SYMPTOM TROUBLESHOOTING [L3 WITH TC]

FOREWORD [L3 WITH TC]

id010339800300

- When the customer reports a vehicle malfunction, check the malfunction indicator lamp (MIL) indication and diagnostic trouble code (DTC), then diagnose the malfunction according to the following flowchart:
 - If a DTC exists, diagnose the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
 - If no DTC exists and the MIL does not illuminate or flash, diagnose the applicable symptom troubleshooting. (See 01-03B-4 SYMPTOM DIAGNOSTIC INDEX [L3 WITH TC].)

NO.2 MIL ILLUMINATES [L3 WITH TC]

id010339800800

2	MIL ILLUMINATES
DESCRIPTION	<ul style="list-style-type: none"> • MIL is illuminated incorrectly.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • MIL illuminates for emission-related concern (DTC is stored in PCM) • Instrument cluster malfunction <p>Note</p> <ul style="list-style-type: none"> • If the MIL blinks at a steady rate, a misfire condition could possibly exist.

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Switch the ignition to ON. Retrieve any DTCs using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Inspect the instrument cluster. (See 09-22-8 INSTRUMENT CLUSTER INSPECTION.) Repair or replace the malfunctioning part according to the inspection results.
2	Verify test results. <ul style="list-style-type: none"> • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. <ul style="list-style-type: none"> — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	<p>Note</p> <ul style="list-style-type: none"> The following test should be performed on the advanced keyless entry and push button start system. If not equipped, go to the next step. <p>Start the engine using the standard ignition key. Does the engine start?</p>	Yes	Inspect the advanced keyless entry and push button start system. Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
2	<p>Do the following conditions appear?</p> <ul style="list-style-type: none"> The engine is not completely started. Immobilizer system DTC B10DA:62 is displayed. 	Yes	Both conditions appear: <ul style="list-style-type: none"> Go to Step 6.
		No	Either condition or other one appears: <ul style="list-style-type: none"> Go to the next step.
3	<p>Inspect if the coil antenna connector securely connected to the coil antenna. Is the coil antenna connector installed securely?</p>	Yes	Go to the next step.
		No	Retighten the coil antenna connector, then repeat Step 1.
4	<p>Does the security light flash?</p>	Yes	Go to the next step.
		No	<p>Inspect the following:</p> <ul style="list-style-type: none"> Vehicles with advanced keyless entry and push button start system: <ul style="list-style-type: none"> Instrument cluster (See 09-22-8 INSTRUMENT CLUSTER INSPECTION.) Wiring harness between keyless control module terminal 2K and instrument cluster terminal 2B Wiring harness between keyless control module terminal 2L and instrument cluster terminal 2D Vehicles without advanced keyless entry and push button start system: <ul style="list-style-type: none"> Instrument cluster (See 09-22-8 INSTRUMENT CLUSTER INSPECTION.) Wiring harness between PCM terminal 1AM and instrument cluster terminal 2B Wiring harness between PCM terminal 1AI and instrument cluster terminal 2D <p>Repair or replace the malfunctioning part according to the inspection results.</p>
5	<p>Retrieve the immobilizer system DTC using the M-MDS. (See 09-02C-2 DTC INSPECTION [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) (See 09-02B-2 DTC INSPECTION [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)].) Are any DTCs present?</p>	Yes	Go to the applicable DTC inspection. (See 09-02C-4 DTC TABLE [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) (See 09-02B-4 DTC TABLE [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)].)
		No	Go to the next step.
6	<p>Inspect for continuity between PCM terminals 1BD, 1BG, 1AZ, 1BH and ground. Is there continuity?</p>	Yes	Go to the next step.
		No	Repair or replace the suspected wiring harness.
7	<p>Switch the ignition to ON (engine off). Measure the voltage at the PCM terminal 1BD, 1BG, 1AZ, 1BH (wiring harness-side). Is the voltage below 1.0 V?</p>	Yes	Go to the next step.
		No	Repair or replace the suspected wiring harness.
8	<p>Switch the ignition to ON (engine off). Access the VPWR PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the VPWR PID value B+?</p>	Yes	Go to the next step.
		No	Repair or replace the suspected wiring harness.

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
9	Disconnect the coil antenna connector. Switch the ignition to ON (engine off). Measure the voltage at the coil antenna terminal D (wiring harness-side). Is the voltage B+ ?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between coil antenna terminal D and fuse panel.
10	Inspect the wiring harness between the following terminals (wiring harness-side) and related connectors: <ul style="list-style-type: none"> • Vehicles without advanced keyless entry and push button start system: <ul style="list-style-type: none"> — Coil antenna terminal A—Instrument cluster terminal 2Q — Coil antenna terminal B—Instrument cluster terminal 2M — PCM terminal 1AM—Instrument cluster terminal 2B — PCM terminal 1AI—Instrument cluster terminal 2D • Vehicles with advanced keyless entry and push button start system: <ul style="list-style-type: none"> — Coil antenna terminal A—Keyless control module terminal 2H — Coil antenna terminal B—Keyless control module terminal 2G — PCM terminal 1AM—Keyless control module terminal 2K — PCM terminal 1AI—Keyless control module terminal 2L Is there any malfunction?	Yes	Repair or replace the suspected wiring harness and connector.
		No	Go to the next step.
11	Inspect the following: <ul style="list-style-type: none"> • Battery connection • Battery condition (See 01-17B-4 BATTERY INSPECTION [L3 WITH TC].) • Fuse (See 01-03B-14 NO.1 MELTING OF MAIN OR OTHER FUSES [L3 WITH TC].) Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result. Repeat this step.
		No	Vehicles without advanced keyless entry and push button start system: <ul style="list-style-type: none"> • Go to Step 24. Vehicles with advanced keyless entry and push button start system: <ul style="list-style-type: none"> • Go to the next step.
12	Inspect the starter relay. (See 09-21-17 RELAY INSPECTION.) Is there any malfunction?	Yes	Replace the starter relay.
		No	Go to the next step.
13	Remove the starter relay. Switch the ignition to ON (engine off). Measure the voltage at the starter relay terminal E (wiring harness-side). Is the voltage B+ ?	Yes	Go to Step 16.
		No	Go to the next step.
14	Switch the ignition to off. Disconnect the keyless control module connector. Inspect for continuity between keyless control module terminal 3B (wiring harness-side) and starter relay terminal E (wiring harness-side). Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the suspected wiring harness and connector.
15	Inspect for continuity between keyless control module terminal 3B (wiring harness-side) and body ground. Is there continuity?	Yes	Repair or replace the suspected wiring harness and connector.
		No	Replace the keyless control module. (See 09-14-66 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION.)
16	Install the starter relay. Short the terminals of the starter interlock switch terminals A and B (wiring harness-side) using a jumper wire. Switch the ignition to start. Does the engine start?	Yes	Go to the next step.
		No	Go to Step 18.

01-03B

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
17	Reconnect all disconnected connectors. Measure the voltage at the keyless control module terminal 3O (wiring harness-side). Is the voltage following? • Clutch pedal depressed: Below 1.0 V • Clutch pedal released: B+	Yes	Inspect the following: • Wiring harness between battery positive terminal and starter cut relay • Starter cut relay (See 09-21-15 STARTER CUT RELAY INSPECTION [MTX].) Repair or replace the malfunctioning part according to the inspection result.
		No	Inspect the following: • Wiring harness between starter cut relay and starter interlock switch • Wiring harness between starter interlock switch and ground • Starter interlock switch (stuck) (See 01-19B-8 STARTER INTERLOCK SWITCH INSPECTION [L3 WITH TC].) Repair or replace the malfunctioning part according to the inspection result.
18	Is the starter relay operation sound heard when the engine starting procedure is performed in Step 12?	Yes	Go to the next step.
		No	Go to Step 22.
19	Switch the ignition to ON (engine off). Measure the voltage at the keyless control module terminal 2F (wiring harness-side). Is the voltage B+ ?	Yes	Go to the next step.
		No	Repair or replace the suspected wiring harness and connector.
20	Switch the ignition to off. Disconnect the keyless control module and starter interlock switch connectors. Inspect for continuity between keyless control module terminal 3T (wiring harness-side) and starter cut relay terminal D (wiring harness-side). Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the suspected wiring harness.
21	Inspect the following: • Starter (See 01-19B-4 STARTER INSPECTION [L3 WITH TC].) • Wiring harness between the starter and ground • Starter power supply (from battery through secondary starter relay, to starter) Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Replace the keyless control module. (See 09-14-66 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION.)
22	Switch the ignition to off. Disconnect the keyless control module and starter interlock switch connectors. Inspect for continuity between keyless control module terminal 3T (wiring harness-side) and starter cut relay terminal D (wiring harness-side). Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the suspected wiring harness and connector.
23	Disconnect the PCM connector (with starter interlock switch connector left removed). Inspect for continuity between starter cut relay terminal D (wiring harness-side) and PCM terminal 1B (wiring harness-side). Is there continuity?	Yes	Go to Step 31.
		No	Repair or replace the suspected wiring harness and connector.
24	Inspect for continuity between PCM terminal 1B (wiring harness-side) and starter relay with clutch pedal depressed. Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the suspected wiring harness.
25	Switch the ignition to start with clutch pedal depressed. Is a clicking sound heard from the starter relay?	Yes	Go to Step 29.
		No	Go to the next step.
26	Inspect the starter interlock switch. (See 01-19B-8 STARTER INTERLOCK SWITCH INSPECTION [L3 WITH TC].) Is there any malfunction?	Yes	Inspect the related wiring harness. Repair or replace the malfunctioning part according to the inspection result. Repeat Step 25.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
27	Inspect the starter relay and the wiring harness between the following: (See 09-21-17 RELAY INSPECTION.) <ul style="list-style-type: none"> • Starter relay and PCM • Starter relay and ignition switch Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result. Repeat Step 25.
		No	Go to the next step.
28	Inspect the ignition switch and the related wiring harness. (See 09-21-7 IGNITION SWITCH INSPECTION [WITHOUT ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result. Repeat Step 25.
		No	Go to the next step.
29	Inspect the wiring harness between the following: <ul style="list-style-type: none"> • Starter relay and battery positive terminal • Starter relay and starter Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result, then go to the next step.
		No	Go to the next step.
30	Inspect the starting system. (See 01-19B-4 STARTER INSPECTION [L3 WITH TC].) Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
31	Inspect for a seized/hydro locked engine or flywheel. Is the engine seized or hydro locked?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection result.
32	Perform the PCM DTC inspection using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Are there any continuous memory DTCs present?	Yes	Continuous memory DTC is displayed: <ul style="list-style-type: none"> • Go to the appropriate DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].) Communication error message is displayed: <ul style="list-style-type: none"> • Inspect the following: <ul style="list-style-type: none"> — Open circuit in the wiring harness between main relay terminal B (wiring harness-side) and PCM terminal 1AT (wiring harness-side) — Open circuit in the wiring harness between main relay terminal C and PCM terminal 1BE (wiring harness-side) — Main relay (stuck open) (See 09-21-17 RELAY INSPECTION.) — Open or short circuit in the wiring harness between DLC-2 and PCM terminals 1AM or 1AI (wiring harness-side) — Open or poor ground circuit (PCM terminal 1BD, 1BG, 1AZ or 1BH) — Poor connection of vehicle body ground • Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
33	Perform the KOEO self test using the M-MDS. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) Are there DTCs displayed during the KOEO inspection?	Yes	Go to the appropriate DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Inspect the following: <ul style="list-style-type: none"> • Start circuit in ignition switch (vehicles without advanced keyless entry and push button start system) • Open circuit in wiring harness between battery and starter Repair or replace the malfunctioning part according to the inspection result.
34	Verify test results. <ul style="list-style-type: none"> • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. <ul style="list-style-type: none"> — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

01-03B

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

NO.4 HARD TO START/LONG CRANK/ERRATIC START/ERRATIC CRANK [L3 WITH TC]

id010339801000

4	HARD TO START/LONG CRANK/ERRATIC START/ERRATIC CRANK
DESCRIPTION	<ul style="list-style-type: none"> • Starter cranks the engine at normal speed but the engine requires excessive cranking time before starting. • Battery is operating normally.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Vacuum leakage • Poor fuel quality • Starting system malfunction • Erratic signal to ignition coils • Spark plug malfunction • Air leakage from intake-air system • Improper air/fuel mixture ratio control • Incorrect fuel injection timing • Erratic signal from CKP sensor • Erratic signal from CMP sensor • A/F sensor, HO2S or related circuit malfunction • ECT sensor No.1 or related circuit malfunction • MAF sensor (integrated in MAF/IAT sensor) or related circuit malfunction • Intake-air system restriction • Improper operation of electronic throttle control system • PCV valve malfunction • Inadequate fuel pressure (high or low pressure side) • Relief valve malfunction (built-in fuel delivery pipe) • Spill valve control solenoid valve malfunction (built-in high pressure fuel pump) • Fuel filter clogging • Fuel line restriction • Fuel leakage • Fuel pump (low-side) resistor or related circuit malfunction • Fuel injector malfunction • Fuel pressure sensor (built-in fuel delivery pipe) malfunction • High pressure fuel pump malfunction • Exhaust system or TWC restriction • EGR valve malfunction • Purge solenoid valve malfunction • Low engine compression • Improper valve timing <p>Warning</p> <ul style="list-style-type: none"> • The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services: <ul style="list-style-type: none"> — Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. — Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete “BEFORE SERVICE PRECAUTION” and “AFTER SERVICE PRECAUTION” described in this manual. (See 01-14B-4 BEFORE SERVICE PRECAUTION [L3 WITH TC].) (See 01-14B-5 AFTER SERVICE PRECAUTION [L3 WITH TC].) <p>Caution</p> <ul style="list-style-type: none"> • Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Inspect for the following: <ul style="list-style-type: none"> • Fuel quality (proper octane, contamination, winter/summer blend) • Fuel leakage • Intake-air system leakage or restriction • Vacuum leakage Is there any malfunction?	Yes	Service if necessary. <ul style="list-style-type: none"> • Repeat this step.
		No	Go to the next step.
2	Switch the ignition to ON. Retrieve any DTCs using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
3	Access the ECT PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Verify that the ECT PID value is less than 116 °C {241 °F} during driving. Is the ECT PID value less than specified? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	Go to the next step.
		No	The cause of this concern could be from the cooling system overheating. <ul style="list-style-type: none"> Perform the symptom troubleshooting "NO.17 COOLING SYSTEM CONCERNS-OVERHEATING". (See 01-03B-68 NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [L3 WITH TC].)
4	Will the engine run smoothly at part throttle?	Yes	Go to the next step.
		No	Go to Step 6.
5	Perform the TP sweep inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the electronic throttle control system work properly?	Yes	Visually inspect the throttle body (damage/scratching). <ul style="list-style-type: none"> If normal: <ul style="list-style-type: none"> Go to the next step. If not: <ul style="list-style-type: none"> Repair or replace the malfunctioning parts according to the inspection results.
		No	Repair or replace the malfunctioning parts according to the inspection results.
6	Disconnect the vacuum hose from purge solenoid valve and plug opening end of vacuum hose. Start the engine. Is the starting condition improper?	Yes	Inspect if the purge solenoid valve is stuck open. Repair or replace the malfunctioning parts according to the inspection results.
		No	Go to the next step.
7	Inspect the engine condition while tapping the EGR valve housing. Does the engine condition improper?	Yes	Replace the EGR valve. (See 01-16B-8 EGR VALVE REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	Inspect the CMP sensor and CKP sensor for the following: <ul style="list-style-type: none"> Installation condition (See 01-40B-34 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].) (See 01-40B-32 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].) Damaged trigger wheel and camshaft Open or short circuit in the wiring harnesses Is there any malfunction?	Yes	Repair or replace the malfunctioning parts according to the inspection results.
		No	Go to the next step.
9	Access the following PIDs using the M-MDS: (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) <ul style="list-style-type: none"> ECT MAF O2S11 O2S12 LONGFT1 SHTFT1 Do the PID values indicate the correct values under the trouble condition? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	Go to the next step.
		No	Inspect the suspected parts and related wiring harness. <ul style="list-style-type: none"> If normal: <ul style="list-style-type: none"> Perform the "INTERMITTENT CONCERN TROUBLESHOOTING". (See 01-03B-89 INTERMITTENT CONCERN TROUBLESHOOTING [L3 WITH TC].) If not: <ul style="list-style-type: none"> Repair or replace the malfunctioning parts according to the inspection results.
10	Inspect for restriction in the exhaust system and the TWC. Is there any restriction?	Yes	Repair or replace the malfunctioning parts according to the inspection results.
		No	Go to the next step.
11	Perform the Spark Test. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
12	Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the FUEL_PRES PID value within the specification? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	Go to Step 17.
		No	Go to the next step.

01-03B

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
13	Is the vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 15.
14	Inspect the fuel pressure sensor. (See 01-40B-29 FUEL PRESSURE SENSOR INSPECTION [L3 WITH TC].) Is there any malfunction?	Yes	Replace the fuel delivery pipe. (See 01-14B-25 FUEL INJECTOR REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to Step 16.
15	Replace the high pressure fuel pump. (See 01-14B-17 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC].) Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the FUEL_PRES PID value within the specified? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	High-pressure fuel pump or spill valve control solenoid valve (built-in high pressure fuel pump) malfunction. • Go to Step 21.
		No	Relief valve malfunction. • Replace the fuel delivery pipe. (See 01-14B-25 FUEL INJECTOR REMOVAL/ INSTALLATION [L3 WITH TC].)
16	Connect the fuel pressure gauge between the fuel pump and the high pressure fuel pump. Measure the fuel pressure line of the low pressure side. (See 01-14B-6 FUEL LINE PRESSURE INSPECTION [L3 WITH TC].) Is the fuel pressure within the specification?	Yes	Go to the next step.
		No	Inspect for the following: • Fuel line restriction • Fuel filter clogging • If normal: — Replace the fuel pump unit. (See 01-14B-13 FUEL PUMP UNIT REMOVAL/ INSTALLATION [L3 WITH TC].) • If not: — Repair or replace the malfunctioning parts according to the inspection results.
17	Perform the Fuel Injector Operation Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Do the fuel injectors operate normally?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
18	Measure the compression pressure for each cylinder. (See 01-10B-12 COMPRESSION INSPECTION [L3 WITH TC].) Does the starting system work properly?	Yes	Go to the next step.
		No	Inspect for the following: • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper valve timing Repair or replace the malfunctioning parts according to the inspection results.
19	Inspect the starting system. (See 01-19B-4 STARTER INSPECTION [L3 WITH TC].) Does the starting system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
20	Inspect the PCV valve. (See 01-16B-10 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [L3 WITH TC].) Is there any malfunction?	Yes	Replace the PCV valve. (See 01-16B-9 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Replace the PCM (injector driver circuit malfunction). (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].) • If a malfunction remains: — Repair or replace the malfunctioning part according to the inspection results.
21	Verify test results. • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

NO.5 ENGINE STALLS-AFTER START/AT IDLE [L3 WITH TC]

id010339801100

5	ENGINE STALLS—AFTER START/AT IDLE
DESCRIPTION	<ul style="list-style-type: none"> • Engine stops unexpectedly at idle or after start or both.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • A/C system improper operation • Air leakage from intake-air system • Purge solenoid valve malfunction • Improper operation of electronic throttle control system • EGR valve malfunction • Vacuum leakage • Engine overheating • Low engine compression • Ignition system malfunction • Poor fuel quality • PCV valve malfunction • Intake-air system restriction • Exhaust system and/or TWC restriction or clogging • Electrical connector disconnection • Open or short circuit in the fuel pump (low-side) body or related wiring harness • Fuel pump resistor or related circuit malfunction • No battery power supply to PCM or poor ground • Inadequate fuel pressure (high or low pressure side) • Fuel pressure sensor (built-in fuel delivery pipe) or related circuit malfunction • Spill valve control solenoid valve malfunction (built-in high pressure fuel pump) • Relief valve malfunction (built-in fuel delivery pipe) • Fuel pump (low-side) body mechanical malfunction • Fuel leakage • Fuel line restriction • Fuel filter clogging • Incorrect fuel injection timing • High pressure fuel pump malfunction • Fuel injector malfunction • Ignition coil malfunction • Improper air/fuel mixture ratio control • No signal from CKP sensor due to sensor, related wiring harness or wrong installation • Erratic signal from CMP sensor • A/F sensor, HO2S or related circuit malfunction • ECT sensor No.1 or related circuit malfunction • APP sensor or related circuit malfunction • MAF sensor (integrated in MAF/IAT sensor) or related circuit malfunction • Improper valve timing • Improper operation of variable valve timing control system • Immobilizer system and/or circuit malfunction <p>Warning</p> <ul style="list-style-type: none"> • The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services: <ul style="list-style-type: none"> — Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. — Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete “BEFORE SERVICE PRECAUTION” and “AFTER SERVICE PRECAUTION” described in this manual. (See 01-14B-4 BEFORE SERVICE PRECAUTION [L3 WITH TC].) (See 01-14B-5 AFTER SERVICE PRECAUTION [L3 WITH TC].) <p>Caution</p> <ul style="list-style-type: none"> • Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.

01-03B

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Do any of the following conditions appear? <ul style="list-style-type: none"> Engine does not start completely. Immobilizer system DTC B10DA:62 is displayed. 	Yes	Both conditions are appear: <ul style="list-style-type: none"> Go to Step 5.
		No	Either or other condition appears: <ul style="list-style-type: none"> Go to the next step.
2	Does the engine stall after approx. 2 s from when it is started?	Yes	Go to the next step.
		No	Retrieve the immobilizer system DTC using the M-MDS. (See 09-02C-2 DTC INSPECTION [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) (See 09-02B-2 DTC INSPECTION [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)].) <ul style="list-style-type: none"> If normal: <ul style="list-style-type: none"> Go to Step 15. If not: <ul style="list-style-type: none"> Go to the applicable DTC inspection. (See 09-02C-4 DTC TABLE [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) (See 09-02B-4 DTC TABLE [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)].)
3	Inspect if the coil antenna connector securely connected to the coil antenna. Is the coil antenna connector installed securely?	Yes	Go to the next step.
		No	Retighten the coil antenna connector, then repeat Step 2.
4	Does the security light flash?	Yes	Go to the next step.
		No	Inspect the following: <ul style="list-style-type: none"> Vehicles with advanced keyless entry and push button start system: <ul style="list-style-type: none"> Instrument cluster (See 09-22-8 INSTRUMENT CLUSTER INSPECTION.) Wiring harness between keyless control module terminal 2K and instrument cluster terminal 2B Wiring harness between keyless control module terminal 2L and instrument cluster terminal 2D Vehicles without advanced keyless entry and push button start system: <ul style="list-style-type: none"> Instrument cluster (See 09-22-8 INSTRUMENT CLUSTER INSPECTION.) Wiring harness between PCM terminal 1AM and instrument cluster terminal 2B Wiring harness between PCM terminal 1AI and instrument cluster terminal 2D Repair or replace the malfunctioning part according to the inspection results.
5	Retrieve the immobilizer system DTC using the M-MDS. (See 09-02C-2 DTC INSPECTION [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) (See 09-02B-2 DTC INSPECTION [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)].) Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 09-02C-4 DTC TABLE [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) (See 09-02B-4 DTC TABLE [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)].)
		No	Go to the next step.
6	Inspect for continuity between PCM terminals 1BD, 1BG, 1AZ, 1BH and ground. Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the suspected wiring harness.
7	Switch the ignition to ON (engine off). Measure the voltage at the PCM terminal 1BD, 1BG, 1AZ, 1BH (wiring harness-side). Is the voltage below 1.0 V ?	Yes	Go to the next step.
		No	Repair or replace the suspected wiring harness.

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
8	Switch the ignition to ON (engine off). Access the VPWR PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the VPWR PID value B+ ?	Yes	Go to the next step.
		No	Repair or replace the suspected wiring harness.
9	Disconnect the coil antenna connector. Switch the ignition to ON (engine off). Measure the voltage at the coil antenna terminal D (wiring harness-side). Is the voltage B+ ?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between coil antenna terminal D and fuse panel.
10	Inspect the following wiring harness and connectors: <ul style="list-style-type: none"> • Vehicles with advanced keyless entry and push button start system: <ul style="list-style-type: none"> — Between coil antenna terminal A and keyless control module terminal 2H — Between coil antenna terminal B and keyless control module terminal 2G • Vehicles without advanced keyless entry and push button start system: <ul style="list-style-type: none"> — Between coil antenna terminal A and instrument cluster terminal 2Q — Between coil antenna terminal B and instrument cluster terminal 2M Is there any malfunction (open or short circuit, terminal corrosion, etc.)?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Vehicles with advanced keyless entry and push button start system: <ul style="list-style-type: none"> • Go to the next step. Vehicles without advanced keyless entry and push button start system: <ul style="list-style-type: none"> • Go to Step 15.
11	Inspect for continuity between keyless control module terminal 2B (wiring harness-side) and body ground. Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the suspected wiring harness.
12	Switch the ignition to ON (engine off). Measure the voltage at the keyless control module terminal 1B, 3C and 4AA (wiring harness-side). Is the voltage below 1.0 V ?	Yes	Go to the next step.
		No	Repair or replace the suspected wiring harness.
13	Switch the ignition to ON (engine off). Measure the voltage at the keyless control module terminal 2A, 2C and 2E (wiring harness-side). Is the voltage B+ ?	Yes	Go to the next step.
		No	Repair or replace the suspected wiring harness.
14	Inspect the following wiring harnesses and connectors. <ul style="list-style-type: none"> • Between keyless control module terminal 2L and PCM terminal 1AI • Between keyless control module terminal 2K and PCM terminal 1AM Is there any malfunction (open or short circuit, terminal corrosion, etc.)?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
15	Inspect for the following: <ul style="list-style-type: none"> • Fuel quality (proper octane, contamination, winter/summer blend) • Intake-air system leakage and restriction • Electrical connectors • Poor connection for PCM ground and body ground • Fuel leakage • Vacuum leakage Is there any malfunction?	Yes	Service if necessary. <ul style="list-style-type: none"> • Repeat this step.
		No	Go to the next step.
16	Switch the ignition to ON. Retrieve any DTCs using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.

01-03B

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
17	Access the ECT PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Verify that the ECT PID value is less than 116 °C {241 °F} during driving. Is the ECT PID value less than specified? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	Go to the next step.
		No	The cause of this concern could be from the cooling system overheating. <ul style="list-style-type: none"> Perform the symptom troubleshooting "NO.17 COOLING SYSTEM CONCERNS-OVERHEATING". (See 01-03B-68 NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [L3 WITH TC].)
18	Switch the ignition to ON (engine off). Access the VPWR PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the VPWR PID value B+ ?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between main relay terminal C and PCM terminal 1BE.
19	<p>Note</p> <ul style="list-style-type: none"> Following test is for stall concerns with the A/C on. If other symptoms exist, go to the next step. <p>Connect the pressure gauges to A/C low side and high side pressure lines. Turn the A/C on and measure low side and high side pressures. Are the pressures within the specifications? (See 07-10-6 REFRIGERANT PRESSURE CHECK.)</p>	Yes	Go to the next step.
		No	If the A/C is always on: <ul style="list-style-type: none"> Go to the symptom troubleshooting "NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY". (See 01-03B-81 NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY [L3 WITH TC].) <p>For other symptoms:</p> <ul style="list-style-type: none"> Inspect the following: <ul style="list-style-type: none"> Refrigerant charging amount Condenser fan operation Repair or replace the malfunctioning part according to the inspection results.
20	Will the engine run smoothly at part throttle?	Yes	Go to the next step.
		No	Go to Step 22.
21	Perform the TP sweep inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the electronic throttle control system work properly?	Yes	Visually inspect the throttle body (damage/scratching). <ul style="list-style-type: none"> If normal: <ul style="list-style-type: none"> Go to the next step. If not: <ul style="list-style-type: none"> Repair or replace the malfunctioning parts according to the inspection results.
		No	Repair or replace the malfunctioning parts according to the inspection results.
22	Disconnect the vacuum hose between purge solenoid valve and intake manifold from the purge solenoid valve side. Plug the open end of the vacuum hose. Start the engine. Is the engine stall now eliminated?	Yes	Inspect the following: <ul style="list-style-type: none"> Purge solenoid valve (See 01-16B-8 PURGE SOLENOID VALVE INSPECTION [L3 WITH TC].) EVAP system <p>Repair or replace the malfunctioning parts according to the inspection results.</p>
		No	Go to the next step.
23	Inspect the engine condition while tapping the EGR valve housing. Does the engine condition improve?	Yes	Replace the EGR valve. (See 01-16B-8 EGR VALVE REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
24	Perform the Variable Valve Timing Control System Operation Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the variable valve timing control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

01-03B

STEP	INSPECTION	RESULTS	ACTION
25	Inspect the CMP sensor and CKP sensor for the following: <ul style="list-style-type: none"> • Installation condition (See 01-40B-34 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].) • (See 01-40B-32 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].) • Damaged trigger wheel and camshaft • Open or short circuit in the wiring harnesses Is there any malfunction?	Yes	Repair or replace the malfunctioning parts according to the inspection results.
		No	Go to the next step.
26	Access the following PIDs using the M-MDS: (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) <ul style="list-style-type: none"> • ECT • APP1 • APP2 • MAF • O2S11 • O2S12 • LONGFT1 • SHTFT1 Do the PID values indicate the correct values under the trouble condition? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	Go to the next step.
		No	Inspect the suspected parts and related wiring harness. <ul style="list-style-type: none"> • If normal: <ul style="list-style-type: none"> — Perform the “INTERMITTENT CONCERN TROUBLESHOOTING.” (See 01-03B-89 INTERMITTENT CONCERN TROUBLESHOOTING [L3 WITH TC].) • If not: <ul style="list-style-type: none"> — Repair or replace the malfunctioning parts according to the inspection results.
27	Inspect for restriction in the exhaust system and TWC. Is there any restriction?	Yes	Repair or replace the malfunctioning parts according to the inspection results.
		No	Go to the next step.
28	Perform the Spark Test. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
29	Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the FUEL_PRES PID value within the specification? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	Go to Step 31.
		No	Go to the next step.
30	Replace the high pressure fuel pump. (See 01-14B-17 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC].) Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the FUEL_PRES PID value within the specified? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	High-pressure fuel pump or spill valve control solenoid valve (built-in high pressure fuel pump or fuel pressure sensor) malfunction.
		No	Relief valve or fuel pressure sensor malfunction. <ul style="list-style-type: none"> • Replace the fuel delivery pipe. (See 01-14B-25 FUEL INJECTOR REMOVAL/INSTALLATION [L3 WITH TC].)
31	Connect the fuel pressure gauge between the fuel pump and the high pressure fuel pump. Measure the fuel pressure line of the low pressure side. (See 01-14B-6 FUEL LINE PRESSURE INSPECTION [L3 WITH TC].) Is the fuel pressure within the specification?	Yes	Go to the next step.
		No	Inspect for the following: <ul style="list-style-type: none"> • Fuel line restriction • Fuel filter clogging <ul style="list-style-type: none"> — If normal: <ul style="list-style-type: none"> • Replace the fuel pump unit. (See 01-14B-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [L3 WITH TC].) — If not: <ul style="list-style-type: none"> • Repair or replace the malfunctioning parts according to the inspection results.

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
32	Measure the compression pressure for each cylinder. (See 01-10B-12 COMPRESSION INSPECTION [L3 WITH TC].) Does the starting system work properly?	Yes	Go to the next step.
		No	Inspect for the following: <ul style="list-style-type: none"> • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper valve timing Repair or replace the malfunctioning parts according to the inspection results.
33	Disconnect the fuel injector connectors. Connect the NOID light to the fuel injector harness-side terminals. Inspect the NOID light dim during cranking. Does the NOID light illuminate?	Yes	Go to the next step.
		No	Inspect the fuel injector wiring harnesses. <ul style="list-style-type: none"> • If normal: <ul style="list-style-type: none"> — Replace the PCM (injector driver circuit malfunction). (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].) • If not: <ul style="list-style-type: none"> — Repair or replace the suspected wiring harness.
34	Inspect the PCV valve. (See 01-16B-10 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [L3 WITH TC].) Is the PCV valve normal?	Yes	Replace the fuel injector. (See 01-14B-25 FUEL INJECTOR REMOVAL/INSTALLATION [L3 WITH TC].) If a malfunction remains: <ul style="list-style-type: none"> • Repair or replace the malfunctioning part according to the inspection results.
		No	Replace the PCV valve. (See 01-16B-9 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [L3 WITH TC].)
35	Verify test results. <ul style="list-style-type: none"> • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. <ul style="list-style-type: none"> — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

NO.6 CRANKS NORMALLY BUT WILL NOT START [L3 WITH TC]

id010339801200

6	CRANKS NORMALLY BUT WILL NOT START
DESCRIPTION	<ul style="list-style-type: none"> • Starter cranks engine at normal speed but engine will not run. • Refer to symptom troubleshooting "NO.5 ENGINE STALLS" if this symptom appears after the engine stalls. • Fuel is in tank. • Battery is in normal condition.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Air leakage from intake-air system • Open PCM ground or vehicle body ground • Improper operation of electronic throttle control system • EGR valve malfunction • Low engine compression • Engine overheating • Vacuum leakage • Ignition system malfunction • Poor fuel quality • PCV valve malfunction • Intake-air system restriction • Improper air/fuel mixture ratio control • No signal from CKP sensor due to sensor, related wire or incorrect installation • No signal from CMP sensor due to sensor, related wire or incorrect installation • A/F sensor, HO2S or related circuit malfunction • ECT sensor No.1 or related circuit malfunction • APP sensor or related circuit malfunction • MAF sensor (integrated in MAF/IAT sensor) or related circuit malfunction • High pressure fuel pump malfunction • Exhaust system or TWC malfunction • Disconnected electrical connector • Open or short in fuel pump (low-side) body and related harness • Inadequate fuel pressure (high or low pressure side) • Fuel pressure sensor (built-in fuel delivery pipe) or related circuit malfunction • Relief valve malfunction (built-in fuel delivery pipe) • Fuel line clogging or restriction • Incorrect fuel injection timing • Fuel pump resistor or control relay malfunction • Fuel pump (low-side) mechanical malfunction • Fuel leakage • Fuel injector malfunction • Purge solenoid valve malfunction • Spark plug malfunction • Ignition coil malfunction • Improper valve timing • Improper operation of variable valve timing control system • Immobilizer system or related wiring harness malfunction <p>Warning</p> <ul style="list-style-type: none"> • The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services: <ul style="list-style-type: none"> — Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. — Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual. (See 01-14B-4 BEFORE SERVICE PRECAUTION [L3 WITH TC].) (See 01-14B-5 AFTER SERVICE PRECAUTION [L3 WITH TC].) <p>Caution</p> <ul style="list-style-type: none"> • Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.

01-03B

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Do any of the following conditions appear? <ul style="list-style-type: none"> • Engine does not start completely. • Immobilizer system DTC B10DA:62 is displayed. 	Yes	Both conditions are appear: <ul style="list-style-type: none"> • Go to Step 5.
		No	Either or other condition appears: <ul style="list-style-type: none"> • Go to the next step.
2	Does the engine stall after approx. 2 s from when it is started?	Yes	Go to the next step.
		No	Retrieve the immobilizer system DTC using the M-MDS. (See 09-02C-2 DTC INSPECTION [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) (See 09-02B-2 DTC INSPECTION [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)].) <ul style="list-style-type: none"> • If normal: <ul style="list-style-type: none"> — Go to Step 15. • If not: <ul style="list-style-type: none"> — Go to the applicable DTC inspection. (See 09-02C-4 DTC TABLE [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) (See 09-02B-4 DTC TABLE [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)].)
3	Inspect if the coil antenna connector securely connected to the coil antenna. Is the coil antenna connector installed securely?	Yes	Go to the next step.
		No	Retighten the coil antenna connector, then repeat Step 2.
4	Does the security light illuminate?	Yes	Go to the next step.
		No	Inspect the following: <ul style="list-style-type: none"> • Vehicles with advanced keyless entry and push button start system: <ul style="list-style-type: none"> — Instrument cluster (See 09-22-8 INSTRUMENT CLUSTER INSPECTION.) — Wiring harness between keyless control module terminal 2K and instrument cluster terminal 2B — Wiring harness between keyless control module terminal 2L and instrument cluster terminal 2D • Vehicles without advanced keyless entry and push button start system: <ul style="list-style-type: none"> — Instrument cluster (See 09-22-8 INSTRUMENT CLUSTER INSPECTION.) — Wiring harness between PCM terminal 1AM and instrument cluster terminal 2B — Wiring harness between PCM terminal 1AI and instrument cluster terminal 2D Repair or replace the malfunctioning part according to the inspection results.
5	Retrieve the immobilizer system DTC using the M-MDS. (See 09-02C-2 DTC INSPECTION [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) (See 09-02B-2 DTC INSPECTION [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)].) Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 09-02C-4 DTC TABLE [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) (See 09-02B-4 DTC TABLE [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)].)
		No	Go to the next step.
6	Inspect for continuity between PCM terminals 1BD, 1BG, 1AZ, 1BH and ground. Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the suspected wiring harness.
7	Switch the ignition to ON (engine off). Measure the voltage at the PCM terminal 1BD, 1BG, 1AZ, 1BH (wiring harness-side). Is the voltage below 1.0 V ?	Yes	Go to the next step.
		No	Repair or replace the suspected wiring harness.
8	Switch the ignition to ON (engine off). Access the VPWR PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the VPWR PID value B+ ?	Yes	Go to the next step.
		No	Repair or replace the suspected wiring harness.

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
9	Disconnect the coil antenna connector. Switch the ignition to ON (engine off). Measure the voltage at the coil antenna terminal D (wiring harness-side). Is the voltage B+ ?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between coil antenna terminal D and fuse panel.
10	Inspect the following wiring harness and connectors: <ul style="list-style-type: none"> • Vehicles with advanced keyless entry and push button start system: <ul style="list-style-type: none"> — Between coil antenna terminal A and keyless control module terminal 2H — Between coil antenna terminal B and keyless control module terminal 2G • Vehicles without advanced keyless entry and push button start system: <ul style="list-style-type: none"> — Between coil antenna terminal A and instrument cluster terminal 2Q — Between coil antenna terminal B and instrument cluster terminal 2M Is there any malfunction (open or short circuit, terminal corrosion, etc.)?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Vehicles with advanced keyless entry and push button start system: <ul style="list-style-type: none"> • Go to the next step. Vehicles without advanced keyless entry and push button start system: <ul style="list-style-type: none"> • Go to Step 15.
11	Inspect for continuity between keyless control module terminal 2B (wiring harness-side) and body ground. Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the suspected wiring harness.
12	Switch the ignition to ON (engine off). Measure the voltage at the keyless control module terminal 1B, 3C and 4AA (wiring harness-side). Is the voltage below 1.0 V ?	Yes	Go to the next step.
		No	Repair or replace the suspected wiring harness.
13	Switch the ignition to ON (engine off). Measure the voltage at the keyless control module terminal 2A, 2C and 2E (wiring harness-side). Is the voltage B+ ?	Yes	Go to the next step.
		No	Repair or replace the suspected wiring harness.
14	Inspect the following wiring harnesses and connectors. <ul style="list-style-type: none"> • Between keyless control module terminal 2L and PCM terminal 1AI • Between keyless control module terminal 2K and PCM terminal 1AM Is there any malfunction (open or short circuit, terminal corrosion, etc.)?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
15	Inspect for the following: <ul style="list-style-type: none"> • Fuel quality (proper octane, contamination, winter/summer blend) • Intake-air system leakage and restriction • Electrical connectors • Fuses • Poor connection for PCM ground and body ground • Fuel leakage • Vacuum leakage Is there any malfunction?	Yes	Service if necessary. <ul style="list-style-type: none"> • Repeat this step.
		No	Go to the next step.
16	Switch the ignition to ON. Retrieve any DTCs using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
17	Access the ECT PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Verify that the ECT PID value is less than 116 °C {241 °F} during driving. Is the ECT PID value less than specified? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	Go to the next step.
		No	The cause of this concern could be from the cooling system overheating. <ul style="list-style-type: none"> • Perform the symptom troubleshooting “NO.17 COOLING SYSTEM CONCERNS-OVERHEATING”. (See 01-03B-68 NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [L3 WITH TC].)
18	Does the engine start with throttle close?	Yes	Go to the next step.
		No	Go to Step 23.

01-03B

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
19	Will the engine start and run smoothly at part throttle?	Yes	Go to the next step.
		No	Go to Step 21.
20	Perform the TP sweep inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the electronic throttle control system work properly?	Yes	Visually inspect the throttle body (damage/scratching). <ul style="list-style-type: none"> If normal: <ul style="list-style-type: none"> Go to the next step. If not: <ul style="list-style-type: none"> Repair or replace the malfunctioning parts according to the inspection results.
		No	Repair or replace the malfunctioning parts according to the inspection results.
21	Access the RPM PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the RPM PID value indicating engine speed when the cranking engine.	Yes	Go to the next step.
		No	Inspect the CKP sensor for following: <ul style="list-style-type: none"> Installation condition (See 01-40B-32 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].) Damaged trigger wheel and camshaft Open or short circuit in wiring harnesses Repair or replace the malfunctioning parts according to the inspection results.
22	Inspect CMP sensor for the following: <ul style="list-style-type: none"> Installation condition (See 01-40B-34 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].) Damaged trigger wheel and camshaft Open or short circuit in wiring harnesses Is there any malfunction?	Yes	Repair or replace the malfunctioning parts according to the inspection results.
		No	Go to the next step.
23	Disconnect the vacuum hose between purge solenoid valve and intake manifold from the purge solenoid valve side. Plug the open end of the vacuum hose. Start the engine. Is the engine stall now eliminated?	Yes	Inspect the following: <ul style="list-style-type: none"> Purge solenoid valve (See 01-16B-8 PURGE SOLENOID VALVE INSPECTION [L3 WITH TC].) EVAP system Repair or replace the malfunctioning parts according to the inspection results.
		No	Go to the next step.
24	Inspect the engine condition while tapping the EGR valve housing. Does the engine condition improve?	Yes	Replace the EGR valve. (See 01-16B-8 EGR VALVE REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
25	Access the following PIDs using the M-MDS: (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) <ul style="list-style-type: none"> ECT APP1 APP2 MAF O2S11 O2S12 LONGFT1 SHTFT1 Do the PID values indicate the correct values under the trouble condition? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	Go to the next step.
		No	Inspect the suspected parts and related wiring harness. <ul style="list-style-type: none"> If normal: <ul style="list-style-type: none"> Perform the "INTERMITTENT CONCERN TROUBLESHOOTING." (See 01-03B-89 INTERMITTENT CONCERN TROUBLESHOOTING [L3 WITH TC].) If not: <ul style="list-style-type: none"> Repair or replace the malfunctioning parts according to the inspection results.
26	Inspect for restriction in the exhaust system and TWC. Is there any restriction?	Yes	Repair or replace the malfunctioning parts according to the inspection results.
		No	Go to the next step.
27	Perform the Spark Test. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
28	Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Crank the engine. Does the FUEL_PRES PID value increase?	Yes	Go to Step 30.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
29	Replace the high pressure fuel pump. (See 01-14B-17 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC].) Crank the engine. Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Does the FUEL_PRES PID value increase?	Yes	High-pressure fuel pump or spill valve control solenoid valve (built-in high pressure fuel pump or fuel pressure sensor) malfunction.
		No	Relief valve or fuel pressure sensor malfunction. <ul style="list-style-type: none"> • Replace the fuel delivery pipe. (See 01-14B-25 FUEL INJECTOR REMOVAL/INSTALLATION [L3 WITH TC].)
30	Connect the fuel pressure gauge between the fuel pump and the high pressure fuel pump. Measure the fuel pressure line of the low pressure side. (See 01-14B-6 FUEL LINE PRESSURE INSPECTION [L3 WITH TC].) Is the fuel pressure within the specification?	Yes	Go to the next step.
		No	Inspect for the following: <ul style="list-style-type: none"> • Fuel line restriction • Fuel filter clogging — If normal: <ul style="list-style-type: none"> • Replace the fuel pump unit. (See 01-14B-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [L3 WITH TC].) — If not: <ul style="list-style-type: none"> • Repair or replace the malfunctioning parts according to the inspection results.
31	Measure the compression pressure for each cylinder. (See 01-10B-12 COMPRESSION INSPECTION [L3 WITH TC].) Does the starting system work properly?	Yes	Go to the next step.
		No	Inspect for the following: <ul style="list-style-type: none"> • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper valve timing Repair or replace the malfunctioning parts according to the inspection results.
32	Disconnect the fuel injector connectors. Connect the NOID light to the fuel injector harness-side terminals. Inspect the NOID light dim during cranking. Does the NOID light illuminate?	Yes	Go to the next step.
		No	Inspect the fuel injector wiring harnesses. <ul style="list-style-type: none"> • If normal: <ul style="list-style-type: none"> — Replace the PCM (injector driver circuit malfunction). (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].) • If not: <ul style="list-style-type: none"> — Repair or replace the suspected wiring harness.
33	Inspect the OCV. (See 01-10B-22 OIL CONTROL VALVE (OCV) INSPECTION [L3 WITH TC].) Is the OCV normal?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
34	Inspect the PCV valve. (See 01-16B-10 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [L3 WITH TC].) Is the PCV valve normal?	Yes	Replace the fuel injector. (See 01-14B-25 FUEL INJECTOR REMOVAL/INSTALLATION [L3 WITH TC].) If a malfunction remains: <ul style="list-style-type: none"> • Repair or replace the malfunctioning part according to the inspection results.
		No	Replace the PCV valve. (See 01-16B-9 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [L3 WITH TC].)
35	Verify test results. <ul style="list-style-type: none"> • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. <ul style="list-style-type: none"> — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

01-03B

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

NO.7 SLOW RETURN TO IDLE [L3 WITH TC]

id010339801300

7	SLOW RETURN TO IDLE
DESCRIPTION	<ul style="list-style-type: none"> • Engine takes more time than normal to return to idle speed. • Engine speed continues at fast idle after warm-up.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • ECT sensor No.1 or related circuit malfunction • Thermostat is stuck open • Incorrect fuel injection timing • Erratic signal from CKP sensor • Erratic signal from CMP sensor • APP sensor or related circuit malfunction • Air suction in intake-air system • MAF sensor (integrated in MAF/IAT sensor) or related circuit malfunction • Fuel pressure sensor (built-in fuel delivery pipe) or related circuit malfunction • Excessive fuel pressure • Relief valve malfunction (built-in fuel delivery pipe) • Fuel injector malfunction • Cooling fan control system malfunction • Improper load signal input • Injector driver circuit (built-in PCM) malfunction <p>Warning</p> <ul style="list-style-type: none"> • The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services: <ul style="list-style-type: none"> — Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. — Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete “BEFORE SERVICE PRECAUTION” and “AFTER SERVICE PRECAUTION” described in this manual. (See 01-14B-4 BEFORE SERVICE PRECAUTION [L3 WITH TC].) (See 01-14B-5 AFTER SERVICE PRECAUTION [L3 WITH TC].) <p>Caution</p> <ul style="list-style-type: none"> • Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Inspect the air suction in the intake-air system components while racing the engine to higher speed. Is there any air suction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
2	Switch the ignition to ON. Retrieve any DTCs using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
3	Access the ECT PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Start the engine and warm it up completely. Is the ECT PID value below 82 °C {180 °F} ?	Yes	Go to the next step.
		No	Perform the symptom troubleshooting “NO.18 COOLING SYSTEM CONCERNS-RUNS COLD”. (See 01-03B-70 NO.18 COOLING SYSTEM CONCERNS-RUNS COLD [L3 WITH TC].)
4	Verify the cooling fan operation. Does the cooling fan operate properly according to the ECT PID value?	Yes	Go to the next step.
		No	Perform the Cooling Fan Control System Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Repair or replace the malfunctioning part according to the inspection results.

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
5	Inspect the CMP sensor and CKP sensor for the following: <ul style="list-style-type: none"> • Installation condition (See 01-40B-34 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].) (See 01-40B-32 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].) • Damaged trigger wheel and camshaft • Open or short circuit in the wiring harnesses Is there any malfunction?	Yes	Repair or replace the malfunctioning parts according to the inspection results.
		No	Go to the next step.
6	Access the following PIDs using the M-MDS: (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) <ul style="list-style-type: none"> • ECT • APP1 • APP2 • MAF Do the PID values indicate the correct values under the trouble condition? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	Go to the next step.
		No	Inspect the suspected parts and related wiring harness. <ul style="list-style-type: none"> • If normal: <ul style="list-style-type: none"> — Perform the "INTERMITTENT CONCERN TROUBLESHOOTING." (See 01-03B-89 INTERMITTENT CONCERN TROUBLESHOOTING [L3 WITH TC].) • If not: <ul style="list-style-type: none"> — Repair or replace the malfunctioning parts according to the inspection results.
7	Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the FUEL_PRES PID value within the specification? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	Go to Step 11.
		No	Go to the next step.
8	Is the vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 10.
9	Inspect the fuel pressure sensor. (See 01-40B-29 FUEL PRESSURE SENSOR INSPECTION [L3 WITH TC].) Is there any malfunction?	Yes	Replace the fuel delivery pipe. (See 01-14B-25 FUEL INJECTOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to Step 11.
10	Replace the high pressure fuel pump. (See 01-14B-17 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC].) Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the FUEL_PRES PID value within the specified? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	High-pressure fuel pump or spill valve control solenoid valve (built-in high pressure fuel pump or fuel pressure sensor) malfunction. <ul style="list-style-type: none"> • Go to Step 13.
		No	Relief valve malfunction. <ul style="list-style-type: none"> • Replace the fuel delivery pipe. (See 01-14B-25 FUEL INJECTOR REMOVAL/INSTALLATION [L3 WITH TC].)
11	Perform the Fuel Injector Operation Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Do the fuel injectors operate normally?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
12	Remove the thermostat. (See 01-12B-11 THERMOSTAT REMOVAL/INSTALLATION [L3 WITH TC].) Inspect the thermostat. (See 01-12B-12 THERMOSTAT INSPECTION [L3 WITH TC].) Is there any malfunction?	Yes	Replace the thermostat. (See 01-12B-11 THERMOSTAT REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Inspect the throttle body. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].) <ul style="list-style-type: none"> • If normal or the problem remains: <ul style="list-style-type: none"> — Replace the PCM (injector driver circuit malfunction). (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].) • If not: <ul style="list-style-type: none"> — Repair or replace the malfunctioning parts according to the inspection results.

01-03B

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
13	Verify test results. <ul style="list-style-type: none"> • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. <ul style="list-style-type: none"> — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Inspect for the following: <ul style="list-style-type: none"> • Fuel quality (proper octane, contamination, winter/summer blend) • Intake-air system restriction or leakage • Electrical connectors connection • Fuel leakage in fuel system • Vacuum leakage Is there any malfunction?	Yes	Service if necessary. <ul style="list-style-type: none"> • Repeat this step.
		No	Go to the next step.
2	Switch the ignition to ON. Retrieve any DTCs using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
3	Access the ECT PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Verify that the ECT PID value is less than 116 °C {241 °F} during driving. Is the ECT PID value less than specified? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	Go to the next step.
		No	The cause of this concern could be from the cooling system overheating. <ul style="list-style-type: none"> • Perform the symptom troubleshooting “NO.17 COOLING SYSTEM CONCERNS-OVERHEATING”. (See 01-03B-68 NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [L3 WITH TC].)
4	<p>Note</p> <ul style="list-style-type: none"> • Following test is for stall concerns with the A/C on. If other symptoms exist, go to the next step. Connect the pressure gauges to A/C low side and high side pressure lines. Turn the A/C on and measure low side and high side pressures. Are the pressures within the specifications? (See 07-10-6 REFRIGERANT PRESSURE CHECK.)	Yes	Go to the next step.
		No	If the A/C is always on: <ul style="list-style-type: none"> • Go to the symptom troubleshooting “NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY”. (See 01-03B-81 NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY [L3 WITH TC].) For other symptoms: <ul style="list-style-type: none"> • Inspect the following: <ul style="list-style-type: none"> — Refrigerant charging amount — Condenser fan operation • Repair or replace the malfunctioning part according to the inspection results.
5	Inspect the engine condition while tapping the EGR valve housing. Does the engine condition improve?	Yes	Replace the EGR valve. (See 01-16B-8 EGR VALVE REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
6	Perform the TP sweep inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the electronic throttle control system work properly?	Yes	Visually inspect the throttle body (damage/scratching). <ul style="list-style-type: none"> • If normal: <ul style="list-style-type: none"> — Go to the next step. • If not: <ul style="list-style-type: none"> — Repair or replace the malfunctioning parts according to the inspection results.
		No	Repair or replace the malfunctioning parts according to the inspection results.
7	Disconnect the vacuum hose between purge solenoid valve and intake manifold from the purge solenoid valve side. Plug the open end of the vacuum hose. Start the engine. Is the engine stall now eliminated?	Yes	Inspect the following: <ul style="list-style-type: none"> • Purge solenoid valve (See 01-16B-8 PURGE SOLENOID VALVE INSPECTION [L3 WITH TC].) • EVAP system Repair or replace the malfunctioning parts according to the inspection results.
		No	Go to the next step.
8	Perform the Variable Valve Timing Control System Operation Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the variable valve timing control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.

01-03B

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
9	Inspect the CMP sensor and CKP sensor for the following: <ul style="list-style-type: none"> • Installation condition (See 01-40B-34 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].) (See 01-40B-32 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].) • Damaged trigger wheel and camshaft • Open or short circuit in the wiring harnesses Is there any malfunction?	Yes	Repair or replace the malfunctioning parts according to the inspection results.
		No	Go to the next step.
10	Access the following PIDs using the M-MDS: (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) <ul style="list-style-type: none"> • ECT • APP1 • APP2 • MAF • MAP Do the PID values indicate the correct values under the trouble condition? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	Go to the next step.
		No	Inspect the suspected parts and related wiring harness. <ul style="list-style-type: none"> • If normal: <ul style="list-style-type: none"> — Perform the "INTERMITTENT CONCERN TROUBLESHOOTING." (See 01-03B-89 INTERMITTENT CONCERN TROUBLESHOOTING [L3 WITH TC].) • If not: <ul style="list-style-type: none"> — Repair or replace the malfunctioning parts according to the inspection results.
11	Inspect for restriction in the exhaust system and TWC. Is there any restriction?	Yes	Repair or replace the malfunctioning parts according to the inspection results.
		No	Go to the next step.
12	Perform the Spark Test. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
13	Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the FUEL_PRES PID value within the specification? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	Go to Step 17.
		No	Go to the next step.
14	Is the vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 16.
15	Inspect the fuel pressure sensor. (See 01-40B-29 FUEL PRESSURE SENSOR INSPECTION [L3 WITH TC].) Is there any malfunction?	Yes	Replace the fuel delivery pipe. (See 01-14B-25 FUEL INJECTOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to Step 17.
16	Replace the high pressure fuel pump. (See 01-14B-17 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC].) Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the FUEL_PRES PID value within the specified? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	High-pressure fuel pump or spill valve control solenoid valve (built-in high pressure fuel pump) malfunction.
		No	Relief valve malfunction. <ul style="list-style-type: none"> • Replace the fuel delivery pipe. (See 01-14B-25 FUEL INJECTOR REMOVAL/INSTALLATION [L3 WITH TC].)
17	Connect the fuel pressure gauge between the fuel pump and the high pressure fuel pump. Measure the fuel pressure line of the low pressure side. (See 01-14B-6 FUEL LINE PRESSURE INSPECTION [L3 WITH TC].) Is the fuel pressure within the specification?	Yes	Go to the next step.
		No	Inspect for the following: <ul style="list-style-type: none"> • Fuel line restriction • Fuel filter clogging • If normal: <ul style="list-style-type: none"> — Replace the fuel pump unit. (See 01-14B-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [L3 WITH TC].) • If not: <ul style="list-style-type: none"> — Repair or replace the malfunctioning parts according to the inspection results.

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
18	Perform the Fuel Injector Operation Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Do the fuel injectors operate normally?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
19	Measure the compression pressure for each cylinder. (See 01-10B-12 COMPRESSION INSPECTION [L3 WITH TC].) Does the starting system work properly?	Yes	Go to the next step.
		No	Inspect for the following: <ul style="list-style-type: none"> • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper valve timing Repair or replace the malfunctioning parts according to the inspection results.
20	Inspect the PCV valve. (See 01-16B-10 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [L3 WITH TC].) Is there any malfunction?	Yes	Replace the PCV valve. (See 01-16B-9 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Replace the PCM (injector driver circuit malfunction). (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].) <ul style="list-style-type: none"> • If a malfunction remains: <ul style="list-style-type: none"> — Repair or replace the malfunctioning part according to the inspection results.
21	Verify test results. <ul style="list-style-type: none"> • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. <ul style="list-style-type: none"> — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. NO.9 FAST IDLE/RUNS ON [L3 WITH TC]

id010339801500

9	FAST IDLE/RUNS ON
DESCRIPTION	<ul style="list-style-type: none"> • Engine speed continues at fast idle after warm-up. • Engine runs after the ignition is switched off.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • ECT sensor No.1 or related circuit malfunction • Spill valve control solenoid valve malfunction (built-in high pressure fuel pump) • Fuel injector malfunction • Air leakage from intake-air system • Throttle body malfunction • APP sensor or related circuit malfunction • Improper operation of cruise control system • Improper load signal input • Improper operation of electric throttle control system <p>Warning</p> <ul style="list-style-type: none"> • The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services: <ul style="list-style-type: none"> — Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. — Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual. (See 01-14B-4 BEFORE SERVICE PRECAUTION [L3 WITH TC].) (See 01-14B-5 AFTER SERVICE PRECAUTION [L3 WITH TC].) <p>Caution</p> <ul style="list-style-type: none"> • Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Access the ECT PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Start the engine and warm it up completely. Is the ECT PID value between 82—112 °C {180—234 °F} ?	Yes	Go to the next step.
		No	ECT PID value is higher than 112 °C {234 °F} : <ul style="list-style-type: none"> Perform the symptom troubleshooting “NO.17 COOLING SYSTEM CONCERNS-OVERHEATING”. (See 01-03B-68 NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [L3 WITH TC].) ECT PID value is less than 82 °C {180 °F} : <ul style="list-style-type: none"> Perform the symptom troubleshooting “NO.18 COOLING SYSTEM CONCERNS-RUNS COLD”. (See 01-03B-70 NO.18 COOLING SYSTEM CONCERNS-RUNS COLD [L3 WITH TC].)
2	Switch the ignition to ON. Retrieve any DTCs using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
3	Inspect for leakage in the intake-air system. Is there any leakage?	Yes	Repair or replace the malfunctioning parts according to the inspection results.
		No	Go to the next step.
4	Perform the TP sweep inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the electronic throttle control system work properly?	Yes	Visually inspect the throttle body (damage/scratching). <ul style="list-style-type: none"> If normal: — Go to the next step. If not: — Repair or replace the malfunctioning parts according to the inspection results.
		No	Repair or replace the malfunctioning parts according to the inspection results.
5	Access the following PIDs using the M-MDS: (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) <ul style="list-style-type: none"> AC_REQ APP1 APP2 ECT Do the PID values indicate the correct values under the trouble condition? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	Go to the next step.
		No	Inspect the suspected parts and related wiring harness. <ul style="list-style-type: none"> If normal: — Perform the “INTERMITTENT CONCERN TROUBLESHOOTING”. (See 01-03B-89 INTERMITTENT CONCERN TROUBLESHOOTING [L3 WITH TC].) If not: — Repair or replace the malfunctioning parts according to the inspection results.
6	Inspect the high pressure fuel pump. (See 01-14B-20 HIGH PRESSURE FUEL PUMP INSPECTION [L3 WITH TC].) Is there any malfunction?	Yes	Replace the high pressure fuel pump. (See 01-14B-17 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
7	Perform the Fuel Injector Operation Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Do the fuel injectors operate normally?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
8	Inspect the operation of the cruise control system. Does the cruise control system work properly?	Yes	Replace the PCM (injector driver circuit malfunction). (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Repair or replace the malfunctioning parts according to the inspection results.
9	Verify test results. <ul style="list-style-type: none"> If normal, return to the diagnostic index to service any additional symptoms. If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

NO.10 LOW IDLE/STALLS DURING DECELERATION [L3 WITH TC]

id010339801600

10	LOW IDLE/STALLS DURING DECELERATION
DESCRIPTION	<ul style="list-style-type: none"> • Engine stops unexpectedly at beginning of deceleration or recovery from deceleration.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Poor fuel quality • Vacuum leakage • Improper operation of electronic throttle control system • Air leakage from intake-air system • Intake-air system restriction • EVAP control system malfunction • Improper air/fuel mixture ratio control • Erratic signal from CKP sensor • Erratic signal from CMP sensor • APP sensor or related circuit malfunction • TP sensor or related circuit malfunction • MAF sensor (integrated in MAF/IAT sensor) or related circuit malfunction • A/F sensor, HO2S or related circuit malfunction • Brake switch or related circuit malfunction • CPP switch or related circuit malfunction • Neutral switch or related circuit malfunction • Improper operation of A/C magnetic clutch • Inadequate fuel pressure (high or low pressure side) • Spill valve control solenoid valve malfunction (built-in high pressure fuel pump) • Relief valve malfunction (built-in fuel delivery pipe) • Fuel leakage • Fuel line restriction • Fuel filter clogging • Incorrect fuel injection timing • High pressure fuel pump malfunction • Fuel injector malfunction • Low engine compression • Improper valve timing • EGR system malfunction • Vacuum leakage • ECT sensor No.1 or related circuit malfunction • Fuel pressure sensor (built-in fuel delivery pipe) malfunction <p>Warning</p> <ul style="list-style-type: none"> • The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services: <ul style="list-style-type: none"> — Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. — Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete “BEFORE SERVICE PRECAUTION” and “AFTER SERVICE PRECAUTION” described in this manual. (See 01-14B-4 BEFORE SERVICE PRECAUTION [L3 WITH TC].) (See 01-14B-5 AFTER SERVICE PRECAUTION [L3 WITH TC].) <p>Caution</p> <ul style="list-style-type: none"> • Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.

01-03B

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Does the engine idle rough?	Yes	Perform the symptom troubleshooting "NO.8 ENGINE RUNS ROUGH/ROLLING IDLE". (See 01-03B-38 NO.8 ENGINE RUNS ROUGH/ROLLING IDLE [L3 WITH TC].)
		No	Go to the next step.
2	Inspect for the following: <ul style="list-style-type: none"> • Fuel quality (proper octane, contamination, winter/summer blend) • Intake-air system restriction or leakage • Fuel leakage in fuel system • Vacuum leakage Is there any malfunction?	Yes	Service if necessary. <ul style="list-style-type: none"> • Repeat this step.
		No	Go to the next step.
3	Inspect the CMP sensor and CKP sensor for the following: <ul style="list-style-type: none"> • Installation condition (See 01-40B-34 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].) • Damaged trigger wheel and camshaft • Open or short circuit in the wiring harnesses Is there any malfunction?	Yes	Repair or replace the malfunctioning parts according to the inspection results.
		No	Go to the next step.
4	Switch the ignition to ON. Retrieve any DTCs using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
5	Access the following PIDs using the M-MDS: (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) <ul style="list-style-type: none"> • AC_REQ • APP1 • APP2 • BOO • ECT • MAF • TP_REL • O2S11 • O2S12 • LONGFT1 • SHTFT1 Do the PID values indicate the correct values under the trouble condition? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	Go to the next step.
		No	Inspect the suspected parts and related wiring harness. <ul style="list-style-type: none"> • If normal: <ul style="list-style-type: none"> — Perform the "INTERMITTENT CONCERN TROUBLESHOOTING." (See 01-03B-89 INTERMITTENT CONCERN TROUBLESHOOTING [L3 WITH TC].) • If not: <ul style="list-style-type: none"> — Repair or replace the malfunctioning parts according to the inspection results.
6	Perform the EGR Control System Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the EGR system operate properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
7	Perform the TP sweep inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the electronic throttle control system work properly?	Yes	Visually inspect the throttle body (damage/scratching). <ul style="list-style-type: none"> • If normal: <ul style="list-style-type: none"> — Go to the next step. • If not: <ul style="list-style-type: none"> — Repair or replace the malfunctioning parts according to the inspection results.
		No	Repair or replace the malfunctioning parts according to the inspection results.
8	Perform the Purge Control System Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the purge solenoid valve work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
9	Perform the A/C Cut-off Control System Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the A/C cut-off operation work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
10	Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the FUEL_PRES PID value within the specification? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	Go to Step 14.
		No	Go to the next step.
11	Is the vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 13.
12	Inspect the fuel pressure sensor. (See 01-40B-29 FUEL PRESSURE SENSOR INSPECTION [L3 WITH TC].) Is there any malfunction?	Yes	Replace the fuel delivery pipe. (See 01-14B-25 FUEL INJECTOR REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to Step 14.
13	Replace the high pressure fuel pump. (See 01-14B-17 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC].) Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the FUEL_PRES PID value within the specified? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	High-pressure fuel pump or spill valve control solenoid valve (built-in high pressure fuel pump) malfunction.
		No	Relief valve malfunction. <ul style="list-style-type: none"> • Replace the fuel delivery pipe. (See 01-14B-25 FUEL INJECTOR REMOVAL/ INSTALLATION [L3 WITH TC].)
14	Connect the fuel pressure gauge between the fuel pump and the high pressure fuel pump. Measure the fuel pressure line of the low pressure side. (See 01-14B-6 FUEL LINE PRESSURE INSPECTION [L3 WITH TC].) Is the fuel pressure within the specification?	Yes	Go to the next step.
		No	Inspect for the following: <ul style="list-style-type: none"> • Fuel line restriction • Fuel filter clogging • If normal: <ul style="list-style-type: none"> — Replace the fuel pump unit. (See 01-14B-13 FUEL PUMP UNIT REMOVAL/ INSTALLATION [L3 WITH TC].) • If not: <ul style="list-style-type: none"> — Repair or replace the malfunctioning parts according to the inspection results.
15	Perform the Fuel Injector Operation Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Do the fuel injectors operate normally?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
16	Measure the compression pressure for each cylinder. (See 01-10B-12 COMPRESSION INSPECTION [L3 WITH TC].) Are compression pressures within the specification?	Yes	Replace the PCM (injector driver circuit malfunction). (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].) <ul style="list-style-type: none"> • If a malfunction remains: <ul style="list-style-type: none"> — Repair or replace the malfunctioning part according to the inspection results.
		No	Inspect for the following: <ul style="list-style-type: none"> • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper valve timing Repair or replace the malfunctioning parts according to the inspection results.
17	Verify test results. <ul style="list-style-type: none"> • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. <ul style="list-style-type: none"> — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

01-03B

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

NO.11 ENGINE STALLS/QUITS, ENGINE RUNS ROUGH, MISSES, BUCK/JERK, HESITATION/STUMBLE, SURGES [L3 WITH TC]

id010339801700

11	ENGINE STALLS/QUITS—ACCELERATION/CRUISE ENGINE RUNS ROUGH—ACCELERATION/CRUISE MISSES—ACCELERATION/CRUISE BUCK/JERK—ACCELERATION/CRUISE/DECELERATION HESITATION/STUMBLE—ACCELERATION SURGES—ACCELERATION/CRUISE
DESCRIPTION	<ul style="list-style-type: none">• Engine stops unexpectedly at beginning of acceleration or during acceleration.• Engine stops unexpectedly while cruising.• Engine speed fluctuates during acceleration or cruising.• Engine misses during acceleration or cruising.• Vehicle bucks/jerks during acceleration, cruising, or deceleration.• Momentary pause at beginning of acceleration or during acceleration.• Momentary minor irregularity in engine output.

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

11	<p>ENGINE STALLS/QUITS—ACCELERATION/CRUISE ENGINE RUNS ROUGH—ACCELERATION/CRUISE MISSES—ACCELERATION/CRUISE BUCK/JERK—ACCELERATION/CRUISE/DECELERATION HESITATION/STUMBLE—ACCELERATION SURGES—ACCELERATION/CRUISE</p>
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Improper operation of A/C system • Air leakage from intake-air system • Intake-air system restriction • Purge solenoid valve malfunction • Improper operation of electronic throttle control system • EGR system malfunction • Low engine compression • Turbocharger malfunction • Improper operation of wastegate control system • Vacuum leakage • Poor fuel quality • Main relay intermittent malfunction • Throttle body malfunction • Engine overheating • Spark plug malfunction • Variable swirl system malfunction • Air cleaner restriction • PCV valve malfunction • Improper valve timing due to jumping out timing chain • Exhaust system and/or TWC restriction • Intermittent open or short circuit in fuel pump circuit • Incorrect fuel injection timing • Inadequate fuel pressure (high or low pressure side) • Fuel pressure sensor (built-in fuel delivery pipe) malfunction • Spill valve control solenoid valve malfunction (built-in high pressure fuel pump) • Relief valve malfunction (built-in delivery pipe) • High pressure fuel pump malfunction • Fuel injector malfunction • Improper fuel pump speed control operation • Fuel pump mechanical malfunction • Fuel line restriction or clogging • Improper air/fuel mixture ratio control operation • Erratic or no signal from CMP sensor • Erratic signal from CKP sensor • A/F sensor, HO2S or related circuit malfunction • APP sensor or related circuit malfunction • ECT sensor No.1 or related circuit malfunction • MAF sensor (integrated in MAF/IAT sensor) or related circuit malfunction • IAT sensor (integrated in MAF/IAT sensor) or related circuit malfunction • MAP sensor (integrated in MAP sensor/boost air temperature sensor) or related circuit malfunction • Boost air temperature sensor (integrated in MAP sensor/boost air temperature sensor) or related circuit malfunction • Intermittent open or short circuit MAF sensor, APP sensor, TP sensor and VSS • Clutch slippage <p>Warning</p> <ul style="list-style-type: none"> • The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services: <ul style="list-style-type: none"> — Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. — Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete “BEFORE SERVICE PRECAUTION” and “AFTER SERVICE PRECAUTION” described in this manual. (See 01-14B-4 BEFORE SERVICE PRECAUTION [L3 WITH TC].) (See 01-14B-5 AFTER SERVICE PRECAUTION [L3 WITH TC].) <p>Caution</p> <ul style="list-style-type: none"> • Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.

01-03B

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Inspect for the following: <ul style="list-style-type: none"> • Fuel quality (proper octane, contamination, winter/summer blend) • Air leakage from intake-air system • Intake-air system restriction • Air cleaner element • Fuel leakage from fuel line • Clutch slippage • Vacuum leakage Is there any malfunction?	Yes	Service if necessary. <ul style="list-style-type: none"> • Repeat this step.
		No	Go to the next step.
2	Switch the ignition to ON. Retrieve any DTCs using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
3	Access the ECT PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Verify that the ECT PID value is less than 116 °C {241 °F} during driving. Is the ECT PID value less than specified? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	Go to the next step.
		No	The cause of this concern could be from the cooling system overheating. <ul style="list-style-type: none"> • Perform the symptom troubleshooting "NO.17 COOLING SYSTEM CONCERNS-OVERHEATING". (See 01-03B-68 NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [L3 WITH TC].)
4	Perform the Main Relay Operation Inspection with wiggle the related harness. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the main relay operate properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
5	Inspect the CMP sensor and CKP sensor for the following: <ul style="list-style-type: none"> • Installation condition (See 01-40B-34 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].) (See 01-40B-32 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].) • Damaged trigger wheel and camshaft • Open or short circuit in the wiring harnesses Is there any malfunction?	Yes	Repair or replace the malfunctioning parts according to the inspection results.
		No	Go to the next step.
6	Access the following PIDs using the M-MDS: (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) <ul style="list-style-type: none"> • APP1 • APP2 • BAT • CPP • PNP • ECT • MAF • IAT • MAP • FP • VSS • O2S11 • O2S12 • LONGFT1 • SHTFT1 Do the PID values indicate the correct values under the trouble condition? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	Go to the next step.
		No	Inspect the suspected parts and related wiring harness. <ul style="list-style-type: none"> • If normal: <ul style="list-style-type: none"> — Perform the "INTERMITTENT CONCERN TROUBLESHOOTING". (See 01-03B-89 INTERMITTENT CONCERN TROUBLESHOOTING [L3 WITH TC].) • If not: <ul style="list-style-type: none"> — Repair or replace the malfunctioning parts according to the inspection results.
7	Perform the EGR Control System Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the EGR system operate properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
8	Perform the A/C Cut-off Control System Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the A/C cut-off operation work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
9	Perform the TP sweep inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the electronic throttle control system work properly?	Yes	Visually inspect the throttle body (damage/scratching). <ul style="list-style-type: none"> • If normal: — Go to the next step. • If not: — Repair or replace the malfunctioning parts according to the inspection results.
		No	Repair or replace the malfunctioning parts according to the inspection results.
10	Perform the Variable Swirl System Operation Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the variable swirl system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
11	Perform the Purge Control System Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the purge solenoid valve work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
12	Perform the Fuel Pump Speed Control Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the fuel pump speed control work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
13	Perform the Wastegate Control System Operation Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the wastegate control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
14	Remove the parts necessary to inspect the turbocharger without removing the turbocharger. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].) Inspect if the turbocharger compressor wheel is bent, damaged, or interfering with housing on vehicle. (See 01-13B-13 TURBOCHARGER INSPECTION [L3 WITH TC].) Is there any malfunction?	Yes	Replace the turbocharger. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
15	Inspect the turbocharger compressor wheel locknut is loose or has fallen down inside the turbocharger. Is there any malfunction?	Yes	Replace the turbocharger. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
16	Inspect the turbocharger compressor wheel by hand. Does the wheel turn easily and smoothly?	Yes	Go to the next step.
		No	Replace the turbocharger. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
17	Inspect the turbocharger turbine wheel is damaged, cracked or interfering with housing on vehicle. Note <ul style="list-style-type: none"> • Inspect all fins on each turbine wheel. Is there any malfunction?	Yes	Replace the turbocharger. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
18	Is any engine oil found inside the turbocharger turbine housing?	Yes	Excessive amount of oil is found: <ul style="list-style-type: none"> • Replace the turbocharger. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].) Small amount of oil is found: <ul style="list-style-type: none"> • Wipe the oil out of the vehicle, then go to the next step.
		No	Go to the next step.

01-03B

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
19	Is any engine oil found inside the turbocharger compressor housing?	Yes	Wipe the oil out of the vehicle and install all removed parts in Step 14, then go to the next step.
		No	Turbocharger is normal: <ul style="list-style-type: none"> Install all removed parts in Step 14, then go to the next step.
20	Inspect for restriction in the exhaust system and TWC. Is there any restriction?	Yes	Repair or replace the malfunctioning parts according to the inspection results.
		No	Go to the next step.
21	Perform the Spark Test. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
22	Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the FUEL_PRES PID value within the specification? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	Go to Step 24.
		No	Go to the next step.
23	Replace the high pressure fuel pump. (See 01-14B-17 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC].) Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the FUEL_PRES PID value within the specified? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	High-pressure fuel pump or spill valve control solenoid valve (built-in high pressure fuel pump) malfunction.
		No	Relief valve or fuel pressure sensor malfunction. <ul style="list-style-type: none"> Replace the fuel delivery pipe. (See 01-14B-25 FUEL INJECTOR REMOVAL/INSTALLATION [L3 WITH TC].)
24	Connect the fuel pressure gauge between the fuel pump and the high pressure fuel pump. Measure the fuel pressure line of the low pressure side. (See 01-14B-6 FUEL LINE PRESSURE INSPECTION [L3 WITH TC].) Is the fuel pressure within the specification?	Yes	Go to the next step.
		No	Inspect for the following: <ul style="list-style-type: none"> Fuel line restriction Fuel filter clogging If normal: <ul style="list-style-type: none"> Replace the fuel pump unit. (See 01-14B-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [L3 WITH TC].) If not: <ul style="list-style-type: none"> Repair or replace the malfunctioning parts according to the inspection results.
25	Perform the Fuel Injector Operation Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Do the fuel injectors operate normally?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
26	Measure the compression pressure for each cylinder. (See 01-10B-12 COMPRESSION INSPECTION [L3 WITH TC].) Are compression pressures within the specification?	Yes	Go to the next step.
		No	Inspect for the following: <ul style="list-style-type: none"> Damaged valve seat Worn valve stem and valve guide Worn or stuck piston ring Worn piston, piston ring or cylinder Improper valve timing Repair or replace the malfunctioning parts according to the inspection results.
27	Inspect the PCV valve. (See 01-16B-10 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [L3 WITH TC].) Is there any malfunction?	Yes	Replace the PCV valve. (See 01-16B-9 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Replace the PCM (injector driver circuit malfunction). (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].) <ul style="list-style-type: none"> If a malfunction remains: <ul style="list-style-type: none"> Repair or replace the malfunctioning part according to the inspection results.

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
28	Verify test results. <ul style="list-style-type: none"> • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. <ul style="list-style-type: none"> — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

01-03B

NO.12 LACK/LOSS OF POWER-ACCELERATION/CRUISE [L3 WITH TC]

id010339801800

12	LACK/LOSS OF POWER—ACCELERATION/CRUISE
DESCRIPTION	<ul style="list-style-type: none"> • Performance is poor under load (e.g., power down when climbing hills).

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

12	LACK/LOSS OF POWER—ACCELERATION/CRUISE
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Improper operation of A/C system • Improper operation of A/C cut-off control • Air leakage or restriction from intake-air system • Loose turbocharger compressor to intake manifold duct connecting • Turbocharger rotating assembly binding or dragging • Wastegate control solenoid valve malfunction (stuck open) • Turbocharger malfunction • Charge air cooler malfunction • Variable swirl system malfunction • Improper operation of electronic throttle control system • Purge solenoid valve malfunction • EGR system malfunction • Brake dragging • Low engine compression • Poor fuel quality • Vacuum leakage • Incorrect signal to ignition coil • Spark plug malfunction • Engine overheating • Throttle body malfunction • Air cleaner restriction or dirty • PCV valve malfunction • Improper valve timing due to jumping out of timing chain • Improper operation of variable valve timing control system • Restriction in exhaust system or TWC • Leakage at exhaust manifold or turbocharger mounting flange • Intermittent open or short fuel pump related circuit • Inadequate fuel pressure (high-or low pressure side) • Fuel pressure sensor (built-in fuel delivery pipe) malfunction • Spill valve control solenoid valve malfunction (built-in high pressure fuel pump) • Relief valve malfunction (built-in fuel delivery pipe) • High pressure fuel pump malfunction • Improper operation of fuel pump speed control • Fuel pump mechanical malfunction • Fuel line restriction or clogging • Fuel injector malfunction • Incorrect fuel injection timing • Erratic signal from CKP sensor • Erratic or no signal from CMP sensor • ECT sensor No.1 or related circuit malfunction • MAP sensor (integrated in MAP sensor/boost air temperature sensor) or related circuit malfunction • APP sensor or related circuit malfunction • MAF/IAT sensor or related circuit malfunction • Boost air temperature sensor (integrated in MAP sensor/boost air temperature sensor) or related circuit malfunction • Intermittent open or short circuit MAF sensor, APP sensor, TP sensor and VSS • Clutch slippage <p>Warning</p> <ul style="list-style-type: none"> • The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services: <ul style="list-style-type: none"> — Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. — Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete “BEFORE SERVICE PRECAUTION” and “AFTER SERVICE PRECAUTION” described in this manual. (See 01-14B-4 BEFORE SERVICE PRECAUTION [L3 WITH TC].) (See 01-14B-5 AFTER SERVICE PRECAUTION [L3 WITH TC].) <p>Caution</p> <ul style="list-style-type: none"> • Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Inspect for the following: <ul style="list-style-type: none"> • Fuel quality (proper octane, contamination, winter/summer blend) • Air cleaner restriction or dirty • Intake-air system restriction or leakage • Charge air cooler condition (restriction or damaged) • Turbocharger compressor-to-intake manifold duct loose connection • Leakage at exhaust manifold or turbocharger mounting flange • Vacuum leakage • Brake dragging • Clutch slippage Is there any malfunction?	Yes	Service if necessary. <ul style="list-style-type: none"> • Repeat this step.
		No	Go to the next step.
2	Switch the ignition to ON. Retrieve any DTCs using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
3	Is the engine overheating?	Yes	Perform the symptom troubleshooting "NO.17 COOLING SYSTEM CONCERNS-OVERHEATING". (See 01-03B-68 NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [L3 WITH TC].)
		No	Go to the next step.
4	Perform the EGR Control System Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the EGR system operate properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
5	Perform the A/C Cut-off Control System Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the A/C cut-off operation work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
6	Perform the TP sweep inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the electronic throttle control system work properly?	Yes	Visually inspect the throttle body (damage/scratching). <ul style="list-style-type: none"> • If normal: <ul style="list-style-type: none"> — Go to the next step. • If not: <ul style="list-style-type: none"> — Repair or replace the malfunctioning parts according to the inspection results.
		No	Repair or replace the malfunctioning parts according to the inspection results.
7	Perform the Variable Swirl System Operation Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the variable swirl system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
8	Perform the Variable Valve Timing Control System Operation Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the variable valve timing control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
9	Perform the Purge Control System Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the purge solenoid valve work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
10	Perform the Fuel Pump Speed Control Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the fuel pump speed control work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.

01-03B

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
11	Perform the Wastegate Control System Operation Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the wastegate control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
12	Access the following PIDs using the M-MDS: (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) <ul style="list-style-type: none"> • BAT • ECT • MAF • IAT • APP1 • APP2 • TP REL • MAP • FP (Low side pressure line) • VSS Do the PID values indicate the correct values under the trouble condition? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	Go to the next step.
		No	Inspect the suspected parts and related wiring harness. <ul style="list-style-type: none"> • If normal: <ul style="list-style-type: none"> — Perform the “INTERMITTENT CONCERN TROUBLESHOOTING.” (See 01-03B-89 INTERMITTENT CONCERN TROUBLESHOOTING [L3 WITH TC].) • If not: <ul style="list-style-type: none"> — Repair or replace the malfunctioning parts according to the inspection results.
13	Inspect the CMP sensor and CKP sensor for the following: <ul style="list-style-type: none"> • Installation condition (See 01-40B-34 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].) (See 01-40B-32 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].) • Damaged trigger wheel and camshaft • Open or short circuit in the wiring harnesses Is there any malfunction?	Yes	Repair or replace the malfunctioning parts according to the inspection results.
		No	Go to the next step.
14	Inspect the spark plug condition. Is the spark plug wet, covered with carbon or grayish white?	Yes	Spark plug is wet or covered with carbon: <ul style="list-style-type: none"> • Perform the Spark Test. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) • Repair or replace the malfunctioning parts according to the inspection results. Spark plug is grayish white: <ul style="list-style-type: none"> • Go to Step 24.
		No	Reinstall the spark plugs on the original cylinders, then go to the next step.
15	Inspect for restriction in the exhaust system and TWC. Is there any restriction?	Yes	Repair or replace the malfunctioning parts according to the inspection results.
		No	Go to the next step.
16	Remove the parts necessary to inspect the turbocharger without removing the turbocharger. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].) Inspect if the turbocharger compressor wheel is bent, damaged, or interfering with housing on vehicle. (See 01-13B-13 TURBOCHARGER INSPECTION [L3 WITH TC].) Is there any malfunction?	Yes	Replace the turbocharger. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
17	Inspect the turbocharger compressor wheel locknut is loose or has fallen down inside the turbocharger. Is there any malfunction?	Yes	Replace the turbocharger. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
18	Inspect the turbocharger compressor wheel by hand. Does the wheel turn easily and smoothly?	Yes	Go to the next step.
		No	Replace the turbocharger. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
19	Inspect the turbocharger turbine wheel is damaged, cracked or interfering with housing on vehicle. Note <ul style="list-style-type: none"> Inspect all fins on each turbine wheel. Is there any malfunction?	Yes	Replace the turbocharger. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
20	Is any engine oil found inside the turbocharger turbine housing?	Yes	Excessive amount of oil is found: <ul style="list-style-type: none"> Replace the turbocharger. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [L3 WITH TC].) Small amount of oil is found: <ul style="list-style-type: none"> Wipe the oil out of the vehicle, then go to the next step.
		No	Go to the next step.
21	Is any engine oil found inside the turbocharger compressor housing?	Yes	Wipe the oil out of the vehicle and install all removed parts in Step 16, then go to the next step.
		No	Turbocharger is normal: <ul style="list-style-type: none"> Install all removed parts in Step 16, then go to the next step.
22	Inspect for fuel leakage in the fuel line. Is there any leakage?	Yes	Repair or replace the malfunctioning parts according to the inspection results.
		No	Go to the next step.
23	Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the FUEL_PRES PID value within the specification? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	Go to Step 25.
		No	Go to the next step.
24	Replace the high pressure fuel pump. (See 01-14B-17 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC].) Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the FUEL_PRES PID value within the specified? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	High-pressure fuel pump or spill valve control solenoid valve (built-in high pressure fuel pump) malfunction.
		No	Relief valve or fuel pressure sensor malfunction. <ul style="list-style-type: none"> Replace the fuel delivery pipe. (See 01-14B-25 FUEL INJECTOR REMOVAL/ INSTALLATION [L3 WITH TC].)
25	Connect the fuel pressure gauge between the fuel pump and the high pressure fuel pump. Measure the fuel pressure line of the low pressure side. (See 01-14B-6 FUEL LINE PRESSURE INSPECTION [L3 WITH TC].) Is the fuel pressure within the specification?	Yes	Go to the next step.
		No	Inspect for the following: <ul style="list-style-type: none"> Fuel line restriction Fuel filter clogging If normal: <ul style="list-style-type: none"> Replace the fuel pump unit. (See 01-14B-13 FUEL PUMP UNIT REMOVAL/ INSTALLATION [L3 WITH TC].) If not: <ul style="list-style-type: none"> Repair or replace the malfunctioning parts according to the inspection results.
26	Perform the Fuel Injector Operation Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Do the fuel injectors operate normally?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.

01-03B

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
27	Measure the compression pressure for each cylinder. (See 01-10B-12 COMPRESSION INSPECTION [L3 WITH TC].) Are compression pressures within the specification?	Yes	Go to the next step.
		No	Inspect for the following: <ul style="list-style-type: none"> • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper valve timing Repair or replace the malfunctioning parts according to the inspection results.
28	Inspect the PCV valve. (See 01-16B-10 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [L3 WITH TC].) Is there any malfunction?	Yes	Replace the PCV valve. (See 01-16B-9 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Replace the PCM (injector driver circuit malfunction). (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].) <ul style="list-style-type: none"> • If a malfunction remains: <ul style="list-style-type: none"> — Repair or replace the malfunctioning part according to the inspection results.
29	Verify test results. <ul style="list-style-type: none"> • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. <ul style="list-style-type: none"> — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

NO.13 KNOCKING/PINGING [L3 WITH TC]

id010339801900

13	KNOCKING/PINGING
DESCRIPTION	<ul style="list-style-type: none"> Sound is produced when air/fuel mixture is ignited by something other than a spark plug (e.g., hot spot in the combustion chamber).
POSSIBLE CAUSE	<ul style="list-style-type: none"> Poor fuel quality Engine overheating due to cooling system malfunction Variable swirl solenoid valve stuck closed Improper operation of electronic throttle system Air leakage or restriction from intake-air system ECT sensor No.1 or related circuit malfunction MAF sensor (integrated in MAF/IAT sensor) or related circuit malfunction IAT sensor (integrated in MAF/IAT sensor) or related circuit malfunction Boost air temperature sensor (integrated in MAP sensor/boost air temperature sensor) or related circuit malfunction Incorrect fuel injection timing or amount Fuel injector malfunction KS or related circuit malfunction Ignition system malfunction Erratic signal from CMP sensor Inadequate engine compression Inadequate fuel pressure (high-pressure side) MAP sensor (integrated in MAP sensor/boost air temperature sensor) or related circuit malfunction Wastegate control solenoid valve malfunction (stuck closed) Charge air cooler malfunction Fuel pressure sensor (built-in fuel delivery pipe) malfunction APP sensor or related circuit malfunction Spill valve control solenoid valve malfunction (built-in high pressure fuel pump) Exhaust system and/or TWC restriction EGR system malfunction <p>Warning</p> <ul style="list-style-type: none"> The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services: <ul style="list-style-type: none"> — Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. — Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete “BEFORE SERVICE PRECAUTION” and “AFTER SERVICE PRECAUTION” described in this manual. (See 01-14B-4 BEFORE SERVICE PRECAUTION [L3 WITH TC].) (See 01-14B-5 AFTER SERVICE PRECAUTION [L3 WITH TC].) <p>Caution</p> <ul style="list-style-type: none"> Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.

01-03B

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Access the ECT PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Verify that the ECT PID value is less than 116 °C {241 °F} during driving. Is the ECT PID value less than specified? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	Go to the next step.
		No	The cause of this concern could be from the cooling system overheating. <ul style="list-style-type: none"> Perform the symptom troubleshooting “NO.17 COOLING SYSTEM CONCERNS-OVERHEATING”. (See 01-03B-68 NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [L3 WITH TC].)
2	Inspect for the following: <ul style="list-style-type: none"> Air leakage or restriction from intake-air system Fuel quality (proper octane, contamination, winter/summer blend) Exhaust system and/or TWC restriction Charge air cooler condition (restriction or damaged) Is there any malfunction?	Yes	Service if necessary. <ul style="list-style-type: none"> Repeat this step.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
3	Switch the ignition to ON. Retrieve any DTCs using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
4	Inspect the KS. (See 01-40B-35 KNOCK SENSOR (KS) INSPECTION [L3 WITH TC].) Is there any malfunction?	Yes	Replace the KS. (See 01-40B-34 KNOCK SENSOR (KS) REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
5	Perform the EGR Control System Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the EGR system operate properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
6	Perform the TP sweep inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the electronic throttle control system work properly?	Yes	Visually inspect the throttle body (damage/scratching). <ul style="list-style-type: none"> • If normal: <ul style="list-style-type: none"> — Go to the next step. • If not: <ul style="list-style-type: none"> — Repair or replace the malfunctioning parts according to the inspection results.
		No	Repair or replace the malfunctioning parts according to the inspection results.
7	Perform the Variable Swirl System Operation Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the variable swirl system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
8	Perform the Wastegate Control System Operation Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the wastegate control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
9	Perform the Spark Test. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
10	Inspect the CMP sensor and CKP sensor for the following: <ul style="list-style-type: none"> • Installation condition (See 01-40B-34 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].) (See 01-40B-32 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].) • Damaged trigger wheel and camshaft • Open or short circuit in the wiring harnesses Is there any malfunction?	Yes	Repair or replace the malfunctioning parts according to the inspection results.
		No	Go to the next step.
11	Access the following PIDs using the M-MDS: (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) <ul style="list-style-type: none"> • BAT • ECT • MAF • IAT • APP1 • APP2 • TP REL • MAP Do the PID values indicate the correct values under the trouble condition? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	Go to the next step.
		No	Inspect the suspected parts and related wiring harness. <ul style="list-style-type: none"> • If normal: <ul style="list-style-type: none"> — Perform the "INTERMITTENT CONCERN TROUBLESHOOTING." (See 01-03B-89 INTERMITTENT CONCERN TROUBLESHOOTING [L3 WITH TC].) • If not: <ul style="list-style-type: none"> — Repair or replace the malfunctioning parts according to the inspection results.

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
12	Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the FUEL_PRES PID value within the specification? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	Go to Step 14.
		No	Go to the next step.
13	Replace the high pressure fuel pump. (See 01-14B-17 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC].) Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the FUEL_PRES PID value within the specified? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	High-pressure fuel pump or spill valve control solenoid valve (built-in high pressure fuel pump) malfunction.
		No	Relief valve or fuel pressure sensor malfunction. <ul style="list-style-type: none"> • Replace the fuel delivery pipe. (See 01-14B-25 FUEL INJECTOR REMOVAL/INSTALLATION [L3 WITH TC].)
14	Measure the compression pressure for each cylinder. (See 01-10B-12 COMPRESSION INSPECTION [L3 WITH TC].) Are compression pressures within the specification?	Yes	Inspect the fuel injector for each cylinder. (See 01-14B-29 FUEL INJECTOR INSPECTION [L3 WITH TC].) Replace the fuel injector if necessary. (See 01-14B-25 FUEL INJECTOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Inspect for the following: <ul style="list-style-type: none"> • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper valve timing Repair or replace the malfunctioning parts according to the inspection results.
15	Verify test results. <ul style="list-style-type: none"> • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. <ul style="list-style-type: none"> — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

01-03B

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

NO.14 POOR FUEL ECONOMY [L3 WITH TC]

id010339802000

14	POOR FUEL ECONOMY
DESCRIPTION	<ul style="list-style-type: none"> • Fuel economy is unsatisfactory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Contaminated air cleaner element • Engine cooling system malfunction • Weak spark • Spark plug malfunction • Poor fuel quality • Erratic signal from CKP sensor • Erratic or no signal from CMP sensor • Fuel pressure sensor (built-in fuel delivery pipe) malfunction • ECT sensor No.1 or related circuit malfunction • MAP sensor (integrated in MAP sensor/boost air temperature sensor) or related circuit malfunction • APP sensor or related circuit malfunction • MAF sensor (integrated in MAF/IAT sensor) or related circuit malfunction • Contaminated MAF sensor • IAT sensor (integrated in MAF/IAT sensor) or related circuit malfunction • Boost air temperature sensor (integrated in MAP sensor/boost air temperature sensor) or related circuit malfunction • VSS or related circuit malfunction • CPP switch or related circuit malfunction • Neutral switch or related circuit malfunction • Variable swirl system malfunction • Improper coolant level • Inadequate fuel pressure (high-pressure side) • Injection timing is incorrect • Fuel injector or related circuit malfunction • High pressure fuel pump malfunction • Fuel leakage • Fuel line restriction • Fuel filter clogging • PCV valve malfunction • Brake dragging • Clutch slippage • Improper operation of A/C system • Improper valve timing due to jumping out of timing chain • Improper engine compression • Turbocharger malfunction • Charge air cooler malfunction • Exhaust system and/or TWC clogging • EGR system malfunction • Vacuum leakage <p>Warning</p> <ul style="list-style-type: none"> • The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services: <ul style="list-style-type: none"> — Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Inspect for the following: <ul style="list-style-type: none"> • Air cleaner element for contamination • Intake-air system restriction • Fuel quality (proper octane, contamination, winter/summer blend) • Coolant level • Clutch slippage • Brake dragging • Charge air cooler condition (restriction or damaged) • Vacuum leakage • Fuel leakage • MAF sensor contaminated • Exhaust system and/or TWC restriction Is there any malfunction?	Yes	Service if necessary. <ul style="list-style-type: none"> • Repeat this step.
		No	Go to the next step.
2	Switch the ignition to ON. Retrieve any DTCs using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
3	Perform the Cooling Fan Control System Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the cooling fan system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
4	Perform the EGR Control System Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the EGR system operate properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
5	Perform the Variable Swirl System Operation Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the variable swirl system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
6	Perform the Wastegate Control System Operation Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the wastegate control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
7	Perform the A/C Cut-off Control System Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the A/C cut-off operation work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
8	Perform the Spark Test. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
9	Inspect the CMP sensor and CKP sensor for the following: <ul style="list-style-type: none"> • Installation condition (See 01-40B-34 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].) (See 01-40B-32 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].) • Damaged trigger wheel and camshaft • Open or short circuit in the wiring harnesses Is there any malfunction?	Yes	Repair or replace the malfunctioning parts according to the inspection results.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
10	Access the following PIDs using the M-MDS: (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • APP1 • APP2 • BAT • ECT • MAF • CPP • PNP • IAT • TP REL • MAP • VSS Do the PID values indicate the correct values under the trouble condition? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	Go to the next step.
		No	Inspect the suspected parts and related wiring harness. • If normal: — Perform the “INTERMITTENT CONCERN TROUBLESHOOTING.” (See 01-03B-89 INTERMITTENT CONCERN TROUBLESHOOTING [L3 WITH TC].) • If not: — Repair or replace the malfunctioning parts according to the inspection results.
11	Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the FUEL_PRES PID value within the specification? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	Go to Step 15.
		No	Go to the next step.
12	Is the vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 14.
13	Inspect the fuel pressure sensor. (See 01-40B-29 FUEL PRESSURE SENSOR INSPECTION [L3 WITH TC].) Is there any malfunction?	Yes	Replace the fuel delivery pipe. (See 01-14B-25 FUEL INJECTOR REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to Step 15.
14	Replace the high pressure fuel pump. (See 01-14B-17 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC].) Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the FUEL_PRES PID value within the specified? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	High-pressure fuel pump or spill valve control solenoid valve (built-in high pressure fuel pump) malfunction. • Go to Step 19.
		No	Relief valve or fuel pressure sensor malfunction. • Replace the fuel delivery pipe. (See 01-14B-25 FUEL INJECTOR REMOVAL/ INSTALLATION [L3 WITH TC].)
15	Inspect the turbocharger. (See 01-13B-13 TURBOCHARGER INSPECTION [L3 WITH TC].) Is there any malfunction?	Yes	Replace the turbocharger. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
16	Perform the Fuel Injector Operation Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Do the fuel injectors operate normally?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
17	Measure the compression pressure for each cylinder. (See 01-10B-12 COMPRESSION INSPECTION [L3 WITH TC].) Are compression pressures within the specification?	Yes	Go to the next step.
		No	Inspect for the following: • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper valve timing Repair or replace the malfunctioning parts according to the inspection results.

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
18	Inspect the PCV valve. (See 01-16B-10 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [L3 WITH TC].) Is there any malfunction?	Yes	Replace the PCV valve. (See 01-16B-9 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Replace the PCM (injector driver circuit malfunction). (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].) • If a malfunction remains: — Repair or replace the malfunctioning part according to the inspection results.
19	Verify test results. <ul style="list-style-type: none"> • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. <ul style="list-style-type: none"> — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

01-03B

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

NO.15 EMISSION COMPLIANCE [L3 WITH TC]

id010339802100

15	EMISSION COMPLIANCE
DESCRIPTION	<ul style="list-style-type: none"> • Fails emissions test.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Poor fuel quality • Vacuum lines leakage or blockage • Cooling system malfunction • Engine overheating • Spark plug malfunction • Air leakage from intake-air system • Variable swirl system malfunction • Improper operation of wastegate control system • Turbocharger malfunction • Charge air cooler malfunction • Inadequate fuel pressure (high-pressure side) • PCV valve malfunction or incorrect valve installation • EGR system malfunction • Exhaust system and/or TWC restriction • Fuel tank ventilation system malfunction • Charcoal canister damage • Air cleaner element clogging or restriction • Throttle body malfunction • Improper operation of electronic throttle control system • Relief valve malfunction (built-in fuel delivery pipe) • Spill valve control solenoid valve malfunction (built-in high pressure fuel pump) • Improper air/fuel mixture ratio control operation • Erratic or no signal from CMP sensor • Erratic signal from CKP sensor • A/F sensor, HO2S or related circuit malfunction • ECT sensor No.1 or related circuit malfunction • MAF sensor (integrated in MAF/IAT sensor) or related circuit malfunction • IAT sensor (integrated in MAF/IAT sensor) or related circuit malfunction • Boost air temperature sensor (integrated in MAP sensor/boost air temperature sensor) or related circuit malfunction • Fuel pressure sensor (built-in fuel delivery pipe) malfunction • APP sensor or related circuit malfunction • TP sensor or related circuit malfunction • MAP sensor (integrated in MAP sensor/boost air temperature sensor) or related circuit malfunction • VSS or related circuit malfunction • CPP switch or related circuit malfunction • Neutral switch or related circuit malfunction • Fuel line restriction • High pressure fuel pump malfunction • Fuel injector or related circuit malfunction • Incorrect fuel injection timing • TWC malfunction • Engine internal parts malfunction • Excessive carbon is built-up in combustion chamber • Improper engine compression • Improper valve timing <p>Warning</p> <ul style="list-style-type: none"> • The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services: <ul style="list-style-type: none"> — Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. — Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete “BEFORE SERVICE PRECAUTION” and “AFTER SERVICE PRECAUTION” described in this manual. (See 01-14B-4 BEFORE SERVICE PRECAUTION [L3 WITH TC].) (See 01-14B-5 AFTER SERVICE PRECAUTION [L3 WITH TC].) <p>Caution</p> <ul style="list-style-type: none"> • Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Is the engine overheating?	Yes	Perform the symptom troubleshooting "NO.17 COOLING SYSTEM CONCERNS-OVERHEATING". (See 01-03B-68 NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [L3 WITH TC].)
		No	Go to the next step.
2	Is the engine runs cold?	Yes	Perform the symptom troubleshooting "NO.18 COOLING SYSTEM CONCERNS-RUNS COLD". (See 01-03B-70 NO.18 COOLING SYSTEM CONCERNS-RUNS COLD [L3 WITH TC].)
		No	Go to the next step.
3	Switch the ignition to ON. Retrieve any DTCs using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
4	Inspect for the following: <ul style="list-style-type: none"> • Fuel quality (proper octane, contamination, winter/summer blend) • Charge air cooler condition (restriction or damaged) • Air cleaner element (clogging or restriction) • Intake-air system leakage • PCV valve installation • Vacuum line leakage or blockage • Fuel leakage at fuel system • Charcoal canister damaged • Exhaust system and/or TWC restriction Is there any malfunction?	Yes	Service if necessary. <ul style="list-style-type: none"> • Repeat this step.
		No	Go to the next step.
5	Perform the EGR Control System Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the EGR system operate properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
6	Perform the TP sweep inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the electronic throttle control system work properly?	Yes	Visually inspect the throttle body (damage/scratching). <ul style="list-style-type: none"> • If normal: — Go to the next step. • If not: — Repair or replace the malfunctioning parts according to the inspection results.
		No	Repair or replace the malfunctioning parts according to the inspection results.
7	Perform the Variable Swirl System Operation Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the variable swirl system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
8	Perform the Wastegate Control System Operation Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the wastegate control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
9	Perform the Evaporative Emission (EVAP) System Leak Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Is the EVAP system normal?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
10	Perform the Spark Test. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.

01-03B

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
11	Inspect the CMP sensor and CKP sensor for the following: <ul style="list-style-type: none"> • Installation condition (See 01-40B-34 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].) (See 01-40B-32 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].) • Damaged trigger wheel and camshaft • Open or short circuit in the wiring harnesses Is there any malfunction?	Yes	Repair or replace the malfunctioning parts according to the inspection results.
		No	Go to the next step.
12	Access the following PIDs using the M-MDS: (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) <ul style="list-style-type: none"> • APP1 • APP2 • BAT • ECT • MAF • IAT • TP REL • MAP • VSS • CPP • PNP • O2S11 • O2S12 • LONGFT1 • SHTFT1 Do the PID values indicate the correct values under the trouble condition? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	Go to the next step.
		No	Inspect the suspected parts and related wiring harness. <ul style="list-style-type: none"> • If normal: <ul style="list-style-type: none"> — Perform the "INTERMITTENT CONCERN TROUBLESHOOTING." (See 01-03B-89 INTERMITTENT CONCERN TROUBLESHOOTING [L3 WITH TC].) • If not: <ul style="list-style-type: none"> — Repair or replace the malfunctioning parts according to the inspection results.
13	Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the FUEL_PRES PID value within the specification? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	Go to Step 17.
		No	Go to the next step.
14	Is the vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 16.
15	Inspect the fuel pressure sensor. (See 01-40B-29 FUEL PRESSURE SENSOR INSPECTION [L3 WITH TC].) Is there any malfunction?	Yes	Replace the fuel delivery pipe. (See 01-14B-25 FUEL INJECTOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to Step 17.
16	Replace the high pressure fuel pump. (See 01-14B-17 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC].) Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the FUEL_PRES PID value within the specified? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	High-pressure fuel pump or spill valve control solenoid valve (built-in high pressure fuel pump) malfunction. <ul style="list-style-type: none"> • Go to Step 22.
		No	Relief valve or fuel pressure sensor malfunction. <ul style="list-style-type: none"> • Replace the fuel delivery pipe. (See 01-14B-25 FUEL INJECTOR REMOVAL/INSTALLATION [L3 WITH TC].)
17	Inspect the turbocharger. (See 01-13B-13 TURBOCHARGER INSPECTION [L3 WITH TC].) Is there any malfunction?	Yes	Replace the turbocharger. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
18	Inspect the TWC. Is there any malfunction?	Yes	Replace the TWC. (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
19	Perform the Fuel Injector Operation Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Do the fuel injectors operate normally?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
20	Measure the compression pressure for each cylinder. (See 01-10B-12 COMPRESSION INSPECTION [L3 WITH TC].) Are compression pressures within the specification?	Yes	Go to the next step.
		No	Inspect for the following: <ul style="list-style-type: none"> • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper valve timing Repair or replace the malfunctioning parts according to the inspection results.
21	Inspect the PCV valve. (See 01-16B-10 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [L3 WITH TC].) Is there any malfunction?	Yes	Replace the PCV valve. (See 01-16B-9 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Replace the PCM (injector driver circuit malfunction). (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].) <ul style="list-style-type: none"> • If a malfunction remains: <ul style="list-style-type: none"> — Repair or replace the malfunctioning part according to the inspection results.
22	Verify test results. <ul style="list-style-type: none"> • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. <ul style="list-style-type: none"> — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

01-03B

NO.16 HIGH OIL CONSUMPTION/LEAKAGE [L3 WITH TC]

id010339802200

16	HIGH OIL CONSUMPTION/LEAKAGE
DESCRIPTION	<ul style="list-style-type: none"> • Oil consumption is excessive.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Improper dipstick • Improper engine oil viscosity • PCV valve malfunction • Engine internal parts malfunction • Seal leakage at the compressor or turbine end of turbocharger (indicated by oil in housing on wheel) • Oil leakage

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Inspect for the following: <ul style="list-style-type: none"> • Proper dipstick • Proper engine oil viscosity • Engine oil level Is there any malfunction?	Yes	Service if necessary. <ul style="list-style-type: none"> • Repeat this step.
		No	Go to the next step.
2	Inspect the PCV valve. (See 01-16B-10 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [L3 WITH TC].) Is there any malfunction?	Yes	Replace the PCV valve. (See 01-16B-9 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
3	Inspect the oil leakage from outside of the engine. Is there any leakage?	Yes	Repair or replace the malfunctioning parts according to the inspection results.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
4	Remove the parts necessary to inspect the turbocharger without removing the turbocharger. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].) Visually inspect for the oil leakage inside turbocharger compressor and turbine housing. Is there any leakage?	Yes	Excessive amount of oil is found: <ul style="list-style-type: none"> Replace the turbocharger. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].) Small amount of oil is found: <ul style="list-style-type: none"> Wipe the oil out of the vehicle, then go to the next step.
		No	Go to the next step.
5	Is any engine oil found around oil pipes attached on the turbocharger center housing?	Yes	If oil leaks from damaged pipe: <ul style="list-style-type: none"> Replace the oil pipe, then install all removed parts in Step 4.
		No	Inspect the internal engine parts such as valves, valve guides, valve stem seals, cylinder head drain passage, and piston rings. Repair or replace the malfunctioning parts according to the inspection results, then install all removed parts in Step 4.
6	Verify test results. <ul style="list-style-type: none"> If normal, return to the diagnostic index to service any additional symptoms. If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. <ul style="list-style-type: none"> If the vehicle is repaired, troubleshooting is completed. If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [L3 WITH TC]

id010339802300

17	COOLING SYSTEM CONCERNS—OVERHEATING
DESCRIPTION	<ul style="list-style-type: none"> Engine runs at higher than normal temperature/overheats.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Improper coolant level Blown fuse Coolant leakage (engine internal, turbocharger, external) Excessive A/C system pressure Improper operation of A/C system Improper water/anti-freeze mixture Fans reverse rotation Poor radiator condition Thermostat malfunction Radiator hose damage Cooling fan inoperative Improper or damaged radiator cap Coolant overflow system malfunction Improper drive belt tension Drive belt damage ECT sensor No.1 or related circuit malfunction ECT sensor No.2 or related circuit malfunction Instrument cluster malfunction

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Inspect for the following: <ul style="list-style-type: none"> Engine coolant level Coolant leakage (around heater unit in passenger compartment, coolant hoses and/or radiator.) Water and anti-freeze mixture Radiator condition Collapsed or restricted radiator hoses Radiator pressure cap Coolant overflow system Fan rotational direction Fuses Is there any malfunction?	Yes	Service if necessary. <ul style="list-style-type: none"> Repeat this step.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
2	Switch the ignition to ON. Retrieve any DTCs using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
3	Perform the KOEO or KOER self test using the M-MDS. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
4	Start the engine and run it at idle speed. Turn the A/C switch off. Does the A/C compressor disengaged?	Yes	Go to the next step.
		No	Perform the symptom troubleshooting "NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY". (See 01-03B-81 NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY [L3 WITH TC].)
5	Perform the Cooling Fan Control System Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the cooling fan system operate properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
6	Inspect the drive belt. (See 01-10B-4 DRIVE BELT INSPECTION [L3 WITH TC].) Is there any malfunction?	Yes	Replace the drive belt. (See 01-10B-4 DRIVE BELT REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
7	Inspect for leakage around heater unit in the passenger compartment. Is there any leakage?	Yes	Inspect the heater unit for leakage. Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
8	Inspect for leakage at the coolant hoses and/or radiator. Is there any leakage?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
9	Cool down the engine. Remove the thermostat. (See 01-12B-11 THERMOSTAT REMOVAL/ INSTALLATION [L3 WITH TC].) Inspect the thermostat. (See 01-12B-12 THERMOSTAT INSPECTION [L3 WITH TC].) Is there any malfunction?	Yes	Replace the thermostat. (See 01-12B-11 THERMOSTAT REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Reinstall the thermostat, then go to the next step. (See 01-12B-11 THERMOSTAT REMOVAL/ INSTALLATION [L3 WITH TC].)
10	Access the ECT PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Inspect for both ECT PID and temperature gauge readings. Does the ECT PID value accord with the engine coolant temperature indicator readings?	Yes	The engine coolant temperature and thermostat are normal. <ul style="list-style-type: none"> Inspect the engine block for leakage or blockage. Repair or replace the malfunctioning part according to the inspection results.
		No	If the low engine coolant temperature indicator light on the instrument cluster indicates turned off but the ECT PID value is not the same as the low engine coolant temperature indicator light condition: <ul style="list-style-type: none"> Inspect the ECT sensor No.1. (See 01-40B-25 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [L3 WITH TC].) Replace the ECT sensor No.1 if necessary. (See 01-40B-24 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/ INSTALLATION [L3 WITH TC].) If the low engine coolant temperature indicator light indication on the instrument cluster illuminates but the ECT PID value is normal: <ul style="list-style-type: none"> Inspect the instrument cluster. (See 09-22-8 INSTRUMENT CLUSTER INSPECTION.) Replace the instrument cluster if necessary. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)

01-03B

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
11	Verify test results. <ul style="list-style-type: none"> • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. <ul style="list-style-type: none"> — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

NO.18 COOLING SYSTEM CONCERNS—RUNS COLD [L3 WITH TC]

id010339802400

18	COOLING SYSTEM CONCERNS—RUNS COLD
DESCRIPTION	<ul style="list-style-type: none"> • Engine does not reach normal operating temperature.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Thermostat malfunction • Condenser fan system malfunction • Cooling fan system malfunction

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Is a customer complaint "Lack of passenger compartment heat" only?	Yes	Inspect the A/C heater system. <ul style="list-style-type: none"> • If there is any malfunction: <ul style="list-style-type: none"> — Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
2	Does the engine speed continue at fast idle?	Yes	Perform the symptom troubleshooting "NO.9 FAST IDLE/RUNS ON". (See 01-03B-41 NO.9 FAST IDLE/RUNS ON [L3 WITH TC].)
		No	Go to the next step.
3	Perform the Cooling Fan Control System Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the cooling fan system operate properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
4	Cool down the engine. Remove the thermostat. (See 01-12B-11 THERMOSTAT REMOVAL/ INSTALLATION [L3 WITH TC].) Inspect the thermostat. (See 01-12B-12 THERMOSTAT INSPECTION [L3 WITH TC].) Is there any malfunction?	Yes	Replace the thermostat. (See 01-12B-11 THERMOSTAT REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Reinstall the thermostat, then go to the next step. (See 01-12B-11 THERMOSTAT REMOVAL/ INSTALLATION [L3 WITH TC].)
5	Access the ECT PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Inspect for both ECT PID and temperature gauge readings. Does the ECT PID value accord with the engine coolant temperature indicator readings?	Yes	The engine coolant temperature and thermostat are normal. <ul style="list-style-type: none"> • Inspect the engine block for leakage or blockage. • Repair or replace the malfunctioning part according to the inspection results.
		No	If the low engine coolant temperature indicator light on the instrument cluster indicates turned off but the ECT PID value is not the same as the low engine coolant temperature indicator light condition: <ul style="list-style-type: none"> • Inspect the ECT sensor No.1. (See 01-40B-25 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [L3 WITH TC].) • Replace the ECT sensor No.1 if necessary. (See 01-40B-24 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/ INSTALLATION [L3 WITH TC].) If the low engine coolant temperature indicator light indication on the instrument cluster illuminates but the ECT PID value is normal: <ul style="list-style-type: none"> • Inspect the instrument cluster. (See 09-22-8 INSTRUMENT CLUSTER INSPECTION.) • Replace the instrument cluster if necessary. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
6	Verify test results. <ul style="list-style-type: none"> • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. <ul style="list-style-type: none"> — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

01-03B

NO.19 EXHAUST SMOKE [L3 WITH TC]

id010339802500

19	EXHAUST SMOKE
DESCRIPTION	<ul style="list-style-type: none"> • Blue, black, or white smoke from exhaust system.
POSSIBLE CAUSE	<p>Blue smoke (Burning oil):</p> <ul style="list-style-type: none"> • PCV valve malfunction • Engine internal oil leakage • Oil leakage at the compressor or turbine end of the turbocharger <p>White smoke (Water in combustion):</p> <ul style="list-style-type: none"> • Cooling system malfunction (coolant loss) • Engine internal coolant leakage • Coolant leakage at the compressor or the turbine end of the turbocharger <p>Black smoke (Rich fuel mixture):</p> <ul style="list-style-type: none"> • Air cleaner restriction • Intake-air system is collapsed or restricted • Leakage at engine intake or exhaust manifold • Wastegate control solenoid valve malfunction (stuck open) • Excessive fuel pressure • Improper engine compression • Ignition system malfunction • Improper fuel injection timing and amount <p>Warning</p> <ul style="list-style-type: none"> • The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services: <ul style="list-style-type: none"> — Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. — Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual. (See 01-14B-4 BEFORE SERVICE PRECAUTION [L3 WITH TC].) (See 01-14B-5 AFTER SERVICE PRECAUTION [L3 WITH TC].) <p>Caution</p> <ul style="list-style-type: none"> • Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	What color is smoke coming from the exhaust system?	Blue	Burning oil is indicated. <ul style="list-style-type: none"> • Go to the next step.
		White	Water in combustion is indicated. <ul style="list-style-type: none"> • Go to Step 5.
		Black	Rich fuel mixture is indicating. <ul style="list-style-type: none"> • Go to Step 6.
2	Inspect the PCV valve. (See 01-16B-10 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [L3 WITH TC].) Is there any malfunction?	Yes	Replace the PCV valve. (See 01-16B-9 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
3	Remove the parts necessary to inspect the turbocharger without removing the turbocharger. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].) Visually inspect for the turbocharger compressor housing. Is any engine oil found inside turbocharger compressor housing?	Yes	Install all removed parts in this step. <ul style="list-style-type: none"> Excessive amount of oil is found: <ul style="list-style-type: none"> Replace the turbocharger. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].) Small amount of oil is found: <ul style="list-style-type: none"> Wipe the oil out of the vehicle, then go to the next step.
		No	Turbocharger is normal. <ul style="list-style-type: none"> Install all removed parts in this step, then go to the next step.
4	Inspect for the following engine internal parts: <ul style="list-style-type: none"> Damaged valve guide, stems or valve seals Blocked oil drain passage in cylinder head Piston ring is not seated, seized or worn Damage cylinder bore Is there any malfunction?	Yes	Repair or replace the malfunctioning parts according to the inspection results.
		No	Engine internal parts are normal. <ul style="list-style-type: none"> If other driveability symptoms are present: <ul style="list-style-type: none"> Return to diagnostic index to service additional symptoms.
5	Does the cooling system hold the coolant pressure? (See 01-12B-6 ENGINE COOLANT LEAKAGE INSPECTION [L3 WITH TC].)	Yes	Inspect for the following: <ul style="list-style-type: none"> Cylinder head gasket leakage Intake manifold gasket leakage Cracked or porous engine block <ul style="list-style-type: none"> If other driveability symptoms are present: <ul style="list-style-type: none"> Return to diagnostic index to service additional symptoms. If not: <ul style="list-style-type: none"> Repair or replace the malfunctioning parts according to the inspection results.
		No	Inspect for the cause. <ul style="list-style-type: none"> If there is any malfunction: <ul style="list-style-type: none"> Repair or replace the malfunctioning parts according to the inspection results.
6	Inspect for the following for intake-air system: <ul style="list-style-type: none"> Air cleaner restriction Collapsed or restricted Leakage Is there any malfunction?	Yes	Repair or replace the malfunctioning parts according to the inspection results.
		No	Go to the next step.
7	Access the following PIDs using the M-MDS : (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) <ul style="list-style-type: none"> APP1 APP2 BAT ECT MAF IAT TP REL MAP VSS CPP PNP O2S11 O2S12 LONGFT1 SHTFT1 Monitor the PIDs under the black smoke appeared engine condition. Do all PID values indicate normal according to the engine conditions? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	Go to the next step.
		No	Inspect the suspected parts and related wiring harness. <ul style="list-style-type: none"> If normal: <ul style="list-style-type: none"> Perform the "INTERMITTENT CONCERN TROUBLESHOOTING. (See 01-03B-89 INTERMITTENT CONCERN TROUBLESHOOTING [L3 WITH TC].) If not: <ul style="list-style-type: none"> Repair or replace the malfunctioning parts according to the inspection results.
8	Access the same PIDs as in Step 7 under the trouble condition. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Do the PID values indicate correct values under trouble condition? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	Go to the next step.
		No	Inspect the suspected parts and related wiring harness. <ul style="list-style-type: none"> If normal: <ul style="list-style-type: none"> Perform the "INTERMITTENT CONCERN TROUBLESHOOTING. (See 01-03B-89 INTERMITTENT CONCERN TROUBLESHOOTING [L3 WITH TC].) If not: <ul style="list-style-type: none"> Repair or replace the malfunctioning parts according to the inspection results.

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
9	Inspect the wastegate. (See 01-13B-14 WASTEGATE ACTUATOR INSPECTION [L3 WITH TC].) Does the wastegate stuck open?	Yes	Perform the Wastegate Control System Operation Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Repair or replace the malfunctioning parts according to the inspection results.
		No	Go to the next step.
10	Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the FUEL_PRES PID value within the specification? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	Go to Step 14.
		No	Go to the next step.
11	Is the vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 13.
12	Inspect the fuel pressure sensor. (See 01-40B-29 FUEL PRESSURE SENSOR INSPECTION [L3 WITH TC].) Is there any malfunction?	Yes	Replace the fuel delivery pipe. (See 01-14B-25 FUEL INJECTOR REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to Step 14.
13	Replace the high pressure fuel pump. (See 01-14B-17 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC].) Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the FUEL_PRES PID value within the specified? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	High-pressure fuel pump or spill valve control solenoid valve (built-in high pressure fuel pump) malfunction. • Go to Step 16.
		No	Relief valve malfunction. • Replace the fuel delivery pipe. (See 01-14B-25 FUEL INJECTOR REMOVAL/ INSTALLATION [L3 WITH TC].)
14	Perform the Spark Test. (See 01-12B-6 ENGINE COOLANT LEAKAGE INSPECTION [L3 WITH TC].) Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
15	Measure the compression pressure for each cylinder. (See 01-10B-12 COMPRESSION INSPECTION [L3 WITH TC].) Are compression pressures within the specification?	Yes	Inspect the fuel injector for each cylinder. (See 01-14B-29 FUEL INJECTOR INSPECTION [L3 WITH TC]) Replace the suspected fuel injector. (See 01-14B-25 FUEL INJECTOR REMOVAL/ INSTALLATION [L3 WITH TC])
		No	Inspect for the following: • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper valve timing Repair or replace the malfunctioning parts according to the inspection results.
16	Verify test results. • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

01-03B

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

NO.20 FUEL ODOR (IN ENGINE COMPARTMENT) [L3 WITH TC]

id010339802600

20	FUEL ODOR (IN ENGINE COMPARTMENT)
DESCRIPTION	<ul style="list-style-type: none"> • Gasoline fuel smell or visible leakage.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Excessive fuel pressure • Purge solenoid valve malfunction • Fuel system vent system blockage • Evaporative gas leakage • Improper connection of evaporative related vacuum hoses • Charcoal canister malfunction • Fuel leakage from fuel system <p>Warning</p> <ul style="list-style-type: none"> • The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services: <ul style="list-style-type: none"> — Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. — Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete “BEFORE SERVICE PRECAUTION” and “AFTER SERVICE PRECAUTION” described in this manual. (See 01-14B-4 BEFORE SERVICE PRECAUTION [L3 WITH TC].) (See 01-14B-5 AFTER SERVICE PRECAUTION [L3 WITH TC].) <p>Caution</p> <ul style="list-style-type: none"> • Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Visually inspect the fuel leakage at the fuel line. Is there any leakage?	Yes	Repair or replace the malfunctioning parts according to the inspection results.
		No	Go to the next step.
2	Inspect the vacuum hose routine. (See 01-13B-3 INTAKE-AIR SYSTEM VACUUM HOSE ROUTING DIAGRAM [L3 WITH TC].) Are vacuum hoses routines properly?	Yes	Go to the next step.
		No	Reconnect the vacuum hose.
3	Perform the Evaporative Emission (EVAP) System Leak Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Is the EVAP system normal?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
4	Inspect the airflow of the purge solenoid valve. (See 01-16B-8 PURGE SOLENOID VALVE INSPECTION [L3 WITH TC].) Is the purge solenoid airflow properly?	Yes	Go to the next step.
		No	Replace the purge solenoid valve. (See 01-16B-7 PURGE SOLENOID VALVE REMOVAL/INSTALLATION [L3 WITH TC].)
5	Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Monitor the FUEL_PRES PID while idle and race the engine. Is the FUEL_PRES PID value indicate 15 MPa {153 kgf/cm², 2175 psi} or less?	Yes	Inspect the charcoal canister for fuel saturation. <ul style="list-style-type: none"> • If excess amount of liquid fuel is present: <ul style="list-style-type: none"> — Replace the charcoal canister. (See 01-16B-5 CHARCOAL CANISTER REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Inspect the fuel pressure sensor and high pressure fuel pump. (See 01-40B-29 FUEL PRESSURE SENSOR INSPECTION [L3 WITH TC].) (See 01-14B-20 HIGH PRESSURE FUEL PUMP INSPECTION [L3 WITH TC].) Replace the fuel pressure sensor or high pressure fuel pump if necessary. (See 01-14B-25 FUEL INJECTOR REMOVAL/INSTALLATION [L3 WITH TC].) (See 01-14B-17 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC].)

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
6	Verify test results. <ul style="list-style-type: none"> • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. <ul style="list-style-type: none"> — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

01-03B

NO.21 ENGINE NOISE [L3 WITH TC]

id010339802700

21	ENGINE NOISE
DESCRIPTION	<ul style="list-style-type: none"> • Engine noise from under hood.
POSSIBLE CAUSE	<p>Squeal, click or chirp noise:</p> <ul style="list-style-type: none"> • Improper engine oil level • Loose installation of solenoid valves • Improper drive belt tension <p>Rumble or grinding sound noise:</p> <ul style="list-style-type: none"> • Loose parts • Fluid level low or air in power the steering fluid • Improper drive belt tension <p>Hiss sound noise:</p> <ul style="list-style-type: none"> • Vacuum leakage • Loose spark plug • Air leakage from the intake-air system <p>Rattle noise:</p> <ul style="list-style-type: none"> • Loose parts <p>Rap or roar noise:</p> <ul style="list-style-type: none"> • Exhaust system looseness <p>Excessive noise from turbocharger</p> <ul style="list-style-type: none"> • Foreign objects or material in the compressor inlet to the intake manifold ducting or the compressor housing • Carbon built-up in the turbine housing • Turbocharger routing assembly banding or dragging • Loose intake or exhaust ducting systems <p>Other noise:</p> <ul style="list-style-type: none"> • Camshaft friction gear noise or MLA noise • Timing chain noise <p>Warning</p> <ul style="list-style-type: none"> • The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services: <ul style="list-style-type: none"> — Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. — Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete “BEFORE SERVICE PRECAUTION” and “AFTER SERVICE PRECAUTION” described in this manual. (See 01-14B-4 BEFORE SERVICE PRECAUTION [L3 WITH TC].) (See 01-14B-5 AFTER SERVICE PRECAUTION [L3 WITH TC].) <p>Caution</p> <ul style="list-style-type: none"> • Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Is the noise from the turbocharger?	Yes	Go to Step 8.
		No	Go to the next step.
2	Is squeal, click or chirp sound present?	Yes	Inspect the engine oil level, solenoid valves installation or drive belt tension. Repair or replace the malfunctioning part according to the inspection results if necessary.
		No	Go to the next step.
3	Is rumble or grinding sound present?	Yes	Inspect the following: <ul style="list-style-type: none"> • Drive belt tension • Loose parts in engine compartment • Power steering system fluid level <ul style="list-style-type: none"> — If normal: <ul style="list-style-type: none"> • Perform the power steering fluid line air bleed. (See 06-14-3 AIR BLEEDING.) — If not: <ul style="list-style-type: none"> • Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
4	Is rattle sound present?	Yes	Inspect the location of rattle for loose parts. Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
5	Is hiss sound present?	Yes	Inspect the following: <ul style="list-style-type: none"> • Vacuum leakage • Spark plug looseness • Intake-air system leakage Repair or replace the malfunctioning part according to the inspection results if necessary.
		No	Go to the next step.
6	Is rap or roar sound present?	Yes	Inspect the exhaust system or loose parts. Repair or replace the malfunctioning part according to the inspection results if necessary.
		No	Go to the next step.
7	Is knocking noise present?	Yes	Perform the symptom troubleshooting "NO.13 KNOCKING/PINGING". (See 01-03B-57 NO.13 KNOCKING/PINGING [L3 WITH TC].)
		No	If noise comes from engine internal: <ul style="list-style-type: none"> • Inspect for the friction gear, timing chain or MLA noise. • Repair or replace the malfunctioning part according to the inspection results.
8	Inspect the intake and exhaust housing system for loose installation. Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
9	Remove the parts necessary to inspect the turbocharger without removing the turbocharger. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].) Inspect if the turbocharger compressor wheel is bent, damaged, or interfering with housing on vehicle. (See 01-13B-13 TURBOCHARGER INSPECTION [L3 WITH TC].) Is there any malfunction?	Yes	Replace the turbocharger. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
10	Inspect the turbocharger compressor wheel locknut is loose or has fallen down inside the turbocharger. Is there any malfunction?	Yes	Replace the turbocharger. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
11	Inspect the turbocharger compressor wheel by hand. Does the wheel turn easily and smoothly?	Yes	Go to the next step.
		No	Replace the turbocharger. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
12	Visually inspect the turbine housing. Is there any carbon built-up or foreign material on the turbine housing?	Yes	Clean built-up carbon or remove foreign materials. <ul style="list-style-type: none"> If turbine housing damaged: <ul style="list-style-type: none"> Replace the turbocharger. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Install the all removal parts at Step 9. Inspect all turbocharger related parts installed correctly. <ul style="list-style-type: none"> If a malfunction remains: <ul style="list-style-type: none"> Repair or replace the malfunctioning part according to the inspection results.
13	Verify test results. <ul style="list-style-type: none"> If normal, return to the diagnostic index to service any additional symptoms. If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. <ul style="list-style-type: none"> If the vehicle is repaired, troubleshooting is completed. If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

01-03B

NO.22 VIBRATION CONCERNS (ENGINE) [L3 WITH TC]

id010339802800

22	VIBRATION CONCERNS (ENGINE)
DESCRIPTION	<ul style="list-style-type: none"> Vibration from under the hood or driveline.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Loose attaching bolts or worn parts Components malfunction such as worn parts

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Inspect the following components for loose attaching bolts or worn parts: <ul style="list-style-type: none"> Cooling fan Drive belt and pulley Engine mounts Exhaust system Is there any malfunction?	Yes	Inspect the following systems: <ul style="list-style-type: none"> Wheels Transmission and mounts Driveline Suspension Repair or replace the malfunctioning part according to the inspection results if necessary.
		No	Readjust or retighten suspect parts installation position. Service if necessary for other parts.
2	Verify test results. <ul style="list-style-type: none"> If normal, return to the diagnostic index to service any additional symptoms. If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. <ul style="list-style-type: none"> If the vehicle is repaired, troubleshooting is completed. If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

NO.23 A/C DOES NOT WORK SUFFICIENTLY [L3 WITH TC]

id010339802900

23	A/C DOES NOT WORK SUFFICIENTLY
DESCRIPTION	<ul style="list-style-type: none"> • A/C compressor magnetic clutch does not engage when A/C is turned on.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • PCM, climate control unit, instrument cluster or multi information display DTC is stored. • Refrigerant pressure sensor malfunction • Improper refrigerant charging amount • Seized A/C compressor • Evaporator temperature sensor malfunction • Open or short circuit in wiring harness between evaporator temperature sensor and climate control unit (Full-auto air conditioner) • Instrument cluster malfunction (Does not receive A/C request signal from climate control unit or transmit it to PCM) • Multi information display malfunction • Climate control unit malfunction (A/C switch malfunction or climate control unit does not determine A/C request or transmit the A/C request signal) • Open or short circuit in wiring harness between climate control unit terminal 2P and instrument cluster terminal 2I (Manual air conditioner) • A/C compressor malfunction • Open circuit in wiring harness between A/C magnetic clutch terminal A and body ground • A/C relay malfunction • Open circuit in wiring harness between A/C relay and PCM terminal 1I • Open circuit in wiring harness between ignition switch and A/C relay (vehicles without advanced keyless entry and push button start system) • Open circuit in wiring harness between IG2 relay and A/C relay (vehicles with advanced keyless entry and push button start system) • Open circuit in wiring harness between battery positive terminal and A/C relay • Open circuit in wiring harness between A/C relay and A/C magnetic clutch

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Switch the ignition to ON (engine off). Perform the PCM, instrument cluster, climate control unit and multi information display DTC inspection using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) (See 09-02E-4 DTC INSPECTION [INSTRUMENT CLUSTER].) (See 07-02-4 DTC DISPLAY.) (See 09-02J-3 DTC INSPECTION [MULTI INFORMATION DISPLAY].) Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].) (See 09-02E-5 DTC TABLE [INSTRUMENT CLUSTER].) (See 07-02-5 DTC TABLE.) (See 09-02J-4 DTC TABLE [MULTI INFORMATION DISPLAY].)
		No	Go to the next step.
2	Access the PCM PID ACCS using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Start the engine and idle it. Turn the ACCS PID to ON from OFF using the M-MDS simulation function. Is the A/C magnetic clutch engaged?	Yes	Manual air conditioner: <ul style="list-style-type: none"> • Go to Step 4. Full-auto air conditioner: <ul style="list-style-type: none"> • Go to the next step.
		No	Go to Step 13.
3	Access the climate control unit PID AC_PRES using the M-MDS. (See 07-02-22 PID/DATA MONITOR DISPLAY.) Monitor the climate control unit AC_PRES PID while turning on and off the air conditioner by switching the control panel. Is the AC_PRES PID value normal? (See 07-02-22 PID/DATA MONITOR TABLE.)	Yes	Go to Step 6.
		No	Go to Step 5.
4	Remove the climate control unit. (See 07-40B-17 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER].) Reconnect the climate control unit connector. Measure the voltage at the climate control unit terminal 1H (wiring harness-side). Is the voltage normal? (See 07-40B-20 CLIMATE CONTROL UNIT INSPECTION [MANUAL AIR CONDITIONER].)	Yes	Go to Step 7.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
5	Inspect the refrigerant pressure sensor. (See 07-40B-16 REFRIGERANT PRESSURE SENSOR INSPECTION [MANUAL AIR CONDITIONER].) (See 07-40A-25 REFRIGERANT PRESSURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) Is there any malfunction?	Yes	Replace the refrigerant pressure sensor. (See 07-40B-15 REFRIGERANT PRESSURE SENSOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER].) (See 07-40A-24 REFRIGERANT PRESSURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
		No	Inspect the following: <ul style="list-style-type: none"> • Refrigerant charging amount • A/C compressor for seizure Repair or replace the malfunctioning part according to the inspection result.
6	Access the climate control unit PID EVAP_TEMP using the M-MDS. (See 07-02-22 PID/DATA MONITOR DISPLAY.) Monitor the climate control unit PID EVAP_TEMP while turning on and off the air conditioner by switching the control panel. Is the EVAP_TEMP PID value normal? (See 07-02-22 PID/DATA MONITOR TABLE.)	Yes	Go to Step 9.
		No	Go to Step 8.
7	Remove the climate control unit. (See 07-40B-17 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER].) Reconnect the climate control unit connector. Measure the voltage at the climate control unit terminal 1C (wiring harness-side). Is the voltage normal? (See 07-40B-20 CLIMATE CONTROL UNIT INSPECTION [MANUAL AIR CONDITIONER].)	Yes	Go to Step 11.
		No	Go to the next step.
8	Inspect the evaporator temperature sensor. (See 07-40B-15 EVAPORATOR TEMPERATURE SENSOR INSPECTION [MANUAL AIR CONDITIONER].) (See 07-40A-24 EVAPORATOR TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) Is there any malfunction?	Yes	Replace the evaporator temperature sensor. (See 07-40B-15 EVAPORATOR TEMPERATURE SENSOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER].) (See 07-40A-24 EVAPORATOR TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
		No	Inspect for open or short circuit between evaporator temperature sensor and climate control unit. Repair or replace the suspected wiring harness.
9	Verify the multi information display indication of A/C system while turning on and off the air conditioner by switching the control panel. Does the multi information display indicate properly?	Yes	Replace the instrument cluster (instrument cluster does not receive A/C request signal from climate control unit or transmit it to PCM). (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to the next step.
10	Inspect the multi information display. (See 09-22-19 MULTI INFORMATION DISPLAY INSPECTION.) Is there any malfunction?	Yes	Replace the multi information display. (See 09-22-18 MULTI INFORMATION DISPLAY REMOVAL/INSTALLATION.)
		No	Replace the climate control unit (A/C switch malfunction or climate control unit does not determine A/C request or transmit the A/C request signal). (See 07-40A-26 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)

01-03B

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
11	Remove the climate control unit. (See 07-40B-17 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER].) Reconnect the climate control unit connector. Start the engine and idle it. Measure the voltage at the climate control unit terminal 2P (wiring harness-side) while turning on and off the air conditioner by switching the control panel. Is the voltage change in specified according to air control panel switching? (See 07-40B-20 CLIMATE CONTROL UNIT INSPECTION [MANUAL AIR CONDITIONER].)	Yes	Replace the instrument cluster (instrument cluster does not receive A/C request signal from climate control unit or transmit it to PCM). (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to the next step.
12	Inspect for open or short circuit between climate control unit terminal 2P (wiring harness-side) and instrument cluster terminal 2I (wiring harness-side). Is there any malfunction?	Yes	Repair or replace the suspected wiring harness.
		No	Replace the climate control unit (A/C switch malfunction or climate control unit does not determine A/C request or transmit the A/C request signal). (See 07-40B-17 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER].)
13	Start the engine and idle it. Turn the PCM PID ACCS to ON from OFF using the M-MDS simulation function. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Measure the voltage at the A/C magnetic clutch terminal A (wiring harness-side). Is the voltage specified? Specification: • 10.5 V or more	Yes	Go to the next step.
		No	Go to Step 15.
14	Inspect for continuity between A/C magnetic clutch terminal A (wiring harness-side) and body ground. Is there continuity?	Yes	Replace the A/C compressor. (See 07-11-18 A/C COMPRESSOR REMOVAL/INSTALLATION.)
		No	Go to the next step.
15	Inspect the A/C relay. (See 09-21-17 RELAY INSPECTION.) Is there any malfunction?	Yes	Replace the A/C relay.
		No	Go to the next step.
16	Switch the ignition to off. Disconnect the A/C relay and PCM connectors. Inspect for continuity between A/C relay and PCM terminal 1I (wiring harness-side). Is there continuity?	Yes	Inspect for open circuit between the following: • Ignition switch and A/C relay (vehicles without advanced keyless entry and push button start system) • IG2 relay and A/C relay (vehicles with advanced keyless entry and push button start system) • Battery positive terminal and A/C relay • A/C relay and A/C magnetic clutch Repair or replace the suspected wiring harness.
		No	Repair or replace the suspected wiring harness.
17	Verify test results. • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY [L3 WITH TC]

id010339803000

24	A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY
DESCRIPTION	<ul style="list-style-type: none"> • A/C compressor magnetic clutch does not disengage.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • PCM, instrument cluster or climate control unit DTC is stored. • Short to power supply in wiring harness between A/C relay and magnetic clutch • A/C compressor magnetic clutch engagement is stuck. • A/C relay malfunction • Short to ground in wiring harness between A/C relay and PCM • Short to ground in wiring harness between climate control unit terminal 2P and instrument cluster (Manual air conditioner) • Climate control unit malfunction

01-03B

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Switch the ignition to ON (engine off). Perform the PCM, instrument cluster and climate control unit DTC inspection using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) (See 09-02E-4 DTC INSPECTION [INSTRUMENT CLUSTER].) (See 07-02-4 DTC DISPLAY.) Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].) (See 09-02E-5 DTC TABLE [INSTRUMENT CLUSTER].) (See 07-02-5 DTC TABLE.)
		No	Go to the next step.
2	Start the engine and idle it. Turn the A/C switch on with blower switch is on. Remove the A/C relay. Does the A/C magnetic clutch disengage?	Yes	Go to Step 4.
		No	Go to the next step.
3	Switch the ignition to off. Disconnect the A/C compressor connector. Switch the ignition to ON (engine off). Measure the voltage at A/C compressor terminal B (wiring harness-side). Is the voltage B+ ?	Yes	Repair or replace the suspected wiring harness.
		No	Replace the A/C compressor (A/C magnetic clutch engagement is stuck). (See 07-11-18 A/C COMPRESSOR REMOVAL/INSTALLATION.)
4	Inspect the A/C relay. (See 09-21-17 RELAY INSPECTION.) Is there any malfunction?	Yes	Replace the A/C relay.
		No	Go to the next step.
5	Access the ACCS PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Start the engine and idle it. Turn the A/C switch on and off with blower switch is on. Is the ACCS PID value always ON?	Yes	Manual air conditioner: <ul style="list-style-type: none"> • Go to the next step. Full-auto air conditioner: <ul style="list-style-type: none"> • Replace the climate control unit (A/C switch signal is always on). (See 07-40A-26 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
		No	Inspect for short to ground in wiring harness between PCM terminal 1I and A/C relay. Repair or replace the suspected wiring harness.
6	Switch the ignition to off. Disconnect the instrument cluster and climate control unit connectors. Inspect for continuity between climate control unit terminal 2P (wiring harness-side) and body ground. Is there continuity?	Yes	Repair or replace the suspected wiring harness.
		No	Replace the climate control unit (A/C switch signal is always on). (See 07-40B-17 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER].)
7	Verify test results. <ul style="list-style-type: none"> • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. <ul style="list-style-type: none"> — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

NO.25 A/C IS NOT CUT OFF UNDER WIDE OPEN THROTTLE CONDITIONS [L3 WITH TC]

id010339803100

25	A/C IS NOT CUT OFF UNDER WIDE OPEN THROTTLE CONDITIONS
DESCRIPTION	<ul style="list-style-type: none"> • A/C compressor magnetic clutch does not disengage under WOT.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • APP sensor malfunction • Loosely installed APP sensor

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Does the A/C compressor disengage when the A/C switch is turned off?	Yes	Go to the next step.
		No	Perform the symptom troubleshooting "NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY". (See 01-03B-81 NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY [L3 WITH TC].)
2	Switch the ignition to ON. Retrieve any DTCs using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Inspect the APP sensor. (See 01-40B-28 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [L3 WITH TC].) Replace the accelerator pedal if necessary. (See 01-13B-14 ACCELERATOR PEDAL REMOVAL/ INSTALLATION [L3 WITH TC].)
3	Verify test results. <ul style="list-style-type: none"> • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. <ul style="list-style-type: none"> — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

NO.26 EXHAUST SULPHUR SMELL [L3 WITH TC]

id010339803200

26	EXHAUST SULPHUR SMELL
DESCRIPTION	<ul style="list-style-type: none"> • Rotten egg smell (sulphur) from exhaust.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Electrical connectors are disconnected or connected poorly • Charcoal canister malfunction • Vacuum lines are disconnected or connected improperly • Improper fuel pressure • Poor fuel quality <p>Warning</p> <ul style="list-style-type: none"> • The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services: <ul style="list-style-type: none"> — Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. — Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual. (See 01-14B-4 BEFORE SERVICE PRECAUTION [L3 WITH TC].) (See 01-14B-5 AFTER SERVICE PRECAUTION [L3 WITH TC].) <p>Caution</p> <ul style="list-style-type: none"> • Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Are any driveability or exhaust smoke concerns present?	Yes	Go to the appropriate flow chart. (See 01-03B-4 SYMPTOM DIAGNOSTIC INDEX [L3 WITH TC].)
		No	Go to the next step.
2	Inspect for the following: <ul style="list-style-type: none"> • Electrical connections • Vacuum lines • Fuel quality Is there any malfunction?	Yes	Service if necessary. <ul style="list-style-type: none"> • Repeat this step.
		No	Go to the next step.
3	Switch the ignition to ON. Retrieve any DTCs using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
4	Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the FUEL_PRES PID value within the specification? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	Go to Step 8.
		No	Go to the next step.
5	Is the vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 7.
6	Inspect the fuel pressure sensor. (See 01-40B-29 FUEL PRESSURE SENSOR INSPECTION [L3 WITH TC].) Is there any malfunction?	Yes	Replace the fuel delivery pipe. (See 01-14B-25 FUEL INJECTOR REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to Step 8.
7	Replace the high pressure fuel pump. (See 01-14B-17 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC].) Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the FUEL_PRES PID value within the specified? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	High-pressure fuel pump or spill valve control solenoid valve (built-in high pressure fuel pump) malfunction.
		No	Relief valve malfunction. <ul style="list-style-type: none"> • Replace the fuel delivery pipe. (See 01-14B-25 FUEL INJECTOR REMOVAL/ INSTALLATION [L3 WITH TC].)
8	Inspect the charcoal canister for fuel saturation. (See 01-16B-6 CHARCOAL CANISTER INSPECTION [L3 WITH TC].) Is a excess amount of liquid fuel present in canister?	Yes	Replace the charcoal canister. (See 01-16B-5 CHARCOAL CANISTER REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Inspect the fuel tank vent system. <ul style="list-style-type: none"> • If the fuel tank vent system is normal: <ul style="list-style-type: none"> — Suggest trying a different brand since sulfur content can vary in different fuels. • If the fuel tank vent system is not normal: <ul style="list-style-type: none"> — Repair or replace the malfunctioning part according to the inspection results.
9	Verify test results. <ul style="list-style-type: none"> • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. <ul style="list-style-type: none"> — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

01-03B

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

NO.27 FUEL REFILL CONCERNS [L3 WITH TC]

id010339803300

27	FUEL REFILL CONCERNS
DESCRIPTION	<ul style="list-style-type: none"> • Fuel tank does not fill smoothly.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Clogged EVAP pipes • Nonreturn valve malfunction • Improper use of fuel nozzle • Inadequate fuel filling speed <p>Warning</p> <ul style="list-style-type: none"> • The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services: <ul style="list-style-type: none"> — Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. — Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete “BEFORE SERVICE PRECAUTION” and “AFTER SERVICE PRECAUTION” described in this manual. (See 01-14B-4 BEFORE SERVICE PRECAUTION [L3 WITH TC].) (See 01-14B-5 AFTER SERVICE PRECAUTION [L3 WITH TC].) <p>Caution</p> <ul style="list-style-type: none"> • Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Switch the ignition to ON. Retrieve any DTCs using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
2	Remove the fuel-filler pipe. Make sure nonreturn valve is installed properly. Inspect the nonreturn valve operation. Does the nonreturn valve operate properly?	Yes	Inspect for the following: <ul style="list-style-type: none"> • Improper use of fuel nozzle • Inadequate fuel filling speed Repair or replace the malfunctioning part according to the inspection results.
		No	Nonreturn valve is installed improperly: <ul style="list-style-type: none"> • Reinstall the nonreturn valve to proper position. Nonreturn valve does not operate properly: <ul style="list-style-type: none"> • Replace the nonreturn valve.
3	Verify test results. <ul style="list-style-type: none"> • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. <ul style="list-style-type: none"> — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

NO.28 FUEL FILLING SHUT OFF CONCERNS [L3 WITH TC]

id010339803400

28	FUEL FILLING SHUT OFF CONCERNS
DESCRIPTION	<ul style="list-style-type: none"> • Fuel does not shut off properly.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Clogged EVAP pipes • Nonreturn valve malfunction • Fuel shut-off valve malfunction • Fuel nozzle malfunction • Fuel nozzle is not inserted correctly <p>Warning</p> <ul style="list-style-type: none"> • The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services: <ul style="list-style-type: none"> — Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. — Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete “BEFORE SERVICE PRECAUTION” and “AFTER SERVICE PRECAUTION” described in this manual. (See 01-14B-4 BEFORE SERVICE PRECAUTION [L3 WITH TC].) (See 01-14B-5 AFTER SERVICE PRECAUTION [L3 WITH TC].) <p>Caution</p> <ul style="list-style-type: none"> • Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.

01-03B

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Switch the ignition to ON. Retrieve any DTCs using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
2	Remove the fuel-filler pipe. Make sure nonreturn valve is installed properly. Inspect the nonreturn valve operation. Does the nonreturn valve operate properly?	Yes	Inspect for the following: <ul style="list-style-type: none"> • Improper use of fuel nozzle • Fuel is not inserted correctly • Inspect fuel shut-off valve Repair or replace the malfunctioning part according to the inspection results.
		No	Nonreturn valve is installed improperly: <ul style="list-style-type: none"> • Reinstall the nonreturn valve to proper position. Nonreturn valve does not operate properly: <ul style="list-style-type: none"> • Replace the nonreturn valve.
3	Verify test results. <ul style="list-style-type: none"> • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. <ul style="list-style-type: none"> — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

NO.29 SPARK PLUG CONDITION [L3 WITH TC]

id010339803600

29	SPARK PLUG CONDITION
DESCRIPTION	<ul style="list-style-type: none"> • Incorrect spark plug condition.
POSSIBLE CAUSE	<p>Note</p> <ul style="list-style-type: none"> • Inspecting the condition of the spark plugs can determine whether a problem is related to a specific cylinder or possibly all cylinders. <p>Wet/carbon stuck on specific plug:</p> <ul style="list-style-type: none"> • Spark—Weak, not visible • Air/fuel mixture—Excessive fuel injection volume • Compression—No compression, low compression • Malfunctioning spark plug <p>Grayish white with specific plug:</p> <ul style="list-style-type: none"> • Air/fuel mixture—Insufficient fuel injection volume • Malfunctioning spark plug <p>Wet/carbon is stuck on all plugs:</p> <ul style="list-style-type: none"> • Spark—Spark weak • Air/fuel mixture—Too rich, excessive fuel pressure • Compression—Low compression • Clogging in intake/exhaust system <p>Grayish white with all plugs:</p> <ul style="list-style-type: none"> • Air/fuel mixture—Too lean, insufficient fuel pressure <p>Warning</p> <ul style="list-style-type: none"> • The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services: <ul style="list-style-type: none"> — Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. — Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete “BEFORE SERVICE PRECAUTION” and “AFTER SERVICE PRECAUTION” described in this manual. (See 01-14B-4 BEFORE SERVICE PRECAUTION [L3 WITH TC].) (See 01-14B-5 AFTER SERVICE PRECAUTION [L3 WITH TC].) <p>Caution</p> <ul style="list-style-type: none"> • Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Remove all spark plugs. (See 01-18B-3 SPARK PLUG REMOVAL/ INSTALLATION [L3 WITH TC].) Inspect the spark plug condition. (See 01-18B-3 SPARK PLUG INSPECTION [L3 WITH TC].) Is there any malfunction?	Yes	Specific plug is wet or covered with carbon: <ul style="list-style-type: none"> • Go to the next step. Specific plug looks grayish white: <ul style="list-style-type: none"> • Go to Step 10. All plugs are wet or covered with carbon: <ul style="list-style-type: none"> • Go to Step 12. All plugs look grayish white: <ul style="list-style-type: none"> • Go to Step 21.
		No	Symptom troubleshooting completed.
2	Is the spark plug wet/covered with carbon from engine oil?	Yes	Inspect all areas related to oil. Repair or replace the malfunctioning parts according to the inspection results.
		No	Go to the next step.
3	Inspect the spark plugs for the following: <ul style="list-style-type: none"> • Cracked insulator • Heat range • Air gap • Worn electrode Is there any malfunction?	Yes	Replace the spark plug. (See 01-18B-3 SPARK PLUG REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
4	Inspect the compression pressure at the suspected cylinder. (See 01-10B-12 COMPRESSION INSPECTION [L3 WITH TC].) Is the compression pressure correct?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
5	Reinstall all the spark plugs. (See 01-18B-3 SPARK PLUG REMOVAL/ INSTALLATION [L3 WITH TC].) Perform the Spark Test at the suspected cylinder. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Is a strong blue spark visible (compare with normal cylinder)?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
6	Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the FUEL_PRES PID value within the specification? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	Inspect the suspected fuel injector for open or short circuit in the fuel injector. (See 01-14B-29 FUEL INJECTOR INSPECTION [L3 WITH TC].) Repair or replace the malfunctioning parts according to the inspection results.
		No	Go to the next step.
7	Is the vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 9.
8	Inspect the fuel pressure sensor. (See 01-40B-29 FUEL PRESSURE SENSOR INSPECTION [L3 WITH TC].) Is there any malfunction?	Yes	Replace the fuel delivery pipe. (See 01-14B-25 FUEL INJECTOR REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
9	Replace the high pressure fuel pump. (See 01-14B-17 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC].) Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the FUEL_PRES PID value within the specified? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	High-pressure fuel pump or spill valve control solenoid valve (built-in high pressure fuel pump) malfunction.
		No	Relief valve malfunction. <ul style="list-style-type: none"> • Replace the fuel delivery pipe. (See 01-14B-25 FUEL INJECTOR REMOVAL/ INSTALLATION [L3 WITH TC].)
10	Inspect the spark plug for the following. <ul style="list-style-type: none"> • Heat range • Air gap Is there any malfunction?	Yes	Replace the spark plug. (See 01-18B-3 SPARK PLUG REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
11	Perform the KOER self test using the M-MDS. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) Is the suspected fuel injector circuit related DTC (P0201:00, P0202:00, P0203:00 or P0204:00) present?	Yes	Go to the applicable DTC inspection. (See 01-02B-127 DTC P0201:00 [L3 WITH TC].) (See 01-02B-129 DTC P0202:00 [L3 WITH TC].) (See 01-02B-131 DTC P0203:00 [L3 WITH TC].) (See 01-02B-133 DTC P0204:00 [L3 WITH TC].)
		No	Inspect the suspect fuel injector for resistance: (See 01-14B-29 FUEL INJECTOR INSPECTION [L3 WITH TC].) Repair or replace the malfunctioning parts according to the inspection results.
12	Is the air cleaner element free of blockage?	Yes	Go to the next step.
		No	Replace the air cleaner element.
13	Perform the Spark Test. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
14	Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the FUEL_PRES PID value within the specification? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	Go to Step 18.
		No	Go to the next step.
15	Is the vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 17.

01-03B

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
16	Inspect the fuel pressure sensor. (See 01-40B-29 FUEL PRESSURE SENSOR INSPECTION [L3 WITH TC].) Is there any malfunction?	Yes	Replace the fuel delivery pipe. (See 01-14B-25 FUEL INJECTOR REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
17	Replace the high pressure fuel pump. (See 01-14B-17 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC].) Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the FUEL_PRES PID value within the specified? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	High-pressure fuel pump or spill valve control solenoid valve (built-in high pressure fuel pump) malfunction. • Go to Step 19.
		No	Relief valve malfunction. • Replace the fuel delivery pipe. (See 01-14B-25 FUEL INJECTOR REMOVAL/ INSTALLATION [L3 WITH TC].)
18	Access the following PIDs using the M-MDS: (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • ECT • O2S11 (When engine can be started) • MAF Are all PIDs normal? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
19	Perform the Purge Control System Inspection (when engine can be started). (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the purge solenoid valve work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results.
20	Inspect the engine compression. (See 01-10B-12 COMPRESSION INSPECTION [L3 WITH TC].) Is the engine compression normal?	Yes	Inspect for clogging in the exhaust system. Repair or replace the malfunctioning part according to the inspection results.
		No	Repair or replace the malfunctioning parts according to the inspection results.
21	When the engine cannot be started: • Inspect the intake-air system for air leakage. When the engine can be started: • Perform the intake manifold vacuum inspection. Is air sucked in from the intake-air system?	Yes	Repair or replace the malfunctioning parts according to the inspection results.
		No	Go to the next step.
22	Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the FUEL_PRES PID value within the specification? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	Access the following PIDs using the M-MDS: (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) (See 01-40B-8 PCM INSPECTION [L3 WITH TC].) • ECT • O2S11 • O2S12 • MAF — If normal: • Inspect the PCM ground condition. • Repair or replace the malfunctioning part according to the inspection results. — If not: • Inspect the PCM ground condition. • Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
23	Is the vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 25.
24	Inspect the fuel pressure sensor. (See 01-40B-29 FUEL PRESSURE SENSOR INSPECTION [L3 WITH TC].) Is there any malfunction?	Yes	Replace the fuel delivery pipe. (See 01-14B-25 FUEL INJECTOR REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

STEP	INSPECTION	RESULTS	ACTION
25	Replace the high pressure fuel pump. (See 01-14B-17 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC].) Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the FUEL_PRES PID value within the specified? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)	Yes	High-pressure fuel pump or spill valve control solenoid valve (built-in high pressure fuel pump) malfunction.
		No	Access the following PIDs using the M-MDS: (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) (See 01-40B-8 PCM INSPECTION [L3 WITH TC].) • ECT • O2S11 • O2S12 • MAF — If normal: • Inspect the PCM ground condition. • Repair or replace the malfunctioning part according to the inspection results. — If not: • Inspect the PCM ground condition. • Repair or replace the malfunctioning part according to the inspection results.
26	Verify test results. • If normal, return to the diagnostic index to service any additional symptoms. • If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

01-03B

INTERMITTENT CONCERN TROUBLESHOOTING [L3 WITH TC]

id010339800400

Vibration Method

- If a malfunction occurs or becomes worse while driving on a rough road or when the engine is vibrating, perform the steps below.

Note

- There are several reasons why the vehicle or engine vibration could cause an electrical malfunction. Check the following:
 - Connectors are not fully seated.
 - Wiring harnesses do not have full play.
 - Wires laying across brackets or moving parts.
 - Wires routed too close to hot parts.
- An improperly routed, improperly clamped, or loose harness can cause a wiring harness to become pinched between parts.
- The connector joints, points of vibration, and places where the wiring harnesses pass through the firewall and body panels are the major areas to be checked.

Inspection Method for Switch Connectors or Wires

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition to ON (engine off).

Note

- If engine starts and runs, perform the following steps during idle.

3. Access the PIDs for the switch you are inspecting.
4. Turn the switch on manually.
5. Slightly shake each connector or wiring harness vertically and horizontally while monitoring the PID.
 - If the PID value is unstable, check for a poor connection.

acxuuw00002361

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

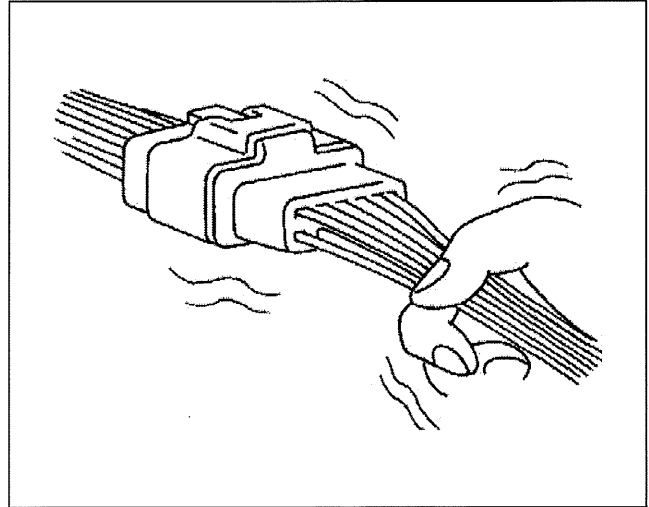

Inspection Method for Sensor Connectors or Wires

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition to ON (engine off).

Note

- If the engine starts and runs, perform the following steps during idling.

3. Access the PIDs for the switch you are inspecting.
4. Slightly shake each connector or wiring harness vertically and horizontally while monitoring the PID.
 - If the PID value is unstable, check for poor connection.

acxuuw00002362

Inspection Method for Sensors

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition to ON (engine off).

Note

- If the engine starts and runs, perform the following steps during idle.

3. Access the PIDs for the switch you are inspecting.
4. Shake the sensor slightly with your finger.
 - If the PID value is unstable or a malfunction occurs, check for a poor connection or a poorly mounted sensor or both.

Inspection Method for Actuators or Relays

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition to ON (engine off).

Note

- If engine starts and runs, perform the following steps during idling.

3. Prepare the output state control function for actuators or relays that you are inspecting.
4. Shake the actuator or relay with your finger for 3 s after the output state control function is activated.
 - If a variable click sound is heard, check for a poor connection or a poorly mounted actuator or both, or the relay.

Note

- Shake the relays too strongly may result in open circuits.

acxuuw00002368

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

Water Sprinkling Method

If a malfunction occurs only during high humidity or rainy/snowy weather, perform the following steps:

Caution

- Indirectly change the temperature and humidity by spraying water onto the front of the radiator.
- If a vehicle is subject to water leakage, the leakage may damage the control module. When testing a vehicle with a water leakage problem, special caution must be used.

01-03B

1. Connect the M-MDS to the DLC-2 if you are inspecting sensors or switches.
2. Switch the ignition to ON (engine off).

Note

- If the engine starts and runs, perform the following steps is idling.

3. Access the PIDs for the sensor or the switch if you are inspecting sensors or switches.
4. If you are inspecting the switch, turn it on manually.
5. Spray water onto the vehicle or run it through a car wash.
 - If the PID value is unstable or a malfunction occurs, repair or replace parts if necessary.

am3uuw000333

ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC]

id010339803700

Input Signal System Investigation Procedure

1. Find an unusual signal. (See 01-03B-91 Finding unusual signals.)
2. Locate the source. (See 01-03B-91 Locating the source of unusual signals.)
3. Repair or replace the defective part.
4. Confirm that the unusual signal has been erased.

Finding unusual signals

While referring to 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC], use the PID/DATA monitor and record function to inspect the input signal system relating to the problem.

1. Start the engine and idle the vehicle. You can assume that any signals that are out of specification by a wide margin are unusual.
2. When recreating the problem, any sudden change in the monitor input signals that is not consciously created by the driver can be determined as unusual.

Locating the source of unusual signals

Caution

- Compare the M-MDS monitor voltage with the measurement voltage using the digital measurement system function. If you use another tester, a misreading may occur.
- When measuring the voltage, attach the tester ground to the ground of the PCM that is being tested, or to the engine itself. If this is not done, the measured voltage and actual voltage may differ.
- After connecting the pin to a waterproof coupler, confirm continuity and measure the voltage, and inspect the waterproof connector for cracks. If there are any, use sealant to fix them. Failure to do this may result in deterioration of the wiring harness or terminal from water damage, leading to problems with the vehicle.

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

Thermistor type (IAT sensor, ECT sensor No.1, ECT sensor No.2 and boost air temperature sensor)

acxuuv00002366

Investigate the input signal system for thermistor type

1. When an unusual signal is received, measure the #1 PCM terminal voltage.
 - If the #1 terminal voltage and the M-MDS monitor voltage are the same, proceed to the next step.
 - If there is a difference of **0.5 V or more**, inspect the following points concerning the PCM connector:
 - Female terminal opening is loose.
 - Coupler (pin holder) damage
 - Pin discoloration (blackness)
 - Wiring harness/pin crimp is loose or disconnected.
2. Measure the #2 sensor terminal voltage.
 - If there is a **0.5 V or more** difference between the sensor and M-MDS voltages, inspect the wiring harness for open or short circuits.
 - If the sensor and M-MDS voltages are the same, inspect the following points concerning the sensor connector:
 - Female terminal opening is loose.
 - Coupler (pin holder) damage
 - Pin discoloration (blackness)
 - Wiring harness/pin crimp is loose or disconnected.
 - If there are no problems, proceed to next investigation below.

Investigate the ground system for thermistor type

- Confirm that terminal sensor #3 is at **0 V**.
 - If it is at **0 V**, inspect the sensor. If necessary, replace the sensor.
 - If not, inspect for the following:
 - Open circuit in wiring harness
 - Female terminal opening is loose.
 - Coupler (pin holder) damage
 - Pin discoloration (blackness)
 - Wiring harness/pin crimp is loose or disconnected.

Main Relay Operation Inspection

1. Verify that the main relay clicks when the ignition is switched to ON and then to off.
 - If there is no operation sound, inspect the following:
 - Main relay (See 09-21-17 RELAY INSPECTION.)
 - Wiring harness and connector between battery positive terminal and main relay terminal A
 - Wiring harness and connector between PCM terminal 1AT and main relay terminal B

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

01-03B

Intake Manifold Vacuum Inspection

1. Verify air intake hoses are installed properly.
2. Start the engine and run it is idling.
3. Disconnect the vacuum hose between the intake manifold and purge solenoid valve from the intake manifold side.
4. Connect a vacuum gauge to the intake manifold and measure the intake manifold vacuum.
 - If not as specified, inspect the following:

Specification

More than 60 kPa {450 mmHg, 18 inHg}

Note

- Air suction can be located by the engine speed change when lubricant is sprayed on the area where suction is occurring.
 - Air suction at throttle body, charge air cooler, intake manifold and PCV valve installation points
 - EGR valve (stuck open)
 - Engine compression (See 01-10B-12 COMPRESSION INSPECTION [L3 WITH TC].)

Electronic Throttle Control System Inspection

Engine coolant temperature compensation inspection

1. Access the following PIDs using the M-MDS: (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC])
 - ECT
 - IAT
 - RPM
2. Verify that the engine is cold, then start the engine.
3. Verify that the engine speed decreases as the engine warms up.
 - If the engine speed does not decrease or decreases slowly, inspect the following:
 - ECT sensor and related wiring harness (See 01-40B-25 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [L3 WITH TC].)
 - Throttle body and related wiring harness (See 01-13B-12 THROTTLE BODY INSPECTION [L3 WITH TC].)

Load compensation inspection

1. Start the engine and run it is idling.
2. Verify that the DTC P0506:00 or P0507:00 is not displayed. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].)
 - If the DTC P0506:00, or P0507:00 is displayed, perform the DTC inspection. (See 01-02B-199 DTC P0506:00 [L3 WITH TC].) (See 01-02B-201 DTC P0507:00 [L3 WITH TC].)
3. Access the RPM PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].)

Note

- Excludes temporary idle speed drop just after the loads are turned on.

4. Verify that the engine speed is within the specification under each load condition.
 - If the load condition is not as specified, inspect the following:
 - A/C system (A/C request signal is always on or off) (See 01-03B-78 NO.23 A/C DOES NOT WORK SUFFICIENTLY [L3 WITH TC].) (See 01-03B-81 NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY [L3 WITH TC].)
 - Electrical load
 - Charging system (See 01-17B-4 BATTERY INSPECTION [L3 WITH TC].) (See 01-17B-8 GENERATOR INSPECTION [L3 WITH TC].)

Engine speed

Load condition	Engine speed (rpm)
	Neutral
No load	650—750
Electrical load on* ¹	650—750
A/C operating	700—800

*¹ : When the following electrical loads are on: Headlights, rear defroster, cooling fan No.1, cooling fan No.2, and the blower motor (2-step or more)

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

Throttle position (TP) sweep inspection

1. Perform the KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].)
2. Verify that none of the following DTCs are displayed:
 - P0122:00, P0123:00, P0222:00, P0223:00, P2100:00, P2101:00, P2107:00, P2108:00, P2119:00, P2122:00, P2123:00, P2127:00, P2128:00, P2135:00, P2138:00
 - If any one DTC is displayed, perform the DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
3. Access the TP REL PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].)
4. Verify that the PID reading is within the CTP value. (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)
 - If the PID reading is out of range, perform the following:
 - Remove the air duct from the throttle valve body.
 - Verify that the throttle valve opens when the accelerator pedal is depressed.
 - If the throttle valve opens, inspect the TP sensor and the related wiring harness. (See 01-40B-28 THROTTLE POSITION (TP) SENSOR INSPECTION [L3 WITH TC].)
 - If the throttle valve does not open, inspect the throttle valve actuator control motor and the related wiring harness. (See 01-13B-12 THROTTLE BODY INSPECTION [L3 WITH TC].)
5. Gradually depress the throttle pedal and verify that the PID reading increases lineally.
 - If the PID reading drops momentarily, inspect the following:
 - TP sensor (See 01-40B-28 THROTTLE POSITION (TP) SENSOR INSPECTION [L3 WITH TC].)
6. Fully depress the throttle pedal and verify that the PID reading is within the WOT value. (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)
 - If the PID reading is out of range, perform the following:
 - Remove the air duct from throttle body with connector connected.
 - Verify that the throttle valve opens when throttle pedal is depressed.
 - If the throttle valve opens, inspect the TP sensor and the related wiring harness. (See 01-40B-28 THROTTLE POSITION (TP) SENSOR INSPECTION [L3 WITH TC].)
 - If the throttle valve does not open, inspect the throttle valve actuator control motor and the related wiring harness. (See 01-13B-12 THROTTLE BODY INSPECTION [L3 WITH TC].)

Variable Swirl System Operation Inspection

1. Access the ECT PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].)
2. Verify that the ECT PID is **below 0 °C {32 °F}**.
3. Start the engine.
4. Inspect the rod operation under the following conditions:

Rod operation

Engine speed	3,250 rpm	
	Below	Above
Shutter valve actuator	Operate	Not operate

If the rod operation is not specified, inspect as follows:

1. Perform the KOER self test using the M-MDS and verify that the DTCs P2004:00, P2006:00, P2009:00 or P2010:00 is not displayed. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].)
 - If the DTC P2004:00, P2006:00, P2009:00 or P2010:00 is displayed, perform DTC inspection. (See 01-02B-234 DTC P2004:00 [L3 WITH TC].) (See 01-02B-237 DTC P2006:00 [L3 WITH TC].) (See 01-02B-240 DTC P2009:00 [L3 WITH TC].) (See 01-02B-242 DTC P2010:00 [L3 WITH TC].)

If simulation function of M-MDS is used:

1. Switch the ignition to ON (engine off).
2. Turn the variable swirl solenoid valve from off to on using the IMRC PID and verify that the operation sound of the solenoid valve is heard.
 - If the operation sound is not heard, replace the variable swirl solenoid valve. (See 01-13B-12 VARIABLE SWIRL SOLENOID VALVE INSPECTION [L3 WITH TC].)
 - If the operation sound is not heard, inspect the following:
 - Vacuum hose and vacuum chamber for looseness or damage
 - Variable swirl shutter valve actuator (See 01-13B-12 VARIABLE SWIRL SHUTTER VALVE ACTUATOR INSPECTION [L3 WITH TC].)
 - Check valve is stuck open or closed.
 - Shutter valve cannot move smoothly.

If simulation function of M-MDS is not used:

1. Inspect the variable swirl solenoid valve. (See 01-13B-12 VARIABLE SWIRL SOLENOID VALVE INSPECTION [L3 WITH TC].)
 - If the variable swirl solenoid valve is not normal, replace the variable swirl solenoid valve. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
 - If the variable swirl solenoid valve is normal, inspect the following:
 - Vacuum hose and vacuum chamber for looseness or damage
 - Variable swirl shutter valve actuator (See 01-13B-12 VARIABLE SWIRL SHUTTER VALVE ACTUATOR INSPECTION [L3 WITH TC].)
 - Check valve is stuck open or closed.
 - Shutter valve cannot move smoothly.

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

Fuel Injector Operation Inspection

If simulation function of M-MDS is used:

STEP	INSPECTION	ACTION
1	<ul style="list-style-type: none"> Start the engine and warm it up completely. Access the INJ_1, INJ_2, INJ_3, and INJ_4 PIDs using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Turn the fuel injector from on to off using the PIDs for each cylinder. Does the engine speed drop? 	Yes Fuel injectors work properly.
		No Engine speed does not drop on any cylinder: <ul style="list-style-type: none"> Go to the next step. Engine speed drops on some cylinders: <ul style="list-style-type: none"> Go to Step 4.
2	<ul style="list-style-type: none"> Perform the Main Relay Operation Inspection. (See 01-03B-92 Main Relay Operation Inspection.) Does the main relay work properly? 	Yes Go to the next step.
		No Repair or replace the malfunctioning part according to the inspection results.
3	<ul style="list-style-type: none"> Inspect the fuel injector of the suspected cylinder. (See 01-14B-29 FUEL INJECTOR INSPECTION [L3 WITH TC].) Is there any malfunction? 	Yes Replace the fuel injector. (See 01-14B-25 FUEL INJECTOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No Inspect the fuel injector power and/or ground systems related wiring harness and connectors for the suspected cylinder. <ul style="list-style-type: none"> If all items normal: <ul style="list-style-type: none"> Replace the PCM. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].) If not: <ul style="list-style-type: none"> Repair or replace the malfunctioning part according to the inspection results.
4	<ul style="list-style-type: none"> Perform the KOER self test using the M-MDS. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) Are DTCs P0201:00, P0202:00, P0203:00 and/or P0204:00 present? 	Yes Go to the applicable DTC inspection. (See 01-02B-127 DTC P0201:00 [L3 WITH TC].) (See 01-02B-129 DTC P0202:00 [L3 WITH TC].) (See 01-02B-131 DTC P0203:00 [L3 WITH TC].) (See 01-02B-133 DTC P0204:00 [L3 WITH TC].)
		No Go to the next step.
5	<ul style="list-style-type: none"> Inspect the fuel injector of the suspected cylinder. (See 01-14B-29 FUEL INJECTOR INSPECTION [L3 WITH TC].) Is there any malfunction? 	Yes Inspect the following for the suspected cylinder: <ul style="list-style-type: none"> PCM terminals (pulled-out pins, corrosion) Fuel injector terminals (pulled-out pins, corrosion) <ul style="list-style-type: none"> If all items are normal: <ul style="list-style-type: none"> Replace the PCM. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].) If not: <ul style="list-style-type: none"> Repair or replace the malfunctioning part according to the inspection results.
		No Replace the fuel injector. (See 01-14B-25 FUEL INJECTOR REMOVAL/INSTALLATION [L3 WITH TC].)

01-03B

If simulation function of M-MDS is not used:

STEP	INSPECTION	ACTION
1	<ul style="list-style-type: none"> Perform the KOER self test using the M-MDS. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) Are DTCs P0201:00, P0202:00, P0203:00 and/or P0204:00 present? 	Yes Go to the applicable DTC inspection. (See 01-02B-127 DTC P0201:00 [L3 WITH TC].) (See 01-02B-129 DTC P0202:00 [L3 WITH TC].) (See 01-02B-131 DTC P0203:00 [L3 WITH TC].) (See 01-02B-133 DTC P0204:00 [L3 WITH TC].)
		No Go to the next step.
2	<ul style="list-style-type: none"> Inspect the fuel injector for each cylinder. (See 01-14B-29 FUEL INJECTOR INSPECTION [L3 WITH TC].) Is there any malfunction? 	Yes Replace the fuel injector. (See 01-14B-25 FUEL INJECTOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No Go to the next step.
3	<ul style="list-style-type: none"> Inspect the following for the suspected cylinder: <ul style="list-style-type: none"> Fuel injector power and/or ground system related wiring harnesses and connectors. PCM terminals (pulled-out pins, corrosion) Fuel injector terminals (pulled-out pins, corrosion) Is there any malfunction? 	Yes Repair or replace the malfunctioning part according to the inspection results.
		No Replace the PCM. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

Fuel Cut Control System Inspection

Note

- This inspection has to be performed after the Fuel Injector Operation Inspection.

If simulation function of M-MDS is used:

1. Warm up the engine and idle it.
2. Access the RPM and the FUELPW1 PIDs using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].)
3. Monitor both PIDs while performing the following steps:
 - (1) Depress the accelerator pedal and increase the RPM PID to **4,000 rpm**.
 - (2) Quickly release the accelerator pedal (brake pedal is not depressed) and verify that the FUELPW1 PID is **0 msec.**, and **2—5 msec.** when the RPM PID drops **below 1,200 rpm**.
 - If not as specified, inspect the following.
 - ECT sensor No.1 and related wiring harness (See 01-40B-25 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [L3 WITH TC].)

If simulation function of M-MDS is not used:

1. Warm up the engine and idle it.
2. Measure the fuel injector control signal wave profile using the oscilloscope while performing the following steps.
 - (1) Depress the accelerator pedal and increase the engine speed to **4,000 rpm**.
 - (2) Quickly release the accelerator pedal (brake pedal is not depressed) and verify that the wave profile constant **B+**, and the wave appears when the engine speed drops **below 1,200 rpm**. (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)
 - If not as specified, inspect the following.
 - ECT sensor No.1 and related wiring harness (See 01-40B-25 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [L3 WITH TC].)

Fuel Pump Operation Inspection

If simulation function of M-MDS is not used:

1. Remove the fuel-filler cap.
2. Switch the ignition to ON (engine off).
3. Turn the fuel pump relay from off to on using the FP PID and inspect if the operation sound of the fuel pump is heard. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].)
 - If no operation sound is heard, proceed to the next step.
4. Measure the voltage at the wiring harness side fuel pump unit terminal B with the FP PID turned on.
 - If the voltage is as specified, inspect the following:
 - Fuel pump continuity
 - Fuel pump ground
 - Wiring harness between fuel pump relay and PCM terminal 1H
 - If not as specified, inspect the following:
 - Fuel pump relay
 - Fuel pump speed control relay
 - Wiring harness connector (Battery—Fuel pump relay—Fuel pump resistor—Fuel pump unit—Ground)

Specification

8.0—11.5 V (Ignition switch at ON)

If simulation function of M-MDS is not used:

Caution

- **Connecting the wrong check connector terminal may possibly cause a malfunction. Carefully connect the specified terminal only.**

1. Short the check connector terminal F/P to body ground using a jumper wire.
2. Remove the fuel-filler cap.
3. Switch the ignition to ON (engine off).
4. Verify that the fuel pump operation sound is heard.
 - If no operation sound is heard, proceed to the next step.

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

01-03B

5. Measure the voltage at wiring harness side fuel pump unit connector terminal B.
 - If the voltage is as specified, inspect the following:
 - Fuel pump continuity
 - Fuel pump ground
 - Wiring harness between fuel pump relay and PCM terminal 1H
 - If not as specified, inspect the following:
 - Fuel pump relay (See 09-21-17 RELAY INSPECTION.)
 - Fuel pump speed control relay (See 09-21-17 RELAY INSPECTION.)
 - Wiring harness connector (Battery—Fuel pump relay—Fuel pump resistor—Fuel pump unit—Ground)

Specification

8.0—11.5 V (Ignition switch at on)

Fuel Pump Control System Inspection

If simulation function of M-MDS is used:

1. Switch the ignition to ON (engine off).
2. Access the FP PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].)
3. Turn the fuel pump relay from off to on and inspect if the operation sound of the fuel pump relay is heard.
 - If no operation sound is heard, inspect the fuel pump relay. (See 09-21-17 RELAY INSPECTION.)
 - If the fuel pump relay is normal, inspect the following:
 - Wiring harness and connectors (Ignition switch—Fuel pump relay—PCM terminal 1H) (vehicles without advanced keyless entry and push button start system)
 - Wiring harness and connectors (Relay block—Fuel pump relay—PCM terminal 1H) (vehicles with advanced keyless entry and push button start system)

If simulation function of M-MDS is not used:

1. Crank the engine and verify that the fuel pump relay operation sound is heard.
2. If the operation sound is not heard, inspect the following:
 - Fuel pump relay (See 09-21-17 RELAY INSPECTION.)
 - Wiring harness and connectors (Ignition switch—Fuel pump relay—PCM terminal 1H) (vehicles without advanced keyless entry and push button start system)
 - Wiring harness and connectors (Relay block—Fuel pump relay—PCM terminal 1H) (vehicles with advanced keyless entry and push button start system)

Fuel Pump Speed Control Inspection

If simulation function of M-MDS is used:

1. Perform the Fuel Pump Operation Inspection.
2. Connect the M-MDS to the DLC-2.
3. Remove the fuel-filler cap.
4. Start the engine and run it is idling.
5. Turn the fuel pump speed control relay from off to on using the FPRR PID and verify that the fuel pump unit operation sound frequency at FPRR PID on is higher than off. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].)
 - If it cannot be verified, inspect for the following:
 - Fuel pump resistor
 - Fuel pump speed control relay (stuck on or off) (See 09-21-17 RELAY INSPECTION.)
 - Wiring harnesses and connectors (open or short to ground circuit at fuel pump relay terminal C—fuel pump speed control relay—fuel pump unit terminal B)

If simulation function of M-MDS is not used:

1. Perform the fuel pump operation inspection.
2. Remove the fuel-filler cap.
3. Verify that the fuel pump unit operation sound frequency at cranking is higher than during idle.
 - If it cannot be verified, inspect for the following:
 - Fuel pump resistor
 - Fuel pump speed control relay (stuck on or off) (See 09-21-17 RELAY INSPECTION.)
 - Wiring harnesses and connectors (open or short to ground circuit at fuel pump relay terminal C—fuel pump speed control relay—fuel pump unit terminal B)

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

Spark Test

1. Disconnect the fuel pump relay.
2. Verify that each ignition coil and connector is connected properly.
3. Inspect the ignition system in the following procedure.

Warning

- **High voltage in the ignition system can cause strong electrical shock which can result in serious injury. Avoid direct contact to the vehicle body during the following spark test.**

STEP	INSPECTION	ACTION	
1	<ul style="list-style-type: none"> • Disconnect the ignition coil from the spark plugs. • Remove the spark plugs. (See 01-18B-3 SPARK PLUG REMOVAL/INSTALLATION [L3 WITH TC].) • Verify that the spark plugs do not have carbon deposits. • Is there any malfunction? 	Yes	Perform no-load racing at 4,000 rpm for 2 min, 2 times to burn off the carbon deposits. Repeat this step.
		No	Go to the next step.
2	<ul style="list-style-type: none"> • Inspect the spark plugs for damage, wear, and proper plug gap. (See 01-18B-3 SPARK PLUG INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the spark plugs, then go to the next step. (See 01-18B-3 SPARK PLUG REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
3	<ul style="list-style-type: none"> • Reconnect the spark plugs to the ignition coil. • Ground the spark plugs to the engine. • Is a strong blue spark visible at each cylinder while cranking the engine? 	Yes	Ignition system is normal.
		No	Some cylinders do not spark: <ul style="list-style-type: none"> • Go to the next step. All cylinders do not spark: <ul style="list-style-type: none"> • Go to Step 5.
4	<ul style="list-style-type: none"> • Inspect the following wiring harnesses for an open or short circuit: <ul style="list-style-type: none"> — Ignition coil No.1 terminal C—PCM terminal 2BA — Ignition coil No.2 terminal C—PCM terminal 2AW — Ignition coil No.3 terminal C—PCM terminal 2AX — Ignition coil No.4 terminal C—PCM terminal 2AT • Is there any malfunction? 	Yes	Repair or replace the suspected wiring harness, then go to Step 1.
		No	Inspect the ignition coil. (See 01-18B-2 IGNITION COIL INSPECTION [L3 WITH TC].) Replace the ignition coil if necessary. (See 01-18B-2 IGNITION COIL REMOVAL/INSTALLATION [L3 WITH TC].)
5	<ul style="list-style-type: none"> • Measure the voltage at the terminal A in each ignition coils. • Is the voltage B+? 	Yes	Go to the next step.
		No	Inspect the power supply circuit of ignition coils. Repair or replace the suspected wiring harness.
6	<ul style="list-style-type: none"> • Does the PCM connector or ignition coil connectors have poor connection? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 1.
		No	Go to the next step.
7	<ul style="list-style-type: none"> • Inspect the CKP sensor and crankshaft pulley. (See 01-40B-33 CRANKSHAFT POSITION (CKP) SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Inspect for an open or short circuit in the wiring harness and connector of the CKP sensor. Repair or replace the malfunctioning part according to the inspection results.

EGR Control System Inspection

If simulation function of M-MDS is used:

1. Crank the engine and verify that the EGR valve operation (initial operation) sound is heard.
 - If the operation sound is not heard, verify that the DTC P0403:00 is shown. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].)
 - If the DTC P0403:00 is shown, perform the DTC inspection. (See 01-02B-164 DTC P0403:00 [L3 WITH TC].)
2. Start the engine run it is idling.
3. Increase the step value of the EGR valve from **0 to 57** using the SEGRP PID of the simulation function. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].)
4. Operate the EGR valve and inspect if the engine speed becomes unstable or the engine stalls.
 - If the engine speed does not change, proceed to the following.
 - (1) Stop the engine.
 - (2) Remove the EGR valve. (See 01-16B-8 EGR VALVE REMOVAL/INSTALLATION [L3 WITH TC].)
 - (3) Connect the EGR valve connector.

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

01-03B

- (4) Switch the ignition to ON (engine off).
- (5) Increase the step value of EGR valve from **0 to 57** using the SEGRP PID.
- (6) Verify that the EGR valve operates according to the SEGRP PID.
 - If the EGR valve is operated, clean the EGR valve and the EGR gas passage.
 - If the EGR valve does not operate, replace the EGR valve.
5. Start the engine and warm it up completely.
6. Access the following PIDs: (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].)
 - ECT, RPM, SEGRP, APP1, APP2, TP REL, VSS
7. Idle the vehicle and verify that the SEGRP value is **0**.

Caution

- **While performing this step, always operate the vehicle in a safe and lawful manner.**
- **When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later.**

8. Put the vehicle in drive.
9. Depress the accelerator pedal and verify that the SEGRP value increases.
 - If the SEGRP value does not increase, inspect the VSS, TP REL and ECT PIDs. (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)
10. Stop the vehicle and verify that the SEGRP value is returns to **0**.

If simulation function of M-MDS is not used:

1. Verify that EGR valve operation (initial operation) sound is heard when the ignition is switched to ON.
 - If the operation sound is not heard, verify that the DTC P0403:00 is shown. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].)
 - If the DTC P0403:00 is shown, perform the DTC inspection. (See 01-02B-164 DTC P0403:00 [L3 WITH TC].)
2. Start the engine and idle it.
3. Warm up the engine to normal operating temperature.
4. Access the following PIDs using the M-MDS: (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].)
 - ECT, RPM, SEGRP, APP1, APP2, TP REL, VSS
5. Let the vehicle idle and verify that the SEGRP value is **0**.
6. Put the vehicle in drive.
7. Depress the accelerator pedal and verify that the SEGRP value is increased.
 - If the EGR valve increases, inspect the following:
 - EGR valve (stuck open or closed) (See 01-16B-9 EGR VALVE INSPECTION [L3 WITH TC].)
 - Wiring harness and connectors (Main relay—EGR valve—PCM)
 - If the SEGRP value does not increase, inspect the VSS, APP1, APP2, TP REL and ECT PIDs. (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)
8. Stop the vehicle and verify that the SEGRP value returns to **0**.

Purge Control System Inspection

If simulation function of M-MDS is used:

1. Start the engine.
2. Disconnect the vacuum hose between the purge solenoid valve and the charcoal canister.
3. Put a finger to the purge solenoid valve and verify that there is no vacuum applied when the engine is cold.
 - If there is a vacuum, inspect the following:
 - Wiring harness and connectors (Purge solenoid valve—PCM terminal 2AB)
 - Purge solenoid valve (stuck open) (See 01-16B-8 PURGE SOLENOID VALVE INSPECTION [L3 WITH TC].)
4. Verify that the DTC P0443:00 is displayed. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].)
 - If the DTC P0443:00 is shown, perform the DTC inspection. (See 01-02B-178 DTC P0443:00 [L3 WITH TC].)
5. Access the EVAPCP PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].)
6. Increase the duty value of the purge solenoid valve to **50%** and inspect if the operation sound of the valve is heard.
 - If the operation sound is heard, inspect for loose or damaged vacuum hoses. (Intake manifold—Purge solenoid valve—Charcoal canister)
 - If the operation sound is not heard, inspect the purge solenoid valve. (See 01-16B-8 PURGE SOLENOID VALVE INSPECTION [L3 WITH TC].)
7. Warm up the engine to normal operating temperature.
8. Monitor the EVAPCP PID using the M-MDS, and drive the vehicle **approx. 2000 rpm for 30 s or more**.
 - If the EVAPCP PID is **0%**, inspect the following.
 - MAF, APP1, APP2, TP REL and LOAD PIDs (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)

01-03B-99

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

If simulation function of M-MDS is not used:

1. Start the engine.
2. Disconnect the vacuum hose between the purge solenoid valve and the charcoal canister.
3. Put a finger to the purge solenoid valve and verify that there is no vacuum applied when the engine is cold.
 - If there is vacuum, inspect the following:
 - Wiring harness and connectors (Purge solenoid valve—PCM terminal 2AB)
 - Purge solenoid valve (See 01-16B-8 PURGE SOLENOID VALVE INSPECTION [L3 WITH TC].)
4. Warm up the engine to the normal operating temperature.
5. Stop the engine.
6. Verify that the DTC P0443:00 is shown. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].)
 - If the DTC P0443:00 is shown, perform the DTC inspection. (See 01-02B-178 DTC P0443:00 [L3 WITH TC].)
7. Switch the ignition to ON (engine off).
8. Access the ECT PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].)
9. Verify that the engine coolant temperature is **above 60 °C {140 °F}**.
 - If the M-MDS indicates that the temperature is **below 60 °C {140 °F}**, Inspect the ECT sensor. (See 01-40B-25 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [L3 WITH TC].)
10. Set the vehicle on the dynamometer or chassis roller.

Warning

- **When the dynamometer or chassis roller is operating, there is a possibility that the operator may come into contact with or be caught up in the rotating parts, leading to serious injuries or death. When performing work while the dynamometer or chassis roller is operating, be careful not to contact or be caught up in any of the rotating parts.**

11. Drive vehicle at an engine speed to **approx. 2000 rpm for 30 s or more**.
12. Put a finger to the purge solenoid valve and verify that there is no vacuum applied during Step 2.
 - If there is no vacuum, inspect the following:
 - Wiring harness and connector (Main relay—Purge solenoid valve—PCM terminal 2AB)
 - Purge solenoid valve (See 01-16B-8 PURGE SOLENOID VALVE INSPECTION [L3 WITH TC].)
 - MAF, APP1, APP2, TP REL and LOAD PIDs (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)
 - If there is vacuum, inspect the following:
 - Vacuum hose (Purge solenoid valve—Charcoal canister)

A/C Cut-off Control System Inspection

1. Start the engine.
2. Turn the A/C switch and fan switch on.
3. Verify that the A/C compressor magnetic clutch actuates.
 - If it does not actuate, go to symptom troubleshooting “NO.23 A/C DOES NOT WORK SUFFICIENTLY”. (See 01-03B-78 NO.23 A/C DOES NOT WORK SUFFICIENTLY [L3 WITH TC].)
4. Fully open the throttle valve and verify that the A/C compressor magnetic clutch does not actuate for **2—5 s**.
 - If it actuates, inspect as follows:
 - A/C relay (See 09-21-17 RELAY INSPECTION.)
 - Open or short to ground circuit in the wiring harness and connectors (Ignition switch—A/C relay—PCM terminal 11)
 - A/C related parts
 - APP1, APP2 PIDs (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)

Cooling Fan Control System Inspection

1. Start the engine and warm it up to normal operating temperature.
2. Perform the KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].)
3. Verify that the DTC P0480:00 is not shown and the cooling fan operates during the KOER self test.
 - If the DTC P0480:00 is shown, perform the DTC inspection. (See 01-02B-195 DTC P0480:00 [L3 WITH TC].)
 - If the cooling fans do not operate, proceed to the following:
 - Inspect the following parts in the indicated order in accordance with fan operation conditions.
 - Open circuit between fan control module and battery positive terminal
 - Open circuit between fan control module and ground
 - Poor connection of the fan control module connector
 - If there is no malfunction:
 - Replace the cooling fan component. (See 01-12B-14 COOLING FAN COMPONENT REMOVAL/ INSTALLATION [L3 WITH TC].)

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

Wastegate Control System Operation Inspection

If simulation function of M-MDS is used:

1. Start the engine and run it is idling.
2. Disconnect the hose between the wastegate control solenoid valve and the intake pipe.
3. Put a finger to the wastegate control solenoid valve and verify that there is no pressure applied.
 - If there is pressure, inspect the following:
 - Wiring harness and connectors (Wastegate control solenoid valve—PCM terminal 2AA)
 - Wastegate control solenoid valve (stuck open) (See 01-13B-13 WASTEGATE CONTROL SOLENOID VALVE INSPECTION [L3 WITH TC].)
4. Warm up the engine to normal operating temperature.
5. Verify that the DTC P0245:00 or P0246:00 are shown. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].)
 - If the DTC P0245:00 or P0246:00 are shown, perform the DTC inspection. (See 01-02B-140 DTC P0245:00 [L3 WITH TC].) (See 01-02B-142 DTC P0246:00 [L3 WITH TC].)
6. Access the WGC PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].)
7. Increase the duty value of the wastegate control solenoid valve and inspect if the operation sound of the solenoid valve is heard.
 - If the operation sound is heard, inspect for loose or damaged vacuum hoses. (Wastegate actuator—Wastegate control solenoid valve—Intake hose)
 - If the operation sound is not heard, inspect the wastegate control solenoid valve. (See 01-13B-13 WASTEGATE CONTROL SOLENOID VALVE INSPECTION [L3 WITH TC].)
8. Warm up the engine to normal operating temperature.
9. Access the WGC and APP PIDs using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].)
10. Run the engine with the APP PID **above 30%** and verify that the WGC PID value increases from **0%**.
 - If the WGC PID is **0%**, inspect the APP PID. (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)

If simulation function of M-MDS is not used:

1. Start the engine and run it is idling.
2. Disconnect the hose between the wastegate control solenoid valve and the intake pipe.
3. Put a finger to the wastegate control solenoid valve and verify that there is no pressure applied.
 - If there is pressure, inspect the following:
 - Wiring harness and connectors (Wastegate control solenoid valve—PCM terminal 2AA)
 - Wastegate control solenoid valve (stuck open) (See 01-13B-13 WASTEGATE CONTROL SOLENOID VALVE INSPECTION [L3 WITH TC].)
4. Warm up the engine to normal operating temperature.
5. Verify that the DTC P0245:00 or P0246:00 are shown. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].)
 - If the DTC P0245:00 or P0246:00 are shown, perform the DTC inspection. (See 01-02B-140 DTC P0245:00 [L3 WITH TC].) (See 01-02B-142 DTC P0246:00 [L3 WITH TC].)
6. Warm up the engine to normal operating temperature.
7. Access the WGC and APP PIDs using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].)
8. The hose between the wastegate control solenoid valve and intake pipe is disconnected.
9. Run the engine with the APP PID **above 30%** and verify that the WGC PID value increases from **0%** and there is pressure applied.
 - If the WGC PID is **0%**, inspect the TP REL PID. (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)
 - If there is no pressure applied, inspect for the following:
 - Wastegate control solenoid valve (stuck closed) (See 01-13B-13 WASTEGATE CONTROL SOLENOID VALVE INSPECTION [L3 WITH TC].)
 - Hose connection (Intake hose (turbocharger compressor downstream side)—Wastegate actuator—Intake hose (turbocharger compressor upstream side))

Variable Valve Timing Control System Operation Inspection

When idling cannot be continued

1. Remove the OCV and verify that the spool valve is at maximum retard position. (See 01-10B-23 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [L3 WITH TC].)
2. Connect the OCV.
3. Switch the ignition to ON.
4. Verify that the spool valve is at the maximum retard position.
 - If the spool valve is stuck in the advance direction, inspect for the following:
 - Short circuit in wiring harnesses or connectors between the OCV and the PCM
5. Inspect the variable timing actuator.

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

When idling can be continued

If simulation function of M-MDS is used:

1. Warm up the engine to normal operating temperature.
2. Verify that the DTC P2088:00 or P2089:00 are shown. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].)
 - If the DTC P2088:00 or P2089:00 are shown, perform the DTC inspection. (See 01-02B-244 DTC P2088:00 [L3 WITH TC].) (See 01-02B-246 DTC P2089:00 [L3 WITH TC].)
3. Start the engine and run it is idling.
4. Access the VT DUTY1 PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].)
5. Increase the OCV duty value and verify that the engine idles roughly or stalls.
 - If as specified, inspect the timing belt component (valve timing deviation).
 - If not as specified, go to the next step.
6. Remove the OCV while the connector is connected. (See 01-10B-23 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [L3 WITH TC].)
7. Switch the ignition to ON (engine off).
8. Access the VT DUTY1 PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].)
9. Increase the OCV duty value and verify that the spool valve operates in the advance direction.
 - If as specified, inspect the following hydraulic passage for clogging and/or leakage.
 - Oil pressure switch—OCV
 - OCV—Camshaft
 - Camshaft internal passage
 - If not as specified, inspect the following:
 - OCV operation (See 01-10B-22 OIL CONTROL VALVE (OCV) INSPECTION [L3 WITH TC].)
10. If they are normal, replace the intake camshaft pulley (with a built-in variable valve timing actuator). (See 01-10B-14 VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [L3 WITH TC].)

If simulation function of M-MDS is not used:

1. Disconnect the OCV connector.
2. Verify that the DTC P2088:00 or P2089:00 are shown. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].)
 - If the DTC P2088:00 or P2089:00 are shown, perform the DTC inspection. (See 01-02B-244 DTC P2088:00 [L3 WITH TC].) (See 01-02B-246 DTC P2089:00 [L3 WITH TC].)
3. Warm up the engine and idle it.
4. Apply battery voltage to the OCV and verify that the engine idles roughly or stalls.
 - If the engine idles roughly or stalls, inspect the timing belt component (valve timing deviation).
 - If the engine does not idle roughly or stalls, go to the next step.
5. Remove the OCV and perform the spool valve operation inspection. (See 01-10B-23 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [L3 WITH TC].)
 - If not as specified, inspect the following:
 - OCV (See 01-10B-22 OIL CONTROL VALVE (OCV) INSPECTION [L3 WITH TC].)
 - Harnesses and connectors between OCV and PCM have an open or short circuit.
 - If as specified, inspect the following hydraulic passages for clogging or leakage or both:
 - Oil pressure switch—OCV
 - OCV—Camshaft
 - Camshaft internal passage
6. If they are normal, replace the camshaft pulley (with built-in variable valve timing actuator). (See 01-10B-14 VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [L3 WITH TC].)

Evaporative Emission (EVAP) System Leak Inspection

- To verify that the problem has been fixed properly after repairs, the run drive cycle or EVAP system leak inspection must be performed.

EVAP system leak inspection using the M-MDS

Note

- Use the IDS (laptop PC) because the PDS (Pocket PC) does not support the EVAP system test.

EVAP system test out line

- The EVAP system test, which can substituted for the run drive cycle as an EVAP control system repair confirmation method, can detect the small/large leak or blockage without run-drive cycle.

Note

- M-MDS can not detect "VERY SMALL LEAK". To identify the leak point, please use the leak tester or ultrasonic leak detector.

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

EVAP system test description

- The EVAP system test finds gas leaks or blockage of EVAP system using the changes of the fuel tank pressure.
 - This test starts after sending an on-demand test signal from the M-MDS to the PCM.
 - This test consists of three stages, and each stage is performed automatically as follows:

Stage 1 test. (Test for large leak or blockage)

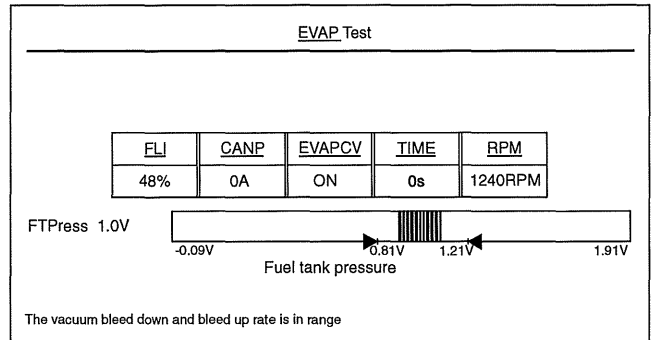

- M-MDS send the stage 1 test start signal to the PCM.
- PCM controls the CV solenoid valve and purge solenoid valve to control the tank pressure to the targeted value.
- M-MDS detect the large leak or the purge line blockage if the tank pressure does not arrive at the target vacuum in specified period.

01-03B

Stage 2 test. (Test for small leak)

- When fuel tank pressure arrived at the targeted pressure at stage 1 test, M-MDS send the stage 2 test signal to the PCM to turn off the purge solenoid to keep the tank pressure.
- M-MDS detect the small leak if the tank pressure can not keep within the target in specified period.

Stage 3 test. (Test for blockage)

- M-MDS send the stage 3 test signal to the PCM to turn off the CV solenoid for check the blockage of EVAP system.
- M-MDS detect blockage of the CV solenoid valve or air filter if the tank pressure does not arrive at the target (atmosphere).

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

EVAP system malfunction judgment

- M-MDS detect the small/large leak or blockage based on fuel tank pressure at the end of EVAP Test.

The EVAP Test could not obtain the target vacuum. A large leak or blockage is suspect.

- This judgment means tank pressure could not arrive at target pressure at stage 1 test.
- Check for the large leakage or inspect the purge solenoid valve operation and related hoses.
- Repair or replace any malfunctioning parts.

The EVAP Test could not maintain the target vacuum. A small leak is suspect.

- This judgment means tank pressure could not stay in target pressure at stage 2 test.
- Run the EVAP Test again after Re-tighten the fuel filler cap.
- If small leak is suspected again, use the leak tester or ultrasonic leak detector for identify the leak point.
- Repair or replace any malfunctioning parts.

Blockage in EVAP system.

- This judgment means tank pressure could not return to atmosphere at stage 3 test.
- Inspect the CV solenoid, Air filter, Charcoal canister and related hoses for blockage.

No large leaks or blockage have been detected in the EVAP system at this time.

- M-MDS can not detect "VERY SMALL LEAK".
- To identify the leak point, please use the leak tester or ultrasonic leak detector.

acmzzc0000014

Evaporative system test procedure

1. Verify that all PIDs within the following specifications.

Note

- To successfully perform this procedure, all PIDs must be within the specifications before proceeding to the next step.

2. Select the following items from the initialization screen of the M-MDS.

1. Select the "Powertrain".
2. Select the "Fuel".
3. Select the "EVAP Test".

- Verify that ECT and IAT are within the specifications at the confirmation screen. To successfully perform this procedure, ECT and IAT must be within the spec before proceeding to the next step.
- Fuel Level must be maintained within **15%—85%**. PCM will cancel the EVAP Test If the Fuel Level is **lower than 15% or higher than 85%**.

3. Verify the test results described on the M-MDS and follow the instructions.

Specification

PID	PID Range
BARO	74.9 kPa {562 mmHg, 22.1 inHg} or more
FLI	15—85 %
ECT	ECT minus IAT -10—25 °C {-5.6—13.9 °F}
IAT	

ac9uuw00002847

SYMPTOM TROUBLESHOOTING [L3 WITH TC]

EVAP system leak inspection using leak tester

1. Perform the following **SST** (EVAP System Tester 134-01049A) self-test:

Note

- If the tester does not work correctly during the self-test, refer to the tester operators manual for a more detailed self-test procedure.

- (1) Verify that the control valve on the panel is in the HOLD position then open the nitrogen bottle valve.
- (2) Connect the vehicle interface hose (part of the **SST**) to the SELF-TEST port located on the control panel. Hand tighten the fitting. (Do not overtighten.)
- (3) Turn the control valve to the TEST position.
- (4) The gauge should read **331—381 mm {13—15 in}** of water.
 - If the gauge is not reading in this range, adjust the pressure by turning the black knob on the low pressure regulator at the nitrogen bottle.
- (5) Turn the control valve to the HOLD position.
- (6) Verify that the gauge holds pressure and that the flow meter reads no flow.
 - If there is no drop in pressure and no flow, the tester passes the self-test.
 - If the gauge leaks down, refer to the tester operators manual.

01-03B

2. Connect the **SST** to the vehicle.

- (1) Verify that the control valve on the panel is in the HOLD position then open the nitrogen bottle valve.
- (2) Remove the fuel-filler cap from the vehicle.
 - If the fuel-filler cap is not a MAZDA part or equivalent, replace it.

Note

- **INSPECT FUEL FILLER CAP AND FILLER NECK**
 - Visually inspect for damage, insufficient sealing, rust, cracks or warps for filler cap and filler neck.
 - Repair or replace if necessary.

- (3) Connect the receiver assembly (**SST**: 134-01059) to the vehicle cap test hose assembly (part of the **SST**) and the fuel-filler cap from the vehicle.
- (4) Connect the cap adaptor (**SST**: 134-01058) to the vehicle cap test hose assembly (part of the **SST**) and to the fuel-filler neck.
- (5) Connect the vehicle interface hose (part of the **SST**) to the center fitting of the vehicle cap test hose assembly (part of the **SST**).

3. Connect the M-MDS to the DLC-2.
4. Switch the ignition to ON (engine off).
5. Request the PCM on-board device control (Mode 08) using the M-MDS to close the canister vent valve.

Note

- The canister vent valve is closed for **10 min** unless the following any actions are done:
 - The engine is started.
 - The ignition switch is turned off position.

6. Make sure the control valve on the 134-01049A is in the HOLD position and that the valve on the cylinder of nitrogen gas is open.
7. Turn the control valve to the open position and let the system fill. You should note a drop in the gauge pressure along with the flow meter being pegged at maximum flow for several minutes depending on how full or empty the fuel tank is, and how long it takes to completely fill and pressurize the evaporative emissions system hoses.
8. If the gauge and the flow meter do not settle to a measurable level after **2—3 min**, then refer to the Mazda Workshop Manual to verify that the canister vent valve is properly closed. If canister vent valve is properly closed. The EVAP system has large leakage. Check for leakage and repair as necessary.

01-03B-105

9. Verify the pressure gauge and flow meter reading to determine if there is an evaporative emissions leak:

NO EVAPORATIVE LEAK:

- The flow meter registers “zero flow” and the pressure gauge returns to the pre-set pressure of **356 mm {14 in}** of water (H₂O).

EVAPORATIVE LEAK:

- The pressure does not return to the preset level of **356 mm {14 in}** of water (H₂O) when measuring the flow. See “SETTING LEAK STANDARD FOR TESTING” (.020 to .040 inch H₂O) of the Evaporative Emissions Tester operators manual (134-01067).

Note

- Turn the control valve to the HOLD position then disconnect the **SST**.

01-10A

ENGINE TUNE-UP [LF, L5]

id0110a7800600

Note

- If the accelerator pedal is depressed continuously for a specified time, the engine speed may decrease to the idle speed. This is due to the fuel cut control operation, which prevents overheating, and it does not indicate a malfunction.

Engine Tune-up Preparation

1. Verify the following:
 - MTX: Shift lever is in neutral position.
 - ATX: Selector lever is in P or N position.
2. Warm up the engine to normal operating temperature.
 - (1) Increase the engine speed to **2,500—3,000 rpm** until the cooling fan starts running.
 - (2) When the cooling fan starts running, release the accelerator pedal and wait until the cooling fan stops running.
3. Turn off all electrical loads.
4. Connect the M-MDS to the DLC-2.

am3uuw0000238

Idle Speed Inspection

Note

- Idle speed is not adjustable.
- Idle speed verification requires M-MDS.

1. Complete the engine tune-up preparation. (See 01-10A-3 Engine Tune-up Preparation.)
2. Verify that the idle speed (M-MDS: RPM) is within the specification. (See 01-40A-8 PCM INSPECTION [LF, L5].)

Idle speed (MTX: Neutral position, ATX: P, N position)
600—700 rpm (MTX), 650—750 (ATX)

Ignition Timing Inspection

Note

- The ignition timing cannot be adjusted.
- The M-MDS is required to verify the ignition timing.

1. Complete the engine tune-up preparation. (See 01-10A-3 Engine Tune-up Preparation.)
2. Verify the ignition timing (M-MDS: SPARKADV) using the PID/data monitor function of the M-MDS. (See 01-40A-8 PCM INSPECTION [LF, L5].)

Ignition timing

LF: Approx. BTDC 8°
L5: Approx. BTDC 12°

3. Verify that ignition timing advances when the engine speed increases gradually.

Idle Mixture Inspection

1. Verify that the idle speed and ignition timing are within the specification. (See 01-10A-4 Idle Speed Inspection.) (See 01-10A-4 Ignition Timing Inspection.)
2. Insert an exhaust gas analyzer into the tailpipe.
3. Verify that the CO and HC concentrations are within regulation.

CO concentration

Within the regulation

HC concentration

Within the regulation

Idle-up Speed Control Inspection

Note

- Idle speed is not adjustable.
- Idle speed verification requires M-MDS.

1. Complete the engine tune-up preparation. (See 01-10A-3 Engine Tune-up Preparation.)
2. Verify that the engine speed (M-MDS: RPM) is within the specification when each load is applied. (The speed decrease just after the load is applied is not considered.) (See 01-40A-8 PCM INSPECTION [LF, L5].)
 - If the engine speed is not within the specification when a specified load is applied, inspect the related input parts, wiring harnesses, and connectors.

Idle-up speed (MTX: Neutral position, ATX: P, N position)
A/C on: 700—800 rpm (MTX), 650—770 (ATX)
Electrical loads on: 650—800 rpm

MECHANICAL [LF, L5]

PLUG HOLE PLATE REMOVAL/INSTALLATION [LF, L5]

id0110a7803900

1. Remove the plug hole plate in the order indicated in the figure.

Note

- Lift off and remove the plug hole plate from the installation areas as shown in the figure.

2. Install the plug hole plate in the reverse order of removal.

am3uuw0000215

id0110a7801500

DRIVE BELT INSPECTION [LF, L5]

LF

A/C drive belt

Note

- Drive belt deflection/tension inspection is not necessary because of the use of the maintenance-free type A/C drive belt.
- Replace the drive belt if it is found to be damaged during visual inspection, or if there is a malfunction or noise in the A/C compressor. (See 01-10A-6 DRIVE BELT REMOVAL/INSTALLATION [LF, L5].)

Generator drive belt

Note

- Drive belt deflection/tension inspection is not necessary because of the use of the drive belt auto tensioner.

1. Verify that the drive belt auto tensioner indicator mark does not exceed the limit.
 - If it exceeds the limit, replace the drive belt. (See 01-10A-6 DRIVE BELT REMOVAL/INSTALLATION [LF, L5].)

am3uuw0000215

01-10A

L5

Note

- Drive belt deflection/tension inspection is not necessary because of the use of the drive belt auto tensioner.

1. Verify that the drive belt auto tensioner indicator mark does not exceed the limit.
 - If it exceeds the limit, replace the drive belt. (See 01-10A-6 DRIVE BELT REMOVAL/INSTALLATION [LF, L5].)

am3uuw0000216

id0110a7801600

DRIVE BELT REMOVAL/INSTALLATION [LF, L5]

LF

A/C drive belt removal

1. Remove the aerodynamic under cover No.2 and splash shield as a single unit. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.) (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)
2. Remove the nut shown in the figure and set the power steering pipe component out of the way.

am3uuw0000321

3. Set the SST as shown in the figure.

Note

- Hold the **SST** by hand until it fits between the A/C drive belt and the crankshaft pulley.

acmzzc0000092

MECHANICAL [LF, L5]

4. Rotate the crankshaft pulley clockwise using a wrench and remove the A/C drive belt.

01-10A

A/C drive belt installation

1. Set the SST to the crankshaft pulley as shown in the figure.

Note

- Hang the A/C drive belt on to the A/C compressor pulley, then move the **SST** upward along the crankshaft pulley.

2. Set the SST to the A/C compressor mount as shown in the figure.

Note

- During the A/C drive belt installation, if the **SST** touches the part number-printed area on the back of the A/C drive belt, the **SST** may not be able to slide smoothly and the A/C drive belt will be pulled inward excessively. This will make it impossible to correctly install the A/C drive belt to the groove of the A/C compressor pulley. To prevent this, adjust the A/C drive belt to the position shown in the figure, then start the procedure.

MECHANICAL [LF, L5]

3. After setting the **SST**, verify that the three parts of A/C drive belt shown in the figure are hung on each pulley.

4. Rotate the crankshaft pulley clockwise using a wrench and install the A/C drive belt.

Caution

- Remove the SST (49 B015 103) immediately after it reaches the lower side to prevent it from falling down and being damaged.

5. Remove the **SST (49 B015 104)**
6. Rotate the crankshaft pulley clockwise one time or more to verify that the A/C drive belt is installed correctly.

Caution

- Do not turn the crankshaft pulley counter clockwise, otherwise the crankshaft pulley bolt could loosen and the timing could change causing engine damage.

- If the A/C belt is not seated properly, push/pull the belt with a suitable tool in the direction where it would be seated properly and then rotate the crank pulley clockwise until the belt is correctly seated. If this does not correct the problem, remove the belt and install it again.

7. Install the nut shown in the figure.
8. Install the aerodynamic under cover No.2 and splash shield as a single unit. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.) (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)

MECHANICAL [LF, L5]

Generator drive belt removal

1. Remove the A/C drive belt. (See 01-10A-6 A/C drive belt removal.)
2. Turn the center of the auto tensioner pulley counterclockwise to release tension to the drive belt tension.
3. Remove the generator drive belt.

abatjw0000717

01-10A

Generator drive belt installation

1. Install a generator drive belt.
2. Install the A/C drive belt. (See 01-10A-6 A/C drive belt removal.)

L5

Removal

1. Remove the aerodynamic under cover No.2 and splash shield as a single unit. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.) (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)
2. Rotate the drive belt auto tensioner in the direction shown in the figure and remove the drive belt.

acxuuw0000136

Installation

1. Install the drive belt.
2. Install the aerodynamic under cover No.2 and splash shield as a single unit. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.) (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)

DRIVE BELT AUTO TENSIONER INSPECTION [LF, L5]

id0110a7801700

LF

1. Remove the generator drive belt with the A/C drive belt still installed and set it out of the way. (See 01-10A-6 DRIVE BELT REMOVAL/INSTALLATION [LF, L5].)
2. Verify that the drive belt auto tensioner moves smoothly in the operational direction.
 - If it does not move smoothly, replace the drive belt auto tensioner. (See 01-10A-45 ENGINE DISASSEMBLY/ASSEMBLY [LF, L5].)
3. Turn the drive belt auto tensioner pulley by hand and verify that it rotates smoothly.
 - If it does not move smoothly, replace the drive belt auto tensioner. (See 01-10A-45 ENGINE DISASSEMBLY/ASSEMBLY [LF, L5].)
4. Install the generator drive belt. (See 01-10A-6 DRIVE BELT REMOVAL/INSTALLATION [LF, L5].)

am3uuw0000226

MECHANICAL [LF, L5]

L5

1. Remove the drive belt. (See 01-10A-6 DRIVE BELT REMOVAL/INSTALLATION [LF, L5].)
2. Verify that the drive belt auto tensioner moves smoothly in the operational direction.
 - Replace the drive belt auto tensioner if necessary. (See 01-10A-45 ENGINE DISASSEMBLY/ASSEMBLY [LF, L5].)
3. Rotate the drive belt auto tensioner pulley by hand and verify that it rotates smoothly.
 - Replace the drive belt auto tensioner if necessary. (See 01-10A-45 ENGINE DISASSEMBLY/ASSEMBLY [LF, L5].)
4. Install the drive belt. (See 01-10A-6 DRIVE BELT REMOVAL/INSTALLATION [LF, L5].)

am3uuw0000216

VALVE CLEARANCE INSPECTION [LF, L5]

id0110a7803400

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the plug hole plate. (See 01-10A-5 PLUG HOLE PLATE REMOVAL/INSTALLATION [LF, L5].)
4. Disconnect the wiring harness.
5. Remove the ignition coils. (See 01-18A-2 IGNITION COIL REMOVAL/INSTALLATION [LF, L5].)
6. Remove the spark plugs. (See 01-18A-3 SPARK PLUG REMOVAL/INSTALLATION [LF, L5].)
7. Remove the ventilation hose.
8. Remove the oil level gauge.
9. Remove the cylinder head cover. (See 01-10A-21 TIMING CHAIN REMOVAL/INSTALLATION [LF, L5].)
10. Remove the aerodynamic under cover No.2 and splash shield as a single unit. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.) (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)
11. Measure the valve clearance.

Note

- Make sure to note down the measured values for choosing the suitable replacement tappets.

- (1) Turn the crankshaft clockwise so that the No.1 piston is at top dead center (TDC) of the compression stroke.
- (2) Measure the valve clearance at A in the figure.

Valve clearance [Engine cold]

IN: 0.22—0.28 mm {0.009—0.011 in}
EX: 0.27—0.33 mm {0.011—0.012 in}

- (3) If the valve clearance is out of the standard value, adjust it. (See 01-10A-11 VALVE CLEARANCE ADJUSTMENT [LF, L5].)
- (4) Turn the crankshaft **360°** clockwise so that the No.4 piston is at TDC of the compression stroke.
- (5) Measure the valve clearance at B in the figure.

am3uuw0000216

Valve clearance [Engine cold]

IN: 0.22—0.28 mm {0.009—0.011 in}
EX: 0.27—0.33 mm {0.011—0.012 in}

- (6) If the valve clearance is out of the standard value, adjust it. (See 01-10A-11 VALVE CLEARANCE ADJUSTMENT [LF, L5].)
12. Install in the reverse order of removal.

MECHANICAL [LF, L5]

id0110a7803300

VALVE CLEARANCE ADJUSTMENT [LF, L5]

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the plug hole plate. (See 01-10A-5 PLUG HOLE PLATE REMOVAL/INSTALLATION [LF, L5].)
4. Disconnect the wiring harness.
5. Remove the ignition coils. (See 01-18A-2 IGNITION COIL REMOVAL/INSTALLATION [LF, L5].)
6. Remove the spark plugs. (See 01-18A-3 SPARK PLUG REMOVAL/INSTALLATION [LF, L5].)
7. Remove the ventilation hose.
8. Remove the oil level gauge.
9. Remove the cylinder head cover. (See 01-10A-21 TIMING CHAIN REMOVAL/INSTALLATION [LF, L5].)
10. Remove the aerodynamic under cover No.2 and splash shield as a single unit. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.) (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)
11. Remove the generator drive belt with the A/C drive belt still installed and set it out of the way. (LF) (See 01-10A-6 DRIVE BELT REMOVAL/INSTALLATION [LF, L5].)
12. Remove the drive belt. (L5) (See 01-10A-6 DRIVE BELT REMOVAL/INSTALLATION [LF, L5].)
13. Remove the engine front cover lower blind plug.

01-10A

14. Remove the engine front cover upper blind plug.
15. Disconnect the drive shaft (RH) from joint shaft, set the drive shaft (RH) out of the way. (MTX) (See 03-13-3 DRIVE SHAFT REMOVAL/INSTALLATION.)

16. Remove the cylinder block lower blind plug, and install the **SST**.
17. Rotate the crankshaft in the direction of the engine rotation so that the No.1 piston is at top dead center (TDC) of the compression stroke. (Until the counterweight contacts **SST** and stops.)

MECHANICAL [LF, L5]

18. Loosen the timing chain using the following procedure.

- (1) Insert a suitable bolt (**M6 X 1.0, length 25—35 mm {1.0—1.3 in}**) into the engine front cover upper blind plug and tighten it until it contacts the chain tensioner arm, and then rotate it back one turn. (Set the bolt slightly away from the chain tensioner arm so that it does not contact it.)

am3uuw0000217

- (2) Using the cast hexagon on the exhaust camshaft, apply force counterclockwise to facilitate unlocking the chain tensioner ratchet.
- (3) Using a Hex bit socket (**2.5 mm {0.098 in}**) or T15 Torx bit socket, unlock the chain tensioner ratchet so that it can be lifted up.

am8rrw00002539

am3uuw0000217

MECHANICAL [LF, L5]

- (4) Using the cast hexagon on the exhaust camshaft, apply force in the direction of the engine rotation to increase tension on the chain.

am8rrw00002541

01-10A

Note

- The chain tensioner rack is compressed using the chain tension generated by applying force to the exhaust camshaft in the direction of the engine rotation.

- (5) Screw in the bolt set in Step 1 approx. 5 mm {0.2 in} and secure the tensioner arm with the rack compressed.

Note

- The ratchet has not been unlocked if the bolt cannot be pressed in approx. 5 mm {0.2 in}.

am3uuw0000217

am3uuw0000303

- If the tensioner arm cannot be secured, return the bolt to its original position and repeat the procedure from Step 3.

19. Fix the exhaust camshaft using a wrench on the cast hexagon, and loosen the camshaft sprocket bolt.
20. Remove the exhaust camshaft sprocket bolt, exhaust camshaft sprocket, and washer as a single unit.

Caution

- Perform the work carefully so that the washer does not drop out.

acxuuw0000161

MECHANICAL [LF, L5]

21. Remove the OCV. (See 01-10A-20 OIL CONTROL VALVE (OCV) REMOVAL/ INSTALLATION [LF, L5].)
22. Loosen the camshaft cap bolts in two or three steps in the order shown in the figure and remove the camshaft cap.

Note

- The camshaft caps are to be kept ordered for correct reassembly in their original positions. Do not mix the caps.

am3uuw0000217

23. Remove the camshafts for the intake and exhaust sides.
24. Remove the tappet.
25. Install an appropriate tappet based on the results of the valve clearance inspection.
Selected tappet = Removed tappet thickness + Measured valve clearance - Standard valve clearance

Valve clearance [Engine cold]

IN: 0.22—0.28 mm {0.009—0.011 in}

EX: 0.27—0.33 mm {0.011—0.012 in}

abatjw00000719

26. Verify that No.1 cylinder is at TDC of the compression stroke. (Position counterweight contacts **SST**.)
27. Apply the gear oil (SAE No.90 or equivalent) to each journal of the cylinder head as shown in the figure.
28. Install the camshaft with No.1 cylinder aligned with the TDC position.

aprijw00003402

MECHANICAL [LF, L5]

29. Apply the gear oil (SAE No.90 or equivalent) to each journal of the camshaft as shown in the figure.
30. Temporarily tighten the camshaft cap bolts evenly in 2—3 steps.

aprijw00003403

31. Tighten the camshaft cap bolts in the order shown in the following two steps.

Tightening procedure

Step 1: 5.0—9.0 N·m {51—91 kgf·cm, 45—79 in·lbf}

Step 2: 14—17 N·m {1.5—1.7 kgf·m, 11—12 ft·lbf}

32. Install the OCV. (See 01-10A-20 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [LF, L5].)

abatjw00000720

33. Install the exhaust camshaft sprocket bolt, exhaust camshaft sprocket, and a new washer as a single unit.

Caution

- Install a washer to the fourth or fifth thread of the exhaust camshaft sprocket bolt being careful not to drop the washer.
- Do not tighten the camshaft sprocket bolt at this stage. Verify the valve timing before performing the bolt tightening.

am3uuw0000217

34. Install the SST on the camshaft as shown in the figure.
35. Remove the installation bolt for the engine front cover upper blind plug (M6 X 1.0 length 25—35mm {1.0—1.3 in}), and apply tension to the timing chain.

am3uuw0000227

01-10A

MECHANICAL [LF, L5]

36. Fix the exhaust camshaft using a wrench on the cast hexagon, and tighten the sprocket bolt.

Tightening torque

69—75 N·m {7.1—7.6 kgf·m, 51—55 ft·lbf}

37. Remove the **SST** from the camshaft.
38. Remove the **SST** installed in the cylinder block lower blind plug hole.
39. Rotate the crankshaft clockwise two turns and inspect the valve timing.
• If not aligned, loosen the camshaft sprocket bolt and repeat the procedure from Step 34.
40. Install the cylinder block lower blind plug.

Tightening torque

18—22 N·m {1.9—2.2 kgf·m, 14—16 ft·lbf}

41. Connect the drive shaft (RH) to joint shaft. (MTX)
(See 03-13-3 DRIVE SHAFT REMOVAL/INSTALLATION.)

am8rrw0002546

42. Apply the silicone sealant and install the engine front cover upper blind plug.

Caution

- Install the engine front cover upper blind plug before the applied silicone sealant starts to harden.

Tightening torque

8—11 N·m {82—117 kgf·cm, 71—101 in·lbf}

am3uuw000217

43. Install a new engine front cover lower blind plug.

Tightening torque

10—14 N·m {102—142 kgf·cm, 89—123 in·lbf}

44. Install the drive belt. (L5) (See 01-10A-6 DRIVE BELT REMOVAL/INSTALLATION [LF, L5].)
45. Install the generator drive belt. (LF) (See 01-10A-6 DRIVE BELT REMOVAL/INSTALLATION [LF, L5].)
46. Install the aerodynamic under cover No.2 and splash shield as a single unit. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.) (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)
47. Install the cylinder head cover. (See 01-10A-21 TIMING CHAIN REMOVAL/INSTALLATION [LF, L5].)
48. Install the oil level gauge.
49. Install the ventilation hose.
50. Install the spark plugs. (See 01-18A-3 SPARK PLUG REMOVAL/INSTALLATION [LF, L5].)
51. Install the ignition coils. (See 01-18A-2 IGNITION COIL REMOVAL/INSTALLATION [LF, L5].)
52. Connect the wiring harness.
53. Install the plug hole plate. (See 01-10A-5 PLUG HOLE PLATE REMOVAL/INSTALLATION [LF, L5].)
54. Connect the negative battery cable.
55. Install the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)

am3uuw000217

am3uuw000216

Warning

- Hot engines and oil can cause severe burns. Be careful not to burn yourself during removal/installation of each component.
- Fuel vapor is hazardous. It can very easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.
- Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure". (See 01-14A-4 BEFORE SERVICE PRECAUTION [LF, L5].)

1. Verify that the battery is fully charged. (See 01-17A-4 BATTERY INSPECTION [LF, L5].)
 - Recharge it if necessary. (See 01-17A-5 BATTERY RECHARGING [LF, L5].)
2. Warm up the engine to the normal operating temperature.
3. Perform "Fuel Line Safety Procedures". Leave the fuel pump relay removed. (See 01-14A-4 BEFORE SERVICE PRECAUTION [LF, L5].)
4. Remove the plug hole plate. (See 01-10A-5 PLUG HOLE PLATE REMOVAL/INSTALLATION [LF, L5].)
5. Remove the ignition coils. (See 01-18A-2 IGNITION COIL REMOVAL/INSTALLATION [LF, L5].)
6. Remove the spark plugs. (See 01-18A-3 SPARK PLUG REMOVAL/INSTALLATION [LF, L5].)
7. Connect a compression gauge into the spark plug hole.
8. Fully depress the accelerator pedal and crank the engine.
9. Note down the maximum gauge reading.
10. Inspect each cylinder as above.

ampjjw00001269

Compression [LF]

Standard: 1,400 kPa {14.28 kgf/cm², 203.1 psi} [300 rpm]

Minimum: 980 kPa {10.0 kgf/cm², 142.2 psi} [300 rpm]

Maximum difference between cylinders:
196.1 kPa {2.0 kgf/cm², 28.5 psi}

Compression [L5]

Standard: 1,324 kPa {13.50 kgf/cm², 192.0 psi} [300 rpm]

Minimum: 927 kPa {9.45 kgf/cm², 134 psi} [300 rpm]

Maximum difference between cylinders: 196.1 kPa {2.0 kgf/cm², 28.5 psi}

- If the measured value is less than the limited value, or there is a cylinder whose compression value varies from that of other cylinders by **196.1 kPa {2.0 kgf/cm², 28.5 psi}** or more, add a small amount of engine oil through the spark plug hole. Then measure the compression pressure and perform the respective operations for the following cases.
 - If the compression increases, the piston, the piston rings, or cylinder wall may be worn and overhaul is required.
 - If the compression stays low, a valve may be stuck or improperly seated and overhaul is required.
 - If the compression in adjacent cylinders stays low, the cylinder head gasket may be damaged or the cylinder head distorted and overhaul is required.

11. Disconnect the compression gauge.

12. Install the following parts.

- (1) Spark plugs. (See 01-18A-3 SPARK PLUG REMOVAL/INSTALLATION [LF, L5].)
- (2) Ignition coils. (See 01-18A-2 IGNITION COIL REMOVAL/INSTALLATION [LF, L5].)
- (3) Plug hole plate. (See 01-10A-5 PLUG HOLE PLATE REMOVAL/INSTALLATION [LF, L5].)
- (4) Fuel pump relay. (See 01-14A-4 BEFORE SERVICE PRECAUTION [LF, L5].)

MECHANICAL [LF, L5]

VARIABLE VALVE TIMING ACTUATOR INSPECTION [LF, L5]

id0110a7801200

Caution

- Variable valve timing actuator can not be disassembled because it is a precision unit.

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the plug hole plate. (See 01-10A-5 PLUG HOLE PLATE REMOVAL/INSTALLATION [LF, L5].)
4. Disconnect the wiring harness.
5. Remove the ignition coils. (See 01-18A-2 IGNITION COIL REMOVAL/INSTALLATION [LF, L5].)
6. Remove the spark plugs. (See 01-18A-3 SPARK PLUG REMOVAL/INSTALLATION [LF, L5].)
7. Remove the ventilation hose.
8. Remove the oil level gauge.
9. Remove the cylinder head cover. (See 01-10A-21 TIMING CHAIN REMOVAL/INSTALLATION [LF, L5].)
10. Confirm that notch of the rotor and notch of the cover at the variable valve timing actuator are aligned and fitted.

- If the notch of the rotor and notch of the cover are not aligned, turn the crankshaft clockwise two rotations. Verify that notch of the rotor and notch of the cover are aligned.
- If the both notches are still not aligned, replace the variable valve timing actuator. (See 01-10A-18 VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [LF, L5].)
- If, when turning the crankshaft, there is a hitting noise from the variable valve timing actuator each time the cam passes the fully lifted position, it means that the actuator is not secured. Replace the actuator. (See 01-10A-18 VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [LF, L5].)

11. Install in the reverse order of removal.

am6xuw0000247

VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [LF, L5]

id0110a7801100

Note

- Variable valve timing actuator can not be disassembled because it is a precision unit.
- Intake camshaft sprocket is integrated with the variable valve timing actuator and cannot be disassembled.

1. Refer to the "VALVE CLEARANCE ADJUSTMENT" procedure and remove the variable valve timing actuator and the camshaft on the intake side as a single unit. (See 01-10A-11 VALVE CLEARANCE ADJUSTMENT [LF, L5].)
2. Remove the variable valve timing actuator.
 - (1) Mark the camshaft and variable valve timing actuator as shown in the figure to make sure they are installed in their original position.

am3uuw0000221

- (2) Secure the camshaft in a vise.
- (3) Loosen the variable valve timing actuator tightening bolt.

VARIABLE VALVE TIMING ACTUATOR

am3uuw0000222

3. Install a new washer.
4. Install the variable valve timing actuator.

Note

- When the variable valve timing actuator is replaced with a new one, mark it in the same location as the old one.

- (1) Secure the camshaft in a vise.
- (2) Align the marks of the camshaft and variable valve timing actuator.
- (3) Tighten variable valve timing actuator tightening bolt.

am3uuw0000222

01-10A

Tightening torque

69—75 N·m {7.1—7.6 kgf·m, 51—55 ft·lbf}

5. Refer to the “VALVE CLEARANCE ADJUSTMENT” procedure and install the variable valve timing actuator and the camshaft on the intake side as a single unit. (See 01-10A-11 VALVE CLEARANCE ADJUSTMENT [LF, L5].)

Note

- If the alignment marks on the variable valve timing actuator are not available, refer to the “TIMING CHAIN ASSEMBLY” in the engine workshop manual and perform the sprocket position alignment again.

OIL CONTROL VALVE (OCV) INSPECTION [LF, L5]

id0110a7801400

Coil Resistance Inspection

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the plug hole plate. (See 01-10A-5 PLUG HOLE PLATE REMOVAL/INSTALLATION [LF, L5].)
4. Disconnect the OCV connector.
5. Measure the resistance between terminals A and B using an ohmmeter.

OCV coil resistance

6.9—7.9 ohms [20°C {68°F}]

- If not as specified, replace the OCV. (See 01-10A-20 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [LF, L5].)
6. Install in the reverse order of removal.

am6zzw0000178

Spool Valve Operation Inspection

1. Remove the OCV. (See 01-10A-20 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [LF, L5].)
2. Verify that the spool valve in the OCV is in the maximum valve timing retard position as indicated in the figure.
 - If not as specified, replace the OCV. (See 01-10A-20 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [LF, L5].)

am3uuw0000226

MECHANICAL [LF, L5]

3. Verify that the battery is fully charged. (See 01-17A-4 BATTERY INSPECTION [LF, L5].)
 - If not as specified, recharge the battery. (See 01-17A-5 BATTERY RECHARGING [LF, L5].)

Note

- When applying battery positive voltage between the OCV terminals, the connection can be either of the following:
 - Positive battery cable to terminal A, negative battery cable to terminal B
 - Positive battery cable to terminal B, negative battery cable to terminal A

am6zzw0000178

4. Apply battery positive voltage between the OCV terminals and verify that the spool valve operates and moves to the maximum valve timing advance position.

- If not as specified, replace the OCV. (See 01-10A-20 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [LF, L5].)

5. Stop applying battery positive voltage and verify that the spool valve returns to the maximum valve timing retard position.

- If not as specified, replace the OCV. (See 01-10A-20 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [LF, L5].)

6. Install the OCV. (See 01-10A-20 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [LF, L5].)

am3uuw0000226

OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [LF, L5]

id0110a7801300

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the plug hole plate. (See 01-10A-5 PLUG HOLE PLATE REMOVAL/INSTALLATION [LF, L5].)
4. Disconnect the wiring harness.
5. Remove the ignition coils. (See 01-18A-2 IGNITION COIL REMOVAL/INSTALLATION [LF, L5].)
6. Remove the ventilation hose.
7. Remove the oil level gauge.
8. Remove the cylinder head cover. (See 01-10A-21 TIMING CHAIN REMOVAL/INSTALLATION [LF, L5].)
9. Remove in the order indicated in the table.
10. Install in the reverse order of removal.

Cylinder Head Cover Removal Note

1. Remove the purge solenoid valve installation bracket with the evaporative hose still connected and set it out of the way.

am3uuw0000298

2. Loosen the cylinder head cover bolts in the order shown in the figure.

am6xuw0000235

Crankshaft Pulley Lock Bolt Removal Note

1. Rotate the crankshaft in the direction of the engine rotation and remove the cylinder block lower blind plug when the No. 1 cylinder is at the point prior to top dead center (TDC) of compression, then install the **SST**.
2. Rotate the crankshaft in the direction of the engine rotation so that the No.1 piston is at TDC of the compression stroke. (Until the counterweight contacts **SST** and stops.)

am3uuw0000238

3. Hold the crankshaft pulley by using the **SSTs**.

abatjw00000937

MECHANICAL [LF, L5]

No.3 Engine Mount Removal Note

1. Remove the air cleaner. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
2. Install the SST using the following procedures.

Caution

- Refer to the SST instruction manual for the basic handling procedure.

am6xuw000068

- (1) Remove the installation bolt for the bracket securing the lower radiator hose.
- (2) Set the bracket securing the lower radiator hose aside to prevent it from interfering with the front shaft of the SST (right side)

am3uuw0000508

- (3) As shown in the figure, set the rear shafts of the SST to the left and right shock absorber bolts.

am3uuw0000528

- (4) Install front foot No.2 to the left/right front shaft of the SST, then align the groove of the front shaft of the SST with the folded up part of the vehicle as shown in the figure.

am3uuw0000529

01-10A

MECHANICAL [LF, L5]

- (5) Adjust the positions of the SST side bars so that they are the same height (left and right) and horizontal. Make sure each joint is securely tightened.

am3uuw0000529

Chain Tensioner Removal Note

1. Using a thin screwdriver, hold the chain tensioner ratchet lock mechanism away from the ratchet stem.
2. Slowly compress the tensioner piston.
3. Hold the tensioner piston using a 1.5 mm {0.059 in} wire or paper clip.

am3uuw0000227

Oil Pump Sprocket Removal/Installation Note

1. Temporarily install the crankshaft pulley and crankshaft pulley lock bolt to the crankshaft, and lock the oil pump against rotation as shown in figure.
2. Remove/install the oil pump sprocket, and then remove the crankshaft pulley and crankshaft pulley lock bolt.

Tightening torque

20—30 N·m {2.1—3.0 kgf·m, 15—22 ft·lbf}

am3uuw0000226

Timing Chain Installation Note

1. Install the SST to the camshaft as shown.
2. Install the timing chain.
3. Remove the retaining wire or paper clip from the auto tensioner to apply tension to the timing chain.

am3uuw0000227

MECHANICAL [LF, L5]

Engine Front Cover Installation Note

1. Apply silicone sealant to the engine front cover as shown.

Caution

- Install the engine front cover before the applied silicone sealant starts to harden.
- Verify that there is no oil or dust on the seal.

CYLINDER HEAD GASKET REPLACEMENT [LF, L5]

id0110a7800700

Warning

- Fuel vapor is hazardous. It can very easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.
- Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure". (See 01-14A-4 BEFORE SERVICE PRECAUTION [LF, L5].)

1. Remove the timing chain. (See 01-10A-21 TIMING CHAIN REMOVAL/INSTALLATION [LF, L5].)
2. Remove the generator, but do not remove it from the vehicle. Fix the generator using a rope to prevent it from falling. (L5) (See 01-17A-6 GENERATOR REMOVAL/INSTALLATION [LF, L5].)
3. Remove the exhaust manifold. (See 01-15A-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [LF, L5].)
4. Remove the intake manifold. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
5. Drain the engine coolant. (See 01-12A-4 ENGINE COOLANT REPLACEMENT [LF, L5].)
6. Disconnect the upper radiator hose. (See 01-12A-8 RADIATOR REMOVAL/INSTALLATION [LF, L5].)
7. Disconnect the water hose. (See 01-12A-11 THERMOSTAT REMOVAL/INSTALLATION [LF, L5].)
8. Disconnect the heater hose. (See 07-11-4 A/C UNIT REMOVAL/INSTALLATION.)
9. Disconnect the wiring harness.

MECHANICAL [LF, L5]

10. To firmly support the engine, first set the engine jack to the oil pan.
11. Remove in the order indicated in the table.
12. Install in the reverse order of removal.
13. Bleed the air from the cooling system. (See 01-12A-4 ENGINE COOLANT REPLACEMENT [LF, L5].)
14. Inspect the compression. (See 01-10A-17 COMPRESSION INSPECTION [LF, L5].)

REAR OIL SEAL REPLACEMENT [LF, L5]

id0110a7800900

1. Remove the transaxle. (See 05-15A-4 MANUAL TRANSAXLE REMOVAL/INSTALLATION [G35M-R] (5MTX).) (See 05-15B-4 MANUAL TRANSAXLE REMOVAL/INSTALLATION [G66M-R] (6MTX).) (See 05-17-40 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL] (ATX).)
2. Remove the flywheel (MTX) or the drive plate (ATX). (See 05-10-16 CLUTCH UNIT REMOVAL/INSTALLATION [G35M-R, G66M-R] (MTX).) (See 05-10-20 CLUTCH UNIT REMOVAL/INSTALLATION [A26M-R] (MTX).) (See 05-17-46 DRIVE PLATE REMOVAL/INSTALLATION [FS5A-EL] (ATX).)
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.

1	Bolt
2	Rear oil seal (See 01-10A-38 Rear Oil Seal Installation Note.)

am3uuw0000227

Rear Oil Seal Installation Note

1. Apply silicone sealant to the mating faces as shown in the figure.

Caution

- Install the rear oil seal before the applied silicone sealant starts to harden.

Thickness

2.2—3.2 mm {0.09—0.12 in}

2. Apply clean engine oil to the new oil seal lip.
3. Install the **SST** to the non-woven fabric side of the rear oil seal.

am3uuw0000228

am3uuw0000531

4. From the back side of the rear oil seal, verify that there is no damage or separation in the lip area of the rear oil seal.

am3uuw0000227

MECHANICAL [LF, L5]

5. Install the rear oil seal to the engine as shown in the figure.

am3zzw000372

01-10A

6. Tighten the rear oil seal bolts in the order as shown in the figure.

Tightening torque

8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

am3uuw000227

id0110a7800400

ENGINE REMOVAL/INSTALLATION [LF, L5]

Warning

- Fuel vapor is hazardous. It can very easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.
- Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete the “Fuel Line Safety Procedure”. (See 01-14A-4 BEFORE SERVICE PRECAUTION [LF, L5].)
- Secure the steering wheel using tape or a cable to prevent the steering shaft from rotating after disconnecting the steering shaft. If the steering wheel rotates after the steering shaft and the steering gear and linkage are disconnected, the internal parts of the clock spring could be damaged.

Note

- Perform the engine and transaxle component removal/installation from below the vehicle.

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the plug hole plate. (See 01-10A-5 PLUG HOLE PLATE REMOVAL/INSTALLATION [LF, L5].)
4. Remove the PCM cover No.1. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
5. Disconnect the PCM connector. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
6. Remove the battery tray and PCM component. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
7. Remove the air cleaner component. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
8. Remove the front wheels and tires. (See 02-10-1 GENERAL PROCEDURES (SUSPENSION).)
9. Remove the aerodynamic under cover No.2 and splash shield as a single unit. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.) (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)
10. Drain the transaxle oil (MTX) or ATF (ATX). (See 05-15A-3 TRANSAXLE OIL REPLACEMENT [G35M-R] (5MTX).) (See 05-15B-3 TRANSAXLE OIL REPLACEMENT [G66M-R] (6MTX).) (See 05-17-14 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL] (ATX).)
11. Drain the engine coolant. (See 01-12A-4 ENGINE COOLANT REPLACEMENT [LF, L5].)
12. Remove the coolant reserve tank. (See 01-12A-7 COOLANT RESERVE TANK REMOVAL/INSTALLATION [LF, L5].)
13. Disconnect the fuel hose. (See 01-14A-15 QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION [LF, L5].)
14. Disconnect the evaporative hose. (See 01-14A-15 QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION [LF, L5].)
15. Disconnect the brake vacuum hose. (See 04-11-4 VACUUM HOSE REMOVAL/INSTALLATION [LF, L5].)

MECHANICAL [LF, L5]

16. Disconnect the radiator hose (upper and lower). (See 01-12A-8 RADIATOR REMOVAL/INSTALLATION [LF, L5].)
17. Disconnect the water hose. (See 01-12A-11 THERMOSTAT REMOVAL/INSTALLATION [LF, L5].)
18. Disconnect the heater hose. (See 07-11-24 REFRIGERANT LINE REMOVAL/INSTALLATION.)
19. Disconnect the oil hose. (ATX type B) (See 05-17-47 OIL COOLER REMOVAL/INSTALLATION [FS5A-EL].)
20. Disconnect the power steering pipe component and then drain the power steering fluid. (See 06-10-1 GENERAL PROCEDURES (STEERING).)
21. Disconnect the shift cable and wiring harness. (MTX) (See 05-15A-4 MANUAL TRANSAXLE REMOVAL/INSTALLATION [G35M-R] (5MTX).) (See 05-15B-4 MANUAL TRANSAXLE REMOVAL/INSTALLATION [G66M-R] (6MTX).)
22. Remove the clutch release cylinder with the pipe still connected. (MTX) (See 05-10-13 CLUTCH RELEASE CYLINDER REMOVAL/INSTALLATION [G35M-R, G66M-R].) (See 05-10-14 CLUTCH RELEASE CYLINDER REMOVAL/INSTALLATION [A26M-R].)
23. Disconnect the selector cable. (ATX) (See 05-17-40 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL].)
24. Remove the crossmember bracket. (See 02-13-13 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
25. Remove the TWC. (See 01-15A-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [LF, L5].)
26. Disconnect the drive shafts from the engine side, set the drive shafts out of the way. (See 03-13-3 DRIVE SHAFT REMOVAL/INSTALLATION.)
27. Remove the A/C compressor with the cooler hose still connected and secure it using wire or rope so that it is out of the way. (See 07-11-18 A/C COMPRESSOR REMOVAL/INSTALLATION.)
28. Remove the wiring harness installation bolt and nut shown in the figure.
29. Disconnect the ground cable from the No.3 engine mount side.

Tightening torque

9—12 N·m {92—122 kgf·cm, 80—108 in·lbf}

30. Disconnect the connectors and the wiring harnesses related to the engine removal/installation.
31. Remove in the order indicated in the table.
32. Install in the reverse order of removal.
33. Start the engine. And inspect and adjust the following:
 - Front wheel alignment (See 02-11-1 FRONT WHEEL ALIGNMENT.)
 - Power steering fluid air bleeding (See 06-14-3 AIR BLEEDING.)
 - Leakage of engine oil, engine coolant, ATF, transaxle oil, and fuel.
 - Runout and contact of pulley and belt.
 - Verify the ignition timing, idle speed and idle mixture. (See 01-10A-3 ENGINE TUNE-UP [LF, L5].)
 - Engine-driven accessories operation.

am3uuw0000297

MECHANICAL [LF, L5]

01-10A

1	No.1 engine mount rubber, front crossmember component (See 01-10A-42 No.1 Engine Mount Rubber, Front Crossmember Component Removal Note.) (See 01-10A-43 Engine Mount Installation Note.)
2	No.3 engine mount (See 01-10A-43 No.3 Engine Mount, No.4 Engine Mount Rubber Removal Note.) (See 01-10A-43 Engine Mount Installation Note.)

3	Battery tray bracket (See 01-10A-43 Engine Mount Installation Note.)
4	No.4 engine mount rubber (See 01-10A-43 No.3 Engine Mount, No.4 Engine Mount Rubber Removal Note.) (See 01-10A-43 Engine Mount Installation Note.)
5	Engine, transaxle

MECHANICAL [LF, L5]

No.1 Engine Mount Rubber, Front Crossmember Component Removal Note

1. Loosen the No.1 engine mount rubber installation bolt (front crossmember side) shown in the figure.

MTX

am3uuw0000298

ATX

am3uuw0000299

2. Remove the No.1 engine mount rubber installation bolt (No.1 engine mount bracket side) shown in the figure.

MTX

am3uuw0000299

ATX

am3uuw0000299

3. Remove the No.1 engine mount rubber and the front crossmember component as a single unit. (See 02-13-13 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)

No.3 Engine Mount, No.4 Engine Mount Rubber Removal Note

1. Secure the engine and transaxle using an engine jack.

am6zzw0000121

01-10A

Engine Mount Installation Note

Note

- If the No.3 engine mount bracket and the engine are removed, retighten the No.3 engine mount stud bolts.

1. Tighten the No. 3 engine mount stud bolts.

Tightening torque

7—13 N·m {72—132 kgf·cm, 62—115 in·lbf}

am3uuw0000226

2. Secure the engine and transaxle using an engine jack.
3. Temporarily tighten the No.3 engine mount installation bolts and nuts.

am6zzw0000121

4. Tighten the No.3 engine mount installation bolts and nuts in the order shown in the figure.

No.	Tightening torque
1	75—104 N·m {7.7—10 kgf·m, 56—76 ft·lbf}
2	71—93 N·m {7.3—9.4 kgf·m, 53—68 ft·lbf}

am3uuw0000303

MECHANICAL [LF, L5]

5. Tighten the No.4 engine mount rubber installation bolt.

Tightening torque

94—152 N·m {9.6—15 kgf·m, 69—112 ft·lbf}

am3uuw0000304

6. Temporarily tighten the No.4 engine mount rubber and battery tray bracket installation nuts as shown in the figure.
 7. Install the No.1 engine mount rubber and the front crossmember component as a single unit. (See 02-13-13 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
 8. Temporarily tighten the No.1 engine mount rubber installation bolts.

am3uuw0000297

Caution

- Tighten the bolts in the order shown in the figure to prevent abnormal noise and vibration after assembly.
- Tighten the bolts while being careful of their length to prevent interference between the steering gear housing and bolt.

Bolt stem length

Front crossmember side: 62mm {2.4 in}

No.1 engine mount bracket side: 65mm {2.6 in}

9. Tighten the No.1 engine mount rubber installation bolts in the order shown.

Caution

- Tighten the bolts in the order shown in the figure to prevent abnormal noise and vibration after assembly.

MTX

am3uuw0000299

ENGINE TUNE-UP [L3 WITH TC]

id011039800600

01-10B

Note

- If the accelerator pedal is depressed continuously for a specified time, the engine speed may decrease to the idle speed. This is due to the fuel cut control operation, which prevents overheating, and it does not indicate a malfunction.

Engine Tune-up Preparation

1. Verify that the shift lever is in neutral position.
2. Connect the M-MDS to the DLC-2.
3. Verify that no DTCs are available.
4. Warm up the engine (ECT is **approx. 80°C {176 °F} or more**).
5. Turn off all electrical loads.
6. Wait until the cooling fan stops.

am3uuw000238

Ignition Timing Inspection

Note

- The ignition timing cannot be adjusted.
- The M-MDS is required to verify the ignition timing.

1. Complete the engine tune-up preparation. (See 01-10B-3 Engine Tune-up Preparation.)
2. Verify the ignition timing (M-MDS: SPARKADV) using the PID/data monitor function of the M-MDS. (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)

Ignition timing

Approx. BTDC 10°

3. Verify that ignition timing advances when the engine speed increases gradually.
 - If there is malfunction, refer to "ENGINE SYMPTOM TROUBLESHOOTING". (See 01-03B-4 SYMPTOM DIAGNOSTIC INDEX [L3 WITH TC].)

Idle Speed Inspection

Note

- The idle speed cannot be adjusted.
- The M-MDS is required to verify the idle speed.

1. Complete the engine tune-up preparation. (See 01-10B-3 Engine Tune-up Preparation.)
2. Verify that the idle speed (M-MDS: RPM PID) is within the specification using the M-MDS. (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)
 - If there is malfunction, refer to "ENGINE SYMPTOM TROUBLESHOOTING". (See 01-03B-4 SYMPTOM DIAGNOSTIC INDEX [L3 WITH TC].)

Idle speed

No load: 650—750 rpm

Electrical load on*1: 650—750 rpm

A/C on: 700—800 rpm

- *1. When the following electrical loads are on: Headlights, rear defroster, cooling fan, and the blower motor (2-step or more.)

MECHANICAL [L3 WITH TC]

Idle Mixture Inspection

1. Verify that the idle speed and ignition timing are within the specification. (See 01-10B-3 Idle Speed Inspection.) (See 01-10B-3 Ignition Timing Inspection.)
2. Insert an exhaust gas analyzer to the tailpipe.
3. Verify that the CO and HC concentrations are within the regulation.

Idle mixture

HC concentration: Within the regulation

CO concentration: Within the regulation

DRIVE BELT INSPECTION [L3 WITH TC]

id011039801500

Note

- Drive belt deflection/tension inspection is not necessary because of the use of the drive belt auto tensioner.
1. Verify that the drive belt auto tensioner indicator mark does not exceed the limit.
 - If it exceeds the limit, replace the drive belt. (See 01-10B-4 DRIVE BELT REMOVAL/INSTALLATION [L3 WITH TC].)

am3uuw0000606

DRIVE BELT REMOVAL/INSTALLATION [L3 WITH TC]

id011039801600

1. Remove the aerodynamic under cover No.2 and splash shield as a single unit. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.) (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)
2. Rotate the drive belt auto tensioner in the direction shown in the figure and remove the drive belt.
3. Install the drive belt.
4. Verify that the drive belt auto tensioner indicator mark does not exceed the limit. (See 01-10B-4 DRIVE BELT INSPECTION [L3 WITH TC].)
5. Install the aerodynamic under cover No.2 and splash shield as a single unit. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.) (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)

acxuuw00000136

MECHANICAL [L3 WITH TC]

DRIVE BELT AUTO TENSIONER INSPECTION [L3 WITH TC]

id011039801700

1. Remove the aerodynamic under cover No.2 and splash shield as a single unit. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.) (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)
2. Remove the drive belt. (See 01-10B-4 DRIVE BELT REMOVAL/INSTALLATION [L3 WITH TC].)
3. Verify that the drive belt auto tensioner moves smoothly in the operational direction.
 - Replace the drive belt auto tensioner if necessary. (See 01-10B-48 ENGINE DISASSEMBLY/ASSEMBLY [L3 WITH TC].)
4. Rotate the drive belt auto tensioner pulley by hand and verify that it rotates smoothly.
 - Replace the drive belt auto tensioner if necessary. (See 01-10B-48 ENGINE DISASSEMBLY/ASSEMBLY [L3 WITH TC].)
5. Install the drive belt. (See 01-10B-4 DRIVE BELT REMOVAL/INSTALLATION [L3 WITH TC].)
6. Install the aerodynamic under cover No.2 and splash shield as a single unit. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.) (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)

am3uuw0000606

01-10B

VALVE CLEARANCE INSPECTION [L3 WITH TC]

id011039803400

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Remove the charge air cooler. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
4. Remove the ignition coils. (See 01-18B-2 IGNITION COIL REMOVAL/INSTALLATION [L3 WITH TC].)
5. Disconnect the ventilation hose from the cylinder head cover. (See 01-16B-12 QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/INSTALLATION [L3 WITH TC].)
6. Remove the cylinder head cover. (See 01-10B-23 TIMING CHAIN REMOVAL/INSTALLATION [L3 WITH TC].)
7. Remove the splash shield (RH). (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)
8. Measure the valve clearance.

Note

- Make sure to note down the measured values for choosing the suitable replacement tappets.

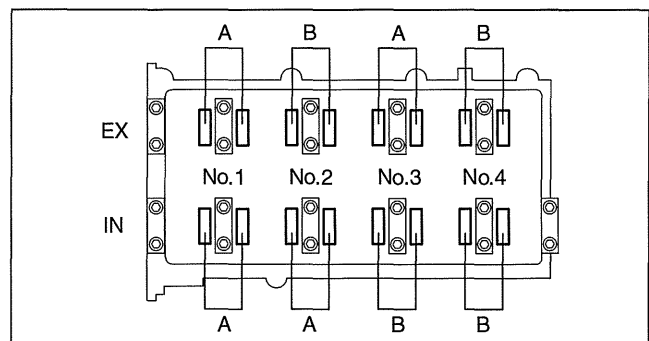

- (1) Turn the crankshaft clockwise so that the No.1 piston is at top dead center (TDC) of the compression stroke.
- (2) Measure the valve clearance at A in the figure.

Standard valve clearance [Engine cold]

IN: 0.22—0.28 mm {0.009—0.011 in}

EX: 0.27—0.33 mm {0.011—0.012 in}

- (3) If the valve clearance is out of the standard value, adjust it. (See 01-10B-6 VALVE CLEARANCE ADJUSTMENT [L3 WITH TC].)
- (4) Turn the crankshaft **360°** clockwise so that the No.4 piston is at TDC of the compression stroke.
- (5) Measure the valve clearance at B in the figure.

acxuuw0000156

Standard valve clearance [Engine cold]

IN: 0.22—0.28 mm {0.009—0.011 in}

EX: 0.27—0.33 mm {0.011—0.012 in}

- (6) If the valve clearance is out of the standard value, adjust it. (See 01-10B-6 VALVE CLEARANCE ADJUSTMENT [L3 WITH TC].)
9. Install in the reverse order of removal.

MECHANICAL [L3 WITH TC]

VALVE CLEARANCE ADJUSTMENT [L3 WITH TC]

id011039803300

Warning

- Fuel vapor is hazardous. It can very easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.
- Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure". (See 01-14B-4 BEFORE SERVICE PRECAUTION [L3 WITH TC].)

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Remove the charge air cooler. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
4. Remove the high pressure fuel pump and high pressure fuel pump cover. (See 01-14B-17 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC].)
5. Remove the ignition coils. (See 01-18B-2 IGNITION COIL REMOVAL/INSTALLATION [L3 WITH TC].)
6. Disconnect the ventilation hose from the cylinder head cover. (See 01-16B-12 QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/INSTALLATION [L3 WITH TC].)
7. Remove the cylinder head cover. (See 01-10B-23 TIMING CHAIN REMOVAL/INSTALLATION [L3 WITH TC].)
8. Remove the aerodynamic under cover No.2 and splash shield as a single unit. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.) (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)
9. Remove the drive belt. (See 01-10B-4 DRIVE BELT REMOVAL/INSTALLATION [L3 WITH TC].)
10. Remove the engine front cover lower blind plug.

am3uuw0000606

11. Remove the engine front cover upper blind plug.

am3uuw0000606

12. Remove the cylinder block lower blind plug.
13. Rotate the crankshaft in the direction of the engine rotation until the No. 1 piston is at the point prior to top dead center (TDC) of the compression stroke.

am3uuw0000606

MECHANICAL [L3 WITH TC]

14. Install the **SST**.
15. Rotate the crankshaft in the direction of the engine rotation so that the No.1 piston is at TDC of the compression stroke. (Until the counterweight contacts the **SST** and stops.)

01-10B

16. Loosen the timing chain using the following procedure.

Note

- Verify the ratchet position using the mirror before servicing. If the ratchet is not tilted, remove the engine front cover before performing the procedure. (See 01-10B-23 TIMING CHAIN REMOVAL/INSTALLATION [L3 WITH TC].)
- If the timing chain tension cannot be released with the ratchet tilted, remove the engine front cover before performing the procedure. (See 01-10B-23 TIMING CHAIN REMOVAL/INSTALLATION [L3 WITH TC].)

Ratchet unlock position

- (1) Insert a suitable bolt (**M6 X 1.0, length 25—35 mm {1.0—1.3 in}**) into the engine front cover upper blind plug hole and tighten it until it contacts the chain tensioner arm, and then rotate it back one turn. (Set the bolt slightly away from the chain tensioner arm so that it does not contact it.)

MECHANICAL [L3 WITH TC]

- (2) Using the cast hexagon on the exhaust camshaft, apply force counterclockwise to facilitate unlocking the chain tensioner ratchet.
- (3) Using a Hex bit socket (2.5 mm {0.098 in}) or T15 Torx bit socket, unlock the chain tensioner ratchet so that it can be lifted up.

am8rrw00002539

acxaaw00001396

- (4) Using the cast hexagon on the exhaust camshaft, apply force in the direction of the engine rotation to increase tension on the chain.

am8rrw00002541

Note

- The chain tensioner rack is compressed using the chain tension generated by applying force to the exhaust camshaft in the direction of the engine rotation.

acxaaw00001397

MECHANICAL [L3 WITH TC]

- (5) Screw in the bolt set in Step (1) approx. 5 mm {0.2 in} and secure the tensioner arm with the rack compressed.

Note

- The ratchet has not been unlocked if the bolt cannot be pressed in **approx. 5 mm {0.2 in}**.

am3uuw0000607

- If the tensioner arm cannot be secured, return the bolt to its original position and repeat the procedure from Step (2).

17. Fix the exhaust camshaft using a wrench on the cast hexagon, and loosen the camshaft sprocket bolt.

Caution

- Perform the work carefully so that the washer does not drop out.

acxuuw0000161

18. Remove the exhaust camshaft sprocket bolt, exhaust camshaft sprocket, and washer as a single unit.
19. Remove the OCV. (See 01-10B-23 OIL CONTROL VALVE (OCV) REMOVAL/ INSTALLATION [L3 WITH TC].)

am3uuw0000607

20. Loosen the camshaft cap bolts in two or three steps in the order shown in the figure and remove the camshaft cap.

Note

- The camshaft caps are to be kept ordered for correct reassembly in their original positions. Do not mix the caps.

21. Remove the camshafts for the intake and exhaust sides.
22. Remove the tappet.

acxuuw0000163

01-10B

MECHANICAL [L3 WITH TC]

23. Install an appropriate tappet based on the results of the valve clearance inspection.
- Selected tappet = Removed tappet thickness + Measured valve clearance - Standard valve clearance

Standard valve clearance [Engine cold]

IN: 0.22—0.28 mm {0.009—0.011 in}

EX: 0.27—0.33 mm {0.011—0.012 in}

24. Verify that the No.1 piston is at TDC of the compression stroke. (The position counterweight contacts the **SST**.)
25. Apply the gear oil (SAE No. 90 or equivalent) to each journal of the cylinder head as shown in the figure.
26. With No.1 cylinder cam aligned at TDC of the compression stroke, install the camshafts.

am3uuw0000151

27. Apply the gear oil (SAE No. 90 or equivalent) to each journal of the camshaft as shown in the figure. However, do not apply it to the end journal of the intake camshaft.

am3uuw0000151

28. Carefully apply adhesive agent (Loctite 518 or 962T) to the area indicated in the figure so that it does not leak into the sliding part, then apply the gear oil (SAE No. 90 or equivalent) to the journal.

Adhesive agent thickness

0.5—1.5 mm {0.02—0.05 in}

29. Temporarily tighten the camshaft cap bolts evenly in 2—3 steps.

Note

- Do not tighten the bolts during this step.

am3uuw0000607

MECHANICAL [L3 WITH TC]

30. Tighten the camshaft cap bolts in two steps in the order shown in the figure.

Tightening torque

Step 1: 5.0—9.0 N·m {51—91 kgf·cm, 45—79 in·lbf}

Step 2: 14—17 N·m {1.5—1.7 kgf·m, 11—12 ft·lbf}

31. Install the OCV. (See 01-10B-23 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [L3 WITH TC].)

32. Install the exhaust camshaft sprocket bolt, exhaust camshaft sprocket, and a new washer as a single unit.

Caution

- Install a new washer to the fourth or fifth thread of the exhaust camshaft sprocket bolt being careful not to drop the washer.
- Do not tighten the camshaft sprocket bolt at this stage. Verify the valve timing before performing the bolt tightening.

33. Install the **SST** on the camshaft as shown in the figure.

34. Remove the bolt (**M6 X 1.0, length 25—35mm {1.0—1.3 in}**) from the engine front cover upper blind plug hole, and apply tension to the timing chain.

35. Verify that the No.1 piston is at TDC of the compression stroke. (The position counterweight contacts the **SST**.)

36. Fix the exhaust camshaft using a wrench on the cast hexagon, and tighten the camshaft sprocket bolt.

Tightening torque

69—75 N·m {7.1—7.6 kgf·m, 51—55 ft·lbf}

37. Remove the **SST** from the camshaft.
38. Remove the **SST** installed to the cylinder block lower blind plug hole.
39. Rotate the crankshaft clockwise two turns and inspect the valve timing.
- If not aligned, loosen the camshaft sprocket bolt and repeat the procedure from Step 33.
40. Install the cylinder block lower blind plug.

Tightening torque

18—22 N·m {1.9—2.2 kgf·m, 14—16 ft·lbf}

acxuuw0000165

01-10B

am3uuw0000607

am8rrw00002546

am3uuw0000606

MECHANICAL [L3 WITH TC]

41. Apply the silicone sealant and install the engine front cover upper blind plug.

Caution

- **Install the engine front cover upper blind plug before the applied silicone sealant starts to harden.**

Tightening torque

8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

am3uuw000607

42. Install a new engine front cover lower blind plug.

Tightening torque

10—14 N·m {102—142 kgf·cm, 89—123 in·lbf}

am3uuw000606

43. Install the drive belt. (See 01-10B-4 DRIVE BELT REMOVAL/INSTALLATION [L3 WITH TC].)
44. Install the aerodynamic under cover No.2 and splash shield as a single unit. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.) (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)
45. Install the cylinder head cover. (See 01-10B-23 TIMING CHAIN REMOVAL/INSTALLATION [L3 WITH TC].)
46. Connect the ventilation hose. (See 01-16B-12 QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/INSTALLATION [L3 WITH TC].)
47. Install the ignition coils. (See 01-18B-2 IGNITION COIL REMOVAL/INSTALLATION [L3 WITH TC].)
48. Install the high pressure fuel pump and high pressure fuel pump cover. (See 01-14B-17 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC].)
49. Install the charge air cooler. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
50. Connect the negative battery cable.
51. Install the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)

COMPRESSION INSPECTION [L3 WITH TC]

id011039800300

Warning

- **Hot engines and oil can cause severe burns. Be careful not to burn yourself during removal/installation of each component.**
- **Fuel vapor is hazardous. It can very easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.**
- **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure". (See 01-14B-4 BEFORE SERVICE PRECAUTION [L3 WITH TC].)**

1. Verify that the battery is fully charged. (See 01-17B-4 BATTERY INSPECTION [L3 WITH TC].)
 - Recharge it if necessary. (See 01-17B-6 BATTERY RECHARGING [L3 WITH TC].)
2. Warm up the engine to normal operating temperature.
3. Remove the charge air cooler. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
4. Remove the ignition coils. (See 01-18B-2 IGNITION COIL REMOVAL/INSTALLATION [L3 WITH TC].)
5. Remove all the spark plugs. (See 01-18B-3 SPARK PLUG REMOVAL/INSTALLATION [L3 WITH TC].)
6. Remove the fuel pump relay. (See 01-14B-4 BEFORE SERVICE PRECAUTION [L3 WITH TC].)
7. Remove the fuel injector relay.

MECHANICAL [L3 WITH TC]

8. Measure the compression pressure using the following procedure.

- (1) Press a compression gauge into the spark plug hole.
- (2) Fully depress the accelerator pedal and crank the engine.
- (3) Note down the maximum gauge reading.
- (4) Perform Steps (1) to (3) for all cylinders.

acxuuw00000151

01-10B

Compression

Standard: 1,280 kPa {13.05 kgf/cm², 185.6 psi} [250 rpm]

Minimum: 896 kPa {9.14 kgf/cm², 130 psi} [250 rpm]

Maximum difference between cylinders:

196.1 kPa {2.000 kgf/cm², 28.44 psi}

- (5) If the measured value is less than the minimum value, or there is a cylinder whose compression value varies from that of other cylinders by **196.1 kPa {2.000 kgf/cm², 28.44 psi}** or more, add a small amount of engine oil through the spark plug hole. Then measure the compression pressure and perform the respective operations for the following cases.
 - If the compression increases, the piston, the piston rings, or cylinder wall may be worn and overhaul is required.
 - If the compression stays low, a valve may be stuck or improperly seated and overhaul is required.
 - If the compression in adjacent cylinders stays low, the cylinder head gasket may be damaged or the cylinder head distorted and overhaul is required.
9. Install the fuel injector relay.
10. Install the fuel pump relay. (See 01-14B-4 BEFORE SERVICE PRECAUTION [L3 WITH TC].)
11. Install the spark plugs. (See 01-18B-3 SPARK PLUG REMOVAL/INSTALLATION [L3 WITH TC].)
12. Install the ignition coils. (See 01-18B-2 IGNITION COIL REMOVAL/INSTALLATION [L3 WITH TC].)
13. Install the charge air cooler. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)

VARIABLE VALVE TIMING ACTUATOR INSPECTION [L3 WITH TC]

id011039801200

Caution

- Variable valve timing actuator cannot be disassembled because it is a precision unit.

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Remove the charge air cooler. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
4. Remove the ignition coils. (See 01-18B-2 IGNITION COIL REMOVAL/INSTALLATION [L3 WITH TC].)
5. Disconnect the ventilation hose from the cylinder head cover. (See 01-16B-12 QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/INSTALLATION [L3 WITH TC].)
6. Remove the cylinder head cover. (See 01-10B-23 TIMING CHAIN REMOVAL/INSTALLATION [L3 WITH TC].)
7. Confirm that notch of the rotor and notch of the cover at the variable valve timing actuator are aligned and fitted.
 - If the notch of the rotor and notch of the cover are not aligned, turn the crankshaft clockwise two rotations. Verify that notch of the rotor and notch of the cover are aligned.
 - If the both notches are still not aligned, replace the variable valve timing actuator. (See 01-10B-14 VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [L3 WITH TC].)
 - If, when turning the crankshaft, there is a hitting noise from the variable valve timing actuator each time the cam passes the fully lifted position, it means that the actuator is not secured. Replace the variable valve timing actuator. (See 01-10B-14 VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [L3 WITH TC].)
8. Install the cylinder head cover. (See 01-10B-23 TIMING CHAIN REMOVAL/INSTALLATION [L3 WITH TC].)
9. Connect the ventilation hose. (See 01-16B-12 QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/INSTALLATION [L3 WITH TC].)

am6xuww0000247

MECHANICAL [L3 WITH TC]

10. Install the ignition coils. (See 01-18B-2 IGNITION COIL REMOVAL/INSTALLATION [L3 WITH TC].)
11. Install the charge air cooler. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
12. Connect the negative battery cable.
13. Install the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)

VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [L3 WITH TC]

id011039801100

Warning

- Fuel vapor is hazardous. It can very easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.
- Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure". (See 01-14B-4 BEFORE SERVICE PRECAUTION [L3 WITH TC].)

Caution

- Variable valve timing actuator cannot be disassembled because it is a precision unit.

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Remove the charge air cooler. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
4. Remove the high pressure fuel pump and high pressure fuel pump cover. (See 01-14B-17 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC].)
5. Remove the ignition coils. (See 01-18B-2 IGNITION COIL REMOVAL/INSTALLATION [L3 WITH TC].)
6. Disconnect the ventilation hose from the cylinder head cover. (See 01-16B-12 QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/INSTALLATION [L3 WITH TC].)
7. Remove the cylinder head cover. (See 01-10B-23 TIMING CHAIN REMOVAL/INSTALLATION [L3 WITH TC].)
8. Remove the aerodynamic under cover No.2 and splash shield as a single unit. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.) (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)
9. Remove the drive belt. (See 01-10B-4 DRIVE BELT REMOVAL/INSTALLATION [L3 WITH TC].)
10. Remove the engine front cover lower blind plug.

am3uuw0000604

11. Remove the engine front cover upper blind plug.

am3uuw0000604

MECHANICAL [L3 WITH TC]

12. Remove the cylinder block lower blind plug.
13. Rotate the crankshaft in the direction of the engine rotation until the No. 1 piston is at the point prior to top dead center (TDC) of the compression stroke.

01-10B

14. Install the **SST**.
15. Rotate the crankshaft in the direction of the engine rotation so that the No.1 piston is at TDC of the compression stroke. (Until the counterweight contacts the **SST** and stops.)

16. Loosen the timing chain using the following procedure.

Note

- Verify the ratchet position using the mirror before servicing. If the ratchet is not tilted, remove the engine front cover before performing the procedure. (See 01-10B-23 TIMING CHAIN REMOVAL/INSTALLATION [L3 WITH TC].)
- If the timing chain tension cannot be released with the ratchet tilted, remove the engine front cover before performing the procedure. (See 01-10B-23 TIMING CHAIN REMOVAL/INSTALLATION [L3 WITH TC].)

Ratchet unlock position

MECHANICAL [L3 WITH TC]

- (1) Insert a suitable bolt (**M6 X 1.0, length 25—35 mm {1.0—1.3 in}**) into the engine front cover upper blind plug hole and tighten it until it contacts the chain tensioner arm, and then rotate it back one turn. (Set the bolt slightly away from the chain tensioner arm so that it does not contact it.)

- (2) Using the cast hexagon on the exhaust camshaft, apply force counterclockwise to facilitate unlocking the chain tensioner ratchet.
- (3) Using a Hex bit socket (**2.5 mm {0.098 in}**) or T15 Torx bit socket, unlock the chain tensioner ratchet so that it can be lifted up.

MECHANICAL [L3 WITH TC]

- (4) Using the cast hexagon on the exhaust camshaft, apply force in the direction of the engine rotation to increase tension on the chain.

am8rrw00002541

Note

- The chain tensioner rack is compressed using the chain tension generated by applying force to the exhaust camshaft in the direction of the engine rotation.

- (5) Screw in the bolt set in Step (1) **approx. 5 mm {0.2 in}** and secure the tensioner arm with the rack compressed.

Note

- The ratchet has not been unlocked if the bolt cannot be pressed in **approx. 5 mm {0.2 in}**.

acxaaw00001397

am3uuw0000604

- If the tensioner arm cannot be secured, return the bolt to its original position and repeat the procedure from Step (2).

MECHANICAL [L3 WITH TC]

17. Fix the exhaust camshaft using a wrench on the cast hexagon, and loosen the camshaft sprocket bolt.

Caution

- Perform the work carefully so that the washer does not drop out.

ac3uuw0000161

18. Remove the exhaust camshaft sprocket bolt, exhaust camshaft sprocket, and washer as a single unit.
19. Remove the OCV. (See 01-10B-23 OIL CONTROL VALVE (OCV) REMOVAL/ INSTALLATION [L3 WITH TC].)

am3uuw0000605

20. Loosen the camshaft cap bolts in two or three steps in the order shown in the figure and remove the camshaft cap.

Note

- The camshaft caps are to be kept ordered for correct reassembly in their original positions. Do not mix the caps.

21. Remove the variable valve timing actuator and intake camshaft as a single unit.

am3uuw0000605

22. Remove the variable valve timing actuator using the following procedures.

- (1) Mark the camshaft and variable valve timing actuator as shown in the figure to make sure they are installed in their original position.

am3uuw0000605

- (2) Secure the camshaft in a vise.
- (3) Loosen the variable valve timing actuator installation bolt.

am3uuw0000605

MECHANICAL [L3 WITH TC]

23. Install the variable valve timing actuator using the following procedures.

Caution

- When the variable valve timing actuator is replaced with a new one, mark it in the same location as the old one.

- (1) Secure the camshaft in a vise.
- (2) Install a new washer.
- (3) Align the marks of the camshaft and the variable valve timing actuator.

Note

- If the alignment marks on the variable valve timing actuator are not available, refer to the "TIMING CHAIN ASSEMBLY" in the engine workshop manual and perform the sprocket position alignment again.

- (4) Tighten the variable valve timing actuator installation bolt.

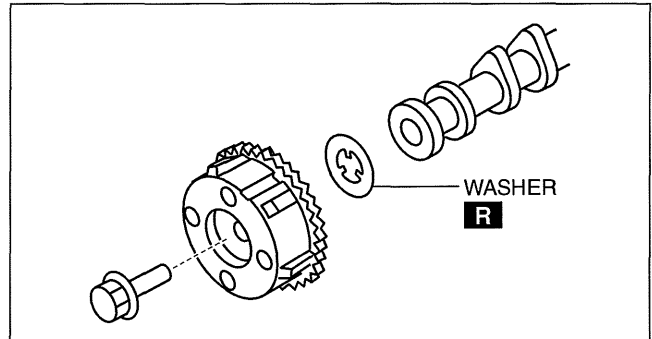

Tightening torque

69—75 N·m {7.1—7.6 kgf·m, 51—55 ft.lbf}

24. Verify that the No.1 piston is at TDC of the compression stroke. (The position counterweight contacts the SST.)

25. Apply the gear oil (SAE No. 90 or equivalent) to each journal of the cylinder head as shown in the figure.

26. With No.1 cylinder cam aligned at TDC of the compression stroke, install the variable valve timing actuator and the camshaft on the intake air side as a single unit.

am3uuw0000605

01-10B

27. Apply the gear oil (SAE No. 90 or equivalent) to each journal of the camshaft as shown in the figure. However, do not apply it to the end journal of the intake camshaft.

am3uuw0000605

am3uuw0000605

01-10B-19

MECHANICAL [L3 WITH TC]

28. Carefully apply adhesive agent (Loctite 518 or 962T) to the area indicated in the figure so that it does not leak into the sliding part, then apply the gear oil (SAE No. 90 or equivalent) to the journal.

Adhesive agent thickness
0.5—1.5 mm {0.02—0.05 in}

29. Temporarily tighten the camshaft cap bolts evenly in 2—3 steps.

Note

- Do not tighten the bolts during this step.

30. Tighten the camshaft cap bolts in two steps in the order shown in the figure.

Tightening torque

Step 1: 5.0—9.0 N·m {51—91 kgf·cm, 45—79 in·lbf}

Step 2: 14—17 N·m {1.5—1.7 kgf·m, 11—12 ft·lbf}

31. Install the OCV. (See 01-10B-23 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [L3 WITH TC].)

32. Install the exhaust camshaft sprocket bolt, exhaust camshaft sprocket, and a new washer as a single unit.

Caution

- Install a new washer to the fourth or fifth thread of the exhaust camshaft sprocket bolt being careful not to drop the washer.
- Do not tighten the camshaft sprocket bolt at this stage. Verify the valve timing before performing the bolt tightening.

33. Install the **SST** on the camshaft as shown in the figure.

34. Remove the bolt (M6 X 1.0, length 25—35mm {1.0—1.3 in}) from the engine front cover upper blind plug hole, and apply tension to the timing chain.

35. Verify that the No.1 piston is at TDC of the compression stroke. (The position counterweight contacts the **SST**.)

OIL CONTROL VALVE (OCV) INSPECTION [L3 WITH TC]

id011039801400

Coil Resistance Inspection

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Disconnect the OCV connector.
4. Measure the coil resistance between terminals A and B using a tester.
 - If not as specified, replace the OCV. (See 01-10B-23 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [L3 WITH TC].)

OCV coil resistance

6.9—7.9 ohms [20°C {68°F}]

5. Install in the reverse order of removal.

am3zzw0000352

Spool Valve Operation Inspection

1. Remove the OCV. (See 01-10B-23 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [L3 WITH TC].)
2. Verify that the spool valve in the OCV is in the maximum valve timing retard position as shown in the figure.
 - If not as specified, replace the OCV. (See 01-10B-23 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [L3 WITH TC].)
3. Verify that the battery is fully charged. (See 01-17B-4 BATTERY INSPECTION [L3 WITH TC].)
 - Recharge it if necessary. (See 01-17B-6 BATTERY RECHARGING [L3 WITH TC].)

am3uuw0000606

4. Apply battery positive voltage between the OCV terminals and verify that the spool valve operates and moves to the maximum valve timing advance position.
 - If not as specified, replace the OCV. (See 01-10B-23 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [L3 WITH TC].)

am3uuw0000606

Note

- When applying battery positive voltage between the OCV terminals, the connection can be either of the following:
 - Positive battery cable to terminal A, negative battery cable to terminal B
 - Positive battery cable to terminal B, negative battery cable to terminal A

5. Stop applying battery positive voltage and verify that the spool valve returns to the maximum valve timing retard position.
 - If not as specified, replace the OCV. (See 01-10B-23 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [L3 WITH TC].)
6. Install the OCV. (See 01-10B-23 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [L3 WITH TC].)

TIMING CHAIN REMOVAL/INSTALLATION [L3 WITH TC]

id011039801000

Warning

- Fuel vapor is hazardous. It can very easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.
- Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure". (See 01-14B-4 BEFORE SERVICE PRECAUTION [L3 WITH TC].)

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Remove the charge air cooler. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
4. Remove the high pressure fuel pump and high pressure fuel pump cover. (See 01-14B-17 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC].)
5. Remove the ignition coils. (See 01-18B-2 IGNITION COIL REMOVAL/INSTALLATION [L3 WITH TC].)
6. Disconnect the ventilation hose from the cylinder head cover. (See 01-16B-12 QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/INSTALLATION [L3 WITH TC].)
7. Remove the coolant reserve tank with the hose still connected and set it out of the way. (See 01-12B-7 COOLANT RESERVE TANK REMOVAL/INSTALLATION [L3 WITH TC].)
8. Remove the front wheel and tire. (RH) (See 02-10-1 GENERAL PROCEDURES (SUSPENSION).)
9. Remove the aerodynamic under cover No.2 and splash shield as a single unit. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.) (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)
10. Remove the nut shown in the figure and set the power steering pipe component out of the way.
11. Loosen the water pump pulley bolts before removing the drive belt.
12. Remove the drive belt. (See 01-10B-4 DRIVE BELT REMOVAL/INSTALLATION [L3 WITH TC].)
13. Remove the crankshaft position (CKP) sensor. (See 01-40B-32 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
14. Remove in the order indicated in the table.
15. Install in the reverse order of removal.
16. Start the engine. And inspect and adjust the following:
 - Leakage of engine oil. (See 01-11B-2 ENGINE OIL LEVEL INSPECTION [L3 WITH TC].)
 - Runout and contact of pulley and belt.

Cylinder Head Cover Removal Note

1. Set the wiring harness out of the way.
2. Remove the wiring harness bracket with the wiring harness still connected and set it out of the way.

am3uuw0000602

3. Remove the wiring harness bracket.

am3uuw0000602

4. Loosen the cylinder head cover bolts in the order shown in the figure.

am3uuw0000602

Crankshaft Pulley Lock Bolt Removal Note

1. Remove the cylinder block lower blind plug.
2. Rotate the crankshaft in the direction of the engine rotation until the No. 1 piston is at the point prior to top dead center (TDC) of the compression stroke.

am3uuw0000602

MECHANICAL [L3 WITH TC]

3. Install the **SST**.
4. Rotate the crankshaft in the direction of the engine rotation so that the No.1 piston is at TDC of the compression stroke. (Until the counterweight contacts the **SST** and stops.)

am3uuw0000602

5. Hold the crankshaft pulley using the **SSTs**.

am3uuw0000602

No.3 Engine Mount Removal Note

1. Remove the air cleaner. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
2. Install the **SST** using the following procedures.

Caution

- Refer to the **SST instruction manual for the basic handling procedure.**

am6xuw0000068

- (1) Remove the installation bolt for the bracket securing the lower radiator hose.
- (2) Set the bracket securing the lower radiator hose aside to prevent it from interfering with the front shaft of the **SST** (right side)

am3uuw0000508

MECHANICAL [L3 WITH TC]

- (3) As shown in the figure, set the rear shafts of the **SST** to the left and right shock absorber bolts.

01-10B

- (4) Install front foot No.2 to the left/right front shaft of the **SST**, then align the groove of the front shaft of the **SST** with the folded up part of the vehicle as shown in the figure.

- (5) Adjust the positions of the **SST** side bars so that they are the same height (left and right) and horizontal. Make sure each joint is securely tightened.

MECHANICAL [L3 WITH TC]

Chain Tensioner Removal Note

1. Press the timing chain tensioner ratchet to the left using a thin flathead screwdriver (precision screwdriver) to unlock the plunger.

am3uuw0000602

2. Slowly press the plunger back in the direction shown in the figure while pressing the ratchet.

am3uuw0000602

3. Release the ratchet with the plunger still pressed down.

am3uuw0000603

4. Press-in the plunger until the ratchet position is as indicated in the figure, and then insert the wire or paper clip to lock the plunger.

am3uuw0000603

MECHANICAL [L3 WITH TC]

Oil Pump Driven Sprocket Removal/Installation Note

1. Temporarily install the crankshaft pulley and crankshaft pulley lock bolt to the crankshaft, and lock the oil pump against rotation as shown in figure.
2. Remove/install the oil pump driven sprocket, and then remove the crankshaft pulley and crankshaft pulley lock bolt.

Tightening torque

20—30 N·m {2.1—3.0 kgf·m, 15—22 ft·lbf}

01-10B

Oil Pump Drive Sprocket Installation Note

1. Assemble the oil pump drive sprocket as shown in the figure.

Timing Chain Installation Note

1. Install the **SST** to the camshaft as shown in the figure.
2. Install the timing chain.
3. Remove the wire or paper clip from the chain tensioner and apply tension to the timing chain.

MECHANICAL [L3 WITH TC]

Engine Front Cover Installation Note

1. Apply silicone sealant to the engine front cover as shown in the figure.

Caution

- Install the engine front cover before the applied silicone sealant starts to harden.
- Verify that there is no oil or dust on the seal.

Thickness

- A:** 2.2—3.2 mm {0.09—0.12 in}
B: 1.5—2.5 mm {0.06—0.098 in}

am3uuw000615

2. Tighten the engine front cover installation bolts in the order as shown in the figure.

No.	Tightening Torque
1—18	8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}
19—22	40—55 N·m {4.1—5.6 kgf·m, 30—40 ft·lbf}

am3uuw000603

No.3 Engine Mount Installation Note

Note

- Retighten the No.3 engine mount stud bolts when the No.3 engine mount nuts are loosened.

1. Tighten the No.3 engine mount stud bolts.

Tightening torque

7—13 N·m {72—132 kgf·cm, 62—115 in·lbf}

2. Temporarily tighten the No.3 engine mount installation bolts and nuts.

am3uuw000603

MECHANICAL [L3 WITH TC]

3. Tighten the No.3 engine mount installation bolts and nuts in the order as shown in the figure.

No.	Tightening torque
1	75—104 N·m {7.7—10 kgf·m, 56—76 ft·lbf}
2	71—93 N·m {7.3—9.4 kgf·m, 53—68 ft·lbf}

01-10B

Crankshaft Pulley Lock Bolt Installation Note

1. Install the **SST** to the camshaft as shown in the figure.
2. Verify that the No.1 piston is at TDC of the compression stroke. (The position counterweight contacts the **SST**.)

3. To position the crankshaft pulley, temporarily tighten it and, using a suitable bolt (**M6 X 1.0**), fix the crankshaft pulley to the engine front cover.

Note

- Do not tighten the crankshaft pulley lock bolt during this step.

4. Hold the crankshaft pulley using the **SSTs**.
5. Tighten the crankshaft pulley lock bolt in the following two steps using the **SST (49 D032 316)**.

Tightening torque

Step 1: 96—104 N·m {9.8—10 kgf·m, 71—76 ft·lbf}

Step 2: 87—93°

6. Remove the bolt (**M6 X 1.0**) installed to the crankshaft pulley.
7. Remove the **SST** from the camshaft.
8. Remove the **SST** installed to the cylinder block lower blind plug hole.
9. Rotate the crankshaft clockwise two turns and inspect the valve timing.
 - If not aligned, loosen the crankshaft pulley lock bolt and repeat from Step 1.

MECHANICAL [L3 WITH TC]

10. Install the cylinder block lower blind plug.

Tightening torque

18—22 N·m {1.9—2.2 kgf·m, 14—16 ft·lbf}

am3uuw0000602

Cylinder Head Cover Installation Note

1. Apply silicone sealant to the mating faces as shown in the figure.

am3uuw0000603

Caution

- Install the cylinder head cover before the applied silicone sealant starts to harden.

Thickness

5.0 mm {0.20 in}

am3uuw0000604

2. Tighten the cylinder head cover bolts in the order shown in the figure.

Tightening torque

8.0—9.5 N·m {82—96 kgf·cm, 71—84 in·lbf}

am3uuw0000604

MECHANICAL [L3 WITH TC]

3. Install the wiring harness bracket.

01-10B

CYLINDER HEAD GASKET REPLACEMENT [L3 WITH TC]

id011039800700

Warning

- Fuel vapor is hazardous. It can very easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.
- Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure". (See 01-14B-4 BEFORE SERVICE PRECAUTION [L3 WITH TC].)

1. Remove the intake manifold. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
2. Remove the exhaust manifold. (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
3. Remove the generator. (See 01-17B-6 GENERATOR REMOVAL/INSTALLATION [L3 WITH TC].)
4. Disconnect the heater hose. (See 07-11-4 A/C UNIT REMOVAL/INSTALLATION.)
5. Disconnect the upper radiator hose. (See 01-12B-8 RADIATOR REMOVAL/INSTALLATION [L3 WITH TC].)
6. Remove the timing chain. (See 01-10B-23 TIMING CHAIN REMOVAL/INSTALLATION [L3 WITH TC].)
7. Disconnect the connectors and the wiring harnesses related to the cylinder head gasket removal/installation.
8. To firmly support the engine, first set the engine jack to the oil pan.
9. Remove in the order indicated in the table.
10. Install in the reverse order of removal.
11. Bleed the air from the cooling system. (See 01-12B-4 ENGINE COOLANT REPLACEMENT [L3 WITH TC].)

am3uuw0000600

MECHANICAL [L3 WITH TC]

12. Inspect the compression. (See 01-10B-12 COMPRESSION INSPECTION [L3 WITH TC].)

4	Cylinder head gasket

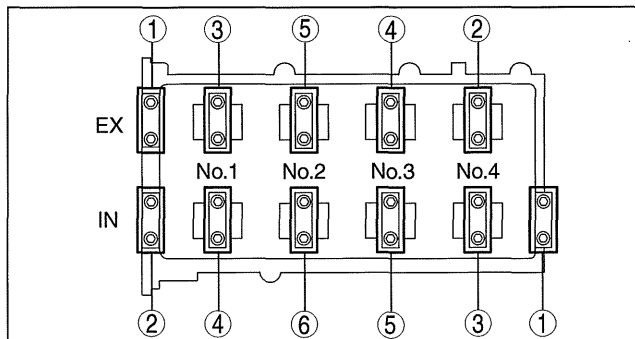

MECHANICAL [L3 WITH TC]

Camshaft Removal Note

1. Loosen the camshaft cap bolts in 2—3 steps in the order shown in the figure.

Note

- The camshaft caps are to be kept ordered for correct reassembly in their original positions. Do not mix the caps.

acxuuw0000251

01-10B

Cylinder Head Removal Note

1. Loosen the cylinder head bolts in 2—3 steps in the order shown in the figure.

am3uuw0000600

Cylinder Head Installation Note

1. Measure the length of each cylinder head bolt.
 - Replace any cylinder head bolts that exceed the maximum length.

Cylinder head bolt stem length

Standard: 144.7—145.3 mm {5.697—5.720 in}

Maximum: 146 mm {5.74 in}

am3uuw0000614

2. Tighten the cylinder head bolts in 5 steps in the order shown in the figure using the **SST (49 D032 316)**.

Tightening torque

Step 1: 3—11 N·m {31—112 kgf·cm, 27—97 in·lbf}

Step 2: 13—17 N·m {133—173 kgf·cm, 116—150 in·lbf}

Step 3: 43—47 N·m {4.4—4.7 kgf·m, 32—34 ft·lbf}

Step 4: 88—92°

Step 5: 88—92°

am3uuw0000600

MECHANICAL [L3 WITH TC]

Camshaft Installation Note

1. Apply the gear oil (SAE No. 90 or equivalent) to each journal of the cylinder head as shown in the figure.
2. With No.1 cylinder cam aligned at TDC of the compression stroke, install the camshafts.

am3uuw0000151

3. Apply the gear oil (SAE No. 90 or equivalent) to each journal of the camshaft as shown in the figure. However, do not apply it to the end journal of the intake camshaft.

am3uuw0000151

4. Carefully apply adhesive agent (Loctite 518 or 962T) to the area indicated in the figure so that it does not leak into the sliding part, then apply the gear oil (SAE No. 90 or equivalent) to the journal.

Adhesive agent thickness

0.5—1.5 mm {0.02—0.05 in}

5. Temporarily tighten the camshaft cap bolts evenly in 2—3 steps.

Note

- Do not tighten the bolts during this step.

am3uuw0000601

MECHANICAL [L3 WITH TC]

6. Tighten the camshaft cap bolts in two steps in the order shown in the figure.

Tightening torque

Step 1: 5.0—9.0 N·m {51—91 kgf·cm, 45—79 in·lbf}

Step 2: 14—17 N·m {1.5—1.7 kgf·m, 11—12 ft·lbf}

acxuuw0000256

Crankshaft Pulley Lock Bolt Removal Note

1. Remove the cylinder block lower blind plug.
2. Rotate the crankshaft in the direction of the engine rotation until the No. 1 piston is at the point prior to top dead center (TDC) of the compression stroke.

am3uuw0000601

3. Install the **SST**.
4. Rotate the crankshaft in the direction of the engine rotation so that the No.1 piston is at TDC of the compression stroke. (Until the counterweight contacts **SST** and stops.)

am3uuw0000601

MECHANICAL [L3 WITH TC]

5. Hold the crankshaft pulley using the **SSTs**.

01-10B

Front Oil Seal Removal Note

1. Cut the oil seal lip using a utility knife.
2. Remove the oil seal using a screwdriver wrapped with a rag.

Front Oil Seal Installation Note

1. Apply clean engine oil to the oil seal lip.
2. Push the oil seal slightly in by hand.
3. Tap the oil seal in evenly using the **SST** and a hammer.

Front oil seal press-in amount
0—0.5 mm {0—0.019 in}

MECHANICAL [L3 WITH TC]

Crankshaft Pulley Lock Bolt Installation Note

1. Install the **SST** to the camshaft as shown in the figure.
2. Verify that the No.1 piston is at TDC of the compression stroke. (The position counterweight contacts the **SST**.)

am3uuw0000601

3. To position the crankshaft pulley, temporarily tighten it and, using a suitable bolt (**M6 X 1.0**), fix the crankshaft pulley to the engine front cover.

Note

- Do not tighten the crankshaft pulley lock bolt during this step.

am3uuw0000601

4. Hold the crankshaft pulley using the **SSTs**.
5. Tighten the crankshaft pulley lock bolt in the following two steps using the **SST (49 D032 316)**.

Tightening torque

Step 1: 96—104 N·m {9.8—10 kgf·m, 71—76 ft·lbf}

Step 2: 87—93°

am3uuw0000601

6. Remove the bolt (**M6 X 1.0**) installed to the crankshaft pulley.
7. Remove the **SST** from the camshaft.
8. Remove the **SST** installed to the cylinder block lower blind plug hole.
9. Verify that the teeth of the crankshaft pulley pulse wheel and the detection area of the crankshaft position sensor are installed to the correct positions. (See 01-40B-33 CRANKSHAFT POSITION (CKP) SENSOR INSPECTION [L3 WITH TC].)
10. Rotate the crankshaft clockwise two turns and inspect the valve timing.
 - If not aligned, loosen the crankshaft pulley lock bolt and repeat from Step 1.
11. Install the cylinder block lower blind plug.

ENGINE REMOVAL/INSTALLATION [L3 WITH TC]

id011039800400

Warning

- Fuel vapor is hazardous. It can very easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.
- Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure". (See 01-14B-4 BEFORE SERVICE PRECAUTION [L3 WITH TC].)

Caution

- Secure the steering wheel using tape or a cable to prevent the steering shaft from rotating after disconnecting the steering shaft. If the steering wheel rotates after the steering shaft and the steering gear and linkage are disconnected, the internal parts of the clock spring could be damaged.

Note

- Perform the engine and transaxle component removal/installation from below the vehicle.

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Remove the charge air cooler cover. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
4. Remove the PCM cover No.1. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
5. Disconnect the PCM connector. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
6. Remove the battery tray and PCM component. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
7. Remove the air cleaner component. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
8. Remove the front wheels and tires. (See 02-10-1 GENERAL PROCEDURES (SUSPENSION).)
9. Remove the aerodynamic under cover No.2 and splash shield as a single unit. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.) (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)
10. Drain the transaxle oil. (See 05-15C-3 TRANSAXLE OIL REPLACEMENT [A26M-R].)
11. Drain the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT [L3 WITH TC].)
12. Remove the coolant reserve tank. (See 01-12B-7 COOLANT RESERVE TANK REMOVAL/INSTALLATION [L3 WITH TC].)
13. Disconnect the upper radiator hose. (See 01-12B-8 RADIATOR REMOVAL/INSTALLATION [L3 WITH TC].)
14. Remove the lower radiator hose and pipe component. (See 01-12B-11 THERMOSTAT REMOVAL/INSTALLATION [L3 WITH TC].) (See 01-12B-8 RADIATOR REMOVAL/INSTALLATION [L3 WITH TC].)
15. Disconnect the heater hose. (See 07-11-4 A/C UNIT REMOVAL/INSTALLATION.)

MECHANICAL [L3 WITH TC]

16. Disconnect the fuel hose. (See 01-14B-21 QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION [L3 WITH TC].)
17. Disconnect the evaporative hose. (See 01-16B-7 PURGE SOLENOID VALVE REMOVAL/INSTALLATION [L3 WITH TC].)
18. Disconnect the brake vacuum hose. (See 04-11-6 VACUUM HOSE REMOVAL/INSTALLATION [L3 WITH TC].)
19. Disconnect the power steering pipe component and then drain the power steering fluid. (See 06-10-1 GENERAL PROCEDURES (STEERING).)
20. Disconnect the shift cable. (See 05-15C-5 MANUAL TRANSAXLE REMOVAL/INSTALLATION [A26M-R].)
21. Remove the clutch release cylinder with the pipe still connected. (See 05-10-14 CLUTCH RELEASE CYLINDER REMOVAL/INSTALLATION [A26M-R].)
22. Remove the TWC. (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
23. Disconnect the front drive shafts from the engine side, set the drive shafts out of the way. (See 03-13-3 DRIVE SHAFT REMOVAL/INSTALLATION.)
24. Remove the A/C compressor with the cooler hose still connected and secure it using wire or rope so that it is out of the way. (See 07-11-18 A/C COMPRESSOR REMOVAL/INSTALLATION.)
25. Remove the wiring harness installation bolt and nut shown in the figure.
26. Disconnect the connectors and the wiring harnesses related to the engine removal/installation.
27. Remove in the order indicated in the table.
28. Install in the reverse order of removal.
29. Start the engine, and inspect and adjust the following:
 - Front wheel alignment (See 02-11-1 FRONT WHEEL ALIGNMENT.)
 - Power steering fluid air bleeding (See 06-14-3 AIR BLEEDING.)
 - Cooling system air bleeding (See 01-12B-4 ENGINE COOLANT REPLACEMENT [L3 WITH TC].)
 - Leakage of engine oil, engine coolant, transaxle oil, and fuel.
 - Runout and contact of pulley and belt.
 - Verify the ignition timing, idle speed and idle mixture. (See 01-10B-3 ENGINE TUNE-UP [L3 WITH TC].)
 - Engine-driven accessories operation.

1	No.1 engine mount rubber, front crossmember component (See 01-10B-45 No.1 Engine Mount Rubber, Front Crossmember Component Removal Note.) (See 01-10B-45 Engine Mount Installation Note.)
2	No.3 engine mount (See 01-10B-45 No.3 Engine Mount, No.4 Engine Mount Rubber Removal Note.) (See 01-10B-45 Engine Mount Installation Note.)

3	Battery tray bracket (See 01-10B-45 Engine Mount Installation Note.)
4	No.4 engine mount rubber (See 01-10B-45 No.3 Engine Mount, No.4 Engine Mount Rubber Removal Note.) (See 01-10B-45 Engine Mount Installation Note.)
5	Engine, transaxle

MECHANICAL [L3 WITH TC]

No.1 Engine Mount Rubber, Front Crossmember Component Removal Note

1. Loosen the No.1 engine mount rubber installation bolt (front crossmember side) shown in the figure.

01-10B

2. Remove the No.1 engine mount rubber installation bolt (No.1 engine mount bracket side) shown in the figure.
3. Remove the No.1 engine mount rubber and the front crossmember component as a single unit. (See 02-13-13 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)

No.3 Engine Mount, No.4 Engine Mount Rubber Removal Note

1. Secure the engine and the transaxle using an engine jack.

Engine Mount Installation Note

Note

- Retighten the No.3 engine mount stud bolts when the No.3 engine mount nuts are loosened.

1. Tighten the No. 3 engine mount stud bolts.

Tightening torque

7—13 N·m {72—132 kgf·cm, 62—115 in·lbf}

MECHANICAL [L3 WITH TC]

- Secure the engine and transaxle using an engine jack.
- Temporarily tighten the No.3 engine mount installation bolts and nuts.

am6zzw0000121

- Tighten the No.3 engine mount installation bolts and nuts in the order shown in the figure.

No.	Tightening torque
1	75—104 N·m {7.7—10 kgf·m, 56—76 ft·lbf}
2	71—93 N·m {7.3—9.4 kgf·m, 53—68 ft·lbf}

am3uuw0000303

- Tighten the No.4 engine mount rubber installation bolt.

Tightening torque

94—152 N·m {9.6—15 kgf·m, 70—112 ft·lbf}

am3uuw0000600

- Temporarily tighten the No.4 engine mount rubber and battery tray bracket installation nuts as shown in the figure.
- Install the No.1 engine mount rubber and the front crossmember component as a single unit. (See 02-13-13 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
- Temporarily tighten the No.1 engine mount rubber installation bolts.

Caution

- Install the bolts while being careful of their length to prevent interference between the steering gear housing and bolt.

Bolt stem length

Front crossmember side: 62mm {2.4 in}

No.1 engine mount bracket side: 65mm {2.6 in}

am3uuw0000600

MECHANICAL [L3 WITH TC]

9. Tighten the No.1 engine mount rubber installation bolts in the order shown in the figure.

Caution

- Tighten the bolts in the order shown in the figure to prevent abnormal noise and vibration after assembly.

Tightening torque

73—90 N·m {7.5—9.1 kgf·m, 54—66 ft·lbf}

am3uuw0000600

10. Tighten the No.4 engine mount rubber and battery tray bracket installation nuts to the specified tightening torque.

Tightening torque

44—61 N·m {4.5—6.2 kgf·m, 33—44 ft·lbf}

am3uuw0000600

ENGINE OIL LEVEL INSPECTION [LF, L5]

id0111c4800500

1. Position the vehicle on level ground.
2. Warm up the engine.
3. Stop the engine and allow **at least 5 min** before continuing.
4. Remove the dipstick, wipe it cleanly, and reinstall it fully.
5. Remove the dipstick and verify that the oil level is between the F and L marks on the dipstick.
 - If the oil level is below the L mark, add engine oil.

am6zzw0000231

01-11A

ENGINE OIL REPLACEMENT [LF, L5]

id0111c4800400

Warning

- Hot engines and engine oil can cause severe burns. Turn off the engine and wait until it and the engine oil have cooled.
- A vehicle that is lifted but not securely supported on safety stands is dangerous. It can slip or fall, causing death or serious injury. Never work around or under a lifted vehicle if it is not securely supported on safety stands.
- Continuous exposure to USED engine oil has caused skin cancer in laboratory mice. Protect your skin by washing with soap and water immediately after working with engine oil.

Caution

- If engine oil is spilled on the exhaust system, wipe it off completely. If you fail to wipe the spilled engine oil, it will produce fumes because of the heat.

1. Position the vehicle on level ground.
2. Remove the oil filler cap.
3. Remove the oil pan drain plug.
4. Drain the engine oil into a container.
5. Install the oil pan drain plug with a new gasket.

Oil pan drain plug tightening torque

30—41 N·m {3.1—4.1 kgf·m, 23—30 ft·lbf}

Note

- The amount of residual oil in the engine can vary according to factors such as the replacement method and oil temperature. Verify the oil level after engine oil replacement.

LUBRICATION [LF, L5]

6. Refill with the following type and amount of the engine oil.

Engine oil specification

Item	U.S.A. and CANADA	Except U.S.A. and CANADA
Engine oil grade	 (ILSAC)	 API SM or ILSAC
Engine oil viscosity	5W-20	5W-20 (If SAE 5W-20 engine oil is not available in your market, use SAE 5W-30 engine oil.)

Engine oil capacity [LF] (approx. quantity)

- Oil replacement: 3.9 L {4.1 US qt, 3.4 Imp qt}
- Oil and oil filter replacement: 4.3 L {4.5 US qt, 3.8 Imp qt}
- Total (dry engine): 4.6 L {4.9 US qt, 4.0 Imp qt}

Engine oil capacity [L5] (approx. quantity)

- Oil replacement: 4.6 L {4.9 US qt, 4.0 Imp qt}
- Oil and oil filter replacement: 5.0 L {5.3 US qt, 4.4 Imp qt}
- Total (dry engine): 5.5 L {5.8 US qt, 4.8 Imp qt}

7. Install the oil filler cap.
8. Start the engine and confirm that there is no oil leakage.
 - If there is oil leakage, repair or replace the applicable part.
9. Inspect the oil level. (See 01-11A-3 ENGINE OIL LEVEL INSPECTION [LF, L5].)

OIL FILTER REPLACEMENT [LF, L5]

id0111c4800700

Warning

- Hot engines and engine oil can cause severe burns. Turn off the engine and wait until it and the engine oil have cooled.
- A vehicle that is lifted but not securely supported on safety stands is dangerous. It can slip or fall, causing death or serious injury. Never work around or under a lifted vehicle if it is not securely supported on safety stands.
- Continuous exposure to USED engine oil has caused skin cancer in laboratory mice. Protect your skin by washing with soap and water immediately after working with engine oil.

Caution

- If engine oil is spilled on the exhaust system, wipe it off completely. If you fail to wipe the spilled engine oil, it will produce fumes because of the heat.

LUBRICATION [LF, L5]

1. Remove the oil filter using a commercially available, cup-type oil filter wrench (**76 mm {3.0 in} diameter, 15 sided**).
2. Use a clean rag to wipe off the mounting surface.
3. Apply clean engine oil to the O-ring of a new oil filter.
4. Tighten the oil filter according to the instructions on the package or side of the oil filter.

Tightening torque (reference value)

15—20 N·m {1.6—2.0 kgf·m, 12—14 ft·lbf}

5. Start the engine and confirm that there is no oil leakage.
 - If there is oil leakage, repair or replace the applicable part.
6. Inspect the oil level. (See 01-11A-3 ENGINE OIL LEVEL INSPECTION [LF, L5].)

am3uuw0000520

01-11A

OIL PRESSURE INSPECTION [LF, L5]

id0111c4800300

Warning

- Hot engines and engine oil can cause severe burns. Turn off the engine and wait until it and the engine oil have cooled.
- A vehicle that is lifted but not securely supported on safety stands is dangerous. It can slip or fall, causing death or serious injury. Never work around or under a lifted vehicle if it is not securely supported on safety stands.
- Continuous exposure to USED engine oil has caused skin cancer in laboratory mice. Protect your skin by washing with soap and water immediately after working with engine oil.

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
4. Remove the oil pressure switch.

Note

- This inspection can be performed using a combination of **SSTs 49 0187 280A** (oil pressure gauge), **49 E019 001** (adapter) and **49 H019 002** (adapter), or using the following combination of the **SSTs**.

am3uuw0000520

- **49 D019 908** (gauge), **49 D019 909** (hose), **49 D019 910** (adapter), **49 D019 911** (adapter), **49 D019 913** (adapter), and **49 D019 914** (adapter)

am3uuw0000520

LUBRICATION [LF, L5]

5. Install the **SSTs** to the oil pressure switch installation hole using the following procedure.
Using SSTs 49 0187 280A, 49 E019 001 and 49 H019 002
 - a. Assemble **SSTs 49 0187 280A** and **49 H019 002** outside of the engine compartment beforehand.
 - b. Install **SST 49 E019 001** to the oil pressure switch installation hole.
 - c. Install **SST 49 H019 002** to the **SST 49 E019 001**.**Using SSTs 49 D019 908, 49 D019 909, 49 D019 910, 49 D019 911, 49 D019 913, and 49 D019 914**
 - a. Assemble **SSTs 49 D019 910**, **49 D019 913** and **49 D019 914** outside of the engine compartment beforehand.
 - b. Assemble **SSTs 49 D019 908**, **49 D019 909** and **49 D019 911** outside of the engine compartment beforehand.
 - c. Install **SST 49 D019 914** to the oil pressure switch installation hole.
 - d. Install **SST 49 D019 911** to the **SST 49 D019 910**.
6. Connect the negative battery cable.
7. Warm up the engine to normal operating temperature.
8. Run the engine at the specified speed, and note the gauge readings.
 - If not within the specification, inspect for the cause and repair or replace if necessary.

Note

- The oil pressure can vary with oil viscosity and temperature.

Oil pressure (reference value) [oil temperature: 100 °C {212 °F}]

LF: 234—521 kPa {2.39—5.31 kgf/cm², 34.0—75.5 psi} [3,000 rpm]

L5: 395—649 kPa {4.03—6.61 kgf/cm², 57.3—94.1 psi} [3,000 rpm]

9. Stop the engine and wait until it is cool.
10. Disconnect the negative battery cable.
11. Remove the **SSTs**.

Caution

- **Be sure there is no sealant between 1.0—2.0 mm {0.040—0.078 in} from the end of the oil pressure switch to prevent a possible operation malfunction.**

12. Apply silicone sealant to the oil pressure switch threads as shown in the figure.

Caution

- **Install the oil pressure switch before the applied sealant starts to harden.**

13. Install the oil pressure switch.

Tightening torque

12—18 N·m {123—183 kgf·cm, 107—159 in·lbf}

am3uuw0000520

14. Connect the negative battery cable.
15. Start the engine and confirm that there is no oil leakage.
 - If there is oil leakage, repair or replace the applicable part.
16. Install the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
17. Install the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)

LUBRICATION [LF, L5]

OIL COOLER REMOVAL/INSTALLATION [LF, L5]

LUBRICATION [L3 WITH TC]

ENGINE OIL LEVEL INSPECTION [L3 WITH TC]

id011139800500

1. Position the vehicle on level ground.
2. Warm up the engine.
3. Stop the engine and allow **at least 5 min** before continuing.
4. Remove the dipstick, wipe it cleanly, and reinstall it fully.
5. Remove the dipstick and verify that the oil level is between the MIN and MAX marks on the dipstick.
 - If the oil level is below the MIN mark, add engine oil.

am3uuw0000608

ENGINE OIL REPLACEMENT [L3 WITH TC]

id011139800400

Warning

- Hot engines and engine oil can cause severe burns. Turn off the engine and wait until it and the engine oil have cooled.
- A vehicle that is lifted but not securely supported on safety stands is dangerous. It can slip or fall, causing death or serious injury. Never work around or under a lifted vehicle if it is not securely supported on safety stands.
- Continuous exposure to USED engine oil has caused skin cancer in laboratory mice. Protect your skin by washing with soap and water immediately after working with engine oil.

Caution

- If engine oil is spilled on the exhaust system, wipe it off completely. If you fail to wipe the spilled engine oil, it will produce fumes because of the heat.

1. Position the vehicle on level ground.
2. Remove the oil filler cap.
3. Remove the oil pan drain plug.
4. Drain the engine oil into a container.
5. Install the oil pan drain plug with a new gasket.

Oil pan drain plug tightening torque

30—41 N·m {3.1—4.1 kgf·m, 23—30 ft·lbf}

Note

- The amount of residual oil in the engine can vary according to factors such as the replacement method and oil temperature. Verify the oil level after engine oil replacement.

LUBRICATION [L3 WITH TC]

6. Refill with the following type and amount of the engine oil.

Engine oil specification

Item	U.S.A. and CANADA	Except U.S.A. and CANADA
Engine oil grade	 (ILSAC)	 (ILSAC) API SM or ILSAC
Engine oil viscosity	5W-30	

01-11B

Engine oil capacity (approx. quantity)

Oil replacement: 5.3 L {5.6 US qt, 4.7 Imp qt}

Oil and oil filter replacement: 5.7 L {6.0 US qt, 5.0 Imp qt}

Total (dry engine): 6.4 L {6.8 US qt, 5.6 Imp qt}

7. Install the oil filler cap.
8. Start the engine and confirm that there is no oil leakage.
 - If there is oil leakage, repair or replace the applicable part.
9. Inspect the oil level. (See 01-11B-2 ENGINE OIL LEVEL INSPECTION [L3 WITH TC].)

OIL FILTER REPLACEMENT [L3 WITH TC]

id011139800700

Warning

- Hot engines and engine oil can cause severe burns. Turn off the engine and wait until it and the engine oil have cooled.
- A vehicle that is lifted but not securely supported on safety stands is dangerous. It can slip or fall, causing death or serious injury. Never work around or under a lifted vehicle if it is not securely supported on safety stands.
- Continuous exposure to USED engine oil has caused skin cancer in laboratory mice. Protect your skin by washing with soap and water immediately after working with engine oil.

Caution

- If engine oil is spilled on the exhaust system, wipe it off completely. If you fail to wipe the spilled engine oil, it will produce fumes because of the heat.

1. Remove the oil filter using a commercially available, cup-type oil filter wrench (76 mm {3.0 in} diameter, 15 sided).
2. Use a clean rag to wipe off the mounting surface.
3. Apply clean engine oil to the O-ring of a new oil filter.
4. Tighten the oil filter according to the instructions on the package or side of the oil filter.

Tightening torque (reference value)

15—20 N·m {1.6—2.0 kgf·m, 12—14 ft·lbf}

5. Start the engine and confirm that there is no oil leakage.
 - If there is oil leakage, repair or replace the applicable part.
6. Inspect the oil level. (See 01-11B-2 ENGINE OIL LEVEL INSPECTION [L3 WITH TC].)

am3uuw0000520

LUBRICATION [L3 WITH TC]

OIL PRESSURE INSPECTION [L3 WITH TC]

id011139800300

Warning

- Hot engines and engine oil can cause severe burns. Turn off the engine and wait until it and the engine oil have cooled.
- A vehicle that is lifted but not securely supported on safety stands is dangerous. It can slip or fall, causing death or serious injury. Never work around or under a lifted vehicle if it is not securely supported on safety stands.
- Continuous exposure to USED engine oil has caused skin cancer in laboratory mice. Protect your skin by washing with soap and water immediately after working with engine oil.

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Remove the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
4. Remove the oil pressure switch.

Note

- This inspection can be performed using a combination of **SSTs 49 0187 280A** (oil pressure gauge), **49 E019 001** (adapter) and **49 H019 002** (adapter), or using the following combination of the **SSTs**.

am3uuw000520

- **49 D019 908** (gauge), **49 D019 909** (hose), **49 D019 910** (adapter), **49 D019 911** (adapter), **49 D019 913** (adapter), and **49 D019 914** (adapter)

am3uuw000520

5. Install the **SSTs** to the oil pressure switch installation hole using the following procedure.
 - Using SSTs 49 0187 280A, 49 E019 001 and 49 H019 002**
 - a. Assemble **SSTs 49 0187 280A** and **49 H019 002** outside of the engine compartment beforehand.
 - b. Install **SST 49 E019 001** to the oil pressure switch installation hole.
 - c. Install **SST 49 H019 002** to the **SST 49 E019 001**.
 - Using SSTs 49 D019 908, 49 D019 909, 49 D019 910, 49 D019 911, 49 D019 913, and 49 D019 914**
 - a. Assemble **SSTs 49 D019 910, 49 D019 913 and 49 D019 914** outside of the engine compartment beforehand.
 - b. Assemble **SSTs 49 D019 908, 49 D019 909 and 49 D019 911** outside of the engine compartment beforehand.
 - c. Install **SST 49 D019 914** to the oil pressure switch installation hole.
 - d. Install **SST 49 D019 911** to the **SST 49 D019 910**.
6. Connect the negative battery cable.
7. Warm up the engine to normal operating temperature.
8. Run the engine at the specified speed, and note the gauge readings.
 - If not within the specification, inspect for the cause and repair or replace if necessary.

Note

- The oil pressure can vary with oil viscosity and temperature.

Oil pressure (reference value) [oil temperature: 100 °C {212 °F}]
297—551 kPa {3.03—5.61 kgf/cm², 43.1—79.9 psi} [3,000 rpm]

9. Stop the engine and wait until it is cool.
10. Disconnect the negative battery cable.

LUBRICATION [L3 WITH TC]

11. Remove the SSTs.

Caution

- Be sure there is no sealant between 1.0—2.0 mm {0.040—0.078 in} from the end of the oil pressure switch to prevent a possible operation malfunction.

12. Apply silicone sealant to the oil pressure switch threads as shown in the figure.

Caution

- Install the oil pressure switch before the applied sealant starts to harden.

13. Install the oil pressure switch.

Tightening torque

12—18 N·m {123—183 kgf·cm, 107—159 in·lbf}

am3uuw0000520

01-11B

14. Connect the negative battery cable.

15. Start the engine and confirm that there is no oil leakage.

- If there is oil leakage, repair or replace the applicable part.

16. Install the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)

17. Install the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)

OIL COOLER REMOVAL/INSTALLATION [L3 WITH TC]

id011139800800

Warning

- Hot engines and engine oil can cause severe burns. Turn off the engine and wait until it and the engine oil have cooled.
- A vehicle that is lifted but not securely supported on safety stands is dangerous. It can slip or fall, causing death or serious injury. Never work around or under a lifted vehicle if it is not securely supported on safety stands.
- Continuous exposure to USED engine oil has caused skin cancer in laboratory mice. Protect your skin by washing with soap and water immediately after working with engine oil.

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)

2. Disconnect the negative battery cable.

3. Remove the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)

4. Drain the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT [L3 WITH TC].)

5. Remove in the order indicated in the table.

6. Use a clean rag to wipe off the mounting surface on the oil filter adapter and the oil cooler.

7. Install in the reverse order of the removal.

8. Refill the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT [L3 WITH TC].)

9. Start the engine and confirm that there is no oil leakage.

- If there is oil leakage, repair or replace the applicable part.

10. Inspect the oil level. (See 01-11B-2 ENGINE OIL LEVEL INSPECTION [L3 WITH TC].)

11. Inspect for engine coolant leakage. (See 01-12B-6 ENGINE COOLANT LEAKAGE INSPECTION [L3 WITH TC].)

LUBRICATION [L3 WITH TC]

OIL PAN REMOVAL/INSTALLATION [L3 WITH TC]

id011139800200

Warning

- Hot engines and engine oil can cause severe burns. Turn off the engine and wait until it and the engine oil have cooled.
- A vehicle that is lifted but not securely supported on safety stands is dangerous. It can slip or fall, causing death or serious injury. Never work around or under a lifted vehicle if it is not securely supported on safety stands.
- Continuous exposure to USED engine oil has caused skin cancer in laboratory mice. Protect your skin by washing with soap and water immediately after working with engine oil.
- Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure". (See 01-14B-4 BEFORE SERVICE PRECAUTION [L3 WITH TC].)

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Remove the charge air cooler. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
4. Remove the high pressure fuel pump and high pressure fuel pump cover. (See 01-14B-17 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC].)
5. Remove the ignition coils. (See 01-18B-2 IGNITION COIL REMOVAL/INSTALLATION [L3 WITH TC].)
6. Disconnect the ventilation hose from the cylinder head cover. (See 01-16B-12 QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/INSTALLATION [L3 WITH TC].)
7. Remove the coolant reserve tank with the hose still connected and set it out of the way. (See 01-12B-7 COOLANT RESERVE TANK REMOVAL/INSTALLATION [L3 WITH TC].)
8. Remove the front wheel and tire. (RH) (See 02-10-1 GENERAL PROCEDURES (SUSPENSION).)
9. Remove the aerodynamic under cover No.2 and splash shield as a single unit. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.) (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)
10. Drain the engine oil. (See 01-11B-2 ENGINE OIL REPLACEMENT [L3 WITH TC].)
11. Remove the nut shown in the figure and set the power steering pipe component out of the way.
12. Loosen the water pump pulley bolts before removing the drive belt.
13. Remove the drive belt. (See 01-10B-4 DRIVE BELT REMOVAL/INSTALLATION [L3 WITH TC].)
14. Remove the crankshaft position (CKP) sensor. (See 01-40B-32 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
15. Remove the engine front cover. (See 01-10B-23 TIMING CHAIN REMOVAL/INSTALLATION [L3 WITH TC].)
16. Remove in the order indicated in the table.
17. Install in the reverse order of removal.
18. Refill with the specified type and amount of the engine oil. (See 01-11B-2 ENGINE OIL REPLACEMENT [L3 WITH TC].)
19. Start the engine and confirm that there is no oil leakage.
 - If there is oil leakage, repair or replace the applicable part.
20. Inspect the oil level. (See 01-11B-2 ENGINE OIL LEVEL INSPECTION [L3 WITH TC].)
21. Inspect for the ignition timing and idle speed. (See 01-10B-3 ENGINE TUNE-UP [L3 WITH TC].)

LUBRICATION [L3 WITH TC]

01-11B

1	Dipstick pipe
2	O-ring

3	Oil pan (See 01-11B-7 Oil Pan Removal Note.) (See 01-11B-7 Oil Pan Installation Note.)
---	--

Oil Pan Removal Note

1. Remove the oil pan using a separator tool.

Oil Pan Installation Note

Caution

- Apply the silicon sealant in a single, unbroken line.
- Install the oil pan before the applied sealant starts to harden.
- Using bolts with the old seal adhering could cause cracks in the cylinder block.

1. Completely clean and remove any oil, dirt, sealant or other foreign material that may be adhering to the cylinder block and oil pan.
2. When reusing the oil pan installation bolts, clean any old sealant from the bolts.

LUBRICATION [L3 WITH TC]

3. Apply silicone sealant to the oil pan along the inside of the bolt holes as shown in the figure.

Thickness

2.2—3.2 mm {0.09—0.12 in}

4. Install the oil pan to the cylinder block.

am3uuw0000607

5. Use a square ruler to align the oil pan and the cylinder block junction side on the engine front cover side.

acxuuw00001994

6. Tighten the bolts in the order shown in the figure.

Tightening torque

17—23 N·m {1.8—2.3 kgf·m, 13—16 ft·lbf}

am3uuw0000607

7. Tighten the oil pan-transaxle installation bolts.

Tightening torque

37—52 N·m {3.8—5.3 kgf·m, 28—38 ft·lbf}

am3uuw0000608

Warning

- Hot engines and engine oil can cause severe burns. Turn off the engine and wait until it and the engine oil have cooled.
- A vehicle that is lifted but not securely supported on safety stands is dangerous. It can slip or fall, causing death or serious injury. Never work around or under a lifted vehicle if it is not securely supported on safety stands.
- Continuous exposure to USED engine oil has caused skin cancer in laboratory mice. Protect your skin by washing with soap and water immediately after working with engine oil.
- Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure". (See 01-14B-4 BEFORE SERVICE PRECAUTION [L3 WITH TC].)

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Remove the charge air cooler. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
4. Remove the high pressure fuel pump and high pressure fuel pump cover. (See 01-14B-17 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC].)
5. Remove the ignition coils. (See 01-18B-2 IGNITION COIL REMOVAL/INSTALLATION [L3 WITH TC].)
6. Disconnect the ventilation hose from the cylinder head cover. (See 01-16B-12 QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/INSTALLATION [L3 WITH TC].)
7. Remove the coolant reserve tank with the hose still connected and set it out of the way. (See 01-12B-7 COOLANT RESERVE TANK REMOVAL/INSTALLATION [L3 WITH TC].)
8. Remove the front wheel and tire. (RH) (See 02-10-1 GENERAL PROCEDURES (SUSPENSION).)
9. Remove the aerodynamic under cover No.2 and splash shield as a single unit. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.) (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)
10. Drain the engine oil. (See 01-11B-2 ENGINE OIL REPLACEMENT [L3 WITH TC].)
11. Remove the nut shown in the figure and set the power steering pipe component out of the way.
12. Loosen the water pump pulley bolts before removing the drive belt.
13. Remove the drive belt. (See 01-10B-4 DRIVE BELT REMOVAL/INSTALLATION [L3 WITH TC].)
14. Remove the crankshaft position (CKP) sensor. (See 01-40B-32 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
15. Remove the engine front cover. (See 01-10B-23 TIMING CHAIN REMOVAL/INSTALLATION [L3 WITH TC].)
16. Remove the oil pan. (See 01-11B-6 OIL PAN REMOVAL/INSTALLATION [L3 WITH TC].)
17. Remove in the order indicated in the table.
18. Install in the reverse order of removal.
19. Refill with the specified type and amount of the engine oil. (See 01-11B-2 ENGINE OIL REPLACEMENT [L3 WITH TC].)
20. Start the engine and confirm that there is no oil leakage.
 - If there is oil leakage, repair or replace the applicable part.
21. Inspect the oil level. (See 01-11B-2 ENGINE OIL LEVEL INSPECTION [L3 WITH TC].)
22. Inspect for the ignition timing and idle speed. (See 01-10B-3 ENGINE TUNE-UP [L3 WITH TC].)
23. Inspect the oil pressure. (See 01-11B-4 OIL PRESSURE INSPECTION [L3 WITH TC].)

am3uuw0000280

LUBRICATION [L3 WITH TC]

am3uuw000624

1	Oil strainer
2	Oil pump chain guide
3	Oil pump chain tensioner
4	Oil pump chain

5	Oil pump driven sprocket (See 01-11B-10 Oil Pump Driven Sprocket Removal/Installation Note.)
6	Oil pump (See 01-11B-10 Oil Pump Installation Note.)

Oil Pump Driven Sprocket Removal/Installation Note

- Temporarily install the crankshaft pulley and crankshaft pulley lock bolt to the crankshaft, and lock the oil pump against rotation as shown in figure.
- Remove/install the oil pump driven sprocket, and then remove the crankshaft pulley and crankshaft pulley lock bolt.

Tightening torque

20-30 N·m {2.1-3.0 kgf-m, 15-22 ft-lbf}

am3uuw000608

Oil Pump Installation Note

- Tighten the oil pump bolts in two steps in the order shown in the figure.

Tightening torque

Step 1: 8-12 N·m {82-122 kgf-cm, 71-106 in-lbf}

Step 2: 17-23 N·m {1.8-2.3 kgf-m, 13-16 ft-lbf}

COOLING SYSTEM SERVICE WARNINGS [LF, L5]

id0112g3800200

Warning

- **Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.**
- **Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise 2.5 turns. Step back while the pressure escapes.**
- **When you are sure all the pressure is gone, turn the cap using the cloth, and remove it.**
- **Depending on the vehicle, the cooling fan may operate suddenly even when the ignition is off. Therefore, keep hands and tools away from the cooling fan even if the cooling fan is not operating to prevent injury to personnel or damage to the cooling fan. Always disconnect the negative battery cable when servicing the cooling fan or parts near the cooling fan.**

ENGINE COOLANT LEVEL INSPECTION [LF, L5]

id0112g3800300

Warning

- **Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.**
- **Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise 2.5 turns. Step back while the pressure escapes.**
- **When you are sure all the pressure is gone, turn the cap using the cloth, and remove it.**

Note

- If the "FL22" mark is shown on or near the cooling system cap, use FL22 type engine coolant.
- FL22 type engine coolant is shipped as a diluted solution. Use the solution as is when replacing coolant.

acxuuw00002056

COOLING SYSTEM [LF, L5]

1. Verify that the engine coolant level in the coolant reserve tank is between the MAX and MIN marks.
 - If the engine coolant level is below the MIN mark, add engine coolant.

am3uuw0000521

01-12A

ENGINE COOLANT PROTECTION INSPECTION [LF, L5]

id0112g3800400

1. Measure the engine coolant temperature and specific gravity using a thermometer and a hydrometer.

Caution

- Use engine coolant at a concentration that meets the environmental conditions in which the vehicle is driven, otherwise engine damage could occur.
- The engine has aluminum parts and must be protected by an ethylene-glycol-based coolant to prevent corrosion and freezing.
- Do not use coolants containing Alcohol, Methanol, Borate or Silicate. These coolants could damage the cooling system.
- Use only soft (demineralized) water in the coolant mixture. Water that contains minerals will cut down on the coolant's effectiveness.
- Engine coolant damages paint. If engine coolant does get on a painted surface, rinse it off quickly.

Note

- If the "FL22" mark is shown on or near the cooling system cap, use FL22 type engine coolant.
- FL22 type engine coolant is shipped as a diluted solution. Use the solution as is when replacing coolant.

am2zzw0000169

COOLING SYSTEM [LF, L5]

2. Determine the engine coolant protection level by referring to the graph shown in the figure.

- If the engine coolant protection level is not correct, add water or engine coolant.

am2zzw0000169

ENGINE COOLANT REPLACEMENT [LF, L5]

id0112g3800600

Warning

- Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.
- Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise 2.5 turns. Step back while the pressure escapes.
- When you are sure all the pressure is gone, turn the cap using the cloth, and remove it.

Caution

- Use engine coolant at a concentration that meets the environmental conditions in which the vehicle is driven, otherwise engine damage could occur.
- The engine has aluminum parts and must be protected by an ethylene-glycol-based coolant to prevent corrosion and freezing.
- Do not use coolants containing Alcohol, Methanol, Borate or Silicate. These coolants could damage the cooling system.
- Use only soft (demineralized) water in the coolant mixture. Water that contains minerals will cut down on the coolant's effectiveness.
- Engine coolant damages paint. If engine coolant does get on a painted surface, rinse it off quickly.

Note

- If the "FL22" mark is shown on or near the cooling system cap, use FL22 type engine coolant.
- FL22 type engine coolant is shipped as a diluted solution. Use the solution as is when replacing coolant.

Engine coolant capacity (approx. quantity)
7.5 L {7.9 US qt, 6.6 Imp qt}

acxuuv00002061

COOLING SYSTEM [LF, L5]

01-12A

1. Remove the cooling system cap.

am3uuw0000521

2. Loosen the radiator drain plug and drain the engine coolant into a container.
3. Flush the cooling system with water until all traces of color are gone.
4. Let the system drain completely.
5. Tighten the radiator drain plug.

Tightening torque

1.2—1.5 N·m {13—15 kgf·cm, 11—13 in·lbf}

6. Referring to the following chart, select the correct volume percentage of the water and engine coolant.

am3uuw0000521

Antifreeze solution mixture percentage (Except FL22 type engine coolant)

Engine coolant protection	Volume percentage (%)		Gravity at 20 °C {68 °F}
	Water	Coolant	
Above -16 °C {3 °F}	65	35	1.057
Above -26 °C {-15 °F}	55	45	1.072
Above -40 °C {-40 °F}	45	55	1.086

7. Refill the engine coolant into the coolant reserve tank up to the MAX mark on the tank.
8. Install the cooling system cap.

Caution

- If the high engine coolant temperature warning light flashes, stop the engine to lower the engine coolant temperature and prevent overheating. Then, verify the malfunctioning part and repair or replace it.
- If the engine coolant level in the coolant reserve tank is below the MIN mark during engine coolant air bleeding operation, stop the engine, and after the engine coolant temperature decreases, add engine coolant. Then, resume the engine coolant air bleeding operation.

9. Start the engine and warm up the engine by idling.
10. Bleed the air by following the procedures below. At this time, be careful of the coolant temperature to prevent overheating.

Note

- If the accelerator pedal is depressed continuously for a specified time, the engine speed may decrease to the idle speed. This is due to the PCM control operation, which prevents overheating, and it does not indicate a malfunction.

- (1) Run the engine at **2,500 rpm** for **2—3 min, 2 times**.
- (2) Run the engine at **3,000 rpm** for **5 s**, then idle.
- (3) Repeat steps (1), (2) twice.

11. Stop the engine, and inspect the engine coolant level after the engine coolant temperature decreases.
12. Check the coolant level.

- If it is low, refill the coolant into the coolant reserve tank up to the MAX mark on the tank.

13. Inspect for engine coolant leakage. (See 01-12A-6 ENGINE COOLANT LEAKAGE INSPECTION [LF, L5].)

COOLING SYSTEM [LF, L5]

RADIATOR DRAIN PLUG REPLACEMENT [LF, L5]

id0112g3802100

Warning

- Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.
- Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise 2.5 turns. Step back while the pressure escapes.
- When you are sure all the pressure is gone, turn the cap using the cloth, and remove it.

1. Remove the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
2. Drain the engine coolant. (See 01-12A-4 ENGINE COOLANT REPLACEMENT [LF, L5].)
3. Loosen the radiator drain plug completely.
4. Using a flathead screwdriver or equivalent, pry out the radiator drain plug.

Caution

- Do not apply excessive force to the flathead screwdriver or equivalent as doing so can damage the drain bore. Slowly and carefully pry out the radiator drain plug when removing it.

5. Install a new radiator drain plug with a new O-ring.

Tightening torque

1.2—1.5 N·m {13—15 kgf·cm, 11—13 in·lbf}

6. Refill the engine coolant. (See 01-12A-4 ENGINE COOLANT REPLACEMENT [LF, L5].)
7. Inspect for engine coolant leakage. (See 01-12A-6 ENGINE COOLANT LEAKAGE INSPECTION [LF, L5].)

am3uuw0000522

ENGINE COOLANT LEAKAGE INSPECTION [LF, L5]

id0112g3800500

Warning

- Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.
- Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise 2.5 turns. Step back while the pressure escapes.
- When you are sure all the pressure is gone, turn the cap using the cloth, and remove it.

1. Inspect the engine coolant level. (See 01-12A-2 ENGINE COOLANT LEVEL INSPECTION [LF, L5].)
2. Remove the cooling system cap.
3. Install the **SST** or aftermarket equivalent and a radiator cap tester to the coolant reserve tank filler port.
4. Apply pressure using the radiator cap tester.

Caution

- Applying more than 155 kPa {1.58 kgf/cm², 22.5 psi} can damage the hoses, fittings, and other components, and cause leakage.

Engine coolant leakage inspection pressure
155 kPa {1.58 kgf/cm², 22.5 psi} [1 min]

5. When pressurizing the cooling system, verify that the pressure is maintained.
 - If the gauge needle drops, it may indicate water leakage. Repair or replace the applicable part.

am3uuw0000521

COOLING SYSTEM [LF, L5]

COOLING SYSTEM CAP INSPECTION [LF, L5]

id0112g3801500

Warning

- Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.
- Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise 2.5 turns. Step back while the pressure escapes.
- When you are sure all the pressure is gone, turn the cap using the cloth, and remove it.

01-12A

1. Clean the cooling system cap and the sealed part.
2. Inspect the cooling system cap for cracks or everted seal.
 - If there is any malfunction, replace the cooling system cap.
3. Attach the cooling system cap to the **SST** or aftermarket equivalent and a radiator cap tester.
4. Hold the cooling system cap downward and apply pressure gradually. Verify that the pressure is held stable for **10 s**.
 - If the pressure is not held stable, replace the cooling system cap.

Cooling system cap valve opening pressure

135—155 kPa {1.38—1.58 kgf/cm², 19.6—22.4 psi}

am3uuw0000522

COOLANT RESERVE TANK REMOVAL/INSTALLATION [LF, L5]

id0112g3801000

Warning

- Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.
- Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise 2.5 turns. Step back while the pressure escapes.
- When you are sure all the pressure is gone, turn the cap using the cloth, and remove it.

1. Drain the engine coolant until the coolant reserve tank becomes empty. (See 01-12A-4 ENGINE COOLANT REPLACEMENT [LF, L5].)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.
4. Refill the engine coolant. (See 01-12A-4 ENGINE COOLANT REPLACEMENT [LF, L5].)

COOLING SYSTEM [LF, L5]

5. Inspect for engine coolant leakage. (See 01-12A-6 ENGINE COOLANT LEAKAGE INSPECTION [LF, L5].)

RADIATOR REMOVAL/INSTALLATION [LF, L5]

id0112g3801400

Warning

- Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.
- Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise 2.5 turns. Step back while the pressure escapes.
- When you are sure all the pressure is gone, turn the cap using the cloth, and remove it.

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the plug hole plate. (See 01-10A-5 PLUG HOLE PLATE REMOVAL/INSTALLATION [LF, L5].)
4. Remove the air cleaner component and fresh air duct (No.1, No.2). (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
5. Remove the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
6. Drain the engine coolant. (See 01-12A-4 ENGINE COOLANT REPLACEMENT [LF, L5].)
7. Remove the cooling fan component. (See 01-12A-13 COOLING FAN COMPONENT REMOVAL/INSTALLATION [LF, L5].)
8. Remove in the order indicated in the table.
9. Install in the reverse order of removal.
10. Refill the engine coolant. (See 01-12A-4 ENGINE COOLANT REPLACEMENT [LF, L5].)

COOLING SYSTEM [LF, L5]

11. Inspect for engine coolant leakage. (See 01-12A-6 ENGINE COOLANT LEAKAGE INSPECTION [LF, L5].)

am6xuw0000230

THERMOSTAT INSPECTION [LF, L5]

id0112g3801300

1. Remove the thermostat. (See 01-12A-11 THERMOSTAT REMOVAL/INSTALLATION [LF, L5].)
2. Visually check that the thermostat valve is closed.
3. Place the thermostat in water.

Warning

- During inspection, the thermostat and water are extremely hot and can cause severe burns. Do not touch the thermostat and water.

4. Heat the water and check the following.
 - Opening temperature and valve lift
 - If there is a malfunction, replace the thermostat. (See 01-12A-11 THERMOSTAT REMOVAL/INSTALLATION [LF, L5].)

Thermostat initial-opening temperature

80—84 °C {176—183 °F}

Thermostat full-open temperature

97 °C {207 °F}

Thermostat full-open lift

More than 8.0 mm {0.31 in}

COOLING SYSTEM [LF, L5]

WATER PUMP REMOVAL/INSTALLATION [LF, L5]

id0112g3800700

01-12A

Warning

- Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.
- Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise 2.5 turns. Step back while the pressure escapes.
- When you are sure all the pressure is gone, turn the cap using the cloth, and remove it.

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the plug hole plate. (See 01-10A-5 PLUG HOLE PLATE REMOVAL/INSTALLATION [LF, L5].)
4. Remove the aerodynamic under cover No.2 and splash shield as a single unit. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)(See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)
5. Drain the engine coolant. (See 01-12A-4 ENGINE COOLANT REPLACEMENT [LF, L5].)
6. Loosen the water pump pulley bolts before removing the drive belt.
7. Remove the generator drive belt with the A/C drive belt still installed and set it out of the way. (LF) (See 01-10A-6 DRIVE BELT REMOVAL/INSTALLATION [LF, L5].)
8. Remove the drive belt. (L5) (See 01-10A-6 DRIVE BELT REMOVAL/INSTALLATION [LF, L5].)
9. Remove the drive belt auto tensioner. (LF) (See 01-10A-45 ENGINE DISASSEMBLY/ASSEMBLY [LF, L5].)
10. Remove the idler pulley. (L5) (See 01-10A-45 ENGINE DISASSEMBLY/ASSEMBLY [LF, L5].)
11. Remove in the order indicated in the table.
12. Install in the reverse order of removal.
13. Refill the engine coolant. (See 01-12A-4 ENGINE COOLANT REPLACEMENT [LF, L5].)
14. Inspect for engine coolant leakage. (See 01-12A-6 ENGINE COOLANT LEAKAGE INSPECTION [LF, L5].)

1	Water pump pulley
2	Water pump
3	O-ring (See 01-12A-13 O-ring Installation Note.)

O-ring Installation Note

1. Apply engine coolant to a new O-ring.
2. Install the O-ring.

COOLING FAN COMPONENT REMOVAL/INSTALLATION [LF, L5]

id0112g3801600

Warning

- Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.
- Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise 2.5 turns. Step back while the pressure escapes.
- When you are sure all the pressure is gone, turn the cap using the cloth, and remove it.

COOLING SYSTEM [LF, L5]

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the plug hole plate. (See 01-10A-5 PLUG HOLE PLATE REMOVAL/INSTALLATION [LF, L5].)
4. Remove the air cleaner component and fresh air duct (No.1, No.2). (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
5. Remove the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
6. Remove in the order indicated in the table.
7. Install in the reverse order of removal.

COOLING SYSTEM SERVICE WARNINGS [L3 WITH TC]

id011239800200

Warning

- Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.
- Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise 2.5 turns. Step back while the pressure escapes.
- When you are sure all the pressure is gone, turn the cap using the cloth, and remove it.
- Depending on the vehicle, the cooling fan may operate suddenly even when the ignition is off. Therefore, keep hands and tools away from the cooling fan even if the cooling fan is not operating to prevent injury to personnel or damage to the cooling fan. Always disconnect the negative battery cable when servicing the cooling fan or parts near the cooling fan.

ENGINE COOLANT LEVEL INSPECTION [L3 WITH TC]

id011239800300

Warning

- Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.
- Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise 2.5 turns. Step back while the pressure escapes.
- When you are sure all the pressure is gone, turn the cap using the cloth, and remove it.

Note

- If the "FL22" mark is shown on or near the cooling system cap, use FL22 type engine coolant.
- FL22 type engine coolant is shipped as a diluted solution. Use the solution as is when replacing coolant.

acxuww00002056

COOLING SYSTEM [L3 WITH TC]

1. Verify that the engine coolant level in the coolant reserve tank is between the MAX and MIN marks.
 - If the engine coolant level is below the MIN mark, add engine coolant.

am3uuw000608

01-12B

ENGINE COOLANT PROTECTION INSPECTION [L3 WITH TC]

id011239800400

1. Measure the engine coolant temperature and specific gravity using a thermometer and a hydrometer.

Caution

- Use engine coolant at a concentration that meets the environmental conditions in which the vehicle is driven, otherwise engine damage could occur.
- The engine has aluminum parts and must be protected by an ethylene-glycol-based coolant to prevent corrosion and freezing.
- Do not use coolants containing Alcohol, Methanol, Borate or Silicate. These coolants could damage the cooling system.
- Use only soft (demineralized) water in the coolant mixture. Water that contains minerals will cut down on the coolant's effectiveness.
- Engine coolant damages paint. If engine coolant does get on a painted surface, rinse it off quickly.

Note

- If the "FL22" mark is shown on or near the cooling system cap, use FL22 type engine coolant.
- FL22 type engine coolant is shipped as a diluted solution. Use the solution as is when replacing coolant.

am2zzw0000169

2. Determine the engine coolant protection level by referring to the graph shown in the figure.
 - If the engine coolant protection level is not correct, add water or engine coolant.

am2zzw0000169

COOLING SYSTEM [L3 WITH TC]

ENGINE COOLANT REPLACEMENT [L3 WITH TC]

id011239800600

Warning

- Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.
- Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise 2.5 turns. Step back while the pressure escapes.
- When you are sure all the pressure is gone, turn the cap using the cloth, and remove it.

Caution

- Use engine coolant at a concentration that meets the environmental conditions in which the vehicle is driven, otherwise engine damage could occur.
- The engine has aluminum parts and must be protected by an ethylene-glycol-based coolant to prevent corrosion and freezing.
- Do not use coolants containing Alcohol, Methanol, Borate or Silicate. These coolants could damage the cooling system.
- Use only soft (demineralized) water in the coolant mixture. Water that contains minerals will cut down on the coolant's effectiveness.
- Engine coolant damages paint. If engine coolant does get on a painted surface, rinse it off quickly.

Note

- If the "FL22" mark is shown on or near the cooling system cap, use FL22 type engine coolant.
- FL22 type engine coolant is shipped as a diluted solution. Use the solution as is when replacing coolant.

Engine coolant capacity (approx. quantity)
7.5 L {7.9 US qt, 6.6 Imp qt}

acxuuw00002061

1. Remove the cooling system cap.
2. Remove the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)

am3uuw0000521

3. Loosen the radiator drain plug and drain the engine coolant into a container.
4. Flush the cooling system with water until all traces of color are gone.
5. Let the system drain completely.
6. Tighten the radiator drain plug.

Tightening torque
1.2—1.5 N·m {13—15 kgf·cm, 11—13 in·lbf}

am3uuw0000521

COOLING SYSTEM [L3 WITH TC]

7. Referring to the following chart, select the correct volume percentage of the water and engine coolant.

Antifreeze solution mixture percentage (Except FL22 type engine coolant)

Engine coolant protection	Volume percentage (%)		Gravity at 20 °C {68 °F}
	Water	Coolant	
Above -16 °C {3 °F}	65	35	1.057
Above -26 °C {-15 °F}	55	45	1.072
Above -40 °C {-40 °F}	45	55	1.086

01-12B

8. Refill the engine coolant into the coolant reserve tank up to the MAX mark on the tank.

9. Install the cooling system cap.

Caution

- If the high engine coolant temperature warning light flashes, stop the engine to lower the engine coolant temperature and prevent overheating. Then, verify the malfunctioning part and repair or replace it.
- If the engine coolant level in the coolant reserve tank is below the MIN mark during engine coolant air bleeding operation, stop the engine, and after the engine coolant temperature decreases, add engine coolant. Then, resume the engine coolant air bleeding operation.

10. Start the engine and warm up the engine by idling.

11. Bleed the air by following the procedures below. At this time, be careful of the coolant temperature to prevent overheating.

Note

- If the accelerator pedal is depressed continuously for a specified time, the engine speed may decrease to the idle speed. This is due to the PCM control operation, which prevents overheating, and it does not indicate a malfunction.

(1) Run the engine at **2,500 rpm** for **2—3 min, 2 times**.

(2) Run the engine at **3,000 rpm** for **5 s**, then idle.

(3) Repeat steps (1), (2) twice.

12. Stop the engine, and inspect the engine coolant level after the engine coolant temperature decreases.

13. Check the coolant level.

- If it is low, refill the coolant into the coolant reserve tank up to the MAX mark on the tank.

14. Inspect for engine coolant leakage. (See 01-12B-6 ENGINE COOLANT LEAKAGE INSPECTION [L3 WITH TC].)

15. Install the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)

RADIATOR DRAIN PLUG REPLACEMENT [L3 WITH TC]

id011239802100

Warning

- **Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.**
- **Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise 2.5 turns. Step back while the pressure escapes.**
- **When you are sure all the pressure is gone, turn the cap using the cloth, and remove it.**

1. Remove the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)

2. Drain the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT [L3 WITH TC].)

3. Loosen the radiator drain plug completely.

COOLING SYSTEM [L3 WITH TC]

- Using a flathead screwdriver or equivalent, pry out the radiator drain plug.

Caution

- Do not apply excessive force to the flathead screwdriver or equivalent as doing so can damage the drain bore. Slowly and carefully pry out the radiator drain plug when removing it.

- Install a new radiator drain plug with a new O-ring.

Tightening torque

1.2—1.5 N·m {13—15 kgf·cm, 11—13 in·lbf}

- Refill the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT [L3 WITH TC].)
- Inspect for engine coolant leakage. (See 01-12B-6 ENGINE COOLANT LEAKAGE INSPECTION [L3 WITH TC].)
- Install the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)

am3uuw0000522

ENGINE COOLANT LEAKAGE INSPECTION [L3 WITH TC]

id011239800500

Warning

- Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.
- Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise 2.5 turns. Step back while the pressure escapes.
- When you are sure all the pressure is gone, turn the cap using the cloth, and remove it.

- Inspect the engine coolant level. (See 01-12B-2 ENGINE COOLANT LEVEL INSPECTION [L3 WITH TC].)
- Remove the cooling system cap.
- Install the **SST** or aftermarket equivalent and a radiator cap tester to the coolant reserve tank filler port.
- Apply pressure using the radiator cap tester.

Caution

- Applying more than 155 kPa {1.58 kgf/cm², 22.5 psi} can damage the hoses, fittings, and other components, and cause leakage.

Engine coolant leakage inspection pressure

155 kPa {1.58 kgf/cm², 22.5 psi} [1 min]

- When pressurizing the cooling system, verify that the pressure is maintained.
 - If the gauge needle drops, it may indicate water leakage. Repair or replace the applicable part.

am3uuw0000521

COOLING SYSTEM [L3 WITH TC]

COOLING SYSTEM CAP INSPECTION [L3 WITH TC]

id011239801500

Warning

- Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.
- Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise 2.5 turns. Step back while the pressure escapes.
- When you are sure all the pressure is gone, turn the cap using the cloth, and remove it.

01-12B

1. Clean the cooling system cap and the sealed part.
2. Inspect the cooling system cap for cracks or everted seal.
 - If there is any malfunction, replace the cooling system cap.
3. Attach the cooling system cap to the **SST** or aftermarket equivalent and a radiator cap tester.
4. Hold the cooling system cap downward and apply pressure gradually. Verify that the pressure is held stable for **10 s**.
 - If the pressure is not held stable, replace the cooling system cap.

Cooling system cap valve opening pressure

135—155 kPa {1.38—1.58 kgf/cm², 19.6—22.4 psi}

am3uuw0000522

COOLANT RESERVE TANK REMOVAL/INSTALLATION [L3 WITH TC]

id011239801000

Warning

- Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.
- Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise 2.5 turns. Step back while the pressure escapes.
- When you are sure all the pressure is gone, turn the cap using the cloth, and remove it.

1. Remove the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
2. Drain the engine coolant until the coolant reserve tank becomes empty. (See 01-12B-4 ENGINE COOLANT REPLACEMENT [L3 WITH TC].)
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.
5. Refill the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT [L3 WITH TC].)

COOLING SYSTEM [L3 WITH TC]

6. Inspect for engine coolant leakage. (See 01-12B-2 ENGINE COOLANT LEVEL INSPECTION [L3 WITH TC].)

INTAKE-AIR SYSTEM [LF, L5]

INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5]

id0113a4801900

Warning

- A hot engine and intake air system can cause severe burns. Turn off the engine and wait until they are cool before removing the intake air system.
- Fuel line spills and leakage from the pressurized fuel system are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure".

1. Complete the "BEFORE SERVICE PRECAUTION". (See 01-14A-4 BEFORE SERVICE PRECAUTION [LF, L5].)
2. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
3. Disconnect the negative battery cable. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
4. Remove the plug hole plate. (See 01-10A-5 PLUG HOLE PLATE REMOVAL/INSTALLATION [LF, L5].)
5. Remove in the order indicated in the table.
6. Install in the reverse order of removal.
7. Complete the "AFTER SERVICE PRECAUTION". (See 01-14A-5 AFTER SERVICE PRECAUTION [LF, L5].)

id0113a4800800

AIR CLEANER ELEMENT INSPECTION [LF, L5]

1. Remove the air cleaner element. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
2. Inspect the following items:
 - Has the replacement interval come?
 - Is the air cleaner element soiled, damaged, or bent?
 - Are the air cleaner case and the air cleaner element correctly sealed?
 - Is the correct air cleaner element installed?
 - If there is any abnormality, clean or replace the air cleaner element. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)

THROTTLE BODY INSPECTION [LF, L5]

id0113a4802600

Resistance Inspection

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Disconnect the throttle body connector.
4. Measure the resistance between throttle body terminals E and F.

Throttle body resistance

0.3—100 ohms [20°C {68 °F}]

- If not as specified, replace the throttle body. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)

THROTTLE BODY

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the variable intake air solenoid valve. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
4. Inspect airflow between the ports under the following conditions.

○—○ : Continuity ○=○ : Airflow

Step	Terminal		Port		
	A	B	A	B	C
1	○—○	○—○	○—○	○=○	○=○
2	B+	GND	○=○	○=○	

- If not as specified, replace the variable intake air solenoid valve. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)

am6xuw0000045

01-13A

VARIABLE TUMBLE SOLENOID VALVE INSPECTION [LF, L5]

id0113a4802900

Airflow Inspection

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the variable tumble solenoid valve. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
4. Inspect airflow between the ports under the following conditions.

○—○ : Continuity ○=○ : Airflow

Step	Terminal		Port		
	A	B	A	B	C
1	○—○	○—○	○—○	○=○	○=○
2	B+	GND	○=○	○=○	

- If not as specified, replace the variable tumble solenoid valve. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)

am6xuw0000045

VARIABLE INTAKE AIR SHUTTER VALVE ACTUATOR INSPECTION [LF, L5]

id0113a4803000

Operation Inspection

1. Remove the air hose. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the vacuum hose from the variable intake air shutter valve actuator.
3. Connect a vacuum pump to the variable intake air shutter valve actuator.

Note

- Covered with a hood, the rod of the variable intake air shutter valve actuator cannot be seen from above. Use a mirror from under it to check the operation of the variable intake air shutter valve.

am6zzw0000021

INTAKE-AIR SYSTEM [LF, L5]

4. Check if the rod operates correctly as stated in the table when a gradual negative pressure is applied to the variable intake air shutter valve actuator.
 - When it is not possible to confirm it, replace the intake manifold. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
 - When the variable intake air shutter valve actuator cannot be activated even though the operation of the rod can be confirmed, check for any incorrect connections or breakage of the vacuum hose.

Vacuum kPa {mmHg, inHg}	Rod movement
Below -2.7 {-20, -0.8}	Not operate
Above -33.4 {-251, -9.86}	Fully pulled

VARIABLE TUMBLE SHUTTER VALVE ACTUATOR INSPECTION [LF, L5]

id0113a4803100

Operation Inspection

1. Remove the air hose. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the vacuum hose from the variable tumble shutter valve actuator.
3. Connect a vacuum pump to the variable tumble shutter valve actuator.

Note

- Covered with a hood, the rod of the variable tumble shutter valve actuator cannot be seen from above. Use a mirror from under it to check the operation of the variable tumble shutter valve.

am6zzw000022

4. Check if the rod operates correctly as stated in the table when a gradual negative pressure is applied to the variable tumble shutter valve actuator.
 - When it is not possible to confirm it, replace the intake manifold. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
 - When the variable tumble shutter valve actuator cannot be activated even though the operation of the rod can be confirmed, check for any incorrect connections or breakage of the vacuum hose.

Vacuum kPa {mmHg, inHg}	Rod movement
Below -2.7 {-20, -0.8}	No operate
Above -33.4 {-251, -9.86}	Fully pulled

ACCELERATOR PEDAL REMOVAL/INSTALLATION [LF, L5]

id0113a4801400

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
3. Remove in the order indicated in the table.

1	APP sensor connector
2	Accelerator pedal

4. Install in the reverse order of removal.

am3uuw0000575

INTAKE-AIR SYSTEM [L3 WITH TC]

INTAKE MANIFOLD VACUUM INSPECTION [L3 WITH TC]

id011339801500

1. Verify that the intake air hoses are installed securely.
2. Warm up the engine.
3. Disconnect the vacuum hose connected between the check valve and the intake manifold from the intake manifold and install the vacuum gauge. (See 01-16B-12 QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/INSTALLATION [L3 WITH TC].)
4. Measure the intake manifold vacuum while idling (no load) using the vacuum gauge.
 - If not within the specification, perform the following inspections.
 - Compression pressure (See 01-10B-12 COMPRESSION INSPECTION [L3 WITH TC].)
 - Air suction
 - Installation areas of each vacuum hose
 - Installation areas of throttle body
 - Installation areas of fuel injector
 - Installation areas of PCV valve
 - Installation areas of intake manifold

Note

- If any air suction exists, the change in engine speed can be made apparent by spraying the penetrant lubricating spray on the applicable part.

Standard

Approx. -71 kPa {-533 mmHg, -21 inHg}

INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC]

id011339800400

Warning

- **A hot engine and intake air system can cause severe burns. Turn off the engine and wait until they are cool before removing the intake air system.**

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
3. Remove the battery and battery tray. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
4. Remove the splash shield (RH) and aerodynamic under cover No.2 as a single unit. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.) (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)
5. Disconnect the wiring harness.
6. Remove in the order indicated in the table.
7. Install in the reverse order of removal.

Air Cleaner Cover Removal Note

1. Remove the air cleaner cover and air hose as a single unit.
2. Remove the air cleaner cover.

Air Hose Removal Note

1. Disconnect the variable swirl shutter valve switch connector.
2. Disconnect the fuel injector harness connector.
3. Disconnect the ventilation hose connected to the air hose.
4. Remove the air hose.

Fresh-Air Duct (No.1) Removal Note

1. Remove the fresh-air duct (No.1) and fresh-air duct (No.2) as a single unit.
2. Remove the fresh-air duct (No.1).

Air Duct Removal Note

1. Disconnect the wastegate control solenoid valve connector.
2. Disconnect the purge solenoid valve connector.
3. Disconnect the EGR valve connector.
4. Remove the air duct.

Throttle Body Removal Note

1. Disconnect the throttle body connector.
2. Drain the engine coolant before removing the water hose. (See 01-12B-4 ENGINE COOLANT REPLACEMENT [L3 WITH TC].)
3. Remove the throttle body.

INTAKE-AIR SYSTEM [L3 WITH TC]

Intake Manifold Removal Note

1. Remove the fuel delivery pipe cover.
2. Disconnect the quick connector connected to the intake manifold.
3. Remove the EGR pipe. (See 01-16B-9 EGR PIPE REMOVAL/INSTALLATION [L3 WITH TC].)
4. Disconnect the variable swirl solenoid valve connector.
5. Disconnect the OCV connector.
6. Remove the oil level gauge pipe. (See 01-11B-6 OIL PAN REMOVAL/INSTALLATION [L3 WITH TC].)
7. Remove the drive belt. (See 01-10B-4 DRIVE BELT REMOVAL/INSTALLATION [L3 WITH TC].)
8. Set the electric power steering oil pump out of the way. (See 06-14-31 ELECTRIC POWER STEERING OIL PUMP REMOVAL/INSTALLATION.)
9. Disconnect the fuel pressure sensor connector.
10. Disconnect the vacuum hose connected between the intake manifold and the master cylinder from the intake manifold.
11. Disconnect the MAP sensor connector.
12. Remove the intake manifold installation bolts.
13. Disconnect the evaporative hose connected between the intake manifold and the PCV valve from the intake manifold.
14. Remove the intake manifold.

01-13B

Turbocharger Insulator Removal Note

1. Remove the exhaust manifold upper insulator. (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
2. Remove the turbocharger insulator.

Oil Outlet Pipe Removal Note

1. Set the generator duct out of the way. (See 01-17B-6 GENERATOR REMOVAL/INSTALLATION [L3 WITH TC].)
2. Remove the oil outlet pipe.

Turbocharger Removal Note

1. Remove the HO2S. (See 01-40B-31 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [L3 WITH TC].)
2. Remove the A/F sensor. (See 01-40B-29 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
3. Remove the WU-TWC insulator. (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
4. Remove the exhaust manifold lower insulator. (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
5. Remove the TWC. (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
6. Remove the WU-TWC. (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)

INTAKE-AIR SYSTEM [L3 WITH TC]

7. Remove the oil outlet pipe, oil inlet pipe, water pipe, and turbocharger insulator.

am3uuw0000597

8. Remove the turbocharger.

am3uuw0000615

Turbocharger Installation Note

1. Install the turbocharger.
2. Install the WU-TWC. (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
3. Install the A/F sensor. (See 01-40B-29 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
4. Install the HO2S. (See 01-40B-31 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [L3 WITH TC].)

am3uuw0000615

INTAKE-AIR SYSTEM [L3 WITH TC]

5. Tight the oil inlet pipe installation bolt while the stopper of the water outlet pipe is faced to the installation area, then install the turbocharger insulator.

01-13B

am3uuw0000576

6. Install the oil outlet pipe and water inlet pipe, then insert the water hose until it reaches the stopper.

am3uuw0000576

INTAKE-AIR SYSTEM [L3 WITH TC]

Wastegate Control Solenoid Valve Installation Note

1. Install the wastegate control solenoid valve.

am3uuw0000576

2. Install the vacuum hose as shown in the figure.

Throttle Body Installation Note

1. Tighten the throttle body installation bolts in the order shown in the figure.

Tightening torque

8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

acxaaw00000883

AIR CLEANER ELEMENT INSPECTION [L3 WITH TC]

id011339800800

1. Remove the air cleaner element. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
2. Inspect the following items:
 - Has the replacement interval come?
 - Is the air cleaner element soiled, damaged, or bent?
 - Are the air cleaner case and the air cleaner element correctly sealed?
 - Is the correct air cleaner element installed?
 - If there is any abnormality, clean or replace the air cleaner element. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)

INTAKE-AIR SYSTEM [L3 WITH TC]

CHARGE AIR COOLER INSPECTION [L3 WITH TC]

id011339800900

1. Remove the charge air cooler cover. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
2. Remove the charge air cooler. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
3. Remove the air bypass valve. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
4. Plug ports A and B.
5. Verify that there is no air leakage when air is sent from port C.
 - If there is leakage, replace the charge air cooler. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)

am3uuw0000577

01-13B

AIR BYPASS VALVE INSPECTION [L3 WITH TC]

id011339800500

1. Remove the air bypass valve. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
2. Connect the vacuum pump to the vacuum ports of the air bypass valve.
3. Verify that the airflow is as indicated in the table.

Vacuum (kPa {mmHg, inHg})	Valve operation condition	Airflow between port A—B
-66 {-495, -19} or more	Open	Yes
-49 {-368, -14} or less	Closed	No

am3uuw0000576

Approx. value

- If there is any malfunction, replace the air bypass valve. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)

am3uuw0000576

INTAKE-AIR SYSTEM [L3 WITH TC]

THROTTLE BODY INSPECTION [L3 WITH TC]

id011339802600

Resistance Inspection

1. Remove the battery cover (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Disconnect the throttle body connector.
4. Measure the resistance between the throttle body terminals E and F.

Throttle body resistance
0.3—100 ohms [20 °C {68 °F}]

- If not as specified, replace the throttle body. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)

acxaaw00000884

VARIABLE SWIRL SOLENOID VALVE INSPECTION [L3 WITH TC]

id011339801100

Airflow Inspection

1. Remove the battery cover (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Remove the variable swirl solenoid valve. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
4. Inspect the airflow between the ports under the following conditions.

○—○ : Continuity ○—○ : Airflow

Step	Terminal		Port	
	A	B	A	B
1	○—○			
2	B+	GND	○—○	

acxaaw00000298

- If not as specified, replace the variable swirl solenoid valve. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)

acxaaw00000886

VARIABLE SWIRL SHUTTER VALVE ACTUATOR INSPECTION [L3 WITH TC]

id011339801200

Operation Inspection

1. Remove the air hose. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the vacuum hose from the variable swirl control solenoid valve.
3. Connect a vacuum pump to the variable swirl shutter valve actuator.
4. Apply vacuum and verify that the rod moves.

Vacuum kPa {mmHg, inHg}	Rod movement
-2.7 {-20, -0.8} or less	Not move
-33.4 {-251, -9.9} or more	Fully pulled

- If the rod does not move, replace the intake manifold. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)

INTAKE-AIR SYSTEM [L3 WITH TC]

WASTEGATE CONTROL SOLENOID VALVE INSPECTION [L3 WITH TC]

id011339800600

Airflow Inspection

1. Remove the battery cover (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Remove the wastegate control solenoid valve. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
4. Inspect the airflow between the ports under the following conditions.

○—○ : Continuity ○≡○ : Airflow

Step	Terminal		Port	
	A	B	A	B
1	○—○			
2	B+	GND	○≡○	

- If not as specified, replace the wastegate control solenoid valve. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)

acxaaw00000893

01-13B

TURBOCHARGER INSPECTION [L3 WITH TC]

id011339801000

Compressor Wheel Inspection

1. Remove the turbocharger. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
2. Visually inspect the compressor wheel from view A for the cracks, damage, or bending on all the compressor wheel blades.
 - If there are any cracks or damage, replace the turbocharger. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)

Note

- If there is contact between the compressor wheel and compressor housing, there may be cracks, damage, or bending on the blade end area.
- If there are cracks, damage, or bending on the compressor wheel, verify the following after replacing the turbocharger.
 - Intake air/exhaust system related components
 - Oil outlet pipe and oil inlet pipe damage

am3uuw0000577

Turbine wheel inspection

1. Remove the turbocharger. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
2. Visually inspect the turbine wheel from view B for the cracks, damage, or bending on all the turbine wheel blades.
 - If there are cracks, damage, or bending on the turbine wheel, replace the turbocharger. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)

Note

- If there is contact between the turbine wheel and turbine housing, there may be cracks, damage, or bending on the blade end area.
- If there are cracks, damage, or bending on the turbine wheel, verify the following after replacing the turbocharger.
 - Intake air/exhaust system related components
 - Oil outlet pipe and oil inlet pipe damage

am3uuw0000577

INTAKE-AIR SYSTEM [L3 WITH TC]

WASTEGATE ACTUATOR INSPECTION [L3 WITH TC]

id011339800700

1. Remove the air hose and air duct. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC])
2. Disconnect the hose from the wastegate actuator.
3. Plug the wastegate actuator as shown in the figure.
4. Connect the vacuum pump to the port

am3uuw0000576

5. Raise the pressure slowly and take a measurement of the pressure when the rod stroke is 1.5 mm {0.06 in}.

Specification (rod stroke: 1.5 mm {0.06 in})
78.0—83.4 kPa {586—625 mmHg, 23.1—24.6 inHg}

- If the rod does not move, replace the turbocharger. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)

acxaaw00000898

ACCELERATOR PEDAL REMOVAL/INSTALLATION [L3 WITH TC]

id011339801400

1. Remove the battery cover (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
3. Remove the dashboard under cover. (See 09-17-39 DASHBOARD UNDER COVER REMOVAL/INSTALLATION.)
4. Remove in the order indicated in the table.

1	Connector
2	Accelerator pedal

5. Install in the reverse order of removal.

am3uuw0000224

BEFORE SERVICE PRECAUTION [LF, L5]

id0114a7802000

Warning

- Fuel vapor is hazardous. It can very easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.
- Fuel line spills and leakage from the pressurized fuel system are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure".
- A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before performing work on the fuel system, discharge static electricity by touching the vehicle body.

Fuel Line Safety Procedure

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the fuel-filler cap to release the pressure inside the fuel tank.
4. Remove the fuel pump relay.
5. Connect the negative battery cable. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
6. Start the engine.
7. After the engine stalls, crank the engine 3—4 times.
8. Switch the ignition to off.
9. Install the fuel pump relay.

am3uuw0000277

Warning

- Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. When installing the fuel hose, perform “Fuel Leakage Inspection” described below.
- A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before performing work on the fuel system, discharge static electricity by touching the vehicle body.

Fuel Leakage Inspection

Caution

- Connecting to the wrong check connector terminal may cause a malfunction. Carefully connect only to the specified terminal.

Using M-MDS

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition to ON.
3. Using the simulation function “FP”, start the fuel pump. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].)
4. Verify that there is no fuel leakage from the pressurized parts.

am3uuw0000277

Standard

There shall be no leakage after 5 min.

5. In the case of fuel leakage, replace the following components and then do the recheck by the fuel leakage checking procedure.
 - If there is leakage, replace the fuel hoses and clips.
 - If there is damage on the seal on the fuel pipe side, replace the fuel pipe.

Without using M-MDS

1. Disconnect the negative battery cable.
2. Remove the fuel pump relay.

Caution

- Short the specified terminals because shorting the wrong terminal of the relay and fuse block may cause malfunctions.

am3uuw0000277

3. Using a jumper wire, short fuel pump relay terminals C and D in the relay and fuse block.
4. Connect the negative battery cable and operate the fuel pump.
5. Verify that there is no fuel leakage from the pressurized parts.

am6zzw0000028

Standard

There shall be no leakage after 5 min.

6. In the case of fuel leakage, replace the following components and then do the recheck by the fuel leakage checking procedure.
 - If there is leakage, replace the fuel hoses and clips.
 - If there is damage on the seal on the fuel pipe side, replace the fuel pipe.

FUEL SYSTEM [LF, L5]

FUEL LINE PRESSURE INSPECTION [LF, L5]

id0114a7800500

Warning

- Fuel line spills and leakage from the pressurized fuel system are dangerous. Fuel can ignite and cause serious injury or death and damage. To prevent this, complete the following inspection with the engine stopped.
- A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before performing work on the fuel system, discharge static electricity by touching the vehicle body.

Caution

- Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting using cloth or soft brush, and make sure that it is free of foreign material.

1. Complete the "BEFORE SERVICE PRECAUTION". (See 01-14A-4 BEFORE SERVICE PRECAUTION [LF, L5].)
2. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
3. Disconnect the negative battery cable.
4. Disconnect the quick release connector. (See 01-14A-15 QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION [LF, L5].)
5. Turn the lever of the **SST** parallel to the hose as shown in the figure.

am3uuw0000225

am3uuw0000225

FUEL SYSTEM [LF, L5]

6. Insert the **SST** quick release connector into the fuel pipe until a click is heard.
7. Verify that the quick release connector is firmly connected by pulling it by hand.
8. Start the fuel pump using the following procedure.

Using M-MDS

1. Connect the negative battery cable. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Connect the M-MDS to the DLC-2.
3. Using the simulation function "FP", start the fuel pump. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].)

am3uuw0000278

01-14A

Without using M-MDS

1. Remove the fuel pump relay.

Caution

- Short the specified terminals because shorting the wrong terminal of the relay and fuse block may cause malfunctions.

am3uuw0000278

2. Using a jumper wire, short fuel pump relay terminals C and D in the relay and fuse block.
3. Connect the negative battery cable and operate the fuel pump.

am6zzw0000028

9. Operate the fuel pump for **10 s**.
10. Measure the fuel line pressure.
 - If not within the specification, inspect the following:
 - If it less than the specification:**
 - Fuel pump unit
 - Fuel line for clogging or leakage
 - If it exceeds the specification:**
 - Fuel line clogging

Fuel pressure

350—430 kPa {3.57—4.38 kgf/cm², 50.8—62.3 psi}

11. Stop the fuel pump using the following procedure.

Using M-MDS

1. Using the simulation function "FP", stop the fuel pump. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].)

Without using M-MDS

1. Disconnect the negative battery cable to stop the fuel pump.

FUEL SYSTEM [LF, L5]

12. Measure the fuel hold pressure **after 5 min.**
 - If not within the specification, inspect the following:
 - Fuel line leakage

Fuel hold pressure

210 kPa {2.14 kgf/cm², 30.5 psi} or more

13. Complete the "BEFORE SERVICE PRECAUTION". (See 01-14A-4 BEFORE SERVICE PRECAUTION [LF, L5].)
14. Disconnect the **SST**.
15. Connect the quick release connector. (See 01-14A-15 QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION [LF, L5].)
16. Complete the "AFTER SERVICE PRECAUTION". (See 01-14A-5 AFTER SERVICE PRECAUTION [LF, L5].)

FUEL TANK REMOVAL/INSTALLATION [LF, L5]

id0114a7801600

Warning

- **Repairing a fuel tank containing fuel is dangerous. Explosion or fire may cause death or serious injury. Always properly steam clean a fuel tank before repairing it.**
- **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, do not damage the sealing surface of the fuel pump unit when removing or installing.**
- **A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before draining fuel, make sure to discharge static electricity by touching the vehicle body.**

Caution

- **Disconnecting/connecting the quick release connector without cleaning it may cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting using a cloth or soft brush, and make sure that it is free of foreign material.**

1. Level the vehicle.
2. Complete the "BEFORE SERVICE PRECAUTION". (See 01-14A-4 BEFORE SERVICE PRECAUTION [LF, L5].)
3. Disconnect the quick release connector. (See 01-14A-15 QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION [LF, L5].)
4. Connect a long hose to the disconnected quick release connector and drain the fuel into a container used for collecting gasoline.

am3uuw0000225

5. Drain the fuel from the fuel tank using the following procedure:

Using M-MDS

1. Connect the M-MDS to the DLC-2.
2. Using the simulation function "FP", start the fuel pump. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].)

am3uuw0000278

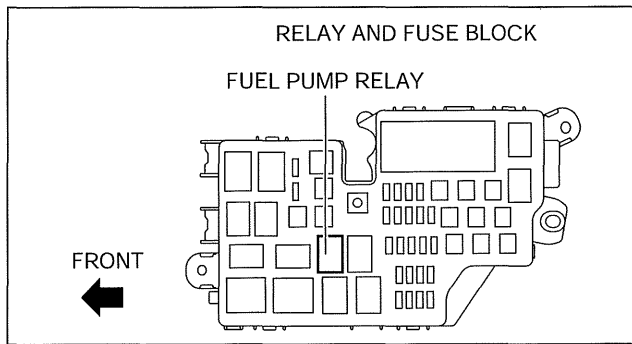

FUEL SYSTEM [LF, L5]

Without using M-MDS

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the fuel pump relay.

Caution

- Short the specified terminals because shorting the wrong terminal of the relay and fuse block may cause malfunctions.

4. Using a jumper wire, short fuel pump relay terminals C and D in the relay and fuse block.
5. Connect the negative battery cable and operate the fuel pump. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)

Caution

- The fuel pump could be damaged if it is operated while there is no fuel in the fuel tank. Verify the amount of fuel being discharged from the hose and stop operation of the fuel pump when essentially no fuel is being discharged.

6. Stop the fuel pump using the following procedure.

Using M-MDS

1. Using the simulation function "FP", stop the fuel pump. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].)
2. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
3. Disconnect the negative battery cable.

Without using M-MDS

1. Disconnect the negative battery cable to stop the fuel pump.

7. To remove the fuel pump unit, remove the following parts:

- (1) Rear seat cushion (See 09-13-37 REAR SEAT CUSHION REMOVAL/INSTALLATION.)
- (2) Service hole cover
- (3) fuel pump unit connector

8. Remove the TWC. (See 01-15A-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [LF, L5].)

9. Remove the under cover. (See 02-14-8 REAR TRAILING LINK REMOVAL/INSTALLATION.)

10. Remove the insulator (middle No.1). (See 01-15A-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [LF, L5].)

11. Remove in the order indicated in the table.

12. Install in the reverse order of removal.

13. Complete the "AFTER SERVICE PRECAUTION". (See 01-14A-5 AFTER SERVICE PRECAUTION [LF, L5].)

01-14A

FUEL SYSTEM [LF, L5]

am3uuw0000328

1	Quick release connector (See 01-14A-15 QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION [LF, L5].)
2	Quick release connector (See 01-16A-11 QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/INSTALLATION [LF, L5].)
3	Quick release connector (See 01-16A-11 QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/INSTALLATION [LF, L5].)
4	Fuel tank strap
5	Joint hose (See 01-14A-11 Joint Hose Installation Note.)
6	Breather hose (See 01-14A-11 Breather Hose Removal Note.) (See 01-14A-11 Breather Hose Installation Note.)

7	Fuel hose (See 01-14A-15 QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION [LF, L5].)
8	Set plate
9	Fuel pump unit
10	O-ring
11	Fuel tank
12	Fuel-filler cap
13	Protector
14	Dust cover
15	Fuel-filler pipe protector
16	Fuel-filler pipe (See 01-14A-11 Fuel-Filler Pipe Removal Note.)

FUEL SYSTEM [LF, L5]

Breather Hose Removal Note

1. Disconnect the breather hose of fuel-filler pipe side.
2. Remove the following parts as a single unit.
 - Fuel tank
 - Breather hose
 - Fuel pump unit
 - Fuel hose
3. Remove the breather hose.

Fuel-Filler Pipe Removal Note

1. Remove the rear tire (LH). (See 02-10-1 GENERAL PROCEDURES (SUSPENSION).)
2. Remove the fuel-filler pipe.

Breather Hose Installation Note

1. Install the breather hose as shown in the figure.

Joint Hose Installation Note

1. Install the joint hose and clamp as shown in the figure.

01-14A

FUEL SYSTEM [LF, L5]

FUEL TANK INSPECTION [LF, L5]

id0114a7803200

Note

- The rollover valve and the fuel shut-off valve built into the fuel tank and fuel tank leakage are inspected in this inspection.

- Complete the "BEFORE SERVICE PRECAUTION". (See 01-14A-4 BEFORE SERVICE PRECAUTION [LF, L5].)
- Remove the fuel tank and the fuel pump unit as a single unit. (See 01-14A-8 FUEL TANK REMOVAL/ INSTALLATION [LF, L5].)
- Perform the following procedure to verify the fuel tank airtightness.

- Plug the fuel pump unit pipe, ports B and C.
- Apply a pressure of **3 kPa {23 mmHg, 0.9 inHg}** to port A and wait for a while.
- Verify that there is no air flow leakage from the fuel tank.
 - If there is air flow, replace the fuel tank. (See 01-14A-8 FUEL TANK REMOVAL/ INSTALLATION [LF, L5].)

am3uuw0000249

- Plug the fuel pump unit pipe and port B.
- Level the fuel tank.
- Apply a pressure of **3 kPa {23 mmHg, 0.9 inHg}** to port A and wait for a while.
- With the pressure still applied, verify that there is air flow port C and the pressure is **0—3 kPa {0—23 mmHg, 0—0.9 inHg}**.
 - If there is no air flow, replace the fuel tank. (See 01-14A-8 FUEL TANK REMOVAL/ INSTALLATION [LF, L5].)
- Apply a pressure of **-0.5 kPa {-3.8 mmHg, -0.1 inHg}** to port A and wait for a while.
- With the pressure still applied, verify that there is air flow port C and the pressure is **-0.5—0 kPa {-3.8—0 mmHg, -0.1—0 inHg}**.
 - If there is no air flow, replace the fuel tank. (See 01-14A-8 FUEL TANK REMOVAL/ INSTALLATION [LF, L5].)
 - If there is air flow, place the fuel tank upside down.
- Apply a pressure to port A and wait for a while.
- With the pressure still applied, verify that there is no air flow from port C.
 - If there is air flow, replace the fuel tank. (See 01-14A-8 FUEL TANK REMOVAL/ INSTALLATION [LF, L5].)

am3uuw0000249

am3uuw0000249

FUEL SYSTEM [LF, L5]

NONRETURN VALVE INSPECTION [LF, L5]

id0114a7803600

Warning

- Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, always complete the “Fuel Line Safety Procedure”, while referring to the “BEFORE SERVICE PRECAUTION”.

1. Complete the “BEFORE SERVICE PRECAUTION”. (See 01-14A-4 BEFORE SERVICE PRECAUTION [LF, L5].)
2. Remove the nonreturn valve. (See 01-14A-8 FUEL TANK REMOVAL/INSTALLATION [LF, L5].)
3. Verify that the nonreturn valve is closed.
 - If malfunction, replace the nonreturn valve. (See 01-14A-8 FUEL TANK REMOVAL/INSTALLATION [LF, L5].)
4. Verify that the nonreturn valve is not stuck open and does not open even when pulled up by a finger.
 - If malfunction, replace the nonreturn valve. (See 01-14A-8 FUEL TANK REMOVAL/INSTALLATION [LF, L5].)

am6xuw000046

FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5]

id0114a7800900

Warning

- Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, always complete the “Fuel Line Safety Procedure”, while referring to “BEFORE SERVICE PRECAUTION”.
- Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, before performing the fuel pump unit removal/installation, always complete the “Fuel Leak Inspection After Fuel Pump Unit Installation”.

1. Complete the “BEFORE SERVICE PRECAUTION”. (See 01-14A-4 BEFORE SERVICE PRECAUTION [LF, L5].)
2. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
3. Disconnect the negative battery cable. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
4. Remove the rear seat cushion. (See 09-13-37 REAR SEAT CUSHION REMOVAL/INSTALLATION.)
5. Remove the service hole cover.
6. Disconnect the fuel pump unit connector.
7. Disconnect the joint hose of fuel-filler pipe side.
8. Disconnect the breather hose of fuel-filler pipe side.
9. Remove the following parts as a single unit.
 - Fuel tank
 - Joint hose
 - Breather hose
 - Fuel pump unit
 - Fuel hose

am3uuw000027

01-14A

FUEL SYSTEM [LF, L5]

10. Remove the order indicated in the table.

1	Quick release connector (See 01-14A-15 QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION [LF, L5].)
2	Set plate
3	Fuel pump unit
4	O-ring

11. Install in the reverse order of removal.
12. Complete the "AFTER SERVICE PRECAUTION".
(See 01-14A-5 AFTER SERVICE PRECAUTION [LF, L5].)

am3uuw0000249

FUEL PUMP UNIT DISASSEMBLY/ASSEMBLY [LF, L5]

id0114a7801000

Note

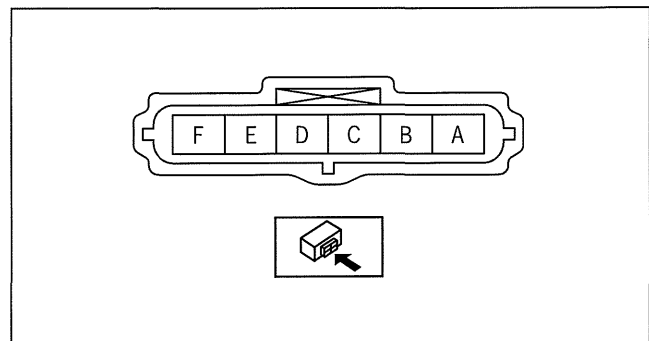

- Fuel pump unit cannot disassemble.

FUEL PUMP UNIT INSPECTION [LF, L5]

id0114a7801100

Continuity Inspection

- Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
- Disconnect the negative battery cable.
- Disconnect the fuel pump unit connector.
- Inspect for continuity between fuel pump unit terminals A—E.
 - If there is no continuity, replace the fuel pump. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].)

am3uuw0000328

FUEL SYSTEM [LF, L5]

QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION [LF, L5]

id0114a7801700

Warning

- Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, always complete the “Fuel Line Safety Procedure”, while referring to the “BEFORE SERVICE PRECAUTION”.

Caution

- Disconnecting/connecting the quick release connector without cleaning it may cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting using a cloth or soft brush, and make sure that it is free of foreign material.

01-14A

Quick Release Connector Type

Caution

- There are four types of quick release connectors. Verify the type and location, and install/remove properly.

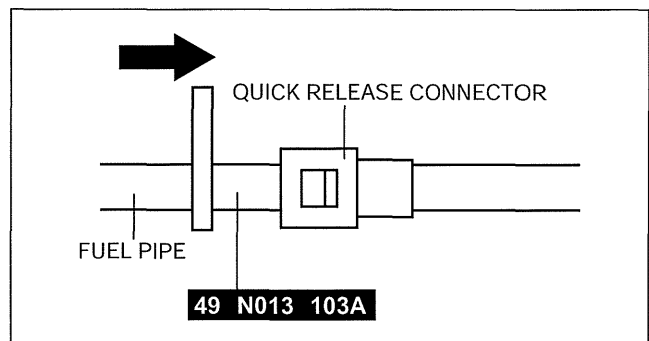

am3uuw0000223

Type A Removal

Caution

- Be careful not to damage the pipe when unlocking the retainer.

1. Complete the “BEFORE SERVICE PRECAUTION”. (See 01-14A-4 BEFORE SERVICE PRECAUTION [LF, L5].)
2. Insert the SST into the quick release connector.
3. Pull out the fuel hose straight from the fuel pipe and disconnect it.
4. Cover the disconnected quick release connector and fuel pipe with vinyl sheeting or a similar material to prevent it from scratches or dirt.

am6xuw0000138

FUEL SYSTEM [LF, L5]

Type B Removal

1. Complete the "BEFORE SERVICE PRECAUTION". (See 01-14A-4 BEFORE SERVICE PRECAUTION [LF, L5].)
2. Move the retainer upward using a small flathead screwdriver or a similar tool.
3. Pull out the fuel hose straight from the fuel pipe and disconnect it.
4. Cover the disconnected quick release connector and fuel pipe with vinyl sheeting or a similar material to prevent it from scratches or dirt.

am6xuw0000138

Type C Removal

1. Complete the "BEFORE SERVICE PRECAUTION". (See 01-14A-4 BEFORE SERVICE PRECAUTION [LF, L5].)

Caution

- The quick release connector may be damaged if the release tab is bent excessively. Do not expand the release tab over the stopper.

Note

- The fuel hose can be removed by pushing it to the pipe side to release the lock.

2. Rotate the release tab on the quick release connector to the stopper position.

am3uuw0000223

3. Pull out the evaporative hose straight from the fuel pipe and disconnect it.

am3uuw0000223

4. Cover the disconnected quick release connector and fuel pipe with vinyl sheeting or a similar material to prevent it from scratches or dirt.

Type D Removal

1. Complete the "BEFORE SERVICE PRECAUTION". (See 01-14A-4 BEFORE SERVICE PRECAUTION [LF, L5].)

Caution

- The quick release connector may be damaged if the release tab is bent excessively. Do not expand the release tab over the stopper.

Note

- The fuel hose can be removed by pushing it to the pipe side to release the lock.

2. Release the retainer shown in the figure.
3. Disconnect the quick release connector.
4. Cover the disconnect the quick release connector and fuel pipe with vinyl sheeting or similar material to prevent it from scratches or dirt.

am3uuw000277

Type A Installation

Caution

- Always replace the retainer with a new one when using SST 49 E042 001, otherwise, fuel leakage could result.

Note

- If the quick release connector O-ring is damaged or has slipped, replace the piping component.
- A checker tab is integrated with the quick release connector for new fuel hoses and fuel hoses. Remove the checker tab from the quick release connector after the connector is completely engaged with the fuel pipe.

1. Inspect the fuel hose and fuel pipe sealing surface for damage and deformation.
 - If there is any malfunction, replace it with a new one.
2. Apply a small amount of clean engine oil to the sealing surface of the fuel pipe.
3. Install a new retainer to the quick release connector.
4. Reconnect the hose straight to the pipe until a click is heard.
5. Lightly pull and push the quick release connector a few times by hand, and then verify that it is connected securely.
6. Complete the "AFTER SERVICE PRECAUTION". (See 01-14A-5 AFTER SERVICE PRECAUTION [LF, L5].)

am3uuw000519

FUEL SYSTEM [LF, L5]

Type B Installation

Note

- If the quick release connector O-ring is damaged or has slipped, replace the fuel hose.
- A checker tab is integrated with the quick release connector for new fuel hoses. Remove the checker tab from the quick release connector after the connector is completely engaged with the fuel pipe.

1. Inspect the fuel hose and fuel pipe sealing surface for damage and deformation.
 - If there is any malfunction, replace it with a new one.
2. Apply a small amount of clean engine oil to the sealing surface of the fuel pipe.
3. Install the quick release connector.
 - Insert the fuel pipe straight to the end of the quick release connector.
 - Push down the retainer using a finger.
 - If the retainer cannot be pushed down, push the fuel pipe further to the quick release connector.
4. Lightly pull and push the quick release connector a few times by hand, and then verify that it is connected securely.
5. Complete the "AFTER SERVICE PRECAUTION". (See 01-14A-5 AFTER SERVICE PRECAUTION [LF, L5].)

am3uuw0000456

Type C Installation

Note

- If the quick release connector O-ring is damaged or has slipped, replace the fuel hose.
- A checker tab is integrated with the quick release connector for new fuel hoses. Remove the checker tab from the quick release connector after the connector is completely engaged with the fuel pipe.

1. Inspect the fuel hose and fuel pipe sealing surface for damaged and deformation.
 - If there is any malfunction, replace it with a new one.
2. Apply a small amount of clean engine oil to the sealing surface of the fuel pipe.
3. Reconnect the fuel hose straight to the fuel pipe until a click is heard.

Note

- If the quick release connector does not move at all, disconnect it, verify that the O-ring is not damaged or has not slipped, and then reconnect the quick release connector.

am3uuw0000519

4. Lightly pull and push the quick release connector a few times by hand, and then verify that it can move **2.0—3.0 mm {0.08—0.12 in}** and is connected securely.
5. Complete the "AFTER SERVICE PRECAUTION". (See 01-14A-5 AFTER SERVICE PRECAUTION [LF, L5].)

FUEL SYSTEM [LF, L5]

Type D Installation

- Inspect the fuel hose and fuel pipe sealing surface for damage and deformation.
 - If there is any malfunction, replace it with a new one.
- Apply a small amount of clean engine oil to the sealing surface of the fuel pipe.
- Install the quick release connector.
 - Insert the fuel pipe straight to the end of the quick release connector.
 - Push down the retainer using a finger.
 - If the retainer cannot be pushed down, push the fuel pipe further to the quick release connector.
- Lightly pull and push the quick release connector a few times by hand, and then verify that it is connected securely.
- Complete the "AFTER SERVICE PRECAUTION". (See 01-14A-5 AFTER SERVICE PRECAUTION [LF, L5].)

am3uuw0000519

01-14A

FUEL INJECTOR REMOVAL/INSTALLATION [LF, L5]

id0114a7800600

- Complete the "BEFORE SERVICE PRECAUTION". (See 01-14A-4 BEFORE SERVICE PRECAUTION [LF, L5].)
- Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
- Disconnect the negative battery cable. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
- Remove the plug hole plate. (See 01-10A-5 PLUG HOLE PLATE REMOVAL/INSTALLATION [LF, L5].)
- Disconnect the fuel injector connector.
- Remove in the order indicated in the table.

1	Quick release connector (See 01-14A-15 QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION [LF, L5].)
2	Fuel distributor
3	Injector clip (See 01-14A-20 Fuel Injector Removal Note.)
4	Fuel injector (See 01-14A-21 Fuel Injector Installation Note.)

- Install in the reverse order of removal.
- Complete the "AFTER SERVICE PRECAUTION". (See 01-14A-5 AFTER SERVICE PRECAUTION [LF, L5].)

am6zzw0000025

FUEL SYSTEM [LF, L5]

Fuel Injector Removal Note

Caution

- Use of a deformed fuel injector clip will cause the fuel injector to be connected incorrectly and could result in fuel leakage. It will also cause the fuel injector to rotate. Therefore, always replace the clip when the fuel injector is removed.

1. Insert a flathead screwdriver between the fuel injector cup and clip finger.

am3uuw0000250

Note

- When pushing the clip finger outward, deform the finger until it is removed completely from the cup notch.

am6zzw0000025

2. Push the clip finger outward using a flathead screwdriver.
3. Remove the fuel injector with the clip.
4. Remove the clip from the fuel injector using the following procedure:

Caution

- The clip will not be reused.

- (1) Hold the clip using pliers.
- (2) Pull the clip parallel to the fuel injector groove and remove it from the fuel injector.

am3uuw0000250

FUEL SYSTEM [LF, L5]

Fuel Injector Installation Note

1. Apply a small amount of clean oil to the fuel injector groove and the new O-ring, and assemble them.
2. Temporarily attach a new clip to the fuel injector groove.

Note

- When the clip is attached correctly, the central area of the fuel injector and the clip finger positions are aligned.

3. Hold the fuel injector firmly and push the clip into the fuel injector until the clip stops sliding.
4. Verify that the fuel injector connector position is correct.
5. Press the fuel injector into the fuel injector cup. Continue pressing until the clip contacts the lower surface of the fuel injector cup.
6. Verify that the fuel injector and clip are correctly installed with the clip locked onto the fuel injector cup notch.

am6zzw000025

FUEL INJECTOR INSPECTION [LF, L5]

id0114a7800700

Resistance Inspection

1. Switch the ignition to off.
2. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
3. Disconnect the negative battery cable.
4. Disconnect the fuel injector connector.
5. Inspect the resistance between fuel injector terminals A and B.

Fuel injector resistance

11.4—12.6 ohms [20 °C {68 °F}]

- If not within the specification, replace the fuel injector. (See 01-14A-19 FUEL INJECTOR REMOVAL/INSTALLATION [LF, L5].)

am3uuw0000577

BEFORE SERVICE PRECAUTION [L3 WITH TC]

id011439802000

Warning

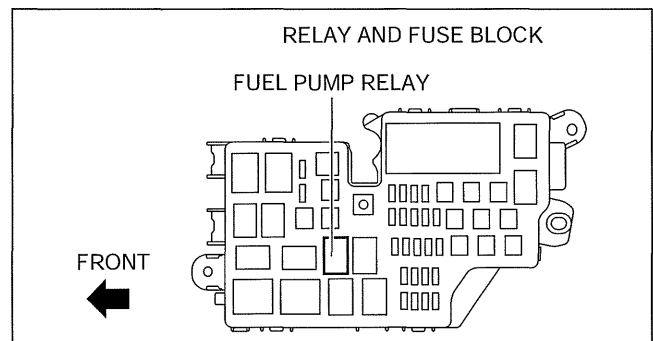

- Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.
- Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete the following "Fuel Line Safety Procedure".
- A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before performing work on the fuel system, discharge static electricity by touching the vehicle body.

Fuel Line Safety Procedure

Note

- Fuel in the fuel system is under high pressure even when the engine is not running.

1. Remove the fuel-filler cap and release the pressure in the fuel tank.
2. Remove the fuel pump relay.
3. Start the engine.
4. After the engine stalls, crank the engine several times.
5. Switch the ignition to off.
6. Install the fuel pump relay.

am3uuw0000579

FUEL SYSTEM [L3 WITH TC]

AFTER SERVICE PRECAUTION [L3 WITH TC]

id011439801900

Warning

- Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. When installing the fuel hose, perform “Fuel Leakage Inspection” described below.
- A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before performing work on the fuel system, discharge static electricity by touching the vehicle body.

01-14B

Fuel Leakage Inspection

Caution

- Connecting to the wrong check connector terminal may cause a malfunction. Carefully connect only to the specified terminal.

Using M-MDS

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition to ON.
3. Using the simulation function “FP”, start the fuel pump. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].)
4. Verify that there is no fuel leakage from the pressurized parts.

am3uuw0000578

Standard

There shall be no leakage after 5 min.

5. In the case of fuel leakage, replace the following components and then do the recheck by the fuel leakage checking procedure.
 - If there is leakage, replace the fuel hoses and clips.
 - If there is damage on the seal on the fuel pipe side, replace the fuel pipe.

Without using M-MDS

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Remove the fuel pump relay.

Caution

- Short the specified terminals because shorting the wrong terminal of the relay and fuse block may cause malfunctions.

am3uuw0000579

4. Using a jumper wire, short fuel pump relay terminals C and D in the relay and fuse block.
5. Connect the negative battery cable and operate the fuel pump. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
6. Install battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
7. Verify that there is no fuel leakage from the pressurized parts.

Standard

There shall be no leakage after 5 min.

am3uuw0000579

8. In the case of fuel leakage, replace the following components and then do the recheck by the fuel leakage checking procedure.
 - If there is leakage, replace the fuel hoses and clips.
 - If there is damage on the seal on the fuel pipe side, replace the fuel pipe.

FUEL SYSTEM [L3 WITH TC]

FUEL LINE PRESSURE INSPECTION [L3 WITH TC]

id011439800500

Warning

- Fuel line spills and leakage from the pressurized fuel system are dangerous. Fuel can ignite and cause serious injury or death and damage. To prevent this, complete the following inspection with the engine stopped.
- Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure", while referring to the "BEFORE SERVICE PRECAUTION".
- A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before performing work on the fuel system, discharge static electricity by touching the vehicle body.

Caution

- Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting using cloth or soft brush, and make sure that it is free of foreign material.

1. Complete the "BEFORE SERVICE PRECAUTION". (See 01-14B-4 BEFORE SERVICE PRECAUTION [L3 WITH TC].)
2. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
3. Disconnect the negative battery cable. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
4. Disconnect the quick release connector. (See 01-14B-21 QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION [L3 WITH TC].)
5. Turn the lever of the **SST** parallel to the hose as shown in the figure.

am3uuw0000582

am3uuw0000582

FUEL SYSTEM [L3 WITH TC]

6. Insert the **SST** quick release connector into the fuel pipe until a click is heard.
7. Verify that the quick release connector is firmly connected by pulling it by hand.
8. Start the fuel pump using the following procedure.

Using M-MDS

1. Connect the negative battery cable. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Connect the M-MDS to the DLC-2.
3. Using the simulation function "FP", start the fuel pump. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].)

am3uuw0000582

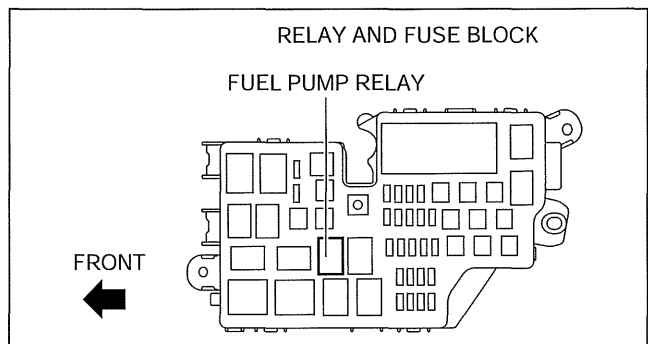

01-14B

Without using M-MDS

1. Remove the fuel pump relay.

Caution

- Short the specified terminals because shorting the wrong terminal of the relay and fuse block may cause malfunctions.

am3uuw0000583

2. Using a jumper wire, short fuel pump relay terminals C and D in the relay and fuse block.
3. Connect the negative battery cable and operate the fuel pump.

am3uuw0000583

9. Operate the fuel pump for **10 s**.
10. Measure the fuel line pressure.
 - If not within the specification, inspect the following:
 - If it less than the specification:**
 - Fuel pump unit
 - Fuel line for clogging or leakage
 - If it exceeds the specification:**
 - Fuel line clogging

Fuel pressure

350—430 kPa {3.57—4.38 kgf/cm², 50.8—62.3 psi}

11. Stop the fuel pump using the following procedure.

Using M-MDS

1. Using the simulation function "FP", stop the fuel pump. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].)

Without using M-MDS

1. Disconnect the negative battery cable to stop the fuel pump.

FUEL SYSTEM [L3 WITH TC]

12. Measure the fuel hold pressure **after 5 min.**
 - If not within the specification, inspect the following:
 - Fuel line leakage

Fuel hold pressure

210 kPa {2.14 kgf/cm², 30.5 psi} or more

13. Complete the "BEFORE SERVICE PRECAUTION". (See 01-14B-4 BEFORE SERVICE PRECAUTION [L3 WITH TC].)
14. Disconnect the **SST**.
15. Connect the quick release connector. (See 01-14B-21 QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION [L3 WITH TC].)
16. Complete the "AFTER SERVICE PRECAUTION". (See 01-14B-5 AFTER SERVICE PRECAUTION [L3 WITH TC].)

FUEL TANK REMOVAL/INSTALLATION [L3 WITH TC]

id011439801600

Warning

- **Repairing a fuel tank containing fuel is dangerous. Explosion or fire may cause death or serious injury. Always properly steam clean a fuel tank before repairing it.**
- **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, do not damage the sealing surface of the fuel pump unit when removing or installing.**
- **A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before draining fuel, make sure to discharge static electricity by touching the vehicle body.**

Caution

- **Disconnecting/connecting the quick release connector without cleaning it may cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting using a cloth or soft brush, and make sure that it is free of foreign material.**

1. Level the vehicle.
2. Complete the "BEFORE SERVICE PRECAUTION". (See 01-14B-4 BEFORE SERVICE PRECAUTION [L3 WITH TC].)
3. Disconnect the quick release connector. (See 01-14B-21 QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION [L3 WITH TC].)
4. Connect a long hose to the disconnected quick release connector and drain the fuel into a container used for collecting gasoline.

am3uuw0000583

5. Drain the fuel from the fuel tank using the following procedure:

Using M-MDS

1. Connect the M-MDS to the DLC-2.
2. Using the simulation function "FP", start the fuel pump. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].)

am3uuw0000584

FUEL SYSTEM [L3 WITH TC]

Without using M-MDS

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Remove the fuel pump relay.

Caution

- Short the specified terminals because shorting the wrong terminal of the relay and fuse block may cause malfunctions.

01-14B

4. Using a jumper wire, short fuel pump relay terminals C and D in the relay and fuse block.
5. Connect the negative battery cable and operate the fuel pump. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)

Caution

- The fuel pump could be damaged if it is operated while there is no fuel in the fuel tank. Verify the amount of fuel being discharged from the hose and stop operation of the fuel pump when essentially no fuel is being discharged.

6. Stop the fuel pump using the following procedure.

Using M-MDS

1. Using the simulation function "FP", stop the fuel pump. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].)
2. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
3. Disconnect the negative battery cable.

Without using M-MDS

1. Disconnect the negative battery cable to stop the fuel pump.

7. To remove the fuel pump unit, remove the following parts:

- (1) Rear seat cushion (See 09-13-37 REAR SEAT CUSHION REMOVAL/INSTALLATION.)
- (2) Service hole cover
- (3) fuel pump unit connector

8. Remove the middle pipe. (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)

9. Remove the under cover. (See 02-14-8 REAR TRAILING LINK REMOVAL/INSTALLATION.)

10. Remove the insulator (middle No.1). (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)

11. Remove in the order indicated in the table.

12. Install in the reverse order of removal.

13. Complete the "AFTER SERVICE PRECAUTION". (See 01-14B-5 AFTER SERVICE PRECAUTION [L3 WITH TC].)

FUEL SYSTEM [L3 WITH TC]

am3uuw0000584

1	Quick release connector (See 01-14B-21 QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION [L3 WITH TC].)

FUEL SYSTEM [L3 WITH TC]

Breather Hose Removal Note

1. Disconnect the breather hose of fuel tank side.
2. Remove the following parts as a single unit.
 - Fuel tank
 - Breather hose
 - Fuel pump unit
 - Fuel hose
3. Remove the breather hose.

Fuel-Filler Pipe Removal Note

1. Remove the rear tire (RH). (See 02-10-1 GENERAL PROCEDURES (SUSPENSION).)
2. Remove the fuel-filler pipe.

Breather Hose Installation Note

1. Install the breather hose as shown in the figure.

am3uuw0000597

Joint Hose Installation Note

1. Install the joint hose and clamp as shown in the figure.

am3uuw0000225

01-14B

FUEL SYSTEM [L3 WITH TC]

id011439803200

FUEL TANK INSPECTION [L3 WITH TC]

Note

- The rollover valve and the fuel shut-off valve built into the fuel tank and fuel tank leakage are inspected in this inspection.

- Complete the "BEFORE SERVICE PRECAUTION". (See 01-14B-4 BEFORE SERVICE PRECAUTION [L3 WITH TC].)
- Remove the fuel tank and the fuel pump unit as a single unit. (See 01-14B-8 FUEL TANK REMOVAL/ INSTALLATION [L3 WITH TC].)
- Perform the following procedure to verify the fuel tank airtightness.
 - Plug the fuel pump unit pipe, ports B and C.
 - Apply a pressure of **3 kPa {23 mmHg, 0.9 inHg}** to port A and wait for a while.
 - Verify that there is no air flow from the fuel tank.
 - If there is air flow, replace the fuel tank. (See 01-14B-8 FUEL TANK REMOVAL/ INSTALLATION [L3 WITH TC].)

am3uuw0000579

- Plug the fuel pump unit pipe and port B.
- Level the fuel tank.
- Apply a pressure of **3 kPa {23 mmHg, 0.9 inHg}** to port A and wait for a while.
- With the pressure still applied, verify that there is air flow port C and the pressure is **0—3 kPa {0—23 mmHg, 0—0.9 inHg}**.
 - If there is no air flow, replace the fuel tank. (See 01-14B-8 FUEL TANK REMOVAL/ INSTALLATION [L3 WITH TC].)
- Apply a pressure of **-0.5 kPa {-3.8 mmHg, -0.1 inHg}** to port A and wait for a while.
- With the pressure still applied, verify that there is air flow port C and the pressure is **-0.5—0 kPa {-3.8—0 mmHg, -0.1—0 inHg}**.
 - If there is no air flow, replace the fuel tank. (See 01-14B-8 FUEL TANK REMOVAL/ INSTALLATION [L3 WITH TC].)
 - If there is air flow, place the fuel tank upside down.
- Apply a pressure to port A and wait for a while.
- With the pressure still applied, verify that there is no air flow from port C.
 - If there is air flow, replace the fuel tank. (See 01-14B-8 FUEL TANK REMOVAL/ INSTALLATION [L3 WITH TC].)

am3uuw0000579

am3uuw0000579

NONRETURN VALVE INSPECTION [L3 WITH TC]

id011439803600

Warning

- Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, always complete the “Fuel Line Safety Procedure”, while referring to the “BEFORE SERVICE PRECAUTION”.

1. Complete the “BEFORE SERVICE PRECAUTION”. (See 01-14A-4 BEFORE SERVICE PRECAUTION [LF, L5].)
2. Remove the nonreturn valve. (See 01-14A-8 FUEL TANK REMOVAL/INSTALLATION [LF, L5].)
3. Verify that the nonreturn valve is closed.
 - If malfunction, replace the nonreturn valve. (See 01-14A-8 FUEL TANK REMOVAL/INSTALLATION [LF, L5].)
4. Verify that the nonreturn valve is not stuck open and does not open even when pulled up by a finger.
 - If malfunction, replace the nonreturn valve. (See 01-14A-8 FUEL TANK REMOVAL/INSTALLATION [LF, L5].)

am6xuw000046

FUEL PUMP UNIT REMOVAL/INSTALLATION [L3 WITH TC]

id011439800900

Warning

- Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, always complete the “Fuel Line Safety Procedure”, while referring to “BEFORE SERVICE PRECAUTION”.
- Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, before performing the fuel pump unit removal/installation, always complete the “Fuel Leak Inspection After Fuel Pump Unit Installation”.

1. Complete the “BEFORE SERVICE PRECAUTION”. (See 01-14B-4 BEFORE SERVICE PRECAUTION [L3 WITH TC].)
2. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
3. Disconnect the negative battery cable. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
4. Remove the rear seat cushion. (See 09-13-37 REAR SEAT CUSHION REMOVAL/INSTALLATION.)
5. Remove the service hole cover.
6. Disconnect the fuel pump unit connector.
7. Disconnect the joint hose of fuel tank side.
8. Disconnect the breather hose of fuel-filler pipe side.
9. Remove the following parts as a single unit.
 - Fuel tank
 - Breather hose
 - Fuel pump unit
 - Fuel hose

FUEL PUMP UNIT INSPECTION [L3 WITH TC]

id011439801100

Continuity Inspection

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Disconnect the fuel pump unit connector.
4. Inspect for continuity between fuel pump unit terminals A—E.
 - If there is no continuity, replace the fuel pump. (See 01-14B-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [L3 WITH TC].)

am3uuw0000577

FUEL PUMP RESISTOR REMOVAL/INSTALLATION [L3 WITH TC]

id011439801200

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
3. Remove the air cleaner. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
4. Disconnect the fuel pump resistor connector.
5. Remove the fuel pump resistor.

am3uuw0000578

6. Install in the order as shown in the figure.
7. Connect the fuel pump resistor connector.

am3uuw0000578

FUEL SYSTEM [L3 WITH TC]

FUEL PUMP RESISTOR INSPECTION [L3 WITH TC]

id011439801300

Resistance Inspection

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Remove the fuel pump resistor. (See 01-14B-16 FUEL PUMP RESISTOR REMOVAL/INSTALLATION [L3 WITH TC].)
4. Verify that the continuity between the fuel pump resistor terminal A and B is within the specification.

Fuel pump resistor continuity

0.304—0.336 ohms [20 °C {68 °F}]

- If not within the specification, replace the fuel pump resistor. (See 01-14B-16 FUEL PUMP RESISTOR REMOVAL/INSTALLATION [L3 WITH TC].)

acxuuw00002331

01-14B

HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC]

id011439801400

Caution

- Do not disassemble the high pressure fuel pump.
- Do not scratch or damage the fuel sealing surface of the high and low fuel ports.
- When removing the high pressure fuel pipe, secure the joint (pump side) so that it does not rotate, and loosen the screw (pipe side).

Note

- If the high pressure fuel pump is removed, replace the O-ring with a new one.

1. Complete the "BEFORE SERVICE PRECAUTION". (See 01-14B-4 BEFORE SERVICE PRECAUTION [L3 WITH TC].)
2. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
3. Disconnect the negative battery cable. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
4. Disconnect the spill valve control solenoid valve connector.
5. Disconnect the quick release connector on the high pressure fuel pump. (See 01-14B-21 QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION [L3 WITH TC].)
6. Remove the battery and battery tray. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
7. Remove the air duct. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)

Warning

- If the high pressure fuel pump joint nut is loosened, fuel leakage may occur resulting in death or serious injury, or damage to the equipment or the vehicle. Fuel can also irritate the skin and eyes. When removing the high pressure line pipe, always tighten the high pressure line pipe installation nut while fixing the high pressure fuel pump joint nut with a wrench. If the high pressure fuel pump joint nut has rotated, replace the high pressure fuel pump with a new one.

FUEL SYSTEM [L3 WITH TC]

8. Disconnect the high pressure line pipe of the high pressure fuel pump.

am3uuw0000578

(1) Fix the joint nut with a wrench on the high pressure fuel pump side as shown in the figure.

(2) Loosen the high pressure line pipe installation nut.

9. Drain the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT [L3 WITH TC].)

10. Loosen the water outlet case installation bolts securing the high pressure line pipe.

11. Remove the following part:

- High pressure fuel pump
- Tension collar

am3uuw0000578

12. Perform the following procedure when removing the high pressure fuel pump cover.

(1) Remove the drain plug and drain the engine oil accumulated in the high-pressure fuel pump cover.

Note

- 20—30 ml {20—30 cc, 1.3—1.8 cu in} of engine oil will drain out when the plug is removed so put a cloth under the drain plug beforehand.

am3uuw0000578

FUEL SYSTEM [L3 WITH TC]

- (2) Remove the high pressure fuel pump cover.

am3uuw0000578

01-14B

- (3) Install the high pressure fuel pump cover.
1) Apply the silicone sealant to the contact surfaces of the camshaft cap and cylinder head.

Diameter

5 mm {0.2 in}

- 2) Tighten the high pressure fuel pump cover bolts.

Tightening torque

17—23 N·m {1.8—2.3 kgf·m, 13—16 ft·lbf}

- 3) Apply the silicone sealant to the drain plug.
4) Tighten the drain plug.

Tightening torque

12—17 N·m {123—173 kgf·cm, 107—150 in·lbf}

Caution

- If the high pressure fuel pump installation bolts are tightened with the high pressure fuel pump tilted, the high pressure fuel pump may not operate correctly. Tighten the high pressure fuel pump installation bolts in a few passes with equal torque.

13. Tighten the bolts on the high pressure fuel pump.

Tightening torque

9—11 N·m {92—112 kgf·cm, 80—97 in·lbf}

Warning

- If the high pressure fuel pump joint nut is loosened, fuel leakage may occur resulting in death or serious injury, or damage to the equipment or the vehicle. Fuel can also irritate the skin and eyes. When installing the high pressure line pipe, always tighten the high pressure line pipe installation nut while fixing the high pressure fuel pump joint nut with a wrench. If the high pressure fuel pump joint nut has rotated, replace the high pressure fuel pump with a new one.

am3uuw0000578

FUEL SYSTEM [L3 WITH TC]

14. Assemble the high pressure line pipe.

am3uuw0000578

- (1) Fix the joint nut with a wrench on the high pressure fuel pump side as shown in the figure.
- (2) Tighten the high pressure line pipe installation nut.

Tightening torque

24—35 N·m {2.5—3.5 kgf·m, 18—25 ft·lbf}

15. Tighten the water outlet case installation bolts.

Tightening torque

8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

16. Install the quick release connector. (See 01-14B-21 QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION [L3 WITH TC].)

Fuel Leakage Inspection After High Pressure Fuel Pump Installation

1. Verify that the high pressure fuel pump is assembled securely.
2. Drive the vehicle starting from a standstill and brake suddenly **five to six times** at a low speed.
3. Stop the vehicle and verify from outside the vehicle that there is no fuel leakage around the high pressure fuel pump.

HIGH PRESSURE FUEL PUMP INSPECTION [L3 WITH TC]

id011439801500

Note

- The following vacuum values are indicated by relative pressure from the fuel pressure sensor.

1. Verify that the fuel pressure sensor is normal. (See 01-40B-29 FUEL PRESSURE SENSOR INSPECTION [L3 WITH TC].)
2. Connect the M-MDS to the DLC-2.
3. Turn the ignition switch to the ON position (Engine off).
4. Select the FUEL_PRES, and LOAD, RPM PIDs on the M-MDS.

Caution

- If the engine is run at a high speed, it could be damaged. When racing the engine, do not race it up to 6,700 rpm or more.

am3uuw0000578

5. After the LOAD PID is **60% or more** while the engine is raced with the accelerator pedal fully depressed, verify that the FUEL_PRES PID is **approx. 11.5Mpa**.
 - If not as verified, replace the high pressure fuel pump. (See 01-14B-17 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC].)

FUEL SYSTEM [L3 WITH TC]

QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION [L3 WITH TC]

id011439801700

Warning

- Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, always complete the “Fuel Line Safety Procedure”, while referring to the “BEFORE SERVICE PRECAUTION”.

01-14B

Quick Release Connector Type

Caution

- There are four types of quick release connectors. Verify the type and location, and install/remove properly.

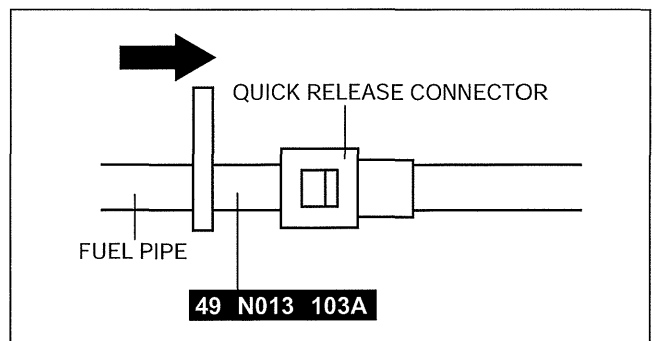

am3uuw0000584

Type A Removal

Caution

- Be careful not to damage the pipe when unlocking the retainer.

1. Complete the “BEFORE SERVICE PRECAUTION”. (See 01-14B-4 BEFORE SERVICE PRECAUTION [L3 WITH TC].)
2. Insert the SST into the quick release connector.
3. Pull out the fuel hose straight from the fuel pipe and disconnect it.
4. Cover the disconnected quick release connector and fuel pipe with vinyl sheeting or a similar material to prevent it from scratches or dirt.

am3uuw0000584

FUEL SYSTEM [L3 WITH TC]

Type B Removal

1. Complete the "BEFORE SERVICE PRECAUTION". (See 01-14B-4 BEFORE SERVICE PRECAUTION [L3 WITH TC].)
2. Move the retainer upward using a small flathead screwdriver or a similar tool.
3. Pull out the fuel hose straight from the fuel pipe and disconnect it.
4. Cover the disconnected quick release connector and fuel pipe with vinyl sheeting or a similar material to prevent it from scratches or dirt.

am3uuw0000584

Type C Removal

1. Complete the "BEFORE SERVICE PRECAUTION". (See 01-14B-4 BEFORE SERVICE PRECAUTION [L3 WITH TC].)

Caution

- The quick release connector may be damaged if the release tab is bent excessively. Do not expand the release tab over the stopper.

Note

- The fuel hose can be removed by pushing it to the pipe side to release the lock.

2. Rotate the release tab on the quick release connector to the stopper position.
3. Pull out the evaporative hose straight from the fuel pipe and disconnect it.
4. Cover the disconnected quick release connector and fuel pipe with vinyl sheeting or a similar material to prevent it from scratches or dirt.

am3uuw0000584

Type D Removal

1. Complete the "BEFORE SERVICE PRECAUTION". (See 01-14B-4 BEFORE SERVICE PRECAUTION [L3 WITH TC].)

Caution

- The quick release connector may be damaged if the release tab is bent excessively. Do not expand the release tab over the stopper.

Note

- The fuel hose can be removed by pushing it to the pipe side to release the lock.

2. Release the retainer shown in the figure.
3. Disconnect the quick release connector.
4. Cover the disconnect the quick release connector and fuel pipe with vinyl sheeting or similar material to prevent it from scratches or dirt.

am3uuw0000585

Type A Installation

Caution

- Always replace the retainer with a new one when using SST 49 E042 001, otherwise, fuel leakage could result.

Note

- If the quick release connector O-ring is damaged or has slipped, replace the piping component.
- A checker tab is integrated with the quick release connector for new fuel hoses and fuel hoses. Remove the checker tab from the quick release connector after the connector is completely engaged with the fuel pipe.

1. Inspect the fuel hose and fuel pipe sealing surface for damage and deformation.
 - If there is any malfunction, replace it with a new one.
2. Apply a small amount of clean engine oil to the sealing surface of the fuel pipe.
3. Install a new retainer to the quick release connector.
4. Reconnect the hose straight to the pipe until a click is heard.
5. Lightly pull and push the quick release connector a few times by hand, and then verify that it is connected securely.
6. Complete the "AFTER SERVICE PRECAUTION". (See 01-14B-5 AFTER SERVICE PRECAUTION [L3 WITH TC].)

01-14B

Type B Installation

Note

- If the quick release connector O-ring is damaged or has slipped, replace the fuel hose.
- A checker tab is integrated with the quick release connector for new fuel hoses. Remove the checker tab from the quick release connector after the connector is completely engaged with the fuel pipe.

1. Inspect the fuel hose and fuel pipe sealing surface for damage and deformation.
 - If there is any malfunction, replace it with a new one.
2. Apply a small amount of clean engine oil to the sealing surface of the fuel pipe.
3. Install the quick release connector.
 - Insert the fuel pipe straight to the end of the quick release connector.
 - Push down the retainer using a finger.
 - If the retainer cannot be pushed down, push the fuel pipe further to the quick release connector.
4. Lightly pull and push the quick release connector a few times by hand, and then verify that it is connected securely.
5. Complete the "AFTER SERVICE PRECAUTION". (See 01-14B-5 AFTER SERVICE PRECAUTION [L3 WITH TC].)

am3uuw0000585

FUEL SYSTEM [L3 WITH TC]

Type C Installation

Note

- If the quick release connector O-ring is damaged or has slipped, replace the fuel hose.
- A checker tab is integrated with the quick release connector for new fuel hoses. Remove the checker tab from the quick release connector after the connector is completely engaged with the fuel pipe.

1. Inspect the fuel hose and fuel pipe sealing surface for damaged and deformation.
 - If there is any malfunction, replace it with a new one.
2. Apply a small amount of clean engine oil to the sealing surface of the fuel pipe.
3. Reconnect the fuel hose straight to the fuel pipe until a click is heard.

Note

- If the quick release connector does not move at all, disconnect it, verify that the O-ring is not damaged or has not slipped, and then reconnect the quick release connector.

4. Lightly pull and push the quick release connector a few times by hand, and then verify that it can move **2.0—3.0 mm {0.08—0.12 in}** and is connected securely.
5. Complete the "AFTER SERVICE PRECAUTION". (See 01-14B-5 AFTER SERVICE PRECAUTION [L3 WITH TC].)

am3uuw0000613

Type D Installation

1. Inspect the fuel hose and fuel pipe sealing surface for damage and deformation.
 - If there is any malfunction, replace it with a new one.
2. Apply a small amount of clean engine oil to the sealing surface of the fuel pipe.
3. Install the quick release connector.
 - Insert the fuel pipe straight to the end of the quick release connector.
 - Push down the retainer using a finger.
 - If the retainer cannot be pushed down, push the fuel pipe further to the quick release connector.
4. Lightly pull and push the quick release connector a few times by hand, and then verify that it is connected securely.
5. Complete the "AFTER SERVICE PRECAUTION". (See 01-14B-5 AFTER SERVICE PRECAUTION [L3 WITH TC].)

am3uuw0000585

FUEL SYSTEM [L3 WITH TC]

FUEL INJECTOR REMOVAL/INSTALLATION [L3 WITH TC]

id011439800600

Caution

- Disconnecting/connecting the quick release connector without cleaning it may cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting using a cloth or soft brush, and make sure that it is free of foreign material.

Note

- When the fuel pressure sensor replaces, replace a new fuel delivery pipe with a new fuel pressure sensor.

01-14B

1. Complete the "BEFORE SERVICE PRECAUTION". (See 01-14B-4 BEFORE SERVICE PRECAUTION [L3 WITH TC].)
2. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
3. Disconnect the negative battery cable. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
4. Remove the intake manifold. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
5. Remove in the order indicated in the table.
6. Install in the reverse order of removal.
7. Complete the "AFTER SERVICE PRECAUTION". (See 01-14B-5 AFTER SERVICE PRECAUTION [L3 WITH TC].)

am3uuw0000583

1	High pressure line pipe (See 01-14B-26 High Pressure Line Pipe Removal Note.) (See 01-14B-28 High Pressure Line Pipe Installation Note.)
---	--

2	Fuel delivery pipe (See 01-14B-27 Fuel Delivery Pipe Installation Note.)
3	Fuel injector bracket
4	Fuel injector (See 01-14B-26 Fuel Injector Removal Note.)
5	Relief valve

FUEL SYSTEM [L3 WITH TC]

High Pressure Line Pipe Removal Note

1. Drain the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT [L3 WITH TC].)
2. Disconnect the high pressure line pipe of the high pressure fuel pump. (See 01-14B-17 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC].)

am3uuw0000583

- (1) Fix the joint nut with a wrench on the high pressure fuel pump side as shown in the figure.
- (2) Loosen the high pressure line pipe installation nut.
3. Remove the high pressure line pipe.

Fuel Injector Removal Note

Note

- Depending on the driving conditions, carbon may accumulate on the inserted part of the fuel injector, causing the fuel injector to stick. Remove the fuel injector using the following procedure.

1. Install the **SST** to the fuel injector confirming that the **SST** faces the correct direction as shown in the figure.

Caution

- If the SST slips while ratcheting up the fuel injector, the fuel injector or surrounding parts could be damaged. Press fit the SST to the fuel injector firmly and operate carefully.
- When ratcheting up the fuel injector, the fuel injector connector may contact the cylinder head and damage the fuel injector. Ratchet up the fuel injector so that the fuel injector connector does not contact the cylinder head.

am3uuw0000583

FUEL SYSTEM [L3 WITH TC]

Note

- If fuel injector No.3 contacts the oil separator, cut the tab on the oil separator as shown in the figure. Carefully cut the tab so that the oil separator is not deformed or damaged, with no clearance on the mating surfaces of the oil separator and engine.

am3uuw0000583

01-14B

2. Keep ratcheting the **SST** so that the fuel injector becomes free enough to ratchet up without using the **SST**.

Caution

- **Do not apply excessive force to the fuel injector connector because the fuel injector could be damaged.**

3. Pull out the fuel injector by ratcheting it upright.
4. Verify that there are no gasket in the cylinder heads after removing the fuel injectors.

Warning

- **If foreign material such as metal shavings penetrates the fuel injector installation hole on the cylinder block, the engine could be damaged. Remove all foreign material and cap the fuel injector installation hole after removing the fuel injector.**

5. Clean the fuel injector and around the insertion hole using a vacuum cleaner.

Fuel Delivery Pipe Installation Note

1. Tighten the bolts in the order shown in the figure.

Tightening torque

17—23 N·m {1.8—2.3 kgf·m, 13—16 ft·lbf}

am3uuw0000583

FUEL SYSTEM [L3 WITH TC]

High Pressure Line Pipe Installation Note

1. Temporarily tighten the bolts in the order shown in the figure.

am3uuw0000583

2. Tighten bolts of No.1 shown in the figure.

Tightening torque

17—23 N·m {1.8—2.3 kgf·m, 13—16 ft·lbf}

3. Tighten high pressure line pipe installation nut of No.2 shown in the figure.

am3uuw0000583

- (1) Fix the joint nut with a wrench on the high pressure fuel pump side as shown in the figure.
- (2) Tighten the high pressure line pipe installation nut.

Tightening torque

24—35 N·m {2.5—3.5 kgf·m, 18—25 ft·lbf}

4. Tighten bolts of No.3, No.4 shown in the figure.

Tightening torque

8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

FUEL INJECTOR INSPECTION [L3 WITH TC]

id011439800700

01-14B

Resistance Inspection

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Remove the fuel delivery pipe. (See 01-14B-25 FUEL INJECTOR REMOVAL/INSTALLATION [L3 WITH TC].)
4. Disconnect the fuel injector connectors.
5. Measure the resistance of the fuel injector.

Fuel injector resistance

1.0—1.2 ohms [20 °C {68 °F}]

- If not as specified, replace the fuel injector.
(See 01-14B-25 FUEL INJECTOR
REMOVAL/INSTALLATION [L3 WITH TC].)

Exhaust Manifold Upper Insulator Removal Note

- Remove the charge air cooler cover. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
- Remove the charge air cooler. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
- Remove the charge air cooler bracket. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
- Remove the exhaust manifold upper insulator.

WU-TWC Insulator Removal Note

- Remove the turbocharger insulator. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
- Remove the WU-TWC insulator.

EXHAUST SYSTEM [L3 WITH TC]

Exhaust Manifold Installation Note

1. Tighten the exhaust manifold installation nuts in the order shown.

Tightening torque

43—64 N·m {4.4—6.5 kgf·m, 32—47 ft·lbf}

am3uuw0000579

01-15B

WU-TWC Installation Note

1. Temporarily tighten No.1 shown in the figure.
2. Temporarily tighten No.2 shown in the figure.
3. Temporarily tighten No.3 shown in the figure.
4. Completely tighten No.1 shown in the figure.

Tightening torque

38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}

5. Completely tighten No.2 shown in the figure.

Tightening torque

38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}

6. Completely tighten No.3 shown in the figure.

Tightening torque

38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}

am3uuw0000579

Seal Ring (WU-TWC Side) Installation Note

Caution

- If installation is performed without using the SST, the seal ring will be damaged and deformed, resulting in an incorrect installation. Always use the SST to install the seal ring.

1. Temporarily install the seal ring to the pipe so that the seal ring is even with the flange.

am3uuw0000580

2. Install the SST to the seal ring so that the SST is even with the flange.

am3uuw0000580

EXHAUST SYSTEM [L3 WITH TC]

3. Press in the seal ring by tapping the SST using a plastic hammer until the seal ring contacts the flange.

am3uuw0000580

TWC Installation Note

1. Spray carbon remover (TB6601 or equivalent) on the flared section of the exhaust pipe.
2. Remove the carbon adhering to the flared section shown in the figure using a nylon brush or sandpaper (No. 400 or equivalent).

am3uuw0000580

Seal Ring (TWC Side) Installation Note

Caution

- If installation is performed without using the SST, the seal ring will be damaged and deformed, resulting in an incorrect installation. Always use the SST to install the seal ring.

1. Temporarily install the seal ring to the pipe so that the seal ring is even with the flange.

am3uuw0000580

2. Install the SST to the seal ring so that the SST is even with the flange.

am3uuw0000580

EXHAUST SYSTEM [L3 WITH TC]

3. Press in the seal ring by tapping the SST using a plastic hammer until the seal ring contacts the flange.

am3uuw0000580

01-15B

Presilencer Installation Note

1. Spray carbon remover (TB6601 or equivalent) on the flared section of the exhaust pipe.
2. Remove the carbon adhering to the flared section shown in the figure using a nylon brush or sandpaper (No. 400 or equivalent).

id0116a7803600

am3uuw0000225

FUEL-FILLER CAP INSPECTION [LF, L5]

id0116a7801300

Leakage Inspection

1. Perform the following **SST** (Evaporative Emission System Tester 134-01049A) self-test:

Note

- If the tester does not work correctly during self-test, refer to the tester operators manual for more detailed procedures.

- (1) Verify that the gas cylinder valve is closed and the control valve located on the tester is in the TEST position. All tester displays should be off at this time.

- (2) Connect the long hose (part of **SST**) to the tester.
- (3) Connect the manifold assembly (part of **SST**) to the long hose as shown.
- (4) Open the gas cylinder valve and verify the gas cylinder regulator left gauge reads **69—82 kPa {0.71—0.83 kgf/cm², 10—12 psi}** (preset at factory).

ac9uuw00000195

- If not, refer to the tester operators manual to contact tester manufacturer.

- (5) Press the ON/OFF switch to turn on the **SST** and make sure the left display reads **0.0**.
- (6) Turn the control valve on the tester to the FILL position.

- (7) Verify the left display reading is **within 13.9 to 14.0** in of water.

- If not, adjust the pressure using the regulator knob located on the right side of the tester.

- (8) Turn the control valve to TEST position and press the START switch.

- (9) After the **2-min** countdown (left display) is completed, the right display shows the total pressure loss for that period. A **0.5** in of water loss is acceptable on the self-test.

- If the loss is **more than 0.5** in of water, do one or more self-test. If the failed test repeats, check for leak using the ultrasonic leak detector (part of **SST**).

2. Press the RESET switch to set the left display reading to **0.0**.

3. Connect the fuel cap receiver assembly (part of **SST**) to the manifold assembly and fuel-filler cap from the vehicle.

- If the fuel-filler cap is not a genuine part, replace it.

4. Turn the control valve to the FILL position.

5. Wait (**maximum 20 s**) until the left display reads **13.9 to 14.0** in of water.

- If the reading is slightly below the specification, adjust it using the regulator knob.
- If the reading is far below, the fuel-filler cap has leak. Replace it.

6. Turn the control valve to the TEST position and press the START switch.

7. After the **2-min** countdown (left display) is completed, check the test result (the failed/ passed light on the tester).

- If the green light turns on, the fuel-filler cap is normal.

- If the red light turns on, the fuel-filler cap has leakage. Replace it.

8. Close the gas cylinder valve.

9. Turn the control valve to the FILL position.

10. Press the ON/OFF switch to turn off the tester.

ac9uuw00000195

EMISSION SYSTEM [LF, L5]

AIR FILTER INSPECTION [LF, L5]

id0116a7736400

Airflow Inspection

1. Remove the air filter. (See 01-16A-16 AIR FILTER REMOVAL/INSTALLATION [LF, L5].)
2. Blow from port A and verify that there is airflow from port B.
 - If specified, replace the air filter. (See 01-16A-16 AIR FILTER REMOVAL/INSTALLATION [LF, L5].)
3. Blow from port B and verify that there is airflow from port A.
 - If specified, replace the air filter. (See 01-16A-16 AIR FILTER REMOVAL/INSTALLATION [LF, L5].)

am3uuw0000226

CHARCOAL CANISTER REMOVAL/INSTALLATION [LF, L5]

id0116a7096400

1. Remove in the order indicated in the table.

1	Evaporative hose
2	Quick release connector (See 01-16A-11 QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/INSTALLATION [LF, L5].)
3	Charcoal canister (See 01-16A-6 Charcoal Canister Removal Note.)
4	Charcoal canister bracket (See 01-16A-6 Charcoal Canister Bracket Removal Note.)

2. Install in the reverse order of removal.

am3uuw0000277

Charcoal Canister Removal Note

1. Remove the rear stabilizer. (See 02-14-13 REAR STABILIZER REMOVAL/INSTALLATION.)
2. Remove the rear coil spring. (See 02-14-4 REAR COIL SPRING REMOVAL/INSTALLATION.)
3. Remove the rear lower arm. (See 02-14-6 REAR LOWER ARM REMOVAL/INSTALLATION.)
4. Remove the rear crossmember component. (See 02-14-14 REAR CROSSMEMBER REMOVAL/INSTALLATION.)
5. Remove the charcoal canister.

Charcoal Canister Bracket Removal Note

Note

- The charcoal canister bracket is installed using rivets.

1. Push out the mandrel using a hammer and punch (2—2.8 mm {0.08—0.11 in} diameter).

am3uuw0000278

EMISSION SYSTEM [LF, L5]

2. Remove the flange using a drill (5 mm {0.20 in} drill bit).

ar8uuw00001479

01-16A

CHARCOAL CANISTER INSPECTION [LF, L5]

id0116a7800500

Airflow Inspection

1. Perform the following procedures:

Note

- The ports should not be damaged.
- Assemble the hose used for inspection (bore: **approx. 14.8 mm {0.58 in}**) to port A.
- Cover ports B and C with the caps.

Caution

- **Do not apply a pressure 20 kPa {150 mmHg, 5.91 inHg} or more to the charcoal canister for 1 min. or more. Doing so will damage the charcoal canister.**

am3uuw0000250

2. Apply pressure (**19.6 kPa {147 mmHg, 5.79 inHg}**) through the hose, and verify that air does not leak from the charcoal canister.

- If there is airflow, replace the charcoal canister. (See 01-16A-6 CHARCOAL CANISTER REMOVAL/INSTALLATION [LF, L5].)

am3uuw0000250

EMISSION SYSTEM [LF, L5]

PURGE SOLENOID VALVE REMOVAL/INSTALLATION [LF, L5]

id0116a7804300

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
3. Remove in the order indicated in the table.

1	Purge solenoid valve connector
2	Evaporative hose (See 01-16A-8 Evaporative Hose Installation Note.)
3	Purge solenoid valve

4. Install in the reverse order of removal.

Evaporative Hose Installation Note

1. Install the evaporative hose and clip as shown in the figure.

PURGE SOLENOID VALVE INSPECTION [LF, L5]

id0116a7800900

Airflow inspection

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the purge solenoid valve. (See 01-16A-8 PURGE SOLENOID VALVE REMOVAL/INSTALLATION [LF, L5].)
4. Inspect airflow between the ports under the following conditions.

Measured condition	Continuity between A—B
When voltage is not applied between terminals A and B	No airflow
When voltage is applied between terminals A and B	Airflow detected

- If not as specified, replace the purge solenoid valve. (See 01-16A-8 PURGE SOLENOID VALVE REMOVAL/INSTALLATION [LF, L5].)

EMISSION SYSTEM [LF, L5]

EGR VALVE REMOVAL/INSTALLATION [LF, L5]

id0116a7801000

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
3. Drain the engine coolant from the radiator. (See 01-12A-4 ENGINE COOLANT REPLACEMENT [LF, L5].)
4. Remove the air cleaner and the air hose as a single unit. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
5. Remove the radiator hose (upper, engine side). (See 01-12A-8 RADIATOR REMOVAL/INSTALLATION [LF, L5].)
6. Disconnect the EGR valve connector.
7. Remove in the order indicated in the table.

1	Water hose
2	EGR valve
3	Gasket

8. Install in the reverse order of removal.

atraaw00002991

EGR VALVE INSPECTION [LF, L5]

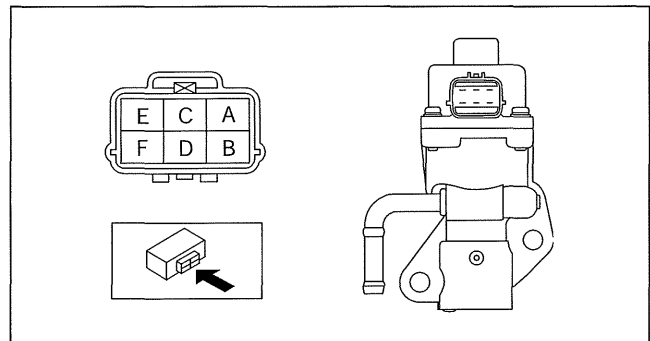

id0116a7801100

Resistance inspection

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Disconnect the EGR valve connector.
4. Measure the resistance between the EGR valve terminals.

EGR valve terminal	Resistance inspection (ohm)
C—A D—B C—E D—F	12—16

- If not within the specification, replace the EGR valve. (See 01-16A-9 EGR VALVE REMOVAL/INSTALLATION [LF, L5].)

am6xuw0000047

POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [LF, L5]

id0116a7819800

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
3. Remove the intake manifold and the fuel distributor component as a single unit. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
4. Remove in the order indicated in the table.

1	Oil separator
2	Retainer (See 01-16A-10 Retainer Removal Note.) (See 01-16A-10 Retainer Installation Note.)
3	PCV valve

5. Install in the reverse order of removal.

am6xuw0000047

01-16A

EMISSION SYSTEM [LF, L5]

Retainer Removal Note

Caution

- Be sure to follow the removal procedures below to prevent the leakage of blow-by gas caused by the damage to the tab of the oil separator or the oil separator itself.

1. Insert a flat blade screwdriver with its tip wrapped in a waste cloth into the gap between the retainer and the oil separator as shown in the figure.
2. Spread the side surface of the retainer outward to dismount it with attention to the tab.

am3uuw0000225

Retainer Installation Note

Caution

- Be sure to replace the old retainer with a new one to prevent the escape of blow-by gas. Reinstalling the old retainer will reduce airtightness.

1. Make sure that the retainer alignment mark is directed as shown in the left diagram before install the retainer to the oil separator.

am6xuw0000047

POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [LF, L5]

id0116a7800400

Airflow Inspection

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the intake manifold and the fuel distributor component as a single unit. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
4. Remove the PCV valve and the oil separator as a single unit. (See 01-16A-9 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [LF, L5].)
5. Verify that there is no airflow when pressure is applied to port A.
 - If there is airflow, replace the PCV valve. (See 01-16A-9 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [LF, L5].)
6. Verify that there is airflow when vacuum is applied to port A.
 - If there is no airflow, replace the PCV valve. (See 01-16A-9 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [LF, L5].)

am3uuw0000225

EMISSION SYSTEM [LF, L5]

ROLLOVER VALVE REMOVAL/INSTALLATION [LF, L5]

id0116a7804600

Note

- The rollover valve cannot be removed as it is built into the fuel tank.

ROLLOVER VALVE INSPECTION [LF, L5]

id0116a7804500

Note

- The rollover valve cannot be disassembled and inspected as it is built into the fuel tank.

1. Perform the fuel tank inspection. (See 01-14A-12 FUEL TANK INSPECTION [LF, L5].)
 - If malfunction, replace the fuel tank. (See 01-14A-8 FUEL TANK REMOVAL/INSTALLATION [LF, L5].)

FUEL SHUT-OFF VALVE REMOVAL/INSTALLATION [LF, L5]

id0116a7809600

Note

- The fuel shut-off valve cannot be removed as it is built into the fuel tank.

FUEL SHUT-OFF VALVE INSPECTION [LF, L5]

id0116a7809700

Note

- The fuel shut-off valve cannot be removed and inspected as it is built into the fuel tank.

1. Perform the fuel tank inspection. (See 01-14A-12 FUEL TANK INSPECTION [LF, L5].)
 - If malfunction, replace the fuel tank (See 01-14A-8 FUEL TANK REMOVAL/INSTALLATION [LF, L5].)

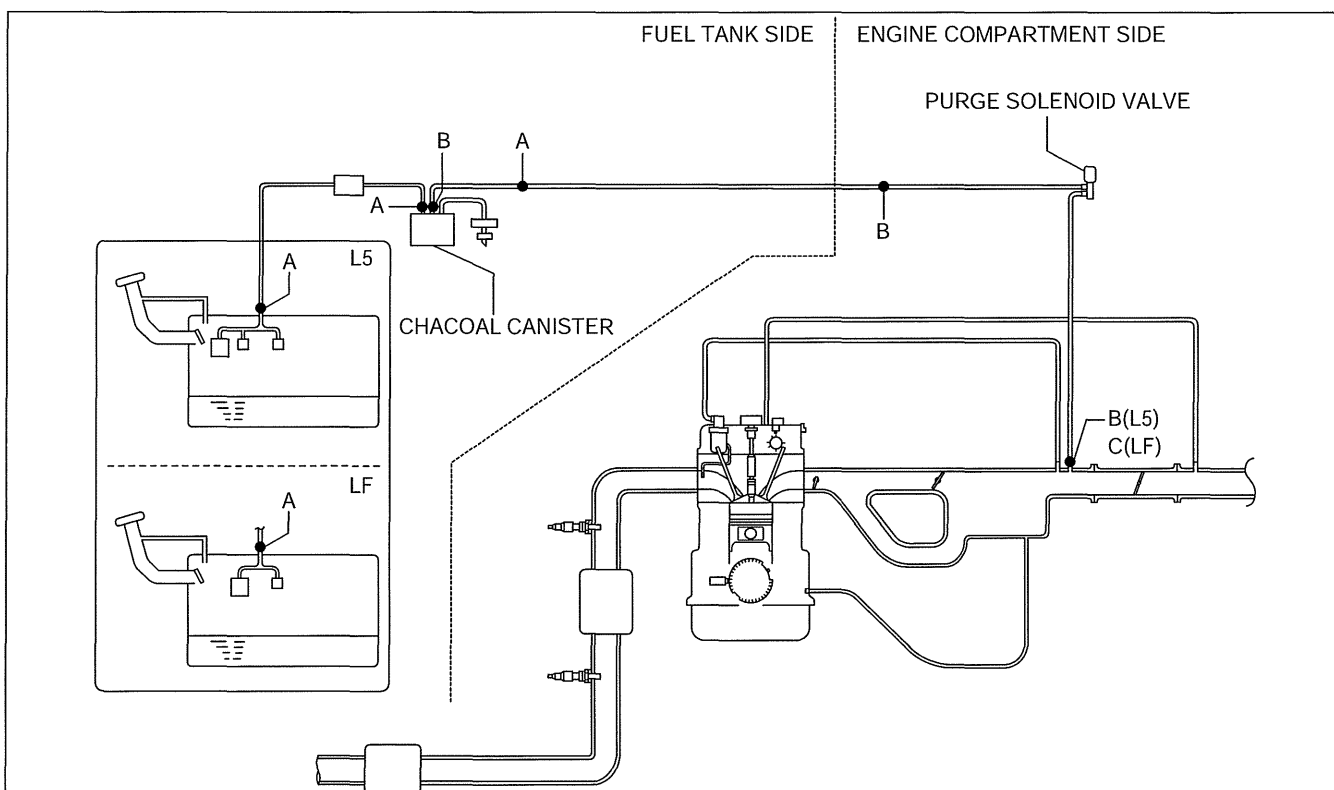

QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/INSTALLATION [LF, L5]

id0116a7805500

Quick Release Connector Type

Caution

- There are Three types of quick release connectors. Verify the type and location, and install/remove properly. (LF)
- There are two types of quick release connectors. Verify the type and location, and install/remove properly. (L5)

am3uuw000250

EMISSION SYSTEM [LF, L5]

Type A Removal

Caution

- Be careful not to damage the pipe when unlocking the retainer.

Note

- When removing the quick release connector, either SST 49 E042 001 or 49 N013 103A (Part of 49 N013 1A0D) can be used.

When using SST 49 E042 001

Note

- If the quick release connector is removed, replace the retainer with a new one.

1. Set the SST parallel to the quick release connector.

Note

- The quick release connector can be removed by pushing the center of the retainer tabs.
- The retainer is attached to the pipe even after the connector is disconnected.

2. Hold the center of the retainer tabs with the SST ends and press the retainer.
3. Pull the connector side and disconnect the quick release connector.
4. Raise a retainer tab using the SST and remove the retainer.
5. Cover the disconnected quick release connector and evaporative pipe with vinyl sheeting or a similar material to prevent it from scratches or dirt.

When using SST 49 N013 103A (Part of 49 N013 1A0D)

1. Insert the SST into the quick release connector.
2. Pull out the evaporative hose straight from the evaporative pipe and disconnect it.
3. Cover the disconnected quick release connector and evaporative pipe with vinyl sheeting or a similar material to prevent it from scratches or dirt.

EMISSION SYSTEM [LF, L5]

Type B Removal

1. Move the retainer upward using a small flathead screwdriver or a similar tool.
2. Pull out the evaporative hose straight from the evaporative pipe and disconnect it.
3. Cover the disconnected quick release connector and evaporative pipe with vinyl sheeting or a similar material to prevent it from scratches or dirt.

am6xuw0000137

01-16A

Type C Removal

Caution

- The quick release connector may be damaged if the release tab is bent excessively. Do not expand the release tab over the stopper.

Note

- The evaporative hose can be removed by pushing it to the pipe side to release the lock.

1. Rotate the release tab on the quick release connector to the stopper position.

am3uuw0000224

2. Pull out the evaporative hose straight from the evaporative pipe and disconnect it.

am3uuw0000224

3. Cover the disconnected quick release connector and evaporative pipe with vinyl sheeting or a similar material to prevent it from scratches or dirt.

am3uuw0000224

Type A Installation

Caution

- Always replace the retainer with a new one when using SST 49 E042 001, otherwise, evaporative leakage could result.

Note

- If the quick release connector O-ring is damaged or has slipped, replace the piping component.
- A checker tab is integrated with the quick release connector for new evaporative hoses and evaporative hoses. Remove the checker tab from the quick release connector after the connector is completely engaged with the evaporative pipe.

1. Inspect the evaporative hose and evaporative pipe sealing surface for damage and deformation.
 - If there is any malfunction, replace it with a new one.
2. Apply a small amount of clean engine oil to the sealing surface of the evaporative pipe.
3. Install a new retainer to the quick release connector.
4. Reconnect the hose straight to the pipe until a click is heard.
5. Lightly pull and push the quick release connector a few times by hand, and then verify that it is connected securely.

am3uuw0000519

Type B Installation

Note

- If the quick release connector O-ring is damaged or has slipped, replace the evaporative hose.
- A checker tab is integrated with the quick release connector for new evaporative hoses. Remove the checker tab from the quick release connector after the connector is completely engaged with the evaporative pipe.

1. Inspect the evaporative hose and evaporative pipe sealing surface for damage and deformation.
 - If there is any malfunction, replace it with a new one.
2. Install the quick release connector.
 - Insert the evaporative pipe straight to the end of the quick release connector.
 - Push down the retainer using a finger.
 - If the retainer cannot be pushed down, push the evaporative pipe further to the quick release connector.
3. Lightly pull and push the quick release connector a few times by hand, and then verify that it is connected securely.

am3uuw0000457

Type C Installation

Note

- If the quick release connector O-ring is damaged or has slipped, replace the evaporative hose.
- A checker tab is integrated with the quick release connector for new evaporative hoses. Remove the checker tab from the quick release connector after the connector is completely engaged with the evaporative pipe.

1. Inspect the evaporative hose and evaporative pipe sealing surface for damaged and deformation.
 - If there is any malfunction, replace it with a new one.
2. Apply a small amount of clean engine oil to the sealing surface of the evaporative pipe.
3. Reconnect the evaporative hose straight to the evaporative pipe until a click is heard.

Note

- If the quick release connector does not move at all, disconnect it, verify that the O-ring is not damaged or has not slipped, and then reconnect the quick release connector.

4. Lightly pull and push the quick release connector a few times by hand, and then verify that it can move **2.0—3.0 mm {0.08—0.12 in}** and is connected securely.

am3uuw0000519

01-16A

CANISTER VENT (CV) SOLENOID VALVE REMOVAL/INSTALLATION [LF, L5]

id0116a7832100

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
3. Remove in the order indicated in the table.

1	CV solenoid valve connector
2	Evaporative hose
3	Evaporative hose (See 01-16A-15 Evaporative Hose Removal Note.)
4	CV solenoid valve

4. Install in the reverse order of removal.

am3uuw0000225

Evaporative Hose Removal Note

1. Disconnect the evaporative hose of fuel tank side.
2. Remove the evaporative hose and CV solenoid valve as a single unit.
3. Remove the evaporative hose.

EMISSION SYSTEM [LF, L5]

CANISTER VENT (CV) SOLENOID VALVE INSPECTION [LF, L5]

id0116a7819200

Airflow Inspection

1. Remove the CV solenoid valve. (See 01-16A-15 CANISTER VENT (CV) SOLENOID VALVE REMOVAL/INSTALLATION [LF, L5].)
2. Inspect airflow between the ports under the following conditions.

Measured condition	Continuity between A—B
When voltage is not applied between terminals A and B	Airflow detected
When voltage is applied between terminals A and B	No airflow

- If not specified, replace the CV solenoid valve. (See 01-16A-15 CANISTER VENT (CV) SOLENOID VALVE REMOVAL/INSTALLATION [LF, L5].)

am3uuw0000224

AIR FILTER REMOVAL/INSTALLATION [LF, L5]

id0116a7832300

1. Remove the fuel-filler pipe protector. (See 01-14A-8 FUEL TANK REMOVAL/INSTALLATION [LF, L5].)
2. Remove in the order indicated in the table.

1	Evaporative hose
2	Air filter

3. Install in the reverse order of removal.

id011639800200

am3uuw0000580

FUEL-FILLER CAP INSPECTION [L3 WITH TC]

id011639801300

Leakage Inspection

1. Perform the following **SST** (Evaporative Emission System Tester 134-01049A) self-test:

Note

- If the tester does not work correctly during self-test, refer to the tester operators manual for more detailed procedures.

- (1) Verify that the gas cylinder valve is closed and the control valve located on the tester is in the TEST position. All tester displays should be off at this time.
 - (2) Connect the long hose (part of **SST**) to the tester.
 - (3) Connect the manifold assembly (part of **SST**) to the long hose as shown.
 - (4) Open the gas cylinder valve and verify the gas cylinder regulator left gauge reads **69—82 kPa {0.71—0.83 kgf/cm², 10—12 psi}** (preset at factory).
 - If not, refer to the tester operators manual to contact tester manufacturer.
 - (5) Press the ON/OFF switch to turn on the **SST** and make sure the left display reads **0.0**.
 - (6) Turn the control valve on the tester to the FILL position.
 - (7) Verify the left display reading is **within 13.9 to 14.0** in of water.
 - If not, adjust the pressure using the regulator knob located on the right side of the tester.
 - (8) Turn the control valve to TEST position and press the START switch.
 - (9) After the **2-min** countdown (left display) is completed, the right display shows the total pressure loss for that period. A **0.5** in of water loss is acceptable on the self-test.
 - If the loss is **more than 0.5** in of water, do one or more self-test. If the failed test repeats, check for leak using the ultrasonic leak detector (part of **SST**).
2. Press the RESET switch to set the left display reading to **0.0**.
3. Connect the fuel cap receiver assembly (part of **SST**) to the manifold assembly and fuel-filler cap from the vehicle.
- If the fuel-filler cap is not a genuine part, replace it.

ac9uuw00000195

EMISSION SYSTEM [L3 WITH TC]

4. Turn the control valve to the FILL position.
5. Wait (**maximum 20 s**) until the left display reads **13.9** to **14.0** in of water.
 - If the reading is slightly below the specification, adjust it using the regulator knob.
 - If the reading is far below, the fuel-filler cap has leak. Replace it.
6. Turn the control valve to the TEST position and press the START switch.
7. After the **2-min** countdown (left display) is completed, check the test result (the failed/ passed light on the tester).
 - If the green light turns on, the fuel-filler cap is normal.
 - If the red light turns on, the fuel-filler cap has leakage. Replace it.
8. Close the gas cylinder valve.
9. Turn the control valve to the FILL position.
10. Press the ON/OFF switch to turn off the tester.

ac9uuw0000196

01-16B

AIR FILTER INSPECTION [L3 WITH TC]

id011639736400

Airflow Inspection

1. Remove the air filter. (See 01-16B-16 AIR FILTER REMOVAL/INSTALLATION [L3 WITH TC].)
2. Blow from port A and verify that there is airflow from port B.
 - If malfunction, replace the air filter. (See 01-16B-16 AIR FILTER REMOVAL/INSTALLATION [L3 WITH TC].)
3. Blow from port B and verify that there is airflow from port A.
 - If malfunction, replace the air filter. (See 01-16B-16 AIR FILTER REMOVAL/INSTALLATION [L3 WITH TC].)

am3uuw0000226

CHARCOAL CANISTER REMOVAL/INSTALLATION [L3 WITH TC]

id011639096400

1. Remove in the order indicated in the table.

1	Evaporative hose
2	Quick release connector (See 01-16B-12 QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/INSTALLATION [L3 WITH TC].)
3	Charcoal canister (See 01-16B-5 Charcoal Canister Removal Note.)
4	Charcoal canister bracket (See 01-16B-6 Charcoal Canister Bracket Removal Note.)

2. Install in the reverse order of removal.

am3uuw0000277

Charcoal Canister Removal Note

1. Remove the rear stabilizer. (See 02-14-13 REAR STABILIZER REMOVAL/INSTALLATION.)
2. Remove the rear coil spring. (See 02-14-4 REAR COIL SPRING REMOVAL/INSTALLATION.)
3. Remove the rear lower arm. (See 02-14-6 REAR LOWER ARM REMOVAL/INSTALLATION.)
4. Remove the rear crossmember component. (See 02-14-14 REAR CROSSMEMBER REMOVAL/INSTALLATION.)
5. Remove the charcoal canister.

EMISSION SYSTEM [L3 WITH TC]

Charcoal Canister Bracket Removal Note

Note

- The charcoal canister bracket is installed using rivets.

- Push out the mandrel using a hammer and punch (2—2.8 mm {0.08—0.11 in} diameter).
- Remove the flange using a drill (5 mm {0.20 in} drill bit).

am3uuw0000278

ar8uuw00001479

CHARCOAL CANISTER INSPECTION [L3 WITH TC]

id011639800500

Airflow Inspection

- Perform the following procedures:

Note

- The ports should not be damaged.
- Assemble the hose used for inspection (bore: approx. 14.8 mm {0.58 in}) to port A.
- Cover ports B and C with the caps.

Caution

- Do not apply a pressure 20 kPa {150 mmHg, 5.91 inHg} or more to the charcoal canister for 1 min. or more. Doing so will damage the charcoal canister.**

am3uuw0000250

- Apply pressure (19.6 kPa {147 mmHg, 5.79 inHg}) through the hose, and verify that air does not leak from the charcoal canister.
 - If there is airflow, replace the charcoal canister. (See 01-16B-5 CHARCOAL CANISTER REMOVAL/INSTALLATION [L3 WITH TC].)

am3uuw0000250

EMISSION SYSTEM [L3 WITH TC]

PURGE SOLENOID VALVE REMOVAL/INSTALLATION [L3 WITH TC]

id011639804300

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
3. Remove in the order indicated in the table.

1	Purge solenoid valve connector
2	Evaporative hose (See 01-16B-7 Evaporative Hose Installation Note.)
3	Purge solenoid valve

4. Install in the reverse order of removal.

am3uuw0000581

01-16B

Evaporative Hose Installation Note

1. Install the evaporative hose and clip as shown in the figure.

am3uuw0000614

EMISSION SYSTEM [L3 WITH TC]

PURGE SOLENOID VALVE INSPECTION [L3 WITH TC]

id011639800900

Airflow inspection

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Remove the purge solenoid valve. (See 01-16B-7 PURGE SOLENOID VALVE REMOVAL/INSTALLATION [L3 WITH TC].)
4. Inspect airflow between the ports under the following conditions.

Measured condition	Continuity between A—B
When voltage is not applied between terminals A and B	No airflow
When voltage is applied between terminals A and B	Airflow detected

- If not as specified, replace the purge solenoid valve. (See 01-16B-7 PURGE SOLENOID VALVE REMOVAL/INSTALLATION [L3 WITH TC].)

am3uuw0000580

CHECK VALVE INSPECTION [L3 WITH TC]

id011639801400

1. Disconnect the vacuum hose connected between the check valve and the purge solenoid valve from the purge solenoid valve.
2. Disconnect the vacuum hose connected between the check valve and the intake manifold from the intake manifold.
3. Blow through the check valve and verify that air flows as specified.

Specification

Condition	Airflow
Air applied from port A to B	Yes
Air applied from port B to A	No*

* : The check valve is normal if the aeration to port A is **3.5 kPa/min {0.03 kgf/cm² min, 0.5 psi/min}** or less when **130 kPa {1.32 kgf/cm², 18.9 psi}** is applied to port B.

- If not as specified, replace the check valve.

acxuuw00003219

EGR VALVE REMOVAL/INSTALLATION [L3 WITH TC]

id011639801000

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
3. Disconnect the EGR valve connector.
4. Remove the air hose and air duct. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
5. Drain the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT [L3 WITH TC].)
6. Remove in the order indicated in the table.

1	Water hose
2	EGR valve

7. Install in the reverse order of removal.

am3uuw0000580

EMISSION SYSTEM [L3 WITH TC]

EGR VALVE INSPECTION [L3 WITH TC]

id011639801100

Resistance Inspection

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Disconnect the EGR valve connector.
4. Measure the resistance between the EGR valve terminals.

EGR valve terminals	Resistance (ohms)
C—A	8—9 [20 °C {68 °F}]
D—B	
C—E	
D—F	

- If not as specified, replace the EGR valve. (See 01-16B-8 EGR VALVE REMOVAL/INSTALLATION [L3 WITH TC])

acxuuw0000051

01-16B

EGR PIPE REMOVAL/INSTALLATION [L3 WITH TC]

id011639810000

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
3. Remove the battery and battery tray. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
4. Remove the following parts. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
 - Fresh-air duct
 - Air cleaner
 - Charge air cooler
 - Air hose
 - Air duct
5. Set the throttle body out of the way. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
6. Remove the EGR pipe.
7. Install in the reverse order of removal.

am3uuw0000582

POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [L3 WITH TC]

id011639819800

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
3. Remove the intake manifold. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
4. Remove in the order indicated in the table.

1	Oil separator
2	Retainer (See 01-16B-10 Retainer Removal Note.) (See 01-16B-10 Retainer Installation Note.)
3	PCV valve

5. Install in the reverse order of removal.

am3uuw0000614

EMISSION SYSTEM [L3 WITH TC]

Retainer Removal Note

Caution

- Be sure to follow the removal procedures below to prevent the leakage of blow-by gas caused by the damage to the tab of the oil separator or the oil separator itself.

1. Insert a flat blade screwdriver with its tip wrapped in a waste cloth into the gap between the retainer and the oil separator as shown in the figure.
2. Spread the side surface of the retainer outward to dismount it with attention to the tab.

Retainer Installation Note

Caution

- Be sure to replace the old retainer with a new one to prevent the escape of blow-by gas. Reinstalling the old retainer will reduce airtightness.

1. Make sure that the retainer alignment mark is directed as shown in the left diagram before install the retainer to the oil separator.

POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [L3 WITH TC]

id011639800400

Airflow Inspection

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Remove the intake manifold. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
4. Remove the PCV valve and the oil separator as a single unit. (See 01-16B-9 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [L3 WITH TC].)
5. Verify that there is no airflow when pressure is applied to port A.
 - If there is airflow, replace the PCV valve. (See 01-16B-9 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [L3 WITH TC].)
6. Verify that there is airflow when vacuum is applied to port A.
 - If there is no airflow, replace the PCV valve. (See 01-16B-9 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [L3 WITH TC].)

EMISSION SYSTEM [L3 WITH TC]

WARM-UP THREE-WAY CATALYTIC CONVERTER (WU-TWC) INSPECTION [L3 WITH TC]

id011639801200

Caution

- Perform the following procedures, DTC P0421 is indicated only.

1. Connect the M-MDS to the DLC-2.
2. Start the engine and warm it up to normal operating temperature.
3. Turn off the engine.
4. Verify that the engine compression is within the specification. (See 01-10B-12 COMPRESSION INSPECTION [L3 WITH TC].)
 - If the compression pressure is not within the specification, repair or replace the malfunction part.
5. Drive the vehicle for **10 min at 65—96 km/h {40—60 mph}** to allow the WU-TWC to reach operating
6. Stop the vehicle and leave it in a safe space.
7. Access Test ID 10:21:80 on the “Diagnostic Monitoring Test Result” function.
8. Verify that the test result is within the specified indicated on the M-MDS.
 - If it is not as specified, replace the WU-TWC. (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)

am3uuw0000597

01-16B

ROLLOVER VALVE REMOVAL/INSTALLATION [L3 WITH TC]

id011639804600

Note

- The rollover valve cannot be removed as it is built into the fuel tank.

ROLLOVER VALVE INSPECTION [L3 WITH TC]

id011639804500

Note

- The rollover valve cannot be disassembled and inspected as it is built into the fuel tank.

1. Perform the fuel tank inspection. (See 01-14B-12 FUEL TANK INSPECTION [L3 WITH TC].)
 - If malfunction, replace the fuel tank. (See 01-14B-8 FUEL TANK REMOVAL/INSTALLATION [L3 WITH TC].)

FUEL SHUT-OFF VALVE REMOVAL/INSTALLATION [L3 WITH TC]

id011639809600

Note

- The fuel shut-off valve cannot be removed as it is built into the fuel tank.

FUEL SHUT-OFF VALVE INSPECTION [L3 WITH TC]

id011639809700

Note

- The fuel shut-off valve cannot be removed and inspected as it is built into the fuel tank.

1. Perform the fuel tank inspection. (See 01-14B-12 FUEL TANK INSPECTION [L3 WITH TC].)
 - If malfunction, replace the fuel tank (See 01-14B-8 FUEL TANK REMOVAL/INSTALLATION [L3 WITH TC].)

EMISSION SYSTEM [L3 WITH TC]

QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/INSTALLATION [L3 WITH TC]

id011639805500

Quick Release Connector Type

Caution

- There are three types of quick release connectors. Verify the type and location, and install/remove properly.

am3uuw0000581

Type A Removal

Caution

- Be careful not to damage the pipe when unlocking the retainer.

Note

- When removing the quick release connector, either SST 49 E042 001 or 49 N013 103A (Part of 49 N013 1A0D) can be used.

When using SST 49 E042 001

Note

- If the quick release connector is removed, replace the retainer with a new one.

1. Set the SST parallel to the quick release connector.

Note

- The quick release connector can be removed by pushing the center of the retainer tabs.
- The retainer is attached to the pipe even after the connector is disconnected.

2. Hold the center of the retainer tabs with the SST ends and press the retainer.
3. Pull the connector side and disconnect the quick release connector.

am3uuw0000581

EMISSION SYSTEM [L3 WITH TC]

4. Raise a retainer tab using the SST and remove the retainer.
5. Cover the disconnected quick release connector and evaporative pipe with vinyl sheeting or a similar material to prevent it from scratches or dirt.

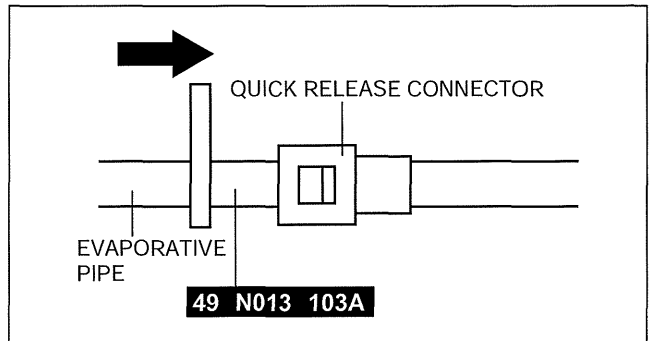

am3uuw0000581

01-16B

When using SST 49 N013 103A (Part of 49 N013 1A0D)

1. Insert the SST into the quick release connector.
2. Pull out the evaporative hose straight from the evaporative pipe and disconnect it.
3. Cover the disconnected quick release connector and evaporative pipe with vinyl sheeting or a similar material to prevent it from scratches or dirt.

am3uuw0000581

Type B Removal

1. Move the retainer upward using a small flathead screwdriver or a similar tool.
2. Pull out the evaporative hose straight from the evaporative pipe and disconnect it.
3. Cover the disconnected quick release connector and evaporative pipe with vinyl sheeting or a similar material to prevent it from scratches or dirt.

am3uuw0000581

Type C Removal

Note

- If the quick release connector is removed, replace the retainer with a new one.

1. Push the retainer.

Note

- The quick release connector can be removed by pushing the center of the retainer tabs.
- The retainer is attached to the pipe even after the connector is disconnected.

2. Pull the connector side and disconnect the quick release connector.
3. Cover the disconnected quick release connector and evaporative pipe with vinyl sheeting or a similar material to prevent it from scratches or dirt.

am3uuw0000615

EMISSION SYSTEM [L3 WITH TC]

Type A Installation

Caution

- Always replace the retainer with a new one when using SST 49 E042 001, otherwise, evaporative leakage could result.

Note

- If the quick release connector O-ring is damaged or has slipped, replace the piping component.
- A checker tab is integrated with the quick release connector for new evaporative hoses and evaporative hoses. Remove the checker tab from the quick release connector after the connector is completely engaged with the evaporative pipe.

1. Inspect the evaporative hose and evaporative pipe sealing surface for damage and deformation.
 - If there is any malfunction, replace it with a new one.
2. Apply a small amount of clean engine oil to the sealing surface of the evaporative pipe.
3. Install a new retainer to the quick release connector.
4. Reconnect the hose straight to the pipe until a click is heard.
5. Lightly pull and push the quick release connector a few times by hand, and then verify that it is connected securely.

am3uuw0000615

Type B Installation

Note

- If the quick release connector O-ring is damaged or has slipped, replace the evaporative hose.
- A checker tab is integrated with the quick release connector for new evaporative hoses. Remove the checker tab from the quick release connector after the connector is completely engaged with the evaporative pipe.

1. Inspect the evaporative hose and evaporative pipe sealing surface for damage and deformation.
 - If there is any malfunction, replace it with a new one.
2. Apply a small amount of clean engine oil to the sealing surface of the evaporative pipe.
3. Install the quick release connector.
 - Insert the evaporative pipe straight to the end of the quick release connector.
 - Push down the retainer using a finger.
 - If the retainer cannot be pushed down, push the evaporative pipe further to the quick release connector.
4. Lightly pull and push the quick release connector a few times by hand, and then verify that it is connected securely.

am3uuw0000582

Type C Installation

Note

- If the quick release connector O-ring is damaged or has slipped, replace the ventilation hose.
- A checker tab is integrated with the quick release connector for new ventilation hose. Remove the checker tab from the quick release connector after the connector is completely engaged with the pipe.

1. Inspect the ventilation hose and pipe sealing surface for damaged and deformation.
 - If there is any malfunction, replace it with a new one.
2. Apply a small amount of clean engine oil to the sealing surface of the pipe.
3. Reconnect the ventilation hose straight to the pipe until a click is heard.

Note

- If the quick release connector does not move at all, disconnect it, verify that the O-ring is not damaged or has not slipped, and then reconnect the quick release connector.
4. Lightly pull and push the quick release connector a few times by hand, and then verify that it can move **2.0—3.0 mm {0.08—0.12 in}** and is connected securely.

am3uuw0000615

01-16B

CANISTER VENT (CV) SOLENOID VALVE REMOVAL/INSTALLATION [L3 WITH TC]

id011639832100

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
3. Remove in the order indicated in the table.

1	CV solenoid valve connector
2	Evaporative hose
3	Evaporative hose (See 01-16B-15 Evaporative Hose Removal Note.)
4	CV solenoid valve

4. Install in the reverse order of removal.

am3uuw0000613

Evaporative Hose Removal Note

1. Disconnect the evaporative hose of fuel tank side.
2. Remove the evaporative hose and CV solenoid valve as a single unit.
3. Remove the evaporative hose.

EMISSION SYSTEM [L3 WITH TC]

CANISTER VENT (CV) SOLENOID VALVE INSPECTION [L3 WITH TC]

id011639819200

Airflow Inspection

1. Remove the CV solenoid valve. (See 01-16B-15 CANISTER VENT (CV) SOLENOID VALVE REMOVAL/INSTALLATION [L3 WITH TC].)
2. Inspect airflow between the ports under the following conditions.

Measured condition	Continuity between A—B
When voltage is not applied between terminals A and B	Airflow detected
When voltage is applied between terminals A and B	No airflow

- If not specified, replace the CV solenoid valve. (See 01-16B-15 CANISTER VENT (CV) SOLENOID VALVE REMOVAL/INSTALLATION [L3 WITH TC].)

am3uuw000224

AIR FILTER REMOVAL/INSTALLATION [L3 WITH TC]

id011639832300

1. Remove the fuel-filler pipe protector. (See 01-14B-8 FUEL TANK REMOVAL/INSTALLATION [L3 WITH TC].)
2. Remove in the order indicated in the table.

1	Evaporative hose
2	Air filter

3. Install in the reverse order of removal.

Battery Cover Installation Note

1. Install with battery cover hooks A aligned with the battery tray holes at two points.

am3uuw0000485

2. Install with battery cover hooks D aligned with the battery tray flange at four points.

am3uuw0000485

3. Set the battery cover to battery tray hooks C at two points.

am3uuw0000485

CHARGING SYSTEM [LF, L5]

BATTERY INSPECTION [LF, L5]

id0117a8800600

Warning

- Since battery acid is toxic, be careful when handling the battery.
- Since battery acid is highly corrosive, be careful not to allow it to contact clothing or the vehicle.
- In case battery acid contacts skin, eyes, or clothing, flush it immediately with running water. Especially if the acid gets in the eyes, flush with water for more than 15 min and get prompt medical attention.

Electrolyte Specific Gravity

1. Measure the electrolyte specific gravity using a hydrometer.
 - If it is less than the specification, recharge the battery. (See 01-17A-5 BATTERY RECHARGING [LF, L5].)

Battery electrolyte specific gravity [20 °C {68 °F}]
1.22—1.29

Battery Voltage

1. Inspect the battery as follows:

Step	Inspection		Action
1	Measure the battery positive voltage.	12.4 V or more	Go to Step 3.
		Less than 12.4 V	Go to the next step.
2	Quick charge for 30 min and recheck voltage.	12.4 V or more	Go to the next step.
		Less than 12.4 V	Replace the battery.
3	Using the battery load tester, apply load current (see battery load test current) and record battery voltage after 15 s . Is voltage more than the specification?	Yes	Normal
		No	Replace the battery.

Battery load test current

50D20L (40): 150 A

55D23L (48): 180 A

75D23L (52): 195 A

Standard specification

Battery temp. (°C {°F})	Minimum voltage (V)
4 {39}	9.3
10 {50}	9.4
16 {61}	9.5
21 {70}	9.6

CHARGING SYSTEM [LF, L5]

Back-up Current

1. Verify that the ignition is off (key has been removed) and that all doors are closed.
2. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
3. Disconnect the negative battery cable.

Caution

- Operating electrical loads while the back-up current is being measured can damage the tester.

Note

- If the battery is not left undisturbed for **10 min or more, but less than 2.5 hours**, the tester will indicate a high value (**approx. 200 mA**).
 - If the ignition or any electrical accessory is operated after the tester is connected, the battery must be left undisturbed for **10 min or more, but less than 2.5 hours** from that point.
 - For vehicles with the immobilizer system, the system periodically shifts synchronization of the security light flashing. Therefore, **65 mA (0.1 s)** current is supplied when the security light is illuminated, and **40 mA (2 s)** current is supplied when the security light is not illuminated. In addition, the measuring instrument, which shows the average value, indicates around **55 mA**.
4. Connect the tester between the negative battery terminal and negative battery cable, leave the battery undisturbed for **10 min or more, but less than 2.5 hours**, and then measure the back-up current.
 - If not within the specification, measure the back-up current while removing the fuses one by one from the inside of the main fuse block and the inside of the fuse block.
 - Inspect and repair wiring harnesses and connectors of the fuse where the current has decreased.

Battery back-up current (When the ignition is off (key is removed) and all doors are closed.) 40—65 mA

Note

- If the battery is left for **2.5 hours or more**, a battery back-up current value of **25—45 mA** is indicated.

BATTERY RECHARGING [LF, L5]

id0117a8800700

Warning

- Keep all flames away from the battery, otherwise evaporated gas from the battery fluid may catch fire, and cause serious injury.
- Remove the battery filler caps when recharging to prevent battery deformation or damage.

Caution

- Do not quick charge for more than 30 min. It will damage the battery.

1. Remove the battery and then place it in a pan of water.
2. Remove the battery filler caps.
3. Connect a battery charger to the battery and adjust the charging current as follows.

Battery slow charge current

- 50D20L (40): 4.0—5.0 A
- 55D23L (48): 4.5—5.5 A
- 75D23L (52): 5.0—6.0 A

Battery quick charge current [30 min]

- 50D20L (40): 25 A
- 55D23L (48): 30 A
- 75D23L (52): 35 A

am3uuw0000485

4. After the battery is recharged, verify that the voltage is within the specification and remains at the same value for **1 h or more** after the recharging has been completed.
 - If not within the specification, replace the battery.

Standard voltage

12.4 V or more

01-17A

CHARGING SYSTEM [LF, L5]

GENERATOR REMOVAL/INSTALLATION [LF, L5]

id0117a8800200

Warning

- Remove and install all parts when the engine is cold, otherwise they can cause severe burns or serious injury.
- When the battery cables are connected, touching the vehicle body with generator terminal B will generate sparks. This can cause personal injury, fire, and damage to the electrical components. Always disconnect the negative battery cable before performing the following operation.

Caution

- The generator can be damaged by the heat from the exhaust manifold. Make sure the generator duct is installed securely (L5).

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the aerodynamic under cover No.2 and splash shield as a single unit. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.) (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION)
4. Remove the generator drive belt with the A/C drive belt still installed and set it out of the way. (LF) (See 01-10A-6 DRIVE BELT REMOVAL/INSTALLATION [LF, L5].)
5. Remove the drive belt. (L5) (See 01-10A-6 DRIVE BELT REMOVAL/INSTALLATION [LF, L5].)
6. Remove in the order indicated in the table.
7. Install in the reverse order of removal.

LF

1	Terminal B cable
2	Generator connector
3	Generator (See 01-17A-7 Generator Installation Note (LF).)

CHARGING SYSTEM [LF, L5]

2	Generator duct bracket

3	Terminal B cable
4	Generator connector
5	Generator (See 01-17A-7 Generator Removal Note (L5).) (See 01-17A-8 Generator Installation Note (L5).)

Generator Installation Note (LF)

1. Align the generator fixing hole with the engine side hole, then temporarily tighten the generator installation bolts in the order of A, B, C, and D.
2. Securely tighten the generator installation bolts in the order of A, B, C, and D.

Generator Duct Removal Note (L5)

1. Remove the generator duct from above the engine compartment.

Generator Removal Note (L5)

1. Set the cooler pipe out of the way. (See 07-11-24 REFRIGERANT LINE REMOVAL/INSTALLATION.)

am3uuw0000326

CHARGING SYSTEM [LF, L5]

- Remove the generator from above the engine compartment.

am3uuw0000326

Generator Installation Note (L5)

- Tighten bolt A temporarily.
- Tighten bolt B, C to the specified tightening torque.
- Tighten bolt A to the specified tightening torque.

Generator Duct Installation Note (L5)

- Install the generator duct to the generator duct bracket and tighten nuts temporarily.
- Tighten nuts to the specified tightening torque.

GENERATOR INSPECTION [LF, L5]

id0117a8800300

Caution

- Do not apply direct battery positive voltage to generator terminal D, otherwise it could cause damage to the internal parts (power transistor) of the generator.

Generator Warning Light

- Verify that the battery is fully charged.
- Verify that the drive belt is correct. (See 01-10A-5 DRIVE BELT INSPECTION [LF, L5].)
- Switch the ignition to ON, verify that the generator warning light illuminates.
 - If it does not illuminate, inspect the generator warning light and the wiring harness.
 - If the generator warning light and the wiring harness are normal, inspect the PCM.
- Verify that the generator warning light goes out after the engine is started.
 - If the generator warning light does not go out, perform the DTC inspection, then perform troubleshooting according to the corresponding diagnostic procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) (See 01-02A-17 DTC TABLE [LF, L5].)

Generator Voltage

- Verify that the battery is fully charged.
- Verify that the drive belt is correct. (See 01-10A-5 DRIVE BELT INSPECTION [LF, L5].)
- Turn off all electrical loads.
- Start the engine.
- Verify that the generator rotates smoothly without any noise while the engine is running.
 - If there is any noise, find the cause and repair or replace the generator.
- Measure the voltage at each terminal using a tester.
 - If it is not as specified, find the cause and repair or replace the applicable part.

Generator standard voltage [IG-ON]

Terminal B: B+

Terminal P: Approx. 1 V or less

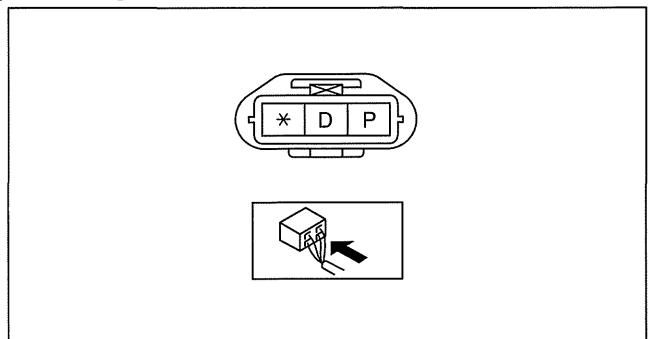

Terminal D: Approx. 0 V

Generator standard voltage [Idle, 20 °C {68 °F}]

Terminal B: 13—15 V

Terminal P: Approx. 3—8 V

Terminal D: Turn the electrical loads (headlights, blower motor, rear window defroster, brake lights, etc.) on and verify that the voltage reading increases.

am6zzw0000234

CHARGING SYSTEM [LF, L5]

Current

Note

- Since the charging current decreases rapidly after starting the engine, carry out the following procedure quickly, and read the maximum current value.

1. Verify that the battery is fully charged.
2. Verify that the drive belt is correct. (See 01-10A-5 DRIVE BELT INSPECTION [LF, L5].)
3. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
4. Disconnect the negative battery cable.
5. Connect a tester, which can read **120 A or more**, between generator terminal B and the wiring harness.
6. Connect the negative battery cable.
7. Turn off all electrical loads.
8. Start the engine.
9. Increase engine speed to **2,500 rpm**.

Note

- When the electrical load on the vehicle is low, the specified current cannot be verified although the generator is normal. In this case, increase the electrical load (Leave the headlights turned on for a while, then discharge the battery, or use a similar method.) and recheck.
- When the generator itself or the ambient temperature are too high, the specified current also cannot be verified. In this case, cool down the generator and recheck.

10. Turn the electrical loads (headlights, blower motor, rear window defroster, brake lights, etc.) on and verify that the current reading increases more than the minimum value indicated below.
 - If it is not as specified, go to the PCM and generator shearing inspection. (See 01-17A-9 PCM and generator shearing inspection.)

Generator generated current minimum value

70% of the nominal output current (nominal output current: 100 A)

[Ambient temp. 20 °C {68 °F}, voltage 13.0—15.0 V, both engine and generator are hot]

PCM and generator shearing inspection

1. Connect the M-MDS to the DLC-2.

am3uuw0000326

01-17A

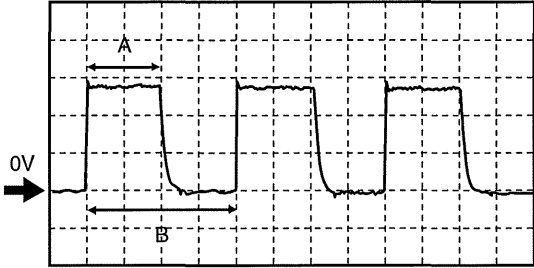

CHARGING SYSTEM [LF, L5]

2. Inspect as follows:

Step	Inspection		Action
1	Measure the generator terminal B voltage when the electrical loads* ¹ are on and off.	15 V or more	Go to Step 2.
		13—15 V	Normal* ²
		13 V or less	Go to Step 3.
2	Monitor the ALTT V PID using the M-MDS, (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) or measure the PCM 2AF terminal waveform using an oscilloscope. (See 01-40A-8 PCM INSPECTION [LF, L5].) Is the value normal?	Yes	Go to Step 4.
		No	Inspect followings, then repair or replace as necessary. <ul style="list-style-type: none"> • If there is no malfunction, replace the PCM. <ol style="list-style-type: none"> 1. Wiring harness between PCM terminal 2AF-generator terminal P. 2. Wiring harness between PCM terminal 2AA-generator terminal D. 3. Generator inner parts.
3	Monitor the ALTT V PID using the M-MDS, (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) or measure the PCM 2AF terminal waveform using an oscilloscope. (See 01-40A-8 PCM INSPECTION [LF, L5].) Is the value normal?	Yes	Go to Step 5.
		No	Inspect followings, then repair or replace as necessary. <ul style="list-style-type: none"> • If there is no malfunction, replace the PCM. <ol style="list-style-type: none"> 1. Wiring harness between PCM terminal 2AF-generator terminal P. 2. Wiring harness between PCM terminal 2AA-generator terminal D. 3. Generator inner parts.
4	Monitor the ALTF PID using the M-MDS, or calculate the duty value of the PCM terminal 2AA using an oscilloscope. Is the duty value 100%?	Yes	Replace PCM.
		No	Inspect followings, then repair or replace as necessary. <ul style="list-style-type: none"> • If there is no malfunction, replace the PCM. <ol style="list-style-type: none"> 1. Wiring harness between PCM terminal 2AA-generator terminal D. 2. Generator inner parts.

CHARGING SYSTEM [LF, L5]

Step	Inspection	Action
5	<p>Monitor the ALTF PID using the M-MDS, or calculate the duty value of the PCM terminal 2AA using an oscilloscope. Is the duty value 0%?</p>  <p style="text-align: center;">$\frac{A}{B} \times 100 (\%) = \text{DUTY} (\%)$</p>	<p>Yes: Replace PCM.</p> <p>No: Inspect followings, then repair or replace as necessary.</p> <ul style="list-style-type: none"> If there is no malfunction, replace the PCM. <ol style="list-style-type: none"> Wiring harness between PCM terminal 2AA-generator terminal D. Generator inner parts.

01-17A

*1 : Headlights, blower motor, rear window defroster, brake lights, etc.

*2 : If the generator field coil duty value does not change when electrical loads (such as headlights, blower motor, rear window defroster, brake lights) are on or off, inspection with discharged battery is needed.

Generator Inner Parts

Rotor

- Measure the resistance between the slip rings using a tester.
 - If not within the specification, replace the rotor.

Generator rotor resistance (between slip rings) [20 °C {68 °F}]
1.9—2.2 ohms

am6zzw0000235

- Verify that there is no continuity between the slip ring and core using a tester.
 - If there is continuity, replace the rotor.
- Inspect the slip ring surface condition.
 - If the slip ring surface is rough, use a lathe or fine sandpaper to smooth it.

am6zzw0000235

CHARGING SYSTEM [LF, L5]

Stator coil

1. Verify that the continuity is as indicated in the table.

○—○ : Continuity

Terminal					
1	2	3	4	5	6
○—○					
○—○		○—○			
	○—○				
			○—○		
			○—○	○—○	
				○—○	

am6zzw0000235

- If there is any malfunction, replace the stator.
2. Verify that there is no continuity between the stator coil leads and core using a tester.
 - If there is continuity, replace the stator coil.

am6zzw0000235

am3uuw0000326

Brush

1. Inspect brushes for wear.
 - If any brush is worn almost to or beyond the limit, replace all of the brushes.

Generator brush length

Standard: 22.5 mm {0.886 in}

Minimum: 5.0 mm {0.20 in}

am6zzw0000235

Brush spring

1. Measure the force of the brush spring using a spring pressure gauge.
2. Read the spring pressure gauge at the brush tip projection of **2 mm {0.08 in}**.
 - If not within the specification, replace the brush spring.

Generator brush spring force

Standard: 4.1—5.3 N {0.42—0.54 kgf, 1.0—1.1 lbf}

Minimum: 1.7 N {0.17 kgf, 0.38 lbf}

am3uuw0000326

CHARGING SYSTEM [LF, L5]

Rectifier (Using an analog circuit tester)

1. Inspect for continuity of the diodes using an analog circuit tester.
 - If not as specified, replace the rectifier.

Specification

Negative	Positive	Continuity
E	P1, P2, P3, P4, P5, P6	Yes
B		No
P1, P2, P3, P4, P5, P6	E	No
	B	Yes

am6zzw0000235

01-17A

Rectifier (Using a digital circuit tester)

1. Inspect for continuity of the diodes using a digital circuit tester.
 - If not as specified, replace the rectifier.

Specification

Negative	Positive	Continuity
E	P1, P2, P3, P4, P5, P6	No
B		Yes
P1, P2, P3, P4, P5, P6	E	Yes
	B	No

Bearing

1. Inspect for abnormal noise, looseness, and sticking.
 - Replace the bearing if necessary.

am6zzw0000235

CHARGING SYSTEM [LF, L5]

GENERATOR DISASSEMBLY/ASSEMBLY [LF, L5]

id0117a8800400

Caution

- Melt the solder quickly, otherwise the diodes (rectifier) and regulator will be damaged by excessive heat.

1. Disassemble in the order indicated in the table.
2. Assemble in the reverse order of disassembly.

Battery Cover Removal Note

Caution

- To prevent component damage, stand at the front of the vehicle and remove the battery cover one side at a time.
- When pulling the clips, do not apply excessive force to a clip using the screwdriver or pair of pliers.
- If excessive force is applied to the clips, they could be damaged. When removing the battery cover, use the following procedure to prevent damaging the clips.

am3uuw0000582

1. Remove the battery cover using the following procedure.

- (1) Pull the clip (LH) in the outward direction approx.4 mm {0.2 in} and disengage the battery cover tabs.
- (2) Pull the clip (RH) in the outward direction approx.4 mm {0.2 in} and disengage the battery cover tabs.
- (3) Remove the battery cover.

am3uuw0000617

CHARGING SYSTEM [L3 WITH TC]

PCM Cover No.1 Installation Note

1. Install the PCM cover No.1 hook to the PCM cover No.2 holes.

01-17B

2. Install with PCM cover No.1 hooks A aligned with the PCM cover No.2 and PCM bracket holes.

3. Install the PCM cover No.1 to the PCM cover No.2 hook.

Battery Installation Note

Caution

- To prevent damaging the clips on the battery tray, install the battery carefully so that it does not contact the clips.

Battery Clamp Installation Note

1. Assemble the battery clamp so that the arrow on it is pointed toward the front of the vehicle.

CHARGING SYSTEM [L3 WITH TC]

Battery Box Installation Note

1. Assemble with battery box hooks B aligned with the battery tray holes at two points.

Battery Cover Installation Note

1. Install with battery cover hooks C aligned with the battery tray holes at two points.

2. Set the battery cover to battery tray clips D at two points.

BATTERY INSPECTION [L3 WITH TC]

id011739800600

Warning

- Since battery acid is toxic, be careful when handling the battery.
- Since battery acid is highly corrosive, be careful not to allow it to contact clothing or the vehicle.
- In case battery acid contacts skin, eyes, or clothing, flush it immediately with running water. Especially if the acid gets in the eyes, flush with water for more than 15 min and get prompt medical attention.

Electrolyte Specific Gravity

1. Measure the electrolyte specific gravity using a hydrometer.
 - If it is less than the specification, recharge the battery. (See 01-17B-6 BATTERY RECHARGING [L3 WITH TC].)

Battery electrolyte specific gravity [20 °C {68 °F}]
1.22—1.29

CHARGING SYSTEM [L3 WITH TC]

Battery Voltage

1. Inspect the battery as follows:

Step	Inspection		Action
1	Measure the battery positive voltage.	12.4 V or more	Go to Step 3.
		Less than 12.4 V	Go to the next step.
2	Quick charge for 30 min and recheck voltage.	12.4 V or more	Go to the next step.
		Less than 12.4 V	Replace the battery.
3	Using the battery load tester, apply load current (see battery load test current) and record battery voltage after 15 s . Is voltage more than the specification?	Yes	Normal
		No	Replace the battery.

01-17B

Battery load test current

55D23L (48): 180 A

75D23L (52): 195 A

Standard specification

Battery temp. (°C {°F})	Minimum voltage (V)
4 {39}	9.3
10 {50}	9.4
16 {61}	9.5
21 {70}	9.6

Back-up Current

- Verify that the ignition is off (key has been removed) and that all doors are closed.
- Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
- Disconnect the negative battery cable.

Caution

- Operating electrical loads while the back-up current is being measured can damage the tester.

Note

- If the battery is not left undisturbed for **10 min or more, but less than 2.5 hours**, the tester will indicate a high value (**approx. 200 mA**).
 - If the ignition or any electrical accessory is operated after the tester is connected, the battery must be left undisturbed for **10 min or more, but less than 2.5 hours** from that point.
 - For vehicles with the immobilizer system, the system periodically shifts synchronization of the security light flashing. Therefore, **65 mA (0.1 s)** current is supplied when the security light is illuminated, and **40 mA (2 s)** current is supplied when the security light is not illuminated. In addition, the measuring instrument, which shows the average value, indicates around **55 mA**.
- Connect the tester between the negative battery terminal and negative battery cable, leave the battery undisturbed for **10 min or more, but less than 2.5 hours**, and then measure the back-up current.
 - If not within the specification, measure the back-up current while removing the fuses one by one from the inside of the main fuse block and the inside of the fuse block.
 - Inspect and repair wiring harnesses and connectors of the fuse where the current has decreased.

Battery back-up current (When the ignition is off (key is removed) and all doors are closed.)

40—65 mA

Note

- If the battery is left for **2.5 hours or more**, a battery back-up current value of **25—45 mA** is indicated.

CHARGING SYSTEM [L3 WITH TC]

BATTERY RECHARGING [L3 WITH TC]

id011739800700

Warning

- Keep all flames away from the battery, otherwise evaporated gas from the battery fluid may catch fire, and cause serious injury.
- Remove the battery filler caps when recharging to prevent battery deformation or damage.

Caution

- Do not quick charge for more than 30 min. It will damage the battery.

1. Remove the battery and then place it in a pan of water.
2. Remove the battery filler caps.
3. Connect a battery charger to the battery and adjust the charging current as follows.

Battery slow charge current

55D23L (48): 4.5—5.5 A

75D23L (52): 5.0—6.0 A

Battery quick charge current [30 min]

55D23L (48): 30 A

75D23L (52): 35 A

am3uuw0000485

4. After the battery is recharged, verify that the voltage is within the specification and remains at the same value for **1 h or more** after the recharging has been completed.
 - If not within the specification, replace the battery.

Standard voltage

12.4 V or more

GENERATOR REMOVAL/INSTALLATION [L3 WITH TC]

id011739800200

Warning

- Remove and install all parts when the engine is cold, otherwise they can cause severe burns or serious injury.
- When the battery cables are connected, touching the vehicle body with generator terminal B will generate sparks. This can cause personal injury, fire, and damage to the electrical components. Always disconnect the negative battery cable before performing the following operation.

Caution

- The generator can be damaged by the heat from the exhaust manifold. Make sure the generator duct is installed securely.

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Remove the charge air cooler and charge air cooler bracket. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
4. Remove the insulator (body side) and exhaust manifold upper insulator. (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
5. Remove the aerodynamic under cover No.2 and splash shield as a single unit. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.) (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)
6. Remove the drive belt. (See 01-10B-4 DRIVE BELT REMOVAL/INSTALLATION [L3 WITH TC].)
7. Remove in the order indicated in the table.
8. Install in the reverse order of removal.

CHARGING SYSTEM [L3 WITH TC]

01-17B

1	Generator duct (See 01-17B-7 Generator Duct Removal Note.)
2	Wiring harness bracket
3	Terminal B cable

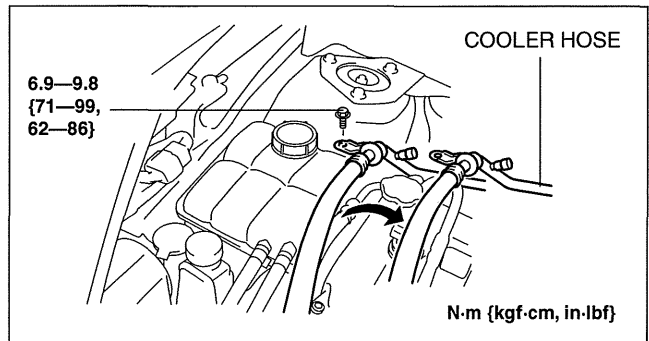

4	Generator connector
5	Generator (See 01-17B-7 Generator Removal Note.) (See 01-17B-7 Generator Installation Note.)

Generator Duct Removal Note

1. Remove the generator duct fitting nuts, and position it in the engine compartment in a location where no part can be damaged.

Generator Removal Note

1. Remove the cooler hose bracket bolt and set the cooler hose out of the way before performing the generator removal/installation.
2. Remove the generator from above the engine compartment.

am3uuw000609

Generator Installation Note

1. Tighten bolt A temporarily.
2. Tighten bolt B, C to the specified tightening torque.
3. Tighten bolt A to the specified tightening torque.

CHARGING SYSTEM [L3 WITH TC]

GENERATOR INSPECTION [L3 WITH TC]

id011739800300

Caution

- Do not apply direct battery positive voltage to generator terminal D, otherwise it could cause damage to the internal parts (power transistor) of the generator.

Generator Warning Light

1. Verify that the battery is fully charged.
2. Verify that the drive belt is correct. (See 01-10B-4 DRIVE BELT INSPECTION [L3 WITH TC].)
3. Switch the ignition to ON, verify that the generator warning light illuminates.
 - If it does not illuminate, inspect the generator warning light and the wiring harness.
 - If the generator warning light and the wiring harness are normal, inspect the PCM.
4. Verify that the generator warning light goes out after the engine is started.
 - If the generator warning light does not go out, perform the DTC inspection, then perform troubleshooting according to the corresponding diagnostic procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) (See 01-02B-18 DTC TABLE [L3 WITH TC].)

Generator

Voltage

1. Verify that the battery is fully charged.
2. Verify that the drive belt is correct. (See 01-10B-4 DRIVE BELT INSPECTION [L3 WITH TC].)
3. Turn off all electrical loads.
4. Start the engine.
5. Verify that the generator rotates smoothly without any noise while the engine is running.
 - If there is any noise, find the cause and repair or replace the generator.
6. Measure the voltage at each terminal using a tester.
 - If it is not as specified, find the cause and repair or replace the applicable part.

am6zzw0000234

Generator standard voltage [IG-ON]

Terminal B: B+

Terminal P: Approx. 1 V or less

Terminal D: Approx. 0 V

Generator standard voltage [Idle, 20 °C {68 °F}]

Terminal B: 13—15 V

Terminal P: Approx. 3—8 V

Terminal D: Turn the electrical loads (headlights, blower motor, rear window defroster, brake lights, etc.) on and verify that the voltage reading increases.

Current

Note

- Since the charging current decreases rapidly after starting the engine, carry out the following procedure quickly, and read the maximum current value.

1. Verify that the battery is fully charged.
2. Verify that the drive belt is correct. (See 01-10B-4 DRIVE BELT INSPECTION [L3 WITH TC].)
3. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
4. Disconnect the negative battery cable.
5. Connect a tester, which can read **120 A or more**, between generator terminal B and the wiring harness.
6. Connect the negative battery cable.
7. Turn off all electrical loads.
8. Start the engine.
9. Increase engine speed to **2,500 rpm**.

Note

- When the electrical load on the vehicle is low, the specified current cannot be verified although the generator is normal. In this case, increase the electrical load (Leave the headlights turned on for a while, then discharge the battery, or use a similar method.) and recheck.
- When the generator itself or the ambient temperature are too high, the specified current also cannot be verified. In this case, cool down the generator and recheck.

CHARGING SYSTEM [L3 WITH TC]

10. Turn the electrical loads (headlights, blower motor, rear window defroster, brake lights, etc.) on and verify that the current reading increases more than the minimum value indicated below.
- If it is not as specified, go to the PCM and generator shearing inspection. (See 01-17B-9 PCM and generator shearing inspection.)

Generator generated current minimum value

70% of the nominal output current (nominal output current: 110 A)

[Ambient temp. 20 °C {68 °F}, voltage 13.0—15.0 V, both engine and generator are hot]

PCM and generator shearing inspection

1. Connect the M-MDS to the DLC-2.
2. Inspect as follows:

am3uuw0000326

01-17B

Step	Inspection		Action
1	Measure the generator terminal B voltage when the electrical loads* ¹ are on and off.	15 V or more	Go to Step 2.
		13—15 V	Normal* ²
		13 V or less	Go to Step 3.
2	Monitor the ALTT V PID using the M-MDS, (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) or measure the PCM 1AX terminal waveform using an oscilloscope. (See 01-40B-8 PCM INSPECTION [L3 WITH TC].) Is the value normal?	Yes	Go to Step 4.
		No	Inspect followings, then repair or replace as necessary. <ul style="list-style-type: none"> • If there is no malfunction, replace the PCM. 1. Wiring harness between PCM terminal 1AX-generator terminal P. 2. Wiring harness between PCM terminal 1AW-generator terminal D. 3. Generator inner parts.

CHARGING SYSTEM [L3 WITH TC]

Step	Inspection		Action	
3	Monitor the ALTT V PID using the M-MDS, (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) or measure the PCM 1AX terminal waveform using an oscilloscope. (See 01-40B-8 PCM INSPECTION [L3 WITH TC].) Is the value normal?	Yes No	Go to Step 5. Inspect followings, then repair or replace as necessary. <ul style="list-style-type: none"> • If there is no malfunction, replace the PCM. 1. Wiring harness between PCM terminal 1AX-generator terminal P. 2. Wiring harness between PCM terminal 1AW-generator terminal D. 3. Generator inner parts.	
4	Monitor the ALTF PID using the M-MDS, or calculate the duty value of the PCM terminal 1AW using an oscilloscope. Is the duty value 100%?	 $\frac{A}{B} \times 100 (\%) = \text{DUTY} (\%)$	Yes No	Replace PCM. Inspect followings, then repair or replace as necessary. <ul style="list-style-type: none"> • If there is no malfunction, replace the PCM. 1. Wiring harness between PCM terminal 1AW-generator terminal D. 2. Generator inner parts.
5	Monitor the ALTF PID using the M-MDS, or calculate the duty value of the PCM terminal 1AW using an oscilloscope. Is the duty value 0%?	 $\frac{A}{B} \times 100 (\%) = \text{DUTY} (\%)$	Yes No	Replace PCM. Inspect followings, then repair or replace as necessary. <ul style="list-style-type: none"> • If there is no malfunction, replace the PCM. 1. Wiring harness between PCM terminal 1AW-generator terminal D. 2. Generator inner parts.

*1 : Headlights, blower motor, rear window defroster, brake lights, etc.

*2 : If the generator field coil duty value does not change when electrical loads (such as headlights, blower motor, rear window defroster, brake lights) are on or off, inspection with discharged battery is needed.

CHARGING SYSTEM [L3 WITH TC]

Generator Inner Parts Rotor

1. Measure the resistance between the slip rings using a tester.
 - If not within the specification, replace the rotor.

Generator rotor resistance (between slip rings) [20 °C {68 °F}]
1.8—2.2 ohms

am6zzw0000235

2. Verify that there is no continuity between the slip ring and core using a tester.
 - If there is continuity, replace the rotor.
3. Inspect the slip ring surface condition.
 - If the slip ring surface is rough, use a lathe or fine sandpaper to smooth it.

am6zzw0000235

Stator coil

1. Verify that the continuity is as indicated in the table.

○—○ : Continuity

Terminal					
1	2	3	4	5	6
○—○					
○—○		○—○			
	○—○				
			○—○		
			○—○	○—○	
				○—○	○—○

am6zzw0000235

am6zzw0000235

- If there is any malfunction, replace the stator.
2. Verify that there is no continuity between the stator coil leads and core using a tester.
 - If there is continuity, replace the stator coil.

am3uuw0000326

01-17B

CHARGING SYSTEM [L3 WITH TC]

Brush

- Inspect brushes for wear.
 - If any brush is worn almost to or beyond the limit, replace all of the brushes.

Generator brush length

Standard: 22.5 mm {0.886 in}
Minimum: 5.0 mm {0.20 in}

am6zzw0000235

Brush spring

- Measure the force of the brush spring using a spring pressure gauge.
- Read the spring pressure gauge at the brush tip projection of **2 mm {0.08 in}**.
 - If not within the specification, replace the brush spring.

Generator brush spring force

Standard: 4.1—5.3 N {0.42—0.54 kgf, 1.0—1.1 lbf}
Minimum: 1.7 N {0.17 kgf, 0.38 lbf}

am3uuv0000326

Rectifier (Using an analog circuit tester)

- Inspect for continuity of the diodes using an analog circuit tester.
 - If not as specified, replace the rectifier.

Specification

Negative	Positive	Continuity
E	P1, P2, P3, P4, P5, P6	Yes
B		No
P1, P2, P3, P4, P5, P6	E	No
	B	Yes

am6zzw0000235

Rectifier (Using a digital circuit tester)

- Inspect for continuity of the diodes using a digital circuit tester.
 - If not as specified, replace the rectifier.

Specification

Negative	Positive	Continuity
E	P1, P2, P3, P4, P5, P6	No
B		Yes
P1, P2, P3, P4, P5, P6	E	Yes
	B	No

Bearing

- Inspect for abnormal noise, looseness, and sticking.
 - Replace the bearing if necessary.

am6zzw0000235

CHARGING SYSTEM [L3 WITH TC]

GENERATOR DISASSEMBLY/ASSEMBLY [L3 WITH TC]

id011739800400

Caution

- Melt the solder quickly, otherwise the diodes (rectifier) and regulator will be damaged by excessive heat.

1. Disassemble in the order indicated in the table.
2. Assemble in the reverse order of disassembly.

01-17B

am3uuw0000616

am6zzw0000376

IGNITION COIL INSPECTION [LF, L5]

id0118a8800300

Ignition Coil Inspection

1. Perform the spark test and identify the malfunctioning cylinder.
2. Replace the ignition coil of the malfunctioning cylinder with that of a normal cylinder, and reperform the spark test.
 - If the spark is not normal due to a malfunctioning ignition coil, replace that ignition coil.
 - It is unlikely that all four ignition coils fail to operate properly. To prevent replacing a normal component, perform the above procedure, identify the malfunctioning ignition coil, and replace it.

Ignition Coil with Built-in Igniter Inspection

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the plug hole plate. (See 01-10A-5 PLUG HOLE PLATE REMOVAL/INSTALLATION [LF, L5].)
4. Disconnect the ignition coil connector.
5. Measure the resistance between each terminal on the ignition coil connector using an analog circuit tester.
 - If the measurement corresponds to the table, replace the ignition coil.

Item	Tester Connection Position		Condition
	Positive	Negative	
Terminal	C	A	0 ohm is not normal (∞ ohm is normal)
	B	A	
	C	B	∞ or 0 ohm is not normal (several kilohms is normal)

am6xuw0000233

SPARK PLUG REMOVAL/INSTALLATION [LF, L5]

id0118a8800400

Caution

- If a spark plug that is not as specified is installed, engine performance will be deteriorated. Install only the specified spark plug when replacing.

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the plug hole plate. (See 01-10A-5 PLUG HOLE PLATE REMOVAL/INSTALLATION [LF, L5].)
4. Remove the ignition coils. (See 01-18A-2 IGNITION COIL REMOVAL/INSTALLATION [LF, L5].)
5. Remove the spark plugs using a plug-wrench.
6. Install in the reverse order of removal.

01-18A

Tightening torque

10—14 N·m {102—142 kgf·cm, 89—123 in·lbf}

SPARK PLUG INSPECTION [LF, L5]

id0118a8800500

Specification

Spark plug type

LFG1 18 110 (ILTR5A-13G), L3Y2 18 110

Plug Gap Inspection

Caution

- To avoid possible damage to the tip, do not adjust the plug gap.
- To prevent damaging the tip, use a wire type plug gap gauge when inspecting the plug gap.

1. Measure the spark plug gap using a wire type plug gap gauge.
 - If not within the standard specification, replace the spark plug.

Spark plug gap

Standard: 1.25—1.45 mm {0.0493—0.0570 in}

New spark plug (reference): 1.25—1.35 mm {0.0493—0.0531 in}

Cleaning

Caution

- Carbon may adhere to the tip of the spark plug during vehicle delivery or repeated short distance driving during the winter time. If there is any malfunction such as rough idling or start difficulty due to carbon adhesion causing plug fouling, burn off the carbon by performing no-load racing of the engine.
- When performing the no-load racing, apply the side brake and foot brake, move the shift lever to neutral (MTX), or the selector lever to P position (ATX) to prevent an accident and serious injury.
- To avoid possible damage to the spark plug tip, do not use a wire brush for cleaning.

Note

- To avoid possible damage to the tip, use gasoline to clean the spark plugs after removing dirt.
- If the accelerator pedal is depressed continuously for a specified time, the engine speed may decrease to the idle speed. This is due to the PCM control operation, which prevents overheating, and it does not indicate a malfunction.
- Do not perform no-load racing at high engine speed continuously for **10 s or more**.

1. If there is carbon adhering to the spark plug, perform no-load racing at **4,000 rpm for 2 min, 2 times**.

IGNITION SYSTEM [LF, L5]

Visual Inspection

1. Inspect the following items:
 - If any of the following malfunctions are indicated, replace the spark plug.
 - Insulator breakage
 - Worn electrode
 - Damaged gasket
 - Badly burned insulator (sparking side)

am3uuw0000624

Resistance Inspection

1. Measure the resistance of the spark plug using a tester as shown in the figure.
 - If not within the specification, replace the spark plug.

Spark plug resistance [25°C {77 °F}]
3.0—7.5 kilohms

am3uuw0000624

Caution

- If a spark plug that is not as specified is installed, engine performance will be deteriorated. Install only the specified spark plug when replacing.

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Remove the charge air cooler. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
4. Remove the ignition coils. (See 01-18B-2 IGNITION COIL REMOVAL/INSTALLATION [L3 WITH TC].)
5. Remove the spark plugs using a plug-wrench.
6. Install in the reverse order of removal.

01-18B

Tightening torque

10—14 N·m {102—142 kgf·cm, 89—123 in·lbf}

SPARK PLUG INSPECTION [L3 WITH TC]

id011839800500

Specification

Spark plug type

L3BD 18 110, L3YD 18 110

Plug Gap Inspection

Caution

- To avoid possible damage to the tip, do not adjust the plug gap.
- To prevent damaging the tip, use a wire type plug gap gauge when inspecting the plug gap.

1. Measure the spark plug gap using a wire type plug gap gauge.
 - If not within the standard specification, replace the spark plug.

Spark plug gap

Standard: 0.60—0.80 mm {0.024—0.031 in}

New spark plug (reference): 0.60—0.70 mm {0.024—0.027 in}

Cleaning

Caution

- Carbon may adhere to the tip of the spark plug during vehicle delivery or repeated short distance driving during the winter time. If there is any malfunction such as rough idling or start difficulty due to carbon adhesion causing plug fouling, burn off the carbon by performing no-load racing of the engine.
- When performing the no-load racing, apply the side brake and foot brake, move the shift lever to neutral to prevent an accident and serious injury.
- To avoid possible damage to the spark plug tip, do not use a wire brush for cleaning.

Note

- To avoid possible damage to the tip, use gasoline to clean the spark plugs after removing dirt.
- If the accelerator pedal is depressed continuously for a specified time, the engine speed may decrease to the idle speed. This is due to the PCM control operation, which prevents overheating, and it does not indicate a malfunction.
- Do not perform no-load racing at high engine speed continuously for **10 s or more**.

1. If there is carbon adhering to the spark plug, perform no-load racing at **4,000 rpm for 2 min, 2 times**.

IGNITION SYSTEM [L3 WITH TC]

Visual Inspection

1. Inspect the following items:
 - If any of the following malfunctions are indicated, replace the spark plug.
 - Insulator breakage
 - Worn electrode
 - Damaged gasket
 - Badly burned insulator (sparking side)

am3uuw0000624

Resistance Inspection

1. Measure the resistance of the spark plug using a tester as shown in the figure.
 - If not within the specification, replace the spark plug.

Spark plug resistance [25°C {77 °F}]
3.0—7.5 kilohms

am3uuw0000624

STARTING SYSTEM [LF, L5]

STARTER REMOVAL/INSTALLATION [LF, L5]

id0119a7800200

Warning

- Remove and install all parts when the engine is cold, otherwise they can cause severe burns or serious injury.
- When the battery cables are connected, touching the vehicle body with starter terminal B will generate sparks. This can cause personal injury, fire, and damage to the electrical components. Always disconnect the negative battery cable before performing the following operation.

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
4. Remove in the order indicated in the table.
5. Install in the reverse order of removal.

am3uuw0000486

2	Terminal B cable

3	Terminal S connector
4	Starter (See 01-19A-3 Starter Installation Note.)

STARTING SYSTEM [LF, L5]

Starter Installation Note

Note

- If there is peeling on or damage to the insulator, attach a new insulator using the following procedure:

1. Peel off the insulator from the starter completely using a scraper.

am6zzw0000237

2. Degrease the insulator attachment area.

am6zzw0000237

3. Attach a new insulator to the starter.

am6zzw0000237

01-19A

STARTING SYSTEM [LF, L5]

STARTER INSPECTION [LF, L5]

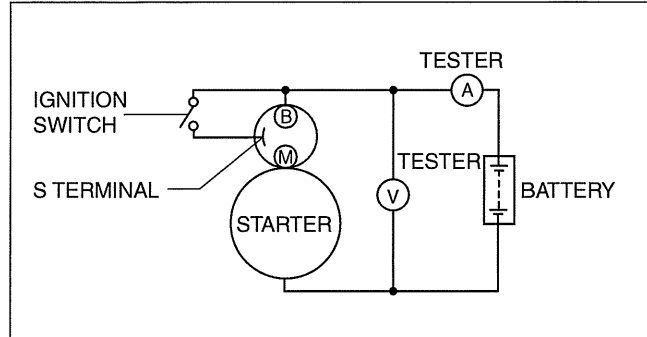

id0119a7800300

On-vehicle Inspection

1. Verify that the battery is fully charged.
2. The starter is normal if it rotates smoothly and without any noise when the engine is cranked.
 - If the starter does not operate, inspect the following:
 - Remove the starter, and inspect the starter unit.
 - Inspect the related wiring harnesses, the ignition switch, and the transaxle range switch (ATX).

No-load Test

1. Verify that the battery is fully charged.
2. Connect the starter, battery, and a tester as shown in the figure.
3. Operate the starter and verify that it rotates smoothly.
 - If the starter does not rotate smoothly, inspect the starter unit.
4. Measure the voltage and current while the starter is operating.
 - If not within the specification, replace the starter.

am6xuw0000234

Starter no-load test voltage

11 V

Starter no-load test current

LF : 95 A or less

L5 : 90 A or less

Magnetic Switch Operation Inspection

Pull-out test

Note

- Depending on the battery charge condition, the starter motor pinion may rotate while in an extended state. This is due to current flowing to the starter motor through the pull-in coil to turn the starter motor, and does not indicate an abnormality.

1. Verify that the starter motor pinion is extended while battery positive voltage is connected to terminal S and the starter body is grounded.
 - If the starter motor pinion is not extended, repair or replace the starter.

am6xuw0000234

Return test

1. Disconnect the motor wire from terminal M.
2. Connect battery positive voltage to terminal M and ground the starter body.
3. Pull out the drive pinion with a screwdriver. Verify that it returns to its original position when released.
 - If it does not return, repair or replace the starter.

am6xuw0000234

STARTING SYSTEM [LF, L5]

Pinion Gap Inspection

1. Pull out the drive pinion with the battery positive voltage connected to terminal S and the starter body grounded.

Caution

- Applying power for more than 10 s can damage the starter. Do not apply power for more than 10 s.

2. Measure the pinion gap while the drive pinion is extended.
 - If not as specified, adjust with an adjustment washer (between drive housing front cover and magnetic switch).

Starter pinion gap

0.5—2.0 mm {0.02—0.07 in}

am6xuw0000234

am6zzw0000237

Starter Inner Parts Inspection

Armature

1. Verify that there is no continuity between the commutator and the core at each segment using a tester.
 - If there is continuity, replace the armature.
2. Verify that there is no continuity between the commutator and the shaft using a tester.
 - If there is continuity, replace the armature.

am6zzw0000237

am6zzw0000237

3. Place the armature on V-blocks, and measure the runout using a dial indicator.
 - If not within the specification, replace the armature.

Starter armature runout

0.1 mm {0.004 in} max.

am6zzw0000238

01-19A

STARTING SYSTEM [LF, L5]

4. Measure the commutator diameter.
 - If not within the minimum specification, replace the armature.

Starter commutator diameter
Standard: 29.4 mm {1.16 in}
Minimum: 28.8 mm {1.13 in}

am6zzw0000238

5. Measure the segment groove depth of the commutator.
 - If not within the minimum specification, undercut the grooves to the standard depth.

Segment groove depth of starter commutator
Standard: 0.5 mm {0.02 in}
Minimum: 0.2 mm {0.008 in}

am6zzw0000238

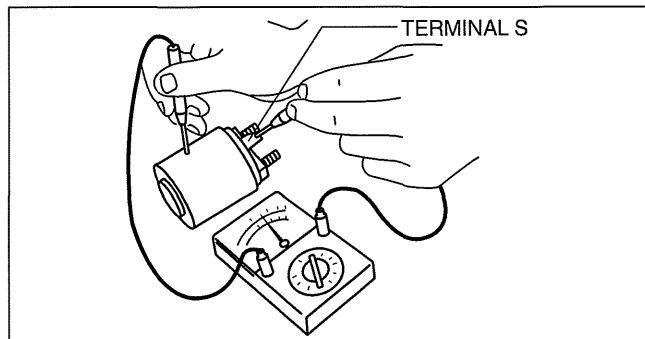

Magnetic switch

1. Inspect for continuity between terminals S and M using a tester.
 - If there is no continuity, replace the magnetic switch.

am6xuw0000234

2. Inspect for continuity between terminal S and the body using a tester.
 - If there is no continuity, replace the magnetic switch.

am6xuw0000234

3. Verify that there is no continuity between terminals M and B using a tester.
 - If there is continuity, replace the magnetic switch.

am6xuw0000234

STARTING SYSTEM [LF, L5]

Brush and brush holder

1. Verify that there is no continuity between each insulated brush and plate using a tester.
 - If there is continuity, replace the brush holder.

am6zzw0000238

01-19A

2. Measure the brush length.
 - If any brush is worn almost to or beyond the minimum specification, replace all of the brushes.

Starter brush length

Standard: 12.3 mm {0.484 in}

Minimum: 5.5 mm {0.22 in}

am6zzw0000238

3. Measure the brush spring force using a spring balance.
 - If not within the minimum specification, replace the brush and brush holder component.

Starter brush spring force

Standard: 15.1—20.4 N {1.54—2.08 kgf, 3.40—4.58 lbf}

Minimum: 2.75 N {0.280 kgf, 0.618 lbf}

am6zzw0000238

STARTING SYSTEM [LF, L5]

STARTER DISASSEMBLY/ASSEMBLY [LF, L5]

PCM REMOVAL/INSTALLATION [LF, L5]

01-40A

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the battery and battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
4. Remove the following items: (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
 - Battery
 - PCM cover No.1
5. Disconnect the PCM connector.
6. Remove the battery tray and PCM component. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
7. Remove in the order indicated in the table.

1	PCM cover No.2
2	PCM

am3uuw0000237

8. Install in the reverse order of removal.

Caution

- If the PCM connector is connected incorrectly it could be damaged. When connecting the PCM connector, connect it using the following procedure.
- If the PCM connector is inserted at an angle and the lever is moved, the connector could be damaged. Verify that the PCM connector is inserted straight.

acxaaw00000768

9. Verify that the PCM connector lever is tilted towards the wiring harness side as shown in the figure.
10. Insert the PCM connector straight until it contacts the PCM and verify that the lever reverts upward naturally.

acxaaw00000766

11. Push the lever until a click is heard.
12. When replacing the PCM on the vehicles, perform the following:
 - PCM configuration (See 01-40A-22 PCM CONFIGURATION [LF, L5].)
 - Immobilizer system component replacement/ key addition and clearing (See 09-14-88 IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING [KEYLESS ENTRY SYSTEM].)(See 09-14-97 IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START

PCM INSPECTION [LF, L5]

id0140i8802500

Using M-MDS

Note

- PIDs for the following parts are not available on this model. Go to the appropriate part inspection page.
 - CMP sensor
 - Main relay

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition to ON.
3. Measure the PID value.
 - If PID value is not within the specification, follow the instructions in Action column.

Note

- The PID/DATA MONITOR function monitors the calculated value of the input/output signals in the PCM. Therefore, an output device malfunction is not directly indicated as a malfunction of the monitored value for the output device. If a monitored value of an output device is out of specification, inspect the monitored value of the input device related to the output control.
- For input/output signals except those of the monitoring items, use a voltmeter to measure the PCM terminal voltage.
- The simulation items that are used in the ENGINE CONTROL SYSTEM OPERATION INSPECTION are as follows.
 - ACCS, ALTF, ARPMDES, EVAPCP, EVAPCV, FAN_DUTY, FP, IMRC, IMTV, INJ_1~4, SEGRP, TEST, VT Duty1 wt

am3uuw0000238

PID/DATA monitor table (reference)

Monitor item (Definition)	Unit/ Condition		Condition/Specification (Reference)	Inspection item	PCM terminal
	°C	°F			
AAT (Ambient air temperature)	°C	°F	Indicates the ambient air temperature	IAT sensor	1AT
AC_REQ (A/C request signal)	OFF/ON		A/C switch OFF: OFF A/C switch ON: ON	Perform applicable DTC troubleshooting	—
ACCS (A/C relay)	OFF/ON		A/C relay OFF: OFF A/C relay ON: ON	A/C relay Inspect following PIDs: RPM, TP REL, ECT.	1I
AFR (Target air fuel ratio)	—		Target air fuel ratio is displayed	A/F sensor	2Z 2AC 2AD
AFR_ACT (Actual air fuel ratio)	—		Actual air fuel ratio is displayed	A/F sensor	2Z 2AC 2AD
ALTF (Generator field coil control duty value)	%		Just after A/C switch ON and fan switch ON at idle: Duty value rises	Generator Inspect following PIDs: IAT, ECT, RPM, VPWR, ALTT V.	2AA
ALTT V (Generator output voltage)	V		Switch the ignition to ON: 0 V Idle: approx. 14 V*1 (E/L not operating)	Generator	2AF
APP (APP sensor)	%		<ul style="list-style-type: none"> • Accelerator pedal released: approx. 0 % • Accelerator pedal depressed: approx. 100 % 	APP sensor	1X 1AP

CONTROL SYSTEM [LF, L5]

Monitor item (Definition)	Unit/ Condition	Condition/Specification (Reference)	Inspection item	PCM terminal
APP 1 (APP sensor No.1)	%	<ul style="list-style-type: none"> Accelerator pedal released: approx. 15 % Accelerator pedal depressed: approx. 80 % 	APP sensor	1AP
	V	<ul style="list-style-type: none"> Accelerator pedal released: approx. 0.4 V Accelerator pedal depressed: approx. 3.3 V 		
APP 2 (APP sensor No.2)	%	<ul style="list-style-type: none"> Accelerator pedal released: approx. 7.5 % Accelerator pedal depressed: approx. 42 % 	APP sensor	1X
	V	<ul style="list-style-type: none"> Accelerator pedal released: approx. 0.4 V Accelerator pedal depressed: approx. 2.0 V 		
ARPMDES (Target engine speed)	RPM	<ul style="list-style-type: none"> Indicate the target engine speed 	Inspect following PIDs: IAT, RPM, MAP, ECT, MAF, TP REL, INGEAR, ALTT V.	—
BARO (Barometric pressure)	kPa, psi, Bar	Indicate the BARO	BARO sensor	—
	V	<ul style="list-style-type: none"> Switch the ignition to ON (at sea level): approx. 4.1 V 		
BOO (Brake switch)	OFF/ON	Brake pedal depressed: ON Brake pedal released: OFF	Brake switch	1AB
BPA*3 (Brake pressure applied switch)	OFF/ON	Brake pedal depressed: ON Brake pedal released: OFF	Brake switch	—
CATT11_DSD (Desired catalyst temperature bank one, sensor one)	°C	Indicate the estimated catalytic converter temperature	Perform applicable DTC troubleshooting.	—
CHRGLP (Generator warning light)	OFF/ON	Switch the ignition to ON: ON Idle: OFF	Perform applicable DTC troubleshooting.	—
COLP (Refrigerant pressure sensor)	OFF/ON	Refrigerant pressure is above 1.96 Mpa {20.0kgf/cm ² , 284 psi}: ON	Refrigerant pressure sensor	—
CPP*2 (Clutch pedal position)	OFF/ON	Clutch pedal depressed: ON Clutch pedal released: OFF	CPP switch	1BD
CPP/PNP*2 (Shift lever position)	OFF/ON	Neutral position: ON Others: OFF	Neutral switch	1BC
ECT (Engine coolant temperature No.1)	°C °F	Indicate the ECT No.1	ECT sensor No.1	2AH
	V	ECT 20 °C {68 °F}: 3.04—3.14 V ECT 80 °C {176 °F}: 0.76—0.83 V		
ECT2 (Engine coolant temperature No.2)	°C °F	Indicate the ECT No.2	ECT sensor No.2	2AO
	V	ECT 20 °C {68 °F}: 3.04—3.14 V ECT 80 °C {176 °F}: 0.76—0.83 V		
EQ_RAT11 (Equivalence ratio (lambda))	—	Idling after warm-up: approx. 1	Perform applicable DTC troubleshooting.	2Z 2AC 2AD
EQ_RAT11_DSD (Desired equivalence ratio (lambda))	—	Idling after warm-up: approx. 1	Perform applicable DTC troubleshooting.	—
ETC_ACT (Electronic throttle control actual)	°	Indicate the desired TP by angle	Perform applicable DTC troubleshooting.	2BE, 2BF
ETC_DSD (Electronic throttle control desired)	%	Indicate the desired TP by percent	TP sensor Inspect following PIDs: APP1, APP2, ETC_ACT.	—
	°	Indicate the desired TP by angle		
EVAPCP (Purge solenoid valve duty value)	%	Switch the ignition to ON: 0% Idle: 0%	Inspect following PIDs: IAT, RPM, ECT, MAF, O2S11, INGEAR, VPWR.	1BA

01-40A

CONTROL SYSTEM [LF, L5]

Monitor item (Definition)	Unit/ Condition	Condition/Specification (Reference)	Inspection item	PCM terminal
EVAPCV (Evaporative emission canister vent valve)	OFF/ON	Simulation item (EVAPCV) is ON: ON	CV solenoid valve	1M
FAN_DUTY (Fan control module)	%	<ul style="list-style-type: none"> When all of following condition are met: 50% <ul style="list-style-type: none"> — Test mode ON — WOT 	Fan control module	1R
FCL (Fuel cap warning light)	OFF/ON	<ul style="list-style-type: none"> Fuel cap warning light not illuminated: OFF Fuel cap warning light illuminated: ON 	Perform applicable DTC troubleshooting.	—
FLI (Fuel level)	%	<ul style="list-style-type: none"> Fuel gauge level F: approx. 100% Fuel gauge level E: approx. 0% 	Perform applicable DTC troubleshooting.	—
FP (Fuel pump relay)	OFF/ON	Switch the ignition to ON: OFF Idle: ON Cranking: ON	Fuel pump relay Inspect following PIDs: RPM.	1BG
FTP (Fuel tank pressure sensor)	kPa, psi, Bar	Indicate the fuel tank pressure	Fuel tank pressure sensor	1AH
	V	Fuel tank pressure is equal to barometric pressure: approx. 2.625 V		
FUELPW (Fuel injector duration)	sec	Idle (after warm up): approx. 2.2 ms	Fuel injector Inspect following PIDs: IAT, MAF, TP REL, MAP, ECT, RPM, O2S11, O2S12, INGEAR, VPWR, ALTT V.	2AZ 2BB 2BC 2BD
FUELSYS (Fuel system status)	OL/CL/CL-Fault/OL-Fault/OL-Drive	Idle (after warm up): CL	Fuel injector Inspect following PIDs: IAT, MAF, TP REL, MAP, ECT, RPM, O2S11, O2S12, INGEAR, VPWR, ALTT V.	—
HTR11 (A/F sensor heater)	OFF/ON	Idle (after warm up): ON⇔OFF	A/F sensor Inspect following PIDs: IAT, MAF, TP REL, ECT, RPM.	2A
HTR12 (HO2S heater)	OFF/ON	Idle (after warm up): ON⇔OFF	HO2S heater Inspect following PIDs: IAT, MAF, ECT, RPM.	2B
IAT (Intake air temperature)	°C °F	Indicate the IAT	IAT sensor	1AC
	V	IAT 20 °C {68 °F}: approx. 2.38 V IAT 60 °C {140 °F}: approx. 0.89 V		
IMRC (Variable tumble solenoid valve)	OFF/ON	<ul style="list-style-type: none"> ECT below 60 °C {140 °F} (LF) / 63 °C {145 °F} (L5) and engine speed below 3,750 rpm : On ECT above 60 °C {140 °F} (LF) / 63 °C {145 °F} (L5) while idling.: Off 	Variable tumble solenoid valve Inspect following PIDs: TP REL, ECT, RPM.	2I
IMRC_POS (Variable tumble shutter valve switch)	V	<ul style="list-style-type: none"> ECT below 60 °C {140 °F} (LF) / 63 °C {145 °F} (L5) and engine speed below 3,750 rpm : 3.408—4.432 V ECT above 60 °C {140 °F} (LF) / 63 °C {145 °F} (L5) while idling.: 0.808—1.832 V 	Variable tumble shutter valve switch	2R
IMTV (Variable Intake air control solenoid valve)	OFF/ON	Engine speed is below approx. 4,400 rpm (LF) / 4,600rpm (L5): On Others: Off	Variable intake air control solenoid valve Inspect following PIDs: RPM.	2J
INGEAR (Load/no load condition)	OFF/ON	MTX <ul style="list-style-type: none"> When the following conditions are satisfied: On <ul style="list-style-type: none"> — Other than neutral — Clutch pedal released Except above: Off 	CPP switch Neutral switch	1BC IBD
		ATX <ul style="list-style-type: none"> Driving range: On Except above: Off 	TR switch	—
IVS (CTP condition)	Idle/Off_Idle	<ul style="list-style-type: none"> CTP: Idle Others: Off Idle 	Perform applicable DTC troubleshooting.	—

CONTROL SYSTEM [LF, L5]

Monitor item (Definition)	Unit/ Condition	Condition/Specification (Reference)	Inspection item	PCM terminal
KNOCKR (Knocking retard)	°	Switch the ignition to ON: 0° Idle: 0°	KS	2U 2V
LOAD (Engine load)	%	Switch the ignition to ON: 0% Idle (after warm up): approx. 15%	Inspect following PIDs: MAP, IAT, MAF, RPM.	—
LONGFT1 (long term fuel trim)	%	Idle (after warm up): -15—20%	Perform applicable DTC troubleshooting.	—
MAF (Mass airflow)	g/sec	Indicate the MAF	MAF sensor	1AK
	V	Switch the ignition to ON: approx. 0.7 V Idle (after warm up): approx. 1.2 V		
MAP (Manifold absolute pressure)	kPa, psi, Bar	Indicate the MAP	MAP sensor	2AG
	V	<ul style="list-style-type: none"> • Switch the ignition to ON (at sea level): approx. 4.1 V • Idle: approx. 1.2 V 		
MIL (Malfunction indicator lamp)	OFF/ON	<ul style="list-style-type: none"> • DTC stored: On • DTC not stored: Off 	Perform applicable DTC troubleshooting.	—
MIL_DIS (Travelled distance since the MIL illuminated)	km miles	Indicate the travelled distance since the MIL illuminated		
O2S11 (A/F sensor)	A	Idle (After warm up): approx. 0 mA	A/F sensor	2Z 2AC 2AD
O2S12 (HO2S)	V	Idle (After warm up): 0—1.0 V	HO2S	2Q
RO2FT1 (HO2S fuel trim)	%	Idle (after warm up): approx. -0.03— 0.03	Perform applicable DTC troubleshooting.	—
RPM (Engine speed)	RPM	Indicate the engine speed	CKP sensor	2W
SC_CANCEL*3 (CANCEL switch)	Inactive/ Active	CANCEL switch pressed in: Active Except above: Inactive	Cruise control switch	1AQ
SC_OFF*3 (ON/OFF switch)	Inactive/ Active	ON/OFF switch pressed in (OFF): Active Except above: Inactive	Cruise control switch	1AQ
SC_ON*3 (ON/OFF switch)	Inactive/ Active	ON/OFF switch pressed in (ON): Active Except above: Inactive	Cruise control switch	1AQ
SC_RES*3 (RESUME switch)	Inactive/ Active	RESUME switch pressed in: Active Except above: Inactive	Cruise control switch	1AQ
SC_SET-3 (SET(-) switch)	Inactive/ Active	SET(-) switch pressed in: Active Except above: Inactive	Cruise control switch	1AQ
SC_SET+3 (SET(+) switch)	Inactive/ Active	SET(+) switch pressed in: Active Except above: Inactive	Cruise control switch	1AQ

CONTROL SYSTEM [LF, L5]

Monitor item (Definition)	Unit/Condition	Condition/Specification (Reference)	Inspection item	PCM terminal
VT DIFF1 (Difference between target and actual valve timing)	°	Idle: approx. 0°	CMP sensor OCV Inspect following PIDs: TP REL, ECT, RPM.	2E 2S
VT DUTY1 (Oil control valve duty value)	%	Idle: approx. 11.5%	OCV Inspect following PIDs: TP REL, ECT, RPM.	2E

01-40A

- *1 : Calculated value; differs from terminal voltage
- *2 : MTX
- *3 : With cruise control switch

- Following PIDs are for the ATX models. If inspects for following PIDs, (See 05-02-5 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FS5A-EL].)

Without Using the M-MDS

Caution

- The PCM terminal voltages vary with change in measuring conditions and vehicle conditions. Always carry out a total inspection of the input systems, output systems, and PCM to determine the cause of trouble. Otherwise, a wrong diagnosis will be made.

1. Measure the voltage at each terminal.
 - If any incorrect voltage is detected, inspect the related system(s), wiring harnesses and connector(s) referring to the Action column in the terminal voltage table.

CONTROL SYSTEM [LF, L5]

PCM CONFIGURATION [LF, L5]

id0140i8802600

Note

- Use the IDS (laptop PC) because the PDS (Pocket PC) does not support the PCM CONFIGURATION.

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select the "Module Programming".
3. Then, select items from the screen menu in the following order.
 1. Select "Programmable Module Installation".
 2. Select "PCM".
4. Perform the configuration according to the directions on the screen.
5. Retrieve DTCs by the M-MDS, then verify that there is no DTC present.
 - If a DTC(s) is detected, perform the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)

am3uuw000239

Wheel And Tire Size change

Note

- Use the IDS (laptop PC) because the PDS (Pocket PC) does not support the PCM CONFIGURATION.

1. Connect the M-MDS to DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select the "Module Programming".
3. Then, select items from the screen menu in the following order.
 1. Select "Programmable Parameters".
 2. Select "Tire Size" or "Tire Size / Axle Ratio".
4. Select an item name, and then select option.

am3uuw000239

Caution

- The same parameter should be set in Tire dimension, Tire Circumference and Tire Size.

Items of "Tire Size"

- Tire dimension (195/70R15, 195/65R15, 205/55R16 205/50R17, 225/40R18)
- Tire Circumference (195/70R15, 195/65R15, 205/55R16 205/50R17, 225/40R18)

Items of "Tire Size / Axle Ratio"

- Tire Size (195/70R15, 195/65R15, 205/55R16 205/50R17, 225/40R18)

CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION [LF, L5]

id0140i8801600

1. Verify that the CPP switch is installed properly.
2. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
3. Disconnect the negative battery cable.
4. Disconnect the CPP switch connector. (See 05-10-6 CLUTCH PEDAL REMOVAL/INSTALLATION.)
5. Inspect for continuity between the CPP switch terminals using an ohmmeter.
 - If not as specified, replace the CPP switch. (See 05-10-6 CLUTCH PEDAL REMOVAL/INSTALLATION.)

Specification

Measured condition	Clutch pedal position	Continuity
Rod pushed	Clutch pedal released	Continuity detected
Except above	Clutch pedal depressed	No continuity

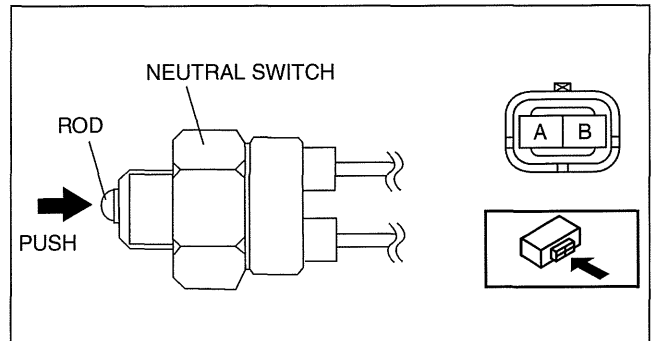

am3uuw000279

CONTROL SYSTEM [LF, L5]

NEUTRAL SWITCH INSPECTION [LF, L5]

id0140i8800800

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the neutral switch. (See 05-15A-1 NEUTRAL SWITCH REMOVAL/INSTALLATION [G35M-R].) (See 05-15B-2 NEUTRAL SWITCH REMOVAL/INSTALLATION [G66M-R].) (See 05-15C-2 NEUTRAL SWITCH REMOVAL/INSTALLATION [A26M-R].)
4. Inspect for continuity between the neutral switch terminals using an ohmmeter.
 - If not as specified, replace the neutral switch. (See 05-15A-1 NEUTRAL SWITCH REMOVAL/INSTALLATION [G35M-R].) (See 05-15B-2 NEUTRAL SWITCH REMOVAL/INSTALLATION [G66M-R].) (See 05-15C-2 NEUTRAL SWITCH REMOVAL/INSTALLATION [A26M-R].)

am6xuw0000134

Specification

Measured condition	Continuity
Rod pushed	Continuity detected
Except above	No continuity

VARIABLE TUMBLE SHUTTER VALVE SWITCH INSPECTION [LF, L5]

id0140i8808200

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition to ON.
3. Verify that the voltage (M-MDS PID: IMRC_POS) within the specification. (See 01-40A-8 PCM INSPECTION [LF, L5].)
 - If not as specified, replace the intake manifold. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)

am3uuw0000239

ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [LF, L5]

id0140i8801900

Warning

- When the engine is hot, it can badly burn. Turn off the engine and wait until it is cool before removing the ECT sensor.

ECT Sensor No.1

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Drain the engine coolant. (See 01-12A-2 COOLING SYSTEM SERVICE WARNINGS [LF, L5].)
4. Remove the battery and battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
5. Disconnect the ECT sensor No.1 connector.
6. Remove the ECT sensor No.1 using the SST.
7. Install in the reverse order of removal.
8. Refill the engine coolant. (See 01-12A-2 COOLING SYSTEM SERVICE WARNINGS [LF, L5].)

am3uuw0000248

01-40A

CONTROL SYSTEM [LF, L5]

ECT Sensor No.2

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Drain the engine coolant. (See 01-12A-2 COOLING SYSTEM SERVICE WARNINGS [LF, L5].)
4. Disconnect the ECT sensor No.2 connector.
5. Remove the ECT sensor No.2 using the SST.

Note

- Wipe off any oil or engine coolant if it gets on the ECT sensor No.2 installation area.

6. Install in the reverse order of removal.
7. Refill the engine coolant. (See 01-12A-2 COOLING SYSTEM SERVICE WARNINGS [LF, L5].)

am3uuw0000239

ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [LF, L5]

id0140i8802000

ECT Sensor No.1 Inspection

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Drain the engine coolant. (See 01-12A-2 COOLING SYSTEM SERVICE WARNINGS [LF, L5].)
4. Remove the battery and battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
5. Disconnect the ECT sensor No.1 connector.
6. Remove the ECT sensor No.1. (See 01-40A-23 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [LF, L5].)
7. Place the ECT sensor No.1 in water with a thermometer, and heat the water gradually.
8. Measure the resistance between the ECT sensor No.1 terminals A and B using an ohmmeter.
 - If not as specified, replace the ECT sensor No.1. (See 01-40A-23 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [LF, L5].)

ECT sensor No.1 Specification

ECT (°C {°F})	Resistance (kilohms)
20{68}	Approx. 37.3
80{176}	Approx. 3.84

am5ezw0000155

ECT Sensor No.2 Inspection

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Drain the engine coolant. (See 01-12A-2 COOLING SYSTEM SERVICE WARNINGS [LF, L5].)
4. Disconnect the ECT sensor No.2 connector.
5. Remove the ECT sensor No.2. (See 01-40A-23 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [LF, L5].)
6. Place the ECT sensor No.2 in water with a thermometer, and heat the water gradually.
7. Measure the resistance between the ECT sensor No.2 terminals A and B using an ohmmeter.
 - If not as specified, replace the ECT sensor No.2. (See 01-40A-23 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [LF, L5].)

ECT sensor No.2 Specification

ECT (°C {°F})	Resistance (kilohms)
20{68}	Approx. 2.45
80{176}	Approx. 0.318

am3uuw0000256

CONTROL SYSTEM [LF, L5]

MASS AIR FLOW (MAF) SENSOR INSPECTION [LF, L5]

id0140i8800700

Visual Inspection

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Disconnect the MAF/IAT sensor connector.
4. Remove the MAF/IAT sensor. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
5. Visually inspect the MAF/IAT sensor for the following:
 - Damage, cracks, soiling
 - Rusted sensor terminal
 - Bent sensor terminal

— If there is any malfunction, repair or replace the MAF/IAT sensor.
(See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)

01-40A

Voltage Inspection

1. Remove the MAF/IAT sensor without disconnect the MAF/IAT sensor connector.
2. Connect the M-MDS to the DLC-2.
3. Switch the ignition to ON.
4. As the air gradually approaches the MAF detection part of the MAF/IAT sensor, verify that the voltage (M-MDS PID: MAF) varies.
 - If not as verified, replace the MAF/IAT sensor.
(See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)

am3uuw0000239

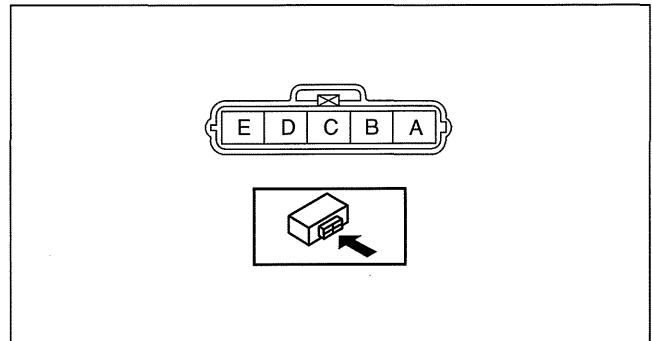

INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [LF, L5]

id0140i8802200

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Disconnect the MAF/IAT sensor connector.
4. Measure the resistance between the MAF/IAT sensor terminals D and E using an ohmmeter.
 - If not as specified, replace the MAF/IAT sensor.
(See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)

IAT sensor Specification

Ambient temperature (°C {°F})	Resistance (kilohm)
20{68}	2.21—2.69
60{140}	0.493—0.667

am6zzw0000081

MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR REMOVAL/INSTALLATION [LF, L5]

id0140i8804300

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the plug hole plate. (See 01-10A-5 PLUG HOLE PLATE REMOVAL/INSTALLATION [LF, L5].)
4. Disconnect the MAP sensor connector.
5. Remove the MAP sensor.
6. Install in the reverse order of removal.

am5ezw0000155

CONTROL SYSTEM [LF, L5]

MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION [LF, L5]

id0140i8800900

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition to ON.
3. Verify that the voltage (M-MDS PID: MAP) within the specification. (See 01-40A-8 PCM INSPECTION [LF, L5].)
 - If not as specified, replace the MAP sensor. (See 01-40A-25 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR REMOVAL/INSTALLATION [LF, L5].)

BAROMETRIC PRESSURE (BARO) SENSOR INSPECTION [LF, L5]

am3uuw0000239

id0140i8801100

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition to ON.
3. Verify that the voltage (M-MDS PID: BARO) within the specification. (See 01-40A-8 PCM INSPECTION [LF, L5].)

Note

- Because the PCM is integrated in the BARO sensor, replacing the BARO sensor includes replacement of the PCM.
- If not as specified, replace the PCM. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)

am3uuw0000261

THROTTLE POSITION (TP) SENSOR INSPECTION [LF, L5]

id0140i8802700

Caution

- The inspection cannot be performed with this method correctly if there is a malfunction of the APP sensor or throttle valve actuator. Verify that no DTCs related to the APP sensor or throttle valve actuator are stored before the inspection.

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition to ON.
3. Verify that the TP sensor output voltage (M-MDS PID: TP1, TP2) is within the specification. (See 01-40A-8 PCM INSPECTION [LF, L5].)
 - If not as specified, replace the throttle body. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)

am3uuw0000239

ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [LF, L5]

id0140i8803200

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition to ON.
3. Verify that the APP sensor output voltage (PID: APP1, APP2) increases according to the increase in the accelerator opening angle when the accelerator opening angle is gradually increased.
 - If verified, go to the next step.
 - If not as verified, replace the accelerator pedal. (See 01-13A-8 ACCELERATOR PEDAL REMOVAL/INSTALLATION [LF, L5].)
4. Verify that the APP sensor output voltage (PID: APP1, APP2) is within the specification when the accelerator pedal is depressed and not depressed.
 - If not as specified, replace the accelerator pedal. (See 01-13A-8 ACCELERATOR PEDAL REMOVAL/INSTALLATION [LF, L5].)

am3uuw0000239

CONTROL SYSTEM [LF, L5]

AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [LF, L5]

id0140i889700

Warning

- A hot engine and exhaust system can cause severe burns. Turn off the engine and wait until they are cool before removing the exhaust system.

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the plug hole plate. (See 01-10A-5 PLUG HOLE PLATE REMOVAL/INSTALLATION [LF, L5].)
4. Remove the air cleaner assembly. (L5) (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
5. Disconnect the A/F sensor connector.
6. Remove the A/F sensor using the SST.

am3uuw0000239

7. Install in the reverse order of removal.

CONTROL SYSTEM [LF, L5]

AIR FUEL RATIO (A/F) SENSOR INSPECTION [LF, L5]

id0140i8899600

A/F Sensor Inspection

1. Warm up the engine to normal operating temperature.
2. Using the M-MDS, monitor the following:
 - Vehicle speed (PID: VSS)
 - Engine speed (PID: RPM)
 - A/F sensor current (PID: O2S11)
3. Drive the vehicle and decelerate the engine speed by releasing the accelerator pedal fully when the engine speed is 3,000 rpm or more.
4. Verify that the A/F sensor current (PID: O2S11) is 0.25 mA or more while decelerating as shown in the figure.

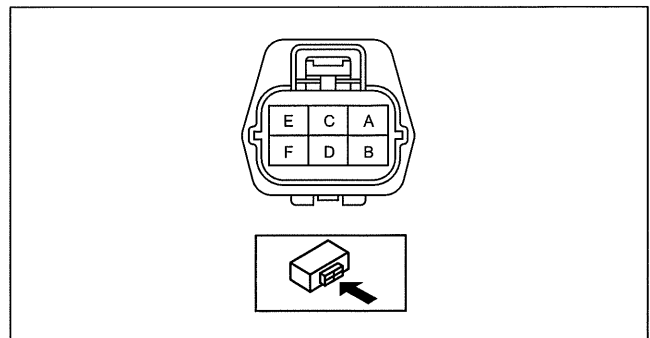

acxuuw0000099

- If not as specified, replace the A/F sensor. (See 01-40A-27 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [LF, L5].)

A/F Sensor Heater Inspection

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Disconnect the A/F sensor connector.
4. Measure the resistance between A/F sensor terminals A and E.
 - If not as specified, replace the A/F sensor. (See 01-40A-27 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [LF, L5].)

A/F sensor heater resistance
1—10 ohms [normal temperature]

am3uuw0000257

CONTROL SYSTEM [LF, L5]

HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [LF, L5]

id0140i8804000

Warning

- A hot engine and exhaust system can cause severe burns. Turn off the engine and wait until they are cool before removing the exhaust system.

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Disconnect the HO2S connector.
4. Remove the HO2S using the SST.
5. Install in the reverse order of removal.

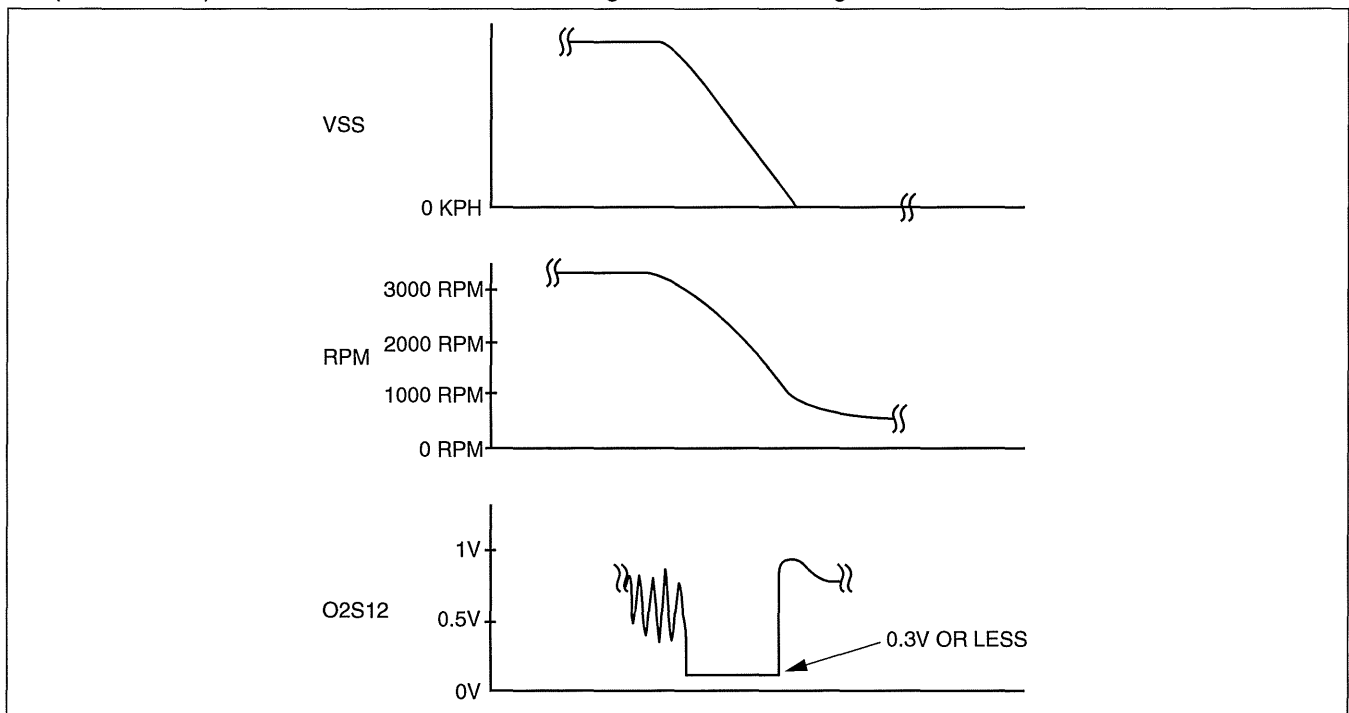

am3uuw0000240

HEATED OXYGEN SENSOR (HO2S) INSPECTION [LF, L5]

id0140i8802300

HO2S Inspection

1. Warm up the engine to normal operating temperature.
2. Using the M-MDS, monitor the following:
 - Vehicle speed (PID: VSS)
 - Engine speed (PID: RPM)
 - HO2S voltage (PID: O2S12)
3. Drive the vehicle and decelerate the engine speed by releasing the accelerator pedal fully when the engine speed is **3,000 rpm or more**.
4. Verify that the HO2S outputs a voltage of **0.6 V or more**, one time or more, then verify that the HO2S voltage (PID: O2S12) is **0.3 V or less** while decelerating as shown in the figure.

am6zzw0000016

- If not as specified, replace the HO2S.
(See 01-40A-29 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [LF, L5].)

01-40A

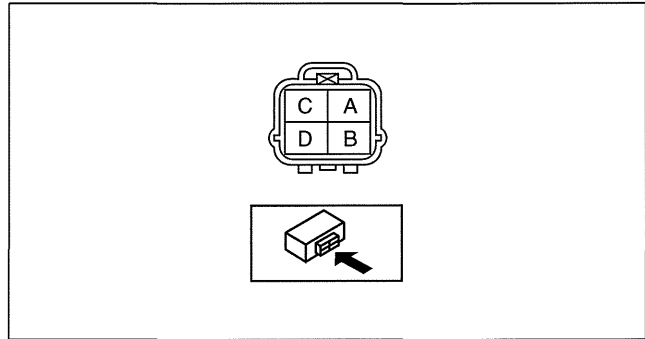

CONTROL SYSTEM [LF, L5]

HO2S Heater Inspection

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Disconnect the HO2S connector.
4. Measure the HO2S resistance between terminals C and D.
 - If not as specified, replace the HO2S.
(See 01-40A-29 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [LF, L5].)

HO2S heater resistance

2—50 ohms [normal temperature]

am3uuw0000256

CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [LF, L5]

id0140i8800600

Removal

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Perform the following procedure for easier access.
 - (1) Remove the under cover.
 - (2) Remove the splash shield.
4. Disconnect the CKP sensor connector.
5. Remove the CKP sensor.

am6xuw0000136

Installation

Caution

- When foreign material such as an iron chip is on the CKP sensor, it can cause abnormal output from the sensor because of flux turbulence and adversely affect the engine control. Be sure there is no foreign material on the CKP sensor when replacing.

1. Perform the following procedure so that cylinder No.1 is at TDC.
 - (1) Remove the wheel and tire (front right side).
 - (2) Disconnect the drive shaft (RH) from joint shaft, set the drive shaft (RH) out of the way.(MTX)
 - (3) Remove the cylinder block lower blind plug and install the **SST**.
 - (4) Rotate the crankshaft pulley clockwise until the crank weight contacts the **SST** so that cylinder No.1 is at TDC.

am3uuw0000217

CONTROL SYSTEM [LF, L5]

2. Fit the center of the CKP sensor with the fifth tooth (counting counterclockwise from the empty space A as shown in the figure) of the pulse wheel.

am3uuw0000103

01-40A

3. Install the CKP sensor fitting bolts.

am3uuw0000296

4. Remove the **SST** then install the cylinder block lower blind plug.

am3uuw0000296

CONTROL SYSTEM [LF, L5]

CRANKSHAFT POSITION (CKP) SENSOR INSPECTION [LF, L5]

id0140i8800500

Visual inspection

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the under cover.
4. Remove the splash shield (RH).
5. Disconnect the CKP sensor connector.
6. Remove the CKP sensor. (See 01-40A-30 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [LF, L5].)
7. Verify that there are no metal shavings on the sensor.
 - Remove any metal shavings that are adhering.

Air Gap Inspection

1. Verify that the CKP sensor is securely installed.
2. Using a thickness gauge, measure the air gap between the plate projections at the back of crankshaft pulley and the CKP sensor.
 - If not within the specification, inspect the plate projections for cracks or bending.
 - If there is any malfunction, replace the crankshaft pulley. (See 01-10A-34 FRONT OIL SEAL REPLACEMENT [LF, L5].)

CKP sensor air gap
0.5—1.5 mm {0.02—0.05 in}

am8rrw00002301

Voltage Inspection

1. Idle the engine.
2. Measure the CKP sensor output wave pattern using an oscilloscope. (See 01-40A-8 PCM INSPECTION [LF, L5].)
 - If not within the specification, replace the CKP sensor. (See 01-40A-30 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [LF, L5].)

CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [LF, L5]

id0140i8801500

Caution

- When replacing the CMP sensor, make sure there is no foreign material on it such as metal shavings. If it is installed with foreign material, the sensor output signal will malfunction resulting from fluctuation in magnetic flux and cause a deterioration in engine control.

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the plug hole plate. (See 01-10A-5 PLUG HOLE PLATE REMOVAL/INSTALLATION [LF, L5].)
4. Disconnect the CMP sensor connector.
5. Remove the CMP sensor.
6. Install in the reverse order of removal.

am5ezw0000155

CAMSHAFT POSITION (CMP) SENSOR INSPECTION [LF, L5]

id0140i8801400

Visual Inspection

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the plug hole plate. (See 01-10A-5 PLUG HOLE PLATE REMOVAL/INSTALLATION [LF, L5].)
4. Disconnect the CMP sensor connector.
5. Remove the CMP sensor. (See 01-40A-32 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [LF, L5].)
6. Verify that there are no metal shavings on the CMP sensor.
 - Remove any metal shavings that are adhering.

Voltage Inspection

1. Idle the engine.
2. Measure the CMP sensor output wave pattern using an oscilloscope. (See 01-40A-8 PCM INSPECTION [LF, L5].)
 - If not within the specification, replace the CMP sensor. (See 01-40A-32 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [LF, L5].)

KNOCK SENSOR (KS) REMOVAL/INSTALLATION [LF, L5]

id0140i8802900

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the plug hole plate. (See 01-10A-5 PLUG HOLE PLATE REMOVAL/INSTALLATION [LF, L5].)
4. Remove the intake manifold. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
5. Disconnect the KS connector.
6. Remove the KS.
7. Install in the reverse order of removal.

am5ezw0000154

id0140i8802800

KNOCK SENSOR (KS) INSPECTION [LF, L5]

Resistance Inspection

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Disconnect the KS connector.
4. Measure the resistance between the KS terminals A and B using an ohmmeter.
 - If not as specified, replace the KS. (See 01-40A-33 KNOCK SENSOR (KS) INSPECTION [LF, L5].)

Specification

Approx. 4.63—5.11 megohms [ECT: 25 °C {77 °F}]

am3uuw0000256

id0140i8857400

FUEL TANK PRESSURE SENSOR INSPECTION [LF, L5]

Voltage Inspection

1. Remove the evaporative hose component. (See 01-14A-8 FUEL TANK REMOVAL/INSTALLATION [LF, L5].)
2. Switch the ignition to ON.
3. Plug one end of the evaporative hose component and verify that the output voltage from the fuel tank pressure sensor changes when pressure is applied from the other hose end.
 - If not as verified, replace the evaporative hose component. (See 01-14A-8 FUEL TANK REMOVAL/INSTALLATION [LF, L5].)

PCM REMOVAL/INSTALLATION [L3 WITH TC]

id014039802400

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Remove the battery and battery tray. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
4. Remove the following items: (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
 - Battery
 - PCM cover No.1
5. Disconnect the PCM connector.
6. Remove the battery tray and PCM component. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
7. Remove in the order indicated in the table.

1	PCM cover No.2
2	PCM
3	PCM bracket

8. Install in the reverse order of removal.

Caution

- If the PCM connector is connected incorrectly it could be damaged. When connecting the PCM connector, connect it using the following procedure.
- If the PCM connector is inserted at an angle and the lever is moved, the connector could be damaged. Verify that the PCM connector is inserted straight.

9. Verify that the PCM connector lever is tilted towards the wiring harness side as shown in the figure.
10. Insert the PCM connector straight until it contacts the PCM and verify that the lever reverts upward naturally.

01-40B

CONTROL SYSTEM [L3 WITH TC]

11. Push the lever until a click is heard.
12. When replacing the PCM on the vehicles, perform the following:
 - PCM configuration (See 01-40B-23 PCM CONFIGURATION [L3 WITH TC].)
 - Immobilizer system component replacement/ key addition and clearing (See 09-14-88 IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING [KEYLESS ENTRY SYSTEM].)(See 09-14-97 IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)

acxaaw0000767

PCM INSPECTION [L3 WITH TC]

id014039802500

Without Using the M-MDS

Note

- The PCM terminal voltage can vary with the conditions when measuring and changes due to aged deterioration on the vehicle, causing false diagnosis. Therefore determine comprehensively where the malfunction occurs among the input systems, output systems, and the PCM.

CONTROL SYSTEM [L3 WITH TC]

Using the M-MDS

Note

- PIDs for the following parts are not available on this model. Perform the specific inspections for the following parts:
 - CMP sensor (See01-40B-34 CAMSHAFT POSITION (CMP) SENSOR INSPECTION [L3 WITH TC].)
 - Main relay

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition to ON.
3. Measure the PID value.
 - If PID value is not within the specification, follow the instructions in the "Inspection item" column.

am3uuw0000239

Note

- The PID/DATA MONITOR function monitors the calculated value of the input/output signals in the PCM. Therefore, an output device malfunction is not directly indicated as a malfunction of the monitored value for the output device. If a monitored value of an output device is out of specification, inspect the monitored value of the input device related to the output control.
- For input/output signals except those of the monitoring items, use a voltmeter to measure the PCM terminal voltage.
- The simulation items that are used in the ENGINE CONTROL SYSTEM OPERATION INSPECTION are as follows.
 - ACCS, ALTF, ARPMDES, EVAPCP, EVAPCV, FAN_DUTY, FP, IMRC, INJ_1, INJ_2, INJ_3, INJ_4, SEGRP, TEST, VT DUTY1 wt, WGC

PID/DATA monitor table (reference)

Monitor item (Definition)	Unit/ Condition		Condition/Specification (Reference)	Inspection item	PCM terminal
	°C	°F			
AAT (Ambient air temperature)	°C	°F	Switch the ignition to ON: Indicates the ambient air temperature	• IAT sensor	1M
AC_REQ (A/C request signal)	OFF/ON		A/C switch OFF: OFF A/C switch ON: ON	Perform applicable DTC troubleshooting	—
ACCS (A/C relay)	OFF/ON		A/C relay OFF: OFF A/C relay ON: ON	• The following PIDs: — RPM, TP REL, ECT • A/C relay	1I
AFR (Air/fuel ratio)	—		Target air-fuel ratio is displayed	• A/F sensor	2Z 2AC 2AD
AFR_ACT (Actual air/fuel ratio)	—		Actual air-fuel ratio is displayed	• A/F sensor	2Z 2AC 2AD
ALTF (Generator field coil control duty value)	%		Switch the ignition to ON: 0% Idle: 0—100% Just after A/C switch ON and fan switch ON at idle: Duty value rises	• The following PIDs: — IAT, ECT, RPM, VPWR, ALTT V • Generator	1AW
ALTT V (Generator output voltage)	V		Idle (no E/L): Approx. 14 V (This is an internal calculation value and differs from the terminal voltage.)	• Generator	1AX

PCM CONFIGURATION [L3 WITH TC]

id014039802600

1. Connect the M-MDS to DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select the "Module Programming".
3. Then, select items from the screen menu in the following order.
 1. Select "Programmable Module Installation".
 2. Select "PCM".
4. Perform the configuration according to the directions on the screen.
5. Retrieve DTCs by the M-MDS, then verify that there is no DTC present.
 - If a DTC (s) is detected, perform the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)

01-40B

CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION [L3 WITH TC]

id014039801600

1. Verify that the CPP switch is installed properly.
2. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
3. Disconnect the negative battery cable.
4. Disconnect the CPP switch connector. (See 05-10-6 CLUTCH PEDAL REMOVAL/INSTALLATION.)
5. Inspect for continuity between the CPP switch terminals using an ohmmeter.
 - If not as specified, replace the CPP switch. (See 05-10-6 CLUTCH PEDAL REMOVAL/INSTALLATION.)

am3uuw0000279

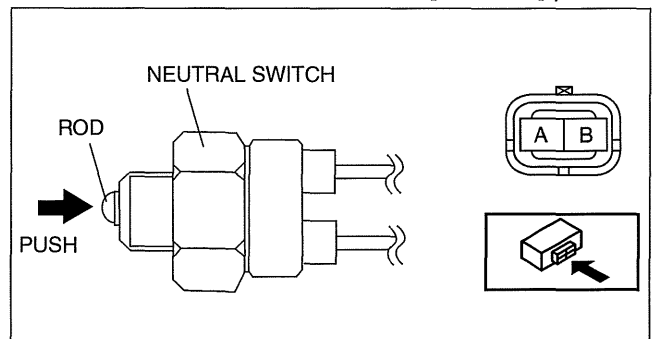

Specification

Measured condition	Clutch pedal position	Continuity
Rod pushed	Clutch pedal released	Continuity detected
Except above	Clutch pedal depressed	No continuity

NEUTRAL SWITCH INSPECTION [L3 WITH TC]

id014039800800

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Remove the neutral switch. (See 05-15B-2 NEUTRAL SWITCH REMOVAL/INSTALLATION [G66M-R].)
4. Inspect for continuity between the neutral switch terminals using an ohmmeter.
 - If not as specified, replace the neutral switch. (See 05-15B-2 NEUTRAL SWITCH REMOVAL/INSTALLATION [G66M-R].)

CONTROL SYSTEM [L3 WITH TC]

VARIABLE SWIRL SHUTTER VALVE SWITCH INSPECTION [L3 WITH TC]

id014039803000

Voltage Inspection

1. Switch the ignition to ON (Engine off).
2. Verify that the PCM terminal 2AE voltage is as shown in the following table when the variable swirl shutter valve actuator rod is depressed and released by hand.

am3uuw0000621

am6zzw0000012

- If not as specified, replace the intake manifold. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)

Variable swirl shutter valve switch output voltage

Condition	PCM terminal 2AE
Released (Open position)	B+
Depressed (Closed position)	Below 1.0 V

ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [L3 WITH TC]

id014039801900

Warning

- When the engine is hot, it can badly burn. Turn off the engine and wait until it is cool before removing the ECT sensor.

ECT Sensor No.1

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Drain the engine coolant. (See 01-12B-2 COOLING SYSTEM SERVICE WARNINGS [L3 WITH TC].)
4. Remove the battery and battery tray. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
5. Remove the air cleaner. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
6. Remove the air duct. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
7. Disconnect the ECT sensor No.1 connector.
8. Remove the ECT sensor No.1.
9. Install in the reverse order of removal.
10. Refill the engine coolant. (See 01-12B-2 COOLING SYSTEM SERVICE WARNINGS [L3 WITH TC].)

am3uuw0000596

CONTROL SYSTEM [L3 WITH TC]

ECT Sensor No.2

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Drain the engine coolant. (See 01-12B-2 COOLING SYSTEM SERVICE WARNINGS [L3 WITH TC].)
4. Disconnect the ECT sensor No.2 connector.
5. Remove the ECT sensor No.2 using the SST.

Note

- Wipe off any oil or engine coolant if it gets on the ECT sensor No.2 installation area.

6. Install in the reverse order of removal.
7. Refill the engine coolant. (See 01-12B-2 COOLING SYSTEM SERVICE WARNINGS [L3 WITH TC].)

am3uuw0000623

01-40B

ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [L3 WITH TC]

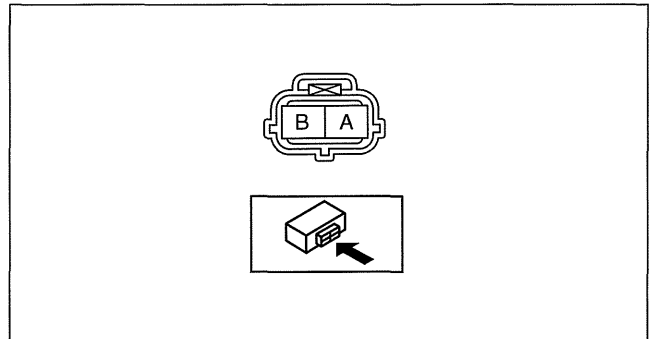

id014039802000

ECT Sensor No.1 Inspection

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Drain the engine coolant. (See 01-12B-2 COOLING SYSTEM SERVICE WARNINGS [L3 WITH TC].)
4. Remove the battery and battery tray. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
5. Disconnect the ECT sensor No.1 connector.
6. Remove the ECT sensor No.1. (See 01-40B-24 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
7. Place the ECT sensor No.1 in water with a thermometer, and heat the water gradually.
8. Measure the resistance between the ECT sensor No.1 terminals A and B using an ohmmeter.
 - If not as specified, replace the ECT sensor No.1. (See 01-40B-24 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)

ECT sensor No.1 Specification

ECT (°C {°F})	Resistance (kilohms)
20{68}	Approx. 37.3
80{176}	Approx. 3.84

am5ezw0000155

ECT Sensor No.2 Inspection

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Drain the engine coolant. (See 01-12B-2 COOLING SYSTEM SERVICE WARNINGS [L3 WITH TC].)
4. Disconnect the ECT sensor No.2 connector.
5. Remove the ECT sensor No.2. (See 01-40B-24 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
6. Place the ECT sensor No.2 in water with a thermometer, and heat the water gradually.
7. Measure the resistance between the ECT sensor No.2 terminals A and B using an ohmmeter.
 - If not as specified, replace the ECT sensor No.2. (See 01-40B-24 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)

ECT sensor No.2 Specification

ECT (°C {°F})	Resistance (kilohms)

80{176}	Approx. 0.318

am3uuw0000256

CONTROL SYSTEM [L3 WITH TC]

MASS AIR FLOW (MAF) SENSOR INSPECTION [L3 WITH TC]

id014039800700

Visual Inspection

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Disconnect the MAF/IAT sensor connector.
4. Remove the MAF/IAT sensor. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
5. Visually inspect the MAF/IAT sensor for the following:
 - Damage, cracks, soiling
 - Rusted sensor terminal
 - Bent sensor terminal

— If there is any malfunction, repair or replace the MAF/IAT sensor.
(See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)

Voltage Inspection

1. Remove the MAF/IAT sensor without disconnect the MAF/IAT sensor connector.
2. Connect the M-MDS to the DLC-2.
3. Switch the ignition to ON.
4. As the air gradually approaches the MAF detection part of the MAF/IAT sensor, verify that the voltage (M-MDS PID: MAF) varies.
 - If not as verified, replace the MAF/IAT sensor.
(See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)

am3uuw0000239

INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [L3 WITH TC]

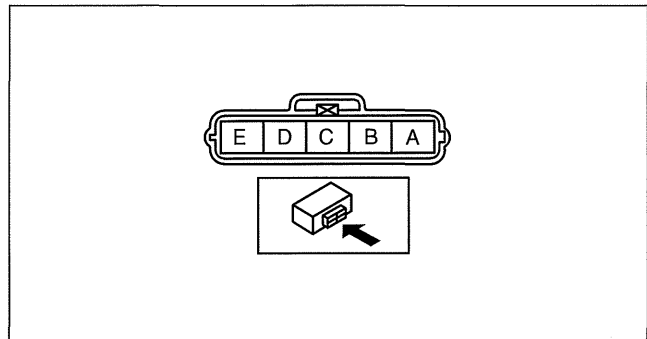

id014039802200

Resistance Inspection

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Disconnect the MAF/IAT sensor.
4. Measure the resistance between the MAF/IAT sensor terminals D and E using a tester.
 - If not as specified, replace the MAF/IAT sensor. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)

Specification

Ambient temperature (°C {°F})	Resistance (kilohm)
20 {68}	2.21—2.69
60 {140}	0.493—0.667

CONTROL SYSTEM [L3 WITH TC]

MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/BOOST AIR TEMPERATURE SENSOR REMOVAL/INSTALLATION [L3 WITH TC]

id014039801000

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Remove the oil level gauge pipe. (See 01-11B-6 OIL PAN REMOVAL/INSTALLATION [L3 WITH TC].)
4. Disconnect the MAP/boost air temperature sensor connector.
5. Remove the MAP/boost air temperature sensor.
6. Install in the reverse order of removal.

01-40B

am3uuw0000619

MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION [L3 WITH TC]

id014039800900

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition to ON.
3. Verify that the voltage (M-MDS PID: MAP) within the specification. (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)
 - If not as specified, replace the MAP sensor. (See 01-40B-27 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/BOOST AIR TEMPERATURE SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)

am3uuw0000239

BAROMETRIC PRESSURE (BARO) SENSOR INSPECTION [L3 WITH TC]

id014039801100

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition to ON.
3. Verify that the voltage (M-MDS PID: BARO) within the specification. (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)

Note

- Because the PCM is integrated in the BARO sensor, replacing the BARO sensor includes replacement of the PCM.
- If not as specified, replace the PCM. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)

am3uuw0000261

CONTROL SYSTEM [L3 WITH TC]

BOOST AIR TEMPERATURE SENSOR INSPECTION [L3 WITH TC]

id014039802100

Resistance Inspection

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Disconnect MAP/boost air temperature sensor.
4. Measure the resistance between the MAP/boost air temperature sensor terminals A and B using a tester.
 - If not as specified, replace the MAP/boost air temperature sensor. (See 01-40B-27 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/BOOST AIR TEMPERATURE SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)

Specification

Ambient temperature (°C {°F})	Resistance (kiloohm)
20 {68}	2.4—2.7
60 {140}	0.59—0.64

acxuuw0000094

THROTTLE POSITION (TP) SENSOR INSPECTION [L3 WITH TC]

id014039802700

Caution

- The inspection cannot be performed with this method correctly if there is a malfunction of the APP sensor or throttle valve actuator. Verify that no DTCs related to the APP sensor or throttle valve actuator are stored before the inspection.

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition to ON.
3. Verify that the TP sensor output voltage (M-MDS PID: TP1, TP2) is within the specification. (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)
 - If not as specified, replace the throttle body. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)

am3uuw0000239

ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [L3 WITH TC]

id014039803200

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition to ON.
3. Verify that the APP sensor output voltage (PID: APP1, APP2) increases according to the increase in the accelerator opening angle when the accelerator opening angle is gradually increased.
 - If verified, go to the next step.
 - If not as verified, replace the accelerator pedal. (See 01-13B-14 ACCELERATOR PEDAL REMOVAL/INSTALLATION [L3 WITH TC].)
4. Verify that the APP sensor output voltage (PID: APP1, APP2) is within the specification when the accelerator pedal is depressed and not depressed.
 - If not as specified, replace the accelerator pedal. (See 01-13B-14 ACCELERATOR PEDAL REMOVAL/INSTALLATION [L3 WITH TC].)

CONTROL SYSTEM [L3 WITH TC]

FUEL PRESSURE SENSOR REMOVAL/INSTALLATION [L3 WITH TC]

id014039801200

Note

- If the fuel pressure sensor is removed, do not reuse the fuel pressure sensor and the fuel delivery pipe. When you replace the fuel pressure sensor, replace a new fuel delivery pipe with a new fuel pressure sensor. (SEE 01-14B-25 FUEL INJECTOR REMOVAL/INSTALLATION [L3 WITH TC].)

01-40B

FUEL PRESSURE SENSOR INSPECTION [L3 WITH TC]

id014039801300

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition to ON (Engine off).
3. Select the FUEL_PRES PID on the M-MDS.
4. After warming up the engine, verify that the FUEL_PRES PID is at the standard value under the following conditions.
 - If not as verified, replace the fuel delivery pipe.

Step	Condition	FUEL_PRES PID
1	<ul style="list-style-type: none">• Idle• 90 s after engine is started	Approx. 3 MPa
2	<ul style="list-style-type: none">• Idle• Spill valve solenoid valve connector is disconnected	Approx. 530 kPa

am3uuw0000239

5. After connecting the spill valve control solenoid valve connector, clear the DTC.

AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [L3 WITH TC]

id014039899700

Warning

- A hot engine and exhaust system can cause severe burns. Turn off the engine and wait until they are cool before removing the exhaust system.

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Remove the charge air cooler. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
4. Remove the charge air cooler bracket. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
5. Disconnect the A/F sensor connector.
6. Remove the A/F sensor using the SST.
7. Install in the reverse order of removal.

am3uuw0000596

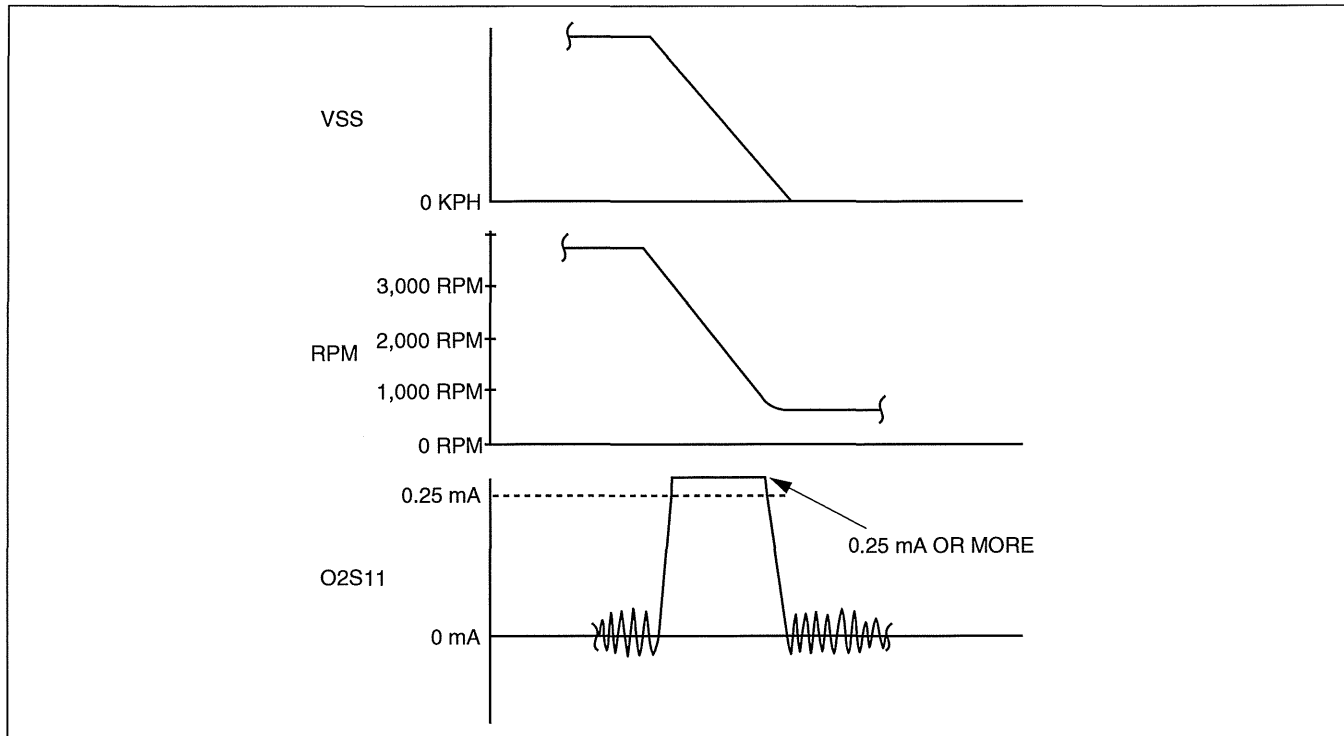

CONTROL SYSTEM [L3 WITH TC]

AIR FUEL RATIO (A/F) SENSOR INSPECTION [L3 WITH TC]

id014039899600

A/F Sensor Inspection

1. Warm up the engine to normal operating temperature.
2. Using the M-MDS, monitor the following:
 - Vehicle speed (PID: VSS)
 - Engine speed (PID: RPM)
 - A/F sensor current (PID: O2S11)
3. Drive the vehicle and decelerate the engine speed by releasing the accelerator pedal fully when the engine speed is 3,000 rpm or more.
4. Verify that the A/F sensor current (PID: O2S11) is 0.25 mA or more while decelerating as shown in the figure.

acxuuw0000099

- If not as specified, replace the A/F sensor. (See 01-40B-29 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)

A/F Sensor Heater Inspection

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Disconnect the A/F sensor connector.
4. Measure the resistance between A/F sensor terminals 2B and 2D.
 - If not as specified, replace the A/F sensor. (See 01-40B-29 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)

A/F sensor heater resistance
1—10 ohms [normal temperature]

am3uuw0000623

CONTROL SYSTEM [L3 WITH TC]

HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [L3 WITH TC]

id014039804000

Warning

- A hot engine and exhaust system can cause severe burns. Turn off the engine and wait until they are cool before removing the exhaust system.

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Disconnect the HO2S connector.
4. Remove the HO2S using the SST.
5. Install in the reverse order of removal.

am3uuw0000594

HEATED OXYGEN SENSOR (HO2S) INSPECTION [L3 WITH TC]

id014039802300

HO2S Inspection

1. Warm up the engine to normal operating temperature.
2. Using the M-MDS, monitor the following:
 - Vehicle speed (PID: VSS)
 - Engine speed (PID: RPM)
 - HO2S voltage (PID: O2S12)
3. Drive the vehicle and decelerate the engine speed by releasing the accelerator pedal fully when the engine speed is **3,000 rpm or more**.
4. Verify that the HO2S outputs a voltage of **0.6 V or more**, one time or more, then verify that the HO2S voltage (PID: O2S12) is **0.3 V or less** while decelerating as shown in the figure.

am6zzw0000016

- If not as specified, replace the HO2S.
(See 01-40B-31 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [L3 WITH TC].)

01-40B

CONTROL SYSTEM [L3 WITH TC]

HO2S Heater Inspection

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Disconnect the HO2S connector.
4. Measure the HO2S resistance between terminals C and D.
 - If not as specified, replace the HO2S.
(See 01-40B-31 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [L3 WITH TC].)

HO2S heater resistance

2—50 ohms [normal temperature]

am3uuw0000623

CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC]

id014039800600

Removal

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Remove the under cover.
4. Remove the splash shield (RH).
5. Disconnect the CKP sensor connector.
6. Remove the installation bolts to remove the CKP sensor.

Installation

Caution

- When foreign material, such as an iron chips, gets on the CKP sensor, it can cause abnormal output from the sensor because of flux turbulence and adversely affect engine control. Be sure there is no foreign material on the CKP sensor when replacing.

1. Perform the following procedure so that piston No.1 is at the top dead center.

- (1) Rotate the crankshaft in the direction of the engine rotation and remove the cylinder block lower blind plug when the No. 1 cylinder is at the point prior to top dead center (TDC) of compression, then install the SST.
- (2) Rotate the crankshaft in the direction of the engine rotation so that the No.1 piston is at TDC of the compression stroke. (Until the crank weight contacts SST and stops.)

acxuuw00001899

2. Using a straight edge, draw a straight line directly in the center of the twentieth tooth of the crankshaft pulley pulse wheel (counting counterclockwise from the empty space).

Caution

- If the line is not accurately drawn, ignition timing, fuel injection and other engine control systems will be adversely effected. Draw the straight line carefully using a straight edge.

3. Align the center line of the crankshaft position sensor and the line drawn in Step 2, then install the sensor.

acxuuw00000075

CONTROL SYSTEM [L3 WITH TC]

4. Install the CKP sensor fitting bolts.

am3uuw0000296

5. Remove the **SST** then install the cylinder block lower blind plug.

am3uuw0000596

CRANKSHAFT POSITION (CKP) SENSOR INSPECTION [L3 WITH TC]

id014039800500

Air Gap Inspection

1. Verify that the CKP sensor is securely installed.
2. Using a thickness gauge, measure the air gap between the plate projections at the back of crankshaft pulley and the CKP sensor.
 - If not within the specification, inspect the plate projections for cracks or bending.
 - If there is any malfunction, replace the plate.
 - If the monitor item condition/specification (reference) is not within the specification, even though there is no malfunction, carry out the "Circuit Open/Short Inspection".

Air gap

0.5–1.5 mm {0.02–0.05 in}

acxuuw00000070

Visual Inspection

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Remove the CKP sensor. (See 01-40B-32 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
4. Verify that there are no metal shavings on the sensor.
 - If the monitor item condition/specification (reference) is without the specification even though there is no malfunction, carry out the "Circuit Open/Short Inspection".

Voltage Inspection

1. Idle the engine.
2. Measure the CKP sensor output wave pattern using an oscilloscope. (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)
 - If not within the specification, replace the CKP sensor. (See 01-40B-32 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)

CONTROL SYSTEM [L3 WITH TC]

CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC]

id014039801500

Caution

- When replacing the CMP sensor, make sure there is no foreign material on it such as metal shavings. If it is installed with foreign material, the sensor output signal will malfunction resulting from fluctuation in magnetic flux and cause a deterioration in engine control.

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Remove the charge air cooler cover. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
4. Disconnect the CMP sensor connector.
5. Remove the CMP sensor.
6. Install in the reverse order of removal.

am3uuw0000619

CAMSHAFT POSITION (CMP) SENSOR INSPECTION [L3 WITH TC]

id014039801400

Visual Inspection

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Remove the CMP sensor. (See 01-40B-34 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
4. Verify that there are no metal shavings on the sensor.
 - If the monitor item condition/specification (reference) is not within the specification even though there is no malfunction, carry out the "Circuit Open/Short Inspection".

Voltage Inspection

1. Idle the engine.
2. Measure the CMP sensor output wave pattern using an oscilloscope. (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)
 - If not within the specification, replace the CMP sensor. (See 01-40B-34 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)

KNOCK SENSOR (KS) REMOVAL/INSTALLATION [L3 WITH TC]

id014039802900

Caution

- Be careful not to impact the sensor.
- Verify that there is no debris between the sensor and the cylinder block before installing.

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Remove the intake manifold. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
4. Disconnect the KS connector.
5. Remove the KS.
6. Install in the reverse order of removal.

am3uuw0000616

CONTROL SYSTEM [L3 WITH TC]

KNOCK SENSOR (KS) INSPECTION [L3 WITH TC]

id014039802800

Resistance Inspection

1. Switch the ignition to ON.
2. Disconnect the KS connector.
3. Measure the resistance between KS terminals A and B using a tester.
 - If not as specified, replace the KS. (See 01-40B-34 KNOCK SENSOR (KS) REMOVAL/INSTALLATION [L3 WITH TC].)

Specification

Approx. 4.87 megohms

01-40B

FUEL TANK PRESSURE SENSOR INSPECTION [L3 WITH TC]

id014039857400

Voltage Inspection

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable.
3. Remove the evaporative hose component. (See 01-14B-8 FUEL TANK REMOVAL/INSTALLATION [L3 WITH TC].)
4. Switch the ignition to ON.
5. Plug one end of the evaporative hose component and verify that the output voltage from the fuel tank pressure sensor changes when pressure is applied from the other hose end.
 - If it cannot be verified even though the related harnesses have no malfunction, replace the evaporative hose component. (See 01-14B-8 FUEL TANK REMOVAL/INSTALLATION [L3 WITH TC].)

ON-BOARD DIAGNOSTIC

TIRE PRESSURE MONITORING SYSTEM (TPMS) ON-BOARD DIAGNOSIS

id020200800200

On-Board Diagnostic (OBD) Test Description

- The OBD test inspects the integrity and function of the TPMS and outputs the results when requested by the specific tests.
- On-board diagnostic test also:
 - Provides a quick inspection of the TPMS usually performed at the start of each diagnostic procedure.
 - Provides verification after repairs to ensure that no other faults occurred during service.
- The OBD test is divided into 2 tests:
 - Read/clear diagnostic results, and PID monitor.

Read/Clear Diagnostic Results

- This function allows you to read or clear DTCs in the instrument cluster memory.

PID/Data Monitor And Record

- This function allows you to access certain data values, input signals, calculated values, and system status information.

Reading DTCs Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Self Test".
 2. Select "Modules".
 3. Select "IC".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "IC".
 3. Select "Self Test".
3. Verify the DTC according to the directions on the screen.
 - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection after recording the snapshot data. (See 02-02-5 Snapshot data table.)
4. After completion of repairs, clear all DTCs stored in the instrument cluster. (See 02-02-3 Clearing DTCs Procedures.)

am3uuw0000267

Clearing DTCs Procedures

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Self Test".
 2. Select "Modules".
 3. Select "IC".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "IC".
 3. Select "Self Test".
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition to ON and wait for **5 s or more**.
7. Perform DTC inspection. (See 02-02-3 Reading DTCs Procedure.)
8. Verify that no DTCs are displayed.

am3uuw0000267

02-02

ON-BOARD DIAGNOSTIC

PID/Data Monitor And Record Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "DataLogger".
 2. Select "Modules".
 3. Select "IC".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "IC".
 3. Select "DataLogger".
3. Select the applicable PID from the PID table. (See 02-02-5 PID/Data Monitor Table.)
4. Verify the PID data according to the directions on the screen.

am3uuw0000267

Note

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.

DTC Table

DTC No.	Description	Reference
M-MDS		
C0077:00	Low tire pressure	(See 02-02-6 DTC C0077:00.)
C2011:49	Wheel unit No.1 internal malfunction	(See 02-02-7 DTC C2011:49/C2012:49/ C2013:49/C2014:49.)
C2012:49	Wheel unit No.2 internal malfunction	
C2013:49	Wheel unit No.3 internal malfunction	
C2014:49	Wheel unit No.4 internal malfunction	
C2011:87	Wheel unit No.1 (No response)	(See 02-02-8 DTC C2011:87/C2012:87/ C2013:87/C2014:87.)
C2012:87	Wheel unit No.2 (No response)	
C2013:87	Wheel unit No.3 (No response)	
C2014:87	Wheel unit No.4 (No response)	
U0100:00	Communication error with PCM	(See 09-02D-1 FOREWORD [MULTIPLEX COMMUNICATION SYSTEM].)
U0127:00	Communication error with keyless receiver	(See 02-02-9 DTC U0127:00.)
U0300:00	Incomplete configuration	(See 02-02-14 DTC U0300:00.)
U0401:68	Erratic signal from PCM	(See 09-02E-9 DTC U0401:68 [INSTRUMENT CLUSTER].)
U2100:00	Incomplete configuration	(See 09-02E-8 DTC B1A84:51/U2100:00 [INSTRUMENT CLUSTER].)
U3000:42	Instrument cluster general memory failure	(See 02-02-15 DTC U3000:42.)

ON-BOARD DIAGNOSTIC

PID/Data Monitor Table

Note

- When the wheel unit is in sleep mode, the data logger displays a value different from the actual value. (Such as, WU1_P: 0 KPa, WU1_T: -50 °C)

PID Name (Definition)	Unit/ Condition	Condition/Specification	Action
WU1_ID WU2_ID WU3_ID WU4_ID (Wheel unit ID code)	—	Indicates the registered ID that is transmitted from the wheel unit.	<ul style="list-style-type: none"> Replace the wheel unit. (See 02-12-6 WHEEL UNIT REMOVAL/INSTALLATION.) Perform the wheel unit ID registration. (See 02-12-5 WHEEL UNIT ID REGISTRATION.)
WU1_P WU2_P WU3_P WU4_P (Tire pressure)	Pa, psi	Indicates the tire pressure. (See 02-12-1 WHEEL AND TIRE SPECIFICATION.)	<ul style="list-style-type: none"> Adjust tire pressure. (See 02-12-5 TIRE PRESSURE ADJUSTMENT (WITH TPMS).) Replace the wheel unit. (See 02-12-6 WHEEL UNIT REMOVAL/INSTALLATION.) Perform the wheel unit ID registration. (See 02-12-5 WHEEL UNIT ID REGISTRATION.)
WU1_T WU2_T WU3_T WU4_T (Tire temperature)	°C, °F	Indicates the internal tire air temperature.	Adjust tire pressure. (See 02-12-5 TIRE PRESSURE ADJUSTMENT (WITH TPMS).)
WU1_VPWR WU2_VPWR WU3_VPWR WU4_VPWR (Supply voltage)	Normal/ Error	Signal is normal: Normal Signal is abnormal: Error	Replace the wheel unit. (See 02-12-6 WHEEL UNIT REMOVAL/INSTALLATION.)
WU1_ERR_T WU2_ERR_T WU3_ERR_T WU4_ERR_T (Tire temperature)	Normal/ Error	Signal is normal: Normal Signal is abnormal: Error	Replace the wheel unit. (See 02-12-6 WHEEL UNIT REMOVAL/INSTALLATION.)
WU1_ERR_P WU2_ERR_P WU3_ERR_P WU4_ERR_P (Tire pressure)	Normal/ Error	Signal is normal: Normal Signal is abnormal: Error	Replace the wheel unit. (See 02-12-6 WHEEL UNIT REMOVAL/INSTALLATION.)

02-02

Snapshot data table

Note

- Snapshot data items are not displayed, according to detected DTC.
- The tire pressure monitoring system (TPMS) does not identify the location of the malfunctioning wheel unit on the vehicle (RF, LF, LR, RR). The TPMS identifies each wheel unit as No.1, No.2, No.3 and No.4. In order to identify the location of the wheel unit, perform the MALFUNCTIONING WHEEL UNIT IDENTIFICATION procedure. (See 02-02-6 MALFUNCTIONING WHEEL UNIT IDENTIFICATION.)

Snapshot data item	Unit	Definition	Description
TOTAL_DIST	km	Displays distance of odometer when a DTC is detected.	Displays distance of odometer when a DTC is detected. (display four last digits)
VSS	KPH, MPH	Vehicle speed	Vehicle speed signal is input from the speed sensor.
WU1_P WU2_P WU3_P WU4_P	Pa, psi	Tire pressure	Tire pressure signal is input from the wheel unit.

ON-BOARD DIAGNOSTIC

Snapshot data item	Unit	Definition	Description
WU1_T WU2_T WU3_T WU4_T	°C, °F	Tire internal air temperature	Tire internal air temperature signal is input from the wheel unit.

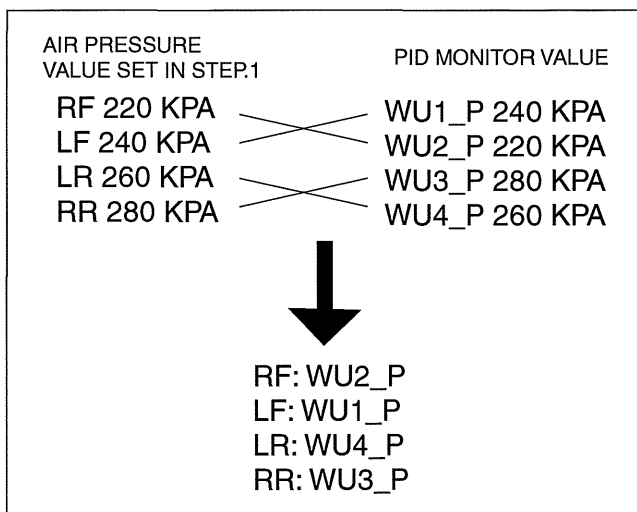

MALFUNCTIONING WHEEL UNIT IDENTIFICATION

id020200800300

Note

- The tire pressure monitoring system (TPMS) does not identify the location of the malfunctioning wheel unit on the vehicle (RF, LF, LR, RR). The TPMS identifies each wheel unit as No.1, No.2, No.3 and No.4. In order to identify the location of the wheel unit, perform the following procedure.

- Adjust the air pressure as follows:
 - RF: 220 kPa {2.2 kgf/cm², 32 psi}
 - LF: 240 kPa {2.4 kgf/cm², 35 psi}
 - LR: 260 kPa {2.6 kgf/cm², 38 psi}
 - RR: 280 kPa {2.8 kgf/cm², 40 psi}
- Switch the ignition to off.
- Connect the M-MDS to the DLC-2.
- Switch the ignition to ON.
- Drive the vehicle at a speed of **25 km/h {15.5 mph} or more** for **2 min or more**.
- Select the following PIDs using the M-MDS, and monitor them.
 - WU1_P
 - WU2_P
 - WU3_P
 - WU4_P
- Determine which wheel unit identification code matches which wheel and tire by comparing the PID monitor values with the air pressure values set in Step 1.

am6zzw0000241

DTC C0077:00

id020200801200

DESCRIPTION	Low tire pressure
DETECTION CONDITION	<ul style="list-style-type: none"> Instrument cluster detects that the tire pressure is low.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Scratch or foreign object of tires Low tire pressure Wheel unit malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VISUALLY INSPECT TIRE <ul style="list-style-type: none"> Visually inspect the tires. Is there any scratch or foreign object? 	Yes	Remove any foreign object or replace the tire if necessary, then go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC

STEP	INSPECTION	ACTION
2	INSPECT TIRE PRESSURE <ul style="list-style-type: none"> Measure the tire pressure when the tires are cold. Is the tire pressure correct? 	Yes Go to the next step.
		No Adjust the tire pressure to the specification, then go to the next step. (See 02-12-5 TIRE PRESSURE ADJUSTMENT (WITH TPMS).)
3	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Clear the DTC from the instrument cluster memory using the M-MDS. (See 02-02-3 TIRE PRESSURE MONITORING SYSTEM (TPMS) ON-BOARD DIAGNOSIS.) Drive the vehicle at speed of 25 km/h {15.5 mph} or more for 10 min or more. Retrieve the TPMS DTC using the M-MDS. (See 02-02-3 TIRE PRESSURE MONITORING SYSTEM (TPMS) ON-BOARD DIAGNOSIS.) Is the same DTC present? 	Yes Confirm the snapshot data. If the tire pressure displayed on the snapshot is not correct, replace and register the wheel unit, then go to the next step. (See 02-12-6 WHEEL UNIT REMOVAL/INSTALLATION.) (See 02-12-5 WHEEL UNIT ID REGISTRATION.)
		No Go to the next step.
4	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> Are any DTCs present? 	Yes Go to the applicable DTC inspection. (See 02-02-3 TIRE PRESSURE MONITORING SYSTEM (TPMS) ON-BOARD DIAGNOSIS.)
		No DTC troubleshooting completed.

02-02

DTC C2011:49/C2012:49/C2013:49/C2014:49

id020200801000

DESCRIPTION	C2011:49	Wheel unit No.1 internal malfunction
	C2012:49	Wheel unit No.2 internal malfunction
	C2013:49	Wheel unit No.3 internal malfunction
	C2014:49	Wheel unit No.4 internal malfunction
DETECTION CONDITION	<ul style="list-style-type: none"> Keyless receiver receives the erratic signal from each wheel unit at speed of 25 km/h {15.5 mph} or more. 	
POSSIBLE CAUSE	<ul style="list-style-type: none"> Wheel unit internal malfunction 	

Diagnostic procedure

STEP	INSPECTION	ACTION
1	IDENTIFY MALFUNCTIONING WHEEL UNIT <ul style="list-style-type: none"> Identify the malfunctioning wheel unit. (See 02-02-6 MALFUNCTIONING WHEEL UNIT IDENTIFICATION.) Is there any malfunction? 	Yes Replace and register the malfunctioning wheel unit, then go to the next step. (See 02-12-6 WHEEL UNIT REMOVAL/INSTALLATION.) (See 02-12-5 WHEEL UNIT ID REGISTRATION.)
		No Go to the next step.
2	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Clear the DTC from the instrument cluster memory using the M-MDS. (See 02-02-3 TIRE PRESSURE MONITORING SYSTEM (TPMS) ON-BOARD DIAGNOSIS.) Drive the vehicle at speed of 25 km/h {15.5 mph} or more for 10 min or more. Retrieve the TPMS DTC using the M-MDS. (See 02-02-3 TIRE PRESSURE MONITORING SYSTEM (TPMS) ON-BOARD DIAGNOSIS.) Is the same DTC present? 	Yes Repeat the inspection from Step 1.
		No Go to the next step.
3	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> Are any DTCs present? 	Yes Go to the applicable DTC inspection. (See 02-02-3 TIRE PRESSURE MONITORING SYSTEM (TPMS) ON-BOARD DIAGNOSIS.)
		No DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC C2011:87/C2012:87/C2013:87/C2014:87

id020200801100

DESCRIPTION	C2011:87	Wheel unit No.1 (No response)
	C2012:87	Wheel unit No.2 (No response)
	C2013:87	Wheel unit No.3 (No response)
	C2014:87	Wheel unit No.4 (No response)
DETECTION CONDITION	<ul style="list-style-type: none"> • Keyless receiver has continuously not received a signal from each wheel unit at speed of 25 km/h {15.5 mph} or more. 	
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Mis-installation of wheel unit • Wheel unit malfunction • Keyless receiver malfunction <ul style="list-style-type: none"> — Keyless receiver do not receive the signal from the wheel unit. • Instrument cluster malfunction <ul style="list-style-type: none"> — Wheel unit identification code is not registered in the instrument cluster. 	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	INSPECT INSTALLATION OF WHEEL UNIT <ul style="list-style-type: none"> • Inspect the wheel unit is installed correctly to each wheel. • Are all four wheels equipped with each wheel units? 	Yes	Go to the next step.
		No	Install the wheel unit correctly and register the wheel unit ID, then go to Step 5. (See 02-12-6 WHEEL UNIT REMOVAL/INSTALLATION.) (See 02-12-5 WHEEL UNIT ID REGISTRATION.)
2	IDENTIFY MALFUNCTIONING WHEEL UNIT <ul style="list-style-type: none"> • Identify the malfunctioning wheel unit. (See 02-02-6 MALFUNCTIONING WHEEL UNIT IDENTIFICATION.) • Is there any malfunction? 	Yes	Replace and register the malfunctioning wheel unit, then go to Step 5. (See 02-12-6 WHEEL UNIT REMOVAL/INSTALLATION.) (See 02-12-5 WHEEL UNIT ID REGISTRATION.)
		No	Vehicles without advanced keyless entry and push button start system: <ul style="list-style-type: none"> • Go to Step 4. Vehicles with advanced keyless entry and push button start system: <ul style="list-style-type: none"> • Go to the next step.
3	CONFIRM ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM DTC <ul style="list-style-type: none"> • Retrieve the advanced keyless entry and push button start system DTC using the M-MDS. (See 09-02A-6 DTC INSPECTION [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02A-7 DTC TABLE [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
		No	Go to the next step.
4	INSPECT KEYLESS RECEIVER <ul style="list-style-type: none"> • Switch the ignition to off. • Inspect the keyless receiver. (See 09-14-81 KEYLESS RECEIVER INSPECTION [KEYLESS ENTRY SYSTEM].) (See 09-14-82 KEYLESS RECEIVER INSPECTION [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) • Is there any malfunction? 	Yes	Replace the keyless receiver, then go to the next step. (See 09-14-80 KEYLESS RECEIVER REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Clear the DTC from the instrument cluster memory using the M-MDS. (See 02-02-3 TIRE PRESSURE MONITORING SYSTEM (TPMS) ON-BOARD DIAGNOSIS.) • Drive the vehicle at speed of 25 km/h {15.5 mph} or more for 10 min or more. • Retrieve the TPMS DTC using the M-MDS. (See 02-02-3 TIRE PRESSURE MONITORING SYSTEM (TPMS) ON-BOARD DIAGNOSIS.) • Is the same DTC present? 	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC

STEP	INSPECTION		ACTION
6	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 02-02-3 TIRE PRESSURE MONITORING SYSTEM (TPMS) ON-BOARD DIAGNOSIS.)
		No	DTC troubleshooting completed.

Note

- If the wheel unit has been newly replaced, the TPMS warning light may flashes before the ID registration is complete, and DTC C2011:87, C2012:87, C2013:87 and C2014:87 may be stored in the memory. In this case, reimplement the wheel unit ID registration, and after confirming that the TPMS warning light is no longer flashing, erase the DTC. If the TPMS warning light does not go out, a malfunction on any one of the wheel units may have occurred and the ID registration will not have been correctly performed. Repeat the diagnostic procedure from Step 1 and perform an inspection.

02-02

DTC U0127:00

id020200801300

Vehicles Without Advanced Keyless Entry And Push Button Start System

DESCRIPTION	Communication error with keyless receiver
DETECTION CONDITION	<ul style="list-style-type: none"> Communication error between instrument cluster and keyless receiver.

ON-BOARD DIAGNOSTIC

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	INSPECT KEYLESS RECEIVER CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable. • Disconnect the keyless receiver connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 9.
		No	Go to the next step.
2	INSPECT BCM CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Disconnect the BCM connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 9.
		No	Go to the next step.
3	INSPECT INSTRUMENT CLUSTER CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Disconnect the instrument cluster connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 9.
		No	Go to the next step.
4	INSPECT WHEEL UNIT SIGNAL CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • Keyless receiver, BCM and instrument cluster connectors are disconnected. • Inspect for continuity between the following terminal (wiring harness-side) and body ground: <ul style="list-style-type: none"> — Keyless receiver terminal D • Is there continuity? 	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 9.
		No	Go to the next step.
5	INSPECT WHEEL UNIT SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • Keyless receiver, BCM and instrument cluster connectors are disconnected. • Reconnect the negative battery cable. • Switch the ignition to ON. • Measure the voltage at the following terminal (wiring harness-side): <ul style="list-style-type: none"> — Keyless receiver terminal D • Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 9.
		No	Go to the next step.
6	INSPECT WHEEL UNIT SIGNAL CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Keyless receiver, BCM and instrument cluster connectors are disconnected. • Switch the ignition to off. • Disconnect the negative battery cable. • Inspect for continuity between following terminals (wiring harness-side): <ul style="list-style-type: none"> — Keyless receiver terminal D—BCM terminal 4K — Keyless receiver terminal D—Instrument cluster terminal 2G • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 9.
7	INSPECT KEYLESS RECEIVER <ul style="list-style-type: none"> • Reconnect the keyless receiver, BCM and instrument cluster connectors. • Reconnect the negative battery cable. • Inspect the keyless receiver. (See 09-14-81 KEYLESS RECEIVER INSPECTION [KEYLESS ENTRY SYSTEM].) • Is there any malfunction? 	Yes	Replace the keyless receiver, then go to Step 9. (See 09-14-80 KEYLESS RECEIVER REMOVAL/INSTALLATION.)
		No	Go to the next step.
8	CONFIRM BCM DTC <ul style="list-style-type: none"> • Retrieve the BCM DTC using the M-MDS. (See 09-02F-7 DTC INSPECTION [BCM].) • Are any DTCs display? 	Yes	Go to the applicable DTC inspection. (See 09-02F-8 DTC TABLE [BCM].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC

STEP	INSPECTION	ACTION	
9	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect the disconnected connectors. • Reconnect the negative battery cable. • Clear the DTC from the instrument cluster memory using the M-MDS. (See 02-02-3 TIRE PRESSURE MONITORING SYSTEM (TPMS) ON-BOARD DIAGNOSIS.) • Switch the ignition to ON and wait for 30 s or more. • Retrieve the TPMS DTC using the M-MDS. (See 02-02-3 TIRE PRESSURE MONITORING SYSTEM (TPMS) ON-BOARD DIAGNOSIS.) • Is the same DTC present? 	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to the next step.
10	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 02-02-3 TIRE PRESSURE MONITORING SYSTEM (TPMS) ON-BOARD DIAGNOSIS.)
		No	DTC troubleshooting completed.

02-02

ON-BOARD DIAGNOSTIC

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	INSPECT KEYLESS CONTROL MODULE CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable. • Disconnect the keyless control module connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 9.
		No	Go to the next step.
2	INSPECT BCM CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Disconnect the BCM connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 9.
		No	Go to the next step.
3	INSPECT INSTRUMENT CLUSTER CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Disconnect the instrument cluster connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Is there any malfunction? 	Yes	Repair or replace the connector or terminals, then go to Step 9.
		No	Go to the next step.
4	INSPECT WHEEL UNIT SIGNAL CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • Keyless control module, BCM and instrument cluster connectors are disconnected. • Inspect for continuity between the following terminal (wiring harness-side) and body ground: <ul style="list-style-type: none"> — Keyless control module terminal 3X • Is there continuity? 	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 9.
		No	Go to the next step.
5	INSPECT WHEEL UNIT SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • Keyless control module, BCM and instrument cluster connectors are disconnected. • Reconnect the negative battery cable. • Switch the ignition to ON. • Measure the voltage at the following terminal (wiring harness-side): <ul style="list-style-type: none"> — Keyless control module terminal 3X • Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 9.
		No	Go to the next step.
6	INSPECT WHEEL UNIT SIGNAL CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Keyless control module, BCM and instrument cluster connectors are disconnected. • Switch the ignition to off. • Disconnect the negative battery cable. • Inspect for continuity between following terminals (wiring harness-side): <ul style="list-style-type: none"> — Keyless control module terminal 3X— BCM terminal 4K — Keyless control module terminal 3X— Instrument cluster terminal 2G • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 9.
7	INSPECT BCM <ul style="list-style-type: none"> • Reconnect the keyless control module, BCM and instrument cluster connectors. • Reconnect the negative battery cable. • Retrieve the BCM DTC using the M-MDS. (See 09-02F-7 DTC INSPECTION [BCM].) • Are any DTCs display? 	Yes	Go to the applicable DTC inspection. (See 09-02F-8 DTC TABLE [BCM].)
		No	Go to the next step.
8	INSPECT KEYLESS CONTROL MODULE <ul style="list-style-type: none"> • Measure the voltage at the following terminals (wiring harness-side): <ul style="list-style-type: none"> — Keyless control module terminal 3X • Is the voltage normal? (See 09-14-68 KEYLESS CONTROL MODULE INSPECTION.) 	Yes	Go to the next step.
		No	Replace the keyless control module, then go to the next step. (See 09-14-66 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION.)

02-02

ON-BOARD DIAGNOSTIC

STEP	INSPECTION	ACTION	
9	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Make sure to reconnect the disconnected connectors. Reconnect the negative battery cable. Clear the DTC from the instrument cluster memory using the M-MDS. (See 02-02-3 TIRE PRESSURE MONITORING SYSTEM (TPMS) ON-BOARD DIAGNOSIS.) Switch the ignition to ON and wait for 30 s or more. Retrieve the TPMS DTC using the M-MDS. (See 02-02-3 TIRE PRESSURE MONITORING SYSTEM (TPMS) ON-BOARD DIAGNOSIS.) Is the same DTC present? 	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to the next step.
10	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 02-02-3 TIRE PRESSURE MONITORING SYSTEM (TPMS) ON-BOARD DIAGNOSIS.)
		No	DTC troubleshooting completed.

DTC U0300:00

id020200801600

DESCRIPTION	Incomplete configuration
DETECTION CONDITION	<ul style="list-style-type: none"> TPMS tire identifier is a repetition error.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Wheel unit malfunction <ul style="list-style-type: none"> — ID registration procedure has not been performed properly. Instrument cluster malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY PROGRAMMED ID OF WHEEL UNIT <ul style="list-style-type: none"> Switch the ignition to off. Connect the M-MDS to the DLC-2. Select the following PIDs using the M-MDS: (See 02-02-3 TIRE PRESSURE MONITORING SYSTEM (TPMS) ON-BOARD DIAGNOSIS.) <ul style="list-style-type: none"> — WU1_ID — WU2_ID — WU3_ID — WU4_ID Switch the ignition to ON. Is the same code in the output ID? 	Yes	Configure the instrument cluster, then go to the next step. (See 09-22-10 INSTRUMENT CLUSTER CONFIGURATION.)
		No	Go to the next step.
2	VERIFY TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Clear the DTC from the instrument cluster memory using the M-MDS. (See 02-02-3 TIRE PRESSURE MONITORING SYSTEM (TPMS) ON-BOARD DIAGNOSIS.) Drive the vehicle at speed of 25 km/h {15.5 mph} or more for 10 min or more. Retrieve the TPMS DTC using the M-MDS. (See 02-02-3 TIRE PRESSURE MONITORING SYSTEM (TPMS) ON-BOARD DIAGNOSIS.) Is the same DTC present? 	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 02-02-3 TIRE PRESSURE MONITORING SYSTEM (TPMS) ON-BOARD DIAGNOSIS.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC U3000:42

id020200801500

DESCRIPTION	Instrument cluster general memory failure
DETECTION CONDITION	<ul style="list-style-type: none"> Instrument cluster detects internal malfunction.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Instrument cluster internal malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	CONFIRM TPMS DTC <ul style="list-style-type: none"> Clear the DTC from the instrument cluster memory using the M-MDS. (See 02-02-3 TIRE PRESSURE MONITORING SYSTEM (TPMS) ON-BOARD DIAGNOSIS.) Switch the ignition to ON. Retrieve the TPMS DTC using the M-MDS. (See 02-02-3 TIRE PRESSURE MONITORING SYSTEM (TPMS) ON-BOARD DIAGNOSIS.) Is the same DTC present? 	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 02-02-3 TIRE PRESSURE MONITORING SYSTEM (TPMS) ON-BOARD DIAGNOSIS.)

SYMPTOM TROUBLESHOOTING

FOREWORD

id020300800200

- Before performing the steps in Symptom Troubleshooting, perform the On-board Diagnostic Inspection. To check the DTC, follow the DTC Inspection steps. (See 02-02-3 TIRE PRESSURE MONITORING SYSTEM (TPMS) ON-BOARD DIAGNOSIS.)

PRECAUTION

id020300800300

Intermittent Concern Troubleshooting

Vibration method

- If malfunction occurs or becomes worse while driving on a rough road or when the engine is vibrating, perform the steps below.

Note

- There are several reasons why vehicle or engine vibration could cause an electrical malfunction. Some of the things to check for are:
 - Connectors not fully seated
 - Wire harnesses not having full play
 - Wires laying across brackets or moving parts
 - Wires routed too close to hot parts
- An improperly routed, improperly clamped, or loose harness can cause wiring to become pinched between parts.
- The connector joints, points of vibration, and places where wire harnesses pass through the firewall, body panels and other panels are the major areas to be checked.

Inspection method for switch and/or sensor connectors or wires

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition to ON (engine off).

Note

- If engine starts and runs, perform the following steps at idle.

3. Access the PIDs for the switch you are inspecting.
4. Turn switch on manually.
5. Shake each connector or wire harness a bit vertically and horizontally while monitoring the PID.

- If the PID value is unstable, check for poor connection.

ac9uuw00002493

Inspection method for sensors

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition to ON (engine off).

Note

- If engine starts and runs, perform the following steps at idle.

3. Access the PIDs for the switch you are inspecting.
4. Vibrate the sensor slightly with your finger.

- If the PID value is unstable or malfunction occurs, check for poor connection and/or poorly mounted sensor.

SYMPTOM TROUBLESHOOTING

Connector terminal check method

1. Check the connection condition of each female terminal.
2. Insert male terminal; fit the female terminal side to female terminal and check to see whether the malfunction is in the female terminal or not.

acxuuw0000962

02-03

SYMPTOM TROUBLESHOOTING

id020300800400

No.	Symptom
1	TPMS warning light illuminates continuously
2	TPMS warning light (low pressure warning) illuminates after engine start and turns off after driving for period of time
3	Wheel unit ID registration cannot be performed (TPMS warning light flashes)

NO.1 TPMS WARNING LIGHT ILLUMINATES CONTINUOUSLY

id020300800500

Caution

- The tire pressure cannot be measured accurately after driving for a long period due to the internal temperature and pressure. Stop the vehicle for approx. 1 hour and then perform the tire pressure measurement and adjustment.
- Use a high accuracy digital gauge for measurement of the tire pressure.

Note

- If the DTC clearing procedure is implement, the TPMS warning light turns off.

1	TPMS warning light illuminates continuously
[TROUBLESHOOTING HINTS]	
• Tire pressure is lower than the specification. (Such as loss of air pressure due to puncture.)	

STEP	INSPECTION		ACTION
1	INSPECT TIRE <ul style="list-style-type: none"> • Inspect the tires. • Is there any foreign object adhering to the tire? 	Yes	Remove the any foreign object. Replace the tire if necessary, then go to the next step.
		No	Go to the next step.
2	MEASURE TIRE PRESSURE <ul style="list-style-type: none"> • Measure the tire pressure when the tires are cold. • Is the tire pressure lower than the specification? 	Yes	Adjust the tire pressure to the specification when the tires are cold, then go to the next step. (See 02-12-5 TIRE PRESSURE ADJUSTMENT (WITH TPMS).)
		No	Go to the next step.
3	VERIFY TPMS WARNING LIGHT <ul style="list-style-type: none"> • Does the TPMS warning light turn off? 	Yes	Symptom troubleshooting completed. Explain to the customer what has been repaired.
		No	Go to the next step.
4	VERIFY TPMS WARNING LIGHT AFTER DRIVE VEHICLE <ul style="list-style-type: none"> • Drive the vehicle at speed of 25 km/h {15.5 mph} or more for 10 min or more. • Does the TPMS warning light turn off? 	Yes	Symptom troubleshooting completed. Explain to the customer what has been repaired.
		No	Adjust the tire pressure to the specification when the tires are cold, then return to Step 1. (See 02-12-5 TIRE PRESSURE ADJUSTMENT (WITH TPMS).) Note <ul style="list-style-type: none"> • If the TPMS warning light does not turn off after repeating this step, the tire may be flat.

SYMPTOM TROUBLESHOOTING

NO.2 TPMS WARNING LIGHT (LOW PRESSURE WARNING) ILLUMINATES AFTER ENGINE START AND TURNS OFF AFTER DRIVING FOR PERIOD OF TIME

id020300800600

Caution

- The tire pressure cannot be measured accurately after driving for a long period due to increased internal temperature and pressure. Stop the vehicle for approx. 1 hour and then perform the tire pressure measurement and adjustment.
- Use a high accuracy digital gauge for measurement of the tire pressure.

Note

- The tire pressure normally decreases by **approx. 7 kPa {0.07 kgf/cm², 1.02 psi}** per month even if the tire is normal.
- The Snapshot (temperature and pressure) stored when the TPMS warning light is turned on and off can be verified by operating the M-MDS.

2	TPMS warning light (low pressure warning) illuminates after engine start and turns off after driving for period of time
[TROUBLESHOOTING HINTS]	
<ul style="list-style-type: none"> • The tire pressure decreases (approaches value to illuminate TPMS warning light) when the internal temperature of the tire is low. 	

STEP	INSPECTION		ACTION
1	INSPECT TIRE <ul style="list-style-type: none"> • Inspect the tires. • Is there any foreign object adhering to the tire? 	Yes	Remove any foreign object. Replace the tire if necessary, then go to the next step.
		No	Go to the next step.
2	MEASURE TIRE PRESSURE <ul style="list-style-type: none"> • Measure the tire pressure when the tires are cold. • Has the tire pressure decreased (approaches value to illuminate TPMS warning light)? 	Yes	Adjust the tire pressure to the specification when the tires are cold, then go to the next step. (See 02-12-5 TIRE PRESSURE ADJUSTMENT (WITH TPMS).)
		No	Go to the next step.
3	VERIFY TPMS WARNING LIGHT <ul style="list-style-type: none"> • Does the TPMS warning light turn off? 	Yes	Symptom troubleshooting completed.
		No	Verify the symptom troubleshooting again and return to Step 1 if the malfunction recurs.

SYMPTOM TROUBLESHOOTING

NO.3 WHEEL UNIT ID REGISTRATION CANNOT BE PERFORMED (TPMS WARNING LIGHT FLASHES)

id020300800900

Caution

- Activate the wheel unit ID registration mode using the M-MDS, and perform the following steps if the TPMS warning light does not turn off after driving at 25 km/h {15.5 mph} or more for 10 min or more.

3	Wheel unit ID registration cannot be performed (TPMS warning light flashes)
[TROUBLESHOOTING HINTS]	
<ul style="list-style-type: none"> • New wheel unit malfunction (caused when install to the wheel). • Any malfunction on an old wheel unit which has not been replaced. 	

02-03

STEP	INSPECTION		ACTION
1	VERIFY REGISTRATION OF WHEEL UNIT <ul style="list-style-type: none"> • Connect the M-MDS to the DLC-2. • Display the wheel unit ID registration condition (ID and tire pressure table) using the M-MDS. (See 02-12-5 WHEEL UNIT ID REGISTRATION.) • Temporarily remove the battery and reinstall it immediately. <p>Note</p> <ul style="list-style-type: none"> • If the battery is removed, the tire pressure data for WU1_P to WU4_P stored in the instrument cluster is reset. • Tire pressure is 0 kPa {0 kgf/cm², 0 psi} when it is displayed again using the M-MDS. <ul style="list-style-type: none"> • Set the tire pressure for the four wheels separately. • Perform the "WHEEL UNIT ID REGISTRATION" using the M-MDS again. (See 02-12-5 WHEEL UNIT ID REGISTRATION.) • Can the ID be registered? 	Yes	Symptom troubleshooting completed. Adjust the tire pressure on four wheels, then return the vehicle to the customer. (See 02-12-5 TIRE PRESSURE ADJUSTMENT (WITH TPMS).)
		No	Go to the next step.
2	IDENTIFY UNREGISTERED WHEEL UNIT <ul style="list-style-type: none"> • Identify the malfunctioning wheel unit. (See 02-02-6 MALFUNCTIONING WHEEL UNIT IDENTIFICATION.) • Is the wheel unit for which the ID could not be registered a new wheel unit? 	Yes	Replace with a new wheel unit, then go to Step 4. (See 02-12-6 WHEEL UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	Replace the old wheel unit, then go to the next step (any malfunction on an old wheel unit which has not been replaced). (See 02-12-6 WHEEL UNIT REMOVAL/INSTALLATION.)		
4	VERIFY REGISTRATION OF WHEEL UNIT <ul style="list-style-type: none"> • Perform the "WHEEL UNIT ID REGISTRATION" using the M-MDS. (See 02-12-5 WHEEL UNIT ID REGISTRATION.) • Can the wheel unit ID be registered? 	Yes	Symptom troubleshooting completed.
		No	Verify the symptom troubleshooting again and return to Step 1 if the malfunction recurs.

GENERAL PROCEDURES (SUSPENSION)

id021000800300

Wheel and Tire Installation

1. When installing the wheels and tires, tighten the wheel nuts in a criss-cross pattern to the following tightening torque.

Tightening torque

88—118 N·m {9.0—12 kgf·m, 65—87 ft·lbf}

am3uuw0000256

Suspension Links Removal/Installation

1. For the joint sections with rubber bushings, raise the vehicle using a lift, and then temporarily tighten the installation bolts and nuts. Lower the vehicle to the ground and tighten them completely with the specified torque.

Connector Disconnection

1. Disconnect the negative battery cable before performing any work that requires handling of connectors. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].) (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC])

Power Steering Related Parts Installation

1. If any power steering fluid line has been disconnected, perform the following after installation of the power steering components. (See 06-14-6 POWER STEERING FLUID INSPECTION.)
 - Power steering fluid amount inspection
 - Power steering fluid leakage inspection
 - Air bleeding

Electro Hydraulic Power Assist Steering (EHPAS) Related Parts

Caution

- If the configuration procedure is not completed, the EHPAS will not operate properly and it might cause an unexpected accident. Therefore, when replacing or removing the electric power steering oil pump, make sure to perform the configuration procedure to ensure the proper EHPAS operation.

1. Make sure that there are no DTCs in the EHPAS memory after working on EHPAS related parts. If there are any codes in the memory, clear them.
2. When replacing or removing the electric power steering oil pump, perform the configuration procedures. (See 06-14-32 ELECTRO HYDRAULIC POWER ASSIST STEERING (EHPAS) CONTROL MODULE CONFIGURATION.)

Auto Leveling System Initialization (Vehicle with Adaptive Front Lighting System (AFS))

1. Initialize the auto leveling sensor, when performing the following services. (See 09-18-51 AUTO LEVELING SYSTEM INITIALIZATION.)
 - Removing the auto leveling sensor
 - Disconnecting the auto leveling sensor link
 - Removing the suspension parts related the vehicle height

WHEEL ALIGNMENT PRE-INSPECTION

id021100800100

02-11

1. Park the vehicle on a level ground, in an unloaded condition*, and with the wheels straight forward.
 *: Unloaded condition.....Fuel tank is full. Engine coolant and engine oil are at specified level. Spare tire, jack and tools are in designated position.
2. Inspect the tire pressure.
 - Adjust to the recommended pressure if necessary. (See 02-50-1 SUSPENSION TECHNICAL DATA.)
3. Inspect the wheel bearing play.
 - Correct if necessary. (See 03-11-2 WHEEL HUB, STEERING KNUCKLE INSPECTION.) (See 03-12-1 WHEEL HUB COMPONENT INSPECTION.)
4. Inspect the wheel runout.
 - Correct if necessary. (See 02-50-1 SUSPENSION TECHNICAL DATA.)
5. Rock the vehicle, and verify that there is no looseness in the steering wheel joint and suspension ball joint.
6. Rock the vehicle, and verify that the shock absorber operates properly.
7. Measure height H from the center of the wheel to the fender brim.
8. Verify that the difference between the left and right dimension H is within the specification.
 - If it exceeds the specification, repeat the Step 2—7.

Item		Fuel gauge indication				
		Empty	1/4	1/2	3/4	Full
Maximum steering angle [Tolerance $\pm 3^\circ$]	Inner	36°00'				
	Outer	30°00'				
Total toe-in	Tire [Tolerance ± 4 { ± 0.2 }]	2 {0.08}				
	Rim inner [Tolerance ± 3 { ± 0.1 }]	1.5 {0.059}				
	(degree)	0°11'±0°22'				
Caster angle*2 (Reference value) [Tolerance $\pm 1^\circ$]		3°06'	3°08'	3°09'	3°11'	3°12'
Camber angle*2 (Reference value) [Tolerance $\pm 1^\circ$]		-0°53'			-0°54'	
Steering axis inclination (Reference value)		14°18'		14°19'		14°20'

*1 : Engine coolant and engine oil are at specified level. Spare tire, jack and tools are in designated position.

*2 : Difference between left and right must not exceed 1°30'.

Steering Angle Adjustment

1. Loosen the tie-rod end locknuts.
2. Remove the steering gear boot clamp.
3. Turn the tie rods.

Standard length L

13—31 mm {0.6—1.2 in}

4. Turn the tie rods equally to provide the correct maximum steering angle.
5. Tighten the tie-rod end locknuts.

Tightening torque

79—108 N·m {8.1—11 kgf·m, 59—79 ft·lbf}

6. Verify that the boot is not twisted, and install the boot clamp.
7. Adjust the toe-in after adjusting the steering angle.

am3uuw0000471

Total Toe-in Adjustment

1. Loosen the locknut of the tie-rod end.
2. Remove the rack boot clamp.
3. Adjust the total toe-in by rotating each tie rod (left and right) in the opposite directions by the same amount respectively.

Note

- Toe angle changes by **approx. 6 mm {0.2 in}** per one rotation of the tie rod for one wheel.
- Each tie rod has a right-hand thread. When increasing the toe-in angle, rotate the right tie rod toward the front of the vehicle and rotate the left tie rod toward the rear of the vehicle by the same amount.

4. Tighten the locknut of the tie-rod end.

Tightening torque

79—108 N·m {8.1—11 kgf·m, 59—79 ft·lbf}

5. Verify that the rack boot does not have any twisting and install the rack boot clamp.

WHEEL ALIGNMENT

REAR WHEEL ALIGNMENT

id021100800300

Rear wheel alignment (Unloaded)*1 [LF, L5]

Item			Fuel gauge indication				
			Empty	1/4	1/2	3/4	Full
Total toe-in	Tire [Tolerance ± 4 { ± 0.2 }]	(mm {in})	3 {0.1}				
	Rim inner [Tolerance ± 3 { ± 0.1 }]		Vehicle equipped with 16 inch wheel: 1.9 {0.075} Vehicle equipped with 17 inch wheel: 2.0 {0.079}				
	(degree)		0°16'±0°21'				
Camber angle*2 (Reference value) [Tolerance $\pm 1^\circ$]			-1°23'	-1°25'	-1°27'	-1°28'	-1°30'
Thrust angle [Tolerance $\pm 0^\circ 48'$]			0°				

*1 : Engine coolant and engine oil are at specified level. Spare tire, jack and tools are in designated position.

*2 : Difference between left and right must not exceed 1°30'.

Rear wheel alignment (Unloaded)*1 [L3 WITH TC]

Item			Fuel gauge indication				
			Empty	1/4	1/2	3/4	Full
Total toe-in	Tire [Tolerance ± 4 { ± 0.2 }]	(mm {in})	3 {0.1}				
	Rim inner [Tolerance ± 3 { ± 0.1 }]		2.2 {0.087}				
	(degree)		0°16'±0°21'				
Camber angle*2 (Reference value) [Tolerance $\pm 1^\circ$]			-1°35'	-1°36'	-1°38'	-1°39'	-1°41'
Thrust angle [Tolerance $\pm 0^\circ 48'$]			0°				

*1 : Engine coolant and engine oil are at specified level. Spare tire, jack and tools are in designated position.

*2 : Difference between left and right must not exceed 1°30'.

Total Toe-in Adjustment

- Loosen the installation nut of the adjusting cam bolt.
- Rotate the adjusting cam bolt in either direction to adjust the camber.

	Left wheel	Right wheel
Toe-out direction	Clockwise	Counterclockwise
Toe-in direction	Counterclockwise	Clockwise

- Tighten the nut.

Tightening torque

80—100 N·m {8.2—10 kgf·m, 60—73 ft·lbf}

WHEEL AND TIRE SPECIFICATION

id021200800100

Standard tire and wheel [LF, L5]

Item		Specification	
Wheel	Size	16 × 6 1/2J	17 × 7J
	Offset (mm {in})	50 {2.0}	52.5 {2.07}
	Pitch circle diameter (mm {in})	114.3 {4.50}	
	Material	Steel or Aluminum alloy	Aluminum alloy
Tire	Size	P205/55R16 89H	P205/50R17 88V
	Air pressure (kPa {psi})	Front	240 {35}
		Rear	240 {35}
	Remaining tread (mm {in})	1.6 {0.063} min.	
Wheel and tire	Lug nut tightening torque (N·m {kgf·m, ft·lbf})	88—118 {9.0—12, 65—87}	
	Wheel and tire runout (mm {in})	Radial direction	1.5 {0.059} max.
		Lateral direction	Steel: 2.5 {0.10} max. Aluminum alloy: 2.0 {0.078} max.
Wheel imbalance (g {oz})	Adhesive-type ^{*1} : 14 {0.49} max. Knock-type ^{*2} : 9 {0.3} max.	Adhesive-type ^{*1} : 13 {0.46} max. Knock-type ^{*2} : 8 {0.28} max.	

^{*1} : Total weight exceeds 160 g {5.64 oz}.

^{*2} : One balance weight: 60 g {2.1 oz} max. If the total weight exceeds 100 g {3.53 oz} on one side, rebalance after moving the tire around on the rim. Do not use three or more balance weights.

WHEEL AND TIRES

Standard tire and wheel [L3 WITH TC]

Item			Specification
Wheel	Size		18 ×7 1/2J
	Offset	(mm {in})	52.5 {2.07}
	Pitch circle diameter	(mm {in})	114.3 {4.50}
	Material		Aluminum alloy
Tire	Size		P225/40R18 88Y
	Air pressure (kPa {psi})	Front	240 {35}
		Rear	230 {34}
Remaining tread		(mm {in})	1.6 {0.063} min.
Wheel and tire	Lug nut tightening torque	(N·m {kgf·m, ft·lbf})	88—118 {9.0—12, 65—87}
	Wheel and tire runout (mm {in})	Radial direction	1.5 {0.059} max.
		Lateral direction	2.0 {0.078} max.
	Wheel imbalance		(g {oz})

*1 : Total weight exceeds 160 g {5.64 oz}.

*2 : One balance weight: 60 g {2.1 oz} max. If the total weight exceeds 100 g {3.53 oz} on one side, rebalance after moving the tire around on the rim. Do not use three or more balance weights.

Temporary spare tire and wheel

Item			Specification		
Wheel	Size		15×4T	16×4T	17×4T
	Offset	(mm {in})	45 {1.8}		40 {1.6}
	Pitch circle diameter	(mm {in})	114.3 {4.50}		
	Material		Steel		
Tire	Size		T115/70D15 90M	T125/70D16 96M	T125/70D17 98M
	Air pressure	(kPa {psi})	420 {60}		
	Remaining tread		(mm {in})	1.6 {0.063} min.	
Wheel and tire	Lug nut tightening torque	(N·m {kgf·m, ft·lbf})	88—118 {9.0—12, 65—87}		

WHEEL AND TIRES

PARAMETER SETTING PROCEDURE WHEN TIRE SIZE IS CHANGED

id021200809900

Caution

- If the wheel and tire sizes are changed, a discrepancy with the speedometer needle whereby it exceeds the allowable range could result in a malfunction. If the wheel and tire sizes are changed, perform the following procedure to change the tire size parameter setting.
- The same parameters should be set in “Tire dimension”, “Tire Circumference”, and “Tire Size”.

Note

- Use the IDS (laptop PC) because the PDS (Pocket PC) does not support these functions.

02-12

1. Connect the M-MDS to DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select “Module Programming”.
3. Select the items from the screen menu.
 1. Select “Programmable Parameters”.
 2. Select “Tire Size”.
4. Select an item name, and then select the option.
 1. Select “Tire Size”.
 - Tire dimension (195/70R15, 205/50R17, 195/65R15, 205/55R16, 225/40R18)
 - Tire Circumference (195/70R15, 205/50R17, 195/65R15, 205/55R16, 225/40R18)
5. Select the items from the screen menu.
 1. Select “Programmable Parameters”.
 2. Select “Tire Size/Axle Ratio”.
6. Select an item name, and then select the option.
 1. Select “Tire Size/Axle Ratio”.
 - Tire Size (195/70R15, 225/40R18, 195/65R15, 205/50R17, 205/55R16)

am3uuw0000340

WHEEL BALANCE ADJUSTMENT

id021200800200

Caution

- Adjust the outer wheel balance first, then the inner wheel balance.
- Be careful not to scratch the wheels.

Adhesive-type Balance Weight (Outer)

1. Remove the old balance weight from the wheel.
2. Remove the double-sided adhesive tape remaining on the wheel, then clean and degrease the bonding area.
3. Set the wheel on a wheel balancer, measure the amount of unbalance and the position with the mode set for knock-type balance weight.
4. Multiply the amount of unbalance by 1.6 to obtain the balance weight value.
5. Select a balance weight closest to the weight value and attach the balance weight on the position (outer) indicated by the wheel balancer.

Example calculation of balance weight value

Indicated amount of unbalance: 23 g {0.81 oz}

$$23 \text{ g } \{0.81 \text{ oz}\} \times 1.6 = 36.8 \text{ g } \{1.30 \text{ oz}\}$$

Selected balance weight value: 35 g {1.24 oz}

am6uuw0000146

Note

- When selecting a balance weight, select one closest to the calculated value.
Example: 32.4 g {1.14 oz} = 30 g {1.06 oz}

Caution

- Use a genuine balance weight or equivalent (steel).
- When attaching the weight, press the weight with a force of 25 N {2.5 kgf, 5.5 lbf} per 5 g for 2 s or more.

WHEEL AND TIRES

6. If attaching two balance weights, position them so that each is on either side of the position indicated by the wheel balancer.

Caution

- Do not attach weight balances in a row.
- Do not overlap the balance weights.
- Total weight must not exceed 160g {5.65 oz}.

am6uuw0000146

Knock-type Balance Weight (Inner)

1. Measure the amount of unbalance with a wheel balancer.
2. Attach a weight corresponding to the measured weight value on the position (inner) indicated by the wheel balancer.

Caution

- Do not attach three or more balance weights.
- One balance weight must not exceed 60g {2.12 oz}, and a total of tow balance weights must not exceed 100g {3.53 oz}.

am6uuw0000146

Remaining Amount of Unbalance Confirmation

1. After installing the outer and inner balance weights, operate the wheel balancer again.
2. Confirm that the remaining unbalance does not exceed the following on either side.
 - If the remaining unbalance exceeds the specifications, adjust the wheel balance again.

Specifications

	Outer (Adhesive-type)	Inner (Knock-type)
16 inch wheel	14 g {0.49 oz}	9 g {0.3 oz}
17 inch wheel	13 g {0.46 oz}	8 g {0.28 oz}
18 inch wheel	12 g {0.42 oz}	8 g {0.28 oz}

WHEEL AND TIRES

TIRE PRESSURE ADJUSTMENT (WITH TPMS)

id021200800300

1. Use of a digital gauge is recommended for accurate measurement of the air pressure.
2. Tire pressure lowers gradually as time passes. Due to this, monthly air pressure inspection is recommended.
3. Perform tire pressure adjustment before driving. (When tires are cold.)
 - Tire pressure will increase after driving because the internal temperature of the tire is high. If tire pressure is adjusted to specifications when the internal temperature of the tire is high, tire pressure will decrease when the internal temperature of the tire decreases to the same level as ambient temperature. If the tire pressure is lower than the lower-limit pressure, the TPMS warning light may illuminate.
 - Even though the air pressure is adjusted to specifications, the indicated air pressure may be higher than the specified value when the internal temperature of the tire is higher than ambient temperature. (Example: Air pressure changes approx. **10 kPa {0.1 kgf/cm², 1.5 psi}** when the temperature changes **10 degrees**)

Caution

- In an area or a season with varying temperatures, tire pressure will change due to ambient temperature change. If the tire pressure is lower than the lower-limit pressure due to low ambient temperature, the TPMS warning light may illuminate. Adjust the pressure when the TPMS warning light illuminates.
- Do not tilt or use excessive side force when checking air pressure or inflating the tire with air. Which can provide enough leverage to easily bend or break the wheel unit.
- To prevent damage to the valve area of the wheel unit or pressure loss during air pressure adjustment, use a type B tool with a round end as shown in the figure, not a type A tool.

am6zzw0000366

WHEEL UNIT ID REGISTRATION

id021200800400

Note

- After the wheel unit replacement, registration of the wheel unit identification codes must be performed.
- ID registration can be done using the M-MDS, or not using the M-MDS.
- Use the IDS (laptop PC) because the PDS (Pocket PC) does not support the wheel unit ID registration and monitoring wheel unit ID.

Using M-MDS

1. Connect the M-MDS to DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - This function is available for only the IDS (laptop PC).
 1. Select the "Body".
 2. Select the "TPMS Functions".
 3. Select the "Wheel Unit ID Registration".
3. Select an item from the screen menu.
 - Wheel unit ID registration: WU ID Registration
 - Monitoring wheel unit ID: Monitor WU ID Registration
4. Leave the vehicle with the ignition to off for **15 min or more**.
5. Switch the ignition to ON (engine ON).
6. Verify that the TPMS warning light turns on and off in **0.5 s** cycles repeatedly.

am3uuw0000340

WHEEL AND TIRES

7. Drive the vehicle at a speed of **25 km/h {15.5 mph} or more** for **10 min** to implement the wheel unit ID registration.

Note

- If the ID registration is not completed even after driving the vehicle for **10 min** or more at a speed of **25 km/h {15.5 mph} or more**, the TPMS warning light flashes.

8. Verify that the TPMS warning light turns off.

Note

- If the wheel unit ID registration cannot be performed after driving **10 min** or more, refer to the symptom troubleshooting procedure.

Without Using M-MDS

1. Switch the ignition to the ON, then switch it off.
2. Leave the vehicle with the engine off for **15 min or more**.
3. Drive the vehicle at a speed of **25 km/h {15.5 mph} or more** for **10 min or more**.
4. After driving for **10 min**, verify that the TPMS warning light does not flash and is not illuminated.

WHEEL UNIT REMOVAL/INSTALLATION

id021200800600

1. Remove the valve core and valve core, and bleed the air out of the tire.
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.
4. Install the valve core and valve cap, put air into the tire.

Caution

- **A TPMS wheel unit has an exclusive valve core. If a valve core other than the exclusive one is installed, the wheel unit could be damaged due to the generation of rust. Always install the exclusive valve core for TPMS.**
- **To prevent damage to the valve area of the wheel unit or charging loss during air pressure adjustment, use a type B tool with a round end as shown in the figure, not a type A tool.**

5. When replacing wheel unit (s), register the new wheel unit ID (s). (See 02-12-5 WHEEL UNIT ID REGISTRATION.)

Note

- If the wheel unit is replaced with a new one, the ID registration must be performed. When the ID registration is finished, the data for the new wheel unit is displayed on the M-MDS.

3	Seal washer

4	Seal
5	Wheel unit

WHEEL AND TIRES

Wheel Unit Component Removal Note

1. Set the bead breaker at the position laterally opposed to the valve.
2. Break the bead loose.

Caution

- Do not break the bead loose within the range of 45° on each side of the valve. Otherwise, the wheel unit could be damaged.

am6xuw0000238

3. Break the bead loose on the other side of the wheel.

Caution

- Set the bead breaker at the position laterally opposed to the valve.
- Do not break the bead loose within the range of 45° on each side of the valve. Otherwise, the wheel unit could be damaged.

am6xuw0000238

4. Insert the tire lever at the point **40 mm {1.6 in}** from the wheel unit in the direction that the tire changer turntable rotates.

am6xuw0000238

5. Remove the bead from the wheel.

Note

- Using the tire lever as a support will aid in preventing the tire changer arm from deviating from the point at which the bead is first broken.

6. For the other side, insert the tire lever at the point of **40 mm {1.6 in}** from the wheel unit in the direction that the tire changer turntable rotates, and remove the bead from the wheel.

7. Remove the wheel unit.

am6xuw0000238

WHEEL AND TIRES

Wheel Unit Component Installation Note

1. Insert the wheel unit valve into the valve hole so that the polyurethane foam side faces the rim.

Note

- Maintain the wheel unit in contact with the rim, then start manually to screw the valve nut, then start to screw the valve nut for a few turns.

2. Install the nut from the outer side of the wheel.
3. Tighten the valve nut slowly (**15 rpm max.**) to **8.0 N·m {82 kgf·cm, 71 in·lbf}** in one rotation.

Caution

- **Do not retighten the valve nut after the initial operation.**

4. Set the tire at the point A (**45°** away from the valve hole), and install the tire.

am6xuw0000244

02-12

Caution

- **Do not retighten the valve nut after the initial operation.**

4. Set the tire at the point A (**45°** away from the valve hole), and install the tire.

am6xuw0000248

5. Set the tire at the point A (**45°** away from the valve hole).

Note

- Using the tire lever as a support will aid in preventing the tire from deviating from the point A.

6. Install the tire.

Caution

- Performing the following procedures without first removing the ABS wheel-speed sensor may possibly cause an open circuit in the wiring harness if it is pulled by mistake. Before performing the following procedures, disconnect the ABS wheel-speed sensor wiring harness connector (axle side) and fix the wiring harness to an appropriate place where it will not be pulled by mistake while servicing the vehicle.

- Remove the windshield wiper arm and blade. (See 09-19-3 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
- Remove the cowl grille. (See 09-16-4 COWL GRILLE REMOVAL/INSTALLATION.)
- Remove in the order indicated in the table.
- Install in the reverse order of removal.
- Inspect the wheel alignment. (See 02-11-1 FRONT WHEEL ALIGNMENT.)

FRONT SUSPENSION

Piston Rod Nut Removal Note

Warning

- Before removing the piston rod nut, secure the shock absorber and coil spring in the SST. Otherwise, the coil spring could fly off under tremendous pressure and cause serious injury or death, or damage to vehicle parts.

1. Install the shock absorber and coil spring to the **SST** according to the following procedures.

Note

- Install the **SST** using a piece of clean rag to prevent the coil spring from being scratched.

- (1) Set the **SST** attachments (tabs) to the positions shown in the figure.

am3uuw0000257

- (2) Install the front shock absorber and coil spring to the **SST** so that the coil spring is set to the position shown in the figure.

2. Compress the coil spring using the **SST**.
3. Remove the piston rod nut.

am3uuw0000257

Coil Spring Installation Note

1. Compress the coil spring using the **SSTs**.
2. Install the shock absorber so that the lower end of the coil spring is seated on the step of the lower spring seat.

am3uuw0000275

Dust Boot Installation Note

1. Install the dust boot by hooking the bottom edge over the shock absorber lip.

am3uuw0000087

FRONT SUSPENSION

Bearing Installation Note

1. Install the bearing by hooking the upper end of the dust boot to the bearing lip.
2. Align the projection A on the lower part of the shock absorber with the bearing projection B.

am3uuw000088

02-13

am3uuw000088

id021300800800

FRONT SHOCK ABSORBER INSPECTION

1. Remove the front shock absorber.
2. Inspect for damage and oil leakage.
3. Compress and extend the shock absorber piston rod **at least three times** at a steady rate. **From the fourth** compression stroke, verify that the operational force does not change and that there is no unusual noise.
 - If there is any malfunction, replace the shock absorber.

FRONT SHOCK ABSORBER DISPOSAL

id021300800900

1. Place the shock absorber on a level surface or with the piston pointing downwards.
2. Drill a **2—3 mm {0.08—0.11 in}** hole at the point A shown in the figure so that the gas can escape.

Warning

- **Whenever drilling into a shock absorber, wear protective eye wear. The gas in the shock absorber is pressurized and could spray metal chips into the eyes and face.**

3. Drill a **2—3 mm {0.08—0.11 in}** hole at the point B shown in the figure to drain the oil.
4. Turn the hole made in Step 3 downwards and drain the oil by pumping the piston rod up and down several times.
5. Cut off the end of the shock absorber.
6. Dispose of waste oil according to local waste disposal laws.

FRONT SUSPENSION

FRONT LOWER ARM REMOVAL/INSTALLATION

id021300800600

1. Disconnect the front auto leveling sensor link lower side. (Vehicles with AFS) (See 09-18-50 AUTO LEVELING SENSOR REMOVAL/INSTALLATION.)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.
4. Inspect the wheel alignment and adjust it if necessary. (See 02-11-1 FRONT WHEEL ALIGNMENT.)

am3uuw0000573

1	Front ABS wheel-speed sensor wiring harness connector
2	Brake hose clip
3	Front lower arm ball joint (See 02-13-9 Front Lower Arm Ball Joint Installation Note.)

4	Tie-rod end ball joint (See 02-13-13 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
5	Front lower arm (See 02-13-9 Front Lower Arm Removal Note [LF (RH)].) (See 02-13-9 Front Lower Arm Installation Note [LF (RH)].)

FRONT SUSPENSION

Front Lower Arm Removal Note [LF (RH)]

Note

- When working on the right side of vehicles with LF, move the A/C compressor protector so that the A/C compressor protector does not interfere with the removal of the front lower arm front side bolt.

- Remove the A/C compressor protector.
- Remove the front lower arm.

am3uuw0000322

02-13

Front Lower Arm Installation Note [LF (RH)]

- Install the front lower arm.
- Install the A/C compressor protector.

am3uuw0000322

Front Lower Arm Ball Joint Installation Note

Note

- The bolt insertion direction can be either front or rear of the vehicle, however, keep the insertion direction the same on both the left and right sides of the vehicle.

FRONT LOWER ARM INSPECTION

id021300800700

- Remove the lower arm from the vehicle.
- Inspect the arm for bending or damage, and the ball joint for excessive looseness.
 - If there is any malfunction, replace the lower arm.
- Rotate the ball joint stud **5 times**. Install the **SST** to the ball joint stud, measure the rotational torque using a pull scale.
 - If not within the specification, replace the lower arm.

Front lower arm ball joint rotational torque
1.0–4.9 N·m {11–49 kgf·cm, 9–43 in·lbf}
Pull scale reading [10–49 N {1.1–4.9 kgf,
3–10 lbf}]

4	Front stabilizer (See 02-13-13 Front Stabilizer, Stabilizer Bushing and Stabilizer Bracket Installation Note.)

FRONT SUSPENSION

Front Stabilizer, Stabilizer Bushing and Stabilizer Bracket Installation Note

Caution

- Verify that the stabilizer bushings are not caught between the stabilizer bracket and the front crossmember, and install the stabilizer bracket using the following procedure.

1. Temporarily tighten bolts A and B shown in the figure.
2. Tighten bolt A.
3. Tighten bolt B.
4. Tighten bolt A.

am3uuw0000586

02-13

FRONT STABILIZER CONTROL LINK INSPECTION

id021300800500

1. Remove the stabilizer control link from the vehicle.
2. Inspect for bending or damage. If there is any malfunction, replace the stabilizer control link.
3. Rotate the ball joint stud **10 times** and shake it side to side **10 times**.
4. Measure the ball-joint rotational torque using an Allen wrench and a torque wrench.

Front stabilizer control link ball joint rotational torque
0.2—0.9 N·m {3—9 kgf·cm, 2—7 in·lbf}

- If not within the specification, replace the stabilizer control link.

am3uuw0000451

FRONT CROSSMEMBER REMOVAL/INSTALLATION

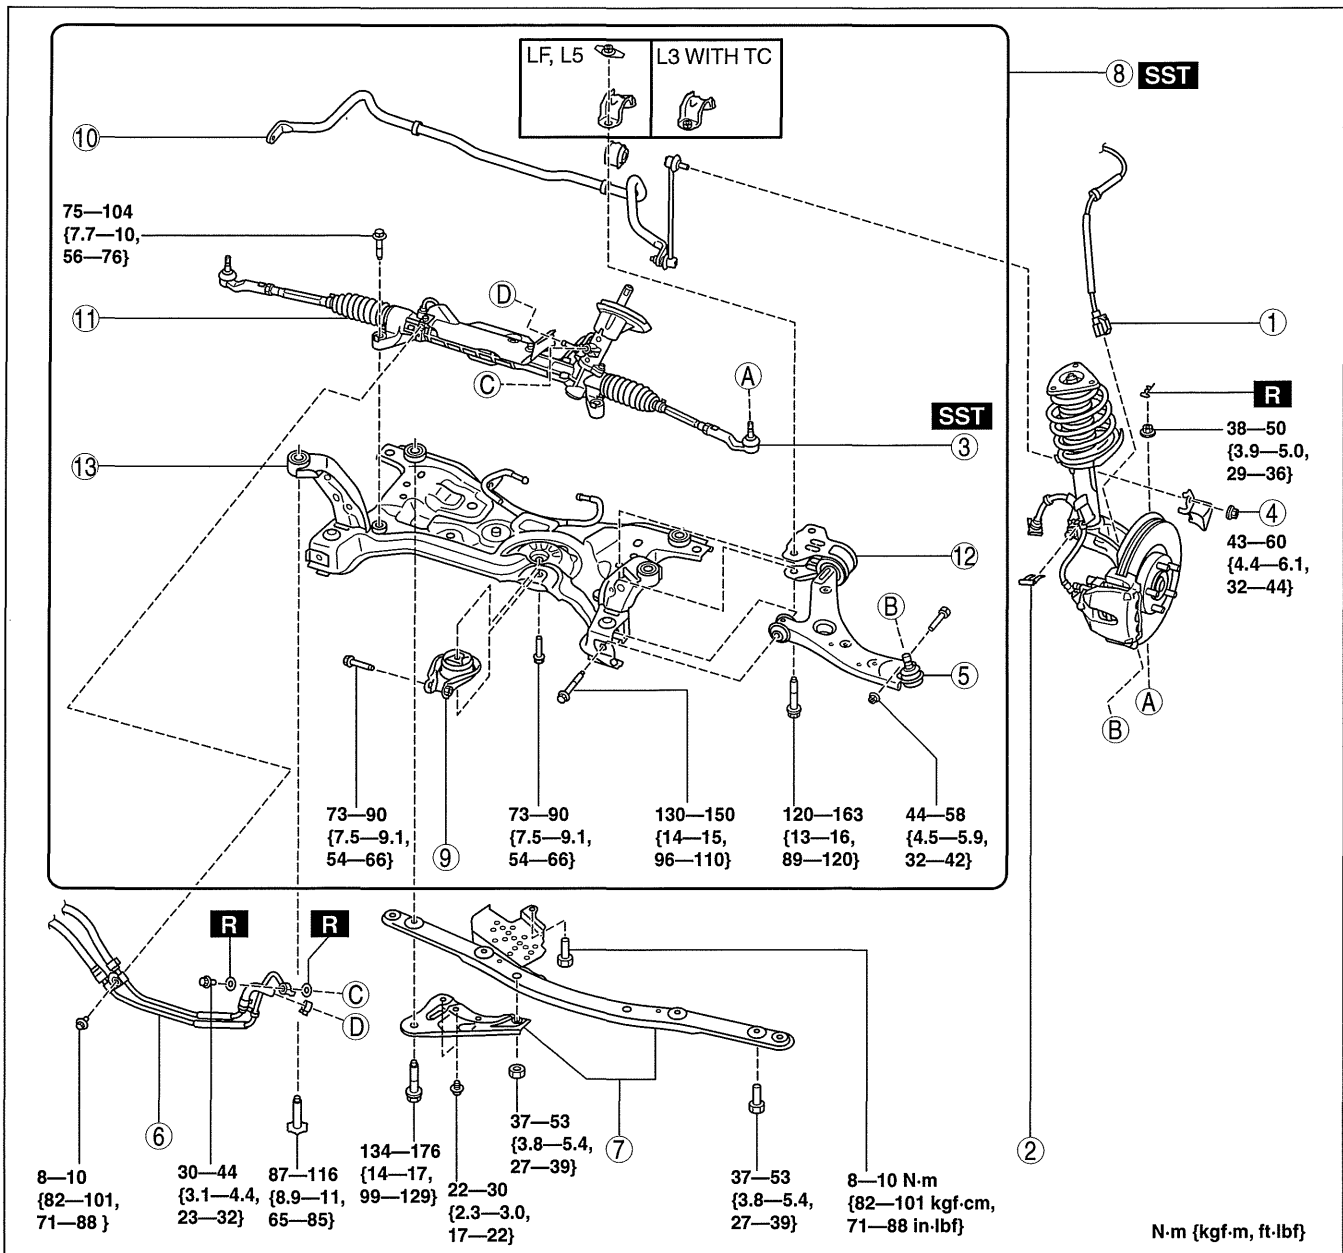

id021300801000

Caution

- Performing the following procedures without first removing the ABS wheel-speed sensor may possibly cause an open circuit in the wiring harness if it is pulled by mistake. Before performing the following procedures, disconnect the ABS wheel-speed sensor wiring harness connector (axle side) and fix the wiring harness to an appropriate place where it will not be pulled by mistake while servicing the vehicle.
- Secure the steering wheel using tape or a cable to prevent the steering shaft from rotating after disconnecting the steering shaft. If the steering wheel rotates after the steering shaft and the steering gear and linkage are disconnected, the internal parts of the clock spring could be damaged.

1. Remove the joint cover. (See 06-14-8 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION [WITHOUT ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) (See 06-14-11 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
2. Disconnect the steering shaft from the steering gear and linkage. (See 06-14-8 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION [WITHOUT ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) (See 06-14-11 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
3. Remove the front auto leveling sensor. (Vehicles with AFS) (See 09-18-50 AUTO LEVELING SENSOR REMOVAL/INSTALLATION.)
4. Remove in the order indicated in the table.
5. Install in the reverse order of removal.
6. Inspect the wheel alignment and adjust it if necessary. (See 02-11-1 FRONT WHEEL ALIGNMENT.)

FRONT SUSPENSION

Tie-rod End Ball Joint Removal Note

1. Detach the tie-rod end from the steering knuckle using the **SST**.

am3uuw000042

02-13

Front Crossmember Component Removal Note

Warning

- Removing the crossmember is dangerous. The crossmember component could fall and cause serious injury or death. Verify that the jack securely supports the crossmember component.

1. Support the front crossmember component using a jack.

am3uuw000042

2. Detach the rubber hangers from the front crossmember.
3. Remove the front crossmember, front stabilizer, front lower arm, and steering gear and linkage as a single unit.

am3uuw0000282

FRONT SUSPENSION

No. 1 Engine Mount Rubber and Front Crossmember Component Installation Note

1. Verify the left and right identification marks and install the positioning **SST** to the front crossmember.

Note

- Verify the identification marks before installation because the left and right parts of the **SST** have different shapes.

2. Temporarily tighten the No.1 engine mount rubber to the front crossmember.

3. Raise the transmission jack gradually and install the front crossmember to the vehicle. At this point verify that the **SST** is securely inserted in the positioning holes on the body.

Warning

- **The crossmember component could fall and cause serious injury or death. Verify that the jack securely supports the crossmember component.**

4. Tighten the front crossmember installation bolts and nuts.

5. Tighten the bolts in the order shown in the figure.

Caution

- **Tighten the bolts in the order shown in the figure to prevent abnormal noise and vibration after assembly.**
- **Tighten the bolts while being careful of their length to prevent interference between the steering gear housing and bolt.**

Tightening torque

73—90 N·m {7.5—9.2 kgf·m, 54—67 ft·lbf}

Bolt stem length

Front crossmember side: 62 mm {2.4 in}

No.1 engine mount bracket side: 65 mm {2.6 in}

Front Lower Arm Ball Joint Installation Note

Note

- The bolt insertion direction can be either front or rear of the vehicle, however, keep the insertion direction the same on both the left and right sides of the vehicle.

REAR SUSPENSION

REAR SHOCK ABSORBER REMOVAL/INSTALLATION

id021400801300

1. Support the rear axle using a jack.
2. Remove the rear shock absorber

am3uuw0000283

02-14

am3uuw0000283

3. Install the rear shock absorber.

REAR SHOCK ABSORBER INSPECTION

id021400801400

1. Remove the rear shock absorber. (See 02-14-3 REAR SHOCK ABSORBER REMOVAL/INSTALLATION.)
2. Inspect for damage and oil leakage.
3. Compress and extend the shock piston at least three times. Verify that the operational force does not change and that there is no unusual noise.
 - If not as specified, replace the rear shock absorber.

REAR SUSPENSION

REAR SHOCK ABSORBER DISPOSAL

id021400801500

1. Clamp a shock absorber on a flat surface or with the piston pointing downwards.
2. Drill a 2—3 mm {0.08—0.11 in} hole at a point 50—60 mm {1.6—1.9 in} from the bottom of the tube, so that the gas can escape.

Warning

- Whenever drilling into a shock absorber, wear protective eye wear. The gas in the shock absorber is pressurized, and could spray metal chips into the eyes and face when drilling.

am3uuw0000323

3. Turn the hole downwards.
4. The oil can be collected by moving the piston rod several times up and down and cutting the tube at the end.
5. Dispose of waste oil according to the waste disposal law.

REAR COIL SPRING REMOVAL/INSTALLATION

id021400800700

1. Disconnect the rear auto leveling sensor lower side. (Vehicles with AFS) (See 09-18-50 AUTO LEVELING SENSOR REMOVAL/INSTALLATION.)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.
4. Inspect the wheel alignment and adjust it if necessary. (See 02-11-3 REAR WHEEL ALIGNMENT.)

4	Rear stabilizer (See 02-14-13 Rear Stabilizer, Stabilizer Bushing and Stabilizer Bracket Installation Note.)

Rear Stabilizer, Stabilizer Bushing and Stabilizer Bracket Installation Note

1. Install the stabilizer bushing so that the projection points to the left side of the vehicle.
2. Install the stabilizer bracket.
3. Install the rear stabilizer component to the vehicle.

am3uuw0000358

02-14

REAR SUSPENSION

REAR STABILIZER CONTROL LINK INSPECTION

id021400800300

1. Remove the stabilizer control link from the vehicle.
2. Inspect for bending or damage. If there is any malfunction, replace the stabilizer control link.
3. Rotate the ball joint stud **10 times** and shake it side to side **10 times**.
4. Measure the ball-joint rotational torque using an Allen wrench and a torque wrench.

Rear stabilizer control link ball joint rotational torque

0.5—2.0 N·m {6—20 kgf·cm, 5—17 in·lbf}

- If not within the specification, replace the stabilizer control link.

am3uuw0000451

REAR CROSSMEMBER REMOVAL/INSTALLATION

id021400801000

Caution

- Performing the following procedures without first removing the ABS wheel-speed sensor may possibly cause an open circuit in the wiring harness if it is pulled by mistake. Before performing the following procedures, disconnect the ABS wheel-speed sensor wiring harness connector (axle side) and fix the wiring harness to an appropriate place where it will not be pulled by mistake while servicing the vehicle.

1. Disconnect the evaporative hose.

am3uuw0000280

2. Disconnect the quick release connectors. (See 01-16A-11 QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/INSTALLATION [LF, L5].) (See 01-16B-5 CHARCOAL CANISTER REMOVAL/INSTALLATION [L3 WITH TC].)

am3uuw0000284

3. Remove the CV solenoid valve from the rear crossmember.

am3uuw0000308

REAR SUSPENSION

4. Disconnect the wiring harness connecting to the rear crossmember.
5. Remove the rear auto leveling sensor. (Vehicles with AFS) (See 09-18-50 AUTO LEVELING SENSOR REMOVAL/INSTALLATION.)
6. Remove the rear stabilizer. (See 02-14-13 REAR STABILIZER REMOVAL/INSTALLATION.)
7. Remove the rear coil spring. (See 02-14-4 REAR COIL SPRING REMOVAL/INSTALLATION.)
8. Remove the rear lower arm. (See 02-14-6 REAR LOWER ARM REMOVAL/INSTALLATION.)
9. Remove in the order indicated in the table.
10. Install in the reverse order of removal.
11. Inspect the wheel alignment and adjust it if necessary. (See 02-11-3 REAR WHEEL ALIGNMENT.)

REAR SUSPENSION

1	Rear ABS wheel-speed sensor wiring harness (See 02-14-16 Rear ABS Wheel-speed Sensor Wiring Harness Installation Note.)
2	Dynamic damper
3	Rear crossmember component (See 02-14-16 Rear Crossmember Component Removal Note.) (See 02-14-16 Rear Crossmember Component Installation Note.)
4	Rear lateral link (See 02-14-11 REAR LATERAL LINK REMOVAL/INSTALLATION.)

5	Rear upper arm (See 02-14-7 REAR UPPER ARM REMOVAL/INSTALLATION.)
6	Charcoal canister (See 01-16A-6 CHARCOAL CANISTER REMOVAL/INSTALLATION [LF, L5].) (See 01-16B-5 CHARCOAL CANISTER REMOVAL/INSTALLATION [L3 WITH TC].)
7	Rear crossmember (See 02-14-16 Rear Crossmember Component Removal Note.)

Rear Crossmember Component Removal Note

Warning

- Verify that the crossmember is securely supported by a jack. If the rear crossmember falls off, it can cause serious injury or death, and damage to the vehicle.

1. Support the rear crossmember with the jack and remove the bolt.
2. Remove the rear crossmember component.

am3uuw0000308

Rear Crossmember Component Installation Note

Warning

- Verify that the crossmember is securely supported by a jack. If the rear crossmember falls off, it can cause serious injury or death, and damage to the vehicle.

1. Support the rear crossmember component and install the rear crossmember.

am3uuw0000308

Rear ABS Wheel-speed Sensor Wiring Harness Installation Note

1. Pass the rear ABS wheel-speed sensor wiring harness outside the rear parking brake cable as shown in the figure.
2. Install the rear ABS wheel-speed sensor wiring harness.

GENERAL PROCEDURES (FRONT AND REAR AXLES)

id031000800100

Wheel and Tire Installation

1. When installing the wheels and tires, tighten the wheel nuts in a criss-cross pattern to the following tightening torque.

Tightening torque

88—118 N·m {9.0—12 kgf·m, 65—87 ft·lbf}

e3u310zw6001

Connector Disconnection

1. Disconnect the negative battery cable before performing any work that requires handling of connectors. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].) (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)

Suspension Links Removal/Installation

1. For the joint sections with rubber bushings, raise the vehicle using a lift, and then temporarily tighten the installation bolts and nuts. Lower the vehicle to the ground and tighten them completely with the specified torque.

Auto Leveling System Initialization (Vehicle with Adaptive Front Lighting System (AFS))

1. Initialize the auto leveling sensor, when performing the following services. (See 09-18-51 AUTO LEVELING SYSTEM INITIALIZATION.)
 - Removing the auto leveling sensor
 - Disconnecting the auto leveling sensor link
 - Removing the suspension parts related the vehicle height

WHEEL HUB, STEERING KNUCKLE INSPECTION

id031100800300

Wheel Bearing Excessive Play Inspection

1. Install the magnetic base and dial gauge as shown in the figure and measure the wheel bearing axial excessive play.
 - If it exceeds the maximum specification, replace the wheel hub bearing.

Maximum front wheel bearing play
0.05 mm {0.002 in}

am3uuw0000458

WHEEL HUB, STEERING KNUCKLE REMOVAL/INSTALLATION

id031100800400

Caution

- Performing the following procedures without first removing the ABS wheel-speed sensor may possibly cause an open circuit in the wiring harness if it is pulled by mistake. Before performing the following procedures, disconnect the ABS wheel-speed sensor connector (axle side) and fix the wiring harness to an appropriate place where it will not be pulled by mistake while servicing the vehicle.

1. When working on the left side of the vehicle, disconnect the front auto leveling sensor link. (Vehicle with Adaptive Front Lighting System (AFS)) (See 09-18-50 AUTO LEVELING SENSOR REMOVAL/INSTALLATION.)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.
4. After installation, inspect the front wheel alignment and adjust it if necessary. (See 02-11-1 FRONT WHEEL ALIGNMENT.)

am3uuw0000616

FRONT AXLE

4	Brake caliper component (See 03-11-3 Brake Caliper Component Removal Note.) (See 04-11-22 FRONT BRAKE (DISC) REMOVAL/INSTALLATION [LF, L5].) (See 04-11-24 FRONT BRAKE (DISC) REMOVAL/INSTALLATION [L3 WITH TC].)
5	Disc plate

6	Tie-rod end ball joint (See 02-13-13 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
7	Front lower arm ball joint (See 03-11-4 Front Lower Arm Ball Joint Installation Note.)
8	Stabilizer control link upper nut
9	Dynamic damper
10	Wheel hub, steering knuckle component (See 03-11-3 Wheel Hub, Steering Knuckle Component Removal Note.) (See 03-11-3 Wheel Hub, Steering Knuckle Component Installation Note.)

03-11

Brake Caliper Component Removal Note

1. Remove the retaining clip, mounting support installing bolt and suspend it out of the way using a cable.

am3uuw0000469

Wheel Hub, Steering Knuckle Component Removal Note

1. Separate the shock absorber from the wheel hub, steering knuckle component by tapping the upper part of the steering knuckle with a hammer.

am3uuw0000469

Wheel Hub, Steering Knuckle Component Installation Note

1. Apply grease (L2Y1 33247) to the wheel bearing inner race and drive shaft contact surface (Area A in figure).
2. Install the wheel hub, steering knuckle component.

am3uuw0000617

FRONT AXLE

Front Lower Arm Ball Joint Installation Note

Note

- The bolt insertion direction can be either front or rear of the vehicle, however, keep the insertion direction the same on both the left and right sides of the vehicle.

WHEEL HUB, STEERING KNUCKLE DISASSEMBLY/ASSEMBLY

id031100152100

1. Disassemble in the order indicated in the table.

1	Dust Cover
2	Wheel hub component (See 03-11-4 Wheel Hub Component Removal Note.) (See 03-11-7 Wheel Hub Component Installation Note.)
3	Retaining clip
4	Wheel bearing (See 03-11-6 Wheel Bearing Removal Note.) (See 03-11-7 Wheel Bearing Installation Note.)
5	Steering knuckle
6	Hub bolt (See 03-11-6 Wheel Hub Bolt Removal Note.) (See 03-11-6 Wheel Hub Bolt Installation Note.)

2. Assemble in the reverse order of disassembly.

am3uuw0000536

Wheel Hub Component Removal Note

- Remove the wheel hub component using the SSTs.
- If the bearing inner race remains on the front wheel hub component, perform the following procedure:

am3uuw0000617

Without using SST

- Grind a section of the bearing inner race until **approx. 0.5 mm {0.02 in}** remains.
- Remove the bearing inner race using a chisel.

am3uuw0000120

FRONT AXLE

With using SST

1. Remove the part as shown in the figure.

am3uuw0000120

03-11

2. Position the **SSTs** and a spare bolt (M10 length 90 mm {3.5 in} or less) as shown in the figure.

Caution

- When tightening section A, tighten section B securely because the engagement of the SST tab is shallow and it can come off easily.

am3uuw0000536

3. Tighten **SST** section A until the space between the bearing inner race and wheel hub component is 1—2 mm {0.04—0.07 in}.
4. Temporarily loosen **SST** section A and position the **SST** again.
5. Tighten **SST** section A and remove the bearing inner race.

am3uuw0000536

FRONT AXLE

Wheel Bearing Removal Note

1. Remove the wheel bearing using the SSTs.

am3uuw0000618

Wheel Hub Bolt Removal Note

Note

- The hub bolts do not need to be removed unless they are being replaced.

1. Remove the hub bolt using a press.

am3uuw0000090

Wheel Hub Bolt Installation Note

1. Install the new hub bolt using a press.

acxjw00001128

FRONT AXLE

Wheel Bearing Installation Note

Note

- Install the wheel bearing with the ABS encoder facing inside of the vehicle.

am3uuw0000536

03-11

1. Install the new wheel bearing using the SSTs.

am3uuw0000536

Wheel Hub Component Installation Note

1. Install the wheel hub component using the SSTs.

am3uuw0000536

FRONT AXLE

FRONT WHEEL HUB BOLT REPLACEMENT

id031100800200

1. Remove the brake calliper component and disc plate. (See 03-11-2 WHEEL HUB, STEERING KNUCKLE REMOVAL/INSTALLATION.)
2. Remove the wheel hub bolt using the **SST** as shown in the figure.

Note

- When removing the wheel hub bolts, perform the work between range A shown in the figure to assure a space for the bolt removal.

3. Place a new wheel hub bolt in the wheel hub.

am3uuw0000618

4. Install the wheel hub by placing a proper sized washer on the hub, and tightening the nut as shown in the figure.

am3uuw0000616

1	Joint shaft (See 03-13-13 JOINT SHAFT INSPECTION.) (See 03-13-13 JOINT SHAFT REMOVAL/ INSTALLATION.) (See 03-13-16 JOINT SHAFT DISASSEMBLY [LF, L5].) (See 03-13-17 JOINT SHAFT DISASSEMBLY [L3 WITH TC].) (See 03-13-19 JOINT SHAFT ASSEMBLY [LF, L5 (MTX)].) (See 03-13-21 JOINT SHAFT ASSEMBLY [L3 WITH TC].) (See 03-13-23 JOINT SHAFT ASSEMBLY [L5 (ATX)].)
---	---

2	Drive shaft (See 03-13-2 DRIVE SHAFT INSPECTION.) (See 03-13-3 DRIVE SHAFT REMOVAL/ INSTALLATION.) (See 03-13-6 DRIVE SHAFT (TRIPOD JOINT) DISASSEMBLY/ASSEMBLY.) (See 03-13-10 DRIVE SHAFT (DOUBLE OFFSET JOINT) DISASSEMBLY/ASSEMBLY.)
---	---

DRIVE SHAFT INSPECTION

id031300801800

1. Inspect the connections for any looseness.
 - If there is any malfunction, tighten or replace the applicable part.
2. Inspect the dust boot for damage and cracks.
 - If there is any malfunction, replace the applicable part.
3. Move the spline and joint up and down, left and right by hand and verify that there is no excessive play.
 - If there is any malfunction, replace the applicable part.

am3uuw0000461

DRIVE SHAFT

DRIVE SHAFT REMOVAL/INSTALLATION

id031300801900

Caution

- Performing the following procedures without first removing the ABS wheel-speed sensor may possibly cause an open circuit in the wiring harness if it is pulled by mistake. Before performing the following procedures, disconnect the ABS wheel-speed sensor connector (axle side) and fix the wiring harness to an appropriate place where it will not be pulled by mistake while servicing the vehicle.

Note

- The right-side drive shaft of L3 WITH TC equipped vehicles cannot be disassembled. Therefore, replace the front drive shaft as a single unit if there is any malfunction of the boots, boot bands, or constant velocity joints.

03-13

- Remove the aerodynamic under cover No.2 and splash shield as a unit. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.) (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)
- Drain the transaxle oil or ATF. (See 05-15A-3 TRANSAXLE OIL REPLACEMENT [G35M-R].) (See 05-15C-3 TRANSAXLE OIL REPLACEMENT [A26M-R].) (See 05-15B-3 TRANSAXLE OIL REPLACEMENT [G66M-R].) (See 05-17-14 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
- When working on the left side of the vehicle, disconnect the front auto leveling sensor link. (Vehicle with Adaptive Front Lighting System (AFS)) (See 09-18-50 AUTO LEVELING SENSOR REMOVAL/INSTALLATION.)
- Remove in the order indicated in the table.
- Install in the reverse order of removal.

am3uuw000052

1	ABS wheel-speed sensor
2	Locknut (See 03-11-2 WHEEL HUB, STEERING KNUCKLE REMOVAL/INSTALLATION.)
3	Tie-rod end ball joint (See 02-13-13 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
4	Stabilizer control link upper nut
5	Dynamic damper
6	Brake hose clip

7	Front lower arm ball joint (See 03-13-5 Front Lower Arm Ball Joint Installation Note.)
8	Drive shaft (See 03-13-4 Drive Shaft Removal Note.) (See 03-13-4 Drive Shaft Installation Note.)
9	Drive shaft clip (See 03-13-4 Drive Shaft Clip Installation Note.)
10	Joint shaft clip (See 03-13-13 JOINT SHAFT REMOVAL/INSTALLATION.)

DRIVE SHAFT

Drive Shaft Removal Note

1. Install a spare nut onto the drive shaft.
2. Tap the nut with a copper hammer and separate the drive shaft from the axle.
3. Separate the drive shaft from the wheel hub.

am3uuw000042

4. Separate the drive shaft (LH) from the transaxle using the SSTs.

Caution

- Be careful not to damage the transaxle oil seal with the bar.

am3uuw0000470

5. Disconnect the drive shaft (RH) from the joint shaft by tapping the transaxle side outer ring with a brass bar and hammer.

am3uuw000042

Drive Shaft Clip Installation Note

1. Install a new drive shaft clip to the clip groove at the end of the drive shaft with the clip opening facing upward and the clip width within the specification.

Standard

LF, L5: 31.2 mm {1.23 in}

L3 WITH TC: 33.2 mm {1.31 in}

2. After installation, measure the outer diameter.
 - If it exceeds the specification, repeat installation using a new clip.

am3uuw0000618

Drive Shaft Installation Note

Left side

Caution

- The sharp edges of the drive shaft can slice or puncture the oil seal. Be careful when installing the drive shaft to the transaxle.

DRIVE SHAFT

1. Apply transaxle oil to the oil seal lip.
2. Apply grease (L2Y1 33247) to the wheel bearing inner race and drive shaft contact surface (Area A in figure).
3. Insert the drive shaft into the wheel hub.

am3uuw0000617

03-13

4. Install the drive shaft to the transaxle.
5. After installation, pull the transaxle side outer ring forward to confirm that the drive shaft is securely held by the clip.

am3uuw0000042

Right side

1. Install a new clip onto the joint shaft. (See 03-13-13 JOINT SHAFT REMOVAL/INSTALLATION.)
2. Apply grease (L2Y1 33247) to the wheel bearing inner race and drive shaft contact surface (Area A in figure).
3. Insert the drive shaft to the wheel hub.
4. Insert the drive shaft to the joint shaft.
5. After installation, pull the transaxle side outer ring forward to confirm that the drive shaft is securely held by the clip.

am3uuw0000617

Front Lower Arm Ball Joint Installation Note

Note

- The bolt insertion direction can be either front or rear of the vehicle, however, keep the insertion direction the same on both the left and right sides of the vehicle.

DRIVE SHAFT

id031300801700

DRIVE SHAFT (TRIPOD JOINT) DISASSEMBLY/ASSEMBLY

1. Disassemble in the order indicated in the table.
2. Assemble in the reverse order of disassembly.

am3uuw0000530

1	Boot band (wheel side, transaxle side smaller diameter) (See 03-13-6 Boot Band (Wheel Side, Transaxle Side Smaller Diameter) Disassembly Note.) (See 03-13-10 Boot Band (Wheel Side, Transaxle Side Smaller Diameter) Assembly Note.)
2	Boot band (transaxle side larger diameter) (See 03-13-7 Boot Band (Transaxle Side Larger Diameter) Disassembly Note.) (See 03-13-10 Boot Band (Transaxle Side Larger Diameter) Assembly Note.)
3	Outer ring (See 03-13-7 Outer Ring Disassembly Note.) (See 03-13-9 Outer Ring Assembly Note)

4	Snap ring (See 03-13-7 Snap Ring, Tripod Joint Disassembly Note.) (See 03-13-8 Tripod Joint, Snap Ring Assembly Note.)
5	Tripod joint (See 03-13-7 Snap Ring, Tripod Joint Disassembly Note.) (See 03-13-8 Tripod Joint, Snap Ring Assembly Note.)
6	Boot (See 03-13-7 Boot Disassembly Note.) (See 03-13-8 Boot Assembly Note.)
7	Dynamic damper (See 03-13-8 Dynamic Damper Assembly Note.)
8	Shaft and ball joint component

Boot Band (Wheel Side, Transaxle Side Smaller Diameter) Disassembly Note

Note

- Remove the boot band only if there is a malfunction.

1. Remove the boot band using end clamp pliers.

am3uuw0000127

DRIVE SHAFT

Boot Band (Transaxle Side Larger Diameter) Disassembly Note

1. Pry up the boot band at the points indicated in the figure using pliers and remove the band.

am3uuw0000127

03-13

Outer Ring Disassembly Note

1. Secure the drive shaft using a vise.

am3uuw0000530

2. Tap the outer ring slightly by using a hummer and urethan bar or equivalent, and remove the outer ring from the drive shaft.

Caution

- Lightly tap the outer ring carefully, otherwise the tripod joint rollers could be damaged.

am3uuw0000530

Snap Ring, Tripod Joint Disassembly Note

1. Place an alignment mark on the shaft and tripod joint.
2. Remove the snap ring using snap ring pliers.
3. Remove the tripod joint from the shaft.

Caution

- Do not try to remove the tripod joint by hitting it with a hammer. The tripod joint could be damaged.

am3uuw0000618

Boot Disassembly Note

Note

- Remove the wheel side boot only if there is any malfunction.

DRIVE SHAFT

1. Wrap the shaft splines with tape.
2. Remove the boot.

am3uuw0000618

Dynamic Damper Assembly Note

1. Install the dynamic damper as shown in the figure.

Standard length

289.7—301.7 mm {11.41—11.87 in}

2. Install the new boot band onto the dynamic damper.

am3uuw0000530

Boot Assembly Note

Note

- The boot shapes on the wheel side and the differential side are different. Do not install the wrong boot by mistake.

1. Fill the inside of the new dust boot (wheel side) with grease.

Note

- Do not touch the grease with your hand. Apply it from the tube to prevent foreign matter from entering the boot.

Grease amount

96—106 g {3.4—3.7 oz}

2. Install the boot with the drive shaft spline still wrapped with vinyl tape.
3. Remove the vinyl tape.

Tripod Joint, Snap Ring Assembly Note

1. While aligning the marks on the shaft and the tripod joint, insert the tripod joint using a bar and a hammer.

Caution

- Do not hit the rollers, otherwise the tripod joint rollers could be damaged.

2. Insert a new snap ring using snap ring pliers.
3. Verify that the snap ring is engaged correctly in the groove of the shaft.

am3uuw0000618

DRIVE SHAFT

Outer Ring Assembly Note

1. Fill the outer ring and boot (transaxle side) with the specified grease.

Note

- Do not touch the grease with your hand. Apply it from the tube to prevent foreign matter from entering the boot.

Grease amount

89—99 g {3.2—3.4 oz}

2. Secure the outer ring using a vise.

Caution

- Carefully perform the work when securing the outer ring to the vise, otherwise otherwise the oil seal could be deformed.

am3uuw0000530

03-13

3. Align the roller with the outer ring, tap the roller slightly using a hammer and urethan bar or equivalent, and install the drive shaft to the outer ring with keeping the drive shaft vertically.

Caution

- Be careful that no foreign matter such as dust or dirt gets into the outer ring, otherwise the drive shaft could be damaged.

am3uuw0000530

4. Set the drive shaft to the standard length.

Front drive shaft standard length

LH: 654.31—663.31 mm {25.761—26.114 in}

RH: 572.73—581.73 mm {22.549—22.902 in}

am3uuw0000530

5. Release any trapped air from the boots by carefully lifting up the small end of each boot with a cloth wrapped screwdriver.

Note

- Verify that there is no grease leak while being careful not to damage the boot.
- If the boot is damaged, it may not be possible to perform the full-length adjustment of the drive shaft.

am3uuw0000128

6. Verify that the drive shaft length is within the specification under atmospheric pressure inside the boot.

- If not within the specification, repeat from Step 3.

DRIVE SHAFT

Boot Band (Transaxle Side Larger Diameter) Assembly Note

1. Pry up the boot band at the points indicated in the figure using pliers and tighten the boot band.
2. Verify that the boot band is installed to the boot slot securely.

am3uuw0000128

Boot Band (Wheel Side, Transaxle Side Smaller Diameter) Assembly Note

1. Adjust opening width A by turning the adjusting bolt of the SST.

Standard A
1.6 mm {0.063 in}

am3uuw0000618

2. Crimp the wheel side small boot band completely closed so there is no gap using the SST.
3. Verify that the boot band does not protrude from the boot band installation area.
 - If the boot band protrudes from the boot band installation area, replace the boot band and repeat Step 2.
4. Fill the boot with the repair kit grease.
5. Adjust opening width A of the SST to the specification.

Standard A
2.0 mm {0.079 in}

am3uuw0000618

6. Crimp the wheel side large boot band completely closed so there is no gap using the SST.
7. Verify that the boot band does not protrude from the boot band installation area.
 - If the boot band protrudes from the boot band installation area, replace the boot band and repeat Step 6.

DRIVE SHAFT (DOUBLE OFFSET JOINT) DISASSEMBLY/ASSEMBLY

id031300801600

Note

- The right-side drive shaft of L3 WITH TC equipped vehicles cannot be disassembled. Therefore, replace the front drive shaft as a single unit if there is any malfunction of the boots, boot bands, or constant velocity joints.

1. Disassemble in the order indicated in the table.
2. Assemble in the reverse order of disassembly.

DRIVE SHAFT

03-13

am3uuw0000529

1	Boot band (wheel side, transaxle side: smaller diameter) (See 03-13-6 DRIVE SHAFT (TRIPOD JOINT) DISASSEMBLY/ASSEMBLY.)
2	Boot band (transaxle side larger diameter) (See 03-13-6 DRIVE SHAFT (TRIPOD JOINT) DISASSEMBLY/ASSEMBLY.)
3	Outer ring (See 03-13-13 Outer Ring, Clip Assembly Note.)
4	Balls (See 03-13-12 Cage, Inner Ring, Balls, Snap Ring Assembly Note.)

5	Inner Ring (See 03-13-11 Inner Ring Disassembly Note.) (See 03-13-12 Cage, Inner Ring, Balls, Snap Ring Assembly Note.)
6	Snap ring (See 03-13-12 Cage, Inner Ring, Balls, Snap Ring Assembly Note.)
7	Cage
8	Boot (See 03-13-12 Boot Assembly Note.)
9	Dynamic damper (See 03-13-12 Dynamic Damper Assembly Note.)
10	Shaft and ball joint component

Inner Ring Disassembly Note

1. Move the dynamic damper to the wheel side of the drive shaft.
2. Move the boot and cage to the wheel side of the drive shaft.
3. Tap the inner ring using a plastic hammer while spreading the snap ring, and disassemble the inner ring from the drive shaft.

am3uuw0000618

DRIVE SHAFT

Dynamic Damper Assembly Note

1. Install the dynamic damper as shown in the figure.

Standard length

LH: 289.7—301.7 mm {11.41—11.87 in}
RH: 304.7—316.7 mm {12.00—12.46 in}

2. Install a new boot band onto the dynamic damper.

am3uuw000530

Boot Assembly Note

Note

- The wheel-side and transaxle-side boots are different.

1. Fill the boot (wheel side) with the specified grease.

Note

- Do not touch grease with your hand. Apply it from the tube to prevent foreign matter from entering the boot.

Grease amount

LF, L5: 96—106 g {3.4—3.7 oz}
L3 WITH TC (LH): 106—116 g {3.74—4.09 oz}

2. Install the boot with the splines of the shaft still wrapped in tape from disassembly.
3. Remove the tape.

Cage, Inner Ring, Balls, Snap Ring Assembly Note

1. Tap the inner ring using a plastic hammer while spreading the snap ring, and assemble the inner ring to the drive shaft.

am3uuw0000619

2. Align the marks and install the balls and cage to the inner ring as shown in the figure.

am3uuw0000619

DRIVE SHAFT

Outer Ring, Clip Assembly Note

1. Fill the outer ring and boot (transaxle side) with the specified grease.

Note

- Do not touch grease with your hand. Apply it from the tube to prevent foreign matter from entering the boot.

Grease amount

LF, L5: 139—149 g {4.91—5.25 oz}

L3 WITH TC (LH): 155—165 g {5.47—5.82 oz}

2. Install the outer ring on to the shaft.
3. Install the boot.
4. Set the drive shaft to the standard length.

Front drive shaft standard length

LF, L5

— LH: 656.56—665.56 mm {25.849—26.203 in}

— RH: 607.54—616.54 mm {23.919—24.273 in}

L3 WITH TC

— LH: 619.07—628.07 mm {24.373—24.727 in}

5. Release any trapped air from the boots by carefully lifting up the small end of each boot with a cloth wrapped screwdriver.

Caution

- Be careful not to allow the grease to leak.
- Do not damage the boot.

6. Verify that the drive shaft length is within the specification.

am3uuw0000530

am3zzw0000440

id031300801500

JOINT SHAFT INSPECTION

1. Verify that there is no torsion or cracks on the joint shaft.
 - If there is any malfunction, replace the joint shaft.
2. Turn the joint shaft by hand and verify that the bearing rotates smoothly.
 - If there is any malfunction, replace the joint shaft.

am3uuw0000460

id031300800900

JOINT SHAFT REMOVAL/INSTALLATION

Caution

- Performing the following procedures without first removing the ABS wheel-speed sensor may possibly cause an open circuit in the wiring harness if it is pulled by mistake. Before performing the following procedures, remove the ABS wheel-speed sensor connector (axle side) and fix it to an appropriate place where the sensor wiring harness will not be pulled by mistake while servicing the vehicle.

DRIVE SHAFT

1. Remove the aerodynamic under cover No.2 and splash shield as a unit. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.) (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)
2. Drain the transaxle oil or ATF. (See 05-15A-3 TRANSAXLE OIL REPLACEMENT [G35M-R].) (See 05-15C-3 TRANSAXLE OIL REPLACEMENT [A26M-R].) (See 05-15B-3 TRANSAXLE OIL REPLACEMENT [G66M-R].) (See 05-17-14 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.

am3uuw0000616

1	ABS wheel-speed sensor connector
2	Tie-rod end ball joint (See 02-13-13 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
3	Stabilizer control link upper nut
4	Dynamic damper
5	Front lower arm ball joint (See 03-13-16 Front Lower Arm Ball Joint Installation Note.)

6	Joint shaft (See 03-13-15 Joint Shaft Removal Note.) (See 03-13-16 Joint Shaft (L3 WITH TC, L5) Installation Note.)
7	Joint shaft bracket (LF) (See 03-13-15 Joint Shaft Bracket (LF) Installation Note.)
8	Joint shaft clip (See 03-13-15 Joint Shaft Clip Installation Note.)

DRIVE SHAFT

Joint Shaft Removal Note

1. Disconnect the drive shaft (RH) from the joint shaft by tapping the transaxle side outer ring with a brass bar and hammer.

am3zzw0000205

03-13

2. Disconnect the clips to set the CKP sensor wiring harness out of the way to prevent interference with the joint shaft. (L5)
3. Remove the joint shaft installation bolts.
4. Remove the joint shaft.

Caution

- The sharp edges of the joint shaft can slice or puncture the oil seal. Be careful when removing the joint shaft from the transaxle.

am3uuw0000459

Joint Shaft Clip Installation Note

1. Install a new joint shaft clip to the clip groove at the end of the joint shaft with the clip opening facing upward and the clip width within the specification.
2. After installation, measure the outer diameter.
 - If it exceeds the specification, repeat installation using a new clip.

Standard

31.2 mm {1.23 in} or less

am3uuw0000618

Joint Shaft Bracket (LF) Installation Note

1. Temporarily tighten the bolts A and B.
2. Tighten the bolts A, then tighten the bolt B to the specified torque.

Tightening torque

42—62 N·m {4.3—6.3 kgf·m, 31—45 ft·lbf}

abatjw00003329

DRIVE SHAFT

Joint Shaft (L3 WITH TC, L5) Installation Note

1. Insert the joint shaft into the transaxle.
2. Temporarily tighten the bolts A and B.
3. Tighten the bolts A, then tighten the bolt B to the specified torque.

Tightening torque

42—62 N·m {4.3—6.3 kgf·m, 31—45 ft·lbf}

am3uuw0000616

Front Lower Arm Ball Joint Installation Note

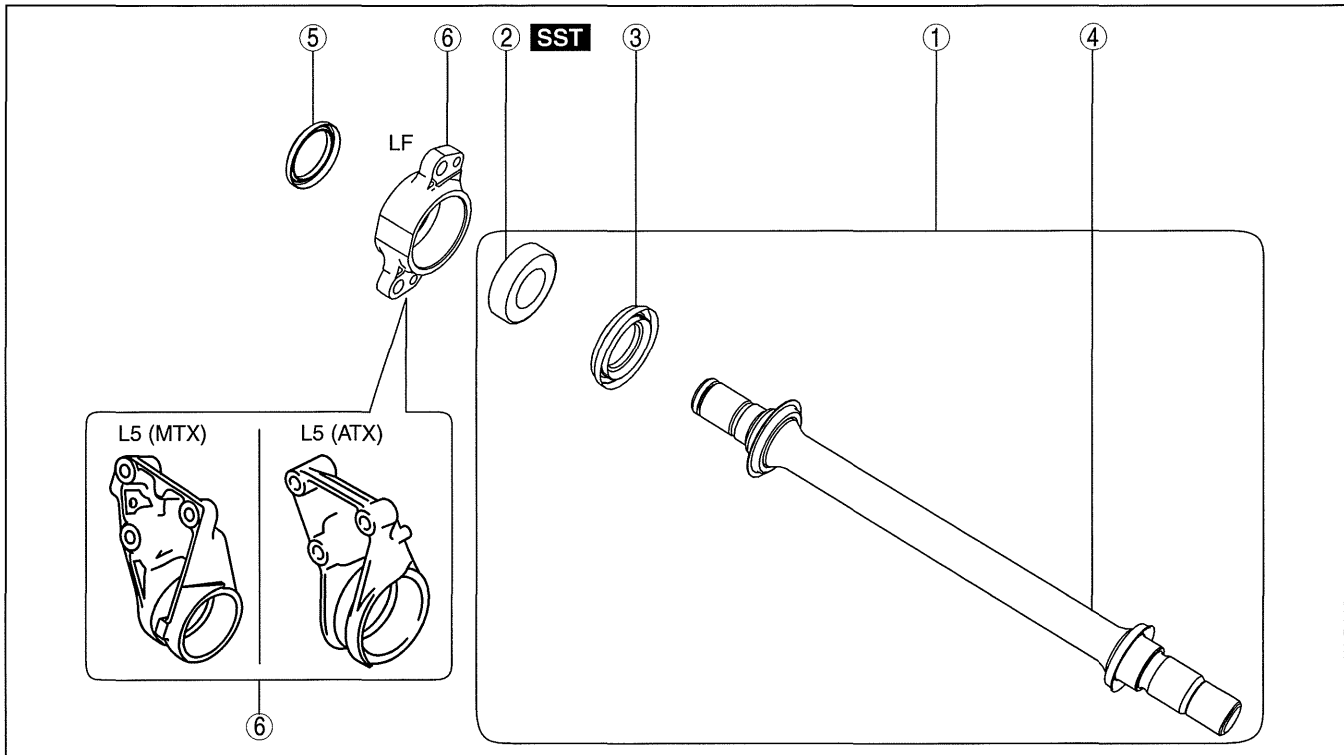

Note

- The bolt insertion direction can be either front or rear of the vehicle, however, keep the insertion direction the same on both the left and right sides of the vehicle.

JOINT SHAFT DISASSEMBLY [LF, L5]

id031300801019

1. Disassemble in the order indicated in the table.

am3uuw0000553

1	Joint shaft component (See 03-13-17 Joint Shaft Component Disassembly Note.)
2	Bearing (See 03-13-17 Bearing Disassembly Note.)

3	Dust seal (LH)
4	Joint shaft
5	Dust seal (RH)
6	Bracket

DRIVE SHAFT

Joint Shaft Component Disassembly Note

1. Secure the bracket to the vise at the position shown in the figure and remove the joint shaft component using the plastic hammer.

Caution

- Do not drop the joint shaft because it could be damaged.

am3uuw0000155

03-13

Bearing Disassembly Note

1. Set the SST and joint shaft to the press.

am3uuw0000619

JOINT SHAFT DISASSEMBLY [L3 WITH TC]

1. Disassemble in the order indicated in the table.

id031300801039

am3uuw0000619

DRIVE SHAFT

1	Joint shaft component (See 03-13-18 Joint Shaft Component Disassembly Note.)
2	Bearing (See 03-13-18 Bearing Disassembly Note.)

3	Dust seal (LH)
4	Joint shaft
5	Dust seal (RH)
6	Bracket

Joint Shaft Component Disassembly Note

1. Secure the bracket to the vise at the position shown in the figure and remove the joint shaft component using the plastic hammer.

Caution

- Do not drop the joint shaft because it could be damaged.

am3uuw0000570

Bearing Disassembly Note

1. Set the SST and joint shaft to the press.

am3uuw0000619

DRIVE SHAFT

JOINT SHAFT ASSEMBLY [LF, L5 (MTX)]

id03130080112

1. Assemble in the order indicated in the table.

am3uuw0000502

1	Bracket
2	Dust seal (RH) (See 03-13-19 Dust Seal (RH) Assembly Note.)
3	Bearing (See 03-13-20 Bearing Assembly Note.)

4	Dust seal (LH) (See 03-13-20 Dust Seal (LH) Assembly Note.)
5	Joint shaft (See 03-13-21 Joint Shaft Assembly Note.)

Dust Seal (RH) Assembly Note

1. Apply grease to a new dust seal lip.
2. Install the dust seal (RH) using the SSTs.

am3uuw0000502

am3uuw0000620

03-13

DRIVE SHAFT

Bearing Assembly Note

1. Install a new bearing using the **SSTs**.

am3uuw0000502

am3uuw0000620

Dust Seal (LH) Assembly Note

1. Apply grease to a new dust seal lip.
2. Install a new dust seal (LH) using the steel plate and the **SSTs**.

am3uuw0000462

am3uuw0000620

DRIVE SHAFT

Joint Shaft Assembly Note

1. Press fit the joint shaft using the **SST** and a press.

am3uuw0000503

03-13

am3uuw0000620

JOINT SHAFT ASSEMBLY [L3 WITH TC]

id031300801139

1. Assemble in the order indicated in the table.

am3uuw0000617

1	Bracket
2	Dust seal (RH) (See 03-13-22 Dust Seal (RH) Assembly Note.)
3	Bearing (See 03-13-22 Bearing Assembly Note.)

4	Dust seal (LH) (See 03-13-22 Dust Seal (LH) Assembly Note.)
5	Joint shaft (See 03-13-22 Joint Shaft Assembly Note.)

DRIVE SHAFT

Dust Seal (RH) Assembly Note

1. Apply grease to a new dust seal lip.
2. Install the dust seal (RH) using the **SST**.

am3uuw0000617

Bearing Assembly Note

1. Install a new bearing using the **SSTs**.

am3uuw0000617

Dust Seal (LH) Assembly Note

1. Apply grease to a new dust seal lip.
2. Install a new dust seal (LH) using the steel plate and the **SSTs**.

am3uuw0000617

Joint Shaft Assembly Note

1. Press fit the joint shaft using the **SST** and a press.

am3uuw0000617

DRIVE SHAFT

JOINT SHAFT ASSEMBLY [L5 (ATX)]

id031300801114

1. Assemble in the order indicated in the table.

am3uuw0000620

1	Bracket
2	Bearing (See 03-13-23 Bearing Assembly Note.)
3	Dust seal (RH) (See 03-13-24 Dust Seal (RH) Assembly Note.)

4	Dust seal (LH) (See 03-13-24 Dust Seal (LH) Assembly Note.)
5	Joint shaft (See 03-13-24 Joint Shaft Assembly Note.)

Bearing Assembly Note

1. Install a new bearing using the SSTs.

am3uuw0000620

03-13

DRIVE SHAFT

Dust Seal (RH) Assembly Note

1. Apply grease to a new dust seal lip.
2. Install the dust seal (RH) using the **SSTs**.

am3uuw0000620

Dust Seal (LH) Assembly Note

1. Apply grease to a new dust seal lip.
2. Install a new dust seal (LH) using the steel plate and the **SSTs**.

am3uuw0000620

Joint Shaft Assembly Note

1. Press fit the joint shaft using the **SST** and a press.

am3uuw0000620

ON-BOARD DIAGNOSIS [ABS]

id0402a7805500

On-Board Diagnostic (OBD) Test Description

- The OBD test inspects the integrity and function of the ABS and outputs the results when requested by the specific tests.
- On-board diagnostic test also:
 - Provides a quick inspection of the ABS usually performed at the start of each diagnostic procedure.
 - Provides verification after repairs to ensure that no other faults occurred during service.
- The OBD test is divided into 3 tests:
 - Read/clear diagnostic results, PID monitor and record and active command modes.

Read/clear diagnostic results

- This function allows you to read or clear DTCs in the ABS HU/CM memory.

PID/Data monitor and record

- This function allows you to access certain data values, input signals, calculated values, and system status information.

Active command modes

- This function allows you to control devices through the M-MDS.

ON-BOARD DIAGNOSTIC [ABS]

Reading DTCs Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Self Test".
 2. Select "Modules".
 3. Select "ABS".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "ABS".
 3. Select "Self Test".
3. Verify the DTC according to the directions on the screen.
 - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
4. After completion of repairs, clear all DTCs stored in the ABS. (See 04-02A-3 Clearing DTCs Procedures.)

am3zzn0000236

04-02A

Clearing DTCs Procedures

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Self Test".
 2. Select "Modules".
 3. Select "ABS".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "ABS".
 3. Select "Self Test".
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition to ON and wait for **5 s or more**.
7. Perform DTC inspection. (See 04-02A-3 Reading DTCs Procedure.)
8. Verify that no DTCs are displayed.

am3zzn0000236

PID/Data Monitor and Record Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "DataLogger".
 2. Select "Modules".
 3. Select "ABS".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "ABS".
 3. Select "DataLogger".
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the directions on the screen.

am3zzn0000236

Note

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.

ON-BOARD DIAGNOSTIC [ABS]

Active Command Modes Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "DataLogger".
 2. Select "Modules".
 3. Select "ABS".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "ABS".
 3. Select "DataLogger".
3. Select the active command modes from the PID table.
4. Perform the active command modes, inspect the operations for each parts.
 - If the operation of output parts cannot be verified after the active command mode inspection is performed, this could indicate the possibility of an open or short circuit, sticking, or operation malfunction in the output parts.

DETECTION CONDITION	<ul style="list-style-type: none"> Malfunction detected in the ABS HU/CM solenoid valve or internal circuit by the ABS HU/CM on-board diagnostic function 	
POSSIBLE CAUSE	<ul style="list-style-type: none"> Open or short circuit in the ABS HU/CM internal solenoid valves Solenoid valve malfunction Poor connection at connectors (female terminal) 	

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY SOLENOID VALVE OPERATION <ul style="list-style-type: none"> Switch the ignition to off. Connect the M-MDS to the DLC-2. Switch the ignition to ON. Access the active command mode for the solenoid valve using the M-MDS. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].) Does the solenoid valve operate? 	Yes	Go to the next step.
		No	Replace the ABS HU/CM, then go to the next step. (See 04-13-2 ABS HU/CM REMOVAL/INSTALLATION.)
2	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Clear the DTC from the memory. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].) Start the engine and drive the vehicle at 10 km/h {6.2 mph} or more. Gradually slow down and stop vehicle. Are the same DTCs present? 	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the ABS HU/CM, then go to the next step. (See 04-13-2 ABS HU/CM REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Are any other DTCs present? 	Yes	Go to the applicable DTC inspection. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [ABS]

DTC C0020:01/C0020:1C/C0020:71 [ABS]

id0402a7877000

DTC	C0020:01, C0020:1C, C0020:71	Pump motor, motor relay
DETECTION CONDITION	<ul style="list-style-type: none"> • C0020:01 — ABS motor relay signal does not correspond to ABS HU/CM ON signal. • C0020:1C — ABS motor monitor signal does not correspond to ABS HU/CM OFF signal. — ABS motor monitor signal does not correspond to ABS HU/CM ON signal. • C0020:71 — ABS HU/CM motor monitor ON signal is not input within specified time limit or more when motor signal is switched from ON to OFF by ABS HU/CM. 	
POSSIBLE CAUSE	<ul style="list-style-type: none"> • ABS 40A fuse malfunction • Open or short circuit in ABS HU/CM internal motor relay, or stuck motor relay • Open or short circuit in ABS HU/CM internal pump motor, or frozen pump motor • Open circuit or short to ground in the wiring harness between the battery and ABS HU/CM terminal Y • Open circuit in the wiring harness between ABS HU/CM terminal B and body ground • Poor connection at connectors (female terminal) 	

04-02A

ON-BOARD DIAGNOSTIC [ABS]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	INSPECT ABS FUSE CONDITION <ul style="list-style-type: none"> Is the ABS fuse (ABS 40A) normal? 	Yes	Go to the next step.
		No	Replace the fuse, then go to Step 6.
2	VERIFY PUMP MOTOR OPERATION <ul style="list-style-type: none"> Switch the ignition to off. Connect the M-MDS to the DLC-2. Switch the ignition to ON. Access PMP_MTR active command modes using the M-MDS. Does the pump motor operate? 	Yes	Go to the next step.
		No	Replace the ABS HU/CM, then go to Step 6. (See 04-13-2 ABS HU/CM REMOVAL/INSTALLATION.)
3	INSPECT MOTOR RELAY POWER SUPPLY FOR OPEN CIRCUIT <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the ABS HU/CM connector. Inspect for continuity between ABS HU/CM terminal Y and the positive battery terminal. Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 6.
4	INSPECT MOTOR RELAY POWER SUPPLY FOR SHORT CIRCUIT <ul style="list-style-type: none"> Inspect for continuity between ABS HU/CM terminal Y and body ground. Is there continuity? 	Yes	Repair or replace the wiring harness, then go to Step 6.
		No	Go to the next step.
5	INSPECT PUMP MOTOR GROUND FOR OPEN CIRCUIT <ul style="list-style-type: none"> Inspect for continuity between ABS HU/CM terminal B and body ground. Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to the next step.
6	VERIFY THAT THE SAME DTC IS NOT PRESENT <ul style="list-style-type: none"> Reconnect all disconnected connectors. Clear the DTCs from the memory. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].) Start the engine and drive the vehicle at 10 km/h {6.2 mph} or more. Are the same DTCs present? 	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the ABS CM, then go to the next step. (See 04-13-2 ABS HU/CM REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> Are any other DTCs output? 	Yes	Go to the applicable DTC inspection. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [ABS]

DTC C0030:07/C0031:07/C0033:07/C0034:07/C0036:07/C0037:07/C0039:07/C003A:07 [ABS]

id0402a7877400

Note

- When only the driving wheels are rotated while the vehicle is jacked up, DTCs C0037:07 and C003A:07 are input to the memory.

DTC	C0030:07	LF ABS sensor rotor
	C0031:07	LF ABS wheel-speed sensor/ABS sensor rotor
	C0033:07	RF ABS sensor rotor
	C0034:07	RF ABS wheel-speed sensor/ABS sensor rotor

	C0037:07	LR ABS wheel-speed sensor/ABS sensor rotor
	C0039:07	RR ABS sensor rotor
	C003A:07	RR ABS wheel-speed sensor/ABS sensor rotor

04-02A

DETECTION CONDITION	<ul style="list-style-type: none"> • C0030:07, C0033:07, C0036:07, C0039:07 — Periodic abnormality is detected in the signal wave pattern from the ABS wheel-speed sensors. • C0031:07, C0034:07, C0037:07, C003A:07 — (1) The wheel-speed signal is not input or an extremely low wheel-speed signal is detected from any of the four wheels when driving at a vehicle speed of 10 km/h {6.2 mph} or more — (2) A large, sudden change in the wheel speed-signal is detected. — (3) ABS control continues to operate for 28 s or more.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • C0030:07, C0033:07, C0036:07, C0039:07 — ABS sensor rotor malfunction (missing ABS sensor rotor teeth due to foreign material obstruction) — ABS sensor rotor installation malfunction (If the ABS sensor rotor is installed at an angle, it may cause output of abnormal wave pattern at high speeds.) • C0031:07, C0034:07, C0037:07, C003A:07 — Conditions (1) and (2) are detected: <ul style="list-style-type: none"> • Excessive clearance between the ABS wheel-speed sensor and sensor rotor • ABS sensor rotor malfunction (foreign material adhering) • ABS sensor rotor installation malfunction (If the sensor rotor is installed at an angle, it may cause output of abnormal wave pattern at high speeds.) • ABS wheel-speed sensor malfunction — When condition (3) is detected: <ul style="list-style-type: none"> • Continuous ABS operation

ON-BOARD DIAGNOSTIC [ABS]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	INSPECT PID FOR ABS WHEEL-SPEED SENSOR OUTPUT ERROR USING M-MDS <ul style="list-style-type: none"> • Switch the ignition to off. • Connect the M-MDS to the DLC-2. • Select the following PIDs using the M-MDS: WSPD_LF WSPD_LR WSPD_RF WSPD_RR • Drive the vehicle. • Verify that the vehicle speeds detected by the four ABS wheel-speed sensors are approximately the same. • Are the vehicle speeds approximately the same? 	Yes	Go to Step 3.
		No	Go to the next step.
2	INSPECT FOR SHORT TO GROUND BETWEEN ABS WHEEL-SPEED SENSOR CONNECTORS AND GROUND <ul style="list-style-type: none"> • Disconnect the ABS wheel-speed sensor connectors. • Inspect for no continuity between the following ABS wheel-speed sensor connector terminals (vehicle harness-side) and body ground: <ul style="list-style-type: none"> — ABS wheel-speed sensor (RF): B—Body ground — ABS wheel-speed sensor (LF): B—Body ground — ABS wheel-speed sensor (RR): B—Body ground — ABS wheel-speed sensor (LR): B—Body ground • Is the continuity normal? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 5.
3	INSPECT IF MALFUNCTION OCCURRED DUE TO IMPROPER SENSOR CLEARANCE. <ul style="list-style-type: none"> • Inspect the clearance between the ABS wheel-speed sensor and the ABS sensor rotor. (See 04-13-7 FRONT ABS WHEEL-SPEED SENSOR INSPECTION.) (See 04-13-10 REAR ABS WHEEL-SPEED SENSOR INSPECTION.) • Is the clearance normal? 	Yes	Go to the next step.
		No	Replace the ABS wheel-speed sensor, then go to Step 5. (See 04-13-7 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.) (See 04-13-9 REAR ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
4	VISUALLY INSPECT ABS SENSOR ROTOR FOR FOREIGN MATERIAL ADHERING OR IMPROPER INSTALLATION <ul style="list-style-type: none"> • Is the result normal? 	Yes	Go to the next step.
		No	Replace the front wheel bearing or the rear wheel hub component, then go to the next step. <ul style="list-style-type: none"> • Front wheel bearing (See 03-11-2 WHEEL HUB, STEERING KNUCKLE REMOVAL/INSTALLATION.) (See 03-11-4 WHEEL HUB, STEERING KNUCKLE DISASSEMBLY/ASSEMBLY.) • Rear wheel hub component (See 03-12-2 WHEEL HUB COMPONENT REMOVAL/INSTALLATION.)
5	VERIFY THAT THE SAME DTC IS NOT PRESENT <ul style="list-style-type: none"> • Clear the DTCs from the memory. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].) • Start the engine and drive the vehicle at 10 km/h {6.2 mph} or more. • Are the same DTCs present? 	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the ABS CM, then go to the next step. (See 04-13-2 ABS HU/CM REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> • Are any other DTCs output? 	Yes	Go to the applicable DTC inspection. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].)
		No	DTC troubleshooting completed.

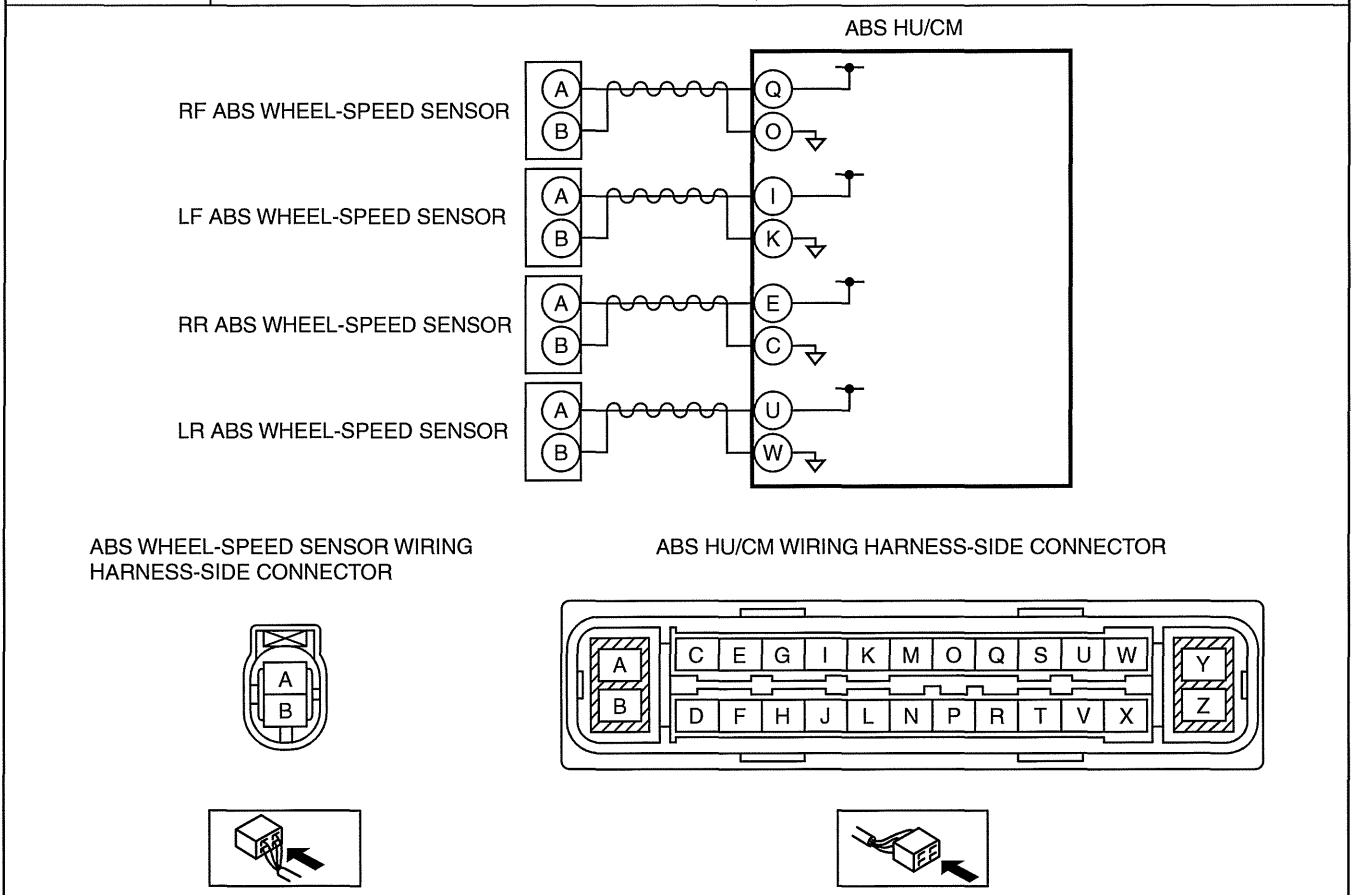

ON-BOARD DIAGNOSTIC [ABS]

DTC C0031:01/C0034:01/C0037:01/C003A:01 [ABS]

id0402a7877300

DTC	C0031:01	LF ABS wheel-speed sensor
	C0034:01	RF ABS wheel-speed sensor
	C0037:01	LR ABS wheel-speed sensor
	C003A:01	RR ABS wheel-speed sensor
DETECTION CONDITION	<ul style="list-style-type: none"> Open circuit or short to ground has been detected in the ABS wheel-speed sensor wiring harness on any of the four vehicle wheels. 	
POSSIBLE CAUSE	<ul style="list-style-type: none"> Open circuit or short to ground in the wiring harness between the following ABS HU/CM terminals and ABS wheel-speed sensor terminals: <ul style="list-style-type: none"> — ABS HU/CM terminal Q—RF ABS wheel-speed sensor terminal A — ABS HU/CM terminal O—RF ABS wheel-speed sensor terminal B — ABS HU/CM terminal I—LF ABS wheel-speed sensor terminal A — ABS HU/CM terminal K—LF ABS wheel-speed sensor terminal B — ABS HU/CM terminal E—RR ABS wheel-speed sensor terminal A — ABS HU/CM terminal C—RR ABS wheel-speed sensor terminal B — ABS HU/CM terminal U—LR ABS wheel-speed sensor terminal A — ABS HU/CM terminal W—LR ABS wheel-speed sensor terminal B Malfunction in the ABS wheel-speed sensor Poor connection at connectors (female terminal) 	

04-02A

ON-BOARD DIAGNOSTIC [ABS]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	INSPECT ABS WHEEL-SPEED SENSOR FOR SHORT TO GROUND <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the ABS HU/CM connectors. • Inspect for continuity between the following ABS HU/CM connector terminals (vehicle harness-side) and body ground: <ul style="list-style-type: none"> — RF ABS wheel-speed sensor(+): Q — RF ABS wheel-speed sensor(-): O — LF ABS wheel-speed sensor(+): I — LF ABS wheel-speed sensor(-): K — RR ABS wheel-speed sensor(+): E — RR ABS wheel-speed sensor(-): C — LR ABS wheel-speed sensor(+): U — LR ABS wheel-speed sensor(-): W • Is there continuity? 	Yes	Go to the next step.
		No	Go to Step 3.
2	INSPECT ABS WHEEL-SPEED SENSOR WIRING HARNESS FOR SHORT TO GROUND <ul style="list-style-type: none"> • Disconnect the ABS wheel-speed sensor connectors. • Inspect for continuity between the following ABS HU/CM connector terminals (vehicle harness-side) and body ground: <ul style="list-style-type: none"> — RF ABS wheel-speed sensor(+): Q — RF ABS wheel-speed sensor(-): O — LF ABS wheel-speed sensor(+): I — LF ABS wheel-speed sensor(-): K — RR ABS wheel-speed sensor(+): E — RR ABS wheel-speed sensor(-): C — LR ABS wheel-speed sensor(+): U — LR ABS wheel-speed sensor(-): W • Is there continuity? 	Yes	Repair or replace the wiring harness, then go to Step 4.
		No	Replace the ABS wheel-speed sensor, then go to Step 4. (See 04-13-7 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.) (See 04-13-9 REAR ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
3	INSPECT FOR OPEN CIRCUIT IN ABS WHEEL-SPEED SENSOR WIRING HARNESS <ul style="list-style-type: none"> • Inspect for continuity between the ABS HU/CM connectors (vehicle harness-side) and the following vehicle harness-side connector terminals of the ABS wheel-speed sensors: <ul style="list-style-type: none"> — RF ABS wheel-speed sensor(+): Q—A — RF ABS wheel-speed sensor(-): O—B — LF ABS wheel-speed sensor(+): I—A — LF ABS wheel-speed sensor(-): K—B — RR ABS wheel-speed sensor(+): E—A — RR ABS wheel-speed sensor(-): C—B — LR ABS wheel-speed sensor(+): U—A — LR ABS wheel-speed sensor(-): W—B • Is there continuity? 	Yes	Go to the next step.
		No	Replace the ABS wheel-speed sensor, then go to the next step. (See 04-13-7 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.) (See 04-13-9 REAR ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
4	VERIFY THAT THE SAME DTC IS NOT PRESENT <ul style="list-style-type: none"> • Reconnect all disconnected connectors. • Clear the DTCs from the memory. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].) • Are the same DTCs present? 	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the ABS CM, then go to the next step. (See 04-13-2 ABS HU/CM REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	VERIFY THAT NO OTHER DTCS ARE PRESENT <ul style="list-style-type: none"> • Are any other DTCs output? 	Yes	Go to the applicable DTC inspection. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [ABS]

DTC C0040:64 [ABS]

id0402a7877500

DTC	C0040:64	Brake switch
DETECTION CONDITION	<ul style="list-style-type: none"> • Brake switch ON signal is input for 6 min or more when driving at a vehicle speed of 20 km/h {12 mph} or more. • Brake switch ON signal is not input even though the control module determines vehicle deceleration. 	
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Open or short circuit in wiring harness between the brake switch and PCM terminal 1AB • Brake switch malfunction • Poor connection at connectors (female terminal) 	

PCM WIRING HARNESS-SIDE CONNECTOR

04-02A

ON-BOARD DIAGNOSTIC [ABS]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY OPEN OR SHORT CIRCUIT IN BRAKE SWITCH SIGNAL <ul style="list-style-type: none"> Switch the ignition to ON. Measure the voltage between the PCM terminal 1AB (vehicle harness-side) and body ground when the brake pedal is depressed and released: Voltage Brake pedal depressed: B+ Brake pedal released: 1 V or less 	Yes	Go to Step 5.
		No	If it is B+ under any condition, then go to the next step. If it is 1 V or less under any condition, then go to Step 3.
2	INSPECT BRAKE SWITCH SIGNAL FOR SHORT TO POWER SUPPLY CIRCUIT <ul style="list-style-type: none"> Disconnect the brake switch connector. Measure voltage between the brake switch connector terminal D (vehicle harness-side) and body ground. Is the voltage 1 V or less? 	Yes	Go to Step 4.
		No	Repair or replace the wiring harness between the PCM and brake switch, then go to Step 5.
3	INSPECT BRAKE SWITCH SIGNAL FOR OPEN CIRCUIT <ul style="list-style-type: none"> Disconnect the PCM connectors. Disconnect the brake switch connector. Inspect continuity between the PCM connector terminal 1AB (vehicle harness-side) and brake switch terminal D (vehicle harness-side). Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness between the PCM and brake switch, then go to Step 5.
4	INSPECT BRAKE SWITCH <ul style="list-style-type: none"> Inspect the brake switch. (See 04-11-10 BRAKE SWITCH INSPECTION.) Is the brake switch normal? 	Yes	Go to the next step.
		No	Replace the brake switch, then go to the next step. (See 04-11-8 BRAKE PEDAL REMOVAL/INSTALLATION.)
5	VERIFY THAT THE SAME DTC IS NOT PRESENT <ul style="list-style-type: none"> Reconnect all disconnected connectors. Clear the DTCs from the memory. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].) Start the engine and drive the vehicle at 20 km/h {12 mph} or more. Are the same DTCs present? 	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the ABS CM, then go to the next step. (See 04-13-2 ABS HU/CM REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	VERIFY THAT NO OTHER DTCS ARE PRESENT <ul style="list-style-type: none"> Are any other DTCs output? 	Yes	Go to the applicable DTC inspection. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].)
		No	DTC troubleshooting completed.

DTC C0082:47/C0082:48/C0082:49 [ABS]

id0402a7884200

DTC	C0082:47, C0082:48, C0082:49	ABS HU/CM (internal malfunction)
DETECTION CONDITION	<ul style="list-style-type: none"> The ABS CM on-board diagnostic function detects control module internal malfunction. 	
POSSIBLE CAUSE	<ul style="list-style-type: none"> ABS HU/CM internal malfunction 	

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY NO ABS HU/CM MALFUNCTION <ul style="list-style-type: none"> Clear the DTCs from the memory. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].) Start the engine and drive the vehicle at 10km/h {6.2 mph} or more. Are the same DTCs present? 	Yes	Replace the ABS CM, then go to the next step. (See 04-13-2 ABS HU/CM REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	VERIFY THAT NO OTHER DTCS ARE PRESENT <ul style="list-style-type: none"> Are any other DTCs output? 	Yes	Go to the applicable DTC inspection. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [ABS]

DTC U0001:88/U0100:00/U0155:00 [ABS]

id0402a7884800

DTC	U0001:88, U0100:00, U0155:00	CAN line
DETECTION CONDITION	<ul style="list-style-type: none"> • U0001:88 — Open or short circuit in CAN system wiring harness is detected. • U0100:00 — Communication error with PCM is detected in CAN communication. • U0155:00 — Communication error with instrument cluster is detected in CAN communication. 	
POSSIBLE CAUSE	<ul style="list-style-type: none"> • CAN system wiring harness open or short circuit • CAN system wiring harness open or short circuit with PCM • CAN system wiring harness open or short circuit with instrument cluster • instrument cluster malfunction 	

Diagnostic procedure

- Inspect according to diagnostic procedure in BODY & ACCESSORIES. (See 09-02D-1 FOREWORD [MULTIPLEX COMMUNICATION SYSTEM].)

04-02A

DTC U2100:00/U2101:00 [ABS]

id0402a7887800

DTC	U2100:00, U2101:00	Configuration data not recorded
DETECTION CONDITION	<ul style="list-style-type: none"> • ABS CM detects configuration data not record or data error 	
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Module configuration procedure is not done properly • Correct data cannot be received from instrument cluster • ABS CM malfunction 	

Diagnostic procedure

STEP	INSPECTION	ACTION				
1	RECORD THE CAR CONFIGURATION DATA <ul style="list-style-type: none"> • Switch the ignition to off. • Switch the ignition to ON, and maintain this condition for approx. 30 s. 	Go to the next step.				
2	VERIFY THAT THE SAME DTC IS NOT PRESENT <ul style="list-style-type: none"> • Clear the DTCs from the memory. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].) • Are the same DTCs present? 	<table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 10%; text-align: center;">Yes</td> <td>Repeat the inspection from Step 1. If the malfunction recurs, go to the next step.</td> </tr> <tr> <td style="text-align: center;">No</td> <td>Go to Step 5.</td> </tr> </table>	Yes	Repeat the inspection from Step 1. If the malfunction recurs, go to the next step.	No	Go to Step 5.
Yes	Repeat the inspection from Step 1. If the malfunction recurs, go to the next step.					
No	Go to Step 5.					
3	INSPECT FOR INSTRUMENT CLUSTER MALFUNCTION <ul style="list-style-type: none"> • Switch the ignition to off. • Using the M-MDS, perform the DTC inspection for the instrument cluster. (See 09-02E-4 DTC INSPECTION [INSTRUMENT CLUSTER].) • Are any DTCs detected? 	<table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 10%; text-align: center;">Yes</td> <td>Go to applicable DTC inspection. (See 09-02E-5 DTC TABLE [INSTRUMENT CLUSTER].) After repairing the instrument cluster, perform the "INSTRUMENT CLUSTER CONFIGURATION", then go to the next step. (See 09-22-10 INSTRUMENT CLUSTER CONFIGURATION.)</td> </tr> <tr> <td style="text-align: center;">No</td> <td>Go to the next step.</td> </tr> </table>	Yes	Go to applicable DTC inspection. (See 09-02E-5 DTC TABLE [INSTRUMENT CLUSTER].) After repairing the instrument cluster, perform the "INSTRUMENT CLUSTER CONFIGURATION", then go to the next step. (See 09-22-10 INSTRUMENT CLUSTER CONFIGURATION.)	No	Go to the next step.
Yes	Go to applicable DTC inspection. (See 09-02E-5 DTC TABLE [INSTRUMENT CLUSTER].) After repairing the instrument cluster, perform the "INSTRUMENT CLUSTER CONFIGURATION", then go to the next step. (See 09-22-10 INSTRUMENT CLUSTER CONFIGURATION.)					
No	Go to the next step.					
4	VERIFY THAT THE SAME DTC IS NOT PRESENT <ul style="list-style-type: none"> • Clear the DTCs from the memory. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].) • Are the same DTCs present? 	<table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 10%; text-align: center;">Yes</td> <td>Replace the ABS CM, then go to the next step. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].)	No	DTC troubleshooting completed.
Yes	Go to the applicable DTC inspection. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].)					
No	DTC troubleshooting completed.					

ON-BOARD DIAGNOSTIC [ABS]

DTC U3003:16/U3003:17 [ABS]

id0402a7877800

DTC	U3003:16, U3003:17	Power supply system
DETECTION CONDITION	<ul style="list-style-type: none"> • U3003:16 — When driving the vehicle at 20 km/h {12 mph} or more, low ignition voltage (10 V or less) is detected at the voltage monitor of the solenoid valve or motor monitor. • U3003:17 — High ignition voltage (18 V or more) is detected at the voltage monitor of the solenoid valve or motor monitor. 	
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Battery deterioration • Generator malfunction • SAS 15A/ABS IG 7.5A/ABS 40A fuse malfunction • Open or short circuit in wiring harness between ABS HU/CM terminal N and battery • Open or short circuit in wiring harness between ABS HU/CM terminal Y and battery • Open circuit in wiring harness between ABS HU/CM terminal B and body ground • ABS HU/CM malfunction • Poor connection at connectors (female terminal) 	
<p style="text-align: center;">ABS HU/CM WIRING HARNESS-SIDE CONNECTOR</p>		

ON-BOARD DIAGNOSTIC [ABS]

Diagnostic procedure

STEP	INSPECTION	ACTION
1	INSPECT BATTERY VOLTAGE <ul style="list-style-type: none"> Is the battery positive terminal voltage normal? 	Yes Inspect for normal connection of the battery terminals. Go to the next step.
		No Charge or replace the battery, then go to Step 7. (See 01-17A-5 BATTERY RECHARGING [LF, L5].) (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2	INSPECT BATTERY GRAVITY <ul style="list-style-type: none"> Is battery specific gravity as specified? 	Yes Go to the next step.
		No Replace the battery, then go to Step 7. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
3	INSPECT CHARGING SYSTEM <ul style="list-style-type: none"> Are the generator and the drive belt tensions normal? 	Yes Go to the next step.
		No Replace the generator and/or drive belt if necessary. (See 01-17A-6 GENERATOR REMOVAL/INSTALLATION [LF, L5].) (See 01-10A-6 DRIVE BELT REMOVAL/INSTALLATION [LF, L5].) Go to Step 7.
4	INSPECT ABS FUSE CONDITION <ul style="list-style-type: none"> Is the ABS fuse (SAS 15A/ABS IG 7.5A/ABS 40A) normal? 	Yes Go to the next step.
		No Replace the fuse, then go to Step 7.
5	INSPECT ABS HU/CM POWER SUPPLY FOR OPEN CIRCUIT <ul style="list-style-type: none"> Disconnect the ABS HU/CM connectors. Switch the ignition to ON. Measure the voltage between following connector terminals of the ABS HU/CM (vehicle harness-side) and body ground: <ul style="list-style-type: none"> — ABS HU/CM: N—Body ground — ABS HU/CM: Y—Body ground Is the voltage 10 V or more? 	Yes Go to the next step.
		No Repair or replace the wiring harness, then go to Step 7.
6	INSPECT ABS HU/CM GROUND FOR POOR GROUND OR OPEN CIRCUIT <ul style="list-style-type: none"> Switch the ignition to off. Measure the resistance between following connector terminal of ABS HU/CM (vehicle harness-side) and body ground: <ul style="list-style-type: none"> — ABS HU/CM: B—Body ground Is the resistance within 0—1 ohm? 	Yes Go to the next step.
		No If there is open circuit: <ul style="list-style-type: none"> Repair or replace the wiring harness, then go to the next step. If resistance is not within specification: <ul style="list-style-type: none"> Repair or replace the poor ground part, then go to the next step.
7	VERIFY THAT THE SAME DTC IS NOT PRESENT <ul style="list-style-type: none"> Reconnect all disconnected connectors. Clear the DTCs from the memory. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].) Start the engine and drive the vehicle at 20 km/h {12 mph} or more. Are the same DTCs present? 	Yes Repeat the inspection from Step 1. If the malfunction recurs, replace the ABS CM, then go to the next step. (See 04-13-2 ABS HU/CM REMOVAL/INSTALLATION)
		No Go to the next step.
8	VERIFY THAT NO OTHER DTCS ARE PRESENT <ul style="list-style-type: none"> Are any other DTCs output? 	Yes Go to the applicable DTC inspection. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].)
		No DTC troubleshooting completed.

ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]

id0402b2800200

On-Board Diagnostic (OBD) Test Description

- The OBD test inspects the integrity and function of the DSC and outputs the results when requested by the specific tests.
- On-board diagnostic test also:
 - Provides a quick inspection of the DSC usually performed at the start of each diagnostic procedure.
 - Provides verification after repairs to ensure that no other faults occurred during service.
- The OBD test is divided into 3 tests:
 - Read/clear diagnostic results, PID monitor and record and active command modes.

Read/clear diagnostic results

- This function allows you to read or clear DTCs in the DSC HU/CM memory.

PID/Data monitor and record

- This function allows you to access certain data values, input signals, calculated values, and system status information.

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

Active command modes

- This function allows you to control devices through the M-MDS.

Reading DTCs Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Self Test".
 2. Select "Modules".
 3. Select "ABS".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "ABS".
 3. Select "Self Test".
3. Verify the DTC according to the directions on the screen.
 - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
4. After completion of repairs, clear all DTCs stored in the DSC. (See 04-02B-3 Clearing DTCs Procedures.)

04-02B

Clearing DTCs Procedures

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Self Test".
 2. Select "Modules".
 3. Select "ABS".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "ABS".
 3. Select "Self Test".
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition to ON and wait for **5 s or more**.
7. Perform DTC inspection. (See 04-02B-3 Reading DTCs Procedure.)
8. Verify that no DTCs are displayed.

PID/Data Monitor and Record Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "DataLogger".
 2. Select "Modules".
 3. Select "ABS".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "ABS".
 3. Select "DataLogger".
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the directions on the screen.

Note

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

Active Command Modes Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "DataLogger".
 2. Select "Modules".
 3. Select "ABS".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "ABS".
 3. Select "DataLogger".
3. Select the active command modes from the PID table.
4. Perform the active command modes, inspect the operations for each parts.
 - If the operation of output parts cannot be verified after the active command mode inspection is performed, this could indicate the possibility of an open or short circuit, sticking, or operation malfunction in the output parts.

DETECTION CONDITION	<ul style="list-style-type: none"> • Malfunction detected in the DSC HU/CM solenoid valve or internal circuit by the DSC HU/CM on-board diagnostic function 	
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Open or short circuit in the DSC HU/CM internal solenoid valves • Solenoid valve malfunction • Poor connection at connectors (female terminal) 	

04-02B

Diagnostic procedure

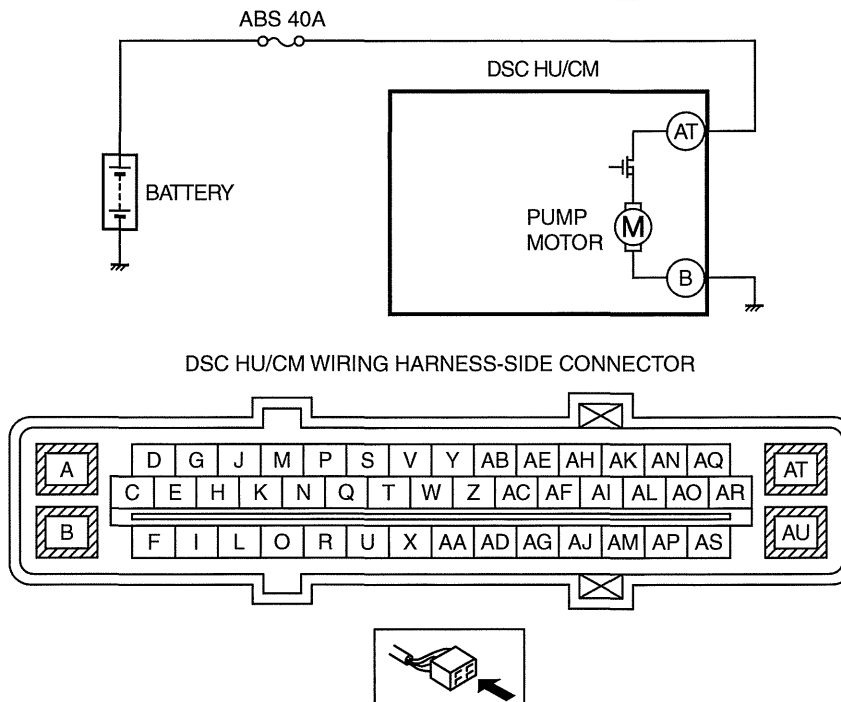

STEP	INSPECTION	ACTION	
1	VERIFY SOLENOID VALVE OPERATION <ul style="list-style-type: none"> • Switch the ignition to off. • Connect the M-MDS to the DLC-2. • Switch the ignition to ON. • Access the active command mode for the solenoid valve using the M-MDS. (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Does the solenoid valve operate? 	Yes	Go to the next step.
		No	Replace the DSC HU/CM, then go to the next step. (See 04-15-2 DSC HU/CM REMOVAL/INSTALLATION.)
2	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Clear the DTC from the memory. (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Start the engine and drive the vehicle at 10 km/h {6.2 mph} or more. • Gradually slow down and stop vehicle. • Are the same DTCs present? 	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See 04-15-2 DSC HU/CM REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Are any other DTCs present? 	Yes	Go to the applicable DTC inspection. (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

DTC C0020:01/C0020:1C/C0020:71 [DYNAMIC STABILITY CONTROL (DSC)]

id0402b2877000

DTC	C0020:01, C0020:1C, C0020:71	Pump motor, motor relay
DETECTION CONDITION	<ul style="list-style-type: none"> • C0020:01 — DSC motor relay signal does not correspond to DSC HU/CM ON signal. • C0020:1C — DSC motor monitor signal does not correspond to DSC HU/CM OFF signal. — DSC motor monitor signal does not correspond to DSC HU/CM ON signal. • C0020:71 — DSC HU/CM motor monitor ON signal is not input within specified time limit or more when motor signal is switched from ON to OFF by DSC HU/CM. 	
POSSIBLE CAUSE	<ul style="list-style-type: none"> • ABS 40A fuse malfunction • Open circuit or short to ground in the wiring harness between the battery and DSC HU/CM terminal AT • Open circuit in the wiring harness between DSC HU/CM terminal B and body ground • Open or short circuit in DSC HU/CM internal motor relay, or stuck motor relay • Open or short circuit in DSC HU/CM internal pump motor, or frozen pump motor • Poor connection at connectors (female terminal) 	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	INSPECT DSC FUSE CONDITION <ul style="list-style-type: none"> • Is the DSC fuse (ABS 40A) normal? 	Yes	Go to the next step.
		No	Replace the fuse, then go to Step 6.
2	VERIFY PUMP MOTOR OPERATION <ul style="list-style-type: none"> • Switch the ignition to off. • Connect the M-MDS to the DLC-2. • Switch the ignition to ON. • Access PMP_MTR active command modes using the M-MDS. • Does the pump motor operate? 	Yes	Go to the next step.
		No	Replace the DSC HU/CM, then go to Step 6. (See 04-15-2 DSC HU/CM REMOVAL/INSTALLATION.)
3	INSPECT MOTOR RELAY POWER SUPPLY FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the DSC HU/CM connector. • Inspect for continuity between DSC HU/CM terminal AT (vehicle harness-side) and the positive battery terminal. • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 6.

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

STEP	INSPECTION	ACTION	
4	INSPECT MOTOR RELAY POWER SUPPLY FOR SHORT CIRCUIT <ul style="list-style-type: none"> • Inspect for continuity between DSC HU/CM terminal AT (vehicle harness-side) and body ground. • Is there continuity? 	Yes	Repair or replace the wiring harness, then go to Step 6.
		No	Go to the next step.
5	INSPECT PUMP MOTOR GROUND FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Inspect for continuity between DSC HU/CM terminal B (vehicle harness-side) and body ground. • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to the next step.
6	VERIFY THAT THE SAME DTC IS NOT PRESENT <ul style="list-style-type: none"> • Reconnect all disconnected connectors. • Clear the DTCs from the memory. (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Start the engine and drive the vehicle at 10 km/h {6.2 mph} or more. • Are the same DTCs present? 	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See 04-15-2 DSC HU/CM REMOVAL/ INSTALLATION.)
		No	Go to the next step.
7	VERIFY THAT NO OTHER DTCS ARE PRESENT <ul style="list-style-type: none"> • Are any other DTCs output? 	Yes	Go to the applicable DTC inspection. (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

	C0037:07	LR ABS wheel-speed sensor/ABS sensor rotor
	C0039:07	RR ABS sensor rotor
	C003A:07	RR ABS wheel-speed sensor/ABS sensor rotor
DETECTION CONDITION	<ul style="list-style-type: none"> • C0030:07, C0033:07, C0036:07, C0039:07 — Periodic abnormality is detected in the signal wave pattern from the ABS wheel-speed sensors. • C0031:07, C0034:07, C0037:07, C003A:07 — (1) The wheel-speed signal is not input or an extremely low wheel-speed signal is detected from any of the four wheels when driving at a vehicle speed of 10 km/h {6.2 mph} or more — (2) A large, sudden change in the wheel speed-signal is detected. — (3) ABS control continues to operate for 28 s or more. 	
POSSIBLE CAUSE	<ul style="list-style-type: none"> • C0030:07, C0033:07, C0036:07, C0039:07 — ABS sensor rotor malfunction (missing ABS sensor rotor teeth due to foreign material obstruction) — ABS sensor rotor installation malfunction (If the ABS sensor rotor is installed at an angle, it may cause output of abnormal wave pattern at high speeds.) • C0031:07, C0034:07, C0037:07, C003A:07 — Conditions (1) and (2) are detected: <ul style="list-style-type: none"> • Excessive clearance between the ABS wheel-speed sensor and sensor rotor • ABS sensor rotor malfunction (foreign material adhering) • ABS sensor rotor installation malfunction (If the sensor rotor is installed at an angle, it may cause output of abnormal wave pattern at high speeds.) • ABS wheel-speed sensor malfunction — When condition (3) is detected: <ul style="list-style-type: none"> • Continuous ABS operation 	

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	INSPECT PID FOR ABS WHEEL-SPEED SENSOR OUTPUT ERROR USING M-MDS <ul style="list-style-type: none"> • Switch the ignition to off. • Connect the M-MDS to the DLC-2. • Select the following PIDs using the M-MDS: WSPD_LF WSPD_LR WSPD_RF WSPD_RR • Drive the vehicle. • Verify that the vehicle speeds detected by the four ABS wheel-speed sensors are approximately the same. • Are the vehicle speeds approximately the same? 	Yes	Go to Step 3.
		No	Go to the next step.
2	INSPECT FOR SHORT TO GROUND BETWEEN ABS WHEEL-SPEED SENSOR CONNECTORS AND GROUND <ul style="list-style-type: none"> • Disconnect the ABS wheel-speed sensor connectors. • Inspect for no continuity between the following ABS wheel-speed sensor connector terminals (vehicle harness-side) and body ground: <ul style="list-style-type: none"> — ABS wheel-speed sensor (RF): B—Body ground — ABS wheel-speed sensor (LF): B—Body ground — ABS wheel-speed sensor (RR): B—Body ground — ABS wheel-speed sensor (LR): B—Body ground • Is the continuity normal? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 5.
3	INSPECT IF MALFUNCTION OCCURRED DUE TO IMPROPER SENSOR CLEARANCE. <ul style="list-style-type: none"> • Inspect the clearance between the ABS wheel-speed sensor and the ABS sensor rotor. (See 04-13-7 FRONT ABS WHEEL-SPEED SENSOR INSPECTION.) (See 04-13-10 REAR ABS WHEEL-SPEED SENSOR INSPECTION.) • Is the clearance normal? 	Yes	Go to the next step.
		No	Replace the ABS wheel-speed sensor, then go to Step 5. (See 04-13-7 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.) (See 04-13-9 REAR ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
4	VISUALLY INSPECT ABS SENSOR ROTOR FOR FOREIGN MATERIAL ADHERING OR IMPROPER INSTALLATION <ul style="list-style-type: none"> • Is the result normal? 	Yes	Go to the next step.
		No	Replace the front wheel bearing or the rear wheel hub component, then go to the next step. <ul style="list-style-type: none"> • Front wheel bearing (See 03-11-2 WHEEL HUB, STEERING KNUCKLE REMOVAL/INSTALLATION.) (See 03-11-4 WHEEL HUB, STEERING KNUCKLE DISASSEMBLY/ASSEMBLY.) • Rear wheel hub component (See 03-12-2 WHEEL HUB COMPONENT REMOVAL/INSTALLATION.)
5	VERIFY THAT THE SAME DTC IS NOT PRESENT <ul style="list-style-type: none"> • Clear the DTCs from the memory. (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Start the engine and drive the vehicle at 10 km/h {6.2 mph} or more. • Are the same DTCs present? 	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See 04-15-2 DSC HU/CM REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	VERIFY THAT NO OTHER DTCS ARE PRESENT <ul style="list-style-type: none"> • Are any other DTCs output? 	Yes	Go to the applicable DTC inspection. (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

DTC C0040:64 [DYNAMIC STABILITY CONTROL (DSC)]

id0402b2877500

DTC	C0040:64	Brake switch
DETECTION CONDITION	<ul style="list-style-type: none"> Brake switch ON signal is input for 6 min or more when driving at a vehicle speed of 20 km/h {12 mph} or more. Brake switch ON signal is not input even though the control module determines vehicle deceleration. 	
POSSIBLE CAUSE	<ul style="list-style-type: none"> Open or short circuit in wiring harness between the brake switch and PCM terminal 1AB Brake switch malfunction Poor connection at connectors (female terminal) 	

BRAKE SWITCH WIRING
HARNESS-SIDE CONNECTOR

PCM WIRING HARNESS-SIDE CONNECTOR

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY OPEN OR SHORT CIRCUIT IN BRAKE SWITCH SIGNAL <ul style="list-style-type: none"> Switch the ignition to ON. Measure the voltage between the PCM terminal 1AB (vehicle harness-side) and body ground when the brake pedal is depressed and released. Voltage Brake pedal depressed: B+ Brake pedal released: 1 V or less	Yes	Go to Step 5.
		No	If it is B+ under any condition, then go to the next step. If it is 1 V or less under any condition, then go to Step 3.
2	INSPECT BRAKE SWITCH SIGNAL FOR SHORT TO POWER SUPPLY CIRCUIT <ul style="list-style-type: none"> Disconnect the brake switch connector. Measure voltage between the brake switch connector terminal D (vehicle harness-side) and body ground. Is the voltage 1 V or less? 	Yes	Go to Step 4.
		No	Repair or replace the wiring harness between the PCM and brake switch, then go to Step 5

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

STEP	INSPECTION	ACTION	
3	INSPECT BRAKE SWITCH SIGNAL FOR OPEN CIRCUIT <ul style="list-style-type: none"> Disconnect the PCM connectors. Disconnect the brake switch connector. Inspect continuity between the PCM connector terminal 1AB (vehicle harness-side) and brake switch terminal D (vehicle harness-side). Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness between the PCM and brake switch, then go to Step 5.
4	INSPECT BRAKE SWITCH <ul style="list-style-type: none"> Inspect the brake switch. (See 04-11-10 BRAKE SWITCH INSPECTION.) Is the brake switch normal? 	Yes	Go to the next step.
		No	Replace the brake switch, then go to the next step. (See 04-11-8 BRAKE PEDAL REMOVAL/INSTALLATION.)
5	VERIFY THAT THE SAME DTC IS NOT PRESENT <ul style="list-style-type: none"> Reconnect all disconnected connectors. Clear the DTCs from the memory. (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) Start the engine and drive the vehicle at 20 km/h {12 mph} or more. Are the same DTCs present? 	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See 04-15-2 DSC HU/CM REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	VERIFY THAT NO OTHER DTCs ARE PRESENT <ul style="list-style-type: none"> Are any other DTCs output? 	Yes	Go to the applicable DTC inspection. (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

DTC U0001:88/U0100:00/U0101:00/U0140:00/U0155:00 [DYNAMIC STABILITY CONTROL (DSC)]

id0402b2888000

DTC	U0001:88, U0100:00, U0101:00, U0140:00, U0155:00	CAN line
DETECTION CONDITION	<ul style="list-style-type: none"> • U0001:88 — Open or short circuit in CAN system wiring harness is detected. • U0100:00 — Communication error with PCM is detected in CAN communication. • U0101:00 — Communication error with TCM is detected in CAN communication. • U0140:00 — Communication error with BCM is detected in CAN communication. • U0155:00 — Communication error with instrument cluster is detected in CAN communication. 	
POSSIBLE CAUSE	<ul style="list-style-type: none"> • CAN system wiring harness open or short circuit • CAN system wiring harness open or short circuit with PCM • CAN system wiring harness open or short circuit with TCM • CAN system wiring harness open or short circuit with BCM • CAN system wiring harness open or short circuit with instrument cluster • instrument cluster malfunction 	

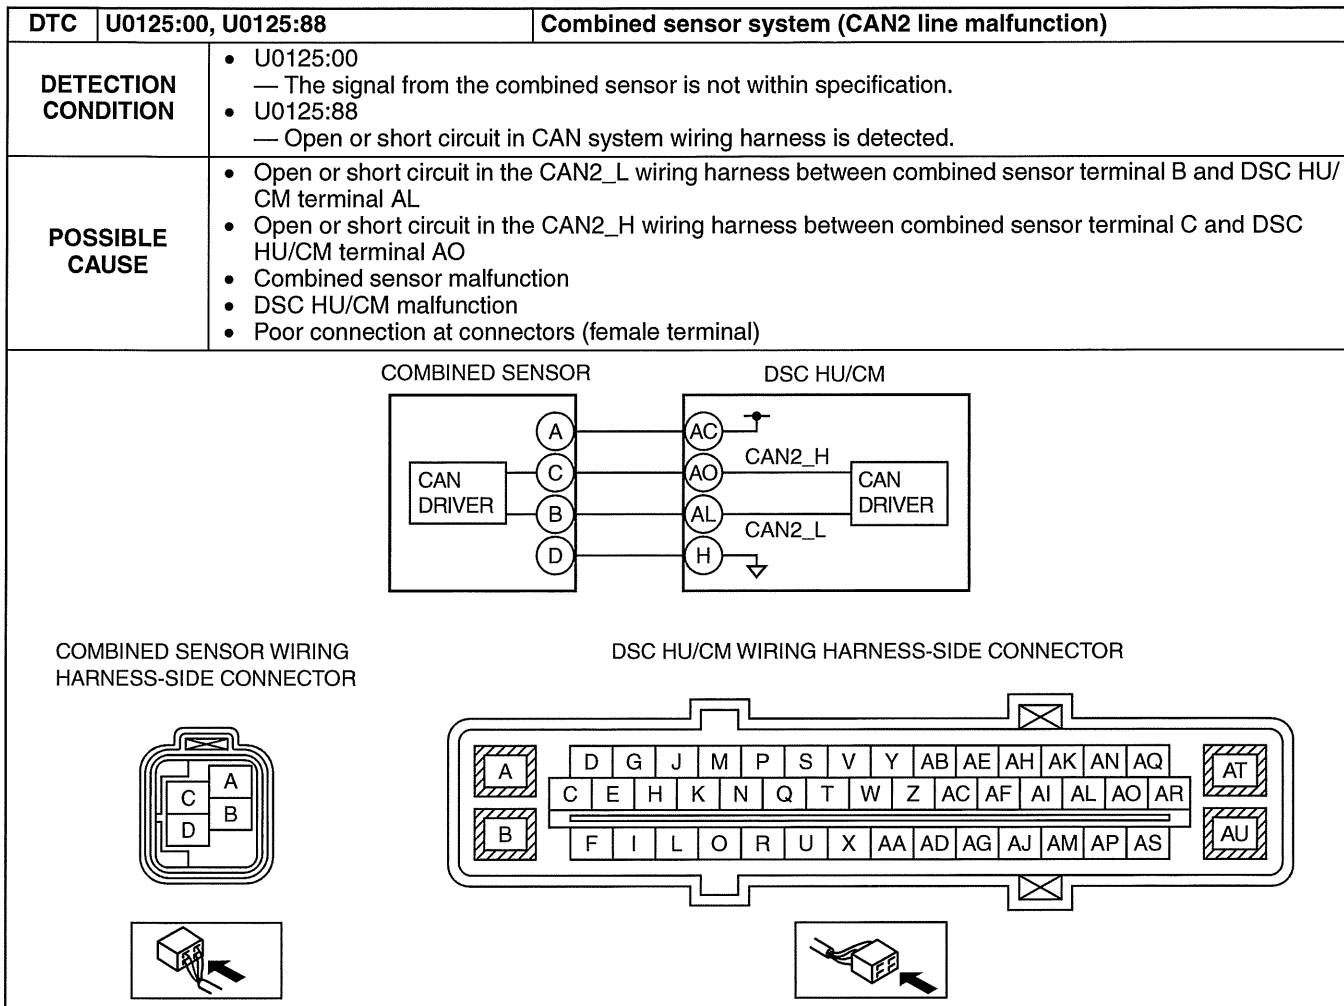

Diagnostic procedure

- Inspect according to diagnostic procedure in BODY & ACCESSORIES. (See 09-02D-1 FOREWORD [MULTIPLEX COMMUNICATION SYSTEM].)

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

DTC U0125:00/U0125:88 [DYNAMIC STABILITY CONTROL (DSC)]

id0402b2879000

Diagnostic procedure

STEP	INSPECTION		ACTION
1	INSPECT COMBINED SENSOR SIGNAL (CAN2 LINE) FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Disconnect the DSC HU/CM connectors. • Disconnect the combined sensor connectors. • Inspect for continuity between the DSC HU/CM connectors (vehicle harness-side) and the following combined sensor connector terminals (vehicle harness-side): <ul style="list-style-type: none"> — Combined sensor (CAN2_L): AL—B — Combined sensor (CAN2_H): AO—C • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 4.
2	INSPECT COMBINED SENSOR SIGNAL (CAN2 LINE) FOR SHORT CIRCUIT <ul style="list-style-type: none"> • Inspect for continuity between the following DSC HU/CM connector terminals (vehicle harness-side) and body ground: <ul style="list-style-type: none"> — Combined sensor (CAN2_L): B — Combined sensor (CAN2_H): C • Is there continuity? 	Yes	Repair or replace the wiring harness, then go to Step 4.
		No	Go to the next step.
3	INSPECT THE COMBINED SENSOR <ul style="list-style-type: none"> • Reconnect all disconnected connectors. Inspect the combined sensor. (See 04-15-8 COMBINED SENSOR INSPECTION.) • Is the combined sensor normal? 	Yes	Go to the next step.
		No	Replace the combined sensor, then go to the next step. (See 04-15-7 COMBINED SENSOR REMOVAL/INSTALLATION.)

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

STEP	INSPECTION	ACTION
4	VERIFY THAT THE SAME DTC IS NOT PRESENT <ul style="list-style-type: none"> Clear the DTCs from the memory. (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) Are the same DTCs present? 	Yes Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See 04-15-2 DSC HU/CM REMOVAL/INSTALLATION.)
		No Go to the next step.
5	VERIFY THAT NO OTHER DTCS ARE PRESENT <ul style="list-style-type: none"> Are any other DTCs output? 	Yes Go to the applicable DTC inspection. (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No DTC troubleshooting completed.

DTC U0401:00 [DYNAMIC STABILITY CONTROL (DSC)]

id0402b2887900

DTC	U0401:00	Abnormal message from PCM
DETECTION CONDITION	<ul style="list-style-type: none"> Correct data cannot be received from PCM 	
POSSIBLE CAUSE	<ul style="list-style-type: none"> PCM malfunction 	

04-02B

Diagnostic procedure

STEP	INSPECTION	ACTION
1	INSPECT FOR PCM MALFUNCTION <ul style="list-style-type: none"> Switch the ignition to off. Using the M-MDS, perform the DTC inspection for the PCM. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Are any DTCs detected? 	Yes Go to applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].) (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No Go to the next step.
2	VERIFY THAT THE SAME DTC IS NOT PRESENT <ul style="list-style-type: none"> Clear the DTCs from the memory. (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) Are the same DTCs present? 	Yes Repeat the inspection from Step 1. If the malfunction recurs, replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].) (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No Go to the next step.
3	VERIFY THAT NO OTHER DTCS ARE PRESENT <ul style="list-style-type: none"> Are any other DTCs output? 	Yes Go to the applicable DTC inspection. (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

DTC U0402:00 [DYNAMIC STABILITY CONTROL (DSC)]

id0402b2881800

DTC	U0402:00	Abnormal message from TCM
DETECTION CONDITION	<ul style="list-style-type: none"> Correct data cannot be received from TCM 	
POSSIBLE CAUSE	<ul style="list-style-type: none"> TCM malfunction 	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	INSPECT FOR TCM MALFUNCTION <ul style="list-style-type: none"> Switch the ignition to off. Using the M-MDS, perform the DTC inspection for the TCM. (See 05-02-3 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FS5A-EL].) Are any DTCs detected? 	Yes	Go to applicable DTC inspection. (See 05-02-4 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FS5A-EL].)
		No	Go to the next step.
2	VERIFY THAT THE SAME DTC IS NOT PRESENT <ul style="list-style-type: none"> Clear the DTCs from the memory. (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) Are the same DTCs present? 	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the TCM, then go to the next step. (See 05-17-39 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
3	VERIFY THAT NO OTHER DTCS ARE PRESENT <ul style="list-style-type: none"> Are any other DTCs output? 	Yes	Go to the applicable DTC inspection. (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

DTC U0422:00/U0428:62/U0428:64 [DYNAMIC STABILITY CONTROL (DSC)]

id0402b2884300

DTC	U0422:00, U0428:62, U0428:64	Abnormal message from BCM
DETECTION CONDITION	<ul style="list-style-type: none"> Correct data cannot be received from BCM 	
POSSIBLE CAUSE	<ul style="list-style-type: none"> Steering angle sensor malfunction BCM malfunction 	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	INSPECT FOR BCM MALFUNCTION <ul style="list-style-type: none"> Switch the ignition to off. Using the M-MDS, perform the DTC inspection for the BCM. (See 09-02F-7 DTC INSPECTION [BCM].) Are any DTCs detected? 	Yes	Go to applicable DTC inspection. (See 09-02F-8 DTC TABLE [BCM].)
		No	Go to the next step.
2	VERIFY THAT THE SAME DTC IS NOT PRESENT <ul style="list-style-type: none"> Clear the DTCs from the memory. (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) Are the same DTCs present? 	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the BCM, then go to the next step. (See 09-40-2 BODY CONTROL MODULE (BCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	VERIFY THAT NO OTHER DTCS ARE PRESENT <ul style="list-style-type: none"> Are any other DTCs output? 	Yes	Go to the applicable DTC inspection. (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

DTC U2100:00/U2101:00 [DYNAMIC STABILITY CONTROL (DSC)]

id0402b2887800

DTC	U2100:00, U2101:00	Configuration data not recorded
DETECTION CONDITION	<ul style="list-style-type: none"> DSC CM detects configuration data not record or data error 	
POSSIBLE CAUSE	<ul style="list-style-type: none"> Module configuration procedure is not done properly Correct data cannot be received from instrument cluster DSC CM malfunction 	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	RECORD THE CAR CONFIGURATION DATA <ul style="list-style-type: none"> Switch the ignition to off. Switch the ignition to ON, and maintain this condition for approx. 30 s. 		Go to the next step.
2	VERIFY THAT THE SAME DTC IS NOT PRESENT <ul style="list-style-type: none"> Clear the DTCs from the memory. (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) Are the same DTCs present? 	Yes	Repeat the inspection from Step 1. If the malfunction recurs, go to the next step.
		No	Go to Step 5.
3	INSPECT FOR INSTRUMENT CLUSTER MALFUNCTION <ul style="list-style-type: none"> Switch the ignition to off. Using the M-MDS, perform the DTC inspection for the instrument cluster. (See 09-02E-4 DTC INSPECTION [INSTRUMENT CLUSTER].) Are any DTCs detected? 	Yes	Go to applicable DTC inspection. (See 09-02E-5 DTC TABLE [INSTRUMENT CLUSTER].) After repairing the instrument cluster, perform the "INSTRUMENT CLUSTER CONFIGURATION", then go to the next step. (See 09-22-10 INSTRUMENT CLUSTER CONFIGURATION.)
		No	Go to the next step.
4	VERIFY THAT THE SAME DTC IS NOT PRESENT <ul style="list-style-type: none"> Clear the DTCs from the memory. (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) Are the same DTCs present? 	Yes	Replace the DSC HU/CM, then go to the next step. (See 04-15-2 DSC HU/CM REMOVAL/ INSTALLATION.)
		No	Go to the next step.
5	VERIFY THAT NO OTHER DTCS ARE PRESENT <ul style="list-style-type: none"> Are any other DTCs output? 	Yes	Go to the applicable DTC inspection. (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

04-02B

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

DTC U3003:16/U3003:17 [DYNAMIC STABILITY CONTROL (DSC)]

id0402b2877800

DTC	U3003:16, U3003:17	Power supply system
DETECTION CONDITION	<ul style="list-style-type: none"> • U3003:16 — When driving the vehicle at 20 km/h {12 mph} or more, low ignition voltage (10 V or less) is detected at the voltage monitor of the solenoid valve or motor monitor. • U3003:17 — High ignition voltage (18 V or more) is detected at the voltage monitor of the solenoid valve or motor monitor. 	
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Battery deterioration • Generator malfunction • ABS 40A/DSC 20A/SAS 15A/ABS IG 7.5A fuse malfunction • Open or short circuit in wiring harness between DSC HU/CM terminal Y and battery • Open or short circuit in wiring harness between DSC HU/CM terminal AU and battery • Open or short circuit in wiring harness between DSC HU/CM terminal AT and battery • Open circuit in wiring harness between DSC HU/CM terminal B and body ground • Poor connection at connectors (female terminal) 	

DSC HU/CM WIRING HARNESS-SIDE CONNECTOR

Diagnostic procedure

STEP	INSPECTION		ACTION
1	INSPECT BATTERY VOLTAGE <ul style="list-style-type: none"> • Is the battery positive terminal voltage normal? 	Yes	Inspect for normal connection of the battery terminals. Go to the next step.
		No	Charge or replace the battery, then go to Step 7. (See 01-17A-5 BATTERY RECHARGING [LF, L5].) (See 01-17B-6 BATTERY RECHARGING [L3 WITH TC].) (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].) (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2	INSPECT BATTERY GRAVITY <ul style="list-style-type: none"> • Is battery specific gravity as specified? 	Yes	Go to the next step.
		No	Replace the battery, then go to Step 7. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].) (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

STEP	INSPECTION	ACTION	
3	INSPECT CHARGING SYSTEM <ul style="list-style-type: none"> • Are the generator and the drive belt tensions normal? 	Yes	Go to the next step.
		No	Replace the generator and/or drive belt if necessary. (See 01-17A-6 GENERATOR REMOVAL/ INSTALLATION [LF, L5].) (See 01-17B-6 GENERATOR REMOVAL/ INSTALLATION [L3 WITH TC].) (See 01-10A-6 DRIVE BELT REMOVAL/ INSTALLATION [LF, L5].) (See 01-10B-4 DRIVE BELT REMOVAL/ INSTALLATION [L3 WITH TC].) Go to Step 7.
4	INSPECT ABS FUSE CONDITION <ul style="list-style-type: none"> • Is the ABS fuse (ABS 40A/DSC 20A/SAS 15A/ABS IG 7.5A) normal? 	Yes	Go to the next step.
		No	Replace the fuse, then go to Step 7.
5	INSPECT DSC HU/CM POWER SUPPLY FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Disconnect the DSC HU/CM connectors. • Switch the ignition to ON. • Measure the voltage between following connector terminals of the DSC HU/CM (vehicle harness-side) and body ground: <ul style="list-style-type: none"> — DSC HU/CM: Y—Body ground — DSC HU/CM: AU—Body ground — DSC HU/CM: AT—Body ground • Is the voltage 10 V or more? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 7.
6	INSPECT DSC HU/CM GROUND FOR POOR GROUND OR OPEN CIRCUIT <ul style="list-style-type: none"> • Switch the ignition to off. • Measure the resistance between the DSC HU/CM terminal B (vehicle harness-side) and body ground. • Is the resistance within 0—1 ohm? 	Yes	Go to the next step.
		No	If there is open circuit: <ul style="list-style-type: none"> • Repair or replace the wiring harness, then go to the next step. If resistance is not within specification: <ul style="list-style-type: none"> • Repair or replace the poor ground part, then go to the next step.
7	VERIFY THAT THE SAME DTC IS NOT PRESENT <ul style="list-style-type: none"> • Reconnect all disconnected connectors. • Clear the DTCs from the memory. (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Start the engine and drive the vehicle at 20 km/h {12 mph} or more. • Are the same DTCs present? 	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See 04-15-2 DSC HU/CM REMOVAL/ INSTALLATION)
		No	Go to the next step.
8	VERIFY THAT NO OTHER DTCS ARE PRESENT <ul style="list-style-type: none"> • Are any other DTCs output? 	Yes	Go to the applicable DTC inspection. (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

FOREWORD [ABS]

id0403a5804000

- Before performing the steps in Symptom Troubleshooting, perform the On-board Diagnostic inspection. To inspect the DTC, follow the DTC Inspection steps. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].)

SYMPTOM TROUBLESHOOTING [ABS]

id0403a5804100

PRECAUTION [ABS]

- Any one or a combination of the ABS warning and brake system warning lights illuminates even when the system is normal.

Warning lights that may illuminate and/or flash	Cases in which the light may illuminate	Conditions in which the light will go out	ABS, EBD control
Either or both of the following lights illuminate: <ul style="list-style-type: none"> ABS warning light Brake system warning light^{*1} 	When the front wheels are jacked up, stuck, or placed on a chassis roller, and only the front wheel ABS wheel-speed sensors are spun.	After switching the ignition to off, vehicle is driven at speed greater than 10 km/h {6.2 mph} and normal operation is confirmed.	<ul style="list-style-type: none"> ABS: Cuts control EBD: <ol style="list-style-type: none"> Cuts control, in cases where the light may illuminate, only when ABS CM detects that a wheel-speed sensor determines that more than two wheels are malfunctioning. Operates control, if wheel-speed sensor determines that more than three wheels are functioning correctly.
	Parking brake is not fully released while driving.		
	Brake drag.		
	Sudden acceleration/ deceleration.		
	Left/right or front/rear tires are different. (Size, radius, tire pressure, or wear is other than that listed on tire label.)		
Both of the following lights illuminate: <ul style="list-style-type: none"> ABS warning light Brake system warning light 	Battery voltage at ABS HU/CM ignition terminal N drops below approx. 8 V. ^{*2}	Battery voltage rises above approx. 8 V.	<ul style="list-style-type: none"> ABS: Cuts control EBD: Cuts control

^{*1} : In cases where the light may illuminate, only when ABS HU/CM detects that a wheel-speed sensor determines that more than two wheels are malfunctioning.

^{*2} : If battery voltage drops **below 8 V** while vehicle speed is **greater than 20 km/h {12.4 mph}**, ABS HU/CM records DTC U3003:16.

2. Precautions during servicing of ABS

The ABS is composed of electrical and mechanical parts. It is necessary to categorize malfunctions as being either electrical or hydraulic when performing troubleshooting.

(1) Malfunctions in electrical system

- The ABS hydraulic unit and control module (ABS HU/CM) has an on-board diagnostic function. With this function, the ABS warning light and/or brake system warning light will illuminate when there is a problem in the electrical system. Also, past and present malfunctions are recorded in the ABS HU/CM. This function can find malfunctions that do not occur during periodic inspections. Connect the M-MDS to the DLC-2. The stored malfunctions will be displayed in the order of occurrence. To find out the causes of ABS malfunctions, use these on-board diagnostic results.
- If a malfunction occurred in the past but is now normal, the cause is likely a temporary poor connection of the wiring harness. The ABS HU/CM usually operates normally. Be careful when searching for the cause of malfunction.
- After repair, it is necessary to clear the DTC from the ABS HU/CM memory. Also, if the ABS related parts have been replaced, verify that the no DTC has been displayed after repairs.
- After repairing the ABS wheel-speed sensor or ABS sensor rotor, or after replacing the ABS CM (ABS motor or ABS motor relay or solenoid valve), the ABS warning light may not go out* even when the ignition is switched to ON. In this case, drive the vehicle at a speed of **10 km/h {6.2 mph} or more**, make sure that ABS warning light goes out, and then clear the DTC.

* The brake system warning light also illuminates when any two wheels malfunction, or battery voltage drops **below 8 V**.
- When repairing, if the ABS related connectors are disconnected and the ignition is switched to ON, the ABS CM will mistakenly detect a fault and record it as a malfunction.
- To protect the ABS HU/CM, make sure the ignition is switched to off before connecting or disconnecting the ABS CM connector.

(2) Malfunctions in hydraulic system

- Symptoms in a hydraulic system malfunction are similar to those in a conventional brake malfunction. However, it is necessary to determine if the malfunction is in an ABS component or the conventional brake system.
- The ABS hydraulic unit contains delicate mechanical parts. If foreign material enters into the component, the ABS may fail to operate. Also, it will likely become extremely difficult to find the location of the malfunction in the event that the brakes operate but the ABS does not. Make sure foreign material does not enter when servicing the ABS (e.g. brake fluid replacement, pipe removal).

SYMPTOM TROUBLESHOOTING [ABS]

Intermittent Concern Troubleshooting

Vibration method

- If malfunction occurs or becomes worse while driving on a rough road or when engine is vibrating, perform the steps below.

Note

- There are several reasons why vehicle or engine vibration could cause an electrical malfunction. Some of the things to inspect are:
 - Connectors not fully seated.
 - Wiring harness not having full play.
 - Wires laying across brackets or moving parts.
 - Wires routed too close to hot parts.
- An improperly routed, improperly clamped, or loose wiring harness can cause wiring to become pinched between parts.
- The connector joints, points of vibration, and places where wiring harness pass through the firewall, body panels, etc. are the major areas to be inspected.

Inspection method for switch connectors or wiring harnesses

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition to ON (engine off).

Note

- If engine starts and runs, perform the following steps at idle.

3. Access PIDs for the switch you are inspecting.
4. Turn switch on manually.
5. Slightly shake each connector or wiring harness vertically and horizontally while monitoring the PID.

- If the PID value is unstable, inspect poor connection.

am3zzw0000169

Inspection method for sensor connectors or wiring harnesses

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition to ON (engine off).

Note

- If engine starts and runs, perform the following steps at idle.

3. Access PIDs for the switch you are inspecting.
4. Slightly shake each connector or wiring harness vertically and horizontally while monitoring the PID.

- If the PID value is unstable, inspect poor connection.

am3zzw0000169

04-03A

SYMPTOM TROUBLESHOOTING [ABS]

Inspection method for sensors

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition to ON (engine off).

Note

- If engine starts and runs, perform the following steps at idle.

3. Access PIDs for the switch you are inspecting.
4. Vibrate the sensor slightly with your finger.
 - If the PID value is unstable or malfunction occurs, inspect the sensor for poor connection and/or poor mounting.

Malfunction data monitor method

1. Perform malfunction reappearance test according to malfunction reappearance mode and malfunction data monitor. The malfunction cause is found in the malfunction data.

Connector terminal inspection method

1. Inspect the connection condition of each female terminal.
2. Insert the male terminal to the female terminal and inspect the female terminal for looseness.

am3zzw0000170

SYMPTOM TROUBLESHOOTING [ABS]

id0403a5804200

- Verify the symptoms, and perform troubleshooting according to the appropriate number.

No.	Symptom
1	Neither ABS warning light nor brake system warning light illuminate with switch the ignition to ON
2	ABS warning light does not illuminate with switch the ignition to ON
3	Brake system warning light does not illuminate with switch the ignition to ON
4	Both ABS warning light and brake system warning light stay on 4 s or more with switch the ignition to ON
5	ABS warning light stays on 4 s or more with switch the ignition to ON
6	Brake system warning light stays on 4 s or more with switch the ignition to ON (Parking brake is released)
7	There is a malfunction in the system even through ABS warning light, brake system warning light, do not illuminate

04-03A

am3uuw0000268

SYMPTOM TROUBLESHOOTING [ABS]

NO.1 NEITHER ABS WARNING LIGHT NOR BRAKE SYSTEM WARNING LIGHT ILLUMINATE WITH SWITCH THE IGNITION TO ON [ABS]

id0403a5950300

1	Neither ABS warning light nor brake system warning light illuminate with switch the ignition to ON
[TROUBLESHOOTING HINTS] <ul style="list-style-type: none"> • ABS DTC is stored • CAN communication malfunction • Instrument cluster malfunction • Instrument cluster power supply malfunction <ul style="list-style-type: none"> — Short to ground in instrument cluster power supply circuit — Instrument cluster power supply fuse malfunction • Open circuit in wiring harness between instrument cluster power supply circuit • Open circuit in wiring harness between instrument cluster and body ground • Instrument cluster malfunction • ABS CM malfunction 	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	CONFIRM ABS DTC <ul style="list-style-type: none"> • Retrieve the ABS DTC using the M-MDS. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].)
		No	Inspect the instrument cluster. (See 09-22-8 INSTRUMENT CLUSTER INSPECTION.) If the instrument cluster is normal: <ul style="list-style-type: none"> • Inspect CAN communication. If the instrument cluster has a malfunction: <ul style="list-style-type: none"> • Go to the next step.
2	VERIFY WHETHER MALFUNCTION IS IN WARNING LIGHTS AND INDICATOR LIGHT'S COMMON POWER SUPPLY, OR IN OTHER WARNING LIGHTS AND INDICATOR LIGHTS <ul style="list-style-type: none"> • Do other warning and indicator lights illuminate when the ignition is switched to ON? 	Yes	Replace the instrument cluster (open circuit in instrument cluster). (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	INSPECT INSTRUMENT CLUSTER POWER SUPPLY FUSE <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable. • Inspect the instrument cluster ignition power supply fuse. • Is the fuse normal? 	Yes	Go to the next step.
		No	Inspect for short to ground in ignition power supply circuit. Repair or replace if necessary. Install appropriate amperage fuse.
*4	INSPECT INSTRUMENT CLUSTER POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Disconnect the instrument cluster connector. • Reconnect the negative battery cable. • Switch the ignition to ON. • Measure the voltage at instrument cluster terminal 2S (wiring harness-side). • Is the voltage approx. 12 V? 	Yes	Replace the instrument cluster (open circuit in instrument cluster). (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Inspect for open circuit in wiring harness between instrument cluster and body ground. If the wiring harness has a malfunction: <ul style="list-style-type: none"> • Repair or replace the wiring harness. If the wiring harness is normal: <ul style="list-style-type: none"> • Replace the ABS CM. (See 04-13-2 ABS HU/CM REMOVAL/INSTALLATION.)

INSTRUMENT CLUSTER
WIRING HARNESS-SIDE CONNECTOR

- When performing an asterisked (*) troubleshooting inspection, slightly shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunction. If there is a problem, verify that the connectors, terminals and wiring harness are connected correctly and undamaged.

SYMPTOM TROUBLESHOOTING [ABS]

NO.2 ABS WARNING LIGHT DOES NOT ILLUMINATE WITH SWITCH THE IGNITION TO ON [ABS]

id0403a5950400

2	ABS warning light does not illuminate with switch the ignition to ON
[TROUBLESHOOTING HINTS]	
<ul style="list-style-type: none"> • Instrument cluster malfunction • ABS CM internal malfunction 	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	CONFIRM ABS DTC <ul style="list-style-type: none"> • Retrieve the ABS DTC using the M-MDS. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].)
		No	Go to the next step.
2	CONFIRM INSTRUMENT CLUSTER DTC <ul style="list-style-type: none"> • Retrieve the instrument cluster DTC using the M-MDS. (See 09-02E-4 DTC INSPECTION [INSTRUMENT CLUSTER].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02E-5 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
3	INSPECT WHETHER MALFUNCTION IS IN ABS HU/CM OR INSTRUMENT CLUSTER <ul style="list-style-type: none"> • Turn on all the warning light and indicator light using the M-MDS simulation function WL+IL. (See 09-02E-24 ACTIVE COMMAND MODES INSPECTION [INSTRUMENT CLUSTER].) • Does the ABS warning light illuminate? 	Yes	Replace the ABS CM (ABS CM internal malfunction). (See 04-13-2 ABS HU/CM REMOVAL/INSTALLATION.)
		No	Replace the instrument cluster. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)

04-03A

NO.3 BRAKE SYSTEM WARNING LIGHT DOES NOT ILLUMINATE WITH SWITCH THE IGNITION TO ON [ABS]

id0403a5950500

3	Brake system warning light does not illuminate with switch the ignition to ON
[TROUBLESHOOTING HINTS]	
<ul style="list-style-type: none"> • Instrument cluster malfunction • Communication error between ABS HU/CM and instrument cluster • ABS CM internal malfunction 	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	CONFIRM ABS DTC <ul style="list-style-type: none"> • Retrieve the ABS DTC using the M-MDS. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].)
		No	Go to the next step.
2	CONFIRM INSTRUMENT CLUSTER DTC <ul style="list-style-type: none"> • Retrieve the instrument cluster DTC using the M-MDS. (See 09-02E-4 DTC INSPECTION [INSTRUMENT CLUSTER].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02E-5 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
3	INSPECT WHETHER MALFUNCTION IS IN ABS HU/CM OR INSTRUMENT CLUSTER <ul style="list-style-type: none"> • Turn on all the warning light and indicator light using the M-MDS simulation function WL+IL. (See 09-02E-24 ACTIVE COMMAND MODES INSPECTION [INSTRUMENT CLUSTER].) • Does the ABS warning light illuminate? 	Yes	Replace the ABS CM (ABS CM internal malfunction). (See 04-13-2 ABS HU/CM REMOVAL/INSTALLATION.)
		No	Replace the instrument cluster. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)

SYMPTOM TROUBLESHOOTING [ABS]

NO.4 BOTH ABS WARNING LIGHT AND BRAKE SYSTEM WARNING LIGHT STAY ON 4 S OR MORE WITH SWITCH THE IGNITION TO ON [ABS]

id0403a5950600

4	Both ABS warning light and brake system warning light stay on 4 s or more with switch the ignition to ON
[TROUBLESHOOTING HINTS] <ul style="list-style-type: none"> • ABS HU/CM power supply fuse malfunction • Short to ground in ABS HU/CM power supply circuit • ABS CM malfunction <ul style="list-style-type: none"> — ABS HU/CM power supply malfunction (ABS HU/CM ignition terminal N voltage is below about 8 V) • Instrument cluster malfunction • ABS HU/CM connector is not connected securely • Battery malfunction • Charging system malfunction • Open circuit in ABS HU/CM ground • Communication network malfunction 	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	INSPECT ABS HU/CM POWER SUPPLY FUSE <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable. • Inspect the ABS HU/CM ignition power supply fuse. • Is the fuse normal? 	Yes	Go to the next step.
		No	Inspect for short to ground in power supply circuit. Repair or replace if necessary. Install appropriate amperage fuse.
2	INSPECT WIRING HARNESS BETWEEN ABS HU/CM AND DLC-2 FOR OPEN CIRCUIT AND SHORT CIRCUIT <ul style="list-style-type: none"> • Retrieve the ABS DTC using the M-MDS. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].) • Is any error message displayed regarding communication between ABS HU/CM and M-MDS? 	Yes	If the communication error message is displayed even after inspecting according to the procedure displayed on the M-MDS: <ul style="list-style-type: none"> • Go to Step 6.
		No	Go to the next step.
3	CONFIRM INSTRUMENT CLUSTER DTC <ul style="list-style-type: none"> • Retrieve the instrument cluster DTC using the M-MDS. (See 09-02E-4 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the DTC U0415:92 present? 	Yes	Go to the next step.
		No	Go to Step 6.
*4	INSPECT ABS HU/CM POWER SUPPLY VOLTAGE <ul style="list-style-type: none"> • Access the VPWR PID using the M-MDS. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].) • Is the VPWR PID value above 10 V? 	Yes	Replace the ABS CM (ABS CM internal malfunction). (See 04-13-2 ABS HU/CM REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	INSPECT WHETHER MALFUNCTION IS IN INSTRUMENT CLUSTER OR ELSEWHERE <ul style="list-style-type: none"> • Release the parking brake. • Turn on all the warning light and indicator light using the M-MDS simulation function WL+IL. (See 09-02E-24 ACTIVE COMMAND MODES INSPECTION [INSTRUMENT CLUSTER].) • Does the ABS warning light turn off? 	Yes	Go to the next step.
		No	Replace the instrument cluster. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
6	INSPECT FOR CONNECTION OF ABS HU/CM CONNECTOR <ul style="list-style-type: none"> • Is the ABS HU/CM connector connected securely? 	Yes	Go to Step 7.
		No	Connect the ABS HU/CM connector securely, then go to the next step.
7	VERIFY ABS WARNING LIGHT OPERATION <ul style="list-style-type: none"> • Switch the ignition to off. • Does the ABS warning light turn off 4 s after the ignition is switched to ON. 	Yes	Symptom troubleshooting is completed (ABS HU/CM connector is not connected securely).
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [ABS]

STEP	INSPECTION	ACTION	
8	INSPECT BATTERY <ul style="list-style-type: none"> Measure the battery voltage. (See 01-17A-4 BATTERY INSPECTION [LF, L5].) Is the battery voltage normal? 	Yes	Go to the next step.
		No	Inspect the battery and charging system. (See 01-17A-4 BATTERY INSPECTION [LF, L5].) (See 01-17A-8 GENERATOR INSPECTION [LF, L5].) Repair or replace the malfunctioning part according to the inspection results.
9	INSPECT CHARGING SYSTEM <ul style="list-style-type: none"> Measure the battery voltage. (See 01-17A-4 BATTERY INSPECTION [LF, L5].) Is the battery voltage normal with electrical load (such as A/C, headlight) on and engine idling? 	Yes	Go to the next step.
		No	Inspect the charging system (such as drive belt tension and generator). (See 01-17A-8 GENERATOR INSPECTION [LF, L5].) Repair or replace the malfunctioning part according to the inspection results.
10	INSPECT BATTERY VOLTAGE WHILE ELECTRICAL LOAD IS OPERATING <ul style="list-style-type: none"> Inspect the battery voltage while electrical load (A/C, headlight etc.) is operating. Is the battery voltage normal? 	Yes	Inspect the wiring harness in ABS HU/CM terminal N and terminal B related circuit. Repair or replace the suspected wiring harness.
		No	Inspect the charging system (such as drive belt tension and generator). (See 01-17A-8 GENERATOR INSPECTION [LF, L5].) Repair or replace the malfunctioning part according to the inspection results.

04-03A

- When performing an asterisked (*) troubleshooting inspection, slightly shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunction. If there is a problem, verify that the connectors, terminals and wiring harness are connected correctly and undamaged.

NO.5 ABS WARNING LIGHT STAYS ON 4 S OR MORE WITH SWITCH THE IGNITION TO ON [ABS]

id0403a5950700

5	ABS warning light stays on 4 s or more with switch the ignition to ON
[TROUBLESHOOTING HINTS] <ul style="list-style-type: none"> ABS DTC is stored Instrument cluster malfunction ABS CM internal malfunction ABS HU/CM connector is not connected securely Battery malfunction Charging system malfunction Communication network malfunction ABS CM detects power supply voltage low ABS CM malfunction 	

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	INSPECT WIRING HARNESS BETWEEN ABS HU/CM AND DLC-2 FOR OPEN CIRCUIT AND SHORT CIRCUIT <ul style="list-style-type: none"> Retrieve the ABS DTC using the M-MDS. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].) Is any error message displayed regarding communication between ABS HU/CM and M-MDS? 	Yes	If the communication error message is displayed even after inspecting according to the procedure displayed on the M-MDS: <ul style="list-style-type: none"> Go to Step 6.
		No	Go to the next step.
2	CONFIRM ABS DTC <ul style="list-style-type: none"> Retrieve the ABS DTC using the M-MDS. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].)
		No	Inspect the instrument cluster. (See 09-22-8 INSTRUMENT CLUSTER INSPECTION.) If the instrument cluster is normal: <ul style="list-style-type: none"> Go to the next step. If the instrument cluster has a malfunction: <ul style="list-style-type: none"> Replace the instrument cluster. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.)

SYMPTOM TROUBLESHOOTING [ABS]

STEP	INSPECTION	ACTION	
3	CONFIRM INSTRUMENT CLUSTER DTC <ul style="list-style-type: none"> • Retrieve the instrument cluster DTC using the M-MDS. (See 09-02E-4 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the DTC U0415:92 present? 	Yes	Go to the next step.
		No	Go to Step 6.
*4	INSPECT ABS HU/CM POWER SUPPLY VOLTAGE <ul style="list-style-type: none"> • Access the VPWR PID using the M-MDS. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].) • Is the VPWR PID value above 10 V? 	Yes	Replace the ABS CM (ABS CM internal malfunction). (See 04-13-2 ABS HU/CM REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	INSPECT WHETHER MALFUNCTION IS IN INSTRUMENT CLUSTER OR ELSEWHERE <ul style="list-style-type: none"> • Release the parking brake. • Turn on all the warning light and indicator light using the M-MDS simulation function WL+IL. (See 09-02E-24 ACTIVE COMMAND MODES INSPECTION [INSTRUMENT CLUSTER].) • Does the ABS warning light turn off? 	Yes	Go to the next step.
		No	Replace the instrument cluster. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
6	INSPECT FOR CONNECTION OF ABS HU/CM CONNECTOR <ul style="list-style-type: none"> • Is the ABS HU/CM connector connected securely? 	Yes	Go to Step 7.
		No	Connect the ABS HU/CM connector securely, then go to the next step.
7	VERIFY ABS WARNING LIGHT OPERATION <ul style="list-style-type: none"> • Switch the ignition to off. • Does the ABS warning light turn off 4 s after the ignition is switched to ON. 	Yes	Symptom troubleshooting is completed (ABS HU/CM connector is not connected securely).
		No	Go to the next step.
8	INSPECT BATTERY <ul style="list-style-type: none"> • Measure the battery voltage. (See 01-17A-4 BATTERY INSPECTION [LF, L5].) • Is the battery voltage normal? 	Yes	Go to the next step.

9	INSPECT BATTERY VOLTAGE WHILE ELECTRICAL LOAD IS OPERATING <ul style="list-style-type: none"> • Inspect the battery voltage while electrical load (A/C, headlight etc.) is operating. • Is the battery voltage normal? 	Yes	Inspect the wiring harness in ABS HU/CM terminal N and terminal B related circuit. Repair or replace the suspected wiring harness.
		No	Inspect the charging system (such as drive belt tension and generator). (See 01-17A-8 GENERATOR INSPECTION [LF, L5].) Repair or replace the malfunctioning part according to the inspection results.

- When performing an asterisked (*) troubleshooting inspection, slightly shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunction. If there is a problem, verify that the connectors, terminals and wiring harness are connected correctly and undamaged.

SYMPTOM TROUBLESHOOTING [ABS]

NO.6 BRAKE SYSTEM WARNING LIGHT STAYS ON 4 S OR MORE WITH SWITCH THE IGNITION TO ON (PARKING BRAKE IS RELEASED) [ABS]

id0403a5950800

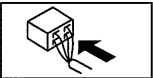

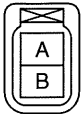

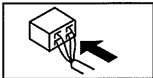

6	Brake system warning light stays on 4 s or more with switch the ignition to ON (Parking brake is released)
[TROUBLESHOOTING HINTS] <ul style="list-style-type: none"> • Brake fluid level is low • ABS CM malfunction <ul style="list-style-type: none"> — ABS DTC is stored • Instrument cluster malfunction • Parking brake switch circuit malfunction <ul style="list-style-type: none"> — Parking brake switch malfunction — Short to ground in wiring harness between parking brake switch and BCM — BCM malfunction • Brake fluid level sensor circuit malfunction <ul style="list-style-type: none"> — Brake fluid level sensor malfunction — Short to ground in wiring harness between brake fluid level sensor and BCM — BCM malfunction 	

04-03A

Diagnostic procedure

STEP	INSPECTION		ACTION
1	INSPECT BRAKE FLUID LEVEL <ul style="list-style-type: none"> • Inspect the brake fluid level. • Is the brake fluid level normal? 	Yes	Go to the next step.
		No	Add the brake fluid.
2	CONFIRM INSTRUMENT CLUSTER DTC <ul style="list-style-type: none"> • Retrieve the instrument cluster DTC using the M-MDS. (See 09-02E-4 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the DTC U0415:92 present? 	Yes	Go to the next step.
		No	Go to Step 4.
3	CONFIRM ABS DTC <ul style="list-style-type: none"> • Retrieve the ABS DTC using the M-MDS. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].)
		No	Go to the next step.
4	INSPECT WHETHER MALFUNCTION IS IN INSTRUMENT CLUSTER OR ELSEWHERE <ul style="list-style-type: none"> • Release the parking brake. • Turn on all the warning light and indicator light using the M-MDS simulation function WL+IL. (See 09-02E-24 ACTIVE COMMAND MODES INSPECTION [INSTRUMENT CLUSTER].) • Does the ABS warning light turn off? 	Yes	Go to the next step.
		No	Replace the instrument cluster. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
5	INSPECT WHETHER MALFUNCTION IS IN BRAKE SYSTEM WARNING LIGHT RELATED SWITCHES OR ELSE WHERE <ul style="list-style-type: none"> • Inspect the following parts for continuity: <ul style="list-style-type: none"> — Parking brake switch (See 04-12-5 PARKING BRAKE SWITCH INSPECTION.) — Brake fluid level sensor (See 04-11-13 BRAKE FLUID LEVEL SENSOR INSPECTION.) • Is the continuity condition normal? 	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results. (See 04-12-3 PARKING BRAKE LEVER REMOVAL/INSTALLATION.) (See 04-11-11 MASTER CYLINDER REMOVAL/INSTALLATION [LF, L5].)
*6	INSPECT FOR SHORT TO GROUND IN WIRING HARNESS BETWEEN BCM AND BRAKE SYSTEM WARNING LIGHT RELATED SWITCHES <ul style="list-style-type: none"> • Inspect for continuity between the following terminals (wiring harness-side) and body ground: <ul style="list-style-type: none"> — Parking switch terminal A — Brake fluid level sensor terminal B • Is there continuity? 	Yes	Repair or replace the wiring harness for a possible short to ground.
		No	Replace the BCM. (See 09-40-2 BODY CONTROL MODULE (BCM) REMOVAL/INSTALLATION.)

SYMPTOM TROUBLESHOOTING [ABS]

STEP	INSPECTION	ACTION
	PARKING BRAKE SWITCH WIRING HARNESS-SIDE CONNECTOR  	BRAKE FLUID LEVEL SENSOR WIRING HARNESS-SIDE CONNECTOR  

- When performing an asterisked (*) troubleshooting inspection, slightly shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunction. If there is a problem, verify that the connectors, terminals and wiring harness are connected correctly and undamaged.

NO.7 THERE IS MALFUNCTION IN THE SYSTEM EVEN THOUGH ABS WARNING LIGHT, BRAKE SYSTEM WARNING LIGHT, DO NOT ILLUMINATE [ABS]

id0403a5802300

7	There is a malfunction in the system even through ABS warning light, brake system warning light, do not illuminate
[TROUBLESHOOTING HINTS] <ul style="list-style-type: none"> • There is a difference in size or air pressure between the front and rear tires • ABS DTC is stored • Conventional brake system malfunction • ABS system malfunction • Brake pipe passage malfunction 	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	CONFIRM ABS DTC <ul style="list-style-type: none"> • Retrieve the ABS DTC using the M-MDS. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].)
		No	Go to the next step.
2	INSPECT ABS HU <ul style="list-style-type: none"> • Perform the ABS HU system inspection. • Is the system normal? 	Yes	Inspect the conventional brake system.
		No	If the wheels do not rotate: <ul style="list-style-type: none"> • Replace the ABS HU/CM. (See 04-13-2 ABS HU/CM REMOVAL/INSTALLATION.) If the wheels rotate but order in which wheels rotate is incorrect: <ul style="list-style-type: none"> • Inspect the brake pipe passage to the ABS HU/CM.

id0403b2806400

am3zzn0000245

FOREWORD [DYNAMIC STABILITY CONTROL (DSC)]

id0403b2804000

- Before performing the steps in Symptom Troubleshooting, perform the On-board Diagnostic Inspection. To check the DTC, follow the DTC Inspection steps. (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)

SYMPTOM TROUBLESHOOTING [DYNAMIC STABILITY CONTROL (DSC)]

id0403b2804100

PRECAUTION [DYNAMIC STABILITY CONTROL (DSC)]

1. The ABS warning light and/or brake system warning light and/or DSC indicator light and/or DSC OFF light illuminate even when the system is normal.

Warning lights that may illuminate and/or flash	Cases in which the light may illuminate	Conditions in which the light will go out	ABS, EBD, TCS and DSC control
<ul style="list-style-type: none"> • ABS warning light • Brake system warning light*¹ • DSC indicator light • DSC OFF light 	Only the front wheels rotate under the following condition while jacked up, stuck or on the chassis dynamometer: <ul style="list-style-type: none"> • Detected 8 times for a continuous 20 s while at a vehicle speed of 20 km/h {12.4 mph} or more (one detection period is when ignition is switched from ON to off). 	After switching ignition to off, vehicle is driven at speed greater than 10 km/h {6.2 mph} and normal operation is confirmed.	<ul style="list-style-type: none"> • ABS: Cuts control • EBD: Cuts control • TCS: Cuts control • DSC: Cuts control
	Parking brake is not fully released while driving.		
	Brake drag.		
	Sudden acceleration/ deceleration.		
	Left/right or front/rear tires are different. (Size, radius, tire pressure or wear is other than that listed on tire label.)		
<ul style="list-style-type: none"> • Brake system warning light • DSC indicator light • DSC OFF light 	Brake fluid amount is low.	Brake fluid level lower than recommended amount.	<ul style="list-style-type: none"> • ABS: Operates control • EBD: Operates control • TCS: Operates control • DSC: Operates control
	Battery voltage at DSC HU/CM ignition terminal Y drops below about 9.5 V² .	Battery voltage rises above about 9.5 V .	<ul style="list-style-type: none"> • ABS: Operates control • EBD: Operates control • TCS: Operates control • DSC: Operates control

04-03B

*¹ : In case where the light may illuminate, only when DSC HU/CM detects that a wheel-speed sensor determines that more than two wheels are malfunctioning.

*² : If battery voltage drops **below 10 V** while vehicle speed is greater than **3 km/h {2 mph}**, DSC HU/CM detects DTC U3003:16.

2. Precautions during servicing of DSC. The DSC is composed of electrical and mechanical parts. It is necessary to categorize malfunctions as being either electrical or hydraulic when performing troubleshooting.

(1) Malfunction in electrical system

- The control module has an on-board diagnostic function. With this function, the ABS warning light and/or brake system warning light and/or DSC indicator light and/or DSC OFF light will come on when there is a problem in the electrical system.
Also, past and present malfunctions are recorded in the control module. This function can find malfunction that do not occur during periodic inspections. Connect the M-MDS to the DLC-2. The stored malfunctions will be displayed in the order of occurrence. To fine out the causes of DSC malfunction, use these on-board diagnostic results.
- If a malfunction occurred in the past but is now normal, the cause is likely a temporary poor connection of the harness.
The control module usually operates normally. Be careful when searching for the cause of malfunction.
- After repair, it is necessary to clear the DTC from the control module memory.
Also, if the DSC related parts have been replaced, verify that the no DTC has been displayed after repairs.
- After repairing the ABS wheel-speed sensor or ABS sensor rotor, or after replacing the control module, the ABS warning light may not go off even when the ignition is switched ON. In this case, drive the vehicle at a speed of **10 km/h {6.2 mph} or more**, make sure the ABS warning light goes off, then clear the DTC.
- When repairing, if the DSC related connectors are disconnected and the ignition is switched ON, the control module will mistakenly detect a fault and record it as a malfunction.

SYMPTOM TROUBLESHOOTING [DYNAMIC STABILITY CONTROL (DSC)]

Caution

- In DSC vehicles, when any DSC HU/CM, steering angle sensor and combined sensor are replaced, perform the sensor standard point installation of each sensor.
- To protect the control module, make sure the ignition is off before connecting or disconnecting the control module connector.

(2) Malfunctions in hydraulic system

- Symptoms in a hydraulic system malfunction are similar to those in a conventional brake malfunction. However, it is necessary to determine if the malfunction is in a DSC component or the conventional brake system.
- The hydraulic unit contains delicate mechanical parts. If foreign materials get into the component, the DSC may fail to operate. Also, it will likely become extremely difficult to find the location of the malfunction in the event that the brakes operate but the DSC does not. Make sure foreign materials do not get inside when servicing the DSC (e.g.brake fluid replacement, pipe removal).

Intermittent Concern Troubleshooting

Vibration method

- If malfunction occurs or becomes worse while driving on a rough road or when engine is vibrating, perform the steps below.

Note

- There are several reasons why vehicle or engine vibration could cause an electrical malfunction. Some of the things to check for are:
 - Connectors not fully seated.
 - Wire harnesses not having full play.
 - Wires laying across brackets or moving parts.
 - Wires routed too close to hot parts.
- An improperly routed, improperly clamped, or loose harness can cause wiring to become pinched between parts.
- The connector joints, points of vibration, and places where wire harnesses pass through the firewall, body panels, etc. are the major areas to be checked.

Inspection method for switch connectors or wires

1. Connect the M-MDS to DLC-2.
2. Switch the ignition to ON (engine off).

Note

- If engine starts and runs, perform the following steps at idle.

3. Access the PIDs for the switch you are inspecting.
4. Turn switch on manually.
5. Shake each connector or wire harness a bit vertically and horizontally while monitoring the PID.
 - If the PID value is unstable, check for poor connection.

am6zzw000002

Inspection method for sensor connectors or wires

1. Connect the M-MDS to DLC-2.
2. Switch the ignition to ON (engine off).

Note

- If engine starts and runs, perform the following steps at idle.

3. Access the PIDs for the switch you are inspecting.

SYMPTOM TROUBLESHOOTING [DYNAMIC STABILITY CONTROL (DSC)]

4. Shake each connector or wire harness a bit vertically and horizontally while monitoring the PID.
 - If the PID value is unstable, check for poor connection.

am6zzw000002

Inspection method for sensors

1. Connect the M-MDS to DLC-2.
2. Switch the ignition to ON (engine off).

Note

- If engine starts and runs, perform the following steps at idle.

3. Access the PIDs for the switch you are inspecting.
4. Vibrate the sensor slightly with your finger.
 - If the PID value is unstable or malfunction occurs, check for poor connection and/or poorly mounted sensor.

Malfunction data monitor method

1. Perform malfunction reappearance test according to malfunction reappearance mode and malfunction data monitor. The malfunction cause is found in the malfunction data.

Connector terminal check method

1. Check the connection condition of each female terminal.
2. Insert male terminal; fit female terminal size to female terminal and check to see whether malfunction is in female terminal or not.

am6zzw000002

SYMPTOM TROUBLESHOOTING [DYNAMIC STABILITY CONTROL (DSC)]

id0403b2804200

- Verify the symptoms and perform troubleshooting according to the appropriate number.

No.	Symptom
1	Any of the following lights do not illuminate with switch the ignition to ON: <ul style="list-style-type: none"> • ABS warning light • Brake system warning light • DSC indicator light • DSC OFF light

SYMPTOM TROUBLESHOOTING [DYNAMIC STABILITY CONTROL (DSC)]

NO.1 ANY OF THE FOLLOWING LIGHTS DO NOT ILLUMINATE WITH SWITCH THE IGNITION TO ON: (ABS WARNING LIGHT, BRAKE SYSTEM WARNING LIGHT, DSC INDICATOR LIGHT AND/OR DSC OFF LIGHT) [DYNAMIC STABILITY CONTROL (DSC)]

id0403b2891900

1	<p>Any of the following lights do not illuminate with switch the ignition to ON:</p> <ul style="list-style-type: none"> • ABS warning light • Brake system warning light • DSC indicator light • DSC OFF light
<p>[TROUBLESHOOTING HINTS]</p> <ul style="list-style-type: none"> • Instrument cluster power supply malfunction <ul style="list-style-type: none"> — Short to ground in ignition power supply circuit — Instrument cluster power supply fuse malfunction • Open circuit in instrument cluster power supply circuit • Open circuit in instrument cluster ground circuit • DSC DTC is stored • DSC HU/CM power supply malfunction <ul style="list-style-type: none"> — Short to ground in ignition power supply circuit — DSC HU/CM power supply fuse malfunction • Open circuit in DSC HU/CM power supply circuit • Open circuit in DSC HU/CM ground circuit • Instrument cluster DTC is stored • DSC CM malfunction • Instrument cluster malfunction 	

04-03B

Diagnostic procedure

STEP	INSPECTION		ACTION
1	<p>VERIFY WHETHER MALFUNCTION IS IN WARNING LIGHT AND INDICATOR LIGHT'S COMMON POWER SUPPLY OR IN OTHER WARNING LIGHTS AND INDICATOR LIGHT</p> <ul style="list-style-type: none"> • Connect the M-MDS to the DLC-2. • Turn on all warning lights and indicator lights using the instrument cluster PID WL+IL of active command modes. • Do the other warning and indicator lights illuminate? 	Yes	Go to Step 5.
		No	<p>If the communication error message is displayed on M-MDS screen:</p> <ul style="list-style-type: none"> • Go to the next step. <p>If the communication error message is not displayed:</p> <ul style="list-style-type: none"> • Replace the instrument cluster. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.)
2	<p>INSPECT INSTRUMENT CLUSTER POWER SUPPLY FUSE</p> <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable. • Inspect the instrument cluster ignition power supply fuse. • Is the fuse normal? 	Yes	Go to the next step.
		No	<p>Inspect for short to ground in ignition power supply circuit. Repair or replace if necessary. Install the appropriate amperage fuse.</p>
*3	<p>INSPECT INSTRUMENT CLUSTER POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT</p> <ul style="list-style-type: none"> • Reconnect the negative battery cable. • Switch the ignition to ON. • Measure the voltage at instrument cluster terminal 2S (wiring harness-side). • Is the voltage approx. 12 V? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit.
*4	<p>INSPECT INSTRUMENT CLUSTER GROUND CIRCUIT FOR OPEN CIRCUIT</p> <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable. • Disconnect the instrument cluster connector. • Inspect for continuity between instrument cluster terminal 2K (wiring harness-side) and body ground. • Is there continuity? 	Yes	<p>Replace the instrument cluster (open circuit in instrument cluster). (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.)</p>
		No	Repair or replace the wiring harness for a possible open circuit.

SYMPTOM TROUBLESHOOTING [DYNAMIC STABILITY CONTROL (DSC)]

STEP	INSPECTION		ACTION
5	CONFIRM DSC DTC <ul style="list-style-type: none"> • Retrieve the DSC DTC using the M-MDS. (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	If the communication error message is displayed in M-MDS screen: <ul style="list-style-type: none"> • Go to the next step. If the communication error message is not displayed: <ul style="list-style-type: none"> • Go to Step 9.
6	INSPECT DSC HU/CM POWER SUPPLY FUSE <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable. • Inspect the DSC HU/CM ignition power supply fuse. • Is the fuse normal? 	Yes	Go to the next step.
		No	Inspect for a short to ground in ignition power supply circuit. Repair or replace if necessary. Install appropriate amperage fuse.
*7	INSPECT DSC HU/CM POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Reconnect the negative battery cable. • Switch the ignition to ON. • Measure the voltage at DSC HU/CM terminal Y (wiring harness-side). • Is the voltage approx. 12 V? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit.
*8	INSPECT DSC HU/CM GROUND CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable. • Disconnect the DSC HU/CM connector. • Inspect for continuity between DSC HU/CM terminal B (wiring harness-side) and body ground. • Is there continuity? 	Yes	Replace the DSC HU/CM (open circuit in DSC CM). (See 04-15-2 DSC HU/CM REMOVAL/INSTALLATION.)
		No	Repair or replace the wiring harness for a possible open circuit.
9	CONFIRM INSTRUMENT CLUSTER DTC <ul style="list-style-type: none"> • Retrieve the instrument cluster DTC using the M-MDS. (See 09-02E-4 DTC INSPECTION [INSTRUMENT CLUSTER].) • Are any DTCs present? 	Yes	Go to the applicable DTC troubleshooting. (See 09-02E-5 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Replace the instrument cluster. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)

INSTRUMENT CLUSTER
WIRING HARNESS-SIDE CONNECTOR

DSC HU/CM WIRING HARNESS-SIDE CONNECTOR

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while doing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, check to make sure connectors, terminals and wiring harness are connected correctly and undamaged.

SYMPTOM TROUBLESHOOTING [DYNAMIC STABILITY CONTROL (DSC)]

NO.2 ANY OF THE FOLLOWING LIGHTS STAY ON: (ABS WARNING LIGHT, BRAKE SYSTEM WARNING LIGHT, DSC INDICATOR LIGHT AND/OR DSC OFF LIGHT) [DYNAMIC STABILITY CONTROL (DSC)]

1d0403b2880000

2	<p>Any of the following lights stay on:</p> <ul style="list-style-type: none"> • ABS warning light • Brake system warning light • DSC indicator light • DSC OFF light
<p>[TROUBLESHOOTING HINTS]</p> <ul style="list-style-type: none"> • Brake fluid level is low • Parking brake lever malfunction • Brake system warning light related switches malfunction <ul style="list-style-type: none"> — Parking brake switch malfunction — Brake fluid level sensor malfunction • Brake system warning light related wiring harness malfunction <ul style="list-style-type: none"> — Short to ground in wiring harness between parking brake switch circuit — Short to ground in wiring harness between brake fluid level sensor circuit • BCM DTC is stored • BCM malfunction • DSC DTC is stored • DSC HU/CM connector or terminals malfunction • DSC HU/CM power supply malfunction <ul style="list-style-type: none"> — DSC HU/CM power supply fuse malfunction — DSC HU/CM power supply circuit malfunction • Open circuit in DSC HU/CM power supply circuit • Open circuit in DSC HU/CM ground circuit • Instrument cluster DTC is stored • DSC CM malfunction • Instrument cluster malfunction 	

04-03B

Diagnostic procedure

STEP	INSPECTION		ACTION
1	<p>INSPECT BRAKE FLUID LEVEL</p> <ul style="list-style-type: none"> • Inspect the brake fluid level. • Is the brake fluid level normal? 	Yes	Go to the next step.
		No	Add the brake fluid. If the brake fluid refilled: <ul style="list-style-type: none"> • Inspect and repair brake line for leakage.
2	<p>VERIFY PARKING BRAKE</p> <ul style="list-style-type: none"> • Verify the parking brake. • Is the parking brake lever released? 	Yes	Go to the next step.
		No	Release the parking brake lever.
3	<p>CONFIRM SYMPTOM</p> <ul style="list-style-type: none"> • Confirm the brake system warning light. • Is it only brake system warning light remains on? 	Yes	Go to the next step.
		No	Go to Step 6.
4	<p>INSPECT WHETHER MALFUNCTION IS IN BRAKE SYSTEM WARNING LIGHT RELATED SWITCHES OR ELSEWHERE</p> <ul style="list-style-type: none"> • Inspect for following part: <ul style="list-style-type: none"> — Parking brake switch (See 04-12-5 PARKING BRAKE SWITCH INSPECTION.) — Brake fluid level sensor (See 04-11-13 BRAKE FLUID LEVEL SENSOR INSPECTION.) • Is there any malfunction? 	Yes	Replace the malfunctioning part according to the inspection results. (See 04-12-3 PARKING BRAKE LEVER REMOVAL/ INSTALLATION.) (See 04-11-11 MASTER CYLINDER REMOVAL/ INSTALLATION [LF, L5].) (See 04-11-12 MASTER CYLINDER REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [DYNAMIC STABILITY CONTROL (DSC)]

STEP	INSPECTION	ACTION	
*5	INSPECT FOR SHORT TO GROUND IN WIRING HARNESS BETWEEN BCM AND BRAKE SYSTEM WARNING LIGHT RELATED SWITCHES <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable. • Disconnect the parking brake switch and brake fluid level sensor connectors. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: <ul style="list-style-type: none"> — Parking brake switch terminal A — Brake fluid level sensor terminal A • Is there continuity? 	Yes	Repair or replace the wiring harness for a possible short to ground.
		No	Retrieve the BCM DTC using the M-MDS. (See 09-02F-7 DTC INSPECTION [BCM].) If the DTC present: <ul style="list-style-type: none"> • Go to the applicable DTC inspection. (See 09-02F-8 DTC TABLE [BCM].) If the DTC does not present: <ul style="list-style-type: none"> • Replace the BCM. (See 09-40-2 BODY CONTROL MODULE (BCM) REMOVAL/INSTALLATION.)
6	CONFIRM DSC DTC <ul style="list-style-type: none"> • Retrieve the DSC DTC using the M-MDS. (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	If the communication error message is displayed on the M-MDS screen: <ul style="list-style-type: none"> • Go to the next step. If the communication error is not displayed: <ul style="list-style-type: none"> • Go to Step 11.
7	INSPECT DSC HU/CM CONNECTOR AND TERMINALS <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the negative battery cable. • Disconnect the DSC HU/CM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.
8	INSPECT DSC HU/CM POWER SUPPLY FUSE <ul style="list-style-type: none"> • Inspect the DSC HU/CM ignition power supply fuse. • Is the fuse normal? 	Yes	Go to the next step.
		No	Inspect for open circuit in DSC HU/CM ignition power supply circuit. Repair or replace if necessary. Install appropriate amperage fuse.
*9	INSPECT DSC HU/CM POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • DSC HU/CM connector is disconnected. • Reconnect the negative battery cable. • Switch the ignition to ON. • Measure the voltage at DSC HU/CM terminal Y (wiring harness-side). • Is the voltage approx. 12 V? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit.
*10	INSPECT DSC HU/CM GROUND CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • DSC HU/CM connector is disconnected. • Switch the ignition to off. • Disconnect the negative battery cable. • Inspect for continuity between DSC HU/CM terminal B (wiring harness-side) and body ground. • Is there continuity? 	Yes	Replace the DSC HU/CM (open circuit in DSC CM). (See 04-15-2 DSC HU/CM REMOVAL/INSTALLATION.)
		No	Repair or replace the wiring harness for a possible open circuit.
11	CONFIRM INSTRUMENT CLUSTER DTC <ul style="list-style-type: none"> • Retrieve the instrument cluster DTC using the M-MDS. (See 09-02E-4 DTC INSPECTION [INSTRUMENT CLUSTER].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02E-5 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [DYNAMIC STABILITY CONTROL (DSC)]

STEP	INSPECTION		ACTION
12	VERIFY WHETHER MALFUNCTION IS IN INSTRUMENT CLUSTER OR BCM <ul style="list-style-type: none"> Turn off and on all warning light and indicator lights using the instrument cluster PID WL+IL of active command modes using the M-MDS. Do the ABS warning light, brake system warning light, DSC indicator light and DSC OFF light turn on and off according to active command modes? 	Yes	Replace the DSC HU/CM (internal fault). (See 04-15-2 DSC HU/CM REMOVAL/INSTALLATION.)
		No	Replace the instrument cluster. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)

BRAKE FLUID LEVEL SENSOR
WIRING HARNESS-SIDE CONNECTOR

04-03B

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while doing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, check to make sure connectors, terminals and wiring harness are connected correctly and undamaged.

SYMPTOM TROUBLESHOOTING [DYNAMIC STABILITY CONTROL (DSC)]

NO.3 THERE IS A MALFUNCTION IN THE SYSTEM EVEN THOUGH ABS WARNING LIGHT, BRAKE SYSTEM WARNING LIGHT, DSC INDICATOR LIGHT AND DSC OFF LIGHT DO NOT ILLUMINATE [DYNAMIC STABILITY CONTROL (DSC)]

id0403b2805500

3	There is a malfunction in the system even though ABS warning light, brake system warning light, DSC indicator light and DSC OFF light do not illuminate
[TROUBLESHOOTING HINTS] <ul style="list-style-type: none"> • There is a mechanical malfunction in system <ul style="list-style-type: none"> — DSC DTC is stored — Conventional brake system malfunction 	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	CONFIRM DSC DTC <ul style="list-style-type: none"> • Retrieve the DSC DTC using the M-MDS. (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	Go to the next step.
2	VERIFY SOLENOID VALVE OPERATION <ul style="list-style-type: none"> • Switch the ignition to off. • Connect the M-MDS to the DLC-2. • Switch the ignition to ON (engine off). • Access the active command mode for the solenoid valve using the M-MDS. (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Does the solenoid valve operate properly? 	Yes	Inspect the conventional brake system. Repair or replace if necessary.
		No	Repair or replace the malfunctioning part.

NO.4 ABS OR TCS*¹ OPERATES FREQUENTLY/TCS DOES NOT WORK CORRECTLY *¹: DSC SYSTEM FUNCTION CONTAINS TRACTION CONTROL FUNCTION, DSC INDICATOR LIGHT GOES ON AND OFF WHILE DSC OPERATES [DYNAMIC STABILITY CONTROL (DSC)]

id0403b2880100

4	ABS or TCS* ¹ operates frequently/TCS does not work correctly* ¹ : DSC system function contains traction control function, DSC indicator light goes on and off while DSC operates
[TROUBLESHOOTING HINTS] <ul style="list-style-type: none"> • DSC DTC is stored • Engine control system malfunction • Tire and air pressure malfunction <ul style="list-style-type: none"> — The difference of size or air pressure between the front tires and rear tires • ABS wheel-speed sensor malfunction <ul style="list-style-type: none"> — Incorrect ABS wheel-speed signal is inputted to DSC HU/CM 	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	CONFIRM DSC AND/OR PCM DTC <ul style="list-style-type: none"> • Retrieve the DSC DTC using the M-MDS. (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Perform the PCM DTC using the M-MDS, if the traction control function has a problem. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) (See 01-02A-17 DTC TABLE [LF, L5].) (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
2	INSPECT TIRE SIZE AND AIR PRESSURE <ul style="list-style-type: none"> • Inspect the tire size and air pressure. • Are size and air pressure as specified? 	Yes	Go to the next step.
		No	Replace with the specified tires and adjust the tire air pressure.

SYMPTOM TROUBLESHOOTING [DYNAMIC STABILITY CONTROL (DSC)]

STEP	INSPECTION	ACTION	
*3	INSPECT ABS WHEEL-SPEED SENSOR OUTPUT PULSE <ul style="list-style-type: none"> • Perform the Voltage Pattern Inspection for each ABS wheel-speed sensor. (See 04-15-6 FRONT ABS WHEEL-SPEED SENSOR INSPECTION.) (See 04-15-7 REAR ABS WHEEL-SPEED SENSOR INSPECTION.) • Is the output voltage pattern normal? 	Yes	Found the malfunctioning part according to Intermittent Concern Troubleshooting. (See 04-03B-3 PRECAUTION [DYNAMIC STABILITY CONTROL (DSC)].)
		No	Inspect the ABS wheel-speed sensor and ABS sensor rotor for poor installation.

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while doing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, check to make sure connectors, terminals and wiring harness are connected correctly and undamaged.

04-03B

NO.5 DSC*2 OPERATES FREQUENTLY/DSC DOES NOT WORK CORRECTLY *2: DSC INDICATOR LIGHT GOES ON AND OFF WHILE DSC OPERATES [DYNAMIC STABILITY CONTROL (DSC)]

id0403b2880200

5	DSC*2 operates frequently/DSC does not work correctly*2: DSC indicator light goes on and off while DSC operates	
[TROUBLESHOOTING HINTS] <ul style="list-style-type: none"> • DSC DTC is stored • Poor installation with combined sensor and/or steering angle sensor <ul style="list-style-type: none"> — If any of the above sensors are poorly installed, DSC may operate intermittently • Initialization is not performed after replacing DSC HU/CM or steering angle sensor <ul style="list-style-type: none"> — If initialization is not performed correctly, DSC may not work correctly 		

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	CONFIRM DSC DTC <ul style="list-style-type: none"> • Retrieve the DSC DTC using the M-MDS. (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	Go to the next step.
2	INSPECT INSTALLATION OF COMBINED SENSOR AND STEERING ANGLE SENSOR <ul style="list-style-type: none"> • Inspect the installation of combined sensor and steering angle sensor. • Are the sensors securely installed? 	Yes	Go to the next step.
		No	Install the malfunctioning sensor securely. (See 04-15-7 COMBINED SENSOR REMOVAL/INSTALLATION.) (See 09-18-19 STEERING ANGLE SENSOR REMOVAL/INSTALLATION.)
3	INSPECT INITIALIZATION OF COMBINED SENSOR AND STEERING ANGLE SENSOR <ul style="list-style-type: none"> • Inspect the initialization of combined sensor and steering angle sensor. • Did the sensors initialize after replacement of DSC HU/CM or steering angle sensor? 	Yes	Found the malfunctioning part according to Intermittent Concern Troubleshooting. (See 04-03B-3 PRECAUTION [DYNAMIC STABILITY CONTROL (DSC)].)
		No	Perform the initialization procedure. (See 04-15-4 DSC SENSOR INITIALIZATION PROCEDURE,)

 Initialization Procedure04-10-1

GENERAL PROCEDURES (BRAKE)

id041000800100

Wheel and Tire Installation

1. When installing the wheels and tires, tighten the wheel nuts in a criss-cross pattern to the following tightening torque.

Tightening torque

88—118 N·m {9.0—12 Kgf·m, 65—87 ft·lbf}

am3uuw0000033

04-10

Brake Lines Disconnection

1. If any brake line has been disconnected during the procedures, add brake fluid, bleed the brakes, and inspect for leakage after the procedure has been completed.

Caution

- Brake fluid will damage painted surfaces. Be careful not to spill any on painted surfaces. If it is spilled, wipe it off immediately.

Brake Pipe Flare Nut Tightening

1. Tighten the brake pipe flare nut using the commercially available flare nut wrench.

Connector Disconnection

1. Disconnect the negative battery cable before performing any work that requires handling of connectors. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].) (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)

ABS/DSC Related Parts

1. Make sure that there are no DTCs in the ABS/DSC memory after working on ABS/DSC related parts. If there are any DTCs in the memory, clear them.

DSC Related Parts Sensor Initialization Procedure

Warning

- If the initialization procedure is not completed, the DSC will not operate properly and it might cause an unexpected accident. Therefore, when replacing or removing the following parts, make sure to perform the initialization procedure to ensure proper DSC operation.

1. When replacing or removing the following parts, perform the initialization procedure. (See 04-15-4 DSC SENSOR INITIALIZATION PROCEDURE.)
 - DSC HU/CM
 - Combined sensor

id041100800200

Caution

- Brake fluid will damage painted surfaces. Be careful not to spill any on painted surfaces. If it is spilled, wipe it off immediately.

Note

- Keep the fluid level in the reserve tank at 3/4 full or more during the air bleeding.
- Begin air bleeding with the brake caliper that is furthest from the master cylinder.

Brake fluid type

SAE J1703, FMVSS 116 DOT-3

1. Remove the cap from the brake fluid reserved tank and add brake fluid.
2. Remove the bleeder cap on the brake caliper, and attach a vinyl tube to the bleeder screw.
3. Place the other end of the vinyl tube in a clear container and fill the container with fluid during air bleeding.
4. Working with two people, one should pump the brake pedal several times and depress and hold the pedal down.
5. While the brake pedal is depressed, the other should loosen the bleeder screw using a commercially available flare nut wrench, drain out any fluid containing air bubbles, and tighten the bleeder screw.

Tightening torque

Front (LF, L5): 7.0—9.0 N·m {72—91 kgf·cm, 62—79 in·lbf}

Front (L3 WITH TC): 12—16 N·m {123—163 kgf·cm, 107—141 in·lbf}

Rear: 12—16 N·m {123—163 kgf·cm, 107—141 in·lbf}

am3uuw0000132

6. Repeat Steps 3 and 4 until no air bubbles are seen.
7. Perform air bleeding as described in the above procedures for all brake calipers.
8. After air bleeding, inspect the following:
 - Brake operation
 - Fluid leakage
 - Fluid level

CONVENTIONAL BRAKE SYSTEM

VACUUM LINE INSPECTION

id041100801500

1. Remove the vacuum hose. (See 04-11-4 VACUUM HOSE REMOVAL/INSTALLATION [LF, L5].) (See 04-11-6 VACUUM HOSE REMOVAL/INSTALLATION [L3 WITH TC].)
2. Verify that air can be blown from the power brake unit side of the vacuum hose towards the intake manifold side, and that air cannot be blown in the opposite direction.
 - If there is any malfunction of the inner check valve, replace it together with the vacuum hose as a single unit.

am3uuw0000567

VACUUM HOSE REMOVAL/INSTALLATION [LF, L5]

id041100801612

1. Remove the battery and battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Remove the vacuum hose from the vacuum hose clip.

am3uuw0000204

3. Insert a thin flathead screwdriver at the point indicated by the arrow in the figure, push the ring down and disconnect the vacuum hose from the intake manifold.

am3uuw0000179

CONVENTIONAL BRAKE SYSTEM

4. Move the vacuum hose as shown in the figure.

04-11

5. Disconnect the vacuum hose connector from the power brake unit while pressing the tabs of the vacuum hose connector.
6. Remove the vacuum hose.
7. Install in the reverse order of removal.
8. Insert the vacuum hose connector to the power brake unit.

9. Verify that the vacuum hose is inserted so that the connector contacts the power brake unit flange.

10. Verify that the vacuum hose is inserted so that the joint contacts the intake manifold ring.

CONVENTIONAL BRAKE SYSTEM

VACUUM HOSE REMOVAL/INSTALLATION [L3 WITH TC]

id041100801639

1. Remove the charge air cooler cover. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
2. Remove the charge air cooler. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
3. Insert a thin flathead screwdriver at the point indicated by the arrow in the figure, push the ring down and disconnect the vacuum hose from the intake manifold.

am3uuw0000179

4. Remove the vacuum hose from the vacuum hose clip.

am3uuw0000615

5. Pinch open the clip using pliers and disconnect the vacuum hose from the insulator bracket as shown in the figure.
6. Pinch open the clip using pliers and disconnect the vacuum hose from the power brake unit.
7. Remove the vacuum hose.
8. Install in the reverse order of removal.

am3uuw0000575

9. Verify that the vacuum hose is inserted so that the joint contacts the intake manifold ring.

am3uuw0000180

CONVENTIONAL BRAKE SYSTEM

BRAKE PEDAL INSPECTION

id041100801100

Pedal Height Inspection

1. Measure the distance from the center of the upper surface of the pedal pad to the floor covering and verify that it is as specified.
 - If not within the specification, replace the brake pedal.

Brake pedal height (reference value)

LF, L5: 125.0 mm {4.921 in}

L3 WITH TC: 128.9 mm {5.075 in}

am3uuw0000611

04-11

Pedal Play Inspection

1. Pump the pedal several times to release the vacuum in the power brake unit.
2. Gently depress the pedal by hand and measure the pedal play.
 - If not within the specification, inspect the wear of the joint pin. Replace it if there is any malfunction.

Brake pedal play

4.0—8.4 mm {0.16—0.33 in}

Note

- If there is no malfunction in the joint pin, there is a possibility that the power brake unit has some malfunction. Verify that there are no malfunctions, and replace it if necessary.

CONVENTIONAL BRAKE SYSTEM

Pedal-to-floor Clearance Inspection

1. Start the engine and depress the brake pedal with a force of **147 N {15.0 kgf, 33.0 lbf}**.
2. Measure the distance from the center of the upper surface of the pedal pad to the floor covering and verify that it is as specified.
 - If it is less than the specification, inspect for air in the brake line.

Brake pedal-to-floor clearance (Brake pedal when depressed at 147 N {15.0 kgf, 33.0 lbf})

LF, L5: 83.5 mm {3.29 in} or more

L3 WITH TC: 88.6 mm {3.49 in} or more

am3uuw000611

BRAKE PEDAL REMOVAL/INSTALLATION

id041100801200

Caution

- The clearance between the brake switch and the brake pedal is automatically adjusted to the correct amount when the brake switch is inserted into the installation hole on the brake pedal and rotated to fix in place. If the brake switch is not properly installed, the clearance may be incorrect, causing a brake light malfunction. Therefore, always verify that the brake pedal is properly installed and fully released before installing the brake switch to the pedal.
- Once the brake switch clearance has automatically been adjusted, it cannot be adjusted again. Therefore, replace the switch with a new one when replacing the power brake unit or the pedal, or performing any procedure that changes the pedal stroke.
- Secure the steering wheel using tape or a cable to prevent the steering shaft from rotating after disconnecting the steering shaft. If the steering wheel rotates after the steering shaft and the steering gear and linkage are disconnected, the internal parts of the clock spring could be damaged.

1. Remove the battery and battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].) (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the vacuum hose from the insulator bracket as shown in the figure. (L3 WITH TC)

am3uuw0000575

CONVENTIONAL BRAKE SYSTEM

3. Remove the wiring harness from the air duct. (L3 WITH TC)
4. Remove the side wall (driver side). (See 09-17-37 SIDE WALL REMOVAL/INSTALLATION.)
5. Disconnect the steering shaft from the steering gear and linkage. (See 06-14-8 STEERING WHEEL AND COLUMN REMOVAL/ INSTALLATION [WITHOUT ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) (See 06-14-11 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
6. Remove the accelerator pedal. (See 01-13A-8 ACCELERATOR PEDAL REMOVAL/INSTALLATION [LF, L5].) (See 01-13B-14 ACCELERATOR PEDAL REMOVAL/INSTALLATION [L3 WITH TC].)
7. Remove in the order indicated in the table.
8. Install in the reverse order of removal.

04-11

1	Brake switch connector, wiring harness
2	Brake switch (See 04-11-10 Brake Switch Installation Note.)
3	Joint pin (See 04-11-10 Joint Pin Installation Note.)

4	Brake pedal (See 04-11-9 Brake Pedal Removal Note.)
5	Pedal pad

Brake Pedal Removal Note

1. Remove the brake pedal installation bolt and nuts.
2. Move the power brake unit to the vehicle front where the power brake unit fork does not interfere with the brake pedal arm.
3. Remove the brake pedal.

CONVENTIONAL BRAKE SYSTEM

Joint Pin Installation Note

1. Install the new joint pin by aligning the pin holes of the brake pedal and power brake unit fork.
2. Verify that the joint pin touches the power brake unit fork completely.

am3uuw0000179

Brake Switch Installation Note

1. Inspect the brake pedal. (See 04-11-7 BRAKE PEDAL INSPECTION.)
2. With the brake pedal fully released, insert a new brake switch into the installation hole on the brake pedal.
3. Secure the brake switch by turning it counterclockwise 45°.

am3uuw0000179

BRAKE SWITCH INSPECTION

id041100801900

Caution

- Inspect the brake switch with it installed to the brake pedal, otherwise the brake switch may not operate normally. If the brake switch is removed from the brake pedal, replace the brake switch with a new one.

1. Disconnect the brake switch connector.
2. Verify that the continuity is as indicated in the table.
 - If not as indicated in the table, replace the brake switch.

POWER BRAKE UNIT INSPECTION

id041100801700

Note

- The following inspection methods are simple inspection methods to judge the function of the power brake unit.
- If there is any malfunction in the power brake unit, replace the power brake unit as a single unit.

Without Using SST

Operation inspection

1. With the engine stopped, pump the pedal a few times.
2. With the pedal depressed, start the engine.
3. If the pedal moves down slightly immediately after starting the engine, the unit is normal.

Vacuum function inspection

1. Start the engine.
2. Stop the engine after driving the vehicle for **1—2 min.**
3. Depress the pedal with normal force.
4. If the first pedal stroke is long and becomes shorter with subsequent strokes, the unit is normal.
 - If a problem is found, inspect for damage to or improper installation of the check valve and vacuum hose. After repairing, inspect again.

CONVENTIONAL BRAKE SYSTEM

Vacuum loss function inspection

1. Start the engine.
2. Depress the pedal with normal force.
3. With the pedal depressed, stop the engine.
4. Hold the pedal depressed for **approx. 30 s.**
5. If the pedal height does not change during this time, the unit is normal.

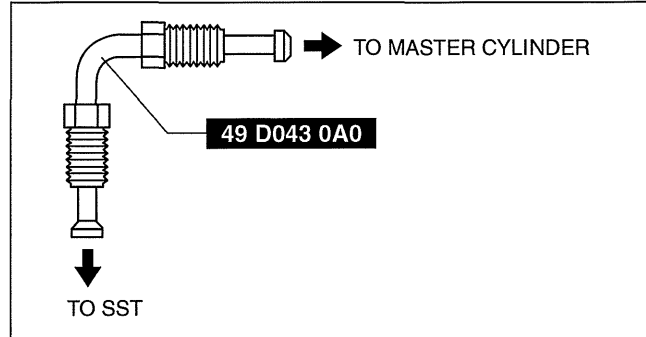

Using SST

Pre-inspection preparation

1. Install the **SST** (49 D043 0A0) to the master cylinder (secondary side) in the orientation shown in the figure.

Note

- When installing the **SST** (49 D043 0A0) to the master cylinder, use a commercially available flare nut wrench.
 - Flare nut across flat: **12 mm {0.47 in}**

am3uuw000180

2. Connect the **SSTs**, a vacuum gauge, and a pedal force gauge to the master cylinder, and bleed the air from the **SSTs** and the brake line. (Bleed the air from the **SSTs** using air bleed valve A.)

am3uuw000350

Checking for vacuum loss (loaded condition)

1. Start the engine.
2. Depress the brake pedal with a force of **200 N {20.4 kgf, 45.0 lbf}**.
3. Stop the engine when the vacuum gauge reading reaches **68 kPa {510 mmHg, 20 inHg}** with the brake pedal depressed.
4. Measure the amount of vacuum decrease for **15 s** immediately after stopping the engine.
5. If the amount of vacuum decrease is **3.3 kPa {25 mmHg, 0.97 inHg}** or less, the power brake unit is normal.

Lack of hydraulic pressure inspection

1. If the pedal force and fluid pressure correlation is within the specification with the engine stopped and a vacuum amount of **0 kPa {0 mmHg, 0 inHg}**, the system is normal.

Master cylinder fluid pressure

Vacuum amount at 0 kPa {0 mmHg, 0 inHg}	
Pedal force	Fluid pressure
200 N {20.4 kgf, 45.0 lbf}	500 kPa {5.10 kgf/cm ² , 72.5 psi} or more

CONVENTIONAL BRAKE SYSTEM

Hydraulic pressure inspection

1. Start the engine. Depress the brake pedal when the vacuum reaches **66.7 kPa {500 mmHg, 19.7 inHg}**.
2. At this time, apply the indicated pedal force and if the fluid pressure is within the specification, the unit is normal.

Master cylinder fluid pressure (LF, L5)

Vacuum amount at 66.7 kPa {500 mmHg, 19.7 inHg}	
Pedal force	Fluid pressure
200 N {20.4 kgf, 45.0 lbt}	6,500 kPa {66.28 kgf/cm ² , 942.7 psi} or more

Master cylinder fluid pressure (L3 WITH TC)

Vacuum amount at 66.7 kPa {500 mmHg, 19.7 inHg}	
Pedal force	Fluid pressure
200 N {20.4 kgf, 45.0 lbt}	7,000 kPa {71.38 kgf/cm ² , 1,015 psi} or more

04-11

POWER BRAKE UNIT REMOVAL/INSTALLATION [LF, L5]

Brake Judder Repair Hints

Description

1. Brake judder concern has the following 3 characteristics:

Steering wheel vibration

1. The steering wheel vibrates in the rotation direction. This characteristic is most noticeable when applying brakes at a vehicle speed of **100—140 km/h {62.2—86.9 mph}**.

Floor vibration

1. When applying the brakes, the vehicle body shakes back and forth. The seriousness of the shaking is not influenced by vehicle speed.

Brake pedal vibration

1. When applying the brakes, a pulsating force tries to push the brake pad back. The pulsation is transmitted to the brake pedal.
2. The following are the main possible causes of brake judder:

Due to an excessive runout (side-to-side wobble) of the disc plate, the thickness of the disc plate is uneven.

1. If the runout is **more than 0.05 mm {0.002 in}** at the position **10 mm {0.39 in}** from the disc plate edge, uneven wear occurs on the disc plate because the pad contacts the plate unevenly.
2. If the runout is **less than 0.05 mm {0.002 in}**, uneven wear does not occur.

The disc plate is deformed by heat.

1. Repeated panic braking may raise the temperature in some portions of the disc plate by **approx. 1,000 °C {1,832 °F}**. This results in a deformed disc plate.

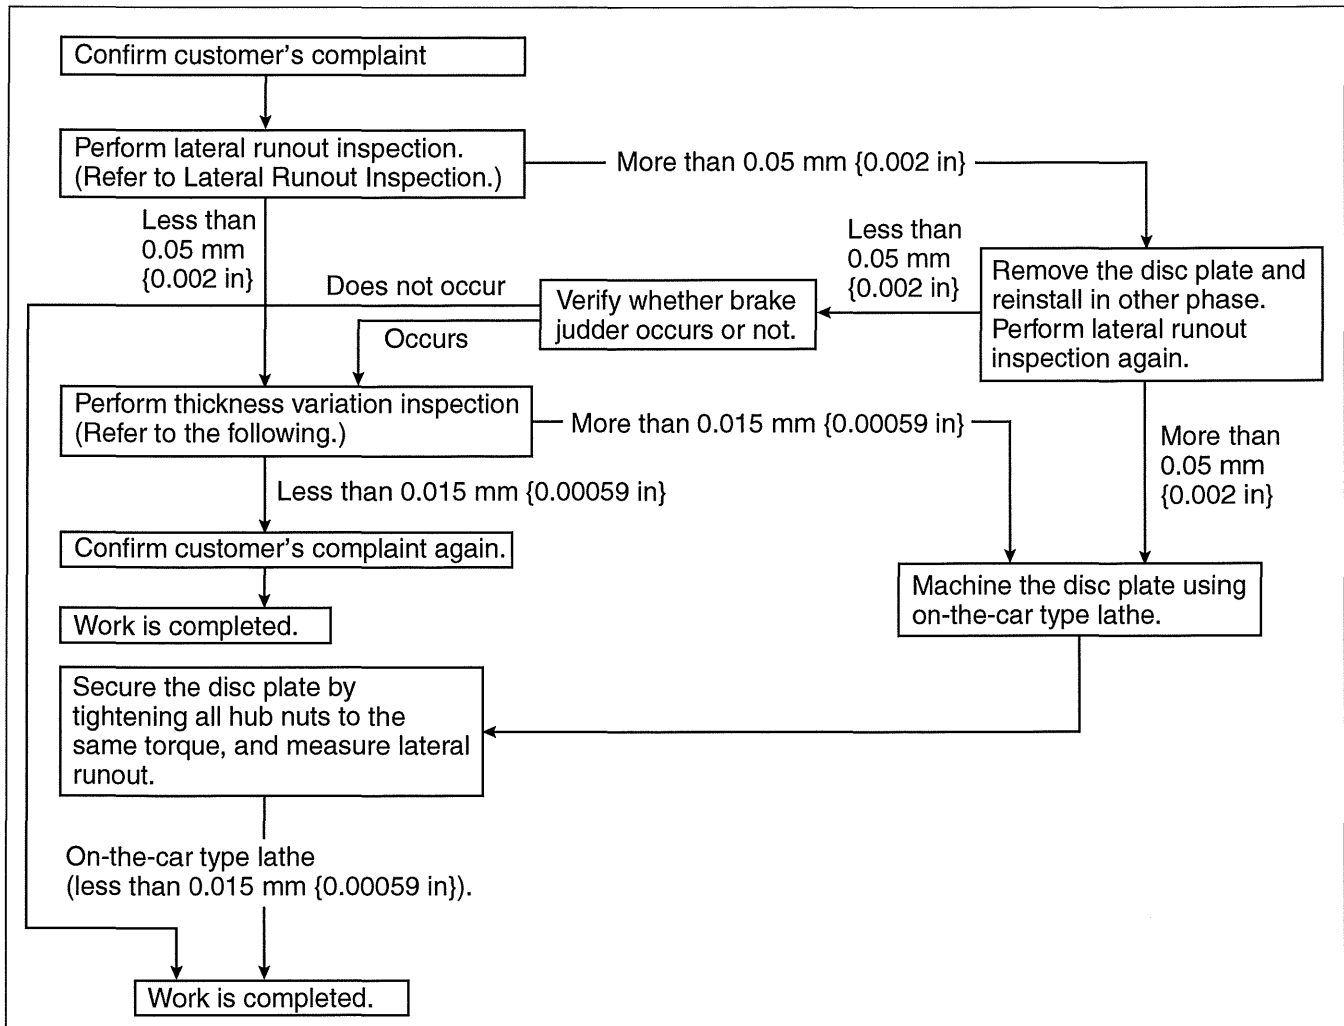

Due to corrosion, the thickness and friction coefficient of the disc plate change.

1. If the vehicle is parked in damp conditions for a long time, corrosion occurs on the friction surface of the disc plate.
2. The thickness of corrosion is uneven and sometimes appears like a wave pattern, which changes the friction coefficient and causes a reaction force.

04-11

CONVENTIONAL BRAKE SYSTEM

Inspection and repair procedure

am3uuw0000178

Lateral runout inspection

1. To secure the disc plate and the hub, insert the washer (thickness **10 mm {0.39 in}**, inner diameter **more than 12 mm {0.47 in}**) between each hub bolt and the hub nut, then tighten all the hub nuts.

Note

- The component parts of the **SST** (49 B017 001 or 49 G019 003) can be used as a suitable washer.

2. After tightening all the hub nuts to the same torque, put the dial gauge on the friction surface of the disc plate **10 mm {0.39 in}** from the disc plate edge.
3. Rotate the disc plate one time and measure the runout.

Front disc plate runout limit
0.05 mm {0.002 in}

abatjw00000018

CONVENTIONAL BRAKE SYSTEM

Thickness variation inspection

1. Clean the disc plate-to-pad friction surface using a brake cleaner.
2. Measure the points indicated in the illustration using a caliper (micrometer).
3. Subtract the minimum value from the maximum, and if the result is not within the specification, machine the disc plate using a lathe.

Thickness variation limit
0.015 mm {0.00059 in}

Warning

- Do not exceed minimum disc plate thickness.

am3uuw000178

04-11

Disc Plate Thickness Inspection

Caution

- Excessive runout may result if the disc plate is removed from the vehicle then machined. Machine the disc plate while installed on the vehicle.

1. Measure the thickness of the disc plate.
 - If the thickness is not within the specification, replace the disc plate.

Minimum front disc plate thickness
23 mm {0.91 in}

Minimum front disc plate thickness after machining using a brake lathe on-vehicle
23.8 mm {0.937 in}

Disc Pad Thickness Inspection

1. Jack up the front of the vehicle and support it with safety stands.
2. Remove the wheels and tires.
3. Verify the remaining thickness of the pads.

Minimum front disc pad thickness
2.0 mm {0.079 in} min.

4. Replace the pads as a set (right and left wheels) if either one is at or less than the minimum thickness.

CALIPER (FRONT) DISASSEMBLY/ASSEMBLY [LF, L5]

id04110080102

1. Disassemble in the order indicated in the table.

1	Bleeder cap
2	Bleeder screw
3	Piston (See 04-11-28 Piston Disassembly Note.) (See 04-11-28 Piston Assembly Note.)
4	Dust seal (See 04-11-28 Dust Seal Assembly Note.)
5	Piston seal
6	Caliper body

2. Assemble in the reverse order of disassembly.

am3uuw000313

CONVENTIONAL BRAKE SYSTEM

Piston Disassembly Note

1. Insert a piece of wood in the caliper as shown in the figure and blow compressed air through the bleeder screw installation hole to remove the piston from the caliper body.

Warning

- When compressed air is blown into the caliper body, injury to a finger or other part from pinching could result from the piston springing up. When blowing in compressed air, do not place your fingers between the piston and caliper body when performing the work.

abatjw0000077

Caution

- The piston could be damaged if blown out with great force. Blow the compressed air slowly to prevent the piston from suddenly popping out.

Dust Seal Assembly Note

1. Assemble a new dust seal to the caliper using the SSTs and a press with a press-in force of **834 N {85 kgf, 187 in-lbf}**.
2. Verify that there is no gap between the dust seal and caliper body.

am3uuw0000179

Piston Assembly Note

1. Press the piston into the dust seal opening as shown in the figure.

am3uuw0000179

2. Insert a piece of wood between the caliper body and the piston, and while supporting the piston by hand, blow compressed air through the brake hose installation hole.

Warning

- When blowing compressed air into the caliper body, the piston may pop out and cause injury if not supported at the correct point. Securely support the piston friction surface by hand when blowing compressed air.

am3uuw0000179

Note

- By blowing compressed air, the dust seal expands due to air pressure and covers the piston end.

CONVENTIONAL BRAKE SYSTEM

- Verify that the dust seal lip covers the piston end as shown in the figure.
- Press the piston into the caliper body completely.

am3uuw000179

CALIPER (FRONT) DISASSEMBLY/ASSEMBLY [L3 WITH TC]

id041100801039

- Disassemble in the order indicated in the table.

1	Bleeder cap
2	Bleeder screw
3	Piston (See 04-11-29 Piston Disassembly Note.) (See 04-11-30 Piston Assembly Note.)
4	Dust seal (See 04-11-30 Dust Seal Assembly Note.)
5	Piston seal
6	Caliper body

- Assemble in the reverse order of disassembly.

REAR BRAKE (DISC) INSPECTION

id041100800400

Brake Judder Repair Hints

Description

1. Brake judder concern has the following 3 characteristics:

Steering wheel vibration

1. The steering wheel vibrates in the rotation direction. This characteristic is most noticeable when applying brakes at a vehicle speed of **100—140 km/h {62.2—86.9 mph}**.

Floor vibration

1. When applying the brakes, the vehicle body shakes back and forth. The seriousness of the shaking is not influenced by vehicle speed.

CONVENTIONAL BRAKE SYSTEM

Brake pedal vibration

1. When applying the brakes, a pulsating force tries to push the brake pad back. The pulsation is transmitted to the brake pedal.
2. The following are the main possible causes of brake judder:

Due to an excessive runout (side-to-side wobble) of the disc plate, the thickness of the disc plate is uneven.

1. If the runout is **more than 0.05 mm {0.002 in}** at the position **10 mm {0.39 in}** from the disc plate edge, uneven wear occurs on the disc plate because the pad contacts the plate unevenly.
2. If the runout is **less than 0.05 mm {0.002 in}**, uneven wear does not occur.

The disc plate is deformed by heat.

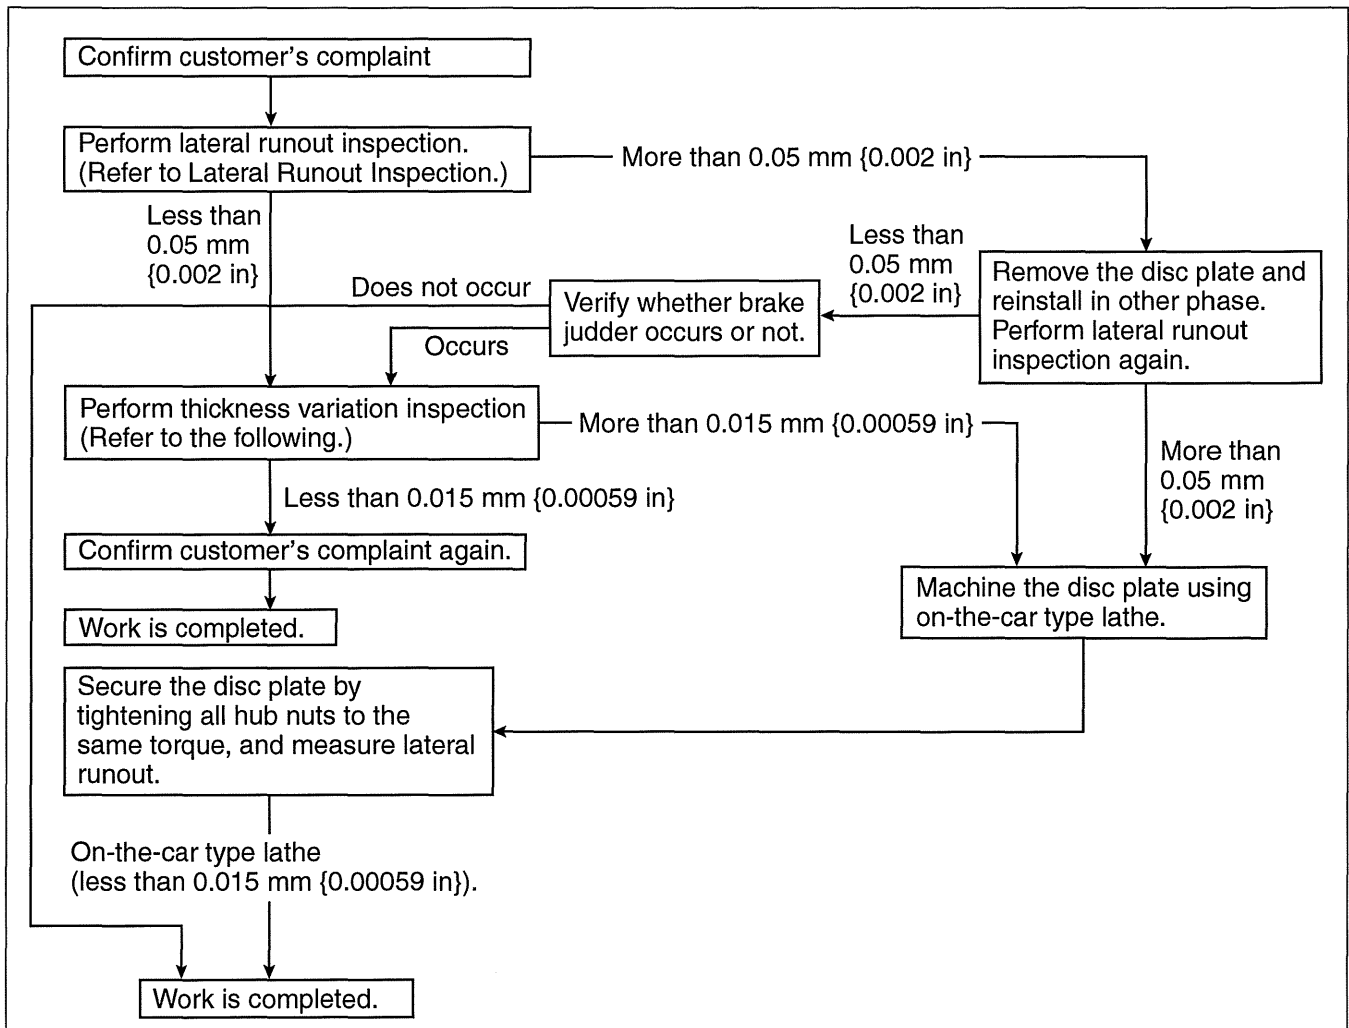

1. Repeated panic braking may raise the temperature in some portions of the disc plate by **approx. 1,000 °C {1,832 °F}**. This results in a deformed disc plate.

Due to corrosion, the thickness and friction coefficient of the disc plate change.

1. If the vehicle is parked in damp conditions for a long time, corrosion occurs on the friction surface of the disc plate.
2. The thickness of corrosion is uneven and sometimes appears like a wave pattern, which changes the friction coefficient and causes a reaction force.

04-11

Inspection and repair procedure

am3uuw0000176

CONVENTIONAL BRAKE SYSTEM

Lateral runout inspection

1. To secure the disc plate and the hub, insert the washer (thickness **10 mm {0.39 in}**, inner diameter **more than 12 mm {0.47 in}**) between each hub bolt and the hub nut, then tighten all the hub nuts.

Note

- The component parts of the **SST** (49 B017 001 or 49 G019 003) can be used as a suitable washer.

2. After tightening all the hub nuts to the same torque, put the dial gauge on the friction surface of the disc plate **10 mm {0.39 in}** from the disc plate edge.
3. Rotate the disc plate one time and measure the runout.

Rear disc plate runout limit
0.05 mm {0.002 in}

am3uuw0000195

Thickness variation inspection

1. Clean the disc plate-to-pad friction surface using a brake cleaner.
2. Measure the points indicated in the illustration using a caliper (micrometer).
3. Subtract the minimum value from the maximum, and if the result is not within the specification, machine the disc plate using a lathe.

Thickness variation limit
0.015 mm {0.00059 in}

Warning

- **Do not exceed minimum disc plate thickness.**

am3uuw0000176

Disc Plate Thickness Inspection

Caution

- **Excessive runout may result if the disc plate is removed from the vehicle then machined. Machine the disc plate while installed on the vehicle.**

1. Measure the thickness of the disc plate.
 - If the thickness is not within the specification, replace the disc plate.

Minimum read disc plate thickness
9 mm {0.35 in}

Minimum rear disc plate thickness after machining using a brake lathe on-vehicle
9.8 mm {0.39 in}

Disc Pad Thickness Inspection

1. Jack up the front of the vehicle and support it with safety stands.
2. Remove the wheels and tires.
3. Verify the remaining thickness of the pads.

Minimum rear disc pad thickness
2.0 mm {0.079 in} min.

CONVENTIONAL BRAKE SYSTEM

11	Disc pad
12	Bolt
13	Mounting support
14	Disc plate

Caliper and Brake Hose Removal Note

1. Remove the caliper and brake hose from the vehicle as a single unit.

Brake Hose Installation Note

1. Secure the caliper to the vise and install the brake hose to it.

Caution

- Insert a protective plate into the vise opening so as not to damage the caliper.

am3uuw0000176

2. Tighten the brake hose to the specified torque.

Tightening torque

26—30 N·m {2.7—3.0 kgf·m, 20—22 ft·lbf}

am3uuw0000177

Caliper and Brake Hose Installation Note

1. Clean the exposed area of the piston.
2. Install the **SST** (49 F043 002) to the **SST** (49 B043 005).
3. Align the **SST** projection to the piston groove.

am3uuw0000177

CONVENTIONAL BRAKE SYSTEM

4. Rotate part A on the **SST** in the direction of the arrow and secure the **SST** to the caliper.

am3uuw0000177

5. Rotate the **SST** in the direction of the arrow and push the piston completely into the caliper.

Note

- Even with the piston completely pushed in, the top of the piston projects from the dust seal by approximately 2 mm {0.09 in}.

am3uuw0000177

6. Rotate part A on the **SST** in the direction of the arrow using the tool and remove the **SST** from the caliper.
7. Install the caliper and brake hose to the vehicle as a single unit.

am3uuw0000177

Retaining Clip Installation Note

1. Temporarily install the retaining clip to the caliper and mounting support as shown in the figure.

am3uuw0000472

04-11

CONVENTIONAL BRAKE SYSTEM

2. Secure the retaining clip so that part A does not slip off from the caliper while installing part B to the mounting support.
3. Verify that the retaining clip is securely installed to the caliper and the mounting support.

am3uuw0000472

Clip and Brake Pipe Installation Note

1. Install the brake hose to the vehicle-side bracket and secure it using a clip.
2. Verify that the brake hose is not twisted.
3. Tighten the brake pipe to the specified torque using a commercially available flare nut wrench.

DISC PAD (REAR) REPLACEMENT

id041100800300

1. Remove in the order indicated in the table.
2. Install in the reverse order of removal.
3. After installation, pump the brake pedal a few times and inspect the following:
 - Parking brake lever stroke
 - Brake drag

am3uuw0000313

1	Parking brake cable (See 04-12-3 PARKING BRAKE LEVER REMOVAL/ INSTALLATION.)
2	Retaining clip (See 04-11-35 REAR BRAKE (DISC) REMOVAL/ INSTALLATION.)

3	Cap
4	Bolt
5	Caliper (See 04-11-39 Caliper Installation Note.)
6	Disc pad

CONVENTIONAL BRAKE SYSTEM

Caliper Installation Note

1. Clean the exposed area of the piston.
2. Install the **SST** (49 F043 002) to the **SST** (49 B043 005).
3. Align the **SST** projection to the piston groove.

4. Rotate part A on the **SST** in the direction of the arrow and secure the **SST** to the caliper.

5. Rotate the **SST** in the direction of the arrow and push the piston completely into the caliper.

Note

- Even with the piston completely pushed in, the top of the piston projects from the dust seal by approximately **2 mm {0.09 in}**.

6. Rotate part A on the **SST** in the direction of the arrow using the tool and remove the **SST** from the caliper.
7. Install the caliper to the vehicle.

04-11

CONVENTIONAL BRAKE SYSTEM

CALIPER (REAR) DISASSEMBLY/ASSEMBLY

id041100800600

1. Disassemble in the order indicated in the table.

1	Dust seal (See 04-11-40 Dust Seal Assembly Note.)
2	Bleeder cap
3	Bleeder screw
4	Caliper body

2. Assemble in the reverse order of disassembly.

Dust Seal Assembly Note

1. While rotating the piston counterclockwise using the SST, pull it out to the position shown in the figure.

2. As shown in the figure, assemble a new dust seal to the piston.

CONVENTIONAL BRAKE SYSTEM

3. Install the **SST** (49 F043 002) to the **SST** (49 B043 005).
4. Align the **SST** projection to the piston groove.

5. Rotate part A on the **SST** in the direction of the arrow and secure the **SST** to the caliper.

04-11

6. Rotate the **SST** (49 B043 005) in the direction of the arrow and push the piston completely into the caliper.

Note

- Even with the piston completely pushed in, the top of the piston projects from the dust seal by approximately **2 mm {0.09 in}**.

7. Rotate part A on the **SST** (49 B043 005) in the direction of the arrow using the tool and remove the **SST** from the caliper.

8. Assemble the dust seal to the caliper body using the **SSTs** and a press with a press-in force of **834 N {85 kgf, 187 lbf}**.
9. Verify that there is no gap between the dust seal and caliper body.

CONVENTIONAL BRAKE SYSTEM

BRAKE HOSE (REAR) REMOVAL/INSTALLATION [LF]

id0411001904b6

Caution

- If the brake hose is installed to the caliper on the vehicle, the tool cannot be installed correctly resulting in brake fluid leakage due to improper installation. Therefore, remove the caliper and brake hose as a single unit when removing the brake hose, and tighten the brake hose to the caliper to the specified torque, then install the caliper and brake hose as a single unit when installing to the vehicle.

1. Remove in the order indicated in the table.
2. Install in the reverse order of removal.
3. Add brake fluid, bleed the brakes, and inspect for leakage after the installation has been completed. (See 04-11-3 AIR BLEEDING.)

ABS HU/CM REMOVAL/INSTALLATION

id041300801400

Caution

- The internal parts of the ABS HU/CM could be damaged if dropped. Be careful not to drop the ABS HU/CM. Replace the ABS HU/CM if it is subjected to an impact.
- Do not separate the ABS HU and ABS CM unless replacing them, otherwise the ABS HU/CM may not function properly. When replacing them with new ones, always perform procedures according to the instructions included with the new parts.
- If the ABS HU/CM configuration is not completed, it could result in an unexpected accident due to the ABS being inoperative. If the ABS HU/CM or ABS CM is replaced, always use the automatic configuration function so that the ABS operation conditions are correct.

Note

- When the ignition is switched to ON or the engine is started after the ABS HU/CM or ABS CM has been replaced, the ABS CM reads data from the instrument cluster via CAN communication to perform automatic configuration.

1. Remove the battery and battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.
4. Switch the ignition to ON or start the engine, and maintain this condition for **approx. 30 s** to allow the ABS HU/CM automatic configuration to be performed.
5. Clear the DTCs from the memory. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].)

7	ABS HU

Connector Removal Note

1. Pull the connector cover up in the direction of the arrow while pressing the tab of the connector cover.
2. Pull the connector toward the vehicle front and remove it.

ANTILOCK BRAKE SYSTEM

Brake Pipe Removal Note

1. Place an alignment mark on the brake pipe and ABS HU/CM.
2. Apply protective tape to the connector to prevent brake fluid from entering.
3. Disconnect the brake pipe.

am3uuw0000272

ABS HU/CM Component, Bracket Removal Note

1. As shown in the figure, move the bracket in the direction of the arrow and remove the ABS HU/CM component and bracket from the body.

am3uuw0000272

Brake Pipe Installation Note

1. Align the marks made before removal and install the brake pipe to the ABS HU/CM referring to the figure.

am3uuw0000272

ANTILOCK BRAKE SYSTEM

Connector Installation Note

1. After connecting the connector, verify that the connector cover is completely pushed in.

am3uuw000272

ABS HU/CM INSPECTION

id041300198300

04-13

1. Disconnect the ABS HU/CM connector. (See 04-13-2 ABS HU/CM REMOVAL/INSTALLATION.)
2. Connect the negative battery cable. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
3. Attach the tester lead to the ABS HU/CM wiring harness-side connector and inspect the voltage, continuity, or resistance according to the standard (reference value) in the table below.

Standard (reference)

FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION

id041300800700

1. Remove in the order indicated in the table.
2. Install in the reverse order of removal.
3. After installation, verify that there is no twisting in the front ABS wheel-speed sensor.

am3uuw0000314

1	Connector
2	Front ABS wheel-speed sensor

3	Connector (See 04-13-7 Connector Removal Note.)
4	Front ABS wheel-speed sensor wiring harness

Connector Removal Note

1. Pull aside the mudguard and disconnect the connector.

FRONT ABS WHEEL-SPEED SENSOR INSPECTION

id041300801300

Sensor Output Value Inspection

Caution

- Resistance inspection using other testers may cause damage to the ABS wheel-speed sensor internal circuit. Be sure to use the M-MDS to inspect the ABS wheel-speed sensor.

1. Switch the ignition to off.
2. Connect the M-MDS to the DLC-2.
3. Select the following PIDs using the M-MDS:
 - WSPD_LF
(LF wheel-speed sensor)
 - WSPD_RF
(RF wheel-speed sensor)
4. Start the engine and drive the vehicle.
5. Verify that the display of the M-MDS shows the same value as the speedometer.
 - If there is any malfunction, replace the front ABS wheel-speed sensor.

am3zzn0000236

04-13

ANTILOCK BRAKE SYSTEM

Installation Visual Inspection

1. Inspect for the following:
 - If there is any malfunction, replace the part.
 - (1) Excessive play of the front ABS wheel-speed sensor
 - (2) Deformation of the front ABS wheel-speed sensor

Clearance Inspection

Preparation prior to inspection

1. Remove the front ABS wheel-speed sensor. (See 04-13-7 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
2. Remove the wheel hub, steering knuckle component. (See 03-11-2 WHEEL HUB, STEERING KNUCKLE REMOVAL/INSTALLATION.)
3. Install the front ABS wheel-speed sensor to the removed the wheel hub, steering knuckle component, and tighten to the specified torque.

Tightening torque

4.0—6.0 N·m {41—61 kgf·cm, 36—53 in·lbf}

Clearance Inspection

1. Measure the gap between the front ABS sensor rotor and the front ABS wheel-speed sensor using a feeler gauge.
 - If not within the specification, verify the following items and repair or replace if necessary.
 - Is there deformation or damage to the front ABS sensor rotor?
 - Is there deformation or damage to the front ABS wheel speed sensor?
 - Is there foreign material adhering?

Clearance

2.1 mm {0.082 in} or less

Servicing after inspection

1. Remove the front ABS wheel-speed sensor from the wheel hub, steering knuckle component.
2. Install the wheel hub, steering knuckle component. (See 03-11-2 WHEEL HUB, STEERING KNUCKLE REMOVAL/INSTALLATION.)
3. Install the front ABS wheel-speed sensor. (See 04-13-7 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
4. Inspect the front wheel alignment. (See 02-11-1 FRONT WHEEL ALIGNMENT.)

ANTILOCK BRAKE SYSTEM

REAR ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION

id041300800500

1. Remove the under cover. (See 02-14-8 REAR TRAILING LINK REMOVAL/INSTALLATION.)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.

04-13

am3zzw0000752

1	Connector
2	Bolt
3	Rear ABS wheel-speed sensor
4	ABS hole cover (See 04-13-9 ABS Hole Cover Removal Note.) (See 04-13-10 ABS Hole Cover Installation Note.)

5	Connector
6	Rear ABS wheel-speed sensor wiring harness (See 04-13-10 Rear ABS Wheel-speed Sensor Wiring Harness Installation Note.)

ABS Hole Cover Removal Note

1. Press the tab of the ABS hole cover to separate the ABS hole cover from the body.
2. Remove the ABS hole cover from the body.

am3uuw0000545

ANTILOCK BRAKE SYSTEM

Rear ABS Wheel-speed Sensor Wiring Harness Installation Note

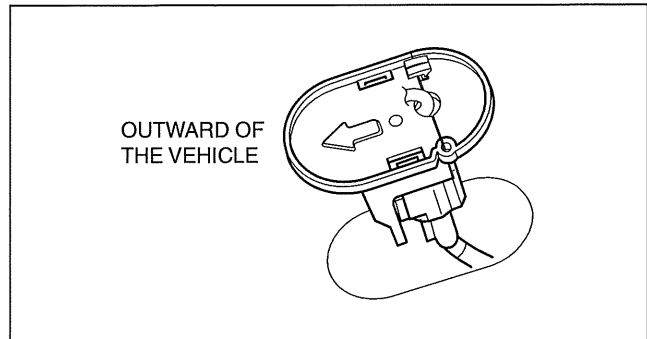

1. Pass the rear ABS wheel-speed sensor wiring harness outside the rear parking brake cable as shown in the figure.
2. Install the rear ABS wheel-speed sensor wiring harness.

am3uuw0000314

ABS Hole Cover Installation Note

1. Install the ABS hole cover into the body so that the arrow on it is facing toward the outer side of the vehicle.

am3uuw0000545

REAR ABS WHEEL-SPEED SENSOR INSPECTION

id041300801200

Installation Visual Inspection

1. Inspect for the following:
 - If there is any malfunction, replace the part.
 - (1) Excessive looseness or play of the rear ABS wheel-speed sensor
 - (2) Deformation of the rear ABS wheel-speed sensor
 - (3) Deformation or damage of the rear ABS sensor rotor

Clearance Inspection

1. Remove the rear ABS wheel-speed sensor.
2. Measure the distance between the rear ABS wheel-speed sensor installation surface and the rear ABS sensor rotor. This is dimension A.
3. Calculate the clearance between the rear ABS wheel-speed sensor and the rear ABS sensor rotor using the following formula:
Clearance (mm {in}) = A - 13.9 {0.547}
4. Verify that the clearance between the rear ABS sensor rotor and the rear ABS wheel-speed sensor is as indicated below.
 - If there is any malfunction, replace it.

am3uuw0000254

Clearance

1.46 mm {0.057 in} or less

Sensor Output Value Inspection

Caution

- Resistance inspection using other testers may cause damage to the ABS wheel-speed sensor internal circuit. Be sure to use the M-MDS to inspect the ABS wheel-speed sensor.

1. Switch the ignition to off.

ANTILOCK BRAKE SYSTEM

2. Connect the M-MDS to the DLC-2.
3. Select the following PIDs using the M-MDS:
 - WSPD_LR
(LR wheel-speed sensor)
 - WSPD_RR
(RR wheel-speed sensor)
4. Start the engine and drive the vehicle.
5. Verify that the display of the M-MDS shows the same value as the speedometer.
 - If there is any malfunction, replace the rear ABS wheel-speed sensor.

DSC HU/CM REMOVAL/INSTALLATION

id041500801000

Caution

- The internal parts of the DSC HU/CM could be damaged if dropped. Be careful not to drop the DSC HU/CM. Replace the DSC HU/CM if it is subjected to an impact.
- If the DSC HU/CM configuration is not completed, it could result in an unexpected accident due to the DSC being inoperative. If the DSC HU/CM is replaced, always use the automatic configuration function so that the DSC operation conditions are correct.
- The DSC may not function normally immediately after the DSC HU/CM is replaced. After installation, always perform the initialization procedures for the combined sensor, brake fluid pressure sensor.

Note

- When the ignition is switched to ON or the engine is started after the DSC HU/CM have been replaced, the DSC CM reads data from the instrument cluster via CAN communication to perform automatic configuration.

DYNAMIC STABILITY CONTROL

1. Remove the battery and battery tray. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].) (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.
4. Switch the ignition to ON or start the engine, and maintain this condition for **approx. 30 s** to allow the DSC HU/CM automatic configuration to be performed.
5. Perform the initialization procedures for the combined sensor, brake fluid pressure sensor. (See 04-15-4 DSC SENSOR INITIALIZATION PROCEDURE.)
6. Clear the DTCs from the memory. (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)

4	DSC HU/CM, bracket (See 04-15-4 DSC HU/CM, Bracket Removal Note.)
5	Bracket
6	DSC HU/CM

Brake Pipe Removal Note

1. Place an alignment mark on the brake pipe and DSC HU/CM.
2. Apply protective tape to the connector to prevent brake fluid from entering.
3. Remove the brake pipe.

am3uuw0000272

04-15

DYNAMIC STABILITY CONTROL

DSC HU/CM, Bracket Removal Note

1. As shown in the figure, move the bracket in the direction of the arrow and remove the DSC HU/CM and bracket from the body.

am3uuw0000272

Brake Pipe Installation Note

1. Align the marks made before removal and install the brake pipe into the DSC HU/CM referring to the figure.

am3uuw0000273

DSC SENSOR INITIALIZATION PROCEDURE

id041500870000

Warning

- If the initialization procedure is not completed, the DSC will not operate properly and it might cause an unexpected accident. Therefore, after replacing or removing the combined sensor or DSC HU/CM, make sure to perform the initialization procedure to insure proper DSC operation.

1. Inspect the wheel alignment and the tire pressure.
 - If there is any malfunction, adjust the applicable part.
2. Position the vehicle on level ground.
3. Switch the ignition to off.
4. Connect the M-MDS to DLC-2.
5. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Chassis".
 2. Select "ABS/DSC".
 3. Select "Sensor Initialization".
 - When using the PDS (Pocket PC)
 1. Select "All Tests and Calibrations".
 2. Select "Sensor Initialization".
6. Perform the procedure according to the directions on the screen.
7. Drive the vehicle.
8. After **5 min or more** of driving, verify that the DSC system is normal.

am3zzn0000236

DYNAMIC STABILITY CONTROL

DSC HU/CM INSPECTION

id041500801100

1. Disconnect the DSC HU/CM connector. (See 04-15-2 DSC HU/CM REMOVAL/INSTALLATION.)
2. Connect the negative battery cable. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].) (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
3. Attach the tester lead to the DSC HU/CM wiring harness-side connector and inspect voltage, continuity, or resistance according to the standard (reference) on the table.

Standard (Reference)

FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION

id041500800300

1. Remove or install the front ABS wheel-speed sensor in the same order of vehicles with ABS. (See 04-13-7 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)

FRONT ABS WHEEL-SPEED SENSOR INSPECTION

id041500800400

1. Inspect the front ABS wheel-speed sensor in the same order of vehicles with ABS. (See 04-13-7 FRONT ABS WHEEL-SPEED SENSOR INSPECTION.)

DYNAMIC STABILITY CONTROL

REAR ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION

id041500800100

1. Remove or install the rear ABS wheel-speed sensor in the same order of vehicles with ABS. (See 04-13-9 REAR ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)

REAR ABS WHEEL-SPEED SENSOR INSPECTION

id041500800200

1. Inspect the rear ABS wheel-speed sensor in the same order of vehicles with ABS. (See 04-13-10 REAR ABS WHEEL-SPEED SENSOR INSPECTION.)

COMBINED SENSOR REMOVAL/INSTALLATION

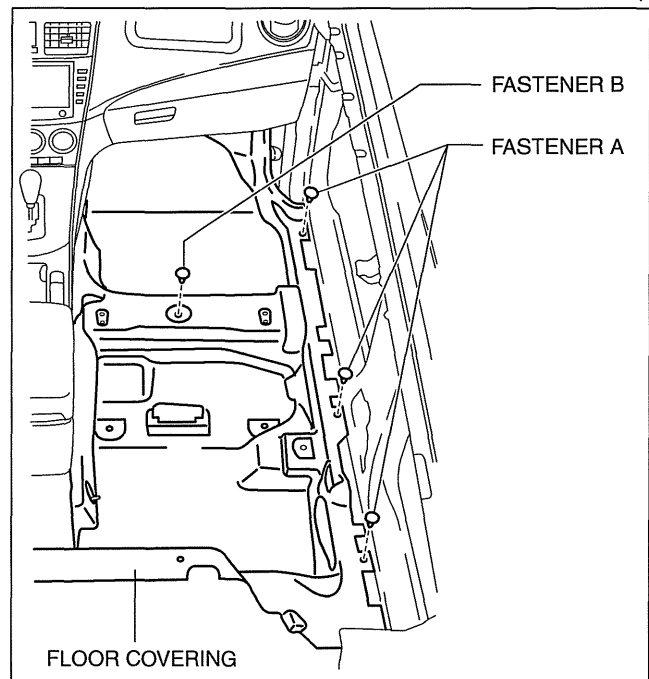

id041500801200

Caution

- The DSC may not function normally immediately after the combined sensor is replaced. After installation, always perform the initialization procedures for the combined sensor.
- The internal parts of the combined sensor could be damaged if dropped. Be careful not to drop the combined sensor. Replace the combined sensor if it is subjected to an impact. Also, do not use an impact wrench or other similar air tools when removing/installing the sensor.

04-15

1. Perform the following procedures:
 - (1) Remove the front seat (RH). (See 09-13-3 FRONT SEAT REMOVAL/INSTALLATION.)
 - (2) Remove the audio amplifier. (With Bose®) (See 09-20-7 AUDIO AMPLIFIER REMOVAL/INSTALLATION.)
 - (3) Remove the front scuff plate (RH). (See 09-17-67 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
 - (4) Remove the front side trim (RH). (See 09-17-53 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
 - (5) Remove the rear scuff plate (RH). (See 09-17-68 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
 - (6) Remove the B-pillar lower trim (RH). (See 09-17-59 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
 - (7) Remove the fastener A and fastener B.
2. Partially peel back the floor covering.
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.
5. After installation, perform the combined sensor initialization procedure. (See 04-15-4 DSC SENSOR INITIALIZATION PROCEDURE.)

2	Combined sensor, bracket

3	Combined sensor
4	Bracket

COMBINED SENSOR INSPECTION

id041500801300

1. Switch the ignition to off.
 2. Connect the M-MDS to the DLC-2.
 3. Select the following PIDs and inspect the lateral acceleration and yaw rate. (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
 - LAT_ACCL (lateral acceleration)
 - YAW_RATE (yaw rate)
- (1) Lateral acceleration inspection

am3zzn0000236

- 1) Verify the LAT_ACCL change when the combined sensor is tilted to the left and right.
 - If there is any malfunction, replace the combined sensor. (See 04-15-7 COMBINED SENSOR REMOVAL/INSTALLATION.)

Standard

When the sensor is tilted to the right (A):
LAT_ACCL changes positively.

When the sensor is tilted to the left (B):
LAT_ACCL changes negatively.

am3uuw0000273

DYNAMIC STABILITY CONTROL

(2) Yaw rate inspection

- 1) Verify the YAW_RATE change when the combined sensor is rotated to the left and right.
 - If there is any malfunction, replace the combined sensor. (See 04-15-7 COMBINED SENSOR REMOVAL/INSTALLATION.)

Standard

When the sensor is rotated to the right (A):
YAW_RATE changes negatively.

When the sensor is rotated to the left (B):
YAW_RATE changes positively.

am3uuw000255

04-15

BRAKE FLUID PRESSURE SENSOR INSPECTION

id041500801500

1. Switch the ignition to off.
2. Install the **SSTs** to the master cylinder (secondary side) as shown in the figure.

Note

- When installing the **SST** (49 D043 0A0) to the master cylinder, use a commercially available flare nut wrench (flare nut across flat 12 mm {0.47 in}).

3. Bleed the brake line and the **SSTs** of air. (Bleed the **SSTs** of air using air bleed valve A.)

am3uuw000180

4. Connect the M-MDS to the DLC-2.
5. Select the "MCYLI_P" PID. (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
6. Start the engine.
7. Depress the brake pedal, and verify that the fluid pressure value of the **SST** (gauge) and the value shown on the M-MDS are equal.
 - If the fluid pressure values are different, replace the DSC HU/CM. (See 04-15-2 DSC HU/CM REMOVAL/INSTALLATION.)

am3zzn000236

DYNAMIC STABILITY CONTROL

DSC OFF SWITCH REMOVAL/INSTALLATION

id041500801900

1. Remove the switch panel in the direction of the arrow shown in the figure.
2. Disconnect the connector.

am3uuw0000545

3. Remove the DSC OFF switch in the direction of the arrow (2) shown in the figure while pressing the tabs in the direction of the arrow (1).
4. Remove the DSC OFF switch.
5. Install in the reverse order of removal.

am3uuw0000545

DSC OFF SWITCH INSPECTION

id041500802000

1. Remove the DSC OFF switch. (See 04-15-10 DSC OFF SWITCH REMOVAL/INSTALLATION.)
2. Verify that the continuity between the DSC OFF switch terminals is as indicated in the table.
 - If not as indicated in the table, replace the DSC OFF switch.

○—○: Continuity

Condition	Terminal

Item	Specification
Brake fluid type	SAE J1703, FMVSS 116 DOT-3
Brake pedal height (reference value)	LF, L5: 125.0 mm {4.921 in} L3 WITH TC: 128.9 mm {5.075 in}
Brake pedal play	4.0—8.4 mm {0.16—0.33 in}
Brake pedal-to-floor clearance (Brake pedal when depressed at 147 N {15.0 kgf, 33.0 lbf})	LF, L5: 83.5 mm {3.29 in} or more L3 WITH TC: 88.6 mm {3.49 in} or more
Front disc plate runout limit	0.05 mm {0.002 in}
Minimum front disc plate thickness	23 mm {0.91 in}
Minimum front disc plate thickness after machining using a brake lathe on-vehicle	23.8 mm {0.937 in}
Minimum front disc pad thickness	2.0 mm {0.079 in} min.
Rear disc plate runout limit	0.05 mm {0.002 in}
Minimum rear disc plate thickness	9 mm {0.35 in}
Minimum rear disc plate thickness after machining using a brake lathe on-vehicle	9.8 mm {0.39 in}
Minimum rear disc pad thickness	2.0 mm {0.079 in} min.
Parking brake lever stroke when pulled at 98 N {10 kgf, 22 lbf}	2—6 notches

04-50

Master cylinder fluid pressure

Vacuum amount at 0 kPa {0 mmHg, 0 inHg}	
Pedal force	Fluid pressure
200 N {20.4 kgf, 45.0 lbt}	500 kPa {5.10 kgf/cm ² , 72.5 psi} or more

Master cylinder fluid pressure (LF, L5)

Vacuum amount at 66.7 kPa {500 mmHg, 19.7 inHg}	
Pedal force	Fluid pressure
200 N {20.4 kgf, 45.0 lbt}	6,500 kPa {66.28 kgf/cm ² , 942.7 psi} or more

Master cylinder fluid pressure (L3 WITH TC)

Vacuum amount at 66.7 kPa {500 mmHg, 19.7 inHg}	
Pedal force	Fluid pressure
200 N {20.4 kgf, 45.0 lbt}	7,000 kPa {71.38 kgf/cm ² , 1,015 psi} or more

ON-BOARD DIAGNOSTIC [FS5A-EL]

ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FS5A-EL]

id050221290100

Reading DTCs Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Self Test".
 2. Select "Modules".
 3. Select "TCM".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "TCM".
 3. Select "Self Test".

am3uuw0000261

Note

- Freeze frame data/snapshot data appears at the top of the help screen when the displayed DTC is selected.

Freeze frame data

- The freeze frame data consists of data for vehicle and transaxle control system operation conditions when malfunctions in the transaxle control system are detected and stored in the TCM.
- Freeze frame data is stored at the instant the malfunction indicator lamp illuminates, and only a part of the DTC data is stored.
- For the freeze frame data, if there are several malfunctions in the transaxle control system, the data for the malfunction which occurred initially is stored. Thereafter, if a misfire or fuel injection control malfunction occurs, data from the misfire or fuel injection control malfunction is written over the initially stored data. However, if the initially stored freeze frame data is a misfire or fuel injection control malfunction, it is not overwritten.

Snapshot data

- The snap shot data stores the currently detected DTC data.
- The recording timing for the freeze frame data/snap shot data differs depending on the number of DTC drive cycles.
 - For a DTC with a drive cycle number 1, only the malfunction determination data is recorded.
 - For a DTC with a drive cycle number 2, both the malfunction determination and undetermined data is recorded.

3. Verify the DTC according to the directions on the M-MDS screen.

Freeze frame data table

Note

- Refer to PID monitor table for confirm the transaxle control system operation status while the TCM does not store the DTC. (See 05-02-5 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FS5A-EL])
- Freeze frame data items are not displayed, according to detected DTC.

Freeze frame data item	Unit	Description	Corresponding PID data monitor item
LOAD	%	Calculated engine load	—
ECT	°C {°F}	Engine coolant temperature	ECT
RPM	RPM	Engine speed	RPM
VS	KPH {MPH}	Vehicle speed	VSS
SPARKADV	°	Ignition timing	—
IAT	°C {°F}	Intake air temperature	—
TP	%	Throttle valve position No.1	THOP
RUNTM	hh:mm:ss	Time from engine start	—
WARMUPS	—	Number of warm-up cycle after DTC cleared	—
CLRDIST	Km {mile}	Mileage after DTC cleared	—
VPWR	V	Module supply voltage	VPWR
APP_D	%	Accelerator pedal position No.1	—

05-02

ON-BOARD DIAGNOSTIC [FS5A-EL]

Snapshot data table

Note

- Refer to PID monitor table for confirm the transaxle control system operation status while the TCM does not store the DTC. (See 05-02-5 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FS5A-EL])
- Snapshot data items are not displayed, according to detected DTC.

Snapshot data item	Unit	Definition	Corresponding PID data monitor item
LOAD	%	Calculated engine load	—
ECT	°C {°F}	Engine coolant temperature	ECT
RPM	RPM	Engine speed	RPM
VSS	KPH {MPH}	Vehicle speed	VSS
SPARKADV	°	Ignition timing	—
IAT	°C {°F}	Intake air temperature	—
TP1	%	Throttle valve position No.1	THOP
EG_RUN_TIME	—	Time from engine start	—
CLR_CNT	—	Number of warm-up cycle after DTC cleared	—
CLR_DIST	Km {mile}	Mileage after DTC cleared	—
VPWR	V	Module supply voltage	VPWR
APP1	%	Accelerator pedal position No.1	—

Clearing DTCs Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Self Test".
 2. Select "Modules".
 3. Select "TCM".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "TCM".
 3. Select "Self Test".
3. Verify the DTC according to the directions on the M-MDS screen.
4. Press the clear button on the DTC screen to clear the DTC.

05-02

ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FS5A-EL]

Id050221290300

Note

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.

- Connect the M-MDS to the DLC-2.
- After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 - Select "DataLogger".
 - Select "Modules".
 - Select "TCM".
 - When using the PDS (Pocket PC)
 - Select "Module Tests".
 - Select "TCM".
 - Select "DataLogger".
- Select the applicable PID from the PID table.
- Verify the PID data according to the detections on the screen.

ON-BOARD DIAGNOSTIC SYSTEM SIMULATION INSPECTION [FS5A-EL]

id050221290400

- Connect the M-MDS to the DLC-2.
- After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 - Select "DataLogger".
 - Select "Modules".
 - Select "TCM".
 - When using the PDS (Pocket PC)
 - Select "Module Tests".
 - Select "TCM".
 - Select "DataLogger".
- Select the simulation items from the PID table.
- Perform the simulation function, inspect the operations for each parts.

am3uuw0000261

- If the operation of output parts cannot be verified after the active command mode inspection is performed, this could indicate the possibility of an open or short circuit, sticking, or operation malfunction in the output parts.

Simulation table

Item	Related to	Unit/Condition	Test condition
LPS	Pressure control solenoid A	A	Idling at P or N position
LPSB	Pressure control solenoid B	%	Idling at P or N position
SSA/SS1	Shift solenoid A	%	Idling at P or N position
SSB/SS2	Shift solenoid B	%	Idling at P or N position
SSC/SS3	Shift solenoid C	%	Idling at P or N position

05-02

ON-BOARD DIAGNOSTIC [FS5A-EL]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY FREEZE FRAME DATA HAS BEEN RECORDED <ul style="list-style-type: none"> • Has the FREEZE FRAME DATA been recorded on the repair order? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	INSPECT COUPLER COMPONENT CONNECTOR FOR POOR CONNECTION <ul style="list-style-type: none"> • Switch the ignition off. • Disconnect the coupler component connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion) • Is there any malfunction? 	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
4	INSPECT TFT SENSOR SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • Switch the ignition to ON (Engine off). • Measure the voltage between coupler component terminal E (wiring harness-side) and body GND. • Is the voltage B+? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 8.
		No	Go to the next step.
5	INSPECT TFT SENSOR <ul style="list-style-type: none"> • Inspect the TFT sensor. (See 05-17-20 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR INSPECTION [FS5A-EL].) • Is there any malfunction? 	Yes	Replace the coupler component, then go to Step 8. (See 05-17-21 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
6	INSPECT TCM CONNECTOR FOR POOR CONNECTION <ul style="list-style-type: none"> • Switch the ignition off. • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion) • Is there any malfunction? 	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
7	INSPECT TFT SENSOR CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Switch the ignition off. • Inspect for continuity between the following circuits: <ul style="list-style-type: none"> — Coupler component terminal E (wiring harness-side) and TCM terminal AA (wiring harness-side) — Coupler component terminal H (wiring harness-side) and TCM terminal V (wiring harness-side) • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
8	VERIFY TROUBLESHOOTING OF DTC P0713:00 COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all the disconnected connectors. • Clear the DTC using the M-MDS. • Perform the following procedure to ensure that the DTC has been resolved: <ol style="list-style-type: none"> 1. Drive the vehicle at more than 20 km/h {12 mph} for 150 s or more. • Is the same DTC present? 	Yes	Replace the TCM, then go to the next step. (See 05-17-39 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
9	VERIFY NO DTC HAS BEEN PRESENTED <ul style="list-style-type: none"> • Perform the "Reading DTCs Procedure". (See 05-02-3 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FS5A-EL].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 05-02-4 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FS5A-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FS5A-EL]

DTC P0715:00 [FS5A-EL]

id050221817600

DTC P0715:00	Input/turbine speed sensor circuit malfunction
DETECTION CONDITION	<ul style="list-style-type: none"> • The TCM detects no signal from the input/turbine speed sensor at vehicle speed 41 km/h {25 mph} or more. <p>Diagnostic support note</p> <ul style="list-style-type: none"> • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The AT warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Input/turbine speed sensor connector or terminal malfunction • Short to GND in wiring harness between input/turbine speed sensor terminal B and TCM terminal AB • Short to GND in wiring harness between input/turbine speed sensor terminal A and TCM terminal Y • Short to power supply in wiring harness between input/turbine speed sensor terminal B and TCM terminal AB • Short to power supply in wiring harness between input/turbine speed sensor terminal A and TCM terminal Y • Input/turbine speed sensor malfunction • TCM connector or terminal malfunction • Open circuit in wiring harness between input/turbine speed sensor terminal B and TCM terminal AB • Open circuit in wiring harness between input/turbine speed sensor terminal A and TCM terminal Y • TCM malfunction

05-02

ON-BOARD DIAGNOSTIC [FS5A-EL]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY FREEZE FRAME DATA HAS BEEN RECORDED <ul style="list-style-type: none"> • Has the FREEZE FRAME DATA been recorded on the repair order? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	INSPECT INPUT/TURBINE SPEED SENSOR CONNECTOR FOR POOR CONNECTION <ul style="list-style-type: none"> • Switch the ignition off. • Disconnect the input/turbine speed sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion) • Is there any malfunction? 	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	INSPECT INPUT/TURBINE SPEED SENSOR CIRCUIT FOR SHORT TO GND <ul style="list-style-type: none"> • Switch the ignition off. • Inspect for continuity between the following circuits: <ul style="list-style-type: none"> — Input/turbine speed sensor terminal B (wiring harness-side) and body GND — Input/turbine speed sensor terminal A (wiring harness-side) and body GND • Is there continuity? 	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 9.
		No	Go to the next step.
5	INSPECT INPUT/TURBINE SPEED SENSOR CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • Switch the ignition to ON (Engine off). • Measure the voltage between the following circuits: <ul style="list-style-type: none"> — Input/turbine speed sensor terminal B (wiring harness-side) and body GND — Input/turbine speed sensor terminal A (wiring harness-side) and body GND • Is the voltage B+? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 9.
		No	Go to the next step.
6	INSPECT INPUT/TURBINE SPEED SENSOR <ul style="list-style-type: none"> • Inspect the input/turbine speed sensor. (See 05-17-24 INPUT/TURBINE SPEED SENSOR INSPECTION [FS5A-EL].) • Is there any malfunction? 	Yes	Replace the input/turbine speed sensor, then go to Step 9. (See 05-17-25 INPUT/TURBINE SPEED SENSOR REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
7	INSPECT TCM CONNECTOR FOR POOR CONNECTION <ul style="list-style-type: none"> • Switch the ignition off. • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion) • Is there any malfunction? 	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
8	INSPECT INPUT/TURBINE SPEED SENSOR CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Switch the ignition off. • Inspect for continuity between the following circuits: <ul style="list-style-type: none"> — Input/turbine speed sensor terminal B (wiring harness-side) and TCM terminal AB (wiring harness-side) — Input/turbine speed sensor terminal A (wiring harness-side) and TCM terminal Y (wiring harness-side) • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.

ON-BOARD DIAGNOSTIC [FS5A-EL]

STEP	INSPECTION	ACTION	
9	VERIFY TROUBLESHOOTING OF DTC P0715:00 COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all the disconnected connectors. • Clear the DTC using the M-MDS. • Perform the following procedure to ensure that the DTC has been resolved: <ol style="list-style-type: none"> 1. Drive the vehicle at more than 41 km/h {25 mph} for 1 s or more. • Is the same DTC present? 	Yes	Replace the TCM, then go to the next step. (See 05-17-39 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
10	VERIFY NO DTC HAS BEEN PRESENTED <ul style="list-style-type: none"> • Perform the "Reading DTCs Procedure". (See 05-02-3 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FS5A-EL].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 05-02-4 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FS5A-EL].)
		No	DTC troubleshooting completed.

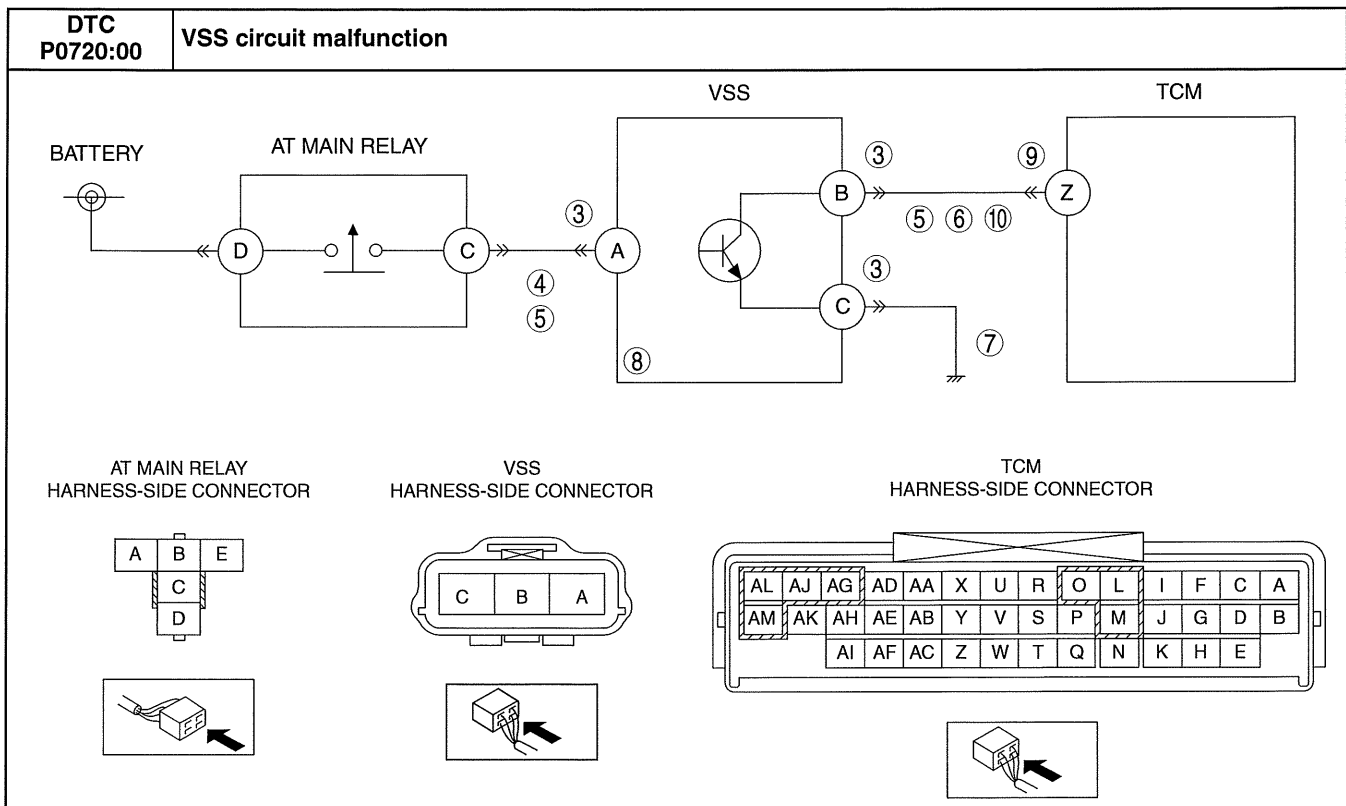

DTC P0720:00 [FS5A-EL]

id050221817700

05-02

DTC P0720:00	VSS circuit malfunction
DETECTION CONDITION	<ul style="list-style-type: none"> • The TCM detects no signal from the VSS when the following conditions are met. <ul style="list-style-type: none"> — Engine coolant temperature: more than 60 °C {140 °F} — D or M range — Intermediate speed: more than 1,500 rpm Diagnostic support note <ul style="list-style-type: none"> • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The AT warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • VSS connector or terminal malfunction • Open circuit in wiring harness between VSS terminal A and AT main relay terminal C • Short to GND in wiring harness between VSS terminal A and AT main relay terminal C • Short to GND in wiring harness between VSS terminal B and TCM terminal Z • Short to power supply in wiring harness between VSS terminal B and TCM terminal Z • Open circuit in wiring harness between VSS terminal C and body GND • VSS malfunction • TCM connector or terminal malfunction • Open circuit in wiring harness between VSS terminal B and TCM terminal Z • TCM malfunction

ON-BOARD DIAGNOSTIC [FS5A-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN RECORDED <ul style="list-style-type: none"> • Has the FREEZE FRAME DATA been recorded on the repair order? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	INSPECT VSS CONNECTOR FOR POOR CONNECTION <ul style="list-style-type: none"> • Switch the ignition off. • Disconnect the VSS connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion) • Is there any malfunction? 	Yes	Repair or replace the terminal, then go to Step 11.
		No	Go to the next step.
4	INSPECT VSS POWER CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Switch the ignition to ON (Engine off). • Measure the voltage between VSS terminal A (wiring harness-side) and body GND. • Is the voltage B+? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 11.
5	INSPECT VSS CIRCUIT FOR SHORT TO GND <ul style="list-style-type: none"> • Switch the ignition off. • Inspect for continuity between the following circuits: <ul style="list-style-type: none"> — VSS terminal A (wiring harness-side) and body GND — VSS terminal B (wiring harness-side) and body GND • Is there continuity? 	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 11.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [FS5A-EL]

STEP	INSPECTION	ACTION	
6	INSPECT VSS SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • Switch the ignition to ON (Engine off). • Measure the voltage between VSS terminal B (wiring harness-side) and body GND. • Is the voltage B+? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 11.
		No	Go to the next step.
7	INSPECT VSS GND CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Switch the ignition off. • Inspect for continuity between VSS terminal C (wiring harness-side) and body GND • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 11.
8	INSPECT VSS <ul style="list-style-type: none"> • Inspect the VSS. (See 05-17-27 VEHICLE SPEED SENSOR (VSS) INSPECTION [FS5A-EL].) • Is there any malfunction? 	Yes	Replace the VSS, then go to Step 11. (See 05-17-28 VEHICLE SPEED SENSOR (VSS) REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
9	INSPECT TCM CONNECTOR FOR POOR CONNECTION <ul style="list-style-type: none"> • Switch the ignition off. • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion) • Is there any malfunction? 	Yes	Repair or replace the terminal, then go to Step 11.
		No	Go to the next step.
10	INSPECT VSS CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Switch the ignition off. • Inspect for continuity between the VSS terminal B (wiring harness-side) and TCM terminal Z (wiring harness-side). • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
11	VERIFY TROUBLESHOOTING OF DTC P0720:00 COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all the disconnected connectors. • Clear the DTC using the M-MDS. • Perform the following procedure to ensure that the DTC has been resolved: <ol style="list-style-type: none"> 1. Start the engine. 2. Warm-up the engine until the engine coolant temperature reaches 60 °C {140 °C} or more. 3. Select the selector lever to D or M range. 4. Drive the vehicle with turbine speed at more than 1,500 rpm for 5 s or more. • Is the same DTC present? 	Yes	Replace the TCM, then go to the next step. (See 05-17-39 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
12	VERIFY NO DTC HAS BEEN PRESENTED <ul style="list-style-type: none"> • Perform the "Reading DTCs Procedure". (See 05-02-3 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FS5A-EL].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 05-02-4 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FS5A-EL].)
		No	DTC troubleshooting completed.

05-02

ON-BOARD DIAGNOSTIC [FS5A-EL]

DTC P0731:00 [FS5A-EL]

id050221817800

DTC P0731:00	Gear 1 incorrect ratio
DETECTION CONDITION	<ul style="list-style-type: none"> • The TCM detects that revolution ratio of the input revolution to output revolution is less than 2.157 four times when the following conditions are met. <ul style="list-style-type: none"> — 1GR — Accelerator opening angle: 3.17% or more (LF) / 3.68% or more (L5) <p>Diagnostic support note</p> <ul style="list-style-type: none"> • The MIL does not illuminate. • The AT warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is not available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Deteriorated ATF • ATF level low • Solenoid valve malfunction <ul style="list-style-type: none"> — Pressure control solenoid A — Shift solenoid A • Line pressure malfunction • Stall speed malfunction • Forward clutch slipping • One-way clutch No.1 slipping • Primary control valve body malfunction • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	INSPECT ATF CONDITION <ul style="list-style-type: none"> • Inspect the ATF condition. (See 05-17-12 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FS5A-EL].) • Is it normal? 	Yes	Go to the next step.
		No	Replace the ATF, then go to Step 9. (See 05-17-14 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL])
3	INSPECT ATF LEVEL <ul style="list-style-type: none"> • Inspect the ATF level. (See 05-17-12 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FS5A-EL].) • Is it normal? 	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 9. (See 05-17-14 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL])
4	INSPECT SOLENOID VALVE <ul style="list-style-type: none"> • Inspect the following solenoid valves: (See 05-17-29 SOLENOID VALVE INSPECTION [FS5A-EL].) — Pressure control solenoid A — Shift solenoid A • Is there any malfunction? 	Yes	Replace the solenoid valve, then go to Step 9. (See 05-17-33 SOLENOID VALVE REMOVAL/ INSTALLATION [FS5A-EL].)
		No	Go to the next step.
5	INSPECT LINE PRESSURE <ul style="list-style-type: none"> • Perform the "Line Pressures Test". (See 05-17-3 MECHANICAL SYSTEM TEST [FS5A-EL].) • Is there any malfunction? 	Yes	Repair or replace malfunctioning part according to test result, then go to Step 9.
		No	Go to the next step.
6	INSPECT STALL SPEED <ul style="list-style-type: none"> • Perform the "Stall Test". (See 05-17-3 MECHANICAL SYSTEM TEST [FS5A-EL].) • Is there any malfunction? 	Yes	Repair or replace malfunctioning part according to test result, then go to Step 9.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [FS5A-EL]

STEP	INSPECTION	ACTION	
7	INSPECT TURBINE SPEED WHILE DRIVING VEHICLE <ul style="list-style-type: none"> • Connect the M-MDS. • Start the engine. • Measure the PID "TSS" while driving vehicle under the following conditions: <ul style="list-style-type: none"> — Selector lever position: D range — Gear position: 1GR — Vehicle speed: 20 km/h {12 mph} • Is the PID "TSS" approx.2,200 RPM (LF) / approx.2,300 RPM (L5)? 	Yes	Go to Step 9.
		No	Go to the next step.
8	INSPECT PRIMARY CONTROL VALVE BODY <ul style="list-style-type: none"> • Remove the primary control valve body. (See 05-17-52 CONTROL VALVE BODY REMOVAL/INSTALLATION [FS5A-EL].) • Disassemble the primary control valve body. • Inspect the following parts: <ul style="list-style-type: none"> — Shift valve — Return spring — Hydraulic passage • Is there any malfunction? 	Yes	Repair or replace malfunctioning part according to inspection result, then go to next step.
		No	Replace the transaxle, then go to the next step. (See 05-17-40 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL].)
9	VERIFY TROUBLESHOOTING OF DTC P0731:00 COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all the disconnected connectors. • Clear the DTC using the M-MDS. • Perform the following procedure to ensure that the DTC has been resolved: <ol style="list-style-type: none"> 1. Drive the vehicle under the following conditions for 1 s or more. <ul style="list-style-type: none"> — 1GR — Accelerator opening angle: 3.17% or more (LF) / 3.68% or more (L5) 2. Stop the vehicle. 3. Repeat Step 1—2 three times. • Is the same DTC present? 	Yes	Replace the TCM, then go to the next step. (See 05-17-39 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
10	VERIFY NO DTC HAS BEEN PRESENTED <ul style="list-style-type: none"> • Perform the "Reading DTCs Procedure". (See 05-02-3 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FS5A-EL].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 05-02-4 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FS5A-EL].)
		No	DTC troubleshooting completed.

05-02

DTC P0732:00 [FS5A-EL]

id050221817900

DTC P0732:00	Gear 2 incorrect ratio
DETECTION CONDITION	<ul style="list-style-type: none"> • The TCM detects that revolution ratio of the input revolution to output revolution in 2GR is more than 2.157 or less than 1.249 three times. <p>Diagnostic support note</p> <ul style="list-style-type: none"> • The MIL does not illuminate. • The AT warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is not available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.

ON-BOARD DIAGNOSTIC [FS5A-EL]

DTC P0732:00	Gear 2 incorrect ratio
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Deteriorated ATF • ATF level low • Solenoid valve malfunction <ul style="list-style-type: none"> — Pressure control solenoid A — Shift solenoid A — Shift solenoid B — Shift solenoid C • Line pressure malfunction • Stall speed malfunction • Forward clutch slipping • 2-4 brake band slipping • Primary control valve body malfunction • TCM malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	INSPECT ATF CONDITION <ul style="list-style-type: none"> • Inspect the ATF condition. (See 05-17-12 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FS5A-EL].) • Is it normal? 	Yes	Go to the next step.
		No	Replace the ATF, then go to Step 9. (See 05-17-14 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL])
3	INSPECT ATF LEVEL <ul style="list-style-type: none"> • Inspect the ATF level. (See 05-17-12 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FS5A-EL].) • Is it normal? 	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 9. (See 05-17-14 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL])
4	INSPECT SOLENOID VALVE <ul style="list-style-type: none"> • Inspect the following solenoid valves: (See 05-17-29 SOLENOID VALVE INSPECTION [FS5A-EL].) <ul style="list-style-type: none"> — Pressure control solenoid A — Shift solenoid A — Shift solenoid B — Shift solenoid C • Is there any malfunction? 	Yes	Replace the solenoid valve, then go to Step 9. (See 05-17-33 SOLENOID VALVE REMOVAL/ INSTALLATION [FS5A-EL].)
		No	Go to the next step.
5	INSPECT LINE PRESSURE <ul style="list-style-type: none"> • Perform the "Line Pressures Test". (See 05-17-3 MECHANICAL SYSTEM TEST [FS5A-EL].) • Is there any malfunction? 	Yes	Repair or replace malfunctioning part according to test result, then go to Step 9.
		No	Go to the next step.
6	INSPECT STALL SPEED <ul style="list-style-type: none"> • Perform the "Stall Test". (See 05-17-3 MECHANICAL SYSTEM TEST [FS5A-EL].) • Is there any malfunction? 	Yes	Repair or replace malfunctioning part according to test result, then go to Step 9.
		No	Go to the next step.
7	INSPECT TURBINE SPEED WHILE DRIVING VEHICLE <ul style="list-style-type: none"> • Connect the M-MDS. • Start the engine. • Measure the PID "TSS" while driving vehicle under the following conditions: <ul style="list-style-type: none"> — Selector lever position: D range — Gear position: 2GR — Vehicle speed: 40 km/h {25 mph} • Is the PID "TSS" approx.2,300 RPM (LF) / approx.2,450 RPM (L5)? 	Yes	Go to Step 9.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [FS5A-EL]

STEP	INSPECTION	ACTION	
8	INSPECT PRIMARY CONTROL VALVE BODY <ul style="list-style-type: none"> • Remove the primary control valve body. (See 05-17-52 CONTROL VALVE BODY REMOVAL/INSTALLATION [FS5A-EL].) • Disassemble the primary control valve body. • Inspect the following parts: <ul style="list-style-type: none"> — Shift valve — Return spring — Hydraulic passage • Is there any malfunction? 	Yes	Repair or replace malfunctioning part according to inspection result, then go to next step.
		No	Replace the transaxle, then go to the next step. (See 05-17-40 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL].)
9	VERIFY TROUBLESHOOTING OF DTC P0732:00 COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all the disconnected connectors. • Clear the DTC using the M-MDS. • Perform the following procedure to ensure that the DTC has been resolved: <ol style="list-style-type: none"> 1. Drive the vehicle in 2GR for 1 s or more. 2. Stop the vehicle. 3. Repeat Step 1—2 two times. • Is the same DTC present? 	Yes	Replace the TCM, then go to the next step. (See 05-17-39 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
10	VERIFY NO DTC HAS BEEN PRESENTED <ul style="list-style-type: none"> • Perform the "Reading DTCs Procedure". (See 05-02-3 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FS5A-EL].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 05-02-4 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FS5A-EL].)
		No	DTC troubleshooting completed.

05-02

DTC P0733:00 [FS5A-EL]

id050221818000

DTC P0733:00	Gear 3 incorrect ratio
DETECTION CONDITION	<ul style="list-style-type: none"> • The TCM detects that revolution ratio of the input revolution to output revolution in 3GR is more than 2.157. • The TCM detects that revolution ratio of the input revolution to output revolution is between 1.345—1.644 when the following conditions are met. <ul style="list-style-type: none"> — 3GR — Vehicle speed: more than 28 km/h {17 mph} (LF) / more than 27 km/h {17 mph} (L5) — TCC operation: Off • The TCM detects that revolution ratio of the input revolution to output revolution is less than 0.863 when the following conditions are met. <ul style="list-style-type: none"> — 3GR — Vehicle speed: more than 43 km/h {27 mph} (LF) / more than 41 km/h {25 mph} (L5) — TCC operation: Off <p>Diagnostic support note</p> <ul style="list-style-type: none"> • The MIL does not illuminate. • The AT warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is not available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Deteriorated ATF • ATF level low • Solenoid valve malfunction <ul style="list-style-type: none"> — Pressure control solenoid A — Shift solenoid A — Shift solenoid C • Line pressure malfunction • Stall speed malfunction • Forward clutch slipping • 3-4 clutch slipping • Primary control valve body malfunction • TCM malfunction

ON-BOARD DIAGNOSTIC [FS5A-EL]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	INSPECT ATF CONDITION <ul style="list-style-type: none"> • Inspect the ATF condition. (See 05-17-12 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FS5A-EL].) • Is it normal? 	Yes	Go to the next step.
		No	Replace the ATF, then go to Step 9. (See 05-17-14 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL])
3	INSPECT ATF LEVEL <ul style="list-style-type: none"> • Inspect the ATF level. (See 05-17-12 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FS5A-EL].) • Is it normal? 	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 9. (See 05-17-14 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL])
4	INSPECT SOLENOID VALVE <ul style="list-style-type: none"> • Inspect the following solenoid valves: (See 05-17-29 SOLENOID VALVE INSPECTION [FS5A-EL].) <ul style="list-style-type: none"> — Pressure control solenoid A — Shift solenoid A — Shift solenoid C • Is there any malfunction? 	Yes	Replace the solenoid valve, then go to Step 9. (See 05-17-33 SOLENOID VALVE REMOVAL/ INSTALLATION [FS5A-EL].)
		No	Go to the next step.
5	INSPECT LINE PRESSURE <ul style="list-style-type: none"> • Perform the "Line Pressures Test". (See 05-17-3 MECHANICAL SYSTEM TEST [FS5A-EL].) • Is there any malfunction? 	Yes	Repair or replace malfunctioning part according to test result, then go to Step 9.
		No	Go to the next step.
6	INSPECT STALL SPEED <ul style="list-style-type: none"> • Perform the "Stall Test". (See 05-17-3 MECHANICAL SYSTEM TEST [FS5A-EL].) • Is there any malfunction? 	Yes	Repair or replace malfunctioning part according to test result, then go to Step 9.
		No	Go to the next step.
7	INSPECT TURBINE SPEED WHILE DRIVING VEHICLE <ul style="list-style-type: none"> • Connect the M-MDS. • Start the engine. • Measure the PID "TSS" while driving vehicle under the following conditions: <ul style="list-style-type: none"> — Selector lever position: D range — Gear position: 3GR — Vehicle speed: 60 km/h {37 mph} • Is the PID "TSS" approx.2,300 RPM (LF) / approx.2,450 RPM (L5)? 	Yes	Go to Step 9.
		No	Go to the next step.
8	INSPECT PRIMARY CONTROL VALVE BODY <ul style="list-style-type: none"> • Remove the primary control valve body. (See 05-17-52 CONTROL VALVE BODY REMOVAL/INSTALLATION [FS5A-EL].) • Disassemble the primary control valve body. • Inspect the following parts: <ul style="list-style-type: none"> — Shift valve — Return spring — Hydraulic passage • Is there any malfunction? 	Yes	Repair or replace malfunctioning part according to inspection result, then go to next step.
		No	Replace the transaxle, then go to the next step. (See 05-17-40 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION [FS5A-EL].)

ON-BOARD DIAGNOSTIC [FS5A-EL]

STEP	INSPECTION		ACTION
9	VERIFY TROUBLESHOOTING OF DTC P0733:00 COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all the disconnected connectors. • Clear the DTC using the M-MDS. • Perform the following procedure to ensure that the DTC has been resolved: <ol style="list-style-type: none"> 1. Drive the vehicle under the following conditions for 2 s or more. <ul style="list-style-type: none"> — 3GR — Vehicle speed: more than 28 km/h {17 mph} (LF) / more than 27 km/h {17 mph} (L5) — TCC operation: Off 2. Drive the vehicle under the following conditions for 5 s or more. <ul style="list-style-type: none"> — 3GR — Vehicle speed: more than 43 km/h {27 mph} (LF) / more than 41 km/h {25 mph} (L5) — TCC operation: Off • Is the same DTC present? 	Yes	Replace the TCM, then go to the next step. (See 05-17-39 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
10	VERIFY NO DTC HAS BEEN PRESENTED <ul style="list-style-type: none"> • Perform the "Reading DTCs Procedure". (See 05-02-3 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FS5A-EL].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 05-02-4 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FS5A-EL].)
		No	DTC troubleshooting completed.

05-02

DTC P0734:00 [FS5A-EL]

id050221818100

DTC P0734:00	Gear 4 incorrect ratio
DETECTION CONDITION	<ul style="list-style-type: none"> • The TCM detects that revolution ratio of the input revolution to output revolution is more than 1.249 or less than 0.6 when the following conditions are met. <ul style="list-style-type: none"> — 4GR — Vehicle speed: more than 31 km/h {19 mph} (LF) / more than 28 km/h {17 mph} (L5) • The TCM detects that revolution ratio of the input revolution to output revolution is between 1.09—0.91 when the following conditions are met. <ul style="list-style-type: none"> — 4GR — Vehicle speed: more than 46 km/h {29 mph} — TCC operation: Off <p>Diagnostic support note</p> <ul style="list-style-type: none"> • The MIL does not illuminate. • The AT warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is not available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.

id050221818400

DTC P0744:00	TCC slip control malfunction
DETECTION CONDITION	<ul style="list-style-type: none"> • The TCM detects that revolution ratio of the input revolution to output revolution in 3GR is more than 1.09 or less than 0.91. • The TCM detects that revolution ratio of the input revolution to output revolution in 4GR is more than 0.817 or less than 0.636. <p>Diagnostic support note</p> <ul style="list-style-type: none"> • The MIL does not illuminate. • The AT warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is not available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.

ON-BOARD DIAGNOSTIC [FS5A-EL]

DTC P0744:00	TCC slip control malfunction
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Solenoid valve malfunction <ul style="list-style-type: none"> — Shift solenoid A — Shift solenoid D — Shift solenoid E • Forward clutch not engaged or slipped • TCM malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	VERIFY DTC HAVE BEEN PRESENTED <ul style="list-style-type: none"> • Switch the ignition to ON (Engine off). • Perform the "Reading DTCs Procedure". (See 05-02-3 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FS5A-EL].) • Are the following DTCs output? <ul style="list-style-type: none"> — P0752:00 (Shift solenoid A stuck on) — P0753:00 (Shift solenoid A electrical malfunction) — P0767:00 (Shift solenoid D stuck on) — P0768:00 (Shift solenoid D electrical malfunction) — P0771:00 (Shift solenoid E stuck off) — P0773:00 (Shift solenoid E electrical malfunction) 	Yes	Go to the applicable DTC inspection. (See 05-02-4 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FS5A-EL].)
		No	Replace the forward clutch, then go to the next step.
3	VERIFY TROUBLESHOOTING OF DTC P0744:00 COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all the disconnected connectors. • Clear the DTC using the M-MDS. • Perform the following procedure to ensure that the DTC has been resolved: <ol style="list-style-type: none"> 1. Drive the vehicle in 3GR for 1 s or more. 2. Drive the vehicle in 4GR for 1 s or more. • Is the same DTC present? 	Yes	Replace the TCM, then go to the next step. (See 05-17-39 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
4	VERIFY NO DTC HAS BEEN PRESENTED <ul style="list-style-type: none"> • Perform the "Reading DTCs Procedure". (See 05-02-3 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FS5A-EL].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 05-02-4 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FS5A-EL].)
		No	DTC troubleshooting completed.

05-02

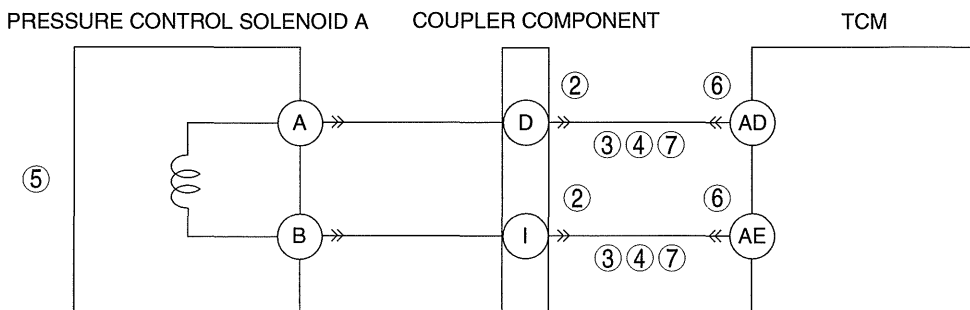

DTC P0745:00 [FS5A-EL]

id050221818500

DTC P0745:00	Pressure control solenoid A malfunction
DETECTION CONDITION	<ul style="list-style-type: none"> • The TCM detects that output voltage to the pressure control solenoid A is stuck at 0 V or B+ when the solenoid valve operates according to TCM calculation. <p>Diagnostic support note</p> <ul style="list-style-type: none"> • The MIL does not illuminate. • The AT warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is not available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.

ON-BOARD DIAGNOSTIC [FS5A-EL]

DTC P0745:00	Pressure control solenoid A malfunction
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Coupler component connector or terminal malfunction • Short to power supply in wiring harness between pressure control solenoid A terminal A and TCM terminal AD • Short to power supply in wiring harness between pressure control solenoid A terminal B and TCM terminal AE • Short to GND in wiring harness between pressure control solenoid A terminal A and TCM terminal AD • Short to GND in wiring harness between pressure control solenoid A terminal B and TCM terminal AE • Pressure control solenoid A malfunction • TCM connector or terminal malfunction • Open circuit in wiring harness between pressure control solenoid A terminal A and TCM terminal AD • Open circuit in wiring harness between pressure control solenoid A terminal B and TCM terminal AE • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	INSPECT COUPLER COMPONENT CONNECTOR FOR POOR CONNECTION <ul style="list-style-type: none"> • Switch the ignition off. • Disconnect the coupler component connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion) • Is there any malfunction? 	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
3	INSPECT PRESSURE CONTROL SOLENOID A CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • Switch the ignition off. • Measure the voltage between the following circuits: <ul style="list-style-type: none"> — Coupler component terminal D (wiring harness-side) and body GND — Coupler component terminal I (wiring harness-side) and body GND • Is the voltage B+? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 8.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [FS5A-EL]

STEP	INSPECTION	ACTION	
4	INSPECT PRESSURE CONTROL SOLENOID A CIRCUIT FOR SHORT TO GND <ul style="list-style-type: none"> • Switch the ignition off. • Inspect for continuity between the following circuits: <ul style="list-style-type: none"> — Coupler component terminal D (wiring harness-side) and body GND — Coupler component terminal I (wiring harness-side) and body GND • Is there continuity? 	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 8.
		No	Go to the next step.
5	INSPECT PRESSURE CONTROL SOLENOID A <ul style="list-style-type: none"> • Inspect pressure control solenoid A. (See 05-17-29 SOLENOID VALVE INSPECTION [FS5A-EL].) • Is there any malfunction? 	Yes	Replace the pressure control solenoid A, then go to Step 8. (See 05-17-33 SOLENOID VALVE REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
6	INSPECT TCM CONNECTOR FOR POOR CONNECTION <ul style="list-style-type: none"> • Switch the ignition off. • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion) • Is there any malfunction? 	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
7	INSPECT PRESSURE CONTROL SOLENOID A CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Switch the ignition off. • Inspect for continuity between the following circuits: <ul style="list-style-type: none"> — Coupler component terminal D (wiring harness-side) and TCM terminal AD (wiring harness-side) — Coupler component terminal I (wiring harness-side) and TCM terminal AE (wiring harness-side) • Is there continuity? 	Yes	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
		No	Go to the next step.
8	VERIFY TROUBLESHOOTING OF DTC P0745:00 COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all the disconnected connectors. • Clear the DTC using the M-MDS. • Perform the following procedure to ensure that the DTC has been resolved: <ol style="list-style-type: none"> 1. Make sure that the gears shift smoothly from 1GR to 5GR. 2. Make sure that TCC operates smoothly. • Is the same DTC present? 	Yes	Replace the TCM, then go to the next step. (See 05-17-39 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
9	VERIFY NO DTC HAS BEEN PRESENTED <ul style="list-style-type: none"> • Perform the "Reading DTCs Procedure". (See 05-02-3 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FS5A-EL].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 05-02-4 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FS5A-EL].)
		No	DTC troubleshooting completed.

05-02

ON-BOARD DIAGNOSTIC [FS5A-EL]

DTC P0751:00 [FS5A-EL]

id050221818600

DTC P0751:00	Shift solenoid A stuck off
DETECTION CONDITION	<ul style="list-style-type: none"> • The TCM detects that revolution ratio of the input revolution to output revolution is between 1.09—0.91 when the following conditions are met. <ul style="list-style-type: none"> — 4GR — Vehicle speed: more than 46 km/h {29 mph} — TCC operation: Off <p>Diagnostic support note</p> <ul style="list-style-type: none"> • The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The AT warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Deteriorated ATF • ATF level low • Shift solenoid A malfunction • Line pressure malfunction • Primary control valve body malfunction • TCM malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY FREEZE FRAME DATA HAS BEEN RECORDED <ul style="list-style-type: none"> • Has the FREEZE FRAME DATA been recorded on the repair order? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	INSPECT ATF CONDITION <ul style="list-style-type: none"> • Inspect the ATF condition. (See 05-17-12 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FS5A-EL].) • Is it normal? 	Yes	Go to the next step.
		No	Replace the ATF, then go to Step 8. (See 05-17-14 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL])
4	INSPECT ATF LEVEL <ul style="list-style-type: none"> • Inspect the ATF level. (See 05-17-12 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FS5A-EL].) • Is it normal? 	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 8. (See 05-17-14 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL])
5	INSPECT SHIFT SOLENOID A <ul style="list-style-type: none"> • Inspect the shift solenoid A. (See 05-17-29 SOLENOID VALVE INSPECTION [FS5A-EL].) • Is there any malfunction? 	Yes	Replace the shift solenoid A, then go to Step 8. (See 05-17-33 SOLENOID VALVE REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
6	INSPECT LINE PRESSURE <ul style="list-style-type: none"> • Perform the "Line Pressures Test". (See 05-17-3 MECHANICAL SYSTEM TEST [FS5A-EL].) • Is there any malfunction? 	Yes	Repair or replace malfunctioning part according to test result, then go to Step 8.
		No	Go to the next step.
7	INSPECT PRIMARY CONTROL VALVE BODY <ul style="list-style-type: none"> • Remove the primary control valve body. (See 05-17-52 CONTROL VALVE BODY REMOVAL/INSTALLATION [FS5A-EL].) • Disassemble the primary control valve body. • Inspect the following parts: <ul style="list-style-type: none"> — Shift valve — Return spring — Hydraulic passage • Is there any malfunction? 	Yes	Repair or replace malfunctioning part according to inspection result, then go to next step.
		No	Replace the transaxle, then go to the next step. (See 05-17-40 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL].)

ON-BOARD DIAGNOSTIC [FS5A-EL]

STEP	INSPECTION	ACTION	
8	VERIFY TROUBLESHOOTING OF DTC P0751:00 COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all the disconnected connectors. • Clear the DTC using the M-MDS. • Perform the following procedure to ensure that the DTC has been resolved: <ol style="list-style-type: none"> 1. Drive the vehicle under the following conditions for 5 s or more. <ul style="list-style-type: none"> — 4GR — Vehicle speed: more than 46 km/h {29 mph} — TCC operation: Off • Is the PENDING CODE same as the DTC present? 	Yes	Replace the TCM, then go to the next step. (See 05-17-39 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
9	VERIFY NO DTC HAS BEEN PRESENTED <ul style="list-style-type: none"> • Perform the "Reading DTCs Procedure". id050221819000

DTC P0757:00	Shift solenoid B stuck on
DETECTION CONDITION	<ul style="list-style-type: none"> • The TCM detects that revolution ratio of the input revolution to output revolution in 2GR is more than 2.157 or less than 1.249 three times. • The TCM detects that revolution ratio of the input revolution to output revolution is more than 1.249 or less than 0.6 when the following conditions are met. <ul style="list-style-type: none"> — 4GR — Vehicle speed: more than 31 km/h {19 mph} (LF) / more than 28km/h {17 mph} (L5) <p>Diagnostic support note</p> <ul style="list-style-type: none"> • The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The AT warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Deteriorated ATF • ATF level low • Shift solenoid B malfunction • Line pressure malfunction • Primary control valve body malfunction • TCM malfunction

ON-BOARD DIAGNOSTIC [FS5A-EL]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY FREEZE FRAME DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the FREEZE FRAME DATA been recorded on the repair order? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	INSPECT ATF CONDITION <ul style="list-style-type: none"> Inspect the ATF condition. (See 05-17-12 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FS5A-EL].) Is it normal? 	Yes	Go to the next step.
		No	Replace the ATF, then go to Step 8. (See 05-17-14 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
4	INSPECT ATF LEVEL <ul style="list-style-type: none"> Inspect the ATF level. (See 05-17-12 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FS5A-EL].) Is it normal? 	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 8. (See 05-17-14 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
5	INSPECT SHIFT SOLENOID B <ul style="list-style-type: none"> Inspect the shift solenoid B. (See 05-17-29 SOLENOID VALVE INSPECTION [FS5A-EL].) Is there any malfunction? 	Yes	Replace the shift solenoid B, then go to Step 8. (See 05-17-33 SOLENOID VALVE REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
6	INSPECT LINE PRESSURE <ul style="list-style-type: none"> Perform the "Line Pressures Test". (See 05-17-3 MECHANICAL SYSTEM TEST [FS5A-EL].) Is there any malfunction? 	Yes	Repair or replace malfunctioning part according to test result, then go to Step 8.
		No	Go to the next step.
7	INSPECT PRIMARY CONTROL VALVE BODY <ul style="list-style-type: none"> Remove the primary control valve body. (See 05-17-52 CONTROL VALVE BODY REMOVAL/INSTALLATION [FS5A-EL].) Disassemble the primary control valve body. Inspect the following parts: <ul style="list-style-type: none"> Shift valve Return spring Hydraulic passage Is there any malfunction? 	Yes	Repair or replace malfunctioning part according to inspection result, then go to next step.
		No	Replace the transaxle, then go to the next step. (See 05-17-40 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL].)
8	VERIFY TROUBLESHOOTING OF DTC P0757:00 COMPLETED <ul style="list-style-type: none"> Make sure to reconnect all the disconnected connectors. Clear the DTC using the M-MDS. Perform the following procedure to ensure that the DTC has been resolved: <ol style="list-style-type: none"> Drive the vehicle in 2GR for 1 s or more. Stop the vehicle. Repeat Step 1—2 two times. Drive the vehicle under the following conditions for 1 s or more. <ul style="list-style-type: none"> 4GR Vehicle speed: more than 31 km/h {19 mph} (LF) / more than 28 km/h {17 mph} (L5) Is the PENDING CODE same as the DTC present? 	Yes	Replace the TCM, then go to the next step. (See 05-17-39 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
9	VERIFY NO DTC HAS BEEN PRESENTED <ul style="list-style-type: none"> Perform the "Reading DTCs Procedure". (See 05-02-3 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FS5A-EL].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 05-02-4 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FS5A-EL].)
		No	DTC troubleshooting completed.

DTC P0758:00 [FS5A-EL]

id050221819100

DTC P0758:00	Shift solenoid B electrical malfunction
DETECTION CONDITION	<ul style="list-style-type: none"> The TCM detects that output voltage to the shift solenoid B is stuck at 0 V or B+ when the solenoid valve operates according to TCM calculation. <p>Diagnostic support note</p> <ul style="list-style-type: none"> The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. The AT warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. PENDING CODE is available. FREEZE FRAME DATA is available. The DTC is stored in the TCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Coupler component connector or terminal malfunction Short to power supply in wiring harness between shift solenoid B terminal B and TCM terminal AJ Short to GND in wiring harness between shift solenoid B terminal B and TCM terminal AJ Shift solenoid B malfunction TCM connector or terminal malfunction Open circuit in wiring harness between shift solenoid B terminal B and TCM terminal AJ TCM malfunction

ON-BOARD DIAGNOSTIC [FS5A-EL]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY FREEZE FRAME DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the FREEZE FRAME DATA been recorded on the repair order? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	INSPECT COUPLER COMPONENT CONNECTOR FOR POOR CONNECTION <ul style="list-style-type: none"> Switch the ignition off. Disconnect the coupler component connector. Inspect for poor connection (such as damaged/pulled-out pins, corrosion) Is there any malfunction? 	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	INSPECT SHIFT SOLENOID B CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> Switch the ignition off. Measure the voltage between the coupler component terminal C (wiring harness-side) and body GND. Is the voltage B+? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 9.
		No	Go to the next step.
5	INSPECT SHIFT SOLENOID B CONTROL CIRCUIT FOR SHORT TO GND <ul style="list-style-type: none"> Switch the ignition off. Inspect for continuity between the coupler component terminal C (wiring harness-side) and body GND. Is there continuity? 	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 9.
		No	Go to the next step.
6	INSPECT SHIFT SOLENOID B <ul style="list-style-type: none"> Inspect the shift solenoid B. (See 05-17-29 SOLENOID VALVE INSPECTION [FS5A-EL].) Is there any malfunction? 	Yes	Replace the shift solenoid B, then go to Step 9. (See 05-17-33 SOLENOID VALVE REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
7	INSPECT TCM CONNECTOR FOR POOR CONNECTION <ul style="list-style-type: none"> Switch the ignition off. Disconnect the TCM connector. Inspect for poor connection (such as damaged/pulled-out pins, corrosion) Is there any malfunction? 	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
8	INSPECT SHIFT SOLENOID B CONTROL CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> Switch the ignition off. Inspect for continuity between the coupler component terminal C (wiring harness-side) and TCM terminal AJ (wiring harness-side). Is there continuity? 	Yes	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
		No	Go to the next step.
9	VERIFY TROUBLESHOOTING OF DTC P0758:00 COMPLETED <ul style="list-style-type: none"> Make sure to reconnect all the disconnected connectors. Clear the DTC using the M-MDS. Perform the following procedure to ensure that the DTC has been resolved: <ol style="list-style-type: none"> Make sure that the gears shift smoothly from 1GR to 5GR. Make sure that TCC operates smoothly. Is the same DTC present? 	Yes	Replace the TCM, then go to the next step. (See 05-17-39 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
10	VERIFY NO DTC HAS BEEN PRESENTED <ul style="list-style-type: none"> Perform the "Reading DTCs Procedure". (See 05-02-3 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FS5A-EL].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 05-02-4 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FS5A-EL].)
		No	DTC troubleshooting completed.

3	INSPECT ATF CONDITION <ul style="list-style-type: none"> • Inspect the ATF condition. (See 05-17-12 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FS5A-EL].) • Is it normal? 	Yes	Go to the next step.
		No	Replace the ATF, then go to Step 8. (See 05-17-14 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
4	INSPECT ATF LEVEL <ul style="list-style-type: none"> • Inspect the ATF level. (See 05-17-12 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FS5A-EL].) • Is it normal? 	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 8. (See 05-17-14 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
5	INSPECT PRESSURE CONTROL SOLENOID B <ul style="list-style-type: none"> • Inspect the pressure control solenoid B. (See 05-17-29 SOLENOID VALVE INSPECTION [FS5A-EL].) • Is there any malfunction? 	Yes	Replace the pressure control solenoid B, then go to Step 8. (See 05-17-33 SOLENOID VALVE REMOVAL/ INSTALLATION [FS5A-EL].)
		No	Go to the next step.
6	INSPECT LINE PRESSURE <ul style="list-style-type: none"> • Perform the "Line Pressures Test". (See 05-17-3 MECHANICAL SYSTEM TEST [FS5A-EL].) • Is there any malfunction? 	Yes	Repair or replace malfunctioning part according to test result, then go to Step 8.
		No	Go to the next step.
7	INSPECT SECONDARY CONTROL VALVE BODY <ul style="list-style-type: none"> • Remove the secondary control valve body. (See 05-17-52 CONTROL VALVE BODY REMOVAL/INSTALLATION [FS5A-EL].) • Disassemble the secondary control valve body. • Inspect the following parts: <ul style="list-style-type: none"> — Shift valve — Return spring — Hydraulic passage • Is there any malfunction? 	Yes	Repair or replace malfunctioning part according to inspection result, then go to next step.
		No	Replace the transaxle, then go to the next step. (See 05-17-40 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION [FS5A-EL].)

ON-BOARD DIAGNOSTIC [FS5A-EL]

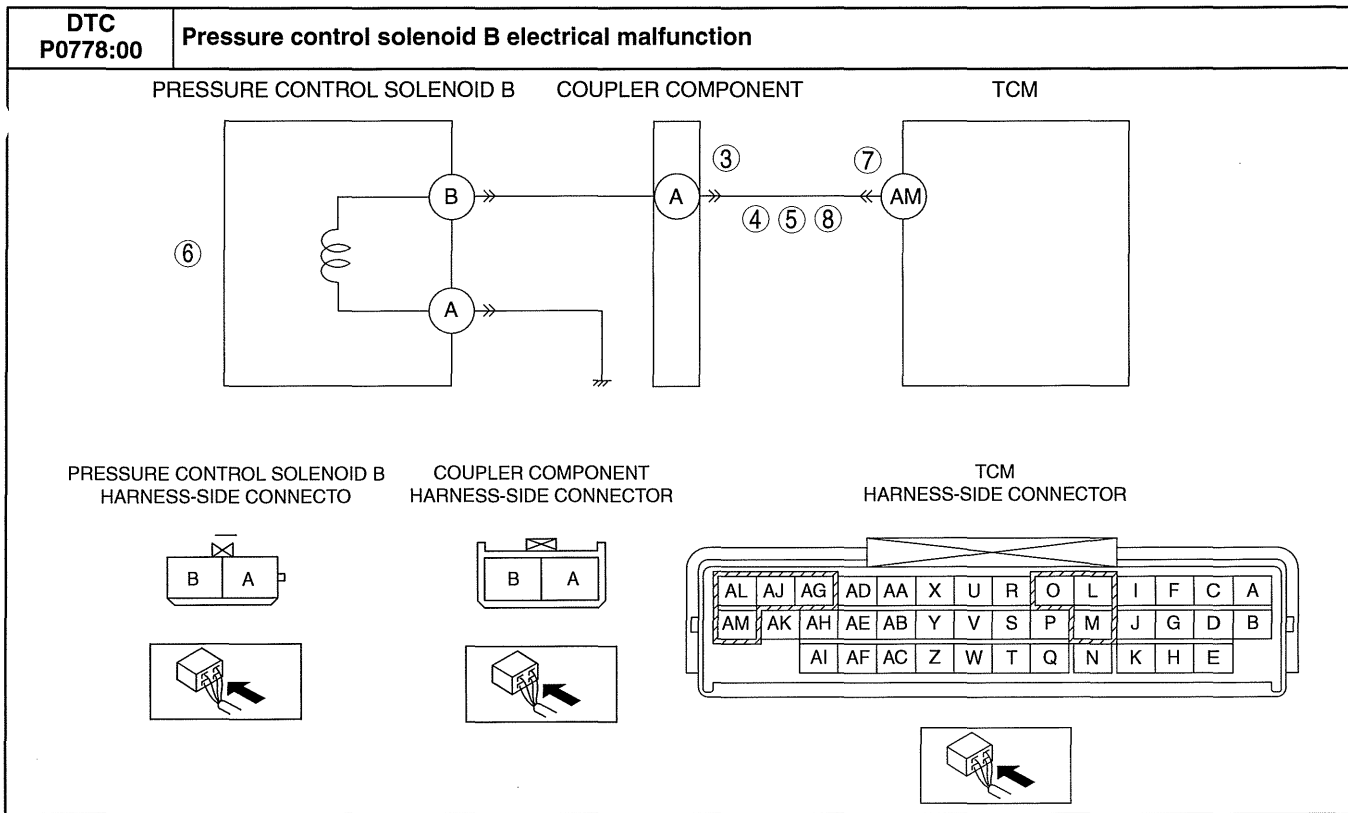

STEP	INSPECTION	ACTION	
8	VERIFY TROUBLESHOOTING OF DTC P0777:00 COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all the disconnected connectors. • Clear the DTC using the M-MDS. • Perform the following procedure to ensure that the DTC has been resolved: <ol style="list-style-type: none"> 1. Drive the vehicle under the following conditions for 5 s or more. <ul style="list-style-type: none"> — 5GR — Accelerator opening angle: 3.67% or more (LF) / 3.17% or more (L5) • Is the PENDING CODE same as the DTC present? 	Yes	Replace the TCM, then go to the next step. (See 05-17-39 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
9	VERIFY NO DTC HAS BEEN PRESENTED <ul style="list-style-type: none"> • Perform the "Reading DTCs Procedure". (See 05-02-3 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FS5A-EL].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 05-02-4 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FS5A-EL].)
		No	DTC troubleshooting completed.

DTC P0778:00 [FS5A-EL]

id050221825300

DTC P0778:00	Pressure control solenoid B electrical malfunction
DETECTION CONDITION	<ul style="list-style-type: none"> • The TCM detects that output voltage to the pressure control solenoid B is stuck at 0 V or B+ when the solenoid valve operates according to TCM calculation. <p>Diagnostic support note</p> <ul style="list-style-type: none"> • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The AT warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Coupler component connector or terminal malfunction • Short to power supply in wiring harness between pressure control solenoid B terminal B and TCM terminal AM • Short to GND in wiring harness between pressure control solenoid B terminal B and TCM terminal AM • Pressure control solenoid B malfunction • TCM connector or terminal malfunction • Open circuit in wiring harness between pressure control solenoid B terminal B and TCM terminal AM • TCM malfunction

ON-BOARD DIAGNOSTIC [FS5A-EL]

05-02

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the FREEZE FRAME DATA been recorded on the repair order? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	INSPECT COUPLER COMPONENT CONNECTOR FOR POOR CONNECTION <ul style="list-style-type: none"> Switch the ignition off. Disconnect the coupler component connector. Inspect for poor connection (such as damaged/pulled-out pins, corrosion) Is there any malfunction? 	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	INSPECT PRESSURE CONTROL SOLENOID B CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> Switch the ignition off. Measure the voltage between the coupler component terminal A (wiring harness-side) and body GND. Is the voltage B+? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 9.
		No	Go to the next step.
5	INSPECT PRESSURE CONTROL SOLENOID B CONTROL CIRCUIT FOR SHORT TO GND <ul style="list-style-type: none"> Switch the ignition off. Inspect for continuity between the coupler component terminal A (wiring harness-side) and body GND. Is there continuity? 	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 9.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [FS5A-EL]

STEP	INSPECTION	ACTION	
6	INSPECT PRESSURE CONTROL SOLENOID B <ul style="list-style-type: none"> • Inspect the pressure control solenoid B. (See 05-17-29 SOLENOID VALVE INSPECTION [FS5A-EL].) • Is there any malfunction? 	Yes	Replace the pressure control solenoid B, then go to Step 9. (See 05-17-33 SOLENOID VALVE REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
7	INSPECT TCM CONNECTOR FOR POOR CONNECTION <ul style="list-style-type: none"> • Switch the ignition off. • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion) • Is there any malfunction? 	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
8	INSPECT PRESSURE CONTROL SOLENOID B CONTROL CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Switch the ignition off. • Inspect for continuity between the coupler component terminal A (wiring harness-side) and TCM terminal AM (wiring harness-side). • Is there continuity? 	Yes	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
		No	Go to the next step.
9	VERIFY TROUBLESHOOTING OF DTC P0778:00 COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all the disconnected connectors. • Clear the DTC using the M-MDS. • Perform the following procedure to ensure that the DTC has been resolved: <ol style="list-style-type: none"> 1. Make sure that the gears shift smoothly from 1GR to 5GR. 2. Make sure that TCC operates smoothly. • Is the same DTC present? 	Yes	Replace the TCM, then go to the next step. (See 05-17-39 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
10	VERIFY NO DTC HAS BEEN PRESENTED <ul style="list-style-type: none"> • Perform the "Reading DTCs Procedure". Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	INSPECT TCM 15A FUSE <ul style="list-style-type: none"> Switch the ignition off. Disconnect the battery negative cable. Inspect the TCM 15A fuse for proper installation and failure. Is the TCM 15A fuse normal? 	Yes	Go to the next step.
		No	<ul style="list-style-type: none"> If the TCM 15A fuse is not installed correctly, install it correctly. Then go to Step 10. If the TCM 15A fuse has melted down, replace it. Then go to Step 10.
4	INSPECT AT MAIN RELAY <ul style="list-style-type: none"> Remove the AT main relay. Inspect the AT main relay. (See 09-21-17 RELAY INSPECTION.) Is the AT main relay normal? 	Yes	Go to the next step.
		No	Replace the AT main relay, then go to Step 10.
5	INSPECT AT MAIN RELAY CONNECTOR FOR POOR CONNECTION <ul style="list-style-type: none"> Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). Is there any malfunction? 	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [FS5A-EL]

STEP	INSPECTION	ACTION	
6	INSPECT POWER SUPPLY CIRCUIT FOR SHORT TO GND <ul style="list-style-type: none"> • Disconnect the battery positive cable. • Inspect for continuity between the following circuits: <ul style="list-style-type: none"> — AT main relay terminal D (wiring harness-side) and body GND — AT main relay terminal C (wiring harness-side) and body GND • Is there continuity? 	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 10.
		No	Go to the next step.
7	INSPECT POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Inspect for continuity between AT main relay terminal D (wiring harness-side) and battery positive terminal (wiring harness-side). • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 10.
8	INSPECT TCM CONNECTOR FOR POOR CONNECTION <ul style="list-style-type: none"> • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
9	INSPECT POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Inspect for continuity between AT main relay terminal C (wiring harness-side) and TCM terminal I (wiring harness-side). • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to next step.
10	VERIFY TROUBLESHOOTING OF DTC P0884:00 COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the TCM memory using the M-MDS. • Perform the following procedure to ensure that the DTC has been resolved: <ol style="list-style-type: none"> 1. Start the engine. 2. Idle the engine for 10 s or more. • Is the same DTC present? 	Yes	Replace the TCM, then go to the next step. (See 05-17-39 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
11	VERIFY NO DTC HAS BEEN PRESENTED <ul style="list-style-type: none"> • Perform the "Reading DTCs Procedure". (See 05-02-3 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FS5A-EL].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 05-02-4 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FS5A-EL].)
		No	DTC troubleshooting completed.

05-02

DTC P0894:00 [FS5A-EL]

id050221820200

DTC P0894:00	Transaxle component slipping
DETECTION CONDITION	<ul style="list-style-type: none"> • The TCM detects that turbine revolution is more than 187 rpm when the following conditions are met. <ul style="list-style-type: none"> — Vehicle stopped (brake pedal is depressed) — Accelerator pedal is fully released — Engine running at idle — Selector lever position moved to D range from N position • Diagnostic support note • The MIL does not illuminate. • The AT warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is not available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Shift solenoid A malfunction • Forward clutch not engaged or slipped • TCM malfunction

ON-BOARD DIAGNOSTIC [FS5A-EL]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	VERIFY DTC HAVE BEEN PRESENTED <ul style="list-style-type: none"> • Switch the ignition to ON (Engine off). • Perform the "Reading DTCs Procedure". (See 05-02-3 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FS5A-EL].) • Are the following DTCs output? <ul style="list-style-type: none"> — P0720:00 (VSS circuit malfunction) — P0752:00 (Shift solenoid A stuck on) — P0753:00 (Shift solenoid A electrical malfunction) 	Yes	Go to the applicable DTC inspection. (See 05-02-4 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FS5A-EL].)
		No	Replace the forward clutch, then go to the next step.
3	VERIFY TROUBLESHOOTING OF DTC P0894:00 COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all the disconnected connectors. • Clear the DTC using the M-MDS. • Perform the following procedure to ensure that the DTC has been resolved: <ol style="list-style-type: none"> 1. Start the engine. 2. Release the accelerator pedal and depress the brake pedal. 3. Select the selector lever from N position to D range. • Is the same DTC present? 	Yes	Replace the TCM, then go to the next step. (See 05-17-39 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
4	VERIFY NO DTC HAS BEEN PRESENTED <ul style="list-style-type: none"> • Perform the "Reading DTCs Procedure". (See 05-02-3 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FS5A-EL].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 05-02-4 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FS5A-EL].)
		No	DTC troubleshooting completed.

DTC P1783:00 [FS5A-EL]

id050221820700

DTC P1783:00	ATF high oil temperature malfunction
DETECTION CONDITION	<ul style="list-style-type: none"> • The TCM detects that ATF temperature is more than 149.5 °C {301.1 °F} when the following conditions are met. <ul style="list-style-type: none"> — TFT sensor circuit malfunction: not stored — Input voltage from the TFT sensor is more than 0.12 V Diagnostic support note <ul style="list-style-type: none"> • The MIL does not illuminate. • The AT warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is not available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • High engine load drive (Driving a steep gradient at a low speed.) • Deteriorated ATF • Insufficient or excess level of ATF • TCM malfunction

ON-BOARD DIAGNOSTIC [FS5A-EL]

Diagnostic procedure

STEP	INSPECTION	ACTION
1	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No Go to the next step.
2	VERIFY VEHICLE DRIVING CONDITIONS <ul style="list-style-type: none"> Verify each PID of "HTM_CNT" and "HTM_DIS". Verify vehicle driving conditions when a DTC P1783:00 is output. Has the vehicle been driven at a high engine load? 	Yes Go to Step 5. Inform the customer that the transaxle temperature is high due to high engine load driving.
		No Go to the next step.
3	INSPECT ATF CONDITION <ul style="list-style-type: none"> Inspect the ATF condition. (See 05-17-12 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FS5A-EL].) Is it normal? 	Yes Go to the next step.
		No Replace the ATF, then go to Step 5. (See 05-17-14 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL])
4	INSPECT ATF LEVEL <ul style="list-style-type: none"> Inspect the ATF level. (See 05-17-12 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FS5A-EL].) Is it normal? 	Yes Go to the next step.
		No Add ATF to the specified level, then go to Step 5. (See 05-17-14 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL])
5	VERIFY TROUBLESHOOTING OF DTC P1783:00 COMPLETED <ul style="list-style-type: none"> Make sure to reconnect all the disconnected connectors. Clear the DTC using the M-MDS. Perform the following procedure to ensure that the DTC has been resolved: <ol style="list-style-type: none"> Start the engine. Idle the engine for 1 s or more. Is the same DTC present? 	Yes Replace the TCM, then go to the next step. (See 05-17-39 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No Go to the next step.
6	VERIFY NO DTC HAS BEEN PRESENTED <ul style="list-style-type: none"> Perform the "Reading DTCs Procedure". (See 05-02-3 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FS5A-EL].) Are any DTCs present? 	Yes Go to the applicable DTC inspection. (See 05-02-4 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FS5A-EL].)
		No DTC troubleshooting completed.

05-02

DTC P2707:00 [FS5A-EL]

id050221825600

DTC P2707:00	Shift solenoid F stuck off
DETECTION CONDITION	<ul style="list-style-type: none"> The TCM detects that revolution ratio of the intermediate revolution to output revolution is less than 1.11 when the following conditions are met. <ul style="list-style-type: none"> — 3GR — Accelerator opening angle: 3.67% or more (LF) / 3.17% or more (L5) The TCM detects that revolution ratio of the intermediate revolution to output revolution is less than 1.11 when the following conditions are met. <ul style="list-style-type: none"> — 4GR — Accelerator opening angle: 3.67% or more (LF) / 3.17% or more (L5) <p>Diagnostic support note</p> <ul style="list-style-type: none"> The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. The AT warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. PENDING CODE is available. FREEZE FRAME DATA is available. The DTC is stored in the TCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Deteriorated ATF ATF level low Shift solenoid F stuck off Line pressure malfunction Secondary control valve body malfunction TCM malfunction

ON-BOARD DIAGNOSTIC [FS5A-EL]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY FREEZE FRAME DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the FREEZE FRAME DATA been recorded on the repair order? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	INSPECT ATF CONDITION <ul style="list-style-type: none"> Inspect the ATF condition. (See 05-17-12 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FS5A-EL].) Is it normal? 	Yes	Go to the next step.
		No	Replace the ATF, then go to Step 8. (See 05-17-14 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL])
4	INSPECT ATF LEVEL <ul style="list-style-type: none"> Inspect the ATF level. (See 05-17-12 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FS5A-EL].) Is it normal? 	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 8. (See 05-17-14 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL])
5	INSPECT SHIFT SOLENOID F <ul style="list-style-type: none"> Inspect the shift solenoid F. (See 05-17-29 SOLENOID VALVE INSPECTION [FS5A-EL].) Is there any malfunction? 	Yes	Replace the shift solenoid F, then go to Step 8. (See 05-17-33 SOLENOID VALVE REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
6	INSPECT LINE PRESSURE <ul style="list-style-type: none"> Perform the "Line Pressures Test". (See 05-17-3 MECHANICAL SYSTEM TEST [FS5A-EL].) Is there any malfunction? 	Yes	Repair or replace malfunctioning part according to test result, then go to Step 8.
		No	Go to the next step.
7	INSPECT SECONDARY CONTROL VALVE BODY <ul style="list-style-type: none"> Remove the secondary control valve body. (See 05-17-52 CONTROL VALVE BODY REMOVAL/INSTALLATION [FS5A-EL].) Disassemble the secondary control valve body. Inspect the following parts: <ul style="list-style-type: none"> — Shift valve — Return spring — Hydraulic passage Is there any malfunction? 	Yes	Repair or replace malfunctioning part according to inspection result, then go to next step.
		No	Replace the transaxle, then go to the next step. (See 05-17-40 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL].)
8	VERIFY TROUBLESHOOTING OF DTC P2707:00 COMPLETED <ul style="list-style-type: none"> Make sure to reconnect all the disconnected connectors. Clear the DTC using the M-MDS. Perform the following procedure to ensure that the DTC has been resolved: <ol style="list-style-type: none"> Drive the vehicle under the following conditions for 5 s or more. <ul style="list-style-type: none"> — 3GR — Accelerator opening angle: 3.67% or more (LF) / 3.17% or more (L5) Drive the vehicle under the following conditions for 5 s or more. <ul style="list-style-type: none"> — 4GR — Accelerator opening angle: 3.67% or more (LF) / 3.17% or more (L5) Is the PENDING CODE same as the DTC present? 	Yes	Replace the TCM, then go to the next step. (See 05-17-39 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
9	VERIFY NO DTC HAS BEEN PRESENTED <ul style="list-style-type: none"> Perform the "Reading DTCs Procedure". (See 05-02-3 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FS5A-EL].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 05-02-4 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FS5A-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FS5A-EL]

DTC P2708:00 [FS5A-EL]

id050221825700

DTC P2708:00	Shift solenoid F stuck on
DETECTION CONDITION	<ul style="list-style-type: none"> • The TCM detects that revolution ratio of the intermediate revolution to output revolution is more than 1.11 when the following conditions are met. <ul style="list-style-type: none"> — 5GR — Accelerator opening angle: 3.67% or more (LF) / 3.17% or more (L5) <p>Diagnostic support note</p> <ul style="list-style-type: none"> • The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The AT warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Deteriorated ATF • ATF level low • Shift solenoid F stuck off • Line pressure malfunction • Secondary control valve body malfunction • TCM malfunction

SYMPTOM TROUBLESHOOTING [FS5A-EL]

FOREWORD [FS5A-EL]

id050308800200

- When the customer reports a vehicle malfunction, inspect the malfunction indicator lamp (MIL) indication, AT warning indicator light flash, and diagnostic trouble code (DTC), then diagnose the malfunction according to following flowchart.
 - If a DTC exists, diagnose the applicable DTC inspection. (See 05-02-4 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FS5A-EL].)
 - If a DTC does not exist, the MIL does not illuminate and the AT warning indicator light illuminate, diagnose the applicable symptom troubleshooting. (See 05-03-4 SYMPTOM TROUBLESHOOTING ITEM TABLE [FS5A-EL].)

05-03

am3uuw000231

*: Malfunction Indicator Lamp (MIL), AT warning light.

BASIC INSPECTION [FS5A-EL]

id050308800300

STEP	INSPECTION		ACTION
1	Perform the mechanical system test. (See 05-17-3 MECHANICAL SYSTEM TEST [FS5A-EL].) Is the mechanical system normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection result.
2	Switch the ignition to ON. When the selector lever is moved, does the gear position indicator light indication correspond to the selector lever position? Also, when other ranges are selected from N or P during idling, does the vehicle move within 1—2 s ?	Yes	Go to the next step.
		No	Inspect the selector lever and TR switch. (See 05-18-11 SELECTOR LEVER INSPECTION.) (See 05-17-14 TRANSAXLE RANGE (TR) SWITCH INSPECTION [FS5A-EL].) If the selector lever and TR switch have a malfunction: • Repair or replace malfunctioning parts. (See 05-17-16 TRANSAXLE RANGE (TR) SWITCH REMOVAL/INSTALLATION [FS5A-EL].) If the selector lever and TR switch are normal: • Go to the next step.
3	Inspect the ATF color and condition. (See 05-17-12 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FS5A-EL].) Are the ATF color and odor normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection result. Flush the ATX and cooler line if necessary.
4	Perform the line pressure test. (See 05-17-3 MECHANICAL SYSTEM TEST [FS5A-EL].) Is the line pressure normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection result.

SYMPTOM TROUBLESHOOTING [FS5A-EL]

STEP	INSPECTION	ACTION	
5	Perform the stall test. (See 05-17-3 MECHANICAL SYSTEM TEST [FS5A-EL].) Is the stall speed normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection result.
6	Inspect the following PCM and TCM PID values using the M-MDS: (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) (See 05-02-5 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FS5A-EL].) PCM PIDs: <ul style="list-style-type: none"> • APP • TP REL • ECT • RPM • VPWR TCM PIDs: <ul style="list-style-type: none"> • TFT • TFTV • TR • TR_SENS • MNL SW • DWN SW • UP SW • THOP • TSS • OSS • VPWR Are the PID values normal? (See 01-40A-8 PCM INSPECTION [LF, L5].)	Yes	Perform the symptom troubleshooting and follow the procedures.
		No	Repair or replace any malfunctioning parts according to the inspection result.

SYMPTOM TROUBLESHOOTING ITEM TABLE [FS5A-EL]

id050308800400

- Use the chart below to verify the symptoms of the trouble in order to diagnose the appropriate area.

No.	Troubleshooting Item	Description	Reference
1	Vehicle does not move in D, M ranges, or in R position	<ul style="list-style-type: none"> • Vehicle does not move when accelerator pedal is depressed. 	(See 05-03-10 NO.1 VEHICLE DOES NOT MOVE IN D, M RANGES, OR IN R POSITION [FS5A-EL].)
2	Vehicle moves in N position	<ul style="list-style-type: none"> • Vehicle creeps in N position. • Vehicle creeps if brake pedal is not depressed in N position. 	(See 05-03-11 NO.2 VEHICLE MOVES IN N POSITION [FS5A-EL].)
3	Vehicle moves in P position, or parking gear does not disengage when P position is disengaged	<ul style="list-style-type: none"> • Vehicle rolls when on a downward slope and tires do not lock in P position. • Tires locked when P position is disengaged, vehicle does not move in D, M ranges, and R position when accelerator pedal is depressed, and engine remains in stalled condition. 	(See 05-03-11 NO.3 VEHICLE MOVES IN P POSITION, OR PARKING GEAR DOES NOT DISENGAGE WHEN P IS DISENGAGED [FS5A-EL].)
4	Excessive creep	<ul style="list-style-type: none"> • Vehicle accelerates in D, M ranges and R position when accelerator pedal is not depressed. 	(See 05-03-11 NO.4 EXCESSIVE CREEP [FS5A-EL].)
5	No creep at all	<ul style="list-style-type: none"> • Vehicle does not move in D, M ranges, or R position when idling on flat paved road. 	(See 05-03-12 NO.5 NO CREEP AT ALL [FS5A-EL].)
6	Low maximum speed and poor acceleration	<ul style="list-style-type: none"> • Vehicle acceleration is poor at start. • Delayed acceleration when accelerator pedal is depressed while driving. 	(See 05-03-13 NO.6 LOW MAXIMUM SPEED AND POOR ACCELERATION [FS5A-EL].)
7	No shifting	<ul style="list-style-type: none"> • Single shift range only. • Sometimes shifts correctly. 	(See 05-03-15 NO.7 NO SHIFTING [FS5A-EL].)

SYMPTOM TROUBLESHOOTING [FS5A-EL]

No.	Troubleshooting Item	Description	Reference
8	Does not shift to 5GR	<ul style="list-style-type: none"> Vehicle does not upshift from 4GR to 5GR even though vehicle speed is increased. Vehicle does not shift to 5GR even though accelerator pedal is released in D range at 60 km/h {37 mph}. 	(See 05-03-16 NO.8 DOES NOT SHIFT TO 5GR [FS5A-EL].)
9	Abnormal shifting	<ul style="list-style-type: none"> Shifts incorrectly (incorrect shift pattern). 	(See 05-03-17 NO.9 ABNORMAL SHIFTING [FS5A-EL].)
10	Frequent shifting	<ul style="list-style-type: none"> Downshifting occurs suddenly even when accelerator pedal is depressed slightly in D range. 	(See 05-03-18 NO.10 FREQUENT SHIFTING [FS5A-EL].)
11	Shift point is high or low	<ul style="list-style-type: none"> Shift point considerably different from automatic shift diagram. Shift delays when accelerating. Shift occurs suddenly when accelerating and engine speed does not increase. 	(See 05-03-18 NO.11 SHIFT POINT IS HIGH OR LOW [FS5A-EL].)
12	Torque converter clutch (TCC) non-operation	<ul style="list-style-type: none"> TCC does not operate when vehicle reaches TCC operation range. 	(See 05-03-19 NO.12 TORQUE CONVERTER CLUTCH (TCC) NON-OPERATION [FS5A-EL].)
13	No kickdown	<ul style="list-style-type: none"> Does not downshift when accelerator pedal is fully depressed within kickdown range. 	(See 05-03-20 NO.13 NO KICKDOWN [FS5A-EL].)
14	Engine flares up or slips when upshifting or downshifting	<ul style="list-style-type: none"> When accelerator pedal is depressed, engine speed increases normally but vehicle speed increases slowly. When accelerator pedal is depressed while driving, engine speed increases but vehicle speed does not. 	(See 05-03-21 NO.14 ENGINE FLARES UP OR SLIPS WHEN UPSHIFTING OR DOWNSHIFTING [FS5A-EL].)
15	Engine flares up or slips when accelerating vehicle	<ul style="list-style-type: none"> Engine flares up when accelerator pedal is depressed for upshifting. Engine flares up suddenly when accelerator pedal is depressed for downshifting. 	(See 05-03-22 NO.15 ENGINE FLARES UP OR SLIPS WHEN ACCELERATING VEHICLE [FS5A-EL].)
16	Judder upon torque converter clutch (TCC) operation	<ul style="list-style-type: none"> Vehicle jolts when TCC is engaged. 	(See 05-03-22 NO.16 JUDDER UPON TORQUE CONVERTER CLUTCH (TCC) OPERATION [FS5A-EL].)
17	Excessive shift shock from N to D or N to R position/range	<ul style="list-style-type: none"> Strong shock is felt when shifting from N to D or N to R position/range at idle. 	(See 05-03-24 NO.17 EXCESSIVE SHIFT SHOCK FROM N TO D OR N TO R POSITION/RANGE [FS5A-EL].)
18	Excessive shift shock is felt when upshifting and downshifting	<ul style="list-style-type: none"> Excessive shift shock is felt when depressing accelerator pedal to accelerate at upshifting. During cruising, excessive shift shock is felt when depressing accelerator pedal at downshifting. 	(See 05-03-25 NO.18 EXCESSIVE SHIFT SHOCK IS FELT WHEN UPSHIFTING AND DOWNSHIFTING [FS5A-EL].)
19	Excessive shift shock on torque converter clutch (TCC)	<ul style="list-style-type: none"> Strong shock is felt when TCC is engaged. 	(See 05-03-26 NO.19 EXCESSIVE SHIFT SHOCK ON TORQUE CONVERTER CLUTCH (TCC) [FS5A-EL].)
20	Noise occurs at idle when vehicle is stopped in all positions/ranges	<ul style="list-style-type: none"> Transaxle is noisy in all positions and ranges when vehicle idling. 	(See 05-03-26 NO.20 NOISE OCCURS AT IDLE WHEN VEHICLE IS STOPPED IN ALL POSITIONS/RANGES [FS5A-EL].)
21	Noise occurs at idle when vehicle is stopped in D, M ranges, or in R position	<ul style="list-style-type: none"> Transaxle is noisy in driving ranges when vehicle is idling. 	(See 05-03-27 NO.21 NOISE OCCURS AT IDLE WHEN VEHICLE IS STOPPED IN D, M RANGES, OR IN R POSITION [FS5A-EL].)

05-03

SYMPTOM TROUBLESHOOTING [FS5A-EL]

No.	Troubleshooting Item	Description	Reference
22	No engine braking in 1GR position of M range	<ul style="list-style-type: none"> Engine speed drops to idle but vehicle coasts when accelerator pedal is released when in M range (1GR) at low vehicle speed. 	(See 05-03-28 NO.22 NO ENGINE BRAKING IN 1GR POSITION OF M RANGE [FS5A-EL].)
23	Transaxle overheats	<ul style="list-style-type: none"> Burnt smell emitted from the transaxle. Smoke is emitted from the transaxle. 	(See 05-03-29 NO.23 TRANSAXLE OVERHEATS [FS5A-EL].)
24	Engine stalls when shifted to D, M ranges, or in R position	<ul style="list-style-type: none"> Engine stalls when shifting from N or P position to D, M ranges or R position at idle. 	(See 05-03-30 NO.24 ENGINE STALLS WHEN SHIFTED TO D, M RANGES, OR IN R POSITION [FS5A-EL].)
25	Engine stalls when driving at slow speeds or stopping	<ul style="list-style-type: none"> Engine stalls when brake pedal is depressed while driving at low speed or stopping. 	(See 05-03-30 NO.25 ENGINE STALLS WHEN DRIVING AT SLOW SPEEDS OR STOPPING [FS5A-EL].)
26	Starter does not work	<ul style="list-style-type: none"> Starter does not work even when in P or N position. 	(See 05-03-30 NO.26 STARTER DOES NOT WORK [FS5A-EL].)
27	Gear position indicator light does not illuminate in M range	<ul style="list-style-type: none"> Gear position indicator light in instrument cluster does not illuminate in M range with the ignition is ON. 	(See 05-03-31 NO.27 GEAR POSITION INDICATOR LIGHT DOES NOT ILLUMINATE IN M RANGE [FS5A-EL].)
28	Gear position indicator light illuminates in P, R, N position and D range	<ul style="list-style-type: none"> Gear position indicator light in instrument cluster illuminates in P, R and N position and D range with the ignition is ON. 	(See 05-03-31 NO.28 GEAR POSITION INDICATOR LIGHT ILLUMINATE IN P, R, N POSITION AND D RANGE [FS5A-EL].)
29	Does not upshift in M range	<ul style="list-style-type: none"> Gear position indicator light in instrument cluster illuminates but vehicle does not upshift when selector lever is pushed to "+" side. 	(See 05-03-32 NO.29 DOES NOT UPSHIFT IN M RANGE [FS5A-EL].)
30	Does not downshift in M range	<ul style="list-style-type: none"> Gear position indicator light in instrument cluster illuminates but vehicle does not downshift when selector lever is pushed to "-" side. 	(See 05-03-33 NO.30 DOES NOT DOWNSHIFT IN M RANGE [FS5A-EL].)
31	M range position indicator light dose not illuminate in M range/ M range position indicator light illuminates in D range	<ul style="list-style-type: none"> M range position indicator light in instrument cluster dose not illuminate in M range or M range position indicator light in instrument cluster in D range with the ignition is ON. 	(See 05-03-33 NO.31 M RANGE POSITION INDICATOR LIGHT DOES NOT ILLUMINATE IN M RANGE/M RANGE POSITION INDICATOR LIGHT ILLUMINATES IN D RANGE [FS5A-EL].)

SYMPTOM TROUBLESHOOTING [FS5A-EL]

NO.1 VEHICLE DOES NOT MOVE IN D, M RANGES, OR IN R POSITION [FS5A-EL]

id050308808500

1	Vehicle does not move in D, M ranges, or in R position
DESCRIPTION	<ul style="list-style-type: none"> • Vehicle does not move when the accelerator pedal is depressed.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • If the vehicle does not move in D, M ranges or R position, basically, the malfunction is in the ATX. (Vehicle will move even with a malfunction in the TCM.) Since a malfunction is in the sensor circuit or output circuit is the cause of the malfunction in the ATX, inspect the sensors, output circuit, and the related wiring harnesses. <ol style="list-style-type: none"> 1. Clutch slippage, worn (D, M ranges-Forward clutch, R position-Reverse clutch, Low and reverse brake) <ul style="list-style-type: none"> • Line pressure low • Shift solenoid A malfunction • Shift solenoid B malfunction • Shift solenoid D malfunction • Pressure control solenoid A malfunction • Pressure control solenoid B malfunction • Body ground malfunction • Control valve body malfunction 2. Selector lever malfunction 3. Improper operation of parking mechanism 4. Torque converter malfunction <p>Note</p> <ul style="list-style-type: none"> • Before following the troubleshooting steps, make sure that the Automatic Transaxle ON-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05-02-3 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FS5A-EL].) (See 05-03-3 BASIC INSPECTION [FS5A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	When the vehicle is stopped on a flat, level road and the engine is off, does the vehicle move when pushed (in D range or N, R positions with the brake pedal released)?	Yes	Go to the next step.
		No	Inspect for parking mechanism. (See Automatic Transaxle Workshop Manual FS5A-EL.)
2	Disconnect the TCM connector. Measure the resistance between ground terminal at the TCM connector and body ground. Is the resistance less than 5.0 ohms ?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit.
3	Verify the LPS PID value using the M-MDS. (See 05-02-5 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FS5A-EL].) Is the PID value normal?	Yes	Overhaul the control valve body and repair or replace any malfunctioning parts. (See Automatic Transaxle Workshop Manual FS5A-EL.) If any problem remains: <ul style="list-style-type: none"> • Overhaul the transaxle and repair or replace any malfunctioning parts. (See Automatic Transaxle Workshop Manual FS5A-EL.)
		No	Repair or replace any malfunctioning parts.
4	<ul style="list-style-type: none"> • Verify the test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM. (See 05-17-39 TCM REMOVAL/INSTALLATION [FS5A-EL].) 		

SYMPTOM TROUBLESHOOTING [FS5A-EL]

NO.2 VEHICLE MOVES IN N POSITION [FS5A-EL]

id050308800700

2	Vehicle moves in N position
DESCRIPTION	<ul style="list-style-type: none"> • Vehicle creeps in N position. • Vehicle creeps if brake pedal is not depressed in N position.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • If the vehicle moves in N position, basically, the malfunction is in the ATX. Since a malfunction in the sensor circuit or output circuit is the cause of the malfunction in the ATX, inspect the sensors, output circuit, and the related wiring harnesses. <ol style="list-style-type: none"> 1. Clutch burnt (Forward clutch) <ul style="list-style-type: none"> • Control valve body malfunction 2. Selector lever position disparity (Although the selector indicator shows N position, the hydraulic circuit shows D range or R position) <p>Note</p> <ul style="list-style-type: none"> • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05-02-3 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FS5A-EL].) (See 05-03-3 BASIC INSPECTION [FS5A-EL].)

Diagnostic procedure

STEP	INSPECTION	ACTION
1	Does the vehicle creep when the selector lever is moved slightly in N position?	Yes Go to the next step.
		No Adjust the selector cable. (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)
2	Disconnect the TCM connector. Measure the resistance between ground terminal at the TCM connector and body ground. Is the resistance less than 5.0 ohms ?	Yes Go to the next step.
		No Repair or replace the wiring harness for a possible open circuit.
3	Inspect the LPS PID value using the M-MDS. (See 05-02-5 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FS5A-EL].) Is the PID value normal?	Yes Overhaul the control valve body and repair or replace any malfunctioning parts. (See Automatic Transaxle Workshop Manual FS5A-EL.) If any problem remains: <ul style="list-style-type: none"> • Overhaul the transaxle and repair or replace any malfunctioning parts. (See Automatic Transaxle Workshop Manual FS5A-EL.)
		No Repair or replace any malfunctioning parts.
4	<ul style="list-style-type: none"> • Verify the test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM. (See 05-17-39 TCM REMOVAL/INSTALLATION [FS5A-EL].) 	

NO.3 VEHICLE MOVES IN P POSITION, OR PARKING GEAR DOES NOT DISENGAGE WHEN P IS DISENGAGED [FS5A-EL]

id050308800800

3	Vehicle moves in P position, or parking gear does not disengage when P is disengaged
DESCRIPTION	<ul style="list-style-type: none"> • Vehicle rolls when on a downward slope and tires do not lock in P position. • Tires locked when P position is disengaged, vehicle does not move in D, M ranges, and R position when accelerator pedal is depressed, and engine remains in stalled condition.
POSSIBLE CAUSE	<ol style="list-style-type: none"> 1. Parking mechanism malfunction (May have effect on noise or shock from transaxle) 2. Improper adjustment of selector lever 3. If vehicle moves in N position, perform the symptom troubleshooting "NO.2 VEHICLE MOVES IN N POSITION" (See 05-03-11 NO.2 VEHICLE MOVES IN N POSITION [FS5A-EL].)

NO.4 EXCESSIVE CREEP [FS5A-EL]

id050308800900

4	Excessive creep
DESCRIPTION	<ul style="list-style-type: none"> • Vehicle accelerates in D, M ranges and R position when accelerator pedal is not depressed.
POSSIBLE CAUSE	<ol style="list-style-type: none"> 1. Engine idle speed is high (Transaxle system is not cause of problem) 2. Perform the symptom troubleshooting "NO.9 FAST IDLE/RUNS ON" (See 01-03A-47 NO.9 FAST IDLE/RUNS ON [LF, L5].)

SYMPTOM TROUBLESHOOTING [FS5A-EL]

NO.5 NO CREEP AT ALL [FS5A-EL]

id050308801000

5	No creep at all
DESCRIPTION	<ul style="list-style-type: none"> • Vehicle does not move in D, M ranges, or R position when idling on flat paved road.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Either transaxle is stuck in 3GR or 4GR position, or there is clutch circuit slippage due to a stuck 3—4 clutch. <ol style="list-style-type: none"> 1. Clutch burnt <ul style="list-style-type: none"> • Line pressure low • Shift solenoid A malfunction • Shift solenoid B malfunction • Shift solenoid C malfunction • Shift solenoid D malfunction • Pressure control solenoid A malfunction • Body ground malfunction • Control valve body malfunction 2. Transaxle fixed in 3GR (Operation of fail-safe function) <ul style="list-style-type: none"> • Short or open circuit in wiring harness • Poor connection of connector • Malfunction of electronic parts of output and input system 3. There is no engine torque <ul style="list-style-type: none"> • Torque converter malfunction <p>Note</p> <ul style="list-style-type: none"> • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05-02-3 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FS5A-EL].) (See 05-03-3 BASIC INSPECTION [FS5A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Does the vehicle creep in any range/position?	Yes	Go to the next step.
		No	Inspect or adjust the selector lever. (See 05-18-11 SELECTOR LEVER INSPECTION.) (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)
2	Inspect the THOP PID value using the M-MDS. (See 05-02-5 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FS5A-EL].) Is the PID value normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts.
3	Disconnect the TCM connector. Measure the resistance between ground terminal at the TCM connector and body ground. Is the resistance less than 5.0 ohms ?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit.
4	Inspect the LPS PID value using the M-MDS. (See 05-02-5 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FS5A-EL].) Is the PID value normal?	Yes	Overhaul the control valve body and repair or replace any malfunctioning parts. (See Automatic Transaxle Workshop Manual FS5A-EL.) If any problem remains: <ul style="list-style-type: none"> • Overhaul the transaxle and repair or replace any malfunctioning parts. (See Automatic Transaxle Workshop Manual FS5A-EL.)
		No	Repair or replace any malfunctioning parts.
5	<ul style="list-style-type: none"> • Verify the test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM. (See 05-17-39 TCM REMOVAL/INSTALLATION [FS5A-EL].) 		

SYMPTOM TROUBLESHOOTING [FS5A-EL]

NO.6 LOW MAXIMUM SPEED AND POOR ACCELERATION [FS5A-EL]

id050308801100

6	Low maximum speed and poor acceleration
DESCRIPTION	<ul style="list-style-type: none"> • Vehicle acceleration is poor at start. • Delayed acceleration when accelerator pedal is depressed while driving.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • If the clutch is stuck or does not stay in 3GR, the malfunction is in the engine circuit. <ol style="list-style-type: none"> 1. Clutch slippage, burnt <ul style="list-style-type: none"> • Line pressure low • Shift solenoid A malfunction • Shift solenoid B malfunction • Shift solenoid C malfunction • Shift solenoid D malfunction • Shift solenoid F malfunction • Pressure control solenoid A malfunction • Body ground malfunction • Control valve body malfunction 2. Signal malfunction <ul style="list-style-type: none"> • VSS malfunction • Sensor ground malfunction • TP sensor malfunction • APP sensor malfunction • Input/turbine speed sensor malfunction 3. Transaxle fixed in 3GR (Operation of fail-safe function) <ul style="list-style-type: none"> • Short or open circuit in wiring harness • Poor connection of connector • Malfunction of electronic parts of output and input system 4. Transaxle fixed in 4GR (Operation of fail-safe function) <ul style="list-style-type: none"> • Forward clutch slippage • VSS malfunction • Shift solenoid A malfunction (Stuck on) • Poor connection of connector 5. Insufficient starting torque (Suspected when in-gear condition, shift control and engine circuit are normal) <ul style="list-style-type: none"> • Torque converter malfunction (Poor operation, stuck) 6. Engagement of TCC operation range (Operation of fail-safe function) <ul style="list-style-type: none"> • TFT sensor malfunction (Short or open circuit) 7. Transaxle fixed in M range <ul style="list-style-type: none"> • M range switch (built-in selector lever component) malfunction 8. TR switch adjustment incorrect <p>Note</p> <ul style="list-style-type: none"> • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05-02-3 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FS5A-EL].) (See 05-03-3 BASIC INSPECTION [FS5A-EL].)

05-03

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Does the gear position indicator light indication correspond to the selector lever position with the ignition at the ON?	Yes	Go to the next step.
		No	Perform the symptom troubleshooting "NO.27 GEAR POSITION INDICATOR LIGHT DOES NOT ILLUMINATE IN M RANGE" or "NO.28 GEAR POSITION INDICATOR LIGHT ILLUMINATE IN P, R, N POSITION AND D RANGE". (See 05-03-31 NO.27 GEAR POSITION INDICATOR LIGHT DOES NOT ILLUMINATE IN M RANGE [FS5A-EL].) (See 05-03-31 NO.28 GEAR POSITION INDICATOR LIGHT ILLUMINATE IN P, R, N POSITION AND D RANGE [FS5A-EL].)
2	Perform the symptom troubleshooting "NO.12 LACK/LOSS OF POWER-ACCELERATION/CRUISE". (See 01-03A-55 NO.12 LACK/LOSS OF POWER-ACCELERATION/CRUISE [LF, L5].) Is the CIS system normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts.

SYMPTOM TROUBLESHOOTING [FS5A-EL]

STEP	INSPECTION	ACTION	
3	Disconnect the solenoid connector. Does the vehicle operate as follows? <ul style="list-style-type: none"> • D range: 3GR (fixed) • R position: Reverse 	Yes	Go to the next step.
		No	Overhaul the control valve body and repair or replace any malfunctioning parts. (See Automatic Transaxle Workshop Manual FS5A-EL.) If any problem remains: <ul style="list-style-type: none"> • Overhaul the transaxle and repair or replace any malfunctioning parts. (See Automatic Transaxle Workshop Manual FS5A-EL.)
4	Drive the vehicle in D range. Does the vehicle start from stop in first gear?	Yes	Go to the next step.
		No	Inspect the following PCM and TCM PID values using the M-MDS: (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) (See 05-02-5 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FS5A-EL].) PCM PIDs: <ul style="list-style-type: none"> • APP • TP REL TCM PIDs: <ul style="list-style-type: none"> • THOP • OSS • TSS • TR Repair or replace any malfunctioning parts. (See 01-40A-8 PCM INSPECTION [LF, L5].)
5	Inspect the following TCM PID values using the M-MDS: (See 05-02-5 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FS5A-EL].) <ul style="list-style-type: none"> • SSA/SS1 • SSB/SS2 • SSC/SS3 • SSF_SS6 Are the PID values normal?	Yes	Go to the next step.
		No	Inspect the following PCM and TCM PID values using the M-MDS: (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) (See 05-02-5 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FS5A-EL].) PCM PIDs: <ul style="list-style-type: none"> • APP • TP REL TCM PIDs: <ul style="list-style-type: none"> • THOP • OSS • TSS Repair or replace any malfunctioning parts. (See 01-40A-8 PCM INSPECTION [LF, L5].)
6	Perform the stall test. (See 05-17-3 MECHANICAL SYSTEM TEST [FS5A-EL].) Is the stall speed normal?	Yes	Reverify symptoms of malfunction.
		No	Overhaul the transaxle and repair or replace any malfunctioning parts. (See Automatic Transaxle Workshop Manual FS5A-EL.)
7	<ul style="list-style-type: none"> • Verify the test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM. (See 05-17-39 TCM REMOVAL/INSTALLATION [FS5A-EL].) 		

SYMPTOM TROUBLESHOOTING [FS5A-EL]

NO.7 NO SHIFTING [FS5A-EL]

id050308801200

7	No shifting
DESCRIPTION	<ul style="list-style-type: none"> • Single shift range only. • Sometimes it shifts correctly.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • When the gear position is fixed in 3GR due to the fail-safe operation, the malfunction is in the ATX. • Perform the malfunction diagnosis according to the symptom troubleshooting "NO.6 LOW MAXIMUM SPEED AND POOR ACCELERATION". (See 05-03-13 NO.6 LOW MAXIMUM SPEED AND POOR ACCELERATION [FS5A-EL].) <ol style="list-style-type: none"> 1. Clutch slippage, burnt <ul style="list-style-type: none"> • Line pressure low • Shift solenoid A malfunction • Shift solenoid B malfunction • Shift solenoid C malfunction • Shift solenoid D malfunction • Shift solenoid F malfunction • Pressure control solenoid A malfunction • Pressure control solenoid B malfunction • Body ground malfunction • Control valve body malfunction 2. Signal malfunction <ul style="list-style-type: none"> • VSS malfunction • Sensor ground malfunction • APP sensor malfunction • TP sensor malfunction • Input/turbine speed sensor malfunction 3. Transaxle fixed in 3GR (Operation of fail-safe function) <ul style="list-style-type: none"> • Short or open circuit in wiring harness • Poor connection of connector • Disconnected shift solenoid connector • Poor ground of shift solenoid 4. Transaxle fixed in 4GR (Operation of fail-safe function) <ul style="list-style-type: none"> • Forward clutch slippage • VSS malfunction • Shift solenoid A malfunction (Stuck on) • Poor connection of connector 5. Transaxle fixed in M range <ul style="list-style-type: none"> • M range switch (built-in selector lever component) malfunction

05-03

SYMPTOM TROUBLESHOOTING [FS5A-EL]

NO.8 DOES NOT SHIFT TO 5GR [FS5A-EL]

id050308809300

8	Does not shift to 5GR
DESCRIPTION	<ul style="list-style-type: none"> • Vehicle does not upshift from 4GR to 5GR even though vehicle speed is increased. • Vehicle does not shift to 5GR even though accelerator pedal is released in D range at 60 km/h {37 mph}.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Basically, TCC does not operate when the fail-safe is operating. Verify the DTCs first. If the TCC operates when driving at high speeds only, the malfunction (improper adjustment) is in the TR switch circuit. <ul style="list-style-type: none"> Caution • If the TCC is stuck, inspect it. In addition, inspect the oil cooler for foreign particles which may have mixed in with the ATF. 1. TCC piston slippage, burned <ul style="list-style-type: none"> • Line pressure low • TP sensor malfunction • APP sensor malfunction • ECT sensor malfunction • VSS malfunction • Input/turbine speed sensor malfunction • Sensor ground malfunction 2. TFT sensor malfunction <ul style="list-style-type: none"> • Short or open circuit in wiring harness • Poor connection of connector • Sensor malfunction 3. TR switch malfunction <ul style="list-style-type: none"> • Short or open circuit in wiring harness • Poor connection of connector • Sensor malfunction • TR switch adjustment incorrect 4. Shift solenoid A, shift solenoid B, shift solenoid D, Shift solenoid F valve malfunction <ul style="list-style-type: none"> • Short or open circuit in wiring harness • Poor connection of connector • Solenoid valve stuck 5. M range switch (built-in selector lever component) malfunction 6. Control valve body malfunction <p>Note</p> <ul style="list-style-type: none"> • Before following the troubleshooting steps, make sure that the Automatic Transaxle ON-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05-02-3 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FS5A-EL].) (See 05-03-3 BASIC INSPECTION [FS5A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Does the gear position indicator light indication correspond to the selector lever position with the ignition at the ON?	Yes	Go to the next step.
		No	Perform the symptom troubleshooting "NO.27 GEAR POSITION INDICATOR LIGHT DOES NOT ILLUMINATE IN M RANGE" or "NO.28 GEAR POSITION INDICATOR LIGHT ILLUMINATE IN P, R, N POSITION AND D RANGE". (See 05-03-31 NO.27 GEAR POSITION INDICATOR LIGHT DOES NOT ILLUMINATE IN M RANGE [FS5A-EL].) (See 05-03-31 NO.28 GEAR POSITION INDICATOR LIGHT ILLUMINATE IN P, R, N POSITION AND D RANGE [FS5A-EL].)
2	Inspect the following TCM PID values using the M-MDS: (See 05-02-5 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FS5A-EL].) • TFT • TFTV Are the PID values normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts.

SYMPTOM TROUBLESHOOTING [FS5A-EL]

STEP	INSPECTION	ACTION	
3	Inspect the following TCM PID values using the M-MDS: (See 05-02-5 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FS5A-EL].) • SSA/SS1 • SSB/SS2 • SSD/SS4 • SSF_SS6 Are the PID values normal?	Yes	Go to the next step.
		No	Overhaul the control valve body and repair or replace any malfunctioning parts. (See Automatic Transaxle Workshop Manual FS5A-EL.) If any problem remains: • Overhaul the transaxle and repair or replace any malfunctioning parts. (See Automatic Transaxle Workshop Manual FS5A-EL.)
4	Disconnect the TCM connector. Measure the resistance between ground terminal at the TCM connector and body ground. Is the resistance less than 5.0 ohms ?	Yes	Inspect the following TCM PID values using the M-MDS: (See 05-02-5 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FS5A-EL].) • TR • TSS • OSS Repair or replace any malfunctioning parts.
		No	Repair or replace the wiring harness for a possible open circuit.
5	<ul style="list-style-type: none"> • Verify the test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM. (See 05-17-39 TCM REMOVAL/INSTALLATION [FS5A-EL].) 		

05-03

NO.9 ABNORMAL SHIFTING [FS5A-EL]

id050308801400

9	Abnormal shifting
DESCRIPTION	<ul style="list-style-type: none"> • Shifts incorrectly (incorrect shift pattern).
POSSIBLE CAUSE	<ul style="list-style-type: none"> • There is a malfunction in the signal circuit which controls shifting (TP sensor, input/turbine speed sensor, VSS), the control valve is stuck, the accumulator (forward or servo apply) is stuck, or the clutch circuit is stuck. <ol style="list-style-type: none"> 1. Clutch slippage, burnt <ul style="list-style-type: none"> • Line pressure low • Control valve body malfunction • Shift solenoid A malfunction • Shift solenoid B malfunction • Shift solenoid C malfunction • Shift solenoid D malfunction • Shift solenoid E malfunction • Shift solenoid F malfunction • Pressure control solenoid B malfunction • Body ground malfunction 2. Signal malfunction <ul style="list-style-type: none"> • VSS malfunction • Sensor ground malfunction • APP sensor malfunction • TP sensor malfunction • Input/turbine speed sensor malfunction 3. TR switch malfunction <ul style="list-style-type: none"> • Selector lever adjustment incorrect • TR switch adjustment incorrect Note <ul style="list-style-type: none"> • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05-02-3 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FS5A-EL].) (See 05-03-3 BASIC INSPECTION [FS5A-EL].)

SYMPTOM TROUBLESHOOTING [FS5A-EL]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	Disconnect the TCM connector. Measure the resistance between ground terminal at the TCM connector and body ground. Is the resistance less than 5.0 ohms ?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit.
2	Inspect the following PCM and TCM PID values using the M-MDS: (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) (See 05-02-5 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FS5A-EL].) PCM PIDs: <ul style="list-style-type: none"> • APP • TP REL TCM PIDs: <ul style="list-style-type: none"> • THOP • TSS • OSS • VSS Are the PID values normal? (See 01-40A-8 PCM INSPECTION [LF, L5].)	Yes	Overhaul the control valve body and repair or replace any malfunctioning parts. (See Automatic Transaxle Workshop Manual FS5A-EL.) If any problem remains: <ul style="list-style-type: none"> • Overhaul the transaxle and repair or replace any malfunctioning parts. (See Automatic Transaxle Workshop Manual FS5A-EL.)
		No	Repair or replace any malfunctioning parts.
3	<ul style="list-style-type: none"> • Verify the test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM. (See 05-17-39 TCM REMOVAL/INSTALLATION [FS5A-EL].) 		

NO.10 FREQUENT SHIFTING [FS5A-EL]

id050308801500

10	Frequent shifting
DESCRIPTION	<ul style="list-style-type: none"> • Downshifting occurs suddenly even when accelerator pedal is depressed slightly in D range.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • The malfunctioning circuit is basically the same as the symptom troubleshooting "NO.9 ABNORMAL SHIFTING [FS5A-EL]". (See 05-03-17 NO.9 ABNORMAL SHIFTING [FS5A-EL].) However, a malfunction of the input signal to the TP sensor, APP sensor, input/turbine speed sensor, VSS (including the sensor ground, sensor wiring harness and connector), or clutch slippage (clutch stuck, low pressure in line) may also be the cause.

NO.11 SHIFT POINT IS HIGH OR LOW [FS5A-EL]

id050308801600

11	Shift point is high or low
DESCRIPTION	<ul style="list-style-type: none"> • Shift point considerably different from automatic shift diagram. • Shift delays when accelerating. • Shift occurs quickly when accelerating and engine speed does not increase.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • If the transaxle does not shift abnormally, there is a malfunction of the input signal to the TP sensor, APP sensor, input/turbine speed sensor, or VSS (including sensor ground). • If the engine speed is high or low, regardless of normal shifting, inspect the tachometer. • Verify that the output signal of the TP sensor and APP sensor changes linearly. • Clutch or brake slippage.

SYMPTOM TROUBLESHOOTING [FS5A-EL]

NO.12 TORQUE CONVERTER CLUTCH (TCC) NON-OPERATION [FS5A-EL]

id050308801700

12	Torque converter clutch (TCC) non-operation
DESCRIPTION	<ul style="list-style-type: none"> • TCC does not operate when vehicle reaches TCC operation range.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Basically, the TCC does not operate when the fail-safe is operating. Verify the DTC first. <ul style="list-style-type: none"> Caution • If the TCC is stuck, inspect it. In addition, inspect the oil cooler for foreign particles which may have mixed in with the ATF. 1. TCC burnt <ul style="list-style-type: none"> (1) Input sensor system malfunction <ul style="list-style-type: none"> • TFT sensor • VSS • Input/turbine speed sensor • Sensor ground (2) Output solenoid valve system malfunction (Sticking) <ul style="list-style-type: none"> • Shift solenoid A malfunction • Shift solenoid E malfunction (3) Control valve body malfunction system (Poor operation, stuck) <ul style="list-style-type: none"> • TCC hydraulic pressure system 2. TP sensor malfunction (Not operating linear) 3. APP sensor malfunction (Not operating linear) 4. Input/turbine speed sensor or VSS malfunction 5. Brake switch malfunction (Always ON) 6. ECT sensor malfunction <p>Note</p> <ul style="list-style-type: none"> • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05-02-3 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FS5A-EL].) (See 05-03-3 BASIC INSPECTION [FS5A-EL].)

05-03

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Does the gear position indicator light indication correspond to the selector lever position with the ignition at the ON?	Yes	Go to the next step.
		No	Perform the symptom troubleshooting "NO.27 GEAR POSITION INDICATOR LIGHT DOES NOT ILLUMINATE IN M RANGE" or "NO.28 GEAR POSITION INDICATOR LIGHT ILLUMINATE IN P, R, N POSITION AND D RANGE". (See 05-03-31 NO.27 GEAR POSITION INDICATOR LIGHT DOES NOT ILLUMINATE IN M RANGE [FS5A-EL].) (See 05-03-31 NO.28 GEAR POSITION INDICATOR LIGHT ILLUMINATE IN P, R, N POSITION AND D RANGE [FS5A-EL].)
2	Inspect the following PCM and TCM PID values using the M-MDS: (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) (See 05-02-5 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FS5A-EL].) PCM PIDs: <ul style="list-style-type: none"> • APP • TP REL TCM PIDs: <ul style="list-style-type: none"> • THOP • OSS • TSS Are the PID values normal? (See 01-40A-8 PCM INSPECTION [LF, L5].)	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts.
3	Disconnect the TCM connector. Measure the resistance between ground terminal at the TCM connector and body ground. Is the resistance less than 5.0 ohms ?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit.

SYMPTOM TROUBLESHOOTING [FS5A-EL]

STEP	INSPECTION	ACTION	
4	Measure the resistance between shift solenoid A and E control circuit at the TCM connector and control valve body connector. Measure the resistance between shift solenoid A and E circuit at the TCM connector and control valve body connector. Are the resistances less than 5.0 ohms ?	Yes	Go to the next step.
		No	Repair or replace the shift solenoid A or E control circuit.
5	Inspect the shift solenoid A and E. (See 05-17-29 SOLENOID VALVE INSPECTION [FS5A-EL].) Are the shift solenoids operating properly?	Yes	Replace the TCM. (See 05-17-39 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Overhaul the control valve body and repair or replace any malfunctioning parts. (See Automatic Transaxle Workshop Manual FS5A-EL.) If any problem remains: <ul style="list-style-type: none"> • Overhaul the transaxle and repair or replace any malfunctioning parts. (See Automatic Transaxle Workshop Manual FS5A-EL.)
6	<ul style="list-style-type: none"> • Verify the test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM. (See 05-17-39 TCM REMOVAL/INSTALLATION [FS5A-EL].) 		

NO.13 NO KICKDOWN [FS5A-EL]

id050308801800

13	No kickdown
DESCRIPTION	<ul style="list-style-type: none"> • Does not downshift when accelerator pedal is fully depressed within kickdown range.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • If transaxle does not downshift though shifting is normal, the malfunction is in the TP sensor and APP sensor circuit (including sensor ground, sensor wiring harness and connector).

SYMPTOM TROUBLESHOOTING [FS5A-EL]

NO.14 ENGINE FLARES UP OR SLIPS WHEN UPSHIFTING OR DOWNSHIFTING [FS5A-EL]

id050308801900

14	Engine flares up or slips when upshifting or downshifting
DESCRIPTION	<ul style="list-style-type: none"> • When accelerator pedal is depressed, engine speed increases normally but vehicle speed increases slowly. • When accelerator pedal is depressed while driving, engine speed increases but vehicle speed does not.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • There is clutch slippage because the clutch is stuck or the line pressure is low. <ol style="list-style-type: none"> 1. Clutch stuck, slippage (Forward clutch, 3–4 clutch, 2–4 brake band, one-way clutch) <ul style="list-style-type: none"> • Line pressure low • Shift solenoid A malfunction • Shift solenoid B malfunction • Shift solenoid C malfunction • Shift solenoid D malfunction • Shift solenoid E malfunction • Shift solenoid F malfunction • Pressure control solenoid A malfunction • Body ground malfunction • Control valve body malfunction 2. Signal malfunction <ul style="list-style-type: none"> • VSS malfunction • Sensor ground malfunction • APP sensor malfunction • TP sensor malfunction • Input/turbine speed sensor malfunction 3. Poor operation of mechanical pressure <ul style="list-style-type: none"> • Selector lever position disparity • TR switch position disparity <p>Note</p> <ul style="list-style-type: none"> • Before following the troubleshooting steps, make sure that the Automatic Transaxle ON-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05-02-3 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FS5A-EL].) (See 05-03-3 BASIC INSPECTION [FS5A-EL].)

05-03

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Is the shift point normal?	Yes	Go to the next step.
		No	Perform the symptom troubleshooting “NO.9 ABNORMAL SHIFTING”. (See 05-03-17 NO.9 ABNORMAL SHIFTING [FS5A-EL].)
2	Inspect the THOP PID value using the M-MDS. (See 05-02-5 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FS5A-EL].) Is the PID value normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts.
3	Disconnect the TCM connector. Measure the resistance between ground terminal at the TCM connector and body ground. Is the resistance less than 5.0 ohms ?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit.
4	Inspect the LPS PID value using the M-MDS. (See 05-02-5 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FS5A-EL].) Is the PID value normal?	Yes	Overhaul the control valve body and repair or replace any malfunctioning parts. (See Automatic Transaxle Workshop Manual FS5A-EL.) If any problem remains: <ul style="list-style-type: none"> • Overhaul the transaxle and repair or replace any malfunctioning parts. (See Automatic Transaxle Workshop Manual FS5A-EL.)
		No	Repair or replace any malfunctioning parts.
5	<ul style="list-style-type: none"> • Verify the test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM. (See 05-17-39 TCM REMOVAL/INSTALLATION [FS5A-EL].) 		

SYMPTOM TROUBLESHOOTING [FS5A-EL]

NO.15 ENGINE FLARES UP OR SLIPS WHEN ACCELERATING VEHICLE [FS5A-EL]

id050308802000

15	Engine flares up or slips when accelerating vehicle
DESCRIPTION	<ul style="list-style-type: none"> • Engine flares up when the accelerator pedal is depressed for upshifting. • Engine flares up suddenly when the accelerator pedal is depressed for downshifting.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • The malfunction is basically the same as the symptom troubleshooting "NO.14 ENGINE FLARES UP OR SLIPS WHEN UPSHIFTING OR DOWNSHIFTING". (See 05-03-21 NO.14 ENGINE FLARES UP OR SLIPS WHEN UPSHIFTING OR DOWNSHIFTING [FS5A-EL].) If conditions for No.14 worsen, the malfunction will develop to No.15.

NO.16 JUDDER UPON TORQUE CONVERTER CLUTCH (TCC) OPERATION [FS5A-EL]

id050308802100

16	Judder upon torque converter clutch (TCC) operation
DESCRIPTION	<ul style="list-style-type: none"> • Vehicle jolts when TCC is engaged.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Poor TCC engagement due to either slippage because the TCC is stuck or the line pressure is low. <ul style="list-style-type: none"> Caution • If the TCC is stuck, inspect it. In addition, inspect the oil cooler for foreign particles which may have mixed in with the ATF. 1. TCC piston slippage, burnt <ul style="list-style-type: none"> • Line pressure high • Shift solenoid A malfunction • Shift solenoid E malfunction • Control valve body malfunction • Body ground malfunction • Pressure control solenoid A malfunction 2. Signal malfunction <ul style="list-style-type: none"> • VSS malfunction • Sensor ground malfunction • TFT sensor malfunction • APP sensor malfunction • TP sensor malfunction • Input/turbine speed sensor malfunction 3. Torque converter malfunction <p>Note</p> <ul style="list-style-type: none"> • Before following the troubleshooting steps, make sure that the Automatic Transaxle ON-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05-02-3 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FS5A-EL].) (See 05-03-3 BASIC INSPECTION [FS5A-EL].)

SYMPTOM TROUBLESHOOTING [FS5A-EL]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	Inspect the TSS PID value using the M-MDS. (See 05-02-5 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FS5A-EL].) Is the PID value normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts.
2	Disconnect the TCM connector. Measure the resistance between ground terminal at the TCM connector and body ground. Is the resistance less than 5.0 ohms ?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit.
3	Measure the resistance between shift solenoid A and E control circuit at the TCM connector and control valve body connector. Measure the resistance between shift solenoid A/E circuit at the TCM connector and control valve body connector. Are the resistances less than 5.0 ohms ?	Yes	Go to the next step.
		No	Repair or replace the shift solenoid A and/or E circuit.
4	Inspect the shift solenoid. (See 05-17-29 SOLENOID VALVE INSPECTION [FS5A-EL].) Is the solenoid valve operating properly?	Yes	Go to the next step.
		No	Overhaul the control valve body and repair or replace any malfunctioning parts. (See Automatic Transaxle Workshop Manual FS5A-EL.) If any problem remains: <ul style="list-style-type: none"> • Overhaul the transaxle and repair or replace any malfunctioning parts. (See Automatic Transaxle Workshop Manual FS5A-EL.)
5	Inspect the LPS PID value using the M-MDS. (See 05-02-5 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FS5A-EL].) Is the PID value normal?	Yes	Overhaul the control valve body and repair or replace any malfunctioning parts. (See Automatic Transaxle Workshop Manual FS5A-EL.) If any problem remains: <ul style="list-style-type: none"> • Overhaul the transaxle and repair or replace any malfunctioning parts. (See Automatic Transaxle Workshop Manual FS5A-EL.)
		No	Replace the TCM. (See 05-17-39 TCM REMOVAL/INSTALLATION [FS5A-EL].)
6	<ul style="list-style-type: none"> • Verify the test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM. (See 05-17-39 TCM REMOVAL/INSTALLATION [FS5A-EL].) 		

05-03

SYMPTOM TROUBLESHOOTING [FS5A-EL]

NO.17 EXCESSIVE SHIFT SHOCK FROM N TO D OR N TO R POSITION/RANGE [FS5A-EL]

id050308802200

17	Excessive shift shock from N to D or N to R position/range
DESCRIPTION	<ul style="list-style-type: none"> • Strong shock felt when shifting from N to D or N to R position/range at idle.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Shift shock may worsen when the fail-safe is operating. If no DTC is output, the shift shock may worsen due to poor operation of the control valve body or sticking of the clutch. 1. Clutch burnt (N→D: Forward clutch, N→R: Reverse clutch or low and reverse brake) <ul style="list-style-type: none"> • Line pressure low, high • APP sensor malfunction • TP sensor malfunction • VSS malfunction • Input/turbine speed sensor malfunction • Shift solenoid A malfunction • Shift solenoid B malfunction • Shift solenoid C malfunction • Shift solenoid D malfunction • Pressure control solenoid A malfunction • Control valve body malfunction • Sensor ground malfunction • Body ground malfunction 2. Poor hydraulic operation (Malfunction in range change) <ul style="list-style-type: none"> • Forward accumulator malfunction • Servo apply accumulator malfunction • Oil pressure switch malfunction 3. Idle speed high 4. Poor tightening torque of engine mount, exhaust mount 5. Poor operation of mechanical pressure <ul style="list-style-type: none"> • Selector lever position disparity <p>Note</p> <ul style="list-style-type: none"> • Before following the troubleshooting steps, make sure that the Automatic Transaxle ON-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05-02-3 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FS5A-EL].) (See 05-03-3 BASIC INSPECTION [FS5A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Does the shift shock occur only when the engine is cold?	Yes	Go to the next step.
		No	Go to Step 3.
2	Disconnect the TCM connector. Measure the resistance between ground terminal at the TCM connector and body ground. Is the resistance less than 5.0 ohms ?	Yes	Inspect the following PCM and TCM PID values using the M-MDS: (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) (See 05-02-5 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FS5A-EL].) PCM PIDs: <ul style="list-style-type: none"> • APP • TP REL TCM PIDs: <ul style="list-style-type: none"> • THOP • TFT • TFTV Repair or replace any malfunctioning parts. (See 01-40A-8 PCM INSPECTION [LF, L5].)
		No	Repair or replace the wiring harness for a possible open circuit.
3	Perform the stall test. (See 05-17-3 MECHANICAL SYSTEM TEST [FS5A-EL].) Is the stall speed normal?	Yes	Go to the next step.
		No	Go to Step 5.
4	Inspect the TR PID value using the M-MDS. (See 05-02-5 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FS5A-EL].) Is the PID value normal?	Yes	Overhaul the control valve body and repair or replace any malfunctioning parts. (See Automatic Transaxle Workshop Manual FS5A-EL.) If any problem remains: <ul style="list-style-type: none"> • Overhaul the transaxle and repair or replace any malfunctioning parts. (See Automatic Transaxle Workshop Manual FS5A-EL.)
		No	Repair or replace any malfunctioning parts.

SYMPTOM TROUBLESHOOTING [FS5A-EL]

STEP	INSPECTION	ACTION	
5	Inspect the THOP PID value using the M-MDS. (See 05-02-5 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FS5A-EL].) Is the PID value normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts.
6	Disconnect the TCM connector. Measure the resistance between ground terminal at the TCM connector and body ground. Is the resistance less than 5.0 ohms ?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit.
7	Inspect the LPS PID value using the M-MDS. (See 05-02-5 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FS5A-EL].) Is the PID value normal?	Yes	Overhaul the control valve body and repair or replace any malfunctioning parts. (See Automatic Transaxle Workshop Manual FS5A-EL.) If any problem remains: <ul style="list-style-type: none"> • Overhaul the transaxle and repair or replace any malfunctioning parts. (See Automatic Transaxle Workshop Manual FS5A-EL.)
		No	Repair or replace any malfunctioning parts.
8	<ul style="list-style-type: none"> • Verify the test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM. (See 05-17-39 TCM REMOVAL/INSTALLATION [FS5A-EL].) 		

05-03

NO.18 EXCESSIVE SHIFT SHOCK IS FELT WHEN UPSHIFTING AND DOWNSHIFTING [FS5A-EL]

id050308804600

18	Excessive shift shock is felt when upshifting and downshifting
DESCRIPTION	<ul style="list-style-type: none"> • Excessive shift shock is felt when depressing the accelerator pedal at upshifting. • During cruising, excessive shift shock is felt when depressing the accelerator pedal at downshifting.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Shift shock may worsen when the fail-safe is operating. The shift shock has worsened if the TP sensor, input/turbine speed sensor, or VSS signal malfunctions. 1. Clutch slippage, burnt (Forward clutch, 2—4 brake band, 3—4 clutch) <ul style="list-style-type: none"> • Line pressure low, high • Shift solenoid A malfunction • Shift solenoid B malfunction • Shift solenoid C malfunction • Shift solenoid D malfunction • Shift solenoid E malfunction • Pressure control solenoid A malfunction • Pressure control solenoid B malfunction • Control valve body malfunction • Body ground malfunction 2. Signal malfunction <ul style="list-style-type: none"> • TFT sensor malfunction • VSS malfunction • Sensor ground malfunction • TP sensor malfunction • APP sensor malfunction • Input/turbine speed sensor malfunction 3. Poor hydraulic operation (Malfunction in range change) <ul style="list-style-type: none"> • Oil pressure switch malfunction • Forward accumulator malfunction • Servo apply accumulator malfunction 4. Engine mounts installation <ul style="list-style-type: none"> • Loose attaching bolts • Worn parts <p style="margin-top: 10px;">Note</p> <ul style="list-style-type: none"> • Before following the troubleshooting steps, make sure that the Automatic Transaxle ON-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05-02-3 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FS5A-EL].) (See 05-03-3 BASIC INSPECTION [FS5A-EL].)

SYMPTOM TROUBLESHOOTING [FS5A-EL]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	Inspect the engine mounts for loose tightening bolts or worn parts. Are all engine mounts normal?	Yes	Go to the next step.
		No	Readjust, retighten or replace the engine mounts.
2	Perform the stall test. (See 05-17-3 MECHANICAL SYSTEM TEST [FS5A-EL].) Is the stall speed normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts.
3	Inspect the following PCM PID values using the M-MDS: (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • APP • TP REL Are the PID values normal? (See 01-40A-8 PCM INSPECTION [LF, L5].)	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts.
4	Disconnect the TCM connector. Measure the resistance between ground terminal at the TCM connector and body ground. Is the resistance less than 5.0 ohms ?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit.
5	Inspect the LPS PID value using the M-MDS. (See 05-02-5 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FS5A-EL].) Is the PID value normal?	Yes	Overhaul the control valve body and repair or replace any malfunctioning parts. (See Automatic Transaxle Workshop Manual FS5A-EL.) If any problem remains: • Overhaul the transaxle and repair or replace any malfunctioning parts. (See Automatic Transaxle Workshop Manual FS5A-EL.)
		No	Repair or replace any malfunctioning parts.
6	<ul style="list-style-type: none"> • Verify the test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM. (See 05-17-39 TCM REMOVAL/INSTALLATION [FS5A-EL].) 		

NO.19 EXCESSIVE SHIFT SHOCK ON TORQUE CONVERTER CLUTCH (TCC) [FS5A-EL]

id050308802400

19	Excessive shift shock on torque converter clutch (TCC)
DESCRIPTION	<ul style="list-style-type: none"> • Strong shock is felt when TCC is engaged.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • The troubleshooting flow is the same as the symptom troubleshooting "NO.16 Judder upon Torque Converter Clutch (TCC) Operation". (See 05-03-22 NO.16 Judder upon Torque Converter Clutch (TCC) Operation [FS5A-EL].)

NO.20 NOISE OCCURS AT IDLE WHEN VEHICLE IS STOPPED IN ALL POSITIONS/RANGES [FS5A-EL]

id050308802500

20	Noise occurs at idle when vehicle is stopped in all positions/ranges
DESCRIPTION	<ul style="list-style-type: none"> • Transaxle is noisy in all positions and ranges when vehicle is idling.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • The malfunction is in the oil pump which causes a high-pitched noise to be emitted from the transaxle at idle. <p>Note</p> <ul style="list-style-type: none"> • If a noise is emitted during shifting only, the malfunction is in shift solenoid D, E or shift solenoid A, B, C. If a noise is emitted during shifting at certain gears only or during deceleration only, it is gear noise. • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05-02-3 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FS5A-EL].) (See 05-03-3 BASIC INSPECTION [FS5A-EL].)

SYMPTOM TROUBLESHOOTING [FS5A-EL]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	Inspect the engine condition. Is there any engine concern (i. e. rough idle)?	Yes	Go to the appropriate symptom troubleshooting. (See 01-03A-4 SYMPTOM DIAGNOSTIC INDEX [LF, L5].)
		No	Go to the next step.
2	Does the noise stop when the solenoid connector is disconnected?	Yes	Go to the next step.
		No	Overhaul the control valve body and repair or replace any malfunctioning parts. (See Automatic Transaxle Workshop Manual FS5A-EL.) If any problem remains: <ul style="list-style-type: none"> • Overhaul the transaxle and repair or replace any malfunctioning parts. (See Automatic Transaxle Workshop Manual FS5A-EL.)
3	Inspect the following PCM and TCM PID values using the M-MDS: (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) (See 05-02-5 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FS5A-EL].) PCM PIDs: <ul style="list-style-type: none"> • APP • TP REL TCM PIDs: <ul style="list-style-type: none"> • THOP • OSS • TSS Are the PID values normal? (See 01-40A-8 PCM INSPECTION [LF, L5].)	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts.
4	Disconnect the TCM connector. Measure the resistance between ground terminal at the TCM connector and body ground. Is the resistance less than 5.0 ohms ?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit.
5	Inspect the LPS PID value using the M-MDS. (See 05-02-5 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FS5A-EL].) Is the PID value normal?	Yes	Overhaul the control valve body and repair or replace any malfunctioning parts. (See Automatic Transaxle Workshop Manual FS5A-EL.) If any problem remains: <ul style="list-style-type: none"> • Overhaul the transaxle and repair or replace any malfunctioning parts. (See Automatic Transaxle Workshop Manual FS5A-EL.)
		No	Repair or replace any malfunctioning parts.
6	<ul style="list-style-type: none"> • Verify the test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM. (See 05-17-39 TCM REMOVAL/INSTALLATION [FS5A-EL].) 		

05-03

NO.21 NOISE OCCURS AT IDLE WHEN VEHICLE IS STOPPED IN D, M RANGES, OR IN R POSITION [FS5A-EL]

id050308808600

21	Noise occurs at idle when vehicle is stopped in D, M ranges, or in R position
DESCRIPTION	<ul style="list-style-type: none"> • Transaxle is noisy in driving ranges when vehicle is idling.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Although the malfunction is basically the same as the symptom troubleshooting "NO.20 NOISE OCCURS AT IDLE WHEN VEHICLE IS STOPPED IN ALL POSITIONS/RANGES", other causes may include selector lever position disparity or TR switch position disparity. (See 05-03-26 NO.20 NOISE OCCURS AT IDLE WHEN VEHICLE IS STOPPED IN ALL POSITIONS/RANGES [FS5A-EL].)

SYMPTOM TROUBLESHOOTING [FS5A-EL]

NO.22 NO ENGINE BRAKING IN 1GR POSITION OF M RANGE [FS5A-EL]

id050308802700

22	No engine braking in 1GR position of M range
DESCRIPTION	<ul style="list-style-type: none"> • Engine speed drops to idle but the vehicle coasts when accelerator pedal is released when in M range (1GR) at low vehicle speed.
POSSIBLE CAUSE	<ol style="list-style-type: none"> 1. Clutch slippage, burnt (low and reverse brake) <ul style="list-style-type: none"> • Line pressure low • Shift solenoid C malfunction • Shift solenoid D malfunction • Shift solenoid E malfunction • Pressure control solenoid B malfunction • Control valve body malfunction • Body ground malfunction 2. Signal malfunction <ul style="list-style-type: none"> • TP sensor malfunction • APP sensor malfunction • VSS malfunction • Sensor ground malfunction • Input/turbine speed sensor malfunction 3. TCM does not determine that the M range switch is ON (short, or open circuit, poor operation) <ul style="list-style-type: none"> • M range switch (built-in selector lever component) signal malfunction <p>Note</p> <ul style="list-style-type: none"> • Before following the troubleshooting steps, make sure that the Automatic Transaxle ON-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05-02-3 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FS5A-EL].) (See 05-03-3 BASIC INSPECTION [FS5A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Do the following symptoms occur concurrently? <ul style="list-style-type: none"> • Engine flares up or slips during acceleration. • Engine flares up or slips when shifting.s 	Yes	Perform the symptom troubleshooting “NO.14 ENGINE FLARES UP OR SLIPS WHEN UPSHIFTING OR DOWNSHIFTING” or “NO.15 ENGINE FLARES UP OR SLIPS WHEN ACCELERATING VEHICLE”. (See 05-03-21 NO.14 ENGINE FLARES UP OR SLIPS WHEN UPSHIFTING OR DOWNSHIFTING [FS5A-EL].) (See 05-03-22 NO.15 ENGINE FLARES UP OR SLIPS WHEN ACCELERATING VEHICLE [FS5A-EL].)
		No	Repeat the basic inspection and repair or replace any malfunctioning parts according to the inspection result. (See 05-03-3 BASIC INSPECTION [FS5A-EL].)
2	<ul style="list-style-type: none"> • Verify the test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM. (See 05-17-39 TCM REMOVAL/INSTALLATION [FS5A-EL].) 		

SYMPTOM TROUBLESHOOTING [FS5A-EL]

NO.23 TRANSAXLE OVERHEATS [FS5A-EL]

id050308802800

23	Transaxle overheats
DESCRIPTION	<ul style="list-style-type: none"> • Burnt smell emitted from the transaxle. • Smoke emitted from the transaxle.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • The malfunction is restricted to the hindrance of coolant at the oil cooler. In addition, overheating of the transaxle may be caused by a malfunction of the TFT sensor. <ol style="list-style-type: none"> 1. Burnt (TCC) <ul style="list-style-type: none"> • Line pressure low • Control valve body malfunction 2. Oil cooler malfunction (Foreign material mixed in ATF) 3. TFT sensor malfunction 4. Excessive amount of ATF 5. Torque converter malfunction <p>Note</p> <ul style="list-style-type: none"> • Before following the troubleshooting steps, make sure that the Automatic Transaxle ON-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05-02-3 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FS5A-EL].) (See 05-03-3 BASIC INSPECTION [FS5A-EL].)

05-03

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Inspect for bending, damage, corrosion or kinks of the oil cooler pipes. Are the oil cooler pipes normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts.
2	Perform the stall test. (See 05-17-3 MECHANICAL SYSTEM TEST [FS5A-EL].) Is the stall speed normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts.
3	Inspect the following PCM PID values using the M-MDS: (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • APP • TP REL Are the PID values normal? (See 01-40A-8 PCM INSPECTION [LF, L5].)	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts.
4	Disconnect the TCM connector. Measure the resistance between ground terminal at the TCM connector and body ground. Is the resistance less than 5.0 ohms ?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit.
5	Inspect the LPS PID value using the M-MDS. (See 05-02-5 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FS5A-EL].) Is the PID value normal?	Yes	Overhaul the control valve body and repair or replace any malfunctioning parts. (See Automatic Transaxle Workshop Manual FS5A-EL.) If any problem remains: <ul style="list-style-type: none"> • Overhaul the transaxle and repair or replace any malfunctioning parts. (See Automatic Transaxle Workshop Manual FS5A-EL.)
		No	Repair or replace any malfunctioning parts.
6	<ul style="list-style-type: none"> • Verify the test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM. (See 05-17-39 TCM REMOVAL/INSTALLATION [FS5A-EL].) 		

SYMPTOM TROUBLESHOOTING [FS5A-EL]

NO.24 ENGINE STALLS WHEN SHIFTED TO D, M RANGES, OR IN R POSITION [FS5A-EL]

id050308808700

24	Engine stalls when shifted to D, M ranges, or in R position
DESCRIPTION	<ul style="list-style-type: none"> Engine stalls when shifting from N or P position to D, M ranges or R position at idle.
POSSIBLE CAUSE	<ul style="list-style-type: none"> The malfunction is on the engine control side (i.e. electronic throttle control system). Otherwise, the malfunction is in the input/turbine speed sensor (engine sometimes starts) or the TCC circuit (engine always stalls).

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	Perform the symptom troubleshooting "NO.10 LOW IDLE/STALLS DURING DECELERATION". (See 01-03A-49 NO.10 LOW IDLE/STALLS DURING DECELERATION [LF, L5].) Is the engine control system normal?	Yes	Repeat the basic inspection and repair or replace any malfunctioning parts according to the inspection result. (See 05-03-3 BASIC INSPECTION [FS5A-EL].)
		No	Repair or replace any malfunctioning parts.
2	<ul style="list-style-type: none"> Verify the test results. <ul style="list-style-type: none"> If normal, return to the diagnostic index to service any additional symptoms. If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> If the vehicle is repaired, troubleshooting is completed. If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM. (See 05-17-39 TCM REMOVAL/INSTALLATION [FS5A-EL].) 		

NO.25 ENGINE STALLS WHEN DRIVING AT SLOW SPEEDS OR STOPPING [FS5A-EL]

id050308805800

25	Engine stalls when driving at slow speeds or stopping
DESCRIPTION	<ul style="list-style-type: none"> Engine stalls when the brake pedal is depressed while driving at low speed or stopping.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Malfunction is in engine control system (e.g. Fuel injection control, electronic throttle control system). Otherwise, the malfunction is in the control valve body, shift solenoid E or TCC.

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	Perform the symptom troubleshooting "NO.10 LOW IDLE/STALLS DURING DECELERATION". (See 01-03A-49 NO.10 LOW IDLE/STALLS DURING DECELERATION [LF, L5].) Is the engine control system normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts.
2	Perform the symptom troubleshooting "NO.5 ENGINE STALLS-AFTER START/AT IDLE". (See 01-03A-33 NO.5 ENGINE STALLS-AFTER START/AT IDLE [LF, L5].) Is the engine control system normal?	Yes	Repeat the basic inspection and repair or replace any malfunctioning parts according to the inspection result. (See 05-03-3 BASIC INSPECTION [FS5A-EL].)
		No	Repair or replace any malfunctioning parts.
3	<ul style="list-style-type: none"> Verify the test results. <ul style="list-style-type: none"> If normal, return to the diagnostic index to service any additional symptoms. If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> If the vehicle is repaired, troubleshooting is completed. If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM. (See 05-17-39 TCM REMOVAL/INSTALLATION [FS5A-EL].) 		

NO.26 STARTER DOES NOT WORK [FS5A-EL]

id050308803100

26	Starter does not work
DESCRIPTION	<ul style="list-style-type: none"> Starter does not work even when in P or N position.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Selector lever mis-adjustment TR switch mis-adjustment Open or short circuit in TR switch terminal

SYMPTOM TROUBLESHOOTING [FS5A-EL]

NO.27 GEAR POSITION INDICATOR LIGHT DOES NOT ILLUMINATE IN M RANGE [FS5A-EL]

id050308803200

27	Gear position indicator light does not illuminate in M range
DESCRIPTION	<ul style="list-style-type: none"> • Gear position indicator light in instrument cluster does not illuminate in M range with the ignition is ON.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • M range switch (built-in selector lever component), instrument cluster, or related wiring harness malfunction <p>Note</p> <ul style="list-style-type: none"> • Before following the troubleshooting steps, make sure that the Automatic Transaxle ON-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05-02-3 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FS5A-EL].) (See 05-03-3 BASIC INSPECTION [FS5A-EL].) • If the ATF temperature reaches 130 °C {266 °F} or more while driving in manual shift mode, the gear position indicator light turns off and the TCM switches to automatic shift mode to reduce load on the ATX. After the ATF temperature decreases to 120 °C {248 °F} or less and a period of time has passed, the gear position indicator light turns back on and driving in manual shift mode is restored.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Inspect the MNL SW PID value using the M-MDS. (See 05-02-5 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FS5A-EL].) Is the PID value normal?	Yes	Go to Step 3.
		No	Go to the next step.
2	Inspect the M range switch. (See 05-17-18 M RANGE SWITCH INSPECTION [FS5A-EL]05-18-11 SELECTOR LEVER INSPECTION.) Is the M range switch normal?	Yes	Inspect the wiring harness between TCM terminal K and selector lever component terminal A. Repair or replace the any malfunctioning parts.
		No	Replace the M range switch. (See 05-17-18 M RANGE SWITCH REMOVAL/INSTALLATION [FS5A-EL].)
3	Inspect the instrument cluster. (See 09-22-8 INSTRUMENT CLUSTER INSPECTION.) Is the instrument cluster normal?	Yes	Go to the next step.
		No	Replace the instrument cluster. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
4	<ul style="list-style-type: none"> • Verify the test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM. (See 05-17-39 TCM REMOVAL/INSTALLATION [FS5A-EL].) 		

05-03

NO.28 GEAR POSITION INDICATOR LIGHT ILLUMINATE IN P, R, N POSITION AND D RANGE [FS5A-EL]

id050308815700

28	Gear position indicator light illuminate in P, R, N position and D range
DESCRIPTION	<ul style="list-style-type: none"> • Gear position indicator light in instrument cluster illuminates in P, R and N position and D range with the ignition is ON.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • M range switch (built-in selector lever component), instrument cluster, or related wiring harness malfunction <p>Note</p> <ul style="list-style-type: none"> • Before following the troubleshooting steps, make sure that the Automatic Transaxle ON-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05-02-3 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FS5A-EL].) (See 05-03-3 BASIC INSPECTION [FS5A-EL].)

SYMPTOM TROUBLESHOOTING [FS5A-EL]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	Inspect the MNL SW PID value using the M-MDS. (See 05-02-5 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FS5A-EL].) Is the PID value normal?	Yes	Go to Step 3.
		No	Go to the next step.
2	Inspect the M range switch. (See 05-17-18 M RANGE SWITCH INSPECTION [FS5A-EL].) Is the M range switch normal?	Yes	Inspect the wiring harness between TCM terminal K and selector lever component terminal A. Repair or replace the any malfunctioning parts.
		No	Replace the M range switch. (See 05-17-18 M RANGE SWITCH REMOVAL/ INSTALLATION [FS5A-EL].)
3	Inspect the instrument cluster. (See 09-22-8 INSTRUMENT CLUSTER INSPECTION.) Is the instrument cluster normal?	Yes	Go to the next step.
		No	Replace the instrument cluster. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.)
4	<ul style="list-style-type: none"> • Verify the test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM. (See 05-17-39 TCM REMOVAL/INSTALLATION [FS5A-EL].) 		

NO.29 DOES NOT UPSHIFT IN M RANGE [FS5A-EL]

id050308803400

29	Does not upshift in M range
DESCRIPTION	<ul style="list-style-type: none"> • Gear position indicator light in instrument cluster illuminates but vehicle does not upshift when selector lever is pushed to "+" side.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Up switch or related wiring harness malfunction <p>Note</p> <ul style="list-style-type: none"> • Before following the troubleshooting steps, make sure that the Automatic Transaxle ON-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05-02-3 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FS5A-EL].) (See 05-03-3 BASIC INSPECTION [FS5A-EL].)

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	Inspect the UP SW PID value using the M-MDS. (See 05-02-5 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FS5A-EL].) Is the PID value normal?	Yes	Inspect the instrument cluster. (See 09-22-8 INSTRUMENT CLUSTER INSPECTION.)
		No	Inspect the up switch. (See 05-17-18 UP SWITCH INSPECTION [FS5A-EL].) If the up switch is normal: <ul style="list-style-type: none"> • Inspect for continuity between TCM terminal G and selector lever component terminal B.
2	<ul style="list-style-type: none"> • Verify the test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM. (See 05-17-39 TCM REMOVAL/INSTALLATION [FS5A-EL].) 		

SYMPTOM TROUBLESHOOTING [FS5A-EL]

NO.30 DOES NOT DOWNSHIFT IN M RANGE [FS5A-EL]

id050308803500

30	Does not downshift in M range
DESCRIPTION	<ul style="list-style-type: none"> Gear position indicator light in instrument cluster illuminates but vehicle does not downshift when selector lever is pushed to “–” side.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Down switch or related wiring harness malfunction <p>Note</p> <ul style="list-style-type: none"> Before following the troubleshooting steps, make sure that the Automatic Transaxle ON-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05-02-3 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FS5A-EL].) (See 05-03-3 BASIC INSPECTION [FS5A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Inspect the DWN SW PID value using the M-MDS. (See 05-02-5 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FS5A-EL].) Is the PID value normal?	Yes	Inspect the instrument cluster. (See 09-22-8 INSTRUMENT CLUSTER INSPECTION.)
		No	Inspect the down switch. (See 05-17-19 DOWN SWITCH INSPECTION [FS5A-EL].) If the down switch is normal: <ul style="list-style-type: none"> Inspect for continuity between TCM terminal F and selector lever component terminal C.
2	<ul style="list-style-type: none"> Verify the test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> If the vehicle is repaired, troubleshooting is completed. If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM. (See 05-17-39 TCM REMOVAL/INSTALLATION [FS5A-EL].) 		

05-03

NO.31 M RANGE POSITION INDICATOR LIGHT DOES NOT ILLUMINATE IN M RANGE/M RANGE POSITION INDICATOR LIGHT ILLUMINATES IN D RANGE [FS5A-EL]

id050308932000

31	M range position indicator light dose not illuminate in M range/ M range position indicator light illuminates in D range
DESCRIPTION	<ul style="list-style-type: none"> M range position indicator light in instrument cluster dose not illuminate in M range or M range position indicator light in instrument cluster in D range with the ignition is ON.
POSSIBLE CAUSE	<ul style="list-style-type: none"> M range switch (built-in selector lever component) or related wiring harness malfunction Instrument cluster malfunction <p>Note</p> <ul style="list-style-type: none"> Before following the troubleshooting steps, make sure that the Automatic Transaxle ON-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05-02-3 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FS5A-EL].) (See 05-03-3 BASIC INSPECTION [FS5A-EL].)

SYMPTOM TROUBLESHOOTING [FS5A-EL]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	Inspect the MNL SW PID value using the M-MDS. (See 05-02-5 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FS5A-EL].) Is the PID value normal?	Yes	Go to Step 3.
		No	Go to the next step.
2	Inspect the M range switch. (See 05-17-18 M RANGE SWITCH INSPECTION [FS5A-EL].) Is the M range switch normal?	Yes	Inspect the wiring harness between TCM terminal K and selector lever component terminal A. Repair or replace the any malfunctioning parts.
		No	Replace the M range switch. (See 05-17-18 M RANGE SWITCH REMOVAL/INSTALLATION [FS5A-EL].)
3	Inspect the instrument cluster. (See 09-22-8 INSTRUMENT CLUSTER INSPECTION.) Is the instrument cluster normal?	Yes	Go to the next step.
		No	Replace the instrument cluster. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
4	<ul style="list-style-type: none"> • Verify test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM. CLUTCH

CLUTCH FLUID INSPECTION

id051000800600

Note

- A common reservoir is used for the clutch and brake system fluid.

1. The fluid in the reservoir must be maintained between the MIN/MAX level during replacement.

am3uuw000209

CLUTCH FLUID AIR BLEEDING/REPLACEMENT

id051000800700

Caution

- Fluid will damage painted surfaces. Be careful not to spill any on painted surfaces. If it is spilled, wipe it off immediately.
- Keep the fluid level in the reserve tank at 3/4 full or more during the air bleeding.
- Do not mix different types of fluid, otherwise the clutch may not operate normally.
- Do not reuse old fluid, otherwise the clutch may not operate normally.

Clutch fluid

SAE J1703 or FMVSS116 DOT-3

1. Remove the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
2. Draw the fluid from the reserve tank with a suction pump.
3. Remove the bleeder cap from the bleeder plug and attach a vinyl hose to the bleeder plug.
4. Place the other end of the vinyl hose into a container.
5. Slowly pump the clutch pedal several times.
6. With the clutch pedal depressed, loosen the bleeder screw to let fluid escape.
7. Tighten the bleeder screw to stop the fluid.
8. Repeat Steps 5, 6 and 7 until only clean fluid without air is seen.
9. Tighten the bleeder screw.

Tightening torque

5—10 N·m {51—101 kgf·cm, 45—88 in·lbf}

10. Add fluid to the MAX mark.
11. After air bleeding, inspect the following:
 - Clutch operation
 - Fluid leakage
 - Fluid level
12. Install the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)

am3uuw000209

CLUTCH

CLUTCH PEDAL INSPECTION/ADJUSTMENT

Id051000802100

Clutch Pedal Height Inspection

1. Measure the distance from the center of the upper surface of the pedal pad to the floor covering.
 - If the clutch pedal height is not with the specification, replace the clutch pedal.

Clutch pedal height (Reference value)
142.8 mm {5.622 in}

am3uuw0000330

05-10

Clutch Pedal Free Play Inspection

1. Depress the clutch pedal by hand until clutch resistance is felt.
 - If the clutch pedal free play is not within the specification, replace the clutch pedal.

Clutch pedal free play (Reference value)
15 mm {0.59 in} or less

am3uuw0000330

Clutch Pedal Disengagement Point

Caution

- When performing inspections, always set the wheel blocks, set the parking brake, depress the brake pedal, and then perform the inspection with the brakes in operation. Otherwise, the vehicle could lurch and cause an accident.

1. Apply the parking brake and fix the front and rear of the wheels with the wheel chocks.
2. Start the engine.
3. With the clutch pedal depressed, move the shift lever to the position just before engaging the reverse gear. (Do not shift completely to reverse position)
4. Gradually release the clutch pedal and then hold it at the point where the sound of gear-grinding begins (clutch disengagement point).

CLUTCH

5. Measure the distances indicated as follows from the clutch disengagement point and verify that they are within the specification.
 - If the measurement is not within the specification, inspect the clutch fluid level and the fluid lines for air infiltration.

Distance A, from clutch disengagement point to full stroke
23 mm {0.91 in} or more (Reference value)

Distance B, from clutch disengagement point to floor mat
64.9 mm {2.56 in} or more (Reference value)

Clutch pedal stroke

LF, L3 WITH TC: 135 mm {5.31 in} (Reference value)

L5: 126.1 mm {4.965 in} (Reference value)

CLUTCH PEDAL REMOVAL/INSTALLATION

id051000801200

Caution

- **Fluid will damage painted surfaces. Be careful not to spill any on painted surfaces. If it is spilled, wipe it off immediately.**

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)(See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)(See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
3. Remove the battery component. (ex: battery, battery tray and PCM component)(See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)(See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
4. Separate the steering shaft. (See 06-14-8 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION [WITHOUT ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)(See 06-14-11 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].)
5. Separate the clutch pipe and reserve hose. (See 05-10-10 CLUTCH MASTER CYLINDER REMOVAL/INSTALLATION.)
6. Remove in the order indicated in the table.
7. Install in the reverse order of removal.
8. Bleed the air from the system. (See 05-10-4 CLUTCH FLUID AIR BLEEDING/REPLACEMENT.)
9. After installation, inspect the clutch pedal. (See 05-10-5 CLUTCH PEDAL INSPECTION/ADJUSTMENT.)

CLUTCH UNIT REMOVAL/INSTALLATION [G35M-R, G66M-R]

id0510008003j1

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the battery component. (ex: battery, battery tray and PCM component) (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
4. Remove the air cleaner component. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
5. Remove the exhaust manifold insulator installation bolts and set the exhaust manifold insulator aside.
6. Remove the following parts:
 - (1) Exhaust manifold bracket (See 01-15A-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [LF, L5].)
 - (2) Front splash shield (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)
 - (3) Aerodynamic under cover No.2 (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
 - (4) Starter (See 01-19A-2 STARTER REMOVAL/INSTALLATION [LF, L5].)
7. Drain the transaxle oil into a suitable container. (See 05-15A-3 TRANSAXLE OIL REPLACEMENT [G35M-R].)(See 05-15B-3 TRANSAXLE OIL REPLACEMENT [G66M-R].)
8. Remove the manual transaxle. (See 05-15A-4 MANUAL TRANSAXLE REMOVAL/INSTALLATION [G35M-R].)(See 05-15B-4 MANUAL TRANSAXLE REMOVAL/INSTALLATION [G66M-R].)
9. Remove in the order indicated in the table.
10. Install in the reverse order of removal.
11. Add the specified amount of specified transaxle oil. (See 05-15A-3 TRANSAXLE OIL REPLACEMENT [G35M-R].)(See 05-15B-3 TRANSAXLE OIL REPLACEMENT [G66M-R].)

Note

- If the transaxle is overhauled and installed to the vehicle, perform the 'INSPECTION AFTER TRANSAXLE INSTALLATION' and verify that there is no abnormality. (See 05-15A-10 INSPECTION AFTER TRANSAXLE INSTALLATION [G35M-R].)(See 05-15B-10 INSPECTION AFTER TRANSAXLE INSTALLATION [G66M-R].)

7	Flywheel (See 05-10-18 Flywheel Removal Note.) (See 05-10-19 Flywheel Installation Note.)

CLUTCH

Clutch Release Fork Removal Note

1. Remove the fork supporter before disassembling the release fork.

am3uuw0000208

Clutch Cover and Disc Removal Note

1. Install the **SSTs**.
2. Loosen each bolt one turn at a time in a crisscross pattern until spring tension is released.
3. Remove the clutch cover and disc.

am3uuw0000208

Pilot Bearing Removal Note

Note

- The pilot bearing does not need to be removed unless you are replacing it.

1. Use the **SST** to remove the pilot bearing.

am3uuw0000208

Flywheel Removal Note

1. Hold the flywheel using the **SST**.
2. Remove the bolts evenly and gradually in a crisscross pattern.

am3uuw0000463

CLUTCH

3. Remove the flywheel.
4. Inspect for oil leakage from the crankshaft rear oil seal.
 - If there is any malfunction, replace the crankshaft rear oil seal. (See 01-10A-38 REAR OIL SEAL REPLACEMENT [LF, L5].)

am3uuw0000208

Flywheel Installation Note

1. Install the flywheel to the crankshaft.
2. Clean the crankshaft thread holes before installing the new lock bolts.
3. Hand-tighten the flywheel lock bolts.
4. Install the **SST** to the flywheel.
5. Gradually tighten the flywheel lock bolts in a crisscross pattern.

Tightening torque

108—116 N·m {11.1—11.8 kgf·m, 80—85 ft·lbf}

am3uuw0000208

05-10

Pilot Bearing Installation Note

1. Install the pilot bearing using the Snap-on brand millimeter size bushing driver set (A160M) adapter A160M7 (20—22 mm).

Caution

- Use the adapter with the 20 mm side of the A160M7 (20—22 mm) facing the pilot bearing side.

Substitution tool

Outer diameter: 21 mm {0.83 in}

Inner diameter: 19 mm {0.75 in}

am3uuw0000208

2. As shown in the figure, press-fit the pilot bearing to the position which is 4.0—5.0 mm {0.16—0.19 in} from the crankshaft end.

am3uuw0000208

CLUTCH

Clutch Disc Installation Note

1. Hold the clutch disc position using the **SST**.

am3uuw000208

Clutch Cover Installation Note

1. Install the **SSTs**.
2. Tighten the bolts in Min. 2 stages.
 - (1) Tighten partially with a crisscross pattern.
 - (2) Fully tighten to specified torque with a crisscross pattern.

Tightening torque

25—33 N·m {2.6—3.3 kgf·m, 19—24 ft·lbf}

am3uuw000208

CLUTCH UNIT REMOVAL/INSTALLATION [A26M-R]

id051008003m8

Caution

- **Secure the steering wheel using tape or a cable to prevent the steering shaft from rotating after disconnecting the steering shaft. If the steering wheel rotates after the steering shaft and the steering gear and linkage are disconnected, the internal parts of the clock spring could be damaged.**
- **When newly replacing the clutch cover or the clutch disc, replace the clutch cover and the clutch disc as a set.**
- **Due to the automatic adjustment function of clutch cover, if the old cover assembly is reused, it must be reinstalled together with its original clutch disc.**

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
3. Remove the PCM cover No.1. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
4. Disconnect the PCM connector. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
5. Remove the following parts:
 - (1) Battery tray and PCM component (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
 - (2) Air cleaner component (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
 - (3) Charge air cooler cover (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
 - (4) Charge air cooler (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
 - (5) Fuel pump resistor (See 01-14B-16 FUEL PUMP RESISTOR REMOVAL/INSTALLATION [L3 WITH TC].)
 - (6) Front tires (See 02-10-1 GENERAL PROCEDURES (SUSPENSION).)
 - (7) Splash shield (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)
 - (8) Aerodynamic under cover No.2 (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
 - (9) WU-TWC bracket (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
 - (10) Starter (See 01-19B-2 STARTER REMOVAL/INSTALLATION [L3 WITH TC].)
 - (11) Front auto leveling sensor (See 09-18-50 AUTO LEVELING SENSOR REMOVAL/INSTALLATION.)
6. Drain the transaxle oil into a suitable container. (See 05-15C-3 TRANSAXLE OIL REPLACEMENT [A26M-R].)
7. Remove the manual transaxle. (See 05-15C-5 MANUAL TRANSAXLE REMOVAL/INSTALLATION [A26M-R].)
8. Remove in the order indicated in the table.
9. Install in the reverse order of removal.
10. Perform the auto leveling system initialization. (See 09-18-51 AUTO LEVELING SYSTEM INITIALIZATION.)

CLUTCH

11. Add the specified amount of specified transaxle oil. (See 05-15C-3 TRANSAXLE OIL REPLACEMENT [A26M-R].)
12. Warm up the engine and transaxle, inspect for oil leakage, and inspect the transaxle operation.

Warning

- Improperly jacking a transaxle is dangerous. It can slip off the jack and may cause serious injury.

Note

- If the transaxle is overhauled and installed to the vehicle, perform the 'INSPECTION AFTER TRANSAXLE OVERHAUL' and verify that there is no abnormality. (See 05-15C-13 INSPECTION AFTER TRANSAXLE INSTALLATION [A26M-R].)

05-10

CLUTCH

Clutch Cover and Disc Removal Note

1. Install the **SSTs**.
2. Loosen each bolt one turn at a time in a crisscross pattern until spring tension is released.
3. Remove the clutch cover and disc.

am3uuw0000621

Pilot Bearing Removal Note

Note

- The pilot bearing does not need to be removed unless you are replacing it.

1. Use the **SST** to remove the pilot bearing.

am3uuw0000622

Flywheel Removal Note

1. Hold the flywheel using the **SST**.
2. Remove the bolts evenly and gradually in a crisscross pattern.
3. Remove the flywheel.

am3uuw0000622

Flywheel Installation Note

1. Clean the crankshaft thread holes.
2. Install the flywheel to the crankshaft.
3. Hand-tighten the new flywheel lock bolts.

CLUTCH

4. Install the **SST** to the flywheel.
5. Gradually tighten the flywheel lock bolts in a crisscross pattern.

Tightening torque

152—161 N·m {15.5—16.4 kgf·m, 113—118 ft·lbf}

Pilot Bearing Installation Note

1. Use the **SSTs** to install the pilot bearing.

2. As shown in the figure, press-fit the pilot bearing to the position which is **4.0—5.0 mm {0.16—0.19 in}** from the crankshaft end.

Clutch Disc Installation Note

1. Clean the splines of the clutch disc and the main drive gear with a brush.
2. Spread a thin layer of clutch grease on the splines.
3. Hold the clutch disc position using the **SST**.

05-10

CLUTCH

Clutch Cover Installation Note

1. Install the SSTs.
2. Tighten the bolts in Min. 2 stages.
3. Tighten partially with a crisscross pattern.
4. Fully tighten to specified torque with a crisscross pattern.

Tightening torque

25—33 N·m {2.6—3.3 kgf·m, 19—24 ft·lbf}

 - If it exceeds the maximum specification, replace the clutch cover. (See 05-10-20 CLUTCH UNIT REMOVAL/INSTALLATION [A26M-R].)

**Clutch cover diaphragm spring fingers
maximum depth
0.6 mm {0.02 in} max.**

am3zzw0000621

10. Measure the flatness of the pressure plate with a straight edge and a feeler gauge.
 - If it exceeds the maximum specification, replace the clutch cover. (See 05-10-20 CLUTCH UNIT REMOVAL/INSTALLATION [A26M-R].)

**Maximum clearance of flatness of the
pressure plate
0.3 mm {0.01 in} max.**

am3zzw0000622

CLUTCH

11. When checking the diaphragm spring fingers, mount a dial gauge on the cylinder block.
12. Rotate the flywheel and check for misaligned diaphragm spring fingers.
 - If it exceeds the maximum specification, replace the clutch cover. (See 05-10-20 CLUTCH UNIT REMOVAL/INSTALLATION [A26M-R].)

**Clutch cover diaphragm spring fingers
maximum misalignment
1.0 mm {0.039 in} max.**

am3zzw0000622

13. Install in the reverse order of removal.
14. Perform the auto leveling system initialization. (See 09-18-51 AUTO LEVELING SYSTEM INITIALIZATION.)
15. Add the specified amount of specified transaxle oil. (See 05-15C-3 TRANSAXLE OIL REPLACEMENT [A26M-R].)
16. Warm up the engine and transaxle, inspect for oil leakage, and inspect the transaxle operation.

Warning

- **Improperly jacking a transaxle is dangerous. It can slip off the jack and may cause serious injury.**

Note

- If the transaxle is overhauled and installed to the vehicle, perform the 'INSPECTION AFTER TRANSAXLE OVERHAUL' and verify that there is no abnormality. (See 05-15C-13 INSPECTION AFTER TRANSAXLE INSTALLATION [A26M-R].)

CLUTCH DISC INSPECTION [G35M-R, G66M-R]

id0510008009j1

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the battery component. (ex: battery, battery tray and PCM component) (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
4. Remove the air cleaner component. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
5. Remove the exhaust manifold insulator installation bolts and set the exhaust manifold insulator aside.
6. Remove the following parts:
 - (1) Exhaust manifold bracket (See 01-15A-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [LF, L5].)
 - (2) Front splash shield (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)
 - (3) Aerodynamic under cover No.2 (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
 - (4) Starter (See 01-19A-2 STARTER REMOVAL/INSTALLATION [LF, L5].)
7. Drain the transaxle oil into a suitable container. (See 05-15A-3 TRANSAXLE OIL REPLACEMENT [G35M-R].)(See 05-15B-3 TRANSAXLE OIL REPLACEMENT [G66M-R].)
8. Remove the manual transaxle. (See 05-15A-4 MANUAL TRANSAXLE REMOVAL/INSTALLATION [G35M-R].)(See 05-15B-4 MANUAL TRANSAXLE REMOVAL/INSTALLATION [G66M-R].)
9. Remove the clutch disc. (See 05-10-16 CLUTCH UNIT REMOVAL/INSTALLATION [G35M-R, G66M-R].)
10. Inspect the lining surface for discoloration and grease adhesion.
11. Inspect the torsion spring for weakness and the rivet for looseness.
12. Using a vernier caliper, measure the depth between the lining surface and the rivet head.
 - If it is less than the minimum specification, replace the clutch disc.

**Clutch disc minimum depth
0.3 mm {0.01 in}**

am3uuw0000209

CLUTCH

13. Measure the clutch disc runout using a dial gauge.
 - If it exceeds the maximum specification, replace the clutch disc.

Clutch disc maximum runout
0.7 mm {0.03 in}

14. Install the clutch disc.

am3uuw0000209

CLUTCH DISC INSPECTION [A26M-R]

id0510008009m8

Caution

- **Secure the steering wheel using tape or a cable to prevent the steering shaft from rotating after disconnecting the steering shaft. If the steering wheel rotates after the steering shaft and the steering gear and linkage are disconnected, the internal parts of the clock spring could be damaged.**

05-10

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
3. Remove the PCM cover No.1. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
4. Disconnect the PCM connector. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
5. Remove the following parts:
 - (1) Battery tray and PCM component (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)

 - (3) Charge air cooler cover (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
 - (4) Charge air cooler (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
 - (5) Fuel pump resistor (See 01-14B-16 FUEL PUMP RESISTOR REMOVAL/INSTALLATION [L3 WITH TC].)
 - (6) Front tires (See 02-10-1 GENERAL PROCEDURES (SUSPENSION).)
 - (7) Splash shield (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)
 - (8) Aerodynamic under cover No.2 (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
 - (9) WU-TWC bracket (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
 - (10) Starter (See 01-19B-2 STARTER REMOVAL/INSTALLATION [L3 WITH TC].)
 - (11) Front auto leveling sensor (See 09-18-50 AUTO LEVELING SENSOR REMOVAL/INSTALLATION.)
6. Drain the transaxle oil into a suitable container. (See 05-15C-3 TRANSAXLE OIL REPLACEMENT [A26M-R].)
7. Remove the manual transaxle. (See 05-15C-5 MANUAL TRANSAXLE REMOVAL/INSTALLATION [A26M-R].)
8. Remove the clutch cover. (See 05-10-20 CLUTCH UNIT REMOVAL/INSTALLATION [A26M-R].)
9. Remove the clutch disk. (See 05-10-20 CLUTCH UNIT REMOVAL/INSTALLATION [A26M-R].)
10. Using vernier calipers, measure the thickness of the lining at a rivet head on both sides.
 - If it less than the minimum specification, replace the clutch disc. (See 05-10-20 CLUTCH UNIT REMOVAL/INSTALLATION [A26M-R].)

Minimum clutch disc thickness
0.3 mm {0.01 in}

am3uuw0000622

CLUTCH

11. Measure the clutch disc runout using a dial gauge.
 - If it exceeds the maximum specification, replace the clutch disc. (See 05-10-20 CLUTCH UNIT REMOVAL/INSTALLATION [A26M-R].)

Maximum clutch disc runout
0.7 mm {0.03 in}

am3uuw000622

12. Install in the reverse order of removal.
13. Perform the auto leveling system initialization. (See 09-18-51 AUTO LEVELING SYSTEM INITIALIZATION.)
14. Add the specified amount of specified transaxle oil. (See 05-15C-3 TRANSAXLE OIL REPLACEMENT [A26M-R].)
15. Warm up the engine and transaxle, inspect for oil leakage, and inspect the transaxle operation.

Warning

- **Improperly jacking a transaxle is dangerous. It can slip off the jack and may cause serious injury.**

Note

- If the transaxle is overhauled and installed to the vehicle, perform the 'INSPECTION AFTER TRANSAXLE OVERHAUL' and verify that there is no abnormality. (See 05-15C-13 INSPECTION AFTER TRANSAXLE INSTALLATION [A26M-R].)

CLUTCH RELEASE COLLAR INSPECTION [G35M-R, G66M-R]

id051008010j1

Caution

- **Do not clean the clutch release collar with cleaning fluids or a steam cleaner because it is filled with grease.**

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the battery component. (ex: battery, battery tray and PCM component) (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
4. Remove the air cleaner component. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
5. Remove the exhaust manifold insulator installation bolts and set the exhaust manifold insulator aside.
6. Remove the following parts:
 - (1) Exhaust manifold bracket (See 01-15A-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [LF, L5].)
 - (2) Front splash shield (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)
 - (3) Aerodynamic under cover No.2 (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
 - (4) Starter (See 01-19A-2 STARTER REMOVAL/INSTALLATION [LF, L5].)
7. Drain the transaxle oil into a suitable container. (See 05-15A-3 TRANSAXLE OIL REPLACEMENT [G35M-R].)(See 05-15B-3 TRANSAXLE OIL REPLACEMENT [G66M-R].)
8. Remove the manual transaxle. (See 05-15A-4 MANUAL TRANSAXLE REMOVAL/INSTALLATION [G35M-R].)(See 05-15B-4 MANUAL TRANSAXLE REMOVAL/INSTALLATION [G66M-R].)
9. Remove the clutch release collar. (See 05-10-16 CLUTCH UNIT REMOVAL/INSTALLATION [G35M-R, G66M-R].)
10. Turn the collar while applying force in the axial direction, and inspect for sticking, excessive resistance, and an abnormal noise.
 - If there is any malfunction, replace the clutch release collar.
11. Install the clutch release collar. (See 05-10-16 CLUTCH UNIT REMOVAL/INSTALLATION [G35M-R, G66M-R].)

am3uuw000209

CLUTCH

CLUTCH RELEASE COLLAR INSPECTION [A26M-R]

id0510008010m8

Caution

- **Secure the steering wheel using tape or a cable to prevent the steering shaft from rotating after disconnecting the steering shaft. If the steering wheel rotates after the steering shaft and the steering gear and linkage are disconnected, the internal parts of the clock spring could be damaged.**
- **Cleaning the clutch release collar with cleaning fluids or a steam cleaner can wash the grease out of the sealed bearing.**

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
3. Remove the PCM cover No.1. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
4. Disconnect the PCM connector. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
5. Remove the following parts:
 - (1) Battery tray and PCM component (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
 - (2) Air cleaner component (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
 - (3) Charge air cooler cover (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
 - (4) Charge air cooler (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
 - (5) Fuel pump resistor (See 01-14B-16 FUEL PUMP RESISTOR REMOVAL/INSTALLATION [L3 WITH TC].)
 - (6) Front tires (See 02-10-1 GENERAL PROCEDURES (SUSPENSION).)
 - (7) Splash shield (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)
 - (8) Aerodynamic under cover No.2 (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
 - (9) WU-TWC bracket (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
 - (10) Starter (See 01-19B-2 STARTER REMOVAL/INSTALLATION [L3 WITH TC].)
 - (11) Front auto leveling sensor (See 09-18-50 AUTO LEVELING SENSOR REMOVAL/INSTALLATION.)
6. Drain the transaxle oil into a suitable container. (See 05-15C-3 TRANSAXLE OIL REPLACEMENT [A26M-R].)
7. Remove the manual transaxle. (See 05-15C-5 MANUAL TRANSAXLE REMOVAL/INSTALLATION [A26M-R].)
8. Remove the clutch release collar. (See 05-10-20 CLUTCH UNIT REMOVAL/INSTALLATION [A26M-R].)
9. Turn the collar while applying force in the axial direction.
 - If the collar sticks or has excessive resistance, replace the clutch release collar. (See 05-10-20 CLUTCH UNIT REMOVAL/INSTALLATION [A26M-R].)
10. Install the clutch release collar.
11. Install in the reverse order of removal.
12. Perform the auto leveling system initialization. (See 09-18-51 AUTO LEVELING SYSTEM INITIALIZATION.)
13. Add the specified amount of specified transaxle oil. (See 05-15C-3 TRANSAXLE OIL REPLACEMENT [A26M-R].)
14. Warm up the engine and transaxle, inspect for oil leakage, and inspect the transaxle operation.

adejiw00001005

Warning

- **Improperly jacking a transaxle is dangerous. It can slip off the jack and may cause serious injury.**

Note

- If the transaxle is overhauled and installed to the vehicle, perform the 'INSPECTION AFTER TRANSAXLE OVERHAUL' and verify that there is no abnormality. (See 05-15C-13 INSPECTION AFTER TRANSAXLE INSTALLATION [A26M-R].)

PILOT BEARING INSPECTION [G35M-R, G66M-R]

id0510008002j1

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the battery component. (ex: battery, battery tray and PCM component) (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
4. Remove the air cleaner component. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
5. Remove the exhaust manifold insulator installation bolts and set the exhaust manifold insulator aside.
6. Remove the following parts:

CLUTCH

- (1) Exhaust manifold bracket (See 01-15A-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [LF, L5].)
- (2) Front splash shield (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)
- (3) Aerodynamic under cover No.2 (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
- (4) Starter (See 01-19A-2 STARTER REMOVAL/INSTALLATION [LF, L5].)
7. Drain the transaxle oil into a suitable container. (See 05-15A-3 TRANSAXLE OIL REPLACEMENT [G35M-R].)(See 05-15B-3 TRANSAXLE OIL REPLACEMENT [G66M-R].)
8. Remove the manual transaxle. (See 05-15A-4 MANUAL TRANSAXLE REMOVAL/INSTALLATION [G35M-R].)(See 05-15B-4 MANUAL TRANSAXLE REMOVAL/INSTALLATION [G66M-R].)
9. Without removing the pilot bearing, turn the bearing while applying force in the axial direction.
 - If there is any malfunction, replace the pilot bearing. (See 05-10-16 CLUTCH UNIT REMOVAL/INSTALLATION [G35M-R, G66M-R].)

am3uuw0000207

PILOT BEARING INSPECTION [A26M-R]

id0510008002m8

Caution

- **Secure the steering wheel using tape or a cable to prevent the steering shaft from rotating after disconnecting the steering shaft. If the steering wheel rotates after the steering shaft and the steering gear and linkage are disconnected, the internal parts of the clock spring could be damaged.**

Note

- Perform the pilot bearing inspection with the crankshaft or flywheel installed.

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
3. Remove the PCM cover No.1. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
4. Disconnect the PCM connector. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
5. Remove the following parts:
 - (1) Battery tray and PCM component (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
 - (2) Air cleaner component (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
 - (3) Charge air cooler cover (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
 - (4) Charge air cooler (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
 - (5) Fuel pump resistor (See 01-14B-16 FUEL PUMP RESISTOR REMOVAL/INSTALLATION [L3 WITH TC].)
 - (6) Front tires (See 02-10-1 GENERAL PROCEDURES (SUSPENSION).)
 - (7) Splash shield (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)
 - (8) Aerodynamic under cover No.2 (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
 - (9) WU-TWC bracket (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
 - (10) Starter (See 01-19B-2 STARTER REMOVAL/INSTALLATION [L3 WITH TC].)
 - (11) Front auto leveling sensor (See 09-18-50 AUTO LEVELING SENSOR REMOVAL/INSTALLATION.)
6. Drain the transaxle oil into a suitable container. (See 05-15C-3 TRANSAXLE OIL REPLACEMENT [A26M-R].)
7. Remove the manual transaxle. (See 05-15C-5 MANUAL TRANSAXLE REMOVAL/INSTALLATION [A26M-R].)
8. Remove the clutch cover. (See 05-10-20 CLUTCH UNIT REMOVAL/INSTALLATION [A26M-R].)
9. Remove the clutch disk. (See 05-10-20 CLUTCH UNIT REMOVAL/INSTALLATION [A26M-R].)

CLUTCH

10. Inspect the rotation condition of the pilot bearing for damage or wear.
 - If there is any malfunction, replace the pilot bearing. (See 05-10-20 CLUTCH UNIT REMOVAL/INSTALLATION [A26M-R].)
11. Install in the reverse order of removal.
12. Perform the auto leveling system initialization. (See 09-18-51 AUTO LEVELING SYSTEM INITIALIZATION.)
13. Add the specified amount of specified transaxle oil. (See 05-15C-3 TRANSAXLE OIL REPLACEMENT [A26M-R].)
14. Warm up the engine and transaxle, inspect for oil leakage, and inspect the transaxle operation.

am3uuw0000621

Warning

- Improperly jacking a transaxle is dangerous. It can slip off the jack and may cause serious injury.

Note

- If the transaxle is overhauled and installed to the vehicle, perform the 'INSPECTION AFTER TRANSAXLE OVERHAUL' and verify that there is no abnormality. (See 05-15C-13 INSPECTION AFTER TRANSAXLE INSTALLATION [A26M-R].)

05-10

FLYWHEEL INSPECTION [G35M-R, G66M-R]

id051008001j1

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the battery component. (ex: battery, battery tray and PCM component) (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
4. Remove the air cleaner component. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
5. Remove the exhaust manifold insulator installation bolts and set the exhaust manifold insulator aside.
6. Remove the following parts:
 - (1) Exhaust manifold bracket (See 01-15A-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [LF, L5].)
 - (2) Front splash shield (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)
 - (3) Aerodynamic under cover No.2 (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
 - (4) Starter (See 01-19A-2 STARTER REMOVAL/INSTALLATION [LF, L5].)
7. Drain the transaxle oil into a suitable container. (See 05-15A-3 TRANSAXLE OIL REPLACEMENT [G35M-R].)(See 05-15B-3 TRANSAXLE OIL REPLACEMENT [G66M-R].)
8. Remove the manual transaxle. (See 05-15A-4 MANUAL TRANSAXLE REMOVAL/INSTALLATION [G35M-R].)(See 05-15B-4 MANUAL TRANSAXLE REMOVAL/INSTALLATION [G66M-R].)
9. Remove the flywheel. (See 05-10-16 CLUTCH UNIT REMOVAL/INSTALLATION [G35M-R, G66M-R].)

Note

- Correct slight scratches and discoloration using sandpaper.
- Inspect the runout of the surface that contacts the clutch disc with the flywheel installed to the crankshaft.

10. Inspect the surface that contacts the clutch disc for scratches, nicks, and discoloration.
11. Inspect the ring gear teeth for damage and wear.

am3uuw0000207

CLUTCH

12. Measure the flatness of the flywheel with a straight edge and a feeler gauge.
- If there is any malfunction, replace the flywheel. (See 05-10-16 CLUTCH UNIT REMOVAL/INSTALLATION [G35M-R, G66M-R].)

Maximum clearance of flatness of the flywheel
0.06 mm {0.002 in}

13. Install the flywheel. (See 05-10-16 CLUTCH UNIT REMOVAL/INSTALLATION [G35M-R, G66M-R].)

14. Measure the runout of the surface that contacts the clutch disc using a dial gauge.
- If it exceeds the maximum specification, replace the flywheel. (See 05-10-16 CLUTCH UNIT REMOVAL/INSTALLATION [G35M-R, G66M-R].)

Flywheel maximum runout
0.1 mm {0.004 in}

am3uuw0000525

am3uuw0000207

FLYWHEEL INSPECTION [A26M-R]

id0510008001m8

Caution

- **Secure the steering wheel using tape or a cable to prevent the steering shaft from rotating after disconnecting the steering shaft. If the steering wheel rotates after the steering shaft and the steering gear and linkage are disconnected, the internal parts of the clock spring could be damaged.**
- **Do not rework the dual-mass flywheel if it is distorted.**
- **Do not clean the dual-mass flywheel with any kind of fluid. Clean the dual-mass flywheel with a dry cloth only.**
- **Do not clean the gap between the primary and secondary mass. Only clean the bolt connection surface and the clutch surface.**

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
3. Remove the PCM cover No.1. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
4. Disconnect the PCM connector. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
5. Remove the following parts:
 - (1) Battery tray and PCM component (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
 - (2) Air cleaner component (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
 - (3) Charge air cooler cover (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
 - (4) Charge air cooler (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
 - (5) Fuel pump resistor (See 01-14B-16 FUEL PUMP RESISTOR REMOVAL/INSTALLATION [L3 WITH TC].)
 - (6) Front tires (See 02-10-1 GENERAL PROCEDURES (SUSPENSION).)
 - (7) Splash shield (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)
 - (8) Aerodynamic under cover No.2 (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
 - (9) WU-TWC bracket (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
 - (10) Starter (See 01-19B-2 STARTER REMOVAL/INSTALLATION [L3 WITH TC].)
 - (11) Front auto leveling sensor (See 09-18-50 AUTO LEVELING SENSOR REMOVAL/INSTALLATION.)
6. Drain the transaxle oil into a suitable container. (See 05-15C-3 TRANSAXLE OIL REPLACEMENT [A26M-R].)
7. Remove the manual transaxle. (See 05-15C-5 MANUAL TRANSAXLE REMOVAL/INSTALLATION [A26M-R].)
8. Remove the clutch cover. (See 05-10-20 CLUTCH UNIT REMOVAL/INSTALLATION [A26M-R].)
9. Remove the clutch disk. (See 05-10-20 CLUTCH UNIT REMOVAL/INSTALLATION [A26M-R].)

CLUTCH

10. Remove the dual-mass flywheel. (See 05-10-20 CLUTCH UNIT REMOVAL/INSTALLATION [A26M-R].)

Note

- Correct slight scratches and discoloration using sandpaper.
- Inspect the runout of the surface that contacts the clutch disc with the dual-mass flywheel installed to the crankshaft.

11. Inspect the dual-mass flywheel.

- Cracks
- Worn ring gear teeth
- Chipped or cracked ring gear teeth
- Surface that contacts the clutch disc for scratches, nicks, and discoloration.
- If there is any malfunction, replace the dual-mass flywheel. (See 05-10-20 CLUTCH UNIT REMOVAL/INSTALLATION [A26M-R].)

12. Verify that the center of the dual-mass flywheel does not move.

- (1) Rotate the dual-mass flywheel or attempt to move it up and down, and left and right to verify that the center of the dual-mass flywheel does not move.
- If there is any movement as indicated by the arrows in the figure, replace the dual-mass flywheel with a new one. (See 05-10-20 CLUTCH UNIT REMOVAL/INSTALLATION [A26M-R].)

am3zzw0000839

05-10

am3zzw0000839

13. Verify that the secondary mass rotates by 15 teeth or more.

- If it rotates by 15 teeth or more, replace the dual-mass flywheel. (See 05-10-20 CLUTCH UNIT REMOVAL/INSTALLATION [A26M-R].)

am3zzw0000839

14. Inspect for locating dowels touching the primary mass of the dual-mass flywheel.

Caution

- **Make sure that the three locating dowels are installed.**

- If the locating dowels are touching the primary mass of the dual-mass flywheel, replace the dual-mass flywheel with a new one.

15. Visually inspect the secondary mass.

- If there is any damage, replace the dual-mass flywheel. (See 05-10-20 CLUTCH UNIT REMOVAL/INSTALLATION [A26M-R].)

am3zzw0000839

CLUTCH

16. Visually inspect the ring gear on the dual-mass flywheel.
- If there is any damage, replace the dual-mass flywheel. (See 05-10-20 CLUTCH UNIT REMOVAL/INSTALLATION [A26M-R].)

am3uuw0000621

17. Inspect the welded area of the dual-mass flywheel for grease leakage.
- If there is grease leakage, replace the dual-mass flywheel. (See 05-10-20 CLUTCH UNIT REMOVAL/INSTALLATION [A26M-R].)

am3zzw0000839

18. Inspect the dual-mass flywheel runout.
- If it is more than the maximum specification, replace the dual-mass flywheel. (See 05-10-20 CLUTCH UNIT REMOVAL/INSTALLATION [A26M-R].)

**Flywheel maximum runout [A26M-R]
1.5 mm {0.059 in}**

am3zzw0000840

19. Inspect the dual-mass flywheel for the amount of guide pin projection.
- If not within the specification, replace the dual-mass flywheel. (See 05-10-20 CLUTCH UNIT REMOVAL/INSTALLATION [A26M-R].)

11mm {0.43 in}

am3uuw0000621

20. Rotate the secondary mass left and right and verify that it rotates within a range of three teeth without resistance.
- If there is any malfunction, replace the dual-mass flywheel. (See 05-10-20 CLUTCH UNIT REMOVAL/INSTALLATION [A26M-R].)
21. Inspect the dual-mass flywheel for cracks.
- If there are cracks, replace the dual-mass flywheel. (See 05-10-20 CLUTCH UNIT REMOVAL/INSTALLATION [A26M-R].)
22. Install in the reverse order of removal.

am3zzw0000840

CLUTCH

23. Perform the auto leveling system initialization. (See 09-18-51 AUTO LEVELING SYSTEM INITIALIZATION.)
24. Add the specified amount of specified transaxle oil. (See 05-15C-3 TRANSAXLE OIL REPLACEMENT [A26M-R].)
25. Warm up the engine and transaxle, inspect for oil leakage, and inspect the transaxle operation.

Warning

- **Improperly jacking a transaxle is dangerous. It can slip off the jack and may cause serious injury.**

Note

- If the transaxle is overhauled and installed to the vehicle, perform the 'INSPECTION AFTER TRANSAXLE OVERHAUL' and verify that there is no abnormality. (See 05-15C-13 INSPECTION AFTER TRANSAXLE INSTALLATION [A26M-R].)

NEUTRAL SWITCH REMOVAL/INSTALLATION [G35M-R]

id0515b1800700

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the battery component. (ex: battery, battery tray and PCM component)(See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
4. Remove the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
5. Drain the oil from the transaxle. (See 05-15A-3 TRANSAXLE OIL REPLACEMENT [G35M-R].)

MANUAL TRANSAXLE [G35M-R]

6. Disconnect the neutral switch connector and remove the neutral switch.
7. Install the neutral switch (with a new gasket) to the transaxle case.

Tightening torque

20—29 N·m {2.1—2.9 kgf·m, 15—21 ft·lbf}

8. Install the battery component. (ex: battery, battery tray and PCM component)(See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
9. Install the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
10. Add the specified amount and type of oil. (See 05-15A-3 TRANSAXLE OIL REPLACEMENT [G35M-R].)
11. Install the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)

BACK-UP LIGHT SWITCH REMOVAL/INSTALLATION [G35M-R]

id0515b1800800

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the battery component. (ex: battery, battery tray and PCM component) (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
4. Remove the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
5. Drain the oil from the transaxle. (See 05-15A-3 TRANSAXLE OIL REPLACEMENT [G35M-R].)
6. Disconnect the back-up light switch connector and remove the back-up light switch.
7. Install the back-up light switch (with a new gasket) to the transaxle case.

Tightening torque

20—29 N·m {2.1—2.9 kgf·m, 15—21 ft·lbf}

8. Install the battery component. (ex: battery, battery tray and PCM component)(See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
9. Install the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
10. Add the specified amount and type of oil. (See 05-15A-3 TRANSAXLE OIL REPLACEMENT [G35M-R].)
11. Install the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)

TRANSAXLE OIL INSPECTION [G35M-R]

id0515b1800000

1. Park the vehicle on level ground.
2. Remove the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
3. Remove the oil level plug and washer.
4. Verify that the oil is near the brim of the plug port.
 - If the oil level is lower than the low level, add the specified amount and type of oil through the oil level plug hole.

Manual transaxle oil Grade
API GL-4

Manual transaxle oil Viscosity
SAE 75W-80

MANUAL TRANSAXLE [G35M-R]

5. Install a new washer and the oil level plug.

Tightening torque

39—59 N·m {4.0—6.0 kgf·m, 29—43 ft·lbf}

6. Install the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)

TRANSAXLE OIL REPLACEMENT [G35M-R]

id0515b1800100

1. Park the vehicle on level ground.
2. Remove the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
3. Remove the drain plug with the washer.
4. Drain the oil into a suitable container.
5. Install a new washer and the drain plug.

Tightening torque

39—59 N·m {4.0—6.0 kgf·m, 29—43 ft·lbf}

6. Remove the oil level plug with washer and add the specified amount and type of oil through the oil level plug hole until the level reaches the bottom of the oil level plug hole.

am6zzw000052

Manual transaxle oil Grade
API GL-4

Manual transaxle oil Viscosity
SAE 75W-80

Manual transaxle oil capacity (approx. quantity)
2.77 L {2.93 US qt, 2.44 Imp qt}

7. Install a new washer and the oil level plug.

Tightening torque

39—59 N·m {4.0—6.0 kgf·m, 29—43 ft·lbf}

8. Install the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)

OIL SEAL (DIFFERENTIAL) REPLACEMENT [G35M-R]

id0515b1800200

1. On level ground, jack up the vehicle and support it evenly on safety stands.
2. Remove the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
3. Drain the oil from the transaxle. (See 05-15A-3 TRANSAXLE OIL REPLACEMENT [G35M-R].)
4. Remove the front splash shield. (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)
5. Separate the drive shaft and joint shaft from the transaxle. (See 03-13-3 DRIVE SHAFT REMOVAL/INSTALLATION.) (See 03-13-13 JOINT SHAFT REMOVAL/INSTALLATION.)
6. Remove the oil seals using a screwdriver.

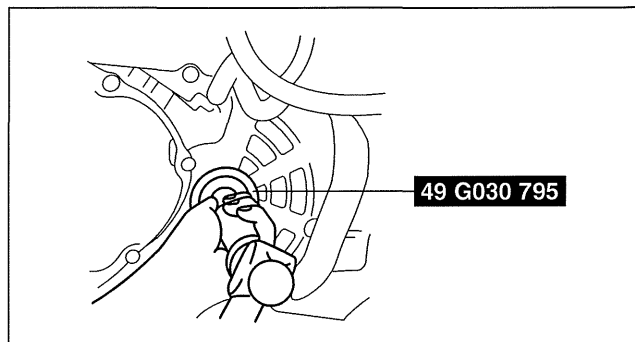

am3uuw000072

05-15A

MANUAL TRANSAXLE [G35M-R]

7. Using the **SST** and a hammer, tap each new oil seal in evenly until the **SST** contacts the transaxle case.
8. Coat the lip of each oil seal with transaxle oil.
9. Insert the drive shaft and joint shaft to the transaxle. (See 03-13-3 DRIVE SHAFT REMOVAL/INSTALLATION.) (See 03-13-13 JOINT SHAFT REMOVAL/INSTALLATION.)
10. Install the front splash shield. (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)
11. Add the specified amount and type of oil. (See 05-15A-3 TRANSAXLE OIL REPLACEMENT [G35M-R].)
12. Install the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)

am3uuw0000211

MANUAL TRANSAXLE REMOVAL/INSTALLATION [G35M-R]

id0515b1800600

Caution

- **Secure the steering wheel using tape or a cable to prevent the steering shaft from rotating after disconnecting the steering shaft. If the steering wheel rotates after the steering shaft and the steering gear and linkage are disconnected, the internal parts of the clock spring could be damaged.**

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the battery component. (ex: battery, battery tray and PCM component)(See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
4. Remove the air cleaner component. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
5. Remove the exhaust manifold insulator installation bolts and set the exhaust manifold insulator aside.
6. Remove the following parts:
 - (1) Exhaust manifold bracket (See 01-15A-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [LF, L5].)
 - (2) Front splash shield (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)
 - (3) Aerodynamic under cover No.2 (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
 - (4) Starter (See 01-19A-2 STARTER REMOVAL/INSTALLATION [LF, L5].)
7. Drain the transaxle oil into a suitable container.
8. Remove in the order indicated in the table.
9. Install in the reverse order of removal.
10. Add the specified amount of specified transaxle oil.

Note

- If the transaxle is overhauled and installed to the vehicle, perform the 'INSPECTION AFTER TRANSAXLE INSTALLATION' and verify that there is no abnormality. (See 05-15A-10 INSPECTION AFTER TRANSAXLE INSTALLATION [G35M-R].)

21	Manual transaxle (See 05-15A-7 Manual Transaxle Removal Note.) (See 05-15A-8 Manual Transaxle Installation Note.)

Shift Cable And Select Cable Removal Note

1. Remove the shift and selector cable outer ends as shown in the figure.

am3uuw0000211

2. Remove the both shift cable end and select cable end using a fastener remover.

am3uuw0000330

No.4 Engine Mount Removal Note

1. Install the SST using the following procedure.

Caution

- Refer to the SST instruction manual for the basic handling procedure.

am6xuw0000151

MANUAL TRANSAXLE [G35M-R]

- (1) Align the bolt of the shock absorber (right side) shown in the figure with the rear shaft bolt for the right side of the **SST**.
- (2) Align the bolt of the shock absorber (left side) shown in the figure with the rear shaft bolt for the left side of the **SST**.

am3uuw0000211

05-15A

- (3) Install one front foot No.2 to each of the left and right front shafts of the **SST**, and then align the holes of the **SST** front shafts with the bolt on the left and right side of each front side frame.
- (4) Adjust the height of the left and right side bars so that they are leveled, then tighten each part of the **SST**.
- (5) Make sure each joint is securely tightened.

am3uuw0000211

2. Suspend the engine using the **SST**.
3. Remove the battery bracket, No.4 engine mount rubber and No.4 engine mount bracket.

am3uuw0000212

Manual Transaxle Removal Note

Warning

- Remove the transaxle carefully, holding it steady. If the transaxle falls it could be damaged or cause injury.

MANUAL TRANSAXLE [G35M-R]

1. Lean the engine toward the transaxle.

2. Support the transaxle on a jack.
3. Remove the transaxle mounting bolts.
4. Remove the transaxle.

Manual Transaxle Installation Note

Warning

- Install the transaxle carefully, holding it steady. If the transaxle falls it could be damaged or cause injury.

1. Set the transaxle on a jack and lift into place.
2. Install the transaxle mounting bolts.
3. Adjust the **SST** (49 C017 5A0) so that the engine is located at the specified position.

No.1 Engine Mount and No.4 Engine Mount Installation Note

1. Install the No.4 engine mount bracket on the transaxle case and tighten bolt and nuts.

Tightening torque

61—76 N·m {6.3—7.7 kgf·m, 45—56 ft·lbf}

MANUAL TRANSAXLE [G35M-R]

2. Install the No.1 engine mount bracket to the transaxle case, and then tighten the bolts.

Tightening torque

94—116 N·m {9.6—11 kgf·m, 70—85 ft·lbf}

am3uuw0000525

3. Install the No.1 engine mount rubber to the front crossmember, and then temporarily tighten the bolts.

am3uuw0000525

4. Place the No.4 engine mount rubber with the body stud bolts passing through the holes and tighten the bolt in the figure.

Tightening torque

94—152 N·m {9.6—15 kgf·m, 70—112 ft·lbf}

am3uuw0000525

5. Fully tighten the bolts.

Tightening torque

73—90 N·m {7.5—9.1 kgf·m, 54—66 ft·lbf}

am3uuw0000212

6. Place the battery bracket on the No.4 Engine mount rubber with the body stud bolts passing through the holes and tighten bolts and nuts in the order shown in the figure.

Tightening torque

73—90 N·m {7.5—9.1 kgf·m, 54—66 ft·lbf}

7. Remove the SST (49 C017 5A0).

am3uuw0000525

05-15A

MANUAL TRANSAXLE [G35M-R]

INSPECTION AFTER TRANSAXLE INSTALLATION [G35M-R]

id0515b1800300

Note

- Perform the following inspection only when the transaxle has been overhauled.

1. Perform a road test and inspect the following items:
 - (1) No abnormal noise in each shift position.
 - (2) Smooth shift operation when shifting gears.
 - (3) No gear slipout after shifting gears.
 - (4) Back-up light switch operates correctly.

NEUTRAL SWITCH REMOVAL/INSTALLATION [G66M-R]

id0515k1800700

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the battery component. (ex: battery, battery tray and PCM component) (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
4. Remove the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
5. Drain the oil from the transaxle. (See 05-15B-3 TRANSAXLE OIL REPLACEMENT [G66M-R].)
6. Remove the neutral switch.
7. Install the neutral switch (with a new gasket) to the transaxle case.

Tightening torque

20—29 N·m {2.1—2.9 kgf·m, 15—21 ft·lbf}

8. Install the battery component. (ex: battery, battery tray and PCM component)(See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
9. Install the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
10. Add the specified amount and type of oil. (See 05-15B-3 TRANSAXLE OIL REPLACEMENT [G66M-R].)
11. Install the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)

am3uuw0000213

BACK-UP LIGHT SWITCH REMOVAL/INSTALLATION [G66M-R]

id0515k1800800

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the battery component. (ex: battery, battery tray and PCM component)(See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
4. Remove the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
5. Drain the oil from the transaxle. (See 05-15B-3 TRANSAXLE OIL REPLACEMENT [G66M-R].)
6. Disconnect the back-up light switch connector and remove the back-up light switch.
7. Install the back-up light switch (with a new gasket) to the transaxle case.

Tightening torque

20—29 N·m {2.1—2.9 kgf·m, 15—21 ft·lbf}

8. Install the battery component. (ex: battery, battery tray and PCM component)(See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
9. Install the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
10. Add the specified amount and type of oil. (See 05-15B-3 TRANSAXLE OIL REPLACEMENT [G66M-R].)
11. Install the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)

am3uuw0000214

TRANSAXLE OIL INSPECTION [G66M-R]

id0515k1800000

1. Park the vehicle on level ground.
2. Remove the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
3. Remove the oil level plug and washer.

MANUAL TRANSAXLE [G66M-R]

- Verify that the oil is near the brim of the plug port.
 - If the oil level is lower than the low level, add the specified amount and type of oil through the oil level plug hole.

Manual transaxle oil Grade
API GL-4

Manual transaxle oil Viscosity
SAE 75W-80

- Install a new washer and the oil level plug.

Tightening torque
39—59 N·m {4.0—6.0 kgf·m, 29—43 ft·lbf}

- Install the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)

am3uuw0000212

TRANSAXLE OIL REPLACEMENT [G66M-R]

id0515k1800100

- Park the vehicle on level ground.
- Remove the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
- Remove the drain plug with the washer.
- Drain the oil into a suitable container.
- Install a new washer and the drain plug.

Tightening torque
39—59 N·m {4.0—6.0 kgf·m, 29—43 ft·lbf}

- Remove the oil level plug with washer and add the specified amount and type of oil through the oil level plug hole until the level reaches the bottom of the oil level plug hole.

21	Manual transaxle (See 05-15B-7 Manual Transaxle Removal Note.) (See 05-15B-8 Manual Transaxle Installation Note.)

Shift Cable And Select Cable Removal Note

1. Remove the shift and selector cable outer ends as shown in the figure.

am3uuw0000213

2. Remove the both shift cable end and select cable end using a fastener remover.

am3uuw0000330

No.4 Engine Mount Removal Note

1. Install the SST using the following procedure.

Caution

- Refer to the SST instruction manual for the basic handling procedure.

am6xuw0000151

MANUAL TRANSAXLE [G66M-R]

- (1) Align the bolt of the shock absorber (right side) shown in the figure with the rear shaft hole for the right side of the **SST**.
- (2) Align the bolt of the shock absorber (left side) shown in the figure with the rear shaft hole for the left side of the **SST**.

am3uuw0000213

05-15B

- (3) Install one front foot No.2 to each of the left and right front shafts of the **SST**, and then align the holes of the **SST** front shafts with the bolt on the left and right side of each front side frame.
- (4) Adjust the height of the left and right side bars so that they are leveled, then tighten each part of the **SST**.
- (5) Make sure each joint is securely tightened.

am3uuw0000213

2. Support the engine using the **SST**.
3. Remove the No.4 engine mount rubber and bracket.

am3uuw0000213

Manual Transaxle Removal Note

Warning

- Remove the transaxle carefully, holding it steady. If the transaxle falls it could be damaged or cause injury.

MANUAL TRANSAXLE [G66M-R]

1. Adjust the **SST** and lean the engine toward the transaxle.

am3uuw0000213

2. Support the transaxle on a jack.
3. Remove the transaxle mounting bolts.
4. Remove the transaxle.

am6xuw0000150

Manual Transaxle Installation Note

Warning

- Install the transaxle carefully, holding it steady. If the transaxle falls it could be damaged or cause injury.

1. Set the transaxle on a jack and lift into place.
2. Install the transaxle mounting bolts.
3. Adjust the **SST** (49 C017 5A0) so that the engine is located at the specified position.

am6xuw0000150

No.1 Engine Mount and No.4 Engine Mount Installation Note

1. Install the No.4 engine mount bracket on the transaxle case and tighten bolt and nuts.

Tightening torque

61—76 N·m {6.3—7.7 kgf·m, 45—56 ft·lbf}

am3uuw0000525

MANUAL TRANSAXLE [G66M-R]

2. Install the No.1 engine mount bracket to the transaxle case, and then tighten the bolts.

Tightening torque

94—116 N·m {9.6—11 kgf·m, 70—85 ft·lbf}

am3uuw0000525

3. Install the No.1 engine mount rubber to the front crossmember, and then temporarily tighten the bolts.

am3uuw0000525

4. Place the No.4 engine mount rubber with the body stud bolts passing through the holes and tighten the bolt in the figure.

Tightening torque

94—152 N·m {9.6—15 kgf·m, 70—112 ft·lbf}

am3uuw0000525

5. Fully tighten the bolts.

Tightening torque

73—90 N·m {7.5—9.1 kgf·m, 54—66 ft·lbf}

am3uuw0000526

6. Place the battery bracket on the No.4 Engine mount rubber with the body stud bolts passing through the holes and tighten bolts and nuts in the order shown in the figure.

Tightening torque

73—90 N·m {7.5—9.1 kgf·m, 54—66 ft·lbf}

7. Remove the SST (49 C017 5A0).

am3uuw0000526

MANUAL TRANSAXLE [G66M-R]

INSPECTION AFTER TRANSAXLE INSTALLATION [G66M-R]

id0515k1800300

Note

- Perform the following inspection only when the transaxle has been overhauled.

1. Perform a road test and inspect the following items:
 - (1) No abnormal noise in each shift position.
 - (2) Smooth shift operation when shifting gears.
 - (3) No gear slipout after shifting gears.
 - (4) Back-up light switch operates correctly.

05-15C

am3zzw0000593

1	Manual transaxle (See 05-15C-5 MANUAL TRANSAXLE REMOVAL/ INSTALLATION [A26M-R])
2	Oil seal (differential) (See 05-15C-3 OIL SEAL (DIFFERENTIAL) REPLACEMENT [A26M-R])
3	Back-up light switch (See 05-15C-2 BACK-UP LIGHT SWITCH REMOVAL/INSTALLATION [A26M-R].) (See 09-18-55 BACK-UP LIGHT SWITCH INSPECTION.)

4	Neutral switch (See 05-15C-2 NEUTRAL SWITCH REMOVAL/ INSTALLATION [A26M-R]) (See 01-40B-23 NEUTRAL SWITCH INSPECTION [L3 WITH TC])
5	Transaxle oil (See 05-15C-2 TRANSAXLE OIL INSPECTION [A26M-R]) (See 05-15C-3 TRANSAXLE OIL REPLACEMENT [A26M-R])

MANUAL TRANSAXLE [A26M-R]

NEUTRAL SWITCH REMOVAL/INSTALLATION [A26M-R]

id05151800700

1. Disconnect the negative battery cable.
2. Disconnect the neutral switch connector.
3. Remove the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
4. Remove the neutral switch.
5. Install the neutral switch to the transaxle case.

Tightening torque

29—52 N·m {2.9—5.3 kgf·m, 21—38 ft·lbf}

6. Install the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
7. Connect the negative battery cable.

am3zzw0000593

BACK-UP LIGHT SWITCH REMOVAL/INSTALLATION [A26M-R]

id05151800800

1. Disconnect the negative battery cable.
2. Disconnect the back-up light switch connector.
3. Remove the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
4. Remove the back-up light switch.
5. Install the back-up light switch to the transaxle case.

Tightening torque

29—52 N·m {2.9—5.3 kgf·m, 21—38 ft·lbf}

6. Install the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
7. Connect the negative battery cable.

am3zzw0000593

TRANSAXLE OIL INSPECTION [A26M-R]

id05151800000

1. Park the vehicle on level ground.
2. Remove the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
3. Remove the oil level plug and washer.
4. Verify that the oil is near the brim of the plug port.
 - If the oil level is low, add the specified amount and type of oil through the filler plug hole.

Manual transaxle oil grade
API service GL-4

Manual transaxle oil viscosity
SAE 75W-80

5. Tighten the oil level plug with a new washer.

Tightening torque

28—50 N·m {2.9—5.1 kgf·m, 21—37 ft·lbf}

6. Install the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)

am3zzw0000545

MANUAL TRANSAXLE [A26M-R]

TRANSAXLE OIL REPLACEMENT [A26M-R]

id051511800100

1. Park the vehicle on level ground.
2. Remove the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
3. Remove the drain plug with the washer.
4. Drain the oil into a suitable container.
5. Install a new washer and the drain plug.

Tightening torque

28—50 N·m {2.9—5.1 kgf·m, 21—37 ft·lbf}

am6zzw0000325

6. Remove the oil level plug with washer and add the specified amount and type of oil through the oil level plug hole until the level reaches the bottom of the oil level plug hole.

Manual transaxle oil grade

API service GL-4

Manual transaxle oil viscosity

SAE 75W-80

Manual transaxle oil capacity (approx. quantity)

2.4—2.6 L {2.6—2.7 US qt, 2.12—2.28 Imp qt}

am3zzw0000545

05-15C

7. Install a new washer and the oil level plug.

Tightening torque

28—50 N·m {2.9—5.1 kgf·m, 21—37 ft·lbf}

8. Install the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)

OIL SEAL (DIFFERENTIAL) REPLACEMENT [A26M-R]

id051511800200

1. On level ground, jack up the vehicle and support it evenly on safety stands.
2. Drain the oil from the transaxle. (See 05-15C-3 TRANSAXLE OIL REPLACEMENT [A26M-R].)
3. Remove the front tires. (See 02-10-1 GENERAL PROCEDURES (SUSPENSION).)
4. Remove the splash shield. (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)
5. Remove the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
6. Separate the drive shaft and joint shaft from the transaxle. (See 03-13-3 DRIVE SHAFT REMOVAL/INSTALLATION.) (See 03-13-13 JOINT SHAFT REMOVAL/INSTALLATION.)
7. Remove the oil seals using a screwdriver.

am6zzw0000325

MANUAL TRANSAXLE [A26M-R]

- Using the **SSTs** and a hammer, tap each new oil seal in evenly until the **SSTs** contact the transaxle case.

am3zzw0000820

- Coat the lip of each oil seal with transaxle oil.
- Insert the drive shaft and joint shaft to the transaxle. (See 03-13-3 DRIVE SHAFT REMOVAL/INSTALLATION) (See 03-13-13 JOINT SHAFT REMOVAL/INSTALLATION)
- Install the aerodynamic under cover No.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
- Install the splash shield. (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)
- Install the front tires. (See 02-10-1 GENERAL PROCEDURES (SUSPENSION).)
- Add the specified amount and type of oil. (See 05-15C-3 TRANSAXLE OIL REPLACEMENT [A26M-R].)

am3zzw0000545

Caution

- **Secure the steering wheel using tape or a cable to prevent the steering shaft from rotating after disconnecting the steering shaft. If the steering wheel rotates after the steering shaft and the steering gear and linkage are disconnected, the internal parts of the clock spring could be damaged.**

1. Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disconnect the negative battery cable. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
3. Remove the PCM cover No.1. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
4. Disconnect the PCM connector. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
5. Remove the following parts:
 - (1) Battery tray and PCM component (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
 - (2) Air cleaner component (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
 - (3) Charge air cooler cover (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
 - (4) Charge air cooler (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
 - (5) Fuel pump resistor (See 01-14B-16 FUEL PUMP RESISTOR REMOVAL/INSTALLATION [L3 WITH TC].)
 - (6) Front tires (See 02-10-1 GENERAL PROCEDURES (SUSPENSION).)
 - (7) Splash shield (See 09-16-30 SPLASH SHIELD REMOVAL/INSTALLATION.)
 - (8) Aerodynamic under cover No.2 (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
 - (9) WU-TWC bracket (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
 - (10) Starter (See 01-19B-2 STARTER REMOVAL/INSTALLATION [L3 WITH TC].)
 - (11) Front auto leveling sensor (See 09-18-50 AUTO LEVELING SENSOR REMOVAL/INSTALLATION.)
6. Drain the transaxle oil into a suitable container. (See 05-15C-3 TRANSAXLE OIL REPLACEMENT [A26M-R].)
7. Remove in the order indicated in the table.
8. Install in the reverse order of removal.
9. Perform the auto leveling system initialization. (See 09-18-51 AUTO LEVELING SYSTEM INITIALIZATION.)
10. Add the specified amount of specified transaxle oil. (See 05-15C-3 TRANSAXLE OIL REPLACEMENT [A26M-R].)
11. Warm up the engine and transaxle, inspect for oil leakage, and inspect the transaxle operation.

Warning

- **Improperly jacking a transaxle is dangerous. It can slip off the jack and may cause serious injury.**

Note

- If the transaxle is overhauled and installed to the vehicle, perform the 'INSPECTION AFTER TRANSAXLE INSTALLATION' and verify that there is no abnormality. (See 05-15C-13 INSPECTION AFTER TRANSAXLE INSTALLATION [A26M-R].)

MANUAL TRANSAXLE [A26M-R]

am3uuw000623

MANUAL TRANSAXLE [A26M-R]

1	Neutral switch connector
2	Back-up light switch connector
3	Selector cable (See 05-15C-7 Shift Cable and Select Cable Removal Note.)
4	Shift cable (See 05-15C-7 Shift Cable and Select Cable Removal Note.)
5	Cable rubber bracket
6	GND wiring harness
7	Clutch release cylinder
8	GND wiring harness
9	Wiring harness bracket
10	Transaxle mounting bolt (upper side)
11	Tie-rod end ball joint (See 02-13-13 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
12	Stabilizer control link
13	Lower arm ball joint
14	No.1 engine mount (See 05-15C-8 No.1 Engine Mount Rubber Removal Note.) (See 05-15C-11 No.1 Engine Mount and No.4 Engine Mount Installation Note.)
15	Crossmember bracket

16	Crossmember component (See 02-13-13 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
17	Drive shaft (LH) (See 03-13-3 DRIVE SHAFT REMOVAL/INSTALLATION)
18	Drive shaft (RH) (See 03-13-3 DRIVE SHAFT REMOVAL/INSTALLATION.)
19	Joint shaft (See 03-13-13 JOINT SHAFT REMOVAL/INSTALLATION.)
20	Battery tray bracket
21	Cable bracket
22	No.4 engine mount rubber (See 05-15C-8 No.4 Engine Mount Removal Note.) (See 05-15C-11 No.1 Engine Mount and No.4 Engine Mount Installation Note.)

24	Transaxle mounting bolt (lower side)
25	Manual transaxle (See 05-15C-10 Manual Transaxle Removal Note.) (See 05-15C-11 Manual Transaxle Installation Note.)

05-15C

Shift Cable and Select Cable Removal Note

1. Remove the shift and selector cable outer ends as shown in the figure.

am3uuw0000213

2. Remove the both shift cable end and select cable end using a fastener remover.

am6zzw0000326

MANUAL TRANSAXLE [A26M-R]

No.1 Engine Mount Rubber Removal Note

1. Loosen the No.1 engine mount rubber installation bolt (front crossmember side) shown in the figure.

am3uuw000598

2. Remove the No.1 engine mount rubber installation bolt (No.1 engine mount bracket side) shown in the figure.
3. Remove the No.1 engine mount rubber and the front crossmember component as a single unit.

am3uuw000598

No.4 Engine Mount Removal Note

1. Detach the hose clip shown in the figure.

am3zzw000545

2. Remove the bracket bolt shown in the figure and set the bracket aside to prevent interference with the SST.

am3zzw000545

MANUAL TRANSAXLE [A26M-R]

3. Install the **SST** using the following procedure.

Caution

- Refer to the **SST** instruction manual for the basic handling procedure.

am2zzw000019

- (1) As shown in the figure, set the rear shafts of the **SST** to the left and right shock absorber installation nut.

am3zzw0000847

- (2) Install front foot No.2 to the left/right front shaft of the **SST**, then align the groove of the front shaft of the **SST** with the folded up part of the vehicle as shown in the figure.
- (3) Adjust the positions of the **SST** side bars so that they are the same height (left and right) and horizontal.
- (4) Make sure each joint is securely tightened.

am3zzw0000840

05-15C

MANUAL TRANSAXLE [A26M-R]

- Support the engine using the **SST**.
- Remove the battery tray bracket, No.4 engine mount rubber and bracket.

am3zzw0000840

Manual Transaxle Removal Note

Warning

- Remove the transaxle carefully, holding it steady. If the transaxle falls it could be damaged or cause injury.

- Adjust the **SST** and lean the engine toward the transaxle.

am3zzw0000840

- To prevent interference when removing the transaxle, remove the brake pipe from the clip as shown in the figure and set it in a place out of the way.

am3zzw0000546

- Remove the clip and suspend the brake hose as shown in the figure using a cable or similar item.

am3zzw0000601

MANUAL TRANSAXLE [A26M-R]

4. Support the transaxle on a jack.
5. Remove the transaxle mounting bolts.
6. Remove the transaxle.

am6zzw0000326

Manual Transaxle Installation Note

Warning

- Install the transaxle carefully, holding it steady. If the transaxle falls it could be damaged or cause injury.

1. Set the transaxle on a jack and lift into place.
2. Install the transaxle mounting bolts.
3. Adjust the **SST** (49 C017 5A0) so that the engine is located at the specified position.

am3uuw0000623

4. Install the brake hose to the bracket as shown in the figure and install the clip.

am3zzw0000601

No.1 Engine Mount and No.4 Engine Mount Installation Note

1. Install the front crossmember component. (See 02-13-13 FRONT CROSSMEMBER REMOVAL/ INSTALLATION.)
2. Temporarily tighten the No.1 engine mount rubber installation bolts.

am3uuw0000598

05-15C

MANUAL TRANSAXLE [A26M-R]

3. Tighten the bolt shown in the figure.

Tightening torque

61—76 N·m {6.3—7.7 kgf·m, 45—56 ft·lbf}

am3uuw0000598

4. Tighten the No.4 engine mount rubber installation bolt.

Tightening torque

94—152 N·m {9.6—15 kgf·m, 70—112 ft·lbf}

5. Tighten the No.1 engine mount rubber installation bolts in the order shown.

Caution

- Tighten the bolts in the order shown in the figure to prevent abnormal noise and vibration after assembly.
- Tighten the bolts while being careful of their length to prevent interference between the steering gear housing and bolt.

am3uuw0000304

Bolt stem length

Front crossmember side: 62mm {2.4 in}

No.1 engine mount bracket side: 65mm {2.6 in}

Tightening torque

73—90 N·m {7.5—9.1 kgf·m, 54—66 ft·lbf}

am3uuw0000623

6. Tighten the No.4 engine mount rubber and battery tray bracket installation nuts as shown in the figure.

Tightening torque

44—61 N·m {4.5—6.2 kgf·m, 33—44 ft·lbf}

am3uuw0000598

Note

- Perform the following inspection only when the transaxle has been overhauled.

1. Perform a road test and inspect the following items:

- (1) No abnormal noise in each shift position.
- (2) Smooth shift operation when shifting gears.
- (3) No gear slipout after shifting gears.
- (4) Back-up light switch operates correctly.

MANUAL TRANSAXLE SHIFT MECHANISM

MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION

id051600800200

G35M-R, G66M-R

1. Remove the battery cover. (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
2. Disconnect the negative battery cable.
3. Remove the battery component. (ex: battery, battery tray and PCM component) (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
4. Remove the air cleaner component. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
5. Remove the aerodynamic under cover NO.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
6. Remove the tunnel member. (rear) (See 01-15A-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [LF, L5].)
7. Remove the upper panel. (See 09-17-40 UPPER PANEL REMOVAL/INSTALLATION.)
8. Remove the shift lever knob.
9. Remove the shift panel. (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION.)
10. Remove the side wall. (See 09-17-37 SIDE WALL REMOVAL/INSTALLATION.)
11. Remove the console. (See 09-17-45 CONSOLE REMOVAL/INSTALLATION.)

am3uuw0000331

12. Detach the clip as shown in the figure.

am3uuw0000331

13. Disconnect the drain hose connected to A/C unit. (See 07-11-4 A/C UNIT REMOVAL/INSTALLATION.)

am3uuw0000438

14. Remove the cap and fastener securing the insulator (front) and set the insulator (front) aside.
15. Remove in the order indicated in the table.
16. Install in the reverse order of removal.
17. After installation, verify that the shift lever can be shifted smoothly into each position.

05-17

MECHANICAL SYSTEM TEST [FS5A-EL]

id051721290600

Mechanical System Test Preparation

1. Engage the parking brake and use wheel chocks at the front and rear of the wheels.
2. Inspect the engine coolant. (See 01-12A-2 ENGINE COOLANT LEVEL INSPECTION [LF, L5].)
3. Inspect the engine oil. (See 01-11A-3 ENGINE OIL LEVEL INSPECTION [LF, L5].)
4. Inspect the ATF. (See 05-17-12 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FS5A-EL].)
5. Inspect the idle speed. (See 01-10A-3 ENGINE TUNE-UP [LF, L5].)
6. Inspect the ignition timing. (See 01-10A-3 ENGINE TUNE-UP [LF, L5].)
7. Verify that no DTCs recorded. (See 05-02-3 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FS5A-EL].)

Line Pressure Test

1. Perform "Mechanical System Test Preparation". (See 05-17-3 Mechanical System Test Preparation.)

Warning

- **Removing the square-head plug when the ATF is hot can be dangerous. Hot ATF can come out of the opening and badly burn you. Before removing the square-head plug, allow the ATF to cool.**

Note

- Use a suitable oil pressure gauge that corresponds to the line pressure because the maximum scale value differs depending on the oil pressure gauge.

2. Perform the line pressure test with the engine idle at D range.

AUTOMATIC TRANSAXLE [FS5A-EL]

- (1) Remove the square-head plug from the line pressure inspection port.
- (2) Connect the SSTs as following:
 - When using the oil pressure gauge set (49 0378 400C), connect the SSTs (49 H019 002, 49 0378 400C, 49 B019 901B) to the line pressure inspection port as shown in the figure.
 - When using the oil pressure gauge set (49 D019 9A2), connect the SSTs (49 D019 910, 49 D019 911, 49 D019 913, 49 D019 909, 49 D019 908) to the line pressure inspection port as shown in the figure.

am3uuw0000229

USING OIL PRESSURE GAUGE SET (49 0378 400C)

USING OIL PRESSURE GAUGE SET (49 D019 9A2)

• 49 0378 400C

- 49 B019 901B (LOW Pressure Gauge): 0—1,000 kPa {0.00—10.19 kgf/cm², 0.0—145.0 psi}
- 49 B019 902A (HIGH Pressure Gauge): 0—2,500 kPa {0.00—25.49 kgf/cm², 0.0—362.5 psi}

• 49 D019 9A2

- 49 D019 908 (LOW Pressure Gauge): 0—1,000 kPa {0.00—10.19 kgf/cm², 0.0—145.0 psi}
- 49 D019 907 (HIGH Pressure Gauge): 0—3,000 kPa {0.00—30.59 kgf/cm², 0.0—435.1 psi}

am6xuw0000280

- (3) Start the engine.
 - (4) Warm-up the transaxle until the ATF temperature reaches at 60—70 °C {140—158 °F}.
 - (5) Select the selector lever to D range.
 - (6) Read the line pressure with the engine idle.
3. Perform the line pressure test at the engine idle at each position/range in the same manner.
 4. Stop the engine.
 5. Perform the line pressure test with the engine stall at D range.
 - (1) Replace the oil pressure gauge as following:
 - When using the oil pressure gauge set (49 0378 400C), replace the SST (49 B019 901B) with SST (49 B019 902A).
 - When using the oil pressure gauge set (49 D019 9A2), replace the SST (49 D019 908) with SST (49 D019 907).

05-17

am6xuw0000280

- (2) Start the engine.
- (3) Firmly depress the brake pedal with the left foot.
- (4) Select the selector lever to D range.

Caution

- If the accelerator pedal is pressed for longer than 5 s while the brake pedal is pressed, the transaxle could be damaged. Therefore, perform Steps (5)—(6) within 5 s.

- (5) Gradually depress the accelerator pedal with the right foot.
 - (6) When the engine speed no longer increases, quickly read the line pressure and release the accelerator pedal.
 - (7) Select the selector lever to N position and let the engine idle for 1 min or more to cool the ATF.
6. Perform the line pressure test with the engine stall at each position/range in the same manner.
- If there is any malfunction, inspect the following “possible cause” according to the condition.

Condition		Possible Cause
Low pressure	In all ranges	<ul style="list-style-type: none"> • Worn oil pump • Oil leakage from oil pump, control valve body, and/or transaxle case • Pressure regulator valve sticking • Pressure control solenoid A malfunction
	In D range and M range (1GR, 2GR)	<ul style="list-style-type: none"> • Oil leakage from forward clutch hydraulic circuit
	In M range (2GR)	<ul style="list-style-type: none"> • Oil leakage from 2-4 brake band hydraulic circuit
	In M range (1GR), R position	<ul style="list-style-type: none"> • Oil leakage from low and reverse brake hydraulic circuit
	In R position	<ul style="list-style-type: none"> • Oil leakage from reverse clutch hydraulic circuit
High pressure	In all ranges	<ul style="list-style-type: none"> • Pressure regulator valve stuck • Pressure control solenoid A malfunction

AUTOMATIC TRANSAXLE [FS5A-EL]

Line Pressure

Test Condition		Specification (kPa {kgf/cm ² , psi})	
		LF	L5
Idle	D range	330—470 {3.37—4.79, 47.9—68.1}	
	M range (1GR, 2GR)	330—470 {3.37—4.79, 47.9—68.1}	
	R position	490—710 {5.00—7.23, 71.1—102.0}	
Stall	D range	1,200—1,320 {12.24—13.46, 174.1—191.4}	
	M range (1GR, 2GR)	1,200—1,320 {12.24—13.46, 174.1—191.4}	
	R position	1,630—1,950 {16.63—19.88, 236.5—282.8}	1,820—2,090 {18.56—21.31, 264.0—303.1}

7. Stop the engine.

Warning

- **Removing the square-head plug when the ATF is hot can be dangerous. Hot ATF can come out of the opening and badly burn you. Before removing the square-head plug, allow the ATF to cool.**

8. Remove the SSTs.

Note

- Do not reuse the square-head plug because it is coated.

9. Install a new square-head plug in the inspection port.

Tightening torque

4.8—9.8 N·m {49—99 kgf·cm, 43—86 in·lbf}

Stall Test

1. Perform "Mechanical System Test Preparation". (See 05-17-3 Mechanical System Test Preparation.)
2. Start the engine.
3. Perform the stall test at D range.
 - (1) Firmly depress the brake pedal with the left foot.
 - (2) Select the selector lever to D range.

Caution

- **If the accelerator pedal is pressed for longer than 5 s while the brake pedal is pressed, the transaxle could be damaged. Therefore, perform Steps (3)—(4) within 5 s.**

- (3) Gently depress the accelerator pedal with the right foot.
- (4) When the engine speed no longer increases, quickly read the speed and release the accelerator pedal.
- (5) Select the selector lever to N position and let the engine idle for 1 min or more to cool the ATF.
4. Perform the stall test at each position/range in the same manner.
 - If there is any malfunction, inspect the following "possible cause" according to the condition.

Condition		Possible Cause	
Above specification	In all ranges	Insufficient line pressure	<ul style="list-style-type: none"> • Worn oil pump • Oil leakage from oil pump, control valve body, and/or transaxle case • Pressure regulator valve sticking • Converter relief valve sticking • Pressure control solenoid A malfunction
	In D range and M range (1GR, 2GR)	• Forward clutch slipping	
	In M range (2GR)	• 2-4 brake band slipping	
	In M range (1GR), R position	• Low and reverse brake slipping	
	In R position	<ul style="list-style-type: none"> • Perform "ROAD TEST" to determine whether problem is in reverse clutch or low and reverse brake <ul style="list-style-type: none"> — Engine braking felt in M range (1GR): Reverse clutch is defective — Engine braking not felt in M range (1GR): Low and reverse brake is defective 	
Below specification		• Engine lack of power	

AUTOMATIC TRANSAXLE [FS5A-EL]

Stall Speed

Test Condition	Specification (rpm)	
	LF	L5
D range	2,200—2,800	2,400—3,000
M range	2,200—2,800	2,400—3,000
R position	2,200—2,800	2,400—3,000

Time Lag Test

1. Perform “Mechanical System Test Preparation”. (See 05-17-3 Mechanical System Test Preparation.)
2. Start the engine.
3. Perform the time lag test when selecting the selector lever from N position to D range.
 - (1) Select the selector lever from N position to D range while the brake pedal is depressed.
 - (2) Measure the time it takes from selecting until shock is felt when shifting the selector lever from N position to D range.
4. Perform the time lag test when selecting the selector lever from N position to R position in the same manner.
 - If there is any malfunction, inspect the following “possible cause” according to the condition.

Condition		Possible Cause
From N position to D range	More than specification	<ul style="list-style-type: none"> • Low line pressure • Oil leakage from forward clutch hydraulic circuit • Forward clutch slipping • Shift solenoid A malfunction
	Less than specification	<ul style="list-style-type: none"> • High line pressure • Shift solenoid A malfunction • Forward accumulator malfunction
From N position to R position	More than specification	<ul style="list-style-type: none"> • Low line pressure • Low and reverse brake slipping • Reverse clutch slipping
	Less than specification	<ul style="list-style-type: none"> • High line pressure • Servo apply accumulator malfunction • Shift solenoid B malfunction

05-17

Time Lag

Test Condition	Specification (s)

From N position to D range	0.4—0.7	
From N position to R position	0.4—0.7	

ROAD TEST [FS5A-EL]

id051721290700

Warning

- When performing a road test, be aware of other vehicles, people, impediments, etc. to avoid an accident.

Note

- When the legal speed limit must be exceeded, use a chassis dynamometer instead of performing a road test.

Road Test Preparation

1. Inspect the engine coolant. (See 01-12A-2 ENGINE COOLANT LEVEL INSPECTION [LF, L5].)
2. Inspect the engine oil. (See 01-11A-3 ENGINE OIL LEVEL INSPECTION [LF, L5].)
3. Inspect the ATF. (See 05-17-12 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FS5A-EL].)
4. Inspect the idle speed. (See 01-10A-3 ENGINE TUNE-UP [LF, L5].)
5. Inspect the ignition timing. (See 01-10A-3 ENGINE TUNE-UP [LF, L5].)
6. Verify that no DTCs recorded. (See 05-02-3 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FS5A-EL].)

AUTOMATIC TRANSAXLE [FS5A-EL]

Shift Diagram (Normal Mode at D Range)

LF

am3uuw000303

AUTOMATIC TRANSAXLE [FS5A-EL]

L5

05-17

am3uuw000303

D Range Test

1. Perform "Road Test Preparation". (See 05-17-7 Road Test Preparation.)
2. Warm-up the transaxle until the ATF temperature reaches at 60—70 °C.
3. Select the selector lever to D range.
4. Perform the road test at D range.
 - If there is any malfunction, perform the "Symptom Troubleshooting".
 - (1) Accelerate the vehicle with half and WOT, then verify that 1GR—2GR, 2GR—3GR, 3GR—4GR, and 4GR—5GR upshifts can be obtained. The shift points must be as shown in the table below.
 - (2) Decelerate the vehicle in 5GR, then verify that 5—4, 4—3, 3—2 and 2—1 downshifts can be obtained. The shift points must be as shown in the table below.
 - (3) Drive the vehicle in 5GR, 4GR, 3GR, and 2GR and verify that kickdown occurs for 5GR—4GR, 4GR—3GR, 3GR—2GR, 2GR—1GR downshifts, and that the shift points are as shown in the table below.
 - (4) Decelerate the vehicle and verify that engine braking effect is felt in 5GR, 4GR, 3GR and 2GR.
 - (5) Drive the vehicle and verify that TCC operation is obtained. The operation points must be as shown in the table below.

05-17

M Range Test

1. Perform "Road Test Preparation". (See 05-17-7 Road Test Preparation.)
2. Warm-up the transaxle until the ATF temperature reaches at 60—70 °C.
3. Select the selector lever to M range.
4. Perform the road test at M range.
 - If there is any malfunction, perform the "Symptom Troubleshooting".
 - (1) Verify that upshifts and downshifts are obtained by manual shifting of the selector lever forward and back.
 - (2) Decelerate the vehicle in 5GR, then verify that 5—4, 4—3, 3—2 and 2—1 downshifts can be obtained. The shift points must be as shown in the table below.
 - (3) Decelerate the vehicle and verify that engine braking effect is felt in all gear position.
 - (4) Drive the vehicle and verify that TCC operation is obtained in 4GR and 5GR.

AUTOMATIC TRANSAXLE [FS5A-EL]

Shift point (LF)

Range/Mode		Throttle condition	Shift	Vehicle speed (km/h {mph})	Turbine speed (rpm)
M	MANUAL	WOT	TCC ON (M ₄)	114—124 {71—76}	3,250—3,450
			TCC ON (M ₅)	114—124 {71—76}	2,400—2,550
		Half throttle	TCC ON (M ₄)	108—126 {67—78}	3,050—3,500
			TCC ON (M ₅)	108—126 {67—78}	2,250—2,600

			M ₃ →M ₁	7—13 {5—8}	300—500

P Position Test

- Select the selector lever to P position on a gentle slope.
- Release the brake and verify that the vehicle does not roll.
 - If the vehicle rolls, inspect the parking mechanism in the transaxle.

AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FS5A-EL]

id051721290800

Automatic Transaxle Fluid (ATF) Condition Inspection

- One way of determining whether the transaxle should be disassembled is by noting:
 - If the ATF is muddy or varnished.
 - If the ATF smells strange or unusual.

ATF Condition		Possible cause
Clear red	Normal	—
Light red: pink	Contaminated with water	<ul style="list-style-type: none"> Broken oil cooler inside of radiator Poor filler tube installation: <ul style="list-style-type: none"> — Problem could be occurring to parts inside the transaxle by water contamination. It is necessary to overhaul transaxle and detect defected parts. If necessary, exchange transaxle.
Reddish brown	Has burnt smell and metal specks are found	<ul style="list-style-type: none"> Defect powertrain components inside of transaxle: Specks cause wide range of problems by plugging up in oil pipe, control valve body and oil cooler in radiator. <ul style="list-style-type: none"> — When large amount of metal specks are found, overhaul transaxle and detect defected parts. If necessary, exchange transaxle. — Implement flushing operation as there is a possibility to have specks plugging up oil pipe and/or oil cooler inside of radiator.
	Has no burnt smell	<ul style="list-style-type: none"> Discoloration by oxidation

AUTOMATIC TRANSAXLE [FS5A-EL]

Automatic Transaxle Fluid (ATF) Level Inspection

Caution

- If there is no ATF adhering to the dipstick after warming-up the engine, there is insufficient ATF. Therefore do not drive the vehicle as it could damage the transaxle.
- If a final inspection of the ATF level is performed without driving the vehicle, or the ATF amount is inspected while the ATF temperature is not at about 60—70 °C {140—158 °F}, the transaxle could be damaged because the ATF level inspection would be incorrect.
- If too much ATF is added, the ATF temperature will increase and ATF could leak from the breather hose.

Note

- The dipstick of the FS5A-EL type measures the ATF level on the differential side and, under the condition that the ATF temperature on the differential side does not rise even after warming up the engine, ATF adhering to the end of the dipstick is normal.

1. Inspect the ATF level before driving the vehicle.

- (1) Park the vehicle on level ground, and then engage the parking brake and use wheel chocks at the front and rear of the wheels.
- (2) Verify visually that there is no ATF leakage from the oil hose or housing.
- (3) Start the engine and warm it up in the P position.

Caution

- If the oil level decreases dramatically while warming-up the engine, do not select the selector lever as it could damage the transaxle.

- (4) Remove the dipstick and wipe it clean while the engine is idling.
- (5) Install the dipstick and remove it again.
- (6) Verify that the ATF level is in the range as shown in the figure.
 - If the ATF level is out of the range, adjust the ATF to the specification.

ATF type ATF M-V

2. Inspect the ATF level after driving the vehicle.

- (1) Select the selector lever and pause momentarily in each position/range (from P position to D range) while depressing the brake pedal.
- (2) Drive on city roads at a minimum of 5 km {3 mile}.
- (3) Connect the M-MDS to the DLC-2.
- (4) Verify that the ATF temperature is 60—70 °C {140—158 °F} using the M-MDS.
- (5) Remove the dipstick and wipe it clean while the engine is idling.

05-17

AUTOMATIC TRANSAXLE [FS5A-EL]

- (6) Verify that the ATF level is in the range as shown in the figure.
- If the ATF level is out of the range, adjust the ATF to the specification.

ATF type
ATF M-V

am8rrw00002327

AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL]

id051721290900

Warning

- **A hot transaxle and ATF can cause severe burns. Turn off the engine and wait until they are cool before changing the ATF.**

1. Drain the ATF.
 - (1) Remove the oil dipstick.
 - (2) Remove the aerodynamic under cover NO.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
 - (3) Remove the drain plug and washer to drain the ATF into a container.
2. Add the ATF.
 - (1) Install a new washer and the drain plug.

Tightening torque

30—41 N·m {3.1—4.1 kgf·m, 23—30 ft·lbf}

- (2) Add the specified ATF through the oil filler tube.

am6xuw0000194

ATF Type
ATF M-V

ATF Capacity (Reference)

Draining ATF from drain plug: 3.0 L {3.2 US qt, 2.6 Imp qt}

Overhauling transaxle: 5.0 L {5.3 US qt, 4.4 Imp qt}

3. Install the aerodynamic under cover NO.2. (See 09-16-29 AERODYNAMIC UNDER COVER NO.2 REMOVAL/INSTALLATION.)
4. Install the oil dipstick.
5. Inspect the ATF level. (See 05-17-12 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FS5A-EL].)

TRANSAXLE RANGE (TR) SWITCH INSPECTION [FS5A-EL]

id051721291800

Caution

- **Water or foreign objects entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign objects on the connector when disconnecting it.**

Operation Inspection

1. Perform the following procedures to inspect the TR switch.
 - If there is any malfunction, adjust the TR switch. (See 05-17-15 TRANSAXLE RANGE (TR) SWITCH ADJUSTMENT [FS5A-EL].)
- (1) Verify that the starter operates only when the ignition is switched to START with the selector lever in P or N position.
- (2) Verify that the back-up lights illuminate when selected to R position with the ignition at ON.
- (3) Verify that the positions of the selector lever and the selector indicator light are aligned.

On-Vehicle Inspection

1. Perform the following procedures.
 - (1) Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
 - (2) Disconnect the negative battery cable.

05-17-14

AUTOMATIC TRANSAXLE [FS5A-EL]

- (3) Remove the air cleaner component. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
- (4) Disconnect the TR switch connector.

am8rrw00002329

2. Inspect continuity as indicated in the table.

○—○ : Continuity

Position/ Range	Terminal				B—C Resistance (Ω)
	A	F	D	E	
P	○—○				4,085—4,515
R			○—○		1,425—1,575
N	○—○				713—788
D					371—410

am3uuw0000240

- If there is any malfunction, adjust the TR switch. (See 05-17-15 TRANSAXLE RANGE (TR) SWITCH ADJUSTMENT [FS5A-EL].)

am3uuw0000240

05-17

TRANSAXLE RANGE (TR) SWITCH ADJUSTMENT [FS5A-EL]

id051721291900

Caution

- **Water or foreign objects entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign objects on the connector when disconnecting it.**

1. Select the selector lever to N position.
2. Perform the following procedures.
 - (1) Remove the battery cover. (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
 - (2) Disconnect the negative battery cable.
 - (3) Remove the air cleaner component. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
 - (4) Disconnect the TR switch connector.
3. Loosen the TR switch.
 - (1) Remove the clip from the selector cable.

am8rrw00002332

AUTOMATIC TRANSAXLE [FS5A-EL]

- (2) Disconnect the selector cable from manual shaft lever.

- (3) Loosen the TR switch installation bolts.
4. Adjust the TR switch.

- (1) Verify that the manual shaft is aligned with N position.

- (2) Adjust the TR switch between terminals B and C until the resistance becomes specification.

TR switch specification
713—788 ohms

- (3) Tighten the TR switch installation bolts.

Tightening torque
8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}
