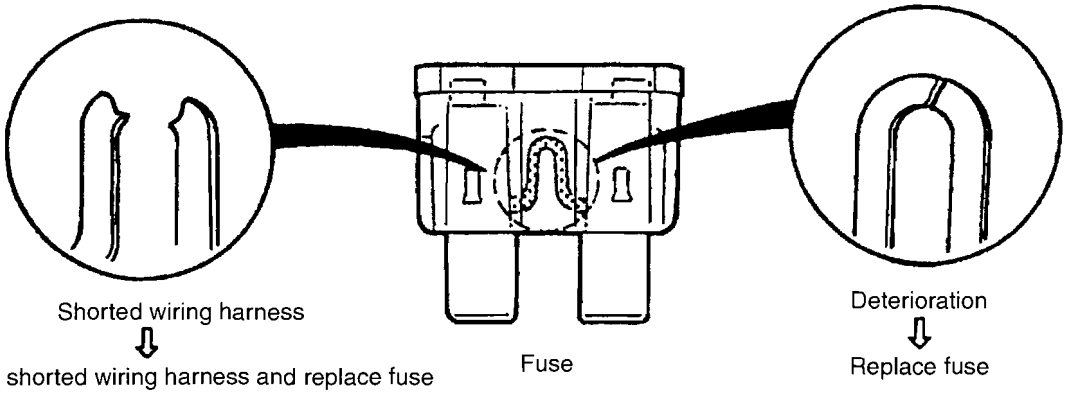
NO.1 MELTING OF MAIN OR OTHER FUSES[LF, L3]

id0103a6800700

1	MELTING OF MAIN OR OTHER FUSES

[TROUBLESHOOTING HINTS]
Inspect condition of fuse.



Damaged fuse	Related wiring harness
MAIN	**MAIN fuse** • Generator • Starter
ENGINE	**ENGINE fuse** • Main Relay — ENG BAR1 fuse — ENG BAR2 fuse — ENG BAR3 fuse — ENG BAR4 fuse (California emission regulation applicable model) — EGI INJ fuse
ENG BAR1	**ENG BAR1 fuse** • PCM (4EAT) • Purge solenoid valve • Variable intake-air solenoid valve • EGR valve • Variable tumble solenoid valve • OCV • MAF/IAT sensor • VSS (4EAT) • Accelerator pedal position sensor • EVAP system leak detection pump • ET control relay
ENG BAR2	**ENG BAR2 fuse** • PCM
ENG BAR3	**ENG BAR3 fuse** • Front HO2S heater (California emission regulation applicable model) • Middle HO2S heater (California emission regulation applicable model) • Rear HO2S heater (except for California emission regulation applicable model)
ENG BAR4 (California emission regulation applicable model)	**ENG BAR4 fuse** • Rear HO2S heater (California emission regulation applicable model)
EGI INJ	**EGI INJ fuse** • Front HO2S heater (except for California emission regulation applicable model) • Fuel injectors
IG KEY1	**IG KEY1 fuse** • Ignition switch — ENGINE fuse (in PJB)
IG KEY2	**IG KEY2 fuse** • Ignition switch — BACK fuse (in PJB)

Damaged fuse	Related wiring harness
ENGINE (in PJB)	**ENGINE fuse (in PJB)** • PCM • Fuel pump relay • Ignition coils • Condenser
STARTER	**STARTER fuse** • Starter relay — Starter
ENG+B	**ENG+B fuse** • PCM
BTN	**BTN fuse** • OBD fuse (in PJB)
OBD (in PJB)	**OBJ fuse (in PJB)** • DLC-2
F/PUMP	**F/PUMP fuse** • Fuel pump relay • ET control relay
FAN	**FAN fuse** • FAN control module
BACK (in PJB)	**BACK fuse (in PJB)** • TR switch

NO.2 MIL ILLUMINATES[LF, L3]

id0103a6800800

2	MIL ILLUMINATES
DESCRIPTION	The MIL is illuminated incorrectly.
POSSIBLE CAUSE	• The PCM illuminates for emission-related concern (DTC is stored in PCM) • Instrument cluster malfunction **Note** • If the MIL blinks at steady rate, misfire condition could possibly exist.

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Connect the M-MDS to the DLC-2. Turn the ignition switch to the ON position (Engine off). Retrieve any DTCs. Are there any DTCs displayed?	Yes	**DTC is displayed:** • Go to appropriate the DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	**No DTC is displayed:** • Inspect instrument cluster operation. (See 09-22-4 INSTRUMENT CLUSTER INSPECTION.)
2	• Verify test results. — If normal, return to diagnostic index to service any additional symptoms. (See 01-03A-11 ENGINE SYMPTOM TROUBLESHOOTING[LF, L3].) — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle is repaired, troubleshooting completed. • If vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)		

NO.3 WILL NOT CRANK[LF, L3]

id0103a6800900

3	WILL NOT CRANK
DESCRIPTION	The starter does not work.
POSSIBLE CAUSE	• Open starter circuit between ignition switch and starter • TR switch malfunction (ATX) • TR switch misadjustment (ATX) • Low or dead battery • Charging system malfunction. • Starter interlock switch malfunction (MTX) • Starter malfunction • Seized/hydrolocked engine, flywheel (MTX) or drive plate (ATX) • Immobilizer system and/or circuit malfunction (if equipped) • Immobilizer system operating properly. (Ignition key is not registered) (if equipped)

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	**Note** • The following test should be performed for vehicles with immobilizer system. Go to Step 8 for vehicles without immobilizer system. Connect the M-MDS to the DLC-2. Do the following conditions appear? • The engine is not completely started. • DTC P1260 is displayed.	Yes	**Both conditions appear:** Go to Step 4.
		No	**Either or other condition appears:** Go to the next step.
2	Turn the ignition switch to the ON position. Is the coil connector securely connected to the coil?	Yes	Go to the next step.
		No	Connect the coil connector securely. Return to Step 1.
3	Does the security light flush?	Yes	Go to the next step.
		No	Inspect instrument cluster and wiring harness. (See 09-22-4 INSTRUMENT CLUSTER INSPECTION.)
4	Connect the M-MDS to the DLC-2 and retrieve DTC. **DTC** **B1213, B2139, B2141, B1600, B1601, B1602, B1681, B2103, B2431, U2510**	Yes	Go to appropriate DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
5	Inspect for the following wiring harnesses and connectors: • Between coil terminal A and instrument cluster terminal 2Q • Between coil terminal B and instrument cluster terminal 2S Is there any malfunction?	Yes	Repair or replace suspected wiring harness and connector.
		No	Go to the next step.
6	Inspect for the following wiring harnesses and connectors: • Between PCM terminal 1AI and instrument cluster terminal 1I • Between PCM terminal 1AM and instrument cluster terminal 1K Is there any malfunction?	Yes	Repair or replace suspected wiring harness and connector.
		No	Go to the next step.
7	Is there continuity between PCM terminal 1B*1, 1AB*2 and starter relay with clutch pedal depressed (MTX with starter interlock system), P or N position (ATX)?	Yes	Go to the next step.
		No	Repair or replace wiring harness.
8	Inspect the following: • Battery connection • Battery condition • Transaxle is in Park or Neutral. (ATX) • Clutch is fully depressed. (MTX) • Fuses Are all items normal?	Yes	Go to the next step.
		No	Service if necessary. Repeat Step 8.

STEP	INSPECTION	RESULTS	ACTION
9	Is clicking sound heard from starter when the ignition switch is turned to START?	Yes	Go to the next step.
		No	Go to Step 11.
10	Inspect the starting system. (See 01-19A-3 STARTER INSPECTION[LF, L3].) Is starting system normal?	Yes	Inspect for seized/hydrolocked engine, flywheel or drive plate. (See 05-10-16 FLYWHEEL INSPECTION[LF, L3].)
		No	Repair or replace components if required.
11	Do any other electrical accessories function?	Yes	Go to the next step.
		No	Inspect the charging system. (See 01-17A-4 BATTERY INSPECTION[LF, L3].) (See 01-17A-7 GENERATOR INSPECTION[LF, L3].)
12	**Note** • The following test should be performed on ATX only. For MTX, go to the next step. Connect the M-MDS to the DLC-2. Access TR PID. Turn the ignition switch to the ON position. Is TR PID indicated P/N when selecting P or N position?	Yes	Go to the next step.
		No	Inspect adjustment of TR switch. If TR switch is adjusted properly, inspect for open circuit between TR switch and PCM terminal 1AH*3, 1U*4, 1S*5 or starter.
13	Connect the M-MDS to the DLC-2. Turn the ignition switch to the ON position (Engine off). Retrieve any DTCs. Are there any DTCs displayed?	Yes	**DTC is displayed:** Go to appropriate DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].) **Communication error message is displayed:** Inspect for the following: • Open circuit in wiring harness between main relay and PCM terminal 1BE or 1BG*3, 1O*4, 1A*5 (ATX) • Open circuit in wiring harness between main relay terminal E and PCM terminal 1Q*1, 1AT*2 • Main relay is stuck open. • Open or short circuit in wiring harness between DLC and PCM terminals 1AM or 1AI • Open or poor GND circuit (PCM terminal 1BD*1, 1AZ*2, 1BB, 1AZ*1, 1BD*2 or 1BH) • Poor connection of vehicle body GND
		No	**No DTC is displayed:** Inspect the following: • START circuit in ignition switch • Open circuit in wiring harness between ignition switch and starter • Starter interlock switch (MTX)
14	• Verify test results. — If normal, return to diagnostic index to service any additional symptoms. (See 01-03A-11 ENGINE SYMPTOM TROUBLESHOOTING[LF, L3].) — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle is repaired, troubleshooting completed. • If vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)

*5 : Except for California emission regulation applicable LF ATX model

NO.4 HARD TO START/LONG CRANK/ERRATIC START/ERRATIC CRANK[LF, L3]

id0103a6801000

4	HARD TO START/LONG CRANK/ERRATIC START/ERRATIC CRANK
DESCRIPTION	• The starter cranks engine at normal speed but engine requires excessive cranking time before starting. • The battery is in normal condition.
POSSIBLE CAUSE	• Erratic signal to ignition coil • Vacuum leakage • Poor fuel quality • Starting system malfunction • Spark plug malfunction • Air leakage from intake-air system • Erratic signal from CKP sensor • Erratic signal from CMP sensor • Improper air/fuel mixture ratio control • Air cleaner restriction • Improper operation of electronic throttle control system • PCV valve malfunction • Inadequate fuel pressure • Purge solenoid valve malfunction • MAF sensor contamination • Incorrect MAF sensor GND voltage • Restriction in exhaust system • EGR valve malfunction • Pressure regulator malfunction (built-in fuel pump unit) **Warning** **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before servicing the fuel system:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual.** **(See 01-14A-4 BEFORE SERVICE PRECAUTION[LF, L3].)** **(See 01-14A-5 AFTER SERVICE PRECAUTION[LF, L3].)** **Caution** • **Disconnecting/connecting quick release connector without cleaning it may cause damage to fuel pipe and quick release connector. Always clean quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Inspect for the following: • Vacuum leakage • Proper fuel quality (such as proper octane, contamination, winter/summer blend) • Loose bands on intake-air system • Cracks on intake-air system parts • Intake-air system restriction (such as air cleaner element, fresh air duct.) Are all items normal?	Yes	Go to the next step.
		No	Service if necessary. Repeat Step 1.
2	Connect the M-MDS to the DLC-2. Turn the ignition switch to the ON position (Engine off). Retrieve any DTCs. Are there any DTCs displayed?	Yes	**DTC is displayed:** Go to the appropriate DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	**No DTC is displayed:** Go to the next step.
3	Is engine overheating?	Yes	Go to symptom troubleshooting "No.17 Cooling system concerns – Overheating". (See 01-03A-50 NO.17 COOLING SYSTEM CONCERNS-OVERHEATING[LF, L3].)
		No	Go to the next step.
4	Inspect the ignition coil related wiring harness condition (intermittent open or short circuit) for all cylinders. Are wiring harness conditions normal?	Yes	Go to the next step.
		No	Repair the wiring harnesses.

STEP	INSPECTION	RESULTS	ACTION
5	Inspect the spark plug conditions. Is spark plug wet, covered with carbon or grayish white?	Yes	**Spark plug is wet or covered with carbon:** Inspect for fuel leakage from fuel injector. **Spark plug is grayish white:** Inspect the fuel injector for clogging.
		No	Install the spark plugs on original cylinders. Go to the next step.
6	Visually inspect the CKP sensor and teeth of crankshaft pulley. Are the CKP sensor and teeth of crankshaft pulley normal?	Yes	Go to the next step.
		No	Replace the malfunctioning part.
7	Remove and shake the PCV valve. Does the PCV valve rattle?	Yes	Go to the next step.
		No	Replace the PCV valve.
8	Attempt to start engine at part throttle. Does engine run smoothly at part throttle?	Yes	Inspect the electronic throttle control system operation. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].)
		No	Go to the next step.
9 —	Install the fuel pressure gauge between the fuel pipe and fuel distributor. Short check connector terminal F/P to body GND using a jumper wiring. Turn the ignition switch to the ON position. Is fuel line pressure correct with ignition switch ON? (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].)	Yes	Go to the next step.
		No	**Zero or low:** Inspect the fuel pump relay and the fuel pump circuit. Inspect the fuel line for clogging. If there is no malfunction, replace the fuel pump unit. (See 01-14A-14 FUEL PUMP UNIT REMOVAL/ INSTALLATION[LF, L3].) **High:** Replace the fuel pump unit. (See 01-14A-14 FUEL PUMP UNIT REMOVAL/ INSTALLATION[LF, L3].)
10	Is the fuel line pressure held after ignition switch is turned off? (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].)	Yes	Go to the next step.
		No	Inspect the fuel injector. (See 01-14A-27 FUEL INJECTOR INSPECTION[LF, L3].) If the fuel injector is normal, replace the fuel pump unit. (See 01-14A-14 FUEL PUMP UNIT REMOVAL/ INSTALLATION[LF, L3].)
11	Disconnect a vacuum hose from purge solenoid valve and plug opening end of vacuum hose. Start engine. Is starting condition improved?	Yes	Inspect if the purge solenoid valve is stuck open.
		No	Go to the next step.
12	Inspect the MAF sensor for following: • Contamination • MAF sensor terminal B voltage (GND circuit) Is there any contamination?	Yes	Repair or replace the malfunctioning part.
		No	Go to the next step.
13	Visually inspect the exhaust system part. Is there any deformed exhaust system part?	Yes	Replace the suspected part.
		No	Go to the next step.
14	Inspect engine condition while tapping EGR valve housing. Does engine condition improve?	Yes	Replace the EGR valve. (See 01-16A-13 EGR VALVE REMOVAL/ INSTALLATION[LF, L3].)
		No	Go to the next step.
15	Inspect the starting system. (See 01-19A-3 STARTER INSPECTION[LF, L3].) Is starting system normal?	Yes	Inspect for loose connectors or poor terminal contact. If there is no malfunction, remove EGR valve and visually inspect for mechanically stuck EGR valve.
		No	Repair or replace components as required.
16	• Verify test results. — If normal, return to diagnostic index to service any additional symptoms. (See 01-03A-11 ENGINE SYMPTOM TROUBLESHOOTING[LF, L3].) — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle is repaired, troubleshooting completed. • If vehicle is not repaired or additional diagnostic information is not available, Replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)		

NO.5 ENGINE STALLS-AFTER START/AT IDLE[LF, L3]

id0103a6801100

5	ENGINE STALLS—AFTER START/AT IDLE
DESCRIPTION	• Engine stops unexpectedly.
POSSIBLE CAUSE	• A/C system operation is improper • Air leakage from intake-air system parts • Purge solenoid valve malfunction • Improper operation of electronic throttle control system • EGR valve malfunction • No signal from CKP sensor due to sensor, related wire or wrong installation • Vacuum leakage • Engine overheating • Low engine compression • Erratic signal to ignition coil • Poor fuel quality • PCV valve malfunction • Air cleaner restriction • Restriction in exhaust system • Electrical connector disconnection • Open or short circuit in fuel pump body and related wiring harness • No battery power supply to PCM or poor GND • Inadequate fuel pressure • Fuel pump body mechanical malfunction • Fuel leakage from fuel injector • Fuel injector clogging • Ignition coil malfunction • Improper air/fuel mixture ratio control • Improper valve timing • Improper operation variable valve timing control system • Immobilizer system and/or circuit malfunction • Immobilizer system operating property. (Ignition key is not registered.) • Pressure regulator malfunction (built-in fuel pump unit) **Warning** **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before servicing the fuel system:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual.** **(See 01-14A-4 BEFORE SERVICE PRECAUTION[LF, L3].)** **(See 01-14A-5 AFTER SERVICE PRECAUTION[LF, L3].)** **Caution** • **Disconnecting/connecting quick release connector without cleaning it may cause damage to fuel pipe and quick release connector. Always clean quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	**Note** • The following test should be perform for vehicles with immobilizer system. Go to Step 8 for vehicles without immobilizer system. Connect the M-MDS to the DLC-2. Do the following conditions appear? • The engine is not completely started. • DTC P1260 is displayed.	Yes	**Both conditions appear:** Go to Step 3.
		No	**Either or other condition appears:** Go to the next step.
2	Does the engine stall after **approx. 2 s** since the engine is started?	Yes	Go to the next step.
		No	Immobilizer system is normal. Go to Step 8.
3	Is coil connector securely connected to coil?	Yes	Go to the next step.
		No	Connect the coil connector securely. Return to Step 2.

STEP	INSPECTION	RESULTS	ACTION
4	Turn the ignition switch to the ON position. Does security light flush?	Yes	Go to the next step.
		No	Inspect the instrument cluster and wiring harness. (See 09-22-4 INSTRUMENT CLUSTER INSPECTION.)
5	Connect the M-MDS to the DLC-2 and retrieve DTC. Are any of the following DTCs displayed? **DTC** **B1213, B1600, B1601, B1602, B1681, B2103, B2139, B2141, B2431, U2510**	Yes	Go to the appropriate DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
6	Inspect for the following wiring harnesses and connectors: • Between coil terminal A and instrument cluster terminal 2Q • Between coil terminal B and instrument cluster terminal 2S Are there any malfunctions?	Yes	Repair or replace the suspected wiring harness and connector.
		No	Go to the next step.
7	Inspect for the following wiring harnesses and connectors: • Between PCM terminal 1AI and instrument cluster terminal 1I • Between PCM terminal 1AM and instrument cluster terminal 1K Are there any malfunctions?	Yes	Repair or replace the suspected wiring harness and connector.
		No	Go to the next step.
8	Verify the following: • Vacuum connection • Air cleaner element • No air leakage from intake-air system • No restriction of intake-air system • Proper sealing of intake manifold and components attached to intake manifold: EGR valve • Ignition wiring • Fuel quality: proper octane, contamination, winter/summer blend • Electrical connections • Smooth operation of throttle valve Are all items normal?	Yes	Go to the next step.
		No	Service if necessary. Repeat Step 8.
9	Connect the M-MDS to the DLC-2. Access the APP1 and APP2 PIDs. Crank the engine with accelerator pedal released. Are the APP1 and APP2 PIDs indicating that the accelerator pedal is in the released position?	Yes	Go to the next step.
		No	Inspect for the following: • APP sensor • Wiring harnesses and connectors for following: — PCM terminal 1AC*1, 1AL*2, 1AO*3 - APP sensor terminal E — PCM terminal 1AP*1, 1Y*2, 1AP*3 - APP sensor terminal B — PCM terminal 1AL*1, 1AW*2, 1AL*3 - APP sensor terminal A — PCM terminal 1AS*1, 1AA*2, 1AV*3 - APP sensor terminal C — Ignition switch terminal A - APP sensor terminal F — APP sensor terminal D - GND
10	Connect the M-MDS to the DLC-2. Access the TP PID. Crank the engine with accelerator pedal released. Are the TP PID indicates the closed throttle position?	Yes	Go to the next step.
		No	Inspect for the following: • TP sensor • Wiring harnesses and connectors for following: — PCM terminal 2AO*1, 2K*2, 2AO*3 - TP sensor terminal B — PCM terminal 2AK*1, 2M*2, 2AK*3 - TP sensor terminal A — PCM terminal 2AL*1, 2I*2, 2AL*3 - TP sensor terminal C — PCM terminal 2AP*1, 2O*2, 2AP*3 - TP sensor terminal D

STEP	INSPECTION	RESULTS	ACTION
11	Connect the M-MDS to the DLC-2. Turn the ignition switch to the ON position (Engine off). Retrieve any DTCs. Are there any DTCs displayed?	Yes	**DTC is displayed:** Go to appropriate DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].) **Communication error message is displayed:** Inspect for the following: • Open circuit in wiring harness between main relay and PCM terminal 1BE or 1A (ATX) • Open main relay GND circuit • Main relay is stuck open. • Open or short circuit in wiring harness between DLC and PCM terminals 1AM or 1AI • Open or poor GND circuit (PCM terminal 1AZ, 1BB, 1BC*2, 1BD, 1BG, 1BH, 2BB*1 or 2BC*1) • Poor connection of vehicle body GND
		No	**No DTC is displayed:** Go to the next step.
12	Attempt to start engine at part throttle. Does engine run smoothly at part throttle?	Yes	Inspect electronic throttle control system operation. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].)
		No	Go to the next step.
13	Connect the M-MDS to the DLC-2. Access RPM PID. Is RPM PID indicating engine speed during engine cranking?	Yes	Go to the next step.
		No	Inspect for the following: • Open or short circuit in CKP sensor • Open or short circuit in wiring harness between CKP sensor terminal C and PCM terminal 2AQ*1, 2T*2, 2AQ*3 • Open or short circuit in wiring harness between CKP sensor terminal B and PCM terminal 2W*1, 2U*2, 2W*3 • Open or short circuit in CKP sensor wiring harnesses If CKP sensor and wiring harness are normal, go to the next step.
14	Visually inspect CKP sensor and teeth of crankshaft pulley. Are CKP sensor and teeth of crankshaft pulley normal?	Yes	Go to the next step.
		No	Replace the malfunctioning part.
15	Inspect the ignition coil related wiring harness condition (intermittent open or short circuit) for all cylinders. Are wiring harness conditions normal?	Yes	Go to the next step.
		No	Repair the wiring harnesses.
16	Perform the spark test. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) Is strong blue spark visible at each cylinder?	Yes	Go to the next step. If symptoms occurs with the A/C on, go to Step 23.
		No	Repair or replace the malfunctioning part according to spark test result.
17	Inspect the spark plug condition. Is spark plug wet, covered with carbon or grayish white?	Yes	**Spark plug is wet or covered with carbon:** Inspect for fuel leakage from injector. **Spark plug is grayish white:** Inspect the fuel injector for clogging.
		No	Install spark plugs on original cylinders. Go to the next step.
18	Remove and shake the PCV valve. Does the PCV valve rattle?	Yes	Go to the next step.
		No	Replace the PCV valve.
19	visually inspect the exhaust system part. Is there any deformed exhaust system part?	Yes	Replace the suspected part.
		No	Go to the next step.

STEP	INSPECTION	RESULTS	ACTION
20	Install the fuel pressure gauge between the fuel pipe and the fuel distributor. Short check connector terminal F/P to body GND using a jumper wiring. Turn the ignition switch to the ON position. Is fuel line pressure correct with ignition switch ON? (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].)	Yes	Go to the next step.
		No	**Zero or low:** Inspect the fuel pump relay and fuel pump circuit. Inspect the fuel line for clogging. If there is no malfunction, replace the fuel pump unit. (See 01-14A-14 FUEL PUMP UNIT REMOVAL/ INSTALLATION[LF, L3].) **High:** Replace the fuel pump unit. (See 01-14A-14 FUEL PUMP UNIT REMOVAL/ INSTALLATION[LF, L3].)
21	Visually inspect for fuel leakage at fuel injector O-ring and fuel line. Service if necessary. Is fuel line pressure held after ignition switch is turned off? (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].)	Yes	Go to the next step.
		No	Inspect the fuel injector. If the fuel injector is normal, replace the fuel pump unit. (See 01-14A-14 FUEL PUMP UNIT REMOVAL/ INSTALLATION[LF, L3].)
22	**Note** • The following test is for stall concerns with the A/C on. If other symptoms exist, go to the next step. Connect pressure gauges to A/C low and high pressure side lines. Turn A/C on and measure low side and high side pressures. Are pressures within specifications? (See 07-10-6 REFRIGERANT PRESSURE CHECK.)	Yes	Go to the next step.
		No	If A/C is always on, go to symptom troubleshooting "No.24 A/C is always on or A/C compressor runs continuously". (See 01-03A-59 NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY[LF, L3].) For other symptoms, inspect the following: • Refrigerant charging amount • Condenser fan operation
23	Disconnect the vacuum hose between the purge solenoid valve and the intake manifold from purge solenoid side. Plug opening end of vacuum hose. Start the engine. Is the engine stall now eliminated?	Yes	Inspect if purge solenoid valve is stuck open. Inspect evaporative emission control system.
		No	Go to the next step.
24	Is air leakage felt or heard at intake-air system components while racing the engine to higher speed?	Yes	Repair or replace the malfunctioning part.
		No	Go to the next step.
25	Inspect the engine condition while tapping EGR valve housing. Does the engine condition improve?	Yes	Replace the EGR valve.
		No	Go to the next step.
26	Inspect variable valve timing control system operation. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) Does variable valve timing control function properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to variable valve timing control system operation inspection results.
27	Is the engine compression correct?	Yes	Inspect the valve timing.
		No	Inspect for cause.
28	• Verify test results. — If normal, return to diagnostic index to service any additional symptoms. (See 01-03A-11 ENGINE SYMPTOM TROUBLESHOOTING[LF, L3].) — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle is repaired, troubleshooting completed. • If vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)

NO.6 CRANKS NORMALLY BUT WILL NOT START[LF, L3]

id0103a6801200

6	CRANKS NORMALLY BUT WILL NOT START
DESCRIPTION	• The starter cranks engine at normal speed but the engine will not run. • Refer to symptom troubleshooting "No.5 Engine stalls" if this symptom appears after engine stall. • Fuel is in tank. • Battery is in normal condition.
POSSIBLE CAUSE	• No battery power supply to PCM • Air leakage from intake-air system • Open PCM GND or vehicle body GND • Improper operation of electronic throttle control system • EGR valve malfunction • No signal from CKP sensor due to sensor, related wire or incorrect installation • No signal from CMP sensor due to sensor, related wire or incorrect installation • Low engine compression • Engine overheating • Vacuum leakage • Erratic signal to ignition coil • Improper air/fuel mixture ratio control • Poor fuel quality • PCV valve malfunction • Restriction in intake-air system • Restriction in exhaust system • Disconnected electrical connector • Open or short circuit in fuel pump body and related wiring harness • Inadequate fuel pressure • Fuel pump mechanical malfunction • Fuel leakage from injector • Fuel injector is clogged. • Purge solenoid valve malfunction • Spark plug malfunction • Ignition coil malfunction • Improper variable valve timing control system operation • Improper valve timing • Immobilizer system and/or circuit malfunction (if equipped) • Immobilizer system operating properly. (Ignition key is not registered.) (if equipped) • Pressure regulator malfunction (built-in fuel pump unit) **Warning** **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before servicing the fuel system:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual.** **(See 01-14A-4 BEFORE SERVICE PRECAUTION[LF, L3].)** **(See 01-14A-5 AFTER SERVICE PRECAUTION[LF, L3].)** **Caution** • **Disconnecting/connecting quick release connector without cleaning it may cause damage to fuel pipe and quick release connector. Always clean quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	**Note** • The following test should be perform for vehicles with immobilizer system. Go to Step 8 for vehicles without immobilizer system. Connect the M-MDS to the DLC-2. Do any of the following conditions appear? • Engine does not completely start. • DTC P1260 is displayed.	Yes	**Both conditions appear:** Go to Step 3.
		No	**Either or other condition appears:** Go to the next step.

STEP	INSPECTION	RESULTS	ACTION
2	Does engine stall after **approx. 2 s** from when it is started?	Yes	Go to the next step.
		No	Immobilizer system is normal. Go to Step 8.
3	Is the coil connector securely connected to the coil?	Yes	Go to the next step.
		No	Connect the coil connector securely. Return to Step 2.
4	Turn the ignition switch to the ON position. Does the security light flush?	Yes	Go to the next step.
		No	Inspect the instrument cluster and wiring harness.
5	Connect the M-MDS equivalent to the DLC-2 and retrieve the DTC. Are any of the following DTCs displayed? **DTC** **B1213, B1600, B1601, B1602, B1681, B2103, B2139, B2141, B2431, U2510**	Yes	Go to the appropriate DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
6	Inspect the following wiring harnesses and connectors: • Between coil terminal A and instrument cluster terminal 2Q • Between coil terminal B and instrument cluster terminal 2S Is there any malfunction?	Yes	Repair or replace the suspected wiring harness and connector.
		No	Go to the next step.
7	Inspect the following wiring harnesses and connectors: • Between PCM terminal 1AI and instrument cluster terminal 1I • Between PCM terminal 1AM and instrument cluster terminal 1K Is there any malfunction?	Yes	Repair or replace the suspected wiring harness and connector.
		No	Go to the next step.
8	Verify the following: • Vacuum connection • External fuel shut off or accessory (such as kill switch, alarm) • Fuel quality: proper octane, contamination, winter/summer blend • No air leakage from intake-air system • Intake-air system restriction (such as air cleaner element, fresh air duct) • Proper sealing of intake manifold and components attached to intake manifold: EGR valve • Ignition wiring • Electrical connections • Fuses • Smooth operation of throttle valve Are all items normal?	Yes	Go to the next step.
		No	Service if necessary. Repeat Step 8.
9	Connect the M-MDS to the DLC-2. Turn the ignition switch to the ON position (Engine off). Retrieve any DTCs. Are there any DTCs displayed?	Yes	**DTC is displayed:** Go to the appropriate DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].) **Communication error message is displayed:** Inspect for the following: • Open circuit in wiring harness between main relay and PCM terminal 1BE or 1A(ATX) • Open main relay GND circuit • Open or short circuit in wiring harness between DLC and PCM terminal 1AM or 1AI • Main relay is stuck open. • Open or poor GND circuit (PCM terminal 1AZ, 1BB, 1BC*2, 1BD, 1BG, 1BH, 2BB*1 or 2BC*1) • Poor connection of vehicle body GND
		No	**No DTC is displayed:** Go to the next step.

STEP	INSPECTION	RESULTS	ACTION
10	Connect the M-MDS to the DLC-2. Access the APP1 and APP2 PIDs. Crank the engine with accelerator pedal released. Are the APP1 and APP2 PIDs indicating that the accelerator pedal is in the released position?	Yes	Go to the next step.
		No	Inspect for the following: • APP sensor • Wiring harnesses and connectors for following: — PCM terminal 1AC*1, 1AL*2, 1AO*3, - APP sensor terminal E — PCM terminal 1AP*1, 1Y*2, 1AP*3 - APP sensor terminal B — PCM terminal 1AL*1, 1AW*2, 1AL*3 - APP sensor terminal A — PCM terminal 1AS*1, 1AA*2, 1AV*3 - APP sensor terminal C — Ignition switch terminal A - APP sensor terminal F — APP sensor terminal D - GND
11	Connect the M-MDS to the DLC-2. Access the TP PID. Crank the engine with accelerator pedal released. Are the TP PID indicates the closed throttle position?	Yes	Go to the next step.
		No	Inspect for the following: • TP sensor • Wiring harnesses and connectors for following: — PCM terminal 2AO*1, 2K*2, 2AO*3 - TP sensor terminal B — PCM terminal 2AK*1, 2M*2, 2AK*3 - TP sensor terminal A — PCM terminal 2AL*1, 2I*2, 2AL*3 - TP sensor terminal C — PCM terminal 2AP*1, 2O*2, 2AP*3 - TP sensor terminal D
12	Does the engine start with the throttle valve closed?	Yes	Go to Step 29.
		No	Go to the next step.
13	Will the engine start and run smoothly at part throttle?	Yes	Inspect the electronic throttle control system operation. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].)
		No	Go to the next step.
14	Connect the M-MDS to the DLC-2. Access RPM PID. Is RPM PID indicating the engine speed when cranking the engine?	Yes	Go to the next step.
		No	Inspect for the following: • Open or short circuit in CKP sensor • Open or short circuit in wiring harness between CKP sensor terminal C and PCM terminal 2AQ*1, 2T*2, 2AQ*3 • Open or short circuit in wiring harness between CKP sensor terminal B and PCM terminal 2W*1, 2U*2, 2W*3 • Open or short circuit in CKP sensor wiring harnesses If CKP sensor and wiring harness are normal, go to the next step.
15	Visually inspect the CKP sensor and teeth of crankshaft pulley. Are CKP sensor and teeth of crankshaft pulley normal?	Yes	Go to the next step.
		No	Replace the malfunctioning part.
16	Inspect the ignition coil related wiring harness condition (intermittent open or short circuit) for all cylinders. Are wiring harness conditions normal?	Yes	Go to the next step.
		No	Repair the wiring harnesses.
17	Perform the spark test. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) Is strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to spark test result.

STEP	INSPECTION	RESULTS	ACTION
18	Inspect the spark plug conditions. Is spark plug wet, covered with carbon or grayish white?	Yes	**Spark plug is wet or covered with carbon:** Inspect for fuel leakage from injector. **Spark plug is grayish white:** Inspect the fuel injector for clogging.
		No	Install the spark plugs on original cylinders. Go to the next step.
19	Remove and shake the PCV valve. Does the PCV valve rattle?	Yes	Go to the next step.
		No	Replace the PCV valve.
20	visually inspect the exhaust system part. Is there any deformed exhaust system part?	Yes	Replace the suspected part.
		No	Go to the next step.
21	Install the fuel pressure gauge between the fuel pipe and the fuel distributor. Short check connector terminal F/P to body GND using a jumper wiring. Turn the ignition switch to the ON position. Is fuel line pressure correct when ignition switch is turned on/off **five times**? (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].)	Yes	Go to the next step.
		No	**Zero or low:** Inspect the fuel pump relay and fuel pump circuit. Inspect the fuel line for clogging. If there is no malfunction, replace the fuel pump unit. (See 01-14A-14 FUEL PUMP UNIT REMOVAL/INSTALLATION[LF, L3].) **High:** Replace the fuel pump unit. (See 01-14A-14 FUEL PUMP UNIT REMOVAL/INSTALLATION[LF, L3].)
22	Visually inspect the fuel injector O-ring and fuel line for fuel leakage. Service if necessary. Is the fuel line pressure held after the ignition switch is turned off? (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].)	Yes	Go to the next step.
		No	Inspect the fuel injector. If the fuel injector is normal, replace the fuel pump unit. (See 01-14A-14 FUEL PUMP UNIT REMOVAL/INSTALLATION[LF, L3].)
23	Disconnect the vacuum hose between the purge solenoid valve and the intake manifold from purge solenoid valve side. Plug opening end of vacuum hose. Start the engine. Is starting condition improved?	Yes	Inspect if the purge solenoid valve is stuck open mechanically. Inspect the evaporative emission control system.
		No	Go to the next step.
24	Is air leakage felt or heard at intake-air system components while racing engine to higher speed?	Yes	Repair or replace the malfunctioning part.
		No	Go to the next step.
25	Inspect the engine condition while tapping EGR valve housing. Is engine condition improved?	Yes	Replace the EGR valve.
		No	Go to the next step.
26	Inspect the variable valve timing control system operation. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) Does variable valve timing control function properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part.
27	Is the engine compression correct?	Yes	Inspect the valve timing.
		No	Inspect for causes.
28	• Verify test results. — If normal, return to diagnostic index to service any additional symptoms. (See 01-03A-11 ENGINE SYMPTOM TROUBLESHOOTING[LF, L3].) — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle is repaired, troubleshooting completed. • If vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)

NO.7 SLOW RETURN TO IDLE[LF, L3]

id0103a6801300

7	SLOW RETURN TO IDLE
DESCRIPTION	Engine takes more time than normal to return to idle speed.
POSSIBLE CAUSE	• ECT sensor malfunction • Thermostat is stuck open. • Throttle body malfunction • Air leakage from intake-air system

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Connect the M-MDS to the DLC-2. Turn the ignition switch to the ON position (Engine off). Retrieve any DTCs. Are there any DTCs displayed?	Yes	**DTC is displayed:** Go to the appropriate DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	**No DTC is displayed:** Go to the next step.
2	Remove thermostat and inspect operation. (See 01-12A-8 THERMOSTAT REMOVAL/ INSTALLATION[LF, L3].) (See 01-12A-8 THERMOSTAT INSPECTION[LF, L3].) Is thermostat normal?	Yes	ECT and thermostat are normal. Go to the next step.
		No	Access ECT PID on the M-MDS. Inspect for both ECT PID and temperature gauge on instrument cluster readings. If temperature gauge on instrument cluster indicates normal range but ECT PID is not same as temperature gauge reading, inspect ECT sensor. If temperature gauge on instrument cluster indicates cold range but ECT PID is normal, inspect temperature gauge and heat gauge unit.
3	Is throttle body free of contamination?	Yes	Inspect for air leakage from the intake-air system components while racing the engine to higher speed.
		No	Clean or replace throttle body.
4	• Verify test results. — If normal, return to diagnostic index to service any additional symptoms. (See 01-03A-11 ENGINE SYMPTOM TROUBLESHOOTING[LF, L3].) — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle is repaired, troubleshooting completed. • If vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)		

NO.8 ENGINE RUNS ROUGH/ROLLING IDLE[LF, L3]

id0103a6801400

8	ENGINE RUNS ROUGH/ROLLING IDLE
DESCRIPTION	• Engine speed fluctuates between specified idle speed and lower speed and engine shakes excessively. • Idle speed is too slow and engine shakes excessively.
POSSIBLE CAUSE	• Air leakage from intake-air system parts • A/C system operation is improper • Erratic signal to ignition coil • Spark plug malfunction • Purge solenoid valve malfunction • Improper operation of electronic throttle control system • Idle learning of electronic throttle control system is not completed • EGR valve malfunction • Erratic or no signal from CMP sensor • Low engine compression • Improper valve timing • Improper variable valve timing control system operation. • Erratic signal from CKP sensor • Improper air / fuel mixture ratio control operation (abnormal signal form MAF sensor or HO2S) • Open or short circuit in PCM GND circuit • Poor fuel quality • PCV valve malfunction • Air cleaner restriction • Restriction in exhaust system • Disconnected electrical connectors • Inadequate fuel pressure • Fuel pump body mechanical malfunction • Improper load signal input • Fuel line restriction or clogging • Improper fuel injection control operation • Fuel leakage from fuel injector • Fuel injector clogging • Engine overheating • Vacuum leakage • Pressure regulator malfunction (built-in fuel pump unit) **Warning** **The following troubleshooting flow chart contains fuel system diagnosis and repair procedures. Read following warnings before servicing the fuel system:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual.** **(See 01-14A-4 BEFORE SERVICE PRECAUTION[LF, L3].)** **(See 01-14A-5 AFTER SERVICE PRECAUTION[LF, L3].)** **Caution** • **Disconnecting/connecting quick release connector without cleaning it may cause damage to fuel pipe and quick release connector. Always clean quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Warm up the engine. Idle the engine for **5 min.** Is the symptom disappeared?	Yes	Troubleshooting completed. (Cause of this symptom is that the idle learning of electronic throttle control system is not completed.)
		No	Go to the next step.

STEP	INSPECTION	RESULTS	ACTION
2	Verify the following: • External fuel shut off or accessory (such as kill switch, alarm) • Fuel quality (such as proper octane, contamination, winter/summer blend) • No air leakage from intake-air system • Proper sealing of intake manifold and components attached to intake manifold: EGR valve • Ignition wiring • Electrical connections • Fuses • Smooth operation of throttle valve • PCM GND circuit (2BH, 1BH, 1BD, AZ, 1BB)*1 (1BH, 1AZ, 1BD, 1BB)*2 Are all items normal?	Yes	Go to the next step.
		No	Service if necessary. Repeat Step 2.
3	Connect the M-MDS to the DLC-2. Turn the ignition switch to the ON position (Engine off). Retrieve any DTCs. Are there any DTCs displayed?	Yes	**DTC is displayed:** Go to the appropriate DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	**No DTC is displayed:** Go to the next step.
4	Is the engine overheating?	Yes	Go to symptom troubleshooting "No.17 Cooling system concerns - Overheating".
		No	Go to the next step.
5	Connect the M-MDS to the DLC-2. Access MAF PID. Drive vehicle with monitoring PID. Is MAF PID within specification?	Yes	Go to the next step.
		No	Inspect for open or short circuit of MAF sensor and related wiring harness.
6	**Note** • The following test is for engine running at rough idle with A/C on. If other symptoms exist, go to the next step. Connect pressure gauge to A/C low and high pressure side lines. Start engine and idle it. Turn the A/C switch on. Measure low side and high side pressures. Are pressures within specifications? (See 07-10-6 REFRIGERANT PRESSURE CHECK.)	Yes	Go to the next step.
		No	If the A/C is always on, go to symptom troubleshooting "No.24 A/C is always on or A/C compressor runs continuously". For other symptoms, inspect the following: • Refrigerant charging amount • Condenser fan operation
7	**Note** • The following test is for engine running rough with P/S on. If other symptoms exist, go to the next step. Connect the M-MDS to the DLC-2. Start the engine and idle it. Retrieve any DTCs for EHPAS Is there any EHPAS DTC displayed?	Yes	Go to appropriate the DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	Go to the next step.
8	Visually inspect the CKP sensor and teeth of crankshaft pulley. Are the CKP sensor and teeth of crankshaft pulley normal?	Yes	Go to the next step.
		No	Replace the malfunctioning part.
9	Inspect the ignition coil related wiring harness condition (intermittent open or short circuit) for all cylinders. Are wiring harness conditions normal?	Yes	Go to the next step.
		No	Repair the wiring harnesses.
10	Inspect the spark plug condition. Is the spark plug wet, covered with carbon or grayish white?	Yes	**Spark plug is wet or covered with carbon:** Inspect for fuel leakage from injector. **Spark plug is grayish white:** Inspect the fuel injector for clogging.
		No	Install the spark plugs on original cylinders. Go to the next step.

STEP	INSPECTION	RESULTS	ACTION
11	Perform the electronic throttle control system operation inspection. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) Does the electronic throttle control system function properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to electronic throttle control system operation inspection results.
12	Install fuel pressure gauge between fuel pipe and fuel distributor. Start the engine and run it at idle. Measure fuel line pressure during idle. Is fuel line pressure correct during idle? (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].)	Yes	Go to the next step.
		No	**Low:** Inspect the fuel line for clogging. If there is no malfunction, replace fuel pump unit. (See 01-14A-14 FUEL PUMP UNIT REMOVAL/ INSTALLATION[LF, L3].) **High:** Replace the fuel pump unit. (See 01-14A-14 FUEL PUMP UNIT REMOVAL/ INSTALLATION[LF, L3].)
13	Visually inspect for fuel leakage at fuel injector, O-ring, and fuel line. Service if necessary. Does fuel line pressure hold after ignition switch is turned off? (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3])	Yes	Go to the next step.
		No	Inspect fuel injector. If fuel injector is normal, replace fuel pump unit.
14	Connect the M-MDS to the DLC-2. Start the engine and idle it. Access LONG FT1 PID. Measure LONG FT1 PID at idle. Is PID value between **–14% and +14%**?	Yes	Go to the next step.
		No	LONG FT1 PID is out of specification. Less than specification (too rich): • Inspect EVAP control system. — If system is normal, go to Step 14. Greater than specification (too lean): • Inspect for air leakage at intake-air system components. — If system is normal, go to the next step.
15	Disconnect the vacuum hose between the purge solenoid valve and the intake manifold from purge solenoid valve side. Plug opening end of vacuum hose. Start the engine. Does the engine condition improve?	Yes	Check if purge solenoid valve is stuck open mechanically. Inspect EVAP control system.
		No	Go to the next step.
16	Remove and shake the PCV valve. Does the PCV valve rattle?	Yes	Go to the next step.
		No	Replace the PCV valve.
17	Visually inspect the exhaust system part. Is there any deformed exhaust system part?	Yes	Replace the suspected part.
		No	Go to the next step.
18	Visually inspect the CMP sensor and teeth of camshaft. Are the CMP sensor and teeth of camshaft normal?	Yes	Go to the next step.
		No	Replace the malfunctioning part.
19	Inspect the engine condition while tapping EGR valve housing. Does the engine condition improve?	Yes	Replace the EGR valve.
		No	Go to the next step.
20	Inspect variable valve timing control system operation. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) Does variable valve timing control system function properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part.
21	Is engine compression correct?	Yes	Inspect the valve timing. (See 01-10A-33 VARIABLE VALVE TIMING ACTUATOR INSPECTION[LF, L3].)
		No	Inspect for causes.

STEP	INSPECTION	RESULTS	ACTION
22	• Verify test results. — If normal, return to diagnostic index to service any additional symptoms. (See 01-03A-11 ENGINE SYMPTOM TROUBLESHOOTING[LF, L3].) — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle is repaired, troubleshooting completed. • If vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)

*2 : Except for California emission regulation applicable model

NO.9 FAST IDLE/RUNS ON[LF, L3]

id0103a6801500

9	FAST IDLE/RUNS ON
DESCRIPTION	• The engine speed continues at fast idle after warm-up. • The engine runs after the ignition switch is turned off.
POSSIBLE CAUSE	• ECT sensor malfunction • Air leakage from intake-air system • Throttle body malfunction • Accelerator pedal position sensor misadjustment • Cruise control system operation improperly • Improper load signal input • Improper operation of electronic throttle control system

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Connect the M-MDS to the DLC-2. Access ECT PID. Start and warm up engine to normal operating temperature. Is ECT PID between **82—112°C {180—234°F}**?	Yes	Go to the next step.
		No	**ECT PID is higher than 112°C {234°F}:** Go to symptom troubleshooting "No.17 Cooling system concerns - Overheating". **ECT PID is less than 82°C {180°F}:** Go to symptom troubleshooting "No.18 Cooling system concerns - Runs cold".
2	Connect the M-MDS to the DLC-2. Turn the ignition switch to the ON position (Engine off). Retrieve any DTCs. Are there any DTCs displayed?	Yes	**DTC is displayed:** Go to the appropriate DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	**No DTC is displayed:** Go to the next step.
3	Measure voltages at PCM terminal 1AP, 1R, 1O (MTX) and 1S. (See 01-40A-13 PCM INSPECTION[LF, L3].) Are voltage normal?	Yes	Go to the next step.
		No	**If PCM terminal 1AU*1, 1AP*2, 1AU*3 voltage is not specified:** Inspect A/C switch, refrigerant pressure switch and fan switch. **If PCM terminal 1J*1, 1R*2, 1J*3 voltage is not specified:** Inspect refrigerant pressure switch (middle pressure). **If PCM terminal 1D voltage is not specified:** Inspect clutch pedal position (CPP) switch. (See 01-40A-47 CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION[LF, L3].) **If PCM terminal 1X voltage is not specified:** Inspect neutral switch (MTX), transaxle range (TR) switch (ATX). (See 01-40A-46 NEUTRAL SWITCH INSPECTION[LF, L3].) (See 05-17A-10 TRANSAXLE RANGE (TR) SWITCH INSPECTION[FN4A-EL].) (See 05-17B-11 TRANSAXLE RANGE (TR) SWITCH INSPECTION[FS5A-EL].)
4	Connect the M-MDS to the DLC-2. Start the engine and idle it. Retrieve any DTCs for EHPAS. Is there any EHPAS DTC displayed?	Yes	**DTC is displayed:** Go to appropriate DTC inspection.
		No	**No DTC is displayed:** Go to the next step.

STEP	INSPECTION	RESULTS	ACTION
5	Is there air leakage felt or heard at intake-air system components while racing engine to higher speed?	Yes	Repair or replace parts if necessary.
		No	Inspect the following: • Electronic throttle control system operation • Accelerator pedal position sensor
6	• Verify test results. — If normal, return to diagnostic index to service any additional symptoms. (See 01-03A-11 ENGINE SYMPTOM TROUBLESHOOTING[LF, L3].) — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle is repaired, troubleshooting completed. • If vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)

NO.10 LOW IDLE/STALLS DURING DECELERATION[LF, L3]

id0103a6801600

10	LOW IDLE/STALLS DURING DECELERATION
DESCRIPTION	• Engine stops unexpectedly at the beginning of deceleration or recovery from deceleration.
POSSIBLE CAUSE	• Vacuum leakage • Improper operation of electronic throttle control system • Air leakage from intake-air system • Improper air/fuel mixture ratio control • Evaporative emission control system malfunction • Accelerator pedal position sensor or related circuit malfunction • Accelerator pedal position sensor misadjustment • TP sensor or related circuit malfunction • MAF sensor or related circuit malfunction • Brake switch or related circuit malfunction • Neutral/clutch pedal position switch or related circuit malfunction (MTX) • TR switch or related circuit malfunction (ATX) • Improper A/C magnetic clutch operation

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Does the engine idle roughly?	Yes	Go to symptom troubleshooting "No.8 Engine runs rough/rolling idle". (See 01-03A-32 NO.8 ENGINE RUNS ROUGH/ ROLLING IDLE[LF, L3].)
		No	Go to the next step.
2	Turn off the A/C switch and fan switch. Does the A/C magnetic clutch engage?	Yes	Go to symptom troubleshooting "No.24 A/C is always on or A/C compressor runs continuously." (See 01-03A-59 NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY[LF, L3].)
		No	Go to the next step.
3	Verify the following: • Proper routing of and no damage to vacuum lines • No air leakage from intake-air system Are all items normal?	Yes	Go to the next step.
		No	Service if necessary. Repeat Step 3.
4	Connect the M-MDS to the DLC-2. Turn the ignition switch to the ON position (Engine off). Retrieve any DTCs. Are there any DTCs displayed?	Yes	**DTC is displayed:** Go to the appropriate DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	**No DTC is displayed:** Go to the next step.
5	Perform the electronic throttle control system operation inspection. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) Does the electronic throttle control system function properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to electronic throttle control system operation inspection results.

STEP	INSPECTION	RESULTS	ACTION
6	Disconnect the vacuum hose between the purge solenoid valve and the intake manifold from purge solenoid valve side. Plug opening end of vacuum hose. Drive the vehicle. Does the engine condition improve?	Yes	Inspect the evaporative emission control system.
		No	Go to the next step.
7	Connect the M-MDS to the DLC-2. Access APP1, APP2, TP, MAF and VSS PIDs. Monitor each PID while driving vehicle. (See 01-40A-13 PCM INSPECTION[LF, L3].) Are PIDs normal?	Yes	Go to the next step.
		No	**APP1, APP2 PIDs:** Inspect the accelerator pedal position sensor. **TP PID:** Inspect TP sensor. **MAF PID:** Inspect MAF sensor. **VSS PID:** Inspect VSS.
8	Measure voltage at PCM terminal 1AU, 1O (MTX), and 1S. (See 01-40A-13 PCM INSPECTION[LF, L3].) Are voltages normal?	Yes	Intermittent concern exists. (See 01-03A-66 INTERMITTENT CONCERN TROUBLESHOOTING[LF, L3].)
		No	**If PCM terminal 1AB*1, 1AU*2, 1AB*3 voltage is not as specified:** Inspect the brake switch. (See 04-11-8 BRAKE SWITCH INSPECTION.) **If PCM terminal 1D voltage is not as specified:** Inspect the clutch pedal position switch. (See 01-40A-47 CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION[LF, L3].) **If PCM terminal voltage 1X is not as specified:** Inspect the neutral switch (MTX). (See 01-40A-46 NEUTRAL SWITCH INSPECTION[LF, L3].) Inspect the TR switch (ATX). (See 05-17A-10 TRANSAXLE RANGE (TR) SWITCH INSPECTION[FN4A-EL].) (See 05-17B-11 TRANSAXLE RANGE (TR) SWITCH INSPECTION[FS5A-EL].)
9	• Verify test results. — If normal, return to diagnostic index to service any additional symptoms. (See 01-03A-11 ENGINE SYMPTOM TROUBLESHOOTING[LF, L3].) — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle is repaired, troubleshooting completed. • If vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM INSPECTION[LF, L3].)

*2 : Except for California emission regulation applicable model with LF engine ATX
*3 : Except for California emission regulation applicable model with LF engine MTX and L3 engine

NO.11 ENGINE STALLS/QUITS, ENGINE RUNS ROUGH, MISSES, BUCK/JERK, HESITATION/STUMBLE, SURGES[LF, L3]

id0103a6801700

11	**ENGINE STALLS/QUITS — ACCELERATION/CRUISE** **ENGINE RUNS ROUGH — ACCELERATION/CRUISE** **MISSES — ACCELERATION/CRUISE** **BUCK/JERK — ACCELERATION/CRUISE/DECELERATION** **HESITATION/STUMBLE — ACCELERATION** **SURGES — ACCELERATION/CRUISE**
DESCRIPTION	• Engine stops unexpectedly at the beginning of acceleration or during acceleration. • Engine stops unexpectedly while cruising. • Engine speed fluctuates during acceleration or cruising. • Engine misses during acceleration or cruising. • Vehicle bucks/jerks during acceleration, cruising, or deceleration. • Momentary pause at beginning of acceleration or during acceleration • Momentary minor irregularity in engine output

11	**ENGINE STALLS/QUITS — ACCELERATION/CRUISE** **ENGINE RUNS ROUGH — ACCELERATION/CRUISE** **MISSES — ACCELERATION/CRUISE** **BUCK/JERK — ACCELERATION/CRUISE/DECELERATION** **HESITATION/STUMBLE — ACCELERATION** **SURGES — ACCELERATION/CRUISE**
POSSIBLE CAUSE	• Improper A/C system operation • Erratic signal or no signal from CMP sensor • Air leakage from intake-air system parts • Purge solenoid valve malfunction • Improper operation of electronic throttle control system • EGR valve malfunction • Erratic signal from CKP sensor • Low engine compression • Vacuum leakage • Poor fuel quality • Main relay intermittent malfunction • Throttle body malfunction • Engine overheating • Spark plug malfunction • Improper air/fuel mixture ratio control operation • Improper variable tumble control operation • Erratic signal to ignition coil • Air cleaner restriction • PCV valve malfunction • Fuel flow into evaporative purge hose • Improper valve timing due to jumping out timing chain • Restriction in exhaust system • Intermittent open or short circuit in fuel body pump circuit • Inadequate fuel pressure • Fuel pump mechanical malfunction • Check valve (two-way) malfunction integrated with fuel tank • Fuel leakage from fuel injector • Fuel injector clogging • Fuel line restriction or clogging • Pressure regulator malfunction (built-in fuel pump unit) • Erratic signal form Accelerator pedal position sensor • Erratic signal form TP sensor • Intermittent open or short circuit of MAF sensor, TP sensor, Accelerator pedal position sensor and VSS • ATX malfunction (ATX) • Clutch slippage (MTX) • Improper variable intake-air control operation • Loose attaching bolts or worn engine mounts **Warning** **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before servicing the fuel system:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual.** **(See 01-14A-4 BEFORE SERVICE PRECAUTION[LF, L3].)** **(See 01-14A-5 AFTER SERVICE PRECAUTION[LF, L3].)** **Caution** • **Disconnecting/connecting quick release connector without cleaning it may cause damage to fuel pipe and quick release connector. Always clean quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Verify the following: • Vacuum connection • Air cleaner element • No air leakage from intake-air system • No restriction of intake-air system • Proper sealing of intake manifold and components attached to intake manifold: such as EGR valve • Ignition wiring • Fuel quality (such as proper octane, contamination, winter/summer blend) • Electrical connections • Smooth operation of throttle valve Are all items normal?	Yes	Go to the next step.
		No	Service if necessary. Repeat Step 1.
2	Connect the M-MDS to the DLC-2. Turn the ignition switch to the ON position (Engine off). Retrieve any DTCs. Are there any DTCs displayed?	Yes	**DTC is displayed:** Go to the appropriate DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	**No DTC is displayed:** Go to the next step.
3	Is engine overheating?	Yes	Go to symptom troubleshooting "No.17 Cooling system concerns - Overheating".
		No	Go to the next step.
4	Connect the M-MDS to the DLC-2. Access APP1, APP2, RPM, VPWR, MAF, TP and VSS PIDs. Drive the vehicle with monitoring PIDs. Are PIDs within specifications? (See 01-40A-13 PCM INSPECTION[LF, L3].)	Yes	Go to the next step.
		No	**APP1, APP2 PIDs:** Inspect if output signal from accelerator pedal position sensor changes smoothly. **RPM PID:** Inspect the CKP sensor and related wiring harness for vibration or intermittent open/short circuit. **VPWR PID:** Inspect for open circuit intermittently. **MAF PID:** Inspect for open circuit of the MAF sensor and related wiring harness intermittently. **TP PID:** Inspect if output signal from TP sensor changes smoothly. **VSS PID:** Inspect for open circuit of VSS and related wiring harness intermittently.
5	Visually inspect the CKP sensor and teeth of crankshaft pulley. Are CKP sensor and teeth of crankshaft pulley normal?	Yes	Go to the next step.
		No	Replace the malfunctioning part.
6	Inspect the spark plug conditions. Is spark plug wet, covered with carbon or grayish white?	Yes	**Spark plug is wet or covered with carbon:** Inspect for fuel leakage from fuel injector. **Spark plug is grayish white:** Inspect the fuel injector for clogging.
		No	Install the spark plugs on original cylinders. Go to the next step.
7	Remove and shake the PCV valve. Does the PCV valve rattle?	Yes	Go to the next step.
		No	Replace the PCV valve.
8	Perform the electronic throttle control system operation inspection. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) Does the electronic throttle control system function properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to electronic throttle system operation inspection results.
9	Visually inspect deformed exhaust system part. Is there any deformed exhaust system part?	Yes	Replace the suspected part.
		No	Go to the next step.

STEP	INSPECTION	RESULTS	ACTION
10	Install fuel pressure gauge between the fuel pipe and fuel distributor. Short check connector terminal F/P to body GND using a jumper wiring. Turn the ignition switch to the ON position. Is fuel line pressure correct with ignition switch to ON position? (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].)	Yes	Go to the next step.
		No	**Zero or low:** Inspect the fuel pump relay and fuel pump circuit. Inspect the fuel line for clogging. If there is no malfunction, replace the fuel pump unit. (See 01-14A-14 FUEL PUMP UNIT REMOVAL/ INSTALLATION[LF, L3].) **High:** Replace the fuel pump unit. (See 01-14A-14 FUEL PUMP UNIT REMOVAL/ INSTALLATION[LF, L3].)
11	Visually inspect for fuel leakage at fuel injector O-ring and fuel line. Service if necessary. Is fuel line pressure held after ignition switch is turned off? (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].)	Yes	Go to the next step.
		No	Inspect the fuel injector. If the fuel injector is normal, replace the fuel pump unit. (See 01-14A-14 FUEL PUMP UNIT REMOVAL/ INSTALLATION[LF, L3].)
12	**Note** • The following test is for engine stall with the A/C on. If other symptom exists, go to the next step. Connect a pressure gauge to A/C low and high pressure side lines. Turn the A/C on and measure low side and high side pressure. Are pressures within specifications? (See 07-10-6 REFRIGERANT PRESSURE CHECK.)	Yes	Go to the next step.
		No	If the A/C is always on, go to symptom troubleshooting "No.24 A/C is always on or A/C compressor runs continuously". (See 01-03A-59 NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY[LF, L3].) For other symptoms, inspect the following: • Refrigerant charging amount • Condenser fan operation
13	**Note** • The following test should be performed for symptom with cruise control ON. If other symptoms exist, go to the next step. Inspect cruise control system. Is cruise control system normal?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part.
14	Inspect the front HO2S. (See 01-40A-57 HEATED OXYGEN SENSOR (HO2S) INSPECTION[LF, L3].) Is the front HO2S normal?	Yes	Go to the next step.
		No	Replace the front HO2S. (See 01-40A-66 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION[LF, L3].)
15	Inspect the evaporative purge hose between the fuel tank and the purge valve. Does fuel flow into evaporative purge hose?	Yes	Inspect the check valve (two-way). (See 01-14A-12 FUEL TANK INSPECTION[LF, L3].)
		No	Go to the next step.
16	Disconnect the vacuum hose between the purge solenoid valve and the intake manifold from the purge solenoid valve side. Plug opening end of vacuum hose. Drive the vehicle. Does the engine condition improve?	Yes	Go to the next step. Inspect if the purge solenoid valve is stuck open mechanically. Inspect the evaporative emission control system.
		No	Go to the next step.
17	Visually inspect the CMP sensor and projections of camshaft pulley. Are CMP sensor and projections of camshaft pulley normal?	Yes	Go to the next step.
		No	Replace the malfunctioning part.
18	Inspect the variable tumble control operation. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) Is the variable tumble control normal?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part.
19	Inspect the EGR system. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) Is the EGR system normal?	Yes	Go to the next step.
		No	Replace the malfunctioning part.

STEP	INSPECTION	RESULTS	ACTION
20	Is the engine compression correct?	Yes	Inspect the following: • Valve timing • Internal transaxle part (ATX) • Clutch (MTX) • EGR valve (mechanical stuck) • Engine mounts • Check valve (two-way)
		No	Inspect for cause.
21	• Verify test results. — If normal, return to diagnostic index to service any additional symptoms. (See 01-03A-11 ENGINE SYMPTOM TROUBLESHOOTING[LF, L3].) — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle is repaired, troubleshooting completed. • If vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)		

NO.12 LACK/LOSS OF POWER-ACCELERATION/CRUISE[LF, L3]

id0103a6804800

12	LACK/LOSS OF POWER — ACCELERATION/CRUISE
DESCRIPTION	Performance is poor under load (such as power down when climbing hills).
POSSIBLE CAUSE	• Improper A/C system operation • Erratic signal or no signal from CMP sensor • Air leakage from intake-air system parts • Restriction in intake-air system • Intake air temperature too hot • Improper variable intake-air control operation • Improper variable tumble control operation • Improper operation of electronic throttle control system • Purge control solenoid malfunction • Improper EGR valve operation • Brake dragging • Erratic signal from CKP sensor • Low engine compression • Vacuum leakage • Poor fuel quality • Erratic signal to ignition coil • Engine overheating • Throttle body malfunction • Spark plug malfunction • PCV valve malfunction • Improper valve timing due to jumping out of timing chain • Improper variable valve timing control operation • Restriction in exhaust system • Intermittent open or short in fuel pump related circuit • Inadequate fuel pressure • Fuel pump mechanical malfunction • Fuel line restriction or clogging • Fuel leakage from fuel injector • Fuel injector clogging • Erratic signal from accelerator pedal position sensor • Erratic signal from TP sensor • Intermittent open or short circuit in MAF sensor, Accelerator pedal position sensor, TP sensor, IAT sensor and VSS • ATX malfunction (ATX) • Clutch slippage (MTX) **Warning** **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before servicing the fuel system:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual.** **(See 01-14A-4 BEFORE SERVICE PRECAUTION[LF, L3].)** **(See 01-14A-5 AFTER SERVICE PRECAUTION[LF, L3].)** **Caution** • **Disconnecting/connecting quick release connector without cleaning it may cause damage to fuel pipe and quick release connector. Always clean quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Verify the following: • Vacuum connection • Restriction in intake-air system (such as air cleaner element, fresh air duct) • No air leakage from intake-air system • No restriction of intake-air system • Proper sealing of intake manifold and components attached to intake manifold; such as EGR valve • Fuel quality (such as proper octane, contamination, winter/summer blend) Are all items normal?	Yes	Go to the next step.
		No	Service if necessary. Repeat Step 1.
2	Connect the M-MDS to the DLC-2. Turn the ignition switch to the ON position (Engine off). Retrieve any DTCs. Are there any DTCs displayed?	Yes	**DTC is displayed:** Go to the appropriate DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	**No DTC is displayed:** Go to the next step.
3	Is the engine overheating?	Yes	Go to symptom troubleshooting "No.17 Cooling system concerns - Overheating".
		No	Go to the next step.
4	Connect the M-MDS to the DLC-2. Access APP1, APP2, RPM, MAF, TP, IAT and VSS PIDs. Drive vehicle while monitoring PIDs. Are PIDs within specifications? (See 01-40A-13 PCM INSPECTION[LF, L3].)	Yes	Go to the next step.
		No	**APP1, APP2 PIDs:** Inspect if output signal accelerator pedal position sensor changes smoothly. **RPM PID:** Inspect CKP sensor and related wiring harness for vibration or intermittent open/short circuit or both. **MAF PID:** Inspect for intermittent open circuit of MAF sensor and related wiring harness. **TP PID:** Inspect if output signal TP sensor changes smoothly. **IAT PID:** Inspect for air suction in intake-air system. If normal, inspect intermittent short circuit of IAT sensor and related wiring harnesses. **VSS PID:** Inspect for intermittent open circuit of VSS and related wiring harness.
5	Visually inspect the CKP sensor and teeth of crankshaft pulley. Are the CKP sensor and teeth of crankshaft pulley normal?	Yes	Go to the next step.
		No	Replace the malfunctioning part.
6	Inspect the spark plug condition. Is spark plug wet, covered with carbon or grayish white?	Yes	**Spark plug is wet or covered with carbon:** Inspect the fuel injector for fuel leakage. **Spark plug is grayish white:** Inspect the fuel injector for clogging.
		No	Install the spark plugs on original cylinders. Go to the next step.
7	Remove and shake the PCV valve. Does the PCV valve rattle?	Yes	Go to the next step.
		No	Replace PCV valve.
8	Perform electronic throttle control system operation inspection. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) Does electronic throttle control system function properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to electronic throttle control system operation inspection results.
9	visually inspect deformed exhaust system part. Is there any deformed exhaust system part?	Yes	Replace the suspected part.
		No	Go to the next step.

STEP	INSPECTION	RESULTS	ACTION
10	Install the fuel pressure gauge between the fuel pipe and the fuel distributor. Short check connector terminal F/P to body GND using a jumper wiring. Turn the ignition switch to the ON position. Is fuel line pressure correct with ignition switch to ON position? (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].)	Yes	Go to the next step.
		No	**Zero or low:** Inspect the fuel pump relay and fuel pump circuit. Inspect the fuel line for clogging. If there is no malfunction, replace the fuel pump unit. (See 01-14A-14 FUEL PUMP UNIT REMOVAL/ INSTALLATION[LF, L3].) **High:** Replace the fuel pump unit. (See 01-14A-14 FUEL PUMP UNIT REMOVAL/ INSTALLATION[LF, L3].)
11	Inspect variable tumble control operation. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) Does variable tumble control function properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part.
12	Inspect variable intake-air control operation. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) Does VIS function properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part.
13	**Note** • The following test is for engine stalling with the A/C on concern. If other symptoms exist, go to the next step. Connect pressure gauge to the A/C low and high side pressure lines. Turn the A/C on and measure low side and high side pressures. Are pressures within specifications? (See 07-10-6 REFRIGERANT PRESSURE CHECK.)	Yes	Go to the next step.
		No	If A/C is always on, go to symptom troubleshooting "No.24 A/C is always on or A/C compressor runs continuously". (See 01-03A-59 NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY[LF, L3].) For other symptoms, inspect the following: • Refrigerant charging amount • Condenser fan operation
14	Inspect for A/C cut-off operation. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) Does the A/C cut-off function properly?	Yes	Go to the next step.
		No	Inspect A/C cut-off system components.
15	Disconnect the vacuum hose between the purge solenoid valve and the intake manifold from purge solenoid valve side. Plug opening end of vacuum hose. Drive the vehicle. Does the engine condition improve?	Yes	Inspect if purge solenoid valve is stuck open mechanically. Inspect the evaporative emission control system. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].)
		No	Go to the next step.
16	Visually inspect the CMP sensor and projections of camshaft pulley. Are the CMP sensor and projections of camshaft pulley normal?	Yes	Go to the next step.
		No	Replace the malfunctioning part.
17	Inspect EGR system. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) Is EGR system normal?	Yes	Go to the next step.
		No	Replace the malfunctioning part according to EGR control system operation inspection results.
18	Inspect the variable valve timing control system operation. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) Does the variable valve timing control system function properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to variable valve timing control system inspection results.
19	Is the engine compression correct?	Yes	Inspect the following: • Valve timing • Internal transaxle components (ATX) • Clutch (MTX) • Brake system for dragging
		No	Inspect for cause.

STEP	INSPECTION	RESULTS	ACTION
20	• Verify test results. — If normal, return to diagnostic index to service any additional symptoms. (See 01-03A-11 ENGINE SYMPTOM TROUBLESHOOTING[LF, L3].) — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle is repaired, troubleshooting completed. • If vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)		

NO.13 KNOCKING/PINGING/DETONATION-ACCELERATION/CRUISE[LF, L3]

id0103a6803800

13	KNOCKING/PINGING - ACCELERATION/CRUISE
DESCRIPTION	Sound is heard when air/fuel mixture is ignited by something other than spark plug (such as hot spot in combustion chamber).
POSSIBLE CAUSE	• Engine overheating due to cooling system malfunction • ECT sensor malfunction • IAT sensor malfunction • MAF sensor malfunction • Knock sensor malfunction • Erratic signal from CMP sensor • Inadequate engine compression • Inadequate fuel pressure **Warning** **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before servicing the fuel system:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual.** **(See 01-14A-4 BEFORE SERVICE PRECAUTION[LF, L3].)** **(See 01-14A-5 AFTER SERVICE PRECAUTION[LF, L3].)** **Caution** • **Disconnecting/connecting quick release connector without cleaning it may cause damage to fuel pipe and quick release connector. Always clean quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Connect the M-MDS to the DLC-2. Access ECT PID. Verify ECT PID is **less than 116°C {241°F}** during driving. Is ECT PID less than specification?	Yes	Go to the next step.
		No	Inspect the cooling system for cause of overheating.
2	Connect the M-MDS to the DLC-2. Access IAT and MAF PIDs. Monitor each PID. (See 01-40A-13 PCM INSPECTION[LF, L3].) Are PIDs normal?	Yes	Go to the next step.
		No	**IAT PID**: Inspect IAT sensor **MAF PID**: Inspect MAF sensor
3	Connect the M-MDS to the DLC-2. Turn the ignition switch to the ON position (engine off). Are there any DTCs displayed?	Yes	**DTC is displayed:** Go to the appropriate DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	**No DTC is displayed:** Go to the next step.
4	Is engine compression correct?	Yes	Go to the next step.
		No	Inspect for cause.

STEP	INSPECTION	RESULTS	ACTION
5	Install fuel pressure gauge between fuel pipe and fuel distributor. Start the engine and idle it. Measure fuel line pressure during idle. Is fuel line pressure correct during idle? (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].)	Yes	Inspect the ignition timing.
		No	**Low:** Inspect the fuel pump relay and fuel pump circuit. Inspect the fuel line for clogging. If there is no malfunction, replace the fuel pump unit. (See 01-14A-14 FUEL PUMP UNIT REMOVAL/INSTALLATION[LF, L3].) **High:** Replace the fuel pump unit. (See 01-14A-14 FUEL PUMP UNIT REMOVAL/INSTALLATION[LF, L3].)
6	Inspect the knock sensor. Is the knock sensor normal?	Yes	Inspect ignition timing.
		No	Replace the knock sensor.
7	• Verify test results. — If normal, return to diagnostic index to service any additional symptoms. (See 01-03A-11 ENGINE SYMPTOM TROUBLESHOOTING[LF, L3].) — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle is repaired, troubleshooting completed. • If vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)		

NO.14 POOR FUEL ECONOMY[LF, L3]

id0103a6802000

14	POOR FUEL ECONOMY
DESCRIPTION	Fuel economy is unsatisfactory.
POSSIBLE CAUSE	• Contaminated air cleaner element • Variable intake-air control malfunction • Engine cooling system malfunction • Improper ATF level (ATX) • Weak spark • Poor fuel quality • Erratic or no signal from CMP sensor • Clutch slippage (MTX) • Variable tumble control malfunction • Improper variable valve timing control system operation • Improper coolant level • Inadequate fuel pressure • Spark plug malfunction • PCV valve malfunction • Brake dragging • Improper valve timing due to jumping out of timing chain • Contaminated MAF sensor • Improper engine compression • Exhaust system clogging **Warning** **The following troubleshooting flow chart contains fuel system diagnosis and repair procedures. Read following warnings before servicing fuel system:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual.** **(See 01-14A-4 BEFORE SERVICE PRECAUTION[LF, L3].)** **(See 01-14A-5 AFTER SERVICE PRECAUTION[LF, L3].)** **Caution** • **Disconnecting/connecting quick release connector without cleaning it may cause damage to fuel pipe and quick release connector. Always clean quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Inspect for the following: • Air cleaner element for contamination • ATF level (ATX) • Fuel quality • Coolant level • Brake dragging • Clutch slippage (MTX) Are all items normal?	Yes	Go to the next step.
		No	Service if necessary. Repeat Step 1.
2	Connect the M-MDS to the DLC-2. Turn the ignition switch to the ON position (Engine off). Retrieve any DTCs. Are there any DTCs displayed?	Yes	**DTC is displayed:** Go to the appropriate DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	**No DTC is displayed:** Go to the next step.
3	Access ECT PID. Drive vehicle while monitoring PID. (See 01-40A-13 PCM INSPECTION[LF, L3].) Is PID within specification?	Yes	Go to the next step.
		No	Inspect for coolant leakage, cooling fan and condenser fan operations or thermostat operation.
4	Perform the spark test. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) Is strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to spark test result.
5	Install the fuel pressure gauge between the fuel pipe and the fuel distributor. Start the engine and idle it. Measure fuel line pressure during idle. Is fuel line pressure correct during idle? (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].)	Yes	Go to the next step.
		No	**Low:** Inspect the fuel pump relay and fuel pump circuit. Inspect the fuel line for clogging. If there is no malfunction, replace the fuel pump unit (See 01-14A-14 FUEL PUMP UNIT REMOVAL/ INSTALLATION[LF, L3].) **High:** Replace the fuel pump unit. (See 01-14A-14 FUEL PUMP UNIT REMOVAL/ INSTALLATION[LF, L3].)
6	Inspect for the variable tumble control operation. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) Does the variable tumble control function properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part.
7	Inspect for variable valve timing control system operation. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) Does the variable valve timing control system function properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part.
8	Inspect for the variable intake-air control operation. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) Does variable intake-air control function properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part.
9	Remove and shake the PCV valve. Does the PCV valve rattle?	Yes	Go to the next step.
		No	Replace the PCV valve.
10	visually inspect the exhaust system part. Is there any deformed exhaust system?	Yes	Replace the suspected part.
		No	Go to the next step.
11	Inspect for contaminated MAF sensor. Is there any contamination?	Yes	Go to the next step.
		No	Inspect for cause.
12	Inspect the MAF sensor for contamination. Is there any contamination?	Yes	Replace MAF sensor.
		No	Go to the next step.
13	Is engine compression correct?	Yes	Inspect the valve timing.
		No	Inspect for cause.

STEP	INSPECTION	RESULTS	ACTION
14	• Verify test results. — If normal, return to diagnostic index to service any additional symptoms. (See 01-03A-11 ENGINE SYMPTOM TROUBLESHOOTING[LF, L3].) — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle is repaired, troubleshooting completed. • If vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)		

NO.15 EMISSION COMPLIANCE[LF, L3]

id0103a6802100

15	EMISSION COMPLIANCE
DESCRIPTION	Fails emissions test.
POSSIBLE CAUSE	• Vacuum lines leakage or blockage • Cooling system malfunction • Spark plug malfunction • Leakage from intake manifold • Erratic or no signal from CMP sensor • Inadequate fuel pressure • PCV valve malfunction or incorrect valve installation • EGR valve malfunction • Exhaust system clogging • Fuel tank ventilation system malfunction • Fuel-filler cap malfunction • Charcoal canister damage • Air cleaner element clogging or restriction • Throttle body malfunction • Erratic signal to ignition coil • Improper air/fuel mixture ratio control operation • Bend or open circuit HO2S wiring harness • Catalyst converter malfunction • Engine internal parts malfunction • Excessive carbon is built up in combustion chamber • Improper engine compression • Improper valve timing **Warning** **The following troubleshooting flow chart contains fuel system diagnosis and repair procedures. Read following warnings before servicing fuel system:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual.** **(See 01-14A-4 BEFORE SERVICE PRECAUTION[LF, L3].)** **(See 01-14A-5 AFTER SERVICE PRECAUTION[LF, L3].)** **Caution** • **Disconnecting/connecting quick release connector without cleaning it may cause damage to fuel pipe and quick release connector. Always clean quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Inspect for the following: • Vacuum lines for leakage or blockage • Electrical connections • Proper maintenance schedule followed • Intake-air system and air cleaner element concerns: obstructions, leakage or dirtiness Are all items normal?	Yes	Go to the next step.
		No	Service if necessary. Repeat Step 1.
2	Connect the M-MDS to the DLC-2. Turn the ignition switch to the ON position (Engine off). Retrieve any DTCs. Are there any DTCs displayed?	Yes	**DTC is displayed:** Go to appropriate DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	**No DTC is displayed:** Go to the next step.
3	Is any other driveability concern present?	Yes	Go to appropriate symptom troubleshooting.
		No	Go to the next step.
4	Connect the M-MDS to the DLC-2. Access ECT PID. Warm up the engine and idle it. Verify ECT PID is correct. (See 01-40A-13 PCM INSPECTION[LF, L3].) Is ECT PID correct?	Yes	Go to the next step.
		No	Inspect for coolant leakage, cooling fan and condenser fan operation or thermostat operation.
5	Inspect fuel-filler cap. (See 01-16A-5 FUEL-FILLER CAP INSPECTION[LF, L3].) Is there any leakage at fuel-filler cap?	Yes	Replace the fuel-filler cap.
		No	Go to the next step.
6	Inspect the front HO2S. (See 01-40A-57 HEATED OXYGEN SENSOR (HO2S) INSPECTION[LF, L3].) Is front HO2S normal?	Yes	Go to the next step.
		No	Replace the front HO2S. (See 01-40A-66 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION[LF, L3].)
7	Perform spark test. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) Is strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to spark test result.
8	Install the fuel pressure gauge between the fuel pipe and the fuel distributor. Start the engine and idle it. Measure fuel line pressure during idle. Is fuel line pressure correct during idle? (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].)	Yes	Go to the next step.
		No	**Low:** Inspect the fuel line for clogging. If there is no malfunction, replace the fuel pump unit. (See 01-14A-14 FUEL PUMP UNIT REMOVAL/INSTALLATION[LF, L3].) **High:** Replace the fuel pump unit. (See 01-14A-14 FUEL PUMP UNIT REMOVAL/INSTALLATION[LF, L3].)
9	Remove and shake the PCV valve. Does the PCV valve rattle?	Yes	Go to the next step.
		No	Replace the PCV valve.
10	Inspect for fuel saturation inside charcoal canister. Is excess amount of liquid fuel present in canister?	Yes	Replace the charcoal canister.
		No	Inspect the fuel tank vent system. Then, go to the next step. (See 01-14A-12 FUEL TANK INSPECTION[LF, L3].)
11	visually inspect the exhaust system part. Is there any deformed exhaust system part?	Yes	Replace the part.
		No	Go to the next step.
12	Inspect the three-way catalytic converter. (See 01-15A-1 EXHAUST SYSTEM INSPECTION[LF, L3].) Is the three-way catalytic converter normal?	Yes	Inspect the EGR system. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].)
		No	Replace the three-way catalytic converter.
13	• Verify test results. — If normal, return to diagnostic index to service any additional symptoms. (See 01-03A-11 ENGINE SYMPTOM TROUBLESHOOTING[LF, L3].) — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle is repaired, troubleshooting completed. • If vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)		

NO.16 HIGH OIL CONSUMPTION/LEAKAGE[LF, L3]

id0103a6802200

16	HIGH OIL CONSUMPTION/LEAKAGE
DESCRIPTION	Oil consumption is excessive.
POSSIBLE CAUSE	• PCV valve malfunction • Improper dipstick • Improper engine oil viscosity • Engine internal parts malfunction

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Remove and shake the PCV valve. Does the PCV valve rattle?	Yes	Go to the next step.
		No	Replace the PCV valve.
2	Inspect for the following: • External leakage • Proper dipstick • Proper engine oil viscosity Are all items normal?	Yes	Inspect the internal engine parts such as valves, valve guides, valve stem seals, cylinder head drain passage, and piston rings.
		No	Service if necessary. Repeat Step 2.
3	• Verify test results. — If normal, return to diagnostic index to service any additional symptoms. (See 01-03A-11 ENGINE SYMPTOM TROUBLESHOOTING[LF, L3].) — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle is repaired, troubleshooting completed. • If vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)		

NO.17 COOLING SYSTEM CONCERNS-OVERHEATING[LF, L3]

id0103a6802300

17	COOLING SYSTEM CONCERNS -OVERHEATING
DESCRIPTION	Engine runs at higher than normal temperature/overheats.
POSSIBLE CAUSE	• Improper coolant level • Blown fuses • Coolant leakage • Excessive A/C system pressure • A/C system operation is improper • Improper water/anti-freeze mixture • Fans reverse rotation • Poor radiator condition • Thermostat malfunction • Radiator hoses damage • Improper or damaged radiator cap • Cooling fan is inoperative. • Coolant overflow system malfunction • Improper tension of drive chain • Drive belt damage

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Inspect the following: • Engine coolant level • Coolant leakage • Water and anti-freeze mixture • Radiator condition • Collapsed or restricted radiator hoses • Radiator pressure cap • Overflow system • Fan rotational direction • Fuses Are all items normal?	Yes	Go to the next step.
		No	Service if necessary. Repeat Step 1.
2	Connect the M-MDS to the DLC-2. Turn the ignition switch to the ON position (Engine off). Retrieve any DTCs. Are there any DTCs displayed?	Yes	**DTC is displayed:** Go to the appropriate DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	**No DTC is displayed:** Go to the next step.

STEP	INSPECTION	RESULTS	ACTION
3	Start the engine and idle it. *Turn the A/C switch on and set blower fan to any* speed. Does the A/C compressor engage?	Yes	Go to Step 5.
		No	Inspect for the following and repair or replace if necessary: • Refrigerant charging amount • Open circuit in wiring harness between A/C relay and PCM terminal 1I*1, 1AN*2, 1I*3 • Seized A/C magnetic clutch • A/C magnetic clutch malfunction If all items are normal, go to the next step.
4	Start the engine and idle it. Turn the A/C switch on and set blower fan any speed. Measure voltage at PCM terminal 1AP. (See 01-40A-13 PCM INSPECTION[LF, L3].) Is voltage normal?	Yes	Go to the next step.
		No	Inspect the following: • Refrigerant pressure switch operation • The A/C switch is stuck open. • Open or short circuit between refrigerant pressure switch and PCM terminal 1AU*1, 1AP*2, 1AU*3 • Open circuit of blower motor fan switch and resistor (if blower motor does not operate) • The evaporator temperature sensor and A/C amplifier
5	Inspect cooling fan control system operation. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) Does the cooling fan control system function properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part.
6	Is the drive belt normal?	Yes	Go to the next step.
		No	Replace the drive belt.
7	Is there leakage around the heater unit in passenger compartment?	Yes	Inspect and service heater for leakage.
		No	Go to the next step.
8	Is there leakage at the coolant hoses and/or radiator?	Yes	Replace the malfunctioning part.
		No	Go to the next step.
9	Cool down the engine. Remove thermostat and inspect operation. (See 01-12A-8 THERMOSTAT REMOVAL/ INSTALLATION[LF, L3].) (See 01-12A-8 THERMOSTAT INSPECTION[LF, L3].) Is thermostat normal?	Yes	The engine coolant temperature and thermostat are normal, inspect engine block for leakage or blockage.
		No	Access ECT PID. Inspect for both ECT PID and temperature gauge readings. If temperature gauge on instrument cluster indicates normal range but ECT PID is not same as temperature gauge reading, inspect ECT sensor. If temperature gauge on instrument cluster indicates overheating but ECT PID is normal, inspect temperature gauge and heat gauge unit.
10	• Verify test results. — If normal, return to diagnostic index to service any additional symptoms. (See 01-03A-11 ENGINE SYMPTOM TROUBLESHOOTING[LF, L3].) — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle is repaired, troubleshooting completed. • If vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)

*3 : Except for California emission regulation applicable model with LF engine MTX and L3 engine

NO.18 COOLING SYSTEM CONCERNS-RUNS COLD[LF, L3]

id0103a6802400

18	COOLING SYSTEM CONCERNS-RUNS COLD
DESCRIPTION	Engine takes excessive time to reach normal operating temperature.
POSSIBLE CAUSE	• Thermostat malfunction • Cooling fan system malfunction

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Is customer complaint "Lack of passenger compartment heat" only?	Yes	Inspect A/C and heater system.
		No	Go to the next step.
2	Does the engine speed continue at fast idle?	Yes	Go to symptom troubleshooting "No.9 Fast idle/runs on". (See 01-03A-35 NO.9 FAST IDLE/RUNS ON[LF, L3].)
		No	Go to the next step.
3	Remove the thermostat and inspect operation. (See 01-12A-8 THERMOSTAT REMOVAL/ INSTALLATION[LF, L3].) (See 01-12A-8 THERMOSTAT INSPECTION[LF, L3].) Is thermostat normal?	Yes	Go to the next step.
		No	Replace the thermostat.
4	Inspect cooling fan control system operation. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) Does the cooling fan control system function properly?	Yes	Access ECT PID. Inspect for both ECT PID and temperature gauge on instrument cluster readings. If the temperature gauge on the instrument cluster indicates normal range but ECT PID is not the same as temperature gauge reading, inspect the ECT sensor. If the temperature gauge on the instrument cluster indicates cold range but ECT PID is normal, inspect the temperature gauge and heat gauge unit.
		No	Repair or replace the malfunctioning part.
5	• Verify test results. — If normal, return to diagnostic index to service any additional symptoms. (See 01-03A-11 ENGINE SYMPTOM TROUBLESHOOTING[LF, L3].) — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle is repaired, troubleshooting completed. • If vehicle is not repaired or additional diagnostic information is not available, replace PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)		

NO.19 EXHAUST SMOKE[LF, L3]

id0103a6803900

19	EXHAUST SMOKE
DESCRIPTION	Blue, black, or white smoke from exhaust system
POSSIBLE CAUSE	**Blue smoke (Burning oil):** • PCV valve malfunction • Engine internal oil leakage **White smoke (Water in combustion):** • Cooling system malfunction (coolant loss) • Engine internal coolant leakage **Black smoke (Rich fuel mixture):** • Air cleaner restriction • Intake-air system is collapsed or restricted. • Fuel return line is restricted. • Excessive fuel pressure • Improper engine compression • Injector fuel leakage • Ignition system malfunction **Warning** **The following troubleshooting flow chart contains fuel system diagnosis and repair procedures. Read following warnings before servicing fuel system:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual.** **(See 01-14A-4 BEFORE SERVICE PRECAUTION[LF, L3].)** **(See 01-14A-5 AFTER SERVICE PRECAUTION[LF, L3].)** **Caution** • **Disconnecting/connecting quick release connector without cleaning it may cause damage to fuel pipe and quick release connector. Always clean quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	What color is smoke coming from the exhaust system?	Blue	Burning oil is indicated. Go to the next step.
		White	Water in combustion is indicated. Go to Step 3.
		Black	Rich fuel mixture is indicated. Go to Step 4.
2	Remove and shake the PCV valve. Does the PCV valve rattle?	Yes	Inspect for the following: • Damaged valve guide, stems or valve seals • Blocked oil drain passage in cylinder head • Piston ring is not seated, seized or worn. • Damaged cylinder bore If other drivability symptoms are present, return to diagnostic index to service any additional symptoms.
		No	Replace the PCV valve.
3	Does the cooling system hold pressure?	Yes	Inspect for the following: • Cylinder head gasket leakage • Intake manifold gasket leakage • Cracked or porous engine block If other drivability symptoms are present, return to diagnostic index to service any additional symptoms.
		No	Inspect for cause.
4	Inspect for the following: • Air cleaner restriction • Collapsed or restricted intake-air system • Restricted fuel return line Are all items normal?	Yes	Go to the next step.
		No	Service if necessary. Repeat Step 4.

STEP	INSPECTION	RESULTS	ACTION
5	Connect the M-MDS to the DLC-2. Turn the ignition switch to the ON position (Engine off). Retrieve any DTCs. Are there any DTCs displayed?	Yes	**DTC is displayed:** Go to the appropriate DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	**No DTC is displayed:** Go to the next step.
6	Install the fuel pressure gauge between the fuel pipe and the fuel distributor. Start the engine and idle it. Measure fuel line pressure during idle. Is fuel line pressure correct during idle? (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].)	Yes	Go to the next step.
		No	**Low:** • Inspect the fuel line for clogging. • If there is no malfunction, replace the fuel pump unit. (See 01-14A-14 FUEL PUMP UNIT REMOVAL/INSTALLATION[LF, L3].) **High:** • Replace the fuel pump unit. (See 01-14A-14 FUEL PUMP UNIT REMOVAL/INSTALLATION[LF, L3].)
7	Perform the spark test. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) Is strong blue spark visible at each cylinder?	Yes	Inspect the CMP sensor. (See 01-40A-70 CAMSHAFT POSITION (CMP) SENSOR INSPECTION[LF, L3].)
		No	Repair or replace the malfunctioning part according to spark test result.
8	• Verify test results. — If normal, return to diagnostic index to service any additional symptoms. (See 01-03A-11 ENGINE SYMPTOM TROUBLESHOOTING[LF, L3].) — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle is repaired, troubleshooting completed. • If vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)		

NO.20 FUEL ODOR (IN ENGINE COMPARTMENT)[LF, L3]

id0103a6802600

20	FUEL ODOR (IN ENGINE COMPARTMENT)
DESCRIPTION	Gasoline fuel smell or visible leakage
POSSIBLE CAUSE	• Excessive fuel pressure • Purge solenoid valve malfunction • Fuel tank vent system blockage • Charcoal canister malfunction • Fuel leakage from fuel system **Warning** **The following troubleshooting flow chart contains fuel system diagnosis and repair procedures. Read following warnings before servicing fuel system:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual.** **(See 01-14A-4 BEFORE SERVICE PRECAUTION[LF, L3].)** **(See 01-14A-5 AFTER SERVICE PRECAUTION[LF, L3].)** **Caution** • **Disconnecting/connecting quick release connector without cleaning it may cause damage to fuel pipe and quick release connector. Always clean quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Visually inspect for fuel leakage at fuel injector O-ring and fuel line. Service if necessary. Install the fuel pressure gauge between the fuel pipe and the fuel distributor. Start engine and idle it. Measure fuel line pressure during idle. Is fuel line pressure correct during idle? (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].)	Yes	Go to the next step.
		No	Replace the fuel pump unit. (See 01-14A-14 FUEL PUMP UNIT REMOVAL/INSTALLATION[LF, L3].)
2	Inspect for blockage/restriction or open circuit in wiring harness between the engine vacuum port and the charcoal canister. Inspect for blockage in fuel tank vent system. Is malfunction indicated?	Yes	Replace vacuum hose.
		No	Go to the next step.
3	Inspect the purge solenoid valve. (See 01-16A-13 PURGE SOLENOID VALVE INSPECTION[LF, L3].) Is the solenoid operating properly?	Yes	Go to the next step.
		No	Replace the purge solenoid valve. (See 01-16A-12 PURGE SOLENOID VALVE REMOVAL/INSTALLATION[LF, L3].)
4	Connect the M-MDS to the DLC-2. Turn the ignition switch to the ON position (Engine off). Retrieve any DTCs. Are there any DTCs displayed?	Yes	**DTC is displayed:** Go to the appropriate DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	**No DTC is displayed:** Inspect charcoal canister for fuel saturation. If excess amount of liquid fuel is present, replace the charcoal canister.
5	• Verify test results. — If normal, return to diagnostic index to service any additional symptoms. (See 01-03A-11 ENGINE SYMPTOM TROUBLESHOOTING[LF, L3].) — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle is repaired, troubleshooting completed. • If vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)		

NO.21 ENGINE NOISE[LF, L3]

id0103a6802700

21	ENGINE NOISE
DESCRIPTION	Engine noise from under hood
POSSIBLE CAUSE	**Squeal, click or chirp noise:** • Improper engine oil level • Improper drive belt tension • Generator installation (alignment) • Splash shield or under cover looseness (splashed water to drive belts) **Rattle sound noise:** • Loose parts **Hiss sound noise:** • Vacuum leakage • Loose spark plug • Air leakage from intake-air system **Rumble or grind noise:** • Improper drive belt tension • Improper P/S fluid level **Rap or roar noise:** • Dynamic dumper looseness • Exhaust system looseness • Intake-air system looseness **Other noise:** • Camshaft friction gear noise or MLA noise • Timing chain noise

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Is a squealing, click or chirping sound present?	Yes	Inspect for the followings: • Engine oil level • Drive belt tension • Splash shield or under cover looseness • Generator installation (alignment)
		No	Go to the next step.
2	Is a rumbling or grinding noise present?	Yes	Inspect for the followings: • Drive belt tension • P/S fluid level
		No	Go to the next step.
3	Is a rattling noise present?	Yes	Inspect rattling location for loose parts.
		No	Go to the next step.
4	Is a hissing noise present?	Yes	Inspect for the following: • Vacuum leakage • Spark plug looseness • Intake-air system leakage
		No	Go to the next step.
5	Is a rapping or roar noise present?	Yes	Inspect looseness for followings: • Dynamic dumper • Intake-air system • Exhaust system
		No	Go to the next step.
6	Is a knocking noise present?	Yes	Go to symptom troubleshooting "No.11 Knocking/ pinging". (See 01-03A-45 NO.13 KNOCKING/PINGING/ DETONATION-ACCELERATION/CRUISE[LF, L3].)
		No	If the noise comes from the engine internal, inspect for friction gear, timing chain or MLA noise.
7	• Verify test results. — If normal, return to diagnostic index to service any additional symptoms. (See 01-03A-11 ENGINE SYMPTOM TROUBLESHOOTING[LF, L3].) — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle is repaired, troubleshooting completed. • If vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)		

NO.22 VIBRATION CONCERNS (ENGINE)[LF, L3]

id0103a6802800

22	VIBRATION CONCERNS (ENGINE)
DESCRIPTION	• Vibration from under hood or driveline
POSSIBLE CAUSE	• Loose attaching bolts or worn parts • Components malfunction such as worn parts

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Inspect the following components for loose attaching bolts or worn parts: • Cooling fan • Drive belt and pulleys • Generator • Engine mounts • Exhaust system mounts All items normal?	Yes	Inspect the following systems: • Wheels • ATX • Driveline • Suspension
		No	Readjust or retighten engine mount installation position. Service if necessary for other parts.
2	• Verify test results. — If normal, return to diagnostic index to service any additional symptoms. (See 01-03A-11 ENGINE SYMPTOM TROUBLESHOOTING[LF, L3].) — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle is repaired, troubleshooting completed. • If vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)		

NO.23 A/C DOES NOT WORK SUFFICIENTLY[LF, L3]

id0103a6802900

23	A/C DOES NOT WORK SUFFICIENTLY.
DESCRIPTION	A/C compressor magnetic clutch does not engage when the A/C switch is turned on.
POSSIBLE CAUSE	• Improper refrigerant charging amount • Open the A/C magnetic clutch • Open circuit in wiring harness between A/C relay and A/C magnetic clutch • Poor GND of A/C magnetic clutch • Refrigerant pressure switch is stuck open. • A/C relay is stuck open. • Seized A/C compressor • Open circuit in wiring harness between A/C switch and PCM through both refrigerant pressure switch and A/C amplifier

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Connect the M-MDS to the DLC-2. Turn the ignition switch to the ON position (Engine off). Retrieve any DTCs. Are there any DTCs displayed?	Yes	**DTC is displayed:** Go to the appropriate DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	**No DTC is displayed:** Go to the next step.
2	Disconnect A/C compressor connector. Start engine and turn A/C switch on. Is there correct voltage at A/C compressor magnetic clutch terminal? **Specification** **10.5 V or more**	Yes	Inspect for GND condition of magnetic clutch on A/C compressor. If GND condition is normal, inspect for open circuit magnetic clutch coil.
		No	Go to the next step.
3	Disconnect refrigerant pressure switch connector. Connect jumper wiring between A/C high pressure switch terminal. Connect jumper wiring between refrigerant pressure switch terminal. Turn the ignition switch to the ON position. Turn A/C switch on and set blower fan to any speed. Does A/C work?	Yes	Inspect refrigerant pressure switch operation. If switch is normal, go to the next step.
		No	Inspect for the following: • A/C switch is stuck open. • Open circuit in wiring harness between refrigerant pressure switch and PCM terminal 1AU*1, 1AP*2, 1AU*3 • Open circuit in wiring harness between blower motor fan switch and resistor (if blower motor does not operate) • Evaporator temperature sensor and A/C amplifier
4	Remove jumper wiring from the switch connector. Reconnect connector to refrigerant pressure switch. Start the engine and turn the A/C switch on. Does the fan operate?	Yes	Inspect whether A/C relay is stuck open. Replace if necessary.
		No	Inspect the following and repair or replace if necessary: • Refrigerant charging amount • A/C compressor for seizure
5	• Verify test results. — If normal, return to diagnostic index to service any additional symptoms. (See 01-03A-11 ENGINE SYMPTOM TROUBLESHOOTING[LF, L3].) — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle is repaired, troubleshooting completed. • If vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)

*2 : Except for California emission regulation applicable model with LF engine ATX
*3 : Except for California emission regulation applicable model with LF engine MTX and L3 engine

NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY[LF, L3]

id0103a6803000

24	A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY.
DESCRIPTION	A/C compressor magnetic clutch does not disengage.
POSSIBLE CAUSE	• A/C compressor magnetic clutch engagement is stuck. • A/C relay is stuck closed. • Short to GND in wiring harness between A/C switch and PCM • Short to GND in wiring harness between A/C relay and PCM • Short circuit to battery power in A/C relay to magnetic clutch

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Connect the M-MDS to the DLC-2. Turn the ignition switch to the ON position (Engine off). Retrieve any DTCs. Are there any DTCs displayed?	Yes	**DTC is displayed:** Go to the appropriate DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	**No DTC is displayed:** Go to the next step.
2	Start the engine and idle it. Turn the A/C switch on. Remove the A/C relay. Does the A/C magnetic clutch disengage?	Yes	Inspect for the following: • A/C relay is stuck closed. • Short to GND in wiring harness between A/C relay and PCM terminal 1AN. If both items normal, go to the next step.
		No	Inspect if circuit between the A/C relay and magnetic clutch shorts to battery power circuit. If the circuit is normal, inspect the magnetic clutch for stuck engagement or clearance.
3	Disconnect refrigerant pressure switch connector. Start the engine and turn A/C switch on. **Note** • A/C should not work when disconnecting connector. If A/C remains working, short to GND circuit may be present. Does the A/C remain working?	Yes	Inspect for short to GND in wiring harness between refrigerant pressure switch and PCM terminal 1AU*1, 1AP*2, 1AU*3.
		No	Go to the next step.
4	Reconnect refrigerant pressure switch connector. Turn off A/C switch. **Note** • A/C should not work when turning A/C switch off. If A/C remains working, short to GND circuit may be present. Does A/C remain working?	Yes	Inspect following: • Short to GND in wiring harness between A/C switch and A/C amplifier • Short to GND circuit between A/C amplifier and refrigerant pressure switch
		No	Inspect whether A/C switch is stuck closed.
5	• Verify test results. — If normal, return to diagnostic index to service any additional symptoms. (See 01-03A-11 ENGINE SYMPTOM TROUBLESHOOTING[LF, L3].) — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle is repaired, troubleshooting completed. • If vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)		

*1 : California emission regulation applicable model
*2 : Except for California emission regulation applicable model with LF engine ATX
*3 : Except for California emission regulation applicable model with LF engine MTX and L3 engine

NO.25 A/C DOES NOT CUT OFF UNDER WIDE OPEN THROTTLE CONDITIONS[LF, L3]

id0103a6803100

25	A/C IS NOT CUT off UNDER WOT CONDITIONS.
DESCRIPTION	A/C compressor magnetic clutch does not disengage under WOT.
POSSIBLE CAUSE	• Accelerator pedal position sensor malfunction • Accelerator pedal position sensor misadjustment • Loosely installed accelerator pedal position sensor

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Does A/C compressor disengage when the A/C switch is turned off?	Yes	Go to the next step.
		No	Go to symptom troubleshooting "No.24 A/C is always on or A/C compressor runs continuously".
2	Connect the M-MDS to the DLC-2. Turn the ignition switch to the ON position (Engine off). Retrieve any DTCs. Are there any DTCs displayed?	Yes	**DTC is displayed:** Go to the appropriate DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	**No DTC is displayed:** Inspect accelerator pedal position sensor.
3	• Verify test results. — If normal, return to diagnostic index to service any additional symptoms. (See 01-03A-11 ENGINE SYMPTOM TROUBLESHOOTING[LF, L3].) — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle is repaired, troubleshooting completed. • If vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)		

NO.26 EXHAUST SULPHUR SMELL[LF, L3]

id0103a6803200

26	EXHAUST SULPHUR SMELL
DESCRIPTION	Rotten egg smell (sulphur) from exhaust
POSSIBLE CAUSE	• Electrical connectors are disconnected or connected poorly • Charcoal canister malfunction • Vacuum lines are disconnected or connected improperly. • Improper fuel pressure • Poor fuel quality **Warning** **The following troubleshooting flow chart contains fuel system diagnosis and repair procedures. Read following warnings before servicing fuel system:** **• Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** **• Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual.** **(See 01-14A-4 BEFORE SERVICE PRECAUTION[LF, L3].)** **(See 01-14A-5 AFTER SERVICE PRECAUTION[LF, L3].)** **Caution** **• Disconnecting/connecting quick release connector without cleaning it may cause damage to fuel pipe and quick release connector. Always clean quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Are any drivability or exhaust smoke concerns present?	Yes	Go to the appropriate flow chart.
		No	Go to the next step.
2	Inspect the following: • Electrical connections • Vacuum lines • Fuel quality Are all items normal?	Yes	Go to the next step.
		No	Service if necessary. Repeat Step 2.
3	Connect the M-MDS to the DLC-2. Turn the ignition switch to the ON position (Engine off). Retrieve any DTCs. Are there any DTCs displayed?	Yes	**DTC is displayed:** Go to the appropriate DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	**No DTC is displayed:** Go to the next step.
4	Install the fuel pressure gauge between the fuel pipe and the fuel distributor. Start engine and idle it. Is fuel line pressure correct at idle? (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].)	Yes	Go to the next step.
		No	**Low:** Inspect fuel pump relay and fuel pump circuit. Inspect the fuel line for clogging. If there is no malfunction, replace the fuel pump unit. (See 01-14A-14 FUEL PUMP UNIT REMOVAL/INSTALLATION[LF, L3].) **High:** Replace the fuel pump unit. (See 01-14A-14 FUEL PUMP UNIT REMOVAL/INSTALLATION[LF, L3].)
5	Inspect the charcoal canister for fuel saturation. Is excess amount of liquid fuel present in canister?	Yes	Replace the charcoal canister.
		No	Inspect the fuel tank vent system. If the fuel tank vent system is normal, suggest trying a different brand since sulfur content can vary in different fuels. If the fuel tank vent system is not normal, repair or replace the malfunctioning part.
6	• Verify test results. — If normal, return to diagnostic index to service any additional symptoms. (See 01-03A-11 ENGINE SYMPTOM TROUBLESHOOTING[LF, L3].) — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle is repaired, troubleshooting completed. • If vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)		

NO.27 FUEL REFILL CONCERNS[LF, L3]

id0103a6803300

27	FUEL REFILL CONCERNS
DESCRIPTION	• Fuel tank is not filled smoothly.
POSSIBLE CAUSE	• Clogged EVAP pipes • Nonreturn valve malfunction • Improper use of fuel nozzle • Inadequate fuel filling speed **Warning** • **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before servicing the fuel system:** — **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** — **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual.** **(See 01-14A-4 BEFORE SERVICE PRECAUTION[LF, L3].)** **(See 01-14A-5 AFTER SERVICE PRECAUTION[LF, L3].)** **Caution** • **Disconnecting/connecting quick release connector without cleaning it may cause damage to fuel pipe and quick release connector. Always clean quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Connect the M-MDS to the DLC-2. Turn the ignition switch to the ON position (Engine off). Retrieve any DTCs. Are there any DTCs displayed?	Yes	**DTC is displayed:** Go to the appropriate DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	**No DTC is displayed:** Go to the next step.
2	Remove the fuel-filler pipe. Make sure the nonreturn valve is installed properly. Inspect nonreturn valve operation. Is the nonreturn valve normal?	Yes	Inspect for the following: • Improper use of fuel nozzle • Inadequate fuel filling speed
		No	**Nonreturn valve is installed improperly:** • Reinstall nonreturn valve to proper position. **Nonreturn valve does not operate properly:** • Replace nonreturn valve.
3	• Verify test results. — If normal, return to diagnostic index to service any additional symptoms. (See 01-03A-11 ENGINE SYMPTOM TROUBLESHOOTING[LF, L3].) — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle is repaired, troubleshooting completed. • If vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)		

NO.28 FUEL FILLING SHUT OFF CONCERNS[LF, L3]

id0103a6912000

28	FUEL FILLING SHUT OFF CONCERNS
DESCRIPTION	• Fuel does not shut off properly.
POSSIBLE CAUSE	• Clogged EVAP pipes • Nonreturn valve malfunction • Fuel shut-off valve malfunction • Fuel nozzle malfunction • Fuel nozzle is not inserted correctly. **Warning** • **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before servicing the fuel system:** **— Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** **— Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual.** **(See 01-14A-4 BEFORE SERVICE PRECAUTION[LF, L3].)** **(See 01-14A-5 AFTER SERVICE PRECAUTION[LF, L3].)** **Caution** • **Disconnecting/connecting quick release connector without cleaning it may cause damage to fuel pipe and quick release connector. Always clean quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Connect the M-MDS to the DLC-2. Turn the ignition switch to the ON position (Engine off). Retrieve any DTCs. Are there any DTCs displayed?	Yes	**DTC is displayed:** Go to the appropriate DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
		No	**No DTC is displayed:** Go to the next step.
2	Remove the fuel-filler pipe. Make sure the nonreturn valve is installed properly. Inspect nonreturn valve operation. Is the nonreturn valve normal?	Yes	Inspect for the following: • Improper use of fuel nozzle • Fuel is not inserted correctly. • Inspect fuel shut-off valve.
		No	**Nonreturn valve is installed improperly:** • Reinstall the nonreturn valve to proper position. **Nonreturn valve does not operate properly:** • Replace the nonreturn valve.
3	• Verify test results. — If normal, return to diagnostic index to service any additional symptoms. (See 01-03A-11 ENGINE SYMPTOM TROUBLESHOOTING[LF, L3].) — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle is repaired, troubleshooting completed. • If vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)		

NO.29 SPARK PLUG CONDITION[LF, L3]

id0103a6803600

29	SPARK PLUG CONDITION
DESCRIPTION	Incorrect spark plug condition
POSSIBLE CAUSE	**Note** • Inspecting spark plugs condition can determine whether problem is related to a specific cylinder or possibly all cylinders. **Wet/carbon stuck on specific plug:** • Spark—Weak, not visible • Air/fuel mixture—Excessive fuel injection volume • Compression—No compression, low compression • Malfunction spark plug **Grayish white with specific plug:** • Air/fuel mixture—Insufficient fuel injection volume • Malfunction spark plug **Wet/carbon is stuck on all plugs:** • Spark—Spark weak • Air/fuel mixture—Too rich • Compression—Low compression • Clogging in intake/exhaust system **Grayish white with all plugs:** • Air/fuel mixture—Too lean **Warning** **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before servicing the fuel system:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual.** **(See 01-14A-4 BEFORE SERVICE PRECAUTION[LF, L3].)** **(See 01-14A-5 AFTER SERVICE PRECAUTION[LF, L3].)** **Caution** • **Disconnecting/connecting quick release connector without cleaning it may cause damage to fuel pipe and quick release connector. Always clean quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Remove all the spark plugs. Inspect spark plug condition. Is spark plug condition normal?	Yes	Troubleshooting completed.
		No	**Specific plug is wet or covered with carbon:** Go to the next step. **Specific plug looks grayish white:** Go to Step 7. **All plugs are wet or covered with carbon:** Go to Step 9. **All plugs look grayish white:** Go to Step 15.
2	Are the spark plug wet/covered with carbon by the engine oil?	Yes	Inspect all areas related to oil, working up and down.
		No	Go to the next step.
3	Inspect the spark plug for the following: • Cracked insulator • Heat range • Air gap • Worn electrode Is the spark plug normal?	Yes	Go to the next step.
		No	Replace the spark plug. (See 01-18A-3 SPARK PLUG REMOVAL/ INSTALLATION[LF, L3].)
4	Inspect compression pressure at suspected malfunctioning cylinder. Is compression pressure correct? (See 01-10A-11 COMPRESSION INSPECTION[LF, L3].)	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part.

STEP	INSPECTION	RESULTS	ACTION
5	Install all spark plugs. Perform the spark test at suspected malfunctioning cylinder. Is strong blue spark visible? (Compare with normal cylinder.)	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part.
6	Install the fuel pressure gauge between fuel filter and fuel distributor. Short check connector terminal F/P to body GND using a jumper wiring. Turn the ignition switch to the ON position (Engine off). Is the fuel line pressure correct with the ignition switch at ON? (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].)	Yes	Inspect fuel injector for the following: • Open or short circuit in injector • Leakage • Injection volume
		No	**Zero or low:** Inspect the fuel pump relay and fuel pump circuit. Inspect the fuel line for clogging. If there is no malfunction, replace the fuel pump unit. (See 01-14A-14 FUEL PUMP UNIT REMOVAL/ INSTALLATION[LF, L3].) **High:** Replace the fuel pump unit. (See 01-14A-14 FUEL PUMP UNIT REMOVAL/ INSTALLATION[LF, L3].)
7	Inspect the spark plug for the following. • Heat range • Air gap Is the spark plug normal?	Yes	Go to the next step.
		No	Replace the spark plug. (See 01-18A-3 SPARK PLUG REMOVAL/ INSTALLATION[LF, L3].)
8	Remove the suspected fuel injector. Inspect the following: • Resistance (See 01-14A-27 FUEL INJECTOR INSPECTION[LF, L3].) • Fuel injection volume (See 01-14A-27 FUEL INJECTOR INSPECTION[LF, L3].) Are all above items normal?	Yes	Inspect for open circuit in wiring harness between fuel injector connector terminal A and PCM at the following terminals: • **For No.1 cylinder: 2AW*1, 2BB*2, 2BA*1, 2BE*2, 2BA*3** • **For No.2 cylinder: 2AS*1, 2BC*2, 2AW*1, 2BF*2, 2AW*3** • **For No.3 cylinder: 2AX*1, 2BD*2, 2AX*1, 2BG*2, 2AX*3** • **For No.4 cylinder: 2AT*1, 2AZ*2, 2AT*1, 2BH*2, 2AT*3**
		No	Replace the fuel injector.
9	Is the air cleaner element free of clogging?	Yes	Go to the next step.
		No	Replace the air cleaner element.
10	Perform the spark test. (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) Is strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part.
11	Install the fuel pressure gauge between the fuel filter and fuel distributor. Short check connector terminal F/P to body GND using a jumper wiring. Turn the ignition switch to the ON position (Engine off). Is the fuel line pressure correct with ignition switch at ON? (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].)	Yes	Go to the next step.
		No	**Zero or low:** Inspect the fuel pump relay and fuel pump circuit. Inspect the fuel line for clogging. If there is no malfunction, replace the fuel pump unit. (See 01-14A-14 FUEL PUMP UNIT REMOVAL/ INSTALLATION[LF, L3].) **High:** Replace the fuel pump unit. (See 01-14A-14 FUEL PUMP UNIT REMOVAL/ INSTALLATION[LF, L3].)
12	Inspect the following PIDs: • ECT • O2S11 (When engine can be started.) • O2S12 (When engine can be started.) • O2S13*1 (When engine can be started.) • MAF (See 01-40A-13 PCM INSPECTION[LF, L3].) Are PIDs normal?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part.

STEP	INSPECTION	RESULTS	ACTION
13	Perform the purge control inspection. (When engine can be started.) (See 01-03A-68 ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3].) Is the purge control correct?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part.
14	Perform compression inspection. (See 01-10A-11 COMPRESSION INSPECTION[LF, L3].) Is compression correct?	Yes	Visually inspect for deformed exhaust system part.
		No	Repair or replace the malfunctioning part.
15	When the engine cannot be started, inspect the intake-air system for air leakage. When the engine can be started, perform intake manifold vacuum inspection. Is air sucked in from intake-air system?	Yes	Repair or replace the malfunctioning part.
		No	Go to the next step.
16	Install the fuel pressure gauge between the fuel filter and the fuel distributor. Short check connector terminal F/P to body GND using a jumper wiring. Turn the ignition switch to the ON position (Engine off). Is fuel line pressure correct with the ignition switch at ON? (See 01-14A-6 FUEL LINE PRESSURE INSPECTION[LF, L3].)	Yes	Inspect the following PIDs: • ECT • O2S11 • O2S12 • O2S13*1 • MAF (See 01-40A-13 PCM INSPECTION[LF, L3].) Inspect PCM GND condition.
		No	**Zero or low:** Inspect the fuel pump relay and fuel pump circuit. Inspect the fuel line for clogging. If there is no malfunction, replace the fuel pump unit. (See 01-14A-14 FUEL PUMP UNIT REMOVAL/INSTALLATION[LF, L3].) **High:** Replace the fuel pump unit. (See 01-14A-14 FUEL PUMP UNIT REMOVAL/INSTALLATION[LF, L3].)
17	• Verify test results. — If normal, return to diagnostic index to service any additional symptoms. (See 01-03A-11 ENGINE SYMPTOM TROUBLESHOOTING[LF, L3].) — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle is repaired, troubleshooting completed. • If vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40A-13 PCM REMOVAL/INSTALLATION[LF, L3].)		

*1 : California emission regulation applicable model
*2 : Except for California emission regulation applicable model with LF engine ATX
*3 : Except for California emission regulation applicable model with LF engine MTX and L3 engine

INTERMITTENT CONCERN TROUBLESHOOTING[LF, L3]

id0103a6800400

Vibration Method

- If malfunction occurs or becomes worse while driving on a rough road or when the engine is vibrating, perform the steps below.

Note

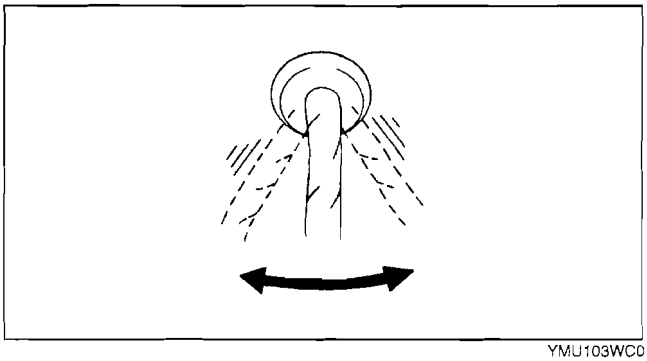
- There are several reasons vehicle or engine vibration could cause an electrical malfunction. Inspect the following:
  - — Connectors not fully seated
  - — Wiring harnesses not having full play
  - — Wiring harnesses laying across brackets or moving parts
  - — Wiring harnesses routed too close to hot parts
- An improperly routed, improperly clamped, or loose wiring harness can cause wiring to become pinched between parts.
- The connector joints, points of vibration, and places where wiring harnesses pass such as through the firewall and body panels are the major areas to be checked.

Inspection Method for Switch Connectors or Wiring Harnesses

1. Connect the M-MDS to the DLC-2.
2. Turn the ignition switch to the ON position (Engine off).

Note
- If the engine starts and runs, perform the following steps during idle.

3. Access PIDs for the switch you are inspecting.
4. Turn the switch on manually.
5. Slightly shake each connector or wiring harness vertically and horizontally while monitoring the PID.
   - If PID value is unstable, inspect for poor connection.



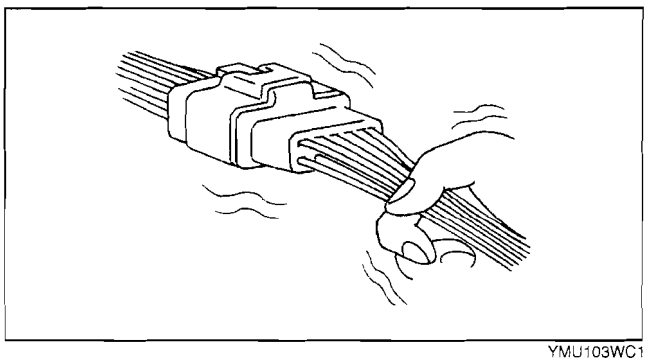
YMU103WC0

Inspection Method for Sensor Connectors or Wiring Harnesses

1. Connect the M-MDS to the DLC-2.
2. Turn the ignition switch to the ON position (Engine off).

Note
- If the engine starts and runs, perform the following steps during idle.

3. Access PIDs for the switch you are inspecting.
4. Slightly shake each connector or wiring harness vertically and horizontally while monitoring the PID.
   - If PID value is unstable, inspect for poor connection.



YMU103WC1

Inspection Method for Sensors

1. Connect the M-MDS to the DLC-2.
2. Turn the ignition switch to the ON position (Engine off).

Note
- If the engine starts and runs, perform the following steps during idle.

3. Access PIDs for the switch you are inspecting.
4. Vibrate the sensor slightly with your finger.
   - If PID value is unstable or malfunction occurs, check for poor connection or poorly mounted sensor or both.

Inspection Method for Actuators or Relays

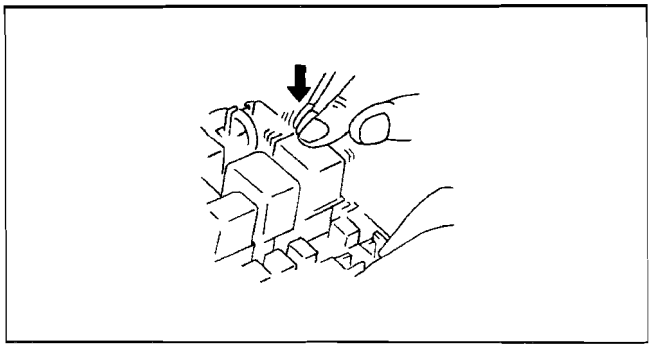
1. Connect the M-MDS to the DLC-2.
2. Turn the ignition switch to the ON position (Engine off).

Note
- If the engine starts and runs, perform the following steps during idle.

3. Prepare the output state control function for actuators or relays that you are inspecting.

4. Vibrate the actuator or relay with your finger for **3 s** after output state control function is activated.
   - If variable click sound is heard, check for poor connection or poorly mounted actuator or both, or the relay.

Note
- Vibrating relays too strongly may result in open relays.



YMU103WC2

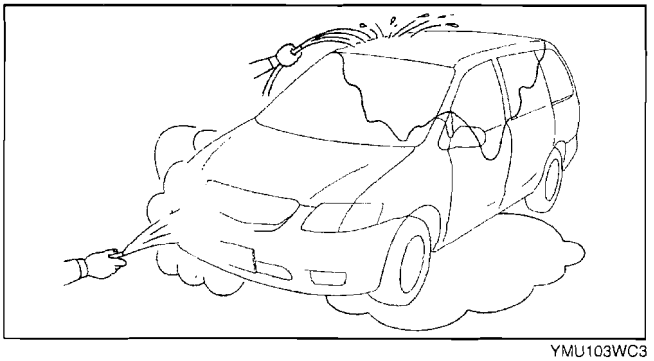
Water Sprinkling Method
If malfunction occurs only under high humidity or rainy/snowy weather, perform the following steps:

Caution
- **Indirectly change the temperature and humidity by spraying water onto the front of the radiator.**
- **If a vehicle is subject to water leakage, the leakage may damage the control module. When testing a vehicle with a water leakage problem, special caution must be used.**

1. Connect the M-MDS to the DLC-2 if you are inspecting sensors or switches.
2. Turn the ignition switch to the ON position (Engine off).

Note
- If the engine starts and runs, perform the following steps at idle.

3. Access PIDs for sensor or switch if you are inspecting sensors or switches.
4. If you are inspecting the switch, turn it on manually.
5. Spray water onto the vehicle or run it through a car wash.
   - If PID value is unstable or malfunction occurs, repair or replace part if necessary.



YMU103WC3

ENGINE CONTROL SYSTEM OPERATION INSPECTION[LF, L3]

id0103a6803700

Input Signal System Inspection Procedure
1. Find an irregular signal. (See 01-03A-68 Finding irregular signals.)
2. Locate source. (See 01-03A-69 Locating the source of unusual signals.)
3. Repair or replace the malfunctioning part.
4. Confirm that the irregular signal is no longer detected.

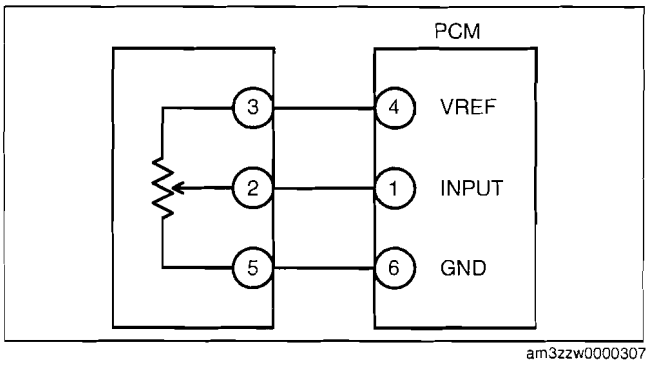
Finding irregular signals
While referring to 01-02A-14 ON-BOARD DIAGNOSTIC TEST[LF, L3], use the PID/DATA monitor and record function to inspect the input signal system relating to the problem.
1. Start the engine and idle the vehicle. You can assume that any signals that are out of specification by a wide margin are irregular.
2. When recreating the problem, any sudden change in monitor input signals that is not intentionally created by the driver can be determined as irregular.

Locating the source of unusual signals

Caution

- **Compare the M-MDS monitor voltage with the measurement voltage using the digital measurement system function. If you use another tester, misreading may occur.**
- **When measuring voltage, attach the tester GND to the GND of the PCM that is being tested, or to the engine itself. If this is not performed, the measured voltage and actual voltage may differ.**
- **After connecting the pin to a waterproof coupler, confirming continuity and measuring the voltage, inspect the waterproof connector for cracks. If there are any, use sealant to fix them. Failure to do this may result in deterioration of the wiring harness or terminal from water damage, leading to problems with the vehicle.**

Variable resistance type 1 (TP sensor and EGR boost sensor)



am3zzw0000307

Input signal system inspection for variable resistance type 1

1. When an irregular signal is detected, measure the #1 PCM terminal voltage.
   - If the #1 terminal voltage and the M-MDS monitor voltage are the same, proceed to the next step.
   - If there is a difference of **0.5 V or more**, inspect for the following points concerning the PCM connector:
     — Female terminal opening is loose.
     — Coupler (pin holder) damage
     — Pin discoloration (blackness)
     — Harness/pin crimp is loose or disconnected.
2. Measure the #2 sensor terminal voltage.
   - If there is a **0.5 V or more** difference between the sensor and the M-MDS voltages, inspect the wiring harness for open or short circuits.
   - If the sensor and the M-MDS voltages are the same, inspect for the following points concerning the sensor connector:
     — Female terminal opening is loose.
     — Coupler (pin holder) damage
     — Pin discoloration (blackness)
   - If there are no problems, proceed to next investigation below.

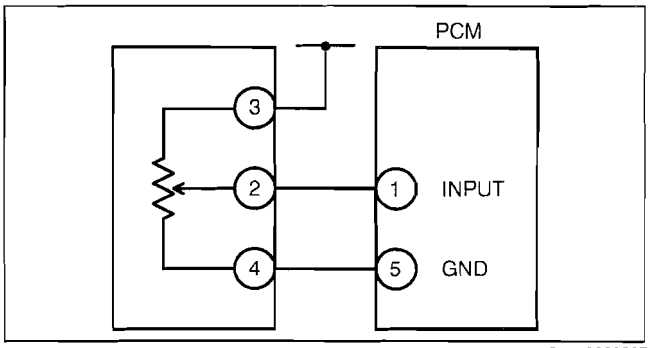
Standard power supply system inspection for variable resistance type 1

- Confirm that the #3 terminal is at **5 V**.
  — If the measured voltage on the #3 terminal is **5 V**, inspect the following points on the sensor connector.
  — If there is no problem, inspect for the following:
    - Female terminal opening is loose.
    - Coupler (pin holder) damage
    - Pin discoloration (blackness)
  — If the #3 terminal measures other than **5 V**, inspect for the following:
    - Open or short circuit in wiring harness
    - Harness/pin crimp is loose or disconnected.

GND system inspection for variable resistance type 1

- Confirm that terminal sensor #5 is at **0 V**.
  — If it is at **0 V**, inspect the sensor.
    - If necessary, replace the sensor.
  — If not, inspect for the following:
    - Open or short circuit in wiring harness
    - Female terminal opening is loose causing an open or short circuit in wiring harness
    - Coupler (pin holder) damage
    - Pin discoloration (blackness)
    - Harness/pin crimp is loose or disconnected.

Variable resistance type 2 (mass air flow (MAF) sensor and VSS)



am3zzw0000307

GND system inspection for variable resistance type 2

- Confirm that terminal sensor #4 is at **0 V**.
  - — If it is at **0 V**, inspect the sensor.
    - If necessary, replace the sensor.
  - — If not at **0 V**, inspect for the following:
    - Open circuit in wiring harness
    - Female terminal opening is loose.
    - Coupler (pin holder) damage
    - Pin discoloration (blackness)
    - Harness/pin crimp is loose or disconnected.

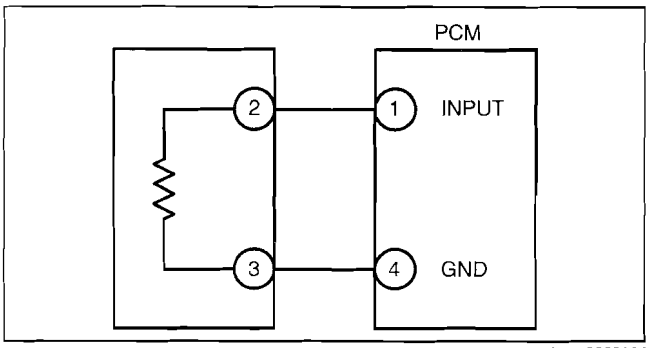
Input signal system inspection for variable resistance type 2

1. When an irregular signal is detected, measure the #1 PCM terminal voltage.
   - If the #1 terminal voltage and the M-MDS monitor voltage are the same, proceed to the next step.
   - If there is a difference of **0.5 V or more**, inspect for the following points concerning the PCM connector:
     - — Female terminal opening is loose.
     - — Coupler (pin holder) damage
     - — Pin discoloration (blackness)
     - — Harness/pin crimp is loose or disconnected.
2. Measure the #2 sensor terminal voltage.
   - If there is a **0.5 V or more** difference between the sensor and the M-MDS voltages, inspect the wiring harness for open or short circuits.
   - If the sensor and the M-MDS voltages are the same, inspect the following points concerning the sensor connector:
     - — Female terminal opening is loose.
     - — Coupler (pin holder) damage
     - — Pin discoloration (blackness)
     - — Harness/pin crimp is loose or disconnected.
   - If there are no problems, proceed to next investigation below.

Electrical supply system inspection for variable resistance type 2

- Confirm that the sensor #3 terminal is **B+**.
  - — If the measured voltage on the #3 terminal is **B+**, inspect the following points on the sensor connector.
  - — If there is no problem, inspect for the following:
    - Female terminal opening is loose.
    - Coupler (pin holder) damage
    - Pin discoloration (blackness)
  - — If the #3 terminal measures other than **B+**, inspect the following:
    - Open or short circuit in wiring harness
    - Harness/pin crimp is loose or disconnected.

Thermistor type (IAT sensor and ECT sensor)



am3zzw0000307

Input signal system inspection for thermistor type

1. When an irregular signal is detected, measure the #1 PCM terminal voltage.
   - If the #1 terminal voltage and the M-MDS monitor voltage are the same, proceed to the next step.
   - If there is a difference of **0.5 V or more**, inspect the following points concerning the PCM connector:
     — Female terminal opening loose
     — Coupler (pin holder) damage
     — Pin discoloration (blackness)
     — Harness/pin crimp is loose or disconnected.
2. Measure the #2 sensor terminal voltage.
   - If there is a **0.5 V or more** difference between the sensor and the M-MDS voltages, inspect the wiring harness for open or short circuits.
   - If the sensor and the M-MDS voltages are the same, inspect the following points concerning the sensor connector:
     — Female terminal opening is loose.
     — Coupler (pin holder) damage
     — Pin discoloration (blackness)
     — Harness/pin crimp is loose or disconnected.
   - If there are no problems, proceed to next investigation below.

GND system inspection for thermistor type

- Confirm that terminal sensor #3 is at **0 V**.
  — If it is at **0 V**, inspect the sensor. If necessary, replace the sensor.
  — If not, inspect for the following:
    - Open circuit in wiring harness
    - Female terminal opening is loose.
    - Coupler (pin holder) damage
    - Pin discoloration (blackness)
    - Harness/pin crimp is loose or disconnected.

Main Relay Operation Inspection

1. Verify that the main relay clicks when the ignition switch is turned to ON position and off.
   - If there is no operation sound, inspect the following:
     — Main relay (See 09-21-3 RELAY INSPECTION.)
     — Harness and connector between ignition switch and main relay terminal A.
     — Harness and connector between PCM terminal 1AT and main relay terminal B.

Intake Manifold Vacuum Inspection

1. Verify air intake hoses are installed properly.
2. Start the engine and run it at idle.
3. Disconnect the vacuum hose between the intake manifold and purge solenoid valve from the intake manifold side.

4. Connect a vacuum gauge to the intake manifold and measure the intake manifold vacuum.
   - If not as specified, inspect the following:

Specification (LF)
ATX: More than 55 kPa {413 mmHg, 16 inHg}
MTX: More than 57 kPa {428 mmHg, 17 inHg}

Specification (L3)
ATX: More than 57 kPa {428 mmHg, 17 inHg}
MTX: More than 60 kPa {451 mmHg, 18 inHg}

Note
- Air suction can be located by engine speed change when lubricant is sprayed on the area where suction is occurring.
  — Air suction at throttle body, intake manifold and PCV valve installation points
  — EGR valve (stuck open)
  — Fuel injector insulator
  — Engine compression
  (See 01-10A-11 COMPRESSION INSPECTION[LF, L3].)

Electronic Throttle Control System Inspection
Engine coolant temperature compensation inspection
1. Connect the M-MDS to the DLC-2.
2. Access the following PIDs:
   - ECT
   - IAT
   - RPM
3. Verify that the engine is cold, then start the engine.
4. Verify that the engine speed decreases as the engine warms up.
   - If the engine speed does not decrease or decreases slowly, inspect the following:
     — ECT sensor and related wiring harness
     (See 01-40A-49 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION[LF, L3].)
     — Electronic throttle body and related wiring harness
     (See 01-13A-7 THROTTLE BODY INSPECTION[LF, L3].)

Load compensation inspection
1. Start the engine and idle it.
2. Connect the M-MDS to the DLC-2.
3. Verify that P0506, P0507, or P0511 is not displayed.
   - If P0506, P0507 or P0511 are displayed, perform DTC inspection.
   (See 01-02A-22 DTC TABLE[LF, L3].)
4. Access the RPM PID.

Note
- Excludes temporary idle speed drop just after the loads are turned on.

5. Verify that the engine speed is within the specification under each load condition.
   - If load condition is not as specified, inspect the following:
     — A/C switch and related wiring harness
     (See 07-40-34 CLIMATE CONTROL UNIT INSPECTION[FULL-AUTO AIR CONDITIONER], 07-40-38 CLIMATE CONTROL UNIT INSPECTION[MANUAL AIR CONDITIONER].)
     — Fan switch and related wiring harness
     (See 07-40-34 CLIMATE CONTROL UNIT INSPECTION[FULL-AUTO AIR CONDITIONER], 07-40-38 CLIMATE CONTROL UNIT INSPECTION[MANUAL AIR CONDITIONER].)

Engine speed

Load condition		Engine speed (rpm)*1	
		MTX	ATX
No load		600—700	650—750
E/L operating*2	38—48 A	650—750	
	more than 48 A	700—800	
A/C operating*3	Refrigerant pressure low*4	700—800	650—750
	Refrigerant pressure high*5	700—800	670—770

*1 : Neutral or P position
*2 : Generator generating current value
*3 : A/C switch and fan switch are on.
*4 : Refrigerant pressure switch (middle pressure) is off.
*5 : Refrigerant pressure switch (middle pressure) is on.

Throttle position (TP) sweep inspection

1. Connect the M-MDS to the DLC-2.
2. Turn the ignition switch to the ON position.
3. Verify that none of the following DTC are displayed:
   - P0122, P0123, P0222, P0223, P0638, P2100*2, P2101, P2102*2, P2103*2, P2106*1, P2107, P2108, P2109*1, P2112*1, P2119, P2122, P2123, P2127, P2128, P2135, P2138

     *1: California emission regulation applicable model

     *2: Except for California emission applicable model
   - — If any one DTC is displayed, perform DTC inspection.
4. Access TP_REL PID.
5. Verify that the PID reading is within the CTP value. (See 01-40A-13 PCM INSPECTION[LF, L3].)
   - If the PID reading is out of range, perform the following:
     - — Remove the air duct from the throttle valve body.
     - — Verify that the throttle valve opens when the accelerator pedal is depressed.
       - If the throttle valve opens, inspect the throttle position sensor and related wiring harness.
       - If the throttle valve does not open, inspect the throttle actuator control motor and related wiring harness.
6. Gradually depress the throttle pedal and verify that the PID reading increases accordingly.
   - If the PID reading drops momentarily, inspect the following:
     - — Throttle position sensor
7. Fully depress the throttle pedal and verify that the PID reading is within WOT value. (See 01-40A-13 PCM INSPECTION[LF, L3].)
   - If the PID reading is out of range, perform the followings:
     - — Remove the air duct from throttle valve body.
     - — Verify that the throttle valve opens when throttle pedal is depressed.
       - If the throttle valve opens, inspect the throttle position sensor and related wiring harness.
       - If the throttle valve does not open, inspect the throttle actuator control motor and related wiring harness.

Variable Intake-air Control Operation Inspection

1. Start the engine.
2. Inspect the rod operation under the following condition:

Rod operation (LF)

Engine speed	4,750 rpm	
	Below	Above
Shutter valve actuator	Operate	Not operate

Rod operation (L3)

Engine speed	4,600 rpm	
	Below	Above
Shutter valve actuator	Operate	Not operate

- If the rod operation is not as specified, inspect as follows:

(1) Stop the engine.
(2) Connect the M-MDS to the DLC-2.

(3) Verify that DTC P0661 or P0662 is not displayed.
- If DTC P0661 or P0662 is shown, perform DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)

(4) Inspect the variable intake-air solenoid valve. (See 01-13A-8 VARIABLE INTAKE AIR SOLENOID VALVE INSPECTION[LF, L3].)
- If the variable intake-air solenoid valve is not normal, replace the variable intake-air solenoid valve. (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[LF, L3].)
- If the variable intake-air solenoid valve is normal, inspect the following:
  — Vacuum hose and vacuum chamber for looseness or damage
  — Shutter valve actuator (See 01-13A-10 VARIABLE INTAKE AIR SHUTTER VALVE ACTUATOR INSPECTION[LF, L3].)
  — Shutter valve stuck open or closed

Variable Tumble Control Operation Inspection

1. Connect the M-MDS to the DLC-2.
2. Access ECT PID.
3. Verify that ECT PID is **below 61.9 °C {143.4 °F} (LF), below 63 °C {145 °F} (L3).**
4. Start the engine.
5. Inspect rod operation under the following conditions:

Rod operation

Engine speed	3,750 rpm	
	Below	Above
Shutter valve actuator	Operate	Not operate

- If the rod operation is not specified, inspect as follows:

(1) Verify that DTC No. P2004, P2006, P2009 or P2010 is not displayed.
- If DTC No. P2004, P2006, P2009 or P2010 are shown, perform DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)

(2) Inspect the variable tumble solenoid valve. (See 01-13A-9 VARIABLE TUMBLE SOLENOID VALVE INSPECTION[LF, L3].)
- If the variable tumble solenoid valve is not normal, replace the variable tumble solenoid valve. (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[LF, L3].)
- If the variable tumble solenoid valve is normal, inspect the following:
  — Vacuum hose and vacuum chamber for looseness or damage
  — Shutter valve actuator (See 01-13A-10 VARIABLE TUMBLE SHUTTER VALVE ACTUATOR INSPECTION[LF, L3].)
  — Shutter valve stuck open or closed

Fuel Injector Operation Inspection

STEP	INSPECTION	RESULTS	ACTION
1	While cranking the engine, inspect for fuel injector operation sound at each cylinder using a soundscope. Is operation sound heard?	Yes	Fuel injector operation is normal.
		No	**All cylinders not heard:** Go to the next step. **Some cylinders not heard:** Go to Step 3.
2	Perform main relay operation inspection. Is main relay operation normal?	Yes	Inspect the following: • Fuel injector power system related wiring harness and connectors • PCM connectors • Fuel injector GND and related wiring harness and connectors
		No	Repair or replace malfunctioning parts.
3	Switch fuel injector connector of not operating fuel injector with operating fuel injector. Is operation sound heard?	Yes	Go to the next step.
		No	Replace the fuel injector.
4	Are wiring harness and connectors of not operation fuel injector normal? (Open or short)	Yes	Inspect PCM terminal voltage of fuel injector signal.
		No	Repair or replace malfunctioning parts.

Fuel Cut Control System Inspection

1. Warm up engine and idle it.
2. Turn off the electrical loads and A/C switch.
3. Connect the M-MDS to the DLC-2.
4. Access RPM PID.
5. Listen for the fuel injector operation sound at all cylinders using the soundscope and monitor both PIDs while performing the following steps:
   (1) Depress the accelerator pedal and increase the engine speed to **4,000 rpm**.
   (2) Quickly release the accelerator pedal (brake pedal is not depressed) and verify that the fuel injector operation sound stops, and starts again when the engine speed drops below **2,200 rpm**.
   - If not as specified, inspect the following:
     — ECT sensor and related wiring harness
     (See 01-40A-49 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION[LF, L3].)
     — Neutral/clutch pedal position switch and related wiring harness (MTX)
     (See 01-40A-47 CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION[LF, L3].)
     — TR switch and related wiring harness (ATX)
     (See 05-17A-10 TRANSAXLE RANGE (TR) SWITCH INSPECTION[FN4A-EL], 05-17B-11 TRANSAXLE RANGE (TR) SWITCH INSPECTION[FS5A-EL].)

Fuel Pump Operation Inspection

1. Remove the fuel-filler cap.
2. Turn the ignition switch to the ON position.
3. Turn the fuel pump relay from off to on using the FP PID and inspect if the operation sound is heard.
   - If no operation sounds is heard, proceed to next step.
4. Measure voltage at wiring harness side fuel pump connector terminal C (California emission regulation applicable model), A (except for California emission regulation applicable model).

Specification
B+ (Ignition switch at on)

- If the voltage is as specified, inspect the following:
  — Fuel pump continuity
  — Fuel pump GND
  — Wiring harness between fuel pump relay and PCM terminal 1AR (with immobilizer system), 1AQ (without immobilizer system)
- If not as specified, inspect the following:
  — Fuel pump relay
  — Wiring harness connector (Main relay – fuel pump relay – fuel pump.)

Fuel Pump Control System Inspection

1. Crank the engine and verify that fuel pump relay operation sound is heard.
2. If operation sound is not heard, inspect the following:
   - Fuel pump relay
   (See 09-21-3 RELAY INSPECTION.)
   - Wiring harness and connectors (Main relay – fuel pump relay – PCM terminal 1AR (with immobilizer system), 1AQ (without immobilizer system)

Spark Test

1. Disconnect the fuel pump relay.
2. Verify that each ignition coil and connector is connected properly.
3. Inspect the ignition system in the following procedure.

Warning

- **High voltage in the ignition system can cause strong electrical shock which can result in serious injury. Avoid direct contact to the vehicle body during the following spark test.**

STEP	INSPECTION		ACTION
1	• Disconnect the ignition coil from the spark plugs. • Remove the spark plugs. • Verify that the spark plugs do not have carbon deposits. • Are the spark plugs normal?	Yes	Go to the next step.
		No	Perform no-load racing at 4,000 rpm for 2 min, 2 times to burn off the carbon deposits. Repeat Step 1.

STEP	INSPECTION		ACTION
2	• Inspect the spark plugs for damage, wear, and proper plug gap. • Are the spark plugs normal?	Yes	Go to the next step.
		No	Replace spark plugs, then go to the next step.
3	• Reconnect the spark plugs to the ignition coil. • Ground the spark plugs to the engine. • Is a strong blue spark visible at each cylinder while cranking the engine?	Yes	Ignition system is normal.
		No	**Some cylinders do not spark:** • Go to the next step. **All cylinders do not spark:** • Go to Step 5.
4	• Inspect the following wiring harnesses for open or short: — Ignition coil No.1 terminal B—PCM terminal 2BE — Ignition coil No.2 terminal B—PCM terminal 2BF — Ignition coil No.3 terminal B—PCM terminal 2BG — Ignition coil No.4 terminal B—PCM terminal 2BH • Are the wiring harnesses normal?	Yes	Inspect and replace the ignition coil. (See 01-18A-2 IGNITION COIL INSPECTION[LF, L3].)
		No	Repair or replace the malfunctioning part, then go to Step.1.
5	• Measure the voltage at terminal A in each ignition coils. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect power supply circuit of ignition coils.
6	• Does the PCM connector or ignition coil connectors have poor connection?	Yes	Repair or replace the connector, then go to Step.1.
		No	Go to the next step.
7	• Are the following parts normal? — CKP sensor and crankshaft pulley	Yes	Inspect for open or short circuit in wiring harness and connector of CKP sensor.
		No	Repair or replace the malfunctioning part, then go to Step.1.

EGR Control System Inspection

1. Crank the engine and verify that EGR valve operation (initial operation) sound is heard.
   - If the operation sound is not heard, connect the M-MDS to the DLC-2 and verify that the DTC P0403 is shown. Perform DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
2. Start the engine and idle it.
3. Warm up the engine to normal operating temperature.
4. Access the following PIDs:
   - ECT, RPM, SEGRP_DSD, APP1, APP2, VSS
5. Idle the vehicle and verify that the SEGRP value is 0.
6. Put the vehicle in drive.
7. Depress the accelerator pedal and verify that the SEGRP_DSD value is increased.
   - If the EGR valve increases, inspect the following:
     — EGR valve (stuck open or close)
     — Wiring harness and connectors (Main relay – EGR valve – PCM)
   - If the SEGRP_DSD value does not increase, inspect the VSS, APP1, APP2, TP and ECT PIDs. (See 01-40A-13 PCM INSPECTION[LF, L3].)
8. Stop the vehicle and verify that the SEGRP value returns to 0.

Purge Control System Inspection

1. Start the engine.
2. Disconnect the vacuum hose between the purge solenoid valve and the charcoal canister.
3. Put a finger to the purge solenoid valve and verify that there is no vacuum applied when the engine is cold.
   - If there is a vacuum, inspect the following:
     — Wiring harness and connectors (Purge solenoid valve—PCM terminal 2AN)
     — Purge solenoid valve
4. Warm up the engine to the normal operating temperature.
5. Stop the engine.
6. Connect the M-MDS to the DLC-2 and verify that the DTC P0443 is shown. Perform DTC inspection. (See 01-02A-22 DTC TABLE[LF, L3].)
7. Turn the ignition switch to the ON position.
8. Access ECT PID.
9. Verify that the engine coolant temperature is **more than 78 °C {173 °F}**.
   - If the M-MDS indicates **less than 78 °C {173 °F}**, perform the ECT sensor inspection.

10. Set the vehicle on the dynamometer or chassis roller.

Warning

- **When the dynamometer or chassis roller is operating, there is a possibility that the operator may come into contact with or be caught up in the rotating parts, leading to serious injuries or death. When performing work while the dynamometer or chassis roller is operating, be careful not to come into contact with or be caught up in any of the rotating parts.**

11. Drive vehicle at engine speed **approx. 2000 rpm** for **30 s or more.**
12. Put a finger to the purge solenoid valve and verify that there is no vacuum applied while step 2.
    - If there is no vacuum, inspect the following:
      — Wiring harness and connector (Main relay – purge solenoid valve – PCM terminal 2AN)
      — Purge solenoid valve
      — MAF, APP1, APP2, TP and LOAD PIDs
    - If there is vacuum, inspect the following:
      — Vacuum hose (Purge solenoid valve – charcoal canister)

A/C Cut-off Control System Inspection

1. Start the engine.
2. Turn the A/C switch and the fan switch on.
3. Verify that the A/C compressor magnetic clutch actuates.
    - If it does not actuate, go to symptom troubleshooting "No.23 A/C does not work sufficiently".
4. Fully open the throttle valve and verify that the A/C compressor magnetic clutch does not actuate for **2—5 s**.
    - If it actuates, inspect as follows:
      — A/C relay
      — Open or short to GND circuit in wiring harness and connectors (Ignition switch—A/C relay—PCM terminal 1AN)
      — A/C related parts
      — APP1, APP2 PIDs

Cooling Fan Control System Inspection

1. Verify that the battery voltage is **more than 12.4 V.**
    - If the battery voltage is **less than 12.4 V**, charge the battery or connect the external power supply.
2. Connect the M-MDS and access ECT PID.
3. Turn A/C switch to off.
4. Verify ECT PID is **less than 98 °C {209 °F}**.
    - If ECT PID **more than 98 °C {209 °F}**, inspect ECT sensor and related wiring harnesses.
5. Verify that the cooling fan does not operate with ECT PID is **less than 98 °C {209 °F}** while the ignition switch is ON.
    - If the cooling fan operates, inspect for following parts and related wiring harnesses:
      — ECT sensor
      — A/C switch
      — A/C refrigerant pressure switch (High/low pressure)
      — A/C refrigerant pressure switch (Medium pressure)
      — VSS
      — A/C magnetic clutch
      — Fan control signal circuit (between fan control module terminal B and PCM terminal 1W)
        - If the all items are normal, replace fan control module.
6. Verify the cooling fan operates while the A/C switch to ON with the ignition switch at ON position.
    - If the cooling fan does not operate, inspect for following:
      — A/C switch
      — A/C refrigerant pressure switch (High/low pressure)
      — Fan control module power supply circuit
      — Fan control module GND circuit
      — Fan control signal circuit (between fan control module terminal B and PCM terminal 1W)
        - If the all items are normal, replace fan control module.

7. Verify that the cooling fan operates with following table.

	PCM terminal 1R voltage	
	B+ (off)*	0V (ON)*
Cooling fan speed	Middle speed	High speed

* : A/C refrigerant pressure switch (Medium pressure) condition

- If the cooling fan operation is not specified, inspect for following:
  - — A/C refrigerant pressure switch (Medium pressure)
    - If the A/C refrigerant pressure switch (Medium pressure) is normal, replace fan control module.

8. Turn A/C switch to off.
9. Start the engine and idle it.
10. Verify that the cooling fan operating speed increases relative to ECT PID increases.
    - If the cooling fan speed does not increase inspect following:
      - — ECT sensor (characteristic)
        (See 01-40A-49 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION[LF, L3].)
      - — Fan control signal circuit (between fan control module terminal B and PCM terminal 1W)
        - If the all items are normal, replace fan control module.

Variable Valve Timing Control System Operation Inspection
When idling cannot be continued

1. Remove the oil control valve (OCV) and verify that the spool valve is at maximum retard position.
2. Connect the oil control valve (OCV).
3. Turn the ignition switch to the ON position.
4. Verify that the spool valve is at maximum retard position.
   - If the spool valve is stuck in the advance direction, inspect for the following:
     - — Short circuit in wiring harnesses or connectors between the oil control valve (OCV) and the PCM.
5. Inspect the variable valve timing actuator. (See 01-10A-33 VARIABLE VALVE TIMING ACTUATOR INSPECTION[LF, L3].)

When idling can be continued

1. Disconnect oil control valve (OCV) connector.
2. Warm up the engine and idle it.
3. Apply battery voltage to the oil control valve (OCV) and verify that the engine idles roughly or stalls.
   - If the engine idles roughly or stalls, inspect the timing chain component (valve timing deviation).
   - If the engine does not idle roughly or stalls, go to the next step.
4. Remove the oil control valve (OCV) and perform spool valve operation inspection.
   (See 01-10A-35 OIL CONTROL VALVE (OCV) INSPECTION[LF, L3].)
   - If not as specified, inspect the following:
     - — Oil control valve (OCV)
     - — Harnesses and connectors between oil control valve (OCV) and PCM open or short.
   - If as specified, inspect the following hydraulic passages for clogging or leakage or both:
     - — Oil pressure switch – oil control valve (OCV)
     - — Oil control valve (OCV) – camshaft
     - — Camshaft internal passage
5. If they are normal, replace the camshaft pulley (with built-in variable valve timing actuator).

Evaporative Emission (EVAP) System Leak Inspection

- To verify that the problem has been fixed properly after repairs, the run drive cycle or EVAP system leak inspection must be performed.

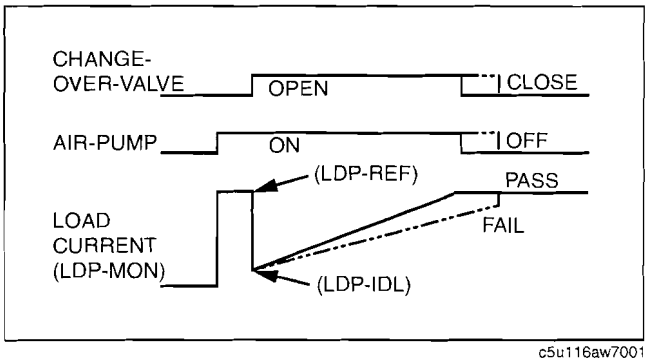
EVAP system leak inspection using M-MDS

Note
EVAP system test outline

- The EVAP system test, which can substituted for the run drive cycle as an EVAP control system repair confirmation method, can be done while operating the M-MDS in the KOEO (Key On Engine Off) condition instead of actually driving the vehicle.

EVAP system test description

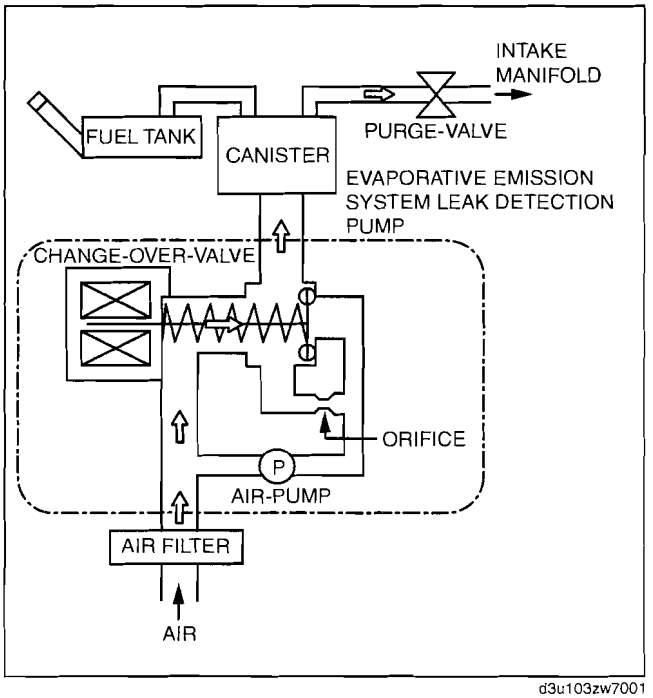
- The EVAP system test finds gas leaks in the system using the PCM to monitor changes in the air pump load current of the EVAP system leak detection pump. This test starts after sending an on-demand test signal from the M-MDS to the PCM. The PCM controls the air pump and change-over-valve operation and also stores the load current of the air pump as follows:
  i. The PCM commands turn the air pump on and retrieve the air pump load current value (LDP_MON PID) as a reference current (LDP_REF PID).
  ii. After retrieving a reference current value, the PCM commands the change-over-valve to open, then captures the air pump load current value (LDP_MON PID) as idle current (LDP_IDL PID). The EVAP system will be pressurized from this phase.
  iii. The PCM continues to monitor the air pump load current value (LDP_MON PID) until the end of the test.
- You can confirm whether any evaporative gas leak occurred or not by reading the test results.



c5u116aw7001

EVAP system malfunction judgment

- The PCM calculates the stored air pump load current value and send the results to the M-MDS as DTCs:



d3u103zw7001

DTC No.	Condition
P0442	Evaporative emission control system leak detected (small leak)
P0446	Change over valve (COV) (EVP system leak detection pump) stuck close
P0455	Evaporative emission control system leak detected (gross leak)
P0456	Evaporative emission system leak detected (very small leak)
P2401	EVAP system leak detection pump motor circuit low
P2402	EVAP system leak detection pump motor circuit high
P2404	EVAP system leak detection pump sense circuit problem
P2405	EVAP system leak detection pump sense circuit low input
P2407	EVAP system leak detection pump sense circuit intermittent

Evaporative system test procedure

1. Select the EVAP system test from the Toolbox on the M-MDS display and follow the instructions.
2. Verify that all of the following PIDs are within the specifications at the pre-test confirmation screen.

Note

- To successfully perform this procedure, all PIDs must be within the following specifications before proceeding to the next step.
- The PCM will cancel the EVAP system test if the VPWR PID value falls lower than **11.0 V** during the test.

Specification

PID	PID Range
BARO	72.2 kPa {543 mmHg, 21.3 inHg} or more
FLI	15—85%
IAT	5—45 °C {41—113 °F}
VPWR	11.0 V or more

3. Start the engine.
4. Drive the vehicle or let the engine idle more than **20 min**.
5. Turn ignition switch off, then turn it to the ON position again (Key On Engine Off).
6. Press the tick icon to start the test.
7. Verify that no DTCs present after the completion of the test.

- If any test result is indicated with red, diagnose the problem using the following DTC troubleshooting procedure or component inspection procedure.
- If any DTCs are detected, diagnose the problem using the appropriate DTC troubleshooting procedure.

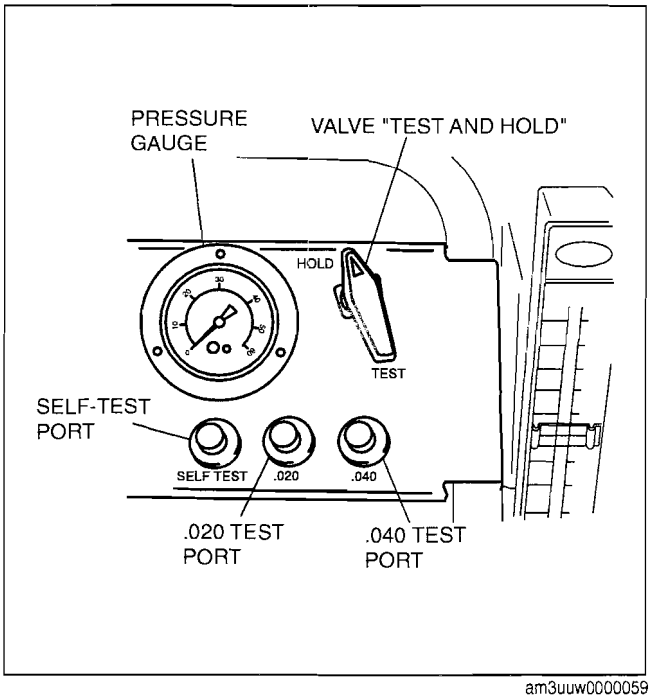
EVAP system leak inspection using leak tester

1. Perform the following **SST** (EVAP System Tester 134-01049) self-test:

Note

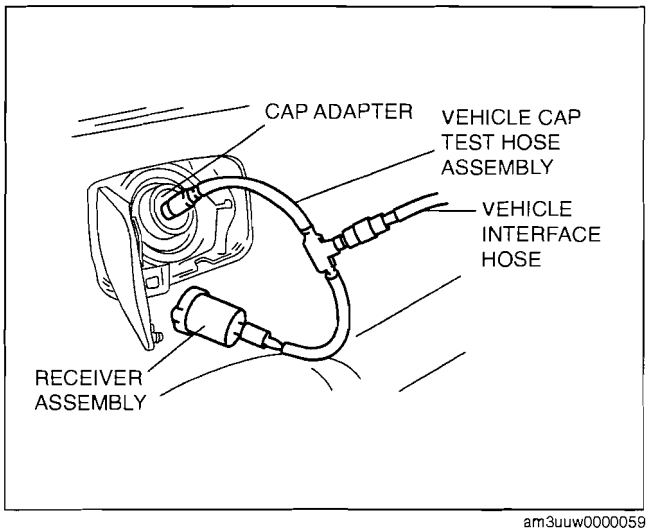
- If the tester does not work correctly during the self-test, refer to the tester operators manual for a more detailed self-test procedure.

(1) Verify that the control valve on the panel is in the HOLD position then open the nitrogen bottle valve.
(2) Connect the vehicle interface hose (part of the **SST**) to the SELF-TEST port located on the control panel. Hand tighten the fitting. (Do not overtighten.)
(3) Turn the control valve to the TEST position.
(4) The gauge should read **331—381 mm {13—15 in}** of water.
  - If the gauge is not reading in this range, adjust the pressure by turning the black knob on the low pressure regulator at the nitrogen bottle.
(5) Turn the control valve to the HOLD position.
(6) Verify that the gauge holds pressure and that the flow meter reads no flow.
  - If there is no drop in pressure and no flow, the tester passes the self-test.
  - If the gauge leaks down, refer to the tester operators manual.



am3uuw0000059

2. Connect the **SST** to the vehicle.
   (1) Verify that the control valve on the panel is in the HOLD position then open the nitrogen bottle valve.
   (2) Remove the fuel-filler cap from the vehicle.
      • If the fuel-filler cap is not a MAZDA part or equivalent, replace it.
   (3) Connect the receiver assembly (**SST**: AKS441130) to the vehicle cap test hose assembly (part of the **SST**) and the fuel-filler cap from the vehicle.
   (4) Connect the cap adaptor (**SST**: AKS441131) to the vehicle cap test hose assembly (part of the **SST**) and to the fuel-filler neck.
   (5) Connect the vehicle interface hose (part of the **SST**) to the center fitting of the vehicle cap test hose assembly (part of the **SST**).
3. Connect the M-MDS to the DLC-2.
4. Turn the ignition switch to the ON position (Engine off).
5. Request the PCM on-board device control (Mode 08) using the M-MDS to close the change-over valve (COV) in the EVAP system leak detection pump.



am3uuw0000059

Note
- The COV is closed for **10 min** unless the following any actions are done:
  — The engine is started.
  — The ignition switch is turned off position.

6. Make sure the control valve on the 134-01049 is in the HOLD position and that the valve on the cylinder of nitrogen gas is open.
7. Turn the control valve to the open position and let the system fill. You should note a drop in the gauge pressure along with the flow meter being pegged at maximum flow for several minutes depending on how full or empty the fuel tank is, and how long it takes to completely fill and pressurize the evaporative emissions system hoses.
8. If the gauge and the flow meter do not settle to a measurable level after **2—3 min**, then refer to the Mazda Workshop Manual to verify that the cut or vent valve is properly closed.
9. Verify the pressure gauge and flow meter reading to determine if there is an evaporative emissions leak:
   NO EVAPORATIVE LEAK:
   - The flow meter registers "zero flow" and the pressure gauge returns to the pre-set pressure of **356 mm {14 in}** of water (H2O).

   EVAPORATIVE LEAK:
   - The pressure does not return to the preset level of **356 mm {14 in}** of water (H2O) when measuring the flow. See "SETTING LEAK STANDARD FOR TESTING" (.020 to .040 inch H2O) of the Evaporative Emissions Tester operators manual (134-01067).

Note
- Turn the control valve to the HOLD position then disconnect the **SST**.

01-03B SYMPTOM TROUBLESHOOTING [L3 WITH TC]

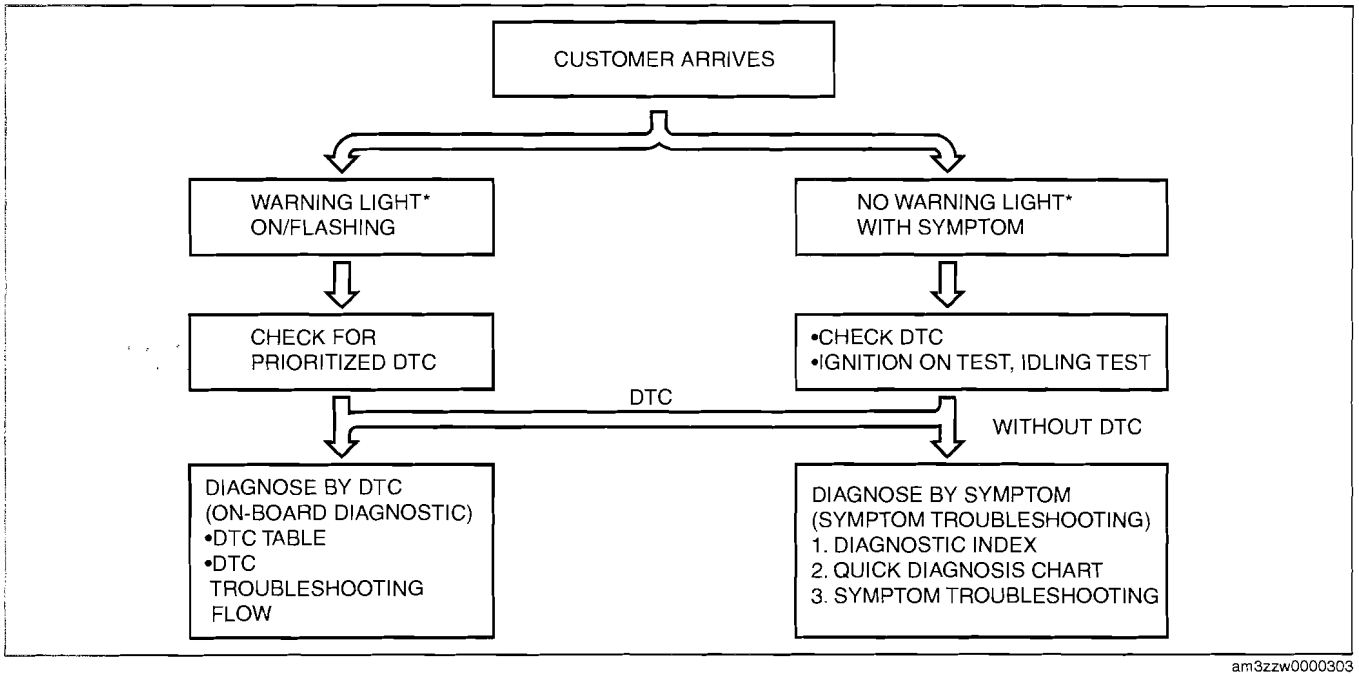
FOREWORD[L3 WITH TC]

id010339800300

- When the customer reports a vehicle malfunction, check the malfunction indicator lamp (MIL) indication and diagnostic trouble code (DTC), then diagnose the malfunction according to the following flowchart:
  - — If a DTC exists, diagnose the applicable DTC inspection. (See 01-02B-14 DTC TABLE[L3 WITH TC].)
  - — If no DTC exists and the MIL does not illuminate or flash, diagnose the applicable symptom troubleshooting. (See 01-03B-8 QUICK DIAGNOSTIC CHART[L3 WITH TC].)



am3zzw0000303

*: Malfunction Indicator Lamp (MIL), Generator Warning Light, Security Light

ENGINE SYMPTOM TROUBLESHOOTING[L3 WITH TC]

id010339800500

- Verify malfunction symptoms using the following diagnostic index, then go to the appropriate troubleshooting chart.

Diagnostic Index

No.	TROUBLESHOOTING ITEM		DESCRIPTION
1	Melting of main or other fuses		—
2	MIL illuminates		MIL is illuminated.
3	Will not crank		Starter does not work.
4	Hard to start/long crank/erratic start/erratic crank		Starter cranks engine at normal speed but engine requires excessive cranking time before starting.
5	Engine stalls.	After start/at idle	Engine stops unexpectedly at idle or after start or both.
6	Cranks normally but will not start		Starter cranks engine at normal speed but engine will not run.
7	Slow return to idle		Engine takes more time than normal to return to idle speed.
8	Engine runs rough/rolling idle		Engine speed fluctuates between specified idle speed and lower speed and engine shakes excessively.
9	Fast idle/runs on		Engine speed continues at fast idle after warm-up. Engine runs after ignition switch is turned off.
10	Low idle/stalls during deceleration		Engine stops unexpectedly at beginning of deceleration or recovery from deceleration.
11	Engine stalls/quits.	Acceleration/cruise	Engine stops unexpectedly at beginning of acceleration or during acceleration. Engine stops unexpectedly while cruising.
	Engine runs rough.	Acceleration/cruise	Engine speed fluctuates during acceleration or cruising.
	Misses	Acceleration/cruise	Engine misses during acceleration or cruising.
	Buck/jerk	Acceleration/cruise/ deceleration	Vehicle bucks/jerks during acceleration, cruising, or deceleration.
	Hesitation/stumble	Acceleration	Momentary pause at beginning of acceleration or during acceleration
	Surges	Acceleration/cruise	Momentary minor irregularity in engine output
12	Lack/loss of power	Acceleration/cruise	Performance is poor under load. (e.g., power down when climbing hills)
13	Knocking/pinging	Acceleration/cruise	Sound is produced when air/fuel mixture is ignited by something other than spark plug. (e.g., hot spot in combustion chamber)
14	Poor fuel economy		Fuel economy is unsatisfactory.
15	Emission compliance		Fails emissions test.
16	High oil consumption/leakage		Oil consumption is excessive.
17	Cooling system concerns	Overheating	Engine runs at higher than normal temperature/overheats.
18	Cooling system concerns	Runs cold	Engine does not reach normal operating temperature.
19	Exhaust smoke		Blue, black, or white smoke from exhaust system
20	Fuel odor (in engine compartment)		Gasoline fuel smell or visible leakage
21	Engine noise		Engine noise from under hood
22	Vibration concerns (engine)		Vibration from under hood or driveline
23	A/C does not work sufficiently.		A/C compressor magnetic clutch does not engage when A/C is turned on.
24	A/C is always on or A/C compressor runs continuously.		A/C compressor magnetic clutch does not disengage.
25	A/C is not cut off under WOT conditions.		A/C compressor magnetic clutch does not disengage under WOT.
26	Exhaust sulphur smell		Rotten egg smell (sulphur) from exhaust
27	Fuel refill concerns		Fuel tank does not fill smoothly.
28	Fuel filling shut off issues		Fuel does not shut off properly.
29	Spark plug condition		Incorrect spark plug condition

QUICK DIAGNOSTIC CHART[L3 WITH TC]

id010339800600

X: Applied

Troubleshooting item			Possible factor: Starter motor malfunction (Mechanical or electrical)	Starter circuit including ignition switch is open	Starter interlock switch malfunction	Improper engine oil level	Low or dead battery	Charging system malfunction	Improper engine compression	Improper dipstick	Base engine malfunction	Flywheel is seized	Improper tension or damaged drive belts	Improper engine coolant level	Water and anti-freeze mixture is improper	Cooling system malfunction (Radiator, hoses,overflow system, thermostat, etc.)	Cooling fan system malfunction
1	Melting of main or other fuses																
2	MIL illuminates																
3	Will not crank		X	X	X		X	X			X	X					
4	Hard start/long crank/erratic start/erratic crank		X						X		X						
5	Engine stalls	After start/at idle							X								
6	Cranks normally but will not start								X								
7	Slow return to idle															X	X
8	Engine runs rough/rolling idle								X								
9	Fast/idle runs on																
10	Low idle/stalls during deceleration								X								
11	Engine stalls/quits	Acceleration/cruise							X								
	Engine runs rough	Acceleration/cruise							X								
	Misses	Acceleration/cruise							X								
	Buck/jerk	Acceleration/cruise/ deceleration							X								
	Hesitation/stumble	Acceleration/cruise							X								
	Surges	Acceleration/cruise							X								
12	Lack/loss of power	Acceleration/cruise							X								
13	Knocking/pinging	Acceleration/cruise							X								X
14	Poor fuel economy								X					X		X	X
15	Emission compliance								X		X					X	
16	High oil consumption/leakage									X	X						
17	Cooling system concerns	Overheating											X	X	X	X	X
18	Cooling system concerns	Runs cold														X	X
19	Exhaust smoke								X		X					X

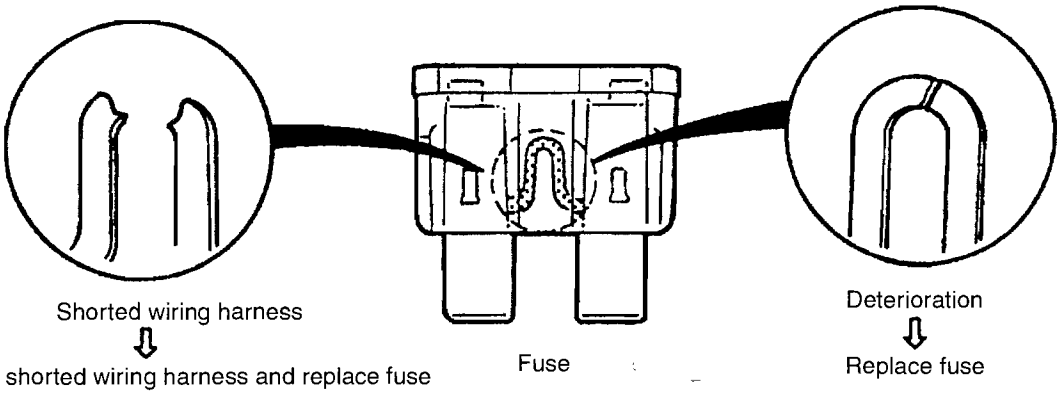
NO.1 MELTING OF MAIN OR OTHER FUSES[L3 WITH TC]

id010339800700

1	MELTING OF MAIN OR OTHER FUSES

[TROUBLESHOOTING HINTS]
Inspect condition of fuse.



Damaged fuse	Related wiring harness
BTN	**BTN fuse** • OBD fuse (PJB) • DLC-2
IG KEY1	**IG KEY1 fuse** • Ignition switch • ENGINE fuse (PJB)
IG KEY2	**IG KEY 2 fuse** • Ignition switch • Starter relay • starter interlock switch
ENG +B	**ENG +B fuse** • PCM
ENGINE	**ENGINE fuse** • Main relay • ENG BAR 1 fuse • ENG BAR 2 fuse • ENG BAR 3 fuse • PCM
FUEL PUMP	**FUEL PUMP fuse** • Fuel pump resistor • Fuel pump speed control relay • Fuel pump relay • Fuel pump unit
INJECTOR	**INJ fuse** • Injector relay • PCM
ETC	**ETC fuse** • Drive-by-wire relay • PCM
ENG BAR 1	**ENG BAR 1 fuse** • APP sensor • PCM • Drive-by-wire relay • Oil control valve • CKP sensor • EGR valve • Wastegate control solenoid valve • Purge solenoid valve • Variable swirl solenoid valve • CMP sensor • MAF/IAT sensor • EVAP system leak detection pump
ENG BAR 2	**ENG BAR fuse** • PCM

Damaged fuse	Related wiring harness
ENG BAR 3	**ENG BAR fuse** • Front HO2S
FAN	**FAN fuse** • Fan control module
MAIN	**MAIN fuse** • Generator • Starter
STARTER	**STARTER fuse** • Starter relay • Starter
ENGINE (PJB)	**ENGINE fuse (PJB)** • Fuel pump speed control relay • Fuel pump relay • PCM • Injector relay • Ignition coil (No.1, No.2, No.3, No.4) • Condenser • Rear HO2S

NO.2 MIL ILLUMINATES[L3 WITH TC]

id010339800800

2	MIL ILLUMINATES
DESCRIPTION	MIL illuminates incorrectly.
POSSIBLE CAUSE	• PCM illuminates for emission-related concern (DTC is stored in PCM) • Instrument cluster malfunction **Note** • If the MIL blinks at a steady rate, a misfire condition could possibly exist.

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Connect the M-MDS to the DLC. Turn the ignition switch to the ON position. Retrieve any DTCs. Is a DTC displayed?	Yes	**DTC is displayed:** • Go to the appropriate DTC test. (See 01-02B-14 DTC TABLE[L3 WITH TC].)
		No	**No DTC is displayed:** • Inspect for an open or short to circuit between instrument cluster terminal 1I and PCM terminal 1AM. • Inspect for an open or short to circuit between instrument cluster terminal 1K and PCM terminal 1AI. (See 09-22-4 INSTRUMENT CLUSTER INSPECTION.)
2	Verify test results. • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

STEP	INSPECTION	RESULTS	ACTION
10	Inspect the following wiring harness and connectors. • Between coil terminal A and keyless CM terminal 3V • Between coil terminal B and keyless CM terminal 3U Is there any malfunction (open or short circuit, terminal corrosion, etc.)?	Yes	Repair or replace malfunctioning part.
		No	Go to the next step.
11	Is there continuity between the keyless CM harness-side connector terminal 2B and body ground?	Yes	Go to the next step.
		No	Repair or replace the wiring harness.
12	Turn the ignition switch to the ON position. Measure the voltage between keyless CM harness-side connector terminal 3C and body ground. Is the voltage **below 1.0V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness.
13	Turn the ignition switch to the ON position. (Engine off.) Measure the voltage between keyless CM harness-side connector terminal 2A, 2C, 2E and body ground. Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness.
14	Turn the ignition switch off. Disconnect the coil connector. Turn the ignition switch to the ON position. (Engine off.) Measure the voltage between coil harness-side connector terminal D and body ground. Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness.
15	Inspect the following wiring harnesses and connectors. • Between keyless CM terminal 3V and coil A • Between keyless CM terminal 3U and coil B • Between keyless CM terminal 3X and PCM 1AM • Between keyless CM terminal 3W and PCM 1AI Is there any malfunction (open or short circuit, terminal corrosion, etc.)?	Yes	Repair or replace malfunctioning part.
		No	Go to the next step.
16	Is there continuity between PCM terminal 1B and the starter relay with the clutch pedal depressed?	Yes	Go to the next step.
		No	Repair or replace the wiring harness.
17	Inspect the following: • Battery connection • Battery condition • Fuses Are all items normal?	Yes	Go to the next step.
		No	Service if necessary. Repeat Step 1.
18	Is a clicking sound heard from the starter when the ignition switch is turned to the START position?	Yes	Go to the next step.
		No	Go to Step 24.
19	Inspect the starting system. (See 01-19B-3 STARTER INSPECTION[L3 WITH TC].) Is the starting system normal?	Yes	Inspect for a seized/hydro-locked engine, flywheel. (See 05-10-16 DUAL-MASS FLYWHEEL INSPECTION[L3 WITH TC].)
		No	Repair or replace components if necessary required.
20	Do any other electrical accessories work?	Yes	Go to the next step.
		No	Inspect the charging system. (See 01-17B-4 BATTERY INSPECTION[L3 WITH TC].) (See 01-17B-7 GENERATOR INSPECTION[L3 WITH TC].)

STEP	INSPECTION	RESULTS	ACTION
21	Perform the self-test function using the M-MDS. Turn the ignition switch to the ON position. Retrieve any DTCs. Is a DTC displayed?	Yes	**DTC is displayed:** Go to the appropriate DTC test. (See 01-02B-14 DTC TABLE[L3 WITH TC].)
		No	**No DTC is displayed:** Inspect the following: • START circuit in the ignition switch • Open circuit between ignition switch and starter • Starter interlock switch
22	Verify test results. • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

NO.4 HARD TO START/LONG CRANK/ERRATIC START/ERRATIC CRANK[L3 WITH TC]

id010339801000

4	HARD TO START/LONG CRANK/ERRATIC START/ERRATIC CRANK
DESCRIPTION	• Starter cranks the engine at normal speed but the engine requires excessive cranking time before starting. • Battery is operating normally
POSSIBLE CAUSE	• Vacuum leakage • Poor fuel quality • Starting system malfunction • Erratic signal to ignition coils • Spark plug malfunction • Air leakage from intake-air system • Improper air/fuel mixture ratio control • Incorrect fuel injection timing • Erratic signal from CKP sensor • Erratic signal from CMP sensor • Front and/rear HO2S sensor or related circuit malfunction • ECT sensor or related circuit malfunction • MAF sensor or related circuit malfunction • Intake-air system restriction • Improper operation of electronic throttle control system • PCV valve malfunction • Inadequate fuel pressure (high or low pressure side) • Relief valve malfunction (built-in delivery pipe) • Spill valve control solenoid valve malfunction (built-in high pressure fuel pump) • Fuel filter clogging • Fuel line restriction • Fuel leakage • Fuel pump (low-side) resister or related circuit malfunction • Fuel injector malfunction • Fuel pressure sensor malfunction • High pressure fuel pump malfunction • Exhaust system or three-way catalytic converter restriction • EGR valve malfunction • Purge solenoid valve malfunction • Low engine compression • Improper valve timing **Warning** **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE REPAIR PROCEDURE" and "AFTER REPAIR PROCEDURE" described in this manual.** **(See 01-14B-4 BEFORE SERVICE PRECAUTION[L3 WITH TC].)** **(See 01-14B-5 AFTER SERVICE PRECAUTION[L3 WITH TC].)** **Caution** • **Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Inspect for the following: • Fuel quality (proper octane, contamination, winter/summer blend) • Fuel leakage • Intake-air system leakage or restriction • Vacuum leakage Are all items normal?	Yes	Go to the next step.
		No	Service if necessary. Repeat Step 1.
2	Perform the self-test function using the M-MDS. Turn the ignition switch to the ON position. Retrieve any DTCs. Is a DTC displayed?	Yes	**DTC is displayed:** Go to the appropriate DTC test. (See 01-02B-14 DTC TABLE[L3 WITH TC].)
		No	**No DTC is displayed:** Go to the next step.
3	Access the ECT PID using the M-MDS. Verify that the ECT PID is **less than 116°C {241°F}** during driving. Is the ECT PID less than specified?	Yes	Go to the next step.
		No	The cause of this concern could be from the cooling system overheating. Perform the symptom troubleshooting "NO.17 COOLING SYSTEM CONCERNS - OVERHEATING." (See 01-03B-60 NO.17 COOLING SYSTEM CONCERNS-OVERHEATING[L3 WITH TC].)
4	Will the engine run smoothly at part throttle?	Yes	Go to the next step.
		No	Go to Step 6.
5	Perform the TP sweep inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the electronic throttle control system work properly?	Yes	Visually inspect the throttle body (damage/scratching.) If normal, go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
6	Perform the EGR system operation inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the EGR system operate properly?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
7	Perform the Purge Control System Operation inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the purge solenoid valve work properly?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
8	Inspect the CMP and CKP sensor for the following; • Installation condition (See 01-40B-47 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/ INSTALLATION[L3 WITH TC].) (See 01-40B-44 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/ INSTALLATION[L3 WITH TC].) • Damaged trigger wheel and camshaft • Open or short circuit in the wiring harnesses. Is there any malfunction detected?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
9	Access and monitor following the PIDs using the data monitor function. • ECT • MAF • O2S11 • O2S12 • LONGFT1 • SHTFT1 Do the PIDs indicate the correct values under trouble condition? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to the next step.
		No	Inspect and repair or replace suspected parts and the related harnesses. If the malfunction remains, perform the intermittent concern troubleshooting. (See 01-03B-77 INTERMITTENT CONCERN TROUBLESHOOTING[L3 WITH TC].)
10	Remove and shake the PCV valve. Does the PCV valve rattle?	Yes	Go to the next step.
		No	Replace the PCV valve.
11	Inspect for restriction in the exhaust system and the three-way catalytic converter (TWC). Is there any restriction?	Yes	Replace the malfunctioning part.
		No	Go to the next step.

STEP	INSPECTION	RESULTS	ACTION
12	Perform the spark test. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
13	Access and monitor the FUEL_PRES PID. Is the FUEL_PRES PID value within the specification? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to Step 38.
		No	Go to the next step.
14	Is the vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 16.
15	Inspect the fuel pressure sensor. (See 01-40B-38 FUEL PRESSURE SENSOR INSPECTION[L3 WITH TC].) Is the fuel pressure sensor normal?	Yes	Go to Step 17.
		No	Replace the delivery pipe.
16	Replace the high pressure fuel pump. Monitor FUEL_PRES PID. Is the FUEL_PRES PID value within the specified? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Troubleshooting is completed. Go to Step 21.
		No	Inspect the fuel pressure sensor. (See 01-40B-38 FUEL PRESSURE SENSOR INSPECTION[L3 WITH TC].)
17	Connect the fuel pressure gauge between the fuel pump and the high pressure fuel pump. Measure the fuel pressure line of the low pressure side. (See 01-14B-6 FUEL LINE PRESSURE INSPECTION[L3 WITH TC].) Is the fuel pressure within the specification?	Yes	Go to the next step.
		No	Inspect for the following: • Fuel line restriction • Fuel filter clogging If normal replace the fuel pump.
18	Inspect the fuel injector for each cylinder. (See 01-14B-33 FUEL INJECTOR INSPECTION[L3 WITH TC].) Are the fuel injectors normal?	Yes	Go to the next step.
		No	Replace the suspected fuel injector. (See 01-14B-30 FUEL INJECTOR REMOVAL/ INSTALLATION[L3 WITH TC].)
19	Measure the compression pressure for each cylinder. (See 01-10B-9 COMPRESSION INSPECTION[L3 WITH TC].) Does the starting system work properly?	Yes	Go to the next step.
		No	Inspect for the following: • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper valve timing Service if necessary.
20	Inspect the starting system. (See 01-19B-3 STARTER INSPECTION[L3 WITH TC].) Does the starting system work properly?	Yes	Replace the injector driver module. If the problem remains, overhaul the engine.
		No	Repair or replace the malfunctioning part.
21	Verify test results. • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

NO.5 ENGINE STALLS-AFTER START/AT IDLE[L3 WITH TC]

id010339801100

5	ENGINE STALLS-AFTER START/AT IDLE
DESCRIPTION	• Engine stops unexpectedly.
POSSIBLE CAUSE	• A/C system improper operation • Air leakage from intake-air system • Purge solenoid valve malfunction • Improper operation of electronic throttle control system • EGR valve malfunction • Vacuum leakage • Engine overheating • Low engine compression • Ignition system malfunction • Poor fuel quality • PCV valve malfunction • Intake-air system restriction • Exhaust system and/or three-way catalytic converter (TWC) restriction or clogging • Electrical connector disconnection • Open or short circuit in the fuel pump (low-side) body or related wiring harness • Fuel pump resister or related circuit malfunction • No battery power supply to PCM or poor ground • Inadequate fuel pressure (high or low pressure side) • Fuel pressure sensor or related circuit malfunction • Spill valve control solenoid valve malfunction (built-in high pressure fuel pump) • Relief valve malfunction (built-in delivery pipe) • Fuel pump (low-side) body mechanical malfunction • Fuel leakage • Fuel line restriction • Fuel filter clogging • Incorrect fuel injection timing • High pressure fuel pump malfunction • Fuel injector malfunction • Ignition coil malfunction • Improper air/fuel mixture ratio control • No signal from CKP sensor due to sensor, related wiring harness or wrong installation • Erratic signal from CMP sensor • Front and/or rear HO2S sensor or related circuit malfunction • ECT sensor or related circuit malfunction • Accelerator positions sensor or related circuit malfunction • MAF sensor or related circuit malfunction • Improper valve timing • Improper operation variable valve timing control system • Immobilizer system and/or circuit malfunction **Warning** **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE REPAIR PROCEDURE" and "AFTER REPAIR PROCEDURE" described in this manual.** **(See 01-14B-4 BEFORE SERVICE PRECAUTION[L3 WITH TC].)** **(See 01-14B-5 AFTER SERVICE PRECAUTION[L3 WITH TC].)** **Caution** • **Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Connect the M-MDS to the DLC-2. Do any of the following conditions appear? • Engine does not start completely. • DTC B1681 is displayed.	Yes	**Both conditions are appear:** Go to Step 5.
		No	**Either or other condition appears:** Go to the next step.
2	Does the engine stall after **approx. 2s** from when it is started?	Yes	Go to the next step.
		No	Is the immobilizer system is normal? Go to Step 16.
3	Is the coil connector securely connected to coil?	Yes	Go to the next step.
		No	Connect the connector securely, retest from Step 2.
4	Does the security light illuminate?	Yes	Go to the next step.
		No	Inspect and repair or replace the following: • Wiring harnesses and connectors from PCM terminal 1Al and instrument cluster terminal 1K • Wiring harnesses and connectors from PCM terminal 1AM and instrument cluster terminal 1I (See 01-03B-77 INTERMITTENT CONCERN TROUBLESHOOTING[L3 WITH TC].)
5	Retrieve the DTC using the M-MDS. Are any of the following DTCs present? **DTC B1213, B1342, B1600, B1601, B1602, B1681, B2103, B2431**	Yes	Go to appropriate DTC test. (See 09-02A-4 DTC TABLE[IMMOBILIZER SYSTEM])
		No	Advanced keyless entry system is not equipped: Go to the next step. Advanced keyless entry system is equipped: Go to Step 11.
6	Is there continuity between PCM terminal 1BB, 1BH, 1BD, 1BG, 1AZ and ground?	Yes	Go to the next step.
		No	Repair or replace the wiring harness.
7	Turn the ignition switch to the ON position (Engine off.) Measure the voltage between PCM terminal1BB, 1BH, 1BD, 1BG, 1AZ and ground. Is the voltage **below 1.0V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness.
8	Turn the ignition switch to the ON position. (Engine off) Access the VPWR PID. Is the VPWR PID normal? **VPWR PID** **Battery voltage**	Yes	Go to the next step.
		No	Repair or replace the wiring harness.
9	Disconnect the coil connector. Turn the ignition switch to the ON position. (Engine off) Is there battery voltage at coil connector terminal D?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between coil connector terminal D and the fuse panel.
10	Inspect the following wiring harness and connectors. • Between coil terminal A and keyless CM terminal 3V • Between coil terminal B and keyless CM terminal 3U Is there any malfunction (open or short circuit, terminal corrosion, etc.)?	Yes	Repair or replace malfunction part.
		No	Go to the next step.
11	Is there continuity between the keyless CM harness-side connector terminal 2B and body ground?	Yes	Go to the next step.
		No	Repair or replace the wiring harness.
12	Turn the ignition switch to the ON position. Measure the voltage between keyless CM harness-side connector terminal 2B and body ground. Is the voltage **below 1.0V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness.
13	Turn the ignition switch to the ON position. (Engine off.) Measure the voltage between keyless CM harness-side connector terminal 2A, 2C, 2E and body ground. Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness.

STEP	INSPECTION	RESULTS	ACTION
14	Turn the ignition switch off. Disconnect the coil connector. Turn the ignition switch to the ON position. (Engine off.) Measure the voltage between coil harness-side connector terminal D and body ground. Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness.
15	Inspect the following wiring harnesses and connectors. • Between keyless CM terminal 3V and coil A • Between keyless CM terminal 3U and coil B • Between keyless CM terminal 3X and PCM 1AM • Between keyless CM terminal 3W and PCM 1AI Is there any malfunction (open or short circuit, terminal corrosion, etc.)?	Yes	Repair or replace malfunctioning part.
		No	Go to the next step.
16	Inspect for the following: • Fuel quality (proper octane, contamination, winter/summer blend) • Intake-air system leakage and restriction • Electrical connectors • Poor connection for PCM ground and body ground • Fuel leakage • Vacuum leakage Are all items normal?	Yes	Go to the next step.
		No	Service if necessary. Repeat Step 16.
17	Perform the self-test function using M-MDS. Turn the ignition switch to the ON position. Retrieve any DTCs. Is the DTC displayed?	Yes	DTC is displayed: Go to the appropriate DTC test. (See 01-02B-14 DTC TABLE[L3 WITH TC].)
		No	No DTC is displayed: Go to the next step.
18	Access the ECT PID using the M-MDS. Verify that the ECT PID is **less than 116 °C {241 °F}** during driving. Is the ECT PID less than specified?	Yes	Go to the next step.
		No	The cause of this concern could from be cooling system overheating. Perform the symptom troubleshooting "NO.17 COOLING SYSTEM CONCERNS - OVERHEATING." (See 01-03B-60 NO.17 COOLING SYSTEM CONCERNS-OVERHEATING[L3 WITH TC].)
19	Access the VPWR PID. Turn the ignition switch to the ON position. (Engine off) Does the VPWR PID indicate **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between main relay terminal C and PCM terminal 2Y and 1D.
20	Perform the A/C Cut-off Operation Inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the A/C Cut-off Operation work properly?	Yes	Go to the next step.
		No	Repair or replace malfunctioning parts according to the inspection results.
21	Will the engine run smoothly at part throttle?	Yes	Go to the next step.
		No	Go to Step 23.
22	Perform the TP sweep inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the electronic throttle control system work properly?	Yes	Visually inspect the throttle body (damaged/ scratching.) If normal, go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
23	Perform the EGR system operation inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does EGR system operate properly?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
24	Perform the Purge Control System Operation inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the purge solenoid valve work properly?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.

STEP	INSPECTION	RESULTS	ACTION
25	Perform the Variable Valve Timing Control System Operation Inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the variable valve timing control system work properly?	Yes	Inspect the valve timing.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
26	Inspect the CMP and CKP sensor for the following; • Installation condition (See 01-40B-47 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/ INSTALLATION[L3 WITH TC].) (See 01-40B-44 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/ INSTALLATION[L3 WITH TC].) • Damaged trigger wheel and camshaft • Open or short circuit in the wiring harnesses Is there any malfunction detected?	Yes	Repair or replace the malfunctioning part according inspection results.
		No	Go to the next step.
27	Access and monitor the following PIDs using the data monitor function. • ECT • APP • MAF • O2S11 • O2S12 • LONGFT1 • SHTFT1 Do the PIDs indicate the correct values under the malfunction condition? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to the next step.
		No	Inspect and repair or replace suspected parts and related harnesses. If the malfunction remains, perform the intermittent concern troubleshooting procedure. (See 01-03B-77 INTERMITTENT CONCERN TROUBLESHOOTING[L3 WITH TC].)
28	Remove and shake the PCV valve. Does the PCV valve rattle?	Yes	Go to the next step.
		No	Replace the PCV valve.
29	Inspect for restriction in the exhaust system and Three-way catalytic converter (TWC). Is there any restriction?	Yes	Replace malfunctioning part.
		No	Go to the next step.
30	Perform the spark test. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
31	Access and monitor the FUEL_PRES PID. Is the FUEL_PRES PID value within the specification? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to Step 35.
		No	Go to the next step.
32	Is the vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 34.
33	Inspect the fuel pressure sensor. (See 01-40B-38 FUEL PRESSURE SENSOR INSPECTION[L3 WITH TC].) Is the fuel pressure sensor normal?	Yes	Go to Step 35.
		No	Replace the delivery pipe.
34	Replace the high pressure fuel pump. Monitor FUEL_PRES PID. Is the FUEL_PRES PID value within the specified? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Troubleshooting is completed. Go to Step 38.
		No	Inspect the fuel pressure sensor. (See 01-40B-38 FUEL PRESSURE SENSOR INSPECTION[L3 WITH TC].)
35	Connect the fuel pressure gauge between the fuel pump and the high pressure fuel pump. Measure the fuel pressure line of the low pressure side. (See 01-14B-6 FUEL LINE PRESSURE INSPECTION[L3 WITH TC].) Is the fuel pressure within the specification?	Yes	Go to the next step.
		No	Inspect for the following: • Fuel line restriction • Fuel filter clogging If normal, replace the fuel pump.

STEP	INSPECTION	RESULTS	ACTION
36	Inspect the fuel injector for each cylinder. (See 01-14B-33 FUEL INJECTOR INSPECTION[L3 WITH TC].) Are the fuel injectors normal?	Yes	Go to the next step.
		No	Replace the suspected fuel injector. (See 01-14B-30 FUEL INJECTOR REMOVAL/ INSTALLATION[L3 WITH TC].)
37	Measure the compression pressure for each cylinder. (See 01-10B-9 COMPRESSION INSPECTION[L3 WITH TC].) Are the compression pressures within the specification?	Yes	Replace the injector driver module. If the problem remains, overhaul the engine.
		No	Inspect for the following: • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper valve timing Service if necessary.
38	Verify test results. • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

NO.6 CRANKS NORMALLY BUT WILL NOT START[L3 WITH TC]

id010339801200

6	CRANKS NORMALLY BUT NOT START
DESCRIPTION	• Starter cranks engine at normal speed but engine will not run. • Refer to symptom troubleshooting "No.5 Engine stalls" if this symptom appears after the engine stalls. • Fuel is in tank. • Battery is in normal condition.
POSSIBLE CAUSE	• Air leakage from intake-air system • Open PCM ground or vehicle body ground • Improper operation of electronic throttle control system • EGR valve malfunction • Low engine compression • Engine overheating • Vacuum leakage • Ignition system malfunction • Poor fuel quality • PCV valve malfunction • Intake-air system restriction • Improper air/fuel mixture ratio control • No signal from CKP sensor due to sensor, related wire or incorrect installation • No signal from CMP sensor due to sensor, related wire or incorrect installation • Front and/or rear HO2S sensor or related circuit malfunction • ECT sensor or related circuit malfunction • Accelerator position sensor or related circuit malfunction • MAF sensor or related circuit malfunction • High pressure fuel pump malfunction • Exhaust system or three-way catalytic converter (TWC) malfunction • Disconnected electrical connector • Open or short in fuel pump (low-side) body and related harness • Inadequate fuel pressure (high or low pressure side) • Fuel pressure sensor or related circuit malfunction • Relief valve malfunction (built-in high pressure fuel pump) • Fuel line clogging or restriction • Incorrect fuel injection timing • Fuel pump resistor or control relay malfunction • Fuel pump (low-side) mechanical malfunction • Fuel leakage • Fuel injector malfunction • Purge solenoid valve malfunction • Spark plug malfunction • Ignition coil malfunction • Improper valve timing • Improper variable valve timing control system operation • Immobilizer system or related circuit malfunction **Warning** **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE REPAIR PROCEDURE" and "AFTER REPAIR PROCEDURE" described in this manual.** **(See 01-14B-4 BEFORE SERVICE PRECAUTION[L3 WITH TC].)** **(See 01-14B-5 AFTER SERVICE PRECAUTION[L3 WITH TC].)** **Caution** • **Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Connect the M-MDS to the DLC-2. Do any of the following conditions appear? • Engine does not completely start. • DTC B1681 is displayed.	Yes	**Both conditions are appear:** Go to Step 5.
		No	**Either or other condition appears:** Go to the next step.
2	Does the engine stall after **approx. 2s** from when it is started?	Yes	Go to the next step.
		No	Is the Is the immobilizer system is normal. Go to Step 20.
3	Is the coil connector securely connected to coil?	Yes	Go to the next step.
		No	Connect the connector securely, retest from Step 1.
4	Does the security light illuminate?	Yes	Go to the next step.
		No	Inspect and repair or replace the following: • Wiring harnesses and connectors from PCM terminal 1AI and instrument cluster terminal 1K • Wiring harnesses and connectors from PCM terminal 1AM and instrument cluster terminal 1I (See 09-22-4 INSTRUMENT CLUSTER INSPECTION.)
5	Retrieve the DTC using the M-MDS. Are any of the following DTCs present? **DTC** **B1213, B1342, B1600, B1601, B1602, B1681, B2103, B2431**	Yes	Go to appropriate DTC test. (See 09-02A-4 DTC TABLE[IMMOBILIZER SYSTEM].)
		No	Advanced keyless entry system is not equipped: Go to the next step. Advanced keyless entry system is equipped: Go to Step 11.
6	Is there continuity between PCM terminal 1BB, 1BH, 1BD, 1BG, 1AZ and ground?	Yes	Go to the next step.
		No	Repair or replace the wiring harness.
7	Turn the ignition switch to the ON position (Engine off.) Measure the voltage between PCM terminal 1BB, 1BH, 1BD, 1BG, 1AZ and ground. Is the voltage **below 1.0V?**	Yes	Go to the next step.
		No	Repair or replace the wiring harness.
8	Turn the ignition switch to the ON position. (Engine off) Access the VPWR PID. Is the VPWR PID normal? **VPWR PID** **Battery voltage**	Yes	Go to the next step.
		No	Repair or replace the wiring harness.
9	Disconnect the coil connector. Turn the ignition switch to the ON position. (Engine off) Is there battery voltage at coil connector terminal D?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between coil connector terminal D and the fuse panel.
10	Inspect the following wiring harness and connectors. • Between coil terminal A and keyless CM terminal 3V • Between coil terminal B and keyless CM terminal 3U Is there any malfunction (open or short circuit, terminal corrosion, etc.)?	Yes	Repair or replace malfunctioning part.
		No	Go to the next step.
11	Is there continuity between the keyless CM harness-side connector terminal 3C and body ground?	Yes	Go to the next step.
		No	Repair or replace the wiring harness.
12	Turn the ignition switch to the ON position. Measure the voltage between keyless CM harness-side connector terminal 2B and body ground. Is the voltage **below 1.0V?**	Yes	Go to the next step.
		No	Repair or replace the wiring harness.
13	Turn the ignition switch to the ON position. (Engine off.) Measure the voltage between keyless CM harness-side connector terminal 2A, 2C, 2E and body ground. Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness.

STEP	INSPECTION	RESULTS	ACTION
14	Turn the ignition switch off. Disconnect the coil connector. Turn the ignition switch to the ON position. (Engine off.) Measure the voltage between coil harness-side connector terminal D and body ground. Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness.
15	Inspect the following wiring harnesses and connectors. • Between keyless CM terminal 3V and coil A • Between keyless CM terminal 3U and coil B • Between keyless CM terminal 3X and PCM 1AM • Between keyless CM terminal 3W and PCM 1AI Is there any malfunction (open or short circuit, terminal corrosion, etc.)?	Yes	Repair or replace malfunctioning part.
		No	Go to the next step.
16	Inspect for the following: • Fuel quality (proper octane, contamination, winter/summer blend) • Intake-air system leakage and restriction • Electrical connectors • Fuses • Fuel leakage • Vacuum leakage • Poor connection for PCM ground and body ground Are all items normal?	Yes	Go to the next step.
		No	Service if necessary. Repeat Step 16.
17	Perform the self-test function using the M-MDS. Turn the ignition switch to the ON position. Retrieve any DTCs. Is a DTC displayed?	Yes	DTC is displayed: Go to the appropriate DTC test. (See 01-02B-14 DTC TABLE[L3 WITH TC].)
		No	No DTC is displayed: Go to the next step.
18	Access the ECT PID using the M-MDS. Verify that the ECT PID is **less than 116°C {241°F}** during driving. Is the ECT PID less than specified?	Yes	Go to the next step.
		No	The cause of this concern could be from the cooling system overheating. Perform the symptom troubleshooting "NO.17 COOLING SYSTEM CONCERNS - OVERHEATING." (See 01-03B-60 NO.17 COOLING SYSTEM CONCERNS-OVERHEATING[L3 WITH TC].)
19	Does the engine start with throttle close?	Yes	Go to the next step.
		No	Go to Step 25.
20	Perform the Variable Valve Timing Control System Operation Inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the variable valve timing control system work properly?	Yes	Inspect the valve timing.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
21	Will the engine start and run smoothly at part throttle?	Yes	Go to the next step.
		No	Go to Step 23.
22	Perform the TP sweep inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the electronic throttle control system work properly?	Yes	Visually inspect the throttle body (damaged/ scratching.) If normal, go to the next step.
		No	Inspect or replace the malfunctioning parts, according the to inspection results.
23	Access the RPM PID using the M-MDS. Is the RPM PID indicating engine speed when the cranking engine.	Yes	Go to the next step.
		No	Inspect the CKP sensor for following; • Installation condition (See 01-40B-44 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION[L3 WITH TC].) • Damaged trigger wheel and camshaft • Open or short circuit in wiring harnesses Is there any malfunction detected?

STEP	INSPECTION	RESULTS	ACTION
24	Inspect CMP sensor for the following; • Installation condition (See 01-40B-47 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/ INSTALLATION[L3 WITH TC].) • Damaged trigger wheel and camshaft • Open or short circuit in wiring harnesses Is there any malfunction detected?	Yes	Repair or replace the malfunctioning part according inspection results.
		No	Go to the next step.
25	Perform the EGR system operation inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does EGR system operate properly?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
26	Perform the Purge Control System Operation inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the purge solenoid valve work properly?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
27	Access and monitor the following PIDs using the data monitor function. • ECT • APP • MAF • O2S11 • O2S12 • LONGFT1 • SHTFT1 Do the PIDs indicate the correct values under the malfunction condition? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to the next step.
		No	Inspect and repair or replace suspected parts and the related harnesses. If the malfunction remains, perform the intermittent concern troubleshooting procedure. (See 01-03B-77 INTERMITTENT CONCERN TROUBLESHOOTING[L3 WITH TC].)
28	Inspect for restriction in the exhaust system and three-way catalytic converter (TWC). Is there any restriction?	Yes	Replace malfunctioning part.
		No	Go to the next step.
29	Remove and shake the PCV valve. Does the PCV valve rattle?	Yes	Go to the next step.
		No	Replace the PCV valve.
30	Perform the spark test. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
31	Access and monitor the FUEL_PRES PID. Is the FUEL_PRES PID value within the specification? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to Step 38.
		No	Go to the next step.
32	Replace the high pressure fuel pump. MOnitor FUEL_PRES PID. Is the FUEL_PRES PID value within the specified? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Troubleshooting is completed. Go to Step 37.
		No	Go to the next step.
33	Inspect the fuel pressure sensor. (See 01-40B-38 FUEL PRESSURE SENSOR INSPECTION[L3 WITH TC].) Is the fuel pressure sensor normal?	Yes	Go to the next step.
		No	Replace the delivery pipe.
34	Connect the fuel pressure gauge between the fuel pump and the high pressure fuel pump. Measure the fuel pressure line of the low pressure side. (See 01-14B-6 FUEL LINE PRESSURE INSPECTION[L3 WITH TC].) Is the fuel pressure within the specification?	Yes	Go to the next step.
		No	Inspect for the following: • Fuel line restriction • Fuel filter clogging If normal, replace the fuel pump.
35	Inspect the fuel injector for each cylinder. (See 01-14B-33 FUEL INJECTOR INSPECTION[L3 WITH TC].) Are the fuel injectors normal?	Yes	Go to the next step.
		No	Replace the suspected fuel injector. (See 01-14B-30 FUEL INJECTOR REMOVAL/ INSTALLATION[L3 WITH TC].)

STEP	INSPECTION	RESULTS	ACTION
36	Measure the compression pressure for each cylinder. (See 01-10B-9 COMPRESSION INSPECTION[L3 WITH TC].) Are the compression pressures within the specification?	Yes	Replace the injector driver module. If the problem remains, overhaul the engine.
		No	Inspect for the following: • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper valve timing Service if necessary.
37	Verify test results. • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

NO.7 SLOW RETURN TO IDLE[L3 WITH TC]

id010339801300

7	SLOW RETURN TO IDLE
DESCRIPTION	• Engine takes more time than normal to return to idle speed. • Engine speed continues at fast idle after warm-up
POSSIBLE CAUSE	• ECT sensor or related circuit malfunction • Thermostat is stuck open • Fuel injection timing is incorrect • Erratic signal from CKP sensor • Erratic signal from CMP sensor • Accelerator position sensor or related circuit malfunction • Air suction in intake-air system • MAF sensor or related circuit malfunction • Fuel pressure sensor or related circuit malfunction • Excessive fuel pressure • Relief valve malfunction (built-in delivery pipe) • Fuel injector malfunction • Cooling fan control system malfunction • Improper load signal input **Warning** **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE REPAIR PROCEDURE" and "AFTER REPAIR PROCEDURE" described in this manual.** **(See 01-14B-4 BEFORE SERVICE PRECAUTION[L3 WITH TC].)** **(See 01-14B-5 AFTER SERVICE PRECAUTION[L3 WITH TC].)** **Caution** • **Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Inspect air suction in intake-air system components while racing engine to higher speed. Is any air suction?	Yes	Repair or replace as necessary.
		No	Go to the next step.
2	Perform the self-test function using the M-MDS. Turn the ignition switch to the ON position. Retrieve any DTCs. Is a DTC displayed?	Yes	**DTC is displayed:** Go to the appropriate DTC test.
		No	**No DTC is displayed:** Go to the next step.
3	Access the ECT PID. Start and warm-up engine to normal operating temperature. Is the ECT PID reading **below 82°C {180°F}?**	Yes	Go to the next step.
		No	Go to symptom troubleshooting "NO.18 COOLING SYSTEM CONCERNS, RUNS COLD". (See 01-03B-62 NO.18 COOLING SYSTEM CONCERNS-RUNS COLD[L3 WITH TC].)
4	Verify the cooling fan operation. Does the cooling fan operate properly according ECT PID value?	Yes	Go to the next step.
		No	Perform the Cooling Fan Control System Operation Inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].)
5	Inspect CMP and CKP sensor for the following; • Installation condition (See 01-40B-47 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/ INSTALLATION[L3 WITH TC].) (See 01-40B-44 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/ INSTALLATION[L3 WITH TC].) • Damaged trigger wheel and camshaft • Open or short circuit in the wiring harnesses. Is there any malfunction detected?	Yes	Repair or replace the malfunctioning part according inspection results.
		No	Go to the next step.
6	Access and monitor following the PIDs using the data monitor function. • ECT • APP • MAF • CPP (PCM terminal 1D) • PNP (PCM terminal 1S) • PSP (PCM terminal 2T) Do the PIDs indicate the correct values under trouble condition? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to the next step.
		No	Inspect and repair or replace suspected parts and the related harnesses. If the malfunction remains, perform the intermittent concern troubleshooting procedure. (See 01-03B-77 INTERMITTENT CONCERN TROUBLESHOOTING[L3 WITH TC].)
7	Access and monitor the FUEL_PRES PID. Is the FUEL_PRES PID value within the specification? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to Step 11.
		No	Go to the next step.
8	Is the vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 10.
9	Inspect the fuel pressure sensor. (See 01-14B-6 FUEL LINE PRESSURE INSPECTION[L3 WITH TC].) Is the fuel pressure sensor normal?	Yes	Go to Step 11.
		No	Replace the delivery pipe.
10	Replace the high pressure fuel pump. Monitor FUEL_PRES PID. Is the FUEL_PRES PID value within the specified? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Troubleshooting is completed. Go to Step 13.
		No	Go to the next step.
11	Inspect the fuel injector for each cylinder. (See 01-14B-33 FUEL INJECTOR INSPECTION[L3 WITH TC].) Are fuel injectors normal?	Yes	Go to the next step.
		No	Replace the suspected fuel injector. (See 01-14B-30 FUEL INJECTOR REMOVAL/ INSTALLATION[L3 WITH TC].)

STEP	INSPECTION	RESULTS	ACTION
12	Remove the thermostat and inspection operation. (See 01-12B-10 THERMOSTAT REMOVAL/ INSTALLATION[L3 WITH TC].) (See 01-12B-11 THERMOSTAT INSPECTION[L3 WITH TC].) Is the thermostat normal?	Yes	Inspect and repair or replace the throttle body. If throttle body is normal or the problem remains, replace the injector driver module.
		No	Replace thermostat.
13	Verify test results. • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

NO.8 ENGINE RUNS ROUGH/ROLLING IDLE[L3 WITH TC]

id010339801400

8	ENGINE RUNS ROUGH/ROLLING IDLE
DESCRIPTION	• Engine speed fluctuates between the specified idle speed and lower speed and, engine shakes excessively. • Idle speed is too slow and the engine shakes excessively.

8	ENGINE RUNS ROUGH/ROLLING IDLE
POSSIBLE CAUSE	• Air leakage from intake-air system • A/C system improper operation • Erratic signal to ignition coil • Spark plug malfunction • Purge solenoid valve malfunction • Improper operation of electronic throttle control system • EGR valve malfunction • Low engine compression or excessive unbalance for each cylinder • Improper valve timing • Improper variable valve timing control system • Poor fuel quality • PCV valve malfunction • Intake-air system restriction • Exhaust system or three-way catalytic converter (TWC) restriction or clogging • Disconnected electrical connectors • Inadequate fuel pressure (high or low pressure side) • Fuel pressure sensor or related circuit malfunction • Spill valve control solenoid valve malfunction (built-in high pressure fuel pump) • Relief valve malfunction (built-in delivery pipe) • Fuel pump (low-side) body mechanical malfunction • Fuel filter restriction or clogging • Fuel leakage • Incorrect fuel injection timing • Unbalanced fuel injection amount for each cylinder • High pressure fuel pump malfunction • Fuel injector malfunction • Erratic signal from CKP sensor • Erratic or no signal from CMP sensor • ECT sensor or related circuit malfunction • Manifold absolute pressure (MAP) sensor or related circuit malfunction • Accelerator position sensor or related circuit malfunction • MAF sensor malfunction • Incorrect or no load signal input • Engine overheating • Vacuum leakage **Warning** **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE REPAIR PROCEDURE" and "AFTER REPAIR PROCEDURE" described in this manual.** **(See 01-14B-4 BEFORE SERVICE PRECAUTION[L3 WITH TC].)** **(See 01-14B-5 AFTER SERVICE PRECAUTION[L3 WITH TC].)** **Caution** • **Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Inspect for the following: • Fuel quality (proper octane, contamination, winter/summer blend) • Intake-air system restriction or leakage • Electrical connectors connection • Fuel leakage in fuel system • Vacuum leakage Are all items normal?	Yes	Go to the next step.
		No	Service if necessary. Repeat Step 1.

STEP	INSPECTION	RESULTS	ACTION
2	Perform the self-test function using the M-MDS. Turn the ignition switch to the ON position. Retrieve any DTCs. Is a DTC displayed?	Yes	**DTC is displayed:** Go to the appropriate DTC test. (See 01-02B-14 DTC TABLE[L3 WITH TC].)
		No	**No DTC is displayed:** Go to the next step.
3	Access the ECT PID. Verify that the ECT PID is **less than 116°C {241°F}** during driving. Is the ECT PID less than specified?	Yes	Go to the next step.
		No	The cause of this concern could be from the cooling system overheating. Perform the symptom troubleshooting "NO.17 COOLING SYSTEM CONCERNS - OVERHEATING." (See 01-03B-60 NO.17 COOLING SYSTEM CONCERNS-OVERHEATING[L3 WITH TC].)
4	Perform the A/C Cut-off Operation Inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the A/C Cut-off Operation work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to inspection results.
5	Perform the EGR system operation inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the EGR system operate properly?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
6	Perform the TP sweep inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the electronic throttle control system work properly?	Yes	Visually inspect the throttle body (damaged/ scratching.) If normal, go to the next step.
		No	Inspect or replace the malfunctioning parts, according the to inspection results.
7	Perform the Purge Control System Operation inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the purge solenoid valve work properly?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
8	Perform the Variable Valve Timing Control System Operation Inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the variable valve timing control system work properly?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
9	Inspect CMP and CKP sensor for the following; • Installation condition (See 01-40B-47 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/ INSTALLATION[L3 WITH TC].) (See 01-40B-44 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/ INSTALLATION[L3 WITH TC].) • Damaged trigger wheel and camshaft • Open or short circuit in the wiring harnesses. Is there any malfunction detected?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
10	Connect the M-MDS to the DLC-2. Access and monitor following PIDs using the data monitor function. • ACSW • APP • ECT • MAF • MAP • CPP (PCM terminal 1D) • PNP (PCM terminal 1S) • PSP (PCM terminal 2T) Do the PIDs indicate the correct values under trouble condition? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to the next step.
		No	Inspect and repair or replace suspected parts and the related harnesses. If the malfunction remains, perform the intermittent concern troubleshooting procedure. (See 01-03B-77 INTERMITTENT CONCERN TROUBLESHOOTING[L3 WITH TC].)
11	Inspect for restriction in the exhaust system and three-way catalytic converter (TWC). Is there any restriction?	Yes	Replace the malfunctioning part.
		No	Go to the next step.

STEP	INSPECTION	RESULTS	ACTION
12	Remove and shake the PCV valve. Does the PCV valve rattle?	Yes	Go to the next step.
		No	Replace the PCV valve.
13	Perform the spark test. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
14	Access and monitor the FUEL_PRES PID. Is the FUEL_PRES PID value within the specification? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to Step 18.
		No	Go to the next step.
15	Is the vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 17.
16	Inspect the fuel pressure sensor. (See 01-40B-38 FUEL PRESSURE SENSOR INSPECTION[L3 WITH TC].) Is the fuel pressure sensor normal?	Yes	Go to Step 18.
		No	Replace the delivery pipe.
17	Replace the high pressure fuel pump. Monitor FUEL_PRES PID. Is the FUEL_PRES PID value within the specified? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Troubleshooting is completed. Go to Step 21.
		No	Go to the next step.
18	Connect the fuel pressure gauge between the fuel pump and the high pressure fuel pump. Measure the fuel pressure line of the low pressure side. (See 01-40B-7 PCM INSPECTION[L3 WITH TC].) Is the fuel pressure within the specification?	Yes	Go to the next step.
		No	Inspect for the following: • Fuel line restriction • Fuel filter clogging If normal replace the fuel pump.
19	Inspect fuel injector for each cylinder. (See 01-14B-33 FUEL INJECTOR INSPECTION[L3 WITH TC].) Are the fuel injectors normal?	Yes	Go to the next step.
		No	Replace the suspected fuel injector. (See 01-14B-30 FUEL INJECTOR REMOVAL/ INSTALLATION[L3 WITH TC].)
20	Measure the compression pressure for each cylinder. (See 01-10B-9 COMPRESSION INSPECTION[L3 WITH TC].) Are compression pressures within the specification?	Yes	Replace the injector driver module. If the problem remains, overhaul the engine.
		No	Inspect for the following: • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper valve timing Service if necessary.
21	Verify test results. • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

NO.9 FAST IDLE/RUNS ON[L3 WITH TC]

id010339801500

9	FAST IDLE/RUNS ON
DESCRIPTION	• Engine speed continues at fast idle after warm-up. • Engine runs after the ignition switch is turned off.
POSSIBLE CAUSE	• ECT sensor or related circuit malfunction • Suction control valve (built-in high pressure fuel pump) • Fuel injector malfunction • Air leakage from intake-air system • Throttle body malfunction • Accelerator pedal position sensor or related circuit malfunction • Cruise control system operation improperly • Improper load signal input • Improper operation of electric throttle control system **Warning** **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE REPAIR PROCEDURE" and "AFTER REPAIR PROCEDURE" described in this manual.** **(See 01-14B-4 BEFORE SERVICE PRECAUTION[L3 WITH TC].)** **(See 01-14B-5 AFTER SERVICE PRECAUTION[L3 WITH TC].)** **Caution** • **Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Connect the M-MDS to the DLC. Access the ECT PID. Start and warm-up engine to normal operating temperature. Is ECT PID reading between **82—112 °C {180—234 °F}?**	Yes	Go to the next step.
		No	**ECT PID is higher than 112 °C {234 °F}:** Go to symptom troubleshooting "NO.17 COOLING SYSTEM CONCERNS - OVERHEATING". **ECT PID is less than 82 °C {180 °F}** Go to symptom troubleshooting "NO.18 COOLING SYSTEM CONCERNS - RUNS COLD".
2	Perform the self-test function using the M-MDS. Turn the ignition switch to the ON position. Retrieve any DTCs. Is a DTC displayed?	Yes	**DTC is displayed:** Go to the appropriate DTC test. (See 01-02B-14 DTC TABLE[L3 WITH TC].)
		No	**No DTC is displayed:** Go to the next step.
3	Inspect for leakage in intake-air system. Is there any leakage found?	Yes	Repair or replace for leakage.
		No	Go to the next step.
4	Perform the TP sweep inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the electronic throttle control system work properly?	Yes	Visually inspect the throttle body (damaged/scratching.) If normal, go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
5	Connect the M-MDS to the DLC-2. Access and monitor the following PIDs using the data monitor function. • ECT • APP • ACSW • CPP (PCM terminal 1D) • PNP (PCM terminal 1S) • PSP (PCM terminal 2T) Do the PIDs indicate the correct values under trouble condition? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to the next step.
		No	Inspect and repair or replace suspected parts and the related harnesses. If the malfunction remains, perform the intermittent concern troubleshooting. (See 01-03B-77 INTERMITTENT CONCERN TROUBLESHOOTING[L3 WITH TC].)
6	Inspect the high pressure fuel pump. (See 01-14B-23 HIGH PRESSURE FUEL PUMP INSPECTION[L3 WITH TC].) Is the high pressure fuel pump normal?	Yes	Go to the next step.
		No	Replace the high pressure fuel pump.
7	Inspect the fuel injector for each cylinder. (See 01-14B-33 FUEL INJECTOR INSPECTION[L3 WITH TC].) Are fuel injectors normal?	Yes	Go to the next step.
		No	Replace the suspected fuel injector. (See 01-14B-30 FUEL INJECTOR REMOVAL/INSTALLATION[L3 WITH TC].)
8	Inspect the operation of cruise control system. Does the cruise control system work properly?	Yes	Inspect and repair or replace the injector driver module or related circuit.
		No	Repair or replace the malfunctioning part according to inspection results.
9	Verify test results. • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

NO.10 LOW IDLE/STALLS DURING DECELERATION[L3 WITH TC]

id010339801600

10	LOW IDLE/STALLS DURING DECELERATION
DESCRIPTION	• Engine stops unexpectedly at beginning of deceleration or recovery from deceleration.
POSSIBLE CAUSE	• Poor fuel quality • Vacuum leakage • Improper operation of electronic throttle control system • Air leakage from intake-air system • Intake-air system restriction • EVAP control system malfunction • Improper air/fuel mixture ratio control • Erratic signal from CKP sensor • Erratic signal from CMP sensor • Accelerator position sensor or related circuit malfunction • TP sensor or related circuit malfunction • MAF sensor or related circuit malfunction • Front and/or rear HO2S sensor or related circuit malfunction • Brake switch or related circuit malfunction • Neutral or clutch switch malfunction or related circuit malfunction • Improper A/C magnetic clutch operation • Inadequate fuel pressure (high or low pressure side) • Suction control valve malfunction (built-in high pressure fuel pump) • Relief valve malfunction (built-in delivery pipe) • Fuel leakage • Fuel line restriction • Fuel filter clogging • Incorrect fuel injection timing • High pressure fuel pump malfunction • Fuel injector malfunction • Low engine compression • Improper valve timing • EGR system malfunction • Vacuum leakage • ECT sensor or related circuit malfunction • Fuel pressure sensor or related circuit malfunction **Warning** **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE REPAIR PROCEDURE" and "AFTER REPAIR PROCEDURE" described in this manual.** **(See 01-14B-4 BEFORE SERVICE PRECAUTION[L3 WITH TC].)** **(See 01-14B-5 AFTER SERVICE PRECAUTION[L3 WITH TC].)** **Caution** • **Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Does the engine idle rough?	Yes	Go to symptom troubleshooting "NO.8 ENGINE RUNS ROUGH/ROLLING IDLE". (See 01-03B-34 NO.8 ENGINE RUNS ROUGH/ ROLLING IDLE[L3 WITH TC].)
		No	Go to the next step.
2	Verify the following: • Fuel quality (proper octane, contamination, winter/summer blend) • Intake-air system restriction or leakage • Fuel leakage in fuel system • Vacuum leakage Are all items normal?	Yes	Go to the next step.
		No	Service if necessary. Repeat Step 2.

STEP	INSPECTION	RESULTS	ACTION
3	Inspect CMP and CKP sensor for the following; • Installation condition (See 01-40B-47 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/ INSTALLATION[L3 WITH TC].) (See 01-40B-44 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/ INSTALLATION[L3 WITH TC].) • Damaged trigger wheel and camshaft • Open or short circuit in the wiring harnesses Is there any malfunction detected?	Yes	Repair or replace the malfunctioning part according inspection results.
		No	Go to the next step.
4	Perform the self-test function using the M-MDS. Turn the ignition switch to the ON position. Retrieve any DTCs. Is a DTC displayed?	Yes	**DTC is displayed:** Go to the appropriate DTC test. (See 01-02B-14 DTC TABLE[L3 WITH TC].)
		No	**No DTC is displayed:** Go to the next step.
5	Connect the M-MDS to the DLC-2. Access and monitor the following PIDs using the data monitor function. • ACSW • APP • BOO • ECT • MAF • TP • O2S11 • O2S12 • LONGFT1 • SHTFT1 • PSP (PCM terminal 1D) • CPP (PCM terminal 1S) • PNP (PCM terminal 2T) Do the PIDs indicate the correct values under trouble condition? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to the next step.
		No	Inspect and repair or replace suspected parts and the related harnesses. If the malfunction remains, perform the intermittent concern troubleshooting procedure. (See 01-03B-77 INTERMITTENT CONCERN TROUBLESHOOTING[L3 WITH TC].)
6	Perform the EGR system operation inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the EGR system operate properly?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
7	Perform the TP sweep inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the electronic throttle control system work properly?	Yes	Visually inspect the throttle body (damaged/ scratching.) If normal, go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
8	Perform the Purge Control System Operation inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the purge solenoid valve work properly?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
9	Perform the A/C Cut-off Operation Inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the A/C Cut-off Operation work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to inspection results.
10	Access and monitor the FUEL_PRES PID. Is the FUEL_PRES PID value within the specification? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to Step 14.
		No	Go to the next step.
11	Is the vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 14.
12	Inspect the fuel pressure sensor. (See 01-40B-38 FUEL PRESSURE SENSOR INSPECTION[L3 WITH TC].) Is the fuel pressure sensor normal?	Yes	Go to Step 14.
		No	Replace the delivery pipe.

STEP	INSPECTION	RESULTS	ACTION
13	Replace the high pressure fuel pump Monitor FUEL_PRES PID. Is the FUEL_PRES PID value within the specified? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Troubleshooting is completed. Go to the Step 17.
		No	Go to the next step.
14	Connect the fuel pressure gauge between the fuel pump and the high pressure fuel pump. Measure the fuel pressure line of the low pressure side. (See 01-14B-6 FUEL LINE PRESSURE INSPECTION[L3 WITH TC].) Is the fuel pressure within the specification?	Yes	Go to the next step.
		No	Inspect for the following: • Fuel line restriction • Fuel filter clogging If normal replace the fuel pump.
15	Inspect the fuel injector for each cylinder. (See 01-14B-33 FUEL INJECTOR INSPECTION[L3 WITH TC].) Are fuel injectors normal?	Yes	Go to the next step.
		No	Replace the suspected fuel injector. (See 01-14B-30 FUEL INJECTOR REMOVAL/ INSTALLATION[L3 WITH TC].)
16	Measure the compression pressure for each cylinder. (See 01-10B-9 COMPRESSION INSPECTION[L3 WITH TC].) Are compression pressures within the specification?	Yes	Replace the injector driver module. If the problem remains, overhaul the engine.
		No	Inspect for the following: • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper valve timing Service if necessary.
17	Verify test results. • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

NO.11 ENGINE STALLS/QUITS, ENGINE RUNS ROUGH, MISSES, BUCK/JERK, HESITATION/STUMBLE, SURGES[L3 WITH TC]

id010339801700

11	**ENGINE STALLS/QUITS-ACCELERATION/CRUISE** **ENGINE RUNS ROUGH-ACCELERATION/CRUISE** **BUCK/JERK-ACCELERATION/CRUISE/DECELERATION** **HESITATION/STUMBLE-ACCELERATION** **SURGES-ACCELERATION/CRUISE**
DESCRIPTION	• Engine stops unexpectedly at beginning of acceleration or during cruise. • Engine stops unexpectedly while cruising. • Engine speed fluctuates during acceleration or cruising. • Engine misses during acceleration or cruising. • Vehicle bucks/jerks during acceleration, during or deceleration. • Momentary pause at beginning of acceleration or during acceleration • Momentary minor irregularity in engine output

11	ENGINE STALLS/QUITS-ACCELERATION/CRUISE ENGINE RUNS ROUGH-ACCELERATION/CRUISE BUCK/JERK-ACCELERATION/CRUISE/DECELERATION HESITATION/STUMBLE-ACCELERATION SURGES-ACCELERATION/CRUISE
POSSIBLE CAUSE	• A/C system improper operation • Air leakage from intake-air system • Intake-air system restriction • Purge solenoid valve malfunction • Improper operation of electronic throttle control system • EGR system malfunction • Low engine compression • Turbocharger malfunction • Improper operation of wastegate control system • Vacuum leakage • Poor fuel quality • Main relay intermittent malfunction • Throttle body malfunction • Engine overheating • Spark plug malfunction • Variable swirl system malfunction • Air cleaner restriction • PCV valve malfunction • Improper valve timing due to jumping out timing chain • Exhaust system and/or three-way catalytic converter restriction • Intermittent open or short circuit in fuel pump circuit • Incorrect fuel injection timing • Inadequate fuel pressure (high or low pressure side) • Fuel pressure sensor or related circuit malfunction • Suction control valve malfunction (built-in high pressure fuel pump) • Relief valve malfunction (built-in delivery pipe) • High pressure fuel pump malfunction • Fuel injector malfunction • Improper fuel pump speed control operation • Fuel pump mechanical malfunction • Fuel line restriction or clogging • Improper air/fuel mixture ratio control operation • Erratic or no signal from CMP sensor • Erratic signal from CKP sensor • Front and/or rear HO2S sensor or related circuit malfunction • Accelerator position sensor or related circuit malfunction • MAF sensor or related circuit malfunction • Neutral switch or related circuit malfunction • ECT sensor or related circuit malfunction • Manifold absolute pressure (MAP) sensor or related circuit malfunction • IAT sensor No.1 or related circuit malfunction • IAT sensor No.2 or related circuit malfunction • Intermittent open or short circuit MAF sensor, accelerator position sensor, TP sensor and VSS • Clutch slippage **Warning** **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE REPAIR PROCEDURE" and "AFTER REPAIR PROCEDURE" described in this manual.** **(See 01-14B-4 BEFORE SERVICE PRECAUTION[L3 WITH TC].)** **(See 01-14B-5 AFTER SERVICE PRECAUTION[L3 WITH TC].)** Caution • **Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Inspect for the following: • Fuel quality (proper octane, contamination, winter/summer blend) • Air leakage from intake-air system • Intake-air system restriction • Air cleaner element • Clutch slippage • Fuel leakage from fuel line • Vacuum leakage Are all items normal?	Yes	Go to the next step.
		No	Service if necessary. Repeat Step 1.
2	Perform the self-test function using the M-MDS. Turn the ignition switch to the ON position. Retrieve any DTCs. Is a DTC displayed?	Yes	**DTC is displayed:** Go to the appropriate DTC test. (See 01-02B-14 DTC TABLE[L3 WITH TC].)
		No	**No DTC is displayed:** Go to the next step.
3	Access the ECT PID. Verify that the ECT PID is **less than 116°C {241°F}** during driving. Is the ECT PID less than specified?	Yes	Go to the next step.
		No	The cause of this concern could be from the cooling system overheating. Perform the symptom troubleshooting "NO.17 COOLING SYSTEM CONCERNS - OVERHEATING." (See 01-03B-60 NO.17 COOLING SYSTEM CONCERNS-OVERHEATING[L3 WITH TC].)
4	Perform the Main Relay Operation Inspection with wiggle the related harness. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the main relay operate properly?	Yes	Go to the next step.
		No	Repair or replace for the intermittent fault.
5	Inspect CMP and CKP sensor for the following; • Installation condition (See 01-40B-47 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/ INSTALLATION[L3 WITH TC].) (See 01-40B-44 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/ INSTALLATION[L3 WITH TC].) • Damaged trigger wheel and camshaft • Open or short circuit in the wiring harnesses Is there any malfunction detected?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
6	Connect the M-MDS to DLC-2. Access and monitor following PIDs using the data monitor function while wiggle the harness and under trouble condition. • APP • ECT • MAF • IAT • IAT2 • MAP • FP • VSS • O2S11 • O2S12 • LONGFT1 • SHTFT1 • CPP (PCM terminal 1S) • PNP (PCM terminal 2T) Do the PIDs indicate correct values? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to the Step 13.
		No	Inspect and repair or replace suspected parts and related harnesses. If the malfunction remains, perform the intermittent concern troubleshooting. (See 01-03B-77 INTERMITTENT CONCERN TROUBLESHOOTING[L3 WITH TC].) If the MAP PID remains without specified, go to the next step.
7	Perform the EGR system operation inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does EGR system operate properly?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.

STEP	INSPECTION	RESULTS	ACTION
8	Perform the A/C Cut-off Operation Inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the A/C Cut-off Operation work properly?	Yes	Go to the next step.
		No	Repair or replace malfunctioning parts, according to inspection results.
9	Perform the TP sweep inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the electronic throttle control system work properly?	Yes	Visually inspect the throttle body (damaged/ scratching.) If normal, go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
10	Perform the Variable Swirl Control System Operation Inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the variable swirl system work properly?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
11	Perform the Purge Control System Operation Inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the purge control system work properly?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
12	Perform the Fuel Pump Speed Control Inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the fuel pump speed control work properly?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
13	Perform the Wastegate Control System Operation Inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the wastegate control system work properly?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
14	Remove the parts necessary to inspect turbocharger without remove the turbocharger. Inspect if turbocharger compressor wheel is bent, damaged, or interfering with housing on vehicle. (See 01-13B-18 TURBOCHARGER INSPECTION[L3 WITH TC].) Is there any problem?	Yes	Replace the turbocharger.
		No	Go to the next step.
15	Inspect the turbocharger compressor wheel locknut is loose or has fallen down inside turbocharger. Is there any problem?	Yes	Replace the turbocharger.
		No	Go to the next step.
16	Inspect if turbocharger compressor wheel by hand. Does the wheel turn easily and smoothly?	Yes	Go to the next step.
		No	Replace the turbocharger.
17	Inspect the turbocharger turbine wheel is damaged, cracked or interfering with housing on vehicle. **Note** • Inspect all fins on each turbine wheel. Is there any problem?	Yes	Replace the turbocharger.
		No	Go to the next step.
18	Is any engine oil found inside turbocharger turbine housing?	Yes	**Excessive amount of oil is found:** Replace the turbocharger. **Small amount of oil is found:** Wipe oil out of vehicle, then go to the next step.
		No	Go to the next step.
19	Is any engine oil found inside turbocharger compressor housing?	Yes	Wipe oil out vehicle and install all removed parts in Step 14. Then, go to the next step.
		No	Turbocharger is normal. Install all parts removed in Step 14. Then, go to the next step.

STEP	INSPECTION	RESULTS	ACTION
20	Inspect for restriction in the exhaust system and three-way catalytic converter (TWC). Is there any restriction?	Yes	Replace the malfunctioning part.
		No	Go to the next step.
21	Remove and shake the PCV valve. Does the PCV valve rattle?	Yes	Go to the next step.
		No	Replace the PCV valve.
22	Perform the spark test. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
23	Access and monitor the FUEL_PRES PID. Is the FUEL_PRES PID value within the specification? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to Step 27.
		No	Go to the next step.
24	Is the vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step.26.
25	Inspect the fuel pressure sensor. (See 01-40B-38 FUEL PRESSURE SENSOR INSPECTION[L3 WITH TC].) Is the fuel pressure sensor normal?	Yes	Go to the Step 27.
		No	Replace the delivery pipe.
26	Replace the high pressure fuel pump. Monitor FUEL_PRES PID. Is the FUEL_PRES PID value within the specified? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Troubleshooting is completed. Go to Step 30.
		No	Go to the next step.
27	Connect the fuel pressure gauge between the fuel pump and the high pressure fuel pump. Measure the fuel pressure line of the low pressure side. (See 01-14B-6 FUEL LINE PRESSURE INSPECTION[L3 WITH TC].) Is the fuel pressure with in the specification?	Yes	Go to the next step.
		No	Inspect for the following: • Fuel line restriction • Fuel filter clogging If normal replace the fuel pump.
28	Inspect the fuel injector for each cylinder. (See 01-14B-33 FUEL INJECTOR INSPECTION[L3 WITH TC].) Are fuel injectors normal?	Yes	Go to the next step.
		No	Replace the suspected fuel injector. (See 01-14B-30 FUEL INJECTOR REMOVAL/ INSTALLATION[L3 WITH TC].)
29	Measure the compression pressure for each cylinder. (See 01-10B-9 COMPRESSION INSPECTION[L3 WITH TC].) Are compression pressures within the specification?	Yes	Replace the injector driver module. If the problem remains, overhaul the engine.
		No	Inspect for the following: • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper valve timing Service if necessary.
30	Verify test results. • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

NO.12 LACK/LOSS OF POWER (ACCELERATION/CRUISE)[L3 WITH TC]

id010339801800

12	LACK/LOSS OF POWER — ACCELERATION/CRUISE
DESCRIPTION	Performance is poor under load (e.g., powers down when climbing hills).
POSSIBLE CAUSE	• Improper A/C system operation • Improper operation of A/C cut-off control • Air leakage or restriction from intake-air system • Loose turbocharger compressor-to-intake manifold duct connecting • Turbocharger rotating assembly binding or dragging • Wastegate valve malfunction (stuck open) • Turbocharger malfunction • Charge air cooler malfunction • Variable swirl system malfunction • Improper operation of electronic throttle control system • Purge solenoid valve malfunction • EGR system malfunction • Brake dragging • Low engine compression • Poor fuel quality • Vacuum leakage • Incorrect signal to ignition coil • Spark plug malfunction • Engine overheating • Throttle body malfunction • Air cleaner restriction or dirty • PCV valve malfunction • Improper valve timing due to jumping out of timing chain • Improper operation of variable valve timing control system • Restriction in exhaust system or three-way catalytic converter (TWC) • Leakage at exhaust manifold or turbocharger mounting flange • Intermittent open or short fuel pump related circuit • Inadequate fuel pressure (high-or low pressure side) • Fuel pressure sensor or related circuit malfunction • Suction control valve or related circuit malfunction (built-in high pressure fuel pump) • Relief valve malfunction (built-in delivery pipe) • High pressure fuel pump malfunction • Improper fuel pump speed control operation • Fuel pump mechanical malfunction • Fuel line restriction or clogging • Fuel injector malfunction • Incorrect fuel injection timing • Erratic signal from CKP sensor • Erratic or no signal from CMP sensor • ECT sensor or related circuit malfunction • Manifold absolute pressure (MAP) sensor or related circuit malfunction • Accelerator position sensor or related circuit malfunction • MAF/IAT sensor or related circuit malfunction • IAT sensor No.2 or related circuit malfunction • Intermittent open or short circuit MAF sensor, accelerator position sensor, TP sensor and VSS • Clutch slippage **Warning** **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE REPAIR PROCEDURE" and "AFTER REPAIR PROCEDURE" described in this manual.** **(See 01-14B-4 BEFORE SERVICE PRECAUTION[L3 WITH TC].)** **(See 01-14B-5 AFTER SERVICE PRECAUTION[L3 WITH TC].)** **Caution** • **Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Verify the following: • Fuel quality (proper octane, contamination, winter/summer blend) • Air cleaner restriction or dirty • Intake-air system restriction or leakage • Charge air cooler condition (restriction or damaged) • Turbocharger compressor-to-intake manifold duct loose connection • Leakage at exhaust manifold or turbocharger mounting flange • Vacuum leakage • Clutch slippage • Brake dragging Are all items normal?	Yes	Go to the next step.
		No	Service if necessary. Repeat Step 1.
2	Perform the self-test function using the M-MDS. Turn the ignition switch to the ON position. Retrieve any DTCs. Is a DTC displayed?	Yes	**DTC is displayed:** Go to the appropriate DTC test. (See 01-02B-14 DTC TABLE[L3 WITH TC].)
		No	**No DTC is displayed:** Go to the next step.
3	Is the engine overheating?	Yes	Go to symptom troubleshooting "NO.17 COOLING SYSTEM CONCERN-OVERHEATING." (See 01-03B-60 NO.17 COOLING SYSTEM CONCERNS-OVERHEATING[L3 WITH TC].)
		No	Go to the next step.
4	Perform the EGR system operation inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the EGR system operate properly?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
5	Perform the A/C Cut-off Operation Inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the A/C Cut-off Operation work properly?	Yes	Go to the next step.
		No	Repair or replace malfunctioning parts, according to the inspection results.
6	Perform the TP sweep inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the variable swirl system work properly?	Yes	Visually inspect throttle body (damaged/scratching.) If normal, go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
7	Perform the Variable Swirl Control System Operation Inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].)	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
8	Perform the Variable Valve Timing Control System Operation Inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the variable valve timing control system work properly?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
9	Perform the Purge Control System Operation Inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the purge control system work properly?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
10	Perform Fuel Pump Speed Control Inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the fuel pump speed control work properly?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
11	Perform the Wastegate Control System Operation Inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the wastegate control system work properly?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.

STEP	INSPECTION	RESULTS	ACTION
12	Connect the M-MDS to DLC-2. Access and monitor following PIDs using the data monitor function. • ECT • MAF • IAT • IAT2 • APP • TP • MAP • FP (Low side pressure line) • VSS Do the PIDs indicate correct values under trouble condition? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to the next step.
		No	Inspect and repair or replace suspected parts and related harnesses. If the malfunction remains, perform the intermittent concern troubleshooting procedure. (See 01-03B-77 INTERMITTENT CONCERN TROUBLESHOOTING[L3 WITH TC].)
13	Inspect CMP and CKP sensor for following; • Installation condition (See 01-40B-47 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/ INSTALLATION[L3 WITH TC].) (See 01-40B-44 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/ INSTALLATION[L3 WITH TC].) • Damaged trigger wheel and camshaft • Open or short circuit in wiring harnesses Is there any malfunction detected?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
14	Remove and shake PCV valve. Does the PCV valve rattle?	Yes	Go to the next step.
		No	Replace the PCV valve.
15	Inspect spark plug condition. Is spark plug wet, covered with carbon or grayish white?	Yes	Spark plug is wet or covered with carbon: Perform the Spark Test and repair or replace malfunctioning part according to inspection result. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Spark plug is grayish white: Go to Step 23.
		No	Install spark plugs on original cylinders. Go to the next step.
16	Inspect for restriction in exhaust system and three-way catalytic converter (TWC). Is there any restriction?	Yes	Replace malfunctioning part.
		No	Go to the next step.
17	Remove parts necessary to inspect turbocharger without remove the turbocharger. Inspect if turbocharger compressor wheel is bent, damaged, or interfering with housing on vehicle. (See 01-13B-18 TURBOCHARGER INSPECTION[L3 WITH TC].) Is there any problem?	Yes	Replace turbocharger.
		No	Go to the next step.
18	Inspect turbocharger compressor wheel locknut is loose or has fallen down inside turbocharger. Is there any problem?	Yes	Replace turbocharger.
		No	Go to the next step.
19	Inspect if turbocharger compressor wheel by hand. Does wheel turn easily and smoothly?	Yes	Go to the next step.
		No	Replace turbocharger.
20	Inspect turbocharger turbine wheel is damaged, cracked or interfering with housing on vehicle. **Note** • Inspect all fins on each turbine wheel. Is there any problem?	Yes	Replace turbocharger.
		No	Go to the next step.

STEP	INSPECTION	RESULTS	ACTION
21	Is any engine oil found inside turbocharger turbine housing?	Yes	Excessive amount of oil is found: Replace turbocharger. Small amount of oil is found: Wipe oil out of vehicle, then Go to the next step.
		No	Go to the next step.
22	Is any engine oil found inside turbocharger compressor housing?	Yes	Wipe oil out vehicle and install all removed parts in Step 16. Then, Go to the next step.
		No	Turbocharger is normal. Install all parts removed in Step 17. Then, Go to the next step.
23	Inspect for leakage in fuel line. Is there any fuel leakage found?	Yes	Repair or replace suspected part.
		No	Go to the next step.
24	Access and monitor FUEL_PRES PID. Is the FUEL_PRES PID value within the specification? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to Step 27.
		No	Go to the next step.
25	Replace the high pressure fuel pump. Monitor FUEL_PRES PID. Is the FUEL_PRES PID value within the specified? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Troubleshooting is completed. Go to Step 30.
		No	Go to the next step.
26	Inspect the fuel pressure sensor. (See 01-40B-38 FUEL PRESSURE SENSOR INSPECTION[L3 WITH TC].) Is the fuel pressure sensor normal?	Yes	Go to the next step.
		No	Replace the delivery pipe.
27	Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. Measure the fuel pressure line of the low pressure side. (See 01-14B-6 FUEL LINE PRESSURE INSPECTION[L3 WITH TC].) Is the fuel pressure within the specification?	Yes	Go to the next step.
		No	Inspect for the following: • Fuel line restriction • Fuel filter clogging If normal replace the fuel pump.
28	Inspect fuel injector for each cylinder. (See 01-14B-33 FUEL INJECTOR INSPECTION[L3 WITH TC].) Are fuel injectors normal?	Yes	Go to the next step.
		No	Replace suspected fuel injector. (See 01-14B-30 FUEL INJECTOR REMOVAL/ INSTALLATION[L3 WITH TC].)
29	Measure compression pressure for each cylinder. (See 01-10B-9 COMPRESSION INSPECTION[L3 WITH TC].) Are compression pressures within the specification?	Yes	Replace the injector driver module. If the problem remains, overhaul the engine.
		No	Inspect for the following: • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper valve timing Service if necessary.
30	Verify test results. • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

NO.13 KNOCKING/PINGING[L3 WITH TC]

id010339801900

13	KNOCKING/PINGING
DESCRIPTION	Sound is produced when air/fuel mixture is ignited by something other than a spark plug (e.g., hot spot in the combustion chamber).
POSSIBLE CAUSE	• Poor fuel quality • Engine overheating due to cooling system malfunction • Variable swirl valve stuck closed • Improper operation of electronic throttle system • Air leakage or restriction from intake-air system • ECT sensor or related circuit malfunction • MAF sensor or related circuit malfunction • IAT sensor No.1 or related circuit malfunction • IAT sensor No.2 or related circuit malfunction • Incorrect fuel injection timing or amount • Fuel injector malfunction • Knock sensor or related circuit malfunction • Ignition system malfunction • Erratic signal from CMP sensor • Inadequate engine compression • Inadequate fuel pressure (high-pressure side) • Manifold absolute pressure (MAP) sensor or related malfunction • Wastegate valve malfunction (stuck closed) • Charge air cooler malfunction • Fuel pressure sensor or related circuit malfunction • Accelerator position sensor or related circuit malfunction • Suction control valve malfunction (built-in high pressure fuel pump) • Exhaust system and/or three-way catalytic converter (TWC) restriction • EGR system malfunction **Warning** **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE REPAIR PROCEDURE" and "AFTER REPAIR PROCEDURE" described in this manual.** **(See 01-14B-4 BEFORE SERVICE PRECAUTION[L3 WITH TC].)** **(See 01-14B-5 AFTER SERVICE PRECAUTION[L3 WITH TC].)** **Caution** • **Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Connect the M-MDS to the DLC-2. Access the ECT PID. Verify that the ECT PID is less than 116°C {241°F} during driving. Is ECT PID less than specified?	Yes	Go to the next step.
		No	The cause of this concern could be from the cooling system overheating. Perform the symptom troubleshooting "NO.17 COOLING SYSTEM CONCERNS - OVERHEATING." (See 01-03B-60 NO.17 COOLING SYSTEM CONCERNS-OVERHEATING[L3 WITH TC].)
2	Inspect for the following: • Air leakage or restriction from intake-air system • Fuel quality (proper octane, contamination, winter/summer blend) • Exhaust system and/or three-way catalytic converter (TWC) restriction • Charge air cooler condition (restriction or damaged) Are all items normal?	Yes	Go to the next step.
		No	Service if necessary. Repeat Step 2.

STEP	INSPECTION	RESULTS	ACTION
3	Perform the self-test function using the M-MDS. Turn the ignition switch to the ON position. Retrieve any DTCs. Is a DTC displayed?	Yes	**DTC is displayed:** Go to the appropriate DTC test. (See 01-02B-14 DTC TABLE[L3 WITH TC].)
		No	**No DTC is displayed:** Go to the next step.
4	Inspect the knock sensor. (See 01-40B-49 KNOCK SENSOR (KS) INSPECTION[L3 WITH TC].) Is the knock sensor normal?	Yes	Go to the next step.
		No	Replace the knock sensor. (See 01-40B-49 KNOCK SENSOR (KS) INSPECTION[L3 WITH TC].)
5	Perform the EGR system operation inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the EGR system operate properly?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
6	Perform the TP sweep inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the electronic throttle control system work properly?	Yes	Visually inspect the throttle body (damaged/ scratching.) If normal, go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
7	Perform the Variable Swirl Control System Operation Inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the variable swirl system work properly?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
8	Perform the Wastegate Control System Operation Inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the wastegate control system work properly?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
9	Perform the spark test. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
10	Inspect CMP and CKP sensor for the following; • Installation condition (See 01-40B-47 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/ INSTALLATION[L3 WITH TC].) (See 01-40B-44 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/ INSTALLATION[L3 WITH TC].) • Damaged trigger wheel and camshaft • Open or short circuit in the wiring harnesses Is there any malfunction detected?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
11	Connect the M-MDS to the DLC-2. Access and monitor the following PIDs using the data monitor function. • ECT • MAF • IAT • IAT2 • APP • TP • MAP Do the PIDs indicate correct values under trouble condition? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to the next step.
		No	Inspect and repair or replace suspected parts and the related harnesses. If the malfunction remains, perform the intermittent concern troubleshooting procedure. (See 01-03B-77 INTERMITTENT CONCERN TROUBLESHOOTING[L3 WITH TC].)
12	Access and monitor FUEL_PRES PID. Is the FUEL_PRES PID value within the specification? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to Step 16.
		No	Go to the next step.
13	Is the vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to the Step 15.

STEP	INSPECTION	RESULTS	ACTION
14	Inspect the fuel pressure sensor. (See 01-40B-38 FUEL PRESSURE SENSOR INSPECTION[L3 WITH TC].) Is the fuel pressure sensor normal?	Yes	Go to Step 16.
		No	Replace the delivery pipe.
15	Replace the high pressure fuel pump. Monitor FUEL_PRES PID. Is the FUEL_PRES PID value within the specified? (See 01-40B-38 FUEL PRESSURE SENSOR INSPECTION[L3 WITH TC].)	Yes	Troubleshooting is completed. Go to Step 17.
		No	Go to the next step.
16	Measure compression pressure for each cylinder. (See 01-10B-9 COMPRESSION INSPECTION[L3 WITH TC].) Are compression pressure within the specified?	Yes	Inspect fuel injector for each cylinder. (See 01-14B-33 FUEL INJECTOR INSPECTION[L3 WITH TC].)
		No	Inspect following: • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper valve timing Service as necessary.
17	Verify test results. • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

NO.14 POOR FUEL ECONOMY[L3 WITH TC]

id010339802000

14	POOR FUEL ECONOMY
DESCRIPTION	Fuel economy is unsatisfactory.
POSSIBLE CAUSE	• Contaminated air cleaner element • Engine cooling system malfunction • Weak spark • Spark plug malfunction • Poor fuel quality • Erratic signal from CKP sensor • Erratic or no signal from CMP sensor • Fuel pressure sensor or related circuit malfunction • ECT sensor or related circuit malfunction • Manifold absolute pressure (MAP) sensor or related circuit malfunction • Accelerator position sensor or related circuit malfunction • MAF sensor or related circuit malfunction • Contaminated MAF sensor • IAT sensor No.1 or related circuit malfunction • IAT sensor No.2 or related circuit malfunction • VSS or related circuit malfunction • Variable swirl system malfunction • Improper coolant level • Inadequate fuel pressure (high-pressure side) • Injection timing is incorrect • Fuel injector or related circuit malfunction • High pressure fuel pump malfunction • Fuel leakage • Fuel line restriction • Fuel filter clogging • PCV valve malfunction • Brake dragging • Clutch slippage • A/C system improper operation • Improper valve timing due to jumping out of timing chain • Improper engine compression • Turbocharger malfunction • Charge air cooler malfunction • Exhaust system and/or three-way catalytic converter clogging • EGR system malfunction • Vacuum leakage **Warning** **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE REPAIR PROCEDURE" and "AFTER REPAIR PROCEDURE" described in this manual.** **(See 01-14B-4 BEFORE SERVICE PRECAUTION[L3 WITH TC].)** **(See 01-14B-5 AFTER SERVICE PRECAUTION[L3 WITH TC].)** **Caution** • **Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Inspect for the following: • Air cleaner element for contamination • Intake-air system restriction • Fuel quality (proper octane, contamination, winter/summer blend) • Coolant level • Brake dragging • Clutch slippage • Charge air cooler condition (restriction or damaged) • Vacuum leakage • Fuel leakage • MAF sensor contaminated • Exhaust system and/or three-way catalytic converter restriction Are all items normal?	Yes	Go to the next step.
		No	Service if necessary. Repeat Step 1.
2	Perform the self-test function using the M-MDS. Turn the ignition switch to the ON position. Retrieve any DTCs. Is a DTC displayed?	Yes	DTC is displayed: Go to the appropriate DTC test. (See 01-02B-14 DTC TABLE[L3 WITH TC].)
		No	No DTC is displayed: Go to the next step.
3	Perform the Cooling Fan Control System Operation Inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the EGR system operate properly?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
4	Perform the EGR system operation inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the EGR system operate properly?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
5	Perform the Variable Swirl Control System Operation Inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the variable swirl system work properly?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
6	Perform the Wastegate Control System Operation Inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the wastegate control system work properly?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
7	Perform the A/C Cut-off Operation Inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the A/C Cut-off Operation work properly?	Yes	Go to the next step.
		No	Repair or replace malfunctioning parts, according to the inspection results.
8	Remove and shake the PCV valve. Does the PCV valve rattle?	Yes	Go to the next step.
		No	Replace the PCV valve.
9	Perform the spark test. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Is the strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
10	Inspect CMP and CKP sensor for the following; • Installation condition (See 01-40B-47 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/ INSTALLATION[L3 WITH TC].) (See 01-40B-44 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/ INSTALLATION[L3 WITH TC].) • Damaged trigger wheel and camshaft • Open or short circuit in the wiring harnesses Is there any malfunction detected?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.

STEP	INSPECTION	RESULTS	ACTION
11	Connect the M-MDS to the DLC-2. Access and monitor following PIDs using the data monitor function. • ECT • MAF • IAT • IAT2 • APP • TP • CPP (PCM terminal 1D) • PNP (PCM terminal 1S) • MAP • VSS Do the PIDs indicate the correct values according to the engine operating condition? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to the next step.
		No	Inspect and repair or replace suspected parts and the related harnesses. If the malfunction remains, perform the intermittent concern troubleshooting procedure. (See 01-03B-77 INTERMITTENT CONCERN TROUBLESHOOTING[L3 WITH TC].)
12	Access and monitor the FUEL_PRES PID. Is the FUEL_PRES PID value within the specification? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to Step 16.
		No	Go to the next step.
13	Is the vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 15.
14	Inspect the fuel pressure sensor. (See 01-40B-38 FUEL PRESSURE SENSOR INSPECTION[L3 WITH TC].) Is the fuel pressure sensor normal?	Yes	Go to Step 16.
		No	Replace the delivery pipe.
15	Replace the high pressure fuel pump. Monitor FUEL_PRES PID. Is the FUEL_PRES PID value within the specified? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Troubleshooting is completed. Go to Step 19.
		No	Go to the next step.
16	Inspect the turbocharger. (See 01-13B-18 TURBOCHARGER INSPECTION[L3 WITH TC].) Is there any problem in turbocharger?	Yes	Replace the turbocharger.
		No	Go to the next step.
17	Inspect the fuel injector for each cylinder. (See 01-14B-33 FUEL INJECTOR INSPECTION[L3 WITH TC].) Are fuel injectors normal?	Yes	Go to the next step.
		No	Replace the suspected fuel injector. (See 01-14B-30 FUEL INJECTOR REMOVAL/ INSTALLATION[L3 WITH TC].)
18	Measure the compression pressure for each cylinder. (See 01-10B-9 COMPRESSION INSPECTION[L3 WITH TC].) Are compression pressures within the specification?	Yes	Replace the injector driver module. If the problem remains, overhaul the engine.
		No	Inspect for the following: • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper valve timing Service if necessary.
19	Verify test results. • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

NO.15 EMISSION COMPLIANCE[L3 WITH TC]

id010339802100

15	EMISSION COMPLIANCE
DESCRIPTION	Fails emissions test.
POSSIBLE CAUSE	• Poor fuel quality • Vacuum lines leakage or blockage • Cooling system malfunction • Engine overheating • Spark plug malfunction • Air leakage from intake-air system • Variable swirl system malfunction • Wastegate control system improper operation • Turbocharger malfunction • Charge air cooler malfunction • Inadequate fuel pressure (high-pressure side) • PCV valve malfunction or incorrect valve installation • EGR system malfunction • Exhaust system and/or three-way catalytic converter restriction • Fuel tank ventilation system malfunction • Charcoal canister damage • Air cleaner element clogging or restriction • Throttle body malfunction • Improper operation of electronic throttle control system • Relief valve malfunction (built-in delivery pipe) • Suction control valve malfunction (built-in high pressure fuel pump) • Improper air/fuel mixture ratio control operation • Erratic or no signal from CMP sensor • Erratic signal from CKP sensor • Front or rear HO2S or related circuit malfunction • ECT or related circuit malfunction • MAF sensor or related circuit malfunction • IAT sensor No.1 or related circuit malfunction • IAT sensor No.2 or related circuit malfunction • Fuel pressure sensor or related circuit malfunction • Accelerator position sensor or related circuit malfunction • TP sensor or related circuit malfunction • Manifold absolute pressure (MAP) sensor or related circuit malfunction • Neutral or clutch switch malfunction • VSS or related circuit malfunction • Fuel line restriction • High pressure fuel pump malfunction • Fuel injector or related circuit malfunction • Incorrect fuel injection timing • Three-way catalytic converter (TWC) malfunction • Engine internal parts malfunction • Excessive carbon is built-up in combustion chamber • Improper engine compression • Improper valve timing **Warning** **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE REPAIR PROCEDURE" and "AFTER REPAIR PROCEDURE" described in this manual.** **(See 01-14B-4 BEFORE SERVICE PRECAUTION[L3 WITH TC].)** **(See 01-14B-5 AFTER SERVICE PRECAUTION[L3 WITH TC].)** **Caution** • **Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Is the engine overheating?	Yes	Go to symptom troubleshooting "NO.17 COOLING SYSTEM CONCERNS - OVERHEATING."
		No	Go to the next step.
2	Is the engine runs cold?	Yes	Go to symptom troubleshooting "NO.18 COOLING SYSTEM CONCERNS - RUNS COLD."
		No	Go to the next step.
3	Connect the M-MDS to the DLC. Perform the self-test function using the M-MDS. Turn the ignition switch to the ON position. Retrieve any DTCs. Is a DTC displayed?	Yes	DTC is displayed: Go to appropriate DTC test.
		No	No DTC is displayed: Go to the next step.
4	Inspect for the following. • Fuel quality (proper octane, contamination, winter/summer blend) • Charge air cooler condition (restriction or damaged) • Air cleaner element (clogging or restriction) • Intake-air system leakage • PCV valve installation • Vacuum line leakage or blockage • Fuel leakage at fuel system • Charcoal canister damaged • Exhaust system and/or three-way catalytic converter restriction Are all items normal?	Yes	Go to the next step.
		No	Service if necessary. Repeat Step 4.
5	Perform the EGR system operation inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the EGR system operate properly?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
6	Perform the TP sweep inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the electronic throttle control system work properly?	Yes	Visually inspect the throttle body (damaged/ scratching.) If normal, go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
7	Perform the Variable Swirl Control System Operation Inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the variable swirl system work properly?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
8	Perform the Wastegate Control System Operation Inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the wastegate control system work properly?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
9	Remove and shake the PCV valve. Does the PCV valve rattle?	Yes	Go to the next step.
		No	Replace the PCV valve.
10	Perform the spark test. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
11	Inspect CMP and CKP sensor for the following; • Installation condition (See 01-40B-47 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/ INSTALLATION[L3 WITH TC].) (See 01-40B-44 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/ INSTALLATION[L3 WITH TC].) • Damaged trigger wheel and camshaft • Open or short circuit in the wiring harnesses Is there any malfunction detected?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.

STEP	INSPECTION	RESULTS	ACTION
12	Connect the M-MDS to the DLC-2. Access and monitor the following PIDs using the data monitor function. • ECT • MAF • IAT • IAT2 • APP • TP • MAP • VSS • O2S11 • O2S12 • LONGFT1 • SHTFT1 • CPP (PCM terminal 1D) • PNP (PCM terminal 1S) Do the PIDs indicate the correct values according to the engine operating condition? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to the next step.
		No	Inspect and repair or replace suspected parts and the related harnesses. If the malfunction remains, perform the intermittent concern troubleshooting procedure. (See 01-03B-77 INTERMITTENT CONCERN TROUBLESHOOTING[L3 WITH TC].)
13	Access and monitor the FUEL_PRES PID. Is the FUEL_PRES PID value within the specification? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to Step 18.
		No	Go to the next step.
14	Is the vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 17.
15	Inspect the fuel pressure sensor. (See 01-40B-38 FUEL PRESSURE SENSOR INSPECTION[L3 WITH TC].) Is the fuel pressure sensor normal?	Yes	Go to Step 18.
		No	Replace the delivery pipe.
16	Replace the high pressure fuel pump. Monitor FUEL_PRES PID. Is the FUEL_PRES PID value within the specified? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Troubleshooting is completed. Go to Step 22.
		No	Go to the next step.
17	Inspect the turbocharger. (See 01-13B-18 TURBOCHARGER INSPECTION[L3 WITH TC].) Is there any problem in turbocharger?	Yes	Replace the turbocharger.
		No	Go to the next step.
18	Inspect the three-way catalytic converter (TWC). Is the TWC normal?	Yes	Go to the next step.
		No	Replace the TWC.
19	Inspect the fuel injector for each cylinder. (See 01-14B-33 FUEL INJECTOR INSPECTION[L3 WITH TC].) Are fuel injectors normal?	Yes	Go to the next step.
		No	Replace the suspected fuel injector. (See 01-14B-30 FUEL INJECTOR REMOVAL/INSTALLATION[L3 WITH TC].)
20	Measure the compression pressure for each cylinder. (See 01-10B-9 COMPRESSION INSPECTION[L3 WITH TC].) Are compression pressures within the specification?	Yes	Replace the injector driver module. If the problem remains, overhaul the engine.
		No	Inspect for the following: • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper valve timing Service if necessary.
21	Verify test results. • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

NO.16 HIGH OIL CONSUMPTION/LEAKAGE[L3 WITH TC]

id010339802200

16	HIGH OIL CONSUMPTION/LEAKAGE
DESCRIPTION	Oil consumption is excessive.
POSSIBLE CAUSE	• PCV valve malfunction • Improper dipstick • Improper engine oil viscosity • Engine internal parts malfunction • Seal leakage at the compressor or turbine end of turbocharger (indicated by oil in housing on wheel) • Oil leakage

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Remove and shake the PCV valve. Does the PCV valve rattle?	Yes	Go to the next step.
		No	Replace the PCV valve.
2	Verify the following: • Proper dipstick • Proper engine viscosity • Engine oil level Are all items normal?	Yes	Go to the next step.
		No	Service if necessary. Repeat Step 2.
3	Inspect the oil leakage from outside of the engine. Is there any oil leakage found?	Yes	Repair or replace oil leakage part.
		No	Go to the next step.
4	Remove the parts to necessary to inspect turbocharger without remove the turbocharger. Visually inspect for the oil leakage inside turbocharger compressor and turbine housing. is any engine oil found inside turbocharger compressor or turbine housing?	Yes	Excessive amount of oil is found: Replace the turbocharger. Small amount of oil is found: Wipe oil out of vehicle, then go to the next step.
		No	Go to the next step.
5	Is any engine oil found around oil pipes attached on turbocharger center housing?	Yes	If oil leaks from damaged pipe, replace oil pipe. Install the removed parts at Step 4.
		No	Inspect internal engine parts such as valves, valve guides, valve stem seals, cylinder head drain passage, and piston rings. Then install the removed parts at Step 4.
6	Verify test results. • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

NO.17 COOLING SYSTEM CONCERNS-OVERHEATING[L3 WITH TC]

id010339802300

17	COOLING SYSTEM CONCERNS-OVERHEATING
DESCRIPTION	Engine runs at higher than normal temperature/overheats.
POSSIBLE CAUSE	• Improper coolant level • Blown fuse • Coolant leakage (engine internal, turbocharger, external) • Excessive A/C system pressure • A/C system operation is improper • Improper water/anti-freeze mixture • Fans reverse rotation • Poor radiator condition • Thermostat malfunction • Radiator hose damage • Cooling fan inoperative • Condenser fan inoperative • Improper or damaged radiator cap • Coolant overflow system malfunction • Improper drive belt tension • Drive belt damage

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Inspect for the following: • Engine coolant level • Coolant leakage (around heater unit in passenger compartment, coolant hoses and/or radiator.) • Water and anti-freeze mixture • Radiator condition • Collapsed or restricted radiator hoses • Radiator pressure cap • Coolant overflow system • Fan rotational direction • Fan rotation direction • Fuses Are all items normal?	Yes	Go to the next step.
		No	Service if necessary. Repeat Step 1.Service if necessary.
2	Connect the M-MDS to the DLC-2. Turn the ignition switch to the ON position (Engine off). Retrieve any DTCs. Is there any DTCs displayed?	Yes	DTC is displayed: Go to appropriate DTC test.
		No	No DTC is displayed: Go to the next step.
3	Perform the KOEO and KOER self-test function using the M-MDS. (See 01-02B-9 KOEO/KOER SELF TEST[L3 WITH TC].) Is there any DTCs displayed?	Yes	DTC is displayed: Go to appropriate DTC test.
		No	No DTC is displayed: Go to the next step.
4	Start the engine and run it at idle speed. Turn the A/C switch off. Does the A/C compressor disengaged?	Yes	Go to the next step.
		No	Go to symptom troubleshooting "NO.24 A/C ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY." (See 01-03B-70 NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY[L3 WITH TC].)
5	Perform the Cooling Fan Control System Operation Inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the cooling fan system operate properly?	Yes	Go to the next step.
		No	Repair or replace malfunctioning part, according to inspection results.
6	Is the drive belt normal?	Yes	Go to the next step.
		No	Replace the drive belt.
7	Is there any leakage around heater unit in passenger compartment?	Yes	Inspect and service heater unit for leakage.
		No	Go to the next step.
8	Is there any leakage at coolant hoses and/or radiator?	Yes	Replace the malfunctioning part.
		No	Go to the next step.
9	Cool down the engine. Remove the thermostat and inspect operation. (See 01-12B-10 THERMOSTAT REMOVAL/INSTALLATION[L3 WITH TC].) (See 01-12B-11 THERMOSTAT INSPECTION[L3 WITH TC].) Is thermostat normal?	Yes	Thermostat is normal. Inspect the cylinder block for leakage or blockage.
		No	Access the ECT PID using the M-MDS. Inspect for both ECT PID and temperature gauge readings. If the temperature gauge on instrument cluster indicates normal but ECT PID is not same as temperature gauge reading, inspect the ECT sensor. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) If the temperature gauge on instrument cluster indicates overheating but ECT PID is normal, inspect the instrument cluster. (See 09-22-4 INSTRUMENT CLUSTER INSPECTION.)
10	Verify test results. • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

NO.18 COOLING SYSTEM CONCERNS-RUNS COLD[L3 WITH TC]

id010339802400

18	COOLING SYSTEM CONCERNS-RUNS COLD
DESCRIPTION	Engine takes excessive time to reach normal operating temperature.
POSSIBLE CAUSE	• Thermostat malfunction • Condenser fan system malfunction • Cooling fan system malfunction

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Is customer complaint "Lack of passenger compartment heat" only?	Yes	Inspect the A/C heater system.
		No	Go to the next step.
2	Does the engine speed continue at fast idle?	Yes	Go to symptom troubleshooting "NO.9 FAST IDLE/ RUNS ON." (See 01-03B-38 NO.9 FAST IDLE/RUNS ON[L3 WITH TC].)
		No	Go to the next step.
3	Cool down the engine. Remove the thermostat and inspect operation. (See 01-12B-10 THERMOSTAT REMOVAL/ INSTALLATION[L3 WITH TC].) (See 01-12B-11 THERMOSTAT INSPECTION[L3 WITH TC].) Is thermostat normal?	Yes	Go to the next step.
		No	Replace the thermostat.
4	Perform the Cooling Fan Control System Operation Inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Does the cooling fan system operate properly?	Yes	Access the ECT PID using the M-MDS. Inspect for both ECT PID and temperature gauge readings. If the temperature gauge on instrument cluster indicates normal but ECT PID is not same as temperature gauge reading, inspect the ECT sensor. (See 01-40B-28 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION[L3 WITH TC].) If the temperature gauge on instrument cluster indicates overheating but ECT PID is normal, inspect the instrument cluster. (See 09-22-4 INSTRUMENT CLUSTER INSPECTION.)
		No	Repair or replace malfunctioning part, according to inspection results.
5	Verify test results. • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

NO.19 EXCESSIVE BLACK SMOKE[L3 WITH TC]

id010339802500

19	EXHAUST SMOKE
DESCRIPTION	Blue, black, or smoke from the exhaust system
POSSIBLE CAUSE	**Blue smoke (Burning oil):** • PCV valve malfunction • Engine internal oil leakage • Oil leakage at the compressor or turbine end of the turbocharger **White smoke (Water in combustion):** • Cooling system malfunction (coolant loss) • Engine internal coolant leakage • Coolant leakage at the compressor or the turbine end of the turbocharger **Black smoke (Rich fuel mixture):** • Air cleaner restriction • Intake-air system is collapsed or restricted • Leakage at engine intake or exhaust manifold • Wastegate valve malfunction (stuck open) • Excessive fuel pressure • Improper engine compression • Ignition system malfunction • Improper fuel injection timing and amount **Warning** **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE REPAIR PROCEDURE" and "AFTER REPAIR PROCEDURE" described in this manual.** **(See 01-14B-4 BEFORE SERVICE PRECAUTION[L3 WITH TC].)** **(See 01-14B-5 AFTER SERVICE PRECAUTION[L3 WITH TC].)** **Caution** • **Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	What color is smoke coming from the exhaust system?	Blue	Burning oil is indicated. Go to the next step.
		White	Water in combustion is indicated. Go to the Step 5.
		Black	Rich fuel mixture is indicating. Go to the Step 6.
2	Remove and shake the PCV valve. Does the PCV valve rattle?	Yes	Go to the next step.
		No	Replace the PCV valve.
3	Remove the parts necessary to inspect turbocharger without remove the turbocharger. Visually inspect for the turbocharger compressor housing. Is any engine oil found inside turbocharger compressor housing?	Yes	Install all parts removed in this step. **Perform the following, according to inspection results. Excessive amount of oil is found:** Replace the turbocharger. **Small amount of oil is found:** Wipe oil out of vehicle, then Go to the next step.
		No	Turbocharger is normal. Install all parts removed in this step. Then, Go to the next step.
4	Inspect for the following engine internal parts. • Damaged valve guide, stems or valve seals • Blocked oil drain passage in cylinder head • Piston ring is not seated, seized or worn • Damage cylinder bore Are there ant problem found?	Yes	Repair or replace suspected parts, according to the inspection results.
		No	Engine internal parts are normal. If other driveability symptoms are present, return to diagnostic index to service additional symptoms.

STEP	INSPECTION	RESULTS	ACTION
5	Does cooling system hold the coolant pressure? (See 01-12B-6 COOLING SYSTEM CAP INSPECTION[L3 WITH TC].)	Yes	Inspect for the following: • Cylinder head gasket leakage • Intake manifold gasket leakage • Cracked or porous engine block If other driveability symptoms are present, return to diagnostic index to service additional symptoms.
		No	Inspect for the cause.
6	Inspect for the following for intake-air system. • Air cleaner restriction • Collapsed or restricted • Leakage Are all items normal?	Yes	Go to the next step.
		No	Repair or replace the suspected part.
7	Connect the M-MDS to the DLC-2. Access following PIDs. • ECT • MAF • IAT • IAT2 • APP • TP • MAP • VSS • O2S11 • O2S12 • LONGFT1 • SHTFT1 • PNP (PCM terminal 1S) • CPP (PCM terminal 1D) Monitor the PIDs under the black smoke appeared engine condition. Do all PID indicate normal according to engine conditions?	Yes	Go to the next step.
		No	Inspect and repair or replace suspected parts and the the related harnesses. If the malfunction remains, perform the intermittent concern troubleshooting procedure. (See 01-03B-77 INTERMITTENT CONCERN TROUBLESHOOTING[L3 WITH TC].)
8	Inspect the wastegate. (See 01-13B-17 WASTEGATE ACTUATOR INSPECTION[L3 WITH TC].) Does the wastegate stuck open?	Yes	Perform the wastegate control system operation inspection. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Repair or replace malfunctioning part according to the inspection results.
		No	Go to the next step.
9	Connect the M-MDS to DLC-2. Access and monitor following PIDs using the data monitor function. • ECT • MAF • IAT • IAT2 • APP • TP • MAP • VSS • CPP (PCM terminal 1D) • PNP (PCM terminal 1S) • O2S11 • O2S12 • LONGFT1 • SHTFT1 Do the PIDs indicate correct values under trouble condition? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to the next step.
		No	Inspect and repair or replace suspected parts and related harnesses. If the malfunction remains, perform the intermittent concern troubleshooting procedure. (See 01-03B-77 INTERMITTENT CONCERN TROUBLESHOOTING[L3 WITH TC].)
10	Access and monitor the FUEL_PRES PID. Is the FUEL_PRES PID value within the specification? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to Step 14.
		No	Go to the next step.
11	Is vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 13.

STEP	INSPECTION	RESULTS	ACTION
12	Inspect the fuel pressure sensor. (See 01-40B-38 FUEL PRESSURE SENSOR INSPECTION[L3 WITH TC].) Is the fuel pressure sensor normal?	Yes	Go to Step 14.
		No	Replace the delivery pipe.
13	Replace the high pressure fuel pump. Monitor FUEL_PRES PID. Is the FUEL_PRES PID value within the specified? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Troubleshooting is completed. Retest Step 16.
		No	Go to the next step.
14	Perform the spark test. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to the inspection results.
15	Measure the compression pressure for each cylinder. (See 01-10B-9 COMPRESSION INSPECTION[L3 WITH TC].) Are compression pressures within the specification?	Yes	Inspect the fuel injector for each cylinder. (See 01-14B-33 FUEL INJECTOR INSPECTION[L3 WITH TC].)
		No	Inspect for the following: • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper valve timing Service if necessary.
16	Verify test results. • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

NO.20 FUEL ODOR (IN ENGINE COMPARTMENT)[L3 WITH TC]

id010339802600

20	FUEL ODOR (IN ENGINE COMPARTMENT)
DESCRIPTION	Gasoline fuel smell or visible leakage
POSSIBLE CAUSE	• Excessive fuel pressure • Purge solenoid valve malfunction • Fuel system vent system blockage • Evaporative gas leakage • Improper connection of evaporative related vacuum hoses • Charcoal canister malfunction • Fuel leakage from fuel system **Warning** **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:** **• Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** **• Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE REPAIR PROCEDURE" and "AFTER REPAIR PROCEDURE" described in this manual.** **(See 01-14B-4 BEFORE SERVICE PRECAUTION[L3 WITH TC].)** **(See 01-14B-5 AFTER SERVICE PRECAUTION[L3 WITH TC].)** **Caution** **• Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Visually inspect fuel leakage at fuel line. Is there any fuel leakage?	Yes	Service if necessary.
		No	Go to the next step.
2	Inspect the vacuum hose routine. (See 01-13B-4 VACUUM HOSE ROUTING DIAGRAM[L3 WITH TC].) Are vacuum hoses routines properly?	Yes	Go to the next step.
		No	Reconnect the vacuum hose.
3	Perform the Evaporative Emission (EVAP) System Leak Inspection. Is there any problem found?	Yes	Repair or replace suspected part according to the inspection results.
		No	Go to the next step.
4	Inspect the airflow of purge solenoid valve. (See 01-16B-11 PURGE SOLENOID VALVE INSPECTION[L3 WITH TC].) Is the purge solenoid airflow properly?	Yes	Go to the next step.
		No	Replace the purge solenoid valve.
5	Connect the M-MDS to the DLC-2. Access the FUEL_PRESPID. Monitor the FUEL_PRES PID while idle and race the engine. Is the FUEL_PRES PID indicate **15 MPa {153 kgf/cm^2, 2175 psi} or less**?	Yes	Inspect the charcoal canister for fuel saturation. If excess amount of liquid fuel is present, replace the charcoal canister.
		No	Inspect the fuel pressure sensor and the high pressure fuel pump. (See 01-40B-38 FUEL PRESSURE SENSOR INSPECTION[L3 WITH TC].) (See 01-14B-23 HIGH PRESSURE FUEL PUMP INSPECTION[L3 WITH TC].)
5	Verify test results. • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

NO.21 ENGINE NOISE[L3 WITH TC]

id010339802700

21	ENGINE NOISE
DESCRIPTION	Engine noise under hood
POSSIBLE CAUSE	**Squeal, click or chirp noise:** • Improper engine oil level • Loose installation of solenoid valves • Improper drive belt tension **Rumble or grinding sound noise:** • Loose parts • Fluid revel low or air in power the steering fluid • Improper drive belt tension **Hiss sound noise:** • Vacuum leakage • Loose spark plug • Air leakage from the intake-air system **Rattle noise:** • Loose parts **Rap or roar noise:** • Exhaust system looseness **Excessive noise from turbocharger** • Foreign objects or material in the compressor inlet to the intake manifold ducting or the compressor housing • Carbon built-up in the turbine housing • Turbocharger routing assembly banding or dragging • Loose intake or exhaust ducting systems **Other noise:** • Camshaft friction gear noise or MLA noise • Timing chain noise **Warning** **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE REPAIR PROCEDURE" and "AFTER REPAIR PROCEDURE" described in this manual.** **(See 01-14B-4 BEFORE SERVICE PRECAUTION[L3 WITH TC].)** **(See 01-14B-5 AFTER SERVICE PRECAUTION[L3 WITH TC].)** **Caution** • **Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Is the noise from the turbocharger?	Yes	Go to Step 8.
		No	Go to the next step
2	Is squeal, click or chirp sound present?	Yes	Inspect the engine oil level, solenoid valves installation or drive belt tension.
		No	Go to the next step.
3	Is rumble or grinding sound present?	Yes	Inspect and repair the following; • Drive belt tension • Loose parts in engine compartment • Power steering system fluid level If normal, perform the power steering fluid line air bleed.
		No	Go to the next step.
4	Is rattle sound present?	Yes	Inspect the location of rattle for loose parts.
		No	Go to the next step.

STEP	INSPECTION	RESULTS	ACTION
5	Is hiss sound present?	Yes	Inspect and repair the following; • Vacuum leakage • Spark plug looseness • Intake-air system leakage
		No	Go to the next step.
6	Is rap or roar sound present?	Yes	Inspect the exhaust system or loose parts.
		No	Go to the next step.
7	Is knocking noise present?	Yes	Go to symptom troubleshooting "NO.13 KNOCKING/PINGING". (See 01-03B-51 NO.13 KNOCKING/PINGING[L3 WITH TC].)
		No	If noise comes from engine internal, inspect for the friction gear, timing chain or MLA noise.
8	Inspect the intake and exhaust housing system for loose installation. Is there any problem found?	Yes	Repair installation or replace suspected part.
		No	Go to the next step.
9	Remove the parts to necessary to inspect turbocharger without remove the turbocharger. Inspect if turbocharger compressor wheel is bent, damaged, or interfering with housing on vehicle. Is there any problem?	Yes	Replace the turbocharger.
		No	Go to the next step.
10	Inspect the turbocharger compressor wheel locknut is loose or has fallen down inside turbocharger. Is there any problem?	Yes	Replace the turbocharger.
		No	Go to the next step.
11	Turn the turbocharger compressor wheel by hand. Does the wheel turn easily and smoothly?	Yes	Go to the next step.
		No	Replace the turbocharger.
12	Visually inspect the turbine housing. Is there any carbon built-up or foreign material on turbine housing?	Yes	Cle built-up carbon or remove foreign materials. If turbine housing damaged, replace the turbocharger.
		No	Install the removal parts at Step 9, and inspect all turbocharger related parts installed correctly.
13	Verify test results. • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

NO.22 VIBRATION CONCERNS (ENGINE)[L3 WITH TC]

id010339802800

22	VIBRATION CONCERNS (ENGINE)
DESCRIPTION	• Vibration from under the hood or driveline
POSSIBLE CAUSE	• Loose attaching bolts or worn parts • Components malfunction such as worn parts

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Inspect the following components for loose attaching bolts or worn parts: • Cooling fan • Condenser fan • Drive belt and pulley • Engine mounts • Exhaust system Are all items normal?	Yes	Inspect the following systems: • Wheels • Transmission and mounts • Driveline • Suspension Service if necessary.
		No	Readjust or retighten suspect parts installation position. Service if necessary for other parts.

STEP	INSPECTION	RESULTS	ACTION
2	Verify test results. • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

NO.23 A/C DOES NOT WORK SUFFICIENTLY[L3 WITH TC]

id010339802900

23	A/C DOES NOT WORK SUFFICIENTLY.
DESCRIPTION	A/C compressor magnetic clutch does not engage when A/C switch is turned on.
POSSIBLE CAUSE	• Improper refrigerant charging amount • Open A/C magnetic clutch • Open circuit between the A/C relay and the A/C magnetic clutch • Poor ground of A/C magnetic clutch • Refrigerant pressure switch is stuck open. • A/C relay is stuck open. • Seized A/C compressor • Open circuit between the A/C switch and the PCM through both the refrigerant pressure switch and the A/C amplifier

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Connect the M-MDS to the DLC-2. Turn the ignition switch to the ON position (Engine off). Retrieve any DTCs. Are there any DTCs displayed?	Yes	**DTC is displayed:** Go to the appropriate DTC test.
		No	**No DTC is displayed:** Go to the next step.
2	Disconnect the A/C compressor connector. Start the engine and turn the A/C switch on. Is there correct voltage at terminal of A/C compressor magnetic clutch connector? **Specification** **10.5 V or more**	Yes	Inspect for the ground condition of magnetic clutch on A/C compressor. If ground condition is normal, inspect for an open circuit magnetic clutch coil.
		No	Go to the next step.
3	Disconnect the refrigerant pressure switch connector. Connect jumper wire between terminals of A/C high-pressure switch connector. Connect jumper wires between terminals of refrigerant pressure switch connector. Turn the ignition switch to the ON position. Turn A/C switch on and set blower fan to any speed. Does A/C work?	Yes	Inspect the refrigerant pressure switch operation. If switch is normal, go to the next step.
		No	Inspect for the following: • A/C switch is stuck open. • Open circuit between refrigerant pressure switch and PCM terminal 1AU • Open circuit between blower motor fan switch and resistor (if blower motor does not operate) • Evaporator temperature sensor and A/C amplifier
4	Remove jumper wire from switch connector. Reconnect connector to refrigerant pressure switch. Start engine and turn A/C switch on. Does fan operate?	Yes	Inspect the whether A/C relay is stuck open. Replace if necessary.
		No	Inspect the following and repair or replace if necessary: • Refrigerant charging amount • A/C compressor for seizure
5	Verify test results. • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.le. Retest.		

NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY[L3 WITH TC]

id010339803000

24	A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY.
DESCRIPTION	A/C compressor magnetic clutch does not disengage.
POSSIBLE CAUSE	• A/C compressor magnetic clutch engagement is stuck. • A/C relay is stuck closed. • Short to ground between A/C switch and PCM • Short to ground circuit between A/C relay and PCM • A/C relay to magnetic clutch circuit shorted to battery power

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Connect the M-MDS to the DLC-2. Turn the ignition switch to the ON position (Engine off). Retrieve any DTCs. Are there any DTCs displayed?	Yes	**DTC is displayed:** Go to the appropriate DTC test.
		No	**No DTC is displayed:** Go to the next step.
2	Start the engine and idle it. Turn the A/C switch on. Remove the A/C relay. Does the A/C magnetic clutch disengage?	Yes	Inspect for the following: • A/C relay is stuck closed. • Short to ground circuit between A/C relay and PCM terminal 1l. If both items normal, go to the next step.
		No	Inspect if circuit between A/C relay and magnetic clutch shorts to battery power circuit. If circuit is normal, inspect magnetic clutch for stuck engagement or clearance.
3	Disconnect the refrigerant pressure switch connector. Start the engine and turn the A/C switch on. **Note** • A/C should not work when disconnecting connector. If A/C remains working, short to ground circuit may be present. Does A/C remain working?	Yes	Inspect for a short to ground circuit between refrigerant pressure switch and PCM terminal 1AU.
		No	Go to the next step.
4	Reconnect refrigerant pressure switch connector. Turn off A/C switch. **Note** • A/C should not work when turning A/C switch off. If A/C remains working, short to ground circuit may be present. Does A/C remain working?	Yes	Inspect for the following: • Short to ground circuit between A/C switch and A/C amplifier • Short to ground circuit between A/C amplifier and refrigerant pressure switch
		No	Inspect the whether A/C switch is stuck closed.
5	Verify test results. • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.le. Retest.		

NO.25 A/C DOES NOT CUT OFF UNDER WIDE OPEN THROTTLE CONDITIONS[L3 WITH TC]

id010339803100

25	A/C IS NOT CUT OFF UNDER WOT CONDITIONS.
DESCRIPTION	A/C compressor magnetic clutch does not disengage under WOT.
POSSIBLE CAUSE	• Accelerator position sensor malfunction • Loosely installed accelerator position sensor.

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Does the A/C compressor disengage when A/C switch is turned off?	Yes	Go to the next step.
		No	Go to symptom troubleshooting "No.24 A/C is always on or A/C compressor runs continuously".
2	Connect the M-MDS to the DLC-2. Turn the ignition switch to the ON position (Engine off). Retrieve any DTCs. Are there any DTCs displayed?	Yes	**DTC is displayed:** Go to appropriate DTC test.
		No	**No DTC is displayed:** Inspect the accelerator position sensor.
3	Verify test results. • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.le. Retest.		

NO.26 EXHAUST SULPHUR SMELL[L3 WITH TC]

id010339803200

26	EXHAUST SULPHUR SMELL
DESCRIPTION	Rotten egg smell (sulphur) from exhaust
POSSIBLE CAUSE	• Electrical connectors are disconnected or connected poorly • Charcoal canister malfunction • Vacuum lines are disconnected or connected improperly. • Improper fuel pressure • Poor fuel quality **Warning** **The following troubleshooting flow chart contains fuel system diagnosis and repair procedures. Read following warnings before servicing fuel system:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE REPAIR PROCEDURE" and "AFTER REPAIR PROCEDURE" described in this manual.** **(See 01-14B-4 BEFORE SERVICE PRECAUTION[L3 WITH TC].)** **(See 01-14B-5 AFTER SERVICE PRECAUTION[L3 WITH TC].)** **Caution** • **Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Are any driveability or exhaust smoke concerns present?	Yes	Go to the appropriate flow chart.
		No	Go to the next step.
2	Inspect for the following: • Electrical connections • Vacuum lines • Fuel quality Are all items normal?	Yes	Go to the next step.
		No	Service if necessary. Repeat Step 2.

STEP	INSPECTION	RESULTS	ACTION
3	Connect the M-MDS to the DLC-2. Turn the ignition switch to the ON position (Engine off). Retrieve any DTCs. Are there any DTCs displayed?	Yes	**DTC is displayed:** Go to the appropriate DTC test.
		No	**No DTC is displayed:** Go to the next step.
4	Access and monitor FUEL_PRES PID. Is the FUEL_PRES PID value within the specified? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to Step 8.
		No	Go to the next step.
5	Is vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 7.
6	Inspect the fuel pressure sensor. (See 01-40B-38 FUEL PRESSURE SENSOR INSPECTION[L3 WITH TC].) Is the fuel pressure sensor normal?	Yes	Go to Step 8.
		No	Go to the next step.
7	Replace the high pressure fuel pump. Monitor FUEL_PRES PID. Is the FUEL_PRES PID value within the specified? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Troubleshooting is completed. Go to Step 9.
		No	Go to the next step.
8	Inspect the charcoal canister for fuel saturation. Is excess amount of liquid fuel present in canister?	Yes	Replace the charcoal canister.
		No	Inspect the fuel tank vent system. If fuel tank vent system is normal, suggest trying a different brand since sulfur content can vary in different fuels. If fuel tank vent system is not normal, repair or replace the malfunctioning parts.
9	Verify test results. • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.le. Retest.		

NO.27 FUEL REFILL CONCERNS[L3 WITH TC]

id010339803300

27	Fuel refill concerns
DESCRIPTION	• Fuel tank does not fill smoothly.
POSSIBLE CAUSE	• Clogged EVAP pipes • Nonreturn valve malfunction • Improper use of fuel nozzle • Inadequate fuel filling speed **Warning** • **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before servicing the fuel system:** **— Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** **— Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE REPAIR PROCEDURE" and "AFTER REPAIR PROCEDURE" described in this manual.** **(See 01-14B-4 BEFORE SERVICE PRECAUTION[L3 WITH TC].)** **(See 01-14B-5 AFTER SERVICE PRECAUTION[L3 WITH TC].)** **Caution** • **Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Connect the M-MDS to the DLC-2. Turn the ignition switch to the ON position (Engine off). Retrieve any DTCs. Are there any DTCs displayed?	Yes	**DTC is displayed:** Go to the appropriate DTC test.
		No	**No DTC is displayed:** Go to the next step.
2	Remove the fuel-filler pipe. Make sure nonreturn valve is installed properly. Inspect the nonreturn valve operation. Is nonreturn valve normal?	Yes	Inspect for the following: • Improper use of fuel nozzle • Inadequate fuel filling speed
		No	**Nonreturn valve is installed improperly:** • Reinstall the nonreturn valve to proper position. **Nonreturn valve does not operate properly:** • Replace the nonreturn valve.
3	Verify test results. • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.le. Retest.		

NO.28 FUEL FILLING SHUT OFF ISSUES[L3 WITH TC]

id010339803400

28	Fuel filling shut off issues
DESCRIPTION	• Fuel does not shut off properly.
POSSIBLE CAUSE	• Clogged EVAP pipes • Nonreturn valve malfunction • Fuel shut-off valve malfunction • Fuel nozzle malfunction • Fuel nozzle is not inserted correctly. **Warning** • **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before servicing the fuel system:** **— Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** **— Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE REPAIR PROCEDURE" and "AFTER REPAIR PROCEDURE" described in this manual.** **(See 01-14B-4 BEFORE SERVICE PRECAUTION[L3 WITH TC].)** **(See 01-14B-5 AFTER SERVICE PRECAUTION[L3 WITH TC].)** **Caution** • **Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Connect the M-MDS to the DLC-2. Turn the ignition switch to the ON position (Engine off). Retrieve any DTCs. Are there any DTCs displayed?	Yes	**DTC is displayed:** Go to the appropriate DTC test.
		No	**No DTC is displayed:** Go to the next step.
2	Remove the fuel-filler pipe. Make sure nonreturn valve is installed properly. Inspect the nonreturn valve operation. Is nonreturn valve normal?	Yes	Inspect for the following: • Improper use of fuel nozzle • Fuel is not inserted correctly. • Inspect fuel shut-off valve.
		No	**Nonreturn valve is installed improperly:** • Reinstall the nonreturn valve to proper position. **Nonreturn valve does not operate properly:** • Replace the nonreturn valve.
3	Verify test results. • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

NO.29 SPARK PLUG CONDITION[L3 WITH TC]

id010339803600

29	SPARK PLUG CONDITION
DESCRIPTION	Incorrect spark plug condition
POSSIBLE CAUSE	**Note** • Inspecting the condition of the spark plugs can determine whether a problem is related to a specific cylinder or possibly all cylinders. **Wet/carbon stuck on specific plug:** • Spark—Weak, not visible • Air/fuel mixture—Excessive fuel injection volume • Compression—No compression, low compression • Malfunctioning spark plug **Grayish white with specific plug:** • Air/fuel mixture—Insufficient fuel injection volume • Malfunctioning spark plug **Wet/carbon is stuck on all plugs:** • Spark—Spark weak • Air/fuel mixture—Too rich • Compression—Low compression • Clogging in intake/exhaust system **Grayish white with all plugs:** • Air/fuel mixture—Too lean **Warning** **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before servicing the fuel system:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE REPAIR PROCEDURE" and "AFTER REPAIR PROCEDURE" described in this manual.** **(See 01-14B-4 BEFORE SERVICE PRECAUTION[L3 WITH TC].)** **(See 01-14B-5 AFTER SERVICE PRECAUTION[L3 WITH TC].)** **Caution** • **Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Remove all the spark plugs. Inspect the spark plug condition. Is the spark plug condition normal?	Yes	Troubleshooting completed.
		No	**Specific plug is wet or covered with carbon:** Go to the next step. **Specific plug looks grayish white:** Go to Step 9. **All plugs are wet or covered with carbon:** Go to Step 11. **All plugs look grayish white:** Go to Step 19.
2	Is the spark plug wet/covered with carbon from engine oil?	Yes	Inspect all areas related to oil.
		No	Go to the next step.
3	Inspect the spark plugs for the following: • Cracked insulator • Heat range • Air gap • Worn electrode Is the spark plug normal?	Yes	Go to the next step.
		No	Replace the spark plug.
4	Inspect the compression pressure at the suspected malfunctioning cylinder. Is the compression pressure correct? (See 01-10B-9 COMPRESSION INSPECTION[L3 WITH TC].)	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts.
5	Install all the spark plugs. Perform the spark test at the suspected malfunctioning cylinder. Is a strong blue spark visible? (Compare with normal cylinder.)	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts.
6	Access and monitor the FUEL_PRES PID. Is the FUEL_PRES PID value within the specification? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Inspect the suspected cylinders fuel injector for the following: • Open or short circuit in the fuel injector (See 01-14B-33 FUEL INJECTOR INSPECTION[L3 WITH TC].)
		No	Go to the next step.
7	Inspect the fuel pressure sensor. (See 01-40B-38 FUEL PRESSURE SENSOR INSPECTION[L3 WITH TC].) Is the fuel pressure sensor normal?	Yes	Go to the next step.
		No	Replace the delivery pipe.
8	Inspect the high pressure fuel pump. (See 01-40B-38 FUEL PRESSURE SENSOR INSPECTION[L3 WITH TC].) Is the high pressure fuel pump normal?	Yes	Replace the delivery pipe. Retest Step 6 If the FUEL_PRES PID indication is other that the specification, replace the high pressure fuel pump.
		No	Replace the high pressure fuel pump.
9	Inspect the spark plug for the following. • Heat range • Air gap Is the spark plug normal?	Yes	Go to the next step.
		No	Replace the spark plug.
10	Perform the KOER self-test function using the M-MDS. (See 01-02B-9 KOEO/KOER SELF TEST[L3 WITH TC].) Is the suspected cylinder injector circuit related DTC (P0201, P0202, P0203 or P0204) present?	Yes	Go to appropriate the DTC test. (See 01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Inspect the suspect cylinder fuel injector for the following: • Resistance (See 01-14B-33 FUEL INJECTOR INSPECTION[L3 WITH TC].)
11	Is the air cleaner element free of blockage?	Yes	Go to the next step.
		No	Replace the air cleaner element.
12	Perform the spark test. (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts.

STEP	INSPECTION	RESULTS	ACTION
13	Access and monitor the FUEL_PRES PID. Is the FUEL_PRES PID value within the specification? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Go to step 16.
		No	Go to the next step.
14	Inspect the fuel pressure sensor. (See 01-40B-38 FUEL PRESSURE SENSOR INSPECTION[L3 WITH TC].) Is the fuel pressure sensor normal?	Yes	Go to the next step.
		No	Replace the delivery pipe.
15	Inspect the high pressure fuel pump. (See 01-14B-23 HIGH PRESSURE FUEL PUMP INSPECTION[L3 WITH TC].) Is the high pressure fuel pump normal?	Yes	Replace the delivery pipe. Retest Step 13. If the FUEL_PRES PID indication is other that the specification, replace the high pressure fuel pump.
		No	Replace the high pressure fuel pump.
16	Inspect the following PIDs: • ECT • O2S11 (When engine can be started) • MAF (See 01-40B-7 PCM INSPECTION[L3 WITH TC].) Are the PIDs normal?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts.
17	Perform the purge control inspection. (When engine can be started) (See 01-03B-79 ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC].) Is the purge control correct?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts.
18	Perform the compression inspection. Is the compression correct?	Yes	Inspect for clogging in the exhaust system.
		No	Repair or replace the malfunctioning parts.
19	When the engine cannot be started, inspect the intake-air system for air leakage. When the engine can be started, perform the intake manifold vacuum inspection. Is air sucked in from the intake-air system?	Yes	Repair or replace the malfunctioning part.
		No	Go to the next step.
20	Access and monitor the FUEL_PRES PID. Is the FUEL_PRES PID value within the specification? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Inspect for the following PIDs: • ECT • O2S11 • O2S12 • MAF (See 01-40B-7 PCM INSPECTION[L3 WITH TC].) Inspect the PCM ground condition.
		No	Go to the next step.
21	Is vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 13.
22	Inspect the fuel pressure sensor. (See 01-40B-38 FUEL PRESSURE SENSOR INSPECTION[L3 WITH TC].) Is the fuel pressure sensor normal?	Yes	Go to the next step.
		No	Replace the delivery pipe.
23	Replace the high pressure fuel pump. Monitor FUEL_PRES PID. Is the FUEL_PRES PID value within the specified? (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)	Yes	Troubleshooting is completed. Go to Step 16.
		No	Inspect following PIDs. • ECT • O2S11 • O2S12 • MAF (See 01-40B-7 PCM INSPECTION[L3 WITH TC].) Inspect PCM ground condition.
24	Verify test results. • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

INTERMITTENT CONCERN TROUBLESHOOTING[L3 WITH TC]

id010339800400

Vibration Method

- If a malfunction occurs or becomes worse while driving on a rough road or when the engine is vibrating, perform the steps below.

Note

- There are several reasons why the vehicle or engine vibration could cause an electrical malfunction. Check the following:
  - — Connectors are not fully seated.
  - — Wiring harnesses do not have full play.
  - — Wires laying across brackets or moving parts.
  - — Wires routed too close to hot parts.
- An improperly routed, improperly clamped, or loose harness can cause a wiring harness to become pinched between parts.
- The connector joints, points of vibration, and places where the wiring harnesses pass through the firewall and body panels are the major areas to be checked.

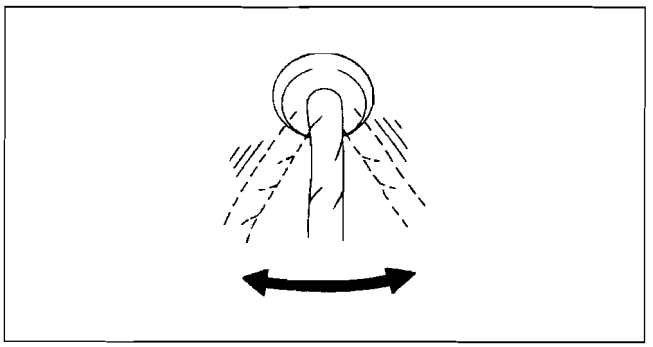
Inspection Method for Switch Connectors or Wires

1. Connect the M-MDS to the DLC-2.
2. Turn the ignition switch to the ON position (Engine off).

Note

- If engine starts and runs, perform the following steps during idle.

3. Access the PIDs for the switch you are inspecting.
4. Turn the switch on manually.
5. Slightly shake each connector or wiring harness vertically and horizontally while monitoring the PID.
   - If the PID value is unstable, check for a poor connection.



atraaw00003048

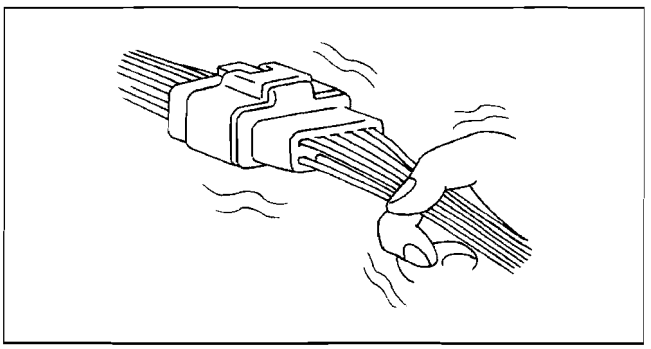
Inspection Method for Sensor Connectors or Wires

1. Connect the M-MDS to the DLC-2.
2. Turn the ignition switch to the ON position (Engine off).

Note

- If the engine starts and runs, perform the following steps during idling.

3. Access the PIDs for the switch you are inspecting.
4. Slightly shake each connector or wiring harness vertically and horizontally while monitoring the PID.
   - If the PID value is unstable, check for poor connection.



atraaw00003049

Inspection Method for Sensors

1. Connect the M-MDS to the DLC-2.
2. Turn the ignition switch to the ON position (Engine off).

Note
- If the engine starts and runs, perform the following steps during idle.

3. Access the PIDs for the switch you are inspecting.
4. Shake the sensor slightly with your finger.
   - If the PID value is unstable or a malfunction occurs, check for a poor connection or a poorly mounted sensor or both.

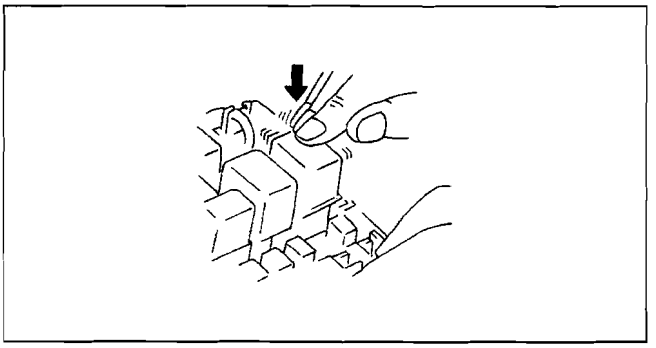
Inspection Method for Actuators or Relays

1. Connect the M-MDS to the DLC-2.
2. Turn the ignition switch to the ON position (Engine off).

Note
- If engine starts and runs, perform the following steps during idling.

3. Prepare the output state control function for actuators or relays that you are inspecting.
4. Shake the actuator or relay with your finger for **3 s** after the output state control function is activated.
   - If a variable click sound is heard, check for a poor connection or a poorly mounted actuator or both, or the relay.

Note
- Shake the relays too strongly may result in open circuits.



atraaw00003050

Water Sprinkling Method

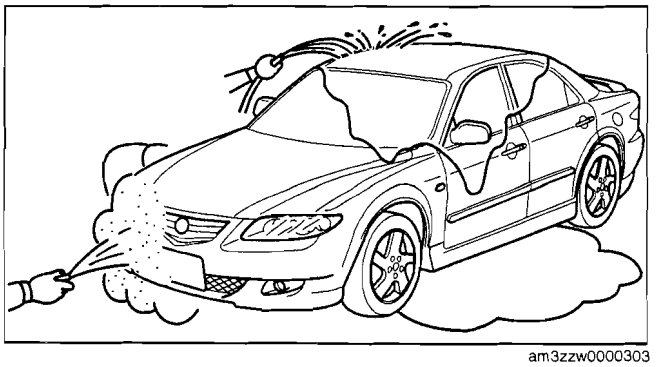
If a malfunction occurs only during high humidity or rainy/snowy weather, perform the following steps:

Caution
- **Indirectly change the temperature and humidity by spraying water onto the front of the radiator.**
- **If a vehicle is subject to water leakage, the leakage may damage the control module. When testing a vehicle with a water leakage problem, special caution must be used.**

1. Connect the M-MDS to the DLC-2 if you are inspecting sensors or switches.
2. Turn the ignition switch to the ON position (Engine off).

Note
- If the engine starts and runs, perform the following steps is idling.

3. Access the PIDs for the sensor or the switch if you are inspecting sensors or switches.
4. If you are inspecting the switch, turn it on manually.
5. Spray water onto the vehicle or run it through a car wash.
   - If the PID value is unstable or a malfunction occurs, repair or replace parts if necessary.



am3zzw0000303

ENGINE CONTROL SYSTEM OPERATION INSPECTION[L3 WITH TC]

id010339803700

Input Signal System Investigation Procedure

1. Find an unusual signal. (See 01-03B-79 Finding unusual signals.)
2. Locate the source. (See 01-03B-79 Locating the source of unusual signals.)
3. Repair or replace the defective part.
4. Confirm that the unusual signal has been erased.

Finding unusual signals

While referring to 01-02B-7 ON-BOARD DIAGNOSTIC TEST[L3 WITH TC], use the PID/DATA monitor and record function to inspect the input signal system relating to the problem.

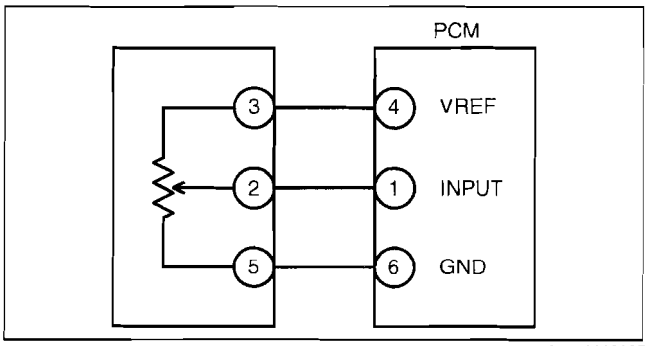
1. Start the engine and idle the vehicle. You can assume that any signals that are out of specification by a wide margin are unusual.
2. When recreating the problem, any sudden change in the monitor input signals that is not consciously created by the driver can be determined as unusual.

Locating the source of unusual signals

Caution

- **Compare the M-MDS monitor voltage with the measurement voltage using the digital measurement system function. If you use another tester, a misreading may occur.**
- **When measuring the voltage, attach the tester ground to the ground of the PCM that is being tested, or to the engine itself. If this is not done, the measured voltage and actual voltage may differ**
- **After connecting the pin to a waterproof coupler, confirm continuity and measure the voltage, and inspect the waterproof connector for cracks. If there are any, use sealant to fix them. Failure to do this may result in deterioration of the wiring harness or terminal from water damage, leading to problems with the vehicle.**

Variable resistance type 1 (TP sensor and EGR boost sensor)



am3zzw0000307

Investigate the input signal system for variable resistance type 1

1. When an unusual signal is received, measure the #1 PCM terminal voltage.
   - If the #1 terminal voltage and the M-MDS monitor voltage are the same, proceed to the next step.
   - If there is a difference of **0.5 V or more**, inspect for the following points concerning the PCM connector:
     — Female terminal opening is loose.
     — Coupler (pin holder) damage
     — Pin discoloration (blackness)
     — Wiring harness/pin crimp is loose or disconnected.
2. Measure the #2 sensor terminal voltage.
   - If there is a **0.5 V or more** difference between the sensor and M-MDS voltages, inspect the wiring harness for open or short circuits.
   - If the sensor and M-MDS voltages are the same, inspect for the following points concerning the sensor connector:
     — Female terminal opening is loose.
     — Coupler (pin holder) damage
     — Pin discoloration (blackness)
   - If there are no problems, proceed to next investigation below.

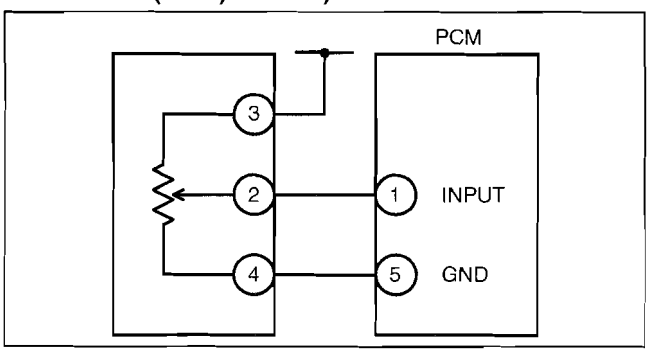
Investigate the standard power supply system for variable resistance type 1

- Confirm that the #3 terminal is at **5 V**.
  - — If the measured voltage on the #3 terminal is **5 V**, inspect the following points on the sensor connector.
  - — If there is no problem, inspect for the following:
    - Female terminal opening loose
    - Coupler (pin holder) damage
    - Pin discoloration (blackness)
  - — If the #3 terminal measures other than **5 V**, inspect for the following:
    - Open or short circuit in wiring harness
    - Wiring harness/pin crimp is loose or disconnected.

Investigate the ground system for variable resistance type 1

- Confirm that terminal sensor #5 is at **0 V**.
  - — If it is at **0 V**, inspect the sensor.
    - If necessary, replace the sensor.
  - — If not, inspect for the following:
    - Open or short circuit in wiring harness
    - Female terminal opening is loose causing an open or short circuit in wiring harness
    - Coupler (pin holder) damage
    - Pin discoloration (blackness)
    - Wiring harness/pin crimp is loose or disconnected.

Variable resistance type 2 (fuel tank level sensor and mass air flow (MAF) sensor)



am3zzw0000307

Investigate the ground system for variable resistance type 2

- Confirm that terminal sensor #4 is at **0 V**.
  - — If it is at **0 V**, inspect the sensor.
    - If necessary, replace the sensor.
  - — If not at **0 V**, inspect for the following:
    - Open circuit in wiring harness
    - Female terminal opening is loose.
    - Coupler (pin holder) damage
    - Pin discoloration (blackness)
    - Wiring harness/pin crimp is loose or disconnected.

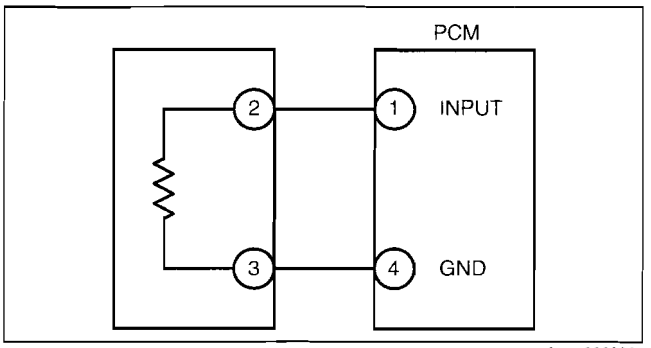
Investigate the input signal system for variable resistance type 2

1. When an unusual signal is received, measure the #1 PCM terminal voltage.
   - If the #1 terminal voltage and the M-MDS monitor voltage are the same, proceed to the next step.
   - If there is a difference of **0.5 V or more**, inspect for the following points concerning the PCM connector:
     - — Female terminal opening is loose.
     - — Coupler (pin holder) damage
     - — Pin discoloration (blackness)
     - — Wiring harness/pin crimp is loose or disconnected.
2. Measure the #2 sensor terminal voltage.
   - If there is a **0.5 V or more** difference between the sensor and M-MDS voltages, inspect the wiring harness for open or short circuits.
   - If the sensor and M-MDS voltages are the same, inspect the following points concerning the sensor connector:
     - — Female terminal opening is loose.
     - — Coupler (pin holder) damage
     - — Pin discoloration (blackness)
     - — Wiring harness/pin crimp is loose or disconnected.
   - If there are no problems, proceed to next investigation below.

Investigate the electrical supply system for variable resistance type 2

- Confirm that the sensor #3 terminal is **B+**.
  - — If the measured voltage on the #3 terminal is **B+**, inspect the following points on the sensor connector.
  - — If there is no problem, inspect for the following:
    - Female terminal opening is loose.
    - Coupler (pin holder) damage
    - Pin discoloration (blackness)
  - — If the #3 terminal measures other than **B+**, inspect the following:
    - Open or short circuit in wiring harness
    - Wiring harness/pin crimp is loose or disconnected.

Thermistor type (IAT sensor and ECT sensor)



am3zzw0000307

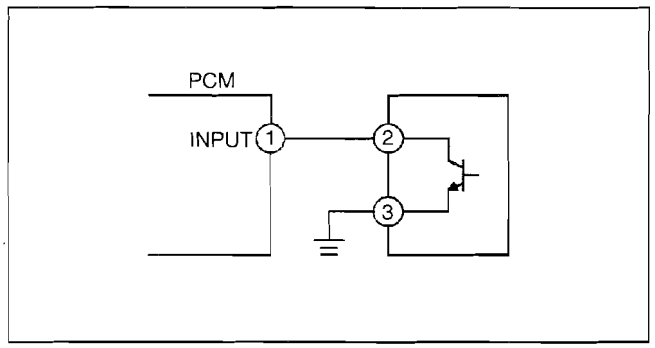
Investigate the input signal system for thermistor type

1. When an unusual signal is received, measure the #1 PCM terminal voltage.
   - If the #1 terminal voltage and the M-MDS monitor voltage are the same, proceed to the next step.
   - If there is a difference of **0.5 V or more**, inspect the following points concerning the PCM connector:
     - — Female terminal opening loose
     - — Coupler (pin holder) damage
     - — Pin discoloration (blackness)
     - — Wiring harness/pin crimp is loose or disconnected.
2. Measure the #2 sensor terminal voltage.
   - If there is a **0.5 V or more** difference between the sensor and M-MDS voltages, inspect the wiring harness for open or short circuits.
   - If the sensor and M-MDS voltages are the same, inspect the following points concerning the sensor connector:
     - — Female terminal opening is loose.
     - — Coupler (pin holder) damage
     - — Pin discoloration (blackness)
     - — Wiring harness/pin crimp is loose or disconnected.
   - If there are no problems, proceed to next investigation below.

Investigate the ground system for thermistor type

- Confirm that terminal sensor #3 is at **0 V**.
  - — If it is at **0 V**, inspect the sensor. If necessary, replace the sensor.
  - — If not, inspect for the following:
    - Open circuit in wiring harness
    - Female terminal opening is loose.
    - Coupler (pin holder) damage
    - Pin discoloration (blackness)
    - Wiring harness/pin crimp is loose or disconnected.

VSS



am3zzw0000307

1. Measure the #1 PCM terminal voltage and confirm that it is at **0 V** or **5 V** when the ignition switch to the ON position and the engine is idling.
   - If it is at **0 V** or **5 V**, intermittent concern exists. (See 01-03B-77 INTERMITTENT CONCERN TROUBLESHOOTING[L3 WITH TC].)
   - If not, inspect the following points concerning the PCM connector.
   - If there is no problem, inspect for the following:
     - — Female terminal opening is loose.
     - — Coupler (pin holder) damage
     - — Pin discoloration (blackness)
     - — Wiring harness/pin crimp is loose or disconnected.
2. Measure the #2 sensor terminal voltage and confirm that it is at **0 V** or **5 V** when the ignition switch to the ON position and the engine is idling.
   - If it is at **0 V** or **5 V**, intermittent concern exists. (See 01-03B-77 INTERMITTENT CONCERN TROUBLESHOOTING[L3 WITH TC].)
   - If not, inspect the following points concerning the sensor connector:
   - If there is no problem, inspect for the following.
     - — Female terminal opening is loose.
     - — Coupler (pin holder) damage
     - — Pin discoloration (blackness)
     - — Wiring harness/pin crimp is loose or disconnected.
3. Confirm that the #3 terminal switch voltage is at **0 V**.
   - If it is at **0 V**, inspect the sensor. If necessary, replace the sensor.
     - — If necessary, replace the sensor.
   - If not, inspect for the following:
     - — Open circuit in wiring harness
     - — Female terminal opening is loose.
     - — Coupler (pin holder) damage
     - — Pin discoloration (blackness)
     - — Wiring harness/pin crimp is loose or disconnected.

Main Relay Operation Inspection

1. Verify that the main relay clicks when the ignition switch is turned to ON position and then off.
   - If there is no operation sound, inspect the following:
     - — Main relay (See 09-21-3 RELAY INSPECTION.)
     - — Wiring harness and connector between ignition switch and main relay terminal A.
     - — Wiring harness and connector between PCM terminal 1AT and main relay terminal B.

Intake Manifold Vacuum Inspection

1. Verify air intake hoses are installed properly.
2. Start the engine and run it is idling.
3. Disconnect the vacuum hose between the intake manifold and purge solenoid valve from the intake manifold side.
4. Connect a vacuum gauge to the intake manifold and measure the intake manifold vacuum.
   - If not as specified, inspect the following:

Specification
More than 60 kPa {450 mmHg, 18 inHg}

Note
- Air suction can be located by the engine speed change when lubricant is sprayed on the area where suction is occurring.
  - — Air suction at throttle body, charge air cooler, intake manifold and PCV valve installation points
  - — EGR valve (stuck open)
  - — Engine compression

Electronic Throttle Control System Inspection
Engine coolant temperature compensation inspection

1. Connect the M-MDS to the DLC-2.
2. Select the following PIDs:
   - ECT
   - IAT
   - RPM
3. Verify that the engine is cold, then start the engine.
4. Verify that the engine speed decreases as the engine warms up.
   - If the engine speed does not decrease or decreases slowly, inspect the following:
     - — ECT sensor and related wiring harness
       (See 01-40B-28 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION[L3 WITH TC].)
     - — Electronic throttle body and related wiring harness

Load compensation inspection

1. Start the engine and run it is idling.
2. Connect the M-MDS to the DLC-2.
3. Verify that DTC P0506 or P0507 is not displayed.
   - If DTC P0506, or P0507 is displayed, perform the DTC inspection.
     (See 01-02B-14 DTC TABLE[L3 WITH TC].)
4. Select the RPM PID.

Note
- Excludes temporary idle speed drop just after the loads are turned on.

5. Verify that the engine speed is within the specification under each load condition.
   - If the load condition is not as specified, inspect the following:
     - — A/C switch and related wiring harness
     - — Fan switch and related wiring harness
     - — PSP switch and related wiring harness
       (See 01-40B-24 POWER STEERING PRESSURE (PSP) SWITCH INSPECTION[L3 WITH TC].)

Engine speed

Load condition		Engine speed (rpm)*1
No load		650—750
E/L operating		650—750
P/S operating		650—750
A/C operating*2	Refrigerant pressure low*3	700—800
	Refrigerant pressure high*4	700—800

*1 : Neutral
*2 : A/C switch and fan switch are on.
*3 : Refrigerant pressure switch (middle pressure) is off.
*4 : Refrigerant pressure switch (middle pressure) is on.

Throttle position (TP) sweep inspection

1. Connect the M-MDS to the DLC-2.
2. Reform the KOER self-test function.
   (See 01-02B-9 KOEO/KOER SELF TEST[L3 WITH TC].)
3. Verify that none of the following DTCs are displayed:
   - P0122, P0123, P0222, P0223, P2100, P2101, P2102, P2103, P2107, P2108, P2119, P2122, P2123, P2127, P2128, P2135, P2138
     — If any one DTC is displayed, perform the DTC inspection.
4. Access the TP_REL PID.
5. Verify that the PID reading is within the CTP value. (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)
   - If the PID reading is out of range, perform the following:
     — Remove the air duct from the throttle valve body.
     — Verify that the throttle valve opens when the accelerator pedal is depressed.
       - If the throttle valve opens, inspect the throttle position sensor and the related wiring harness.
       - If the throttle valve does not open, inspect the throttle actuator control motor and the related wiring harness.
6. Gradually depress the throttle pedal and verify that the PID reading increases lineally.
   - If the PID reading drops momentarily, inspect the following:
     — Throttle position sensor
7. Fully depress the throttle pedal and verify that the PID reading is within the WOT value. (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)
   - If the PID reading is out of range, perform the following:
     — Remove the air duct from throttle valve body with connector connected.
     — Verify that the throttle valve opens when throttle pedal is depressed.
       - If the throttle valve opens, inspect the throttle position sensor and the related wiring harness.
       - If the throttle valve does not open, inspect the throttle actuator control motor and the related wiring harness.

Variable Swirl System Operation Inspection

1. Connect the M-MDS to the DLC-2.
2. Access the ECT PID.
3. Verify that the ECT PID is **below 60°C {140°F}**.
4. Start the engine.
5. Inspect the rod operation under the following conditions:

Rod operation

Engine speed	3,750 rpm	
	Below	Above
Shutter valve actuator	Operate	Not operate

If the rod operation is not specified, inspect as follows:

1. Perform the KOER self-test using the M-MDS and verify that DTCs No. P2004, P2006, P2009 or P2010 are not displayed.
   - If DTC No. P2004, P2006, P2009 or P2010 are displayed, perform DTC inspection.
     (See 01-02B-14 DTC TABLE[L3 WITH TC].)

If simulation function of M-MDS is used:

1. Turn the ignition switch to the ON position. (Engine off)
2. Turn the variable swirl solenoid valve from off to on using the IMRC PID and verify that the operation sound of the solenoid valve is heard.
   - If the operation sound is not heard, replace the variable swirl solenoid valve.
   - If the operation sound is not heard, inspect the following:
     — Vacuum hose and vacuum chamber for looseness or damage
     — Shutter valve actuator
     — Check valve is stuck open or closed
     — Shutter valve cannot move smoothly

If simulation function of M-MDS is not used:

1. Inspect variable swirl solenoid valve.
   - If the variable swirl solenoid valve is not normal, replace the variable swirl solenoid valve.
   - If the variable swirl solenoid valve is normal, inspect the following:
     — Vacuum hose and vacuum chamber for looseness or damage
     — Shutter valve actuator
     — Check valve is stuck open or closed
     — Shutter valve cannot move smoothly

Fuel Injector Operation Inspection
If simulation function of M-MDS is used:

STEP	INSPECTION		ACTION
1	Start the engine and warm it up until normal operating temperature. Connect the M-MDS to DLC-2. Select the INJ#1, INJ#2, INJ#3, and INJ#4 PIDs. Turn the fuel injector from on to off using the PIDs for each cylinder. Does the engine speed drop?	Yes	Fuel injector work properly
		No	**Engine speed does not drop an any cylinder:** Go to the next steps. **Engine speed drops on some cylinders:** Go to step 3.
2	Perform the Main Relay Operation Inspection. (See 01-03B-82 Main Relay Operation Inspection.) Does the main relay work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts.
3	Inspect the fuel injector of the suspected cylinder. Is the fuel injector normal?	Yes	Inspect the following for the suspected cylinder. • Fuel injector power and/or ground systems related wiring harness and connectors. If all items normal replace the PCM. (See 01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Replace the fuel injector.
4	Perform KOER self-test function using the M-MDS. (See 01-02B-9 KOEO/KOER SELF TEST[L3 WITH TC].) Are DTCs P0201, P0202, P0203 and/or P0204 present?	Yes	Go to the appropriate DTC test. (See 01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Go to the next step.
5	Inspect the fuel injector of the suspected cylinder. Is the fuel injector normal?	Yes	Inspect the following for the suspected cylinder: • PCM terminals (pulled-out pins, corrosion) • Injector driver module terminals (pulled-out pins, corrosion) • Fuel injector terminals (pulled-out pins, corrosion) If all items are normal replace the PCM. (See 01-40B-7 PCM REMOVAL/INSTALLATION[L3 WITH TC].)
		No	Replace the fuel injector.

If simulation function of M-MDS is not used:

STEP	INSPECTION		ACTION
1	Perform the KOER self-test function using the M-MDS. (See 01-02B-9 KOEO/KOER SELF TEST[L3 WITH TC].) Are DTCs P0201, P0202, P0203 and/or P0204 present?	Yes	Go to appropriate DTC test. (See 01-02B-14 DTC TABLE[L3 WITH TC].)
		No	Go to the next step.
2	Inspect the fuel injector for each cylinder. Is the fuel injector normal?	Yes	Go to the next step.
		No	Replace the fuel injector.
3	Inspect the following for the suspected cylinder: • Fuel injector power and/or ground system related wiring harnesses and connectors. • PCM terminals (pulled-out pins, corrosion) • Fuel injector terminals (pulled-out pins, corrosion) Are all items normal?	Yes	Inspect PCM terminal voltage of fuel injector signal
		No	Repair or replace malfunctioning parts.

Fuel Cut Control System Inspection

Note
- This inspection has to be performed after the Fuel Injector Operation Inspection.

If simulation function of M-MDS is used:
1. Warm up the engine and idle it.
2. Connect the M-MDS to the DLC-2.
3. Select the RPM and the FUELPW1 PIDs.
4. Monitor both PIDs while performing the following steps.
   1. Depress the accelerator pedal and increase the RPM PID to **4,000 rpm**.
   2. Quickly release the accelerator pedal (brake pedal is not depressed) and verify that the FUELPW1 PID is **0 msec.**, and **2—5 msec**. when the RPM PID drops **below 1,200 rpm**.
   - If not as specified, inspect the following.
     — ECT sensor and related wiring harness
     (See 01-40B-28 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION[L3 WITH TC].)
     — Neutral switch and related wiring harness
     (See 01-40B-22 NEUTRAL SWITCH INSPECTION[L3 WITH TC].)
     — Clutch switch and related wiring harness
     (See 01-40B-23 CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION[L3 WITH TC].)

If simulation function of M-MDS is not used:
1. Warm up the engine and idle it.
2. Measure the fuel injector control signal wave profile using the oscilloscope while performing the following steps.
   1. Depress the accelerator pedal and increase the engine speed to **4,000 rpm**.
   2. Quickly release the accelerator pedal (brake pedal is not depressed) and verify that the wave profile constant **B+**, and the wave appears when the engine speed drops **below 1,200 rpm**.
   (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)
   - If not as specified, inspect the following.
     — ECT sensor and related wiring harness
     (See 01-40B-28 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION[L3 WITH TC].)
     — Neutral switch and related wiring harness
     (See 01-40B-22 NEUTRAL SWITCH INSPECTION[L3 WITH TC].)
     — Clutch switch and related wiring harness
     (See 01-40B-23 CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION[L3 WITH TC].)

Fuel Pump Operation Inspection
If simulation function of M-MDS is not used:
1. Connect the M-MDS to the DLC-2.
2. Remove the fuel-filler cap.
3. Turn the ignition switch to the ON position.
4. Turn the fuel pump relay from off to on using the FP PID and inspect if the operation sound of the fuel pump is heard.
   - If no operation sound is heard, proceed to the next step.
5. Measure the voltage at the wiring harness side fuel pump connector terminal B with the FIP PID turned on.
   - If the voltage is as specified, inspect the following:
     — Fuel pump continuity
     — Fuel pump ground
     — Wiring harness between the fuel pump relay and PCM terminal 1H
   - If not as specified, inspect the following:
     — Fuel pump relay
     — Fuel pump speed control relay
     — Wiring harness connector (Main relay-fuel pump relay-fuel pump resister-fuel pump.)

Specification
8.0—11.5 V (Ignition switch at ON)

If simulation function of M-MDS is not used:

Caution
- **Connecting the wrong check connector terminal may possibly cause a malfunction. Carefully connect the specified terminal only.**

1. Short the check connector terminal F/P to body ground using a jumper wire.
2. Remove the fuel-filler cap.
3. Turn the ignition switch to the ON position.
4. Verify that the fuel pump operation sound is heard.
   - If no operation sound is heard, proceed to the next step.
5. Measure the voltage at wiring harness side fuel pump connector terminal B.
   - If the voltage is as specified, inspect the following:
     — Fuel pump continuity
     — Fuel pump ground
     — Wiring harness between the fuel pump relay and PCM terminal, 1H
   - If not as specified, inspect the following:
     — Fuel pump relay
     — Fuel pump speed control relay
     — Wiring harness connector (Main relay – fuel pump relay – fuel pump resister – fuel pump.)

Specification
8.0—11.5 V (Ignition switch at on)

Fuel Pump Control System Inspection
If simulation function of M-MDS is used:
1. Connect the M-MDS to the DLC-2.
2. Turn the ignition switch to the ON position.
3. Select the FP PID.
4. Turn the fuel pump relay from off to on and inspect if the operation sound of the fuel pump relay is heard.
   - If no operation sound is heard, inspect the fuel pump relay.
   - If the fuel pump relay is normal, inspect the following:
     — Wiring harness and connectors (Main relay – fuel pump relay – PCM terminal 1H)

If simulation function of M-MDS is not used:
1. Crank the engine and verify that the fuel pump relay operation sound is heard.
2. If the operation sound is not heard, inspect the following:
   - Fuel pump relay
   - Wiring harness and connectors (Main relay – fuel pump relay – PCM terminal 1H)

Fuel Pump Speed Control Inspection
If simulation function of M-MDS is used:
1. Perform the Fuel Pump Operation Inspection.
2. Connect the M-MDS to the DLC-2.
3. Turn the ignition switch to the ON position.
4. Turn the fuel pump speed control relay from off to on using the FPRR PID and verify that the fuel pump speed control relay operation sound is heard.
   - If the operation sound is not heard, inspect the following:
     — Fuel pump speed control relay
     — Wiring harness and connectors (Main relay - fuel pump speed control relay - PCM terminal 4P)
5. Start the engine and run it is idling.
6. Remove the fuel-filler cap.
7. Turn the fuel pump speed control relay from off to on using the FPRR PID and inspect if the operation sound frequency of the fuel pump is higher than when the FPRR PID is off.
   - If it cannot be verified, inspect the following:
     — Fuel pump resister
     — Wiring harness and connectors (open circuit at fuel pump speed control relay terminal C - fuel pump relay terminal D)

If simulation function of M-MDS is not used:
1. Perform the fuel pump operation inspection.
2. Verify that fuel pump relay operation sound is heard, while cranking the engine.
   - If the operation sound is not heard, inspect the following:
     — Fuel pump relay
     — Wiring harnesses and connectors (Main relay—fuel pump relay—PCM terminal 4Q)
3. Remove the fuel-filler cap.
4. Verify that the fuel pump unit operation sound frequency at cranking is higher than during idle.
   - If it cannot verified, inspect for the following:
     — Fuel pump resister
     — Fuel pump relay
     — Wiring harnesses and connectors (open circuit at fuel pump relay terminal C—fuel pump terminal B)

Spark Test

1. Disconnect the fuel pump relay.
2. Disconnect the injector driver module connector.
3. Verify that each ignition coil and connector is connected properly.
4. Inspect the ignition system in the following procedure.
5. Clear the DTC from PCM memory using the M-MDS, after perform the spark test procedures and reconnect the injector driver module connector.

Warning

- **High voltage in the ignition system can cause strong electrical shock which can result in serious injury. Avoid direct contact to the vehicle body during the following spark test.**

STEP	INSPECTION		ACTION
1	• Disconnect the ignition coil from the spark plugs. • Remove the spark plugs. • Verify that the spark plugs do not have carbon deposits. • Are the spark plugs normal?	Yes	Go to the next step.
		No	Perform no-load racing at 4,000 rpm for 2 min, 2 times to burn off the carbon deposits. Repeat Step 1.
2	• Inspect the spark plugs for damage, wear, and proper plug gap. • Are the spark plugs normal?	Yes	Go to the next step.
		No	Replace spark plugs, then go to the next step.
3	• Reconnect the spark plugs to the ignition coil. • Ground the spark plugs to the engine. • Is a strong blue spark visible at each cylinder while cranking the engine?	Yes	Ignition system is normal.
		No	**Some cylinders do not spark:** • Go to the next step. **All cylinders do not spark:** • Go to Step 5.
4	• Inspect the following wiring harnesses for an open or short circuit: — Ignition coil No.1 terminal C—PCM terminal 2BA — Ignition coil No.2 terminal C—PCM terminal 2AW — Ignition coil No.3 terminal C—PCM terminal 2AX — Ignition coil No.4 terminal C—PCM terminal 2AT • Are the wiring harnesses normal?	Yes	Inspect and replace the ignition coil.
		No	Repair or replace the malfunctioning part, then go to Step 1.
5	• Measure the voltage at terminal A in each ignition coils. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the power supply circuit of ignition coils.
6	• Does the PCM connector or ignition coil connectors have poor connection?	Yes	Repair or replace the connector, then go to Step 1.
		No	Go to the next step.
7	• Are the following parts normal? — CKP sensor and crankshaft pulley	Yes	Inspect for an open or short circuit in the wiring harness and connector of the CKP sensor.
		No	Repair or replace the malfunctioning part, then go to Step 1.

EGR Control System Inspection

If simulation function of M-MDS is used:

1. Crank the engine and verify that the EGR valve operation (initial operation) sound is heard.
   - If the operation sound is not heard, connect the M-MDS to the DLC-2 and verify that the DTC P0403 is shown. Perform the DTC inspection. (See 01-02B-14 DTC TABLE[L3 WITH TC].)
2. Start the engine run it is idling.
3. Increase the step value of the EGR valve from **0 to 40** using the SEGR PID of the simulation function.
4. Operate the EGR valve and inspect if the engine speed becomes unstable or the engine stalls.
   - If the engine speed does not change, proceed to the following.
     1. Stop the engine.
     2. Remove the EGR valve.
     3. Connect the EGR valve connector.
     4. Turn the ignition switch to the ON position.
     5. Increase the step value of EGR valve from **0 to 40** using SEGRP PID.
     6. Verify that the EGR valve operates according to the SEGRP PID.
        - If the EGR valve is operated, clean the EGR valve and the EGR gas passage.
        - If the EGR valve does not operate, replace the EGR valve.

5. Start the engine and warm it up completely.
6. Access the following PIDs.
   - ECT, RPM, SEGRP, APP1, APP2, TP_REL, VSS
7. Idle the vehicle and verify that the SEGRP value is **0**.
8. Put the vehicle in drive.
9. Depress the accelerator pedal and verify that the SEGRP value increases.
   - If the SEGRP value does not increase, inspect the VSS, TP and ECT PIDs. (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)
10. Stop the vehicle and verify that the SEGRP value is returns to **0**.

If simulation function of M-MDS is not used:

1. Verify that EGR valve operation (initial operation) sound is heard when the ignition switch is turned to the ON position.
   - If the operation sound is not heard, connect the M-MDS to the DLC-2 and verify that the DTC P0403 is shown. Perform the DTC inspection. (See 01-02B-14 DTC TABLE[L3 WITH TC].)
2. Start the engine and idle it.
3. Warm up the engine to normal operating temperature.
4. Select the following PIDs:
   - ECT, RPM, SEGRP, APP1, APP2, TP_REL, VSS
5. Let the vehicle idle and verify that the SEGRP value is **0**.
6. Put the vehicle in drive.
7. Depress the accelerator pedal and verify that the SEGRP value is increased.
   - If the EGR valve increases, inspect the following:
     — EGR valve (stuck open or closed)
     — Wiring harness and connectors (Main relay – EGR valve – PCM)
   - If the SEGRP value does not increase, inspect the VSS, APP1, APP2, TP_REL and ECT PIDs. (See 01-40B-7 PCM INSPECTION[L3 WITH TC].)
8. Stop the vehicle and verify that the SEGRP value returns to **0**.

Purge Control System Inspection
If simulation function of M-MDS is used:

1. Start the engine.
2. Disconnect the vacuum hose between the purge solenoid valve and the charcoal canister.
3. Put a finger to the purge solenoid valve and verify that there is no vacuum applied when the engine is cold.
   - If there is a vacuum, inspect the following:
     — Wiring harness and connectors (Purge solenoid valve - PCM terminal 2AB)
     — Purge solenoid valve (stuck open)
4. Connect the M-MDS to the DLC-2 and verify that the DTC P0403 is displayed. Perform the DTC inspection. (See 01-02B-14 DTC TABLE[L3 WITH TC].)
5. Select the EVAPCP PID.
6. Increase the duty value of the purge solenoid valve to **50%** and inspect if the operation sound of the valve is heard.
   - If the operation sound is heard, inspect for loose or damaged vacuum hoses. (Intake manifold - purge solenoid valve - charcoal canister)
   - If the operation sound is not heard, perform the purge solenoid valve inspection.
7. Warm up the engine to normal operating temperature.
8. Monitor the EVAPCP PID using the M-MDS, and drive the vehicle **approx. 2000 rpm** for **30 s** or more.
   - If the EVAPCP PID is **0%**, inspect the following.
     — MAF, APP1, APP2, TP_REL and LOAD PIDs.

If simulation function of M-MDS is not used:

1. Start the engine.
2. Disconnect the vacuum hose between the purge solenoid valve and the charcoal canister.
3. Put a finger to the purge solenoid valve and verify that there is no vacuum applied when the engine is cold.
   - If there is vacuum, inspect the following:
     — Wiring harness and connectors (Purge solenoid valve-PCM terminal, 2AB)
     — Purge solenoid valve
4. Warm up the engine to the normal operating temperature.
5. Stop the engine.
6. Connect the M-MDS to the DLC-2 and verify that the DTC P0443 is shown. Perform DTC inspection. (See 01-02B-14 DTC TABLE[L3 WITH TC].)
7. Turn the ignition switch to the ON position.
8. Select the ECT PID.

9. Verify that the engine coolant temperature is above **60°C {140°F}**.
   - If the M-MDS indicates that the temperature is below **60°C {140°F}**, perform the ECT sensor inspection.
10. Set the vehicle on the dynamometer or chassis roller.

Warning

- **When the dynamometer or chassis roller is operating, there is a possibility that the operator may come into contact with or be caught up in the rotating parts, leading to serious injuries or death. When performing work while the dynamometer or chassis roller is operating, be careful not to contact or be caught up in any of the rotating parts.**

11. Drive vehicle at an engine speed to **approx. 2000 rpm** for **30 s or more.**
12. Put a finger to the purge solenoid valve and verify that there is no vacuum applied during Step 2.
    - If there is no vacuum, inspect the following:
      — Wiring harness and connector (Main relay – purge solenoid valve – PCM terminal 2AB)
      — Purge solenoid valve
      — MAF, APP1, APP2, TP_REL and LOAD PIDs
    - If there is vacuum, inspect the following:
      — Vacuum hose (Purge solenoid valve – charcoal canister)

A/C Cut-off Control System Inspection

1. Start the engine.
2. Turn the A/C switch and fan switch on.
3. Verify that the A/C compressor magnetic clutch actuates.
   - If it does not actuate, go to symptom troubleshooting "No.23 A/C does not work sufficiently".
4. Fully open the throttle valve and verify that the A/C compressor magnetic clutch does not actuate for **2—5 s**.
   - If it actuates, inspect as follows:
     — A/C relay
     — Open or short to ground circuit in the wiring harness and connectors (Ignition switch-A/C relay-PCM terminal 1I)
     — A/C related parts
     — APP1, APP2 PIDs

Cooling Fan Control System Inspection

1. Verify that the battery voltage is **more than 12.4 V**.
   - If the battery voltage is **less than 12.4 V**, charge the battery or connect the external power supply.
2. Connect the M-MDS and access ECT PID.
3. Turn A/C switch to off.
4. Verify ECT PID is **less than 98 °C {209 °F}**.
   - If ECT PID **more than 98 °C {209 °F}**, inspect ECT sensor and related wiring harnesses.
5. Verify that the cooling fan does not operate with ECT PID is **less than 98 °C {209 °F}** while the ignition switch is ON.
   - If the cooling fan operates, inspect for following parts and related wiring harnesses:
     — ECT sensor
     — A/C switch
     — A/C refrigerant pressure switch (High/low pressure)
     — A/C refrigerant pressure switch (Medium pressure)
     — VSS
     — A/C magnetic clutch
     — Fan control signal circuit (between fan control module terminal B and PCM terminal 1AE)
       - If the all items are normal, replace fan control module.
6. Verify the cooling fan operates while the A/C switch to ON with the ignition switch at ON position.
   - If the cooling fan does not operate, inspect for following:
     — A/C switch
     — A/C refrigerant pressure switch (High/low pressure)
     — Fan control module power supply circuit
     — Fan control module GND circuit
     — Fan control signal circuit (between fan control module terminal B and PCM terminal 1AE)
       - If the all items are normal, replace fan control module.

7. Verify that the cooling fan operates with following table.

	PCM terminal 1J voltage	
	B+ (off)*	0V (ON)*
Cooling fan speed	Middle speed	High speed

* : A/C refrigerant pressure switch (Medium pressure) condition

- If the cooling fan operation is not specified, inspect for following:
  - — A/C refrigerant pressure switch (Medium pressure)
    - If the A/C refrigerant pressure switch (Medium pressure) is normal, replace fan control module.
8. Turn A/C switch to off.
9. Start the engine and idle it.
10. Verify that the cooling fan operating speed increases relative to ECT PID increases.
    - If the cooling fan speed does not increase inspect following:
      - — ECT sensor (characteristic)
        (See 01-40A-49 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION[LF, L3].)
      - — Fan control signal circuit (between fan control module terminal B and PCM terminal 1AE)
        - If the all items are normal, replace fan control module.

Wastegate Control System Operation Inspection
If simulation function of M-MDS is used:

1. Start the engine and run it is idling.
2. Disconnect the hose between the wastegate control solenoid valve and the intake pipe.
3. Put a finger to the wastegate control solenoid valve and verify that there is no pressure applied.
   - If there is pressure, inspect the following:
     - — Wiring harness and connectors (Wastegate control solenoid valve—PCM terminal 2AA)
     - — Wastegate control solenoid valve (Stuck open)
4. Warm up the engine to normal operating temperature.
5. Connect the M-MDS to the DLC-2 and verify that DTC P0245 or P0246 are shown. Perform the DTC inspection.
   (See 01-02B-114 DTC P0245[L3 WITH TC].)
   (See 01-02B-116 DTC P0246[L3 WITH TC].)
6. Select the VGT PID.
7. Increase the duty value of the wastegate control solenoid valve and inspect if the operation sound of the solenoid valve is heard.
   - If the operation sound is heard, inspect for loose or damaged vacuum hoses. (Wastegate actuator - wastegate control solenoid valve - intake hose)
   - If the operation sound is not heard, perform the wastegate control solenoid valve inspection.
8. Warm up the engine to normal operating temperature.
9. Monitor the VGT and APP PIDs using the M-MDS.
10. Run the engine with the APP PID **above 30%** and verify that the VGT PID value increases from **0%**.
    - If the VGT PID is **0%**, inspect the APP PID.

If simulation function of M-MDS is not used:

1. Start the engine and run it is idling.
2. Disconnect the hose between the wastegate control solenoid valve and the intake pipe.
3. Put a finger to the wastegate control solenoid valve and verify that there is no pressure applied.
   - If there is pressure, inspect the following:
     - — Wiring harness and connectors (Wastegate control solenoid valve - PCM terminal 2AA)
     - — Wastegate control solenoid valve (Stuck open)
4. Warm up the engine to normal operating temperature.
5. Connect the M-MDS to the DLC-2 and verify that the DTC P0245 or P0246 are shown. Perform the DTC inspection.
   (See 01-02B-114 DTC P0245[L3 WITH TC].)
   (See 01-02B-116 DTC P0246[L3 WITH TC].)
6. Warm up the engine to normal operating temperature.
7. Monitor the VGT and APP PIDs using the M-MDS.
8. The hose between the wastegate control solenoid valve and intake pipe is disconnected.

9. Run the engine with the APP PID **above 30%** and verify that the VGT PID value increases from **0%** and there is pressure applied.
   - If the VGT PID is **0%**, inspect the TP_REL PID.
   - If there is no pressure applied, inspect for the following:
     — Wastegate control solenoid valve (Stuck closed)
     — Hose connection (Intake hose (turbocharger compressor downstream side) - wastegate actuator - intake hose (turbocharger compressor upstream side))

Variable Valve Timing Control System Operation Inspection
When idling cannot be continued

1. Remove the oil control valve (OCV) and verify that the spool valve is at maximum retard position.
2. Connect the oil control valve (OCV).
3. Turn the ignition switch to the ON position.
4. Verify that the spool valve is at the maximum retard position.
   - If the spool valve is stuck in the advance direction, inspect for the following:
     — Short circuit in wiring harnesses or connectors between the oil control valve (OCV) and the PCM.
5. Inspect the variable timing actuator.

When idling can be continued
If simulation function of M-MDS is used:

1. Warm up the engine to normal operating temperature.
2. Connect the M-MDS to the DLC-2.
3. Start the engine and run it is idling.
4. Select the VT DUTY1 PID.
5. Increase the oil control valve (OCV) duty value and verify that the engine idles roughly or stalls.
   - If as specified, inspect the timing belt component (valve timing deviation).
   - If not as specified, go to the next step.
6. Remove the oil control valve (OCV) while the connector is connected.
7. Turn the ignition switch to the ON position.
8. Select VT DUTY1 PID.
9. Increase the oil control valve (OCV) duty value and verify that the spool valve operates in the advance direction.
   - If as specified, inspect the following hydraulic passage for clogging and/or leakage.
     — Oil pressure switch - oil control valve (OCV)
     — Oil control valve (OCV) - camshaft
     — Camshaft internal passage
   - If not as specified, inspect the following:
     — Oil control valve (OCV) operation
     — Harness and connectors for open or short circuit (Oil control valve (OCV) - PCM terminal 2AF)
10. If they are normal, replace the intake camshaft pulley (with a built-in variable valve timing actuator).

If simulation function of M-MDS is not used:

1. Disconnect the oil control valve (OCV) connector.
2. Warm up the engine and idle it.
3. Apply battery voltage to the oil control valve (OCV) and verify that the engine idles roughly or stalls.
   - If the engine idles roughly or stalls, inspect the timing belt component (valve timing deviation).
   - If the engine does not idle roughly or stalls, go to the next step.
4. Remove the oil control valve (OCV) and perform the spool valve operation inspection.
   - If not as specified, inspect the following:
     — Oil control valve (OCV)
     — Harnesses and connectors between oil control valve (OCV) and PCM have an open or short circuit.
   - If as specified, inspect the following hydraulic passages for clogging or leakage or both:
     — Oil pressure switch – oil control valve (OCV)
     — Oil control valve (OCV) – camshaft
     — Camshaft internal passage
5. If they are normal, replace the camshaft pulley (with built-in variable valve timing actuator).

EVAP system leak inspection using M-MDS

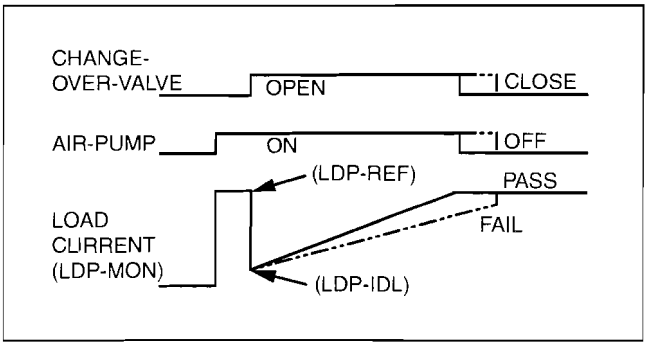
Note

EVAP system test outline

- The EVAP system test, which can substituted for the run drive cycle as an EVAP control system repair confirmation method, can be done while operating the M-MDS in the KOEO (Key On Engine Off) condition instead of actually driving the vehicle.

EVAP system test description

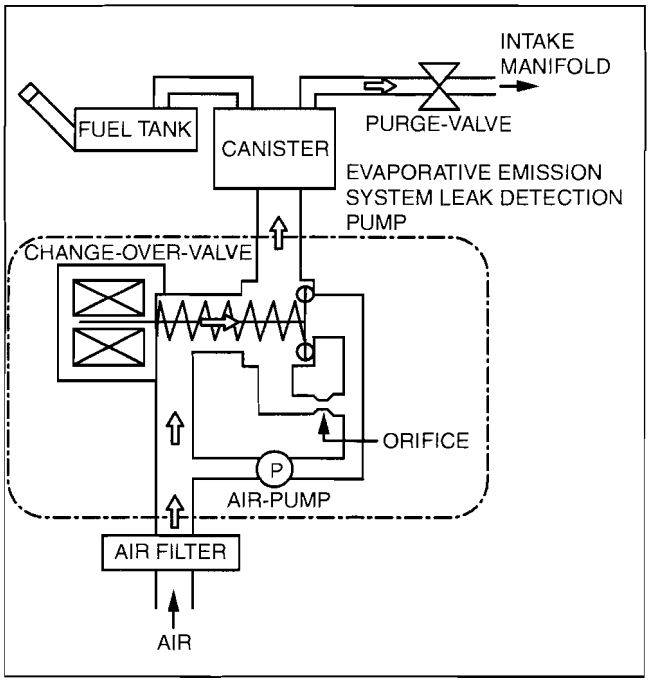
- The EVAP system test finds gas leaks in the system using the PCM to monitor changes in the air pump load current of the EVAP system leak detection pump. This test starts after sending an on-demand test signal from the M-MDS to the PCM. The PCM controls the air pump and change-over-valve operation and also stores the load current of the air pump as follows:
  i. The PCM commands turn the air pump on and retrieve the air pump load current value (LDP_MON PID) as a reference current (LDP_REF PID).
  ii. After retrieving a reference current value, the PCM commands the change-over-valve to open, then captures the air pump load current value (LDP_MON PID) as idle current (LDP_IDL PID). The EVAP system will be pressurized from this phase.
  iii. The PCM continues to monitor the air pump load current value (LDP_MON PID) until the end of the test.
- You can confirm whether any evaporative gas leak occurred or not by reading the test results.



c5u116aw7001

EVAP system malfunction judgment

- The PCM calculates the stored air pump load current value and send the results to the M-MDS as DTCs:



d3u103zw7001

DTC No.	Condition
P0442	Evaporative emission control system leak detected (small leak)
P0446	Change over valve (COV) (EVP system leak detection pump) stuck close
P0455	Evaporative emission control system leak detected (gross leak)
P0456	Evaporative emission system leak detected (very small leak)
P2401	EVAP system leak detection pump motor circuit low
P2402	EVAP system leak detection pump motor circuit high
P2404	EVAP system leak detection pump sense circuit problem
P2405	EVAP system leak detection pump sense circuit low input
P2407	EVAP system leak detection pump sense circuit intermittent

Evaporative system test procedure

1. Select the EVAP system test from the Toolbox on the M-MDS display and follow the instructions.
2. Verify that all of the following PIDs are within the specifications at the pre-test confirmation screen.

Note

- To successfully perform this procedure, all PIDs must be within the following specifications before proceeding to the next step.
- The PCM will cancel the EVAP system test if the VPWR PID value falls lower than **11.0 V** during the test.

Specification

PID	PID Range
BARO	72.2 kPa {543 mmHg, 21.3 inHg} or more
FLI	15—85%
IAT	5—45 °C {41—113 °F}
VPWR	11.0 V or more

3. Start the engine.
4. Drive the vehicle or let the engine idle more than **20 min**.
5. Turn ignition switch off, then turn it to the ON position again (Key On Engine Off).
6. Press the tick icon to start the test.
7. Verify that no DTCs present after the completion of the test.

- If any test result is indicated with red, diagnose the problem using the following DTC troubleshooting procedure or component inspection procedure.
- If any DTCs are detected, diagnose the problem using the appropriate DTC troubleshooting procedure.

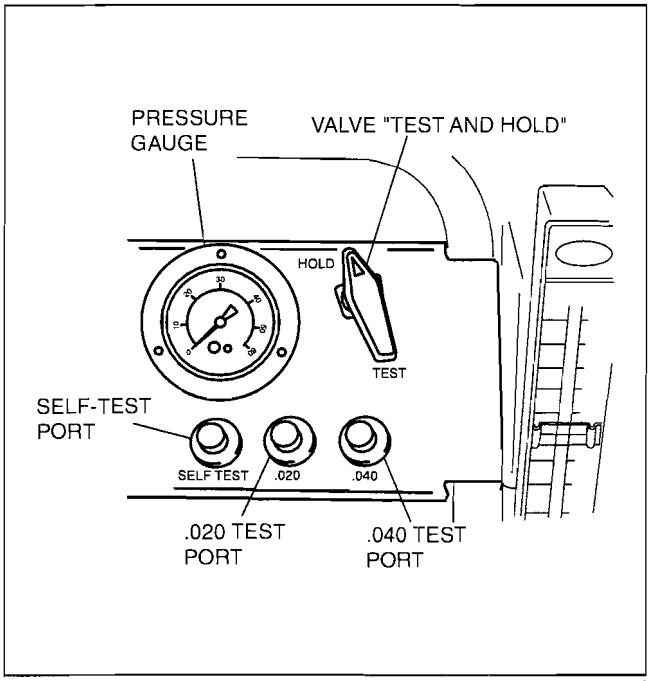
EVAP system leak inspection using leak tester

1. Perform the following **SST** (EVAP System Tester 134-01049) self-test:

Note

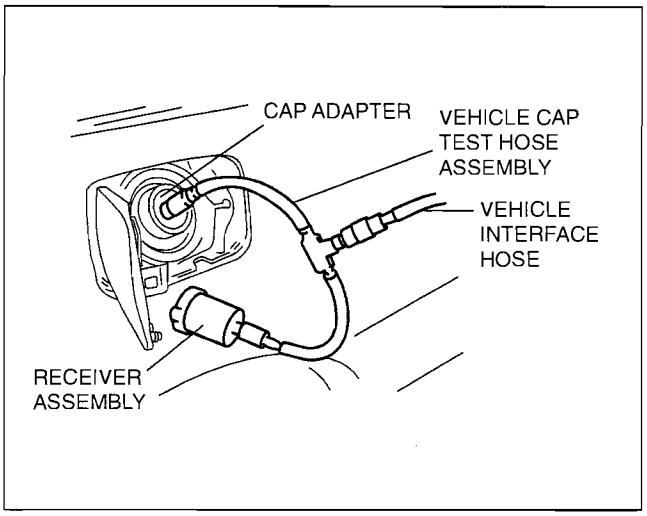
- If the tester does not work correctly during the self-test, refer to the tester operators manual for a more detailed self-test procedure.

(1) Verify that the control valve on the panel is in the HOLD position then open the nitrogen bottle valve.
(2) Connect the vehicle interface hose (part of the **SST**) to the SELF-TEST port located on the control panel. Hand tighten the fitting. (Do not overtighten.)
(3) Turn the control valve to the TEST position.
(4) The gauge should read **331—381 mm {13—15 in}** of water.
  - If the gauge is not reading in this range, adjust the pressure by turning the black knob on the low pressure regulator at the nitrogen bottle.
(5) Turn the control valve to the HOLD position.
(6) Verify that the gauge holds pressure and that the flow meter reads no flow.
  - If there is no drop in pressure and no flow, the tester passes the self-test.
  - If the gauge leaks down, refer to the tester operators manual.



am3uuw0000059

2. Connect the **SST** to the vehicle.
   (1) Verify that the control valve on the panel is in the HOLD position then open the nitrogen bottle valve.
   (2) Remove the fuel-filler cap from the vehicle.
   - If the fuel-filler cap is not a MAZDA part or equivalent, replace it.
   (3) Connect the receiver assembly (**SST**: AKS441130) to the vehicle cap test hose assembly (part of the **SST**) and the fuel-filler cap from the vehicle.
   (4) Connect the cap adaptor (**SST**: AKS441131) to the vehicle cap test hose assembly (part of the **SST**) and to the fuel-filler neck.
   (5) Connect the vehicle interface hose (part of the **SST**) to the center fitting of the vehicle cap test hose assembly (part of the **SST**).
3. Connect the M-MDS to the DLC-2.
4. Turn the ignition switch to the ON position (Engine off).
5. Request the PCM on-board device control (Mode 08) using the M-MDS to close the change-over valve (COV) in the EVAP system leak detection pump.



am3uuw0000059

Note
- The COV is closed for **10 min** unless the following any actions are done:
  — The engine is started.
  — The ignition switch is turned off position.

6. Make sure the control valve on the 134-01049 is in the HOLD position and that the valve on the cylinder of nitrogen gas is open.
7. Turn the control valve to the open position and let the system fill. You should note a drop in the gauge pressure along with the flow meter being pegged at maximum flow for several minutes depending on how full or empty the fuel tank is, and how long it takes to completely fill and pressurize the evaporative emissions system hoses.
8. If the gauge and the flow meter do not settle to a measurable level after **2—3 min**, then refer to the Mazda Workshop Manual to verify that the cut or vent valve is properly closed.
9. Verify the pressure gauge and flow meter reading to determine if there is an evaporative emissions leak:
   NO EVAPORATIVE LEAK:
   - The flow meter registers "zero flow" and the pressure gauge returns to the pre-set pressure of **356 mm {14 in}** of water (H2O).
   EVAPORATIVE LEAK:
   - The pressure does not return to the preset level of **356 mm {14 in}** of water (H2O) when measuring the flow. See "SETTING LEAK STANDARD FOR TESTING" (.020 to .040 inch H2O) of the Evaporative Emissions Tester operators manual (134-01067).

Note
- Turn the control valve to the HOLD position then disconnect the **SST**.

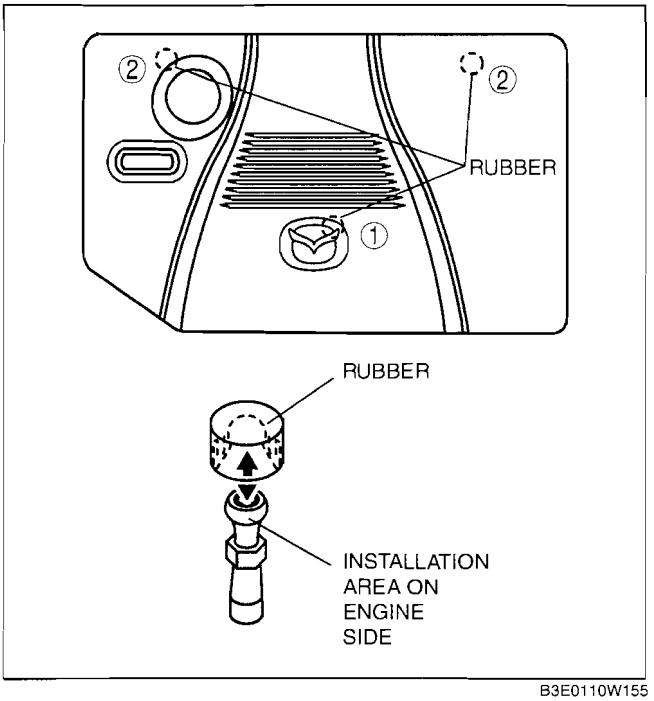
PLUG HOLE PLATE REMOVAL/INSTALLATION[LF, L3]

id0110a2803900

1. Remove the plug hole plate in the order indicated in the figure.

Note
- Lift off and remove the plug hole plate from the installation areas as shown in the figure.

2. Install the plug hole plate in the reverse order of removal.



B3E0110W155

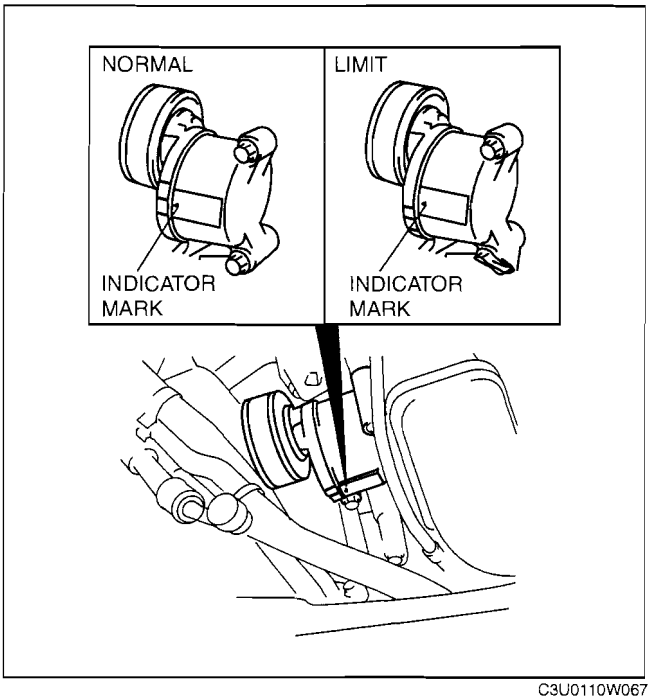
DRIVE BELT INSPECTION[LF, L3]

id0110a2801500

Generator Drive Belt

Note
- Drive belt deflection/tension inspection is not necessary because of the use of the generator drive belt auto tensioner.

1. Verify that the drive belt auto tensioner indicator mark does not exceed the limit.
   - If it exceeds the limit, replace the drive belt. (See 01-10A-4 DRIVE BELT REPLACEMENT[LF, L3].)



C3U0110W067

A/C Drive Belt

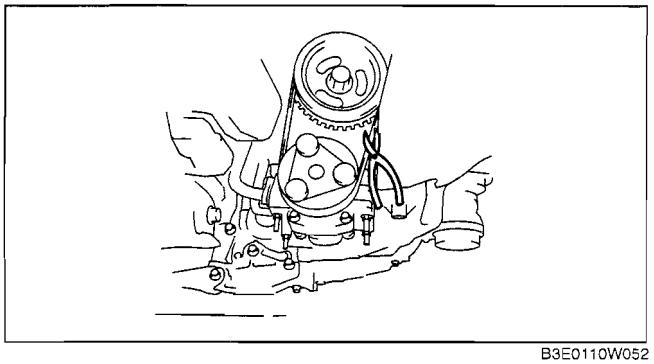
Note
- Drive belt deflection/tension inspection is not necessary because of the use of the maintenance-free type A/C drive belt.
- Replace the drive belt if it is found to be damaged during visual inspection, or if there is a malfunction or noise in the A/C compressor.

DRIVE BELT REPLACEMENT[LF, L3]

id0110a2803800

A/C Drive belt

1. Remove the engine under cover and splash shield (RH).
2. Cut the A/C drive belt using scissors.

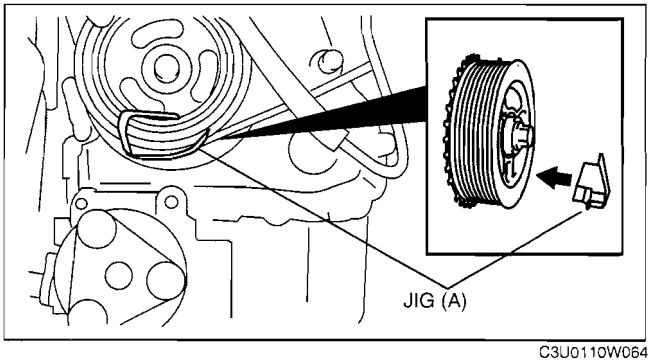


B3E0110W052

3. Install a jig (A) to the crankshaft pulley as shown in the figure.

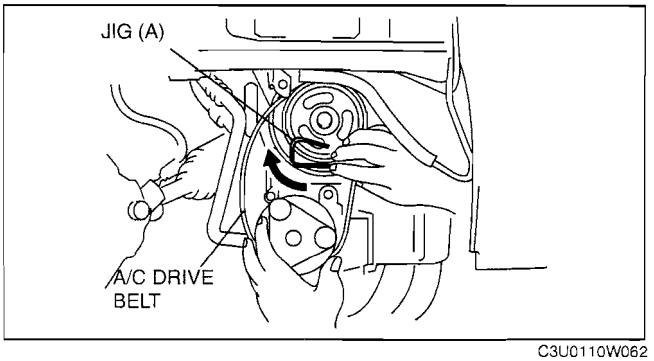
Note

- The jig is prepackaged with a new A/C drive belt.



C3U0110W064

4. Install a new A/C drive belt to the A/C compressor pulley, move jig (A) upward, and then install the A/C drive belt to the crankshaft pulley.

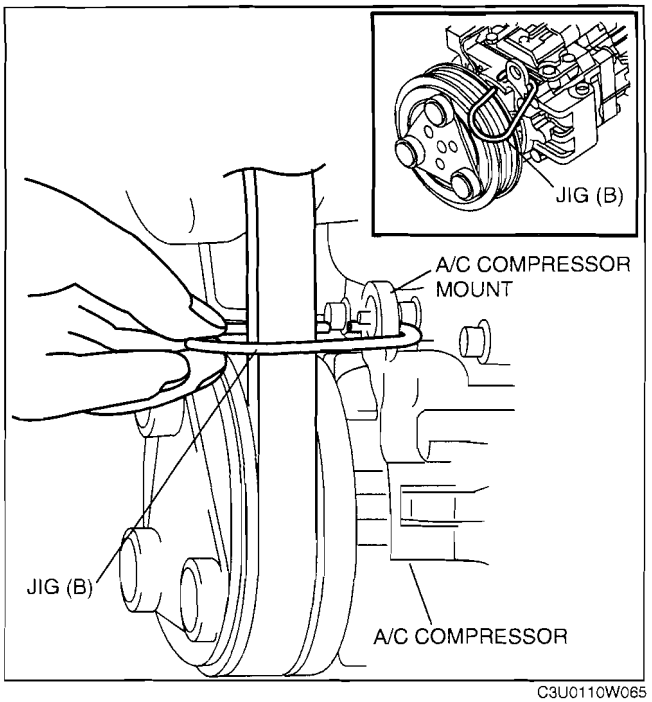


C3U0110W062

5. Install jig (B) to the A/C compressor mount as shown in the figure.

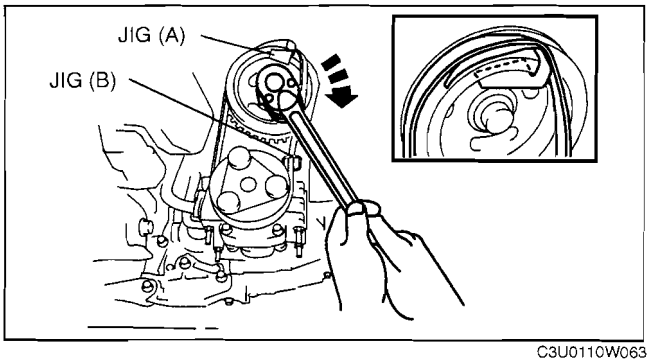
Caution
- **The A/C drive belt cannot be reused.**

Note
- The jig is prepackaged with a new A/C drive belt.
- Do not pass jig (B) through the A/C compressor mount hole.



C3U0110W065

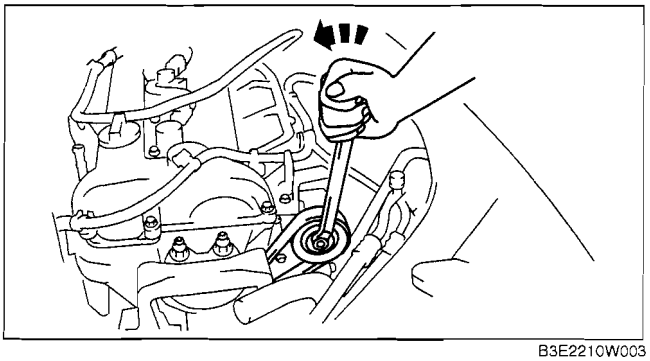
6. Rotate the crankshaft pulley to the right using a wrench and install the A/C drive belt.
7. Install the under cover and splash shield (RH).



C3U0110W063

Generator Drive Belt

1. Remove the plug hole plate.
   (See 01-10A-3 PLUG HOLE PLATE REMOVAL/INSTALLATION[LF, L3].)
2. Remove the A/C drive belt.
3. Turn the center of the auto tensioner pulley counterclockwise to release tension to the drive belt tension.
4. Remove the generator drive belt.
5. Install a new generator drive belt.
6. Install the A/C drive belt.
7. Install the plug hole plate.
   (See 01-10A-3 PLUG HOLE PLATE REMOVAL/ INSTALLATION[LF, L3].)

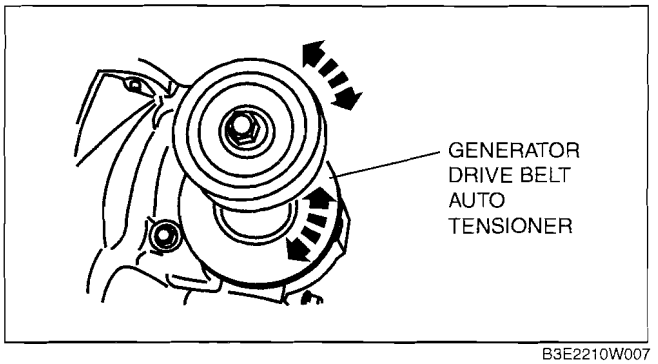


B3E2210W003

DRIVE BELT AUTO TENSIONER INSPECTION[LF, L3]

id0110a2801700

1. Remove the drive belt. (See 01-10A-4 DRIVE BELT REPLACEMENT[LF, L3].)
2. Verify that the generator drive belt auto tensioner moves smoothly in the operational direction.
   - If it does not move smoothly, replace the generator drive belt auto tensioner.
3. Turn the generator drive belt auto tensioner pulley by hand and verify that it rotates smoothly.
   - If it does not move smoothly, replace the generator drive belt auto tensioner.
4. Install the generator drive belt. (See 01-10A-4 DRIVE BELT REPLACEMENT[LF, L3].)

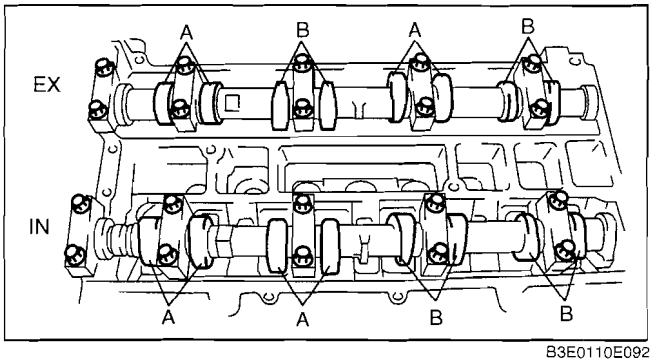


B3E2210W007

VALVE CLEARANCE INSPECTION[LF, L3]

id0110a2803400

1. Remove the plug hole plate. (See 01-10A-3 PLUG HOLE PLATE REMOVAL/INSTALLATION[LF, L3].)
2. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
3. Disconnect the negative battery cable.
4. Disconnect the wiring harness.
5. Remove the ignition coils. (See 01-18A-2 IGNITION COIL REMOVAL/INSTALLATION[LF, L3].)
6. Disconnect the OCV connector.
7. Remove the ventilation hose.
8. Remove the cylinder head cover.
9. Verify that the engine is cold.
10. Measure the valve clearance.
    (1) Turn the crankshaft clockwise so that the No.1 piston is at TDC of the compression stroke.
    (2) Measure the valve clearance at A in the figure.
        - If the valve clearance is out of the standard value, adjust it. (See 01-10A-7 VALVE CLEARANCE ADJUSTMENT[LF, L3].)



B3E0110E092

Standard [Engine cold]
IN: 0.22—0.28 mm {0.0087—0.0110 in}
EX: 0.27—0.33 mm {0.0107—0.0129 in}

Note
- Make sure to note down the measured values for choosing the suitable replacement tappets.

    (3) Turn the crankshaft **360°** clockwise so that the No.4 piston is at TDC of the compression stroke.
    (4) Measure the valve clearance at B in the figure.
        - If the valve clearance is out of the standard value, adjust it. (See 01-10A-7 VALVE CLEARANCE ADJUSTMENT[LF, L3].)

Note
- Make sure to note down the measured values for choosing the suitable replacement tappets.

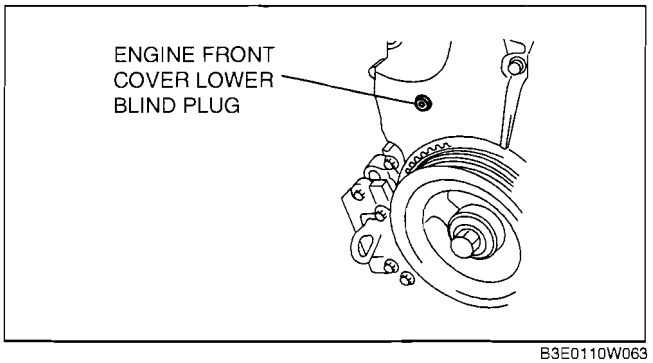
Standard [Engine cold]
IN: 0.22—0.28 mm {0.0087—0.0110 in}
EX: 0.27—0.33 mm {0.0107—0.0129 in}

11. Install the cylinder head cover. (See 01-10A-12 TIMING CHAIN REMOVAL/INSTALLATION[LF, L3].)
12. Install the ventilation hose.
13. Connect the OCV connector.
14. Install the ignition coils. (See 01-18A-2 IGNITION COIL REMOVAL/INSTALLATION[LF, L3].)
15. Connect the wiring harness.
16. Connect the negative battery cable.
17. Install the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
18. Install the plug hole plate and bracket. (See 01-10A-3 PLUG HOLE PLATE REMOVAL/INSTALLATION[LF, L3].)

VALVE CLEARANCE ADJUSTMENT[LF, L3]

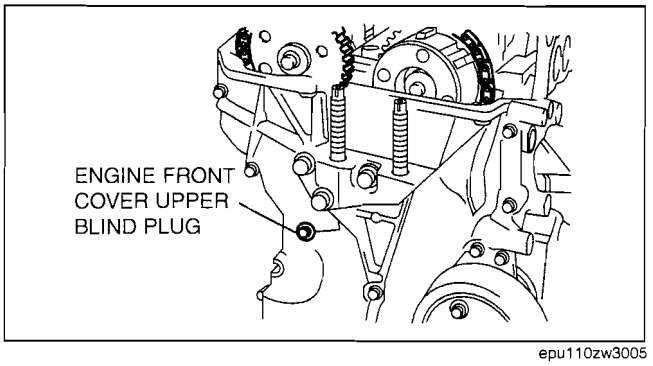
id0110a2803300

1. Remove the plug hole plate. (See 01-10A-3 PLUG HOLE PLATE REMOVAL/INSTALLATION[LF, L3].)
2. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
3. Disconnect the negative battery cable.
4. Disconnect the wiring harness.
5. Disconnect the OCV connector.
6. Remove the following parts.
   (1) Front wheel and tire (RH) (See 02-10-1 GENERAL PROCEDURES (SUSPENSION).)
   (2) Engine under cover and splash shield (RH)
   (3) Ignition coils (See 01-18A-2 IGNITION COIL REMOVAL/INSTALLATION[LF, L3].)
   (4) Ventilation hose
   (5) Cylinder head cover
   (6) Engine front cover lower blind plug



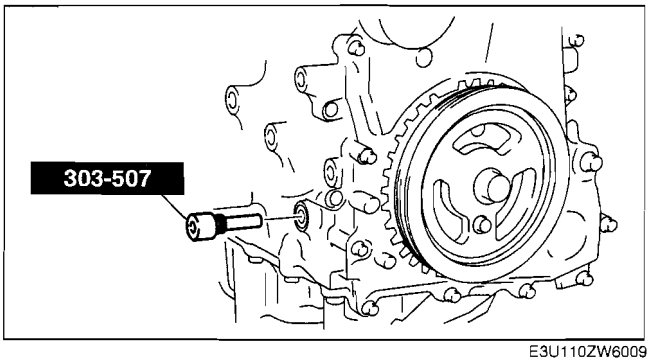
B3E0110W063

   (7) Engine front cover upper blind plug.
   (8) Cylinder block lower blind plug.



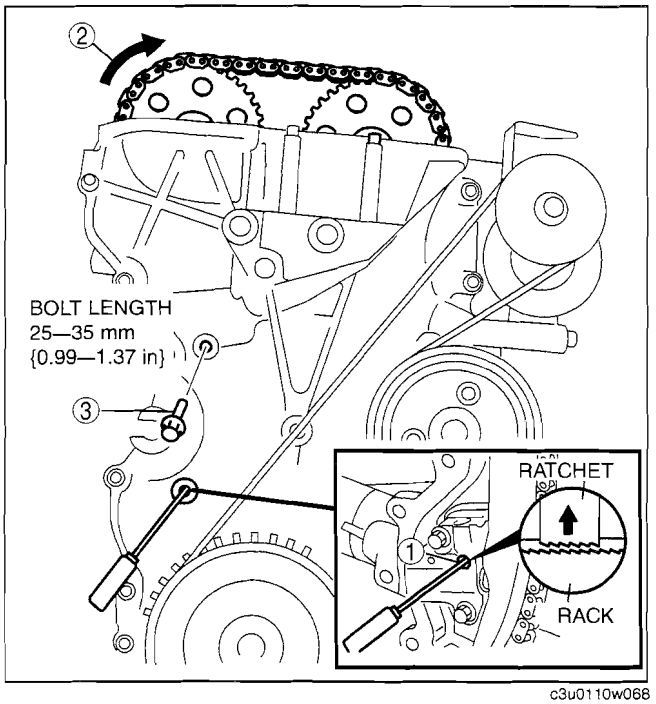
epu110zw3005

7. Install the **SST** as shown in the figure.
8. Turn the crankshaft clockwise the crankshaft is in the No.1 cylinder TDC position (until the balance weight is attached to the **SST**).



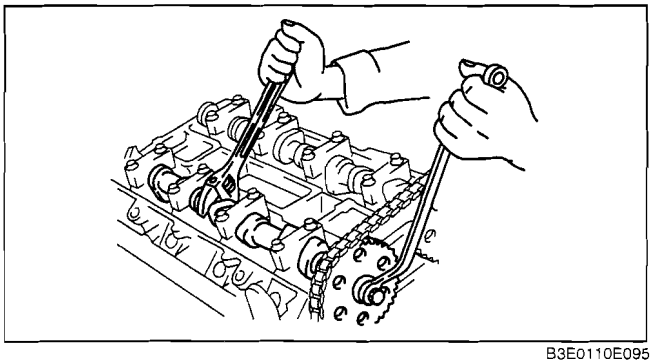
E3U110ZW6009

9. Loosen the timing chain.
   (1) Unlock the chain tensioner ratchet using a suitable screwdriver or equivalent tool.
   (2) Turn the exhaust camshaft clockwise using a suitable wrench on the cast hexagon and loosen the timing chain.
   (3) Placing the suitable bolt **(M6 X 1.0 length 25mm—35mm {0.99—1.37in})** at the engine front cover upper blind plug, secure the chain guide at the position where the tension is released.



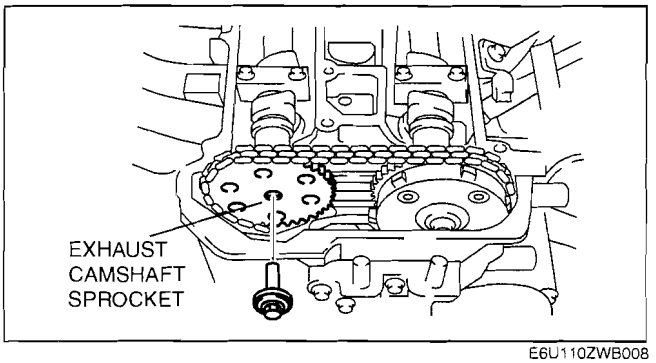
c3u0110w068

10. Hold the exhaust camshaft using a suitable wrench on the cast hexagon as shown in the figure.



B3E0110E095

11. Remove the exhaust camshaft sprocket.

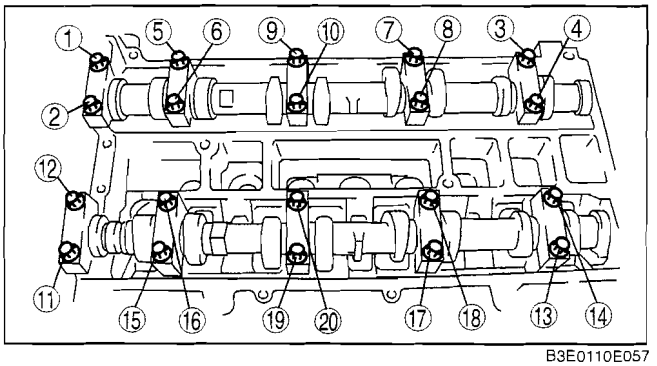


E6U110ZWB008

12. Loosen the camshaft cap bolts in 2—3 passes in the order shown in the figure.

Note
- The cylinder head and the camshaft caps are numbered to be reassembled in their original position correctly. When removed, keep the caps with the cylinder head they were removed from. Do not mix the caps.

13. Remove the camshaft.
14. Remove the tappet.



B3E0110E057

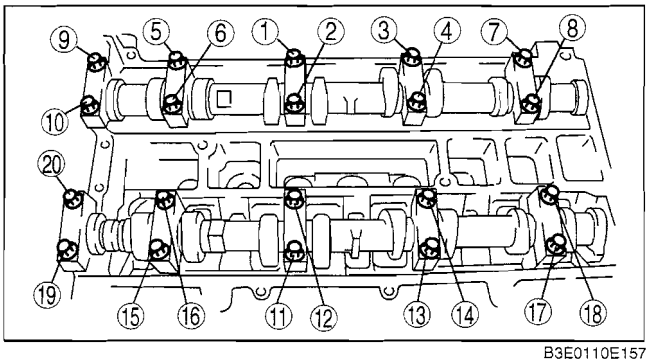
15. Select proper adjustment shim.

New adjustment shim
= Removed shim thickness + Measured valve clearance - Standard valve clearance (IN: 0.25 mm {0.0098 in}, EX: 0.30 mm {0.0118 in})

Standard [Engine cold]
IN: 0.22—0.28 mm {0.0087—0.0110 in}
EX: 0.27—0.33 mm {0.0107—0.0129 in}

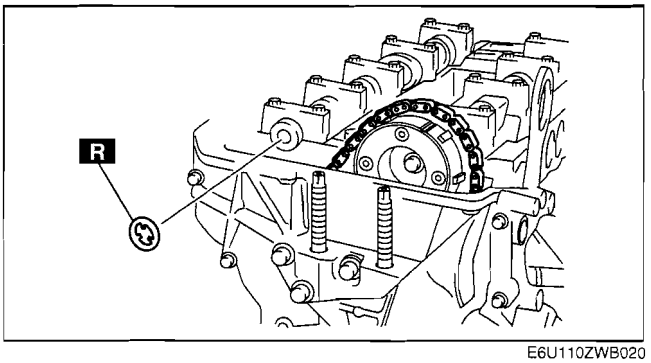
16. Install the camshaft with No.1 cylinder aligned with the TDC position.
17. Tighten the camshaft cap bolts in the order shown with the following two steps.

Tightening torque
(1) 5.0—8.0 N·m
{51.0—81.5 kgf·cm, 44.3—70.8 in·lbf}
(2) 14—17 N·m
{1.43—1.73 kgf·m, 10.4—12.5 ft·lbf}



B3E0110E157

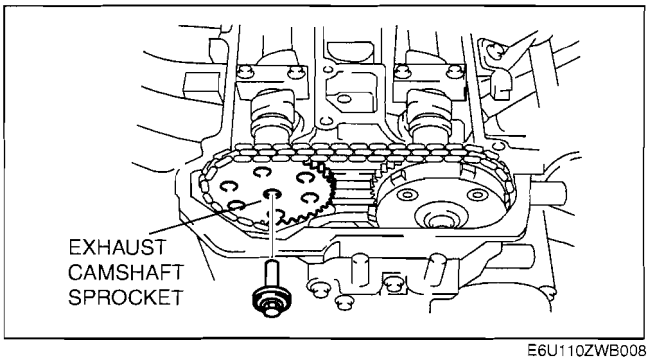
18. Install a new washer.



E6U110ZWB020

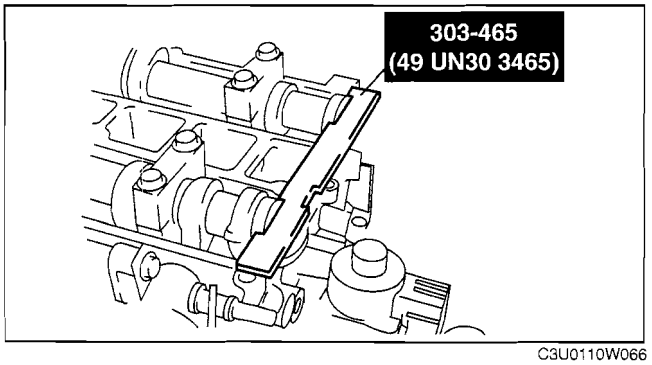
19. Install the exhaust camshaft sprocket.

Note
- Do not tighten the bolt for the camshaft sprocket during this step. First confirm the valve timing, then tighten the bolt.



E6U110ZWB008

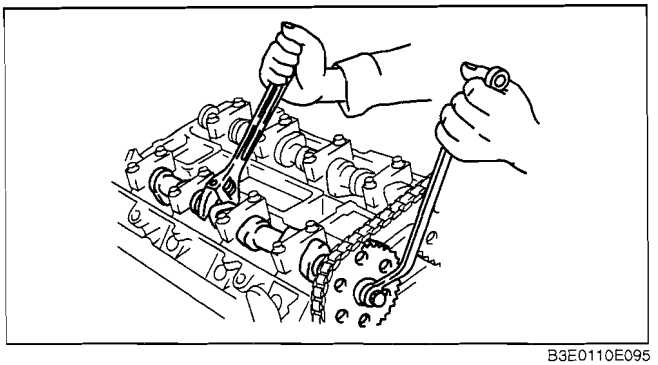
20. Install the **SST** to the camshaft as shown in the figure.
21. Remove the **(M6 X 1.0 length 25mm—35mm {0.99—1.37in})** bolt from the engine front cover to apply tension to the timing chain.
22. Turn the crankshaft clockwise until the crankshaft is in the No.1 cylinder TDC position (until the balance weight is attached to the **SST**).



C3U0110W066

23. Hold the exhaust camshaft using a suitable wrench on the cast hexagon as shown in the figure.
24. Tighten the exhaust camshaft sprocket lock bolt.

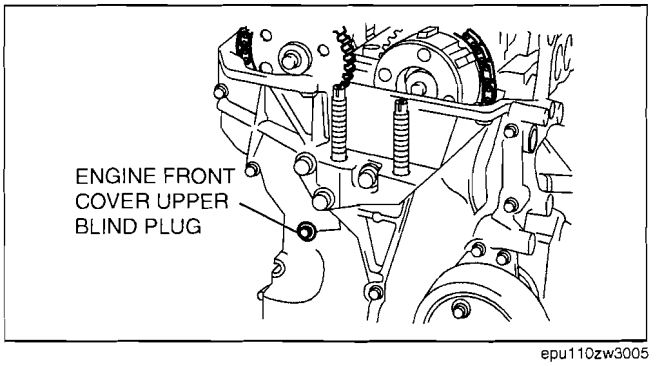
    Tightening torque
    69—75 N·m
    {7.1—7.6 kgf·m, 50.9—55.3 ft·lbf}



B3E0110E095

25. Remove the **SST** from the camshaft.
26. Remove the **SST** from the block lower blind plug.
27. Rotate the crankshaft clockwise two turns until the TDC position.
    - If not aligned, loosen the crankshaft pulley lock bolt and repeat from Step 14.
28. Apply silicone sealant to the engine front cover upper blind plug.
29. Install the following parts.
    (1) Engine front cover upper blind plug.

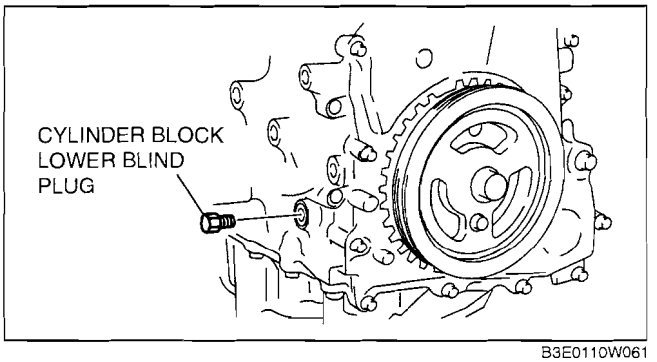
    Tightening torque
    8.0—11.5 N·m
    {82—117 kgf·cm, 71—101 in·lbf}



epu110zw3005

    (2) Cylinder block lower blind plug.

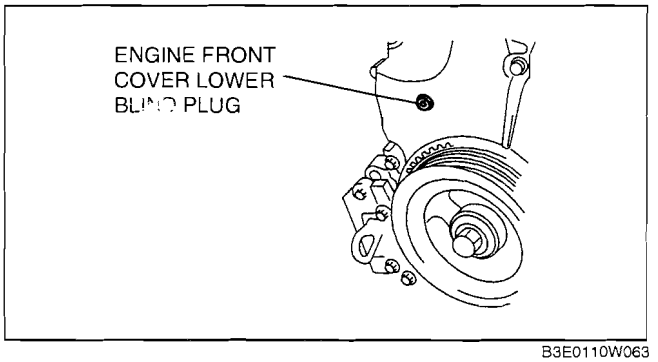
    Tightening torque
    18—22 N·m
    {1.9—2.2 kgf·m, 13.3—16.2 ft·lbf}



B3E0110W061

    (3) New engine front cover lower blind plug.

    Tightening torque
    10—14 N·m
    {102—142 kgf·m, 89—123 in·lbf}



B3E0110W063

    (4) Cylinder head cover. (See 01-10A-12 TIMING CHAIN REMOVAL/INSTALLATION[LF, L3].)
    (5) Ventilation hose.
    (6) Ignition coils. (See 01-18A-2 IGNITION COIL REMOVAL/INSTALLATION[LF, L3].)
    (7) Engine under cover and splash shield (RH).
    (8) Front wheel and tire (RH). (See 02-10-1 GENERAL PROCEDURES (SUSPENSION).)
30. Connect the OCV connector.
31. Connect the wiring harness.
32. Connect the negative battery cable.
33. Install the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
34. Install the plug hole plate. (See 01-10A-3 PLUG HOLE PLATE REMOVAL/INSTALLATION[LF, L3].)

COMPRESSION INSPECTION[LF, L3]

id0110a2800300

Warning
- **Hot engines and oil can cause severe burns. Be careful not to burn yourself during removal/ installation of each component.**

1. Verify that the battery is fully charged.
   - Recharge it if necessary. (See 01-17A-4 BATTERY INSPECTION[LF, L3].)
2. Warm up the engine to the normal operating temperature.
3. Stop the engine and allow it to cool down for **about 10 min**.
4. Perform "Fuel Line Safety Procedures". Leave the fuel pump relay removed. (See 01-14A-4 BEFORE SERVICE PRECAUTION[LF, L3].)

Warning
- **Fuel vapor is hazardous. It can very easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.**
- **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure". (See 01-14A-4 BEFORE SERVICE PRECAUTION[LF, L3].)**

5. Remove the plug hole plate. (See 01-10A-3 PLUG HOLE PLATE REMOVAL/INSTALLATION[LF, L3].)
6. Remove the ignition coils. (See 01-18A-2 IGNITION COIL REMOVAL/INSTALLATION[LF, L3].)
7. Remove the spark plugs. (See 01-18A-3 SPARK PLUG REMOVAL/INSTALLATION[LF, L3].)
8. Connect a compression gauge into the spark plug hole.
9. Fully depress the accelerator pedal and crank the engine.
10. Note down the maximum gauge reading.
11. Inspect each cylinder as above.
    - If the measured value is less than the limited value, or there is a cylinder whose compression value varies from that of other cylinders by **196.1 kPa {2.0 kgf/cm2, 28.5 psi}** or more, add a small amount of engine oil through the spark plug hole. Then measure the compression pressure and perform the respective operations for the following cases.
      — If the compression increases, the piston, the piston rings, or cylinder wall may be worn and overhaul is required.
      — If the compression stays low, a valve may be stuck or improperly seated and overhaul is required.
      — If the compression in adjacent cylinders stays low, the cylinder head gasket may be damaged or the cylinder head distorted and overhaul is required.

Compression [LF]

Standard: 1,400 kPa {14.28 kgf/cm^2, 203.1 psi} [300 rpm]
Minimum: 980 kPa {10.0 kgf/cm^2, 142.2 psi} [300 rpm]
Maximum difference between cylinders: 196.1 kPa {2.0 kgf/cm^2, 28.5 psi}

Compression [L3]

Standard: 1,372 kPa {14.00 kgf/cm^2, 199.1 psi} [290 rpm]
Minimum: 960 kPa {9.79 kgf/cm^2, 139.2 psi} [290 rpm]
Maximum difference between cylinders: 196.1 kPa {2.0 kgf/cm^2, 28.5 psi}

12. Disconnect the compression gauge.
13. Install the following parts.
    (1) Spark plug. (See 01-18A-3 SPARK PLUG REMOVAL/INSTALLATION[LF, L3].)
    (2) Ignition coils. (See 01-18A-2 IGNITION COIL REMOVAL/INSTALLATION[LF, L3].)
    (3) Fuel pump relay. (See 01-14A-4 BEFORE SERVICE PRECAUTION[LF, L3].)
    (4) Plug hole plate. (See 01-10A-3 PLUG HOLE PLATE REMOVAL/INSTALLATION[LF, L3].)

TIMING CHAIN REMOVAL/INSTALLATION[LF, L3]

id0110a2801000

Warning

- **Fuel vapor is hazardous. It can very easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.**
- **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure". (See 01-14A-4 BEFORE SERVICE PRECAUTION[LF, L3].)**

1. Remove the following parts.
   (1) Plug hole plate (See 01-10A-3 PLUG HOLE PLATE REMOVAL/INSTALLATION[LF, L3].)
   (2) Plug hole plate bracket
   (3) Accelerator cable and bracket
   (4) Battery cover (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
2. Disconnect the negative battery cable.
3. Remove the following parts.
   (1) Ignition coils (See 01-18A-2 IGNITION COIL REMOVAL/INSTALLATION[LF, L3].)
   (2) Front wheel and tire (RH) (See 02-10-1 GENERAL PROCEDURES (SUSPENSION).)
   (3) Under cover and splash shields
   (4) Crankshaft position (CKP) sensor (See 01-40A-67 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION[LF, L3].)
   (5) Drive belt (See 01-10A-4 DRIVE BELT REPLACEMENT[LF, L3].)
   (6) A/C compressor with the oil hose still connected and position the A/C compressor so that it is out of the way (See 07-11-15 A/C COMPRESSOR REMOVAL/INSTALLATION[LF, L3].)
   (7) Coolant reserve tank with the hose still connected and position the coolant reserve tank so that it is out of the way
4. Remove in the order indicated in the table.
5. Install in the reverse order of removal.
6. Start the engine.
7. Inspect the following and adjust if necessary.
   - Pulley and belt for runout and contact
   - Leakage of engine oil
   - Ignition timing, idle speed, and amount of CO and HC (See 01-10A-37 ENGINE TUNE-UP[LF, L3].)
   - Engine-driven accessories operation

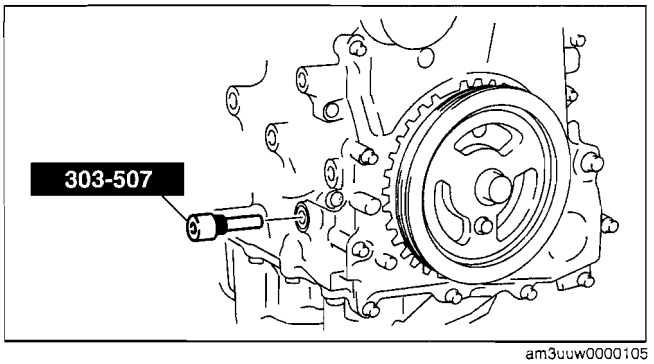
17	Oil pump chain
18	Crankshaft sprocket

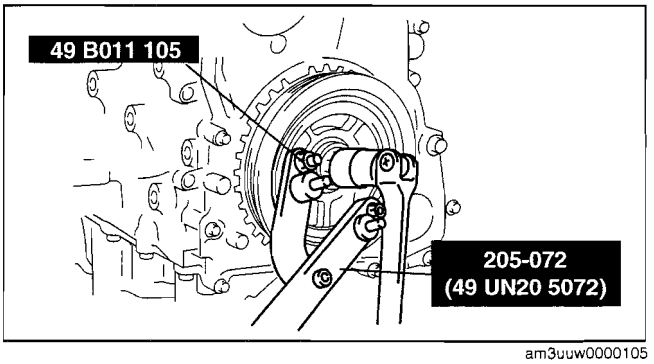
Crankshaft Pulley Lock Bolt Removal Note

1. Remove the cylinder block lower blind plug.
2. install the **SST**.
3. Turn the crankshaft clockwise the crankshaft is in the No.1 cylinder TDC position (until the balance weight is attached to the **SST**).



am3uuw0000105

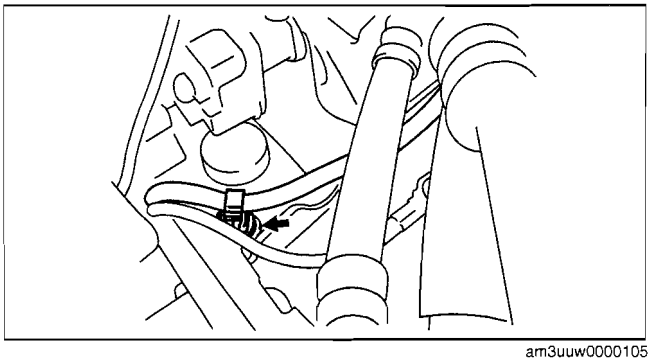
4. Hold the crankshaft pulley using the **SSTs**.



am3uuw0000105

No.3 Engine Mount Rubber Removal Note

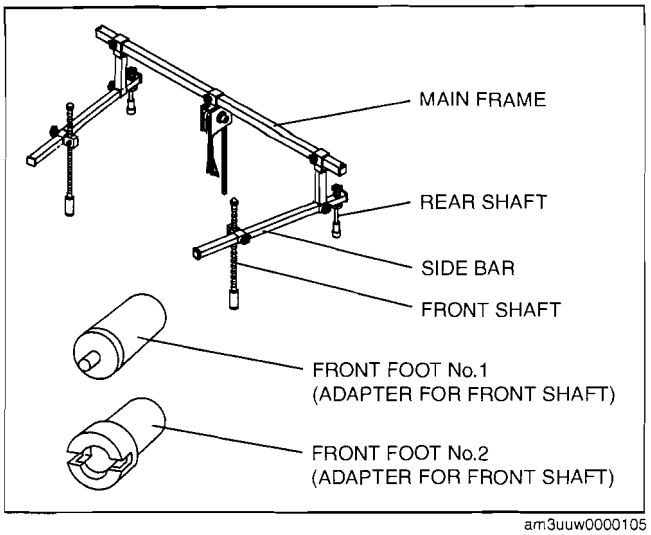
1. To install the front shaft (RH) of the **SST** (49 C017 5A0), remove the clip shown the figure.



am3uuw0000105

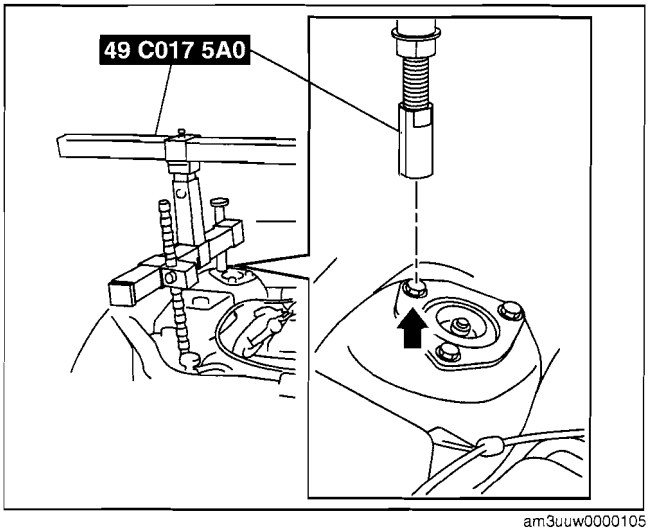
2. Install the **SST** using the following procedure.

Caution
- **Refer to the SST instruction manual for the basic handing procedure.**



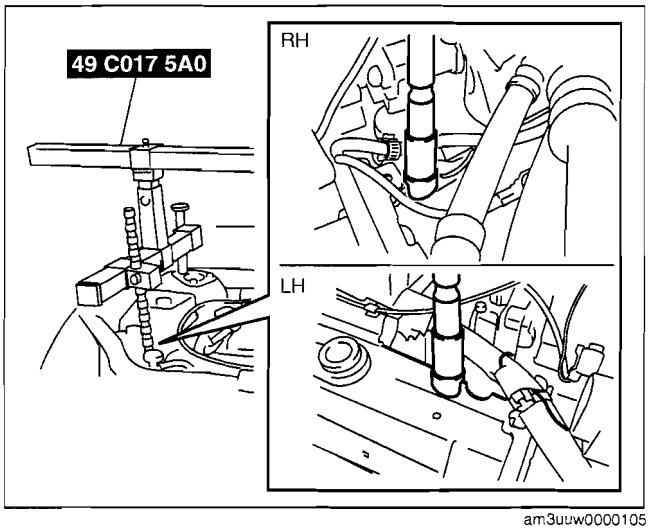
am3uuw0000105

(1) Install the right rear shaft of the **SST** to the bolt of the right shock absorber as shown in the figure.
(2) Install the left rear shaft of the **SST** to the bolt of the left shock absorber. (identical position to the right side)



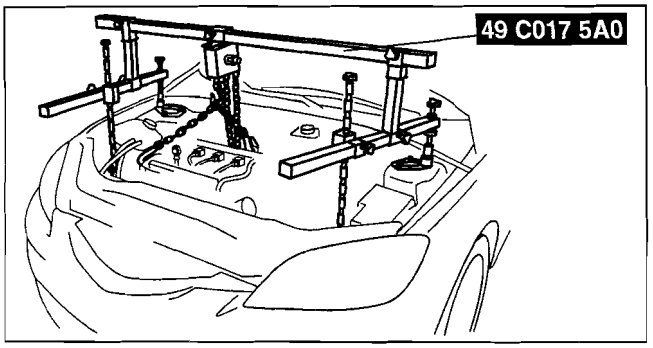
am3uuw0000105

(3) Install front foot No.2 to the left/right front shaft of the SST, then align the groove of the front shaft of the SST with the folded up part of the vehicle as shown in the figure.
(4) Adjust the positions of the **SST** side bars so that they are the same height (left and right) and horizontal.
(5) Make sure each joint is securely tightened.



am3uuw0000105

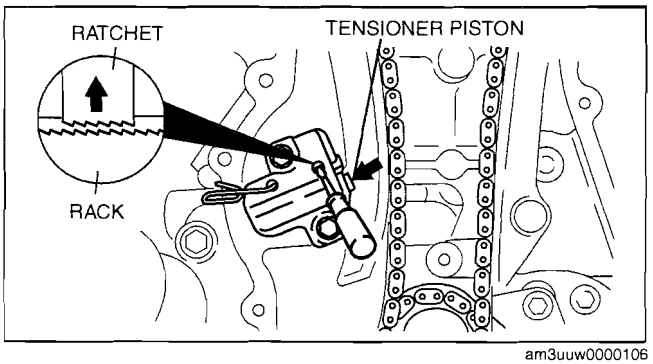
3. Suspend the engine using the **SST**.



am3uuw0000106

Chain Tensioner Removal Note

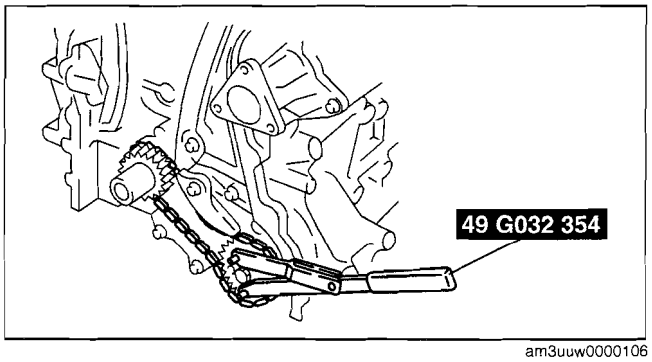
1. Unlock the chain tensioner ratchet using a suitable screw driver or equivalent tool.
2. Slowly compress the tensioner piston.
3. Hold the tensioner piston using a **1.5 mm {0.059 in}** wire or paper clip.



am3uuw0000106

Oil Pump Sprocket Removal Note

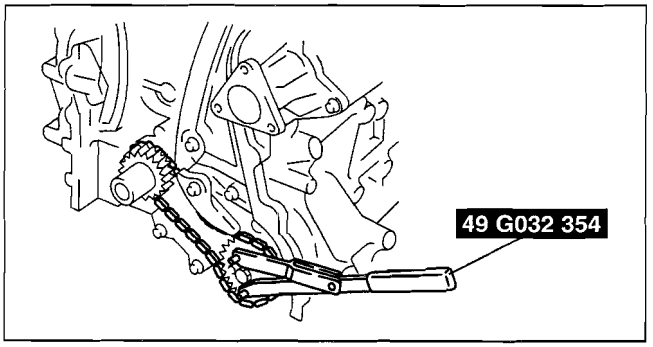
1. Hold the oil pump sprocket using the **SST**.



am3uuw0000106

Oil Pump Sprocket Installation Note

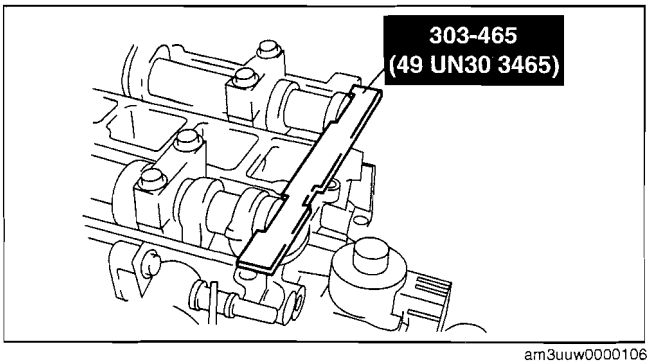
1. Hold the oil pump sprocket using the **SST**.



am3uuw0000106

Timing Chain Installation Note

1. Install the **SST** to the camshaft as shown in the figure.
2. Install the timing chain.
3. Remove the retaining wire or paper clip from the auto tensioner to apply tension to the timing chain.



am3uuw0000106

Engine Front Cover Installation Note

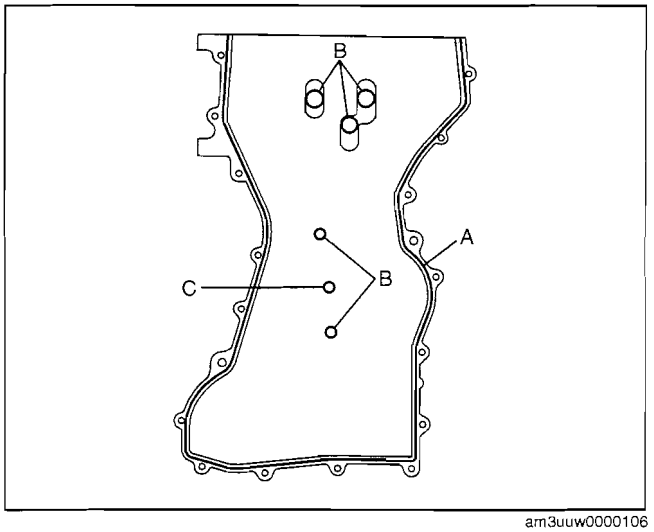
1. Apply silicone sealant to the engine front cover as shown in the figure.

Caution

- **Install the engine front cover within 10 min of applying the silicone sealant.**
- **Silicone sealant is not need in area C as indicated below due to an existing.**
- **They are oil and a thing without adhesion of dust to a seal side.**

Thickness

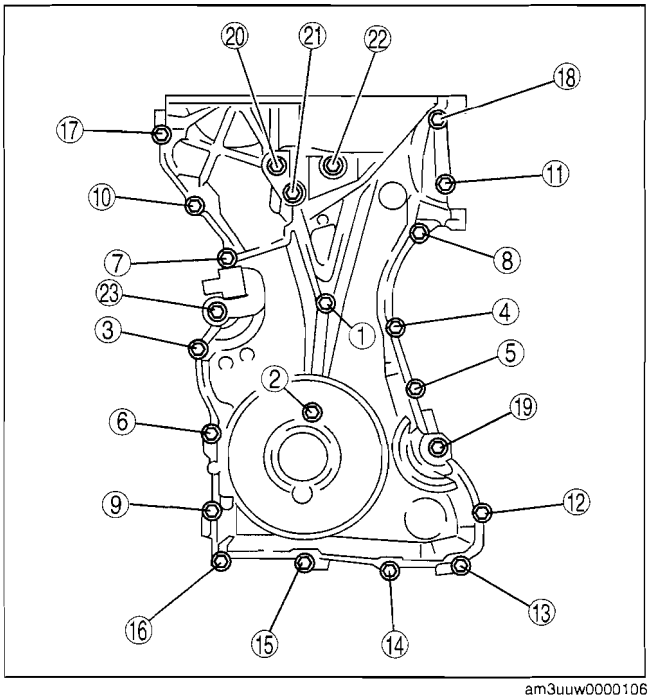
A: 2.2—3.2 mm {0.087—0.125 in}
B: 1.5—2.5 mm {0.059—0.098 in}



am3uuw0000106

2. Install the engine front cover bolts in the order shown in the figure.

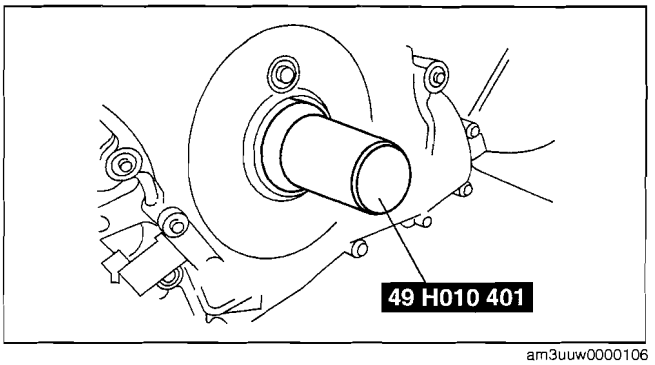
Bolt No.	Tightening torque
1—18	**8.0—11.5 N·m {81.6—117.2 kgf·cm, 70.9—101.7 in·lbf}**
19—22	**40—55 N·m {4.1—5.6 kgf·m, 29.7—40.5 ft·lbf}**
23	**20—30 N·m {2.1—3.0 kgf·m, 14.8—22.1 ft·lbf}**



am3uuw0000106

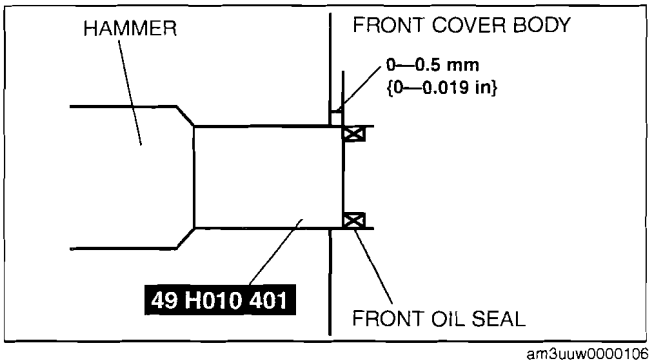
Front Oil Seal Installation Note

1. Apply clean engine oil to the oil seal.
2. Push the oil seal slightly in by hand.
3. Compress the oil seal using the **SST** and a hammer.



am3uuw0000106

Front oil seal press-in amount
0—0.5 mm {0—0.019 in}



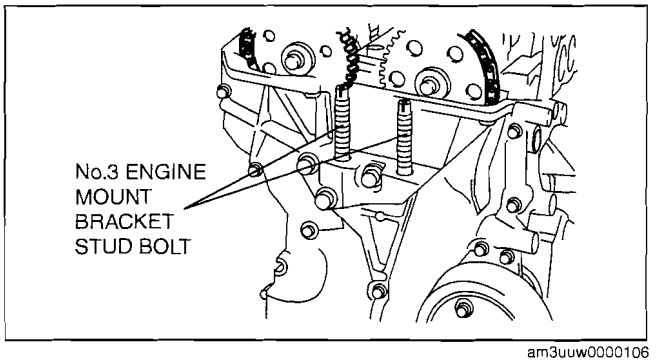
am3uuw0000106

No.3 Engine Mount Rubber and No.3 Engine Mount Bracket Installation Note

1. Tighten the stud bolt of the No.3 engine mount bracket.

Tightening torque
7.0—13 N·m
{71.4—132.5 kgf·cm, 62.0—115.0 in·lbf}

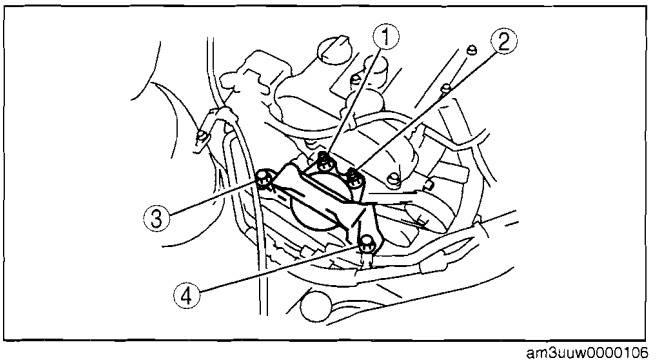
Note
- Tightening stud bolt when the nut of No.3 engine mount nut is loosened.



am3uuw0000106

2. Hand-tighten the No.3 engine mount rubber and No.3 engine mount bracket.
3. Tighten the bolts and nuts in the order as shown in the figure.

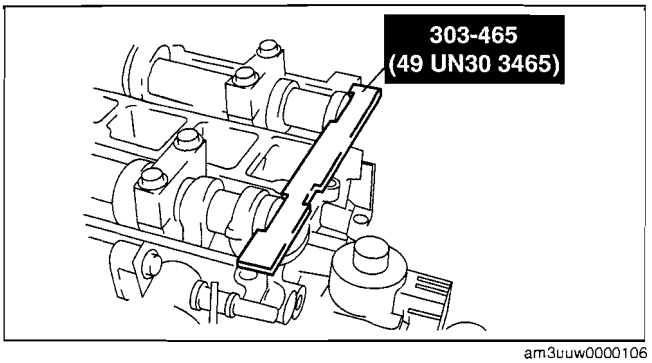
Tightening torque
Nuts : 74.5—104.9 N·m {7.6—10.6 kgf·m, 55.0—77.3 ft·lbf}
Bolts : 74.5—93.1 N·m {7.6—9.5 kgf·m, 55.0—68.7 ft·lbf}



am3uuw0000106

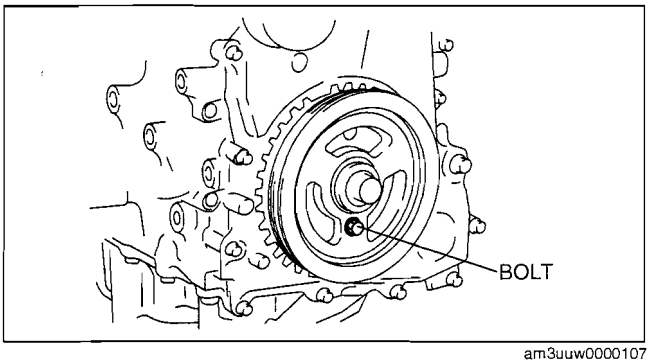
Crankshaft Pulley Lock Bolt Installation Note

1. Install the **SST** to the camshaft as shown in the figure.



am3uuw0000106

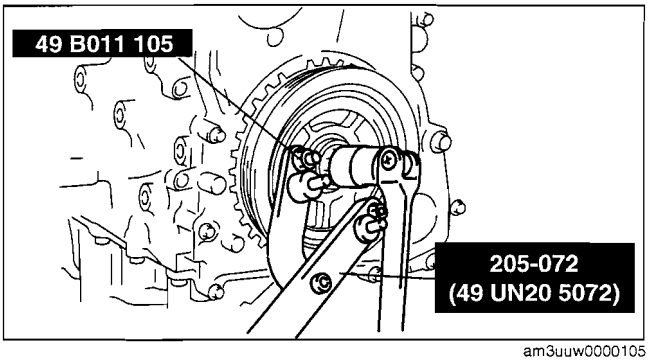
2. Install the **M6 x 1.0** bolt in by hand.
3. Turn the crankshaft clockwise until the crankshaft is in the No.1 cylinder TDC position (until the balance weight is attached to the **SST**).



am3uuw0000107

4. Hold the crankshaft pulley using the **SST**.
5. Tighten the crankshaft pulley lock bolt in the order shown with the following two steps using the **SST** (49 D032 316).

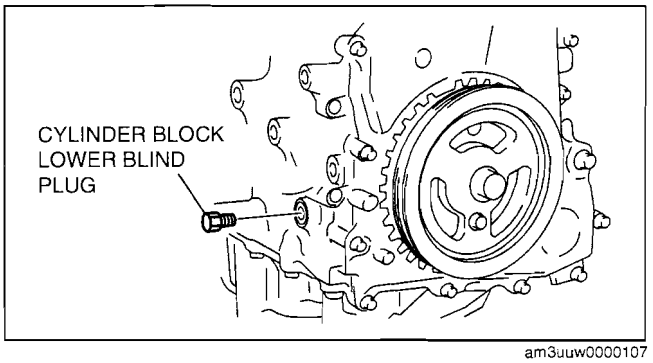
   Tightening torque
   (1) 96—104 N·m
   {9.8—10.6 kgf·m, 70.9—76.7 ft·lbf}
   (2) 87°—93°



am3uuw0000105

6. Remove the **M6 x 1.0** bolt.
7. Remove the **SST** from the camshaft.
8. Remove the **SST** from the cylinder block lower blind plug.
9. Rotate the crankshaft clockwise two turns until the TDC position.
   - If not aligned, loosen the crankshaft pulley lock bolt and repeat from Step 1.
10. Install the cylinder block lower blind plug.

    Tightening torque
    18—22 N·m {1.9—2.2 kgf·m, 13.3—16.2 ft·lbf}



am3uuw0000107

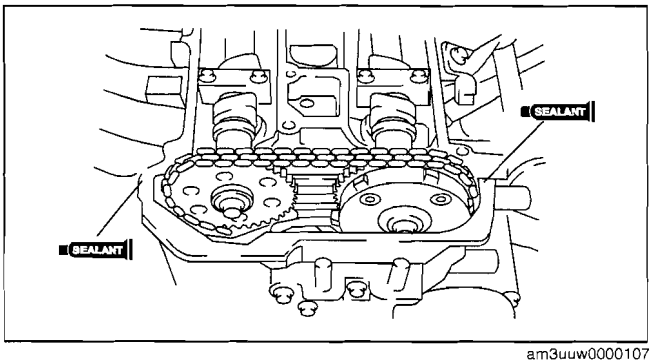
Cylinder Head Cover Installation Note

1. Apply silicone sealant to the mating faces as shown in the figure.

   Caution
   - **Install the cylinder head cover within 10 min of applying the silicone sealant.**

   Thickness
   4.0—7.0 mm {0.16—0.24 in}

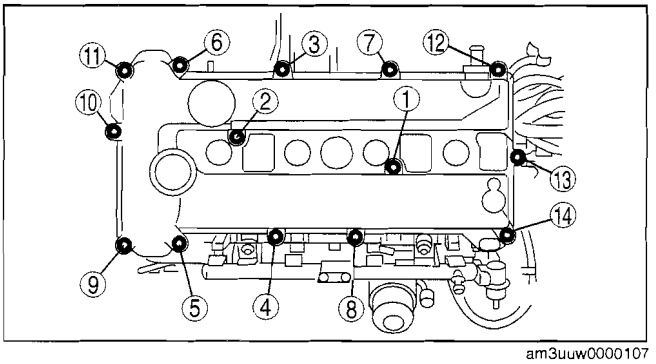
2. install the cylinder head cover with a new gasket.



am3uuw0000107

3. Tighten the bolts in the order shown in the figure.

   Tightening torque
   8.0—10.5 N·m
   {81.6—107.1 kgf·cm, 70.9—92.9 in·lbf}



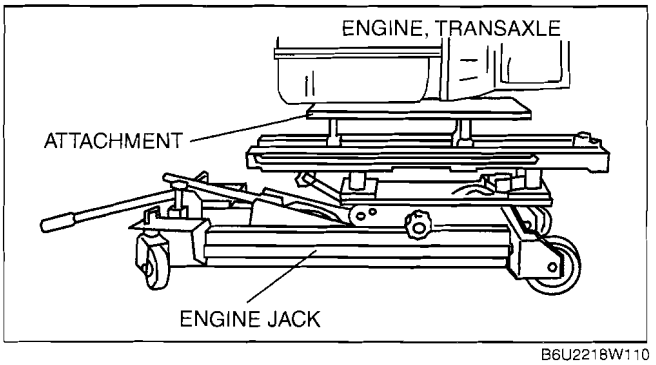
am3uuw0000107

CYLINDER HEAD GASKET REPLACEMENT[LF, L3]

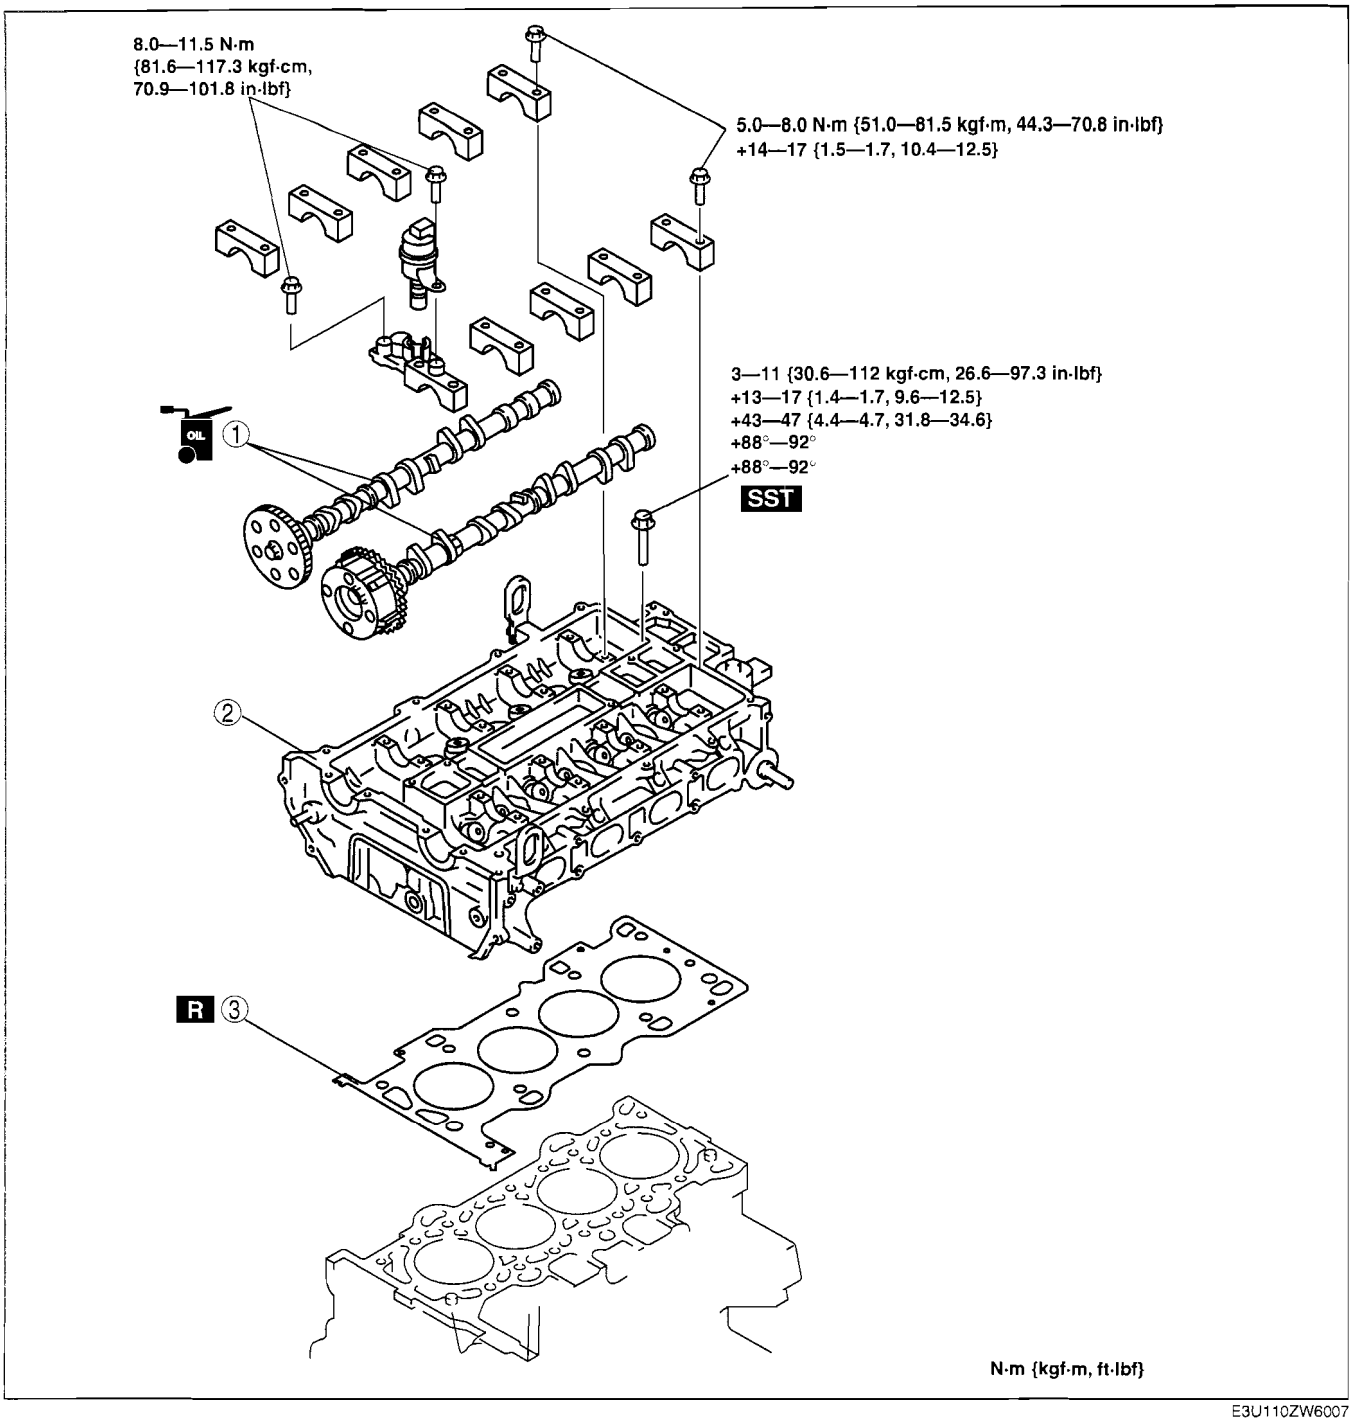
id0110a2800700

Warning
- **Fuel vapor is hazardous. It can very easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.**
- **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure". (See 01-14A-4 BEFORE SERVICE PRECAUTION[LF, L3].)**

1. Remove the timing chain. (See 01-10A-12 TIMING CHAIN REMOVAL/INSTALLATION[LF, L3].)
2. Remove the intake manifold. (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[LF, L3].) (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[LF, L3].)
3. Disconnect the following parts.
   (1) WU-TWC (See 01-15A-1 EXHAUST SYSTEM REMOVAL/INSTALLATION[LF, L3].)
   (2) Radiator upper hose
   (3) Water hose
   (4) Heater hose
   (5) wiring harness
4. To firmly support the engine, first set the engine jack and attachment to the oil pan.
5. Remove in the order indicated in the table.
6. Install in the reverse order of removal.
7. Inspect the compression. (See 01-10A-11 COMPRESSION INSPECTION[LF, L3].)



B6U2218W110



E3U110ZW6007

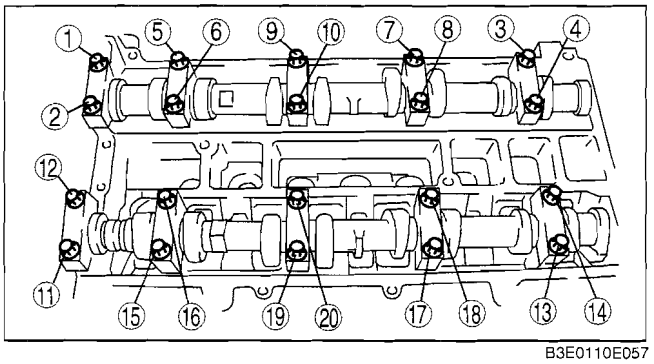
1	Camshaft (See 01-10A-22 Camshaft Removal Note.) (See 01-10A-23 Camshaft Installation Note.)

2	Cylinder head (See 01-10A-22 Cylinder Head Removal Note.) (See 01-10A-22 Cylinder Head Installation Note.)
3	Cylinder head gasket
4	Oil control valve (OCV)

Camshaft Removal Note

Note
- The cylinder head and the camshaft caps are numbered to be reassembled in their original position correctly. When removed, keep the caps with the cylinder head they were removed from. Do not mix the caps.

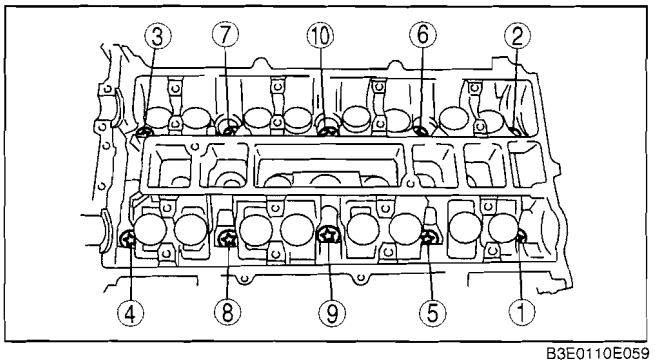
1. Loosen the camshaft cap bolts in 2—3 passes in the order shown in the figure.



B3E0110E057

Cylinder Head Removal Note

1. Loosen the cylinder head bolts in 2—3 passes in the order shown in the figure.



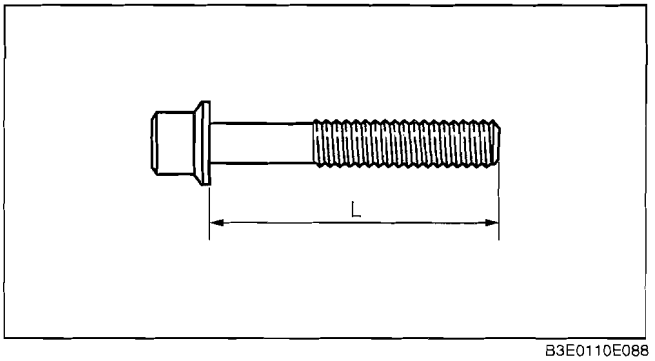
B3E0110E059

Cylinder Head Installation Note

1. Measure the length of each cylinder head bolt.
   - Replace any that exceeds maximum length.

   Cylinder Head Bolt Length L
   145.2—145.8 mm {5.717—5.740 in}

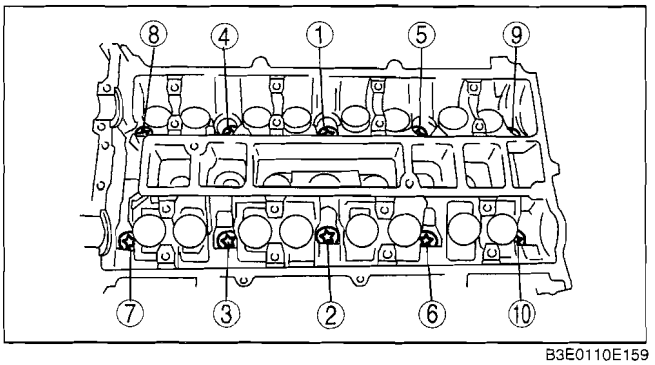
   Cylinder Head Bolt Maximum
   146.5 mm {5.767 in}



B3E0110E088

2. Tighten the cylinder head bolts in the order shown with the following 5 steps using the **SST (49 D032 316)**.

   Tightening torque
   (1) 3—11 N·m
   {30.6—112 kgf·cm, 26.6—97.3 in·lbf}
   (2) 13—17 N·m
   {1.4—1.7 kgf·m, 9.59—12.5 ft·lbf}
   (3) 43—47 N·m
   {4.4—4.7 kgf·m, 31.8—34.6 ft·lbf}
   (4) 88°—92°
   (5) 88°—92°

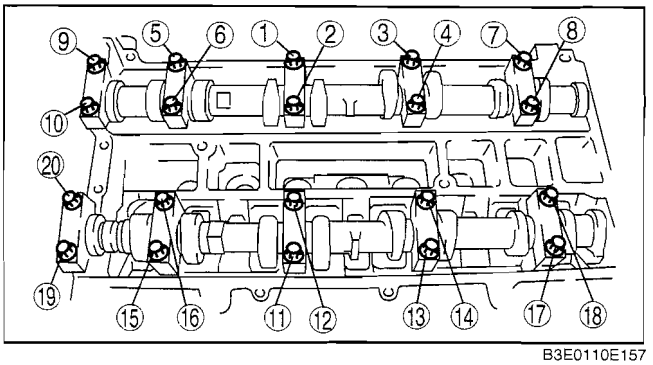


B3E0110E159

Camshaft Installation Note

1. Set the cam position of No.1 cylinder at the top dead center (TDC) and install the camshaft.
2. Temporarily tighten the camshaft bearing caps evenly in 2—3 passes.
3. Tighten the camshaft cap bolts in the order shown with the following two steps.

Tighten torque
(1) 5.0—8.0 N·m
{51.0—81.5 kgf·cm, 44.3—70.8 in·lbf}
(2) 14—17 N·m
{1.5—1.7 kgf·m, 10.4—12.5 ft·lbf}



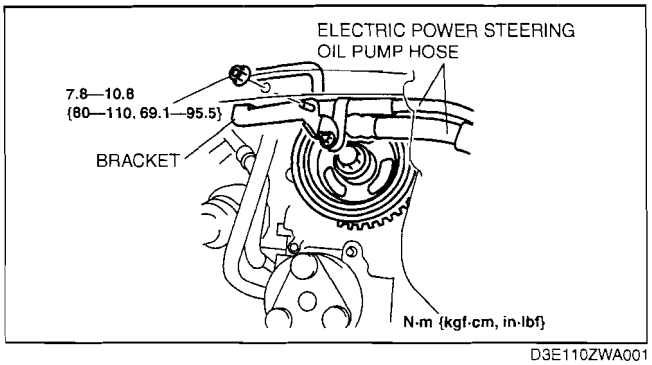
B3E0110E157

FRONT OIL SEAL REPLACEMENT[LF, L3]

id0110a2800800

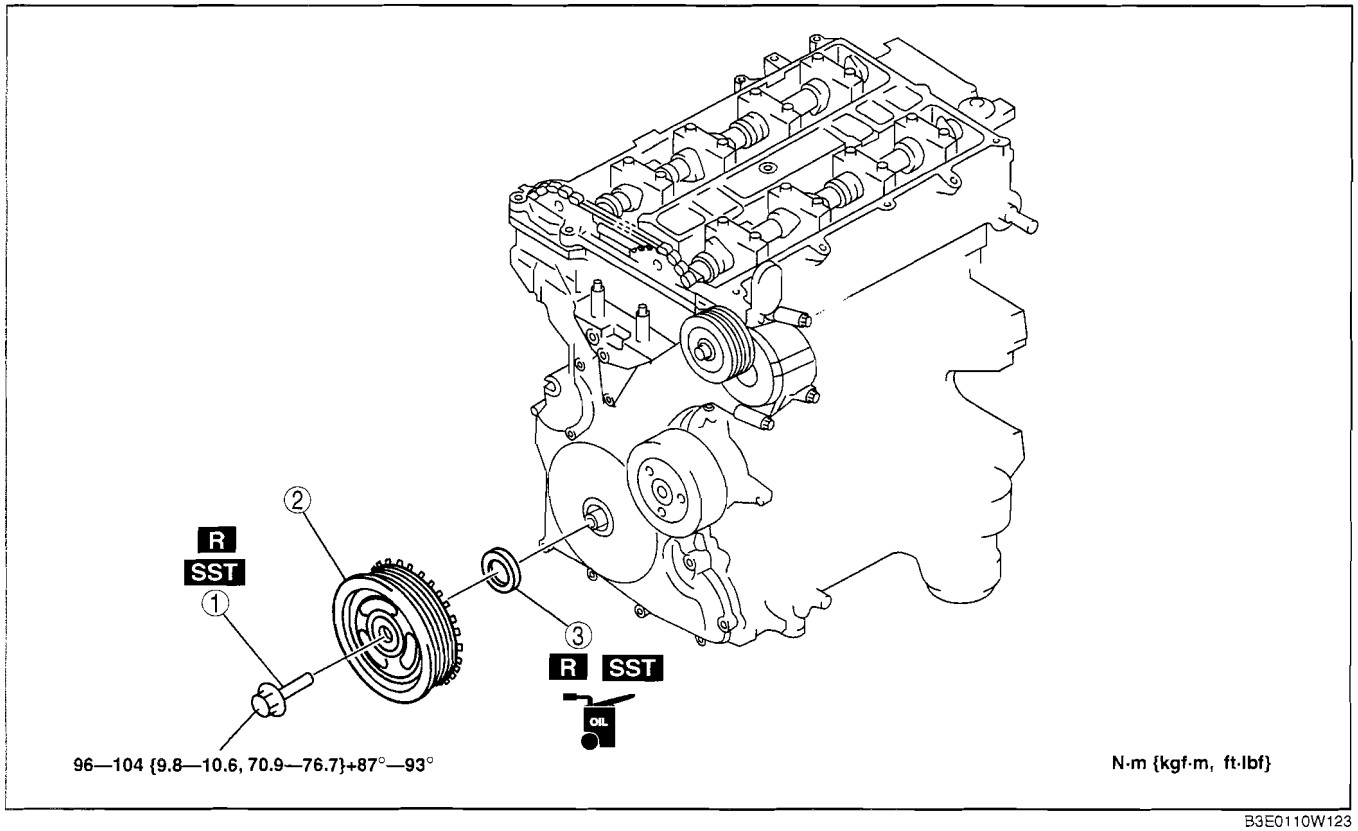
1. Remove the plug hole plate. (See 01-10A-3 PLUG HOLE PLATE REMOVAL/INSTALLATION[LF, L3].)
2. Remove the plug hole plate bracket.
3. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
4. Disconnect the negative battery cable.
5. Disconnect the wiring harness.
6. Remove the following parts.
   (1) Ignition coils (See 01-18A-2 IGNITION COIL REMOVAL/INSTALLATION[LF, L3].)
   (2) Cylinder head cover (See 01-10A-12 TIMING CHAIN REMOVAL/INSTALLATION[LF, L3].)
   (3) Drive belt (See 01-10A-4 DRIVE BELT REPLACEMENT[LF, L3].)
   (4) Front wheel and tire (RH) (See 02-10-1 GENERAL PROCEDURES (SUSPENSION).)
   (5) Under cover and splash shield
   (6) Crankshaft position (CKP) sensor (See 01-40A-67 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION[LF, L3].)

7. Remove the bracket installation nut shown in the figure, then set the bracket and electric power steering oil pump hose away from the vehicle.
8. Remove in the order indicated in the table.



D3E110ZWA001

9. Install in the reverse order of removal.



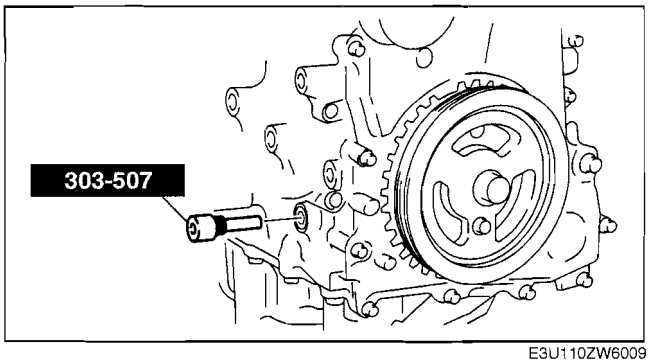
B3E0110W123

1	Crankshaft pulley lock bolt (See 01-10A-25 Crankshaft Pulley Lock Bolt Removal Note.) (See 01-10A-26 Crankshaft Pulley Lock Bolt Installation Note.)

2	Crankshaft pulley
3	Front oil seal (See 01-10A-25 Front Oil Seal Removal Note.) (See 01-10A-25 Front Oil Seal Installation Note.)

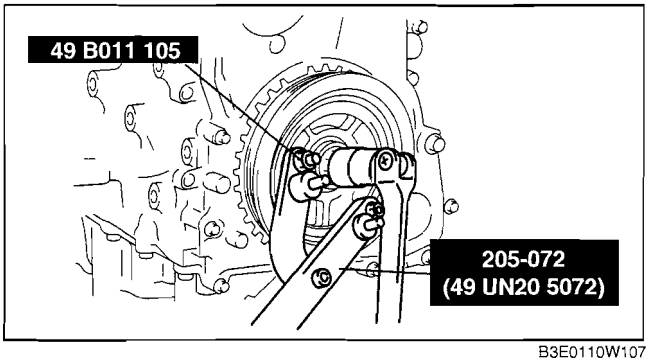
Crankshaft Pulley Lock Bolt Removal Note

1. Remove the cylinder block lower blind plug.
2. Install the **SST**.
3. Turn the crankshaft clockwise until the crankshaft is in the No.1 cylinder TDC position (until the balance weight is attached to the **SST**).



E3U110ZW6009

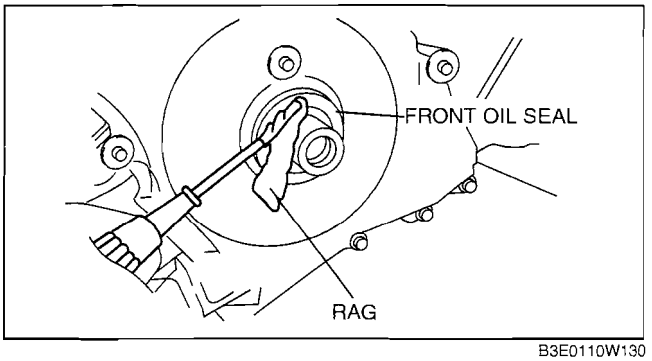
4. Hold the crankshaft pulley using the **SSTs**.



B3E0110W107

Front Oil Seal Removal Note

1. Cut the oil seal lip using a razor knife.
2. Remove the oil seal using a screwdriver wrapped with a rag.

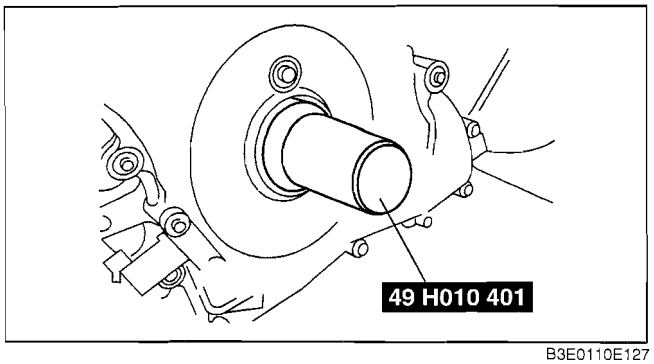


B3E0110W130

Front Oil Seal Installation Note

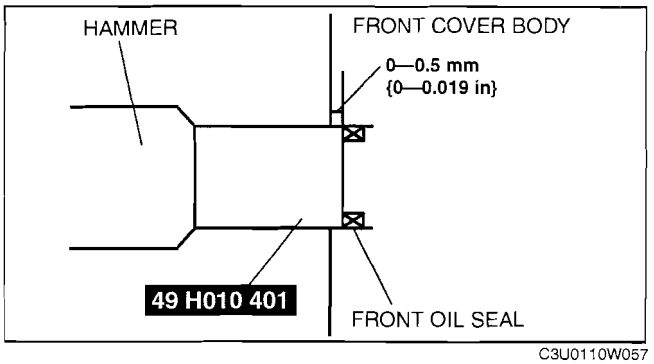
1. Apply clean engine oil to the oil seal lip.
2. Push the oil seal slightly in by hand.

3. Tap the oil seal in evenly using the **SST** and a hammer.



B3E0110E127

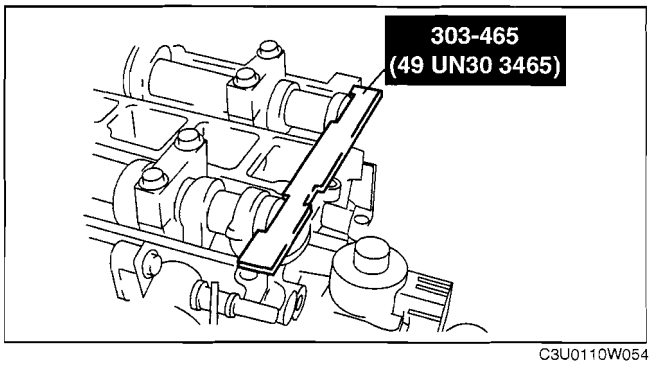
Front oil seal press-in amount
0—0.5 mm {0—0.019 in}



C3U0110W057

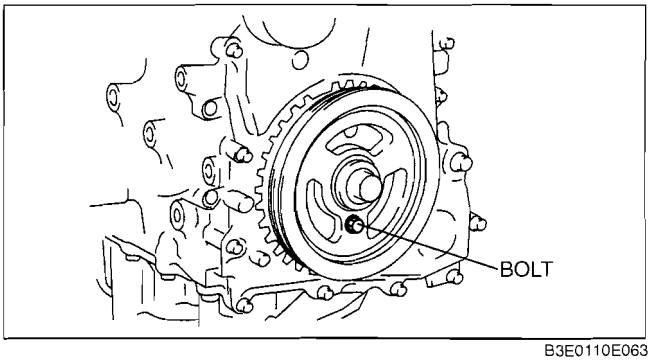
Crankshaft Pulley Lock Bolt Installation Note

1. Install the **SST** on the camshaft as shown in the figure.



C3U0110W054

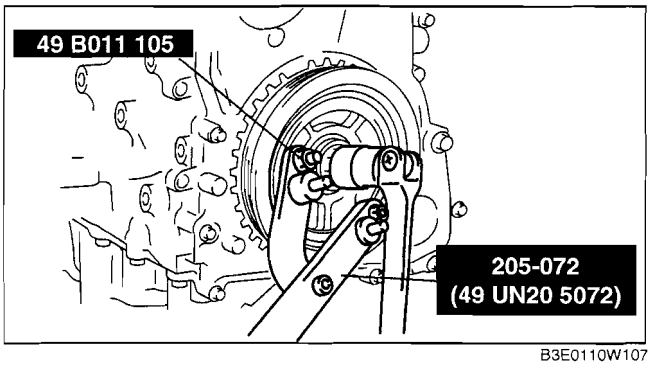
2. Install the **M6 x 1.0** bolt in by hand.
3. Turn the crankshaft clockwise until the crankshaft is in the No.1 cylinder TDC position (until the balance weight is attached to the **SST**).



B3E0110E063

4. Hold the crankshaft pulley using the **SSTs**.
5. Tighten the crankshaft pulley lock bolt in the order shown following two steps using the **SST (49 D032 316)**.

Tightening torque
(1) 96—104 N·m
{9.8—10.6 kgf·m, 70.9—76.7 ft·lbf}
(2) 87°—93°

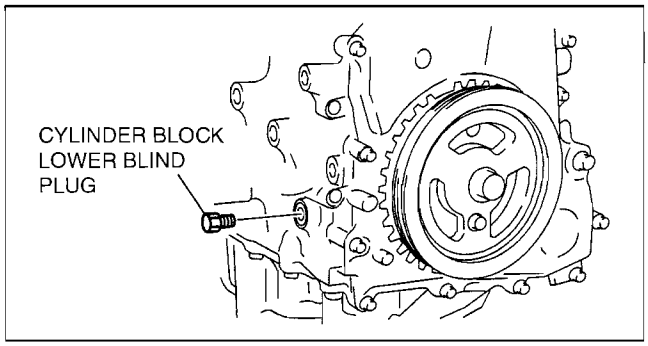


B3E0110W107

6. Remove the **M6 x 1.0** bolt.
7. Remove the **SST** from the camshaft.
8. Remove the **SST** from the cylinder block lower blind plug.

9. Rotate the crankshaft clockwise 2 turns until the TDC position.
   - If not aligned, loosen the crankshaft pulley lock bolt and repeat from Step 1.
10. Install the cylinder block lower blind plug.

Tightening torque
18—22 N·m {1.9—2.2 kgf·m, 13.3—16.2 ft·lbf}



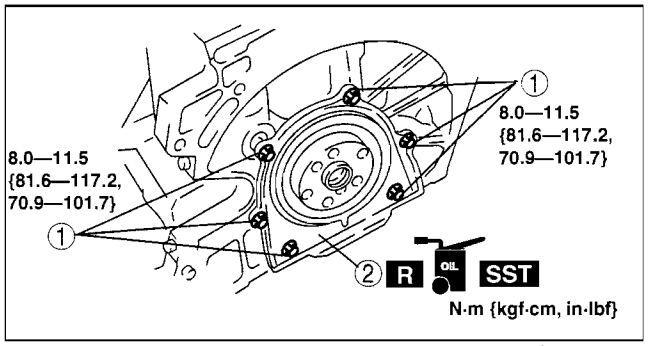
B3E0110W061

REAR OIL SEAL REPLACEMENT[LF, L3]

id0110a2800900

1. Remove the flywheel. (MTX) (See 05-10-11 CLUTCH UNIT REMOVAL/INSTALLATION.)
2. Remove the drive plate. (ATX) (See 05-17A-42 DRIVE PLATE REMOVAL/INSTALLATION[FN4A-EL].) (See 05-17B-58 DRIVE PLATE REMOVAL/INSTALLATION[FS5A-EL].)
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.

1	Bolt
2	Rear oil seal (See 01-10A-27 Rear Oil Seal Installation Note.)



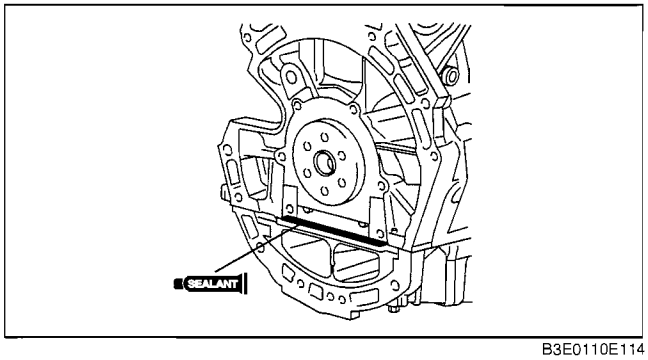
C3U0110W124

Rear Oil Seal Installation Note

1. Apply silicone sealant to the mating faces as shown in the figure.

Caution
- **Install the rear oil seal within 10 min of applying the silicone sealant.**

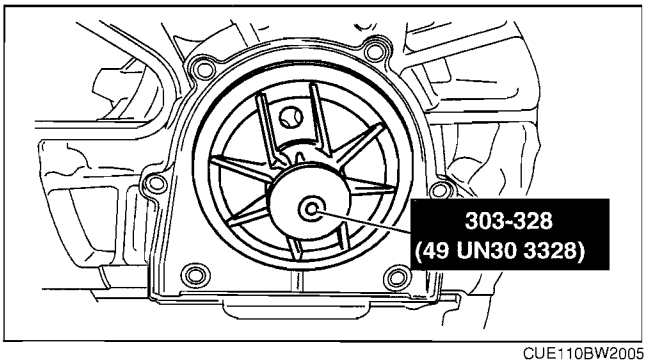
Thickness
4.0—6.0 mm {0.16—0.23 in}



B3E0110E114

2. Apply clean engine oil to the new oil seal lip.

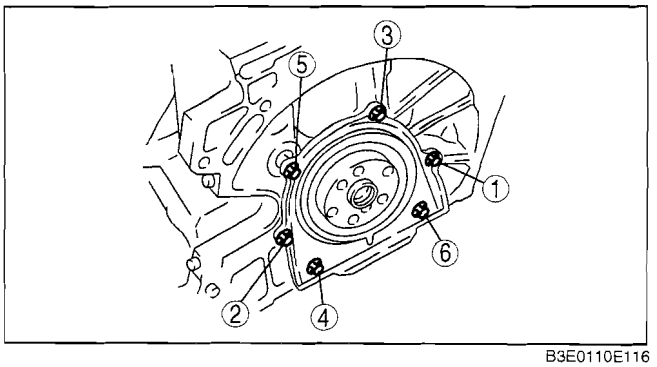
3. Install the rear oil seal using the **SST** as shown in the figure.



CUE110BW2005

4. Tighten the rear oil seal bolts in the order as shown in the figure.

Tightening torque
8.0—11.5 N·m
{81.6—117.2 kgf·cm, 70.9—101.7 in·lbf}



B3E0110E116

ENGINE REMOVAL/INSTALLATION[LF, L3]

id0110a2800400

Warning
- **Fuel vapor is hazardous. It can very easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.**
- **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure". (See 01-14A-4 BEFORE SERVICE PRECAUTION[LF, L3].)**

Note
- Perform the engine and transaxle component removal/installation from below the vehicle.

1. Remove the plug hole plate. (See 01-10A-3 PLUG HOLE PLATE REMOVAL/INSTALLATION[LF, L3].)
2. Remove the air hose and air cleaner component. (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[LF, L3].)
3. Remove the battery cover, battery duct, battery clamp, battery and battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION[LF, L3].)
4. Disconnect the fuel hose. (See 01-14A-22 QUICK RELEASE CONNECTOR (FUEL SYSTEM) REMOVAL/INSTALLATION[LF, L3].)
5. Remove the following parts.
   (1) Accelerator cable and bracket
   (2) Front wheels and tires (See 02-10-1 GENERAL PROCEDURES (SUSPENSION).)
   (3) Under cover and splash shields
   (4) A/C drive belt (See 01-10A-4 DRIVE BELT REPLACEMENT[LF, L3].)
   (5) A/C compressor with the pipes still connected

Note
- Secure the A/C compressor using wire or rope so that it is out of the way.

6. Drain the transaxle oil (MTX) or ATF (ATX). (See 05-15A-3 TRANSAXLE OIL REPLACEMENT[G35M-R].) (See 05-17A-9 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FN4A-EL].) (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT[FS5A-EL].)
7. Drain the engine coolant. (See 01-12A-3 ENGINE COOLANT REPLACEMENT[LF, L3].)
8. Disconnect the brake vacuum hose.
9. Remove the following parts.
   (1) Member (See 01-15A-1 EXHAUST SYSTEM REMOVAL/INSTALLATION[LF, L3].)
   (2) Front crossmember, front stabilizer, lower arm, steering gear and No.1 engine mount rubber component (See 06-14-11 STEERING GEAR AND LINKAGE REMOVAL/INSTALLATION.)
   (3) Drive shafts (See 03-13-9 DRIVE SHAFT REMOVAL/INSTALLATION.)
   (4) Coolant reserve tank with the hose still connected
   (5) Cooling fan component (See 01-12A-6 RADIATOR REMOVAL/INSTALLATION[LF, L3].)
   (6) ATF hose, selector cable and wiring harness (ATX) (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FS5A-EL].)
   (7) Shift cable (MTX) (See 05-15B-5 MANUAL TRANSAXLE REMOVAL/INSTALLATION[A26M-R].)
   (8) Clutch release cylinder with the pipe still connected (MTX) (See 05-10-9 CLUTCH RELEASE CYLINDER REMOVAL/INSTALLATION.)
10. Disconnect the heater hose.
11. Disconnect the upper and lower radiator hose.
12. Disconnect the main silencer. (See 01-15A-1 EXHAUST SYSTEM REMOVAL/INSTALLATION[LF, L3].)
13. Remove in the order indicated in the table.

14. Install in the reverse order of removal.

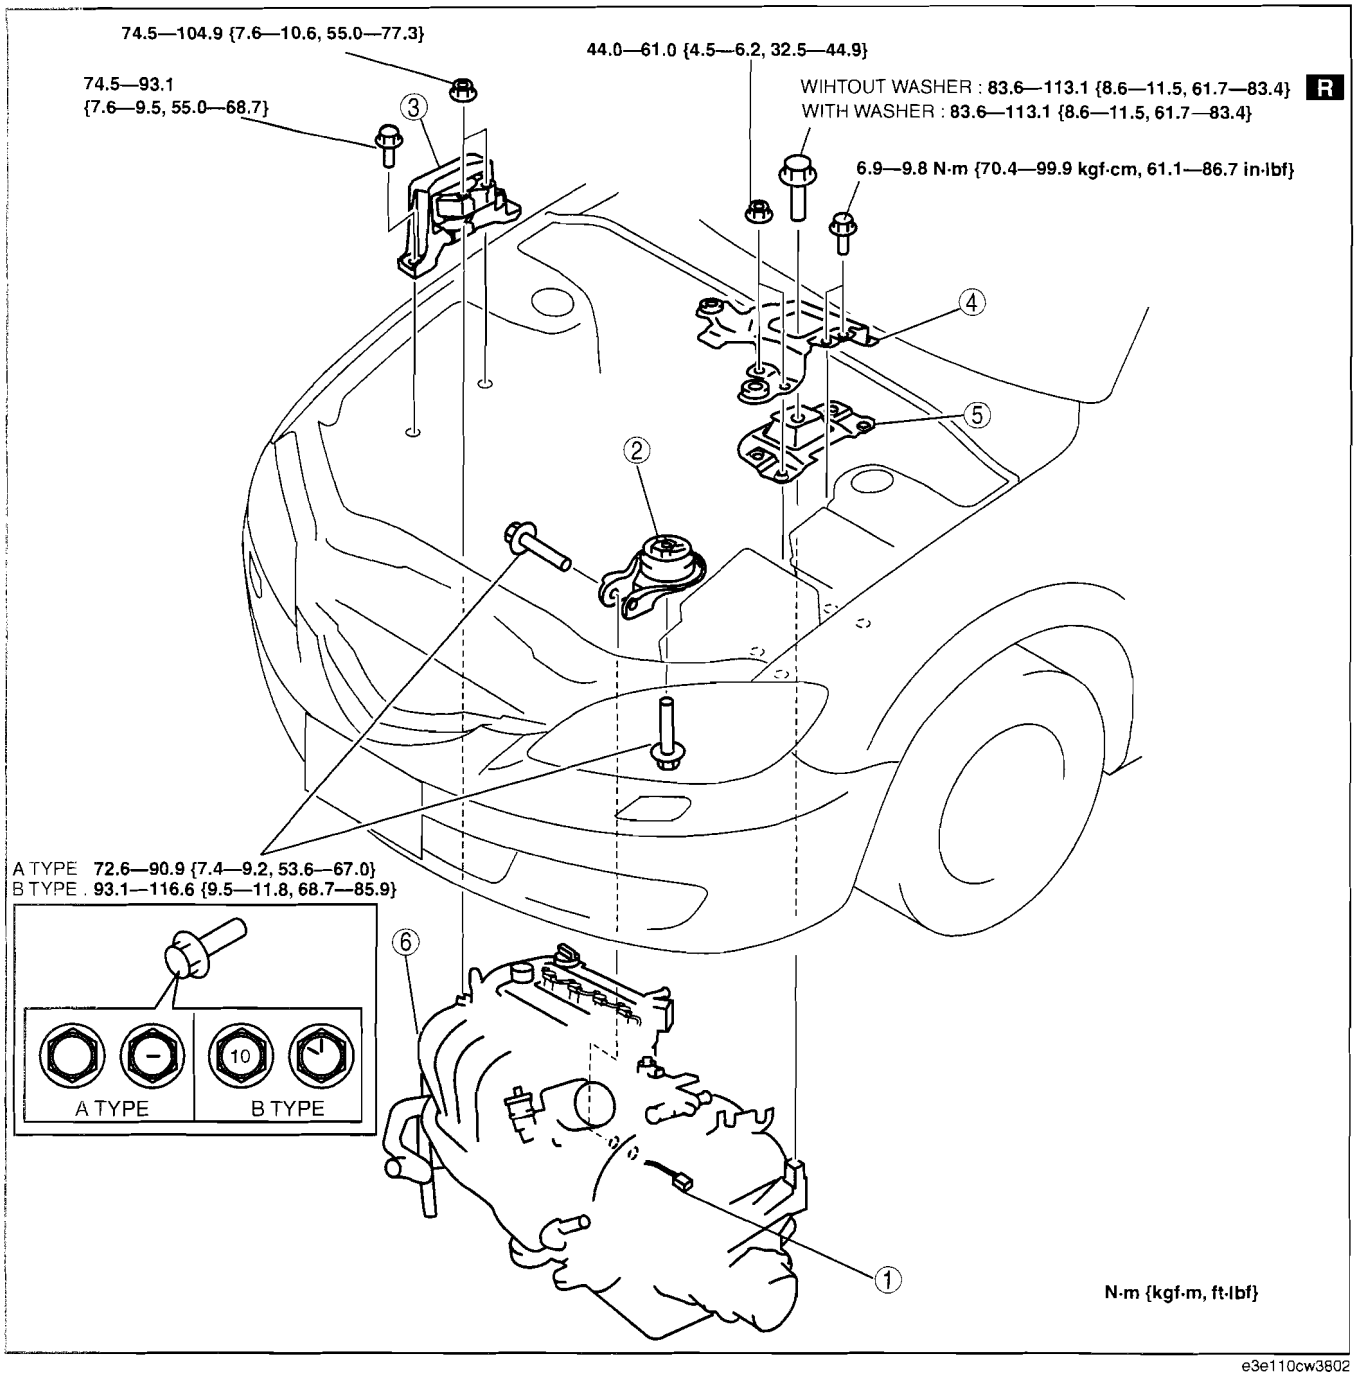
Caution

- **Do not tighten the No.1 engine mount rubber installation bolt before tightening the No.3 engine mount rubber installation bolt. (See 01-10A-31 No.3 Engine Mount and No.4 Engine Mount Rubber Installation Note.)**

15. Start the engine. And inspect and adjust them if necessary.
16. Inspect the following and adjust them if necessary.
    - Front wheel alignment (See 02-11-2 FRONT WHEEL ALIGNMENT.)
    - Puller and belt for runout and contact
    - Leakage of engine oil, engine coolant, ATF, transaxle oil, and fuel
    - Ignition timing, idle speed, and amount of CO, HC (See 01-10A-37 ENGINE TUNE-UP[LF, L3].)
    - Engine-driven accessories operation

Note

- If the engine is overhauled and installed to the vehicle, perform the road test and verify that there is no abnormality.



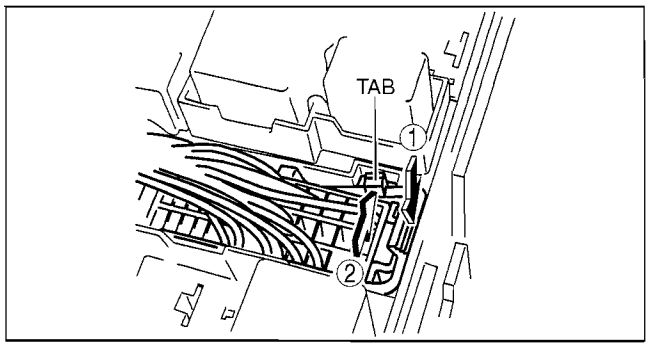
e3e110cw3802

1	Main fuse block connector (See 01-10A-31 Main Fuse Block Connector Removal Note.)
2	No.1 engine mount rubber (See 01-10A-33 No.1 Engine Mount Rubber Installation Note.)
3	No.3 Engine mount (See 01-10A-31 No.3 Engine Mount and No.4 Engine Mount Rubber Removal Note.) (See 01-10A-31 No.3 Engine Mount and No.4 Engine Mount Rubber Installation Note.)
4	Dynamic damper (if equipped)

5	Battery bracket
6	No.4 Engine mount rubber (See 01-10A-31 No.3 Engine Mount and No.4 Engine Mount Rubber Removal Note.) (See 01-10A-31 No.3 Engine Mount and No.4 Engine Mount Rubber Installation Note.)
7	Engine, transaxle

Main Fuse Block Connector Removal Note

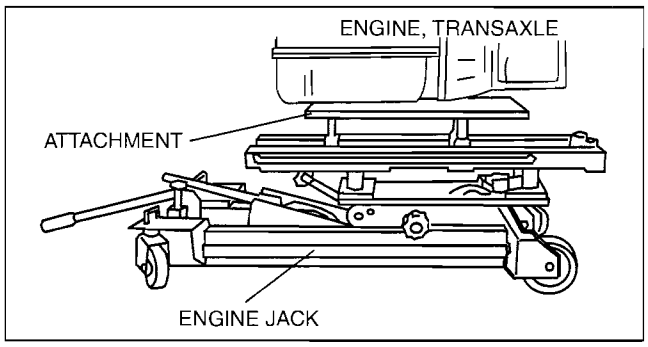
1. Release the tab in the order shown in the figure.
2. Pull the lock lever up and remove the connector.



am3uuw0000104

No.3 Engine Mount and No.4 Engine Mount Rubber Removal Note

1. Secure the engine and the transaxle using an engine jack and attachment as shown in the figure.



am3uuw0000105

No.3 Engine Mount and No.4 Engine Mount Rubber Installation Note

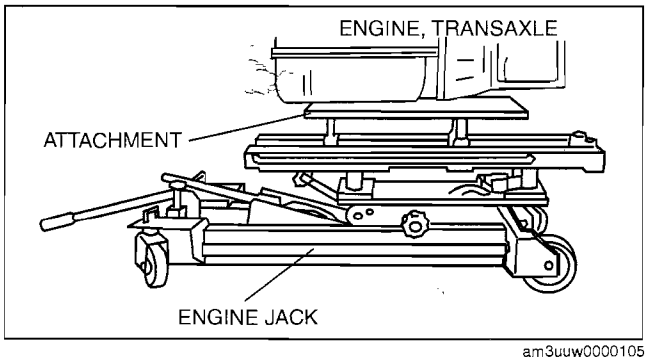
1. Secure the engine and the transaxle using an engine jack and attachment as shown in the figure.
2. Install the No.1 engine mount rubber and No.4 engine mount rubber.

Caution

- **Do not reuse the No.4 engine mount rubber installation bolt unless it has a washer.**

Note

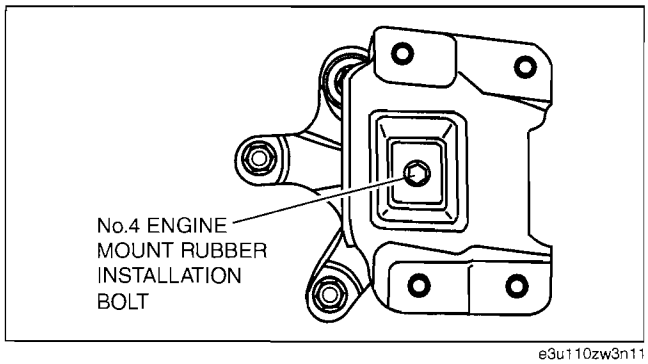
- Do not tighten the bolt and nut for the No.1 engine mount rubber and No.4 engine mount rubber during this step.



am3uuw0000105

3. Tighten the No.4 engine mount rubber installation bolt as shown in the figure.

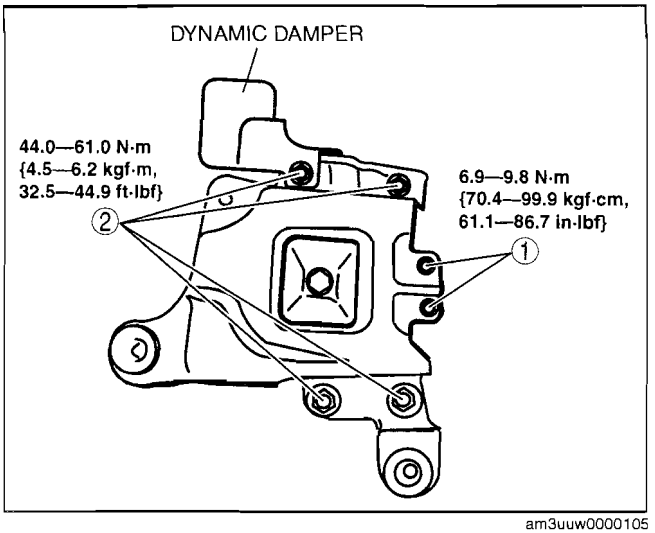
Tightening torque
83.6—113.1 N·m
{8.6—11.5 kgf·m, 61.7—83.4 ft·lbf}



e3u110zw3n11

4. Tighten the No.4 engine mount rubber and battery bracket bolts and nuts in the order as shown in the figure.

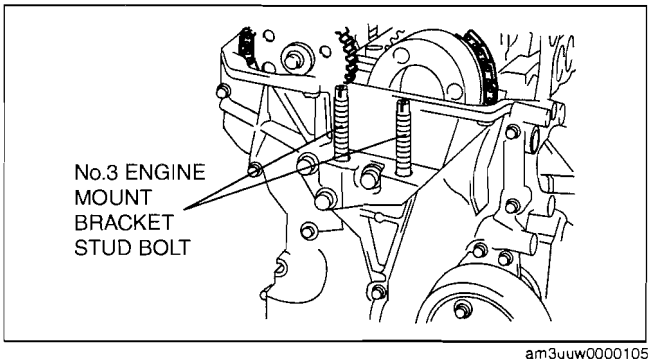
Tightening torque
(1) 6.9—9.8 N·m
{70.4—99.9 kgf·cm, 61.1—86.7 in·lbf}
(2) 44.0—61.0 N·m
{4.5—6.2 kgf·m, 32.5—44.9 ft·lbf}



am3uuw0000105

5. Tighten the No.3 engine mount bracket stud bolts.

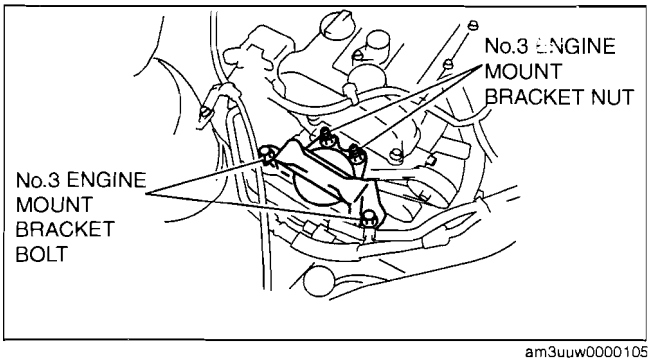
Tightening torque
7.0—13 N·m
{71.4—132.5 kgf·cm, 62.0—115.0 in·lbf}



am3uuw0000105

6. Tighten the No.3 engine joint bracket bolts and nuts in the order as shown in the figure.

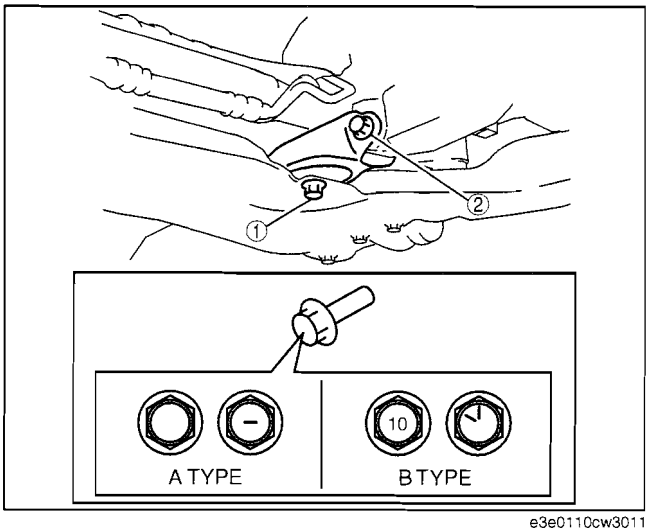
Tightening torque
Nuts : 74.5—104.9 N·m {7.6—10.6 kgf·m, 55.0—77.3 ft·lbf}
Bolts : 74.5—93.1 N·m {7.6—9.5 kgf·m, 55.0—68.7 ft·lbf}



am3uuw0000105

No.1 Engine Mount Rubber Installation Note

1. Remove the engine jack and attachment.
2. Tighten the No.1 engine mount rubber installation bolts as shown in the figure.



e3e0110cw3011

Caution

- **Tighten the bolts in the order shown in the figure to prevent abnormal noise and vibration after assembly.**
- **Tighten the bolts while being careful of their length to prevent interference between the steering gear housing and bolt.**

Bolt stem length

Front cross member bolt : 62mm {2.44 in}
No.1 engine mount bracket bolt : 65mm {2.56 in}

Tightening torque

A type : 72.6—90.9 N·m {7.40—9.2 kgf·m, 53.6—67.0 ft·lbf}
B type : 93.1—116.6 N·m {9.5—11.8 kgf·m, 68.7—85.9 ft·lbf}

ENGINE DISASSEMBLY/ASSEMBLY[LF, L3]

id0110a2800500

1. Disconnect the engine and transaxle. (See 05-15A-5 MANUAL TRANSAXLE REMOVAL/INSTALLATION[G35M-R].) (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FN4A-EL].) (See 05-17B-42 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION[FS5A-EL].)
2. Remove the following part.
   (1) Intake-air system (See 01-13A-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[LF, L3].)
   (2) Generator (See 01-17A-6 GENERATOR REMOVAL/INSTALLATION[LF, L3].)
   (3) Ignition coils (See 01-18A-2 IGNITION COIL REMOVAL/INSTALLATION[LF, L3].)
   (4) Crankshaft position (CKP) sensor (See 01-40A-67 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION[LF, L3].)
3. Assemble in the reverse order of disassembly.

VARIABLE VALVE TIMING ACTUATOR INSPECTION[LF, L3]

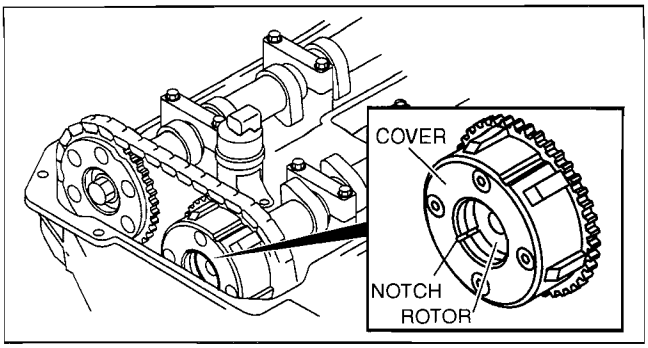
id0110a2801200

Caution

- **Variable valve timing actuator can not be disassembled it is a precision unit.**

1. Disconnect the negative battery cable.
2. Remove the following parts.
   - Plug hole plate (See 01-10A-3 PLUG HOLE PLATE REMOVAL/INSTALLATION[LF, L3].)
   - Ignition coils (See 01-18A-2 IGNITION COIL REMOVAL/INSTALLATION[LF, L3].)
   - Oil control valve connector
   - Ventilation hose
   - Cylinder head cover
3. Confirm that notch of the rotor and bump of the cover at the variable valve timing actuator are aligned and fitted.
   - If the notch and the bump are not aligned, turn the crankshaft clockwise two rotations. Verify that the bump and the notch are aligned.
   - If the bump and notch are still not aligned, replace the variable valve timing actuator.
   - If, when turning the crankshaft, there is a hitting noise from the variable valve timing actuator each time the cam passes the fully lifted position, it means that the actuator is not secured. Replace the actuator.

4. Install the following parts.
   - Cylinder head cover (See 01-10A-12 TIMING CHAIN REMOVAL/INSTALLATION[LF, L3].)
   - Ventilation hose
   - Oil control valve connector
   - Ignition coils (See 01-18A-2 IGNITION COIL REMOVAL/INSTALLATION[LF, L3].)
   - Plug hole plate (See 01-10A-3 PLUG HOLE PLATE REMOVAL/INSTALLATION[LF, L3].)



C3U0110W070

VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION[LF, L3]

id0110a2803700

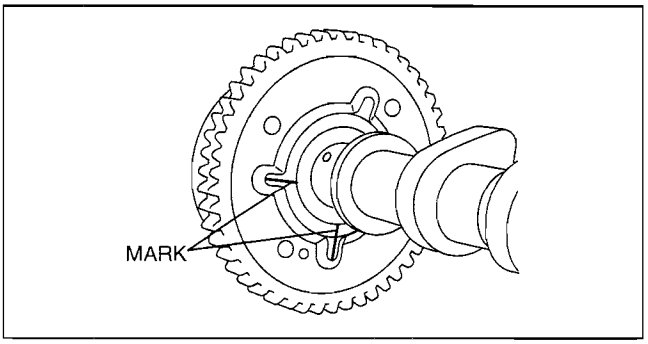
Caution
- **Variable valve timing actuator can not be disassembled because it is a precision unit.**

Note
- Intake camshaft sprocket is integrated with the variable valve timing actuator and cannot be disassembled.

1. Follow the valve clearance adjustment procedure from 1 to 12 and remove the intake camshaft and variable valve timing actuator as a single unit.
   (See 01-10A-7 VALVE CLEARANCE ADJUSTMENT[LF, L3].)
2. Remove the variable valve timing actuator.
   (1) Mark the camshaft and variable valve timing actuator as shown in the figure to make sure they are installed in their original position.

Note
- Do not add scratch marks to the camshaft thrust area.

   (2) Secure the camshaft in a vise.
   (3) Loosen the variable valve timing actuator tightening bolt.

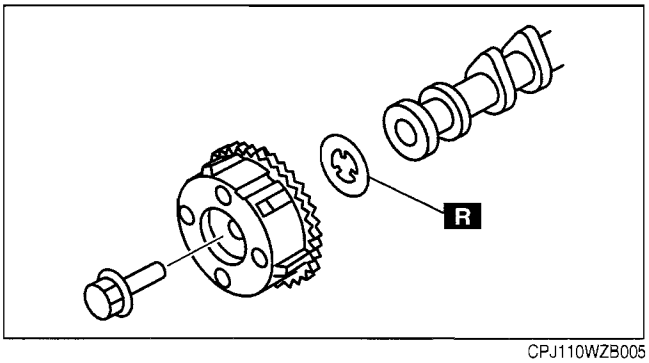


B3J110BWB001

3. Install a new washer.
4. Install the variable valve timing actuator.
   (1) Secure the camshaft in a vise.
   (2) Align the marks of the camshaft and variable valve timing actuator.

Caution
- **When the variable valve timing actuator is replaced with a new one, mark it in the same location as the old one.**

   (3) Tighten variable valve timing actuator tightening bolt.



CPJ110WZB005

Tightening torque
69—75 N·m {7.1—7.6 kgf·m, 50.9—55.3 ft·lbf}

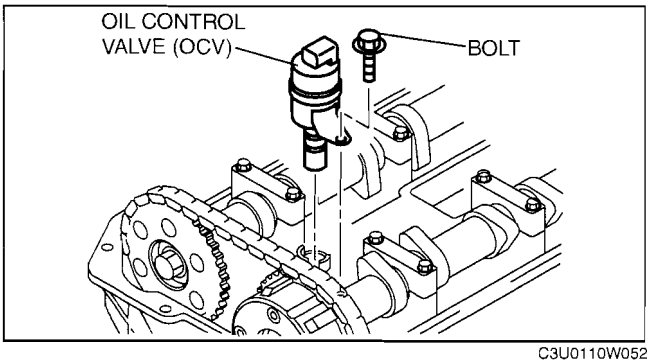
5. Follow the valve clearance adjustment procedure from 16 to 33 and install the intake camshaft and variable valve timing actuator.
   (See 01-10A-7 VALVE CLEARANCE ADJUSTMENT[LF, L3].)

OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION[LF, L3]

id0110a2801300

1. Disconnect the negative battery cable.
2. Remove the following parts.
   - Plug hole plate (See 01-10A-3 PLUG HOLE PLATE REMOVAL/INSTALLATION[LF, L3].)
   - Ignition coils (See 01-18A-2 IGNITION COIL REMOVAL/INSTALLATION[LF, L3].)
   - Oil control valve (OCV) connector
   - Ventilation hose
   - Cylinder head cover (See 01-10A-12 TIMING CHAIN REMOVAL/INSTALLATION[LF, L3].)
   - Oil control valve (OCV)
3. Install in the reverse order of removal.

Tightening torque
8.0—11.5 N·m {81.6—117.2 kgf·cm, 70.9—101.7 in·lbf}



C3U0110W052

OIL CONTROL VALVE (OCV) INSPECTION[LF, L3]

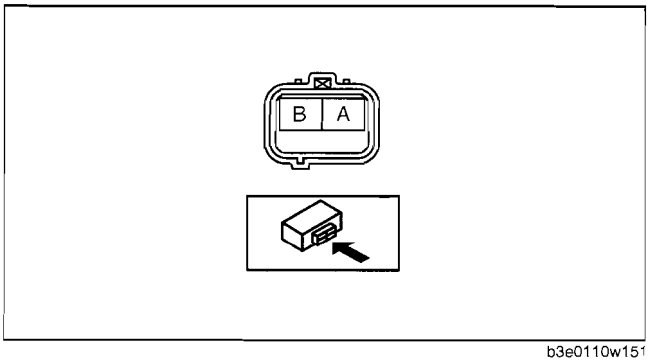
id0110a2801400

Coil Resistance Inspection

1. Disconnect the negative battery cable.
2. Remove the plug hole plate. (See 01-10A-3 PLUG HOLE PLATE REMOVAL/INSTALLATION[LF, L3].)
3. Disconnect the oil control valve connector.
4. Measure the resistance between terminals A and B using an ohmmeter.
   - If not as specified, replace the oil control valve.

Specification
6.9—7.9 ohms [20°C {68°F}]

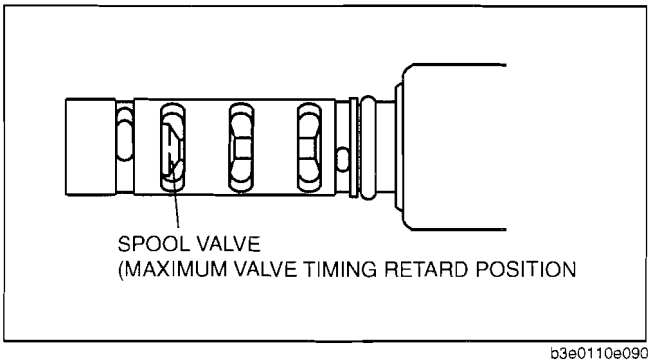
5. Connect the oil control valve connector.
6. Install the plug hole plate. (See 01-10A-3 PLUG HOLE PLATE REMOVAL/INSTALLATION[LF, L3].)
7. Connect the negative battery cable.



b3e0110w151

Spool Valve Operation Inspection

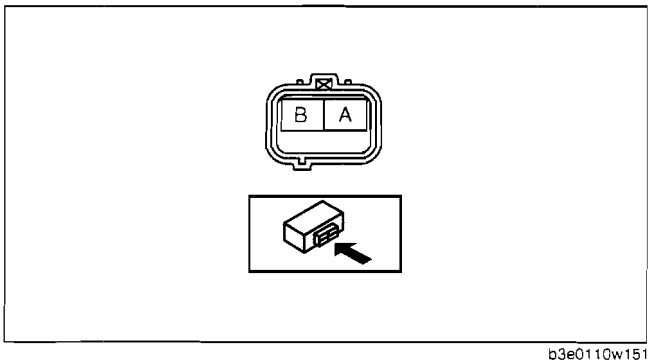
1. Disconnect the negative battery cable.
2. Remove the plug hole plate. (See 01-10A-3 PLUG HOLE PLATE REMOVAL/INSTALLATION[LF, L3].)
3. Disconnect the oil control valve connector.
4. Remove the oil control valve.
5. Verify that the spool valve in the oil control valve is in the maximum valve timing retard position as indicated in the figure.
   - If not as specified, replace the oil control valve.
6. Verify that the battery is fully charged.
   - If not as specified, recharge the battery.



b3e0110e090

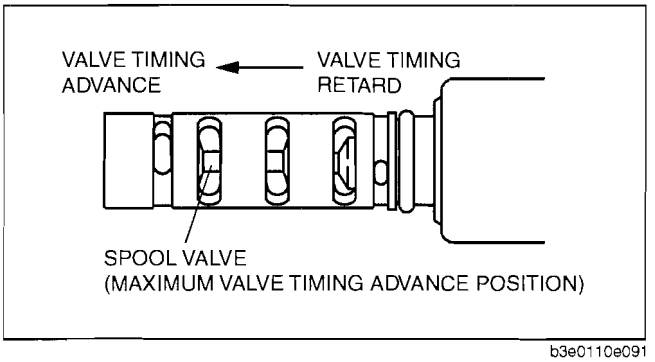
7. Apply battery positive voltage between the oil control valve terminals and verify that the spool valve operates and moves to the maximum valve timing advance position.
   - If not as specified, replace the oil control valve.

   Note
   - When applying battery positive voltage between the oil control valve terminals, the connection can be either of the following:
     — Positive battery cable to terminal A, negative battery cable to terminal B
     — Positive battery cable to terminal B, negative battery cable to terminal A



b3e0110w151

8. Stop applying battery positive voltage and verify that the spool valve returns to the maximum valve timing retard position.
   - If not as specified, replace the oil control valve.
9. Connect the oil control valve connector.
10. Install the plug hole plate. (See 01-10A-3 PLUG HOLE PLATE REMOVAL/INSTALLATION[LF, L3].)
11. Disconnect the negative battery cable.



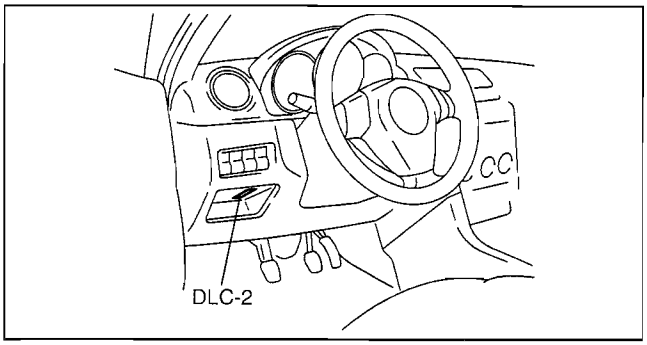
b3e0110e091

ENGINE TUNE-UP[LF, L3]

id0110a2800600

Engine Tune-up Preparation

1. Turn off all electrical loads.
2. Warm up the engine as follows.
   (1) Start the engine.
   (2) Maintain the engine speed **2,500—3,000 rpm** until the cooling fans start to operate.
   (3) Release the accelerator pedal.
   (4) Wait until the cooling fans stop.
3. Connect the **SST** (M-MDS) to the DLC-2.



B3E0102W003

Ignition Timing Inspection

Note
- Ignition timing is not adjustable.
- Ignition timing verification requires M-MDS.

1. Verify that the ignition timing (M-MDS: SPARKADV PID) is within the specification using M-MDS.

Ignition timing
Approx. BTDC 8°

2. Verify that ignition timing advances when the engine speed increases gradually.
   - If there malfunction, refer to "ENGINE SYMPTOM TROUBLESHOOTING". (See 01-03A-11 ENGINE SYMPTOM TROUBLESHOOTING[LF, L3].)

Idle Speed Inspection

Note
- Idle speed is not adjustable.
- Idle speed verification requires M-MDS.

1. Verify that the idle speed (M-MDS: RPM PID) is within the specification using M-MDS.

Idle speed [MTX (Neutral position)]
No load: 600—700 rpm
Electrical loads*2 ON (38—48 A): 650—750 rpm
Electrical loads*2 ON (more than 48 A): 700—800 rpm
A/C ON and refrigerant pressure switch (middle) OFF: 700—800 rpm
A/C ON and refrigerant pressure switch (middle) ON: 700—800 rpm
Idle speed [ATX (P or N position)]
No load: 650—750 rpm
Electrical loads*2 ON (38—48 A): 650—750 rpm
Electrical loads*2 ON (more than 48 A): 700—800 rpm
A/C ON and refrigerant pressure switch (middle) OFF: 650—750 rpm
A/C ON and refrigerant pressure switch (middle) ON: 670—770 rpm

*1 Excludes temporary idle speed drop just after the electrical loads are turned on.
*2. generator generating current value.

- If there malfunction, refer to "ENGINE SYMPTOM TROUBLESHOOTING". (See 01-03A-11 ENGINE SYMPTOM TROUBLESHOOTING[LF, L3].)

Idle Mixture Inspection

1. Verify that the idle speed and ignition timing are within the specification. (See 01-10A-37 Idle Speed Inspection.) (See 01-10A-37 Ignition Timing Inspection.)
2. Insert an exhaust gas analyzer to the tailpipe.
3. Verify that the CO and HC concentrations are within the regulation.
   - If there malfunction, refer to "ENGINE SYMPTOM TROUBLESHOOTING". (See 01-03A-11 ENGINE SYMPTOM TROUBLESHOOTING[LF, L3].)

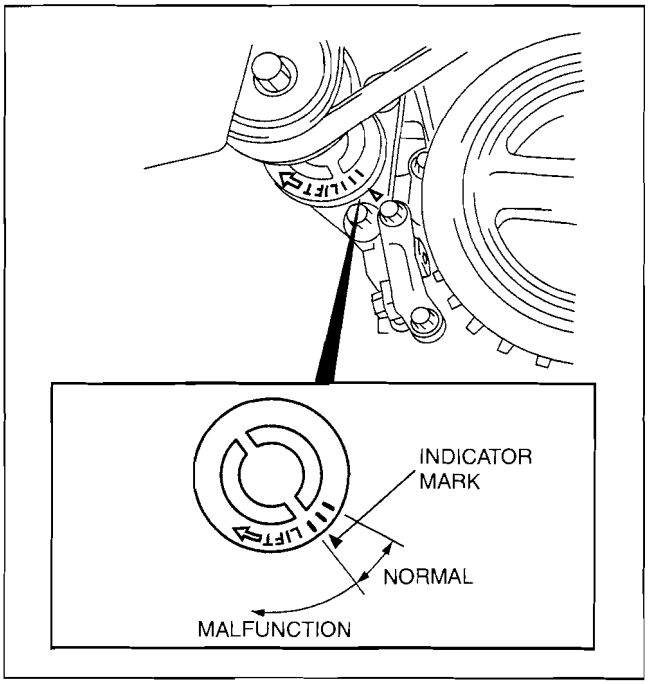
DRIVE BELT INSPECTION[L3 WITH TC]

id011039801500

Note

- Drive belt deflection/tension inspection is not necessary because of the use of the drive belt auto tensioner.

1. Verify that the drive belt auto tensioner indicator mark does not exceed the limit.
   - If it exceeds the limit, replace the drive belt. (See 01-10B-3 DRIVE BELT REMOVAL/ INSTALLATION[L3 WITH TC].)

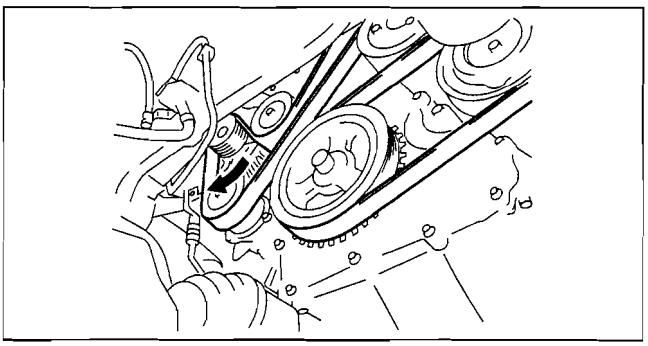


acxuuw00000135

DRIVE BELT REMOVAL/INSTALLATION[L3 WITH TC]

id011039801600

1. Remove the splash shield (RH).
2. Rotate the drive belt auto tensioner in the direction shown in the figure and remove the drive belt.
3. Install the drive belt.
4. Verify that the drive belt auto tensioner indicator mark does not exceed the limit. (See 01-10A-3 DRIVE BELT INSPECTION[LF, L3].)
5. Install the splash shield (RH).

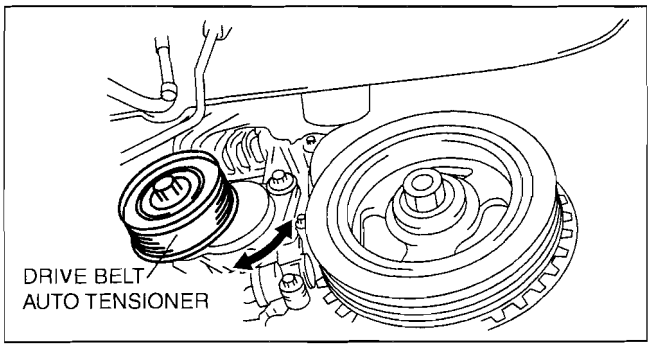


acxuuw00000136

DRIVE BELT AUTO TENSIONER INSPECTION[L3 WITH TC]

id011039801700

1. Remove the drive belt. (See 01-10B-3 DRIVE BELT REMOVAL/INSTALLATION[L3 WITH TC].)
2. Verify that the drive belt auto tensioner moves smoothly in the operational direction.
   - Replace the drive belt auto tensioner if necessary.
3. Rotate the drive belt auto tensioner pulley by hand and verify that it rotates smoothly.
   - Replace the drive belt auto tensioner if necessary.
4. Install the drive belt. (See 01-10B-3 DRIVE BELT REMOVAL/INSTALLATION[L3 WITH TC].)



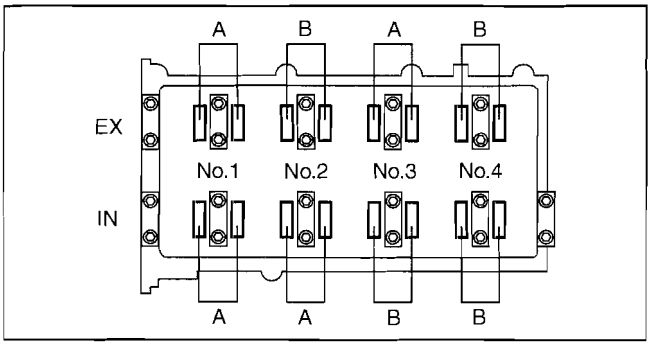
acxuuw00000137

VALVE CLEARANCE INSPECTION/ADJUSTMENT[L3 WITH TC]

id011039800200

Valve Clearance Inspection

1. Remove the battery cover.
2. Disconnect the negative battery cable.
3. Remove the splash shield (RH).
4. Remove the charge air cooler. (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
5. Remove the high pressure fuel pump. (See 01-14B-21 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION[L3 WITH TC].)
6. Remove the ignition coils. (See 01-18B-2 IGNITION COIL REMOVAL/INSTALLATION[L3 WITH TC].)
7. Disconnect the wiring harness.
8. Remove the ventilation hose.
9. Remove the cylinder head cover. (See 01-10B-10 TIMING CHAIN REMOVAL/INSTALLATION[L3 WITH TC].)
10. Measure the valve clearance.
    (1) Rotate the crankshaft clockwise so that the No.1 cylinder is at TDC of the compression stroke.
    (2) Measure the valve clearance of location A shown in the figure.



acxuuw00000156

Standard valve clearance [Engine cold]
IN: 0.22—0.28 mm {0.0087—0.011 in}
EX: 0.27—0.33 mm {0.011—0.012 in}

    (3) If it is not within the specification, replace the tappet and adjust the valve clearance to the median value of the standard.

Note
- Make sure to note down the measured values for choosing the suitable replacement tappets.

    (4) Rotate the crankshaft clockwise **360**° so that the No.4 cylinder is at TDC of the compression stroke.
    (5) Measure the valve clearance of location B shown in the figure.

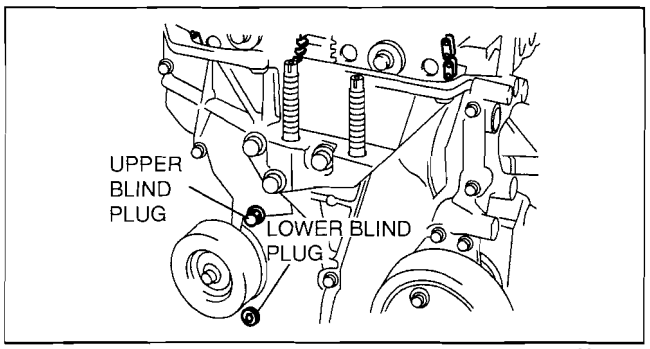
Standard valve clearance [Engine cold]
IN: 0.22—0.28 mm {0.0087—0.011 in}
EX: 0.27—0.33 mm {0.011—0.012 in}

    (6) If not within the specification, replace the tappet and adjust the valve clearance to the median value of the standard.
11. Install the cylinder head cover. (See 01-10B-10 TIMING CHAIN REMOVAL/INSTALLATION[L3 WITH TC].)
12. Install the ventilation hose.
13. Connect the wiring harness.
14. Install the ignition coils. (See 01-18B-2 IGNITION COIL REMOVAL/INSTALLATION[L3 WITH TC].)
15. Install the high pressure fuel pump. (See 01-14B-21 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION[L3 WITH TC].)

16. Install the charge air cooler. (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
17. Install the splash shield (RH).
18. Connect the negative battery cable.
19. Install the battery cover.

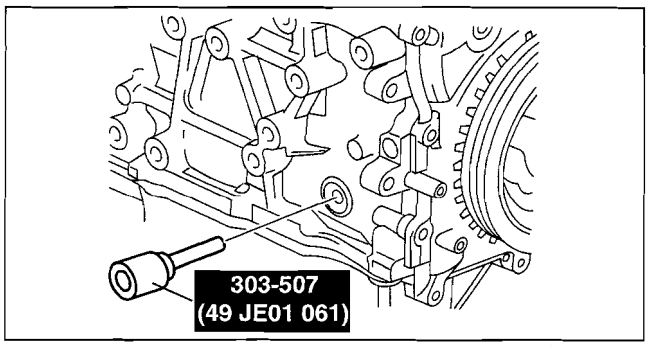
Valve Clearance Adjustment

1. Remove the battery cover.
2. Disconnect the negative battery cable.
3. Remove the splash shield (RH).
4. Remove the charge air cooler. (See 01-13B-4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION[L3 WITH TC].)
5. Remove the high pressure fuel pump. (See 01-14B-21 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION[L3 WITH TC].)
6. Remove the ignition coils. (See 01-18B-2 IGNITION COIL REMOVAL/INSTALLATION[L3 WITH TC].)
7. Disconnect the wiring harness.
8. Remove the ventilation hose.
9. Remove the cylinder head cover. (See 01-10B-10 TIMING CHAIN REMOVAL/INSTALLATION[L3 WITH TC].)
10. Remove the drive belt. (See 01-10B-3 DRIVE BELT REMOVAL/INSTALLATION[L3 WITH TC].)
11. Remove the engine front cover lower blind plug.
12. Remove the engine front cover upper blind plug.



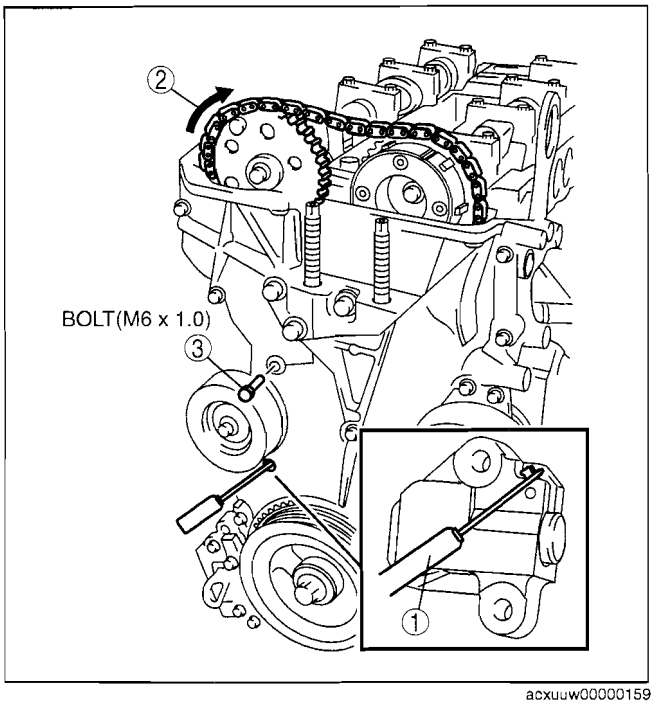
acxuuw00000157

13. Remove the cylinder block lower blind plug, and install the **SST.**
14. Rotate the crankshaft in the direction of the engine rotation so that the No.1 piston is at TDC of the compression stroke. (Until the crank weight contacts **SST** and stops.)



am3zzw0000350

15. Release the tension on the timing chain shown in the figure.
    (1) Using a suitable screwdriver or equivalent tool, unlock the chain tensioner ratchet.
    (2) Rotate the exhaust camshaft clockwise using a suitable wrench on the cast hexagon and loosen the tension on the timing chain.



acxuuw00000159

(3) Using a suitable bolt **(M6 X 1.0 length 25mm—35mm {0.99—1.3 in})** at the engine front cover upper blind plug, secure the tensioner arm at the position where the tension is released.
