- Water or foreign objects entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign objects on the connector when disconnecting it.

1. Select the selector lever to N position.
2. Perform the following procedures.
 - (1) Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
 - (2) Disconnect the negative battery cable.
 - (3) Remove the air cleaner component. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)

AUTOMATIC TRANSAXLE [FS5A-EL]

3. Remove in the order indicated in the table.

1	Connector
2	Clip
3	Selector cable
4	Manual shaft nut (See 05-17-17 Manual Shaft Nut Removal Note.) (See 05-17-18 Manual Shaft Nut Installation Note.)
5	Washer
6	Manual shaft lever
7	TR switch (See 05-17-17 TR switch Installation Note.)

4. Install in the reverse order of removal.
 5. Inspect the TR switch. (See 05-17-14 TRANSAXLE RANGE (TR) SWITCH INSPECTION [FS5A-EL].)

am8rrw00002452

05-17

Manual Shaft Nut Removal Note

1. Set the adjustable wrench as shown to hold the manual shaft lever and loosen the manual shaft nut.

Caution

- Do not use an impact wrench. Hold the manual shaft lever when removing the manual shaft nut, or the transaxle may be damaged.

am6xuw0000194

TR switch Installation Note

1. Verify that the manual shaft is aligned with N position.

am3uuw0000241

2. Adjust the TR switch between terminals B and C until the resistance becomes specification.

TR switch specification 713—788 ohms

3. Tighten the TR switch installation bolts.

Tightening torque

8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

am3uuw0000241

AUTOMATIC TRANSAXLE [FS5A-EL]

Manual Shaft Nut Installation Note

- Set the adjustable wrench as shown to hold the manual shaft lever and tighten the manual shaft nut.

Caution

- Do not use an impact wrench. Hold the manual shaft lever when installing the manual shaft nut, or the transaxle may be damaged

Tightening torque

32—46 N·m {3.3—4.6 kgf·m, 24—33 ft·lb}

am6xuw0000195

M RANGE SWITCH INSPECTION [FS5A-EL]

id051721291400

- Perform the following procedures.
 - Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
 - Disconnect the negative battery cable.
 - Remove the console. (See 09-17-45 CONSOLE REMOVAL/INSTALLATION.)
 - Disconnect the selector lever component connector.

am3uuw0000299

- Inspect the continuity between the selector lever component terminals A and H.
 - If there is any malfunction, replace the selector lever component. (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)

M range switch specification

Test condition	Continuity
M range	Continuity
Except M range	No continuity

am3uuw0000243

M RANGE SWITCH REMOVAL/INSTALLATION [FS5A-EL]

id051721291500

Note

- The M range switch is built into the selector lever component.

- Replace the selector lever component. (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)

UP SWITCH INSPECTION [FS5A-EL]

id051721310000

- Perform the following procedures.
 - Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
 - Disconnect the negative battery cable.
 - Remove the console. (See 09-17-45 CONSOLE REMOVAL/INSTALLATION.)

AUTOMATIC TRANSAXLE [FS5A-EL]

- (4) Disconnect the selector lever component connector.

am3uuw0000299

2. Inspect the continuity between the selector lever component terminals B and H.
- If there is any malfunction, replace the selector lever component. (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)

Up switch specification

Test condition	Continuity
Selector lever is in the M range (+) side position	Continuity
Selector lever is not in the M range (+) side position	No continuity

am3uuw0000243

05-17

UP SWITCH REMOVAL/INSTALLATION [FS5A-EL]

id051721310100

Note

- The up switch is built into the selector lever component.

1. Replace the selector lever component. (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)

DOWN SWITCH INSPECTION [FS5A-EL]

id051721310200

1. Perform the following procedures.
- (1) Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
 - (2) Disconnect the negative battery cable.
 - (3) Remove the console. (See 09-17-45 CONSOLE REMOVAL/INSTALLATION.)
 - (4) Disconnect the selector lever component connector.

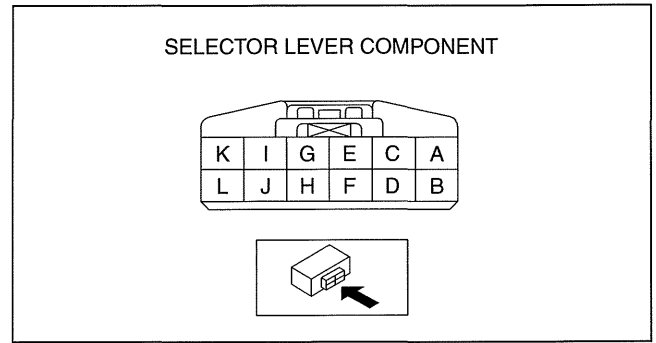

am3uuw0000299

AUTOMATIC TRANSAXLE [FS5A-EL]

2. Inspect the continuity between the selector lever component terminals C and H.
 - If there is any malfunction, replace the selector lever component. (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)

Up switch specification

Test condition	Continuity
Selector lever is in the M range (-) side position	Continuity
Selector lever is not in the M range (-) side position	No continuity

am3uuw0000243

DOWN SWITCH REMOVAL/INSTALLATION [FS5A-EL]

id051721310300

Note

- The down switch is built into the selector lever component.

1. Replace the selector lever component. (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)

TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR INSPECTION [FS5A-EL]

id051721292100

Caution

- **Water or foreign objects entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign objects on the connector when disconnecting it.**

On-Vehicle Inspection

1. Perform the following procedures.
 - (1) Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
 - (2) Disconnect the negative battery cable.
 - (3) Remove the air cleaner component. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
 - (4) Disconnect the coupler component connector.

am8rrw00002340

2. Measure the resistance between the coupler component terminals E and H.
 - If there is any malfunction, replace the TFT sensor. (See 05-17-21 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR REMOVAL/INSTALLATION [FS5A-EL].)

am3uuw0000241

AUTOMATIC TRANSAXLE [FS5A-EL]

TFT sensor specification

ATF temperature (°C{°F})	Resistance (kilohm)
-20 {-4}	236—324
0 {32}	84.3—110
20 {68}	33.5—42.0
40 {104}	14.7—17.9
60 {140}	7.08—8.17
80 {176}	3.61—4.15
100 {212}	1.96—2.24
120 {248}	1.13—1.28
130 {266}	0.87—0.98

Off-Vehicle Inspection

- Place the TFT sensor and a thermometer in ATF as shown, and heat the ATF gradually.

Warning

- A hot ATF and beaker can cause severe burns. Do not touch them.

ampjiw00005643

- Measure the resistance between the coupler component terminals E and H.
 - If there is any malfunction, replace the TFT sensor. (See 05-17-21 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR REMOVAL/INSTALLATION [FS5A-EL].)

TFT sensor specification

ATF temperature (°C{°F})	Resistance (kilohm)
-20 {-4}	236—324
0 {32}	84.3—110
20 {68}	33.5—42.0
40 {104}	14.7—17.9
60 {140}	7.08—8.17
80 {176}	3.61—4.15
100 {212}	1.96—2.24
120 {248}	1.13—1.28
130 {266}	0.87—0.98

am3uuw0000241

TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR REMOVAL/INSTALLATION [FS5A-EL]

id051721292200

Warning

- A hot transaxle and ATF can cause severe burns. Turn off the engine and wait until they are cool.

- Remove the primary control valve body.
 - Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
 - Disconnect the negative battery cable.
 - Remove the aerodynamic under cover NO.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
 - Clean the transaxle exterior throughout with a steam cleaner or cleaning solvents.
 - Drain the ATF. (See 05-17-14 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
 - Remove the oil pan.
 - Remove the primary control valve body. (See 05-17-52 CONTROL VALVE BODY REMOVAL/INSTALLATION [FS5A-EL].)

AUTOMATIC TRANSAXLE [FS5A-EL]

- (8) Disconnect the coupler component connector.

am8rrw0002342

2. Remove the coupler component from transaxle case.
3. Remove the O-ring from the coupler component.
4. Install the primary control valve body.
 - (1) Apply ATF to a new O-ring and install it on the coupler component.
 - (2) Install the coupler component to transaxle case.
 - (3) Connect the coupler component connector.
 - (4) Install the primary control valve body. (See 05-17-52 CONTROL VALVE BODY REMOVAL/INSTALLATION [FS5A-EL].)

am6xuw000195

5. Apply a light coat of silicon sealant (TB1217E) to the contact surfaces of the oil pan and transaxle case.

Caution

- If any old sealant gets into the transaxle during installation of the oil pan, trouble may occur in the transaxle case and oil pan, and clean with cleaning fluids.

6. Install the oil pan before the applied sealant starts to harden.

am6xuw000195

Tightening torque

6—8 N·m {62—81 kgf·cm, 54—70 in·lbf}

7. Add ATF. (See 05-17-14 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
8. Install the aerodynamic under cover NO.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
9. Connect the negative battery cable.
10. Install the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
11. Perform the "Mechanical System Test". (See 05-17-3 MECHANICAL SYSTEM TEST [FS5A-EL].)

OIL PRESSURE SWITCH INSPECTION [FS5A-EL]

id051721292300

Caution

- Water or foreign objects entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign objects on the connector when disconnecting it.

On-Vehicle Inspection

1. Perform the following procedures.
 - (1) Remove the aerodynamic under cover NO.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)

AUTOMATIC TRANSAXLE [FS5A-EL]

- (2) Disconnect the oil pressure switch connector.
2. Start the engine.

am8rrw00002344

3. Inspect the continuity between the oil pressure switch terminal A and body GND.
 - If there is any malfunction, replace the oil pressure switch. (See 05-17-24 OIL PRESSURE SWITCH REMOVAL/INSTALLATION [FS5A-EL].)

Oil pressure switch specification

Test Condition	Continuity
In P position	No continuity
In R position	No continuity
In N position	No continuity
In D range	Continuity

am3uuw0000241

05-17

Off-Vehicle Inspection

1. Apply air pressure at 400—440 kPa {4.08—4.48 kgf/cm², 58.1—63.8 psi} as shown in the figure.

am8rrw00002346

2. Inspect continuity between the oil pressure switch terminal A and screw part.
 - If there is any malfunction, replace the oil pressure switch. (See 05-17-24 OIL PRESSURE SWITCH REMOVAL/INSTALLATION [FS5A-EL].)

Oil pressure switch specification

Test Condition	Continuity
Applying air pressure	No continuity
Applying no air pressure	Continuity

am3uuw0000241

AUTOMATIC TRANSAXLE [FS5A-EL]

OIL PRESSURE SWITCH REMOVAL/INSTALLATION [FS5A-EL]

id051721292400

Warning

- A hot transaxle and ATF can cause severe burns. Turn off the engine and wait until they are cool.

1. Perform the following procedures.

- (1) Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
- (2) Disconnect the negative battery cable.
- (3) Remove the aerodynamic under cover NO.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)

2. Remove in the order indicated in the table.

1	Connector
2	Oil pressure switch
3	Washer

3. Install in the reverse order of removal.

am8rrw0002453

INPUT/TURBINE SPEED SENSOR INSPECTION [FS5A-EL]

id051721292500

Caution

- Water or foreign objects entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign objects on the connector when disconnecting it.

On-Vehicle Inspection

1. Perform the following procedures.

- (1) Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
- (2) Disconnect the negative battery cable.
- (3) Remove the air cleaner component. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
- (4) Disconnect the input/turbine speed sensor connector.

am8rrw0002347

2. Measure the resistance between the input/turbine speed sensor terminals A and B.

- If there is any malfunction, replace the input/turbine speed sensor. (See 05-17-25 INPUT/TURBINE SPEED SENSOR REMOVAL/INSTALLATION [FS5A-EL].)

Input/turbine speed sensor specification
250—600 ohms

am3uuw000241

AUTOMATIC TRANSAXLE [FS5A-EL]

Off-Vehicle Inspection

1. Measure the resistance between the input/turbine speed sensor terminals A and B.
 - If there is any malfunction, replace the input/turbine speed sensor. (See 05-17-25 INPUT/TURBINE SPEED SENSOR REMOVAL/INSTALLATION [FS5A-EL].)

Input/turbine speed sensor specification
250—600 ohms

am3uuw0000241

INPUT/TURBINE SPEED SENSOR REMOVAL/INSTALLATION [FS5A-EL]

id051721292600

Caution

- Always use a new bolt. If the removed input/turbine speed sensor installation bolt is reused, it may cause oil leakage.
- A sealant coating is applied to the input/turbine speed sensor installation bolt to prevent oil leakage from the installation bolt hole which passes through the component.

05-17

1. Perform the following procedures.
 - (1) Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
 - (2) Disconnect the negative battery cable.
 - (3) Remove the air cleaner component. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)

2. Remove in the order indicated in the table.

1	Connector
2	Input/turbine speed sensor
3	O-ring

3. Install in the reverse order of removal.

am3uuw0000563

INTERMEDIATE SENSOR INSPECTION [FS5A-EL]

id051721292700

On-Vehicle Inspection

1. Inspect the power supply circuit for the intermediate sensor.
 - (1) Set the battery component (ex: battery, battery tray and PCM component) out of the way.
 - (2) Disconnect the intermediate sensor connector.
 - (3) Switch the ignition to ON (engine off).

am8rrw00002349

AUTOMATIC TRANSAXLE [FS5A-EL]

- (4) Measure the voltage at intermediate sensor connector terminal A (harness-side).
 - If there is any malfunction, repair wiring harness between intermediate sensor and TCM.

Intermediate sensor specification 4.5—5.5 V

- (5) Switch the ignition to off.
 - (6) Connect the intermediate sensor connector.
2. Inspect the GND circuit for the intermediate sensor.
 - (1) Switch the ignition to off.
 - (2) Measure the voltage at intermediate sensor connector terminal C (harness-side).
 - If there is any malfunction, repair wiring harness between intermediate sensor and TCM.

Intermediate sensor specification Below 1.0 V

3. Inspect the signal circuit for the intermediate sensor.
 - (1) Connect the oscilloscope to the following TCM connector terminals and set it as below.
 - (+) lead: TCM terminal AC
 - (-) lead: battery negative terminal
 - Oscilloscope setting: 1 V/DIV (Y), 2 ms/DIV (X), DC range
 - (2) Start the engine.
 - (3) Measure the wave form when vehicle speed at 30 km/h {19 mph}.
 - If there is any malfunction, replace the intermediate sensor. (See 05-17-26 INTERMEDIATE SENSOR REMOVAL/INSTALLATION [FS5A-EL].)

INTERMEDIATE SENSOR REMOVAL/INSTALLATION [FS5A-EL]

id051721292800

Caution

- If foreign materials are stuck to the sensor, disturbance by magnetic flux can cause sensor output to be abnormal and thereby negatively affect control. Make sure that foreign materials such as iron filings are not stuck to the sensor during installation.

1. Perform the following procedures.
 - (1) Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
 - (2) Disconnect the negative battery cable.
 - (3) Remove the battery component (ex: battery, battery tray and PCM component). (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)

AUTOMATIC TRANSAXLE [FS5A-EL]

2. Remove in the order indicated in the table.

1	Connector
2	Intermediate sensor
3	O-ring

3. Install in the reverse order of removal.

am8rrw0002455

VEHICLE SPEED SENSOR (VSS) INSPECTION [FS5A-EL]

id051721292900

On-Vehicle Inspection

1. Inspect the power supply circuit for the VSS.

(1) Remove the insulator from the transaxle.

am3uuw000304

05-17

(2) Disconnect the VSS connector.

(3) Switch the ignition to ON (engine off).

am8rrw0002351

(4) Measure the voltage at VSS connector terminal A (harness-side).

- If there is any malfunction, repair wiring harness between VSS and TCM.

VSS specification

4.5—5.5 V

(5) Switch the ignition to off.

(6) Connect the VSS connector.

am3uuw0000241

AUTOMATIC TRANSAXLE [FS5A-EL]

2. Inspect the GND circuit for the VSS.
 - (1) Switch the ignition to off.
 - (2) Measure the voltage at intermediate sensor connector terminal C (harness-side).
 - If there is any malfunction, repair wiring harness between intermediate sensor and TCM.

Intermediate sensor specification Below 1.0 V

3. Inspect the signal circuit for the VSS.
 - (1) Connect the oscilloscope to the following TCM connector terminals and set it as below.
 - (+) lead: TCM terminal Z
 - (-) lead: battery negative terminal
 - Oscilloscope setting: 1 V/DIV (Y), 2 ms/DIV (X), DC range
 - (2) Start the engine.
 - (3) Measure the wave form when vehicle speed at 30 km/h {19 mph}.
 - If there is any malfunction, replace the VSS. (See 05-17-28 VEHICLE SPEED SENSOR (VSS) REMOVAL/ INSTALLATION [FS5A-EL].)

VEHICLE SPEED SENSOR (VSS) REMOVAL/INSTALLATION [FS5A-EL]

Caution

- If foreign materials are stuck to the sensor, disturbance by magnetic flux can cause sensor output to be abnormal and thereby negatively affect control. Make sure that foreign materials such as iron filings are not stuck to the sensor during installation.

1. Perform the following procedures.
 - (1) Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
 - (2) Disconnect the negative battery cable.
 - (3) Remove the insulator from the transaxle.

AUTOMATIC TRANSAXLE [FS5A-EL]

2. Remove in the order indicated in the table.

1	Connector
2	VSS
3	O-ring

3. Install in the reverse order of removal.

am8rrw00002456

SOLENOID VALVE INSPECTION [FS5A-EL]

id051721293100

Caution

- Water or foreign objects entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign objects on the connector when disconnecting it.

05-17

Primary Control Valve Body

On-vehicle inspection

1. Perform the following procedures.

- (1) Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
- (2) Disconnect the negative battery cable.
- (3) Remove the air cleaner component. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
- (4) Disconnect the coupler component connector.

am8rrw00002353

2. Measure the resistance between the coupler component terminals.

- If there is any malfunction, inspect the coupler component for continuity.
- If coupler component has no malfunction, perform the "Off-vehicle inspection". (See 05-17-30 Off-Vehicle inspection.)

am3uuw0000241

Solenoid valve specification

Solenoid valve	Terminal	Resistance (ohm)
Pressure control solenoid A	D⇔I	2.4—7.3
Shift solenoid A	A⇔GND	1.0—4.2
Shift solenoid B	C⇔GND	1.0—4.2
Shift solenoid C	G⇔GND	1.0—4.2
Shift solenoid D	B⇔GND	10.9—26.2
Shift solenoid E	F⇔GND	10.9—26.2

AUTOMATIC TRANSAXLE [FS5A-EL]

Operating inspection

Caution

- Do not apply battery positive voltage to terminals for more than 3 s.

Note

- Because the operation sound of the solenoid valve is small, perform inspection in a quiet place.

1. Perform the following procedures.

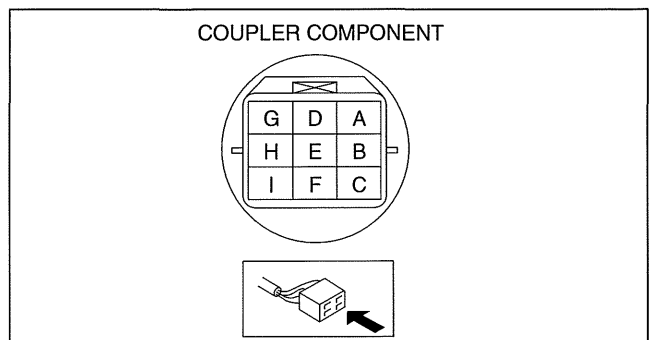

- (1) Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
- (2) Disconnect the negative battery cable.
- (3) Remove the air cleaner component. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
- (4) Disconnect the coupler component connector.

am8rrw00002353

2. Apply battery positive voltage to the coupler component terminals A, B, C, F or G and battery negative voltage to GND, and verify that operating sound is heard from solenoid valve.

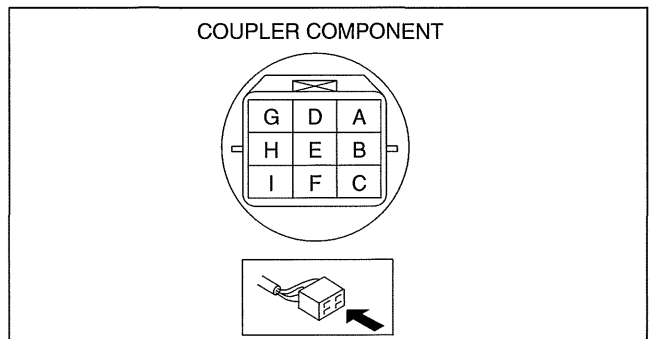

- If the operation sound is not heard, inspect the coupler component for continuity.
- If coupler component has no malfunction, perform the "Off-vehicle inspection". (See 05-17-30 Off-Vehicle inspection.)

am3uuw0000241

3. Apply battery positive voltage to the coupler component terminal D and battery negative voltage to terminal I, and verify that operating sound is heard from solenoid valve.

- If the operation sound is not heard, inspect the coupler component for continuity.
- If coupler component has no malfunction, perform the "Off-vehicle inspection". (See 05-17-30 Off-Vehicle inspection.)

am3uuw0000241

Off-Vehicle inspection

1. Measure the resistance between the solenoid valve terminals.

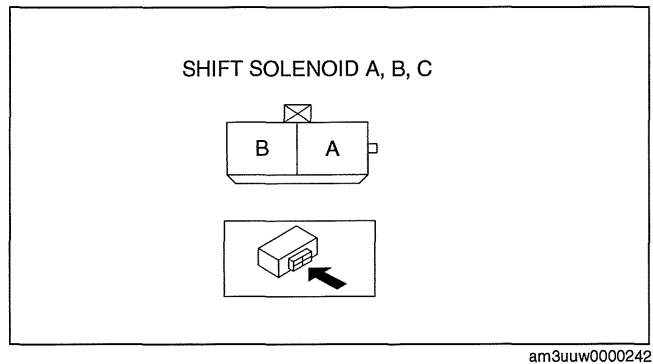

- If there is any malfunction, replace the solenoid valve. (See 05-17-33 SOLENOID VALVE REMOVAL/INSTALLATION [FS5A-EL].)

AUTOMATIC TRANSAXLE [FS5A-EL]

Pressure control solenoid A specification 2.4—7.3 ohms

Shift solenoid A, B, C specification 1.0—4.2 ohms

Shift solenoid D, E specification 10.9—26.2 ohms

05-17

Secondary Control Valve Body On-vehicle inspection

1. Perform the following procedures.
 - (1) Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
 - (2) Disconnect the negative battery cable.
 - (3) Remove the battery component (ex: battery, battery tray and PCM component). (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
 - (4) Disconnect the coupler component connector.

AUTOMATIC TRANSAXLE [FS5A-EL]

2. Measure the resistance between the coupler component terminals A and B.
 - If there is any malfunction, inspect the coupler component for continuity.
 - If coupler component has no malfunction, perform the "Off-vehicle inspection". (See 05-17-33 Off-Vehicle inspection.)

Solenoid valve specification

Solenoid valve	Terminal	Resistance (ohm)
Pressure control solenoid B	A↔GND	1.0—4.2
Shift solenoid F	B↔GND	8.4—21.8

am3uuw0000242

Operating inspection

Caution

- Do not apply battery position voltage to terminals for more than 3 s.

Note

- Because the operation sound of the solenoid valve is small, perform inspection in a quiet place.

1. Perform the following procedures.

- (1) Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
- (2) Disconnect the negative battery cable.
- (3) Remove the battery component (ex: battery, battery tray and PCM component). (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
- (4) Disconnect the coupler component connector.

am8rrw00002358

2. Apply battery positive voltage to the coupler component terminals A, B and battery negative voltage to GND, and verify that operating sound is heard from solenoid valve.
 - If the operation sound is not heard, inspect the coupler component for continuity.
 - If coupler component has no malfunction, perform the "Off-vehicle inspection". (See 05-17-33 Off-Vehicle inspection.)

am3uuw0000242

AUTOMATIC TRANSAXLE [FS5A-EL]

Off-Vehicle inspection

1. Measure the resistance between the solenoid valve terminals.
 - If there is any malfunction, replace the solenoid valve. (See 05-17-33 SOLENOID VALVE REMOVAL/INSTALLATION [FS5A-EL].)

Pressure control solenoid B specification 1.0—4.2 ohms

am3uuw0000242

Shift solenoid F specification 8.4—21.8 ohms

id051721293200

05-17

SOLENOID VALVE REMOVAL/INSTALLATION [FS5A-EL]

id051721293200

Warning

- A hot transaxle and ATF can cause severe burns. Turn off the engine and wait until they are cool.

Primary Control Valve Body

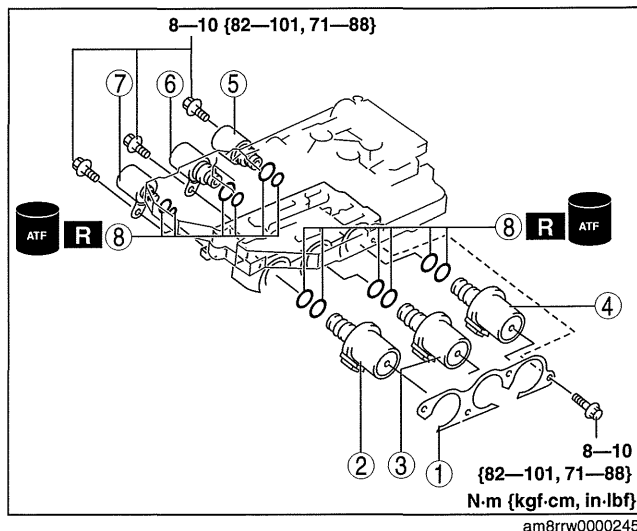

1. Remove the primary control valve body.
 - (1) Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
 - (2) Disconnect the negative battery cable.
 - (3) Remove the aerodynamic under cover NO.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
 - (4) Clean the transaxle exterior throughout with a steam cleaner or cleaning solvents.
 - (5) Drain the ATF. (See 05-17-14 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
 - (6) Remove the oil pan. (See 05-17-52 CONTROL VALVE BODY REMOVAL/INSTALLATION [FS5A-EL].)
 - (7) Remove the primary control valve body. (See 05-17-52 CONTROL VALVE BODY REMOVAL/INSTALLATION [FS5A-EL].)

AUTOMATIC TRANSAXLE [FS5A-EL]

2. Remove in the order indicated in the table.

1	Bracket
2	Shift solenoid A
3	Shift solenoid C
4	Shift solenoid B
5	Shift solenoid E
6	Shift solenoid D
7	Pressure control solenoid A
8	O-ring

3. Install in the reverse order of removal.
4. Add ATF. (See 05-17-14 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
5. Perform the "Mechanical System Test". (See 05-17-3 MECHANICAL SYSTEM TEST [FS5A-EL].)
6. Perform the "Road Test". (See 05-17-7 ROAD TEST [FS5A-EL].)

Secondary Control Valve Body

1. Remove the secondary control valve body.
 - (1) Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
 - (2) Disconnect the negative battery cable.
 - (3) Remove the battery component (ex: battery, battery tray and PCM component). (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
 - (4) Remove the aerodynamic under cover NO.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
 - (5) Clean the transaxle exterior throughout with a steam cleaner or cleaning solvents.
 - (6) Drain the ATF. (See 05-17-14 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
 - (7) Remove the oil cover. (See 05-17-52 CONTROL VALVE BODY REMOVAL/INSTALLATION [FS5A-EL].)
 - (8) Remove the secondary control valve body. (See 05-17-52 CONTROL VALVE BODY REMOVAL/INSTALLATION [FS5A-EL].)
2. Remove in the order indicated in the table.

1	Bracket
2	Pressure control solenoid B
3	Shift solenoid F
4	O-ring

3. Install in the reverse order of removal.
4. Add ATF. (See 05-17-14 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
5. Perform the "Mechanical System Test". (See 05-17-3 MECHANICAL SYSTEM TEST [FS5A-EL].)
6. Perform the "Road Test". (See 05-17-7 ROAD TEST [FS5A-EL].)

TCM INSPECTION [FS5A-EL]

id051721293800

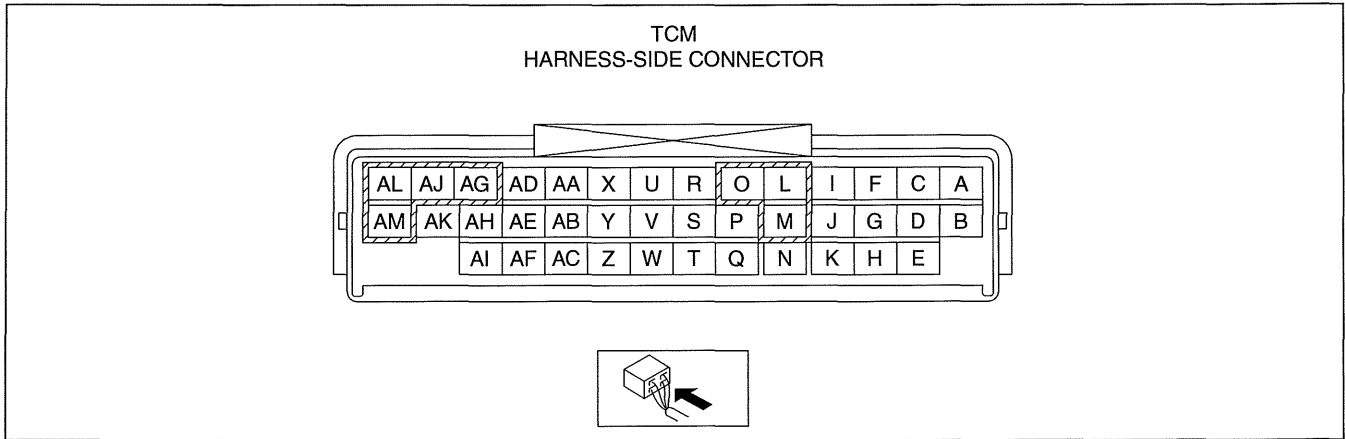

Note

- The TCM terminal voltage can vary with conditions when measuring and changes due to age deterioration on the vehicle, causing false diagnosis. Therefore a comprehensive inspection of the input and output systems, and the TCM is necessary to determine where the malfunction occurs.

1. Connect the voltmeter (-) lead to body GND.
2. Measure the voltage at each terminal.
 - If any incorrect voltage is detected, inspect the related system(s), wiring harnesses and connector(s) referring to the "Inspection Item" column in the "TCM Terminal Voltage".

TCM REMOVAL/INSTALLATION [FS5A-EL]

id051721294000

1. Perform the following procedures.
 - (1) Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
 - (2) Disconnect the negative battery cable.
 - (3) Remove the battery component (ex: battery, battery tray and PCM component). (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)

2. Remove in the order indicated in the table.

1	Connector
2	TCM

3. Install in the reverse order of removal.

N·m {kgf·cm, in·lbf}

am3uuw0000245

AUTOMATIC TRANSAXLE [FS5A-EL]

AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL]

id051721294100

Caution

- **Secure the steering wheel using tape or a cable to prevent the steering shaft from rotating after disconnecting the steering shaft. If the steering wheel rotates after the steering shaft and the steering gear and linkage are disconnected, the internal parts of the clock spring could be damaged.**

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the aerodynamic under cover No. 2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
4. Remove the front splash shield. (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)
5. Drain the ATF. (See 05-17-14 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
6. Disconnect and/or remove the following parts in the engine compartment.
 - (1) Remove the battery component (ex: battery, battery tray and PCM component). (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
 - (2) Remove the air cleaner component. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
 - (3) Disconnect the selector cable from the transaxle.
 - (4) Remove the insulator from the transaxle.
 - (5) Disconnect the connectors and GND wiring harness from the transaxle.
 - (6) Remove the bracket from the transaxle.
 - (7) Disconnect the oil hoses from the transaxle.
 - (8) Remove the water-cooled oil cooler from the transaxle with the hose connected. (See 05-17-47 OIL COOLER REMOVAL/INSTALLATION [FS5A-EL].)
 - (9) Remove the filler tube from the transaxle.
 - (10) Remove the starter. (See 01-19B-2 STARTER REMOVAL/INSTALLATION [LF, L5].)
7. Disconnect and/or remove the following parts related to the suspension and axle.
 - (1) Remove the front tires. (See 03-10-1 GENERAL PROCEDURES (FRONT AND REAR AXLES).)
 - (2) Disconnect the ABS wheel-speed sensors from the steering knuckles. (See 04-13-7 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
 - (3) Disconnect the clip securing the brake hose (LH) from the shock absorber. (See 04-11-31 BRAKE HOSE (FRONT) REMOVAL/INSTALLATION [LF, L5].)
 - (4) Disconnect the brake hose (LH) from the shock absorber. (See 04-11-31 BRAKE HOSE (FRONT) REMOVAL/INSTALLATION [LF, L5].)
 - (5) Disconnect the tie-rod end ball joints from the steering knuckles. (See 02-13-13 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
 - (6) Disconnect the front lower arms from the steering knuckles. (See 02-13-8 FRONT LOWER ARM REMOVAL/INSTALLATION.)
 - (7) Disconnect the stabilizer control links from the shock absorbers. (See 02-13-3 FRONT SHOCK ABSORBER AND COIL SPRING REMOVAL/INSTALLATION.)
 - (8) Disconnect the drive shaft (LH) from the transaxle. (See 03-13-3 DRIVE SHAFT REMOVAL/INSTALLATION.)
 - (9) Disconnect the drive shaft (RH) from the joint shaft. (See 03-13-3 DRIVE SHAFT REMOVAL/INSTALLATION.)

AUTOMATIC TRANSAXLE [FS5A-EL]

- (10) Disconnect the clips to set the CKP sensor harness out of the way to prevent interference with the joint shaft. (L5).
- (11) Remove the joint shaft. (See 03-13-13 JOINT SHAFT REMOVAL/INSTALLATION.)

am3uuw0000348

8. Install the SST using the following procedures.

Caution

- Refer to the SST instruction manual for the basic handling procedure.

am6xuw0000068

05-17

- (1) Remove the installation bolt for the bracket securing the lower radiator hose.
- (2) Set the bracket securing the lower radiator hose aside to prevent it from interfering with the front shaft of the SST (right side)

am3uuw0000508

- (3) As shown in the figure, set the rear shafts of the SST to the left and right shock absorber bolts.

am3uuw0000528

AUTOMATIC TRANSAXLE [FS5A-EL]

- (4) Install front foot No.2 to the left/right front shaft of the SST, then align the groove of the front shaft of the SST with the folded up part of the vehicle as shown in the figure.

am3uuw0000529

- (5) Adjust the positions of the SST side bars so that they are the same height (left and right) and horizontal. Make sure each joint is securely tightened.

am3uuw0000529

AUTOMATIC TRANSAXLE [FS5A-EL]

9. Remove in the order indicated in the table.

am3uuw0000519

1	Torque converter installation nuts (See 05-17-44 Torque Converter Installation Nuts Removal Note.)
2	Transaxle mounting bolts (upper side)
3	Battery tray bracket (See 05-17-45 No.1 Engine Mount and No.4 Engine Mount Installation Note.)
4	No.4 engine mount rubber (See 05-17-45 No.1 Engine Mount and No.4 Engine Mount Installation Note.)
5	No.4 engine mount bracket (See 05-17-45 No.1 Engine Mount and No.4 Engine Mount Installation Note.)

6	No.1 engine mount rubber (See 05-17-45 No.1 Engine Mount and No.4 Engine Mount Installation Note.)
7	No.1 engine mount bracket (See 05-17-45 No.1 Engine Mount and No.4 Engine Mount Installation Note.)
8	Transaxle mounting bolts (lower side) (See 05-17-44 Transaxle Mounting Bolts (Lower Side) Removal Note.)
9	Transaxle (See 05-17-44 Transaxle Mounting Bolts (Lower Side) Removal Note.)

Warning

- Improperly jacking a transaxle is dangerous. It can slip off the jack and may cause serious injury.

Caution

- To prevent the torque converter and transaxle from separating, remove the transaxle without tilting it toward the torque converter.

05-17

AUTOMATIC TRANSAXLE [FS5A-EL]

10. Install in the reverse order of removal.
11. Add ATF to the specified level. (See 05-17-14 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
12. Perform the following test according to the service item. (See 05-17-3 MECHANICAL SYSTEM TEST [FS5A-EL].)(See 05-17-7 ROAD TEST [FS5A-EL].)

Service item	Test item			
	Line pressure test	Stall test	Time lag test	Road test
ATX replacement	×			
ATX overhaul	×	×	×	×
Torque converter replacement	×	×		
Oil pump replacement	×			
Clutch system replacement	×		×	×

× : Test to be performed after the service work

Torque Converter Installation Nuts Removal Note

1. Hold the crankshaft pulley to prevent drive plate from rotating.

am3uuw0000258

2. Remove the torque converter nuts from the starter installation hole.

am3uuw0000258

Transaxle Mounting Bolts (Lower Side) Removal Note

1. Adjust the SST (49 C017 5A0) and lean the engine toward the transaxle.
2. Support the transaxle on a jack.
3. Remove the transaxle mounting bolts (lower side).

am3uuw0000529

AUTOMATIC TRANSAXLE [FS5A-EL]

4. Remove the transaxle.

am3uuw0000258

No.1 Engine Mount and No.4 Engine Mount Installation Note

1. Install the No.4 engine mount bracket to the transaxle case, and then tighten the nuts.

Tightening torque

61—76 N·m {6.3—7.7 kgf·m, 45—56 ft·lbf}

am3uuw0000261

05-17

2. Install the No.1 engine mount bracket to the converter housing, and then tighten the bolts.

Tightening torque

44—61 N·m {4.5—6.2 kgf·m, 33—44 ft·lbf}

am3uuw0000262

3. Install the No.1 engine mount rubber to the front crossmember, and then temporarily tighten the bolts.

am3uuw0000262

AUTOMATIC TRANSAXLE [FS5A-EL]

4. Align the No.4 engine mount rubber installation hole to the stud bolts on the body.
5. Install the No.4 engine mount rubber to the No.4 engine mount bracket, and then tighten the bolt.

Tightening torque

94—152 N·m {9.6—15 kgf·m, 70—112 ft·lbf}

am3uuw0000262

6. Tighten the No.1 engine mount rubber installation bolts in the order shown.

Tightening torque

73—90 N·m {7.5—9.1 kgf·m, 54—66 ft·lbf}

am3uuw0000262

7. Align the battery tray bracket installation hole to the stud bolts on the body.
8. Install the battery tray bracket to the No.4 engine mount rubber, and then tighten the nuts.

Tightening torque

44—61 N·m {4.5—6.2 kgf·m, 33—44 ft·lbf}

9. Remove the SST (49 C017 5A0).

am3uuw0000262

DRIVE PLATE REMOVAL/INSTALLATION [FS5A-EL]

id051721294200

1. Remove the transaxle. (See 05-17-40 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL].)
2. Remove in the order indicated in the table.

1	Drive plate installation bolts (See 05-17-47 Drive Plate Installation Bolts Removal Note.) (See 05-17-47 Drive Plate Installation Bolts Installation Note.)
2	Backing plate
3	Drive plate

3. Install in the reverse order of removal

am3uuw0000237

AUTOMATIC TRANSAXLE [FS5A-EL]

Drive Plate Installation Bolts Removal Note

1. Set the SST against the drive plate.
2. Loosen the drive plate installation bolts in two or three steps in the order as shown in the figure, then remove the bolts and the drive plate.

am3uuw0000245

Drive Plate Installation Bolts Installation Note

1. Set the SST against the drive plate.
2. Tighten the drive plate mounting bolts in two or three steps in the order as shown in the figure.

Tightening torque

108—116 N·m {11.1—11.8 kgf·m, 80—85 ft·lbf}

am3uuw0000245

05-17

OIL SEAL REPLACEMENT [FS5A-EL]

id051721294300

1. Remove the aerodynamic under cover No. 2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
2. Remove the oil seal.
 - (1) Drain the ATF. (See 05-17-14 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
 - (2) Remove the drive shaft and/or joint shaft. (See 03-13-3 DRIVE SHAFT REMOVAL/INSTALLATION.)(See 03-13-13 JOINT SHAFT REMOVAL/INSTALLATION.)

Caution

- The oil seal is easily damaged by the sharp edges of the drive shaft splines. Do not let the splines contact the oil seal.

- (3) Remove the oil seal using a flathead screwdriver.
3. Using the SSTs and a hammer, tap a new oil seal in evenly until the SST (body) contacts the transaxle case.
4. Coat the lip of the oil seal with ATF.
5. Install the drive shaft and/or joint shaft. (See 03-13-3 DRIVE SHAFT REMOVAL/INSTALLATION.)(See 03-13-13 JOINT SHAFT REMOVAL/INSTALLATION.)
6. Add the ATF. (See 05-17-14 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
7. Install the aerodynamic under cover No. 2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
8. Perform the "Mechanical System Test". (See 05-17-3 MECHANICAL SYSTEM TEST [FS5A-EL].)

am3uuw0000358

OIL COOLER REMOVAL/INSTALLATION [FS5A-EL]

id051721294400

Type A

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the air cleaner component. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)

AUTOMATIC TRANSAXLE [FS5A-EL]

4. Remove the aerodynamic under cover NO.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
5. Drain the ATF. (See 05-17-14 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
6. Drain the engine coolant. (See 01-12A-4 ENGINE COOLANT REPLACEMENT [LF, L5].)
7. Remove in the order indicated in the table.

am3uuw0000448

1	Water hose (connected to the outlet)
2	Water hose (connected to the thermostat)
3	Oil hose (See 05-17-48 Oil Hose Installation Note.)

4	Hose clamp (See 05-17-48 Oil Hose Installation Note.)
5	Connector bolt
6	Packing
7	Water-cooled oil cooler

8. Install in the reverse order of removal.
9. Add the engine coolant. (See 01-12A-4 ENGINE COOLANT REPLACEMENT [LF, L5].)
10. Add the ATF. (See 05-17-14 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
11. Perform the "Mechanical System Test". (See 05-17-3 MECHANICAL SYSTEM TEST [FS5A-EL].)

Oil Hose Installation Note

Note

- If reusing the hose, install the new hose clamp exactly on the mark left by the previous hose clamp. Then apply force to the hose clamp in the direction of the arrow in order to fit the clamp in place.

AUTOMATIC TRANSAXLE [FS5A-EL]

1. Align the marks, and slide the oil hose onto the oil pipe until it is fully seated as shown.
2. Install the hose clamp.

am6xuw0000195

3. Install the hose clamp onto the hose.
4. Verify that the hose clamp does not interfere with any other components.

ampjjw00005653

05-17

Type B

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the air cleaner component. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
4. Remove the aerodynamic under cover NO.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
5. Remove the front splash shield (LH). (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)
6. Remove the front mudguard (LH). (See 09-16-17 FRONT MUDGUARD REMOVAL/INSTALLATION.)
7. Drain the ATF. (See 05-17-14 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
8. Drain the engine coolant. (See 01-12A-4 ENGINE COOLANT REPLACEMENT [LF, L5].)

AUTOMATIC TRANSAXLE [FS5A-EL]

9. Remove in the order indicated in the table.

am3uuw0000262

1	Water hose (connected to the outlet)
2	Water hose (connected to the thermostat)
3	Oil hose (See 05-17-48 Oil Hose Installation Note.)
4	Hose clamp (See 05-17-48 Oil Hose Installation Note.)
5	Fastener
6	Bracket installation bolt

7	Bracket
8	Bracket
9	Air-cooled oil cooler
10	Oil cooler duct
11	Connector bolt
12	Packing
13	Water-cooled oil cooler

10. Install in the reverse order of removal.

11. Add the engine coolant. (See 01-12A-4 ENGINE COOLANT REPLACEMENT [LF, L5].)

AUTOMATIC TRANSAXLE [FS5A-EL]

12. Add the ATF. (See 05-17-14 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
13. Perform the "Mechanical System Test". (See 05-17-3 MECHANICAL SYSTEM TEST [FS5A-EL].)

Oil Hose Installation Note

Note

- If reusing the hose, install the new hose clamp exactly on the mark left by the previous hose clamp. Then apply force to the hose clamp in the direction of the arrow in order to fit the clamp in place.

1. Align the marks, and slide the oil hose onto the oil pipe until it is fully seated as shown.
2. Install the hose clamp.

3. Install the hose clamp onto the hose.
4. Verify that the hose clamp does not interfere with any other components.

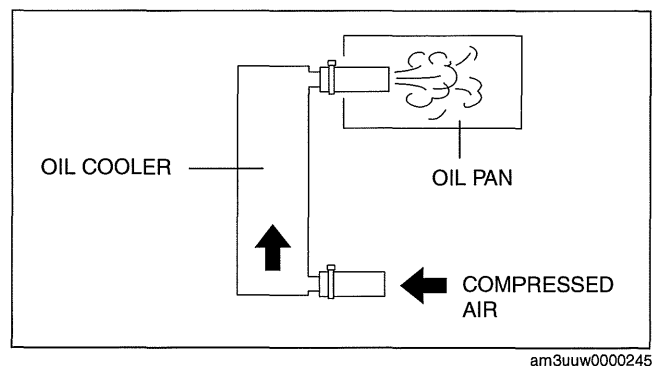

OIL COOLER FLUSHING [FS5A-EL]

id051721294500

Note

- If the automatic transaxle is replaced, flush and inspect the oil cooler.
- When replacing the automatic transaxle, inspect the oil cooler together with flushing it using the following procedures, and with the oil cooler hose removed.

1. Disconnect the oil hose.
2. Set a clean oil pan up to the oil hose inlet.
3. Blow 491—882 kPa {5—9 kgf/cm², 72—127 psi} of compressed air from the oil hose outlet to drain remaining oil.

05-17

AUTOMATIC TRANSAXLE [FS5A-EL]

Type A

am3uuw0000245

Type B

4. Add new ATF from the oil cooler hose outlet and blow 491—882 kPa {5—9 kgf/cm², 72—127 psi} of compressed air to flush. (Repeat 2 or 3 times)
5. Verify that none of the following foreign material is mixed in with the drained ATF:
 - Large metal fragments of ϕ 0.5 mm {0.02 mm} or more that cannot pass through the oil strainer
 - Fibrous clutch facing
6. Repeat the procedures from Step 3 to 4 and flush the inside of the oil cooler.
 - If foreign material such as metal fragments or clutch facing remains even after the oil cooler is flushed repeatedly, replace the oil cooler.

am3uuw0000245

CONTROL VALVE BODY REMOVAL/INSTALLATION [FS5A-EL]

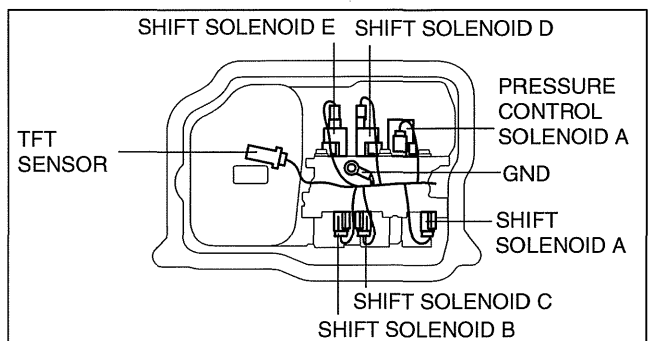

id051721294600

Primary Control Valve Body On-Vehicle Removal

Warning

- A hot transaxle and ATF can cause severe burns. Turn off the engine and wait until they are cool.
- Using compressed air can cause dirt and other particles to fly out, causing injury to the eyes. Wear protective eyeglasses whenever using compressed air.

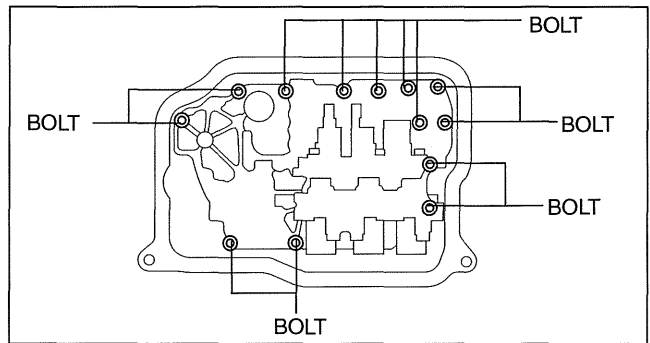

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the aerodynamic under cover NO.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
4. Clean the transaxle exterior throughout with a steam cleaner or cleaning solvents.
5. Drain the ATF. (See 05-17-14 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
6. Remove the oil pan.
7. Remove the oil strainer.
8. Disconnect each solenoid valve connector and GND.

am3uuw0000242

AUTOMATIC TRANSAXLE [FS5A-EL]

9. Remove the bolts as shown, then remove the primary control valve body.

am3uuw0000246

10. Remove the accumulators and accumulator springs.

am6xuw0000195

05-17

Primary Control Valve Body On-Vehicle Installation

Caution

- Be sure to align the parking rod and the manual valve.

am6xuw0000195

AUTOMATIC TRANSAXLE [FS5A-EL]

1. Install the accumulator springs, accumulators and primary control valve body.

Accumulator spring specification

am3uuw0000246

Spring	Outer diameter (mm {in})	Free Length (mm {in})	No. of coils	Wire diameter (mm {in})
Servo apply accumulator large spring	21.0 {0.827}	67.8 {2.669}	10.3	3.5 {0.138}
Servo apply accumulator small spring	13.0 {0.512}	67.8 {2.669}	17.1	2.2 {0.087}
Forward accumulator large spring	21.0 {0.827}	75.0 {2.953}	10.7	2.3 {0.091}
Forward accumulator small spring	15.6 {0.614}	49.0 {1.929}	7.7	2.4 {0.094}

2. Tighten the bolts as shown to install the primary control valve body.

Tightening torque

8—10 N·m {82—101 kgf·cm, 71—88 in·lbf}

Bolt length measured from below the head

Mark	Length measured from below the head
B	40mm {1.575 in}
No mark	70mm {2.756 in}

am3uuw0000246

AUTOMATIC TRANSAXLE [FS5A-EL]

3. Match the harness colors, then connect each solenoid valves connector.

Connector color (harness-side)

Solenoid valve	Connector color
Pressure control solenoid A	Black
Shift solenoid A	White
Shift solenoid B	Blue
Shift solenoid C	Green
Shift solenoid D	White
Shift solenoid E	Black

4. Install the GND.

Tightening torque

8—10 N·m {82—101 kgf·cm, 71—88 in·lbf}

5. Install the TFT sensor to the oil strainer.

6. Install the oil strainer.

7. Apply a light coat of silicon sealant (TB1217E) to the contact surfaces of the oil pan and transaxle case.

Caution

- If any old sealant gets into the transaxle during installation of the oil pan, trouble may occur in the transaxle case and oil pan, and clean with cleaning fluids.

8. Install the oil pan before the applied sealant starts to harden.

Tightening torque

6—8 N·m {62—81 kgf·cm, 54—70 in·lbf}

9. Add ATF. (See 05-17-14 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
10. Install the aerodynamic under cover NO.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
11. Connect the negative battery cable.
12. Install the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
13. Perform the "Mechanical System Test". (See 05-17-3 MECHANICAL SYSTEM TEST [FS5A-EL].)
14. Perform the "Road Test". (See 05-17-7 ROAD TEST [FS5A-EL].)

Secondary Control Valve Body On-Vehicle Removal

Warning

- A hot transaxle and ATF can cause severe burns. Turn off the engine and wait until they are cool.
- Using compressed air can cause dirt and other particles to fly out, causing injury to the eyes. Wear protective eyeglasses whenever using compressed air.

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the battery component (ex: battery, battery tray and PCM component). (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
4. Remove the aerodynamic under cover NO.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
5. Clean the transaxle exterior throughout with a steam cleaner or cleaning solvents.
6. Drain the ATF. (See 05-17-14 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)

05-17

AUTOMATIC TRANSAXLE [FS5A-EL]

7. Disconnect each solenoid valve connector.

am3uuw0000242

8. Remove the bolts and GND as shown, then remove the secondary control valve body.

am3uuw0000242

9. Remove the tubular pin and O-ring.

am3uuw0000243

Secondary Control Valve Body On-Vehicle Installation

1. Install the tubular pin and new O-rings to the transaxle case.
2. Install the secondary control valve body.

am3uuw0000243

AUTOMATIC TRANSAXLE [FS5A-EL]

- Tighten the bolts and GND as shown to install the secondary control valve body.

Tightening torque

8—10 N·m {82—101 kgf·cm, 71—88 in·lbf}

Bolt length measured from below the head

Mark	Length measured from below the head
B	40mm {1.575 in}
C	50mm {1.967 in}

am3uuw0000243

- Connect each solenoid valve connector.

Connector color (harness-side)

Solenoid valve	Connector color
Pressure control solenoid B	White
Shift solenoid F	Black

am3uuw0000243

- Apply a light coat of silicon sealant (TB1217E) to the contact surfaces of the oil cover and transaxle case.
- Install the oil cover.

Tightening torque

8—10 N·m {82—101 kgf·cm, 71—88 in·lbf}

- Add ATF. (See 05-17-14 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
- Install the aerodynamic under cover NO.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
- Install the battery component (ex: battery, battery tray and PCM component). (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
- Connect the negative battery cable.
- Install the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
- Perform the "Mechanical System Test". (See 05-17-3 MECHANICAL SYSTEM TEST [FS5A-EL].)
- Perform the "Road Test". (See 05-17-7 ROAD TEST [FS5A-EL].)

6	Selector cable (selector lever side) (See 05-18-4 Selector cable (selector lever side) installation note.)
7	Selector lever (See 05-18-4 Selector lever installation note.)

Shift panel and indicator panel removal note

1. Remove the shift panel and indicator panel as a single unit.
 - (1) Release the hooks securing the shift panel and console, and then release the hooks securing the shift panel and ashtray panel. (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION.)
 - (2) Lift up the shift panel and indicator panel and disconnect the bulb socket from the indicator panel.

am3uuw0000304

- (3) Remove the shift panel and indicator panel from the selector lever as a single unit.

am3uuw0000305

2. Detach the hooks as shown in the figure and remove the indicator panel from the shift panel.

am3uuw0000305

05-18

AUTOMATIC TRANSAXLE SHIFT MECHANISM

Selector lever installation note

1. Align the locator pin with the hole in the floor as shown in the figure and install the selector lever.

am3uuw0000305

2. Tighten the selector lever installation bolts.

Tightening torque

8—10 N·m {82—101 kgf·cm, 71—88 in·lbf}

am3uuw0000305

Selector cable (selector lever side) installation note

1. Install the selector cable end (selector lever side) as shown in the figure.

am3uuw0000306

2. Install the cable outer end (selector lever side) to the selector cable bracket as shown in the figure.
3. Adjust the selector cable. (See 05-18-10 Selector Cable Adjustment.)

am3uuw0000306

AUTOMATIC TRANSAXLE SHIFT MECHANISM

Indicator panel and shift panel installation note

1. Install the shift panel to the indicator panel.

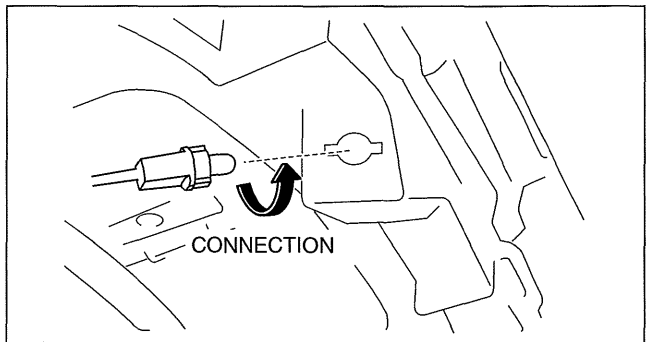

am3uuw0000305

2. Install the shift panel and indicator panel to the selector lever as a single unit.

am3uuw0000305

3. Connect the bulb socket to the indicator panel.
4. Install the shift panel and indicator panel to the console and ashtray panel as a single unit. (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION)

am3uuw0000305

05-18

Selector Cable Removal/Installation

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the battery component (ex: battery, battery tray and PCM component). (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
4. Remove the air cleaner component. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
5. Remove the Aerodynamic under cover NO.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
6. Remove the tunnel member (rear). (See 01-15A-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [LF, L5].)
7. Remove the insulator (front) installation nuts and set the insulator (front) aside. (See 01-15A-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [LF, L5].)
8. Remove the upper panel. (See 09-17-40 UPPER PANEL REMOVAL/INSTALLATION.)
9. Remove the knob. (See 05-18-2 Selector Lever Removal/Installation.)
10. Remove the shift panel and indicator panel as a single unit.
 - (1) Release the hooks securing the shift panel and console, and then release the hooks securing the shift panel and ashtray panel. (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION.)

AUTOMATIC TRANSAXLE SHIFT MECHANISM

- (2) Lift up the shift panel and indicator panel and disconnect the bulb socket from the indicator panel.

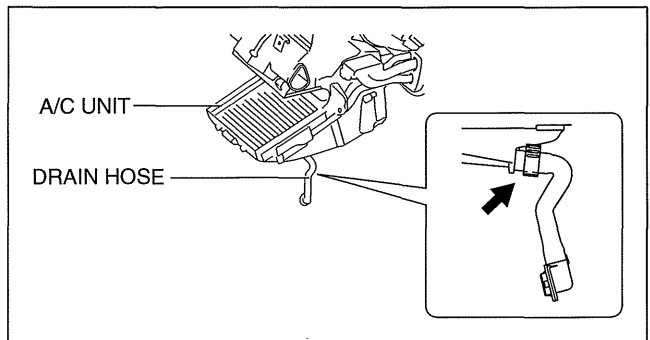

am3uuw0000305

- (3) Remove the shift panel and indicator panel from the selector lever as a single unit.
 11. Remove the console. (See 09-17-45 CONSOLE REMOVAL/INSTALLATION.)

am3uuw0000305

12. Disconnect the drain hose connected to A/C unit. (See 07-11-4 A/C UNIT REMOVAL/INSTALLATION.)
 13. Remove in the order indicated in the table.
 14. Install in reverse of removal.

am3uuw0000438

am3uuw0000519

1	Selector cable end (transaxle side) (See 05-18-7 Selector cable end (transaxle side) removal note.)

AUTOMATIC TRANSAXLE SHIFT MECHANISM

5	Selector cable end (selector lever side)
6	Grommet

7	Selector cable (See 05-18-7 Selector cable installation note.)
---	---

Selector cable end (transaxle side) removal note

1. Remove the clip, and then disconnect the selector cable end from the manual shaft lever.

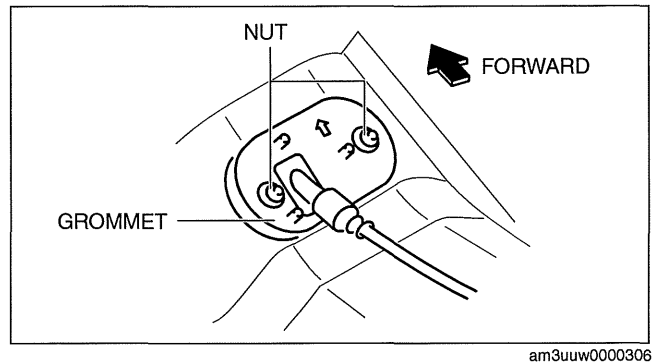

05-18

Selector cable installation note

1. Install the grommet as shown in the figure.

Tightening torque

4.0—9.8 N·m {41—99 kgf·cm, 36—86 in·lbf}

2. Install the selector cable end (selector lever side) as shown in the figure.

3. Install the cable outer end (selector lever side) to the selector cable bracket as shown in the figure.

AUTOMATIC TRANSAXLE SHIFT MECHANISM

4. Install the clip as shown in the figure and tighten the nut.

Tightening torque

19—25 N·m {2.0—2.5 kgf·m, 15—18 ft·lbf}

5. Install the selector cable end (transaxle side) and the cable outer end (transaxle side).

Caution

- When installing selector cable, make sure the boot is not twisted.

- Bending the selector cable in the manner shown in the figure will damage the cable and it may become loose when shifted. When installing the selector cable, hold it straight.

- (1) Install the cable outer end (transaxle side) to the selector cable bracket as shown in the figure.

- (2) Install the clip to the selector cable end (transaxle side) as shown in the figure.

am3uuw0000306

am3uuw0000306

am3uuw0000306

am3uuw0000306

AUTOMATIC TRANSAXLE SHIFT MECHANISM

- (3) Install the selector cable end (transaxle side) to the manual shaft lever as shown in the figure.
6. Verify that the selector cable is securely installed.
7. Adjust the selector cable. (See 05-18-10 Selector Cable Adjustment.)

am3uuw0000306

Bulb Removal/Installation

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the upper panel. (See 09-17-40 UPPER PANEL REMOVAL/INSTALLATION.)
4. Remove the knob. (See 05-18-2 Selector Lever Removal/Installation.)
5. Remove the shift panel and indicator panel as a single unit.
 - (1) Release the hooks securing the shift panel and console, and then release the hooks securing the shift panel and ashtray panel. (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION)
 - (2) Lift up the shift panel and indicator panel and disconnect the bulb socket from the indicator panel.

05-18

am3uuw0000305

- (3) Remove the shift panel and indicator pane from the selector lever as a single unit.

am3uuw0000305

6. Remove the bulb from the bulb socket.
7. Install in the reverse order of removal.

am3uuw0000528

AUTOMATIC TRANSAXLE SHIFT MECHANISM

Selector Cable Adjustment

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the upper panel. (See 09-17-40 UPPER PANEL REMOVAL/INSTALLATION.)
4. Remove the knob. (See 05-18-2 Selector Lever Removal/Installation.)
5. Remove the shift panel and indicator panel as a single unit.
 - (1) Release the hooks securing the shift panel and console, and then release the hooks securing the shift panel and ashtray panel. (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION.)
 - (2) Lift up the shift panel and indicator panel and disconnect the bulb socket from the indicator panel.

am3uuw0000305

- (3) Remove the shift panel and indicator panel from the selector lever as a single unit.
6. Shift the selector lever to the P position.

am3uuw0000305

7. Unlock the lock piece of the selector cable end (selector lever side) in the order as shown in the figure.
8. Verify that the manual shaft is in the P position.

am3uuw0000307

9. Lock the lock piece and safety lock of the selector cable end (selector lever side) in the order as shown in the figure.

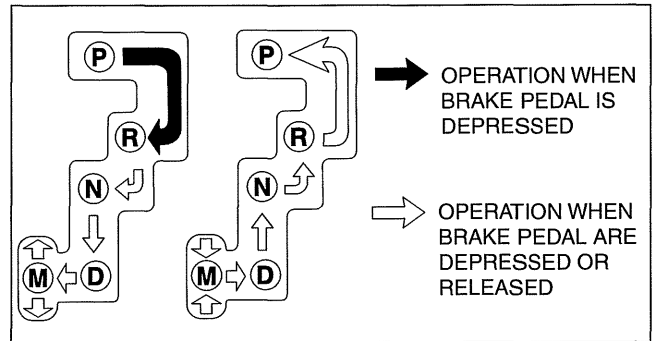

am3uuw0000307

AUTOMATIC TRANSAXLE SHIFT MECHANISM

SELECTOR LEVER INSPECTION

id051800297000

1. Switch the ignition to ON.
2. Perform the following procedures to inspect the selector lever.
 - If there is any malfunction, adjust the selector cable. (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)
- (1) Verify that the selector lever can be operated as shown in the figure.
- (2) Verify that the selector lever can be operated smoothly and moderately.

am3uuw0000230

SHIFT-LOCK SYSTEM INSPECTION

id051800297100

Shift-Lock System Inspection

1. Switch the ignition to ON.
2. Shift the selector lever to the P position.
3. Perform the following procedures to inspect the shift-lock system.
 - If there is any malfunction, inspect the shift-lock solenoid and P position switch. (See 05-18-11 Shift-Lock Solenoid and P Position Switch Inspection.)
- (1) Verify that the selector lever cannot be shifted from P to R position when the brake pedal is released.
- (2) Verify that the selector lever can be shifted from P to R position when the brake pedal is depressed.

Shift-Lock Solenoid and P Position Switch Inspection

1. Perform the following procedures.
 - (1) Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
 - (2) Disconnect the negative battery cable.
 - (3) Remove the console. (See 09-17-45 CONSOLE REMOVAL/INSTALLATION.)
 - (4) Disconnect the selector lever component connector.

am3uuw0000299

2. Measure the voltage between the selector lever component terminals.
 - If there is any malfunction, repair or replace the related wiring harness.
 - If there is no malfunction even though the shift-lock system has any malfunction, replace the selector lever component. (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)

am3uuw0000243

05-18

AUTOMATIC TRANSAXLE SHIFT MECHANISM

Shift-lock solenoid specification

Terminals	Connected to	Test condition	Voltage (V)
E—GND	Brake switch	Brake pedal released	Below 1.0
		Brake pedal depressed	B+
I—GND	Ignition switch	Switch the ignition to off	Below 1.0
		Switch the ignition to ACC or ON	B+
K—GND	GND	Under any condition	Below 1.0

Emergency Override Button Inspection

1. Switch the ignition to off.
2. Verify that the selector lever is in the P position.
3. Without the brake pedal depressed, verify that the selector lever cannot be shifted from the P position.
4. Remove the cover using a tape-wrapped flathead screwdriver.
5. Insert the flathead screwdriver into the emergency override hole and push it down.
6. Verify that the selector lever can be shifted from the P position.
 - If there is any malfunction, replace the selector lever component. (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)

am3uuw0000230

KEY INTERLOCK SYSTEM INSPECTION

id051800297200

Key Interlock System Inspection

1. Switch the ignition to ON.
2. Perform the following procedures to inspect the key interlock system.
 - If there is any malfunction, inspect the key interlock solenoid and NOT P position switch. (See 05-18-12 Key Interlock Solenoid Inspection.)(See 05-18-13 NOT P Position Switch Inspection.)
- (1) Verify that the ignition cannot be switched to off when the selector lever is not in the P position.
- (2) Verify that the ignition can be switched to off when the selector lever is in the P position.

Key Interlock Solenoid Inspection

1. Perform the following procedures.
 - (1) Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
 - (2) Disconnect the negative battery cable.
 - (3) Remove the column cover. (See 09-17-22 COLUMN COVER REMOVAL/INSTALLATION.)
 - (4) Disconnect the key interlock solenoid connector.

am3uuw0000300

AUTOMATIC TRANSAXLE SHIFT MECHANISM

2. Measure the resistance between the key interlock solenoid terminals A and B.
 - If there is any malfunction, replace the steering lock. (See 06-14-8 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION [WITHOUT ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)

Key interlock solenoid specification
Approx.36 ohms

am3uuw0000243

NOT P Position Switch Inspection

1. Perform the following procedures.
 - (1) Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
 - (2) Disconnect the negative battery cable.
 - (3) Remove the console. (See 09-17-45 CONSOLE REMOVAL/INSTALLATION.)
 - (4) Disconnect the selector lever component connector.

am3uuw0000300

05-18

2. Inspect the continuity between the selector lever component terminals G and K.
 - If there is any malfunction, replace the selector lever component. (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)

NOT P position switch specification

Test condition	Continuity
P position	No continuity
Except P position	Continuity

ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) ON-BOARD DIAGNOSIS

id060200814100

On-Board Diagnostic (OBD) Test Description

- The OBD test inspects the integrity and function of the EHPAS and outputs the results when requested by the specific tests.
- On-board diagnostic test also:
 - Provides a quick inspection of the EHPAS usually performed at the start of each diagnostic procedure.
 - Provides verification after repairs to ensure that no other faults occurred during service.
- The OBD test is divided into 2 tests:
 - Read/clear diagnostic results, PID monitor and record.

Read/clear diagnostic results

- This function allows reading or clearing of DTCs in the EHPAS CM memory.

PID/Data monitor and record

- This function allows access of certain data values, input signals, calculated values, and system status information.

ON-BOARD DIAGNOSTIC

Reading DTCs Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Self Test".
 2. Select "Modules".
 3. Select "EPS".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "EPS".
 3. Select "Self Test".
3. Verify the DTC according to the directions on the screen.
 - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
4. After completion of repairs, clear all DTCs stored in the EHPAS. (See 06-02-3 Clearing DTCs Procedures.)

am3zzn0000236

Clearing DTCs Procedures

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Self Test".
 2. Select "Modules".
 3. Select "EPS".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "EPS".
 3. Select "Self Test".
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition to ON and wait for **5 s or more**.
7. Perform DTC inspection. (See 06-02-3 Reading DTCs Procedure.)
8. Verify that no DTCs are displayed.

am3zzn0000236

06-02

PID/Data Monitor and Record Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "DataLogger".
 2. Select "Modules".
 3. Select "EPS".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "EPS".
 3. Select "DataLogger".
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the directions on the screen.

am3zzn0000236

Note

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.

ON-BOARD DIAGNOSTIC

DTC Table

DTC	Diagnosis system component	Page
B1238	EHPAS CM	(See 06-02-5 DTC B1238.)
B1317	Battery power supply	(See 06-02-5 DTC B1317/B1318.)
B1318	Battery power supply	
B1342	EHPAS CM	(See 06-02-7 DTC B1342.)
B1352	Ignition power supply	(See 06-02-7 DTC B1352.)
B2477	EHPAS CM configuration	(See 06-02-9 DTC B2477.)
C1099	Electric power steering oil pump (motor)	(See 06-02-9 DTC C1099.)
U0073	CAN system communication error	(See 06-02-9 DTC U0073.)
U0100	Communication error to PCM	(See 06-02-10 DTC U0100/U0140/U0155.)
U0140	Communication error to BCM	
U0155	Communication error to instrument cluster	
U1938	Signal error from BCM	(See 06-02-10 DTC U1938.)
U2023	Signal error from PCM	(See 06-02-11 DTC U2023.)

PID/DATA Monitor Table

PID Name (Definition)	Unit/ Condition	Condition/Specification	Action	EHPAS CM terminal
DTC_CNT (Number of continuous codes)	—	<ul style="list-style-type: none"> • DTCs are detected: 1—255 • No DTCs are detected: 0 	Perform inspection using appropriate DTC.	—
ENGRPM (Engine speed signal)	RPM	<ul style="list-style-type: none"> • Engine speed 1,000 rpm: 1000 RPM 	Inspect the PCM. (See 01-40A-8 PCM INSPECTION [LF, L5].) (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	—
MTR_AMP (Pump Motor Operation Current)	A	<ul style="list-style-type: none"> • Indicates pump motor operation current. 	Replace the EHPAS CM. (See 06-14-31 ELECTRIC POWER STEERING OIL PUMP REMOVAL/ INSTALLATION.)	—
RPM_ACT (Actual pump motor revolution per minutes)	RPM	<ul style="list-style-type: none"> • Indicates pump motor revolution per minutes. 	Replace the EHPAS CM. (See 06-14-31 ELECTRIC POWER STEERING OIL PUMP REMOVAL/ INSTALLATION.)	—
RPM_TGT (Target pump motor revolution per minutes)	RPM	<ul style="list-style-type: none"> • Indicates pump motor target revolution per minutes. 	Replace the EHPAS CM. (See 06-14-31 ELECTRIC POWER STEERING OIL PUMP REMOVAL/ INSTALLATION.)	—
STEER_RATE (Steering wheel rotation rate)	°/s	<ul style="list-style-type: none"> • Indicates steering wheel rotation rate. 	Inspect steering angle sensor. (See 09-18-19 STEERING ANGLE SENSOR INSPECTION.)	—
BOARD_T (Printed circuit board temperature)	°F, °C	<ul style="list-style-type: none"> • Indicates circuit temperature. 	Replace the EHPAS CM. (See 06-14-31 ELECTRIC POWER STEERING OIL PUMP REMOVAL/ INSTALLATION.)	—
VPWR (Module supply voltage)	V	<ul style="list-style-type: none"> • Switch the ignition to ON: B+ 	Inspect the battery. (See 01-17A-4 BATTERY INSPECTION [LF, L5].) (See 01-17B-4 BATTERY INSPECTION [L3 WITH TC].)	1B, 2F

ON-BOARD DIAGNOSTIC

PID Name (Definition)	Unit/ Condition	Condition/Specification	Action	EHPAS CM terminal
VSS (Vehicle speed)	KPH, MPH	<ul style="list-style-type: none"> Vehicle is stopped: 0 KPH/0 MPH Vehicle speed 20 km/h {12 mph}: 20 KPH/12 MPH 	Inspect the PCM. (See 01-40A-8 PCM INSPECTION [LF, L5].) (See 01-40B-8 PCM INSPECTION [L3 WITH TC].) Inspect the instrument cluster. (See 09-22-8 INSTRUMENT CLUSTER INSPECTION.)	—

DTC B1238

id060200808000

DTC B1238		EHPAS CM
DETECTION CONDITION	<ul style="list-style-type: none"> Excessive load to electric power steering oil pump 	
POSSIBLE CAUSE	<ul style="list-style-type: none"> Due to the continuously static steering, being turned to the lock end, or other causes, the internal temperature of the electric power steering oil pump is more than the specified value. 	

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	SWITCH IGNITION TO OFF AND ALLOW ELECTRIC POWER STEERING OIL PUMP TO COOL DOWN.		
2	VERIFY THAT THE SAME DTC IS NOT PRESENT <ul style="list-style-type: none"> Switch the ignition to ON. Clear the DTC from the memory. (See 06-02-2 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) ON-BOARD DIAGNOSIS.) Is the same DTC present? 	Yes	Replace the electric power steering oil pump, then go to the next step. (See 06-14-31 ELECTRIC POWER STEERING OIL PUMP REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	VERIFY THAT NO OTHER DTCS ARE PRESENT <ul style="list-style-type: none"> Are any other DTCs output? 	Yes	Go to the applicable DTC inspection. (See 06-02-2 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) ON-BOARD DIAGNOSIS.)
		No	DTC troubleshooting completed.

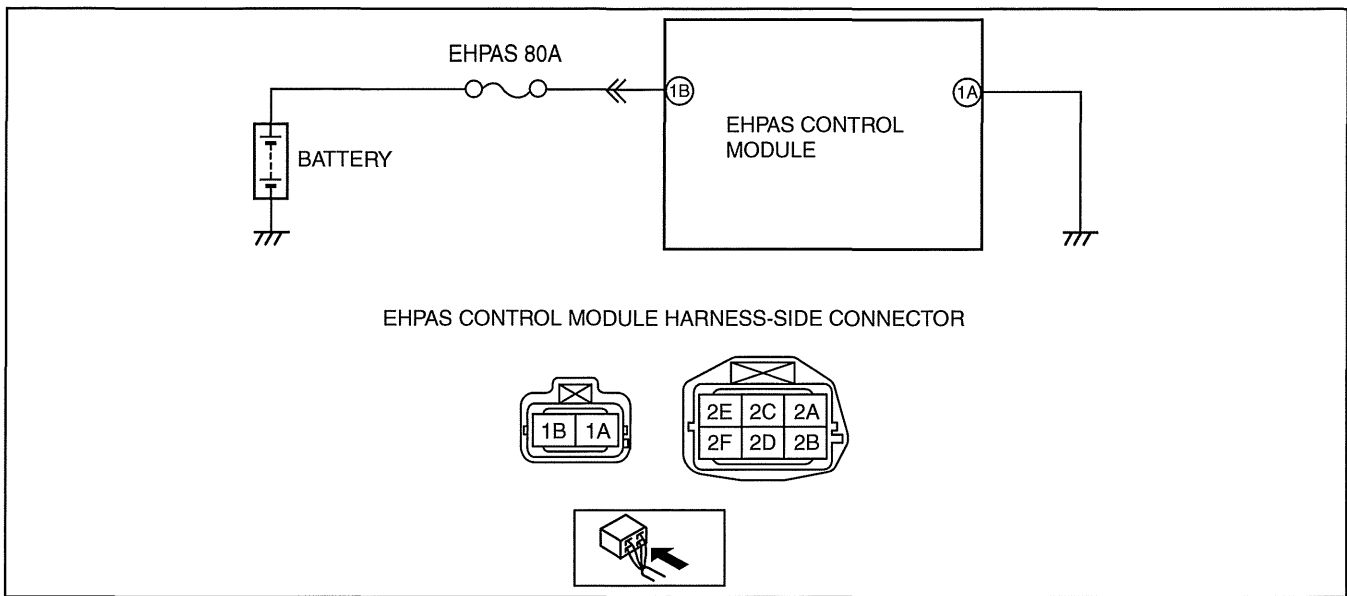

06-02

DTC B1317/B1318

id060200808100

DTC B1317, B1318		Battery power supply
DETECTION CONDITION	<ul style="list-style-type: none"> Low voltage or high voltage are detected at the voltage monitor. 	
POSSIBLE CAUSE	<ul style="list-style-type: none"> Battery and/or generator malfunction Open or short circuit in wiring harness between EHPAS CM terminal 1B and battery positive terminal 	

ON-BOARD DIAGNOSTIC

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	INSPECT BATTERY VOLTAGE • Is the battery terminal voltage normal?	Yes	Make sure that battery terminal connection is okay. Go to the next step.
		No	Charge or replace the battery, then go to Step 6.
2	INSPECT BATTERY GRAVITY • Is the battery specific gravity as specified?	Yes	Go to the next step.
		No	Replace the battery, then go to Step 6.
3	INSPECT CHARGING SYSTEM • Are the generator and drive belt tension normal?	Yes	Go to the next step.
		No	Replace the generator and/or drive belt if necessary. Go to step 6.
4	INSPECT EHPAS CM POWER SUPPLY CIRCUIT FOR OPEN OR SHORT CIRCUIT • Start the engine. • Measure the voltage between following EHPAS CM terminal (wiring harness-side) and ground. — EHPAS CM: 1B—ground • Is the voltage 9 V or more ?	Yes	Go to the next Step.
		No	Repair or replace the wiring harness for open circuit between the EHPAS CM and ground, then go to Step 6.
5	INSPECT EHPAS CM GROUND CIRCUIT FOR POOR GROUND OR OPEN CIRCUIT • Switch the ignition to off. • Measure the resistance between the following EHPAS CM terminal (wiring harness-side) and ground. — EHPAS CM: 1A—ground • Is the resistance within 0—1 ohm ?	Yes	Go to the next step.
		No	If there is no continuity: • Repair or replace the wiring harness for open circuit between the EHPAS CM and ground, then go to the next step. If the resistance is not within 0—1 ohm : • Repair or replace the wiring harness for poor ground, then go to the next step.
6	VERIFY THAT THE SAME DTC IS NOT PRESENT • Make sure to reconnect all disconnected connectors. • Clear the DTC from the memory. (See 06-02-2 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) ON-BOARD DIAGNOSIS.) • Is the same DTC present?	Yes	Replace the electric power steering oil pump, then go to the next step. (See 06-14-31 ELECTRIC POWER STEERING OIL PUMP REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	VERIFY THAT NO OTHER DTCS ARE PRESENT • Are any other DTCS output?	Yes	Go to the applicable DTC inspection. (See 06-02-2 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) ON-BOARD DIAGNOSIS.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC B1342

id060200808200

DTC B1342	EHPAS CM
DETECTION CONDITION	<ul style="list-style-type: none"> EHPAS CM on-board diagnostic function detects system malfunction.
POSSIBLE CAUSE	<ul style="list-style-type: none"> EHPAS CM internal malfunction Poor connection at connectors

Diagnostic procedure

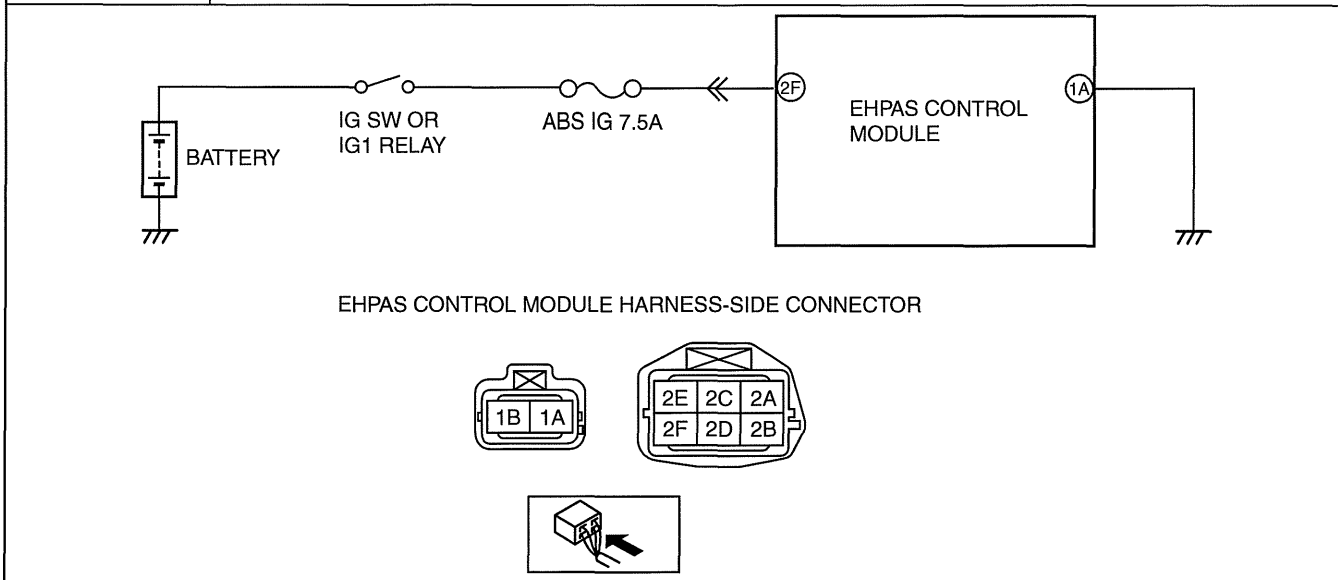

STEP	INSPECTION		ACTION
1	VERIFY THAT THE SAME DTC IS NOT PRESENT <ul style="list-style-type: none"> Clear the DTC from the memory. (See 06-02-2 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) ON-BOARD DIAGNOSIS.) Is the same DTC present? 	Yes	Replace the electric power steering oil pump, then go to the next step. (See 06-14-31 ELECTRIC POWER STEERING OIL PUMP REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> Are any other DTCs output? 	Yes	Go to the applicable DTC inspection. (See 06-02-2 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) ON-BOARD DIAGNOSIS.)
		No	DTC troubleshooting completed.

06-02

DTC B1352

id060200808300

DTC B1352	Ignition power supply
DETECTION CONDITION	<ul style="list-style-type: none"> Less than 2.5 V detected at the voltage monitor of the EHPAS CM
POSSIBLE CAUSE	<ul style="list-style-type: none"> Short to ground in wiring harness between EHPAS CM terminal 2F and ignition switch or ignition relay Open circuit in wiring harness between EHPAS CM terminal 2F and ignition switch or ignition relay Poor connection at connectors

ON-BOARD DIAGNOSTIC

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	INSPECT FUSES <ul style="list-style-type: none"> • Are the fuses normal? 	Yes	Go to the next step.
		No	Replace the fuses, then go to the step 3.
2	INSPECT EHPAS CM POWER SUPPLY CIRCUIT FOR OPEN OR SHORT CIRCUIT <ul style="list-style-type: none"> • Start the engine. • Measure the voltage between following EHPAS CM terminal (wiring harness-side) and ground. <ul style="list-style-type: none"> — EHPAS CM: 2F—ground • Is voltage 10 V or more? 	Yes	Go to the next step.
		No	Repair or replace the harness for open circuit between EHPAS CM and ground, then go to next step.
3	VERIFY THAT THE SAME DTC IS NOT PRESENT <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the memory. (See 06-02-2 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) ON-BOARD DIAGNOSIS.) • Is same DTC present? 	Yes	Replace the electric power steering oil pump, then go to the next step. (See 06-14-31 ELECTRIC POWER STEERING OIL PUMP REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> • Are any other DTCs output? 	Yes	Go to the applicable DTC inspection. (See 06-02-2 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) ON-BOARD DIAGNOSIS.)
		No	Troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC B2477

id060200808400

DTC B2477	EHPAS CM configuration
DETECTION CONDITION	<ul style="list-style-type: none"> Configuration setting failure is detected.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Module configuration procedure was not completed properly.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY CONFIGURATION <ul style="list-style-type: none"> Has the EHPAS CM configuration been performed? 	Yes	Go to the next step.
		No	Perform configuration using the M-MDS. (See 06-14-32 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) CONTROL MODULE CONFIGURATION.)
2	VERIFY THAT THE SAME DTC IS NOT PRESENT <ul style="list-style-type: none"> Clear the DTC from the memory. (See 06-02-2 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) ON-BOARD DIAGNOSIS.) Is the same DTC present? 	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the EHPAS CM. (See 06-14-31 ELECTRIC POWER STEERING OIL PUMP REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> Are any other DTCs output? 	Yes	Go to the applicable DTC inspection. (See 06-02-2 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) ON-BOARD DIAGNOSIS.)
		No	DTC troubleshooting completed.

06-02

DTC C1099

id060200808500

DTC C1099	Electric power steering oil pump (motor)
DETECTION CONDITION	<ul style="list-style-type: none"> The EHPAS CM detects that the motor speed is less than the specified value.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Motor internal malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	REPLACE ELECTRIC POWER STEERING OIL PUMP <ul style="list-style-type: none"> Replace the electric power steering oil pump, then go to the next step. (See 06-14-31 ELECTRIC POWER STEERING OIL PUMP REMOVAL/INSTALLATION.) 		
2	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> Are any other DTCs output? 	Yes	Go to the applicable DTC inspection. (See 06-02-2 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) ON-BOARD DIAGNOSIS.)
		No	DTC troubleshooting completed.

DTC U0073

id060200808600

DTC U0073	CAN system communication error
DETECTION CONDITION	<ul style="list-style-type: none"> Error detected in line between CAN connection module and CAN bus communication line
POSSIBLE CAUSE	<ul style="list-style-type: none"> Malfunction in CAN communication line Malfunction in each control module connecting to CAN communication line EHPAS CM malfunction. Poor connection at connectors

Diagnostic procedure

- Perform inspection according to the diagnostic procedure in BODY & ACCESSORIES. (See 09-02D-1 FOREWORD [MULTIPLEX COMMUNICATION SYSTEM].)

ON-BOARD DIAGNOSTIC

DTC U0100/U0140/U0155

id060200808700

DTC	U0100	Communication error to PCM
	U0140	Communication error to BCM
	U0155	Communication error to instrument cluster
DETECTION CONDITION	<ul style="list-style-type: none"> • U0100 — Communication error to PCM is detected in CAN communication • U0140 — Communication error to BCM is detected in CAN communication • U0155 — Communication error to instrument cluster is detected in CAN communication 	
POSSIBLE CAUSE	<ul style="list-style-type: none"> • CAN system wiring harness open or short circuit with PCM • CAN system wiring harness open or short circuit with BCM • CAN system wiring harness open or short circuit with instrument cluster • Poor connection at connectors 	

Diagnostic procedure

- Perform inspection according to the diagnostic procedure in BODY & ACCESSORIES. (See 09-02D-1 FOREWORD [MULTIPLEX COMMUNICATION SYSTEM].)

DTC U1938

id060200808900

DTC	U1938	Signal error from BCM
DETECTION CONDITION	<ul style="list-style-type: none"> • Error detected in signal from BCM via CAN communication 	
POSSIBLE CAUSE	<ul style="list-style-type: none"> • BCM malfunction • EHPAS CM malfunction 	

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	INSPECT FOR BCM MALFUNCTION <ul style="list-style-type: none"> • Using the M-MDS, perform the DTC inspection for the BCM. (See 09-02F-7 DTC INSPECTION [BCM].) • Are any DTCs detected? 	Yes	Go to applicable DTC inspection. (See 09-02F-8 DTC TABLE [BCM].) DTC troubleshooting completed, then go to the next step.
		No	Go to the next step.
2	VERIFY THAT SAME DTC IS NOT PRESENT <ul style="list-style-type: none"> • Clear the DTC from the memory. (See 06-02-2 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) ON-BOARD DIAGNOSIS.) • Is the same DTC present? 	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the EHPAS CM. (See 06-14-31 ELECTRIC POWER STEERING OIL PUMP REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> • Are any other DTCs output? (See 06-02-2 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) ON-BOARD DIAGNOSIS.) 	Yes	Go to the applicable DTC inspection. (See 06-02-2 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) ON-BOARD DIAGNOSIS.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

am3uuw0000455

FOREWORD

id060300800100

- Before performing the steps in Symptom Troubleshooting, perform the On-board Diagnostic Inspection. To inspect the DTC, follow the DTC Inspection steps. (See 06-02-2 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) ON-BOARD DIAGNOSIS.)

SYMPTOM TROUBLESHOOTING

PRECAUTION

id060300800300

Intermittent Concern Troubleshooting

Vibration method

- If a malfunction occurs or becomes worse while driving on a rough road or when the engine is vibrating, perform the following steps.

Note

- There are several reasons why vehicle or engine vibration could cause an electrical malfunction. Inspect the following:
 - Connectors not fully seated.
 - Wiring harnesses not having full play.
 - Wires laying across brackets or moving parts.
 - Wires routed too close to hot parts.
- An improperly routed, improperly clamped, or loose wiring harness can cause wiring to become pinched between parts.
- The connector joints, points of vibration, and places where wiring harness pass through the firewall, body panels and other panels are the major areas to be inspected.

Inspection method for switch and/or sensor connectors or wires

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition to ON (engine off).

Note

- If the engine starts and runs, perform the following steps at idle.

3. Access PIDs for the switch you are inspecting.
4. Turn the switch on manually.
5. Slightly shake each connector or wiring harness vertically and horizontally while monitoring the PID.
 - If the PID value is unstable, inspect for poor connection.

am3uuw0000268

Inspection method for sensors

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition to ON (engine off).

Note

- If the engine starts and runs, perform the following steps at idle.

3. Access PIDs for the switch you are inspecting.
4. Vibrate the sensor slightly with your finger.
 - If the PID value is unstable or a malfunction occurs, inspect for poor connection and/or poorly mounted sensor.

Connector terminal inspection method

1. Inspect the connection of each female terminal.
2. Insert the male terminal to the female terminal and inspect the female terminal for looseness.

am3uuw0000269

SYMPTOM TROUBLESHOOTING

SYMPTOM TROUBLESHOOTING

id060300800400

- Verify the symptom, and perform troubleshooting according to the appropriate number.

No.	Symptom
1	Poor power steering assist
2	Excessive noise from electric power steering oil pump

NO.1 POOR POWER STEERING ASSIST

id060300800200

1	Poor power steering assist
TROUBLESHOOTING HINTS	
<ul style="list-style-type: none"> • EHPAS DTC is stored • Steering gear and linkage malfunction • Power steering fluid leakage from electro hydraulic power assist steering (EHPAS) fluid line • EHPAS control module malfunction 	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	CONFIRM EHPAS DTC <ul style="list-style-type: none"> • Retrieve the EHPAS DTC using the M-MDS. (See 06-02-2 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) ON-BOARD DIAGNOSIS.) • Are any DTCs present? 	Yes	Record all DTC and go to the applicable DTC inspection. (See 06-02-2 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) ON-BOARD DIAGNOSIS.)
		No	Go to the next step.
2	INSPECT STEERING WHEEL ASSIST FUNCTION <ul style="list-style-type: none"> • Disconnect the EHPAS control module connector (2-pin). • Is the power steering assist function changed? 	Yes	Go to the next step.
		No	Visually inspect the steering gear and linkage. Replace the steering gear and linkage if the malfunction is found. (See 06-14-16 STEERING GEAR AND LINKAGE REMOVAL/INSTALLATION.)
3	INSPECT IF THERE IS ANY FLUID LEAK FROM THE EHPAS FLUID LINE <ul style="list-style-type: none"> • Visually inspect the EHPAS fluid line. • Is there any fluid leakage? 	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Replace the EHPAS control module. (See 06-14-31 ELECTRIC POWER STEERING OIL PUMP REMOVAL/INSTALLATION.)

06-03

NO.2 EXCESSIVE NOISE FROM ELECTRIC POWER STEERING OIL PUMP

id060300800600

2	Excessive noise from electric power steering oil pump
TROUBLESHOOTING HINTS	
<ul style="list-style-type: none"> • Power steering fluid level is low • Air in EHPAS fluid line • Electric power steering oil pump is poor installation • Mount rubber (on bracket) is deterioration 	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	INSPECT POWER STEERING FLUID LEVEL <ul style="list-style-type: none"> • Inspect the power steering fluid level when engine is cold. • Is the power steering fluid level between MAX and MIN of the reserve tank? 	Yes	Go to the next step.
		No	Perform the Fluid Leakage Inspection and add the fluid. (See 06-14-6 POWER STEERING FLUID INSPECTION.)
2	INSPECT AIR IN EHPAS FLUID LINE <ul style="list-style-type: none"> • Perform the air bleed. (See 06-14-3 AIR BLEEDING.) • Is the symptom solved? 	Yes	Symptom troubleshooting completed.
		No	Go to the next step.
3	INSPECT ELECTRIC POWER STEERING OIL PUMP INSTALLATION <ul style="list-style-type: none"> • Inspect the electric power steering oil pump installation condition. • Is the electric power steering oil pump installed properly? 	Yes	Inspect the mount rubber condition. If the mount rubber is deterioration, replace the bracket.
		No	Install the electric power steering oil pump properly. (See 06-14-31 ELECTRIC POWER STEERING OIL PUMP REMOVAL/INSTALLATION.)

06-10 GENERAL PROCEDURES

GENERAL PROCEDURES

(STEERING) 06-10-1
 Wheel and Tire Installation 06-10-1
 Connector Disconnection..... 06-10-1
 Suspension Links
 Removal/Installation..... 06-10-1

Power Steering Related Parts
 Installation.....06-10-1
 Electro Hydraulic Power Assist Steering
 (EHPAS) Related Parts.....06-10-1

GENERAL PROCEDURES (STEERING)

id061000800100

Wheel and Tire Installation

1. When installing the wheels and tires, tighten the wheel nuts in a criss-cross pattern to the following tightening torque.

Tightening torque

88—118 N·m {9.0—12 kgf·m, 65—87 ft·lbf}

am3uuw0000199

06-10

Connector Disconnection

1. Disconnect the negative battery cable before performing any work that requires handling of connectors. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].) (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)

Suspension Links Removal/Installation

1. For the joint sections with rubber bushings, raise the vehicle using a lift, and then temporarily tighten the installation bolts and nuts. Lower the vehicle to the ground and tighten them completely with the specified torque.

Power Steering Related Parts Installation

1. If any power steering fluid line has been disconnected, perform the following after installation of the power steering components. (See 04-11-3 AIR BLEEDING.) (See 06-14-6 POWER STEERING FLUID INSPECTION.)
 - Power steering fluid amount inspection
 - Power steering fluid leakage inspection
 - Air bleeding

Electro Hydraulic Power Assist Steering (EHPAS) Related Parts

Caution

- If the configuration procedure is not completed, the EHPAS will not operate properly and it might cause an unexpected accident. Therefore, when replacing or removing the electric power steering oil pump, make sure to perform the configuration procedure to ensure the proper EHPAS operation.

1. Make sure that there are no DTCs in the EHPAS memory after working on EHPAS related parts. If there are any codes in the memory, clear them.
2. When replacing or removing the electric power steering oil pump, perform the configuration procedures. (See 06-14-32 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) CONTROL MODULE CONFIGURATION.)

ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) SYSTEM WIRING DIAGRAM

id061400803100

am3uuw0000455

06-14

AIR BLEEDING

id061400800200

Note

- Verify that the strainer is installed to the sub tank of the vehicle being serviced because the air bleeding procedure differs depending on whether it has a strainer or not.

am3uuw0000611

POWER STEERING

Air bleeding (vehicles without strainer)

Caution

- **Do not maintain the steering wheel fully turned for 5 s or more. The oil temperature could rise and negatively affect the oil pump.**

1. Inspect the fluid level. (See 06-14-6 POWER STEERING FLUID INSPECTION.)
2. Turn the steering wheel fully to the left and right several times.
3. Reinspect the fluid level.
 - If the fluid level has dropped, add fluid.
4. Repeat Steps 2—3 until the fluid level stabilizes.
5. Start the engine and idle it.
6. Turn the steering wheel fully to the left and right several times.
7. Repeat Step 6 until the fluid is no longer foamy and the fluid level has not dropped.
8. Inspect the fluid level and, if the fluid level has dropped, add fluid to a level between MAX and MIN on the sub tank.

Air bleeding (vehicles with strainer)

Caution

- **If the strainer is removed, impurities may penetrate the power steering system and damage it. To prevent this, always bleed air with the strainer installed.**
- **Do not maintain the steering wheel fully turned for 5 s or more. The oil temperature could rise and damage the oil pump.**

Note

- Add fluid and bleed air using the following procedure. Otherwise, additional time will be required to add fluid because of mesh resistance.

Fluid level adjustment

Note

- The following procedure is for adding (adjusting) fluid if the lack of fluid level has dropped as a result of fluid leakage.

1. Working with two people, one person protects the area around the sub tank using a cloth and adds fluid to the sub tank.

Caution

- **Do not spread a cloth near the drive belt, otherwise the cloth could get caught in the drive belt when starting the engine causing damage to parts in the engine compartment.**

2. The other person starts the engine and idles it.
3. Turn the steering wheel fully to the left and right slowly several times.
 - If the steering wheel operation speed is too fast, the fluid may spatter from the filler port. Do not exceed the steering wheel operation speed reference value.

Steering wheel operation speed (reference value)

90 °/s

4. Inspect the fluid level and, if the fluid level has dropped, repeat Step 1—3 until the level is between MAX and MIN on the sub tank while idling the engine.

POWER STEERING

Power steering component parts replacement

Note

- The following procedure is for adding fluid to the tank (full amount) after replacing the electric power steering oil pump component or steering gear and linkage.

- Remove the aerodynamic undercover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
- Disconnect the return hose from the power steering pipe component.

am3uuw0000613

- Add fluid until fluid escapes from the return hose.
- Assemble the return hose to the power steering pipe component.
- Working with two people, one person protects the area around the sub tank using a cloth and adds fluid to the sub tank.

Caution

- Do not spread a cloth near the drive belt, otherwise the cloth could get caught in the drive belt when starting the engine causing damage to parts in the engine compartment.

aaxjiw00006037

- The other person starts the engine and idles it.
- Turn the steering wheel fully to the left and right slowly several times.
 - If the steering wheel operation speed is too fast, the fluid may spatter from the filler port. Do not exceed the steering wheel operation speed reference value.

Steering wheel operation speed (reference value)

90 °/s

- Inspect the fluid level and, if the fluid level has dropped, repeat Step 5—7 until the level is between MAX and MIN on the sub tank while idling the engine.

06-14

POWER STEERING

POWER STEERING FLUID INSPECTION

id061400800500

Fluid Level Inspection

1. Verify that the fluid level is between MAX and MIN of the sub tank when the engine is cold.
 - If the fluid is not at the specified level, adjust the fluid level (MIN-MAX on sub tank) by adding/draining the fluid.

Power steering fluid type

ATF M-III, M-V or equivalent (e.g. Dexron ® II)

Power steering fluid capacity (approx. quantity)

1.0 L {1.1 US qt, 0.88 Imp qt}

Fluid Leakage Inspection

1. Start the engine and idle it.
2. Turn the steering wheel fully to left or right, to generate the fluid pressure.

Caution

- Do not maintain the steering wheel fully turned for 5 s or more. It is possible that oil temperature can rise and this will negatively affect the oil pump.

3. Inspect for the fluid leakage at the points indicated in the figure.

am3uuw0000452

- If fluid leakage is found, repair or replace the related parts. (See 06-14-29 POWER STEERING FLUID LINE COMPONENT REMOVAL/INSTALLATION.)

POWER STEERING

STEERING WHEEL AND COLUMN INSPECTION

id061400800300

Play Inspection

1. With the wheels in the straight-ahead position, start the engine.
2. Turn the steering wheel to the left and right gently, then verify that the steering wheel play is within the specification.

Steering wheel play

0—30 mm {0—1.18 in} (When hydraulic operating)

Looseness, Excessive Play Inspection

1. Inspect the steering wheel for looseness or excessive play in the axial direction of the shaft and four locations around the steering wheel.
 - If there is any malfunction, inspect the following, and repair or replace the applicable part.
 - Column bearing wear
 - Looseness of the steering wheel installation part
 - Looseness of the column installation area
 - Excessive play of the steering shaft joint
 - Excessive play of the steering gear

adejjw00000816

06-14

Steering Force Inspection

1. Verify that the equipped tire size and tire air pressure is as specified.
2. With the vehicle on a hard, level surface, put the wheels in the straight-ahead position.

Warning

- **Handling the air bag module improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings before handling the air bag module. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**

3. Remove the air bag module. (See 08-10-7 DRIVER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
4. Start the engine and idle it.
5. Verify that the EHPAS warning light does not illuminate.
6. Inspect the steering force using a torque wrench.
 - If not within the specification, verify the following:
 - No air in steering system
 - No fluid leakage at hose or connectors
 - Function of oil pump and steering gear

am3uuw0000214

Steering wheel force (reference value)

7.8 N·m {80 kgf·cm, 69 in·lbf} or less

Note

- Comparing another vehicle of the same model under the same conditions is an acceptable inspection method.
- The steering force varies with conditions indicated below.
 - Road conditions: Such as dry, wet, asphalt, or concrete
 - Tire condition: such as brand, wear, and tire pressure

POWER STEERING

STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION [WITHOUT ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

id0614008004h1

Warning

- **Handling the air bag module improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings before handling the air bag module. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**

1. Remove the driver-side front scuff plate. (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
2. Remove the driver-side front side trim. (See 09-17-53 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
3. Remove the hood release lever. (See 09-14-15 HOOD LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
4. Remove the upper panel. (See 09-17-40 UPPER PANEL REMOVAL/INSTALLATION.)
5. Remove the shift knob (MTX). (See 05-16-2 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)
6. Remove the selector lever knob (ATX). (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)
7. Remove the shift panel. (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION.)
8. Remove the side wall. (See 09-17-37 SIDE WALL REMOVAL/INSTALLATION.)
9. Remove the console. (See 09-17-45 CONSOLE REMOVAL/INSTALLATION.)
10. Remove the lower panel. (See 09-17-27 LOWER PANEL REMOVAL/INSTALLATION.)
11. Remove in the order indicated in the table.
12. Install in the reverse order of removal.

POWER STEERING

Steering Wheel Removal Note

Caution

- Do not try to remove the steering wheel by hitting the shaft with a hammer. The column will be damaged.

1. Set the wheels in the straight-ahead position.
2. Remove the steering wheel using any commercially available puller.

Key Cylinder Removal Note

1. Insert the key into the key cylinder and turn it to the ACC position.
2. Insert a pin from the position indicated by the arrow in the figure, and while pressing the lock bar with the pin, remove the key cylinder from the steering lock component.

am3uuw0000463

Steering Lock Mounting Bolt, Steering Lock Removal Note

1. Make a groove in the heads of the steering lock mounting bolts using a chisel and hammer.
2. Remove the steering lock.

am3uuw0000463

Steering Lock, Steering Lock Mounting Bolt Installation Note

1. Assemble section A of the steering lock to the section B of the steering shaft.
2. Temporarily install the steering lock to the steering shaft using a new steering lock mounting bolt.

am3uuw0000464

POWER STEERING

3. Tighten the steering lock mounting bolt until the head breaks off.

am3uuw0000464

Steering Shaft Component Installation Note

1. Verify that the adjusting lever is in the LOCK position.
2. Tighten the bolts in alphabetical order.

am3uuw0000236

06-14

Joint Bolt Installation Note

1. Install the steering shaft component to the steering gear.
2. After temporarily install the joint bolt to the intermediate shaft joint, verify that the joint bolt is installed to the groove of the steering gear.
3. Tighten the joint bolt to the specified torque.

am3uuw0000215

Key Cylinder Installation Note

1. Insert the key into the key cylinder and turn it to the ACC position.
2. Install the key cylinder to the steering lock.

Steering Wheel Installation Note

1. Set the wheels in the straight-ahead position and install the steering wheel.

STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

id0614008004h2

Warning

- Handling the air bag module improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings before handling the air bag module. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)

1. Remove the driver-side front scuff plate. (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
2. Remove the driver-side front side trim. (See 09-17-53 FRONT SIDE TRIM REMOVAL/INSTALLATION.)

POWER STEERING

3. Remove the hood release lever. (See 09-14-15 HOOD LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
4. Remove the upper panel. (See 09-17-40 UPPER PANEL REMOVAL/INSTALLATION.)
5. Remove the shift knob (MTX). (See 05-16-2 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)
6. Remove the selector lever knob (ATX). (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)
7. Remove the shift panel. (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION.)
8. Remove the side wall. (See 09-17-37 SIDE WALL REMOVAL/INSTALLATION.)
9. Remove the console. (See 09-17-45 CONSOLE REMOVAL/INSTALLATION.)
10. Remove the lower panel. (See 09-17-27 LOWER PANEL REMOVAL/INSTALLATION.)
11. Remove in the order indicated in the table.
12. Install in the reverse order of removal.
13. If the steering lock component is replaced, perform programming for the immobilizer system related parts. (See 09-14-97 IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)

am3uuw0000464

17	Steering shaft

06-14

Steering Wheel Removal Note

Caution

- Do not try to remove the steering wheel by hitting the shaft with a hammer. The column will be damaged.

1. Set the wheels in the straight-ahead position.
2. Remove the steering wheel using any commercially available puller.

Key Slot Removal Note

1. Insert the key into the key slot.
2. Insert a pin from the position indicated by the arrow in the figure, and while pressing the lock lever with the pin, remove the key slot from the steering lock component.

am3uuw0000464

POWER STEERING

Coil Attachment Mounting Bolt, Coil Attachment Removal Note

1. Make a groove in the heads of the coil attachment mounting bolts using a chisel and hammer.
2. Remove the coil attachment.

am3uuw0000464

Steering Lock Mounting Bolt, Steering Lock Removal Note

1. Make a groove in the heads of the steering lock mounting bolts using a chisel and hammer.
2. Remove the steering lock.

am3uuw0000215

Steering Lock, Steering Lock Mounting Bolt Installation Note

1. Temporarily install the steering lock to the steering shaft using a new steering lock mounting bolt.
2. Tighten the steering lock mounting bolt until the head breaks off.

am3uuw0000215

POWER STEERING

Coil Attachment, Coil Attachment Mounting Bolt Installation Note

1. Assemble section A of the coil attachment to the section B of the steering shaft.
2. Temporarily install the coil attachment to the steering shaft using a new coil attachment mounting bolt.

am3uuw0000464

3. Tighten the coil attachment mounting bolt until the head breaks off.

am3uuw0000464

06-14

Steering Shaft Component Installation Note

1. Verify that the adjusting lever is in the LOCK position.
2. Tighten the bolts in alphabetical order.

am3uuw0000236

Joint Bolt Installation Note

1. Install the steering shaft component to the steering gear.
2. After temporarily install the joint bolt to the intermediate shaft joint, verify that the joint bolt is installed to the groove of the steering gear.
3. Tighten the joint bolt to the specified torque.

am3uuw0000215

POWER STEERING

Key Slot Installation Note

1. Insert the key into the key slot.
2. Install the key slot to the steering lock.

Steering Wheel Installation Note

1. Set the wheels in the straight-ahead position and install the steering wheel.

STEERING SHAFT INSPECTION

id061400800600

1. Inspect the column bearing for excessive play and damage.
2. Verify that the measurement of the steering shaft indicated in the figure is as specified.
 - If not within the specification replace the steering shaft component.

Steering shaft length

315—320 mm {12.41—12.59 in}

am3uuw0000229

3. Inspect the tilt/telescope mechanism operation for the following.
 - (1) Verify that the adjusting lever moves smoothly from the lock to the unlock position.
 - (2) Verify that the steering shaft is fixed firmly when the adjusting lever is locked.
 - If there is any malfunction, replace the steering shaft.

am3uuw0000205

STEERING GEAR AND LINKAGE REMOVAL/INSTALLATION

id061400800900

Caution

- Performing the following procedures without first removing the ABS wheel-speed sensor may possibly cause an open circuit in the wiring harness if it is pulled by mistake. Before performing the following procedures, disconnect the ABS wheel-speed sensor connector (axle side) and fix the wiring harness to an appropriate place where it will not be pulled by mistake while servicing the vehicle.
- Secure the steering wheel using tape or a cable to prevent the steering shaft from rotating after disconnecting the steering shaft. If the steering wheel rotates after the steering shaft and the steering gear and linkage are disconnected, the internal parts of the clock spring could be damaged.

1. Remove the joint cover. (See 06-14-8 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION [WITHOUT ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) (See 06-14-11 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
2. Disconnect the steering shaft from the steering gear and linkage. (See 06-14-8 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION [WITHOUT ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) (See 06-14-11 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
3. Remove the front auto leveling sensor. (Vehicles with AFS) (See 09-18-50 AUTO LEVELING SENSOR REMOVAL/INSTALLATION.)
4. Remove the front crossmember component. (See 02-13-13 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
5. Remove in the order indicated in the table.
6. Install in the reverse order of removal.

POWER STEERING

7. After installation, inspect the front wheel alignment and adjust it if necessary. (See 02-11-1 FRONT WHEEL ALIGNMENT.)

am3uuw0000229

1	Insulator
---	-----------

2	Steering gear and linkage (See 06-14-17 Steering Gear and Linkage Removal Note.)
---	---

Steering Gear and Linkage Removal Note

1. Remove the steering gear and linkage installation bolts, move the steering gear and linkage in the direction and order of the arrows shown in the figure, and then remove it.

am3uuw0000229

06-14

POWER STEERING

Tie-rod End Disassembly Note

1. Place alignment marks as shown in the figure for proper installation.
2. Remove the tie-rod end.

am3uuw0000316

Tie Rod Disassembly Note

Caution

- If the steering rack is secured to a vise without using a cloth, the sliding surface of the steering rack could be damaged. Always use a clean cloth when securing the steering rack to the vise.
- If the steering rack is secured to a vise in the incorrect position, the steering gear could fall off the vise and be damaged during the operation. Always secure the steering rack to the vise in the proper position.

1. Protect the steering rack tooth surface using a clean cloth and secure it using a vise.

am3uuw0000316

06-14

2. Remove the tie rod using the SST.

am3uuw0000316

Locknut (on Adjusting Cover), Adjusting Cover Disassembly Note

1. Remove the locknut using the SST.
2. Remove the adjusting cover.

am3uuw0000316

POWER STEERING

Oil Seal Disassembly Note

1. Install the **SST** (49 N032 319A) to the gear housing as shown in the figure.
2. Insert the **SSTs** (49 F032 303, 49 B032 323) into the valve housing side.

am3uuw0000467

3. Remove the oil seal using the **SSTs** and a press.

am3uuw0000317

Mounting Rubber Disassembly Note

1. Remove the mounting rubber from the gear housing using the **SSTs** and a press.

am3uuw0000317

POWER STEERING

STEERING GEAR AND LINKAGE INSPECTION

id061400801100

Steering Rack Inspection

1. Inspect for cracking, damage, and tooth wear.
 - If there is any malfunction, replace the steering rack.
2. Measure the steering rack warp.
 - If it exceeds the maximum specification, replace the steering rack.

Steering rack runout

Large diameter portion (near point A): 0.15 mm {0.006 in} max.

Small diameter portion (near point B): 0.20 mm {0.008 in} max.

aprijw00001284

Tie-rod End Inspection

1. Inspect the tie-rod end for damage and the boot for cracks.
 - If there is any malfunction, replace the tie-rod end.
2. Inspect for excessive play.
 - If there is any malfunction, replace the tie-rod end.
3. Rotate the ball joint **5 times**.
4. Install two nuts to the ball joint and measure the tie-rod end rotational torque using a torque wrench.
 - If not within the specification, replace the tie-rod end.

Tie-rod end rotational torque

0.5—3.0 N·m {5.1—30 kgf·cm, 4.5—26 in·lbf}

am3uuw0000317

Tie rod Inspection

1. Inspect for bending and damage.
 - If there is any malfunction, replace the tie rod.
2. Inspect for excessive play.
 - If there is any malfunction, replace the tie rod.
3. Swing the ball joint **10 times**.
4. Measure the ball joint swing torque using a pull scale.
 - If it exceeds the specification, replace the tie rod.

Tie rod swing torque

0.4—4.0 N·m {4.1—40 kgf·cm, 3.6—35 in·lbf}

[Pull scale reading 0.6—29.3 N {0.06—2.98 kgf, 0.14—6.58 lbf}]

am3uuw0000229

POWER STEERING

STEERING GEAR AND LINKAGE ASSEMBLY

id061400801200

Caution

- To prevent damage to the steering gear, secure it to the vise using a copper plate or clean cloth.

1. Assemble in the order indicated in the table.

am3zzw0000866

1	Gear housing
2	Mounting rubber (See 06-14-23 Mounting Rubber Assembly Note.)
3	Oil seal (See 06-14-24 Oil Seal Assembly Note.)
4	Steering rack (See 06-14-25 Steering Rack Assembly Note.)
5	Rack bushing (See 06-14-25 Rack Bushing, Stopper and Clip Assembly Note.)
6	Stopper (See 06-14-25 Rack Bushing, Stopper and Clip Assembly Note.)

7	Clip (See 06-14-25 Rack Bushing, Stopper and Clip Assembly Note.)
8	Pinion shaft and valve housing component (See 06-14-26 Pinion Shaft and Valve Housing Component Assembly Note.)
9	Locknut
10	Housing cover (See 06-14-26 Housing Cover Assembly Note.)
11	Support yoke
12	Yoke spring
13	Adjusting cover (See 06-14-27 Adjusting Cover, Locknut (on Adjusting Cover) Assembly Note.)

POWER STEERING

14	Locknut (on adjusting cover) (See 06-14-27 Adjusting Cover, Locknut (on Adjusting Cover) Assembly Note.)
15	Tie rod
16	Boot (See 06-14-28 Boot Assembly Note.)
17	Boot band
18	Boot clamp

19	Locknut
20	Tie-rod end (See 06-14-28 Tie-rod End Assembly Note.)
21	Oil pipe
22	Return pipe
23	Floor seal (See 06-14-28 Floor Seal Assembly Note.)

Mounting Rubber Assembly Note

1. Apply soapy water to the rubber part of the mounting rubber.
2. Install the mounting rubber so that two projections of the mounting rubber are parallel to the steering rack as shown in the figure.

am3uuw0000317

3. Press fit the ear portion of the mounting rubber (lower side) using the **SSTs** until it projects from the gear housing as shown in the figure.

Note

- Press fit the ear portion of the mounting rubber (upper side) until it partially enters the gear housing.

am3uuw0000318

06-14

POWER STEERING

- Reverse the gear housing, then Press fit the mounting rubber using the **SSTs** and the press until the mounting rubber ear portion (upper side) contacts the gear housing.

am3uuw0000466

- Verify that both mounting rubber ears are correctly assembled with no gaps between them and the gear housing as shown in the figure.
 - If there are gaps, readjust their positions using the **SSTs** and the press.

am3uuw0000318

Oil Seal Assembly Note

- Apply ATF to the lip of a new oil seal.
- Install the **SST** (49 N032 319A) to the gear housing as shown in the figure.

am3uuw0000323

- Set the gear housing into the press and insert the oil seal in the gear housing so that groove area is facing up as shown in the figure.

am3uuw0000470

POWER STEERING

4. Set the stopper into the gear housing to hold the **SSTs** as shown in the figure.
5. Install the oil seal using the **SSTs** (49 F032 303, 49 F032 304) and a press.

am3uuw0000318

06-14

Steering Rack Assembly Note

1. Apply multipurpose grease to the rack teeth.
2. Install a plastic bag to the rack teeth and insert the steering rack in the gear housing.

am3uuw0000320

Rack Bushing, Stopper and Clip Assembly Note

1. Apply ATF to the rack bushing.
2. After installing the **SST** to the steering rack end, assemble the rack bushing to the rack housing.

Note

- Assemble the rack bushing so that the taper side faces the piston side of the steering rack.

3. Insert the stopper together with the rack bushing to the rack housing so that the stopper extends past the installation groove on the rack housing.

Note

- Assemble the stopper so that the side with the groove is facing outward.

am3uuw0000318

POWER STEERING

4. Assemble the clip to the installation groove on the rack housing.

5. Perform the cylinder air tightness inspection using the following procedure.
6. Install the **SST** to the power cylinder section of the gear housing.
7. Apply **53.3 kPa {400 mmHg, 15.7 inHg}** of vacuum with a vacuum pump and verify that it holds for **30 s**.
 - If there is a malfunction, inspect the gear housing inner surface and the oil seal, and the rack bushing for damage, and repair or replace if necessary.

Pinion Shaft and Valve Housing Component Assembly Note

1. Set the rack in the center with the measurement between rack housing end and rack end as shown in the figure.

2. When the pinion shaft position is as shown in the figure with the rack in the center, insert the pinion shaft and valve housing component.

Housing Cover Assembly Note

1. Apply silicone sealant to the threads of the housing cover.
2. Assemble the housing cover.

POWER STEERING

Adjusting Cover, Locknut (on Adjusting Cover) Assembly Note

1. Apply sealant to the threads of the adjusting cover.
2. Tighten the adjusting cover with a tightening torque of 20—29 N·m {2.1—2.9 kgf·m, 15—21 ft·lbf}.
3. Using the **SST**, loosen the adjusting cover to 25—35°.

4. Fix the adjusting cover and tighten the locknut using the **SST**.

5. Measure the rotation torque of the pinion shaft using a crescent wrench and pull scale.
 - (1) Install the crescent wrench to the steering gear.

- (2) Measure the length from the pinion shaft center to the crescent wrench end (application point of pull scale) as shown in the figure. This is dimension A.
 - (3) The rotation torque of the pinion shaft can be calculated using the following formula:
 Measured value using pull scale (N {kgf, lbf}) = rotation torque of the pinion shaft (N·m {kgf·cm, in·lbf})/length A (m {cm, in})

Pinion shaft rotation torque (center of rack ± 90°)

LF, L5: 0.93—1.53 N·m {9.49—15.7 kgf·cm, 8.24—13.5 in·lbf}

[Pull scale reading: 0.93—1.53 N·m {9.49—15.7 kgf·cm, 8.24—13.5 in·lbf}/A (m {cm, in})]

L3 WITH TC: 1.45—2.05 N·m {14.8—20.9 kgf·cm, 12.9—18.1 in·lbf}

[Pull scale reading: 1.45—2.05 N·m {14.8—20.9 kgf·cm, 12.9—18.1 in·lbf}/A (m {cm, in})]

6. If not as specified, remove the locknut and adjust the adjust cover.

POWER STEERING

Boot Assembly Note

1. Apply silicone grease to the rubber lip groove.
2. Assemble the boot.

Tie-rod End Assembly Note

1. Align the alignment marks made before removing the tie-rod end, and then assemble it to the tie-rod.
 - If there are no alignment marks, go to the following procedure.

am3uuw0000316

2. Adjust dimension A shown in the figure to the standard, and assemble.

Standard Dimension A

- 13—31 mm {0.6—1.2 in}

am3uuw0000319

Floor Seal Assembly Note

1. Assemble the floor seal using the **SST** and a press, steel plate.

Note

- Set the steering gear and linkage to the press with the housing cover facing down as shown in the figure.

am3uuw0000319

POWER STEERING

POWER STEERING FLUID LINE COMPONENT REMOVAL/INSTALLATION

id061400807000

Note

- The following procedure is for replacement of the parts shown in the figure. Regarding replacement of the suction hose and return hose, refer to the electric power steering oil pump removal/installation. (See 06-14-31 ELECTRIC POWER STEERING OIL PUMP REMOVAL/INSTALLATION.)

am3uuw0000482

06-14

Power Steering Pipe Component Removal/Installation

Note

- The pressure pipe and return pipe are integrated with the power steering pipe component. Therefore, if any one of the pipes has a malfunction, replace the power steering pipe component.

1. Remove the front mudguard (RH). (See 09-16-17 FRONT MUDGUARD REMOVAL/INSTALLATION.)
2. Remove the splash shield and aerodynamic under cover NO.2 as a single unit. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
3. Remove the connecting bolt (pump side) from the electric power steering oil pump and disconnect the return hose from the power steering pipe component (return pipe).

Note

- Drain the power steering fluid.

am3uuw0000263

POWER STEERING

4. Remove the nut shown in the figure.
5. Remove in the order indicated in the table.
6. Install in the reverse order of removal.

POWER STEERING

ELECTRIC POWER STEERING OIL PUMP REMOVAL/INSTALLATION

id061400803200

Caution

- Be careful not to drop the electric power steering oil pump as the internal parts of the EHPAS CM could be damaged. Replace the electric power steering oil pump if it is subjected to an impact.

1. Remove the front mudguard (RH). (See 09-16-17 FRONT MUDGUARD REMOVAL/INSTALLATION.)
2. Remove the aerodynamic under cover NO.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
3. Remove the splash shield (RH).
4. Remove in the order indicated in the table.
5. Install in the reverse order of removal.
6. After installation, perform the EHPAS CM configuration procedure. (See 06-14-32 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) CONTROL MODULE CONFIGURATION.)

06-14

am3uuw0000470

8	Electric power steering oil pump

POWER STEERING

Power Steering Pipe Component Removal Note

1. Disconnect the power steering pipe component and then drain the power steering fluid.

ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) CONTROL MODULE CONFIGURATION

id061400802400

Caution

- If the EHPAS CM configuration is not completed, the EHPAS will not operate properly. If the EHPAS CM is replaced, always carry out the EHPAS CM configuration so that the EHPAS operates properly.

Note

- Use the IDS (laptop PC) because the PDS (Pocket PC) does not support the EHPAS CM configuration.

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select the "Module Programming".
3. Then, select items from the screen menu in the following order.
 1. Select "Programmable Module Installation".
 2. Select "EPS".
4. Perform the configuration according to the directions on the screen.
5. Retrieve DTCs by the M-MDS, then verify that there is no DTC present.
 - If a DTC (s) is detected, perform the applicable DTC inspection. (See 06-02-2 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) ON-BOARD DIAGNOSIS.)

ON-BOARD DIAGNOSTIC

HVAC SYSTEM WIRING DIAGRAM

id070200800100

am3uuw0000418

FOREWORD

id070200820100

Outline

- The OBD (on-board diagnostic) system has the following functions:
 - Malfunction detection function: Detects malfunctions in the climate control unit and outputs DTCs (Diagnostic Trouble Codes).
 - PID/data monitor function: Reads out specific input/output signals and the system status.
- DTCs can be read/cleared using the M-MDS.

FLOWCHART

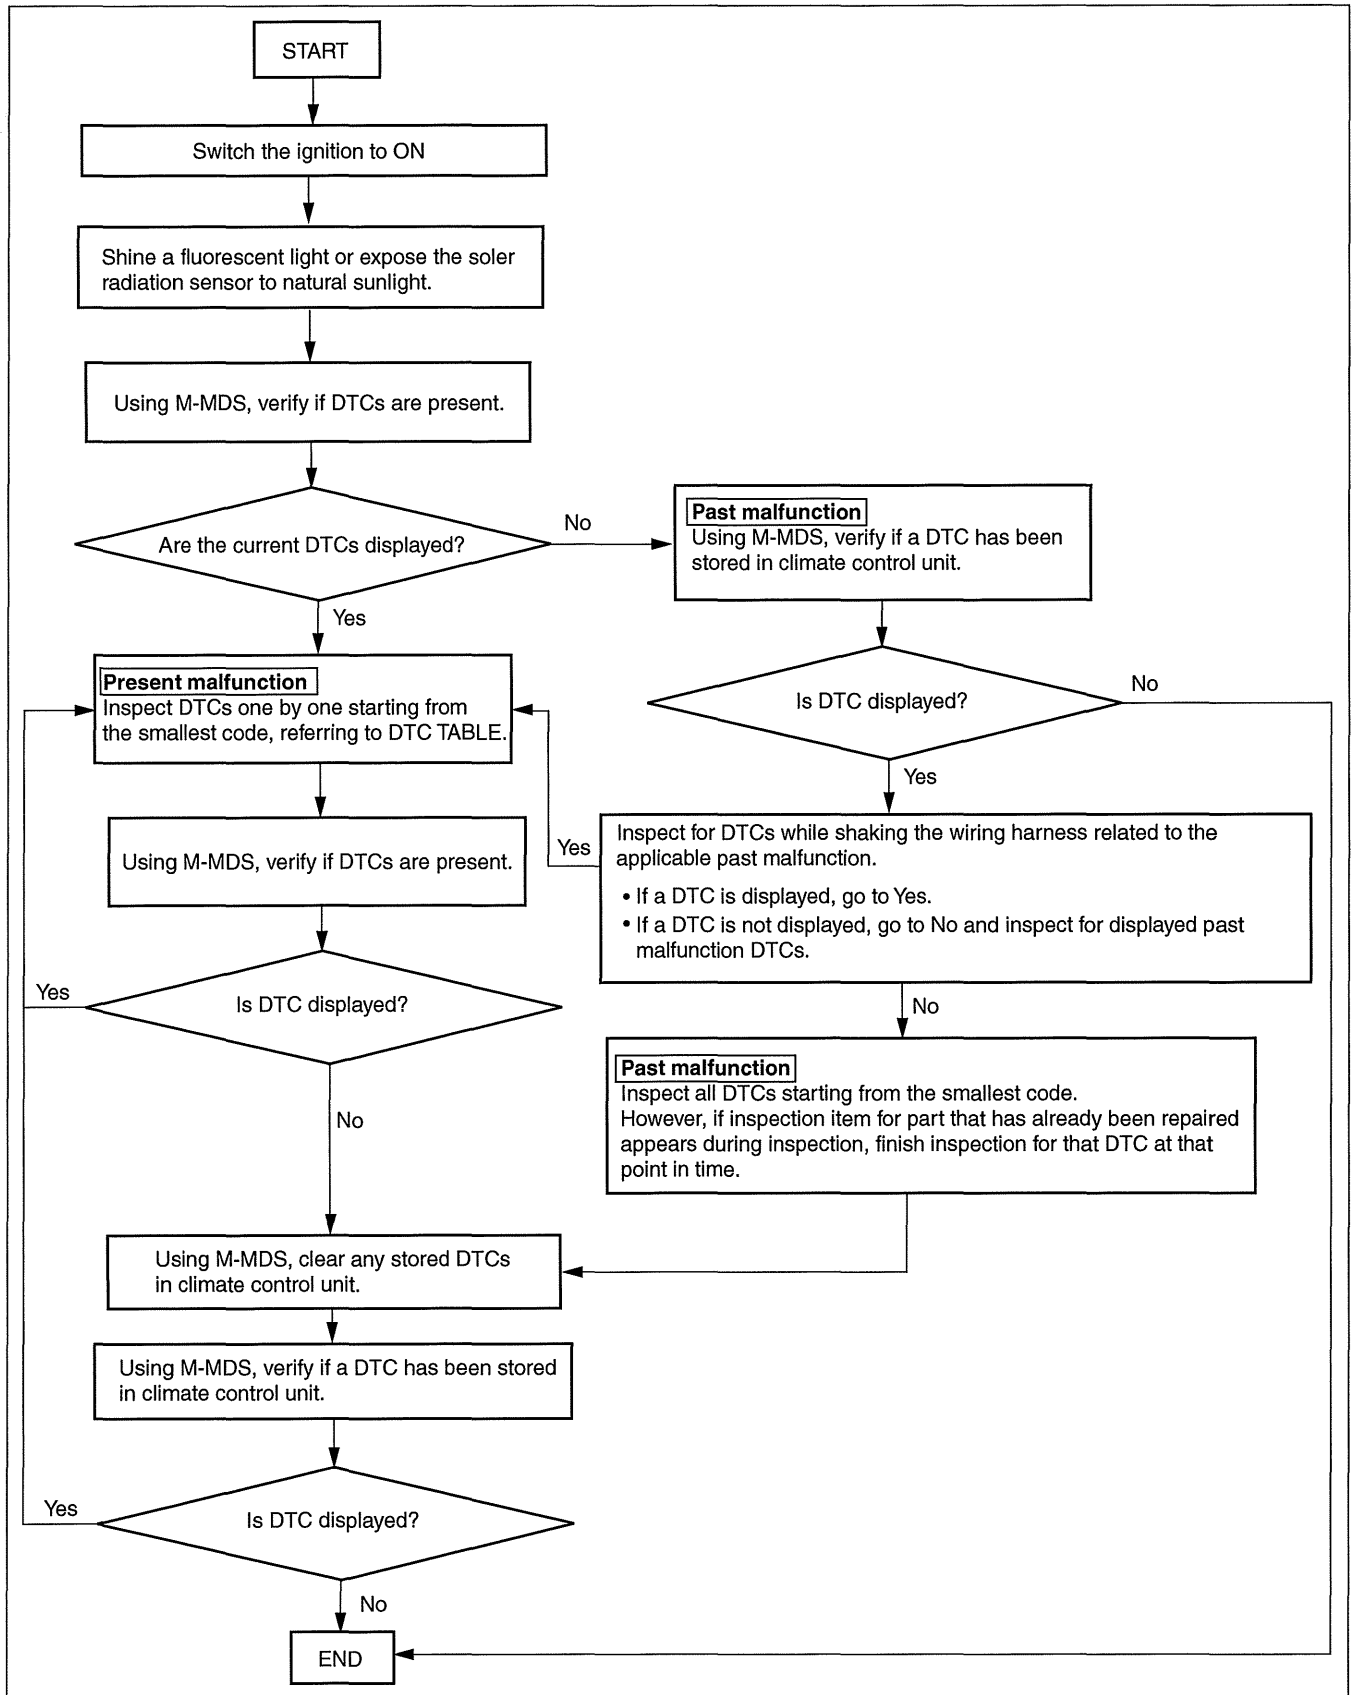

id070200820200

- Use the following flowchart to verify the cause of the trouble.

Note

- When inspecting past malfunction codes, inspect only the DTCs that were indicated before beginning the inspection. A mis-diagnosis could occur as a result of new DTCs being added while performing an inspection by disconnecting related parts or connectors.
- When DTCs of the present malfunction are no longer output after present or past malfunctions or both have been repaired, be sure to clear the past malfunction from memory to prevent repair of malfunctions that have already been repaired.

ON-BOARD DIAGNOSTIC

ON-BOARD DIAGNOSTIC

DTC DISPLAY

id070200801500

1. Connect the M-MDS to the DLC-2.
2. Expose the solar radiation sensor to natural sunlight.

Note

- If natural sunlight is not shone on the solar radiation sensor, the climate control unit determines a malfunction and indicates DTC "B1A63:12, B1A63:13, B1A64:12, B1A64:13".

3. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Self Test".
 2. Select "Modules".
 3. Select "EATC".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "EATC".
 3. Select "Self Test".
4. Verify the DTC according to the directions on the screen.
 - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
5. After completion of repairs, clear all DTCs stored in the climate control unit. (See 07-02-4 CLEARING DTC.)

am3uuw0000396

CLEARING DTC

id070200801600

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Self Test".
 2. Select "Modules".
 3. Select "EATC".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "EATC".
 3. Select "Self Test".
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition to ON and wait for **5 s or more**.
7. Press the retest button on the DTC screen.
8. Verify that no DTCs are displayed.

ON-BOARD DIAGNOSTIC

DTC B1081:71, B1082:71

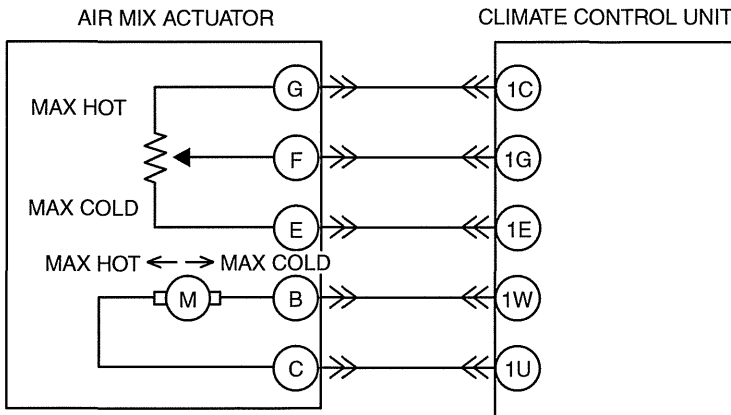

id070200816500

Note

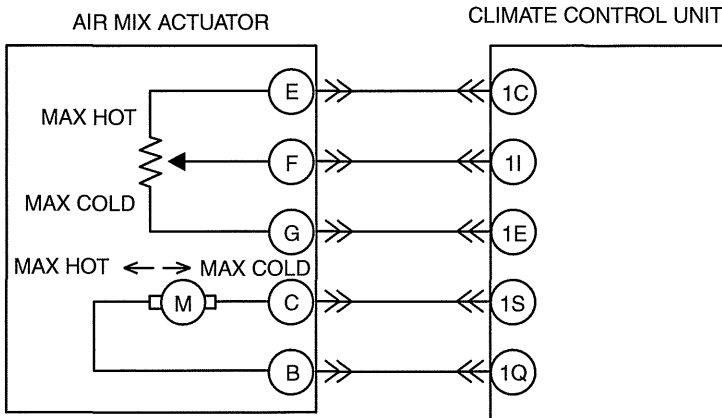

- DTC B1081:71, B1082:71 will be detected when switch the ignition to ON and approx. 30 s have passed since the air mix actuator is operated.

DTC B1081:71	Driver-side air mix actuator motor lock
DTC B1082:71	Passenger-side air mix actuator motor lock
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Air mix actuator malfunction • A/C unit (air mix link and air mix crank) malfunction • Connector or terminal malfunction • Open circuit in wiring harness between climate control unit connector terminal 1U and 1W (Driver-side) • Open or short circuit in wiring harness between climate control unit connector terminal 1S and 1Q (Passenger-side) • Short to ground in wiring harness between climate control unit connector terminal 1U and 1W (Driver-side) • Short to ground in wiring harness between climate control unit connector terminal 1S and 1Q (Passenger-side)

DRIVER-SIDE

PASSENGER-SIDE

ON-BOARD DIAGNOSTIC

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	INSPECT AIR MIX ACTUATOR CONNECTOR <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable. • Disconnect the air mix actuator connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal? 	Yes	Go to the next step.
		No	Repair/replace the connector or terminal. After repair procedure, go to the next step.
2	INSPECT AIR MIX ACTUATOR OPERATION <ul style="list-style-type: none"> • Disconnect the air mix actuator connector. • Apply battery positive voltage and connect the ground to the air mix actuator terminals B and C, and then inspect the air mix actuator. • Does the air mix actuator operate? 	Yes	Connect the connector, then go to Step 4.
		No	Go to the next step.
3	INSPECT AIR MIX LINK OPERATION <ul style="list-style-type: none"> • Remove the air mix actuator. • Operate the air mix link manually. • Does the air mix link operate smoothly? 	Yes	Replace the air mix actuator. (See 07-40A-4 AIR MIX ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) Go to the next step.
		No	Replace the air mix link and the air mix crank. Go to the next step.
4	INSPECT AIR MIX ACTUATOR CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GROUND <ul style="list-style-type: none"> • Disconnect the climate control unit connector. • Apply battery positive voltage and connect the ground to the climate control unit terminal 1W and 1U, and then inspect the air mix actuator. (Driver-side) • Apply battery positive voltage and connect the ground to the climate control unit terminal 1S and 1Q, and then inspect the air mix actuator. (Passenger-side) • Does the air mix actuator operate? 	Yes	Go to the next step.
		No	Repair/replace the malfunctioning vehicle wiring harness. After repair procedure, go to the next step.
5	VERIFY CLIMATE CONTROL UNIT CONNECTOR CONDITION <ul style="list-style-type: none"> • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal? 	Yes	Go to the next step.
		No	Repair/replace the malfunctioning vehicle wiring harness, connector, or terminal. After repair procedure, go to the next step.
6	VERIFY THAT SAME DTC IS NOT OUTPUT AGAIN <ul style="list-style-type: none"> • Reconnect the disconnected connectors. • Clear the past malfunction from memory. • Verify DTCs. • Is DTC B1081:71 or B1082:71 output? 	Yes	Repeat the inspection from Step 1. <ul style="list-style-type: none"> • If the malfunction does not recur, go to the next step. • If the malfunction recurs, replace the climate control unit (See 07-40A-26 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) then go to the next step.
		No	Go to the next step.
7	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> • Verify other DTCs displayed. • Are any other DTCs output? 	Yes	Perform the corresponding DTC inspection.
		No	DTC troubleshooting completed.

07-02

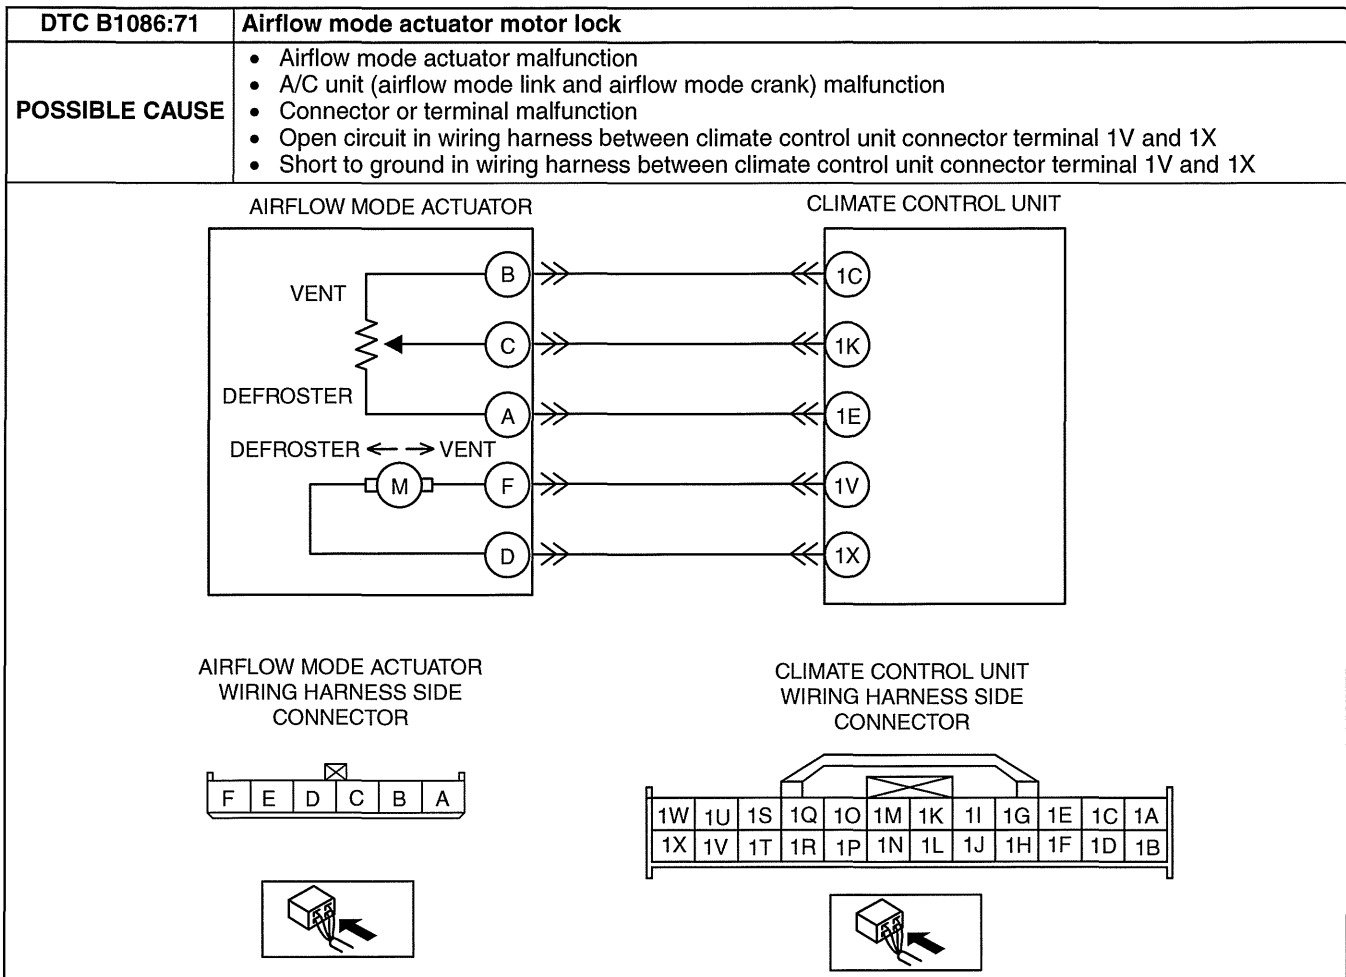

ON-BOARD DIAGNOSTIC

DTC B1086:71

id070200816700

Note

- DTC B1086:71 will be detected when switch the ignition to ON and approx. 30 s have passed since the airflow mode actuator is operated.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	INSPECT AIRFLOW MODE ACTUATOR CONNECTOR <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable. • Disconnect the airflow mode actuator connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal? 	Yes	Go to the next step.
		No	Repair/replace the connector or terminal. After repair procedure, go to the next step.
2	INSPECT AIRFLOW MODE ACTUATOR OPERATION <ul style="list-style-type: none"> • Disconnect the airflow mode actuator connector. • Apply battery positive voltage and connect the ground to the airflow mode actuator terminals F and D, and then inspect the airflow mode actuator. • Does the airflow mode actuator operate? 	Yes	Connect the connector, then go to Step 4.
		No	Go to the next step.
3	INSPECT AIRFLOW MODE MAIN LINK OPERATION <ul style="list-style-type: none"> • Remove the airflow mode actuator. • Operate the airflow mode main link manually. • Does the airflow mode main link operate smoothly? 	Yes	Replace the airflow mode actuator. (See 07-40A-8 AIRFLOW MODE ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER].) Go to the next step.
		No	Replace the airflow mode main link, airflow mode sub link, and the airflow mode crank. Go to the next step.

ON-BOARD DIAGNOSTIC

STEP	INSPECTION		ACTION
4	INSPECT AIRFLOW MODE ACTUATOR CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GROUND <ul style="list-style-type: none"> Disconnect the climate control unit connector. Apply battery positive voltage and connect the ground to the climate control unit connector terminals 1V and 1X, and then inspect the airflow mode actuator. Does the airflow mode actuator operate? 	Yes	Go to the next step.
		No	Repair/replace the malfunctioning vehicle wiring harness. After repair procedure, go to the next step.
5	VERIFY CLIMATE CONTROL UNIT CONNECTOR CONDITION <ul style="list-style-type: none"> Inspect the connector and terminals (corrosion, damage, pin disconnection). Are the connector and terminals normal? 	Yes	Go to the next step.
		No	Repair/replace the malfunctioning vehicle wiring harness, connector, or terminal. After repair procedure, go to the next step.
6	VERIFY THAT SAME DTC IS NOT OUTPUT AGAIN <ul style="list-style-type: none"> Reconnect the disconnected connectors. Clear the past malfunction from memory. Verify DTCs. Is DTC B1086:71 output? 	Yes	Repeat the inspection from Step 1. <ul style="list-style-type: none"> If the malfunction does not recur, go to the next step. If the malfunction recurs, replace the climate control unit (See 07-40A-26 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) then go to the next step.
		No	Go to the next step.
7	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> Verify other DTCs displayed. Are any other DTCs output? 	Yes	Perform the corresponding DTC inspection.
		No	DTC troubleshooting completed.

		No	Repair/replace the malfunctioning vehicle wiring harness, connector, or terminal. After repair procedure, go to the next step.
6	VERIFY THAT SAME DTC IS NOT OUTPUT AGAIN <ul style="list-style-type: none"> • Reconnect the disconnected connectors. • Clear the past malfunction from memory. • Verify DTCs. • Is DTC B1C1A:11, B1C1A:13, B1C1B:11, B1C1B:13 output? 	Yes	Repeat the inspection from Step 1. <ul style="list-style-type: none"> • If the malfunction does not recur, go to the next step. • If the malfunction recurs, replace the climate control unit (See 07-40A-26 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) then go to the next step.
		No	Go to the next step.
7	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> • Verify other DTCs displayed. • Are any other DTCs output? 	Yes	Perform the corresponding DTC inspection.
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC B1C1C:11, B1C1C:13

id070200817200

DTC B1C1C:11	Airflow mode actuator (potentiometer) circuit short to ground
DTC B1C1C:13	Airflow mode actuator (potentiometer) circuit open
POSSIBLE CAUSE	<ul style="list-style-type: none"> Airflow mode actuator malfunction Open circuit in wiring harness between climate control unit connector terminal 1C and airflow mode actuator connector terminal B Open circuit in wiring harness between climate control unit connector terminal 1K and airflow mode actuator connector terminal C Open circuit in wiring harness between climate control unit connector terminal 1E and airflow mode actuator connector terminal A Short to ground in wiring harness between climate control unit connector terminal 1K and airflow mode actuator connector terminal C

AIRFLOW MODE ACTUATOR WIRING HARNESS SIDE CONNECTOR

CLIMATE CONTROL UNIT WIRING HARNESS SIDE CONNECTOR

07-02

Diagnostic procedure

STEP	INSPECTION		ACTION
1	INSPECT AIRFLOW MODE ACTUATOR CONNECTOR <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the negative battery cable. Disconnect the airflow mode actuator connector. Inspect the connector and terminals (corrosion, damage, pin disconnection). Are the connector and terminals normal? 	Yes	Go to the next step.
		No	Repair/replace the connector or terminal. After repair procedure, go to the next step.
2	INSPECT AIRFLOW MODE ACTUATOR <ul style="list-style-type: none"> Inspect the airflow mode actuator. (See 07-40A-8 AIRFLOW MODE ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER].) Is it normal? 	Yes	Go to the next step.
		No	Replace the airflow mode actuator. (See 07-40A-7 AIRFLOW MODE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) Go to the next step.
3	INSPECT AIRFLOW MODE ACTUATOR (POTENTIOMETER) CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> Disconnect the climate control unit connector and the airflow mode actuator connector. Is there an open circuit in the wiring harness between the following terminals of the climate control unit and the airflow mode actuator? <ul style="list-style-type: none"> — 1C—B — 1K—C — 1E—A 	Yes	Repair the wiring harness. Go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC

STEP	INSPECTION	ACTION
4	INSPECT AIRFLOW MODE ACTUATOR (POTENTIOMETER) SHORT TO GROUND <ul style="list-style-type: none"> Is there a short circuit to ground in the wiring harness between climate control unit terminal 1K and airflow mode actuator terminal C? 	Yes Repair/replace the malfunctioning vehicle wiring harness. After repair procedure, go to the next step.
		No The system is normal at present. Go to the next step.
5	VERIFY CLIMATE CONTROL UNIT CONNECTOR CONDITION <ul style="list-style-type: none"> Inspect the connector and terminals (corrosion, damage, pin disconnection). Are the connector and terminals normal? 	Yes Go to the next step.
		No Repair/replace the malfunctioning vehicle wiring harness, connector, or terminal. After repair procedure, go to the next step.
6	VERIFY THAT SAME DTC IS NOT OUTPUT AGAIN <ul style="list-style-type: none"> Reconnect the disconnected connectors. Clear the past malfunction from memory. Verify DTCs. Is DTC B1C1C:11, B1C1C:13 output? 	Yes Repeat the inspection from Step 1. <ul style="list-style-type: none"> If the malfunction does not recur, go to the next step. If the malfunction recurs, replace the climate control unit (See 07-40A-26 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) then go to the next step.
		No Go to the next step.
7	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> Verify other DTCs displayed. Are any other DTCs output? 	Yes Perform the corresponding DTC inspection.
		No DTC troubleshooting completed.

DTC P0530:12, P0530:13

id070200073500

DTC P0530:12	Refrigerant pressure sensor circuit short to power supply
DTC P0530:13	Refrigerant pressure sensor circuit open
POSSIBLE CAUSE	<ul style="list-style-type: none"> Refrigerant pressure sensor malfunction Open circuit in wiring harness between climate control unit connector terminal 1C and refrigerant pressure sensor connector terminal A Open circuit in wiring harness between climate control unit connector terminal 1E and refrigerant pressure sensor connector terminal C Open circuit in wiring harness between climate control unit connector terminal 2J and refrigerant pressure sensor connector terminal B Short to power supply in wiring harness between climate control unit connector terminal 2J and refrigerant pressure sensor connector terminal B Connector or terminal malfunction

ON-BOARD DIAGNOSTIC

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	INSPECT REFRIGERANT PRESSURE SENSOR CONNECTOR <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable. • Disconnect the refrigerant pressure sensor connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal? 	Yes	Go to the next step.
		No	Repair/replace the connector or terminal. After repair procedure, go to Step 5.
2	INSPECT REFRIGERANT PRESSURE SENSOR <ul style="list-style-type: none"> • Inspect the refrigerant pressure sensor. (See 07-40A-25 REFRIGERANT PRESSURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is it normal? 	Yes	Go to the next step.
		No	Replace the refrigerant pressure sensor. (See 07-40A-24 REFRIGERANT PRESSURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
3	INSPECT REFRIGERANT PRESSURE SENSOR CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Disconnect the climate control unit connector and the refrigerant pressure sensor connector. • Is there continuity between the following terminals of the climate control unit and the refrigerant pressure sensor? <ul style="list-style-type: none"> — 1C—A — 1E—C — 2J—B 	Yes	Go to the next step.
		No	Repair the wiring harness.
4	INSPECT REFRIGERANT PRESSURE SENSOR CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • Is there a short circuit to power supply in the wiring harness between the following terminals of the climate control unit terminal and refrigerant pressure sensor? <ul style="list-style-type: none"> — 2J—B 	Yes	Repair the wiring harness.
		No	Go to the next step.
5	VERIFY CLIMATE CONTROL UNIT CONNECTOR CONDITION <ul style="list-style-type: none"> • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal? 	Yes	Go to the next step.
		No	Repair/replace the malfunctioning vehicle wiring harness, connector, or terminal. After repair procedure, go to the next step.
6	VERIFY THAT SAME DTC IS NOT OUTPUT AGAIN <ul style="list-style-type: none"> • Reconnect the disconnected connectors. • Clear the past malfunction from memory. • Verify DTCs. • Is DTC P0530:12 or P0530:13 output? 	Yes	Repeat the inspection from Step 1. <ul style="list-style-type: none"> • If the malfunction does not recur, go to the next step. • If the malfunction recurs, replace the climate control unit. (See 07-40A-26 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
		No	Go to the next step.
7	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> • Verify other DTCs displayed. • Are any other DTCs output? 	Yes	Perform the corresponding DTC inspection.
		No	DTC troubleshooting completed.

07-02

ON-BOARD DIAGNOSTIC

DTC U0423:68

id070200730600

DTC U0423:68	Invalid data received from instrument cluster
POSSIBLE CAUSE	<ul style="list-style-type: none"> Instrument cluster malfunction Climate control unit malfunction

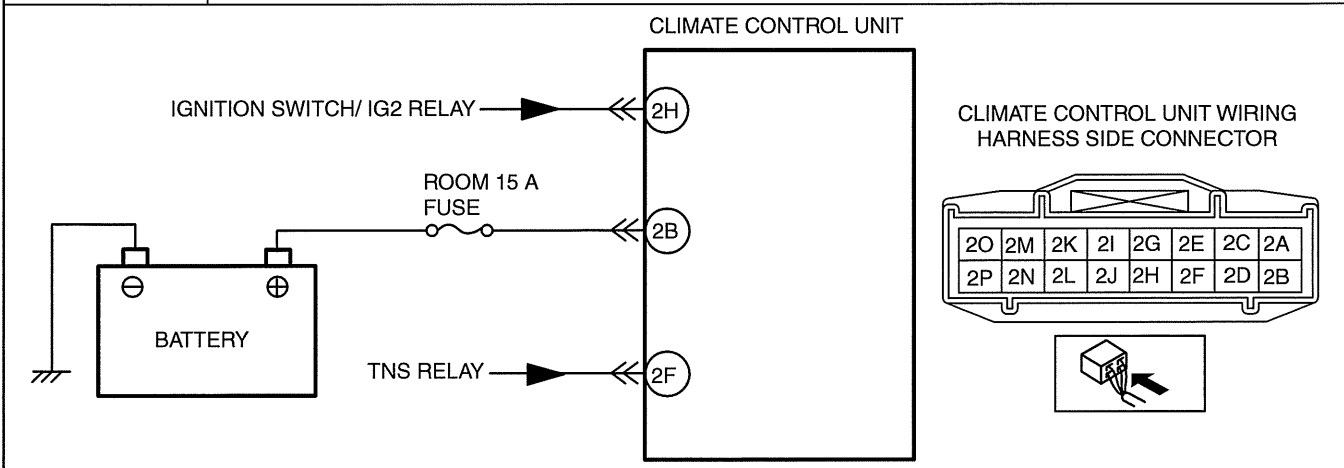

Diagnostic Procedure

Step	Inspection		Action
1	PERFORM INSTRUMENT CLUSTER DTC INSPECTION <ul style="list-style-type: none"> Perform the instrument cluster DTC inspection using the M-MDS. (See 09-02E-4 DTC INSPECTION [INSTRUMENT CLUSTER].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02E-5 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
2	PERFORM CLIMATE CONTROL UNIT DTC INSPECTION <ul style="list-style-type: none"> Clear the DTC from the climate control unit memory using the M-MDS. (See 07-02-4 CLEARING DTC.) Perform the climate control unit DTC inspection using the M-MDS. (See 07-02-4 DTC DISPLAY.) Is the same DTC present? 	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.)
		No	Go to the next step.
3	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Clear the DTC from the climate control unit memory using the M-MDS. (See 07-02-4 CLEARING DTC.) Perform the climate control unit DTC inspection using the M-MDS. (See 07-02-4 DTC DISPLAY.) Is the same DTC present? 	Yes	Repeat the inspection from Step 1. <ul style="list-style-type: none"> If the malfunction does not recur, go to the next step. If the malfunction recurs, replace the climate control unit. (See 07-40A-26 CLIMATE CONTROL UNIT REMOVAL/ INSTALLATION [FULL-AUTO AIR CONDITIONER].)

DTC U3003:16, U3003:17

id070200731000

DTC U3003:16	Power supply circuit voltage below threshold (9.7 V or less (B+))
DTC U3003:17	Power supply circuit voltage above threshold (16.4 V or more (B+)), (16.8 V or more (IG2, TNS))
POSSIBLE CAUSE	<ul style="list-style-type: none"> Generator system malfunction ROOM 15 A fuse malfunction Battery malfunction Open or short circuit to ground in wiring harness between battery positive terminal and climate control unit terminal 2B. Climate control unit malfunction

ON-BOARD DIAGNOSTIC

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	INSPECT PCM DTC (INSPECT GENERATOR CIRCUIT) <ul style="list-style-type: none"> • Switch the ignition to off. • Connect the M-MDS to the DLC-2. • Perform the PCM DTC inspection using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].) (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
2	INSPECT FUSE <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable. • Remove the ROOM 15 A fuse. • Is the fuse normal? 	Yes	Install the ROOM 15 A fuse, then go to the next step.
		No	Replace the ROOM 15 A fuse, then go to Step 6.
3	INSPECT BATTERY <ul style="list-style-type: none"> • Inspect the battery. (See 01-17A-4 BATTERY INSPECTION [LF, L5].) (See 01-17B-4 BATTERY INSPECTION [L3 WITH TC].) • Is the battery normal? 	Yes	Go to the next step.
		No	Replace/charge the battery, then go to Step 6.
4	INSPECT CLIMATE CONTROL UNIT POWER SUPPLY CIRCUIT FOR SHORT CIRCUIT TO GROUND <ul style="list-style-type: none"> • Disconnect the climate control unit connector. • Inspect for continuity between climate control unit terminal 2B and body ground. • Is there continuity? 	Yes	Repair the wiring harness, then go to Step 6.
		No	Go to the next step.
5	INSPECT CLIMATE CONTROL UNIT POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Inspect for continuity between climate control unit terminal 2B and battery positive terminal. • Is there continuity? 	Yes	Go to the next step.
		No	Repair the wiring harness, then go to the next step.
6	INSPECT CLIMATE CONTROL UNIT <ul style="list-style-type: none"> • Clear DTCs using the M-MDS. • Perform the climate control unit DTC inspection using the M-MDS. (See 07-02-4 DTC DISPLAY.) • Are DTCs U3003:16 or U3003:17 displayed? 	Yes	Repeat the inspection from Step 1. <ul style="list-style-type: none"> • If the malfunction does not recur, go to the next step. • If the malfunction recurs, replace the climate control unit. (See 07-40A-26 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
		No	Go to the next step.
7	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> • Verify other DTCs displayed. • Are any other DTCs output? 	Yes	Perform the corresponding DTC inspection.
		No	DTC troubleshooting completed.

07-02

ON-BOARD DIAGNOSTIC

PID/DATA MONITOR DISPLAY

id070200801800

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "DataLogger".
 2. Select "Modules".
 3. Select "EATC".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "EATC".
 3. Select "DataLogger".
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the directions on the screen.

am3uuw0000396

Note

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.

PID/DATA MONITOR TABLE

id070200801900

PID name (definition)	Input part	Unit/Condition	Terminal
AC_PRES	Refrigerant pressure sensor	Pa	2J
CABIN_TEMP	Passenger compartment temperature sensor	°C	2M
EVAP_TEMP	Evaporator temperature sensor	°C	1L
SOLAR_SSR_L	Solar radiation sensor (LH)	W	1H
SOLAR_SSR_R	Solar radiation sensor (RH)	W	1F

ACTIVE COMMAND MODES DISPLAY

id070200809400

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "DataLogger".
 2. Select "Modules".
 3. Select "EATC".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "EATC".
 3. Select "DataLogger".
3. Select the active command modes from the PID table.
4. Perform the active command modes, inspect the operations for each parts.
 - If the operation of output parts cannot be verified after the active command mode inspection is performed, this could indicate the possibility of an open or short circuit, sticking, or operation malfunction in the output parts.

am3uuw0000396

ON-BOARD DIAGNOSTIC

ACTIVE COMMAND MODES TABLE

id070200809500

Command name	Output part	Operation
MIX_ACT	Air mix actuator	Off/On
REC/FRESH	REC switch	
DISPLAY	Information display	
BLOWER	Blower motor	
MODE_ACT	Airflow mode actuator	

A/C OPERATION CHECK MODE DISPLAY

id070200801400

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select the "Body".
 2. Select the "EATC Operation Check".
 - When using the PDS (Pocket PC)
 1. Select the "All Tests and Calibrations".
 2. Select the "EATC Operation Check".
3. Select the "EATC Operation Check" from the screen menu.
4. Verify the A/C operation check mode according to the directions on the screen.

am3uuw0000396

07-02

A/C OPERATION CHECK MODE TABLE

id070200801300

M-MDS display	Target part	Operation condition
Illumination of All Indicator Lights	Climate control unit	All A/C indicator lights illuminated
Blower Motor Speed	Blower motor	OFF → 1ST → 3RD → 5TH → 7TH
Air Mix Actuator	Air mix door	0% → 50% → 100% → 50%
Air Flow Mode Actuator	Airflow mode door	VENT → BI-LEVEL → HEAT → DEF/HEAT → DEFROSTER
Air Intake Actuator / Air Conditioning Compressor	Air intake door A/C compressor	FRESH ↔ REC ON ↔ OFF

* : Shown on the information display (at the set temperature display) according to each M-MDS display.

- The areas for inspection (steps) are given according to various circuit malfunctions. Use the following chart to verify the symptoms of the trouble in order to diagnose the appropriate area.

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

TROUBLESHOOTING INDEX [FULL-AUTO AIR CONDITIONER]

id0703c1800300

No.	TROUBLESHOOTING ITEM	DESCRIPTION
1	Insufficient air (or no air) blown from vents	<ul style="list-style-type: none"> • Problem with each vent and/or duct • Airflow mode does not change
2	Amount of air blown from vents does not change	<ul style="list-style-type: none"> • Malfunction in blower system
3	Air intake mode from front vent does not change	<ul style="list-style-type: none"> • Air intake mode does not change when switching REC/FRESH mode
4	No temperature control with climate control unit	<ul style="list-style-type: none"> • Temperature does not change when operating temperature dial. • Malfunction in A/C unit and/or climate control unit air mix system
5	Windshield fogged	<ul style="list-style-type: none"> • A/C compressor does not operate while airflow mode is in DEFROSTER or HEAT/DEF modes • Air intake mode does not change to FRESH while airflow mode is in DEFROSTER or HEAT/DEF modes
6	Air from vents not cold enough	<ul style="list-style-type: none"> • Magnetic clutch operates but A/C system malfunctions
7	No cool air	<ul style="list-style-type: none"> • Magnetic clutch does not operate
8	Noise while operating A/C system	<ul style="list-style-type: none"> • Noise from magnetic clutch, A/C compressor, hose or refrigerant line
9	Dual A/C control function does not operate	<ul style="list-style-type: none"> • Driver or passenger side temperature control dial does not operate individually • Temperature control operates normally expect for dual A/C control function

07-03A

NO.1 INSUFFICIENT AIR (OR NO AIR) BLOWN FROM VENTS [FULL-AUTO AIR CONDITIONER]

id0703c1800400

1	Insufficient air (or no air) blown from vents
DESCRIPTION	<ul style="list-style-type: none"> • Problem with each vent and/or duct. • Airflow mode does not change.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Malfunction in airflow mode actuator • Malfunction in VENT mode system • Malfunction in HEAT mode system • Malfunction in DEFROSTER mode system

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions.
If there is a problem, check to make sure connectors, terminals and wiring harnesses are connected correctly and undamaged.

Diagnostic procedure

STEP	INSPECTION	ACTION
1*	INSPECT CLIMATE CONTROL UNIT POWER SUPPLY FUSE FOR B+ SIGNAL <ul style="list-style-type: none"> • Is the climate control unit power supply fuse for B+ signal normal? 	Yes Go to the next step.
		No Inspect for short to GND in blown fuse circuit Repair or replace as necessary. Install appropriate amperage fuse.
2*	INSPECT TO SEE WHETHER MALFUNCTION (OPEN CIRCUIT) IS IN B+ SIGNAL WIRING HARNESS (BETWEEN FUSE BLOCK AND CLIMATE CONTROL UNIT) OR ELSEWHERE <ul style="list-style-type: none"> • Disconnect the climate control unit connector (16-pin). • Switch the ignition to ON. • Measure the voltage at climate control unit harness-side connector (16-pin) terminal 2B (B+ signal). • Is the voltage approx. 12V? 	Yes Go to the next step.
		No Repair wiring harness between fuse block and climate control unit, then go to Step 20.

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION	ACTION	
3*	INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN WIRING HARNESS (BETWEEN CLIMATE CONTROL UNIT AND GND) OR ELSE ELSEWHERE <ul style="list-style-type: none"> • Climate control unit connector (24-pin) disconnected. • Verify that continuity between climate control unit harness-side connector (24-pin) terminal 1D and GND. • Is there continuity? 	Yes	Go to the next step
		No	Repair wiring harness between climate control unit and GND. Inspect GND point condition. Then go to Step 20.
4*	INSPECT TO SEE WHETHER MALFUNCTION IS IN A/C UNIT OR AIRFLOW MODE ACTUATOR <ul style="list-style-type: none"> • Switch the ignition to ON. • Measure voltage at climate control unit terminal 1K (24-pin) when temperature controls dial at VENT and DEFROSTER. (See 07-40A-26 CLIMATE CONTROL UNIT INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is voltage normal? 	Yes	Go to Step 16.
		No	Go to the next step.
5*	INSPECT TO SEE WHETHER MALFUNCTION IS IN POSITION OR ELSEWHERE <ul style="list-style-type: none"> • Switch the ignition to ON. • Measure voltage at climate control unit terminal 1I and 1G (24-pin) when airflow mode change to MAX HOT and MAX COLD. (See 07-40A-26 CLIMATE CONTROL UNIT INSPECTION [FULL-AUTO AIR CONDITIONER].) • Are voltages normal? 	Yes	Go to Step 8.
		No	Go to the next step.
6*	INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY OR SHORT TO BATTERY POWER OR GND) IS IN POSITION SENSOR POWER SUPPLY (CLIMATE CONTROL UNIT TERMINAL 1C) OR ELSEWHERE <ul style="list-style-type: none"> • Switch the ignition to ON. • Measure voltage at climate control unit terminal 1C (24-pin). • Is voltage approx. 5V? 	Yes	Go to the next step.
		No	Repair wiring harness between climate control unit terminal 1C and follows: <ul style="list-style-type: none"> • Airflow mode actuator terminal B • Driver side air mix actuator terminal G • Passenger side air mix actuator terminal E Then go to Step 20.
7*	INSPECT TO SE WHETHER MAL FUNCTION (LACK OF CONTINUITY OR OPEN) IS IN POSITION SENSOR GND (CLIMATE CONTROL UNIT TERMINAL 1E) OR ELSEWHERE <ul style="list-style-type: none"> • Measure voltage at climate control unit terminal 1E (24-pin). • Is voltage below 1.0V? 	Yes	Go to Step 11.
		No	Repair wiring harness between climate control unit terminal 1E and follows: <ul style="list-style-type: none"> • Airflow mode actuator terminal A • Driver side air mix actuator terminal E • Passenger side air mix actuator terminal G Then go to Step 20.
8*	INSPECT TO SEE WHETHER MALFUNCTION (SHORT TO POWER) IS IN WIRING HARNESS (AIRFLOW MODE POSITION SIGNAL) OR ELSEWHERE <ul style="list-style-type: none"> • Is climate control unit terminal 1K voltage approx. 12V, at Step 4? 	Yes	Repair wiring harness between climate control unit terminal 1K and airflow mode actuator terminal C. Then go to Step 20.
		No	Go to the next step.
9*	INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN WIRING HARNESS (AIRFLOW MODE POSITION SIGNAL) OR ELSEWHERE <ul style="list-style-type: none"> • Switch the ignition off. • Disconnect climate control unit and airflow mode actuator connectors. • Verify continuity between climate control unit terminal 1K (24-pin) and airflow mode actuator terminal C at harness-side connector. • Is there continuity? 	Yes	Go to next step.
		No	Repair wiring harness between climate control unit terminal 1K and airflow mode actuator terminal C. Then go to Step 20.

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION	ACTION	
10*	INSPECT TO SEE WHETHER MALFUNCTION (SHORT TO GND) IS IN WIRING HARNESS (AIRFLOW MODE POSITION SIGNAL) OR POSITION SENSOR COMMON (POWER SUPPLY OR GND) HARNESS <ul style="list-style-type: none"> • Verify continuity between climate control unit harness-side connector terminal 1K (24-pin) and GND. • Is there continuity? 	Yes	Repair wiring harness between climate control unit terminal 1K and airflow mode actuator terminal C. Then go to Step 20.
		No	Inspection and repair for open circuit following: <ul style="list-style-type: none"> • Between airflow mode actuator terminal B and junction point to each air mix actuator (position sensor power supply). • Between airflow mode actuator terminal A and junction point to each air mix actuator (position sensor GND). Then go to Step 20.
11*	INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN AIRFLOW MODE ACTUATOR WIRING HARNESS (BETWEEN CLIMATE CONTROL UNIT AND AIR FLOW MODE ACTUATOR) OR ELSEWHERE <ul style="list-style-type: none"> • Switch the ignition to ON. • Measure voltage at the following terminals of climate control unit. (See 07-40A-26 CLIMATE CONTROL UNIT INSPECTION [FULL-AUTO AIR CONDITIONER].) — Terminal 1V (24-pin, DEFROSTER mode motor drive signal) — Terminal 1X (24-pin, VENT mode motor drive signal) • Are voltages okay? 	Yes	Go to the next step.
		No	Go to Step 13.
12*	INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN AIR FLOW MODE ACTUATOR OR WIRING HARNESS (BETWEEN CLIMATE CONTROL UNIT AND AIR FLOW MODE ACTUATOR) <ul style="list-style-type: none"> • Airflow mode actuator connector disconnected. • Disconnect the airflow mode actuator. • Verify continuity at following terminals between airflow mode actuator and climate control unit. — Climate control unit terminal 1V — airflow mode actuator terminal F (DEFROSTER mode motor drive signal) — Climate control unit terminal 1X — airflow mode actuator terminal D (24-pin, VENT mode motor drive signal) • Is there continuity? 	Yes	Go to Step 17.
		No	Repair wiring harness between climate control unit and airflow mode actuator. Then go to Step 20.
13*	INSPECT TO SEE WHETHER MALFUNCTION IS IN AIR FLOW MODE ACTUATOR OR ELSEWHERE <ul style="list-style-type: none"> • Airflow mode actuator and climate control unit connectors disconnected. • Measure voltage at the following terminals of climate control unit. (See 07-40A-26 CLIMATE CONTROL UNIT INSPECTION [FULL-AUTO AIR CONDITIONER].) — Terminal 1V (24-pin, DEFROSTER mode motor drive signal) — Terminal 1X (24-pin, VENT mode motor drive signal) • Are voltage okay? 	Yes	Go to Step 16.
		No	Go to the next step.

07-03A

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION	ACTION	
14*	INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (SHORT TO B+ BETWEEN CLIMATE CONTROL UNIT AND FLOW MODE ACTUATOR) OR ELSEWHERE <ul style="list-style-type: none"> • Airflow mode actuator and climate control unit connectors disconnected. • Measure voltage at the following terminal of the climate control unit harness-side connector. <ul style="list-style-type: none"> — Terminal 1V (24-pin, DEFROSTER mode motor drive signal) — Terminal 1X (24-pin, VENT mode motor drive signal) • Are voltages approx. 0V? 	Yes	Go to the next step.
		No	Repair wiring between climate control unit and airflow mode actuator. Then go to the Step 20.
15*	INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (SHORT TO GND BETWEEN CLIMATE CONTROL UNIT AND AIRFLOW MODE ACTUATOR) OR ELSEWHERE <ul style="list-style-type: none"> • Switch the ignition to off. • Verify that continuity at the following harness-side connector terminals between climate control unit and GND. <ul style="list-style-type: none"> — Terminal 1V (24-pin, DEFROSTER mode motor drive signal) — Terminal 1X (24-pin, VENT mode motor drive signal) • Is there continuity? 	Yes	Repair wiring harness between climate control unit and airflow mode actuator. Then go to the Step 20.
		No	Go to the next step.
16	INSPECT AIRFLOW MODE ACTUATOR <ul style="list-style-type: none"> • Inspect airflow mode actuator. (See 07-40A-8 AIRFLOW MODE ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is airflow mode actuator normal? 	Yes	Go to the next step.
		No	Replace the airflow mode actuator. (See 07-40A-7 AIRFLOW MODE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) Then go to the Step 20.
17	INSPECT AIRFLOW MODE LINK <ul style="list-style-type: none"> • Inspect airflow mode links. <ul style="list-style-type: none"> — Is grease on link? — Are links securely and properly installed? — Are links free of obstructions and hindrances? • Are above items okay? 	Yes	Go to the next step.
		No	Apply grease to links. If any links are damaged, replace malfunctioning part. Then go to the Step 20.
18	INSPECT TO SEE WHETHER MALFUNCTION IS IN CLIMATE CONTROL UNIT OR AIRFLOW MODE DOOR <ul style="list-style-type: none"> • Inspect blower unit airflow mode door. <ul style="list-style-type: none"> — Is door free of obstructions, cracks and damage? — Are door securely and properly installed? • Are above items okay? 	Yes	Go to the next step.
		No	Remove the obstruction, or install door in proper position. If any doors are cracked or damaged, replace them. Then go to the Step 20.
19	VERIFY THAT DUCTS INSTALLATION CONDITION <ul style="list-style-type: none"> • Are following ducts installed properly? <ul style="list-style-type: none"> — Dashboard ducts — Defroster ducts 	Yes	Inspect ducts for clogging, deformity, and air leakage, then go to the next step.
		No	Install the suspected ducts properly, then go to the next step.
20	CONFIRM THAT MALFUNCTION SYMPTOM DOES NOT RECUR AFTER REPAIR <ul style="list-style-type: none"> • Does air blow out? 	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

NO.2 AMOUNT OF AIR BLOWN FROM VENTS DOES NOT CHANGE [FULL-AUTO AIR CONDITIONER]

id0703c1800500

2	Amount of air blown from vents does not change.
DESCRIPTION	<ul style="list-style-type: none"> • Malfunction in blower system
POSSIBLE CAUSE	<ul style="list-style-type: none"> • A/C unit malfunction • Blower motor malfunction • Malfunction in power MOS FET system • Climate control unit malfunction

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, inspect make sure connectors, terminals and wiring harnesses are connected correctly and undamaged.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	INSPECT HEATER 40 A FUSE <ul style="list-style-type: none"> • Inspect the HEATER 40 A fuse. • Is it normal? 	Yes	Go to the next step.
		No	Replace the fuse, then go to Step 15. If the fuse burns out immediately, go to the next step.
2	INSPECT TO SEE WHETHER MALFUNCTION IS IN A/C UNIT OR ELSEWHERE <ul style="list-style-type: none"> • Switch the ignition to ON. • Turn the fan dial clockwise. • Recirculate air inside the vehicle. • Does the blower motor rotate smoothly? 	Yes	Go to the next step.
		No	Go to Step 4.
3	INSPECT A/C UNIT INTAKE VENT <ul style="list-style-type: none"> • Is A/C unit intake vent clogged? 	Yes	Remove obstruction, then go to Step 15.
		No	Inspect if there are any obstruction in the A/C unit passage, then go to Step 15.
4*	INSPECT TO SEE WHETHER MALFUNCTION IS IN BLOWER RELAY SYSTEM OR POWER MOS FET SYSTEM <ul style="list-style-type: none"> • Switch the ignition to ON. • Push OFF switch. • Measure the voltage at the following blower motor terminal. <ul style="list-style-type: none"> — Terminal B (blower motor operation signal) • Is voltage approx. 12 V? 	Yes	Go to Step 8.
		No	Go to the next step.
5*	INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN FUSE BLOCK AND BLOWER RELAY) OR ELSEWHERE <ul style="list-style-type: none"> • Measure the voltage at the following blower relay terminals. <ul style="list-style-type: none"> — Terminal D (IG2 signal) — Terminal C (B+ signal) • Is the voltage approx. 12 V? 	Yes	Go to the next step.
		No	Repair the wiring harness between the blower relay and HEATER 40 A fuse / HEATER 10 A fuse, then go to Step 15.
6*	INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN BLOWER RELAY AND GROUND) OR ELSEWHERE <ul style="list-style-type: none"> • Measure the voltage at the following blower relay terminal. <ul style="list-style-type: none"> — Terminal B (GND signal) • Is the voltage approx. 0 V? 	Yes	Go to the next step.
		No	Repair the wiring harness between the blower relay and ground, then go to Step 15.
7*	INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN BLOWER RELAY AND BLOWER MOTOR) OR BLOWER RELAY <ul style="list-style-type: none"> • Switch the ignition to ON. • Measure the voltage at the following blower relay terminal. <ul style="list-style-type: none"> — Terminal A (blower motor operation signal) • Is the voltage approx. 12 V? 	Yes	Repair the wiring harness between the blower relay and blower motor, then go to Step 15.
		No	Replace the blower relay, then go to Step 15.

07-03A

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION	ACTION	
8*	INSPECT TO SEE WHETHER MALFUNCTION IS IN BLOWER MOTOR OR ELSEWHERE <ul style="list-style-type: none"> • Measure the voltage at the following blower motor terminal. <ul style="list-style-type: none"> — Terminal B (blower motor operation signal) • Is the voltage approx. 12 V? 	Yes	Go to the next step.
		No	Inspect the blower motor, then go to Step 15. (See 07-40A-15 BLOWER MOTOR INSPECTION [FULL-AUTO AIR CONDITIONER].)
9*	INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN BLOWER MOTOR AND POWER MOS FET) OR ELSEWHERE <ul style="list-style-type: none"> • Measure the voltage at the following terminal of power MOS FET. <ul style="list-style-type: none"> — Terminal B (blower motor operation signal) • Is voltage approx. 12 V? 	Yes	Go to the next step.
		No	Repair the wiring harness between the blower motor and power MOS FET, then go to Step 15.
10*	INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN POWER MOS FET AND GROUND) OR ELSEWHERE <ul style="list-style-type: none"> • Measure the voltage at the following power MOS FET terminal. <ul style="list-style-type: none"> — Terminal A (GND) • Is the voltage approx. 0 V? 	Yes	Go to the next step.
		No	Repair the wiring harness between the power MOS FET and ground, then go to Step 15.
11	INSPECT A/C UNIT <ul style="list-style-type: none"> • Inspect the fan in A/C unit. <ul style="list-style-type: none"> — Is the fan free of interference with the A/C unit case? — Is the fan free of foreign material and obstruction? • Is the fan normal? 	Yes	Go to the next step.
		No	Remove obstruction, repair or replace the fan and A/C unit case, then go to Step 15.
12*	INSPECT TO SEE WHETHER MALFUNCTION IS IN POWER MOS FET OR ELSEWHERE <ul style="list-style-type: none"> • Disconnect power MOS FET connector. • Turn the fan switch to 1st position from off. • Measure the voltage at the following power MOS FET terminal. <ul style="list-style-type: none"> — Terminal C (blower motor speed control signal) • Is voltage approx. 10 V? 	Yes	Replace the power MOS FET, then go to Step 15. (See 07-40A-16 POWER METAL OXIDE SEMICONDUCTOR FIELD EFFECT TRANSISTOR (POWER MOS FET) REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
		No	Go to the next step.
13*	INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN POWER MOS FET AND CLIMATE CONTROL UNIT) OR ELSEWHERE <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect climate control unit connector. • Inspect for continuity at the following terminals between the power MOS FET and climate control unit. <ul style="list-style-type: none"> — Terminal C—1M(blower motor speed control signal) — Terminal B—1N(blower motor speed feedback signal) • Is there continuity? 	Yes	Go to the next step.
		No	Repair the wiring harness between the power MOS FET and climate control unit, then go to Step 15.
14*	INSPECT TO SEE WHETHER MALFUNCTION IS IN CLIMATE CONTROL UNIT OR WIRING HARNESS (SHORT TO GROUND IN WIRING HARNESS BETWEEN POWER MOS FET AND CLIMATE CONTROL UNIT) <ul style="list-style-type: none"> • Inspect for continuity at the following terminal between the power MOS FET and ground. <ul style="list-style-type: none"> — Terminal C (blower motor control signal)—ground — Terminal B (blower motor feedback signal)—ground • Is there continuity? 	Yes	Repair the wiring harness between the power MOS FET and ground, then go to the next step.
		No	Replace the climate control unit, then go to the next step.

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION		ACTION
15	CONFIRM THAT MALFUNCTION SYMPTOM DOES NOT RECUR AFTER REPAIR <ul style="list-style-type: none"> • Is air discharged from vent? 	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

NO.3 AIR INTAKE MODE FROM VENT DOES NOT CHANGE [FULL-AUTO AIR CONDITIONER]

id0703c1803000

3	Air intake mode from vent does not change.
DESCRIPTION	<ul style="list-style-type: none"> • Air intake mode does not change when switching REC/FRESH mode.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Air intake actuator malfunction • Air intake door malfunction

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, inspect to make sure connectors, terminals and wiring harnesses are connected correctly and undamaged.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	INSPECT AIR INTAKE ACTUATOR <ul style="list-style-type: none"> • Inspect the air intake actuator. • Is the air intake actuator normal? 	Yes	Go to the next step.
		No	Replace the air intake actuator, then go to Step 9.
2*	INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN AIR INTAKE ACTUATOR, WIRING HARNESS (BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR) OR ELSEWHERE <ul style="list-style-type: none"> • Switch the ignition to ON. • Measure the voltages at the following climate control unit terminals. <ul style="list-style-type: none"> — Terminal 1R (24-pin, FRESH motor drive signal) — Terminal 1T (24-pin, RECIRCULATE motor drive signal) (See 07-40A-26 CLIMATE CONTROL UNIT INSPECTION [FULL-AUTO AIR CONDITIONER].) • Are voltages normal? 	Yes	Go to the next step.
		No	Go to Step 4.
3*	INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN AIR INTAKE ACTUATOR OR WIRING HARNESS (BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR) <ul style="list-style-type: none"> • Measure the voltages at the following air intake actuator terminals. <ul style="list-style-type: none"> — Terminal C (FRESH motor drive signal) — Terminal B (RECIRCULATE motor drive signal) • Are voltages as shown below? <ul style="list-style-type: none"> — Terminal C: approx. 0.5 V during RECIRCULATE and approx. 10 V during FRESH — Terminal B: approx. 10 V during RECIRCULATE and approx. 0.5 V during FRESH 	Yes	Go to Step 7.
		No	Repair the wiring harness between the climate control unit and air intake actuator, then go to Step 9.

07-03A

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION	ACTION	
4*	INSPECT TO SEE WHETHER MALFUNCTION IS IN AIR INTAKE ACTUATOR OR ELSEWHERE <ul style="list-style-type: none"> • Disconnect the air intake actuator connector. • Measure the voltages at the following climate control unit terminals. <ul style="list-style-type: none"> — Terminal 1R (FRESH motor drive signal) — Terminal 1T (RECIRCULATE motor drive signal) (See 07-40A-26 CLIMATE CONTROL UNIT INSPECTION [FULL-AUTO AIR CONDITIONER].) • Are voltages normal? 	Yes	Inspect the air intake actuator, then go to Step 9.
		No	Go to the next step.
5*	INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (SHORT TO B+ BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR) OR ELSEWHERE <ul style="list-style-type: none"> • Disconnect the climate control unit connector. • Measure the voltages at the following climate control unit terminals. <ul style="list-style-type: none"> — Terminal 1R (FRESH motor drive signal) — Terminal 1T (RECIRCULATE motor drive signal) • Are voltages approx. 0 V? 	Yes	Go to the next step.
		No	Repair the wiring harness between the climate control unit and air intake actuator, then go to Step 9.
6*	INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (SHORT TO GROUND BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR) OR ELSEWHERE <ul style="list-style-type: none"> • Switch the ignition to off. • Inspect for continuity at the following terminals between the climate control unit and ground. <ul style="list-style-type: none"> — Terminal 1R (FRESH motor drive signal) — Terminal 1T (RECIRCULATE motor drive signal) • Is there continuity? 	Yes	Repair the wiring harness between the climate control unit and air intake actuator, then go to Step 9.
		No	Go to the next step.
7	INSPECT AIR INTAKE LINK <ul style="list-style-type: none"> • Inspect the air intake links. <ul style="list-style-type: none"> — Is there grease on link? — Are the links securely and properly installed? — Are the links free of obstructions and hindrances? • Are the above items normal? 	Yes	Go to the next step.
		No	Apply grease to the links. If any the links are damaged, replace the air intake actuator, then go to Step 9.
8	INSPECT TO SEE WHETHER MALFUNCTION IS IN CLIMATE CONTROL UNIT OR AIR INTAKE DOOR <ul style="list-style-type: none"> • Inspect the blower unit air intake door. <ul style="list-style-type: none"> — Is the door free of obstructions, cracks, and damage? — Are the doors securely and properly installed? • Are the above items normal? 	Yes	Replace the climate control unit, then go to the next step.
		No	Remove obstruction, or install the doors in the proper position. If any doors are cracked or damaged, replace them, then go to the next step.
9	CONFIRM THAT MALFUNCTION SYMPTOMS DO NOT RECUR AFTER REPAIR <ul style="list-style-type: none"> • Does the air intake mode change smoothly? 	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

NO.4 NO TEMPERATURE CONTROL WITH CLIMATE CONTROL UNIT [FULL-AUTO AIR CONDITIONER]

id0702c1812400

4	No temperature control with climate control unit
DESCRIPTION	<ul style="list-style-type: none"> Temperature does not change when operating temperature dial Malfunction in A/C unit and/or climate control unit air mix system Malfunction in driver and/or passenger side air mix actuator or related wiring harness
POSSIBLE CAUSE	<ul style="list-style-type: none"> A/C unit air mix link, air mix crank, air mix rod, malfunction Climate control unit rack-and-pinion, malfunction A/C unit air mix door malfunction Heater piping malfunction

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while doing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, inspect to make sure connectors, terminals and wiring harness are connected correctly and undamaged.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	INSPECT COOLANT TEMPERATURE <ul style="list-style-type: none"> Is the coolant sufficiently warmed up? 	Yes	Go to the next step.
		No	Warm up the engine, then go to Step 9.
2*	INSPECT CLIMATE CONTROL UNIT POWER SUPPLY FUSE FOR B+ SIGNAL <ul style="list-style-type: none"> Is the climate control unit power supply fuse for B+ signal normal?. 	Yes	Go to the next step.
		No	Inspect for short to GND in blown fuse circuit. Repair or replace as necessary. Install appropriate amperage fuse then go to Step 21.
3*	INSPECT TO SEE WHETHER MALFUNCTION (OPEN CIRCUIT) IS IN B+ SIGNAL WIRING HARNESS (BETWEEN FUSE BLOCK AND CLIMATE CONTROL UNIT) OR ELSEWHERE. <ul style="list-style-type: none"> Disconnect the climate control unit connector (16-pin). Switch the ignition to ON. Measure voltage at climate control unit harness-side connector (16-pin) terminal 2B (B+ signal). Is the voltage approx. 12V? 	Yes	Go to the next step.
		No	Repair wiring harness between fuse block and climate control unit, then go to Step 21.
*4	INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) WIRING HARNESS (BETWEEN CLIMATE CONTROL UNIT AND GND) OR ELSEWHERE <ul style="list-style-type: none"> Climate control unit connector (24-pin) disconnected. Verify that continuity between climate control unit harness-side connector (24-pin) terminal 1D and GND. Is the continuity? 	Yes	Go to the next step.
		No	Repair wiring harness between climate control unit and GND. Inspect GND point condition. Then go to Step 21.
*5	INSPECT TO SEE WHETHER MALFUNCTION IS IN BLOWER UNIT OR AIR MIX ACTUATOR <ul style="list-style-type: none"> Switch the ignition to ON. Measure the voltage at climate control unit terminal 1G (drive-side) and 1I (passenger-side) (24-pin) when temperature control dial at MAX HOT and MAX COLD. (See 07-40A-26 CLIMATE CONTROL UNIT INSPECTION [FULL-AUTO AIR CONDITIONER].) Is voltage normal? 	Yes	Go to Step 17.
		No	Go to the next step.
*6	INSPECT TO SEE WHETHER MALFUNCTION IS IN POSITION SENSOR OR ELSEWHERE <ul style="list-style-type: none"> Switch the ignition to ON. Measure voltage at climate control unit terminal 1K (24-pin) when airflow mode change to DEF and VENT (See 07-40A-26 CLIMATE CONTROL UNIT INSPECTION [FULL-AUTO AIR CONDITIONER].) Is voltage normal? 	Yes	Go to Step 9.
		No	Go to the next step.

07-03A

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION	ACTION	
*7	INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY OR SHORT TO BATTERY POWER OR GND) IS IN POSITION SENSOR POWER SUPPLY (CLIMATE CONTROL UNIT TERMINAL 1C) OR ELSEWHERE <ul style="list-style-type: none"> • Switch the ignition to ON. • Measure voltage at climate control unit terminal 1C (24-pin). • Is voltage approx. 5V? 	Yes	Go to the next step.
		No	Repair wiring harness between climate control unit terminal 1C and follows: <ul style="list-style-type: none"> • Driver side air mix actuator terminal G • Passenger side air mix actuator terminal E • Airflow mode actuator terminal B Then go to Step 21.
*8	INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY OR OPEN) IS IN POSITION SENSOR GND (CLIMATE CONTROL UNIT TERMINAL 1E) OR ELSEWHERE <ul style="list-style-type: none"> • Measure voltage at climate control unit terminal 1E (24-pin). • Is the voltage below. 1.0V? 	Yes	Go to Step 12.
		No	Repair wiring harness between climate control unit terminal 1E and follows: <ul style="list-style-type: none"> • Driver side air mix actuator terminal E • Passenger side air mix actuator terminal G • Airflow mode actuator terminal A Then go to Step 21.
*9	INSPECT TO SEE WHETHER MALFUNCTION (SHORT TO POWER) IS IN WIRING HARNESS (AIR MIX POSITION SIGNAL) OR ELSEWHERE <ul style="list-style-type: none"> • Is climate unit terminal 1G (driver-side) and 1I (passenger-side) voltage approx. 12V, at Step 5? 	Yes	Repair wiring harness between climate control unit terminal 1G (driver-side) and 1I (passenger-side) and each side air mix actuator terminal F. Then go to Step 21.
		No	Go to the next step.
*10	INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN WIRING HARNESS (AIR MIX POSITION SIGNAL) OR ELSEWHERE <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the climate control and air mix actuator connectors. • Verify continuity between climate control unit terminal 1G (driver-side) and 1I (passenger-side) (24-pin) and each side air mix actuator terminal F at harness-side connector. • Is there continuity? 	Yes	Go to the next step.
		No	Repair wiring harness between climate control unit terminal 1G (driver-side) and 1I (passenger-side) and each side air mix actuator terminal F. Then go to Step 21.
*11	INSPECT TO SEE WHETHER MALFUNCTION (SHORT TO GND) IS IN WIRING HARNESS (AIR MIX POSITION SIGNAL) OR POSITION SENSOR COMMON (POWER SUPPLY OR GND) HARNESS <ul style="list-style-type: none"> • Verify continuity between climate control unit harness-side connector terminal 1G (driver-side) and 1I (passenger-side) (24-pin) and GND. • Is there continuity? 	Yes	Repair wiring harness between climate control unit terminal 1G (driver-side) and 1I (passenger-side) and each side air mix actuator terminal F. Then go to Step 21.
		No	Inspect and repair for open circuit following: <ul style="list-style-type: none"> • Between driver side air mix actuator terminal G and junction point to airflow mode actuator (position sensor power supply). • Between passenger side air mix actuator terminal E and junction point to airflow mode actuator (position sensor power supply). • Between driver side air mix actuator terminal E and junction point to airflow mode actuator (position sensor GND). • Between passenger side air mix actuator terminal G and junction point to airflow mode actuator (position sensor GND). Then go to Step 21.

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION	ACTION	
*12	<p>INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN AIR MIX ACTUATOR WIRING HARNESS (BETWEEN CLIMATE CONTROL UNIT AND AIR MIX ACTUATOR) OR ELSEWHERE</p> <ul style="list-style-type: none"> • Switch the ignition to ON. • Measure voltage at the following terminals of climate control unit. <p>Driver-side:</p> <ul style="list-style-type: none"> — Terminal 1U (24-pin, COLD motor drive signal) — Terminal 1W (24-pin, HOT motor drive signal) <p>Passenger-side</p> <ul style="list-style-type: none"> — Terminal 1Q (24-pin, COLD motor drive signal) — Terminal 1S (24-pin, HOT motor drive signal) <p>(See 07-40A-26 CLIMATE CONTROL UNIT INSPECTION [FULL-AUTO AIR CONDITIONER].)</p> <ul style="list-style-type: none"> • Are voltages okay? 	Yes	Go to the next step.
		No	Go to Step 14.
*13	<p>INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN AIR MIX ACTUATOR OR WIRING HARNESS (BETWEEN CLIMATE CONTROL UNIT AND AIR MIX ACTUATOR)</p> <ul style="list-style-type: none"> • Measure voltage at the following terminals of air mix actuator. — Terminal C (driver-side)/B (passenger-side) (COLD motor drive signal) — Terminal B (driver-side)/C (passenger-side) (HOT motor drive signal) <ul style="list-style-type: none"> • Are voltage s as shown below? — COLD motor drive signal: approx. 10V during COLD and approx. 0.5V during HOT — HOT motor drive signal: approx. 0.5V during HOT and approx. 10V during HOT 	Yes	Go to Step 14.
		No	Repair wiring harness between climate control unit and air mix actuator. Then go to Step 21.
*14	<p>INSPECT TO SEE WHETHER MALFUNCTION IS IN AIR MIX ACTUATOR OR ELSEWHERE</p> <ul style="list-style-type: none"> • Disconnect the air mix actuator. • Measure voltage at the following terminals of climate control unit. <p>Driver-side:</p> <ul style="list-style-type: none"> — Terminal 1U (24-pin, COLD motor drive signal) — Terminal 1W (24-pin, HOT motor drive signal) <p>Passenger-side</p> <ul style="list-style-type: none"> — Terminal 1Q (24-pin, COLD motor drive signal) — Terminal 1S (24-pin, HOT motor drive signal) <p>(See 07-40A-26 CLIMATE CONTROL UNIT INSPECTION [FULL-AUTO AIR CONDITIONER].)</p> <ul style="list-style-type: none"> • Are voltages okay? 	Yes	Go to the next step.
		No	Repair wiring between climate control unit and air mix actuator. Then go to Step 21.

07-03A

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION	ACTION	
*15	INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (SHORT TO B+ BETWEEN CLIMATE CONTROL UNIT AND AIR MIX ACTUATOR) OR ELSEWHERE <ul style="list-style-type: none"> • Disconnect the climate control unit connector. • Measure voltage at the following terminals of the climate control unit harness-side connector. <p>Driver-side:</p> <ul style="list-style-type: none"> — Terminal 1U (24-pin, COLD motor drive signal) — Terminal 1W (24-pin, HOT motor drive signal) <p>Passenger-side</p> <ul style="list-style-type: none"> — Terminal 1Q (24-pin, COLD motor drive signal) — Terminal 1S (24-pin, HOT motor drive signal) • Are voltages approx. 0V? 	Yes	Go to the next step.
		No	Repair wiring harness between climate control unit and air mix actuator. Then go to Step 21.
*16	INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (SHORT TO GND BETWEEN CLIMATE CONTROL UNIT AND AIR MIX ACTUATOR) OR ELSEWHERE <ul style="list-style-type: none"> • Switch the ignition to off. • Verify that continuity at the following harness-side connector terminals between climate control unit and GND. <p>Driver-side:</p> <ul style="list-style-type: none"> — Terminal 1U (24-pin, COLD motor drive signal) — Terminal 1W (24-pin, HOT motor drive signal) <p>Passenger-side:</p> <ul style="list-style-type: none"> — Terminal 1Q (24-pin, COLD motor drive signal) — Terminal 1S (24-pin, HOT motor drive signal) • Is there continuity? 	Yes	Repair wiring harness between climate control unit and air mix actuator. Then go to Step 21.
		No	Go to the next step.
17	INSPECT AIR MIX ACTUATOR <ul style="list-style-type: none"> • Inspect the air mix actuator. (See 07-40A-5 AIR MIX ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is air mix actuator normal? 	Yes	Go to the next step.
		No	Replace the suspected side air mix actuator. Then go to 21. (See 07-40A-4 AIR MIX ACTUATOR REMOVAL/ INSTALLATION [FULL-AUTO AIR CONDITIONER].)
18	INSPECT AIR MIX LINK <ul style="list-style-type: none"> • Inspect air mix links for each-side. <ul style="list-style-type: none"> — Is grease on link? — Are links securely and properly installed? — Are links free of obstructions and hindrances? • Are above items okay? 	Yes	Go to the next step.
		No	Apply grease to links. If any links are damaged. replace malfunctioning part. Then go to Step 21.
19	INSPECT TO SEE WHETHER MALFUNCTION IS IN CLIMATE CONTROL UNIT OR AIR MIX DOOR ELSEWHERE <ul style="list-style-type: none"> • Inspect blower unit and each-side air mix door. <ul style="list-style-type: none"> — Is door free of unit and obstruction, and damage? — Are doors securely and properly installed? • Are above items okay? 	Yes	Go to the next step.
		No	Remove the obstruction, or install door in proper position. If any door are cracked, replace them. Then go to the next step.

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION	ACTION
20	INSPECT HEATER LINES <ul style="list-style-type: none"> Inspect heater lines for followings: <ul style="list-style-type: none"> Is heater piping free if damage and cracks? Are heater piping connections free of engine coolant leakage? Are heater piping installation points on A/C unit free of engine coolant leakage? Are above items okay? 	Yes Replace the climate control unit. Then go to the next step. (See 07-40A-26 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
		No If heater piping connections is loosed, tighten connections with specified torque. Repair or replace heater piping. Then go to the next step.
21	VERIFY THAT MALFUNCTION SYMPTOM OCCURS AFTER REPAIR <ul style="list-style-type: none"> Does the unit operate in every temperature setting? 	Yes Trouble shooting completed. Explain repairs customer.
		No Recheck malfunction symptoms, then repeat from Step1 if the malfunction recurs.

NO.5 WINDSHIELD FOGGED [FULL-AUTO AIR CONDITIONER]

id0703c1801900

5	Windshield fogged.
DESCRIPTION	<ul style="list-style-type: none"> A/C compressor does not operate while airflow mode is in DEFROSTER or HEAT/DEF modes. Air intake mode does not change to FRESH while airflow mode is in DEFROSTER or HEAT/DEF modes.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Climate control unit (B+ signal) system malfunction Air intake actuator malfunction Climate control unit (RECIRCULATE, FRESH signal) system malfunction A/C unit air intake door malfunction

07-03A

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while doing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, inspect to make sure connectors, terminals and wiring harness are connected correctly and undamaged.

Diagnostic procedure

STEP	INSPECTION	ACTION
1	COOL AIR BLOW OUT INSPECTION <ul style="list-style-type: none"> When both the A/C and fan switch in the climate control unit are on, does cool air blow out from the front vent? 	Yes Go to the next step.
		No Go to Step 1 of troubleshooting index No.7.
2	INSPECT CLIMATE CONTROL UNIT POWER SUPPLY FUSE FOR B+ SIGNAL <ul style="list-style-type: none"> Is the climate control unit power supply fuse for B+ signal normal? 	Yes Go to the next step.
		No Inspect for a short to ground on blown fuse circuit. <ul style="list-style-type: none"> Repair or replace if necessary. Install appropriate amperage fuse.
3	INSPECT AIR INTAKE ACTUATOR <ul style="list-style-type: none"> Inspect the air intake actuator. <ul style="list-style-type: none"> Is there grease on the link? Is the link securely and properly positioned? Is the link free of obstructions? Are the above items normal? 	Yes Go to the next step.
		No Apply grease or install the link properly and securely, remove obstruction, then go to Step 14.
*4	INSPECT WIRING HARNESS BETWEEN FUSE BLOCK AND CLIMATE CONTROL UNIT FOR CONTINUITY <ul style="list-style-type: none"> Disconnect the climate control unit connector (16-pin). Switch the ignition to ON. Measure the voltage at climate control unit terminal 2B (B+ signal). Is the voltage approx. 12 V? 	Yes Go to the next step.
		No Repair the wiring harness between the fuse block and climate control unit, then go to Step 14.
*5	INSPECT WIRING HARNESS BETWEEN CLIMATE CONTROL UNIT AND GROUND FOR VOLTAGE <ul style="list-style-type: none"> Measure the voltage at climate control unit terminal 1D (Ground). Is the voltage approx. 0V? 	Yes Go to the next step.
		No Repair the wiring harness between the climate control unit and ground, then go to Step 14.

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION	ACTION	
6	VERIFY WHETHER MALFUNCTION IS IN A/C UNIT AIR INTAKE DOOR OR ELSEWHERE <ul style="list-style-type: none"> • Switch the ignition to off. • Connect the climate control unit connector (24-pin and 16-pin). • Remove the air intake actuator. • Switch the ignition to ON. • Set the fan switch to MAX position. • Does the air intake mode (RECIRCULATE, FRESH) change smoothly when the air intake link is operated by hand? 	Yes	Go to the next step.
		No	Go to Step 12.
7	INSPECT AIR INTAKE ACTUATOR <ul style="list-style-type: none"> • Inspect the air intake actuator. (See 07-40A-4 AIR INTAKE ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is it normal? 	Yes	Go to the next step.
		No	Replace the air intake actuator, go to Step 14.
8	INSPECT AIR INTAKE SELECTOR SWITCH AND DEFROSTER SWITCH IN CLIMATE CONTROL UNIT <ul style="list-style-type: none"> • Measure the voltage at climate control unit connector (24-pin) terminals 1R and 1T. • Is it normal? 	Yes	Go to the next step.
		No	Replace the climate control unit, then go to Step 14.
*9	INSPECT WIRING HARNESS BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR FOR CONTINUITY <ul style="list-style-type: none"> • Switch the ignition off. • Is there continuity between the following climate control unit terminals and air intake actuator terminals? <ul style="list-style-type: none"> — Terminal 1R —Terminal C (FRESH signal) — Terminal 1T —Terminal B (RECIRCULATE signal) 	Yes	Go to the next step.
		No	Repair the wiring harness between the climate control unit and air intake actuator, then go to Step 14.
*10	INSPECT WIRING HARNESS BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR FOR SHORT TO GROUND <ul style="list-style-type: none"> • Is there continuity between the following climate control unit terminals and ground? <ul style="list-style-type: none"> — Terminal 1R (FRESH signal) — Terminal 1T (RECIRCULATE signal) 	Yes	Repair the wiring harness between the climate control unit and air intake actuator, then go to Step 14.
		No	Go to the next step.
*11	INSPECT WIRING HARNESS BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR FOR SHORT TO B+ <ul style="list-style-type: none"> • Switch the ignition to ON. • Measure the voltage at the following climate control unit terminals. <ul style="list-style-type: none"> — Terminal 1R (FRESH signal) — Terminal 1T (RECIRCULATE signal) • Is the voltage approx. 12 V? 	Yes	Repair the wiring harness between the climate control unit and air intake actuator, then go to Step 14.
		No	Replace the climate control unit, then go to Step 14.
12	INSPECT A/C UNIT AIR INTAKE DOOR <ul style="list-style-type: none"> • Is there any foreign material or obstruction in the A/C unit air intake door? 	Yes	Remove obstruction, then go to Step 14.
		No	Go to the next step.
13	VERIFY THAT A/C UNIT AIR INTAKE DOOR IS POSITIONED SECURELY AND PROPERLY <ul style="list-style-type: none"> • Is the A/C unit air intake door securely and properly positioned? 	Yes	Inspect the air intake door for cracks or damage, then go to the next step.
		No	Install the air intake door securely in the proper position, then go to the next step.
14	VERIFY THAT MALFUNCTION SYMPTOM OCCURS AFTER REPAIR <ul style="list-style-type: none"> • Does the malfunction disappear? 	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

NO.6 AIR FROM VENTS NOT COLD ENOUGH [FULL-AUTO AIR CONDITIONER]

id0702c1812500

6	Air from vents not cold enough.
DESCRIPTION	<ul style="list-style-type: none"> • Magnetic clutch operates but A/C system malfunctions.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Drive belt malfunction • A/C pressure sensor malfunction • Malfunction in blower unit or condenser • Cooling fan system malfunction • Condenser or related part malfunction • A/C unit or condenser malfunction • Receiver/drier or expansion valve malfunction (valve closes too mach) • Malfunction in refrigerant lines • A/C compressor system malfunction, insufficient compressor oil • Over filling of compressor oil, malfunction in expansion valve or A/C unit air mix link system • Evaporative temperature sensor malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	INSPECT REFRIGERANT SYSTEM PERFORMANCE <ul style="list-style-type: none"> • Perform refrigerant system performance test. (See 07-10-7 REFRIGERANT SYSTEM PERFORMANCE TEST.) • Is the operation normal? 	Yes	Operation is normal. (Recheck malfunction symptoms.)
		No	Go to the next step.
2	INSPECT DRIVE BELT <ul style="list-style-type: none"> • Inspect the drive belt. (See 01-10A-5 DRIVE BELT INSPECTION [LF, L5].) • (See 01-10B-4 DRIVE BELT INSPECTION [L3 WITH TC].) • Is it normal? 	Yes	Go to the next step.
		No	Adjust or replace the drive belt, then the next step. (See 01-10A-6 DRIVE BELT REMOVAL/INSTALLATION [LF, L5].)
3	INSPECT REFRIGERANT PRESSURE SENSOR <ul style="list-style-type: none"> • Inspect the refrigerant pressure sensor. (See 07-40A-25 REFRIGERANT PRESSURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is it normal? 	Yes	Go to the next step.
		No	Replace the refrigerant pressure sensor, then go to Step 24. (See 07-40A-26 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
4	INSPECT REFRIGERANT PRESSURE SENSOR RELATED HARNESS <ul style="list-style-type: none"> • Inspect following refrigerant pressure sensor wiring harness (open or short circuit) and connectors (corrosion, pulled out pins) <ul style="list-style-type: none"> — Climate control unit terminal 1C and refrigerant pressure sensor terminal A — Climate control unit terminal 1E and refrigerant pressure sensor terminal C — Climate control unit terminal 2J and refrigerant pressure sensor terminal B • Is it normal? 	Yes	Replace the refrigerant pressure sensor, then go to Step 24. (See 07-40A-26 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
		No	Repair wiring harness between climate control unit and refrigerant pressure sensor. Go to the next step.
5	CHECK TO SEE WHETHER MALFUNCTION IS IN BLOWER UNIT INTAKE AND CONDENSER OR ELSEWHERE <ul style="list-style-type: none"> • Perform refrigerant pressure check. (See 07-10-6 REFRIGERANT PRESSURE CHECK.) • Are the refrigerant high-pressure and low-pressure values both high? 	Yes	Go to the next step.
		No	After recording the inspection results, go to Step 10.
6	INSPECT COOLING FAN OPERATION <ul style="list-style-type: none"> • Verify the cooling fan operation. (See 01-12A-15 COOLING FAN COMPONENT INSPECTION [LF, L5].) • (See 01-12B-15 COOLING FAN COMPONENT INSPECTION [L3 WITH TC].) • Is the cooling fan operation normal? 	Yes	Go to the next step.
		No	Repair or replace the malfunctioning location according to the inspection results. Then go to Step 24.

07-03A

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION	ACTION
7	VISUALLY INSPECT CONDENSER <ul style="list-style-type: none"> • Is the condenser fin clogged or obstructed by foreign material? 	Yes Remove the foreign material. Repair the condenser fin. Then go to Step 24.
		No Go to the next step.
8	CHECK TO SEE WHETHER MALFUNCTION IS IN EXPANSION VALVE OR ELSEWHERE <ul style="list-style-type: none"> • Verify the condition of the low pressure hose while the A/C is operating. • Is there frost or condensation adhering? 	Yes Replace the expansion valve. After performing the following servicing, go to Step 24. <ul style="list-style-type: none"> • Adjust the compressor oil to the specified level. • After discharging, charge with new refrigerant to the specified level.
		No Go to the next step.
9	INSPECT AIR MIX DOOR RELATED PART INSTALLATION <ul style="list-style-type: none"> • Remove the A/C unit. (See 07-11-4 A/C UNIT REMOVAL/INSTALLATION.) • Are the air mix link, air mix crank, and air mix rod of the A/C unit correctly and securely installed to their positions? 	Yes Adjust the compressor oil to the specified amount, then go to Step 24. (See 07-11-18 A/C COMPRESSOR REMOVAL/INSTALLATION.)
		No Repair or install the links, cranks and rods securely in the proper position, then go to Step 24.
10	CHECK TO SEE WHETHER MALFUNCTION IS IN BLOWER UNIT AND REFRIGERANT PRESSURE LINE OR ELSEWHERE <ul style="list-style-type: none"> • Are the refrigerant high-pressure and low-pressure values low? 	Yes Go to the next step.
		No Go to Step 17.
11	INSPECT BLOWER UNIT FOR BLOCKAGE <ul style="list-style-type: none"> • Is the blower unit intake and air filter clogged? 	Yes Remove the cause of the clogging. Replace the air filter if it is clogged. (See 07-11-3 AIR FILTER REMOVAL/INSTALLATION.) Then go to Step 24.
		No Go to the next step.
12	CHECK TO SEE WHETHER MALFUNCTION IS REFRIGERANT LINE LEAKAGE OR ELSEWHERE <ul style="list-style-type: none"> • Verify if there is gas leakage from the system hoses using the gas leak tester. • Is there gas leakage? 	Yes If there is leakage from a system hose connection area, go to Step 14. If there is leakage other than from a system hose connection area, go to Step 16.
		No Go to the next step.
13	VISUALLY INSPECT REFRIGERANT LINE <ul style="list-style-type: none"> • Is a system hose crushed? 	Yes Replace the crushed system hose. (See 07-11-24 REFRIGERANT LINE REMOVAL/INSTALLATION.) After performing the following servicing, go to Step 24. <ul style="list-style-type: none"> • Adjust the compressor oil to the specified level. • After discharging, charge with new refrigerant to the specified level.
		No Go to Step 23.
14	CHECK TO SEE WHETHER MALFUNCTION IS IN REFRIGERANT LINE JOINT LOOSE OR O-RING <ul style="list-style-type: none"> • Tighten the system hose connection area to the specified torque. (See 07-11-24 REFRIGERANT LINE REMOVAL/INSTALLATION.) • Has the leakage stopped? 	Yes Go to the next step.
		No Go to Step 16.
15	VISUALLY INSPECT REFRIGERANT LINE <ul style="list-style-type: none"> • Is a system hose crushed? 	Yes Replace the crushed system hose. (See 07-11-24 REFRIGERANT LINE REMOVAL/INSTALLATION.) After performing the following servicing, go to Step 24. <ul style="list-style-type: none"> • Adjust the compressor oil to the specified level. • After discharging, charge with new refrigerant to the specified level.
		No Adjust the compressor oil to the specified amount, then go to Step 24. (See 07-11-18 A/C COMPRESSOR REMOVAL/INSTALLATION.)

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION	ACTION
16	VISUALLY INSPECT REFRIGERANT LINE <ul style="list-style-type: none"> Is a system hose crushed? 	Yes Replace the O-ring of the leaking area. Replace the crushed system hose. (See 07-11-24 REFRIGERANT LINE REMOVAL/INSTALLATION.) After performing the following servicing, go to Step 24. <ul style="list-style-type: none"> Adjust the compressor oil to the specified level. After discharging, charge with new refrigerant to the specified level.
		No Replace the O-ring of the leaking area. After performing the following servicing, go to Step 24. <ul style="list-style-type: none"> Adjust the compressor oil to the specified level. After discharging, charge with new refrigerant to the specified level.
17	CHECK TO SEE WHETHER MALFUNCTION IS IN CONDENSER AND EXPANSION VALVE OR ELSEWHERE <ul style="list-style-type: none"> Do the results of the refrigerant pressure inspection in Step 4 indicate vacuum on the low pressure side and extremely low pressure on the high pressure side? 	Yes Go to the next step.
		No Go to Step 21.
18	CHECK TO SEE WHETHER MALFUNCTION IS IN EXPANSION VALVE AND RECEIVER/DRIER OR ELSEWHERE <ul style="list-style-type: none"> Is there is no refrigerant pressure on the low pressure side, or is it normal? 	Yes Replace the condenser. (See 07-11-20 CONDENSER REMOVAL/INSTALLATION.) After performing the following servicing, go to Step 24. <ul style="list-style-type: none"> Adjust the compressor oil to the specified level. After discharging, charge with new refrigerant to the specified level.
		No Go to the next step.
19	CHECK TO SEE WHETHER MALFUNCTION IS IN CONDENSER OR EXPANSION VALVE <ul style="list-style-type: none"> Verify the condition of the outlet hose on the condenser high pressure side. Is there condensation in the hose? 	Yes Replace the condenser. (See 07-11-20 CONDENSER REMOVAL/INSTALLATION.) After performing the following servicing, go to Step 24. <ul style="list-style-type: none"> Adjust the compressor oil to the specified level. After discharging, charge with new refrigerant to the specified level.
		No Go to the next step.
20	INSPECT EXPANSION VALVE <ul style="list-style-type: none"> Remove the expansion valve and verify its condition. Is there refrigerant leakage or valve clogging? 	Yes If there is foreign matter clogging the valve, remove the foreign matter.If there is refrigerant leakage or clogging, replace the expansion valve.Perform discharge, charge with new refrigerant, and then go to Step 24.
		No Install the expansion valve, then go to Step 23.
21	CHECK TO SEE WHETHER MALFUNCTION IS IN A/C COMPRESSOR OR ELSEWHERE <ul style="list-style-type: none"> Do the results of the refrigerant pressure inspection in Step 4 indicate low pressure on the high pressure side and high pressure on the low pressure side? 	Yes Replace the A/C compressor, then go to Step 24. (See 07-11-18 A/C COMPRESSOR REMOVAL/INSTALLATION.)
		No Go to the next step.
22	INSPECT EVAPORATIVE TEMPERATURE SENSOR <ul style="list-style-type: none"> Inspect the evaporator temperature sensor. (See 07-11-10 A/C UNIT DISASSEMBLY/ASSEMBLY.) Is it normal? 	Yes Verify the evaporator temperature sensor position. (See 07-11-10 A/C UNIT DISASSEMBLY/ASSEMBLY.) Then go to Step 24.
		No Replace the evaporator temperature sensor, then go to Step 24. (See 07-11-10 A/C UNIT DISASSEMBLY/ASSEMBLY.)
23	INSPECT AIR MIX DOOR RELATED PART INSTALLATION <ul style="list-style-type: none"> Remove the A/C unit. (See 07-11-4 A/C UNIT REMOVAL/INSTALLATION.) Are the air mix link, air mix crank, and air mix rod of the A/C unit correctly and securely installed to their positions? 	Yes Go to the next step.
		No Repair or install the links, cranks and rods securely in the proper position, then go to the next step. (See 07-11-10 A/C UNIT DISASSEMBLY/ASSEMBLY.)

07-03A

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION	ACTION	
24	VERIFY THAT MALFUNCTION SYMPTOM OCCURS AFTER REPAIR <ul style="list-style-type: none"> If the refrigerant discharged during inspection has not been recharged, discharge and charge with new refrigerant to the specified level. Does cool air blow out? (Are results of refrigerant system performance test normal?) 	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

NO.7 NO COOL AIR [FULL-AUTO AIR CONDITIONER]

id0702c1812600

7	No cool air
DESCRIPTION	<ul style="list-style-type: none"> Magnetic clutch does not operate.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Malfunction in PCM A/C cut control system Malfunction in climate control unit Malfunction in refrigerant pressure sensor Malfunction in PCM (A/C signal) Malfunction in PCM (IG1 signal) Malfunction in A/C compressor Malfunction in A/C relay Malfunction in evaporator temperature sensor Malfunction in BCM Malfunction in instrument cluster Malfunction in CAN communication Improper refrigerant charging amount

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, check to make sure connectors, terminals and wiring harnesses are connected correctly and undamaged.

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	INSPECT AIR BLOW OUT <ul style="list-style-type: none"> Does air blow out? 	Yes	Go to the next step.
		No	Go to Step 1 of troubleshooting indexes No.1 and 2.
2	INSPECT A/C COMPRESSOR OPERATION <ul style="list-style-type: none"> Start engine. Turn A/C switch and fan switch on. Does A/C compressor operate? 	Yes	Go to Step 1 of troubleshooting index No.6.
		No	Go to the next step.
3	INSPECT FOR DTC IN PCM <ul style="list-style-type: none"> Inspect for DTCs related to the PCM on-board diagnostic system. Are any DTCs displayed? 	Yes	Go to appropriate inspection procedure.
		No	Go to the next step.
4	CONFIRM DTC U0010:88, U0001:88, U0100:00 AND U0164:00 USING M-MDS <ul style="list-style-type: none"> Retrieve DTC from climate control unit and Instrument cluster. Are DTCs (U0010:88, U0001:88, U0100:00, U0164:00) retrieved? 	Yes	Network communication, for related system is malfunction. Go to appropriate DTC inspection procedure.
		No	Go to the next step.
5	DETERMINE IF MALFUNCTION CAUSE IS A/C REQUEST SIGNAL OR A/C RELAY OPERATIONAL MALFUNCTION <ul style="list-style-type: none"> Access PCM PID ACCS using the M-MDS. Start the engine and idle it. Turn the PID ACCS to ON from OFF using the M-MDS simulation function. Is the A/C magnetic clutch engaged? 	Yes	Go to the next step.
		No	Go to Step 12.

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION	ACTION	
6	DETERMINE IF MALFUNCTION CAUSE IS A/C PRESSURE SENSOR SIGNAL OR ELSEWHERE <ul style="list-style-type: none"> • Access climate control unit PID AC_PRES. • Monitor the AC_PRES PID while turning on and off the air conditioner by switching the control panel. • Is the PID normal? (See 07-02-22 PID/DATA MONITOR DISPLAY.) 	Yes	Go to Step 8.
		No	Go to the next step.
7	INSPECT TO SEE MALFUNCTION IS IN REFRIGERANT PRESSURE SENSOR OR A/C SYSTEM <ul style="list-style-type: none"> • Inspect refrigerant pressure sensor. (See 07-40A-25 REFRIGERANT PRESSURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is the refrigerant pressure sensor normal? 	Yes	Inspect for following and repair or replace if necessary. <ul style="list-style-type: none"> • Refrigerant charging amount • A/C compressor for seizure Then go to Step 18.
		No	Repair or replace malfunctioning part according to inspection result. Then go to Step 18.
8	DETERMINE IF MALFUNCTION CAUSE IS EVAPORATOR TEMPERATURE SENSOR OPERATIONAL SIGNAL OR ELSEWHERE <ul style="list-style-type: none"> • Access climate control unit PID EVAP_TEMP. • Monitor the EVAP_TEMP PID while turning on and off the air conditioner by switching the control panel. • Is the PID normal? (See 07-02-22 PID/DATA MONITOR DISPLAY.) 	Yes	Go to Step 10.
		No	Go to the next step.
9	INSPECT EVAPORATOR TEMPERATURE SENSOR <ul style="list-style-type: none"> • Inspect the evaporator temperature sensor. (See 07-40A-24 EVAPORATOR TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is the evaporator temperature sensor normal? 	Yes	Inspect and repair for open or short circuit between evaporator temperature sensor and climate control unit. Then go to Step 18.
		No	Replace the evaporator temperature sensor. (See 07-11-10 A/C UNIT DISASSEMBLY/ASSEMBLY.) Then go to Step 18.
10	DETERMINE IF MALFUNCTION CAUSE IS INSTRUMENT CLUSTER OR CAN COMMUNICATION SIGNAL <ul style="list-style-type: none"> • Verify the information display indication of A/C system while turning on and off the air conditioner by switching the control panel. • Does the information display indicate properly? 	Yes	Replace the instrument cluster. (Instrument cluster does not receive A/C request signal from climate control unit or transmit it to PCM.) (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.) Then go to Step 18.
		No	Go to the next step.
11	INSPECT THE INFORMATION DISPLAY <ul style="list-style-type: none"> • Inspect the information display. • Is the information display normal? (See 09-22-14 INFORMATION DISPLAY INPUT/OUTPUT CHECK MODE.) 	Yes	Replace the climate control unit. (A/C switch malfunction or climate control unit does not determine A/C request or transmit the A/C request signal.) (See 07-40A-26 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) Then go to Step 18.
		No	Repair or replace malfunctioning part according to inspection result.
12	INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN A/C CONTROL SIGNAL CIRCUIT (BETWEEN A/C RELAY AND PCM) OR ELSEWHERE <ul style="list-style-type: none"> • Does cool air blow out when terminal E of A/C relay connector (A/C control signal) is grounded? 	Yes	Release short, then go to the next step.
		No	Go to Step 14.
13*	INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN PCM OR WIRING HARNESS (BETWEEN A/C RELAY AND PCM) <ul style="list-style-type: none"> • Test voltage at the A/C relay control signal terminal of PCM. • Is voltage approx. 12 V? 	Yes	Inspect PCM, then go to Step 18.
		No	Repair wiring harness between A/C relay and PCM, then go to Step 18.

07-03A

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION	ACTION	
14*	INSPECT TO SEE WHETHER MALFUNCTION IS IN MAGNETIC CLUTCH OR ELSEWHERE <ul style="list-style-type: none"> Test voltage at the following terminal of magnetic clutch thermal protector. <ul style="list-style-type: none"> Terminal A (magnetic clutch operation signal) Is voltage approx. 12 V? 	Yes	Inspect magnetic clutch, then go to Step 18.
		No	Go to the next step.
15	INSPECT FUSE <ul style="list-style-type: none"> Are A/C relay power supply fuses okay? 	Yes	Go to the next step.
		No	Replace fuse, then go to Step 18. If fuse burns out immediately, go to the next step.
16*	INSPECT WIRING HARNESS BETWEEN FUSE BLOCK AND A/C RELAY FOR LACK OF CONTINUITY <ul style="list-style-type: none"> Test voltages at following terminals of A/C relay. <ul style="list-style-type: none"> Terminal A (A/C relay control signal) Terminal C (A/C control signal) Are voltages approx. 12 V? 	Yes	Go to the next step.
		No	Repair the wiring harness between fuse block and A/C relay, then go to Step 18.
17	INSPECT TO SEE WHETHER MALFUNCTION IS IN A/C RELAY OR WIRING HARNESS (BETWEEN A/C RELAY AND MAGNETIC CLUTCH) <ul style="list-style-type: none"> Test voltage at the following terminal of A/C relay. <ul style="list-style-type: none"> Terminal D (magnetic clutch operation signal) Is voltage approx. 12 V? 	Yes	Inspect wiring harness between A/C relay and magnetic clutch. <ul style="list-style-type: none"> If above wiring harness is OK, go to the next step. If above wiring harness malfunctions, repair wiring harness, then go to the next step.
		No	Replace the A/C relay, then go to the next step.
18	CONFIRM THAT MALFUNCTION SYMPTOMS DO NOT RECUR AFTER REPAIR <ul style="list-style-type: none"> Does cool air blow out? (Are the results of refrigerant system performance test okay?) 	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

NO.8 NOISE WHILE OPERATING A/C SYSTEM [FULL-AUTO AIR CONDITIONER]

id0702c1812700

8	Noise while operating A/C system.
DESCRIPTION	<ul style="list-style-type: none"> Noise from magnetic clutch, A/C compressor, hose or refrigerant line.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Magnetic clutch operation noise A/C compressor vane noise A/C compressor slippage noise Hose or refrigerant line interference noise

* : If there is gas leakage, air enters into the A/C system. The desiccant within the receiver/drier absorbs the moisture from the air and becomes saturated. If the A/C system is used in this condition, the inside of the A/C compressor will begin to rust due to this moisture, which may cause lock up or noise to occur. Therefore, replacement of the receiver/drier is necessary.

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	CHECK A/C COMPRESSOR VANE NOISE <ul style="list-style-type: none"> Is there a jingling, popping, beeping, or buzzing sound (A/C compressor vane noise)? 	Yes	Go to Step 5.
		No	Go to the next step.
2	INSPECT A/C COMPRESSOR SLIPPAGE NOISE <ul style="list-style-type: none"> Is there a squeaking or whirling sound (A/C compressor slippage noise)? 	Yes	Go to Step 14.
		No	Go to the next step.
3	INSPECT A/C COMPRESSOR INTERFERENCE NOISE <ul style="list-style-type: none"> Is there a rattling or vibrating sound (interference noise)? 	Yes	Go to Step 18.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION	ACTION	
4	INSPECT MAGNETIC CLUTCH OPERATION NOISE <ul style="list-style-type: none"> • Is there a clicking sound (magnetic clutch operation noise)? 	Yes	Adjust clearance between pressure plate of magnetic clutch and A/C compressor pulley, then go to Step 19. (See 07-40A-19 MAGNETIC CLUTCH ADJUSTMENT [FULL-AUTO AIR CONDITIONER].)
		No	Condition is normal. (Recheck malfunction symptoms.)
5	INSPECT A/C COMPRESSOR NOISE TIME <ul style="list-style-type: none"> • Is noise heard continuously for more than 3 s after A/C compressor comes on? 	Yes	Go to the next step.
		No	Condition is normal. (Noise occurs for 2—3 s immediately after A/C compressor turns on.)
6	INSPECT IDLE SPEED <ul style="list-style-type: none"> • Inspect idle speed. (See 01-10A-3 ENGINE TUNE-UP [LF, L5].) (See 01-10B-3 ENGINE TUNE-UP [L3 WITH TC].) • Is it okay? 	Yes	Go to the next step.
		No	Follow the repair instruction described in section 01, then go to Step 19.
7	INSPECT REFRIGERANT AMOUNT <ul style="list-style-type: none"> • Inspect refrigerant amount. • Is it okay? 	Yes	Go to Step 10.
		No	Go to the next step.
8	INSPECT REFRIGERANT LINES <ul style="list-style-type: none"> • Inspect refrigerant lines. <ul style="list-style-type: none"> — Is piping free of damage and cracks? — Are piping connections free of oil grime? (Visual inspection) — Are piping connections free of gas leakage? — Are piping installation points on condenser free of gas leakage? — Are piping installation points on receiver/drier free of gas leakage? — Are piping installation points on A/C compressor free of gas leakage? — Are piping installation points on A/C unit free of gas leakage? — Perform gas leak inspection using gas leak tester. • Are above items okay? 	Yes	Go to the next step.
		No	If piping or A/C component(s) is damaged or cracked, replace then go to Step 19. If there is gas leakage, repair or replace connection and replace condenser*, then go to Step 19.
9	INSPECT EVAPORATOR PIPING CONNECTIONS IN A/C UNIT FOR GAS LEAKAGE <ul style="list-style-type: none"> • Are piping connections for evaporator in A/C unit free of gas leakage? 	Yes	Adjust refrigerant amount to specified level, then go to Step 19.
		No	If piping is damaged or cracked, replace then go to Step 19. If there is gas leakage, repair or replace connection and replace condenser*, then go to Step 19.
10	CHECK TO SEE WHETHER MALFUNCTION IS IN COMPRESSOR OIL OR ELSEWHERE <ul style="list-style-type: none"> • Add 20 ml {20 cc, 0.8 fl oz} of compressor oil. • Is noise heard when racing engine? 	Yes	Go to the next step.
		No	Troubleshooting completed. Explain repair to customer.
11	CHECK TO SEE WHETHER MALFUNCTION IS IN A/C COMPRESSOR OR ELSEWHERE <ul style="list-style-type: none"> • Drain compressor oil. • Is it contaminated with metal particles? 	Yes	Go to the next step.
		No	Replace A/C compressor, then go to Step 19.
12	CHECK TO SEE WHETHER MALFUNCTION IS SOMEWHERE IN A/C SYSTEM OR ELSEWHERE <ul style="list-style-type: none"> • Is compressor oil whitish and mixed with water? 	Yes	Replace entire A/C system (excluding heater), then go to Step 19.
		No	Go to the next step.
13	INSPECT A/C COMPRESSOR OIL <ul style="list-style-type: none"> • Is compressor oil darker than normal and contaminated with aluminum chips? 	Yes	Replace A/C compressor and condenser, then go to Step 19. (Since A/C compressor may be worn and receiver/drier may be clogged, replacement of receiver/drier is necessary.)
		No	Condition is normal. Recheck malfunction symptoms.
14	CHECK TO SEE WHETHER MALFUNCTION IS IN A/C COMPRESSOR OR ELSEWHERE <ul style="list-style-type: none"> • Is noise heard immediately after A/C compressor is stopped? 	Yes	Replace A/C compressor, then go to Step 19. (A/C compressor discharge valve left open)
		No	Go to the next step.

07-03A

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION	ACTION	
15	INSPECT DRIVE BELT <ul style="list-style-type: none"> Inspect the drive belt. (See 01-10A-5 DRIVE BELT INSPECTION [LF, L5].) (See 01-10B-4 DRIVE BELT INSPECTION [L3 WITH TC].) Is it okay? 	Yes	Go to the next step.
		No	Adjust or replace drive belt, then go to Step 19. (See 01-10A-6 DRIVE BELT REMOVAL/INSTALLATION [LF, L5].) (See 01-10B-4 DRIVE BELT REMOVAL/INSTALLATION [L3 WITH TC].)
16	INSPECT DRIVE BELT CONDITION <ul style="list-style-type: none"> Is drive belt worn? Does it have foreign material imbedded in it, or have oil on it? 	Yes	Remove obstruction, remove oil, or replace drive belt, then go to Step 19.
		No	Go to the next step.
17	INSPECT MAGNETIC CLUTCH <ul style="list-style-type: none"> Inspect magnetic clutch. (See 07-40A-20 MAGNETIC CLUTCH INSPECTION [FULL-AUTO AIR CONDITIONER].) Is it okay? 	Yes	Replace A/C compressor (excluding pressure plate, A/C compressor pulley, and stator), then go to Step 19.
		No	Replace magnetic clutch, then go to Step 19.
18	CHECK TO SEE WHETHER MALFUNCTION IS IN A/C COMPRESSOR OR REFRIGERANT LINES <ul style="list-style-type: none"> Is noise emitted from A/C compressor? 	Yes	Visually inspect A/C compressor, replace appropriate parts if necessary, then go to the next step.
		No	If noise is due to refrigerant lines, repair detached or missing clips, tighten loose bolts, then go to the next step.
19	VERIFY THAT MALFUNCTION SYMPTOM OCCURS AFTER REPAIR <ul style="list-style-type: none"> Has A/C compressor noise stopped? 	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

NO.9 DUAL A/C CONTROL DOES NOT OPERATE [FULL-AUTO AIR CONDITIONER]

id0703c1812300

9	Dual A/C control function does not operate
DESCRIPTION	<ul style="list-style-type: none"> Driver or passenger side temperature control does not operate individually. Temperature control operates normally except for dual A/C control function.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Driver-side air mix door malfunction (stuck) Passenger-side air mix door malfunction (stuck) Driver-side air mix actuator malfunction Passenger-side air mix actuator malfunction Driver-side air mix actuator position sensor malfunction Passenger-side air mix actuator position sensor malfunction Open, short circuit in wiring or poor connection between climate control unit and driver-side air mix actuator Open, short circuit in wiring or poor connection between climate control unit and passenger-side air mix actuator Open, short circuit in wiring or poor connection between climate control unit and driver-side air mix actuator position sensor Open, short circuit in wiring or poor connection between climate control unit and passenger-side air mix actuator position sensor Climate control unit malfunction

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while doing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, inspect to make sure connectors, terminals and wiring harness are connected correctly and undamaged.

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	CHECK SYMPTOM <ul style="list-style-type: none"> • Turn on the A/C. • Perform the dual A/C control function for driver and passenger side individually. • Is it either of cannot the temperature control on driver side or passenger side? 	Yes	Go to the next step.
		No	Go to Step 8.
2	INSPECT TO SEE WHETHER MALFUNCTION IS IN AIR MIX DOOR OR ELSEWHERE <ul style="list-style-type: none"> • Turn on the A/C. • Change temperature control for suspect side seat at the dual mode. • Does the suspect side air mix door move smoothly? 	Yes	Go to the next step.
		No	Go to Step 6.
3	INSPECT AIR MIX DOOR <ul style="list-style-type: none"> • Inspect the suspect side air mix door. <ul style="list-style-type: none"> — Is the fan free of interfere with the suspect side A/C unit case? — Is the fan free of foreign material and obstruction? • Is the air mix door normal? 	Yes	Go to the next step.
		No	Remove the obstruction or replace the suspect side A/C unit case, then go to Step 9.
4	INSPECT AIR MIX ACTUATOR <ul style="list-style-type: none"> • Inspect the suspect side air mix actuator. • Is the air mix actuator normal? 	Yes	Go to the next step.
		No	Replace the suspect air mix actuator, then go to Step 9.
5*	INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (OPEN, SHORT OR POOR CONNECTION OF TERMINALS BETWEEN AIR MIX ACTUATOR AND CLIMATE CONTROL UNIT) OR ELSEWHERE <ul style="list-style-type: none"> • Inspect for open, short or poor connection of terminals between the suspect air mix actuator and climate control unit. <ul style="list-style-type: none"> — Terminal 1W (climate control unit) - terminal B (driver-side air mix actuator) — Terminal 1U (climate control unit) - terminal C (driver-side air mix actuator) — Terminal 1S (climate control unit) - terminal C (passenger-side air mix actuator) — Terminal 1Q (climate control unit) - terminal B (passenger-side air mix actuator) • Is there any open, short or poor connection of terminals? 	Yes	Repair or replace malfunction part, then go to Step 9.
		No	Replace the climate control unit, then go to Step 9.
6*	INSPECT AIR MIX ACTUATOR POSITION SENSOR <ul style="list-style-type: none"> • Inspect the suspect side air mix actuator position sensor. • Is the air mix actuator position sensor normal? 	Yes	Go to the next step.
		No	Replace the suspect air mix actuator, then go to Step 9.

07-03A

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION	ACTION	
7*	INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (OPEN, SHORT OR POOR CONNECTION OF TERMINALS BETWEEN AIR MIX ACTUATOR POSITION SENSOR AND CLIMATE CONTROL UNIT) OR ELSEWHERE <ul style="list-style-type: none"> • Inspect for open, short or poor connection of terminals between the suspect air mix actuator position sensor and climate control unit. <ul style="list-style-type: none"> — Terminal 1G (climate control unit) - terminal F (driver-side air mix actuator) — Terminal 1I (climate control unit) - terminal F (passenger-side air mix actuator) — Terminal 1C (climate control unit) - terminal G (driver-side air mix actuator) — Terminal 1C (climate control unit) - terminal E (passenger-side air mix actuator) — Terminal 1E (climate control unit) - terminal E (driver-side air mix actuator) — Terminal 1E (climate control unit) - terminal G (passenger-side air mix actuator) • Is there any open, short or poor connection of terminals? 	Yes	Repair or replace malfunction part, then go to Step 9.
		No	Replace the climate control unit, then go to Step 9.
8*	INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (OPEN, SHORT OR POOR CONNECTION OF TERMINALS BETWEEN CLIMATE CONTROL UNIT AND AIR MIX ACTUATOR POSITION SENSOR) OR ELSEWHERE <ul style="list-style-type: none"> • Inspect for open, short or poor connection of terminals between the climate control unit and air mix actuator position sensor. <ul style="list-style-type: none"> — Terminal 1C (climate control unit) - terminal G (driver-side air mix actuator) — Terminal 1C (climate control unit) - terminal E (passenger-side air mix actuator) — Terminal 1E (climate control unit) - terminal E (driver-side air mix actuator) — Terminal 1E (climate control unit) - terminal G (passenger-side air mix actuator) • Is there any open, short or poor connection of terminals? 	Yes	Repair or replace malfunction part, then go to the next step.
		No	Replace the climate control unit, then go to the step.
9	CONFIRM THAT MALFUNCTION SYMPTOMS DOES NOT RECUR AFTER REPAIR <ul style="list-style-type: none"> • Does the temperature adjust individually for driver seat and passenger seat? 	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

SYMPTOM TROUBLESHOOTING [MANUAL AIR CONDITIONER]

FOREWORD [MANUAL AIR CONDITIONER]

id0703c2800200

- The areas for inspection (steps) are given according to various circuit malfunctions. Use the following chart to verify the symptoms of the trouble in order to diagnose the appropriate area.

TROUBLESHOOTING INDEX [MANUAL AIR CONDITIONER]

id0703c2800300

No.	TROUBLESHOOTING ITEM	DESCRIPTION
1	Insufficient air (or no air) blown from vents	<ul style="list-style-type: none"> Problem with each vent and/or duct Airflow mode does not change
2	Amount of air blown from vents does not change	<ul style="list-style-type: none"> Malfunaction in blower system
3	Air intake mode does not change	<ul style="list-style-type: none"> Air intake mode does not change when switching REC/FRESH mode
4	No temperature control with climate control unit	<ul style="list-style-type: none"> Temperature does not change when operating temperature dial Malfunaction in A/C unit and/or climate control unit air mix system
5	Windshield fogged	<ul style="list-style-type: none"> A/C compressor does not operate while airflow mode is in DEFROSTER mode Air intake mode does not change to FRESH while airflow mode is in DEFROSTER mode
6	Air from vents not cold enough	<ul style="list-style-type: none"> Magnetic clutch operates but A/C system malfunctions
7	No cool air	<ul style="list-style-type: none"> Magnetic clutch does not operate
8	Noise while operating A/C system	<ul style="list-style-type: none"> Noise from magnetic clutch, A/C compressor, hose or refrigerant line

NO.1 INSUFFICIENT AIR (OR NO AIR) BLOWN FROM VENTS [MANUAL AIR CONDITIONER]

id0703c2800400

1	Insufficient air (or no air) blown from vents
DESCRIPTION	<ul style="list-style-type: none"> Problem with each vent and/or duct. Airflow mode does not change.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Malfunaction in airflow mode wire Malfunaction in VENT mode system Malfunaction in HEAT mode system Malfunaction in DEFROSTER mode system Malfunaction in next vent or duct (clogging, deformation, air leakage, improper operation)

Diagnostic procedure

STEP	INSPECTION	ACTION
1	INSPECT A/C UNIT AIRFLOW MODE SYSTEM <ul style="list-style-type: none"> Inspect the A/C unit and/or climate control unit airflow mode links, air airflow mode cranks, air airflow mode rods, and wire clamp. <ul style="list-style-type: none"> — Is there grease on links and cranks? — Are links, cranks, and rods securely installed in their proper positions? — Is wire clamp free of deformation? Are the above items normal? 	Yes Go to the next step.
		No Apply grease or airflow mode the links, cranks, and rods securely in their proper positions, repair or replace the airflow mode wire clamp, then go to Step 9.
2	INSPECT TO SEE WHETHER MALFUNCTION IS IN VENT MODE OR OTHER MODES <ul style="list-style-type: none"> Does air blow out when in the VENT mode? 	Yes Go to Step 5.
		No Go to the next step.
3	INSPECT VENT <ul style="list-style-type: none"> Is the vent clogged? 	Yes Remove obstruction, then go to Step 9.
		No Go to the next step.
4	VERIFY THAT DUCT IN DASHBOARD IS INSTALLED <ul style="list-style-type: none"> Is the duct in the dashboard properly installed? 	Yes Inspect the duct for clogging, deformation and air leakage, then go to Step 9.
		No Install the duct securely in the proper position, then go to Step 9.
5	INSPECT TO SEE WHETHER MALFUNCTION IS IN HEAT MODE OR DEFROSTER MODE <ul style="list-style-type: none"> Does air blow out when in the HEAT mode? 	Yes Go to the next step.
		No Inspect the vent for clogging, then go to Step 9.

SYMPTOM TROUBLESHOOTING [MANUAL AIR CONDITIONER]

STEP	INSPECTION	ACTION
6	INSPECT DEFROSTER MODE <ul style="list-style-type: none"> Does air blow out when in the DEFROSTER mode? 	Yes Operation is normal. Recheck malfunction symptoms.
		No Go to the next step.
7	INSPECT VENT <ul style="list-style-type: none"> Is the vent clogged? 	Yes Remove obstruction, then go to Step 9.
		No Go to the next step.
8	VERIFY THAT DEFROSTER DUCT IS INSTALLED <ul style="list-style-type: none"> Is the defroster duct properly installed? 	Yes Inspect the duct for clogging, deformation, and air leakage, then go to the next step.
		No Install the duct securely in proper position, then go to the next step.
9	CONFIRM THAT MALFUNCTION SYMPTOM DOES NOT RECUR AFTER REPAIR <ul style="list-style-type: none"> Does air blow out? 	Yes Troubleshooting completed. Explain repairs to customer.
		No Recheck malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

NO.2 AMOUNT OF AIR BLOWN FROM VENTS DOES NOT CHANGE [MANUAL AIR CONDITIONER]

id0703c2800500

2	Amount of air blown from vents does not change.
DESCRIPTION	<ul style="list-style-type: none"> Malfunction in blower system
POSSIBLE CAUSE	<ul style="list-style-type: none"> A/C unit malfunction Blower motor malfunction Clogged in A/C unit passage

07-03B

Diagnostic procedure

STEP	INSPECTION	ACTION
1	INSPECT BLOWER SYSTEM <ul style="list-style-type: none"> Inspect the following systems and electrical parts. <ul style="list-style-type: none"> Blower relay Blower motor Resistor Fan switch Related wiring harnesses Are they normal? 	Yes Go to the next step.
		No Repair or replace the malfunctioning part, then go to Step 5.
2	INSPECT TO SEE WHETHER MALFUNCTION IS IN A/C UNIT OR ELSEWHERE <ul style="list-style-type: none"> Switch the ignition to ON. Turn the fan switch to ON position. Recirculate air inside the vehicle. Does the blower motor rotate smoothly? 	Yes Go to Step 4.
		No Go to the next step.
3	INSPECT A/C UNIT INTAKE VENT <ul style="list-style-type: none"> Inspect blower motor. <ul style="list-style-type: none"> Is the fan free of interference from the A/C unit case? Is the fan free of foreign material and obstructions? Is the fan normal? 	Yes Go to the next step.
		No Remove obstruction, repair or replace the fan and A/C unit case, then go to Step 5.
4	INSPECT A/C UNIT INTAKE VENT <ul style="list-style-type: none"> Is the A/C unit intake vent clogged? 	Yes Remove obstruction, then go to the next step.
		No Inspect it there are not any obstructions in the A/C unit passage, then go to the next step.
5	VERIFY THAT MALFUNCTION SYMPTOM OCCURS AFTER REPAIR <ul style="list-style-type: none"> Does air blow out? 	Yes Troubleshooting completed. Explain repairs to customer.
		No Recheck malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

SYMPTOM TROUBLESHOOTING [MANUAL AIR CONDITIONER]

NO.3 AIR INTAKE MODE DOES NOT CHANGE [MANUAL AIR CONDITIONER]

id0703c2802900

3	Air intake mode does not change.
DESCRIPTION	<ul style="list-style-type: none"> • Air intake mode does not change when switching REC/FRESH mode.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Air intake actuator malfunction • Air intake door malfunction

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, inspect to make sure connectors, terminals and wiring harnesses are connected correctly and undamaged.

Note

- The climate control unit controls the air intake mode when the airflow mode is in DEFROSTER or DEF/HEAT so that it is fixed at FRESH mode. At this time, the airflow mode cannot be changed from FRESH to REC even if the REC switch is pressed, but this does not indicate a malfunction.

Diagnostic procedure

STEP	INSPECTION		ACTION
1*	INSPECT TO SEE WHETHER MALFUNCTION IS IN AIR INTAKE ACTUATOR OR ELSEWHERE <ul style="list-style-type: none"> • Disconnect the air intake actuator connector. • Measure the voltages at the following climate control unit terminals. <ul style="list-style-type: none"> — Terminal 1F (FRESH motor drive signal) — Terminal 1B (RECIRCULATE motor drive signal) (See 07-40B-20 CLIMATE CONTROL UNIT INSPECTION [MANUAL AIR CONDITIONER].) • Are voltages normal? 	Yes	Go to the next step.
		No	Go to Step 3.
2	INSPECT AIR INTAKE ACTUATOR <ul style="list-style-type: none"> • Inspect air intake actuator. (See 07-40B-3 AIR INTAKE ACTUATOR INSPECTION [MANUAL AIR CONDITIONER].) • Is it okay? 	Yes	Go to Step 6.
		No	Replace the air intake actuator, then go to Step 8. (See 07-40B-3 AIR INTAKE ACTUATOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER].)
3*	INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (SHORT TO B+ BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR) OR ELSEWHERE <ul style="list-style-type: none"> • Air intake actuator and climate control unit disconnected. • Measure the voltages at the following climate control unit terminals. <ul style="list-style-type: none"> — Terminal 1F (FRESH motor drive signal) — Terminal 1B (RECIRCULATE motor drive signal) • Are voltages approx. 0 V? 	Yes	Go to the next step.
		No	Repair the wiring harness between the climate control unit and air intake actuator, then go to Step 8.
4*	INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (SHORT TO GROUND BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR) OR ELSEWHERE <ul style="list-style-type: none"> • Switch the ignition to off. • Inspect for continuity at the following terminals between the climate control unit and ground. <ul style="list-style-type: none"> — Terminal 1F (FRESH motor drive signal) — Terminal 1B (RECIRCULATE motor drive signal) • Is there continuity? 	Yes	Repair the wiring harness between the climate control unit and air intake actuator, then go to Step 8.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [MANUAL AIR CONDITIONER]

STEP	INSPECTION	ACTION	
5*	INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (OPEN CIRCUIT BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR) OR ELSEWHERE <ul style="list-style-type: none"> • Air intake actuator and climate control unit connectors disconnected. • Switch the ignition to off. • Inspect for continuity at the following terminals between the climate control unit and air intake actuator. <ul style="list-style-type: none"> — Air intake actuator terminal B and climate control unit terminal 1F (FRESH motor drive signal) — Air intake actuator terminal C and climate control unit terminal 1B (RECIRCULATE motor drive signal) • Is there continuity? 	Yes	Go to the next step.
		No	Repair the wiring harness for open circuit between the climate control unit and air intake actuator, then go to Step 8.
6	INSPECT AIR INTAKE LINK <ul style="list-style-type: none"> • Inspect the air intake links. <ul style="list-style-type: none"> — Is there grease on link? — Are the links securely and properly installed? — Are the links free of obstructions and hindrances? • Are the above items normal? 	Yes	Go to the next step.
		No	Apply grease to the links. if any the links are damaged, replace the air intake actuator, then go to Step 8.
7	INSPECT TO SEE WHETHER MALFUNCTION IS IN CLIMATE CONTROL UNIT OR AIR INTAKE DOOR <ul style="list-style-type: none"> • Inspect the A/C unit air intake door. <ul style="list-style-type: none"> — Is the door free of obstructions, cracks, and damage? — Are the doors securely and properly installed? • Are the above items normal? 	Yes	Replace the climate control unit, then go to the next step.
		No	Remove obstruction, or install the doors in the proper position. If any doors are cracked or damaged, replace them, then go to the next step.
8	CONFIRM THAT MALFUNCTION SYMPTOMS DO NOT RECUR AFTER REPAIR <ul style="list-style-type: none"> • Does the air intake mode change smoothly? 	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

07-03B

SYMPTOM TROUBLESHOOTING [MANUAL AIR CONDITIONER]

NO.4 NO TEMPERATURE CONTROL WITH CLIMATE CONTROL UNIT [MANUAL AIR CONDITIONER]

id0702c2812400

4	No temperature control with climate control unit
DESCRIPTION	<ul style="list-style-type: none"> • Temperature does not change when operating temperature dial • Malfunction in A/C unit and/or climate control unit air mix system
POSSIBLE CAUSE	<ul style="list-style-type: none"> • A/C unit air mix link, air mix crank, air mix rod, air mix wire, or wire clamp malfunction • Climate control unit rack-and-pinion, or air mix wire malfunction • A/C unit air mix door malfunction • Heater piping malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION
1	INSPECT COOLANT TEMPERATURE <ul style="list-style-type: none"> • Is the coolant sufficiently warmed up? 	Yes Go to the next step.
		No Warm up the engine, then go to Step 8.
2	INSPECT A/C UNIT AIR MIX SYSTEM <ul style="list-style-type: none"> • Inspect the A/C unit air mix links, air mix cranks, air mix rods, air mix actuator, and wire clamp. <ul style="list-style-type: none"> — Is there grease on links and cranks? — Are links, cranks, and rods securely installed in their proper positions? — Is wire clamp free of deformation? • Are the above items normal? 	Yes Go to the next step.
		No Apply grease or install the links, cranks, and rods securely in their proper positions, repair or replace the wire clamp, then go to Step 8.
3	VERIFY THAT AIR MIX WIRE FROM A/C UNIT IS POSITIONED SECURELY AND CORRECTLY (IF AVAILABLE) <ul style="list-style-type: none"> • Is the air mix wire securely installed in the correct position in relation to the A/C unit air mix links? 	Yes Go to the next step.
		No Adjust the air mix wire or install securely in the correct position, then go to Step 8.
4	INSPECT CLIMATE CONTROL UNIT <ul style="list-style-type: none"> • Inspect the climate control unit. • Is the climate control unit normal? 	Yes Go to the next step.
		No Repair or replace the climate control unit, then go to Step 8.
5	INSPECT A/C UNIT <ul style="list-style-type: none"> • Is there any foreign material or obstruction in the A/C unit air mix doors? 	Yes Remove obstruction, then go to Step 8.
		No Go to the next step.
6	INSPECT A/C UNIT AIR MIX DOOR <ul style="list-style-type: none"> • Is the A/C unit air mix door securely and properly installed? 	Yes Inspect the air mix door for cracks or damage, then go to the next step.
		No Install the air mix door securely in the proper position, then go to the next step.
7	INSPECT HEATER LINE <ul style="list-style-type: none"> • Inspect the heater lines. <ul style="list-style-type: none"> — Is the heater piping free of damage and cracks? — Are the heater piping connections free of engine coolant leakage? — Are the heater piping connections securely tightened? — Are the heater piping installation points on A/C unit free of engine coolant leakage? • Are the above items normal? 	Yes Operation is normal. Recheck malfunction symptoms.
		No If heater piping connections are loose, tighten the connections to the specified torque. Repair or replace the heater piping, then go to the next step.
8	VERIFY THAT MALFUNCTION SYMPTOM OCCURS AFTER REPAIR <ul style="list-style-type: none"> • Does the unit operate in every temperature setting? 	Yes Troubleshooting completed. Explain repairs to customer.
		No Recheck malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

SYMPTOM TROUBLESHOOTING [MANUAL AIR CONDITIONER]

NO.5 WINDSHIELD FOGGED [MANUAL AIR CONDITIONER]

id0703c2801900

5	Windshield fogged.
DESCRIPTION	<ul style="list-style-type: none"> A/C compressor does not operate while airflow mode is in DEFROSTER or HEAT/DEF modes. Air intake mode does not change to FRESH while airflow mode is in DEFROSTER or HEAT/DEF modes.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Climate control unit (B+ signal) system malfunction Air intake actuator malfunction Climate control unit (RECIRCULATE, FRESH signal) system malfunction A/C unit air intake door malfunction

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while doing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, inspect to make sure connectors, terminals and wiring harness are connected correctly and undamaged.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	COOL AIR BLOW OUT INSPECTION <ul style="list-style-type: none"> When both the A/C and fan switch in the climate control unit are on, does cool air blow out from the front vent? 	Yes	Go to the next step.
		No	Go to Step 1 of troubleshooting index No.8.
2	INSPECT CLIMATE CONTROL UNIT POWER SUPPLY FUSE FOR B+ SIGNAL <ul style="list-style-type: none"> Is the climate control unit power supply fuse for B+ signal normal? 	Yes	Go to the next step.
		No	Inspect for a short to ground on blown fuse circuit. <ul style="list-style-type: none"> Repair or replace if necessary. Install appropriate amperage fuse.
3	INSPECT AIR INTAKE ACTUATOR <ul style="list-style-type: none"> Inspect the air intake actuator. <ul style="list-style-type: none"> — Is there grease on the link? — Is the link securely and properly positioned? — Is the link free of obstructions? Are the above items normal? 	Yes	Go to the next step.
		No	Apply grease or install the link properly and securely, remove obstruction, then go to Step 14.
*4	INSPECT WIRING HARNESS BETWEEN FUSE BLOCK AND CLIMATE CONTROL UNIT FOR CONTINUITY <ul style="list-style-type: none"> Disconnect the climate control unit connector (16-pin). Turn the ignition switch to the ON position. Measure the voltage at climate control unit terminal 2B (B+ signal). Is the voltage approx. 12 V? 	Yes	Go to the next step.
		No	Repair the wiring harness between the fuse block and climate control unit, then go to Step 14.
*5	INSPECT WIRING HARNESS BETWEEN CLIMATE CONTROL UNIT AND GROUND FOR VOLTAGE <ul style="list-style-type: none"> Measure the voltage at climate control unit terminal 1I (Ground). Is the voltage approx. 0V? 	Yes	Go to the next step.
		No	Repair the wiring harness between the climate control unit and ground, then go to Step 14.
6	VERIFY WHETHER MALFUNCTION IS IN A/C UNIT AIR INTAKE DOOR OR ELSEWHERE <ul style="list-style-type: none"> Turn the ignition switch to the LOCK position. Connect the climate control unit connector (16-pin). Remove the air intake actuator. Turn the ignition switch to the ON position. Set the fan switch to 4th position. Does the air intake mode (RECIRCULATE, FRESH) change smoothly when the air intake link is operated by hand? 	Yes	Go to the next step.
		No	Go to Step 12.
7	INSPECT AIR INTAKE ACTUATOR <ul style="list-style-type: none"> Inspect the air intake actuator. (See 07-40B-3 AIR INTAKE ACTUATOR INSPECTION [MANUAL AIR CONDITIONER].) Is it normal? 	Yes	Go to the next step.
		No	Replace the air intake actuator, go to Step 14.

07-03B

SYMPTOM TROUBLESHOOTING [MANUAL AIR CONDITIONER]

STEP	INSPECTION	ACTION	
8	INSPECT AIR INTAKE SELECTOR SWITCH AND DEFROSTER SWITCH IN CLIMATE CONTROL UNIT <ul style="list-style-type: none"> • Measure the voltage at climate control unit connector (12-pin) terminals 1F and 1B. • Is it normal? 	Yes	Go to the next step.
		No	Replace the climate control unit, then go to Step 14.
*9	INSPECT WIRING HARNESS BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR FOR CONTINUITY <ul style="list-style-type: none"> • Turn the ignition switch to the LOCK position. • Is there continuity between the following climate control unit terminals and air intake actuator terminals? <ul style="list-style-type: none"> — Terminal 1F —Terminal C (FRESH signal) — Terminal 1B —Terminal B (RECIRCULATE signal) 	Yes	Go to the next step.
		No	Repair the wiring harness between the climate control unit and air intake actuator, then go to Step 14.
*10	INSPECT WIRING HARNESS BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR FOR SHORT TO GROUND <ul style="list-style-type: none"> • Is there continuity between the following climate control unit terminals and ground? <ul style="list-style-type: none"> — Terminal 1F (FRESH signal) — Terminal 1B (RECIRCULATE signal) 	Yes	Repair the wiring harness between the climate control unit and air intake actuator, then go to Step 14.
		No	Go to the next step.
*11	INSPECT WIRING HARNESS BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR FOR SHORT TO B+ <ul style="list-style-type: none"> • Turn the ignition switch to the ON position • Measure the voltage at the following climate control unit terminals. <ul style="list-style-type: none"> — Terminal 1F (FRESH signal) — Terminal 1B (RECIRCULATE signal) • Is the voltage approx. 12 V? 	Yes	Repair the wiring harness between the climate control unit and air intake actuator, then go to Step 14.
		No	Replace the climate control unit, then go to Step 14.
12	INSPECT A/C UNIT AIR INTAKE DOOR <ul style="list-style-type: none"> • Is there any foreign material or obstruction in the A/C unit air intake door? 	Yes	Remove obstruction, then go to Step 14.
		No	Go to the next step.
13	VERIFY THAT A/C UNIT AIR INTAKE DOOR IS POSITIONED SECURELY AND PROPERLY <ul style="list-style-type: none"> • Is the A/C unit air intake door securely and properly positioned? 	Yes	Inspect the air intake door for cracks or damage, then go to the next step.
		No	Install the air intake door securely in the proper position, then go to the next step.
14	VERIFY THAT MALFUNCTION SYMPTOM OCCURS AFTER REPAIR <ul style="list-style-type: none"> • Does the malfunction disappear? 	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

SYMPTOM TROUBLESHOOTING [MANUAL AIR CONDITIONER]

NO.6 AIR FROM VENTS NOT COLD ENOUGH [MANUAL AIR CONDITIONER]

id0702c2812500

6	Air from vents not cold enough.
DESCRIPTION	<ul style="list-style-type: none"> • Magnetic clutch operates but A/C system malfunctions.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Drive belt malfunction • A/C pressure sensor malfunction • Malfunction in blower unit or condenser • Cooling fan system malfunction • Condenser or related part malfunction • A/C unit or condenser malfunction • Receiver/drier or expansion valve malfunction (valve closes too mach) • A/C compressor system malfunction, insufficient compressor oil • Over filling of compressor oil, malfunction in expansion valve or A/C unit air mix link system • Evaporative temperature sensor malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	INSPECT REFRIGERANT SYSTEM PERFORMANCE <ul style="list-style-type: none"> • Perform refrigerant system performance test. (See 07-10-7 REFRIGERANT SYSTEM PERFORMANCE TEST.) • Is the operation normal? 	Yes	Operation is normal. (Recheck malfunction symptoms.)
		No	Go to the next step.
2	INSPECT DRIVE BELT <ul style="list-style-type: none"> • Inspect the drive belt. (See 01-10A-5 DRIVE BELT INSPECTION [LF, L5].) • (See 01-10B-4 DRIVE BELT INSPECTION [L3 WITH TC].) • Is it normal? 	Yes	Go to the next step.
		No	Adjust or replace the drive belt, then the next step. (See 01-10A-6 DRIVE BELT REMOVAL/INSTALLATION [LF, L5].)
3	INSPECT REFRIGERANT PRESSURE SENSOR <ul style="list-style-type: none"> • Inspect the refrigerant pressure sensor. (See 07-40B-16 REFRIGERANT PRESSURE SENSOR INSPECTION [MANUAL AIR CONDITIONER].) • Is it normal? 	Yes	Go to the Step 5.
		No	Go to the next step.
4*	INSPECT REFRIGERANT PRESSURE SENSOR RELATED HARNESS <ul style="list-style-type: none"> • Inspect following refrigerant pressure sensor wiring harness (open or short circuit) and connectors (corrosion, pulled out pins) <ul style="list-style-type: none"> — Climate control unit terminal 1H and refrigerant pressure sensor terminal A — Climate control unit terminal 1G and refrigerant pressure sensor terminal C — Climate control unit terminal 2J and refrigerant pressure sensor terminal B • Is it normal? 	Yes	Replace the refrigerant pressure sensor, then go to Step 24. (See 07-40B-15 REFRIGERANT PRESSURE SENSOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER].)
		No	Repair wiring harness between climate control unit and refrigerant pressure sensor. Go to the next step.
5	CHECK TO SEE WHETHER MALFUNCTION IS IN BLOWER UNIT INTAKE AND CONDENSER OR ELSEWHERE <ul style="list-style-type: none"> • Perform refrigerant pressure check. (See 07-10-6 REFRIGERANT PRESSURE CHECK.) • Are the refrigerant high-pressure and low-pressure values both high? 	Yes	Go to the next step.
		No	After recording the inspection results, go to Step 10.
6	INSPECT COOLING FAN OPERATION <ul style="list-style-type: none"> • Verify the cooling fan operation. (See 01-12A-15 COOLING FAN COMPONENT INSPECTION [LF, L5].) • (See 01-12B-15 COOLING FAN COMPONENT INSPECTION [L3 WITH TC].) • Is the cooling fan operation normal? 	Yes	Go to the next step.
		No	Repair or replace the malfunctioning location according to the inspection results. Then go to Step 24.

07-03B

SYMPTOM TROUBLESHOOTING [MANUAL AIR CONDITIONER]

STEP	INSPECTION	ACTION
7	VISUALLY INSPECT CONDENSER <ul style="list-style-type: none"> Is the condenser fin clogged or obstructed by foreign material? 	Yes Remove the foreign material. Repair the condenser fin. Then go to Step 24.
		No Go to the next step.
8	CHECK TO SEE WHETHER MALFUNCTION IS IN EXPANSION VALVE OR ELSEWHERE <ul style="list-style-type: none"> Verify the condition of the low pressure hose while the A/C is operating. Is there frost or condensation adhering? 	Yes Replace the expansion valve. After performing the following servicing, go to Step 24. <ul style="list-style-type: none"> Adjust the compressor oil to the specified level. After discharging, charge with new refrigerant to the specified level.
		No Go to the next step.
9	INSPECT AIR MIX DOOR RELATED PART INSTALLATION <ul style="list-style-type: none"> Remove the A/C unit. (See 07-11-4 A/C UNIT REMOVAL/INSTALLATION.) Are the air mix link, air mix crank, and air mix rod of the A/C unit correctly and securely installed to their positions? 	Yes Adjust the compressor oil to the specified amount, then go to Step 23. (See 07-11-18 A/C COMPRESSOR REMOVAL/INSTALLATION.)
		No Repair or install the links, cranks and rods securely in the proper position, then go to Step 24.
10	CHECK TO SEE WHETHER MALFUNCTION IS IN BLOWER UNIT AND REFRIGERANT PRESSURE LINE OR ELSEWHERE <ul style="list-style-type: none"> Are the refrigerant high-pressure and low-pressure values low? 	Yes Go to the next step.
		No Go to Step 17.
11	INSPECT A/C UNIT FOR BLOCKAGE <ul style="list-style-type: none"> Is the A/C unit intake and air filter clogged? 	Yes Remove the cause of the clogging. Replace the air filter if it is clogged. (See 07-11-3 AIR FILTER REMOVAL/INSTALLATION.) Then go to Step 24.
		No Go to the next step.
12	CHECK TO SEE WHETHER MALFUNCTION IS REFRIGERANT LINE LEAKAGE OR ELSEWHERE <ul style="list-style-type: none"> Verify if there is gas leakage from the system hoses using the gas leak tester. Is there gas leakage? 	Yes If there is leakage from a system hose connection area, go to Step 14. If there is leakage other than from a system hose connection area, go to Step 16.
		No Go to the next step.
13	VISUALLY INSPECT REFRIGERANT LINE <ul style="list-style-type: none"> Is a system hose crushed? 	Yes Replace the crushed system hose. (See 07-11-24 REFRIGERANT LINE REMOVAL/INSTALLATION.) After performing the following servicing, go to Step 24. <ul style="list-style-type: none"> Adjust the compressor oil to the specified level. After discharging, charge with new refrigerant to the specified level.
		No Go to Step 23.
14	CHECK TO SEE WHETHER MALFUNCTION IS IN REFRIGERANT LINE JOINT LOOSE OR O-RING <ul style="list-style-type: none"> Tighten the system hose connection area to the specified torque. (See 07-11-24 REFRIGERANT LINE REMOVAL/INSTALLATION.) Has the leakage stopped? 	Yes Go to the next step.
		No Go to Step 16.
15	VISUALLY INSPECT REFRIGERANT LINE <ul style="list-style-type: none"> Is a system hose crushed? 	Yes Replace the crushed system hose. (See 07-11-24 REFRIGERANT LINE REMOVAL/INSTALLATION.) After performing the following servicing, go to Step 24. <ul style="list-style-type: none"> Adjust the compressor oil to the specified level. After discharging, charge with new refrigerant to the specified level.
		No Adjust the compressor oil to the specified amount, then go to Step 24. (See 07-11-18 A/C COMPRESSOR REMOVAL/INSTALLATION.)

SYMPTOM TROUBLESHOOTING [MANUAL AIR CONDITIONER]

STEP	INSPECTION	ACTION
16	VISUALLY INSPECT REFRIGERANT LINE <ul style="list-style-type: none"> Is a system hose crushed? 	Yes Replace the O-ring of the leaking area. Replace the crushed system hose. (See 07-11-24 REFRIGERANT LINE REMOVAL/INSTALLATION.) After performing the following servicing, go to Step 24. <ul style="list-style-type: none"> Adjust the compressor oil to the specified level. After discharging, charge with new refrigerant to the specified level.
		No Replace the O-ring of the leaking area. After performing the following servicing, go to Step 24. <ul style="list-style-type: none"> Adjust the compressor oil to the specified level. After discharging, charge with new refrigerant to the specified level.
17	CHECK TO SEE WHETHER MALFUNCTION IS IN CONDENSER AND EXPANSION VALVE OR ELSEWHERE <ul style="list-style-type: none"> Do the results of the refrigerant pressure inspection in Step 4 indicate vacuum on the low pressure side and extremely low pressure on the high pressure side? 	Yes Go to the next step.
		No Go to Step 21.
18	CHECK TO SEE WHETHER MALFUNCTION IS IN EXPANSION VALVE AND RECEIVER/ DRIER OR ELSEWHERE <ul style="list-style-type: none"> Is there is no refrigerant pressure on the low pressure side, or is it normal? 	Yes Replace the condenser. (See 07-11-20 CONDENSER REMOVAL/INSTALLATION.) After performing the following servicing, go to Step 24. <ul style="list-style-type: none"> Adjust the compressor oil to the specified level. After discharging, charge with new refrigerant to the specified level.
		No Go to the next step.
19	CHECK TO SEE WHETHER MALFUNCTION IS IN CONDENSER OR EXPANSION VALVE <ul style="list-style-type: none"> Verify the condition of the outlet hose on the condenser high pressure side. Is there condensation in the hose? 	Yes Replace the condenser. (See 07-11-20 CONDENSER REMOVAL/INSTALLATION.) After performing the following servicing, go to Step 24. <ul style="list-style-type: none"> Adjust the compressor oil to the specified level. After discharging, charge with new refrigerant to the specified level.
		No Go to the next step.
20	INSPECT EXPANSION VALVE <ul style="list-style-type: none"> Remove the expansion valve and verify its condition. Is there refrigerant leakage or valve clogging? 	Yes If there is foreign matter clogging the valve, remove the foreign matter.If there is refrigerant leakage or clogging, replace the expansion valve.Perform discharge, charge with new refrigerant, and then go to Step 24.
		No Install the expansion valve, then go to Step 23.
21	CHECK TO SEE WHETHER MALFUNCTION IS IN A/C COMPRESSOR OR ELSEWHERE <ul style="list-style-type: none"> Do the results of the refrigerant pressure inspection in Step 4 indicate low pressure on the high pressure side and high pressure on the low pressure side? 	Yes Replace the A/C compressor, then go to Step 24. (See 07-11-18 A/C COMPRESSOR REMOVAL/INSTALLATION.)
		No Go to the next step.
22	INSPECT EVAPORATIVE TEMPERATURE SENSOR <ul style="list-style-type: none"> Inspect the evaporator temperature sensor. (See 07-11-10 A/C UNIT DISASSEMBLY/ASSEMBLY.) Is it normal? 	Yes Verify the evaporator temperature sensor position. (See 07-11-10 A/C UNIT DISASSEMBLY/ASSEMBLY.) Then go to Step 24.
		No Replace the evaporator temperature sensor, then go to Step 24. (See 07-11-10 A/C UNIT DISASSEMBLY/ASSEMBLY.)
23	INSPECT AIR MIX DOOR RELATED PART INSTALLATION <ul style="list-style-type: none"> Remove the A/C unit. (See 07-11-4 A/C UNIT REMOVAL/INSTALLATION.) Are the air mix link, air mix crank, air mix wire and air mix rod of the A/C unit correctly and securely installed to their positions? 	Yes Go to the next step.
		No Repair or install the links, cranks, wire and rods securely in the proper position, then go to the next step. (See 07-11-10 A/C UNIT DISASSEMBLY/ASSEMBLY.)

07-03B

SYMPTOM TROUBLESHOOTING [MANUAL AIR CONDITIONER]

STEP	INSPECTION	ACTION	
24	VERIFY THAT MALFUNCTION SYMPTOM OCCURS AFTER REPAIR <ul style="list-style-type: none"> If the refrigerant discharged during inspection has not been recharged, discharge and charge with new refrigerant to the specified level. Does cool air blow out? (Are results of refrigerant system performance test normal?) 	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

NO.7 NO COOL AIR [MANUAL AIR CONDITIONER]

id0702c2812600

7	No cool air
DESCRIPTION	<ul style="list-style-type: none"> Magnetic clutch does not operate.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Malfunction in PCM A/C cut control system Malfunction in climate control unit Malfunction in refrigerant pressure sensor Malfunction in PCM (A/C signal) Malfunction in PCM (IG1 signal) Malfunction in A/C compressor Malfunction in A/C relay Malfunction in evaporator temperature sensor Malfunction in instrument cluster Improper refrigerant charging amount Open circuit in wiring harness between instrument cluster and climate control unit Malfunction in CAN communication

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, check to make sure connectors, terminals and wiring harnesses are connected correctly and undamaged.

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	INSPECT FUSE <ul style="list-style-type: none"> Are A/C relay power supply fuses okay? 	Yes	Go to the next step.
		No	Replace fuse, then go to Step 17. If fuse burns out immediately, go to the next step.
2	INSPECT AIR BLOW OUT <ul style="list-style-type: none"> Does air blow out? 	Yes	Go to the next step.
		No	Go to Step 1 of troubleshooting indexes No.1 and 2.
3	INSPECT A/C COMPRESSOR OPERATION <ul style="list-style-type: none"> Start engine. Turn A/C switch and fan switch on. Does A/C compressor operate? 	Yes	Go to Step 1 of troubleshooting index No.6.
		No	Go to the next step.
4	INSPECT FOR DTC IN PCM <ul style="list-style-type: none"> Inspect for DTCs related to the PCM on-board diagnostic system. Are any DTCs displayed? 	Yes	Go to appropriate inspection procedure.
		No	Go to the next step.
5	DETERMINE IF MALFUNCTION CAUSE IS A/C REQUEST SIGNAL OR A/C RELAY OPERATIONAL MALFUNCTION <ul style="list-style-type: none"> Access PCM PID ACCS using the M-MDS. Start the engine and idle it. Turn the PID ACCS to ON from OFF using the M-MDS simulation function. Is the A/C magnetic clutch engaged? 	Yes	Go to the next step.
		No	Go to Step 13.
6*	INSPECT CLIMATE CONTROL UNIT <ul style="list-style-type: none"> Remove the climate control unit. Reconnect the climate control unit connector. Measure the climate control unit terminal 1H (12-pin) voltage. Is the voltage within the specified? (See 07-40B-20 CLIMATE CONTROL UNIT INSPECTION [MANUAL AIR CONDITIONER].) 	Yes	Go to Step 8.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [MANUAL AIR CONDITIONER]

STEP	INSPECTION	ACTION	
7	INSPECT REFRIGERANT PRESSURE SENSOR <ul style="list-style-type: none"> • Inspect refrigerant pressure sensor. (See 07-40B-16 REFRIGERANT PRESSURE SENSOR INSPECTION [MANUAL AIR CONDITIONER].) • Is the refrigerant pressure sensor normal? 	Yes	Inspect for following and repair or replace if necessary. <ul style="list-style-type: none"> • Refrigerant charging amount • A/C compressor for seizure
		No	Repair or replace malfunctioning part according to inspection result.
8*	SIGNAL INSPECTION FROM EVAPORATOR TEMPERATURE SENSOR TO CLIMATE CONTROL UNIT <ul style="list-style-type: none"> • Remove the climate control unit. • Reconnect the climate control unit connector. • Measure the climate control unit terminal 1C (12-pin) voltage. • Is the voltage within the specified? (See 07-40B-20 CLIMATE CONTROL UNIT INSPECTION [MANUAL AIR CONDITIONER].) 	Yes	Go to Step 10.
		No	Go to the next step.
9	INSPECT EVAPORATOR TEMPERATURE SENSOR <ul style="list-style-type: none"> • Inspect the evaporator temperature sensor. (See 07-40B-15 EVAPORATOR TEMPERATURE SENSOR INSPECTION [MANUAL AIR CONDITIONER].) • Is the evaporator temperature sensor normal? 	Yes	Inspect and repair for open or short circuit between evaporator temperature sensor and climate control unit.
		No	Replace the evaporator temperature sensor. (See 07-11-10 A/C UNIT DISASSEMBLY/ASSEMBLY.)
10*	SIGNAL INSPECTION FROM INSTRUMENT CLUSTER TO CLIMATE CONTROL UNIT <ul style="list-style-type: none"> • Remove the climate control unit. • Reconnect the climate control unit connector. • Start the engine and idle it. • Measure the climate control unit terminal 2P (16-pin) voltage while turning on and off the air conditioner by switching the control panel. • Is the voltage change in specified according to air control panel switching? (See 07-40B-20 CLIMATE CONTROL UNIT INSPECTION [MANUAL AIR CONDITIONER].) Specification — Turn on the A/C: Below 1.0 V — Turn off the A/C: Approx. 5 V	Yes	Replace the instrument cluster. (Instrument cluster does not receive A/C request signal from climate control unit or transmit it to PCM.) (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to the next step.
11	CONTINUITY INSPECTION BETWEEN CLIMATE CONTROL UNIT AND INSTRUMENT CLUSTER <ul style="list-style-type: none"> • Inspect for open or short circuit between climate control unit terminal 2P (16-pin) and instrument cluster terminal 2I. Is there any open or short circuit detected? 	Yes	Repair for open or short circuit.
		No	Replace the climate control unit. (A/C switch malfunction or climate control unit does not determine A/C request or transmit the A/C request signal.) (See 07-40B-17 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER].)
12	INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN A/C CONTROL SIGNAL CIRCUIT (BETWEEN A/C RELAY AND PCM) OR ELSEWHERE <ul style="list-style-type: none"> • Does cool air blow out when terminal E of A/C relay connector (A/C control signal) is grounded? 	Yes	Release short, then go to the next step.
		No	Go to Step 14.
13*	INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN PCM OR WIRING HARNESS (BETWEEN A/C RELAY AND PCM) <ul style="list-style-type: none"> • Test voltage at the A/C relay control signal terminal of PCM. • Is voltage approx. 12 V? 	Yes	Inspect PCM, then go to Step 17.
		No	Repair wiring harness between A/C relay and PCM, then go to Step 17.

07-03B

SYMPTOM TROUBLESHOOTING [MANUAL AIR CONDITIONER]

STEP	INSPECTION	ACTION	
14*	INSPECT TO SEE WHETHER MALFUNCTION IS IN MAGNETIC CLUTCH OR ELSEWHERE <ul style="list-style-type: none"> • Test voltage at the following terminal of magnetic clutch thermal protector. <ul style="list-style-type: none"> — Terminal A (magnetic clutch operation signal) • Is voltage approx. 12 V? 	Yes	Inspect magnetic clutch, then go to Step 17.
		No	Go to the next step.
15	INSPECT WIRING HARNESS BETWEEN FUSE BLOCK AND A/C RELAY FOR LACK OF CONTINUITY <ul style="list-style-type: none"> • Test voltages at following terminals of A/C relay. <ul style="list-style-type: none"> — Terminal A (A/C relay control signal) — Terminal C (A/C control signal) • Are voltages approx. 12 V? 	Yes	Go to the next step.
		No	Repair wiring harness between fuse block and A/C relay, then go to Step 17.
16	INSPECT TO SEE WHETHER MALFUNCTION IS IN A/C RELAY OR WIRING HARNESS (BETWEEN A/C RELAY AND MAGNETIC CLUTCH) AND EVAPORATOR TEMPERATURE SENSOR <ul style="list-style-type: none"> • Test voltage at the following terminal of A/C relay. <ul style="list-style-type: none"> — Terminal D (magnetic clutch operation signal) • Is voltage approx. 12 V? 	Yes	Inspect wiring harness between A/C relay and magnetic clutch. <ul style="list-style-type: none"> • If above wiring harness is OK, go to the next step. • If above wiring harness malfunctions, repair wiring harness, then go to the next step.
		No	Replace A/C relay, then go to the next step.
17	CONFIRM THAT MALFUNCTION SYMPTOMS DO NOT RECUR AFTER REPAIR <ul style="list-style-type: none"> • Does cool air blow out? (Are the results of refrigerant system performance test okay?) 	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

NO.8 NOISE WHILE OPERATING A/C SYSTEM [MANUAL AIR CONDITIONER]

id0702c2812700

8	Noise while operating A/C system.
DESCRIPTION	<ul style="list-style-type: none"> • Noise from magnetic clutch, A/C compressor, hose or refrigerant line.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Magnetic clutch operation noise • A/C compressor vane noise • A/C compressor slippage noise • Hose or refrigerant line interference noise

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	CHECK A/C COMPRESSOR VANE NOISE <ul style="list-style-type: none"> • Is there a jingling, popping, beeping, or buzzing sound (A/C compressor vane noise)? 	Yes	Go to Step 5.
		No	Go to the next step.
2	INSPECT A/C COMPRESSOR SLIPPAGE NOISE <ul style="list-style-type: none"> • Is there a squeaking or whirling sound (A/C compressor slippage noise)? 	Yes	Go to Step 14.
		No	Go to the next step.
3	INSPECT A/C COMPRESSOR INTERFERENCE NOISE <ul style="list-style-type: none"> • Is there a rattling or vibrating sound (interference noise)? 	Yes	Go to Step 18.
		No	Go to the next step.
4	INSPECT MAGNETIC CLUTCH OPERATION NOISE <ul style="list-style-type: none"> • Is there a clicking sound (magnetic clutch operation noise)? 	Yes	Adjust clearance between pressure plate of magnetic clutch and A/C compressor pulley, then go to Step 19. (See 07-40B-13 MAGNETIC CLUTCH ADJUSTMENT [MANUAL AIR CONDITIONER].)
		No	Condition is normal. (Recheck malfunction symptoms.)
5	INSPECT A/C COMPRESSOR NOISE TIME <ul style="list-style-type: none"> • Is noise heard continuously for more than 3 s after A/C compressor comes on? 	Yes	Go to the next step.
		No	Condition is normal. (Noise occurs for 2—3 s immediately after A/C compressor turns on.)

SYMPTOM TROUBLESHOOTING [MANUAL AIR CONDITIONER]

STEP	INSPECTION	ACTION	
6	INSPECT IDLE SPEED <ul style="list-style-type: none"> • Inspect idle speed. (See 01-10A-3 ENGINE TUNE-UP [LF, L5].) (See 01-10B-3 ENGINE TUNE-UP [L3 WITH TC].) • Is it okay? 	Yes	Go to the next step.
		No	Follow the repair instruction described in section 01, then go to Step 19.
7	INSPECT REFRIGERANT AMOUNT <ul style="list-style-type: none"> • Inspect refrigerant amount. • Is it okay? 	Yes	Go to Step 10.
		No	Go to the next step.
8	INSPECT REFRIGERANT LINES <ul style="list-style-type: none"> • Inspect refrigerant lines. <ul style="list-style-type: none"> — Is piping free of damage and cracks? — Are piping connections free of oil grime? (Visual inspection) — Are piping connections free of gas leakage? — Are piping installation points on condenser free of gas leakage? — Are piping installation points on receiver/drier free of gas leakage? — Are piping installation points on A/C compressor free of gas leakage? — Are piping installation points on A/C unit free of gas leakage? — Perform gas leak inspection using gas leak tester. • Are above items okay? 	Yes	Go to the next step.
		No	If piping or A/C component(s) is damaged or cracked, replace then go to Step 19. If there is gas leakage, repair or replace connection and replace condenser*, then go to Step 19.
9	INSPECT EVAPORATOR PIPING CONNECTIONS IN A/C UNIT FOR GAS LEAKAGE <ul style="list-style-type: none"> • Are piping connections for evaporator in A/C unit free of gas leakage? 	Yes	Adjust refrigerant amount to specified level, then go to Step 19.
		No	If piping is damaged or cracked, replace then go to Step 19. If there is gas leakage, repair or replace connection and replace condenser*, then go to Step 19.
10	CHECK TO SEE WHETHER MALFUNCTION IS IN COMPRESSOR OIL OR ELSEWHERE <ul style="list-style-type: none"> • Add 20 ml {20 cc, 0.8 fl oz} of compressor oil. • Is noise heard when racing engine? 	Yes	Go to the next step.
		No	Troubleshooting completed. Explain repair to customer.
11	CHECK TO SEE WHETHER MALFUNCTION IS IN A/C COMPRESSOR OR ELSEWHERE <ul style="list-style-type: none"> • Drain compressor oil. • Is it contaminated with metal particles? 	Yes	Go to the next step.
		No	Replace A/C compressor, then go to Step 19.
12	CHECK TO SEE WHETHER MALFUNCTION IS SOMEWHERE IN A/C SYSTEM OR ELSEWHERE <ul style="list-style-type: none"> • Is compressor oil whitish and mixed with water? 	Yes	Replace entire A/C system (excluding heater), then go to Step 19.
		No	Go to the next step.
13	INSPECT A/C COMPRESSOR OIL <ul style="list-style-type: none"> • Is compressor oil darker than normal and contaminated with aluminum chips? 	Yes	Replace A/C compressor and condenser, then go to Step 19. (Since A/C compressor may be worn and receiver/drier may be clogged, replacement of receiver/drier is necessary.)
		No	Condition is normal. Recheck malfunction symptoms.
14	CHECK TO SEE WHETHER MALFUNCTION IS IN A/C COMPRESSOR OR ELSEWHERE <ul style="list-style-type: none"> • Is noise heard immediately after A/C compressor is stopped? 	Yes	Replace A/C compressor, then go to Step 19. (A/C compressor discharge valve left open)
		No	Go to the next step.
15	INSPECT DRIVE BELT <ul style="list-style-type: none"> • Inspect drive belt. (See 01-10A-5 DRIVE BELT INSPECTION [LF, L5].) (See 01-10B-4 DRIVE BELT INSPECTION [L3 WITH TC].) • Is it okay? 	Yes	Go to the next step.
		No	Replace drive belt, then go to Step 19. (See 01-10A-6 DRIVE BELT REMOVAL/INSTALLATION [LF, L5].) (See 01-10B-4 DRIVE BELT REMOVAL/INSTALLATION [L3 WITH TC].)
16	INSPECT DRIVE BELT CONDITION <ul style="list-style-type: none"> • Is drive belt worn? • Does it have foreign material imbedded in it, or have oil on it? 	Yes	Remove obstruction, remove oil, or replace drive belt, then go to Step 19.
		No	Go to the next step.

07-03B

SYMPTOM TROUBLESHOOTING [MANUAL AIR CONDITIONER]

STEP	INSPECTION	ACTION	
17	INSPECT MAGNETIC CLUTCH <ul style="list-style-type: none"> • Inspect magnetic clutch. (See 07-40B-14 MAGNETIC CLUTCH INSPECTION [MANUAL AIR CONDITIONER].) • Is it okay? 	Yes	Replace A/C compressor (excluding pressure plate, A/C compressor pulley, and stator), then go to Step 19.
		No	Replace magnetic clutch, then go to Step 19.
18	CHECK TO SEE WHETHER MALFUNCTION IS IN A/C COMPRESSOR OR REFRIGERANT LINES <ul style="list-style-type: none"> • Is noise emitted from A/C compressor? 	Yes	Visually inspect A/C compressor, replace appropriate parts if necessary, then go to the next step.
		No	If noise is due to refrigerant lines, repair detached or missing clips, tighten loose bolts, then go to the next step.
19	VERIFY THAT MALFUNCTION SYMPTOM OCCURS AFTER REPAIR <ul style="list-style-type: none"> • Has A/C compressor noise stopped? 	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

* : If there is gas leakage, air enters into the A/C system. The desiccant within the receiver/drier absorbs the moisture from the air and becomes saturated. If the A/C system is used in this condition, the inside of the A/C compressor will begin to rust due to this moisture, which may cause lock up or noise to occur. Therefore, replacement of the receiver/drier is necessary.

REFRIGERANT SYSTEM SERVICE WARNINGS

id071000800100

Handling Refrigerant

- **Avoid breathing air conditioning refrigerant or lubricant vapor. Exposure may irritate eyes, nose and throat. Also, due to environmental concerns, we urge use of recovery/recycling/recharging equipment when draining HFC-134a from the air conditioning system. If accidental system discharge occurs, ventilate work area before resuming service.**
- **Do not perform pressure test or leak test for HFC-134a service equipment and/or vehicle air conditioning system using compressed air. Some mixtures of air and HFC-134a have been shown to be combustible at elevated pressures. These mixtures, if ignited, may cause injury or property damage. Additional health and safety information may be obtained from refrigerant manufacturers.**
- **Do not allow the refrigerant to leak near fire or any kind of heat. A poisonous gas may be generated if the refrigerant gas contacts fire or heat such as from cigarettes and heaters. When carrying out any operation that can cause refrigerant leakage, extinguish or remove the above-mentioned heat sources and maintain adequate ventilation.**
- **Handling liquid refrigerant is dangerous. A drop of it on the skin can result in localized frostbite. When handling the refrigerant, wear gloves and safety goggles. If refrigerant splashes into the eyes, immediately wash them with clean water and consult a doctor.**

Storing Refrigerant

- **The refrigerant container is highly pressurized. If it is subjected to high heat, it could explode, scattering metal fragments and liquid refrigerant that can seriously injure you. Store the refrigerant at temperatures below 40 °C {104 °F}.**

07-10

REFRIGERANT SYSTEM

REFRIGERANT SYSTEM SERVICE CAUTIONS

id071000800200

Handling Insufficient Refrigerant Level

- If an insufficient refrigerant level is detected at troubleshooting, do not charge (add) the refrigerant. Because an accurate amount of refrigerant cannot be determined from the pressure indicated on the manifold gauge, never charge the refrigerant. If there is too much or too little refrigerant from the refilling, there may be secondary problems such as damage to the refrigerant cycle parts, or a decrease of cooling performance. Therefore, if it is determined that the refrigerant level is insufficient, completely remove refrigerant from the refrigerant cycle and refill with refrigerant to the specified amount.

Handling Compressor Oil

- Use only FD46XG compressor oil for this vehicle. Using a PAG oil other than FD46XG compressor oil can damage the A/C compressor.
- Do not spill ATMOS GU10 compressor oil on the vehicle. A drop of compressor oil on the vehicle surface can eat away at the paint. If oil gets on the vehicle, wipe it off immediately.
- FD46XG compressor oil (PAG oil) has a higher moisture absorption efficiency than the previously used mineral oil. If moisture mixes with the compressor oil, the refrigerant system could be damaged. Therefore, install caps immediately after using the compressor oil or removing refrigerant system parts to prevent moisture absorption.
- If the refrigerant gas is completely discharged from the system for reasons such as a malfunction during A/C operation, repair or replace the malfunctioning part, charge the refrigerant to the specified amount and always add 60 ml {60 cc, 2.03 fl oz} of compressor. If the compressor oil is not adequately replenished, the A/C compressor may quickly deteriorate, abnormal noise may develop, cooling performance may be affected or, in the worst case, the A/C compressor may seize.

am3uuw0000398

REFRIGERANT SYSTEM GENERAL PROCEDURES

id071000800300

1. Fully close the valves of the manifold gauge.
2. Connect the charging hoses to the high- and low-pressure side joints of the manifold gauge.
3. Connect the quick couplers to the ends of the charging hoses.
4. Connect the quick couplers to the charging valves.

am3uuw0000398

REFRIGERANT SYSTEM

REFRIGERANT CHARGING

id071000800400

Caution

- Do not exceed the specification when charging the system with refrigerant. Doing so will decrease the efficiency of the air conditioner or damage the refrigeration cycle parts.

Charging Recycled HFC-134a Refrigerant

1. Connect an HFC-134a recovery/recycling/recharging device to the vehicle and follow the device manufacturer's instructions.

Charging Preparation

1. Install the manifold gauge set.
2. Connect the tap pin side of the charging hose to the air purge valve of the manifold gauge.
3. Connect the vacuum pump hose to the center joint of the manifold gauge.
4. Connect the vacuum pump hose to the vacuum pump.
5. Connect the charging hose to the refrigerant tank.
6. Place the refrigerant tank on the scale.

Regular amount of refrigerant (approx. quantity)

455—505 g {16.1—17.8 oz}

am6xuw0000109

07-10

Evacuation

1. Open all the valves of the manifold gauge.

Caution

- Close the manifold gauge valve immediately after stopping the vacuum pump. If the valve is left open, the vacuum pump oil will back flow into the refrigeration cycle and cause a decrease in the efficiency of the air conditioner.

2. Start the vacuum pump and let it operate for 15 min.

am6xuw0000109

3. Verify that high- and low-pressure side readings of the manifold gauge are at **-101 kPa {-760 mmHg, -29.9 inHg}**. Close each valve of the manifold gauge.

am6xuw0000109

REFRIGERANT SYSTEM

Airtightness Check

1. Stop the vacuum pump and wait for **5 min.**
2. Check the high- and low-pressure side readings of the manifold gauge.
 - If the reading has changed, inspect for leakage and go to Evacuation. (See 07-10-3 Evacuation.)
 - If the reading has not changed, go to Charging New R-134a Refrigerant. (See 07-10-4 Charging New HFC-134a Refrigerant.)

Charging New HFC-134a Refrigerant

1. Open the valve of the refrigerant tank.
2. Weigh the refrigerant tank to charge the suitable amount of refrigerant.

Warning

- If the refrigerant system is charged with a large amount of refrigerant when inspecting for gas leakage, and if any leakage should occur, the refrigerant will be released into the atmosphere. In order to prevent the accidental release of refrigerant which can destroy the ozone layer in the stratosphere, follow the proper procedures and charge with only a small amount of refrigerant when inspecting for gas leakage.
- If charging the system with refrigerant using service cans, running the engine with the high-pressure side valve open is dangerous. Pressure within the service cans will increase and the cans could explode, scattering metal fragments and liquid refrigerant that can seriously injure you. Therefore, do not open the high-pressure side valve while the engine is running.

3. Open the low-pressure side valve of the manifold gauge.

am6xuw0000109

4. When the high-pressure side reading increases to **0.098 MPa {1.0 kgf/cm², 14 psi}**, close the low-pressure side valve of the manifold gauge.
5. Inspect for leakage from the cooler pipe/hose connections using the gas leak tester.
 - If there is no leakage, go to Step 7.
 - If leakage is found at a loose joint, tighten the joint, then go to next step.
6. Inspect for leakage again.
 - If there is no leakage after tightening the joint, go to next step.
 - If there is still a leakage at the same joint, discharge the refrigerant and then repair the joint. Repeat the charging procedure from evacuation.

am6xuw0000109

Warning

- If charging the system with refrigerant using service cans, running the engine with the high-pressure side valve open is dangerous. Pressure within the service cans will increase and the cans could explode, scattering metal fragments and liquid refrigerant that can seriously injure you. Therefore, do not open the high-pressure side valve while the engine is running.

REFRIGERANT SYSTEM

- Open the low-pressure side valve of the manifold gauge and charge with refrigerant until the weight of refrigerant tank has decreased **250 g {8.82 oz}** from the amount in Step 2.

am6xuw0000109

- Close the low-pressure side valve of the manifold gauge.

Warning

- If charging the system with refrigerant using service cans, running the engine with the high-pressure side valve open is dangerous. Pressure within the service cans will increase and the cans could explode, scattering metal fragments and liquid refrigerant that can seriously injure you. Therefore, do not open the high-pressure side valve while the engine is running.

am6xuw0000109

07-10

- Start the engine and actuate the A/C compressor.
- Open the low-pressure side valve of the manifold gauge and charge with refrigerant until the weight of the refrigerant tank has decreased regular amount from the amount in Step 2.
- Close the low-pressure side valve of the manifold gauge and the valve of the refrigerant tank.
- Stop the engine and A/C compressor.

am6xuw0000109

Leak Test

- Inspect for leakage using the gas leak tester.
 - If there is no leakage, go to Step 3.
 - If leakage is found at a loose joint, tighten the joint, then go to the next step.
- Inspect for leakage again.
 - If there is no leakage after tightening the joint, go to the next step.
 - If there is still leakage at the same joint, discharge the refrigerant and then repair the joint. Repeat the charging procedure from evacuation.
- Disconnect the quick couplers from the charging valves.
- Install the caps to the charging valves.

am6xuw0000109

REFRIGERANT SYSTEM

REFRIGERANT RECOVERY

id071000800500

1. Connect an HFC-134a recovery/recycling/recharging device to the vehicle and follow the device manufacturer's instructions.

REFRIGERANT PRESSURE CHECK

id071000800600

1. Install the manifold gauge. (See 07-10-2 REFRIGERANT SYSTEM GENERAL PROCEDURES.)
2. Start the engine and after it is warmed up, run it at a constant **1,500 rpm**.
3. Set the fan speed MAX HI.
4. Turn the A/C switch on.
5. Set to RECIRCULATE mode.
6. Set the temperature control to MAX COLD.
7. Set to VENT mode.
8. Close all the doors and all the windows.
9. Measure the ambient temperature and high- and low- pressure side reading of the manifold gauge.
10. Verify that the intersection of the pressure reading of the manifold gauge and ambient temperature is in the shaded zone.

4SD

5HB

- If there is any malfunction, inspect the refrigerant system according to the troubleshooting chart.

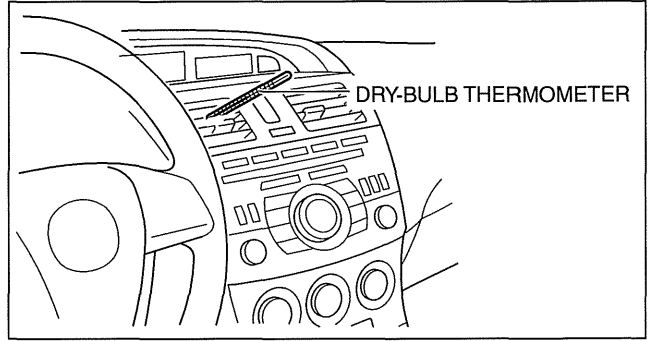

REFRIGERANT SYSTEM

REFRIGERANT SYSTEM PERFORMANCE TEST

id071000800700

1. Inspect the refrigerant pressure. (See 07-10-6 REFRIGERANT PRESSURE CHECK.)
2. Place a dry-bulb thermometer in the driver-side center ventilator outlet.
3. Start the engine and after it is warmed up, run it at a constant **1,500 rpm**.
4. Set the fan speed to MAX HI.
5. Turn the A/C switch on.
6. Set to RECIRCULATE mode.
7. Set the temperature control to MAX COLD.
8. Set to VENT mode.
9. Close all the doors and windows.
10. Wait until the air conditioner output temperature stabilizes.

am3uuw0000399

Stabilized condition

- The A/C compressor repeatedly turns on and off at regular intervals.

11. After the blower air is stabilized, read the dry-bulb thermometer.
12. Verify the ambient temperature.
13. Verify that the temperature reading is in the shaded zone.

4SD

am3uuw0000533

07-10

5HB

- If there is any malfunction, inspect the refrigerant system according to the troubleshooting chart.

Evaporator Temperature Sensor Assembly Note

1. Assemble the evaporator temperature sensor as shown in the figure.

am3uuw0000400

Caution

- When installing the evaporator temperature sensor without newly replacing the evaporator, assemble the evaporator temperature sensor with the installation position slid to the left of the previous position by 1 line. If the evaporator temperature sensor is assembled to the previously installed position, it may not function due to poor contact of the fin surface with the sensor detection area caused by fin deformation.

Note

- Newly replace an evaporator in which the evaporator temperature sensor cannot be correctly positioned.

Adhesive Polyurethane (2) Assembly Note

1. Wrap the low-pressure side of the evaporator pipe with insulator.

am3uuw0000400

BASIC SYSTEM

2. Assemble the adhesive polyurethane as shown in the figure.

07-11

BASIC SYSTEM

EXPANSION VALVE REMOVAL/INSTALLATION

id071100800400

1. Disconnect the negative battery cable.
2. Discharge the refrigerant from the system. (See 07-10-3 REFRIGERANT CHARGING.)

Caution

- If moisture or foreign material enters the refrigeration cycle, cooling ability will be lowered and abnormal noise will occur. Always immediately plug all open fittings after removing any refrigeration cycle parts to keep moisture or foreign material out of the cycle.

3. Disconnect the cooler hose (LO) and cooler pipe. Do not allow compressor oil to spill. (See 07-11-24 REFRIGERANT LINE REMOVAL/INSTALLATION.)
4. Remove the following parts:
 - (1) Front side trim (RH) (See 09-17-53 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
 - (2) Front scuff plate (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
 - (3) Dashboard under cover (See 09-17-39 DASHBOARD UNDER COVER REMOVAL/INSTALLATION.)
 - (4) Glove compartment (See 09-17-33 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
 - (5) Lower panel (passenger-side) (See 09-17-27 LOWER PANEL REMOVAL/INSTALLATION.)
 - (6) Side wall (RH) (See 09-17-37 SIDE WALL REMOVAL/INSTALLATION.)
 - (7) Shower duct (RH) (See 07-11-4 A/C UNIT REMOVAL/INSTALLATION)
5. Remove the adhesive polyurethane (2). (See 07-11-10 A/C UNIT DISASSEMBLY/ASSEMBLY.)
6. Remove the bolt A.
7. Disconnect the evaporator pipe.
8. Remove the bolt B.
9. Remove the expansion valve. Do not allow compressor oil to spill.
10. Install in the reverse order of removal.
11. Perform the refrigerant system performance test. (See 07-10-7 REFRIGERANT SYSTEM PERFORMANCE TEST.)

am3uuw0000543

EVAPORATOR INSPECTION

id071100801500

1. Inspect the evaporator for damage, cracks, and oil leakage.
 - If there is any malfunction, replace the evaporator.
2. Visually inspect the fins for bending.
 - If there is any bending, use the end of a flathead screwdriver to straighten the fins.

HEATER CORE INSPECTION

id071100801600

1. Inspect the heater core for damage, cracks, and water leakage.
 - If there is any malfunction, replace the heater core.
2. Visually inspect the fins for bending.
 - If there is any bending, use the end of a flathead screwdriver to straighten the fins.
3. Visually inspect the heater hose for deformation.
 - Repair with pliers if there is deformation. If there is any malfunction, replace the heater core.

BASIC SYSTEM

AIRFLOW MODE MAIN LINK REMOVAL/INSTALLATION

id071100801800

1. Set the air intake mode to FRESH.
2. Set the air mix mode to MAX COLD.
3. Disconnect the negative battery cable.
4. Remove the following parts:
 - (1) Front doors (See 09-11-3 FRONT DOOR REMOVAL/INSTALLATION.)
 - (2) Front scuff plate (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
 - (3) Front side trim (See 09-17-53 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
 - (4) Dashboard under cover (See 09-17-39 DASHBOARD UNDER COVER REMOVAL/INSTALLATION.)
 - (5) Glove compartment (See 09-17-33 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)

 - (30) Information display (See 09-22-13 INFORMATION DISPLAY REMOVAL/INSTALLATION.)
 - (31) A-pillar trim (See 09-17-50 A-PILLAR TRIM REMOVAL/INSTALLATION.)
 - (32) Windshield wiper arm and blade (See 09-19-3 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
 - (33) Front fender molding (See 09-16-4 COWL GRILLE REMOVAL/INSTALLATION.)
 - (34) Cowl grille (See 09-16-4 COWL GRILLE REMOVAL/INSTALLATION.)
 - (35) Windshield wiper motor (See 09-19-5 WINDSHIELD WIPER MOTOR REMOVAL/INSTALLATION.)
 - (36) Rear heat duct (1) (See 07-11-18 REAR HEAT DUCT REMOVAL/INSTALLATION.)
 - (37) Shower ducts (See 07-11-4 A/C UNIT REMOVAL/INSTALLATION)
 - (38) Heater case (See 07-11-4 A/C UNIT REMOVAL/INSTALLATION)
5. Remove the nuts and bolts for installing the dashboard to the body.
6. Remove the nuts and bolts for installing the A/C unit to the dashboard.
7. Remove the accelerator pedal. (See 01-13A-8 ACCELERATOR PEDAL REMOVAL/INSTALLATION [LF, L5].) (See 01-13B-14 ACCELERATOR PEDAL REMOVAL/INSTALLATION [L3 WITH TC].)

07-11

BASIC SYSTEM

8. Disconnect the following connectors:
 - Blower motor connector
 - Power MOS FET connector (Full-auto air conditioner)
 - Resistor connector (Manual air conditioner)
 - Evaporator temperature sensor connector
 - Air intake actuator connector
 - Air mix actuator connector (Full-auto air conditioner)
 - Airflow mode actuator connector (Full-auto air conditioner)
9. Remove the dashboard. (See 09-17-5 DASHBOARD REMOVAL/INSTALLATION.)
10. Remove the airflow mode actuator (Full-auto air conditioner).
11. Remove the airflow mode rod (Manual air conditioner).
12. Remove the airflow mode main link.
13. Install in the reverse order of removal.

Airflow Mode Main Link Installation Note

Caution

- Apply only the specified grease to links. Otherwise abnormal noise or improper operation may result.

Full-auto air conditioner

1. Set the airflow mode sub link to the A/C unit as shown in the figure.

2. Set the airflow mode main link to the A/C unit as shown in the figure.
3. Press the airflow mode main link lightly to the A/C unit in the direction shown by the arrow, then set the projections of each airflow mode sub link into the grooves of the airflow mode main link.

BASIC SYSTEM

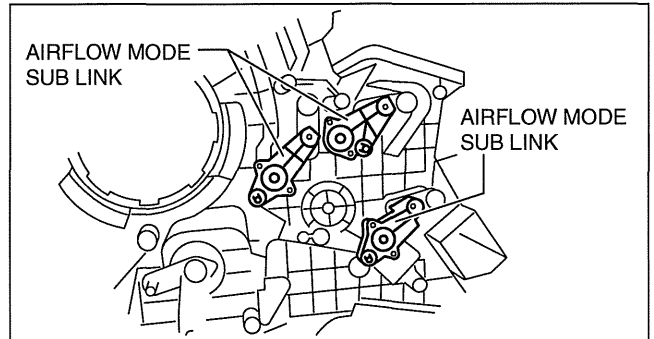

4. Rotate airflow mode main link and verify that each mode is accessed properly.

am3uuw000488

Manual air conditioner

1. Set the airflow mode sub link to the A/C unit as shown in the figure.

am3uuw000488

2. Set the airflow mode main link to the A/C unit as shown in the figure.
3. Install the airflow mode rod.
4. Press the airflow mode main link lightly to the A/C unit in the direction shown by the arrow, then set the projections of each airflow mode sub link into the grooves of the airflow mode main link.

am3uuw000488

5. Rotate airflow mode main link and verify that each mode is accessed properly.

10. Remove the cooler hose (HI). (See 07-11-24 REFRIGERANT LINE REMOVAL/INSTALLATION.)
11. Remove the bolt B.
12. Remove the A/C compressor. Do not allow compressor oil to spill. (See 07-11-20 A/C Compressor Installation Note.)
13. Install in the reverse order of removal.
14. Perform the refrigerant system performance test. (See 07-10-7 REFRIGERANT SYSTEM PERFORMANCE TEST.)

BASIC SYSTEM

A/C Compressor Installation Note

Caution

- Due to the high moisture-absorption characteristics of the compressor oil, it may absorb moisture if left over a long period of time thereby negatively affecting A/C operation. Drain the compressor oil and refill within 10 min. of each other.

1. Rotate new A/C compressor shaft six to eight revolutions while collecting refrigerant oil in a clean measuring device. Use this refrigerant oil to refill new compressor. Do not allow refrigerant oil to become contaminated.
2. Rotate old A/C compressor shaft six to eight revolutions while collecting refrigerant oil in a separate, clean measuring device.
3. Compare those oil amounts. The amount of the oil drained from the new A/C compressor should be greater than the old one.
4. Pour the same amount oil of drained from the old A/C compressor back into the new A/C compressor.

A/C compressor oil type
FD46XG

A/C compressor oil sealed volume (approx. quantity)
120 ml {120 cc, 4.06 fl oz}

Refrigerant Line Removal Note

Block joint type

1. Disconnect the block joint type pipes by grasping female side of the block with pliers or similar tool and holding firmly, then remove the connection bolt or nut.

am3uuw000061

Spring-lock coupling type

1. Set the SST.

am3zzw000072

2. While looking through the inspection hole of the SST, insert the protruding part of the SST until it makes contact with the cage section.

am3zzw000072

3. Use the SST to disconnect the male pipe or hose from the female by pulling the male pipe or hose.

Note

- The male pipe or hose can be disconnected easily from the female pipe by pulling from the male pipe or hose while maintaining the pressure of the protruding part of the SST.

am3uuw000061

07-11

BASIC SYSTEM

Refrigerant Line Installation Note

1. Apply compressor oil to the O-rings and connect the joints.
2. Tighten the joints.

Block joint type

1. Tighten the bolt of joint by hand.
2. Connect the block joint type pipes by grasping the female side of the block with pliers or similar tool and holding firmly, then tighten the connection bolt or nut with a torque wrench.

am3uuw000061

Spring-lock coupling type

1. Connect the male pipe or hose by twisting it onto female pipe until the garter spring at the male pipe or hose is over the flared end of female pipe.

Note

- When the male pipe or hose is replaced, the indicator ring comes out after connecting to indicate that it is locked.

am3uuw000062

Cooler Hose (LO) Installation Note

1. After replacing the cooler hose (LO), add compressor oil to the refrigeration cycle.

Supplemental oil amount (approx. quantity)

10 ml {10 cc, 0.32 fl oz}

Cooler Pipe Installation Note

1. After replacing the cooler pipe, add compressor oil to the refrigeration cycle.

Supplemental oil amount (approx. quantity)

5 ml {5 cc, 0.16 fl oz}

AIR INTAKE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]

id0740a1801400

07-40A

1. Set the air intake mode to FRESH.
2. Disconnect the negative battery cable.
3. Remove the following parts:
 - (1) Front scuff plate (Passenger side) (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
 - (2) Front side trim (Passenger side) (See 09-17-53 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
 - (3) Dashboard under cover (See 09-17-39 DASHBOARD UNDER COVER REMOVAL/INSTALLATION.)
 - (4) Glove compartment (See 09-17-33 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
 - (5) Lower panel (Passenger side) (See 09-17-27 LOWER PANEL REMOVAL/INSTALLATION.)
 - (6) Shower duct (Passenger side) (See 07-11-4 A/C UNIT REMOVAL/INSTALLATION.)
4. Disconnect the harness clip from the blower case.
5. Disconnect the air intake actuator connector.
6. Remove the blower case. (See 07-40A-9 BLOWER MOTOR REMOVAL [FULL-AUTO AIR CONDITIONER].) (See 07-40A-13 BLOWER MOTOR INSTALLATION [FULL-AUTO AIR CONDITIONER].)
7. Remove the screw A.
8. Remove the air intake actuator link.
9. Remove the screw B.
10. Remove the air intake actuator.
11. Install in the reverse order of removal.

am3uuw0000403

CONTROL SYSTEM [FULL-AUTO AIR CONDITIONER]

AIR INTAKE ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER]

id0740a1801500

1. Connect battery positive voltage to air intake actuator terminal B (or C), connect terminal C (or B) to ground, and then verify that the air intake actuator operates as shown in the table.
 - If the operation condition is not normal, replace the air intake actuator.

am3uuw0000403

Terminal		Air intake actuator operation
B	C	
B+	Ground	FRESH → RECIRCULATE
Ground	B+	RECIRCULATE → FRESH

AIR MIX ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]

id0740a1802400

Driver Side

1. Disconnect the negative battery cable.
2. Disconnect the connector.
3. Remove the hook (1), remove the rod (2) from the air mix actuator link.

am3uuw0000488

4. Remove the screw.
5. Remove the driver side air mix actuator.
6. Install in the reverse order of removal.

am3uuw0000404

CONTROL SYSTEM [FULL-AUTO AIR CONDITIONER]

Passenger Side

1. Disconnect the negative battery cable.
2. Remove the following parts:
 - (1) Front scuff plate (Passenger side) (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
 - (2) Front side trim (Passenger side) (See 09-17-53 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
 - (3) Dashboard under cover (See 09-17-39 DASHBOARD UNDER COVER REMOVAL/INSTALLATION.)
 - (4) Glove compartment (See 09-17-33 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
 - (5) Lower panel (Passenger side) (See 09-17-27 LOWER PANEL REMOVAL/INSTALLATION.)
 - (6) Shower duct (Passenger side) (See 07-11-4 A/C UNIT REMOVAL/INSTALLATION.)
3. Disconnect the connector.
4. Remove the screw.
5. Remove the passenger side air mix actuator.
6. Install in the reverse order of removal.

am3uuw0000404

AIR MIX ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER]

id0740a1802500

07-40A

Caution

- If the lever position exceeds the operation range shown in the figure, the circuit in the actuator could be damaged. Always perform an actuator operation inspection with the lever movement within the range shown in the figure.

Driver Side

1. Connect battery positive voltage to air mix actuator terminal C (or B), connect terminal B (or C) to ground, and then verify that the air mix actuator operates as shown in the table.
 - If the operation condition is not normal, replace the air mix actuator.

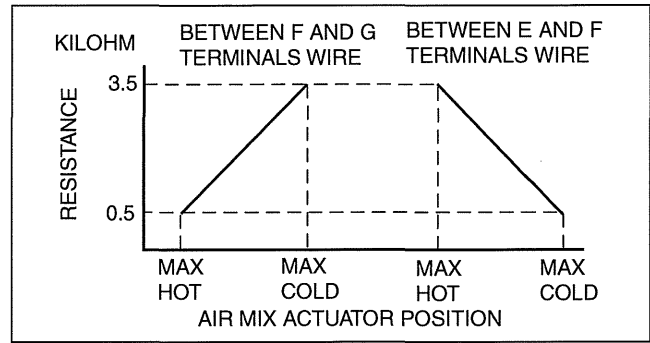

am3uuw0000404

Terminal		Air mix actuator operation
B	C	
B+	Ground	COLD → HOT
Ground	B+	HOT → COLD

CONTROL SYSTEM [FULL-AUTO AIR CONDITIONER]

2. Verify that the resistance between terminals F and G, E and F matches the air mix actuator operation as shown in the graph.
 - If the operation condition and resistance are not normal, replace the the air mix actuator.

am3uuw0000404

Passenger Side

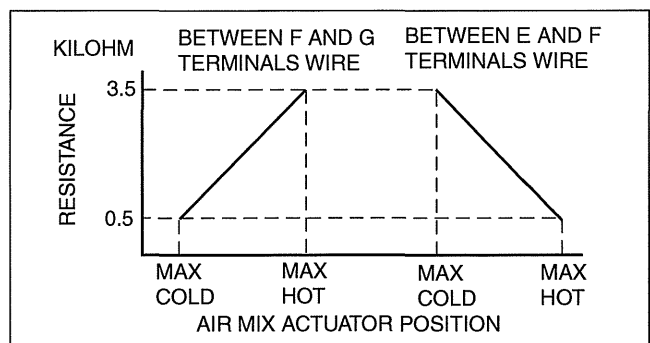

1. Connect battery positive voltage to air mix actuator terminal C (or B), connect terminal B (or C) to ground, and then verify that the air mix actuator operates as shown in the table.
 - If the operation condition is not normal, replace the air mix actuator.

am3uuw0000404

Terminal		Air mix actuator operation
B	C	
B+	Ground	HOT → COLD
Ground	B+	COLD → HOT

2. Verify that the resistance between terminals F and G, E and F matches the air mix actuator operation as shown in the graph.
 - If the operation condition and resistance are not normal, replace the air mix actuator.

AIRFLOW MODE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]

id0740a1801600

07-40A

1. Set the air intake mode to FRESH.
2. Set the air mix mode to MAX COLD.
3. Disconnect the negative battery cable.
4. Remove the following parts:
 - (1) Front doors (See 09-11-3 FRONT DOOR REMOVAL/INSTALLATION.)
 - (2) Front scuff plate (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
 - (3) Front side trim (See 09-17-53 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
 - (4) Dashboard under cover (See 09-17-39 DASHBOARD UNDER COVER REMOVAL/INSTALLATION.)
 - (5) Glove compartment (See 09-17-33 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
 - (6) Upper panel (See 09-17-40 UPPER PANEL REMOVAL/INSTALLATION.)
 - (7) Shift lever knob (MTX) (See 05-16-2 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)
 - (8) Selector lever knob (ATX) (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)
 - (9) Shift panel (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION.)
 - (10) Side wall (See 09-17-37 SIDE WALL REMOVAL/INSTALLATION.)
 - (11) Console (See 09-17-45 CONSOLE REMOVAL/INSTALLATION.)
 - (12) Shift lever component (MTX) (See 05-16-2 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)
 - (13) Selector lever component (ATX) (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)
 - (14) Hood release lever (See 09-14-15 HOOD LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
 - (15) Lower panel (See 09-17-27 LOWER PANEL REMOVAL/INSTALLATION.)
 - (16) Knee bolster (See 09-17-36 KNEE BOLSTER REMOVAL/INSTALLATION.)
 - (17) Driver-side air bag module (See 08-10-7 DRIVER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
 - (18) Steering wheel (See 06-14-8 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION [WITHOUT ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) (See 06-14-11 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
 - (19) Column cover (See 09-17-22 COLUMN COVER REMOVAL/INSTALLATION.)
 - (20) Combination switch (See 09-18-56 COMBINATION SWITCH REMOVAL/INSTALLATION.)
 - (21) Joint cover (See 06-14-8 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION [WITHOUT ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) (See 06-14-11 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
 - (22) Steering shaft (See 06-14-8 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION [WITHOUT ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) (See 06-14-11 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
 - (23) Center panel (See 09-17-24 CENTER PANEL REMOVAL/INSTALLATION.)
 - (24) Audio unit (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
 - (25) Climate control unit (See 07-40A-26 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
 - (26) Instrument cluster (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
 - (27) Center cover (See 09-17-19 CENTER COVER REMOVAL/INSTALLATION.)
 - (28) Dashboard upper panel (See 09-17-14 DASHBOARD UPPER PANEL REMOVAL/INSTALLATION.)
 - (29) Hole cover (See 09-17-25 HOLE COVER REMOVAL/INSTALLATION.)
 - (30) Information display (See 09-22-13 INFORMATION DISPLAY REMOVAL/INSTALLATION.)
 - (31) A-pillar trim (See 09-17-50 A-PILLAR TRIM REMOVAL/INSTALLATION.)
 - (32) Front fender molding (See 09-16-4 COWL GRILLE REMOVAL/INSTALLATION.)
 - (33) Windshield wiper arm and blade (See 09-19-3 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
 - (34) Cowl grille (See 09-16-4 COWL GRILLE REMOVAL/INSTALLATION.)
 - (35) Windshield wiper motor (See 09-19-5 WINDSHIELD WIPER MOTOR REMOVAL/INSTALLATION.)
 - (36) Rear heat duct (1) (See 07-11-18 REAR HEAT DUCT REMOVAL/INSTALLATION.)
 - (37) Shower ducts (See 07-11-4 A/C UNIT REMOVAL/INSTALLATION)
 - (38) Heater case (See 07-11-4 A/C UNIT REMOVAL/INSTALLATION)
5. Remove the nuts and bolts for installing the dashboard to the body.
6. Remove the nuts and bolts for installing the A/C unit to the dashboard.
7. Remove the accelerator pedal. (See 01-13A-8 ACCELERATOR PEDAL REMOVAL/INSTALLATION [LF, L5].) (See 01-13B-14 ACCELERATOR PEDAL REMOVAL/INSTALLATION [L3 WITH TC].)
8. Disconnect the following connectors:
 - Blower motor connector
 - Power MOS FET connector
 - Evaporator temperature sensor connector
 - Air intake actuator connector
 - Air mix actuator connector

CONTROL SYSTEM [FULL-AUTO AIR CONDITIONER]

— Airflow mode actuator connector

9. Remove the dashboard. (See 09-17-5 DASHBOARD REMOVAL/INSTALLATION.)
10. Remove the airflow mode rod from the airflow mode actuator.
11. Remove the screw.
12. Remove the airflow mode actuator. (See 07-40A-8 Airflow Mode Actuator Disassemble Note.)
13. Install in the reverse order of removal.

am3uuw0000403

Airflow Mode Actuator Disassemble Note

1. Remove the airflow mode actuator bracket as shown in the figure.

am3uuw0000403

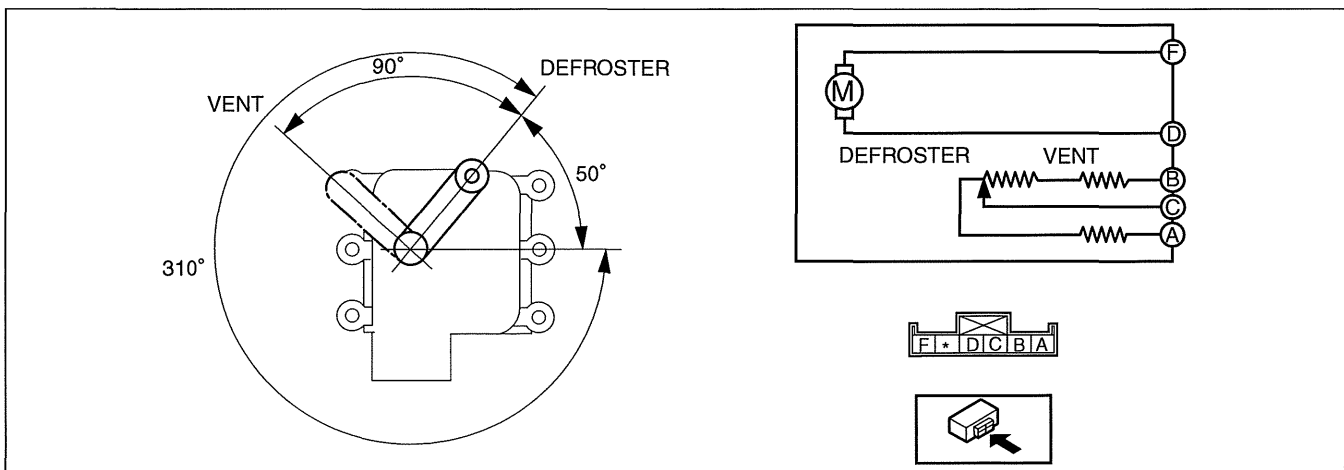

AIRFLOW MODE ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER]

id0740a1801700

Caution

- If the lever position exceeds the operation range shown in the figure, the circuit in the actuator could be damaged. Always perform an actuator operation inspection with the lever movement within the range shown in the figure.

1. Connect battery positive voltage to airflow mode actuator terminal D (or F), connect terminal F (or D) to ground, and then verify that the airflow mode actuator operates as shown in the table.
 - If the operation condition is not normal, replace the airflow mode actuator.

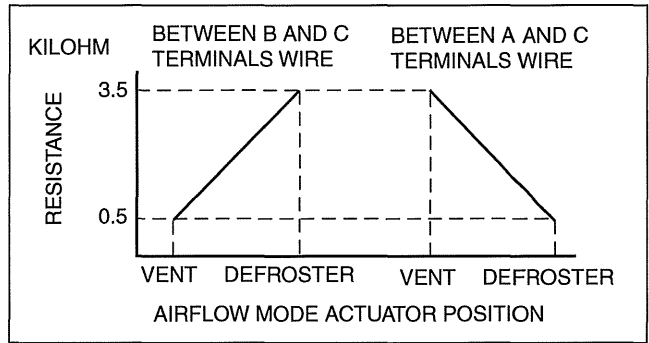

am3uuw0000614

CONTROL SYSTEM [FULL-AUTO AIR CONDITIONER]

Terminal		Airflow mode actuator operation
D	F	
B+	Ground	DEFROSTER → VENT
Ground	B+	VENT → DEFROSTER

2. Verify that the resistance between terminals B and C, C and A matches the airflow mode actuator operation as shown in the graph.
- If the operation condition and resistance are not normal, replace the airflow mode actuator.

am3uuw0000403

BLOWER MOTOR REMOVAL [FULL-AUTO AIR CONDITIONER]

id0740a1807300

Note

- The blower motor is located on the A/C unit as shown in the figure.

07-40A

am3uuw0000406

- Perform the work from the front passenger side in the posture shown in the figure.

am3uuw0000406

CONTROL SYSTEM [FULL-AUTO AIR CONDITIONER]

1. Set the air intake mode to FRESH.
2. Disconnect the negative battery cable.
3. Remove the following parts:
 - (1) Front scuff plate (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
 - (2) Front side trim (See 09-17-53 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
 - (3) Upper panel (See 09-17-40 UPPER PANEL REMOVAL/INSTALLATION.)
 - (4) Shift lever knob (MTX) (See 05-16-2 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)
 - (5) Selector lever knob (ATX) (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)
 - (6) Shift panel (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION.)
 - (7) Side wall (See 09-17-37 SIDE WALL REMOVAL/INSTALLATION.)
 - (8) Console (See 09-17-45 CONSOLE REMOVAL/INSTALLATION.)
 - (9) Dashboard under cover (See 09-17-39 DASHBOARD UNDER COVER REMOVAL/INSTALLATION.)
 - (10)Glove compartment (See 09-17-33 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
 - (11)Hood release lever (See 09-14-15 HOOD LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
 - (12)Lower panel (See 09-17-27 LOWER PANEL REMOVAL/INSTALLATION.)
 - (13)Shower duct (See 07-11-4 A/C UNIT REMOVAL/INSTALLATION.)
 - (14)Accelerator pedal (See 01-13A-8 ACCELERATOR PEDAL REMOVAL/INSTALLATION [LF, L5].) (See 01-13B-14 ACCELERATOR PEDAL REMOVAL/INSTALLATION [L3 WITH TC].)
4. Disconnect the air intake actuator connector. (See 07-40B-3 AIR INTAKE ACTUATOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER].)
5. Detach the harness clip from the blower case.
6. Remove the screws shown in the figure and slide the blower case.
7. Remove the blower case.

am3uuw0000406

8. Disconnect the blower motor cooling pipe.

am3uuw0000406

9. Install the **SST (49 B061 015A)** to the blower motor.

am3uuw0000556

CONTROL SYSTEM [FULL-AUTO AIR CONDITIONER]

- (1) Rotate the **SST** (1) and align the **SST** hole with the align point (2) and then confirm that the **SST** tabs into the three set holes on the blower motor they are inserted as shown in the figure.

am3uuw0000556

10. Press the tab (1) and rotate the blower motor (2) and push the blower motor into the A/C case slightly.

am3uuw0000407

11. Rotate the blower motor and the blower motor connector position as shown in the figure (3) for disconnect the blower motor connector eased.

am3uuw0000440

07-40A

CONTROL SYSTEM [FULL-AUTO AIR CONDITIONER]

12. Press the tab (4) disconnect the blower motor connector as shown in the figure (5).

am3uuw0000440

13. Remove the blower motor in the direction shown by the arrow.

Caution

- To prevent damage to the sirocco fan, pull the blower motor out being careful that the blower motor does not interfere with the A/C unit.

am3uuw0000407

14. Remove the blower motor with SST (49 B061 015A) by pulling it out.

Caution

- To prevent damage to the sirocco fan, pull the blower motor out being careful that the blower motor does not interfere with the A/C unit.

am3uuw0000407

CONTROL SYSTEM [FULL-AUTO AIR CONDITIONER]

BLOWER MOTOR INSTALLATION [FULL-AUTO AIR CONDITIONER]

id0740a1807200

1. Install the SST (49 B061 015A) to the blower motor.

am3uuw0000405

2. Install the blower motor with the SST (49 B061 015A) installed, to the A/C unit.

Caution

- To prevent damage to the sirocco fan, install the blower motor being careful that the blower motor does not interfere with the A/C unit. Also, another person must hold the blower motor at the installation position.

am3uuw0000556

3. Rotate the SST (49 B061 015A) until to the blower motor tab locked.

am3uuw0000557

07-40A

CONTROL SYSTEM [FULL-AUTO AIR CONDITIONER]

4. Connect the blower motor connector as shown in the figure.

am3uuw0000406

5. Connect the blower motor cooling pipe.

am3uuw0000406

6. Rotate the **SST (49 B061 015A)** in the direction shown by the arrow.

am3uuw0000406

7. Remove the **SST (49 B061 015A)** from the blower motor.
8. Install the blower case.

Caution

- Install the blower case while pressing the dashboard insulator, otherwise the blower case could be damaged.

am3uuw0000557

CONTROL SYSTEM [FULL-AUTO AIR CONDITIONER]

9. Install the screws shown in the figure.
10. Install the harness clip to the blower case.
11. Connect the air intake actuator connector.
12. Install the following parts:
 - (1) Accelerator pedal (See 01-13A-8 ACCELERATOR PEDAL REMOVAL/INSTALLATION [LF, L5].) (See 01-13B-14 ACCELERATOR PEDAL REMOVAL/INSTALLATION [L3 WITH TC].)
 - (2) Shower duct (Passenger side) (See 07-11-4 A/C UNIT REMOVAL/INSTALLATION.)
 - (3) Lower panel (See 09-17-27 LOWER PANEL REMOVAL/INSTALLATION.)
 - (4) Hood release lever (See 09-14-15 HOOD LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
 - (5) Dashboard under cover (Passenger side) (See 09-17-39 DASHBOARD UNDER COVER REMOVAL/INSTALLATION.)
 - (6) Glove compartment (See 09-17-33 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
 - (7) Shift panel (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION.)
 - (8) Selector lever knob (ATX) (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)
 - (9) Shift lever knob (MTX) (See 05-16-2 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)
 - (10) Upper panel (See 09-17-40 UPPER PANEL REMOVAL/INSTALLATION.)
 - (11) Front side trim (See 09-17-53 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
 - (12) Front scuff plate (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)

am3uuw0000406

07-40A

Blower Case Installation Note

1. If not replacing the blower case, replace the adhesive polyurethane on the fresh-air inlet of the blower case.

Caution

- To adhere new polyurethane properly, be sure to remove the adhesive agent and adhesive polyurethane completely.

Note

- If the blower case is removed or installed, the adhesive polyurethane can be damaged. Damaged adhesive polyurethane could cause abnormal noise or other malfunctions, therefore replace it.

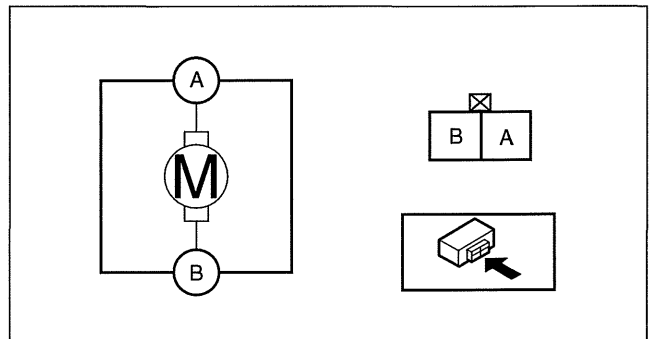

am3uuw0000406

BLOWER MOTOR INSPECTION [FULL-AUTO AIR CONDITIONER]

id0740a1801000

1. Connect battery positive voltage to blower motor terminal A, connect terminal B to ground, and then verify its operation.
 - If there is any malfunction, replace the blower motor.

am3uuw0000403

CONTROL SYSTEM [FULL-AUTO AIR CONDITIONER]

POWER METAL OXIDE SEMICONDUCTOR FIELD EFFECT TRANSISTOR (POWER MOS FET) REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]

id0740a1800200

1. Disconnect the negative battery cable.
2. Remove the dashboard under cover (See 09-17-39 DASHBOARD UNDER COVER REMOVAL/INSTALLATION.)
3. Disconnect the connector.
4. Remove the screw.
5. Remove the power MOS FET.
6. Install in the reverse order of removal.

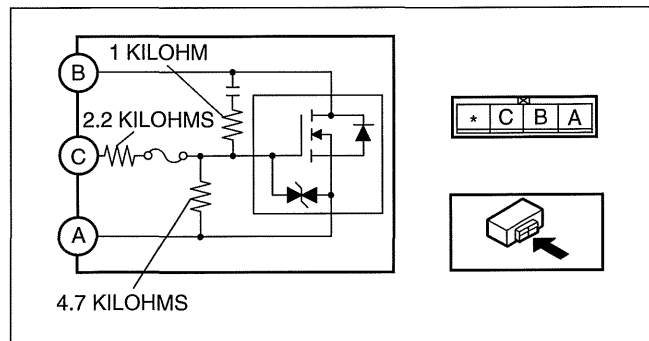

am3uuw0000571

POWER METAL OXIDE SEMICONDUCTOR FIELD EFFECT TRANSISTOR (POWER MOS FET) INSPECTION [FULL-AUTO AIR CONDITIONER]

id0740a1800300

1. Verify that the continuity between the power MOS FET terminals is as indicated in the table.
 - If there is any malfunction, replace the power MOS FET.
 - If the blower motor operation is not normal even though no malfunction can be verified, inspect the climate control unit. (See 07-40A-26 CLIMATE CONTROL UNIT INSPECTION [FULL-AUTO AIR CONDITIONER].)

Tester lead		Resistance (kilohm)
+	-

CONTROL SYSTEM [FULL-AUTO AIR CONDITIONER]

LF

1	Bolt (See 07-40A-17 Bolt Removal/Installation Note.)
2	Pressure plate
3	Shim (See 07-40A-19 Shim Installation Note.)
4	Snap ring (See 07-40A-19 Snap Ring Removal/Installation Note.)
5	A/C compressor pulley (See 07-40A-18 A/C Compressor Pulley Removal Note.) (See 07-40A-18 A/C Compressor Pulley Installation Note.)
6	Snap ring (See 07-40A-19 Snap Ring Removal/Installation Note.)
7	Stator
8	A/C compressor body

am3uuw0000402

2. Assemble in the reverse order of disassembly.
3. Adjust the magnetic clutch clearance. (See 07-40A-19 MAGNETIC CLUTCH ADJUSTMENT [FULL-AUTO AIR CONDITIONER].)

Bolt Removal/Installation Note

1. When removing or installing the bolt, lock the A/C compressor pulley against rotation using the following procedure

Caution

- When connecting the positive battery cable to the magnetic clutch connector, use a cable with a female terminal of the correct size. Otherwise, load will be applied to the terminal, resulting in deformation or damage, and poor contact. In addition, the positive battery cable could disconnect from the connector resulting in a short circuit.

- (1) Apply battery positive voltage to the magnetic clutch terminal and connect the A/C compressor body to the ground.

acxuuw00002858

- (2) Wrap the drive belt, which is no longer of use, tightly around the A/C compressor pulley.
- (3) Hold the drive belt in place with pliers.
- (4) Remove/installation the bolt.

Tightening torque

15 N·m {1.5 kgf·m, 11 ft·lbf}

CONTROL SYSTEM [FULL-AUTO AIR CONDITIONER]

A/C Compressor Pulley Removal Note

1. Remove the A/C compressor pulley using the SSTs (49 0839 425C, 49 SE01 160).

Caution

- Be careful that the SST (49 0839 425C) tabs do not hang over the stator.

acxuuw00002994

Note

- Taping on the nail to protect damage.

am3uuw0000572

A/C Compressor Pulley Installation Note

1. Install the inner wheel of the pulley using SST (49 D034 202) to the compressor.

Caution

- If the SST is not properly positioned when the A/C compressor pulley is press-fit, the A/C compressor axle will interfere with the SST, possibly damaging component parts. Verify the SST and axle are properly positioned and perform the procedure very carefully.

CONTROL SYSTEM [FULL-AUTO AIR CONDITIONER]

Snap Ring Removal/Installation Note

1. Remove/installation the snap ring using a snap ring pliers.

am3uuw0000572

Shim Installation Note

1. First, insert the 1mm (0.039 in) thick shim into the shaft.

am3uuw0000572

MAGNETIC CLUTCH ADJUSTMENT [FULL-AUTO AIR CONDITIONER]

id0740a1800500

1. Measure the clearance around the entire circumference between the pressure plate and A/C compressor pulley using a thickness gauge.
2. Verify that the clearance.
 - If not within the specification, remove the pressure plate and adjust the clearance by changing the shim (0.2 mm {0.008 in}, 0.5 mm {0.02 in}) or the number of shims.

Clearance

0.35—0.65 mm {0.014—0.025 in}

am3uuw0000402

am6xuw0000101

07-40A

CONTROL SYSTEM [FULL-AUTO AIR CONDITIONER]

MAGNETIC CLUTCH INSPECTION [FULL-AUTO AIR CONDITIONER]

id0740a1800600

1. Connect battery to terminal A of magnetic clutch and ground to A/C compressor body.

am3uuw0000403

2. Verify that the magnetic clutch operates.
 - If there is any malfunction, replace the magnetic clutch.

SOLAR RADIATION SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]

id0740a1802800

1. Disconnect the negative battery cable.
2. Remove the following parts:
 - (1) Upper panel (See 09-17-40 UPPER PANEL REMOVAL/INSTALLATION.)
 - (2) Shift lever knob (MTX) (See 05-16-2 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)
 - (3) Selector lever knob (ATX) (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)
 - (4) Shift panel (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION.)
 - (5) Side wall (See 09-17-37 SIDE WALL REMOVAL/INSTALLATION.)
 - (6) Center panel (See 09-17-24 CENTER PANEL REMOVAL/INSTALLATION.)
 - (7) Console (See 09-17-45 CONSOLE REMOVAL/INSTALLATION.)
 - (8) Front scuff plate (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
 - (9) Front side trim (See 09-17-53 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
 - (10) Dashboard under cover (See 09-17-39 DASHBOARD UNDER COVER REMOVAL/INSTALLATION.)
 - (11) Glove compartment (See 09-17-33 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
 - (12) Lower panel (passenger-side) (See 09-17-27 LOWER PANEL REMOVAL/INSTALLATION.)
 - (13) Hood release lever (See 09-14-15 HOOD LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
 - (14) Lower panel (driver-side) (See 09-17-27 LOWER PANEL REMOVAL/INSTALLATION.)
 - (15) Shower duct (See 07-11-4 A/C UNIT REMOVAL/INSTALLATION.)
 - (16) Center panel (See 09-17-24 CENTER PANEL REMOVAL/INSTALLATION.)
 - (17) Audio unit (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
 - (18) Climate control unit (See 07-40A-26 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
 - (19) Driver-side air bag module (See 08-10-7 DRIVER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
 - (20) Steering wheel (See 06-14-8 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION [WITHOUT ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) (See 06-14-11 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
 - (21) Column cover (See 09-17-22 COLUMN COVER REMOVAL/INSTALLATION.)
 - (22) Combination switch (See 09-18-56 COMBINATION SWITCH REMOVAL/INSTALLATION.)
 - (23) Instrument cluster (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
 - (24) Center cover (See 09-17-19 CENTER COVER REMOVAL/INSTALLATION.)
 - (25) Dashboard upper panel (See 09-17-14 DASHBOARD UPPER PANEL REMOVAL/INSTALLATION.)
 - (26) Hole cover (See 09-17-25 HOLE COVER REMOVAL/INSTALLATION.)
 - (27) Information display (See 09-22-13 INFORMATION DISPLAY REMOVAL/INSTALLATION.)
 - (28) A-pillar trim (See 09-17-50 A-PILLAR TRIM REMOVAL/INSTALLATION.)
 - (29) Ventilator grille (See 09-17-34 VENTILATOR GRILLE REMOVAL/INSTALLATION.)
 - (30) SIRIUS satellite radio unit (See 09-20-30 SIRIUS SATELLITE RADIO UNIT REMOVAL/INSTALLATION.)

CONTROL SYSTEM [FULL-AUTO AIR CONDITIONER]

3. Remove the passenger-side air bag module installation bolt.
4. Disconnect the passenger-side air bag module connector.

5. Remove the screws and the panel of the dashboard.
6. Remove the dashboard wiring harness and clips.

7. Disconnect the solar radiation sensor connector.
8. Remove the solar radiation sensor.
9. Install in the reverse order of removal.

07-40A

CONTROL SYSTEM [FULL-AUTO AIR CONDITIONER]

SOLAR RADIATION SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]

id0740a1802900

1. Shine a fluorescent light or expose the solar radiation sensor to natural sunlight.
2. Connect the positive (+) lead to terminal B, C and negative (-) lead to terminal A of the solar radiation, and verify that the voltage value is output.
 - If the voltage is **0 V**, replace the solar radiation sensor.

am3uuw0000613

AMBIENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]

id0740a1803200

1. Disconnect the negative battery cable.
2. Remove the under cover.
3. Disconnect the connector.
4. Remove the ambient temperature sensor.
5. Install in the reverse order of removal.

am3uuw0000405

AMBIENT TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]

id0740a1803300

1. Measure the temperature around the ambient temperature sensor and measure the resistance between the ambient temperature sensor terminal.
 - If the characteristics of the ambient temperature sensor are not as shown in the graph, replace the ambient temperature sensor.

am3zzw0000076

CONTROL SYSTEM [FULL-AUTO AIR CONDITIONER]

PASSENGER COMPARTMENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]

id0740a1803000

1. Disconnect the negative battery cable.
2. Remove the following parts:
 - (1) Front scuff plate (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
 - (2) Front side trim (See 09-17-53 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
 - (3) Dashboard under cover (See 09-17-39 DASHBOARD UNDER COVER REMOVAL/INSTALLATION.)
 - (4) Front side wall (See 09-17-37 SIDE WALL REMOVAL/INSTALLATION.)
 - (5) Console (See 09-17-45 CONSOLE REMOVAL/INSTALLATION.)
 - (6) Hood release lever (See 09-14-15 HOOD LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
 - (7) Lower panel (See 09-17-27 LOWER PANEL REMOVAL/INSTALLATION.)
3. Disconnect the passenger compartment temperature sensor connector.
4. Remove the screw.
5. Remove the passenger compartment temperature sensor.
6. Install in the reverse order of removal.

am3uuw0000405

07-40A

PASSENGER COMPARTMENT TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]

id0740a1803100

1. Measure the temperature around the passenger compartment temperature sensor and measure the resistance between passenger compartment temperature sensor terminals B and D.
 - If the characteristics of the passenger compartment temperature sensor are not as shown in the graph, replace the passenger compartment temperature sensor.

am3uuw0000405

2. Connect battery positive voltage to passenger compartment temperature sensor terminal A and connect terminal C to ground to verify fan operation.
 - If there is any malfunction, replace the passenger compartment temperature sensor.

am3uuw0000405

CONTROL SYSTEM [FULL-AUTO AIR CONDITIONER]

EVAPORATOR TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]

id0740a1801100

1. Remove the evaporator temperature sensor from the A/C unit. (See 07-11-10 A/C UNIT DISASSEMBLY/ASSEMBLY.)

EVAPORATOR TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]

id0740a1801200

Note

- Inspect the evaporator temperature sensor when it is installed to the A/C unit.

1. Set the fan speed MAX HI.
2. Set the temperature control at MAX COLD.
3. Set the RECIRCULATE mode.
4. Turn the A/C switch off.
5. Close all doors and windows.
6. Wait for **5 min.**
7. Disconnect the evaporator temperature sensor connector.
8. Measure the temperature at the blower inlet.
9. Measure the resistance between the evaporator temperature sensor terminals.
 - If the resistance is not as shown in the graph, replace the evaporator temperature sensor.

REFRIGERANT PRESSURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]

am3uuw0000403

id0740a1817300

1. Disconnect the negative battery cable.
2. Discharge the refrigerant. (See 07-10-3 REFRIGERANT CHARGING.)
3. Disconnect the refrigerant pressure sensor connector.

Caution

- If moisture or foreign material enters the refrigeration cycle, cooling ability will be lowered and abnormal noise will occur. Always immediately plug all open fittings after removing any refrigeration cycle parts to keep moisture or foreign material out of the cycle.

4. Loosen the refrigerant pressure sensor using two spanners.
5. Remove the refrigerant pressure sensor. (See 07-40A-25 Refrigerant Pressure Sensor Installation Note.)

Tightening torque

9.5—11.5 N·m {102—112 kgf·cm, 89—97 in·lbf}

6. Install in the reverse order of removal.
7. Perform the refrigerant system performance test. (See 07-10-7 REFRIGERANT SYSTEM PERFORMANCE TEST.)

am3uuw0000407

CONTROL SYSTEM [FULL-AUTO AIR CONDITIONER]

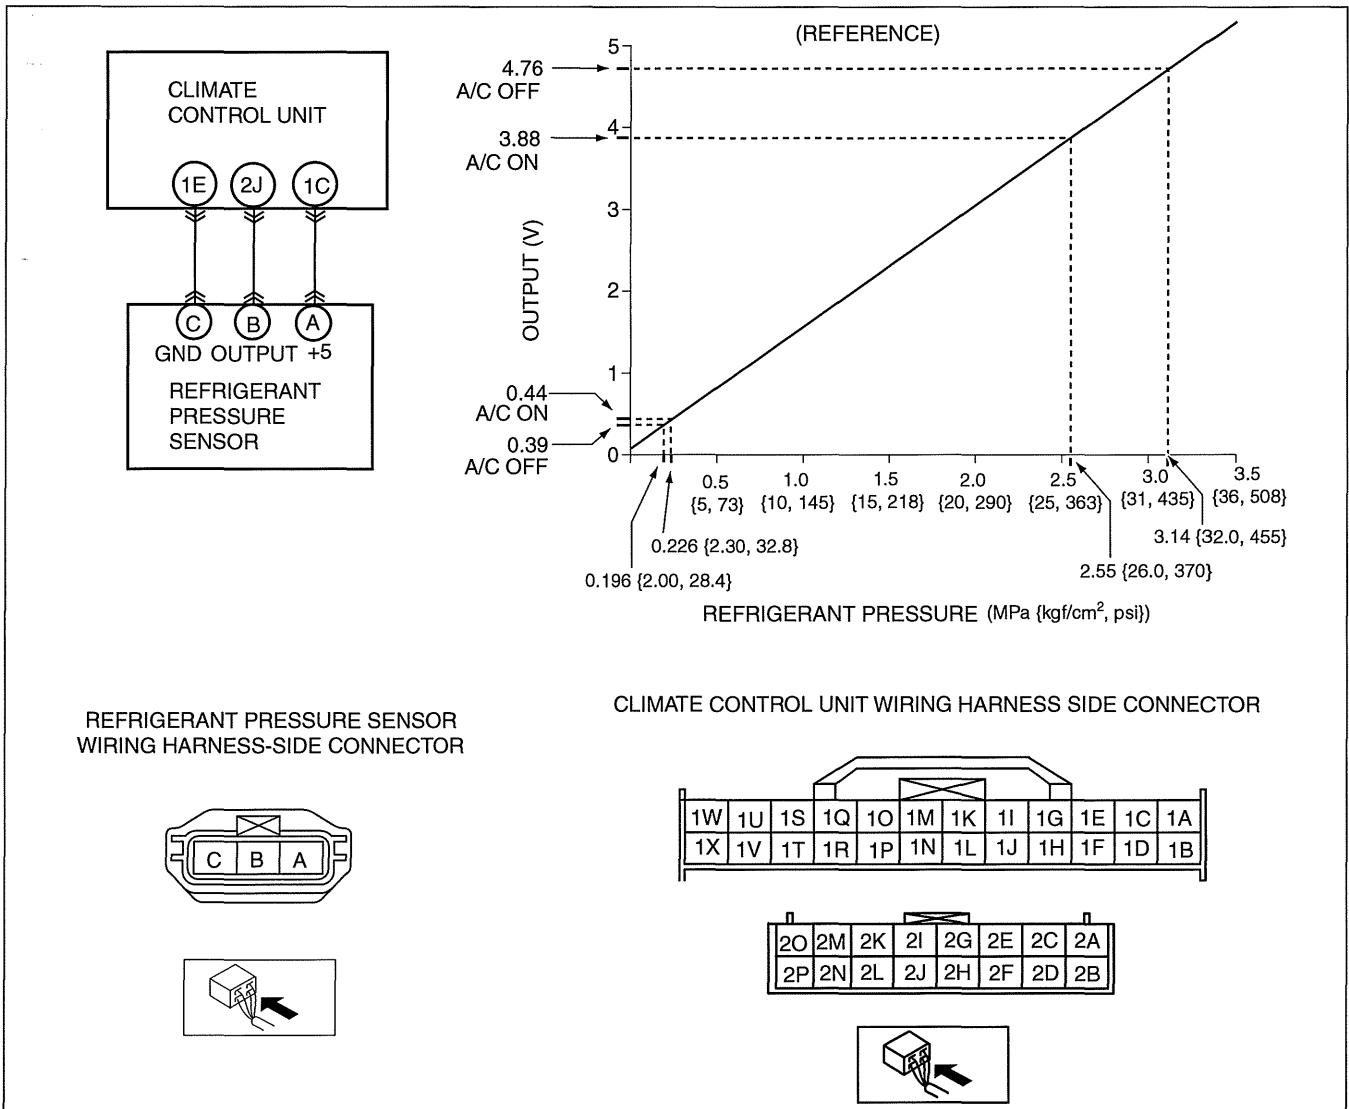

Refrigerant Pressure Sensor Installation Note

1. Apply compressor oil to the O-rings and connect the joints.

REFRIGERANT PRESSURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]

id0740a1817400

1. Install the manifold gauge.
2. Verify the high-pressure side reading of the manifold gauge.
3. Measure the terminal voltage of the climate control unit.
 - 1C, 1E and 2J
4. Verify that below graph as measure the terminal voltage 2J.
5. Follow the climate control unit inspection when measure the other terminal voltage. (See 07-40A-26 CLIMATE CONTROL UNIT INSPECTION [FULL-AUTO AIR CONDITIONER].)
 - Terminal 1E: 1.0 V or less
 - Terminal 1C: Approx. 5 V (Ignition switch on)
 - If the each voltage is not normal, inspect the related wiring harness.
 - If there is any malfunction, replace the related wiring harness.
 - If wiring harness is normal, replace the refrigerant pressure sensor.

07-40A

am3uuw0000550

CONTROL SYSTEM [FULL-AUTO AIR CONDITIONER]

CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]

id0740a1807400

1. Disconnect the negative battery cable.
2. Remove the following parts:
 - (1) Upper panel (See 09-17-40 UPPER PANEL REMOVAL/INSTALLATION.)
 - (2) Shift lever knob (MTX) (See 05-16-2 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)
 - (3) Selector lever knob (ATX) (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)
 - (4) Shift panel (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION.)
 - (5) Side wall (See 09-17-37 SIDE WALL REMOVAL/INSTALLATION.)
 - (6) Center panel (See 09-17-24 CENTER PANEL REMOVAL/INSTALLATION.)
 - (7) Console (See 09-17-45 CONSOLE REMOVAL/INSTALLATION.)
 - (8) Front scuff plate (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
 - (9) Front side trim (See 09-17-53 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
 - (10) Dashboard under cover (See 09-17-39 DASHBOARD UNDER COVER REMOVAL/INSTALLATION.)
 - (11) Glove compartment (See 09-17-33 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
 - (12) Hood release lever (See 09-14-15 HOOD LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
 - (13) Lower panel (See 09-17-27 LOWER PANEL REMOVAL/INSTALLATION.)
 - (14) Center panel (See 09-17-24 CENTER PANEL REMOVAL/INSTALLATION.)
 - (15) Audio unit (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)

3. Remove in the order indicated in the table.

1	Screw
2	Connector
3	Climate control unit

4. Install in the reverse order of removal.

am3uuw0000419

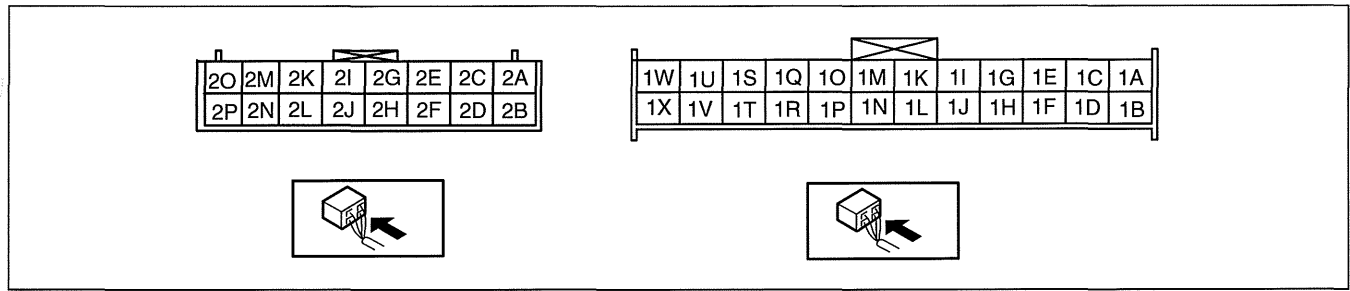

CLIMATE CONTROL UNIT INSPECTION [FULL-AUTO AIR CONDITIONER]

id0740a1802200

1. Remove the climate control unit with the connector connected. (See 07-40A-26 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
2. Switch the ignition to ON.
3. Connect the negative (-) lead of the tester to body ground.
4. By inserting the positive (+) lead of the tester into each climate control unit terminal, measure the voltage according to the terminal voltage table.
 - If there is any malfunction, inspect the parts under "Inspection item (s)".
 - If the parts under "Inspection item (s)" are found to be normal (except for terminal 1M), replace the climate control unit.
 - For terminal 1M, first try replacing the power MOS FET. If there is still any malfunction, replace the climate control unit.

CONTROL SYSTEM [MANUAL AIR CONDITIONER]

AIR INTAKE ACTUATOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]

id0740a2801400

1. Set the air intake mode to FRESH.
2. Disconnect the negative battery cable.
3. Remove the following parts:
 - (1) Front scuff plate (Passenger side) (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
 - (2) Front side trim (Passenger side) (See 09-17-53 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
 - (3) Dashboard under cover (See 09-17-39 DASHBOARD UNDER COVER REMOVAL/INSTALLATION.)
 - (4) Glove compartment (See 09-17-33 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
 - (5) Lower panel (Passenger side) (See 09-17-27 LOWER PANEL REMOVAL/INSTALLATION.)
 - (6) Shower duct (Passenger side) (See 07-11-4 A/C UNIT REMOVAL/INSTALLATION.)
4. Disconnect the harness clip from the blower case.
5. Disconnect the air intake actuator connector.
6. Remove the blower case. (See 07-40B-4 BLOWER MOTOR REMOVAL [MANUAL AIR CONDITIONER].) (See 07-40B-7 BLOWER MOTOR INSTALLATION [MANUAL AIR CONDITIONER].)
7. Remove the screw A.
8. Remove the air intake actuator link.
9. Remove the screw B.
10. Remove the air intake actuator.
11. Install in the reverse order of removal.

AIR INTAKE ACTUATOR INSPECTION [MANUAL AIR CONDITIONER]

id0740a2801500

1. Connect battery positive voltage to air intake actuator terminal B (or C), connect terminal C (or B) to ground, and then verify that the air intake actuator operates as shown in the table.
 - If the operation condition is not normal, replace the air intake actuator.

am3uuw0000409

Terminal		Air intake actuator operation
B	C	
B+	Ground	FRESH → RECIRCULATE
Ground	B+	RECIRCULATE → FRESH

CONTROL SYSTEM [MANUAL AIR CONDITIONER]

BLOWER MOTOR REMOVAL [MANUAL AIR CONDITIONER]

id0740a2807300

Note

- The blower motor is located on the A/C unit as shown in the figure.

am3uuw0000406

- Perform the work from the front passenger side in the posture shown in the figure.

1. Set the air intake mode to FRESH.
2. Disconnect the negative battery cable.
3. Remove the following parts:
 - (1) Front scuff plate (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
 - (2) Front side trim (See 09-17-53 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
 - (3) Upper panel (See 09-17-40 UPPER PANEL REMOVAL/INSTALLATION.)
 - (4) Shift lever knob (MTX) (See 05-16-2 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)
 - (5) Selector lever knob (ATX) (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)
 - (6) Shift panel (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION.)
 - (7) Side wall (See 09-17-37 SIDE WALL REMOVAL/INSTALLATION.)
 - (8) Console (See 09-17-45 CONSOLE REMOVAL/INSTALLATION.)
 - (9) Dashboard under cover (See 09-17-39 DASHBOARD UNDER COVER REMOVAL/INSTALLATION.)
 - (10)Glove compartment (See 09-17-33 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
 - (11)Hood release lever (See 09-14-15 HOOD LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
 - (12)Lower panel (See 09-17-27 LOWER PANEL REMOVAL/INSTALLATION.)
 - (13)Shower duct (See 07-11-4 A/C UNIT REMOVAL/INSTALLATION.)
 - (14)Accelerator pedal (See 01-13A-8 ACCELERATOR PEDAL REMOVAL/INSTALLATION [LF, L5].) (See 01-13B-14 ACCELERATOR PEDAL REMOVAL/INSTALLATION [L3 WITH TC].)
4. Disconnect the air intake actuator connector. (See 07-40B-3 AIR INTAKE ACTUATOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER].)
5. Detach the harness clip from the blower case.

am3uuw0000406

CONTROL SYSTEM [MANUAL AIR CONDITIONER]

- Remove the screws shown in the figure and slide the blower case.
- Remove the blower case.

am3uuw000406

- Disconnect the blower motor cooling pipe.

am3uuw000406

- Install the **SST (49 B061 015A)** to the blower motor.
- Rotate the **SST (1)** and align the **SST** hole with the align point (2) and then confirm that the **SST** tabs into the three set holes on the blower motor they are inserted as shown in the figure.

am3uuw000556

am3uuw000556

07-40B

CONTROL SYSTEM [MANUAL AIR CONDITIONER]

11. Press the tab (1) and rotate the blower motor (2) and push the blower motor into the A/C case slightly.

am3uuw0000407

12. Rotate the blower motor and the blower motor connector position as shown in the figure (3) for disconnect the blower motor connector eased.

am3uuw0000440

13. Press the tab (4) disconnect the blower motor connector as shown in the figure (5).

am3uuw0000440

14. Remove the blower motor in the direction shown by the arrow.

Caution

- To prevent damage to the sirocco fan, pull the blower motor out being careful that the blower motor does not interfere with the A/C unit.

am3uuw0000407

15. Remove the blower motor with SST (49 B061 015A) by pulling it out.

Caution

- To prevent damage to the sirocco fan, pull the blower motor out being careful that the blower motor does not interfere with the A/C unit.

am3uuw0000407

CONTROL SYSTEM [MANUAL AIR CONDITIONER]

BLOWER MOTOR INSTALLATION [MANUAL AIR CONDITIONER]

id0740a2807200

1. Install the SST (49 B061 015A) to the blower motor.

2. Install the blower motor with the SST (49 B061 015A) installed, to the A/C unit.

Caution

- To prevent damage to the sirocco fan, install the blower motor being careful that the blower motor does not interfere with the A/C unit. Also, another person must hold the blower motor at the installation position.

3. Rotate the SST (49 B061 015A) until to the blower motor tab locked.

07-40B

CONTROL SYSTEM [MANUAL AIR CONDITIONER]

4. Connect the blower motor connector as shown in the figure.

am3uuw0000409

5. Connect the blower motor cooling pipe.

am3uuw0000410

6. Rotate the **SST (49 B061 015A)** in the direction shown by the arrow.

am3uuw0000410

7. Remove the **SST (49 B061 015A)** from the blower motor.
8. Install the blower case.

Caution

- Install the blower case while pressing the dashboard insulator, otherwise the blower case could be damaged.

am3uuw0000557

CONTROL SYSTEM [MANUAL AIR CONDITIONER]

9. Install the screws shown in the figure.
10. Install the harness clip to the blower case.
11. Connect the air intake actuator connector.
12. Install the following parts:
 - (1) Accelerator pedal (See 01-13A-8 ACCELERATOR PEDAL REMOVAL/INSTALLATION [LF, L5].) (See 01-13B-14 ACCELERATOR PEDAL REMOVAL/INSTALLATION [L3 WITH TC].)
 - (2) Shower duct (Passenger side) (See 07-11-4 A/C UNIT REMOVAL/INSTALLATION.)
 - (3) Lower panel (See 09-17-27 LOWER PANEL REMOVAL/INSTALLATION.)
 - (4) Hood release lever (See 09-14-15 HOOD LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
 - (5) Dashboard under cover (Passenger side) (See 09-17-39 DASHBOARD UNDER COVER REMOVAL/INSTALLATION.)
 - (6) Glove compartment (See 09-17-33 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
 - (7) Shift panel (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION.)
 - (8) Selector lever knob (ATX) (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)
 - (9) Shift lever knob (MTX) (See 05-16-2 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)
 - (10) Upper panel (See 09-17-40 UPPER PANEL REMOVAL/INSTALLATION.)
 - (11) Front side trim (See 09-17-53 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
 - (12) Front scuff plate (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)

am3uuw0000410

07-40B

Blower Case Installation Note

1. If not replacing the blower case, replace the adhesive polyurethane on the fresh-air inlet of the blower case.

Caution

- To adhere new polyurethane properly, be sure to remove the adhesive agent and adhesive polyurethane completely.

Note

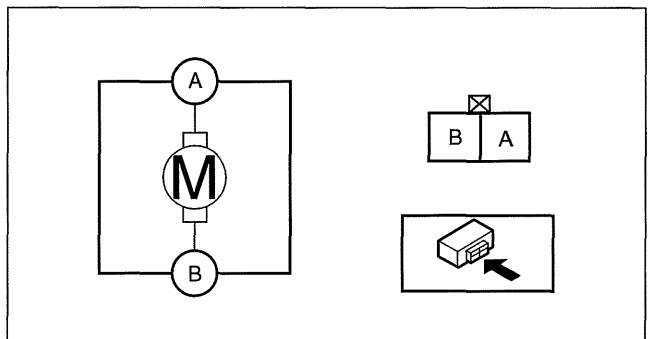

- If the blower case is removed or installed, the adhesive polyurethane can be damaged. Damaged adhesive polyurethane could cause abnormal noise or other malfunctions, therefore replace it.

am3uuw0000410

BLOWER MOTOR INSPECTION [MANUAL AIR CONDITIONER]

1. Connect battery positive voltage to blower motor terminal A, connect terminal B to ground, and then verify its operation.
 - If there is any malfunction, replace the blower motor.

am3uuw0000408

CONTROL SYSTEM [MANUAL AIR CONDITIONER]

RESISTOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]

id0740a2800700

1. Disconnect the negative battery cable.
2. Disconnect the connector.
3. Remove the screw.
4. Remove the resistor.
5. Install in the reverse order of removal.

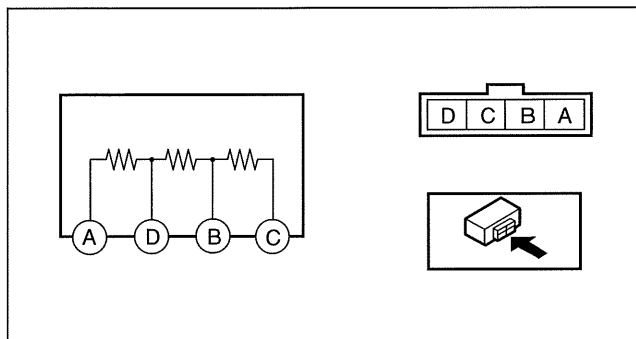

am3uuw0000408

RESISTOR INSPECTION [MANUAL AIR CONDITIONER]

id0740a2800800

1. Verify that the resistance between the resistor terminals is as shown in the table.
 - If there is any malfunction, replace the resistor.

Terminal	Resistance (ohm)
A—D	0.33—0.39
A—B	0.95—1.09
A—C	1.88—2.16

am3uuw0000408

MAGNETIC CLUTCH DISASSEMBLY/ASSEMBLY [MANUAL AIR CONDITIONER]

id0740a2800400

1. Disassemble in the order indicated in the table.

1	Bolt (See 07-40B-11 Bolt Removal/Installation Note.)
2	Pressure plate
3	Shim (See 07-40B-13 Shim Installation Note.)
4	Snap ring (See 07-40B-13 Snap Ring Removal/Installation Note.)
5	A/C compressor pulley (See 07-40B-12 A/C Compressor Pulley Removal Note.) (See 07-40B-12 A/C Compressor Pulley Installation Note.)
6	Snap ring (See 07-40B-13 Snap Ring Removal/Installation Note.)
7	Stator
8	A/C compressor body

am3uuw0000408

2. Assemble in the reverse order of disassembly.
3. Adjust the magnetic clutch clearance. (See 07-40B-13 MAGNETIC CLUTCH ADJUSTMENT [MANUAL AIR CONDITIONER].)

Bolt Removal/Installation Note

1. When removing or installing the bolt, lock the A/C compressor pulley against rotation using the following procedure.

Caution

- When connecting the positive battery cable to the magnetic clutch connector, use a cable with a female terminal of the correct size. Otherwise, load will be applied to the terminal, resulting in deformation or damage, and poor contact. In addition, the positive battery cable could disconnect from the connector resulting in a short circuit.

- (1) Apply battery positive voltage to the magnetic clutch terminal and connect the A/C compressor body to the ground.

acxuuw00002858

- (2) Wrap the drive belt, which is no longer of use, tightly around the A/C compressor pulley.
- (3) Hold the drive belt in place with pliers.
- (4) Remove/installation the bolt.

Tightening torque

15 N·m {1.5 kgf·m, 11 ft·lbf}

acxuuw00002859

07-40B

CONTROL SYSTEM [MANUAL AIR CONDITIONER]

A/C Compressor Pulley Removal Note

1. Remove the A/C compressor pulley using the SSTs (49 0839 425C, 49 SE01 160).

Caution

- Be careful that the SST (49 0839 425C) tabs do not hang over the stator.

acxuuw00002994

Note

- Taping on the nail to protect damage.

am6zzw0000194

A/C Compressor Pulley Installation Note

1. Install the inner wheel of the pulley using SST (49 D034 202) to the compressor.

Caution

- If the SST is not properly positioned when the A/C compressor pulley is press-fit, the A/C compressor axle will interfere with the SST, possibly damaging component parts. Verify the SST and axle are properly positioned and perform the procedure very carefully.

acxuuw00002995

CONTROL SYSTEM [MANUAL AIR CONDITIONER]

Snap Ring Removal/Installation Note

1. Remove/installation the snap ring using a snap ring pliers.

am6zzw0000106

Shim Installation Note

1. First, insert the 1mm (0.039 in) thick shim into the shaft.

am6zzw0000106

07-40B

MAGNETIC CLUTCH ADJUSTMENT [MANUAL AIR CONDITIONER]

id0740a2800500

1. Measure the clearance around the entire circumference between the pressure plate and A/C compressor pulley using a thickness gauge.

am3uuw0000408

2. Verify that the clearance.
 - If not within the specification, remove the pressure plate and adjust the clearance by changing the shim (0.2 mm {0.008 in}, 0.5 mm {0.02 in}) or the number of shims.

Clearance

0.35—0.65 mm {0.014—0.025 in}

am6xuw0000101

CONTROL SYSTEM [MANUAL AIR CONDITIONER]

MAGNETIC CLUTCH INSPECTION [MANUAL AIR CONDITIONER]

id0740a2800600

1. Connect battery to terminal A of magnetic clutch and ground to A/C compressor body.

am3uuw0000408

2. Verify that the magnetic clutch operates.
 - If there is any malfunction, replace the magnetic clutch.

AMBIENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]

id0740a2803200

1. Disconnect the negative battery cable.
2. Remove the under cover.
3. Disconnect the connector.
4. Remove the ambient temperature sensor.
5. Install in the reverse order of removal.

am3uuw0000405

AMBIENT TEMPERATURE SENSOR INSPECTION [MANUAL AIR CONDITIONER]

id0740a2803300

1. Measure the temperature around the ambient temperature sensor and measure the resistance between the ambient temperature sensor terminal.
 - If the characteristics of the ambient temperature sensor are not as shown in the graph, replace the ambient temperature sensor.

am3zzw0000076

CONTROL SYSTEM [MANUAL AIR CONDITIONER]

EVAPORATOR TEMPERATURE SENSOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]

id0740a2801100

1. Remove the evaporator temperature sensor from the A/C unit. (See 07-11-10 A/C UNIT DISASSEMBLY/ASSEMBLY.)

EVAPORATOR TEMPERATURE SENSOR INSPECTION [MANUAL AIR CONDITIONER]

id0740a2801200

Note

- Inspect the evaporator temperature sensor when it is installed to the A/C unit.

1. Set the fan speed MAX HI.
2. Set the temperature control at MAX COLD.
3. Set the RECIRCULATE mode.
4. Turn the A/C switch off.
5. Close all doors and windows.
6. Wait for **5 min.**
7. Disconnect the evaporator temperature sensor connector.
8. Measure the temperature at the blower inlet.
9. Measure the resistance between the evaporator temperature sensor terminals.
 - If the resistance is not as shown in the graph, replace the evaporator temperature sensor.

07-40B

REFRIGERANT PRESSURE SENSOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]

am3uuw0000408

id0740a2817300

1. Disconnect the negative battery cable.
2. Discharge the refrigerant. (See 07-10-3 REFRIGERANT CHARGING.)
3. Disconnect the refrigerant pressure sensor connector.

Caution

- If moisture or foreign material enters the refrigeration cycle, cooling ability will be lowered and abnormal noise will occur. Always immediately plug all open fittings after removing any refrigeration cycle parts to keep moisture or foreign material out of the cycle.

4. Loosen the refrigerant pressure sensor using two spanners.
5. Remove the refrigerant pressure sensor. (See 07-40B-16 Refrigerant Pressure Sensor Installation Note.)

Tightening torque

9.5—11.5 N·m {102—112 kgf·cm, 89—97 in·lbf}

6. Install in the reverse order of removal.
7. Perform the refrigerant system performance test. (See 07-10-7 REFRIGERANT SYSTEM PERFORMANCE TEST.)

am3uuw0000407

07-40B-15

CONTROL SYSTEM [MANUAL AIR CONDITIONER]

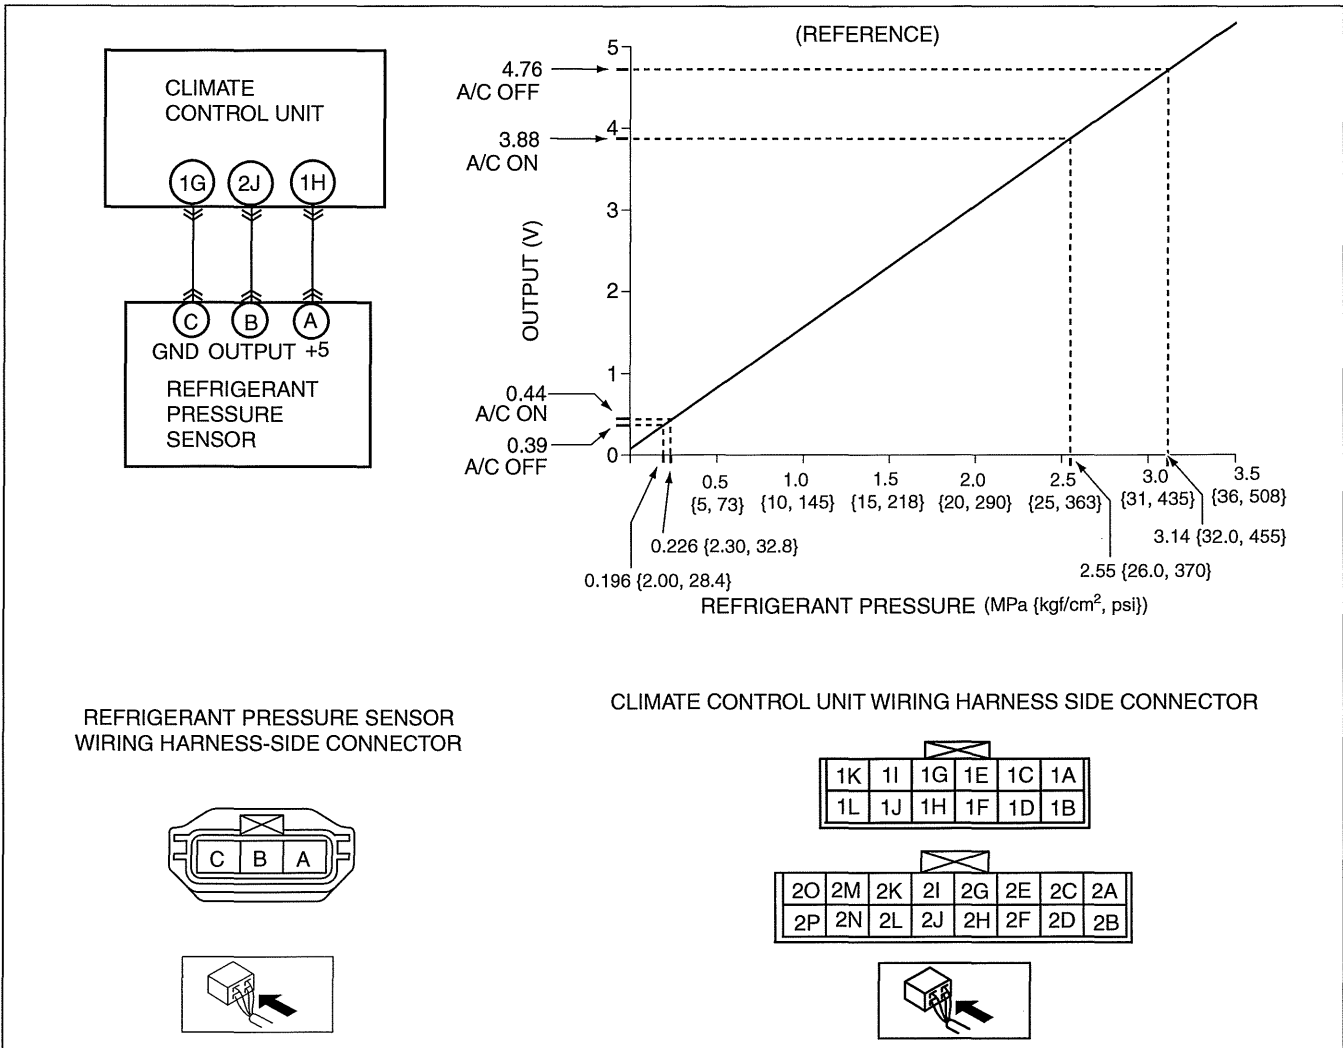

Refrigerant Pressure Sensor Installation Note

1. Apply compressor oil to the O-rings and connect the joints.

REFRIGERANT PRESSURE SENSOR INSPECTION [MANUAL AIR CONDITIONER]

id0740a2817400

1. Install the manifold gauge.
2. Verify the high-pressure side reading of the manifold gauge.
3. Measure the terminal voltage of the climate control unit.
 - 1G, 1H and 2J
4. Verify that below graph as measure the terminal voltage 2J.
5. Follow the climate control unit inspection when measure the other terminal voltage. (See 07-40B-20 CLIMATE CONTROL UNIT INSPECTION [MANUAL AIR CONDITIONER].)
 - Terminal 1G: 1.0 V or less
 - Terminal 1H: Approx. 5 V (Ignition switch on)
 - If the each voltage is not normal, inspect the related wiring harness.
 - If there is any malfunction, replace the related wiring harness.
 - If wiring harness is normal, replace the refrigerant pressure sensor.

am3uuw0000550

CONTROL SYSTEM [MANUAL AIR CONDITIONER]

CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]

id0740a2807400

1. Disconnect the negative battery cable.
2. Remove the following parts:
 - (1) Upper panel (See 09-17-40 UPPER PANEL REMOVAL/INSTALLATION.)
 - (2) Shift lever knob (MTX) (See 05-16-2 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)
 - (3) Selector lever knob (ATX) (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)
 - (4) Shift panel (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION.)
 - (5) Side wall (See 09-17-37 SIDE WALL REMOVAL/INSTALLATION.)
 - (6) Center panel (See 09-17-24 CENTER PANEL REMOVAL/INSTALLATION.)
 - (7) Console (See 09-17-45 CONSOLE REMOVAL/INSTALLATION.)
 - (8) Front scuff plate (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
 - (9) Front side trim (See 09-17-53 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
 - (10) Dashboard under cover (See 09-17-39 DASHBOARD UNDER COVER REMOVAL/INSTALLATION.)
 - (11) Glove compartment (See 09-17-33 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
 - (12) Hood release lever (See 09-14-15 HOOD LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
 - (13) Lower panel (See 09-17-27 LOWER PANEL REMOVAL/INSTALLATION.)
 - (14) Center panel (See 09-17-24 CENTER PANEL REMOVAL/INSTALLATION.)
 - (15) Audio unit (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.

1	Screw
2	Climate control unit (See 07-40B-17 Climate Control Unit Removal Note.) (See 07-40B-18 Climate Control Unit Installation Note.)
3	Connector

4. Install in the reverse order of removal.

07-40B

Climate Control Unit Removal Note

1. Disconnect each wire to links and remove it to the wire clamps.

CONTROL SYSTEM [MANUAL AIR CONDITIONER]

2. Pull out the air mix wire and airflow mode from the dashboard.

am3uuw0000420

Climate Control Unit Installation Note

1. Pass each wire through the hole on the dashboard as shown in the figure.
2. Route each wire as shown in the figure.

am3uuw0000420

am3uuw0000420

3. Connect the climate control unit connector.

CONTROL SYSTEM [MANUAL AIR CONDITIONER]

- Connect each wire to links and install it to the wire clamps.
- Verify that the dial is turned fully from one end to the other.

am3uuw0000420

CLIMATE CONTROL UNIT DISASSEMBLY/ASSEMBLY [MANUAL AIR CONDITIONER]

id0740a2802000

- Disassemble in the order indicated in the figure.

1	Dial
2	Airflow mode wire (See 07-40B-19 Wire Removal Note.) (See 07-40B-19 Wire Installation Note.)
3	Air mix wire (See 07-40B-19 Wire Removal Note.) (See 07-40B-19 Wire Installation Note.)
4	Bulb
5	Fan switch
6	Climate control unit

- Assemble in the reverse order of disassembly.

am3uuw0000409

07-40B

Wire Removal Note

- Remove in the order indicated in the figure.

am3uuw0000409

Wire Installation Note

- Install as shown in the figure.

FOREWORD

id080200080300

Outline

- The OBD (on-board diagnostic) system has the following functions:
 - Malfunction detection function: Detects malfunctions in the air bag system and outputs DTCs (Diagnostic Trouble Codes).
 - PID/data monitor function: Reads out specific input/output signals and the system status.
- DTCs can be read/cleared using the M-MDS.

Note

- Use the M-MDS to verify DTCs because the DTCs displayed by the air bag system warning light are reference information only.

FLOWCHART

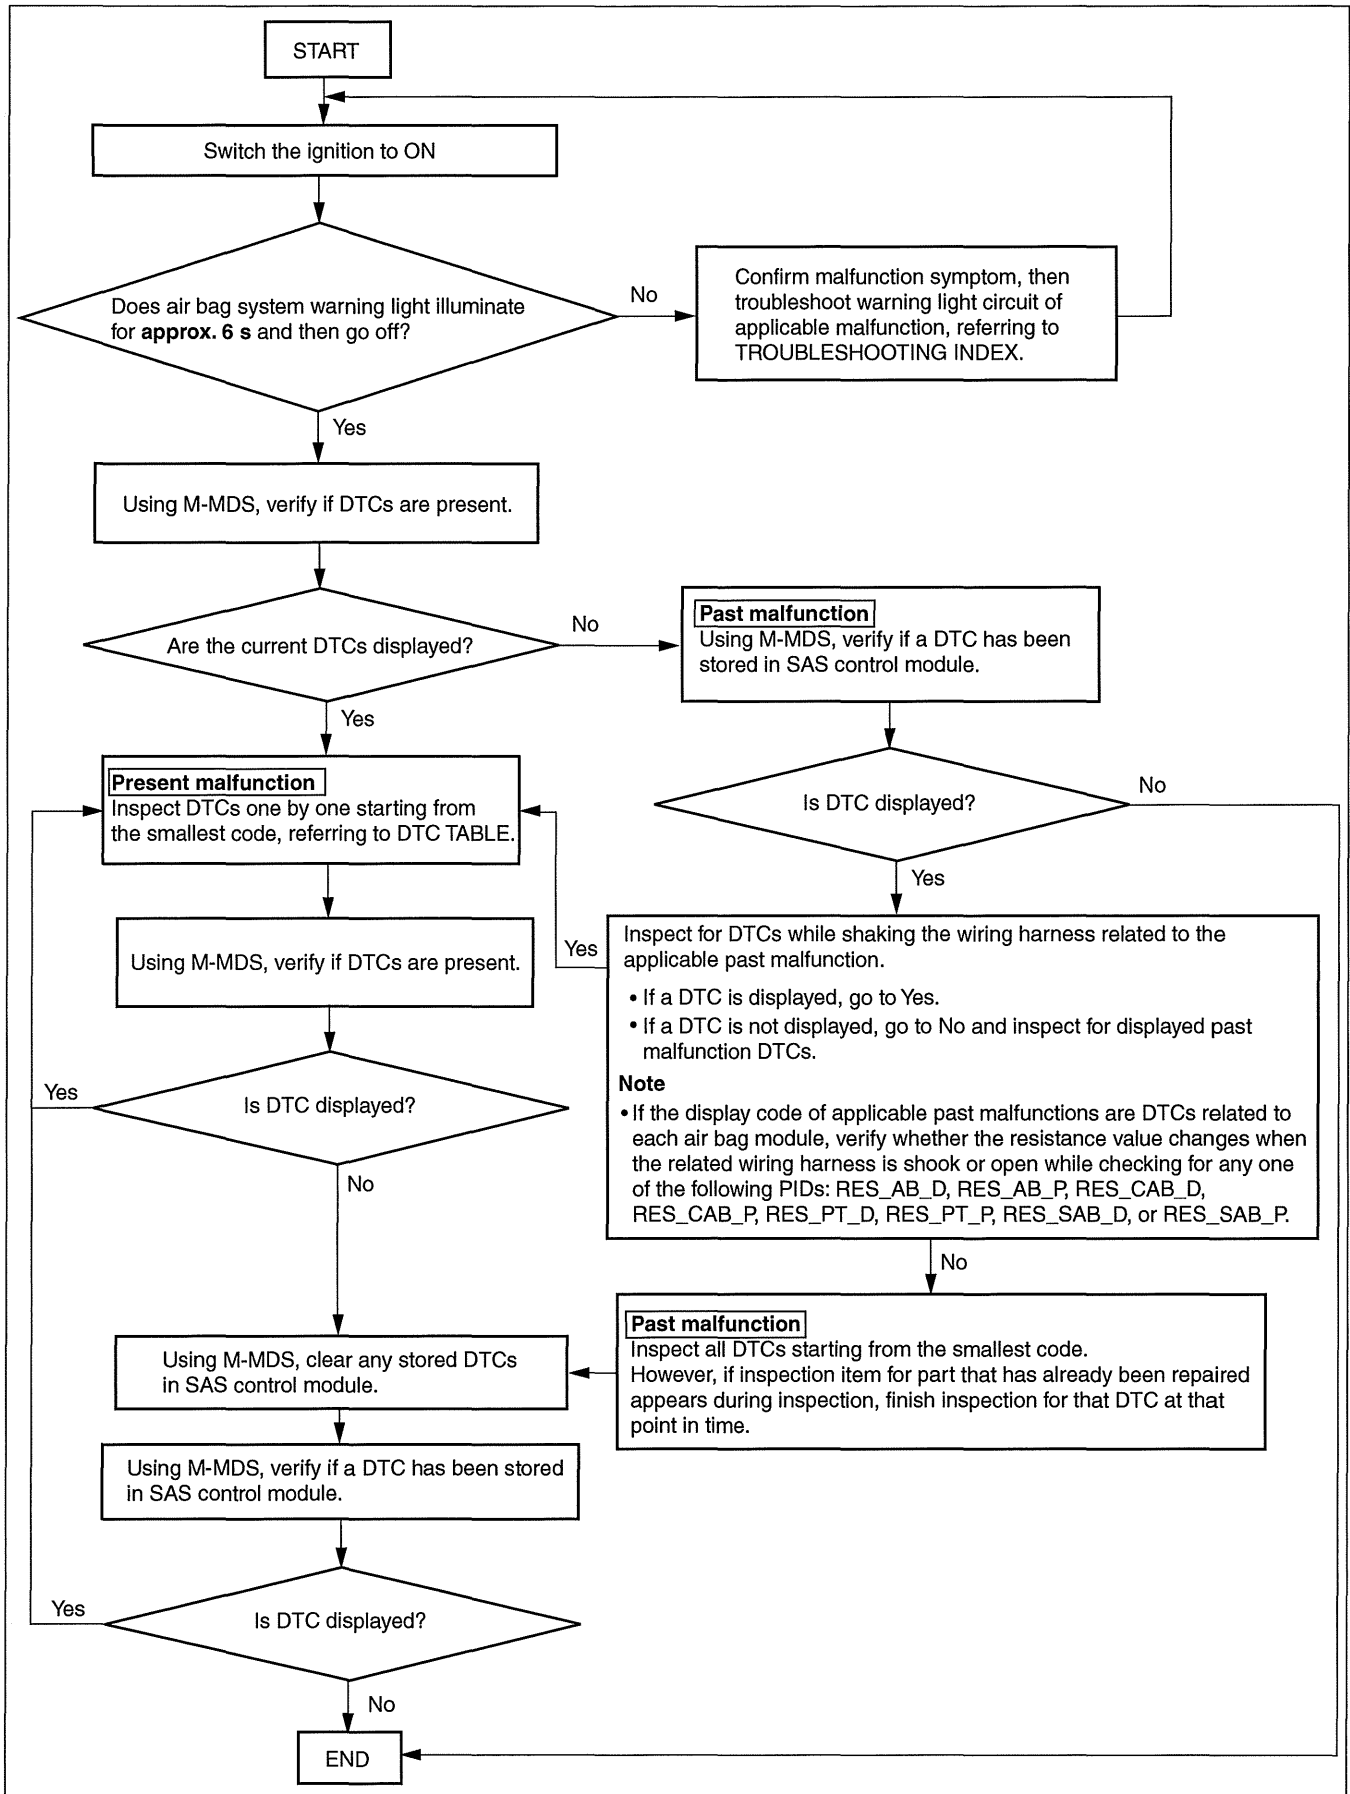

id080200080400

- Use the following flowchart to verify the cause of the trouble.

Note

- When inspecting past malfunction codes, inspect only the DTCs that were indicated before beginning the inspection. A mis-diagnosis could occur as a result of new DTCs being added while performing an inspection by disconnecting related parts or connectors.
- When DTCs of the present malfunction are no longer output after present or past malfunctions or both have been repaired, be sure to clear the past malfunction from memory to prevent repair of malfunctions that have already been repaired.

ON-BOARD DIAGNOSTIC

08-02

am6xuw0000179

ON-BOARD DIAGNOSTIC

DTC INSPECTION

id080200080500

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Self Test".
 2. Select "Modules".
 3. Select "RCM".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "RCM".
 3. Select "Self Test".
3. Verify the DTC according to the directions on the screen.
 - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
4. After completion of repairs, clear all DTCs stored in the SAS control module. (See 08-02-6 CLEARING DTC.)

am3uuw0000364

CLEARING DTC

id080200080600

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Self Test".
 2. Select "Modules".
 3. Select "RCM".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "RCM".
 3. Select "Self Test".
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition to ON and wait for **5 s or more**.
7. Perform DTC inspection. (See 08-02-6 DTC INSPECTION.)
8. Verify that no DTCs are displayed.

DTC B1013

id080200800900

System Malfunction Location

DTC	System Malfunction Location
M-MDS display	
B1013	Seat weight sensor calibration error

Detection Condition

Warning

- **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.**

- Calibration set value not within valid range

Possible Causes

- Seat weight sensor deformed or malfunction
- Load to or deformation of the seat belt rail
- Deformed front passenger-side seat under-bracket or frame
- Weight acting on front passenger-side seat during calibration
- Improperly installed front passenger-side seat part at time of calibration
- Deformed floor where attached to front passenger-side seat
- Seat weight sensor control module malfunction
- SAS control module malfunction

08-02

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	INSPECT SEAT WEIGHT SENSOR <ul style="list-style-type: none"> • Properly install the passenger-side front seat. • Inspect the seat weight sensor. (See 08-10-19 SEAT WEIGHT SENSOR INSPECTION.) • Is the seat weight sensor normal? 	Yes	Replace the SAS control module. (See 08-10-17 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	INSPECT PASSENGER-SIDE FRONT SEAT <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable and wait for 1 min or more. • Remove the passenger-side seat and visually inspect for the following: <ul style="list-style-type: none"> — Seat under-bracket deformation — Seat frame deformation — Seat weight sensor deformation — Foreign objects stuck in seat • Are any of the parts deformed or are any foreign objects stuck in the seat? 	Yes	Replace any deformed parts or remove any foreign objects. <ul style="list-style-type: none"> • After replacement, perform seat weight sensor calibration and reperform the DTC inspection. If the DTC is displayed, go the next step. (See 08-10-18 SEAT WEIGHT SENSOR CALIBRATION.)
		No	Go to the next step.
3	INSPECT FLOOR <ul style="list-style-type: none"> • Visually inspect the installation parts of the front passenger-side seat for the following: <ul style="list-style-type: none"> — Abnormal floor deformation — Installation hole of front passenger-side seat is improperly positioned • Is the floor normal? 	Yes	Go to the next step.
		No	Repair floor deformation. <ul style="list-style-type: none"> • After repair, perform seat weight sensor calibration and reperform the DTC inspection. If the DTC is displayed even though the floor has been repaired, go the next step. (See 08-10-18 SEAT WEIGHT SENSOR CALIBRATION.)
4	INSPECT SEAT WEIGHT SENSOR CONTROL MODULE <ul style="list-style-type: none"> • Replace the seat weight sensor. • Connect the negative battery cable. • Switch the ignition to ON. • After replacement, perform seat weight sensor calibration. (See 08-10-18 SEAT WEIGHT SENSOR CALIBRATION.) • Reperform the DTC inspection. • Are the same DTCs present? 	Yes	Replace the seat weight sensor control module. (See 08-10-18 SEAT WEIGHT SENSOR CONTROL MODULE REMOVAL/INSTALLATION.) <ul style="list-style-type: none"> • After replacement, perform seat weight sensor calibration and reperform the DTC inspection. If the DTC is displayed even though the seat weight sensor control module has been replaced, replace the SAS control module. (See 08-10-17 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC B1046, B2773, B2774, B2775, B2776

id080200808900

System Malfunction Location

DTC	System Malfunction Location
B1046	Short to the driver-side curtain air bag module circuit and other air bag module circuits
B2773	Driver-side curtain air bag module circuit resistance low
B2774	Driver-side curtain air bag module circuits open circuit or resistance high
B2775	Driver-side curtain air bag module circuit short to body ground
B2776	Driver-side curtain air bag module circuit short to power supply

Detection Condition

Warning

- Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.

- Resistance other than **1.10–9.64 ohms** detected in driver-side curtain air bag module circuit
- Wiring harness between the driver-side curtain air bag module and SAS control module has a malfunction

Possible Causes

- Driver-side curtain air bag module connector malfunction
- Open or short circuit or short to ground or short to power supply in the wiring harness between the driver-side curtain air bag module and SAS control module
- Driver-side curtain air bag module malfunction
- SAS control module malfunction

ON-BOARD DIAGNOSTIC

Step	Inspection	Action	
3	<p>INSPECT THE WIRING HARNESS BETWEEN THE SAS CONTROL MODULE AND PASSENGER-SIDE PRE-TENSIONER SEAT BELT FOR A SHORT CIRCUIT TO THE POWER SUPPLY</p> <ul style="list-style-type: none"> • Connect the negative battery cable. • Switch the ignition to ON with SAS control module connector and passenger-side pre-tensioner seat belt connector disconnected. • Measure the voltage of SAS control module connector terminals 2E and 2G of SAS control module harness side connector. <p>Note</p> <ul style="list-style-type: none"> • Measure the voltage while shaking the wiring harness between the SAS control module and passenger-side pre-tensioner seat belt. <ul style="list-style-type: none"> • Is the voltage measured? 	Yes	Replace the wiring harness between the SAS control module and the passenger-side pre-tensioner seat belt.
		No	Go to the next step.
4	<p>INSPECT PASSENGER-SIDE PRE-TENSIONER SEAT BELT</p> <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable and wait for 1min or more. • Connect the SST (Fuel and thermometer checker) or apply 2 ohms resistance to the passenger-side pre-tensioner seat belt connector terminals A–B. • Set the SST (Fuel and thermometer checker) to 2 ohms. • Except for the passenger-side pre-tensioner seat belt connector, reconnect all disconnected connectors. • Connect the negative battery cable. • Switch the ignition to ON. • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-6 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-6 DTC INSPECTION.) • Are the same DTCs present? 	Yes	Go to the next step.
		No	Replace the passenger-side pre-tensioner seat belt. (See 08-11-3 FRONT SEAT BELT REMOVAL/INSTALLATION.)
5	<p>PERFORM SAS CONTROL MODULE DTC INSPECTION</p> <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable and wait for 1min or more. • Disconnect the SST (Fuel and thermometer checker) or the 2 ohms resistance. • Connect the passenger-side pre-tensioner seat belt connector. • Connect the negative battery cable. • Switch the ignition to ON. • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-6 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-6 DTC INSPECTION.) • Are the same DTCs present? 	Yes	Replace the SAS control module. (See 08-10-17 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC B104B, B104E, B1051, U2017

id080200810800

System Malfunction Location

DTC	System Malfunction Location
B104B	Short to the driver-side side air bag sensor No.1 circuit and other sensor circuits
B104E	Driver-side side air bag sensor No.1 circuit short to power supply or body ground
B1051	Driver-side side air bag sensor No.1 internal malfunction
U2017	Driver-side side air bag sensor No.1 (communication error)

Detection Condition

Warning

- Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.

- Wiring harness between the driver-side side air bag sensor No.1 and SAS control module has a malfunction.
- Driver-side side air bag sensor No.1 has a malfunction

Possible Causes

- Driver-side side air bag sensor No.1 connector malfunction
- Open or short circuit or short to ground or short to power supply in the wiring harness between the driver-side side air bag sensor No.1 and SAS control module
- Driver-side side air bag sensor No.1 malfunction
- SAS control module malfunction

ON-BOARD DIAGNOSTIC

DTC B1055, B1996, B1997, B1998, B1999

id080200809400

System Malfunction Location

DTC	System Malfunction Location
M-MDS display	
B1055	Short to the passenger-side side air bag module circuit and other air bag module circuits
B1996	Passenger-side side air bag module circuit short to power supply
B1997	Passenger-side side air bag module circuit short to body ground
B1998	Passenger-side side air bag module circuit open circuit or resistance high
B1999	Passenger-side side air bag module circuit resistance low

Detection Condition

Warning

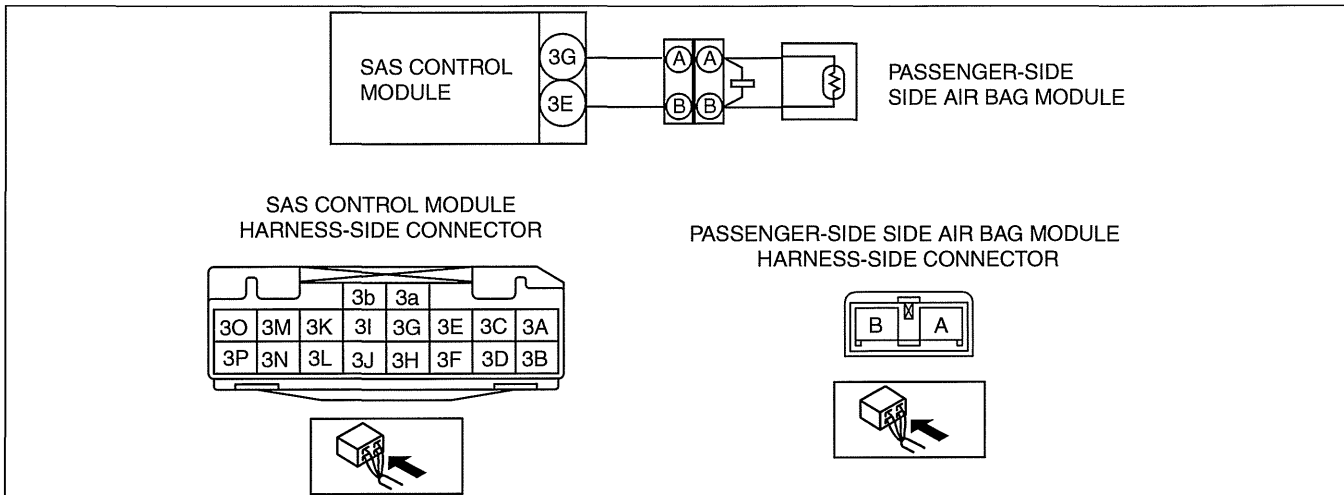

- Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.

- Resistance other than **1.10–9.64 ohms** detected in passenger-side side air bag module circuit
- Wiring harness between the passenger-side side air bag module and SAS control module has a malfunction

Possible Causes

- Passenger-side side air bag module connector malfunction
- Open or short circuit or short to ground or short to power supply in the wiring harness between the passenger-side side air bag module and SAS control module
- Passenger-side side air bag module malfunction
- SAS control module malfunction

ON-BOARD DIAGNOSTIC

DTC B1059, B2229, B2231, B2233, B2235

id080200809700

System Malfunction Location

DTC	System Malfunction Location
M-MDS display	
B1059	Short to the passenger-side air bag module (inflator No.2) circuit and other air bag module circuits
B2229	Passenger-side air bag module (inflator No.2) circuit short to body ground
B2231	Passenger-side air bag module (inflator No.2) circuit short to power supply
B2233	Passenger-side air bag module (inflator No.2) circuit open circuit or resistance high
B2235	Passenger-side air bag module (inflator No.2) circuit resistance low

Detection Condition

Warning

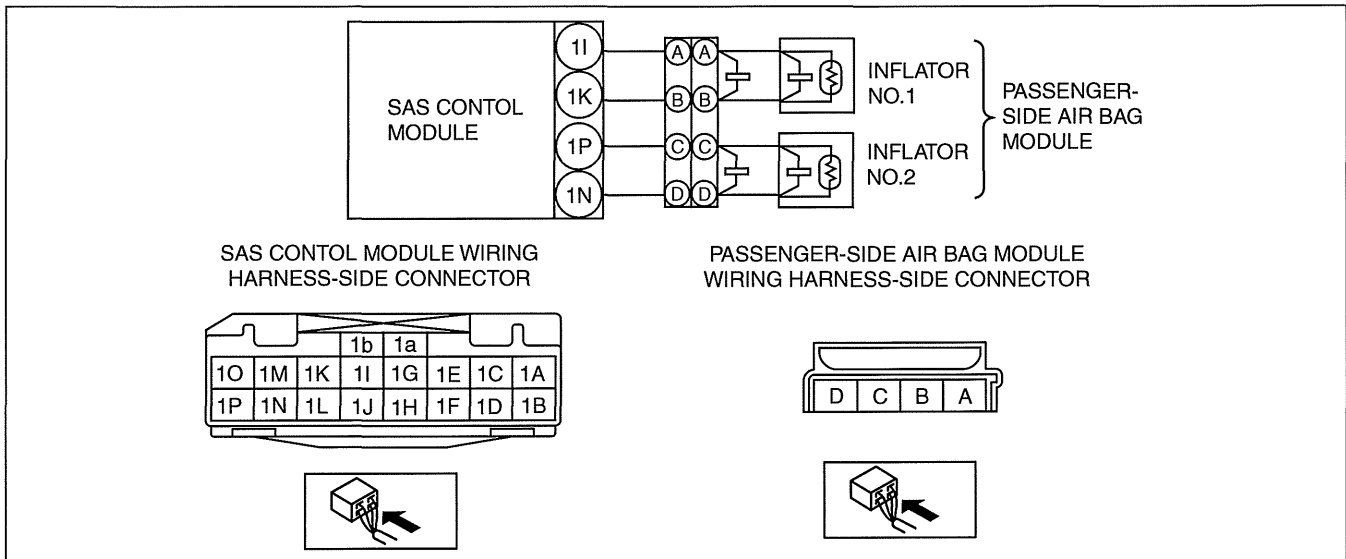

- Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.

- Abnormal resistance (other than **1.10—5.77 ohms**) detected in the passenger-side air bag module (inflator No.2) circuit
- Malfunction in the wiring harness between the passenger-side air bag module (inflator No.2) and SAS control module

Possible Causes

- Passenger-side air bag module connector malfunction
- Open or short circuit or short to ground or short to power supply in the wiring harness between the passenger-side air bag module (inflator No.2) and SAS control module
- Passenger-side air bag module malfunction
- SAS control module malfunction

(See 09-17-59 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side pre-tensioner seat belt connector. (See 08-11-3 FRONT SEAT BELT REMOVAL/INSTALLATION.) • Remove the console. (See 09-17-45 CONSOLE REMOVAL/INSTALLATION.) • Disconnect all SAS control module connectors. (See 08-10-17 SAS CONTROL MODULE REMOVAL/INSTALLATION.) • Inspect the wiring harnesses between SAS control module connector terminal 2I and lap pre-tensioner seat belt connector terminal A, and SAS control module connector terminal 2K and lap pre-tensioner seat belt connector terminal B for the following: <ul style="list-style-type: none"> — Short circuit between terminals — Short to body ground — Open circuit <p>Note</p> <ul style="list-style-type: none"> • Inspect for continuity while shaking the wiring harness between the SAS control module and lap pre-tensioner seat belt. <p>• Is the wiring harness normal?</p>	<p style="text-align: center;">Yes</p> <p>Go to the next step.</p> <p style="text-align: center;">No</p> <p>Replace the wiring harness between the SAS control module and the lap pre-tensioner seat belt.</p>

ON-BOARD DIAGNOSTIC

Step	Inspection	Action	
3	<p>INSPECT THE WIRING HARNESS BETWEEN THE SAS CONTROL MODULE AND LAP PRE-TENSIONER SEAT BELT FOR A SHORT CIRCUIT TO THE POWER SUPPLY</p> <ul style="list-style-type: none"> • Connect the negative battery cable. • Switch the ignition to ON with SAS control module connector and lap pre-tensioner seat belt connector disconnected. • Measure the voltage of SAS control module connector terminals 2I and 2K of SAS control module harness side connector. <p>Note</p> <ul style="list-style-type: none"> • Measure the voltage while shaking the wiring harness between the SAS control module and lap pre-tensioner seat belt. <ul style="list-style-type: none"> • Is the voltage measured? 	Yes	Replace the wiring harness between the SAS control module and the lap pre-tensioner seat belt.
		No	Go to the next step.
4	<p>INSPECT LAP PRE-TENSIONER SEAT BELT</p> <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable and wait for 1min or more. • Connect the SST (Fuel and thermometer checker) or apply 2 ohms resistance to the lap pre-tensioner seat belt connector terminals A–B. • Set the SST (Fuel and thermometer checker) to 2 ohms. • Except for the lap pre-tensioner seat belt connector, reconnect all disconnected connectors. • Connect the negative battery cable. • Switch the ignition to ON. • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-6 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-6 DTC INSPECTION.) • Are the same DTCs present? 	Yes	Go to the next step.
		No	Replace the lap pre-tensioner seat belt. (See 08-11-3 FRONT SEAT BELT REMOVAL/INSTALLATION.)
5	<p>PERFORM SAS CONTROL MODULE DTC INSPECTION</p> <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable and wait for 1min or more. • Disconnect the SST (Fuel and thermometer checker) or the 2 ohms resistance. • Connect the lap pre-tensioner seat belt connector. • Connect the negative battery cable. • Switch the ignition to ON. • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-6 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-6 DTC INSPECTION.) • Are the same DTCs present? 	Yes	Replace the SAS control module. (See 08-10-17 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

08-02

ON-BOARD DIAGNOSTIC

DTC B110E, B110F, B2856, B2886, B2887

id080200811800

System Malfunction Location

DTC	System Malfunction Location
M-MDS display	
B110E	Driver-side side air bag sensor No.2 ID mismatch
B110F	Passenger-side side air bag sensor No.2 ID mismatch
B2856	Crash zone sensor ID mismatch
B2886	Passenger-side side air bag sensor No.1 ID mismatch
B2887	Driver-side side air bag sensor No.1 ID mismatch

Detection Condition

Warning

- **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.**

- The SAS control module detects an error of impact magnitude set in the sensor, which occurs due to installation mismatch of the crash zone sensor or side air bag sensors.

Possible Causes

- Crash zone sensor misinstalled with wrong sensor
- Driver-side side air bag sensor No.1 misinstalled with wrong sensor
- Passenger-side side air bag sensor No.1 misinstalled with wrong sensor
- Driver-side side air bag sensor No.2 misinstalled with wrong sensor
- Passenger-side side air bag sensor No.2 misinstalled with wrong sensor
- SAS control module malfunction

Diagnostic Procedure

STEP	INSPECTION	ACTION
1	INSPECT EACH SENSOR FOR INSTALLATION POSITION Warning <ul style="list-style-type: none"> • Handling the air bag system components improperly can accidentally deploy the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the service warnings and cautions before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.) <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable and wait for 1 min or more. • Verify that the crash zone sensor or side air bag sensor is installed in the correct position. • Is each sensor installed correctly? 	Yes: Go to the next step. No: Install the each sensor correctly, then go to the next step.
2	PERFORM DTC INSPECTION <ul style="list-style-type: none"> • Connect the negative battery cable. • Switch the ignition to ON. • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-6 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-6 DTC INSPECTION.) • Are the same DTCs present? 	Yes: Replace the SAS control module. (See 08-10-17 SAS CONTROL MODULE REMOVAL/INSTALLATION.) No: DTC troubleshooting completed.

No	DTC troubleshooting completed.					

DTC B2290

id080200802300

System Malfunction Location

- Seat weight sensor ID mismatch (Air bag system warning light DTC 15 is displayed)
- Seat weight sensor communication error (Air bag system warning light DTC 16 is displayed)

Detection Condition

Warning

- **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.**

08-02

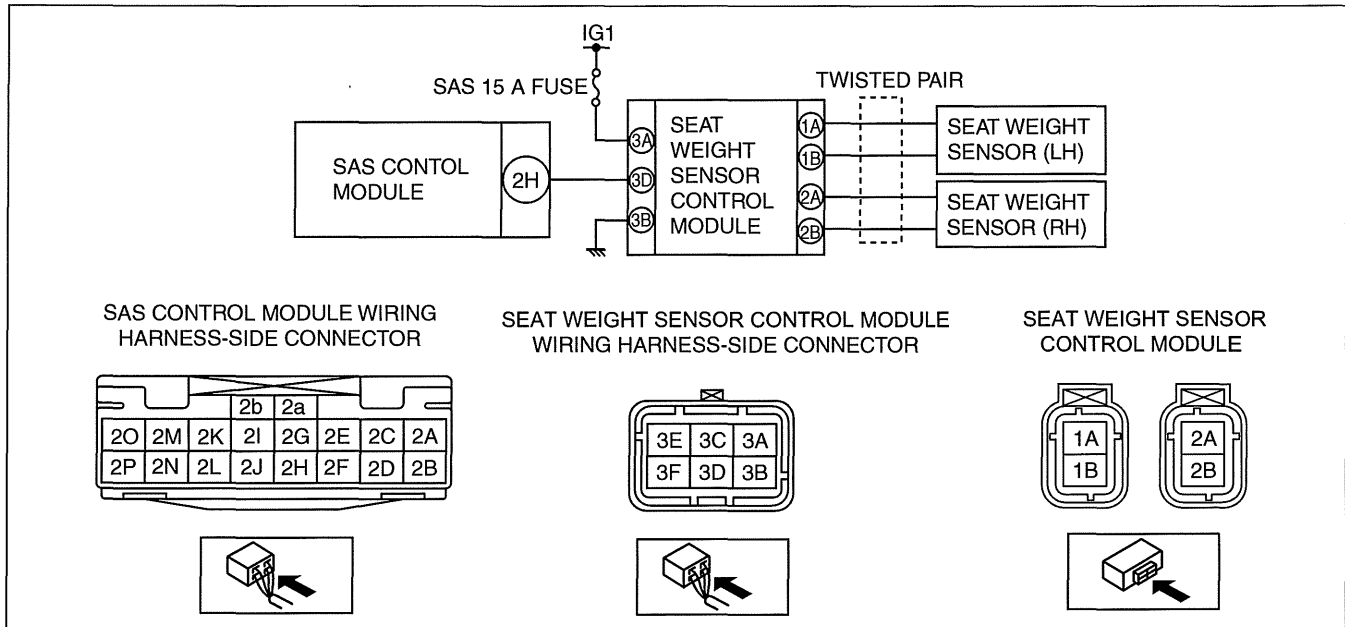

- Error signal is detected between SAS control module and seat weight sensor control module
- Seat weight sensor ID mismatch

Possible Causes

- Seat weight sensor control module connector malfunction
- Open or short circuit in the wiring harness between the battery and the seat weight sensor control module
- Open or short circuit in the wiring harness between the SAS control module and seat weight sensor control module
- Open circuit in the wiring harness between the seat weight sensor control module and body ground
- Seat weight sensor calibration not properly set
- Communication error between SAS control module and seat weight sensor control module
- Seat weight sensor control module internal malfunction
- LH or RH seat weight sensor malfunction
- SAS control module malfunction

ON-BOARD DIAGNOSTIC

System Wiring Diagram

am3uuw0000475

Diagnostic Procedure

Step	Inspection	Action
1	<p>INSPECT SEAT WEIGHT SENSOR CONTROL MODULE CONNECTOR</p> <p>Warning</p> <ul style="list-style-type: none"> Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.) <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the negative battery cable and wait for 1 min or more. Disconnect the seat weight sensor control module connector. (See 08-10-18 SEAT WEIGHT SENSOR CONTROL MODULE REMOVAL/INSTALLATION.) Is there any malfunction of the seat weight sensor control module connector? 	<p>Yes: Go to the next step.</p> <p>No: Repair or replace the wiring harness.</p>

ON-BOARD DIAGNOSTIC

Step	Inspection	Action	
2	INSPECT SEAT WEIGHT SENSOR CONTROL MODULE POWER SUPPLY CIRCUIT <ul style="list-style-type: none"> • Remove the console. (See 09-17-45 CONSOLE REMOVAL/INSTALLATION.) • Disconnect all SAS control module connectors. (See 08-10-17 SAS CONTROL MODULE REMOVAL/INSTALLATION.) • Connect the negative battery cable. • Switch the ignition to ON. • Measure the voltage of seat weight sensor control module connector terminals 3A. <p>Note</p> <ul style="list-style-type: none"> • Measure the voltage while shaking the wiring harness between the seat weight sensor control module and fuse block. <ul style="list-style-type: none"> • Is the voltage measured? 	Yes	Go to the next step.
		No	Repair the wiring harness between the seat weight sensor control module and fuse block.
3	INSPECTION WIRING HARNESS <ul style="list-style-type: none"> • Disconnect the SAS control module connector. (See 08-10-17 SAS CONTROL MODULE REMOVAL/INSTALLATION.) • Verify continuity in the following wiring harnesses: <ul style="list-style-type: none"> — Between SAS control module terminal 2H and seat weight sensor control module terminal 3D — Between seat weight sensor control module terminal 3B and body ground <p>Note</p> <ul style="list-style-type: none"> • Inspect for continuity while shaking the wiring harness between the SAS control module and seat weight sensor control module. <ul style="list-style-type: none"> • Is the continuity normal? 	Yes	Go to the next step.
		No	If there is any malfunction in the wiring harnesses, repair or replace the applicable wiring harness. After replacement, reperform the DTC inspection and verify that no DTCs are displayed.
4	INSPECT PASSENGER SENSING SYSTEM <ul style="list-style-type: none"> • Connect the seat weight sensor control module connector. • Connect the SAS control module. • Connect the negative battery cable. • Verify the following PIDs using the M-MDS. (See 08-02-96 PID/DATA MONITOR TABLE.) <ul style="list-style-type: none"> — OCSFLT_CAL — OCSFLT_COM — OCSFLT_L — OCSFLT_MDL — OCSFLT_R • Do all PIDs display "OK"? 	Yes	Go to the Step 6.
		No	Replace the following parts according to the M-MDS screen: <ul style="list-style-type: none"> • If FAULT is displayed for OCSFLT_CAL: <ul style="list-style-type: none"> — Perform seat weight sensor calibration (See 08-10-18 SEAT WEIGHT SENSOR CALIBRATION.) • If FAULT is displayed for OCSFLT_COM or OCSFLT_MDL: <ul style="list-style-type: none"> — Seat weight sensor control module (See 08-10-18 SEAT WEIGHT SENSOR CONTROL MODULE REMOVAL/INSTALLATION.) • If FAULT is displayed for OCSFLT_L or OCSFLT_R: <ul style="list-style-type: none"> — Go to the next step

08-02

ON-BOARD DIAGNOSTIC

Step	Inspection	Action	
5	<p>INSPECT SEAT WEIGHT SENSOR CONTROL MODULE</p> <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable and wait for 1 min or more. • Disconnect the seat weight sensor connector from the seat weight sensor control module. • Connect the negative battery cable. • Switch the ignition to ON. • Measure the voltage between the following terminals: Caution <ul style="list-style-type: none"> • When measuring the voltage at a terminal of the seat weight sensor control module, measure it being careful not to bend or damage the terminal. <p>— Seat weight sensor control module terminal 1A (module side) and body ground — Seat weight sensor control module terminal 2A (module side) and body ground</p> <ul style="list-style-type: none"> • Is the voltage approx. 6.5 V? 	Yes	Replace the seat weight sensor on the side in which the PID/data monitor indicates a malfunction.
		No	Replace the seat weight sensor control module, then go to the next step. (See 08-10-18 SEAT WEIGHT SENSOR CONTROL MODULE REMOVAL/INSTALLATION.)
6	<p>PERFORM SAS CONTROL MODULE DTC INSPECTION</p> <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable and wait for 1min or more. • Reconnect all disconnected connectors. • Connect the negative battery cable. • Switch the ignition to ON. • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-6 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-6 DTC INSPECTION.) • Are the same DTCs present? 	Yes	Replace the SAS control module. (See 08-10-17 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

- SAS control module configuration setting has not been done correctly

Possible Causes

- SAS control module configuration setting not implemented
- SAS control module configuration setting invalid
- SAS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	PERFORM SAS CONTROL MODULE INSPECTION <ul style="list-style-type: none">• Perform the configuration for the SAS control module using the M-MDS. (See 08-10-17 SAS CONTROL MODULE CONFIGURATION.)• Clear the DTC for the SAS control module using the M-MDS. (See 08-02-6 CLEARING DTC.)• Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-6 DTC INSPECTION.)• Are the same DTCs present?	Yes	Perform the SAS control module configuration, then go to the next step. (See 08-10-17 SAS CONTROL MODULE CONFIGURATION.)
		No	Go to the next step.
2	PERFORM SAS CONTROL MODULE DTC INSPECTION <ul style="list-style-type: none">• Clear the DTC for the SAS control module using the M-MDS. (See 08-02-6 CLEARING DTC.)• Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-6 DTC INSPECTION.)• Are the same DTCs present?	Yes	Replace the SAS control module. (See 08-10-17 SAS CONTROL MODULE REMOVAL/ INSTALLATION.)
		No	DTC troubleshooting completed.

08-02

ON-BOARD DIAGNOSTIC

DTC B2867

id080200803100

System Malfunction Location

- SAS control module connectors are poorly connected

Detection Condition

Warning

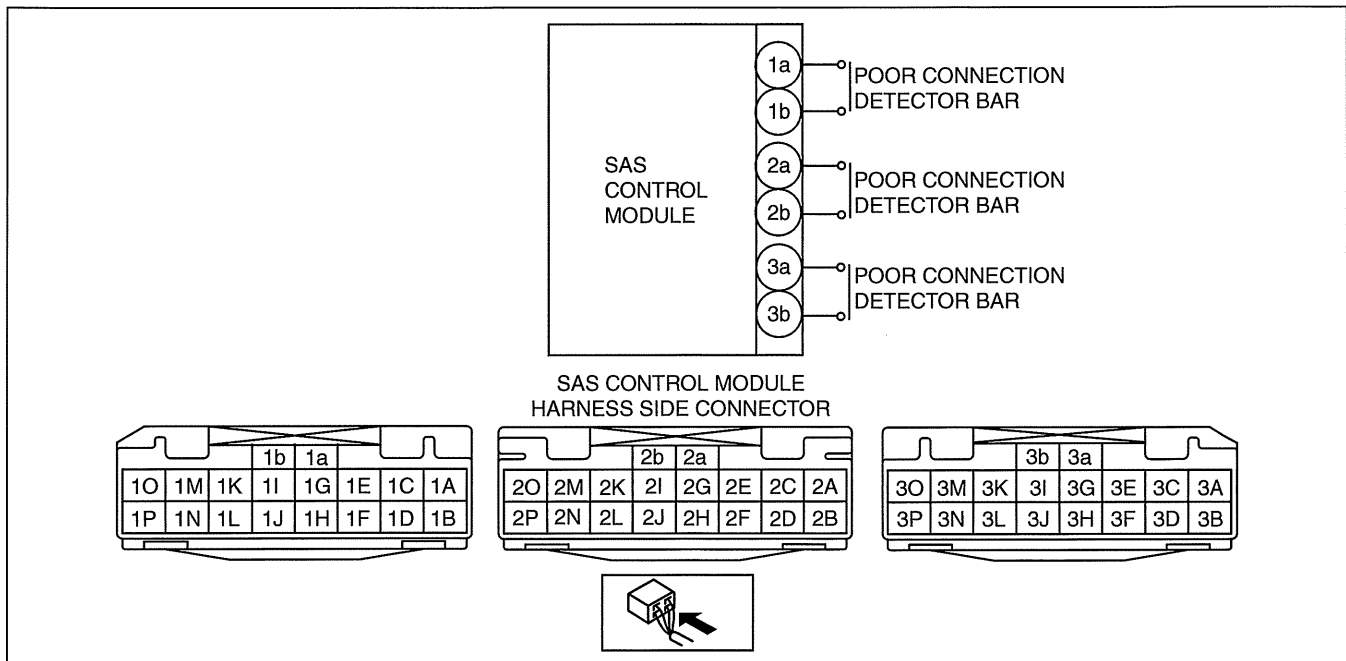

- **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.**

- No continuity between poorly connected detector bar terminals of the SAS control module

Possible Causes

- SAS control module connectors are poorly connected
- SAS control module connector malfunction
- SAS control module malfunction

System Wiring Diagram

am6xuw0000196

ON-BOARD DIAGNOSTIC

Diagnostic Procedure

Step	Inspection	Action	
1	INSPECT CONTACTS OF SAS CONTROL MODULE CONNECTORS Warning <ul style="list-style-type: none"> • Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.) <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable and wait for 1 min or more. • Are all SAS control module connectors securely connected? 	Yes	Go to the next step.
		No	Reconnect the SAS control module connectors properly.
2	VERIFY POORLY CONNECTED DETECTOR BARS OF SAS CONTROL MODULE CONNECTORS <ul style="list-style-type: none"> • Disconnect the SAS control module connectors. • Verify the condition of the poorly connected detector bars of the SAS control module connectors. (Corrosion, damage, and disconnected pins) • Are the poorly connected detector bars of the SAS control module connectors normal? 	Yes	Go to the next step.
		No	Replace the air bag wiring harness.
3	PERFORM SAS CONTROL MODULE DTC INSPECTION <ul style="list-style-type: none"> • Connect the SAS control module connectors. • Connect the negative battery cable. • Switch the ignition to ON. • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-6 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-6 DTC INSPECTION.) • Are the same DTCs present? 	Yes	Replace the SAS control module. (See 08-10-17 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

08-02

ON-BOARD DIAGNOSTIC

DTC C1946, C1947, C1948, C1981, C1982

id080200820200

System Malfunction Location

DTC	System Malfunction Location
C1946	Seat track position sensor circuit open or resistance high
C1947	Seat track position sensor circuit short to body ground
C1948	Seat track position sensor circuit resistance not within specification
C1981	Seat track position sensor malfunction
C1982	Seat track position sensor circuit open or short to power supply

Detection Condition

Warning

- Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.

- Malfunction in seat track position sensor circuit.

Possible Causes

- Seat track position sensor connector malfunction
- Open or short circuit or short to ground or short to power supply in wiring harness between seat track position sensor and SAS control module.
- Open circuit in wiring harness between seat track position sensor and body ground.
- Seat track position sensor malfunction
- SAS control module malfunction

System Wiring Diagram

(See 08-10-17 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

08-02

ON-BOARD DIAGNOSTIC

PID/DATA MONITOR INSPECTION

id080200080800

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "DataLogger".
 2. Select "Modules".
 3. Select "RCM".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "RCM".
 3. Select "DataLogger".
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the directions on the screen.

am3uuw0000421

Note

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.

PID/DATA MONITOR TABLE

id080200081000

PID name (definition)	Unit/Operation	Operation Status (Reference)	Terminal
BUCKLE_D (Driver-side buckle switch status)	Unbuckled/ Buckled	<ul style="list-style-type: none"> • Driver-side front seat belt fastened (Driver-side buckle switch off): Buckled • Driver-side front seat belt not fastened (Driver-side buckle switch on): Unbuckled 	2M

id080300802000

- Use the chart below verify the symptoms of the trouble in order to diagnose the appropriate area.

No.	Troubleshooting item	Description	Page
1	Air bag system warning light does not illuminate.	Air bag system warning light does not illuminate while the air bag system is performing initialization.	(See 08-03-3 NO.1 AIR BAG SYSTEM WARNING LIGHT DOES NOT ILLUMINATE)
2	Air bag system warning light is illuminated constantly.	Air bag system warning light is illuminated constantly and remains illuminated after 6 s have elapsed.	(See 08-03-4 NO.2 AIR BAG SYSTEM WARNING LIGHT ILLUMINATES CONSTANTLY)

NO.1 AIR BAG SYSTEM WARNING LIGHT DOES NOT ILLUMINATE

id080300802000

08-03

1	Air bag system warning light does not illuminate.
DETECTION CONDITION	Air bag system warning light does not illuminate while the air bag system is performing initialization.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Instrument cluster (circuit board) malfunction • Short to ground circuit in wiring harness between instrument cluster and SAS control module • Air bag system warning light (LED) malfunction • Communication error between SAS control module and instrument cluster • SAS control module malfunction

Diagnostic Procedure

STEP	INSPECTION	ACTION
1	INSPECT OTHER WARNING AND INDICATOR LIGHTS CIRCUIT IN INSTRUMENT CLUSTER <ul style="list-style-type: none"> • Switch the ignition to ON. • Do other warning and indicator lights illuminate? 	Yes Switch the ignition to off, then go to the next step.
		No Inspect the instrument cluster power supply system and ground system, then go to Step 3.
2	INSPECT DTCS IN SAS CONTROL MODULE <ul style="list-style-type: none"> • Inspect the DTC for the SAS control module on-board diagnostic system. • Have DTCs been recorded in memory? 	Yes Perform the applicable DTC inspection, then go to Step 5. (See 08-02-7 DTC TABLE.)
		No Go to the next step.
3	VERIFY WHERE MALFUNCTION IS IN WARNING LIGHTS INDICATION CIRCUIT OR ELSEWHERE <ul style="list-style-type: none"> • Turn on all warning lights and indicator lights using the instrument cluster PID WL+IL of simulation function using the M-MDS. (See 09-02E-24 ACTIVE COMMAND MODES INSPECTION [INSTRUMENT CLUSTER].) • Do other warning and indicator lights illuminate? 	Yes Go to the next step.
		No Replace the instrument cluster. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.) Then go to Step 5.
4	INSPECT DTCS IN INSTRUMENT CLUSTER <ul style="list-style-type: none"> • Inspect the DTC for the instrument cluster on-board diagnostic system. • Have DTCs been recorded in memory? 	Yes Perform the applicable DTC inspection, then go to the next step. (See 09-02E-5 DTC TABLE [INSTRUMENT CLUSTER].)
		No Go to the next step.

SYMPTOM TROUBLESHOOTING

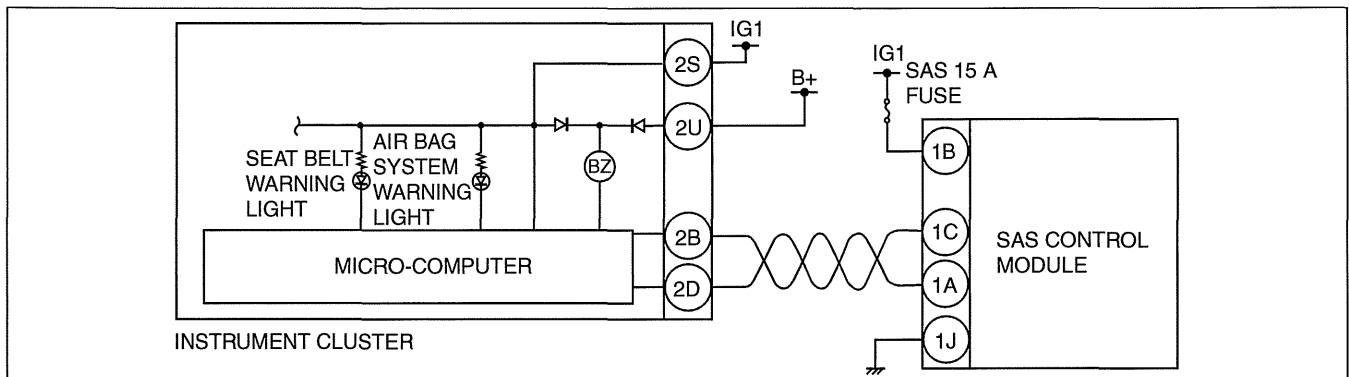

STEP	INSPECTION	ACTION				
5	CONFIRM THAT MALFUNCTION SYMPTOMS DO NOT RECUR AFTER REPAIR <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable and wait for 1 min or more. • Connect all disconnected SAS system connectors. • Connect the negative battery cable. • Switch the ignition to ON. • Does the air bag system warning light operate properly? 	<table border="0" style="width: 100%;"> <tr> <td style="text-align: center; width: 50px;">Yes</td> <td>Verify that there are no DTCs in the memory. If there are no DTCs, the troubleshooting is completed.</td> </tr> <tr> <td style="text-align: center;">No</td> <td>Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.</td> </tr> </table>	Yes	Verify that there are no DTCs in the memory. If there are no DTCs, the troubleshooting is completed.	No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.
Yes	Verify that there are no DTCs in the memory. If there are no DTCs, the troubleshooting is completed.					
No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.					

NO.2 AIR BAG SYSTEM WARNING LIGHT ILLUMINATES CONSTANTLY

id080300800300

2	Air bag system warning light illuminates constantly
DETECTION CONDITION	Air bag system warning light is illuminated constantly and remains illuminated after 6 s have elapsed.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Weak battery • SAS control module malfunction • Instrument cluster (circuit board) malfunction • No connection in SAS control module connector • Poor contact in instrument cluster connector (24-pin) • Open or short to power supply circuit in wiring harness between instrument cluster and SAS control module • Poor contact at terminals 1J and/or 1B of SAS control module connector • Poor contact in wiring harness between terminal 1J of SAS control module connector and ground • Poor contact in wiring harness between battery and terminal 1B of SAS control module

System Wiring Diagram

SYMPTOM TROUBLESHOOTING

Diagnostic Procedure

STEP	INSPECTION	ACTION	
1	INSPECT BATTERY <ul style="list-style-type: none"> • Measure the voltage of battery. • Is the voltage 8 V or more? 	Yes	Go to the next step.
		No	Battery is weak. Inspect charge/discharge system, then go to Step 8. (See 01-17A-4 BATTERY INSPECTION [LF, L5].) (See 01-17B-4 BATTERY INSPECTION [L3 WITH TC].)
2	VERIFY THAT SAS CONTROL MODULE CONNECTOR IS CONNECTED <p>Warning</p> <ul style="list-style-type: none"> • Handling the air bag system components improperly can accidentally deploy the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.) <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable and wait for 1 min or more. • Remove the console. (See 09-17-45 CONSOLE REMOVAL/INSTALLATION.) • Are all SAS control module connectors securely connected? 	Yes	Go to the next step.
		No	Reconnect the connector properly, then go to Step 8.
3	INSPECT DTCS IN SAS CONTROL MODULE <ul style="list-style-type: none"> • Clear DTCS using the M-MDS. (See 08-02-6 CLEARING DTC.) • Inspect the DTC for the SAS control module on-board diagnostic system. • Have DTCS been recorded in memory? 	Yes	Perform the applicable DTC inspection, then go to Step 8. (See 08-02-7 DTC TABLE.)
		No	Go to the next step.
4	INSPECT DTCS IN INSTRUMENT CLUSTER <ul style="list-style-type: none"> • Inspect the DTC for the instrument cluster on-board diagnostic system. • Have DTCS been recorded in memory? 	Yes	Perform the applicable DTC inspection, then go to Step 8. (See 09-02E-5 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
5	VERIFY WHERE MALFUNCTION IS IN WARNING LIGHTS INDICATION CIRCUIT OR ELSEWHERE <ul style="list-style-type: none"> • Turn on all warning lights and indicator lights using the instrument cluster PID WL+IL of simulation function using the M-MDS. (See 09-02E-24 ACTIVE COMMAND MODES INSPECTION [INSTRUMENT CLUSTER].) • Do other warning and indicator lights illuminate? 	Yes	Go to the next step.
		No	Repair the instrument cluster. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.) Then go to Step 8.

08-03

SYMPTOM TROUBLESHOOTING

STEP	INSPECTION	ACTION	
6	INSPECT POWER SUPPLY CIRCUIT OF SAS CONTROL MODULE (TERMINAL 1B) <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable and wait for 1 min or more. • Remove the console. (See 09-17-45 CONSOLE REMOVAL/INSTALLATION.) • Disconnect all SAS control module connectors. • Connect the negative battery cable. • Switch the ignition to ON. • Measure the voltage at SAS control module at wiring harness-side connector terminal 1B. • Is the voltage 8—16 V? 	Yes	Go to the next step.
		No	Repair the wiring harnesses, then go to Step 8.
7	VERIFY THAT SAS CONTROL MODULE CONNECTOR TERMINAL 1J IS GROUND <ul style="list-style-type: none"> • SAS control module connector disconnected. • Inspect the wiring harness between SAS control module connector terminal 1J and ground for the following: <ul style="list-style-type: none"> — Short to power supply — Open circuit • Is the wiring harness normal? 	Yes	Replace the SAS control module, then go to the next step. (See 08-10-17 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Replace the wiring harnesses, then go to the next step.
8	CONFIRM THAT MALFUNCTION SYMPTOMS DO NOT RECUR AFTER REPAIR <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable and wait for 1 min or more. • Connect all disconnected SAS control module connectors during diagnosis. • Connect the negative battery cable. • Switch the ignition to ON. • Does the air bag system warning light illuminate for approx. 6 s and turn off? 	Yes	Complete troubleshooting, then explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

id08100805300

am3uuw000425

1	Curtain air bag module (See 08-10-11 CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION.) (See 08-10-26 AIR BAG MODULE AND PRE-TENSIONER SEAT BELT DEPLOYMENT PROCEDURES.)
2	SAS control module (See 08-10-17 SAS CONTROL MODULE REMOVAL/INSTALLATION.) (See 08-10-17 SAS CONTROL MODULE CONFIGURATION.)
3	Driver-side air bag module (See 08-10-7 DRIVER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.) (See 08-10-26 AIR BAG MODULE AND PRE-TENSIONER SEAT BELT DEPLOYMENT PROCEDURES.)

4	Clock spring (See 08-10-21 CLOCK SPRING REMOVAL/INSTALLATION.) (See 08-10-23 CLOCK SPRING INSPECTION.) (See 08-10-22 CLOCK SPRING ADJUSTMENT.)
5	Passenger air bag deactivation (PAD) indicator light bulb (See 08-10-25 PASSENGER AIR BAG DEACTIVATION (PAD) INDICATOR LIGHT BULB REMOVAL/INSTALLATION.)
6	Passenger-side air bag module (See 08-10-8 PASSENGER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.) (See 08-10-26 AIR BAG MODULE AND PRE-TENSIONER SEAT BELT DEPLOYMENT PROCEDURES.)
7	Crash zone sensor (See 08-10-16 CRASH ZONE SENSOR REMOVAL/INSTALLATION.)

AIR BAG SYSTEM

8	Side air bag sensor No.1 (See 08-10-19 SIDE AIR BAG SENSOR NO. 1 REMOVAL/INSTALLATION.)
9	Side air bag sensor No.2 (See 08-10-20 SIDE AIR BAG SENSOR NO. 2 REMOVAL/INSTALLATION.)
10	Pre-tensioner seat belt (See 08-10-26 AIR BAG MODULE AND PRE-TENSIONER SEAT BELT DEPLOYMENT PROCEDURES.)
11	Lap pre-tensioner seat belt (See 08-10-26 AIR BAG MODULE AND PRE-TENSIONER SEAT BELT DEPLOYMENT PROCEDURES.)

12	Side air bag module (See 08-10-10 SIDE AIR BAG MODULE REMOVAL/INSTALLATION.) (See 08-10-26 AIR BAG MODULE AND PRE-TENSIONER SEAT BELT DEPLOYMENT PROCEDURES.)
13	Seat track position sensor (See 08-10-18 SEAT TRACK POSITION SENSOR REMOVAL/INSTALLATION.)
14	Seat weight sensor control module (See 08-10-18 SEAT WEIGHT SENSOR CONTROL MODULE REMOVAL/INSTALLATION.)
15	Seat weight sensor (See 08-10-18 SEAT WEIGHT SENSOR CALIBRATION.) (See 08-10-19 SEAT WEIGHT SENSOR INSPECTION.)

AIR BAG SYSTEM SERVICE WARNINGS

id081000800200

Air Bag Module Inspection

- Inspecting an air bag module using a tester can operate (deploy) the air bag module, which may cause serious injury. Do not use a tester to inspect an air bag module. Always use the on-board diagnostic function to diagnose the air bag module for malfunctions.

08-10

am3uuw0000368

Air Bag Module Handling

- Before removing the air bag module or disconnecting the air bag module connector, always switch the ignition to off, disconnect the negative battery cable, and then wait for 1 min or more to allow the backup power supply of the SAS control module to deplete its stored power.
- Handling a live (undeployed) air bag module that is pointed toward your body could result in serious injury if the air bag module were to accidentally operate (deploy). When carrying a live (undeployed) air bag module, point the deployment surface away from your body to lessen the chance of injury in case it operates (deploys).

am3uuw0000368

AIR BAG SYSTEM

- A live (undeployed) air bag module placed with its deployment surface to ground is dangerous. If the air bag module were to accidentally operate (deploy), it could cause serious injury. Always place a live (undeployed) air bag module with its deployment surface up.

am3uuw000369

Side Air Bag Module Handling

- Before removing the side air bag module or disconnecting the side air bag module connector, always switch the ignition to off, disconnect the negative battery cable, and then wait for 1 min or more to allow the backup power supply of the SAS control module to deplete its stored power.
- When a side air bag module operates (deploys) due to a collision, the interior of the seat back (pad, frame, trim) may become damaged. If a side air bag does not operate (deploy) normally from a seat back that has been reused, a serious accident may result. After a side air bag has operated (deployed), always replace both the side air bag module and the seat back (pad, frame, trim) with new parts. After servicing, verify that the seat operates normally and that the wiring harness is not caught.

SAS Control Module Handling

- Removing the SAS control module or disconnecting the SAS control module connector with the switch the ignition to ON can activate the sensor in the SAS control module and operate (deploy) the air bags and pre-tensioner seat belts, which may cause serious injury. Before removing the SAS control module or disconnecting the SAS control module connector, always switch the ignition to off, disconnect the negative battery cable, and then wait for 1 min or more to allow the backup power supply of the SAS control module to deplete its stored power.
- Connecting the SAS control module connector with the SAS control module not securely fixed to the vehicle is dangerous. The sensor in the SAS control module could send an electrical signal to the air bag modules and pre-tensioner seat belts. This will operate (deploy) the air bags and pre-tensioner seat belts, which may result in serious injury. Therefore, before connecting the connector, securely fix the SAS control module to the vehicle.
- Because a sensor is built into the SAS control module, once the air bags and pre-tensioner seat belts have operated (deployed) due to a collision or other causes, the SAS control module must be replaced with a new one even if the used one does not have any visible external damage or deformation. The used SAS control module may have been damaged internally, which may cause improper operation. If the SAS control module is reused, the air bags and pre-tensioner seat belts may not operate (deploy) normally, which could result in a serious accident. Always replace the SAS control module with a new one. The SAS control module cannot be bench-checked or self-checked.

Side Air Bag Sensor Handling

- Removing the side air bag sensor or disconnecting the side air bag sensor connector with the switch the ignition to ON can activate the side air bag sensor and operate (deploy) the side air bag, which may cause serious injury. Before removing the side air bag sensor or disconnecting the side air bag sensor connector, always switch the ignition to off, disconnect the negative battery cable, and then wait for 1 min or more to allow the backup power supply of the SAS control module to deplete its stored power.
- If the side air bag sensor is subjected to shock or the sensor is disassembled, the side air bag may accidentally operate (deploy) and cause injury, or the system may fail to operate normally and cause a serious accident. Do not subject the side air bag sensor to shock or disassemble the sensor.
- Because a sensor is built into the side air bag sensor, once the air bag has operated (deployed) due to a collision or other causes, the side air bag sensor must be replaced with a new one even if the used one does not have any visible external damage or deformation. If the side air bag sensor is reused, the side air bag may not operate (deploy) normally, which could result in a serious accident. Always replace the side air bag sensor with a new one. The side air bag sensor cannot be bench-checked or self-checked.

AIR BAG SYSTEM

Pre-tensioner Seat Belt Inspection

- Inspecting a pre-tensioner seat belt using a tester can operate (deploy) the pre-tensioner seat belt, which may cause serious injury. Do not use a tester to inspect a pre-tensioner seat belt. Always use the on-board diagnostic function to diagnose the pre-tensioner seat belt for malfunctions.

am3uuw0000369

Lap Pre-tensioner Seat Belt Inspection

- Inspecting a lap pre-tensioner seat belt using a tester can operate (deploy) the lap pre-tensioner seat belt, which may cause serious injury. Do not use a tester to inspect a lap pre-tensioner seat belt. Always use the on-board diagnostic function to diagnose the lap pre-tensioner seat belt for malfunctions.

am3uuw0000369

08-10

AIR BAG SYSTEM SERVICE CAUTIONS

Air Bag System Component Disassembly

- Disassembling the air bag system components could cause it to not operate (deploy) normally. Never disassemble any air bag system components.

id081000800300

am3uuw0000368

Air Bag Module, Pre-tensioner Seat Belt, Lap Pre-tensioner Seat Belt Handling

- Oil, grease, or water on the air bag modules may cause the air bags, pre-tensioner seat belts and lap pre-tensioner seat belt to fail to operate (deploy) in an accident. Never allow oil, grease, or water to get on the air bag modules, pre-tensioner seat belts or lap pre-tensioner seat belt.

AIR BAG SYSTEM

- Inserting a screwdriver or similar object into the connector of an air bag module, pre-tensioner seat belt or a lap pre-tensioner seat belt may damage the connector and cause the air bag module, pre-tensioner seat belt or the lap pre-tensioner seat belt to operate (deploy) improperly, which may cause serious injury. Never insert any foreign objects into the air bag module, pre-tensioner seat belt or lap pre-tensioner seat belt connectors.

am3uuw0000368

Seat Weight Sensor Handling

- The seat weight sensor has a built-in strain gauge which may operate improperly if the sensor is dropped by itself or when installed to the seat. If it is dropped, replace the seat weight sensor with a new one.
- Oil, grease, or water on the seat weight sensor may cause the system to operate (deploy) improperly. Never allow oil, grease, or water to get on the seat weight sensor.
- Foreign material in the seat weight sensor components may cause the system to operate (deploy) improperly. Always make sure that no foreign material can get into the seat weight sensor.
- Disassembling the seat weight sensor, or tightening any of the nuts and bolts installed to the sensor body may cause it to operate (deploy) improperly. Never disassemble the seat weight sensor or tighten any of the nuts or bolts installed to the body of the sensor.

Air Bag Module, Pre-tensioner Seat Belt Reuse

- Even if an air bag module or a pre-tensioner seat belt does not operate (deploy) in a collision and does not have any external signs of damage, it may have been damaged internally, which may cause improper operation. Before reusing a live (undeployed) air bag module and the pre-tensioner seat belts, always use the on-board diagnostic to diagnose the air bag module and the pre-tensioner seat belts to verify that they have no malfunction.

Air Bag Wiring Harness Repair

- Incorrectly repairing an air bag wiring harness can accidentally operate (deploy) the air bag module and pre-tensioner seat belts. If a problem is found in the air bag wiring harness, always replace the wiring harness with a new one.

am6zzw0000094

AIR BAG SYSTEM

DRIVER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION

id081000801300

Warning

- Handling the air bag module improperly can accidentally deploy the air bag module, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag module. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.)(See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)
- Due to the adoption of 2-step deployment control in the driver-side air bag module, depending on the impact force, it is possible that inflator No.2 might not deploy. In such cases, before disposing of the air bag module, make sure to follow the inflator deployment procedures and verify complete deployment of inflators No.1 and 2.

1. Switch the ignition to off.
2. Disconnect the negative battery cable and wait for **1 min or more**.
3. Remove the covers.
4. Remove the bolts.

am3uuw0000372

08-10

AIR BAG SYSTEM

5. Using a flathead screwdriver, lift the locking device carefully, however do not remove it.

6. Disconnect the air bag module connector.
7. Disconnect the horn switch connector.
8. Remove the driver-side air bag module.
9. Install in the reverse order of removal.
10. Switch the ignition to ON.
11. Verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.
 - If the air bag system warning light does not operate normally, refer to the on-board diagnostic system (air bag system) and perform inspection of the system. (See 08-02-4 FLOWCHART.)

PASSENGER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION

id081000801900

Warning

- **Handling the air bag module improperly can accidentally deploy the air bag module, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag module. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**
- **Due to the adoption of 2-step deployment control in the passenger-side air bag module, depending on the impact force, it is possible that inflator No.2 might not deploy. In such cases, before disposing of the air bag module, make sure to follow the inflator deployment procedures and verify complete deployment of inflators No.1 and 2.**

Note

- When replacing the passenger-side air bag module after the deployment, replace it together with the mid-wiring harness.
- When installing the mid-wiring harness, install it along the vehicle wiring harness using bands or tape.

1. Switch the ignition to off.
2. Disconnect the negative battery cable and wait for **1 min or more**.
3. Remove the following parts:
 - (1) Passenger-side front scuff plate (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
 - (2) Passenger-side front side trim (See 09-17-53 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
 - (3) Dashboard under cover (See 09-17-39 DASHBOARD UNDER COVER REMOVAL/INSTALLATION.)
 - (4) Glove compartment (See 09-17-33 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
 - (5) Passenger-side lower panel (See 09-17-27 LOWER PANEL REMOVAL/INSTALLATION.)
 - (6) SIRIUS satellite radio unit (with SIRIUS satellite radio system) (See 09-20-30 SIRIUS SATELLITE RADIO UNIT REMOVAL/INSTALLATION.)

AIR BAG SYSTEM

4. Disconnect the connector.
5. Remove the screws.
6. Remove the bolts.

am3uuw0000373

7. Pull the passenger-side air bag module in the direction of arrow (1) and detach the hook A from the instrument panel.

am3uuw0000373

8. Pull the passenger-side air bag module in the direction of arrow (2) and detach the hook B from the instrument panel and remove it.
9. Install in the reverse order of removal.
10. Switch the ignition to ON.
11. Verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.
 - If the air bag system warning light does not operate, refer to the on-board diagnostic system (air bag system) and perform inspection of the system. (See 08-02-4 FLOWCHART.)

am3uuw0000373

08-10

AIR BAG SYSTEM

SIDE AIR BAG MODULE REMOVAL/INSTALLATION

id081000800800

Warning

- Handling the air bag module improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag module. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)
- If the side air bag module is installed with debris in the seat back, the foreign material may be scattered when the side air bag module operates (deploys), causing injury. Verify that there is no foreign material in the seat back before installing the side air bag module.

1. Switch the ignition to off.
2. Disconnect the negative battery cable and wait for **1 min or more**.
3. Remove the front seat. (See 09-13-3 FRONT SEAT REMOVAL/INSTALLATION.)
4. Remove the front seat back trim and front seat back pad. (See 09-13-13 FRONT SEAT BACK TRIM REMOVAL/INSTALLATION.)
5. Remove the bands.
6. Remove the nuts.
7. Remove the side air bag module.
8. Install in the reverse order of removal.
9. Switch the ignition to ON.
10. Verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.
 - If the air bag system warning light does not operate normally, refer to the on-board diagnostic system (air bag system) and perform inspection of the system. (See 08-02-4 FLOWCHART.)

am3uuw0000566

AIR BAG SYSTEM

CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION

id081000800900

Warning

- Handling the air bag module improperly can accidentally deploy the air bag module, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag module. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.)(See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)

4SD

1. Switch the ignition to off.
2. Disconnect the negative battery cable and wait for **1 min or more**.
3. Partially peel back the seaming welt.
4. Remove the rain sensor cover. (Vehicles with auto light/wiper system) (See 09-19-25 RAIN SENSOR REMOVAL/INSTALLATION)
5. Disconnect the rain sensor connector. (Vehicles with auto light/wiper system)
6. Remove the following parts:
 - (1) Sunroof seaming welt (vehicles with sunroof system)
 - (2) A-pillar trim (See 09-17-50 A-PILLAR TRIM REMOVAL/INSTALLATION.)
 - (3) Front scuff plate (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
 - (4) Rear scuff plate (See 09-17-68 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
 - (5) B-pillar lower trim (See 09-17-59 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
 - (6) Upper anchor of the front seat belt (See 08-11-3 FRONT SEAT BELT REMOVAL/INSTALLATION.)
 - (7) B-pillar upper trim (See 09-17-61 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
 - (8) Rear seat cushion (See 09-13-37 REAR SEAT CUSHION REMOVAL/INSTALLATION.)
 - (9) Tire house trim (See 09-17-54 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
 - (10)C-pillar trim (See 09-17-63 C-PILLAR TRIM REMOVAL/INSTALLATION.)
 - (11)Map light (See 09-18-67 MAP LIGHT REMOVAL/INSTALLATION.)
 - (12)Interior light (See 09-18-69 INTERIOR LIGHT REMOVAL/INSTALLATION.)
 - (13)Sunvisor (See 09-17-106 SUNVISOR REMOVAL/INSTALLATION.)
 - (14)Assist handle (See 09-17-104 ASSIST HANDLE REMOVAL/INSTALLATION.)
 - (15)Headliner (See 09-17-107 HEADLINER REMOVAL/INSTALLATION.)
7. Disconnect the connector (harness side).

08-10

AIR BAG SYSTEM

am3uuw000495

am3uuw000495

8. Disconnect the connector (inflator side).
9. Remove the clip A. (See 08-10-15 Clip Removal Note.)
10. Remove the bolt A.
11. Pull hook A in the direction shown in the figure and remove it from the body.
12. Remove the clip B. (See 08-10-15 Clip Removal Note.)
13. Remove the bolt B.
14. Pull hook B in the direction shown in the figure and remove it from the body.
15. Remove the clip C. (See 08-10-15 Clip Removal Note.)

08-10-12

AIR BAG SYSTEM

16. Remove the bolt C.
17. Pull hook C in the direction shown in the figure and remove it from the body.
18. Remove the curtain air bag module.
19. Install in the reverse order of removal.
20. When the switch the ignition to ON verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.
 - If the air bag system warning light does not operate normally, refer to the on-board diagnostic system (air bag system) and perform inspection of the system. (See 08-02-4 FLOWCHART.)

5HB

1. Switch the ignition to off.
2. Disconnect the negative battery cable and wait for **1 min or more**.
3. Partially peel back the seaming welt.
4. Remove the rain sensor cover. (Vehicles with auto light/wiper system) (See 09-19-25 RAIN SENSOR REMOVAL/INSTALLATION)
5. Disconnect the rain sensor connector. (Vehicles with auto light/wiper system)
6. Remove the following parts:
 - (1) Sunroof seaming welt (vehicles with sunroof system)
 - (2) A-pillar trim (See 09-17-50 A-PILLAR TRIM REMOVAL/INSTALLATION.)
 - (3) Front scuff plate (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
 - (4) Rear scuff plate (See 09-17-68 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
 - (5) B-pillar lower trim (See 09-17-59 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
 - (6) Upper anchor of the front seat belt (See 08-11-3 FRONT SEAT BELT REMOVAL/INSTALLATION.)
 - (7) B-pillar upper trim (See 09-17-61 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
 - (8) Rear seat cushion (See 09-13-37 REAR SEAT CUSHION REMOVAL/INSTALLATION.)
 - (9) Tire house trim (See 09-17-54 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
 - (10) Trunk side upper trim (See 09-17-78 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION.)
 - (11) C-pillar trim (See 09-17-63 C-PILLAR TRIM REMOVAL/INSTALLATION.)
 - (12) Map light (See 09-18-67 MAP LIGHT REMOVAL/INSTALLATION.)
 - (13) Interior light (See 09-18-69 INTERIOR LIGHT REMOVAL/INSTALLATION.)
 - (14) Sunvisor (See 09-17-106 SUNVISOR REMOVAL/INSTALLATION.)
 - (15) Assist handle (See 09-17-104 ASSIST HANDLE REMOVAL/INSTALLATION.)
 - (16) Headliner (See 09-17-107 HEADLINER REMOVAL/INSTALLATION.)
7. Remove the fastener.

am3uuw0000548

08-10

AIR BAG SYSTEM

8. Disconnect the connector (harness side).

am3uuw000495

am3uuw000495

9. Disconnect the connector (inflator side).
10. Remove the clip A. (See 08-10-15 Clip Removal Note.)
11. Remove the bolt A.
12. Pull hook A in the direction shown in the figure and remove it from the body.
13. Remove the clip B. (See 08-10-15 Clip Removal Note.)
14. Remove the bolt B.
15. Pull hook B in the direction shown in the figure and remove it from the body.

08-10-14

AIR BAG SYSTEM

16. Remove the clip C. (See 08-10-15 Clip Removal Note.)
17. Remove the bolt C.
18. Pull hook C in the direction shown in the figure and remove it from the body.
19. Remove the curtain air bag module.
20. Install in the reverse order of removal.
21. When the switch the ignition to ON verify that the air bag system warning light illuminates for **approx 6 s** and goes out.
 - If the air bag system warning light does not operate normally, refer to the on-board diagnostic system (air bag system) and perform inspection of the system. (See 08-02-4 FLOWCHART.)

Clip Removal Note

1. Pull out the pin with flathead screwdriver as shown in the figure.

08-10

2. Insert a flathead screwdriver into shown in the figure.

AIR BAG SYSTEM

3. While pulling the curtain air bag in the direction of the arrow shown in the figure (1), detach tabs by prying with a flathead screwdriver in the direction of the arrow (2) (3).
4. Remove the clip from the body.

am3uuw0000495

CRASH ZONE SENSOR REMOVAL/INSTALLATION

id081000800500

Warning

- **Handling the crash zone sensor improperly can accidentally deploy the air bags and pre-tensioner seat belts, which may seriously injure you. Read the air bag system service warnings and cautions before handling the crash zone sensor. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**

1. Switch the ignition to off.
2. Disconnect the negative battery cable and wait for **1 min or more**.
3. Remove the front bumper. (See 09-10-16 FRONT BUMPER REMOVAL/INSTALLATION.)
4. Remove the bolt
5. Remove the cover.

am3uuw0000495

6. Disconnect the connector from the crash zone sensor by pressing the connector tab in the direction of the arrow.
7. Remove the nut.
8. Remove the crash zone sensor.
9. Install in the reverse order of removal.
10. Switch the ignition to ON.
11. Verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.
 - If the air bag system warning light does not operate normally, refer to the on-board diagnostic system (air bag system) and perform inspection of the system. (See 08-02-4 FLOWCHART.)

am3uuw0000421

AIR BAG SYSTEM

SAS CONTROL MODULE REMOVAL/INSTALLATION

id081000801400

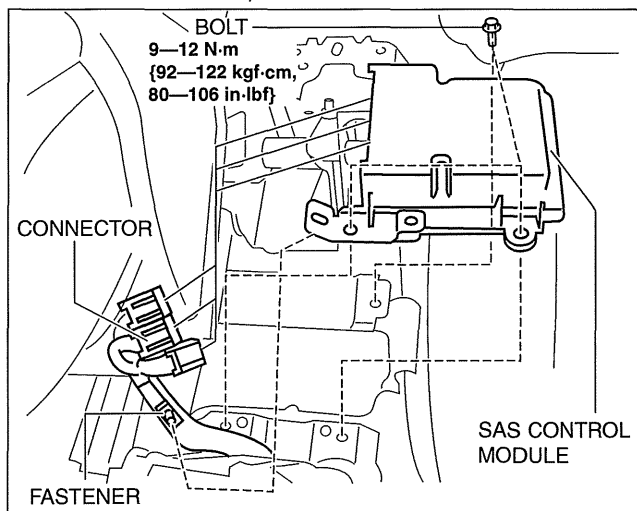

Warning

- Handling the SAS control module or air bag module improperly can accidentally deploy the air bag modules and pre-tensioner seat belt, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag module. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)
- If the connector is connected and the switch the ignition to ON with the SAS control module not secured completely using the installation nuts, the SAS control module may detect a degree of impact even when something contacts it lightly, deploying the air bag module and pre-tensioner seat belt accidentally.

Caution

- When replacing the SAS control module, always perform the configuration procedure before removing the SAS control module. If the configuration is not performed and the SAS control module is removed, DTC B2477 will be displayed.

1. Perform SAS control module configuration when replacing it. (See 08-10-17 SAS CONTROL MODULE CONFIGURATION.)
2. Switch the ignition to off.
3. Disconnect the negative battery cable and wait for **1 min or more**.
4. Remove the console. (See 09-17-45 CONSOLE REMOVAL/INSTALLATION.)
5. Detach the fastener.
6. Disconnect the connectors.
7. Remove the bolts.
8. Remove the SAS control module.
9. Install in the reverse order of removal.
10. Switch the ignition to ON.
11. Verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.
 - If the air bag system warning light does not operate normally, refer to the on-board diagnostic system (air bag system) and perform inspection of the system. (See 08-02-4 FLOWCHART.)

am3uuw0000373

08-10

SAS CONTROL MODULE CONFIGURATION

id081000801500

Note

- Use the IDS (laptop PC) because the PDS (Pocket PC) does not support the SAS CONTROL MODULE CONFIGURATION.

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Module Programming".
3. Then, select items from the screen menu in the following order.
 1. Select "Programmable Module Installation".
 2. Select "RCM".
4. Perform the configuration according to the directions on the screen.
5. Retrieve DTCs by the M-MDS, then verify that there is no DTC present.
 - If a DTC (s) is detected, perform the applicable DTC inspection. (See 08-02-7 DTC TABLE.)

am3uuw0000373

AIR BAG SYSTEM

SEAT TRACK POSITION SENSOR REMOVAL/INSTALLATION

id081000803700

1. Switch the ignition to off.
2. Disconnect the negative battery cable and wait for **1min or more**.
3. Remove the front driver's seat (See 09-13-3 FRONT SEAT REMOVAL/INSTALLATION.)
4. Remove the screws.
5. Remove the seat track position sensor.
6. Install in the reverse order of removal.

am3uuw0000425

SEAT WEIGHT SENSOR CONTROL MODULE REMOVAL/INSTALLATION

id081000801600

Caution

- When the seat weight sensor control module is replaced with a new one, perform the seat weight sensor calibration using the M-MDS. (See 08-10-18 SEAT WEIGHT SENSOR CALIBRATION.)

1. Switch the ignition to off.
2. Disconnect the negative battery cable and wait for **1 min or more**.
3. Remove the connector.
4. Remove the screws.
5. Remove the seat weight sensor control module.
6. Install in the reverse order of removal.

am3uuw0000425

SEAT WEIGHT SENSOR CALIBRATION

id081000801700

Caution

- If any of the following work is performed, perform the seat weight sensor calibration using the M-MDS.
 - Replacement with a new seat weight sensor
 - Replacement with a new seat weight sensor control module
 - Replacement with new passenger-side seat parts
 - Disassembly of the passenger-side seat
- If any of the following work is performed, perform the seat weight sensor inspection using the M-MDS. (See 08-10-19 SEAT WEIGHT SENSOR INSPECTION.)
 - Removal of the passenger-side seat
 - Loosening and retightening of passenger's seat fixing bolts
 - Or, the vehicle is involved in a collision

1. Have two **20 kg {44 lb}** weights ready to use.

AIR BAG SYSTEM

2. Connect the M-MDS to the DLC-2.
3. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Body".
 2. Select "Restraints".
4. Then, select item from the screen menu in the following order.
 1. Select "Passenger Seat Weight Sensor ReZero".
5. Perform calibration following the procedures on the M-MDS screen.

am3uuw000373

SEAT WEIGHT SENSOR INSPECTION

id081000801800

Caution

- If any of the following work is performed, perform the seat weight sensor inspection using the M-MDS.
 - Removal of the passenger-side seat
 - Loosening and retightening of passenger's seat fixing bolts
 - Or, the vehicle is involved in a collision
- If any of the following work is performed, perform the seat weight sensor calibration using the M-MDS. (See 08-10-18 SEAT WEIGHT SENSOR CALIBRATION.)
 - Replacement with a new seat weight sensor
 - Replacement with a new seat weight sensor control module
 - Replacement with new passenger-side seat parts
 - Disassembly of the passenger-side seat

08-10

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Body".
 2. Select "Restraints".
 - When using the PDS (Pocket PC)
 1. Select "All Tests and Calibrations".
3. Then, select item from the screen menu in the following order.
 1. Select "Passenger Seat Weight Sensor ReZero".
4. Perform inspection following the procedures on the M-MDS screen.

am3uuw000373

SIDE AIR BAG SENSOR NO. 1 REMOVAL/INSTALLATION

id081000800600

Warning

- Handling the side air bag sensor improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the air bag system service warnings and cautions before handling the side air bag sensor. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)

1. Switch the ignition to off.
2. Disconnect the negative battery cable and wait for **1 min or more**.
3. Remove the front scuff plate. (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
4. Remove the rear scuff plate. (See 09-17-68 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
5. Remove the B-pillar lower trim. (See 09-17-59 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)

AIR BAG SYSTEM

6. Remove the nut.
7. Remove the side air bag sensor No.1.

am3uuw0000496

8. Disconnect the connector from the side air bag sensor No.1 by pressing the connector tab in the direction of the arrow.
9. Install in the reverse order of removal.
10. Switch the ignition to ON.
11. Verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.
 - If the air bag system warning light does not operate normally, refer to the on-board diagnostic system (air bag system) and perform inspection of the system. (See 08-02-4 FLOWCHART.)

id081000800700

SIDE AIR BAG SENSOR NO. 2 REMOVAL/INSTALLATION

id081000800700

Warning

- **Handling the side air bag sensor improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the air bag system service warnings and cautions before handling the side air bag sensor. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**

1. Switch the ignition to off.
2. Disconnect the negative battery cable and wait for **1 min or more**.
3. Remove the following parts:
 - (1) Rear scuff plate (See 09-17-68 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
 - (2) Rear seat cushion (See 09-13-37 REAR SEAT CUSHION REMOVAL/INSTALLATION.)
 - (3) Rear seat back (See 09-13-31 REAR SEAT BACK REMOVAL/INSTALLATION.)
 - (4) Tire house trim (See 09-17-54 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
4. Remove the nut.
5. Remove the side air bag sensor No.2.

am3uuw0000496

AIR BAG SYSTEM

6. Disconnect the connector from the side air bag sensor No.2 by pressing the connector tab in the direction of the arrow.
7. Install in the reverse order of removal.
8. Switch the ignition to ON.
9. Verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.
 - If the air bag system warning light does not operate normally, refer to the on-board diagnostic system (air bag system) and perform inspection of the system. (See 08-02-4 FLOWCHART.)

am3uuw0000421

CLOCK SPRING REMOVAL/INSTALLATION

id081000802000

1. Disconnect the negative battery cable.
2. Remove the driver-side air bag module. (See 08-10-7 DRIVER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
3. Remove the steering wheel. (See 06-14-8 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION [WITHOUT ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)(See 06-14-11 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
4. Remove the column cover.
5. Remove the connectors.
6. Remove the tab direction of the arrow shown in the figure.
7. Remove the screws.
8. Remove the clock spring.
9. Remove the steering angle sensor (See 08-10-21 Steering Angle Sensor Removal Note.)
10. Install in the reverse order of removal.
11. Verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.
 - If the air bag system warning light does not operate in the manner described above, there are malfunctions in the system. Inspect the system using the on-board diagnostic.

am3uuw0000425

08-10

Clock Spring Installation Note

Caution

- If the clock spring is not adjusted, the spring wire in the clock spring will break due to overtension when the steering wheel is turned. Always adjust the clock spring after installing it.
- Adjust the clock spring after installing it. (See 08-10-22 CLOCK SPRING ADJUSTMENT.)

Steering Angle Sensor Removal Note

- Remove the tab shown in the figure and remove the steering angle sensor.

am3uuw0000425

AIR BAG SYSTEM

CLOCK SPRING ADJUSTMENT

id081000802100

Note

- The adjustment procedure is also specified on the caution label of the clock spring.

1. Set the front wheels straight ahead.

Caution

- **The clock spring will break if over-wound. Do not forcibly turn the clock spring.**

2. Turn the clock spring clockwise until it stops.

am3uuw0000374

3. Turn the clock spring counterclockwise **2 3/4 turns**.

am3uuw0000374

AIR BAG SYSTEM

4. Align the mark on the clock spring with the mark on the outer housing.

am3uuw0000374

id081000802200

08-10

CLOCK SPRING INSPECTION

1. Disconnect the negative battery cable.
2. Remove the driver-side air bag module. (See 08-10-7 DRIVER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
3. Remove the steering wheel. (See 06-14-8 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION [WITHOUT ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)(See 06-14-11 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
4. Remove the column cover.
5. Remove the clock spring. (See 08-10-21 CLOCK SPRING REMOVAL/INSTALLATION.)
6. Verify that the continuity is as indicated in the table.
 - If not as indicated in the table, replace the clock spring.

Note

- When the vehicle-side connector for the clock spring is disconnected, terminals 1A, 1B, 1C and 1D are shorted to prevent unexpected operation (deployment) of the air bag module.

PASSENGER AIR BAG DEACTIVATION (PAD) INDICATOR LIGHT BULB REMOVAL/INSTALLATION

id081000806800

Note

- The PAD indicator light (LED) is built into the multi information display/information display.

- Remove the information display. (With information display) (See 09-22-13 INFORMATION DISPLAY REMOVAL/INSTALLATION.)
- Remove the multi information display. (With multi information display) (See 09-22-18 MULTI INFORMATION DISPLAY REMOVAL/INSTALLATION.)

AIR BAG SYSTEM

AIR BAG MODULE AND PRE-TENSIONER SEAT BELT DEPLOYMENT PROCEDURES

id081000801100

Warning

- A live (undeployed) air bag module or pre-tensioner seat belt may accidentally operate (deploy) when it is disposed of and cause serious injury. Do not dispose of a live (undeployed) air bag module and pre-tensioner seat belt. If the SSTs (Deployment tool and Adapter harness) are not available, consult the nearest Mazda representative for assistance.

Caution

- Deploying the air bag modules and pre-tensioner seat belts inside the vehicle may cause damage to the vehicle interior. When the vehicle is not to be scrapped, always deploy the air bag modules and pre-tensioner seat belts outside the vehicle.
- If the vehicle is to be scrapped, or when disposing of any air bag modules or pre-tensioner seat belts, operate (deploy) them inside the vehicle by following the deployment procedure below and using the **SST (Deployment tool)**.
- When disposing of an operated (deployed) air bag module and pre-tensioner seat belt, refer to "AIR BAG MODULE AND PRE-TENSIONER SEAT BELT DISPOSAL PROCEDURES".

Deployment Procedure for Inside of Vehicle

1. Inspect the **SST (Deployment tool)**. (See 08-10-44 INSPECTION OF SST (DEPLOYMENT TOOL).)
2. Move the vehicle to an open space, away from strong winds, and close all of the vehicle doors and windows.
3. Switch the ignition to off.
4. Disconnect the negative battery cable and wait for **1 min or more**.
5. Follow the procedure below for operating (deploying) the applicable air bag module or pre-tensioner seat belt.

Driver-side Air Bag Module

Warning

- The driver-side air bag module is a dual inflator type. If one inflator is forced to operate (deploy), the other may operate (deploy) accidentally. To prevent injury while disposing of the air bag module, make sure to operate (deploy) both driver-side air bag module inflators simultaneously, following the procedure below.

Note

- The SSTs, two types of adapter harnesses (for inflators No.1 and No.2) and two deployment tools are to be used to operate (deploy) the driver-side air bag module.
1. Remove the driver-side air bag module. (See 08-10-7 DRIVER-SIDE AIR BAG MODULE REMOVAL/ INSTALLATION.)
 2. Connect the **SST (Adapter harness)** to the driver-side air bag module as shown in the figure.
 3. Install the driver-side air bag module. (See 08-10-7 DRIVER-SIDE AIR BAG MODULE REMOVAL/ INSTALLATION.)

am3uuw0000422

AIR BAG SYSTEM

4. Connect the **SST (Deployment tool)** to the **SST (Adapter harness)**.

am6xuw0000200

5. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.
6. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.
7. Verify that all persons are standing **at least 6 m {20 ft}** way from the vehicle.
8. Press the activation switch on the **SST (Deployment tool)** connected with **49 L066 002** (a yellow connector) of the **SST (Adapter harness)**, and after **3 s**, press the activation switch on the other **SST (Deployment tool)** to operate (deploy) the air bag module (both inflators).

am6zzw0000095

Warning

- Verify that air bag module operation (explosive) sound occurs twice. If no operation (explosive) sound was heard or a single operation (explosive) sound was heard, both inflators would not have operated (deployed) properly. This may cause serious injury if the air bag module operates (deploy) unexpectedly. If the two operation (explosive) sounds are not heard, perform Step 8 again. If a total of two operation (explosive) sounds cannot be verified even though Step 8 is performed again, leave the air bag module alone for 30 min or more before approaching it again.
- The air bag module is very hot immediately after it is operated (deployed). You can get burned. Do not touch the air bag module for at least 15 min after deployment.

9. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.

Passenger-side Air Bag Module

Warning

- The passenger-side air bag module is a dual inflator type. If one inflator is forced to operate (deploy), the other may operate (deploy) accidentally. To prevent injury while disposing of the air bag module, make sure to operate (deploy) both passenger-side air bag module inflators simultaneously, following the procedure below.

Note

- The SSTs, two types of adapter harnesses (for inflators No.1 and No.2) and two deployment tools are to be used to operate (deploy) the passenger-side air bag module.

1. Remove the glove compartment. (See 09-17-33 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)

08-10

AIR BAG SYSTEM

2. Disconnect the passenger-side air bag module connector.
3. Connect the **SST (Adapter harness)** to the passenger-side air bag module as shown in the figure.
4. Connect the **SST (Deployment tool)** to the **SST (Adapter harness)**.

am3uuw0000422

am6xuw0000210

5. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.
6. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.
7. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.
8. Press the activation switch on the **SST (Deployment tool)** connected with **49 L066 002** (a yellow connector) of the **SST (Adapter harness)**, and after **3 s**, press the activation switch on the other **SST (Deployment tool)** to operate (deploy) the air bag module (both inflators).

am6zzw0000095

Warning

- Verify that air bag module operation (explosive) sound occurs twice. If no operation (explosive) sound was heard or a single operation (explosive) sound was heard, both inflators would not have operated (deployed) properly. This may cause serious injury if the air bag module operates (deploy) unexpectedly. If the two operation (explosive) sounds are not heard, perform Step 8 again. If a total of two operation (explosive) sounds cannot be verified even though Step 8 is performed again, leave the air bag module alone for 30 min or more before approaching it again.
- The air bag module is very hot immediately after it is operated (deployed). You can get burned. Do not touch the air bag module for at least 15 min after deployment.

9. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.

AIR BAG SYSTEM

Side Air Bag Module

1. Disconnect the side air bag module connector.
2. Connect the **SST (Adapter harness)** to the side air bag module as shown in the figure.

am3uuw0000422

3. Connect the **SST (Deployment tool)** to the **SST (Adapter harness)**.
4. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.
5. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.
6. Verify that all persons are standing at least 6 m {20 ft} away from the vehicle.

am3uuw0000423

7. Press the activation switch on the **SST (Deployment tool)** to operate (deploy) the side air bag module.

Warning

- The air bag module is very hot immediately after it is operated (deployed). You can be burned. Do not touch the air bag module for at least 15 min after deployment.

8. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.

am6zzw0000095

AIR BAG SYSTEM

Curtain Air Bag Module

1. Remove the following parts:
 1. Rear seat cushion (4SD) (See 09-13-37 REAR SEAT CUSHION REMOVAL/INSTALLATION.)
 2. Rear scuff plate (See 09-17-68 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
 3. Tire house trim (See 09-17-54 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
 4. Trunk side upper trim (5HB) (See 09-17-78 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION.)
 5. Trunk side trim (5HB) (See 09-17-74 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
2. Remove the C-pillar trim. (See 09-17-63 C-PILLAR TRIM REMOVAL/INSTALLATION.)
3. Disconnect the curtain air bag module connector.

4. Connect the **SST (Deployment tool)** to the **SST (Adapter harness)**.
5. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.
6. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.
7. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.

8. Press the activation switch on the **SST (Deployment tool)** to operate (deploy) the curtain air bag module.

Warning

- **The air bag module is very hot immediately after it is operated (deployed). You can be burned. Do not touch the air bag module for at least 15 min after deployment.**

9. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.

AIR BAG SYSTEM

Pre-tensioner Seat Belt

1. Remove the front scuff plate. (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
2. Remove the rear scuff plate. (See 09-17-68 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
3. Remove the B-pillar lower trim. (See 09-17-59 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
4. Remove the pre-tensioner seat belt and connect the **SST (Adapter harness)** as shown in the figure. (See 08-11-3 FRONT SEAT BELT REMOVAL/INSTALLATION.)
5. Install the pre-tensioner seat belt.

am3uuw0000423

6. Connect the **SST (Deployment tool)** to the **SST (Adapter harness)**.
7. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.
8. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.
9. Verify that all persons are standing at least 6 m {20 ft} away from the vehicle.

am6xuw0000203

10. Press the activation switch on the **SST (Deployment tool)** to operate (deploy) the pre-tensioner seat belt.

Warning

- The pre-tensioner seat belt is very hot immediately after it is operated (deployed). You can be burned. Do not touch the pre-tensioner seat belt for at least 15 min after deployment.

11. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.

am6zzw0000095

Lap pre-tensioner Seat Belt

1. Remove the lap pre-tensioner seat belt and connect the **SST (Adapter harness)** as shown in the figure. (See 08-11-3 FRONT SEAT BELT REMOVAL/INSTALLATION.)
2. Install the lap pre-tensioner seat belt.

am3uuw0000423

08-10

AIR BAG SYSTEM

3. Connect the **SST (Deployment tool)** to the **SST (Adapter harness)**.
4. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.
5. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.
6. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.

am3uuw0000423

7. Press the activation switch on the **SST (Deployment tool)** to operate (deploy) the pre-tensioner seat belt.

Warning

- The pre-tensioner seat belt is very hot immediately after it is operated (deployed). You can be burned. Do not touch the pre-tensioner seat belt for at least 15 min after deployment.

8. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.

am6zzw0000095

Deployment Procedure for Outside of Vehicle

1. Inspect the **SST (Deployment tool)**. (See 08-10-44 INSPECTION OF SST (DEPLOYMENT TOOL).)
2. Switch the ignition to off.
3. Disconnect the negative battery cable and wait for **1 min or more**.
4. Follow the procedure below for operating (deploying) the applicable air bag module or lap pre-tensioner seat belt.

Driver-side Air Bag Module

Warning

- The driver-side air bag module is a dual inflator type. If one inflator is forced to operate (deploy), the other may operate (deploy) accidentally. To prevent injury while disposing of the air bag module, make sure to operate (deploy) both driver-side air bag module inflators simultaneously, following the procedure below.

1. Remove the driver-side air bag module. (See 08-10-7 DRIVER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
2. Install the bolts to the driver-side air bag module as shown in the figure, and connect the **SST (Adapter harness)**.

am3uuw0000423

AIR BAG SYSTEM

- Place the driver-side air bag module on the center of the tire wheel with the padded surface facing up. To secure the air bag module to the tire wheel, wrap a wire (cross section 1.25 mm^2 {0.002 in²} or more) through the wheel and the bolt installation holes of the air bag module **at least 4 times**.

Warning

- If the air bag module is not properly installed to the tire wheel, serious injury may occur when the module is operated (deployed). When installing the air bag module to the tire wheel, make sure the padded surface is facing up.

- Stack three tires without wheels on top of the tire with the driver-side air bag module, and then stack another tire with a wheel on the very top.

- Secure the tires with wire.

- Connect the **SSTs (Deployment tool)** to the **SSTs (Adapter harness)**.
- Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.
- Verify that the red lamp on the **SST (Deployment tool)** is illuminated.
- Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.

AIR BAG SYSTEM

10. Press the activation switch on the **SST (Deployment tool)** connected with **49 L066 002** (a yellow connector) of the **SST (Adapter harness)**, and **after 3 s**, press the activation switch on the other **SST (Deployment tool)** to operate (deploy) the air bag module (both inflators).

Warning

- **Verify that air bag module operation (explosive) sound occurs twice. If no operation (explosive) sound was heard or a single operation (explosive) sound was heard, both inflators would not have operated (deployed) properly. This may cause serious injury if the air bag module operates (deploy) unexpectedly. If the two operation (explosive) sounds are not heard, perform Step 10 again. If a total of two operation (explosive) sounds cannot be verified even though Step 10 is performed again, leave the air bag module alone for 30 min or more before approaching it again.**
- **The air bag module is very hot immediately after it is operated (deployed). You can be burned. Do not touch the air bag module for at least 15 min after deployment.**

am6zzw000095

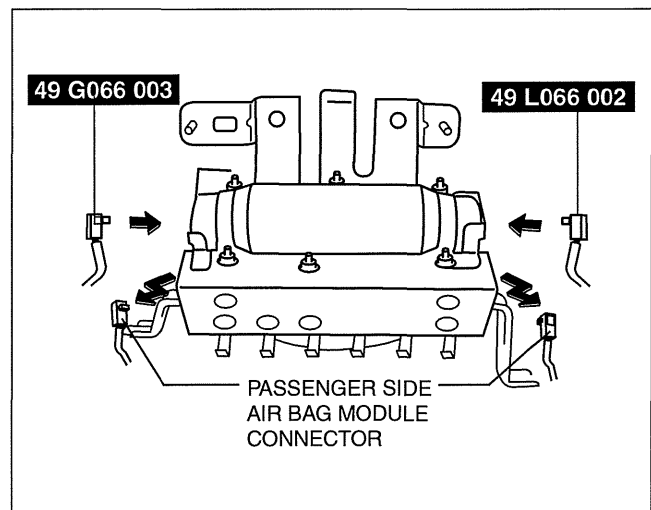

11. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.

Passenger-side Air Bag Module

Warning

- **The passenger-side air bag module is a dual inflator type. If one inflator is forced to operate (deploy), the other may operate (deploy) accidentally. To prevent injury while disposing of the air bag module, make sure to operate (deploy) both passenger-side air bag module inflators simultaneously, following the procedure below.**

1. Remove the following parts:
 - (1) Passenger-side front scuff plate (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
 - (2) Passenger-side front side trim (See 09-17-53 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
 - (3) Dashboard under cover (See 09-17-39 DASHBOARD UNDER COVER REMOVAL/INSTALLATION.)
 - (4) Glove compartment (See 09-17-33 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
 - (5) Passenger-side lower panel (See 09-17-27 LOWER PANEL REMOVAL/INSTALLATION.)
 - (6) SIRIUS satellite radio unit (with SIRIUS satellite radio system) (See 09-20-30 SIRIUS SATELLITE RADIO UNIT REMOVAL/INSTALLATION.)
 - (7) Passenger-side air bag module (See 08-10-8 PASSENGER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
2. Disconnect the passenger-side air bag module connector.
3. Connect the **SSTs (Adapter harness)** to the passenger-side air bag module as shown in the figure.

am3uuw0000423

AIR BAG SYSTEM

4. Place the padded surface of the passenger-side air bag module facing the center of the tire as shown in the figure. To secure the air bag module to the tire wheel, wrap a wire (cross section **1.25 mm²{0.002 in²}** or more) through the tire and the bolt installation holes **at least 4 times** as shown in the figure.

Warning

- **If the air bag module is not properly secured to the tire, the tires may fall over by the impact of operation (deployment) and cause serious injury. To prevent this, secure the air bag module properly with the padded surface facing the center of the tire.**

am6zzw000096

5. Stack the tire with the passenger-side air bag module on top of two tires without wheels. Stack a tire without a wheel on top of the tire with the passenger-side air bag module, and then stack another tire with a wheel on the very top.

am6xuw0000182

6. Secure the tires with wire.

am6zzw000096

7. Connect the **SSTs (Deployment tool)** to the **SSTs (Adapter harness)**.
8. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.
9. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.
10. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.

am6xuw0000211

AIR BAG SYSTEM

11. Press the activation switch on the **SST (Deployment tool)** connected with **49 L066 002** (a yellow connector) of the **SST (Adapter harness)**, and **after 3 s**, press the activation switch on the other **SST (Deployment tool)** to operate (deploy) the air bag module (both inflators).

Warning

- **Verify that air bag module operation (explosive) sound occurs twice. If no operation (explosive) sound was heard or a single operation (explosive) sound was heard, both inflators would not have operated (deployed) properly. This may cause serious injury if the air bag module operates (deploy) unexpectedly. If the two operation (explosive) sounds are not heard, perform Step 11 again. If a total of two operation (explosive) sounds cannot be verified even though Step 11 is performed again, leave the air bag module alone for 30 min or more before approaching it again.**
- **The air bag module is very hot immediately after it is operated (deployed). You can be burned. Do not touch the air bag module for at least 15 min after deployment.**

am6zzw0000095

12. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.

Side Air Bag Module

1. Remove the front seat. (See 09-13-3 FRONT SEAT REMOVAL/INSTALLATION.)
2. Remove the front seat back trim and pad. (See 09-13-13 FRONT SEAT BACK TRIM REMOVAL/INSTALLATION.)
3. Remove the side air bag module. (See 08-10-10 SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
4. Connect the **SST (Adapter harness)** to the side air bag module as shown in the figure.

am3uuw0000496

5. Put the side air bag module inside the tire and secure it to the tire by wrapping a wire (cross section of 1.25 mm^2 { 0.002 in^2 } or more) through the tire and the bolt **at least 4 times**.

Warning

- **If the air bag module is not properly secured to the tire, the tires may fall over by the impact of operation (deployment) and cause serious injury. To prevent this, secure the air bag module properly with the padded surface facing the center of the tire.**

am3uuw0000424

AIR BAG SYSTEM

- Stack the tire with the side air bag module on top of two tires without wheels. Stack a tire without a wheel on top of the tire with the side air bag module, and then stack another tire with a wheel on the very top.

am2zzw000037

- Secure the tires with wire.

am6zzw000096

- Connect the **SST (Deployment tool)** to the **SST (Adapter harness)**.
- Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.
- Verify that the red lamp on the **SST (Deployment tool)** is illuminated.
- Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.

am3uuw0000496

- Press the activation switch on the **SST (Deployment tool)** to operate (deploy) the side air bag module.

Warning

- The air bag module is very hot immediately after it is operated (deployed). You can be burned. Do not touch the air bag module for at least 15 min after deployment.

- Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.

am6zzw000095

08-10

AIR BAG SYSTEM

Curtain Air Bag Module

1. Partially peel back the seaming welt.
2. Remove the rain sensor cover. (Vehicles with auto light/wiper system) (See 09-19-25 RAIN SENSOR REMOVAL/INSTALLATION.)
3. Disconnect the rain sensor connector. (Vehicles with auto light/wiper system)
4. Remove the following parts:
 - (1) Sunroof seaming welt (vehicles with sunroof system)
 - (2) A-pillar trim (See 09-17-50 A-PILLAR TRIM REMOVAL/INSTALLATION.)
 - (3) Front scuff plate (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
 - (4) Rear scuff plate (See 09-17-68 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
 - (5) B-pillar lower trim (See 09-17-59 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
 - (6) Upper anchor of the front seat belt (See 08-11-3 FRONT SEAT BELT REMOVAL/INSTALLATION.)
 - (7) B-pillar upper trim (See 09-17-61 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
 - (8) Rear seat cushion (See 09-13-37 REAR SEAT CUSHION REMOVAL/INSTALLATION.)
 - (9) Tire house trim (See 09-17-54 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
 - (10) Trunk side upper trim (5HB) (See 09-17-78 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION.)
 - (11) C-pillar trim (See 09-17-63 C-PILLAR TRIM REMOVAL/INSTALLATION.)
 - (12) Map light (See 09-18-67 MAP LIGHT REMOVAL/INSTALLATION.)
 - (13) Interior light (See 09-18-69 INTERIOR LIGHT REMOVAL/INSTALLATION.)
 - (14) Sunvisor (See 09-17-106 SUNVISOR REMOVAL/INSTALLATION.)
 - (15) Assist handle (See 09-17-104 ASSIST HANDLE REMOVAL/INSTALLATION.)
 - (16) Headliner (See 09-17-107 HEADLINER REMOVAL/INSTALLATION.)
 - (17) Remove the curtain air bag module. (See 08-10-11 CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION.)
5. Cut off the air bag part of the curtain air bag module at the position shown in the figure.

Warning

- Be sure not to crush the pipe on the side where it is cut. If it is crushed completely, the interior pressure of the pipe will build up and can cause it to explode during air bag module operation (deployment).

am3uuw0000424

6. Disconnect the curtain air bag module connector.
7. Connect the **SST (Adapter harness)** to the curtain air bag module as shown in the figure.

am3uuw0000424

8. Secure the curtain air bag module to the tire, by wrapping a wire (cross section **1.25 mm² {0.002 in²} or more**) through the tire and the bolt installation holes **at least 4 times** as shown in the figure.

Warning

- If the air bag module is not properly installed to the tire, serious injury may occur when the module is operated (deployed). Make sure to install the air bag module securely.

am3uuw0000424

AIR BAG SYSTEM

9. Stack the tire with the curtain air bag module on top of two tires without wheels. Stack a tire without a wheel on top of the tire with the curtain air bag module, and then stack another tire with a wheel on the very top.

am3uuw0000424

10. Secure the tires with wire.

am6zzw0000096

08-10

11. Connect the **SST (Deployment tool)** to the **SST (Adapter harness)**.
12. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.
13. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.
14. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.

am3uuw0000424

15. Press the activation switch on the **SST (Deployment tool)** to operate (deploy) the curtain air bag module.

Warning

- The air bag module is very hot immediately after it is operated (deployed). You can be burned. Do not touch the air bag module for at least 15 min after deployment.

16. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.

am6zzw0000095

AIR BAG SYSTEM

Pre-tensioner Seat Belt

1. Remove the front scuff plate. (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
2. Remove the rear scuff plate. (See 09-17-68 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
3. Remove the B-pillar lower trim. (See 09-17-59 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
4. Remove the pre-tensioner seat belt and connect the **SST (Adapter harness)** as shown in the figure. (See 08-11-3 FRONT SEAT BELT REMOVAL/INSTALLATION.)

am3uuw0000423

5. Put the pre-tensioner seat belt inside the tire and secure it to the tire by wrapping a wire (cross section of 1.25 mm^2 {0.002 in²} or more) through the tire and the bolt installation holes at least 4 times.

Warning

- If the pre-tensioner seat belt is not properly installed to the tire, serious injury may occur when the pre-tensioner part is operated (deployed). When installing the pre-tensioner seat belt to the tire, make sure the pre-tensioner part is inside the tire.

am6zzw0000097

6. Stack the tire with the pre-tensioner seat belt on top of two tires without wheels. Stack a tire without a wheel on top of the tire with the pre-tensioner seat belt, and then stack another tire with a wheel on the very top.

am2zzw0000037

7. Secure the tires with wire.

AIR BAG SYSTEM

8. Connect the **SST (Deployment tool)** to the **SST (Adapter harness)**.
9. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.
10. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.
11. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.

am6xuw0000203

12. Press the activation switch on the **SST (Deployment tool)** to operate (deploy) the pre-tensioner seat belt.

Warning

- **The pre-tensioner seat belt is very hot immediately after it is operated (deployed). You can be burned. Do not touch the pre-tensioner seat belt for at least 15 min after deployment.**

13. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.

am6zzw0000095

08-10

Lap Pre-tensioner Seat Belt

1. Remove the front scuff plate. (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
2. Remove the rear scuff plate. (See 09-17-68 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
3. Remove the B-pillar lower trim. (See 09-17-59 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
4. Cut off the seat belt part of the lap pre-tensioner seat belt at the position shown in the figure.

am3uuw0000424

5. Remove the lap pre-tensioner seat belt and connect the **SST (Adapter harness)** as shown in the figure. (See 08-11-3 FRONT SEAT BELT REMOVAL/INSTALLATION.)

am3uuw0000423

AIR BAG SYSTEM

- Secure the lap pre-tensioner seat belt to the vise as shown in the figure. Set the lap pre-tensioner piston so that the ejection end is pointed downward. Place the bottom surface of the housing so that it contacts the upper surface of the vise.

Warning

- When the lap pre-tensioner seat belt operates (deploys), the piston ejects from the end of the cylinder. If an object lies in the ejection path within 40 mm of the cylinder end, the piston could hit the object, rebound and hit the lap pre-tensioner seat belt. The force of the piston hitting the lap pre-tensioner seat belt could dislodge it from the vise and cause injury. When securing the lap pre-tensioner in the vise, position it so that there is no obstruction in the ejection path within 40 mm of the cylinder end.

am3uuw0000567

- Put the lap pre-tensioner seat belt secure it to the vise by hold a wire (cross section of 1.25 mm^2 { 0.002 in^2 } or more) through the shaft of vise and the lap pre-tensioner seat belt bracket hole at least 4 times.

Warning

- If the lap pre-tensioner seat belt is not properly installed to the vise, serious injury may occur when the lap pre-tensioner part is operated (deployed). When installing the lap pre-tensioner seat belt to the vise, make sure the lap pre-tensioner part is properly installed to the vise.

am3uuw0000424

- Connect the **SST (Deployment tool)** to the **SST (Adapter harness)**.
- Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.
- Verify that the red lamp on the **SST (Deployment tool)** is illuminated.
- Verify that all persons are standing at least 6 m {20 ft} away from the vehicle.

am3uuw0000496

AIR BAG SYSTEM

- Press the activation switch on the **SST (Deployment tool)** to operate (deploy) the lap pre-tensioner seat belt.

Warning

- The lap pre-tensioner seat belt is very hot immediately after it is operated (deployed). You can be burned. Do not touch the lap pre-tensioner seat belt for at least 15 min after deployment.

- Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.

am6zzw000095

AIR BAG MODULE AND PRE-TENSIONER SEAT BELT DISPOSAL PROCEDURES

id081000801200

Warning

- A live (undeployed) air bag module or pre-tensioner seat belt may accidentally operate (deploy) when it is disposed of and cause serious injury. Always refer to the “AIR BAG MODULE AND PRE-TENSIONER SEAT BELT DEPLOYMENT PROCEDURES” and dispose of air bag modules and pre-tensioner seat belts in a deployed condition.
- The air bag modules and the pre-tensioner seat belts are very hot immediately after they are deployed. You can be burned. Do not touch an air bag module and pre-tensioner seat belt for at least 15 min after deployment.
- Pouring water on the deployed air bag module and pre-tensioner seat belt is dangerous. The water will mix with the residual gases to form a gas that can make breathing difficult. Do not pour water on the deployed air bag module and pre-tensioner seat belt.
- The deployed air bag module or pre-tensioner seat belt may contain deposits of sodium hydroxide, a caustic byproduct of the gas-generated combustion. If this substance gets into your eyes or on your hands, it can cause irritation and itching. When handling the deployed air bag module and pre-tensioner seat belt, wear gloves and safety glasses.
- Due to the adoption of 2-step deployment control in both the driver and passenger-side air bag modules, depending on the impact force, it is possible that inflator No.2 might not operate (deploy). Before disposing of the air bag module, always follow the inflator deployment procedures and verify the complete operation (deployment) of inflators No.1 and 2.

08-10

- Remove the deployed air bag module or pre-tensioner seat belt.
- Put the air bag module or pre-tensioner seat belt in a plastic bag, seal the bag, and then dispose of it.

am6xuw0000182

AIR BAG SYSTEM

INSPECTION OF SST (DEPLOYMENT TOOL)

id081000801000

1. Before using the SST (49 H066 002), inspect its operation.

am6xuw0000181

Inspection Procedure

1. Follow the steps below to inspect the SST (49 H066 002).
 - If not as indicated in the table, replace the SST (49 H066 002) because it has a malfunction.

Warning

- Do not use a malfunctioning SST (49 H066 002), otherwise it could cause the air bag module or pre-tensioner seat belt to accidentally operate (deploy).

Caution

- Because the permissible voltage for the SST (49 H066 002) is 12 V, do not connect a 24 V power source because it will damage the SST. Always connect only a 12 V power source.

Step	Inspection procedure	Light condition	
		Green	Red
1	Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.	On	Off
2	Connect connectors A and B.	Off	On
3	Press the activation switch.	On	Off

SEAT BELT

FRONT SEAT BELT REMOVAL/INSTALLATION

id081100800600

Warning

- Handling the front seat belt (pre-tensioner seat belt) improperly can accidentally deploy the pre-tensioner seat belt, which may seriously injure you. Read the air bag system service warnings and cautions before handling the front seat belt. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)

Warning

- The side air bag sensor is attached to the lower part of the B-pillar. When working around the B-pillar, disconnect the negative battery cable avoiding excessive impact to the lower part of the B-pillar.

Caution

- The ELR (emergency locking retractor) has a spring that will unwind if the retractor cover is removed. The spring cannot be rewound by hand. If this occurs, the ELR will not work properly. Therefore, do not disassemble the retractor.

Driver Side

1. Switch the ignition to off.
2. Disconnect the negative battery cable and wait for **1min or more**.
3. Remove the front scuff plate. (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
4. Remove the rear scuff plate. (See 09-17-68 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
5. Remove the B-pillar lower trim. (See 09-17-59 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
6. Remove the fastener.
7. Remove the cover.

am3uuw0000375

08-11

SEAT BELT

8. Remove the bolt A.

am3uuw0000375

9. Remove the bolt B.
10. Remove the front seat belt.
11. Using a flathead screwdriver, lift the locking device carefully, however do not remove it.

am3uuw0000375

12. Disconnect the pre-tensioner seat belt connector.
13. Disconnect the lap pre-tensioner seat belt connector.
14. Install in the reverse order of removal.
15. Switch the ignition to ON.
16. Verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.
 - If the air bag system warning light dose not operate, refer to the on-board diagnostic system (air bag system) and perform inspection of the system. (See 08-02-4 FLOWCHART.)

am3uuw0000375

SEAT BELT

Passenger Side

1. Switch the ignition to off.
2. Disconnect the negative battery cable and wait for **1min or more**.
3. Remove the front scuff plate. (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
4. Remove the rear scuff plate. (See 09-17-68 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
5. Remove the B-pillar lower trim. (See 09-17-59 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
6. Remove the cover.
7. Remove the bolt A.

am3uuw000496

08-11

am3uuw000375

8. Remove the bolt B.
9. Remove the front seat belt.

SEAT BELT

- Using a flathead screwdriver, lift the locking device carefully, however do not remove it.
- Disconnect the pre-tensioner seat belt connector.
- Install in the reverse order of removal.
- Switch the ignition to ON.
- Verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.
 - If the air bag system warning light dose not operate, refer to the on-board diagnostic system (air bag system) and perform inspection of the system. (See 08-02-4 FLOWCHART.)

am3uuw0000375

ADJUSTER ANCHOR REMOVAL/INSTALLATION

id081100802000

Warning

- The side air bag sensor is attached to the lower part of the B-pillar. When working around the B-pillar, disconnect the negative battery cable or work carefully, avoiding excessive impact to the lower part of the B-pillar.**

- Remove the following parts:
 - Front scuff plate (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
 - Rear scuff plate (See 09-17-68 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
 - B-pillar lower trim (See 09-17-59 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
 - Front seat belt upper anchor installation bolt (See 08-11-3 FRONT SEAT BELT REMOVAL/INSTALLATION.)
 - B-pillar upper trim (See 09-17-61 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
- Remove bolts.
- Remove the adjuster anchor.
- Install in the reverse order of removal.

am3uuw0000376

REAR SEAT BELT REMOVAL/INSTALLATION

id081100800800

Caution

- The ELR (emergency locking retractor) has a spring that will unwind if the retractor cover is removed. The spring cannot be rewound by hand. If this occurs, the ELR will not work properly. Therefore, do not disassemble the retractor.**

4SD

- Remove the following parts:
 - Rear scuff plate (See 09-17-68 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
 - Rear seat cushion (See 09-13-37 REAR SEAT CUSHION REMOVAL/INSTALLATION.)
 - Rear seat back (See 09-13-31 REAR SEAT BACK REMOVAL/INSTALLATION.)
 - Tire house trim (See 09-17-54 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
 - C-pillar trim. (See 09-17-63 C-PILLAR TRIM REMOVAL/INSTALLATION.)
 - Rear package trim. (See 09-17-57 REAR PACKAGE TRIM REMOVAL/INSTALLATION.)

SEAT BELT

2. Remove the bolt.
3. Remove the rear seat belt.
4. Install in the reverse order of removal.

am3uuw0000376

5HB

1. Remove the following parts:
 - (1) Rear scuff plate (See 09-17-68 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
 - (2) Rear seat cushion (See 09-13-37 REAR SEAT CUSHION REMOVAL/INSTALLATION.)
 - (3) Rear seat back (See 09-13-31 REAR SEAT BACK REMOVAL/INSTALLATION.)
 - (4) Tire house trim (See 09-17-54 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
 - (5) Trunk side upper trim. (See 09-17-63 C-PILLAR TRIM REMOVAL/INSTALLATION.)
 - (6) C-pillar trim. (See 09-17-63 C-PILLAR TRIM REMOVAL/INSTALLATION.)
2. Remove the bolt.
3. Remove the rear seat belt.
4. Install in the reverse order of removal.

am3uuw0000376

08-11

SEAT BELT

REAR CENTER SEAT BELT REMOVAL/INSTALLATION

id081100800900

Caution

- The ELR (emergency locking retractor) has a spring that will unwind if the retractor cover is removed. The spring cannot be rewound by hand. If this occurs, the ELR will not work properly. Therefore, do not disassemble the retractor.

4SD

1. Remove the following parts:

- (1) Rear scuff plate (See 09-17-68 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
- (2) Rear seat cushion (See 09-13-37 REAR SEAT CUSHION REMOVAL/INSTALLATION.)
- (3) Rear seat back (See 09-13-31 REAR SEAT BACK REMOVAL/INSTALLATION.)
- (4) Tire house trim (See 09-17-54 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
- (5) C-pillar trim. (See 09-17-63 C-PILLAR TRIM REMOVAL/INSTALLATION.)
- (6) Rear package trim. (See 09-17-57 REAR PACKAGE TRIM REMOVAL/INSTALLATION.)

2. Remove the bolt A.

3. Remove the rear center seat belt.

am3uuw0000425

4. Remove the bolt B.

5. Remove the rear center seat belt.

6. Install in the reverse order of removal. (See 08-11-9 Rear Center Seat Belt Installation Note.)

am3uuw0000425

SEAT BELT

5HB

1. Remove the following parts:
 - (1) Rear scuff plate (See 09-17-68 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
 - (2) Rear seat cushion (See 09-13-37 REAR SEAT CUSHION REMOVAL/INSTALLATION.)
2. Remove the bolt.
3. Remove the rear center seat belt with the rear seat back (See 09-13-33 REAR SEAT BACK FRAME REMOVAL/INSTALLATION.)
4. Install in the reverse order of removal. (See 08-11-9 Rear Center Seat Belt Installation Note.)

am3uuw0000497

Rear Center Seat Belt Installation Note

- Rotate the rear center seat belt lower anchor clockwise 180° and install it.

am3uuw0000547

08-11

SEAT BELT

SEAT BELT INSPECTION

id081100800300

Belt

1. Verify that the belt is installed properly with no twists or kinks.
2. Verify that there is no damage to the seat belt and no deformation of the metal fittings.
 - If there is any malfunction, replace the seat belt.

ELR

Except 5HB (rear center seat belt)

1. Verify that the belt can be pulled out smoothly, and that it retracts smoothly.
 - If there is any malfunction, replace the seat belt.
2. Verify that the retractor locks when the belt is pulled quickly.
 - If there is any malfunction, replace the seat belt.
3. Remove the retractor.

acxuuw00002083

4. While pulling the seat belt out, make sure that the seat belt does not lock when the retractor is tilted slowly up to 15° from the mounted position and locks when the retractor is tilted 40° or more.
 - If there is any malfunction, replace the seat belt.

am6zzw0000099

5HB (rear center seat belt)

Caution

- **The rear center seat belt ELR only becomes operable after a certain amount of belt webbing is pulled out. For the ELR inspection, fasten the rear center seat belt to the rear buckle (center) and perform the inspection after pulling out the rear center seat belt 130 mm {5.12 in} (ELR operable condition). If the inspection is performed while the ELR is not in an operable condition, the integrity of the system cannot be determined.**

1. Fasten the rear center seat belt to the rear buckle (center) and pull out the rear center seat belt **130 mm {5.12 in}**.
2. Verify that the belt can be pulled out smoothly, and that it retracts smoothly.
 - If there is any malfunction, replace the seat belt.
3. Verify that the retractor locks when the belt is pulled quickly.
 - If there is any malfunction, replace the seat belt.
4. Remove the rear center seat belt retractor.

am3uuw0000621

SEAT BELT

5. While pulling the seat belt out, make sure that the seat belt does not lock when the retractor is tilted slowly up to 15° from the mounted position and locks when the retractor is tilted 40° or more.
 - If there is any malfunction, replace the seat belt.

am6zzw000099

ALR

1. Pull the belt out fully to change the lock mode from ELR to ALR.
2. Verify that retractor makes a clicking sound as the belt slowly retracts. If no sound is heard, the lock mode has not changed to ALR. If necessary, repeat Step 1.
 - If there is any malfunction, replace the seat belt.
3. Verify that the retractor locks when pulled.
 - If there is any malfunction, replace the seat belt.
4. Verify that the lock mode changes to ELR when the belt is fully pulled out.
 - If there is any malfunction, replace the seat belt.

Load Limiter Retractor

Warning

- **When the load limiter operates, the belt and anchor rub against each other strongly leaving wear tracks. If the seat belt is used in this state, the seat belt will not function at its full capability and there is the possibility of serious injury to passengers. Be sure to replace the seat belt once the load limiter operates.**

08-11

1. If the vehicle has been subjected to a shock in an accident, pull the belt from the retractor and confirm that there are no wear tracks (the load limiter has not operated) by visually inspecting and feeling the belt.
 - If there is any malfunction, replace the seat belt.

acxuuw00002085

SEAT BELT

FRONT BUCKLE REMOVAL/INSTALLATION

id081100800400

1. Switch the ignition to off.
2. Disconnect the negative battery cable.
3. Remove the front seat. (See 09-13-3 FRONT SEAT REMOVAL/INSTALLATION.)
4. Remove the bolt.
5. Remove the front buckle.
6. Install in the reverse order of removal.

am3uuw0000375

REAR BUCKLE REMOVAL/INSTALLATION

id081100800700

Rear Buckle (RH) and Rear Buckle (Center)

1. Remove the rear seat cushion. (See 09-13-37 REAR SEAT CUSHION REMOVAL/INSTALLATION.)
2. Remove the bolt.
3. Remove the rear buckle (RH) and rear buckle (center).
4. Install in the reverse order of removal.

am3uuw0000553

Rear Buckle (LH)

1. When removing or installing the rear buckle, refer to the rear center seat belt removal/installation procedure. (See 08-11-8 REAR CENTER SEAT BELT REMOVAL/INSTALLATION.)

Rear Buckle Installation Note

- After installing the rear seat cushion, position the rear buckle (RH) and rear buckle (center) with the rear buckle (RH) and rear buckle (center) buttons facing upward as shown in the figure.

BUCKLE SWITCH INSPECTION

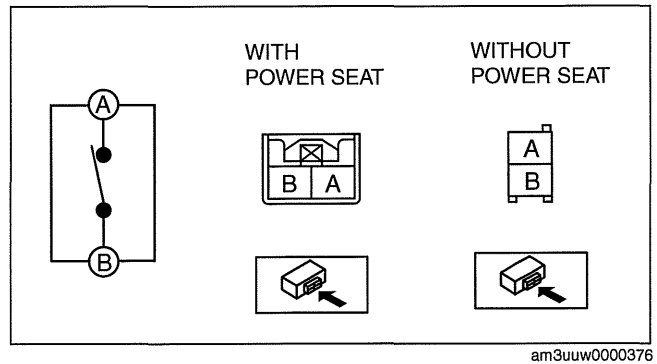

Driver Side

1. Switch the ignition to off.
2. Disconnect the negative battery cable.
3. Remove the front seat. (See 09-13-3 FRONT SEAT REMOVAL/INSTALLATION.)
4. Remove the front buckle. (See 08-11-12 FRONT BUCKLE REMOVAL/INSTALLATION.)
5. Inspect for continuity between the buckle switch terminals using a tester.
 - If not as indicated in the table, replace the front buckle.

○—○ : Continuity

Seat belt	Terminal	
	A	B
Fastened		
Unfastened	○—○	○—○

am6xuw00001840

Passenger Side

1. Switch the ignition to off.
2. Disconnect the negative battery cable.
3. Remove the front seat. (See 09-13-3 FRONT SEAT REMOVAL/INSTALLATION.)
4. Remove the front buckle. (See 08-11-12 FRONT BUCKLE REMOVAL/INSTALLATION.)
5. Inspect for continuity between the buckle switch terminals using a tester.
 - If not as indicated in the table, replace the front buckle.

SEAT BELT

CHILD-RESTRAINT SEAT ANCHOR REMOVAL/INSTALLATION

id081100800100

4SD

1. Remove the cover.
2. Remove the bolt and child-restraint seat anchor.
3. Install in the reverse order of removal.

am3uuw0000496

5HB

1. Remove the trunk end trim. (See 09-17-72 TRUNK END TRIM REMOVAL/INSTALLATION.)
2. Remove the bolt and child-restraint seat anchor.
3. Install in the reverse order of removal.

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

FOREWORD [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

id09021c960100

- The OBD (on-board diagnostic) system has the following functions:
 - Malfunction detection function: Detects malfunctions in the advanced keyless entry and push button start system and outputs DTCs.
 - PID/data monitor function: Reads out specific input/output signals and the system status.
- Diagnostic DTCs can be read/cleared using the M-MDS.

DTC INSPECTION [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

id09021c960300

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Self Test".
 2. Select "Modules".
 3. Select "RKE".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "RKE".
 3. Select "Self Test".
3. Verify the DTC according to the directions on the screen.
 - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
4. After completion of repairs, clear all DTCs stored in the keyless control module.
(See 09-02A-6 CLEARING DTC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)

am3uuw0000266

CLEARING DTC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

id09021c960400

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Self Test".
 2. Select "Modules".
 3. Select "RKE".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "RKE".
 3. Select "Self Test".
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition to ON and wait for **5 s or more**.
7. Perform the DTC inspection. (See 09-02A-6 DTC INSPECTION [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
8. Verify that no DTCs are displayed.

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

DTC B100B:11 [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

id09021c395500

Warning

- If this DTC is detected, the system will enter the fail-safe function to ensure safety. If the vehicle is left as it is for a specified time limit or more, or the ignition is operated a specified number of times or more while the fail-safe function is operating, the ignition will remain stuck in off and it is possible that the engine cannot be started. Therefore, perform the malfunction diagnosis while the engine can be started. In addition, after having performed the malfunction diagnosis, verify that this DTC is not detected with the steering wheel locked. If the DTC is not detected, the system returns to normal from the fail-safe function.

Note

- When the system enters the fail-safe function, the keyless warning light and the push button start indicator light illuminate as follows:
 - When the clutch pedal (MTX) or the brake pedal (ATX) is depressed while the ignition is switched off, both lights illuminate (red).
 - When the ignition is switched to ACC or ON, both lights illuminate (red) constantly.

am3uuw0000510

DESCRIPTION	Short to ground in steering lock unit ground circuit
DETECTION CONDITION	<ul style="list-style-type: none"> • Steering lock unit ground terminal voltage is less than 1.1 V for 3 s when the steering lock unit ground transistor is not active.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Steering lock unit connector or terminals malfunction • Keyless control module connector or terminals malfunction • Short to ground in wiring harness between the following terminals: <ul style="list-style-type: none"> — Steering lock unit terminal C—Keyless control module terminal 1D • Steering lock unit malfunction • Keyless control module malfunction

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

Diagnostic Procedure

Step	Inspection		Action
1	INSPECT STEERING LOCK UNIT CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable. • Disconnect the steering lock unit connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 5.
		No	Go to the next step.
2	INSPECT KEYLESS CONTROL MODULE CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Disconnect the keyless control module connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 5.
		No	Go to the next step.
3	INSPECT STEERING LOCK UNIT GROUND CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • Steering lock unit and keyless control module connectors are disconnected. • Inspect for continuity between the following terminal (wiring harness-side) and body ground: <ul style="list-style-type: none"> — Steering lock unit terminal C • Is there continuity? 	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 5.
		No	Go to the next step.
4	INSPECT STEERING LOCK UNIT <ul style="list-style-type: none"> • Reconnect the steering lock unit connector. • Reconnect the negative battery cable. • Inspect the steering lock unit. (See 09-21-13 STEERING LOCK UNIT INSPECTION [WITH ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) • Is there any malfunction? 	Yes	Replace the steering lock unit and perform the steering lock unit programming, then go to the next step. (See 06-14-11 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) (See 09-14-115 STEERING LOCK UNIT ID CODE REGISTRATION.)
		No	Go to the next step.

09-02A

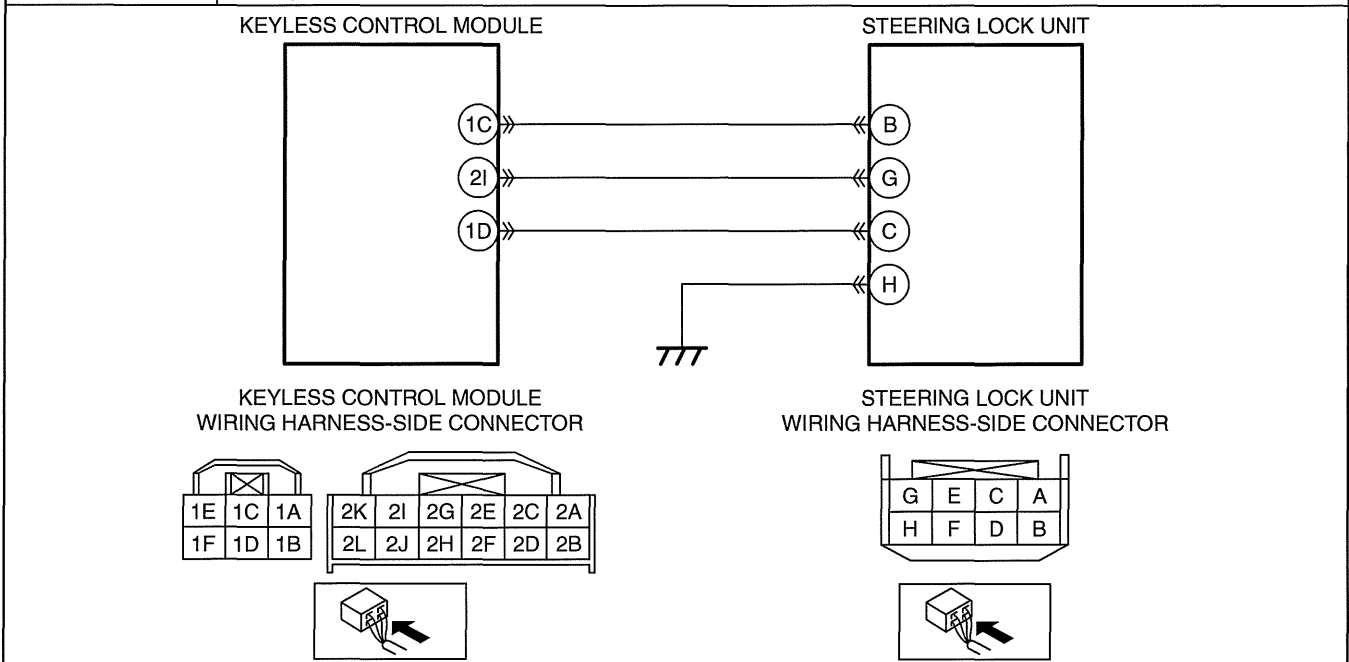

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

Step	Inspection		Action
5	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Make sure to reconnect the disconnected connectors. Reconnect the negative battery cable. Perform the following procedure within 5 min. <ol style="list-style-type: none"> 1. Clear the DTC from the keyless control module using the M-MDS. (See 09-02A-6 CLEARING DTC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) 2. Switch the ignition to off, then open the door to lock the steering. 3. Operate the advanced key to activate the keyless control module. 4. Perform the advanced keyless entry and push button start system DTC inspection using the M-MDS. (See 09-02A-6 DTC INSPECTION [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) Is the same DTC present? 	Yes	Replace the keyless control module, then go to the next step. (See 09-14-66 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02A-7 DTC TABLE [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
		No	DTC troubleshooting completed.

09-02A

Diagnostic Procedure

Step	Inspection		Action
1	VERIFY RELATED STORED DTC <ul style="list-style-type: none"> Perform the advanced keyless entry and push button start system DTC inspection using the M-MDS. (See 09-02A-6 DTC INSPECTION [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) Is the DTC B1026:08, B1026:51, B1026:71 or B1026:96 also present? 	Yes	Go to the applicable DTC inspection. (See 09-02A-20 DTC B1026:08 [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) (See 09-02A-21 DTC B1026:51 [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) (See 09-02A-22 DTC B1026:71 [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) (See 09-02A-27 DTC B1026:96 [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
		No	Go to the next step.
2	INSPECT STEERING LOCK UNIT CONNECTOR AND TERMINALS <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the negative battery cable. Disconnect the steering lock unit connector. Inspect the connector and terminals (corrosion, damage, pin disconnection). Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 6.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

Step	Inspection	Action	
3	INSPECT KEYLESS CONTROL MODULE CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Disconnect the keyless control module connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 6.
		No	Go to the next step.
4	INSPECT STEERING LOCK UNIT COMMUNICATION CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Steering lock unit and keyless control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — Steering lock unit terminal G—Keyless control module terminal 2I • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 6.
5	INSPECT STEERING LOCK UNIT <ul style="list-style-type: none"> • Reconnect the steering lock unit connector. • Reconnect the negative battery cable. • Inspect the steering lock unit. (See 09-21-13 STEERING LOCK UNIT INSPECTION [WITH ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) • Is there any malfunction? 	Yes	Replace the steering lock unit and perform the steering lock unit programming, then go to the next step. (See 06-14-11 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) (See 09-14-115 STEERING LOCK UNIT ID CODE REGISTRATION.)
		No	Go to the next step.
6	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect the disconnected connectors. • Reconnect the negative battery cable. • Clear the DTC from the keyless control module using the M-MDS. (See 09-02A-6 CLEARING DTC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) • Switch the ignition to off, then open the door to lock the steering. • Perform the advanced keyless entry and push button start system DTC inspection using the M-MDS. (See 09-02A-6 DTC INSPECTION [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) • Is the same DTC present? 	Yes	Replace the keyless control module, then go to the next step. (See 09-14-66 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02A-7 DTC TABLE [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

DTC B1026:92 [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

id09021c396900

Warning

- If this DTC is detected, the system will enter the fail-safe function to ensure safety. If the vehicle is left as it is for a specified time limit or more, or the ignition is operated a specified number of times or more while the fail-safe function is operating, the ignition will remain stuck in off and it is possible that the engine cannot be started. Therefore, perform the malfunction diagnosis while the engine can be started. In addition, after having performed the malfunction diagnosis, verify that this DTC is not detected with the steering wheel locked. If the DTC is not detected, the system returns to normal from the fail-safe function.

Note

- When the system enters the fail-safe function, the keyless warning light and the push button start indicator light illuminate as follows:
 - When the clutch pedal (MTX) or the brake pedal (ATX) is depressed while the ignition is switched off, both lights illuminate (red).
 - When the ignition is switched to ACC or ON, both lights illuminate (red) constantly.

DTC B10C7:1F [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

id09021c387800

DESCRIPTION	Erratic signal of keyless antenna (interior, rear)
DETECTION CONDITION	<ul style="list-style-type: none"> Keyless control module detects the open circuit in keyless antenna (interior, rear) circuit.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Keyless antenna (interior, rear) connector or terminals malfunction Keyless control module connector or terminals malfunction Short to ground in the wiring harness between the following terminals: <ul style="list-style-type: none"> Keyless antenna (interior, rear) terminal A—Keyless control module terminal 4G Keyless antenna (interior, rear) terminal B—Keyless control module terminal 4J Open circuit in the wiring harness between the following terminals: <ul style="list-style-type: none"> Keyless antenna (interior, rear) terminal A—Keyless control module terminal 4G Keyless antenna (interior, rear) terminal B—Keyless control module terminal 4J Keyless antenna (interior, rear) malfunction Keyless control module malfunction
<p>The diagram illustrates the electrical connections for the keyless antenna system. On the left, the KEYLESS CONTROL MODULE has terminals 4G and 4J. On the right, the KEYLESS ANTENNA (INTERIOR, REAR) has terminals A and B. Terminal 4G is connected to terminal A, and terminal 4J is connected to terminal B. Below the main diagram, a KEYLESS CONTROL MODULE WIRING HARNESS-SIDE CONNECTOR is shown with a grid of terminals: 4Y, 4V, 4S, 4P, 4M, 4J, 4G, 4D, 4A in the first row; 4Z, 4W, 4T, 4Q, 4N, 4K, 4H, 4E, 4B in the second row; and 4AA, 4X, 4U, 4R, 4O, 4L, 4I, 4F, 4C in the third row. An arrow points to terminal 4G. To the right, a KEYLESS ANTENNA (INTERIOR, REAR) WIRING HARNESS-SIDE CONNECTOR is shown with terminals B and A. An arrow points to terminal A.</p>	

Diagnostic Procedure

Step	Inspection		Action
1	INSPECT KEYLESS ANTENNA (INTERIOR, REAR) CONNECTOR AND TERMINALS <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the negative battery cable. Disconnect the keyless antenna (interior, rear) connector. Inspect the connector and terminals (corrosion, damage, pin disconnection). Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 6.
		No	Go to the next step.
2	INSPECT KEYLESS CONTROL MODULE CONNECTOR AND TERMINALS <ul style="list-style-type: none"> Disconnect the keyless control module connector. Inspect the connector and terminals (corrosion, damage, pin disconnection). Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 6.
		No	Go to the next step.
3	INSPECT KEYLESS ANTENNA (INTERIOR, REAR) CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> Keyless antenna (interior, rear) and keyless control module connectors are disconnected. Inspect for continuity between the following terminals (wiring harness-side) and body ground: <ul style="list-style-type: none"> Keyless antenna (interior, rear) terminal A Keyless antenna (interior, rear) terminal B Is there continuity? 	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 6.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

Step	Inspection	Action	
4	INSPECT KEYLESS ANTENNA (INTERIOR, REAR) CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Keyless antenna (interior, rear) and keyless control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): <ul style="list-style-type: none"> — Keyless antenna (interior, rear) terminal A—Keyless control module terminal 4G — Keyless antenna (interior, rear) terminal B—Keyless control module terminal 4J • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 6.
5	VERIFY KEYLESS ANTENNA (INTERIOR, REAR) MALFUNCTION <ul style="list-style-type: none"> • Make sure to reconnect the disconnected connectors. • Reconnect the negative battery cable. • Open any door or trunk/liftgate, then close all doors or the trunk/liftgate with the ignition switched off. • Clear the DTC from the keyless control module using the M-MDS. (See 09-02A-6 CLEARING DTC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) • Open any door or trunk/liftgate, then close all doors or the trunk/liftgate with the ignition switched off. • Perform the advanced keyless entry and push button start system DTC inspection using the M-MDS. (See 09-02A-6 DTC INSPECTION [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) • Is the same DTC present? 	Yes	Replace the keyless antenna (interior, rear), then go to the next step. (See 09-14-76 KEYLESS ANTENNA REMOVAL/INSTALLATION.)
		No	Go to Step 7.
6	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect the disconnected connectors. • Reconnect the negative battery cable. • Open any door or trunk/liftgate, then close all doors or the trunk/liftgate with the ignition switched off. • Clear the DTC from the keyless control module using the M-MDS. (See 09-02A-6 CLEARING DTC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) • Open any door or trunk/liftgate, then close all doors or the trunk/liftgate with the ignition switched off. • Perform the advanced keyless entry and push button start system DTC inspection using the M-MDS. (See 09-02A-6 DTC INSPECTION [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) • Is the same DTC present? 	Yes	Replace the keyless control module, then go to the next step. (See 09-14-66 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02A-7 DTC TABLE [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
		No	DTC troubleshooting completed.

Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 5.
		No	Go to the next step.
4	INSPECT RELAY BLOCK <ul style="list-style-type: none"> • Inspect the relay block. (See 09-21-5 RELAY BLOCK INSPECTION [WITH ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) • Is there any malfunction? 	Yes	Replace the relay block, then go to the next step. (See 09-21-3 RELAY BLOCK REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
		No	Go to the next step.
5	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect the disconnected connectors. • Reconnect the negative battery cable. • Switch the ignition to off using the advanced key. • Clear the DTC from the keyless control module using the M-MDS. (See 09-02A-6 CLEARING DTC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) • Switch the ignition to off using the advanced key. • Perform the advanced keyless entry and push button start system DTC inspection using the M-MDS. (See 09-02A-6 DTC INSPECTION [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) • Is the same DTC present? 	Yes	Replace the keyless control module, then go to the next step. (See 09-14-66 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02A-7 DTC TABLE [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
		No	DTC troubleshooting completed.

09-02A

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

DTC B112A:16 [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

id09021c404800

Diagnostic Procedure

Step	Inspection		Action
1	VERIFY RELATED STORED DTC <ul style="list-style-type: none"> Perform the advanced keyless entry and push button start system DTC inspection using the M-MDS. (See 09-02A-6 DTC INSPECTION [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) Is the DTC B112A:11 also present? 	Yes	Go to the applicable DTC inspection. (See 09-02A-47 DTC B112A:11 [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
		No	Go to the next step.
2	INSPECT RELAY BLOCK CONNECTOR AND TERMINALS <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the negative battery cable. Disconnect the relay block connector. Inspect the connector and terminals (corrosion, damage, pin disconnection). Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 6.
		No	Go to the next step.
3	INSPECT KEYLESS CONTROL MODULE CONNECTOR AND TERMINALS <ul style="list-style-type: none"> Disconnect the keyless control module connector. Inspect the connector and terminals (corrosion, damage, pin disconnection). Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 6.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

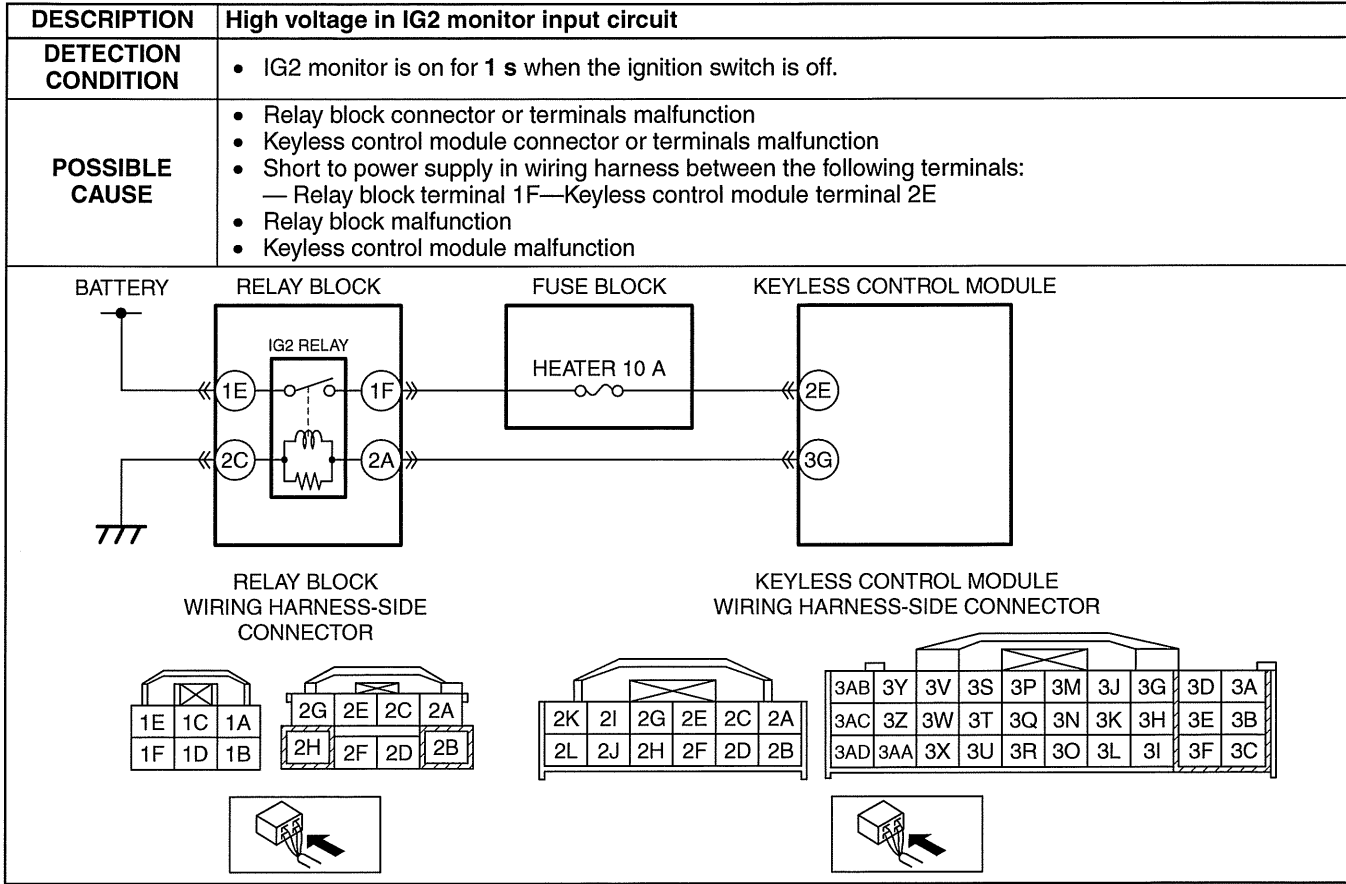

Step	Inspection	Action	
4	INSPECT IG2 MONITOR INPUT CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GROUND <ul style="list-style-type: none"> • Relay block and keyless control module connectors are disconnected. • Reconnect the relay block connector. • Reconnect the negative battery cable. • Switch the ignition to ON. • Measure the voltage at the following terminal (wiring harness-side): <ul style="list-style-type: none"> — Keyless control module terminal 2E • Is the voltage B+? 	Yes	Go to the next step.
		No	Inspect the HEATER 10 A fuse. <ul style="list-style-type: none"> • If the fuse is melt: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deterioration: <ul style="list-style-type: none"> — Replace the fuse. • If the fuse is normal: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible open circuit. Go to Step 6.
5	INSPECT RELAY BLOCK <ul style="list-style-type: none"> • Switch the ignition to off. • Inspect the relay block. (See 09-21-5 RELAY BLOCK INSPECTION [WITH ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) • Is there any malfunction? 	Yes	Replace the relay block, then go to the next step. (See 09-21-3 RELAY BLOCK REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
		No	Go to the next step.
6	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect the disconnected connectors. • Reconnect the negative battery cable. • Clear the DTC from the keyless control module using the M-MDS. (See 09-02A-6 CLEARING DTC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) • Switch the ignition to off, then to ON. • Perform the advanced keyless entry and push button start system DTC inspection using the M-MDS. (See 09-02A-6 DTC INSPECTION [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) • Is the DTC B112A:16 present? 	Yes	Replace the keyless control module, then go to the next step. (See 09-14-66 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02A-7 DTC TABLE [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
		No	DTC troubleshooting completed.

09-02A

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

DTC B112A:17 [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

id09021c404900

Diagnostic Procedure

Step	Inspection		Action
1	VERIFY RELATED STORED DTC <ul style="list-style-type: none"> Perform the advanced keyless entry and push button start system DTC inspection using the M-MDS. (See 09-02A-6 DTC INSPECTION [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) Is the DTC B112A:12 also present? 	Yes	Go to the applicable DTC inspection. (See 09-02A-48 DTC B112A:12 [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
		No	Go to the next step.
2	INSPECT RELAY BLOCK CONNECTOR AND TERMINALS <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the negative battery cable. Disconnect the relay block connector. Inspect the connector and terminals (corrosion, damage, pin disconnection). Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 6.
		No	Go to the next step.
3	INSPECT KEYLESS CONTROL MODULE CONNECTOR AND TERMINALS <ul style="list-style-type: none"> Disconnect the keyless control module connector. Inspect the connector and terminals (corrosion, damage, pin disconnection). Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 6.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

Step	Inspection	Action	
4	INSPECT IG2 MONITOR INPUT CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • Relay block and keyless control module connectors are disconnected. • Reconnect the negative battery cable. • Measure the voltage at the following terminal (wiring harness-side): <ul style="list-style-type: none"> — Keyless control module terminal 2E • Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 6.
		No	Go to the next step.
5	INSPECT RELAY BLOCK <ul style="list-style-type: none"> • Inspect the relay block. (See 09-21-5 RELAY BLOCK INSPECTION [WITH ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) • Is there any malfunction? 	Yes	Replace the relay block, then go to the next step. (See 09-14-66 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02A-7 DTC TABLE [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
		No	DTC troubleshooting completed.

09-02A

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

DTC B11FD:1F [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

id09021c388500

DESCRIPTION	Erratic signal of keyless antenna (exterior, LF)
DETECTION CONDITION	<ul style="list-style-type: none"> Keyless control module detects the open circuit in keyless antenna (exterior, LF) circuit.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Front outer handle (LH) connector or terminals malfunction Keyless control module connector or terminals malfunction Short to ground in the wiring harness between the following terminals: <ul style="list-style-type: none"> Front outer handle (LH) terminal E—Keyless control module terminal 4B Front outer handle (LH) terminal B—Keyless control module terminal 4E Open circuit in the wiring harness between the following terminals: <ul style="list-style-type: none"> Front outer handle (LH) terminal E—Keyless control module terminal 4B Front outer handle (LH) terminal B—Keyless control module terminal 4E Keyless antenna (exterior, LF) malfunction Keyless control module malfunction
<p>The diagram illustrates the electrical connections for the keyless antenna system. It shows the Keyless Control Module with terminals 4B and 4E. The Keyless Antenna (Exterior, LF) has terminals E and B. The Keyless Control Module Wiring Harness-Side Connector has terminals 4Y, 4V, 4S, 4P, 4M, 4J, 4G, 4D, 4A, 4Z, 4W, 4T, 4Q, 4N, 4K, 4H, 4E, 4B, 4AA, 4X, 4U, 4R, 4O, 4L, 4I, 4F, 4C. The Front Outer Handle (LH) Wiring Harness-Side Connector has terminals D, A, E, B, F, C. Arrows indicate the signal flow between the module and the antenna, and the physical layout of the connectors.</p>	

Diagnostic Procedure

Step	Inspection		Action
1	INSPECT FRONT OUTER HANDLE (LH) CONNECTOR AND TERMINALS <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the negative battery cable. Disconnect the front outer handle (LH) connector. Inspect the connector and terminals (corrosion, damage, pin disconnection). Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 6.
		No	Go to the next step.
2	INSPECT KEYLESS CONTROL MODULE CONNECTOR AND TERMINALS <ul style="list-style-type: none"> Disconnect the keyless control module connector. Inspect the connector and terminals (corrosion, damage, pin disconnection). Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 6.
		No	Go to the next step.
3	INSPECT KEYLESS ANTENNA (EXTERIOR, LF) CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> Front outer handle (LH) and keyless control module connectors are disconnected. Inspect for continuity between the following terminals (wiring harness-side) and body ground: <ul style="list-style-type: none"> Front outer handle (LH) terminal E Front outer handle (LH) terminal B Is there continuity? 	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 6.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

Step	Inspection	Action	
4	INSPECT KEYLESS ANTENNA (EXTERIOR, LF) CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Front outer handle (LH) and keyless control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): <ul style="list-style-type: none"> — Front outer handle (LH) terminal E— Keyless control module terminal 4B — Front outer handle (LH) terminal B— Keyless control module terminal 4E • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 6.
5	INSPECT KEYLESS ANTENNA (EXTERIOR, LF) MALFUNCTION <ul style="list-style-type: none"> • Make sure to reconnect the disconnected connectors. • Reconnect the negative battery cable. • Open any door or trunk/liftgate, then close all doors or the trunk/liftgate with the ignition switched off. • Clear the DTC from the keyless control module using the M-MDS. (See 09-02A-6 CLEARING DTC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) • Open any door or trunk/liftgate, then close all doors or the trunk/liftgate with the ignition switched off. • Perform the advanced keyless entry and push button start system DTC inspection using the M-MDS. (See 09-02A-6 DTC INSPECTION [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) • Is the same DTC present? 	Yes	Replace the keyless antenna (exterior, LF), then go to the next step. (See 09-14-76 KEYLESS ANTENNA REMOVAL/INSTALLATION.)
		No	Go to Step 7.
6	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect the disconnected connectors. • Reconnect the negative battery cable. • Open any door or trunk/liftgate, then close all doors or the trunk/liftgate with the ignition switched off. • Clear the DTC from the keyless control module using the M-MDS. (See 09-02A-6 CLEARING DTC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) • Open any door or trunk/liftgate, then close all doors or the trunk/liftgate with the ignition switched off. • Perform the advanced keyless entry and push button start system DTC inspection using the M-MDS. (See 09-02A-6 DTC INSPECTION [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) • Is the same DTC present? 	Yes	Replace the keyless control module, then go to the next step. (See 09-14-66 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02A-7 DTC TABLE [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
		No	DTC troubleshooting completed.

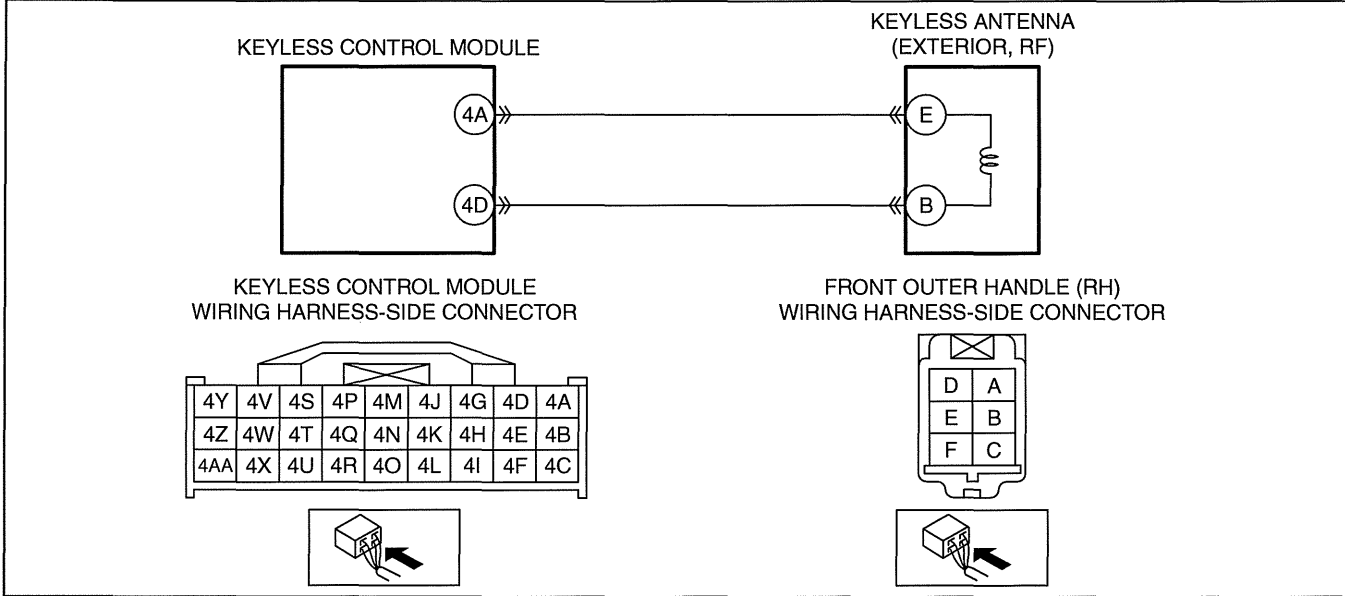

09-02A

BRAKE SWITCH WIRING HARNESS-SIDE CONNECTOR

KEYLESS CONTROL MODULE WIRING HARNESS-SIDE CONNECTOR

09-02A

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

Diagnostic Procedure

Step	Inspection	Action	
1	INSPECT BRAKE SWITCH CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable. • Disconnect the brake switch connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 8.
		No	Go to the next step.
2	INSPECT BRAKE SWITCH CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GROUND <ul style="list-style-type: none"> • Brake switch connector is disconnected. • Reconnect the negative battery cable. • Switch the ignition to ON. • Measure the voltage at the following terminal (wiring harness-side): <ul style="list-style-type: none"> — Brake switch terminal A • Is the voltage B+? 	Yes	Go to the next step.
		No	Inspect the STOP 15 A fuse. <ul style="list-style-type: none"> • If the fuse is melt: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deterioration: <ul style="list-style-type: none"> — Replace the fuse. • If the fuse is normal: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible open circuit. Go to Step 8.
3	INSPECT BRAKE SWITCH GROUND CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Brake switch connector is disconnected. • Switch the ignition to off. • Disconnect the negative battery cable. • Inspect for continuity between the following terminal (wiring harness-side) and body ground: <ul style="list-style-type: none"> — Brake switch terminal B • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 8.
4	INSPECT KEYLESS CONTROL MODULE CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Disconnect the keyless control module connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 8.
		No	Go to the next step.
5	INSPECT BRAKE SWITCH CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • Brake switch and keyless control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: <ul style="list-style-type: none"> — Brake switch terminal C — Brake switch terminal D • Is there continuity? 	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 8.
		No	Go to the next step.
6	INSPECT BRAKE SWITCH CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • Brake switch and keyless control module connectors are disconnected. • Reconnect the negative battery cable. • Switch the ignition to ON. • Measure the voltage at the following terminal (wiring harness-side): <ul style="list-style-type: none"> — Brake switch terminal D • Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 8.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

Step	Inspection	Action	
7	INSPECT BRAKE SWITCH CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Brake switch and keyless control module connectors are disconnected. • Switch the ignition to off. • Disconnect the negative battery cable. • Inspect for continuity between the following terminals (wiring harness-side): <ul style="list-style-type: none"> — Brake switch terminal C—Keyless control module terminal 4W — Brake switch terminal D—Keyless control module terminal 3R • Is there continuity? 	Yes	Replace the brake switch, then go to the next step. (See 04-11-8 BRAKE PEDAL REMOVAL/INSTALLATION.)
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
8	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect the disconnected connectors. • Reconnect the negative battery cable. • Operate the advanced key to activate the keyless control module. • Clear the DTC from the keyless control module using the M-MDS. (See 09-02A-6 CLEARING DTC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) • Operate the advanced key to activate the keyless control module. • Perform the advanced keyless entry and push button start system DTC inspection using the M-MDS. (See 09-02A-6 DTC INSPECTION [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) • Is the same DTC present? 	Yes	Replace the keyless control module, then go to the next step. (See 09-14-66 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
9	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02A-7 DTC TABLE [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
		No	DTC troubleshooting completed.

09-02A

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

DTC P0560:16 [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

id09021c933500

DESCRIPTION	Low voltage in power supply circuit (+B3)
DETECTION CONDITION	<ul style="list-style-type: none"> • Keyless control module power supply circuit (+B3) voltage is less than 8.5 V for 5 s.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Charging system malfunction <ul style="list-style-type: none"> — PCM DTC is stored • Battery malfunction • Generator malfunction • Keyless control module connector or terminals malfunction • Open circuit or short to ground in keyless control module power supply circuit <ul style="list-style-type: none"> — Short to ground in wiring harness between battery positive terminal and keyless control module terminal 1A — ESCL 15 A fuse malfunction — Open circuit in wiring harness between battery positive terminal and keyless control module terminal 1A • Keyless control module malfunction
<p style="text-align: center;">KEYLESS CONTROL MODULE WIRING HARNESS-SIDE CONNECTOR</p>	

Diagnostic Procedure

Step	Inspection		Action
1	CONFIRM PCM DTC <ul style="list-style-type: none"> • Perform the PCM DTC inspection using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].) (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
2	INSPECT BATTERY <ul style="list-style-type: none"> • Inspect the battery. (See 01-17A-4 BATTERY INSPECTION [LF, L5].) (See 01-17B-4 BATTERY INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Recharge or replace the battery, then go to Step 6. (See 01-17A-5 BATTERY RECHARGING [LF, L5].) (See 01-17B-6 BATTERY RECHARGING [L3 WITH TC].) (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].) (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
3	INSPECT GENERATOR <ul style="list-style-type: none"> • Inspect the generator. (See 01-17A-8 GENERATOR INSPECTION [LF, L5].) (See 01-17B-8 GENERATOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the generator, then go to Step 6. (See 01-17A-6 GENERATOR REMOVAL/INSTALLATION [LF, L5].) (See 01-17B-6 GENERATOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

Step	Inspection	Action	
4	INSPECT KEYLESS CONTROL MODULE CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable. • Disconnect the keyless control module connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 6.
		No	Go to the next step.
5	INSPECT POWER SUPPLY CIRCUIT (+B3) FOR OPEN CIRCUIT OR SHORT TO GROUND <ul style="list-style-type: none"> • Keyless control module connector is disconnected. • Reconnect the negative battery cable. • Measure the voltage at the following terminal (wiring harness-side): <ul style="list-style-type: none"> — Keyless control module terminal 1A • Is the voltage B+? 	Yes	Go to the next step.
		No	Inspect the ESCL 15 A fuse. <ul style="list-style-type: none"> • If the fuse is melt: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deterioration: <ul style="list-style-type: none"> — Replace the fuse. • If the fuse is normal: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible open circuit. Go to the next step.
6	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect the disconnected connectors. • Reconnect the negative battery cable. • Operate the advanced key to activate the keyless control module. • Clear the DTC from the keyless control module using the M-MDS. (See 09-02A-6 CLEARING DTC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) • Operate the advanced key to activate the keyless control module. • Perform the advanced keyless entry and push button start system DTC inspection using the M-MDS. (See 09-02A-6 DTC INSPECTION [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) • Is the same DTC present? 	Yes	Replace the keyless control module, then go to the next step. (See 09-14-66 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02A-7 DTC TABLE [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
		No	DTC troubleshooting completed.

3	INSPECT STARTER CUT RELAY <ul style="list-style-type: none"> • Inspect the starter cut relay. (See 09-21-15 STARTER CUT RELAY INSPECTION [MTX].) • Is there any malfunction? 	Yes	Replace the starter cut relay, then go to Step 8. (See 09-21-14 STARTER CUT RELAY REMOVAL/INSTALLATION [MTX].)
		No	Go to the next step.
4	INSPECT PCM CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 8.
		No	Go to the next step.
5	INSPECT KEYLESS CONTROL MODULE CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Disconnect the keyless control module connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 8.
		No	Go to the next step.
6	INSPECT STARTER RELAY CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • Starter relay is removed. • Starter cut relay, PCM and keyless control module connectors are disconnected. • Inspect the wiring harness between the following terminals (wiring harness-side) for short to power supply: <ul style="list-style-type: none"> — Starter relay terminal E—Keyless control module terminal 3B — Starter relay terminal A—Keyless control module terminal 2F — Starter relay terminal A—Starter cut relay terminal A — Starter cut relay terminal D—PCM terminal 1BB (LF, L5) — Starter cut relay terminal D—PCM terminal 1B (L3 WITH TC) — Starter cut relay terminal D—Keyless control module terminal 3T • Is there any malfunction? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 8.
		No	Go to the next step.
7	INSPECT PCM <ul style="list-style-type: none"> • Install the starter relay. • Reconnect all disconnected connectors. • Reconnect the negative battery cable. • Measure the voltage at the following terminal (wiring harness-side): <ul style="list-style-type: none"> — PCM terminal 1BB (LF, L5) — PCM terminal 1B (L3 WITH TC) • Is the voltage normal? (See 01-40A-8 PCM INSPECTION [LF, L5].) (See 01-40B-8 PCM INSPECTION [L3 WITH TC].) 	Yes	Go to the next step.
		No	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].) (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)

09-02A

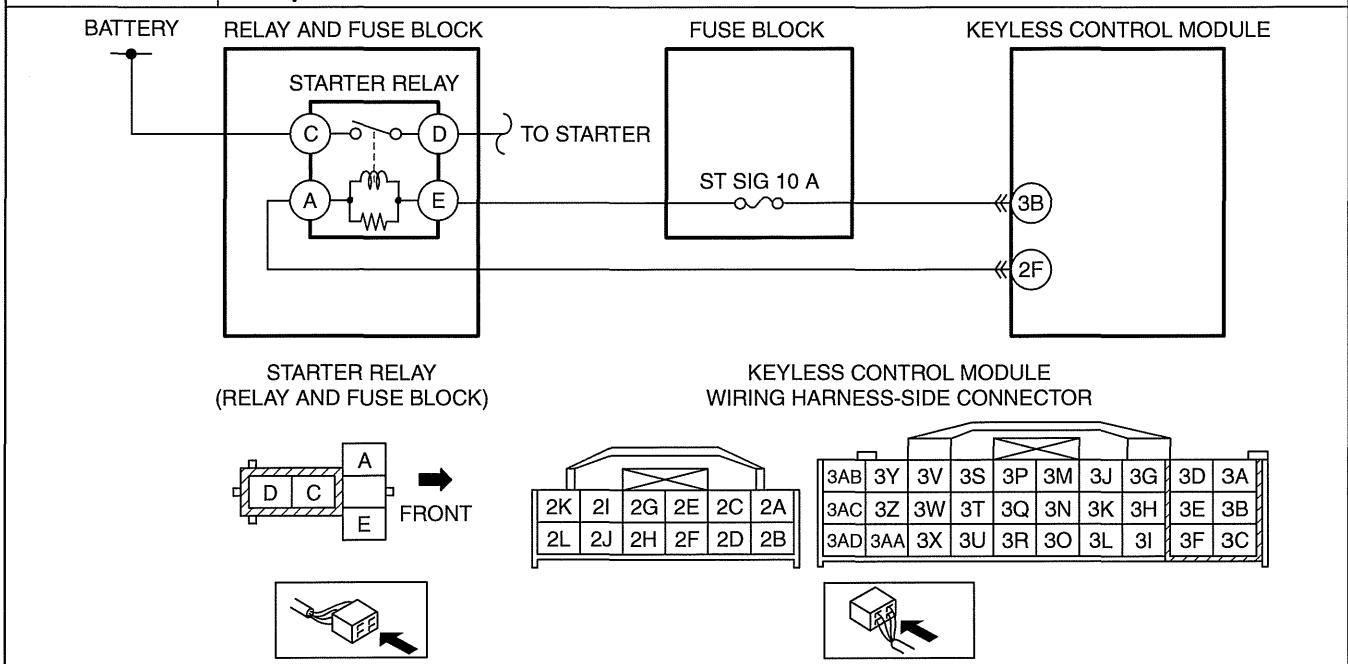

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

Step	Inspection		Action
8	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect the disconnected connectors. • Reconnect the negative battery cable. • Switch the ignition to off using the advanced key. • Clear the DTC from the keyless control module using the M-MDS. (See 09-02A-6 CLEARING DTC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) • Switch the ignition to off using the advanced key. • Perform the advanced keyless entry and push button start system DTC inspection using the M-MDS. (See 09-02A-6 DTC INSPECTION [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) • Is the same DTC present? 	Yes	Replace the keyless control module, then go to the next step. (See 09-14-66 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
9	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02A-7 DTC TABLE [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
		No	DTC troubleshooting completed.

DTC P0615:13 [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

id09021c406000

DESCRIPTION	Open circuit in starter relay circuit
DETECTION CONDITION	<ul style="list-style-type: none"> • Starter relay input voltage less than threshold and a starter monitor input voltage which exceeds threshold is detected for 0.075 s.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Starter relay malfunction • Keyless control module connector or terminals malfunction • Open circuit in starter relay circuit <ul style="list-style-type: none"> — Open circuit in wiring harness between keyless control module terminal 3B and starter relay terminal E — ST SIG 10 A fuse malfunction • Open circuit in wiring harness between the following terminals: <ul style="list-style-type: none"> — Starter relay terminal A—Keyless control module terminal 2F • Keyless control module malfunction

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

Diagnostic Procedure

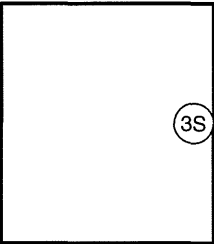

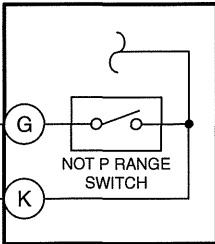

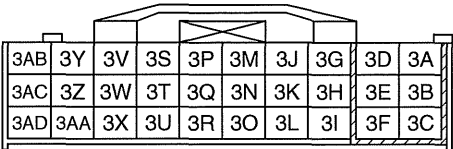

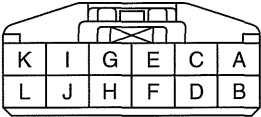

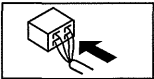

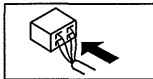

STEP	INSPECTION	ACTION	
1	INSPECT RELAY <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable. • Remove the starter relay. • Inspect the starter relay. (See 09-21-17 RELAY INSPECTION.) • Is there any malfunction? 	Yes	Replace the relay, then go to Step 5.
		No	Go to the next step.
2	INSPECT KEYLESS CONTROL MODULE CONNECTOR <ul style="list-style-type: none"> • Disconnect the keyless control module connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 5.
		No	Go to the next step.
3	INSPECT STARTER RELAY CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Starter relay is removed. • Keyless control module connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — Keyless control module terminal 3B— Starter relay terminal E • Is there continuity? 	Yes	Go to the next step.
		No	Inspect the ST SIG 10 A fuse. <ul style="list-style-type: none"> • If the fuse is deterioration: — Replace the fuse. • If the fuse is normal: — Repair or replace the wiring harness for a possible open circuit. Go to Step 5.
4	INSPECT STARTER RELAY CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Starter relay is removed. • Keyless control module connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — Starter relay terminal A—Keyless control module terminal 2F • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
5	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect the disconnected connectors. • Reconnect the negative battery cable. • Switch the ignition to off using the advanced key. • Clear the DTC from the keyless control module using the M-MDS. (See 09-02A-6 CLEARING DTC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) • Switch the ignition to off using the advanced key. • Perform the advanced keyless entry and push button start system DTC inspection using the M-MDS. (See 09-02A-6 DTC INSPECTION [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) • Is the same DTC present? 	Yes	Replace the keyless control module, then go to the next step. (See 09-14-66 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02A-7 DTC TABLE [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
		No	DTC troubleshooting completed.

DTC P0850:29 [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

id09021c406400

DESCRIPTION	Erratic signal of TR switch
DETECTION CONDITION	<ul style="list-style-type: none"> • CAN and TR switch signals do not correspond. <ul style="list-style-type: none"> — Keyless control module detects that the TR switch stuck off for 5 s while the ignition is ON. <ul style="list-style-type: none"> • Starter monitor input voltage is above the specification when the CAN signal is P or N range. — Keyless control module detects that the TR switch stuck ON for 5 s while the ignition is ON. <ul style="list-style-type: none"> • Starter monitor input voltage is less than the specification when the CAN signal is R or D range.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Starter relay malfunction • TR switch connector or terminals malfunction • TR switch malfunction • Keyless control module connector or terminals malfunction • Short to ground in wiring harness between the following terminals: <ul style="list-style-type: none"> — Starter relay terminal A—Keyless control module terminal 2F — Starter relay terminal A—TR switch terminal F — TR switch terminal A—Keyless control module terminal 3T • Short to power supply in wiring harness between the following terminals: <ul style="list-style-type: none"> — Starter relay terminal A—Keyless control module terminal 2F — Starter relay terminal A—TR switch terminal F — TR switch terminal A—Keyless control module terminal 3T • Open circuit in wiring harness between the following terminals: <ul style="list-style-type: none"> — Starter relay terminal A—Keyless control module terminal 2F — Starter relay terminal A—TR switch terminal F — TR switch terminal A—Keyless control module terminal 3T • Keyless control module malfunction

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

Diagnostic Procedure

Step	Inspection	Action	
1	INSPECT STARTER RELAY <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable. • Remove the starter relay. • Inspect the starter relay. (See 09-21-17 RELAY INSPECTION.) • Is there any malfunction? 	Yes	Replace the relay, then go to Step 8.
		No	Install the relay, then go to the next step.
2	INSPECT TR SWITCH CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Disconnect the TR switch connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 8.
		No	Go to the next step.
3	INSPECT TR SWITCH <ul style="list-style-type: none"> • Reconnect the TR switch connector. • Reconnect the negative battery cable. • Inspect the TR switch. (See 05-17-14 TRANSAXLE RANGE (TR) SWITCH INSPECTION [FS5A-EL].) • Is there any malfunction? 	Yes	Replace the TR switch, then go to Step 8. (See 05-17-16 TRANSAXLE RANGE (TR) SWITCH REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
4	INSPECT KEYLESS CONTROL MODULE CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Disconnect the negative battery cable. • Disconnect the keyless control module connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 8.
		No	Go to the next step.
5	INSPECT TR SWITCH CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • Keyless control module connector is disconnected. • Remove the starter relay. • Disconnect the TR switch connector. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: <ul style="list-style-type: none"> — Starter relay terminal A — TR switch terminal A • Is there continuity? 	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 8.
		No	Go to the next step.
6	INSPECT TR SWITCH CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • Starter relay is removed. • Keyless control module connector is disconnected. • Reconnect the negative battery cable. • Switch the ignition to ON. • Measure the voltage at the following terminals (wiring harness-side): <ul style="list-style-type: none"> — Starter relay terminal A — TR switch terminal A • Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 8.
		No	Go to the next step.

09-02A

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

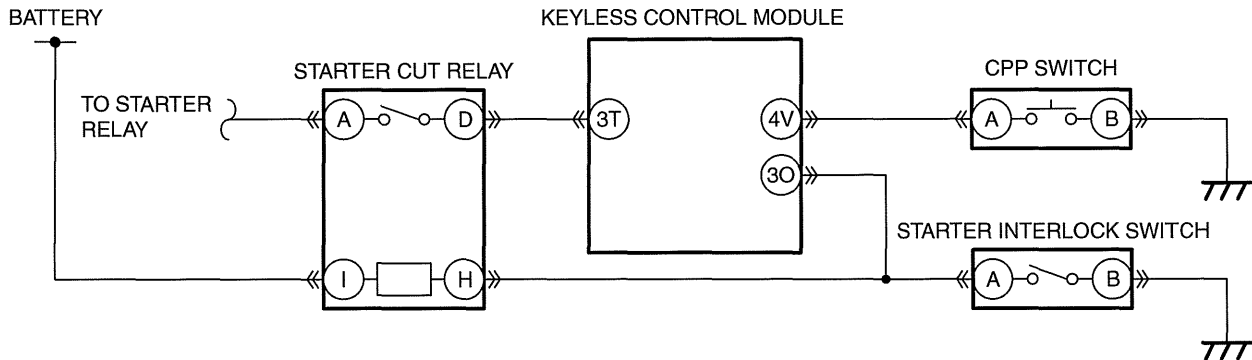

Step	Inspection	Action	
7	INSPECT TR SWITCH CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Starter relay is removed, and TR switch and keyless control module connectors are disconnected. • Switch the ignition to off. • Disconnect the negative battery cable. • Inspect for continuity between the following terminals (wiring harness-side): <ul style="list-style-type: none"> — Starter relay terminal A—Keyless control module terminal 2F — Starter relay terminal A—TR switch terminal F — TR switch terminal A—Keyless control module terminal 3T • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
8	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect the disconnected connectors. • Reconnect the negative battery cable. • Operate the advanced key to activate the keyless control module. • Clear the DTC from the keyless control module using the M-MDS. (See 09-02A-6 CLEARING DTC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) • Switch the ignition to ON using the advanced key. • Perform the advanced keyless entry and push button start system DTC inspection using the M-MDS. (See 09-02A-6 DTC INSPECTION [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) • Is the same DTC present? 	Yes	Replace the keyless control module, then go to the next step. (See 09-14-66 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
9	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02A-7 DTC TABLE [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

DTC P1708:29 [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

id09021c406500

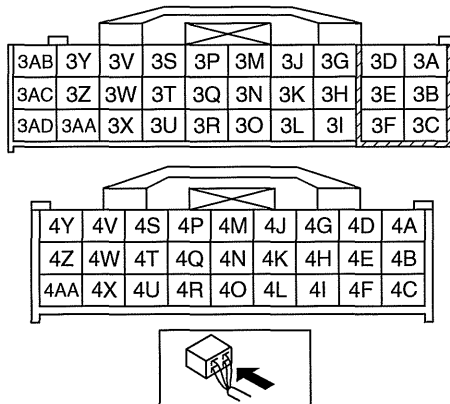

DESCRIPTION	Erratic signal of CPP switch and/or starter interlock switch
DETECTION CONDITION	<ul style="list-style-type: none"> • CPP switch and starter interlock switch signals do not correspond. — Starter interlock switch stuck on for 0.2 s when the CPP switch is off. — CPP switch stuck off when the starter interlock switch on. — Starter cut relay stuck on for 0.075 s when the starter interlock switch is off. — Starter cut relay stuck off for 0.075 s when the starter interlock switch is on.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Starter interlock switch connector or terminals malfunction • Starter interlock switch malfunction • Keyless control module connector or terminals malfunction • Short to ground in wiring harness between the following terminals: <ul style="list-style-type: none"> — Starter interlock switch terminal A—Keyless control module terminal 3O • CPP switch connector or terminals malfunction • CPP switch malfunction • Open circuit in wiring harness between the following terminals: <ul style="list-style-type: none"> — CPP switch terminal A—Keyless control module terminal 4V — CPP switch terminal B—Body ground • Starter cut relay connector or terminals malfunction • Starter cut relay malfunction • Short to ground or open circuit in wiring harness between the following terminals: <ul style="list-style-type: none"> — Starter relay—Starter cut relay terminal A • Short to power supply in wiring harness between the following terminals: <ul style="list-style-type: none"> — Starter cut relay terminal D—Keyless control module terminal 3T • Keyless control module malfunction

STARTER CUT RELAY WIRING HARNESS-SIDE CONNECTOR

KEYLESS CONTROL MODULE WIRING HARNESS-SIDE CONNECTOR

CPP SWITCH WIRING HARNESS-SIDE CONNECTOR

STARTER INTERLOCK SWITCH WIRING HARNESS-SIDE CONNECTOR

09-02A

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

Diagnostic Procedure

Step	Inspection	Action	
1	INSPECT STARTER INTERLOCK SWITCH CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable. • Disconnect the starter interlock switch connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 12.
		No	Go to the next step.
2	INSPECT STARTER INTERLOCK SWITCH <ul style="list-style-type: none"> • Inspect the starter interlock switch. (See 01-19A-8 STARTER INTERLOCK SWITCH INSPECTION [LF, L5].) • (See 01-19B-8 STARTER INTERLOCK SWITCH INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the starter interlock switch, then go to Step 12.
		No	Go to the next step.
3	INSPECT KEYLESS CONTROL MODULE CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Disconnect the keyless control module connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 12.
		No	Go to the next step.
4	INSPECT STARTER INTERLOCK SWITCH CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • Starter interlock switch and keyless control module connectors are disconnected. • Inspect for continuity between the following terminal (wiring harness-side) and body ground: <ul style="list-style-type: none"> — Starter interlock switch terminal A • Is there continuity? 	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 12.
		No	Go to the next step.
5	INSPECT CPP SWITCH CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Disconnect the CPP switch connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 12.
		No	Go to the next step.
6	INSPECT CPP SWITCH <ul style="list-style-type: none"> • Inspect the CPP switch. (See 01-40A-22 CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION [LF, L5].) • (See 01-40B-23 CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the CPP switch, then go to Step 12. (See 05-10-6 CLUTCH PEDAL REMOVAL/ INSTALLATION.)
		No	Go to the next step.
7	INSPECT CPP SWITCH CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Starter interlock switch, CPP switch and keyless control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): <ul style="list-style-type: none"> — CPP switch terminal A—Keyless control module terminal 4V — CPP switch terminal B—Body ground • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 12.
8	INSPECT STARTER CUT RELAY CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Disconnect the starter cut relay connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 12.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

Step	Inspection	Action	
9	INSPECT STARTER CUT RELAY <ul style="list-style-type: none"> • Inspect the starter cut relay. (See 09-21-15 STARTER CUT RELAY INSPECTION [MTX].) • Is there any malfunction? 	Yes	Replace the starter cut relay, then go to Step 12. (See 09-21-14 STARTER CUT RELAY REMOVAL/INSTALLATION [MTX].)
		No	Go to the next step.
10	INSPECT STARTER CUT RELAY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT <ul style="list-style-type: none"> • Starter interlock switch, CPP switch, starter cut relay and keyless control module connectors are disconnected. • Reconnect the negative battery cable. • Switch the ignition to ON. • Measure the voltage at the following terminal (wiring harness-side): — Starter cut relay terminal A • Is there any voltage? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to ground or open circuit, then go to Step 12.
11	INSPECT STARTER CUT RELAY CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • Starter interlock switch, CPP switch, starter cut relay and keyless control module connectors are disconnected. • Measure the voltage at the following terminal (wiring harness-side): — Starter cut relay terminal D • Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to the next step.
		No	Go to the next step.
12	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect the disconnected connectors. • Reconnect the negative battery cable. • Operate the advanced key to activate the keyless control module. • Clear the DTC from the keyless control module using the M-MDS. (See 09-02A-6 CLEARING DTC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) • Switch the ignition to off using the advanced key. • Perform the advanced keyless entry and push button start system DTC inspection using the M-MDS. (See 09-02A-6 DTC INSPECTION [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) • Is the same DTC present? 	Yes	Replace the keyless control module, then go to the next step. (See 09-14-66 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
13	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02A-7 DTC TABLE [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
		No	DTC troubleshooting completed.

09-02A

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

DTC P1794:16 [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

id09021c933100

DESCRIPTION	Low voltage in power supply circuit (+B2)
DETECTION CONDITION	<ul style="list-style-type: none"> Keyless-control module power supply circuit (+B2) voltage is less than 8.5 V for 5 s.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Charging system malfunction <ul style="list-style-type: none"> — PCM DTC is stored Battery malfunction Generator malfunction Keyless control module connector or terminals malfunction Open circuit or short to ground in keyless control module power supply circuit <ul style="list-style-type: none"> — Short to ground in wiring harness between battery positive terminal and keyless control module terminal 1F — ENG+B 10 A fuse malfunction — Open circuit in wiring harness between battery positive terminal and keyless control module terminal 1F Keyless control module malfunction
<p style="text-align: center;">KEYLESS CONTROL MODULE WIRING HARNESS-SIDE CONNECTOR</p>	

Diagnostic Procedure

Step	Inspection		Action
1	CONFIRM PCM DTC <ul style="list-style-type: none"> Perform the PCM DTC inspection using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].) (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
2	INSPECT BATTERY <ul style="list-style-type: none"> Inspect the battery. (See 01-17A-4 BATTERY INSPECTION [LF, L5].) (See 01-17B-4 BATTERY INSPECTION [L3 WITH TC].) Is there any malfunction? 	Yes	Recharge or replace the battery, then go to Step 6. (See 01-17A-5 BATTERY RECHARGING [LF, L5].) (See 01-17B-6 BATTERY RECHARGING [L3 WITH TC].) (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].) (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
3	INSPECT GENERATOR <ul style="list-style-type: none"> Inspect the generator. (See 01-17A-8 GENERATOR INSPECTION [LF, L5].) (See 01-17B-8 GENERATOR INSPECTION [L3 WITH TC].) Is there any malfunction? 	Yes	Replace the generator, then go to Step 6. (See 01-17A-6 GENERATOR REMOVAL/INSTALLATION [LF, L5].) (See 01-17B-6 GENERATOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

Step	Inspection	Action	
4	INSPECT KEYLESS CONTROL MODULE CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable. • Disconnect the keyless control module connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 6.
		No	Go to the next step.
5	INSPECT POWER SUPPLY CIRCUIT (+B2) FOR OPEN CIRCUIT OR SHORT TO GROUND <ul style="list-style-type: none"> • Keyless control module connector is disconnected. • Reconnect the negative battery cable. • Measure the voltage at the following terminal (wiring harness-side): <ul style="list-style-type: none"> — Keyless control module terminal 1F • Is the voltage B+? 	Yes	Go to the next step.
		No	Inspect the ENG+B 10 A fuse. <ul style="list-style-type: none"> • If the fuse is melt: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deterioration: <ul style="list-style-type: none"> — Replace the fuse. • If the fuse is normal: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible open circuit. Go to the next step.
6	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect the disconnected connectors. • Reconnect the negative battery cable. • Operate the advanced key to activate the keyless control module. • Clear the DTC from the keyless control module using the M-MDS. (See 09-02A-6 CLEARING DTC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) • Operate the advanced key to activate the keyless control module. • Perform the advanced keyless entry and push button start system DTC inspection using the M-MDS. (See 09-02A-6 DTC INSPECTION [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) • Is the same DTC present? 	Yes	Replace the keyless control module, then go to the next step. (See 09-14-66 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02A-7 DTC TABLE [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
		No	DTC troubleshooting completed.

09-02A

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

DTC P1794:17 [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

id09021c933200

DESCRIPTION	High voltage in power supply circuit (+B2)
DETECTION CONDITION	<ul style="list-style-type: none"> Keyless control module power supply circuit (+B2) voltage is 16.5 V or more for 0.5 s.
POSSIBLE CAUSE	<ul style="list-style-type: none"> PCM DTC is stored Generator malfunction Keyless control module malfunction

Diagnostic Procedure

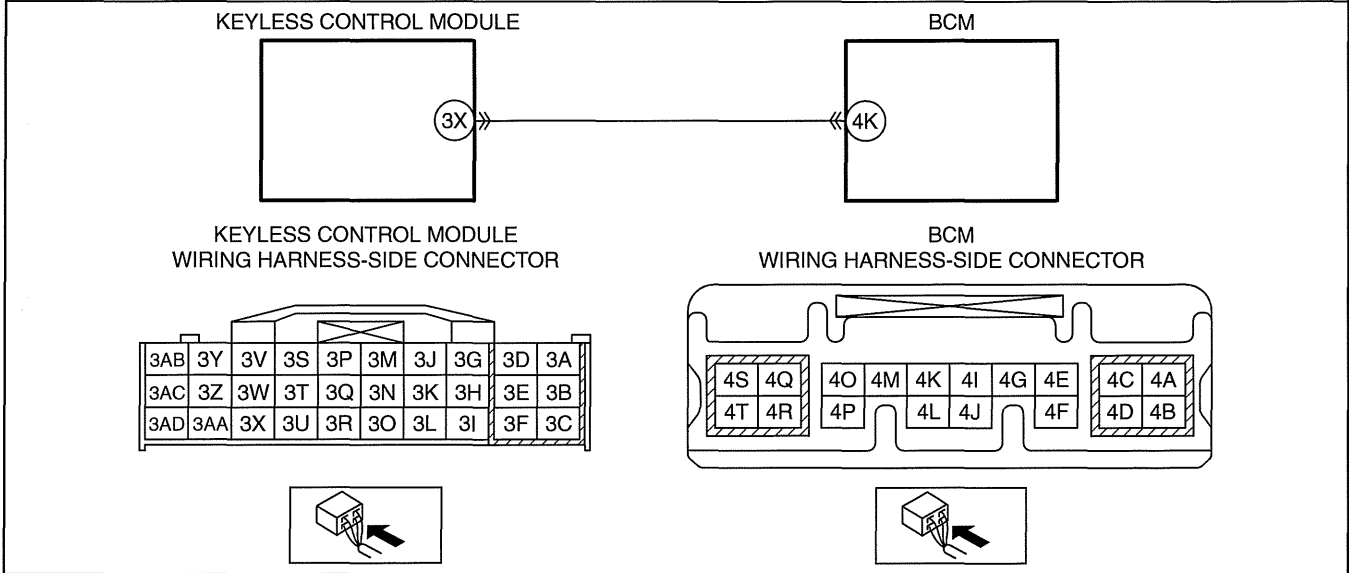

Step	Inspection		Action
1	CONFIRM PCM DTC <ul style="list-style-type: none"> Perform the PCM DTC inspection using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].) (See 01-02B-18 DTC TABLE [L3 WITH TC].)

Diagnostic Procedure

Step	Inspection	Action	
1	INSPECT KEYLESS RECEIVER CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable. • Disconnect the keyless receiver connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 5.
		No	Go to the next step.
2	INSPECT KEYLESS CONTROL MODULE CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Disconnect the keyless control module connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 5.
		No	Go to the next step.
3	INSPECT KEYLESS RECEIVER POWER SUPPLY CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • Keyless receiver and keyless control module connectors are disconnected. • Inspect for continuity between the following terminal (wiring harness-side) and body ground: <ul style="list-style-type: none"> — Keyless receiver terminal A • Is there continuity? 	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 5.
		No	Go to the next step.
4	INSPECT KEYLESS RECEIVER <ul style="list-style-type: none"> • Reconnect the keyless receiver and the keyless control module connectors. • Inspect the keyless receiver. (See 09-14-82 KEYLESS RECEIVER INSPECTION [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) • Is there any malfunction? 	Yes	Replace the keyless receiver, then go to the next step. (See 09-14-80 KEYLESS RECEIVER REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect the disconnected connectors. • Reconnect the negative battery cable. • Operate the advanced key to activate the keyless control module. • Clear the DTC from the keyless control module using the M-MDS. (See 09-02A-6 CLEARING DTC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) • Operate the advanced key to activate the keyless control module. • Perform the advanced keyless entry and push button start system DTC inspection using the M-MDS. (See 09-02A-6 DTC INSPECTION [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) • Is the same DTC present? 	Yes	Replace the keyless control module, then go to the next step. (See 09-14-66 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02A-7 DTC TABLE [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

DTC U3000:49 [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

id09021c923000

Warning

- If this DTC is detected, the system will enter the fail-safe function to ensure safety. If the vehicle is left as it is for a specified time limit or more, or the ignition is operated a specified number of times or more while the fail-safe function is operating, the ignition will remain stuck in off and it is possible that the engine cannot be started. Therefore, perform the malfunction diagnosis while the engine can be started. In addition, after having performed the malfunction diagnosis, verify that this DTC is not detected with the steering wheel locked. If the DTC is not detected, the system returns to normal from the fail-safe function.

Note

- When the system enters the fail-safe function, the keyless warning light and the push button start indicator light illuminate as follows:
 - When the clutch pedal (MTX) or the brake pedal (ATX) is depressed while the ignition is switched off, both lights illuminate (red).
 - When the ignition is switched to ACC or ON, both lights illuminate (red) constantly.

09-02A

PID/DATA MONITOR INSPECTION [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

id09021c960600

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "DataLogger".
 2. Select "Modules".
 3. Select "RKE".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "RKE".
 3. Select "DataLogger".
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the directions on the screen.

am3uuw0000266

Note

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

PID/DATA MONITOR TABLE [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

ACTIVE COMMAND MODES INSPECTION [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

id09021c960800

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "DataLogger".
 2. Select "Modules".
 3. Select "RKE".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "RKE".
 3. Select "DataLogger".
3. Select the active command modes from the PID table.
4. Perform the active command modes, inspect the operations for each parts.
 - If the operation of output parts cannot be verified after the active command mode inspection is performed, this could indicate the possibility of an open or short circuit, sticking, or operation malfunction in the output parts.

ON-BOARD DIAGNOSTIC [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)]

FOREWORD [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)]

id09021d960100

- DTCs are recorded in the PCM and keyless control module when a malfunction is detected. The stored DTCs can be verified using the flashing pattern of the security light and M-MDS. There are some DTCs which cannot be verified using the security light. Verify the DTCs that were detected using the M-MDS prior to beginning the servicing. (See 09-02B-2 DTC INSPECTION [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)].)
- If more than one DTC is detected, the security light only displays the DTC with the lowest number. Begin repairs based on the DTC displayed by the security light. All DTCs can be read by the M-MDS.
- It is possible for several DTCs to be displayed for a one malfunction cause. Erase the DTCs after one repair and then re-inspect the DTCs.
- If immobilizer system DTCs are not recorded even if the engine cannot be started, perform symptom troubleshooting. (See 01-03A-24 NO.3 WILL NOT CRANK [LF, L5].) (See 01-03B-16 NO.3 WILL NOT CRANK [L3 WITH TC].)
- The PID/data monitor function can be used to verify the number of key ID numbers programmed for a single vehicle. (See 09-02B-32 PID/DATA MONITOR TABLE [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)].)

Note

- Due to the possibility that the engine cannot be started because transmission between the key and the vehicle is obstructed, do not allow the following items to contact the key ring.
 - Any metallic object
 - Spare keys or keys for other vehicles equipped with an immobilizer system
 - Any electronic device, or any credit or other card with magnetic strips

am6zzw0000176

DTC INSPECTION [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)]

id09021d960300

Security Light

1. Switch the ignition to ON.
2. Verify the security light status.
 - If a malfunction is detected, the DTC pattern begins flashing after the security light flashes or illuminates for **approx. 1 min** according to the DTC. However, because there are DTCs which cannot be confirmed using the security light, verify the DTCs that were detected using the M-MDS prior to beginning the servicing.
 - DTC 16 or below: Flashes for **approx. 1 min** and the DTC flash pattern repeats **10 times**.
 - DTC 21 or higher: Illuminate for **approx. 1 min** and the DTC flash pattern repeats **10 times**.
 - If more than one DTC is detected, only the DTC with the lowest number is displayed.
 - If there is no malfunction, the security light illuminates for **approx. 3 s**, and then turns off.

ON-BOARD DIAGNOSTIC [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)]

3. If there is a malfunction, verify the DTCs using the M-MDS. When several DTCs are detected, repair the malfunctioning location based on the DTC displayed by the security light.

Note

- Because of the possibility that one malfunction cause could result in several DTCs being detected, erase the DTCs after the repair is completed, and then re-inspect the DTCs.

4. After completion of repairs, clear all DTCs stored in the keyless control module and PCM. (See 09-02B-3 CLEARING DTC [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)].) (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].)

M-MDS

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - Using the IDS (laptop PC)
 1. Select "Self test"
 2. Select "Modules"
 3. Select "RKE"
 - Using the PDS (Pocket PC):
 1. Select "Module tests"
 2. Select "RKE"
 3. Select "Self test"
3. Verify the DTC according to the directions on the screen.

am3uuw000266

- If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection. When several DTCs are detected, repair the malfunctioning location based on the DTC displayed by the security light. (See 09-02B-4 DTC TABLE [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)].)

09-02B

Note

- Because of the possibility that one malfunction cause could result in several DTCs being detected, erase the DTCs after the repair is completed, and then check for DTCs again.

4. After completion of repairs, clear all DTCs stored in the keyless control module and PCM. (See 09-02B-3 CLEARING DTC [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)].) (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].)

CLEARING DTC [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)]

id09021d960400

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Self Test".
 2. Select "Modules".
 3. Select "RKE".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "RKE".
 3. Select "Self Test".
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition to ON and wait for **5 s or more**.
7. Perform DTC inspection. (See 09-02B-2 DTC INSPECTION [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)].)
8. Verify that no DTCs are displayed.

am3uuw000266

ON-BOARD DIAGNOSTIC [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)]

DTC TABLE [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)]

id09021d960500

Note

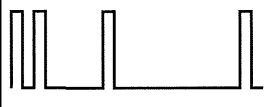

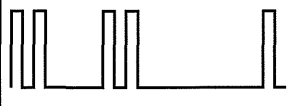

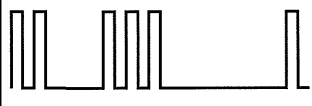

- The security light flashes or illuminates under the following conditions when the ignition is off or ACC.
 - If there is any malfunction:
 - DTC 16 or below: Flashes for **approx. 1 min** and the DTC flash pattern indicated in the table below repeats **10 times**.
 - DTC 21 or higher: Illuminates for **approx. 1 min** and the DTC flash pattern indicated in the table below repeats **10 times**.
 - If more than one DTC is detected, only the DTC with the lowest number is displayed.
 - If there is no malfunction:
 - The security light illuminates **for approx. 3 s** and then turns off.

ON-BOARD DIAGNOSTIC [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)]

Diagnostic Procedure

STEP	INSPECTION	ACTION
1	CONFIRM IMMOBILIZER SYSTEM DTC <ul style="list-style-type: none"> Clear the DTC from the keyless control module and PCM using the M-MDS. (See 09-02B-3 CLEARING DTC [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)].) (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Perform the immobilizer system DTC inspection using the M-MDS. (See 09-02B-2 DTC INSPECTION [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)].) Is the following DTC present? — Keyless control module: B10E6:11 	Yes Go to the applicable DTC inspection. (See 09-02B-27 SECURITY LIGHT: NOT ILLUMINATED, DTC B10E6:11/- [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)].)
		No Go to the next step.
2	INSPECT COIL ANTENNA CONNECTOR AND TERMINALS <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the negative battery cable. Disconnect the coil antenna connector. Inspect the connector and terminals (corrosion, damage, pin disconnection). Is there any malfunction? 	Yes Repair or replace the connector or terminals, then go to Step 8.
		No Go to the next step.
3	INSPECT COIL ANTENNA GROUND CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> Coil antenna connector is disconnected. Inspect for continuity between the following terminal (wiring harness-side) and body ground: — Coil antenna terminal C Is there continuity? 	Yes Go to the next step.
		No Repair or replace the wiring harness for a possible open circuit, then go to Step 8.
4	INSPECT KEYLESS CONTROL MODULE CONNECTOR AND TERMINALS <ul style="list-style-type: none"> Disconnect the keyless control module connector. Inspect the connector and terminals (corrosion, damage, pin disconnection). Is there any malfunction? 	Yes Repair or replace the connector or terminals, then go to Step 8.
		No Go to the next step.
5	INSPECT COIL ANTENNA COMMUNICATION CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> Coil antenna and keyless control module connectors are disconnected. Inspect for continuity between the following terminals (wiring harness-side) and body ground: — Coil antenna terminal D — Coil antenna terminal B — Coil antenna terminal A Is there continuity? 	Yes Repair or replace the wiring harness for a possible short to ground, then go to Step 8.
		No Go to the next step.
6	INSPECT COIL ANTENNA COMMUNICATION CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> Coil antenna and keyless control module connectors are disconnected. Inspect for continuity between the following terminals (wiring harness-side): — Coil antenna terminal D—Instrument cluster terminal 3M — Coil antenna terminal B—Instrument cluster terminal 2G — Coil antenna terminal A—Instrument cluster terminal 2H Is there continuity? 	Yes Go to the next step.
		No Repair or replace the wiring harness for a possible open circuit, then go to Step 8.

09-02B

ON-BOARD DIAGNOSTIC [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)]

STEP	INSPECTION	ACTION	
7	VERIFY COIL ANTENNA MALFUNCTION <ul style="list-style-type: none"> • Make sure to reconnect the disconnected connectors. • Reconnect the negative battery cable. • Clear the DTC from the keyless control module and PCM using the M-MDS. (See 09-02B-3 CLEARING DTC [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)].) (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the immobilizer system DTC inspection using the M-MDS. (See 09-02B-2 DTC INSPECTION [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)].) • Is the following DTC present? — Keyless control module: B10D9:87 — PCM: P1260:00 	Yes	Replace the coil antenna, then go to the next step. (See 09-14-88 COIL ANTENNA REMOVAL/INSTALLATION.)
		No	Go to Step 9.
8	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect the disconnected connectors. • Reconnect the negative battery cable. • Clear the DTC from the keyless control module and PCM using the M-MDS. (See 09-02B-3 CLEARING DTC [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)].) (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the immobilizer system DTC inspection using the M-MDS. (See 09-02B-2 DTC INSPECTION [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)].) • Is the following DTC present? — Keyless control module: B10D9:87 — PCM: P1260:00 	Yes	Replace the keyless control module, then go to the next step. (See 09-14-66 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
9	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02B-4 DTC TABLE [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)]

SECURITY LIGHT: 12, DTC: B10D5:13/P1260:00 [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)]

09-02B

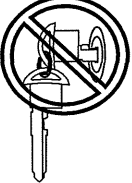

ON-BOARD DIAGNOSTIC [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)]

PID/DATA MONITOR INSPECTION [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)]

id09021d960600

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "DataLogger".
 2. Select "Modules".
 3. Select "RKE".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "RKE".
 3. Select "DataLogger".
3. Select the applicable PID from the PID table. (See 09-02B-32 PID/DATA MONITOR TABLE [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)].)
4. Verify the PID data according to the directions on the screen.

am3uuw0000266

Note

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.

PID/DATA MONITOR TABLE [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)]

PID/DATA MONITOR TABLE [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)] 09-02C-22

09-02C

ON-BOARD DIAGNOSTIC [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)]

FOREWORD [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)]

id0902e5960100

- DTCs are recorded in the PCM and instrument cluster when a malfunction is detected. The stored DTCs can be verified using the flashing pattern of the security light and M-MDS. There are some DTCs which cannot be verified using the security light. Verify the DTCs that were detected using the M-MDS prior to beginning the servicing. (See 09-02C-2 DTC INSPECTION [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].)
- If more than one DTC is detected, the security light only displays the DTC with the lowest number. Begin repairs based on the DTC displayed by the security light. All DTCs can be read by the M-MDS.
- It is possible for several DTCs to be displayed for one malfunction cause. Erase the DTCs after one repair and then re-inspect the DTCs.
- If immobilizer system DTCs are not recorded even if the engine cannot be started, perform symptom troubleshooting. (See 01-03A-24 NO.3 WILL NOT CRANK [LF, L5].) (See 01-03B-16 NO.3 WILL NOT CRANK [L3 WITH TC].)
- The PID/data monitor function can be used to verify the number of key ID numbers programmed for a single vehicle. (See 09-02C-22 PID/DATA MONITOR TABLE [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].)

Note

- Due to the possibility that the engine cannot be started because transmission between the key and the vehicle is obstructed, do not allow the following items to contact the key ring.
 - Any metallic object
 - Spare keys or keys for other vehicles equipped with an immobilizer system
 - Any electronic device, or any credit or other card with magnetic strips

ac9uuw00001496

DTC INSPECTION [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)]

id0902e5960300

Security Light

1. Switch the ignition to ON.
2. Verify the security light status.
 - If a malfunction is detected, the DTC pattern begins flashing after the security light flashes or illuminates for **approx. 1 min** according to the DTC. However, because there are DTCs which cannot be confirmed using the security light, verify the DTCs that were detected using the M-MDS prior to beginning the servicing.
 - DTC 16 or below: Flashes for **approx. 1 min** and the DTC flash pattern repeats **10 times**.
 - DTC 21 or higher: Illuminates for **approx. 1 min** and the DTC flash pattern repeats **10 times**.
 - If more than one DTC is detected, only the DTC with the lowest number is displayed.
 - If there is no malfunction, the security light illuminates for **approx. 3 s**, and then turns off.
3. If there is a malfunction, verify the DTCs using the M-MDS. When several DTCs are detected, repair the malfunctioning location based on the DTC displayed by the security light.

Note

- Because of the possibility that one malfunction cause could result in several DTCs being detected, erase the DTCs after the repair is completed, and then re-inspect the DTCs.

4. After completion of repairs, clear all DTCs stored in the Instrument cluster and PCM. (See 09-02C-3 CLEARING DTC [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].)

ON-BOARD DIAGNOSTIC [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)]

M-MDS

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Self Test".
 2. Select "Modules".
 3. Select "IC".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "IC".
 3. Select "Self Test".
3. Verify the DTC according to the directions on the screen.
 - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection. When several DTCs are detected, repair the malfunctioning location based on the DTC displayed by the security light. (See 09-02C-4 DTC TABLE [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].)

am3uuw0000266

Note

- Because of the possibility that one malfunction cause could result in several DTCs being detected, erase the DTCs after the repair is completed, and then check for DTCs again.
4. After completion of repairs, clear all DTCs stored in the Instrument cluster and PCM. (See 09-02C-3 CLEARING DTC [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].)

CLEARING DTC [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)]

id0902e5960400

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Self Test".
 2. Select "Modules".
 3. Select "IC".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "IC".
 3. Select "Self Test".
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition to ON and wait for **5 s or more**.
7. Perform DTC inspection. (See 09-02C-2 DTC INSPECTION [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].)
8. Verify that no DTCs are displayed.

ON-BOARD DIAGNOSTIC [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)]

SECURITY LIGHT: 15, DTC: B10D7:51/P1260:00 [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)]

id0902e5356700

DTC	Security light flashing pattern		15	Unprogrammed key ID number
	M-MDS display	Instrument cluster	B10D7:51	
		PCM	P1260:00	
DETECTION CONDITION				<ul style="list-style-type: none"> Instrument cluster detects the unprogrammed key ID number.
POSSIBLE CAUSE				<ul style="list-style-type: none"> Key malfunction <ul style="list-style-type: none"> No keys have been programmed after replacing instrument cluster. Unprogrammed key is used. Programmed a ninth key. PCM malfunction Instrument cluster malfunction

Diagnostic Procedure

STEP	INSPECTION	ACTION
1	VERIFY NUMBER OF PROGRAMMED KEYS <ul style="list-style-type: none"> Perform the PID/data monitor inspection using the M-MDS to verify the number of programmed keys. (See 09-02C-22 PID/DATA MONITOR INSPECTION [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) — NUMKEYS (See 09-02C-22 PID/DATA MONITOR TABLE [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) Are eight keys programmed? 	Yes Erase the key ID number. Program an additional key referring to the immobilizer system-related parts programming, then go to the next step. (See 09-14-88 IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING [KEYLESS ENTRY SYSTEM].)
		No Program an additional key referring to the immobilizer system-related parts programming, then go to the next step. (See 09-14-88 IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING [KEYLESS ENTRY SYSTEM].) Note <ul style="list-style-type: none"> To start the engine, two or more programmed keys are necessary.
2	VERIFY PCM MALFUNCTION <ul style="list-style-type: none"> Switch the ignition to ON (engine off) using the programmed key. Clear the DTC from the instrument cluster and PCM using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) (See 09-02C-3 CLEARING DTC [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) Perform the immobilizer system DTC inspection using the M-MDS. (See 09-02C-2 DTC INSPECTION [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) Is the same DTC present? 	Yes Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].) (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No Dispose of the malfunctioning key and program a new key if necessary, then go to Step 4. (See 09-14-88 IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING [KEYLESS ENTRY SYSTEM].) Note <ul style="list-style-type: none"> To start the engine, two or more programmed keys are necessary.
3	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Clear the DTC from the instrument cluster and PCM using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) (See 09-02C-3 CLEARING DTC [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) Perform the immobilizer system DTC inspection using the M-MDS. (See 09-02C-2 DTC INSPECTION [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) Is the same DTC present? 	Yes Replace the instrument cluster, then go to the next step. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No Go to the next step.

ON-BOARD DIAGNOSTIC [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)]

DTC			Description	Reference
Security light flashing pattern	M-MDS display*			
	Instrument cluster	PCM		
23 	B10DA:62	P1260:00	Communication error with PCM (Data mis-match)	(See 09-02C-21 SECURITY LIGHT: 23, DTC: B10DA:62/P1260:00 [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].)
Not illuminated	U0001:88	U0073:00	Module communication error (HS-CAN)	(See 09-02D-1 FOREWORD [MULTIPLEX COMMUNICATION SYSTEM].)
Not illuminated	U0100:00	—	Communication error with PCM	(See 09-02E-21 DTC U3000:41 [INSTRUMENT CLUSTER].)
Not illuminated	U3000:41	—	Instrument cluster internal malfunction	(See 09-02E-21 DTC U3000:41 [INSTRUMENT CLUSTER].)

* : The letters at the beginning of each DTC are only displayed when using the M-MDS, and refer to the following:
 B= Body system, P= Powertrain system, U= Network communication system.

ON-BOARD DIAGNOSTIC [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)]

SECURITY LIGHT: 11, DTC: B10D9:87/P1260:00 [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)]

id0902e5353000

DTC	Security light flashing pattern		11	Communication error with coil antenna
	M-MDS display	Instrument cluster	B10D9:87	
		PCM	P1260:00	
DETECTION CONDITION				<ul style="list-style-type: none"> Instrument cluster cannot communicate with coil antenna.

ON-BOARD DIAGNOSTIC [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)]

Diagnostic Procedure

STEP	INSPECTION	ACTION	
1	INSPECT COIL ANTENNA CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable. • Disconnect the coil antenna connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 8.
		No	Go to the next step.
2	INSPECT COIL ANTENNA POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GROUND <ul style="list-style-type: none"> • Coil antenna connector is disconnected. • Reconnect the negative battery cable. • Switch the ignition to ON (engine off). • Measure the voltage at the following terminal (wiring harness-side): <ul style="list-style-type: none"> — Coil antenna terminal D • Is the voltage 8 V or more? 	Yes	Go to the next step.
		No	Inspect the METER 15 A fuse. <ul style="list-style-type: none"> • If the fuse is melt: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deterioration: <ul style="list-style-type: none"> — Replace the fuse. • If the fuse is normal: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible open circuit. Go to Step 8.
3	INSPECT COIL ANTENNA GROUND CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Coil antenna connector is disconnected. • Switch the ignition to off. • Disconnect the negative battery cable. • Inspect for continuity between the following terminal (wiring harness-side) and body ground: <ul style="list-style-type: none"> — Coil antenna terminal C • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 8.
4	INSPECT INSTRUMENT CLUSTER CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Disconnect the instrument cluster connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 8.
		No	Go to the next step.
5	INSPECT COIL ANTENNA COMMUNICATION CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • Coil antenna and instrument cluster connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: <ul style="list-style-type: none"> — Coil antenna terminal B — Coil antenna terminal A • Is there continuity? 	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 8.
		No	Go to the next step.
6	INSPECT COIL ANTENNA COMMUNICATION CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Coil antenna and instrument cluster connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): <ul style="list-style-type: none"> — Coil antenna terminal B—Instrument cluster terminal 2M — Coil antenna terminal A—Instrument cluster terminal 2Q • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 8.

09-02C

ON-BOARD DIAGNOSTIC [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)]

STEP	INSPECTION	ACTION	
7	VERIFY COIL ANTENNA MALFUNCTION <ul style="list-style-type: none"> • Make sure to reconnect the disconnected connectors. • Reconnect the negative battery cable. • Clear the DTC from the instrument cluster and PCM using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) (See 09-02C-3 CLEARING DTC [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the immobilizer system DTC inspection using the M-MDS. (See 09-02C-2 DTC INSPECTION [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) • Is the same DTC present? 	Yes	Replace the coil antenna, then go to the next step. (See 09-14-88 COIL ANTENNA REMOVAL/INSTALLATION.)
		No	Go to Step 9.
8	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect the disconnected connectors. • Reconnect the negative battery cable. • Clear the DTC from the instrument cluster and PCM using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) (See 09-02C-3 CLEARING DTC [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the immobilizer system DTC inspection using the M-MDS. (See 09-02C-2 DTC INSPECTION [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) • Is the same DTC present? 	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to the next step.
9	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02C-4 DTC TABLE [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)]

STEP	INSPECTION	ACTION	
2	VERIFY WHETHER THERE IS A VALID KEY <ul style="list-style-type: none"> • Are there any valid keys which can start the engine other than the cause of the displayed DTC? 	Yes	Go to the next step.
		No	Program an additional key referring to the immobilizer system-related parts programming, then go to the next step. (See 09-14-88 IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING [KEYLESS ENTRY SYSTEM].)
3	VERIFY WHETHER MALFUNCTION IS CAUSED BY KEY OR COIL ANTENNA <ul style="list-style-type: none"> • Switch the ignition to ON using the valid key other than the cause of the displayed DTC (engine off). • Clear the DTC from the instrument cluster and PCM using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) (See 09-02C-3 CLEARING DTC [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) • Perform the immobilizer system DTC inspection using the M-MDS. (See 09-02C-2 DTC INSPECTION [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) • Is the following DTC present? — Instrument cluster: B10D7:94 — PCM: P1260:00 	Yes	Replace the coil antenna, then go to the next step. (See 09-14-88 COIL ANTENNA REMOVAL/INSTALLATION.)
		No	Dispose of the malfunctioning key and program a new key if necessary, then go to Step 6. (See 09-14-88 IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING [KEYLESS ENTRY SYSTEM].) <p style="margin-top: 10px;">Note</p> <ul style="list-style-type: none"> • To start the engine, two or more programmed keys are necessary.
4	VERIFY PCM MALFUNCTION <ul style="list-style-type: none"> • Clear the DTC from the instrument cluster and PCM using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) (See 09-02C-3 CLEARING DTC [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) • Perform the immobilizer system DTC inspection using the M-MDS. (See 09-02C-2 DTC INSPECTION [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) • Is the following DTC present? — Instrument cluster: B10D7:94 — PCM: P1260:00 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].) (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to Step 6.
5	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Clear the DTC from the instrument cluster and PCM using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) (See 09-02C-3 CLEARING DTC [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) • Perform the immobilizer system DTC inspection using the M-MDS. (See 09-02C-2 DTC INSPECTION [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) • Is the following DTC present? — Instrument cluster: B10D7:94 — PCM: P1260:00 	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02C-4 DTC TABLE [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].)
		No	DTC troubleshooting completed.

09-02C

ON-BOARD DIAGNOSTIC [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)]

SECURITY LIGHT: 14, DTC: B10D7:81/P1260:00 [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)]

id0902e5356600

DTC	Security light flashing pattern		14	Receiving erratic serial data
	M-MDS display	Instrument cluster	B10D7:81	
		PCM	P1260:00	
DETECTION CONDITION				<ul style="list-style-type: none"> Instrument cluster cannot read the key ID number data normally.
POSSIBLE CAUSE				<ul style="list-style-type: none"> Coil antenna connector or terminals malfunction Instrument cluster connector or terminals malfunction Key (transponder) malfunction Coil antenna malfunction PCM malfunction Instrument cluster malfunction <p>Note</p> <ul style="list-style-type: none"> If any of the following items are touching or near key head, signal communication between key and vehicle is negatively affected, resulting in engine not starting <ul style="list-style-type: none"> Keys for other vehicles equipped with an immobilizer system Spare <p>EXAMPLES:</p> <div style="display: flex; flex-direction: column; align-items: center;"> <div style="display: flex; align-items: center; margin-bottom: 10px;">  <div style="margin-left: 10px;">METAL RING LYING ON KEY HEAD</div> </div> <div style="display: flex; align-items: center; margin-bottom: 10px;">  <div style="margin-left: 10px;">METAL PART OF ANOTHER KEY TOUCHING KEY HEAD</div> </div> <div style="display: flex; align-items: center;">  <div style="margin-left: 10px;">KEY IS NEAR OR TOUCHING ANOTHER IMMOBILIZER SYSTEM KEY</div> </div> </div> <p>keys</p> <ul style="list-style-type: none"> Any metallic object Any electronic device, or any credit or other card with magnetic strips

Diagnostic Procedure

STEP	INSPECTION	ACTION
1	INSPECT COIL ANTENNA CONNECTOR AND TERMINALS <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the negative battery cable. Disconnect the coil antenna connector. Inspect the connector and terminals (corrosion, damage, pin disconnection). Is there any malfunction? 	Yes Repair or replace the connector or terminals, then go to Step 6.
		No Go to the next step.
2	INSPECT INSTRUMENT CLUSTER CONNECTOR AND TERMINALS <ul style="list-style-type: none"> Disconnect the instrument cluster connector. Inspect the connector and terminals (corrosion, damage, pin disconnection). Is there any malfunction? 	Yes Repair or replace the connector or terminals, then go to Step 6.
		No Go to the next step.
3	VERIFY WHETHER THERE IS A VALID KEY <ul style="list-style-type: none"> Are there any valid keys which can start the engine other than the cause of the displayed DTC? 	Yes Go to the next step.
		No Program an additional key referring to the immobilizer system-related parts programming, then go to the next step. (See 09-14-88 IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING [KEYLESS ENTRY SYSTEM].)

ON-BOARD DIAGNOSTIC [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)]

STEP	INSPECTION	ACTION	
4	VERIFY WHETHER MALFUNCTION IS CAUSED BY KEY OR COIL ANTENNA <ul style="list-style-type: none"> • Make sure to reconnect the disconnected connector. • Reconnect the negative battery cable. • Switch the ignition to ON (engine off) using the valid key other than the cause of the displayed DTC. • Clear the DTC from the instrument cluster and PCM using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) (See 09-02C-3 CLEARING DTC [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) • Perform the immobilizer system DTC inspection using the M-MDS. (See 09-02C-2 DTC INSPECTION [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) • Is the same DTC present? 	Yes	Replace the coil antenna, then go to the next step. (See 09-14-88 COIL ANTENNA REMOVAL/INSTALLATION.)
		No	Dispose of the malfunctioning key and program a new key if necessary, then go to Step 7. (See 09-14-88 IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING [KEYLESS ENTRY SYSTEM].) <p style="margin-left: 20px;">Note</p> <ul style="list-style-type: none"> • To start the engine, two or more programmed keys are necessary.
5	VERIFY PCM MALFUNCTION <ul style="list-style-type: none"> • Clear the DTC from the instrument cluster and PCM using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) (See 09-02C-3 CLEARING DTC [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) • Perform the immobilizer system DTC inspection using the M-MDS. (See 09-02C-2 DTC INSPECTION [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) • Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].) (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to Step 7.
6	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect the disconnected connector. • Reconnect the negative battery cable. • Clear the DTC from the instrument cluster and PCM using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) (See 09-02C-3 CLEARING DTC [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) • Perform the immobilizer system DTC inspection using the M-MDS. (See 09-02C-2 DTC INSPECTION [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) • Is the same DTC present? 	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02C-4 DTC TABLE [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].)
		No	DTC troubleshooting completed.

09-02C

ON-BOARD DIAGNOSTIC [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)]

SECURITY LIGHT: 15, DTC: B10D7:51/P1260:00 [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)]

id0902e5356700

DTC	Security light flashing pattern		15	Unprogrammed key ID number
	M-MDS display	Instrument cluster	B10D7:51	
		PCM	P1260:00	
DETECTION CONDITION				<ul style="list-style-type: none"> Instrument cluster detects the unprogrammed key ID number.
POSSIBLE CAUSE				<ul style="list-style-type: none"> Key malfunction <ul style="list-style-type: none"> No keys have been programmed after replacing instrument cluster. Unprogrammed key is used. Programmed a ninth key. PCM malfunction Instrument cluster malfunction

Diagnostic Procedure

STEP	INSPECTION	ACTION
1	VERIFY NUMBER OF PROGRAMMED KEYS <ul style="list-style-type: none"> Perform the PID/data monitor inspection using the M-MDS to verify the number of programmed keys. (See 09-02C-22 PID/DATA MONITOR INSPECTION [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) — NUMKEYS (See 09-02C-22 PID/DATA MONITOR TABLE [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) Are eight keys programmed? 	Yes Erase the key ID number. Program an additional key referring to the immobilizer system-related parts programming, then go to the next step. (See 09-14-88 IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING [KEYLESS ENTRY SYSTEM].)
		No Program an additional key referring to the immobilizer system-related parts programming, then go to the next step. (See 09-14-88 IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING [KEYLESS ENTRY SYSTEM].) Note <ul style="list-style-type: none"> To start the engine, two or more programmed keys are necessary.
2	VERIFY PCM MALFUNCTION <ul style="list-style-type: none"> Switch the ignition to ON (engine off) using the programmed key. Clear the DTC from the instrument cluster and PCM using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) (See 09-02C-3 CLEARING DTC [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) Perform the immobilizer system DTC inspection using the M-MDS. (See 09-02C-2 DTC INSPECTION [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) Is the same DTC present? 	Yes Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].) (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No Dispose of the malfunctioning key and program a new key if necessary, then go to Step 4. (See 09-14-88 IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING [KEYLESS ENTRY SYSTEM].) Note <ul style="list-style-type: none"> To start the engine, two or more programmed keys are necessary.
3	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Clear the DTC from the instrument cluster and PCM using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) (See 09-02C-3 CLEARING DTC [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) Perform the immobilizer system DTC inspection using the M-MDS. (See 09-02C-2 DTC INSPECTION [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) Is the same DTC present? 	Yes Replace the instrument cluster, then go to the next step. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No Go to the next step.

ON-BOARD DIAGNOSTIC [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)]

STEP	INSPECTION	ACTION
4	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> Are any DTCs present? 	Yes Go to the applicable DTC inspection. (See 09-02C-4 DTC TABLE [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].)
		No DTC troubleshooting completed.

SECURITY LIGHT: 16, DTC: U0100:87/P1260:00 [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)]

id0902e5356800

DTC	Security light flashing pattern		16	Communication error with PCM (No response)
	M-MDS display	Instrument cluster	U0100:87	
		PCM	P1260:00	
DETECTION CONDITION				<ul style="list-style-type: none"> Communication error between instrument cluster and PCM (no response).
POSSIBLE CAUSE				<ul style="list-style-type: none"> Multiplex communication system DTC is stored (CAN line) PCM malfunction Instrument cluster malfunction

Diagnostic Procedure

STEP	INSPECTION	ACTION
1	CONFIRM MULTIPLEX COMMUNICATION SYSTEM DTC <ul style="list-style-type: none"> Clear the DTC from the instrument cluster and PCM using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) (See 09-02C-3 CLEARING DTC [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) Perform the "DTC INSPECTION" to confirm the multiplex communication system DTC. (See 09-02C-2 DTC INSPECTION [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) Is the following DTC present? <ul style="list-style-type: none"> Instrument cluster: U0001:88 PCM: U0073:00 	Yes Go to the applicable DTC inspection. (See 09-02D-1 FOREWORD [MULTIPLEX COMMUNICATION SYSTEM].)
		No Go to the next step.
2	VERIFY PCM MALFUNCTION <ul style="list-style-type: none"> Clear the DTC from the instrument cluster and PCM using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) (See 09-02C-3 CLEARING DTC [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) Perform the immobilizer system DTC inspection using the M-MDS. 1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "DataLogger".
 2. Select "Modules".
 3. Select "IC".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "IC".
 3. Select "DataLogger".
3. Select the applicable PID from the PID table. (See 09-02C-22 PID/DATA MONITOR TABLE [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].)
4. Verify the PID data according to the directions on the screen.

am3uuw0000266

Note

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.

PID/DATA MONITOR TABLE [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)]

id0902e5960700

PID Name	Description	Unit/Status
NUMKEYS	Number of key ID registered in the instrument cluster	0—8

FOREWORD [MULTIPLEX COMMUNICATION SYSTEM]

id0902e6845700

- If the CAN system is considered to be the cause of the malfunction based on the repair order form and the malfunctioning symptom, follow the 09-02D-2 Troubleshooting Procedure.
- DTCs are also output due to a control module or sensor malfunction, or incorrect power supply. Verify the output DTCs and first inspect the DTCs not shown in 09-02D-3 DTC TABLE [MULTIPLEX COMMUNICATION SYSTEM].
- If there is an open circuit in the communication lines, it is possible that signal error DTCs may be output in addition to communication error DTCs. Perform 09-02D-7 DETERMINING MALFUNCTIONING PART (HS-CAN) [MULTIPLEX COMMUNICATION SYSTEM], 09-02D-27 DETERMINING MALFUNCTIONING PART (MS-CAN) [MULTIPLEX COMMUNICATION SYSTEM] if the communication error and signal error DTCs are output simultaneously.

ON-BOARD DIAGNOSTIC [MULTIPLEX COMMUNICATION SYSTEM]

A

Possible cause

- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between PCM and branch A
- PCM malfunction

System wiring diagram

09-02D

am3uuw0000568

Inspection item

- PCM connector
- Wiring harness between PCM terminal 1AM and branch A
- Wiring harness between PCM terminal 1AI and branch A
- PCM

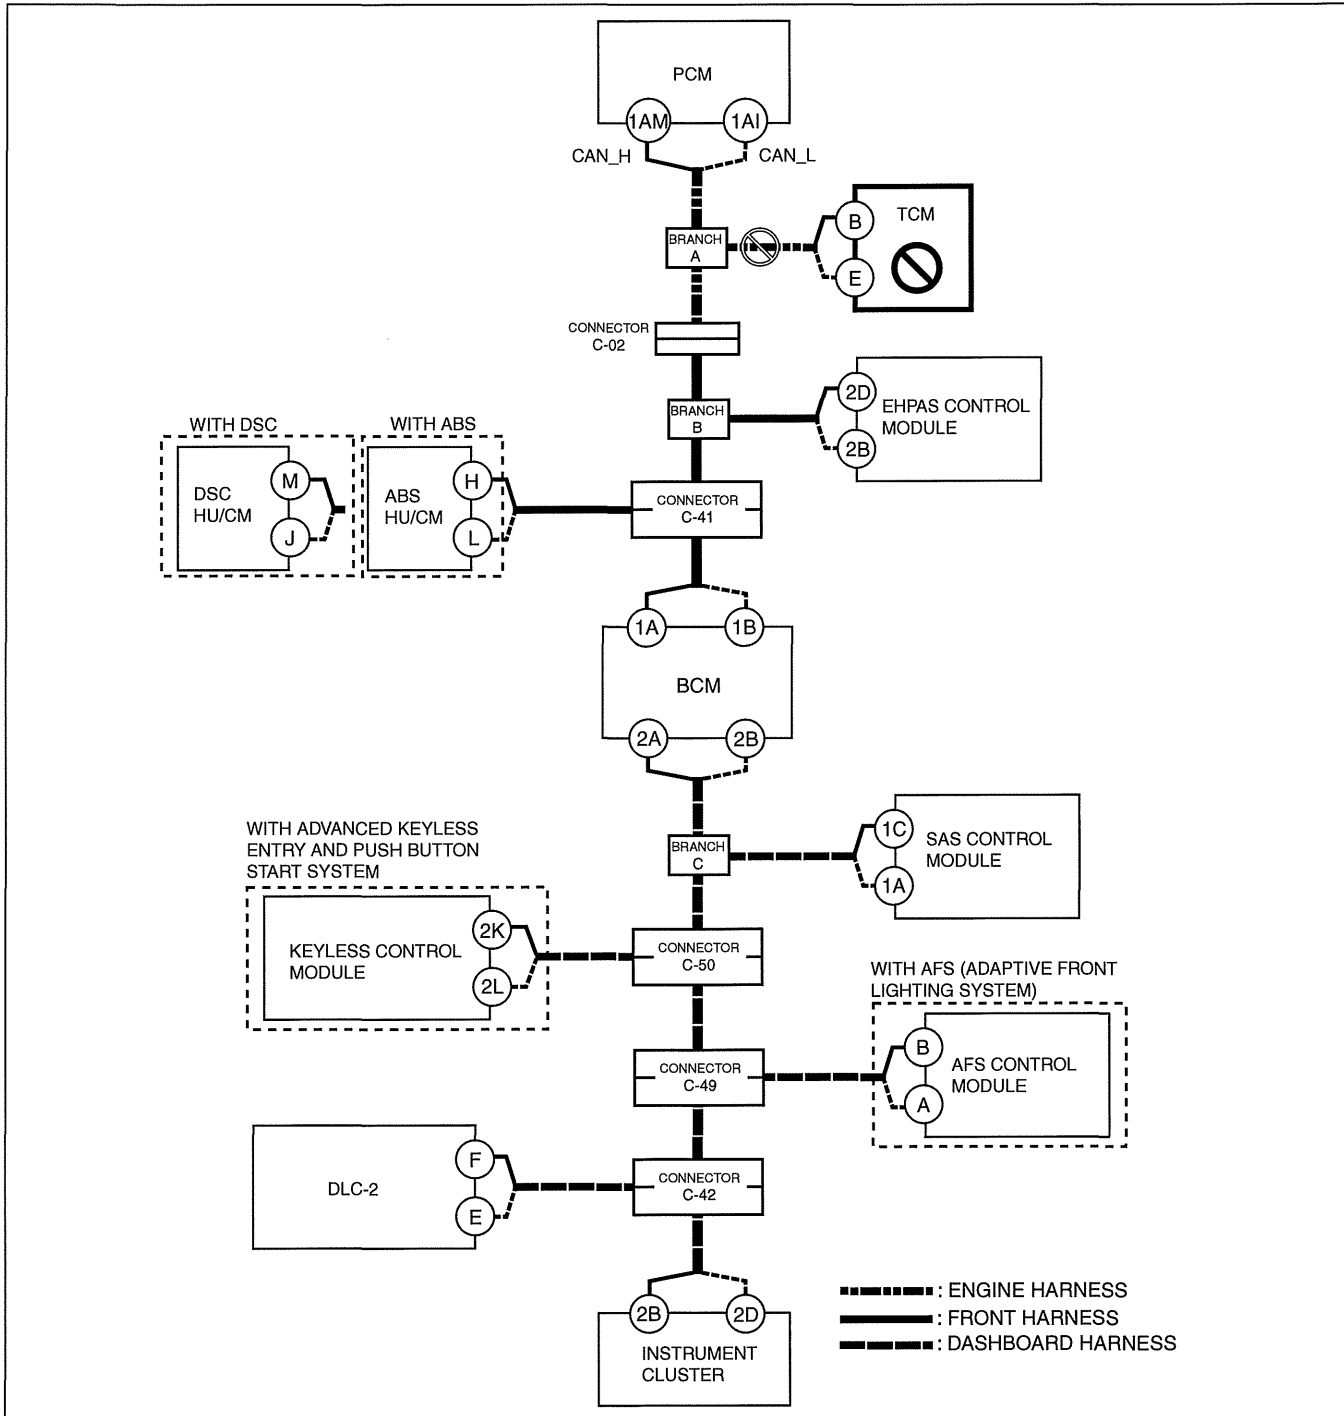

ON-BOARD DIAGNOSTIC [MULTIPLEX COMMUNICATION SYSTEM]

B

Possible cause

- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between TCM and branch A
- TCM malfunction

System wiring diagram

am3uuw0000568

Inspection item

- TCM connector
- Wiring harness between TCM terminal B and branch A
- Wiring harness between TCM terminal E and branch A
- TCM

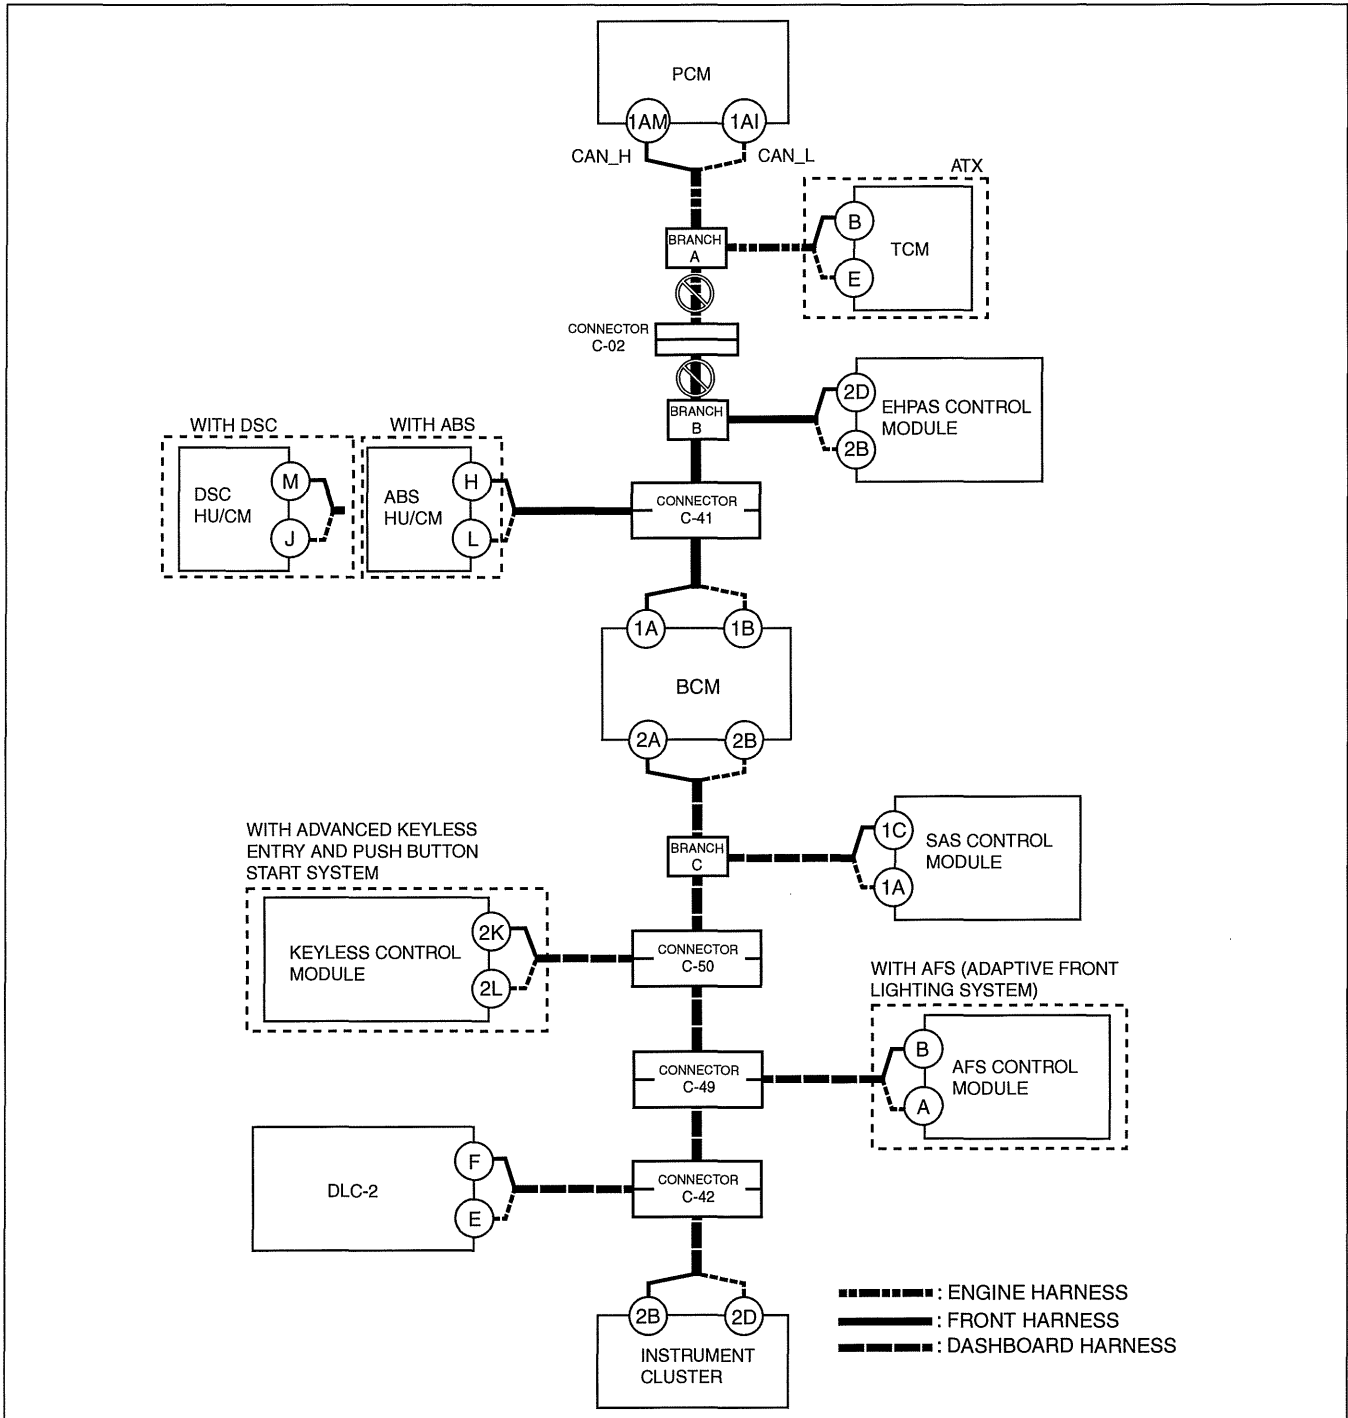

ON-BOARD DIAGNOSTIC [MULTIPLEX COMMUNICATION SYSTEM]

C

Possible cause

- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between branch A and connector C-02
- Open circuit in wiring harness between connector C-02 and branch B
- Connector C-02 malfunction

System wiring diagram

09-02D

am3uuw000568

Inspection item

- Connector C-02
- Wiring harness between branch A and connector C-02
- Wiring harness between connector C-02 and branch B

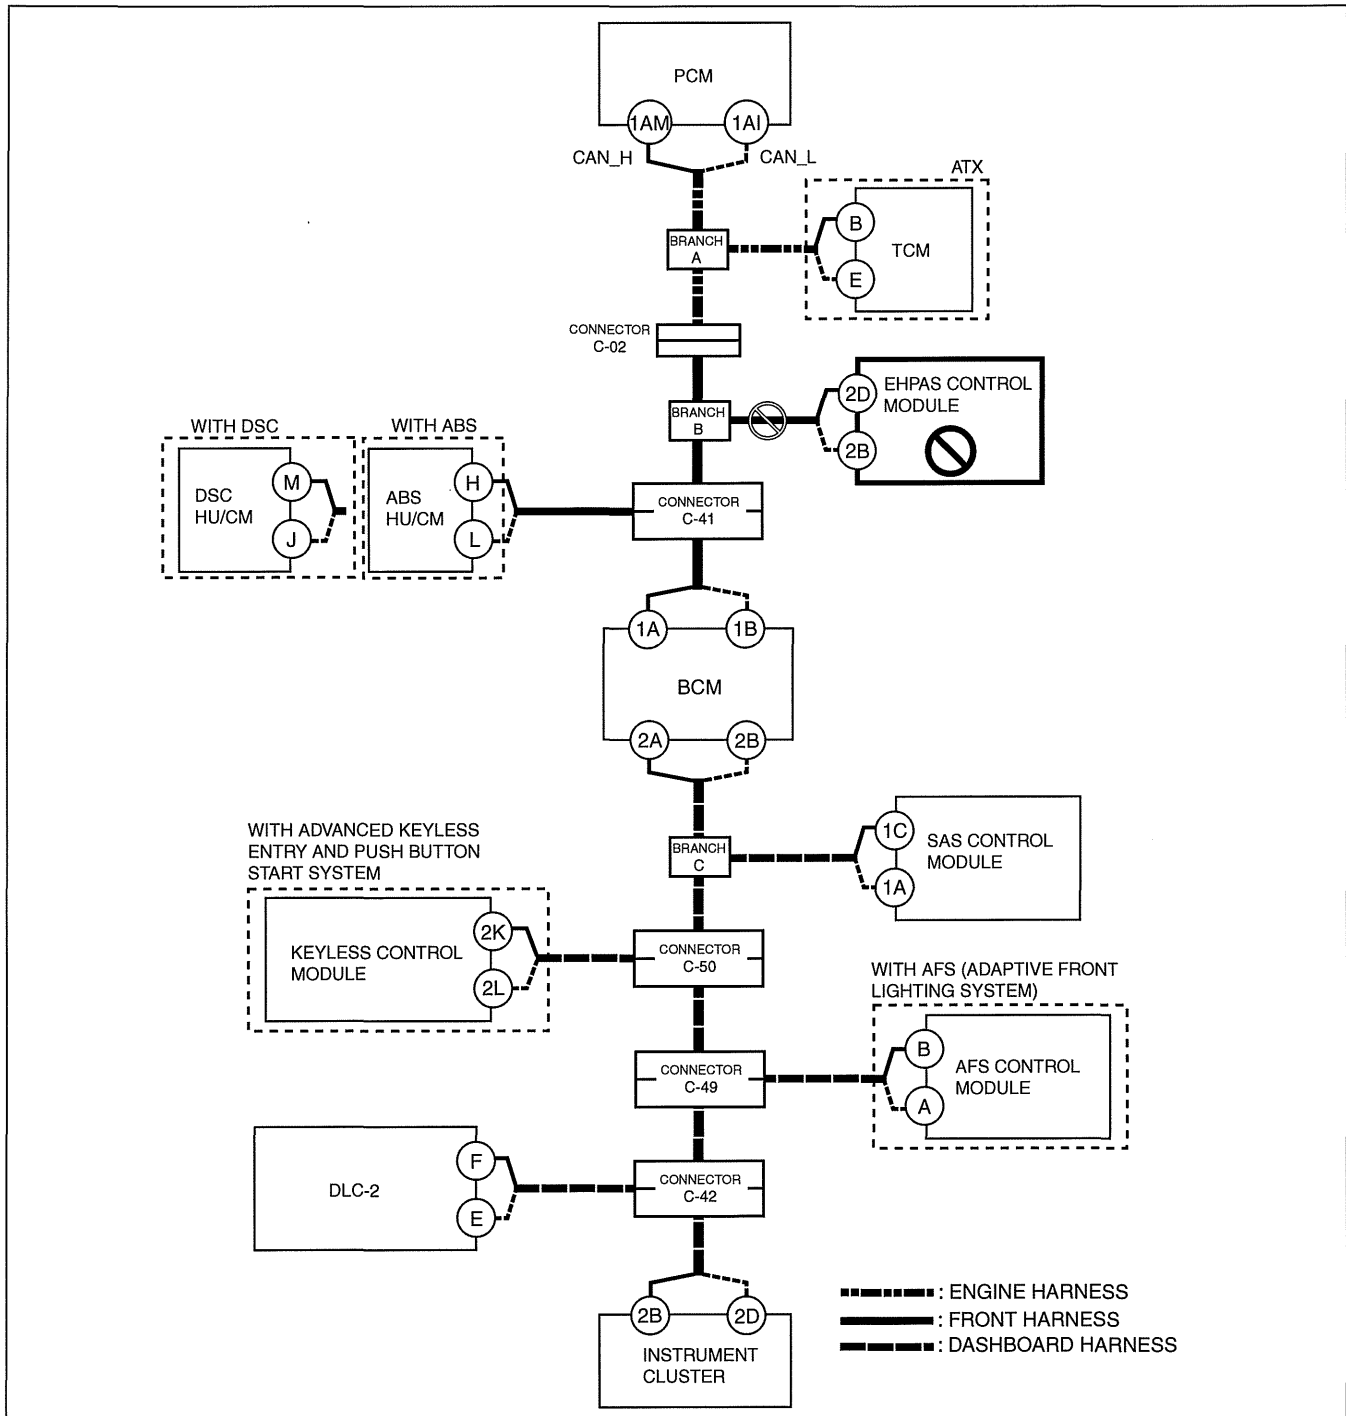

ON-BOARD DIAGNOSTIC [MULTIPLEX COMMUNICATION SYSTEM]

D

Possible cause

- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between EHPAS control module and branch B
- EHPAS control module malfunction

System wiring diagram

am3uuw0000568

Inspection item

- EHPAS control module connector
- Wiring harness between EHPAS control module terminal 2D and branch B
- Wiring harness between EHPAS control module terminal 2B and branch B
- EHPAS control module

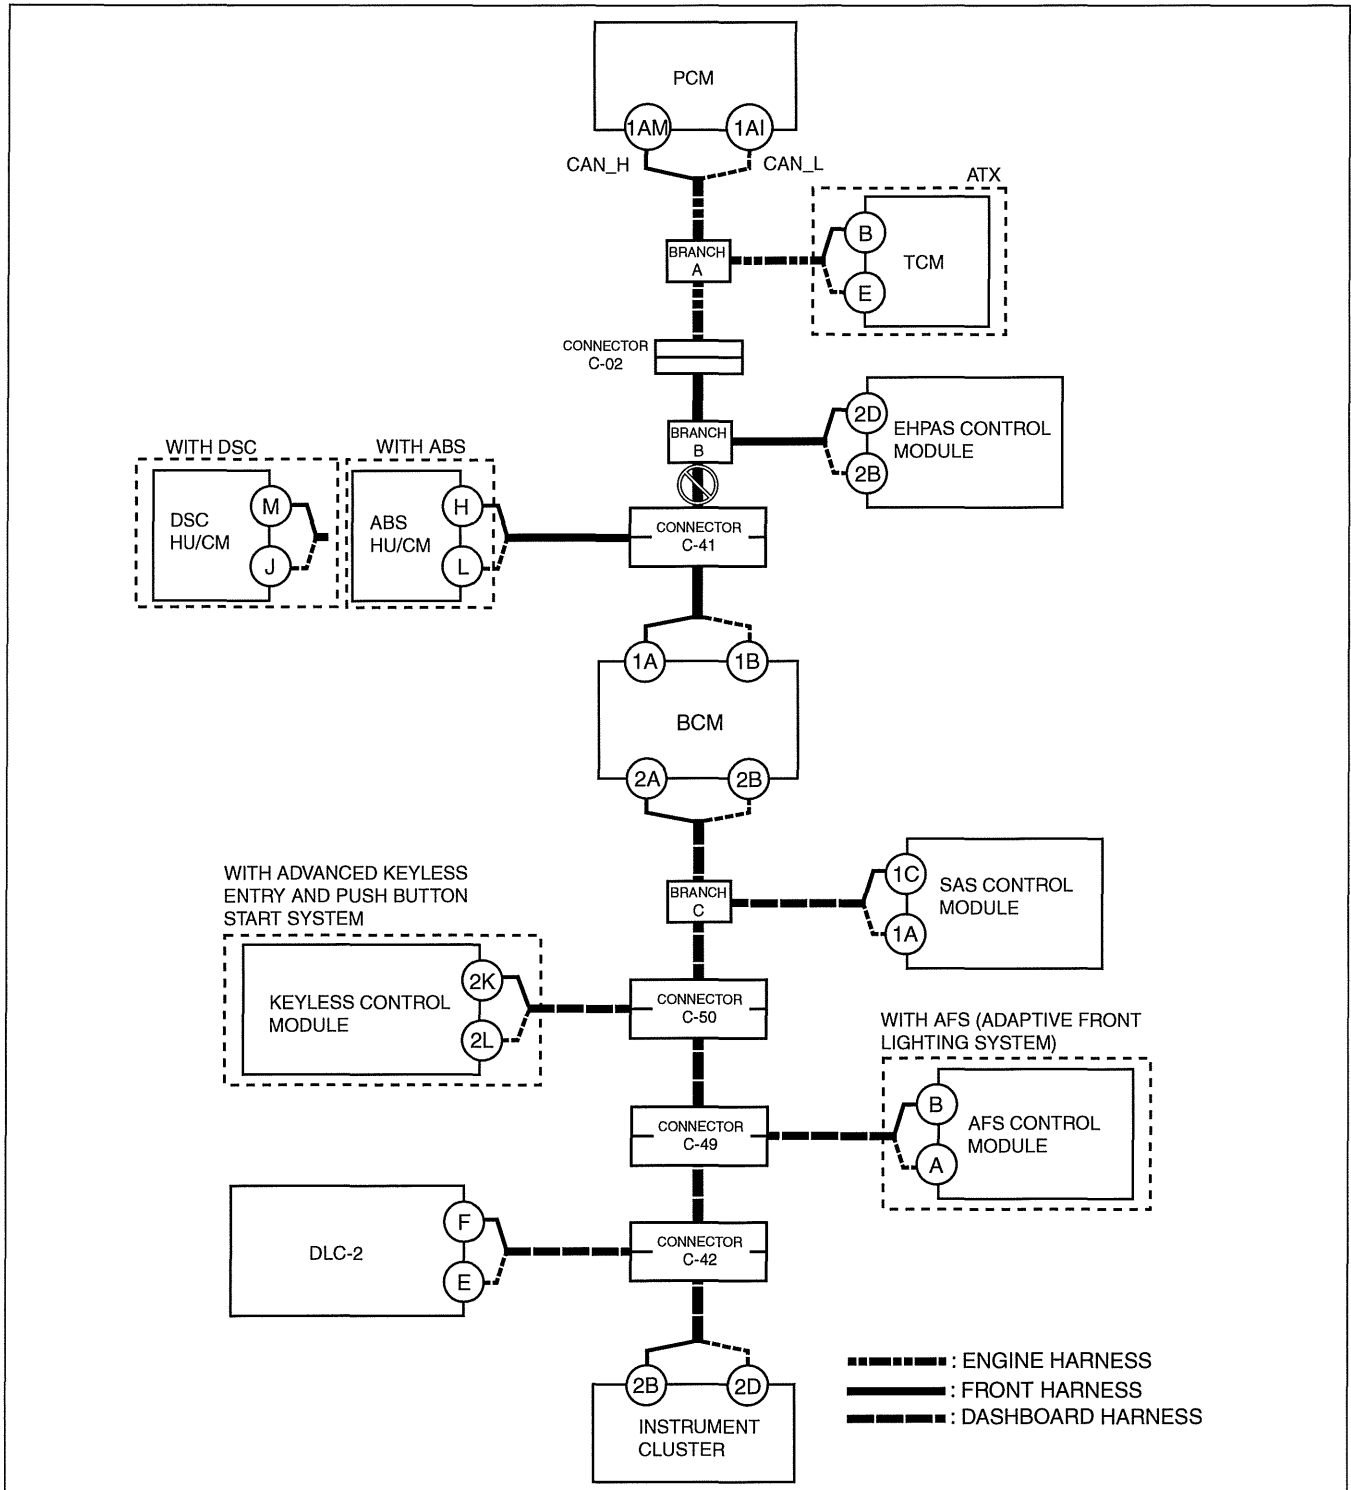

ON-BOARD DIAGNOSTIC [MULTIPLEX COMMUNICATION SYSTEM]

ON-BOARD DIAGNOSTIC [MULTIPLEX COMMUNICATION SYSTEM]

DETERMINING MALFUNCTIONING PART (MS-CAN) [MULTIPLEX COMMUNICATION SYSTEM]

id0902e6846800

Caution

- If the malfunctioning part is detected in the communication line, before disconnecting the related connector for inspection, press the connector in the connection direction to verify that there is no looseness or disconnection.
- When disconnecting the connector, verify that there is no damage, deformation, or corrosion of the connector terminals.

1. Verify the following for the modules related to the CAN system.
 - Communication error DTCs
 - Malfunctioning module
 - Display status of the air conditioner/audio control on the multi information display/information display when the climate control unit, or either the audio unit is operated.
 - The operation condition of the SIRIUS satellite radio system and the Bluetooth system.
2. Look for a DTC display pattern and system operation status in tandem which match.

Note

- A hyphen (-) in the DTC output pattern cell indicates that the DTC may or may not be displayed depending on the malfunction detection conditions. If it is not displayed, the malfunctioning location can be determined by checking the crosses (x) and asterisks (*).

3. Refer to the matching tandem diagnostic results (A to G) and inspect the possible cause and inspection item.
4. Perform the DTC inspection after the repair procedure.
 - If any DTC is displayed, return to 09-02D-1 FOREWORD [MULTIPLEX COMMUNICATION SYSTEM].

Diagnostic Table for Determining Malfunctioning Part

09-02D

Cross (x): Displayed
Hyphen (-): May or may not be displayed
Asterisk (*): No display or no operation

DTC display		DTC display pattern						
DTC output module	DTC							
Information display*2	U0164 EATC						x

M-MDS AND VEHICLE NOT COMMUNICATING [MULTIPLEX COMMUNICATION SYSTEM]

id0902e6037400

Caution

- Perform the following on-board diagnosis according to 09-02D-1 FOREWORD [MULTIPLEX COMMUNICATION SYSTEM] troubleshooting procedure.

Detection Condition

- Possible causes of communication errors between the M-MDS and vehicle include communication circuit interruption due to an open circuit in the CAN communication wiring harness, or poor contact of connector terminals, or a BUS OFF condition due to a short circuit in the CAN communication wiring harness.

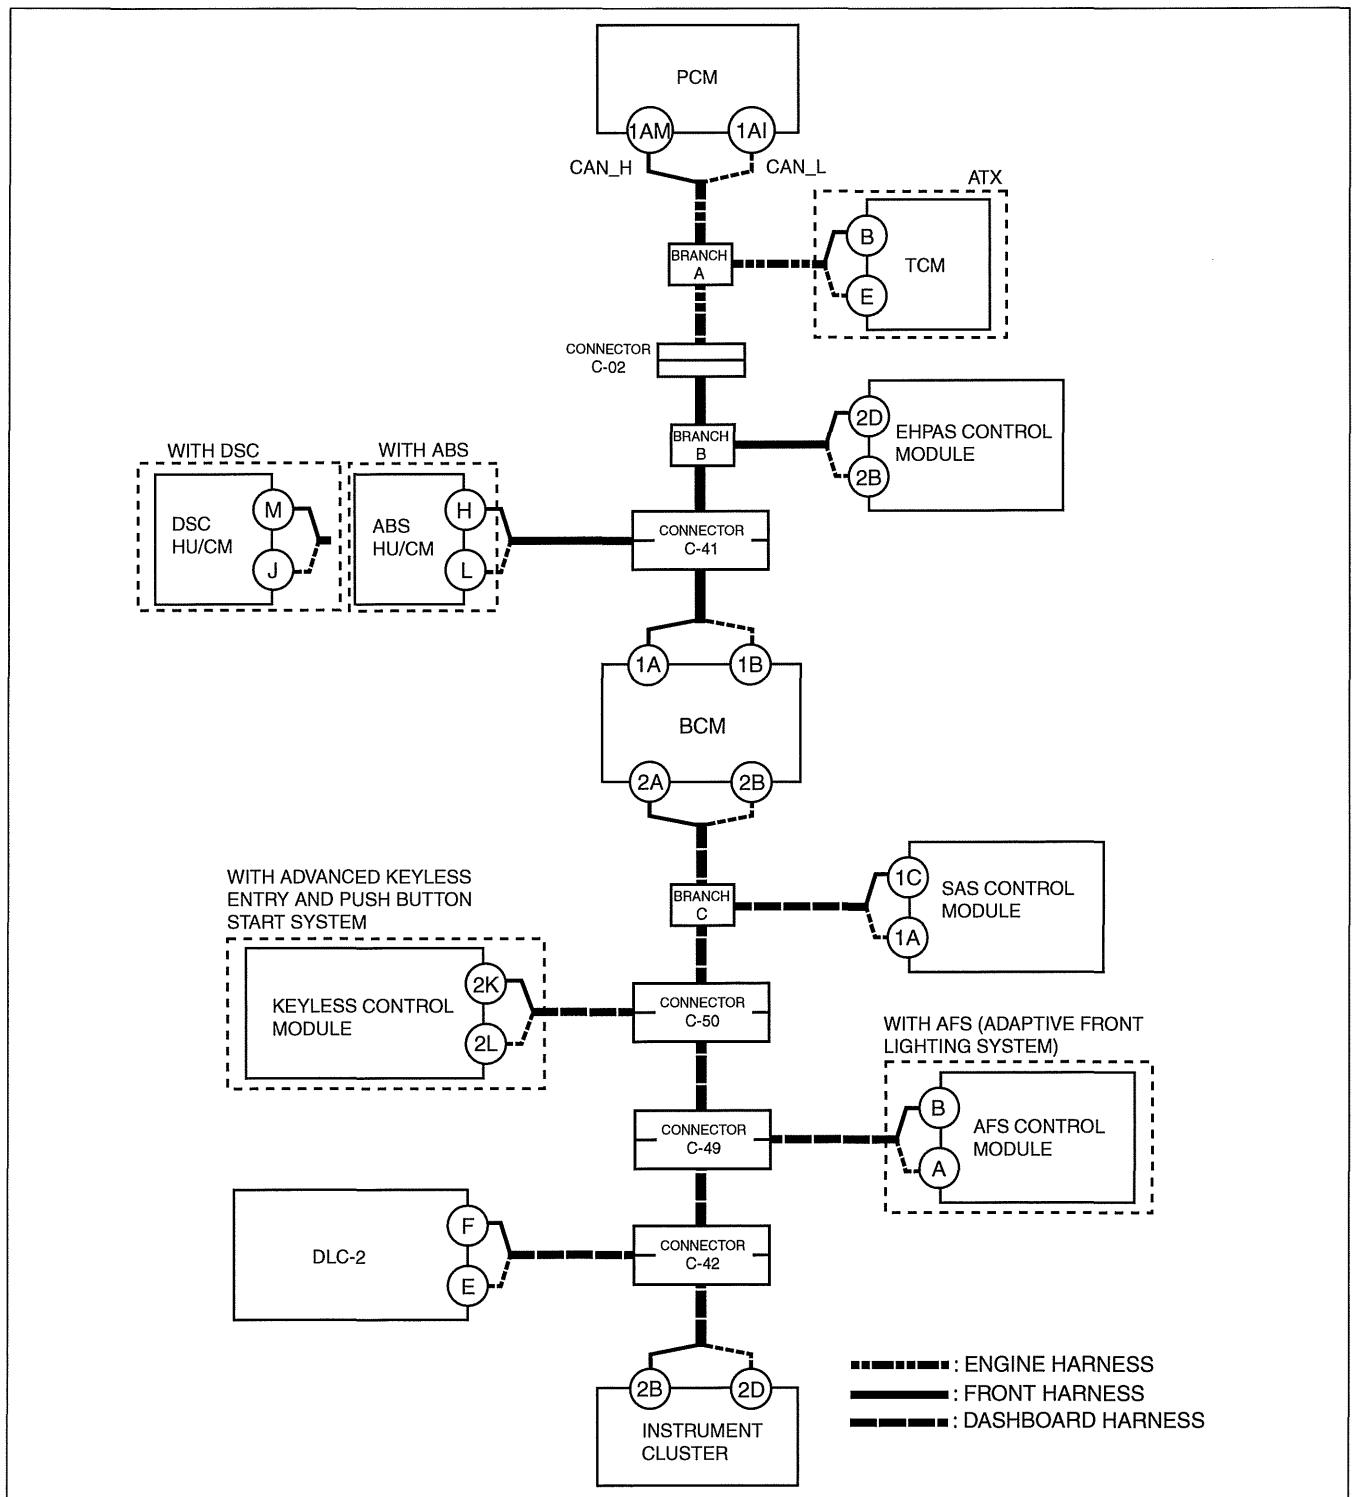

Possible Causes

- Open circuit in wiring harness between PCM and DLC-2
- Improper insertion, connector terminal damage, deformation, corrosion, or disconnection of PCM, BCM, connector C-02, connector C-41, connector C-50, connector C-49, or connector C-42
- Short circuit in wiring harness between CAN system-related module CAN_L and CAN_H lines
- Short circuit to power supply in wiring harness between CAN system-related module
- Short circuit to ground in wiring harness between CAN system-related module
- Short circuit to power supply in CAN system-related module internal CAN lines
- Short circuit to ground in CAN system-related module internal CAN lines
- Damage, deformation, corrosion, or disconnection of DLC-2

ON-BOARD DIAGNOSTIC [MULTIPLEX COMMUNICATION SYSTEM]

- PCM power supply is not normal
- PCM ground is not normal
- PCM internal resistance is not normal
- CAN system-related module malfunction

Wiring Diagram

09-02D

am3uuw0000573

ON-BOARD DIAGNOSTIC [MULTIPLEX COMMUNICATION SYSTEM]

Diagnostic Procedure

Caution

- When disconnecting the connector, verify that there is no looseness, damage, deformation, corrosion, or poor connection of the connector terminals.

Step	Inspection	Action
1	VERIFICATION BEFORE SERVICING <ul style="list-style-type: none"> • Is there communication between the M-MDS and vehicle? 	Yes Go to the next step.
		No Go back to FOREWORD [MULTIPLEX COMMUNICATION SYSTEM. (See 09-02D-1 FOREWORD [MULTIPLEX COMMUNICATION SYSTEM].)]
2	VERIFY THAT M-MDS AND DLC-2 ARE CONNECTED <ul style="list-style-type: none"> • Verify the connection condition between the M-MDS and DLC-2. • Are the connector terminals normal without damage, deformation, corrosion, or disconnection? 	Yes Go to the next step.
		No Correct the connection condition, then go to Step 13.
3	VERIFY PCM POWER SUPPLY CONDITION <ul style="list-style-type: none"> • Refer to the PCM terminal voltage table and inspect the terminal voltage and fuse condition. (See 01-40A-8 PCM INSPECTION [LF, L5].) (See 01-40B-8 PCM INSPECTION [L3 WITH TC].) • Is the power supply condition normal? 	Yes Go to the next step.
		No Repair or replace the fuse or wiring harness, then go to Step 13.
4	VERIFY PCM BODY GROUND CONDITION <ul style="list-style-type: none"> • Inspect the PCM body ground wiring harness and ground point. • Are the ground and ground point normal? 	Yes Go to the next step.
		No Repair or replace the wiring harness, then go to Step 13.
5	INSPECT PCM CONNECTOR TERMINAL <ul style="list-style-type: none"> • Disconnect the negative battery cable. • Disconnect the PCM connector. • Are the PCM connector terminal normal without damage, deformation, corrosion, or disconnection? 	Yes Go to the next step.
		No Repair the connector terminal if necessary, then go to Step 13.
6	INSPECT PCM <ul style="list-style-type: none"> • Disconnect the PCM connector. • Measure the resistance between the following PCM connector terminals: <ul style="list-style-type: none"> — Between terminal 1AM and terminal 1AI (part side) • Is the resistance 118—130 ohms? 	Yes Go to the next step.
		No Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].) (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
7	VERIFY THAT THERE IS NO OPEN CIRCUIT IN CAN COMMUNICATION WIRING HARNESS <p>Caution</p> <ul style="list-style-type: none"> • When inspecting the DLC-2, touch it with a paper clip or similar thin pin without directly inserting a tester into the terminals. • Verify the continuity between the following terminals: <ul style="list-style-type: none"> — Between DLC-2 terminal F and PCM terminal 1AM — Between DLC-2 terminal E and PCM terminal 1AI • Is there continuity? 	Yes Go to the next step.
		No There is an open circuit in the CAN communication wiring harness. Repair or replace it, then go to Step 13.

ON-BOARD DIAGNOSTIC [MULTIPLEX COMMUNICATION SYSTEM]

Step	Inspection	Action	
8	INSPECT CAN COMMUNICATION WIRING HARNESS IN BCM FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Verify the continuity between the following terminals: <ul style="list-style-type: none"> — Between BCM terminal 1A and BCM terminal 2A — Between BCM terminal 1B and BCM terminal 2B • Is there continuity? 	Yes	Go to the next step.
		No	Replace the BCM which has an open circuit in the CAN communication wiring harness in the BCM, then go to Step 13. (See 09-40-2 BODY CONTROL MODULE (BCM) REMOVAL/INSTALLATION.)
9	VERIFY THAT THERE IS NO SHORT CIRCUIT IN CAN COMMUNICATION WIRING HARNESS <p>Caution</p> <ul style="list-style-type: none"> • When inspecting the DLC-2, touch it with a paper clip or similar thin pin without directly inserting a tester into the terminals. • Measure the resistance between the terminals. <ul style="list-style-type: none"> — Between DLC-2 terminal F and DLC-2 terminal E • Is the resistance 60 ohms or less? 	Yes	There is an open circuit in the CAN communication wiring harness. Repair or replace it, then go to Step 13.
		No	Go to the next step.
10	VERIFY NO SHORT CIRCUIT TO GROUND IN CAN COMMUNICATION WIRING HARNESS <p>Caution</p> <ul style="list-style-type: none"> • When inspecting the DLC-2, touch it with a paper clip or similar thin pin without directly inserting a tester into the terminals. • Verify the continuity between the following terminals: <ul style="list-style-type: none"> — Between DLC-2 terminal F and ground — Between DLC-2 terminal E and ground — Between PCM terminal 1AM and ground — Between PCM terminal 1Al and ground • Is there continuity? 	Yes	There is a short circuit to ground in the CAN communication wiring harness. Repair or replace it, then go to Step 13.
		No	Go to the next step.
11	VERIFY NO SHORT CIRCUIT TO POWER SUPPLY SYSTEM IN CAN COMMUNICATION WIRING HARNESS <p>Caution</p> <ul style="list-style-type: none"> • When inspecting the DLC-2, touch it with a paper clip or similar thin pin without directly inserting a tester into the terminals. • Verify the continuity between the following terminals: <ul style="list-style-type: none"> — Between DLC-2 terminal F and DLC-2 terminal A — Between DLC-2 terminal E and DLC-2 terminal A — Between PCM terminal 1AM and PCM terminal 1C (LF, L5) — Between PCM terminal 1Al and PCM terminal 1C (LF, L5) — Between PCM terminal 1AM and PCM terminal 1BA (L3 WITH TC) — Between PCM terminal 1Al and PCM terminal 1BA (L3 WITH TC) • Is there continuity? 	Yes	There is a short circuit to the power supply system in the CAN communication wiring harness. Repair or replace it, then go to Step 13.
		No	Go to the next step.

09-02D

ON-BOARD DIAGNOSTIC [MULTIPLEX COMMUNICATION SYSTEM]

Step	Inspection	Action	
12	INSPECT CAN-RELATED MODULES OTHER THAN PCM <ul style="list-style-type: none"> • Remove only one of the CAN-related modules other than those related to the PCM. • Connect the negative battery cable. • Connect the M-MDS to the DLC-2. • Does the M-MDS recognize the vehicle? 	Yes	Replace the removed module.
		No	Inspect all of the CAN-related modules other than those related to the PCM using the same procedure. After inspecting all of the modules, go to the next step.
13	PERFORM VEHICLE IDENTIFICATION <ul style="list-style-type: none"> • Connect the M-MDS to the DLC-2. • Does the M-MDS recognize the vehicle? 	Yes	DTC troubleshooting completed.
		No	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].) (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
14	PERFORM VEHICLE IDENTIFICATION <ul style="list-style-type: none"> • Connect the M-MDS to the DLC-2. • Does the M-MDS recognize the vehicle? 	Yes	DTC troubleshooting completed.
		No	Replace the BCM. (See 09-40-2 BODY CONTROL MODULE (BCM) REMOVAL/INSTALLATION.)

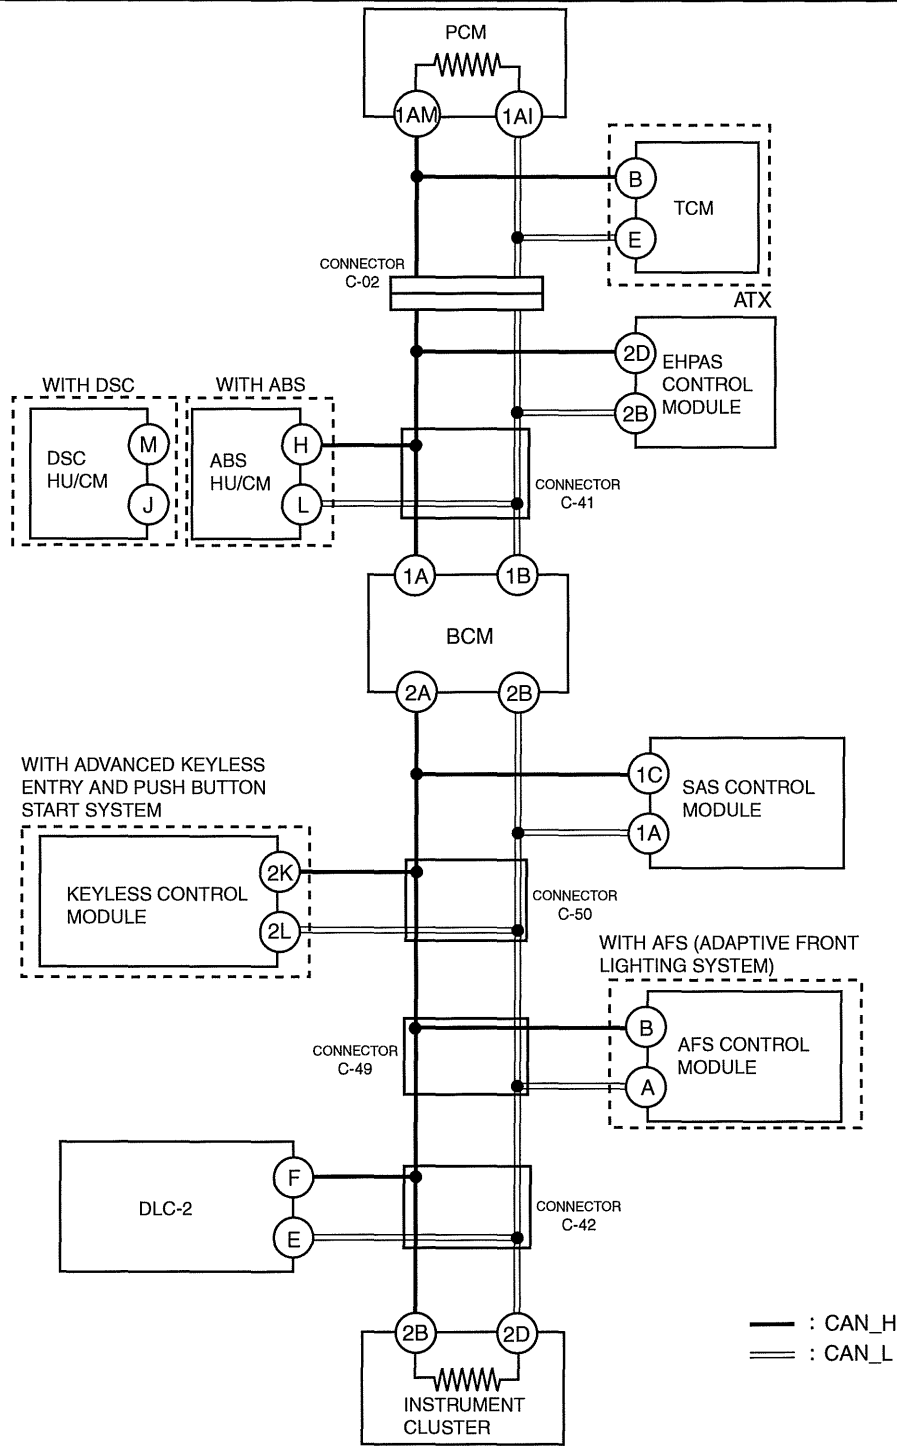

DTC U0001:88, U0073, U0073:00 [MULTIPLEX COMMUNICATION SYSTEM]

id0902e6847500

DTC	U0001:88	Module communication error
	U0073	CAN system communication error
	U0073:00	CAN system communication error
DETECTION CONDITION	Warning <ul style="list-style-type: none"> • Perform the following on-board diagnosis according to 09-02D-1 FOREWORD [MULTIPLEX COMMUNICATION SYSTEM] troubleshooting procedure. • CAN system-related harness malfunction • CAN system-related module malfunction 	
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Open or short circuit in wiring harness • Malfunction of connectors between PCM, TCM, EHPAS control module, ABS HU/CM, DSC HU/CM, BCM, SAS control module, keyless control module, AFS control module and instrument cluster • PCM malfunction • TCM malfunction • EHPAS control module malfunction • ABS HU/CM malfunction • DSC HU/CM malfunction • BCM malfunction • SAS control module malfunction • Keyless control module malfunction • AFS control module malfunction • Instrument cluster malfunction

09-02D

ON-BOARD DIAGNOSTIC [MULTIPLEX COMMUNICATION SYSTEM]

Diagnostic procedure

Caution

- When disconnecting the connector, verify that there is no looseness, damage, deformation, corrosion, or poor connection of the connector terminals.

Step	Inspection		Action
1	VERIFICATION BEFORE SERVICING <ul style="list-style-type: none"> • Are any DTCs, except the following, displayed? <ul style="list-style-type: none"> — U0001:88 — U0073 — U0073:00 	Yes	Determine the open circuit location referring to 09-02D-7 DETERMINING MALFUNCTIONING PART (HS-CAN) [MULTIPLEX COMMUNICATION SYSTEM].
		No	Go to the next step.
2	INSPECTION OF CONTROL MODULE CONNECTOR OUTPUTTING DTCs <ul style="list-style-type: none"> • Inspect the terminal condition of the control module connector outputting DTCs and the mid-connector. • Are the connector terminals normal without damage, deformation, corrosion, or disconnection? 	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 9.
3	INSPECTION OF POWER SUPPLY OF CONTROL MODULE OUTPUTTING DTCs <ul style="list-style-type: none"> • Refer to the terminal voltage table of the control module outputting DTCs or use the PID/data monitoring function to inspect the terminal voltage and fuse condition. • Is the power supply voltage normal? 	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 9.
4	INSPECTION OF BODY GROUND CONDITION OF CONTROL MODULE OUTPUTTING DTCs <ul style="list-style-type: none"> • Inspect the body ground wires and ground point of the control module outputting DTCs. • Are the ground and ground point normal? 	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 9.
5	CAN SYSTEM RELATED WIRING HARNESS INSPECTION <ul style="list-style-type: none"> • CAN system related wiring harness inspection: <ul style="list-style-type: none"> — Short to ground — Short to power supply — Short between twisted pair wiring harness — Open circuit • Is the wiring harness normal? 	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 9.
6	INSPECT PCM <ul style="list-style-type: none"> • Disconnect the PCM connector. • Measure the resistance between the following PCM connector terminals: <ul style="list-style-type: none"> — Between terminal 1AM and terminal 1AI (part side) • Is the resistance 118—130 ohms? 	Yes	Go to the next step.
		No	Replace the PCM, then go to Step 9. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].) (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
7	INSPECT INSTRUMENT CLUSTER <ul style="list-style-type: none"> • Disconnect the instrument cluster connector. • Measure the resistance between the following instrument cluster connector terminals: <ul style="list-style-type: none"> — Between terminal 2B and terminal 2D (part side) • Is the resistance 118—130 ohms? 	Yes	Go to the next step.
		No	Replace the instrument cluster, then go to Step 9. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
8	CAN RELATED MODULE VERIFICATION <ul style="list-style-type: none"> • Remove only one of the CAN-related modules. • Clear DTCs using the M-MDS. • Inspect the DTCs of all modules using the M-MDS. • Are DTCs U0001:88, U0073, U0073:00 displayed? 	Yes	Reinstall the removed module, remove another module and perform the same inspection. Inspect all of the CAN-related modules using the same procedure. After inspecting all of the modules, go to the next step.
		No	Replace the removed module.

ON-BOARD DIAGNOSTIC [MULTIPLEX COMMUNICATION SYSTEM]

Step	Inspection		Action
9	AFTER REPAIR VERIFICATION <ul style="list-style-type: none"> Connect all of the modules. Clear DTCs using the M-MDS. Inspect the DTCs using the M-MDS. Are DTCs displayed? 	Yes	Perform the CAN system on-board diagnosis again according to the troubleshooting procedure (See 09-02D-1 FOREWORD [MULTIPLEX COMMUNICATION SYSTEM].)
		No	DTC troubleshooting completed.

DTC U0010:88, U0498:68, U2516 [MULTIPLEX COMMUNICATION SYSTEM]

09-02D

ON-BOARD DIAGNOSTIC [MULTIPLEX COMMUNICATION SYSTEM]

Diagnostic procedure

Caution

- When disconnecting the connector, verify that there is no looseness, damage, deformation, corrosion, or poor connection of the connector terminals.

Step	Inspection	Action	
1	VERIFICATION BEFORE SERVICING <ul style="list-style-type: none"> • Are any DTCs, except the following, displayed? <ul style="list-style-type: none"> — U0010:88 — U0498:68 — U2516 	Yes	Determine the open circuit location referring to 09-02D-27 DETERMINING MALFUNCTIONING PART (MS-CAN) [MULTIPLEX COMMUNICATION SYSTEM].
		No	Go to the next step.
2	INSPECTION OF CONTROL MODULE CONNECTOR OUTPUTTING DTCs <ul style="list-style-type: none"> • Inspect the terminal condition of the control module connector outputting DTCs and the mid-connector. • Are the connector terminals normal without damage, deformation, corrosion, or disconnection? 	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 9.
3	INSPECTION OF POWER SUPPLY OF CONTROL MODULE OUTPUTTING DTCs <ul style="list-style-type: none"> • Refer to the terminal voltage table of the control module outputting DTCs to inspect the terminal voltage and fuse condition. • Is the power supply voltage normal? 	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 9.
4	INSPECTION OF BODY GROUND CONDITION OF CONTROL MODULE OUTPUTTING DTCs <ul style="list-style-type: none"> • Inspect the body ground wires and ground point of the control module outputting DTCs. • Are the ground and ground point normal? 	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 9.
5	CAN SYSTEM RELATED WIRING HARNESS INSPECTION <ul style="list-style-type: none"> • CAN system related wiring harness inspection: <ul style="list-style-type: none"> — Short to ground — Short to power supply — Short between twisted pair wiring harness — Open circuit • Is the wiring harness normal? 	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 9.
6	INSPECT INSTRUMENT CLUSTER <ul style="list-style-type: none"> • Disconnect the instrument cluster connector. • Measure the resistance between the following instrument cluster connector terminals: <ul style="list-style-type: none"> — Between terminal 2C and terminal 2E (part side) • Is the resistance 118—130 ohms? 	Yes	Go to the next step.
		No	Replace the instrument cluster, then go to Step 9. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.)
7	INSPECT MULTI INFORMATION DISPLAY/ INFORMATION DISPLAY <ul style="list-style-type: none"> • Disconnect the multi information display/ information display connector. • Measure the resistance between the following multi information display/ information display connector terminals: <ul style="list-style-type: none"> — Between terminal 1V and terminal 1X (part side) • Is the resistance 118—130 ohms? 	Yes	Go to the next step.
		No	Replace the multi information display/information display, then go to Step 9. (See 09-22-13 INFORMATION DISPLAY REMOVAL/ INSTALLATION.)
8	CAN RELATED MODULE VERIFICATION <ul style="list-style-type: none"> • Remove only one of the CAN-related modules. • Clear DTCs. • Inspect the DTCs of all modules. • Are DTCs U0010:88, U0498:68, U2516 displayed? 	Yes	Reinstall the removed module, remove another module and perform the same inspection. Inspect all of the CAN-related modules using the same procedure. After inspecting all of the modules, go to the next step.
		No	Replace the removed module.

ON-BOARD DIAGNOSTIC [MULTIPLEX COMMUNICATION SYSTEM]

Step	Inspection	Action
9	AFTER REPAIR VERIFICATION <ul style="list-style-type: none">• Connect all of the modules.• Clear DTCs.• Inspect the DTCs.• Are DTCs displayed?	Yes Perform the CAN system on-board diagnosis again according to the troubleshooting procedure (See 09-02D-1 FOREWORD [MULTIPLEX COMMUNICATION SYSTEM].)
		No DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

DTC INSPECTION [INSTRUMENT CLUSTER]

id0902e8960300

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Self Test".
 2. Select "Modules".
 3. Select "IC".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "IC".
 3. Select "Self Test".
3. Verify the DTC according to the directions on the screen.
 - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
4. After completion of repairs, clear all DTCs stored in the instrument cluster. (See 09-02E-4 CLEARING DTC [INSTRUMENT CLUSTER].)

ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

DTC B1A84:41/U0300:00 [INSTRUMENT CLUSTER]

id0902e8999900

DESCRIPTION	Configuration error
DETECTION CONDITION	<ul style="list-style-type: none"> Instrument cluster detects the configuration error when the ignition is ON.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Configuration was not done correctly Instrument cluster malfunction

Diagnostic Procedure

STEP	INSPECTION	ACTION
1	PERFORM INSTRUMENT CLUSTER CONFIGURATION <ul style="list-style-type: none"> Perform the "INSTRUMENT CLUSTER CONFIGURATION" using the M-MDS. (See 09-22-10 INSTRUMENT CLUSTER CONFIGURATION.) Clear the DTC from the instrument cluster using the M-MDS. (See 09-02E-4 CLEARING DTC [INSTRUMENT CLUSTER].) Switch the ignition to ON. Perform the "DTC INSPECTION". (See 09-02E-4 DTC INSPECTION [INSTRUMENT CLUSTER].) Is the same DTC present? 	Yes Perform the "INSTRUMENT CLUSTER CONFIGURATION" again, then go to the next step. (See 09-22-10 INSTRUMENT CLUSTER CONFIGURATION.)
		No Go to Step 3.
2	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Clear the DTC from the instrument cluster using the M-MDS. (See 09-02E-4 CLEARING DTC [INSTRUMENT CLUSTER].) Switch the ignition to ON. Perform the "DTC INSPECTION". (See 09-02E-4 DTC INSPECTION [INSTRUMENT CLUSTER].) Is the same DTC present? 	Yes Replace the instrument cluster, then go to the next step. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION)
		No Go to the next step.
3	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> Are any DTCs present? 	Yes Go to the applicable DTC inspection. (See 09-02E-5 DTC TABLE [INSTRUMENT CLUSTER].)
		No DTC troubleshooting completed.

09-02E

ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

DTC B1A84:51/U2100:00 [INSTRUMENT CLUSTER]

id0902e8999800

DESCRIPTION	Configuration error
DETECTION CONDITION	<ul style="list-style-type: none"> Instrument cluster detects the erratic configuration data.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Instrument cluster configuration not implemented Instrument cluster malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	PERFORM INSTRUMENT CLUSTER CONFIGURATION <ul style="list-style-type: none"> Perform the "INSTRUMENT CLUSTER CONFIGURATION" using the M-MDS. (See 09-22-10 INSTRUMENT CLUSTER CONFIGURATION.) Clear the DTC from the instrument cluster using the M-MDS. (See 09-02E-4 CLEARING DTC [INSTRUMENT CLUSTER].) Switch the ignition to ON. Perform the "DTC INSPECTION". (See 09-02E-4 DTC INSPECTION [INSTRUMENT CLUSTER].) Is the same DTC present? 	Yes	Perform the "INSTRUMENT CLUSTER CONFIGURATION" again, then go to the next step. (See 09-22-10 INSTRUMENT CLUSTER CONFIGURATION.)
		No	Go to Step 3.
2	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Clear the DTC from the instrument cluster using the M-MDS. (See 09-02E-4 CLEARING DTC [INSTRUMENT CLUSTER].) Switch the ignition to ON. Perform the "DTC INSPECTION". (See 09-02E-4 DTC INSPECTION [INSTRUMENT CLUSTER].) Is the same DTC present? 	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION)
		No	Go to the next step.
3	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02E-5 DTC TABLE [INSTRUMENT CLUSTER].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

DTC U0401:68 [INSTRUMENT CLUSTER]

id0902e8988800

DESCRIPTION	Erratic signal from PCM
DETECTION CONDITION	<ul style="list-style-type: none"> Instrument cluster receives the erratic data from PCM when the ignition is ON.
POSSIBLE CAUSE	<ul style="list-style-type: none"> PCM DTC is stored PCM malfunction Instrument cluster malfunction

Diagnostic Procedure

STEP	INSPECTION	ACTION
1	CONFIRM PCM DTC <ul style="list-style-type: none"> Perform the DTC Reading Procedure to confirm the PCM DTC. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Are any DTCs present? 	Yes Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].) (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No Go to the next step.
2	CONFIRM INSTRUMENT CLUSTER DTC <ul style="list-style-type: none"> Clear the DTC from the instrument cluster using the M-MDS. (See 09-02E-4 CLEARING DTC [INSTRUMENT CLUSTER].) Switch the ignition to ON and wait for 20 s or more. Drive the vehicle at speed of 30 km/h {19 mph} or more. Turn the boost gauge display on. (L3 WITH TC) (See SERVICE HIGHLIGHTS, BOOST GAUGE CONTROL CONSTRUCTION/ OPERATION.) Perform the "DTC INSPECTION" to confirm the instrument cluster DTC. (See 09-02E-4 DTC INSPECTION [INSTRUMENT CLUSTER].) Is the same DTC present? 	Yes Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].) (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No Go to Step 4.
3	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Clear the DTC from the instrument cluster using the M-MDS. (See 09-02E-4 CLEARING DTC [INSTRUMENT CLUSTER].) Switch the ignition to ON and wait for 20 s or more. Drive the vehicle at speed of 30 km/h {19 mph} or more. Turn the boost gauge display on. (L3 WITH TC) (See SERVICE HIGHLIGHTS, BOOST GAUGE CONTROL CONSTRUCTION/ OPERATION.) Perform the "DTC INSPECTION" to confirm the instrument cluster DTC. (See 09-02E-4 DTC INSPECTION [INSTRUMENT CLUSTER].) Is the same DTC present? 	Yes Replace the instrument cluster, then go to the next step. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.)
		No Go to the next step.
4	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> Are any DTCs present? 	Yes Go to the applicable DTC inspection. (See 09-02E-5 DTC TABLE [INSTRUMENT CLUSTER].)
		No DTC troubleshooting completed.

09-02E

ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

DTC U0401:92 [INSTRUMENT CLUSTER]

id0902e8988700

DESCRIPTION	Erratic signal from PCM
DETECTION CONDITION	<ul style="list-style-type: none"> • Illumination command signal from PCM continues for 20 s or more.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • PCM DTC is stored • PCM malfunction • Instrument cluster malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	CONFIRM PCM DTC <ul style="list-style-type: none"> • Perform the DTC Reading Procedure to confirm the PCM DTC. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].) (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
2	CONFIRM INSTRUMENT CLUSTER DTC <ul style="list-style-type: none"> • Clear the DTC from the instrument cluster using the M-MDS. (See 09-02E-4 CLEARING DTC [INSTRUMENT CLUSTER].) • Switch the ignition to ON and wait for 20 s or more. • Drive the vehicle at speed of 30 km/h {19 mph} or more with 500 rpm or more. • Perform the "DTC INSPECTION" to confirm the instrument cluster DTC. (See 09-02E-4 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].) 4	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> Are any DTCs present? 	Yes Go to the applicable DTC inspection. (See 09-02E-5 DTC TABLE [INSTRUMENT CLUSTER].)
		No DTC troubleshooting completed.

09-02E

ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

DTC U0415:92 [INSTRUMENT CLUSTER]

id0902e8988400

DESCRIPTION	Erratic signal from ABS HU/CM or DSC HU/CM
DETECTION CONDITION	<ul style="list-style-type: none"> • Illumination command signal from ABS/TCS HU/CM or DSC HU/CM continues for 20 s or more.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • ABS HU/CM or DSC HU/CM DTC is stored • ABS HU/CM or DSC HU/CM malfunction • Instrument cluster malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	CONFIRM ABS HU/CM OR DSC HU/CM DTC <ul style="list-style-type: none"> • Perform the Reading DTCs Procedure to confirm the ABS HU/CM or DSC HU/CM DTC. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].) (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].) (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	Go to the next step.
2	CONFIRM INSTRUMENT CLUSTER DTC <ul style="list-style-type: none"> • Clear the DTC from the instrument cluster using the M-MDS. (See 09-02E-4 CLEARING DTC [INSTRUMENT CLUSTER].) • Switch the ignition to ON and wait for 20 s or more. • Drive the vehicle at speed of 30 km/h {19 mph} or more with 500 rpm or more. • Perform the "DTC INSPECTION" to confirm the instrument cluster DTC. (See 09-02E-4 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the same DTC present? 	Yes	Replace the ABS HU/CM or DSC HU/CM, then go to the next step. (See 04-13-2 ABS HU/CM REMOVAL/INSTALLATION.) (See 04-15-2 DSC HU/CM REMOVAL/INSTALLATION.)
		No	Go to Step 4.
3	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Clear the DTC from the instrument cluster using the M-MDS. (See 09-02E-4 CLEARING DTC [INSTRUMENT CLUSTER].) • Switch the ignition to ON and wait for 20 s or more. • Drive the vehicle at speed of 30 km/h {19 mph} or more with 500 rpm or more. • Perform the "DTC INSPECTION" to confirm the instrument cluster DTC. (See 09-02E-4 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the same DTC present? 	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02E-5 DTC TABLE [INSTRUMENT CLUSTER].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

DTC U0452:92 [INSTRUMENT CLUSTER]

id0902e8988200

DESCRIPTION	Erratic signal from SAS control module
DETECTION CONDITION	<ul style="list-style-type: none"> • Illumination command signal from SAS control module continues for 20 s or more.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • SAS control module DTC is stored • SAS control module malfunction • Instrument cluster malfunction

Diagnostic Procedure

STEP	INSPECTION	ACTION
1	CONFIRM SAS CONTROL MODULE DTC <ul style="list-style-type: none"> • Perform the "DTC INSPECTION" to confirm the SAS control module. (See 08-02-6 DTC INSPECTION.) • Are any DTCs present? 	Yes Go to the applicable DTC inspection. (See 08-02-7 DTC TABLE.)
		No Go to the next step.
2	CONFIRM INSTRUMENT CLUSTER DTC <ul style="list-style-type: none"> • Clear the DTC from the instrument cluster using the M-MDS. (See 09-02E-4 CLEARING DTC [INSTRUMENT CLUSTER].) • Switch the ignition to ON and wait for 20 s or more. • Drive the vehicle at speed of 30 km/h {19 mph} or more with 500 rpm or more. • Perform the "DTC INSPECTION" to confirm the instrument cluster DTC. (See 09-02E-4 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the same DTC present? 	Yes Replace the SAS control module, then go to the next step. (See 08-10-17 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No Go to Step 4.
3	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Clear the DTC from the instrument cluster using the M-MDS. (See 09-02E-4 CLEARING DTC [INSTRUMENT CLUSTER].) • Switch the ignition to ON and wait for 20 s or more. • Drive the vehicle at speed of 30 km/h {19 mph} or more with 500 rpm or more. • Perform the "DTC INSPECTION" to confirm the instrument cluster DTC. (See 09-02E-4 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the same DTC present? 	Yes Replace the instrument cluster, then go to the next step. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No Go to the next step.
4	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> • Are any DTCs present? 	Yes Go to the applicable DTC inspection. (See 09-02E-5 DTC TABLE [INSTRUMENT CLUSTER].)
		No DTC troubleshooting completed.

09-02E

ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

Diagnostic Procedure

STEP	INSPECTION	ACTION	
1	CONFIRM PCM DTC <ul style="list-style-type: none"> Perform the DTC Reading Procedure to confirm the PCM DTC. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].) (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
2	INSPECT BATTERY <ul style="list-style-type: none"> Inspect the battery. (See 01-17A-4 BATTERY INSPECTION [LF, L5].) (See 01-17B-4 BATTERY INSPECTION [L3 WITH TC].) Is there any malfunction? 	Yes	Recharge or replace the battery, then go to Step 6. (See 01-17A-5 BATTERY RECHARGING [LF, L5].) (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].) (See 01-17B-6 BATTERY RECHARGING [L3 WITH TC].) (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
3	INSPECT GENERATOR <ul style="list-style-type: none"> Inspect the generator. (See 01-17A-8 GENERATOR INSPECTION [LF, L5].) (See 01-17B-8 GENERATOR INSPECTION [L3 WITH TC].) Is there any malfunction? 	Yes	Replace the generator, then go to Step 6. (See 01-17A-6 GENERATOR REMOVAL/INSTALLATION [LF, L5].) (See 01-17B-6 GENERATOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
4	INSPECT INSTRUMENT CLUSTER CONNECTOR AND TERMINALS <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the negative battery cable. Disconnect the instrument cluster connector. Inspect the connector for poor connection (such as damaged/pulled-out pins, and corrosion). Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 6.
		No	Go to the next step.
5	INSPECT POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GROUND <ul style="list-style-type: none"> Instrument cluster connector is disconnected. Reconnect the negative battery cable. Measure the voltage at the following terminal (wiring harness-side): — Instrument cluster terminal 2U Is the voltage B+? 	Yes	Go to the next step.
		No	Inspect the ROOM 15 A fuse. If the fuse is melt: <ul style="list-style-type: none"> Repair or replace the wiring harness for a possible short to ground. Replace the fuse. If the fuse is deterioration: <ul style="list-style-type: none"> Replace the fuse. If the fuse is normal: <ul style="list-style-type: none"> Repair or replace the wiring harness for a possible open circuit. Go to the next step.
6	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Make sure reconnect the disconnected connectors. Reconnect the negative battery cable. Clear the DTC from the instrument cluster using the M-MDS. (See 09-02E-4 CLEARING DTC [INSTRUMENT CLUSTER].) Switch the ignition to ON. Perform the "DTC INSPECTION" to confirm the instrument cluster DTC. (See 09-02E-4 DTC INSPECTION [INSTRUMENT CLUSTER].) Is the same DTC present? 	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	VERIFY THAT NO OTHER DTCs ARE RECORDED <ul style="list-style-type: none"> Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02E-5 DTC TABLE [INSTRUMENT CLUSTER].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

PID/DATA MONITOR INSPECTION [INSTRUMENT CLUSTER]

id0902e8960600

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "DataLogger".
 2. Select "Modules".
 3. Select "IC".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "IC".
 3. Select "DataLogger".
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the directions on the screen.

am3uuw0000265

Note

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.

PID/DATA MONITOR TABLE [INSTRUMENT CLUSTER]

id0902e8960700

PID Name	Description	Unit/Status	Terminal
ECT_GAUGE	Indicates the engine coolant temperature.	°C	—
FUEL_GAUGE	Indicates the fuel gauge.	L	2R, 2T
FUEL_INPT	Indicates the resistance value of fuel gauge sender unit.	ohm	2R, 2T
NUMKEYS*1	Indicates the number of key ID registered in the instrument cluster.	0—8	—
ODOMETER	Indicates the odometer data.	km	—
SPDMTR	Indicates the vehicle speed.	KPH	—
TACHOMTR	Indicates the tachometer data.	RPM	—
TOTAL_DIST	Indicates the total distance.	km	—
VPWR	Indicate the battery voltage.	V	2U
VSS*2	Indicate the VSS data.	KPH	—
WU1_ID*2	Indicates the registered ID that is transmitted from the wheel unit.	—	—
WU2_ID*2			
WU3_ID*2			
WU4_ID*2			
WU1_P*2	Indicates the tire pressure.	Pa	—
WU2_P*2

am3uuw0000266

- Select the active command modes from the PID table.
- Perform the active command modes, inspect the operations for each parts.

- If the operation of output parts cannot be verified after the active command mode inspection is performed, this could indicate the possibility of an open or short circuit, sticking, or operation malfunction in the output parts.

ACTIVE COMMAND MODES TABLE [INSTRUMENT CLUSTER]

id0902e8960900

Command Name	Operation Condition	Output Part Name	Unit/Operation
ALARM	On: Warning alarm sounds.	Warning alarm	On/Off
LCD_SEG	On: LCD segment displayed.	LCD segment	Off/On
SPDMTR	<ul style="list-style-type: none"> 60 Km/h: Speedometer gauge needle moves to approx. 60 km/h. 120 Km/h: Speedometer gauge needle moves to approx. 120 km/h. Off: Speedometer gauge needle moves to 0 km/h. 	Speed meter	Off/60 Km/h/ 120 Km/h
TACHOMTR	<ul style="list-style-type: none"> 3000 RPM: Tachometer gauge needle moves to approx. 3,000 rpm. 6000 RPM: Tachometer gauge needle moves to approx. 6,000 rpm. Off: Tachometer gauge needle moves to 0 rpm. 	Tachometer	Off/3000 RPM/ 6000 RPM
WL+IL	On: Warning/indicator lights illuminate.	Warning light, indicator light	Off/On

ON-BOARD DIAGNOSTIC [BCM]

DTC INSPECTION [BCM]

id0902f5960300

1. Connect the M-MDS to the DLC-2.
2. Verify the following vehicle conditions:
 - All the switches are turned off (except the ignition switch).
 - All the doors, hood, and trunk (4SD)/liftgate (5HB) are closed.
 - All the doors, and trunk (4SD)/liftgate (5HB) are unlocked.
 - All the seat belts are unbuckled.
 - Parking brake lever is pulled.
3. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Self Test".
 2. Select "Modules".
 3. Select "GEM".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "GEM".
 3. Select "Self Test".
4. Verify the DTC according to the directions on the screen.
 - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
5. After completion of repairs, clear all DTCs stored in the BCM. (See 09-02F-7 CLEARING DTC [BCM].)

am3uuw0000265

CLEARING DTC [BCM]

id0902f5960400

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Self Test".
 2. Select "Modules".
 3. Select "GEM".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "GEM".
 3. Select "Self Test".
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition to ON and wait for **5 s or more**.
7. Perform DTC inspection. (See 09-02F-7 DTC INSPECTION [BCM].)
8. Verify that no DTCs are displayed.

ON-BOARD DIAGNOSTIC [BCM]

DTC B1C45:12 [BCM]

id0902f5390300

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	CONFIRM BCM DTC <ul style="list-style-type: none"> Clear the DTC using the M-MDS. (See 09-02F-7 CLEARING DTC [BCM].) Perform the BCM DTC inspection using the M-MDS. (See 09-02F-7 DTC INSPECTION [BCM].) Is the same DTC present? 	Yes	Go to the next step.
		No	Go to Step 7.
2	INSPECT WINDSHIELD WIPER MOTOR CONNECTOR AND TERMINALS <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the negative battery cable. Disconnect the windshield wiper motor connector. Inspect the connector and terminals (corrosion, damage, pin disconnection). Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 6.
		No	Go to the next step.
3	INSPECT BCM CONNECTOR AND TERMINALS <ul style="list-style-type: none"> Disconnect the BCM connector. Inspect the connector and terminals (corrosion, damage, pin disconnection). Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 6.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [BCM]

STEP	INSPECTION	ACTION	
4	INSPECT WINDSHIELD WIPER PARK POSITION SWITCH CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • Windshield wiper motor and BCM connectors are disconnected. • Reconnect the negative battery cable. • Switch the ignition to ON. • Measure the voltage at the following terminal (wiring harness-side): <ul style="list-style-type: none"> — Windshield wiper motor terminal D • Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 6.
		No	Go to the next step.
5	INSPECT WINDSHIELD WIPER MOTOR <ul style="list-style-type: none"> • Switch the ignition to off. • Inspect the windshield wiper motor. (See 09-19-9 WINDSHIELD WIPER MOTOR INSPECTION.) • Is there any malfunction? 	Yes	Replace the windshield wiper motor, then go to the next step. (See 09-19-5 WINDSHIELD WIPER MOTOR REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect the disconnected connectors. • Reconnect the negative battery cable. • Clear the DTC using the M-MDS. (See 09-02F-7 CLEARING DTC [BCM].) • Perform the BCM DTC inspection using the M-MDS. (See 09-02F-7 DTC INSPECTION [BCM].) • Is the same DTC present? 	Yes	Replace the BCM, then go to the next step. (See 09-40-2 BODY CONTROL MODULE (BCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02F-8 DTC TABLE [BCM].)
		No	DTC troubleshooting completed.

09-02F

DTC B1D35:11 [BCM]

id0902f5389700

DESCRIPTION	Hazard warning switch circuit malfunction
DETECTION CONDITION	<ul style="list-style-type: none"> • Short to ground in the hazard warning switch circuit with the hazard warning switch off.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Hazard warning switch connector or terminals malfunction • BCM connector or terminals malfunction • Short to ground in wiring harness between the following terminals: <ul style="list-style-type: none"> — Hazard warning switch terminal B—BCM terminal 2M • Hazard warning switch malfunction • BCM malfunction

ON-BOARD DIAGNOSTIC [BCM]

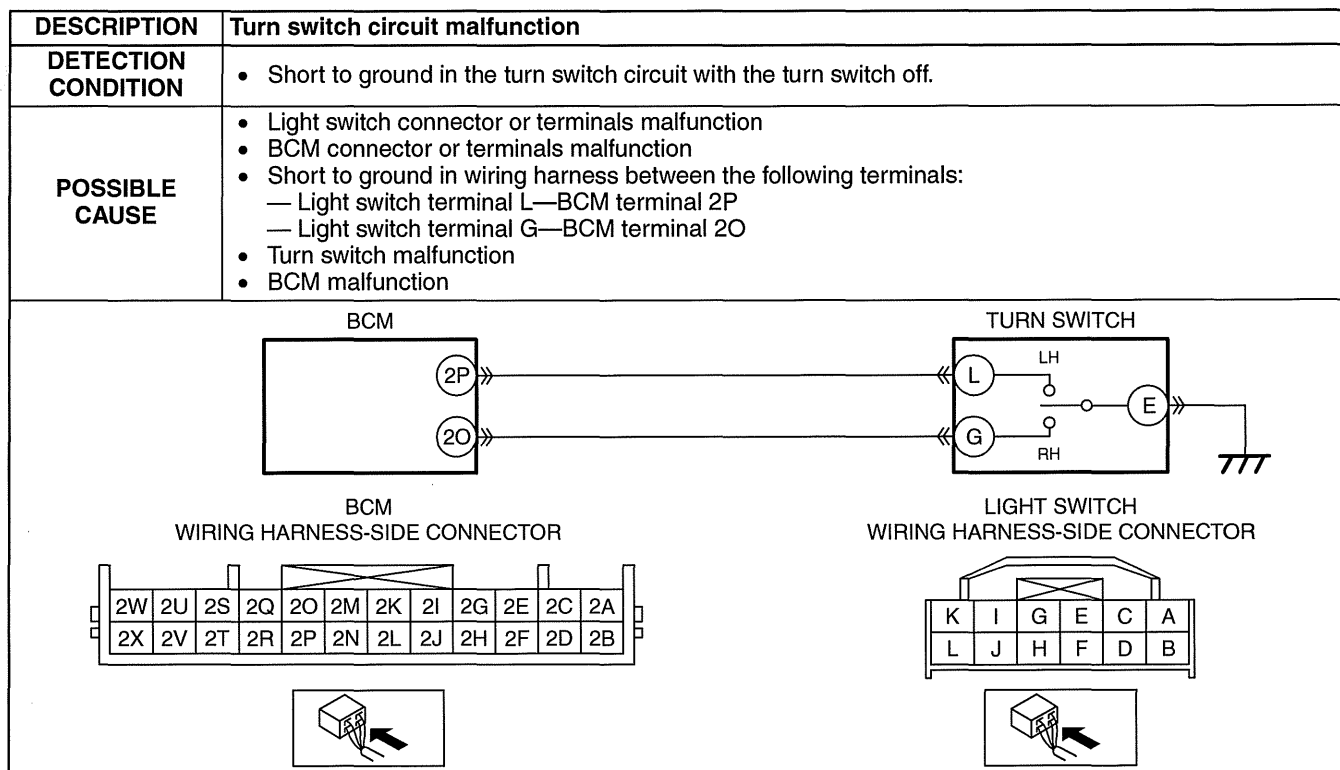

Diagnostic Procedure

STEP	INSPECTION	ACTION	
1	CONFIRM BCM DTC <ul style="list-style-type: none"> • Clear the DTC using the M-MDS. (See 09-02F-7 CLEARING DTC [BCM].) • Perform the BCM DTC inspection using the M-MDS with the hazard warning switch off. (See 09-02F-7 DTC INSPECTION [BCM].) • Is the same DTC present? 	Yes	Go to the next step.
		No	Go to Step 7.
2	INSPECT HAZARD WARNING SWITCH CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable. • Disconnect the hazard warning switch connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 6.
		No	Go to the next step.
3	INSPECT BCM CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Disconnect the BCM connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 6.
		No	Go to the next step.
4	INSPECT HAZARD WARNING SWITCH CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • Hazard warning switch and BCM connectors are disconnected. • Inspect for continuity between the following terminal (wiring harness-side) and body ground: — Hazard warning switch terminal B • Is there continuity? 	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 6.
		No	Go to the next step.
5	INSPECT HAZARD WARNING SWITCH <ul style="list-style-type: none"> • Inspect the hazard warning switch. (See 09-18-61 HAZARD WARNING SWITCH INSPECTION.) • Is there any malfunction? 	Yes	Replace the hazard warning switch, then go to the next step. (See 09-18-60 HAZARD WARNING SWITCH REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect the disconnected connectors. • Reconnect the negative battery cable. • Clear the DTC using the M-MDS. (See 09-02F-7 CLEARING DTC [BCM].) • Perform the BCM DTC inspection using the M-MDS with the hazard warning switch off. (See 09-02F-7 DTC INSPECTION [BCM].) • Is the same DTC present? 	Yes	Replace the BCM, then go to the next step. (See 09-40-2 BODY CONTROL MODULE (BCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02F-8 DTC TABLE [BCM].)
		No	DTC troubleshooting completed.

Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 6.
		No	Go to the next step.
5	INSPECT REAR WASHER SWITCH <ul style="list-style-type: none"> • Inspect the rear wiper and washer switch. (See 09-19-24 REAR WIPER AND WASHER SWITCH INSPECTION.) • Is there any malfunction? 	Yes	Replace the wiper and washer switch, then go to the next step. (See 09-19-21 WIPER AND WASHER SWITCH REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect the disconnected connectors. • Reconnect the negative battery cable. • Clear the DTC using the M-MDS. (See 09-02F-7 CLEARING DTC [BCM].) • Perform the BCM DTC inspection using the M-MDS with the rear washer switch off. (See 09-02F-7 DTC INSPECTION [BCM].) • Is the same DTC present? 	Yes	Replace the BCM, then go to the next step. (See 09-40-2 BODY CONTROL MODULE (BCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02F-8 DTC TABLE [BCM].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [BCM]

DTC B1079:13 [BCM]

id0902f5415000

DESCRIPTION	Hood latch switch circuit malfunction
DETECTION CONDITION	<ul style="list-style-type: none"> Open circuit in the hood latch switch circuit with the hood closed (hood latch switch on).
POSSIBLE CAUSE	<ul style="list-style-type: none"> Hood latch switch connector or terminals malfunction Open circuit in wiring harness between the following terminals: <ul style="list-style-type: none"> — Hood latch switch terminal B—Body ground Hood latch switch malfunction BCM connector or terminals malfunction Open circuit in wiring harness between the following terminals: <ul style="list-style-type: none"> — Hood latch switch terminal A—BCM terminal 1J BCM malfunction
<p>The diagram illustrates the electrical connection between the BCM and the Hood Latch Switch. The BCM terminal 1J is connected to terminal A of the Hood Latch Switch. Terminal A of the switch is also connected to ground (represented by three parallel lines). Terminal B of the switch is shown but not connected in this circuit. Below the main diagram are two connector views: the BCM Wiring Harness-Side Connector with terminals 1W through 1B, and the Hood Latch Switch Wiring Harness-Side Connector with terminals B and A. Arrows point to the specific terminals involved in the circuit.</p>	

09-02F

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	CONFIRM BCM DTC <ul style="list-style-type: none"> Clear the DTC using the M-MDS. (See 09-02F-7 CLEARING DTC [BCM].) Perform the BCM DTC inspection using the M-MDS with the hood closed (hood latch switch on). (See 09-02F-7 DTC INSPECTION [BCM].) Is the same DTC present? 	Yes	Go to the next step.
		No	Go to Step 9.
2	INSPECT HOOD LATCH SWITCH CONNECTOR AND TERMINALS <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the negative battery cable. Disconnect the hood latch switch connector. Inspect the connector and terminals (corrosion, damage, pin disconnection). Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 8.
		No	Go to the next step.
3	VERIFY MALFUNCTIONING LOCATION <ul style="list-style-type: none"> Hood latch switch connector is disconnected. Reconnect the negative battery cable. Measure the voltage at the following terminal (wiring harness-side): <ul style="list-style-type: none"> — Hood latch switch terminal A Is there any voltage? 	Yes	Go to the next step.
		No	Go to Step 6.
4	INSPECT HOOD LATCH SWITCH CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> Hood latch switch connector is disconnected. Disconnect the negative battery cable. Inspect for continuity between the following terminal (wiring harness-side) and body ground: <ul style="list-style-type: none"> — Hood latch switch terminal B Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 8.

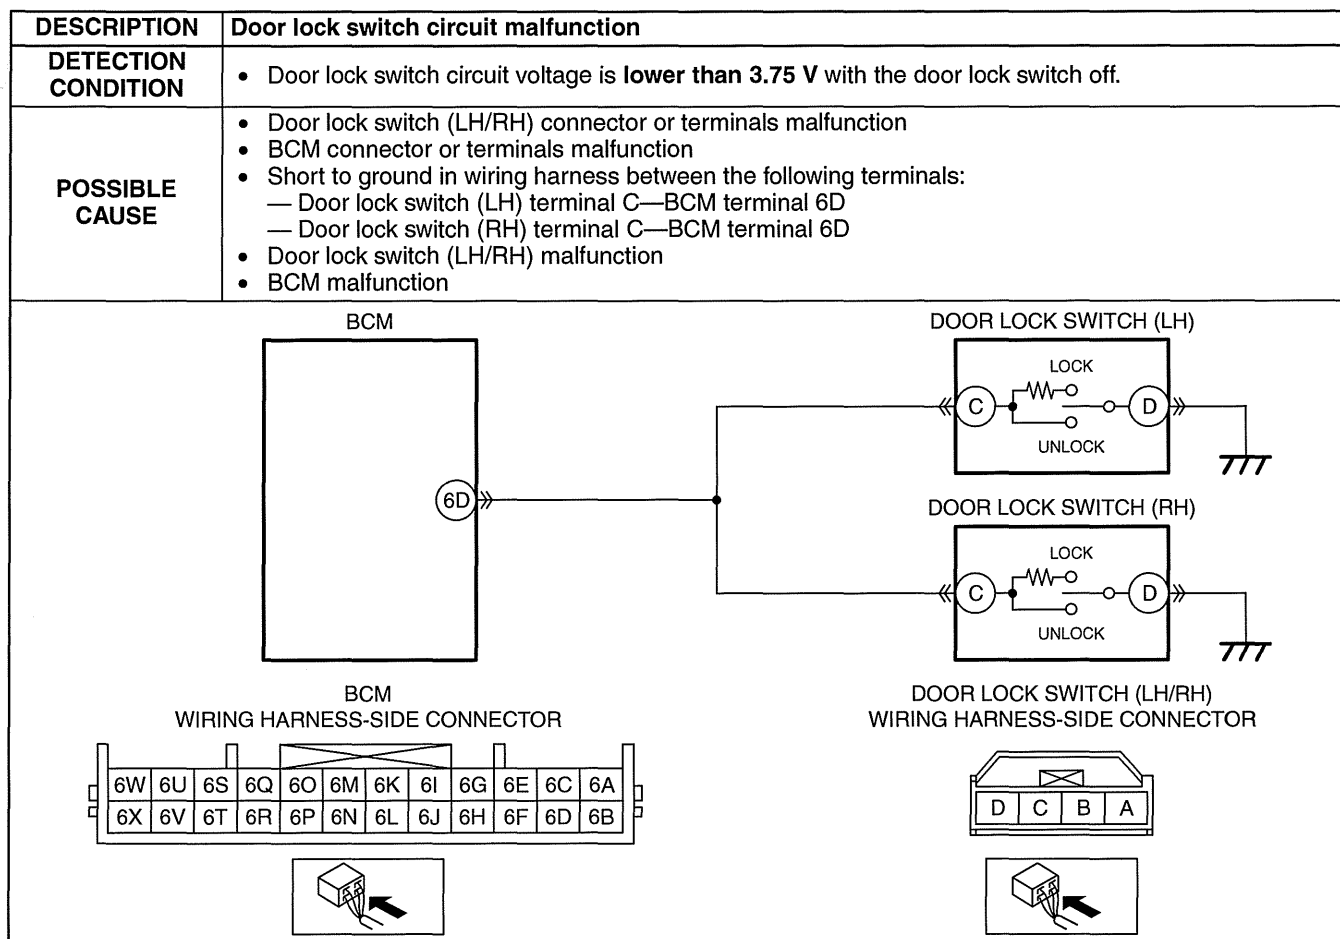

ON-BOARD DIAGNOSTIC [BCM]

STEP	INSPECTION	ACTION	
5	INSPECT HOOD LATCH SWITCH <ul style="list-style-type: none"> • Inspect the hood latch switch. (See 09-14-18 HOOD LATCH SWITCH INSPECTION.) • Is there any malfunction? 	Yes	Replace the hood latch switch, then go to Step 8. (See 09-14-15 HOOD LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
		No	Go to Step 8.
6	INSPECT BCM CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Disconnect the negative battery cable. • Disconnect the BCM connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 8.
		No	Go to the next step.
7	INSPECT HOOD LATCH SWITCH CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Hood latch switch and BCM connectors are disconnected. • Reconnect the BCM connector. • Reconnect the negative battery cable. • Measure the voltage at the following terminal (wiring harness-side): — BCM terminal 1J • Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
		No	Go to the next step.
8	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect the disconnected connectors. • Reconnect the negative battery cable. • Clear the DTC using the M-MDS. (See 09-02F-7 CLEARING DTC [BCM].) • Perform the BCM DTC inspection using the M-MDS with the hood closed (hood latch switch on). (See 09-02F-7 DTC INSPECTION [BCM].) • Is the same DTC present? 	Yes	Replace the BCM, then go to the next step. (See 09-40-2 BODY CONTROL MODULE (BCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
9	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02F-8 DTC TABLE [BCM].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [BCM]

DTC B108F:16 [BCM]

id0902f5510000

09-02F

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	CONFIRM BCM DTC <ul style="list-style-type: none"> Clear the DTC using the M-MDS. (See 09-02F-7 CLEARING DTC [BCM].) Perform the BCM DTC inspection using the M-MDS with the door lock switch off. (See 09-02F-7 DTC INSPECTION [BCM].) Is the same DTC present? 	Yes	Go to the next step.
		No	Go to Step 7.
2	INSPECT DOOR LOCK SWITCH (LH/RH) CONNECTOR AND TERMINALS <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the negative battery cable. Disconnect the door lock switch (LH/RH) connector. Inspect the connector and terminals (corrosion, damage, pin disconnection). Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 6.
		No	Go to the next step.
3	INSPECT BCM CONNECTOR AND TERMINALS <ul style="list-style-type: none"> Disconnect the BCM connector. Inspect the connector and terminals (corrosion, damage, pin disconnection). Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 6.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [BCM]

STEP	INSPECTION	ACTION	
4	INSPECT DOOR LOCK SWITCH CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> Door lock switch (LH/RH) and BCM connectors are disconnected. Inspect for continuity between the following terminals (wiring harness-side) and body ground: <ul style="list-style-type: none"> Door lock switch (LH) terminal C Door lock switch (RH) terminal C Is there continuity? 	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 6.
		No	Go to the next step.
5	INSPECT DOOR LOCK SWITCH (LH/RH) <ul style="list-style-type: none"> Inspect the door lock switch (LH/RH). (See 09-14-15 DOOR LOCK SWITCH INSPECTION.) Is there any malfunction? 	Yes	Replace the door lock switch (LH/RH), then go to the next step. (See 09-14-14 DOOR LOCK SWITCH REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Make sure to reconnect the disconnected connectors. Reconnect the negative battery cable. Clear the DTC using the M-MDS. (See 09-02F-7 CLEARING DTC [BCM].) Perform the BCM DTC inspection using the M-MDS with the door lock switch off. (See 09-02F-7 DTC INSPECTION [BCM].) Is the same DTC present? 	Yes	Replace the BCM, then go to the next step. (See 09-40-2 BODY CONTROL MODULE (BCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02F-8 DTC TABLE [BCM].)
		No	DTC troubleshooting completed.

DTC B109E:83 [BCM]

id0902f5345800

DESCRIPTION	Keyless receiver circuit malfunction
DETECTION CONDITION	<ul style="list-style-type: none"> BCM receives the erratic signal continuously 12 times.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Keyless receiver malfunction Keyless control module malfunction (vehicles with advanced keyless entry and push button start system) BCM malfunction

Diagnostic Procedure

STEP	INSPECTION	ACTION	
1	CONFIRM BCM DTC <ul style="list-style-type: none"> Clear the DTC using the M-MDS. (See 09-02F-7 CLEARING DTC [BCM].) Perform the BCM DTC inspection using the M-MDS. (See 09-02F-7 DTC INSPECTION [BCM].) Is the same DTC present? 	Yes	Go to the next step.
		No	Go to Step 5.
2	INSPECT KEYLESS RECEIVER <ul style="list-style-type: none"> Inspect the keyless receiver. (See 09-14-81 KEYLESS RECEIVER INSPECTION [KEYLESS ENTRY SYSTEM].) (See 09-14-82 KEYLESS RECEIVER INSPECTION [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) Is there any malfunction? 	Yes	Replace the keyless receiver, then go to Step 4. (See 09-14-80 KEYLESS RECEIVER REMOVAL/INSTALLATION.)
		No	Vehicles without advanced keyless entry and push button start system: <ul style="list-style-type: none"> Go to Step 4. Vehicles with advanced keyless entry and push button start system: <ul style="list-style-type: none"> Go to the next step.
3	INSPECT KEYLESS CONTROL MODULE <ul style="list-style-type: none"> Inspect the keyless control module. (See 09-14-68 KEYLESS CONTROL MODULE INSPECTION.) Is there any malfunction? 	Yes	Replace the keyless control module, then go to the next step. (See 09-14-66 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [BCM]

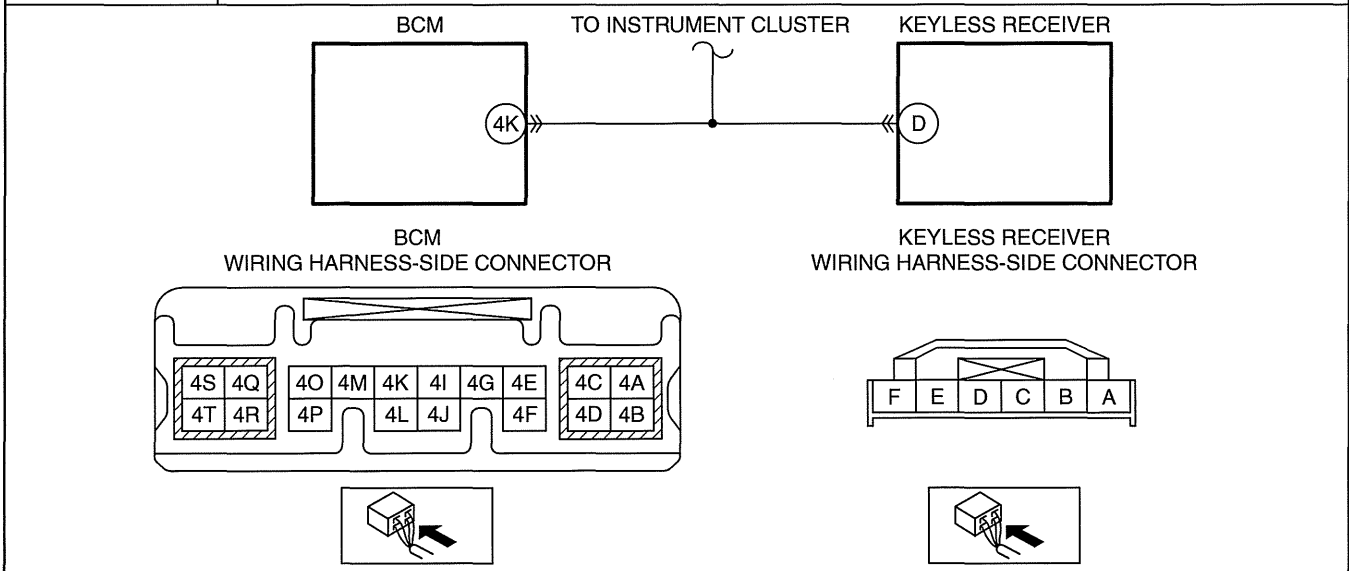

STEP	INSPECTION	ACTION	
4	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Clear the DTC using the M-MDS. (See 09-02F-7 CLEARING DTC [BCM].) Perform the BCM DTC inspection using the M-MDS. ON-BOARD DIAGNOSTIC [BCM]

Diagnostic Procedure

STEP	INSPECTION	ACTION	
1	CONFIRM BCM DTC <ul style="list-style-type: none"> • Clear the DTC using the M-MDS. (See 09-02F-7 CLEARING DTC [BCM].) • Perform the BCM DTC inspection using the M-MDS with the door lock-link switch (RF/LR/RR) unlocked. (See 09-02F-7 DTC INSPECTION [BCM].) • Is the same DTC present? 	Yes	Go to the next step.
		No	Go to Step 21.
2	VERIFY MALFUNCTIONING LOCATION <ul style="list-style-type: none"> • Operate the door lock-link switch lock and unlock. • Is there a door lock-link switch that does not operate? 	Yes	All door lock-link switches do not operate: <ul style="list-style-type: none"> • Go to the next step. Only the door lock-link switch (RF) does not operate: <ul style="list-style-type: none"> • Go to Step 5. Only the door lock-link switch (LR) does not operate: <ul style="list-style-type: none"> • Go to Step 10. Only the door lock-link switch (RR) does not operate: <ul style="list-style-type: none"> • Go to Step 15.
		No	Go to Step 20.
3	INSPECT BCM CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable. • Disconnect the BCM connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 20.
		No	Go to the next step.
4	INSPECT DOOR LOCK-LINK SWITCH (RF/LR/RR) CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Reconnect the BCM connector. • Reconnect the negative battery cable. • Measure the voltage at the following terminal (wiring harness-side): — BCM terminal 6J • Is the voltage normal? (See 09-40-6 BODY CONTROL MODULE (BCM) INSPECTION.) 	Yes	Repair or replace the wiring harness for a possible open circuit, then go to Step 20.
		No	Go to Step 20.
5	INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (RH) CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable. • Disconnect the front door latch and lock actuator (RH) connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 20.
		No	Go to the next step.
6	VERIFY MALFUNCTIONING LOCATION <ul style="list-style-type: none"> • Front door latch and lock actuator (RH) connector is disconnected. • Reconnect the negative battery cable. • Measure the voltage at the following terminal (wiring harness-side): — Front door latch and lock actuator (RH) terminal L • Is there any voltage? 	Yes	Go to the next step.
		No	Go to Step 9.
7	INSPECT DOOR LOCK-LINK SWITCH (RF) CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Front door latch and lock actuator (RH) connector is disconnected. • Disconnect the negative battery cable. • Inspect for continuity between the following terminal (wiring harness-side) and body ground: — Front door latch and lock actuator (RH) terminal D • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 20.

09-02F

ON-BOARD DIAGNOSTIC [BCM]

STEP	INSPECTION	ACTION	
8	INSPECT DOOR LOCK-LINK SWITCH (RF) <ul style="list-style-type: none"> • Inspect the door lock-link switch (RF). (See 09-14-42 DOOR LOCK-LINK SWITCH INSPECTION.) • Is there any malfunction? 	Yes	Replace the front door latch and lock actuator (RH), then go to Step 20. (See 09-14-33 FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.)
		No	Go to Step 20.
9	INSPECT DOOR LOCK-LINK SWITCH (RF) CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Front door latch and lock actuator (RH) connector is disconnected. • Reconnect the negative battery cable. • Measure the voltage at the following terminal (wiring harness-side): — BCM terminal 6J • Is there any voltage? 	Yes	Repair or replace the wiring harness between front door latch and lock actuator (RH) terminal L and BCM terminal 6J, then go to Step 20.
		No	Go to Step 20.
10	INSPECT REAR DOOR LATCH AND LOCK ACTUATOR (LH) CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable. • Disconnect the rear door latch and lock actuator (LH) connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 20.
		No	Go to the next step.
11	VERIFY MALFUNCTIONING LOCATION <ul style="list-style-type: none"> • Rear door latch and lock actuator (LH) connector is disconnected. • Reconnect the negative battery cable. • Measure the voltage at the following terminal (wiring harness-side): — Rear door latch and lock actuator (LH) terminal B • Is there any voltage? 	Yes	Go to the next step.
		No	Go to Step 14.
12	INSPECT DOOR LOCK-LINK SWITCH (LR) CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Rear door latch and lock actuator (LH) connector is disconnected. • Disconnect the negative battery cable. • Inspect for continuity between the following terminal (wiring harness-side) and body ground: — Rear door latch and lock actuator (LH) terminal J • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 20.
13	INSPECT DOOR LOCK-LINK SWITCH (LR) <ul style="list-style-type: none"> • Inspect the door lock-link switch (LR). (See 09-14-42 DOOR LOCK-LINK SWITCH INSPECTION.) • Is there any malfunction? 	Yes	Replace the rear door latch and lock actuator (LH), then go to Step 20. (See 09-14-45 REAR DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.)
		No	Go to Step 20.
14	INSPECT DOOR LOCK-LINK SWITCH (LR) CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Rear door latch and lock actuator (LH) connector is disconnected. • Reconnect the negative battery cable. • Measure the voltage at the following terminal (wiring harness-side): — BCM terminal 6J • Is there any voltage? 	Yes	Repair or replace the wiring between rear door latch and lock actuator (LH) terminal B and BCM terminal 6J, then go to Step 20.
		No	Go to Step 20.

ON-BOARD DIAGNOSTIC [BCM]

STEP	INSPECTION	ACTION	
15	INSPECT REAR DOOR LATCH AND LOCK ACTUATOR (RH) CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable. • Disconnect the rear door latch and lock actuator (RH) connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 20.
		No	Go to the next step.
16	VERIFY MALFUNCTIONING LOCATION <ul style="list-style-type: none"> • Rear door latch and lock actuator (RH) connector is disconnected. • Reconnect the negative battery cable. • Measure the voltage at the following terminal (wiring harness-side): <ul style="list-style-type: none"> — Rear door latch and lock actuator (RH) terminal L • Is there any voltage? 	Yes	Go to the next step.
		No	Go to Step 19.
17	INSPECT DOOR LOCK-LINK SWITCH (RR) CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Rear door latch and lock actuator (RH) connector is disconnected. • Disconnect the negative battery cable. • Inspect for continuity between the following terminal (wiring harness-side) and body ground: <ul style="list-style-type: none"> — Rear door latch and lock actuator (RH) terminal D • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 20.
18	INSPECT DOOR LOCK-LINK SWITCH (RR) <ul style="list-style-type: none"> • Inspect the door lock-link switch (RR). (See 09-14-42 DOOR LOCK-LINK SWITCH INSPECTION.) • Is there any malfunction? 	Yes	Replace the rear door latch and lock actuator (RH), then go to Step 20. (See 09-14-45 REAR DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.)
		No	Go to Step 20.
19	INSPECT DOOR LOCK-LINK SWITCH (RR) CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Rear door latch and lock actuator (RH) connector is disconnected. • Reconnect the negative battery cable. • Measure the voltage at the following terminal (wiring harness-side): <ul style="list-style-type: none"> — BCM terminal 6J • Is there any voltage? 	Yes	Repair or replace the wiring between rear door latch and lock actuator (RH) terminal L and BCM terminal 6J, then go to the next step.
		No	Go to the next step.
20	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect the disconnected connectors. • Reconnect the negative battery cable. • Clear the DTC using the M-MDS. (See 09-02F-7 CLEARING DTC [BCM].) • Perform the BCM DTC inspection using the M-MDS with the door lock-link switch (RF/LR/RR) unlocked. (See 09-02F-7 DTC INSPECTION [BCM].) • Is the same DTC present? 	Yes	Replace the BCM, then go to the next step. (See 09-40-2 BODY CONTROL MODULE (BCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
21	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02F-8 DTC TABLE [BCM].)
		No	DTC troubleshooting completed.

DESCRIPTION	Incomplete configuration
DETECTION CONDITION	<p>Warning</p> <ul style="list-style-type: none"> • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • BCM detects the corrupt configuration data after completion of configuration.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • BCM configuration error • BCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	<p>CONFIRM BCM DTC</p> <ul style="list-style-type: none"> • Clear the DTC using the M-MDS. (See 09-02F-7 CLEARING DTC [BCM].) • Perform the BCM DTC inspection using the M-MDS. (See 09-02F-7 DTC INSPECTION [BCM].) • Is the same DTC present? 	Yes	Go to the next step.
		No	Go to Step 4.
2	<p>PERFORM BCM CONFIGURATION</p> <ul style="list-style-type: none"> • Perform the BCM configuration using the M-MDS. (See 09-40-16 BODY CONTROL MODULE (BCM) CONFIGURATION.) • Clear the DTC using the M-MDS. (See 09-02F-7 CLEARING DTC [BCM].) • Perform the BCM DTC inspection using the M-MDS. (See 09-02F-7 DTC INSPECTION [BCM].) • Is the same DTC present? 	Yes	Perform the BCM configuration again, then go to the next step. (See 09-40-16 BODY CONTROL MODULE (BCM) CONFIGURATION.)
		No	Go to Step 4.
3	<p>VERIFY TROUBLESHOOTING COMPLETED</p> <ul style="list-style-type: none"> • Clear the DTC using the M-MDS. (See 09-02F-7 CLEARING DTC [BCM].) • Perform the BCM DTC inspection using the M-MDS. (See 09-02F-7 DTC INSPECTION [BCM].) • Is the same DTC present? 	Yes	Replace the BCM, then go to the next step. (See 09-40-2 BODY CONTROL MODULE (BCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	<p>VERIFY THAT NO OTHER DTCs ARE PRESENT</p> <ul style="list-style-type: none"> • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02F-8 DTC TABLE [BCM].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [BCM]

DTC U0401:68 [BCM]

id0902f5413600

DESCRIPTION	Receive erratic data from PCM
DETECTION CONDITION	<ul style="list-style-type: none"> • BCM receives the erratic data from PCM for 5 s or more, while the ignition is ON.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • PCM DTC is stored • PCM malfunction • BCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	CONFIRM PCM DTC <ul style="list-style-type: none"> • Perform the PCM DTC inspection using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].) (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
2	CONFIRM BCM DTC <ul style="list-style-type: none"> • Clear the DTC using the M-MDS. (See 09-02F-7 CLEARING DTC [BCM].) • Switch the ignition to ON and wait for 5 s or more. • Perform the BCM DTC inspection using the M-MDS. (See 09-02F-7 DTC INSPECTION [BCM].) • Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].) (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to Step 4.
3	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Clear the DTC using the M-MDS. (See 09-02F-7 CLEARING DTC [BCM].) • Switch the ignition to ON and wait for 5 s or more. • Perform the BCM DTC inspection using the M-MDS. (See 09-02F-7 DTC INSPECTION [BCM].) • Is the same DTC present? 	Yes	Replace the BCM, then go to the next step. (See 09-40-2 BODY CONTROL MODULE (BCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02F-8 DTC TABLE [BCM].)
		No	DTC troubleshooting completed.

09-02F

ON-BOARD DIAGNOSTIC [BCM]

		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [BCM]

PID/DATA MONITOR INSPECTION [BCM]

id0902f5960600

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "DataLogger".
 2. Select "Modules".
 3. Select "GEM".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "GEM".
 3. Select "DataLogger".
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the directions on the screen.

am3uuw0000265

Note

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.

PID/DATA MONITOR TABLE [BCM]

id0902f5960700

PID Name	Unit/Status	Description	Inspection Item	Terminal

FOREWORD [AUDIO]

id0902f6441800

09-02G

- The audio system has an on-board diagnostic function and diagnostic assist function to facilitate audio system diagnosis.

On-board diagnostic function

- The on-board diagnostic function consists of the following functions: A malfunction detection function, which detects overall malfunctions in the audio system-related parts; a memory function, which stores detected DTCs; and a display function, which indicates system malfunctions via a DTC display.
- If the audio unit detects a malfunction in the audio system, a maximum of 3 DTCs are recorded in the audio unit. If three DTCs have already been stored and an additional malfunction is detected, the oldest DTC of the 3 already stored is cleared and it is replaced with the DTC for the most current malfunction.
- DTCs stored in the audio unit are cleared if the negative battery cable is disconnected (if backup power is interrupted).
- There are two methods for reading and clearing DTCs. They include activation of the on-board diagnostic test mode of the on-board diagnostic function, which is operated using the audio unit, and the M-MDS. The displayed DTCs differ depending on whether the on-board diagnostic test mode or the M-MDS method is used. Additionally, because some DTCs are not displayed in the on-board diagnostic test mode, use the M-MDS before performing the procedure.

On-board diagnostic test mode

- To display DTCs on the information display that have been recorded in the memory function, activate the on-board diagnostic function by operating the audio unit.

Using the M-MDS

- When a DTC inspection is performed using the M-MDS, the malfunction diagnostics for the audio system, Bluetooth system (hands-free telephone (HF/TEL system), and the SIRIUS satellite radio system is initiated. A maximum of 5 DTCs detected by the malfunction diagnostics are displayed.

Diagnostic assist function

- The diagnostic assist function is a function for forcibly operating audio system related parts to verify their connection condition and operation status. In addition, the specifications for the audio system related parts are displayed in the information display to enable their verification.

ON-BOARD DIAGNOSTIC [AUDIO]

DTC INSPECTION [AUDIO]

id0902f6440500

Note

- All DTCs displayed in the DTC inspection should be entered in the Audio Repair Order Form.

Using the M-MDS

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Self Test".
 2. Select "Modules".
 3. Select "ACU".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "ACU".
 3. Select "Self Test".
3. Verify the DTC according to the directions on the screen.
 - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
4. After completion of repairs, clear all DTCs stored in the audio unit. (See 09-02G-4 CLEARING DTC [AUDIO].)

Without Using M-MDS (On-board Diagnostic Test Mode)

1. Switch the ignition to ACC or ON.
2. While pressing the POWER/VOLUME switch, simultaneously press the AUX switch and the RPT/PRESET switch 2 for **2 s or more**.

Note

- If several DTCs are in the memory, they can be displayed using the SEEK/TRACK switch (up or down).
3. To stop the on-board diagnostic test mode, ignition is switched to off.

ON-BOARD DIAGNOSTIC [AUDIO]

SUPPLIER IDENTIFICATION PROCEDURE [AUDIO]

id0902f6803800

Note

- The supplier can vary with the unit. When asking the supplier (service center) for repair or replacement, identify the supplier and fill in the Audio Repair Order Form with the following procedures.

Identification Using the Label or Inscribed Lettering

- Disconnect the negative battery cable.
- Remove the center panel. (See 09-17-24 CENTER PANEL REMOVAL/INSTALLATION.)
- Remove the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
- Verify the supplier by referring to the label attached to each unit.

am3uuw0000309

09-02G

Verify Using the Diagnostic Assist Function

- Switch the ignition to ACC or ON.
- While pressing the POWER/VOLUME switch, simultaneously press the PRESET switch 5 for **0.2 s or more**.

am3uuw0000310

- Identify the supplier code by referring to the information display.

Supplier code	Supplier name
01	SANYO Automeida
02	Panasonic
03	Clarion
04	Pioneer
05	VISTEON

am3uuw0000310

ON-BOARD DIAGNOSTIC [AUDIO]

Note

- The supplier code can also be identified from the DTC displays screen.
4. To stop the diagnostic assist function, ignition is switched to off.

am3uuw0000310

CLEARING DTC [AUDIO]

id0902f6855600

Caution

- Before clearing the DTCs, be sure to enter all of the DTCs displayed in the DTC inspection in the Audio Repair Order Form.

Using the M-MDS

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Self Test".
 2. Select "Modules".
 3. Select "ACU".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "ACU".
 3. Select "Self Test".
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition to ON and wait for **5 s or more**.
7. Perform DTC inspection. (See 09-02G-2 DTC INSPECTION [AUDIO].)
8. Verify that no DTCs are displayed.

am3uuw0000310

Without Using M-MDS (On-board Diagnostic Test Mode)

1. Launch the on-board diagnostic test mode. (See 09-02G-2 DTC INSPECTION [AUDIO].)
2. While pressing the POWER/VOLUME switch, simultaneously press the AUDIO CONT switch for **2 s or more**.
3. To stop the on-board diagnostic test mode, ignition is switched to off.

am3uuw0000310

ON-BOARD DIAGNOSTIC [AUDIO]

DTC: B1188:64, 10:Er07, 22:Er07 [AUDIO]

id0902f6440600

DESCRIPTION	Audio unit internal malfunction
DETECTION CONDITION	Audio unit detects CD reading error
POSSIBLE CAUSE	<ul style="list-style-type: none"> CD is inserted upside down CDs with scratches or deformity Incompatible CDs Audio unit malfunction

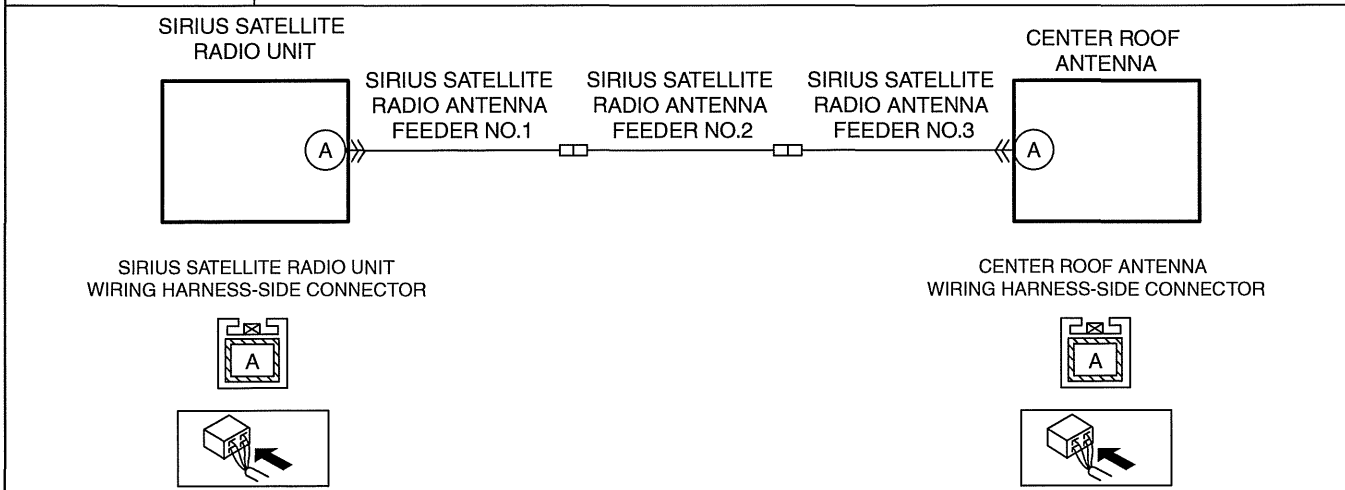

Diagnostic Procedure

Step	Inspection		Action
1	INSPECT THE CD <ul style="list-style-type: none"> Clear the DTC from the audio unit memory. (See 09-02G-4 CLEARING DTC [AUDIO].) Insert a playable CD with the title surface facing upward. <p>Note</p> <ul style="list-style-type: none"> Refer to the following for a playable CD. (See 09-03F-12 REFERENCE [CD PLAYER/CHANGER].) <ul style="list-style-type: none"> Play the CD for 12 s or more. Perform the audio unit DTC inspection. (See 09-02G-2 DTC INSPECTION [AUDIO].) Is the same DTC present? 	Yes	Replace the audio unit, then go to the next step. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	VERIFY THAT NO OTHER DTCs ARE RECORDED <ul style="list-style-type: none"> Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02G-5 DTC TABLE [AUDIO].)
		No	DTC troubleshooting completed.

DTC: B1A89:13 [AUDIO]

id0902f6440700

DESCRIPTION	SIRIUS satellite radio system communication circuit malfunction
DETECTION CONDITION	Open circuit between SIRIUS satellite radio unit and center roof antenna (SIRIUS satellite radio antenna) is detected continuously for 5 s.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Connector or terminal malfunction SIRIUS satellite radio antenna feeder malfunction <p>Note</p> <ul style="list-style-type: none"> SIRIUS satellite radio antenna feeder No.1 is integrated with the dashboard wiring harness. SIRIUS satellite radio antenna feeder No.2 is integrated with the antenna feeder No.2. SIRIUS satellite radio antenna feeder No.3 is integrated with the antenna feeder No.3. <ul style="list-style-type: none"> Center roof antenna (SIRIUS satellite radio antenna) malfunction SIRIUS satellite radio unit malfunction

ON-BOARD DIAGNOSTIC [AUDIO]

Diagnostic Procedure

Step	Inspection	Action	
1	INSPECT CENTER ROOF ANTENNA CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable. • Disconnect the center roof antenna connector. • Inspect the connector for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector or terminal, then go to Step 6.
		No	Go to the next step.
2	INSPECT SIRIUS SATELLITE RADIO ANTENNA FEEDER CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the SIRIUS satellite radio antenna feeder connector. • Inspect the connector for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector or terminal, then go to Step 6.
		No	Go to the next step.
3	INSPECT SIRIUS SATELLITE RADIO UNIT CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the SIRIUS satellite radio unit connector. • Inspect the connector for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector or terminal, then go to Step 6.
		No	Go to the next step.
4	INSPECT SIRIUS SATELLITE RADIO ANTENNA FEEDER <ul style="list-style-type: none"> • Inspect the SIRIUS satellite radio antenna feeder. (See 09-20-41 SIRIUS SATELLITE RADIO ANTENNA FEEDER INSPECTION.) • Is there any malfunction? 	Yes	Replace the SIRIUS satellite radio antenna feeder, then go to Step 6. (See 09-20-41 SIRIUS SATELLITE RADIO ANTENNA FEEDER REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	INSPECT CENTER ROOF ANTENNA (SIRIUS SATELLITE RADIO ANTENNA) <ul style="list-style-type: none"> • Inspect the center roof antenna (SIRIUS satellite radio antenna). (See 09-20-23 CENTER ROOF ANTENNA INSPECTION.) • Is there any malfunction? 	Yes	Replace the center roof antenna (SIRIUS satellite radio antenna), then go to the next step. (See 09-20-19 CENTER ROOF ANTENNA REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure reconnect the disconnected connectors. • Reconnect the negative battery cable. • Clear the DTC from the audio unit memory using the M-MDS. (See 09-02G-4 CLEARING DTC [AUDIO].) • Perform the audio unit DTC inspection using the M-MDS. (See 09-02G-2 DTC INSPECTION [AUDIO].) • Is the same DTC present? 	Yes	Replace the SIRIUS satellite radio unit, then go to the next step. (See 09-20-30 SIRIUS SATELLITE RADIO UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	VERIFY THAT NO OTHER DTCs ARE RECORDED <ul style="list-style-type: none"> • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02G-5 DTC TABLE [AUDIO].)
		No	DTC troubleshooting completed.

DTC: U3003:16, 09:Er20 [AUDIO]

id0902f6441700

DESCRIPTION	Audio unit power supply voltage is low
DETECTION CONDITION	Audio unit power supply voltage of less than 10 V is detected continuously for 10 s .
POSSIBLE CAUSE	<ul style="list-style-type: none"> • PCM DTC is stored • Battery malfunction • Generator malfunction • Audio unit connector or terminals malfunction • Open circuit or short to ground in audio unit power supply circuit <ul style="list-style-type: none"> — Short to ground in wiring harness between the following terminal: <ul style="list-style-type: none"> • Audio unit terminal 1R—Ignition switch terminal F^{*1}/Relay block terminal 2B^{*2} • Audio unit terminal 1B—Battery positive terminal — AUDIO 7.5 A fuse malfunction — ROOM 15 A fuse malfunction — Open circuit in wiring harness between the following terminal: <ul style="list-style-type: none"> • Audio unit terminal 1R—Ignition switch terminal F^{*1}/Relay block terminal 2B^{*2} • Audio unit terminal 1B—Battery positive terminal • Audio unit malfunction

*1 : Vehicles without advanced keyless entry and push button start system
 *2 : Vehicles with advanced keyless entry and push button start system

ON-BOARD DIAGNOSTIC [AUDIO]

Diagnostic Procedure

Step	Inspection	Action	
1	CONFIRM PCM DTC <ul style="list-style-type: none"> • Perform the DTC Reading Procedure to confirm the PCM DTC. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].) (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
2	INSPECT BATTERY <ul style="list-style-type: none"> • Inspect the battery. (See 01-17A-4 BATTERY INSPECTION [LF, L5].) (See 01-17B-4 BATTERY INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Recharge or replace the battery, then go to Step 6. (See 01-17A-5 BATTERY RECHARGING [LF, L5].) (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].) (See 01-17B-6 BATTERY RECHARGING [L3 WITH TC].) (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
3	INSPECT GENERATOR <ul style="list-style-type: none"> • Inspect the generator. (See 01-17A-8 GENERATOR INSPECTION [LF, L5].) (See 01-17B-8 GENERATOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the generator, then go to Step 6. (See 01-17A-6 GENERATOR REMOVAL/INSTALLATION [LF, L5].) (See 01-17B-6 GENERATOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
4	INSPECT AUDIO UNIT CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable. • Disconnect the audio unit connector. • Inspect the connector for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector or terminal, then go to Step 6.
		No	Go to the next step.
5	INSPECT POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GROUND <ul style="list-style-type: none"> • Audio unit connector is disconnected. • Reconnect the negative battery cable. • Switch the ignition to ON. • Measure the voltage at the following terminals (wiring harness-side): — Audio unit terminal 1B — Audio unit terminal 1R • Is the voltage B+? 	Yes	Go to the next step.
		No	If the audio unit terminal 1B or 1R voltage is not B+: <ul style="list-style-type: none"> • Inspect the ROOM 15 A fuse or AUDIO 7.5 A fuse. — If the fuse is melt: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible short to ground. • Replace the malfunctioning fuse. — If the fuse is deterioration: <ul style="list-style-type: none"> • Replace the malfunctioning fuse. — If the fuse is normal: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible open circuit. Go to the next step.
6	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Switch the ignition to off. • Make sure reconnect the disconnected connectors. • Reconnect the negative battery cable. • Clear the DTC from the audio unit memory. (See 09-02G-4 CLEARING DTC [AUDIO].) • Perform the audio unit DTC inspection. (See 09-02G-2 DTC INSPECTION [AUDIO].) • Is the same DTC present? 	Yes	Replace the audio unit, then go to the next step. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	VERIFY THAT NO OTHER DTCs ARE RECORDED <ul style="list-style-type: none"> • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02G-5 DTC TABLE [AUDIO].)
		No	DTC troubleshooting completed.

09-02G

ON-BOARD DIAGNOSTIC [AUDIO]

DIAGNOSTIC ASSIST FUNCTION [AUDIO]

id0902f6804500

Switch Inspection

1. Switch the ignition to ACC or ON.
2. Turn the audio unit power to ON.
3. While pressing the POWER/VOLUME switch, simultaneously press the RDM/PRESET switch 3 for **0.2 s or more**.
4. Inspect according to the following table:

am3uuw0000439

INSPECTION	DISPLAY	ACTION	
<ul style="list-style-type: none"> • Launch the switch inspection mode. • Operate all of the switches (press). • Does the buzzer sound? 	—	Yes	The switch is normal.
		No	Verify the switch. (See 09-03D-3 CONFIRMATION STEP 1: AUDIO PANEL SWITCH CONFIRMATION [ENTIRE AUDIO SYSTEM].)

5. Cancel the diagnostic assist function by either turning off the audio unit power or by switch the ignition to off.

Speaker Inspection

Using the M-MDS

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Electrical".
 2. Select "Audio".
 3. Select "Audio Speaker Walkaround Test".
 - When using the PDS (Pocket PC)
 1. Select "All Tests and Calibrations".
 2. Select "Audio Speaker Walkaround Test".
3. Perform the procedure according to the directions on the screen.

am3uuw0000309

ON-BOARD DIAGNOSTIC [AUDIO]

Without Using M-MDS

1. Switch the ignition to ACC or ON.
2. Turn the audio unit power to ON.
3. While pressing the POWER/VOLUME switch, simultaneously press the AUTO-M switch for **0.2 s or more**.
4. Inspect according to the following table:

am3uuw0000439

INSPECTION	DISPLAY	ACTION	
<ul style="list-style-type: none"> • Launch the speaker inspection mode. • Does each speaker output sound in the following order?: <p>Without Bose®</p> <ol style="list-style-type: none"> 1. Front door speaker (LH) and tweeter (LH) 2. Front door speaker (RH) and tweeter (RH) 3. Rear door speaker (RH) 4. Rear door speaker (LH) <p>With Bose®</p> <ol style="list-style-type: none"> 1. Front door speaker (LH) and tweeter (LH) and front center speaker 2. Front door speaker (RH) and tweeter (RH) and front center speaker 3. Rear door speaker (RH) and rear speaker (RH) and rear center speaker (4DS)/Bass-box (5HB) 4. Rear door speaker (LH) and rear speaker (LH) and rear center speaker (4DS)/Bass-box (5HB) 	—	Yes	The speakers and the wiring harness between the audio unit and speakers are normal.
		No	<ul style="list-style-type: none"> • If no sound is produced from all of the speakers. (See 09-03D-7 NO.3 NO SOUND FROM ALL SPEAKERS [ENTIRE AUDIO SYSTEM].) • If no sound is produced from some of the speakers. (See 09-03D-8 NO.4 NO SOUND FROM SOME SPEAKERS [ENTIRE AUDIO SYSTEM].)

09-02G

5. Cancel the diagnostic assist function by either turning off the audio unit power or by switch the ignition to off.

Radio Reception Condition Inspection Using the M-MDS

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Electrical".
 2. Select "Audio".
 3. Select "AM Antenna Reception Sensitivity Test".
 - When using the PDS (Pocket PC)
 1. Select "All Tests and Calibrations".
 2. Select "AM Antenna Reception Sensitivity Test".
3. Perform the procedure according to the directions on the screen.

am3uuw0000309

ON-BOARD DIAGNOSTIC [AUDIO]

Without Using M-MDS

1. Switch the ignition to ACC or ON.
2. Turn the audio unit power to ON.
3. Tune in the radio.
4. While pressing the POWER/VOLUME switch, simultaneously press the RPT/PRESET switch 2 for **0.2 s or more**.
5. Inspect according to the following table:

Caution

- Even if the system is normal, radio reception may be difficult depending on where the system is inspected (indoors/outdoors, or conditions at the location). Before inspecting the system, verify that radio reception is adequate.
- When performing the inspection, select the best area for receiving radio frequencies.

am3uuw0000439

INSPECTION	DISPLAY	ACTION
Launch the radio reception condition inspection mode.	LEV 10 — LEV 5	Glass antenna, antenna amplifier, antenna feeder and audio unit are normal.
	LEV 4 — LEV 3	Change frequencies and re-perform the inspection.
	LEV 2 — LEV 0	<p>Inspect the glass antenna and antenna amplifier and antenna feeder. (See 09-20-26 GLASS ANTENNA INSPECTION.) (See 09-20-28 ANTENNA AMPLIFIER INSPECTION.) (See 09-20-34 ANTENNA FEEDER NO.1 INSPECTION.) (See 09-20-36 ANTENNA FEEDER NO.2 INSPECTION.) (See 09-20-39 ANTENNA FEEDER NO.3 INSPECTION.)</p> <ul style="list-style-type: none"> • If either the glass antenna or the antenna amplifier or the antenna feeder is not normal, replace the malfunctioning part. (See 09-12-39 FILAMENT REPAIR.) (See 09-20-27 ANTENNA AMPLIFIER REMOVAL/INSTALLATION.) (See 09-20-32 ANTENNA FEEDER NO.1 REMOVAL/INSTALLATION.) (See 09-20-35 ANTENNA FEEDER NO.2 REMOVAL/INSTALLATION.) (See 09-20-38 ANTENNA FEEDER NO.3 REMOVAL/INSTALLATION.) • If the glass antenna and antenna feeder are normal, replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)

6. Cancel the diagnostic assist function by either turning off the audio unit power or by switch the ignition to off.

ON-BOARD DIAGNOSTIC [AUDIO]

Antenna Control Condition Inspection

1. Switch the ignition to ACC or ON.
2. Turn the audio unit power to ON.
3. Tune in the radio.
4. While pressing the POWER/VOLUME switch, simultaneously press the SAT switch for **0.2 s or more**.
5. Inspect according to the following table:

am3uuw000439

INSPECTION	DISPLAY	ACTION	
Launch the antenna control condition inspection mode.	ANT—ON	Sound quality good.	System is okay.
		Sound quality poor.	Inspect the glass antenna and antenna amplifier and antenna feeder. (See 09-20-26 GLASS ANTENNA INSPECTION.) (See 09-20-28 ANTENNA AMPLIFIER INSPECTION.) (See 09-20-34 ANTENNA FEEDER NO.1 INSPECTION.) (See 09-20-36 ANTENNA FEEDER NO.2 INSPECTION.) (See 09-20-39 ANTENNA FEEDER NO.3 INSPECTION.)
	ANT—OFF	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)	

09-02G

6. Cancel the diagnostic assist function by either turning off the audio unit power or by switch the ignition to off.

Audio Amplifier Control Condition Inspection

1. Switch the ignition to ACC or ON.
2. Turn the audio unit power to ON.
3. While pressing the AUTO-M switch, simultaneously press the CD switch for **0.2 s or more**.
4. Inspect according to the following table:

am3uuw000439

INSPECTION	DISPLAY	ACTION
Launch the audio amplifier control condition inspection mode.	AMP—ON	System is okay.
	AMP—OFF	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)

5. Cancel the diagnostic assist function by either turning off the audio unit power or by switch the ignition to off.

ON-BOARD DIAGNOSTIC [AUDIO]

Dial Inspection

1. Switch the ignition to ACC or ON.
2. Turn the audio unit power to ON.
3. While pressing the AUTO-M switch, simultaneously press the PRESET switch 1 for **0.2 s or more**.
4. Inspect according to the following table:

am3uuw0000439

INSPECTION	DISPLAY	ACTION	
<ul style="list-style-type: none"> • Launch the dial inspection mode. • Operate all of the dial. • Does the dial rotation direction correspond with the direction displayed in information display? 	→ ←	Yes	Dial is okay.
		No	Verify the switch. (See 09-03D-3 CONFIRMATION STEP 1: AUDIO PANEL SWITCH CONFIRMATION [ENTIRE AUDIO SYSTEM].)

5. Cancel the diagnostic assist function by either turning off the audio unit power or by switch the ignition to off.

Audio Amplifier Specification Inspection

1. Switch the ignition to ACC or ON.
2. While pressing the POWER/VOLUME switch, simultaneously press the SEEK/TRACK/REPLAY switch (down) for **0.2 s or more**.
3. Inspect according to the following table:

am3uuw0000439

INSPECTION	DISPLAY	ACTION	
<ul style="list-style-type: none"> • Launch the audio amplifier specification inspection mode. • Verify the audio amplifier specification. • Does the audio amplifier specification correspond. 	Without Bose® •N (Normal) With Bose® •L (Line out)	Yes	System is okay.
		No	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/ INSTALLATION.)

4. To stop the diagnostic assist function, ignition is switched to off.

ON-BOARD DIAGNOSTIC [AUDIO]

Audio Amplifier (With Bose®) Identify Inspection

1. Switch the ignition to ACC or ON.
2. Turn the audio unit power to ON.
3. While pressing the POWER/VOLUME switch, simultaneously press the TUNE/FILE/INSTANT REPLAY switch and SEEK/TRACK/REPLAY switch (down) for **3 s or more**.
4. Inspect according to the following table:

INSPECTION	—	ACTION	
<ul style="list-style-type: none"> Launch the audio amplifier (With Bose®) identify inspection mode. Dose the audio amplifier specification correspond. 	<p style="text-align: center;">With normal seat The rear door speaker sounds.</p> <p style="text-align: center;">With leather seat The front door speaker sounds.</p>	Yes	Audio amplifier is okay.
		No	Replace the audio amplifier. (See 09-20-7 AUDIO AMPLIFIER REMOVAL/INSTALLATION.)

5. Cancel the diagnostic assist function by either turning off the audio unit power or by switch the ignition to off.

FOREWORD [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

id0902g8441800

- The Bluetooth system (hands-free telephone (HF/TEL) system) has an on-board diagnostic function and diagnostic assist function to facilitate Bluetooth system (hands-free telephone (HF/TEL) system) diagnosis.
- On-board diagnostic function**
- The on-board diagnostic function consists of the following functions: A malfunction detection function, which detects overall malfunctions in the audio system-related parts; a memory function, which stores detected DTCs; and a display function, which indicates system malfunctions via a DTC display.
 - The memory function converts a malfunction detected by the malfunction detection function to a DTC and stores it. The error currently occurring is stored as a present malfunction. Up to five DTCs can be stored as a present malfunction.
 - There are two methods for reading and clearing DTCs. They include activation of the on-board diagnostic test mode of the on-board diagnostic function, which is operated using the audio unit, and the M-MDS. The displayed DTCs differ depending on whether the on-board diagnostic test mode or the M-MDS method is used. Additionally, because some DTCs are not displayed in the on-board diagnostic test mode, use the M-MDS before performing the procedure.
- On-board diagnostic test mode**
- To display DTCs on the information display that have been recorded in the memory function, activate the on-board diagnostic function by operating the audio unit.
- Using the M-MDS**
- When a DTC inspection is performed using the M-MDS, the malfunction diagnostics for the audio system, Bluetooth system (hands-free telephone (HF/TEL) system), and the SIRIUS satellite radio system is initiated. A maximum of 5 DTCs detected by the malfunction diagnostics are displayed.
- Diagnostic assist function**
- The diagnostic assist function enables verification of the connection condition of the Bluetooth system (hands-free telephone (HF/TEL) system) related parts and their specification. The password for the Bluetooth system (hands-free telephone (HF/TEL) system), which is set by the user, can also be reset.

ON-BOARD DIAGNOSTIC [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

DTC INSPECTION [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

id0902g8440500

Note

- All DTCs displayed in the DTC inspection should be entered in the Audio Repair Order Form.

Using the M-MDS

- Connect the M-MDS to the DLC-2.
- After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 - Select "Self Test".
 - Select "Modules".
 - Select "ACU".
 - When using the PDS (Pocket PC)
 - Select "Module Tests".
 - Select "ACU".
 - Select "Self Test".
- Verify the DTC according to the directions on the screen.
 - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
- After completion of repairs, clear all DTCs stored in the Bluetooth unit. (See 09-02H-3 CLEARING DTC [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)].)

Without Using M-MDS (On-board Diagnostic Test Mode)

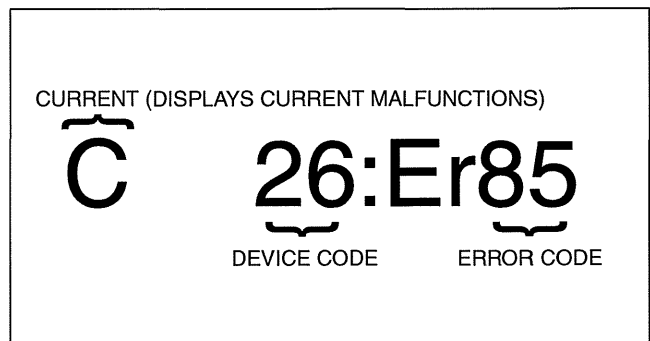

- Switch the ignition to ACC or ON.
- While pressing the POWER/VOLUME switch, simultaneously press the PRESET switch 1 and the PRESET switch 6 for **2 s or more**.

Note

- If several DTCs are in the memory, they can be displayed using the SEEK/TRACK switch (up or down).

- To stop the on-board diagnostic test mode, ignition is switched to off.

ON-BOARD DIAGNOSTIC [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

CLEARING DTC [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

id0902g8855600

Caution

- Before clearing the DTCs, be sure to enter all of the DTCs displayed in the DTC inspection in the Audio Repair Order Form.

Using the M-MDS

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Self Test".
 2. Select "Modules".
 3. Select "ACU".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "ACU".
 3. Select "Self Test".
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition to ON and wait for **5 s or more**.
7. Perform DTC inspection. (See 09-02H-2 DTC INSPECTION [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)].)
8. Verify that no DTCs are displayed.

am3uuw0000302

Without Using M-MDS (On-board Diagnostic Test Mode)

1. Launch the on-board diagnostic test mode. (See 09-02H-2 DTC INSPECTION [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)].)
2. While pressing the AUTO-M switch, simultaneously press the PRESET switch 4 for **2 s or more**.
3. To stop the on-board diagnostic test mode, ignition is switched to off.

DTC: B1134:23, 26:Er85 [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

id0902g8440000

DESCRIPTION	Steering switch circuit malfunction
DETECTION CONDITION	Steering switch input signal is detected continuously for 2 min or more
POSSIBLE CAUSE	<ul style="list-style-type: none"> Connector or terminal malfunction Steering switch malfunction Clock spring malfunction Short to ground in wiring harness between the following terminals: — Steering switch terminal N and Bluetooth unit terminal F Bluetooth unit malfunction
<div style="display: flex; justify-content: space-around;"> <div style="text-align: center;"> <p>STEERING SWITCH WIRING HARNESS-SIDE CONNECTOR</p> </div> <div style="text-align: center;"> <p>Bluetooth UNIT WIRING HARNESS-SIDE CONNECTOR</p> </div> </div>	

ON-BOARD DIAGNOSTIC [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

Diagnostic Procedure

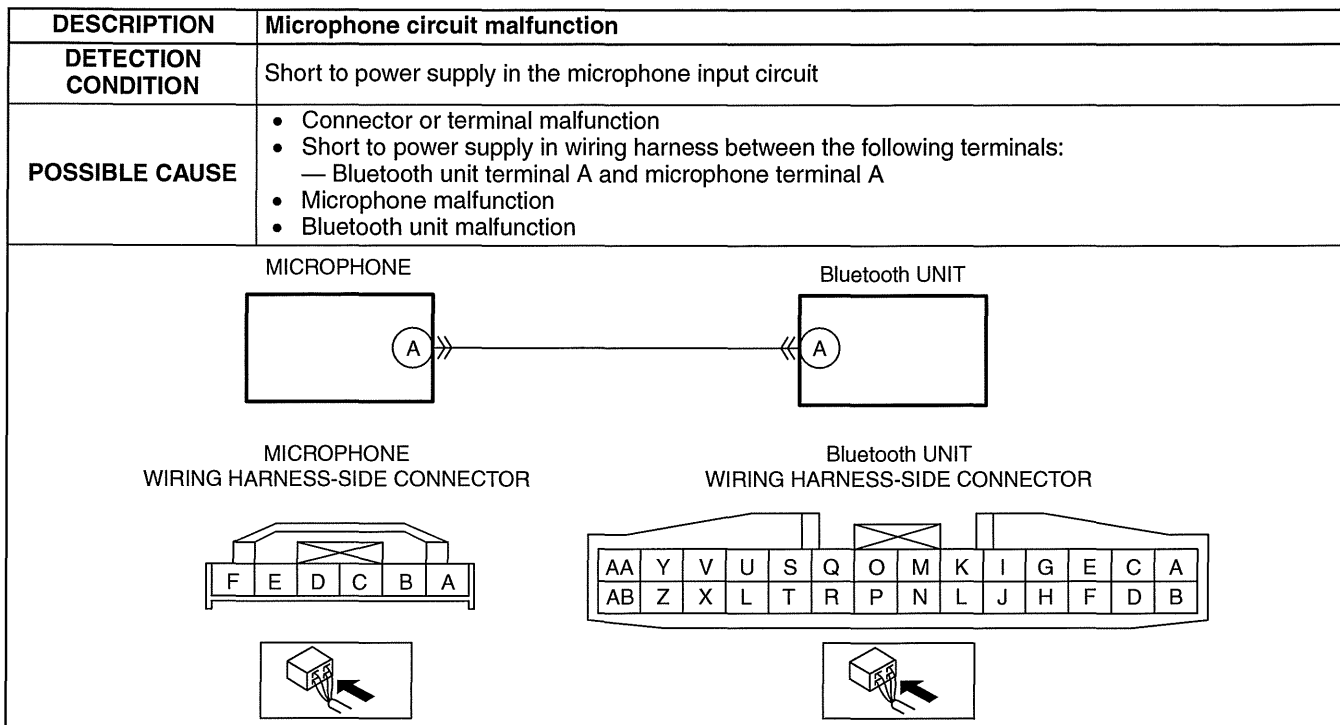

Step	Inspection	Action	
1	INSPECT STEERING SWITCH CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable. • Disconnect the steering switch connector. • Inspect the connector for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector or terminal, then go to Step 7.
		No	Go to the next step.
2	INSPECT CLOCK SPRING CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the clock spring connector. • Inspect the connector for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector or terminal, then go to Step 7.
		No	Go to the next step.
3	INSPECT Bluetooth UNIT CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the Bluetooth unit connector. • Inspect the connector for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector or terminal, then go to Step 7.
		No	Go to the next step.
4	INSPECT STEERING SWITCH <ul style="list-style-type: none"> • Inspect the steering switch. (See 09-20-46 STEERING SWITCH INSPECTION.) • Is there any malfunction? 	Yes	Replace the steering switch, then go to Step 7. (See 09-20-43 STEERING SWITCH REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	INSPECT CLOCK SPRING <ul style="list-style-type: none"> • Inspect the clock spring. (See 08-10-23 CLOCK SPRING INSPECTION.) • Is there any malfunction? 	Yes	Replace the clock spring, then go to Step 7. (See 08-10-21 CLOCK SPRING REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	INSPECT STEERING SWITCH INPUT CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • Make sure reconnect the disconnected connectors. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: <ul style="list-style-type: none"> — Bluetooth unit terminal F • Is there continuity? 	Yes	Repair or replace the wiring harness for a possible short to ground, then go to the next step.
		No	Go to the next step.
7	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Switch the ignition to off. • Reconnect the negative battery cable. • Clear the DTC from the Bluetooth unit memory. (See 09-02H-3 CLEARING DTC [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)].) • Perform the Bluetooth unit DTC inspection. (See 09-02H-2 DTC INSPECTION [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)].) • Is the same DTC present? 	Yes	Replace the Bluetooth unit, then go to the next step. (See 09-20-50 Bluetooth UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
8	VERIFY THAT NO OTHER DTCs ARE RECORDED <ul style="list-style-type: none"> • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02H-4 DTC TABLE [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)].)
		No	DTC troubleshooting completed.

Diagnostic Procedure

Step	Inspection		Action
1	INSPECT MICROPHONE CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable. • Disconnect the microphone connector. • Inspect the connector for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector or terminal, then go to Step 4.
		No	Go to the next step.
2	INSPECT Bluetooth UNIT CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the Bluetooth unit connector. • Inspect the connector for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector or terminal, then go to Step 4.
		No	Go to the next step.
3	INSPECT MICROPHONE INPUT CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • Make sure reconnect the disconnected connectors. • Reconnect the negative battery cable. • Switch the ignition to ON. • Measure the voltage at the following terminals (wiring harness-side): <ul style="list-style-type: none"> — Bluetooth unit terminal A • Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to the next step.
		No	Go to the next step.
4	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Clear the DTC from the Bluetooth unit memory. (See 09-02H-3 CLEARING DTC [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)].) • Perform the Bluetooth unit DTC inspection. (See 09-02H-2 DTC INSPECTION [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)].) • Is the same DTC present? 	Yes	Replace the microphone, then go to the next step. (See 09-20-50 MICROPHONE REMOVAL/INSTALLATION.)
		No	Go to the step 6.

ON-BOARD DIAGNOSTIC [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

Step	Inspection	Action	
2	INSPECT Bluetooth UNIT CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the Bluetooth unit connector. • Inspect the connector for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector or terminal, then go to Step 5.
		No	Go to the next step.
3	INSPECT MICROPHONE CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Inspect for continuity between the following terminals (wiring harness-side): <ul style="list-style-type: none"> — Bluetooth unit terminal E and microphone terminal E • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 5.
4	INSPECT MICROPHONE INPUT CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • Inspect for continuity between the following terminals (wiring harness-side) and body ground: <ul style="list-style-type: none"> — Bluetooth unit terminal A and body ground • Is there continuity? 	Yes	Repair or replace the wiring harness for a possible short to ground, then go to the next step.
		No	Go to the next step.
5	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure reconnect the disconnected connectors. • Reconnect the negative battery cable. • Clear the DTC from the Bluetooth unit memory. (See 09-02H-3 CLEARING DTC [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)].) • Perform the Bluetooth unit DTC inspection. (See 09-02H-2 DTC INSPECTION [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)].) • Is the same DTC present? 	Yes	Replace the microphone then go to the next step. (See 09-20-50 MICROPHONE REMOVAL/INSTALLATION.)
		No	Go to Step 7.
6	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Clear the DTC from the Bluetooth unit memory. (See 09-02H-3 CLEARING DTC [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)].) • Perform the Bluetooth unit DTC inspection. DTC INSPECTION [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)]

id0902g9960300

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Self Test".
 2. Select "Modules".
 3. Select "AFS".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "AFS".
 3. Select "Self Test".
3. Verify the DTC according to the directions on the screen.
 - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
4. After completion of repairs, clear all DTCs stored in the AFS control module. (See 09-021-3 CLEARING DTC [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)].)

ON-BOARD DIAGNOSTIC [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)]

CLEARING DTC [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)]

id0902g9960400

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Self Test".
 2. Select "Modules".
 3. Select "AFS".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "AFS".
 3. Select "Self Test".
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition to ON and wait for **5 s or more**.
7. Perform the DTC inspection. (See 09-02I-2 DTC INSPECTION [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)].)
8. Verify that no DTCs are displayed.

U3003:17	High power supply circuit voltage	(See 09-02I-19 DTC U3003:17 [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)].)

DTC B1041:54 [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)]

id0902g9934000

DESCRIPTION	Auto leveling system initialization error
DETECTION CONDITION	<ul style="list-style-type: none"> • Auto leveling system initialization has not been completed.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Auto leveling system initialization error • AFS control module malfunction

Diagnostic Procedure

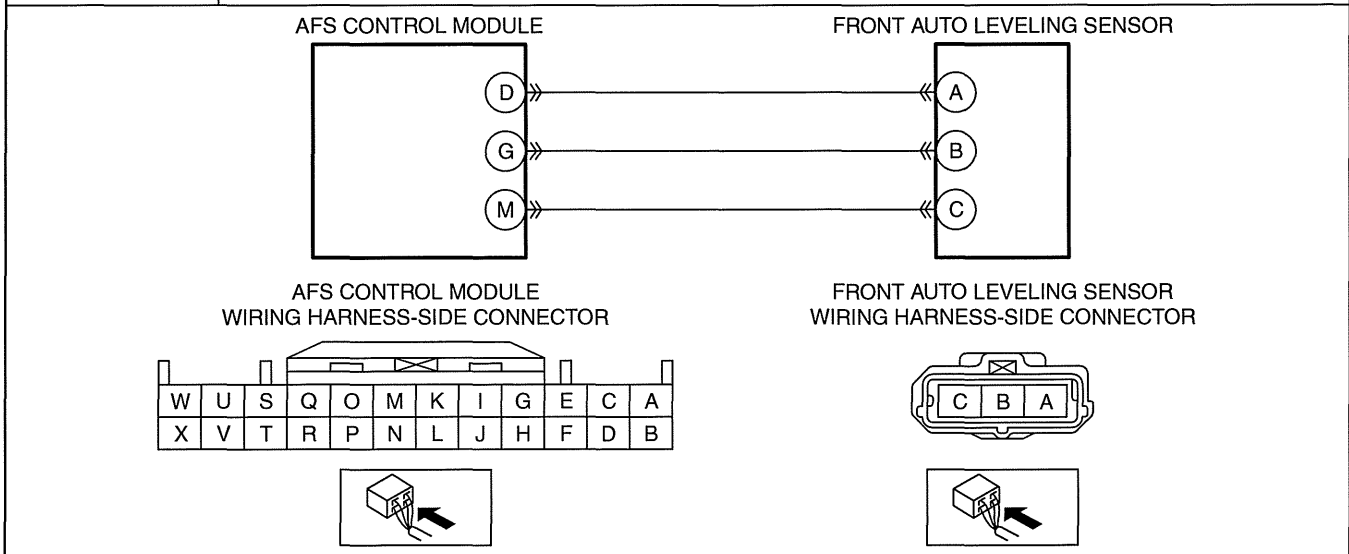

STEP	INSPECTION	ACTION				
1	PERFORM AUTO LEVELING SYSTEM INITIALIZATION <ul style="list-style-type: none"> • Perform the "AUTO LEVELING SYSTEM INITIALIZATION". (See 09-18-51 AUTO LEVELING SYSTEM INITIALIZATION.) • Clear the DTC from AFS control module using the M-MDS. (See 09-02I-3 CLEARING DTC [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)].) • Switch the ignition to ON. • Perform the "DTC INSPECTION". (See 09-02I-2 DTC INSPECTION [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)].) • Is the same DTC present? 	<table border="0" style="width: 100%;"> <tr> <td style="text-align: center; width: 50px;">Yes</td> <td>Perform the "AUTO LEVELING SYSTEM INITIALIZATION" again, then go to the next step. (See 09-18-51 AUTO LEVELING SYSTEM INITIALIZATION.)</td> </tr> <tr> <td style="text-align: center;">No</td> <td>Go to Step 3.</td> </tr> </table>	Yes	Perform the "AUTO LEVELING SYSTEM INITIALIZATION" again, then go to the next step. (See 09-18-51 AUTO LEVELING SYSTEM INITIALIZATION.)	No	Go to Step 3.
Yes	Perform the "AUTO LEVELING SYSTEM INITIALIZATION" again, then go to the next step. (See 09-18-51 AUTO LEVELING SYSTEM INITIALIZATION.)					
No	Go to Step 3.					
2	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Clear the DTC from AFS control module using the M-MDS. (See 09-02I-3 CLEARING DTC [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)].) • Switch the ignition to ON. • Perform the "DTC INSPECTION". (See 09-02I-2 DTC INSPECTION [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)].) • Is the same DTC present? 	<table border="0" style="width: 100%;"> <tr> <td style="text-align: center; width: 50px;">Yes</td> <td>Replace the AFS control module, then go to the next step. (See 09-18-18 AFS (ADAPTIVE FRONT LIGHTING SYSTEM) CONTROL MODULE REMOVAL/ INSTALLATION.)</td> </tr> <tr> <td style="text-align: center;">No</td> <td>Go to the next step.</td> </tr> </table>	Yes	Replace the AFS control module, then go to the next step. (See 09-18-18 AFS (ADAPTIVE FRONT LIGHTING SYSTEM) CONTROL MODULE REMOVAL/ INSTALLATION.)	No	Go to the next step.
Yes	Replace the AFS control module, then go to the next step. (See 09-18-18 AFS (ADAPTIVE FRONT LIGHTING SYSTEM) CONTROL MODULE REMOVAL/ INSTALLATION.)					
No	Go to the next step.					
3	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> • Are any DTCs present? 	<table border="0" style="width: 100%;"> <tr> <td style="text-align: center; width: 50px;">Yes</td> <td>Go to the applicable DTC inspection. (See 09-02I-3 DTC TABLE [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)].)</td> </tr> <tr> <td style="text-align: center;">No</td> <td>DTC troubleshooting completed.</td> </tr> </table>	Yes	Go to the applicable DTC inspection. (See 09-02I-3 DTC TABLE [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)].)	No	DTC troubleshooting completed.
Yes	Go to the applicable DTC inspection. (See 09-02I-3 DTC TABLE [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)].)					
No	DTC troubleshooting completed.					

ON-BOARD DIAGNOSTIC [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)]

DTC B1043:01 [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)]

id0902g9934100

DESCRIPTION	Front auto leveling sensor circuit malfunction
DETECTION CONDITION	<ul style="list-style-type: none"> Front auto leveling sensor circuit voltage is out of range for 10 s or more, while the ignition is ON.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Front auto leveling sensor connector or terminals malfunction AFS control module connector or terminals malfunction Short to ground in wiring harness between the following terminals: <ul style="list-style-type: none"> — AFS control module terminal D—Front auto leveling sensor terminal A — AFS control module terminal G—Front auto leveling sensor terminal B — AFS control module terminal M—Front auto leveling sensor terminal C Short to power supply in wiring harness between the following terminals: <ul style="list-style-type: none"> — AFS control module terminal D—Front auto leveling sensor terminal A — AFS control module terminal G—Front auto leveling sensor terminal B — AFS control module terminal M—Front auto leveling sensor terminal C Front auto leveling sensor malfunction Open circuit in wiring harness between the following terminals: <ul style="list-style-type: none"> — AFS control module terminal D—Front auto leveling sensor terminal A — AFS control module terminal G—Front auto leveling sensor terminal B — AFS control module terminal M—Front auto leveling sensor terminal C AFS control module malfunction

09-02I

Diagnostic Procedure

STEP	INSPECTION	ACTION	
1	INSPECT FRONT AUTO LEVELING SENSOR CONNECTOR AND TERMINALS <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the negative battery cable. Disconnect the front auto leveling sensor connector. Inspect the connector and terminals (corrosion, damage, pin disconnection). Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 7.
		No	Go to the next step.
2	INSPECT AFS CONTROL MODULE CONNECTOR AND TERMINALS <ul style="list-style-type: none"> Disconnect the AFS control module connector. Inspect the connector and terminals (corrosion, damage, pin disconnection). Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 7.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)]

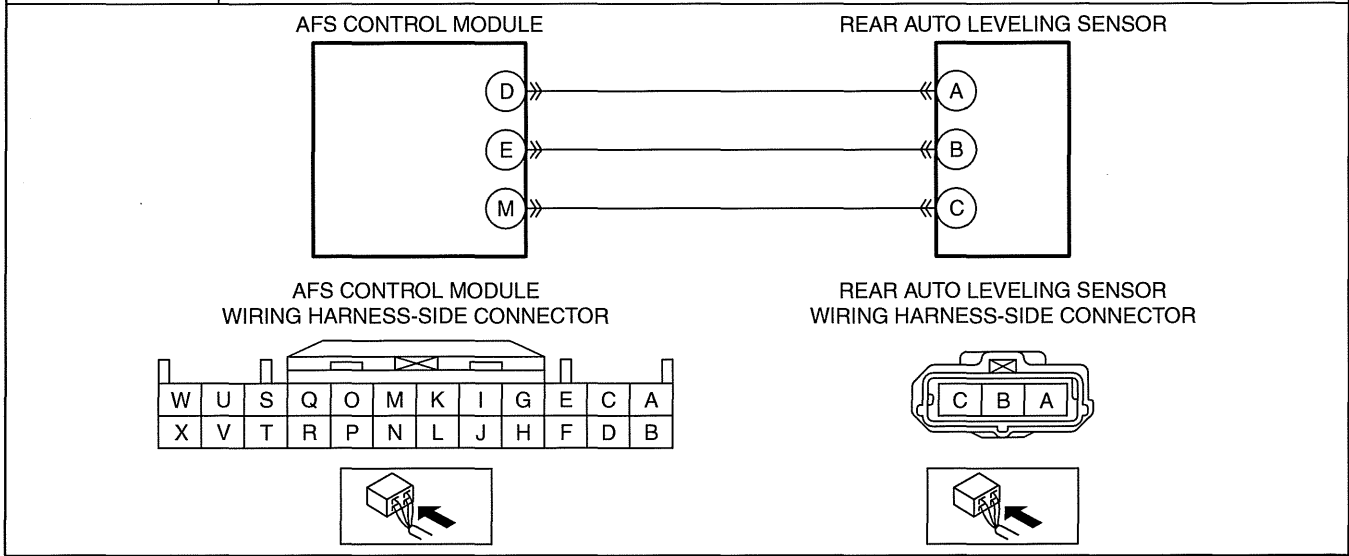

STEP	INSPECTION	ACTION	
3	INSPECT FRONT AUTO LEVELING SENSOR CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • Front auto leveling sensor and AFS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: <ul style="list-style-type: none"> — Front auto leveling sensor terminal A — Front auto leveling sensor terminal B — Front auto leveling sensor terminal C • Is there continuity? 	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 7.
		No	Go to the next step.
4	INSPECT FRONT AUTO LEVELING SENSOR CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • Front auto leveling sensor and AFS control module connectors are disconnected. • Reconnect the negative battery cable. • Switch the ignition to ON. • Measure the voltage at the following terminals (wiring harness-side): <ul style="list-style-type: none"> — Front auto leveling sensor terminal A — Front auto leveling sensor terminal B — Front auto leveling sensor terminal C • Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 7.
		No	Go to the next step.
5	INSPECT FRONT AUTO LEVELING SENSOR <ul style="list-style-type: none"> • Switch the ignition to off. • Inspect the front auto leveling sensor. (See 09-18-51 AUTO LEVELING SENSOR INSPECTION.) • Is there any malfunction? 	Yes	Replace the front auto leveling sensor, then go to Step 7. (See 09-18-50 AUTO LEVELING SENSOR REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	INSPECT FRONT AUTO LEVELING SENSOR CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Front auto leveling sensor and AFS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): <ul style="list-style-type: none"> — AFS control module terminal D—Front auto leveling sensor terminal A — AFS control module terminal G—Front auto leveling sensor terminal B — AFS control module terminal M—Front auto leveling sensor terminal C • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
7	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect the disconnected connectors. • Reconnect the negative battery cable. • Clear the DTC from AFS control module using the M-MDS. (See 09-021-3 CLEARING DTC [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)].) • Switch the ignition to ON. • Perform the "DTC INSPECTION". (See 09-021-2 DTC INSPECTION [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)].) • Is the same DTC present? 	Yes	Replace the AFS control module, then go to the next step. (See 09-18-18 AFS (ADAPTIVE FRONT LIGHTING SYSTEM) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
8	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-021-3 DTC TABLE [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)]

DTC B1044:01 [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)]

id0902g9934200

DESCRIPTION	Rear auto leveling sensor circuit malfunction
DETECTION CONDITION	<ul style="list-style-type: none"> Rear auto leveling sensor circuit voltage is out of range for 10 s or more, while the ignition is ON.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Rear auto leveling sensor connector or terminals malfunction AFS control module connector or terminals malfunction Short to ground in wiring harness between the following terminals: <ul style="list-style-type: none"> — AFS control module terminal D—Rear auto leveling sensor terminal A — AFS control module terminal E—Rear auto leveling sensor terminal B — AFS control module terminal M—Rear auto leveling sensor terminal C Short to power supply in wiring harness between the following terminals: <ul style="list-style-type: none"> — AFS control module terminal D—Rear auto leveling sensor terminal A — AFS control module terminal E—Rear auto leveling sensor terminal B — AFS control module terminal M—Rear auto leveling sensor terminal C Rear auto leveling sensor malfunction Open circuit in wiring harness between the following terminals: <ul style="list-style-type: none"> — AFS control module terminal D—Rear auto leveling sensor terminal A — AFS control module terminal E—Rear auto leveling sensor terminal B — AFS control module terminal M—Rear auto leveling sensor terminal C AFS control module malfunction

09-02I

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	INSPECT REAR AUTO LEVELING SENSOR CONNECTOR AND TERMINALS <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the negative battery cable. Disconnect the rear auto leveling sensor connector. Inspect the connector and terminals (corrosion, damage, pin disconnection). Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 7.
		No	Go to the next step.
2	INSPECT AFS CONTROL MODULE CONNECTOR AND TERMINALS <ul style="list-style-type: none"> Disconnect the AFS control module connector. Inspect the connector and terminals (corrosion, damage, pin disconnection). Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 7.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)]

STEP	INSPECTION	ACTION	
3	INSPECT REAR AUTO LEVELING SENSOR CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • Rear auto leveling sensor and AFS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: <ul style="list-style-type: none"> — Rear auto leveling sensor terminal A — Rear auto leveling sensor terminal B — Rear auto leveling sensor terminal C • Is there continuity? 	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 7.
		No	Go to the next step.
4	INSPECT REAR AUTO LEVELING SENSOR CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • Rear auto leveling sensor and AFS control module connectors are disconnected. • Reconnect the negative battery cable. • Switch the ignition to ON. • Measure the voltage at the following terminals (wiring harness-side): <ul style="list-style-type: none"> — Rear auto leveling sensor terminal A — Rear auto leveling sensor terminal B — Rear auto leveling sensor terminal C • Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 7.
		No	Go to the next step.
5	INSPECT REAR AUTO LEVELING SENSOR <ul style="list-style-type: none"> • Switch the ignition to off. • Inspect the rear auto leveling sensor. (See 09-18-51 AUTO LEVELING SENSOR INSPECTION.) • Is there any malfunction? 	Yes	Replace the rear auto leveling sensor, then go to Step 7. (See 09-18-50 AUTO LEVELING SENSOR REMOVAL/ INSTALLATION.)
		No	Go to the next step.
6	INSPECT REAR AUTO LEVELING SENSOR CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Rear auto leveling sensor and AFS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): <ul style="list-style-type: none"> — AFS control module terminal D—Rear auto leveling sensor terminal A — AFS control module terminal E—Rear auto leveling sensor terminal B — AFS control module terminal M—Rear auto leveling sensor terminal C • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
7	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect the disconnected connectors. • Reconnect the negative battery cable. • Clear the DTC from AFS control module using the M-MDS. Diagnostic Procedure

STEP	INSPECTION		ACTION
1	INSPECT FRONT COMBINATION LIGHT (RH) CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable. • Disconnect the front combination light (RH) connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 6.
		No	Go to the next step.
2	INSPECT AFS CONTROL MODULE CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Disconnect the AFS control module connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 6.
		No	Go to the next step.
3	INSPECT SWIVEL ACTUATOR (RH) CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • Front combination light (RH) and AFS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: <ul style="list-style-type: none"> — Front combination light (RH) terminal K — Front combination light (RH) terminal J • Is there continuity? 	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 6.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)]

STEP	INSPECTION	ACTION	
4	INSPECT SWIVEL ACTUATOR (RH) CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Front combination light (RH) and AFS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): <ul style="list-style-type: none"> — AFS control module terminal R—Front combination light (RH) terminal K — AFS control module terminal X—Front combination light (RH) terminal J • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 6.
5	VERIFY SWIVEL ACTUATOR (RH) MALFUNCTION <ul style="list-style-type: none"> • Make sure to reconnect the disconnected connectors. • Reconnect the negative battery cable. • Clear the DTC from AFS control module using the M-MDS. (See 09-021-3 CLEARING DTC [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)].) • Switch the ignition to ON. • Perform the "DTC INSPECTION". (See 09-021-2 DTC INSPECTION [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)].) • Is the same DTC present? 	Yes	Replace the front combination light (RH), then go to the next step. (See 09-18-7 FRONT COMBINATION LIGHT REMOVAL/INSTALLATION.)
		No	Go to Step 7.
6	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect the disconnected connectors. • Reconnect the negative battery cable. • Clear the DTC from AFS control module using the M-MDS. (See 09-021-3 CLEARING DTC [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)].) • Switch the ignition to ON. • Perform the "DTC INSPECTION". (See 09-021-2 DTC INSPECTION [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)].) • Is the same DTC present? 	Yes	Replace the AFS control module, then go to the next step. (See 09-18-18 AFS (ADAPTIVE FRONT LIGHTING SYSTEM) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-021-3 DTC TABLE [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)]

DTC C1B00:54 [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)]

id0902g9934800

DESCRIPTION	Communication error with steering angle sensor
DETECTION CONDITION	<ul style="list-style-type: none"> AFS control module receives the invalid signal of steering angle sensor from BCM when the ignition is ON.
POSSIBLE CAUSE	<ul style="list-style-type: none"> BCM DTC is stored Steering angle sensor malfunction AFS control module malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	CONFIRM BCM DTC <ul style="list-style-type: none"> Perform the "DTC INSPECTION" to confirm the BCM DTC. (See 09-02F-7 DTC INSPECTION [BCM].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02F-8 DTC TABLE [BCM].)
		No	Go to the next step.
2	INSPECT STEERING ANGLE SENSOR <ul style="list-style-type: none"> Inspect the steering angle sensor. (See 09-18-19 STEERING ANGLE SENSOR INSPECTION.) Is there any malfunction? 	Yes	Replace the steering angle sensor, then go to the next step. (See 09-18-56 COMBINATION SWITCH REMOVAL/ INSTALLATION.)
		No	Go to the next step.
3	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Clear the DTC from AFS control module using the M-MDS. (See 09-02I-3 CLEARING DTC [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)].) Switch the ignition to ON. Perform the "DTC INSPECTION" to confirm the AFS DTC. (See 09-02I-2 DTC INSPECTION [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)].) Is the same DTC present? 	Yes	Replace the AFS control module, then go to the next step. (See 09-18-18 AFS (ADAPTIVE FRONT LIGHTING SYSTEM) CONTROL MODULE REMOVAL/ INSTALLATION.)
		No	Go to the next step.
4	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02I-3 DTC TABLE [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)]

PID/DATA MONITOR INSPECTION [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)]

id0902g9960600

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "DataLogger".
 2. Select "Modules".
 3. Select "AFS".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "AFS".
 3. Select "DataLogger".
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the directions on the screen.

am3uuw0000425

Note

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.

PID/DATA MONITOR TABLE [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)]

*1 : Vehicles without advanced keyless entry and push button start system

*2 : Vehicles with advanced keyless entry and push button start system

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	CONFIRM PCM DTC <ul style="list-style-type: none"> • Perform the DTC Reading Procedure to confirm the PCM DTC. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].) (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
2	INSPECT BATTERY <ul style="list-style-type: none"> • Inspect the battery. (See 01-17A-4 BATTERY INSPECTION [LF, L5].) (See 01-17B-4 BATTERY INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Recharge or replace the battery, then go to Step 6. (See 01-17A-5 BATTERY RECHARGING [LF, L5].) (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].) (See 01-17B-6 BATTERY RECHARGING [L3 WITH TC].) (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
3	INSPECT GENERATOR <ul style="list-style-type: none"> • Inspect the generator. (See 01-17A-8 GENERATOR INSPECTION [LF, L5].) (See 01-17B-8 GENERATOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the generator, then go to Step 6. (See 01-17A-6 GENERATOR REMOVAL/INSTALLATION [LF, L5].) (See 01-17B-6 GENERATOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [MULTI INFORMATION DISPLAY]

STEP	INSPECTION	ACTION	
4	INSPECT MULTI INFORMATION DISPLAY CONNECTOR AND TERMINALS <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the negative battery cable. Disconnect the multi information display connector. Inspect the connector and terminals (corrosion, damage, pin disconnection). Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 6.
		No	Go to the next step.
5	INSPECT POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GROUND <ul style="list-style-type: none"> Multi information display connector is disconnected. Reconnect the negative battery cable. Switch the ignition to ON. Measure the voltage at the following terminal (wiring harness-side): <ul style="list-style-type: none"> Multi information display terminal 1E Is the voltage B+? 	Yes	Go to the next step.
		No	Inspect the METER 15 A fuse. If the fuse is melt: <ul style="list-style-type: none"> Repair or replace the wiring harness for a possible short to ground. Replace the fuse. If the fuse is deterioration: <ul style="list-style-type: none"> Replace the fuse. If the fuse is normal: <ul style="list-style-type: none"> Repair or replace the wiring harness for a possible open circuit. Go to the next step.
6	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Make sure to reconnect the disconnected connectors. Reconnect the negative battery cable. Clear the DTC from multi information display using the M-MDS. (See 09-02J-3 CLEARING DTC [MULTI INFORMATION DISPLAY].) Switch the ignition to ON. Perform the "DTC INSPECTION". (See 09-02J-3 DTC INSPECTION [MULTI INFORMATION DISPLAY].) Is the same DTC present? 	Yes	Replace the multi information display, then go to the next step. (See 09-22-18 MULTI INFORMATION DISPLAY REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02J-4 DTC TABLE [MULTI INFORMATION DISPLAY].)
		No	DTC troubleshooting completed.

09-02J

DTC B1342 [MULTI INFORMATION DISPLAY]

id0902i4935600

DESCRIPTION	Multi information display internal malfunction
DETECTION CONDITION	<ul style="list-style-type: none"> Multi information display internal ECU is failed when the ignition is ON.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Multi information display internal malfunction

Diagnostic Procedure

STEP	INSPECTION	ACTION	
1	CONFIRM MULTI INFORMATION DISPLAY DTC <ul style="list-style-type: none"> Clear the DTC from multi information display using the M-MDS. (See 09-02J-3 CLEARING DTC [MULTI INFORMATION DISPLAY].) Switch the ignition to ON. Perform the "DTC INSPECTION". (See 09-02J-3 DTC INSPECTION [MULTI INFORMATION DISPLAY].) Is the same DTC present? 	Yes	Replace the multi information display, then go to the next step. (See 09-22-18 MULTI INFORMATION DISPLAY REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02J-4 DTC TABLE [MULTI INFORMATION DISPLAY].)
		No	DTC troubleshooting completed.

09-02J-7

ON-BOARD DIAGNOSTIC [MULTI INFORMATION DISPLAY]

DTC B1893 [MULTI INFORMATION DISPLAY]

id0902i4935700

DESCRIPTION	Open circuit in GPS antenna circuit
DETECTION CONDITION	<ul style="list-style-type: none"> Multi information display detects open circuit in GPS antenna circuit for 5 s or more, while the ignition is ACC.
POSSIBLE CAUSE	<ul style="list-style-type: none"> GPS antenna connector or terminals malfunction Open circuit in wiring harness between the following terminals: <ul style="list-style-type: none"> — Multi information display terminal 3B—Body ground Multi information display connector or terminals malfunction Open circuit in wiring harness between the following terminals: <ul style="list-style-type: none"> — Multi information display terminal 3A—GPS antenna terminal A GPS antenna malfunction Multi information display malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	INSPECT GPS ANTENNA CONNECTOR AND TERMINALS <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the negative battery cable. Disconnect the GPS antenna connector. Inspect the connector and terminals (corrosion, damage, pin disconnection). Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 6.
		No	Go to the next step.
2	INSPECT GPS ANTENNA GROUND CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> GPS antenna connector is disconnected. Inspect for continuity between the following terminals (wiring harness-side) and body ground: <ul style="list-style-type: none"> — Multi information display terminal 3B Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 6.
3	INSPECT MULTI INFORMATION DISPLAY CONNECTOR AND TERMINALS <ul style="list-style-type: none"> Disconnect the multi information display connector. Inspect the connector and terminals (corrosion, damage, pin disconnection). Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 6.
		No	Go to the next step.
4	INSPECT GPS ANTENNA SIGNAL CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> GPS antenna and multi information display connectors are disconnected. Inspect for continuity between the following terminals (wiring harness-side): <ul style="list-style-type: none"> — Multi information display terminal 3A—GPS antenna terminal A Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 6.

ON-BOARD DIAGNOSTIC [MULTI INFORMATION DISPLAY]

STEP	INSPECTION	ACTION	
5	VERIFY GPS ANTENNA MALFUNCTION <ul style="list-style-type: none"> Make sure to reconnect the disconnected connectors. Reconnect the negative battery cable. Clear the DTC from multi information display using the M-MDS. (See 09-02J-3 CLEARING DTC [MULTI INFORMATION DISPLAY].) Switch the ignition to ACC. Perform the "DTC INSPECTION". (See 09-02J-3 DTC INSPECTION [MULTI INFORMATION DISPLAY].) Is the same DTC present? 	Yes	Replace the GPS antenna, then go to the next step. (See 09-20-42 GPS ANTENNA REMOVAL/INSTALLATION.)
		No	Go to Step 7.
6	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Make sure to reconnect the disconnected connectors. Reconnect the negative battery cable. Clear the DTC from multi information display using the M-MDS. (See 09-02J-3 CLEARING DTC [MULTI INFORMATION DISPLAY].) Switch the ignition to ACC. Perform the "DTC INSPECTION". (See 09-02J-3 DTC INSPECTION [MULTI INFORMATION DISPLAY].) Is the same DTC present? 	Yes	Replace the multi information display, then go to the next step. (See 09-22-18 MULTI INFORMATION DISPLAY REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02J-4 DTC TABLE [MULTI INFORMATION DISPLAY].)
		No	DTC troubleshooting completed.

09-02J

DTC B2477 [MULTI INFORMATION DISPLAY]

id090214935800

DESCRIPTION	Multi information display configuration error
DETECTION CONDITION	<ul style="list-style-type: none"> Multi information display configuration has not been performed.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Multi information display configuration error Multi information display malfunction

Diagnostic Procedure

STEP	INSPECTION	ACTION	
1	PERFORM MULTI INFORMATION DISPLAY CONFIGURATION <ul style="list-style-type: none"> Perform the "MULTI INFORMATION DISPLAY CONFIGURATION" using the M-MDS. (See 09-22-19 MULTI INFORMATION DISPLAY CONFIGURATION.) Clear the DTC from multi information display using the M-MDS. (See 09-02J-3 CLEARING DTC [MULTI INFORMATION DISPLAY].) Switch the ignition to ACC. Perform the "DTC INSPECTION". (See 09-02J-3 DTC INSPECTION [MULTI INFORMATION DISPLAY].) Is the same DTC present? 	Yes	Perform the "MULTI INFORMATION DISPLAY CONFIGURATION" again, then go to the next step. (See 09-22-19 MULTI INFORMATION DISPLAY CONFIGURATION.)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [MULTI INFORMATION DISPLAY]

STEP	INSPECTION	ACTION	
2	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Clear the DTC from multi information display using the M-MDS. (See 09-02J-3 CLEARING DTC [MULTI INFORMATION DISPLAY].) Switch the ignition to ACC. Perform the "DTC INSPECTION". (See 09-02J-3 DTC INSPECTION [MULTI INFORMATION DISPLAY].) Is the same DTC present? 	Yes	Replace the multi information display, then go to the next step. (See 09-22-18 MULTI INFORMATION DISPLAY REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02J-4 DTC TABLE [MULTI INFORMATION DISPLAY].)
		No	DTC troubleshooting completed.

DTC C1976 [MULTI INFORMATION DISPLAY]

id0902i4935900

DESCRIPTION	Open circuit in steering switch circuit
DETECTION CONDITION	<ul style="list-style-type: none"> Multi information display detects open circuit in steering switch circuit for 30 s or more, while the ignition is ACC or ON.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Clock spring connector or terminals malfunction Steering switch connector or terminals malfunction Clock spring malfunction Steering switch malfunction Multi information display connector or terminals malfunction Open circuit in wiring harness between the following terminals: <ul style="list-style-type: none"> — Multi information display terminal 1N—Steering switch terminal D — Multi information display terminal 1P—Steering switch terminal F — Multi information display terminal 1Q—Steering switch terminal B Multi information display malfunction
<div style="display: flex; justify-content: space-around;"> <div style="text-align: center;"> <p>MULTI INFORMATION DISPLAY WIRING HARNESS-SIDE CONNECTOR</p> </div> <div style="text-align: center;"> <p>STEERING SWITCH WIRING HARNESS-SIDE CONNECTOR</p> </div> </div>	
<div style="display: flex; justify-content: space-around;"> </div>	

* : Vehicles with car-navigation system

ON-BOARD DIAGNOSTIC [MULTI INFORMATION DISPLAY]

Diagnostic Procedure

STEP	INSPECTION	ACTION	
1	INSPECT CLOCK SPRING CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable. • Disconnect the clock spring connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 7.
		No	Go to the next step.
2	INSPECT STEERING SWITCH CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Disconnect the steering switch connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 7.
		No	Go to the next step.
3	INSPECT CLOCK SPRING <ul style="list-style-type: none"> • Inspect the clock spring. (See 08-10-23 CLOCK SPRING INSPECTION.) • Is there any malfunction? 	Yes	Replace the clock spring, then go to Step 7. (See 08-10-21 CLOCK SPRING REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	INSPECT STEERING SWITCH <ul style="list-style-type: none"> • Inspect the steering switch. (See 09-20-46 STEERING SWITCH INSPECTION.) • Is there any malfunction? 	Yes	Replace the steering switch, then go to Step 7. (See 09-20-43 STEERING SWITCH REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	INSPECT MULTI INFORMATION DISPLAY CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Disconnect the multi information display connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 7.
		No	Go to the next step.
6	INSPECT STEERING SWITCH CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Clock spring, steering switch and multi information display connectors are disconnected. • Reconnect the clock spring connector. • Inspect for continuity between the following terminals (wiring harness-side): <ul style="list-style-type: none"> — Multi information display terminal 1N— Steering switch terminal D — Multi information display terminal 1Q— Steering switch terminal F — Multi information display terminal 1P— Steering switch terminal B • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
7	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect the disconnected connectors. • Reconnect the negative battery cable. • Clear the DTC from multi information display using the M-MDS. (See 09-02J-3 CLEARING DTC [MULTI INFORMATION DISPLAY].) • Switch the ignition to ON. • Perform the "DTC INSPECTION". (See 09-02J-3 DTC INSPECTION [MULTI INFORMATION DISPLAY].) • Is the same DTC present? 	Yes	Replace the multi information display, then go to the next step. (See 09-22-18 MULTI INFORMATION DISPLAY REMOVAL/INSTALLATION.)
		No	Go to the next step.
8	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02J-4 DTC TABLE [MULTI INFORMATION DISPLAY].)
		No	DTC troubleshooting completed.

09-02J

ON-BOARD DIAGNOSTIC [MULTI INFORMATION DISPLAY]

DTC U0423 [MULTI INFORMATION DISPLAY]

id0902i4936000

DESCRIPTION	Communication error with instrument cluster
DETECTION CONDITION	<ul style="list-style-type: none"> Multi information display receives invalid signal of vehicle speed data from the instrument cluster for 5 s or more, while the ignition is ON.
POSSIBLE CAUSE	<ul style="list-style-type: none"> PCM DTC is stored Instrument cluster DTC is stored Multi information display malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	CONFIRM PCM DTC <ul style="list-style-type: none"> Perform the DTC Reading Procedure to confirm the PCM DTC. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].) (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
2	CONFIRM INSTRUMENT CLUSTER DTC <ul style="list-style-type: none"> Perform the "DTC INSPECTION" to confirm the instrument cluster DTC. (See 09-02E-4 DTC INSPECTION [INSTRUMENT CLUSTER].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02E-5 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
3	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Clear the DTC from multi information display using the M-MDS. (See 09-02J-3 CLEARING DTC [MULTI INFORMATION DISPLAY].) Switch the ignition to ON. Perform the "DTC INSPECTION" to confirm the multi information display DTC. (See 09-02J-3 DTC INSPECTION [MULTI INFORMATION DISPLAY].) Is the same DTC present? 	Yes	Replace the multi information display, then go to the next step. (See 09-22-18 MULTI INFORMATION DISPLAY REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02J-4 DTC TABLE [MULTI INFORMATION DISPLAY].)
		No	DTC troubleshooting completed.

DTC INSPECTION [AUTO LIGHT/WIPER CONTROL MODULE]

id0902j1960300

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Self Test".
 2. Select "Modules".
 3. Select "LCM".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "LCM".
 3. Select "Self Test".
3. Verify the DTC according to the directions on the screen.
 - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
4. After completion of repairs, clear all DTCs stored in the auto light/wiper control module. (See 09-02K-3 CLEARING DTC [AUTO LIGHT/WIPER CONTROL MODULE].)

ON-BOARD DIAGNOSTIC [AUTO LIGHT/WIPER CONTROL MODULE]

Diagnostic Procedure

STEP	INSPECTION	ACTION	
1	CONFIRM PCM DTC <ul style="list-style-type: none"> • Perform the PCM DTC inspection using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].) (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
2	INSPECT AUTO LIGHT/WIPER CONTROL MODULE CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable. • Disconnect the auto light/wiper control module connector. • Inspect for poor connection (damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 4.
		No	Go to the next step.
3	INSPECT AUTO LIGHT/WIPER CONTROL MODULE POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GROUND <ul style="list-style-type: none"> • Auto light/wiper control module connector is disconnected. • Reconnect the negative battery cable. • Switch the ignition to ON. • Measure the voltage at the following terminal (wiring harness-side): — Auto light/wiper control module terminal A • Is the voltage B+? 	Yes	Go to the next step.
		No	Inspect the METER 15 A fuse. <ul style="list-style-type: none"> • If the fuse is melt: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deterioration: <ul style="list-style-type: none"> — Replace the fuse. • If the fuse is normal: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible open circuit. Go to the next step.
4	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect the disconnected connectors. • Reconnect the negative battery cable. • Clear the DTC from the auto light/wiper control module using the M-MDS. (See 09-02K-3 CLEARING DTC [AUTO LIGHT/WIPER CONTROL MODULE].) • Perform the auto light/wiper control module DTC inspection using the M-MDS. (See 09-02K-3 DTC INSPECTION [AUTO LIGHT/WIPER CONTROL MODULE].) • Is the same DTC present? 	Yes	Replace the auto light/wiper control module, then go to the next step. (See 09-18-64 AUTO LIGHT/WIPER CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	VERIFY THAT NO OTHER DTCs ARE RECORDED <ul style="list-style-type: none"> • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02K-3 DTC TABLE [AUTO LIGHT/WIPER CONTROL MODULE].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [AUTO LIGHT/WIPER CONTROL MODULE]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	INSPECT RAIN SENSOR/AUTO LIGHT SENSOR CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable. • Disconnect the rain sensor/auto light sensor connector. • Inspect the rain sensor/auto light sensor connector for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 7.
		No	Go to the next step.
2	INSPECT AUTO LIGHT/WIPER CONTROL MODULE CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Disconnect the auto light/wiper control module connector. • Inspect the auto light/wiper control module connector for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 7.
		No	Go to the next step.
3	INSPECT RAIN SENSOR/AUTO LIGHT SENSOR SIGNAL CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • Rain sensor/auto light sensor and auto light/wiper control module connectors are disconnected. • Inspect for continuity between the following terminal (wiring harness-side) and body ground: <ul style="list-style-type: none"> — Rain sensor/auto light sensor terminal C • Is there continuity? 	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 7.
		No	Go to the next step.
4	INSPECT RAIN SENSOR/AUTO LIGHT SENSOR SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • Rain sensor/auto light sensor and auto light/wiper control module connectors are disconnected. • Reconnect the negative battery cable. • Switch the ignition to ON. • Measure the voltage at the following terminal (wiring harness-side): <ul style="list-style-type: none"> — Rain sensor/auto light sensor terminal C • Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 7.
		No	Go to the next step.
5	INSPECT RAIN SENSOR/AUTO LIGHT SENSOR SIGNAL CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Rain sensor/auto light sensor and auto light/wiper control module connectors are disconnected. • Switch the ignition to off. • Disconnect the negative battery cable. • Inspect for continuity between the following terminals (wiring harness-side): <ul style="list-style-type: none"> — Rain sensor/auto light sensor terminal C— Auto light/wiper control module terminal U • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 7.

ON-BOARD DIAGNOSTIC [AUTO LIGHT/WIPER CONTROL MODULE]

STEP	INSPECTION	ACTION	
6	CONFIRM AUTO LIGHT/WIPER CONTROL MODULE DTC <ul style="list-style-type: none"> • Make sure to reconnect the disconnected connectors. • Reconnect the negative battery cable. • Clear the DTC from the auto light/wiper control module using the M-MDS. (See 09-02K-3 CLEARING DTC [AUTO LIGHT/WIPER CONTROL MODULE].) • Perform the auto light/wiper control module DTC inspection using the M-MDS. (See 09-02K-3 DTC INSPECTION [AUTO LIGHT/WIPER CONTROL MODULE].) • Is the same DTC present? 	Yes	Replace the rain sensor/auto light sensor, then go to the next step. (See 09-19-25 RAIN SENSOR REMOVAL/INSTALLATION.)
		No	Go to Step 8.
7	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect the disconnected connectors. • Reconnect the negative battery cable. • Clear the DTC from the auto light/wiper control module using the M-MDS. (See 09-02K-3 CLEARING DTC [AUTO LIGHT/WIPER CONTROL MODULE].) • Perform the auto light/wiper control module DTC inspection using the M-MDS. (See 09-02K-3 DTC INSPECTION [AUTO LIGHT/WIPER CONTROL MODULE].) • Is the same DTC present? 	Yes	Replace the auto light/wiper control module, then go to the next step. (See 09-18-64 AUTO LIGHT/WIPER CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
8	VERIFY THAT NO OTHER DTCs ARE RECORDED <ul style="list-style-type: none"> • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02K-3 DTC TABLE [AUTO LIGHT/WIPER CONTROL MODULE].)
		No	DTC troubleshooting completed.

SYMPTOM TROUBLESHOOTING [POWER WINDOW SYSTEM]

FOREWORD [POWER WINDOW SYSTEM]

id0903a0805400

Troubleshooting Procedure

09-03A

- Slightly shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions.

Caution

- If any of the following conditions continues indefinitely, the power window motor will heat up causing the protection circuit (integrated in power window motor) to operate. If this occurs, the operation of the power window motor protection circuit temporarily disables the power windows.
 - Continuous up and down operation of the power window.
 - Continuously pulling up the power window switch while the window glass is fully closed.
 - Continuously pressing the power window switch while the window glass fully opened.
- A malfunction in the power window system will be determined and the system will shift to malfunction mode if the power windows are operated up or down using the power window switch while the power window protection circuit is operating.
- While the power window system is in malfunction mode, but they do not operate using the auto open/close function.
- The power window system reverts to normal operation after performing the Power Window Initialization Procedure.

Note

- If the following operations have been performed, initial setting is reset, and auto up/down operation are disabled. Therefore, performing initial setting is necessary.
 - Negative battery cable disconnected
 - Power window main switch connector disconnected
 - Power window system power supply fuse removed

SYMPTOM TROUBLESHOOTING [POWER WINDOW SYSTEM]

Power Window System Initial Setting

1. Switch the ignition to ON.
2. Press the driver side power window main switch and fully open the driver side front door glass.
3. Pull up the driver side power window main switch to the manual-up position to fully close the driver side front door glass, and keep holding the switch up at the position for **approx.2 s**.

SYMPTOM TROUBLESHOOTING [POWER WINDOW SYSTEM]

POWER WINDOW SYSTEM PRELIMINARY INSPECTION [POWER WINDOW SYSTEM]

id0903a0831700

Manual Open/close Function Inspection

STEP	INSPECTION	ACTION	
1	<ul style="list-style-type: none"> • Switch the ignition to ON. • Operate the power window using the manual open/close function on the power window main switch. • Does the power window operate properly? 	Yes	Go to the next step.
		No	<ul style="list-style-type: none"> • Inspect the power window main switch and the wiring harness. • Repair or replace malfunctioning parts.
2	<ul style="list-style-type: none"> • Set the power cut switch to the UNLOCK position. • Operate the power window using the power window subswitch. • Does the power window operate properly? 	Yes	Go to the next step.
		No	<ul style="list-style-type: none"> • Inspect the power window subswitch and the wiring harness. • Repair or replace malfunctioning parts.
3	<ul style="list-style-type: none"> • Set the power cut switch to the LOCK position. • Operate all power windows other than the driver side. • Does the power window operate properly? 	Yes	<ul style="list-style-type: none"> • Inspect the power cut switch and the wiring harness. • Replace the power window main switch.
		No	<ul style="list-style-type: none"> • Manual open/close function is normal. • Perform the auto open/close function inspection.

Auto Open/close Function (Driver's Side) Inspection

STEP	INSPECTION	ACTION	
1	<ul style="list-style-type: none"> • Switch the ignition to ON. • Operate the power window using the auto open / close function on the power window main switch. • Does the power window operate properly? 	Yes	Go to the next step.
		No	<p>If the power window automatically opens during the closing operation:</p> <ul style="list-style-type: none"> • Go to 09-03A-13 No.6 DOOR GLASS REVERSES EVEN THOUGH THE GLASS DOES NOT ENCOUNTER A FOREIGN OBJECT WHILE IT IS MOVING UP IN AUTOMATIC MODE [POWER WINDOW SYSTEM]. <p>Others:</p> <ul style="list-style-type: none"> • Go to 09-03A-8 No.1 THE AUTO OPEN/CLOSE FUNCTION ON THE DRIVER'S SIDE POWER WINDOW IS INOPERATIVE [POWER WINDOW SYSTEM].
2	<ul style="list-style-type: none"> • Operate the power window main switch to the close position while the power window is opening. • Does the power window operation stop? 	Yes	Go to the next step.
		No	<ul style="list-style-type: none"> • Replace the power window main switch (power window control unit is malfunctioning.)
3	<ul style="list-style-type: none"> • Operate the power window main switch to the open position while the power window is closing. • Does the power window operation stop? 	Yes	<ul style="list-style-type: none"> • Auto open/close function is normal. • Perform the IG-OFF timer function inspection.
		No	<ul style="list-style-type: none"> • Replace the power window main switch (power window control unit is malfunctioning.)

IG-OFF Timer Function Inspection

STEP	INSPECTION	ACTION	
1	<ul style="list-style-type: none"> • Close all doors. • Switch the ignition from the ON to the off. • Operate the power window main switch within 43 seconds after turning the ignition switch to the LOCK position. • Does the power window operate? 	Yes	Go to the next step.
		No	<ul style="list-style-type: none"> • Inspect the door switches and related wiring harness. • If above parts are okay, replace the power window main switch, then go to the next step. • If above parts are incorrect repair or replace malfunction part(s), then go to the next step.
2	<ul style="list-style-type: none"> • Open any door. • Switch the ignition from the ON to the off. • Operate the power window main switch within 43 seconds after turning the ignition switch to the LOCK position. • Does the power window operate? 	Yes	<ul style="list-style-type: none"> • Inspect the door switches and related wiring harness. • If above parts are okay, replace the power window main switch, then go to the next step. • If above parts are incorrect repair or replace malfunction part(s), then go to the next step.
		No	<ul style="list-style-type: none"> • Go to the next step.

SYMPTOM TROUBLESHOOTING [POWER WINDOW SYSTEM]

STEP	INSPECTION	ACTION	
3	<ul style="list-style-type: none"> • Close all doors. • Switch the ignition from the ON to the off. • Operate the power window main switch within 60 seconds after turning the ignition switch to the LOCK position. • Does the power window operate? 	Yes	<ul style="list-style-type: none"> • Replace the power window main switch (power window control unit is malfunctioning.)
		No	<ul style="list-style-type: none"> • IG-OFF timer function operation is normal. • Perform the auto reverse pinch protection function inspection.

Auto Reverse Pinch Protection Function Inspection

STEP	INSPECTION	ACTION	
1	<ul style="list-style-type: none"> • Switch the ignition to ON. • Fully open the driver's side power window. • Set the hammer (thickness: 10 mm {0.39 in} or more) as shown below. Then, close the power window. • Verify that the power window opens 200 mm {7.87 in} after contacting the hammer and the operation stops. • Does auto reverse pinch protection function operate properly? 	Yes	<ul style="list-style-type: none"> • Auto reverse pinch protection function is normal.
		No	Go to the next step.
2	<ul style="list-style-type: none"> • Does power window open before contacting the hammer? 	Yes	<ul style="list-style-type: none"> • Go to 09-03A-13 No.6 DOOR GLASS REVERSES EVEN THOUGH THE GLASS DOES NOT ENCOUNTER A FOREIGN OBJECT WHILE IT IS MOVING UP IN AUTOMATIC MODE [POWER WINDOW SYSTEM].
		No	<ul style="list-style-type: none"> • Initialize the power window main switch. <p>Note</p> <ul style="list-style-type: none"> • Before initializing the power window main switch, cut off the power supply to the power window main switch for 60 seconds. Then, reconnect it again after 60 seconds: <ul style="list-style-type: none"> — Disconnect the negative battery cable. — Disconnect the power window main switch connector. — Remove the fuse for the power window system.

09-03A

acxaaw00000113

SYMPTOM TROUBLESHOOTING [POWER WINDOW SYSTEM]

No.1 THE AUTO OPEN/CLOSE FUNCTION ON THE DRIVER'S SIDE POWER WINDOW IS INOPERATIVE [POWER WINDOW SYSTEM]

id0903a0831000

1	The auto open/close function on the driver's side power window is inoperative.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Power window system in fail-safe function (Power window motor heat protection circuit is operating) • No power supply to power window main switch • Power window main switch malfunction (power window control unit malfunction, auto switch malfunction) • Power window motor malfunction (Sensor inside motor malfunction) • Malfunction in wiring harness between power window motor (sensor) and power window main switch

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	<ul style="list-style-type: none"> • Switch the ignition to off for 3 min. • Switch the ignition to ON. • Initialize the power window system. • Operate the auto open/close function. • Dose the power window operate properly? 	Yes	System is normal. The power window system auto open/close function dose not operate temporarily for any of the following reasons: <ul style="list-style-type: none"> • The power window switch is operated while the power window motor protection circuit (integrated in power window motor) is operating. • The power window main switch power supply is cut off by disconnection of the negative battery cable or removing the fuse.
		No	Go to the next step.
2	<ul style="list-style-type: none"> • Does the sensor built into the power window motor send pulse signals while the power window motor is operating? • Inspect the voltage at the following power window motor terminals: <ul style="list-style-type: none"> — B (sensor 1 signal) — A (sensor 2 signal) • Is the voltage approx.12 V? 	Yes	Go to the next step.
		No	Replace the power window motor. (See 09-12-12 POWER WINDOW MOTOR INSPECTION.)
3	<ul style="list-style-type: none"> • Does the sensor built into the power window motor send pulse signals while the power window motor is operating? • Inspect the voltage at the following power window main switch terminals: <ul style="list-style-type: none"> — 1D (sensor 1 signal) — 1H (sensor 2 signal) • Is the voltage approx.12 V? 	Yes	Replace the power window main switch. (See 09-12-13 POWER WINDOW MAIN SWITCH REMOVAL/INSTALLATION.)
		No	Inspect for an open or short circuit in wiring between the power window motor (sensor) and the power window main switch. Inspect the connection of the power window motor and power window main switch connectors. (damaged/pulled-out pins, corrosion) Repair of replace necessary.

SYMPTOM TROUBLESHOOTING [POWER WINDOW SYSTEM]

No.2 THE DRIVER'S SIDE POWER WINDOW IS INOPERATIVE [POWER WINDOW SYSTEM]

id0903a0831100

2	The driver's side power window is inoperative.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Power supply circuit or ground circuit malfunction <ul style="list-style-type: none"> — Burnt fuse (B+) — Open or short circuit in wiring harness between fuse (B+) and power window main switch — Open or short circuit in wiring harness between power window main switch and power window motor — Open or short circuit in wiring harness between power window main switch and ground • Power window main switch malfunction • Power window motor malfunction • Power window regulator malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	<ul style="list-style-type: none"> • Switch the ignition to ON. • Does the LED on the power window main switch illuminate? 	Yes	Go to Step 6.
		No	Go to the next step.
2	<ul style="list-style-type: none"> • Operate all power windows other than the driver's side window using the power window main switch. • Does the power window operate properly? 	Yes	Go to the next step.
		No	Inspect for an open or short circuit in the following wiring harnesses. Inspect the connector connections (damage/pulled-out pins, corrosion): <ul style="list-style-type: none"> • P.WIND 30 A fuse—Power window main switch terminal 1M • Power window main switch terminal 1B—ground. Repair or replace if necessary.
3	<ul style="list-style-type: none"> • Is the P.WIND 30 A fuse normal? 	Yes	Go to Step 5.
		No	Inspect the following: <ul style="list-style-type: none"> • Short circuit in B+ power supply wiring harness • Short circuit in power window motor Repair or replace if necessary. Replace with the appropriate standard fuse. Then, go to the next step.
4	<ul style="list-style-type: none"> • Initialize the power window system. • Operate the power window system. • Do the power windows operate properly? 	Yes	Troubleshooting is completed.
		No	Re-confirm the symptom and go to Step 1.
5	<ul style="list-style-type: none"> • Measure the voltage at the power window main switch terminal 1M. • Is the voltage B+? 	Yes	Replace the power window main switch. (See 09-12-13 POWER WINDOW MAIN SWITCH REMOVAL/ INSTALLATION.)
		No	Inspect for an open or short circuit in the power window main switch wiring harness (battery power supply). Inspect the power window main switch connector connection. (damage/pulled-out pins, corrosion) Repair or replace if necessary.
6	<ul style="list-style-type: none"> • Measure the voltage at the power window main switch. (power window motor output terminal) while operating the power window using the power window main switch. • Is the voltage B+? (Open: terminal 1L/ close: terminal 1J) 	Yes	Go to the next step.
		No	Replace the power window main switch. (See 09-12-13 POWER WINDOW MAIN SWITCH REMOVAL/ INSTALLATION.)
7	<ul style="list-style-type: none"> • Measure the voltage at the power window motor. (battery power supply terminal) while operating the power window using the power window motor. • Is the voltage B+? (Open: terminal F/ close: terminal E) 	Yes	Go to the next step.
		No	Inspect for an open or short circuit in the wiring harness between the power window main switch and the power window motor. Inspect the power window main switch and power window motor connector connections. (damage/pulled-out pins, corrosion) Repair or replace if necessary.

09-03A

SYMPTOM TROUBLESHOOTING [POWER WINDOW SYSTEM]

STEP	INSPECTION	ACTION	
8	<ul style="list-style-type: none"> • Operate the driver's side power window using the power window main switch. • Does the power window motor operate (rotate)? <p>Caution</p> <ul style="list-style-type: none"> • If the power window motor temperature is high, the motor may not rotate due to the motor internal bimetal function. Leave it untouched for about 3 min to cool it down, then reinspect. 	Yes	Go to the next step.
		No	Replace the power window motor. (See 09-12-11 POWER WINDOW MOTOR REMOVAL/INSTALLATION.)
9	<ul style="list-style-type: none"> • Remove the door glass from the carrier plate. • Make sure that the door glass moves smoothly using your hand. • Does the door glass move smoothly? 	Yes	Replace the power window regulator. (See 09-12-8 FRONT POWER WINDOW REGULATOR REMOVAL/INSTALLATION.) (See 09-12-9 REAR POWER WINDOW REGULATOR REMOVAL/INSTALLATION.)
		No	Inspect for a bent regulator guide or other possible malfunction. If normal, replace the door glass run-channel.

No.3 ALL POWER WINDOWS OTHER THAN DRIVER'S SIDE DO NOT OPERATE USING THE POWER WINDOW SUBSWITCH [POWER WINDOW SYSTEM]

id0903a0831200

3	All power windows other than driver's side do not operate using the power window subswitch.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Open or short circuit in power window subswitch wiring harness (battery power supply circuit) • Power window subswitch malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	<ul style="list-style-type: none"> • Switch the ignition to ON. • Set the power cut-switch to the UNLOCK position. • Measure the voltage at the power window subswitch terminal B. • Is the voltage B+? 	Yes	Replace the power window subswitch. (See 09-12-16 POWER WINDOW SUBSWITCH REMOVAL/INSTALLATION.)
		No	Inspect for an open or short circuit in the wiring harness between the power window main switch and the power window subswitch. Inspect the power window subswitch connector connection. (damage/pulled-out pins, corrosion) Repair or replace if necessary.

No.4 ALL POWER WINDOWS OTHER THAN DRIVER'S SIDE DO NOT OPERATE USING THE POWER WINDOW MAIN SWITCH [POWER WINDOW SYSTEM]

id0903a0831300

4	All power windows other than driver's side do not operate using the power window main switch.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Open or short circuit in wiring harness between ignition switch (IG1) and power window main switch (IG1) • Power window main switch malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	<ul style="list-style-type: none"> • Switch the ignition to ON. • Set the power cut-switch to the UNLOCK position. • Operate all power windows other than the driver's side using the power window main switch. • Do any power windows operate? 	Yes	Replace the power window main switch. (See 09-12-13 POWER WINDOW MAIN SWITCH REMOVAL/INSTALLATION.)
		No	Inspect for an open or short circuit in the power window main switch wiring harness (battery power supply). Inspect the power window main switch connector connection. (damage/pulled-out pins, corrosion) Repair or replace if necessary.

SYMPTOM TROUBLESHOOTING [POWER WINDOW SYSTEM]

No.5 ALL POWER WINDOWS ARE INOPERATIVE [POWER WINDOW SYSTEM]

id0903a0831400

5	All power windows are inoperative.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Power supply circuit or ground circuit malfunction <ul style="list-style-type: none"> — Burnt fuse (B+) — Open or short circuit in wiring harness between ignition switch (IG1) and power window main switch — Open or short circuit in wiring harness between power window main switch and power window subswitch — Open or short circuit in wiring harness between power window main switch and power window motor — Open or short circuit in wiring harness between power window main switch and ground • Power window main switch malfunction (power cut-off switch malfunction, switch malfunction) • Power window subswitch malfunction • Power window motor malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	<ul style="list-style-type: none"> • Switch the ignition to ON. • Set the power cut-off switch to the UNLOCK position. • Inspect the power window system operation again. • Does the system operate properly? 	Yes	System is now normal. (power cut-off switch is not set properly.)
		No	Go to the next step.
2	<ul style="list-style-type: none"> • Operate all power windows other than driver's side window using the power window main switch. • Does any power window operate? 	Yes	Go to Step 6.
		No	Go to the next step.
3	<ul style="list-style-type: none"> • Operate the driver's side power window using the power window main switch. • Does the power window operate? 	Yes	Go to the next step.
		No	Inspect for an open circuit in the wiring harness between the power window main switch and the body ground. Inspect the power window main switch connector connection. (damage/pulled-out pins, corrosion) Repair or replace if necessary
4	<ul style="list-style-type: none"> • Is the P.WIND 30 A fuse normal? 	Yes	Replace with the appropriate standard fuse. If the fuse is melted, inspect the wiring harness for a short to ground. Repair or replace the wiring harness, then replace the fuse.
		No	Go to the next step.
5	<ul style="list-style-type: none"> • Measure the voltage at the power window main switch terminal 1M. • Is the voltage B+? 	Yes	Replace the power window main switch. (See 09-12-13 POWER WINDOW MAIN SWITCH REMOVAL/INSTALLATION.)
		No	Inspect for an open or short circuit in the power window main switch wiring harness (battery power supply). Inspect the power window main switch connector connection. (damage/pulled-out pins, corrosion) Repair or replace if necessary.
6	<ul style="list-style-type: none"> • Identify the inoperative power window. • Measure the voltage at the suspect power window motor (battery power supply) while operating the power window motor using the suspect power window subswitch • Is the voltage B+? (Open: terminal F/ close: terminal E) 	Yes	Go to the next step.
		No	Go to Step 9.
7	<ul style="list-style-type: none"> • Operate the power window using the power window subswitch • Does the power window motor operate (rotate)? Caution <ul style="list-style-type: none"> • If the power window motor temperature is high, the motor may not rotate due to the motor internal bimetal function. Leave it untouched for about 3 min to cool it down, then reinspect. 	Yes	Go to the next step.
		No	Replace the power window motor. (See 09-12-11 POWER WINDOW MOTOR REMOVAL/INSTALLATION.)
8	<ul style="list-style-type: none"> • Remove the door glass from the carrier plate. • Make sure that the door glass moves smoothly using your hand. • Does the door glass move smoothly? 	Yes	Replace the power window regulator guide.
		No	Inspect for a bent regulator guide or other possible malfunction. If normal, replace the glass run channel.

09-03A

SYMPTOM TROUBLESHOOTING [POWER WINDOW SYSTEM]

STEP	INSPECTION	ACTION	
9	<ul style="list-style-type: none"> • Measure the voltage at the power window subswitch (power window motor output) while operating the power window subswitch. • Is the voltage B+? (Open: terminal C/ close: terminal E) 	Yes	Inspect for an open or short circuit in the wiring harness between the power window subswitch and power window motor. Inspect the power window subswitch and power window motor connector connections. (damage/pulled-out pins, corrosion) Repair or replace if necessary.
		No	Go to the next step.
10	<p>Note</p> <ul style="list-style-type: none"> • Do not operate the power window subswitch during the following inspection. • Inspect the continuity between power window subswitch terminal A (vehicle harness-side) and ground. • Is there continuity? 	Yes	Go to the next step.
		No	Inspect for an open or short circuit in the power window subswitch wiring harness. Inspect the power window subswitch connector connection. (damage/pulled-out pins, corrosion) Repair or replace if necessary. Then go to Step 12.
11	<p>Note</p> <ul style="list-style-type: none"> • Do not operate the power window subswitch during the following inspection. • Inspect the continuity between power window subswitch terminal D and ground. • Is there continuity? 	Yes	Replace the power window subswitch. (See 09-12-16 POWER WINDOW SUBSWITCH REMOVAL/ INSTALLATION.)
		No	Inspect for an open or short circuit in the power window subswitch wiring harness. Inspect the power window subswitch connector connection. (damage/pulled-out pins, corrosion) Repair or replace if necessary. Then go to Step 13.
12	<p>Note</p> <ul style="list-style-type: none"> • Do not operate the power window main switch during the following inspection. • Inspect the continuity between power window main switch terminal (up-side 2L, 1I, 1C) and ground. • Is there continuity? 	Yes	Go to the next step.
		No	Replace the power window main switch. (See 09-12-13 POWER WINDOW MAIN SWITCH REMOVAL/ INSTALLATION.)
13	<p>Note</p> <ul style="list-style-type: none"> • Do not operate the power window main switch during the following inspection. • Inspect the continuity between power window main switch terminal (down-side 2K, 1G, 1E) and ground. • Is there continuity? 	Yes	Inspect for an open or short circuit in the wiring harness between the power window main switch and power window subswitch. Inspect the power window main switch and subswitch connector connections. (damage/pulled-out pins, corrosion) Repair or replace if necessary.
		No	Replace the power window main switch. (See 09-12-13 POWER WINDOW MAIN SWITCH REMOVAL/ INSTALLATION.)

SYMPTOM TROUBLESHOOTING [POWER WINDOW SYSTEM]

No.6 DOOR GLASS REVERSES EVEN THOUGH THE GLASS DOES NOT ENCOUNTER A FOREIGN OBJECT WHILE IT IS MOVING UP IN AUTOMATIC MODE [POWER WINDOW SYSTEM]

id0903a0831500

Note

- Perform the following inspection for the power window system component parts of windows where the door glass reverses even though the glass does not encounter a foreign object while it is moving up in automatic mode.

6	Door glass reverses even though the glass does not encounter a foreign object while it is moving up in automatic mode.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Extreme change in the sliding resistance of the glass while the door glass is closing. <ul style="list-style-type: none"> — Improper installation of the acrylic door visor. — Power window motor malfunction. — Object caught between the glass run channel and the door glass. — Insufficient tightening of the door glass to the carrier plate. — Glass run channel malfunction. — Glass guide related malfunction. <p>Note</p> <ul style="list-style-type: none"> • The auto-reverse pinch protection function is a mechanism that automatically reverses (opens) the door glass while it is closing when the power window main switch detects the signal from the power window motor indicating that an object is obstructing the door glass movement. • The auto-reverse pinch protection function may operate if the sliding resistance of the door glass increases causing the closing speed to decrease. • If the door glass closing speed has changed, concentrate the inspection on the following locations: (Slip occurrence) <ul style="list-style-type: none"> — If the door glass is slipping forward, inspect the front side of the glass guide or glass run channel. — If the door glass is slipping rearward, inspect the rear side of the glass guide or glass run channel.

Diagnostic procedure

09-03A

STEP	INSPECTION		ACTION
1	INSPECT MALFUNCTION SYMPTOM <ul style="list-style-type: none"> • Does the malfunction symptom occur only under the following special conditions?: <ul style="list-style-type: none"> — Driving over railroad tracks — Driving on bumpy roads — Opening/closing the door 	Yes	The system is normal. (Explain to the customer that this does not indicate a malfunction because the system is designed to reverse the door glass while it is closing if it receives vibration when the vehicle is crossing railroad tracks, driving on a bumpy road, or when the door is opened/closed.)
		No	Go to the next step.
2	INSPECT ACRYLIC DOOR VISOR INSTALLATION CONDITION <ul style="list-style-type: none"> • Is the acrylic door visor normal? 	Yes	Go to the next step.
		No	Install the side visor properly, then go to the next step.
3	INSPECT DOOR GLASS CLOSING SPEED <ul style="list-style-type: none"> • Affix tape to the rear edge of the door glass as shown in the figure for placing marks. (to facilitate seeing the door glass movement) • Start the engine and idle it (to ensure a stabilized operational voltage). • Does the door glass hesitate only once while its closing? 	Yes	Mark the point where the door glass closing speed changed, then go to Step 5.
		No	Go to the next step.
4	REINSPECT DOOR GLASS CLOSING SPEED <ul style="list-style-type: none"> • Does the door glass hesitate periodically (5-6 times) while it is closing? 	Yes	Replace the power window motor, then go to Step 8 (See 09-12-11 POWER WINDOW MOTOR REMOVAL/ INSTALLATION.)
		No	Go to Step 8.
5	INSPECT GLASS RUN CHANNEL AND DOOR GLASS SLIDING SURFACE <ul style="list-style-type: none"> • Is there an object caught between the glass run channel and the door glass, or is there roughness on the sliding surface (rubber surface)? 	Yes	<p>Object is caught between glass run channel and door glass:</p> <ul style="list-style-type: none"> • Remove the object. <p>Roughness on the sliding surface (rubber surface):</p> <ul style="list-style-type: none"> • Replace the glass run channel. <p>After performing one of the above actions, reinspect. If the malfunction is not corrected, go to Step 3.</p>
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [POWER WINDOW SYSTEM]

STEP	INSPECTION	ACTION	
6	INSPECT TIGHTENING OF DOOR GLASS TO CARRIER PLATE • Is it normal?	Yes	Go to the next step.
		No	After tightening correctly, reinspect. If the malfunction is not corrected, go to Step 3.
7	INSPECT CONDITION OF GLASS RUN CHANNEL AND DOOR GLASS • Is it normal?	Yes	Go to the next step.
		No	Assemble the glass run channel and door glass securely, and reinspect. If the malfunction is not corrected, go to Step 3.
8	INSPECT DOOR GLASS CLOSING SPEED • Does the door glass hesitate at any location?	Yes	Repeat the inspection from Step 3.
		No	Troubleshooting completed.

acxaaw00000111

SYMPTOM TROUBLESHOOTING [POWER WINDOW SYSTEM]

No.7 ABNORMAL NOISE WHILE THE DOOR GLASS IS OPENING OR CLOSING [POWER WINDOW SYSTEM]

id0903a0831600

7	Abnormal noise while the door glass is opening or closing.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Installation screw is loose between the door glass and carrier plate. • Deformity in the power window regulator plastic part due to use. <ul style="list-style-type: none"> — Scratching, wear marks to the power window regulator resin part due to twisting of the cable. — Gear deformity in the power window motor. <p>Note</p> <ul style="list-style-type: none"> • Identify the location of the noise using a stethoscope or similar device.

Diagnostic procedure

Noise type	Time of occurrence	Possible cause	Location of noise	Action
Clanking noise	Door glass begins to move	Insufficiently tightened installation screw between the door glass and carrier plate.	Between door glass lower edge and carrier plate.	Securely tighten the installation screw.
Groaning noise (Sound increases due to use)	While door glass is operating	Vibration caused by wear on the resin part from cable twisting due to use of the power window regulator. Note <ul style="list-style-type: none"> • Noise does not occur if a roller is equipped to power window regulator resin part. 	Power window regulator	Replace the power window regulator (See 09-12-8 FRONT POWER WINDOW REGULATOR REMOVAL/INSTALLATION.) (See 09-12-8 FRONT POWER WINDOW REGULATOR REMOVAL/INSTALLATION.)
Whining noise Clicking noise (Periodic noise)		Gear inside power window motor is deformed due to use.	Gear in power window motor	Replace the power window motor (See 09-12-11 POWER WINDOW MOTOR REMOVAL/INSTALLATION.)

SYMPTOM TROUBLESHOOTING [KEYLESS ENTRY SYSTEM]

KEYLESS ENTRY SYSTEM PRELIMINARY INSPECTION [KEYLESS ENTRY SYSTEM]

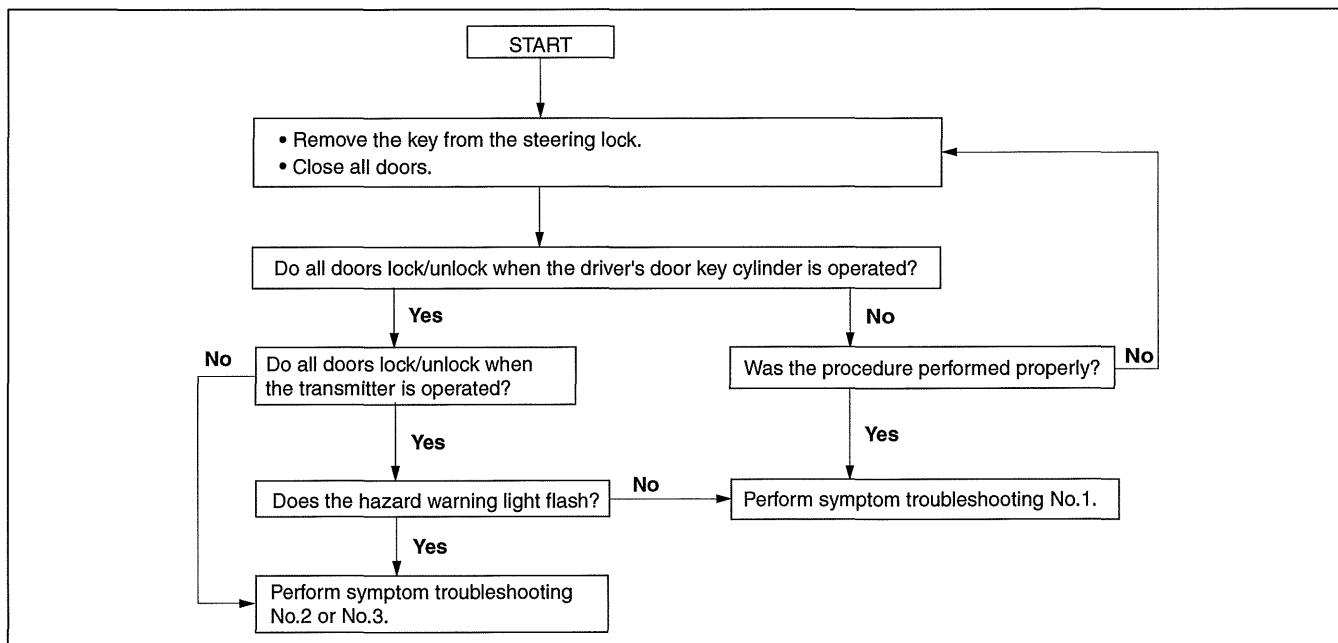

id0903d2800300

- Perform the following preliminary inspection before troubleshooting.

STEP	INSPECTION	ACTION	
1	<ul style="list-style-type: none"> • Is system an after-market one? 	Yes	Perform troubleshooting according to after-market keyless entry system manual.
		No	Go to next step.
2	<ul style="list-style-type: none"> • Did customer activate keyless entry system when the ignition is switched to off? 	Yes	Go to next step.
		No	<ul style="list-style-type: none"> • Explain to customer that system does not work when ignition is key in key cylinder. • Switch the ignition to off, then go to next step.
3	<ul style="list-style-type: none"> • Did customer use keyless entry system in particular area, such as being near TV towers, power plants, power lines, or factories? 	Yes	Attempt to lock/unlock doors with transmitter in non-interference area. If system operates: <ul style="list-style-type: none"> • Area of operation is bad. Explain effect of outside interference on transmitter to customer. If system does not operate: <ul style="list-style-type: none"> • Go to next step.
		No	Go to next step.
4	<ul style="list-style-type: none"> • Are any of the following after-market electrical parts on the vehicle? <ul style="list-style-type: none"> — Cellular phone — Radio-wave equipment — Remote engine starter — TV, etc. 	Yes	Disconnect after-market electrical part connectors and attempt to lock/unlock doors with transmitter. If system operates: <ul style="list-style-type: none"> • After-market electrical parts are interfering with keyless entry system. If system does not operate: <ul style="list-style-type: none"> • Go to next step.
		No	Go to next step.
5	<ul style="list-style-type: none"> • Reform the keyless entry system operation inspection. (See 09-03B-4 KEYLESS ENTRY SYSTEM OPERATION INSPECTION [KEYLESS ENTRY SYSTEM].) • Does the keyless entry system function work? 	Yes	Go to next step.
		No	<ul style="list-style-type: none"> • Go to Step 1 of NO. 1 ONE OR MORE ON-BOARD DIAGNOSTIC FUNCTIONS INOPERATIVE.
6	<ul style="list-style-type: none"> • Attempt to reprogram transmitter ID code. • Can transmitter ID code be reprogrammed? 	Yes	System is normal now.
		No	Go to Step 1 of troubleshooting NO. 3 TRANSMITTER ID CODE CANNOT BE REPROGRAMMED.

KEYLESS ENTRY SYSTEM OPERATION INSPECTION [KEYLESS ENTRY SYSTEM]

am6xuw0000238

SYMPTOM TROUBLESHOOTING [KEYLESS ENTRY SYSTEM]

KEYLESS ENTRY SYSTEM CHECK SHEET [KEYLESS ENTRY SYSTEM]

id0903d2871400

- Use the sheet below as a customer interview sheet when accepting a vehicle for service.
- If the symptom is "Power door lock system does not operate with transmitter at all," find out how the customer uses the keyless entry system by following the check sheet below.

Perform the following inspection with customer.

Q1. What's the customer's complaint?

- Power door lock system does not operate with transmitter (door does not lock/unlock).
 Other _____

Q2. Is system factory-installed or after-market?

- Factory-installed system
→ Go to Q3.

- After-market system
→ Perform troubleshooting according to after-market keyless entry system manual.

Q3. Operate transmitter with customer from 2.5 m {8.2 ft} away from center of vehicle. (Make sure the ignition key is either in the LOCK position or removed.)
Does keyless entry system work?

- Yes
→ Explain the following to the customer.
- Keyless entry system does not work when ignition key in key cylinder.
 - Keyless entry system does not work form excessive distances (more than 2.5 m {8.2 ft} away from center of vehicle).
- No
→ Go to Q4.

Q4. Check location where customer uses keyless entry system.

Does a particular area, such as being near TV towers, power plants, power lines, or factories, have an effect on malfunction?

- Yes Place _____
→ Area of operation is bad. Explain effect of outside interference on transmitter to customer.
- No
→ Go to Q5.

Q5. Make sure there are no after-market electrical parts installed on vehicle.

Are there any of the following present?

- Cellular phone
- Radio-wave equipment
- Remote engine starter
- TV, etc.

- Yes Parts _____
 No

Perform the keyless entry system preliminary inspection.

KEYLESS RECEIVER

BODY CONTROL MODULE (BCM) WIRING HARNESS SIDE CONNECTOR

SYMPTOM TROUBLESHOOTING [KEYLESS ENTRY SYSTEM]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	INSPECT FOR MALFUNCTION IN BCM POWER SUPPLY CIRCUIT OR ELSEWHERE <ul style="list-style-type: none"> • Did any of the following items operate during the keyless entry system operation inspection? <ul style="list-style-type: none"> — All doors lock/unlock — Hazard warning light flashes 	Yes	Go to the next step.
		No	Inspect the connection of the BCM connectors, and go to Step 4.
2	INSPECT FOR MALFUNCTION IN KEY REMINDER SWITCH OR ELSEWHERE <ul style="list-style-type: none"> • Did the following item operate during the keyless entry system operation inspection? <ul style="list-style-type: none"> — All doors lock/unlock 	Yes	Go to the next step.
		No	Go to Step 9.
3	INSPECT FOR MALFUNCTION IN DOOR LOCK ACTUATOR OR ELSEWHERE <ul style="list-style-type: none"> • Did the following item operate during the keyless entry system operation inspection? <ul style="list-style-type: none"> — Hazard warning light flashes 	Yes	Go to the next step.
		No	Go to Step 11.
*4	INSPECT BCM POWER SUPPLY CIRCUIT <ul style="list-style-type: none"> • Are the BCM power supply and voltage normal? <ul style="list-style-type: none"> — IG1 signal (terminal 4T) — B+ signal (terminal 3J, 5B, 4S) 	Yes	Go to the next step.
		No	<ul style="list-style-type: none"> • Inspect for burnt fuse. • Inspect the power supply system wiring harness for an open or short circuit. • Then go to Step 14.
*5	INSPECT BCM GROUND CIRCUIT <ul style="list-style-type: none"> • Is the BCM ground voltage normal? <ul style="list-style-type: none"> — 1.0 V or less (terminal 2N, 4B) 	Yes	Go to the next step.
		No	Inspect the ground system wiring harness for open circuit. Then go to Step 14.
*6	INSPECT DOOR LATCH SWITCH SIGNAL <ul style="list-style-type: none"> • Monitor following BCM (door latch switch) PID using the M-MDS. <ul style="list-style-type: none"> — TR/LG_SW (Trunk lid/liftgate latch switch) — DRSW_P (Passenger's door latch switch) — DRSW_D (Driver's door latch switch) • Are monitored PID values normal? 	Yes	Go to the next step.
		No	<ul style="list-style-type: none"> • Inspect for open or short circuit in wiring harness between BCM and suspected door latch/trunk lid/liftgate latch switch. <ul style="list-style-type: none"> — If wiring harness is normal, inspect suspect door latch/trunk lid/liftgate latch switch. <ul style="list-style-type: none"> (See 09-14-41 FRONT DOOR LATCH SWITCH INSPECTION.) (See 09-14-49 REAR DOOR LATCH SWITCH INSPECTION.) (See 09-14-53 TRUNK LID LATCH SWITCH INSPECTION.) (See 09-14-63 LIFTGATE LATCH SWITCH INSPECTION.) — If wiring harness malfunction, repair or replace wiring harness, then go to Step 14.
*7	INSPECT DOOR LATCH SWITCH SIGNAL VOLTAGE <ul style="list-style-type: none"> • Are the wiring harness between the BCM and each door latch switch normal? <ul style="list-style-type: none"> — Inspect each terminal (6G, 6H, 6K, 6E) under the following conditions. <ul style="list-style-type: none"> • Door closed: 1.0 V or less • Door open: B+ 	Yes	Go to the next step.
		No	<ul style="list-style-type: none"> • Inspect the door latch switch. • Inspect the door latch switch system wiring harness for a short circuit. • Then go to Step 14.
8	INSPECT KEY REMINDER SWITCH <ul style="list-style-type: none"> • Measure the voltage at the following BCM terminals: <ul style="list-style-type: none"> — Key reminder switch signal (terminal 2J) <ul style="list-style-type: none"> ON (Key inserted ignition key cylinder):B+ OFF (Key removed ignition key cylinder): 1.0 V or less • Is the key reminder switch normal? 	Yes	Replace the BCM.
		No	Replace the key reminder switch, then go to Step 14.

09-03B

SYMPTOM TROUBLESHOOTING [KEYLESS ENTRY SYSTEM]

STEP	INSPECTION	ACTION	
*9	INSPECT IF MALFUNCTION IS IN DOOR LOCK ACTUATOR, BCM GROUND CIRCUIT OR ELSEWHERE <ul style="list-style-type: none"> • Measure the voltage at the BCM terminals 5O, 5M while operating the transmitter. <ul style="list-style-type: none"> — Driver-side door locked: 1.0 V or less → B+ → 1.0 V or less (5O terminal) — Driver-side door unlocked: 1.0 V or less → B+ → 1.0 V or less (5M terminal) • Is the voltage as above? 	Yes	Go to the next step.
		No	<ul style="list-style-type: none"> • Inspect the wiring harness between BCM and the door lock actuator for an open or short circuit. • Inspect the door lock actuator. • Then go to Step 14.
10	INSPECT DOOR LOCK LINKAGE <ul style="list-style-type: none"> • Operate the key cylinder and verify the door locks and unlock manually. • Does every door lock system work? 	Yes	Go to step 12.
		No	Inspect the door lock linkage then go to Step 14.
*11	INSPECT FOR MALFUNCTION IN THEFT-DETERRENT SYSTEM OR ELSEWHERE <ul style="list-style-type: none"> • Is the theft-deterrent system equipped? 	Yes	Go to the next step.
		No	Go to step 13.
12	INSPECT HOOD LATCH SWITCH AND TRUNK/LIFTGATE SIGNAL <ul style="list-style-type: none"> • Monitor following BCM PID using the M-MDS. <ul style="list-style-type: none"> — TR/LG_SW (trunk lid/liftgate latch switch) — HOOD_SW (hood latch switch) • Are monitored PID values ON (open)? 	Yes	Normal operation (Hazard warning light flashing on vehicles with theft-deterrent system operates in conjunction with theft-deterrent system).
		No	Go to the next step.
*13	INSPECT TURN LIGHT SIGNAL CIRCUIT <ul style="list-style-type: none"> • Measure voltage at the BCM terminals 5C, 3L (right side turn signal), 5E, 3K (left side turn signal) while operating hazard and/or turn signal on. • Are the terminal voltages alternated between 1.0V or less and B+? 	Yes	Verify the malfunction symptom again.
		No	<ul style="list-style-type: none"> • Inspect the wiring harnesses between the BCM and each turn light for a short circuit. • Inspect each turn light. • If these items are normal, replace the BCM.
*14	REINSPECT MALFUNCTION SYMPTOM AFTER REPAIR <ul style="list-style-type: none"> • Does the keyless entry system operate properly? 	Yes	Troubleshooting completed. Explain repairs to the customer.
		No	Reinspect the malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

SYMPTOM TROUBLESHOOTING [KEYLESS ENTRY SYSTEM]

NO.2 ALL KEYLESS ENTRY SYSTEM FUNCTIONS INOPERATIVE [KEYLESS ENTRY SYSTEM]

id0903d2898600

- When performing an asterisked (*) troubleshooting inspection, slightly shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, verify that the connectors, terminals and wiring harnesses are connected correctly and undamaged.

2	All keyless entry system functions inoperative
DESCRIPTION	<ul style="list-style-type: none"> Malfunction in BCM power supply circuit, door latch switch circuit, BCM ground circuit, or keyless receiver.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Malfunction in IG1 or power supply signal circuit of BCM <ul style="list-style-type: none"> BCM power supply fuse malfunction Malfunction in wiring harness between BCM power supply fuses and BCM Malfunction in door open/closed signal circuit of BCM <ul style="list-style-type: none"> Door latch switch system malfunction BCM malfunction Malfunction in wiring harness between BCM and door latch switch Malfunction in BCM GND signal circuit <ul style="list-style-type: none"> Malfunction in wiring harness between BCM and ground Malfunction in keyless receiver <ul style="list-style-type: none"> Keyless receiver malfunction Malfunction in wiring harness between keyless receiver and BCM

KEYLESS RECEIVER

BODY CONTROL MODULE (BCM) WIRING HARNESS SIDE CONNECTOR

09-03B

SYMPTOM TROUBLESHOOTING [KEYLESS ENTRY SYSTEM]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	INSPECT BCM POWER SUPPLY FUSES <ul style="list-style-type: none"> • Are the BCM power supply fuses normal? 	Yes	Go to the next step.
		No	Install an appropriate amperage fuse.
2	INSPECT DOOR LATCH SWITCH INSTALLATION <ul style="list-style-type: none"> • Are the door latch switches installed securely? 	Yes	Go to the next step.
		No	Install the door latch switches securely, then go back to Step 5 of keyless entry system preliminary inspection.
*3	INSPECT IF MALFUNCTION IS IN WIRING HARNESS (NO CONTINUITY BETWEEN FUSE BLOCK AND BCM) OR ELSEWHERE <ul style="list-style-type: none"> • Switch the ignition to ON. • Measure the voltage at the following BCM terminals: <ul style="list-style-type: none"> — IG1 signal (terminal 4T) — Power supply signal (terminal 3J, 5B, 4S) • Is the voltage B+? 	Yes	Go to the next step.
		No	Repair the wiring harness between the fuse block and BCM, then go to Step 13.
*4	INSPECT IF MALFUNCTION IS IN WIRING HARNESS (SHORT TO POWER SUPPLY BETWEEN FUSE BLOCK AND BCM, OR BETWEEN BCM AND GROUND) OR ELSEWHERE <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the BCM connector. • Measure the voltage at the following BCM terminal (wiring harness-side): <ul style="list-style-type: none"> — IG1 signal (terminal 4T) • Is the voltage B+? 	Yes	Repair the malfunctioning wiring harness, then go to Step 13.
		No	Go to the next step.
*5	INSPECT IF MALFUNCTION IS IN WIRING HARNESS (NO CONTINUITY BETWEEN BCM AND GROUND) OR ELSEWHERE <ul style="list-style-type: none"> • Is there continuity between BCM terminal 2N, 4B and ground? 	Yes	Go to the next step.
		No	Repair the wiring harness between the BCM and ground, then go to Step 13.
6	INSPECT DOOR SWITCH SIGNAL <ul style="list-style-type: none"> • Monitor following BCM (door switch) PID using the M-MDS. <ul style="list-style-type: none"> — TR/LG_SW (Trunk lid/liftgate latch switch) — DRSW_P (Passenger's door latch switch) — DRSW_D (Driver's door latch switch) • Are monitored PID values normal? 	Yes	Go to the next step.
		No	<ul style="list-style-type: none"> • Inspect for open or short circuit in wiring harness between BCM and suspected door latch/trunk lid/liftgate latch switch. <ul style="list-style-type: none"> — If wiring harness is normal, inspect suspect door latch/trunk lid/liftgate latch switch. <ul style="list-style-type: none"> (See 09-14-41 FRONT DOOR LATCH SWITCH INSPECTION.) (See 09-14-49 REAR DOOR LATCH SWITCH INSPECTION.) (See 09-14-53 TRUNK LID LATCH SWITCH INSPECTION.) (See 09-14-63 LIFTGATE LATCH SWITCH INSPECTION.) — If wiring harness malfunction, repair or replace wiring harness, then go to Step 13.
7	INSPECT BCM OR WIRING HARNESS (BETWEEN BCM AND DOOR LATCH SWITCHES FOR CONTINUITY) <ul style="list-style-type: none"> • Open and close all doors. • Verify continuity between BCM terminals 6G, 6H, 6K, 6E and ground. • Are there continuities followings? <ul style="list-style-type: none"> — Open: Not continuity — Close: Continuity 	Yes	Replace the BCM and reprogram the transmitter ID code, then go to the next step.
		No	Repair the wiring harness between the BCM and door latch switches, then go to the next step.
8	INSPECT POWER SUPPLY FUSE <ul style="list-style-type: none"> • Is the keyless receiver power supply fuse normal? 	Yes	Go to the next step.
		No	Inspect and repair short to GND in wiring harness at keyless receiver power supply circuit install an appropriate amperage fuse, then go to step 13.

SYMPTOM TROUBLESHOOTING [KEYLESS ENTRY SYSTEM]

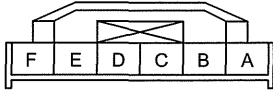

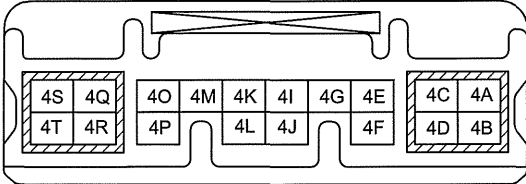

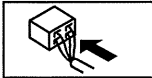

STEP	INSPECTION	ACTION	
9	INSPECT IF MALFUNCTION IS IN WIRING HARNESS (NO CONTINUITY BETWEEN FUSE BLOCK AND KEYLESS RECEIVER) OR ELSEWHERE <ul style="list-style-type: none"> • Measure the voltage at the following keyless receiver terminal: — B+ signal (terminal D) • Is the voltage B+? 	Yes	Go to the next step.
		No	Repair the wiring harness between the fuse block and keyless receiver, then go to Step 13.
10	INSPECT IF MALFUNCTION IS IN WIRING HARNESS (NO CONTINUITY BETWEEN KEYLESS RECEIVER AND GROUND) OR ELSEWHERE <ul style="list-style-type: none"> • Is there continuity between keyless receiver terminal E and ground? 	Yes	Go to the next step.
		No	Repair the wiring harness between the keyless receiver and ground, then go to Step 13.
11	INSPECT IF MALFUNCTION IS IN WIRING HARNESS (NO CONTINUITY BETWEEN KEYLESS RECEIVER AND BCM) OR ELSEWHERE <ul style="list-style-type: none"> • Disconnect the keyless receiver connector and BCM connector. • Is there continuity between the following terminals? — 4K (BCM connector)—D (keyless receiver connector) 	Yes	Go to the next step.
		No	Repair the wiring harness between the keyless receiver and BCM, then go to Step 13.
12	INSPECT MALFUNCTION IS IN KEYLESS RECEIVER OR BCM <ul style="list-style-type: none"> • Replace the keyless receiver. • Does the keyless entry system operate properly? 	Yes	Troubleshooting completed. (Keyless receiver malfunction)
		No	Replace the BCM, then go to the next step.
13	REINSPECT MALFUNCTION SYMPTOM AFTER REPAIR <ul style="list-style-type: none"> • Does the keyless entry system operate properly? 	Yes	Troubleshooting completed. Explain repairs to the customer.
		No	Reinspect the malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

SYMPTOM TROUBLESHOOTING [KEYLESS ENTRY SYSTEM]

NO.3 TRANSMITTER ID CODE CANNOT BE REPROGRAMMED [KEYLESS ENTRY SYSTEM]

id0903d2800800

3	Transmitter ID code cannot be reprogrammed
DESCRIPTION	<ul style="list-style-type: none"> Malfunction in transmitter battery, transmitter, keyless receive bracket, keyless receive bracket ground screw, or BCM circuit. keyless receive circuit.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Malfunction in transmitter battery, transmitter, BCM, or keyless receiver.
<div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;"> <p>KEYLESS RECEIVER</p>  </div> <div style="text-align: center;"> <p>BODY CONTROL MODULE (BCM) WIRING HARNESS-SIDE CONNECTOR</p>  </div> </div> <div style="text-align: center; margin-top: 20px;">  </div>	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	INSPECT TRANSMITTER BATTERY INSTALLATION AND TYPE <ul style="list-style-type: none"> Visually inspect the transmitter battery. Are the below items correct? <ul style="list-style-type: none"> Transmitter battery installation (correct polarity) Battery type: CR1620 	Yes	Go to the next step.
		No	Properly install the battery or replace the battery with the specified battery (CR1620), and then go to Step 11.
2	INSPECT TRANSMITTER BATTERY TERMINALS FOR RUST AND POOR CONNECTION <ul style="list-style-type: none"> Visually inspect the transmitter. <ul style="list-style-type: none"> Is there rust on the transmitter battery terminals (positive or negative)? Is there poor connection between the terminals and battery? 	Yes	Replace the transmitter battery or repair the transmitter battery terminal, then go to Step 11.
		No	Go to the next step.
3	INSPECT TRANSMITTER BATTERY <ul style="list-style-type: none"> Inspect the transmitter battery. Is the battery voltage normal? 	Yes	Go to the next step.
		No	Replace the transmitter battery, then go to Step 11.
4	INSPECT IF MALFUNCTION IS IN TRANSMITTER BATTERY OR ELSEWHERE <ul style="list-style-type: none"> Replace with a transmitter battery known to be good. Does the keyless entry system operate properly? 	Yes	Replace the transmitter battery, then go to Step 11.
		No	Go to the next step.
5	INSPECT IF MALFUNCTION IS IN TRANSMITTER OR BCM <ul style="list-style-type: none"> Reprogram the transmitter ID code using another known good transmitter. Does the keyless entry system operate properly? 	Yes	Replace the transmitter and reprogram the transmitter ID code, then go to Step 11.
		No	Go to the next step.
6	INSPECT POWER SUPPLY FUSE <ul style="list-style-type: none"> Is the keyless receiver power supply fuse normal? 	Yes	Go to the next step.
		No	Install an appropriate amperage fuse, then go to Step 11.
7	INSPECT IF MALFUNCTION IS IN WIRING HARNESS (NO CONTINUITY BETWEEN FUSE BLOCK AND KEYLESS RECEIVER) OR ELSEWHERE <ul style="list-style-type: none"> Measure the voltage at the following keyless receiver terminal: <ul style="list-style-type: none"> Power supply signal (terminal A) Is the voltage B+? 	Yes	Go to the next step.
		No	Repair the wiring harness between the fuse block and keyless receiver, then go to Step 11.

SYMPTOM TROUBLESHOOTING [KEYLESS ENTRY SYSTEM]

STEP	INSPECTION	ACTION	
8	INSPECT IF MALFUNCTION IS IN WIRING HARNESS (NO CONTINUITY BETWEEN KEYLESS RECEIVER AND GROUND) OR ELSEWHERE <ul style="list-style-type: none"> • Is there continuity between keyless receiver terminal E and ground? 	Yes	Go to the next step.
		No	Repair the wiring harness between the keyless receiver and ground, then go to Step 11.
9	INSPECT IF MALFUNCTION IS IN WIRING HARNESS (NO CONTINUITY BETWEEN KEYLESS RECEIVER AND BCM) OR ELSEWHERE <ul style="list-style-type: none"> • Disconnect the keyless receiver connector and BCM connector. • Is there continuity between the following terminals? <ul style="list-style-type: none"> — 4K (BCM connector)—D (keyless receiver connector) 	Yes	Go to the next step.
		No	Repair the wiring harness between the keyless receiver and BCM, then go to Step 11.
10	INSPECT IF MALFUNCTION IS IN WIRING HARNESS (NO CONTINUITY BETWEEN KEYLESS RECEIVER AND BCM) OR BCM <ul style="list-style-type: none"> • Measure the voltage at keyless receiver terminal D. <ul style="list-style-type: none"> — When transmitter operated: <ul style="list-style-type: none"> • Any transmitter button is operated: 0.5 V • Any transmitter button is operated: 3.5 V • Is the voltage normal? 	Yes	Replace the BCM, then go to the next step.
		No	Replace the keyless receiver, then go to the next step.
11	REINSPECT MALFUNCTION SYMPTOM AFTER REPAIR <ul style="list-style-type: none"> • Does the keyless entry system operate properly? 	Yes	Troubleshooting completed. Explain repairs to the customer.
		No	Reinspect the malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

SYMPTOM TROUBLESHOOTING [INSTRUMENT CLUSTER]

NO. 1 FUEL GAUGE INDICATOR LIGHT INDICATION IS INCORRECT [INSTRUMENT CLUSTER]

id0903d5869100

1	Fuel gauge indicator light indication is incorrect
POSSIBLE CAUSE	<ul style="list-style-type: none"> Fuel gauge sender unit malfunction Instrument cluster malfunction Connector or pin malfunction Fuel gauge sender unit is improperly installed Open or short circuit in wiring harness between instrument cluster and fuel gauge sender unit

Diagnostic procedure

STEP	INSPECTION		ACTION
1	<ul style="list-style-type: none"> Switch the ignition to ON. Verify that the fuel gauge needle does not move after engine switch is turned off, or the display does not indicate F even though fuel tank is full. Is the fuel gauge normal? 	Yes	Troubleshooting completed. (The system is normal.)
		No	Go to the next step.
2	<ul style="list-style-type: none"> Retrieve the DTC of instrument cluster using M-MDS. (See 09-02E-4 DTC INSPECTION [INSTRUMENT CLUSTER].) Is the DTC detected? 	Yes	Go to applicable DTC troubleshooting procedure. (See 09-02E-5 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
3	<ul style="list-style-type: none"> Inspect the instrument cluster. (See 09-22-8 INSTRUMENT CLUSTER INSPECTION.) Is the display normal? 	Yes	Go to Step 7.
		No	Go to the next step.
4	<ul style="list-style-type: none"> Switch the ignition to Off. Inspect the instrument cluster connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). Are the terminals normal? 	Yes	Go to the next step.
		No	Repair or replace the terminal.
5	<ul style="list-style-type: none"> Switch the ignition to Off. Inspect for continuity following the wiring harness between instrument cluster and fuel gauge sender unit. — 2T terminal—E terminal — 2R terminal—A terminal Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace for open circuit in the wiring harness between the instrument cluster and the fuel gauge sender unit.
6	<ul style="list-style-type: none"> Switch the ignition to Off. Remove the instrument cluster. Disconnect the instrument cluster connector. Inspect for continuity between the following wiring harness. — 2R terminal—ground Is there continuity? <div style="text-align: center; margin-top: 10px;">  </div>	Yes	Repair or replace the wiring harness for short to ground.
		No	Replace the instrument cluster. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
7	<ul style="list-style-type: none"> Switch the ignition to Off. Inspect the fuel gauge sender unit connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). Are the terminals normal? 	Yes	Go to the next step.
		No	Repair or replace the terminal.
8	<ul style="list-style-type: none"> Switch the ignition to Off. Is the fuel gauge sender unit installed properly? 	Yes	Inspect the fuel gauge sender unit.
		No	Reinstall the fuel gauge sender unit.

SYMPTOM TROUBLESHOOTING [ENTIRE AUDIO SYSTEM]

CONFIRMATION STEP 1: AUDIO PANEL SWITCH CONFIRMATION [ENTIRE AUDIO SYSTEM]

id0903e2802800

- Verify the customer complaint and identify either the audio panel malfunction or audio unit malfunction.

How to activate audio panel switch inspection mode

1. Switch the ignition to ACC or ON.
2. Turn the audio unit power to ON.
3. While pressing the POWER/VOLUME switch, simultaneously press the RDM/PRESET switch 3 for **0.2 s or more**.
4. The audio panel switch inspection mode is now activated.

STEP	INSPECTION		ACTION
1	<ul style="list-style-type: none"> • Press each switch on the audio panel. • Does buzzer sound when pressing each switch? 	Yes	Verify the customer complaint and then go to the appropriate symptom troubleshooting procedure.
		No	Go to the next step.
2	<ul style="list-style-type: none"> • Disassemble and reassemble the audio panel and audio unit. • Activate the audio panel switch confirmation mode. • Does buzzer sound when pressing each switch? 	Yes	Go to the next step.
		No	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
3	Does the audio system operate properly?	Yes	The system is normal.
		No	Verify the customer complaint and then go to the appropriate symptom troubleshooting procedure.

CONFIRMATION STEP 2: STEERING SWITCH CONFIRMATION [ENTIRE AUDIO SYSTEM]

id0903e2833000

- Verify the customer complaint and identify either the steering switch malfunction or audio unit malfunction.

STEP	INSPECTION		ACTION
1	Is the symptom related to either the steering switch or audio panel operation?	Yes	Verify the customer complaint and then go to the appropriate symptom troubleshooting procedure.
		No	The symptom is related to the audio panel operation: <ul style="list-style-type: none"> • Follow the "Confirmation Step 1". The symptom is related to the steering switch operation: <ul style="list-style-type: none"> • Go to the next step.
2	<ul style="list-style-type: none"> • Disconnect the audio unit connector (24-pin). • Inspect both the audio unit and wiring harness-side connectors for poor connection (such as damaged/pulled-out pins, corrosion). <ul style="list-style-type: none"> — Terminal 1N (ST SW1) — Terminal 1P (ST SW2) • Are all the pins normal? 	Yes	Go to the next step.
		No	If the audio unit side connector is wrong: <ul style="list-style-type: none"> • Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.) If the wiring harness-side connector is wrong: <ul style="list-style-type: none"> • Repair or replace the pins and/or the connector.
3	<ul style="list-style-type: none"> • Inspect the continuity between the audio unit wiring harness-side connector terminal 1N and 1P while operating the steering switch. • Does the resistance change? 	Yes	Verify the customer complaint and then go to the appropriate symptom troubleshooting procedure.
		No	Go to the next step.
4	<ul style="list-style-type: none"> • Switch the ignition to off. • Remove the steering switch. (See 09-20-43 STEERING SWITCH REMOVAL/INSTALLATION.) • Inspect the continuity between the audio unit wiring harness-side connector (24-pin) terminal and the steering switch wiring harness-side connector (16-pin) terminal. <ul style="list-style-type: none"> — Terminal 1N (24-pin) — Terminal G (16-pin) — Terminal 1P (24-pin) — Terminal I (16-pin) • Is there the continuity? 	Yes	Replace the steering switch. (See 09-20-43 STEERING SWITCH REMOVAL/INSTALLATION.)
		No	Repair or replace the suspect wiring harness.

09-03D

SYMPTOM TROUBLESHOOTING [ENTIRE AUDIO SYSTEM]

NO.1 AF NOISE OR POP NOISE AT ALL SOURCES (RADIO, CD) [ENTIRE AUDIO SYSTEM]

id0903e2817600

1	AF noise or POP noise on all sources (Radio, CD)	
Possible DTC	Using the M-MDS	U3000:09
	Without using M-MDS (On-board diagnostic test mode)	09:Er21
Possible cause	<ul style="list-style-type: none"> • Low vehicle battery voltage. • Jammed radio signals from after market equipment. • Speaker malfunction (e.g., any foreign material, broken) • Improper speaker installation • Poor connection of audio unit connector, terminal damage • Antenna malfunction (e.g., poor ground) • Audio unit malfunction • Poor connection of audio amplifier connector, terminal damage (with Bose®) • Audio amplifier malfunction (with Bose®) <p>Note</p> <ul style="list-style-type: none"> • AF noise is a snapping noise that generally occurs during ON/OFF switching operations of electrical equipment other than the audio unit, or a continual rasping noise that occurs when electrical equipment is operated. This is caused by noise interference in the power supply wiring, signal wiring, speaker cable or head of cassette deck. Therefore noise can be heard regardless of radio wave conditions or the audio volume position. The noise will start after one click from the minimum position of the volume button but normally does not change even when volume is turned to a higher position. • POP noise is snapping or popping noise that occurs during ON/OFF switching operation of the audio unit, or when switching from radio to CD. Even a normal audio unit sometimes emits a little noise depending on the conditions. 	

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	<ul style="list-style-type: none"> • Inspect the vehicle battery voltage. • Is the vehicle battery voltage normal? <p>Specification: Switch the ignition to ON.: 11.5 V or more Idle: 12.5 V or more</p>	Yes	Go to the next step.
		No	Charge the battery, then go to the next step.
2	<ul style="list-style-type: none"> • Turn the audio system to ON. • Is there any noise? 	Yes	Go to the next step.
		No	The system is normal. Explain to the customer that the vehicle battery voltage was low.
3	<ul style="list-style-type: none"> • Is any of the following after-market equipment installed? (Inspect especially near the antenna.) <ul style="list-style-type: none"> — Radar — Remote engine starter — Anti-theft device — Other 	Yes	Go to the next step.
		No	Go to Step 5.
4	<ul style="list-style-type: none"> • Remove the after-market equipment. • Turn the audio system to ON. • Is there any noise? 	Yes	Go to the next step.
		No	The system is normal. The after-market electrical devices might make a noise.
5	<ul style="list-style-type: none"> • Is there the noise from all speakers? 	Yes	Go to Step 7.
		No	Go to the next step.
6	<ul style="list-style-type: none"> • Inspect the suspect speaker. • Is the speaker normal? 	Yes	Go to the next step.
		No	<p>If there is any foreign material on the speaker:</p> <ul style="list-style-type: none"> • Remove the foreign material from the speaker. <p>If the speaker is malfunctioning:</p> <ul style="list-style-type: none"> • Replace the speaker. <p>If the speaker is not installed properly:</p> <ul style="list-style-type: none"> • Install the speaker properly.
7	<ul style="list-style-type: none"> • Attempt to duplicate the symptom on the other vehicle. • Is the noise better than the customer's vehicle? 	Yes	Go to the next step.
		No	<p>The system is normal. Explain the noise generation mechanism to the customer.</p> <p>Note</p> <ul style="list-style-type: none"> • The noise may be heard depends on the operating speed of audio power and/or mode switch.

SYMPTOM TROUBLESHOOTING [ENTIRE AUDIO SYSTEM]

STEP	INSPECTION	ACTION	
8	<ul style="list-style-type: none"> • Switch the ignition to off. • Remove the audio unit. • Inspect the connection of the audio unit connector (24-pin) (for sound signal line). • Is the connector connected securely? 	Yes	Go to the next step.
		No	<p>If poor connection of audio unit connector:</p> <ul style="list-style-type: none"> • Securely connect the audio unit connector. <p>If the audio unit side connector is wrong:</p> <ul style="list-style-type: none"> • Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.) <p>If the wiring harness-side connector is wrong:</p> <ul style="list-style-type: none"> • Repair or replace the pins and/or the connector. <p>After treating either the above-mentioned, then go to the next step.</p>
9	<ul style="list-style-type: none"> • Is there any noise? 	Yes	Go to the next step.
		No	The system is normal.
10	<ul style="list-style-type: none"> • Inspect the ground condition of the antenna. • Is the ground condition normal? 	Yes	Go to the next step.
		No	Repair or replace the ground. Go to the next step.
11	<ul style="list-style-type: none"> • Is there any noise? 	Yes	<p>Without Bose®:</p> <ul style="list-style-type: none"> • Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.) <p>With Bose®:</p> <ul style="list-style-type: none"> • If noise occurs from the speaker of a specific channel, or the volume is minimized and the noise occurs: <ul style="list-style-type: none"> — Replace the audio amplifier. (See 09-20-7 AUDIO AMPLIFIER REMOVAL/INSTALLATION.) • If noise occurs from the speaker of two or more channels or the volume is minimized and the noise dose not occurs <ul style="list-style-type: none"> — Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	The system is normal.

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	<ul style="list-style-type: none"> Switch the ignition to off. Inspect the following fuses: <ul style="list-style-type: none"> — ROOM 15 A — AUDIO 7.5 A Are the fuse normal? 	Yes	Go to the next step.
		No	Replace with the appropriate standard fuse. <ul style="list-style-type: none"> If the fuse is melted, inspect the wiring harness for short to ground. Repair or replace the wiring harness, then replace the fuse.
2	<ul style="list-style-type: none"> Remove the audio unit (with audio system). Inspect the connection of the audio unit connector (24-pin). Disconnect the audio unit connector and inspect both the audio unit and wiring harness-side connectors for poor connection (such as damaged/pulled-out pins, corrosion). <ul style="list-style-type: none"> — Terminal 1B (B+) — Terminal 1R (ACC) — Terminal 1W (GND) Are all the pins normal? 	Yes	Go to the next step.
		No	If poor connection of audio unit connector: <ul style="list-style-type: none"> Securely connect the audio unit connector. If the audio unit side connector is wrong: <ul style="list-style-type: none"> Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.) If the wiring harness-side connector is wrong: <ul style="list-style-type: none"> Repair or replace the pins and/or the connector.
3	<ul style="list-style-type: none"> Connect the audio unit connector. Inspect the voltage for the power supply line (B+, ACC). Specification: Switch the ignition to ON: 11.5 V or more Idle: 12.5 V or more <ul style="list-style-type: none"> Is the voltage normal? 	Yes	Go to the next step.
		No	Inspect and repair or replace the suspect wiring harness. Charge the battery, if necessary.
4	<ul style="list-style-type: none"> Switch the ignition to off. Remove the audio unit connector (24-pin). Inspect the continuity between the audio unit wiring harness-side connector terminal 1W (GND) and the ground. Is there the continuity? 	Yes	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Repair or replace the wiring harness.

SYMPTOM TROUBLESHOOTING [ENTIRE AUDIO SYSTEM]

NO.3 NO SOUND FROM ALL SPEAKERS [ENTIRE AUDIO SYSTEM]

id0903e2803200

Without Bose®

3	No sound from all speakers	
Possible DTC	Using the M-MDS	U3003:16, U3000:09
	Without using M-MDS (On-board diagnostic test mode)	09:Er20, 09:Er21
Possible cause	<ul style="list-style-type: none"> • Poor connection at audio unit connector, terminal damage • Audio unit malfunction 	

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	<ul style="list-style-type: none"> • Play the CD or Radio. • Adjust the volume between "10" to "15". • Is there sound? 	Yes	The system is normal.
		No	Go to the next step.
2	<ul style="list-style-type: none"> • Inspect the connection of audio unit connector (24-pin) for poor connection (such as damaged/pulled-out pins corrosion). • Is there continuity? 	Yes	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Repair or replace wiring harness.

With Bose®

3	No sound from all speakers	
Possible DTC	Using the M-MDS	U3003:16, U3000:09
	Without using M-MDS (On-board diagnostic test mode)	09:Er20, 09:Er21
Possible cause	<ul style="list-style-type: none"> • Poor connection of audio unit or audio amplifier connector, terminal damage • Open or short circuit in wiring harness between audio amplifier and audio unit • Audio amplifier malfunction 	

09-03D

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	<ul style="list-style-type: none"> • Play CD or radio. • Adjust the volume between "10" and "15". • Is there sound? 	Yes	The system is normal.
		No	Go to the next step.
2	<ul style="list-style-type: none"> • Measure the voltage at the audio amplifier terminal 3A (8-pin, vehicle harness-side) • Is the voltage B+? 	Yes	Go to Step 4.
		No	Repair or replace wiring harness between the audio amplifier and fuse. (See 09-20-7 AUDIO AMPLIFIER REMOVAL/INSTALLATION.) Go to the next step.
3	<ul style="list-style-type: none"> • Is there any sound? 	Yes	The system is normal.
		No	Go to the next step.
4	<ul style="list-style-type: none"> • Inspect the connection of audio unit connector (24-pin) and audio amplifier connectors for poor connection (such as damaged/pulled-out pins, corrosion). • Are all pins normal? 	Yes	Go to the next step.
		No	<p>If poor connection of audio unit or audio amplifier connector:</p> <ul style="list-style-type: none"> • Securely connect the suspect connector. <p>If the audio unit or audio amplifier side connector is wrong:</p> <ul style="list-style-type: none"> • Replace the audio unit. No	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)					

SYMPTOM TROUBLESHOOTING [ENTIRE AUDIO SYSTEM]

NO.8 AudioPilot®2 FUNCTION IS INOPERATIVE [ENTIRE AUDIO SYSTEM]

id0903e2996400

8	AudioPilot®2 function is inoperative	
Possible DTC	Using the M-MDS	U0155:00, U0010:88
	Without using M-MDS (On-board diagnostic test mode)	16:Er11, 17:Er12, 16:Er12
Possible cause	<ul style="list-style-type: none"> • Audio amplifier malfunction • Open or short circuit in AudioPilot®2 signal wiring harness • Open or short circuit in AudioPilot®2 microphone signal wiring harness • Open or short circuit in vehicle speed signal wiring harness (e. g., instrument cluster) <p>Note</p> <ul style="list-style-type: none"> • Inspect the AudioPilot®2 function while driving the vehicle and playing a CD. 	

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	<ul style="list-style-type: none"> • Turn the AudioPilot®2 function on. • Inspect the AudioPilot®2 function operation while driving the vehicle. • Does the AudioPilot®2 system operation properly? 	Yes	The system is normal. Explain the AudioPilot®2 function to the customer.
		No	Go to the next step.
2	<ul style="list-style-type: none"> • Inspect the connection of the audio amplifier connector (AudioPilot®2 microphone signal). • Inspect both the audio amplifier wiring harness-side connector terminal 1O, 1P and 1B for a poor connection (such as damaged/pulled-out pins, corrosion). • Are all the pins normal? 	Yes	Repair or replace the pins and/or the connector.
		No	Go to the next step.
3	<ul style="list-style-type: none"> • Inspect the connection of the AudioPilot®2 microphone connector (2-pin). • Inspect the AudioPilot®2 microphone wiring harness-side connector terminal A and B (2-pin) for poor connection (such as damaged/pulled-out pins, corrosion). • Are all pins normal? 	Yes	Repair or replace the pins and/or the connector.
		No	Go to the next step.
4	<ul style="list-style-type: none"> • Inspect continuity between the following terminals of the audio amplifier connector and body ground. <ul style="list-style-type: none"> — Terminal 1O (AudioPilot®2 microphone+) — Terminal 1P (AudioPilot®2 microphone-) — Terminal 1B (vehicle speed signal) • Is there continuity? 	Yes	Repair or replace the wiring harness for a possible short to ground.
		No	Go to the next step.
5	<ul style="list-style-type: none"> • Inspect continuity between the following terminals of the audio amplifier connector and AudioPilot®2 microphone/instrument cluster connector. <ul style="list-style-type: none"> — Terminal 1O—AudioPilot®2 microphone terminal B (+) — Terminal 1P—AudioPilot®2 microphone terminal A (-) — Terminal 1B—Instrument cluster terminal 2O (vehicle speed signal) • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace for open circuit.
6	<ul style="list-style-type: none"> • Retrieve the DTCs from all vehicle modules using the M-MDS. • Is there the following DTC displayed? <ul style="list-style-type: none"> — Vehicle speed signal — CAN communication 	Yes	Go to the appropriate DTC inspection.
		No	Replace the audio amplifier. (See 09-20-7 AUDIO AMPLIFIER REMOVAL/INSTALLATION.)

SYMPTOM TROUBLESHOOTING [ENTIRE AUDIO SYSTEM]

NO.9 NO AUDIO SYSTEM ILLUMINATION [ENTIRE AUDIO SYSTEM]

id0903e2826600

9	No audio system illumination	
Possible DTC	Using the M-MDS	U3003:16
	Without using M-MDS (On-board diagnostic test mode)	09:Er20
Possible cause	<ul style="list-style-type: none"> Burnt fuse (TNS signal) Open or short circuit in TNS signal wiring harness Poor connection of audio unit connector, terminal damage Audio unit malfunction 	

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	<ul style="list-style-type: none"> Are all illumination on the audio unit turned OFF? 	Yes	Go to the next step.
		No	Replace the audio panel. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
2	<ul style="list-style-type: none"> Switch the ignition to off. Inspect the fuse (ILLUMI). Is the fuse normal? 	Yes	Go to Step 4.
		No	Go to the next step.
3	<ul style="list-style-type: none"> Disconnect the audio unit connector (24-pin) and inspect the continuity between the audio unit wiring harness-side connector terminal 1E (TNS) and the ground. Is there continuity? 	Yes	Repair or replace the short circuit in the suspect wiring harness. After repair the harness, replace with the appropriate standard fuse.
		No	Go to the next step.
4	<ul style="list-style-type: none"> Inspect the connection of the audio unit connector (24-pin). Inspect both the audio unit and wiring harness-side connector terminal 1E for poor connection (such as damaged/pulled-out pins, corrosion). Are all the pins normal? 	Yes	Go to the next step.
		No	If poor connection of audio unit connector: <ul style="list-style-type: none"> Securely connect the audio unit connector. If the audio unit side connector is wrong: <ul style="list-style-type: none"> Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.) If the wiring harness-side connector is wrong: <ul style="list-style-type: none"> Repair or replace the pins and/or the connector.
5	<ul style="list-style-type: none"> Connect the audio unit connector (24-pin). Switch the ignition to ACC. Inspect the voltage at the audio unit connector terminal 1E (TNS). Is the voltage B+ when the light switch is turned to the TNS position? 	Yes	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Repair or replace the suspect wiring harness (TNS signal).

09-03D

SYMPTOM TROUBLESHOOTING [ENTIRE AUDIO SYSTEM]

NO.10 LCD DOES NOT DISPLAY AT ALL [ENTIRE AUDIO SYSTEM]

id0903e2825300

10	LCD does not display at all	
Possible DTC	Using the M-MDS	U3003:16, U0010:88
	Without using M-MDS (On-board diagnostic test mode)	09:Er20, 16:Er12
Possible cause	<ul style="list-style-type: none"> • Audio unit malfunction • Information display malfunction 	

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	<ul style="list-style-type: none"> • Inspect the information display. (See 09-22-14 INFORMATION DISPLAY INPUT/OUTPUT CHECK MODE.) • Does the LCD display properly? 	Yes	Go to the next step.
		No	Replace the information display.
2	<ul style="list-style-type: none"> • Press either INFO switch on the information display. • Does the beep sound? 	Yes	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Replace both audio unit and information display. (CAN communication malfunction)

FOREWORD [RADIO]

id0903e3802700

Note

- In case location, time, and broadcasting station etc. can be specified through interview to customer, possibility that signal environment causes problem is high.
- Perform confirmation of symptom and evaluation under conditions that customer reported (location, time, broadcasting station etc.). If not possible, perform it under equivalent conditions.
- Before inspection or repair, record the broadcasting stations that customer preset and reset them accordingly after the inspection or repair. Adjust the clock too.

am3uuw0002224

CONFIRMATION STEP 1: RECEPTION CONDITION SYMPTOM (EXAMPLE) [RADIO]

id0903e3804000

Symptom	Antenna signal condition	Source
Only a buzzing sound from the speakers	<ul style="list-style-type: none"> There is no broadcasting wave. Signals from antenna to audio unit/car-navigation unit are not transmitted. 	<ul style="list-style-type: none"> Electric noise caused by the operation of internal circuit from audio unit it self Atmosphere noise
A buzzing or crunching sound and normal sound produced at the same time from the speakers	<ul style="list-style-type: none"> Though signals are transmitted from antenna to audio unit, electric noise from other sources is larger. 	<ul style="list-style-type: none"> Electrical noise caused by operation of electrical component on vehicle Electrical noise from high tension wire, transformer substation (factory), electrical feeder line (street car), or motorcycle.
A thumping sound and normal sound produced at the same time from the speakers (FM only)	<ul style="list-style-type: none"> Noise occurs due to radio wave environment at specific places (e.g. in valleys between buildings). Noise varies when own vehicle or surrounding vehicles moves. (FM only) 	<ul style="list-style-type: none"> Interference between direct and reflected waves of FM signals causes noise (Multipass noise).

SYMPTOM TROUBLESHOOTING [RADIO]

CONFIRMATION STEP 2: ANTENNA SYSTEM SYMPTOM (EXAMPLE) [RADIO]

id0903e3804100

Possible cause	AM reception condition	FM reception condition	SIRIUS satellite radio reception
<ul style="list-style-type: none"> Antenna feeder axis, open circuit Antenna feeder plug not attached 	NG: No reception	YES: Reception possible. (Sensitivity decreases, but reception is possible under strong electric field.)	NG: No reception
<ul style="list-style-type: none"> Antenna feeder axis (+) to ground (-), open circuit 	NG: No reception	NG: No reception	NG: No reception
<ul style="list-style-type: none"> Antenna feeder and antenna, poor ground 	YES: Reception possible (Noise may occur)	YES: Reception possible (Sensitivity decreases, but reception is possible under strong electric field.)	YES: Reception possible (Noise may occur)
<ul style="list-style-type: none"> Antenna feeder, jack and plug poor connection 	NG: No reception (Depending on connection conditions)	YES: Reception possible (Depending on connection conditions)	NG: No reception (Depending on connection conditions)

CONFIRMATION STEP 3: ANTENNA SYSTEM SIMPLE INSPECTION [RADIO]

id0903e3804200

- Because the antenna system is equipped with a capacitor, the continuity cannot be checked. Therefore proceed the following simple inspection.
 - Turn the AM radio on.
 - Tune to the frequency that there is no broadcast and you will hear a buzzing sound.
 - Turn a work light on and shake it around the antenna rod (around 10—20 mm {0.40—0.78 in})

Note

- Use a fluorescent light type for the inspection. Accurate diagnostic cannot be done with a different type of light.
- If a whirring sound from the speaker synchronized to the work light movement is confirmed, the antenna system is normal.

SYMPTOM TROUBLESHOOTING [RADIO]

NO.1 NO RADIO RECEPTION (AM/FM)/NO OR LOW VOLUME [RADIO]

id0903e3804300

1	No radio reception (AM/FM)/no or low volume	
Possible DTC	Using the M-MDS	U3003:16, U3000:04
	Without using M-MDS (On-board diagnostic test mode)	09:Er20, 09:Er22
Possible cause	<ul style="list-style-type: none"> • Low vehicle battery voltage • Electronic jamming from outside, or inferior condition of broadcasting station radio wave • Jamming from aftermarket electronic equipment (two-way radio, navigation system, mobile phone, etc.) • Antenna plug poor connection • Antenna feeder malfunction • Audio unit malfunction • Antenna rod not installed 	

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	<ul style="list-style-type: none"> • Turn the audio unit power to ON. • Is the LCD indicated correctly? 	Yes	Go to Step 3.
		No	Go to the next step.
2	<ul style="list-style-type: none"> • Measure voltage at B+ and ACC terminals. • Is voltage okay? <p>Specification With ignition switch ON: 11.5 V or more At idling: 12.5 V or more</p>	Yes	Go to the next step.
		No	Follow diagnostic procedure for symptom No. 2 (AUDIO).
3	<ul style="list-style-type: none"> • Set volume to 10 to 15. • Is buzzing sound or voice confirmed? 	Yes	Go to the next step.
		No	Follow diagnostic procedure for symptom No. 3 (AUDIO) or No. 4 (AUDIO).
4	<ul style="list-style-type: none"> • Tune to local broadcasting station and check reception condition. • Is reception okay? 	Yes	Go to the next step.
		No	Go to Step 6.
5	<ul style="list-style-type: none"> • Push PRESET switches and check preset conditions. • Has preset been stored? 	Yes	The system is normal.
		No	Preset broadcasting stations.
6	<ul style="list-style-type: none"> • Is aftermarket electronic equipment (two-way radio, navigation system, mobile phone, etc.) installed? <p>Note</p> <ul style="list-style-type: none"> • TV antenna located closely to audio antenna can be cause of noise. Relocate TV antenna. 	Yes	Go to the next step.
		No	Go to Step 8.
7	<ul style="list-style-type: none"> • Remove aftermarket electronic equipment. • Turn audio unit ON and check reception condition. • Is reception improved? 	Yes	The system is normal. (Explain to customers that aftermarket electronic equipment is cause of noise)
		No	Go to the next step.
8	<ul style="list-style-type: none"> • Refer to confirmation step 3, and inspect antenna system. • Is a whirring sound present? 	Yes	Replace audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Go to the next step.
9	<ul style="list-style-type: none"> • Inspect antenna plug connection condition. • Is connection okay? 	Yes	Go to the next step.
		No	Insert antenna plug securely.
10	<ul style="list-style-type: none"> • Switch the ignition to off. • Measure continuity between antenna feeder axis and ground. • Is there any continuity? 	Yes	Replace antenna feeder.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [RADIO]

STEP	INSPECTION	ACTION	
11	<ul style="list-style-type: none"> • Compare reception with other audio unit on same model (model/unit) under same problem conditions. • Is reception equivalent between customer's unit and compared unit? <p>Note</p> <ul style="list-style-type: none"> • Due to following differences, you may feel difference in reception efficiency. <p>(Vehicle side factor)</p> <ul style="list-style-type: none"> — Antenna installation location, height, feeder wiring routing, optional electrical equipment <p>(Audio unit factor)</p> <ul style="list-style-type: none"> — Volume concern type: It decreases change of volume when signals become weak. (Noise is easily noticed) — Noise decrease type: It decreases volume when signals become weak, so that noise is not noticeable. 	Yes	The system is normal. (It is caused by electronic jamming from outside, or inferior broadcasting station signal condition.)
		No	Replace audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)

NO.2 NO RADIO RECEPTION (SIRIUS SATELLITE RADIO) [RADIO]

id0903e3904500

2	No radio reception (SIRIUS satellite radio)	
Possible DTC	Using the M-MDS	B1A89:13
	Without using M-MDS (On-board diagnostic test mode)	—
Possible cause	<ul style="list-style-type: none"> • Low battery voltage • Electronic jamming from outside, or inferior condition of broadcasting station radio wave • Jamming from aftermarket electronic equipment (two-way radio, navigation system, mobile phone, etc.) • Antenna plug poor connection • Antenna feeder malfunction • SIRIUS satellite radio unit malfunction • Open or short circuit in wiring harness between SIRIUS satellite radio unit and audio unit • Communication error between SIRIUS satellite radio unit and audio unit • Audio unit malfunction • Antenna rod not installed 	

09-03E

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	<ul style="list-style-type: none"> • Verify that the AM radio and FM radio reception conditions. • Are AM radio and FM radio reception normally? 	Yes	Go to the next step.
		No	Perform symptom "No.1 no radio reception (AM/FM)/no or low volume" troubleshooting procedure.
2	<ul style="list-style-type: none"> • Is aftermarket electronic equipment (two-way radio, navigation system, mobile phone, etc.) installed? <p>Note</p> <ul style="list-style-type: none"> • TV antenna located closely to audio antenna can be cause of noise. Relocate TV antenna. 	Yes	Go to the next step.
		No	Go to Step 4.
3	<ul style="list-style-type: none"> • Remove aftermarket electronic equipment. • Turn audio unit ON and check reception condition. • Is reception improved? 	Yes	The system is normal. (Explain to customers that aftermarket electronic equipment is cause of noise)
		No	Go to the next step.
4	<ul style="list-style-type: none"> • Inspect SIRIUS satellite radio antenna plug connection condition. • Is connection okay? 	Yes	Go to the next step.
		No	Insert antenna plug securely.
5	<ul style="list-style-type: none"> • Switch the ignition to off. • Measure continuity between SIRIUS satellite radio antenna feeder axis and ground. • Is there any continuity? 	Yes	Replace the SIRIUS satellite radio antenna feeder. (See 09-20-41 SIRIUS SATELLITE RADIO ANTENNA FEEDER REMOVAL/INSTALLATION.)
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [RADIO]

STEP	INSPECTION	ACTION	
6	<ul style="list-style-type: none"> • Inspect the SIRIUS satellite radio antenna feeder. (See 09-20-41 SIRIUS SATELLITE RADIO ANTENNA FEEDER INSPECTION.) • Is the SIRIUS satellite radio antenna feeder normal? 	Yes	Go to the next step.
		No	Replace the SIRIUS satellite radio antenna feeder. (See 09-20-41 SIRIUS SATELLITE RADIO ANTENNA FEEDER REMOVAL/INSTALLATION.)
7	<ul style="list-style-type: none"> • Inspect the SIRIUS satellite radio antenna. (See 09-20-23 CENTER ROOF ANTENNA INSPECTION.) • Is the SIRIUS satellite radio antenna normal? 	Yes	Go to the next step.
		No	Replace the SIRIUS satellite radio antenna. (See 09-20-19 CENTER ROOF ANTENNA REMOVAL/INSTALLATION.)
8	<ul style="list-style-type: none"> • Inspect the following wiring harness for open or short circuit. <ul style="list-style-type: none"> — Between SIRIUS satellite radio unit harness side connector terminal L and audio unit terminal 1O — Between SIRIUS satellite radio unit harness side connector terminal K and audio unit terminal 1Q — Between SIRIUS satellite radio unit harness side connector terminal O and main fuse block — Between SIRIUS satellite radio unit harness side connector terminal P and ignition switch (without advanced keyless entry and push button start system)/ACC relay (with advanced keyless entry and push button start system) — Between SIRIUS satellite radio unit harness side connector terminal C and audio unit terminal 2C — Between SIRIUS satellite radio unit harness side connector terminal E and audio unit terminal 2E — Between SIRIUS satellite radio unit harness side connector terminal G and audio unit terminal 2D — Between SIRIUS satellite radio unit harness side connector terminal A and GND — Is there any open or short circuit detected? 	Yes	Repair or replace malfunctioning part.
		No	Go to the next step.
9	<ul style="list-style-type: none"> • Install all removed parts. • Compare reception with other Audio unit on same model (model/unit) under same problem conditions. • Is reception equivalent between customer's unit and compared unit? <p>Note</p> <ul style="list-style-type: none"> • Due to following differences, you may feel difference in reception efficiency. <p>(Vehicle side factor)</p> <ul style="list-style-type: none"> — Antenna installation location, height, feeder wiring routing, optional electrical equipment <p>(Audio unit factor)</p> <ul style="list-style-type: none"> — Volume concern type: It decreases change of volume when signals become weak. (Noise is easily noticed) — Volume concern type: It decreases change of volume when signals become weak. (Noise is easily noticed) 	Yes	The system is normal. (It is caused by electronic jamming from outside, or inferior broadcasting station signal condition.)
		No	Replace audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)

SYMPTOM TROUBLESHOOTING [RADIO]

NO.3 NOISE FROM RADIO (AM ONLY) [RADIO]

id0903e3904600

3	Noise from radio (AM only)	
Possible DTC	Using the M-MDS	U3000:04
	Without using M-MDS (On-board diagnostic test mode)	09:Er22
Possible cause	<ul style="list-style-type: none"> • Antenna rod not installed • Jamming from aftermarket electronic equipment (two-way radio, navigation system, mobile phone, etc.) • Battery malfunction • Noise from electrical system on vehicle (e.g. fuel pump) • Charging system malfunction • Electronic jamming from outside, or inferior condition of broadcasting station radio wave • Antenna plug poor connection • Antenna feeder malfunction • Antenna installation loosened • Audio unit malfunction 	

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	<ul style="list-style-type: none"> • Tune to local broadcasting station and check reception condition. • Is reception okay? 	Yes	Tune to correct frequency of broadcasting station. If not preset, preset it.
		No	Go to the next step.
2	<ul style="list-style-type: none"> • Is aftermarket electronic equipment (two-way radio, navigation system, mobile phone, etc.) installed? <p>Note</p> <ul style="list-style-type: none"> • TV antenna located closely to audio antenna can be cause of noise. Relocate TV antenna. 	Yes	Go to the next step.
		No	Go to Step 4.
3	<ul style="list-style-type: none"> • Remove aftermarket electronic equipment. • Turn audio unit ON and check reception condition. • Is reception improved? 	Yes	The system is normal. (Explain to customers that aftermarket electronic equipment is cause of noise)
		No	Go to the next step.
4	<ul style="list-style-type: none"> • Measure battery voltage. • Is battery voltage okay? <p>Specification:</p> <p>With ignition switch ON: 11.5 V or more</p> <p>At idling: 12.5 V or more</p> <p>Note</p> <ul style="list-style-type: none"> • Inspect that battery cables are connected to terminals securely. 	Yes	Go to the next step.
		No	Charge battery. Inspect charging system, and repair or replace if necessary.
5	<ul style="list-style-type: none"> • Is noise occurring only when vehicle electrical system (e.g. fuel pump) operates? <p>Note</p> <ul style="list-style-type: none"> • Identify subject electrical component by disconnecting fuse, turning switch ON & OFF, or disconnecting & connecting connector. • It will be easy when simulation function on M-MDS is used. 	Yes	Go to the next step.
		No	Go to Step 7.

09-03E

SYMPTOM TROUBLESHOOTING [RADIO]

STEP	INSPECTION	ACTION	
6	<ul style="list-style-type: none"> • Inspect power supply, ground condition, and noise prevention capacitor for electrical component. • Is noise present after inspection? <p>Note</p> <ul style="list-style-type: none"> • Inspect following: <ul style="list-style-type: none"> — Power supply to electrical component for voltage drop (compare with battery voltage) — Resistance between ground of electrical component and body. (Should be close to 0 ohm) — Installation condition of noise prevention capacitor for fuel pump etc. 	Yes	Go to the next step.
		No	Troubleshooting completed. <p>Note</p> <ul style="list-style-type: none"> • The audio unit supplies 12 V battery power to the antenna amplifier for the AM radio reception in the radio mode. The audio unit cannot receive the AM signals without the 12 V battery power to the antenna amplifier. If the AM signals become strong, the audio/unit car-navigation unit may receive the signal with noises.
7	<ul style="list-style-type: none"> • Inspect antenna plug connection condition. • Is connection okay? 	Yes	Go to the next step.
		No	Insert antenna plug securely.
8	<ul style="list-style-type: none"> • Switch the ignition to off. • Measure continuity between antenna feeder axis and ground. • Is there any continuity? 	Yes	Replace antenna feeder.
		No	Go to the next step.
9	Compare reception with other audio unit on same model (model/unit) under same problem conditions. <ul style="list-style-type: none"> • Is reception equivalent between customer's unit and compared unit? <p>Note</p> <ul style="list-style-type: none"> • Due to following differences, you may feel difference in reception efficiency. <ul style="list-style-type: none"> (Vehicle side factor) <ul style="list-style-type: none"> — Antenna installation location, height, feeder wiring routing, optional electrical equipment (Audio unit factor) <ul style="list-style-type: none"> — Volume concern type: It decreases change of volume when signals become weak. (Noise is easily noticed) — Noise decrease type: It decreases volume when signals become weak, so that noise is not noticeable. 	Yes	The system is normal (It is caused by electronic jamming from outside, or inferior broadcasting station signal condition).
		No	Go to the next step.
10	<ul style="list-style-type: none"> • Retighten ground fixation for antenna installation part and antenna amplifier. • Is noise present, after retightening? 	Yes	Replace audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Troubleshooting completed.

SYMPTOM TROUBLESHOOTING [RADIO]

NO.4 NOISE FROM RADIO (FM ONLY) [RADIO]

id0903e3904700

4	Noise from radio (FM only)	
Possible DTC	Using the M-MDS	U3000:04
	Without using M-MDS (On-board diagnostic test mode)	09:Er22
Possible cause	<ul style="list-style-type: none"> • Antenna rod not installed • Jamming from aftermarket electronic equipment (two-way radio, navigation system, mobile phone, etc.) • Battery malfunction • Noise from electrical system on vehicle (e.g. fuel pump) • Charging system malfunction • Electronic jamming from outside, or inferior condition of broadcasting station radio wave • Antenna plug poor connection • Antenna feeder malfunction • Antenna installation loosened • Audio unit malfunction <p>Note</p> <ul style="list-style-type: none"> • FM broadcast has feature “sound quality is good” and “resistant to noise”, but FM broadcast has particular noises. Though audio unit is designed to reduce noise, there are times noise occurs due to conditions. 	

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	<ul style="list-style-type: none"> • Tune to local broadcasting station and check reception condition. • Is reception okay? 	Yes	Tune to correct frequency of broadcasting station. If not preset, preset it.

		No	Troubleshooting completed.

SYMPTOM TROUBLESHOOTING [RADIO]

NO.5 NOISE FROM RADIO (SIRIUS SATELLITE RADIO ONLY) [RADIO]

id0903e3904800

5	Noise from radio (SIRIUS satellite audio only)	
Possible DTC	Using the M-MDS	B1A89:13
	Without using M-MDS (On-board diagnostic test mode)	—
Possible cause	<ul style="list-style-type: none"> • Jamming from aftermarket electronic equipment (two-way radio, navigation system, mobile phone, etc.) • Battery malfunction • Noise from electrical system on vehicle (e.g. fuel pump) • Charging system malfunction • Electronic jamming from outside, or inferior condition of broadcasting station radio wave • Antenna plug poor connection • Antenna feeder malfunction • Antenna installation loosened • SIRIUS satellite radio unit malfunction • Audio unit malfunction 	

Diagnostic procedure

STEP	INSPECTION	ACTION
1	<ul style="list-style-type: none"> • Is aftermarket electronic equipment (two-way radio, navigation system, mobile phone, etc.) installed? <p>Note</p> <ul style="list-style-type: none"> • TV antenna located closely to audio antenna can be cause of noise. Relocate TV antenna. 	Yes Go to the next step.
		No Go to Step 3.
2	<ul style="list-style-type: none"> • Remove aftermarket electronic equipment. • Turn audio unit ON and check reception condition. • Is reception improved? 	Yes The system is normal. (Explain to customers that aftermarket electronic equipment is cause of noise)
		No Go to the next step.
3	<ul style="list-style-type: none"> • Measure the voltage at battery. • Is the battery voltage okay? <p>Specification: Ignition switch ON: 11.5 V or more Idle: 12.5 V or more</p> <p>Note</p> <ul style="list-style-type: none"> • Inspect that battery cables are connected to terminals securely. 	Yes Go to the next step.
		No Charge battery. Inspect charging system, and repair or replace if necessary.
4	<ul style="list-style-type: none"> • Is noise occurring only when vehicle electrical system (e.g. fuel pump) operates? <p>Note</p> <ul style="list-style-type: none"> • Identify subject electrical component by disconnecting fuse, turning switch ON & OFF, or disconnecting & connecting connector. • It will be easy when simulation function on M-MDS is used. 	Yes Go to the next step.
		No Go to Step 6.
5	<ul style="list-style-type: none"> • Inspect power supply, ground condition, and noise prevention capacitor for electrical component. • Is noise present after inspection? <p>Note</p> <ul style="list-style-type: none"> • Inspect following: <ul style="list-style-type: none"> — Power supply to electrical component for voltage drop (compare with battery voltage) — Resistance between ground of electrical component and body. (Should be close to 0 ohm) — Installation condition of noise prevention capacitor for fuel pump etc. 	Yes Go to the next step.
		No Troubleshooting completed.
		<p>Note</p> <ul style="list-style-type: none"> • The SIRIUS satellite radio is supplied 12 V battery power for the AM radio reception in the radio mode. The audio unit cannot receive the AM signals without the 12 V battery power to the antenna amplifier. If the SIRIUS satellite radio signals become strong, the audio unit may receive the signal with noises.

09-03E

SYMPTOM TROUBLESHOOTING [RADIO]

STEP	INSPECTION	ACTION	
6	<ul style="list-style-type: none"> • Inspect SIRIUS satellite radio antenna plug connection condition. • Is connection okay? 	Yes	Go to the next step.
		No	Insert antenna plug securely.
7	<ul style="list-style-type: none"> • Inspect the SIRIUS satellite radio antenna. (See 09-20-23 CENTER ROOF ANTENNA INSPECTION.) • Is the SIRIUS satellite radio antenna normal 	Yes	Go to the next step.
		No	Replace the SIRIUS satellite radio antenna. (See 09-20-19 CENTER ROOF ANTENNA REMOVAL/INSTALLATION.)
8	<ul style="list-style-type: none"> • Switch the ignition to off. • Measure continuity between SIRIUS satellite radio antenna feeder axis and ground. • Is there any continuity? 	Yes	Replace the SIRIUS satellite radio antenna feeder. (See 09-20-41 SIRIUS SATELLITE RADIO ANTENNA FEEDER REMOVAL/INSTALLATION.)
		No	Go to the next step.
9	<ul style="list-style-type: none"> • Inspect the SIRIUS satellite radio antenna feeder. (See 09-20-41 SIRIUS SATELLITE RADIO ANTENNA FEEDER INSPECTION.) • Is the SIRIUS satellite radio antenna feeder normal? 	Yes	Go to the next step.
		No	Replace the SIRIUS satellite radio antenna feeder. (See 09-20-41 SIRIUS SATELLITE RADIO ANTENNA FEEDER REMOVAL/INSTALLATION.)
10	<ul style="list-style-type: none"> • Compare reception with other audio unit on same model (model/unit) under same problem conditions. • Is reception equivalent between customer unit and compared unit? <p>Note</p> <ul style="list-style-type: none"> • Due to following differences, you may feel difference in reception efficiency. <ul style="list-style-type: none"> (Vehicle side factor) <ul style="list-style-type: none"> — Antenna installation location, height, feeder wiring routing, optional electrical equipment (Audio unit factor) <ul style="list-style-type: none"> — Volume concern type: It decreases change of volume when signals become weak. (Noise is easily noticed) — Noise decrease type: It decreases volume when signals become weak, so that noise is not noticeable. 	Yes	The system is normal. (It is caused by electronic jamming from outside, or inferior broadcasting station signal condition.)
		No	Go to the next step.
11	<ul style="list-style-type: none"> • Retighten ground fixation for antenna installation part and antenna feeder. • Is noise present, after retightening? 	Yes	Replace the SIRIUS satellite radio unit. (See 09-20-30 SIRIUS SATELLITE RADIO UNIT REMOVAL/INSTALLATION.)
		No	Troubleshooting completed.

SYMPTOM TROUBLESHOOTING [RADIO]

NO.6 CANNOT TUNE (SEEK DOES NOT STOP) [RADIO]

id0903e3904900

6	Cannot tune (seek does not stop)	
Possible DTC	Using the M-MDS	U3003:16, U3000:04
	Without using M-MDS (On-board diagnostic test mode)	09:Er20, 09:Er22
Possible cause	<ul style="list-style-type: none"> • Audio panel malfunction • Electronic jamming from outside, or inferior condition of broadcasting station radio wave • Antenna plug poor connection • Antenna feeder malfunction • Audio unit malfunction 	

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	<ul style="list-style-type: none"> • Inspect if feel of SEEK switch is normal when switch is pushed and released. • Is it okay? 	Yes	Go to the next step.
		No	Perform confirmation step 1: audio panel switch confirmation. Replace audio panel if necessary.
2	<ul style="list-style-type: none"> • Inspect indication of LCD. • Is frequency indication increased or decreased when SEEK switch is pushed? 	Yes	Go to the next step.
		No	Perform confirmation step 1: audio panel switch confirmation. Replace audio panel if necessary.
3	<ul style="list-style-type: none"> • Manually tune to local broadcasting station and check reception condition. • Is reception okay? 	Yes	Go to Step 6.
		No	Go to the next step.
4	<ul style="list-style-type: none"> • Inspect antenna plug connection condition. • Is connection okay? 	Yes	Go to the next step.
		No	Insert antenna plug securely.
5	<ul style="list-style-type: none"> • Switch the ignition to off. • Measure continuity between antenna feeder axis and ground. • Is there any continuity? 	Yes	Replace antenna feeder.
		No	Go to the next step.
6	<ul style="list-style-type: none"> • Check if number of broadcasting stations changes depending on time and place. • Does it change? 	Yes	The system is normal. (Explain to customer that SEEK sometimes does not stop depending on signal reception condition.) Note <ul style="list-style-type: none"> • Signals tend to reach longer distances in the night. It is noticeable in AM signals, several audio functions may stop due to foreign broadcasting station or noise. Though the audio system restrains sensitivity of SEEK and SCAN functions in the night, the audio system may select other than desired broadcasting station when signals are considerably strong. This function is linked to the parking light. When the parking light or headlight is turned on, SEEK and SCAN may not function for weak signals.
		No	Replace audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)

SYMPTOM TROUBLESHOOTING [RADIO]

NO.7 CANNOT PRESET (PRESET FUNCTION DOES NOT OPERATE) [RADIO]

id0903e3905000

7	Cannot preset (preset function does not operate)
Possible DTC	—
Possible cause	<ul style="list-style-type: none"> • Audio unit malfunction • Audio panel malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	<ul style="list-style-type: none"> • Tune to desired station and push channel preset button 1 for about 2 seconds to store it. • Repeat above for other stations using PRESET switch 2 to 5. • Push channel preset switch 1 to 6 one by one. • Are stored stations present? 	Yes	Go to the next step.
		No	Go to Step 3.
2	<ul style="list-style-type: none"> • Switch the ignition to off and then to ACC. • Check if preset stations are stored by pushing preset switches. • Are stations stored? 	Yes	The system is normal. (Explain preset procedure to customer using Owner's Manual)
		No	Replace audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
3	<ul style="list-style-type: none"> • Remove audio panel from audio unit, and reinstall audio panel to audio unit. • Turn the audio unit power to ON. • While pressing the POWER/VOLUME switch, simultaneously press the RDM/PRESET switch 3 for 0.2 s or more. • Push all switches and check if buzzer sounds. • Is all switches okay? 	Yes	Replace audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Replace audio panel. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)

NO.8 RECEPTION FREQUENCY OF RADIO SLIPS [RADIO]

id0903e3905100

8	Reception frequency of radio slip	
Possible DTC	Using the M-MDS	U3000:04
	Without using M-MDS (On-board diagnostic test mode)	09:Er22
Possible cause	<ul style="list-style-type: none"> • Electronic jamming from outside, or inferior condition of broadcasting station radio wave • Audio unit malfunction 	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	<ul style="list-style-type: none"> • Push SEEK switch and check if desired broadcasting station is tuned. • Is it okay? 	Yes	Go to Step 3.
		No	Go to the next step.
2	<ul style="list-style-type: none"> • Check if other broadcasting station is received at certain place when indication of reception frequency stays. • Is other station received? <p>Note</p> <ul style="list-style-type: none"> • When you receive weak signal from one broadcasting station and come close to broadcasting antenna which emits strong signal, broadcasting with strong signal is sometimes received. 	Yes	Go to the next step.
		No	Replace audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
3	<ul style="list-style-type: none"> • Compare reception with other audio unit on same model (model/unit) under same problem conditions. • Is reception equivalent between customer's unit and compared unit? 	Yes	Troubleshooting completed.
		No	Replace audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)

SYMPTOM TROUBLESHOOTING [RADIO]

REFERENCE [RADIO]

id0903e383000

1. Multipath Noise

- Signals from an FM transmitter are a high frequency and similar to beams of light because they do not bend around corners, but they do reflect. Since FM signals can be reflected by obstructions, it is possible to receive both the direct signal and the reflected signal at the same time. This causes a slight delay in reception and may be heard as a broken sound or a distortion.

atraaw00001761

2. Flutter/Skip Noise

- Signals become weak in valleys between mountains, tall building, and other obstacles. When the vehicle passes through such an area, the reception conditions may change suddenly, resulting in annoying noise.

atraaw00001762

09-03E

3. Stereo and Monaural Receptions

- As signals become weak, noise may appear more in stereo reception. Comparing to stereo reception, noise in monaural receptions is relatively less striking.

Measures in Audio System

Separation control

- Utilizing the characteristic of monaural reception that noise is relatively less striking than stereo reception, the audio system automatically changes the reception from stereo to monaural and lessens annoying noise when signals become weak or a multipath phenomenon occurs.

High tone control

- When signals become weak or a multipath phenomenon occurs, the audio system restrains volume level in high frequency band and lessens annoying noise.

Effect Setting of Separation Control and High Tone Control

- The separation and high tone controls influence sound quality, Therefore they are specifically tuned for individual model. (Comparison of characteristic must be done on the same models)

High tone setting → Less effective range → Noise is conspicuous

Noise restraint setting → Wider effective range → Noise is less conspicuous

acxuuw00001936

SYMPTOM TROUBLESHOOTING [RADIO]

Remarks

- Signals tend to reach longer distances at night. It is conspicuous in AM signals, several audio functions may stop due to foreign broadcasting station or noise. Though the audio system restrains sensitivity of SEEK and SCAN functions at night, the audio system may select other than desired broadcasting station when signals are considerably strong. This function is linked to the parking light. When the parking light or headlight is turned on, SEEK and SCAN may not function for weak signals.

SYMPTOM TROUBLESHOOTING [CD PLAYER/CHANGER]

NO.1 CD PLAYER/CHANGER DOES NOT LOAD THE CD OR EJECTS THE CD IMMEDIATELY [CD PLAYER/CHANGER]

id0903e5826100

1	CD player/changer does not load the CD or ejects the CD immediately	
Possible DTC	Using the M-MDS	B1D19:79
	Without using M-MDS (On-board diagnostic test mode)	10:Er01, 22:Er01
Possible cause	<ul style="list-style-type: none"> CD is inserted upside down Defective CD (e.g., cracked, badly bent, rough edges, scratch, dirty CD, condensation) Non-conventional discs (e.g., 8 cm (3 in) CD, 8 cm (3 in) disc adapter, heart-shaped disc, octagonal disc) Deformed disc is used (e.g., out of specification (thickness), bent disc) Poor connection of audio unit connector or terminal (e.g., damaged, bent, pulled-out pin, corrosion) Audio unit malfunction 	

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	<ul style="list-style-type: none"> Is CD inserted properly, label-side up? 	Yes	Go to the next step.
		No	Explain to the customer that CD should be inserted into the slot, label-side up.
2	<ul style="list-style-type: none"> Replace with a CD known to be good. Does the CD player/changer load the CD? 	Yes	Go to the next step.
		No	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
3	<ul style="list-style-type: none"> Visually inspect the CD. <ul style="list-style-type: none"> — Is there any dirt, scratch or deformation on the CD? — Is the CD a non-conventional disc? 	Yes	Explain to the customer that the defective CD or non-conventional disc cannot be use.
		No	Go to the next step.
4	<ul style="list-style-type: none"> Switch the ignition to off. Inspect the connection of the audio unit connector (24-pin). Inspect both audio unit connector and wiring harness-side connector for poor connection. (such as damaged/bent/pulled-out pins, corrosion) All the pins and connector normal? 	Yes	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	If the audio unit connector/ pin is wrong: <ul style="list-style-type: none"> Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.) If the wiring harness-side connector/pin is wrong: <ul style="list-style-type: none"> Repair or replace the pins and/or the connector.

SYMPTOM TROUBLESHOOTING [CD PLAYER/CHANGER]

NO.2 CD PLAYER/CHANGER DOES NOT EJECT THE CD [CD PLAYER/CHANGER]

id0903e5826200

2	CD player/changer does not eject the CD	
Possible DTC	Using the M-MDS	B1D19:79
	Without using M-MDS (On-board diagnostic test mode)	10:Er01, 22:Er01
Possible cause	<ul style="list-style-type: none"> Defective CD. (e.g., cracked, badly bent, rough edges, scratch, dirty CD, condensation) Non-conventional discs (e.g., 8 cm (3 in) CD, 8 cm (3 in) disc adapter, heart-shaped disc, octagonal disc) Poor connection of audio unit connector or terminal (e.g., damaged, bent, pulled-out pin, corrosion) Deformed disc is used (e.g., out of specification (thickness), bent disc). Multiple CDs are inserted into the CD player at the same time Audio unit malfunction <p>Note</p> <ul style="list-style-type: none"> The CD may be malfunctioning if the CD player/changer does not eject the certain CD only. Inspect the CD player/changer operation using the CD known to be good. 	

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	<ul style="list-style-type: none"> Inspect the operation of the audio system other than CD player/changer (e.g. Radio). Does other audio system operate? 	Yes	Go to Step 3.
		No	Go to the next step.
2	<ul style="list-style-type: none"> Switch the ignition to off. Inspect the connection of the audio unit connector (24-pin). Inspect both audio unit connector and wiring harness-side connector for poor connection. (such as damaged/bent/pulled-out pins, corrosion) All the pins and connector normal? 	Yes	Go to the next step.
		No	<p>If the audio unit connector/pin is wrong:</p> <ul style="list-style-type: none"> Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.) <p>If the wiring harness-side connector/pin is wrong:</p> <ul style="list-style-type: none"> Repair or replace the pins and/or the connector.
3	<ul style="list-style-type: none"> Eject the CD. Is the CD ejected from the CD player/changer? 	Yes	Go to the next step.
		No	Inspect the panel switch and CD cover installation. Securely install the panel switch and/or CD cover as necessary.
4	<ul style="list-style-type: none"> Insert the CD into the CD player/changer. Does the CD insert into the CD player/changer smoothly? 	Yes	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Install the audio panel and/or CD cover properly, then go to the next step.
5	<ul style="list-style-type: none"> Is the CD ejected from the CD player/changer? 	Yes	Troubleshooting completed. Explain repairs to the customers.
		No	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)

09-03F

SYMPTOM TROUBLESHOOTING [CD PLAYER/CHANGER]

NO.3 CD PLAYER/CHANGER DOES NOT PLAY THE CD/NO SOUND [CD PLAYER/CHANGER]

id0903e5806100

3	CD player/changer does not play the CD/No sound	
Possible DTC	Using the M-MDS	B1188:64
	Without using M-MDS (On-board diagnostic test mode)	10:Er07, 22:Er07
Possible cause	<ul style="list-style-type: none"> • CD is inserted upside down • Defective CD (e.g., cracked, badly bent, rough edges, scratch, dirty CD, condensation) • Non-conventional discs (e.g., 8 cm (3 in) CD, 8 cm (3 in) disc adapter, heart-shaped disc, octagonal disc) • Audio unit malfunction 	

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	<ul style="list-style-type: none"> • Turn the radio ON and inspect that there is sound. • Is there sound? <p style="margin-left: 20px;">Note</p> <ul style="list-style-type: none"> • Check for the volume dial position. 	Yes	Go to the next step.
		No	Go to the symptom troubleshooting No.3 (Audio system).
2	<ul style="list-style-type: none"> • Was CD inserted properly, label-side up? 	Yes	Go to the next step.
		No	Explain to the customer that CD should be inserted into the slot, label-side up.
3	<ul style="list-style-type: none"> • Replace the CD known to be good. • Does the CD player/changer load the CD? 	Yes	Go to the next step.
		No	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
4	<ul style="list-style-type: none"> • Visually inspect the CD. <ul style="list-style-type: none"> — Is there any dirt, scratch or deformation on the CD? — Is the CD a non-conventional disc? — Is there a CD in MP3/WMA recording? 	Yes	Explain to the customer that the defective CD or non-conventional disc cannot be use.
		No	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)

NO.4 SOUND JUMPS [CD PLAYER/CHANGER]

id0903e5806200

4	Sound jumps	
Possible DTC	Using the M-MDS	B1188:64
	Without using M-MDS (On-board diagnostic test mode)	10:Er07, 22:Er07
Possible cause	<ul style="list-style-type: none"> • Defective CD (e.g., cracked, badly bent, rough edges, scratch, dirty CD, condensation) • Improper audio unit installation (e.g., rattle, loose) • Inadequate tire pressure • Audio unit malfunction <p style="margin-left: 20px;">Note</p> <ul style="list-style-type: none"> • The CD may be malfunctioning if the sound jumps on the certain CD only. Inspect the CD player/changer operation using the CD known to be good. 	

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	<ul style="list-style-type: none"> • Does the sound jump when the vehicle is stopped? 	Yes	Go to Step 6.
		No	Go to the next step.
2	<ul style="list-style-type: none"> • Drive the vehicle. • Does the sound jump when driving over uneven surfaces? 	Yes	Go to the next step.
		No	Go to Step 6.
3	<ul style="list-style-type: none"> • Is the audio unit installed securely? 	Yes	Go to the next step.
		No	Install the audio unit securely.
4	<ul style="list-style-type: none"> • Inspect the tire pressure. • Is the tire pressure normal? 	Yes	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [CD PLAYER/CHANGER]

STEP	INSPECTION	ACTION
5	<ul style="list-style-type: none"> Adjust the tire pressure within specification. Does the sound jump when driving the vehicle? 	Yes Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No Audio system is normal. Explain repairs to the customers.
6	<ul style="list-style-type: none"> Replace the CD known to be good. Does the sound jump when driving the vehicle? 	Yes Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No Audio system is normal. Explain to the customer that the CD is malfunctioning.

NO.5 CD PLAYER/CHANGER SCRATCHES ON THE CD [CD PLAYER/CHANGER]

id0903e5806300

5	CD player/changer scratches on the CD	
Possible DTC	Using the M-MDS	B1188:64
	Without using M-MDS (On-board diagnostic test mode)	10:Er07, 22:Er07
Possible cause	<ul style="list-style-type: none"> Deformed disc is used (e.g., out of specification (thickness), bent disc) Multiple CDs are inserted into the CD player at the same time Audio unit malfunction 	

Diagnostic procedure

STEP	INSPECTION	ACTION
1	<ul style="list-style-type: none"> Were the multiple CDs inserted into the CD player at the same time? 	Yes Explain to the customer to insert a CD one by one.
		No Go to the next step.
2	<ul style="list-style-type: none"> Visually inspect the CD. Is the CD a deformed disc (e.g., out of specification (thickness), bent disc)? 	Yes Audio system is normal. Explain to the customer that the CD is malfunctioning.
		No Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)

09-03F

NO.6 DISC CHANGE IS INOPERATIVE [CD PLAYER/CHANGER]

id0903e5806400

6	Disc change is inoperative	
Possible DTC	Using the M-MDS	B1188:64
	Without using M-MDS (On-board diagnostic test mode)	22:Er07
Possible cause	<ul style="list-style-type: none"> Improper panel switch installation Audio panel switch is malfunctioning Audio unit malfunction 	

Diagnostic procedure

STEP	INSPECTION	ACTION
1	<ul style="list-style-type: none"> Inspect the CD changer operation. Does the CD changer operate properly? 	Yes Go to the next step.
		No Go to the symptom troubleshooting "No.3 CD player/changer does not play the CD/No sound".
2	<ul style="list-style-type: none"> Inspect the followings: <ul style="list-style-type: none"> Is the display shown properly when operating the disc change switch? Does the radio band selection operate properly? 	Yes Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No Go to the next step.
3	<ul style="list-style-type: none"> Inspect the audio panel switch installation. Does the CD changer change the disc properly after re-installing the audio panel switch? 	Yes Install the audio panel switch securely and properly.
		No Go to the "No.1 Audio panel switch inspection" in this section. Replace the audio panel as necessary.

SYMPTOM TROUBLESHOOTING [CD PLAYER/CHANGER]

NO.7 CD PLAYER DOES NOT PLAY THE MP3/WMA-FORMATTED FILE [CD PLAYER/CHANGER]

id0903e5888100

7	CD player does not play the MP3/WMA-formatted file	
Possible DTC	Using the M-MDS	B1188:64
	Without using M-MDS (On-board diagnostic test mode)	10:Er07, 22:Er07
Possible cause	<ul style="list-style-type: none"> • CD-R/RW written format is out of specification • MP3/WMA and other format data are in the CD-R/RW • File extension for MP3-formatted file is incorrect (Correct: “.mp3”/“.wma”, incorrect: e.g., RIFF) • Defective CD-R/RW (e.g. dirty CD, scratch) • Audio unit malfunction <p style="margin-top: 10px;">Note</p> <ul style="list-style-type: none"> • The free-software for the MP3-formatted file in the field may cause the deterioration of sound quality, noise, or defective play, so that the CD player won't play the customer made MP3-formatted file. • The CD player may not play the CD-R/RW properly due to the disc condition. • If there are MP3/WMA-formatted file and other file in the same disc, the CD player may not play the disc. • If there are MP3/WMA-formatted file and audio data in the same disc, the CD player loads and plays the first session of the data only. 	

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	<ul style="list-style-type: none"> • Inspect the written format of the recorded data on the CD-R/RW. • Is the written format correct? 	Yes	Go to the next step.
		No	Write the CD-R/RW with the correct specification.
2	<ul style="list-style-type: none"> • Inspect the recorded data in the CD-R/RW. • Is there MP3/WMA and other format data in the CD-R/RW. 	Yes	Replace with the CD-R/RW known to be good (MP3/WMA-formatted file data only), then inspect the CD player operation. If the CD player plays the MP3/WMA-formatted file: <ul style="list-style-type: none"> • Audio system is normal. Explain to the customer that the CD player does not operate properly if the MP3/WMA and other format data are in the CD-R/RW. If the CD player does not play the MP3/WMA-formatted file: <ul style="list-style-type: none"> • Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Go to the next step.
3	<ul style="list-style-type: none"> • Inspect the CD-R/RW written format. • Is the written format within the specification (“.mp3”/“.wma” is the correct file extension)? 	Yes	Replace with the CD-R/RW using the “.mp3”/“.wma” file extension, then inspect the CD player operation. If the CD player plays the MP3/WMA-formatted file: <ul style="list-style-type: none"> • Audio system is normal. Explain to the customer that the CD player does not operate properly if the correct file extension is not used. If the CD player does not play the MP3/WMA-formatted file: <ul style="list-style-type: none"> • Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Go to the next step.
4	<ul style="list-style-type: none"> • Visually inspect the CD-R/RW. • Is there any dirt or scratch on the CD-R/RW? 	Yes	Clean the disc or replace with the CD-R/RW known to be good.
		No	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)

SYMPTOM TROUBLESHOOTING [CD PLAYER/CHANGER]

NO.8 MP3/WMA-FORMATTED FILE FOLDER SELECTION IS INOPERATIVE/TRACK SEARCH IS INOPERATIVE [CD PLAYER/CHANGER]

id0903e5889100

8	MP3/WMA-formatted file folder selection is inoperative/Track search is inoperative	
Possible DTC	Using the M-MDS	B1D19:71
	Without using M-MDS (On-board diagnostic test mode)	10:Er02, 22:Er02
Possible cause	<ul style="list-style-type: none"> • Defective CD-R/RW (e.g. dirty CD, scratch) • Conflict of ID tag version for CD-R/RW (MP-3) • Improper folder and/or music title in CD-R/RW • The number of characters of folder/audio file name in CD-R/RW exceeds the maximum number of characters • Improper encode in CD-R/RW • Audio unit malfunction 	

Note

- ID3 is a tagging format for MP3-formatted file. ID3 allows metadata (e.g., title, artist, track number, etc.) to be added to the MP3-formatted file.
- There are two versions in the ID tag.
 - ID3v1: This is the most widespread standard tag formats and most software is compatible with this version. There is a limitation on the maximum number of characters for the text data.
 - ID3v2: There are a variety of version in V2, but there is no interchangeability among the versions.

Limitation on the maximum number of characters for the text data (ID3v1)

Item	Maximum number of characters	Description
Title	30	Music title
Artist	30	Artist name
Album	30	Album title
Year	4	Album produced year/CD wholesale year
Genre	—	Music category selection
Comment	30	Free comment
Track	3	Track number

09-03F

- In a WMA file, the track name, artist name and album name are recorded with data called “WMA-Tag”, and the information can be displayed.
- WMA files which do not comply with the specific standard may not be played correctly or its file and folder name may not be displayed correctly.
- The file extension may not be provided depending on the computer operating system, version, software, or setting. In this case, add the file extension “.wma” to the end of the file name, and then write the disc.

Diagnostic procedure

STEP	INSPECTION	ACTION
1	<ul style="list-style-type: none"> • Visually inspect the CD-R/RW. • Is there any dirt or scratch on the CD/R/RW? 	Yes Clean the disc or replace with the CD-R/RW known to be good.
		No Go to the next step. (MP-3)/Go to the step 3.(WMA)
2	<ul style="list-style-type: none"> • Inspect the ID tag version. • Is ID tag correct? 	Yes Go to the next step.
		No Write the CD-R/RW with the correct ID tag version.
3	<ul style="list-style-type: none"> • Inspect folder and audio file name. • Are all file name input correctly? 	Yes Go to the next step.
		No Use the CD-R/RW that a folder and audio file name is input correctly.
4	<ul style="list-style-type: none"> • Inspect the encode for the folder and audio file name in the CD-R/RW. • Is the encode correct? <p style="margin-left: 20px;">Note</p> <ul style="list-style-type: none"> • Unreadable characters may be displayed if incorrect encode is used. 	Yes Go to the next step.
		No Use the correct encode.
5	<ul style="list-style-type: none"> • Inspect the number of characters for the folder and audio file name. • Is the number of characters within the maximum number of characters? 	Yes Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No Input the folder and audio file name within the maximum number of characters.

SYMPTOM TROUBLESHOOTING [CD PLAYER/CHANGER]

NO.9 CD PLAYER DOES NOT INDICATE THE MP3/WMA TITLE TEXT [CD PLAYER/CHANGER]

id0903e5889500

9	CD player does not indicate the MP3/WMA title text	
Possible DTC	Using the M-MDS	B1D19:71, B1188:64
	Without using M-MDS (On-board diagnostic test mode)	10:Er02, 10:Er07, 22:Er02, 22:Er07
Possible cause	<ul style="list-style-type: none"> • Defective CD-R/RW (e.g. dirty CD, scratch) • Conflict of ID tag version for CD-R/RW (MP-3) • The number of characters of folder/audio file name in CD-R/RW exceeds the maximum number of characters • Improper encode in CD-R/RW • No title input in CD-R/RW • Input title text by 2-bytes characters • Audio unit malfunction 	

Diagnostic procedure

STEP	INSPECTION	ACTION
1	<ul style="list-style-type: none"> • Visually inspect the CD-R/RW. • Is there any dirt or scratch on the CD/R/RW? 	Yes Clean the disc or replace with the CD-R/RW known to be good.
		No Go to the next step.
2	<ul style="list-style-type: none"> • Inspect the display the LCD. • Is the CD (other than MP3/WMA compatible) displayed on the LCD? 	Yes Go to the next step. (MP-3)/Go to the step 4. (WMA)
		No Replace the audio panel. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
3	<ul style="list-style-type: none"> • Inspect the ID tag version. • Is the ID tag correct? 	Yes Go to the next step.
		No Write the CD-R/RW with the correct ID tag version.
4	<ul style="list-style-type: none"> • Is the title text input into the CD-R/RW? 	Yes Go to the next step.
		No Input the title text. Note • Do not input the title text by two-bytes character.
5	<ul style="list-style-type: none"> • Inspect the encode for the folder and audio file name in the CD-R/RW. • Is the encode correct? 	Yes Go to the next step.
		No Use the correct encode.
6	<ul style="list-style-type: none"> • Inspect the number of characters for the folder and audio file name. • Is the number of characters within the maximum number of characters? 	Yes Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No Input the folder and audio file name within the maximum number of characters.

SYMPTOM TROUBLESHOOTING [CD PLAYER/CHANGER]

NO.10 CD PLAYER DOES NOT PLAY THE AUDIO DATA (CDDA) [CD PLAYER/CHANGER]

id0903e5806800

10	CD player does not play the audio data (CDDA)	
Possible DTC	Using the M-MDS	B1D19:71, B1188:64
	Without using M-MDS (On-board diagnostic test mode)	10:Er02, 10:Er07, 22:Er02, 22:Er07
Possible cause	<ul style="list-style-type: none"> • CD-R/RW written format is out of specification • Defective CD-R/RW (e.g., dirty CD, scratch) • Data other than the audio data is in CD-R/RW • Audio unit malfunction <p>Note</p> <ul style="list-style-type: none"> • The CD player may not play the CD-R/RW properly due to the disc condition. • If there are MP3-formatted file and audio data in the same disc, the CD player loads and plays the first session of the data only. 	

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	<ul style="list-style-type: none"> • Replace with the audio-CD known to be good. • Does the CD player play the audio-CD properly? 	Yes	Go to the next step.
		No	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
2	<ul style="list-style-type: none"> • Inspect the written format of the recorded data on the CD-R/RW. • Is the written format correct? 	Yes	Go to the next step.
		No	Write the CD-R/RW with the correct specification.
3	<ul style="list-style-type: none"> • Inspect the recorded data in the CD-R/RW. • Is any data other than the audio data recorded in the CD-R/RW? 	Yes	Replace with the CD-R/RW known to be good (record audio data only), then inspect the CD player operation. If the CD-R/RW plays: <ul style="list-style-type: none"> • Audio system is normal. Explain to the customer that the CD player does not operate properly if the audio data and other data are recorded in the CD-R/RW. If the CD-R/RW does not play: <ul style="list-style-type: none"> • Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Go to the next step.
4	<ul style="list-style-type: none"> • Visually inspect the CD-R/RW. • Is there any dirt or scratch on the CD-R/RW? 	Yes	Clean the disc or replace with the CD-R/RW known to be good.
		No	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)

09-03F

SYMPTOM TROUBLESHOOTING [CD PLAYER/CHANGER]

NO.11 TRACK CHANGE IS INOPERATIVE [CD PLAYER/CHANGER]

id0903e5806900

11	Track change is inoperative	
Possible DTC	Using the M-MDS	B1D19:71
	Without using M-MDS (On-board diagnostic test mode)	10:Er02, 22:Er02
Possible cause	<ul style="list-style-type: none"> • Defective CD (e.g., cracked, badly bent, rough edges, scratch, dirty CD, condensation) • Non-conventional discs (e.g., 8 cm (3 in) CD, 8 cm (3 in) disc adapter, heart-shaped disc, octagonal disc) • Audio panel malfunction • Audio unit malfunction 	

Diagnostic procedure

STEP	INSPECTION	ACTION
1	<ul style="list-style-type: none"> • Replace the CD known to be good. • Does the CD player change the track? 	Yes Explain to the customer that the defective CD or non-conventional disc cannot be used.
		No Go to the next step.
2	<ul style="list-style-type: none"> • Inspect the panel switch installation. • Does the CD player change the track number on the display when pressing the track up or down switch? 	Yes Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) (See 09-20-5 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No Go to the "No.1 Audio panel switch inspection" in this section. Replace the audio panel as necessary.

REFERENCE [CD PLAYER/CHANGER]

id0903e5830000

- The CD player/changer has been designed to play CDs bearing the identification logo, COMPACT DISC DIGITAL AUDIO, as shown. No other discs can be played on the CD player/changer other than MP3/WMA applicable one.
- The CD player/changer may not play the following CD:
 - Defective CD (e.g., cracked, badly bent, rough edges, scratch, dirty CD condensation)
 - 8 cm (3 in) CDs accessories (e.g., 8 cm (3 in) disc adapter, sticker, label)
 - Nonstandard CD (e.g., Diameter/thickness is out of specification)
Specification: 119.7—120.3 mm (4.668—4.692 in) of diameter, 1.2+0.3 or -0.1 mm (0.047+0.012 or 0.004 in) of thickness
- Do not use non-conventional discs. The CD player/changer could be damaged.

Examples:

- Although the same physical size as the compact disc, SACD uses a different kind of digital audio signal, Direct Stream Digital.
- The CD player/changer may not play the CD-R/RW properly due to the disc condition (excluding the MP3/WMA).

ar8uuw00000227

SYMPTOM TROUBLESHOOTING [CD PLAYER/CHANGER]

MP3/WMA-Formatted File

Outline of CD-R and CD-RW

- Definition
 - CD-R: The CD-R is a non-rewritable version. Once a section of a CD-R is written, it cannot be erased or rewritten.
 - CD-RW: The CD-RW is a re-writable version of CD-ROM and can be written the data an unlimited number of times.
 - Since a reflected laser beam amount of the CD-R/RW is less than the reflected laser beam amount of the conventional CD media, the CD player/changer may not play the CD-R/RW or have the sound jumped.
 - Since the recording quality of the CD-R/RW vary widely, some CD-R/RW may not be played.

Recording method

- There are two methods for recording.
- Classification by recorder
 - Record the audio data in the audio-CD by audio recorder
 - The price of the audio recorder and original audio-CD includes the copyright fee.
 - Recorded the audio data in the conventional data-CD by the personal computer
 - The data-CD is cheaper than the audio-CD. But, there is a CD with the low quality.
- Classification by audio data uncompression/compression
 - Uncompressed audio data
 - The CD-R/RW player can play the uncompressed audio data.
 - Compressed audio data
 - It is possible to record the large quantity of music in a disc. The sound quality varies depends on the audio data compression format. The compressed audio data can be played on the applicable player only.
 - Type of compression format:
 - MP3: MPEG Audio Layer 3 — Mazda genie MP3 applicable CD player is available.
 - WMA: Windows Media Audio
 - ATRAG: Adaptive TRansform Acoustic Coding

MP3

- The following condition should be met in order to record the MP3-formatted data on the MP3 applicable CD player:

Media	Applicable to the CD-R/RW
Logical format	ISO 9660 level 1&2 / Joliet / Romeo
Number of directly	8 directly
Number of files	Maximum 255 as a total number of file and folder Maximum 155 for folder
ID3 TAG	Applicable to Ver1.1, 2.3 and 2.4
File extension	MP3
Packet writing	Not applicable
Bit rate	8 kbps—320 kbps/VBR
Sampling rate	11.025 kHz—48 kHz

WMA (Windows media audio)

- CD-R and CD-RW including WMA files can be played with this unit. Discs which conform to the following formats can be played.
Playable WMA files are as follows:

Item	Content
Specification	Windows Media Audio Version 7.0, 8.0, 9.0
Sampling frequency	32kHz — 32, 40, 48 kbps
	44.1kHz — 32, 48, 64, 80, 96, 128, 160, 192, 256, 320 kbps
	48kHz — 64, 96, 128, 160, 192 kbps
VBR (Variable Bit Rate)	Supported
Channel mode	Stereo/Monaural
WMA tag	Title, artist name, album name

SYMPTOM TROUBLESHOOTING CHART [IMMOBILIZER SYSTEM] 09-03G-1

NO.1 SECURITY LIGHT DISPLAY IS NOT NORMAL [IMMOBILIZER SYSTEM]09-03G-1

SYMPTOM TROUBLESHOOTING CHART [IMMOBILIZER SYSTEM]

id0903f5814200

No.	TROUBLESHOOTING ITEM	PAGE
1	The security light display is not normal.	09-03G-1 NO.1 SECURITY LIGHT DISPLAY IS NOT NORMAL [IMMOBILIZER SYSTEM]

NO.1 SECURITY LIGHT DISPLAY IS NOT NORMAL [IMMOBILIZER SYSTEM]

id0903f5800200

1	The security light display is not normal.
DESCRIPTION	<ul style="list-style-type: none"> The security light remains illuminated 2 min or more after the ignition is switched to ON. The security light does not illuminate when the ignition is switched to ON. The security light remains illuminated while the ignition is switched off. The security light does not flash or the flashing interval is abnormal while the ignition is switched off.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Keyless control module malfunction (with advanced keyless entry and push button start system) Instrument cluster malfunction <p>Note</p> <ul style="list-style-type: none"> If the security light remains illuminated for approx. 1 min after the ignition is switched to ON and a DTC is displayed, perform the immobilizer system malfunction diagnosis according to that DTC. (See 09-02A-7 DTC TABLE [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]09-02C-4 DTC TABLE [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) While performing the immobilizer system security access using the M-MDS, the security light does not illuminate even if the ignition is switched to ON. Verify the illumination condition of the security light by disconnecting the DLC-2 to release security access. <p style="text-align: center;">NOTE: SECURITY LIGHT FLASHING SEQUENCE WHEN IGNITION IS SWITCHED TO OFF (IMMOBILIZER SYSTEM IS NORMAL)</p> <div style="text-align: center;"> <p style="font-size: small;">ILLUMINATED APPROX. 1.9 S APPROX. 1.9 S</p> <p style="font-size: small;">TURNS OFF APPROX. 0.1 S</p> </div>

09-03G

Note

- Normal operation of the security light is as follows. The light starts flashing every 2 s when the ignition is switched from ON to ACC and the immobilizer system is armed. The light stops flashing when the ignition is switched to ON with the correct ignition key. At this time, the immobilizer system is disarmed and the security light illuminates for about 3 s and then goes out.

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	<ul style="list-style-type: none"> Switch the ignition to ON. Do other warning lights in the instrument cluster illuminate normally? Do the warning lights illumination normal? 	Yes	Go to the next step.
		No	Inspect the instrument cluster. (See 09-22-8 INSTRUMENT CLUSTER INSPECTION.)
2	<ul style="list-style-type: none"> Switch the ignition to ON. Verify that the security light illuminates. Does the security light remain illuminates for 2 min or more? 	Yes	Replace the instrument cluster. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.)
		No	Go to the next step.
3	<ul style="list-style-type: none"> Switch the ignition to off. Verify that the security light illuminates. Does the security light remain illumination? 	Yes	Replace the instrument cluster. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.)
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [IMMOBILIZER SYSTEM]

STEP	INSPECTION	ACTION	
4	<ul style="list-style-type: none"> • Switch the ignition to off. • Verify that the security light is flashing. • Does the security light flash normally? 	Yes	Go to the next step.
		No	If the security light flashes with DTC patterns, perform the applicable DTC troubleshooting procedure. (See 09-02A-7 DTC TABLE [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) (See 09-02C-4 DTC TABLE [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) If the security light does not flash, replace the instrument cluster. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
5	<ul style="list-style-type: none"> • Is the advanced keyless entry and push button start system equipped? 	Yes	Go to the next step.
		No	Replace the instrument cluster. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
6	<ul style="list-style-type: none"> • Disconnect the negative battery. • Disconnect the keyless control module connectors. • Connect the negative battery. • Switch the ignition to ON. • Verify that the security light illuminates. • Does the security light illuminate normally? 	Yes	Replace the instrument cluster. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Replace the keyless control module. (See 09-14-66 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION.)

SYMPTOM TROUBLESHOOTING [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

No.1 HANDS-FREE TELEPHONE SYSTEM DOES NOT RECEIVE/TRANSMIT CALLS, DOES NOT CONNECT [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

id0903h5844000

1	Hands-free telephone system does not receive/transmit calls, does not connect	
Possible DTC	Using the M-MDS	U0498:68, B116A:12, B116A:16, B116A:13, B1134:23
	Without using M-MDS (On-board diagnostic test mode)	26:Er81, 26:Er82, 26:Er83, 26:Er84, 26:Er85
Possible cause	<ul style="list-style-type: none"> • Malfunction in steering switch related parts <ul style="list-style-type: none"> — Open or short circuit in the wiring harness between the Hang-up/Pick-up/Talk switch and Bluetooth unit — CAN communication error between the audio unit and Bluetooth unit — Hang-up/Pick-up/Talk switch malfunction — Poor connection in the connector • Malfunction in microphone related parts <ul style="list-style-type: none"> — Open or short circuit in the wiring harness between the microphone and Bluetooth unit — Microphone malfunction — Poor connection in the connector • Malfunction in audio system <ul style="list-style-type: none"> — Open or short circuit in the wiring harness between the Bluetooth unit and the speaker through the audio amplifier (with Bose® system) — Open or short circuit in the wiring harness between the Bluetooth unit and the speaker through the audio unit (without Bose®) — Poor connection in the connector • Bluetooth unit does not respond <ul style="list-style-type: none"> — Bluetooth unit malfunction — Open or short circuit in the wiring harness between the Bluetooth unit and the audio unit (without Bose® system) — Open or short circuit in the wiring harness between the Bluetooth unit and the audio amplifier (with Bose® system) — Open or short circuit in the wiring harness of the Bluetooth unit power supply or ground circuit — Poor connection in the connector • Problem in cellular phone <ul style="list-style-type: none"> — Cellular phone does not set up to Bluetooth system — Cellular phone does not operate (low battery voltage, power off) — Cellular phone is outside of the signal transmission area — Bluetooth does not operate — A cellular phone other than a Hands-free telephone system-enabled models is used. 	

Diagnostic procedure

- When performing an asterisk (*) troubleshooting inspection, slightly shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunction. If there is a problem, verify that the connectors, terminals and wiring harness are connected correctly and undamaged.

STEP	INSPECTION	ACTION	
1	<ul style="list-style-type: none"> • Verify if the customer's cellular phone is a Hands-free telephone system-enabled model by referring to http://www.mazdausa.com/MusaWeb/displayPage.action?pageParameter=bluetoothHandsFreeSystem. • Is the customer's cellular phone a Hands-free telephone system-enabled model? 	Yes	Go to the next step.
		No	Explain to the customer that the customer's cellular phone is not a Hands-free telephone system-enabled model.
2	<ul style="list-style-type: none"> • Verify that the cellular phone is communicating with the Bluetooth unit. • Does the cellular phone connect to the Bluetooth unit via Bluetooth when the Hands-free telephone system is activated? 	Yes	Enter a cellular phone signal transmission area and reinspect the Bluetooth system operation.
		No	Go to the next step.
3	<ul style="list-style-type: none"> • Inspect the cellular phone condition while the hands free phone does not operate. • Can the following conditions be verified? <ul style="list-style-type: none"> — Low battery voltage — Power is off — Out of signal transmission area 	Yes	Enter a cellular phone signal transmission area and reinspect the Bluetooth system operation.
		No	Go to the next step.
4	<ul style="list-style-type: none"> • Does the cellular phone set up to the Bluetooth unit? 	Yes	Set up the cellular phone to the Bluetooth unit.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

STEP	INSPECTION	ACTION	
5	<ul style="list-style-type: none"> • Is the audio system sound output normal? 	Yes	Go to the next step.
		No	Perform the audio system troubleshooting procedure.
6	<ul style="list-style-type: none"> • Perform the Bluetooth system (hands-free telephone (HF/TEL) system) DTC inspection. • Are the following DTC displayed? <ul style="list-style-type: none"> — B116A:12/26:Er82 — B116A:16/26:Er83 — B116A:13/26:Er84 	Yes	Go to the next step.
		No	Go to Step 8.
7*	<ul style="list-style-type: none"> • Inspect for open or short circuits in the following wiring harnesses and connectors, and inspect the connector connections. <ul style="list-style-type: none"> — Between microphone terminal A and Bluetooth unit terminal A — Between microphone terminal B and Bluetooth unit terminal B — Between microphone terminal C and Bluetooth unit terminal C — Between microphone terminal D and Bluetooth unit terminal D — Between microphone terminal E and Bluetooth unit terminal E • Are the harnesses and connector connections normal? 	Yes	Replace the microphone. (See 09-20-50 MICROPHONE REMOVAL/INSTALLATION.)
		No	Repair or replace malfunctioning parts.
8	<ul style="list-style-type: none"> • Perform the Bluetooth system (hands-free telephone (HF/TEL) system) DTC inspection. • Is U0498:68/26:Er81 displayed? 	Yes	Inspect and repair the audio system CAN communication.
		No	Go to the next step.
9	<ul style="list-style-type: none"> • Inspect the Hang-up/Pick-up/Talk switch. (See 09-20-46 STEERING SWITCH INSPECTION.) • Is the Hang-up/Pick-up/Talk switch normal? 	Yes	Go to the next step.
		No	Replace the steering switch. (See 09-20-43 STEERING SWITCH REMOVAL/INSTALLATION.)
10*	<ul style="list-style-type: none"> • Inspect for open or short circuits in the following wiring harnesses and connectors, and inspect the connector connections. <ul style="list-style-type: none"> — Between steering switch terminal I and audio unit (24-pin) terminal 1P — Between steering switch terminal N and Bluetooth unit (28-pin) terminal F — Between audio unit (24-pin) terminal 1O and Bluetooth unit (28-pin) terminal Y — Between audio unit (24-pin) terminal 1Q and Bluetooth unit (28-pin) terminal Z • Are the harnesses and connector connections normal? 	Yes	Go to the next step.
		No	Repair or replace malfunctioning parts.
11	<ul style="list-style-type: none"> • Call the hands-free cell phone using another cellular phone. • Do the same symptoms appear? 	Yes	Replace the Bluetooth unit. (See 09-20-50 Bluetooth UNIT REMOVAL/INSTALLATION.)
		No	The cellular phone Bluetooth system is malfunctioning.

09-03H

SYMPTOM TROUBLESHOOTING [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

No.2 CALLER'S VOICE VOLUME TOO LOW, OR NOISE INTERRUPTS CALL [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

id0903h5844100

2	Caller's voice volume too low, or noise interrupts call	
Possible DTC	Using the M-MDS	U0498:68
	Without using M-MDS (On-board diagnostic test mode)	26:Er81
Possible cause	<ul style="list-style-type: none"> • Malfunction in the microphone related parts <ul style="list-style-type: none"> — Open or short circuit in the wiring harness between the microphone and the Bluetooth unit — Microphone malfunction — Poor connection in the connector • Malfunction in the Hang-up/Pick-up/Talk switch <ul style="list-style-type: none"> — Hang-up/Pick-up/Talk switch malfunction — Open or short circuit in the wiring harness between the Hang-up/Pick-up/Talk switch and the audio unit — Poor connection in the connector • Bluetooth unit does not receive the vehicle speed signal <ul style="list-style-type: none"> — CAN communication error • Malfunction in the audio system <ul style="list-style-type: none"> — Steering switch (+) and/or related circuit malfunction • Influence due to vehicle driving conditions <ul style="list-style-type: none"> — Noise while driving is loud (engine, tire noise, blower fan noise) — Windows and/or sunroof are open • Bluetooth unit malfunction • Problem in the cellular phone <ul style="list-style-type: none"> — Vehicle is in a place where signal transmission is weak — Bluetooth does not operate — A cellular phone other than a Hands-free telephone system-enabled models is used. 	

Diagnostic procedure

- When performing an asterisk (*) troubleshooting inspection, slightly shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunction. If there is a problem, verify that the connectors, terminals and wiring harness are connected correctly and undamaged.

STEP	INSPECTION	ACTION	
1	<ul style="list-style-type: none"> • Verify if the customer's cellular phone is a Hands-free telephone system-enabled model by referring to http://www.mazdausa.com/MusaWeb/displayPage.action?pageParameter=bluetoothHandsFreeSystem. • Is the customer's cellular phone a Hands-free telephone system-enabled model? 	Yes	Go to the next step.
		No	Explain to the customer that the customer's cellular phone is not a Hands-free telephone system-enabled model.
2*	<ul style="list-style-type: none"> • Can the audio volume be controlled using steering switch? 	Yes	Go to the next step.
		No	Inspect and repair the steering switch and related wiring harness.
3	<ul style="list-style-type: none"> • Does the symptom appear under following conditions? <ul style="list-style-type: none"> — Windows and/or sunroof are open — Noise while driving is loud (engine, tire noise, blower fan noise) 	Yes	The system is normal. (Influence due to vehicle driving conditions)
		No	Go to the next step.
4	<ul style="list-style-type: none"> • Perform the Bluetooth system (hands-free telephone (HF/TEL) system) DTC inspection. • Is U0498:68/26:Er81 displayed? 	Yes	Inspect and repair the audio system CAN communication.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

STEP	INSPECTION	ACTION	
5*	<ul style="list-style-type: none"> • Inspect for open or short circuits in the following wiring harnesses and connectors, and inspect the connector connections. <ul style="list-style-type: none"> — Between microphone terminal A and Bluetooth unit terminal A — Between microphone terminal B and Bluetooth unit terminal B — Between microphone terminal C and Bluetooth unit terminal C — Between microphone terminal D and Bluetooth unit terminal D — Between microphone terminal E and Bluetooth unit terminal E • Are the harnesses and connector connections normal? 	Yes	Go to the next step.
		No	Repair or replace malfunctioning parts.
6	<ul style="list-style-type: none"> • Inspect the following switches. (See 09-20-46 STEERING SWITCH INSPECTION.) <ul style="list-style-type: none"> — Hung-up switch — Pic-up switch — Talk switch • Are the switches normal? 	Yes	Go to the next step.
		No	Replace the steering switch. (See 09-20-43 STEERING SWITCH REMOVAL/INSTALLATION.)

SYMPTOM TROUBLESHOOTING [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)]

No.1 AFS OFF LIGHT ILLUMINATES CONTINUOUSLY [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)]

id0903h9925200

1	The AFS (adaptive front lighting system) OFF LIGHT illuminates continuously
DESCRIPTION	The AFS OFF light remains illuminated with the ignition switched ON and the AFS does not operate.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Constant AFS OFF signal malfunction to the AFS control module. <ul style="list-style-type: none"> — AFS OFF switch malfunction (stuck on) — Short in wiring harness ground between AFS OFF switch terminal H and AFS control module terminal P • Instrument cluster malfunction

Diagnostic Procedure

Step	Inspection		Action
1	INSPECT IF MALFUNCTION IS IN AFS OFF SWITCH <ul style="list-style-type: none"> • Switch the ignition off. • Disconnect the AFS OFF switch connector. • Switch the ignition ON. • Verify that the AFS OFF light illuminates. • Does the AFS OFF switch illumination turn off after illuminating for several seconds directly after the ignition is switched ON? 	Yes	Replace the AFS OFF switch. (See 09-18-17 AFS (ADAPTIVE FRONT LIGHTING SYSTEM) OFF SWITCH REMOVAL/ INSTALLATION.)
		No	Go to the next step.
2	INSPECT AFS OFF SWITCH SIGNAL WIRING HARNESS <ul style="list-style-type: none"> • Disconnect the AFS control module connector. • Verify the continuity between AFS OFF switch terminal H and body ground. • Is there continuity? 	Yes	Repair for a short circuit to the wiring harness ground between AFS OFF switch terminal H and AFS control module terminal P.
		No	Go to the next step.
3	INSPECT AUTO LEVELING SENSOR SIGNAL CIRCUIT <ul style="list-style-type: none"> • Verify the continuity between AFS control module terminal E/G and body ground. • Is there continuity? 	Yes	Repair or replace the related wiring harness.
		No	Go to the next step.
4	INSPECT INSTRUMENT CLUSTER <ul style="list-style-type: none"> • Turn off the AFS OFF light using the instrument cluster active command modes WL + IL and the M-MDS. (See 09-02E-24 ACTIVE COMMAND MODES TABLE [INSTRUMENT CLUSTER].) • Does the AFS OFF light turn off with the simulation operation? 	Yes	Replace the AFS control module. (See 09-18-18 AFS (ADAPTIVE FRONT LIGHTING SYSTEM) CONTROL MODULE REMOVAL/ INSTALLATION.)
		No	Replace the instrument cluster. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.)

SYMPTOM TROUBLESHOOTING [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)]

No.2 AFS (ADAPTIVE FRONT LIGHTING SYSTEM) DOES NOT OPERATE IN THE LEFT AND RIGHT DIRECTIONS [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)]

id0903h9913300

2	AFS (adaptive front lighting system) does not operate in the left and right directions
DESCRIPTION	The AFS OFF light is not illuminated while the vehicle speed is 2 km/h or more and the AFS does not operate in the left or right direction when the shift position is in the D or M range (ATX) or in a position other than R (MTX).
POSSIBLE CAUSE	<ul style="list-style-type: none"> • The necessary signal for controlling the AFS control module is not input. <ul style="list-style-type: none"> — Steering angle signal error <ul style="list-style-type: none"> • Steering angle sensor malfunction • Communication error between BCM and AFS control modules — Engine speed signal, vehicle speed signal error <ul style="list-style-type: none"> • Communication error between PCM and AFS control modules — Transaxle range signal error <ul style="list-style-type: none"> • Communication error between TCM and BCM • Communication error between BCM and AFS control modules — Manual transmission backlight switch signal error <ul style="list-style-type: none"> • Backlight switch malfunction (stuck on) — Headlight left/right position signal error <ul style="list-style-type: none"> • Hall sensor (swivel actuator) malfunction • Vehicle steering conditions are not correctly input to AFS control module <ul style="list-style-type: none"> — Steering angle sensor malfunction — Wheel alignment adjustment malfunction (right run/left run) • Swivel actuator which receives control signal from AFS control module does not operate <ul style="list-style-type: none"> — Swivel actuator malfunction — Malfunction in wiring harness between AFS control module and front combination light • AFS OFF light malfunction <ul style="list-style-type: none"> — Instrument cluster (AFS OFF light) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	INSPECT DTCs FOR MODULES COMPRISING SYSTEM <ul style="list-style-type: none"> • Verify DTCs for the following modules using the diagnostic tester. <ul style="list-style-type: none"> — BCM — PCM — TCM — AFS • Can DTCs be verified? 	Yes	Go to the applicable DTC inspection.
		No	Go to the next step.
2	INSPECT IF MALFUNCTION IS SWIVEL ACTUATOR <ul style="list-style-type: none"> • Do both the left and right headlights not move? 	Yes	Go to the next step.
		No	Go to Step 8.
3	INSPECT IF MALFUNCTION IS AFS OFF LIGHT <ul style="list-style-type: none"> • Start the engine. • Turn on the headlights. • Verify that the AFS OFF light illuminates by operating the AFS OFF switch ON/OFF. • Does the AFS OFF switch illuminate/turn off according to the switch operation? 	Yes	Go to Step 6.
		No	Go to the next step.
4	INSPECT AFS OFF SWITCH SIGNAL WIRING HARNESS <ul style="list-style-type: none"> • Disconnect the AFS control module connector. • Verify the continuity between AFS OFF switch terminal H and body ground. • Is there continuity? 	Yes	Repair for a short circuit to the wiring harness ground between AFS OFF switch terminal H and AFS control module terminal P.
		No	Go to the next step.
5	INSPECT AFS OFF SWITCH <ul style="list-style-type: none"> • Inspect the AFS OFF switch. (See 09-18-17 AFS (ADAPTIVE FRONT LIGHTING SYSTEM) OFF SWITCH INSPECTION.) • Is the AFS OFF switch normal? 	Yes	Turn off the AFS OFF light using the instrument cluster active command modes WL + IL and the M-MDS. (See 09-02E-24 ACTIVE COMMAND MODES TABLE [INSTRUMENT CLUSTER].)
		No	Replace the AFS OFF switch. (See 09-18-17 AFS (ADAPTIVE FRONT LIGHTING SYSTEM) OFF SWITCH REMOVAL/INSTALLATION.)

09-031

SYMPTOM TROUBLESHOOTING [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)]

Step	Inspection	Action	
6	STEERING ANGLE SENSOR INSPECTION <ul style="list-style-type: none"> • Inspect the steering angle sensor. (See 09-18-19 STEERING ANGLE SENSOR INSPECTION.) • Is the steering angle sensor normal? 	Yes	Go to the next step.
		No	Replace the steering angle sensor. (See 09-18-19 STEERING ANGLE SENSOR REMOVAL/INSTALLATION.)
7	VERIFY THAT VEHICLE TRAVELS STRAIGHT <ul style="list-style-type: none"> • Drive the vehicle on a flat, straight road. • Is there frequent steering correction (right run/left run) while on course? 	Yes	Inspect the wheel alignment and perform adjustments. (See 02-11-1 FRONT WHEEL ALIGNMENT.) (See 02-11-3 REAR WHEEL ALIGNMENT.)
		No	Inspect the following AFS control module PIDs. If not within the specification, inspect related parts and wiring harnesses. <ul style="list-style-type: none"> • Engine speed (RPM) • Vehicle speed (VSPD) • Reverse gear switch (R_GEAR_SW) (See 09-021-20 PID/DATA MONITOR TABLE [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)].) • Transaxle position (TR) (See 05-02-5 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FS5A-EL].)
8	INSPECT WIRING HARNESS BETWEEN SWIVEL ACTUATOR AND AFS CONTROL MODULE <ul style="list-style-type: none"> • Inspect the following wiring harnesses and connectors: Swivel actuator (RH) <ul style="list-style-type: none"> — Terminal F to AFS control module terminal I — Terminal I to AFS control module terminal J — Terminal J to AFS control module terminal X — Terminal K to AFS control module terminal R — Terminal L to AFS control module terminal L Swivel actuator (LH) <ul style="list-style-type: none"> — Terminal F to AFS control module terminal K — Terminal I to AFS control module terminal J — Terminal J to AFS control module terminal U — Terminal K to AFS control module terminal T — Terminal L to AFS control module terminal L • Is there an open or short circuit, or poor contact? 	Yes	Repair or replace the malfunctioning part.
		No	Replace the AFS control module. (See 09-18-18 AFS (ADAPTIVE FRONT LIGHTING SYSTEM) CONTROL MODULE REMOVAL/INSTALLATION.)
9	INSPECT IF MALFUNCTION OCCURS IN SWIVEL ACTUATOR OR AFS CONTROL MODULE <ul style="list-style-type: none"> • Replace the AFS control module. (See 09-18-18 AFS (ADAPTIVE FRONT LIGHTING SYSTEM) CONTROL MODULE REMOVAL/INSTALLATION.) • Is the AFS operation normal? 	Yes	Troubleshooting completed.
		No	Replace the front combination light. (See 09-18-7 FRONT COMBINATION LIGHT REMOVAL/INSTALLATION.)

SYMPTOM TROUBLESHOOTING [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)]

No.3 AFS (ADAPTIVE FRONT LIGHTING SYSTEM) OPERATES WHEN OPERATING AFS OFF SWITCH [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)]

id0903h9913600

3	AFS (adaptive front lighting system) operates when operating AFS OFF switch
DESCRIPTION	The AFS operates while the AFS OFF switch is off.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • AFS OFF signal error to AFS control module <ul style="list-style-type: none"> — AFS OFF switch malfunction (stuck off) — Open circuit in wiring harness between AFS OFF switch terminal H and AFS control module terminal P — Open circuit in wiring harness between AFS OFF switch terminal K and ground. • AFS control module malfunction

Diagnostic Procedure

Step	Inspection	Action	
1	INSPECT IF MALFUNCTION IS AFS OFF SWITCH <ul style="list-style-type: none"> • Switch the ignition ON. • Turn the AFS OFF switch on and off. • Does the AFS OFF light illumination change in accordance with the switch operation? 	Yes	Go to the next step.
		No	Turn off the AFS OFF light using the instrument cluster active command modes WL + IL and the M-MDS. (See 09-02E-24 ACTIVE COMMAND MODES TABLE [INSTRUMENT CLUSTER].)
2	INSPECT IF MALFUNCTION IS AFS CONTROL MODULE <ul style="list-style-type: none"> • Disconnect the AFS control module connector. • Verify that there is continuity between the AFS control module wiring harness-side terminal P and body ground. • Is there continuity when the AFS OFF switch is on? 	Yes	Inspect the AFS control module terminal P connection condition. If a malfunction is detected, repair or replace the terminal. If a malfunction is not detected, replace the AFS control module. (See 09-18-18 AFS (ADAPTIVE FRONT LIGHTING SYSTEM) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	INSPECT AFS OFF SWITCH SIGNAL WIRING HARNESS <ul style="list-style-type: none"> • Disconnect the AFS OFF switch connector. • Verify the continuity between the AFS OFF switch terminal H and AFS control module terminal P. • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the malfunctioning location.
4	INSPECT AFS OFF SWITCH <ul style="list-style-type: none"> • Inspect the AFS OFF switch. (See 09-18-17 AFS (ADAPTIVE FRONT LIGHTING SYSTEM) OFF SWITCH INSPECTION.) • Is the AFS OFF switch normal? 	Yes	Inspect the following and repair or replace the malfunctioning location. <ul style="list-style-type: none"> • AFS OFF switch terminal K to body ground • Looseness, lifting at ground points
		No	Replace the AFS switch. (See 09-18-17 AFS (ADAPTIVE FRONT LIGHTING SYSTEM) OFF SWITCH REMOVAL/INSTALLATION.)

09-03I

SYMPTOM TROUBLESHOOTING [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)]

No.4 AFS OFF LIGHT ILLUMINATES WHEN THE IGNITION IS SWITCHED TO ON [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)]

id0903h9993900

4	AFS OFF light illuminates when the ignition is switched to ON
DESCRIPTION	<ul style="list-style-type: none"> • The AFS OFF light flashes when the ignition is switched ON. • The AFS OFF light illuminates when the ignition is switched ON.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Headlight auto leveling function related electrical part malfunction <ul style="list-style-type: none"> — Front auto leveling sensor related part malfunction <ul style="list-style-type: none"> • Output signal excessively high or low • Front auto leveling sensor malfunction — Rear auto leveling sensor related part malfunction <ul style="list-style-type: none"> • Output signal excessively high or low • Rear auto leveling sensor malfunction — AFS control module malfunction — AFS control module power supply voltage excessively high • AFS OFF light illumination circuit malfunction <ul style="list-style-type: none"> — Instrument cluster malfunction — Communication error between AFS control module and Instrument cluster

Diagnostic Procedure

Step	Inspection		Action
1	INSPECT FRONT AND REAR AUTO LEVELING SENSOR INSTALLATION <ul style="list-style-type: none"> • Inspect the front and rear auto leveling sensor installation. • Is there any bending, damage or dislocated links at the bracket? 	Yes	Repair or replace the malfunctioning part.
		No	Go to the next step.
2	INSPECT AFS CONTROL MODULE POWER SUPPLY VOLTAGE <ul style="list-style-type: none"> • Switch the ignition to ON. • Measure the voltage between AFS control module terminals H and ground. • Is the voltage B+? 	Yes	Go to the next step.
		No	Inspect and repair or replace the malfunctioning part for an open circuit between the ignition switch (push start) and AFS control module terminals H.
3	INSPECT AFS GROUND CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the AFS control module connector. • Verify the continuity between the AFS control module wiring harness-side connector terminal F and ground. • Is there continuity? 	Yes	Connect the AFS control module connector, then go to the next step.
		No	Inspect and repair for a loose or poor connection in the AFS control module ground point.
4	INSPECT IF MALFUNCTION IS IN FRONT AUTO LEVELING SENSOR OR ELSEWHERE <ul style="list-style-type: none"> • Switch the ignition to ON. • Turn the headlights on. • Measure the voltage between AFS control module terminal G and ground. • Is the voltage 0.5—4.5V? 	Yes	Go to the next step.
		No	Go to Step 8.
5	INSPECT IF MALFUNCTION IS IN REAR AUTO LEVELING SENSOR OR ELSEWHERE <ul style="list-style-type: none"> • Turn the headlights on. • Measure the voltage between AFS control module terminal E and ground. • Is the voltage 0.5—4.5V? 	Yes	Go to Step 10.
		No	Go to the next step.
6	INSPECT REAR AUTO LEVELING SENSOR SIGNAL RELATED CIRCUIT <ul style="list-style-type: none"> • Inspect for an open or short circuit in the wiring harness between AFS control module terminal E and rear auto leveling sensor terminal B. • Is an open or short circuit detected? 	Yes	Repair or replace the malfunctioning part for an open or short circuit.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)]

Step	Inspection	Action	
7	INSPECT REAR AUTO LEVELING SENSOR <ul style="list-style-type: none"> • Inspect the rear auto leveling sensor. (See 09-18-51 AUTO LEVELING SENSOR INSPECTION.) • Is the rear auto leveling sensor normal? 	Yes	Repair or replace the malfunctioning part for an open circuit in the following: <ul style="list-style-type: none"> • Between AFS control module terminal M and rear leveling sensor terminal C • Between AFS control module terminal D and rear auto leveling sensor terminal A
		No	Replace the rear auto leveling sensor. (See 09-18-50 AUTO LEVELING SENSOR REMOVAL/INSTALLATION.)
8	INSPECT IF MALFUNCTION IS IN FRONT AUTO LEVELING SENSOR POWER OR GROUND CIRCUIT OR ELSEWHERE <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the front and rear auto leveling sensor connectors. • Switch the ignition to ON. • Turn the headlights on. • Measure the voltage between front auto leveling sensor terminals A and C at the wiring harness-side connector. • Is the voltage 4.75—5.25V? 	Yes	Go to the next step.
		No	Inspect for an open or short circuit in the following: <ul style="list-style-type: none"> • Between AFS control module terminal M and front auto leveling sensor terminal C • Between AFS control module terminal M and rear auto leveling sensor terminal C • Between AFS control module terminal D and front auto leveling sensor terminal A • Between AFS control module terminal D and rear auto leveling sensor terminal A Repair or replace the malfunctioning part for an open or short circuit.
9	INSPECT FRONT AUTO LEVELING SENSOR SIGNAL CIRCUIT FOR OPEN OR SHORT CIRCUIT <ul style="list-style-type: none"> • Inspect for an open or short circuit in the wiring harness between AFS control module terminal G and front auto leveling sensor terminal B • Is an open or short circuit detected? 	Yes	Repair or replace malfunctioning part for an open or short circuit.
		No	Inspect the front auto leveling sensor. If it is malfunctioning, replace the front auto leveling sensor. (See 09-18-51 AUTO LEVELING SENSOR INSPECTION.) (See 09-18-50 AUTO LEVELING SENSOR REMOVAL/INSTALLATION.)
10	INSPECT IF MALFUNCTION IS IN COMMUNICATION BETWEEN AFS CONTROL MODULE AND INSTRUMENT CLUSTER OR ELSEWHERE <ul style="list-style-type: none"> • Retrieve the DTCs for the AFS control module and the instrument cluster using the M-MDS. • Are the following DTCs displayed? <ul style="list-style-type: none"> — AFS control module:U0001-88 — Instrument cluster:U0001-88, U0182-00 	Yes	Go to the applicable DTC inspection.
		No	Go to the next step.
11	INSPECT IF MALFUNCTION IS IN INSTRUMENT CLUSTER OR AFS CONTROL MODULE <ul style="list-style-type: none"> • Inspect the instrument cluster. (See 09-22-8 INSTRUMENT CLUSTER INSPECTION.) • Is the instrument cluster normal? 	Yes	Replace the AFS control module. (See 09-18-18 AFS (ADAPTIVE FRONT LIGHTING SYSTEM) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Replace the instrument cluster. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)

09-031

SYMPTOM TROUBLESHOOTING [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)]

No.5 AUTO LEVELING DOES NOT ADJUST OPTICAL AXIS OF THE HEADLIGHTS FOR VEHICLE POSTURE [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)]

id0903h9912500

5	Auto leveling does not adjust optical axis of headlights according to vehicle attitude
DESCRIPTION	<ul style="list-style-type: none"> Auto leveling does not adjust optical axis of headlights according to cargo and passenger weight conditions
POSSIBLE CAUSE	<ul style="list-style-type: none"> Headlight auto leveling actuator malfunction AFS control module malfunction Front auto leveling sensor malfunction Rear auto leveling sensor malfunction Front auto leveling sensor is not installed properly Rear auto leveling sensor is not installed properly

Diagnostic Procedure

Step	Inspection	Action	
1	INSPECT AFS OFF LIGHT ILLUMINATION <ul style="list-style-type: none"> Switch the ignition to ON. Inspect the AFS OFF light indicator light condition. Does the headlight AFS OFF light illuminate 3 s after switching the ignition to ON? 	Yes	Go to symptom "No.4 AFS OFF light illuminates when the ignition is switched to ON" troubleshooting procedure.
		No	Go to the next step.
2	INSPECT IF MALFUNCTION IS IN AUTO LEVELING SENSOR OR ELSEWHERE <ul style="list-style-type: none"> Switch the ignition to off. Switch the ignition to ON. Turn the headlights on at low beam. Jump DLC-2 terminal B to ground using a jumper wire. Inspect the headlight optical axis movement. Does the optical axis move up and down on both sides? 	Yes	Go to the next step.
		No	Go to Step 5.
3	INSPECT IF MALFUNCTION IS IN WIRING HARNESS BETWEEN HEADLIGHT AUTO LEVELING ACTUATOR AND AFS CONTROL MODULE OR ELSEWHERE <ul style="list-style-type: none"> Inspect for an open or short circuit in the wiring harness on the side where the auto leveling function does not operate. RH: <ul style="list-style-type: none"> — AFS control module terminal J—front combination light (RH) terminal (14-pin) I — AFS control module terminal I—front combination light (RH) terminal (14-pin) F — AFS control module terminal L—front combination light (RH) terminal (14-pin) L LH: <ul style="list-style-type: none"> — AFS control module terminal J—front combination light (LH) terminal (14-pin) I — AFS control module terminal K—front combination light (LH) terminal (14-pin) F — AFS control module terminal L—front combination light (LH) terminal (14-pin) L <ul style="list-style-type: none"> Is an open or short circuit detected? 	Yes	Repair or replace the malfunctioning part for an open or short circuit.
		No	Go to the next step.
4	INSPECT IF MALFUNCTION IS IN HEADLIGHT AUTO LEVELING ACTUATOR OR ELSEWHERE <ul style="list-style-type: none"> Replace the front combination light on the suspected side. (See 09-18-7 FRONT COMBINATION LIGHT REMOVAL/INSTALLATION.) Perform Step 2 inspection procedure again. Does the optical axis move up and down? 	Yes	Troubleshooting is completed. (The malfunction is in headlight leveling actuator.)
		No	Replace the AFS control module. (See 09-18-18 AFS (ADAPTIVE FRONT LIGHTING SYSTEM) CONTROL MODULE REMOVAL/INSTALLATION.)

SYMPTOM TROUBLESHOOTING [AFS (ADAPTIVE FRONT LIGHTING SYSTEM)]

Step	Inspection	Action	
5	INSPECT IF MALFUNCTION IS IN WIRING HARNESS BETWEEN AFS CONTROL MODULE AND HEADLIGHT AUTO LEVELING ACTUATOR <ul style="list-style-type: none"> • Inspect for an open or short circuit in the wiring harness on the side where the auto leveling function does not operate. RH: <ul style="list-style-type: none"> — AFS control module terminal J—front combination light (RH) terminal (14-pin) I — AFS control module terminal L—front combination light (RH) terminal (14-pin) L LH: <ul style="list-style-type: none"> — AFS control module terminal J—front combination light (LH) terminal (14-pin) I — AFS control module terminal L—front combination light (LH) terminal (14-pin) L <ul style="list-style-type: none"> • Is an open or short circuit detected? 	Yes	Repair or replace for an open or short to the ground circuit.
		No	Go to the next step.
6	INSPECT FRONT AND REAR AUTO LEVELING SENSOR INSTALLATION <ul style="list-style-type: none"> • Inspect the front and rear auto leveling sensor installation (bent or damaged bracket, or dislocated link). • Are the front and rear auto leveling sensors installed properly? 	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part, then install the auto leveling sensor properly. (See 09-18-50 AUTO LEVELING SENSOR REMOVAL/INSTALLATION.)
7	INSPECT FRONT AUTO LEVELING SENSOR <ul style="list-style-type: none"> • Inspect the front auto leveling sensor. (See 09-18-51 AUTO LEVELING SENSOR INSPECTION) • Is the front auto leveling sensor normal? 	Yes	Go to the next step.
		No	Replace the front auto leveling sensor. (See 09-18-50 AUTO LEVELING SENSOR REMOVAL/INSTALLATION.)
8	INSPECT REAR AUTO LEVELING SENSOR <ul style="list-style-type: none"> • Inspect the rear auto leveling sensor. (See 09-18-51 AUTO LEVELING SENSOR INSPECTION) • Is the rear auto leveling sensor normal? 	Yes	Go to the next step.
		No	Replace the rear auto leveling sensor. (See 09-18-50 AUTO LEVELING SENSOR REMOVAL/INSTALLATION.)
9	VERIFY IF MALFUNCTION IS NO VEHICLE SPEED SIGNAL OR AFS CONTROL MODULE <ul style="list-style-type: none"> • Verify that the speedometer indication. • Does the speedometer indicate properly? 	Yes	Replace the AFS control module.
		No	Perform the instrument cluster symptom troubleshooting “No.7 Speedometer indication is defective” procedure. (See 09-03C-9 NO. 7 SPEEDOMETER INDICATION IS DEFECTIVE [INSTRUMENT CLUSTER].)

(See 09-03J-19 NO.6 PUSH BUTTON START SYSTEM DOES NOT TURN OFF (IG OFF) [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)

TROUBLESHOOTING INDEX [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

Td0903z3801000

- The advanced keyless entry and push button start system is controlled by the keyless control module.
- Go to troubleshooting after identifying the specific malfunction by doing a advanced keyless entry and push-button start system preliminary inspection.

am6zzw0000042

SYMPTOM TROUBLESHOOTING [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

KEYLESS ENTRY SYSTEM CHECK SHEET [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

id0903z3871400

- Use the sheet below as a customer interview sheet when accepting a vehicle for service.
- If the symptom is "Power door lock system does not operate with advanced key at all," find out how the customer uses the keyless entry system by following the check sheet below.

Perform the following inspection with customer.

Q1. What's the customer's complaint?

- Power door lock system does not operate with advanced key (door does not lock/unlock).
- Other _____

Q2. Is system factory-installed or after-market?

- Factory-installed system
→ Go to Q3.

- After-market system
→ Perform troubleshooting according to after-market keyless entry system manual.

Q3. Operate advanced key with customer from 2.5 m {8.2 ft} away from center of vehicle. (Make sure the ignition key is either in the LOCK position or removed.)

Does keyless entry system work?

- Yes

→ Explain the following to the customer.

- Keyless entry system does not work when ignition switch is in except for off.
- Keyless entry system does not work form excessive distances (more than 2.5 m {8.2 ft} away from center of vehicle).
- The auxiliary key is inserted into the key slot.

- No

→ Go to Q4.

Q4. Check location where customer uses keyless entry system.

Does a particular area, such as being near TV towers, power plants, power lines, or factories, have an effect on malfunction?

- Yes Place _____

→ Area of operation is bad. Explain effect of outside interference on advanced key to customer.

- No

→ Go to Q5.

Q5. Make sure there are no after-market electrical parts installed on vehicle.

Are there any of the following present?

- Cellular phone
- Radio-wave equipment
- Remote engine starter
- TV, etc.

- Yes Parts _____

- No

Perform the keyless entry system preliminary inspection.

SYMPTOM TROUBLESHOOTING [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

NO.1 DOOR CANNOT BE LOCKED/UNLOCKED BY ADVANCED KEY [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

id0903z3901500

1	Door cannot be locked/unlocked by advanced key
DESCRIPTION	<ul style="list-style-type: none"> • Cannot door lock and/or unlock with transmitter (electrical key button)
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Malfunction in advanced key battery or advanced key • Malfunction in keyless control module • Malfunction in keyless receiver • Malfunction in BCM • Malfunction in door switch, key remainder switch or trunk lid/liftgate opener switch • Open or short circuit in wiring between trunk lid/liftgate latch switch and BCM • Open or short circuit in wiring harness door latch switch and BCM • Open or short circuit in wiring harness key reminder switch and BCM • Malfunction in door lock actuator • Open or short circuit in wiring between door lock actuator and BCM • Open or short circuit in wiring between keyless control module and BCM • Poor connection of connector, terminal damage • Wrong usage • The after-market electrical parts are interfering with the keyless entry system
<div style="display: flex; justify-content: space-around;"> <div style="text-align: center;"> <p>KEYLESS RECEIVER</p>  </div> <div style="text-align: center;"> <p>KEYLESS CONTROL MODULE</p>  </div> <div style="text-align: center;">  </div> </div> <p style="text-align: center; margin: 10px 0;">BCM</p> <div style="display: flex; justify-content: space-around;"> <div style="text-align: center;">  </div> <div style="text-align: center;">  </div> </div> <div style="display: flex; justify-content: space-around; margin-top: 20px;"> <div style="text-align: center;">  </div> <div style="text-align: center;">  </div> </div> <div style="text-align: center; margin-top: 20px;">  </div>	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	<ul style="list-style-type: none"> • Attempt to lock/unlock the door with transmitter (electrical key button). • Does the advanced key LED illuminate? 	Yes	Go to the next step.
		No	Go to Step 9.
2	<ul style="list-style-type: none"> • Did the customer activate the keyless entry system within operative area (2.5 m {8.2 ft} from vehicle)? 	Yes	Go to the next step.
		No	The system is normal. Explain to the customer that the system does not work without the system operative area.
3	<ul style="list-style-type: none"> • Did the customer use the keyless entry system in particular area, such as being near TV towers, power plants, power lines, or factories? 	Yes	The system is normal. Area of operation is subject. Explain effect of outside interference on the advanced key to the customer.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

STEP	INSPECTION	ACTION	
4	<ul style="list-style-type: none"> • Did the customer activate the advanced keyless entry system with all following conditions satisfied? <ul style="list-style-type: none"> — All doors and trunk lid/liftgate closed — Switch the ignition to off. (without ACC and ignition to ON position) — The auxiliary key is inserted in the key slot. 	Yes	Go to the next step.
		No	The system is normal. Explain to the customer that the system does not work without these conditions satisfied.
5	<ul style="list-style-type: none"> • Are any of the following after-market electrical parts on the vehicle? <ul style="list-style-type: none"> — Cellular phone — Parts with built-in microcomputer — Remote engine starter — TV — Other 	Yes	Go to the next step.
		No	Go to Step 7.
6	<ul style="list-style-type: none"> • Disconnect the after-market electrical parts connectors and attempt to lock/unlock the doors with transmitter (electrical key button). • Does the keyless entry system work only near the receiver? 	Yes	The system is normal. The after-market electrical parts are interfering with the keyless entry system.
		No	Go to the next step.
7	<ul style="list-style-type: none"> • Attempt to lock/unlock the doors with transmitter (electrical key button). • Does the door lock system work? 	Yes	Go to the next step.
		No	Go to Step 9.
8	<ul style="list-style-type: none"> • Replace with a advanced key battery known to be good. • Does the keyless entry system operate properly? 	Yes	Replace the advanced key battery, and then go to Step 21.
		No	Go to the next step.
9	<ul style="list-style-type: none"> • Visually inspect the advanced key battery. • Are the below items correct? <ul style="list-style-type: none"> — Advanced key battery installation (correct polarity) — Battery type (CR2025) 	Yes	Go to the next step.
		No	Install the advanced key battery properly or replace with the specified advanced key battery (CR2025), then go to Step 21.
10	<ul style="list-style-type: none"> • Visually inspect the advanced key. <ul style="list-style-type: none"> — Is there rust on the advanced key battery terminals (positive or negative)? — Is there poor connection between the terminals and battery? 	Yes	Replace the advanced key or repair the advanced key battery terminal, then go to Step 21.
		No	Go to the next step.
11	<ul style="list-style-type: none"> • Inspect advanced key battery. • Is the battery voltage normal? 	Yes	Go to Step 13.
		No	Go to the next step.
12	<ul style="list-style-type: none"> • Replace with a advanced key battery known to be good. • Does the keyless entry system operate properly? 	Yes	Replace the advanced key battery, and then go to Step 21.
		No	Replace the advanced key, and then go to Step 21.
13	<ul style="list-style-type: none"> • Inspect for the keyless receiver installation. • Is the bracket securely installed on the keyless receiver? 	Yes	Go to the next step.
		No	Install the bracket securely, and then go to the next step.
14	<ul style="list-style-type: none"> • Switch the ignition to off. • Measure the voltage at keyless receiver terminal A? • Is the voltage B+? 	Yes	Go to the next step.
		No	<ul style="list-style-type: none"> • Inspect ROOM 15 A fuse. • Inspect and repair the wiring harness between the keyless control module and the keyless receiver as necessary. • Then go to Step 21.
15	<ul style="list-style-type: none"> • Measure the voltage at keyless receiver terminal E? • Is the voltage below 1.0? 	Yes	Go to the next step.
		No	<ul style="list-style-type: none"> • Inspect and repair the wiring harness between the ground wire and the keyless receiver as necessary. • Re-tighten the ground wire as necessary. • Then go to Step 21.

09-03J

SYMPTOM TROUBLESHOOTING [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

STEP	INSPECTION	ACTION	
16	<ul style="list-style-type: none"> • Disconnect the keyless receiver connector (6-pin) and keyless control module connector (30-pin). • Is there continuity between the following terminals? <ul style="list-style-type: none"> — Keyless receiver connector terminal C—keyless control module connector terminal 3W — Keyless receiver connector terminal A—keyless control module connector terminal 3AA 	Yes	Go to the next step.
		No	<ul style="list-style-type: none"> • Inspect and repair the wiring harness between the keyless control module and the keyless receiver, then go to the next step.
17	<ul style="list-style-type: none"> • Measure the voltage at the keyless control module terminals 1E, 1A and 1F. <ul style="list-style-type: none"> — Terminal 1E: B+ — Terminal 1F: B+ • Is the voltage as above? 	Yes	Go to the next step.
		No	<ul style="list-style-type: none"> • Inspect for fuse. • Inspect and repair the wiring harness between the keyless control module and the main fuse block as necessary. • Then go to the Step 21.
18	<ul style="list-style-type: none"> • Measure the voltage at keyless control module terminal 3C, 4AA? • Is the voltage below 1.0 V or less? 	Yes	Go to the next step.
		No	<ul style="list-style-type: none"> • Inspect and repair the wiring harness between the ground wire and the keyless control module as necessary. • Re-tighten the ground wire as necessary. • Then go to the Step 21.
19	<ul style="list-style-type: none"> • Measure the following BCM terminal voltage. (See 09-40-6 BODY CONTROL MODULE (BCM) INSPECTION.) • Are terminal voltages normal? <ul style="list-style-type: none"> — Driver's door closed: 1.0 V or less (Terminal 6G) — Driver's door opened: B+ (Terminal 6G) — Passenger's door closed: 1.0 V or less (Terminal 6H) — Passenger's door opened: 5.0 V (Terminal 6H) — Left rear door closed: 1.0 V or less (Terminal 6E) — Left rear door opened: 2.5 V (Terminal 6E) — Right rear door closed: 1.0 V or less (Terminal 6K) — Right rear door opened: 2.5 V (Terminal 6K) — Trunk lid/liftgate closed: B+ (Terminal 6F) — Trunk lid/liftgate opened: 1.0 V or less (Terminal 6F) — The auxiliary key is inserted in the key slot: B+ (Terminal 2J) — The auxiliary key is not inserted in the key slot: 1.0 V or less (Terminal 2J) 	Yes	<ul style="list-style-type: none"> • Inspect for open or short circuit in wiring harness between keyless control module terminal 3X terminal and BCM terminal 4K. <ul style="list-style-type: none"> — If the wiring harness is not normal, repair or replace malfunctioning part. Then go to Step 21. — If the wiring harness is normal, go to the next step. • Then go to Step 21.
		No	<ul style="list-style-type: none"> • Inspect suspect door switch, key remainder switch or trunk lid/liftgate latch switch. • Inspect for open or short circuit in wiring harness between suspect switch and BCM. • Then go to Step 21.
20	<ul style="list-style-type: none"> • Measure the voltage at the BCM terminals 5M, 5O and 5K while operating the transmitter (electrical key button). <ul style="list-style-type: none"> — Lock all doors with transmitter (electrical key button): 1.0 V or less → B+ → 1.0 V or less (terminal 5O) — Unlock all doors with transmitter (electrical key button): 1.0 V or less → B+ → 1.0 V or less (terminal 5K) — Unlock driver's side door with the advanced key: 1.0 V or less → B+ → 1.0 V or less (terminal 5M) • Is the voltage as above? 	Yes	<ul style="list-style-type: none"> • Inspect and repair the wiring harness between the BCM and the door lock actuator. • Inspect for door lock actuator. • Then go to the next step.
		No	<ul style="list-style-type: none"> • Replace the BCM. (See 09-40-2 BODY CONTROL MODULE (BCM) REMOVAL/INSTALLATION.) • Then go to the next step.
21	<ul style="list-style-type: none"> • Does the keyless entry system operate properly? 	Yes	Troubleshooting completed. Explain repairs to the customers.
		No	Re-inspect the malfunction symptoms, then repeat form Step 1 if malfunction recurs.

SYMPTOM TROUBLESHOOTING [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

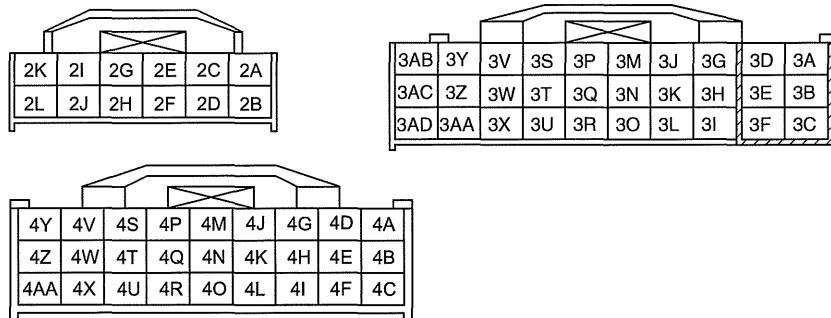

NO.2 ADVANCED KEYLESS ENTRY FUNCTION INOPERATIVE [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

id0903z3901600

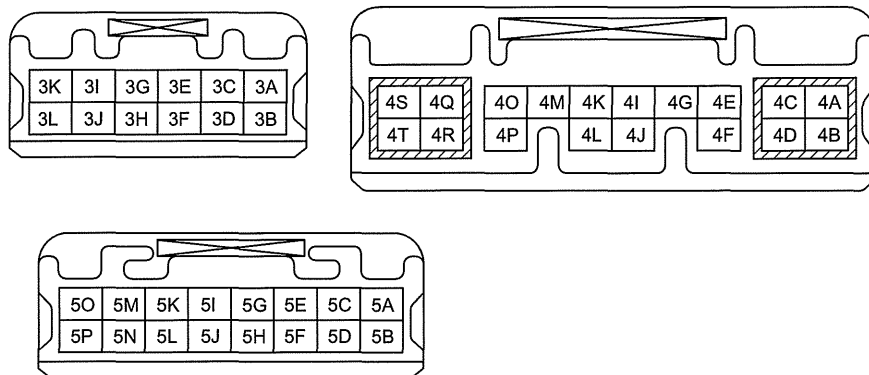

2	Advanced keyless entry function inoperative
DESCRIPTION	<ul style="list-style-type: none"> • Cannot door lock with door lock request switch • Cannot trunk lid/liftgate open with trunk lid/liftgate opener switch
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Malfunction in advanced key battery or advanced key • Malfunction in the keyless control module. • Malfunction in the request switch • Open or short circuit in wiring between request switch and keyless control module • Malfunction in the keyless receiver. • Open or short circuit in wiring between keyless receiver and keyless control module • Malfunction in the keyless antenna. • Malfunction in the lock link switch. • Open circuit in wiring between lock link switch and keyless control module • Malfunction in door latch switch or trunk lid/liftgate latch switch • Open or short circuit in wiring between trunk lid/liftgate switch and BCM • Open or short circuit in wiring between trunk lid/liftgate switch and keyless control module • Open or short circuit in wiring harness between door latch switch and BCM • Open or short circuit in wiring harness between door latch switch and keyless control module • Malfunction in trunk lid/liftgate opener switch • Open or short circuit in wiring harness between trunk lid/liftgate opener switch and BCM • Open or short circuit in wiring harness between trunk lid/liftgate opener switch and keyless control module • Keyless antenna (exterior) malfunction • Open or short circuit in wiring harness between keyless antenna (exterior) and keyless control module • Malfunction in door lock actuator • Open or short circuit in wiring between door lock actuator and BCM • Malfunction in the BCM. • Poor connection of connector, terminal damage • Wrong usage.

KEYLESS CONTROL MODULE

BCM

SYMPTOM TROUBLESHOOTING [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	<ul style="list-style-type: none"> Retrieve the advanced keyless system DTC using the M-MDS. Are there DTC displayed? 	Yes	Go to the applicable DTC troubleshooting procedures. (See 09-02A-7 DTC TABLE [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
		No	Go to the next step.
2	<ul style="list-style-type: none"> Prepare the followings: <ul style="list-style-type: none"> All doors and trunk lid/liftgate closed Switch the ignition to off. (without ACC and ignition to ON) Make sure that the advanced key is within the advanced keyless system operative area (within 80 cm {2.6 ft} from front door) The auxiliary key is not inserted in the key slot. Does the advanced keyless system operate properly? 	Yes	The system is normal. Explain the advanced keyless system operation.
		No	Go to the next step.
3	<ul style="list-style-type: none"> Confirm the problem using another advanced key. Is the same problem remained? 	Yes	Go to Step 5.
		No	Go to the next step.
4	<ul style="list-style-type: none"> Lock and unlock operation using advanced key button that has problem. Are the lock and unlock operations properly? 	Yes	Replace the electrical key. (internal malfunction)
		No	Replace the electrical key battery, then go to Step 23.
5	<ul style="list-style-type: none"> Verify that the trouble occurred condition. Is the problem occurred lock operation only? 	Yes	Go to Step 7
		No	Go to the next step.
6	<ul style="list-style-type: none"> Verify that the trouble occurred condition. Is the problem occurred unlock operation only? 	Yes	Go to Step 13.
		No	Go to Step 15.
7	<ul style="list-style-type: none"> Monitor the following keyless control module PIDs using the M-MDS. <ul style="list-style-type: none"> REQ_SW_R (RF lock request switch) REQ_SW_L (LF lock request switch) LGATE_L_SW (liftgate request switch) Are PIDs indicated properly? <p>Specification Switch pushed: ON Other: OFF</p>	Yes	Go to Step 11.
		No	Go to the next step.
8	<ul style="list-style-type: none"> Switch the ignition to off. Disconnect the keyless control module (30-pin) door handle (incorrect PID value at Step 7) connectors. Verify continuity between suspect door handle harness-side connector terminal D and GND. Is there continuity? 	Yes	<ul style="list-style-type: none"> Repair or replace wiring harness for short to GND circuit. Then go to Step 23.
		No	Go to the next step.
9	<ul style="list-style-type: none"> Keyless control module and handle switch disconnected. Verify continuity between door handle connector terminal D and following keyless control module terminal at each harness-side connector. <ul style="list-style-type: none"> Terminal 4O for right-side door handle Terminal 4R for left-side door handle Terminal 4T for request switch (liftgate) Is there continuity? 	Yes	Go to the next step.
		No	<ul style="list-style-type: none"> Repair or replace for open circuit. Then go to Step 23.
10	<ul style="list-style-type: none"> Handle switch disconnected. Verify continuity between suspect door handle harness-side connector terminal A and GND. Is there continuity? 	Yes	<ul style="list-style-type: none"> Replace suspect door handle. (See 09-14-8 FRONT OUTER HANDLE REMOVAL/INSTALLATION.) Then go to Step 23.
		No	<ul style="list-style-type: none"> Repair or replace wiring harness for open circuit. Re-tighten the ground wire as necessary. Then go to Step 23.

SYMPTOM TROUBLESHOOTING [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

STEP	INSPECTION	ACTION	
11	<ul style="list-style-type: none"> • Monitor the following BCM PIDs using the M-MDS. <ul style="list-style-type: none"> — DRSW_RR (Right rear door latch switch) — DRSW_LR (Left rear door latch switch) — DRSW_P (Passenger's door latch switch) — DRSW_D (Driver's door latch switch) • Are PIDs indicated properly? 	Yes	<ul style="list-style-type: none"> • Go to the next step.
		No	<ul style="list-style-type: none"> • Inspect suspect door latch switch and wiring harness. (See 09-14-41 FRONT DOOR LATCH SWITCH INSPECTION.) • (See 09-14-49 REAR DOOR LATCH SWITCH INSPECTION.) • (See 09-14-53 TRUNK LID LATCH SWITCH INSPECTION.) • (See 09-14-63 LIFTGATE LATCH SWITCH INSPECTION.) • Repair or replace as necessary. • Then go to Step 23.
12	<ul style="list-style-type: none"> • Measure the voltage at the BCM terminals 5O and 5K while the lock door using the request switch. <ul style="list-style-type: none"> — Lock all doors with the advanced key: 1.0 V or less → B+ → 1.0 V or less (terminal 5O) • Is the voltage as above? 	Yes	<ul style="list-style-type: none"> • Inspect and repair the wiring harness between the BCM and the door lock actuator. • Inspect for door lock actuator. • Then go to Step 23.
		No	<ul style="list-style-type: none"> • Replace the BCM. (See 09-40-2 BODY CONTROL MODULE (BCM) REMOVAL/INSTALLATION.) • Then go to Step 23.
13	<ul style="list-style-type: none"> • Measure the voltage at the BCM terminals 5M and 5K while the unlock door using the request switch. <ul style="list-style-type: none"> — Unlock driver's doors with the advanced key: 1.0 V or less → B+ → 1.0 V or less (terminal 5M) — Unlock all doors with the advanced key: 1.0 V or less → B+ → 1.0 V or less (terminal 5K) • Is the voltage as above? 	Yes	<ul style="list-style-type: none"> • Inspect and repair the wiring harness between the BCM and the door lock actuator. • Inspect for door lock actuator. • Then go to Step 23.

23	<ul style="list-style-type: none"> • Does the keyless entry system operate properly? 	Yes <ul style="list-style-type: none"> • Troubleshooting completed. Explain repairs to the customers.
		No <ul style="list-style-type: none"> • Re-inspect the malfunction symptoms, then repeat form Step 1 if malfunction recurs.

SYMPTOM TROUBLESHOOTING [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

NO.3 PUSH BUTTON START SYSTEM DOES NOT OPERATE [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

Id0903z3901700

3	Push button start system does not operate
DESCRIPTION	<ul style="list-style-type: none"> Cannot switch to ACC or ignition to ON Engine does not start
Possible Causes	<ul style="list-style-type: none"> Advanced key battery malfunction (battery power depleted) Advanced key malfunction Keyless control module malfunction Open or short circuit in keyless control module power supply ENG+B fuse, ESCL fuse or ROOM fuse malfunction Front keyless antenna malfunction Open or short circuit in wiring harness between front keyless antenna and keyless control module Open or short circuit in wiring harness between push button start switch and keyless control module PCM malfunction Engine starting system malfunction Short to power supply in starter relay wiring harness Steering lock unit malfunction Open or short circuit in wiring harness between keyless control module and steering lock unit Relay block (ACC relay, IG1 relay, IG2 relay) malfunction Open or short circuit in wiring harness between relay block (ACC relay, IG1 relay, IG2 relay) and keyless control module CAN system malfunction. Effect of after-market electronic device installation Mechanical catching of steering lock (system is normal)

Diagnostic procedure

Step	Inspection		Action
1	<ul style="list-style-type: none"> Verify that the advanced keyless entry system is operating. Is the advanced keyless entry system operating normally? 	Yes	Go to the next step.
		No	Go to applicable malfunction diagnostic procedure. (See 09-03J-4 SYMPTOM TROUBLESHOOTING CHART [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
2	<ul style="list-style-type: none"> Move the steering wheel slightly while pressing the push button start. Does the steering lock release and the push button start operate? 	Yes	System is normal. Note <ul style="list-style-type: none"> Depending on the steering wheel position, the steering lock mechanism could catch due to spring force from the tires.
		No	Go to the next step.

09-03J

SYMPTOM TROUBLESHOOTING [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

Step	Inspection	Action	
3	<ul style="list-style-type: none"> • Measure the voltage at keyless control module terminal 1E and 1F. • Is the voltage B+? 	Yes	Go to the next step.
		No	Inspect the condition of the ENG+B fuse ESCL fuse or ROOM fuse If the fuse is broken: <ul style="list-style-type: none"> • Replace the suspect fuse. If the ROOM fuse is burnt out: <ul style="list-style-type: none"> • After repairing for a short to ground in the wiring harness between battery + terminal and keyless control module terminal 1E, replace the ROOM fuse. If the ENG+B fuse is burnt out: <ul style="list-style-type: none"> • After repairing for a short to ground in the wiring harness between battery + terminal and keyless control module terminal 1F, replace the ENG+B fuse. • Repair for an open circuit to the wiring harness between the battery+ terminal and keyless control module terminal 1A. If the fuse is normal: <ul style="list-style-type: none"> • Repair for an open circuit to the wiring harness between the battery + terminal and keyless control module terminal 1E. • Repair for an open circuit to the wiring harness between the battery + terminal and keyless control module terminal 1F. If the ESCL fuse is burnt out: <ul style="list-style-type: none"> • After replacing for a short to ground in wiring harness between battery + terminal and keyless control module terminal 1A, replace the ESCL fuse. After repair procedure, go to Step 14.
4	Note <ul style="list-style-type: none"> • If the malfunction is the ignition not switching to ACC or ignition to ON, switch to ignition to ON using the M-MDS and the forced Ignition to ON function. • If the M-MDS forced ignition to ON function cannot be used, Inspect and repair for keyless control module terminals 1A, 1C, 2I and 3D related harnesses. Reset Step 4. <ul style="list-style-type: none"> • Verify the keyless control module DTCs using the M-MDS. • Can DTCs be verified? 	Yes	Go to the applicable DTC inspection. (See 09-02A-7 DTC TABLE [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
		No	Go to the next step. If the FAIL is displayed on the M-MDS, inspect for open circuit between connector terminal 2K, 2I on the keyless control module vehicle wiring harness and DLC-2.
5	<ul style="list-style-type: none"> • Has a non-standard electronic device been installed? <ul style="list-style-type: none"> — Cellular phone — Part with built-in micro computer — Remote engine starter — TV 	Yes	Go to the next step.
		No	Go to Step 7.
6	<ul style="list-style-type: none"> • Disconnect all non-standard electronic device connectors and start the engine. • Does the engine start? 	Yes	System is normal. Explain to the customer that the effects of installed non-standard electronic devices is the reason for the non-operation.
		No	Go to the next step.
7	<ul style="list-style-type: none"> • Press the push button start with brake pedal (ATX)/clutch pedal (MTX) is depressed. • Verify condition of push button start warning light (red). • Does the push button start system warning light (red) flash? 	Yes	<ul style="list-style-type: none"> • Inspect or repair the front keyless antenna and related wiring harness connectors. • Inspect or repair for open or short circuit in the wiring harness between keyless control module terminal 3W and keyless receiver terminal C. • After repair procedure, go to Step 14.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

Step	Inspection	Action	
8	<ul style="list-style-type: none"> • Disconnect the keyless control module connector. • Verify the continuity between following keyless control module harness side connector terminal and GND. <ul style="list-style-type: none"> — Terminal 2B — Terminal 3Q • Is the continuity changing according to the push button start status? <ul style="list-style-type: none"> — While push button start is pressed: continuity — While push button start is not pressed: not continuity 	Yes	Go to Step 11.
		No	Go to the next step.
9	<ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the push button start connector. • Verify the continuity between connector terminal I on the push start switch vehicle wiring harness side and ground. • Can continuity be verified? 	Yes	Go to the next step.
		No	<ul style="list-style-type: none"> • Inspect the following and repair or replace the malfunctioning location. <ul style="list-style-type: none"> — Wiring harness between push button start and ground (open circuit). — Ground point (looseness, bad contact) • If there is no malfunction, replace the push button start. • After repair procedure, go to Step 14.
10	<ul style="list-style-type: none"> • Switch the ignition to off. (PUSH BUTTON START CIRCUIT INSPECTION (SHORT TO GROUND CIRCUIT)). • Leave the push button start connector disconnected. • Disconnect the keyless control module connector (12-pin). • Verify the continuity between the following connector terminals on the push button start vehicle wiring harness side and ground. <ul style="list-style-type: none"> — Terminal A — Terminal B • Can continuity be verified? 	Yes	<ul style="list-style-type: none"> • Repair for a short to ground in the wiring harness between the push button start and the keyless control module. • After repair procedure, go to Step 14.
		No	Go to the next step.
11	<ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the steering lock unit connector. • Verify the continuity between connector terminal H of the steering lock unit on the vehicle wiring harness side and ground. • Can continuity be verified? 	Yes	Go to the next step.
		No	<ul style="list-style-type: none"> • Inspect the following and repair or replace the malfunctioning location. <ul style="list-style-type: none"> — Wiring harness between steering lock unit terminal H and ground (open circuit) — Ground point (looseness, bad contact) • After repair procedure, go to Step 14.
12	<ul style="list-style-type: none"> • Perform engine starting procedure. • Verify the system switching related to the push button start operation. • Does the system switch as follows: OFF→ACC→IG1→OFF? 	Yes	Go to the next step.
		No	Perform engine control system symptom troubleshooting in "No.3 Engine does not start".
13	<ul style="list-style-type: none"> • Monitor the following keyless control module PIDs using the M-MDS: MTX vehicles <ul style="list-style-type: none"> — SHIFT_N (Neutral switch) — CLUTCH_SW (Clutch switch) • ATX vehicles <ul style="list-style-type: none"> — SHIFT_P (P position signal) — BRAKE_SW2 (Brake switch) • Are the PID values correctly indicated for each switch operation? 	Yes	<ul style="list-style-type: none"> • Replace the keyless control module (See 09-14-66 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION.) • After replacement, go to the next step.
		No	<ul style="list-style-type: none"> • Inspect and repair parts and wiring harnesses which are not correctly displayed. • After repair, go to the next step.
14	<ul style="list-style-type: none"> • Does the push button start operate correctly? 	Yes	Troubleshooting completed. Explain the contents of the servicing to the customer.
		No	If the malfunction has not been resolved, repeat the inspection from Step 1.

09-03J

SYMPTOM TROUBLESHOOTING [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

NO.4 AFTER ENGINE START, ELECTRICAL DEVICES DO NOT OPERATE [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

id0903z3888200

4	After engine start, electrical devices do not operate
DESCRIPTION	<ul style="list-style-type: none"> Possible cause related to non-operation of electrical devices (such as blower motor, rear wiper) with ignition switched to ignition to ON (IG2), after engine start.
Possible Causes	<ul style="list-style-type: none"> Open or short circuit in wiring harness between battery and relay block (IG2 relay) and each part Fuse burnt out (short to ground in related wiring harness) Open circuit in wiring harness between keyless control module and relay block (IG2 relay) Relay block (IG2 relay) malfunction (stuck open) Keyless control module malfunction

Diagnostic Procedure

Step	Inspection	Action	
1	<ul style="list-style-type: none"> Do the electrical devices operate with the ignition is switched to ACC, ignition to ON (IG1)? 	Yes	Go to the next step.
		No	Go to symptom troubleshooting procedure "No.3 Push button start does not operate".
2	<ul style="list-style-type: none"> Disconnect the keyless control module connector. Connect battery positive voltage to the following connector terminal on the keyless control module vehicle wiring harness side. <ul style="list-style-type: none"> Terminal 3G (IG2) Measure the voltage of the following connector terminal on the keyless control module vehicle wiring harness side. <ul style="list-style-type: none"> Terminal 2E (IG2) Is the voltage B+? 	Yes	Replace the keyless control module. (See 09-14-66 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION.) After replacement, go to Step 7.
		No	Go to the next step.
3	<ul style="list-style-type: none"> Leave the keyless control module connector disconnected. Disconnect the relay block connector. Verify the continuity between the following connector terminals on the vehicle wiring harness side: <ul style="list-style-type: none"> Between keyless control module terminal 2E and relay block terminal 1C (6-pin) (IG2 monitor). Between keyless control module terminal 3G and relay block terminal 2A (8-pin) (IG2 relay primary power supply). Can continuity be verified? 	Yes	Go to the next step.
		No	After repairing for an open circuit in the wiring harness, go to Step 7.
4	<ul style="list-style-type: none"> Leave the relay block connector disconnected. Verify the continuity between connector terminal 2C (8-pin) on the relay block vehicle wiring harness side and ground. Can continuity be verified? 	Yes	Go to the next step.
		No	Repair for an open circuit in the wiring harness. Inspect and repair the ground point. After repair procedure, go to Step 7.
5	<ul style="list-style-type: none"> Leave the relay block connector disconnected. Measure the voltage of connector terminal 1A (6-pin) and terminal 1E (6-pin) on the relay block vehicle wiring harness side. Is the voltage B+? 	Yes	Go to the next step.
		No	After repairing for an open circuit in the wiring harness, go to Step 7.
6	<ul style="list-style-type: none"> Inspect the relay block. (See 09-21-5 RELAY BLOCK INSPECTION [WITH ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) Is the relay block normal? 	Yes	<ul style="list-style-type: none"> Replace the keyless control module. (See 09-14-66 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION.) After replacement, go to the next step.
		No	Replace the relay block, then go to the next step.
7	<ul style="list-style-type: none"> Do the electrical devices (such as blower motor, rear wiper) operate normally after starting the engine? 	Yes	Troubleshooting completed. Explain the contents of the servicing to the customer.
		No	If the malfunction has not been resolved, repeat the inspection from Step 1.

SYMPTOM TROUBLESHOOTING [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

NO.5 ELECTRONIC STEERING MECHANISM DOES NOT OPERATE [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

id0903z3888300

5	Electronic steering mechanism does not operate
DESCRIPTION	<ul style="list-style-type: none"> • Steering does not lock during system ignition to OFF, door lock, door open/close
Possible Causes	<ul style="list-style-type: none"> • Steering lock unit malfunction • ENG+B fuse ESCL fuse malfunction • Open/short circuit in wiring harness between battery + terminal and keyless control module • Open or short circuit in wiring harness between keyless control module and steering lock unit • Connector connection malfunction • Open circuit in wiring harness between keyless control module and DSC CM • Open circuit in wiring harness between door lock link switch and keyless control module • Open circuit in wiring harness between keyless control module and ground. • Communication error between keyless control module and DSC CM • Keyless control module malfunction • DSC CM malfunction • ABSCM malfunction • CAN system malfunction

Diagnostic Procedure

Step	Inspection		Action
1	<ul style="list-style-type: none"> • Verify that the advanced keyless entry system is operating. • Is the advanced keyless entry system operating normally? 	Yes	Go to the next step.
		No	Go to applicable malfunction diagnostic procedure. (See 09-03J-4 SYMPTOM TROUBLESHOOTING CHART [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
2	<ul style="list-style-type: none"> • Does the system switch to ACC and ignition to ON (IG1)? 	Yes	Go to the next step.
		No	Go to symptom troubleshooting procedure "No.3 Push button start does not operate".
3	<ul style="list-style-type: none"> • Verify the keyless control module DTCs using the M-MDS. • Can DTCs be verified? 	Yes	Go to the applicable DTC inspection. (See 09-02A-7 DTC TABLE [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) If the FAIL is displayed on the M-MDS, inspect for open circuit between connector terminal 2K, 2L on the keyless control module vehicle wiring harness and DLC-2.
		No	Go to the next step.
4	<ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the keyless control system connector. • Verify the continuity between connector terminal 1D on the keyless control module vehicle wiring harness side and ground. • Can continuity be verified? 	Yes	Go to the next step.
		No	After repairing or replacing for an open circuit in the wiring harness, go to Step 17.
5	<ul style="list-style-type: none"> • Does the engine stop normally? 	Yes	Go to the next step.
		No	Go to Step 8.
6	<ul style="list-style-type: none"> • Lock the doors using the advanced keyless entry mechanism. • Does the steering lock mechanism lock? 	Yes	Go to the next step.
		No	Go to Step 11.
7	<ul style="list-style-type: none"> • Switch the ignition to off. • Change the door condition (Open→Close, Close→Open) • Does the steering lock mechanism lock? 	Yes	After repairing or replacing for intermittent connection malfunctions of the following part connectors and malfunction areas, go to Step 17. <ul style="list-style-type: none"> • Keyless control module • BCM • Electronic steering lock unit
		No	Go to Step 16.
8	<ul style="list-style-type: none"> • Monitor the instrument cluster PID SPDMTR using the M-MDS data monitor function. • Is the monitor value when the vehicle is stopped 0 km/h? 	Yes	Go to Step 10.
		No	Go to the next step.

09-03J

SYMPTOM TROUBLESHOOTING [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

Step	Inspection	Action	
9	<ul style="list-style-type: none"> • Monitor the following PIDs concerning the ABS (ABS equipped vehicles) and DSC (DSC equipped vehicle) CM using the M-MDS data monitor function. <ul style="list-style-type: none"> — LF_WSPD — LR_WSPD — RF_WSPD — RR_WSPD • Does the monitor value agree with the vehicle driving conditions? 	Yes	Go to the instrument cluster symptom troubleshooting "Speedometer indication malfunction".
		No	Inspect the ABS wheel-speed sensor. (See 04-13-7 FRONT ABS WHEEL-SPEED SENSOR INSPECTION.) (See 04-13-10 REAR ABS WHEEL-SPEED SENSOR INSPECTION.) After inspection and repair, go to Step 17.
10	<ul style="list-style-type: none"> • Verify the keyless control module PID LOCK_SW_D (door lock signal) using the M-MDS data monitor function. • Is the monitor value linked to the door lock condition? 	Yes	Replace the steering lock unit, then go to Step 17. (See 06-14-8 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION [WITHOUT ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) (See 06-14-11 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
		No	Go to the next step.
11	<ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the keyless control module, BCM, and door lock link switch connectors. • Verify the continuity between the following connector terminals on the vehicle wiring harness side: <ul style="list-style-type: none"> — Between keyless control module terminal 4U and door lock link switch terminal D. — Between BCM terminal 6I and door lock link switch terminal D • Is there continuity? 	Yes	Go to the next step.
		No	After repairing or replacing for an open circuit in the wiring harness, go to Step 17.
12	<ul style="list-style-type: none"> • Leave the keyless control module, BCM, door lock link switch connectors disconnected. • Verify the continuity between connector terminal 4U of the keyless control module on the vehicle wiring harness side and ground. • Is there continuity? 	Yes	After repairing or replacing for a short to the wiring harness ground, go to Step 17. <ul style="list-style-type: none"> • Between keyless control module terminal 4U and door lock link switch terminal D. • Between BCM terminal 8G and door lock link switch terminal D
		No	Go to the next step.
13	<ul style="list-style-type: none"> • Leave the keyless control module, BCM, door lock link switch connectors disconnected. • Measure the voltage of connector terminal 4U on the keyless control module vehicle wiring harness side. • Is the voltage 1.0 V or more? 	Yes	After repairing or replacing for a short to the power supply wiring harness, go to Step 17. <ul style="list-style-type: none"> • Between keyless control module terminal 4U and door lock link switch terminal D. • Between BCM terminal 6I and door lock link switch terminal D
		No	Go to the next step.
14	<ul style="list-style-type: none"> • Leave the door lock link switch connector disconnected. • Verify the continuity between connector terminal J on the door lock link switch vehicle wiring harness side and ground. • Is there continuity? 	Yes	Go to the next step.
		No	<ul style="list-style-type: none"> • Inspect the following and repair or replace the malfunctioning location. <ul style="list-style-type: none"> — Wiring harness between connector terminal J of the door lock link switch vehicle wiring harness side (open circuit). — Ground point (looseness, bad contact) • After repair procedure, go to Step 17.
15	<ul style="list-style-type: none"> • Inspect the door lock-link switch. (See 09-14-15 DOOR LOCK SWITCH INSPECTION.) • Is the door lock-link switch normal? 	Yes	Go to the next step.
		No	Replace the door lock-link switch. After replacement, go to Step 17.
16	<ul style="list-style-type: none"> • Leave the keyless control module and BCM connectors disconnected. • Measure the voltage of connector terminal 3X on the keyless control module vehicle wiring harness side. • Is the voltage 1.0 V or more? 	Yes	After repairing or replacing for a short to the power supply wiring harness, go to Step 15.
		No	Replace the keyless control module. (See 09-14-66 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION.)
17	<ul style="list-style-type: none"> • Is the electronic steering lock operating normally? 	Yes	Troubleshooting completed. Explain the contents of the servicing to the customer.
		No	If the malfunction has not been resolved, repeat the inspection from Step 1.

SYMPTOM TROUBLESHOOTING [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

NO.6 PUSH BUTTON START SYSTEM DOES NOT TURN OFF (IG OFF) [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

id0903z3888400

6	Push button start system does not turn off (ignition to OFF)
DESCRIPTION	<ul style="list-style-type: none"> Engine does not turn off even if engine shut off operation is performed. Electrical devices continue to operate after engine is turned off. Dead battery Engine does not turn off even if the emergency engine stop (continuously pressing the push button start or quickly pressing it any number of items) is performed.
Possible Causes	<ul style="list-style-type: none"> Communication error between keyless control module and ABS, DSC CM Relay block (ACC relay) malfunction Short to power supply in wiring harness between relay block (ACC relay) and keyless control module Relay block (IG1 relay) malfunction Short to power supply in wiring harness between relay block (IG1 relay) and keyless control module Relay block (IG2 relay) malfunction Short to power supply in wiring harness between relay block (IG2 relay) and keyless control module Keyless control module malfunction ABS, DSC CM malfunction CAN system malfunction Open circuit in wiring harness between push button start and keyless control module

Diagnostic Procedure

Step	Inspection		Action
1	<ul style="list-style-type: none"> Verify the keyless control module DTCs using the M-MDS. Can DTCs be verified? 	Yes	Go to the applicable DTC inspection. (See 09-02A-7 DTC TABLE [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
		No	Go to the next step.
2	<ul style="list-style-type: none"> Perform engine stop operation. Does the engine stop normally? 	Yes	Go to Step 8.
		No	Go to the next step.
3	<ul style="list-style-type: none"> Connect the M-MDS to the DLC-2 connector. Monitor the keyless control module PID PUSH_ST1, and PUSH_ST2. Operate the push button start. Does the PID display change according to the push button start status? <ul style="list-style-type: none"> — While push button start is pressed: ON — While push button start is not pressed: OFF 	Yes	Go to Step 6.
		No	Go to the next step.
4	<ul style="list-style-type: none"> Switch the ignition to off. Disconnect the push button start connector. Verify the continuity between connector terminal 1 on the push start switch vehicle wiring harness side and ground. Can continuity be verified? 	Yes	Go to the next step.
		No	<ul style="list-style-type: none"> Inspect the following and repair or replace the malfunctioning location. <ul style="list-style-type: none"> — Wiring harness between push button start and ground (open circuit). — Ground point (looseness, bad contact) If there is no malfunction, replace the push button start. After repair procedure, go to Step 13.
5	<ul style="list-style-type: none"> Switch the ignition to off. Leave the push button start connector disconnected. Disconnect the keyless control module connector (12-pin). Verify the continuity between the following connector terminals on the push button start vehicle wiring harness side and ground. <ul style="list-style-type: none"> — Terminal A — Terminal B Can continuity be verified? 	Yes	<ul style="list-style-type: none"> Repair for a short to ground in the wiring harness between the push button start and the keyless control module. After repair procedure, go to Step 13.
		No	<ul style="list-style-type: none"> Replace the push button start. (See 09-21-8 PUSH BUTTON START REMOVAL/ INSTALLATION [WITH ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) After replacement, go to Step 13.
6	<ul style="list-style-type: none"> Monitor the instrument cluster PID SPDMTR using the M-MDS data monitor function. Is the monitor value when the vehicle is stopped 0 km/h? 	Yes	Go to Step 8.
		No	Go to the next step.

09-03J

SYMPTOM TROUBLESHOOTING [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

Step	Inspection	Action	
7	<ul style="list-style-type: none"> • Monitor the following PIDs concerning the ABS (ABS equipped vehicles) and DSC (DSC equipped vehicle) CM using the M-MDS data monitor function. <ul style="list-style-type: none"> — LF_WSPD — LR_WSPD — RF_WSPD — RR_WSPD • Does the monitor value agree with the vehicle driving conditions? 	Yes	Go to the instrument cluster symptom troubleshooting "Speedometer indication malfunction".
		No	Inspect the ABS wheel-speed sensor. (See 04-15-6 FRONT ABS WHEEL-SPEED SENSOR INSPECTION.) (See 04-15-7 REAR ABS WHEEL-SPEED SENSOR INSPECTION.) After inspection and repair, go to Step 13.
8	<ul style="list-style-type: none"> • Disconnect the keyless control module connector. • Connect battery positive voltage to the following connector terminals on the keyless control module vehicle wiring harness side. <ul style="list-style-type: none"> — Terminal 3J (ACC) — Terminal 3D (IG1) — Terminal 3G (IG2) • Measure the voltage of the following connector terminals on the keyless control module vehicle wiring harness side. <ul style="list-style-type: none"> — Terminal 2C (ACC) — Terminal 2A (IG1) — Terminal 2E (IG2) • Is the voltage B+? 	Yes	Replace the keyless control module. (See 09-14-66 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION.) After replacement, go to Step 13.
		No	Go to the next step.

TRUNK LID REMOVAL/INSTALLATION

id091000801600

Warning

- Removing the trunk lid stay damper without supporting the trunk lid can be dangerous. The trunk lid may fall and injure you. Be sure to open the trunk lid completely and support it securely before removing the trunk lid stay damper.

1. Disconnect the negative battery cable.
2. Remove the following parts:
 - (1) Rear scuff plate (See 09-17-68 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
 - (2) Tire house trim (See 09-17-54 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
 - (3) Trunk mat (See 09-17-95 TRUNK BOARD REMOVAL/INSTALLATION.)
 - (4) Trunk board (See 09-17-95 TRUNK BOARD REMOVAL/INSTALLATION.)
 - (5) Trunk end trim. (See 09-17-72 TRUNK END TRIM REMOVAL/INSTALLATION.)
 - (6) Trunk side trim (LH) (See 09-17-74 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
3. Disconnect the trunk lid wiring harness connector, then take the trunk lid wiring harness out from the vehicle.

09-10

am3uuw0000331

BODY PANELS

4. Pry off the trunk lid stay damper band using a flathead screwdriver.

am3uuw0000522

5. Pry out the connecting parts of the trunk lid stay damper out of the hinge with a flathead screwdriver, then remove the trunk lid stay damper.

BODY PANELS

6. Remove the nuts, then remove the trunk lid.

09-10

7. Remove the bolts, then remove the trunk lid hinge.

8. Install in the reverse order of removal.

9. Adjust the trunk lid. (See 09-10-6 TRUNK LID ADJUSTMENT.)

BODY PANELS

TRUNK LID ADJUSTMENT

id091000801700

1. Measure the gap and height difference between the trunk lid and the body.

am3uuw0000522

Standard clearance

- a: 2.4—4.4 mm {0.10—0.17 in}
- b: -4.6—-2.6 mm {-0.18—-0.11 in}

BODY PANELS

2. Loosen the trunk lid hinge installation bolts or nuts and adjust the trunk lid.
 - If necessary, loosen the trunk lid lock striker installation bolts and adjust the trunk lid. (See 09-14-53 TRUNK LID LOCK STRIKER REMOVAL/INSTALLATION.)

am3uuw0000391

3. Tighten the bolts or nuts. (See 09-10-3 TRUNK LID REMOVAL/INSTALLATION)

09-10

TRUNK LID STAY DAMPER DISPOSAL

id091000802700

Note

- The gas in the trunk lid stay damper is colorless, odorless, and non-toxic.

1. Wear protective eye wear.
2. Lay the trunk lid stay damper flat.
3. Hacksaw **2—3 mm {0.08—0.11 in}** into the trunk lid stay damper using a hacksaw, and allow the gas to escape from the trunk lid stay damper.
4. Verify that the gas has escaped from the trunk lid stay damper.
5. Discard the trunk lid stay damper.

am3uuw0000522

BODY PANELS

FUEL-FILLER LID REMOVAL/INSTALLATION

id091000800100

1. Remove the bolts.
2. Remove the fuel-filler lid.
3. Install in the reverse order of removal.
4. Adjust the fuel-filler lid. (See 09-10-8 FUEL-FILLER LID ADJUSTMENT.)

am3uuw0000392

FUEL-FILLER LID ADJUSTMENT

id091000800200

1. Measure the gap and height difference between the fuel-filler lid and the body.
2. Loosen the fuel-filler lid installation bolts, and adjust the fuel-filler lid.

Standard clearance

- a: 1.7—3.7 mm {0.067—0.14 in}
b: -0.5—1.5 mm {-0.019—0.059 in}

3. Tighten the bolts. (See 09-10-8 FUEL-FILLER LID REMOVAL/INSTALLATION)

am3uuw0000044

HOOD REMOVAL/INSTALLATION

id091000801200

Warning

- Removing the hood without supporting it could cause the hood to fall and cause serious injury. Always perform the procedure with at least another person to prevent the hood from falling.

1. Disconnect the negative battery cable.
2. Remove the following parts:
 - (1) Front bumper (See 09-10-16 FRONT BUMPER REMOVAL/INSTALLATION.)
 - (2) Front combination light (See 09-18-7 FRONT COMBINATION LIGHT REMOVAL/INSTALLATION.)
 - (3) Front fender molding (See 09-16-4 COWL GRILLE REMOVAL/INSTALLATION.)
 - (4) Side step molding (See 09-16-7 SIDE STEP MOLDING REMOVAL.)
 - (5) Front fender panel (See 09-10-40 FRONT FENDER PANEL REMOVAL/INSTALLATION.)

BODY PANELS

3. After loosening bolt A and removing bolt B, remove the hood in the direction of the arrow shown in the figure.

09-10

4. Remove bolt C, and remove the hood hinge in the direction of the arrow shown in the figure.

5. Install in the reverse order of removal.

6. When installing the hood, adjust the hood by moving the hood hinge. (See 09-10-12 HOOD ADJUSTMENT)

BODY PANELS

REAR BUMPER REMOVAL/INSTALLATION

id091000800700

4SD

1. Disconnect the negative battery cable.
2. Remove the rear combination light. (See 09-18-32 REAR COMBINATION LIGHT REMOVAL/INSTALLATION)
3. Remove the fastener A and screw B.

am3uuw0000389

4. Remove the rear splash shield. (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION)

BODY PANELS

5. Remove the screws C.

am3uuw0000390

09-10

BODY PANELS

6. Remove the bolts D.

am3uuw0000546

7. Affix the protective tape to the position shown in the figure.

am3uuw0000430

BODY PANELS

8. Pull the rear bumper in the direction of arrow (1), (2) shown in the figure to disengage the rear bumper from the rear bumper slider.
9. Pull the rear bumper in the direction of arrow (3), then remove the guide E.

09-10

am3uuw0000546

Caution

- When disengaging the rear bumper from the rear bumper slider, the rear bumper could fall and be damaged. Support the rear bumper so that it does not fall.

BODY PANELS

10. Disconnect the license plate light connector.
11. Install in the reverse order of removal.

5HB

1. Disconnect the negative battery cable.
2. Remove the rear combination light. (See 09-18-32 REAR COMBINATION LIGHT REMOVAL/INSTALLATION)
3. Remove the fastener A and screw B.

am3uuw0000390

4. Remove the rear splash shield. (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION)

BODY PANELS

5. Remove the screws C.

am3uuw0000390

09-10

BODY PANELS

6. Remove the bolts D.

am3uuw0000546

7. Affix the protective tape to the position shown in the figure.

am3uuw0000430

BODY PANELS

8. Pull the rear bumper in the direction of arrow (1), (2) shown in the figure to disengage the rear bumper from the rear bumper slider.
9. Pull the rear bumper in the direction of arrow (3), then remove the guide E.

09-10

am3uuw0000546

Caution

- When disengaging the rear bumper from the rear bumper slider, the rear bumper could fall and be damaged. Support the rear bumper so that it does not fall.

BODY PANELS

10. Disconnect the license plate light connector.
11. Install in the reverse order of removal.

REAR BUMPER DISASSEMBLY/ASSEMBLY

id09100800800

1. Remove the License plate lights. (See 09-18-49 LICENSE PLATE LIGHT REMOVAL/INSTALLATION.)
2. Disassemble in the order indicated in the table.

am3uuw0000546

1	Fastener A
2	Bracket
3	Screw B

4	Reflector (See 09-10-38 Reflector Removal Note)
5	Rear bumper fascia

3. Assemble in the reverse order of disassembly.

Reflector Removal Note

1. Remove the screws.
2. Lift the reflector up in the direction of the arrow, then unhook it from the rear bumper.

am3uuw0000523

BODY PANELS

REAR BUMPER REINFORCEMENT REMOVAL/INSTALLATION

id091000800900

1. Disconnect the negative battery cable.
2. Remove the rear combination light. (See 09-18-32 REAR COMBINATION LIGHT REMOVAL/INSTALLATION)
3. Remove the rear bumper. (See 09-10-38 REAR BUMPER DISASSEMBLY/ASSEMBLY)
4. Remove the nuts and remove the rear bumper reinforcement.

09-10

5. Install in the reverse order of removal.

am3uuw0000390

BODY PANELS

FRONT FENDER PANEL REMOVAL/INSTALLATION

id091000801000

1. Disconnect the negative battery cable.
2. Remove the following parts:
 - (1) Front bumper (See 09-10-16 FRONT BUMPER REMOVAL/INSTALLATION.)
 - (2) Front combination light (See 09-18-7 FRONT COMBINATION LIGHT REMOVAL/INSTALLATION.)
 - (3) Front fender molding (See 09-16-4 COWL GRILLE REMOVAL/INSTALLATION.)
 - (4) Side step molding (See 09-16-7 SIDE STEP MOLDING REMOVAL.)
3. Remove fasteners and bolts, then remove the front fender panel in the direction of the arrow shown in the figure.

am3uuw0000390

4. Install in the reverse order of removal.
5. Adjust the headlight aiming. (See 09-18-11 HEADLIGHT AIMING)

Caution

- **Because the shroud panel is installed to the bumper reinforcement, support the shroud panel using a jack before removing the bumper reinforcement so as not to apply excessive force to the shroud panel.**
- **Since the servicing is performed with the hood open, secure the hood using a piece of wood to prevent it from falling.**

1. Disconnect the negative battery cable.
2. Remove the following parts:
 - (1) Front bumper (See 09-10-16 FRONT BUMPER REMOVAL/INSTALLATION.)
 - (2) Front combination lights (See 09-18-7 FRONT COMBINATION LIGHT REMOVAL/INSTALLATION.) (See 09-18-11 HEADLIGHT AIMING.)
 - (3) Seal plate (See 09-10-25 SEAL PLATE REMOVAL/INSTALLATION.)
 - (4) Front bumper reinforcement (See 09-10-22 FRONT BUMPER REINFORCEMENT REMOVAL/INSTALLATION.)
3. Disconnect the hood latch cable. (See 09-14-18 HOOD RELEASE CABLE REMOVAL/INSTALLATION)

BODY PANELS

4. Remove the bolts.

am3uuw0000391

BODY PANELS

5. Push the hooks in the direction of arrow (1), and remove the upper mount bracket in the direction of the arrow (2.)

DOORS AND LIFTGATE

REAR DOOR MODULE PANEL REMOVAL/INSTALLATION

id091100520900

1. Fully open the rear door glass.
2. Disconnect the negative battery cable.
3. Remove the following parts:
 - (1) Rear door trim (See 09-17-88 REAR DOOR TRIM REMOVAL/INSTALLATION.)
 - (2) Rear door speaker (See 09-20-10 REAR DOOR SPEAKER REMOVAL/INSTALLATION.)
 - (3) Rear door quarter glass (See 09-12-6 REAR DOOR QUARTER GLASS REMOVAL/INSTALLATION.)
 - (4) Rear door glass (See 09-12-5 REAR DOOR GLASS REMOVAL/INSTALLATION.)
4. Remove the clips securing the rear door wiring harness from the rear door module panel.

am3uuw0000258

5. Remove the bolts.
6. Remove the fastener.
7. Remove the rear door module panel.
8. Remove the rear power window motor. (See 09-12-11 POWER WINDOW MOTOR REMOVAL/INSTALLATION.)
9. Remove the rear power window regulator. (See 09-12-9 REAR POWER WINDOW REGULATOR REMOVAL/INSTALLATION.)
10. Install in the reverse order of removal.

am3uuw0000259

DOORS AND LIFTGATE

REAR DOOR PAD REMOVAL/INSTALLATION

id091100609100

1. Fully open the rear door glass.
2. Disconnect the negative battery cable.
3. Remove the following parts:
 - (1) Rear door trim (See 09-17-88 REAR DOOR TRIM REMOVAL/INSTALLATION.)
 - (2) Rear door speaker (See 09-20-10 REAR DOOR SPEAKER REMOVAL/INSTALLATION.)
 - (3) Rear door glass (See 09-12-5 REAR DOOR GLASS REMOVAL/INSTALLATION.)
 - (4) Rear door module panel (See 09-11-10 REAR DOOR MODULE PANEL REMOVAL/INSTALLATION.)
4. Remove the fasteners A.

09-11

am3uuw0000259

5. Remove the rear door pad No.1.
6. Remove the fasteners B.

am3uuw0000259

7. Remove the rear door pad No.2.
8. Install in the reverse order of removal.

DOORS AND LIFTGATE

REAR DOOR CHECKER REMOVAL/INSTALLATION

id091100520700

1. Fully close the rear door glass.
2. Disconnect the negative battery cable.
3. Remove the rear door trim. (See 09-17-88 REAR DOOR TRIM REMOVAL/INSTALLATION.)
4. Remove the rear door speaker. (See 09-20-10 REAR DOOR SPEAKER REMOVAL/INSTALLATION.)
5. Remove the bolt.

am3uuw0000259

6. Remove the bolt.
7. Pull out the rear door checker from the rear door speaker installation hole.
8. Install in the reverse order of removal.

am3uuw0000259

DOORS AND LIFTGATE

REAR DOOR HINGE REMOVAL/INSTALLATION

id091100520800

1. Disconnect the negative battery cable.
2. Remove the following parts:
 - (1) Rear door (See 09-11-9 REAR DOOR REMOVAL/INSTALLATION.)
 - (2) Front scuff plate (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
 - (3) Rear scuff plate (See 09-17-68 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
 - (4) B-pillar lower trim (See 09-17-59 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.

1	Bolt
2	Nut
3	Rear door hinge

4. Install in the reverse order of removal.

am3uuw000259

LIFTGATE REMOVAL/INSTALLATION

id091100521200

Warning

- When removing the stay damper, serious injury may occur if the stay damper is removed without supporting the liftgate. Always perform the procedure with at least another person.

1. Disconnect the negative battery cable.
2. Remove the following parts:
 - (1) Rear scuff plate (See 09-17-68 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
 - (2) Rear seat cushion (See 09-13-37 REAR SEAT CUSHION REMOVAL/INSTALLATION.)
 - (3) Rear seat back (See 09-13-31 REAR SEAT BACK REMOVAL/INSTALLATION.)
 - (4) Lower anchor installation bolts on the rear seat belt (See 08-11-6 REAR SEAT BELT REMOVAL/INSTALLATION.)
 - (5) Tire house trim (See 09-17-54 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
 - (6) Trunk end trim (See 09-17-72 TRUNK END TRIM REMOVAL/INSTALLATION.)
 - (7) Trunk side trim (See 09-17-74 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
 - (8) Trunk side upper trim (See 09-17-78 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION.)
 - (9) C-pillar trim (See 09-17-63 C-PILLAR TRIM REMOVAL/INSTALLATION.)
 - (10) Rear assist handle (See 09-17-104 ASSIST HANDLE REMOVAL/INSTALLATION.)

09-11

DOORS AND LIFTGATE

3. Peel back the seaming welt to the point indicated by the arrow in the figure.

am3uuw0000263

4. Remove the fasteners.
5. Disconnect the connector while partially peeling back the headliner.

Note

- Be careful not to leave a fold-seam.

am3uuw0000264

6. Disconnect the rear washer hose while partially peeling back the headliner.

Note

- Be careful not to leave a fold-seam.

am3uuw0000264

DOORS AND LIFTGATE

7. Remove the stay damper band using a tape-wrapped flathead screwdriver.

am3uuw0000391

am3uuw0000284

8. Remove the stay damper.
9. Remove the stud bolts.

09-11

DOORS AND LIFTGATE

10. Remove the bolts.
11. Remove the liftgate.

12. Remove the bolts.
13. Remove the bracket.
14. Install in the reverse order of removal.
15. Adjust the liftgate. (See 09-11-20 LIFTGATE ADJUSTMENT.)

LIFTGATE HINGE REMOVAL/INSTALLATION

id091100521300

1. Disconnect the negative battery cable.
2. Remove the following parts:
 - (1) Rear scuff plate (See 09-17-68 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
 - (2) Rear seat cushion (See 09-13-37 REAR SEAT CUSHION REMOVAL/INSTALLATION.)
 - (3) Rear seat back (See 09-13-31 REAR SEAT BACK REMOVAL/INSTALLATION.)
 - (4) Lower anchor installation bolts on the rear seat belt (See 08-11-6 REAR SEAT BELT REMOVAL/INSTALLATION.)
 - (5) Tire house trim (See 09-17-54 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
 - (6) Trunk end trim (See 09-17-72 TRUNK END TRIM REMOVAL/INSTALLATION.)
 - (7) Trunk side trim (See 09-17-74 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
 - (8) Trunk side upper trim (See 09-17-78 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION.)
 - (9) C-pillar trim (See 09-17-63 C-PILLAR TRIM REMOVAL/INSTALLATION.)
 - (10) Rear assist handle (See 09-17-104 ASSIST HANDLE REMOVAL/INSTALLATION.)
 - (11) Liftgate (See 09-11-13 LIFTGATE REMOVAL/INSTALLATION.)

DOORS AND LIFTGATE

3. Remove the nut while partially peeling back the headliner.

Note

- Be careful not to leave a fold-seam.

am3uuw0000264

4. Remove the liftgate hinge.

5. Install in the reverse order of removal.

09-11

DOORS AND LIFTGATE

STAY DAMPER DISPOSAL

id091100521000

Note

- The stay damper contains colorless, odorless, nontoxic gas.

1. Wear protective eye wear.
2. Position the stay damper horizontally.
3. Drain gas and oil by cutting the position indicated in the figure to a **2—3 mm** {0.08—0.11 in} depth using a metal saw.

Caution

- **Be careful. The gas and oil may spray out with force.**

am2zzw0000043

4. Verify that the gas and oil is drained completely by pulling and pushing the piston rod several times with the cut position facing downward.

am2zzw0000043

5. Cut off the bottom of the stay damper.
6. Dispose of the stay damper.

am2zzw0000043

DOORS AND LIFTGATE

DOOR ADJUSTMENT

id091100521100

1. Loosen the door hinge installation bolts.
2. Adjust the gap and height difference to the standard range by moving the door back and forth, left and right.

am3uuw0000253

09-11

Standard range

- a: 2.5—4.5 mm {-0.10—0.17 in}
- b: -1.0—1.0 mm {-0.039—0.039 in}
- c: 2.5—4.5 mm {-0.10—0.17 in}
- d: -1.0—1.0 mm {-0.039—0.039 in}
- e: 2.5—4.5 mm {-0.10—0.17 in}
- f: -1.0—1.0 mm {-0.039—0.039 in}

3. Tighten the bolts.
4. If the door does not open/close smoothly, adjust it by loosening the door lock striker installation screw.

DOORS AND LIFTGATE

LIFTGATE ADJUSTMENT

id091100521400

1. Measure the gap and height difference between the liftgate and the body.
2. Loosen the liftgate hinge installation bolts and adjust the gap by moving the liftgate.

am3uuw0000253

Standard clearance

- a: 5.0—7.0 mm {0.20—0.27 in}
- b: -2.0—0 mm {0.079—0 in}
- c: 3.0—6.0 mm {0.12—0.24 in}
- d: -1.4—1.6 mm {0.055—0.062 in}
- e: 2.5—6.5 mm {0.10—0.25 in}
- f: -2.8—1.2 mm {-0.11—0.04 in}
- g: 4.0—8.0 mm {0.16—0.31 in}

3. Tighten the bolts.

09-12

FRONT DOOR GLASS REMOVAL/INSTALLATION

1. To access the glass installation bolt, position the front door glass so that the distance from the top of the front door glass to the upper part of the front beltline molding is **approx. 80 mm {3.1 in}**.
2. Disconnect the negative battery cable.
3. Remove the inner garnish. (See 09-17-69 INNER GARNISH REMOVAL/INSTALLATION.)
4. Remove the front door trim. (See 09-17-79 FRONT DOOR TRIM REMOVAL/INSTALLATION.)
5. Remove the front door speaker. (See 09-20-8 FRONT DOOR SPEAKER REMOVAL/INSTALLATION.)

GLASS/WINDOWS/MIRRORS

6. Remove the hole plug.

am3uuw00005005

7. Remove the bolts.

Caution

- If the bolts are removed without supporting the front door glass, the front door glass may fall off and be damaged. Remove the bolts while inserting your hand into the front door speaker installation hole to support the front door glass.

am3uuw00005130

8. Lift up the front door glass, tilt it in the direction of arrow (1) shown in the figure, then remove it in the direction of arrow (2).

am3uuw00002937

am3uuw00004988

GLASS/WINDOWS/MIRRORS

9. Install in the reverse order of removal.

Caution

- If the bolts are installed without supporting the front door glass, the front door glass may fall off and be damaged. When installing the front door glass, align the glass edge with the front door glass guide by hand through the speaker installation hole, and then install the bolts.

am3uuw000498

REAR DOOR GLASS REMOVAL/INSTALLATION

id091200800500

1. Fully lower the rear door glass.
2. Disconnect the negative battery cable.
3. Remove the rear door trim. (See 09-17-88 REAR DOOR TRIM REMOVAL/INSTALLATION.)
4. Remove the rear door speaker. (See 09-20-10 REAR DOOR SPEAKER REMOVAL/INSTALLATION.)
5. Remove the rear power window motor. (See 09-12-11 POWER WINDOW MOTOR REMOVAL/INSTALLATION.)
6. Remove the hole cover.
7. Remove the rear door glass guide. (See 09-12-6 REAR DOOR QUARTER GLASS REMOVAL/INSTALLATION.)
8. Remove the rear door quarter glass. (See 09-12-6 REAR DOOR QUARTER GLASS REMOVAL/INSTALLATION.)

am3uuw000289

9. Remove the hole plug and bolt.

Caution

- If the bolts are removed without supporting the rear door glass, the rear door glass may fall off and be damaged. Remove the bolts while inserting your hand into the rear door speaker installation hole to support the rear door glass.

am3uuw0000513

09-12

GLASS/WINDOWS/MIRRORS

10. Lift the rear door glass up and remove while tilting it.
11. Install in the reverse order of removal.

Caution

- If the bolts are installed without supporting the rear door glass, the rear door glass may fall off and be damaged. When installing the rear door glass, align the glass edge with the rear door glass guide by hand through the speaker installation hole, and then install the bolts.

am3uuw0000513

REAR DOOR QUARTER GLASS REMOVAL/INSTALLATION

id091200807200

1. Fully lower the rear door glass.
2. Disconnect the negative battery cable.
3. Remove the rear door trim. (See 09-17-88 REAR DOOR TRIM REMOVAL/INSTALLATION.)
4. Remove the hole cover.

am3uuw0000289

GLASS/WINDOWS/MIRRORS

5. Remove the hole plug.

am3uuw0000498

09-12

6. Remove the screw.
7. Remove the bolt A and B.
8. Remove the rear door glass guide.

am3uuw0000500

9. Remove the pin. (5HB)

am3uuw0000294

GLASS/WINDOWS/MIRRORS

10. Slide the rear door quarter glass in the direction of the arrow (1) shown in the figure.

11. Remove the rear door quarter glass and rear door quarter glass guide as a single unit in the direction of the arrow (2) shown in the figure.

12. Remove the rear door quarter glass from the rear door quarter glass guide.

13. Install in the reverse order of removal.

FRONT POWER WINDOW REGULATOR REMOVAL/INSTALLATION

id091200800200

1. To access the glass installation bolt, position the front door glass so that the distance from the top of the front door glass to the upper part of the front beltline molding is **approx. 80 mm {3.1 in.}**

2. Disconnect the negative battery cable.

3. Remove the following parts:

- (1) Inner garnish (See 09-17-69 INNER GARNISH REMOVAL/INSTALLATION.)
- (2) Front door trim (See 09-17-79 FRONT DOOR TRIM REMOVAL/INSTALLATION.)
- (3) Front door speaker (See 09-20-8 FRONT DOOR SPEAKER REMOVAL/INSTALLATION.)
- (4) Front door glass (See 09-12-3 FRONT DOOR GLASS REMOVAL/INSTALLATION.)
- (5) Front power window motor (See 09-12-11 POWER WINDOW MOTOR REMOVAL/INSTALLATION.)

GLASS/WINDOWS/MIRRORS

4. Remove the nuts.

am3uuw0000513

5. Install in the reverse order of removal.

Caution

- When installing, do not allow the cable to come out from the drum housing.

09-12

REAR POWER WINDOW REGULATOR REMOVAL/INSTALLATION

id091200800300

1. Fully lower the rear door glass.
2. Disconnect the negative battery cable.
3. Remove the rear door trim. (See 09-17-88 REAR DOOR TRIM REMOVAL/INSTALLATION.)
4. Remove the service hole cover.
5. Remove the rear door speaker. (See 09-20-10 REAR DOOR SPEAKER REMOVAL/INSTALLATION.)
6. Remove the glass guide. (See 09-12-6 REAR DOOR QUARTER GLASS REMOVAL/INSTALLATION.)
7. Remove the rear power window motor. (See 09-12-11 POWER WINDOW MOTOR REMOVAL/INSTALLATION.)
8. Remove the rear door glass. (See 09-12-5 REAR DOOR GLASS REMOVAL/INSTALLATION.)

am3uuw0000289

GLASS/WINDOWS/MIRRORS

9. Remove the nuts.

am3uuw0000513

10. Insert a hand through the speaker installation hole, rotate the drum housing in the direction shown in the figure to detach the tabs from the rear door module.

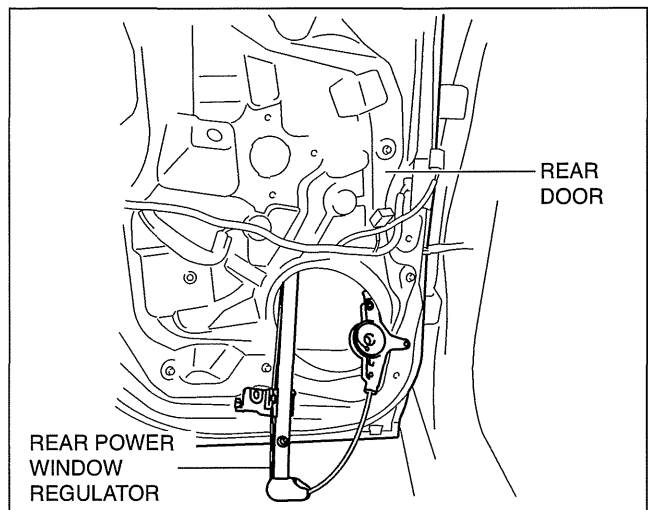

am3uuw0000513

11. Remove the rear power window regulator through the speaker installation hole.
12. Install in the reverse order of removal.

Caution

- Make sure the cable does not unspool from the drum housing when installing.

am3uuw0000294

GLASS/WINDOWS/MIRRORS

POWER WINDOW MOTOR REMOVAL/INSTALLATION

id091200803700

Front Power Window Motor

1. Fully lower the front door glass.
2. Disconnect the negative battery cable.
3. Remove the inner garnish. (See 09-17-69 INNER GARNISH REMOVAL/INSTALLATION.)
4. Remove the front door trim. (See 09-17-79 FRONT DOOR TRIM REMOVAL/INSTALLATION.)
5. Remove the front door speaker. (See 09-20-8 FRONT DOOR SPEAKER REMOVAL/INSTALLATION.)
6. Remove the bolts.

7. Disconnect the front power window motor connector.
8. Install in the reverse order of removal.

Note

- When installing the front power window motor to the front power window regulator drum, the drum housing hooks may detach from the door module. If this happens, remove the front door speaker, insert your hand in the speaker installation hole, connect the drum housing hooks, and while supporting the drum housing, install the front power window motor to the drum.

09-12

Rear Power Window Motor

1. Fully lower the rear door glass.
2. Disconnect the negative battery cable.
3. Remove the rear door trim. (See 09-17-88 REAR DOOR TRIM REMOVAL/INSTALLATION.)
4. Remove the rear door speaker. (See 09-20-10 REAR DOOR SPEAKER REMOVAL/INSTALLATION.)
5. Remove the bolts.

am3uuw0000513

GLASS/WINDOWS/MIRRORS

- Disconnect the front power window motor connector.
- Install in the reverse order of removal.

Note

- When installing the rear power window motor to the rear power window regulator drum, the drum housing hooks may detach from the door module. If this happens, remove the door speaker, insert your hand in the speaker installation hole, connect the drum housing hooks, and while supporting the drum housing, install the rear power window motor to the drum.

am3uuw0000289

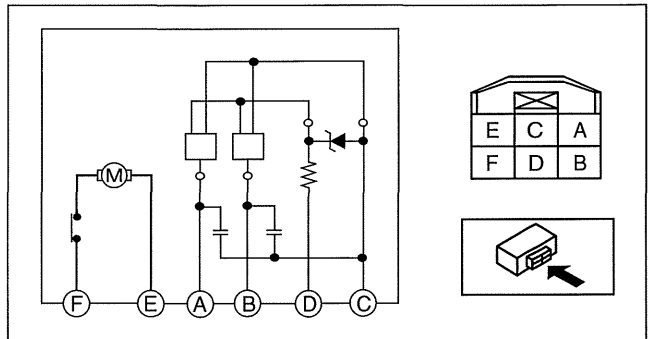

POWER WINDOW MOTOR INSPECTION

id091200417000

Front Driver Side

- Disconnect the negative battery cable.
- Remove the inner garnish. (See 09-17-69 INNER GARNISH REMOVAL/INSTALLATION.)
- Remove the front door trim. (See 09-17-79 FRONT DOOR TRIM REMOVAL/INSTALLATION.)
- Disconnect the power window motor connector.
- Apply battery positive voltage and connect the ground to power window motor terminals E and F, and then inspect the power window motor operation.
 - If the power window motor does not operate as indicated in the table, replace the power window motor.

Operation	Terminal	
	E	F
Open	Ground	B+
Close	B+	Ground

adejiw00002583

- Connect the battery positive voltage to power window motor terminal D and connect terminal C to ground.
- Operate the power window motor and measure the voltage at terminals A and B.
 - If there is any malfunction, replace the power window motor.

Voltage

Pulse: max. 5 V/min. 0 V

Front Passenger Side

- Disconnect the negative battery cable.
- Remove the inner garnish. (See 09-17-69 INNER GARNISH REMOVAL/INSTALLATION.)
- Remove the front door trim. (See 09-17-79 FRONT DOOR TRIM REMOVAL/INSTALLATION.)
- Disconnect the power window motor connector.
- Apply battery positive voltage and connect the ground to power window motor terminals E and F, and then inspect the power window motor operation.
 - If the power window motor does not operate as indicated in the table, replace the power window motor.

Operation	Terminal	
	E	F
Open	Ground	B+
Close	B+	Ground

am3uuw0000513

GLASS/WINDOWS/MIRRORS

Rear

1. Disconnect the negative battery cable.
2. Remove the rear door trim. (See 09-17-88 REAR DOOR TRIM REMOVAL/INSTALLATION.)
3. Disconnect the power window motor connector.
4. Apply battery positive voltage and connect the ground to power window motor terminals E and F, and then inspect the power window motor operation.
 - If the power window motor does not operate as indicated in the table, replace the power window motor.

Operation	Terminal	
	E	F
Open	Ground	B+
Close	B+	Ground

am3uuw0000513

POWER WINDOW MAIN SWITCH REMOVAL/INSTALLATION

id091200801900

1. Disconnect the negative battery cable.
2. Remove the inner garnish. (driver's side) (See 09-17-69 INNER GARNISH REMOVAL/INSTALLATION.)
3. Remove the front door trim. (driver's side) (See 09-17-79 FRONT DOOR TRIM REMOVAL/INSTALLATION.)
4. Remove the power window main switch. (See 09-17-86 FRONT DOOR TRIM DISASSEMBLY/ASSEMBLY.)
5. Install in the reverse order of removal.

GLASS/WINDOWS/MIRRORS

POWER WINDOW MAIN SWITCH INSPECTION

id091200802000

1. Switch the ignition to ON.
2. Verify that the door glass (driver's side) can be operated for **approx. 43 s** after the ignition is switched off.
 - If the door glass (driver's side) cannot be operated for **approx. 43 s** after the ignition is switched off, or if the door glass (driver's side) can still be operated after **approx. 43 s**, replace the power window main switch.
3. Disconnect the negative battery cable.
4. Remove the inner garnish. (driver's side) (See 09-17-69 INNER GARNISH REMOVAL/INSTALLATION.)
5. Remove the front door trim. (driver's side) (See 09-17-79 FRONT DOOR TRIM REMOVAL/INSTALLATION.)
6. Remove the main switch panel. (driver's side) (See 09-17-86 FRONT DOOR TRIM DISASSEMBLY/ASSEMBLY.)
7. Connect the power window main switch connector.
8. Connect the negative battery cable.
9. Measure the voltage at each terminal.
 - If the voltage is not as specified in the terminal voltage table, inspect the parts under Inspection item (s) and related wiring harnesses.
 - If the system does not work normally even though the inspection items or related wiring harnesses do not have any malfunction, replace the power window main switch.

POWER WINDOW SUBSWITCH REMOVAL/INSTALLATION

id091200419100

Passenger's Side

1. Disconnect the negative battery cable.
2. Remove the inner garnish. (See 09-17-69 INNER GARNISH REMOVAL/INSTALLATION.)
3. Remove the front door trim. (See 09-17-79 FRONT DOOR TRIM REMOVAL/INSTALLATION.)
4. Remove the power window subswitch. (See 09-17-86 FRONT DOOR TRIM DISASSEMBLY/ASSEMBLY.)
5. Install in the reverse order of removal.

Rear

1. Disconnect the negative battery cable.
2. Remove the rear door trim. (See 09-17-88 REAR DOOR TRIM REMOVAL/INSTALLATION.)
3. Remove the power window subswitch. (See 09-17-71 REAR DOOR TRIM DISASSEMBLY/ASSEMBLY.)
4. Install in the reverse order of removal.

POWER WINDOW SUBSWITCH INSPECTION

id091200419200

Passenger's Side

1. Disconnect the negative battery cable.
2. Remove the inner garnish. (See 09-17-69 INNER GARNISH REMOVAL/INSTALLATION.)
3. Remove the front door trim. (See 09-17-79 FRONT DOOR TRIM REMOVAL/INSTALLATION.)
4. Remove the power window subswitch. (See 09-17-86 FRONT DOOR TRIM DISASSEMBLY/ASSEMBLY.)
5. Verify that the continuity is as indicated in the table using a tester.

- If not as indicated in the table, replace the power window subswitch.

POWER WINDOW INITIALIZATION PROCEDURE

id091200413800

Note

- If the following operations have been performed, initial setting is reset, and auto up/down and two-step down operation are disabled. Therefore, performing initial setting is necessary.
 - Negative battery cable is disconnected.
 - Power window main switch connector is disconnected.
 - Power window system power supply fuse is removed.

09-12

1. Turn the ignition switch to the ON position.
2. Press the driver's seat switch to fully open the door glass.
3. Pull up the driver's seat switch to the manual-up position to fully close the door glass and keep holding the switch up at the position for **approx. 2 s**.

WINDSHIELD REMOVAL

id091200417800

1. Disconnect the negative battery cable.
2. Remove the following parts:
 - (1) Windshield wiper arm and blade (See 09-19-3 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
 - (2) Cowl grille (See 09-16-4 COWL GRILLE REMOVAL/INSTALLATION.)
 - (3) Rain sensor (Vehicles with auto light/wiper system) (See 09-19-25 RAIN SENSOR REMOVAL/INSTALLATION.)
 - (4) Auto-dimming mirror (Vehicles with auto-dimming mirror) (See 09-12-44 AUTO-DIMMING MIRROR REMOVAL.)
 - (5) Rear view mirror (Vehicles without auto-dimming mirror) (See 09-12-47 REARVIEW MIRROR REMOVAL.)
 - (6) A-pillar trim (See 09-17-50 A-PILLAR TRIM REMOVAL/INSTALLATION.)
 - (7) Sunvisor (See 09-17-106 SUNVISOR REMOVAL/INSTALLATION.)
 - (8) Assist handle (See 09-17-104 ASSIST HANDLE REMOVAL/INSTALLATION.)
3. Set the headliner out of the way.
4. Apply protective tape along the edge of the body.

Note

- Overlap and adhere the protective tape to the corners to prevent damage.

5. Remove the windshield molding by pulling it outward.

Note

- If the windshield molding is difficult to remove, warm the windshield molding using a hot air blower.
- The windshield molding is a replacement part.

am3uuw00003386

GLASS/WINDOWS/MIRRORS

Not Reusing Windshield

Note

- If it is difficult to cut sealant, use piano wire and follow the procedure under “Reusing Windshield”.

Warning

- **Using piano wire with bare hands can cause injury. Always wear gloves when using piano wire.**

1. Cut out the sealant all around the glass using a sealant remover.
2. Remove the windshield.

am3uuw0000334

Reusing Windshield

Warning

- **Using piano wire with bare hands can cause injury. Always wear gloves when using piano wire.**

Caution

- **Because the lens for rainfall/illumination level detection is integrated with the windshield, the auto wiper/auto light systems may not operate correctly if the lens is damaged. When removing the windshield, be careful not to damage the lens. If the lens is damaged, replace the windshield.**

Note

- Before removing the windshield from the body, mark the position of the windshield by affixing tape to the windshield and body panel.

1. Avoiding the pin on the inside of the vehicle, insert piano wire which has been cut to sufficient length.
2. Wind each end of piano wire around a bar.

Note

- Use a long sawing action to spread the work over the whole length of piano wire to prevent it from breaking due to localized heating.

am3uuw0000334

GLASS/WINDOWS/MIRRORS

3. Secure one end of piano wire, and while pulling the other end, cut the sealant around the windshield.
4. Pinch the pin from the inside of the vehicle and detach it.
5. Remove the windshield.
6. If the pin is damaged, remove the pin.

Note

- Before removing the pin from the windshield glass, place an alignment mark on the windshield.

am2zzw0000209

WINDSHIELD INSTALLATION

id091200417900

Warning

- Using a utility knife with bare hands can cause injury. Always wear gloves when using a utility knife.

Caution

- If a door is opened or closed when all the window glass is closed, the resulting change in air pressure could cause the sealant to crack preventing the proper installation of the windshield. Keep the door glass opened until the windshield installation is completed.
- If the rain sensor is replaced with a new one, the reflection rate when the switch the ignition to on the first time is memorized as a condition that no rainfall is on the windshield. Therefore, remove water and dirt from the windshield before switch the ignition to on. Perform the rain sensor reinitial setting in the following cases: (See 09-19-28 RAIN SENSOR REINITIALIZATION SETTING.)
 - The windshield is replaced and the rain sensor is reused.
 - The auto wiper system does not operate correctly after the windshield is installed.

09-12

1. Remove the sealant along the perimeter of the glass using a utility knife. (When reusing the glass)
2. Clean and degrease an **approx. 50 mm {2.0 in}** wide strip along the perimeter of the windshield.
3. Inspect the glass for cracks. If it is cracked, chamfer it using sandpaper.
4. Align the alignment marks made before removal and install the pin to the windshield referring to the figure. (Reusing glass, pin removed)

am3uuw0000335

5. Install the windshield molding.
6. Apply glass primer on the glass as shown in the figure, then allow it to dry for **approx. 30 min.**

Caution

- To prevent weakening of the primer adhesion, keep the bonding surface free of dirt, moisture, and grease. Do not touch the surface with your hand.

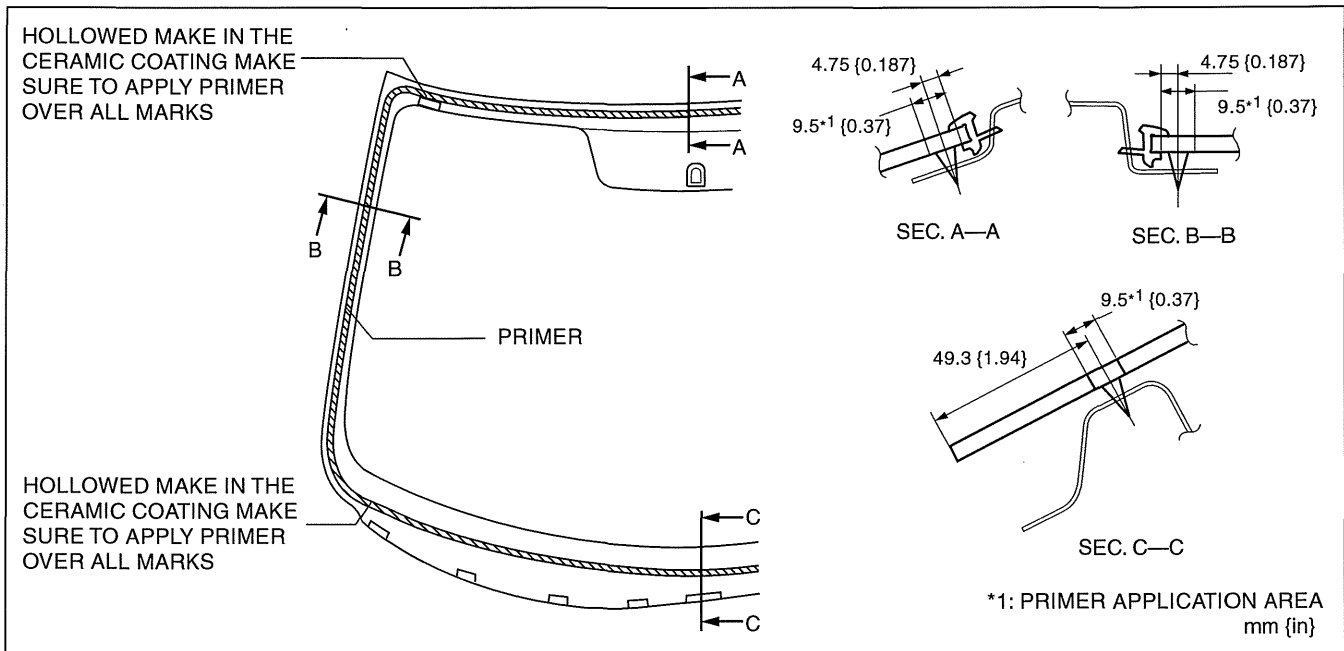

am2zzw0000209

GLASS/WINDOWS/MIRRORS

Note

- Apply primer to the hollowed marks in the ceramic coating.

am3uuw0000335

- Cut away the old sealant using a utility knife so that **1—2 mm {0.04—0.07 in}** thickness of sealant remains along the perimeter of the frame.
- If the sealant has come off completely in any one place, apply some primer after degreasing, and allow it **approx. 30 min** to dry. Then apply **2 mm {0.08 in}** thickness of new sealant.

Caution

- To prevent weakening of the primer adhesion, keep the bonding surface free of dirt, moisture, and grease. Do not touch the surface with your hand.

avejjw00001067

- Clean and degrease along the perimeter of the bonding area on the body.

GLASS/WINDOWS/MIRRORS

10. Apply body primer on the body as shown in the figure, then allow it to dry for **approx. 30 min.**

Caution

- To prevent weakening of the primer adhesion, keep the bonding surface free of dirt, moisture, and grease. Do not touch the surface with your hand.

Note

- Apply primer to the hollowed marks in the ceramic coating.

09-12

am3uuw0000336

11. Apply sealant to the area of the glass surface as shown in the figure.
12. Insert the positioning pins to the body and install the windshield.

am2zzw0000247

GLASS/WINDOWS/MIRRORS

13. Verify that the clearance between the A-pillar and the roof is within the range shown in the figure, and press along the perimeter of the glass.

14. Install the headliner.

15. Install the following parts:

- (1) Assist handle (See 09-17-104 ASSIST HANDLE REMOVAL/INSTALLATION.)
- (2) Sunvisor (See 09-17-106 SUNVISOR REMOVAL/INSTALLATION.)
- (3) A-pillar trim (See 09-17-50 A-PILLAR TRIM REMOVAL/INSTALLATION.)
- (4) Rear view mirror (Vehicles without auto-dimming mirror) (See 09-12-49 REARVIEW MIRROR INSTALLATION.)
- (5) Auto-dimming mirror (Vehicles with auto-dimming mirror) (See 09-12-46 AUTO-DIMMING MIRROR INSTALLATION.)
- (6) Rain sensor (Vehicles with auto light / wiper system) (See 09-19-25 RAIN SENSOR REMOVAL/INSTALLATION.)
- (7) Cowl grille (See 09-16-4 COWL GRILLE REMOVAL/INSTALLATION.)
- (8) Windshield wiper arm and blade (See 09-19-3 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)

16. Allow the sealant to harden completely.

Sealant hardening time: 24 h

REAR WINDOW GLASS REMOVAL

id091200418000

4SD

1. Disconnect the negative battery cable.
2. Remove the following parts:
 - (1) Rear seat cushion (See 09-13-37 REAR SEAT CUSHION REMOVAL/INSTALLATION.)
 - (2) Rear scuff plate (See 09-17-68 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
 - (3) Rear side seat back (See 09-13-31 REAR SEAT BACK REMOVAL/INSTALLATION.)
 - (4) C-pillar trims (See 09-17-63 C-PILLAR TRIM REMOVAL/INSTALLATION.)
 - (5) Rear package trim (See 09-17-57 REAR PACKAGE TRIM REMOVAL/INSTALLATION.)
 - (6) Tire house trims (See 09-17-54 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
3. Remove the fasteners.
4. Set the headliner out of the way.

GLASS/WINDOWS/MIRRORS

5. Disconnect the filament connector.

QUARTER WINDOW GLASS REMOVAL

id091200801700

1. Remove the following parts:
 - (1) Rear seat cushion (See 09-13-37 REAR SEAT CUSHION REMOVAL/INSTALLATION.)
 - (2) Rear scuff plate (See 09-17-68 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
 - (3) Tire house trim (See 09-17-54 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
 - (4) Trunk side upper trim (See 09-17-78 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION.)
 - (5) C-pillar trim (See 09-17-63 C-PILLAR TRIM REMOVAL/INSTALLATION.)
2. Apply protective tape along the edge of the body and the quarter window glass.

Note

- For the areas of the sealant that are difficult to cut, use the piano wire and follow the procedure under "Reusing Windshield".

Warning

- **Using the piano wire with bare hands can cause injury. Always wear gloves when using the piano wire.**

am3uuw0000350

3. Avoiding the pin on the inside of the vehicle, insert the piano wire which has been cut to sufficient length.
4. Wind each end of the piano wire around a bar.

Note

- Use a long sawing action to spread the work over the whole length of the piano wire to prevent it from breaking due to localized heating.

am3uuw0000351

09-12

5. Secure one end of the piano wire, and while pulling the other end, cut the sealant around the quarter window glass.
6. Pull the quarter window glass outward and detach the pins from the body.
7. If a pin or fastener is damaged, remove it.

Note

- Before removing the pins or spacers from the quarter window glass, place alignment marks on the quarter window glass.

acxuuw00001578

GLASS/WINDOWS/MIRRORS

QUARTER WINDOW GLASS INSTALLATION

id091200801800

Warning

- Using a razor with bare hands can cause injury. Always wear gloves when using a razor.

Caution

- If a door is opened or closed when all the window glass is closed, the resulting change in air pressure could cause the sealant to crack preventing the proper installation of the glass. Keep the door glass open until the quarter window glass installation is completed.

1. Remove sealant along the perimeter of the glass using a razor or scraper. (when reusing the glass)
2. Clean and degrease the ceramic part along the perimeter of the glass.
3. Inspect the glass for cracks. If it is cracked, chamfer it using sandpaper.
4. If the glass is reused, attach the pins to the glass as shown in the figure.

am3uuw0000544

Note

- Align with the alignment marks marked before removing the glass.

GLASS/WINDOWS/MIRRORS

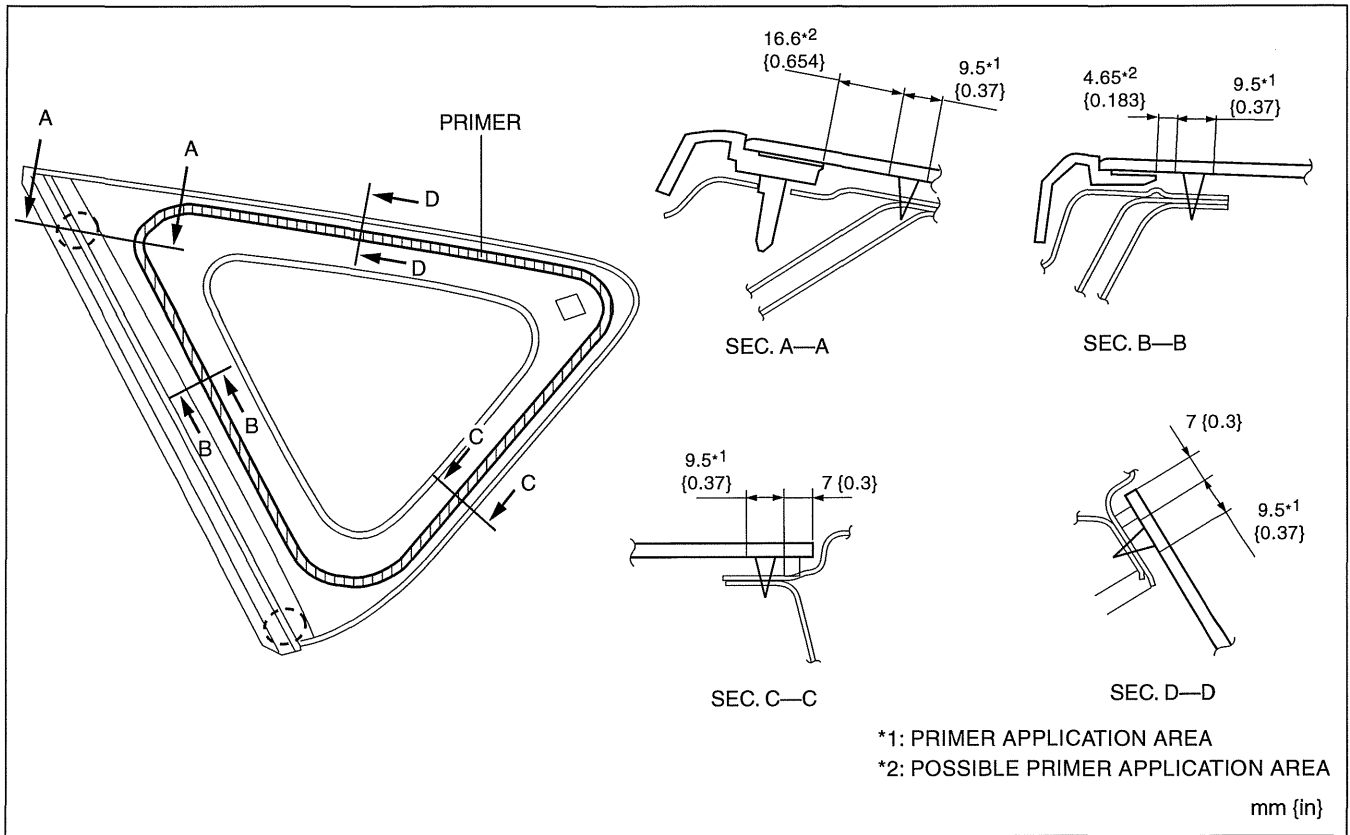

5. Apply glass primer along the hollowed marks in the ceramic coating on the new glass, along the sealant tracks on the reused glass, then allow it to dry for **approx. 30 min.**

Caution

- To prevent weakening of the primer adhesion, keep the bonding surface free of dirt, moisture, and grease. Do not touch the surface with your hand.

Note

- Apply primer to the hollowed marks in the ceramic coating.

am3uuw0000359

6. Cut away the old sealant using a razor or scraper so that **1—2 mm {0.04—0.079 in}** thickness of sealant remains along the perimeter of the frame.
7. If the sealant has come off completely in any one place, apply some primer after degreasing, and allow it **approx. 30 min** to dry. Then apply **2 mm {0.079 in}** thickness of new sealant.
8. Clean and degrease the bonding surface along the perimeter of the body.

09-12

GLASS/WINDOWS/MIRRORS

9. Apply body primer on the body as shown in the figure, then allow it to dry for **approx. 30 min.**

Caution

- To prevent weakening of the primer adhesion, keep the bonding surface free of dirt, moisture, and grease. Do not touch the surface with your hand.

am3uuw0000359

10. Install the fastener to the bead on the body side.

am3uuw0000359

11. After the primer has dried, apply **11 mm {0.43 in}** in thickness, **5 mm {0.20 in}** in width of sealant using a sealant gun. Where it is not applied properly, correctly apply it using a spatula.

am3uuw0000359

GLASS/WINDOWS/MIRRORS

12. Insert the positioning pins to the body and install the quarter window glass.
13. Install the following parts:
 - (1) C-pillar trim (See 09-17-63 C-PILLAR TRIM REMOVAL/INSTALLATION.)
 - (2) Trunk side upper trim (See 09-17-78 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION.)
 - (3) Tire house trim (See 09-17-54 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
 - (4) Rear scuff plate (See 09-17-68 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
 - (5) Rear seat cushion (See 09-13-37 REAR SEAT CUSHION REMOVAL/INSTALLATION.)
14. Allow the sealant to harden completely.

Sealant hardening time: 24 h

FILAMENT INSPECTION

id091200801000

1. Turn the ignition switch to the ON position.
2. Turn the rear window defroster switch on.

Caution

- **Directly touching the rear window defroster filament with the lead of the tester could damage it. Wrap aluminum foil around the end of the lead and inspect the filament by touching it with the foil.**

3. Connect the positive lead of the tester to the positive side of each filament and the negative lead to ground.
4. Gradually slide the positive lead from the positive side to the negative side and verify that the voltage decreases accordingly.
 - If the voltage changes rapidly, the filament has a malfunction. Repair the filament.

Measured part	Voltage (Reference)
(1) to (2)	Approx. 11 V to 0 V

acxuuw00001514

acxuuw00001515

09-12

FILAMENT REPAIR

id091200801100

1. Clean the filament using isopropyl alcohol.
2. Attach tape to both sides of the filament.
3. Using a small brush or marking pen, apply silver paint.
4. After **2—3 min**, carefully remove the tape without damaging the applied area.

Caution

- **Do not operate the rear window defroster until the paint is completely dry. It may cause other malfunctions if it is used before the paint is dry.**

5. Dry the repaired part according to the following procedure.

- When the room temperature is **25 °C {77 °F}**, leave it as it is for **24 h**.
- When a hot air blower is used, dry with the **150 °C {302 °F}** air for **30 min**.

1. Remove the rain sensor. (See 09-19-25 RAIN SENSOR REMOVAL/INSTALLATION.)
2. Make a tool as shown in the figure using wire.

Caution

- Using the tool with bare hands can cause injury. Always wear gloves when using the tool.
- To prevent damage to the lens, do not use a flathead screwdriver.

ac9uuw00002472

3. Push the wire in the direction of the arrow shown in the figure.

am6zzw0000190

4. Insert a tool into the position shown in the figure and release the tab in the direction of the arrow.

Caution

- Perform the procedure while being careful not to damage the lens.

am6zzw0000190

09-12

GLASS/WINDOWS/MIRRORS

5. Pull the rearview mirror in the direction of the arrow shown in the figure and remove it.

Caution

- When removing the rearview mirror, it may hit the headliner and cause a damage. Hold the rearview mirror with hands and be careful not to contact it with the headliner.

am6zzw0000190

Vehicles Without Auto Light/Wiper System

1. Push the wire in the direction of the arrow shown in the figure.
2. Insert a flathead screwdriver between the rearview mirror and base.

am6zzw0000190

3. Insert a tape-wrapped flathead screwdriver to the position shown in the figure and press the center part of the spring.

am6zzw0000190

GLASS/WINDOWS/MIRRORS

4. Pull out the rearview mirror toward the vehicle rear.

am6zzw0000190

REARVIEW MIRROR INSTALLATION

id091200806700

1. Install the rearview mirror onto the base.

am6zzw0000190

09-12

2. Install the rain sensor. (vehicles with auto light/wiper system)(See 09-19-25 RAIN SENSOR REMOVAL/INSTALLATION.)

BASE REMOVAL

id091200803200

1. Remove the rearview mirror. (See 09-12-47 REARVIEW MIRROR REMOVAL.)
2. Wind each end of a wire around a bar.

Warning

- Using the piano wire with bare hands can cause injury. Always wear gloves when using the piano wire.

Note

- Use a long sawing action to spread the work over the whole length of the piano wire to prevent it from breaking.

acxuuw00001981

3. Fix one end of the piano wire, and while pulling the other end, cut the sealant to remove the base.

GLASS/WINDOWS/MIRRORS

BASE INSTALLATION

id091200803300

1. Cut away all of the original sealant using a razor.

Warning

- Using a razor with bare hands can cause injury. Always wear gloves when using a razor.

2. Clean and degrease the ceramic coating on the glass and the base.

Caution

- Keep the area free of dirt and grease, and do not touch the surface. Otherwise, the primer may not properly bond to the surface of the glass.

3. Apply primer to the bonding area of the glass and the base.
4. Use only glass primer on the glass, and body primer on the base. Allow the primer to dry for **approx. 30 min.**
5. Apply **3.0 mm {0.12 in}** layer of sealant to the base.

acxuuw00001982

6. Center the base in the ceramic coating and press it onto the glass.
7. Use isopropyl alcohol to remove any excess repair sealant.

Hardening time of sealant

Temperature	Surface hardening time	Time required until car can be put into service
5 °C {41 °F}	Approx. 1.5 h	Approx. 12 h
20 °C {68 °F}	Approx. 1 h	Approx. 4 h
35 °C {95 °F}	Approx. 10 min	Approx. 2 h

acxuuw00001983

8. Install the rearview mirror.

FRONT SEAT REMOVAL/INSTALLATION

id091300800200

Warning

- Handling a front seat (with built-in side air bag) improperly can accidentally operate (deploy) the air bag, which may seriously injure you. Read the service warnings before handling a front seat (with built-in side air bag). (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.)

Caution

- After removing a front seat, do not operate the slider lever. If the slider lever is operated, the left and right slide positions will deviate, and the slide adjuster may be damaged after the front seat is installed.
- Verify that there are no malfunctions in the sliding mechanism after installing a front seat.
- When performing the procedure with a front seat removed from the vehicle, perform the procedure on a clean rag so as not to damage or soil the seat.

Note

- When removing the front seat out of the vehicle or putting it back in, it can be performed smoothly by removing the headrest.

Driver-side

Vehicles without power seat system

1. Switch the ignition to off.
2. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
3. Disconnect the negative battery cable and wait **1 min or more**.
4. Detach hook A while pulling the adjuster cover No.1 and No.2 in the direction of the arrow (1), and remove it in the direction of arrow (2) shown in the figure.

FRONT SEAT BACK TRIM REMOVAL/INSTALLATION

id091300912000

Warning

- Handling a front seat (with built-in side air bag) improperly can accidentally operate (deploy) the air bag, which may seriously injure you. Read the service warnings before handling a front seat (with built-in side air bag). (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.)

Caution

- After removing a front seat, do not operate the slider lever. If the slider lever is operated, the left and right slide positions will deviate, and the slide adjuster may be damaged after the front seat is installed.
- Verify that there are no malfunctions in the sliding mechanism after installing a front seat.
- When performing the procedure with a front seat removed from the vehicle, perform the procedure on a clean rag so as not to damage or soil the seat.

09-13

SEATS

Removal

1. Switch the ignition to off.
2. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
3. Disconnect the negative battery cable and wait **1 min or more**.
4. Remove the front seat. (See 09-13-3 FRONT SEAT REMOVAL/INSTALLATION.)
5. Remove the headrest.
6. Cut the band securing the wiring harness.

am3uuw0000526

7. Disconnect the side air bag connector and seat warmer connector (Vehicles with power seat system).

SEATS

- Slide hook A in the order shown in the figure to detach it from hook B.

am3uuw000553

- Open the fastener.
- Partially peel back the front seat back trim, release the pole guide tabs in the direction of arrow (4) shown in the figure, then pull the pole guide out in the direction of arrow (5).
- Remove the nut and remove the holder bracket A.

am3uuw000353

09-13

SEATS

12. Remove the holder hook B in the order of (6), (7) as shown in the figure.

am3uuw0000553

am3uuw0000554

13. Pull out part A shown in the figure to the front.

am3uuw0000353

14. Remove the seat back trim and the seat back pad as a single unit from the seat frame by pulling them in the direction of the arrow.

am3uuw0000554

SEATS

- Partially peel back the seat back trim from the seat back pad, remove rings C in the order of (8), (9), (10) shown in the figure, then remove the seat back trim.

am3uuw0000353

Installation

- Install the seat back trim to the front seat back pad, install the rings C in the order of (1), (2), (3) shown in the figure, then install the seat back trim.

am3uuw0000353

09-13

- Install the seat back trim and the seat back pad as a single unit from the seat frame by pushing them in the direction of the arrow

am3uuw0000554

SEATS

3. Pass holder bracket A through slit A, holder hook B through slit B of the seat back pad.

am3uuw0000554

Caution

- Install it without twisting the sleeve.
- Get the holder bracket through between active frame and seat back frame.

4. Push the part A shown in the figure to the rear.

am3uuw0000354

SEATS

5. Assemble the holder bracket A to the seat back frame and install the nut shown in the figure.

am3uuw0000554

6. Install the pole guide in the direction of arrow shown in the figure.
7. shut the fastener.

am3uuw0000354

09-13

SEATS

8. Slide hook A in the order of (4), (5), (6) shown in the figure to install it to hook B

am3uuw0000554

SEATS

9. Install the band, while tighten the wiring harness.

FRONT SEAT CUSHION TRIM REMOVAL/INSTALLATION

id091300911700

Warning

- Handling a front seat (with built-in side air bag) improperly can accidentally operate (deploy) the air bag, which may seriously injure you. Read the service warnings before handling a front seat (with built-in side air bag). (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.)

Caution

- After removing a front seat, do not operate the slider lever. If the slider lever is operated, the left and right slide positions will deviate, and the slide adjuster may be damaged after the front seat is installed.
- Verify that there are no malfunctions in the sliding mechanism after installing a front seat.
- When performing the procedure with a front seat removed from the vehicle, perform the procedure on a clean rag so as not to damage or soil the seat.

1. Switch the ignition to off.
2. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
3. Disconnect the negative battery cable and wait **1 min or more**.
4. Remove the front seat. (See 09-13-3 FRONT SEAT REMOVAL/INSTALLATION.)
5. Remove the side cover. (See 09-13-23 FRONT SEAT COVER REMOVAL/INSTALLATION [VEHICLES WITH POWER SEAT SYSTEM].) (See 09-13-25 FRONT SEAT COVER REMOVAL/INSTALLATION [VEHICLES WITHOUT POWER SEAT SYSTEM].)
6. Detach hook A and B in the direction of the arrow shown in the figure.
7. Detach hook C by sliding it in the order of (1), (2), and (3) as shown in the figure.
8. Remove the seat cushion trim and the seat cushion pad from the seat frame as a single unit.

am3uuw0000554

SEATS

- Remove rings C in the order of (4), (5), (6) and (7) as shown in the figure, then remove the seat cushion trim from the seat cushion pad in the direction of the arrow shown in the figure.
- Install in the reverse order of removal.

FRONT SEAT COVER REMOVAL/INSTALLATION [VEHICLES WITH POWER SEAT SYSTEM]

id091300989141

Warning

- Handling a front seat (with built-in side air bag) improperly can accidentally operate (deploy) the air bag, which may seriously injure you. Read the service warnings before handling a front seat (with built-in side air bag). (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.)

Caution

- After removing a front seat, do not operate the slider lever. If the slider lever is operated, the left and right slide positions will deviate, and the slide adjuster may be damaged after the front seat is installed.
- Verify that there are no malfunctions in the sliding mechanism after installing a front seat.
- When performing the procedure with a front seat removed from the vehicle, perform the procedure on a clean rag so as not to damage or soil the seat.

Side Cover

Driver-side

- Switch the ignition to off.
- Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
- Disconnect the negative battery cable and wait **1 min or more**.
- Remove the front seat. (See 09-13-3 FRONT SEAT REMOVAL/INSTALLATION.)
- Pull the power seat switch knobs in the direction of arrow, while remove the hook.

09-13

SEATS

6. Pull the side cover (front door side) in the order of (1), (2), (3) shown in the figure to disengage the fastener, hook and tab.
7. Remove the front seat side cover (front door side).
8. Disconnect the seat position memory switch connector.

am3uuw000555

9. Pull the side cover (rear console side) in the order of (4), (5) shown in the figure to disengage the fastener and tab.
10. Remove the front seat side cover (rear console side).
11. Install in the reverse order of removal.

am3uuw000356

id091300811300

Warning

- Handling a front seat (with built-in side air bag) improperly can accidentally operate (deploy) the air bag, which may seriously injure you. Read the service warnings before handling a front seat (with built-in side air bag). (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.)

Caution

- After removing a front seat, do not operate the slider lever. If the slider lever is operated, the left and right slide positions will deviate, and the slide adjuster may be damaged after the front seat is installed.
- Verify that there are no malfunctions in the sliding mechanism after installing a front seat.
- When performing the procedure with a front seat removed from the vehicle, perform the procedure on a clean rag so as not to damage or soil the seat.

1. Remove the front seat side cover. (See 09-13-23 FRONT SEAT COVER REMOVAL/INSTALLATION [VEHICLES WITH POWER SEAT SYSTEM].)
2. Disconnect the position memory switch connector.

SEATS

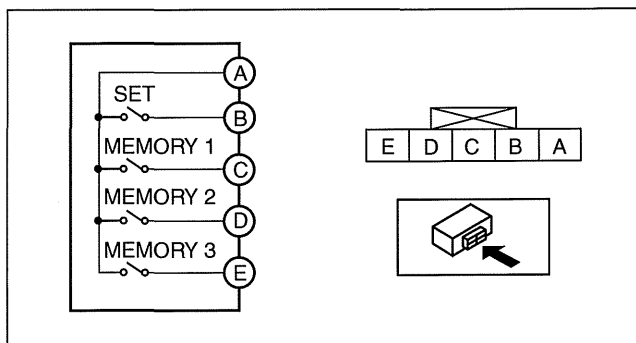

3. Inspect for continuity between the power seat switch connector terminals.

- If not as specified, replace the position memory switch.

am3uuw0000539

- If not as specified, replace the seat warmer switch.

09-13

SEAT WARMER UNIT INSPECTION

Warning

- Handling a front seat (with built-in side air bag) improperly can accidentally operate (deploy) the air bag, which may seriously injure you. Read the service warnings before handling a front seat (with built-in side air bag). (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.)

Caution

- After removing a front seat, do not operate the slider lever. If the slider lever is operated, the left and right slide positions will deviate, and the slide adjuster may be damaged after the front seat is installed.
- Verify that there are no malfunctions in the sliding mechanism after installing a front seat.
- When performing the procedure with a front seat removed from the vehicle, perform the procedure on a clean rag so as not to damage or soil the seat.

Seat Cushion

1. Remove the front seat. (See 09-13-3 FRONT SEAT REMOVAL/INSTALLATION.)
2. Remove the seat cushion trim. (See 09-13-22 FRONT SEAT CUSHION TRIM REMOVAL/INSTALLATION.)
3. Verify that the continuity between terminals A and B is as indicated in the table.
 - If not as indicated in the table, replace the seat cushion pad. (See 09-13-22 FRONT SEAT CUSHION TRIM REMOVAL/INSTALLATION.)

HOOD LATCH AND RELEASE LEVER REMOVAL/INSTALLATION

id091400516600

Hood latch

1. Open the hood.
2. Disconnect the negative battery cable.
3. Disconnect the hood latch switch connector. (vehicles with theft-deterrent system)

am3uuw0000281

SECURITY AND LOCKS

4. Remove the bolts.
5. Remove the hood latch.
6. Install in the reverse order of removal.
7. Adjust the hood. (See 09-10-12 HOOD ADJUSTMENT.)

am3uuw0000281

Hood release lever

1. Pull the hood release lever.

am3uuw0000281

SECURITY AND LOCKS

2. While maintaining the condition in procedure 1, insert a tape-wrapped flathead screwdriver as shown in the figure, press the ends of the tabs with the screwdriver in the direction of the arrows (1), pull the hood release lever in the direction of arrow (2), and then disconnect the lower panel.

am6xuw0000037

Caution

- Remove the hood release lever while being careful not to damage the hood release cable with the flathead screwdriver.

09-14

3. Pull the latch release lever outward, remove it from the lower panel, and then disconnect the hood release cable.
4. Install in the reverse order of removal.

am6xuw0000037

SECURITY AND LOCKS

HOOD RELEASE CABLE REMOVAL/INSTALLATION

id091400516700

1. Disconnect the negative battery cable.
2. Remove the battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
3. Remove the Front mudguard (LH). (See 09-16-17 FRONT MUDGUARD REMOVAL/INSTALLATION.)
4. Remove the hood release cable from clips A.

am3uuw0000282

5. Remove the clips B.
6. Disconnect the hood latch from the hood release cable.
7. Remove the hood release cable from outside of the vehicle.
8. Install in the reverse order of removal.

HOOD LATCH SWITCH INSPECTION

id091400516800

1. Disconnect the negative battery cable.
2. Remove the hood latch. (See 09-14-15 HOOD LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
3. Press the latch in using a flathead screwdriver to inspect the latch lever condition.

am3uuw0000361

SECURITY AND LOCKS

4. Verify that the continuity is as indicated in the table.
 - If not as indicated in the table, replace the hood latch.

IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING [KEYLESS ENTRY SYSTEM]

id0914005147b3

Foreword

- When replacing immobilizer system-related parts or programming an additional key, program the immobilizer system-related parts so that the system operates normally. For immobilizer system-related parts programming, select the programming procedures according to the service. (See 09-14-88 Selection of Procedure for Immobilizer System-Related Parts Programming.)

Caution

- **The engine cannot be started if any step or procedure for each service operation is skipped. Perform all procedures in the order of the steps.**
- **If any metallic or magnetic object is near the key, communication between the key and the vehicle may be obstructed, resulting in a failure to program the immobilizer system-related parts. Remove any metallic or magnetic objects, such as key holders, from the key when programming immobilizer system-related parts.**
- **If any of the following devices are inside the vehicle, programming of immobilizer system-related parts may fail. Do not bring any of the following devices or similar products inside the vehicle when programming immobilizer system-related parts.**
 - M-MDS
 - Personal computer
 - Devices that can send/receive radio waves
- **If the engine is started during immobilizer system-related parts programming, the programming mode cancels. Therefore, do not start the engine unless indicated in the procedure. Repeat the procedure from the beginning if the engine is started during the immobilizer system-related parts programming.**

Note

- The "Valid key" referred to in this manual indicates the key that can start the engine.
- Two or more key ID numbers must be programmed for the engine to start.
- A maximum of eight key ID numbers can be programmed for one vehicle.
- The number of programmed key ID numbers can be verified using the M-MDS.
- Do not select any screen menu other than the ones indicated in the procedure during M-MDS operation.

Selection of Procedure for Immobilizer System-Related Parts Programming

1. Verify that the room fuse is equipped.
2. Select the applicable programming procedure from the service content of the immobilizer system-related parts.

SECURITY AND LOCKS

Immobilizer System-Related Parts Service and Programming Procedure Table

No.	Service	Programming procedure
1	Additional key programming	Have two or more valid keys (See 09-14-89 No.1 Additional Key Programming Procedure (Using Two Valid Keys).)
2		Have one valid key or none (See 09-14-90 No. 2 Additional Key Programming Procedure (Using the M-MDS).)
3	Additional key programming procedure setting	Disable programming using valid keys (See 09-14-92 No.3 Additional Key Programming Procedure Changing.)
		Enable programming using valid keys
4	Programming due to PCM replacement	(See 09-14-93 No.4 Programming Procedure Due to PCM Replacement.)
5	Programming due to instrument cluster replacement	(See 09-14-94 No.5 Programming Procedure Due to Instrument Cluster Replacement.)
6	Programming due to simultaneous replacement of immobilizer system-related parts <ul style="list-style-type: none"> • PCM • Instrument cluster 	(See 09-14-95 No.6 Programming Procedure Due to Simultaneous Replacement of Immobilizer System-related Parts (PCM and Instrument Cluster).)
7	Programming due to coil antenna replacement	Programming of immobilizer system-related parts is not necessary

M-MDS Connecting Procedure

Note

- Do not place the M-MDS in the vehicle while programming the immobilizer system.

1. Fully lower the door glass.
2. Connect the M-MDS to the DLC-2.
3. Place the M-MDS outside the vehicle.

Caution

- **Cover the vehicle body with a clean rag so as not to damage the vehicle body with the cable.**

After verifying that the PATS function menu is displayed again on the M-MDS screen, select “Finish (this menu)”. 3. Switch the ignition to off. 4. Switch the ignition to ON. 5. Verify that the security light illuminates for approx. 3 s, and then turns off. 6. Switch the ignition to off. 7. Disconnect the M-MDS from the DLC-2. 	Go to the next step.	
6	<p>VERIFY THAT ANY KEY IS PROGRAMMED</p> <ol style="list-style-type: none"> 1. Verify that the engine can be started with all the keys. 2. Can the engine be started? 	Yes	Procedure is completed
		No	Perform the corresponding DTC inspection to repair the malfunctioning part.

SECURITY AND LOCKS

IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

id0914005147z3

Note

- For a key that can start the engine, or no advanced key, the M-MDS can be used to force the ignition to switch to IG ON.

Foreword

- When replacing immobilizer system-related parts or programming an additional key, program the immobilizer system-related parts so that the system operates normally. For immobilizer system-related parts programming, select the programming procedures according to the service. (See 09-14-97 Selection of Procedure for Immobilizer System-Related Parts Programming.)

Caution

- **The engine cannot be started if any step or procedure for each service operation is skipped. Perform all procedures in the order of the steps.**
- **If any metallic or magnetic object is near the key, communication between the key and the vehicle may be obstructed, resulting in a failure to program the immobilizer system-related parts. Remove any metallic or magnetic objects, such as key holders, from the key when programming immobilizer system-related parts.**
- **If any of the following devices are inside the vehicle, programming of immobilizer system-related parts may fail. Do not bring any of the following devices or similar products inside the vehicle when programming immobilizer system-related parts.**
 - Advanced key
 - M-MDS
 - Personal computer
 - Devices that can send/receive radio waves
- **If the engine is started during immobilizer system-related parts programming, the programming mode cancels. Therefore, do not start the engine unless indicated in the procedure. Repeat the procedure from the beginning if the engine is started during the immobilizer system-related parts programming.**
- **If an advanced key is near the vehicle during immobilizer system-related parts programming, it may be programmed mistakenly. Keep advanced keys 1 m away from the vehicle unless indicated in the procedure.**

09-14

Note

- The “Valid key” or “Valid advanced key” referred to in this manual indicates the key that can start the engine.
- Two or more key ID numbers must be programmed for the engine to start.
- A maximum of eight key ID numbers can be programmed for one vehicle.
- The number of programmed key ID numbers can be verified using the M-MDS.
- Do not select any screen menu other than the ones indicated in the procedure during M-MDS operation.

Selection of Procedure for Immobilizer System-Related Parts Programming

1. Verify that the ROOM fuse, EGI fuse, STEERING LOCK fuse are equipped.
2. Select the applicable programming procedure from the service content of the immobilizer system-related parts.

SECURITY AND LOCKS

Immobilizer System-Related Parts Service and Programming Procedure Table

No.	Service	Programming procedure
1	Additional key programming Have one valid key or valid advanced key	(See 09-14-98 No.1 Additional Key Programming Procedure (Using the M-MDS).)
2	Programming due to PCM replacement	(See 09-14-101 No.2 Programming Procedure After PCM Replacement.)
3	Programming due to steering lock unit replacement	(See 09-14-103 No.3 Programming Procedure After Steering Lock Unit Replacement.)
4	Programming due to keyless control module replacement	(See 09-14-105 No.4 Programming Procedure After Keyless Control Module Replacement.)
5	Programming due to simultaneous replacement of immobilizer system-related parts <ul style="list-style-type: none"> • PCM • Keyless control module • Steering lock unit 	(See 09-14-109 No.5 Programming Procedure After Simultaneous Replacement of Immobilizer System-related Parts (PCM, Keyless Control Module, Steering Lock Unit, and Key).)
6	Key replacement	(See 09-14-113 No.6 Replacing Only Key.)
7	Programming due to coil antenna replacement	Programming of immobilizer system-related parts is not necessary
8	Programming after keyless receiver replacement	Programming of immobilizer system-related parts is not necessary

M-MDS Connecting Procedure

Note

- Do not place the M-MDS in the vehicle while programming the immobilizer system.

1. Fully lower the door glass.
2. Connect the M-MDS to the DLC-2.
3. Place the M-MDS outside the vehicle.

Caution

- **Cover the vehicle body with a clean rag so as not to damage the vehicle body with the cable.**

am3uuw0000260

No.1 Additional Key Programming Procedure (Using the M-MDS)

Caution

- **The engine cannot be started if any step or procedure is skipped. Perform all procedures in the order of the steps.**

Conditions

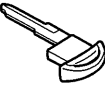

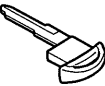

- There is only one valid key.

Note

- If a key ID number cannot be programmed, verify the number of programmed keys using the M-MDS.
- If eight keys have already been programmed and it is necessary to program other keys, the previously programmed key ID numbers must first be cleared.

The 'KEYLESS WARNING LIGHT' timeline shows a pulse that starts when the ignition is turned ON and lasts for 'Approx. 1 s'. Vertical dashed lines indicate the start and end of the engine start pulse.</p> </div>	<p>Procedure is completed.</p>

STEERING LOCK UNIT ID CODE REGISTRATION

id091400514800

Caution

- Do not place the following devices in the vehicle while programming, otherwise programming cannot be performed:
 - M-MDS
 - Personal computer
 - Devices that can send/receive radio waves

09-14

Note

- The steering lock unit and steering lock component are a single unit. Therefore, replace the steering lock component when replacing steering lock unit. (See 06-14-8 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION [WITHOUT ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM])(See 06-14-11 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM])
- For this procedure, a programmed advanced key is necessary. If there is no programmed advanced key, perform the steering lock unit programming after the advanced key programming.

1. Bring the programmed advanced key into the vehicle.
2. Fully lower the driver-side door glass.
3. Connect the M-MDS to the DLC-2.
4. Pull out the M-MDS cable from the door glass opening and set the M-MDS outside the vehicle.

Caution

- Cover the vehicle body with a clean rag so as not to damage the vehicle body with the cable.

am3uuw0000261

5. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Body".
 2. Select "Security".
 3. Select "PATS Functions".
 - When using the PDS (Pocket PC)
 1. Select "All Tests and Calibrations".
 2. Select "PATS Functions".
6. Then, select items from the screen menu in the following order.
 1. Select "Steering Lock Unit Programming".
7. Perform the security access according to the directions on the M-MDS screen.

SECURITY AND LOCKS

THEFT-DETERRENT SYSTEM READING FREEZE FRAME DATA

id091400514100

Note

- Use the IDS (laptop PC) because the PDS (Pocket PC) does not support the READING FREEZE FRAME DATA.

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Body".
 2. Select "Burglar Service Functions".
3. Then, select the following item from the screen menu.
 1. Select "Read FFD".
4. Read the record according to the directions on the screen.

am3uuw0000260

THEFT-DETERRENT SYSTEM CLEARING FREEZE FRAME DATA

id091400514200

Note

- Use the IDS (laptop PC) because the PDS (Pocket PC) does not support the CLEARING FREEZE FRAME DATA.

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Body".
 2. Select "Burglar Service Functions".
3. Then, select the following item from the screen menu.
 1. Select "Clear FFD".
4. Clear the record according to the directions on the screen.

10	Decoration link (See 09-15-8 Decoration Link Assembly Note.)
11	Bracket
12	Frame

SUNROOF

Sunroof Motor Assembly Note

Note

- If the guide or sunroof motor is removed, the sunroof motor initial position setting has to be performed. After installing the sunroof unit, perform the initial position setting using the following procedure.

1. The initialization mode starts after **approx. 13 s** from when the tilt up switch has been pressed and held. The glass stops after it has moved **approx. 30 mm {1.2 in}** towards the closed position.

Note

- Only the tilt up switch is available during the initialization mode.
- The initialization may finish at the first inching operation depending on the glass position when the motor is installed.
- If the glass position is between the closed and semi-tilt positions when the motor is removed, the glass moves in the tilt up direction (to the full tilt position stored in the motor). However, if the tilt up switch is pressed and held, the initialization mode starts.

2. When the tilt up switch is pressed again, the glass continues to move **approx. 30 mm {1.2 in}** and stops.
3. Repeat this procedure several times so that the glass moves to the fully closed, full tilt (normal operation position), and full tilt (mechanical stopper position) positions.
4. After the glass is moved to the full tilt position (mechanical stopper position), it returns to the tilt down direction slightly and the initialization is completed.

Rear Drip Assembly Note

Note

- If the rear drip is removed, butyl seal must be applied when re-installing.

1. Apply a **6.0—8.0 mm {0.24—0.31 in}** wide line of butyl seal to the area shown in the figure.

acxuuw00001196

09-15

Guide Disassembly Note

1. Place an alignment mark on the guide pin and frame.

am6zzw0000269

SUNROOF

- Slide the guide to the rear of the sunroof frame, and remove the guide and decoration link as a single unit.

acxuuw00001198

Guide Assembly Note

- Move the pin to the position shown in the figure.

am6zzw0000269

Decoration Link Assembly Note

- Set the guide pin to the decoration link.

acxuuw00001200

FRONT DRAIN HOSE REMOVAL

id091500801300

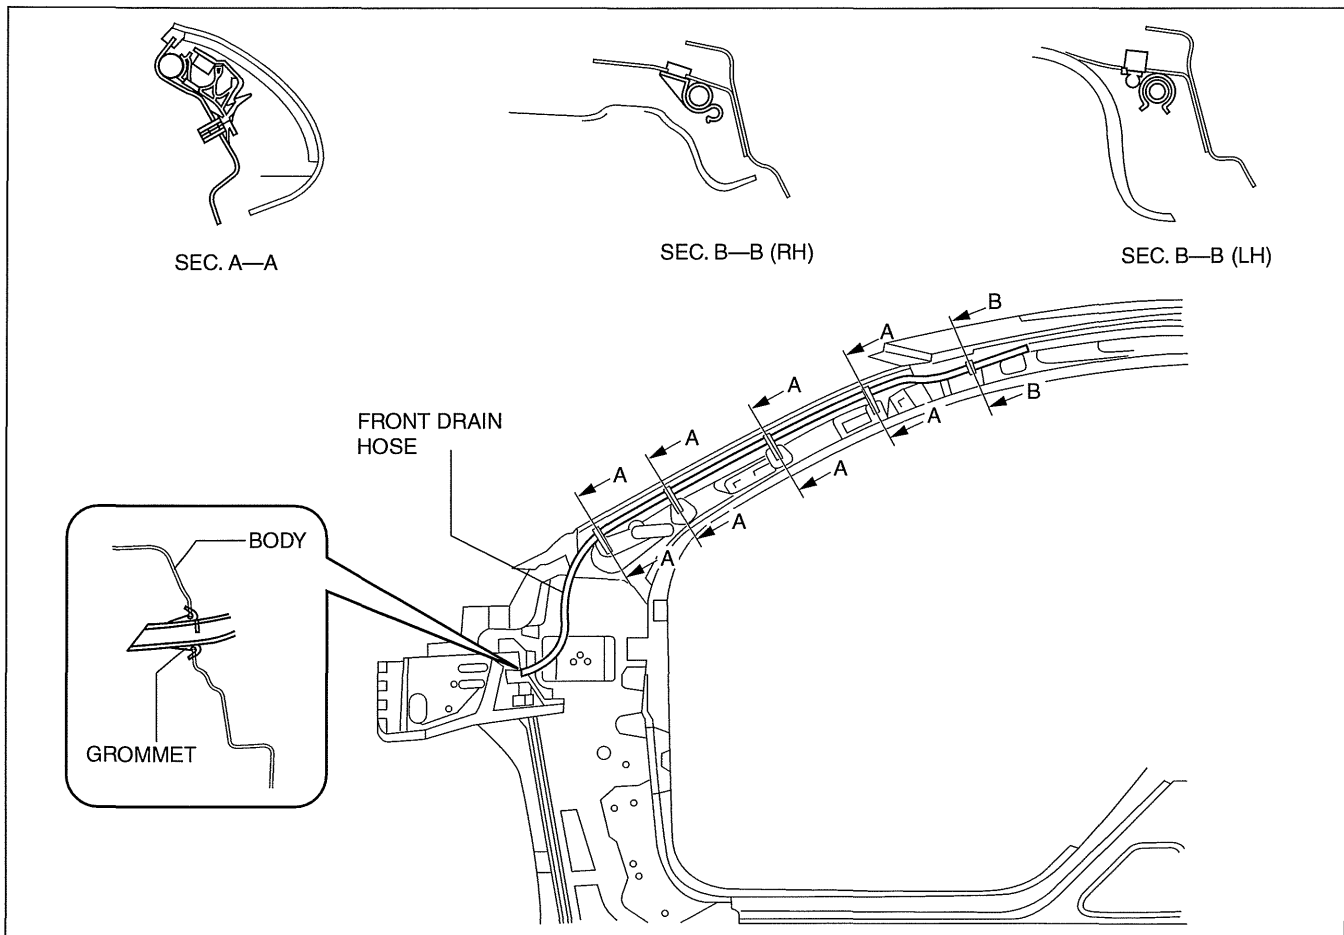

- Set the air intake mode to FRESH.
- Set the air mix mode to MAX COLD.
- Disconnect the negative battery cable.
- Partially peel back the seaming welt.
- Remove the rain sensor cover. (Vehicles with auto light / wiper system) (See 09-19-25 RAIN SENSOR REMOVAL/INSTALLATION.)
- Disconnect the rain sensor connector. (Vehicles with auto light / wiper system)
- Remove the following parts:
 - Front doors (See 09-11-3 FRONT DOOR REMOVAL/INSTALLATION.)
 - Front scuff plate (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
 - Front side trim (See 09-17-53 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
 - Dashboard under cover (See 09-17-39 DASHBOARD UNDER COVER REMOVAL/INSTALLATION.)
 - Glove compartment (See 09-17-33 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)

SUNROOF

8. Disconnect the auto-dimming mirror connector. (vehicles with auto-dimming mirror)
9. Disconnect the roof harness connector, remove the clip, and remove the connector.
10. Disconnect the front drain hose from the sunroof frame.
11. Remove the front drain hose from the clips.
12. Pull the front drain hose into the room side.
13. Remove the front drain hose.

am3uuw0000414

FRONT DRAIN HOSE INSTALLATION

id091500801400

Caution

- If the front drain hose is pinched or bent anywhere, the water in the hose may not discharge and enter the inside of the vehicle. During and after installation of the trims and the headliner, always make sure there is no interference with the front drain hose. Fix any problem if found.

1. Apply soapy water to the front drain hose inserting area.
2. Insert one end (the wider end) of the front drain hose into the sunroof frame.
3. Install the front drain hose to the clips, parallel to the pillar and free of slack.
4. Insert the front drain hose joint into the hinge pillar inner hole.
5. Connect the auto-dimming mirror connector. (vehicles with auto-dimming mirror)
6. Install the following parts:
 - (1) Headliner (See 09-17-107 HEADLINER REMOVAL/INSTALLATION.)
 - (2) Assist handle (See 09-17-104 ASSIST HANDLE REMOVAL/INSTALLATION.)
 - (3) Sunvisor (See 09-17-106 SUNVISOR REMOVAL/INSTALLATION.)
 - (4) Map light (See 09-18-67 MAP LIGHT REMOVAL/INSTALLATION.)
 - (5) C-pillar trim (See 09-17-63 C-PILLAR TRIM REMOVAL/INSTALLATION.)
 - (6) Trunk side upper trim (5HB) (See 09-17-78 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION.)
 - (7) Tire house trim (See 09-17-54 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
 - (8) Rear seat cushion (See 09-13-37 REAR SEAT CUSHION REMOVAL/INSTALLATION.)
 - (9) B-pillar upper trim (See 09-17-61 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)

 - (12) Upper anchor of the front seat belt (See 08-11-3 FRONT SEAT BELT REMOVAL/INSTALLATION.)
 - (13) B-pillar lower trim (See 09-17-59 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
 - (14) Rear scuff plate (See 09-17-68 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
 - (15) Front scuff plate (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
 - (16) A-pillar trim (See 09-17-50 A-PILLAR TRIM REMOVAL/INSTALLATION.)
 - (17) Sunroof seaming welt (vehicles with sunroof)
8. Install the seaming welt.

SUNROOF MOTOR REMOVAL/INSTALLATION

id091500805000

1. Disconnect the negative battery cable.
2. Remove the following parts:
 - (1) Sunroof seaming welt (vehicles with sunroof)
 - (2) A-pillar trim (See 09-17-50 A-PILLAR TRIM REMOVAL/INSTALLATION.)
 - (3) Front scuff plate (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
 - (4) Rear scuff plate (See 09-17-68 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
 - (5) B-pillar lower trim (See 09-17-59 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
 - (6) Upper anchor of the front seat belt (See 08-11-3 FRONT SEAT BELT REMOVAL/INSTALLATION.)
 - (7) B-pillar upper trim (See 09-17-61 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
 - (8) Rear seat cushion (See 09-13-37 REAR SEAT CUSHION REMOVAL/INSTALLATION.)
 - (9) Tire house trim (See 09-17-54 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
 - (10) Trunk side upper trim (5HB) (See 09-17-78 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION.)
 - (11) C-pillar trim (See 09-17-63 C-PILLAR TRIM REMOVAL/INSTALLATION.)
 - (12) Map light (See 09-18-67 MAP LIGHT REMOVAL/INSTALLATION.)
 - (13) Sunvisor (See 09-17-106 SUNVISOR REMOVAL/INSTALLATION.)
 - (14) Assist handle (See 09-17-104 ASSIST HANDLE REMOVAL/INSTALLATION.)
 - (15) Headliner (See 09-17-107 HEADLINER REMOVAL/INSTALLATION.)
3. Disconnect the sunroof motor connector.
4. Remove the screws, and then remove the sunroof motor.
5. Install in the reverse order of removal.

Note

- If the glass panel or the sunroof motor is moved with the sunroof motor removed, initial position setting of the sunroof motor will be required. Perform initial position setting referring to the Sunroof Motor Assembly Note. (See 09-15-6 SUNROOF UNIT DISASSEMBLY/ASSEMBLY.)

SUNROOF

SUNROOF MOTOR INSPECTION

id091500801100

1. Measure the voltage at each terminal.
 - If not as specified, inspect the parts listed under "Inspection item" and the related wiring harnesses.
 - If the parts and wiring harnesses are normal but the system still does not work properly, replace the sunroof motor.

Terminal Voltage Table (Reference)

am3uuw00005117

Terminal	Signal	Connected to	Test condition	Voltage (V)	Inspection item
A	Slide open	Sunroof switch	Sunroof is fully opening.	B+	Sunroof switch
			Other	1.0 or less	
B	Slide close/tilt down	Sunroof switch	Sunroof is closing/tilting down.	B+	Sunroof switch
			Other	1.0 or less	
C	Tilt up	Sunroof switch	Sunroof is tilting up.	B+	Sunroof switch
			Other	1.0 or less	
D	—	—	—	—	—
E	IG2	HEATER 10 A fuse	Switch the ignition ON.	B+	HEATER 10 A fuse
			Other	1.0 or less	
F	—	—	—	—	—
G	GND	GND	Under any condition	1.0 or less	GND
H	—	—	—	—	—
I	—	—	—	—	—
J	Power supply	SUNROOF 15 A fuse	Under any condition	B+	SUNROOF 15 A fuse

SUNROOF SWITCH REMOVAL/INSTALLATION

id091500800200

Note

- The sunroof switch is together with the front map light.

1. Disconnect the negative battery cable.
2. Remove the map light from the headliner. (See 09-18-67 MAP LIGHT REMOVAL/INSTALLATION.)
3. Install in the reverse order of removal.

SUNROOF SWITCH INSPECTION

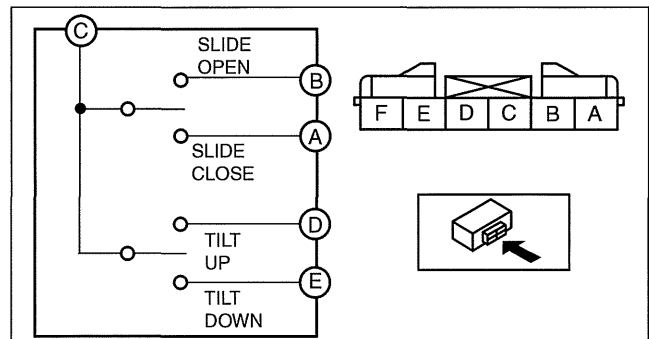

id091500800300

1. Inspect for continuity between the sunroof switch terminals using an ohmmeter.
 - If not as specified, replace the sunroof switch.

○—○ : Continuity

Switch position	Terminal				
	A	B	C	D	E
Slide open		○—○			
Slide close	○—○				
Tilt up			○—○		
Tilt down			○—○	○—○

ROOF MOLDING REMOVAL

id091600447800

1. Insert a fastener remover in the position shown in the figure.
2. Rotate the flathead screwdriver in the direction of the arrow (1) shown in the figure and remove the roof molding from the T-stud (figure A);
3. Rotate the roof molding in the direction of the arrow (2) shown in the figure, pull up the roof molding in the direction of the arrow (3) while detaching it from the clip (figure B), and then remove the roof molding.

am3uuw0000524

ROOF MOLDING INSTALLATION

id091600447600

1. Install the roof molding to the front T-stud.

am3uuw0000524

2. Hook the roof molding to the clip and attach the roof molding while pressing it in the direction of the arrow shown in the figure.
3. Install the roof molding to the rear T-stud.
4. Press in the protector installation positions shown in the figure and firmly adhere them to the body.

EXTERIOR TRIM

FRONT MUDGUARD REMOVAL/INSTALLATION

id091600812300

1. Remove screw A, fasteners B, screws C, fasteners D, and E.

09-16

am3uuw0000393

EXTERIOR TRIM

2. Remove the front mudguard in the direction of the arrow shown in the figure.

am3uuw000393

3. Install in the reverse order of removal.

ROOF CARRIER BRACKET REMOVAL/INSTALLATION

id091600801700

4SD

1. Remove the following parts:

- (1) Sunroof seaming welt (vehicles with sunroof)
- (2) Front scuff plate (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
- (3) Rear scuff plate (See 09-17-68 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
- (4) A-pillar trim (See 09-17-50 A-PILLAR TRIM REMOVAL/INSTALLATION.)
- (5) B-pillar lower trim (See 09-17-59 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
- (6) Upper anchor of the front seat belt installation bolt (See 08-11-3 FRONT SEAT BELT REMOVAL/INSTALLATION.)
- (7) B-pillar upper trim (See 09-17-61 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
- (8) Rear seat cushion (See 09-13-37 REAR SEAT CUSHION REMOVAL/INSTALLATION.)
- (9) Tire house trim (See 09-17-54 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
- (10) C-pillar trim (See 09-17-63 C-PILLAR TRIM REMOVAL/INSTALLATION.)
- (11) Map light (See 09-18-67 MAP LIGHT REMOVAL/INSTALLATION.)
- (12) Sunvisor (See 09-17-106 SUNVISOR REMOVAL/INSTALLATION.)
- (13) Assist handle (See 09-17-104 ASSIST HANDLE REMOVAL/INSTALLATION.)
- (14) Headliner (See 09-17-107 HEADLINER REMOVAL/INSTALLATION.)

EXTERIOR TRIM

2. Remove the nuts.

09-16

3. Remove the roof carrier bracket.

4. Install in the reverse order of removal.

Note

- Install the roof carrier bracket so that the arrow on it faces inward.

5HB

1. Remove the following parts:

- (1) Sunroof seaming welt (vehicles with sunroof)
- (2) Front scuff plate (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
- (3) Rear scuff plate (See 09-17-68 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
- (4) A-pillar trim (See 09-17-50 A-PILLAR TRIM REMOVAL/INSTALLATION.)
- (5) B-pillar lower trim (See 09-17-59 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
- (6) Upper anchor of the front seat belt installation bolt (See 08-11-3 FRONT SEAT BELT REMOVAL/INSTALLATION.)
- (7) B-pillar upper trim (See 09-17-61 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
- (8) Rear seat cushion (See 09-13-37 REAR SEAT CUSHION REMOVAL/INSTALLATION.)
- (9) Tire house trim (See 09-17-54 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
- (10) Trunk side upper trim (See 09-17-78 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION.)
- (11) C-pillar trim (See 09-17-63 C-PILLAR TRIM REMOVAL/INSTALLATION.)
- (12) Map light (See 09-18-67 MAP LIGHT REMOVAL/INSTALLATION.)
- (13) Sunvisor (See 09-17-106 SUNVISOR REMOVAL/INSTALLATION.)
- (14) Assist handle (See 09-17-104 ASSIST HANDLE REMOVAL/INSTALLATION.)
- (15) Headliner (See 09-17-107 HEADLINER REMOVAL/INSTALLATION.)

EXTERIOR TRIM

2. Remove the nuts.

am3uuw0000395

3. Remove the roof carrier bracket.
4. Install in the reverse order of removal.

Note

- Install the roof carrier bracket so that the arrow on it faces inward.

EXTERIOR TRIM

REAR SPOILER REMOVAL/INSTALLATION

id091600801600

4SD

1. Remove the trunk lid trim. (See 09-17-104 TRUNK LID TRIM REMOVAL/INSTALLATION)
2. Remove the nuts.

09-16

am3uuw0000351

EXTERIOR TRIM

3. While cutting the double-sided adhesive tape using a flathead screwdriver or a razor, separate the rear spoiler from the trunk lid.

am3uuw0000351

Warning

- Using a razor with bare hands can cause injury. Always wear gloves when using a razor.

EXTERIOR TRIM

4. Pull the rear spoiler in the direction of arrow in the order of (1), (2) and (3), then remove the clips from the trunk lid.

am3uuw0000351

5. Remove the rear spoiler.
6. Install in the reverse order of removal.

Note

- Attach double-sided adhesive tape to the rear spoiler as shown in the figure.

am3uuw0000351

09-16

EXTERIOR TRIM

5HB

Except Mazdaspeed 3

1. Disconnect the negative battery cable.
2. Remove the liftgate upper trim. (See 09-17-97 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)
3. Remove the caps.
4. Remove the nut A and B.

am3uuw0000351

EXTERIOR TRIM

5. Pull the rear spoiler in the direction of arrow, then remove the clips C and D from the liftgate.

am3zzw0000610

6. Remove the rear spoiler.
7. Install in the reverse order of removal.

EXTERIOR TRIM

Mazdaspeed 3

1. Disconnect the negative battery cable.
2. Remove the liftgate upper trim. (See 09-17-97 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)
3. Remove the caps.
4. Remove the nut A and B.

am3uuw0000597

EXTERIOR TRIM

5. Pull the rear spoiler in the direction of arrow, then remove the clips C and D from the liftgate.

6. Remove the rear spoiler.
7. Install in the reverse order of removal.

am3uuw0000352

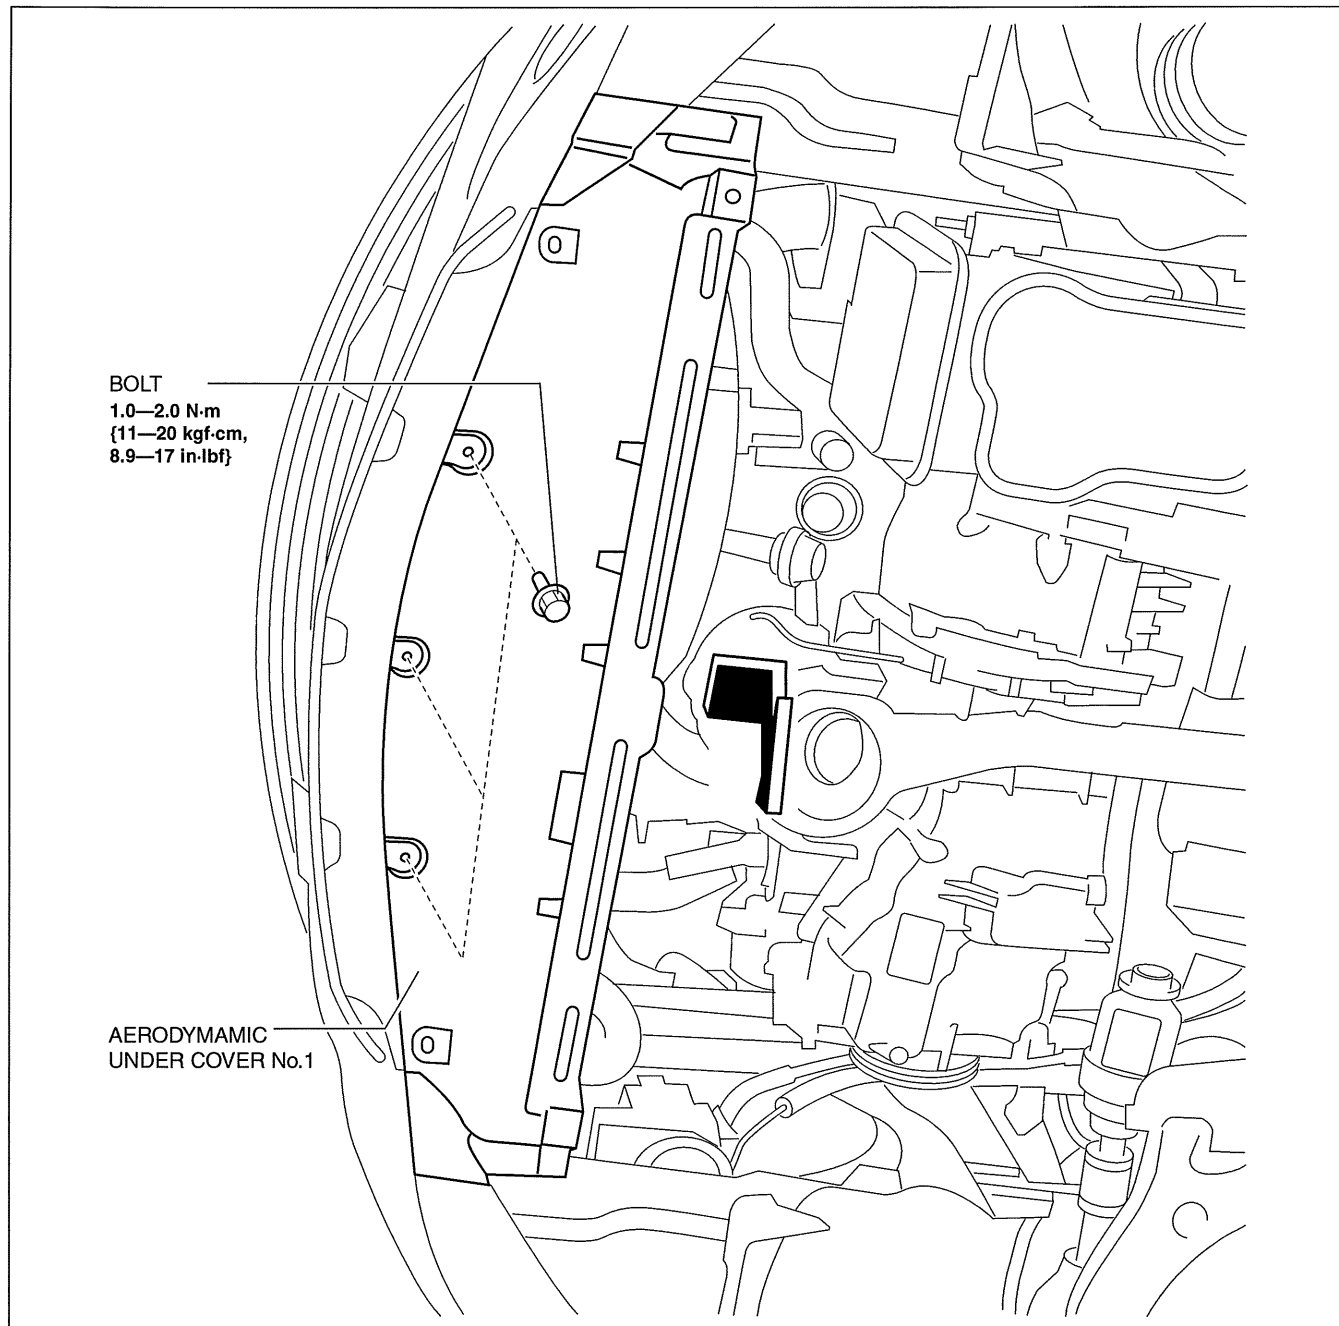

09-16

EXTERIOR TRIM

AERODYNAMIC UNDER COVER NO.1 REMOVAL/INSTALLATION

id091600820300

1. Remove the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION)
2. Remove the bolts.

am3zzw0000610

3. Remove the aerodynamic under cover No.1 in the direction of the arrow shown in the figure.

Caution

- Be careful not to damage the aerodynamic under cover No.1 during removal.

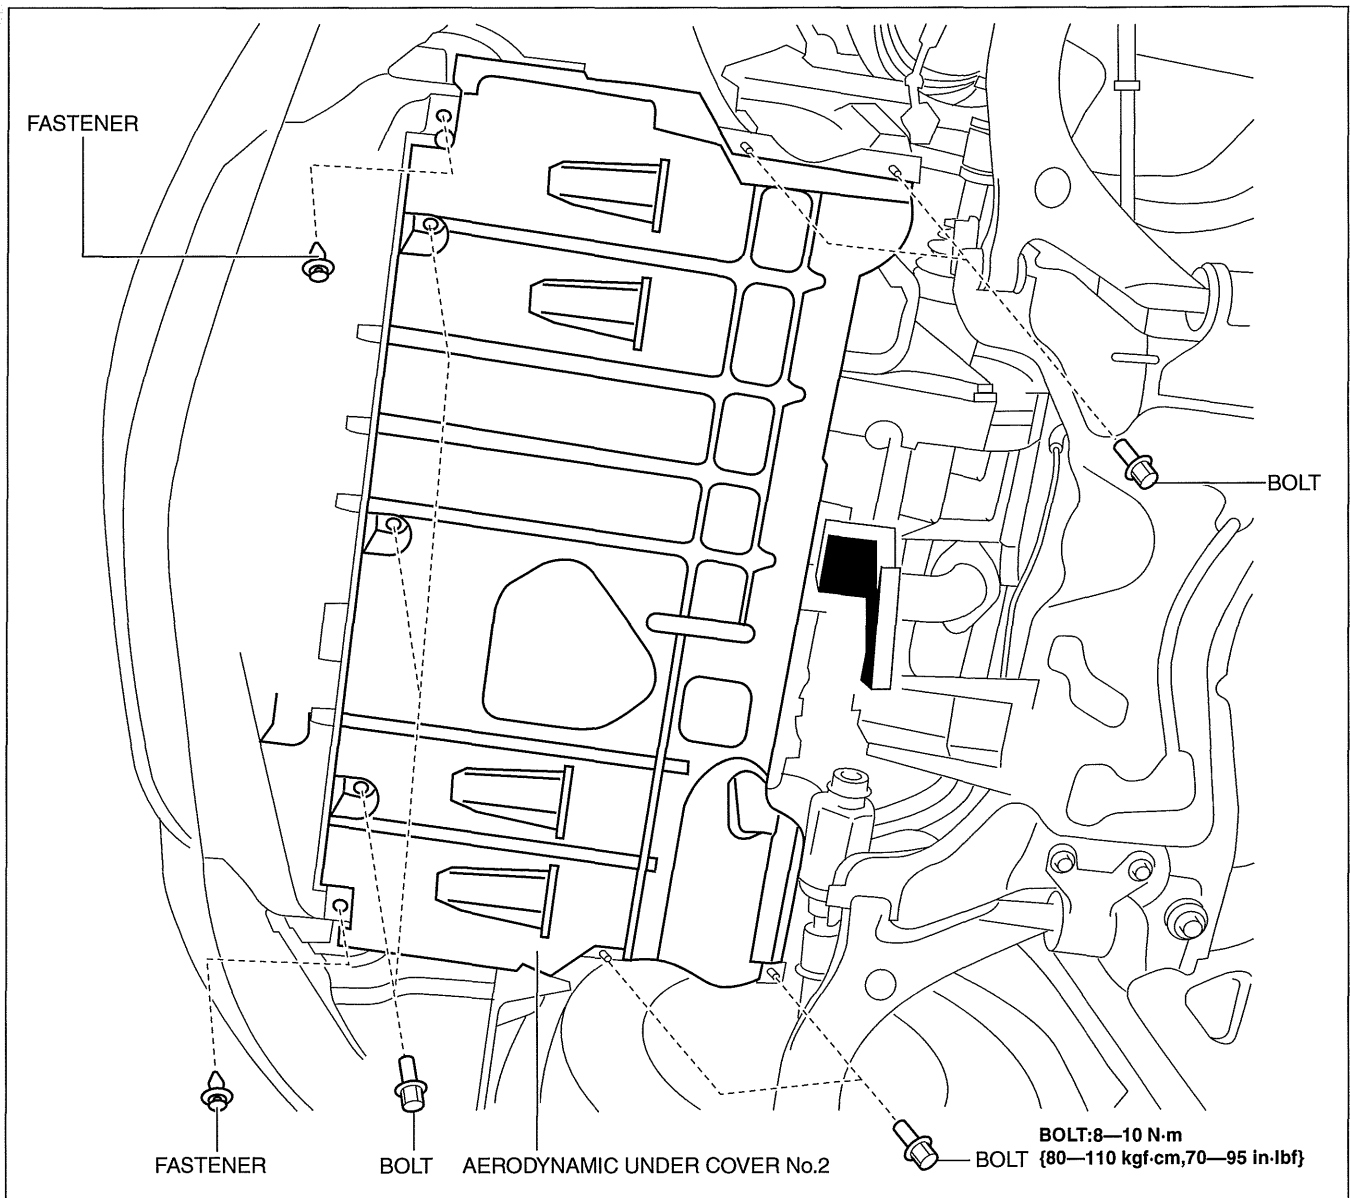

4. Install in the reverse order of removal.

EXTERIOR TRIM

AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION

id091600820400

1. Lift up the vehicle.
2. Remove the fasteners and bolts.

09-16

am3uuw0000553

3. Move the aerodynamic under cover No.2 in the direction of the arrow shown in the figure.

Caution

- Be careful not to damage the aerodynamic under cover No.2 during removal.

4. Install in the reverse order of removal.

EXTERIOR TRIM

SPLASH SHIELD REMOVAL/INSTALLATION

id091600808400

Front Splash Shield

1. Remove the screws and fastener then remove the front splash shield.

am3uuw0000412

2. Install in the reverse order of removal.

EXTERIOR TRIM

Rear Splash Shield

1. Remove the fastener, screws and capnut .

09-16

am3zzw0000610

EXTERIOR TRIM

2. Pull the rear splash shield in the direction of the arrow shown in the figure, then remove the hooks.

am3uuw0000412

3. Install in the reverse order of removal.

EXTERIOR TRIM

DOOR SASH FILM REMOVAL

id091600805200

1. Partially peel back the glass run channel.
2. Partially peel back the door weatherstrip.
3. Remove the following parts:
 - (1) Inner garnish (See 09-17-69 INNER GARNISH REMOVAL/INSTALLATION.)
 - (2) Front door trim (See 09-17-79 FRONT DOOR TRIM REMOVAL/INSTALLATION.)
 - (3) Power outer mirror (See 09-12-41 POWER OUTER MIRROR REMOVAL/INSTALLATION.)
 - (4) Rear door trim (See 09-17-88 REAR DOOR TRIM REMOVAL/INSTALLATION.)
 - (5) Rear door speaker (See 09-20-10 REAR DOOR SPEAKER REMOVAL/INSTALLATION.)
 - (6) Rear door quarter glass (See 09-12-6 REAR DOOR QUARTER GLASS REMOVAL/INSTALLATION.)
 - (7) Front beltline molding (See 09-16-14 FRONT BELTLINE MOLDING REMOVAL/INSTALLATION.)
 - (8) Rear beltline molding (See 09-16-15 REAR BELTLINE MOLDING REMOVAL/INSTALLATION.)
4. Peel off the rear sash film by pulling it outward from one end.

Note

- Slowly remove the door sash film since it may tear easily.

am3uuw0000523

DOOR SASH FILM INSTALLATION

id091600805300

1. Remove any grease or dirt from the affixing surface of the door.
2. Cut away the unused portion along the dotted lines.

acxuuw00000915

09-16

EXTERIOR TRIM

3. Peel off the backing paper and attach the door sash film onto the door as shown in the figure.

am6xuw0000174

Standard clearance

a: 3.0—5.0 mm {0.12—0.19 in}

b: 3.0 mm or more {0.12 in or more}

c: 4.0—6.0 mm {0.16—0.23 in}

4. Peel off the transparent protective film on the door sash film.

5. Install the following parts:

- (1) Rear beltline molding (See 09-16-15 REAR BELTLINE MOLDING REMOVAL/INSTALLATION.)
- (2) Front beltline molding (See 09-16-14 FRONT BELTLINE MOLDING REMOVAL/INSTALLATION.)
- (3) Rear door quarter glass (See 09-12-6 REAR DOOR QUARTER GLASS REMOVAL/INSTALLATION.)
- (4) Rear door speaker (See 09-20-10 REAR DOOR SPEAKER REMOVAL/INSTALLATION.)
- (5) Rear door trim (See 09-17-88 REAR DOOR TRIM REMOVAL/INSTALLATION.)
- (6) Power outer mirror (See 09-12-41 POWER OUTER MIRROR REMOVAL/INSTALLATION.)
- (7) Front door trim (See 09-17-79 FRONT DOOR TRIM REMOVAL/INSTALLATION.)
- (8) Inner garnish (See 09-17-69 INNER GARNISH REMOVAL/INSTALLATION.)

3. Move the fuel-filler lid opener bezel in the direction of the arrow (2) shown in the figure.

am3uuw0000527

4. Remove the fuel-filler lid opener bezel.
5. Install in the reverse order of removal.

INTERIOR TRIM

REAR DOOR TRIM DISASSEMBLY/ASSEMBLY

id091700804300

1. Disassemble in the order shown in the figure.

09-17

am3uuw0000512

1	Screw
2	Assist handle
3	Switch panel cover
4	Power window subswitch
5	Rear door trim

INTERIOR TRIM

TRUNK END TRIM REMOVAL/INSTALLATION

id091700803400

4SD

1. Remove the trunk mat. (See 09-17-95 TRUNK BOARD REMOVAL/INSTALLATION)
2. Remove the trunk board. (See 09-17-95 TRUNK BOARD REMOVAL/INSTALLATION)
3. Remove the fasteners.
4. Pull the trunk end trim indicated in the arrow shown in the figure, then detach clips A, pins B, pin C, D and tabs E.

am3uuw0000478

5. Remove the trunk end trim.
6. Install in the reverse order of removal.

INTERIOR TRIM

5HB

1. Remove the trunk mat. (See 09-17-95 TRUNK BOARD REMOVAL/INSTALLATION)
2. Remove the trunk board. (See 09-17-95 TRUNK BOARD REMOVAL/INSTALLATION)
3. Remove the fasteners.
4. Pull the trunk end trim indicated in the arrow shown in the figure, then detach clips A, pins B, pin C, guides D and pins E.

09-17

am3uuw000479

5. Remove the trunk end trim.
6. Install in the reverse order of removal.

INTERIOR TRIM

TRUNK SIDE TRIM REMOVAL/INSTALLATION

id091700803100

4SD

Left-side

1. Remove the following parts:
 - (1) Rear scuff plate (See 09-17-68 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
 - (2) Tire house trim (See 09-17-54 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
 - (3) Trunk mat (See 09-17-95 TRUNK BOARD REMOVAL/INSTALLATION.)
 - (4) Trunk board (See 09-17-95 TRUNK BOARD REMOVAL/INSTALLATION.)
 - (5) Trunk end trim (See 09-17-72 TRUNK END TRIM REMOVAL/INSTALLATION.)
 - (6) Service hole cover
2. Remove the fasteners.

am3uuw0000527

3. Install in the reverse order of removal.

INTERIOR TRIM

Right-side

1. Remove the following parts:
 - (1) Rear scuff plate (See 09-17-68 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
 - (2) Tire house trim (See 09-17-54 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
 - (3) Trunk mat (See 09-17-95 TRUNK BOARD REMOVAL/INSTALLATION.)
 - (4) Trunk board (See 09-17-95 TRUNK BOARD REMOVAL/INSTALLATION.)
 - (5) Trunk end trim (See 09-17-72 TRUNK END TRIM REMOVAL/INSTALLATION.)
2. Remove the fasteners and tab.

09-17

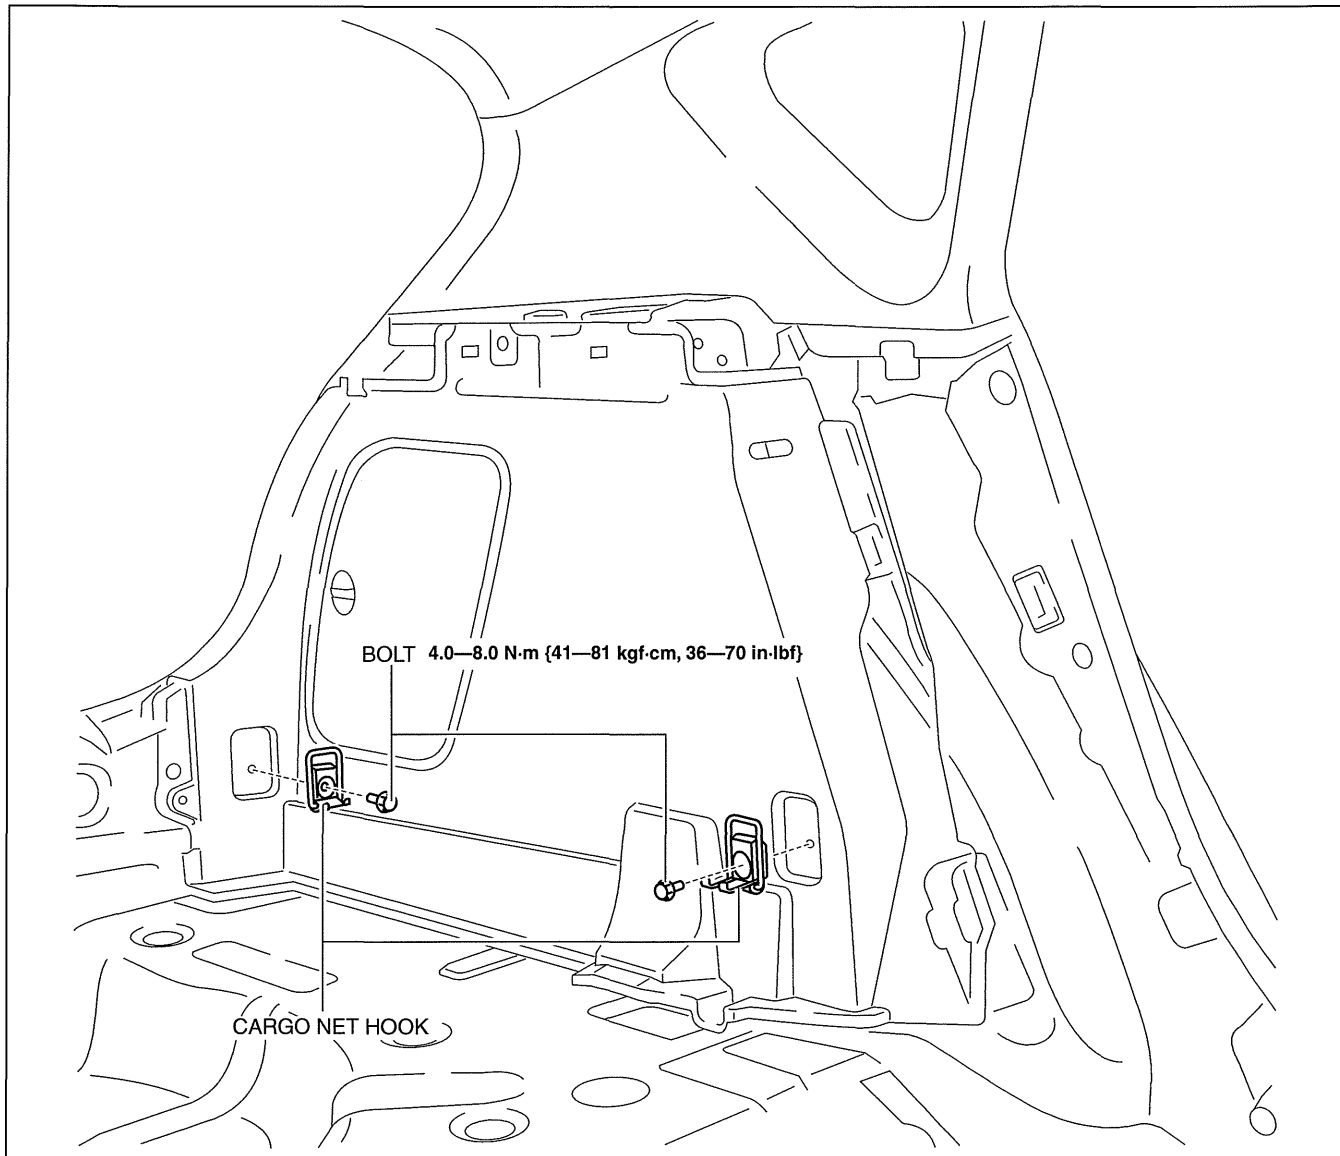

am3uuw0000527

3. Install in the reverse order of removal.

INTERIOR TRIM

5HB

1. Disconnect the negative battery cable. (Right-side only)
2. Remove the following parts:
 - (1) Rear seat (See 09-13-31 REAR SEAT BACK REMOVAL/INSTALLATION.)
 - (2) Rear scuff plate (See 09-17-68 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
 - (3) Tire house trim (See 09-17-54 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
 - (4) Trunk end trim (See 09-17-72 TRUNK END TRIM REMOVAL/INSTALLATION.)
 - (5) Trunk side upper trim (See 09-17-78 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION.)
3. Remove the bolts, then remove the cargo net hooks.

am3uuw0000529

INTERIOR TRIM

4. Remove the fasteners.
5. Pull the trunk side trim in the direction of arrow, while remove the clip.

am3uuw000480

6. Remove the trunk side trim.
7. Disconnect the cargo compartment light connector. (Right-side only)
8. Install in the reverse order of removal.

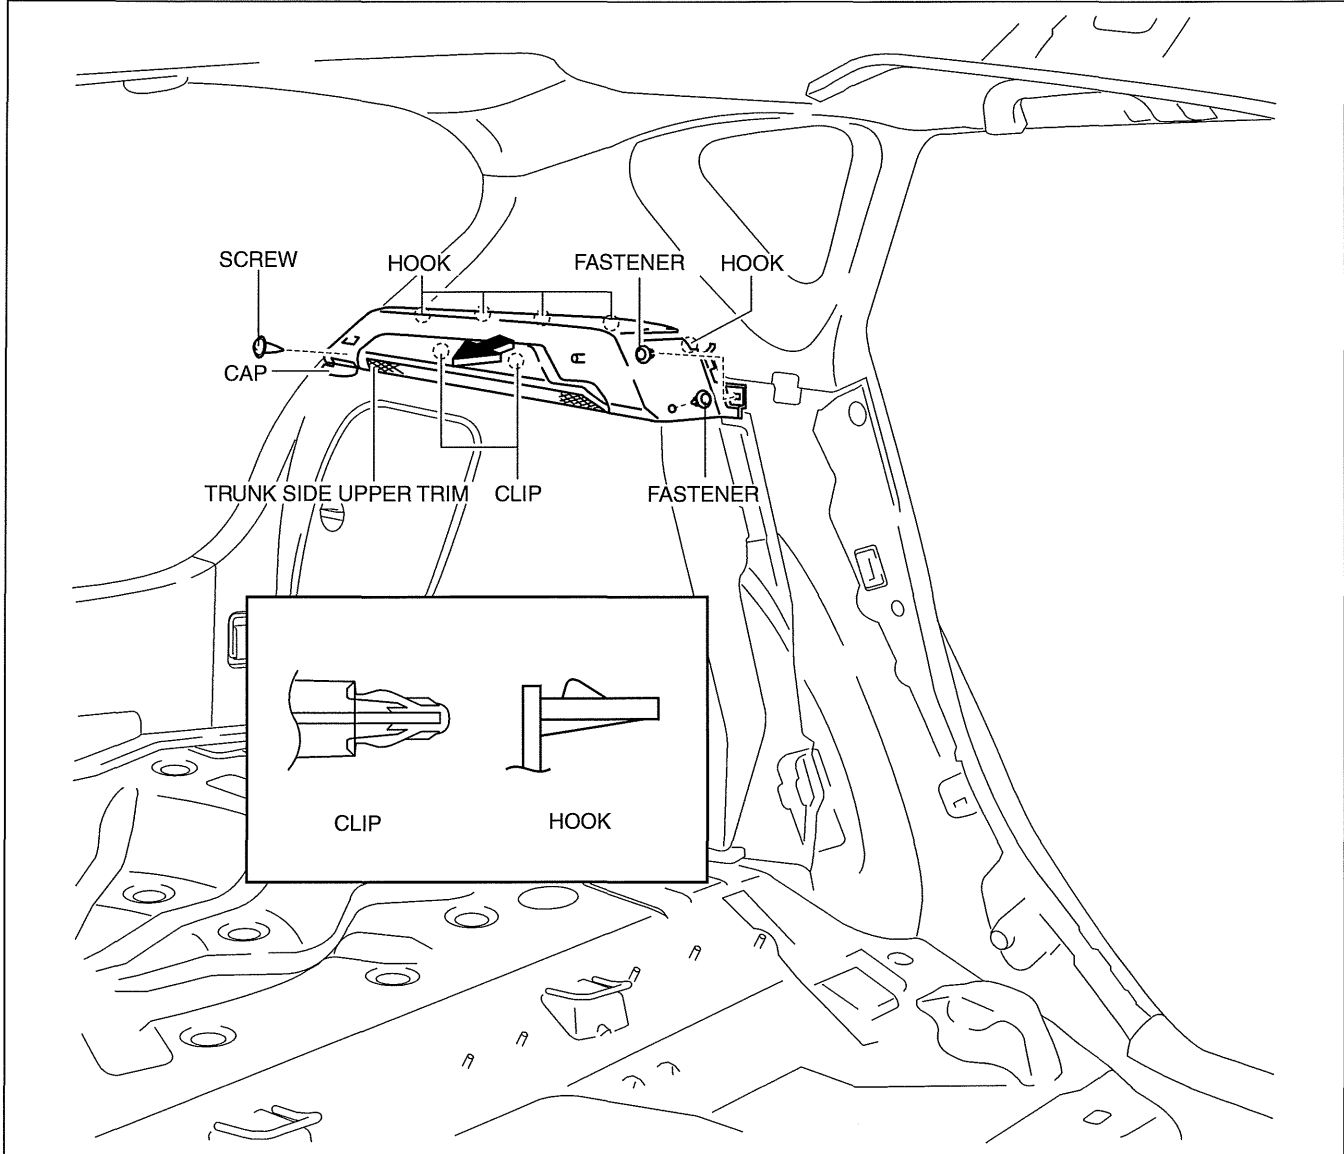

09-17

INTERIOR TRIM

TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION

id091700803200

1. Remove the rear seat cushion. (See 09-13-37 REAR SEAT CUSHION REMOVAL/INSTALLATION)
2. Remove the rear scuff plate. (See 09-17-68 REAR SCUFF PLATE REMOVAL/INSTALLATION)
3. Remove the tire house trim. (See 09-17-54 TIRE HOUSE TRIM REMOVAL/INSTALLATION)
4. Open the cap.
5. Remove the screw.
6. Remove the fasteners.
7. Pull the trunk side upper trim in the direction of arrow, then detach the hooks and clips.

am3uuw0000480

8. Install in the reverse order of removal.

INTERIOR TRIM

FRONT DOOR TRIM REMOVAL/INSTALLATION

id091700802500

1. Disconnect the negative battery cable.
2. Remove the inner garnish. (See 09-17-69 INNER GARNISH REMOVAL/INSTALLATION)
3. Move the hook in the direction of arrow shown in the figure using a tape-lapped flathead screwdriver and detach it from the front door trim.

09-17

am3uuw000481

Caution

- Affix protective tape to the front door trim and assist handle cover to prevent damage.

INTERIOR TRIM

4. Pull the inner handle cover in the direction of arrow and remove it while detaching tabs.

am3uuw0000481

INTERIOR TRIM

5. Remove the screws.

09-17

am3uuw0000512

INTERIOR TRIM

6. Pull in the direction of the arrow (1), (2), (3) shown in the figure and remove clips from the door inner panel using a fastener remover.

am3uuw0000517

INTERIOR TRIM

7. Remove the front door trim in the direction of the arrow shown in the figure.

09-17

am3uuw0000527

INTERIOR TRIM

8. Remove the inner handle and move the front door trim shown in the figure.

am3uuw0000527

INTERIOR TRIM

9. Turn the inner handle 90° in the direction of the arrow and remove it from the front door trim.

am3uuw0000481

10. Disconnect the driver-side power outer mirror switch connector and driver-side power window main switch connector.
11. Install in the reverse order of removal.

09-17

INTERIOR TRIM

FRONT DOOR TRIM DISASSEMBLY/ASSEMBLY

id091700804200

Driver-side

1. Disassemble in the order shown in the figure.

am3uuw0000512

1	Screw A
2	Assist handle
3	Switch panel cover

4	Screw B
5	Power window main switch
6	Front door trim

INTERIOR TRIM

Passenger-side

1. Disassemble in the order shown in the figure.

am3uuw0000512

1	Screw
2	Assist handle
3	Switch panel cover

4	Power window subswitch
5	Front door trim

09-17

INTERIOR TRIM

REAR DOOR TRIM REMOVAL/INSTALLATION

id091700802600

1. Disconnect the negative battery cable.
2. Move the hook in the direction of arrow shown in the figure using a tape-lapped flathead screwdriver and detach it from the rear door trim.

am3uuw0000481

Caution

- Affix protective tape to the rear door trim and assist handle cover to prevent damage.

INTERIOR TRIM

3. Pull the cover of inner handle and remove it while detaching tabs.

09-17

am3uuw0000481

INTERIOR TRIM

4. Remove the screws.

am3uuw0000481

am3uuw0000512

INTERIOR TRIM

5. Pull in the direction of the arrow (1), (2), (3) shown in the figure and remove clips from the door inner panel using a fastener remover.

am3uuw000482

09-17

INTERIOR TRIM

6. Remove the rear door trim in the direction of the arrow shown in the figure.

am3uuw0000527

INTERIOR TRIM

7. Remove the inner handle and move the rear door trim in the direction of the arrow shown in the figure.

am3uuw0000527

09-17

INTERIOR TRIM

8. Turn the inner handle 90° in the direction of the arrow and remove it from the rear door trim.

am3uuw000482

9. Disconnect the power window subswitch connector.
10. Install in the reverse order of removal.

INTERIOR TRIM

TRUNK BOARD REMOVAL/INSTALLATION

id091700810000

1. Remove the trunk mat in the direction of arrow shown in the figure.

am3uuw0000487

09-17

INTERIOR TRIM

2. Remove the trunk board in the direction of arrow shown in the figure.

am3uuw0000487

3. Install in the reverse order of removal.

INTERIOR TRIM

LIFTGATE UPPER TRIM REMOVAL/INSTALLATION

id091700803600

1. Detach tab while pulling the liftgate upper trim in the direction of the arrow (1) shown in the figure, then detach clips and pin while pulling in the direction of the arrow (2).

09-17

am3uuw0000487

INTERIOR TRIM

2. Detach tab while pulling the liftgate upper trim in the direction of the arrow (3) shown in the figure, then detach clip while pulling in the direction of the arrow (4).

am3uuw0000487

3. Remove the liftgate upper trim.
4. Install in the reverse order of removal.

INTERIOR TRIM

LIFTGATE SIDE TRIM REMOVAL/INSTALLATION

id091700803700

1. Remove the liftgate upper trim. (See 09-17-97 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)
2. Pull the point A of the strap hanger as shown in the figure.

09-17

am3uuw0000488

INTERIOR TRIM

3. Remove the strap hanger.
4. Remove the fastener.
5. Pull the liftgate side trim in the direction of arrow then remove clip A.

am3uuw0000488

INTERIOR TRIM

6. Detach tab B and C while pulling the liftgate side trim in the direction of the arrow (1) shown in the figure, then detach hook D while pulling in the direction of the arrow (2).

7. Install in the reverse order of removal.

am3uuw0000488

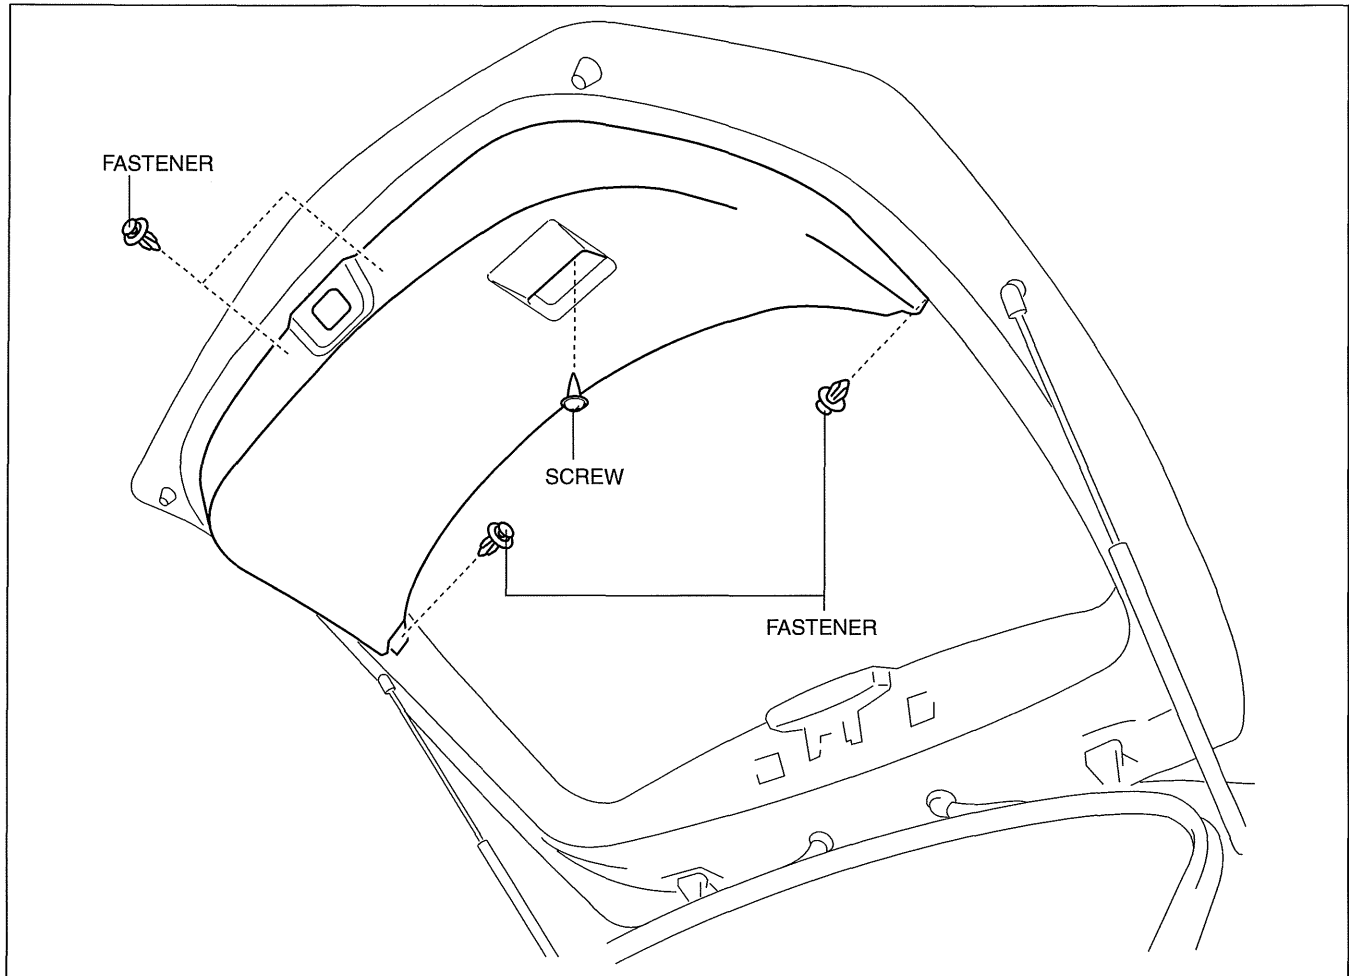

09-17

INTERIOR TRIM

LIFTGATE LOWER TRIM REMOVAL/INSTALLATION

id091700803800

1. Remove the liftgate upper trim. (See 09-17-97 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)
2. Remove the liftgate side trim. (See 09-17-99 LIFTGATE SIDE TRIM REMOVAL/INSTALLATION.)
3. Remove the screw and fasteners.

am3uuw0000488

INTERIOR TRIM

4. Pull the liftgate lower trim in the direction of arrow (1), (2), (3), then detach clips A, B, pin C and D from the liftgate.

am3uuw0000527

5. Remove the liftgate lower trim.
6. Install in the reverse order of removal.

09-17

INTERIOR TRIM

TRUNK LID TRIM REMOVAL/INSTALLATION

id091700803500

1. Remove the fasteners, then remove the trunk lid trim.

am3uuw0000489

2. Install in the reverse order of removal.

ASSIST HANDLE REMOVAL/INSTALLATION

id091700801800

Assist Handle Removal

1. Insert a flathead screwdriver into the service hole and remove the assist handle covers.

am3uuw0000524

INTERIOR TRIM

2. Remove the assist handle in the direction of the arrow (1) and (2), while detach the clip.

09-17

am3uuw0000524

Note

- Remove the assist handle by shaking it up and down.

Assist Handle Installation

1. Push the assist handle in the direction of the arrow shown in the figure.

am3uuw0000528

INTERIOR TRIM

2. Push the assist handle cover assembled to install the assist handle.

am3uuw0000524

SUNVISOR REMOVAL/INSTALLATION

id091700801700

1. Disconnect the negative battery cable.
2. Remove the screw.
3. Rotate the sunvisor in the direction of the arrow.
4. Unhook and remove the sunvisor.

am3uuw0000524

INTERIOR TRIM

5. Disconnect the vanity mirror illumination connector. (Vehicles with vanity mirror illumination)
6. Press the center adaptor tabs as shown in the figure using two tape-wrapped flathead screwdrivers, and remove the center adaptor.

am3uuw0000524

7. Install in the reverse order of removal.

HEADLINER REMOVAL/INSTALLATION

id091700801600

09-17

1. Shift to the D (ATX) or 4th gear (MTX) position. (4SD)
2. Disconnect the negative battery cable.
3. Remove the rain sensor cover. (Vehicles with auto light/wiper system) (See 09-19-25 RAIN SENSOR REMOVAL/INSTALLATION)
4. Disconnect the rain sensor connector. (Vehicles with auto light/wiper system)
5. Partially peel back the seaming welts.
6. Remove the following parts:
 - (1) Sunroof seaming welt (vehicles with sunroof)
 - (2) A-pillar trim (See 09-17-50 A-PILLAR TRIM REMOVAL/INSTALLATION.)
 - (3) Front scuff plate (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
 - (4) Rear scuff plate (See 09-17-68 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
 - (5) B-pillar lower trim (See 09-17-59 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
 - (6) Upper anchor of the front seat belt (See 08-11-3 FRONT SEAT BELT REMOVAL/INSTALLATION.)
 - (7) B-pillar upper trim (See 09-17-61 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
 - (8) Rear seat cushion (See 09-13-37 REAR SEAT CUSHION REMOVAL/INSTALLATION.)
 - (9) Tire house trim (See 09-17-54 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
 - (10) Trunk side upper trim (5HB) (See 09-17-78 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION.)
 - (11) C-pillar trim (See 09-17-63 C-PILLAR TRIM REMOVAL/INSTALLATION.)
 - (12) Map light (See 09-18-67 MAP LIGHT REMOVAL/INSTALLATION.)
 - (13) Sunvisor (See 09-17-106 SUNVISOR REMOVAL/INSTALLATION.)
 - (14) Assist handle (See 09-17-104 ASSIST HANDLE REMOVAL/INSTALLATION.)
7. Disconnect the roof wiring harness connector and remove the roof wiring harness connector clip from the body.
8. Disconnect the rear washer hose. (5HB)
9. Remove the fasteners.

INTERIOR TRIM

am3uuw0000528

INTERIOR TRIM

10. Take the headliner out from the opened front passenger-side door. (4SD)

e3u917zw7101

11. Take the headliner out from the opened liftgate. (5HB)
12. Install in the reverse order of removal.

e3u917zw7102

FLOOR COVERING REMOVAL/INSTALLATION

id091700803000

1. Disconnect the negative battery cable.
2. Remove the following parts:
 - (1) Front seat (See 09-13-3 FRONT SEAT REMOVAL/INSTALLATION.)
 - (2) Audio amplifier (Vehicles with Bose®) (See 09-20-7 AUDIO AMPLIFIER REMOVAL/INSTALLATION.)
 - (3) Front scuff plate (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
 - (4) Joint cover (See 06-14-8 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION [WITHOUT ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) (See 06-14-11 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
 - (5) Front side trim (See 09-17-53 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
 - (6) Fuel-filler lid opener lever bezel (See 09-17-70 FUEL-FILLER LID OPENER BEZEL REMOVAL/INSTALLATION.)
 - (7) Selector lever knob (ATX) (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)
 - (8) Shift lever knob (MTX) (See 05-16-2 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)
 - (9) Upper panel (See 09-17-40 UPPER PANEL REMOVAL/INSTALLATION.)
 - (10) Shift panel (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION.)
 - (11) Side wall (See 09-17-37 SIDE WALL REMOVAL/INSTALLATION.)
 - (12) Console (See 09-17-45 CONSOLE REMOVAL/INSTALLATION.)
 - (13) Rear scuff plate (See 09-17-68 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
 - (14) Lower anchor of the front seat belt (See 08-11-3 FRONT SEAT BELT REMOVAL/INSTALLATION.)
 - (15) B-pillar lower trim (See 09-17-59 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
 - (16) Rear seat cushion (See 09-13-37 REAR SEAT CUSHION REMOVAL/INSTALLATION.)
 - (17) Tire house trim (See 09-17-54 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)

INTERIOR TRIM

3. Remove fasteners A and B.

09-17

am3uuw0000556

4. Take the floor covering out from the opened door.
5. Install in the reverse order of removal.

DISCHARGE HEADLIGHT SERVICE WARNINGS

id091800804900

Discharge Headlight Service Warnings

- To prevent electrical shock when replacing the discharge headlight bulb, dry hands thoroughly, and carry out work in an area out of rain.
- When the light switch is on, approx. 25,000 V of high voltage passes through the discharge headlight bulb socket. Because of the danger of electrical shock, do not insert fingers or a tester.
- When the headlights are on, high voltage flows around the socket and bulb. When turning on the discharge headlights while working, always leave the headlights in the vehicle-installed condition to prevent electrical shock.

am6xuw0000094

Discharge Headlight Control Module Service Warnings

- Because of the danger of electrical shock, when inspecting with a tester, do not inspect the discharge headlight control module as a single unit or disassemble it.

am6xuw0000094

Discharge Headlight Control Module Reuse

- If the discharge headlight control module is dented or damaged in any way, replace the module with a new one to prevent electrical shock and improper operation.
- Although the control module may temporarily operate normally even though it has received an impact, it is possible that the interior may have been damaged. When reusing the control module, inspect the following items regarding discharge headlight illumination to verify that there are no malfunctions.
 - Verify that the discharge headlights illuminate normally by testing them several times under cold illumination (headlights off for approx. 10 min or more and then turned on) and hot illumination (headlights on for approx. 15 min or more, turned off for approx. 1 min, and then turned on again) conditions.
 - Inspect the headlight illumination in the period from directly after cold illumination until they are uniformly illuminated (approx. 5 min) and verify that there is no flickering or inconsistent brightness.
 - Turn on the headlights for approx. 30 min with normal condition bulbs and verify that there is no brightness difference between the right and left, and that illumination is consistent.

LIGHTING SYSTEMS

FRONT COMBINATION LIGHT REMOVAL/INSTALLATION

id091800800700

Warning

- **Incorrect servicing of the discharge headlights could result in electrical shock. Before servicing the discharge headlights, always refer to the discharge headlight service warnings. (See 09-18-6 DISCHARGE HEADLIGHT SERVICE WARNINGS.)**

1. Disconnect the negative battery cable.
2. Remove the front bumper. (See 09-10-16 FRONT BUMPER REMOVAL/INSTALLATION.)
3. Remove the bolt and fastener shown in the figure.
4. Disconnect the connector.

am3uuw0000269

5. Pull the front combination light in the direction of the arrow shown in the figure and remove the pin from the body.
6. Remove the front combination light.

am3uuw0000284

09-18

LIGHTING SYSTEMS

7. Remove the bolts.
8. Pull the cover in the direction of the arrow (1) while detaching tab.

am3uuw0000427

9. Remove the cover from the front combination light.
10. Install in the reverse order of removal.
11. Adjust the headlight aiming. (See 09-18-11 HEADLIGHT AIMING.)

am3uuw0000270

id091800800500

HEADLIGHT BULB REMOVAL/INSTALLATION

Halogen Type

Low-beam

1. Disconnect the negative battery cable.
2. Disconnect the connector.

am3uuw0000536

LIGHTING SYSTEMS

3. Remove the cover.
4. Remove the adaptor.
5. Remove the headlight bulb (LO).

Caution

- A halogen bulb generates extremely high heat when it is illuminated. If the surface of the bulb is soiled, excessive heat will build up and the life of the bulb will be shortened. When replacing the bulb, hold the metal flange, not the glass.

6. Install in the reverse order of removal.

High-beam

1. Disconnect the negative battery cable.
2. Disconnect the connector.

am3uuw0000536

am3uuw0000308

3. Rotate the headlight bulb (HI) in the direction of the arrow shown in the figure to remove it.
4. Remove the headlight bulb (HI).

Caution

- A halogen bulb generates extremely high heat when it is illuminated. If the surface of the bulb is soiled, excessive heat will build up and the life of the bulb will be shortened. When replacing the bulb, hold the metal flange, not the glass.

5. Install in the reverse order of removal.

LIGHTING SYSTEMS

Discharge Type

Warning

- Incorrect servicing of the discharge headlights could result in electrical shock. Before servicing the discharge headlights, always refer to the discharge headlight service warnings. (See 09-18-6 DISCHARGE HEADLIGHT SERVICE WARNINGS.)

1. Disconnect the negative battery cable.
2. Remove the front bumper. (See 09-10-16 FRONT BUMPER REMOVAL/INSTALLATION.)
3. Remove the front combination light. (See 09-18-7 FRONT COMBINATION LIGHT REMOVAL/INSTALLATION.)
4. Rotate the cover in the direction of the arrow shown in the figure to remove it.

am3uuw0000441

5. Rotate the connector in the direction of the arrow shown in the figure to remove it.

am3uuw0000270

LIGHTING SYSTEMS

- Press sections A to release the bulb retaining wire and remove the discharge headlight.

am3uuw0000270

- Remove the discharge headlight.

Caution

- The bulb generates extremely high heat when it is illuminated. If the surface of the bulb is soiled, excessive heat will build up and the life of the bulb will be shortened. When replacing the bulb, hold the metal flange, not the glass.

- Install in the reverse order of removal.

DISCHARGE HEADLIGHT

am3uuw0000536

id091800800400

HEADLIGHT AIMING

- Point the headlight beams to a wall and verify that the headlight beams are as shown in the figure.

am6xuw0000008

09-18

LIGHTING SYSTEMS

2. Make a screen as shown in the figure using double-weight, white paper.
3. Adjust the tire pressure to the specification.
4. Position the unloaded vehicle on a flat, level surface.
5. Seat one person in the driver's seat.

am3uuw0000547

6. Line up the vehicle with the wall so that the center of the headlight is **3 m {9.8 ft}** away from the wall.

am3uuw0000430

7. Measure the height at the center of the headlight.

Note

- Since the height of the vehicle varies depending on the vehicle situation, measure the height of the center of the headlight using the actual vehicle.

am3uuw0000246

LIGHTING SYSTEMS

8. Align the center of the headlight with the center of the screen.

9. Block the light of the other headlight using a partition.
10. Start the engine and charge the battery.
11. Turn on the headlight low beams.
12. Set the headlight leveling switch to the 0 position. (vehicles with headlight leveling switch)
13. Verify that the elbow point of the headlight is in the position indicated on the screen.
 - If the elbow point is not in the position indicated on the screen, perform the following adjustment:
 1. Insert a Phillips driver into the position shown in the figure and adjust the headlights.

LIGHTING SYSTEMS

DRL LAMP BULB REMOVAL/INSTALLATION

id091800812300

1. Disconnect the negative battery cable.
2. Disconnect the connector.

am3uuw0000507

3. Rotate the DRL lamp bulb in the direction of the arrow shown in the figure to remove it.
4. Remove the DRL lamp bulb.
5. Install in the reverse order of removal.

am3uuw0000507

DISCHARGE HEADLIGHT CONTROL MODULE REMOVAL/INSTALLATION

id091800805300

Caution

- **Incorrect servicing of the discharge headlight control module could result in electrical shock. Before servicing the discharge headlight control module, always refer to the "Discharge headlight service warnings." (See 09-18-6 DISCHARGE HEADLIGHT SERVICE WARNINGS.)**

1. Disconnect the negative battery cable.
2. Remove the front bumper. (See 09-10-16 FRONT BUMPER REMOVAL/INSTALLATION.)
3. Remove the front combination light. (See 09-18-7 FRONT COMBINATION LIGHT REMOVAL/INSTALLATION.)
4. Remove the screws.
5. Disconnect the connector A.

am3uuw0000271

LIGHTING SYSTEMS

6. Remove the screw.
7. Disconnect the connector B.
8. Remove the discharge headlight control module.
9. Install in the reverse order of removal.

LIGHTING SYSTEMS

Inspection procedure

STEP	INSPECTION	ACTION	
1	INSPECT POWER SUPPLY CIRCUIT OF DISCHARGE HEADLIGHT CONTROL MODULE <ul style="list-style-type: none"> • Disconnect the discharge headlight control module connector. • Turn the headlight switch to the HEADLIGHT (LO) position. • Measure the voltage at discharge headlight control module connector (harness-side) terminal B. • Is the voltage approx. 12 V? 	Yes	Go to Step 6.
		No	Go to the next step.
2	INSPECT FUSE <ul style="list-style-type: none"> • Turn the headlight switch to the OFF position. • Remove the H/L LO RH 15 A fuse or H/L LO LH 15 A fuse. • Inspect the fuses. • Are the fuses normal? 	Yes	Go to the next step.
		No	Replace the fuse.
3	INSPECT HEADLIGHT RELAY <ul style="list-style-type: none"> • Remove the headlight relay (LO). (See 09-21-16 RELAY LOCATION.) • Inspect the headlight relay (LO). (See 09-21-17 RELAY INSPECTION.) • Is the headlight low relay normal? 	Yes	Go to the next step.
		No	Replace the headlight low relay. (See 09-21-16 RELAY LOCATION.)
4	INSPECT LIGHT SWITCH <ul style="list-style-type: none"> • Inspect the light switch. (See 09-18-58 LIGHT SWITCH INSPECTION.) • Is the light switch normal? 	Yes	Go to the next step.
		No	Replace the light switch. (See 09-18-57 LIGHT SWITCH REMOVAL/INSTALLATION.)
5	INSPECT WIRING HARNESS BETWEEN BATTERY AND DISCHARGE HEADLIGHT CONTROL MODULE <ul style="list-style-type: none"> • Disconnect the negative battery cable. • Inspect for continuity between the following terminals: <ul style="list-style-type: none"> — Positive battery—headlight low relay terminal D — H/L LO RH 15 A fuse—discharge headlight control module terminal B — H/L LO LH 15 A fuse—discharge headlight control module terminal B • Are the wiring harnesses normal? 	Yes	Go to the next step.
		No	Replace the related wiring harness.
6	INSPECT WIRING HARNESS BETWEEN DISCHARGE HEADLIGHT CONTROL MODULE AND GROUND <ul style="list-style-type: none"> • Inspect wiring harness between discharge headlight control module terminal M and ground for following: <ul style="list-style-type: none"> — Short to power supply — Open circuit • Is the wiring harness normal? 	Yes	Go to the next step.
		No	Replace the related wiring harness.
7	VERIFY WHETHER MALFUNCTION IS IN DISCHARGE HEADLIGHT OR DISCHARGE HEADLIGHT CONTROL MODULE <ul style="list-style-type: none"> • Install any other discharge headlight. (See 09-18-8 HEADLIGHT BULB REMOVAL/INSTALLATION.) • Connect the discharge headlight control module connector. • Turn the headlight switch to the HEADLIGHT (LO) position. • Does the headlight (low-beam) illuminate? 	Yes	Replace the discharge headlight. (See 09-18-8 HEADLIGHT BULB REMOVAL/INSTALLATION.)
		No	Replace the discharge headlight control module. (See 09-18-14 DISCHARGE HEADLIGHT CONTROL MODULE REMOVAL/INSTALLATION.)

LIGHTING SYSTEMS

AFS (ADAPTIVE FRONT LIGHTING SYSTEM) OFF SWITCH REMOVAL/INSTALLATION

id091800813000

1. Disconnect the negative battery cable.
2. Remove the switch panel in the direction of the arrow shown in the figure.
3. Disconnect the connector.

am3uuw0000529

4. Remove the AFS OFF switch in the direction of the arrow (2) shown in the figure while pressing the tabs in the direction of the arrow (1).
5. Remove the AFS OFF switch.
6. Install in the reverse order of removal.

am3uuw0000529

09-18

AFS (ADAPTIVE FRONT LIGHTING SYSTEM) OFF SWITCH INSPECTION

id091800813100

1. Disconnect the negative battery cable.
2. Remove the AFS OFF switch. (See 09-18-17 AFS (ADAPTIVE FRONT LIGHTING SYSTEM) OFF SWITCH REMOVAL/INSTALLATION.)
3. Verify that the continuity between the AFS OFF switch terminals is as indicated in the table.

○—○ : Continuity

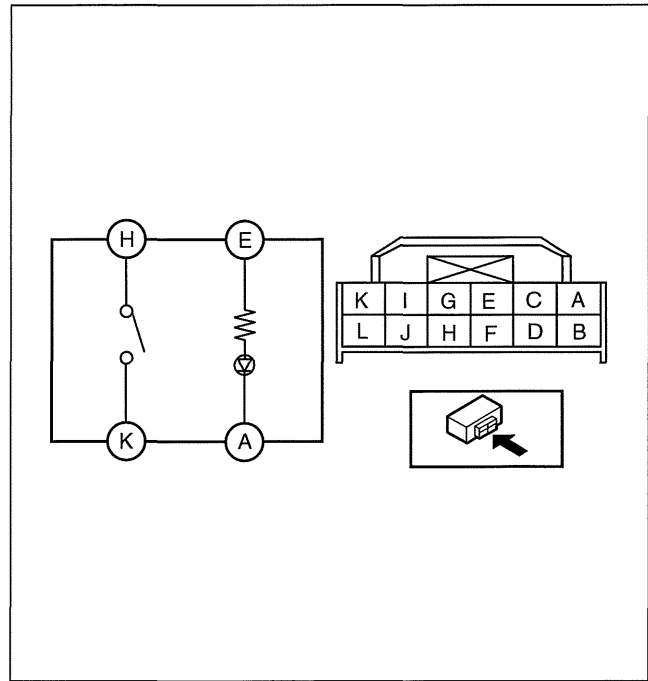

Switch position	Terminal	
	H	K
Off		
On	○—○	○—○

am3uuw00003424

- If the continuity is not as indicated in the table, replace the AFS OFF switch.

LIGHTING SYSTEMS

4. Apply battery positive voltage to AFS OFF switch terminal E, and connect terminal A to ground.
5. Verify that the LED illuminates.
 - If there is any malfunction, replace the AFS OFF switch.

am3uuw0000342

AFS (ADAPTIVE FRONT LIGHTING SYSTEM) CONTROL MODULE REMOVAL/INSTALLATION

id091800813200

Note

- Perform the auto leveling system initialization after newly replacing the AFS control module to assure that the auto leveling system operates correctly.

1. Disconnect the negative battery cable.
2. Remove the following parts:
 - (1) Passenger-side front scuff plate (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
 - (2) Passenger-side front side trim (See 09-17-53 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
 - (3) Dashboard under cover (See 09-17-39 DASHBOARD UNDER COVER REMOVAL/INSTALLATION.)
 - (4) Grove compartment (See 09-17-33 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.

1	Nut
2	Connector
3	AFS control module

4. Install in the reverse order of removal.
5. Perform the auto leveling system initialization after newly replacing the AFS control module. (See 09-18-51 AUTO LEVELING SYSTEM INITIALIZATION.)

am3uuw0000539

LIGHTING SYSTEMS

STEERING ANGLE SENSOR REMOVAL/INSTALLATION

id091800813600

1. Disconnect the negative battery cable.
2. Remove the following parts:
 - (1) Driver-side air bag module (See 08-10-7 DRIVER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
 - (2) Steering wheel (See 06-14-8 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION [WITHOUT ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) (See 06-14-11 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
 - (3) Clock spring (See 08-10-21 CLOCK SPRING REMOVAL/INSTALLATION.)
3. Remove the steering angle sensor.
4. Install in the reverse order of removal.

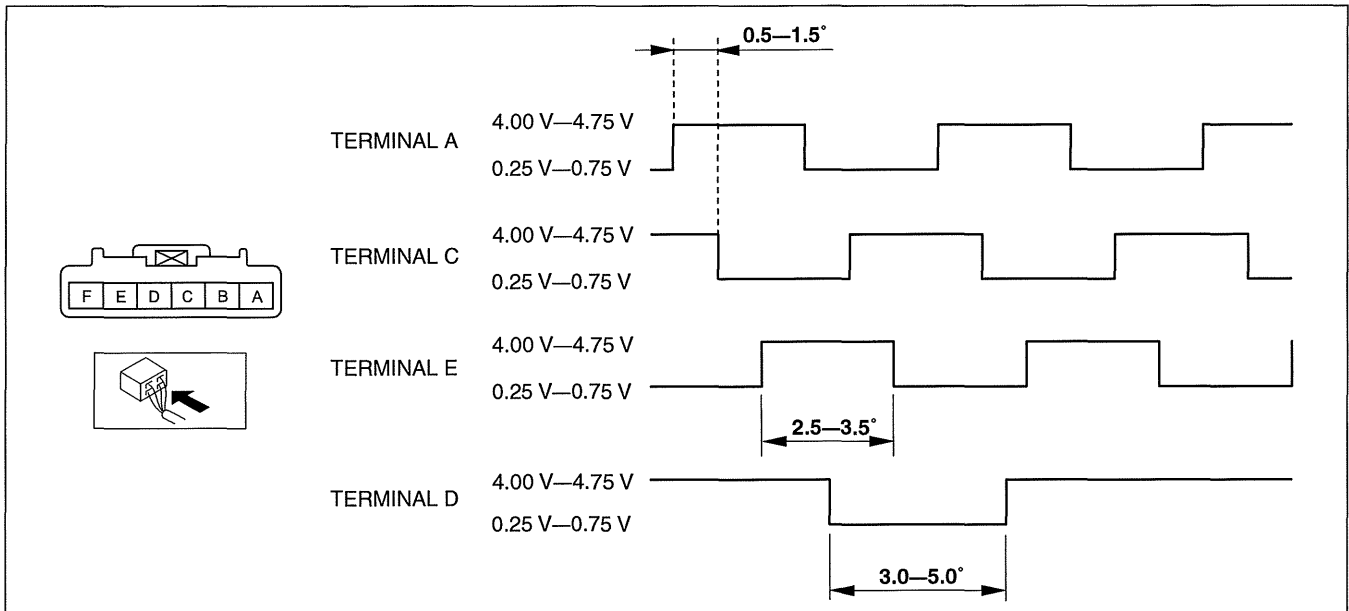

am3uuw0000449

STEERING ANGLE SENSOR INSPECTION

id091800813400

1. Remove the column cover. (See 09-17-22 COLUMN COVER REMOVAL/INSTALLATION.)
2. Turn the steering wheel to the right and left, and verify that the voltage and pulses at the terminals are as shown in the figure.
 - If not as specified, replace the steering angle sensor.

am3uuw0000247

09-18

LIGHTING SYSTEMS

STEERING ANGLE SENSOR INITIALIZATION PROCEDURE

id091800813500

Warning

- If the steering angle sensor reference point setting is not completed, it could result in an unexpected accident due to the related systems being inoperative. Therefore, if the BCM connector or negative battery cable are disconnected, or the BCM power supply is interrupted, always perform the steering angle sensor reference point setting and verify that each system is operational.

Note

- The BCM stores the steering angle reference point using battery power supply. Therefore, if the following operations are performed and the power supply to the BCM is interrupted, the stored steering angle reference point will be erased.
 - The negative battery cable is disconnected
 - The steering angle sensor connector is disconnected
 - A fuse (ROOM) is removed
 - The wiring harness between the BCM and steering angle sensor connector is disconnected
1. Inspect the wheel alignment, inflation pressure, and the installation condition of the steering wheel.
 - If there is any malfunction, adjust the applicable part.
 2. Connect the negative battery cable.
 3. Switch the ignition to ON.
 4. Confirm that the AFS OFF indicator light illuminates and that the AFS OFF light flashes.
 5. Turn the steering wheel to full right lock, then turn it to full left lock.
 6. Confirm that the AFS OFF light and AFS OFF indicator light goes out.
 - If the AFS OFF indicator light does not go out, disconnect the negative battery cable, and perform the procedure again starting from Step 2 shown above.
 7. Drive the vehicle for **approx. 10 min**, and confirm that the AFS OFF indicator lights do not illuminate.

PARKING LIGHT BULB REMOVAL/INSTALLATION

id091800804200

1. Disconnect the negative battery cable.
2. Rotate the parking light socket in the direction of the arrow shown in the figure to remove it.
3. Remove the parking light bulb.
4. Install in the reverse order of removal.

3. Rotate the front side marker/front turn light socket in the direction of the arrow shown in the figure.

am3uuw0000271

4. Remove the front side marker/front turn light bulb.
5. Install in the reverse order of removal.

am3uuw0000503

FRONT FOG LIGHT REMOVAL/INSTALLATION

id091800802100

Except Mazdaspeed3

1. Disconnect the negative battery cable.
2. Remove the front bumper. (See 09-10-16 FRONT BUMPER REMOVAL/INSTALLATION.)
3. Disconnect the connector.
4. Remove the screw.
5. Remove the bolt.

am3uuw0000537

LIGHTING SYSTEMS

6. Remove the clips.

am3uuw0000538

7. Pull the front fog light in the direction of the arrow shown in the figure and remove the pin from the front fog light cover.
8. Remove the front fog light.
9. Install in the reverse order of removal.
10. Adjust the front fog light aiming. (See 09-18-24 FRONT FOG LIGHT AIMING.)

am3uuw0000538

09-18

Mazdaspeed3

1. Disconnect the negative battery cable.
2. Remove the fasteners and slightly bend back the mudguard.
3. While pressing the tab in the direction of arrow (1) shown in the figure, pull the connector in the direction of arrow (2) and disconnect it.

am3uuw0000572

4. Remove the screws shown in the figure and remove the front fog light cover from the front bumper.

am3uuw0000572

LIGHTING SYSTEMS

5. Remove the screw and bolt shown in the figure.

6. Pull the front fog light in the direction of the arrow shown in the figure and remove it from the front fog light cover.
7. Remove the front fog light.
8. Install in the reverse order of removal.
9. Adjust the front fog light aiming. (See 09-18-24 FRONT FOG LIGHT AIMING.)

FRONT FOG LIGHT AIMING

Except Mazdaspeed3

1. Make a screen as shown in the figure using double-weight, white paper.
2. Adjust the tire pressure to the specification.
3. Position the unloaded vehicle on a flat, level surface.
4. Seat one person in the driver's seat.

5. Line up the vehicle with the wall so that the center of the front fog light is **3 m {9.8 ft}** away from the wall.

LIGHTING SYSTEMS

6. Measure the height at the center of the front fog light.

Note

- Since the height of the vehicle varies depending on the vehicle situation, measure the height of the center of the front fog light using the actual vehicle.

am3uuw0000247

7. Align the center of the front fog light with the center of the screen.

am3uuw0000256

8. Block the light of the other front fog light using a partition.
9. Start the engine so that the battery remains charged.
10. Turn the front fog lights on.

09-18

LIGHTING SYSTEMS

11. Verify that the brightness border line of the front fog light is at the position indicated on the adjustment screen.
 - If the brightness border line is not at the position indicated on the adjustment screen, perform the following adjustment.
 1. Loosen the adjustment bolt.
 2. Loosen the screw.
 3. Move the front fog light in the direction of the arrow shown in the figure to adjust the brightness border line to the position indicated on the adjustment screen.
 4. Tighten the screw and adjustment bolt.

am3uuw0000285

Mazdaspeed3

1. Make a screen as shown in the figure using double-weight, white paper.
2. Adjust the tire pressure to the specification.
3. Position the unloaded vehicle on a flat, level surface.
4. Seat one person in the driver's seat.

am3uuw0000612

5. Line up the vehicle with the wall so that the center of the front fog light is **3 m {9.8 ft}** away from the wall.

am3uuw0000596

LIGHTING SYSTEMS

AUTO LEVELING SENSOR INSPECTION

id091800805600

1. Disconnect the negative battery cable.
2. Remove the auto leveling sensor. (See 09-18-50 AUTO LEVELING SENSOR REMOVAL/INSTALLATION.)
3. Connect the three dry cell batteries (1.5 V) in a series.
4. Connect auto leveling sensor terminal A to the battery's minus terminal, and terminal C to the battery's plus terminal, and apply 4.5 V of voltage between terminals A and C.
5. Connect the tester as shown in the figure.

6. When slowly moving the link up and down, verify that the shift is linear while the voltage is 0.5 to 4.5 V.
 - If the voltage cannot be verified as indicated in the graph, replace the auto leveling sensor.

09-18

AUTO LEVELING SYSTEM INITIALIZATION

id091800805800

Caution

- Perform with the vehicle in an unloaded condition (no occupants; spare tire, jack and tools are in designated positions.)

Without using M-MDS

Note

- If the following servicing is to be done, perform the procedure for the case where system initialization has never been done. (See 09-18-52 Initialization has never been performed.)
 - AFS control module is newly replaced.
- If the following servicing is done, perform the procedure for the case where the system is reset after initialization has already been completed. (See 09-18-52 Initialization operation implemented and resetting to be performed.)
 - Auto leveling sensor is removed/installed.
 - Auto leveling sensor is replaced.
 - Procedure for changing vehicle height is performed such as changing suspension.

LIGHTING SYSTEMS

Initialization has never been performed

Caution

- Perform the procedures in Steps 2 to 5 within 30 s.

1. Switch the ignition to off.
2. Set a jumper wire to the DLC-2 B terminal.
3. Switch the ignition to ON.

am3uuw0000288

4. Verify that the AFS OFF light flashes every 0.5 s.
5. Ground the DLC-2 B terminal 3 times or more at 1 s intervals using the jumper wire.
6. After the AFS OFF light flashes three times at 0.5 s intervals, verify that it turns off.
 - If the AFS OFF light continues to flash at 0.5 s intervals, the following malfunction can be considered. Repair or replace the malfunctioning area, then repeat the procedure from Step 1.
 - Auto leveling sensor malfunction (See 09-18-51 AUTO LEVELING SENSOR INSPECTION.)
 - AFS control module malfunction
 - Instrument cluster malfunction (See 09-22-8 INSTRUMENT CLUSTER INSPECTION.)
 - Malfunction in the related wiring harnesses

am3uuw0000433

7. Disconnect the jumper wire from DLC-2.
8. Verify that the AFS OFF light is not illuminated.

Initialization operation implemented and resetting to be performed

Caution

- Perform the procedures in Steps 4 to 7 within 30 s.
- Perform the procedures in Steps 6 to 7 within 5 s.

LIGHTING SYSTEMS

Without DRL or with DRL lamp bulb

1. Switch the ignition to off.
2. Set a jumper wire to the DLC-2 B terminal.
3. Turn off the headlights.
4. Switch the ignition to ON.
5. Verify that the AFS OFF light flashes.

am3uuw0000433

6. Connect terminal B (INIT) of the DLC-2 to terminal J (GND) using a jumper wire.
7. The headlight switch switches in the following order: OFF→ON→OFF→ON→OFF→ON→OFF
8. After the AFS OFF light flashes three times at 0.5 s intervals, verify that it turns off.
 - If the AFS OFF light continues to flash at 0.5 s intervals, the following malfunction can be considered. Repair or replace the malfunctioning area, then repeat the procedure from Step 1.
 - Auto leveling sensor malfunction (See 09-18-51 AUTO LEVELING SENSOR INSPECTION.)
 - Instrument cluster malfunction (See 09-22-8 INSTRUMENT CLUSTER INSPECTION.)
 - AFS control module malfunction
 - Malfunction in the related wiring harnesses
9. Pull out the jumper wire from DLC-2.
10. Verify that the AFS OFF light is not illuminated.

am3uuw0000288

09-18

LIGHTING SYSTEMS

Without DRL lamp bulb

1. Switch the ignition to off.
2. Set a jumper wire to the DLC-2 B terminal.
3. Turn on the headlights TNS position.
4. Switch the ignition to ON.

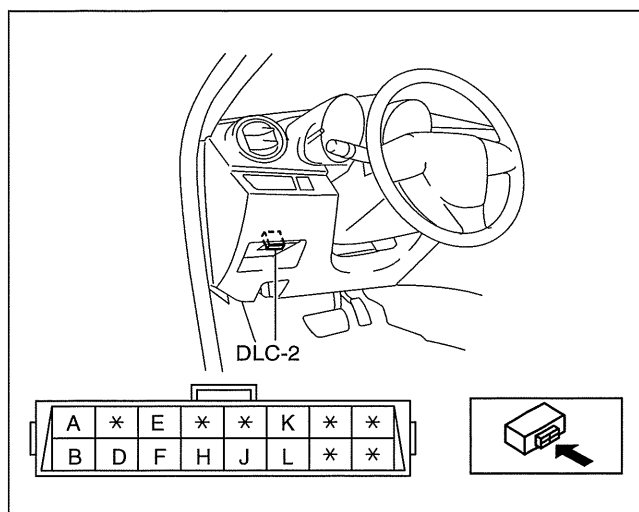

am3uuw000288

5. Verify that the AFS OFF light flashes.

am3uuw000433

6. Connect terminal B (INIT) of the DLC-2 to terminal J (GND) using a jumper wire.
7. The headlight switch switches in the following order: TNS→ON→OFF→ON→OFF→ON→OFF
8. After the AFS OFF light flashes three times at 0.5 s intervals, verify that it turns off.
 - If the AFS OFF light continues to flash at 0.5 s intervals, the following malfunction can be considered. Repair or replace the malfunctioning area, then repeat the procedure from Step 1.
 - Auto leveling sensor malfunction (See 09-18-51 AUTO LEVELING SENSOR INSPECTION.)
 - Instrument cluster malfunction (See 09-22-8 INSTRUMENT CLUSTER INSPECTION.)
 - AFS control module malfunction
 - Malfunction in the related wiring harnesses
9. Pull out the jumper wire from DLC-2.
10. Verify that the AFS OFF light is not illuminated.

am3uuw000288

LIGHTING SYSTEMS

Using M-MDS

Caution

- Perform with the vehicle in an unloaded condition (no occupants; spare tire, jack and tools are in designated positions).

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Electrical".
 2. Select "Exterior Lighting".
 3. Select "Headlamp".
 4. Select "Auto Leveling Sensor Re-zero Procedure"
 - When using the PDS (Pocket PC)
 1. Select the "All Tests and Calibrations".
 2. Select "Auto Leveling Sensor Re-zero Procedure".
 3. Perform the procedure according to the directions on the screen.

LIGHTING SYSTEMS

AUTO LIGHT/WIPER CONTROL MODULE REMOVAL/INSTALLATION

id091800809400

1. Disconnect the negative battery cable.
2. Remove the following parts:
 - (1) Passenger-side front scuff plate (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
 - (2) Passenger-side front side trim (See 09-17-53 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
 - (3) Dashboard under cover (See 09-17-39 DASHBOARD UNDER COVER REMOVAL/INSTALLATION.)
 - (4) Glove compartment (See 09-17-33 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.

1	Nut
2	Connector
3	Auto light/wiper control module

4. Install in the reverse order of removal.

am3uuw0000313

LIGHTING SYSTEMS

AUTO LIGHT/WIPER CONTROL MODULE INSPECTION

id091800809500

1. Remove the following parts:
 - (1) Passenger-side front scuff plate (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
 - (2) Passenger-side front side trim (See 09-17-53 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
 - (3) Dashboard under cover (See 09-17-39 DASHBOARD UNDER COVER REMOVAL/INSTALLATION.)
 - (4) Grove compartment (See .)
 - (5) Passenger-side lower panel (See 09-17-27 LOWER PANEL REMOVAL/INSTALLATION.)
2. Remove the auto light/wiper control module with the connector connected. (See 09-18-64 AUTO LIGHT/WIPER CONTROL MODULE REMOVAL/INSTALLATION.)
3. Measure the voltage at the auto light/wiper control module terminals as indicated below.

LIGHTING SYSTEM PERSONALIZATION FEATURES SETTING PROCEDURE

id091800439900

Auto light system

Note

- Use the IDS (laptop PC) because the PDS (Pocket PC) does not support the PERSONALIZATION FEATURES SETTING PROCEDURE.

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
 1. Select the "Module Programming"
3. Then, select items from the screen menu in the following order.
 1. Select "Programmable Parameters"
 2. Select "Exterior Lighting"

am3uuw0000288

4. Select the item name, and then select option.

Mazda Modular Diagnostic System (M-MDS) display	Function	Initial setting	Setting content	Control unit
Autolamp On Setting	The auto light system sensitivity can be adjusted.	Standard (Other)	Standard (Other) / Low (Other)	Auto light/wiper control module

09-18

Room Light Control System / Turn Light System

- For the room light control system and turn light system, refer to the control system personalization features setting. (See 09-40-17 CONTROL SYSTEM PERSONALIZATION FEATURES SETTING PROCEDURE.)

MAP LIGHT REMOVAL/INSTALLATION

id091800801200

1. Disconnect the negative battery cable.
2. Remove in the order indicated in the table.

1	Lens (See 09-18-68 Lens Removal Note.)
2	Map light bulb
3	Map light (See 09-18-68 Map Light Removal Note.)
4	Connector

3. Install in the reverse order of removal.

am3uuw0000322

LIGHTING SYSTEMS

Lens Removal Note

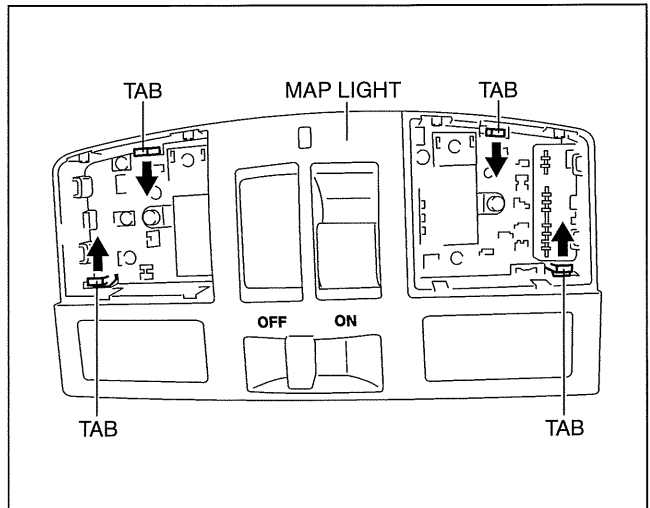

1. Insert a tape-wrapped fastener remover into the service hole and pry with the screwdriver in the direction shown by the arrow to remove the lens.

am3uuw0000443

Map Light Removal Note

1. Release the tabs by pressing them in the direction of the arrows in the figure and remove the map light.

am3uuw0000443

MAP LIGHT INSPECTION

id091800801300

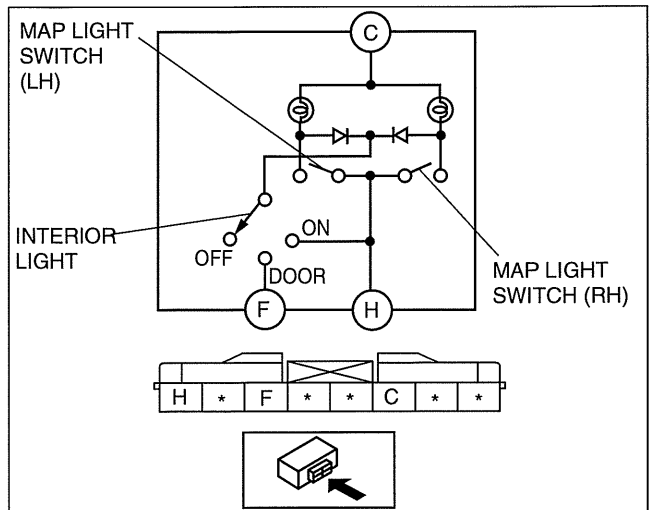

1. Disconnect the negative battery cable.
2. Remove the map light. (See 09-18-67 MAP LIGHT REMOVAL/INSTALLATION.)
3. Verify that the continuity between the map light terminals is as indicated in the table.

○—○: Bulb

Switch position		Terminal		
Front map light switch	Interior light switch	C	F	H
ON	ON	○	○	○
-	DOOR	○	○	
	OFF			

am6xuw0000080

- If not as indicated in the table, replace the map light.

am3uuw0000540

LIGHTING SYSTEMS

INTERIOR LIGHT BULB REMOVAL/INSTALLATION

id091800801400

1. Disconnect the negative battery cable.
2. Insert a tape-wrapped fastener remover into the service hole and pry with the screwdriver in the direction shown by the arrow to remove the lens.

am6xuw0000090

3. Remove the interior light bulb.
4. Install in the reverse order of removal.

am6xuw0000090

INTERIOR LIGHT REMOVAL/INSTALLATION

id091800801500

1. Disconnect the negative battery cable.
2. Remove the rain sensor cover. (Vehicles with auto light/wiper system) (See 09-19-25 RAIN SENSOR REMOVAL/INSTALLATION)
3. Remove the following parts:
 - (1) Sunroof seaming welt (vehicles with sunroof)
 - (2) A-pillar trim (See 09-17-50 A-PILLAR TRIM REMOVAL/INSTALLATION.)
 - (3) Front scuff plate (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
 - (4) Rear scuff plate (See 09-17-68 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
 - (5) B-pillar lower trim (See 09-17-59 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
 - (6) Upper anchor of the front seat belt (See 08-11-3 FRONT SEAT BELT REMOVAL/INSTALLATION.)
 - (7) B-pillar upper trim (See 09-17-61 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
 - (8) Rear seat cushion (See 09-13-37 REAR SEAT CUSHION REMOVAL/INSTALLATION.)
 - (9) Tire house trim (See 09-17-54 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
 - (10) Trunk side upper trim (5HB) (See 09-17-78 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION.)
 - (11) C-pillar trim (See 09-17-63 C-PILLAR TRIM REMOVAL/INSTALLATION.)
 - (12) Map light (See 09-18-67 MAP LIGHT REMOVAL/INSTALLATION.)
 - (13) Sunvisor (See 09-17-106 SUNVISOR REMOVAL/INSTALLATION.)
 - (14) Assist handle (See 09-17-104 ASSIST HANDLE REMOVAL/INSTALLATION.)
 - (15) Headliner (See 09-17-107 HEADLINER REMOVAL/INSTALLATION.)

09-18

LIGHTING SYSTEMS

4. Pull in the direction of the arrows and detach the tabs.
5. Disconnect the connector.
6. Remove the interior light.
7. Install in the reverse order of removal.

Note

- After installing the wiring harness, reinforce the urethane that was cut when removing the valve housing with vinyl tape.

CARGO COMPARTMENT LIGHT REMOVAL/INSTALLATION

id091800801700

1. Disconnect the negative battery cable.
2. Insert a tape-wrapped fastener remover into the service hole and pry with the screwdriver in the direction shown by the arrow to remove the cargo compartment light.

3. Disconnect the connector.
4. Remove the cargo compartment light.
5. Install in the reverse order of removal.

LIGHTING SYSTEMS

CARGO COMPARTMENT LIGHT BULB REMOVAL/INSTALLATION

id091800807800

1. Disconnect the negative battery cable.
2. Remove the cargo compartment light. (See 09-18-70 CARGO COMPARTMENT LIGHT REMOVAL/INSTALLATION.)
3. Remove the cargo compartment light bulb.
4. Install in the reverse order of removal.

am3uuw0000317

CARGO COMPARTMENT LIGHT INSPECTION

id091800801800

1. Disconnect the negative battery cable.
2. Remove the cargo compartment light. (See 09-18-70 CARGO COMPARTMENT LIGHT REMOVAL/INSTALLATION.)
3. Verify that the continuity between the cargo compartment light terminals is as indicated in the table.

○—○ : Bulb

Switch position	Terminal	
	A	B
DOOR	○—○	○—○
OFF	○—○	○—○

am3uuw00003600

- If not as indicated in the table, replace the cargo compartment light.

am3uuw0000540

09-18

TRUNK COMPARTMENT LIGHT BULB REMOVAL/INSTALLATION

id091800806200

1. Disconnect the negative battery cable.
2. Disengage the tabs by pressing both ends of the lens in the directions indicated by the arrows and remove the lens.
3. Remove the trunk compartment light bulb.
4. Install in the reverse order of removal.

am3uuw0000540

LIGHTING SYSTEMS

IGNITION KEY ILLUMINATION REMOVAL/INSTALLATION

id091800814800

1. Disconnect the negative battery cable.
2. Remove the column cover upper. (See 09-17-22 COLUMN COVER REMOVAL/INSTALLATION.)
3. Remove the ignition key illumination bulb.
4. Install in the reverse order of removal.

am3uuw0000316

GLOVE COMPARTMENT LIGHT BULB REMOVAL/INSTALLATION

id091800801900

1. Disconnect the negative battery cable.
2. Remove the following parts:
 - (1) Passenger-side front scuff plate (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
 - (2) Passenger-side front side trim (See 09-17-53 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
 - (3) Dashboard under cover (See 09-17-39 DASHBOARD UNDER COVER REMOVAL/INSTALLATION.)
 - (4) Glove compartment (See 09-17-33 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
 - (5) Passenger-side lower panel (See 09-17-27 LOWER PANEL REMOVAL/INSTALLATION.)
3. Remove the glove compartment bulb.
4. Install in the reverse order of removal.

am3uuw0000427

LIGHTING SYSTEMS

VANITY MIRROR ILLUMINATION INSPECTION

id091800808500

1. Disconnect the negative battery cable.
2. Remove the sunvisor. (See 09-17-106 SUNVISOR REMOVAL/INSTALLATION.)
3. Verify that the continuity between the vanity mirror illumination terminals is as indicated in the table.

○—⊕—○ : Bulb

Vanity mirror cover condition	Terminal	
	A	B
OPEN	○—⊕—○	
CLOSED		

am8rrw00001374

- If not as indicated in the table, inspect the bulb. If there is no malfunction, replace the sunvisor.

ampjiw00002957

VANITY MIRROR ILLUMINATION BULB REMOVAL/INSTALLATION

id091800808200

1. Disconnect the negative battery cable.
2. Insert a tape-wrapped fastener remover into the service hole, and pry it in the direction indicated by the arrow to remove the lens.

am3uuw0000244

3. Remove the vanity mirror illumination bulb.
4. Install in the reverse order of removal.

id091900800700

1. Remove in the order indicated in the table.

1	Cap
2	Nut
3	Windshield wiper arm (See 09-19-4 Windshield Wiper Arm Installation Note.)
4	Windshield wiper blade
5	Rubber brush
6	Backing plate

2. Install in the reverse order of removal.
3. Adjust the windshield wiper arm and blade. (See 09-19-4 WINDSHIELD WIPER ARM AND BLADE ADJUSTMENT.)

am3uuw0000276

WIPER/WASHER SYSTEM

Windshield Wiper Arm Installation Note

1. Clean the windshield wiper arm connector shafts using a wire brush before installing the windshield wiper arms.

acxuuw0001609

WINDSHIELD WIPER ARM AND BLADE ADJUSTMENT

id091900800800

1. Operate the windshield wipers, and then turn off the windshield wiper motor to set the wipers in the park position.
2. Slide the serrated connecting part and adjust the windshield wiper arm and blade so that its end is aligned with the hollowed mark in the ceramic coating.

am3uuw0000276

Note

- If the hollowed mark in the ceramic coating cannot be located, measure the distance from the cowl grille end line, and adjust the windshield wiper arm and blade.

am3uuw0000319

WIPER/WASHER SYSTEM

WINDSHIELD WIPER MOTOR REMOVAL/INSTALLATION

id091900800900

1. Disconnect the negative battery cable.
2. Remove the following parts:
 - (1) Windshield wiper arm and blade (See 09-19-3 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
 - (2) Front fender molding (See 09-16-4 COWL GRILLE REMOVAL/INSTALLATION.)
 - (3) Cowl grille (See 09-16-4 COWL GRILLE REMOVAL/INSTALLATION.)
 - (4) Center cowl grille No1, No2
3. Stick masking tape on the figure.

Caution

- If the front wiper motor is removed without affixing protective tape to the windshield, the motor may contact the windshield and damage it. Always affix protective tape along the edge of the windshield when removing the front wiper motor.
- Stick masking tape on the position to show in the figure of the windshield.

4. Remove the bolts.
5. Disconnect the windshield wiper motor connector.

am3uuw0000451

6. Remove the windshield wiper motor. (See 09-19-6 Windshield Wiper Motor Remove Note.)
7. Install in the reverse order of removal.

am3uuw0000479

09-19

WIPER/WASHER SYSTEM

Windshield Wiper Motor Remove Note

1. Slide the windshield wiper motor in the direction of the left front fender and pull it out from between the windshield and the cowl panel.

am3uuw0000465

2. Be careful when removing the windshield wiper motor so that it does not strike the windshield. If the windshield wiper motor hits the windshield, it could cause damage to the windshield.

am3uuw0000465

WIPER/WASHER SYSTEM

WINDSHIELD WIPER MOTOR DISASSEMBLY/ASSEMBLY

id091900801000

1. Disassemble in the order indicated in the table.
2. Assemble in the reverse order of disassembly.

am3uuw0000332

09-19

1	Wiper link No.1 (See 09-19-8 Ball Joint Assembly Note.)
2	Wiper link No.2 (See 09-19-8 Ball Joint Assembly Note.)
3	Nut
4	Washer
5	Crank arm

6	Bolt
7	Windshield wiper motor
8	Main link (See 09-19-8 Ball Joint Assembly Note.)
9	Windshield wiper motor cover No.1
10	Windshield wiper motor cover No.2

WIPER/WASHER SYSTEM

Windshield Wiper Motor Assembly Note

1. Connect the windshield wiper motor to the vehicle wiring harness connector, operate the windshield wipers, and then stop them at the auto-stop position.
2. Disconnect the windshield wiper motor connector.
3. Install the windshield wiper motor to the main link and tighten the bolt.
4. Assemble the crank arm such that the crank arm and main link markings are aligned as shown in the figure.

am3uuw0000619

5. Install the washer and nut.

Ball Joint Assembly Note

1. Use a clean cloth to protect the link, and squeeze using pliers.

am3uuw0000487

WIPER/WASHER SYSTEM

id091900801100

WINDSHIELD WIPER MOTOR INSPECTION

1. Disconnect the negative battery cable.
2. Remove the following parts:
 - (1) Windshield wiper arm and blade (See 09-19-3 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
 - (2) Front fender molding (See 09-16-4 COWL GRILLE REMOVAL/INSTALLATION.)
 - (3) Cowl grille (See 09-16-4 COWL GRILLE REMOVAL/INSTALLATION.)
 - (4) Center cowl grille No.1, No.2
 - (5) Cowl panel (See 09-10-45 COWL PANEL REMOVAL/INSTALLATION.)
 - (6) Windshield wiper motor (See 09-19-5 WINDSHIELD WIPER MOTOR REMOVAL/INSTALLATION.)

3. Connect battery positive voltage to windshield wiper motor terminal A or B, and ground to terminal D, then verify that the windshield wipers operate as shown in the table.

- If the windshield wipers do not operate as indicated in the table, replace the windshield wiper motor.

Terminal connected to battery positive voltage	Operation condition
A	LO
B	HI

am3uuw0000529

4. Disconnect battery positive voltage from the motor terminal A while the wipers are operating.
5. Verify that the wipers do not stop in the park position.
6. Short between the motor terminals A and C, and connect battery positive voltage to the motor terminal E.
7. Verify that the wipers operate at low speed again, then stop in the park position.
 - If there is any malfunction, replace the windshield wiper motor.

WASHER TANK REMOVAL/INSTALLATION

id091900801700

Vehicles with the washer fluid-level sensor

1. Disconnect the negative battery cable.
2. Remove the front bumper. (See 09-10-16 FRONT BUMPER REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.

am3uuw0000430

1	Washer motor connector
2	Windshield washer hose
3	Rear washer hose (Vehicles with rear washer system)
4	Washer fluid-level sensor connector

5	Nut
6	Bolt
7	Washer tank

WIPER/WASHER SYSTEM

Vehicles without the washer fluid-level sensor

1. Disconnect the negative battery cable.
2. Remove the front bumper. (See 09-10-16 FRONT BUMPER REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.

am3uuw0000430

1	Washer motor connector
2	Windshield washer hose
3	Rear washer hose (Vehicles with rear washer system)

4	Nut
5	Bolt
6	Washer tank

09-19

WIPER/WASHER SYSTEM

WASHER MOTOR REMOVAL/INSTALLATION

id091900805000

Vehicles Without Rear Washer System

1. Disconnect the negative battery cable.
2. Remove the front mudguard (RH). (See 09-16-17 FRONT MUDGUARD REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.

1	Windshield washer hose
2	Washer motor connector
3	Washer motor
4	Grommet

4. Install in the reverse order of removal.

am3uuw0000302

Vehicles With Rear Washer System

1. Disconnect the negative battery cable.
2. Remove the front mudguard (RH). (See 09-16-17 FRONT MUDGUARD REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.

1	Windshield washer hose
2	Rear washer hose
3	Washer motor connector
4	Washer motor
5	Grommet

4. Install in the reverse order of removal.

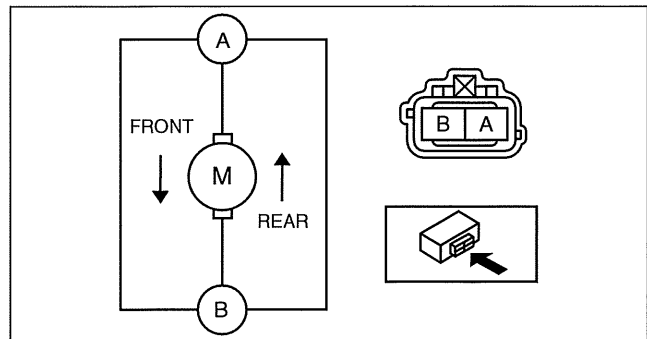

am3uuw0000302

WASHER MOTOR INSPECTION

id091900805100

1. Disconnect the negative battery cable.
2. Remove the front mudguard (RH). (See 09-16-17 FRONT MUDGUARD REMOVAL/INSTALLATION.)
3. Disconnect the washer motor connector.
4. After connecting washer motor terminal A to the positive battery terminal, and terminal B to the negative battery terminal, verify that washer fluid flows to the windshield washer hose.
 - If there is any malfunction, replace the washer motor.
5. After connecting washer motor terminal B to the positive battery terminal, and terminal A to the negative battery terminal, verify that washer fluid flows to the rear washer hose. (Vehicles with rear washer system.)
 - If there is any malfunction, replace the washer motor.

am3uuw0000429

WIPER/WASHER SYSTEM

WINDSHIELD WASHER NOZZLE REMOVAL/INSTALLATION

id091900802000

1. Disconnect the negative battery cable.
2. Remove the following parts:
 - (1) Windshield wiper arm and blade (See 09-19-3 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
 - (2) Front fender molding
 - (3) Cowl grille (See 09-16-4 COWL GRILLE REMOVAL/INSTALLATION.)
3. Remove the windshield washer hose from the windshield washer nozzle.
4. Squeeze the tabs of the windshield washer nozzle.
5. Pull the windshield washer nozzle out to remove it.
6. Install in the reverse order of removal.

am3uuw0000452

WINDSHIELD WASHER HOSE REMOVAL/INSTALLATION

id091900802100

1. Disconnect the negative battery cable.
2. Remove the following parts:
 - (1) Windshield wiper arm and blade (See 09-19-3 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
 - (2) Front fender molding (See 09-16-4 COWL GRILLE REMOVAL/INSTALLATION.)
 - (3) Cowl grille (See 09-16-4 COWL GRILLE REMOVAL/INSTALLATION.)
 - (4) Front mudguard (RH) (See 09-16-17 FRONT MUDGUARD REMOVAL/INSTALLATION.)
3. Disconnect joint pipes, then remove windshield washer hose B, C and D.
4. Remove the windshield washer hose B.
5. Disconnect windshield washer hose C from the washer nozzle.
6. Remove the windshield washer hose C.
7. Disconnect windshield washer hose D from the washer nozzle.

09-19

WIPER/WASHER SYSTEM

8. Remove the windshield washer hose D.

am3uuw0000430

9. Disconnect the windshield washer hose A from the windshield washer motor.

10. Remove the clip A and B.

11. Disconnect joint pipes, then remove windshield washer hose A.

12. Remove the windshield washer hose A.

am3uuw0000431

13. Install in the reverse order of removal.

WIPER/WASHER SYSTEM

REAR WIPER ARM AND BLADE REMOVAL/INSTALLATION

id091900801200

1. Remove in the order indicated in the table.

1	Cap
2	Nut
3	Rear wiper arm (See 09-19-15 Rear Wiper Arm Installation Note.)
4	Rear wiper blade
5	Rubber brush
6	Backing plate

2. Install in the reverse order of removal.
3. Adjust the rear wiper arm and blade. (See 09-19-15 REAR WIPER ARM AND BLADE ADJUSTMENT.)

am3uuw0000457

Rear Wiper Arm Installation Note

1. Clean the rear wiper arm connector shaft using a wire brush before installing the rear wiper arm.

acxuuw00001784

REAR WIPER ARM AND BLADE ADJUSTMENT

id091900801300

1. Turn off the rear wiper switch while operating the rear wiper motor, and then stop the rear wiper at the auto-stop position.
2. Set the rear wiper arm onto the ceramic end line.

am3uuw0000300

09-19

WIPER/WASHER SYSTEM

REAR WIPER MOTOR REMOVAL/INSTALLATION

id091900801400

1. Disconnect the negative battery cable.
2. Remove the following parts:
 - (1) Rear wiper arm and blade (See 09-19-15 REAR WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
 - (2) Liftgate upper trim (See 09-17-97 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)
 - (3) Liftgate side trim (See 09-17-99 LIFTGATE SIDE TRIM REMOVAL/INSTALLATION.)
 - (4) Liftgate lower trim (See 09-17-102 LIFTGATE LOWER TRIM REMOVAL/INSTALLATION.)
3. Disconnect the rear wiper motor connector.

am3uuw0000314

4. Remove the bolts, then remove the rear wiper motor.
5. Remove the outer bushing.
6. Install in the reverse order of removal.

REAR WIPER MOTOR INSPECTION

id091900801500

1. Disconnect the negative battery cable.
2. Remove the following parts:
 - (1) Rear wiper arm and blade (See 09-19-15 REAR WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
 - (2) Liftgate upper trim (See 09-17-97 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)
 - (3) Liftgate side trim (See 09-17-99 LIFTGATE SIDE TRIM REMOVAL/INSTALLATION.)
 - (4) Liftgate lower trim (See 09-17-102 LIFTGATE LOWER TRIM REMOVAL/INSTALLATION.)
3. Disconnect the rear wiper motor connector.
4. Apply battery positive voltage to rear wiper motor connector terminal B, and connect terminals A and C to the ground.
5. Verify that the rear wiper motor operates.
 - If there is any malfunction, replace the rear wiper motor.
6. Disconnect the ground to the terminal A while the rear wiper is operating.
7. Verify that the rear wiper stops in the park position.
 - If there is any malfunction, replace the rear wiper motor.

WIPER/WASHER SYSTEM

REAR WASHER NOZZLE REMOVAL/INSTALLATION

id091900802200

1. Disconnect the negative battery cable.
2. Remove the following parts:
 - (1) Liftgate upper trim (See 09-17-97 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)
 - (2) Rear spoiler (See 09-16-21 REAR SPOILER REMOVAL/INSTALLATION.)
 - (3) High-mount brake light (See 09-18-42 HIGH-MOUNT BRAKE LIGHT REMOVAL/INSTALLATION.)
3. Disconnect the rear washer hose.
4. Press the tabs and remove the rear washer nozzle.
5. Install in the reverse order of removal.
6. Adjust the rear washer nozzle. (See 09-19-17 REAR WASHER NOZZLE ADJUSTMENT.)

am3uuw0000328

REAR WASHER NOZZLE ADJUSTMENT

id091900802300

1. Insert a needle or an equivalent tool into the spray hole of the rear washer nozzle and adjust the nozzle direction as shown.

am3uuw0000300

09-19

WIPER/WASHER SYSTEM

REAR WASHER HOSE REMOVAL/INSTALLATION

id091900801600

1. Disconnect the negative battery cable.
2. Remove the front mudguard (RH). (See 09-16-17 FRONT MUDGUARD REMOVAL/INSTALLATION.)
3. Disconnect rear washer hose A from the washer motor.

am3uuw0000432

4. Remove the rear washer hose A from clip A, B, C, D, E, F, G.
5. Disconnect joint pipes and remove rear washer hose A.
6. Partially peel back the seaming welts.
7. Remove the following parts:
 - (1) Sunroof seaming welt (vehicles with sunroof only)
 - (2) A-pillar trims (See 09-17-50 A-PILLAR TRIM REMOVAL/INSTALLATION.)
 - (3) Front scuff plate (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
 - (4) Rear scuff plate (See 09-17-68 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
 - (5) B-pillar lower trim (See 09-17-59 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
 - (6) Upper anchor of the front seat belt (See 08-11-3 FRONT SEAT BELT REMOVAL/INSTALLATION.)
 - (7) B-pillar upper trim (See 09-17-61 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
 - (8) Rear seat cushion (See 09-13-31 REAR SEAT BACK REMOVAL/INSTALLATION.)
 - (9) Tire house trim (See 09-17-54 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
 - (10) Trunk side upper trim (See 09-17-78 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION.)
 - (11) C-pillar trim (See 09-17-63 C-PILLAR TRIM REMOVAL/INSTALLATION.)
 - (12) Map light (See 09-18-67 MAP LIGHT REMOVAL/INSTALLATION.)
 - (13) Interior light (See 09-18-69 INTERIOR LIGHT REMOVAL/INSTALLATION.)
 - (14) Sunvisor (See 09-17-106 SUNVISOR REMOVAL/INSTALLATION.)

 - (16) Headliner (See 09-17-107 HEADLINER REMOVAL/INSTALLATION.)

WIPER/WASHER SYSTEM

8. Peel off the tape and remove rear washer hose B.

09-19

am3uuw0000510

9. Remove the liftgate upper trim. (See 09-17-97 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)

WIPER/WASHER SYSTEM

10. Partially peel back the grommet.

am3uuw0000621

11. Remove the bracket in the direction of the arrow (2) shown in the figure while pressing the bracket tabs in the direction of the arrow (1).

am3uuw0000621

WIPER/WASHER SYSTEM

12. Remove the rear washer hose C from clip H, I, J, K.

am3uuw0000429

09-19

13. Disconnect joint pipes and remove rear washer hose C.
14. Disconnect check valve and remove rear washer hose C.
15. Remove rear washer hose D from the rear washer nozzle.
16. Install in the reverse order of removal.

WIPER AND WASHER SWITCH REMOVAL/INSTALLATION

id091900800200

1. Disconnect the negative battery cable.
2. Remove the Column cover (See 09-17-22 COLUMN COVER REMOVAL/INSTALLATION.)
3. Disconnect the wiper and washer switch connector.
4. Remove the screws.
5. Remove the wiper and washer switch.
6. Install in the reverse order of removal.

am3uuw0000276

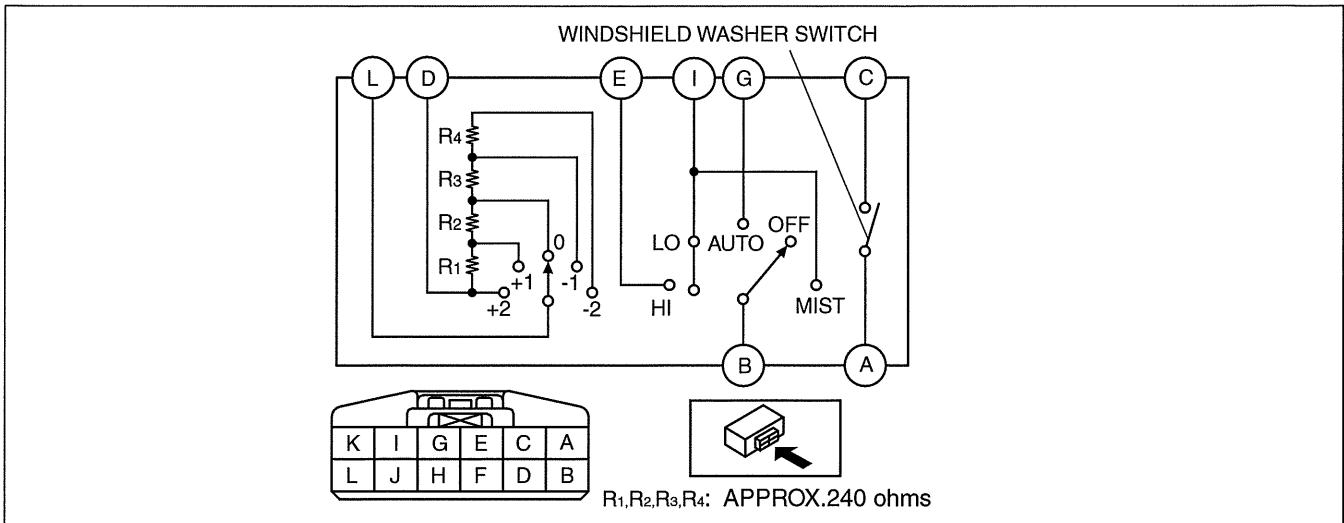

WIPER/WASHER SYSTEM

id091900800300

WINDSHIELD WIPER AND WASHER SWITCH INSPECTION

1. Disconnect the negative battery cable.
2. Remove the following parts:
 - (1) Front scuff plate (Driver's side) (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
 - (2) Front side trim (Driver's side) (See 09-17-53 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
 - (3) Hood release lever (See 09-14-15 HOOD LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
 - (4) Upper panel (See 09-17-40 UPPER PANEL REMOVAL/INSTALLATION.)
 - (5) Shift knob (MTX) (See 05-16-2 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION)
 - (6) Selector lever knob (ATX) (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)
 - (7) Shift panel (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION.)
 - (8) Side wall (See 09-17-37 SIDE WALL REMOVAL/INSTALLATION.)
 - (9) Console (See 09-17-45 CONSOLE REMOVAL/INSTALLATION.)
 - (10) Lower panel (See 09-17-27 LOWER PANEL REMOVAL/INSTALLATION.)
 - (11) Column cover (See 09-17-22 COLUMN COVER REMOVAL/INSTALLATION.)
 - (12) Wiper and washer switch (See 09-19-21 WIPER AND WASHER SWITCH REMOVAL/INSTALLATION.)
3. Verify that the resistance and continuity between the windshield wiper and washer switch terminals as indicated in the table.
 - If the continuity is not as indicated in the table, or if the resistance is not within the specification, replace the windshield wiper and washer switch.

AUTO LIGHT/WIPER CONTROL MODULE REMOVAL/INSTALLATION

id091900809000

Note

- Auto wiper system are integrated with the auto light/wiper control module.

1. Disconnect the negative battery cable.
2. Remove the glove compartment. (See 09-17-39 DASHBOARD UNDER COVER REMOVAL/INSTALLATION.)
3. Remove the auto light/wiper control module. (See 09-18-64 AUTO LIGHT/WIPER CONTROL MODULE REMOVAL/INSTALLATION.)
4. Install in the reverse order of removal.

AUTO LIGHT/WIPER CONTROL MODULE INSPECTION

id091900809100

Note

- Auto wiper system are integrated with the auto light/wiper control module.

1. Auto light/wiper control module inspection. (See 09-18-65 AUTO LIGHT/WIPER CONTROL MODULE INSPECTION.)

RAIN SENSOR REMOVAL/INSTALLATION

id091900800500

Caution

- The reflection rate at the moment the ignition switch is first turned to the ON position after replacing the rain sensor with a new one is stored as the condition indicating no precipitation on the windshield. Therefore, remove water and dirt from the windshield before turning on the ignition switch.
- Perform the rain sensor initialization in the following cases: (See 09-19-28 RAIN SENSOR REINITIALIZATION SETTING.)
 - The windshield is replaced and the rain sensor is reused
 - The auto wiper system operates incorrectly

1. Disconnect the negative battery cable.
2. Insert a tape-wrapped flathead screwdriver into the notch on the rain sensor cover, turn it in the direction of the arrow shown in the figure, and detach the tab A.

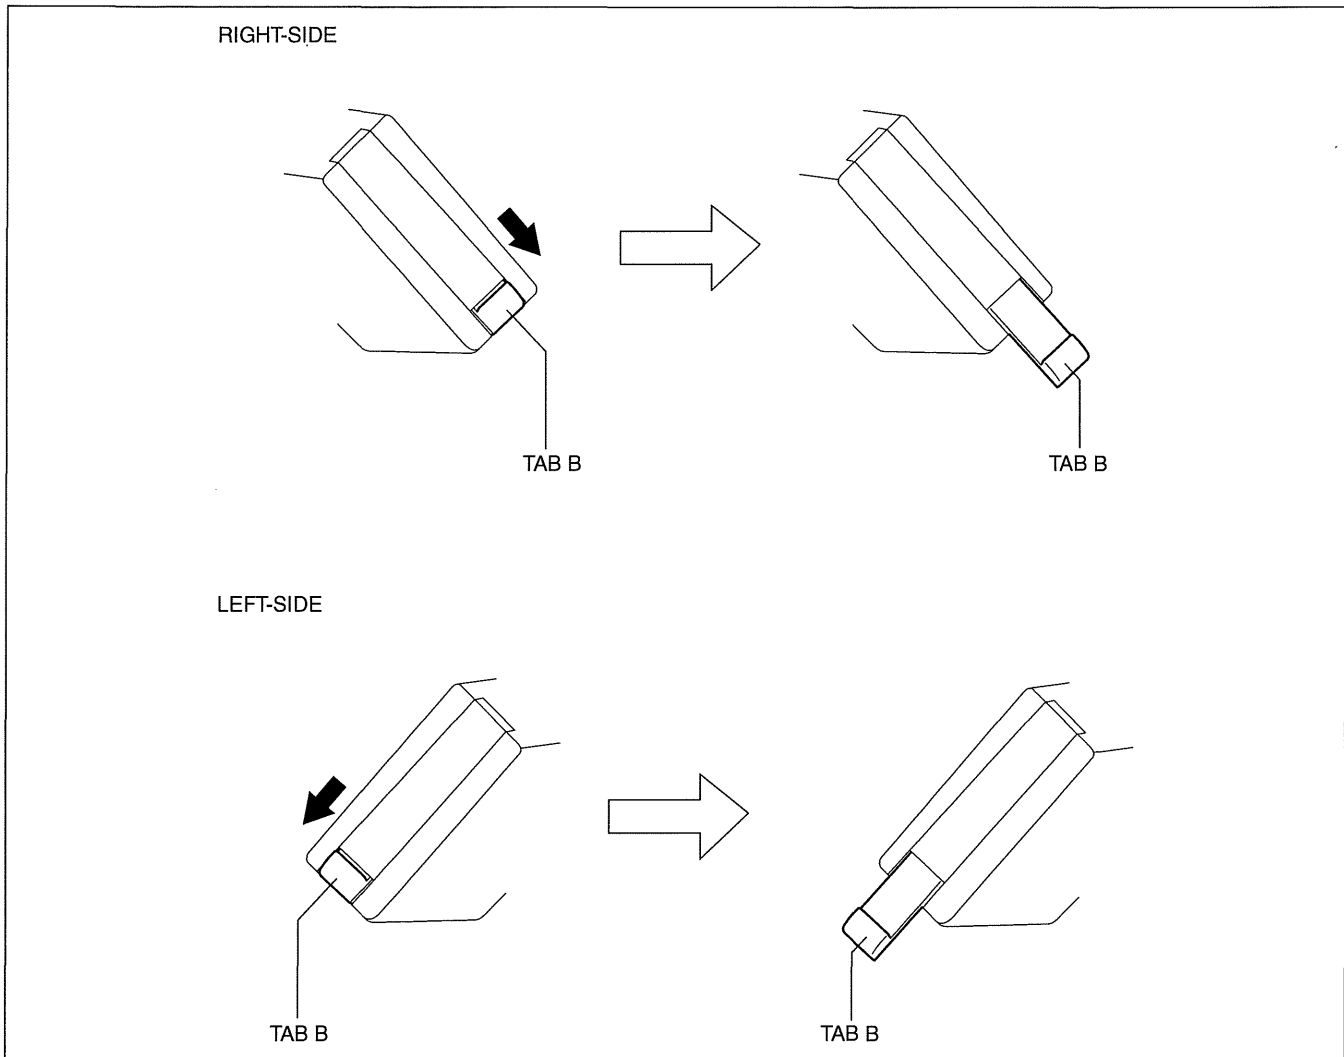

09-19

WIPER/WASHER SYSTEM

3. Remove the rain sensor cover in the direction shown in the figure.
4. Slide the tab B in the direction of the arrow and remove the rain sensor while supporting it with the hand.

adejjw00003422

am2zzw0000262

WIPER/WASHER SYSTEM

5. Remove the rain sensor in the direction of the arrow shown in the figure.

am3zzw0000818

6. Disconnect the rain sensor connector.

am3zzw0000818

7. Install in the reverse order of removal.

09-19

WIPER/WASHER SYSTEM

RAIN SENSOR REINITIALIZATION SETTING

id091900810000

Caution

- **If the initialization is performed again with water or dirt on the windshield, the rain sensor may not operate normally. Before performing the rain sensor initialization again, remove water and dirt from the windshield.**

Note

- When the ignition switch is first turned on after replacing the rain sensor with a new one, the windshield condition is verified and the initial setting is stored.
- Perform the initial setting again in the following cases:
 - The windshield is replaced and the rain sensor is reused.
 - The auto wiper system operates incorrectly.

1. Remove water and dirt from the windshield surface.
2. Switch the ignition to off.
3. Turn the windshield wiper switch to the AUTO position.
4. Within 10 s after turning the ignition switch to the ON position, turn the windshield wiper switch from the AUTO to the OFF position for five times and return it to the AUTO position. When the initial setting is performed correctly, the windshield wiper operates once at low speed.

Caution

- **If the operation is too fast, the windshield wiper switch position cannot be detected and the initial setting may not be performed. Operate the windshield wiper switch for one cycle (AUTO→OFF→AUTO) per 1 s.**

WIPER/WASHER SYSTEM PERSONALIZATION FEATURES SETTING PROCEDURE

id091900804100

1. Refer to the control system personalization features setting. (See 09-40-17 CONTROL SYSTEM PERSONALIZATION FEATURES SETTING PROCEDURE.)

AUDIO UNIT REMOVAL/INSTALLATION

id092000805500

Caution

- When installing the audio unit, make sure that the wiring harness and antenna feeder are not caught between the unit and dashboard. If the wiring harness or the antenna feeder is caught between the unit and dashboard, it may cause malfunctions.
- Pressing the switch area of the audio unit when installing it could result in a malfunction. Therefore only press the hatched area shown in the figure.

1. Disconnect the negative battery cable.
2. Remove the center panel. (See 09-17-24 CENTER PANEL REMOVAL/INSTALLATION.)

am3uuw000244

3. Remove in the order indicated in the table.

Feeder Line Inspection

1. Remove the center roof antenna. (See 09-20-19 CENTER ROOF ANTENNA REMOVAL/INSTALLATION.)
2. Verify that there is no continuity between the center roof antenna terminals A and C using an ohmmeter.

AM/FM type

AM/FM/SIRIUS type

3. Inspect for continuity between the center roof antenna terminals using an ohmmeter.
 - If not as indicated in the table, replace the center roof antenna.

POWER SYSTEMS PERSONALIZATION FEATURES SETTING PROCEDURE

id092100468500

Note

- Use the IDS (laptop PC) because the PDS (Pocket PC) does not support the POWER SYSTEMS PERSONALIZATION FEATURES SETTING PROCEDURE.

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
 1. Select the "Module Programming".
3. Then, select items from the screen menu in the following order.
 1. Select "Programmable Parameters".
 2. Select "RKE".
4. Select an item name, and then select option.

am3uuw0000359

M-MDS display	Function	Initial setting	Setting content	Control unit
ACC auto off	The function to automatically switch off the ignition after one hour has elapsed since the ignition was switched to ACC can be set to operable or inoperable.	Enabled	Disabled/ Enabled	Keyless control module
Power off mode	The transition pattern in which the ignition position is switched by pressing the push button start can be selected.	Direct	Direct/Stepwise	Keyless control module

FORCED IGNITION ON [WITH ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

fd0921008025z5

Note

- In order to perform a forced ignition ON, the M-MDS is necessary. If the servicing is being done outside of an Authorized Mazda dealership, contact an Authorized Mazda dealership for instructions.
- The forced ignition ON procedure forces a power supply to each part when no power is available even after the ignition switch has been operated. However, the engine cannot be started and the steering cannot be unlocked.
- When performing a forced ignition ON procedure, remove all advanced keys from the vehicle. If an advanced key is left in the vehicle, the forced ignition ON procedure cannot be done.

1. Verify that there are no advanced keys in the vehicle.
2. Get PCM part number from As-built site.
3. Connect the M-MDS to the DLC-2.
4. Manual vehicle identification.
 - When using the IDS (laptop PC)
 1. Select "Manual Vehicle Entry".
 - When using the PDS (Pocket PC)
 1. Select "Vehicle ID button".
 2. Select "keyboard button".
5. Select the "All other" from Vehicle list.
6. Input the PCM part number on the following screen.

STEERING LOCK UNIT INSPECTION [WITH ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM]

id0921008005z5

1. Remove the column cover. (See 09-17-22 COLUMN COVER REMOVAL/INSTALLATION.)
2. Measure each terminal voltage under the measurement condition.
 - If the voltage is not as specified in the terminal voltage table, inspect the parts under "Inspection item(s)".
3. If the system does not work normally even though the inspection items are normal, replace the steering lock unit.

Terminal Voltage Table (Reference)

INSTRUMENT CLUSTER REMOVAL/INSTALLATION

id092200800500

Caution

- When replacing the instrument cluster, the configuration procedure must be performed before removing the instrument cluster. Replacing the instrument cluster without performing the configuration procedure will result in system malfunction.

09-22

1. Perform the instrument cluster configuration when replacing it. (See 09-22-10 INSTRUMENT CLUSTER CONFIGURATION.)
2. Disconnect the negative battery cable.
3. Remove the column cover. (upper) (See 09-17-22 COLUMN COVER REMOVAL/INSTALLATION.)
4. Remove the screws.
5. Pull the instrument cluster outward and remove it

INSTRUMENT CLUSTER INSPECTION

id092200800400

Speedometer

Using a speedometer tester

1. Adjust the tire pressure to the specification.
2. Using a speedometer tester, verify that the tester reading is as indicated in the table below.
3. Verify that the speedometer reading is within the range indicated in the table.
 - If the speedometer does not move or the indication is not within the allowable range, inspect the PCM, ABS HU/CM (with ABS) or DSC HU/CM (with DSC), and related wiring harnesses.
 - If the PCM, ABS HU/CM (with ABS) or DSC HU/CM (with DSC), and related wiring harnesses are normal, replace the instrument cluster.

Speedometer tester indication (km/h)	Allowable range (km/h)	Speedometer tester indication (mph)	Allowable range (mph)
20	17—23	10	9—11
40	36—44	20	18—22
60	54—66	30	27—33
80	72—88	40	36—44
100	90—110	50	45—55
120	108—132	60	54—66
140	126—154	70	63—77

Using the M-MDS

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "DataLogger".
 2. Select "Modules".
 3. Select "IC".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "IC".
 3. Select "DataLogger".
3. Verify that it is displayed according to the table using "SPDMTR".
 - If the speedometer does not move or the indication is not within the allowable range, inspect the related wiring harnesses.
 - If the related wiring harnesses are normal, replace the instrument cluster.

am3uuw0000254

M-MDS display	Instrument cluster display
60 km/h	Speedometer gauge needle moves to approx. 60 km/h
120 km/h	Speedometer gauge needle moves to approx. 120 km/h
Off	Speedometer gauge needle moves to 0 km/h

INSTRUMENTATION/DRIVER INFO.

Tachometer

Caution

- If the engine speed exceeds the allowable range, the engine could be damaged. Therefore, when inspecting the tachometer, do not allow the engine speed to exceed the allowable range indication on the tachometer.

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "DataLogger".
 2. Select "Modules".
 3. Select "IC".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "IC".
 3. Select "DataLogger".
3. Verify that it is displayed according to the table using "TACHOMTR".
 - If the tachometer does not move or the indication is not within the allowable range, inspect the related wiring harnesses.
 - If the related wiring harnesses are normal, replace the instrument cluster.

am3uuw0000254

M-MDS display	Instrument cluster display
3000 RPM	Tachometer gauge needle moves to approx. 3,000 rpm
6000 RPM	Tachometer gauge needle moves to approx. 6,000 rpm
Off	Tachometer gauge needle moves to 0 rpm

09-22

Fuel gauge

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "DataLogger".
 2. Select "Modules".
 3. Select "IC".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "IC".
 3. Select "DataLogger".
3. Verify that it is displayed according to the table using "LCD_SEG".
 - If any of the segments are not displayed, replace the instrument cluster.

am3uuw0000254

am3uuw0000457

INSTRUMENTATION/DRIVER INFO.

Boost gauge

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "DataLogger".
 2. Select "Modules".
 3. Select "IC".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "IC".
 3. Select "DataLogger".
3. Verify that it is displayed according to the table using "LCD_SEG".
 - If any of the segments are not displayed, replace the instrument cluster.

am3uuw0000254

am3uuw0000574

INSTRUMENT CLUSTER CONFIGURATION

id092200800300

Note

- Use the IDS (laptop PC) because the PDS (Pocket PC) does not support the INSTRUMENT CLUSTER CONFIGURATION.

Note

- If all the following conditions are met, the odometer data (total traveled distance) in the previous instrument cluster is automatically transferred to a new instrument cluster during the configuration. If any of the conditions are not met, odometer-data transfer cannot be performed.

Previous instrument cluster

- No malfunction (Configuration data can be read using the M-MDS.)

New instrument cluster

- Odometer display is less than 100 km
- Odometer has no malfunction

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
 1. Select the "Module Programming".
3. Then, select items from the screen menu in the following order.
 1. Select "Programmable Module Installation".
 2. Select "IC".
4. Perform the configuration according to the directions on the screen.
 - If odometer data is to be transferred to a new instrument cluster, perform the following procedure:
 1. Select "Programmable Parameters" from the menu.
 2. Select "Odometer Write", and perform the procedure following the screen.

am3uuw0000262

INSTRUMENTATION/DRIVER INFO.

Note

- During the odometer data writing procedure, As-Built Data (VIN and Vehicle Data) input is requested. Obtain the As-Built Sheet for the vehicle, and input the necessary data.

- Retrieve DTCs by the M-MDS, then verify that there is no DTC present.
 - If a DTC (s) is detected, perform the applicable DTC inspection. (See 09-02E-5 DTC TABLE [INSTRUMENT CLUSTER].)

INSTRUMENTATION/DRIVER INFO. PERSONALIZATION FEATURES SETTING PROCEDURE

id092200889900

Instrument Cluster

Note

- Use the IDS (laptop PC) because the PDS (Pocket PC) does not support the INSTRUMENTATION/DRIVER INFO. PERSONALIZATION FEATURES SETTING PROCEDURE.

- Connect the M-MDS to the DLC-2.
- After the vehicle is identified, select the following items from the initial screen of the M-MDS.
 - Select the "Module Programming".
- Then, select items from the screen menu in the following order.
 - Select "Programmable Parameters".
 - Select "Warning Lamps / Chimes".
- Select an item name, and then select option.

FUEL GAUGE SENDER UNIT REMOVAL/INSTALLATION

id092200801800

Note

- Fuel pump unit cannot disassemble.

FUEL GAUGE SENDER UNIT INSPECTION

id092200801800

- Disconnect the negative battery cable.
- Remove the rear seat cushion. (See 09-13-37 REAR SEAT CUSHION REMOVAL/INSTALLATION.)
- Remove the fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].) (See 01-14B-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [L3 WITH TC].)
- Move the float to the topmost and bottommost positions, and verify that the resistance between terminals B and D of the fuel gauge sender unit and the position of the float are as shown in the figure.

am3uuw0000261

- If they are not as shown in the figure, replace the fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5]) (See 01-14B-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [L3 WITH TC].)

OIL PRESSURE SWITCH INSPECTION

id092200801200

- Verify that the oil pressure warning light illuminates when the ignition is switched to ON.
- Verify that the oil pressure warning light goes out when the engine is started.
 - If the oil pressure warning light does not illuminate or remains illuminated, inspect the related wiring harness.
 - If the related wiring harness are normal, inspect the oil pressure. (See 01-11A-5 OIL PRESSURE INSPECTION [LF, L5].) (See 01-11B-4 OIL PRESSURE INSPECTION [L3 WITH TC].)
 - If the oil pressure is normal, replace the oil pressure switch.

INSTRUMENTATION/DRIVER INFO.

HORN REMOVAL/INSTALLATION

id092200800900

1. Disconnect the negative battery cable.
2. Remove the front bumper. (See 09-10-16 FRONT BUMPER REMOVAL/INSTALLATION.)
3. Disconnect the connector.
4. Remove the bolt.
5. Remove the horn.
6. Install in the reverse order of removal.

am3uuw0000259

INFORMATION DISPLAY REMOVAL/INSTALLATION

id092200801400

1. Disconnect the negative battery cable.
2. Remove the following parts:
 - (1) Upper column cover (See 09-17-22 COLUMN COVER REMOVAL/INSTALLATION.)
 - (2) Instrument cluster (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
 - (3) Center panel (See 09-17-24 CENTER PANEL REMOVAL/INSTALLATION.)
 - (4) Audio unit (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
 - (5) Center cover (See 09-17-19 CENTER COVER REMOVAL/INSTALLATION.)
 - (6) Dashboard upper panel (See 09-17-14 DASHBOARD UPPER PANEL REMOVAL/INSTALLATION.)
 - (7) Hole cover (See 09-17-25 HOLE COVER REMOVAL/INSTALLATION.)
3. Remove the screws and wiring harness clip.
4. Remove the information display.

am3uuw0000463

5. Disconnect the connector.
6. Install in the reverse order of removal.

am3uuw0000501

MULTI INFORMATION DISPLAY REMOVAL/INSTALLATION

id092200968600

1. Disconnect the negative battery cable.
2. Remove the following parts:
 - (1) Upper column cover (See 09-17-22 COLUMN COVER REMOVAL/INSTALLATION.)
 - (2) Instrument cluster (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
 - (3) Center panel (See 09-17-24 CENTER PANEL REMOVAL/INSTALLATION.)
 - (4) Audio unit (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
 - (5) Center cover (See 09-17-19 CENTER COVER REMOVAL/INSTALLATION.)
 - (6) Dashboard upper panel (See 09-17-14 DASHBOARD UPPER PANEL REMOVAL/INSTALLATION.)
 - (7) GPS antenna (with car-navigation system) (See 09-20-42 GPS ANTENNA REMOVAL/INSTALLATION.)
 - (8) Hole cover (See 09-17-25 HOLE COVER REMOVAL/INSTALLATION.)
3. Remove the wiring harness clip.
4. Remove the screws.
5. Pull the multi information display outward and remove it

am3uuw0000463

6. Disconnect the connector and clips.
7. Remove the GPS antenna feeder.

am3uuw0000497

8. Disconnect the connector A and B.
9. Remove the multi information display.

am3uuw0000497

INSTRUMENTATION/DRIVER INFO.

MULTI INFORMATION DISPLAY INSPECTION

id092200261600

1. Refer to INFORMATION DISPLAY INPUT/OUTPUT CHECK MODE to perform multi information display inspection. (See 09-22-14 INFORMATION DISPLAY INPUT/OUTPUT CHECK MODE.)

MULTI INFORMATION DISPLAY CONFIGURATION

id092200196500

Note

- Use the IDS (laptop PC) because the PDS (Pocket PC) does not support the MULTI INFORMATION DISPLAY CONFIGURATION.

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
 1. Select the "Module Programming".
3. Then, select items from the screen menu in the following order.
 1. Select "Programmable Module Installation".
 2. Select "MID".
4. Perform the configuration according to the directions on the screen.
5. Retrieve DTCs by the M-MDS, then verify that there is no DTC present.
 - If a DTC (s) is detected, perform the applicable DTC inspection. (See 09-02J-4 DTC TABLE [MULTI INFORMATION DISPLAY].)

am3uuw0000262

MULTI INFORMATION DISPLAY MAINTENANCE MONITOR OPERATION PROCEDURE

id092200651600

09-22

- The maintenance monitor displays a notification when a tire rotation or periodic inspection period approaches to inform the driver.
- The notification timing can be performed according to either the remaining travel distance or remaining days by performing the following procedure:
 - Notification timing setting method
 - Reset method
 - Notification display ON/OFF setting method
- Remaining distance and number of days information is not erased even if the battery is disconnected.
- If the multi information display is repaired or replaced, it is possible that the remaining distance and number of days information will be erased.

Notification Timing Setting Method

Caution

- **Because the time information is reset after the negative battery cable is disconnected, the regular inspection period cannot be set using days. If the time information is reset, move the vehicle outdoors where reception of time information via GPS is possible.**
- **After verifying that the time is displayed on the multi information display, perform the day-setting procedure for the regular inspection period.**
- **Do not place objects around the GPS antenna, otherwise the GPS signal cannot be received.**

1. Press the INFO SWITCH to display the SETTINGS menu.
2. When the MAINTENANCE menu is displayed, press the ENTER switch.
3. Select TIRE ROTATION or SERVICE DUE and press the ENTER switch.
4. Select SET and press the ENTER switch.

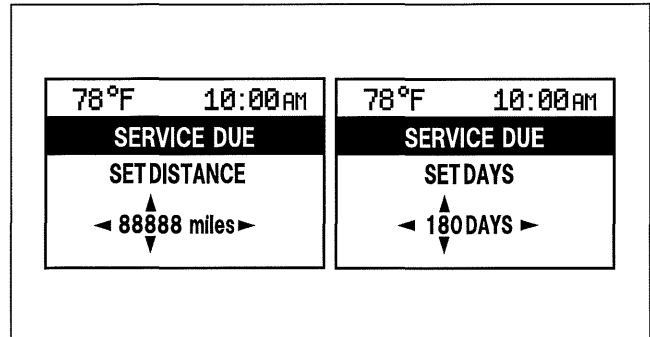

am3uuw0000509

INSTRUMENTATION/DRIVER INFO.

5. If SERVICE DUE is selected, select either DISTANCE or DAYS and press the ENTER switch.

am3uuw0000509

am3uuw0000509

6. If TIRE ROTATION is selected, the SET DISTANCE screen is displayed.
7. The screen for setting the next distance or days to maintenance is displayed.
 - The initial setting corresponding to the maintenance schedule is displayed. (except Puerto Rico)
8. To change the set value, operate the up/down switch and change the setting.
9. Press the ENTER switch.

am3uuw0000509

Reset Method

Note

- Performed after a tire rotation or periodic inspection has been completed, or when you want to reset a value.
- After resetting, a notification display is performed when the next maintenance period approaches.

1. Set each maintenance period according to the "Notification Timing Setting Method".

Notification Display ON/OFF Setting Method

1. Press the INFO SWITCH to display the SETTINGS menu.
2. When the MAINTENANCE menu displays, press the ENTER switch.
3. Select the item you want to start or cancel and press the ENTER switch.
4. Select SET or OFF and press the ENTER switch.
 - SET: Starts notification display
 - OFF: Cancel notification display

INSTRUMENTATION/DRIVER INFO.

CLOCK SWITCH REMOVAL/INSTALLATION

id092200888900

1. Remove the clock switch. (See 09-18-60 HAZARD WARNING SWITCH REMOVAL/INSTALLATION.)

CLOCK SWITCH INSPECTION

id092200889000

Note

- Clock switch built with the hazard warning switch.

1. Disconnect the negative battery cable.
2. Remove the clock switch. (See 09-18-60 HAZARD WARNING SWITCH REMOVAL/INSTALLATION.)
3. Verify resistance between the clock switch terminals.

- If the resistance is not as specified, replace the clock switch.

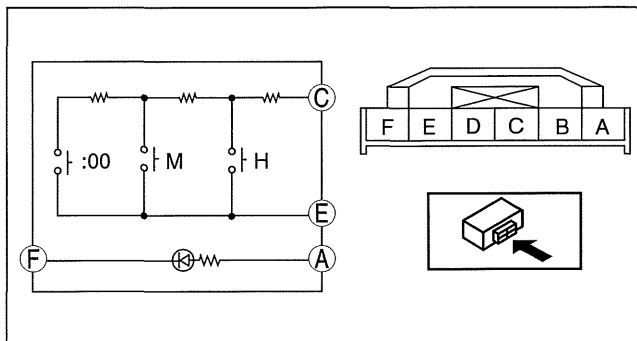

○——○ Resistance

Switch Position	Terminal	
	C	E
H	○——○	
M		
:00		
Off		

am3uuw00003002

Between the terminal C—E resistance

Switch position	Resistance (ohm)
H	48.45—53.55
M	86.45—95.55
:00	142.5—157.5

am3uuw00002995

4. Connect the positive battery to the clock switch terminal A, the negative battery to the clock switch terminal F.
5. Verify the LED illuminates.
 - If there is any malfunction, replace the clock switch.

BODY CONTROL MODULE (BCM) REMOVAL/INSTALLATION

id094000800400

Caution

- When replacing the BCM, the configuration procedure must be performed before removing the BCM. Replacing the BCM without performing the configuration procedure will result in system malfunction.

ATX

1. Perform the BCM configuration when replacing it. (See 09-40-16 BODY CONTROL MODULE (BCM) CONFIGURATION.)
2. Disconnect the negative battery cable.
3. Remove the following parts:
 - (1) Front scuff plate (LH) (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
 - (2) Front side trim (LH) (See 09-17-53 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
 - (3) Upper panel (See 09-17-40 UPPER PANEL REMOVAL/INSTALLATION.)
 - (4) Selector lever knob (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)
 - (5) Shift panel (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION.)
 - (6) Side wall (See 09-17-37 SIDE WALL REMOVAL/INSTALLATION.)
 - (7) Console (See 09-17-45 CONSOLE REMOVAL/INSTALLATION.)
4. Set the hood release lever out of the way. (See 09-14-15 HOOD LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
5. Remove the lower panel. (driver-side) (See 09-17-27 LOWER PANEL REMOVAL/INSTALLATION.)
6. Remove the nut shown in the figure.

am3uuw0000471

7. Pry off the lock device of the clip while pressing the tab in the position shown in the figure.

am3uuw0000464

8. Rotate the clip in the direction of the arrow shown in the figure.

am3uuw0000558

CONTROL SYSTEM

9. Remove the clip by pulling it in the direction of the arrow shown in the figure.

am3uuw000448

10. Disconnect the connector shown in the figure.

am3uuw000449

11. While pressing the tab shown in the figure, pull the bracket in the direction of the arrow and remove it.
12. Remove the BCM.
13. Install in the reverse order of removal.

am3uuw000449

CONTROL SYSTEM

BODY CONTROL MODULE (BCM) INSPECTION

id094000800300

1. Remove the following parts:
 - (1) Front scuff plate (LH) (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
 - (2) Front side trim (LH) (See 09-17-53 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
 - (3) Upper panel (See 09-17-40 UPPER PANEL REMOVAL/INSTALLATION.)
 - (4) Shift knob (MTX) (See 05-16-2 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)
 - (5) Selector lever knob (ATX) (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)
 - (6) Shift panel (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION.)
 - (7) Side wall (See 09-17-37 SIDE WALL REMOVAL/INSTALLATION.)
 - (8) Console (See 09-17-45 CONSOLE REMOVAL/INSTALLATION.)
2. Set the hood release lever out of the way. (See 09-14-15 HOOD LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
3. Remove the lower panel. (driver-side) (See 09-17-27 LOWER PANEL REMOVAL/INSTALLATION.)
4. Set the starter cut relay out of the way. (with advanced keyless entry and push button start system) (MTX) (see 09-21-14 STARTER CUT RELAY REMOVAL/INSTALLATION [MTX])
5. Remove the BCM with the connector connected. (See 09-40-2 BODY CONTROL MODULE (BCM) REMOVAL/INSTALLATION.)
6. Measure the voltage at each terminal is as indicated in the Terminal Voltage Tables.
 - If the voltage or continuity is not as specified in the Terminal Voltage Table, inspect the parts under "Inspection item (s)".
 - If the system does not work properly even though the parts or related wiring harnesses do not have any malfunction, replace the BCM.

BODY CONTROL MODULE (BCM) CONFIGURATION

id094000800900

Note

- Use the IDS (laptop PC) because the PDS (Pocket PC) does not support the BCM CONFIGURATION.

1. Connect the M-MDS to DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Module Programming".
3. Then, select items from the screen menu in the following order.
 1. Select "Programmable Module Installation".
 2. Select "GEM".
4. Perform the configuration according to the directions on the screen.
5. Retrieve DTCs by the M-MDS, then verify that there is no DTC present.
 - If a DTC(s) is detected, perform the applicable DTC inspection. (See 09-02F-8 DTC TABLE [BCM].)
