MAZDA3 *MAZDASPEED3* **Workshop Manual**

FOREWORD

This manual contains on-vehicle service and/or diagnosis procedures for the Mazda3/Mazdaspeed3.

For proper repair and maintenance, a thorough familiarization with this manual is important, and it should always be kept in a handy place for quick and easy reference.

All the contents of this manual, including drawings and specifications, are the latest available at the time of printing.

As modifications affecting repair or maintenance occur, relevant information supplementary to this volume will be made available at Mazda dealers. This manual should be kept up-to-date.

Mazda Motor Corporation reserves the right to alter the specifications and contents of this manual without obligation or advance notice.

All rights reserved. No part of this book may be reproduced or used in any form or by any means, electronic or mechanical—including photocopying and recording and the use of any kind of information storage and retrieval system—without permission in writing.

**Mazda Motor Corporation

WARNING

Servicing a vehicle can be dangerous. If you have not received service-related training, the risks of injury, property damage, and failure of servicing increase. The recommended servicing procedures for the vehicle in this workshop manual were developed with Mazda-trained technicians in mind. This manual may be useful to non-Mazda trained technicians, but a technician with our service-related training and experience will be at less risk when performing service operations. However, all users of this manual are expected to at least know general safety procedures.

This manual contains "Warnings" and "Cautions" applicable to risks not normally encountered in a general technician's experience. They should be followed to reduce the risk of injury and the risk that improper service or repair may damage the vehicle or render it unsafe. It is also important to understand that the "Warnings" and "Cautions" are not exhaustive. It is impossible to warn of all the hazardous consequences that might result from failure to follow the procedures.

The procedures recommended and described in this manual are effective methods of performing service and repair. Some require tools specifically designed for a specific purpose. Persons using procedures and tools which are not recommended by Mazda Motor Corporation must satisfy themselves thoroughly that neither personal safety nor safety of the vehicle will be jeopardized.

The contents of this manual, including drawings and specifications, are the latest available at the time of printing, and Mazda Motor Corporation reserves the right to change the vehicle designs and alter the contents of this manual without notice and without incurring obligation.

Parts should be replaced with genuine Mazda replacement parts or with parts which match the quality of genuine Mazda replacement parts. Persons using replacement parts of lesser quality than that of genuine Mazda replacement parts must satisfy themselves thoroughly that neither personal safety nor safety of the vehicle will be jeopardized.

Mazda Motor Corporation is not responsible for any problems which may arise from the use of this manual. The cause of such problems includes but is not limited to insufficient service-related training, use of improper tools, use of replacement parts of lesser quality than that of genuine Mazda replacement parts, or not being aware of any revision of this manual.

GENERAL INFORMATION

HOW TO USE THIS MANUAL

id000000800100

Range of Topics

- This manual contains procedures for performing all required service operations. The procedures are divided into the following five basic operations:
 - Removal/Installation
 - Disassembly/Assembly
 - Replacement
 - Inspection
 - Adjustment
- Simple operations which can be performed easily just by looking at the vehicle (i.e., removal/installation of parts, jacking, vehicle lifting, cleaning of parts, and visual inspection) have been omitted.

00-00

Service Procedure

Inspection, adjustment

- Inspection and adjustment procedures are divided into steps. Important points regarding the location and contents of the procedures are explained in detail and shown in the illustrations.

am6xuw0000155

GENERAL INFORMATION

Repair procedure

1. Most repair operations begin with an overview illustration. It identifies the components, shows how the parts fit together, and describes visual part inspection. However, only removal/installation procedures that need to be performed methodically have written instructions.
2. Expendable parts, tightening torques, and symbols for oil, grease, and sealant are shown in the overview illustration. In addition, symbols indicating parts requiring the use of special service tools or equivalent are also shown.
3. Procedure steps are numbered and the part that is the main point of that procedure is shown in the illustration with the corresponding number. Occasionally, there are important points or additional information concerning a procedure. Refer to this information when servicing the related part.

Procedure

"Inspection After Installation" Portion

INSTALL THE PARTS BY PERFORMING STEPS 1—3 IN REVERSE ORDER

SHOWS SERVICE ITEM (S)

LOWER TRAILING LINK, UPPER TRAILING LINK REMOVAL/INSTALLATION

1. Jack up the rear of the vehicle and support it with safety stands.
2. Remove the undercover. (See 01-10-4 Undercover Removal)
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.
5. Inspect the rear wheel alignment and adjust it if necessary.

INDICATES RELEVANT REFERENCES THAT NEED TO BE FOLLOWED DURING INSTALLATION

Lower Trailing Link Ball Joint, Upper Trailing Link Ball Joint Removal Note

- Remove the ball joint using the SSTs.

SHOWS SPECIAL SERVICE TOOL (SST) NO.

am6xuw0000155

GENERAL INFORMATION

Symbols

- There are eight symbols indicating oil, grease, fluids, sealant, and the use of **SST** or equivalent. These symbols show application points or use of these materials during service.

Symbol	Meaning	Kind
	Apply oil	New appropriate engine oil or gear oil
	Apply brake fluid	New appropriate brake fluid
	Apply automatic transaxle/ transmission fluid	New appropriate automatic transaxle/ transmission fluid
	Apply grease	Appropriate grease
	Apply sealant	Appropriate sealant
	Apply petroleum jelly	Appropriate petroleum jelly
	Replace part	O-ring, gasket, etc.
	Use SST or equivalent	Appropriate tools

00-00

Advisory Messages

- You will find several **Warnings, Cautions, Notes, Specifications** and **Upper and Lower Limits** in this manual.

Warning

- A Warning indicates a situation in which serious injury or death could result if the warning is ignored.

Caution

- A Caution indicates a situation in which damage to the vehicle or parts could result if the caution is ignored.

Note

- A Note provides added information that will help you to complete a particular procedure.

Specification

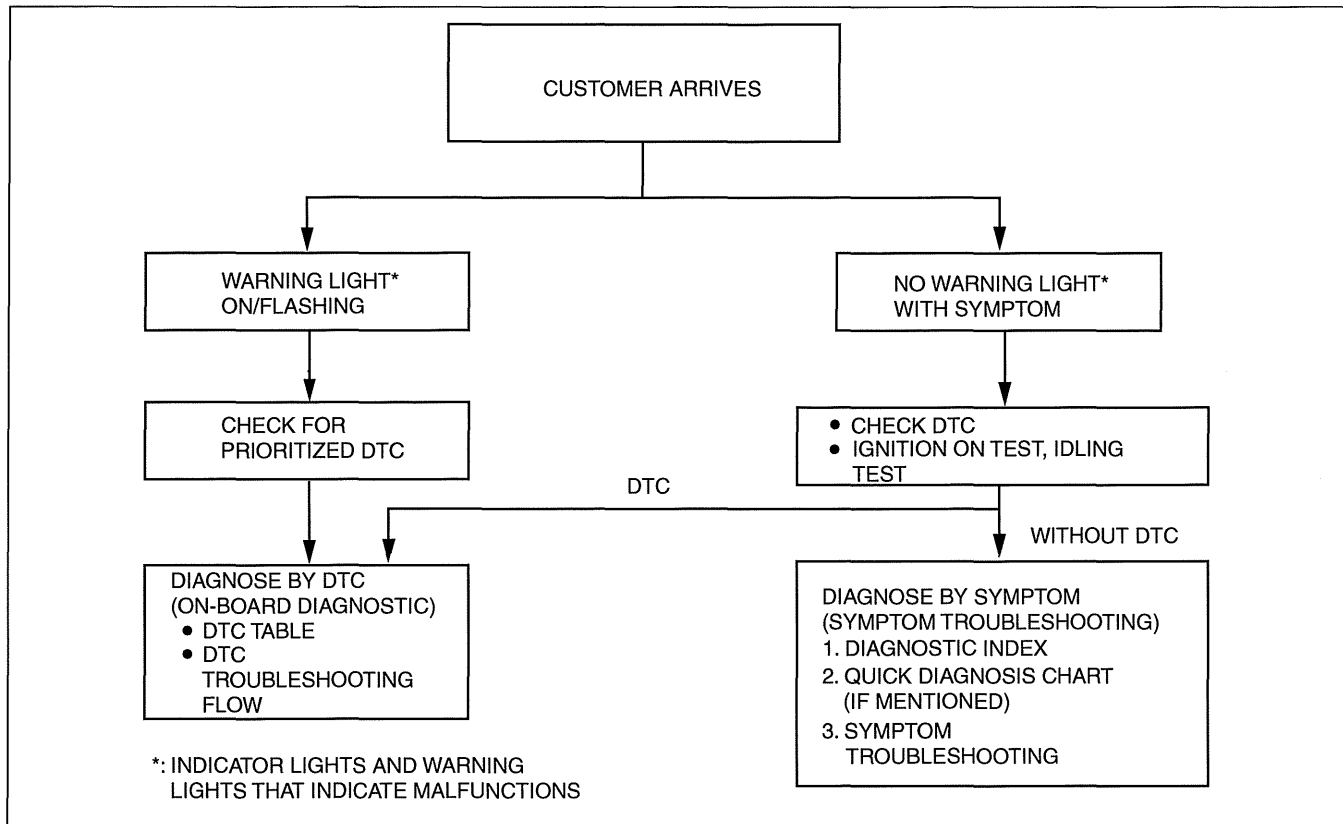

- The values indicate the allowable range when performing inspections or adjustments.

Upper and lower limits

- The values indicate the upper and lower limits that must not be exceeded when performing inspections or adjustments.

GENERAL INFORMATION

Troubleshooting Procedure Basic flow of troubleshooting

acxuuw00000444

DTC troubleshooting flow (on-board diagnostic)

- Diagnostic trouble codes (DTCs) are important hints for repairing malfunctions that are difficult to simulate. Perform the specific DTC diagnostic inspection to quickly and accurately diagnose the malfunction.
- The on-board diagnostic function is used during inspection. When a DTC is shown specifying the cause of a malfunction, continue the diagnostic inspection according to the items indicated by the on-board diagnostic function.

Diagnostic index

- The diagnostic index lists the symptoms of specific malfunctions. Select the symptoms related or most closely relating to the malfunction.

Quick diagnosis chart (If mentioned)

- The quick diagnosis chart lists diagnosis and inspection procedures to be performed specifically relating to the cause of the malfunction.

Symptom troubleshooting

- Symptom troubleshooting quickly determines the location of the malfunction according to symptom type.

GENERAL INFORMATION

Procedures for Use

Using the basic inspection (section 05)

- Perform the basic inspection procedure before symptom troubleshooting.
- Perform each step in the order shown.
- The reference column lists the location of the detailed procedure for each basic inspection.
- Although inspections and adjustments are performed according to the reference column procedures, if the cause of the malfunction is discovered during basic inspection, continue the procedures as indicated in the action column.

00-00

	SHOWS INSPECTION ORDER	SHOWS ITEM NAMES FOR DETAILED PROCEDURES	SHOW POINTS REQUIRING ATTENTION BASED ON INSPECTION RESULTS				
	BASIC INSPECTION						
	STEP	INSPECTION	ACTION				
	1	Perform the mechanical system test. (See 05-13-3 MECHANICAL SYSTEM TEST.) Is mechanical system normal?	<table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 10%; text-align: center;">Yes</td> <td>Go to the next step.</td> </tr> <tr> <td style="text-align: center;">No</td> <td>Repair or replace any malfunctioning parts according to the inspection result.</td> </tr> </table>	Yes	Go to the next step.	No	Repair or replace any malfunctioning parts according to the inspection result.
Yes	Go to the next step.						
No	Repair or replace any malfunctioning parts according to the inspection result.						
	2	Turn the ignition switch to the ON position. When the selector lever is moved, does the selector illumination indicate synchronized position to the lever location? Also, when other ranges are selected from N or P during idling, does the vehicle move within 1—2 s?	<table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 10%; text-align: center;">Yes</td> <td>Go to the next step.</td> </tr> <tr> <td style="text-align: center;">No</td> <td>Inspect the selector lever and TR switch. Repair or replace malfunctioning parts. (See 05-14-5 SELECTOR LEVER INSPECTION.) (See 05-13-10 TRANSMISSION RANGE (TR) SWITCH INSPECTION.) If the selector lever and TR switch are normal, go to the next step.</td> </tr> </table>	Yes	Go to the next step.	No	Inspect the selector lever and TR switch. Repair or replace malfunctioning parts. (See 05-14-5 SELECTOR LEVER INSPECTION.) (See 05-13-10 TRANSMISSION RANGE (TR) SWITCH INSPECTION.) If the selector lever and TR switch are normal, go to the next step.
Yes	Go to the next step.						
No	Inspect the selector lever and TR switch. Repair or replace malfunctioning parts. (See 05-14-5 SELECTOR LEVER INSPECTION.) (See 05-13-10 TRANSMISSION RANGE (TR) SWITCH INSPECTION.) If the selector lever and TR switch are normal, go to the next step.						
	3	Inspect the ATF color condition. (See 05-13-8 AUTOMATIC TRANSMISSION FLUID (ATF) INSPECTION.) Are ATF color and odor normal?	<table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 10%; text-align: center;">Yes</td> <td>Go to the next step.</td> </tr> <tr> <td style="text-align: center;">No</td> <td>Repair or replace any malfunctioning parts according to the inspection result. Flush ATX and cooler line as necessary.</td> </tr> </table>	Yes	Go to the next step.	No	Repair or replace any malfunctioning parts according to the inspection result. Flush ATX and cooler line as necessary.
Yes	Go to the next step.						
No	Repair or replace any malfunctioning parts according to the inspection result. Flush ATX and cooler line as necessary.						
	4	Perform the line pressure test. (See 05-13-3 Line Pressure Test.) Is the line pressure normal?	<table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 10%; text-align: center;">Yes</td> <td>Go to the next step.</td> </tr> <tr> <td style="text-align: center;">No</td> <td>Repair or replace any malfunctioning parts according to the inspection result.</td> </tr> </table>	Yes	Go to the next step.	No	Repair or replace any malfunctioning parts according to the inspection result.
Yes	Go to the next step.						
No	Repair or replace any malfunctioning parts according to the inspection result.						
	5	Perform the stall test. (See 05-13-4 Stall Speed Test.) Is the stall speed normal?	<table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 10%; text-align: center;">Yes</td> <td>Go to the next step.</td> </tr> <tr> <td style="text-align: center;">No</td> <td>Repair or replace any malfunctioning parts according to the inspection result.</td> </tr> </table>	Yes	Go to the next step.	No	Repair or replace any malfunctioning parts according to the inspection result.
Yes	Go to the next step.						
No	Repair or replace any malfunctioning parts according to the inspection result.						
REFERENCE COLUMN		Inspect the voltage at the following TCM terminals. (See 05-13-29 TCM INSPECTION.) <ul style="list-style-type: none"> • Terminal 2J (TFT sensor) • Terminals 1D, 2B, 2C, 2E (TR switch) • Terminal 2G (turbine sensor) • Terminal 2D (down switch) • Terminal 2I (up switch) • Terminal 1E (M range switch) • Terminal 1W (steering shift switch) Is the voltage normal?	<table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 10%; text-align: center;">Yes</td> <td>Go to the next step.</td> </tr> <tr> <td style="text-align: center;">No</td> <td>Repair or replace any malfunctioning parts according to the inspection result.</td> </tr> </table>	Yes	Go to the next step. GENERAL INFORMATION

Using the DTC troubleshooting flow

- DTC troubleshooting flow shows diagnostic procedures, inspection methods, and proper action to take for each DTC.

· TROUBLE CONDITION

DTC P0103

DETECTION CONDITION
describes the condition under which the DTC is detected.

DTC P0103	<p>MAF circuit high input</p> <p>PCM monitors input voltage from TP sensor after ignition key is turned on. If input voltage at PCM terminal 68 is above 8.25 V, PCM determines that TP circuit has malfunction.</p>	
DETECTION CONDITION	<p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). MIL illuminates if PCM detects the above malfunction during first drive cycle. Therefore, PENDING CODE is not available. FREEZE FRAME DATE is available. DTC is stored in the PCM memory. 	
POSSIBLE CAUSE	<ul style="list-style-type: none"> MAF sensor malfunction Connector or terminal malfunction Open circuit in wiring between MAF sensor terminal D and PCM terminal 36 Open circuit in MAF sensor ground circuit 	

POSSIBLE CAUSE
describes possible point(s) of malfunction

Indicates the inspection step No. to be performed (01 and 05 section)

Indicates the circuit to be inspected (01 and 05 section)

STEP shows the order of troubleshooting

Indicates the connector related to the inspection

Diagnostic procedure			
STEP	INSPECTION		ACTION
1	<p>VERIFY FREEZE FRAME DATA HAS BEEN RECORDED</p> <ul style="list-style-type: none"> Has FREEZE FRAME DATA been recorded? 	Yes	Go to next step.
		No	Record FREEZE FRAME DATA on repair order, then go to next step.
2	<p>VERIFY RELATED REPAIR INFORMATION AVAILABILITY</p> <ul style="list-style-type: none"> Are related Service Bulletins and/or on-line repair information available? 	Yes	Perform repair or diagnosis according to available repair information. If vehicle is not repaired, then go to next step.
		No	Go to next step.
3	<p>VERIFY CURRENT INPUT SIGNAL STATUS IS CONCERN INTERMITTENT OR CONSTANT</p> <ul style="list-style-type: none"> Connect diagnostic tool to DLC-2. Start engine. Access MAF V PID using diagnostic tool. Is MAF V PID within 0.2 - 8.3 V? 	Yes	Intermittent concern is existing. Go to INTERMITTENT CONCERNS TROUBLESHOOTING procedure. (See 01-03-33 INTERMITTENT CONCERN TROUBLESHOOTING)
		No	Go to next step.
4	<p>INSPECT POOR CONNECTION OF MAF SENSOR CONNECTOR</p> <ul style="list-style-type: none"> Turn ignition key to OFF. Disconnect MAF sensor connector. Check for poor connection (damaged, pulled-out terminals, corrosion etc.). Are there any malfunctions? 	Yes	Repair or replace terminals, then go to Step 8.

INSPECTION describes the method to quickly determine the malfunctioning part(s).

ACTION describes the appropriate action to be taken according to the result (Yes/No) of the INSPECTION.

Reference item(s) to perform ACTION.

am6xuw0000155

00-00-8

GENERAL INFORMATION

Using the diagnostic index

- Malfunction symptoms are listed in the diagnostic index under symptom troubleshooting.
- The exact malfunction symptoms can be selected by following the index.

No.	TROUBLESHOOTING ITEM	DESCRIPTION	Page
1	Melting of main or other fuses	—	(See 01-03-6 MELT NO.1 MAIN OR OTHER FUSE)
2	MIL comes on	MIL is illuminated incorrectly.	(See 01-03-7 NO.2 MIL COMES ON)
3	Will not crank	Starter does not work.	(See 01-03-8 NO. 3 WILL NOT CRANK)
4	Hard start/long crank/erratic start/erratic crank	Starter cranks engine at normal speed but engine requires excessive cranking time before starting.	(See 01-03-9 NO. 4 HARD START/ LONG CRANK/ERRATIC CRANK)
5	Engine stalls. After start/at idle	Engine stops unexpectedly at idle and/or after start.	(See 01-03-11 NO. 5 ENGINE-STALLS AFTER START/AT IDLE)
6	Cranks normally but will not start	Starter cranks engine at normal speed but engine will not run.	(See 01-03-15 NO.6 CRANKS NORMALLY BUT WILL NOT START)
7	Slow return to idle	Engine takes more time than normal to return to idle speed.	(See 01-03-19 NO. 7 SLOW RERUN TO IDLE)
8	Engine runs rough/rotling	Engine speed fluctuates between specified idle speed and lower speed and engine shakes excessively.	(See 01-03-20 NO. 8 ENGINE RUNS ROUGH/ROLLING IDLE)
9	Fast idle/runs on	Engine speed continues at fast idle after warm-up. Engine runs after ignition key is turned to OFF.	(See 01-03-23 NO. 9 FAST IDLE/RUNS ON)
10	Low idle/stalls during deceleration	Engine stops unexpectedly at beginning of deceleration or recovery from deceleration.	(See 01-03-24 NO. 10 LOW IDLE/ STALLS DURING DECELERATION)

00-00

acxuuv00000447

GENERAL INFORMATION

Using the quick diagnosis chart

- The chart lists the relation between the symptom and the cause of the malfunction.
- The chart is effective in quickly narrowing down the relation between symptom and cause of the malfunction. It also specifies a range of common causes when multiple malfunction symptoms occur.
- The appropriate diagnostic inspection relating to a malfunction cause as specified by the symptoms can be selected by looking down the diagnostic inspection column of the chart.

SYMPTOM QUICK DIAGNOSTIC CHART		② PARTS WHICH MAY BE THE CAUSE OF PROBLEMS																				
		Starter motor malfunction (Mechanical or electrical)	Starter circuit, including ignition switch open	Improper engine oil level	Low or dead battery	Charging system malfunction	Improper engine compression	Improper valve timing	Hydrolocked engine	Improper engine oil viscosity	Improper dipstick	Base engine malfunction	Drive plate or flywheel seized	Improper tension or damaged drive belts	Improper engine coolant level	Water and anti-freeze mixture improperly	Cooling system malfunction (Radiator, hoses, overflow system, thermostat, etc.)	Cooling fan system malfunction	Engine or transaxle mounts improperly installed	Cooling fan or condenser fan seat improperly	Accelerator cable free play mis-adjustment	Fuel quality

		No	<ul style="list-style-type: none"> • Inspect for bend, damage, corrosion or loose connection if shift solenoid A, B, or C terminal on ATX. • Inspect for shift solenoid mechanical stuck. (See 05-17-14 Inspection of Operation) • If shift solenoids are okay, inspect for open or short circuit between PCM connector terminal A, B or C. 																									
4	<ul style="list-style-type: none"> • Verify test results. <ul style="list-style-type: none"> — If okay, return to diagnostic index to service any additional symptoms. — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. — If vehicle is repaired, troubleshooting completed. — If vehicle is not repaired or additional diagnostic information is not available, replace or reprogram PCM. 																											
		<p>ACTION describes the appropriate action to be taken according to the result (Yes/No) of the INSPECTION.</p> <p>How to perform ACTION is described in the relative material shown.</p> <p>Reference item(s) to perform ACTION.</p>																										

am6xuw000156

GENERAL INFORMATION

id000000801600

UNITS

Electric current	A (ampere)
Electric power	W (watt)
Electric resistance	ohm
Electric voltage	V (volt)
Length	mm (millimeter)
	in (inch)
Negative pressure	kPa (kilo pascal)
	mmHg (millimeters of mercury)
	inHg (inches of mercury)
Positive pressure	kPa (kilo pascal)
	kgf/cm ² (kilogram force per square centimeter)
	psi (pounds per square inch)
Number of revolutions	rpm (revolutions per minute)
Torque	N·m (Newton meter)
	kgf·m (kilogram force meter)
	kgf·cm (kilogram force centimeter)
	ft·lbf (foot pound force)
	in·lbf (inch pound force)
Volume	L (liter)
	US qt (U.S. quart)
	Imp qt (Imperial quart)
	ml (milliliter)
	cc (cubic centimeter)
	cu in (cubic inch)
	fl oz (fluid ounce)
Weight	g (gram)
	oz (ounce)

Conversion to SI Units (Système International d'Unités)

- All numerical values in this manual are based on SI units. Numbers shown in conventional units are converted from these values.

Rounding Off

- Converted values are rounded off to the same number of places as the SI unit value. For example, if the SI unit value is 17.2 and the value after conversion is 37.84, the converted value will be rounded off to 37.8.

Upper and Lower Limits

- When the data indicates upper and lower limits, the converted values are rounded down if the SI unit value is an upper limit and rounded up if the SI unit value is a lower limit. Therefore, converted values for the same SI unit value may differ after conversion. For example, consider 2.7 kgf/cm² in the following specifications:

210—260 kPa {2.1—2.7 kgf/cm², 30—38 psi}

270—310 kPa {2.7—3.2 kgf/cm², 39—45 psi}

- The actual converted values for 2.7 kgf/cm² are 264 kPa and 38.4 psi. In the first specification, 2.7 is used as an upper limit, so the converted values are rounded down to 260 and 38. In the second specification, 2.7 is used as a lower limit, so the converted values are rounded up to 270 and 39.

GENERAL INFORMATION

SERVICE CAUTIONS

id000000800200

Injury/damage Prevention Precautions

- Depending on the vehicle, the cooling fan may operate suddenly even when the ignition is switched to off. Therefore, keep hands and tools away from the cooling fan even if the cooling fan is not operating to prevent injury to personnel or damage to the cooling fan. Always disconnect the negative battery cable when servicing the cooling fan or parts near the cooling fan.

00-00

Protection of the Vehicle

- Always be sure to cover fenders, seats and floor areas before starting work.

am3uuw0000191

Preparation of Tools and Measuring Equipment

- Be sure that all necessary tools and measuring equipment are available before starting any work.

am3uuw0000192

Special Service Tools

- Use special service tools or equivalent when they are required.

am3uuw0000193

Malfunction Diagnosis System

- Use the Mazda modular diagnostic system (M-MDS) or equivalent for malfunction diagnosis.

GENERAL INFORMATION

Negative Battery Cable Disconnection/Connection

- Perform the following system initialization after disconnecting the negative battery cable.

SYSTEM	PAGE
Steering angle sensor	(See 09-18-20 STEERING ANGLE SENSOR INITIALIZATION PROCEDURE.)
Power window system	(See 09-12-17 POWER WINDOW INITIALIZATION PROCEDURE.)

Required procedure following negative battery cable disconnection

SAS control module Disconnect the negative battery cable and wait for 1 min. or more to allow the back-up power supply to deplete its stored power.
Clock and audio The clock and audio memory settings will be erased, therefore record the clock and audio settings prior to disconnecting, and reset them after reconnecting.
Audio The DTC memory will be erased, therefore record the DTC content prior to disconnecting.

Oil Leakage Inspection

- Use either of the following procedures to identify the type of oil that is leaking:

Using UV light (black light)

1. Remove any oil on the engine or transaxle/transmission.

Note

- Referring to the fluorescent dye instruction manual, mix the specified amount of dye into the engine oil or ATF (or transaxle/transmission oil).

2. Pour the fluorescent dye into the engine oil or ATF (or transaxle/transmission oil).
3. Allow the engine to run for 30 min.
4. Inspect for dye leakage by irradiating with UV light (black light), and identify the type of oil that is leaking.
5. If no dye leakage is found, allow the engine to run for another 30 min. or drive the vehicle then reinspect.
6. Find where the oil is leaking from, then make necessary repairs.

Note

- To determine whether it is necessary to replace the oil after adding the fluorescent dye, refer to the fluorescent dye instruction manual.

Not using UV light (black light)

1. Gather some of the leaking oil using an absorbent white tissue.
2. Take samples of engine oil and ATF (or transaxle/transmission oil), both from the dipstick, and place them next to the leaked oil already gathered on the tissue.
3. Compare the appearance and smell, and identify the type of oil that is leaking.
4. Remove any oil on the engine or transaxle/transmission.
5. Allow the engine to run for 30 min.
6. Check the area where the oil is leaking, then make necessary repairs.

am3uuw000192

GENERAL INFORMATION

Removal of Parts

- While correcting a problem, also try to determine its cause. Begin work only after first learning which parts and subassemblies must be removed and disassembled for replacement or repair. After removing the part, plug all holes and ports to prevent foreign material from entering.

am3uuw0000192

00-00

Disassembly

- If the disassembly procedure is complex, requiring many parts to be disassembled, all parts should be marked in a place that will not affect their performance or external appearance and identified so that reassembly can be performed easily and efficiently.

am3uuw0000192

Inspection During Removal, Disassembly

- When removed, each part should be carefully inspected for malfunction, deformation, damage and other problems.

am3uuw0000192

Arrangement of Parts

- All disassembled parts should be carefully arranged for reassembly.
- Be sure to separate or otherwise identify the parts to be replaced from those that will be reused.

am3uuw0000192

GENERAL INFORMATION

Cleaning of Parts

- All parts to be reused should be carefully and thoroughly cleaned in the appropriate method.

Warning

- **Using compressed air can cause dirt and other particles to fly out causing injury to the eyes. Wear protective eye wear whenever using compressed air.**

am3uuw0000192

Reassembly

- Standard values, such as torques and certain adjustments, must be strictly observed in the reassembly of all parts.
- If removed, the following parts should be replaced with new ones:
 - Oil seals
 - Gaskets
 - O-rings
 - Lock washers
 - Cotter pins
 - Nylon nuts

am3uuw0000192

- Depending on location:
 - Sealant and gaskets, or both, should be applied to specified locations. When sealant is applied, parts should be installed before sealant hardens to prevent leakage.
 - Oil should be applied to the moving components of parts.
 - Specified oil or grease should be applied at the prescribed locations (such as oil seals) before reassembly.

amxzzw0000006

Adjustment

- Use suitable gauges and testers when making adjustments.

am3uuw0000193

GENERAL INFORMATION

Rubber Parts and Tubing

- Prevent gasoline or oil from getting on rubber parts or tubing.

am3uuw0000193

00-00

Hose Clamps

- When reinstalling, position the hose clamp in the original location on the hose and squeeze the clamp lightly with large pliers to ensure a good fit.

am3uuw0000193

Torque Formulas

- When using a torque wrench **SST** or equivalent combination, the written torque must be recalculated due to the extra length that the **SST** or equivalent adds to the torque wrench. Recalculate the torque by using the following formulas. Choose the formula that applies to you.

Torque Unit	Formula
N·m	$N \cdot m \times [L / (L + A)]$
kgf·m	$kgf \cdot m \times [L / (L + A)]$
kgf·cm	$kgf \cdot cm \times [L / (L + A)]$
ft·lbf	$ft \cdot lbf \times [L / (L + A)]$
in·lbf	$in \cdot lbf \times [L / (L + A)]$

am3uuw0000193

A : The length of the **SST** past the torque wrench drive.
 L : The length of the torque wrench.

Vise

- When using a vise, put protective plates in the jaws of the vise to prevent damage to parts.

am3uuw0000194

GENERAL INFORMATION

Dynamometer

- When inspecting and servicing the power train on the dynamometer or speed meter tester, pay attention to the following:
 - Place a fan, preferably a vehicle-speed proportional type, in front of the vehicle.
 - Make sure the vehicle is in a facility with an exhaust gas ventilation system.
 - Since the rear bumper might deform from the heat, cool the rear with a fan. (Surface of the bumper must be below **70°C {158°F}**.)
 - Keep the area around the vehicle uncluttered so that heat does not build up.
 - Watch the water temperature gauge and don't overheat the engine.
 - Avoid added load to the engine and maintain normal driving conditions as much as possible.

Note

- When only the front or rear wheels are rotated on a chassis dynamometer or equivalent, the ABS/DSC HU/CM determines that there is a malfunction in the ABS and illuminates the following lights:
 - Vehicles with ABS
 - ABS warning light
 - Brake system warning light
 - Vehicles with DSC
 - ABS warning light
 - Brake system warning light
 - DSC indicator light
- If the above lights are illuminated, dismount the vehicle from the chassis dynamometer and switch the ignition to LOCK. Then, switch the ignition to ON position, run the vehicle at 10 km/h or more and verify that the warning lights go out. In this case, a DTC will be stored in the memory. Clear the DTC from the memory by following the memory clearing procedure [ABS]/[DSC] in the on-board diagnostic system. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].)(See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)

SST

- Some global **SST** or equivalent are used as **SSTs** necessary for engine repair. Note that these **SSTs** are marked with global **SST** numbers.
- Note that a global **SST** number is written together with a corresponding Mazda **SST** number as shown below.

Example (section **-60)

Example (except section **-60)

GENERAL INFORMATION

ELECTRICAL SYSTEM

id00000800400

Electrical Parts

Battery cable

- Before disconnecting connectors or removing electrical parts, disconnect the negative battery cable.

am6xuw0000003

00-00

Wiring Harness

- To remove the wiring harness from the clip in the engine room, pry up the hook of the clip using a flathead screwdriver.

am3uuw0000445

Caution

- Do not remove the harness protective tape. Otherwise, the wires could rub against the body, which could result in water penetration and electrical shorting.

am6xuw0000003

Connectors

Disconnecting connectors

- When disconnecting connector, grasp the connectors, not the wires.

am6xuw0000003

GENERAL INFORMATION

- Connectors can be disconnected by pressing or pulling the lock lever as shown.

am3uuw0000445

Locking connector

- When locking connectors, listen for a click indicating they are securely locked.

am3uuw0000531

Inspection

Caution

- To prevent damage to the terminal, wrap a thin wire around the tester probe before inserting into terminal.
- When a tester is used to inspect for continuity or measuring voltage, insert the tester probe from the wiring harness side.

am6xuw0000004

- Inspect the terminals of waterproof connectors from the connector side since they cannot be accessed from the wiring harness side.

am6xuw0000004

GENERAL INFORMATION

Terminals

Inspection

- Pull lightly on individual wires to verify that they are secured in the terminal.

am3uuw0000445

00-00

Replacement

- Use the appropriate tools to remove a terminal as shown. When installing a terminal, be sure to insert it until it locks securely.
- Insert a thin piece of metal from the terminal side of the connector and with the terminal locking tab pressed down, pull the terminal out from the connector.

am3uuw0000531

Sensors, Switches, and Relays

- Handle sensors, switches, and relays carefully. Do not drop them or strike them against other objects.

am6xuw0000004

Wiring Harness

Wiring color codes

- Two-color wires are indicated by a two-color code symbol.
- The first letter indicates the base color of the wire and the second the color of the stripe.

CODE	COLOR	CODE	COLOR
B	Black	O	Orange
BR	Brown	P	Pink
G	Green	R	Red
GY	Gray	V	Violet
L	Blue	W	White
LB	Light Blue	Y	Yellow
LG	Light Green	-	-

am3uuw0000531

GENERAL INFORMATION

Fuse

Replacement

- When replacing a fuse, be sure to replace it with one of the same capacity. If a fuse fails again, the circuit probably has a short and the wiring should be inspected.
- Be sure the negative battery terminal is disconnected before replacing a main fuse.

am3uuw0000445

- When replacing a pullout fuse, use the fuse puller.

am6xuw0000004

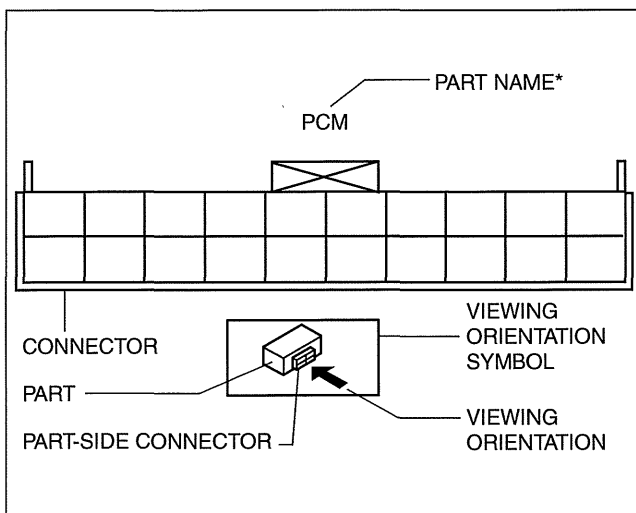

Direction of View for Connector

- The viewing direction of connectors is indicated with a symbol.
- The figures showing the viewing direction are the same as those used in Wiring Diagrams.
- The viewing directions are shown in the following three ways:

Part-side connector

The viewing direction of part-side connectors is from the terminal side.

* : Part names are shown only when there are multiple connector drawings.

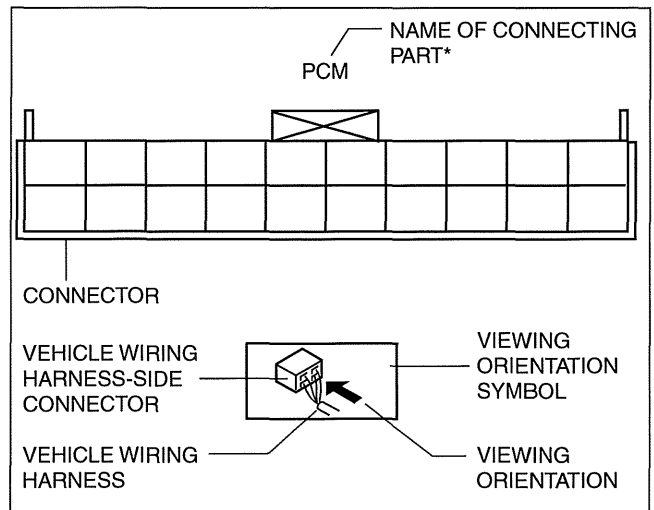

am6xuw0000160

GENERAL INFORMATION

Vehicle harness-side connector

The viewing direction of vehicle harness-side connectors is from the harness side.

* : Part names are shown only when there are multiple connector drawings.

am6xuw0000160

00-00

Other

When it is necessary to show the terminal side of vehicle harness-side connectors, such as the following connectors, the viewing direction is from the terminal side.

- Main fuse block and the main fuse block relays
- Data link connector
- Check connector
- Relay box

am6xuw0000160

Electrical Troubleshooting Tools

Jumper wire

Caution

- **Do not connect a jumper wire from the power source line to a body ground. This may cause burning or other damage to wiring harnesses or electronic components.**
- A jumper wire is used to create a temporary circuit. Connect the jumper wire between the terminals of a circuit to bypass a switch.

am3uuw0000445

GENERAL INFORMATION

Voltmeter

- The DC voltmeter is used to measure circuit voltage. A voltmeter with a range of **15 V or more** is used by connecting the positive (+) probe (red lead wire) to the point where voltage will be measured and the negative (-) probe (black lead wire) to a body ground.

am6xuw0000160

Ohmmeter

Caution

- Do not connect the ohmmeter to any circuit where voltage is applied. This will damage the ohmmeter.**
- The ohmmeter is used to measure the resistance between two points in a circuit and to inspect for continuity and short circuits.

am6xuw0000005

Precautions Before Welding

A vehicle has various electrical parts. To protect the parts from excessive current generated when welding, be sure to perform the following procedure.

- Switch the ignition to LOCK.
- Disconnect the battery cables.

am6xuw0000005

- Securely connect the welding machine ground near the welding area.
- Cover the peripheral parts of the welding area to protect them from weld spatter.

am6xuw0000160

GENERAL INFORMATION

INSTALLATION OF RADIO SYSTEM

id000000800300

The control module and control unit have been designed with sufficient attention to radio wave disturbances from the outside. However, observe the following precautions when installing the radio set to the vehicle to prevent adverse effects on the control module and control unit.

- Install the radio set and its antenna as far away as possible from the control module and control unit.
- The antenna feeder and power cable generate radio waves, therefore, keep them **100 mm {3.94 in} or more** from the control module, control unit, and wiring harness. If the antenna feeder and power cable cross over the wiring harness, place them perpendicular to the wiring harness.
- Do not install a high output radio set.
- Do not use the control module and control unit power source for the radio set. In addition, do not use the cigar lighter and accessory socket power source.
- Do not attach the antenna feeder or wiring harness of the radio set to the wiring harness, fuel pipe, or brake tube of the vehicle.
- Do not install any radio set-related devices in the area where the air bag module deploys to prevent a secondary accident if the air bag were to deploy.

00-00

am3uuw0000518

- After installing the radio set, perform a test transmission with the engine idling to verify that it does not affect engine control.

GENERAL INFORMATION

JACKING POSITIONS, VEHICLE LIFT (2 SUPPORTS) AND SAFETY STAND (RIGID RACK) POSITIONS

id000000800500

Jacking Positions

Warning

- Improperly jacking a vehicle is dangerous. The vehicle can slip off the jack and cause serious injury. Use only the correct front and rear jacking points and block the wheels.

- Use safety stands to support the vehicle after it has been lifted.

Front

Note

- To prevent obstruction between the jack body and front bumper when the jack body is inserted, use a low-floor type jack.

- Near the center of the front crossmember.

Rear

- At the center of the rear crossmember.

am3uuw0000450

GENERAL INFORMATION

Vehicle Lift Positions, Safety Stand Positions Front and rear

Warning

- Lifting a vehicle is dangerous. The vehicle can slip off the lift and cause serious injury and/or vehicle damage. Make sure that the vehicle is on the lift horizontally by adjusting the height of support at the end of the arm of the lift.

00-00

- Both sides of the vehicle, on side sills.

am3uuw0000450

GENERAL INFORMATION

TOWING

id000000800600

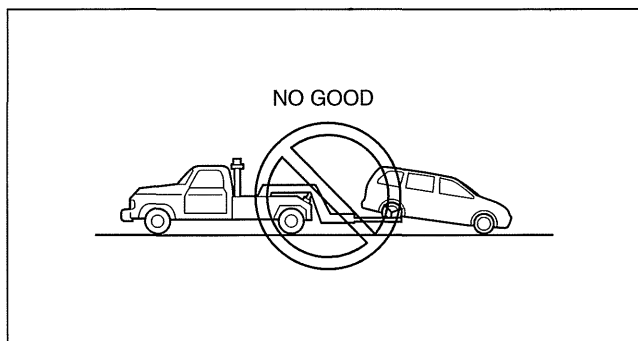

- Proper lifting and towing are necessary to prevent damage to the vehicle. Government and local laws must be followed.
- A towed vehicle usually should have its drive wheel (front wheels) off the ground. If excessive damage or other conditions prevent this, use wheel dollies.
- When towing with the rear wheels on the ground, release the parking brake.

b3e0000w007

Caution

- **Do not tow the vehicle pointed backward with driving wheels on the ground. This may cause internal damage to the transaxle.**

am3uuw0000556

Caution

- **Do not tow with sling-type equipment. This could damage your vehicle. Use wheel-lift or flatbed equipment.**

am3uuw0000556

GENERAL INFORMATION

Vehicle Securing Position

- When transporting the vehicle by flat bed tow truck or trailer, secure the vehicle to the trailer using the holes and left tiedown loop shown in the figure.

00-00

am3uuw000518

Caution

- To prevent damage to the vehicle, do not use the tiedown eyelet (front) and the left/right tiedown loops (rear) for towing the vehicle using another vehicle.
- Do not use the tie-down eyelet and rear hook for tying down the vehicle onto a trailer and flatbed tow truck. It may cause damage to the vehicle.

am3uuw000497

Note

- The tiedown eyelet (front) and the tiedown loops (rear) are used only when the vehicle is transported by ship.

GENERAL INFORMATION

SAE STANDARDS

id000000800900

00-00

- In accordance with new regulations, SAE (Society of Automotive Engineers) standard names and abbreviations are now used in this manual. The table below lists the names and abbreviations that have been used in Mazda manuals up to now and their SAE equivalents.

SAE Standard			SAE Standard		
Abbreviation	Name	Remark	Abbreviation	Name	Remark
AP	Accelerator Pedal		MIL	Malfunction Indicator Lamp	
APP	Accelerator Pedal Position		MAP	Manifold Absolute Pressure	
ACL	Air Cleaner		MAF sensor	Mass Air Flow Sensor	
A/C	Air Conditioning		MFL	Multiport Fuel Injection	
A/F sensor	Air Fuel Ratio Sensor		OBD	On-board Diagnostic System	
BARO	Barometric Pressure		OL	Open Loop	
B+	Battery Positive Voltage		OC	Oxidation Catalytic Converter	
CMP sensor	Camshaft Position Sensor		O2S	Oxygen sensor	
CAC	Charge Air Cooler		PNP	Park/Neutral Position	
CLS	Closed Loop System		PSP	Power Steering Pressure	
CTP	Closed Throttle Position		PCM	Powertrain Control Module	#3
CPP	Clutch Pedal Position		PAIR	Pulsed Secondary Air Injection	Pulsed injection
CIS	Continuous Fuel Injection System		AIR	Secondary Air Injection	Injection with air pump
CKP sensor	Crankshaft Position Sensor		SAPV	Secondary Air Pulse Valve	
DLC	Data Link Connector		SFI	Sequential Multiport Fuel Injection	
DTM	Diagnostic Test Mode	#1	3GR	Third Gear	
DTC	Diagnostic Test Code (s)		TWC	Three Way Catalytic Converter	
DI	Distributor Ignition		TB	Throttle Body	
DLI	Distributorless Ignition		TP sensor	Throttle Position Sensor	
EI	Electronic Ignition	#2	TCC	Torque Converter Clutch	
ECT	Engine Coolant Temperature		TCM	Transmission (Transaxle) Control Module	
EM	Engine Modification		TR	Transmission (Transaxle) Range	
EVAP	Evaporative Emission		TC	Turbocharger	
EGR	Exhaust Gas Recirculation		VSS	Vehicle Speed Sensor	
FC	Fan Control		VR	Voltage Regulator	
FF	Flexible Fuel		VAF sensor	Volume Air Flow Sensor	
4GR	Fourth Gear		WU-TWC	Warm Up Three Way Catalytic Converter	#4
GEN	Generator		WOT	Wide Open Throttle	
GND	Ground				
HO2S	Heated Oxygen Sensor	With heater			
IAC	Idle Air Control				
IAT	Intake Air Temperature				
KS	Knock Sensor				

#1: Diagnostic trouble codes depend on the diagnostic test mode.

#2: Controlled by the PCM

#3: Device that controls engine and powertrain

#4: Directly connected to exhaust manifold

PRE-DELIVERY INSPECTION

id000000801100

Pre-Delivery Inspection Table

Exterior

INSPECT and **ADJUST**, if necessary, the following items to specification:

- Glass, exterior bright metal and paint for damage
- Wheel lug nuts
- All weatherstrips for damage or detachment
- Tire pressures
- Headlight cleaner and fluid level (if equipped)
- Operation of hood release and lock
- Operation of trunk lid and fuel-filler lid opener
- Door operation and alignment including side door and back door
- Headlight aiming

INSTALL the following parts:

- Flap (if equipped)

Under hood—engine off

INSPECT and **ADJUST**, if necessary, the following items to specification:

- Fuel, engine coolant, and hydraulic lines, fittings, connections, and components for leaks
- Engine oil level
- Power steering fluid level
- Brake and clutch fluid level
- Windshield washer reservoir fluid level
- Coolant level and specific gravity
- Tightness of water hose clamps
- Tightness of battery terminals, electrolyte level and specific gravity
- Tension of drive belt

Interior

INSTALL the following items:

- Fuse for accessories

INSPECT the operations of the following items:

- Seat controls (slide and recline) and headrests
- Folding rear seat
- Door locks, including childproof door locks
- Seat belts and warning system
- Ignition switch and steering lock
- Transaxle range switch
- Warning buzzers
- Ignition key reminder alarm
- Air bag system using warning light
- Cruise control system (if equipped)
- Power door lock
- Shift-lock system (if equipped)
- Starter interlock
- All lights including warning, and indicator lights
- Horn, wipers, and washers
- Wiper blades performance
- Clean wiper blades and windshield, if necessary
- Audio system
- Cigarette lighter and clock
- Power windows (if equipped)
- Heater, defroster, and air conditioner at various mode selections (if equipped)

GENERAL INFORMATION

INSPECT the following items:

- Presence of spare fuse
- Upholstery and interior finish

INSPECT and **ADJUST**, if necessary, the following items:

- Operation and fit of windows
- Pedal height and free play of clutch and brake pedal
- Parking brake

Under hood—engine running at operating temperature

INSPECT the following items:

- Automatic transaxle fluid level
- Operation of idle-up system for electrical load, air conditioner or power steering (if equipped)
- Ignition timing
- Idle speed
- Operation of throttle position sensor

On hoist

INSPECT the following items:

- Manual transaxle oil level
- Underside fuel, coolant and hydraulic lines, fittings, connections, and components for leaks
- Tires for cuts or bruises
- Steering linkage, suspension, exhaust system, and all underside hardware for looseness or damage

Road test

INSPECT the following items:

- Brake operation
- Operation of gauges
- Engine general performance
- Emergency locking retractors and automatic locking retractors
- Cruise control system (if equipped)
- Operation of meters and gauges, squeaks, rattles, and abnormal noises

After road test

INSPECT for necessary owner information materials, tools, and spare tire in vehicle
The following items must be completed just before delivery to your customer.

- Load test battery and charge if necessary (Load test result: Volts)
- Adjust tire pressure to specification
- Install fuses for accessories

Initial setting of Maintenance Monitor

ADJUST maintenance interval

- Set distance of Tire rotation
- Set days and distance of Service due

SCHEDULED MAINTENANCE

id000000801200

Scheduled Maintenance Table for U.S.A., CANADA and Puerto Rico

Schedule 1: (Normal Driving Conditions) for U.S.A.

- The vehicle is mainly operated where none of the “unique driving conditions” apply.

Maintenance Interval	Number of months or kilometers (miles), whichever comes first								
	Months	6	12	18	24	30	36	42	48
	×1000 km	12	24	36	48	60	72	84	96
	×1000 miles	7.5	15	22.5	30	37.5	45	52.5	60
ENGINE									
Engine valve clearance	Audibly inspect every 120,000 km (75,000 miles), if noisy, adjust								
Drive belts					I				
Engine oil	R	R	R	R	R	R	R	R	R
Engine oil filter	R	R	R	R	R	R	R	R	R
COOLING SYSTEM									
Engine coolant	FL22 type ^{*1}	Replace at first 192,000 km (120,000 miles) or 10 years; after that, every 96,000 km (60,000 miles) or 5 years							
	Others	Replace at first 96,000 km (60,000 miles) or 4 years; after that, every 2 years							

GENERAL INFORMATION

Maintenance Interval	Number of months or kilometers (miles), whichever comes first												
	Months	6	12	18	24	30	36	42	48				
	×1000 km	12	24	36	48	60	72	84	96				
	×1000 miles	7.5	15	22.5	30	37.5	45	52.5	60				
FUEL SYSTEM													
Air cleaner element						R							
Fuel lines and hoses *2					I								I
Hoses and tubes for emission *2													I
IGNITION SYSTEM													
Spark plugs	Replace every 120,000 km (75,000 miles)												
CHASSIS and BODY													
Brake lines, hoses and connections					I								I
Disc brakes			I			I			I				I
Tire (Rotation)	Rotate every 12,000 km (7,500 miles)												
Steering operation and linkages					I								I
Front and rear suspension, ball joints and wheel bearing axial play					I								I
Driveshaft dust boots					I								I
Bolts and nuts on chassis and body					T								T
Exhaust system and heat shields	Inspect every 72,000 km (45,000 miles) or 5 years												
All locks and hinges	L	L	L	L	L	L	L	L	L	L	L	L	L
AIR CONDITIONER SYSTEM													
Cabin air filter						R							R

00-00

Chart symbols

I: Inspect: Inspect and clean, repair, adjust, fill up, or replace if necessary.

R: Replace

L: Lubricate

T: Tighten

Remarks

- After the prescribed period, continue to follow the described maintenance at the recommended intervals.
- Refer below for a description of items marked* in the maintenance chart.
- *1: Use FL22 type coolant in vehicles with the inscription "FL22" on the radiator cap itself or the surrounding area. Use FL22 when replacing the coolant.
- *2: According to state/provincial and federal regulations, failure to perform maintenance on these items will not void your emissions warranties. However, Mazda recommends that all maintenance services be performed at the recommended time or mileage/kilometer period to ensure long-term reliability.

Schedule 2: CANADA, Puerto Rico, and (Unique Driving Conditions) for U.S.A.

- Repeated short-distance driving
- Driving in dusty conditions
- Driving with extended use of brakes
- Driving in areas where salt or other corrosive materials are used
- Driving on rough or muddy roads
- Extended periods of idling or low-speed operation
- Driving for long periods in cold temperatures or extremely humid climates
- Driving in extremely hot conditions
- Driving in mountainous conditions continually

Maintenance Interval	Number of months or kilometers (miles), whichever comes first												
	Months	4	8	12	16	20	24	28	32	36	40	44	48
	×1000 km	8	16	24	32	40	48	56	64	72	80	88	96
	×1000 miles	5	10	15	20	25	30	35	40	45	50	55	60
ENGINE													
Engine valve clearance	Audibly inspect every 120,000 km (75,000 miles), if noisy, adjust												
Drive belts								I					
Engine oil	Puerto Rico	Replace every 5,000 km (3,000 miles) or 3 months											
	Others	R	R	R	R	R	R	R	R	R	R	R	R
Engine oil filter	R	R	R	R	R	R	R	R	R	R	R	R	R

Maintenance Interval	Number of months or kilometers (miles), whichever comes first												
	Months	4	8	12	16	20	24	28	32	36	40	44	48
	×1000 km	8	16	24	32	40	48	56	64	72	80	88	96
	×1000 miles	5	10	15	20	25	30	35	40	45	50	55	60
COOLING SYSTEM													
Engine coolant	FL22 type *1	Replace at first 192,000 km (120,000 miles) or 10 years; after that, every 96,000 km (60,000 miles) or 5 years											
	Others	Replace at first 96,000 km (60,000 miles) or 4 years; after that, every 2 years											
Engine coolant level													
FUEL SYSTEM													
Air cleaner element	Puerto Rico						R						R
	Others							R					
Fuel lines and hoses *2													
Hoses and tubes for emission *2													
IGNITION SYSTEM													
Spark plugs (for LF/L5 engine)		Replace every 120,000 km (75,000 miles)											
Spark plugs (for L3 WITH TC engine)	USA	Replace every 96,000 km (60,000 miles)											
	Others *3	Replace every 120,000 km (75,000 miles)											
ELECTRICAL SYSTEM													
Function of all lights													
CHASSIS and BODY													
Brake lines, hoses and connections													
Brake fluid level													
Disc brakes													
Tire (Rotation)		Rotate every 8,000 km (5,000 miles)											
Tire inflation pressure and tire wear													
Steering operation and linkages													
Power steering fluid level													
Front and rear suspension, ball joints and wheel bearing axial play													
Driveshaft dust boots													
Bolts and nuts on chassis and body							T						T
Exhaust system and heat shields		Inspect every 72,000 km (45,000 miles) or 5 years											
All locks and hinges		L	L	L	L	L	L	L	L	L	L	L	L
Washer fluid level													
AIR CONDITIONER SYSTEM													
Cabin air filter		Replace every 40,000 km (25,000 miles) or 2 years											

Chart symbols

I: Inspect: Inspect and clean, repair, adjust, fill up, or replace if necessary.

R: Replace

L: Lubricate

T: Tighten

Remarks

- After the prescribed period, continue to follow the described maintenance at the recommended intervals.
- Refer below for a description of items marked* in the maintenance chart.

*1: Use FL22 type coolant in vehicles with the inscription "FL22" on the radiator cap itself or the surrounding area. Use FL22 when replacing the coolant.

*2: According to state/provincial and federal regulations, failure to perform maintenance on these items will not void your emissions warranties. However, Mazda recommends that all maintenance services be performed at the recommended time or mileage/kilometer period to ensure long-term reliability.

*3: If the vehicle is operated primarily under any of the following conditions, replace the spark plugs at every 96,000 km (60,000 miles) or shorter.

- a. Repeated short-distance driving
- b. Extended periods of idling or low-speed operation
- c. Driving for long periods in cold temperatures or extremely humid climates

OBD-II PENDING TROUBLE CODE [LF, L5]

id0102c8800400

- These appear when a problem is detected in a monitored system. The code for a failed system is stored in the PCM memory in the first drive cycle. This code is called the pending code. If the PCM determines that the system has returned to normal or the problem was mistakenly detected, it deletes the pending code. If the problem is found in the second drive cycle, too the PCM determines that the system is malfunctioning, and the DTC is stored.

OBD-II FREEZE FRAME DATA [LF, L5]

id0102c8800500

- This is technical data which indicates the engine condition at the time of the first malfunction. This data will remain in the memory even if another emission-related DTC is stored, with the exception of the Misfire or Fuel System DTCs. Once FREEZE FRAME DATA for the Misfire or Fuel System DTC is stored, it will overwrite any previous data and the FREEZE FRAME DATA will not be overwritten again.

ON-BOARD DIAGNOSTIC [LF, L5]

OBD-II ON-BOARD SYSTEM READINESS TEST [LF, L5]

id0102c8800600

- This shows the OBD-II systems operating status. If any monitor function is incomplete, the M-MDS will identify which monitor function has not been completed. Misfires, Fuel System and Comprehensive Components (CCM) are continuous monitoring-type functions. The catalyst, EGR system, evaporation system and oxygen sensor will be monitored under drive cycles. The OBD-II diagnostic system is initialized by performing the DTC cancellation procedure or disconnecting the negative battery cable.

OBD-II READ/CLEAR DIAGNOSTIC TEST RESULTS [LF, L5]

id0102c8800800

01-02A

- This retrieves all stored DTCs in the PCM and clears the DTC, FREEZE FRAME DATA, On-Board Readiness Test Results, Diagnostic Monitoring Test Results and Pending Trouble Codes.

OBD-II PARAMETER IDENTIFICATION (PID) ACCESS [LF, L5]

id0102c8800900

- The PID mode allows access to certain data values, analog and digital inputs and outputs, calculated values and system status information. Since PID values for output devices are PCM internal data values, inspect each device to identify which output devices are malfunctioning.

ON-BOARD DIAGNOSTIC TEST [LF, L5]

id0102c8801000

DTC Reading Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Self Test".
 2. Select "Modules".
 3. Select "PCM".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "PCM".
 3. Select "Self Test".
3. Then, select the "Retrieve CMDTCs" and perform procedures according to directions on the M-MDS screen.
4. Verify the DTC according to the directions on the M-MDS screen.
 - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
5. After completion of repairs, clear all DTCs stored in the PCM, while referring to "AFTER REPAIR PROCEDURE" (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].).

am3uuw0000340

Pending Trouble Code Access Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Self Test".
 2. Select "Modules".
 3. Select "PCM".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "PCM".
 3. Select "Self Test".
3. Then, select the "Retrieve CMDTCs" and perform procedures according to directions on the M-MDS screen.
4. Retrieve the pending trouble codes according to the directions on the M-MDS screen.

am3uuw0000340

ON-BOARD DIAGNOSTIC [LF, L5]

Freeze Frame PID Data Access Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Self Test".
 2. Select "Modules".
 3. Select "PCM".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "PCM".
 3. Select "Self Test".
3. Then, select the "Retrieve CMDTCs" and perform procedures according to directions on the M-MDS screen.
4. Retrieve the freeze frame PID data according to the directions on the M-MDS screen.

am3uuw0000340

Note

- Freeze frame data/snapshot data appears at the top of the help screen when the displayed DTC is selected.

Freeze frame data

- The freeze frame data consists of data for vehicle and engine control system operation conditions when malfunctions in the engine control system are detected and stored in the PCM.
- Freeze frame data is stored at the instant the malfunction indicator lamp illuminates, and only a part of the DTC data is stored.
- For the freeze frame data, if there are several malfunctions in the engine control system, the data for the malfunction which occurred initially is stored. Thereafter, if a misfire or fuel injection control malfunction occurs, data from the misfire or fuel injection control malfunction is written over the initially stored data. However, if the initially stored freeze frame data is a misfire or fuel injection control malfunction, it is not overwritten.

Snapshot data

- The snap shot data stores the currently detected DTC data.
- The recording timing for the freeze frame data/snap shot data differs depending on the number of DTC drive cycles.
 - For a DTC with a drive cycle number 1, only the malfunction determination data is recorded.
 - For a DTC with a drive cycle number 2, both the malfunction determination and undetermined data is recorded.

Freeze frame data table

Note

- Refer to PID monitor table for confirm the engine control system operation status while the PCM does not store the DTC. (See 01-40A-8 PCM INSPECTION [LF, L5])
- Freeze frame data items are not displayed, according to detected DTC.

Freeze frame data item	Unit			Description	Corresponding PID data monitor item
FUELSYS1	Open Loop/Closed Loop/ OL-Drive/OL-Fault/CL- Fault			Fuel system status	FUELSYS
LOAD	%			Calculated engine load	—
ECT	°C	°F		Engine coolant temperature	ECT
SFT1	%			Short term fuel trim	SHRTFT1
LFT1	%			Long term fuel trim	LONGFT1
MAP	kPa	psi	Bar	Manifold absolute pressure	MAP
RPM	RPM			Engine speed	RPM
VS	KPH	MPH		Vehicle speed	VSS
SPARKADV	°			Ignition timing	SPARKADV
IAT	°C	°F		Intake air temperature	IAT
MAF	g/sec			Mass airflow	MAF
TP	%			Throttle valve position No.1	TP1
RUNTM	hh:mm:ss			Time from engine start	—

ON-BOARD DIAGNOSTIC [LF, L5]

Freeze frame data item	Unit			Description	Corresponding PID data monitor item
EGRPCT	%			Target EGR valve position	SEGRP_DSD
EVAPPCT	%			Purge solenoid valve controlled value	EVAPCP

01-02A-9

ON-BOARD DIAGNOSTIC [LF, L5]

Snapshot data item	Unit	Definition	Corresponding PID data monitor item
APP1	%	Accelerator pedal position No.1	APP1
APP2	%	Accelerator pedal position No.2	APP2
ETC_DSD	%	Target throttle valve position	ETC_DSD

On-Board System Readiness Tests Access Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Powertrain".
 2. Select "OBD Test Modes".
 3. Select "Mode 1 Powertrain Data".
 4. Select "PCM".
 - When using the PDS (Pocket PC)
 1. Select "OBDII Modes".
 2. Select "Mode 1 Powertrain Data".
 3. Select "PCM".
3. Then, select the "****SUP" and "***EVAL" PIDs in the PID selection screen.
4. Monitor those PIDs and check it system monitor is completed.

PID/DATA Monitor and Record Procedure

Note

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "DataLogger".
 2. Select "Modules".
 3. Select "PCM".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "PCM".
 3. Select "DataLogger".
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the detections on the screen.

Diagnostic Monitoring Test Results Access Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Powertrain".
 2. Select "OBD Test Modes".
 3. Select "Mode 6 On-Board Test Results".
 - When using the PDS (Pocket PC)
 1. Select "OBDII Modes".
 2. Select "Mode 6 On-Board Test Results".
3. Verify the diagnostic monitoring test result according to the directions on the screen.

ON-BOARD DIAGNOSTIC [LF, L5]

Active Command Modes Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "DataLogger".
 2. Select "Modules".
 3. Select "PCM".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "PCM".
 3. Select "DataLogger".
3. Select the simulation items from the PID table.
4. Perform the simulation function, inspect the operations for each parts.
 - If the operation of output parts cannot be verified after the active command mode inspection is performed, this could indicate the possibility of an open or short circuit, sticking, or operation malfunction in the output parts.

am3uuw000340

01-02A

AFTER REPAIR PROCEDURE [LF, L5]

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Self Test".
 2. Select "Modules".
 3. Select "PCM".
 4. Select "Retrieve CMDTCs".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "PCM".
 3. Select "Self Test".
 4. Select "Retrieve CMDTCs".
3. Verify the DTC according to the directions on the M-MDS screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Verify that no DTCs are displayed.

id0102c8801100

am3uuw000340

KOEO/KOER SELF TEST [LF, L5]

KOEO Self Test

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Self Test".
 2. Select "Modules".
 3. Select "PCM".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "PCM".
 3. Select "Self Test".
3. Then, select the "KOEO On Demand Self Test" and perform procedures according to directions on the M-MDS screen.
4. Verify the DTC according to the directions on the M-MDS screen.
 - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
5. After completion of repairs, clear all DTCs stored in the PCM, while referring to "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].)

id0102c8801200

am3uuw000340

ON-BOARD DIAGNOSTIC [LF, L5]

KOER Self Test

Note

- For vehicles with the variable valve timing control, execute a KOER self test after the variable valve timing learning is finished.
 - A KOER self test cannot be executed if the variable timing valve learning is not finished.
 - The variable valve timing learning is cleared if the PCM backup power supply is interrupted (including battery removal), or after reprogramming.
 - To perform variable valve timing learning, the engine speed needs to be increased momentarily to **approx. 2,000 rpm**.

1. Connect the M-MDS to the DLC-2.
2. Idle the engine.
3. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Self Test".
 2. Select "Modules".
 3. Select "PCM".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "PCM".
 3. Select "Self Test".
4. Then, select the "KOER On Demand Self Test" and perform procedures according to directions on the M-MDS screen.
5. Verify the DTC according to the directions on the M-MDS screen.
 - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
6. After completion of repairs, clear all DTCs stored in the PCM, while referring to "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].)

am3uuw0000340

OBD-II DRIVE MODE [LF, L5]

id0102c8801300

- Using the OBD-II Drive Mode, the monitoring item requested by OBD-II regulations can be easily diagnosed.
- Performing the Drive Mode inspects the OBD-II system for proper operation and must be performed to ensure that no additional DTCs are present.
- The OBD-II Drive Mode is divided into the specific Drive Mode and single Drive Mode.
- For the specific Drive Mode, specified Drive Modes have been set for each individual monitoring item requested by OBD-II regulations, and they can be diagnosed individually. For the single Drive Mode, the entire monitoring item requested by OBD-II regulations can be diagnosed.
- The following modes are in the specific Drive Mode. The applicable system is diagnosed by driving in the following Drive Modes.
 - Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S and TWC Repair Verification Drive Mode)
 - Mode 06 (EVAP System Repair Verification Drive Mode)
- The following systems are diagnosed with the single Drive Mode.
 - EGR system
 - Oxygen sensor (A/F sensor, HO2S)
 - Oxygen sensor heater (A/F sensor heater, HO2S heater)
 - Catalytic converter (TWC)
 - Evaporative (EVAP) system

Caution

- **While performing the Drive Mode, always operate the vehicle in a safe and lawful manner.**
- **When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD function and inspect later.**

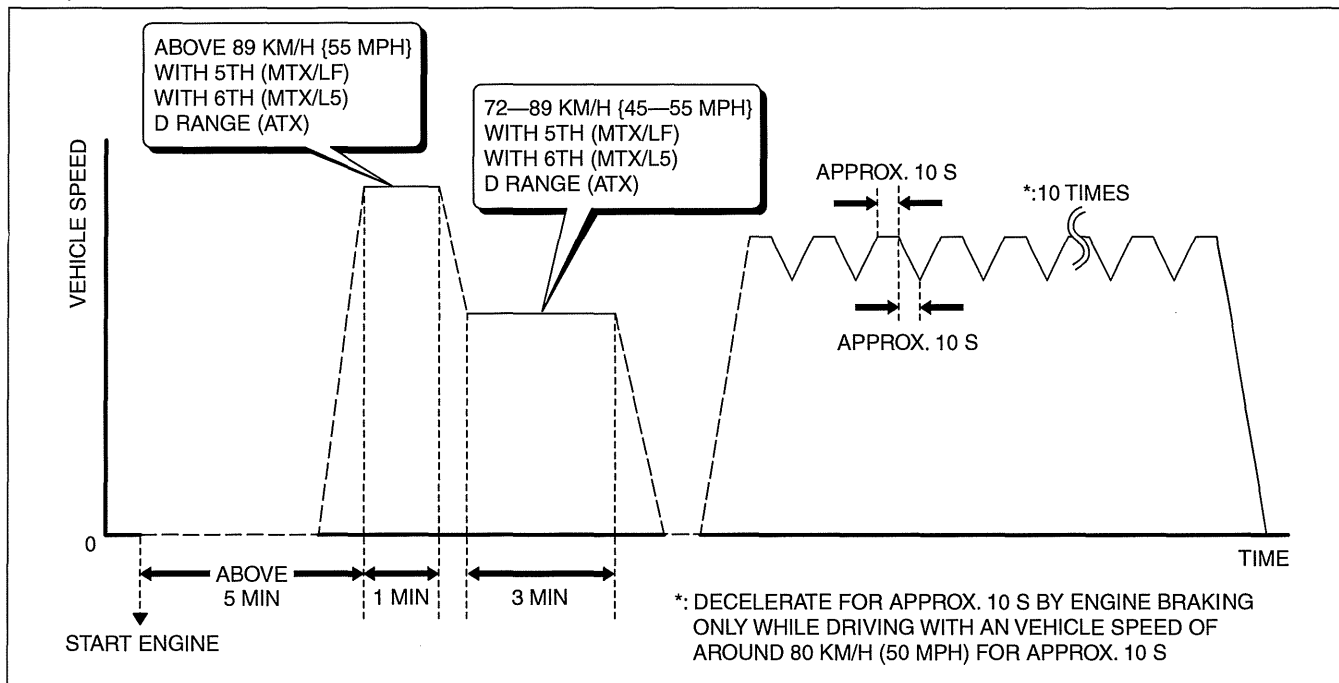

Note

- Vehicle speed and engine speed detected by the PCM may differ from that indicated by the speedometer and tachometer. Use the M-MDS to monitor vehicle speed.
- If the OBD-II system inspection is not completed during the Drive Mode, the following causes are considered:
 - The OBD-II system detects the malfunction.
 - The Drive Mode procedure is not completed correctly.
- Disconnecting the battery will reset the memory. Do not disconnect the battery during and after Drive Mode.
- The M-MDS can be used at anytime through the course of the Drive Mode to monitor the completion status. Monitoring can be done by viewing the ON BOARD SYSTEM READINESS menu.
- The OBD monitoring status can be confirmed with the ignition switch operation. During KOEO, the MIL illuminates for a fail-light inspection for **approx. 17 s**. The OBD monitoring status is confirmed after the fail-light inspection.
 - If all of the diagnosis is completed even one time, the MIL will continue to illuminate.
 - If all of the diagnosis is not completed, the MIL flashes for **approx. 7 s**, and then it illuminates until the engine is started.

01-02A

Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S and TWC Repair Verification Drive Mode)

1. Start the engine and warm it up completely.
2. Verify all accessory loads (A/C, headlights, blower fan, rear window defroster) are off.
3. Drive the vehicle as shown in the graph. The driving conditions before driving at constant speed are not specified.

am3uuw0000340

4. Stop the vehicle and access ON BOARD SYSTEM READINESS menu of GENERIC OBD-II FUNCTION to verify the OBD monitoring status.
 - If completed, the OBD monitoring status items change from non-completed to completed.
 - If not completed, switch the ignition to off then repeat from Step 4.
5. Access DIAGNOSTIC MONITORING TEST RESULTS menu of GENERIC OBD-II FUNCTIONS to verify the monitor results.
 - If detected values are not within the specification, repair has not been completed.
6. Verify no DTCs are available.

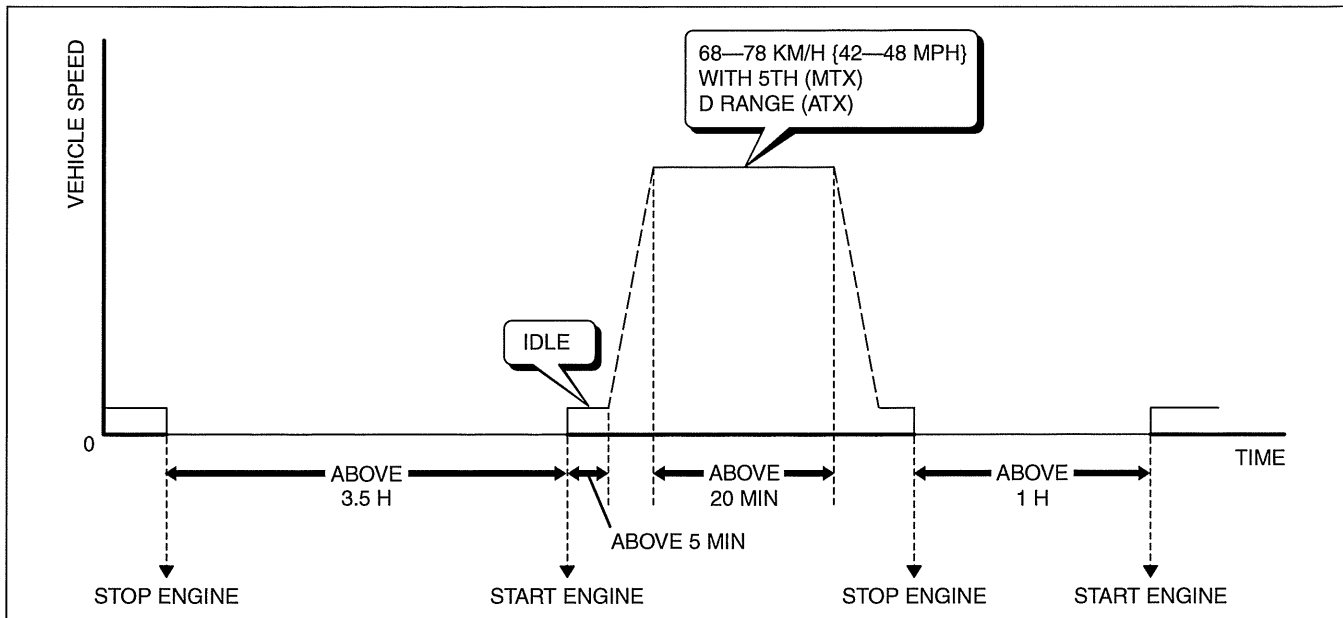

ON-BOARD DIAGNOSTIC [LF, L5]

Mode 06 (EVAP System Repair Verification Drive Mode)

Note

- If “EVAP System Repair Verification Drive Mode” cannot be performed (it is impossible to drive the vehicle under this Drive Mode condition), perform evaporative system test procedure as an alternative. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].)

1. Verify that all of the following PIDs are within the following specifications. All PIDs must be within specifications before engine is started to initiate the evaporative system test.
 - BARO: **72.2 kPa {542 mmHg, 21.3 inHg} or higher**
 - FLI: **20—80%**
 - IAT: **5—35 °C {41—95 °F}**
 - VPWR: **above 10.9 V**
2. Start the engine and warm it up completely.
3. Clear the DTC from the PCM memory using the M-MDS (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].).
4. Drive the vehicle as shown in the graph.

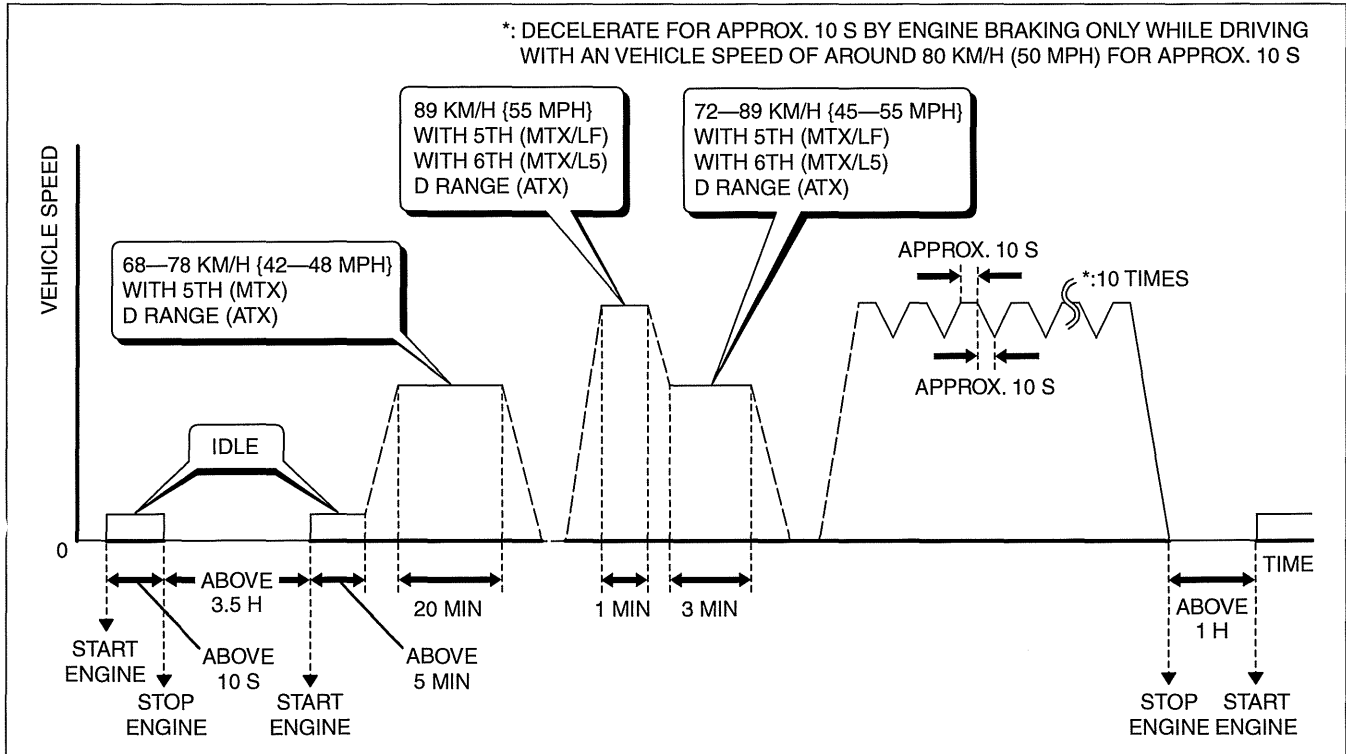

am3uuw000340

5. Access the ON BOARD SYSTEM READINESS to verify the OBD monitoring status.
 - If completed, the OBD monitoring status items change from non-completed to completed.
 - If not completed, switch the ignition to off then go back to Step 1.
6. Access the DIAGNOSTIC MONITORING TEST RESULTS to verify the monitor results.
 - If detected values are not within specification, repair has not completed.
7. Verify no DTCs are available.

Single Drive Mode

1. Start the engine and warm it up completely.
2. Clear the DTC from the PCM memory using the M-MDS (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5]).
3. Verify all accessory loads (A/C, headlights, blower fan, rear window defroster) are off.
4. Verify that all of the following PIDs are within the following specifications. All PIDs must be within specifications from Step 5 to Step 6.
 - BARO: **72.2 kPa {542 mmHg, 21.3 inHg} or higher**
 - FLI: **20—80%**
 - IAT: **5—35 °C {41—95 °F}**
 - VPWR: **above 10.9 V**
5. With the vehicle stopped, race the engine at the engine speed indicated, and then drive the vehicle as shown in the graph. The driving conditions before driving at constant speed are not specified. If possible, monitor RPM PID for engine speed during this procedure.

01-02A

6. Switch the ignition to off.
7. Access the ON BOARD SYSTEM READINESS to verify the OBD monitoring status.
 - If completed, all of the OBD monitoring status items change from non-completed to completed.
 - If not completed, switch the ignition to off, then perform the applicable specific Drive Mode for any monitoring item that was not in the detection condition.
8. Access the DIAGNOSTIC MONITORING TEST RESULTS to verify the monitor results.
 - If detected values are not within specification, repair has not been completed.

ON-BOARD DIAGNOSTIC [LF, L5]

DIAGNOSTIC MONITORING TEST RESULTS [LF, L5]

id0102c8801400

- The purpose of this test mode is to confirm the result of OBD-II monitor diagnostic test results. The result values stored when particular monitor is completed are displayed. If the monitor is not completed, initial value is displayed.

OBD Monitor ID	Test ID	Description	Related system	Scaling ID	Unit
01	80	A/F sensor lean-to-rich response time (calculated)	A/F sensor, HO2S	20	Ratio
01	81	A/F sensor rich-to-lean response time (calculated)		20	Ratio
01	82	A/F sensor lean-to-rich response time (calculated)		20	Ratio
01	83	A/F sensor rich-to-lean response time (calculated)		20	Ratio
02	03	Low HO2S voltage for switch time calculation (constant)		0A	Voltage
02	04	High HO2S voltage for switch time calculation (constant)		0A	Voltage
02	05	HO2S rich-to-lean response time (calculated)		10	Time
02	80	HO2S response time out (calculated)		10	Time
21	80	A/F sensor and HO2S switching time ratio	Catalyst	20	Ratio

DTC P0011:00 [LF, L5]

id0102c8700100

DTC P0011:00	CMP timing over-advanced
DETECTION CONDITION	<ul style="list-style-type: none"> The actual valve timing is over-advanced by 15 ° from the target valve timing for specified period when the OCV is controlled in the maximum valve timing retard condition. <p>MONITORING CONDITIONS</p> <ul style="list-style-type: none"> Engine speed: below 4,000 rpm Engine coolant temperature: 60—110 °C {140—230 °F} <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> OCV malfunction Spool valve in OCV is stuck in advanced position Variable valve timing mechanism malfunction <ul style="list-style-type: none"> Variable valve timing mechanism misinstallation Loose timing chain or improper valve timing due to timing chain slippage Stopper pin mechanism malfunction Variable valve timing mechanism is stuck in advanced position PCM malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION
1	VERIFY SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the snapshot data been recorded? 	Yes Go to the next step.
		No Record the snapshot on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No Go to the next step.
3	INSPECT OCV <ul style="list-style-type: none"> Inspect the OCV. (See 01-10A-19 OIL CONTROL VALVE (OCV) INSPECTION [LF, L5].) Is there any malfunction? 	Yes Replace the OCV, then go to Step 7. (See 01-10A-20 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [LF, L5].)
		No Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
4	VERIFY VALVE TIMING MECHANISM INSTALLATION <ul style="list-style-type: none"> • Verify the valve timing mechanism installation for the following parts: <ul style="list-style-type: none"> — Crankshaft pulley lock bolt — Camshaft sprocket lock bolt — Timing chain • Is there any malfunction? 	Yes	Reinstall the misinstallation or loose parts correctly, then go to Step 7. (See 01-10A-18 VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [LF, L5].) (See 01-10A-21 TIMING CHAIN REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
5	INSPECT STOPPER PIN MECHANISM <ul style="list-style-type: none"> • Remove the timing chain. (See 01-10A-21 TIMING CHAIN REMOVAL/INSTALLATION [LF, L5].) • Inspect the stopper pin mechanism. (See 01-10A-18 VARIABLE VALVE TIMING ACTUATOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the variable valve timing actuator, then go to Step 7. (See 01-10A-18 VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
6	INSPECT ROTOR POSITION <ul style="list-style-type: none"> • Remove the variable valve timing actuator. (See 01-10A-18 VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [LF, L5].) • Is the rotor at the maximum valve timing advanced position? 	Yes	Reinstall or replace the variable valve timing actuator, then go to the next step. (See 01-10A-18 VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [LF, L5].)
		No	Variable valve timing mechanism is normal. Note <ul style="list-style-type: none"> • This DTC is detected as an intermittent concern. • An intermittent concern might be removed using the cleaning mode of the variable valve timing control function. Go to the next step.
7	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Switch the ignition to off. • Start the engine and warm it up completely. • Perform the KOER self test. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
8	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

01-02A

ON-BOARD DIAGNOSTIC [LF, L5]

DTC P0012:00 [LF, L5]

id0102c8700200

DTC P0012:00	CMP timing over-retarded
DETECTION CONDITION	<ul style="list-style-type: none"> The actual valve timing is over-retarded by 10 ° from the target valve timing for specified period when the OCV system control is within the feedback range. <p>MONITORING CONDITIONS</p> <ul style="list-style-type: none"> Engine speed: below 4,000 rpm Engine coolant temperature: 60—110 °C {140—230 °F} <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Low engine oil pressure OCV malfunction <ul style="list-style-type: none"> Spool valve in the OCV is stuck in retard position Timing chain misinstallation Engine oil runners are clogged or have leakage PCM malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY RELATED PENDING CODE AND STORED DTC <ul style="list-style-type: none"> Switch the ignition to off, then to ON (engine off). Perform the DTC Reading Procedure and Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Is the DTC P2088:00 or P2089:00 also present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-210 DTC P2088:00 [LF, L5].) (See 01-02A-212 DTC P2089:00 [LF, L5].)
		No	Go to the next step.
4	VERIFY ENGINE OIL PRESSURE <ul style="list-style-type: none"> Start the engine. Does the oil pressure warning light illuminate? 	Yes	Inspect the engine oil pressure. (See 01-11A-5 OIL PRESSURE INSPECTION [LF, L5].) Repair or replace the malfunctioning part according to the inspection results, then go to Step 8.
		No	Go to the next step.
5	INSPECT OCV <ul style="list-style-type: none"> Stop the engine. Inspect the OCV. (See 01-10A-19 OIL CONTROL VALVE (OCV) INSPECTION [LF, L5].) Is there any malfunction? 	Yes	Replace the OCV, then go to Step 8. (See 01-10A-20 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
6	VERIFY TIMING CHAIN INSTALLATION <ul style="list-style-type: none"> Remove the timing chain cover. Is the camshaft timing mark at the correct point? 	Yes	Go to the next step.
		No	Reinstall the timing chain, then go to Step 8. (See 01-10A-21 TIMING CHAIN REMOVAL/INSTALLATION [LF, L5].)

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
7	INSPECT ENGINE OIL RUNNER <ul style="list-style-type: none"> • Inspect the following engine oil runners for clogging or leakage: <ul style="list-style-type: none"> — Between oil pressure switch and OCV — Between OCV and variable valve timing actuator — In variable valve timing actuator • Is there any clogging or leakage? 	Yes	Repair or replace the suspected runner, then go to the next step.
		No	Variable valve timing mechanism is normal. Note <ul style="list-style-type: none"> • This DTC is detected by intermittent concern. • An intermittent concern might be removed using the cleaning mode of the variable valve timing control function. Go to the next step.
8	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Switch the ignition to off. • Start the engine and warm it up completely. • Perform the KOER self test. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
9	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

01-02A

ON-BOARD DIAGNOSTIC [LF, L5]

DTC P0016:00 [LF, L5]

id0102c8145600

DTC P0016:00	CKP-CMP correlation
DETECTION CONDITION	<ul style="list-style-type: none"> • The PCM monitors the input pulses from the CKP sensor and CMP sensor. If the input pulse pick-up timing do not match each other, the PCM determines that the camshaft position does not coincide with the crankshaft position. <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • CKP sensor malfunction <ul style="list-style-type: none"> — Connector or terminals malfunction — Foreign material on CKP sensor — Damaged or scratched CKP sensor pulse wheel • CMP sensor malfunction <ul style="list-style-type: none"> — Connector or terminals malfunction — Foreign material on CMP sensor — Damaged or scratched CMP sensor pulse wheel • PCM connector or terminals malfunction • Improper valve timing • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> • Has the snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	INSPECT CKP SENSOR CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the CKP sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 13.
		No	Go to the next step.
4	INSPECT CKP SENSOR FOR FOREIGN MATERIAL <ul style="list-style-type: none"> • Visually inspect the CKP sensor for foreign materials. (See 01-40A-32 CRANKSHAFT POSITION (CKP) SENSOR INSPECTION [LF, L5].) • Is there any foreign material on the CKP sensor? 	Yes	Remove the foreign material from the CKP sensor, then go to Step 13.
		No	Go to the next step.
5	INSPECT CKP SENSOR PULSE WHEEL <ul style="list-style-type: none"> • Visually inspect the CKP sensor pulse wheel. (See 01-40A-32 CRANKSHAFT POSITION (CKP) SENSOR INSPECTION [LF, L5].) • Are there any damage or scratches at the CKP sensor pulse wheel? 	Yes	Replace the CKP sensor pulse wheel, then go to Step 13. (See 01-10A-30 CYLINDER HEAD GASKET REPLACEMENT [LF, L5].)
		No	Go to the next step.
6	INSPECT CKP SENSOR <ul style="list-style-type: none"> • Reconnect the CKP sensor connector. • Inspect the CKP sensor. (See 01-40A-32 CRANKSHAFT POSITION (CKP) SENSOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the CKP sensor, then go to Step 13. (See 01-40A-30 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
7	INSPECT CMP SENSOR CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the CMP sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 13.
		No	Go to the next step.
8	INSPECT CMP SENSOR FOR FOREIGN MATERIAL <ul style="list-style-type: none"> • Visually inspect the CMP sensor for foreign materials. (See 01-40A-33 CAMSHAFT POSITION (CMP) SENSOR INSPECTION [LF, L5].) • Is there any foreign material on the CMP sensor? 	Yes	Remove the foreign material from the CMP sensor, then go to Step 13.
		No	Go to the next step.
9	INSPECT CMP SENSOR PULSE WHEEL <ul style="list-style-type: none"> • Visually inspect the CMP sensor pulse wheel. (See 01-40A-33 CAMSHAFT POSITION (CMP) SENSOR INSPECTION [LF, L5].) • Are there any damage or scratches at the CMP sensor pulse wheel? 	Yes	Replace the CMP sensor pulse wheel, then go to Step 13. (See 01-10A-30 CYLINDER HEAD GASKET REPLACEMENT [LF, L5].)
		No	Go to the next step.
10	INSPECT CMP SENSOR <ul style="list-style-type: none"> • Reconnect the CMP sensor connector. • Inspect the CMP sensor. (See 01-40A-33 CAMSHAFT POSITION (CMP) SENSOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the CMP sensor, then go to Step 13. (See 01-40A-32 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
11	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 13.
		No	Go to the next step.
12	INSPECT VALVE TIMING <ul style="list-style-type: none"> • Inspect valve timing. • Is there any malfunction? 	Yes	Adjust the valve timing properly, then go to the next step. (See 01-10A-21 TIMING CHAIN REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
13	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Start the engine and warm it up completely. • Perform the Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
14	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

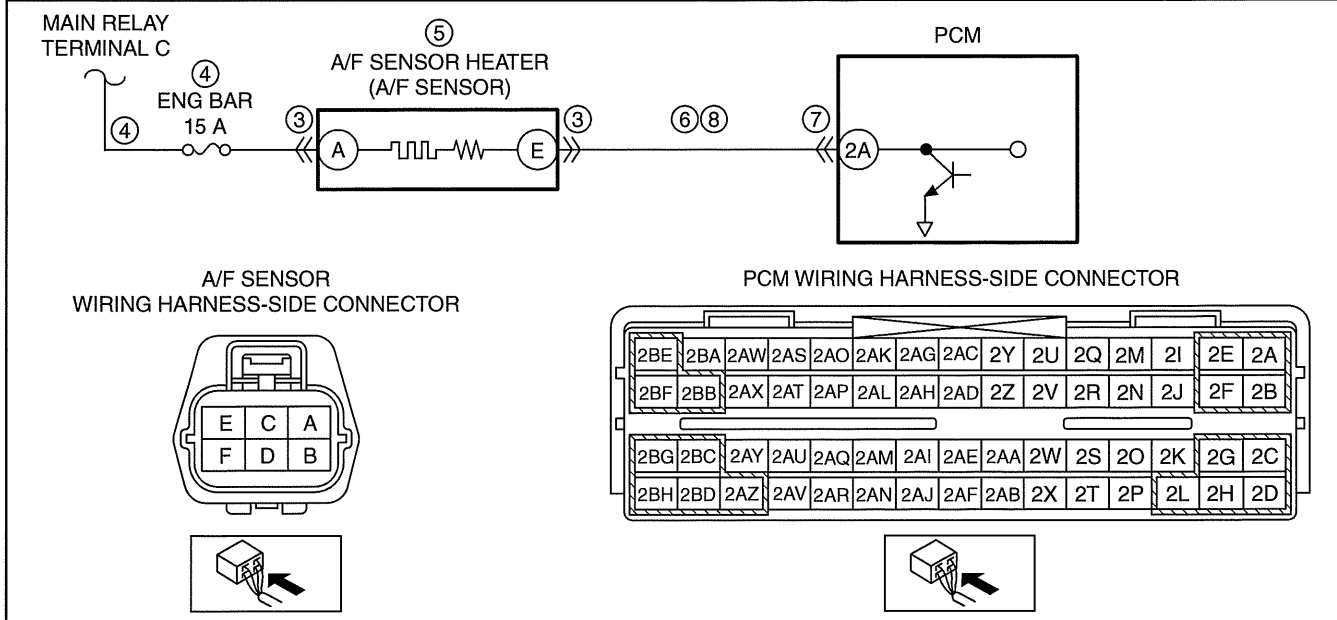

01-02A

ON-BOARD DIAGNOSTIC [LF, L5]

DTC P0031:00 [LF, L5]

id0102c8700400

DTC P0031:00	A/F sensor heater control circuit low input
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the A/F sensor heater output voltage. If the PCM turns the A/F sensor heater off but the A/F sensor heater circuit remains low voltage, the PCM determines that the A/F sensor heater circuit has a malfunction. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (A/F sensor heater, HO2S heater). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> A/F sensor connector or terminals malfunction Short to ground or open circuit in A/F sensor power supply circuit <ul style="list-style-type: none"> — Short to ground in wiring harness between main relay terminal C and A/F sensor terminal A — ENG BAR 15 A fuse malfunction — Open circuit in wiring harness between main relay terminal C and A/F sensor terminal A A/F sensor heater malfunction Short to ground in wiring harness between A/F sensor terminal E and PCM terminal 2A PCM connector or terminals malfunction Open circuit in wiring harness between A/F sensor terminal E and PCM terminal 2A PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> Have the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor heater, HO2S heater related) been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
3	INSPECT A/F SENSOR CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the A/F sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 9.
		No	Go to the next step.
4	INSPECT A/F SENSOR HEATER POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT <ul style="list-style-type: none"> • A/F sensor connector is disconnected. • Switch the ignition to ON (engine off). • Measure the voltage between A/F sensor terminal A (wiring harness-side) and body ground. • Is the voltage B+? 	Yes	Go to the next step.
		No	Inspect the ENG BAR 15 A fuse. <ul style="list-style-type: none"> • If the fuse is melt: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deterioration: <ul style="list-style-type: none"> — Replace the fuse. • If the fuse is normal: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible open circuit. Go to Step 9.
5	INSPECT A/F SENSOR HEATER <ul style="list-style-type: none"> • Switch the ignition to off. • Inspect the A/F sensor heater. (See 01-40A-28 AIR FUEL RATIO (A/F) SENSOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the A/F sensor, then go to Step 9. (See 01-40A-27 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
6	INSPECT A/F SENSOR HEATER CONTROL CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • A/F sensor connector is disconnected. • Inspect for continuity between A/F sensor terminal E (wiring harness-side) and body ground. • Is there continuity? 	Yes	If the short to ground circuit could be detected: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected: <ul style="list-style-type: none"> • Replace the PCM (short to ground in PCM internal circuit). (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].) Go to Step 9.
		No	Go to the next step.
7	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 9.
		No	Go to the next step.
8	INSPECT A/F SENSOR HEATER CONTROL CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • A/F sensor and PCM connectors are disconnected. • Inspect for continuity between A/F sensor terminal E (wiring harness-side) and PCM terminal 2A (wiring harness-side). • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
9	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Perform the KOEO/KOER self test. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
10	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

STEP	INSPECTION		ACTION
1	VERIFY SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> Have the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor heater, HO2S heater related) been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
3	INSPECT HO2S CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the HO2S connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 9.
		No	Go to the next step.
4	INSPECT HO2S HEATER <ul style="list-style-type: none"> • Inspect the HO2S heater. (See 01-40A-29 HEATED OXYGEN SENSOR (HO2S) INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the HO2S, then go to Step 9. (See 01-40A-29 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
5	INSPECT HO2S HEATER CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GROUND <ul style="list-style-type: none"> • HO2S connector is disconnected. • Switch the ignition to ON (engine off). • Measure the voltage between HO2S terminal C (wiring harness-side) and body ground. • Is the voltage B+? 	Yes	Go to the next step.
		No	Inspect the ENG 20 A fuse. <ul style="list-style-type: none"> • If the fuse is melt: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deterioration: <ul style="list-style-type: none"> — Replace the fuse. • If the fuse is normal: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible open circuit. Go to Step 9.
6	INSPECT HO2S HEATER CONTROL CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • HO2S connector is disconnected. • Switch the ignition to off. • Inspect for continuity between HO2S terminal D (wiring harness-side) and body ground. • Is there continuity? 	Yes	If the short to ground circuit could be detected: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected: <ul style="list-style-type: none"> • Replace the PCM (short to ground in PCM internal circuit). (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].) Go to Step 9.
		No	Go to the next step.
7	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 9.
		No	Go to the next step.
8	INSPECT HO2S CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • HO2S and PCM connectors are disconnected. • Inspect for continuity between HO2S terminal D (wiring harness-side) and PCM terminal 2B (wiring harness-side). • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
9	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Switch the ignition to ON (engine off). • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Perform the KOEO/KOER self test. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
10	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

01-02A

ON-BOARD DIAGNOSTIC [LF, L5]

DTC P0069:00 [LF, L5]

id0102c8300000

DTC P0069:00	Manifold absolute pressure/atmospheric pressure correlation
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors difference between intake manifold vacuum and atmospheric pressure. If the difference is below -12 kPa {-90 mmHg, -3.5 inHg} or above 12 kPa {90 mmHg, 3.5 inHg} when the following conditions are met, the PCM determines that there is a MAP sensor performance problem. <p>MONITORING CONDITIONS</p> <p>— 12—15 s from when ignition is switched to off</p> <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> MAP sensor malfunction or substandard performance BARO sensor malfunction or substandard performance PCM malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY RELATED PENDING CODE AND STORED DTC <ul style="list-style-type: none"> Switch the ignition to off, then to ON. Perform the DTC Reading Procedure and Pending Trouble Code Access Procedure. Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	INSPECT MAF/IAT SENSOR CONNECTOR CONDITION <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the MAF/IAT sensor connector. Inspect for poor connection (such as damaged/pulled-out pins, corrosion). Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 9.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
4	INSPECT MAF SENSOR POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT <ul style="list-style-type: none"> • MAF/IAT sensor connector is disconnected. • Switch the ignition to ON (engine off). • Measure the voltage between the MAF/IAT sensor terminal A (wiring harness-side) and body ground. • Is the voltage B+? 	Yes	Go to the next step.
		No	Inspect the ENG BAR 15 A fuse. <ul style="list-style-type: none"> • If the fuse is melt: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deterioration: <ul style="list-style-type: none"> — Replace the fuse. • If the fuse is normal: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible open circuit. Go to Step 9.
5	INSPECT MAF SENSOR SIGNAL CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • MAF/IAT sensor connector is disconnected. • Switch the ignition to off. • Inspect for continuity between MAF/IAT sensor terminal C (wiring harness-side) and body ground. • Is there continuity? 	Yes	If the short to ground circuit could be detected: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected: <ul style="list-style-type: none"> • Replace the PCM (short to ground in PCM internal circuit). (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].) Go to Step 9.
		No	Go to the next step.
6	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 9.
		No	Go to the next step.
7	INSPECT MAF SENSOR SIGNAL CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • MAF/IAT sensor and PCM connectors are disconnected. • Inspect for continuity between MAF/IAT sensor terminal C (wiring harness-side) and PCM terminal 1AK (wiring harness-side). • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 9.
8	INSPECT MAF SENSOR <ul style="list-style-type: none"> • Inspect the MAF sensor. (See 01-40A-25 MASS AIR FLOW (MAF) SENSOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the MAF/IAT sensor, then go to the next step. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
9	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Perform the KOEO/KOER self test. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) • Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
10	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

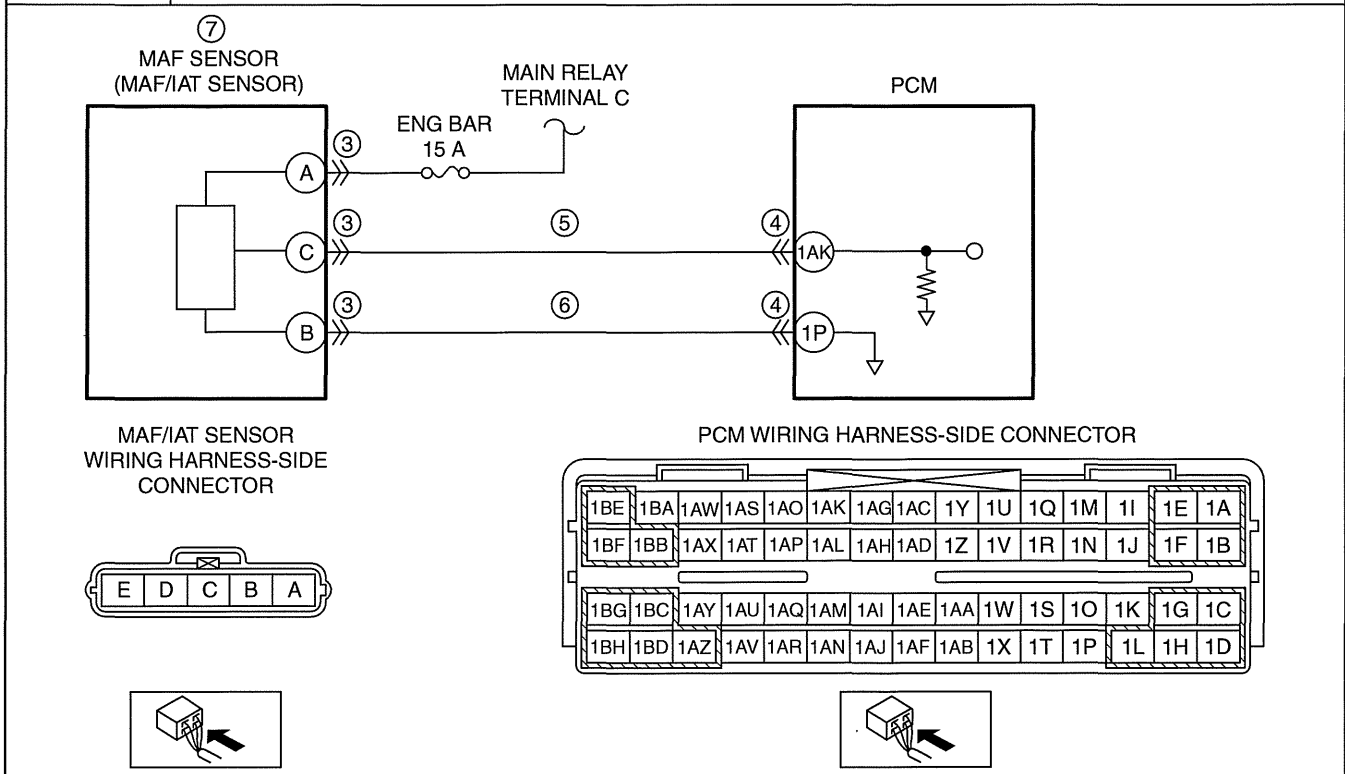

01-02A

ON-BOARD DIAGNOSTIC [LF, L5]

DTC P0103:00 [LF, L5]

id0102c8701000

DTC P0103:00	MAF sensor circuit high input
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the input voltage from the MAF sensor when the engine running. If the input voltage is above 4.9 V for 5 s, the PCM determines that the MAF sensor circuit has a malfunction. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> MAF/IAT sensor connector or terminals malfunction PCM connector or terminals malfunction Short to power supply in wiring harness between MAF/IAT sensor terminal C and PCM terminal 1AK Open circuit in wiring harness between MAF/IAT sensor terminal B and PCM terminal 1P MAF sensor malfunction PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	INSPECT MAF/IAT SENSOR CONNECTOR CONDITION <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the MAF/IAT sensor connector. Inspect for poor connection (such as damaged/pulled-out pins, corrosion). Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 8.
		No	Go to the next step.

		No	Go to the next step.
5	VERIFY PID DATA FOR IAT SENSOR MALFUNCTION <ul style="list-style-type: none"> • MAF/IAT sensor and PCM connectors are disconnected. • Reconnect the PCM connector. • Connect the M-MDS to the DLC-2. • Access the IAT PID using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Connect a jumper wire between MAF/IAT sensor terminals D and E (wiring harness-side). • Is the voltage below 4.9 V? 	Yes	Replace the MAF/IAT sensor, then go to Step 8. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
6	INSPECT IAT SENSOR SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • MAF/IAT sensor connector is disconnected. • Disconnect the PCM connector. • Switch the ignition to ON (engine off). • Measure the voltage between MAF/IAT sensor terminal D (wiring harness-side) and body ground. • Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 8.
		No	Go to the next step.
7	INSPECT IAT SENSOR CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • MAF/IAT sensor and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between the following terminals (wiring harness-side): <ul style="list-style-type: none"> — MAF/IAT sensor terminal D—PCM terminal 1AC — MAF/IAT sensor terminal E—PCM terminal 1AR • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
8	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Perform the KOEO/KOER self test. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) • Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
9	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [LF, L5]

DTC P0116:00 [LF, L5]

id0102c8146800

DTC P0116:00	ECT sensor No.1 circuit range/performance problem
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the maximum value and minimum value of engine coolant temperature when the engine is started and 5 min have been passed after leaving the vehicle 6 h or more. If difference between maximum and minimum values of engine coolant temperature is below 6 °C {43 °F} the PCM determines that there is an ECT sensor circuit No.1 range/performance problem. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (engine cooling system). The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> ECT sensor No.1 connector or terminals malfunction PCM connector or terminals malfunction ECT sensor No.1 malfunction Thermostat malfunction PCM malfunction

01-02A

Diagnostic procedure

STEP	INSPECTION	ACTION
1	VERIFY SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> Have the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (engine cooling system related) been recorded? 	Yes Go to the next step.
		No Record the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No Go to the next step.
3	IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA <ul style="list-style-type: none"> Perform the Freeze Frame PID Data Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Is the DTC P0116:00 on FREEZE FRAME DATA (Mode 2)? 	Yes Go to the next step.
		No Go to troubleshooting for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02A-17 DTC TABLE [LF, L5].)
4	INSPECT ECT SENSOR NO.1 CONNECTOR CONDITION <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the ECT sensor No.1 connector. Inspect for poor connection (such as damaged/pulled-out pins, corrosion). Is there any malfunction? 	Yes Repair or replace the terminal and/or connector, then go to Step 9.
		No Go to the next step.
5	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the PCM connector. Inspect for poor connection (such as damaged/pulled-out pins, corrosion). Is there any malfunction? 	Yes Repair or replace the terminal and/or connector, then go to Step 9.
		No Go to the next step.
6	INSPECT ECT SENSOR NO.1 <ul style="list-style-type: none"> Inspect the ECT sensor No.1. (See 01-40A-24 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [LF, L5].) Is there any malfunction? 	Yes Replace the ECT sensor No.1, then go to Step 9. (See 01-40A-23 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [LF, L5].)
		No Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION				
7	COMPARE ECT1 PID VALUE <ul style="list-style-type: none"> • Prepare a new ECT sensor No.1. • Connect the ECT sensor No.1 connector to the new one without installing to the engine. • Switch the ignition to ON and record the ECT1 PID value. • Switch the ignition to off. • Replace the malfunction ECT sensor No.1 with new one. • Start the engine and wait for 5 min. • Record the ECT1 PID value. • Is the difference between each ECT1 PID values more than 6 °C {43 °F}? 	<table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 50px; text-align: center;">Yes</td> <td>Go to the next step.</td> </tr> <tr> <td style="text-align: center;">No</td> <td>Go to Step 9.</td> </tr> </table>	Yes	Go to the next step.	No	Go to Step 9.
Yes	Go to the next step.					
No	Go to Step 9.					
8	INSPECT THERMOSTAT <ul style="list-style-type: none"> • Switch the ignition to off. • Inspect the thermostat. (See 01-12A-12 THERMOSTAT INSPECTION [LF, L5].) • Is there any malfunction? 	<table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 50px; text-align: center;">Yes</td> <td>Replace the thermostat, then go to the next step. (See 01-12A-11 THERMOSTAT REMOVAL/INSTALLATION [LF, L5].)</td> </tr> <tr> <td style="text-align: center;">No</td> <td>Go to the next step.</td> </tr> </table>	Yes	Replace the thermostat, then go to the next step. (See 01-12A-11 THERMOSTAT REMOVAL/INSTALLATION [LF, L5].)	No	Go to the next step.
Yes	Replace the thermostat, then go to the next step. (See 01-12A-11 THERMOSTAT REMOVAL/INSTALLATION [LF, L5].)					
No	Go to the next step.					
9	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Switch the ignition to off. • Start the engine and warm it up completely. • Perform the DTC Reading Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Is the same DTC present? 	<table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 50px; text-align: center;">Yes</td> <td>Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)</td> </tr> <tr> <td style="text-align: center;">No</td> <td>Go to the next step.</td> </tr> </table>	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)	No	Go to the next step.
Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)					
No	Go to the next step.					
10	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-17 DTC TABLE [LF, L5].)	No	DTC troubleshooting completed.
Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)					
No	DTC troubleshooting completed.					

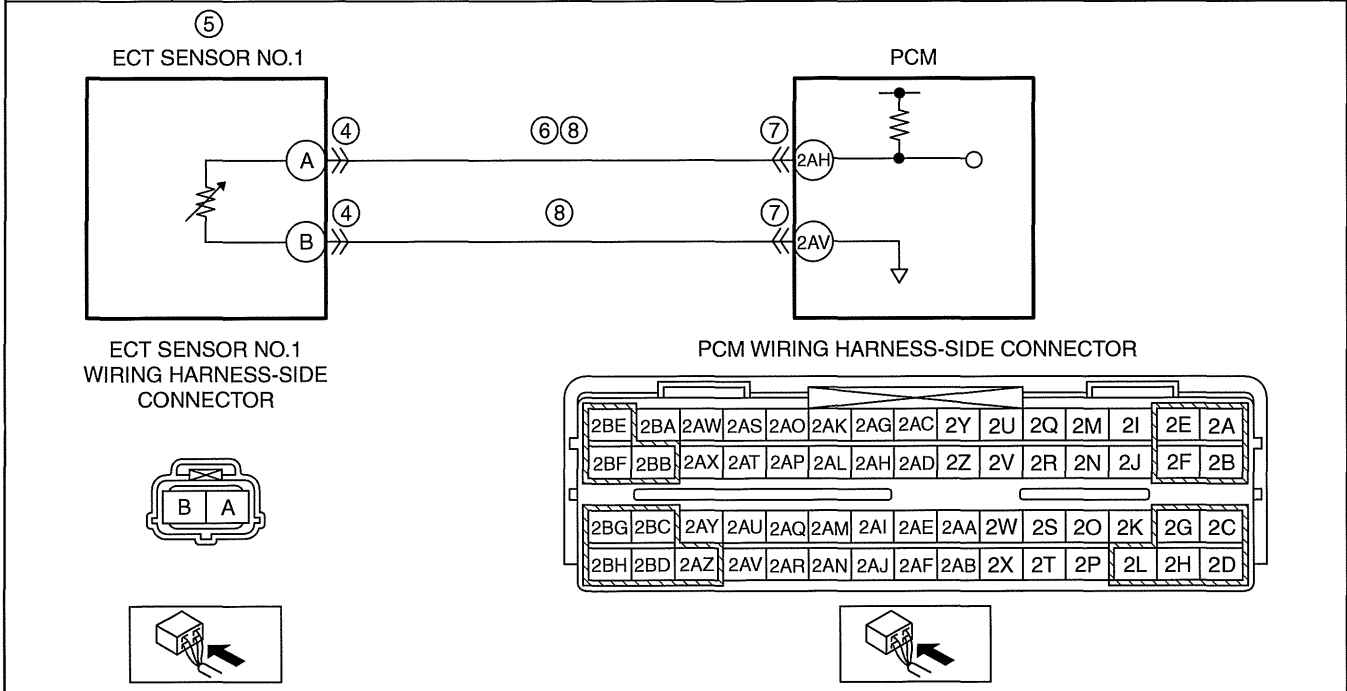

ON-BOARD DIAGNOSTIC [LF, L5]

DTC P0117:00 [LF, L5]

id0102c8701600

01-02A

DTC P0117:00	ECT sensor No.1 circuit low input
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the ECT sensor No.1 signal. If the PCM detects that the ECT sensor No.1 voltage is below 0.2 V for 5 s, the PCM determines that the ECT sensor No.1 circuit has a malfunction. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (engine cooling system). The MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Engine overheating (Cooling system malfunction) ECT sensor No.1 connector or terminals malfunction ECT sensor No.1 malfunction Short to ground in wiring harness between ECT sensor No.1 terminal A and PCM terminal 2AH PCM connector or terminals malfunction ECT sensor No.1 signal circuit and ground circuit are shorted to each other PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> Have the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (engine cooling system related) been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY ENGINE CONDITION <ul style="list-style-type: none"> Is the engine overheating? 	Yes	Perform the symptom troubleshooting "NO.17 COOLING SYSTEM CONCERNS-OVERHEATING". (See 01-03A-64 NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [LF, L5].).
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
4	INSPECT ECT SENSOR NO.1 CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the ECT sensor No.1 connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 9.
		No	Go to the next step.
5	VERIFY PID DATA FOR ECT MALFUNCTION <ul style="list-style-type: none"> • Connect the M-MDS to the DLC-2. • Access the ECT1 PID using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Verify and compare the ECT1 PID values when disconnecting and connecting ECT sensor No.1 connector. • Does the ECT1 value change? 	Yes	Replace the ECT sensor No.1, then go to Step 9. (See 01-40A-23 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
6	INSPECT ECT SENSOR NO.1 SIGNAL CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the ECT sensor No.1 connector. • Inspect for continuity between ECT sensor No.1 terminal A (wiring harness-side) and body ground. • Is there continuity? 	Yes	If the short to ground circuit could be detected: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected: <ul style="list-style-type: none"> • Replace the PCM (short to ground in PCM internal circuit). (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].) Go to Step 9.
		No	Go to the next step.
7	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 9.
		No	Go to the next step.
8	INSPECT ECT SENSOR NO.1 SIGNAL AND GROUND CIRCUITS FOR SHORT TO EACH OTHER <ul style="list-style-type: none"> • ECT sensor No.1 and PCM connectors are disconnected. • Inspect for continuity between ECT sensor No.1 terminals A and B (wiring harness-side). • Is there continuity? 	Yes	Repair or replace the malfunctioning wiring harness, then go to the next step.
		No	Go to the next step.
9	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Perform the KOEO/KOER self test. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) • Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
10	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

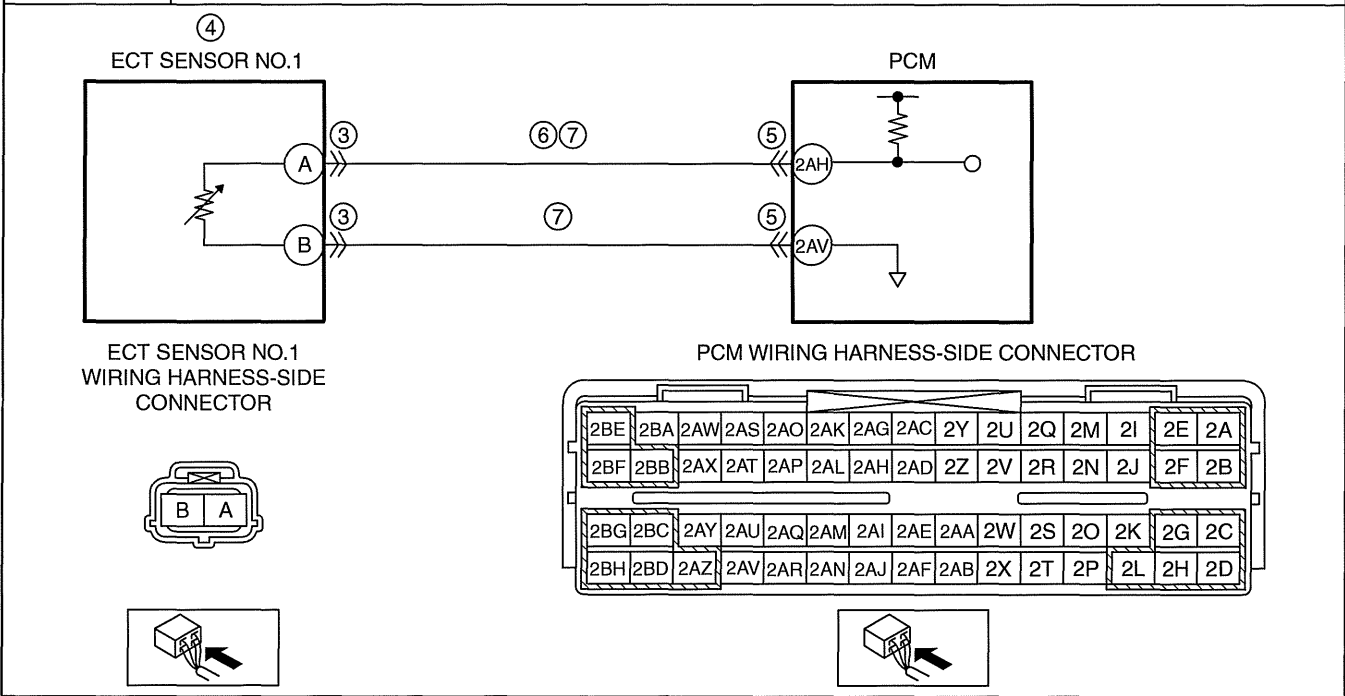

ON-BOARD DIAGNOSTIC [LF, L5]

DTC P0118:00 [LF, L5]

id0102c8701700

01-02A

DTC P0118:00	ECT sensor No.1 circuit high input
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the ECT sensor No.1 signal. If the PCM detects that the ECT sensor No.1 voltage is above 4.6 V for 5 s, the PCM determines that the ECT sensor No.1 circuit has a malfunction. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (engine cooling system). The MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> ECT sensor No.1 connector or terminals malfunction ECT sensor No.1 malfunction PCM connector or terminals malfunction Short to power supply in wiring harness between ECT sensor No.1 terminal A and PCM terminal 2AH Open circuit in wiring harness between the following terminals: <ul style="list-style-type: none"> — ECT sensor No.1 terminal A—PCM terminal 2AH — ECT sensor No.1 terminal B—PCM terminal 2AV PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> Have the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (engine cooling system related) been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	INSPECT ECT SENSOR NO.1 CONNECTOR CONDITION <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the ECT sensor No.1 connector. Inspect for poor connection (such as damaged/pulled-out pins, corrosion). Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 8.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
4	VERIFY PID DATA FOR ECT SENSOR NO.1 MALFUNCTION <ul style="list-style-type: none"> • ECT sensor No.1 connector is disconnected. • Connect the M-MDS to the DLC-2. • Access the ECT1 PID using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Connect a jumper wire between ECT sensor No.1 terminals A and B (wiring harness-side). • Is the voltage 4.6 V or below? 	Yes	Replace the ECT sensor No.1, then go to Step 8. (See 01-40A-23 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
5	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 8.
		No	Go to the next step.
6	INSPECT ECT SENSOR NO.1 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • ECT sensor No.1 and PCM connectors are disconnected. • Switch the ignition to ON (engine off). • Measure the voltage between ECT sensor No.1 terminal A (wiring harness-side) and body ground. • Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 8.
		No	Go to the next step.
7	INSPECT ECT SENSOR NO.1 CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • ECT sensor No.1 and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between the following terminals (wiring harness-side): <ul style="list-style-type: none"> — ECT sensor No.1 terminal A—PCM terminal 2AH — ECT sensor No.1 terminal B—PCM terminal 2AV • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
8	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Perform the KOEO/KOER self test. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) • Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.

Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	INSPECT THROTTLE BODY CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the throttle body connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 9.
		No	Go to the next step.
4	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 9.
		No	Go to the next step.
5	INSPECT TP1 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • Throttle body and PCM connectors are disconnected. • Switch the ignition to ON (engine off). • Measure the voltage between throttle body terminal A (wiring harness-side) and body ground. • Is there any voltage? 	Yes	Repair or replace for a possible short to power supply, then go to Step 9.
		No	Go to the next step.
6	INSPECT TP1 SIGNAL AND POWER SUPPLY CIRCUITS FOR SHORT TO EACH OTHER <ul style="list-style-type: none"> • Throttle body and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between throttle body terminals A and B (wiring harness-side). • Is there continuity? 	Yes	Repair or replace the malfunctioning wiring harness, then go to Step 9.
		No	Go to the next step.
7	INSPECT TP SENSOR NO.1 GROUND CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Throttle body and PCM connectors are disconnected. • Inspect for continuity between throttle body terminal D (wiring harness-side) and PCM terminal 2AN (wiring harness-side). • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 9.
8	INSPECT TP SENSOR NO.1 <ul style="list-style-type: none"> • Reconnect the throttle body and PCM connectors. • Inspect the TP sensor No.1. (See 01-40A-26 THROTTLE POSITION (TP) SENSOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the throttle body, then go to the next step. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
9	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Make sure to reconnect all disconnected connectors. Switch the ignition to ON (engine off). Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) Perform the KOEO/KOER self test. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
10	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

01-02A

DTC P0125:00 [LF, L5]

id0102c8702000

DTC P0125:00	Insufficient coolant temperature for closed loop fuel control
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the ECT sensor No.1 signal after engine is started while the engine is cold. If the engine coolant temperature does not reach the expected temperature for a specified period, the PCM determines that it has taken an excessive amount of time for the engine coolant temperature to reach the temperature necessary to start closed-loop fuel control. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (engine cooling system). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> ECT sensor No.1 connector or terminals malfunction ECT sensor No.1 malfunction PCM connector or terminals malfunction PCM malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> Have the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (engine cooling system related) been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY CURRENT INPUT SIGNAL STATUS IS CONCERN INTERMITTENT OR CONSTANT <ul style="list-style-type: none"> Access the ECT PID using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Is the ECT PID value above 60 °C {140 °F}? 	Yes	Intermittent concern exists. <ul style="list-style-type: none"> Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING" procedure. (See 01-03A-84 INTERMITTENT CONCERN TROUBLESHOOTING [LF, L5].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
4	INSPECT ECT SENSOR NO.1 CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the ECT sensor No.1 connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 7.
		No	Go to the next step.
5	INSPECT ECT SENSOR NO.1 <ul style="list-style-type: none"> • Inspect the ECT sensor No.1. (See 01-40A-24 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the ECT sensor No.1, then go to Step 7. (See 01-40A-23 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
6	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to the next step.
		No	Go to the next step.
7	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Switch the ignition to ON (engine off). • Access the ECT PID using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Wait until the ECT PID value below 20 °C {68 °F}. • Start the engine and warm it up completely. • Perform the Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.

		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [LF, L5]

DTC P0126:00, P0128:00 [LF, L5]

id0102c8900800

01-02A

DTC P0126:00	Thermostat stuck open
DTC P0128:00	
DETECTION CONDITION	<p>P0126:00</p> <ul style="list-style-type: none"> The PCM monitors detects based on following calculation with ECT sensor No.2 and estimated ECT sensor No.2* at judge timing. When the difference between ECT sensor No.2 and the estimated ECT sensor No.2 is at the set value or more, a malfunction is detected. *: Estimated ECT sensor No.2 output value when it is determined that there is a thermostat-open malfunction. <p>MONITORING CONDITIONS</p> <ul style="list-style-type: none"> IAT: above -10 °C {14 °F} Vehicle speed: over 40 km/h {25 mph} Absolute load: above 14% <p>P0128:00</p> <ul style="list-style-type: none"> The PCM monitors MAF, IAT, VSS and ECT signals and calculate radiator's heat radiation ratio while following monitoring conditions are met. If calculated value exceeds specification, the PCM determines that the thermostat is stuck open. <p>MONITORING CONDITIONS</p> <ul style="list-style-type: none"> IAT: above -10 °C {14 °F} ECT at engine start: below 52 °C {126 °F} Vehicle speed: over 40 km/h {25 mph} <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is an intermittent monitor (engine cooling system). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Thermostat malfunction ECT sensor malfunction Cooling system malfunction PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> Have the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (engine cooling system related) been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY RELATED PENDING CODE AND STORED DTC <ul style="list-style-type: none"> Switch the ignition to off, then to ON (engine off). Perform the DTC Reading Procedure and Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Are any other DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	Go to the next step.
4	INSPECT THERMOSTAT <ul style="list-style-type: none"> Switch the ignition to off. Inspect the thermostat. (See 01-12A-12 THERMOSTAT INSPECTION [LF, L5].) Is there any malfunction? 	Yes	Replace the thermostat, then go to Step 7. (See 01-12A-11 THERMOSTAT REMOVAL/INSTALLATION [LF, L5].)
		No	P0126:00: <ul style="list-style-type: none"> Go to Step 6. P0128:00: <ul style="list-style-type: none"> Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
5	INSPECT ECT SENSOR NO.1 <ul style="list-style-type: none"> • Inspect the ECT sensor No.1. (See 01-40A-24 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the ECT sensor No.1, then go to Step 7. (See 01-40A-23 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [LF, L5].)
		No	Go to Step 7.
6	INSPECT ECT SENSOR NO.2 <ul style="list-style-type: none"> • Inspect the ECT sensor No.2. (See 01-40A-24 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the ECT sensor No.2, then go to the next step. (See 01-40A-23 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
7	VERIFY MONITORING CONDITION FOR REPAIR VERIFICATION <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Cool down the engine. <p>Note</p> <ul style="list-style-type: none"> • If workshop inside and outside temperature difference is significant, PCM might not operate thermostat monitor. Therefore, it is recommended to cool down engine out of workshop. <ul style="list-style-type: none"> • Switch the ignition to ON (engine off). • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Access the ECT and IAT PIDs using the M-MDS under the following conditions: (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) <p>P0126:00 — IAT: above -10 °C {14 °F}</p> <p>P0128:00 — IAT: above -10 °C {14 °F} — ECT: below 36 °C {97 °F} — Difference between ECT and IAT: below 6 °C {10.8 °F}</p> <ul style="list-style-type: none"> • Is there any PID that out of the specification? 	Yes	Take corrective action (e.g. cool down engine). Repeat this step.
		No	P0126:00: <ul style="list-style-type: none"> • Go to the next step. P0128:00: <ul style="list-style-type: none"> • Go to Step 9.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
8	VERIFY TROUBLESHOOTING OF DTC P0126:00 COMPLETED <ul style="list-style-type: none"> • Start engine and turn off the electrical load and A/C. • Access the THM_2 (Temp unit) and THM_MIN_2 (Temp unit) PIDs using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) <p>Note</p> <ul style="list-style-type: none"> • This test requires actual driving. Chassis roller cannot be used for this test. • During the test drive, constant speed should be maintained, although 2 or 3 stops during every 5 min of driving time (e.g. for traffic signals) is acceptable. Stop-and-go (e.g. in case of traffic congestion) is not acceptable during the test period. • Test period depends on ECT at engine start. (e.g. if ECT is -10 °C {14 °F}, monitoring period is 38 min and ECT is 30 °C {86 °F}, monitoring period is 8 min) <ul style="list-style-type: none"> • Verify the THM_2 and THM_MIN_2 PIDs values. • Is the THM_2 value above THM_MIN_2 value? 	Yes	Go to Step 10.
		No	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
9	VERIFY TROUBLESHOOTING OF DTC P0128:00 COMPLETED <ul style="list-style-type: none"> • Start engine and turn off the electrical load and A/C. • Access the THM_1 (Temp and Num units), THM_MAX_1 (Num unit) and THM_MIN_1 (Temp unit) PIDs using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) <p>Note</p> <ul style="list-style-type: none"> • This test requires actual driving. Chassis roller cannot be used for this test. • During the test drive, constant speed should be maintained, although 2 or 3 stops (e.g. for traffic signals) is acceptable. Stop-and-go (e.g. in case of traffic congestion) is not acceptable during the test period. <ul style="list-style-type: none"> • Verify the THM_1, THM_MAX_1 and THM_MIN_1 PIDs values. • Are THM_1 value of Num unit below THM_MAX_1 value and THM_1 value of Temp unit above THM_MIN_1 value? 	Yes	Go to the next step.
		No	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
10	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

01-02A

ON-BOARD DIAGNOSTIC [LF, L5]

DTC P0130:00 [LF, L5]

id0102c8702100

DTC P0130:00	A/F sensor circuit problem
DETECTION CONDITION	<ul style="list-style-type: none"> • The PCM monitors the voltage between PCM terminal 2AD and 2AC while the A/F sensor active. If the voltage deviate from specified range, the PCM determines that there is a A/F sensor circuit problem. <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is a intermittent monitor (A/F sensor, HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • A/F sensor connector or terminals malfunction • PCM connector or terminals malfunction • A/F sensor malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> • Have the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor, HO2S related) been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	INSPECT A/F SENSOR CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the A/F sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 6.
		No	Go to the next step.
4	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 6.
		No	Go to the next step.
5	INSPECT A/F SENSOR <ul style="list-style-type: none"> • Reconnect the A/F sensor and PCM connectors. • Inspect the A/F sensor. (See 01-40A-28 AIR FUEL RATIO (A/F) SENSOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the A/F sensor, then go to the next step. (See 01-40A-27 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
6	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Perform the Drive Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02A-12 OBD-II DRIVE MODE [LF, L5].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION		ACTION
7	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

DTC P0131:00 [LF, L5]

id0102c8702200

01-02A

DTC P0131:00	A/F sensor circuit low input
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the input voltage from the A/F sensor while the engine is running. If the following PCM terminal voltage is below specified, the PCM determines that the A/F sensor circuit voltage is low. <ul style="list-style-type: none"> — PCM terminal 2Z: 2 V — PCM terminal 2AC: 1.2 V — PCM terminal 2AD: 1.2 V <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (A/F sensor, HO2S). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> A/F sensor connector or terminals malfunction Short to ground in wiring harness between the following terminals: <ul style="list-style-type: none"> — A/F sensor terminal B—PCM terminal 2AD — A/F sensor terminal D—PCM terminal 2AC — A/F sensor terminal F—PCM terminal 2Z PCM connector or terminals malfunction A/F sensor malfunction PCM malfunction

ON-BOARD DIAGNOSTIC [LF, L5]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> • Have the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor, HO2S related) been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY RELATED PENDING CODE AND STORED DTC <ul style="list-style-type: none"> • Switch the ignition to off, then to ON (engine off). • Perform the DTC Reading Procedure and Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Are any other DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	Go to the next step.
4	IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2) <ul style="list-style-type: none"> • Perform the Freeze Frame PID Data Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Is the DTC P0131:00 on FREEZE FRAME DATA (Mode 2)? 	Yes	Go to the next step.
		No	Go to the troubleshooting procedures for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02A-17 DTC TABLE [LF, L5].)
5	INSPECT A/F SENSOR CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the A/F sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 9.
		No	Go to the next step.
6	INSPECT A/F SENSOR CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • A/F sensor connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: <ul style="list-style-type: none"> — A/F sensor terminal B — A/F sensor terminal D — A/F sensor terminal F • Is there continuity? 	Yes	If the short to ground circuit could be detected: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected: <ul style="list-style-type: none"> • Replace the PCM (short to ground in PCM internal circuit). (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].) Go to Step 9.
		No	Go to the next step.
7	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 9.
		No	Go to the next step.
8	INSPECT A/F SENSOR <ul style="list-style-type: none"> • Reconnect the A/F sensor and PCM connectors. • Inspect the A/F sensor. (See 01-40A-28 AIR FUEL RATIO (A/F) SENSOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the A/F sensor, then go to the next step. (See 01-40A-27 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

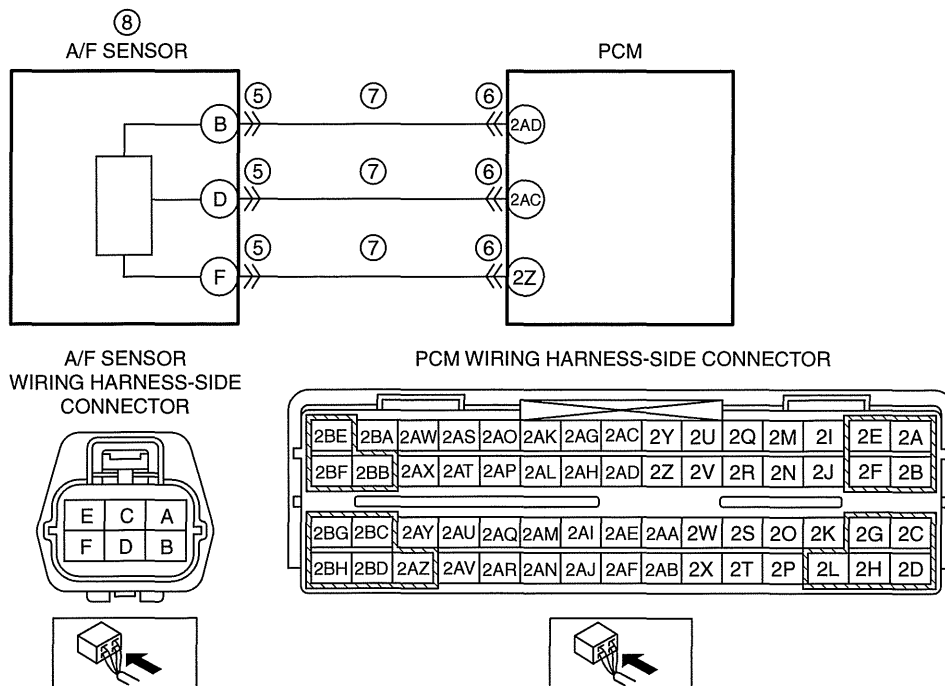

STEP	INSPECTION		ACTION
9	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Perform the KOEO/KOER self test. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
10	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

01-02A

DTC P0132:00 [LF, L5]

id0102c8702300

DTC P0132:00	A/F sensor circuit high input
DETECTION CONDITION	<ul style="list-style-type: none"> • The PCM monitors the input voltage from the A/F sensor when the engine is running. If the following PCM terminal voltage is above specified, the PCM determines that the A/F sensor circuit voltage is high. <ul style="list-style-type: none"> — PCM terminal 2Z: battery voltage -1.2 V — PCM terminal 2AC: 6.2 V — PCM terminal 2AD: battery voltage -1.2 V Diagnostic support note • This is a continuous monitor (A/F sensor, HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • A/F sensor connector or terminals malfunction • PCM connector or terminals malfunction • Short to power supply in wiring harness between the following terminals: <ul style="list-style-type: none"> — A/F sensor terminal B—PCM terminal 2AD — A/F sensor terminal D—PCM terminal 2AC — A/F sensor terminal F—PCM terminal 2Z • A/F sensor malfunction • PCM malfunction

ON-BOARD DIAGNOSTIC [LF, L5]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> • Have the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor, HO2S related) been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.

Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY RELATED PENDING CODE AND STORED DTC <ul style="list-style-type: none"> • Switch the ignition to off, then to ON (engine off). • Perform the DTC Reading Procedure and Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Are any other DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	Go to the next step.
4	IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2) <ul style="list-style-type: none"> • Perform the Freeze Frame PID Data Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Is the DTC P0132:00 on FREEZE FRAME DATA (Mode 2)? 	Yes	Go to the next step.
		No	Go to the troubleshooting procedures for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02A-17 DTC TABLE [LF, L5].)
5	INSPECT A/F SENSOR CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the A/F sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 9.
		No	Go to the next step.
6	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 9.
		No	Go to the next step.
7	INSPECT A/F SENSOR CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • A/F sensor and PCM connectors are disconnected. • Switch the ignition to ON (engine off). • Measure the voltage between the following terminals (wiring harness-side) and body ground: <ul style="list-style-type: none"> — A/F sensor terminal B — A/F sensor terminal D — A/F sensor terminal F • Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 9.
		No	Go to the next step.
8	INSPECT A/F SENSOR <ul style="list-style-type: none"> • Reconnect the A/F sensor and PCM connectors. • Inspect the A/F sensor. (See 01-40A-28 AIR FUEL RATIO (A/F) SENSOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the A/F sensor, then go to the next step. (See 01-40A-27 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
9	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Perform the KOEO/KOER self test. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
10	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

01-02A

DTC P0133:00 [LF, L5]

id0102c8702400

DTC P0133:00	A/F sensor circuit slow response
DETECTION CONDITION	<ul style="list-style-type: none"> • The PCM monitors the A/F sensor terminal D current slow response and delayed response while the A/F fluctuation being provided when following monitoring conditions are met. If the average value of slow response and/or delayed response is more than specified value, the PCM determine that the A/F sensor has a deterioration. <p>MONITORING CONDITIONS</p> <ul style="list-style-type: none"> — Drive Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S and TWC Repair Verification Drive Mode) — Following conditions are met: <ul style="list-style-type: none"> • A/F sensor heater monitor is completed. • Fuel system loop status is closed loop fuel control. — ECT sensor and A/F sensor heater are normal — Engine speed: 1,200—3,500 rpm — Charging efficiency: 16—63% — Intake airflow amount: 5—40 g/s {0.7—5.2 lb/min} — Engine coolant temperature: above 60 °C {140 °F} <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is an intermittent monitor (A/F sensor, HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • A/F sensor malfunction <ul style="list-style-type: none"> — Connector or terminals malfunction — Leakage exhaust system • Fuel supply system malfunction or improper fuel line pressure <ul style="list-style-type: none"> — Fuel leakage in fuel line from fuel distribution pipe to fuel pump — Clogged or restricted fuel filter — Pressure regulator malfunction — Fuel pump unit malfunction • Purge solenoid valve malfunction • Engine malfunction <ul style="list-style-type: none"> — Leakage engine coolant — Insufficient engine compression • A/F sensor malfunction <ul style="list-style-type: none"> — A/F sensor deterioration — Related wiring harness malfunction • PCM malfunction

ON-BOARD DIAGNOSTIC [LF, L5]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> • Have the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor, HO2S related) been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY RELATED PENDING CODE AND STORED DTC <ul style="list-style-type: none"> • Switch the ignition to off, then to ON (engine off). • Perform the DTC Reading Procedure and Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Is the DTC P0443:00 also present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-147 DTC P0443:00 [LF, L5].)
		No	Go to the next step.
4	IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2) <ul style="list-style-type: none"> • Perform the Freeze Frame PID Data Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Is the DTC P0133:00 on FREEZE FRAME DATA (Mode 2)? 	Yes	Go to the next step.
		No	Go to the troubleshooting procedures for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02A-17 DTC TABLE [LF, L5].)
5	INSPECT A/F SENSOR CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the A/F sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 14.
		No	Go to the next step.
6	INSPECT GAS LEAKAGE FROM EXHAUST SYSTEM <ul style="list-style-type: none"> • Reconnect the A/F sensor connector. • Visually inspect if there is any gas leakage between the exhaust manifold and A/F sensor. • Is there gas leakage? 	Yes	Repair or replace the malfunctioning part according to the inspection result, then go to Step 14.
		No	Go to the next step.
7	INSPECT FUEL LINE PRESSURE <ul style="list-style-type: none"> • Switch the ignition to off. <p style="margin-left: 20px;">Note</p> <ul style="list-style-type: none"> • If engine will not start, inspect fuel line pressure with ignition is switched to ON. • Inspect fuel line pressure while engine running. (See 01-14A-6 FUEL LINE PRESSURE INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Go to the next step.
		No	Go to Step 10.
8	INSPECT FUEL LINE LEAKAGE <ul style="list-style-type: none"> • Visually inspect the leakage from fuel line between fuel distribution pipe to fuel pump. • Is there any leakage? 	Yes	Repair or replace the malfunctioning part according to the inspection result, then go to Step 14.
		No	Go to the next step.
9	INSPECT FUEL FILTER <ul style="list-style-type: none"> • Visually inspect the foreign materials or stain inside fuel filter. • Is there any foreign materials or stain? 	Yes	Repair or replace the malfunctioning part according to the inspection result, then go to Step 14.
		No	Replace the fuel pump unit, then go to Step 14. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].)

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
10	INSPECT PURGE SOLENOID VALVE <ul style="list-style-type: none"> • Inspect the purge solenoid valve. (See 01-16A-8 PURGE SOLENOID VALVE INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the purge solenoid valve, then go to Step 14. (See 01-16A-8 PURGE SOLENOID VALVE REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
11	INSPECT SEALING OF ENGINE COOLANT PASSAGE <ul style="list-style-type: none"> • Perform the "ENGINE COOLANT LEAKAGE INSPECTION". (See 01-12A-6 ENGINE COOLANT LEAKAGE INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection result, then go to Step 14.
		No	Go to the next step.
12	INSPECT ENGINE COMPRESSION <ul style="list-style-type: none"> • Inspect the engine compression. (See 01-10A-17 COMPRESSION INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning parts according to the inspection results, then go to Step 14.
		No	Go to the next step.
13	INSPECT A/F SENSOR <ul style="list-style-type: none"> • Inspect the A/F sensor. (See 01-40A-28 AIR FUEL RATIO (A/F) SENSOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the A/F sensor, then go to the next step. (See 01-40A-27 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [LF, L5].)
		No	Inspect the related wiring harness. If there is a malfunction: <ul style="list-style-type: none"> • Repair or replace the malfunctioning wiring harness, then go to the next step. If there is no malfunction: <ul style="list-style-type: none"> • Go to the next step.
14	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Drive the vehicle under the monitoring conditions. • Perform the Drive Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02A-12 OBD-II DRIVE MODE [LF, L5].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
15	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

01-02A

ON-BOARD DIAGNOSTIC [LF, L5]

DTC P0134:00 [LF, L5]

id0102c8702500

<p>DTC P0134:00</p>	<p>A/F sensor circuit no activity detected</p>
<p>DETECTION CONDITION</p>	<ul style="list-style-type: none"> • The PCM monitors the element impedance A/F sensor when the following conditions are met. Under the following monitoring conditions, the element impedance more than specified value, the PCM determines that the A/F sensor is not activated. <p>MONITORING CONDITIONS</p> <ul style="list-style-type: none"> — Drive Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S and TWC Repair Verification Drive Mode) — Following conditions are met: <ul style="list-style-type: none"> • A/F sensor heater is turned on for 35 s or more • Battery voltage: 11—18 V <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is an intermittent monitor (A/F sensor, HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
<p>POSSIBLE CAUSE</p>	<ul style="list-style-type: none"> • A/F sensor connector or terminals malfunction • A/F sensor heater malfunction • Short to ground in wiring harness between the following terminals: <ul style="list-style-type: none"> — A/F sensor terminal E—PCM terminal 2A — A/F sensor terminal B—PCM terminal 2AD — A/F sensor terminal D—PCM terminal 2AC — A/F sensor terminal F—PCM terminal 2Z • PCM connector or terminals malfunction • Open circuit in wiring harness between the following terminals: <ul style="list-style-type: none"> — A/F sensor terminal E—PCM terminal 2A — A/F sensor terminal B—PCM terminal 2AD — A/F sensor terminal D—PCM terminal 2AC — A/F sensor terminal F—PCM terminal 2Z • Leakage exhaust system • Engine malfunction <ul style="list-style-type: none"> — Leakage engine coolant — Insufficient engine compression • A/F sensor malfunction • PCM malfunction

ON-BOARD DIAGNOSTIC [LF, L5]

Diagnostic procedure

STEP	INSPECTION	ACTION
1	VERIFY SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> Have the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor, HO2S related) been recorded? 	Yes Go to the next step.
		No Record the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No Go to the next step.
3	VERIFY RELATED PENDING CODE AND STORED DTC <p>Note</p> <ul style="list-style-type: none"> If fuel monitor DTC, DTC P0132:00 is retrieved, ignore it until P0134:00 is fixed. Switch the ignition to off, then to ON (engine off). Perform the DTC Reading Procedure and Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Is the DTC P2237:00 or P2251:00 also present? 	Yes Go to the applicable DTC inspection. (See 01-02A-265 DTC P2237:00 [LF, L5].) (See 01-02A-269 DTC P2251:00 [LF, L5].)
		No Go to the next step.
4	IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2) <ul style="list-style-type: none"> Perform the Freeze Frame PID Data Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Is the DTC P0134:00 on FREEZE FRAME DATA (Mode 2)? 	Yes Go to the next step.
		No Go to the troubleshooting procedures for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02A-17 DTC TABLE [LF, L5].)
5	INSPECT A/F SENSOR CONNECTOR CONDITION <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the A/F sensor connector. Inspect for poor connection (such as damaged/pulled-out pins, corrosion). Is there any malfunction? 	Yes Repair or replace the terminal and/or connector, then go to Step 14.
		No Go to the next step.
6	INSPECT A/F SENSOR HEATER <ul style="list-style-type: none"> Inspect the A/F sensor heater. (See 01-40A-28 AIR FUEL RATIO (A/F) SENSOR INSPECTION [LF, L5].) Is there any malfunction? 	Yes Replace the A/F sensor, then go to Step 14. (See 01-40A-27 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [LF, L5].)
		No Go to the next step.
7	INSPECT A/F SENSOR CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> A/F sensor connector is disconnected. Inspect for continuity between the following terminals (wiring harness-side) and body ground: <ul style="list-style-type: none"> A/F sensor terminal E A/F sensor terminal B A/F sensor terminal D A/F sensor terminal F Is there continuity? 	Yes If the short to ground circuit could be detected: <ul style="list-style-type: none"> Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected: <ul style="list-style-type: none"> Replace the PCM (short to ground in PCM internal circuit). (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].) Go to Step 14.
		No Go to the next step.
8	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> Disconnect the PCM connector. Inspect for poor connection (such as damaged/pulled-out pins, corrosion). Is there any malfunction? 	Yes Repair or replace the terminal and/or connector, then go to Step 14.
		No Go to the next step.

01-02A

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
9	INSPECT A/F SENSOR CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • A/F sensor and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): <ul style="list-style-type: none"> — A/F sensor terminal E—PCM terminal 2A — A/F sensor terminal B—PCM terminal 2AD — A/F sensor terminal D—PCM terminal 2AC — A/F sensor terminal F—PCM terminal 2Z • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 14.
10	INSPECT GAS LEAKAGE FROM EXHAUST SYSTEM <ul style="list-style-type: none"> • Reconnect the A/F sensor connector. • Visually inspect if there is any gas leakage between the exhaust manifold and A/F sensor. • Is there gas leakage? 	Yes	Repair or replace the malfunctioning part according to inspection results, then go to Step 14.
		No	Go to the next step.
11	INSPECT SEALING OF ENGINE COOLANT PASSAGE <ul style="list-style-type: none"> • Perform the “ENGINE COOLANT LEAKAGE INSPECTION”. (See 01-12A-6 ENGINE COOLANT LEAKAGE INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to inspection results, then go to Step 14.
		No	Go to the next step.
12	INSPECT ENGINE COMPRESSION <ul style="list-style-type: none"> • Inspect the engine compression. (See 01-10A-17 COMPRESSION INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning parts according to the inspection results, then go to Step 14.
		No	Go to the next step.
13	INSPECT A/F SENSOR <ul style="list-style-type: none"> • Inspect the A/F sensor. (See 01-40A-28 AIR FUEL RATIO (A/F) SENSOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the A/F sensor, then go to the next step. (See 01-40A-27 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
14	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Start the engine and warm it up completely. • Perform the Drive Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02A-12 OBD-II DRIVE MODE [LF, L5].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
15	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [LF, L5]

DTC P0137:00 [LF, L5]

id0102c8300300

01-02A

DTC P0137:00	HO2S circuit low input
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors input voltage from HO2S. If the input voltage from the HO2S is below -1.15 V or HO2S bias voltage below 1.3 V for 5 s while the HO2S is active, the PCM determines that circuit input is low. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (A/F sensor, HO2S). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> HO2S connector or terminals malfunction Short to ground in wiring harness between HO2S terminal A and PCM terminal 2Q PCM connector or terminals malfunction Open circuit in wiring between the following terminals: <ul style="list-style-type: none"> — HO2S terminal A—PCM terminal 2Q — HO2S terminal B—PCM terminal 2AS HO2S malfunction PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> Have the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor, HO2S related) been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
3	VERIFY RELATED PENDING CODE AND STORED DTC <ul style="list-style-type: none"> • Switch the ignition to off, then to ON (engine off). • Perform the DTC Reading Procedure and Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Are any other DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	Go to the next step.
4	IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (Mode 2) <ul style="list-style-type: none"> • Perform the Freeze Frame PID Data Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Is the DTC P0137:00 on FREEZE FRAME DATA (Mode 2)? 	Yes	Go to the next step.
		No	Go to the troubleshooting procedures for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02A-17 DTC TABLE [LF, L5].)
5	INSPECT HO2S CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the HO2S connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 10.
		No	Go to the next step.
6	INSPECT HO2S SIGNAL CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • HO2S connector is disconnected. • Inspect for continuity between HO2S terminal A (wiring harness-side) and body ground. • Is there continuity? 	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 10.
		No	Go to the next step.
7	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 10.
		No	Go to the next step.
8	INSPECT HO2S CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • HO2S and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): <ul style="list-style-type: none"> — HO2S terminal A—PCM terminal 2Q — HO2S terminal B—PCM terminal 2AS • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 10.
9	INSPECT HO2S <ul style="list-style-type: none"> • Reconnect the HO2S and PCM connectors. • Inspect the HO2S. (See 01-40A-29 HEATED OXYGEN SENSOR (HO2S) INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Repair or replace the HO2S, then go to the next step. (See 01-40A-29 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
10	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Perform the Drive Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02A-12 OBD-II DRIVE MODE [LF, L5].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

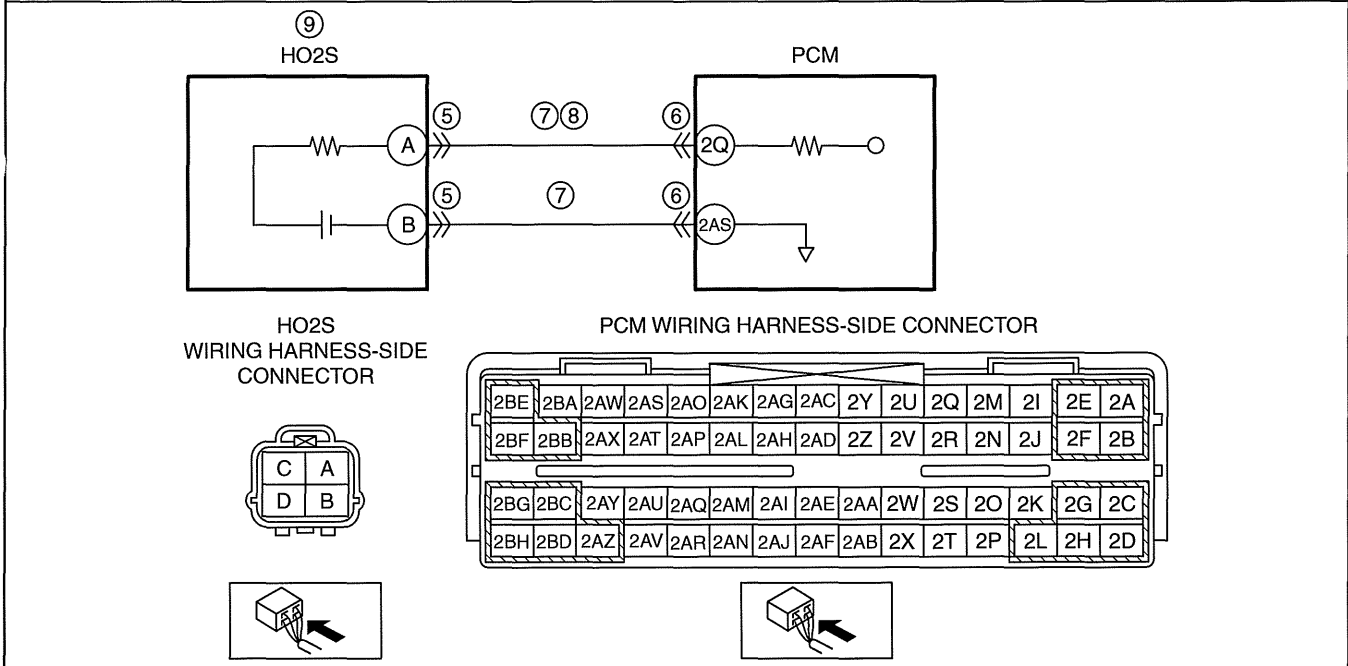

STEP	INSPECTION	ACTION	
11	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

DTC P0138:00 [LF, L5]

id0102c8702600

01-02A

DTC P0138:00	HO2S circuit high input
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors input voltage from HO2S. If the input voltage from the HO2S is above 1.2 V or HO2S bias voltage above 1.7 V for 5 s, the PCM determines that circuit input is high. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (A/F sensor, HO2S). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.

Diagnostic procedure

STEP	INSPECTION	ACTION
1	VERIFY SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> Have the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor, HO2S related) been recorded? 	Yes Go to the next step.
		No Record the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No Go to the next step.
3	VERIFY RELATED PENDING CODE AND STORED DTC <ul style="list-style-type: none"> Switch the ignition to off, then to ON (engine off). Perform the DTC Reading Procedure and Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Are any other DTCs present? 	Yes Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No Go to the next step.
4	IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2) <ul style="list-style-type: none"> Perform the Freeze Frame PID Data Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Is the DTC P0138:00 on FREEZE FRAME DATA (Mode 2)? 	Yes Go to the next step.
		No Go to the troubleshooting procedures for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02A-17 DTC TABLE [LF, L5].)
5	INSPECT HO2S CONNECTOR CONDITION <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the HO2S connector. Inspect for poor connection (such as damaged/pulled-out pins, corrosion). Is there any malfunction? 	Yes Repair or replace the terminal and/or connector, then go to Step 10.
		No Go to the next step.
6	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> Disconnect the PCM connector. Inspect for poor connection (such as damaged/pulled-out pins, corrosion). Is there any malfunction? 	Yes Repair or replace the terminal and/or connector, then go to Step 10.
		No Go to the next step.
7	INSPECT HO2S CIRCUIT FOR SHORT TO EACH OTHER <ul style="list-style-type: none"> HO2S and PCM connectors are disconnected. Inspect for continuity between HO2S terminal A and B (wiring harness-side). Is there continuity? 	Yes Repair or replace the malfunctioning wiring harness, then go to Step 10.
		No Go to the next step.
8	INSPECT HO2S SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> HO2S and PCM connectors are disconnected. Switch the ignition to ON (engine off). Measure the voltage between HO2S terminal A (wiring harness-side) and body ground. Is there any voltage? 	Yes Repair or replace the wiring harness for a short to power supply, then go to Step 10.
		No Go to the next step.
9	INSPECT HO2S <ul style="list-style-type: none"> Reconnect the HO2S and PCM connectors. Inspect the HO2S. (See 01-40A-29 HEATED OXYGEN SENSOR (HO2S) INSPECTION [LF, L5].) Is there any malfunction? 	Yes Replace the HO2S, then go to the next step. (See 01-40A-29 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [LF, L5].)
		No Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
10	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Perform the KOEO/KOER self test. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
11	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

01-02A

DTC P0139:00 [LF, L5]

id0102c8300400

DTC P0139:00	HO2S circuit slow response
DETECTION CONDITION	<ul style="list-style-type: none"> • The PCM monitors the rich (0.55 V) to lean (0.3 V) response time of the HO2S. The PCM measures the response time when the following conditions are met. The PCM determines a HO2S response deterioration malfunction when the measured response time is more than 0.12 s (LF)/0.10 s (L5) for 2 of 3 times. <p>MONITORING CONDITIONS</p> <ul style="list-style-type: none"> — Drive Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S and TWC Repair Verification Drive Mode) — Following conditions are met: <ul style="list-style-type: none"> • During deceleration fuel cut • Estimated temperature of the zirconia element inside the HO2S: above 450 °C {842 °F} <ul style="list-style-type: none"> • The PCM monitors for a time-out malfunction (when HO2S remains above 0.2 V for longer than a specified period of time during fuel cut control). The PCM measures the amount of time from when the following conditions are met until the HO2S output voltage drops below 0.2 V. The PCM determines a HO2S time-out malfunction when the detected time is more than 4 s for 2 of 3 times. <p>MONITORING CONDITIONS</p> <ul style="list-style-type: none"> — Drive Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S and TWC Repair Verification Drive Mode) — Following conditions are met: <ul style="list-style-type: none"> • During deceleration fuel cut • Estimated temperature of the zirconia element inside the HO2S: above 450 °C {842 °F} <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is an intermittent monitor (A/F sensor, HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • HO2S malfunction <ul style="list-style-type: none"> — Looseness HO2S — Leakage exhaust system — HO2S deterioration • Fuel supply system malfunction or improper fuel line pressure <ul style="list-style-type: none"> — Fuel leakage on fuel line from fuel distribution pipe and fuel pump — Clogged or restricted fuel filter — Pressure regulator malfunction — Fuel pump unit malfunction • Purge solenoid valve malfunction • Engine malfunction <ul style="list-style-type: none"> — Leakage engine coolant — Insufficient engine compression • PCM malfunction

ON-BOARD DIAGNOSTIC [LF, L5]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> Have the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor, HO2S related) been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY RELATED PENDING CODE AND STORED DTC <ul style="list-style-type: none"> Switch the ignition to off, then to ON (engine off). Perform the DTC Reading Procedure and Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Is the DTC P0443:00 also present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-147 DTC P0443:00 [LF, L5].)
		No	Go to the next step.
4	IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (Mode 2) <ul style="list-style-type: none"> Perform the Freeze Frame PID Data Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Is the DTC P0139:00 on FREEZE FRAME DATA (Mode 2)? 	Yes	Go to the next step.
		No	Go to the troubleshooting procedures for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02A-17 DTC TABLE [LF, L5].)
5	INSPECT INSTALLATION OF HO2S <ul style="list-style-type: none"> Inspect if the HO2S is loosely installed. Is the HO2S installed securely? 	Yes	Go to the next step.
		No	Retighten the HO2S, then go to Step 17.
6	INSPECT GAS LEAKAGE FROM EXHAUST SYSTEM <ul style="list-style-type: none"> Visually inspect if there is any gas leakage is found between the exhaust manifold and HO2S. Is there gas leakage? 	Yes	Repair or replace the malfunctioning part according to the inspection result, then go to Step 17.
		No	Go to the next step.
7	INSPECT HO2S <ul style="list-style-type: none"> Inspect the HO2S. (See 01-40A-29 HEATED OXYGEN SENSOR (HO2S) INSPECTION [LF, L5].) Is there any malfunction? 	Yes	Replace the HO2S, then go to Step 17. (See 01-40A-29 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
8	INSPECT LONG TERM FUEL TRIM <ul style="list-style-type: none"> Access the LONGFT1 PID using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Compare the PID with snapshot data recorded at Step 1. Is it below snapshot data value? 	Yes	Engine is driven under rich condition. <ul style="list-style-type: none"> Go to the next step.
		No	Engine is driven under lean condition. <ul style="list-style-type: none"> Go to Step 11.
9	INSPECT FUEL LINE PRESSURE (EXCESSIVE FUEL LINE PRESSURE) <ul style="list-style-type: none"> Switch the ignition to off. <p>Note</p> <ul style="list-style-type: none"> If engine will not start, inspect fuel the line pressure with ignition is switched to ON. Inspect fuel line pressure while the engine running. (See 01-14A-6 FUEL LINE PRESSURE INSPECTION [LF, L5].) Is there any malfunction? 	Yes	Go to the next step.
		No	Go to Step 14.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
10	INSPECT FUEL PUMP <ul style="list-style-type: none"> • Inspect the fuel pump maximum pressure and fuel return pipe for clogging. (See 01-14A-14 FUEL PUMP UNIT INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection result, then go to Step 17.
		No	Replace the fuel pump unit, then go to Step 17. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].)
11	INSPECT FUEL LINE PRESSURE (LOW FUEL LINE PRESSURE) <ul style="list-style-type: none"> • Switch the ignition to off. <p style="margin-left: 20px;">Note</p> <ul style="list-style-type: none"> • If engine will not start, inspect fuel the line pressure with ignition is switched to ON. • Inspect fuel line pressure while the engine running. (See 01-14A-6 FUEL LINE PRESSURE INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Go to the next step.
		No	Go to Step 14.
12	INSPECT FUEL LINE LEAKAGE <ul style="list-style-type: none"> • Visually inspect the leakage from the fuel pump to fuel distributor. • Is there any leakage? 	Yes	Repair or replace the malfunctioning part according to the inspection result, then go to Step 17.
		No	Go to the next step.
13	INSPECT FUEL FILTER <ul style="list-style-type: none"> • Visually inspect the foreign materials or stain inside fuel filter (low-pressure side). • Is there any foreign material or stain? 	Yes	Repair or replace the malfunctioning part according to the inspection result, then go to Step 17.
		No	Replace the fuel pump unit, then go to Step 17. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].)
14	INSPECT PURGE SOLENOID VALVE <ul style="list-style-type: none"> • Inspect the purge solenoid valve. (See 01-16A-8 PURGE SOLENOID VALVE INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the purge solenoid valve, then go to Step 17. (See 01-16A-8 PURGE SOLENOID VALVE REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
15	INSPECT SEALING OF ENGINE COOLANT PASSAGE <ul style="list-style-type: none"> • Perform the "ENGINE COOLANT LEAKAGE INSPECTION". (See 01-12A-6 ENGINE COOLANT LEAKAGE INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection result, then go to Step 17.
		No	Go to the next step.
16	INSPECT ENGINE COMPRESSION <ul style="list-style-type: none"> • Inspect the engine compression. (See 01-10A-17 COMPRESSION INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning parts according to the inspection results, then go to the next step.
		No	Go to the next step.
17	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Perform the Drive Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02A-12 OBD-II DRIVE MODE [LF, L5].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
18	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

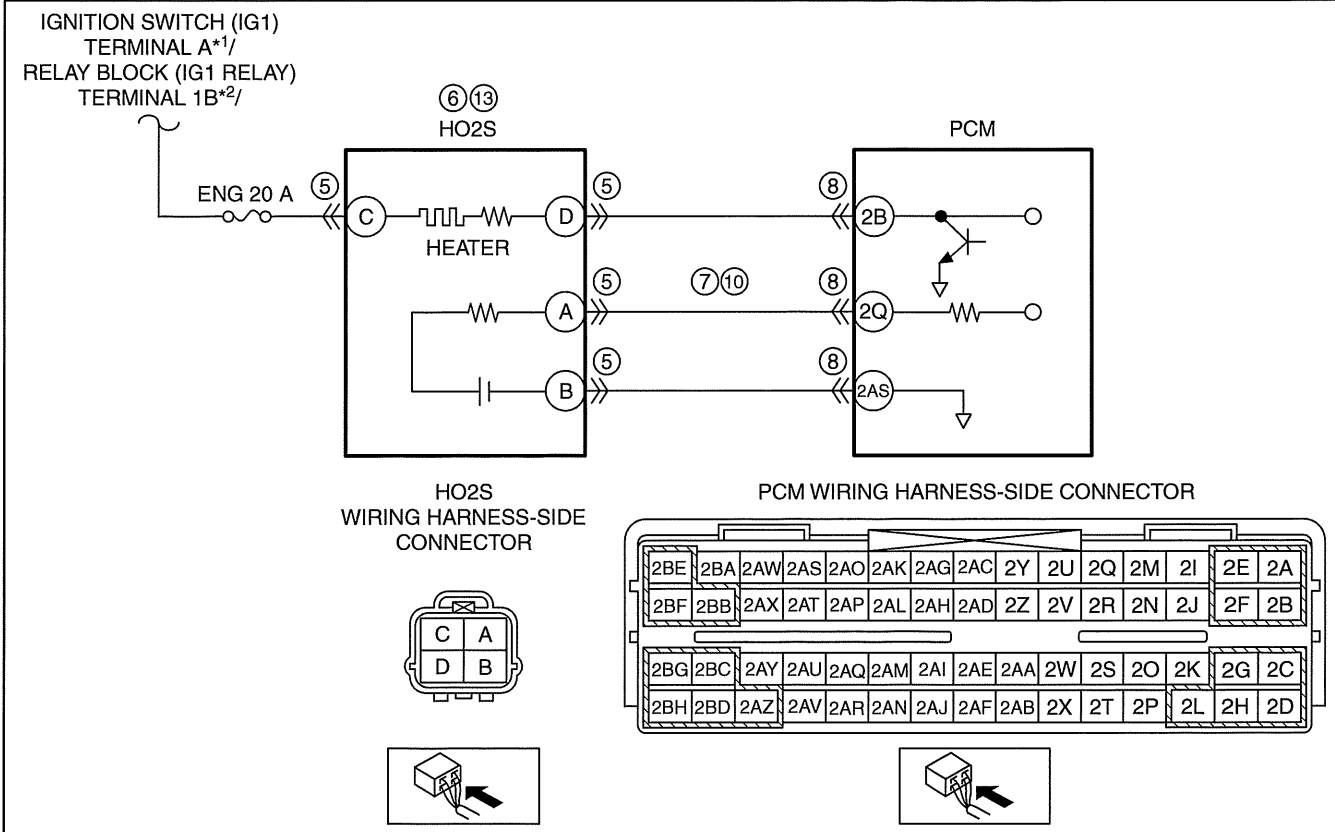

01-02A

ON-BOARD DIAGNOSTIC [LF, L5]

DTC P0140:00 [LF, L5]

id0102c8702700

DTC P0140:00	HO2S circuit no activity detected
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the input voltage from the HO2S when the following conditions are met. Under the following monitoring conditions, if the input voltage from the HO2S does not even exceed 0.6 V though the short term fuel trim is controlled up to 20.5% for 20.8 s, the PCM determines that HO2S circuit is not activated. <p>MONITORING CONDITIONS</p> <ul style="list-style-type: none"> — Drive Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S and TWC Repair Verification Drive Mode) — Estimated temperature of the zirconia element inside the HO2S above 450 °C {842 °F} <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is an intermittent monitor (A/F sensor, HO2S). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> HO2S connector or terminals malfunction HO2S heater malfunction Short to ground in wiring harness between HO2S terminal A and PCM terminal 2Q PCM connector or terminals malfunction Leakage exhaust system Open circuit in wiring harness between HO2S terminal A and PCM terminal 2Q Engine malfunction <ul style="list-style-type: none"> — Leakage engine coolant — Insufficient engine compression HO2S malfunction PCM malfunction

*1 : Vehicles without advanced keyless entry and push button start system
 *2 : Vehicles with advanced keyless entry and push button start system

ON-BOARD DIAGNOSTIC [LF, L5]

Diagnostic procedure

STEP	INSPECTION	ACTION
1	VERIFY SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> Have the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor, HO2S related) been recorded? 	Yes Go to the next step.
		No Record the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No Go to the next step.
3	VERIFY RELATED PENDING CODE AND STORED DTC <p>Note</p> <ul style="list-style-type: none"> If fuel monitor DTC, DTC P0132:00 is retrieved, ignore it until P0140:00 is fixed. Switch the ignition to off, then to ON (engine off). Perform the DTC Reading Procedure and Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Are any other DTCs present? 	Yes Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No Go to the next step.
4	IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2) <ul style="list-style-type: none"> Perform the Freeze Frame PID Data Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Is the DTC P0140:00 on FREEZE FRAME DATA (Mode 2)? 	Yes Go to the next step.
		No Go to the troubleshooting procedures for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02A-17 DTC TABLE [LF, L5].)
5	INSPECT HO2S CONNECTOR CONDITION <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the HO2S connector. Inspect for poor connection (such as damaged/pulled-out pins, corrosion). Is there any malfunction? 	Yes Repair or replace the terminal and/or connector, then go to Step 14.
		No Go to the next step.
6	INSPECT HO2S HEATER <ul style="list-style-type: none"> HO2S connector is disconnected. Inspect the HO2S heater. (See 01-40A-29 HEATED OXYGEN SENSOR (HO2S) INSPECTION [LF, L5].) Is there any malfunction? 	Yes Replace the HO2S, then go to Step 14. (See 01-40A-29 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [LF, L5].)
		No Go to the next step.
7	INSPECT HO2S SIGNAL CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> HO2S connector is disconnected. Inspect for continuity between HO2S terminal A (wiring harness-side) and body ground. Is there continuity? 	Yes If the short to ground circuit could be detected: <ul style="list-style-type: none"> Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected: <ul style="list-style-type: none"> Replace the PCM (short to ground in PCM internal circuit). (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].) Go to Step 14.
		No Go to the next step.
8	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> Disconnect the PCM connector. Inspect for poor connection (such as damaged/pulled-out pins, corrosion). Is there any malfunction? 	Yes Repair or replace the terminal and/or connector, then go to Step 14.
		No Go to the next step.

01-02A

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
9	INSPECT GAS LEAKAGE FROM EXHAUST SYSTEM <ul style="list-style-type: none"> • Reconnect the HO2S connector. • Visually inspect the exhaust system from exhaust manifold to HO2S. • Is there any leakage? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 14.
		No	Go to the next step.
10	INSPECT HO2S SIGNAL CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Disconnect the HO2S connector. • HO2S and PCM connectors are disconnected. • Inspect for continuity between HO2S terminal A (wiring harness-side) and PCM terminal 2Q (wiring harness-side). • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 14.
11	INSPECT SEALING OF ENGINE COOLANT PASSAGE <ul style="list-style-type: none"> • Perform the "ENGINE COOLANT LEAKAGE INSPECTION". (See 01-12A-6 ENGINE COOLANT LEAKAGE INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 14.
		No	Go to the next step.
12	INSPECT ENGINE COMPRESSION <ul style="list-style-type: none"> • Inspect the engine compression. (See 01-10A-17 COMPRESSION INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning parts according to the inspection results, then go to Step 14.
		No	Go to the next step.
13	INSPECT HO2S <ul style="list-style-type: none"> • Reconnect the HO2S and PCM connectors. • Inspect the HO2S. (See 01-40A-29 HEATED OXYGEN SENSOR (HO2S) INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the HO2S, then go to the next step. (See 01-40A-29 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
14	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Start the engine and warm it up completely. • Perform the Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
15	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [LF, L5]

DTC P0171:00 [LF, L5]

id0102c8934200

DTC P0171:00	Fuel trim system too lean
DETECTION CONDITION	<ul style="list-style-type: none"> • The PCM monitors short term fuel trim (SHRTFT) and long term fuel trim (LONGFT) values when closed loop fuel control. If the LONGFT and the sum total of these fuel trims exceed preprogrammed criteria, the PCM determines that the fuel system is too lean. <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is a continuous monitor (fuel system). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Misfire • Erratic signal to PCM <ul style="list-style-type: none"> — APP sensor signal malfunction — ECT sensor signal malfunction — MAF sensor signal malfunction — TP sensor signal malfunction — VSS signal malfunction • A/F sensor heater malfunction • A/F sensor malfunction <ul style="list-style-type: none"> — Looseness A/F sensor — Leakage exhaust system — A/F sensor deterioration • Air suction in intake air system • MAF sensor malfunction • Improper operation of purge control system • Fuel supply system malfunction <ul style="list-style-type: none"> — Pressure regulator malfunction — Fuel pump unit malfunction — Fuel leakage on fuel line from fuel delivery pipe and fuel pump — Fuel filter clogged or restricted — Fuel return hose clogged • Ignition system malfunction <ul style="list-style-type: none"> — Ignition coil related wiring harness malfunction — Spark plug malfunction — Ignition coil malfunction • Improper operation of variable valve timing control system • Insufficient engine compression • Improper operation of fuel injector • PCM malfunction

01-02A

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> • Have the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (fuel system related) been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY RELATED PENDING CODE AND STORED DTC <ul style="list-style-type: none"> • Switch the ignition to off, then to ON (engine off). • Perform the DTC Reading Procedure and Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Are any other DTCs present? 	Yes	If misfire DTC is present: <ul style="list-style-type: none"> • Go to Step 11. If other DTC is present: <ul style="list-style-type: none"> • Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	If drive ability concern is present: <ul style="list-style-type: none"> • Go to Step 11. If drive ability concern is not present: <ul style="list-style-type: none"> • Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
4	IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2) <ul style="list-style-type: none"> • Perform the Freeze Frame PID Data Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Is the DTC P0171:00 on FREEZE FRAME DATA (Mode 2)? 	Yes	Go to the next step.
		No	Go to the troubleshooting procedures for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02A-17 DTC TABLE [LF, L5].)
5	VERIFY CURRENT INPUT SIGNAL STATUS <ul style="list-style-type: none"> • Connect the M-MDS to the DLC-2. • Access the following PIDs using the M-MDS. (See 01-40A-8 PCM INSPECTION [LF, L5].) — APP1 — APP2 — ECT1 — MAF — TP REL — VSS • Is there any signal that is far out of specification when the ignition is switched to ON and the engine runs? 	Yes	Repair or replace the malfunctioning parts according to the inspection results, then go to Step 21.
		No	Go to the next step.
6	VERIFY CURRENT INPUT SIGNAL STATUS UNDER FREEZE FRAME DATA (MODE 2) CONDITION <ul style="list-style-type: none"> • Connect the M-MDS to the DLC-2. • Access the following PIDs using the M-MDS under the FREEZE FRAME DATA (Mode 2) conditions. (See 01-40A-8 PCM INSPECTION [LF, L5].) — APP1 — APP2 — ECT — MAF — TP REL — VSS • Is there any signal which causes drastic changes? 	Yes	Repair or replace the malfunctioning parts according to the inspection results, then go to Step 21.
		No	Go to the next step.
7	INSPECT A/F SENSOR HEATER <ul style="list-style-type: none"> • Inspect the A/F sensor heater. (See 01-40A-28 AIR FUEL RATIO (A/F) SENSOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the A/F sensor, then go to Step 21. (See 01-40A-27 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
8	INSPECT A/F SENSOR <ul style="list-style-type: none"> • Reconnect the A/F sensor connector. • Inspect the A/F sensor. (See 01-40A-28 AIR FUEL RATIO (A/F) SENSOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Go to the next step.
		No	Go to Step 11.
9	INSPECT INSTALLATION OF A/F SENSOR <ul style="list-style-type: none"> • Inspect if the A/F sensor is loosely installed. • Is the A/F sensor installed securely? 	Yes	Go to the next step.
		No	Retighten the A/F sensor, then go to Step 21.
10	INSPECT EXHAUST GAS LEAKAGE <ul style="list-style-type: none"> • Visually inspect for the exhaust gas leakage between the exhaust manifold and A/F sensor. • Is there any leakage? 	Yes	Repair or replace the malfunctioning parts according to the inspection results, then go to Step 21.
		No	Replace the A/F sensor, then go to Step 21. (See 01-40A-27 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [LF, L5].)
11	INSPECT INTAKE AIR SYSTEM FOR EXCESSIVE AIR SUCTION <ul style="list-style-type: none"> • Visually inspect the hose in intake air system for looseness, cracks or damages. • Is there any malfunction? 	Yes	Repair or replace the malfunctioning parts according to the inspection results, then go to Step 21.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
12	VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR <ul style="list-style-type: none"> • Connect the M-MDS to the DLC-2. • Start the engine. • Access the MAF PID using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Verify that the MAF PID changes quickly according to engine RPM. • Is the MAF PID value normal? (See 01-40A-8 PCM INSPECTION [LF, L5].) 	Yes	Go to Step 14.
		No	Go to the next step.
13	INSPECT FOR EXCESSIVE AIR SUCTION OF INTAKE AIR SYSTEM <ul style="list-style-type: none"> • Visually inspect for loosen, cracks or damages hoses on intake air system. <p>Note</p> <ul style="list-style-type: none"> • Engine speed may change when rust penetrating agent is sprayed on the air suction area. <ul style="list-style-type: none"> • Is there any malfunction? 	Yes	Repair or replace the source of air suction, then go to Step 21.
		No	Replace the MAF/IAT sensor, then go to Step 21. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [LF, L5].)
14	INSPECT PURGE CONTROL SYSTEM OPERATION <ul style="list-style-type: none"> • Perform the Purge Control System Inspection. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning parts according to the inspection results, then go to Step 21.
		No	Go to the next step.
15	INSPECT FUEL LINE PRESSURE <ul style="list-style-type: none"> • Switch the ignition to off. <p>Note</p> <ul style="list-style-type: none"> • If engine will not start, inspect fuel line pressure with ignition is switched to ON. <ul style="list-style-type: none"> • Inspect fuel line pressure while engine running. (See 01-14A-6 FUEL LINE PRESSURE INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	If fuel pressure is too high: <ul style="list-style-type: none"> • Replace the fuel pump unit, then go to Step 21. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/ INSTALLATION [LF, L5].) If fuel pressure is low: <ul style="list-style-type: none"> • Go to the next step.
		No	Go to Step 17.
16	INSPECT FUEL LINE <ul style="list-style-type: none"> • Visually inspect the fuel line from fuel pump to fuel delivery pipe. • Is there any leakage? 	Yes	Repair or replace the malfunctioning parts according to the inspection results, then go to Step 21.
		No	Inspect the low-pressure side fuel filter for follows: <ul style="list-style-type: none"> • Foreign materials or stain inside fuel filter. If foreign materials or stain is found inside fuel filter (low-pressure side): <ul style="list-style-type: none"> • Clean of fuel tank and filter. If foreign materials or stain is not found: <ul style="list-style-type: none"> • Replace the fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/ INSTALLATION [LF, L5].) Go to Step 21.
17	INSPECT IGNITION SYSTEM OPERATION <ul style="list-style-type: none"> • Carry out the spark test. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) • Is strong blue spark visible at each cylinder? 	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results, then go to Step 21.
18	INSPECT VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION <ul style="list-style-type: none"> • Perform the Variable Valve Timing Control System Operation Inspection. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning parts according to the inspection results, then go to Step 21.
		No	Go to the next step.

01-02A

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
19	INSPECT ENGINE COMPRESSION <ul style="list-style-type: none"> • Inspect the engine compression. (See 01-10A-17 COMPRESSION INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning parts according to the inspection results, then go to Step 21.
		No	Go to the next step.
20	INSPECT FUEL INJECTOR OPERATION <ul style="list-style-type: none"> • Perform the Fuel Injector Operation Inspection. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning parts according to the inspection results, then go to the next step.
		No	Go to the next step.
21	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Perform the Drive Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02A-12 OBD-II DRIVE MODE [LF, L5].) • Stop the vehicle and access the ON BOARD READINESS TEST to inspect Drive Mode completion status. • Verify the FUEL_EVAL PID changes to yes. <ul style="list-style-type: none"> — If not, perform the Drive Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02A-12 OBD-II DRIVE MODE [LF, L5].) • Perform the KOER self test. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
22	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [LF, L5]

DTC P0172:00 [LF, L5]

id0102c8934300

DTC P0172:00	Fuel trim system too rich
DETECTION CONDITION	<ul style="list-style-type: none"> • The PCM monitors short fuel trim (SHRTFT) and long fuel trim (LONGFT) values when closed loop fuel control. If the LONGFT and the sum total of these fuel trims exceed preprogrammed criteria, the PCM determines that the fuel system is too rich. <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is a continuous monitor (fuel system). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Misfire • Erratic signal to PCM <ul style="list-style-type: none"> — APP sensor signal malfunction — ECT sensor signal malfunction — MAF sensor signal malfunction — TP sensor signal malfunction — VSS signal malfunction • A/F sensor heater malfunction • A/F sensor malfunction <ul style="list-style-type: none"> — Looseness A/F sensor — A/F sensor deterioration • MAF sensor malfunction • Fuel supply system malfunction or improper fuel line pressure <ul style="list-style-type: none"> — Pressure regulator malfunction — Fuel pump unit malfunction — Fuel leakage on fuel line from fuel delivery pipe and fuel pump — Fuel filter clogged or restricted — Fuel return hose clogged • Improper connection of purge control system • Improper operation of EGR valve system • Improper operation of variable tumble solenoid valve • Improper operation of PCV valve • PCM malfunction

01-02A

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> • Have the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (fuel system related) been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY RELATED PENDING CODE AND STORED DTC <ul style="list-style-type: none"> • Switch the ignition to off, then to ON (engine off). • Perform the DTC Reading Procedure and Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Are any other DTCs present? 	Yes	If misfire DTC is present: <ul style="list-style-type: none"> • Go to Step 10. If other DTC is present: <ul style="list-style-type: none"> • Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	If drive ability concern is present: <ul style="list-style-type: none"> • Go to Step 10. If drive ability concern is not present: <ul style="list-style-type: none"> • Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
4	IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2) <ul style="list-style-type: none"> • Perform the Freeze Frame PID Data Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Is the DTC P0172:00 on FREEZE FRAME DATA (Mode 2)? 	Yes	Go to the next step.
		No	Go to the troubleshooting procedures for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02A-17 DTC TABLE [LF, L5].)
5	VERIFY CURRENT INPUT SIGNAL STATUS <ul style="list-style-type: none"> • Connect the M-MDS to the DLC-2. • Access the following PIDs using the M-MDS. (See 01-40A-8 PCM INSPECTION [LF, L5].) — APP1 — APP2 — ECT1 — MAF — TP REL — VSS • Is there any signal that is far out of specification when the ignition is switched to ON and the engine runs? 	Yes	Repair or replace the malfunctioning parts according to the inspection results, then go to Step 18.
		No	Go to the next step.
6	VERIFY CURRENT INPUT SIGNAL STATUS UNDER FREEZE FRAME DATA (MODE 2) CONDITION <ul style="list-style-type: none"> • Connect the M-MDS to the DLC-2. • Access the following PIDs using the M-MDS under the FREEZE FRAME DATA (Mode 2) conditions. (See 01-40A-8 PCM INSPECTION [LF, L5].) — APP1 — APP2 — ECT — MAF — TP REL — VSS • Is there any signal which causes drastic changes? 	Yes	Repair or replace the malfunctioning parts according to the inspection results, then go to Step 18.
		No	Go to the next step.
7	INSPECT A/F SENSOR HEATER <ul style="list-style-type: none"> • Inspect the A/F sensor heater. (See 01-40A-28 AIR FUEL RATIO (A/F) SENSOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the A/F sensor, then go to Step 18. (See 01-40A-27 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
8	INSPECT A/F SENSOR <ul style="list-style-type: none"> • Reconnect the A/F sensor connector. • Inspect the A/F sensor. (See 01-40A-28 AIR FUEL RATIO (A/F) SENSOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Go to the next step.
		No	Go to Step 10.
9	INSPECT INSTALLATION OF A/F SENSOR <ul style="list-style-type: none"> • Inspect if the A/F sensor is loosely installed. • Is the A/F sensor installed securely? 	Yes	Replace the A/F sensor, then go to Step 18. (See 01-40A-27 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [LF, L5].)
		No	Retighten the A/F sensor, then go to Step 18.
10	VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR <ul style="list-style-type: none"> • Connect the M-MDS to the DLC-2. • Start the engine. • Access the MAF PID using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Verify that the MAF PID changes quickly according to engine RPM. • Is the MAF PID value normal? (See 01-40A-8 PCM INSPECTION [LF, L5].) 	Yes	Go to the next step.
		No	Replace the MAF/IAT sensor, then go to Step 18. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION
11	INSPECT FUEL LINE PRESSURE <ul style="list-style-type: none"> • Switch the ignition to off. <p>Note</p> <ul style="list-style-type: none"> • If engine will not start, inspect fuel line pressure with ignition is switched to ON. <ul style="list-style-type: none"> • Inspect fuel line pressure while engine running. (See 01-14A-6 FUEL LINE PRESSURE INSPECTION [LF, L5].) • Is there any malfunction? 	Yes If fuel pressure is too high: <ul style="list-style-type: none"> • Replace the fuel pump unit, then go to Step 18. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].) If fuel pressure is low: <ul style="list-style-type: none"> • Go to the next step.
		No Go to Step 13.
12	INSPECT FUEL LINE <ul style="list-style-type: none"> • Visually inspect the fuel line from fuel pump to fuel delivery pipe. • Is there any leakage? 	Yes Repair or replace the malfunctioning parts according to the inspection results, then go to Step 18.
		No Inspect the low-pressure side fuel filter for follows: <ul style="list-style-type: none"> • Foreign materials or stain inside fuel filter. If foreign materials or stain is found inside fuel filter (low-pressure side): <ul style="list-style-type: none"> • Clean of fuel tank and filter. If foreign materials or stain is not found: <ul style="list-style-type: none"> • Replace the fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].) Go to Step 18.
13	INSPECT LONG TERM FUEL TRIM <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the purge hose from intake manifold and plug opening end of hose and intake manifold. • Access the LONGFT1 PID using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Does it shift to positive value? 	Yes Go to the next step.
		No Go to Step 15.
14	INSPECT PURGE CONTROL SYSTEM OPERATION <ul style="list-style-type: none"> • Perform the Purge Control System Inspection. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) • Is there any malfunction? 	Yes Repair or replace the malfunctioning parts according to the inspection results, then go to Step 18.
		No Go to the next step.
15	INSPECT EGR VALVE OPERATION <ul style="list-style-type: none"> • Perform the EGR Control System Inspection. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) • Is there any malfunction? 	Yes Repair or replace the malfunctioning parts according to the inspection results, then go to Step 18.
		No Go to the next step.
16	INSPECT VARIABLE TUMBLE CONTROL OPERATION <ul style="list-style-type: none"> • Perform the Variable Tumble Control Operation Inspection. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) • Is there any malfunction? 	Yes Repair or replace the malfunctioning parts according to the inspection results, then go to Step 18.
		No Go to the next step.
17	INSPECT PCV VALVE OPERATION <ul style="list-style-type: none"> • Inspect the PCV valve operation. (See 01-16A-10 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [LF, L5].) • Is there any malfunction? 	Yes Replace the PCV valve, then go to the next step. (See 01-16A-9 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [LF, L5].)
		No Go to the next step.

01-02A

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
18	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Perform the Drive Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02A-12 OBD-II DRIVE MODE [LF, L5].) • Stop the vehicle and access the ON BOARD READINESS TEST to inspect Drive Mode completion status. • Verify the FUEL_EVAL PID changes to yes. — If not, perform the Drive Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02A-12 OBD-II DRIVE MODE [LF, L5].) • Perform the KOER self test. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
19	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

DTC P2110:00 [L5]

id0102c9303500

DTC P2110:00	Throttle valve actuator control system-forced limited RPM
DETECTION CONDITION	<ul style="list-style-type: none"> • The throttle valve actuator control system is in the failure mode effects management mode. Diagnostic support note <ul style="list-style-type: none"> • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Throttle valve actuator control module internal processor error • APP sensor malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> • Has the snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
3	VERIFY RELATED PENDING CODE AND STORED DTC <ul style="list-style-type: none"> • Switch the ignition to off, then to ON (engine off). • Perform the DTC Reading Procedure and Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Are any other DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	Go to the next step.
4	INSPECT THROTTLE BODY AND PCM <ul style="list-style-type: none"> • Switch the ignition to off. • Visually inspect the following for obvious signs of damage: <ul style="list-style-type: none"> — Throttle body — PCM • Is a concern present? 	Yes	Isolate the concern and repair if necessary, then go to Step 6.
		No	Go to the next step.
5	INSPECT APP SENSOR <ul style="list-style-type: none"> • Inspect the APP sensor. (See 01-40A-26 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the APP sensor, then go to the next step. (See 01-13A-8 ACCELERATOR PEDAL REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
6	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Perform the KOER self test. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) • Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
7	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

01-02A

ON-BOARD DIAGNOSTIC [LF, L5]

DTC P0222:00 [LF, L5]

id0102c8702800

DTC P0222:00	TP sensor No.2 circuit low input
DETECTION CONDITION	<ul style="list-style-type: none"> If the PCM detects TP sensor No.2 voltage is to be below 0.2 V after switch the ignition to ON, the PCM determines that TP sensor circuit has a malfunction. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Throttle body connector or terminals malfunction Short to ground in wiring harness between the following terminals: <ul style="list-style-type: none"> — Throttle body terminal B—PCM terminal 2AR — Throttle body terminal C—PCM terminal 2AL PCM connector or terminals malfunction Open circuit in wiring harness between the following terminals: <ul style="list-style-type: none"> — Throttle body terminal B—PCM terminal 2AR — Throttle body terminal C—PCM terminal 2AL TP sensor No.2 malfunction PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
3	INSPECT THROTTLE BODY CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the throttle body connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 8.
		No	Go to the next step.
4	INSPECT TP SENSOR NO.2 CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • Throttle body connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: <ul style="list-style-type: none"> — Throttle body terminal B — Throttle body terminal C • Is there continuity? 	Yes	If the short to ground circuit could be detected: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected: <ul style="list-style-type: none"> • Replace the PCM (short to ground in PCM internal circuit). (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].) Go to Step 8.
		No	Go to the next step.
5	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 8.
		No	Go to the next step.
6	INSPECT TP SENSOR NO.2 CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Throttle body and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): <ul style="list-style-type: none"> — Throttle body terminal B—PCM terminal 2AR — Throttle body terminal C—PCM terminal 2AL • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 8.
7	INSPECT TP SENSOR NO.2 <ul style="list-style-type: none"> • Reconnect the throttle body and PCM connectors. • Inspect the TP sensor No.2. (See 01-40A-26 THROTTLE POSITION (TP) SENSOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the throttle body, then go to the next step. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)

Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	INSPECT THROTTLE BODY CONNECTOR CONDITION <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the throttle body connector. Inspect for poor connection (such as damaged/pulled-out pins, corrosion). Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 8.
		No	Go to the next step.
4	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> Disconnect the PCM connector. Inspect for poor connection (such as damaged/pulled-out pins, corrosion). Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 8.
		No	Go to the next step.
5	INSPECT TP SENSOR NO.2 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> Throttle body and PCM connectors are disconnected. Switch the ignition to ON (engine off). Measure the voltage between throttle body terminal C (wiring harness-side) and body ground. Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 8.
		No	Go to the next step.
6	INSPECT TP SENSOR NO.2 GROUND CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> Switch the ignition to off. Throttle body and PCM connectors are disconnected. Inspect for continuity between throttle body terminal D (wiring harness-side) and PCM terminal 2AN (wiring harness-side). Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 8.
7	INSPECT TP SENSOR NO.2 <ul style="list-style-type: none"> Reconnect the throttle body and PCM connectors. Inspect the TP sensor No.2. (See 01-40A-26 THROTTLE POSITION (TP) SENSOR INSPECTION [LF, L5].) Is there any malfunction? 	Yes	Replace the throttle body, then go to the next step. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
8	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) Perform the KOEO/KOER self test. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
9	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

01-02A

ON-BOARD DIAGNOSTIC [LF, L5]

DTC P0300:00 [LF, L5]

id0102c8703200

DTC P0300:00	Random misfire detected
DETECTION CONDITION	<ul style="list-style-type: none"> • The PCM monitors CKP sensor input signal interval time. The PCM calculates the change of interval time for each cylinder. If the change of interval time exceeds the preprogrammed criteria, the PCM detects a misfire in the corresponding cylinder. While the engine is running, the PCM counts the number of misfires that occurred at 200 crankshaft revolutions and 1,000 crankshaft revolutions and calculates the misfire ratio for each crankshaft revolution. If the ratio exceeds the preprogrammed criteria, the PCM determines that a misfire, which can damage the catalytic converter or affect emission performance, has occurred. <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is a continuous monitor (misfire). • The MIL illuminates if the PCM detects the misfire which affects emission performance in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • The MIL flashes if the PCM detects a misfire which can damage the catalytic converter during the first drive cycle. • PENDING CODE is available if the PCM detects the misfire which affects emission performance during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Erratic signal to PCM <ul style="list-style-type: none"> — APP sensor signal malfunction — ECT sensor No.1 signal malfunction — IAT sensor signal malfunction — MAF sensor signal malfunction — CKP sensor signal malfunction — TP sensor signal malfunction — VSS signal malfunction • CMP sensor connector or terminals malfunction • CMP sensor malfunction • CKP sensor connector or terminals malfunction • CKP sensor malfunction • Ignition system malfunction <ul style="list-style-type: none"> — Spark plug malfunction — Ignition coil related wiring harness malfunction — Ignition coil malfunction • MAF sensor malfunction • Excessive air suction in intake air system (between MAF sensor and intake manifold) • Fuel supply system malfunction or improper fuel line pressure <ul style="list-style-type: none"> — Fuel leakage in fuel line — Clogged or restricted fuel filter — Fuel pressure regulator (built-in fuel pump unit) malfunction — Fuel runout — Fuel pump unit malfunction • Purge solenoid valve malfunction • Improper operation of variable valve timing control system • EGR valve malfunction • Engine malfunction <ul style="list-style-type: none"> — Leakage engine coolant — Insufficient engine compression • PCV valve malfunction • Poor quality fuel • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> • Have the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (misfire related) been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
3	VERIFY RELATED PENDING CODE AND STORED DTC <ul style="list-style-type: none"> • Switch the ignition to off, then to ON (engine off). • Perform the DTC Reading Procedure and Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Are any other DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	Go to the next step.
4	VERIFY CURRENT INPUT SIGNAL STATUS <ul style="list-style-type: none"> • Access the following PIDs using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) <ul style="list-style-type: none"> — APP1 — APP2 — ECT1 — IAT — MAF — RPM — TP REL — VSS • Is there any signal that is far out of specification when switch the ignition to ON and the engine idles? (See 01-40A-8 PCM INSPECTION [LF, L5].) 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 25.
		No	Go to the next step.
5	VERIFY CURRENT INPUT SIGNAL STATUS UNDER FREEZE FRAME DATA (MODE 2) CONDITION <ul style="list-style-type: none"> • Access the following PIDs using the M-MDS under the FREEZE FRAME DATA (Mode 2) condition. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) <ul style="list-style-type: none"> — APP1 — APP2 — ECT1 — IAT — MAF — RPM — TP REL — VSS • Is there any signal which causes drastic changes? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 25.
		No	Go to the next step.
6	INSPECT CMP SENSOR CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the CMP sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 25.
		No	Go to the next step.
7	INSPECT CMP SENSOR <ul style="list-style-type: none"> • Inspect the CMP sensor. (See 01-40A-33 CAMSHAFT POSITION (CMP) SENSOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the CMP sensor, then go to Step 25. (See 01-40A-32 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
8	INSPECT CKP SENSOR CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the CKP sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 25.
		No	Go to the next step.
9	INSPECT CKP SENSOR <ul style="list-style-type: none"> • Inspect the CKP sensor. (See 01-40A-32 CRANKSHAFT POSITION (CKP) SENSOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the CKP sensor, then go to Step 25. (See 01-40A-30 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
10	INSPECT IGNITION SYSTEM OPERATION <ul style="list-style-type: none"> • Carry out the spark test. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) • Is strong blue spark visible at each cylinder? 	Yes	Go to Step 14.
		No	Go to the next step.

01-02A

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
11	INSPECT SPARK PLUG <ul style="list-style-type: none"> • Remove the spark plug. (See 01-18A-3 SPARK PLUG REMOVAL/INSTALLATION [LF, L5].) • Inspect the spark plug. (See 01-18A-3 SPARK PLUG INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the spark plug, then go to Step 25. (See 01-18A-3 SPARK PLUG REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
12	INSPECT IGNITION COIL RELATED WIRING HARNESS <ul style="list-style-type: none"> • Inspect the ignition coil related wiring harness condition (intermittent open or short) for all cylinders. • Is there any malfunction? 	Yes	Repair or replace the malfunctioning wiring harness, then go to Step 25.
		No	Go to the next step.
13	INSPECT IGNITION COIL <ul style="list-style-type: none"> • Inspect the ignition coil for all cylinders. (See 01-18A-2 IGNITION COIL INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the malfunctioning ignition coil, then go to Step 25. (See 01-18A-2 IGNITION COIL REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
14	VERIFY PID DATA FOR MAF SENSOR MALFUNCTION <ul style="list-style-type: none"> • Connect the M-MDS to the DLC-2. • Access the MAF PID using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Race the engine and verify that the MAF PID changes quickly according to change in the engine speed. • Is the MAF PID response normal? (See 01-40A-8 PCM INSPECTION [LF, L5].) 	Yes	Go to Step 16.
		No	Go to the next step.
15	INSPECT INTAKE AIR SYSTEM FOR AIR SUCTION <ul style="list-style-type: none"> • Inspect for air leakage between the following: <ul style="list-style-type: none"> — MAF sensor and throttle body — Throttle body and intake manifold Note <ul style="list-style-type: none"> • Engine speed may change when rust penetrating agent is sprayed on the air suction area. • Is there any leakage? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 25.
		No	Replace the MAF/IAT sensor, then go to Step 25. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
16	INSPECT FUEL LINE PRESSURE <ul style="list-style-type: none"> • Switch the ignition to off. Note <ul style="list-style-type: none"> • If engine will not start, inspect fuel line pressure with ignition is switched to ON. • Inspect fuel line pressure while engine running. (See 01-14A-6 FUEL LINE PRESSURE INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Go to the next step.
		No	Go to Step 19.
17	INSPECT FUEL LINE LEAKAGE <ul style="list-style-type: none"> • Visually inspect the leakage from fuel line. • Is there any leakage? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 25.
		No	Go to the next step.
18	INSPECT FUEL FILTER <ul style="list-style-type: none"> • Visually inspect the foreign materials or stain inside fuel filter. • Is there any foreign materials or stain? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 25.
		No	Replace the fuel pump unit, then go to Step 25. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].)

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
19	VERIFY SIMULATION ITEM FOR PURGE SOLENOID VALVE MALFUNCTION <ul style="list-style-type: none"> • Switch the ignition to off. • Connect the vacuum pump to the purge solenoid valve and apply vacuum to the solenoid. • Verify that the solenoid holds vacuum. • Switch the ignition to ON (engine off). • Access the EVAPCP PID of simulation item using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Set the purge solenoid value to 100% for the EVAPCP PID. • Verify that the purge solenoid value releases vacuum while the 100% for the EVPCP PID. • Is the purge solenoid valve operation normal? 	Yes	Go to the next step.
		No	Replace the purge solenoid valve, then go to Step 25. (See 01-16A-8 PURGE SOLENOID VALVE REMOVAL/INSTALLATION [LF, L5].)
20	INSPECT VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION <ul style="list-style-type: none"> • Perform the Variable Valve Timing Control System Operation Inspection. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 25.
		No	Go to the next step.
21	INSPECT EGR VALVE <ul style="list-style-type: none"> • Inspect the EGR valve. (See 01-16A-9 EGR VALVE INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the EGR valve, then go to Step 25. (See 01-16A-9 EGR VALVE REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
22	INSPECT SEALING OF ENGINE COOLANT PASSAGE <ul style="list-style-type: none"> • Perform the "ENGINE COOLANT LEAKAGE INSPECTION". (See 01-12A-6 ENGINE COOLANT LEAKAGE INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 25.
		No	Go to the next step.
23	INSPECT ENGINE COMPRESSION <ul style="list-style-type: none"> • Inspect the engine compression. (See 01-10A-17 COMPRESSION INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning parts according to the inspection results, then go to the next step.
		No	Go to the next step.
24	INSPECT PCV VALVE OPERATION <ul style="list-style-type: none"> • Remove the PCV valve. (See 01-16A-9 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [LF, L5].) • Inspect the PCV valve. (See 01-16A-10 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the PCV valve and the oil separator as a single unit, then go to the next step. (See 01-16A-9 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [LF, L5].)
		No	Poor quality fuel is used. <ul style="list-style-type: none"> • Replace the fuel, then go to the next step.
25	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Start the engine and warm it up completely. • Perform the Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
26	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

01-02A

		No	Go to the next step.
6	INSPECT IGNITION SYSTEM OPERATION <ul style="list-style-type: none"> • Carry out the spark test. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5]) • Is strong blue spark visible at each cylinder? 	Yes	Go to Step 10.
		No	Go to the next step.
7	INSPECT SPARK PLUG CONDITION <ul style="list-style-type: none"> • Remove the spark plug. (See 01-18A-3 SPARK PLUG REMOVAL/INSTALLATION [LF, L5].) • Inspect the spark plug. (See 01-18A-3 SPARK PLUG INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the spark plug, then go to Step 16. (See 01-18A-3 SPARK PLUG REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
8	INSPECT IGNITION COIL RELATED WIRING HARNESS OR CONNECTOR CONDITION <ul style="list-style-type: none"> • Inspect the ignition coil related wiring harness condition (intermittent open or short) for all cylinders and connector for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 16.
		No	Go to the next step.
9	INSPECT IGNITION COIL <ul style="list-style-type: none"> • Inspect the ignition coil for all cylinders. (See 01-18A-2 IGNITION COIL INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the malfunctioning ignition coil, then go to Step 16. (See 01-18A-2 IGNITION COIL REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.

01-02A

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
10	INSPECT INTAKE AIR SYSTEM FOR AIR SUCTION <ul style="list-style-type: none"> • Inspect for air leakage at the following: <ul style="list-style-type: none"> — Around connection of dynamic chamber and intake manifold — Around connection of intake manifold and cylinder head Note <ul style="list-style-type: none"> • Engine speed may change when rust penetrating agent is sprayed on the air suction area. • Is there any leakage? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 16.
		No	Go to the next step.
11	INSPECT FUEL INJECTOR OPERATION <ul style="list-style-type: none"> • Remove the intake air system parts. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].) • Disconnect the fuel injector connector on suspected cylinder. • Connect the NOID LIGHT to fuel injector terminals. • Inspect dim of light during cranking. • Does the light illuminate? 	Yes	Go to the next step.
		No	Go to Step 14.
12	INSPECT FUEL INJECTOR RELATED WIRING HARNESS OR CONNECTOR CONDITION <ul style="list-style-type: none"> • Inspect the fuel injector related wiring harness condition (intermittent open or short) and connector for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 16.
		No	Go to the next step.
13	INSPECT FUEL INJECTOR <ul style="list-style-type: none"> • Remove the fuel injector. (See 01-14A-19 FUEL INJECTOR REMOVAL/INSTALLATION [LF, L5].) • Switch the fuel injector with the fuel injector on other cylinder. • Start the engine and idle it. • Is the misfire DTC for cylinder which has a suspected fuel injector? 	Yes	Replace the malfunctioning fuel injector, then go to Step 16. (See 01-14A-19 FUEL INJECTOR REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
14	INSPECT SEALING OF ENGINE COOLANT PASSAGE <ul style="list-style-type: none"> • Perform the "ENGINE COOLANT LEAKAGE INSPECTION". (See 01-12A-6 ENGINE COOLANT LEAKAGE INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 16.
		No	Go to the next step.
15	INSPECT ENGINE COMPRESSION <ul style="list-style-type: none"> • Inspect the engine compression. (See 01-10A-17 COMPRESSION INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning parts according to the inspection results, then go to the next step.
		No	Go to the next step.
16	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Start the engine and warm it up completely. • Perform the Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

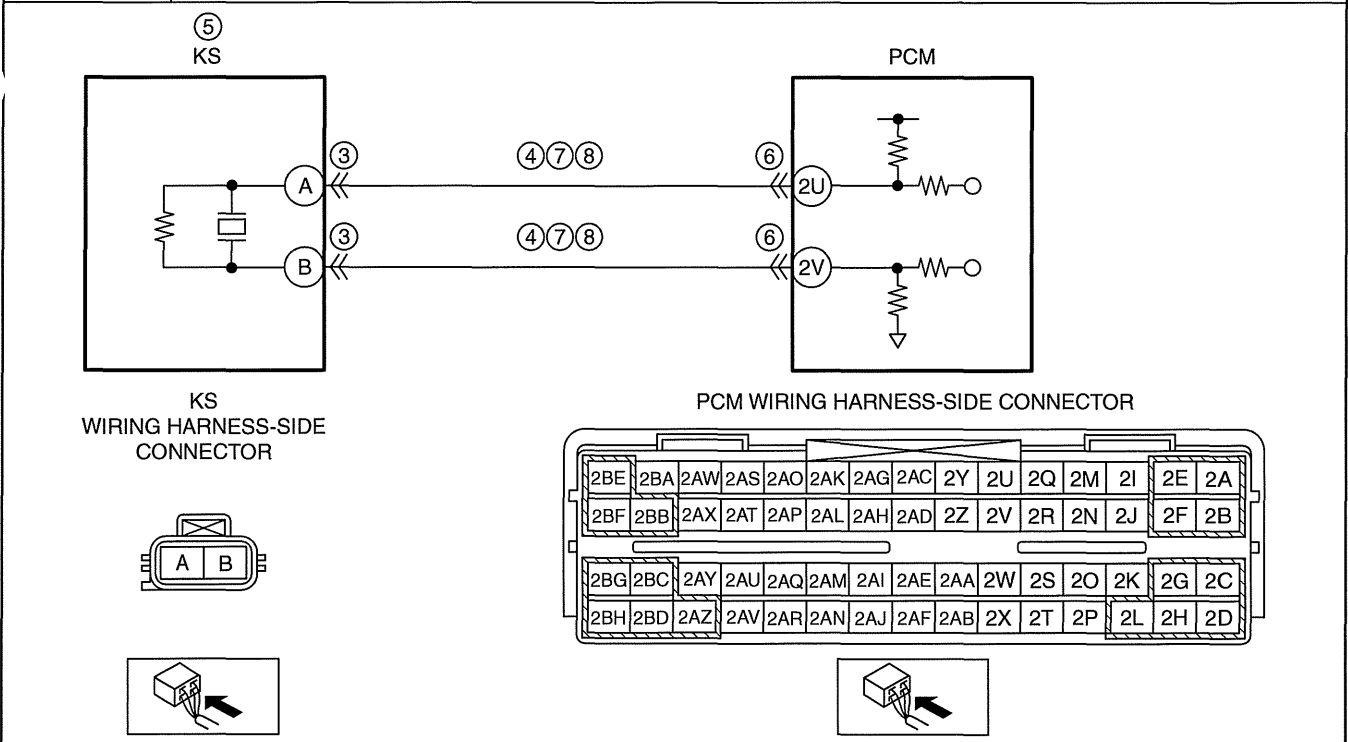

STEP	INSPECTION	ACTION
17	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) Are any DTCs present? 	Yes
		No

DTC P0327:00 [LF, L5]

id0102c8703000

01-02A

DTC P0327:00	KS circuit low input
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors input signal from the KS when the engine is running. If the input voltage is below 0.2 V for 5 s, the PCM determines that the KS circuit has a malfunction. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> KS connector or terminals malfunction Short to ground in wiring harness between the following terminals: <ul style="list-style-type: none"> — KS terminal A—PCM terminal 2U — KS terminal B—PCM terminal 2V KS malfunction PCM connector or terminals malfunction KS circuits are shorted to each other Open circuit in wiring harness between the following terminals: <ul style="list-style-type: none"> — KS terminal A—PCM terminal 2U — KS terminal B—PCM terminal 2V PCM malfunction

ON-BOARD DIAGNOSTIC [LF, L5]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	INSPECT KS CONNECTOR CONDITION <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the KS connector. Inspect for poor connection (such as damaged/pulled-out pins, corrosion). Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 9.
		No	Go to the next step.
4	INSPECT KS CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> KS connector is disconnected. Inspect for continuity between the following terminals (wiring harness-side) and body ground: <ul style="list-style-type: none"> — KS terminal A — KS terminal B Is there continuity? 	Yes	If the short to ground circuit could be detected: <ul style="list-style-type: none"> Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected: <ul style="list-style-type: none"> Replace the PCM (short to ground in PCM internal circuit). (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].) Go to Step 9.
		No	Go to the next step.
5	INSPECT KS <ul style="list-style-type: none"> Inspect the KS. (See 01-40A-33 KNOCK SENSOR (KS) INSPECTION [LF, L5].) Is there any malfunction? 	Yes	Replace the KS, then go to Step 9. (See 01-40A-33 KNOCK SENSOR (KS) REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
6	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> Disconnect the PCM connector. Inspect for poor connection (such as damaged/pulled-out pins, corrosion). Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 9.
		No	Go to the next step.
7	INSPECT KS CIRCUITS FOR SHORT TO EACH OTHER <ul style="list-style-type: none"> KS and PCM connectors are disconnected. Inspect for continuity between KS terminals A and B (wiring harness-side). Is there continuity? 	Yes	Repair or replace the malfunctioning wiring harness, then go to Step 9.
		No	Go to the next step.
8	INSPECT KS CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> KS and PCM connectors are disconnected. Inspect for continuity between the following terminals (wiring harness-side): <ul style="list-style-type: none"> — KS terminal A—PCM terminal 2U — KS terminal B—PCM terminal 2V Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to the next step.
9	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) Perform the KOEO/KOER self test. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
10	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

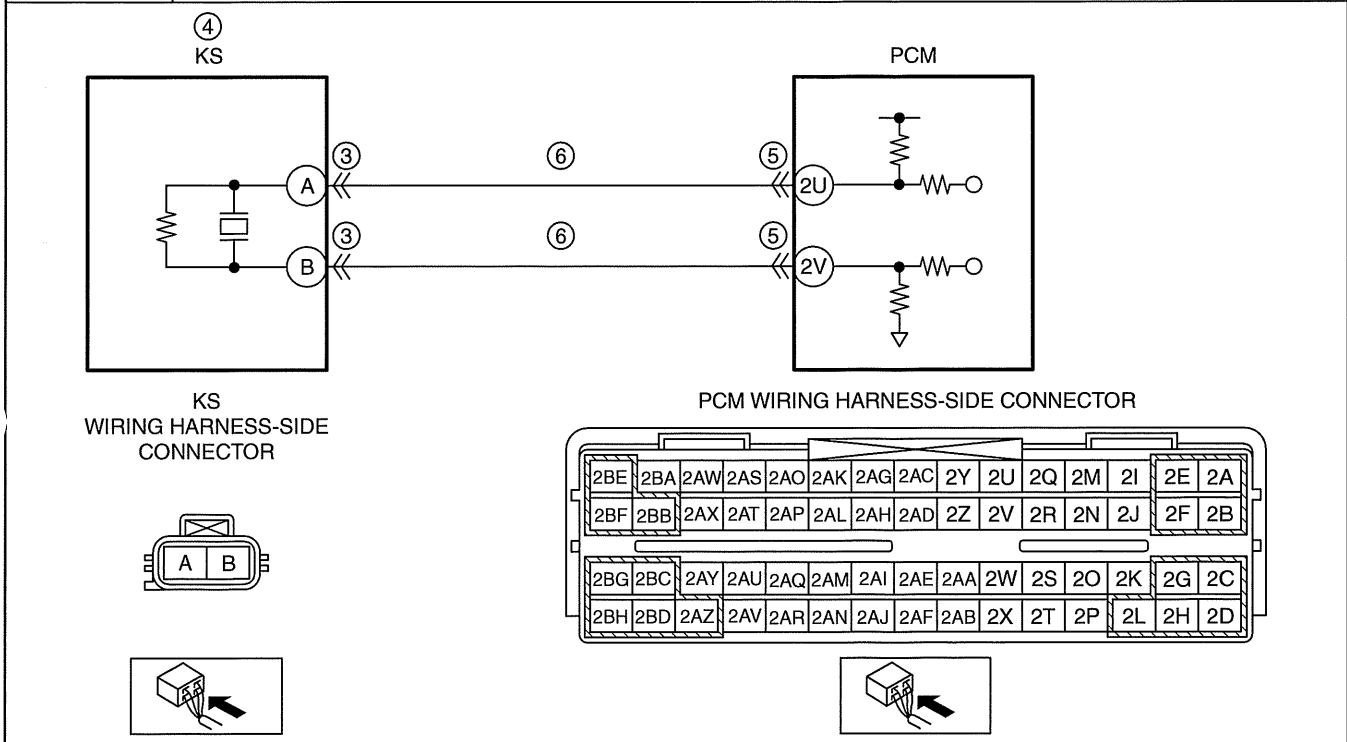

ON-BOARD DIAGNOSTIC [LF, L5]

DTC P0328:00 [LF, L5]

id0102c8703100

01-02A

DTC P0328:00	KS circuit high input
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the input signal from the KS when the engine is running. If the input voltage is above 4.8 V for 5 s, the PCM determines that KS circuit has a malfunction. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction conditions during first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> KS connector or terminals malfunction KS malfunction PCM connector or terminals malfunction Short to power supply in wiring harness between the following terminals: <ul style="list-style-type: none"> — KS terminal A—PCM terminal 2U — KS terminal B—PCM terminal 2V PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	INSPECT KS CONNECTOR CONDITION <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the KS connector. Inspect for poor connection (such as damaged/pulled-out pins, corrosion). Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 7.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 15.
		No	Go to the next step.

01-02A

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
10	INSPECT CMP SENSOR CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • CMP sensor and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between the following terminals (wiring harness-side): <ul style="list-style-type: none"> — CMP sensor terminal C—PCM terminal 2AM — CMP sensor terminal B—PCM terminal 2S • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 15.
11	INSPECT CKP SENSOR CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the CKP sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 15.
		No	Go to the next step.
12	VERIFY VALVE TIMING MECHANISM INSTALLATION <ul style="list-style-type: none"> • Verify the valve timing mechanism installation for the following parts: <ul style="list-style-type: none"> — Timing chain — Camshaft sprocket lock bolt — Crankshaft pulley lock bolt • Is there any malfunction? 	Yes	Reinstall the misinstallation or loose parts correctly, then go to Step 15. (See 01-10A-18 VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [LF, L5].) (See 01-10A-21 TIMING CHAIN REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
13	INSPECT STOPPER PIN MECHANISM <ul style="list-style-type: none"> • Remove the timing chain. (See 01-10A-21 TIMING CHAIN REMOVAL/INSTALLATION [LF, L5].) • Inspect the stopper pin. (See 01-10A-18 VARIABLE VALVE TIMING ACTUATOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the variable valve timing actuator, then go to Step 15. (See 01-10A-18 VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
14	INSPECT ROTOR POSITION <ul style="list-style-type: none"> • Remove the variable valve timing actuator. (See 01-10A-18 VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [LF, L5].) • Is the rotor at the maximum valve timing advanced position? 	Yes	Reinstall or replace the variable valve timing actuator, then go to the next step. (See 01-10A-18 VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [LF, L5].)
		No	Variable valve timing mechanism is normal. <p>Note</p> <ul style="list-style-type: none"> • This DTC is detected as an intermittent concern. • The intermittent concern might be removed by cleaning the variable valve timing mode control function. <p>Go to the next step.</p>

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
15	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Switch the ignition to ON (engine off). • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Start the engine and warm it up completely. • Access the MAF PID using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) <p>Note</p> <ul style="list-style-type: none"> • The MAF PID should indicate 1.95 g/s {0.25 lb/min} or above during this test. <ul style="list-style-type: none"> • Perform the KOER self test. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) • Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
16	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

01-02A

DTC P0401:00 [LF, L5]

id0102c8704200

DTC P0401:00	EGR flow insufficient detected
DETECTION CONDITION	<ul style="list-style-type: none"> • The PCM monitors the difference in the intake manifold pressures when the EGR is operated and when it is stopped. If the difference is too small, the PCM determines that the EGR flow insufficient. <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is an intermittent monitor (EGR system). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • MAP sensor malfunction • EGR valve malfunction • EGR valve passage malfunction <ul style="list-style-type: none"> — Gasket of EGR valve malfunction — Clogged EGR valve passage • PCM malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> • Have the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (EGR system related) been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
3	VERIFY RELATED PENDING CODE AND STORED DTC <ul style="list-style-type: none"> • Switch the ignition to off, then to ON (engine off). • Perform the DTC Reading Procedure and Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Are any other DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	Go to the next step.
4	INSPECT MAP SENSOR <ul style="list-style-type: none"> • Switch the ignition to off. • Inspect the MAP sensor. (See 01-40A-26 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the MAP sensor, then go to Step 7. (See 01-40A-25 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
5	INSPECT EGR VALVE OPERATION <ul style="list-style-type: none"> • Perform the EGR Control System Inspection. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) • Does the EGR system operate properly? 	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection result, then go to Step 7.
6	INSPECT EGR VALVE PASSAGE <ul style="list-style-type: none"> • Switch the ignition to off. • Remove the EGR valve. (See 01-16A-9 EGR VALVE REMOVAL/INSTALLATION [LF, L5].) • Visually inspect the gasket installation of EGR valve and EGR valve passage for clogging. • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection result, then go to the next step.
		No	Go to the next step.
7	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Perform the Drive Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02A-12 OBD-II DRIVE MODE [LF, L5].) • Stop the vehicle and access the ON BOARD READINESS TEST to inspect the Drive Mode completion status. • Verify that the ON BOARD READINESS TEST status changing to YES. • Perform the Diagnostic Monitoring Test Results Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Verify the #31:83 (EGR pressure variation) value. (See 01-02A-16 DIAGNOSTIC MONITORING TEST RESULTS [LF, L5].) • Is the value out of the specification? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Repeat this step.
8	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [LF, L5]

DTC P0403:00 [LF, L5]

id0102c8704300

01-02A

DTC P0403:00	EGR control circuit problem
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the input voltage from the EGR valve. If the voltage remain low or high, the PCM determines that the EGR valve circuit has a malfunction. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction conditions in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> EGR valve connector or terminals malfunction Short to ground or open circuit in EGR valve power supply circuit <ul style="list-style-type: none"> — Short to ground in wiring harness between the following terminals: <ul style="list-style-type: none"> Main relay terminal C—EGR valve terminal C Main relay terminal C—EGR valve terminal D — ENG BAR 15 A fuse malfunction — Open circuit in wiring harness between the following terminals: <ul style="list-style-type: none"> Main relay terminal C—EGR valve terminal C Main relay terminal C—EGR valve terminal D Short to ground in wiring harness between the following terminals: <ul style="list-style-type: none"> — EGR valve terminal E—PCM terminal 2AX — EGR valve terminal A—PCM terminal 2BA — EGR valve terminal B—PCM terminal 2AT — EGR valve terminal F—PCM terminal 2AW PCM connector or terminals malfunction Short to power supply in wiring harness between the following terminals: <ul style="list-style-type: none"> — EGR valve terminal E—PCM terminal 2AX — EGR valve terminal A—PCM terminal 2BA — EGR valve terminal B—PCM terminal 2AT — EGR valve terminal F—PCM terminal 2AW EGR valve malfunction Open circuit in wiring harness between the following terminals: <ul style="list-style-type: none"> — EGR valve terminal E—PCM terminal 2AX — EGR valve terminal A—PCM terminal 2BA — EGR valve terminal B—PCM terminal 2AT — EGR valve terminal F—PCM terminal 2AW PCM malfunction

EGR VALVE WIRING HARNESS-SIDE CONNECTOR

PCM WIRING HARNESS-SIDE CONNECTOR

ON-BOARD DIAGNOSTIC [LF, L5]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> • Has the snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	INSPECT EGR VALVE CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the EGR valve connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 10.
		No	Go to the next step.
4	INSPECT EGR VALVE POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT <ul style="list-style-type: none"> • EGR valve connector is disconnected. • Switch the ignition to ON (engine off). • Measure the voltage between the following terminals (wiring harness-side) and body ground: <ul style="list-style-type: none"> — EGR valve terminal C — EGR valve terminal D • Is the voltage B+? 	Yes	Go to the next step.
		No	Inspect the ENG BAR 15 A fuse. <ul style="list-style-type: none"> • If the fuse is melt: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deterioration: <ul style="list-style-type: none"> — Replace the fuse. • If the fuse is normal: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible open circuit. Go to Step 10.
5	INSPECT EGR CONTROL CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • EGR valve connector is disconnected. • Switch the ignition to off. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: <ul style="list-style-type: none"> — EGR valve terminal E — EGR valve terminal A — EGR valve terminal B — EGR valve terminal F • is there continuity? 	Yes	If the short to ground circuit could be detected: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected: <ul style="list-style-type: none"> • Replace the PCM (short to ground in PCM internal circuit). (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].) Go to Step 10.
		No	Go to the next step.
6	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 10.
		No	Go to the next step.
7	INSPECT EGR CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • EGR valve and PCM connectors are disconnected. • Switch the ignition to ON (engine off). • Measure the voltage between the following terminals (wiring harness-side) and body ground: <ul style="list-style-type: none"> — EGR valve terminal E — EGR valve terminal A — EGR valve terminal B — EGR valve terminal F • Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 10.
		No	Go to the next step.
8	INSPECT EGR VALVE <ul style="list-style-type: none"> • Switch the ignition to off. • Inspect the EGR valve. (See 01-16A-9 EGR VALVE INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the EGR valve, then go to Step 10. (See 01-16A-9 EGR VALVE REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
9	INSPECT EGR CONTROL CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • EGR valve and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): <ul style="list-style-type: none"> — EGR valve terminal E—PCM terminal 2AX — EGR valve terminal A—PCM terminal 2BA — EGR valve terminal B—PCM terminal 2AT — EGR valve terminal F—PCM terminal 2AW • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
10	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Perform the KOEO/KOER self test. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
11	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

01-02A

DTC P0421:00 [LF, L5]

id0102c8704400

DTC P0421:00	Warm up catalyst system efficiency below threshold
DETECTION CONDITION	<ul style="list-style-type: none"> • The PCM compares the number of A/F sensor and HO2S inversions for a predetermined time. The PCM monitors the HO2S inversion counts when the following conditions are met. The PCM detects inversion ratio. If the inversion ratio is below specification, the PCM determine that catalyst system has deteriorated. <ul style="list-style-type: none"> — The A/F sensor inversion counts is as prescribed when the following monitoring conditions are met: — The accumulated occurrence time of the following monitoring conditions has exceeded the prescribed time limit: <p>MONITORING CONDITIONS</p> <ul style="list-style-type: none"> — Catalyst converter temperature: more than 400 °C {752 °F} — Engine speed: <ul style="list-style-type: none"> • 1,350–3,000 rpm (LF/ATX) • 1,500–3,000 rpm (LF/MTX) • 1,200–3,000 rpm (L5/ATX) • 1,300–3,000 rpm (L5/MTX) — Charging efficiency: 15—48% (engine speed: 2,000 rpm) <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is an intermittent monitor (catalyst). • The MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Leakage exhaust system • Looseness A/F sensor • Looseness HO2S • TWC malfunction • PCM malfunction

ON-BOARD DIAGNOSTIC [LF, L5]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> • Have the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (catalyst related) been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY RELATED PENDING CODE AND STORED DTC <ul style="list-style-type: none"> • Switch the ignition to off, then to ON (engine off). • Perform the DTC Reading Procedure and Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Are any other DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	Go to the next step.
4	INSPECT GAS LEAKAGE FROM EXHAUST SYSTEM <ul style="list-style-type: none"> • Visually inspect the exhaust gas system. • Is there any leakage? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 8.
		No	Go to the next step.
5	INSPECT INSTALLATION OF A/F SENSOR <ul style="list-style-type: none"> • Inspect the A/F sensor for looseness. • Is the A/F sensor installed securely? 	Yes	Go to the next step.
		No	Retighten the A/F sensor, then go to Step 8.
6	INSPECT INSTALLATION OF HO2S <ul style="list-style-type: none"> • Inspect the HO2S for looseness. • Is the HO2S installed securely? 	Yes	Go to the next step.
		No	Retighten the HO2S, then go to Step 8.
7	INSPECT TWC <ul style="list-style-type: none"> • Inspect the TWC. (See 01-15A-1 EXHAUST SYSTEM INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the TWC, then go to the next step. (See 01-15A-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
8	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Switch the ignition to ON (engine off). • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Perform the Drive Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02A-12 OBD-II DRIVE MODE [LF, L5].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
9	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [LF, L5]

DTC P0442:00, P0455:00, P0456:00 [LF, L5]

id0102c8896000

DTC P0442:00	EVAP system leak detected (small leak)
DTC P0455:00	EVAP system leak detected (gross leak/no flow)
DTC P0456:00	EVAP system leak detected (very small leak)
DETECTION CONDITION	<p>P0442:00</p> <ul style="list-style-type: none"> • P0442:00 indicates that a leak has been detected as small as 1 mm {0.04 in} in the EVAP vapor management valve solenoid system when there is less than 0.988 kPa {7.41 mmHg, 0.292 inHg} bleed-up over 20 s at 75% fuel fill. Bleed-up and evaluation time vary as a function of fuel fill level. The vapor generation limit is more than 0.286 kPa {2.15 mmHg, 0.085 inHg} over 150 s. <p>P0455:00</p> <ul style="list-style-type: none"> • P0455:00 indicates that a substantial leak or blockage has been detected in the EVAP system when there is -1.94 kPa {-14.6 mmHg, -0.575 inHg} or less vacuum for 75 s evaluation time. <p>P0456:00</p> <ul style="list-style-type: none"> • P0456:00 indicates that a fuel vapor leak from an opening as small as 0.508 mm {0.020 in} has been detected by the EVAP running loss monitor test. <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is an intermittent monitor (EVAP system). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<p>DTC P0442:00, P0456:00</p> <ul style="list-style-type: none"> • After-market EVAP hardware (such as fuel filler cap) nonconforming to required specifications • Fuel filler cap loosely installed • Small leaks in components <ul style="list-style-type: none"> — CV solenoid is not seated on the charcoal canister — Cut or loose connection in the fuel vapor hoses/tubes — Fuel filler pipe damaged • Fuel filler cap and fuel filler pipe damaged • CV solenoid valve malfunction • Leaks in complete EVAP system • Small leaks from EVAP system return tube to charcoal canister • Small leaks between fuel tank vapor tube and fuel tank filler pipe • PCM malfunction <p>DTC P0455:00</p> <ul style="list-style-type: none"> • Purge solenoid valve related part malfunction <ul style="list-style-type: none"> — Blockage or loose vacuum hose between intake manifold and purge solenoid valve — Purge solenoid valve malfunction (blockage) • After-market EVAP hardware (such as fuel filler cap) not conforming to required specifications • Large EVAP system leak <ul style="list-style-type: none"> — Fuel filler cap malfunction (damaged, missing or loosely installed) — Both the input port vacuum hose and EVAP return tube are not attached to the CV solenoid valve — CV solenoid valve is not attached to the charcoal canister — Fuel vapor hoses/tubes disconnected or cracked — Fuel filler pipe and the fuel tank damaged • Blockage between CV solenoid valve and fuel vapor hose joint • CV solenoid valve malfunction • Fuel tank pressure sensor malfunction • PCM malfunction

01-02A

ON-BOARD DIAGNOSTIC [LF, L5]

Diagnostic procedure

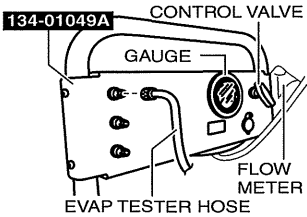

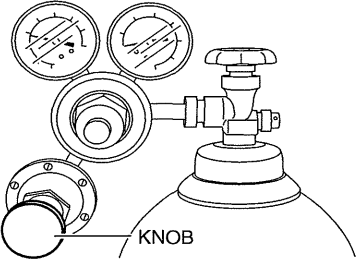

STEP	INSPECTION	ACTION	
1	VERIFY SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> Have the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (EVAP system related) been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Are any related Service Bulletins available? 	Yes	Perform repair or diagnosis according to the available Service Bulletins. If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY RELATED PENDING CODE AND STORED DTC <ul style="list-style-type: none"> Switch the ignition to off, then to ON (engine off). Perform the DTC Reading Procedure and Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Are any other DTCs present? 	Yes	Go to the appropriate DTC troubleshooting. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	Go to the next step.
4	VERIFY DTC FOR SMALL LEAK <ul style="list-style-type: none"> Is the DTC P0456:00 present? 	Yes	Go to Step 9.
		No	Go to the next step.
5	VERIFY DTC FOR LARGE LEAK <ul style="list-style-type: none"> Is the DTC P0455:00 present? 	Yes	Verify that the purge solenoid valve is not blocked. If the purge solenoid valve is functioning correctly and receiving engine vacuum: <ul style="list-style-type: none"> Go to the next step.
		No	Go to the next step.
6	PRELIMINARY LEAK TEST (EXCEPT P0456:00) <ul style="list-style-type: none"> Perform the EVAP system leak inspection. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) Verify that all PIDs are within the following specifications: <p>Note</p> <ul style="list-style-type: none"> To successfully perform this procedure, all PIDs must be within specification before proceeding to the next step. <ul style="list-style-type: none"> Select the following items from the initialization screen of the M-MDS. <ul style="list-style-type: none"> Select "Powertrain". Select "Fuel". Select "EVAP Test". Verify that ECT and IAT are within specification at the confirmation screen. <ul style="list-style-type: none"> To successfully perform this procedure, ECT and IAT must be within specification before proceeding to the next step. The fuel level must be maintained within 15%—85%. The PCM will cancel the EVAP test if the fuel level is lower than 15% or higher than 85%. Allow the M-MDS to run the EVAP test. Does M-MDS indicate an EVAP system leak exists? 	Yes	Go to the next step.
		No	Go to Step 9.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION				
7	<p>PRELIMINARY LEAK TEST (EXCEPT P0456:00)</p> <ul style="list-style-type: none"> • Tighten the fuel-filler cap then repeat the EVAP system leak inspection using the M-MDS again. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) • Verify that all PIDs are within the following specifications: <p>Note</p> <ul style="list-style-type: none"> • To successfully perform this procedure, all PIDs must be within specification before proceeding to the next step. <ul style="list-style-type: none"> — Select the following items from the initialization screen of the M-MDS. — Select “Powertrain”. — Select “Fuel”. — Select “EVAP Test”. — Verify that ECT and IAT are within specification at the confirmation screen. To successfully perform this procedure, ECT and IAT must be within specification before proceeding to the next step. — The fuel level must be maintained within 15%—85%. The PCM will cancel the EVAP test if the fuel level is lower than 15% or higher than 85%. — Allow the M-MDS to run the EVAP test. • Does M-MDS still indicate an EVAP system leak exists? 	<table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="text-align: center; width: 50px;">Yes</td> <td>Go to the next step.</td> </tr> <tr> <td style="text-align: center;">No</td> <td>The fuel cap was not properly tightened. <ul style="list-style-type: none"> • Go to Step 14. </td> </tr> </table>	Yes	Go to the next step.	No	The fuel cap was not properly tightened. <ul style="list-style-type: none"> • Go to Step 14.

DTC P0443:00 [LF, L5]

id0102c8704500

01-02A

DTC P0443:00	Purge solenoid valve circuit problem
DETECTION CONDITION	<ul style="list-style-type: none"> • The PCM monitors the purge solenoid valve control signal voltage and current. If the following conditions are met, the PCM determines that there is the purge solenoid valve control circuit problem: <ul style="list-style-type: none"> — The PCM turns the purge solenoid valve off, but the voltage of the purge solenoid valve control signal remains low. — The PCM turns the purge solenoid valve on, but the current of the purge solenoid valve control signal remains high. <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Purge solenoid valve connector or terminals malfunction • Short to ground or open circuit in purge solenoid valve power supply circuit <ul style="list-style-type: none"> — Short to ground in wiring harness between main relay terminal C and purge solenoid valve terminal B — ENG BAR 15 A fuse malfunction — Open circuit in wiring harness between main relay terminal C and purge solenoid valve terminal B • Short to ground in wiring harness between purge solenoid valve terminal A and PCM terminal 1BA • PCM connector or terminals malfunction • Short to power supply in wiring harness between purge solenoid valve terminal A and PCM terminal 1BA • Purge solenoid valve malfunction • Open circuit in wiring harness between purge solenoid valve terminal A and PCM terminal 1BA • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY SNAPSHOT DATA HAS BEEN RECORDED • Has the snapshot data been recorded?	Yes	Go to the next step.
		No	Record the snapshot data on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
3	INSPECT PURGE SOLENOID VALVE CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the purge solenoid valve connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 10.
		No	Go to the next step.
4	INSPECT PURGE SOLENOID VALVE POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT <ul style="list-style-type: none"> • Purge solenoid valve connector is disconnected. • Switch the ignition to ON (engine off). • Measure the voltage between purge solenoid valve terminal B (wiring harness-side) and body ground. • Is the voltage B+? 	Yes	Go to the next step.
		No	Inspect the ENG BAR 15 A fuse. <ul style="list-style-type: none"> • If the fuse is melt: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deterioration: <ul style="list-style-type: none"> — Replace the fuse. • If the fuse is normal: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible open circuit. Go to Step 10.
5	INSPECT PURGE SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • Purge solenoid valve connector is disconnected. • Switch the ignition to off. • Inspect for continuity between purge solenoid valve terminal A (wiring harness-side) and body ground. • Is there continuity? 	Yes	If the short to ground circuit could be detected: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected: <ul style="list-style-type: none"> • Replace the PCM (short to ground in PCM internal circuit). (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].) Go to Step 10.
		No	Go to the next step.
6	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 10.
		No	Go to the next step.
7	INSPECT PURGE SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • Purge solenoid valve and PCM connectors are disconnected. • Switch the ignition to ON (engine off). • Measure the voltage between purge solenoid valve terminal A (wiring harness-side) and body ground. • Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 10.
		No	Go to the next step.
8	INSPECT PURGE SOLENOID VALVE <ul style="list-style-type: none"> • Switch the ignition to off. • Inspect the purge solenoid valve. (See 01-16A-8 PURGE SOLENOID VALVE INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the purge solenoid valve, then go to Step 10. (See 01-16A-8 PURGE SOLENOID VALVE REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
9	INSPECT PURGE SOLENOID VALVE CONTROL CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Purge solenoid valve and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between purge solenoid valve terminal A (wiring harness-side) and PCM terminal 1BA (wiring harness-side). • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION		ACTION
10	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. STEP	INSPECTION	ACTION	
1	VERIFY SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	INSPECT FUEL TANK PRESSURE SENSOR CONNECTOR CONDITION <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the fuel tank pressure sensor connector. Inspect for poor connection (such as damaged/pulled-out pins, corrosion). Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 8.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION
4	VERIFY FUEL TANK PRESSURE SENSOR SIGNAL CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • Fuel tank pressure sensor connector is disconnected. • Inspect for continuity between fuel tank pressure sensor terminal B (wiring harness-side) and body ground. • Is there continuity? 	Yes If the short to ground circuit could be detected: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected: <ul style="list-style-type: none"> • Replace the PCM (short to ground in PCM internal circuit). (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].) Go to Step 8.
		No Go to the next step.
5	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes Repair or replace the terminal and/or connector, then go to Step 8.
		No Go to the next step.
6	INSPECT FUEL TANK PRESSURE SENSOR SIGNAL AND GROUND CIRCUITS FOR SHORT TO EACH OTHER <ul style="list-style-type: none"> • Fuel tank pressure sensor and PCM connectors are disconnected. • Inspect for continuity between fuel tank pressure sensor terminals A and B (wiring harness-side). • Is there continuity? 	Yes Repair or replace the malfunctioning wiring harness, then go to Step 8.
		No Go to the next step.
7	INSPECT FUEL TANK PRESSURE SENSOR <ul style="list-style-type: none"> • Inspect the fuel tank pressure sensor. (See 01-40A-33 FUEL TANK PRESSURE SENSOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes Replace the evaporative hose component, then go to the next step. (See 01-14A-8 FUEL TANK REMOVAL/INSTALLATION [LF, L5].)
		No Go to the next step.
8	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Perform the KOEO/KOER self test. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) • Is the PENDING CODE for this DTC present? 	Yes Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No Go to the next step.
9	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [LF, L5]

DTC P0453:00 [LF, L5]

id0102c8300900

01-02A

DTC P0453:00	Fuel tank pressure sensor high input
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the EVAP control system fuel tank pressure sensor input signal to the PCM. The test fails when the signal average jumps above a minimum allowable calibrated parameter. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Fuel tank pressure sensor connector or terminals malfunction PCM connector or terminals malfunction Fuel tank pressure sensor power circuit and signal circuit are shorted to each other Short to power supply in wiring harness between the following terminals: <ul style="list-style-type: none"> — Fuel tank pressure sensor terminal C—PCM terminal 1AD — Fuel tank pressure sensor terminal B—PCM terminal 1AH Fuel tank pressure sensor malfunction Open circuit in wiring harness between the following terminals: <ul style="list-style-type: none"> — Fuel tank pressure sensor terminal B—PCM terminal 1AH — Fuel tank pressure sensor terminal A—PCM terminal 1AR PCM malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION
1	VERIFY SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the snapshot data been recorded? 	Yes Go to the next step.
		No Record the snapshot data on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
3	INSPECT FUEL TANK PRESSURE SENSOR CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the fuel tank pressure sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 9.
		No	Go to the next step.
4	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 9.
		No	Go to the next step.
5	INSPECT FUEL TANK PRESSURE SENSOR POWER SUPPLY CIRCUIT AND SIGNAL CIRCUIT FOR SHORT TO EACH OTHER <ul style="list-style-type: none"> • Fuel tank pressure sensor and PCM connector. • Inspect for continuity between fuel tank pressure sensor terminal C and B (wiring harness-side). • Is there continuity? 	Yes	Repair or replace the malfunctioning wiring harness, then go to Step 9.
		No	Go to the next step.
6	INSPECT FUEL TANK PRESSURE SENSOR CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • Fuel tank pressure sensor and PCM connector. • Switch the ignition to ON (engine off). • Measure the voltage between the following terminals (wiring harness-side) and body ground: <ul style="list-style-type: none"> — Fuel tank pressure sensor terminal C — Fuel tank pressure sensor terminal B • Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 9.
		No	Go to the next step.
7	INSPECT FUEL TANK PRESSURE SENSOR <ul style="list-style-type: none"> • Switch the ignition to off. • Inspect the fuel tank pressure sensor. (See 01-40A-33 FUEL TANK PRESSURE SENSOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the evaporative hose component, then go to Step 9. (See 01-14A-8 FUEL TANK REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
8	INSPECT FUEL TANK PRESSURE SENSOR CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Fuel tank pressure sensor and PCM connector. • Inspect for continuity between the following terminals (wiring harness-side): <ul style="list-style-type: none"> — Fuel tank pressure sensor terminal B—PCM terminal 1AH — Fuel tank pressure sensor terminal A—PCM terminal 1AR • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
9	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Perform the KOEO/KOER self test. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
10	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [LF, L5]

DTC P0454:00 [LF, L5]

id0102c8301000

DTC P0454:00	Fuel tank pressure sensor intermittent
DETECTION CONDITION	<ul style="list-style-type: none"> • The fuel tank pressure changes more than 1,993 Pa {8.0 in} of water in 0.1 s. <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Fuel tank pressure sensor malfunction <ul style="list-style-type: none"> — Intermittent open or short in the fuel tank pressure sensor or the fuel tank pressure sensor signal • PCM malfunction

01-02A

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> • Has the snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY RELATED PENDING CODE AND STORED DTC <ul style="list-style-type: none"> • Switch the ignition to off, then to ON (engine off). • Perform the DTC Reading Procedure and Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Are any other DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	Go to the next step.
4	INSPECT FUEL TANK PRESSURE SENSOR <ul style="list-style-type: none"> • Switch the ignition to off, then to ON (engine off). • Inspect the fuel tank pressure sensor. (See 01-40A-33 FUEL TANK PRESSURE SENSOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the evaporative hose component, then go to the next step. (See 01-14A-8 FUEL TANK REMOVAL/INSTALLATION [LF, L5].)
		No	Intermittent concern exists. <ul style="list-style-type: none"> • Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING" procedure. (See 01-03A-84 INTERMITTENT CONCERN TROUBLESHOOTING [LF, L5].)
5	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Perform the KOER self test. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
6	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [LF, L5]

DTC P0457:00 [LF, L5]

id0102c8301300

DTC P0457:00	EVAP system leak detected (fuel cap loose/off)
DETECTION CONDITION	<ul style="list-style-type: none"> • P0457:00 indicates that the initial vacuum could not be achieved after a refueling event and the purge vapor flow is excessive (gross leak). <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is an intermittent monitor (EVAP system). • A check cap light will be illuminated after a malfunction has been detected on one driving cycle. The check cap light will be extinguished after the monitor has run without a malfunction (same or subsequent drive cycle). • The MIL will be illuminated after a malfunction has been detected on three consecutive driving cycles. The MIL will be extinguished after three consecutive driving cycles where the monitor was run without a malfunction. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Missing or loose fuel filler cap • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> • Have the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (EVAP system related) been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY RELATED PENDING CODE AND STORED DTC <ul style="list-style-type: none"> • Switch the ignition to off, then to ON (engine off). • Perform the DTC Reading Procedure and Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Are any other DTCs present? <p>Note</p> <ul style="list-style-type: none"> • If the DTC P0455:00 is present, diagnose the DTC P0455:00 first. 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	Go to the next step.
4	INSPECT FUEL FILLER CAP FOR MISSING OR LOOSENESS <ul style="list-style-type: none"> • Visually inspect the fuel filler cap for missing or looseness. • Is there any malfunction? 	Yes	Repair or replace the fuel filler cap, then go to the next step.
		No	Go to the next step.
5	PERFORM EVAP SYSTEM LEAK INSPECTION <ul style="list-style-type: none"> • Perform the EVAP system leak Inspection. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Leakage still exists. <ul style="list-style-type: none"> • Perform the DTC P0455:00 inspection. (See 01-02A-137 DTC P0442:00, P0455:00, P0456:00 [LF, L5].)
		No	Go to the next step.
6	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Perform the Drive Mode 06 (EVAP System Repair Verification Drive Mode). (See 01-02A-12 OBD-II DRIVE MODE [LF, L5].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION
7	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) Are any DTCs present? 	Yes Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No DTC troubleshooting completed.

DTC P0460:00 [LF, L5]

id0102c8301400

01-02A

DTC P0460:00	Fuel level sensor circuit malfunction
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the fuel level input communications network message for a concern. The test fails when the PCM determines that the value of the fuel level input signal is stuck. The PCM calculates the amount of fuel used during operation. If the fuel level input signal does not change or does not correspond with the calculated fuel usage, the DTC P0460 is set. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Instrument cluster malfunction <ul style="list-style-type: none"> — Incorrectly installed fuel gauge — Fuel level input signal circuit malfunction Amount of fuel is empty or overfilled Fuel gauge sender unit malfunction PCM malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION
1	VERIFY SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the snapshot data been recorded? 	Yes Go to the next step.
		No Record the snapshot data on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No Go to the next step.
3	VERIFY RELATED PENDING CODE AND STORED DTC <ul style="list-style-type: none"> Switch the ignition to off, then to ON (engine off). Perform the DTC Reading Procedure and Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Are any other DTCs present? 	Yes Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No Go to the next step.
4	VERIFY STORED DTC IN INSTRUMENT CLUSTER <ul style="list-style-type: none"> Switch the ignition to off then to ON (engine off). Perform the instrument cluster DTC inspection using the M-MDS. (See 09-02E-4 DTC INSPECTION [INSTRUMENT CLUSTER].) Are any DTCs present? 	Yes Go to the appropriate DTC inspection. (See 09-02E-5 DTC TABLE [INSTRUMENT CLUSTER].)
		No Go to the next step.
5	INSPECT AMOUNT OF FUEL <ul style="list-style-type: none"> Visually inspect the amount of fuel. Is the amount of fuel normal? 	Yes Go to the next step.
		No Do the amount of the fuel to a proper level, then go to Step 7.
6	INSPECT FUEL GAUGE SENDER UNIT <ul style="list-style-type: none"> Switch the ignition to off. Inspect the fuel gauge sender unit. (See 09-22-12 FUEL GAUGE SENDER UNIT INSPECTION.) Is there any malfunction? 	Yes Replace the fuel gauge sender unit, then go to the next step. (See 09-22-12 FUEL GAUGE SENDER UNIT REMOVAL/INSTALLATION.)
		No Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
7	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) Perform the KOER self test. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
8	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

DTC P0461:00 [LF, L5]

id0102c8301500

DTC P0461:00	Fuel gauge sender unit circuit range/performance problem
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the fuel tank level difference before and after the PCM-calculated fuel consumption has reached more than 25 L {26 US qt, 22 Imp qt}. If the difference is less than 5 %, the PCM determines that there is a fuel gauge sender unit circuit range/performance problem. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Fuel gauge sender unit malfunction Instrument cluster malfunction PCM malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	INSPECT FUEL GAUGE SENDER UNIT <ul style="list-style-type: none"> Switch the ignition to off. Inspect the fuel gauge sender unit. (See 09-22-12 FUEL GAUGE SENDER UNIT INSPECTION.) Is there any malfunction? 	Yes	Replace the fuel gauge sender unit, then go to Step 5. (See 09-22-12 FUEL GAUGE SENDER UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	INSPECT INSTRUMENT CLUSTER <ul style="list-style-type: none"> Inspect the instrument cluster. (See 09-22-8 INSTRUMENT CLUSTER INSPECTION.) Is there any malfunction? 	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
5	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Start the engine and warm it up completely. • Drive the vehicle under the snapshot data condition. • Perform the Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.

Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	INSPECT FUEL GAUGE SENDER UNIT <ul style="list-style-type: none"> Switch the ignition to off. Inspect the fuel gauge sender unit. (See 09-22-12 FUEL GAUGE SENDER UNIT INSPECTION.) Is there any malfunction? 	Yes	Replace the fuel gauge sender unit, then go to Step 5. (See 09-22-12 FUEL GAUGE SENDER UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	INSPECT INSTRUMENT CLUSTER <ul style="list-style-type: none"> Inspect the instrument cluster. (See 09-22-8 INSTRUMENT CLUSTER INSPECTION.) Is there any malfunction? 	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION		ACTION
5	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) Perform the KOEO/KOER self test. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
6	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

01-02A

DTC P0480:00 [LF, L5]

id0102c8704600

DTC P0480:00	Cooling fan control circuit problem
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the input voltages from the fan control module. If the voltage at the PCM terminal 1R remains low or high, the PCM determines that the fan control circuit has malfunction. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (other). The MIL does not illuminate. FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Fan control module connector or terminals malfunction Short to ground or open circuit in fan control module power supply circuit <ul style="list-style-type: none"> — Short to ground in wiring harness between battery positive terminal and fan control module terminal 1D — FAN1 40 A fuse malfunction — Open circuit in wiring harness between battery positive terminal and fan control module terminal 1D Short to ground in wiring harness between fan control module terminal 1C and PCM terminal 1R PCM connector or terminals malfunction Short to power supply in wiring harness between fan control module terminal 1C and PCM terminal 1R Open circuit in wiring harness between fan control module terminal 1C and PCM terminal 1R Fan control module malfunction PCM malfunction
<p style="text-align: center;"> FAN CONTROL MODULE WIRING HARNESS-SIDE CONNECTOR PCM WIRING HARNESS-SIDE CONNECTOR </p>	

ON-BOARD DIAGNOSTIC [LF, L5]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	INSPECT FAN CONTROL MODULE CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the fan control module connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 9.
		No	Go to the next step.
3	INSPECT FAN CONTROL MODULE POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT <ul style="list-style-type: none"> • Fan control module connector is disconnected. • Switch the ignition to ON (engine off). • Measure the voltage between fan control module terminal 1D (wiring harness-side) and body ground. • Is the voltage B+? 	Yes	Go to the next step.
		No	Inspect the FAN1 40 A fuse. <ul style="list-style-type: none"> • If the fuse is melt: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deterioration: <ul style="list-style-type: none"> — Replace the fuse. • If the fuse is normal: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible open circuit. Go to Step 9.
4	INSPECT FAN CONTROL MODULE CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • Switch the ignition to off. • Fan control module connector is disconnected. • Inspect for continuity between fan control module terminal 1C (wiring harness-side) and body ground. • Is there continuity? 	Yes	If the short to ground circuit could be detected: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected: <ul style="list-style-type: none"> • Replace the PCM (short to ground in PCM internal circuit). (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].) Go to Step 9.
		No	Go to the next step.
5	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 9.
		No	Go to the next step.
6	INSPECT FAN CONTROL MODULE CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • Fan control module and PCM connectors are disconnected. • Switch the ignition to ON (engine off). • Measure the voltage between PCM terminal 1R (wiring harness-side) and body ground. • Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 9.
		No	Go to the next step.
7	INSPECT FAN CONTROL MODULE CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Fan control module and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between fan control module terminal 1C (wiring harness-side) and PCM terminal 1R (wiring harness-side). • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 9.
8	INSPECT FAN CONTROL MODULE <ul style="list-style-type: none"> • Inspect the fan control module. (See 01-12A-15 COOLING FAN COMPONENT INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the fan control module, then go to the next step. (See 01-12A-13 COOLING FAN COMPONENT REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION
9	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Make sure to reconnect all disconnected connectors. Reconnect the negative battery cable. Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) Perform the KOEO/KOER self test. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) Is the same DTC present? 	Yes Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No Go to the next step.
10	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) Are any DTCs present? 	Yes Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No DTC troubleshooting completed.

01-02A

DTC P0500:00 [LF, L5]

id0102c8704800

DTC P0500:00	VSS circuit problem
DETECTION CONDITION	<ul style="list-style-type: none"> If an error in the wheel speed signal from the ABS HU/CM or DSC HU/CM is detected by CAN when the following conditions are met: MONITORING CONDITIONS <ul style="list-style-type: none"> Neutral switch and clutch switch: off (MTX) Shift range: except P, N or R range (ATX) Absolute load: above 40% Engine speed: above 2,000 rpm Brake switch: off Diagnostic support note <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> VSS signal malfunction <ul style="list-style-type: none"> Front ABS wheel-speed sensor malfunction ABS HU/CM or DSC HU/CM connector or terminals malfunction PCM connector or terminals malfunction ABS HU/CM or DSC HU/CM malfunction PCM malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION
1	VERIFY SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the snapshot data been recorded? 	Yes Go to the next step.
		No Record the snapshot data on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No Go to the next step.
3	VERIFY CURRENT INPUT SIGNAL STATUS <ul style="list-style-type: none"> Connect the M-MDS to the DLC-2. Start the engine. Access the VSS PID using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) <ul style="list-style-type: none"> Vehicle speed 20 km/h {12.4 mph}: 20km/h {12.4 mph} Vehicle speed 40 km/h {24.8 mph}: 40km/h {24.8 mph} Is the PID reading within specification? 	Yes Intermittent concern exists. <ul style="list-style-type: none"> Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING". (See 01-03A-84 INTERMITTENT CONCERN TROUBLESHOOTING [LF, L5].)
		No Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
4	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Switch the ignition to ON (engine off). • Clear DTC from PCM memory using M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Warm up the engine completely. • Access the RPM and LOAD PIDs using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Drive the vehicle under the following conditions for 18 s: <ul style="list-style-type: none"> — Engine speed: above 2,000 rpm — Gear: except NEUTRAL — Load: above 40% • Perform the Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
5	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

DTC P0505:00 [LF, L5]

id0102c8704900

DTC P0505:00	IAC system problem
DETECTION CONDITION	<ul style="list-style-type: none"> • The PCM cannot control idle speed toward target idle speed while KOER self test. Diagnostic support note <ul style="list-style-type: none"> • This is a continuous monitor (other). • The MIL does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is not stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • A/C magnetic clutch malfunction • Generator control circuit malfunction • Air cleaner element clogged • Throttle body passage clogged • Insufficient engine compression (over capacity of blow-by gas) • PCM malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	VERIFY RELATED PENDING CODE AND STORED DTC <ul style="list-style-type: none"> • Switch the ignition to off, then to ON (engine off). • Perform the DTC Reading Procedure and Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Are any other DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION
3	INSPECT A/C MAGNETIC CLUTCH OPERATION <ul style="list-style-type: none"> • Turn the fan switch off. • Is the magnetic clutch still on? 	Yes Perform the symptom troubleshooting "NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY". (See 01-03A-76 NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY [LF, L5].)
		No Go to the next step.
4	INSPECT GENERATOR CONTROL CIRCUIT MALFUNCTION <ul style="list-style-type: none"> • Apply the electrical load. • Is the engine speed increased? 	Yes Go to the next step.
		No Repair the generator control circuit for short to power supply, then go to Step 8.
5	INSPECT AIR CLEANER ELEMENT <ul style="list-style-type: none"> • Remove the air cleaner element with the engine running. (See 01-13A-6 AIR CLEANER ELEMENT INSPECTION [LF, L5].) • Is the engine speed increased? 	Yes Clean or replace the air cleaner element, then go to Step 8.
		No Go to the next step.
6	INSPECT THROTTLE BODY PASSAGE <ul style="list-style-type: none"> • Switch the ignition to off. • Visually inspect the throttle body passage. • Is the throttle body passage clogged? 	Yes Clean or replace the throttle body passage, then go to Step 8.
		No Go to the next step.
7	INSPECT ENGINE COMPRESSION <ul style="list-style-type: none"> • Inspect the engine compression. (See 01-10A-17 COMPRESSION INSPECTION [LF, L5].) • Is there any malfunction? 	Yes Repair or replace the malfunctioning parts according to the inspection results, then go to the next step.
		No Go to the next step.
8	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Clear the DTC from the PCM memory using the M-MDS. Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
3	IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2) <ul style="list-style-type: none"> • Perform the Freeze Frame PID Data Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Is the P050A:00 on FREEZE FRAME DATA (Mode 2)? 	Yes	Go to the next step.
		No	Go to the troubleshooting procedures for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02A-17 DTC TABLE [LF, L5].)
4	INSPECT INTAKE AIR SYSTEM FOR AIR SUCTION <ul style="list-style-type: none"> • Start the engine. • Inspect for air leakage between MAF sensor and intake manifold. <p>Note</p> <ul style="list-style-type: none"> • Engine speed may change when rust penetrating agent is sprayed on the air suction area. <ul style="list-style-type: none"> • Is there any leakage? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 7.
		No	Go to the next step.
5	VERIFY ELECTRONIC THROTTLE CONTROL SYSTEM OPERATION <ul style="list-style-type: none"> • Perform the Electronic Throttle Control System Operation Inspection. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 7.
		No	Go to the next step.
6	INSPECT THROTTLE VALVE <ul style="list-style-type: none"> • Switch the ignition to off. • Remove the throttle valve with connector connected. • Access the ETC_DSD PID using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Switch the ignition to ON (engine off). • Move the throttle valve using the ETC_DSD PID of simulation function. • Dose the throttle valve move smoothly? 	Yes	Go to the next step.
		No	Clean or replace the throttle valve and retest, then go to the next step. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
7	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Start the engine and warm it up completely. • Perform the Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
8	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [LF, L5]

DTC P050B:00 [LF, L5]

id0102c8301900

DTC P050B:00	Cold start ignition timing performance problem
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors actual ignition timing using the CKP sensor while electronic spark advance control fast idle correction operating. If the ignition timing is out of specified range, the PCM determines that the ignition timing at cold condition has performance problem. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (cold start emission reduction strategy monitoring). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Damaged or chipped CKP sensor pulse wheel CKP sensor malfunction Damaged or chipped CMP sensor pulse wheel CMP sensor malfunction PCM malfunction

01-02A

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> Have the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (cold start emission reduction strategy monitoring related) been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2) <ul style="list-style-type: none"> Perform the Freeze Frame PID Data Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Is the P050B:00 on FREEZE FRAME DATA (Mode 2)? 	Yes	Go to the next step.
		No	Go to the troubleshooting procedures for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02A-17 DTC TABLE [LF, L5].)
4	INSPECT CKP SENSOR AND PULSE WHEEL <ul style="list-style-type: none"> Visually inspect the CKP sensor and pulse wheel. Is there any damage or chip on the CKP sensor and pulse wheel? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 8.
		No	Go to the next step.
5	INSPECT CKP SENSOR <ul style="list-style-type: none"> Inspect the CKP sensor. (See 01-40A-32 CRANKSHAFT POSITION (CKP) SENSOR INSPECTION [LF, L5].) Is there any malfunction? 	Yes	Replace the CKP sensor, then go to Step 8. (See 01-40A-30 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
6	INSPECT CMP SENSOR AND PULSE WHEEL <ul style="list-style-type: none"> Visually inspect the CMP sensor and pulse wheel. Is there any damage or chip on the CMP sensor and pulse wheel? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 8.
		No	Go to the next step.
7	INSPECT CMP SENSOR <ul style="list-style-type: none"> Inspect the CMP sensor. (See 01-40A-33 CAMSHAFT POSITION (CMP) SENSOR INSPECTION [LF, L5].) Is there any malfunction? 	Yes	Replace the CMP sensor, then go to the next step. (See 01-40A-32 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.

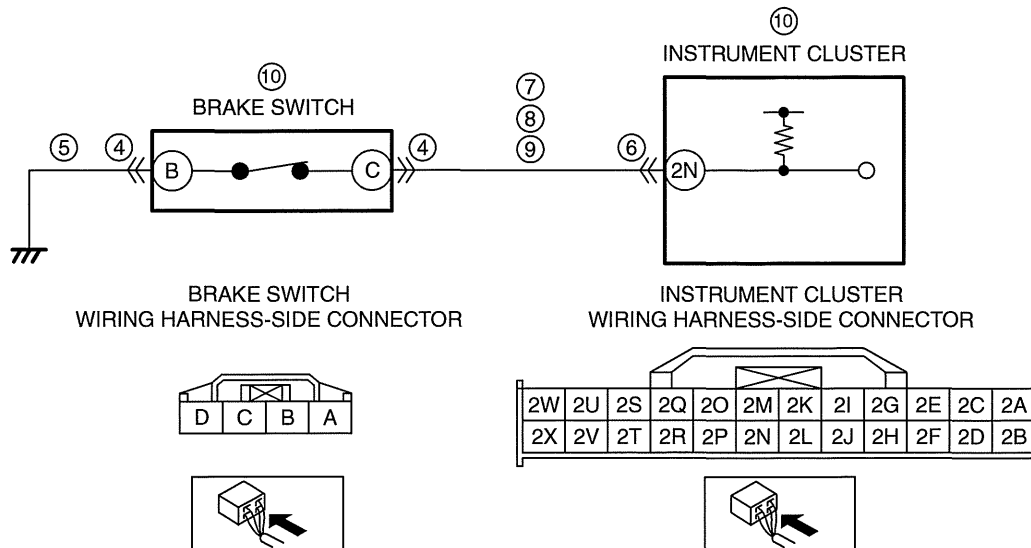

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION		ACTION
8	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) Start the engine and warm it up completely. Perform the Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
9	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

DTC P0571:00 [LF, L5]

id0102c8705500

DTC P0571:00	Brake switch circuit problem
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors changes in input voltage for brake switch No.1 and No.2 (signal from instrument cluster). If the PCM detects that both brake switches No.1 and No.2 remain on or off for 15 s, it determines that the brake switch circuit has a malfunction. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (other). The MIL does not illuminate. FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<p>Caution</p> <ul style="list-style-type: none"> Inspect the brake switch with it installed to the brake pedal, otherwise the brake switch may not operate normally. If the brake switch is removed from the brake pedal, replace the brake switch with a new one. <ul style="list-style-type: none"> Brake switch connector or terminals malfunction Instrument cluster connector or terminals malfunction Open circuit in wiring harness between brake switch terminal B and body ground Short to ground in wiring harness between brake switch terminal C and instrument cluster terminal 2N Short to power supply in wiring harness between brake switch terminal C and instrument cluster terminal 2N Open circuit in wiring harness between brake switch terminal C and instrument cluster terminal 2N Instrument cluster malfunction Brake switch malfunction PCM malfunction

ON-BOARD DIAGNOSTIC [LF, L5]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	VERIFY DTC FOR MODULE COMMUNICATION <ul style="list-style-type: none"> • Connect the M-MDS to the DLC-2. • Switch the ignition to ON (engine off). • Perform the DTC Reading Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Is the DTC U0155:00 present? 	Yes	Go to the applicable DTC inspection. (See 09-02D-3 DTC TABLE [MULTIPLEX COMMUNICATION SYSTEM].)
		No	Go to the next step.
3	VERIFY RELATED PENDING CODE AND STORED DTC <ul style="list-style-type: none"> • Switch the ignition to off, then to ON (engine off). • Perform the DTC Reading Procedure and Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Is the DTC P0703:00 also present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-199 DTC P0703:00 [LF, L5].)
		No	Go to the next step.
4	INSPECT BRAKE SWITCH CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the brake switch connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 11.
		No	Go to the next step.
5	INSPECT BRAKE SWITCH GROUND CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Brake switch connector is disconnected. • Inspect for continuity between brake switch terminal B (wiring harness-side) and body ground. • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 11.
6	INSPECT INSTRUMENT CLUSTER CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the instrument cluster connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 11.
		No	Go to the next step.
7	INSPECT BRAKE SWITCH SIGNAL CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • Brake switch and instrument cluster connectors are disconnected. • Inspect for continuity between brake switch terminal C (wiring harness-side) and body ground. • Is there continuity? 	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 11.
		No	Go to the next step.
8	INSPECT BRAKE SWITCH SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • Brake switch and instrument cluster connectors are disconnected. • Switch the ignition to ON (engine off). • Measure the voltage between brake switch terminal C (wiring harness-side) and body ground. • Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 11.
		No	Go to the next step.

01-02A

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
9	INSPECT BRAKE SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Brake switch and instrument cluster connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between brake switch terminal C (wiring harness-side) and instrument cluster terminal 2N (wiring harness-side). • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 11.
10	INSPECT INSTRUMENT CLUSTER <ul style="list-style-type: none"> • Inspect the instrument cluster. (See 09-22-8 INSTRUMENT CLUSTER INSPECTION.) • Is there any malfunction? 	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Replace the brake switch, then go to the next step. (See 04-11-8 BRAKE PEDAL REMOVAL/INSTALLATION.)
11	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Switch the ignition to ON (engine off). • Depress and release the brake pedal more than 5 times. • Perform the DTC Reading Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
12	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

DTC P0579:00 [LF, L5]

id0102c8087000

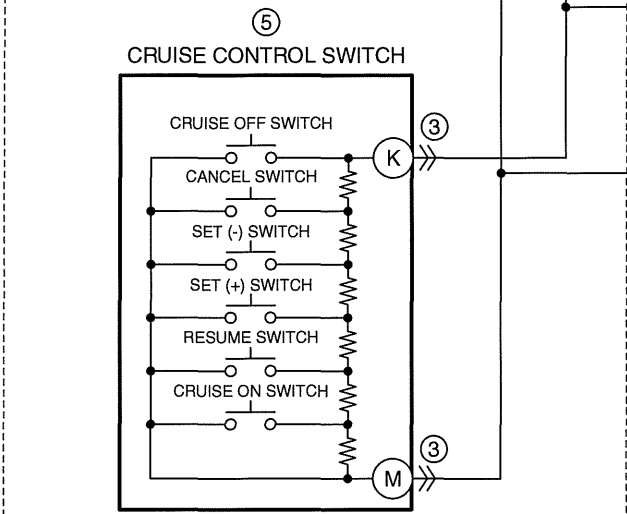

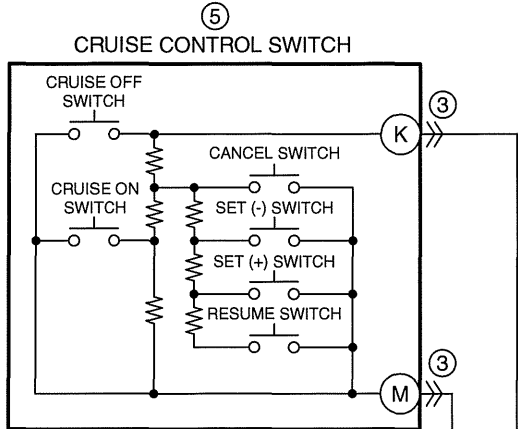

DTC P0579:00	Cruise control multi-function input circuit range/performance problem
DETECTION CONDITION	<ul style="list-style-type: none"> • The PCM monitors the input signal from the cruise control switch. If the input signal does not change for 120 s, the PCM determines that the cruise control switch circuit has a malfunction. <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is a continuous monitor (other). • The MIL does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.

DTC P0601:00	PCM memory check sum error
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM internal memory check sum error. Diagnostic support note <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> PCM internal memory malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) Perform the KOEO/KOER self test. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
4	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [LF, L5]

DTC P0602:00 [LF, L5]

id0102c8705700

DTC P0602:00	PCM programming error
DETECTION CONDITION	<ul style="list-style-type: none"> • No configuration data in the PCM. <p>Note</p> <ul style="list-style-type: none"> • If the “PCM CONFIGURATION” is successful, the PCM stores the DTC P0602:00 and illuminates the MIL (system is normal). Clear the DTC P0602:00 using the M-MDS after the “PCM CONFIGURATION”. • The MIL goes out after three drive cycles with no failure (The DTCs remain in the PCM). <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • PCM configuration has not been completed • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> • Has the snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	PERFORM PCM CONFIGURATION <ul style="list-style-type: none"> • Perform the PCM configuration. (See 01-40A-22 PCM CONFIGURATION [LF, L5].) • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Perform the KOEO/KOER self test. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) • Is the same DTC present? 	Yes	Perform the PCM configuration again, then go to the next step. (See 01-40A-22 PCM CONFIGURATION [LF, L5].)
		No	Go to Step 5.
4	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Clear the DTC from the PCM memory using the M-MDS. id0102c8302700

DTC P064D:00	Internal control module A/F sensor processor performance problem
DETECTION CONDITION	<ul style="list-style-type: none"> The A/F sensor IC integrated in PCM converts to voltage value for fuel control and for diagnosis based on the A/F sensor signal current and sends to CPU (integrated in PCM). If there is a transmission format error from the A/F sensor IC to the PCM, the PCM will detect a transmission error. <p>MONITORING CONDITIONS</p> <ul style="list-style-type: none"> Drive Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S and TWC Repair Verification Drive Mode) Following conditions are met: <ul style="list-style-type: none"> Engine is running or ignition switch is ON A/F sensor signal voltage is 1.2V—battery voltage–1.2 V (PCM terminals 2Z, 2AC, 2AD) <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> PCM internal malfunction (between CPU and A/F sensor control IC communication line)

Diagnostic procedure

STEP	INSPECTION	ACTION
1	VERIFY SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the snapshot data been recorded? 	Yes Go to the next step.
		No Record the snapshot data on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No Go to the next step.
3	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) Perform the Drive Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02A-12 OBD-II DRIVE MODE [LF, L5].) Is the same DTC present? 	Yes Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION		ACTION
4	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

DTC P0661:00 [LF, L5]

id0102c8850600

01-02A

DTC P0661:00	Variable intake air solenoid valve circuit low input
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the variable intake air solenoid valve control signal. If the PCM turns the variable intake air solenoid valve off but the voltage still remains low, the PCM determines that the variable intake air solenoid valve circuit has malfunction. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (other). The MIL does not illuminate. FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Variable intake air solenoid valve connector or terminals malfunction Short to ground or open circuit in variable intake air solenoid valve power supply circuit <ul style="list-style-type: none"> — Short to ground in wiring harness between main relay terminal C and variable intake air solenoid valve terminal B — ENG BAR 15 A fuse malfunction — Open circuit in wiring harness between main relay terminal C and variable intake air solenoid valve terminal B Variable intake air solenoid valve malfunction Short to ground in wiring harness between variable intake air solenoid valve terminal A and PCM terminal 2J PCM connector or terminals malfunction Open circuit in wiring harness between variable intake air solenoid valve terminal A and PCM terminal 2J PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
2	INSPECT VARIABLE INTAKE AIR SOLENOID VALVE CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the variable intake air solenoid valve connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 8.
		No	Go to the next step.
3	INSPECT VARIABLE INTAKE AIR SOLENOID VALVE POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT <ul style="list-style-type: none"> • Variable intake air solenoid valve connector is disconnected. • Switch the ignition to ON (engine off). • Measure the voltage between variable intake air solenoid valve terminal B (wiring harness-side) and body ground. • Is the voltage B+? 	Yes	Go to the next step.
		No	Inspect the ENG BAR 15 A fuse. <ul style="list-style-type: none"> • If the fuse is melt: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deterioration: <ul style="list-style-type: none"> — Replace the fuse. • If the fuse is normal: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible open circuit. Go to Step 8.
4	INSPECT VARIABLE INTAKE AIR SOLENOID VALVE <ul style="list-style-type: none"> • Switch the ignition to off. • Inspect the variable intake air solenoid valve. (See 01-13A-7 VARIABLE INTAKE AIR SOLENOID VALVE INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the variable intake air solenoid valve, then go to Step 8. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
5	INSPECT VARIABLE INTAKE AIR SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • Variable intake air solenoid valve connector is disconnected. • Inspect for continuity between variable intake air solenoid valve terminal A (wiring harness-side) and body ground. • Is there continuity? 	Yes	If the short to ground circuit could be detected: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected: <ul style="list-style-type: none"> • Replace the PCM (short to ground in PCM internal circuit). (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].) Go to Step 8.
		No	Go to the next step.
6	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 8.
		No	Go to the next step.
7	INSPECT VARIABLE INTAKE AIR SOLENOID VALVE CONTROL CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Variable intake air solenoid valve and PCM connectors are disconnected. • Inspect for continuity between variable intake air solenoid valve terminal A (wiring harness-side) and PCM terminal 2J (wiring harness-side). • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

01-02A

STEP	INSPECTION		ACTION
8	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) Access the RPM PID using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Increase the engine speed more than 4,600 rpm for 10 times. Perform the KOEO/KOER self test. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
9	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

DTC P0662:00 [LF, L5]

id0102c8850700

DTC P0662:00	Variable intake air solenoid valve circuit high input
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the variable intake air solenoid valve control signal. If the PCM turns the variable intake air solenoid valve on but current at the PCM terminal still remains high, the PCM determines that the variable intake air solenoid valve circuit has malfunction. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (other). The MIL does not illuminate. FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Variable intake air solenoid valve connector or terminals malfunction Variable intake air solenoid valve malfunction PCM connector or terminals malfunction Short to power supply in wiring harness between variable intake air solenoid valve terminal A and PCM terminal 2J PCM malfunction

ON-BOARD DIAGNOSTIC [LF, L5]

Diagnostic procedure

STEP	INSPECTION	ACTION
1	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No Go to the next step.
2	INSPECT VARIABLE INTAKE AIR SOLENOID VALVE CONNECTOR CONDITION <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the variable intake air solenoid valve connector. Inspect for poor connection (such as damaged/pulled-out pins, corrosion). Is there any malfunction? 	Yes Repair or replace the terminal and/or connector, then go to Step 6.
		No Go to the next step.
3	INSPECT VARIABLE INTAKE AIR SOLENOID VALVE <ul style="list-style-type: none"> Inspect the variable intake air solenoid valve. (See 01-13A-7 VARIABLE INTAKE AIR SOLENOID VALVE INSPECTION [LF, L5].) 7	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 13.
		No	Go to Step 13.
8	INSPECT CPP SWITCH CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the CPP switch connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 13.
		No	Go to the next step.
9	INSPECT CPP SWITCH GROUND CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • CPP switch connector is disconnected. • Inspect for continuity between CPP switch terminal B (wiring harness-side) and body ground. • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 13.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
10	INSPECT CPP SWITCH <ul style="list-style-type: none"> • Inspect the CPP switch. (See 01-40A-22 CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the CPP switch, then go to Step 13. (See 05-10-6 CLUTCH PEDAL REMOVAL/INSTALLATION.)
		No	Go to the next step.
11	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 13.
		No	Go to the next step.
12	INSPECT CPP SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • CPP switch and PCM connectors are disconnected. • Inspect for continuity between CPP switch terminal A (wiring harness-side) and PCM terminal 1BD (wiring harness-side). • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
13	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Start the engine. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Operate the clutch pedal while the vehicle runs and stops 8 times alternately. • Perform the Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
14	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

01-02A

ON-BOARD DIAGNOSTIC [LF, L5]

DTC P0850:00 [LF, L5]

id0102c8706700

DTC P0850:00	Neutral switch input circuit problem
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors changes in input voltage from the neutral switch. If the PCM does not detect the voltage changes while driving the vehicle at a vehicle speed above 30 km/h {19 mph} and the clutch pedal turns press and depress 10 times repeatedly, the PCM determines that the neutral switch circuit has a malfunction. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Neutral switch connector or terminals malfunction Neutral switch malfunction Short to ground in wiring harness between neutral switch terminal B and PCM terminal 1BC PCM connector or terminals malfunction Open circuit in wiring harness between neutral switch terminal A and body ground Open circuit in wiring harness between neutral switch terminal B and PCM terminal 1BC PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY WHETHER MALFUNCTION IS OPEN CIRCUIT OR SHORT TO GROUND <ul style="list-style-type: none"> Connect the M-MDS to the DLC-2. Perform the PID/DATA Monitor and Record Procedure and access the CPP/PNP PID. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Verify the CPP/PNP PID during operating the gear. Is the PID normal? (See 01-40A-8 PCM INSPECTION [LF, L5].) 	Yes	Go to the next step.
		No	If the CPP/PNP PID is always Drive: <ul style="list-style-type: none"> Go to Step 8. If the CPP/PNP PID is always Neutral: <ul style="list-style-type: none"> Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
4	INSPECT NEUTRAL SWITCH CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the neutral switch connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 13.
		No	Go to the next step.
5	INSPECT NEUTRAL SWITCH <ul style="list-style-type: none"> • Inspect the neutral switch. (See 01-40A-23 NEUTRAL SWITCH INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the neutral switch, then go to Step 13. (See 05-15B-2 NEUTRAL SWITCH REMOVAL/INSTALLATION [G66M-R].)
		No	Go to the next step.
6	INSPECT NEUTRAL SWITCH SIGNAL CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • Neutral switch connector is disconnected. • Inspect for continuity between neutral switch terminal B (wiring harness-side) and body ground. • Is there continuity? 	Yes	If the short to ground circuit could be detected: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected: <ul style="list-style-type: none"> • Replace the PCM (short to ground in PCM internal circuit). (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].) Go to Step 13.
		No	Go to the next step.
7	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 13.
		No	Go to Step 13.
8	INSPECT NEUTRAL SWITCH CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the neutral switch connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 13.
		No	Go to the next step.
9	INSPECT NEUTRAL SWITCH GROUND CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Neutral switch connector is disconnected. • Inspect for continuity between neutral switch terminal A (wiring harness-side) and body ground. • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 13.
10	INSPECT NEUTRAL SWITCH <ul style="list-style-type: none"> • Inspect the neutral switch. (See 01-40A-23 NEUTRAL SWITCH INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the neutral switch, then go to Step 13. (See 05-15B-2 NEUTRAL SWITCH REMOVAL/INSTALLATION [G66M-R].)
		No	Go to the next step.
11	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 13.
		No	Go to the next step.
12	INSPECT NEUTRAL SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Neutral switch and PCM connectors are disconnected. • Inspect for continuity between neutral switch terminal B (wiring harness-side) and PCM terminal 1BC (wiring harness-side). • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.

01-02A

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
13	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Start the engine. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Drive the vehicle above 30 km/h {19 mph} and stop vehicle. • Depress and release the clutch pedal more than 10 times during drive cycle. • Perform the Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
14	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

DTC P1260:00 [LF, L5]

id0102c8856800

DTC P1260:00	Immobilizer system problem
DETECTION CONDITION	<ul style="list-style-type: none"> • The instrument cluster detects an immobilizer system malfunction. (Vehicles without advanced keyless entry and push button start system) • The keyless control module detects an immobilizer system malfunction. (Vehicles with advanced keyless entry and push button start system) <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is a continuous monitor (other). • The MIL does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is not stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Immobilizer system malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	CONFIRM IMMOBILIZER SYSTEM DTC <ul style="list-style-type: none"> • Perform the immobilizer system DTC inspection using the M-MDS. (See 09-02C-2 DTC INSPECTION [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) (See 09-02A-6 DTC INSPECTION [ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02C-4 DTC TABLE [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) (See 09-02B-4 DTC TABLE [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)].)
		No	Go to the next step.
3	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Perform the KOEO self test. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) • Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
4	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

DTC P144A:00 [LF, L5]

id0102c8303000

01-02A

DTC P144A:00	EVAP system purge vapor line restricted/blocked
DETECTION CONDITION	<ul style="list-style-type: none"> P144A:00 indicates that the P144A:00 blocked line diagnostic is designed to detect a full blockage in the vapor lines between the fuel tank pressure sensor and the fuel tank. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is an intermittent monitor (EVAP system). The MIL illuminates if the PCM detects the above malfunction conditions in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Blockage(s) between fuel tank pressure sensor and fuel tank PCM malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> Have the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (EVAP system related) been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY RELATED PENDING CODE AND STORED DTC <ul style="list-style-type: none"> Switch the ignition to off, then to ON (engine off). Perform the DTC Reading Procedure and Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Is the DTC P0451:00, P0452:00, P0453:00 or P0454:00 also present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-151 DTC P0451:00 [LF, L5].) (See 01-02A-153 DTC P0452:00 [LF, L5].) (See 01-02A-155 DTC P0453:00 [LF, L5].) (See 01-02A-157 DTC P0454:00 [LF, L5].)
		No	Go to the next step.
4	INSPECT FOR BLOCKED FUEL VAPOR TUBE BETWEEN FUEL TANK PRESSURE SENSOR AND FUEL TANK <ul style="list-style-type: none"> Switch the ignition to off. Remove the fuel vapor tube assembly. (See 01-14A-8 FUEL TANK REMOVAL/ INSTALLATION [LF, L5].) Visually inspect the fuel vapor tube for a blockage between the fuel tank pressure sensor and the connection to the fuel tank. Visually inspect the connection at the fuel tank for a blockage. Attempt to manually remove the blockage. Is the blockage visible and can be removed? 	Yes	Remove the blockage, then go to the next step.
		No	Replace a fuel vapor tube assembly, then go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION
5	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) Perform the Drive Mode 06 (EVAP System Repair Verification Drive Mode). (See 01-02A-12 OBD-II DRIVE MODE [LF, L5].) Is the PENDING CODE for this DTC present? 	Yes Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No Go to the next step.
6	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) Are any DTCs present? 	Yes Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No DTC troubleshooting completed.

DTC P1450:00 [LF, L5]

id0102c8303100

DTC P1450:00	Unable to bleed up fuel tank vacuum
DETECTION CONDITION	<ul style="list-style-type: none"> P1450:00 indicates the Self Test has detected that the EVAP system is unable to bleed up fuel tank vacuum. Diagnostic support note <ul style="list-style-type: none"> This is an intermittent monitor (CCM). The MIL illuminates if the PCM detects the above malfunction conditions in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Excessive fuel tank vacuum <ul style="list-style-type: none"> Kinks or bends in the fuel vapor hoses and tubes Charcoal canister inlet port, CV solenoid valve, EVAP dust separator or outlet hose for contamination or foreign material CV solenoid valve malfunction <ul style="list-style-type: none"> Stuck open or close Fuel tank pressure sensor malfunction (built-in evaporative hose component) PCM malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION
1	VERIFY SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the snapshot data been recorded? 	Yes Go to the next step.
		No Record the snapshot data on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No Go to the next step.
3	VERIFY RELATED PENDING CODE AND STORED DTC <ul style="list-style-type: none"> Switch the ignition to off, then to ON (engine off). Perform the DTC Reading Procedure and Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Are any other DTCs present? 	Yes Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
4	INSPECT FUEL TANK VACUUM <ul style="list-style-type: none"> • Switch the ignition to off. • Verify kinks or bends in the fuel vapor hoses and tubes. • Visually inspect the charcoal canister inlet port, CV solenoid valve, EVAP dust separator or outlet hose for contamination or foreign material. • Is a concern evident? 	Yes	Remove any contamination or foreign material around fuel vapor hoses and tubes. Repair the hoses, tubes or components if necessary, then go to Step 9.
		No	Go to the next step.
5	PERFORM EVAP SYSTEM LEAK INSPECTION <ul style="list-style-type: none"> • Connect the leak tester to the fuel filler pipe. • Switch the ignition to ON (engine off). • Access the EVAPCV PID using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Close the CV solenoid valve using the EVAPCV PID. • Pressurize the EVAP system to 3.48 kPa {26.1 mmHg, 1.03 inHg}. • Does the pressure reach 3.48 kPa {26.1 mmHg, 1.03 inHg}? 	Yes	Go to the next step.
		No	Replace the CV solenoid valve, then go to Step 9. (See 01-16A-6 CHARCOAL CANISTER REMOVAL/INSTALLATION [LF, L5].)
6	INSPECT CV SOLENOID VALVE <ul style="list-style-type: none"> • Switch the ignition to ON (engine off). • Access the EVAPCV PID using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Open the CV solenoid valve using the EVAPCV PID. • Does the pressure drop immediately? 	Yes	Go to the next step.
		No	Replace the CV solenoid valve, then go to Step 9. (See 01-16A-6 CHARCOAL CANISTER REMOVAL/INSTALLATION [LF, L5].)
7	INSPECT FUEL TANK PRESSURE SENSOR <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the charcoal canister outlet tube at the charcoal canister. • Switch the ignition to ON (engine off). • Select the Diagnostic Data Link using the M-MDS. • Select the PCM. • Access the FTP PID and record the reading. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Is the reading between 2.4—2.8 V? 	Yes	Go to the next step.
		No	Replace the evaporative hose component, then go to Step 9. (See 01-40A-33 FUEL TANK PRESSURE SENSOR INSPECTION [LF, L5].)
8	PERFORM EVAP SYSTEM LEAK INSPECTION <ul style="list-style-type: none"> • Switch the ignition to off. • Reconnect the disconnected connectors and hoses. • Perform the EVAP system leak inspection. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Leakage still exists. <ul style="list-style-type: none"> • Locate the leak point and repair. • Repeat this step.
		No	Go to the next step.
9	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Perform the Drive Mode 06 (EVAP System Repair Verification Drive Mode). (See 01-02A-12 OBD-II DRIVE MODE [LF, L5].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
10	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

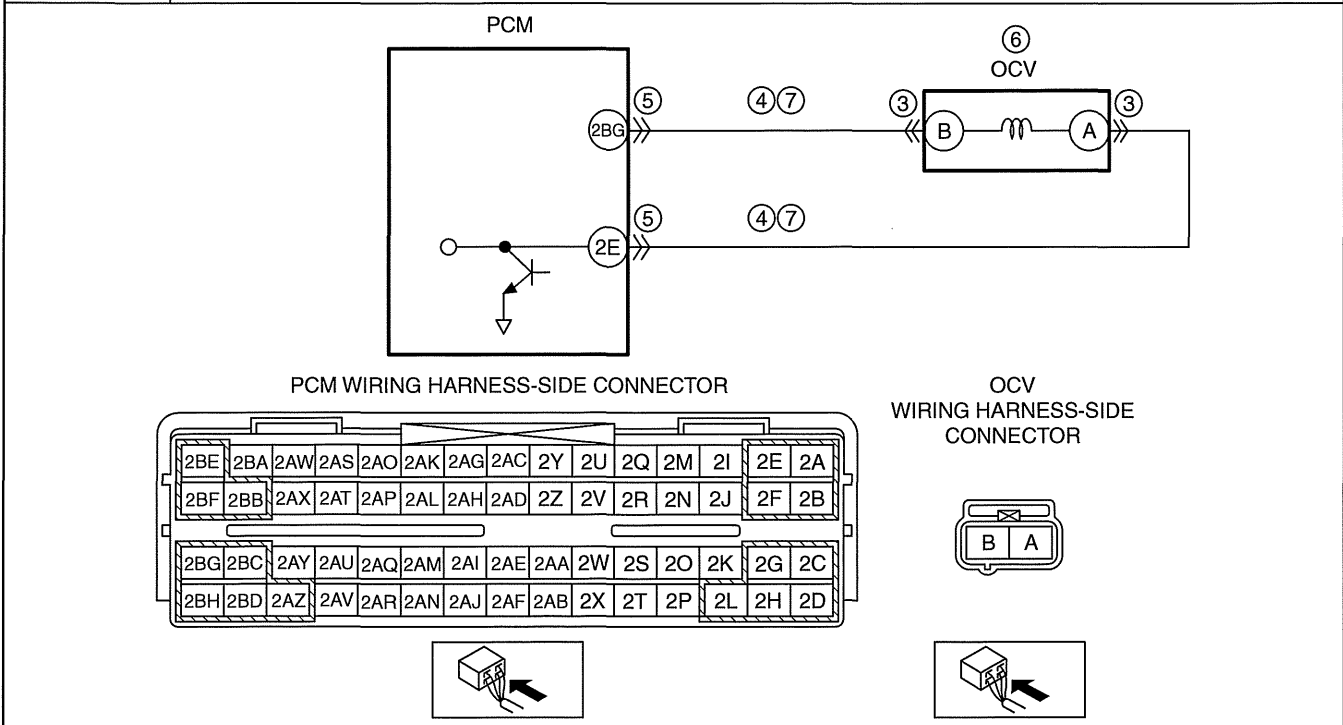

01-02A

ON-BOARD DIAGNOSTIC [LF, L5]

DTC P2088:00 [LF, L5]

id0102c8707300

DTC P2088:00	OCV circuit low input
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the OCV voltage. If the PCM detects the OCV control voltage (calculated from the OCV) is below the specification voltage (calculated from the battery positive voltage), the PCM determines that the OCV circuit has a malfunction. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> OCV connector or terminals malfunction Short to ground in wiring harness between the following terminals: <ul style="list-style-type: none"> — OCV terminal B—PCM terminal 2BG — OCV terminal A—PCM terminal 2E PCM connector or terminals malfunction OCV malfunction Open circuit in wiring harness between the following terminals: <ul style="list-style-type: none"> — OCV terminal B—PCM terminal 2BG — OCV terminal A—PCM terminal 2E PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. 1	VERIFY SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	INSPECT OCV CONNECTOR CONDITION <ul style="list-style-type: none"> Switch the ignition off. Disconnect the OCV connector. Inspect for poor connection (such as damaged/pulled-out pins, corrosion). Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 7.
		No	Go to the next step.
4	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> Disconnect the PCM connector. Inspect for poor connection (such as damaged/pulled-out pins, corrosion). Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 7.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
5	INSPECT OCV CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • OCV and PCM connectors are disconnected. • Switch the ignition to ON (engine off). • Measure the voltage between the following terminals (wiring harness-side) and body ground: <ul style="list-style-type: none"> — PCM terminal 2BG — PCM terminal 2E • Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 7.
		No	Go to the next step.
6	INSPECT OCV <ul style="list-style-type: none"> • Switch the ignition to off. • Inspect the OCV. (See 01-10A-19 OIL CONTROL VALVE (OCV) INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the OCV, then go to the next step. (See 01-10A-20 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
7	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Perform the KOEO/KOER self test. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) • Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
8	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

01-02A

DTC P2096:00 [LF, L5]

id0102c8707500

DTC P2096:00	Target A/F feedback system too lean
DETECTION CONDITION	<ul style="list-style-type: none"> • The PCM monitors the target A/F fuel trim when under the target A/F feedback control. If the fuel trim is more than the specification, the PCM determines that the target A/F feedback system is too lean. <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is a continuous monitor (fuel system). • The MIL illuminates if the PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • HO2S malfunction • Leakage exhaust gas (between A/F sensor and HO2S) • IAT sensor malfunction • Erratic signal to PCM <ul style="list-style-type: none"> — ECT sensor No.1 signal malfunction — MAF sensor signal malfunction — TP sensor signal malfunction — VSS signal malfunction • A/F sensor malfunction • Leakage exhaust gas (between exhaust manifold and A/F sensor) • MAF sensor malfunction • Air suction in intake air system • Insufficient fuel line pressure • Leakage fuel • Fuel pump unit malfunction • Ignition system malfunction <ul style="list-style-type: none"> — Ignition coil related wiring harness malfunction • Fuel injector malfunction • Insufficient engine compression • ECT sensor No.1 malfunction • PCM malfunction

ON-BOARD DIAGNOSTIC [LF, L5]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> • Have the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (fuel system related) been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY RELATED PENDING CODE AND STORED DTC <ul style="list-style-type: none"> • Switch the ignition to off, then to ON (engine off). • Perform the DTC Reading Procedure and Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Are any other DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	Go to the next step.
4	IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2) <ul style="list-style-type: none"> • Perform the Freeze Frame PID Data Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Is the DTC P2096:00 on FREEZE FRAME DATA (Mode 2)? 	Yes	Go to the next step.
		No	Go to the troubleshooting procedures for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02A-17 DTC TABLE [LF, L5].)
5	INSPECT HO2S <ul style="list-style-type: none"> • Inspect the HO2S. (See 01-40A-29 HEATED OXYGEN SENSOR (HO2S) INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Go to the next step.
		No	Go to Step 7.
6	INSPECT EXHAUST GAS LEAKAGE <ul style="list-style-type: none"> • Visually inspect for the exhaust gas leakage between the A/F sensor and HO2S. • Is there any leakage? 	Yes	Repair or replace the malfunctioning parts according to the inspection results, then go to Step 20.
		No	Replace the HO2S, then go to Step 20. (See 01-40A-29 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [LF, L5].)
7	INSPECT IAT SENSOR <ul style="list-style-type: none"> • Switch the ignition to off. • Inspect the IAT sensor. (See 01-40A-25 INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the MAF/IAT sensor, then go to Step 20. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
8	VERIFY CURRENT INPUT SIGNAL STATUS <ul style="list-style-type: none"> • Connect the M-MDS to the DLC-2. • Access the following PIDs using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) <ul style="list-style-type: none"> — ECT1 — MAF — TP REL — VSS • Are the PIDs normal? (See 01-40A-8 PCM INSPECTION [LF, L5].) 	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results, then go to Step 20.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
9	VERIFY CURRENT INPUT SIGNAL STATUS UNDER FREEZE FRAME DATA (MODE 2) CONDITION <ul style="list-style-type: none"> • Connect the M-MDS to the DLC-2. • Access the following PIDs using the M-MDS under the FREEZE FRAME DATA (Mode 2) condition. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) — ECT1 — MAF — TP REL — VSS • Are the PIDs normal? (See 01-40A-8 PCM INSPECTION [LF, L5].) 	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results, then go to Step 20.
10	INSPECT A/F SENSOR <ul style="list-style-type: none"> • Inspect the A/F sensor. (See 01-40A-28 AIR FUEL RATIO (A/F) SENSOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Go to the next step.
		No	Go to Step 12.
11	INSPECT EXHAUST GAS LEAKAGE <ul style="list-style-type: none"> • Visually inspect for the exhaust gas leakage between the exhaust manifold and A/F sensor. • Is there any leakage? 	Yes	Repair or replace the malfunctioning parts according to the inspection results, then go to Step 20.
		No	Replace the A/F sensor, then go to Step 20. (See 01-40A-27 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [LF, L5].)
12	VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR <ul style="list-style-type: none"> • Connect the M-MDS to the DLC-2. • Start the engine. • Access the MAF PID using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Verify that the MAF PID changes quickly according to engine speed. • Is the MAF PID value normal? (See 01-40A-8 PCM INSPECTION [LF, L5].) 	Yes	Go to Step 14.
		No	Go to the next step.
13	INSPECT INTAKE AIR SYSTEM FOR EXCESSIVE AIR SUCTION <ul style="list-style-type: none"> • Switch the ignition to off. • Visually inspect the hose in intake air system for looseness, cracks or damages. • Is there any malfunction? 	Yes	Repair or replace the malfunctioning parts according to the inspection results, then go to Step 20.
		No	Replace the MAF/IAT sensor, then go to Step 20. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
14	INSPECT FUEL LINE PRESSURE <ul style="list-style-type: none"> • Switch the ignition to off. <p style="margin-left: 20px;">Note</p> <ul style="list-style-type: none"> • If engine will not start, inspect fuel line pressure with ignition is switched to ON. • Inspect fuel line pressure while engine running. (See 01-14A-6 FUEL LINE PRESSURE INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Go to the next step.
		No	Go to Step 16.
15	INSPECT FUEL SYSTEM FOR FUEL LEAKAGE <ul style="list-style-type: none"> • Visually inspect the fuel leakage in the fuel system. <p style="margin-left: 20px;">Note</p> <ul style="list-style-type: none"> • Engine speed may change when rust penetrating agent is sprayed on the air suction area. • Is there any leakage? 	Yes	Repair or replace the malfunctioning parts according to the inspection results, then go to Step 20.
		No	Replace the fuel pump unit, then go to Step 20. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].)

01-02A

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
16	INSPECT IGNITION SYSTEM OPERATION <ul style="list-style-type: none"> • Carry out the spark test. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) • Is strong blue spark visible at each cylinder? 	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results, then go to Step 20.
17	INSPECT FUEL INJECTOR OPERATION <ul style="list-style-type: none"> • Perform the Fuel Injector Operation Inspection. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning parts according to the inspection results, then go to Step 20.
		No	Go to the next step.
18	INSPECT ENGINE COMPRESSION <ul style="list-style-type: none"> • Inspect the engine compression. (See 01-10A-17 COMPRESSION INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning parts according to the inspection results, then go to Step 20.
		No	Go to the next step.
19	INSPECT ECT SENSOR NO.1 <ul style="list-style-type: none"> • Inspect the ECT sensor No.1. (See 01-40A-24 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the ECT sensor No.1, then go to the next step. (See 01-40A-23 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
20	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • After warming up the engine, maintain the idle status for 1 min or more. • Perform the Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
21	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

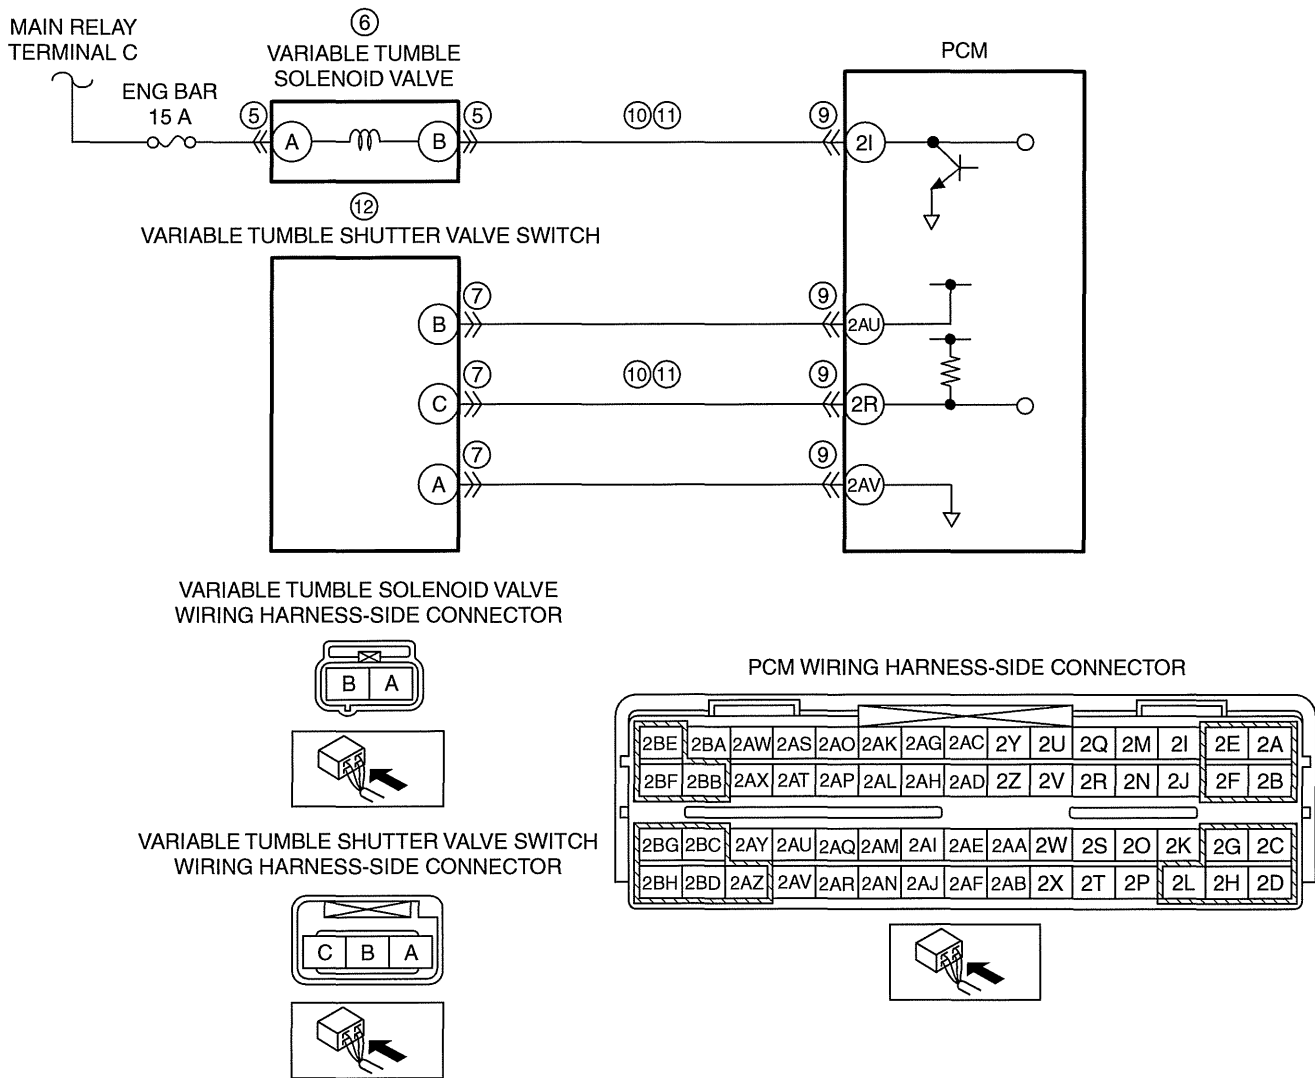

ON-BOARD DIAGNOSTIC [LF, L5]

DTC P2004:00 [LF, L5]

id0102c8303300

01-02A

DTC P2004:00	Variable tumble shutter valve stuck open
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors mass the variable tumble shutter valve position using the variable tumble position sensor. If the PCM turns the variable tumble solenoid valve on but the variable tumble position still remain open for 5 s (the variable tumble position sensor off), the PCM determines that the variable tumble shutter valve has been stuck open. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Variable tumble solenoid valve connector or terminals malfunction Variable tumble solenoid valve malfunction Variable tumble shutter valve switch connector or terminals malfunction Variable tumble shutter valve actuator malfunction (stuck open) PCM connector or terminals malfunction Short to power supply in wiring harness between the following terminals: <ul style="list-style-type: none"> — Variable tumble solenoid valve terminal B—PCM terminal 2I — Variable tumble shutter valve switch terminal C—PCM terminal 2R Open circuit in wiring harness between the following terminals: <ul style="list-style-type: none"> — Variable tumble solenoid valve terminal B—PCM terminal 2I — Variable tumble shutter valve switch terminal C—PCM terminal 2R Variable tumble shutter valve switch malfunction Miss connecting or pull out the vacuum hose PCM malfunction

ON-BOARD DIAGNOSTIC [LF, L5]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	CLASSIFY INTERMITTENT CONCERN OR CONTINUOUS CONCERN <ul style="list-style-type: none"> Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) Drive the vehicle under the following conditions: <ul style="list-style-type: none"> Engine coolant temperature: above 60 °C {140 °F} Engine speed: below 3,750 rpm Throttle opening angle is below as followings: <ul style="list-style-type: none"> Engine speed—below 1,500 rpm: above 35% Engine speed—between 1,500—2,500 rpm: between 25—35% Engine speed—above 2,500 rpm: below 25% Perform the Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Is the PENDING CODE for this DTC present? 	Yes	Go to the next step.
		No	Intermittent concern exists. <ul style="list-style-type: none"> Perform the “INTERMITTENT CONCERNS TROUBLESHOOTING” procedure. (See 01-03A-84 INTERMITTENT CONCERN TROUBLESHOOTING [LF, L5].)
4	VERIFY RELATED PENDING CODE AND STORED DTC <ul style="list-style-type: none"> Switch the ignition to off, then to ON (engine off). Perform the DTC Reading Procedure and Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Is the DTC P2010, P2088:00 or P2089:00 also present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-226 DTC P2010:00 [LF, L5].) (See 01-02A-210 DTC P2088:00 [LF, L5].) (See 01-02A-212 DTC P2089:00 [LF, L5].)
		No	Go to the next step.
5	INSPECT VARIABLE TUMBLE SOLENOID VALVE CONNECTOR CONDITION <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the variable tumble solenoid valve connector. Inspect for poor connection (such as damaged/pulled-out pins, corrosion). Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 14.
		No	Go to the next step.
6	INSPECT VARIABLE TUMBLE SOLENOID VALVE <ul style="list-style-type: none"> Inspect the variable tumble solenoid valve. (See 01-13A-7 VARIABLE TUMBLE SOLENOID VALVE INSPECTION [LF, L5].) Is there any malfunction? 	Yes	Replace the variable tumble solenoid valve, then go to Step 14. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [LF, L5].)
		No	Go to the next step.
7	INSPECT VARIABLE TUMBLE SHUTTER VALVE SWITCH CONNECTOR CONDITION <ul style="list-style-type: none"> Disconnect the variable tumble shutter valve switch connector. Inspect for poor connection (such as damaged/pulled-out pins, corrosion). Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 14.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
8	INSPECT VARIABLE TUMBLE SHUTTER VALVE ACTUATOR <ul style="list-style-type: none"> • Inspect the variable tumble shutter valve actuator. (See 01-13A-8 VARIABLE TUMBLE SHUTTER VALVE ACTUATOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the variable tumble shutter valve actuator, then go to Step 14. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [LF, L5].)
		No	Go to the next step.
9	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 14.
		No	Go to the next step.
10	INSPECT SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • Variable tumble solenoid valve, variable tumble shutter valve switch and PCM connectors are disconnected. • Switch the ignition to ON (engine off). • Measure the voltage between the following terminals (wiring harness-side) and body ground: <ul style="list-style-type: none"> — PCM terminal 2I — PCM terminal 2R • Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 14.
		No	Go to the next step.
11	INSPECT SIGNAL CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Variable tumble solenoid valve, variable tumble shutter valve switch and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between the following terminals (wiring harness-side): <ul style="list-style-type: none"> — Variable tumble solenoid valve terminal B— PCM terminal 2I — Variable tumble shutter valve switch terminal C—PCM terminal 2R • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 14.
12	INSPECT VARIABLE TUMBLE SHUTTER VALVE SWITCH <ul style="list-style-type: none"> • Inspect the variable tumble shutter valve switch. (See 01-40A-23 VARIABLE TUMBLE SHUTTER VALVE SWITCH INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the intake manifold, then go to Step 14. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [LF, L5].)
		No	Go to the next step.
13	VERIFY CONNECTION OF VACUUM HOSE ROUTING <ul style="list-style-type: none"> • Verify that the vacuum hoses are connected properly. (See 01-13A-3 INTAKE MANIFOLD VACUUM INSPECTION [LF, L5].) • Are the vacuum hoses connected properly? 	Yes	Go to the next step.
		No	Connect the vacuum hoses properly, then go to the next step.

01-02A

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
14	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Drive the vehicle under the following conditions: <ul style="list-style-type: none"> — Engine coolant temperature: above 60 °C {140 °F} — Engine speed: below 3,750 rpm — Throttle opening angle is below as followings: <ul style="list-style-type: none"> • Engine speed—below 1,500 rpm: above 35% • Engine speed—between 1,500—2,500 rpm: between 25—35% • Engine speed—above 2,500 rpm: below 25% • Perform the Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
15	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [LF, L5]

DTC P2006:00 [LF, L5]

id0102c8303400

01-02A

DTC P2006:00	Variable tumble shutter valve stuck closed
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors mass the variable tumble shutter valve position using the variable tumble position sensor. If the PCM turns the variable tumble solenoid valve off but the variable tumble position still remain close for 5 s (the variable tumble position sensor on), the PCM determines that the variable tumble shutter valve has been stuck closed. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. 		No	Go to the next step.
3	VERIFY RELATED PENDING CODE AND STORED DTC <ul style="list-style-type: none"> • Switch the ignition to off, then to ON (engine off). • Perform the DTC Reading Procedure and Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Are any other DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	Go to the next step.
4	IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2) <ul style="list-style-type: none"> • Perform the Freeze Frame PID Data Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Is the DTC P2097:00 on FREEZE FRAME DATA (Mode 2)? 	Yes	Go to the next step.
		No	Go to the troubleshooting procedures for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02A-17 DTC TABLE [LF, L5].)

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION
5	INSPECT INSTALLATION OF HO2S <ul style="list-style-type: none"> • Inspect if the HO2S is loosely installed. • Is the HO2S installed securely? 	Yes Go to the next step.
		No Retighten the HO2S, then go to Step 20.
6	INSPECT HO2S <ul style="list-style-type: none"> • Inspect the HO2S. (See 01-40A-29 HEATED OXYGEN SENSOR (HO2S) INSPECTION [LF, L5].) • Is there any malfunction? 	Yes Replace the HO2S, then go to Step 20. (See 01-40A-29 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [LF, L5].)
		No Go to the next step.
7	INSPECT IAT SENSOR <ul style="list-style-type: none"> • Switch the ignition to off. • Inspect the IAT sensor. (See 01-40A-25 INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes Replace the MAF/IAT sensor, then go to Step 20. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
		No Go to the next step.
8	VERIFY CURRENT INPUT SIGNAL STATUS <ul style="list-style-type: none"> • Connect the M-MDS to the DLC-2. • Access the following PIDs using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) <ul style="list-style-type: none"> — ECT1 — MAF — TP REL — VSS • Are the PIDs normal? (See 01-40A-8 PCM INSPECTION [LF, L5].) 	Yes Go to the next step.
		No Repair or replace the malfunctioning parts according to the inspection results, then go to Step 20.
9	VERIFY CURRENT INPUT SIGNAL STATUS UNDER FREEZE FRAME DATA (MODE 2) CONDITION <ul style="list-style-type: none"> • Connect the M-MDS to the DLC-2. • Access the following PIDs using the M-MDS under the FREEZE FRAME DATA (Mode 2) condition. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) <ul style="list-style-type: none"> — ECT1 — MAF — TP REL — VSS • Are the PIDs normal? (See 01-40A-8 PCM INSPECTION [LF, L5].) 	Yes Go to the next step.
		No Repair or replace the malfunctioning parts according to the inspection results, then go to Step 20.
10	INSPECT INSTALLATION OF A/F SENSOR <ul style="list-style-type: none"> • Inspect if the A/F sensor is loosely installed. • Is the A/F sensor installed securely? 	Yes Go to the next step.
		No Retighten the A/F sensor, then go to Step 20.
11	INSPECT A/F SENSOR <ul style="list-style-type: none"> • Inspect the A/F sensor. (See 01-40A-28 AIR FUEL RATIO (A/F) SENSOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes Replace the A/F sensor, then go to Step 20. (See 01-40A-27 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [LF, L5].)
		No Go to the next step.
12	INSPECT FUEL LINE PRESSURE <ul style="list-style-type: none"> • Switch the ignition to off. <p style="margin-left: 20px;">Note</p> <ul style="list-style-type: none"> • If engine will not start, inspect fuel line pressure with ignition is switched to ON. <ul style="list-style-type: none"> • Inspect fuel line pressure while engine running. (See 01-14A-6 FUEL LINE PRESSURE INSPECTION [LF, L5].) • Is there any malfunction? 	Yes If fuel pressure is too high: <ul style="list-style-type: none"> • Replace the fuel pump unit, then go to Step 20. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].) If fuel pressure is low: <ul style="list-style-type: none"> • Go to the next step.
		No Go to the next step.

01-02A

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
13	INSPECT FUEL LINE <ul style="list-style-type: none"> • Visually inspect the fuel line from fuel pump to fuel delivery pipe. • Is there any leakage? 	Yes	Repair or replace the malfunctioning parts according to the inspection results, then go to Step 20.
		No	Inspect the low-pressure side fuel filter for follows: <ul style="list-style-type: none"> • Foreign materials or stain inside fuel filter. If foreign materials or stain is found inside fuel filter (low-pressure side): <ul style="list-style-type: none"> • Clean of fuel tank and filter. If foreign materials or stain is not found: <ul style="list-style-type: none"> • Replace fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].) Go to Step 20.
14	INSPECT LONG TERM FUEL TRIM <ul style="list-style-type: none"> • Connect the M-MDS to the DLC-2. • Access the LONGFT1 PID using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Compare the LONGFT1 PID with recorded snapshot data at Step 1. • Is the LONGFT1 PID above snapshot data value? 	Yes	Go to the next step.
		No	Go to Step 16.
15	INSPECT PURGE SOLENOID VALVE <ul style="list-style-type: none"> • Switch the ignition to off. • Inspect the purge solenoid valve. (See 01-16A-8 PURGE SOLENOID VALVE INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the purge solenoid valve, then go to Step 20. (See 01-16A-8 PURGE SOLENOID VALVE REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
16	INSPECT IGNITION SYSTEM OPERATION <ul style="list-style-type: none"> • Carry out the spark test. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) • Is strong blue spark visible at each cylinder? 	Yes	Go to the next step.
		No	Repair or replace the malfunctioning parts according to the inspection results, then go to Step 20.
17	INSPECT FUEL INJECTOR OPERATION <ul style="list-style-type: none"> • Perform the Fuel Injector Operation Inspection. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning parts according to the inspection results, then go to Step 20.
		No	Go to the next step.
18	INSPECT ENGINE COMPRESSION <ul style="list-style-type: none"> • Inspect the engine compression. (See 01-10A-17 COMPRESSION INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning parts according to the inspection results, then go to Step 20.
		No	Go to the next step.
19	INSPECT ECT SENSOR NO.1 <ul style="list-style-type: none"> • Inspect ECT sensor No.1. (See 01-40A-24 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the ECT sensor No.1, then go to the next step. (See 01-40A-23 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
20	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • After warming up the engine, maintain the idle status for 1 min or more. • Perform the Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
21	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

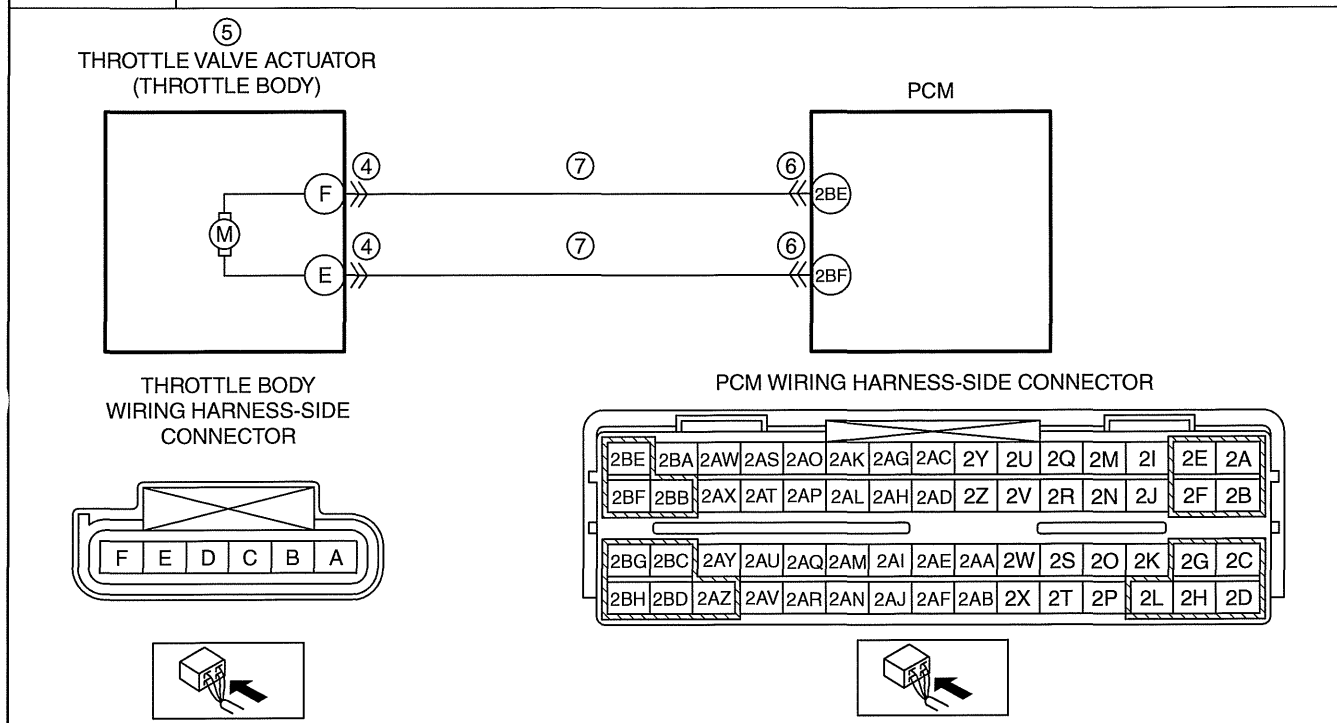

ON-BOARD DIAGNOSTIC [LF, L5]

DTC P2100:00 [LF, L5]

id0102c8851000

01-02A

DTC P2100:00	Throttle valve actuator circuit open
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the electronic throttle valve actuator current. If the PCM detects the electronic throttle valve actuator current is below the specification current, the PCM determines that the electronic throttle valve actuator circuit has a malfunction. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Throttle body connector or terminals malfunction Throttle valve actuator malfunction PCM connector or terminals malfunction Open circuit in wiring harness between the following terminals: <ul style="list-style-type: none"> — Throttle body terminal F—PCM terminal 2BE — Throttle body terminal E—PCM terminal 2BF PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	CLASSIFY INTERMITTENT CONCERN OR CONTINUOUS CONCERN <ul style="list-style-type: none"> Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) Start the engine and idle it. Perform the DTC Reading Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Is the same DTC present? 	Yes	Go to the next step.
		No	Intermittent concern exists. <ul style="list-style-type: none"> Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING" procedure. (See 01-03A-84 INTERMITTENT CONCERN TROUBLESHOOTING [LF, L5].)

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
4	INSPECT THROTTLE BODY CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the throttle body connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 8.
		No	Go to the next step.
5	INSPECT THROTTLE VALVE ACTUATOR <ul style="list-style-type: none"> • Inspect the throttle valve actuator. (See 01-13A-6 THROTTLE BODY INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the throttle body, then go to Step 8. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
6	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 8.
		No	Go to the next step.
7	INSPECT THROTTLE VALVE ACTUATOR CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Throttle body and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): <ul style="list-style-type: none"> — Throttle body terminal F—PCM terminal 2BE — Throttle body terminal E—PCM terminal 2BF • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
8	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Perform the KOEO/KOER self test. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) • Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
9	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

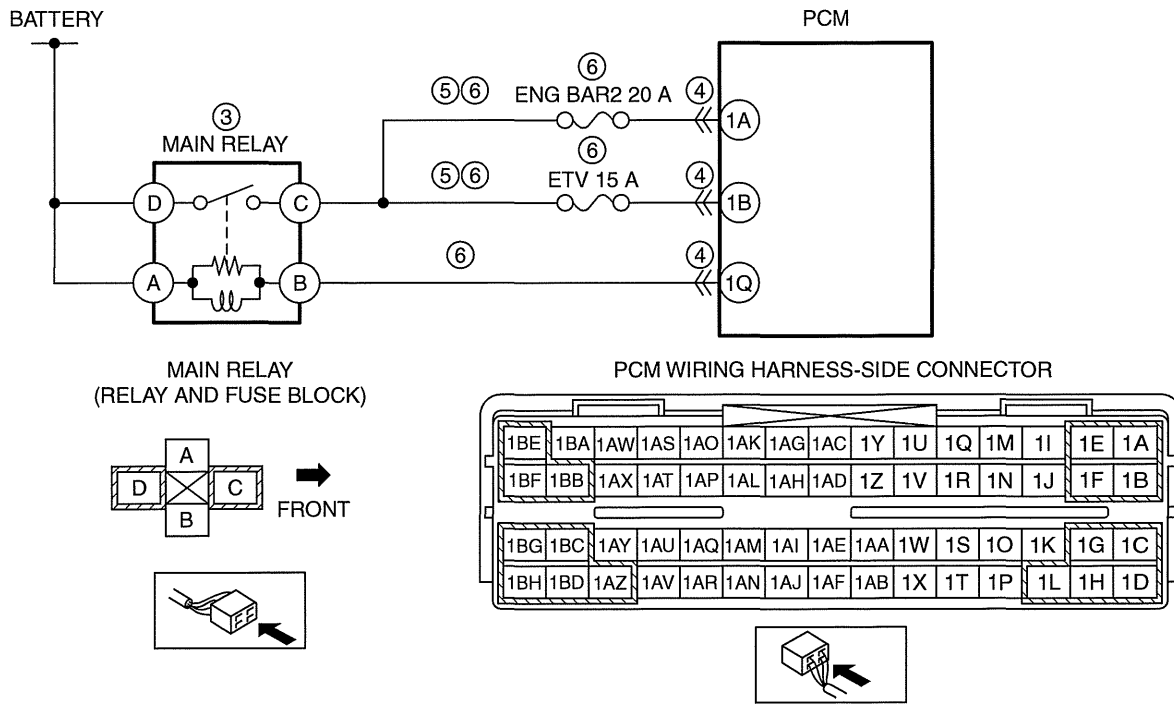

ON-BOARD DIAGNOSTIC [LF, L5]

DTC P2101:00 [LF, L5]

id0102c8707700

01-02A

DTC P2101:00	Throttle valve actuator circuit range/performance problem
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM turns the main relay on but the input voltage is 4 V or less, the PCM determines that the main relay control circuit voltage is low. The PCM monitors the input voltage from the main relay. The PCM turns the main relay off but the input voltage is 4 V or more, the PCM determines that the main relay control circuit voltage is high. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Main relay malfunction PCM connector or terminals malfunction Short to power supply in wiring harness between the following terminals: <ul style="list-style-type: none"> — Main relay terminal C—PCM terminal 1A — Main relay terminal C—PCM terminal 1B Short to ground or open circuit in main relay circuit <ul style="list-style-type: none"> — Short to ground in wiring harness between the following terminals: <ul style="list-style-type: none"> Main relay terminal C—PCM terminal 1A Main relay terminal C—PCM terminal 1B Main relay terminal B—PCM terminal 1Q — ENG BAR2 20 A fuse malfunction — ETV 15 A fuse malfunction — Open circuit in wiring harness between the following terminals: <ul style="list-style-type: none"> Main relay terminal C—PCM terminal 1A Main relay terminal C—PCM terminal 1B Main relay terminal B—PCM terminal 1Q PCM malfunction

ON-BOARD DIAGNOSTIC [LF, L5]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> • Has the snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	INSPECT MAIN RELAY <ul style="list-style-type: none"> • Switch the ignition to off. • Remove the main relay. • Inspect the main relay. (See 09-21-17 RELAY INSPECTION.) • Is there any malfunction? 	Yes	Replace the main relay, then go to Step 7.
		No	Go to the next step.
4	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 7.
		No	Go to the next step.
5	INSPECT MAIN RELAY CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • Main relay is removed. • PCM connector is disconnected. • Switch the ignition to ON (engine off). • Measure the voltage between the following terminals (wiring harness-side) and body ground: <ul style="list-style-type: none"> — PCM terminal 1A — PCM terminal 1B • Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 7.
		No	Go to the next step.
6	INSPECT MAIN RELAY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT <ul style="list-style-type: none"> • Main relay is removed. • PCM connector is disconnected. • Switch the ignition to off. • Install the main relay. • Switch the ignition to ON (engine off). • Measure the voltage between the following terminals (wiring harness-side) and body ground: <ul style="list-style-type: none"> — PCM terminal 1A — PCM terminal 1B — PCM terminal 1Q • Is the voltage normal? (See 01-40A-8 PCM INSPECTION [LF, L5].) 	Yes	Go to the next step.
		No	If the PCM terminal 1A and/or 1B voltage is abnormal: <ul style="list-style-type: none"> • Inspect the ENG BAR2 20 A fuse and ETV 15 A fuse. <ul style="list-style-type: none"> — If the fuse is melt: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible short to ground. • Replace the malfunctioning fuse. — If the fuse is deterioration: <ul style="list-style-type: none"> • Replace the malfunctioning fuse. — If the fuse is normal: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible open circuit. If the PCM terminal 1Q voltage is abnormal: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible short or open circuit. Go to the next step.
7	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Perform the KOER self test. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) • Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
8	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [LF, L5]

Diagnostic procedure

STEP	INSPECTION	ACTION
1	VERIFY SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the snapshot data been recorded? 	Yes Go to the next step.
		No Record the snapshot data on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No Go to the next step.
3	VERIFY RELATED PENDING CODE AND STORED DTC <ul style="list-style-type: none"> Switch the ignition to off, then to ON (engine off). Perform the DTC Reading Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Is the DTC P0122:00, P0123:00, P0222:00 or P0223:00 also present? 	Yes Go to the applicable DTC inspection. (See 01-02A-71 DTC P0122:00 [LF, L5].) (See 01-02A-73 DTC P0123:00 [LF, L5].) (See 01-02A-110 DTC P0222:00 [LF, L5].) (See 01-02A-112 DTC P0223:00 [LF, L5].)
		No Go to the next step.
4	INSPECT THROTTLE BODY CONNECTOR CONDITION <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the throttle body connector. Inspect for poor connection (such as damaged/pulled-out pins, corrosion). Is there any malfunction? 	Yes Repair or replace the terminal and/or connector, then go to Step 9.
		No Go to the next step.
5	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> Disconnect the PCM connector. Inspect for poor connection (such as damaged/pulled-out pins, corrosion). Is there any malfunction? 	Yes Repair or replace the terminal and/or connector, then go to Step 9.
		No Go to the next step.
6	VERIFY INTERMITTENT MALFUNCTION AT TP SENSOR NO.1 CIRCUIT <ul style="list-style-type: none"> Perform the "INTERMITTENT CONCERN TROUBLESHOOTING" to TP sensor No.1 related harnesses and connectors. (See 01-03A-84 INTERMITTENT CONCERN TROUBLESHOOTING [LF, L5].) Is there any malfunction? 	Yes Repair or replace the malfunctioning part according to the inspection results, then go to Step 9.
		No Go to the next step.
7	VERIFY INTERMITTENT MALFUNCTION AT TP SENSOR NO.2 CIRCUIT <ul style="list-style-type: none"> Perform the "INTERMITTENT CONCERN TROUBLESHOOTING" to TP sensor No.2 related harnesses and connectors. (See 01-03A-84 INTERMITTENT CONCERN TROUBLESHOOTING [LF, L5].) Is there any malfunction? 	Yes Repair or replace the malfunctioning part according to the inspection results, then go to Step 9.
		No Go to the next step.
8	INSPECT TP SENSOR <ul style="list-style-type: none"> Inspect the TP sensor No.1 and No.2. (See 01-40A-26 THROTTLE POSITION (TP) SENSOR INSPECTION [LF, L5].) Is there any malfunction? 	Yes Replace the throttle body, then go to the next step. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
		No Go to the next step.
9	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) Perform the KOER self test. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) Is the same DTC present? 	Yes Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No Go to the next step.

01-02A

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
10	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

DTC P2119:00 [LF, L5]

id0102c8708200

DTC P2119:00	Throttle valve actuator control throttle body range/performance problem
DETECTION CONDITION	<ul style="list-style-type: none"> • The PCM compares the TP with the default TP when switch the ignition to off. If the TP is higher than the default TP, the PCM determines that there is a throttle valve actuator control throttle body range/performance problem. Diagnostic support note <ul style="list-style-type: none"> • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Throttle valve malfunction • Throttle valve actuator malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> • Has the snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	INSPECT THROTTLE VALVE ACTUATOR <ul style="list-style-type: none"> • Switch the ignition to off. • Inspect the throttle valve and throttle valve actuator. (See 01-13A-6 THROTTLE BODY INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the throttle body, then go to the next step. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
4	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Clear the DTC from the PCM memory using the M-MDS. 		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [LF, L5]

DTC P2183:00 [LF, L5]

id0102c8940000

DTC P2183:00	ECT sensor No.2 circuit range/performance problem
DETECTION CONDITION	<ul style="list-style-type: none"> When the ECT sensor No.2 detected temperature is approx. 8.1 °C higher than the IAT, or the ECT sensor No.2 detected temperature is approx. 13.8 °C less than the IAT with the ignition switch is ON*. *: Ignition switch is ON when 6s or mor have passed since the ignition was switched to off. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is an continuous monitor (engine cooling system). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> ECT sensor No.2 connector or terminals malfunction PCM connector or terminals malfunction ECT sensor No.2 malfunction Thermostat malfunction PCM malfunction

01-02A

Diagnostic procedure

STEP	INSPECTION	ACTION
1	VERIFY SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> Have the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (engine cooling system) been recorded? 	Yes Go to the next step.
		No Record the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No Go to the next step.
3	IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (Mode 2) <ul style="list-style-type: none"> Is the DTC P2183:00 on FREEZE FRAME DATA (Mode 2)? 	Yes Go to the next step.
		No Go to troubleshooting for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02A-17 DTC TABLE [LF, L5].)
4	INSPECT ECT SENSOR NO.2 CONNECTOR CONDITION <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the ECT sensor No.2 connector. Inspect for poor connection (such as damaged/pulled-out pins, corrosion). Is there any malfunction? 	Yes Repair or replace the terminal and/or connector, then go to Step 9.
		No Go to the next step.
5	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> Disconnect the PCM connector. Inspect for poor connection (such as damaged/pulled-out pins, corrosion). Is there any malfunction? 	Yes Repair or replace the terminal and/or connector, then go to Step 9.
		No Go to the next step.
6	INSPECT ECT SENSOR NO.2 <ul style="list-style-type: none"> Inspect the ECT sensor No.2. (See 01-40A-24 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [LF, L5].) Is there any malfunction? 	Yes Replace the ECT sensor No.2, then go to Step 9. (See 01-40A-23 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [LF, L5].)
		No Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
7	COMPARE ECT2 PID VALUE <ul style="list-style-type: none"> • Prepare a new ECT sensor No.2. • Connect the ECT sensor No.2 connector to the new one without installing to the engine. • Switch the ignition to ON and record the ECT PID value. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Switch the ignition to off. • Replace the malfunction ECT sensor No.2 with new one. • Start the engine and wait for 5 min or more. • Record the ECT2 PID value. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Is the difference between each ECT PID values 6 °C {43 °F} or more? 	Yes	Go to the next step.
		No	Go to Step 9.
8	INSPECT THERMOSTAT <ul style="list-style-type: none"> • Inspect the thermostat. (See 01-12A-12 THERMOSTAT INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the thermostat, then go to the next step. (See 01-12A-11 THERMOSTAT REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
9	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Switch the ignition to off. • Start the engine and warm it up completely. • Perform the DTC Reading Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
10	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [LF, L5]

DTC P2195:00 [LF, L5]

id0102c8709300

01-02A

DTC P2195:00	A/F sensor signal stuck lean
DETECTION CONDITION	<ul style="list-style-type: none"> • The PCM monitors the equivalence ratio output when the following conditions are met. If the equivalence ratio is more than 1.15 for 25 s, the PCM determines that the A/F sensor signal remains lean. <p>MONITORING CONDITIONS</p> <ul style="list-style-type: none"> — ECT: more than 60 °C {140 °F} — Engine speed: 1,000—3,200 rpm — Absolute load: 20—62.5% — Output voltage from the A/F sensor: more than 0.2 V <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is an intermittent monitor (A/F sensor, HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • A/F sensor heater malfunction • A/F sensor malfunction <ul style="list-style-type: none"> — Looseness A/F sensor — Leakage exhaust system — A/F sensor malfunction • Air suction in intake air system • MAF sensor malfunction • Fuel supply system malfunction or improper fuel line pressure <ul style="list-style-type: none"> — Pressure regulator (built-in fuel injection pump) malfunction — Fuel pump unit malfunction — Fuel leakage on fuel line from fuel distributor and fuel pump — Fuel filter clogged or restricted • Fuel injector malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> • Have the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor, HO2S related) been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY RELATED PENDING CODE AND STORED DTC <ul style="list-style-type: none"> • Switch the ignition to off, then to ON (engine off). • Perform the DTC Reading Procedure and Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Are any other DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	Go to the next step.
4	IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2) <ul style="list-style-type: none"> • Perform the Freeze Frame PID Data Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Is the DTC P2195:00 on FREEZE FRAME DATA (Mode 2)? 	Yes	Go to the next step.
		No	Go to the troubleshooting procedures for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02A-17 DTC TABLE [LF, L5].)

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
5	INSPECT A/F SENSOR HEATER <ul style="list-style-type: none"> • Switch the ignition to off. • Inspect the A/F sensor heater. (See 01-40A-28 AIR FUEL RATIO (A/F) SENSOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the A/F sensor, then go to Step 15. (See 01-40A-27 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
6	INSPECT INSTALLATION OF A/F SENSOR <ul style="list-style-type: none"> • Inspect if the A/F sensor is loosely installed. • Is the A/F sensor installed securely? 	Yes	Go to the next step.
		No	Retighten the A/F sensor, then go to Step 15.
7	INSPECT EXHAUST GAS LEAKAGE <ul style="list-style-type: none"> • Visually inspect for the exhaust gas leakage between the exhaust manifold and A/F sensor. • Is there any leakage? 	Yes	Repair or replace the malfunctioning parts according to the inspection results, then go to Step 15.
		No	Go to the next step.
8	INSPECT A/F SENSOR <ul style="list-style-type: none"> • Inspect the A/F sensor. (See 01-40A-28 AIR FUEL RATIO (A/F) SENSOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the A/F sensor, then go to Step 15. (See 01-40A-27 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
9	INSPECT INTAKE AIR SYSTEM FOR EXCESSIVE AIR SUCTION <ul style="list-style-type: none"> • Visually inspect the hose in intake air system for looseness, cracks or damages. <p>Note</p> <ul style="list-style-type: none"> • Engine speed may change when rust penetrating agent is sprayed on the air suction area. <ul style="list-style-type: none"> • Is there any malfunction? 	Yes	Repair or replace the malfunctioning parts according to the inspection results, then go to Step 15.
		No	Go to the next step.
10	VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR <ul style="list-style-type: none"> • Connect the M-MDS to the DLC-2. • Start the engine. • Access the MAF PID using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Verify that the MAF PID changes quickly according to engine speed. • Is the MAF PID value normal? (See 01-40A-8 PCM INSPECTION [LF, L5].) 	Yes	Go to the next step.
		No	Replace the MAF/IAT sensor, then go to Step 15. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
11	INSPECT FUEL LINE PRESSURE <ul style="list-style-type: none"> • Switch the ignition to off. <p>Note</p> <ul style="list-style-type: none"> • If engine will not start, inspect fuel line pressure with ignition is switched to ON. <ul style="list-style-type: none"> • Inspect fuel line pressure while engine running. (See 01-14A-6 FUEL LINE PRESSURE INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Fuel pressure is too high: <ul style="list-style-type: none"> • Replace the fuel pump unit, then go to Step 15. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].) Fuel pressure is low: <ul style="list-style-type: none"> • Go to the next step.
		No	Go to Step 14.
12	INSPECT FUEL LINE <ul style="list-style-type: none"> • Visually inspect the fuel line from fuel pump to fuel injector for any leakage. • Is there any leakage? 	Yes	Repair or replace the malfunctioning parts according to the inspection results, then go to Step 15.
		No	Go to the next step.
13	INSPECT FUEL FILTER <ul style="list-style-type: none"> • Visually inspect the fuel filter for foreign materials or stain. • Is there any malfunction? 	Yes	Repair or replace the malfunctioning parts according to the inspection results, then go to Step 15.
		No	Go to the next step.
14	INSPECT FUEL INJECTOR OPERATION <ul style="list-style-type: none"> • Perform the Fuel Injector Operation Inspection. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning parts according to the inspection results, then go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
15	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Perform the Drive Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02A-12 OBD-II DRIVE MODE [LF, L5].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
16	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

01-02A

DTC P2196:00 [LF, L5]

id0102c8709400

DTC P2196:00	A/F sensor signal stuck rich
DETECTION CONDITION	<ul style="list-style-type: none"> • The PCM monitors the equivalence ratio when the following conditions are met. If the equivalence ratio is less than 0.85 for 25 s, the PCM determines that the A/F sensor signal remains rich. <p>MONITORING CONDITIONS</p> <ul style="list-style-type: none"> — ECT: more than 60 °C {140 °F} — Engine speed: 1,000—3,200 rpm — Absolute load: 20—62.5% — Output voltage from the A/F sensor: less than 0.7 V <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is an intermittent monitor (A/F sensor, HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • A/F sensor heater malfunction • A/F sensor malfunction <ul style="list-style-type: none"> — Looseness A/F sensor — Leakage exhaust system — A/F sensor malfunction • Air suction in intake air system • MAF sensor malfunction • Fuel supply system malfunction or improper fuel line pressure <ul style="list-style-type: none"> — Pressure regulator (built-in fuel injection pump) malfunction — Fuel pump unit malfunction — Fuel leakage on fuel line from fuel distributor and fuel pump — Fuel filter clogged or restricted • Fuel injector malfunction • PCM malfunction

ON-BOARD DIAGNOSTIC [LF, L5]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> • Have the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor, HO2S related) been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY RELATED PENDING CODE AND STORED DTC <ul style="list-style-type: none"> • Switch the ignition to off, then to ON (engine off). • Perform the DTC Reading Procedure and Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Are any other DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	Go to the next step.
4	IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2) <ul style="list-style-type: none"> • Perform the Freeze Frame PID Data Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Is the DTC P2196:00 on FREEZE FRAME DATA (Mode 2)? 	Yes	Go to the next step.
		No	Go to the troubleshooting procedures for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02A-17 DTC TABLE [LF, L5].)
5	INSPECT A/F SENSOR HEATER <ul style="list-style-type: none"> • Switch the ignition to off. • Inspect the A/F sensor heater. (See 01-40A-28 AIR FUEL RATIO (A/F) SENSOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the A/F sensor, then go to Step 15. (See 01-40A-27 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
6	INSPECT INSTALLATION OF A/F SENSOR <ul style="list-style-type: none"> • Inspect if the A/F sensor is loosely installed. • Is the A/F sensor installed securely? 	Yes	Go to the next step.
		No	Retighten the A/F sensor, then go to Step 15.
7	INSPECT EXHAUST GAS LEAKAGE <ul style="list-style-type: none"> • Visually inspect for the exhaust gas leakage between the exhaust manifold and A/F sensor. • Is there any leakage? 	Yes	Repair or replace the malfunctioning parts according to the inspection results, then go to Step 15.
		No	Go to the next step.
8	INSPECT A/F SENSOR <ul style="list-style-type: none"> • Inspect the A/F sensor. (See 01-40A-28 AIR FUEL RATIO (A/F) SENSOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the A/F sensor, then go to Step 15. (See 01-40A-27 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
9	INSPECT INTAKE AIR SYSTEM FOR EXCESSIVE AIR SUCTION <ul style="list-style-type: none"> • Visually inspect the hose in intake air system for looseness, cracks or damages. <p>Note</p> <ul style="list-style-type: none"> • Engine speed may change when rust penetrating agent is sprayed on the air suction area. <ul style="list-style-type: none"> • Is there any malfunction? 	Yes	Repair or replace the malfunctioning parts according to the inspection results, then go to Step 15.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
10	VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR <ul style="list-style-type: none"> • Connect the M-MDS to the DLC-2. • Start the engine. • Access the MAF PID using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Verify that the MAF PID changes quickly according to engine speed. • Is the MAF PID value normal? (See 01-40A-8 PCM INSPECTION [LF, L5].) 	Yes	Go to the next step.
		No	Replace the MAF/IAT sensor, then go to Step 15. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
11	INSPECT FUEL LINE PRESSURE <ul style="list-style-type: none"> • Switch the ignition to off. <p>Note</p> <ul style="list-style-type: none"> • If engine will not start, inspect fuel line pressure with ignition is switched to ON. <ul style="list-style-type: none"> • Inspect the fuel line pressure while the engine is running. (See 01-14A-6 FUEL LINE PRESSURE INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Fuel pressure is too high: <ul style="list-style-type: none"> • Replace the fuel pump unit, then go to Step 15. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].) Fuel pressure is low: <ul style="list-style-type: none"> • Go to the next step.
		No	Go to Step 14.
12	INSPECT FUEL LINE <ul style="list-style-type: none"> • Visually inspect the fuel line from fuel pump to fuel injector for any leakage. • Is there any leakage? 	Yes	Repair or replace the malfunctioning parts according to the inspection results, then go to Step 15.
		No	Go to the next step.
13	INSPECT FUEL FILTER <ul style="list-style-type: none"> • Visually inspect the fuel filter for foreign materials or stain. • Is there any malfunction? 	Yes	Repair or replace the malfunctioning parts according to the inspection results, then go to Step 15.
		No	Go to the next step.
14	INSPECT FUEL INJECTOR OPERATION <ul style="list-style-type: none"> • Perform the Fuel Injector Operation Inspection. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning parts according to the inspection results, then go to the next step.
		No	Go to the next step.
15	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Perform the Drive Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02A-12 OBD-II DRIVE MODE [LF, L5].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
16	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

01-02A

ON-BOARD DIAGNOSTIC [LF, L5]

DTC P2228:00 [LF, L5]

id0102c8153200

DTC P2228:00	BARO sensor circuit low input
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors input voltage from the BARO sensor. If the input voltage is below 1.95 V for 5 s, the PCM determines that BARO sensor circuit has a malfunction. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> BARO sensor (built-in PCM) malfunction PCM malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	INSPECT BARO SENSOR <ul style="list-style-type: none"> Inspect the BARO sensor. (See 01-40A-26 BAROMETRIC PRESSURE (BARO) SENSOR INSPECTION [LF, L5].) Is there any malfunction? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
4	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) Perform the KOEO/KOER self test. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
5	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [LF, L5]

DTC P2229:00 [LF, L5]

id0102c8153300

DTC P2229:00	BARO sensor circuit high input
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors input voltage from the BARO sensor. If the input voltage is above 4.45 V for 5 s, the PCM determines that BARO sensor circuit has a malfunction. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in PCM memory.

		No	DTC troubleshooting completed.

01-02A

DTC P2502:00 [LF, L5]

id0102c8709500

DTC P2502:00	Charging system voltage problem
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM determines that the generator output voltage is above 17 V or battery voltage is below 11 V while the engine is running. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (other). The MIL does not illuminate. FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Battery malfunction Poor installation of generator terminal Short to ground or open circuit in generator power supply circuit <ul style="list-style-type: none"> — Short to ground in wiring harness between generator terminal B and battery positive terminal — STARTER fuse 250 A (LF)/450 A (L5) malfunction — Open circuit in wiring harness between generator terminal B and battery positive terminal Generator malfunction PCM malfunction

ON-BOARD DIAGNOSTIC [LF, L5]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	INSPECT BATTERY <ul style="list-style-type: none"> • Switch the ignition to off. • Inspect the battery. (See 01-17A-4 BATTERY INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Recharge or replace the battery, then go to Step 6. (See 01-17A-5 BATTERY RECHARGING [LF, L5].) (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
3	INSPECT POOR INSTALLATION OF GENERATOR TERMINAL <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the generator connector. • Inspect for looseness of generator terminal B installation nut. • Is the nut loose? 	Yes	Tighten generator terminal B installation nut, then go to Step 6.
		No	Go to the next step.
4	INSPECT BATTERY CHARGING CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT <ul style="list-style-type: none"> • Generator connector is disconnected. • Switch the ignition to ON (engine off). • Measure the voltage between generator terminal B (wiring harness-side) and body ground. • Is the voltage B+? 	Yes	Go to the next step.
		No	Inspect the STARTER 250 A (LF)/450 A (L5) fuse. <ul style="list-style-type: none"> • If the fuse is melt: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deterioration: <ul style="list-style-type: none"> — Replace the fuse. • If the fuse is normal: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible open circuit. Go to Step 6.
5	INSPECT GENERATOR <ul style="list-style-type: none"> • Inspect the generator. (See 01-17A-8 GENERATOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the generator, then go to the next step. (See 01-17A-6 GENERATOR REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
6	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Perform the KOER self test. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) • Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
7	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

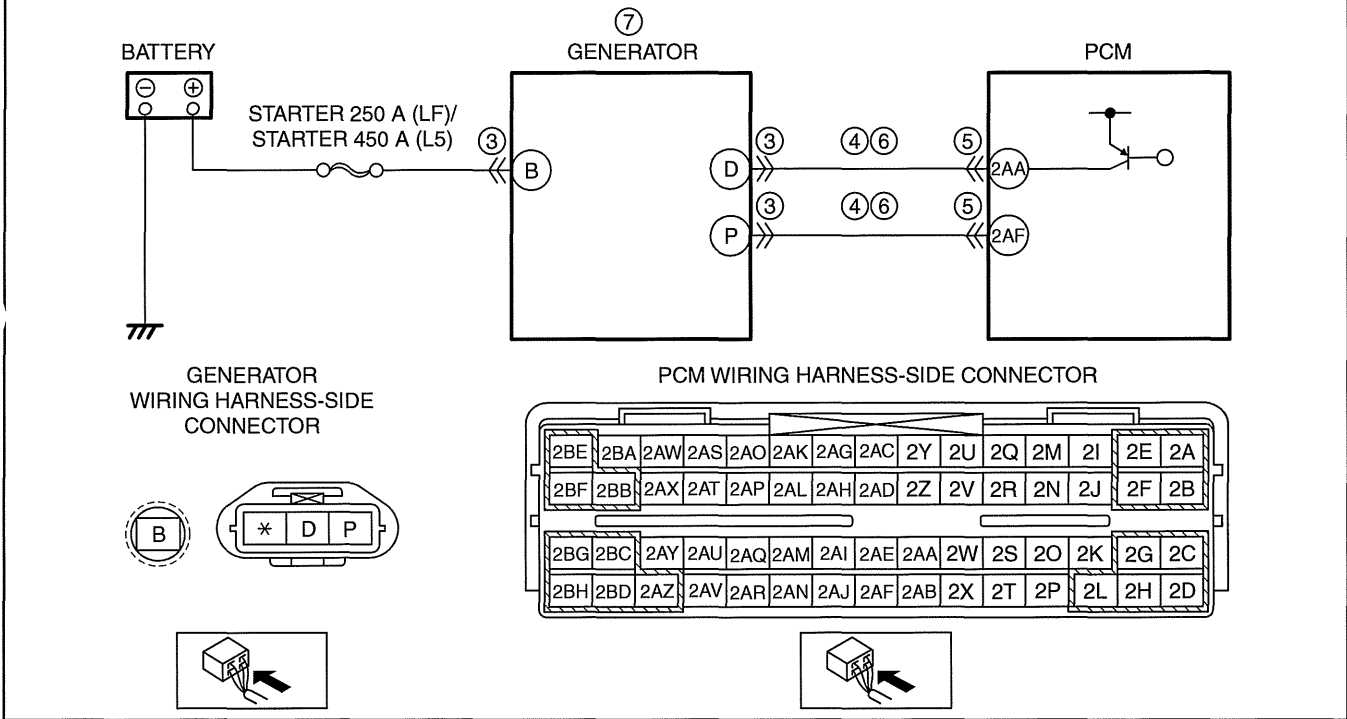

ON-BOARD DIAGNOSTIC [LF, L5]

DTC P2503:00 [LF, L5]

id0102c8709600

01-02A

DTC P2503:00	Charging system voltage low input
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM needs more than 20 A from the generator, and determines that the generator output voltage is below 8.5 V while the engine running. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (other). The MIL does not illuminate. FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Drive belt exceed limit Generator connector or terminals malfunction Short to ground in wiring harness between the following terminals: <ul style="list-style-type: none"> — Generator terminal D—PCM terminal 2AA — Generator terminal P—PCM terminal 2AF PCM connector or terminals malfunction Open circuit in wiring harness between the following terminals: <ul style="list-style-type: none"> — Generator terminal D—PCM terminal 2AA — Generator terminal P—PCM terminal 2AF Generator malfunction PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	INSPECT DRIVE BELT CONDITION <ul style="list-style-type: none"> Verify that the drive belt auto tensioner indicator mark does not exceed limit. Is the drive belt normal? 	Yes	Go to the next step.
		No	Replace the drive belt, then go to Step 8. (See 01-10A-6 DRIVE BELT REMOVAL/INSTALLATION [LF, L5].)
3	INSPECT GENERATOR CONNECTOR CONDITION <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the generator connector. Inspect for poor connection (such as damaged/pulled-out pins, corrosion). Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 8.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION	
4	INSPECT GENERATOR CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • Generator connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: <ul style="list-style-type: none"> — Generator terminal D — Generator terminal P • Is there continuity? 	Yes	If the short to ground circuit could be detected: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected: <ul style="list-style-type: none"> • Replace the PCM (short to ground in PCM internal circuit). (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].) Go to Step 8.
		No	Go to the next step.
5	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 8.
		No	Go to the next step.
6	INSPECT GENERATOR CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Generator and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): <ul style="list-style-type: none"> — Generator terminal D—PCM terminal 2AA — Generator terminal P—PCM terminal 2AF • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 8.
7	INSPECT GENERATOR <ul style="list-style-type: none"> • Inspect the generator. (See 01-17A-8 GENERATOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Replace the generator, then go to the next step. (See 01-17A-6 GENERATOR REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
8	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Perform the KOER self test. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) • Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
9	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [LF, L5]

DTC P2504:00 [LF, L5]

id0102c8709700

DTC P2504:00	Charging system voltage high input
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM determines that the generator output voltage is above 18.5 V or battery voltage is above 16 V while the engine running. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (other). The MIL does not illuminate. FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Generator connector or terminals malfunction PCM connector or terminals malfunction Short to power supply in wiring harness between generator terminal D and PCM terminal 2AA Generator malfunction PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	INSPECT GENERATOR CONNECTOR CONDITION <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the generator connector. Inspect for poor connection (such as damaged/pulled-out pins, corrosion). Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 6.
		No	Go to the next step.
3	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> Disconnect the PCM connector. Inspect for poor connection (such as damaged/pulled-out pins, corrosion). Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 6.
		No	Go to the next step.
4	INSPECT GENERATOR CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> Generator and PCM connectors are disconnected. Switch the ignition to ON (engine off). Measure the voltage between generator terminal D (wiring harness-side) and body ground. Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 6.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [LF, L5]

STEP	INSPECTION	ACTION
5	INSPECT GENERATOR <ul style="list-style-type: none"> Inspect the generator. (See 01-17A-8 GENERATOR INSPECTION [LF, L5].) Is there any malfunction? 	Yes Replace the generator, then go to the next step. (See 01-17A-6 GENERATOR REMOVAL/INSTALLATION [LF, L5].)
		No Go to the next step.
6	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) Perform the KOER self test. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) Is the same DTC present? 	Yes Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No Go to the next step.
7	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) Are any DTCs present? 	Yes Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No DTC troubleshooting completed.

DTC P2507:00 [LF, L5]

id0102c8709800

DTC P2507:00	PCM battery voltage low input
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the voltage of backup battery positive terminal. If the PCM detects battery positive terminal voltage below 2.5 V for 5 s when the battery voltage is more than 8 V, the PCM determines that the backup voltage circuit has a malfunction. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Battery malfunction PCM connector or terminals malfunction Short to ground or open circuit in PCM power supply circuit <ul style="list-style-type: none"> Short to ground in wiring harness between battery positive terminal and PCM terminal 1C ENG+B 10 A fuse malfunction Open circuit in wiring harness between battery positive terminal and PCM terminal 1C PCM malfunction

PCM WIRING HARNESS-SIDE CONNECTOR

ON-BOARD DIAGNOSTIC [LF, L5]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> • Has the snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	INSPECT BATTERY <ul style="list-style-type: none"> • Inspect the battery. (See 01-17A-4 BATTERY INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Recharge or replace the battery, then go to Step 6. (See 01-17A-5 BATTERY RECHARGING [LF, L5].) (See 01-17A-2 BATTERY REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
4	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the terminal and/or connector, then go to Step 6.
		No	Go to the next step.
5	INSPECT MONITOR CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT <ul style="list-style-type: none"> • PCM connector is disconnected. • Measure the voltage between PCM terminal 1C (wiring harness-side) and body ground. • Is the voltage B+? 	Yes	Go to the next step.
		No	Inspect the ENG+B 10 A fuse. <ul style="list-style-type: none"> • If the fuse is melt: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deterioration: <ul style="list-style-type: none"> — Replace the fuse. • If the fuse is normal: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible open circuit. Go to the next step.
6	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Perform the KOEO/KOER self test. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) • Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
7	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [LF, L5]

DTC P2610:00 [LF, L5]

id0102c8303800

DTC P2610:00	PCM internal engine off timer performance problem
DETECTION CONDITION	<ul style="list-style-type: none"> • The PCM internal engine off timer is damaged. <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • PCM internal engine off timer malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> • Has the snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the snapshot data on repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Clear the DTC from the PCM memory using the M-MDS. (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Start the engine and warm it up completely. • Perform the Pending Trouble Code Access Procedure. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
4	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02A-11 AFTER REPAIR PROCEDURE [LF, L5].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [LF, L5]

DTC U3000:41 [LF, L5]

id0102c8851600

DTC U3000:41	PCM processor error
DETECTION CONDITION	<ul style="list-style-type: none"> • The PCM internal EEPROM malfunction. <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is a continuous monitor (other). • The MIL does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is not stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • PCM internal malfunction

Diagnostic procedure

ON-BOARD DIAGNOSTIC [L3 WITH TC]

FOREWORD [L3 WITH TC]

id010239800300

- When the customer reports a vehicle malfunction, check the malfunction indicator lamp (MIL) indication and diagnostic trouble code (DTC), then diagnose the malfunction according to the following flowchart.
 - If a DTC exists, diagnose the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
 - If a DTC does not exist and the MIL does not illuminate or flash, diagnose the applicable symptom troubleshooting. (See 01-03B-4 SYMPTOM DIAGNOSTIC INDEX [L3 WITH TC].)

01-02B

am3uuw0000586

* : Malfunction Indicator Lamp (MIL), Generator Warning Light, Security Light

OBD-II PENDING TROUBLE CODE [L3 WITH TC]

id010239800400

- These appear when a problem is detected in a monitored system. The code for a failed system is stored in the PCM memory in the first drive cycle. This code is called the pending code. If the PCM determines that the system has returned to normal or the problem was mistakenly detected, it deletes the pending code. If the problem is found in the second drive cycle, too the PCM determines that the system is malfunctioning, and the DTC is stored.

OBD-II FREEZE FRAME DATA [L3 WITH TC]

id010239800500

- This is technical data which indicates the engine condition at the time of the first malfunction. This data will remain in the memory even if another emission-related DTC is stored, with the exception of the Misfire or Fuel System DTCs. Once freeze frame data for the Misfire or Fuel System DTC is stored, it will overwrite any previous data and the freeze frame will not be overwritten again.

OBD-II ON-BOARD SYSTEM READINESS TEST [L3 WITH TC]

id010239800600

- This shows the OBD-II systems operating status. If any monitor function is incomplete, the M-MDS will identify which monitor function has not been completed. Misfires, Fuel System and Comprehensive Components (CCM) are continuous monitoring-type functions. The catalyst, EGR system, EVAP system and A/F sensor, HO2S will be monitored under drive cycles. The OBD-II diagnostic system is initialized by performing the DTC cancellation procedure or disconnecting the negative battery cable.

OBD-II DIAGNOSTIC MONITORING TEST RESULTS [L3 WITH TC]

id010239800700

- These result from the intermittent monitor system technical data, which are used to determine whether the system is normal or not. They also display the system's thresholds and diagnostic results. The intermittent monitor system monitors the A/F sensor, HO2S, EVAP system, catalyst and the EGR system.

OBD-II READ/CLEAR DIAGNOSTIC TEST RESULTS [L3 WITH TC]

id010239800800

- This retrieves all stored DTCs in the PCM and clears the DTC, Freeze Frame Data, On-Board Readiness Test Results, Diagnostic Monitoring Test Results and Pending Trouble Codes.

01-02B-7

ON-BOARD DIAGNOSTIC [L3 WITH TC]

OBD-II PARAMETER IDENTIFICATION (PID) ACCESS [L3 WITH TC]

id010239800900

- The PID mode allows access to certain data values, analog and digital inputs and outputs, calculated values and system status information. Since PID values for output devices are PCM internal data values, inspect each device to identify which output devices are malfunctioning.

ON-BOARD DIAGNOSTIC TEST [L3 WITH TC]

id010239801000

DTC Reading Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Self Test".
 2. Select "Modules".
 3. Select "PCM".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "PCM".
 3. Select "Self Test".
3. Then, select the "Retrieve CMDTCs" and perform procedures according to directions on the M-MDS screen.
4. Verify the DTC according to the directions on the M-MDS screen.
 - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
5. After completion of repairs, clear all DTCs stored in the PCM, while referring to "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].)

am3uun0000054

Pending Trouble Code Access Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Self Test".
 2. Select "Modules".
 3. Select "PCM".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "PCM".
 3. Select "Self Test".
3. Then, select the "Retrieve CMDTCs" and perform procedures according to directions on the M-MDS screen.
4. Retrieve the pending trouble codes according to the directions on the M-MDS screen.

am3uun0000054

Freeze Frame PID Data Access Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Self Test".
 2. Select "Modules".
 3. Select "PCM".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "PCM".
 3. Select "Self Test".
3. Then, select the "Retrieve CMDTCs" and perform procedures according to directions on the M-MDS screen.
4. Retrieve the freeze frame PID data according to the directions on the M-MDS screen.

am3uun0000054

Note

- Freeze frame data/snapshot data appears at the top of the help screen when the displayed DTC is selected.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

01-02B

Freeze frame data

- The freeze frame data consists of data for vehicle and engine control system operation conditions when malfunctions in the engine control system are detected and stored in the PCM.
- Freeze frame data is stored at the instant the malfunction indicator lamp illuminates, and only a part of the DTC data is stored.
- For the freeze frame data, if there are several malfunctions in the engine control system, the data for the malfunction which occurred initially is stored. Thereafter, if a misfire or fuel injection control malfunction occurs, data from the misfire or fuel injection control malfunction is written over the initially stored data. However, if the initially stored freeze frame data is a misfire or fuel injection control malfunction, it is not overwritten.

Snapshot data

- The snap shot data stores the currently detected DTC data.
- The recording timing for the freeze frame data/snap shot data differs depending on the number of DTC drive cycles.
 - For a DTC with a drive cycle number 1, only the malfunction determination data is recorded.
 - For a DTC with a drive cycle number 2, both the malfunction determination and undetermined data is recorded.

Freeze frame data table

Note

- Refer to PID monitor table for confirm the engine control system operation status while the PCM does not store the DTC. (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)
- Freeze frame data items are not displayed, according to detected DTC.

Freeze frame data item	Unit	Description	Corresponding PID data monitor item
FUELSYS1	Open Loop/Closed Loop/OL-Drive/OL-Fault/CL-Fault	Fuel system status	FUELSYS
LOAD	%	Calculated engine load	—
ECT	°C	Engine coolant temperature	ECT
SFT1	%	Short term fuel trim	SHRTFT1
LFT1	%	Long term fuel trim	LONGFT1
MAP	kPa	Manifold absolute pressure	MAP
RPM	RPM	Engine speed	RPM
VS	KPH	Vehicle speed	VSS
SPARKADV	°	Ignition timing	SPARKADV
IAT	°C	Intake air temperature	IAT
MAF	g/sec	Mass airflow	MAF
TP	%	Throttle valve position No.1	TP1
RUNTM	hh:mm:ss	Time from engine start	—
EGRPCT	%	Target EGR valve position	SEGRP_DSD
FRP	kPa	Fuel pressure	FUEL_PRES
EVAPPCT	%	Purge solenoid valve controlled value	EVAPCP
FLI	%	Fuel level in fuel tank	FLI
WARMUPS	—	Number of warm-up cycle after DTC cleared	—
CLRDIST	Km	Mileage after DTC cleared	—
EVAP_VP	kPa	Fuel tank pressure	FTP
BARO	kPa	Barometric pressure	BARO
CATTEMP11	°C	Estimated catalytic converter temperature	CATT11_DSD
VPWR	V	Module supply voltage	VPWR
ALV	%	Engine load	LOAD
TP_REL	%	Relative throttle position	TP REL
AAT	°C	Ambient air temperature	AAT
TP_B	%	Throttle valve position No.2	TP2
APP_D	%	Accelerator pedal position No.1	APP1
APP_E	%	Accelerator pedal position No.2	APP2
TAC_PCT	%	Target throttle valve position	ETC_DSD

ON-BOARD DIAGNOSTIC [L3 WITH TC]

Snapshot data table

Note

- Refer to PID monitor table for confirm the engine control system operation status while the PCM does not store the DTC. (See 01-40B-8 PCM INSPECTION [L3 WITH TC].)
- Snapshot data items are not displayed, according to detected DTC.

Snapshot data item	Unit	Definition	Corresponding PID data monitor item
FUELSYS	OL/CL/OL-Drive/OL-Fault/CL-Fault	Fuel system status	FUELSYS
LOAD_C	%	Calculated engine load	—
ECT	°C	Engine coolant temperature	ECT
SHRTFT1	%	Short term fuel trim	SHRTFT1
LONGFT1	%	Long term fuel trim	LONGFT1
MAP	kPa	Manifold absolute pressure	MAP
RPM	RPM	Engine speed	RPM
VSS	KPH	Vehicle speed	VSS
SPARKADV	°	Ignition timing	SPARKADV
IAT	°C	Intake air temperature	IAT
MAF	g/sec	Mass airflow	MAF
TP1	%	Throttle valve position No.1	TP1
EG_RUN_TIME	—	Time from engine start	—
SEGRP_DSD	%	Target EGR valve position	SEGRP DSD
EVAPCP	%	Purge solenoid valve controlled value	EVAPCP
FLI	%	Fuel level in fuel tank	FLI
CLR_CNT	—	Number of warm-up cycle after DTC cleared	—
CLR_DIST	Km	Mileage after DTC cleared	—
FTP	kPa	Fuel tank pressure	FTP
BARO	kPa	Barometric pressure	BARO
CATT11_DSD	°C	Estimated catalytic converter temperature	CATT11_DSD
VPWR	V	Module supply voltage	VPWR
LOAD	%	Engine load	LOAD
EQ_RAT11_DSD	—	Target equivalence ratio (lambda)	EQ_RAT11_DSD
TP REL	%	Relative throttle position	TP REL
AAT	°C	Ambient air temperature	AAT
TP2	%	Throttle valve position No.2	TP2
APP1	%	Accelerator pedal position No.1	APP1
APP2	%	Accelerator pedal position No.2	APP2
ETC_DSD	%	Target throttle valve position	ETC_DSD

On-Board System Readiness Tests Access Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Powertrain".
 2. Select "OBD Test Modes".
 3. Select "Mode 1 Powertrain Data".
 4. Select "PCM".
 - When using the PDS (Pocket PC)
 1. Select "OBDII Modes".
 2. Select "Mode 1 Powertrain Data".
 3. Select "PCM".
3. Then, select the "****SUP" and "***EVAL" PIDs in the PID selection screen.
4. Monitor those PIDs and check it system monitor is completed.

am3uun000054

PID/DATA Monitor and Record Procedure

Note

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.

01-02B

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "DataLogger".
 2. Select "Modules".
 3. Select "PCM".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "PCM".
 3. Select "DataLogger".
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the detections on the screen.

am3uun000054

Diagnostic Monitoring Test Results Access Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Powertrain".
 2. Select "OBD Test Modes".
 3. Select "Mode 6 On-Board Test Results".
 - When using the PDS (Pocket PC)
 1. Select "OBDII Modes".
 2. Select "Mode 6 On-Board Test Results".
3. Verify the diagnostic monitoring test result according to the directions on the screen.

am3uun000054

Active Command Modes Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "DataLogger".
 2. Select "Modules".
 3. Select "PCM".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "PCM".
 3. Select "DataLogger".
3. Select the simulation items from the PID table.
4. Perform the simulation function, inspect the operations for each parts.
 - If the operation of output parts cannot be verified after the active command mode inspection is performed, this could indicate the possibility of an open or short circuit, sticking, or operation malfunction in the output parts.

am3uun000054

ON-BOARD DIAGNOSTIC [L3 WITH TC]

AFTER REPAIR PROCEDURE [L3 WITH TC]

id010239801100

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Self Test".
 2. Select "Modules".
 3. Select "PCM".
 4. Select "Retrieve CMDTCs".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "PCM".
 3. Select "Self Test".
 4. Select "Retrieve CMDTCs".
3. Verify the DTC according to the directions on the M-MDS screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Verify that no DTCs are displayed.

am3uun0000054

KOEO/KOER SELF TEST [L3 WITH TC]

id010239801200

KOEO Self Test

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Self Test".
 2. Select "Modules".
 3. Select "PCM".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "PCM".
 3. Select "Self Test".
3. Then, select the "KOEO On Demand Self Test" and perform procedures according to directions on the M-MDS screen.
4. Verify the DTC according to the directions on the M-MDS screen.
 - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
5. After completion of repairs, clear all DTCs stored in the PCM, while referring to "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].)

am3uun0000054

ON-BOARD DIAGNOSTIC [L3 WITH TC]

KOER Self Test

Note

- For vehicles with the variable valve timing control, execute a KOER self test after the variable valve timing learning is finished.
 - A KOER self test cannot be executed if the variable timing valve learning is not finished.
 - The variable valve timing learning is cleared if the PCM backup power supply is interrupted (including battery removal), or after reprogramming.
 - To perform variable valve timing learning, the engine speed needs to be increased momentarily to **approx. 2,000 rpm**.

01-02B

1. Connect the M-MDS to the DLC-2.
2. Idle the engine.
3. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
 - When using the IDS (laptop PC)
 1. Select "Self Test".
 2. Select "Modules".
 3. Select "PCM".
 - When using the PDS (Pocket PC)
 1. Select "Module Tests".
 2. Select "PCM".
 3. Select "Self Test".
4. Then, select the "KOER On Demand Self Test" and perform procedures according to directions on the M-MDS screen.
5. Verify the DTC according to the directions on the M-MDS screen.
 - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
6. After completion of repairs, clear all DTCs stored in the PCM, while referring to "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].)

am3uun000054

OBD-II DRIVE MODE [L3 WITH TC]

id010239801300

- Using the OBD-II Drive Mode, the monitoring item requested by OBD-II regulations can be easily diagnosed.
- Performing the Drive Mode inspects the OBD-II system for proper operation and must be performed to ensure that no additional DTCs are present.
- The OBD-II Drive Mode is divided into the specific Drive Mode and single Drive Mode.
- For the specific Drive Mode, specified Drive Modes have been set for each individual monitoring item requested by OBD-II regulations, and they can be diagnosed individually. For the single Drive Mode, the entire monitoring item requested by OBD-II regulations can be diagnosed.
- The following modes are in the specific Drive Mode. The applicable system is diagnosed by driving in the following Drive Modes.
 - Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S and TWC Repair Verification Drive Mode)
 - Mode 06 (EVAP System Repair Verification Drive Mode)
- The following systems are diagnosed with the single Drive Mode.
 - EGR system
 - Oxygen sensor (A/F sensor, HO2S)
 - Oxygen sensor heater (A/F sensor heater, HO2S heater)
 - Catalytic converter (TWC)
 - Evaporative (EVAP) system

Caution

- While performing the Drive Mode, always operate the vehicle in a safe and lawful manner.
- When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD function and inspect later.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

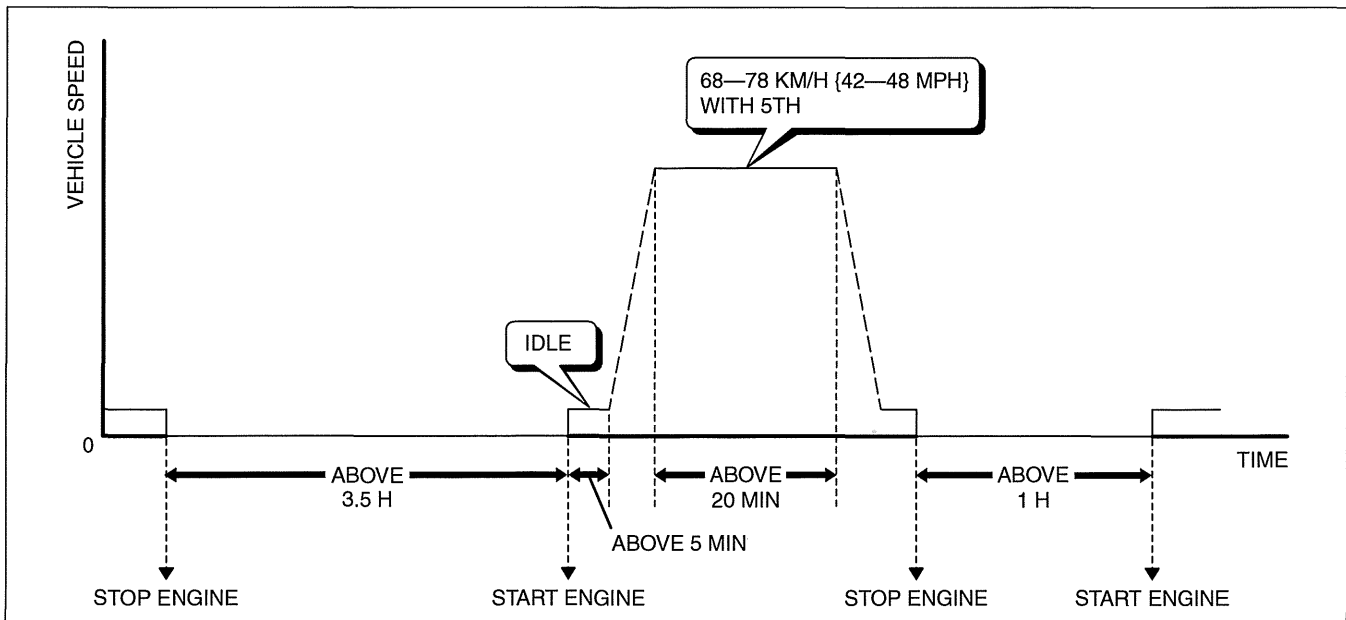

Mode 06 (EVAP System Repair Verification Drive Mode)

Note

- If “EVAP System Repair Verification Drive Mode” cannot be performed (it is impossible to drive the vehicle under this Drive Mode condition), perform evaporative system test procedure as an alternative. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].)

1. Verify that all of the following PIDs are within the following specifications. All PIDs must be within specifications before engine is started to initiate the evaporative system test.
 - BARO: **72.2 kPa {542 mmHg, 21.3 inHg} or higher**
 - FLI: **20—80%**
 - IAT: **5—35 °C {41—95 °F}**
 - VPWR: **above 10.9 V**
2. Start the engine and warm it up completely.
3. Clear the DTC from the PCM memory using the M-MDS (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].).
4. Drive the vehicle as shown in the graph.

01-02B

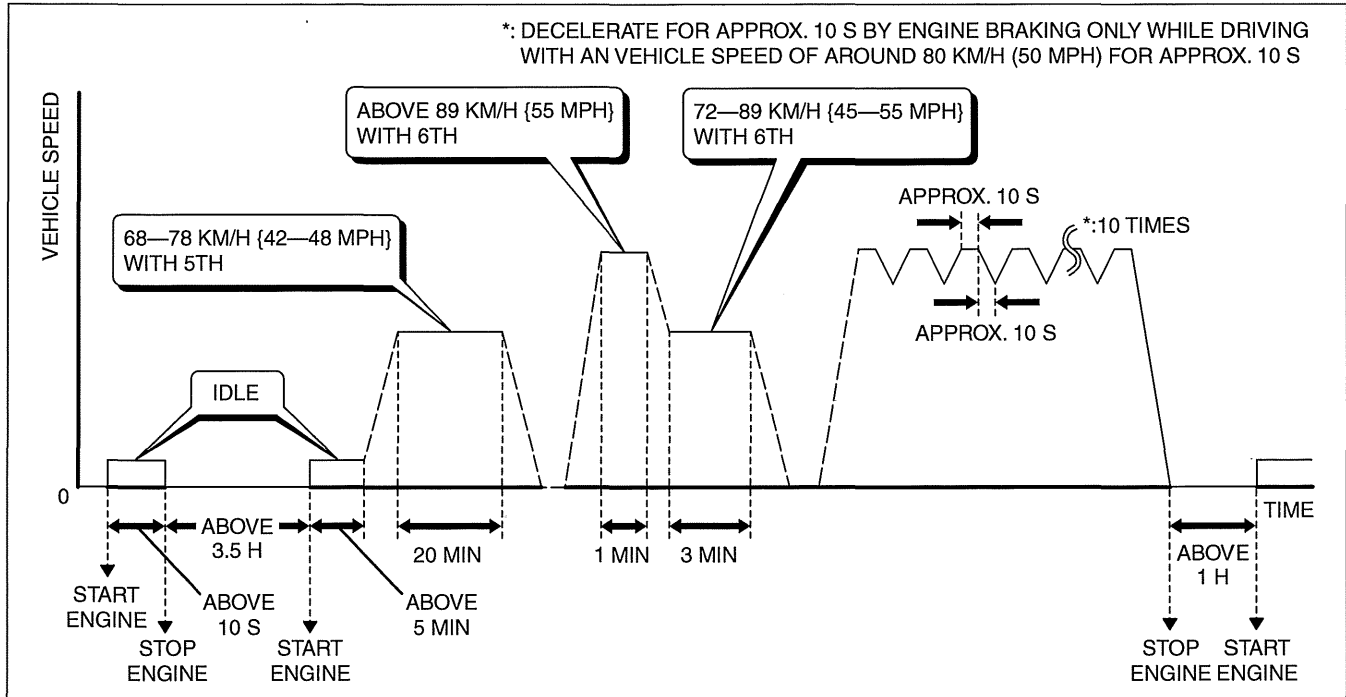

5. Access the ON BOARD SYSTEM READINESS to verify the OBD monitoring status.
 - If completed, the OBD monitoring status items change from non-completed to completed.
 - If not completed, switch the ignition to off then go back to Step 1.
6. Access the DIAGNOSTIC MONITORING TEST RESULTS to verify the monitor results.
 - If detected values are not within specification, repair has not completed.
7. Verify no DTCs are available.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

Single Drive Mode

1. Verify all accessory loads (A/C, headlights, blower fan, rear window defroster) are off.
2. Start the engine and warm it up completely.
3. Clear the DTC from the PCM memory using the M-MDS (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].).
4. Verify that all of the following PIDs are within the following specifications. All PIDs must be within specifications from Step 5 to Step 6.
 - BARO: **72.2 kPa {542 mmHg, 21.3 inHg} or higher**
 - FLI: **20—80%**
 - IAT: **5—35 °C {41—95 °F}**
 - VPWR: **above 10.9 V**
5. With the vehicle stopped, race the engine at the engine speed indicated, and then drive the vehicle as shown in the graph. The driving conditions before driving at constant speed are not specified. If possible, monitor RPM PID for engine speed during this procedure.

am3uuw0000586

6. Switch the ignition to off.
7. Access the ON BOARD SYSTEM READINESS to verify the OBD monitoring status.
 - If completed, all of the OBD monitoring status items change from non-completed to completed.
 - If not completed, switch the ignition to off, then perform the applicable specific Drive Mode for any monitoring item that was not in the detection condition.
8. Access the DIAGNOSTIC MONITORING TEST RESULTS to verify the monitor results.
 - If detected values are not within specification, repair has not been completed.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DIAGNOSTIC MONITORING TEST RESULTS [L3 WITH TC]

id010239801400

- The purpose of this test mode is to confirm the result of the OBD-II monitor diagnostic test results. The result values stored when a particular monitor is completed are displayed. If the monitor is not completed, the initial value is displayed.

OBD Monitor ID	Test ID	Description	Related system	Scaling ID	Unit
01	80	A/F sensor lean-to-rich response time (calculated)	A/F sensor, HO2S	20	Ratio
01	81	A/F sensor rich-to-lean response time (calculated)		20	Ratio
01	82	A/F sensor lean-to-rich response time (calculated)		20	Ratio
01	83	A/F sensor rich-to-lean response time (calculated)		20	Ratio
02	03	Low HO2S voltage for switch time calculation (constant)		0A	Voltage
02	04	High HO2S voltage for switch time calculation (constant)		0A	Voltage
02	05	HO2S rich-to-lean response time (calculated)		10	Time
02	80	HO2S response timeout (calculated)		10	Time
21	80	A/F sensor, HO2S switching time ratio	Catalyst	20	Ratio
31	83	EGR pressure variation	EGR	17	Pressure
35	80	Over-retarded	Variable valve timing	9C	deg.CA
35	81	Over-advanced		9C	deg.CA
3A	80	Phase 0 inicial tank vacuum and minimum vacuum limit	EVAP system	FE	Pa
3A	81	Phase 4 vapor generation minimum change in pressure and minimum vacuum limit		FE	Pa
3A	82	Phase 0 inicial tank vacuum and gross leak maximum vacuum limit		FE	Pa
3B	80	Phase 2 0.040" cruise leak check vacuum bleed-up and maximum vacuum limit		FE	Pa
3C	81	EONV positive pressure test result and limits		FE	Pa
3C	82	EONV negative pressure (vacuum) test result and limits		FE	Pa
3C	83	Normalized average of four EONV tests results and limits		03	Raw Value
3D	80	Blocked EVAP system line-screening test		A9	Pa/s
3D	81	Blocked EVAP system line-fault confirmation test	FE	Pa	
41	80	Primary O2 heater test result and limits	EVAP system	14	Ohm
42	80	Secondary O2 heater test result and limits		14	Ohm
A2	0B	EWMA misfire counts for last 10 driving cycles	Misfire	24	Counts
A2	0C	Misfire counts for last/current driving cycles		24	Counts
A3	0B	EWMA misfire counts for last 10 driving cycles		24	Counts
A3	0C	Misfire counts for last/current driving cycles		24	Counts
A4	0B	EWMA misfire counts for last 10 driving cycles		24	Counts
A4	0C	Misfire counts for last/current driving cycles		24	Counts
A5	0B	EWMA misfire counts for last 10 driving cycles		24	Counts
A5	0C	Misfire counts for last/current driving cycles		24	Counts

DTC P0011:00 [L3 WITH TC]

id010239700100

DTC P0011:00	CMP timing over-advanced
DETECTION CONDITION	<ul style="list-style-type: none"> Actual valve timing is over-advanced by 17 ° (when the following conditions are met) from the target valve timing when the OCV is controlled at the maximum valve timing retard condition. <p>MONITORING CONDITIONS</p> <ul style="list-style-type: none"> — Engine speed: below 4,000 rpm — Engine coolant temperature: 60—110 °C {140—230 °F} <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Loose timing chain or improper valve timing due to timing chain slippage OCV malfunction Spool valve in OCV is stuck in advance position Variable valve timing mechanism not installed correctly Variable valve timing actuator is stuck in advance position PCM malfunction

ON-BOARD DIAGNOSTIC [L3 WITH TC]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY TIMING CHAIN INSTALLATION <ul style="list-style-type: none"> • Stop the engine. • Remove the timing chain cover. • Is the camshaft timing mark at the correct point? 	Yes	Go to the next step.
		No	Reinstall the timing chain, then go to Step 7. (See 01-10B-23 TIMING CHAIN REMOVAL/INSTALLATION [L3 WITH TC].)
4	INSPECT OCV <ul style="list-style-type: none"> • Inspect the OCV. (See 01-10B-22 OIL CONTROL VALVE (OCV) INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the OCV, then go to Step 7. (See 01-10B-23 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
5	INSPECT STOPPER PIN MECHANISM <ul style="list-style-type: none"> • Remove the timing chain. (See 01-10B-23 TIMING CHAIN REMOVAL/INSTALLATION [L3 WITH TC].) • Inspect the stopper pin mechanism. (See 01-10B-13 VARIABLE VALVE TIMING ACTUATOR INSPECTION [L3 WITH TC].) • Is the stopper pin mechanism normal? 	Yes	Go to the next step.
		No	Replace the variable valve timing actuator, then go to Step 7. (See 01-10B-14 VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [L3 WITH TC].)
6	INSPECT ROTOR POSITION <ul style="list-style-type: none"> • Remove the variable valve timing actuator. (See 01-10B-14 VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [L3 WITH TC].) • Is the rotor position at the maximum valve timing retard? 	Yes	Variable valve timing mechanism is normal. <p style="margin-left: 20px;">Note</p> <ul style="list-style-type: none"> • This DTC is detected as an intermittent concern. • The intermittent concern might be removed using the cleaning mode of the variable valve timing control function. Go to the next step.
		No	Replace the variable valve timing actuator, then go to the next step. (See 01-10B-14 VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [L3 WITH TC].)
7	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P0012:00 [L3 WITH TC]

id010239700200

DTC P0012:00	CMP timing over-retarded
DETECTION CONDITION	<ul style="list-style-type: none"> • Actual valve timing is over-retarded by 10 ° (when the following conditions are met) from the target valve timing for 5 s when the OCV system control is within the feed-back range. <p>MONITORING CONDITIONS</p> <ul style="list-style-type: none"> — Engine speed: below 4,000 rpm — Engine coolant temperature: 60—110 °C {140—230 °F} <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Low engine oil pressure • Loose timing chain or improper valve timing due to timing chain slippage • OCV malfunction • Spool valve in OCV is stuck in retard position • Variable valve timing actuator is stuck in retard position • Following oil runners are clogged or have leakage: <ul style="list-style-type: none"> — Between oil pressure switch and OCV — Between OCV and variable valve timing actuator — In variable valve timing actuator • PCM malfunction

01-02B

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY RELATED PENDING CODE AND/OR DTC <ul style="list-style-type: none"> • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the PENDING CODE/DTC P2088:00 or P2089:00 also present? 	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02B-244 DTC P2088:00 [L3 WITH TC].) (See 01-02B-246 DTC P2089:00 [L3 WITH TC].)
		No	Go to the next step.
4	VERIFY ENGINE OIL PRESSURE <ul style="list-style-type: none"> • Start the engine. • Does the oil pressure warning light illuminate? 	Yes	Inspect the engine oil pressure. (See 01-11B-4 OIL PRESSURE INSPECTION [L3 WITH TC].) Repair or replace the malfunctioning part according to the inspection results, then go to Step 10.
		No	Go to the next step.
5	VERIFY TIMING CHAIN INSTALLATION <ul style="list-style-type: none"> • Stop the engine. • Remove the timing chain cover. • Is the camshaft timing mark at the correct point? 	Yes	Go to the next step.
		No	Reinstall the timing chain, then go to Step 10. (See 01-10B-23 TIMING CHAIN REMOVAL/ INSTALLATION [L3 WITH TC].)
6	INSPECT OCV <ul style="list-style-type: none"> • Inspect the OCV. (See 01-10B-22 OIL CONTROL VALVE (OCV) INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the OCV, then go to Step 10. (See 01-10B-23 OIL CONTROL VALVE (OCV) REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
7	INSPECT STOPPER PIN MECHANISM <ul style="list-style-type: none"> • Remove the timing chain. (See 01-10B-23 TIMING CHAIN REMOVAL/INSTALLATION [L3 WITH TC].) • Inspect the stopper pin mechanism. (See 01-10B-13 VARIABLE VALVE TIMING ACTUATOR INSPECTION [L3 WITH TC].) • Is the stopper pin mechanism normal? 	Yes	Go to the next step.
		No	Replace the variable valve timing actuator, then go to Step 10. (See 01-10B-14 VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [L3 WITH TC].)
8	INSPECT ROTOR POSITION <ul style="list-style-type: none"> • Remove the variable valve timing actuator. (See 01-10B-14 VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [L3 WITH TC].) • Is the rotor position at the maximum valve timing retard? 	Yes	Replace the variable valve timing actuator, then go to Step 10. (See 01-10B-14 VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Variable valve timing mechanism is normal. Note <ul style="list-style-type: none"> • This DTC is detected as an intermittent concern. • The intermittent concern might be removed using the cleaning mode of the variable valve timing control function. Go to the next step.
9	INSPECT ENGINE OIL RUNNER <ul style="list-style-type: none"> • Inspect the following engine oil runners for clogging or leakage: <ul style="list-style-type: none"> — Between oil pressure switch and OCV — Between OCV and variable valve timing actuator — In the variable valve timing actuator • Is there any clogging or leakage? 	Yes	Repair or replace the suspected runner, then go to the next step.
		No	Variable valve timing mechanism is normal. Note <ul style="list-style-type: none"> • This DTC is detected as an intermittent concern. • The intermittent concern might be removed using the cleaning mode of the variable valve timing control function. Go to the next step.
10	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
11	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P0016:00 [L3 WITH TC]

id010239145600

01-02B

DTC P0016:00	CKP-CMP correlation problem
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the input pulses from the CKP sensor and CMP sensor. If the input pulse pick-up timing do not match each other, the PCM determines that the camshaft position does not coincide with the crankshaft position. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> CMP sensor malfunction <ul style="list-style-type: none"> — Connector or terminals malfunction — Foreign material on CMP sensor — Damaged or scratched CMP sensor pulse wheel CKP sensor malfunction <ul style="list-style-type: none"> — Connector or terminals malfunction — Foreign material on CKP sensor — Damaged or scratched CKP sensor pulse wheel PCM connector or terminals malfunction Improper valve timing PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	INSPECT CMP SENSOR CONNECTOR CONDITION <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the CMP sensor connector. Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 13.
		No	Go to the next step.
4	INSPECT CMP SENSOR FOR FOREIGN MATERIAL <ul style="list-style-type: none"> Visually inspect the CMP sensor for foreign materials. Is there any foreign material on the CMP sensor? 	Yes	Remove the foreign material from the CMP sensor, then go to Step 13.
		No	Go to the next step.
5	INSPECT CMP SENSOR PULSE WHEEL <ul style="list-style-type: none"> Visually inspect the CMP sensor pulse wheel. Is there any damage or scratching to the CMP sensor pulse wheel? 	Yes	Replace the CMP sensor pulse wheel, then go to Step 13. (See 01-10B-33 CYLINDER HEAD GASKET REPLACEMENT [L3 WITH TC].)
		No	Go to the next step.
6	INSPECT CMP SENSOR <ul style="list-style-type: none"> Inspect the CMP sensor. (See 01-40B-34 CAMSHAFT POSITION (CMP) SENSOR INSPECTION [L3 WITH TC].) Is there any malfunction? 	Yes	Replace the CMP sensor, then go to Step 13. (See 01-40B-34 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
7	INSPECT CKP SENSOR CONNECTOR CONDITION <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the CKP sensor connector. Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 13.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
8	INSPECT CKP SENSOR FOR FOREIGN MATERIAL <ul style="list-style-type: none"> • Visually inspect the CKP sensor for foreign materials. • Is there any foreign material on the CKP sensor? 	Yes	Remove the foreign material from the CKP sensor, then go to Step 13.
		No	Go to the next step.
9	INSPECT CKP SENSOR PULSE WHEEL <ul style="list-style-type: none"> • Visually inspect the CKP sensor pulse wheel. • Is there any damage or scratching to the CKP sensor pulse wheel? 	Yes	Replace the CKP sensor pulse wheel, then go to Step 13. (See 01-10B-23 TIMING CHAIN REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
10	INSPECT CKP SENSOR <ul style="list-style-type: none"> • Inspect the CKP sensor. (See 01-40B-33 CRANKSHAFT POSITION (CKP) SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the CKP sensor, then go to Step 13. (See 01-40B-32 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
11	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 13.
		No	Go to the next step.
12	INSPECT VALVE TIMING <ul style="list-style-type: none"> • Inspect the valve timing. (See 01-10B-23 TIMING CHAIN REMOVAL/INSTALLATION [L3 WITH TC].) • Is there any malfunction? 	Yes	Adjust the valve timing properly, then go to the next step. (See 01-10B-23 TIMING CHAIN REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
13	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Start the engine. • Perform the Pending Trouble Code Access Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
14	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P0031:00 [L3 WITH TC]

id010239700400

01-02B

DTC P0031:00	A/F sensor heater control circuit low input
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the A/F sensor heater output voltage. If the PCM turns the A/F sensor heater off but the A/F sensor heater circuit remains low voltage, the PCM determines that the A/F sensor heater circuit has a malfunction. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (A/F sensor heater, HO2S heater). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> A/F sensor connector or terminals malfunction Short to ground or open circuit in A/F sensor heater power supply circuit <ul style="list-style-type: none"> — Short to ground in wiring harness between main relay terminal C and A/F sensor terminal 2B — ENG BAR 15 A fuse malfunction — Open circuit in wiring harness between main relay terminal C and A/F sensor terminal 2B A/F sensor heater malfunction Short to ground in wiring harness between A/F sensor terminal 2D and PCM terminal 2C PCM connector or terminals malfunction Open circuit in wiring harness between A/F sensor terminal 2D and PCM terminal 2C PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor heater, HO2S heater related) been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION
3	INSPECT A/F SENSOR CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the A/F sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes Repair or replace the connector and/or terminals, then go to Step 9.
		No Go to the next step.
4	INSPECT A/F SENSOR HEATER POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT <ul style="list-style-type: none"> • A/F sensor connector is disconnected. • Switch the ignition to ON (engine off). • Measure the voltage at the A/F sensor terminal 2B (wiring harness-side). • Is the voltage B+? 	Yes Go to the next step.
		No Inspect the ENG BAR 15 A fuse. <ul style="list-style-type: none"> • If the fuse is melt: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deterioration: <ul style="list-style-type: none"> — Replace the fuse. • If the fuse is normal: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible open circuit. Go to Step 9.
5	INSPECT A/F SENSOR HEATER <ul style="list-style-type: none"> • Switch the ignition to off. • Inspect the A/F sensor heater. (See 01-40B-30 AIR FUEL RATIO (A/F) SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes Replace the A/F sensor, then go to Step 9. (See 01-40B-29 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No Go to the next step.
6	INSPECT A/F SENSOR HEATER CONTROL CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • A/F sensor connector is disconnected. • Inspect for continuity between A/F sensor terminal 2D (wiring harness-side) and body ground. • Is there continuity? 	Yes If the short to ground circuit could be detected: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected: <ul style="list-style-type: none"> • Replace the PCM (short to ground in PCM internal circuit). (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].) Go to Step 9.
		No Go to the next step.
7	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes Repair or replace the connector and/or terminals, then go to Step 9.
		No Go to the next step.
8	INSPECT A/F SENSOR HEATER CONTROL CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • A/F sensor and PCM connectors are disconnected. • Inspect for continuity between A/F sensor terminal 2D (wiring harness-side) and PCM terminal 2C (wiring harness-side). • Is there continuity? 	Yes Go to the next step.
		No Repair or replace the wiring harness for a possible open circuit, then go to the next step.
9	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the KOEO or KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) • Is the PENDING CODE for this DTC present? 	Yes Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No Go to the next step.
10	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P0032:00 [L3 WITH TC]

id010239700500

01-02B

DTC P0032:00	A/F sensor heater control circuit high input
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the A/F sensor heater output voltage. DTC P0054:00	HO2S heater resistance problem
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the HO2S heater resistance when under the HO2S heater control. If the resistance is more than 51 ohms, the PCM determines that there is a HO2S heater circuit problem. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is an intermittent monitor (A/F sensor heater, HO2S heater). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> HO2S connector or terminals malfunction HO2S heater malfunction Short to ground or open circuit in HO2S heater power supply circuit <ul style="list-style-type: none"> — Short to ground in wiring harness between ignition switch^{*1}/relay block^{*2} and HO2S terminal C — ENG 20 A fuse malfunction — Open circuit in wiring harness between ignition switch^{*1}/relay block^{*2} and HO2S terminal C Short to ground in wiring harness between HO2S terminal D and PCM terminal 2D PCM connector or terminals malfunction Open circuit in wiring harness between HO2S terminal D and PCM terminal 2D PCM malfunction

^{*1} : Vehicles without advanced keyless entry and push button start system
^{*2} : Vehicles with advanced keyless entry and push button start system

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor heater, HO2S heater related) been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
3	INSPECT HO2S CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the HO2S connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
4	INSPECT HO2S HEATER <ul style="list-style-type: none"> • Inspect the HO2S heater. (See 01-40B-31 HEATED OXYGEN SENSOR (HO2S) INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the HO2S, then go to Step 9. (See 01-40B-31 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
5	INSPECT HO2S HEATER POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT <ul style="list-style-type: none"> • HO2S connector is disconnected. • Switch the ignition to ON (engine off). • Measure the voltage at the HO2S terminal C (wiring harness-side). • Is the voltage B+? 	Yes	Go to the next step.
		No	Inspect the ENG 20 A fuse. <ul style="list-style-type: none"> • If the fuse is melt: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deterioration: <ul style="list-style-type: none"> — Replace the fuse. • If the fuse is normal: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible open circuit. Go to Step 9.
6	INSPECT HO2S HEATER CONTROL CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • HO2S connector is disconnected. • Switch the ignition to off. • Inspect for continuity between HO2S terminal D (wiring harness-side) and body ground. • Is there continuity? 	Yes	If the short to ground circuit could be detected: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected: <ul style="list-style-type: none"> • Replace the PCM (short to ground in PCM internal circuit). (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].) Go to Step 9.
		No	Go to the next step.
7	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
8	INSPECT HO2S HEATER CONTROL CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • HO2S and PCM connectors are disconnected. • Inspect for continuity between HO2S terminal D (wiring harness-side) and PCM terminal 2D (wiring harness-side). • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
9	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the KOEO or KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
10	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P0069:00 [L3 WITH TC]

id010239300000

DTC P0069:00	Manifold absolute pressure/atmospheric pressure correlation problem
DETECTION CONDITION	<ul style="list-style-type: none"> • The PCM monitors differences between intake manifold vacuum and atmospheric pressure. If the difference is below -12 kPa {-90 mmHg, -3.5 inHg} or above 12 kPa {90 mmHg, 3.5 inHg} when the following conditions are met, the PCM determines that there is a MAP sensor performance problem. <p>MONITORING CONDITIONS</p> <ul style="list-style-type: none"> — 12—15 s from when ignition is turned off. — Intake air temperature: above -10 °C {14 °F} — Engine coolant temperature: above 70 °C {158 °F} <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • MAP sensor malfunction • BARO sensor (built-in PCM) malfunction • PCM malfunction

01-02B

Diagnostic procedure

STEP	INSPECTION		ACTION
1	IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2) <ul style="list-style-type: none"> • Perform the Freeze Frame PID Data Access Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the DTC P0069:00 on FREEZE FRAME DATA (Mode 2)? 	Yes	Go to the next step.
		No	Go to the troubleshooting procedures for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02B-18 DTC TABLE [L3 WITH TC].)
2	VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
3	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	VERIFY RELATED PENDING CODE AND/OR DTC <ul style="list-style-type: none"> • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the PENDING CODE/DTC P0107:00, P0108:00, P2228:00 or P2229:00 also present? 	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02B-69 DTC P0107:00 [L3 WITH TC].) (See 01-02B-71 DTC P0108:00 [L3 WITH TC].) (See 01-02B-284 DTC P2228:00 [L3 WITH TC].) (See 01-02B-285 DTC P2229:00 [L3 WITH TC].)
		No	Go to the next step.
5	INSPECT MAP SENSOR STUCK OPEN OR CLOSED <ul style="list-style-type: none"> • Inspect the MAP sensor. (See 01-40B-27 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the MAP sensor/boost air temperature sensor, then go to Step 7. (See 01-40B-27 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/BOOST AIR TEMPERATURE SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
6	INSPECT BARO SENSOR <ul style="list-style-type: none"> • Inspect the BARO sensor. (See 01-40B-27 BAROMETRIC PRESSURE (BARO) SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION				
7	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Start the engine and warm it up to the engine coolant temperature above 70 °C {158 °F}. • Switch the ignition to off above 15 s. • Perform the Pending Trouble Code Access Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the PENDING CODE for this DTC present? 	<table border="0" style="width: 100%;"> <tr> <td style="width: 30px; text-align: center; vertical-align: top;">Yes</td> <td>Replace the PCM, then go to the next step. No	DTC troubleshooting completed.					

DTC P0089:00 [L3 WITH TC]

id010239008900

DTC P0089:00	Fuel pressure regulator performance problem
DETECTION CONDITION	<ul style="list-style-type: none"> • The PCM monitors the actual fuel pressure (high-pressure side) using the fuel pressure sensor. The PCM compares the fuel pressure of the target that is calculated based on charging efficiency and engine speed and actual fuel pressure. The PCM detects that the difference of fuel pressures is above threshold or below threshold, the PCM determines that the spill valve control solenoid valve has a deterioration. <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Air suction in fuel line due to fuel runout • Improper operation of fuel pump speed control system • High pressure fuel pump connector or terminals malfunction • Fuel pressure sensor connector or terminals malfunction • PCM connector or terminals malfunction • Fuel pressure sensor malfunction • High pressure fuel pump malfunction • Spill valve control solenoid valve malfunction • Insufficient fuel pressure (low pressure line) • Fuel injector malfunction (fuel leakage) • Fuel pressure limiter malfunction • PCM malfunction

ON-BOARD DIAGNOSTIC [L3 WITH TC]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY RELATED PENDING CODE AND/OR DTC <ul style="list-style-type: none"> Switch the ignition to off, then to ON (engine off). Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the PENDING CODE/DTC P0091:00, P0092:00, P0201:00, P0202:00, P0203:00, P0204:00 or P120F:00 also present? 	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02B-49 DTC P0091:00 [L3 WITH TC].) (See 01-02B-51 DTC P0092:00 [L3 WITH TC].) (See 01-02B-127 DTC P0201:00 [L3 WITH TC].) (See 01-02B-129 DTC P0202:00 [L3 WITH TC].) (See 01-02B-131 DTC P0203:00 [L3 WITH TC].) (See 01-02B-133 DTC P0204:00 [L3 WITH TC].) (See 01-02B-229 DTC P120F:00 [L3 WITH TC].)
		No	Go to the next step.
4	VERIFY WHETHER MALFUNCTION IS AIR SUCTION IN FUEL LINE BY FUEL RUNOUT OR ELSEWHERE <ul style="list-style-type: none"> Verify the fuel gauge indicator on instrument cluster. Does the fuel gauge indicate empty? 	Yes	Refill the fuel and warm up the engine, then go to the next step.
		No	Go to the next step.
5	VERIFY FUEL PUMP SPEED CONTROL OPERATION <ul style="list-style-type: none"> Perform the Fuel Pump Speed Control Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the fuel pump speed control operate properly? 	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results, then go to Step 14.
6	INSPECT HIGH PRESSURE FUEL PUMP CONNECTOR CONDITION <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the high pressure fuel pump connector. Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 14.
		No	Go to the next step.
7	INSPECT FUEL PRESSURE SENSOR CONNECTOR CONDITION <ul style="list-style-type: none"> Disconnect the fuel pressure sensor connector. Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 14.
		No	Go to the next step.
8	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> Disconnect the PCM connector. Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 14.
		No	Go to the next step.
9	VERIFY WHETHER MALFUNCTION IS IN HIGH PRESSURE FUEL LINE OR ELSEWHERE <ul style="list-style-type: none"> Reconnect all disconnected connectors. Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the FUEL_PRES PID value within the specification? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].) 	Yes	Go to Step 13.
		No	Go to the next step.

01-02B

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
10	VERIFY WHETHER MALFUNCTION IS IN FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP <ul style="list-style-type: none"> Is the vehicle acceleration performance normally? 	Yes	Go to the next step.
		No	Go to Step 12.
11	INSPECT FUEL PRESSURE SENSOR <ul style="list-style-type: none"> Inspect the fuel pressure sensor. (See 01-40B-29 FUEL PRESSURE SENSOR INSPECTION [L3 WITH TC].) Is there any malfunction? 	Yes	Replace the fuel delivery pipe, then go to Step 14. (See 01-14B-25 FUEL INJECTOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to Step 13.
12	VERIFY WHETHER MALFUNCTION IS IN HIGH PRESSURE FUEL PUMP OR FUEL PRESSURE LIMITER <ul style="list-style-type: none"> Replace the high pressure fuel pump. (See 01-14B-17 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC].) Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the FUEL_PRES PID value within the specification? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].) 	Yes	Go to Step 14.
		No	Replace the fuel delivery pipe, then go to Step 14. (See 01-14B-25 FUEL INJECTOR REMOVAL/INSTALLATION [L3 WITH TC].)
13	INSPECT FUEL LINE PRESSURE (LOW PRESSURE LINE) <ul style="list-style-type: none"> Measure the fuel line pressure (low-pressure). (See 01-14B-6 FUEL LINE PRESSURE INSPECTION [L3 WITH TC].) Is the fuel pressure within the specification? 	Yes	Remove the fuel injector and visually inspect the fuel injector or leakage. (See 01-14B-25 FUEL INJECTOR REMOVAL/INSTALLATION [L3 WITH TC].) Replace the fuel injector if necessary, then go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results, then go to the next step.
14	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Perform the KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
15	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

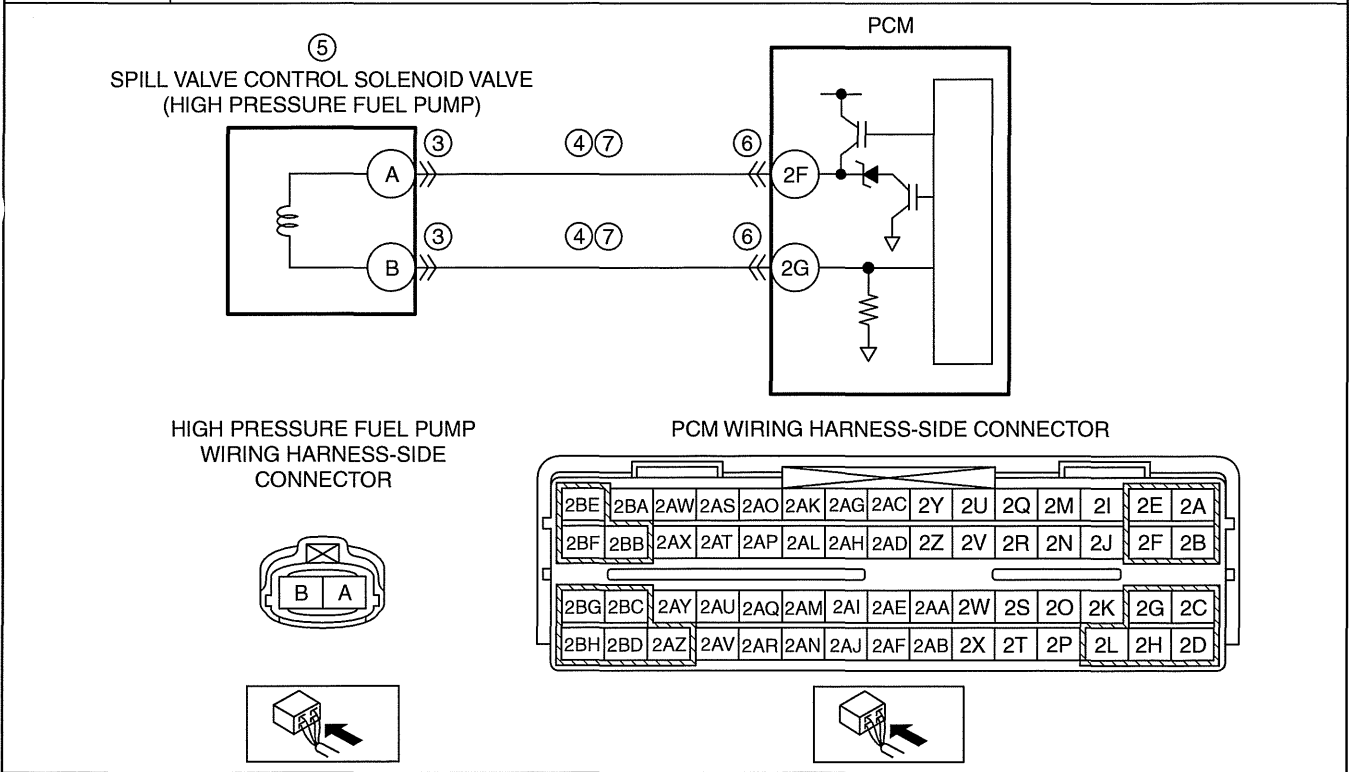

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P0091:00 [L3 WITH TC]

id010239009100

01-02B

DTC P0091:00	<p>Fuel pressure regulator control circuit low input</p> <ul style="list-style-type: none"> When the PCM turns the spill valve control solenoid valve off but the spill valve control solenoid valve control circuit voltage is low for 5 s, the PCM determines that the spill valve control solenoid valve control circuit has a malfunction. <p>MONITORING CONDITIONS</p> <p>— The following conditions are met:</p> <ul style="list-style-type: none"> Engine speed: 3,000 rpm or less Battery voltage: 10 V or more <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
DETECTION CONDITION	
POSSIBLE CAUSE	<ul style="list-style-type: none"> High pressure fuel pump connector or terminals malfunction Short to ground in wiring harness between the following terminals: <ul style="list-style-type: none"> High pressure fuel pump terminal A—PCM terminal 2F High pressure fuel pump terminal B—PCM terminal 2G Spill valve control solenoid valve malfunction PCM connector or terminals malfunction Open circuit in wiring harness between the following terminals: <ul style="list-style-type: none"> High pressure fuel pump terminal A—PCM terminal 2F High pressure fuel pump terminal B—PCM terminal 2G PCM malfunction

ON-BOARD DIAGNOSTIC [L3 WITH TC]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	INSPECT HIGH PRESSURE FUEL PUMP CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the high pressure fuel pump connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
4	INSPECT SPILL VALVE CONTROL SOLENOID VALVE CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • High pressure fuel pump connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: <ul style="list-style-type: none"> — High pressure fuel pump terminal A — High pressure fuel pump terminal B • Is there continuity? 	Yes	If the short to ground circuit could be detected: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected: <ul style="list-style-type: none"> • Replace the PCM (short to ground in PCM internal circuit). (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].) Go to Step 8.
		No	Go to the next step.
5	INSPECT SPILL VALVE CONTROL SOLENOID VALVE <ul style="list-style-type: none"> • Inspect the spill valve control solenoid valve. (See 01-14B-20 HIGH PRESSURE FUEL PUMP INSPECTION [L3 WITH TC].) • Is there any malfunction. 	Yes	Replace the high pressure fuel pump, then go to Step 8. (See 01-14B-17 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.

Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
4	INSPECT SPILL VALVE CONTROL SOLENOID VALVE <ul style="list-style-type: none"> • Inspect the spill valve control solenoid valve. (See 01-14B-20 HIGH PRESSURE FUEL PUMP INSPECTION [L3 WITH TC].) • Is there any malfunction. 	Yes	Replace the high pressure fuel pump, then go to Step 7. (See 01-14B-17 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
5	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
6	INSPECT SPILL VALVE CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • High pressure fuel pump and PCM connectors are disconnected. • Switch the ignition to ON (engine off). • Measure the voltage at the high pressure fuel pump terminal B (wiring harness-side). • Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to the next step.
		No	Go to the next step.
7	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the KOEO or KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) • Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P0096:00 [L3 WITH TC]

id010239146300

01-02B

DTC P0096:00	Boost air temperature sensor circuit range/performance problem
DETECTION CONDITION	<ul style="list-style-type: none"> If the boost air temperature is higher than the engine coolant temperature by 23 °C {41.4 °F} for 1.2 s with the ignition switch is on*, the PCM determines that there is a boost air temperature sensor circuit range/performance problem. <p>*: Ignition switch on when 6 h or more has passed since the ignition was switched to off.</p> <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> MAP sensor/boost air temperature sensor connector or terminals malfunction Boost air temperature sensor malfunction ECT sensor No.1 malfunction PCM connector or terminals malfunction PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	INSPECT MAP SENSOR/BOOST AIR TEMPERATURE SENSOR CONNECTOR CONDITION <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the MAP sensor/boost air temperature sensor connector. Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
4	INSPECT BOOST AIR TEMPERATURE SENSOR <ul style="list-style-type: none"> Inspect the boost air temperature sensor. (See 01-40B-28 BOOST AIR TEMPERATURE SENSOR INSPECTION [L3 WITH TC].) Is there any malfunction? 	Yes	Replace the MAP sensor/boost air temperature sensor, then go to Step 7. (See 01-40B-27 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/BOOST AIR TEMPERATURE SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
5	INSPECT ECT SENSOR NO.1 <ul style="list-style-type: none"> Inspect the ECT sensor No.1. (See 01-40B-25 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [L3 WITH TC].) Is there any malfunction? 	Yes	Replace the ECT sensor No.1, then go to Step 7. (See 01-40B-24 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
6	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> Disconnect the PCM connector. Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to the next step.
		No	Go to the next step.

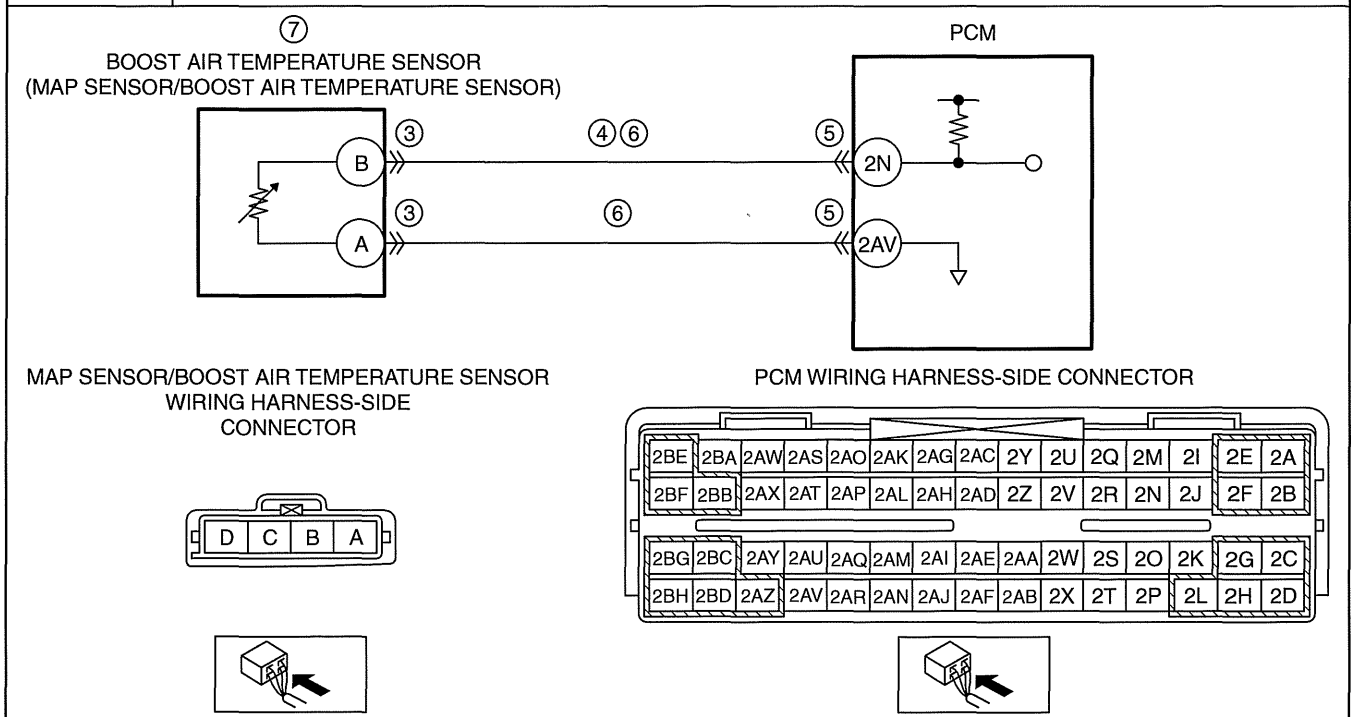

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION		ACTION
7	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the M-MDS. id010239700800

DTC P0101:00	MAF sensor circuit range/performance problem
DETECTION CONDITION	<ul style="list-style-type: none"> • When the conditions are as follows, the PCM compares the intake airflow amount with the estimated intake airflow amount (calculated from the manifold absolute pressure, boost air temperature, intake air temperature, EGR position, purge flow rate and variable valve timing). <p>MONITORING CONDITIONS</p> <ul style="list-style-type: none"> — Engine speed: 500—4,500 rpm — Barometric pressure: 0—180 kPa {0—1.83 kgf/cm², 0—26.1 psi} — Throttle position—throttle position before 25 ms: below 1.22% (boost air temperature less than 20 °C {68 °F}), below 10% (boost air temperature more than 20 °C {68 °F}) — Battery voltage: above 8 V <ul style="list-style-type: none"> • If over a period continuing for 5 s, the differential value between the actual intake airflow amount and the estimated intake airflow amount is more than specified value, the PCM determines that the detected mass air flow amount is too high. • If over a period continuing for 5 s, the differential value between the actual intake airflow amount and the estimated intake airflow amount is less than specified value, the PCM determines that the detected mass air flow amount is too low. <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Air restriction or leakage in intake-air system (between MAF sensor and intake manifold) • MAF sensor malfunction • Turbocharger malfunction (turbine wheel/compressor damaged, stuck) • MAF/IAT sensor connector or terminals malfunction • Electrical corrosion in MAF/IAT RETURN circuit • Voltage drops in ground circuit • PCM connector or terminals malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION				
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded? 	<table border="0" style="width: 100%;"> <tr> <td style="width: 50px; text-align: center;">Yes</td> <td>Go to the next step.</td> </tr> <tr> <td style="text-align: center;">No</td> <td>Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.</td> </tr> </table>	Yes	Go to the next step.	No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
Yes	Go to the next step.					
No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.					
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	<table border="0" style="width: 100%;"> <tr> <td style="width: 50px; text-align: center;">Yes</td> <td>Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step. </td> </tr> <tr> <td style="text-align: center;">No</td> <td>Go to the next step.</td> </tr> </table>	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step. 	No	Go to the next step.
Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step. 					
No	Go to the next step.					

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
3	VERIFY CURRENT INPUT SIGNAL STATUS IS CONCERN INTERMITTENT OR CONSTANT <ul style="list-style-type: none"> • Connect the M-MDS to the DLC-2. • Start the engine. • Access the following PIDs using the M-MDS: (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) <ul style="list-style-type: none"> — ECT — MAF — TP — RPM • Warm-up the engine until the ECT PID value is above 70 °C {158 °F}. • Idle the engine for 5 s or more. <ul style="list-style-type: none"> Caution <ul style="list-style-type: none"> • While driving, always operate the vehicle in a safe and lawful manner. • Drive the vehicle under the following two conditions: <ul style="list-style-type: none"> Condition 1 <ul style="list-style-type: none"> — TP PID: 50—87.5% — RPM PID: above 1,000 rpm — 4th gear Condition 2 <ul style="list-style-type: none"> — TP PID: above 80% — RPM PID: below 2,000 rpm — gear in • Perform the Pending Trouble Code Access Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the PENDING CODE for this DTC present? 	Yes	Go to the next step.
		No	Intermittent concern exists. <ul style="list-style-type: none"> • Perform the “INTERMITTENT CONCERN TROUBLESHOOTING” procedure. (See 01-03B-89 INTERMITTENT CONCERN TROUBLESHOOTING [L3 WITH TC].)
4	INSPECT MAF PID <ul style="list-style-type: none"> • Connect the M-MDS to the DLC-2. • Start the engine. • Access the MAF PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Race the engine and verify that the MAF PID value changes quickly according to the change in the engine speed. • Is the MAF PID response normal? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].) 	Yes	Go to Step 7.
		No	Go to the next step.
5	INSPECT AIR RESTRICTION OR LEAKAGE AT INTAKE-AIR SYSTEM <ul style="list-style-type: none"> • Inspect for air leakage and restrict between MAF sensor and intake manifold. • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 9.
		No	Go to the next step.
6	INSPECT TURBOCHARGER <ul style="list-style-type: none"> • Inspect the turbocharger. (See 01-13B-13 TURBOCHARGER INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the turbocharger, then go to Step 9. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Replace the MAF/IAT sensor, then go to Step 9. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [L3 WITH TC].)
7	INSPECT MAF/IAT SENSOR TERMINALS FOR ELECTRICAL CORROSION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the MAF/IAT sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Inspect the MAF/IAT RETURN circuit and ground circuit. <ul style="list-style-type: none"> • If the circuit has a malfunction: <ul style="list-style-type: none"> — Repair or replace the suspected wiring harness, then go to Step 9. • If the circuit is normal: <ul style="list-style-type: none"> — Go to the next step.

01-02B

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
8	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to the next step.
		No	Go to the next step.
9	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Start the engine. • Warm-up the engine until the ECT PID value is above 70 °C {158 °F}. • Idle the engine for 5 s or more. Caution <ul style="list-style-type: none"> • While driving, always operate the vehicle in a safe and lawful manner. • Drive the vehicle under the following two conditions: Condition 1 <ul style="list-style-type: none"> — TP PID: 50—87.5% — RPM PID: above 1,000 rpm — 4th gear Condition 2 <ul style="list-style-type: none"> — TP PID: above 80% — RPM PID: below 2,000 rpm — gear in • Perform the Pending Trouble Code Access Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
10	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

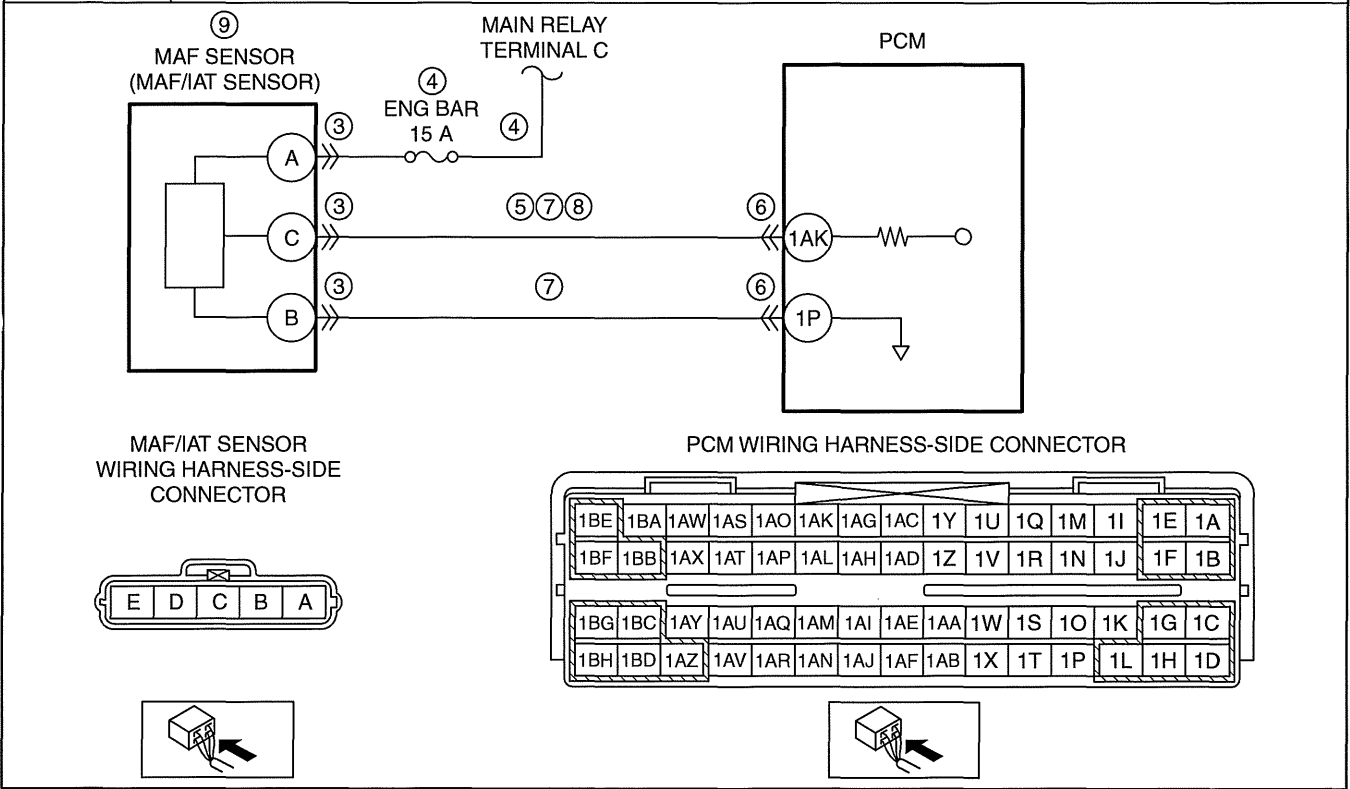

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P0102:00 [L3 WITH TC]

id010239700900

01-02B

DTC P0102:00	MAF sensor circuit low input
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the input voltage from the MAF sensor when the engine is running. If the input voltage is below 0.21 V for 5 s, the PCM determines that the MAF sensor circuit has a malfunction. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> MAF/IAT sensor connector or terminals malfunction Short to ground or open circuit in MAF sensor power supply circuit <ul style="list-style-type: none"> — Short to ground in wiring harness between main relay terminal C and MAF/IAT sensor terminal A — ENG BAR 15 A fuse malfunction — Open circuit in wiring harness between main relay terminal C and MAF/IAT sensor terminal A Short to ground in wiring harness between MAF/IAT sensor terminal C and PCM terminal 1AK PCM connector or terminals malfunction MAF sensor signal circuit and ground circuit are shorted to each other. Open circuit in wiring harness between MAF/IAT sensor terminal C and PCM terminal 1AK MAF sensor malfunction PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
3	INSPECT MAF/IAT SENSOR CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the MAF/IAT sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
4	INSPECT MAF SENSOR POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT <ul style="list-style-type: none"> • MAF/IAT sensor connector is disconnected. • Switch the ignition to ON (engine off). • Measure the voltage at the MAF/IAT sensor terminal A (wiring harness-side). • Is the voltage B+? 	Yes	Go to the next step.
		No	Inspect the ENG BAR 15 A fuse. <ul style="list-style-type: none"> • If the fuse is melt: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deterioration: <ul style="list-style-type: none"> — Replace the fuse. • If the fuse is normal: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible open circuit. Go to Step 10.
5	INSPECT MAF SENSOR SIGNAL CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • MAF/IAT sensor connector is disconnected. • Switch the ignition to off. • Inspect for continuity between MAF/IAT sensor terminal C (wiring harness-side) and body ground. • Is there continuity? 	Yes	If the short to ground circuit could be detected: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected: <ul style="list-style-type: none"> • Replace the PCM (short to ground in PCM internal circuit). (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].) Go to Step 10.
		No	Go to the next step.
6	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
7	INSPECT MAF SENSOR SIGNAL CIRCUIT AND GROUND CIRCUIT FOR SHORT TO EACH OTHER <ul style="list-style-type: none"> • MAF/IAT sensor and PCM connectors are disconnected. • Inspect for continuity between MAF/IAT sensor terminals C and B (wiring harness-side). • Is there continuity? 	Yes	Repair or replace the wiring harness for a possible short to each other, then go to Step 10.
		No	Go to the next step.
8	INSPECT MAF SENSOR SIGNAL CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • MAF/IAT sensor and PCM connectors are disconnected. • Inspect for continuity between MAF/IAT sensor terminal C (wiring harness-side) and PCM terminal 1AK (wiring harness-side). • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 10.
9	INSPECT MAF SENSOR <ul style="list-style-type: none"> • Reconnect all disconnected connectors. • Inspect the MAF sensor. (See 01-40B-26 MASS AIR FLOW (MAF) SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the MAF/IAT sensor, then go to the next step. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

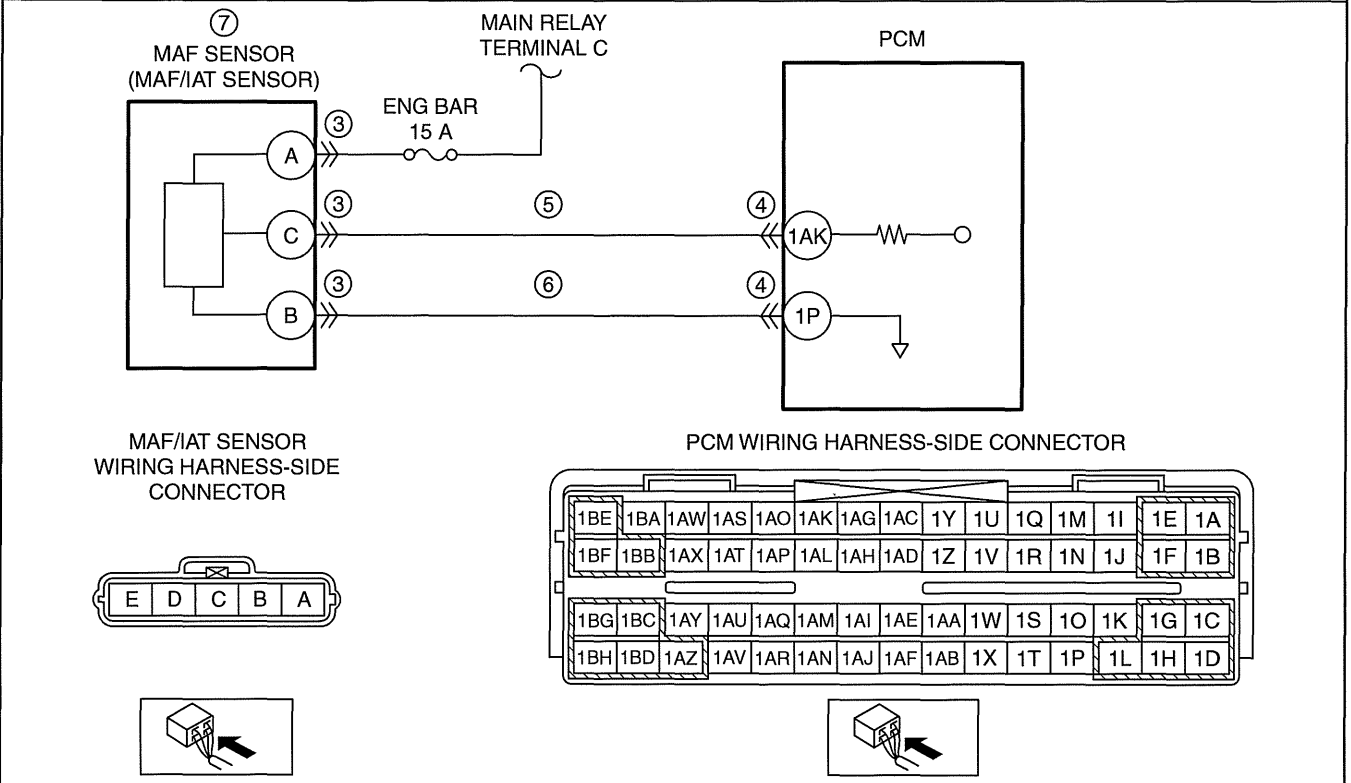

01-02B

STEP	INSPECTION		ACTION
10	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Perform the KOEO or KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
11	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0103:00 [L3 WITH TC]

id010239701000

DTC P0103:00	MAF sensor circuit high input
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the input voltage from the MAF sensor when the engine is running. If the input voltage is above 4.9 V for 5 s, the PCM determines that the MAF sensor circuit has a malfunction. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> MAF/IAT sensor connector or terminals malfunction PCM connector or terminals malfunction Short to power supply in wiring harness between MAF/IAT sensor terminal C and PCM terminal 1AK Open circuit in wiring harness between MAF/IAT sensor terminal B and PCM terminal 1P MAF sensor malfunction PCM malfunction

ON-BOARD DIAGNOSTIC [L3 WITH TC]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 		No	Go to the next step.
6	INSPECT MAP SENSOR POWER SUPPLY CIRCUIT AND SIGNAL CIRCUIT FOR SHORT TO EACH OTHER <ul style="list-style-type: none"> • MAP sensor/boost air temperature sensor and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between MAP sensor/boost air temperature sensor terminals C and D (wiring harness-side). • Is there continuity? 	Yes	Repair or replace the wiring harness for a possible short to each other, then go to Step 9.
		No	Go to the next step.
7	INSPECT MAP SENSOR CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • MAP sensor/boost air temperature sensor and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): <ul style="list-style-type: none"> — MAP sensor/boost air temperature sensor terminal D—PCM terminal 2AG — MAP sensor/boost air temperature sensor terminal A—PCM terminal 2AV • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 9.
8	INSPECT MAP SENSOR <ul style="list-style-type: none"> • Reconnect all disconnected connectors. • Inspect the MAP sensor. (See 01-40B-27 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the MAP sensor/boost air temperature sensor, then go to the next step. (See 01-40B-27 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/BOOST AIR TEMPERATURE SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
9	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the KOEO or KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) • Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
10	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0111:00 [L3 WITH TC]

id010239701300

01-02B

DTC P0111:00	IAT sensor circuit range/performance problem
DETECTION CONDITION	<ul style="list-style-type: none"> If the intake air temperature is higher than the engine coolant temperature by 18 °C {32 °F} for 1.2 s or the intake air temperature is lower than the engine coolant temperature by -48 °C {-86.4 °F} for 1.2 s with the ignition switch is ON*, the PCM determines that there is a IAT sensor circuit range/performance problem. <p>*: Ignition switch is ON when 6 h or more have passed since the ignition was switched to off.</p> <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> MAF/IAT sensor connector or terminals malfunction IAT sensor malfunction PCM connector or terminals malfunction PCM malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	INSPECT MAF/IAT SENSOR CONNECTOR CONDITION <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the MAF/IAT sensor connector. Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 6.
		No	Go to the next step.
4	INSPECT IAT SENSOR <ul style="list-style-type: none"> Inspect the IAT sensor. (See 01-40B-26 INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [L3 WITH TC].) Is there any malfunction? 	Yes	Replace the MAF/IAT sensor, then go to Step 6. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
5	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> Disconnect the PCM connector. Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to the next step.
		No	Go to the next step.

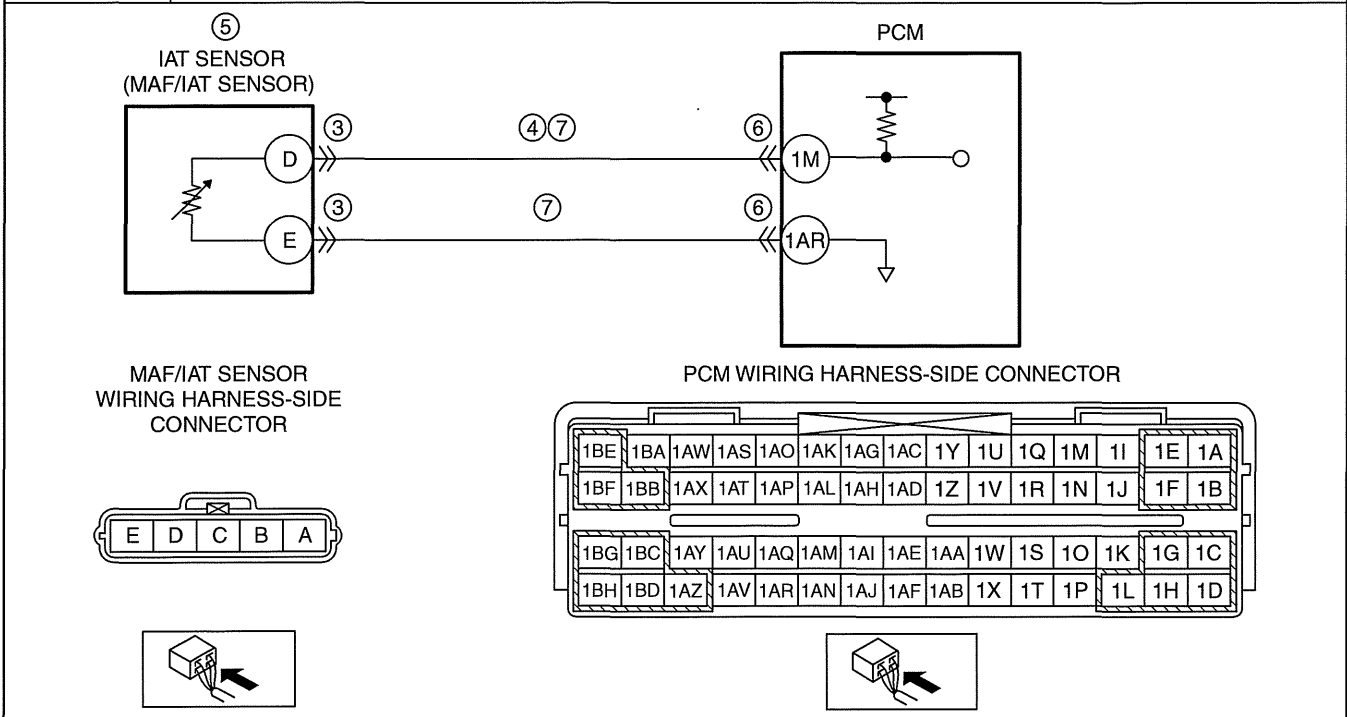

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION		ACTION
6	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Start the engine and run the engine under the FREEZE FRAME DATA (Mode 2) condition. Perform the Pending Trouble Code Access Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
7	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0112:00 [L3 WITH TC]

id010239701400

DTC P0112:00	IAT sensor circuit low input
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the IAT sensor signal. If the PCM detects on the IAT sensor voltage is below 0.06 V for 5 s, the PCM determines that the IAT sensor circuit has a malfunction. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> MAF/IAT sensor connector or terminals malfunction Short to ground in wiring harness between MAF/IAT sensor terminal D and PCM terminal 1M IAT sensor malfunction PCM connector or terminals malfunction IAT sensor signal circuit and ground circuit are shorted to each other. PCM malfunction

ON-BOARD DIAGNOSTIC [L3 WITH TC]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	INSPECT MAF/IAT SENSOR CONNECTOR CONDITION <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the MAF/IAT sensor connector. Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
4	INSPECT IAT SENSOR SIGNAL CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> MAF/IAT sensor connector is disconnected. Inspect for continuity between MAF/IAT sensor terminal D (wiring harness-side) and body ground. Is there continuity? 	Yes	If the short to ground circuit could be detected: <ul style="list-style-type: none"> Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected: <ul style="list-style-type: none"> Replace the PCM (short to ground in PCM internal circuit). (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].) Go to Step 8.
		No	Go to the next step.
5	INSPECT IAT SENSOR <ul style="list-style-type: none"> Inspect the IAT sensor. (See 01-40B-26 INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [L3 WITH TC].) Is there any malfunction? 	Yes	Replace the MAF/IAT sensor, then go to Step 8. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P0130:00 [L3 WITH TC]

id010239702100

DTC P0130:00	A/F sensor circuit problem
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the voltage between PCM terminal 2AD and 2AC while the A/F sensor active. If the voltage deviate from the specified range, the PCM determines that there is a A/F sensor circuit problem. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is an intermittent monitor (A/F sensor, HO2S). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> A/F sensor connector or terminals malfunction PCM connector or terminals malfunction A/F sensor malfunction PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor, HO2S related) been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	INSPECT A/F SENSOR CONNECTOR CONDITION <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the A/F sensor connector. Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 6.
		No	Go to the next step.
4	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> Disconnect the PCM connector. Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 6.
		No	Go to the next step.
5	INSPECT A/F SENSOR <ul style="list-style-type: none"> Reconnect all disconnected connectors. Inspect the A/F sensor. (See 01-40B-30 AIR FUEL RATIO (A/F) SENSOR INSPECTION [L3 WITH TC].) Is there any malfunction? 	Yes	Replace the A/F sensor, then go to the next step. (See 01-40B-29 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
6	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Perform the Drive Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02B-13 OBD-II DRIVE MODE [L3 WITH TC].) Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2) <ul style="list-style-type: none"> • Perform the Freeze Frame PID Data Access Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the DTC P0131:00 on FREEZE FRAME DATA (Mode 2)? 	Yes	Go to the next step.
		No	Go to the troubleshooting procedures for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02B-18 DTC TABLE [L3 WITH TC].)
2	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> • Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor, HO2S related) been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
3	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	VERIFY RELATED PENDING CODE AND/OR DTC <ul style="list-style-type: none"> • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Are any other PENDING CODEs and/or DTCs present? 	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
5	INSPECT A/F SENSOR CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the A/F sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
6	INSPECT A/F SENSOR CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • A/F sensor connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: <ul style="list-style-type: none"> — A/F sensor terminal 1C — A/F sensor terminal 1B — A/F sensor terminal 1A • Is there continuity? 	Yes	If the short to ground circuit could be detected: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected: <ul style="list-style-type: none"> • Replace the PCM (short to ground in PCM internal circuit). (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].) Go to Step 9.
		No	Go to the next step.
7	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
8	INSPECT A/F SENSOR <ul style="list-style-type: none"> • Reconnect all disconnected connectors. • Inspect the A/F sensor. (See 01-40B-30 AIR FUEL RATIO (A/F) SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the A/F sensor, then go to the next step. (See 01-40B-29 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Intermittent concern exists. <ul style="list-style-type: none"> • Perform the "INTERMITTENT CONCERN TROUBLESHOOTING" procedure. (See 01-03B-89 INTERMITTENT CONCERN TROUBLESHOOTING [L3 WITH TC].)

ON-BOARD DIAGNOSTIC [L3 WITH TC]

01-02B

STEP	INSPECTION		ACTION
9	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Perform the KOEO or KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
10	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0132:00 [L3 WITH TC]

id010239702300

DTC P0132:00	A/F sensor circuit high input
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the input voltage from the A/F sensor when the engine is running. If the following PCM terminal voltage is above specified, the PCM determines that the A/F sensor circuit voltage is high. <ul style="list-style-type: none"> — PCM terminal 2Z: battery voltage-1.2 V — PCM terminal 2AC: 6.2 V — PCM terminal 2AD: battery voltage-1.2 V <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (A/F sensor, HO2S). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> A/F sensor connector or terminals malfunction PCM connector or terminals malfunction Short to power supply in wiring harness between the following terminals: <ul style="list-style-type: none"> — A/F sensor terminal 1C—PCM terminal 2Z — A/F sensor terminal 1B—PCM terminal 2AC — A/F sensor terminal 1A—PCM terminal 2AD A/F sensor malfunction PCM malfunction

ON-BOARD DIAGNOSTIC [L3 WITH TC]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2) <ul style="list-style-type: none"> • Perform the Freeze Frame PID Data Access Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the DTC P0132:00 on FREEZE FRAME DATA (Mode 2)? 	Yes	Go to the next step.
		No	Go to the troubleshooting procedures for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02B-18 DTC TABLE [L3 WITH TC].)
2	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> • Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor, HO2S related) been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
3	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	VERIFY RELATED PENDING CODE AND/OR DTC <ul style="list-style-type: none"> • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Are any other PENDING CODEs and/or DTCs present? 	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
5	INSPECT A/F SENSOR CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the A/F sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
6	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
7	INSPECT A/F SENSOR CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • A/F sensor and PCM connectors are disconnected. • Switch the ignition to ON (engine off). • Measure the voltage at the following terminals (wiring harness-side): <ul style="list-style-type: none"> — A/F sensor terminal 1C — A/F sensor terminal 1B — A/F sensor terminal 1A • Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 9.
		No	Go to the next step.
8	INSPECT A/F SENSOR <ul style="list-style-type: none"> • Switch the ignition to off. • Reconnect all disconnected connectors. • Inspect the A/F sensor. (See 01-40B-30 AIR FUEL RATIO (A/F) SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the A/F sensor, then go to the next step. (See 01-40B-29 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Intermittent concern exists.. <ul style="list-style-type: none"> • Perform the "INTERMITTENT CONCERN TROUBLESHOOTING" procedure. (See 01-03B-89 INTERMITTENT CONCERN TROUBLESHOOTING [L3 WITH TC].)

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
9	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the KOEO or KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
10	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

01-02B

DTC P0133:00 [L3 WITH TC]

id010239702400

DTC P0133:00	A/F sensor circuit slow response
DETECTION CONDITION	<ul style="list-style-type: none"> • The PCM monitors the peak differential value of the A/F sensor signal after the A/F fluctuation being provided when the following conditions are met. If the peak differential value is lower than the threshold value, the PCM determines that the A/F sensor circuit is slow. <p>MONITORING CONDITIONS</p> <ul style="list-style-type: none"> — Drive Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S, and TWC Repair Verification Drive Mode) — The following conditions are met: <ul style="list-style-type: none"> • A/F sensor heater monitor is completed. • Fuel system loop status is closed loop fuel control. — Engine speed: 1,350—3,500 rpm — Absolute load: 21—71% (at engine speed of 2,500 rpm) — Intake air volume: 5—40 g/s — Engine coolant temperature: above 60 °C {140 °F} <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is an intermittent monitor (A/F sensor, HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • A/F sensor looseness • Exhaust system leakage • A/F sensor malfunction <ul style="list-style-type: none"> — A/F sensor deterioration • Fuel pressure sensor malfunction • Clogged or restricted fuel line • Fuel leakage in the fuel line between the high-pressure fuel pump and the fuel pump unit • Fuel pump unit malfunction • Purge solenoid valve malfunction • Improper connection of purge solenoid hose • Engine internal malfunction <ul style="list-style-type: none"> — Leakage engine coolant to combustion chamber — Insufficient engine compression • PCM malfunction

ON-BOARD DIAGNOSTIC [L3 WITH TC]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2) <ul style="list-style-type: none"> • Perform the Freeze Frame PID Data Access Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the DTC P0133:00 on FREEZE FRAME DATA (Mode 2)? 	Yes	Go to the next step.
		No	Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02B-18 DTC TABLE [L3 WITH TC].)
2	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> • Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor, HO2S related) been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
3	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	VERIFY RELATED PENDING CODE AND/OR DTC <ul style="list-style-type: none"> • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the PENDING CODE/DTC P0443:00 also present? 	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02B-178 DTC P0443:00 [L3 WITH TC].)
		No	Go to the next step.
5	INSPECT INSTALLATION OF A/F SENSOR <ul style="list-style-type: none"> • Inspect if the A/F sensor is loosely installed. • Is the A/F sensor installed securely? 	Yes	Go to the next step.
		No	Retighten the A/F sensor, then go to Step 16. (See 01-40B-29 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
6	INSPECT EXHAUST GAS LEAKAGE <ul style="list-style-type: none"> • Visually inspect for the exhaust gas leakage between the exhaust manifold and A/F sensor. • Is there any leakage? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 16.
		No	Go to the next step.
7	INSPECT A/F SENSOR <ul style="list-style-type: none"> • Inspect the A/F sensor. (See 01-40B-30 AIR FUEL RATIO (A/F) SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the A/F sensor, then go to Step 16. (See 01-40B-29 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	INSPECT FUEL PRESSURE (HIGH-SIDE) <ul style="list-style-type: none"> • Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the FUEL_PRES PID value within the specification? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].) 	Yes	Go to Step 12.
		No	Go to the next step.
9	IDENTIFY CAUSE BY FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP <ul style="list-style-type: none"> • Is the vehicle accelerate performance normally? 	Yes	Go to the next step.
		No	Go to Step 11.
10	INSPECT FUEL PRESSURE SENSOR <ul style="list-style-type: none"> • Inspect the fuel pressure sensor. (See 01-40B-29 FUEL PRESSURE SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the fuel delivery pipe, then go to Step 16. (See 01-14B-25 FUEL INJECTOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION
11	INSPECT HIGH PRESSURE FUEL PUMP <ul style="list-style-type: none"> Replace the high pressure fuel pump (See 01-14B-17 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC].) Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the FUEL_PRES PID value within the specification? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].) 	Yes High-pressure fuel pump or spill valve control solenoid valve (built-in high pressure fuel pump) malfunction. <ul style="list-style-type: none"> Go to Step 16.
		No Relief valve malfunction. <ul style="list-style-type: none"> Replace the fuel delivery pipe, then go to Step 16. (See 01-14B-25 FUEL INJECTOR REMOVAL/INSTALLATION [L3 WITH TC].)
12	INSPECT FUEL PRESSURE (LOW-SIDE) <ul style="list-style-type: none"> Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. Measure the low side fuel pressure. (See 01-14B-6 FUEL LINE PRESSURE INSPECTION [L3 WITH TC].) Is the low side fuel pressure within the specification? 	Yes Go to the next step.
		No Inspect for the following. <ul style="list-style-type: none"> Fuel line restriction Fuel filter clogging If there is no malfunction: <ul style="list-style-type: none"> Replace the fuel pump unit. (See 01-14B-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [L3 WITH TC].) If there is any malfunction: <ul style="list-style-type: none"> Repair or replace the malfunctioning part according to the inspection results. Go to Step 16.
13	INSPECT PURGE SOLENOID VALVE <ul style="list-style-type: none"> Inspect the purge solenoid valve and vacuum hose connection. (See 01-16B-8 PURGE SOLENOID VALVE INSPECTION [L3 WITH TC].) (See 01-13B-3 INTAKE-AIR SYSTEM VACUUM HOSE ROUTING DIAGRAM [L3 WITH TC].) Is there any malfunction? 	Yes Repair or replace the malfunctioning part according to the inspection results, then go to Step 16.
		No Go to the next step.
14	INSPECT SEALING OF ENGINE COOLANT PASSAGE <ul style="list-style-type: none"> Perform the "ENGINE COOLANT LEAKAGE INSPECTION". (See 01-12B-6 ENGINE COOLANT LEAKAGE INSPECTION [L3 WITH TC].) Is there any malfunction? 	Yes Repair or replace the malfunctioning part according to the inspection results, then go to Step 16.
		No Go to the next step.
15	INSPECT ENGINE COMPRESSION <ul style="list-style-type: none"> Inspect the engine compression. (See 01-10B-12 COMPRESSION INSPECTION [L3 WITH TC].) Is there any malfunction? 	Yes Repair or replace the malfunctioning part according to the inspection results, then go to the next step.
		No Go to the next step.
16	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Perform the Drive Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S, and TWC Repair Verification Drive Mode). (See 01-02B-13 OBD-II DRIVE MODE [L3 WITH TC].) Is the PENDING CODE for this DTC present? 	Yes Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No Go to the next step.
17	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Are any DTCs present? 	Yes Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No DTC troubleshooting completed.

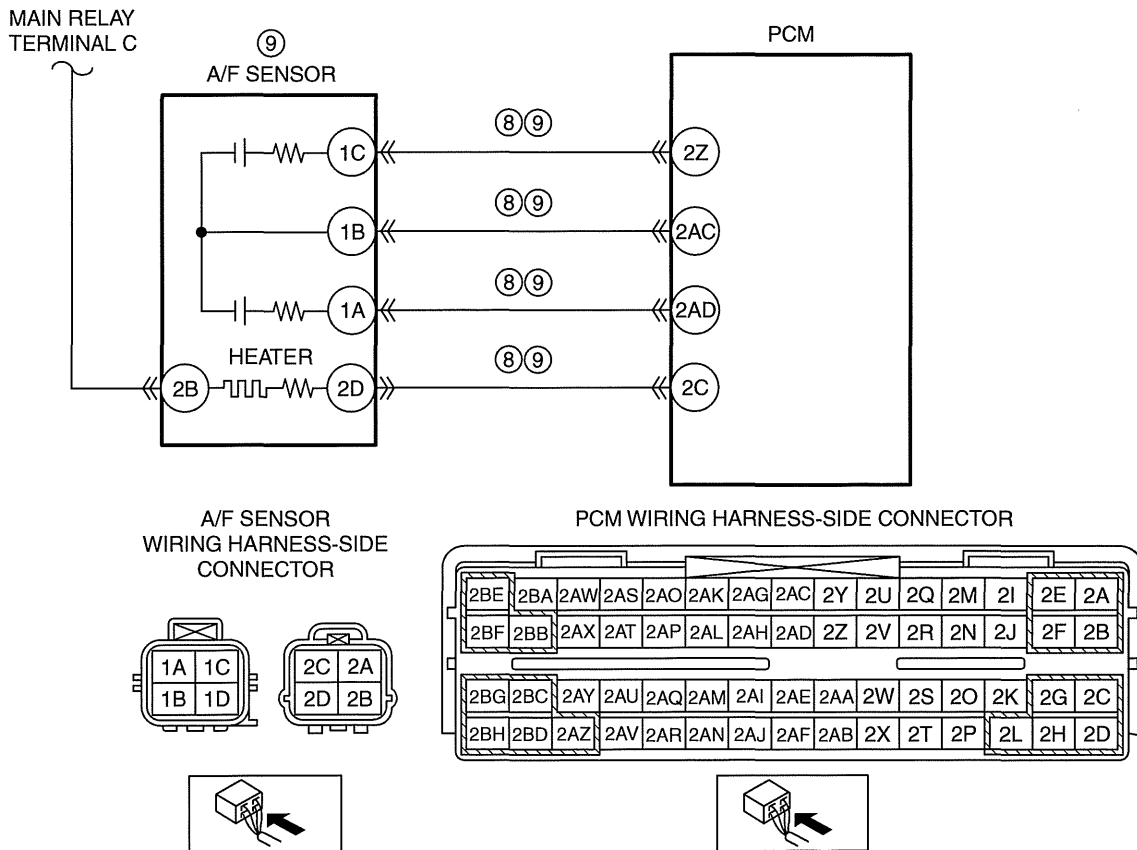

01-02B

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P0134:00 [L3 WITH TC]

id010239702500

DTC P0134:00	A/F sensor circuit no activity detected
DETECTION CONDITION	<ul style="list-style-type: none"> • The PCM monitors the element impedance A/F sensor when the following conditions are met. Under the following monitoring conditions, if the element impedance is more than the specified value, the PCM determines that the A/F sensor is not activated. <p>MONITORING CONDITIONS</p> <ul style="list-style-type: none"> — Drive Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S and TWC Repair Verification Drive Mode) — The following conditions are met: <ul style="list-style-type: none"> • A/F sensor heater is tuned on for 35 s or more • Battery voltage: 10—18 V <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is an intermittent monitor (A/F sensor, HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • A/F sensor looseness • Exhaust system leakage • Short to ground in wiring harness between the following terminals: <ul style="list-style-type: none"> — A/F sensor terminal 1C—PCM terminal 2Z — A/F sensor terminal 1B—PCM terminal 2AC — A/F sensor terminal 1A—PCM terminal 2AD — A/F sensor terminal 2D—PCM terminal 2C • Open circuit in wiring harness between the following terminals: <ul style="list-style-type: none"> — A/F sensor terminal 1C—PCM terminal 2Z — A/F sensor terminal 1B—PCM terminal 2AC — A/F sensor terminal 1A—PCM terminal 2AD — A/F sensor terminal 2D—PCM terminal 2C • A/F sensor malfunction <ul style="list-style-type: none"> — A/F sensor deterioration • Engine internal malfunction <ul style="list-style-type: none"> — Leakage engine coolant to combustion chamber — Insufficient engine compression • PCM malfunction

ON-BOARD DIAGNOSTIC [L3 WITH TC]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2) <ul style="list-style-type: none"> • Perform the Freeze Frame PID Data Access Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the DTC P0134:00 on FREEZE FRAME DATA (Mode 2)? 	Yes	Go to the next step.
		No	Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02B-18 DTC TABLE [L3 WITH TC].)
2	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> • Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor, HO2S related) been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
3	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	VERIFY RELATED PENDING CODE AND/OR DTC <p>Note</p> <ul style="list-style-type: none"> • If the fuel monitor, the DTC P0132:00 is retrieved, ignore it until the DTC P0134:00 is fixed. • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the PENDING CODE/DTC P2237:00 or P2251:00 also present? 	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02B-286 DTC P2237:00 [L3 WITH TC].) (See 01-02B-294 DTC P2251:00 [L3 WITH TC].)
		No	Go to the next step.
5	INSPECT INSTALLATION OF A/F SENSOR <ul style="list-style-type: none"> • Inspect if the A/F sensor is loosely installed. • Is the A/F sensor installed securely? 	Yes	Go to the next step.
		No	Retighten the A/F sensor, then go to Step 12. (See 01-40B-29 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
6	INSPECT EXHAUST GAS LEAKAGE <ul style="list-style-type: none"> • Visually inspect for the exhaust gas leakage between the exhaust manifold and A/F sensor. • Is there any leakage? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 12.
		No	Go to the next step.
7	INSPECT A/F SENSOR <ul style="list-style-type: none"> • Inspect the A/F sensor. (See 01-40B-30 AIR FUEL RATIO (A/F) SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Go to the next step.
		No	Go to Step 10.
8	INSPECT A/F SENSOR CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the A/F sensor connector. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: <ul style="list-style-type: none"> — A/F sensor terminal 1C — A/F sensor terminal 1B — A/F sensor terminal 1A — A/F sensor terminal 2D • Is there continuity? 	Yes	If the short to ground circuit could be detected: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected: <ul style="list-style-type: none"> • Replace the PCM (short to ground in PCM internal circuit). (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].) Go to Step 12.
		No	Go to the next step.

01-02B

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
9	INSPECT A/F SENSOR CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • A/F sensor connector is disconnected. • Disconnect the PCM connector. • Inspect for continuity between the following terminals (wiring harness-side): <ul style="list-style-type: none"> — A/F sensor terminal 1C—PCM terminal 2Z — A/F sensor terminal 1B—PCM terminal 2AC — A/F sensor terminal 1A—PCM terminal 2AD — A/F sensor terminal 2D—PCM terminal 2C • Is there continuity? 	Yes	Replace the A/F sensor, then go to Step 12. (See 01-40B-29 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 12.
10	INSPECT SEALING OF ENGINE COOLANT PASSAGE <ul style="list-style-type: none"> • Perform the “ENGINE COOLANT LEAKAGE INSPECTION”. (See 01-12B-6 ENGINE COOLANT LEAKAGE INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 12.
		No	Go to the next step.
11	INSPECT ENGINE COMPRESSION <ul style="list-style-type: none"> • Inspect the engine compression. (See 01-10B-12 COMPRESSION INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to the next step.
		No	Go to the next step.
12	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the Drive Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02B-13 OBD-II DRIVE MODE [L3 WITH TC].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
13	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

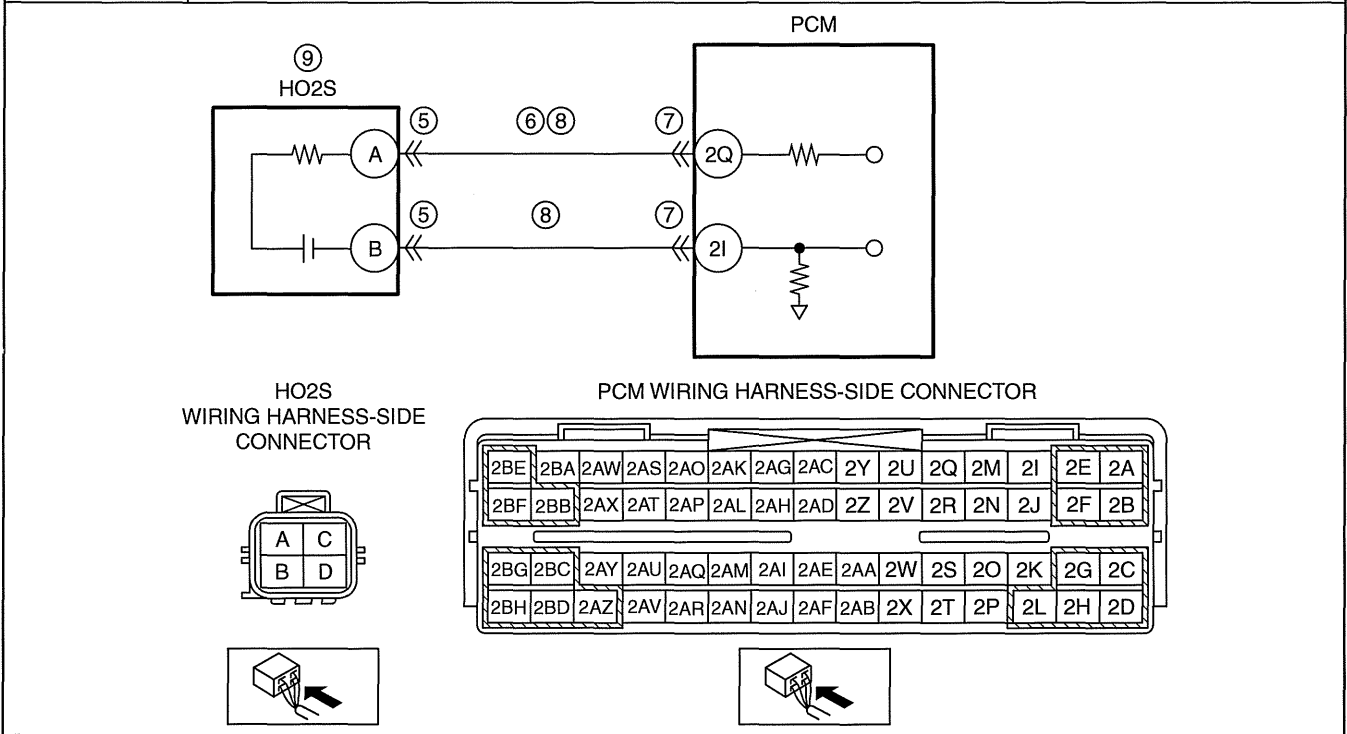

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P0137:00 [L3 WITH TC]

id010239300300

01-02B

DTC P0137:00	HO2S circuit low input
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the input voltage from the HO2S. If the input voltage from the HO2S is below -1.15 V or if HO2S bias voltage is below 1.3 V for 5 s while the HO2S is active, the PCM determines that the circuit input is low. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is an intermittent monitor (A/F sensor, HO2S). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> HO2S connector or terminals malfunction Short to ground in wiring harness between HO2S terminal A and PCM terminal 2Q PCM connector or terminals malfunction Open circuit in wiring harness between the following terminals: <ul style="list-style-type: none"> HO2S terminal A—PCM terminal 2Q HO2S terminal B—PCM terminal 2I HO2S malfunction PCM malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION				
1	<p>IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2)</p> <ul style="list-style-type: none"> Perform the Freeze Frame PID Data Access Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the DTC P0137:00 on FREEZE FRAME DATA (Mode 2)? 	<table border="0" style="width: 100%;"> <tr> <td style="width: 10%; vertical-align: top;">Yes</td> <td>Go to the next step.</td> </tr> <tr> <td style="vertical-align: top;">No</td> <td>Go to the troubleshooting procedures for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02B-18 DTC TABLE [L3 WITH TC].)</td> </tr> </table>	Yes	Go to the next step.	No	Go to the troubleshooting procedures for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02B-18 DTC TABLE [L3 WITH TC].)
Yes	Go to the next step.					
No	Go to the troubleshooting procedures for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02B-18 DTC TABLE [L3 WITH TC].)					
2	<p>VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED</p> <ul style="list-style-type: none"> Have the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor, HO2S related) been recorded? 	<table border="0" style="width: 100%;"> <tr> <td style="width: 10%; vertical-align: top;">Yes</td> <td>Go to the next step.</td> </tr> <tr> <td style="vertical-align: top;">No</td> <td>Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.</td> </tr> </table>	Yes	Go to the next step.	No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
Yes	Go to the next step.					
No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.					

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
3	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	VERIFY RELATED PENDING CODE AND/OR DTC <ul style="list-style-type: none"> • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Are any other PENDING CODEs and/or DTCs present? 	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
5	INSPECT HO2S CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the HO2S connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
6	INSPECT HO2S CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • HO2S connector is disconnected. • Inspect for continuity between HO2S terminal A (wiring harness-side) and body ground. • Is there continuity? 	Yes	If the short to ground circuit could be detected: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected: <ul style="list-style-type: none"> • Replace the PCM (short to ground in PCM internal circuit). (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].) Go to Step 10.
		No	Go to the next step.
7	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
8	INSPECT HO2S CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • HO2S and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): <ul style="list-style-type: none"> — HO2S terminal A—PCM terminal 2Q — HO2S terminal B—PCM terminal 2I • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 10.
9	INSPECT HO2S <ul style="list-style-type: none"> • Reconnect all disconnected connectors. • Inspect the HO2S. (See 01-40B-31 HEATED OXYGEN SENSOR (HO2S) INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the HO2S, then go to the next step. (See 01-40B-31 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
10	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the KOEO or KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
11	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

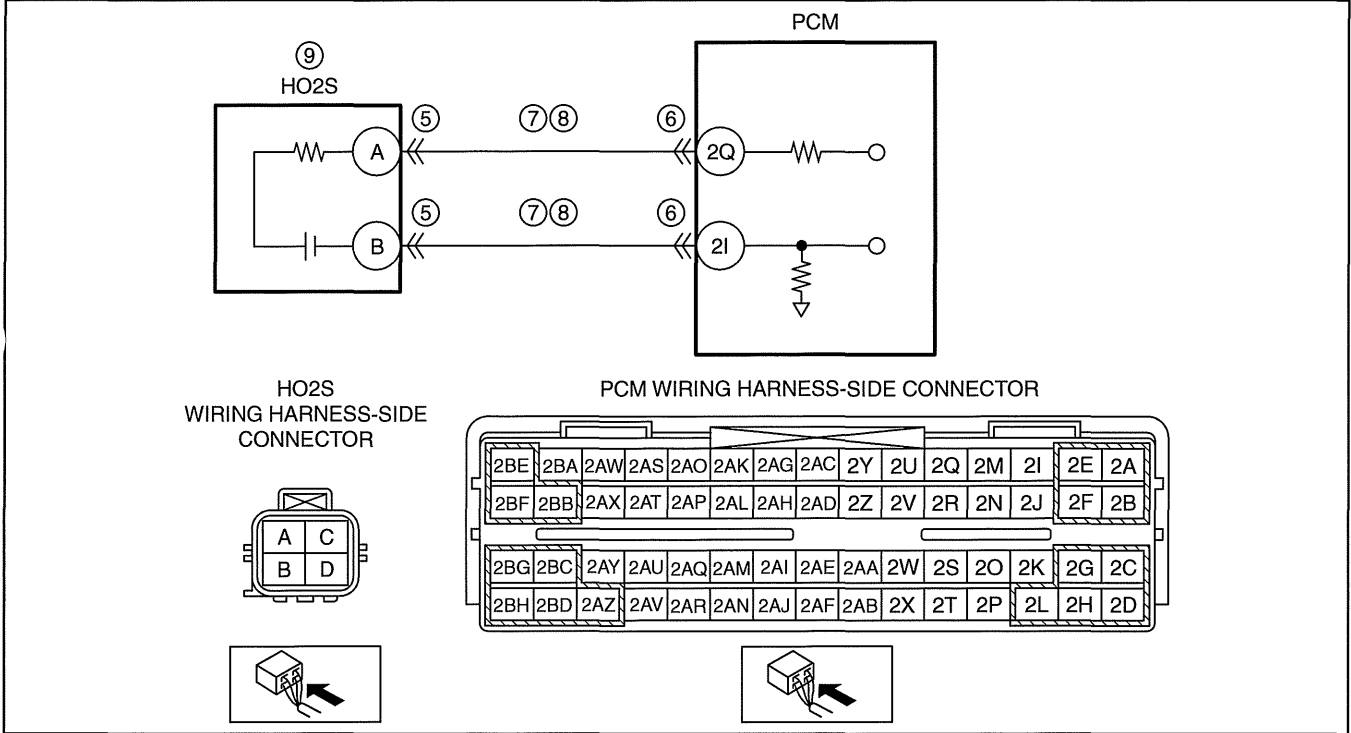

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P0138:00 [L3 WITH TC]

id010239702600

01-02B

DTC P0138:00	HO2S circuit high input
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the input voltage from the HO2S. If the input voltage from the HO2S is above 1.2 V or if HO2S bias voltage is above 1.7 V for 5 s, the PCM determines that the circuit input is high. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is an intermittent monitor (A/F sensor, HO2S). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> HO2S connector or terminals malfunction PCM connector or terminals malfunction Short to power supply in wiring harness between the following terminals: <ul style="list-style-type: none"> — HO2S terminal A—PCM terminal 2Q — HO2S terminal B—PCM terminal 2I HO2S signal circuit and ground circuit are shorted to each other. HO2S malfunction PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2) <ul style="list-style-type: none"> Perform the Freeze Frame PID Data Access Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the DTC P0138:00 on FREEZE FRAME DATA (Mode 2)? 	Yes	Go to the next step.
		No	Go to the troubleshooting procedures for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02B-18 DTC TABLE [L3 WITH TC].)
2	VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> Have the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor, HO2S related) been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
3	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	VERIFY RELATED PENDING CODE AND/OR DTC <ul style="list-style-type: none"> • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Are any other PENDING CODEs and/or DTCs present? 	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
5	INSPECT HO2S CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the HO2S connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
6	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
7	INSPECT HO2S CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • HO2S and PCM connectors are disconnected. • Switch the ignition to ON (engine off). • Measure the voltage at the following terminals (wiring harness-side): <ul style="list-style-type: none"> — HO2S terminal A — HO2S terminal B • Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 10.
		No	Go to the next step.
8	INSPECT HO2S SIGNAL CIRCUIT AND GROUND CIRCUIT FOR SHORT TO EACH OTHER <ul style="list-style-type: none"> • HO2S and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between HO2S terminals A and B (wiring harness-side). • Is there continuity? 	Yes	Repair or replace the wiring harness for a possible short to each other, then go to Step 10.
		No	Go to the next step.
9	INSPECT HO2S <ul style="list-style-type: none"> • Reconnect all disconnected connectors. • Inspect the HO2S. (See 01-40B-31 HEATED OXYGEN SENSOR (HO2S) INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the HO2S, then go to the next step. (See 01-40B-31 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Intermittent concern exists. <ul style="list-style-type: none"> • Perform the "INTERMITTENT CONCERN TROUBLESHOOTING" procedure. (See 01-03B-89 INTERMITTENT CONCERN TROUBLESHOOTING [L3 WITH TC].)
10	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. 		No	DTC troubleshooting completed.

DTC P0139:00 [L3 WITH TC]

id010239300400

01-02B

DTC P0139:00	HO2S circuit slow response
DETECTION CONDITION	<ul style="list-style-type: none"> • The PCM monitors the rich (0.55 V) to lean (0.3 V) response time of the HO2S. The PCM measures the response time when the following conditions are met. The PCM determines a HO2S response deterioration malfunction when the measured response time is more than 0.1 s for 2 of 3 times. <p>MONITORING CONDITIONS</p> <ul style="list-style-type: none"> — Drive Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S, and TWC Repair Verification Drive Mode) — The following conditions are met: <ul style="list-style-type: none"> • During deceleration fuel cut • Estimated temperature of the zirconia element inside the HO2S: above 450 °C {842 °F} <ul style="list-style-type: none"> • The PCM monitors for a time-out malfunction (when the HO2S remains above 0.2 V for longer than a specified period of time during the fuel cut control). The PCM measures the amount of time from when the following conditions are met until the HO2S output voltage drops below 0.2 V. The PCM determines a HO2S time-out malfunction when the detected time is more than 4 s for 2 of 3 times. <p>MONITORING CONDITIONS</p> <ul style="list-style-type: none"> — Drive Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S, and TWC Repair Verification Drive Mode) — The following conditions are met: <ul style="list-style-type: none"> • During deceleration fuel cut • Estimated temperature of the zirconia element inside the HO2S: above 450 °C {842 °F} <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is an intermittent monitor (A/F sensor, HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • HO2S looseness • Exhaust system leakage • HO2S malfunction <ul style="list-style-type: none"> — HO2S deterioration • High-pressure side fuel delivery system malfunction <ul style="list-style-type: none"> — Fuel pressure sensor (built-in fuel delivery pipe) malfunction — Relief valve (built-in fuel delivery pipe) malfunction — High pressure fuel pump malfunction — Spill valve control solenoid valve (built-in high pressure fuel pump) malfunction • Low-pressure side fuel delivery system malfunction <ul style="list-style-type: none"> — Fuel pressure regulator (built-in fuel pump unit) malfunction — Fuel pump unit malfunction — Fuel filter (built-in fuel pump unit) clogged or restricted — Fuel leakage on fuel line from high pressure fuel pump to fuel pump unit • Purge solenoid valve malfunction • Improper connection of purge solenoid hoses • Engine internal malfunction <ul style="list-style-type: none"> — Engine coolant leakage into combustion chamber — Insufficient engine compression • PCM malfunction

ON-BOARD DIAGNOSTIC [L3 WITH TC]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2) <ul style="list-style-type: none"> • Perform the Freeze Frame PID Data Access Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the DTC P0139:00 on FREEZE FRAME DATA (Mode 2)? 	Yes	Go to the next step.
		No	Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02B-18 DTC TABLE [L3 WITH TC].)
2	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> • Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor, HO2S related) been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
3	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	VERIFY RELATED PENDING CODE AND/OR DTC <ul style="list-style-type: none"> • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the PENDING CODE/DTC P0443:00 also present? 	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02B-178 DTC P0443:00 [L3 WITH TC].)
		No	Go to the next step.
5	INSPECT INSTALLATION OF HO2S <ul style="list-style-type: none"> • Inspect if the HO2S is loosely installed. • Is the HO2S installed securely? 	Yes	Go to the next step.
		No	Retighten the HO2S, then go to Step 16. (See 01-40B-31 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [L3 WITH TC].)
6	INSPECT EXHAUST GAS LEAKAGE <ul style="list-style-type: none"> • Visually inspect for the exhaust gas leakage between the exhaust manifold and HO2S. • Is there any leakage? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 16.
		No	Go to the next step.
7	INSPECT HO2S <ul style="list-style-type: none"> • Inspect the HO2S. (See 01-40B-31 HEATED OXYGEN SENSOR (HO2S) INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Inspect the HO2S related wiring harness. <ul style="list-style-type: none"> • If there is no malfunction: <ul style="list-style-type: none"> — Replace the HO2S. (See 01-40B-31 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [L3 WITH TC].) • If there is a malfunction: <ul style="list-style-type: none"> — Repair or replace the suspected wiring harness. Go to Step 16.
		No	Go to the next step.
8	INSPECT FUEL PRESSURE (HIGH-SIDE) <ul style="list-style-type: none"> • Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the FUEL_PRES PID value within the specification? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].) 	Yes	Go to Step 13.
		No	Go to the next step.
9	IDENTIFY CAUSE BY FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP <ul style="list-style-type: none"> • Is the vehicle accelerate performance normally? 	Yes	Go to the next step.
		No	Go to Step 11.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
10	INSPECT FUEL PRESSURE SENSOR <ul style="list-style-type: none"> Inspect the fuel pressure sensor. (See 01-40B-29 FUEL PRESSURE SENSOR INSPECTION [L3 WITH TC].) Is there any malfunction? 	Yes	Replace the fuel delivery pipe, then go to Step 16. (See 01-14B-25 FUEL INJECTOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
11	INSPECT HIGH PRESSURE FUEL PUMP <ul style="list-style-type: none"> Replace the high pressure fuel pump (See 01-14B-17 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC].) Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the FUEL_PRES PID value within the specification? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].) 	Yes	High-pressure fuel pump or spill valve control solenoid valve (built-in high pressure fuel pump) malfunction. <ul style="list-style-type: none"> Go to Step 16.
		No	Go to the next step.
12	INSPECT FUEL PRESSURE (LOW-SIDE) <ul style="list-style-type: none"> Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. Measure the low side fuel pressure. (See 01-14B-6 FUEL LINE PRESSURE INSPECTION [L3 WITH TC].) Is the low side fuel pressure within the specification? 	Yes	Go to the next step.
		No	Inspect for the following. <ul style="list-style-type: none"> Fuel line restriction Fuel filter clogging If there is no malfunction: <ul style="list-style-type: none"> Replace the fuel pump unit. (See 01-14B-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [L3 WITH TC].) If there is any malfunction: <ul style="list-style-type: none"> Repair or replace the malfunctioning part according to the inspection results. Go to Step 16.
13	INSPECT PURGE SOLENOID VALVE <ul style="list-style-type: none"> Inspect the purge solenoid valve and vacuum hose connection. (See 01-16B-8 PURGE SOLENOID VALVE INSPECTION [L3 WITH TC].) (See 01-13B-3 INTAKE-AIR SYSTEM VACUUM HOSE ROUTING DIAGRAM [L3 WITH TC].) Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 16.
		No	Go to the next step.
14	INSPECT SEALING OF ENGINE COOLANT PASSAGE <ul style="list-style-type: none"> Perform the "ENGINE COOLANT LEAKAGE INSPECTION". (See 01-12B-6 ENGINE COOLANT LEAKAGE INSPECTION [L3 WITH TC].) Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 16.
		No	Go to the next step.
15	INSPECT ENGINE COMPRESSION <ul style="list-style-type: none"> Inspect the engine compression. (See 01-10B-12 COMPRESSION INSPECTION [L3 WITH TC].) Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to the next step.
		No	Go to the next step.
16	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Perform the Drive Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S, and TWC Repair Verification Drive Mode). (See 01-02B-13 OBD-II DRIVE MODE [L3 WITH TC].) Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.

01-02B

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION		ACTION
17	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0140:00 [L3 WITH TC]

id010239702700

DTC P0140:00	HO2S circuit no activity detected
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the input voltage from the HO2S when the following conditions are met. Under the following monitoring conditions, if the input voltage from the HO2S does not even exceed 0.6 V though the short term fuel trim is controlled up to 20.5% for 20.8 s, the PCM determines that the HO2S circuit is not activated. <p>MONITORING CONDITIONS</p> <ul style="list-style-type: none"> — Drive Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S, and TWC Repair Verification Drive Mode) — Estimated temperature of the zirconia element inside the HO2S: above 450 °C {842 °F} <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is an intermittent monitor (A/F sensor, HO2S). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> HO2S looseness Exhaust system leakage Short to ground in wiring harness between HO2S terminal A and PCM terminal 2Q Open circuit in wiring harness between HO2S terminal A and PCM terminal 2Q HO2S malfunction <ul style="list-style-type: none"> — HO2S deterioration Engine internal malfunction <ul style="list-style-type: none"> — Engine coolant leakage into combustion chamber — Insufficient engine compression PCM malfunction

ON-BOARD DIAGNOSTIC [L3 WITH TC]

Diagnostic procedure

STEP	INSPECTION	ACTION
1	IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2) <ul style="list-style-type: none"> Perform the Freeze Frame PID Data Access Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the DTC P0140:00 on FREEZE FRAME DATA (Mode 2)? 	Yes Go to the next step.
		No Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02B-18 DTC TABLE [L3 WITH TC].)
2	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor, HO2S related) been recorded? 	Yes Go to the next step.
		No Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
3	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No Go to the next step.
4	VERIFY RELATED PENDING CODE AND/OR DTC <p>Note</p> <ul style="list-style-type: none"> If the fuel monitor, the DTC P0132:00 is retrieved, ignore it until the DTC P0140:00 is fixed. Switch the ignition to off, then to ON (engine off). Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Are any other PENDING CODEs and/or DTCs present? 	Yes Go to the applicable PENDING CODE or DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No Go to the next step.
5	INSPECT INSTALLATION OF HO2S <ul style="list-style-type: none"> Inspect if the HO2S is loosely installed. Is the HO2S installed securely? 	Yes Go to the next step.
		No Retighten the HO2S, then go to Step 12. (See 01-40B-31 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [L3 WITH TC].)
6	INSPECT EXHAUST GAS LEAKAGE <ul style="list-style-type: none"> Visually inspect for the exhaust gas leakage between the exhaust manifold and HO2S. Is there any leakage? 	Yes Repair or replace the malfunctioning part according to the inspection results, then go to Step 12.
		No Go to the next step.
7	INSPECT HO2S <ul style="list-style-type: none"> Inspect the HO2S. (See 01-40B-31 HEATED OXYGEN SENSOR (HO2S) INSPECTION [L3 WITH TC].) Is there any malfunction? 	Yes Go to the next step.
		No Go to Step 10.
8	INSPECT HO2S CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the HO2S connector. Inspect for continuity between HO2S terminal A (wiring harness-side) and body ground. Is there continuity? 	Yes If the short to ground circuit could be detected: <ul style="list-style-type: none"> Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected: <ul style="list-style-type: none"> Replace the PCM (short to ground in PCM internal circuit). (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].) Go to Step 12.
		No Go to the next step.

01-02B

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
9	INSPECT HO2S CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • HO2S connector is disconnected. • Disconnect the PCM connector. • Inspect for continuity between HO2S terminal A (wiring harness-side) and PCM terminal 2Q (wiring harness-side). • Is there continuity? 	Yes	Replace the HO2S, then go to Step 12. (See 01-40B-31 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 12.
10	INSPECT SEALING OF ENGINE COOLANT PASSAGE <ul style="list-style-type: none"> • Perform the "ENGINE COOLANT LEAKAGE INSPECTION". (See 01-12B-6 ENGINE COOLANT LEAKAGE INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 12.
		No	Go to the next step.
11	INSPECT ENGINE COMPRESSION <ul style="list-style-type: none"> • Inspect the engine compression. (See 01-10B-12 COMPRESSION INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to the next step.
		No	Go to the next step.
12	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the Drive Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02B-13 OBD-II DRIVE MODE [L3 WITH TC].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
13	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P0171:00 [L3 WITH TC]

id010239934200

DTC P0171:00	Fuel trim system too lean
DETECTION CONDITION	<ul style="list-style-type: none"> • The PCM monitors the short term fuel trim (SHRTFT) and long term fuel trim (LONGFT) values when closed loop fuel control. If the LONGFT and the sum total of these fuel trims or SHRTFT exceed preprogrammed criteria, the PCM determines that the fuel system is too lean. <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is a continuous monitor (fuel system). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Erratic signal to PCM <ul style="list-style-type: none"> — APP sensor signal malfunction — ECT sensor No.1 signal malfunction — MAF sensor signal malfunction — TP sensor signal malfunction — VSS signal malfunction — Related connector or terminals malfunction — Related wiring harness malfunction • A/F sensor heater malfunction • A/F sensor looseness • Exhaust system leakage • A/F sensor deterioration • MAF sensor malfunction • Air suction in intake air system • Improper operation of purge control system <ul style="list-style-type: none"> — Purge solenoid valve malfunction (stuck open) — Improper connection of purge solenoid hoses • Improper operation of variable valve timing control system • High-pressure side fuel delivery system malfunction <ul style="list-style-type: none"> — Fuel pressure sensor (built-in fuel delivery pipe) malfunction — Relief valve (built-in fuel delivery pipe) malfunction — Spill valve control solenoid valve (built-in high pressure fuel pump) malfunction — High pressure fuel pump malfunction • Low-pressure side fuel delivery system malfunction <ul style="list-style-type: none"> — Fuel pressure regulator (built-in fuel pump unit) malfunction — Fuel pump unit malfunction — Fuel filter clogging — Fuel leakage on fuel line (between fuel pump unit and high pressure fuel pump) • Ignition system malfunction <ul style="list-style-type: none"> — Spark plug malfunction — Ignition coil malfunction — Ignition coil related wiring harness malfunction • Insufficient engine compression • Improper operation of fuel injector • Misfire • Fuel runout • PCM malfunction

01-02B

ON-BOARD DIAGNOSTIC [L3 WITH TC]

Diagnostic procedure

STEP	INSPECTION	ACTION
1	IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2) <ul style="list-style-type: none"> Perform the Freeze Frame PID Data Access Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the DTC P0171:00 on FREEZE FRAME DATA (Mode 2)? 	Yes Go to the next step.
		No Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02B-18 DTC TABLE [L3 WITH TC].)
2	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (fuel system related) been recorded? 	Yes Go to the next step.
		No Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
3	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No Go to the next step.
4	VERIFY RELATED PENDING CODE AND/OR DTC <ul style="list-style-type: none"> Switch the ignition to off, then to ON (engine off). Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Are any other PENDING CODEs and/or DTCs present? 	Yes If misfire DTC is present: <ul style="list-style-type: none"> Go to Step 11. If other DTC is present: <ul style="list-style-type: none"> Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No If drive ability concern is present: <ul style="list-style-type: none"> Go to Step 11. If drive ability concern is not present: <ul style="list-style-type: none"> Go to the next step.
5	VERIFY CURRENT INPUT SIGNAL STATUS <ul style="list-style-type: none"> Access the following PIDs using the M-MDS: (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) <ul style="list-style-type: none"> APP1 APP2 ECT MAF TP REL VSS Is there any signal that is far out of specification when the ignition switch is ON and the engine runs? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].) 	Yes Inspect the suspected circuit. <ul style="list-style-type: none"> If there is any malfunction: <ul style="list-style-type: none"> Repair or replace the malfunctioning part according to the inspection results, then go to Step 23.
		No Go to the next step.
6	VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION <ul style="list-style-type: none"> Access the same PIDs as in Step 5 while simulating the FREEZE FRAME DATA (Mode 2) condition. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is there any signal which causes drastic changes? 	Yes Inspect the suspected circuit. <ul style="list-style-type: none"> If there is any malfunction: <ul style="list-style-type: none"> Repair or replace the malfunctioning part according to the inspection results, then go to Step 23.
		No Go to the next step.
7	INSPECT A/F SENSOR HEATER <ul style="list-style-type: none"> Inspect the A/F sensor heater. (See 01-40B-30 AIR FUEL RATIO (A/F) SENSOR INSPECTION [L3 WITH TC].) Is there any malfunction? 	Yes Replace the A/F sensor, then go to Step 23. (See 01-40B-29 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No Go to the next step.
8	INSPECT A/F SENSOR <ul style="list-style-type: none"> Inspect the A/F sensor. (See 01-40B-30 AIR FUEL RATIO (A/F) SENSOR INSPECTION [L3 WITH TC].) Is there any malfunction? 	Yes Go to the next step.
		No Go to Step 11.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION
9	INSPECT INSTALLATION OF A/F SENSOR <ul style="list-style-type: none"> Inspect if the A/F sensor is loosely installed. Is the A/F sensor installed securely? 	Yes Go to the next step.
		No Retighten the A/F sensor, then go to Step 23. (See 01-40B-29 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
10	INSPECT EXHAUST GAS LEAKAGE <ul style="list-style-type: none"> Visually inspect for the exhaust gas leakage between the exhaust manifold and A/F sensor. Is there any leakage? 	Yes Repair or replace the malfunctioning part according to the inspection results, then go to Step 23.
		No Replace the A/F sensor, then go to Step 23. (See 01-40B-29 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
11	VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR <ul style="list-style-type: none"> Start the engine. Access the MAF PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Verify that the MAF PID changes quickly according to the engine speed. Is the MAF PID value normal? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].) 	Yes Go to Step 13.
		No Go to the next step.
12	INSPECT FOR EXCESSIVE AIR SUCTION OF INTAKE AIR SYSTEM <ul style="list-style-type: none"> Visually inspect for loosen, cracks or damages hoses on the intake air system. <p>Note</p> <ul style="list-style-type: none"> Engine speed may change when rust penetrating agent is sprayed on the air suction area. <ul style="list-style-type: none"> Is there any malfunction? 	Yes Repair or replace the malfunctioning part according to the inspection results, then go to Step 23.
		No Replace the MAF/IAT sensor, then go to Step 23. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
13	INSPECT PURGE CONTROL SYSTEM OPERATION <ul style="list-style-type: none"> Perform the Purge Control System Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Is there any malfunction? 	Yes Repair or replace the malfunctioning part according to the inspection results, then go to Step 23.
		No Go to the next step.
14	INSPECT VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION <ul style="list-style-type: none"> Perform the Variable Valve Timing Control System Operation Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Is there any malfunction? 	Yes Repair or replace the malfunctioning part according to the inspection results, then go to Step 23.
		No Go to the next step.
15	INSPECT FUEL PRESSURE (HIGH-SIDE) <ul style="list-style-type: none"> Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the FUEL_PRES PID value within the specification? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].) 	Yes Go to Step 19.
		No Go to the next step.
16	IDENTIFY CAUSE BY FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP <ul style="list-style-type: none"> Is the vehicle accelerate performance normally? 	Yes Go to the next step.
		No Go to Step 18.
17	INSPECT FUEL PRESSURE SENSOR <ul style="list-style-type: none"> Inspect the fuel pressure sensor. (See 01-40B-29 FUEL PRESSURE SENSOR INSPECTION [L3 WITH TC].) Is there any malfunction? 	Yes Replace the fuel delivery pipe, then go to Step 23. (See 01-14B-25 FUEL INJECTOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No Go to Step 19.

01-02B

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
18	INSPECT HIGH PRESSURE FUEL PUMP <ul style="list-style-type: none"> • Replace the high pressure fuel pump (See 01-14B-17 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC].) • Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the FUEL_PRES PID value within the specification? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].) 	Yes	High-pressure fuel pump or spill valve control solenoid valve (built-in high pressure fuel pump) malfunction. <ul style="list-style-type: none"> • Go to Step 23.
		No	Go to the next step.
19	INSPECT FUEL PRESSURE (LOW-SIDE) <ul style="list-style-type: none"> • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See 01-14B-6 FUEL LINE PRESSURE INSPECTION [L3 WITH TC].) • Is the low side fuel pressure within the specification? 	Yes	Go to the next step.
		No	Inspect for the following. <ul style="list-style-type: none"> • Fuel line restriction • Fuel filter clogging If there is no malfunction: <ul style="list-style-type: none"> • Replace the fuel pump unit. (See 01-14B-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [L3 WITH TC].) If there is any malfunction: <ul style="list-style-type: none"> • Repair or replace the malfunctioning part according to the inspection results. Go to Step 23.
20	INSPECT IGNITION SYSTEM OPERATION <ul style="list-style-type: none"> • Perform the Spark Test. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) • Is a strong blue spark visible at each cylinder? 	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results, then go to Step 23.
21	INSPECT ENGINE COMPRESSION <ul style="list-style-type: none"> • Inspect the engine compression. (See 01-10B-12 COMPRESSION INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 23.
		No	Go to the next step.
22	INSPECT FUEL INJECTOR OPERATION <ul style="list-style-type: none"> • Perform the Fuel Injector Operation Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to the next step.
		No	Go to the next step.
23	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the Drive Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02B-13 OBD-II DRIVE MODE [L3 WITH TC].) • Stop the vehicle and access the On-Board System Readiness Tests Access Procedure to inspect the Drive Mode completion status. • Verify the FUEL_EVAL PID changes to yes. <ul style="list-style-type: none"> — If not: <ul style="list-style-type: none"> • Perform the Drive Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S and TWC Repair Verification Drive Mode) again. (See 01-02B-13 OBD-II DRIVE MODE [L3 WITH TC].) • Perform the KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION		ACTION
24	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0172:00 [L3 WITH TC]

id010239934300

01-02B

DTC P0172:00	Fuel trim system too rich
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the short fuel trim (SHRTFT) and long fuel trim (LONGFT) values when closed loop fuel control. If the LONGFT and the sum total of these fuel trims or SHRTFT exceed preprogrammed criteria, the PCM determines that the fuel system is too rich. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (fuel system). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Erratic signal to PCM <ul style="list-style-type: none"> — APP sensor signal malfunction — ECT sensor No.1 signal malfunction — MAF sensor signal malfunction — TP sensor signal malfunction — VSS signal malfunction — Related connector or terminals malfunction — Related wiring harness malfunction A/F sensor heater malfunction A/F sensor looseness Exhaust system leakage A/F sensor deterioration MAF sensor malfunction Improper operation of purge control system <ul style="list-style-type: none"> — Purge solenoid valve malfunction (stuck open) — Improper connection of purge solenoid hoses Improper operation of EGR valve system Improper operation of variable swirl control Improper operation of variable valve timing control system High-pressure side fuel delivery system malfunction <ul style="list-style-type: none"> — Fuel pressure sensor (built-in fuel delivery pipe) malfunction — Relief valve (built-in fuel delivery pipe) malfunction — Spill valve control solenoid valve (built-in high pressure fuel pump) malfunction — High pressure fuel pump malfunction Low-pressure side fuel delivery system malfunction <ul style="list-style-type: none"> — Fuel pressure regulator (built-in fuel pump unit) malfunction — Fuel pump unit malfunction — Fuel filter clogging — Fuel leakage on fuel line (between fuel pump unit and high pressure fuel pump) Ignition system malfunction <ul style="list-style-type: none"> — Spark plug malfunction — Ignition coil malfunction — Ignition coil related wiring harness malfunction Improper operation of PCV valve Improper operation of fuel injector Misfire PCM malfunction

ON-BOARD DIAGNOSTIC [L3 WITH TC]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2) <ul style="list-style-type: none"> • Perform the Freeze Frame PID Data Access Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the DTC P0172:00 on FREEZE FRAME DATA (Mode 2)? 	Yes	Go to the next step.
		No	Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02B-18 DTC TABLE [L3 WITH TC].)
2	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> • Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (fuel system related) been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
3	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	VERIFY RELATED PENDING CODE AND/OR DTC <ul style="list-style-type: none"> • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Are any other PENDING CODEs and/or DTCs present? 	Yes	If misfire DTC is present: <ul style="list-style-type: none"> • Go to Step 11. If other DTC is present: <ul style="list-style-type: none"> • Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	If drive ability concern is present: <ul style="list-style-type: none"> • Go to Step 11. If drive ability concern is not present: <ul style="list-style-type: none"> • Go to the next step.
5	VERIFY CURRENT INPUT SIGNAL STATUS (IGNITION SWITCH TO THE ON POSITION/ IDLE) <ul style="list-style-type: none"> • Access the following PIDs using the M-MDS: (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) — APP1 — APP2 — ECT — MAF — TP REL — VSS • Is there any signal that is far out of specification when the ignition switch is ON and the engine runs? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].) 	Yes	Inspect the suspected circuit. <ul style="list-style-type: none"> • If there is any malfunction: — Repair or replace the malfunctioning part according to the inspection results, then go to Step 24.
		No	Go to the next step.
6	VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION <ul style="list-style-type: none"> • Access the same PIDs as in Step 5 while simulating the FREEZE FRAME DATA (Mode 2) condition. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is there any signal which causes drastic changes? 	Yes	Inspect the suspected circuit. <ul style="list-style-type: none"> • If there is any malfunction: — Repair or replace the malfunctioning part according to the inspection results, then go to Step 24.
		No	Go to the next step.
7	INSPECT A/F SENSOR HEATER <ul style="list-style-type: none"> • Inspect the A/F sensor heater. (See 01-40B-30 AIR FUEL RATIO (A/F) SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the A/F sensor, then go to Step 24. (See 01-40B-29 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
8	INSPECT A/F SENSOR <ul style="list-style-type: none"> Inspect the A/F sensor. (See 01-40B-30 AIR FUEL RATIO (A/F) SENSOR INSPECTION [L3 WITH TC].) Is there any malfunction? 	Yes	Go to the next step.
		No	Go to Step 11.
9	INSPECT INSTALLATION OF A/F SENSOR <ul style="list-style-type: none"> Inspect if the A/F sensor is loosely installed. Is the A/F sensor installed securely? 	Yes	Go to the next step.
		No	Retighten the A/F sensor, then go to Step 24. (See 01-40B-29 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
10	INSPECT EXHAUST GAS LEAKAGE <ul style="list-style-type: none"> Visually inspect for the exhaust gas leakage between the exhaust manifold and A/F sensor. Is there any leakage? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 24.
		No	Replace the A/F sensor, then go to Step 24. (See 01-40B-29 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
11	VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR <ul style="list-style-type: none"> Start the engine. Access the MAF PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Verify that the MAF PID changes quickly according to the engine speed. Is the MAF PID value normal? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].) 	Yes	Go to the next step.
		No	Replace the MAF/IAT sensor, then go to Step 24. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
12	INSPECT PURGE CONTROL SYSTEM OPERATION <ul style="list-style-type: none"> Perform the Purge Control System Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 24.
		No	Go to the next step.
13	INSPECT EGR VALVE OPERATION <ul style="list-style-type: none"> Perform the EGR Control System Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 24.
		No	Go to the next step.
14	INSPECT VARIABLE SWIRL CONTROL OPERATION <ul style="list-style-type: none"> Perform the Variable Swirl System Operation Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 24.
		No	Go to the next step.
15	INSPECT VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION <ul style="list-style-type: none"> Perform the Variable Valve Timing Control System Operation Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 24.
		No	Go to the next step.
16	INSPECT FUEL PRESSURE (HIGH-SIDE) <ul style="list-style-type: none"> Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the FUEL_PRES PID value within the specification? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].) 	Yes	Go to Step 20.
		No	Go to the next step.
17	IDENTIFY CAUSE BY FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP <ul style="list-style-type: none"> Is the vehicle accelerate performance normally? 	Yes	Go to the next step.
		No	Go to Step 19.

01-02B

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
18	INSPECT FUEL PRESSURE SENSOR <ul style="list-style-type: none"> • Inspect the fuel pressure sensor. (See 01-40B-29 FUEL PRESSURE SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the fuel delivery pipe, then go to Step 24. (See 01-14B-25 FUEL INJECTOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
19	INSPECT HIGH PRESSURE FUEL PUMP <ul style="list-style-type: none"> • Replace the high pressure fuel pump (See 01-14B-17 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC].) • Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the FUEL_PRES PID value within the specification? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].) 	Yes	High-pressure fuel pump or spill valve control solenoid valve (built-in high pressure fuel pump) malfunction. <ul style="list-style-type: none"> • Go to Step 24.
		No	Go to the next step.
20	INSPECT FUEL PRESSURE (LOW-SIDE) <ul style="list-style-type: none"> • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See 01-14B-6 FUEL LINE PRESSURE INSPECTION [L3 WITH TC].) • Is the low side fuel pressure within the specification? 	Yes	Go to the next step.
		No	Inspect for the following. <ul style="list-style-type: none"> • Fuel line restriction • Fuel filter clogging If there is no malfunction: <ul style="list-style-type: none"> • Replace the fuel pump unit. (See 01-14B-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [L3 WITH TC].) If there is any malfunction: <ul style="list-style-type: none"> • Repair or replace the malfunctioning part according to the inspection results. Go to Step 24.
21	INSPECT IGNITION SYSTEM OPERATION <ul style="list-style-type: none"> • Perform the Spark Test. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) • Is a strong blue spark visible at each cylinder? 	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the spark test result, then go to Step 24.
22	INSPECT PCV VALVE OPERATION <ul style="list-style-type: none"> • Inspect the PCV valve operation. (See 01-16B-10 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the PCV valve, then go to Step 24. (See 01-16B-9 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
23	INSPECT FUEL INJECTOR OPERATION <ul style="list-style-type: none"> • Perform the Fuel Injector Operation Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
24	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the Drive Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02B-13 OBD-II DRIVE MODE [L3 WITH TC].) • Stop the vehicle and access the On-Board System Readiness Tests Access Procedure inspect the Drive Mode completion status. • Verify the FUEL_EVAL PID changes to yes. <ul style="list-style-type: none"> — If not: <ul style="list-style-type: none"> • Perform the Drive Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S and TWC Repair Verification Drive Mode) again. (See 01-02B-13 OBD-II DRIVE MODE [L3 WITH TC].) • Perform the KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
25	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

01-02B

DTC P0191:00 [L3 WITH TC]

id010239147600

DTC P0191:00	Fuel pressure sensor circuit range/performance problem
DETECTION CONDITION	<ul style="list-style-type: none"> • If the fluctuation range of the actual fuel pressure is below the set value when the fluctuation range of the target fuel pressure has exceeded the set value, the PCM determines that there is fuel pressure sensor performance problem. <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Air suction in fuel line due to fuel runout • High pressure fuel pump connector or terminals malfunction • Fuel pressure sensor connector or terminals malfunction • PCM connector or terminals malfunction • Fuel pressure sensor malfunction • Insufficient fuel pressure (low pressure line) • Fuel injector malfunction (fuel leakage) • Fuel pressure limiter malfunction • PCM malfunction

ON-BOARD DIAGNOSTIC [L3 WITH TC]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY WHETHER MALFUNCTION IS AIR SUCTION IN FUEL LINE BY FUEL RUNOUT OR ELSEWHERE <ul style="list-style-type: none"> • Verify the fuel gauge indicator on the instrument cluster. • Does the fuel gauge indicate empty? 	Yes	Refill the fuel and warm up the engine, then go to the next step.
		No	Go to the next step.
4	INSPECT HIGH PRESSURE FUEL PUMP CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the high pressure fuel pump connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
5	INSPECT FUEL PRESSURE SENSOR CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the fuel pressure sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
6	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
7	INSPECT FUEL PRESSURE SENSOR <ul style="list-style-type: none"> • Reconnect all disconnected connectors. • Inspect the fuel pressure sensor. (See 01-40B-29 FUEL PRESSURE SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the fuel pressure sensor, then go to Step 9. (See 01-40B-29 FUEL PRESSURE SENSOR REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	INSPECT FUEL LINE PRESSURE (LOW PRESSURE LINE) <ul style="list-style-type: none"> • Measure the fuel line pressure (low-pressure). (See 01-14B-6 FUEL LINE PRESSURE INSPECTION [L3 WITH TC].) • Is the fuel pressure within the specification? 	Yes	Remove the fuel injector and visually inspect fuel injector or leakage. (See 01-14B-25 FUEL INJECTOR REMOVAL/ INSTALLATION [L3 WITH TC].) Replace the fuel injector if necessary, then go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results, then go to the next step.
9	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Start the engine and run the engine under the FREEZE FRAME DATA (Mode 2) condition. • Perform the KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

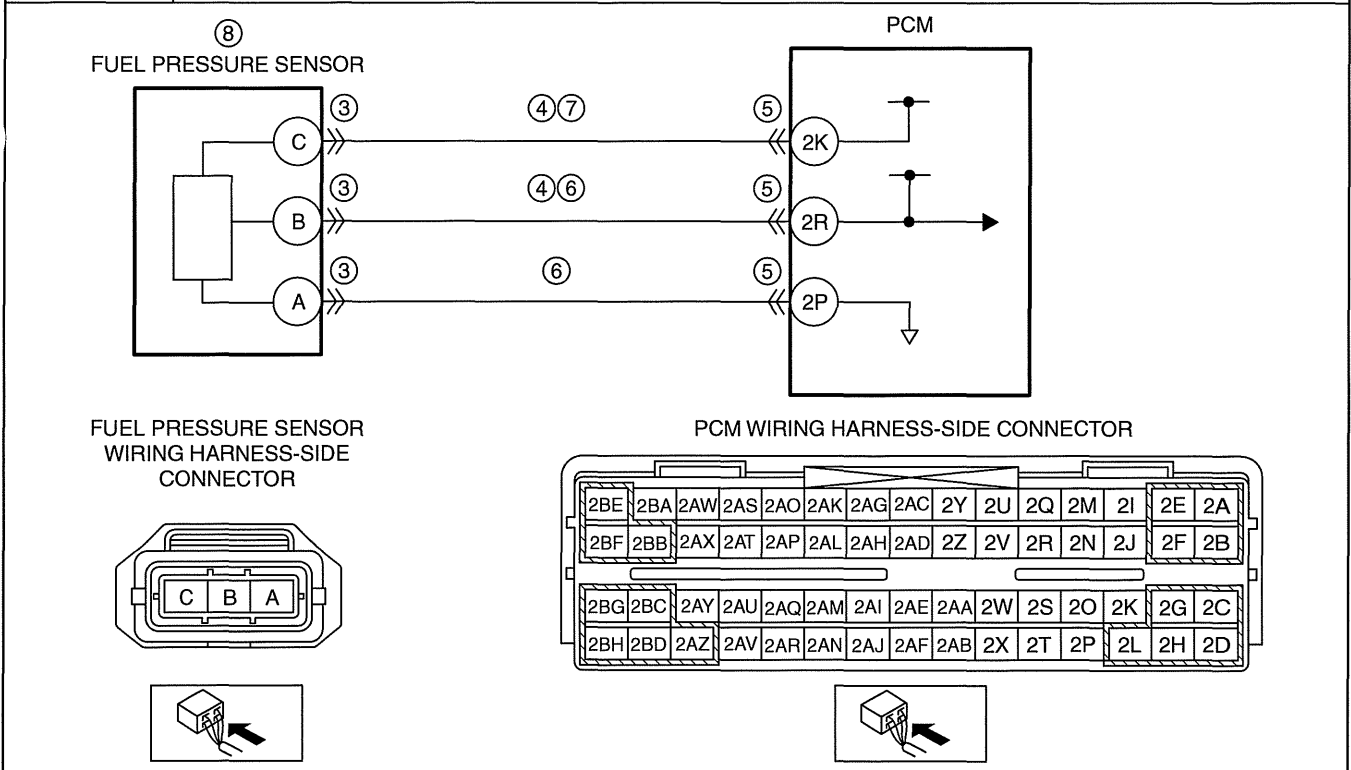

STEP	INSPECTION		ACTION
10	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0192:00 [L3 WITH TC]

id010239147700

01-02B

DTC P0192:00	Fuel pressure sensor circuit low input
DETECTION CONDITION	<ul style="list-style-type: none"> If the input voltage from the fuel pressure sensor is less than 0.19 V for 5.3 s, the PCM determines that the fuel pressure sensor circuit is low. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Fuel pressure sensor connector or terminals malfunction Short to ground in wiring harness between the following terminals: <ul style="list-style-type: none"> — Fuel pressure sensor terminal C—PCM terminal 2K — Fuel pressure sensor terminal B—PCM terminal 2R PCM connector or terminals malfunction Fuel pressure sensor signal circuit and ground circuit are shorted to each other. Open circuit in wiring harness between fuel pressure sensor terminal C and PCM terminal 2K Fuel pressure sensor malfunction PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	INSPECT FUEL PRESSURE SENSOR CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the fuel pressure sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
4	INSPECT FUEL PRESSURE SENSOR CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • Fuel pressure sensor connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: <ul style="list-style-type: none"> — Fuel pressure sensor terminal C — Fuel pressure sensor terminal B • Is there continuity? 	Yes	If the short to ground circuit could be detected: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected: <ul style="list-style-type: none"> • Replace the PCM (short to ground in PCM internal circuit). (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].) Go to Step 9.
		No	Go to the next step.
5	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
6	INSPECT FUEL PRESSURE SENSOR SIGNAL CIRCUIT AND GROUND CIRCUIT FOR SHORT TO EACH OTHER <ul style="list-style-type: none"> • Fuel pressure sensor and PCM connectors are disconnected. • Inspect for continuity between fuel pressure sensor terminals B and A (wiring harness-side). • Is there continuity? 	Yes	Repair or replace the wiring harness for a possible short to each other, then go to Step 9.
		No	Go to the next step.
7	INSPECT FUEL PRESSURE SENSOR POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Fuel pressure sensor and PCM connectors are disconnected. • Inspect for continuity between fuel pressure sensor terminal C (wiring harness-side) and PCM terminal 2K (wiring harness-side). • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 9.
8	INSPECT FUEL PRESSURE SENSOR <ul style="list-style-type: none"> • Reconnect all disconnected connectors. • Inspect the fuel pressure sensor. (See 01-40B-29 FUEL PRESSURE SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the fuel pressure sensor, then go to the next step. (See 01-40B-29 FUEL PRESSURE SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
9	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the KOEO or KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) • Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
10	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P0193:00 [L3 WITH TC]

id010239147800

01-02B

DTC P0193:00	Fuel pressure sensor circuit high input
DETECTION CONDITION	<ul style="list-style-type: none"> If the input voltage from the fuel pressure sensor is more than 4.8 V for 5.3 s, the PCM determines that the fuel pressure sensor circuit is high. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Fuel pressure sensor connector or terminals malfunction PCM connector or terminals malfunction Short to power supply in wiring harness between fuel pressure sensor terminal B and PCM terminal 2R Fuel pressure sensor power supply circuit and signal circuit are shorted to each other. Open circuit in wiring harness between the following terminals: <ul style="list-style-type: none"> — Fuel pressure sensor terminal B—PCM terminal 2R — Fuel pressure sensor terminal A—PCM terminal 2P Fuel pressure sensor malfunction PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P0202:00 [L3 WITH TC]

id010239148000

01-02B

DTC P0202:00	Injector circuit/open cylinder No.2
DETECTION CONDITION	<ul style="list-style-type: none"> If the fuel injection verification signal is not input at 255 times continuously even though the PCM drives the fuel injector No.2, the PCM determines that there is an open circuit in the fuel injector No.2 control circuit. <p>MONITORING CONDITIONS</p> <ul style="list-style-type: none"> — Engine speed: 4,000 rpm or less — Battery voltage: 10.03 V or more — Fuel injection control: except during fuel cut <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Fuel injector No.2 connector or terminals malfunction Short to ground in wiring harness between the following terminals: <ul style="list-style-type: none"> — Fuel injector No.2 terminal B—PCM terminal 2BH — Fuel injector No.2 terminal A—PCM terminal 2BC PCM connector or terminals malfunction Short to power supply in wiring harness between fuel injector No.2 terminal A and PCM terminal 2BC Open circuit in wiring harness between the following terminals: <ul style="list-style-type: none"> — Fuel injector No.2 terminal B—PCM terminal 2BH — Fuel injector No.2 terminal A—PCM terminal 2BC Fuel injector No.2 malfunction PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
3	INSPECT FUEL INJECTOR NO.2 CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the fuel injector No.2 connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
4	INSPECT FUEL INJECTOR NO.2 CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • Fuel injector No.2 connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: <ul style="list-style-type: none"> — Fuel injector No.2 terminal B — Fuel injector No.2 terminal A • Is there continuity? 	Yes	If the short to ground circuit could be detected: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected: <ul style="list-style-type: none"> • Replace the PCM (short to ground in PCM internal circuit). (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].) Go to Step 9.
		No	Go to the next step.
5	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
6	INSPECT FUEL INJECTOR NO.2 CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • Fuel injector No.2 and PCM connectors are disconnected. • Switch the ignition to ON (engine off). • Measure the voltage at the fuel injector No.2 terminal A (wiring harness-side). • Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 9.
		No	Go to the next step.
7	INSPECT FUEL INJECTOR NO.2 CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Fuel injector No.2 and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between the following terminals (wiring harness-side): <ul style="list-style-type: none"> — Fuel injector No.2 terminal B—PCM terminal 2BH — Fuel injector No.2 terminal A—PCM terminal 2BC • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 9.
8	INSPECT FUEL INJECTOR NO.2 <ul style="list-style-type: none"> • Inspect the fuel injector No.2. (See 01-14B-29 FUEL INJECTOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the fuel injector No.2, then go to the next step. (See 01-14B-25 FUEL INJECTOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
9	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) • Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
10	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

		No	DTC troubleshooting completed.

01-02B

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P0300:00 [L3 WITH TC]

id010239703200

DTC P0300:00	Random misfire detected
DETECTION CONDITION	<ul style="list-style-type: none"> • The PCM monitors the CKP sensor input signal interval time. The PCM calculates the change of interval time for each cylinder. If the change of interval time exceeds the preprogrammed criteria, the PCM detects a misfire in the corresponding cylinder. While the engine is running, the PCM counts the number of misfires that occurred at 200 crankshaft revolutions and 1,000 crankshaft revolutions and calculates a misfire ratio for each crankshaft revolution. If the ratio exceeds the preprogrammed criteria, the PCM determines that a misfire, which can damage the catalytic converter or affect emission performance, has occurred. <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is a continuous monitor (misfire). • The MIL illuminates if the PCM detects a misfire which affects emission performance in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • The MIL flashes if the PCM detects a misfire which can damage the catalytic converter during the first drive cycle. • PENDING CODE is available if the PCM detects a misfire which affects emission performance during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Erratic signal to PCM <ul style="list-style-type: none"> — APP sensor signal malfunction — ECT sensor No.1 signal malfunction — IAT sensor signal malfunction — MAF sensor signal malfunction — CKP sensor signal malfunction — TP sensor signal malfunction — VSS signal malfunction — Related connector or terminals malfunction — Related wiring harness malfunction • CMP sensor malfunction • CKP sensor looseness • Ignition coil related wiring harness malfunction • Ignition system malfunction <ul style="list-style-type: none"> — Spark plug malfunction — Ignition coil malfunction • Air restriction or leakage in intake air system (between MAF sensor and intake manifold) • MAF sensor contamination • Turbocharger malfunction (turbine wheel/compressor wheel damaged, stuck) • Low-pressure side fuel delivery system malfunction <ul style="list-style-type: none"> — Fuel pump unit malfunction — Fuel pressure regulator (built-in fuel pump unit) malfunction — Fuel line clogged — Fuel filter clogged — Fuel leakage in fuel line — Fuel runout • Improper operation of variable valve timing control system • Purge solenoid valve malfunction • Vacuum hoses damage or improper connection • Improper operation of fuel pump speed control • Engine internal malfunction <ul style="list-style-type: none"> — Engine coolant leakage into combustion chamber — Insufficient engine compression • High-pressure side fuel delivery system malfunction <ul style="list-style-type: none"> — Fuel pressure sensor (built-in fuel delivery pipe) malfunction — Relief valve (built-in fuel delivery pipe) malfunction — High pressure fuel pump malfunction — Spill valve control solenoid valve (built-in high pressure fuel pump) malfunction • EGR valve malfunction • PCV valve malfunction • Poor quality fuel • PCM malfunction

ON-BOARD DIAGNOSTIC [L3 WITH TC]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> • Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (misfire related) been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY RELATED PENDING CODE AND/OR DTC <ul style="list-style-type: none"> • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Are any other PENDING CODEs and/or DTCs present? 	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
4	VERIFY CURRENT INPUT SIGNAL STATUS (KEY TO ON/IDLE) <ul style="list-style-type: none"> • Access the following PIDs using the M-MDS: (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) <ul style="list-style-type: none"> — APP1 — APP2 — ECT — IAT — MAF — RPM — TP REL — VSS • Is there any signal that is far out of specification when the ignition switch is ON and the engine idles? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].) 	Yes	Inspect the suspected circuit. <ul style="list-style-type: none"> • If the inspection results are normal: <ul style="list-style-type: none"> — Go to the next step. • If the inspection results are not normal: <ul style="list-style-type: none"> — Repair or replace the malfunctioning part according to the inspection results, then go to Step 27.
		No	Go to the next step.
5	VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION <ul style="list-style-type: none"> • Access the same PIDs as in Step 4 while simulating the FREEZE FRAME DATA (Mode 2) condition. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is there any signal which causes drastic changes? 	Yes	Inspect the suspected circuit. <ul style="list-style-type: none"> • If the inspection results are normal: <ul style="list-style-type: none"> — Go to the next step. • If the inspection results are not normal: <ul style="list-style-type: none"> — Repair or replace the malfunctioning part according to the inspection results, then go to Step 27.
		No	Go to the next step.
6	INSPECT CMP SENSOR <ul style="list-style-type: none"> • Inspect the CMP sensor. (See 01-40B-34 CAMSHAFT POSITION (CMP) SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Inspect the installation condition for damage to the timing chain and gears. <ul style="list-style-type: none"> • If there is no malfunction: <ul style="list-style-type: none"> — Replace the CMP sensor. (See 01-40B-34 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].) • If there is any malfunction: <ul style="list-style-type: none"> — Repair or replace the malfunctioning part according to the inspection results. Go to Step 27.
		No	Go to the next step.
7	INSPECT INSTALLATION OF CKP SENSOR <ul style="list-style-type: none"> • Inspect if the CKP sensor is loosely installed. • Is the CKP sensor installed securely? 	Yes	Go to the next step.
		No	Retighten the CKP sensor, then go to Step 27. (See 01-40B-32 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)

01-02B

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
8	INSPECT IGNITION COIL HARNESSSES <ul style="list-style-type: none"> • Inspect the ignition coil related wiring harness condition (intermittent open or short) for all cylinders. • Is there any malfunction? 	Yes	Repair or replace the suspected wiring harnesses, then go to Step 27.
		No	Go to the next step.
9	INSPECT IGNITION SYSTEM OPERATION <ul style="list-style-type: none"> • Perform the Spark Test. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) • Is a strong blue spark visible at each cylinder? 	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the spark test result, then go to Step 27.
10	INSPECT MAF PID <ul style="list-style-type: none"> • Start the engine. • Access the MAF PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Face the engine and verify that the MAF PID changes quickly according to the change in the engine speed. • Is the MAF PID value normal? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].) 	Yes	Go to Step 13.
		No	Go to the next step.
11	INSPECT IN INTAKE AIR SYSTEM FOR RESTRICTION OR LEAKAGE <ul style="list-style-type: none"> • Inspect for air leakage at the following: <ul style="list-style-type: none"> — Between MAF sensor and throttle body — Between throttle body and intake manifold <p>Note</p> <ul style="list-style-type: none"> • Engine speed may change when rust penetrating agent is sprayed on the air suction area. <ul style="list-style-type: none"> • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 27.
		No	Go to the next step.
12	INSPECT TURBOCHARGER <ul style="list-style-type: none"> • Inspect the turbocharger. (See 01-13B-13 TURBOCHARGER INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the turbocharger, then go to Step 27. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Replace the MAF/IAT sensor, then go to Step 27. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [L3 WITH TC].)
13	INSPECT FUEL PRESSURE (LOW-SIDE) <ul style="list-style-type: none"> • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See 01-14B-6 FUEL LINE PRESSURE INSPECTION [L3 WITH TC].) • Is the low side fuel pressure within the specification? 	Yes	Go to Step 15.
		No	If the fuel line pressure is too low: <ul style="list-style-type: none"> • Go to the next step. If the fuel line pressure is too high: <ul style="list-style-type: none"> • Replace the fuel pump unit, then go to Step 27. (See 01-14B-13 FUEL PUMP UNIT REMOVAL/ INSTALLATION [L3 WITH TC].)
14	INSPECT FUEL LINE FROM FUEL PUMP TO FUEL DELIVERY PIPE <ul style="list-style-type: none"> • Visually inspect the fuel line for fuel leakage. • Is there any leakage? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 27.
		No	Inspect the fuel filters for foreign material or stain inside fuel filter (low-pressure side). <ul style="list-style-type: none"> • Perform the following actions depend on the result above. <ul style="list-style-type: none"> — If foreign materials or stain is found inside fuel filter (low-pressure side): <ul style="list-style-type: none"> • Clean the fuel tank and filter (low-pressure side). — If normal: <ul style="list-style-type: none"> • Replace the fuel pump unit. (See 01-14B-13 FUEL PUMP UNIT REMOVAL/ INSTALLATION [L3 WITH TC].) Go to Step 27.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
15	INSPECT VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION <ul style="list-style-type: none"> • Perform the Variable Valve Timing Control System Operation Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 27.
		No	Go to the next step.
16	INSPECT OPERATION OF PURGE CONTROL SOLENOID VALVE <ul style="list-style-type: none"> • Switch the ignition to off. • Connect the vacuum pump to the purge solenoid valve and apply vacuum to the solenoid. • Verify that the solenoid holds vacuum. • Switch the ignition to ON (engine off). • Access the EVAPCP PID of simulation item using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Set the duty value to 100% for the EVAPCP PID. • Apply the vacuum while turning the solenoid from OFF to ON and simulating the EVAPCP PID with a 100% duty value. • Verify that the solenoid releases vacuum while the solenoid is turned on. • Is the purge control solenoid valve operation normal? 	Yes	Go to the next step.
		No	Replace the purge solenoid valve, then go to Step 27. (See 01-16B-7 PURGE SOLENOID VALVE REMOVAL/ INSTALLATION [L3 WITH TC].)
17	VERIFY FUEL PUMP SPEED CONTROL OPERATION <ul style="list-style-type: none"> • Perform the Fuel Pump Speed Control Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 27.
		No	Go to the next step.
18	INSPECT SEALING OF ENGINE COOLANT PASSAGE <ul style="list-style-type: none"> • Perform the "ENGINE COOLANT LEAKAGE INSPECTION". (See 01-12B-6 ENGINE COOLANT LEAKAGE INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 27.
		No	Go to the next step.
19	INSPECT ENGINE COMPRESSION <ul style="list-style-type: none"> • Inspect the engine compression. (See 01-10B-12 COMPRESSION INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 27.
		No	Go to the next step.
20	INSPECT FUEL PRESSURE (HIGH-SIDE) <ul style="list-style-type: none"> • Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the FUEL_PRES PID value within the specification? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].) 	Yes	Go to Step 25.
		No	Go to the next step.
21	IDENTIFY CAUSE BY FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP <ul style="list-style-type: none"> • Is the vehicle accelerate performance normally? 	Yes	Go to the next step.
		No	Go to Step 24.
22	INSPECT FUEL PRESSURE SENSOR <ul style="list-style-type: none"> • Inspect the fuel pressure sensor. (See 01-40B-29 FUEL PRESSURE SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the fuel delivery pipe, then go to Step 27. (See 01-14B-25 FUEL INJECTOR REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to the next step.

01-02B

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
23	INSPECT HIGH PRESSURE FUEL PUMP <ul style="list-style-type: none"> • Replace the high pressure fuel pump (See 01-14B-17 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC].) • Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the FUEL_PRES PID value within the specification? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].) 	Yes	High-pressure fuel pump or spill valve control solenoid valve (built-in high pressure fuel pump) malfunction. <ul style="list-style-type: none"> • Go to Step 27.
		No	Relief valve malfunction. <ul style="list-style-type: none"> • Replace the fuel delivery pipe, then go to Step 27. (See 01-14B-25 FUEL INJECTOR REMOVAL/INSTALLATION [L3 WITH TC].)
24	INSPECT FUEL PRESSURE (LOW-SIDE) <ul style="list-style-type: none"> • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See 01-14B-6 FUEL LINE PRESSURE INSPECTION [L3 WITH TC].) • Is the low side fuel pressure within the specification? 	Yes	Go to the next step.
		No	Inspect for the following. <ul style="list-style-type: none"> • Fuel line restriction • Fuel filter clogging If there is no malfunction: <ul style="list-style-type: none"> • Replace the fuel pump unit. (See 01-14B-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [L3 WITH TC].) If there is any malfunction: <ul style="list-style-type: none"> • Repair or replace the malfunctioning part according to the inspection results. Go to Step 27.
25	INSPECT EGR VALVE OPERATION <ul style="list-style-type: none"> • Remove the EGR valve. (See 01-16B-8 EGR VALVE REMOVAL/INSTALLATION [L3 WITH TC].) • Visually inspect if the EGR valve is stuck open. • Is the EGR valve stuck open? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 27.
		No	Go to the next step.
26	INSPECT PCV VALVE OPERATION <ul style="list-style-type: none"> • Switch the ignition to off. • Remove the PCV valve. (See 01-16B-9 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [L3 WITH TC].) • Inspect the PCV valve operation. (See 01-16B-10 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the PCV valve, then go to the next step. (See 01-16B-9 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
27	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the Drive Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02B-13 OBD-II DRIVE MODE [L3 WITH TC].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
28	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P0301:00, P0302:00, P0303:00, P0304:00 [L3 WITH TC]

id010239703300

01-02B

DTC P0301:00	Cylinder No.1 misfire detected
DTC P0302:00	Cylinder No.2 misfire detected
DTC P0303:00	Cylinder No.3 misfire detected
DTC P0304:00	Cylinder No.4 misfire detected
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the CKP sensor input signal interval time, and calculates the change of interval time for each cylinder. If the change of interval time exceeds the preprogrammed criteria, the PCM detects a misfire in the corresponding cylinder. While the engine is running, the PCM counts the number of misfires that occurred at 200 crankshaft revolutions and 1,000 crankshaft revolutions and calculates a misfire ratio for each crankshaft revolution. If the ratio exceeds the preprogrammed criteria, the PCM determines that a misfire, which can damage the catalytic converter or affect emission performance, has occurred. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (misfire). The MIL illuminates if the PCM detects a misfire which affects emission performance in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. The MIL flashes if the PCM detects a misfire which can damage the catalytic converter during the first drive cycle. PENDING CODE is available if the PCM detects a misfire which affects emission performance during first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Erratic signal to PCM <ul style="list-style-type: none"> — APP sensor signal malfunction — ECT sensor No.1 signal malfunction — IAT sensor signal malfunction — MAF sensor signal malfunction — CKP sensor signal malfunction — TP sensor signal malfunction — VSS signal malfunction — Related connector or terminals malfunction — Related wiring harness malfunction Air suction in intake air system (between dynamic chamber and cylinder head) Engine coolant leakage into combustion chamber Fuel injector related wiring harness malfunction Ignition system malfunction <ul style="list-style-type: none"> — Spark plug malfunction — Ignition coil malfunction — Ignition coil related wiring harness malfunction Inadequate engine compression due to engine internal malfunction Improper operation of fuel injector PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (misfire related) been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
3	VERIFY RELATED PENDING CODE AND/OR DTC <ul style="list-style-type: none"> • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Are any other PENDING CODEs and/or DTCs present? 	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
4	VERIFY CURRENT INPUT SIGNAL STATUS (KEY TO ON/IDLE) <ul style="list-style-type: none"> • Access the following PIDs using the M-MDS: (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) <ul style="list-style-type: none"> — APP1 — APP2 — ECT — IAT — MAF — RPM — TP REL — VSS • Is there any signal that is far out of specification when the ignition switch is ON and the engine idles? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].) 	Yes	Inspect the suspected circuit. <ul style="list-style-type: none"> • If the inspection results are normal: <ul style="list-style-type: none"> — Go to the next step. • If the inspection results are not normal: <ul style="list-style-type: none"> — Repair or replace the malfunctioning part according to the inspection results, then go to Step 14.
		No	Go to the next step.
5	VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION <ul style="list-style-type: none"> • Access the same PIDs as in Step 4 while simulating the FREEZE FRAME DATA (Mode 2) condition. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is there any signal which causes drastic changes? 	Yes	Inspect the suspected circuit. <ul style="list-style-type: none"> • If the inspection results are normal: <ul style="list-style-type: none"> — Go to the next step. • If the inspection results are not normal: <ul style="list-style-type: none"> — Repair or replace the malfunctioning part according to the inspection results, then go to Step 14.
		No	Go to the next step.
6	INSPECT INTAKE-AIR SYSTEM FOR AIR SUCTION <ul style="list-style-type: none"> • Inspect for air leakage at the following: <ul style="list-style-type: none"> — Around connection of dynamic chamber and intake manifold — Around connection of intake manifold and cylinder head Note <ul style="list-style-type: none"> • Engine speed may change when rust penetrating agent is sprayed on the air suction area. • Is there any leakage? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 14.
		No	Go to the next step.
7	INSPECT SEALING OF ENGINE COOLANT PASSAGE <ul style="list-style-type: none"> • Perform the "ENGINE COOLANT LEAKAGE INSPECTION". (See 01-12B-6 ENGINE COOLANT LEAKAGE INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 14.
		No	Go to the next step.
8	INSPECT WHETHER MALFUNCTION IS IN IGNITION SYSTEM OR ELSEWHERE <ul style="list-style-type: none"> • Perform the Spark Test. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) • Is a strong blue spark visible at the suspected cylinder? 	Yes	Go to Step 11.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
9	INSPECT SPARK PLUG <ul style="list-style-type: none"> • Switch the ignition to off. • Remove the suspected spark plug. (See 01-18B-3 SPARK PLUG REMOVAL/INSTALLATION [L3 WITH TC].) • Inspect the suspected spark plug. (See 01-18B-3 SPARK PLUG INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the suspected spark plug, then go to Step 14. (See 01-18B-3 SPARK PLUG REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
10	INSPECT IGNITION COIL <ul style="list-style-type: none"> • Inspect the suspected ignition coil. (See 01-18B-2 IGNITION COIL INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the suspected ignition coil, then go to Step 14. (See 01-18B-2 IGNITION COIL REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Inspect the suspect cylinder ignition coil related wiring harness. <ul style="list-style-type: none"> • Repair or replace the suspected wiring harness, if necessary. Go to Step 14.
11	INSPECT ENGINE COMPRESSION <ul style="list-style-type: none"> • Inspect the engine compression. (See 01-10B-12 COMPRESSION INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 14.
		No	Go to the next step.
12	INSPECT FUEL INJECTOR OPERATION <ul style="list-style-type: none"> • Access the INJ_1, INJ_2, INJ_3, INJ_4 PIDs. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Start the engine and warm it up to the normal operating temperature. • Turn the fuel injector off from on using the PID simulation function. • Does the engine speed decrease while the fuel injectors are turned off? 	Yes	Go to Step 14.
		No	Go to the next step.
13	INSPECT FUEL INJECTOR WIRING HARNESS <ul style="list-style-type: none"> • Remove the intake air system parts. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].) • Disconnect the fuel injector connector on suspected cylinder. • Connect the NOID LIGHT to the fuel injector terminals. • Inspect the dim of light during cranking. • Does the light illuminate? 	Yes	Replace the suspect fuel injector, then go to the next step. (See 01-14B-25 FUEL INJECTOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Repair or replace the suspected wiring harness, if necessary, then go to the next step.
14	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the Drive Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02B-13 OBD-II DRIVE MODE [L3 WITH TC].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
15	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

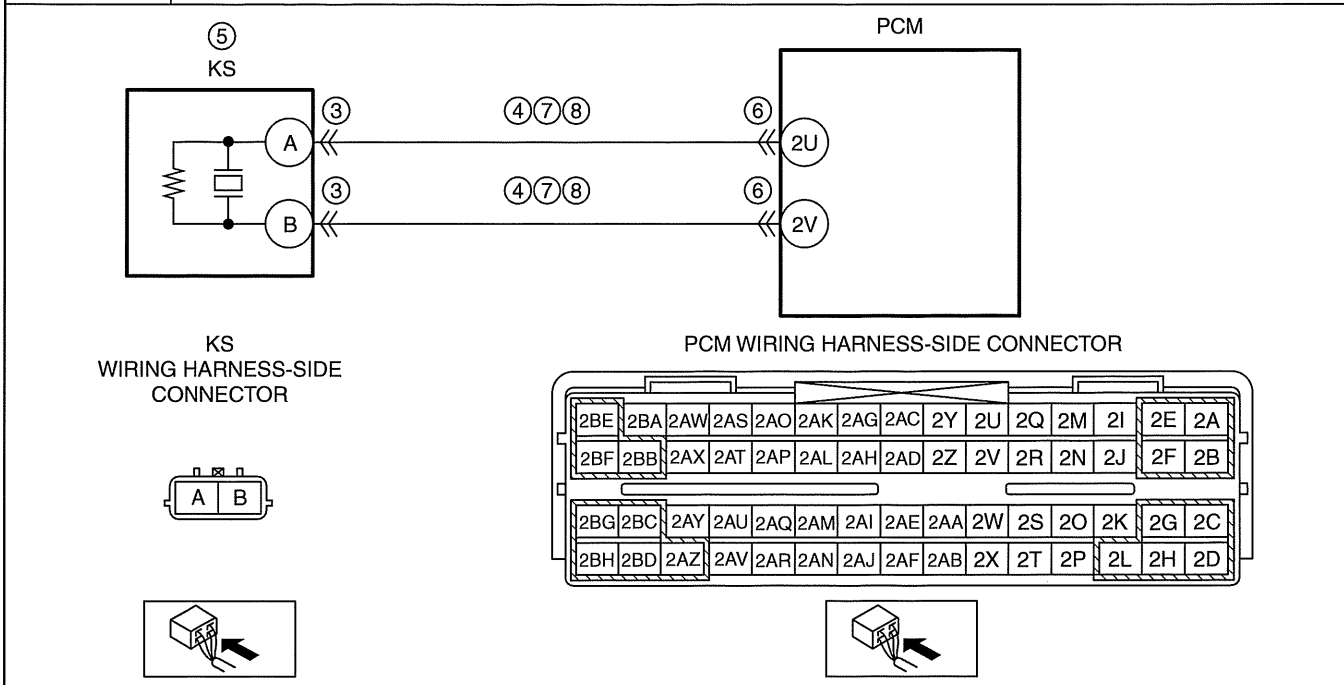

01-02B

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P0327:00 [L3 WITH TC]

id010239703000

DTC P0327:00	KS circuit low input
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the input signal from the KS when the engine is running. If the input voltage at the PCM terminals between 2V and 2U is below 0.2 V for 5 s, the PCM determines that the KS circuit has a malfunction. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> KS connector or terminals malfunction Short to ground in wiring harness between the following terminals: <ul style="list-style-type: none"> — KS terminal A—PCM terminal 2U — KS terminal B—PCM terminal 2V KS malfunction PCM connector or terminals malfunction KS circuits are shorted to each other. Open circuit in wiring harness between the following terminals: <ul style="list-style-type: none"> — KS terminal A—PCM terminal 2U — KS terminal B—PCM terminal 2V PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	INSPECT KS CONNECTOR CONDITION <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the KS connector. Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION
4	INSPECT KS CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • KS connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: <ul style="list-style-type: none"> — KS terminal A — KS terminal B • Is there continuity? 	Yes If the short to ground circuit could be detected: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected: <ul style="list-style-type: none"> • Replace the PCM (short to ground in PCM internal circuit). (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].) Go to Step 9.
		No Go to the next step.
5	INSPECT KS <ul style="list-style-type: none"> • Inspect the KS. (See 01-40B-35 KNOCK SENSOR (KS) INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes Replace the KS, then go to Step 9. (See 01-40B-34 KNOCK SENSOR (KS) REMOVAL/INSTALLATION [L3 WITH TC].)
		No Go to the next step.
6	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes Repair or replace the connector and/or terminals, then go to Step 9.
		No Go to the next step.
7	INSPECT KS CIRCUIT FOR SHORT TO EACH OTHER <ul style="list-style-type: none"> • KS and PCM connectors are disconnected. • Inspect for continuity between KS terminals A and B (wiring harness-side). • Is there continuity? 	Yes Repair or replace the wiring harness for a possible short to each other, then go to Step 9.
		No Go to the next step.
8	INSPECT KS CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • KS and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): <ul style="list-style-type: none"> — KS terminal A—PCM terminal 2U — KS terminal B—PCM terminal 2V • Is there continuity? 	Yes Go to the next step.
		No Repair or replace the wiring harness for a possible open circuit, then go to the next step.
9	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the KOEO or KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) • Is the same DTC present? 	Yes Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No Go to the next step.
10	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No DTC troubleshooting completed.

6	INSPECT CKP SENSOR SIGNAL CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> CKP sensor connector is disconnected. Switch the ignition to off. Inspect for continuity between CKP sensor terminal B (wiring harness-side) and body ground. Is there continuity? 	Yes	If the short to ground circuit could be detected: <ul style="list-style-type: none"> Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected: <ul style="list-style-type: none"> Replace the PCM (short to ground in PCM internal circuit). (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].) Go to Step 12.
		No	Go to the next step.
7	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> Disconnect the PCM connector. Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 12.
		No	Go to the next step.
8	INSPECT CKP SENSOR SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> CKP sensor and PCM connectors are disconnected. Switch the ignition to ON (engine off). Measure the voltage at the CKP sensor terminal B (wiring harness-side). Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 12.
		No	Go to the next step.

01-02B

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
9	INSPECT CKP SENSOR SIGNAL CIRCUIT AND GROUND CIRCUIT FOR SHORT TO EACH OTHER <ul style="list-style-type: none"> • CKP sensor and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between CKP sensor terminals B and A (wiring harness-side). • Is there continuity? 	Yes	Repair or replace the wiring harness for a possible short to each other, then go to Step 12.
		No	Go to the next step.
10	INSPECT CKP SENSOR CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • CKP sensor and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): <ul style="list-style-type: none"> — CKP sensor terminal B—PCM terminal 2W — CKP sensor terminal A—PCM terminal 2P • Is there continuity? 	Yes	Go to Step 12.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 12.
11	INSPECT CKP SENSOR <ul style="list-style-type: none"> • Inspect the CKP sensor. (See 01-40B-33 CRANKSHAFT POSITION (CKP) SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the CKP sensor, then go to the next step. (See 01-40B-32 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
12	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) • Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
13	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P0340:00 [L3 WITH TC]

id010239703700

01-02B

DTC P0340:00	CMP sensor circuit malfunction
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the input voltage from the CMP sensor when the engine is running. If the PCM does not receive the input voltage from the CMP sensor while the PCM receives the input signal from the CKP sensor, the PCM determines that the CMP sensor circuit has a malfunction. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> CMP sensor connector or terminals malfunction Short to ground or open circuit in CMP sensor power supply circuit <ul style="list-style-type: none"> — Short to ground in wiring harness between main relay terminal C and CMP sensor terminal A — ENG INJ 15 A fuse malfunction — Open circuit in wiring harness between main relay terminal C and CMP sensor terminal A Short to ground in wiring harness between CMP sensor terminal C and PCM terminal 2S PCM connector or terminals malfunction Short to power supply in wiring harness between CMP sensor terminal C and PCM terminal 2S CMP sensor signal circuit and ground circuit are shorted to each other. Open circuit in wiring harness between the following terminals: <ul style="list-style-type: none"> — CMP sensor terminal C—PCM terminal 2S — CMP sensor terminal B—PCM terminal 2P CMP sensor malfunction <ul style="list-style-type: none"> — CMP sensor pulse wheel malfunction — CMP sensor is dirty CKP sensor not installed correctly Timing chain not installed correctly <ul style="list-style-type: none"> — Loose timing chain or improper valve timing — Loose camshaft sprocket lock bolt — Loose crankshaft pulley lock bolt PCM malfunction

ON-BOARD DIAGNOSTIC [L3 WITH TC]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY CMP SENSOR VOLTAGE <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the CMP sensor connector. • Connect a voltmeter between CMP sensor terminals A and C (sensor-side). • Measure the voltage in AC range while cranking the engine. • Is there any voltage? 	Yes	Go to the next step.
		No	Go to Step 11.
4	INSPECT CMP SENSOR CONNECTOR CONDITION <ul style="list-style-type: none"> • CMP sensor connector is disconnected. • Switch the ignition to off. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 16.
		No	Go to the next step.
5	INSPECT CMP SENSOR POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT <ul style="list-style-type: none"> • CMP sensor connector is disconnected. • Switch the ignition to ON (engine off). • Measure the voltage at the CMP sensor terminal A (wiring harness-side). • Is the voltage B+? 	Yes	Go to the next step.
		No	Inspect the ENG INJ 15 A fuse. <ul style="list-style-type: none"> • If the fuse is melt: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deterioration: <ul style="list-style-type: none"> — Replace the fuse. • If the fuse is normal: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible open circuit. Go to Step 16.
6	INSPECT CMP SENSOR SIGNAL CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • CMP sensor connector is disconnected. • Switch the ignition to off. • Inspect for continuity between CMP sensor terminal C (wiring harness-side) and body ground. • Is there continuity? 	Yes	If the short to ground circuit could be detected: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected: <ul style="list-style-type: none"> • Replace the PCM (short to ground in PCM internal circuit). (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].) Go to Step 16.
		No	Go to the next step.
7	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 16.
		No	Go to the next step.
8	INSPECT CMP SENSOR SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • CMP sensor and PCM connectors are disconnected. • Switch the ignition to ON (engine off). • Measure the voltage at the CMP sensor terminal C (wiring harness-side). • Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 16.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
9	INSPECT CMP SENSOR SIGNAL CIRCUIT AND GROUND CIRCUIT FOR SHORT TO EACH OTHER <ul style="list-style-type: none"> • CMP sensor and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between CMP sensor terminals C and B (wiring harness-side). • Is there continuity? 	Yes	Repair or replace the wiring harness for a possible short to each other, then go to Step 16.
		No	Go to the next step.
10	INSPECT CMP SENSOR CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • CMP sensor and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): <ul style="list-style-type: none"> — CMP sensor terminal C—PCM terminal 2S — CMP sensor terminal B—PCM terminal 2P • Is there continuity? 	Yes	Go to Step 12.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 16.
11	INSPECT CMP SENSOR <ul style="list-style-type: none"> • Switch the ignition to off. • Inspect the CMP sensor. (See 01-40B-34 CAMSHAFT POSITION (CMP) SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the CMP, then go to Step 16. (See 01-40B-34 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to Step 16.
12	VERIFY CKP SENSOR INSTALLATION <ul style="list-style-type: none"> • Verify the CKP sensor installation. • Is the CKP sensor installed correctly? 	Yes	Go to the next step.
		No	Reinstall the CKP sensor, then go to Step 16. (See 01-40B-32 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
13	VERIFY VALVE TIMING MECHANISM INSTALLATION <ul style="list-style-type: none"> • Verify the valve timing mechanism installation for the following parts: <ul style="list-style-type: none"> — Timing chain misinstallation — Loose camshaft sprocket lock bolt — Loose crankshaft pulley lock bolt • Is the valve timing mechanism installed correctly? 	Yes	Go to the next step.
		No	Reinstall the malfunctioning part, then go to Step 16.
14	INSPECT STOPPER PIN MECHANISM <ul style="list-style-type: none"> • Remove the timing chain. (See 01-10B-23 TIMING CHAIN REMOVAL/INSTALLATION [L3 WITH TC].) • Inspect the stopper pin mechanism. (See 01-10B-13 VARIABLE VALVE TIMING ACTUATOR INSPECTION [L3 WITH TC].) • Is the stopper pin mechanism normal? 	Yes	Go to the next step.
		No	Replace the variable valve timing actuator, then go to Step 16. (See 01-10B-14 VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [L3 WITH TC].)
15	INSPECT ROTOR POSITION <ul style="list-style-type: none"> • Remove the variable valve timing actuator. (See 01-10B-14 VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [L3 WITH TC].) • Is the rotor position at the maximum valve timing retard? 	Yes	Variable valve timing mechanism is normal. Note <ul style="list-style-type: none"> • This DTC is detected as an intermittent concern. • The intermittent concern might be removed by cleaning the variable valve timing mode control function. Go to the next step.
		No	Replace the variable valve timing actuator, then go to the next step. (See 01-10B-14 VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [L3 WITH TC].)

01-02B

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
16	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Perform the KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
17	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0401:00 [L3 WITH TC]

id010239704200

DTC P0401:00	EGR flow insufficient detected
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the difference in the intake manifold pressures when the EGR is operated and when it is stopped. If the difference is too small, the PCM determines that the EGR flow is insufficient. Diagnostic support note <ul style="list-style-type: none"> This is an intermittent monitor (EGR system). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> MAP sensor malfunction EGR valve malfunction EGR valve passage malfunction <ul style="list-style-type: none"> Gasket of EGR valve malfunction Clogged EGR valve passage PCM malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (EGR system related) been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY RELATED PENDING CODE AND/OR DTC <ul style="list-style-type: none"> Switch the ignition to off, then to ON (engine off). Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Are any other PENDING CODEs and/or DTCs present? 	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
4	INSPECT MAP SENSOR <ul style="list-style-type: none"> • Inspect the MAP sensor. (See 01-40B-27 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the MAP sensor/boost air temperature sensor, then go to Step 7. (See 01-40B-27 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/BOOST AIR TEMPERATURE SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
5	INSPECT EGR VALVE OPERATION <ul style="list-style-type: none"> • Perform the EGR Control System Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) • Does the EGR valve operate properly? 	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results, then go to Step 7.
6	INSPECT EGR VALVE PASSAGE <ul style="list-style-type: none"> • Switch the ignition to off. • Remove the EGR valve. (See 01-16B-8 EGR VALVE REMOVAL/INSTALLATION [L3 WITH TC].) • Visually inspect the gasket installation of EGR valve and EGR valve passage for clogging. • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to the next step.
		No	Go to the next step.
7	MONITOR EGR SYSTEM BY DRIVE MODE <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the Drive Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02B-13 OBD-II DRIVE MODE [L3 WITH TC].) • Stop the vehicle and perform the On-Board System Readiness Tests Access Procedure to inspect the Drive Mode completion status. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Do the FUEL_EVAL and EGR_EVAL PIDs change to Yes? 	Yes	Go to the next step.
		No	Retry this step.
8	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Perform the Diagnostic Monitoring Test Results Access Procedure using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the TEST 31: 83 (EGR pressure variation) value within the specification? 	Yes	Go to the next step.
		No	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
9	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

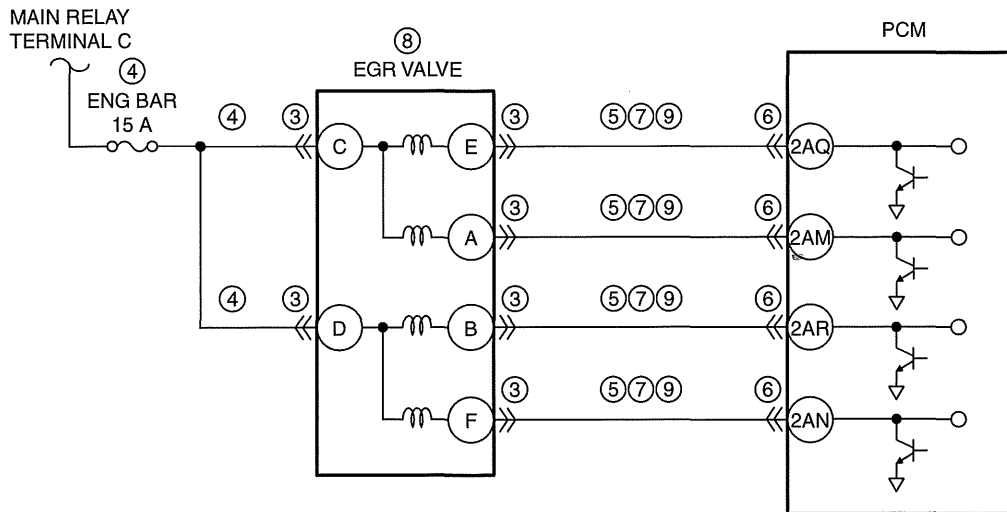

01-02B

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P0403:00 [L3 WITH TC]

id010239704300

DTC P0403:00	EGR valve (stepper motor) circuit malfunction
DETECTION CONDITION	<ul style="list-style-type: none"> • The PCM monitors the input voltage from the EGR valve. If the voltage at the PCM terminals 2AQ, 2AM, 2AR and/or 2AN remain low or high, the PCM determines that the EGR valve circuit has a malfunction. <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.

No	DTC troubleshooting completed.					

DTC P0442:00, P0455:00, P0456:00 [L3 WITH TC]

id010239896000

DTC P0442:00	EVAP system leak detected (small leak)
DTC P0455:00	EVAP system leak detected (gross leak/no flow)
DTC P0456:00	EVAP system leak detected (very small leak)
DETECTION CONDITION	<ul style="list-style-type: none"> • The DTC P0442:00 indicates that a leak has been detected as small as 1 mm {0.04 in} in the EVAP vapor management valve solenoid system when there is less than 0.988 kPa {7.41 mmHg, 0.292 inHg} bleed-up over 20 s at 75% fuel fill. Bleed-up and evaluation time vary as a function of fuel fill level. The vapor generation limit is more than 0.286 kPa {2.15 mmHg, 0.085 inHg} over 150 s. • The DTC P0455:00 indicates that a substantial leak or blockage has been detected in the EVAP system when there is -1.94 kPa {-14.6 mmHg, -0.575 inHg} or less vacuum for 20 s evaluation time. • The DTC P0456:00 indicates that a fuel vapor leak from an opening as small as 0.508 mm {0.020 in} has been detected by the EVAP running loss monitor test. <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is an intermittent monitor (EVAP system). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<p>DTC P0442:00, P0456:00</p> <ul style="list-style-type: none"> • After-market EVAP hardware (such as fuel filler cap) nonconforming to required specifications • Fuel filler cap loosely installed • Small leaks in components <ul style="list-style-type: none"> — CV solenoid is not seated on the charcoal canister. — Cut or loose connection in the fuel vapor hoses/tubes — Fuel filler pipe damaged • Fuel filler cap and fuel filler pipe damaged • CV solenoid valve malfunction • Leaks in complete EVAP system • Small leaks from EVAP system return tube to charcoal canister • Small leaks between fuel tank vapor tube and fuel tank filler pipe • PCM malfunction <p>DTC P0455:00</p> <ul style="list-style-type: none"> • Purge solenoid valve related part malfunction <ul style="list-style-type: none"> — Blockage or loose vacuum hose between intake manifold and purge solenoid valve — Purge solenoid valve malfunction (blockage) • After-market EVAP hardware (such as fuel filler cap) not conforming to required specifications • Large EVAP system leak <ul style="list-style-type: none"> — Fuel filler cap malfunction (damaged, missing or loosely installed) — Both the input port vacuum hose and EVAP return tube are not attached to the CV solenoid valve — CV solenoid valve is not attached to the charcoal canister. — Fuel vapor hoses/tubes disconnected or cracked — Fuel filler pipe and the fuel tank damaged • Blockage between CV solenoid valve and fuel vapor hose joint • CV solenoid valve malfunction • Fuel tank pressure sensor malfunction • PCM malfunction

ON-BOARD DIAGNOSTIC [L3 WITH TC]

Diagnostic procedure

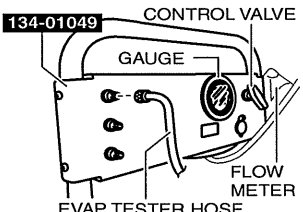

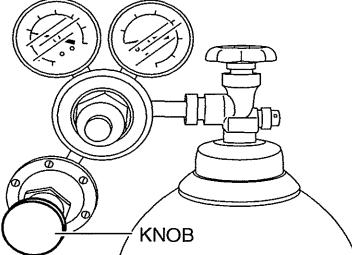

STEP	INSPECTION	ACTION	
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> • Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (EVAP system related) been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY RELATED PENDING CODE AND/OR DTC <ul style="list-style-type: none"> • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Are any other PENDING CODEs and/or DTCs present? 	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
4	VERIFY DTC FOR SMALL LEAK <ul style="list-style-type: none"> • Is the DTC P0456:00 stored? 	Yes	Go to Step 9.
		No	Go to the next step.
5	VERIFY DTC FOR LARGE LEAK <ul style="list-style-type: none"> • Is the DTC P0455:00 stored? 	Yes	Verify that the purge solenoid valve is not blocked. <ul style="list-style-type: none"> • If the purge solenoid valve is functioning correctly and receiving engine vacuum: — Go to the next step.
		No	Go to the next step.
6	PRELIMINARY LEAK TEST (DTC P0442:00 OR P0455:00) <ul style="list-style-type: none"> • Perform the EVAP system leak inspection using the M-MDS. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) • Verify that all PIDs are within the following specifications: Note <ul style="list-style-type: none"> • To successfully perform this procedure, all PIDs must be within the specification before proceeding to the next step. <ul style="list-style-type: none"> — Select the following items from the initialization screen of the M-MDS. <ul style="list-style-type: none"> • “Powertrain” • “Fuel” • “EVAP Test” — Verify that the ECT and IAT are within the specification at the confirmation screen. To successfully perform this procedure, the ECT and IAT must be within the specification before proceeding to the next step. — The fuel level must be maintained within 15%—85%. The PCM will cancel the EVAP test if the fuel level is lower than 15% or higher than 85%. — Allow the M-MDS to run the EVAP test. • Does the M-MDS indicate an EVAP system leak exists? 	Yes	Go to the next step.
		No	Go to Step 9.

01-02B

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
7	<p>PRELIMINARY LEAK TEST (DTC P0442:00 OR P0455:00)</p> <ul style="list-style-type: none"> • Tighten the fuel-filler cap then repeat the EVAP system leak inspection using the M-MDS again. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) • Verify that all PIDs are within the following specifications: <p>Note</p> <ul style="list-style-type: none"> • To successfully perform this procedure, all PIDs must be within the specification before proceeding to the next step. <ul style="list-style-type: none"> — Select the following items from the initialization screen of the M-MDS. <ul style="list-style-type: none"> • “Powertrain” • “Fuel” • “EVAP Test” — Verify that the ECT and IAT are within the specification at the confirmation screen. To successfully perform this procedure, the ECT and IAT must be within the specification before proceeding to the next step. — The fuel level must be maintained within 15%—85%. The PCM will cancel the EVAP test if the fuel level is lower than 15% or higher than 85%. — Allow the M-MDS to run the EVAP test. • Does the M-MDS still indicate an EVAP system leak exists? 	Yes	Go to the next step.
		No	The fuel cap was not properly tightened. <ul style="list-style-type: none"> • Go to Step 15.
8	<p>VISUALLY INSPECT COMPONENTS FOR LEAKS (EXCEPT P0456:00)</p> <ul style="list-style-type: none"> • Verify that the CV solenoid valve is properly seated on the charcoal canister. • Visually inspect for cut or loose connections to the fuel vapor hoses/tubes in the following locations: <ul style="list-style-type: none"> — Charcoal canister to CV solenoid valve — Charcoal canister to evaporative emission valve component — Evaporative emission valve component to the fuel tank (if applicable) — Check for fuel-filler pipe damage • Is a concern with a hose, tube, connection or valve visually evident? 	Yes	Repair or install a new component if necessary. Afterwards, verify that the leak is repaired by repeating diagnostic Step 6. <ul style="list-style-type: none"> • If the leak is repaired: <ul style="list-style-type: none"> — Go to Step 15.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION		ACTION
9	<p>CALIBRATE LEAK TESTER FOR DIAGNOSIS</p> <ul style="list-style-type: none"> Verify that the control valve on the panel is in the HOLD position then open the nitrogen bottle valve.  <ul style="list-style-type: none"> Connect the EVAP Tester Hose (part of the SST) to the SELF-TEST port located on the control panel. Hand tighten the fitting. (Do not overtighten.) Turn the control valve to the TEST position; the gauge should read 331—381 mm {13—15 in} of water. <p>Note</p> <ul style="list-style-type: none"> If the gauge is not reading in this range, adjust the pressure by turning the black knob on the low pressure regulator at the nitrogen bottle.  <ul style="list-style-type: none"> After verifying the regulator is properly calibrated, turn the control valve to the HOLD position. Verify that the gauge holds pressure and that the flow meter reads no flow. Does the gauge hold pressure and the flow meter read no flow? 	<p>Yes</p> <p>No</p>	<p>Go to the next step.</p> <p>Refer to the tester operator's manual for tester repair instructions.</p>

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P0443:00 [L3 WITH TC]

id010239704500

DTC P0443:00	Purge solenoid valve circuit malfunction
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the input voltages from the purge solenoid valve. If the voltage remains low or high for 5 s, the PCM determines that the purge solenoid valve circuit has a malfunction. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Short to ground in wiring harness between purge solenoid valve terminal B and PCM terminal 2AB Purge solenoid valve malfunction Purge solenoid valve connector or terminals malfunction Short to ground or open circuit in purge solenoid valve power supply circuit <ul style="list-style-type: none"> — Short to ground in wiring harness between main relay terminal C and purge solenoid valve terminal A — ENG BAR 15 A fuse malfunction — Open circuit in wiring harness between main relay terminal C and purge solenoid valve terminal A PCM connector or terminals malfunction Short to power supply in wiring harness between purge solenoid valve terminal B and PCM terminal 2AB Open circuit in wiring harness between purge solenoid valve terminal B and PCM terminal 2AB PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	CLASSIFY OPEN CIRCUIT OR SHORT TO GROUND MALFUNCTION <ul style="list-style-type: none"> Disconnect the purge solenoid valve tube that is connected to the intake manifold. Connect the vacuum pump to the purge solenoid valve. Pump the vacuum pump several times and stop and wait a few seconds. Is the vacuum maintained? 	Yes	Go to Step 5.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
4	INSPECT PASSAGE CONTROL OF PURGE SOLENOID VALVE <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the purge solenoid valve connector. • Pump the vacuum pump several times and wait a few seconds. • Is the vacuum maintained? 	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 11.
		No	Replace the purge solenoid valve, then go to Step 11. (See 01-16B-7 PURGE SOLENOID VALVE REMOVAL/ INSTALLATION [L3 WITH TC].)
5	INSPECT PURGE SOLENOID VALVE CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the purge solenoid valve connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.
6	INSPECT PURGE SOLENOID VALVE POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT <ul style="list-style-type: none"> • Purge solenoid valve connector is disconnected. • Switch the ignition to ON (engine off). • Measure the voltage at the purge solenoid valve terminal A (wiring harness-side). • Is the voltage B+? 	Yes	Go to the next step.
		No	Inspect the ENG BAR 15 A fuse. <ul style="list-style-type: none"> • If the fuse is melt: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deterioration: <ul style="list-style-type: none"> — Replace the fuse. • If the fuse is normal: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible open circuit. Go to Step 11.
7	INSPECT PURGE SOLENOID VALVE <ul style="list-style-type: none"> • Switch the ignition to off. • Inspect the purge solenoid valve. (See 01-16B-8 PURGE SOLENOID VALVE INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the purge solenoid valve, then go to Step 11. (See 01-16B-7 PURGE SOLENOID VALVE REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.
9	INSPECT PURGE SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • Purge solenoid valve and PCM connectors are disconnected. • Switch the ignition to ON (engine off). • Measure the voltage at the purge solenoid valve terminal B (wiring harness-side). • Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 11.
		No	Go to the next step.
10	INSPECT PURGE SOLENOID VALVE CONTROL CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Purge solenoid valve and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between purge solenoid valve terminal B (wiring harness-side) and PCM terminal 2AB (wiring harness-side) • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
11	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the KOEO or KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.

01-02B

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION		ACTION
12	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0446:00 [L3 WITH TC]

id010239300600

DTC P0446:00	CV solenoid valve control circuit problem
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the CV solenoid valve circuit for an electrical failure. The test fails when the signal moves outside the minimum or maximum allowable calibrated parameters for a specified canister vent duty cycle by the PCM command. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> CV solenoid valve connector or terminals malfunction Short to ground or open circuit in CV solenoid valve power supply circuit <ul style="list-style-type: none"> — Short to ground in wiring harness between main relay terminal C and CV solenoid valve terminal A — ENG INJ 15 A fuse malfunction — Open circuit in wiring harness between main relay terminal C and CV solenoid valve terminal A Short to ground in wiring harness between CV solenoid valve terminal B and PCM terminal 1AS PCM connector or terminals malfunction Short to power supply in wiring harness between CV solenoid valve terminal B and PCM terminal 1AS CV solenoid valve malfunction Open circuit in wiring harness between CV solenoid valve terminal B and PCM terminal 1AS PCM malfunction

Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
6	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P0457:00 [L3 WITH TC]

id010239301300

DTC P0457:00	EVAP system leak detected (fuel cap loose/off)
DETECTION CONDITION	<ul style="list-style-type: none"> The DTC P0457:00 indicates that the initial vacuum could not be achieved after a refueling event and the purge vapor flow is excessive (gross leak). <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is an intermittent monitor (EVAP system). A check cap light will be illuminated after a malfunction has been detected on one driving cycle. The check cap light will be extinguished after the monitor has run without a malfunction (same or subsequent drive cycle). The MIL will be illuminated after a malfunction has been detected on three consecutive driving cycles. The MIL will be extinguished after three consecutive driving cycles where the monitor was run without a malfunction. PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Missing or loose fuel filler cap PCM malfunction

01-02B

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> Have the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (EVAP system related) been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY RELATED PENDING CODE AND/OR DTC <ul style="list-style-type: none"> Switch the ignition to off, then to ON (engine off). Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Are any other PENDING CODEs and/or DTCs present? <p>Note</p> <ul style="list-style-type: none"> If the DTC P0455:00 is present, diagnose the DTC P0455:00 first. 	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02B-168 DTC P0442:00, P0455:00, P0456:00 [L3 WITH TC].) (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
4	INSPECT FUEL FILLER CAP FOR MISSING OR LOOSENESS <ul style="list-style-type: none"> Visually inspect the fuel filler cap for missing or looseness. Is there any malfunction? 	Yes	Repair or replace the fuel filler cap, then go to the next step.
		No	Go to the next step.
5	EVAP SYSTEM LEAK INSPECTION <ul style="list-style-type: none"> Perform the EVAP system leak inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Is there any malfunction? 	Yes	Leakage still exists. <ul style="list-style-type: none"> Perform the DTC P0455:00 inspection. (See 01-02B-168 DTC P0442:00, P0455:00, P0456:00 [L3 WITH TC].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
6	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the Drive Mode 06 (EVAP System Repair Verification Drive Mode). (See 01-02B-13 OBD-II DRIVE MODE [L3 WITH TC].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
7	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0460:00 [L3 WITH TC]

id010239301400

DTC P0460:00	Fuel level sensor circuit malfunction
DETECTION CONDITION	<ul style="list-style-type: none"> • The PCM monitors the fuel level input communications network message for a concern. The test fails when the PCM determines that the value of the fuel level input signal is stuck. The PCM calculates the amount of the fuel used during the operation. If the fuel level input signal does not change or does not correspond with the calculated fuel usage, the DTC P0460:00 is set. <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Instrument cluster malfunction <ul style="list-style-type: none"> — Incorrectly installed fuel gauge — Fuel level input signal circuit malfunction • Amount of fuel is empty or overfilled • Fuel gauge sender unit malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY RELATED PENDING CODE AND/OR DTC <ul style="list-style-type: none"> • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Are any other PENDING CODEs and/or DTCs present? 	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
4	VERIFY STORED DTC IN INSTRUMENT CLUSTER <ul style="list-style-type: none"> • Retrieve the instrument cluster DTC using the M-MDS. (See 09-02E-4 DTC INSPECTION [INSTRUMENT CLUSTER].) • Are any DTCs present? 	Yes	Go to the appropriate DTC inspection. (See 09-02E-5 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
5	INSPECT AMOUNT OF FUEL <ul style="list-style-type: none"> • Visually inspect the amount of the fuel. • Is the amount of the fuel normal? 	Yes	Go to the next step.
		No	Do the amount of the fuel to a proper level, then go to Step 7.
6	INSPECT FUEL GAUGE SENDER UNIT <ul style="list-style-type: none"> • Switch the ignition to off. • Inspect the fuel gauge sender unit. (See 09-22-12 FUEL GAUGE SENDER UNIT INSPECTION.) • Is there any malfunction? 	Yes	Replace the fuel gauge sender unit, then go to the next step. (See 09-22-12 FUEL GAUGE SENDER UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

01-02B

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P0461:00 [L3 WITH TC]

id010239301500

DTC P0461:00	Fuel gauge sender unit circuit range/performance problem
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the fuel level voltage difference before and after the PCM-calculated fuel consumption has reached 25 L {26.4 US qt., 22 Imp qt.}. If the difference is 5% less than the PCM-calculated fuel consumption, the PCM determines that the fuel gauge sender unit range/performance is in error. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Fuel gauge sender unit malfunction or substandard performance Instrument cluster malfunction PCM malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded? 	Yes Go to the next step.
		No Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No Go to the next step.
3	INSPECT FUEL GAUGE SENDER UNIT <ul style="list-style-type: none"> Switch the ignition to off. Inspect the fuel gauge sender unit. (See 09-22-12 FUEL GAUGE SENDER UNIT INSPECTION.) Is there any malfunction? 	Yes Replace the fuel gauge sender unit, then go to Step 5. (See 09-22-12 FUEL GAUGE SENDER UNIT REMOVAL/INSTALLATION.)
		No Go to the next step.
4	VERIFY STORED DTC IN INSTRUMENT CLUSTER <ul style="list-style-type: none"> Retrieve the instrument cluster DTC using the M-MDS. (See 09-02E-4 DTC INSPECTION [INSTRUMENT CLUSTER].) Are any DTCs present? 	Yes Go to the appropriate DTC inspection. (See 09-02E-5 DTC TABLE [INSTRUMENT CLUSTER].)
		No Go to the next step.
5	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Start the engine and warm it up completely. Drive the vehicle under the FREEZE FRAME DATA (Mode 2) condition. Perform the Pending Trouble Code Access Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the PENDING CODE for this DTC present? 	Yes Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No Go to the next step.

		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P0480:00 [L3 WITH TC]

id010239704600

01-02B

DTC P0480:00	Cooling fan control circuit problem
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the input voltage from the fan control module. If the voltage remains low or high, the PCM determines that the fan control circuit has a malfunction. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (other). The MIL does not illuminate. FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Fan control module connector or terminals malfunction Short to ground or open circuit in fan control module power supply circuit <ul style="list-style-type: none"> — Short to ground in wiring harness between battery positive terminal and fan control module terminal 1D — FAN1 40 A fuse and/or FAN2 40 A fuse malfunction — Open circuit in wiring harness between battery positive terminal and fan control module terminal 1D Short to ground in wiring harness between fan control module terminal 1C and PCM terminal 1AE PCM connector or terminals malfunction Short to power supply in wiring harness between fan control module terminal 1C and PCM terminal 1AE Open circuit in wiring harness between fan control module terminal 1C and PCM terminal 1AE Fan control module malfunction PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	INSPECT FAN CONTROL MODULE CONNECTOR CONDITION <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the fan control module connector. Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
3	INSPECT FAN CONTROL MODULE POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT <ul style="list-style-type: none"> • Fan control module connector is disconnected. • Switch the ignition to ON (engine off). • Measure the voltage at the fan control module terminal 1D (wiring harness-side). • Is the voltage B+? 	Yes	Go to the next step.
		No	Inspect the FAN1 40 A fuse and FAN2 40 A fuse. <ul style="list-style-type: none"> • If the fuse is melt: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible short to ground. — Replace the malfunctioning fuse. • If the fuse is deterioration: <ul style="list-style-type: none"> — Replace the malfunctioning fuse. • If the fuse is normal: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible open circuit. Go to Step 9.
4	INSPECT FAN CONTROL MODULE SIGNAL CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • Fan control module connector is disconnected. • Switch the ignition to off. • Inspect for continuity between fan control module terminal 1C (wiring harness-side) and body ground. • Is there continuity? 	Yes	If the short to ground circuit could be detected: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected: <ul style="list-style-type: none"> • Replace the PCM (short to ground in PCM internal circuit). (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].) Go to Step 9.
		No	Go to the next step.
5	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
6	INSPECT FAN CONTROL MODULE SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • Fan control module and PCM connectors are disconnected. • Switch the ignition to ON (engine off). • Measure the voltage at the fan control module terminal 1C (wiring harness-side). • Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 9.
		No	Go to the next step.
7	INSPECT FAN CONTROL MODULE SIGNAL CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Fan control module and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between fan control module terminal 1C (wiring harness-side) and PCM terminal 1AE (wiring harness-side). • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 9.
8	INSPECT FAN CONTROL MODULE <ul style="list-style-type: none"> • Perform the Cooling Fan Control System Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to the next step.
		No	Go to the next step.
9	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the KOEO or KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) • Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
10	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P0500:00 [L3 WITH TC]

id010239704800

01-02B

DTC P0500:00	VSS circuit problem
DETECTION CONDITION	<ul style="list-style-type: none"> • If an error in the wheel speed signal from the ABS HU/CM or DSC HU/CM is detected by the can when the following conditions are met: <ul style="list-style-type: none"> — Neutral switch and CPP switch: off — Absolute load: above 40% — Engine speed: 2,000 rpm or above — Brake switch: off <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Front ABS wheel-speed sensor malfunction • ABS HU/CM or DSC HU/CM connector or terminals malfunction • PCM connector or terminals malfunction • ABS HU/CM or DSC HU/CM malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.

Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY STORED DTC IN DSC HU/CM <ul style="list-style-type: none"> • Retrieve the ABS HU/CM or DSC HU/CM DTC using the M-MDS. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].) (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are any DTCs present? 	Yes	Go to the appropriate DTC inspection. (See 04-02A-2 ON-BOARD DIAGNOSIS [ABS].) (See 04-02B-2 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	Go to the next step.
4	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Start the engine and warm it up completely. • Access the RPM and LOAD PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Drive the vehicle under the following conditions for 18 s. <ul style="list-style-type: none"> — Neutral switch and CPP switch: off — Absolute load: above 40% — Engine speed: 2,000 rpm or above — Brake switch: off • Perform the Pending Trouble Code Access Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION
5	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Are any DTCs present? 	Yes Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No DTC troubleshooting completed.

DTC P0505:00 [L3 WITH TC]

id010239704900

DTC P0505:00	IAC system malfunction
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM cannot control idle speed toward the target idle speed during the KOER self test. Diagnostic support note <ul style="list-style-type: none"> The MIL does not illuminate. FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. The DTC is not stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Improper operation of electronic throttle control system A/C relay control circuit malfunction Generator control circuit malfunction Air cleaner element clogged. Air intake passage clogged. Low engine compression (Over capacity of blow-by gas) PCM malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION
1	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No Go to the next step.
2	VERIFY RELATED PENDING CODE AND/OR DTC <ul style="list-style-type: none"> Switch the ignition to off, then to ON (engine off). Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the PENDING CODE/DTC P0506:00, P0507:00, P0638:00, P2100:00, P2101:00, P2108:00 or P2119:00 also present? 	Yes Go to the applicable PENDING CODE or DTC inspection. (See 01-02B-199 DTC P0506:00 [L3 WITH TC].) (See 01-02B-201 DTC P0507:00 [L3 WITH TC].) (See 01-02B-219 DTC P0638:00 [L3 WITH TC].) (See 01-02B-255 DTC P2100:00 [L3 WITH TC].) (See 01-02B-258 DTC P2101:00 [L3 WITH TC].) (See 01-02B-264 DTC P2108:00 [L3 WITH TC].) (See 01-02B-266 DTC P2119:00 [L3 WITH TC].)
		No Go to the next step.
3	VERIFY ELECTRONIC THROTTLE CONTROL SYSTEM OPERATION <ul style="list-style-type: none"> Perform the throttle position (TP) sweep inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) Does the electronic throttle control system work properly? 	Yes Go to the next step.
		No Repair or replace the malfunctioning part according to the inspection results, then go to Step 9.
4	INSPECT A/C MAGNETIC CLUTCH OPERATION <ul style="list-style-type: none"> Turn the fan switch off. Is the magnetic clutch still on? 	Yes Perform the symptom troubleshooting "NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY". (See 01-03B-81 NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY [L3 WITH TC].)
		No Go to the next step.
5	INSPECT GENERATOR CONTROL CIRCUIT MALFUNCTION <ul style="list-style-type: none"> Apply the electrical load. Does the engine speed increase? 	Yes Go to the next step.
		No Repair or replace the generator control circuit for a possible short to power supply, then go to Step 9.
6	INSPECT AIR CLEANER ELEMENT <ul style="list-style-type: none"> Remove the air cleaner element with the engine running. Does the engine speed increase? 	Yes Clean or replace the air cleaner element, then go to Step 9.
		No Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION
7	INSPECT THROTTLE BODY PASSAGE <ul style="list-style-type: none"> Visually inspect the throttle body passage. Is the throttle body clogged? 	Yes Clean or replace the throttle body passage, then go to Step 9.
		No Go to the next step.
8	INSPECT ENGINE COMPRESSION <ul style="list-style-type: none"> Inspect the engine compression. (See 01-10B-12 COMPRESSION INSPECTION [L3 WITH TC].) Is there any malfunction? 	Yes Repair or replace the malfunctioning part according to the inspection results, then go to the next step.
		No Go to the next step.
9	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Perform the KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) Is the same DTC present? 	Yes Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No Go to the next step.
10	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Are any DTCs present? 	Yes Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No DTC troubleshooting completed.

01-02B

DTC P0506:00 [L3 WITH TC]

id010239705000

DTC P0506:00	IAC system RPM lower than expected
DETECTION CONDITION	<ul style="list-style-type: none"> Actual idle speed is lower than expected by 100 rpm for 14 s when the brake pedal is depressed (brake switch is on). <p>Note</p> <ul style="list-style-type: none"> If the atmospheric pressure is less than 72.3 kPa {542 mmHg, 21.3 inHg} or the intake air temperature is below -10 °C {14 °F}, the PCM cancels the diagnosis of the DTC P0506:00. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> A/C relay control circuit malfunction Electronic throttle control system malfunction Purge solenoid valve malfunction Air cleaner element clogged Air intake passage clogged Generator malfunction Low engine compression (over capacity of blow-by gas) PCM malfunction

ON-BOARD DIAGNOSTIC [L3 WITH TC]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY RELATED PENDING CODE AND/OR DTC <ul style="list-style-type: none"> • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Are any other PENDING CODEs and/or DTCs present? 	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
4	INSPECT A/C MAGNET CLUTCH OPERATION <ul style="list-style-type: none"> • Turn the blower motor switch off. • Is the magnet clutch still on? 	Yes	Perform the symptom troubleshooting "NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY". (See 01-03B-81 NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY [L3 WITH TC].)
		No	Go to the next step.
5	INSPECT ELECTRONIC THROTTLE CONTROL SYSTEM RELATED SENSOR <ul style="list-style-type: none"> • Inspect the following: <ul style="list-style-type: none"> — APP sensor (See 01-40B-28 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [L3 WITH TC].) — TP sensor (See 01-40B-28 THROTTLE POSITION (TP) SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 11. (See 01-13B-14 ACCELERATOR PEDAL REMOVAL/ INSTALLATION [L3 WITH TC].) (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
6	INSPECT PURGE SOLENOID VALVE <ul style="list-style-type: none"> • Inspect the purge solenoid valve. (See 01-16B-8 PURGE SOLENOID VALVE INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the purge solenoid valve, then go to Step 11. (See 01-16B-7 PURGE SOLENOID VALVE REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
7	INSPECT AIR CLEANER ELEMENT <ul style="list-style-type: none"> • Remove the air cleaner element with the engine running. • Does the engine speed increase? 	Yes	Clean or replace the air cleaner element, then go to Step 11.
		No	Go to the next step.
8	INSPECT THROTTLE BODY PASSAGE <ul style="list-style-type: none"> • Visually inspect the throttle body passage. • Is the throttle body passage clogged? 	Yes	Clean or replace the throttle body passage, then go to Step 11.
		No	Go to the next step.
9	INSPECT GENERATOR <ul style="list-style-type: none"> • Inspect the generator. (See 01-17B-8 GENERATOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 11.
		No	Go to the next step.
10	INSPECT ENGINE COMPRESSION <ul style="list-style-type: none"> • Inspect the engine compression. (See 01-10B-12 COMPRESSION INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
11	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Make sure to reconnect all disconnected connectors. Start the engine. Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Depress the brake pedal for 14 s or more. Perform the Pending Trouble Code Access Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
12	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

01-02B

DTC P0507:00 [L3 WITH TC]

id010239705100

DTC P0507:00	IAC system RPM higher than expected
DETECTION CONDITION	<ul style="list-style-type: none"> Actual idle speed is higher than expected by 200 rpm for 14 s when the brake pedal is depressed (brake switch is on). <p>Note</p> <ul style="list-style-type: none"> If the atmospheric pressure is less than 72.3 kPa {542 mmHg, 21.3 inHg} or the intake air temperature is below -10 °C {14 °F}, the PCM cancels the diagnosis of the DTC P0507:00. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Vacuum hose not connected correctly Electronic throttle control system malfunction PCM malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY RELATED PENDING CODE AND/OR DTC <ul style="list-style-type: none"> Switch the ignition to off, then to ON (engine off). Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Are any other PENDING CODEs and/or DTCs present? 	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
4	INSPECT VACUUM HOSE CONNECTION <ul style="list-style-type: none"> • Visually inspect the vacuum hoses for connecting. • Are the vacuum hoses connecting accurately? (See 01-13B-3 INTAKE-AIR SYSTEM VACUUM HOSE ROUTING DIAGRAM [L3 WITH TC].) 	Yes	Go to the next step.
		No	Reconnect the vacuum hoses correctly, then go to Step 6. (See 01-13B-3 INTAKE-AIR SYSTEM VACUUM HOSE ROUTING DIAGRAM [L3 WITH TC].)
5	INSPECT ELECTRONIC THROTTLE CONTROL SYSTEM RELATED SENSOR <ul style="list-style-type: none"> • Inspect the following: <ul style="list-style-type: none"> — APP sensor (See 01-40B-28 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [L3 WITH TC].) — TP sensor (See 01-40B-28 THROTTLE POSITION (TP) SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to the next step. (See 01-13B-14 ACCELERATOR PEDAL REMOVAL/INSTALLATION [L3 WITH TC].) (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
6	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Start the engine. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Depress the brake pedal for 14 s or more. • Perform the Pending Trouble Code Access Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
7	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P050A:00 [L3 WITH TC]

id010239301800

DTC P050A:00	Cold start IAC system performance problem
DETECTION CONDITION	<ul style="list-style-type: none"> • Actual idle speed is lower than expected by 100 rpm for 8.4 s when target idle speed is above 0 rpm at the cold start or ignition retard value is above 6 °. <p>Note</p> <ul style="list-style-type: none"> • If the atmospheric pressure is less than 72.3 kPa {542 mmHg, 21.3 inHg} or intake air temperature is below -10 °C {14 °F}, the PCM cancels the diagnosis of the DTC P050A:00. <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is a continuous monitor (cold start emission reduction strategy monitoring). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Air into fuel line by exchange or re-installation • Air suction in intake-air system • Electronic throttle control system malfunction • Throttle valve stuck or blockage • PCM malfunction

ON-BOARD DIAGNOSTIC [L3 WITH TC]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2) <ul style="list-style-type: none"> • Perform the Freeze Frame PID Data Access Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the DTC P050A:00 on FREEZE FRAME DATA (Mode 2)? 	Yes	Go to the next step.
		No	Go to the troubleshooting procedures for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02B-18 DTC TABLE [L3 WITH TC].)
2	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> • Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (cold start emission reduction strategy monitoring related) been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
3	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	INSPECT FUEL SYSTEM <ul style="list-style-type: none"> • Were any exchange or re-installation of the fuel system performed just before the DTC P050A:00 stored? 	Yes	Perform the air bleeding of fuel system. <ul style="list-style-type: none"> • Start the engine and warm it up until the engine speed is stable, then go to the next step.
		No	Go to Step 6.
5	CONFIRM PENDING CODE <ul style="list-style-type: none"> • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Access the ECT PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Cool down the engine still the ECT PID value below 30 °C {86 °F}. • Perform the cold start. • Perform the Pending Trouble Code Access Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the PENDING CODE for this DTC present? 	Yes	Go to the next step.
		No	Go to Step 10.
6	INSPECT INTAKE AIR SYSTEM FOR AIR SUCTION <ul style="list-style-type: none"> • Start the engine. • Inspect for air suction between MAF sensor and intake manifold. • Is there any air suction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 9.
		No	Go to the next step.
7	VERIFY ELECTRONIC THROTTLE CONTROL SYSTEM OPERATION <ul style="list-style-type: none"> • Perform the Electronic Throttle Control System Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 9.
		No	Go to the next step.

01-02B

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
8	VERIFY THROTTLE VALVE OPERATION <ul style="list-style-type: none"> • Switch the ignition to off. • Remove the throttle valve with connector connected. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].) • Access the ETC_DSD PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Switch the ignition to ON (engine off). • Operate the throttle valve using the ETC_DSD PID of the active command function. • Dose the throttle valve move smoothly? 	Yes	Go to the next step.
		No	Clean or replace the throttle valve and retest. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].) <ul style="list-style-type: none"> • If the problem does not resolve: <ul style="list-style-type: none"> — Replace the throttle body, then go to the next step. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].) • If the problem resolve: <ul style="list-style-type: none"> — Go to the next step.
9	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
10	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P050B:00 [L3 WITH TC]

id010239301900

DTC P050B:00	Cold start ignition timing performance problem
DETECTION CONDITION	<ul style="list-style-type: none"> • The PCM monitors the actual ignition timing using the CKP sensor while the electronic spark advance control fast idle correction operating. If the ignition timing is out of the specified range, the PCM determines that the ignition timing at the cold condition has a performance problem. <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is a continuous monitor (cold start emission reduction strategy monitoring). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Air into fuel line by exchange or re-installation • Damaged or chipped CKP sensor pulse wheel • CKP sensor malfunction • Damaged or chipped CMP sensor pulse wheel • CMP sensor malfunction • PCM malfunction

ON-BOARD DIAGNOSTIC [L3 WITH TC]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2) <ul style="list-style-type: none"> • Perform the Freeze Frame PID Data Access Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the DTC P050B:00 on FREEZE FRAME DATA (Mode 2)? 	Yes	Go to the next step.
		No	Go to the troubleshooting procedures for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02B-18 DTC TABLE [L3 WITH TC].)
2	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> • Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (cold start emission reduction strategy monitoring related) been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
3	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	INSPECT FUEL SYSTEM <ul style="list-style-type: none"> • Were any exchange or re-installation of the fuel system performed just before the DTC P050B:00 stored? 	Yes	Perform the air bleeding of fuel system. <ul style="list-style-type: none"> • Start the engine and warm it up until the engine speed is stable, then go to the next step.
		No	Go to Step 6.
5	CONFIRM PENDING CODE <ul style="list-style-type: none"> • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Access the ECT PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Cool down the engine still the ECT PID value below 30 °C {86 °F}. • Perform the cold start. • Perform the Pending Trouble Code Access Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the PENDING CODE for this DTC present? 	Yes	Go to the next step.
		No	Go to Step 11.
6	INSPECT CKP SENSOR PULSE WHEEL <ul style="list-style-type: none"> • Visually inspect the CKP sensor pulse wheel. • Is there any damage or chip on the CKP sensor pulse wheel? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 10.
		No	Go to the next step.
7	INSPECT CKP SENSOR <ul style="list-style-type: none"> • Inspect the CKP sensor. (See 01-40B-33 CRANKSHAFT POSITION (CKP) SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the CKP sensor, then go to Step 10. (See 01-40B-32 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	INSPECT CMP SENSOR AND PULSE WHEEL <ul style="list-style-type: none"> • Visually inspect the CMP sensor and pulse wheel. • Is there any damage or chip on the CMP sensor and pulse wheel? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 10.
		No	Go to the next step.
9	INSPECT CMP SENSOR <ul style="list-style-type: none"> • Inspect the CMP sensor. (See 01-40B-34 CAMSHAFT POSITION (CMP) SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the CMP sensor, then go to the next step. (See 01-40B-34 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.

01-02B

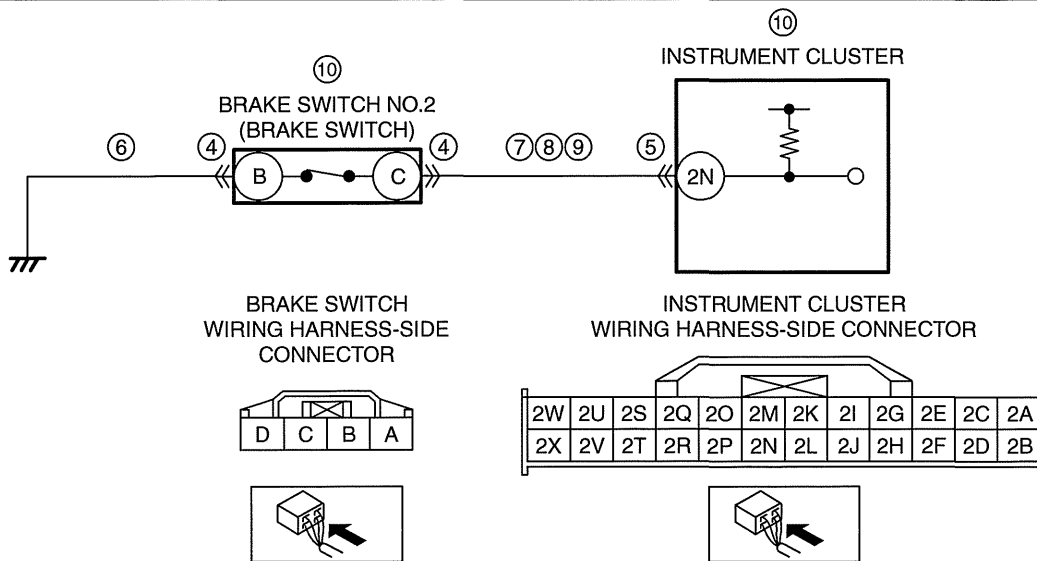

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION		ACTION
10	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Perform the KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
11	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0571:00 [L3 WITH TC]

id010239705500

DTC P0571:00	Brake switch circuit malfunction
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the changes in input voltage for the brake switch No.1 and No.2 (signal from the instrument cluster). If the PCM detects that both brake switches No.1 and No.2 remain on or off for 15 s, it determines that the brake switch circuit has a malfunction. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (other). The MIL does not illuminate. FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<p>Caution</p> <ul style="list-style-type: none"> Inspect the brake switch with it installed to the brake pedal, otherwise the brake switch may not operate normally. If the brake switch is removed from the brake pedal, replace the brake switch with a new one. <ul style="list-style-type: none"> Brake switch connector or terminals malfunction Open circuit in wiring harness between brake switch terminal B and body ground Instrument cluster connector or terminals malfunction Short to ground in wiring harness between brake switch terminal C and instrument cluster terminal 2N Short to power supply in wiring harness between brake switch terminal C and instrument cluster terminal 2N Open circuit in wiring harness between brake switch terminal C and instrument cluster terminal 2N Brake switch No.2 malfunction PCM malfunction

ON-BOARD DIAGNOSTIC [L3 WITH TC]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	VERIFY DTC FOR MODULE COMMUNICATION <ul style="list-style-type: none"> • Switch the ignition to off, then to ON (engine off). • Perform the DTC Reading Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the DTC U0155:00 also present? 	Yes	Go to the applicable DTC inspection. (See 09-02D-1 FOREWORD [MULTIPLEX COMMUNICATION SYSTEM].)
		No	Go to the next step.
3	VERIFY RELATED PENDING CODE AND/OR DTC <ul style="list-style-type: none"> • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the PENDING CODE/DTC P0703:00 also present? 	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02B-223 DTC P0703:00 [L3 WITH TC].)
		No	Go to the next step.
4	INSPECT BRAKE SWITCH CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the brake switch connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.
5	INSPECT INSTRUMENT CLUSTER CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the instrument cluster connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.
6	INSPECT BRAKE SWITCH NO.2 GROUND CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Brake switch and instrument cluster connectors are disconnected. • Inspect for continuity between brake switch terminal B (wiring harness-side) and body ground. • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 11.
7	INSPECT BRAKE SWITCH NO.2 SIGNAL CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • Brake switch and instrument cluster connectors are disconnected. • Inspect for continuity between brake switch terminal C (wiring harness-side) and body ground. • Is there continuity? 	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 11.
		No	Go to the next step.
8	INSPECT BRAKE SWITCH NO.2 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • Brake switch and instrument cluster connectors are disconnected. • Switch the ignition to ON (engine off). • Measure the voltage at the brake switch terminal C (wiring harness-side). • Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 11.
		No	Go to the next step.

01-02B

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
9	INSPECT BRAKE SWITCH NO.2 SIGNAL CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Brake switch and instrument cluster connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between brake switch terminal C (wiring harness-side) and instrument cluster terminal 2N (wiring harness-side). • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 11.
10	INSPECT INSTRUMENT CLUSTER <ul style="list-style-type: none"> • Inspect the instrument cluster. (See 09-22-8 INSTRUMENT CLUSTER INSPECTION.) • Is there any malfunction? 	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Replace the brake switch, then go to the next step. (See 04-11-12 MASTER CYLINDER REMOVAL/INSTALLATION [L3 WITH TC].)
11	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Switch the ignition to ON (engine off). • Depress the brake pedal above 15 s more than 5 times. • Perform the DTC Reading Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
12	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P0579:00 [L3 WITH TC]

id010239087000

01-02B

DTC P0579:00	Cruise control multi-function input circuit range/performance problem
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the input signal from the cruise control switch. If the input signal does not change for 120 s, the PCM determines that the cruise control switch circuit has a malfunction. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (other). The MIL does not illuminate. FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Clock spring connector or terminals malfunction Clock spring malfunction Cruise control switch malfunction Short to ground in wiring harness between clock spring terminal 2L and PCM terminal 1AQ PCM connector or terminals malfunction Short to power supply in wiring harness between the following terminals: <ul style="list-style-type: none"> — Clock spring terminal 2L—PCM terminal 1AQ — Clock spring terminal 2N—PCM terminal 1W Open circuit in wiring harness between the following terminals: <ul style="list-style-type: none"> — Clock spring terminal 2L—PCM terminal 1AQ — Clock spring terminal 2N—PCM terminal 1W PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	<p>VERIFY RELATED REPAIR INFORMATION AVAILABILITY</p> <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
2	INSPECT CLOCK SPRING CONNECTOR CONDITION Warning <ul style="list-style-type: none"> • Handling the air bag system components improperly can accidentally deploy the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.) <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the clock spring connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
3	INSPECT CLOCK SPRING <ul style="list-style-type: none"> • Inspect the clock spring. (See 08-10-23 CLOCK SPRING INSPECTION.) • Is there any malfunction? 	Yes	Replace the clock spring, then go to Step 9. (See 08-10-21 CLOCK SPRING REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	INSPECT CRUISE CONTROL SWITCH <ul style="list-style-type: none"> • Inspect the cruise control switch. (See 01-20B-1 CRUISE CONTROL SWITCH INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the steering switch, then go to Step 9. (See 09-20-43 STEERING SWITCH REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	INSPECT CRUISE CONTROL SWITCH CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • Clock spring connector is disconnected. • Inspect for continuity between clock spring terminal 2L (wiring harness-side) and body ground. • Is there continuity? 	Yes	If the short to ground circuit could be detected: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected: <ul style="list-style-type: none"> • Replace the PCM (short to ground in PCM internal circuit). (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].) Go to Step 9.
		No	Go to the next step.
6	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
7	INSPECT CRUISE CONTROL SWITCH CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • Clock spring and PCM connectors are disconnected. • Switch the ignition to ON (engine off). • Measure the voltage at the following terminals (wiring harness-side): <ul style="list-style-type: none"> — Clock spring terminal 2L — Clock spring terminal 2N • Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 9.
		No	Go to the next step.
8	INSPECT CRUISE CONTROL SWITCH CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Clock spring and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between the following terminals (wiring harness-side): <ul style="list-style-type: none"> — Clock spring terminal 2L—PCM terminal 1AQ — Clock spring terminal 2N—PCM terminal 1W • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

01-02B

STEP	INSPECTION		ACTION
9	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Drive the vehicle using the cruise control for 2 min or more. Perform the DTC Reading Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
10	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0581:00 [L3 WITH TC]

id010239879900

DTC P0581:00	Cruise control multi-function input circuit high input
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the input signal from the cruise control switch. If the PCM detects that the cruise control switch voltage is above 4.75 V, the PCM determines that the cruise control switch circuit has a malfunction. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (other). The MIL does not illuminate. FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Clock spring connector or terminals malfunction Clock spring malfunction Cruise control switch malfunction PCM connector or terminals malfunction Short to power supply in wiring harness between the following terminals: <ul style="list-style-type: none"> — Clock spring terminal 2L—PCM terminal 1AQ — Clock spring terminal 2N—PCM terminal 1W Open circuit in wiring harness between the following terminals: <ul style="list-style-type: none"> — Clock spring terminal 2L—PCM terminal 1AQ — Clock spring terminal 2N—PCM terminal 1W PCM malfunction

ON-BOARD DIAGNOSTIC [L3 WITH TC]

Diagnostic procedure

STEP	INSPECTION	ACTION
1	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No Go to the next step.
2	INSPECT CLOCK SPRING CONNECTOR CONDITION <p>Warning</p> <ul style="list-style-type: none"> • Handling the air bag system components improperly can accidentally deploy the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) id010239705800

DTC P0604:00	PCM RAM error
DETECTION CONDITION	<ul style="list-style-type: none"> • The PCM internal RAM malfunction. <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • PCM internal RAM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the KOEO or KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) • Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
4	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P0606:00 [L3 WITH TC]

id010239705900

DTC P0606:00	PCM processor error
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM internal CPU malfunction. The abnormal voltage applied to the PCM ignition switch terminal. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Voltage of 1.0 V or more is applied to PCM ignition switch terminal even though ignition switch is off PCM internal CPU malfunction

01-02B

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY VOLTAGE AROUND PCM IGNITION SWITCH TERMINAL <ul style="list-style-type: none"> Measure the voltage around the PCM ignition switch terminal when the ignition switch is off. <p>Note</p> <ul style="list-style-type: none"> If the measured value fluctuates above and below 1.0 V, place the measurement position close to the PCM and measure several times. <ul style="list-style-type: none"> Is the voltage less than 1.0 V? 	Yes	Go to the next step.
		No	Inspect the power supply circuit for short or open circuit. Repair or replace the suspected wiring harness, then go to the next step.
4	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Perform the KOEO or KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
5	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P0610:00 [L3 WITH TC]

id010239706000

DTC P0610:00	PCM vehicle configuration error
DETECTION CONDITION	<ul style="list-style-type: none"> • The PCM data configuration error. <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Configuration procedure has not been completed • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	PERFORM PCM CONFIGURATION <ul style="list-style-type: none"> • Perform the PCM configuration. (See 01-40B-23 PCM CONFIGURATION [L3 WITH TC].) • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the KOEO or KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) • Is the same DTC present? 	Yes	Perform the PCM configuration again, then go to the next step. (See 01-40B-23 PCM CONFIGURATION [L3 WITH TC].)
		No	Go to Step 5.
4	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the KOEO or KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) • Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
5	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P0638:00 [L3 WITH TC]

id010239706100

DTC P0638:00	Throttle valve actuator control circuit range/performance problem
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM compares the actual TP with the target TP when the engine is running. If the difference is more than the specification, the PCM determines that there is a throttle valve actuator control circuit range/performance problem. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Throttle valve actuator malfunction PCM malfunction

01-02B

Diagnostic procedure

STEP	INSPECTION	ACTION
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded? 	Yes Go to the next step.
		No Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No Go to the next step.
3	VERIFY RELATED PENDING CODE AND/OR DTC <ul style="list-style-type: none"> Switch the ignition to off, then to ON (engine off). Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Are any other PENDING CODEs and/or DTCs present? 	Yes Go to the applicable PENDING CODE or DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No Go to the next step.
4	INSPECT THROTTLE VALVE ACTUATOR <ul style="list-style-type: none"> Switch the ignition to off. Inspect the throttle valve actuator. (See 01-13B-12 THROTTLE BODY INSPECTION [L3 WITH TC].) Is there any malfunction? 	Yes Replace the throttle body, then go to the next step. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [L3 WITH TC].)
		No Go to the next step.
5	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Switch the ignition to off. Start the engine and idle it. Perform the DTC Reading Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the same DTC present? 	Yes Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No Go to the next step.
6	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Are any DTCs present? 	Yes Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P064D:00 [L3 WITH TC]

id010239302700

DTC P064D:00	Internal control module A/F sensor processor performance problem
DETECTION CONDITION	<ul style="list-style-type: none"> • The A/F sensor IC integrated in the PCM converts to voltage value for fuel control and for diagnosis based on the A/F sensor signal current and sends to the CPU (integrated in the PCM). If there is a transmission format error from the A/F sensor IC to the PCM, the PCM will detect a transmission error. <p>MONITORING CONDITIONS</p> <ul style="list-style-type: none"> — Drive Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S, and TWC Repair Verification Drive Mode) — Following conditions are met: <ul style="list-style-type: none"> • Engine is running or ignition switch is ON • A/F sensor signal voltage: 1.2 V—battery voltage—1.2 V (PCM terminals 2Z, 2AC, 2AD) <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • PCM internal malfunction (between CPU and A/F sensor control IC communication line)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the Drive Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02B-13 OBD-II DRIVE MODE [L3 WITH TC].) • Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
4	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P0685:00 [L3 WITH TC]

id010239302800

DTC P0685:00	Main relay control circuit open
DETECTION CONDITION	<ul style="list-style-type: none"> This DTC sets when the ignition switch position run circuit indicates the key is in the off, ACC, or LOCK position, and the amount of time the PCM remains powered through the PCM power relay exceeds a predetermined amount of time. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Main relay malfunction PCM malfunction

01-02B

Diagnostic procedure

STEP	INSPECTION	ACTION
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded? 	Yes Go to the next step.
		No Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No Go to the next step.
3	INSPECT MAIN RELAY <ul style="list-style-type: none"> Switch the ignition to off. Remove the main relay. Inspect the main relay. (See 09-21-17 RELAY INSPECTION.) Is there any malfunction? 	Yes Replace the main relay, then go to the next step.
		No Install the main relay, then go to the next step.
4	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Start the engine and warm it up completely. Switch the ignition to off. Perform the Pending Trouble Code Access Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the PENDING CODE for this DTC present? 	Yes Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No Go to the next step.
5	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Are any DTCs present? 	Yes Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P06B8:00 [L3 WITH TC]

id010239316200

DTC P06B8:00	Internal control module non-volatile RAM error
DETECTION CONDITION	<ul style="list-style-type: none"> • The PCM internal EEPROM malfunction. <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • PCM internal EEPROM malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded? 	Yes Go to the next step.
		No Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No Go to the next step.
3	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the KOEO or KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) • Is the same DTC present? 	Yes Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No Go to the next step.

		No DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
4	INSPECT BRAKE SWITCH NO.1 POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT <ul style="list-style-type: none"> • Brake switch connector is disconnected. • Measure the voltage at the brake switch terminal A (wiring harness-side). • Is the voltage B+? 	Yes	Go to the next step.
		No	Inspect the STOP 15 A fuse. <ul style="list-style-type: none"> • If the fuse is melt: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deterioration: <ul style="list-style-type: none"> — Replace the fuse. • If the fuse is normal: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible open circuit. Go to Step 9.
5	INSPECT BRAKE SWITCH NO.1 SIGNAL CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • Brake switch connector is disconnected. • Switch the ignition to off. • Inspect for continuity between brake switch terminal D (wiring harness-side) and body ground. • Is there continuity? 	Yes	If the short to ground circuit could be detected: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected: <ul style="list-style-type: none"> • Replace the PCM (short to ground in PCM internal circuit). (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].) Go to Step 9.
		No	Go to the next step.
6	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
7	INSPECT BRAKE SWITCH NO.1 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • Brake switch and PCM connectors are disconnected. • Switch the ignition to ON (engine off). • Measure the voltage at the brake switch terminal D (wiring harness-side). • Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 9.
		No	Go to the next step.
8	INSPECT BRAKE SWITCH NO.1 SIGNAL CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Brake switch and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between brake switch terminal D (wiring harness-side) and PCM terminal 1AB (wiring harness-side). • Is there continuity? 	Yes	Replace the brake switch, then go to the next step. (See 04-11-8 BRAKE PEDAL REMOVAL/INSTALLATION.)
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
9	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Drive vehicle at 30 km/h {19 mph} or more. • Depress and release the brake pedal more than 8 times while driving the vehicle. • Perform the Pending Trouble Code Access Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
10	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P0704:00 [L3 WITH TC]

id010239706600

01-02B

DTC P0704:00	CPP switch input circuit problem
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the changes in input voltage from the CPP switch. If the PCM does not detect the voltage changes while the vehicle runs with the vehicle speed above 30 km/h {19 mph} and stops 8 times alternately, the PCM determines that the CPP switch circuit has a malfunction. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> CPP switch connector or terminal malfunction Open circuit in wiring harness between CPP switch terminal B and body ground CPP switch malfunction Short to ground in wiring harness between CPP switch terminal A and PCM terminal 1D PCM connector or terminal malfunction Short to power supply in wiring harness between CPP switch terminal A and PCM terminal 1D Open circuit in wiring harness between CPP switch terminal A and PCM terminal 1D PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	INSPECT CPP SWITCH CONNECTOR CONDITION <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the CPP switch connector. Inspect for poor connection (such as damaged/pulled-out pins, corrosion). Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
4	INSPECT CPP SWITCH GROUND CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • CPP switch connector is disconnected. • Inspect for continuity between CPP switch terminal B (wiring harness-side) and body ground. • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 10.
5	INSPECT CPP SWITCH <ul style="list-style-type: none"> • Inspect the CPP switch. (See 01-40B-23 CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the CPP switch, then go to Step 10. (See 05-10-6 CLUTCH PEDAL REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	INSPECT CPP SWITCH SIGNAL CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • CPP switch connector is disconnected. • Inspect for continuity between CPP switch terminal A (wiring harness-side) and body ground. • Is there continuity? 	Yes	If the short to ground circuit could be detected: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected: <ul style="list-style-type: none"> • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].) Go to Step 10.
		No	Go to the next step.
7	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
8	INSPECT CPP SWITCH SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • CPP switch and PCM connectors are disconnected. • Switch the ignition to ON (engine off). • Measure the voltage at the CPP switch terminal A (wiring harness-side). • Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 10.
		No	Go to the next step.
9	INSPECT CPP SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • CPP switch and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between CPP switch terminal A (wiring harness-side) and PCM terminal 1D (wiring harness-side). • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
10	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Start the engine. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Operate the clutch pedal while the vehicle runs and stops 8 times alternately. • Perform the Pending Trouble Code Access Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
11	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P0850:00 [L3 WITH TC]

id010239706700

01-02B

DTC P0850:00	Neutral switch input circuit problem
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the changes in the input voltage from the neutral switch. If the PCM does not detect the voltage changes while driving the vehicle at a vehicle speed above 30 km/h {19 mph} and the clutch pedal is pressed and depressed 10 times repeatedly, the PCM determines that the neutral switch circuit has a malfunction. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Neutral switch connector or terminal malfunction Open circuit in wiring harness between neutral switch terminal B and body ground Neutral switch malfunction Short to ground in wiring harness between neutral switch terminal A and PCM terminal 1S PCM connector or terminal malfunction Short to power supply in wiring harness between neutral switch terminal A and PCM terminal 1S Open circuit in wiring harness between neutral switch terminal A and PCM terminal 1S PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	INSPECT NEUTRAL SWITCH CONNECTOR CONDITION <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the neutral switch connector. Inspect for poor connection (such as damaged/pulled-out pins, corrosion). Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
4	INSPECT NEUTRAL SWITCH GROUND CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Neutral switch connector is disconnected. • Inspect for continuity between neutral switch terminal B (wiring harness-side) and body ground. • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 10.
5	INSPECT NEUTRAL SWITCH <ul style="list-style-type: none"> • Inspect the neutral switch. (See 01-40B-23 NEUTRAL SWITCH INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the neutral switch, then go to Step 10. (See 05-15C-2 NEUTRAL SWITCH REMOVAL/INSTALLATION [A26M-R].)
		No	Go to the next step.
6	INSPECT NEUTRAL SWITCH SIGNAL CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • Neutral switch connector is disconnected. • Inspect for continuity between neutral switch terminal A (wiring harness-side) and body ground. • Is there continuity? 	Yes	If the short to ground circuit could be detected: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected: <ul style="list-style-type: none"> • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].) Go to Step 10.
		No	Go to the next step.
7	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
8	INSPECT NEUTRAL SWITCH SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • Neutral switch and PCM connectors are disconnected. • Switch the ignition to ON (engine off). • Measure the voltage at the neutral switch terminal A (wiring harness-side). • Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 10.
		No	Go to the next step.
9	INSPECT NEUTRAL SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Neutral switch and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between neutral switch terminal A (wiring harness-side) and PCM terminal 1S (wiring harness-side). • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
10	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Start the engine. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Drive the vehicle above 30 km/h {19 mph} and stop the vehicle. • Depress and release the clutch pedal more than 10 times during a drive cycle. • Perform the Pending Trouble Code Access Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
11	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P120F:00 [L3 WITH TC]

id010239120500

01-02B

DTC P120F:00	Fuel pressure regulator excessive variation
DETECTION CONDITION	<ul style="list-style-type: none"> • If the fuel pressure average value measured by the PCM exceeds the specification when the camshaft is rotating at a specified rate, the PCM determines that there is a fuel pressure regulator performance problem. <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is a continuous monitor (CCM). • The MIL does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • High pressure fuel pump connector or terminals malfunction • PCM connector or terminals malfunction • Spill valve control solenoid valve malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	INSPECT HIGH PRESSURE FUEL PUMP CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the high pressure fuel pump connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 5.
		No	Go to the next step.
3	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 5.
		No	Go to the next step.
4	INSPECT SPILL VALVE CONTROL SOLENOID VALVE <ul style="list-style-type: none"> • Reconnect the high pressure fuel pump and PCM connectors. • Inspect the spill valve control solenoid valve. (See 01-14B-20 HIGH PRESSURE FUEL PUMP INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the high pressure fuel pump, then go to the next step. (See 01-14B-17 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
5	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Start the engine. • Perform the DTC Reading Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
6	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P1260:00 [L3 WITH TC]

id010239856800

DTC P1260:00	Immobilizer system problem
DETECTION CONDITION	<ul style="list-style-type: none"> • The instrument cluster detects an immobilizer system malfunction. (Vehicles without advanced keyless entry and push button start system) • The keyless control module detects an immobilizer system malfunction. (Vehicles with advanced keyless entry and push button start system) Diagnostic support note <ul style="list-style-type: none"> • This is a continuous monitor (other). • The MIL does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is not stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Immobilizer system malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	VERIFY STORED DTC IN INSTRUMENT CLUSTER <ul style="list-style-type: none"> • Retrieve the immobilizer system DTC using the M-MDS. (See 09-02C-2 DTC INSPECTION [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) (See 09-02B-2 DTC INSPECTION [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 09-02C-4 DTC TABLE [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) (See 09-02B-4 DTC TABLE [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)].)
		No	Go to the next step.
3	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the KOEO self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) • Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
4	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P144A:00 [L3 WITH TC]

id010239303000

DTC P144A:00	EVAP system purge vapor line restricted/blocked
DETECTION CONDITION	<ul style="list-style-type: none"> The DTC P144A:00 indicates that the DTC P144A:00 blocked line diagnostic is designed to detect a full blockage in the vapor lines between fuel tank pressure sensor and fuel tank. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is an intermittent monitor (EVAP system). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Blockage(s) between fuel tank pressure sensor and fuel tank PCM malfunction

01-02B

Diagnostic procedure

STEP	INSPECTION	ACTION
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (EVAP system related) been recorded? 	Yes Go to the next step.
		No Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No Go to the next step.
3	VERIFY RELATED PENDING CODE AND/OR DTC <ul style="list-style-type: none"> Switch the ignition to off, then to ON (engine off). Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the PENDING CODE/DTC P0451:00, P0452:00, P0453:00 or P0454:00 also present? 	Yes Go to the applicable PENDING CODE or DTC inspection. (See 01-02B-182 DTC P0451:00 [L3 WITH TC].) (See 01-02B-184 DTC P0452:00 [L3 WITH TC].) (See 01-02B-186 DTC P0453:00 [L3 WITH TC].) (See 01-02B-188 DTC P0454:00 [L3 WITH TC].)
		No Go to the next step.
4	INSPECT FOR BLOCKED FUEL VAPOR TUBE BETWEEN FUEL TANK PRESSURE SENSOR AND FUEL TANK <ul style="list-style-type: none"> Switch the ignition to off. Remove the fuel vapor tube assembly. Visually inspect the following: <ul style="list-style-type: none"> Fuel vapor tube for a blockage between fuel tank pressure sensor and connection to fuel tank Connection at the fuel tank for a blockage Attempt to manually remove the blockage. Is the blockage visible and can be removed? 	Yes Remove the blockage, then go to the next step.
		No Replace the fuel vapor tube assembly, then go to the next step.
5	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Perform the Drive Mode 06 (EVAP System Repair Verification Drive Mode). (See 01-02B-13 OBD-II DRIVE MODE [L3 WITH TC].) Is the PENDING CODE for this DTC present? 	Yes Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
6	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P1450:00 [L3 WITH TC]

id010239303100

DTC P1450:00	Unable to bleed up fuel tank vacuum
DETECTION CONDITION	<ul style="list-style-type: none"> • The DTC P1450:00 indicates the Self Test has detected that the EVAP system is unable to bleed up fuel tank vacuum. <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is an intermittent monitor (EVAP system). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Excessive fuel tank vacuum <ul style="list-style-type: none"> — Kinks or bends in the fuel vapor hoses and tubes — Charcoal canister inlet port, CV solenoid valve, EVAP dust separator or outlet hose for contamination or foreign material • CV solenoid valve malfunction <ul style="list-style-type: none"> — Stuck open or close • Fuel tank pressure sensor malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> • Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (EVAP system related) been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY RELATED PENDING CODE AND/OR DTC <ul style="list-style-type: none"> • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Are any other PENDING CODEs and/or DTCs present? 	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
4	INSPECT FUEL TANK VACUUM <ul style="list-style-type: none"> • Verify kinks or bends in the fuel vapor hoses and tubes. • Visually inspect the charcoal canister inlet port, CV solenoid valve, EVAP dust separator or outlet hose for contamination or foreign material. • Is a concern evident? 	Yes	Remove any contamination or foreign material around fuel vapor hoses and tubes. Repair the hoses, tubes or components if necessary, then go to Step 9.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
5	PERFORM EVAP SYSTEM LEAK INSPECTION <ul style="list-style-type: none"> • Connect the leak tester to the fuel filler pipe. • Switch the ignition to ON (engine off). • Access the EVAPCV PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Close the CV solenoid valve. • Does the EVAP system pressure reach 3.48 kPa {26.1 mmHg, 1.03 inHg}? 	Yes	Go to the next step.
		No	Replace the CV solenoid valve, then go to Step 9. (See 01-16B-15 CANISTER VENT (CV) SOLENOID VALVE REMOVAL/INSTALLATION [L3 WITH TC].)
6	INSPECT CV SOLENOID VALVE <ul style="list-style-type: none"> • Switch the ignition to ON (engine off). • Access the EVAPCV PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Open the CV solenoid valve. • Does the pressure drop immediately? 	Yes	Go to the next step.
		No	Replace the CV solenoid valve, then go to Step 9. (See 01-16B-15 CANISTER VENT (CV) SOLENOID VALVE REMOVAL/INSTALLATION [L3 WITH TC].)
7	INSPECT FUEL TANK PRESSURE SENSOR <ul style="list-style-type: none"> • Disconnect the charcoal canister outlet tube at the charcoal canister. • Switch the ignition to ON (engine off). • Access the FTP PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the FTP PID value between 2.4 and 2.8 V? 	Yes	Go to the next step.
		No	Replace the evaporative hose component, then go to Step 9. (See 01-14B-8 FUEL TANK REMOVAL/INSTALLATION [L3 WITH TC].)
8	PERFORM EVAP SYSTEM LEAK INSPECTION <ul style="list-style-type: none"> • Reconnect all disconnected connectors and hoses. • Perform the EVAP system leak inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Leakage still exists. <ul style="list-style-type: none"> • Locate the leak point and repair. • Repeat this step.
		No	Go to the next step.
9	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the Drive Mode 06 (EVAP System Repair Verification Drive Mode). (See 01-02B-13 OBD-II DRIVE MODE [L3 WITH TC].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
10	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

01-02B

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P2004:00 [L3 WITH TC]

id010239303300

DTC P2004:00	Variable swirl shutter valve stuck open
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the mass variable swirl shutter valve position using the variable swirl shutter valve switch. If the PCM turns the variable swirl solenoid valve on but the variable swirl shutter valve position still remains open (variable swirl shutter valve switch is on), the PCM determines that the variable swirl shutter valve is stuck open. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Variable swirl solenoid valve connector or terminals malfunction Variable swirl shutter valve switch connector or terminals malfunction Variable swirl solenoid valve malfunction Variable swirl shutter valve switch malfunction Variable swirl shutter valve actuator malfunction (stuck open) Vacuum hose not connected correctly PCM connector or terminals malfunction Short to power supply in wiring harness between the following terminals: <ul style="list-style-type: none"> — Variable swirl solenoid valve terminal B—PCM terminal 2AS — Variable swirl shutter valve switch terminal A—PCM terminal 2AE Open circuit in wiring harness between the following terminals: <ul style="list-style-type: none"> — Variable swirl solenoid valve terminal B—PCM terminal 2AS — Variable swirl shutter valve switch terminal A—PCM terminal 2AE PCM malfunction

ON-BOARD DIAGNOSTIC [L3 WITH TC]

Diagnostic procedure

STEP	INSPECTION	ACTION
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded? 	Yes Go to the next step.
		No Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No Go to the next step.
3	CLASSIFY INTERMITTENT CONCERN OR CONTINUOUS CONCERN <ul style="list-style-type: none"> Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Drive the vehicle under the following conditions: <ul style="list-style-type: none"> ECT: below 63 °C {145 °F} Engine speed: below 3,750 rpm Throttle opening angle is as follows: <ul style="list-style-type: none"> Engine speed below 1,500 rpm: above 35% Engine speed between 1,500—2,500 rpm: between 25—35% Engine speed above 2,500 rpm: below 25% Perform the KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) Is the PENDING CODE for this DTC present? 	Yes Go to the next step.
		No Intermittent concern exists. <ul style="list-style-type: none"> Perform the "INTERMITTENT CONCERN TROUBLESHOOTING" procedure. (See 01-03B-89 INTERMITTENT CONCERN TROUBLESHOOTING [L3 WITH TC].)
4	VERIFY RELATED PENDING CODE AND/OR DTC <ul style="list-style-type: none"> Switch the ignition to off, then to ON (engine off). Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the PENDING CODE/DTC P2088:00 or P2089:00 also present? 	Yes Go to the applicable PENDING CODE or DTC inspection. (See 01-02B-244 DTC P2088:00 [L3 WITH TC].) (See 01-02B-246 DTC P2089:00 [L3 WITH TC].)
		No Go to the next step.
5	INSPECT VARIABLE SWIRL SOLENOID VALVE CONNECTOR CONDITION <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the variable swirl solenoid valve connector. Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). Is there any malfunction? 	Yes Repair or replace the connector and/or terminals, then go to Step 14.
		No Go to the next step.
6	INSPECT VARIABLE SWIRL SHUTTER VALVE SWITCH CONNECTOR CONDITION <ul style="list-style-type: none"> Disconnect the variable swirl shutter valve switch connector. Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). Is there any malfunction? 	Yes Repair or replace the connector and/or terminals, then go to Step 14.
		No Go to the next step.
7	INSPECT VARIABLE SWIRL SOLENOID VALVE <ul style="list-style-type: none"> Inspect the variable swirl solenoid valve. (See 01-13B-12 VARIABLE SWIRL SOLENOID VALVE INSPECTION [L3 WITH TC].) Is there any malfunction? 	Yes Replace the variable swirl solenoid valve, then go to Step 14. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [L3 WITH TC].)
		No Go to the next step.
8	INSPECT VARIABLE SWIRL SHUTTER VALVE SWITCH <ul style="list-style-type: none"> Inspect the variable swirl shutter valve switch. (See 01-40B-24 VARIABLE SWIRL SHUTTER VALVE SWITCH INSPECTION [L3 WITH TC].) Is there any malfunction? 	Yes Replace the variable swirl shutter valve switch, then go to Step 14. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [L3 WITH TC].)
		No Go to the next step.

01-02B

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
9	INSPECT VARIABLE SWIRL SHUTTER VALVE ACTUATOR <ul style="list-style-type: none"> • Perform the Variable Swirl System Operation Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) • Does the variable swirl shutter valve actuator operate properly? 	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results, then go to Step 14.
10	VERIFY CONNECTION OF VACUUM HOSE ROUTING <ul style="list-style-type: none"> • Verify that the vacuum hoses are connected properly. • Are the vacuum hoses connected properly? 	Yes	Go to the next step.
		No	Reconnect the vacuum hoses properly, then go to Step 14. (See 01-13B-3 INTAKE-AIR SYSTEM VACUUM HOSE ROUTING DIAGRAM [L3 WITH TC].)
11	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 14.
		No	Go to the next step.
12	INSPECT VARIABLE SWIRL SOLENOID VALVE CIRCUIT AND VARIABLE SWIRL SHUTTER VALVE SWITCH CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • Variable swirl solenoid valve, variable swirl shutter valve switch and PCM connectors are disconnected. • Switch the ignition to ON (engine off). • Measure the voltage at the following terminals (wiring harness-side): <ul style="list-style-type: none"> — Variable swirl solenoid valve terminal B — Variable swirl shutter valve switch terminal A • Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 14.
		No	Go to the next step.
13	INSPECT VARIABLE SWIRL SOLENOID VALVE CIRCUIT AND VARIABLE SWIRL SHUTTER VALVE SWITCH CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Variable swirl solenoid valve, variable swirl shutter valve switch and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between the following terminals (wiring harness-side): <ul style="list-style-type: none"> — Variable swirl solenoid valve terminal B—PCM terminal 2AS — Variable swirl shutter valve switch terminal A—PCM terminal 2AE • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
14	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Start the engine. • Drive the vehicle under the following conditions: <ul style="list-style-type: none"> — ECT: below 63 °C {145 °F} — Engine speed: below 3,750 rpm — Throttle opening angle is as follows: <ul style="list-style-type: none"> • Engine speed below 1,500 rpm: above 35% • Engine speed between 1,500—2,500 rpm: between 25—35% • Engine speed above 2,500 rpm: below 25% • Perform the KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

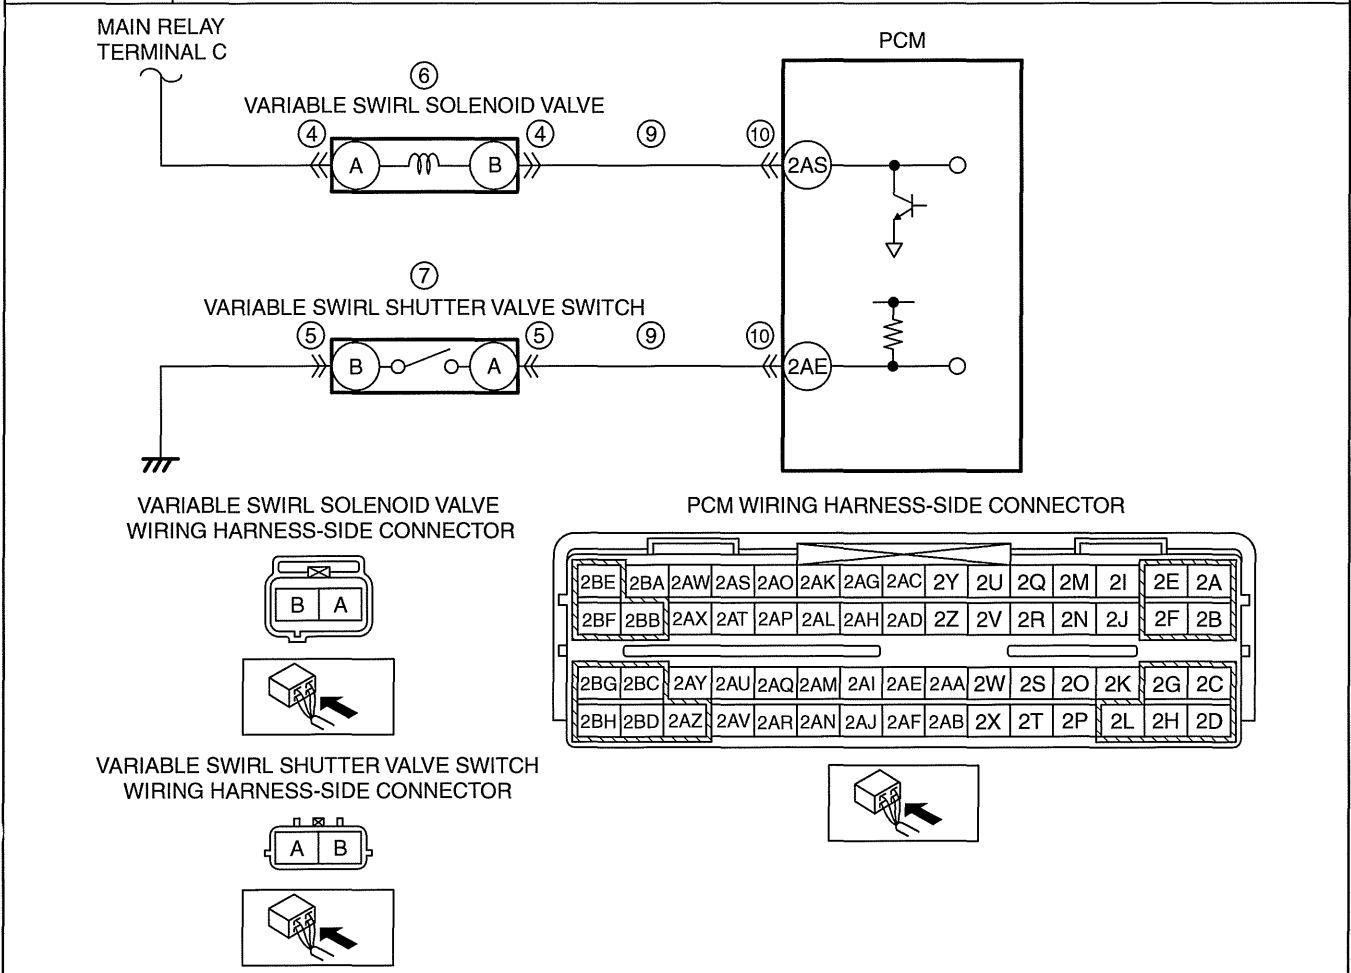

STEP	INSPECTION		ACTION
15	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P2006:00 [L3 WITH TC]

id010239303400

01-02B

DTC P2006:00	Variable swirl shutter valve stuck closed
DETECTION CONDITION	<ul style="list-style-type: none"> • The PCM monitors the mass variable swirl shutter valve position using the variable swirl shutter valve switch. If the PCM turns the variable swirl solenoid valve off but the variable swirl position still remains closed (variable swirl shutter valve switch is off), the PCM determines that the variable swirl shutter valve is stuck closed. <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Variable swirl solenoid valve connector or terminals malfunction • Variable swirl shutter valve switch connector or terminals malfunction • Variable swirl solenoid valve malfunction • Variable swirl shutter valve switch malfunction • Variable swirl shutter valve actuator malfunction (stuck closed) • Short to ground in wiring harness between the following terminals: <ul style="list-style-type: none"> — Variable swirl solenoid valve terminal B—PCM terminal 2AS — Variable swirl shutter valve switch terminal A—PCM terminal 2AE • PCM connector or terminals malfunction • PCM malfunction

ON-BOARD DIAGNOSTIC [L3 WITH TC]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	CLASSIFY INTERMITTENT CONCERN OR CONTINUOUS CONCERN <ul style="list-style-type: none"> • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Drive the vehicle under the following conditions: <ul style="list-style-type: none"> — ECT: above 63 °C {145 °F} — Engine speed: below 3,750 rpm — Throttle opening angle is as follows: <ul style="list-style-type: none"> • Engine speed below 1,500 rpm: above 35% • Engine speed between 1,500—2,500 rpm: between 25—35% • Engine speed above 2,500 rpm: below 25% • Perform the KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) • Is the PENDING CODE for this DTC present? 	Yes	Go to the next step.
		No	Intermittent concern exists. <ul style="list-style-type: none"> • Perform the “INTERMITTENT CONCERN TROUBLESHOOTING” procedure. (See 01-03B-89 INTERMITTENT CONCERN TROUBLESHOOTING [L3 WITH TC].)
4	INSPECT VARIABLE SWIRL SOLENOID VALVE CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the variable swirl solenoid valve connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.
5	INSPECT VARIABLE SWIRL SHUTTER VALVE SWITCH CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the variable swirl shutter valve switch connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.
6	INSPECT VARIABLE SWIRL SOLENOID VALVE <ul style="list-style-type: none"> • Inspect the variable swirl solenoid valve. (See 01-13B-12 VARIABLE SWIRL SOLENOID VALVE INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the variable swirl solenoid valve, then go to Step 11. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
7	INSPECT VARIABLE SWIRL SHUTTER VALVE SWITCH <ul style="list-style-type: none"> • Inspect the variable swirl shutter valve switch. (See 01-40B-24 VARIABLE SWIRL SHUTTER VALVE SWITCH INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the variable swirl shutter valve switch, then go to Step 11. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	INSPECT VARIABLE SWIRL SHUTTER VALVE ACTUATOR <ul style="list-style-type: none"> • Perform the Variable Swirl System Operation Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 11.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION
9	INSPECT VARIABLE SWIRL SOLENOID VALVE CIRCUIT AND VARIABLE SWIRL SHUTTER VALVE SWITCH CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • Variable swirl solenoid valve and variable swirl shutter valve switch connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: <ul style="list-style-type: none"> — Variable swirl solenoid valve terminal B — Variable swirl shutter valve switch terminal A • Is there continuity? 	Yes If the short to ground circuit could be detected: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected: <ul style="list-style-type: none"> • Replace the PCM (short to ground in PCM internal circuit). (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].) Go to Step 11.
		No Go to the next step.
10	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes Repair or replace the connector and/or terminals, then go to the next step.
		No Go to the next step.
11	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Start the engine. • Drive the vehicle under the following conditions: <ul style="list-style-type: none"> — ECT: above 63 °C {145 °F} — Engine speed: below 3,750 rpm — Throttle opening angle is as follows: <ul style="list-style-type: none"> • Engine speed below 1,500 rpm: above 35% • Engine speed between 1,500—2,500 rpm: between 25—35% • Engine speed above 2,500 rpm: below 25% • Perform the KOER self test. ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
5	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
6	INSPECT OCV CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • OCV and PCM connectors are disconnected. • Switch the ignition to ON (engine off). • Measure the voltage at the OCV terminal A (wiring harness-side). • Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 8.
		No	Go to the next step.
7	INSPECT OCV CIRCUIT FOR SHORT TO EACH OTHER <ul style="list-style-type: none"> • OCV and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between OCV terminals B and A (wiring harness-side). • Is there continuity? 	Yes	Repair or replace the wiring harness for a possible short to each other, then go to the next step.
		No	Go to the next step.
8	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the KOEO or KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) • Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
9	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

01-02B

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P2096:00 [L3 WITH TC]

id010239900400

DTC P2096:00	Target A/F feedback system too lean
DETECTION CONDITION	<ul style="list-style-type: none"> • The PCM monitors the target A/F fuel trim while under the target A/F feedback control. If the fuel trim is more than the specification, the PCM determines that the target A/F feedback system is too lean. <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is a continuous monitor (fuel system). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Exhaust gas leakage • HO2S malfunction • IAT sensor malfunction • Erratic signal to PCM <ul style="list-style-type: none"> — ECT sensor No.1 signal malfunction — MAF sensor signal malfunction — TP sensor signal malfunction — VSS signal malfunction — Related connector or terminals malfunction — Related wiring harness malfunction • A/F sensor malfunction • Air suction in intake-air system • MAF sensor malfunction • Improper operation of ignition system • Spark plug malfunction • Ignition coil malfunction • Insufficient engine compression • High-pressure side fuel delivery system malfunction <ul style="list-style-type: none"> — Fuel pressure sensor (built-in fuel delivery pipe) malfunction — Relief valve (built-in fuel delivery pipe) malfunction — Spill valve control solenoid valve (built-in high pressure fuel pump) malfunction — High pressure fuel pump malfunction • Low-pressure side fuel delivery system malfunction <ul style="list-style-type: none"> — Fuel pump unit malfunction — Fuel pressure regulator (built-in fuel pump unit) malfunction — Fuel leakage in low-pressure side fuel line (between fuel pump unit and high pressure fuel pump) • Improper operation of fuel injector • ECT sensor No.1 malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2) <ul style="list-style-type: none"> • Perform the Freeze Frame PID Data Access Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the DTC P2096:00 on FREEZE FRAME DATA (Mode 2)? 	Yes	Go to the next step.
		No	Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02B-18 DTC TABLE [L3 WITH TC].)
2	VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> • Have the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (fuel system related) been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
3	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
4	VERIFY RELATED PENDING CODE AND/OR DTC <ul style="list-style-type: none"> • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Are any other PENDING CODEs and/or DTCs present? 	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
5	INSPECT HO2S <ul style="list-style-type: none"> • Inspect the HO2S. (See 01-40B-31 HEATED OXYGEN SENSOR (HO2S) INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Go to the next step.
		No	Go to Step 7.
6	INSPECT EXHAUST GAS LEAKAGE <ul style="list-style-type: none"> • Visually inspect for the exhaust gas leakage between the TWC and HO2S. • Is there any leakage? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 23.
		No	Replace the HO2S, then go to Step 23. (See 01-40B-31 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [L3 WITH TC].)
7	INSPECT IAT SENSOR <ul style="list-style-type: none"> • Inspect the IAT sensor. (See 01-40B-26 INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the MAF/IAT sensor, then go to Step 23. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	VERIFY CURRENT INPUT SIGNAL STATUS <ul style="list-style-type: none"> • Access the following PIDs using the M-MDS: (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) <ul style="list-style-type: none"> — ECT — MAF — TP REL — VSS • Are all PIDs normal? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].) 	Yes	Go to the next step.
		No	Inspect the malfunctioning part. <ul style="list-style-type: none"> • If there is any malfunction: <ul style="list-style-type: none"> — Repair or replace the malfunctioning part according to the inspection results, then go to Step 23.
9	VERIFY CURRENT INPUT SIGNAL STATUS UNDER FREEZE FRAME DATA CONDITION <ul style="list-style-type: none"> • Access the same PIDs as in Step 8 while simulating the FREEZE FRAME DATA (Mode 2) condition. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Are all PIDs normal? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].) 	Yes	Go to the next step.
		No	Inspect the malfunctioning part. <ul style="list-style-type: none"> • If there is any malfunction: <ul style="list-style-type: none"> — Repair or replace the malfunctioning part according to the inspection results, then go to Step 23.
10	INSPECT A/F SENSOR <ul style="list-style-type: none"> • Inspect the A/F sensor. (See 01-40B-30 AIR FUEL RATIO (A/F) SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Go to the next step.
		No	Go to Step 12.
11	INSPECT EXHAUST GAS LEAKAGE <ul style="list-style-type: none"> • Visually inspect for the exhaust gas leakage between the exhaust manifold and A/F sensor. • Is there any leakage? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 23.
		No	Replace the A/F sensor, then go to Step 23. (See 01-40B-29 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)

01-02B

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
12	VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR <ul style="list-style-type: none"> • Start the engine. • Access the MAF PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Verify that the MAF PID changes quickly according to engine speed. • Is the MAF PID value normal? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].) 	Yes	Go to Step 14.
		No	Go to the next step.
13	INSPECT INTAKE-AIR SYSTEM FOR EXCESSIVE AIR SUCTION <ul style="list-style-type: none"> • Visually inspect the hose in intake-air system for looseness, cracks or damages. <p>Note</p> <ul style="list-style-type: none"> • Engine speed may change when rust penetrating agent is sprayed on the air suction area. <ul style="list-style-type: none"> • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 23.
		No	Replace the MAF/IAT sensor, then go to Step 23. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
14	INSPECT IGNITION SYSTEM OPERATION <ul style="list-style-type: none"> • Perform the Spark Test. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) • Is a strong blue spark visible at each cylinder? 	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the spark test result, then go to Step 23.
15	INSPECT ENGINE COMPRESSION <ul style="list-style-type: none"> • Inspect the engine compression. (See 01-10B-12 COMPRESSION INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 23.
		No	Go to the next step.
16	INSPECT FUEL PRESSURE (HIGH-SIDE) <ul style="list-style-type: none"> • Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the FUEL_PRES PID value within the specification? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].) 	Yes	Go to Step 20.
		No	Go to the next step.
17	IDENTIFY CAUSE BY FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP <ul style="list-style-type: none"> • Is the vehicle accelerate performance normally? 	Yes	Go to the next step.
		No	Go to Step 19.
18	INSPECT FUEL PRESSURE SENSOR <ul style="list-style-type: none"> • Inspect the fuel pressure sensor. (See 01-40B-29 FUEL PRESSURE SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the fuel delivery pipe, then go to Step 23. (See 01-14B-25 FUEL INJECTOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to Step 20.
19	INSPECT HIGH PRESSURE FUEL PUMP <ul style="list-style-type: none"> • Replace the high pressure fuel pump (See 01-14B-17 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC].) • Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the FUEL_PRES PID value within the specification? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].) 	Yes	High-pressure fuel pump or spill valve control solenoid valve (built-in high pressure fuel pump) malfunction. <ul style="list-style-type: none"> • Go to Step 23.
		No	Relief valve malfunction. <ul style="list-style-type: none"> • Replace the fuel delivery pipe, then go to Step 23. (See 01-14B-25 FUEL INJECTOR REMOVAL/INSTALLATION [L3 WITH TC].)

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
20	INSPECT FUEL PRESSURE (LOW-SIDE) <ul style="list-style-type: none"> • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See 01-14B-6 FUEL LINE PRESSURE INSPECTION [L3 WITH TC].) • Is the low side fuel pressure within the specification? 	Yes	Go to the next step.
		No	Inspect for the following. <ul style="list-style-type: none"> • Fuel line restriction • Fuel filter clogging If there is no malfunction: <ul style="list-style-type: none"> • Replace the fuel pump unit. (See 01-14B-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [L3 WITH TC].) If there is any malfunction: <ul style="list-style-type: none"> • Repair or replace the malfunctioning part according to the inspection results. Go to Step 23.
21	INSPECT FUEL INJECTOR OPERATION <ul style="list-style-type: none"> • Perform the Fuel Injector Operation Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) • Do the fuel injectors operate properly? 	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results, then go to Step 23.
22	INSPECT ECT SENSOR NO.1 <ul style="list-style-type: none"> • Inspect the ECT sensor No.1. (See 01-40B-25 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the ECT sensor No.1, then go to the next step. (See 01-40B-24 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
23	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • After warming up the engine, maintain the idle status for 1 min or more. • Perform the Pending Trouble Code Access Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
24	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

01-02B

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P2097:00 [L3 WITH TC]

id010239707600

DTC P2097:00	Target A/F feedback system too rich
DETECTION CONDITION	<ul style="list-style-type: none"> • The PCM monitors the target A/F fuel trim while under the target A/F feedback control. If the fuel trim is less than the specification, the PCM determines that the target A/F feedback system is too rich. <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is a continuous monitor (fuel system). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Exhaust gas leakage • HO2S malfunction • IAT sensor malfunction • Erratic signal to PCM <ul style="list-style-type: none"> — ECT sensor No.1 signal malfunction — MAF sensor signal malfunction — TP sensor signal malfunction — VSS signal malfunction — Related connector or terminals malfunction — Related wiring harness malfunction • Exhaust gas leakage • A/F sensor malfunction • High-pressure side fuel delivery system malfunction <ul style="list-style-type: none"> — Fuel pressure sensor (built-in fuel delivery pipe) malfunction — Relief valve (built-in fuel delivery pipe) malfunction — Spill valve control solenoid valve (built-in high pressure fuel pump) malfunction — High pressure fuel pump malfunction • Low-pressure side fuel delivery system malfunction <ul style="list-style-type: none"> — Low pressure side fuel line restriction (between fuel pump unit and high pressure fuel pump) — Fuel filter clogging — Fuel pump unit malfunction — Fuel pressure regulator (built-in fuel pump unit) malfunction • Purge solenoid valve malfunction • Insufficient engine compression • Improper operation of fuel injector • ECT sensor No.1 malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2) <ul style="list-style-type: none"> • Perform the Freeze Frame PID Data Access Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the DTC P2097:00 on FREEZE FRAME DATA (Mode 2)? 	Yes	Go to the next step.
		No	Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02B-18 DTC TABLE [L3 WITH TC].)
2	VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> • Have the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (fuel system related) been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
3	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
4	VERIFY RELATED PENDING CODE AND/OR DTC <ul style="list-style-type: none"> • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Are any other PENDING CODEs and/or DTCs present? 	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
5	INSPECT HO2S <ul style="list-style-type: none"> • Inspect the HO2S. (See 01-40B-31 HEATED OXYGEN SENSOR (HO2S) INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Go to the next step.
		No	Go to Step 7.
6	INSPECT EXHAUST GAS LEAKAGE <ul style="list-style-type: none"> • Visually inspect for the exhaust gas leakage between the TWC and HO2S. • Is there any leakage? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 21.
		No	Replace the HO2S, then go to Step 21. (See 01-40B-31 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [L3 WITH TC].)
7	INSPECT IAT SENSOR <ul style="list-style-type: none"> • Inspect the IAT sensor. (See 01-40B-26 INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the MAF/IAT sensor, then go to Step 21. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	VERIFY CURRENT INPUT SIGNAL STATUS <ul style="list-style-type: none"> • Access the following PIDs using the M-MDS: (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) <ul style="list-style-type: none"> — ECT — MAF — TP REL — VSS • Are all PID values normal? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].) 	Yes	Go to the next step.
		No	Inspect the malfunctioning part. <ul style="list-style-type: none"> • If there is any malfunction: <ul style="list-style-type: none"> — Repair or replace the malfunctioning part according to the inspection results, then go to Step 21.
9	VERIFY CURRENT INPUT SIGNAL STATUS UNDER FREEZE FRAME DATA CONDITION <ul style="list-style-type: none"> • Access the same PIDs as in Step 8 while simulating the FREEZE FRAME DATA (Mode 2) condition. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Are all PID values normal? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].) 	Yes	Go to the next step.
		No	Inspect the malfunctioning part. <ul style="list-style-type: none"> • If there is any malfunction: <ul style="list-style-type: none"> — Repair or replace the malfunctioning part according to the inspection results, then go to Step 21.
10	INSPECT A/F SENSOR <ul style="list-style-type: none"> • Inspect the A/F sensor. (See 01-40B-30 AIR FUEL RATIO (A/F) SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Go to the next step.
		No	Go to Step 12.
11	INSPECT EXHAUST GAS LEAKAGE <ul style="list-style-type: none"> • Visually inspect for the exhaust gas leakage between the exhaust manifold and A/F sensor. • Is there any leakage? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 21.
		No	Replace the A/F sensor, then go to Step 21. (See 01-40B-29 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
12	INSPECT FUEL PRESSURE (HIGH-SIDE) <ul style="list-style-type: none"> • Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the FUEL_PRES PID value within the specification? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].) 	Yes	Go to Step 17.
		No	Go to the next step.

01-02B

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
13	IDENTIFY CAUSE BY FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP <ul style="list-style-type: none"> • Is the vehicle accelerate performance normally? 	Yes	Go to the next step.
		No	Go to Step 15.
14	INSPECT FUEL PRESSURE SENSOR <ul style="list-style-type: none"> • Inspect the fuel pressure sensor. (See 01-40B-29 FUEL PRESSURE SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the fuel delivery pipe, then go to Step 21. (See 01-14B-25 FUEL INJECTOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to Step 16.
15	INSPECT HIGH PRESSURE FUEL PUMP <ul style="list-style-type: none"> • Replace the high pressure fuel pump (See 01-14B-17 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC].) • Access the FUEL_PRES PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the FUEL_PRES PID value within the specification? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].) 	Yes	High-pressure fuel pump or spill valve control solenoid valve (built-in high pressure fuel pump) malfunction. <ul style="list-style-type: none"> • Go to Step 21.
		No	Go to the next step.
16	INSPECT FUEL PRESSURE (LOW-SIDE) <ul style="list-style-type: none"> • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See 01-14B-6 FUEL LINE PRESSURE INSPECTION [L3 WITH TC].) • Is the low side fuel pressure within the specification? 	Yes	Go to the next step.
		No	Inspect for the following. <ul style="list-style-type: none"> • Fuel line restriction • Fuel filter clogging If there is no malfunction: <ul style="list-style-type: none"> • Replace the fuel pump unit. (See 01-14B-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [L3 WITH TC].) If there is any malfunction: <ul style="list-style-type: none"> • Repair or replace the malfunctioning part according to the inspection results. Go to Step 21.
17	INSPECT LONG TERM FUEL TRIM <ul style="list-style-type: none"> • Access the LONGFT1 PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Compare the LONGFT1 PID with recorded FREEZE FRAME DATA (Mode 2) at Step 2. • Is the LONGFT1 PID above FREEZE FRAME DATA (Mode 2)? 	Yes	Inspect the purge solenoid valve. (See 01-16B-8 PURGE SOLENOID VALVE INSPECTION [L3 WITH TC].) <ul style="list-style-type: none"> • If there is any malfunction: <ul style="list-style-type: none"> — Replace the purge solenoid valve. (See 01-16B-7 PURGE SOLENOID VALVE REMOVAL/INSTALLATION [L3 WITH TC].) Go to Step 21.
		No	Go to the next step.
18	INSPECT ENGINE COMPRESSION <ul style="list-style-type: none"> • Inspect the engine compression. (See 01-10B-12 COMPRESSION INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 21.
		No	Go to the next step.
19	INSPECT FUEL INJECTOR OPERATION <ul style="list-style-type: none"> • Perform the Fuel Injector Operation Inspection. (See 01-03B-91 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].) • Do the fuel injectors operate properly? 	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results, then go to Step 21.
20	INSPECT ECT SENSOR NO.1 <ul style="list-style-type: none"> • Inspect the ECT sensor No.1. (See 01-40B-25 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the ECT sensor No.1, then go to the next step. (See 01-40B-24 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
21	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • After warming up the engine, maintain the idle status for 1 min or more. • Perform the Pending Trouble Code Access Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
22	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

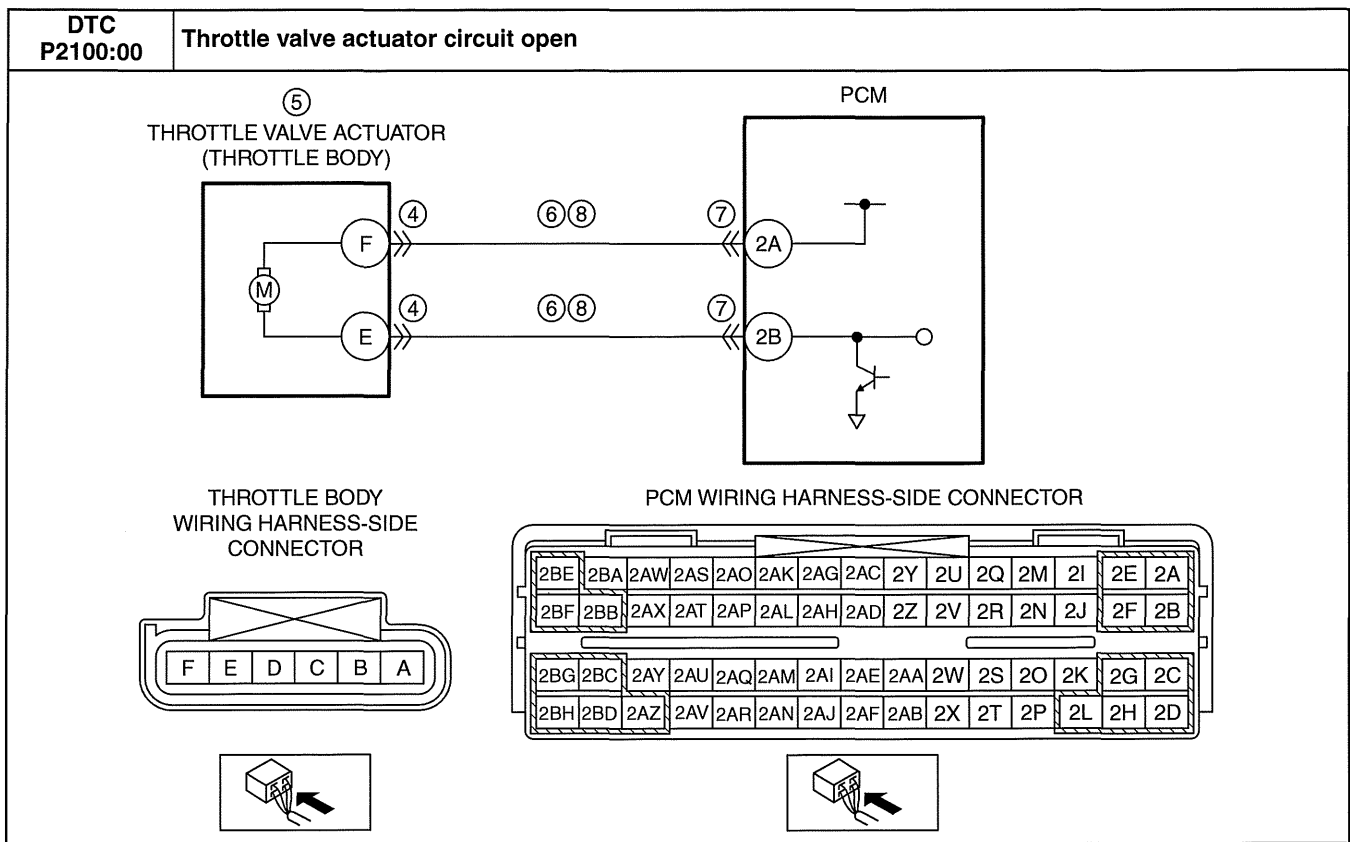

01-02B

DTC P2100:00 [L3 WITH TC]

id010239851000

DTC P2100:00	Throttle valve actuator circuit open
DETECTION CONDITION	<ul style="list-style-type: none"> • The PCM monitors the electronic throttle valve actuator current. If the PCM detects the electronic throttle valve actuator current is below the specification current, the PCM determines that the electronic throttle valve actuator circuit has a malfunction. <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Throttle body connector or terminals malfunction • Throttle valve electrical malfunction • Short to ground in wiring harness between the following terminals: <ul style="list-style-type: none"> — Throttle body terminal F—PCM terminal 2A — Throttle body terminal E—PCM terminal 2B • PCM connector or terminals malfunction • Open circuit in wiring harness between the following terminals: <ul style="list-style-type: none"> — Throttle body terminal F—PCM terminal 2A — Throttle body terminal E—PCM terminal 2B • PCM malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	CLASSIFY INTERMITTENT CONCERN OR CONTINUOUS CONCERN <ul style="list-style-type: none"> • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the KOEO or KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) • Is the same DTC present? 	Yes	Go to the next step.
		No	Intermittent concern exists. <ul style="list-style-type: none"> • Perform the "INTERMITTENT CONCERN TROUBLESHOOTING" procedure. (See 01-03B-89 INTERMITTENT CONCERN TROUBLESHOOTING [L3 WITH TC].)
4	INSPECT THROTTLE BODY CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the throttle body connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
5	INSPECT THROTTLE VALVE ELECTRICAL MALFUNCTION <ul style="list-style-type: none"> • Measure the resistance between throttle body terminal F and E (part-side). • Is the resistance approx.1.3 ohms? 	Yes	Go to the next step.
		No	Replace the throttle body, then go to Step 9. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
6	INSPECT THROTTLE VALVE ACTUATOR CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • Throttle body connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: <ul style="list-style-type: none"> — Throttle body terminal F — Throttle body terminal E • Is there continuity? 	Yes	If the short to ground circuit could be detected: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected: <ul style="list-style-type: none"> • Replace the PCM (short to ground in PCM internal circuit). (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].) Go to Step 9.
		No	Go to the next step.
7	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
8	INSPECT THROTTLE VALVE ACTUATOR CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Throttle body and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): <ul style="list-style-type: none"> — Throttle body terminal F—PCM terminal 2A — Throttle body terminal E—PCM terminal 2B • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.

01-02B

ON-BOARD DIAGNOSTIC [L3 WITH TC]

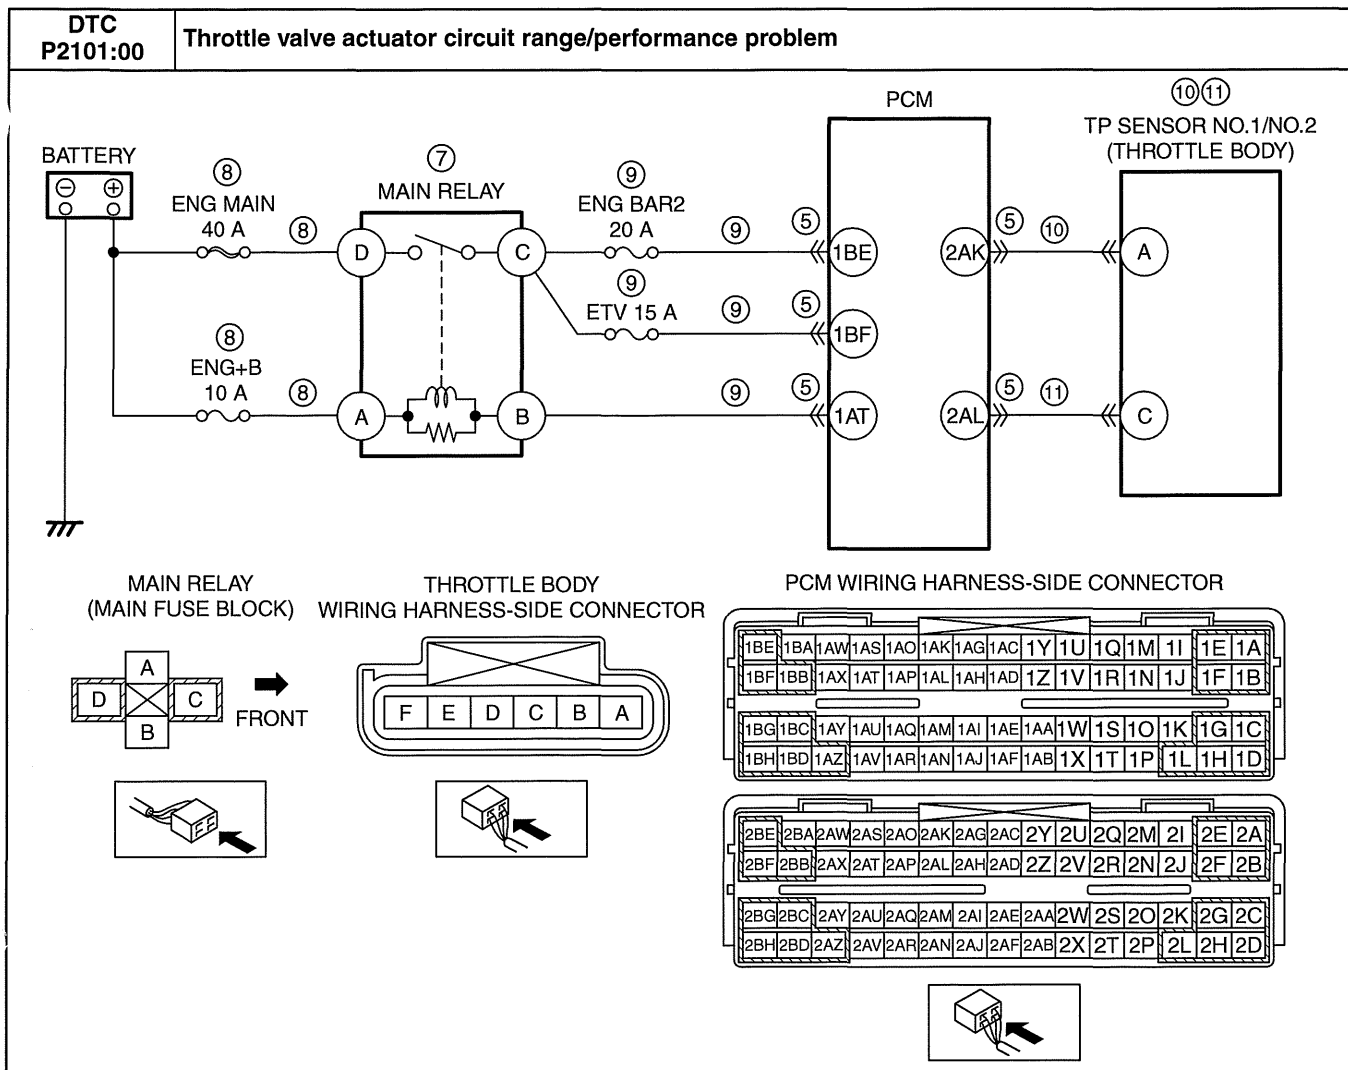

STEP	INSPECTION	ACTION	
9	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the KOEO or KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) • Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
10	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P2101:00 [L3 WITH TC]

id010239707700

DTC P2101:00	Throttle valve actuator circuit range/performance problem
DETECTION CONDITION	<ul style="list-style-type: none"> • The PCM turns the main relay on but the input voltage is 4 V or less, the PCM determines that the main relay control circuit voltage is low. • The PCM monitors the input voltage from the main relay. The PCM turns the main relay off but the input voltage is 4 V or more, the PCM determines that the main relay control circuit voltage is high. <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • PCM connector or terminals malfunction • Main relay malfunction • Short to ground or open circuit in main relay power supply circuit <ul style="list-style-type: none"> — Short to ground in wiring harness between the following terminals: <ul style="list-style-type: none"> • Battery positive terminal—Main relay terminal D • Battery positive terminal—Main relay terminal A — ENG MAIN 40 A fuse and/or ENG+B 10 A fuse malfunction — Open circuit in wiring harness between the following terminals: <ul style="list-style-type: none"> • Battery positive terminal—Main relay terminal D • Battery positive terminal—Main relay terminal A • Short to ground or open circuit in main relay control circuit <ul style="list-style-type: none"> — Short to ground in wiring harness between the following terminals: <ul style="list-style-type: none"> • Main relay terminal C—PCM terminal 1BE • Main relay terminal C—PCM terminal 1BF • Main relay terminal B—PCM terminal 1AT — ENG BAR2 20 A fuse and/or ETV 15 A fuse malfunction — Open circuit in wiring harness between the following terminals: <ul style="list-style-type: none"> • Main relay terminal C—PCM terminal 1BE • Main relay terminal C—PCM terminal 1BF • Main relay terminal B—PCM terminal 1AT • TP sensor No.1 and related circuit malfunction • TP sensor No.2 and related circuit malfunction • PCM malfunction

ON-BOARD DIAGNOSTIC [L3 WITH TC]

01-02B

Diagnostic procedure

STEP	INSPECTION		ACTION
1	IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2) <ul style="list-style-type: none"> Perform the Freeze Frame PID Data Access Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the DTC P2101:00 on FREEZE FRAME DATA (Mode 2)? 	Yes	Go to the next step.
		No	Go to the troubleshooting procedures for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02B-18 DTC TABLE [L3 WITH TC].)
2	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
3	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
4	VERIFY RELATED PENDING CODE AND/OR DTC <ul style="list-style-type: none"> • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Are any other PENDING CODEs and/or DTCs present? 	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
5	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 12.
		No	Go to the next step.
6	INSPECT MAIN RELAY OUTPUT VOLTAGE <ul style="list-style-type: none"> • PCM connector is disconnected. • Switch the ignition to ON (engine off). • Measure the voltage at the following terminals (wiring harness-side): <ul style="list-style-type: none"> — PCM terminal 1BE — PCM terminal 1BF • Is the voltage B+? 	Yes	Go to Step 10.
		No	Go to the next step.
7	INSPECT MAIN RELAY <ul style="list-style-type: none"> • Switch the ignition to off. • Remove the main relay. • Inspect the main relay. (See 09-21-17 RELAY INSPECTION.) • Is there any malfunction? 	Yes	Replace the main relay, then go to Step 12.
		No	Go to the next step.
8	INSPECT MAIN RELAY POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT <ul style="list-style-type: none"> • Main relay is removed. • PCM connector is disconnected. • Switch the ignition to ON (engine off). • Measure the voltage at the following terminals (wiring harness-side): <ul style="list-style-type: none"> — Main relay terminal D — Main relay terminal A • Is the voltage B+? 	Yes	Go to the next step.
		No	Inspect the ENG MAIN 40 A fuse and ENG+B 10 A fuse. <ul style="list-style-type: none"> • If the fuse is melt: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deterioration: <ul style="list-style-type: none"> — Replace the fuse. • If the fuse is normal: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible open circuit. Go to Step 12.
9	INSPECT MAIN RELAY CONTROL CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT <ul style="list-style-type: none"> • Switch the ignition to off. • Reconnect all disconnected connectors. • Switch the ignition to ON (engine off). • Measure the voltage at the following terminals (wiring harness-side): <ul style="list-style-type: none"> — PCM terminal 1BE — PCM terminal 1BF — PCM terminal 1AT • Is the voltage normal? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].) 	Yes	Go to Step 12.
		No	If the PCM terminal 1BE or 1BF voltage is not normal: <ul style="list-style-type: none"> • Inspect the ENG BAR2 20 A fuse and ETV 15 A fuse. <ul style="list-style-type: none"> — If the fuse is melt: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible short to ground. • Replace the fuse. — If the fuse is deterioration: <ul style="list-style-type: none"> • Replace the fuse. — If the fuse is normal: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible open circuit. If the PCM terminal 1AT voltage is not normal: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible short or open circuit. Go to Step 12.
10	INSPECT TP SENSOR NO.1 OUTPUT VOLTAGE <ul style="list-style-type: none"> • PCM connector is disconnected. • Measure the voltage at the PCM terminal 2AK (wiring harness-side). • Is the voltage normal? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].) 	Yes	Go to the next step.
		No	Inspect the TP sensor No.1 and related circuits, connectors and terminals. (See 01-40B-28 THROTTLE POSITION (TP) SENSOR INSPECTION [L3 WITH TC].) Repair or replace the malfunctioning part according to the inspection results, then go to Step 12.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION
11	INSPECT TP SENSOR NO.2 OUTPUT VOLTAGE <ul style="list-style-type: none"> PCM connector is disconnected. Measure the voltage at the PCM terminal 2AL (wiring harness-side). Is the voltage normal? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].) 	Yes Go to the next step.
		No Inspect the TP sensor No.2 and related circuits, connectors and terminals. (See 01-40B-28 THROTTLE POSITION (TP) SENSOR INSPECTION [L3 WITH TC].) Repair or replace the malfunctioning part according to the inspection results, then go to the next step.
12	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Perform the KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) Is the same DTC present? 	Yes Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No Go to the next step.
13	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Are any DTCs present? 	Yes Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No DTC troubleshooting completed.

01-02B

DTC P2105:00 [L3 WITH TC]

id010239851100

DTC P2105:00	Throttle valve actuator control system-forced engine shutdown
DETECTION CONDITION	<ul style="list-style-type: none"> The throttle valve actuator control system is in the failure mode effects management mode. Diagnostic support note <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Damaged throttle body and/or PCM Throttle valve actuator control module internal processor malfunction PCM malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION
1	VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded? 	Yes Go to the next step.
		No Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No Go to the next step.
3	VERIFY RELATED PENDING CODE AND/OR DTC <ul style="list-style-type: none"> Switch the ignition to off, then to ON (engine off). Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Are any other PENDING CODEs and/or DTCs present? 	Yes Go to the applicable PENDING CODE or DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
4	INSPECT THROTTLE VALVE ACTUATOR AND PCM <ul style="list-style-type: none"> • Switch the ignition to off. • Visually inspect the following for obvious signs of damage: <ul style="list-style-type: none"> — Throttle body — PCM • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 6.
		No	Go to the next step.
5	PERFORM PCM CONFIGURATION <ul style="list-style-type: none"> • Perform the PCM configuration. (See 01-40B-23 PCM CONFIGURATION [L3 WITH TC].) • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) • Is the same DTC present? 	Yes	Perform the PCM configuration again, then go to the next step. (See 01-40B-23 PCM CONFIGURATION [L3 WITH TC].)
		No	Go to Step 7.
6	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) • Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
7	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

id010239708200

DTC P2119:00	Throttle valve actuator control throttle body range/performance problem
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM compares the TP with the default TP when the ignition switch is off. If the TP is higher than the default TP, the PCM determines that there is a throttle valve actuator control throttle body range/performance problem. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Throttle valve actuator malfunction PCM malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	INSPECT THROTTLE VALVE ACTUATOR <ul style="list-style-type: none"> Switch the ignition to off. Inspect the throttle valve actuator. (See 01-13B-12 THROTTLE BODY INSPECTION [L3 WITH TC].) Is there any malfunction? 	Yes	Replace the throttle body, then go to the next step. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
4	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Perform the KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
5	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

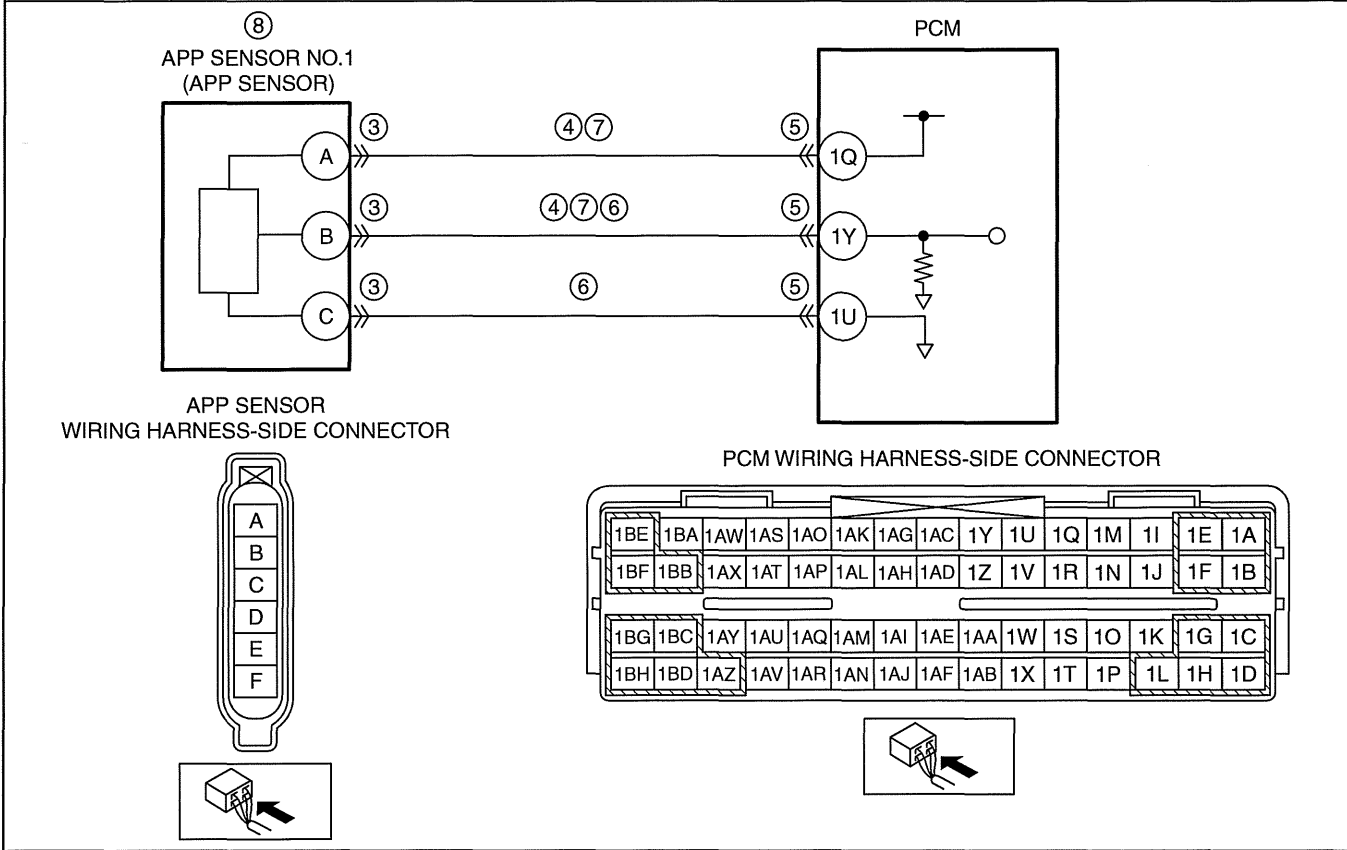

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P2122:00 [L3 WITH TC]

id010239326500

01-02B

DTC P2122:00	APP sensor No.1 circuit low input
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the APP sensor No.1 signal. If the PCM detects that the APP sensor No.1 voltage is below 0.12 V, the PCM determines that the APP sensor No.1 circuit has a malfunction. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> APP sensor connector or terminals malfunction Short to ground in wiring harness between the following terminals: <ul style="list-style-type: none"> — APP sensor terminal A—PCM terminal 1Q — APP sensor terminal B—PCM terminal 1Y PCM connector or terminals malfunction APP sensor No.1 signal circuit and ground circuit are shorted to each other. Open circuit in wiring harness between the following terminals: <ul style="list-style-type: none"> — APP sensor terminal A—PCM terminal 1Q — APP sensor terminal B—PCM terminal 1Y APP sensor No.1 malfunction PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
3	INSPECT APP SENSOR CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the APP sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
4	INSPECT APP SENSOR NO.1 CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • APP sensor connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: <ul style="list-style-type: none"> — APP sensor terminal A — APP sensor terminal B • Is there continuity? 	Yes	If the short to ground circuit could be detected: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected: <ul style="list-style-type: none"> • Replace the PCM (short to ground in PCM internal circuit). (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].) Go to Step 9.
		No	Go to the next step.
5	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
6	INSPECT APP SENSOR NO.1 SIGNAL CIRCUIT AND GROUND CIRCUIT FOR SHORT TO EACH OTHER <ul style="list-style-type: none"> • APP sensor and PCM connectors are disconnected. • Inspect for continuity between APP sensor terminals B and C (wiring harness-side). • Is there continuity? 	Yes	Repair or replace the wiring harness for a possible short to each other, then go to Step 9.
		No	Go to the next step.
7	INSPECT APP SENSOR NO.1 CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • APP sensor and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): <ul style="list-style-type: none"> — APP sensor terminal A—PCM terminal 1Q — APP sensor terminal B—PCM terminal 1Y • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 9.
8	INSPECT APP SENSOR NO.1 <ul style="list-style-type: none"> • Reconnect all disconnected connectors. • Inspect the APP sensor No.1. (See 01-40B-28 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the accelerator pedal, then go to the next step. (See 01-13B-14 ACCELERATOR PEDAL REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
9	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the KOEO or KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) • Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
10	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

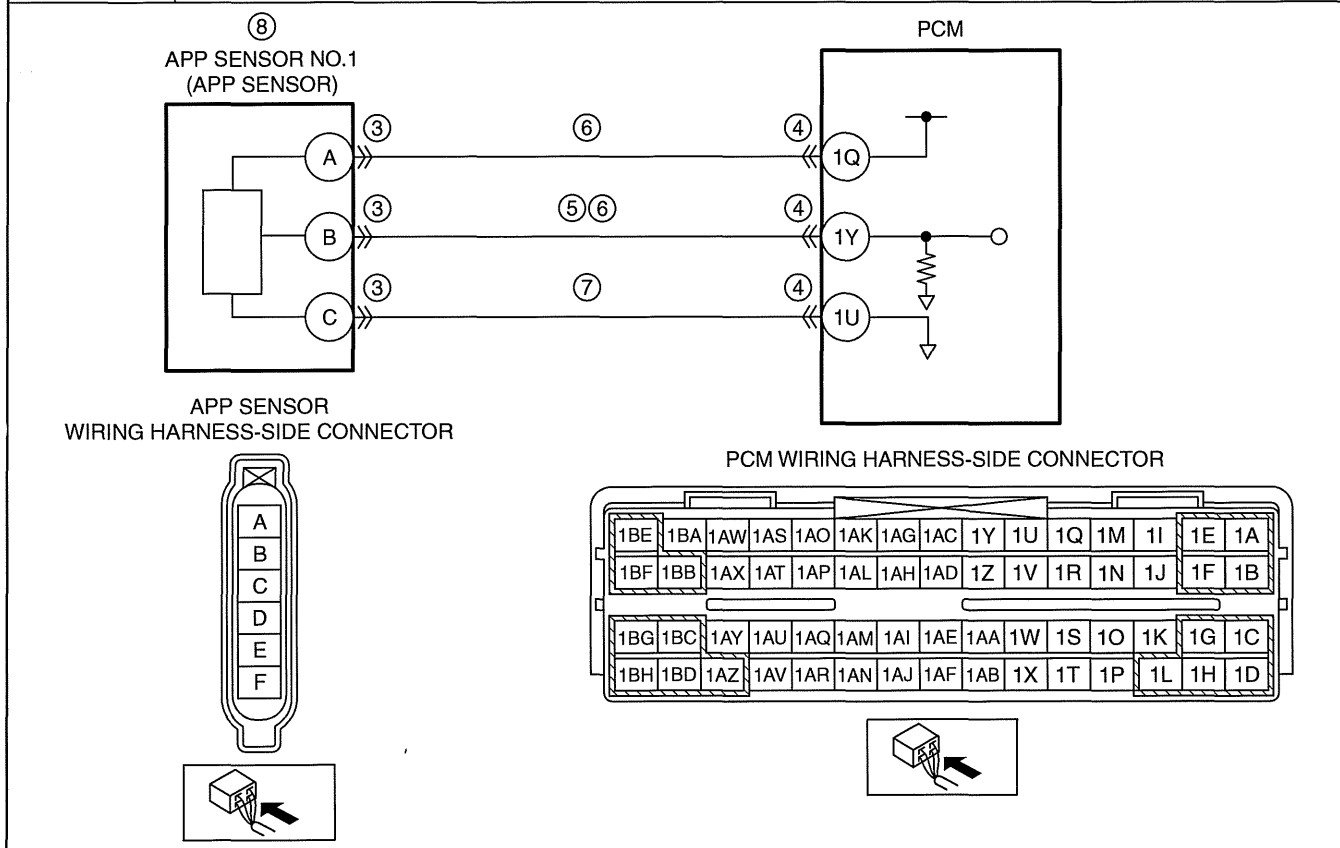

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P2123:00 [L3 WITH TC]

id010239708400

01-02B

DTC P2123:00	APP sensor No.1 circuit high input
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the APP sensor No.1 signal. If the PCM detects that the APP sensor No.1 voltage is above 4.8 V, the PCM determines that the APP sensor No.1 circuit has a malfunction. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> APP sensor connector or terminals malfunction PCM connector or terminals malfunction Short to power supply in wiring harness between APP sensor terminal B and PCM terminal 1Y APP sensor No.1 power supply circuit and signal circuit are shorted to each other. Open circuit in wiring harness between APP sensor terminal C and PCM terminal 1U APP sensor No.1 malfunction PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION
3	INSPECT APP SENSOR CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the APP sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes Repair or replace the connector and/or terminals, then go to Step 9.
		No Go to the next step.
4	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes Repair or replace the connector and/or terminals, then go to Step 9.
		No Go to the next step.
5	INSPECT APP SENSOR NO.1 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • APP sensor and PCM connectors are disconnected. • Switch the ignition to ON (engine off). • Measure the voltage at the APP sensor terminal B (wiring harness-side). • Is there any voltage? 	Yes Repair or replace the wiring harness for a possible short to power supply, then go to Step 9.
		No Go to the next step.
6	INSPECT APP SENSOR NO.1 POWER SUPPLY CIRCUIT AND SIGNAL CIRCUIT FOR SHORT TO EACH OTHER <ul style="list-style-type: none"> • APP sensor and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between APP sensor terminals A and B (wiring harness-side). • Is there continuity? 	Yes Repair or replace the wiring harness for a possible short to each other, then go to Step 9.
		No Go to the next step.
7	INSPECT APP SENSOR NO.1 GROUND CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • APP sensor and PCM connectors are disconnected. • Inspect for continuity between APP sensor terminal C (wiring harness-side) and PCM terminal 1U (wiring harness-side). • Is there continuity? 	Yes Go to the next step.
		No Repair or replace the wiring harness for a possible open circuit, then go to Step 9.
8	INSPECT APP SENSOR NO.1 <ul style="list-style-type: none"> • Reconnect all disconnected connectors. • Inspect the APP sensor No.1. (See 01-40B-28 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes Replace the accelerator pedal, then go to the next step. (See 01-13B-14 ACCELERATOR PEDAL REMOVAL/INSTALLATION [L3 WITH TC].)
		No Go to the next step.

4	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
5	INSPECT APP SENSOR NO.2 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • APP sensor and PCM connectors are disconnected. • Switch the ignition to ON (engine off). • Measure the voltage at the APP sensor terminal E (wiring harness-side). • Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 8.
		No	Go to the next step.
6	INSPECT APP SENSOR NO.2 GROUND CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • APP sensor and PCM connectors are disconnected. • Inspect for continuity between APP sensor terminal D (wiring harness-side) and PCM terminal 1AV (wiring harness-side). • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 8.
7	INSPECT APP SENSOR NO.2 <ul style="list-style-type: none"> • Reconnect all disconnected connectors. • Inspect the APP sensor No.2. (See 01-40B-28 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the accelerator pedal, then go to the next step. (See 01-13B-14 ACCELERATOR PEDAL REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the KOEO or KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) • Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
9	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

01-02B

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P2135:00 [L3 WITH TC]

id010239708700

DTC P2135:00	TP sensor No.1/No.2 voltage correlation problem
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM compares the input voltage from TP sensor No.1 with the input voltage from the TP sensor No.2 when the engine is running. If the difference is more than the specification, the PCM determines that there is a TP sensor No.1/No.2 voltage correlation problem. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Throttle body connector or terminals malfunction PCM connector or terminals malfunction TP sensor No.1 and/or No.2 malfunction PCM malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	INSPECT THROTTLE BODY CONNECTOR CONDITION <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the throttle body connector. Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 6.
		No	Go to the next step.
4	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> Disconnect the PCM connector. Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 6.
		No	Go to the next step.
5	INSPECT TP SENSOR NO.1 AND NO.2 <ul style="list-style-type: none"> Reconnect all disconnected connectors. Inspect the TP sensor No.1 and No.2. (See 01-40B-28 THROTTLE POSITION (TP) SENSOR INSPECTION [L3 WITH TC].) Is there any malfunction? 	Yes	Replace the throttle body, then go to the next step. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
6	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Perform the KOEO or KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
7	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P2138:00 [L3 WITH TC]

id010239708800

DTC P2138:00	APP sensor No.1/No.2 voltage correlation problem
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM compares the input voltage from the APP sensor No.1 with the input voltage from the APP sensor No.2 when the engine is running. If the difference is more than the specification, the PCM determines that there is an APP sensor No.1/No.2 angle correlation problem. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P2183:00 [L3 WITH TC]

id010239940000

DTC P2183:00	ECT sensor No.2 circuit range/performance problem
DETECTION CONDITION	<ul style="list-style-type: none"> When the ECT sensor No.2 detected temperature is approx. 8.8 °C {15.8 °F} higher than the IAT, or the ECT sensor No.2 detected temperature is approx. 22.6 °C {40.7 °F} less than the IAT for 1.2 s with the ignition switch is ON*. *: Ignition switch is ON when 6 h or more have passed since the ignition was switched to off. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is an continuous monitor (engine cooling system). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> ECT sensor No.2 connector or terminals malfunction MAF/IAT sensor connector or terminals malfunction PCM connector or terminals malfunction IAT sensor malfunction ECT sensor No.2 malfunction PCM malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2) <ul style="list-style-type: none"> Perform the Freeze Frame PID Data Access Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the DTC P2183:00 on FREEZE FRAME DATA (Mode 2)? 	Yes	Go to the next step.
		No	Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02B-18 DTC TABLE [L3 WITH TC].)
2	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (engine cooling system related) been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
3	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	INSPECT ECT SENSOR NO.2 CONNECTOR CONDITION <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the ECT sensor No.2 connector. Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
5	INSPECT MAF/IAT SENSOR CONNECTOR CONDITION <ul style="list-style-type: none"> Disconnect the MAF/IAT sensor connector. Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
6	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> Disconnect the PCM connector. Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
7	INSPECT IAT SENSOR <ul style="list-style-type: none"> • Inspect the IAT sensor. (See 01-40B-26 INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the MAF/IAT sensor, then go to Step 9. (See 01-13B-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	INSPECT ECT SENSOR NO.2 <ul style="list-style-type: none"> • Inspect the ECT sensor No.2. (See 01-40B-25 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the ECT sensor No.2, then go to the next step. (See 01-40B-24 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
9	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Switch the ignition to off. • Start the engine and warm it up completely. • Perform the Pending Trouble Code Access Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
10	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

01-02B

DTC P2195:00 [L3 WITH TC]

id010239709300

DTC P2195:00	A/F sensor signal stuck lean
DETECTION CONDITION	<ul style="list-style-type: none"> • The PCM monitors the A/F sensor output when the following conditions are met. If the output is more than 1.15 for 25 s, the PCM determines that the A/F sensor has a malfunction. <p>MONITORING CONDITIONS</p> <ul style="list-style-type: none"> — ECT: more than 60 °C {140 °F} — Engine speed: 1,000—3,200 rpm — Absolute load: 20—115% — Output voltage from the HO2S: 0.7 V or above <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is an intermittent monitor (A/F sensor, HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • A/F sensor malfunction • PCM malfunction

ON-BOARD DIAGNOSTIC [L3 WITH TC]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2) <ul style="list-style-type: none"> • Perform the Freeze Frame PID Data Access Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the DTC P2195:00 on FREEZE FRAME DATA (Mode 2)? 	Yes	Go to the next step.
		No	Go to the troubleshooting procedures for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02B-18 DTC TABLE [L3 WITH TC].)
2	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> • Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor, HO2S related) been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
3	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	VERIFY RELATED PENDING CODE AND/OR DTC <ul style="list-style-type: none"> • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Are any other PENDING CODEs and/or DTCs present? 	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
5	INSPECT A/F SENSOR <ul style="list-style-type: none"> • Inspect the A/F sensor. (See 01-40B-30 AIR FUEL RATIO (A/F) SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the A/F sensor, then go to the next step. (See 01-40B-29 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
6	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the Drive Mode 03 (EGR System, A/F sensor heater, HO2S heater, A/F sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02B-13 OBD-II DRIVE MODE [L3 WITH TC].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
7	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P2196:00 [L3 WITH TC]

id010239709400

01-02B

DTC P2196:00	A/F sensor signal stuck rich
DETECTION CONDITION	<ul style="list-style-type: none"> • The PCM monitors the A/F sensor output when the following conditions are met. If the output is less than 0.85 for 25 s, the PCM determines that the A/F sensor has a malfunction. <p>MONITORING CONDITIONS</p> <ul style="list-style-type: none"> — ECT: more than 60 °C {140 °F} — Engine speed: 1,000—3,200 rpm — Absolute load: 20—115% — Output voltage from the HO2S: 0.2 V or less <p>Diagnostic support note</p> <ul style="list-style-type: none"> • This is an intermittent monitor (A/F sensor, HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • A/F sensor malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2) <ul style="list-style-type: none"> • Perform the Freeze Frame PID Data Access Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the DTC P2196:00 on FREEZE FRAME DATA (Mode 2)? 	Yes	Go to the next step.
		No	Go to the troubleshooting procedures for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02B-18 DTC TABLE [L3 WITH TC].)
2	VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> • Have the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor, HO2S related) been recorded? 	Yes	Go to the next step.

Yes Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No Go to the next step.
3	INSPECT BARO SENSOR MALFUNCTION <ul style="list-style-type: none"> Connect the M-MDS to the DLC-2. Start the engine. Access the BARO PID using the M-MDS. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the BARO PID value normal? (See 01-40B-8 PCM INSPECTION [L3 WITH TC].) 	Yes Go to the next step.
		No Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
4	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Perform the KOEO or KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) Is the same DTC present? 	Yes Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No Go to the next step.

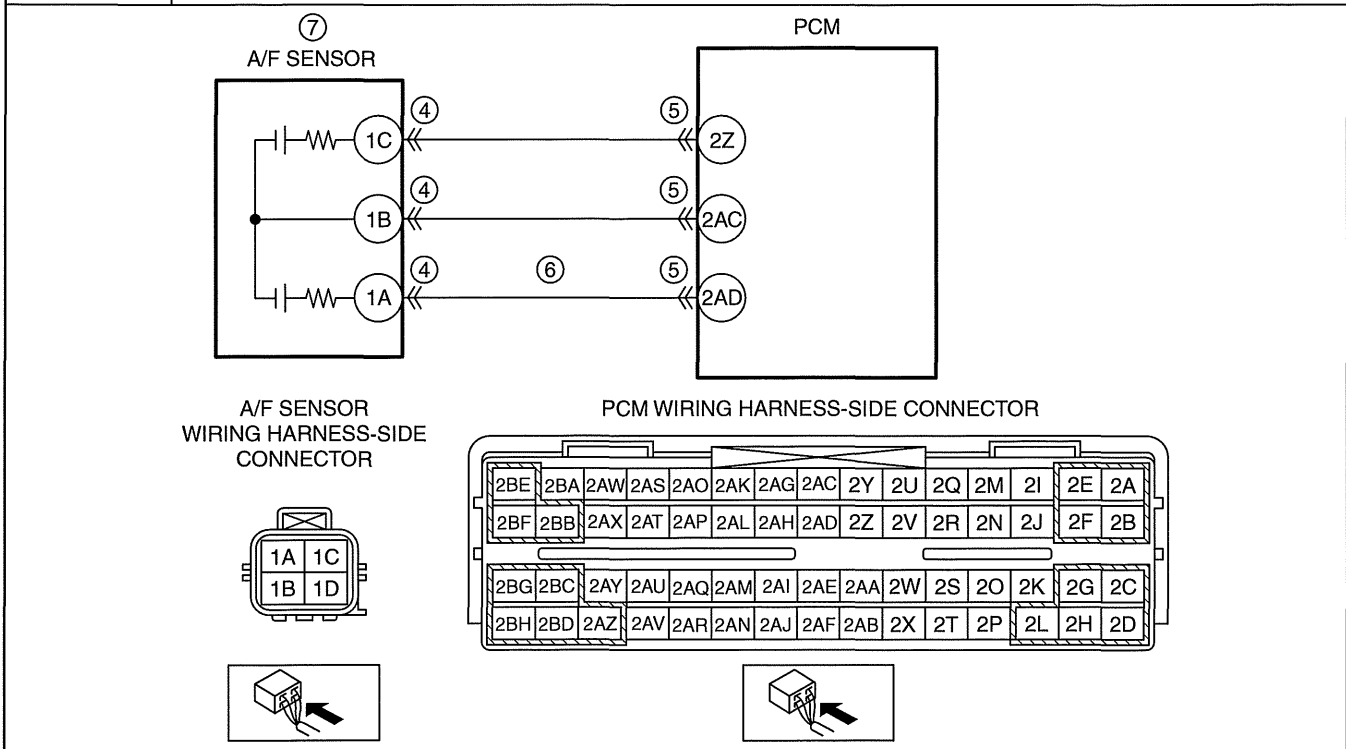

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION		ACTION
5	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P2237:00 [L3 WITH TC]

id010239851200

DTC P2237:00	A/F sensor positive current control circuit open
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the A/F sensor terminal 1B current. If the current approx. 0 A while the A/F sensor active, the PCM determines that the A/F sensor positive current control circuit is open. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (A/F sensor, HO2S). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> A/F sensor connector or terminals malfunction PCM connector or terminals malfunction Open circuit in wiring harness between A/F sensor terminal 1A and PCM terminal 2AD A/F sensor malfunction PCM malfunction

ON-BOARD DIAGNOSTIC [L3 WITH TC]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2) <ul style="list-style-type: none"> • Perform the Freeze Frame PID Data Access Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) • Is the DTC P2237:00 on FREEZE FRAME DATA (Mode 2)? 	Yes	Go to the next step.
		No	Go to the troubleshooting procedures for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02B-18 DTC TABLE [L3 WITH TC].)
2	VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED <ul style="list-style-type: none"> • Have the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor, HO2S related) been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
3	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	INSPECT A/F SENSOR CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the A/F sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
5	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
6	INSPECT A/F SENSOR POSITIVE CURRENT CONTROL CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • A/F sensor and PCM connectors are disconnected. • Inspect for continuity between A/F sensor terminal 1A (wiring harness-side) and PCM terminal 2AD (wiring harness-side). • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 8.
7	INSPECT A/F SENSOR <ul style="list-style-type: none"> • Reconnect all disconnected connectors. • Inspect the A/F sensor. (See 01-40B-30 AIR FUEL RATIO (A/F) SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the A/F sensor, then go to the next step. (See 01-40B-29 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the KOEO or KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
9	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

		No	Go to the next step.
5	INSPECT A/F SENSOR CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the A/F sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
6	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
7	INSPECT A/F SENSOR NEGATIVE CURRENT CONTROL CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • A/F sensor and PCM connectors are disconnected. • Inspect for continuity between A/F sensor terminal 1B (wiring harness-side) and PCM terminal 2AC (wiring harness-side). • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 9.
8	INSPECT A/F SENSOR <ul style="list-style-type: none"> • Reconnect all disconnected connectors. • Inspect the A/F sensor. (See 01-40B-30 AIR FUEL RATIO (A/F) SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the A/F sensor, then go to the next step. (See 01-40B-29 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
9	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the KOEO or KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) • Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.

01-02B

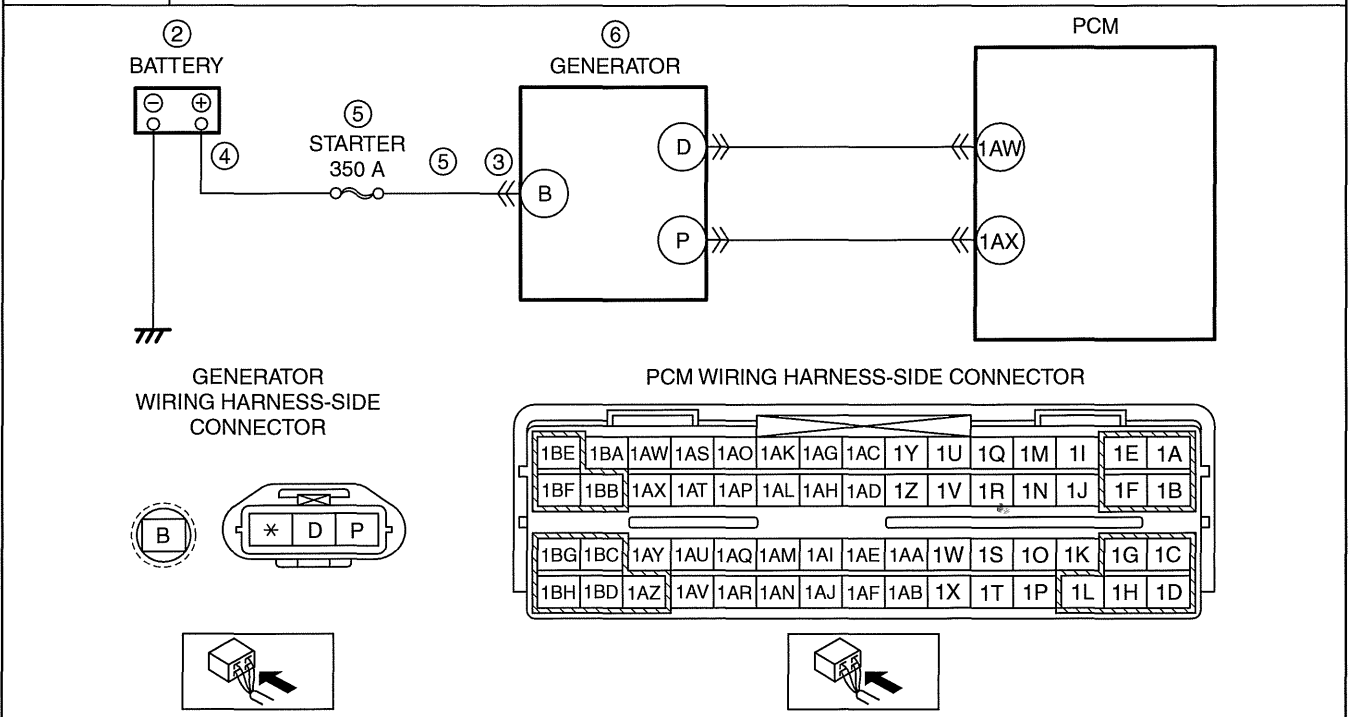

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION
10	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Are any DTCs present? 	Yes Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No DTC troubleshooting completed.

DTC P2502:00 [L3 WITH TC]

id010239709500

DTC P2502:00	Charging system voltage problem
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM determines that the generator output voltage is above 17 V or the battery voltage is below 11 V for 5 s while the engine is running. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (other). The MIL does not illuminate. FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Battery malfunction Loose generator terminal installation nut Battery positive terminal poorly connected Short to ground or open circuit in generator power supply circuit <ul style="list-style-type: none"> Short to ground in wiring harness between battery positive terminal and generator terminal B STARTER 350 A fuse malfunction Open circuit in wiring harness between battery positive terminal and generator terminal B Generator malfunction PCM malfunction

ON-BOARD DIAGNOSTIC [L3 WITH TC]

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	INSPECT BATTERY <ul style="list-style-type: none"> • Inspect the battery. (See 01-17B-4 BATTERY INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Recharge or replace the battery, then go to Step 7. (See 01-17B-6 BATTERY RECHARGING [L3 WITH TC].) (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
3	INSPECT POOR INSTALLATION OF GENERATOR TERMINAL <ul style="list-style-type: none"> • Switch the ignition to off. • Inspect for looseness of generator terminal B installation nut. • Is the nut loose? 	Yes	Tighten the generator terminal B installation nut, then go to Step 7.
		No	Go to the next step.
4	INSPECT POOR INSTALLATION OF BATTERY POSITIVE TERMINAL <ul style="list-style-type: none"> • Inspect for looseness of battery positive terminal. • Is the terminal loose? 	Yes	Connect the battery positive terminal correctly, then go to Step 7.
		No	Go to the next step.
5	INSPECT BATTERY CHARGING CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT <ul style="list-style-type: none"> • Disconnect the generator terminal B. • Measure the voltage between generator terminal B (wiring harness-side) and body ground. • Is the voltage B+? 	Yes	Go to the next step.
		No	Inspect the STARTER 350 A fuse. <ul style="list-style-type: none"> • If the fuse is melt: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deterioration: <ul style="list-style-type: none"> — Replace the fuse. • If the fuse is normal: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible open circuit. Go to Step 7.
6	INSPECT GENERATOR <ul style="list-style-type: none"> • Inspect the generator. (See 01-17B-8 GENERATOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the generator, then go to the next step. (See 01-17B-6 GENERATOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
7	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) • Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

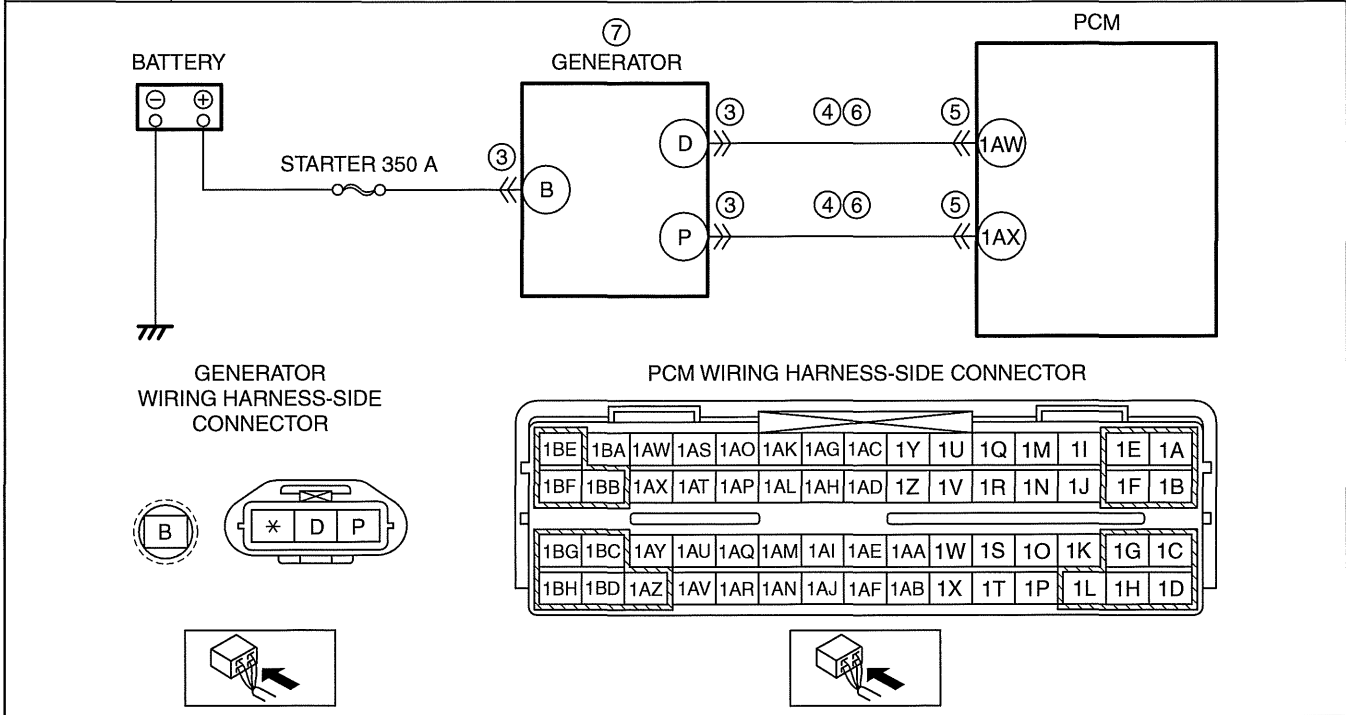

01-02B

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P2503:00 [L3 WITH TC]

id010239709600

DTC P2503:00	Charging system voltage low
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM needs more than 20 A from the generator, and determines that the generator output voltage is below 8.5 V for 5 s while the engine is running. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (other). The MIL does not illuminate. FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Drive belt exceed limit Generator connector or terminals malfunction Short to ground in wiring harness between the following terminals: <ul style="list-style-type: none"> — Generator terminal D—PCM terminal 1AW — Generator terminal P—PCM terminal 1AX PCM connector or terminals malfunction Open circuit in wiring harness between the following terminals: <ul style="list-style-type: none"> — Generator terminal D—PCM terminal 1AW — Generator terminal P—PCM terminal 1AX Generator malfunction PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	INSPECT DRIVE BELT CONDITION <ul style="list-style-type: none"> Verify that the drive belt auto tensioner indicator mark does not exceed limit. (See 01-10B-4 DRIVE BELT INSPECTION [L3 WITH TC].) Does the indicator mark exceed limit? 	Yes	Replace the drive belt, then go to Step 8. (See 01-10B-4 DRIVE BELT REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
3	INSPECT GENERATOR CONNECTOR CONDITION <ul style="list-style-type: none"> • Switch the ignition to off. • Disconnect the generator connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
4	INSPECT GENERATOR CIRCUIT FOR SHORT TO GROUND <ul style="list-style-type: none"> • Generator connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: <ul style="list-style-type: none"> — Generator terminal D — Generator terminal P • Is there continuity? 	Yes	If the short to ground circuit could be detected: <ul style="list-style-type: none"> • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected: <ul style="list-style-type: none"> • Replace the PCM (short to ground in PCM internal circuit). (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].) Go to Step 8.
		No	Go to the next step.
5	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
6	INSPECT GENERATOR CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • Generator and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): <ul style="list-style-type: none"> — Generator terminal D—PCM terminal 1AW — Generator terminal P—PCM terminal 1AX • Is there continuity? 	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 8.
7	INSPECT GENERATOR <ul style="list-style-type: none"> • Inspect the generator. (See 01-17B-8 GENERATOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the generator, then go to the next step. (See 01-17B-6 GENERATOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) • Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
9	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

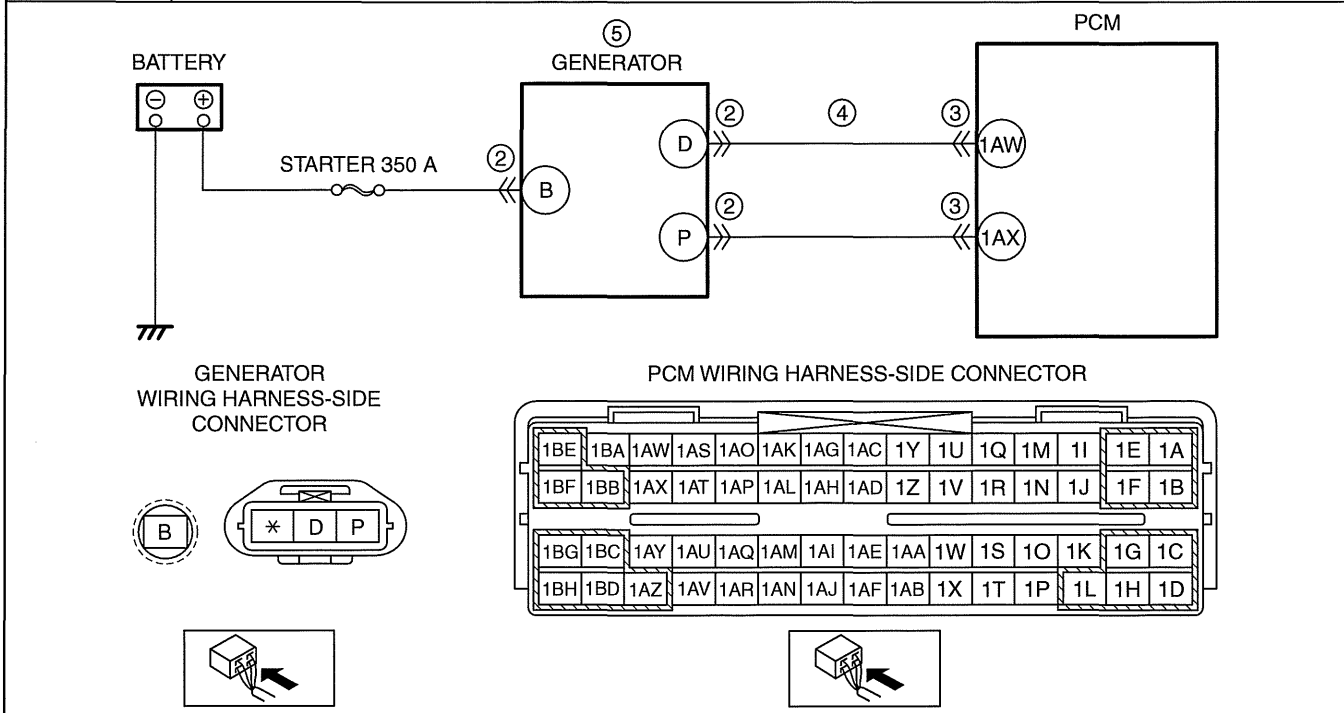

01-02B

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P2504:00 [L3 WITH TC]

id010239709700

DTC P2504:00	Charging system voltage high
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM determines that the generator output voltage is above 18.5 V or the battery voltage is above 16.0 V for 5 s while the engine is running. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (other). The MIL does not illuminate. FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Generator connector or terminals malfunction PCM connector or terminals malfunction Short to power supply in wiring harness between generator terminal D and PCM terminal 1AW Generator malfunction <ul style="list-style-type: none"> — Short to power supply in field coil control circuit at generator PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	INSPECT GENERATOR CONNECTOR CONDITION <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the generator connector. Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 6.
		No	Go to the next step.
3	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> Disconnect the PCM connector. Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 6.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
4	INSPECT GENERATOR CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY <ul style="list-style-type: none"> • Generator and PCM connectors are disconnected. • Switch the ignition to ON (engine off). • Measure the voltage at the generator terminal D (wiring harness-side). • Is there any voltage? 	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 6.
		No	Go to Step 8.
5	INSPECT GENERATOR <ul style="list-style-type: none"> • Inspect the generator. (See 01-17B-8 GENERATOR INSPECTION [L3 WITH TC].) • Is there any malfunction? 	Yes	Replace the generator, then go to the next step. (See 01-17B-6 GENERATOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
6	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Perform the KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) • Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
7	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> • Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

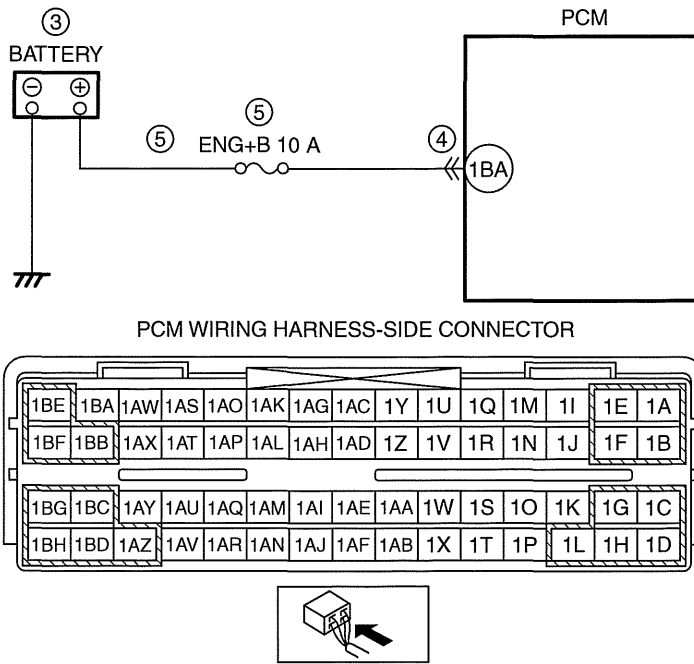

01-02B

ON-BOARD DIAGNOSTIC [L3 WITH TC]

DTC P2507:00 [L3 WITH TC]

id010239709800

DTC P2507:00	PCM battery voltage low
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM monitors the voltage of the back-up battery positive terminal. If the PCM detects that the battery positive terminal voltage is below 2.5 V for 5 s, the PCM determines that the back-up voltage circuit has a malfunction. <p>Diagnostic support note</p> <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> Battery malfunction PCM connector or terminals malfunction Short to ground or open circuit in PCM power supply circuit <ul style="list-style-type: none"> — Short to ground in wiring harness between battery positive terminal and PCM terminal 1BA — ENG+B 10 A fuse malfunction — Open circuit in wiring harness between battery positive terminal and PCM terminal 1BA PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	INSPECT BATTERY <ul style="list-style-type: none"> Inspect the battery. (See 01-17B-4 BATTERY INSPECTION [L3 WITH TC].) Is there any malfunction? 	Yes	Recharge or replace the battery, then go to Step 6. (See 01-17B-6 BATTERY RECHARGING [L3 WITH TC].) (See 01-17B-2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
4	INSPECT PCM CONNECTOR CONDITION <ul style="list-style-type: none"> Switch the ignition to off. Disconnect the PCM connector. Inspect for poor connection (such as damaged/pulled-out pins, and corrosion). Is there any malfunction? 	Yes	Repair or replace the connector and/or terminals, then go to Step 6.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

01-02B

STEP	INSPECTION		ACTION
5	INSPECT PCM POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT <ul style="list-style-type: none"> PCM connector is disconnected. Measure the voltage at the PCM terminal 1BA (wiring harness-side). Is the voltage B+? 	Yes	Go to the next step.
		No	Inspect the ENG+B 10 A fuse. <ul style="list-style-type: none"> If the fuse is melt: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. If the fuse is deterioration: <ul style="list-style-type: none"> — Replace the fuse. If the fuse is normal: <ul style="list-style-type: none"> — Repair or replace the wiring harness for a possible open circuit. Go to the next step.
6	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Perform the KOEO or KOER self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
7	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P2610:00 [L3 WITH TC]

id010239303800

DTC P2610:00	PCM internal engine off timer performance problem
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM internal engine off timer is damaged. Diagnostic support note <ul style="list-style-type: none"> This is a continuous monitor (CCM). The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. FREEZE FRAME DATA (Mode 2)/Snapshot data is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> PCM internal engine off timer is damaged.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED <ul style="list-style-type: none"> Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded? 	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [L3 WITH TC]

STEP	INSPECTION	ACTION	
3	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Start the engine. Perform the Pending Trouble Code Access Procedure. (See 01-02B-8 ON-BOARD DIAGNOSTIC TEST [L3 WITH TC].) Is the PENDING CODE for this DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
4	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC U3000:41 [L3 WITH TC]

id010239851600

DTC U3000:41	PCM processor error
DETECTION CONDITION	<ul style="list-style-type: none"> The PCM internal EEPROM malfunction. Diagnostic support note <ul style="list-style-type: none"> This is a continuous monitor (other). The MIL does not illuminate. FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. The DTC is not stored in the PCM memory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> PCM internal malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION	
1	VERIFY RELATED REPAIR INFORMATION AVAILABILITY <ul style="list-style-type: none"> Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. <ul style="list-style-type: none"> If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	VERIFY DTC TROUBLESHOOTING COMPLETED <ul style="list-style-type: none"> Clear the DTC from the PCM memory using the M-MDS. (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Perform the KOEO self test. (See 01-02B-12 KOEO/KOER SELF TEST [L3 WITH TC].) Is the same DTC present? 	Yes	Replace the PCM, then go to the next step. (See 01-40B-7 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
3	VERIFY AFTER REPAIR PROCEDURE <ul style="list-style-type: none"> Perform the "AFTER REPAIR PROCEDURE". (See 01-02B-12 AFTER REPAIR PROCEDURE [L3 WITH TC].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See 01-02B-18 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

SYMPTOM TROUBLESHOOTING [LF, L5]

SYMPTOM DIAGNOSTIC INDEX [LF, L5]

id010397800500

- Confirm trouble symptom using the following diagnostic index, then go to appropriate troubleshooting chart.

Diagnostic Index

No.	TROUBLESHOOTING ITEM		DESCRIPTION
1	Melting of main or other fuses		—
2	MIL illuminates		<ul style="list-style-type: none"> • MIL is illuminated incorrectly.
3	Will not crank		<ul style="list-style-type: none"> • Starter does not work.
4	Hard to start/long crank/erratic start/erratic crank		<ul style="list-style-type: none"> • Starter cranks engine at normal speed but engine requires excessive cranking time before starting.
5	Engine stalls	After start/at idle	<ul style="list-style-type: none"> • Engine stops unexpectedly at idle and/or after start.
6	Crank normally but will not start		<ul style="list-style-type: none"> • The starter cranks engine at normal speed but engine will not run. • Refer to symptom troubleshooting "No.5 ENGINE STALLS" if this symptom appears after engine stall. • Fuel is in tank. • Battery is in normal condition.
7	Slow return to idle		<ul style="list-style-type: none"> • Engine takes more time than normal to return to idle speed.
8	Engine runs rough/rolling idle		<ul style="list-style-type: none"> • Engine speed fluctuates between specified idle speed and lower speed, and engine shakes excessively. • Idle speed is too slow and engine shakes excessively.
9	Fast idle/runs on		<ul style="list-style-type: none"> • Engine speed continues at fast idle after warm-up. • Engine runs after ignition is off.
10	Low idle/stalls during deceleration		<ul style="list-style-type: none"> • Engine stops unexpectedly at beginning of deceleration or recovery from deceleration.
11	Engine stalls/quits	Acceleration/cruise	<ul style="list-style-type: none"> • Engine stops unexpectedly at beginning of acceleration or during acceleration. • Engine stops unexpectedly while cruising.
	Engine runs rough	Acceleration/cruise	<ul style="list-style-type: none"> • Engine speed fluctuates during acceleration or cruising.
	Misses	Acceleration/cruise	<ul style="list-style-type: none"> • Engine misses during acceleration or cruising.

SYMPTOM TROUBLESHOOTING [LF, L5]

FOREWORD [LF, L5]

id010397910000

- When the customer reports a vehicle malfunction, check the malfunction indicator lamp (MIL) indication and diagnostic trouble code (DTC), then diagnose the malfunction according to the following flowchart:
 - If a DTC exists, diagnose the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
 - If no DTC exists and the MIL does not illuminate or flash, diagnose the applicable symptom troubleshooting. (See 01-03A-7 QUICK DIAGNOSTIC CHART [LF, L5].)

NO.2 MIL ILLUMINATES [LF, L5]

id010397800800

2	MIL ILLUMINATES
DESCRIPTION	<ul style="list-style-type: none"> MIL is illuminated incorrectly.
POSSIBLE CAUSE	<ul style="list-style-type: none"> MIL illuminates for emission-related concern (PCM DTC is stored) Instrument cluster malfunction <p>Note</p> <ul style="list-style-type: none"> If the MIL blinks at steady rate, misfire condition could possibly exist.

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Connect the M-MDS to the DLC-2. Switch the ignition to ON (engine off). Perform the PCM DTC inspection using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	Inspect the instrument cluster. (See 09-22-8 INSTRUMENT CLUSTER INSPECTION.) Repair or replace the malfunctioning part according to the inspection result.
2	<ul style="list-style-type: none"> Verify test results. <ul style="list-style-type: none"> If normal, return to diagnostic index to service any additional symptoms. (See 01-03A-4 SYMPTOM DIAGNOSTIC INDEX [LF, L5].) If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> If vehicle is repaired, troubleshooting completed. If vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.

SYMPTOM TROUBLESHOOTING [LF, L5]

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	<p>Note</p> <ul style="list-style-type: none"> The following test should be performed on the advanced keyless entry and push button start system. If not equipped, go to the next step. <p>Insert the emergency key in the emergency slot and start the engine. Does the engine start?</p>	Yes	Inspect the advanced keyless entry and push button start system. Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
2	<p>Connect the M-MDS to the DLC-2. Do the following conditions appear?</p> <ul style="list-style-type: none"> The engine is not completely started. Immobilizer system DTC B10DA:62 is displayed. 	Yes	Both conditions appear: <ul style="list-style-type: none"> Go to Step 5.
		No	Either condition or other one appears: <ul style="list-style-type: none"> Go to the next step.
3	<p>Inspect the coil antenna connector and terminals for poor connection (such as damaged/pulled-out pins, corrosion). Is there any malfunction?</p>	Yes	Repair or replace the connector or terminals. Return to Step 1.
		No	Go to the next step.
4	<p>Does the security light flash?</p>	Yes	Go to the next step.
		No	Inspect the instrument cluster and the related wiring harness. (See 09-22-8 INSTRUMENT CLUSTER INSPECTION.) Repair or replace the malfunctioning part according to the inspection result.
5	<p>Connect the M-MDS to DLC-2. Perform the immobilizer system DTC inspection. (See 09-02C-2 DTC INSPECTION [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) (See 09-02B-2 DTC INSPECTION [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)].) Are any DTCs present?</p>	Yes	Go to the appropriate DTC inspection. (See 09-02C-4 DTC TABLE [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) (See 09-02B-4 DTC TABLE [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)].)
		No	Go to the next step.
6	<p>Inspect the wiring harness between the following terminals (wiring harness-side) and related connectors:</p> <ul style="list-style-type: none"> Vehicles without advanced keyless entry and push button start system: <ul style="list-style-type: none"> Coil antenna terminal A—Instrument cluster terminal 2Q Coil antenna terminal B—Instrument cluster terminal 2M PCM terminal 1AM—Instrument cluster terminal 2B PCM terminal 1AI—Instrument cluster terminal 2D Vehicles with advanced keyless entry and push button start system: <ul style="list-style-type: none"> Coil antenna terminal A—Keyless control module terminal 2H Coil antenna terminal B—Keyless control module terminal 2G PCM terminal 1AM—Keyless control module terminal 2K PCM terminal 1AI—Keyless control module terminal 2L <p>Is there any malfunction?</p>	Yes	Repair or replace the suspected wiring harness and connector.
		No	Go to the next step.

01-03A

SYMPTOM TROUBLESHOOTING [LF, L5]

STEP	INSPECTION	RESULTS	ACTION
7	Inspect the following: <ul style="list-style-type: none"> • Battery connection • Battery condition (See 01-17A-4 BATTERY INSPECTION [LF, L5].) • Fuse (See 01-03A-22 NO.1 MELTING OF MAIN OR OTHER FUSES [LF, L5].) • Selector lever is in P or N position (ATX) Are all items normal?	Yes	Vehicles without advanced keyless entry and push button start system: <ul style="list-style-type: none"> • Go to Step 20. Vehicles with advanced keyless entry and push button start system: <ul style="list-style-type: none"> • Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection result. Repeat Step 7.
8	Inspect the starter relay. (See 09-21-17 RELAY INSPECTION.) Is there any malfunction?	Yes	Replace the starter relay.
		No	Go to the next step.
9	Remove the starter relay. Switch the ignition to ON (engine off). Measure the voltage at the starter relay terminal E (wiring harness-side). Is the voltage B+?	Yes	Go to Step 12.
		No	Go to the next step.
10	Switch the ignition to off. Disconnect the keyless control module connector. Inspect for continuity between keyless control module terminal 3B (wiring harness-side) and starter relay terminal E (wiring harness-side). Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the suspected wiring harness and connector.
11	Inspect for continuity between keyless control module terminal 3B (wiring harness-side) and body ground. Is there continuity?	Yes	Repair or replace the suspected wiring harness and connector.
		No	Replace the keyless control module. (See 09-14-66 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION.)
12	Install the starter relay. Short the terminals of the following connector using a jumper wire: <ul style="list-style-type: none"> • ATX: <ul style="list-style-type: none"> — TR switch terminals A and F (wiring harness-side) • MTX: <ul style="list-style-type: none"> — Starter interlock switch terminals A and B (wiring harness-side) Switch the ignition to start. Does the engine start?	Yes	ATX: <ul style="list-style-type: none"> • Replace the TR switch. (See 05-17-16 TRANSAXLE RANGE (TR) SWITCH REMOVAL/INSTALLATION [FS5A-EL].) MTX: <ul style="list-style-type: none"> • Go to the next step.
		No	Go to Step 14.
13	Reconnect the disconnected connectors. Measure the voltage at the keyless control module terminal 3O (wiring harness-side). Is the voltage following? <ul style="list-style-type: none"> • Clutch pedal depressed: Below 1.0 V • Clutch pedal released: B+ 	Yes	Inspect the following: <ul style="list-style-type: none"> • Wiring harness between battery positive terminal and starter cut relay • Starter cut relay Repair or replace the malfunctioning part according to the inspection result.
		No	Inspect the following: <ul style="list-style-type: none"> • Wiring harness between starter cut relay and clutch cut switch • Wiring harness between clutch cut switch and ground • Clutch cut switch (stuck) Repair or replace the malfunctioning part according to the inspection result.
14	Is the starter relay operation sound heard when the engine starting procedure is performed in Step 12?	Yes	Go to the next step.
		No	Go to Step 18.
15	Switch the ignition to ON (engine off). Measure the voltage at the keyless control module terminal 2F (wiring harness-side). Is the voltage B+?	Yes	Go to the next step.
		No	Repair or replace the suspected wiring harness and connector.

SYMPTOM TROUBLESHOOTING [LF, L5]

STEP	INSPECTION	RESULTS	ACTION
16	Switch the ignition to off. Disconnect the keyless control module, TR switch (ATX), or starter interlock switch (MTX) connectors. Inspect for continuity between the following terminals (wiring harness-side): <ul style="list-style-type: none"> • ATX: — Keyless control module terminal 3T—TR switch terminal A • MTX: — Keyless control module terminal 3T—Starter cut relay terminal D Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the suspected wiring harness.
17	Inspect the following: <ul style="list-style-type: none"> • Starter • Wiring harness between the starter and ground • Starter power supply (from battery through secondary starter relay, to starter) Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Replace the keyless control module. (See 09-14-66 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION.)
18	Switch the ignition to off. Disconnect the keyless control module, TR switch (ATX), or starter interlock switch (MTX) connectors. Inspect for continuity between the following terminals (wiring harness-side): <ul style="list-style-type: none"> • ATX: — Keyless control module terminal 3T—TR switch terminal A • MTX: — Keyless control module terminal 3T—Starter cut relay terminal D Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the suspected wiring harness and connector.
19	Disconnect the PCM connector (with starter interlock switch (MTX) or TR switch (ATX) connectors left removed). Inspect for continuity between the following terminals (wiring harness-side): <ul style="list-style-type: none"> • ATX: — TR switch terminal A—PCM terminal 1BB • MTX: — Starter cut relay terminal D—PCM terminal 1BB Is there continuity?	Yes	Go to Step 28.
		No	Repair or replace the suspected wiring harness and connector.
20	Inspect for continuity between PCM terminal 1BB (wiring harness-side) and starter relay with P or N position (ATX)/clutch pedal depressed (MTX). Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the suspected wiring harness.
21	Switch the ignition to start with P or N position (ATX)/clutch pedal depressed (MTX). Is a clicking sound heard from the starter relay?	Yes	Go to Step 26.
		No	ATX: • Go to the next step. MTX: • Go to Step 23.
22	Connect the M-MDS to the DLC-2. Switch the ignition to ON (engine off). Access TR PID using the M-MDS. Is TR PID indicated P/N when selecting the P or N position?	Yes	Go to Step 24.
		No	Verify that the TR switch is adjusted properly. Inspect for open or short circuit between TR switch and TCM. Repair or replace the malfunctioning part according to the inspection result. Repeat Step 21.
23	Inspect the starter interlock switch. (See 01-19A-8 STARTER INTERLOCK SWITCH INSPECTION [LF, L5].) Is there any malfunction?	Yes	Inspect the related wiring harness. Repair or replace the malfunctioning part according to the inspection result. Repeat Step 21.
		No	Go to the next step.

01-03A

SYMPTOM TROUBLESHOOTING [LF, L5]

STEP	INSPECTION	RESULTS	ACTION
24	Inspect the starter relay and the wiring harness between the following: (See 09-21-17 RELAY INSPECTION.) <ul style="list-style-type: none"> • Starter relay and PCM • Starter relay and ignition switch Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result. Repeat Step 21.
		No	Go to the next step.
25	Inspect the ignition switch and the related wiring harness. (See 09-21-7 IGNITION SWITCH INSPECTION [WITHOUT ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM].) Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result. Repeat Step 21.
		No	Go to the next step.
26	Inspect the wiring harness between the following: <ul style="list-style-type: none"> • Starter relay and battery positive terminal • Starter relay and starter Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result, then go to the next step.
		No	Go to the next step.
27	Inspect the starting system. (See 01-19A-4 STARTER INSPECTION [LF, L5].) Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
28	Inspect for a seized/hydro locked engine or flywheel (MTX) or drive plate (ATX). Is the engine seized or hydro locked?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection result.
29	Connect the M-MDS to the DLC-2. Perform the PCM DTC inspection using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Are there any continuous memory DTCs present?	Yes	Continuous memory DTC is displayed: <ul style="list-style-type: none"> • Go to the appropriate DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].) Communication error message is displayed: <ul style="list-style-type: none"> • Inspect the following: <ul style="list-style-type: none"> — Open circuit in the wiring harness between main relay terminal B (wiring harness-side) and PCM terminal 1Q (wiring harness-side) — Open circuit in the wiring harness between main relay terminal C and PCM terminal 1A (wiring harness-side) — Main relay (stuck open) — Open or short circuit in the wiring harness between DLC-2 and PCM terminals 1AM or 1AI (wiring harness-side) — Open or poor ground circuit (PCM terminal 1E, 1F or 1G) — Poor connection of vehicle body ground • Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
30	Perform the KOEO self-test using the M-MDS. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) Are there DTCs displayed during the KOEO inspection?	Yes	Go to the appropriate DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	Inspect the following: <ul style="list-style-type: none"> • Start circuit in ignition switch • Open circuit in wiring harness between ignition switch and starter Repair or replace the malfunctioning part according to the inspection result.
31	<ul style="list-style-type: none"> • Verify test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. (See 01-03A-4 SYMPTOM DIAGNOSTIC INDEX [LF, L5].) — If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

SYMPTOM TROUBLESHOOTING [LF, L5]

NO.4 HARD TO START/LONG CRANK/ERRATIC START/ERRATIC CRANK [LF, L5]

id010397801000

4	HARD TO START/LONG CRANK/ERRATIC START/ERRATIC CRANK
DESCRIPTION	<ul style="list-style-type: none"> • Starter cranks engine at normal speed but engine requires excessive cranking time before starting.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • PCM DTC is stored • Cooling system malfunction • Ignition coil related wiring harness malfunction • Spark plug malfunction • CKP sensor and teeth of crankshaft pulley malfunction • Improper operation of electronic throttle control system • Excessive fuel pressure • Fuel leakage from fuel system • Purge solenoid valve malfunction • MAF sensor malfunction • Restriction in exhaust system • EGR valve malfunction • Starting system malfunction <p>Warning The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before servicing the fuel system:</p> <ul style="list-style-type: none"> • Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. • Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual. (See 01-14A-4 BEFORE SERVICE PRECAUTION [LF, L5].) (See 01-14A-5 AFTER SERVICE PRECAUTION [LF, L5].) <p>Caution</p> <ul style="list-style-type: none"> • Disconnecting/connecting the quick release connector without cleaning it may cause damage to the fuel pipe and the quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.

01-03A

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Inspect the following: <ul style="list-style-type: none"> • Vacuum leakage • Proper fuel quality (such as proper octane, contamination, winter/summer blend) • Loose bands on intake air system • Cracks on intake air system parts • Intake air system restriction (such as air cleaner element, fresh air duct) Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result. Repeat Step 1.
		No	Go to the next step.
2	Connect the M-MDS to the DLC-2. Switch the ignition to ON (engine off). Perform the PCM DTC inspection. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Are any DTCs present?	Yes	Go to the appropriate DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	Go to the next step.
3	Is engine overheating?	Yes	Go to the symptom troubleshooting "NO.17 COOLING SYSTEM CONCERNS-OVERHEATING". (See 01-03A-64 NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [LF, L5].)
		No	Go to the next step.
4	Inspect the ignition coil related wiring harness condition (intermittent open or short circuit) for all cylinders. Is there any malfunction?	Yes	Repair or replace the suspected wiring harness.
		No	Go to the next step.
5	Inspect the spark plug conditions. (See 01-18A-3 SPARK PLUG INSPECTION [LF, L5].) Is spark plug wet, covered with carbon or grayish white?	Yes	Spark plug is wet or covered with carbon: <ul style="list-style-type: none"> • Inspect for fuel leakage from fuel injector. Spark plug is grayish white: <ul style="list-style-type: none"> • Inspect the fuel injector for clogging. Repair or replace the malfunctioning part according to the inspection result.
		No	Install the spark plugs on original cylinders. Go to the next step.

SYMPTOM TROUBLESHOOTING [LF, L5]

STEP	INSPECTION	RESULTS	ACTION
6	Visually inspect the CKP sensor and teeth of crankshaft pulley. Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
7	Attempt to start the engine at part throttle. Does the engine run smoothly at part throttle?	Yes	Inspect the electronic throttle control system operation. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
8	Inspect the fuel line pressure. (See 01-14A-6 FUEL LINE PRESSURE INSPECTION [LF, L5].) Is there any malfunction?	Yes	Zero or low: <ul style="list-style-type: none"> • Inspect the fuel pump relay and the fuel pump circuit. • Inspect the fuel line for clogging. <ul style="list-style-type: none"> — If there is a malfunction: <ul style="list-style-type: none"> • Repair or replace the malfunctioning part according to the inspection result. — If there is no malfunction: <ul style="list-style-type: none"> • Replace the fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].) High: <ul style="list-style-type: none"> • Replace the fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
9	Is the fuel line pressure held after ignition is off? (See 01-14A-6 FUEL LINE PRESSURE INSPECTION [LF, L5].)	Yes	Go to the next step.
		No	Inspect the fuel injector. (See 01-14A-21 FUEL INJECTOR INSPECTION [LF, L5].) <ul style="list-style-type: none"> • If the fuel injector has malfunction: <ul style="list-style-type: none"> — Replace the fuel injector. (See 01-14A-19 FUEL INJECTOR REMOVAL/INSTALLATION [LF, L5].) • If the fuel injector is normal: <ul style="list-style-type: none"> — Replace the fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].)
10	Disconnect the vacuum hose from purge solenoid valve and plug opening end of vacuum hose. Switch the ignition to start. Is the starting condition improved?	Yes	Inspect if the purge solenoid valve is stuck open. (See 01-16A-8 PURGE SOLENOID VALVE INSPECTION [LF, L5].) Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
11	Inspect the MAF sensor for the following: <ul style="list-style-type: none"> • Contamination • MAF sensor terminal B voltage (ground circuit) Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
12	Visually inspect the exhaust system part. Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
13	Inspect the engine condition while tapping the EGR valve housing. Does the engine condition improve?	Yes	Replace the EGR valve. (See 01-16A-9 EGR VALVE REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
14	Inspect the starting system. (See 01-19A-4 STARTER INSPECTION [LF, L5].) Is there any malfunction?	Yes	Repair or replace components as required.
		No	Inspect for loose connectors or poor terminal contact. <ul style="list-style-type: none"> • If there is a malfunction: <ul style="list-style-type: none"> — Repair or replace the malfunctioning part according to the inspection result. • If there is no malfunction: <ul style="list-style-type: none"> — Remove the EGR valve and visually inspect for a mechanically stuck EGR valve. — Repair or replace the malfunctioning part according to the inspection result.

SYMPTOM TROUBLESHOOTING [LF, L5]

STEP	INSPECTION	RESULTS	ACTION
15	<ul style="list-style-type: none"> • Verify test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. (See 01-03A-4 SYMPTOM DIAGNOSTIC INDEX [LF, L5].) — If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

01-03A

NO.5 ENGINE STALLS-AFTER START/AT IDLE [LF, L5]

id010397801100

5	ENGINE STALLS—AFTER START/AT IDLE
DESCRIPTION	<ul style="list-style-type: none"> • Engine stops unexpectedly at idle and/or after start.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Coil antenna connector or terminals malfunction • Instrument cluster and related wiring harness malfunction • Immobilizer system malfunction • Coil antenna and related wiring harness • Air cleaner restriction • EGR valve malfunction • Electrical connector disconnection • Poor fuel quality • Ignition wiring malfunction • Air leakage from intake air system • Intake air system restriction • Improper operation of electronic throttle control system • Vacuum leakage • APP sensor and related wiring harness malfunction • TP sensor and related wiring harness malfunction • PCM continuous memory DTC is stored • Improper operation of electronic throttle control system • CKP sensor and related wiring harness malfunction • CKP sensor and teeth of crankshaft pulley malfunction • Ignition coil and related wiring harness malfunction • Spark plug malfunction • Exhaust system part malfunction • Excessive fuel pressure • Fuel leakage from fuel system • Improper operation of A/C system • Purge solenoid valve malfunction • Evaporative emission control system malfunction • Air leakage from intake air system • EGR valve malfunction • Improper operation of variable valve timing control system • Low engine compression • PCV valve malfunction <p>Warning The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:</p> <ul style="list-style-type: none"> • Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. • Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete “BEFORE SERVICE PRECAUTION” and “AFTER SERVICE PRECAUTION” described in this manual. (See 01-14A-4 BEFORE SERVICE PRECAUTION [LF, L5].) (See 01-14A-5 AFTER SERVICE PRECAUTION [LF, L5].) <p>Caution</p> <ul style="list-style-type: none"> • Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and the quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Connect the M-MDS to the DLC-2. Do the following conditions appear? <ul style="list-style-type: none"> • The engine is not completely started. • Immobilizer system DTC B10DA:62 is displayed. 	Yes	Both conditions appear: <ul style="list-style-type: none"> • Go to Step 3.
		No	Either condition or other one appears: <ul style="list-style-type: none"> • Go to the next step.
2	Does the engine stall after approx. 2 s from when the engine is started?	Yes	Go to the next step.
		No	Immobilizer system is normal. <ul style="list-style-type: none"> • Go to Step 10.
3	Inspect the coil antenna connector and terminals for poor connection (such as damaged/pulled-out pins, corrosion). Is there any malfunction?	Yes	Repair or replace the connector or terminals. Return to Step 2.
		No	Go to the next step.
4	Does the security light flash?	Yes	Go to the next step.
		No	Inspect the instrument cluster and related wiring harness. (See 09-22-8 INSTRUMENT CLUSTER INSPECTION.) Repair or replace the malfunctioning part according to the inspection result.
5	Connect the M-MDS to DLC-2. Perform the immobilizer system DTC inspection. (See 09-02C-2 DTC INSPECTION [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) (See 09-02B-2 DTC INSPECTION [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)].) Are any DTCs present?	Yes	Go to the appropriate DTC inspection. (See 09-02C-4 DTC TABLE [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) (See 09-02B-4 DTC TABLE [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)].)
		No	Go to the next step.
6	Inspect the wiring harness between the following terminals and related connectors: <ul style="list-style-type: none"> • Vehicles without advanced keyless entry and push button start system: <ul style="list-style-type: none"> — Coil antenna terminal A—Instrument cluster terminal 2Q — Coil antenna terminal B—Instrument cluster terminal 2M — PCM terminal 1AM—Instrument cluster terminal 2B — PCM terminal 1AI—Instrument cluster terminal 2D • Vehicles with advanced keyless entry and push button start system: <ul style="list-style-type: none"> — Coil antenna terminal A—Keyless control module terminal 2H — Coil antenna terminal B—Keyless control module terminal 2G — PCM terminal 1AM—Keyless control module terminal 2K — PCM terminal 1AI—Keyless control module terminal 2L Is there any malfunction?	Yes	Repair or replace the suspected wiring harness and connector.
		No	Go to the next step.
7	Inspect the following: <ul style="list-style-type: none"> • Air cleaner element • EGR valve • Electrical connections • Fuel quality: proper octane, contamination, winter/summer blend • Ignition wiring • No air leakage from intake air system • No restriction of intake air system • Proper sealing of intake manifold and components attached to intake manifold • Smooth operation of throttle valve • Vacuum connection Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result. Repeat Step 7.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [LF, L5]

STEP	INSPECTION	RESULTS	ACTION
8	Access the APP1 and APP2 PIDs using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Crank the engine with the accelerator pedal released. Are the APP1 and APP2 PIDs indicating that the accelerator pedal is in the released position?	Yes	Go to the next step.
		No	Inspect the following: <ul style="list-style-type: none"> • APP sensor (See 01-40A-26 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [LF, L5].) • Wiring harness between the following terminals and related connectors: <ul style="list-style-type: none"> — APP sensor terminal A—PCM terminal 1AE — APP sensor terminal B—PCM terminal 1AP — APP sensor terminal C—PCM terminal 1AJ — APP sensor terminal D—Engine ground — APP sensor terminal E—PCM terminal 1X — APP sensor terminal F—Main relay terminal C Repair or replace the malfunctioning part according to the inspection result.
9	Access the TP_REL PID using M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Crank the engine with the accelerator pedal released. Is the TP_REL PID indicating that the accelerator pedal is in the released position?	Yes	Go to the next step.
		No	Inspect the following: <ul style="list-style-type: none"> • TP sensor (See 01-40A-26 THROTTLE POSITION (TP) SENSOR INSPECTION [LF, L5].) • Wiring harness between the following terminals and related connectors: <ul style="list-style-type: none"> — TP sensor terminal A—PCM terminal 2AK — TP sensor terminal B—PCM terminal 2AR — TP sensor terminal C—PCM terminal 2AL — TP sensor terminal D—PCM terminal 2AN Repair or replace the malfunctioning part according to the inspection result.
10	Connect the M-MDS to the DLC-2. Perform the KOEO/KOER self-test using the M-MDS. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) <ul style="list-style-type: none"> • If the engine stalls: <ul style="list-style-type: none"> — Perform the KOEO self-test using the M-MDS. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) Are there any continuous memory DTCs present?	Yes	Continuous memory DTC is displayed: <ul style="list-style-type: none"> • Go to the appropriate DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].) Communication error message is displayed: <ul style="list-style-type: none"> • Inspect the following: <ul style="list-style-type: none"> — Open circuit in the wiring harness between main relay terminal B and PCM terminal 1Q — Open circuit in the wiring harness between main relay terminal C and PCM terminal 1A — Main relay (stuck open) — Open or short circuit in the wiring harness between DLC-2 and PCM terminals 1AM or 1AI — Open or poor ground circuit (PCM terminal 1E, 1F or 1G) — Poor connection of vehicle body ground • Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
11	Attempt to start the engine at part throttle. Does the engine run smoothly at part throttle.	Yes	Inspect the electronic throttle control system operation. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
12	Connect the M-MDS to the DLC-2. Access the RPM PID using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Is the RPM PID indicating the engine speed during engine cranking?	Yes	Go to the next step.
		No	Inspect the following: <ul style="list-style-type: none"> • Open or short circuit in CKP sensor • Open or short circuit between CKP sensor terminal A and body ground • Open or short circuit between CKP sensor terminal B and PCM terminal 2W • Open or short circuit between CKP sensor terminal C and PCM terminal 2AQ • CKP sensor and related wiring harness Repair or replace the malfunctioning part according to the inspection result. <ul style="list-style-type: none"> • If CKP sensor and wiring harness are normal: <ul style="list-style-type: none"> — Go to the next step.

01-03A

SYMPTOM TROUBLESHOOTING [LF, L5]

STEP	INSPECTION	RESULTS	ACTION
13	Visually inspect the CKP sensor and teeth of the crankshaft pulley. Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
14	Inspect the ignition coil related wiring harness condition (intermittent open or short circuit) for all cylinders. (See 01-18A-2 IGNITION COIL INSPECTION [LF, L5].) Is there any malfunction?	Yes	Repair the suspected wiring harnesses.
		No	Go to the next step.
15	Inspect the spark plug condition. (See 01-18A-3 SPARK PLUG INSPECTION [LF, L5].) Is the spark plug wet, covered with carbon or grayish white?	Yes	Spark plug is wet or covered with carbon: <ul style="list-style-type: none"> Inspect for fuel leakage from fuel injector. Spark plug is grayish white: <ul style="list-style-type: none"> Inspect the fuel injector for clogging.
		No	Install the spark plugs on original cylinders. Go to the next step.
16	Perform the spark test. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) Is a strong blue spark visible at each cylinder?	Yes	Go to the next step. <ul style="list-style-type: none"> If a symptom occurs with the A/C on: <ul style="list-style-type: none"> Go to Step 20.
		No	Repair or replace the malfunctioning part according to the inspection result.
17	Visually inspect the exhaust system part. (See 01-15A-1 EXHAUST SYSTEM INSPECTION [LF, L5].) Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
18	Inspect the fuel line pressure. (See 01-14A-6 FUEL LINE PRESSURE INSPECTION [LF, L5].) Is there any malfunction?	Yes	Zero or low: <ul style="list-style-type: none"> Inspect the fuel pump relay and the fuel pump circuit. Inspect the fuel line for clogging. <ul style="list-style-type: none"> If there is a malfunction: <ul style="list-style-type: none"> Repair or replace the malfunctioning part according to the inspection result. If there is no malfunction: <ul style="list-style-type: none"> Replace the fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/ INSTALLATION [LF, L5].) High: <ul style="list-style-type: none"> Replace the fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/ INSTALLATION [LF, L5].)
		No	Go to the next step.
19	Visually inspect for fuel leakage at the fuel injector O-ring and fuel line. Is the fuel line pressure held after the ignition is off?	Yes	Go to the next step.
		No	Inspect the fuel injector. (See 01-14A-21 FUEL INJECTOR INSPECTION [LF, L5].) <ul style="list-style-type: none"> If the fuel injector has malfunction: <ul style="list-style-type: none"> Replace the fuel injector. (See 01-14A-19 FUEL INJECTOR REMOVAL/ INSTALLATION [LF, L5].) If the fuel injector is normal: <ul style="list-style-type: none"> Replace the fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/ INSTALLATION [LF, L5].)
20	<p>Note</p> <ul style="list-style-type: none"> Following test is for stall concerns with the A/C on. If other symptoms exist, go to the next step. <p>Connect pressure gauges to the A/C low side and high side pressure lines. Turn the A/C on and measure the low side and high side pressures. Are the pressures within the specifications? (See 07-10-6 REFRIGERANT PRESSURE CHECK.)</p>	Yes	Go to the next step.
		No	If the A/C is always on: <ul style="list-style-type: none"> Go to the symptom troubleshooting "NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY". (See 01-03A-76 NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY [LF, L5].) For other symptoms: <ul style="list-style-type: none"> Inspect the following: <ul style="list-style-type: none"> Refrigerant charging amount Condenser fan operation Repair or replace the malfunctioning part according to the inspection result.

SYMPTOM TROUBLESHOOTING [LF, L5]

STEP	INSPECTION	RESULTS	ACTION
21	Disconnect the vacuum hose between the purge solenoid valve and the intake manifold from the purge solenoid valve side. Plug the open end of the vacuum hose. Switch the ignition to start. Is the engine stall now eliminated?	Yes	Inspect if the purge solenoid valve is stuck open. (See 01-16A-8 PURGE SOLENOID VALVE INSPECTION [LF, L5].) Inspect the evaporative emission control system. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
22	Is air leakage felt or heard at the intake air system components while racing the engine to higher speed?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
23	Inspect the engine condition while tapping the EGR valve housing. Does the engine condition improve?	Yes	Replace the EGR valve. (See 01-16A-9 EGR VALVE REMOVAL/ INSTALLATION [LF, L5].)
		No	Go to the next step.
24	Inspect the variable valve timing control system operation. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
25	Is the engine compression correct? (See 01-10A-17 COMPRESSION INSPECTION [LF, L5].)	Yes	Go to the next step.
		No	Inspect for causes.
26	Inspect the PCV valve. (See 01-16A-10 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [LF, L5].) Is there any malfunction?	Yes	Replace the PCV valve. (See 01-16A-9 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/ INSTALLATION [LF, L5].)
		No	Inspect the valve timing. (See 01-10A-18 VARIABLE VALVE TIMING ACTUATOR INSPECTION [LF, L5].) Repair or replace the malfunctioning part according to the inspection result.
27	<ul style="list-style-type: none"> • Verify test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. (See 01-03A-4 SYMPTOM DIAGNOSTIC INDEX [LF, L5].) — If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information perform repair or diagnosis. <ul style="list-style-type: none"> • If the vehicle repaired, troubleshooting is completed. • If the vehicle not repaired or additional diagnostic information not available, reprogram the PCM if a later calibration is available. Retest. 		

01-03A

SYMPTOM TROUBLESHOOTING [LF, L5]

NO.6 CRANKS NORMALLY BUT WILL NOT START [LF, L5]

id010397801200

6	CRANKS NORMALLY BUT WILL NOT START
DESCRIPTION	<ul style="list-style-type: none"> • The starter cranks engine at normal speed but engine will not run. • Refer to symptom troubleshooting "No.5 ENGINE STALLS" if this symptom appears after engine stall. • Fuel is in tank. • Battery is in normal condition.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Coil antenna connector or terminals malfunction • Instrument cluster and related wiring harness malfunction • Immobilizer system malfunction • Coil antenna and related wiring harness • Wiring harness between the following terminals and related connectors malfunction: <ul style="list-style-type: none"> — PCM terminal 1AM—Instrument cluster terminal 2B — PCM terminal 1AI—Instrument cluster terminal 2D • Vacuum leakage • External fuel shut off or accessory • Poor fuel quality • Air leakage from intake air system • Intake air system restriction • Proper sealing of intake manifold and components attached to intake manifold: EGR valve • Ignition wiring malfunction • Electrical connector disconnection • Fuse malfunction • Improper operation of electronic throttle control system • APP sensor and related wiring harness malfunction • TP sensor and related wiring harness malfunction • PCM continuous memory DTC is stored • Improper operation of electronic throttle control system • CKP sensor and related wiring harness malfunction • CKP sensor and teeth of crankshaft pulley malfunction • Ignition coil and related wiring harness malfunction • Spark plug malfunction • Exhaust system part malfunction • Excessive fuel pressure • Fuel leakage from fuel system • Purge solenoid valve malfunction • Evaporative emission control system malfunction • Air leakage from intake air system • EGR valve malfunction • Improper operation of variable valve timing control system • Low engine compression <p>Warning The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:</p> <ul style="list-style-type: none"> • Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. • Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual. (See 01-14A-4 BEFORE SERVICE PRECAUTION [LF, L5].) (See 01-14A-5 AFTER SERVICE PRECAUTION [LF, L5].) <p>Caution</p> <ul style="list-style-type: none"> • Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and the quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.

SYMPTOM TROUBLESHOOTING [LF, L5]

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Connect the M-MDS to the DLC-2. Do the following conditions appear? <ul style="list-style-type: none"> The engine is not completely started. Immobilizer system DTC B10DA:62 is displayed. 	Yes	Both conditions appear: <ul style="list-style-type: none"> Go to Step 3.
		No	Either condition or other one appears: <ul style="list-style-type: none"> Go to the next step.
2	Does the engine stall after approx. 2 s since the engine is started?	Yes	Go to the next step.
		No	Immobilizer system is normal: <ul style="list-style-type: none"> Go to Step 8.
3	Inspect the coil antenna connector and terminals for poor connection (such as damaged/pulled-out pins, corrosion). Is there any malfunction?	Yes	Repair or replace the connector or terminals. Return to Step 2.
		No	Go to the next step.
4	Does the security light flash?	Yes	Go to the next step.
		No	Inspect the instrument cluster and related wiring harness. (See 09-22-8 INSTRUMENT CLUSTER INSPECTION.) Repair or replace the malfunctioning part according to the inspection result.
5	Connect the M-MDS to DLC-2. Perform the immobilizer system DTC inspection. (See 09-02C-2 DTC INSPECTION [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) (See 09-02B-2 DTC INSPECTION [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)].) Are any DTCs present?	Yes	Go to the appropriate DTC inspection. (See 09-02C-4 DTC TABLE [IMMOBILIZER SYSTEM (KEYLESS ENTRY SYSTEM)].) (See 09-02B-4 DTC TABLE [IMMOBILIZER SYSTEM (ADVANCED KEYLESS ENTRY AND PUSH BUTTON START SYSTEM)].)
		No	Go to the next step.
6	Inspect the wiring harness between the following terminals and related connectors: <ul style="list-style-type: none"> Vehicles without advanced keyless entry and push button start system: <ul style="list-style-type: none"> Coil antenna terminal A—Instrument cluster terminal 2Q Coil antenna terminal B—Instrument cluster terminal 2M PCM terminal 1AM—Instrument cluster terminal 2B PCM terminal 1AI—Instrument cluster terminal 2D Vehicles with advanced keyless entry and push button start system: <ul style="list-style-type: none"> Coil antenna terminal A—Keyless control module terminal 2H Coil antenna terminal B—Keyless control module terminal 2G PCM terminal 1AM—Keyless control module terminal 2K PCM terminal 1AI—Keyless control module terminal 2L Is there any malfunction?	Yes	Repair or replace the suspected wiring harness and connector.
		No	Vehicles without advanced keyless entry and push button start system: <ul style="list-style-type: none"> Go to Step 8. Vehicles with advanced keyless entry and push button start system: <ul style="list-style-type: none"> Go to the next step.
7	Inspect the wiring harness between the following terminals and connectors: <ul style="list-style-type: none"> PCM terminal 1AM—Instrument cluster terminal 2B PCM terminal 1AI—Instrument cluster terminal 2D Is there any malfunction?	Yes	Repair or replace the suspected wiring harness and connector.
		No	Go to the next step.

01-03A

SYMPTOM TROUBLESHOOTING [LF, L5]

STEP	INSPECTION	RESULTS	ACTION
8	Verify the following: <ul style="list-style-type: none"> • Vacuum connection • External fuel shut off or accessory (such as kill switch, alarm) • Fuel quality: proper octane, contamination, winter/summer blend • No air leakage from intake air system • Intake air system restriction (such as air cleaner element, fresh air duct) • Proper sealing of intake manifold and components attached to intake manifold: EGR valve • Ignition wiring • Electrical connections • Fuses • Smooth operation of throttle valve Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result. Repeat Step 8.
		No	Go to the next step.
9	Access the APP1 and APP2 PIDs using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Crank the engine with the accelerator pedal released. Are the APP1 and APP2 PIDs indicating that the accelerator pedal is in the released position?	Yes	Go to the next step.
		No	Inspect the following: <ul style="list-style-type: none"> • APP sensor (See 01-40A-26 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [LF, L5].) • Wiring harness between the following terminals and related connectors: <ul style="list-style-type: none"> — APP sensor terminal A—PCM terminal 1AE — APP sensor terminal B—PCM terminal 1AP — APP sensor terminal C—PCM terminal 1AJ — APP sensor terminal D—Engine ground — APP sensor terminal E—PCM terminal 1X — APP sensor terminal F—Main relay terminal C Repair or replace the malfunctioning part according to the inspection result.
10	Access the TP_REL PID using M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Crank the engine with the accelerator pedal released. Is the TP_REL PID indicating that the accelerator pedal is in the released position?	Yes	Go to the next step.
		No	Inspect the following: <ul style="list-style-type: none"> • TP sensor (See 01-40A-26 THROTTLE POSITION (TP) SENSOR INSPECTION [LF, L5].) • Wiring harness between the following terminals and related connectors: <ul style="list-style-type: none"> — TP sensor terminal A—PCM terminal 2AK — TP sensor terminal B—PCM terminal 2AR — TP sensor terminal C—PCM terminal 2AL — TP sensor terminal D—PCM terminal 2AN Repair or replace the malfunctioning part according to the inspection result.
11	Connect the M-MDS to the DLC-2. Perform the KOEO/KOER self-test using the M-MDS. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) <ul style="list-style-type: none"> • If the engine stalls: <ul style="list-style-type: none"> — Perform the KOEO self-test using the M-MDS. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].) Are there any continuous memory DTCs present?	Yes	Continuous memory DTC is displayed: <ul style="list-style-type: none"> • Go to the appropriate DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].) Communication error message is displayed: <ul style="list-style-type: none"> • Inspect the following: <ul style="list-style-type: none"> — Open circuit in the wiring harness between main relay terminal B and PCM terminal 1Q — Open circuit in the wiring harness between main relay terminal C and PCM terminal 1A — Main relay (stuck open) — Open or short circuit in the wiring harness between DLC-2 and PCM terminals 1AM or 1AI — Open or poor ground circuit (PCM terminal 1E, 1F or 1G) — Poor connection of vehicle body ground • Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
12	Does the engine start with the throttle valve closed?	Yes	Go to Step 27.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [LF, L5]

STEP	INSPECTION	RESULTS	ACTION
13	Will the engine start and run smoothly at part throttle?	Yes	Inspect the electronic throttle control system operation. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
14	Connect the M-MDS to the DLC-2. Access RPM PID using the M-MDS. Is RPM PID indicating the engine speed when cranking the engine?	Yes	Go to the next step.
		No	Inspect the following: <ul style="list-style-type: none"> • Open or short circuit in CKP sensor • Open or short circuit between CKP sensor terminal A and body ground • Open or short circuit between CKP sensor terminal B and PCM terminal 2W • Open or short circuit between CKP sensor terminal C and PCM terminal 2AQ • CKP sensor and related wiring harness Repair or replace the malfunctioning part according to the inspection result. <ul style="list-style-type: none"> • If CKP sensor and wiring harness are normal: <ul style="list-style-type: none"> — Go to the next step.
15	Visually inspect the CKP sensor and teeth of the crankshaft pulley. Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
16	Inspect the ignition coil related wiring harness condition (intermittent open or short circuit) for all cylinders. (See 01-18A-2 IGNITION COIL INSPECTION [LF, L5].) Is there any malfunction?	Yes	Repair the suspected wiring harnesses.
		No	Go to the next step.
17	Inspect the spark plug condition. (See 01-18A-3 SPARK PLUG INSPECTION [LF, L5].) Is the spark plug wet, covered with carbon or grayish white?	Yes	Spark plug is wet or covered with carbon: <ul style="list-style-type: none"> • Inspect for fuel leakage from fuel injector. Spark plug is grayish white: <ul style="list-style-type: none"> • Inspect the fuel injector for clogging.
		No	Install the spark plugs on original cylinders. Go to the next step.
18	Perform the spark test. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to spark test result.
19	Visually inspect the exhaust system part. (See 01-15A-1 EXHAUST SYSTEM INSPECTION [LF, L5].) Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
20	Inspect the fuel line pressure. (See 01-14A-6 FUEL LINE PRESSURE INSPECTION [LF, L5].) Is there any malfunction?	Yes	Zero or low: <ul style="list-style-type: none"> • Inspect the fuel pump relay and the fuel pump circuit. • Inspect the fuel line for clogging. <ul style="list-style-type: none"> — If there is a malfunction: <ul style="list-style-type: none"> • Repair or replace the malfunctioning part according to the inspection result. — If there is no malfunction: <ul style="list-style-type: none"> • Replace the fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].) High: <ul style="list-style-type: none"> • Replace the fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.

01-03A

SYMPTOM TROUBLESHOOTING [LF, L5]

STEP	INSPECTION	RESULTS	ACTION
21	Visually inspect for fuel leakage at the fuel injector O-ring and fuel line. Is the fuel line pressure held after the ignition is off?	Yes	Go to the next step.
		No	Inspect the fuel injector. (See 01-14A-21 FUEL INJECTOR INSPECTION [LF, L5].) <ul style="list-style-type: none"> • If the fuel injector has malfunction: <ul style="list-style-type: none"> — Replace the fuel injector. (See 01-14A-19 FUEL INJECTOR REMOVAL/INSTALLATION [LF, L5].) • If the fuel injector is normal: <ul style="list-style-type: none"> — Replace the fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].)
22	Disconnect the vacuum hose between the purge solenoid valve and the intake manifold from the purge solenoid valve side. Plug the open end of the vacuum hose. Switch the ignition to start. Is the engine stall now eliminated?	Yes	Inspect if the purge solenoid valve is stuck open. (See 01-16A-8 PURGE SOLENOID VALVE INSPECTION [LF, L5].) Inspect the evaporative emission control system. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
23	Is air leakage felt or heard at the intake air system components while racing the engine to higher speed?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
24	Inspect the engine condition while tapping the EGR valve housing. Does the engine condition improve?	Yes	Replace the EGR valve. (See 01-16A-9 EGR VALVE REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
25	Inspect the variable valve timing control system operation. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) Does the variable valve timing control system operate properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection result.
26	Is the engine compression correct? (See 01-10A-17 COMPRESSION INSPECTION [LF, L5].)	Yes	Inspect the valve timing. (See 01-10A-18 VARIABLE VALVE TIMING ACTUATOR INSPECTION [LF, L5].)
		No	Inspect for causes.
27	Verify test results. <ul style="list-style-type: none"> • If normal, return to the diagnostic index to service any additional symptoms. (See 01-03A-4 SYMPTOM DIAGNOSTIC INDEX [LF, L5].) • If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> — If the vehicle repaired, troubleshooting is completed. — If the vehicle not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Connect the M-MDS to the DLC-2. Switch the ignition to ON (engine off). Perform the PCM DTC inspection using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Are any DTCs present?	Yes	Go to the appropriate DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	Go to the next step.
2	Access the ECT and ECT2 PIDs using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Start the engine and warm it up to ECT1 and ECT2 PIDs are above 90 °C {194 °F} . Does the ECT and ECT2 PIDs increasing dull at thermostat initial opening temperature? <ul style="list-style-type: none"> • Thermostat initial opening temperature: 80—84 °C {176—183 °F} 	Yes	Inspect characteristic of the ECT sensor No.1, No.2. (See 01-40A-24 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [LF, L5].) Repair or replace the malfunctioning part according to the inspection result.
		No	Thermostat operation is normal: <ul style="list-style-type: none"> • Go to the next step.
3	Is the throttle body free of contamination?	Yes	Inspect for air leakage from the intake air system components while racing the engine to higher speed. Repair or replace the malfunctioning part according to the inspection result.
		No	Clean or replace the throttle body. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
4	<ul style="list-style-type: none"> • Verify test results. <ul style="list-style-type: none"> — If normal, return to diagnostic index to service any additional symptoms. (See 01-03A-4 SYMPTOM DIAGNOSTIC INDEX [LF, L5].) — If a malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

SYMPTOM TROUBLESHOOTING [LF, L5]

NO.8 ENGINE RUNS ROUGH/ROLLING IDLE [LF, L5]

id010397801400

8	ENGINE RUNS ROUGH/ROLLING IDLE
DESCRIPTION	<ul style="list-style-type: none"> • Engine speed fluctuates between specified idle speed and lower speed, and engine shakes excessively. • Idle speed is too slow and engine shakes excessively.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Idle learning of electronic throttle control system is not completed • Electrical connector disconnection • External fuel shut off or accessory • Poor fuel quality • Fuse malfunction • Ignition wiring malfunction • Air leakage from intake air system • PCM ground circuit (1E, 1F, 1G or 1BE) malfunction • EGR valve malfunction • Improper operation of electronic throttle control system • PCM DTC is stored • MAF sensor and related wiring harness malfunction • Improper operation of A/C system • CKP sensor and teeth of crankshaft pulley malfunction • Ignition coil and related wiring harness malfunction • Spark plug malfunction • Improper operation of electronic throttle control system • Excessive fuel pressure • Fuel leakage from fuel system • Purge solenoid valve malfunction • Evaporative emission control system malfunction • CMP sensor and teeth of camshaft malfunction • EGR valve malfunction • Improper operation of variable valve timing control system • Low engine compression • PCV valve malfunction <p>Warning The following troubleshooting flow chart contains fuel system diagnosis and repair procedures. Read the following warnings before servicing the fuel system:</p> <ul style="list-style-type: none"> • Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. • Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual. (See 01-14A-4 BEFORE SERVICE PRECAUTION [LF, L5].) (See 01-14A-5 AFTER SERVICE PRECAUTION [LF, L5].) <p>Caution</p> <ul style="list-style-type: none"> • Disconnecting/connecting the quick release connector without cleaning it may cause damage to the fuel pipe and the quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.

SYMPTOM TROUBLESHOOTING [LF, L5]

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Start the engine and warm it up completely. Idle the engine for 5 min or more . Does the symptom disappear?	Yes	Symptom troubleshooting is completed (cause of this symptom is that the idle learning for electronic throttle control system is not completed).
		No	Go to the next step.
2	Verify the following: <ul style="list-style-type: none"> • Electrical connections • External fuel shut off or accessory (such as kill switch, alarm) • Fuel quality (such as proper octane, contamination, winter/summer blend) • Fuses • Ignition wiring • No air leakage from intake air system • PCM ground circuit (1E, 1F, 1G or 1BE) • Proper sealing of intake manifold and components attached to intake manifold: EGR valve • Smooth operation of throttle valve Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result. Repeat Step 2.
		No	Go to the next step.
3	Connect the M-MDS to the DLC-2. Switch the ignition to ON (engine off). Perform the PCM DTC inspection using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Are any DTCs present?	Yes	Go to the appropriate DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	Go to the next step.
4	Is the engine overheating?	Yes	Go to the symptom troubleshooting "NO.17 COOLING SYSTEM CONCERNS-OVERHEATING". (See 01-03A-64 NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [LF, L5].)
		No	Go to the next step.
5	Connect the M-MDS to the DLC-2. Access the MAF PID using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Drive the vehicle during monitoring the PID. Is the MAF PID within the specification?	Yes	Go to the next step.
		No	Inspect for an open or short circuit in the MAF sensor and related wiring harness. (See 01-40A-25 MASS AIR FLOW (MAF) SENSOR INSPECTION [LF, L5].) Repair or replace the malfunctioning part according to the inspection result.
6	<p>Note</p> <ul style="list-style-type: none"> • The following test is for engine running at rough idle with A/C on. If other symptoms exist, go to the next step. Connect a pressure gauge to the A/C low and high pressure side lines. Start the engine and idle it. Turn the A/C switch on. Measure the low side and high side pressures. Are the pressures within the specifications? (See 07-10-6 REFRIGERANT PRESSURE CHECK.)	Yes	Go to the next step.
		No	If the A/C is always on: <ul style="list-style-type: none"> • Go to the symptom troubleshooting "NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY". (See 01-03A-76 NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY [LF, L5].) For other symptoms: <ul style="list-style-type: none"> • Inspect the following: <ul style="list-style-type: none"> — Refrigerant charging amount — Condenser fan operation • Repair or replace the malfunctioning part according to the inspection result.
7	Visually inspect the CKP sensor and teeth of the crankshaft pulley. Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
8	Inspect the ignition coil related wiring harness condition (intermittent open or short circuit) for all cylinders. Is there any malfunction?	Yes	Repair or replace the suspected wiring harness.
		No	Go to the next step.

01-03A

SYMPTOM TROUBLESHOOTING [LF, L5]

STEP	INSPECTION	RESULTS	ACTION
9	Inspect the spark plug condition. (See 01-18A-3 SPARK PLUG INSPECTION [LF, L5].) Is the spark plug wet, covered with carbon or grayish white?	Yes	Spark plug is wet or covered with carbon: <ul style="list-style-type: none"> Inspect for fuel leakage from fuel injector. Spark plug is grayish white: <ul style="list-style-type: none"> Inspect the fuel injector for clogging.
		No	Install the spark plugs on original cylinders. Go to the next step.
10	Perform the electronic throttle control system operation inspection. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
11	Inspect the fuel line pressure. (See 01-14A-6 FUEL LINE PRESSURE INSPECTION [LF, L5].) Is there any malfunction?	Yes	Zero or low: <ul style="list-style-type: none"> Inspect the fuel pump relay and the fuel pump circuit. Inspect the fuel line for clogging. <ul style="list-style-type: none"> If there is a malfunction: <ul style="list-style-type: none"> Repair or replace the malfunctioning part according to the inspection result. If there is no malfunction: <ul style="list-style-type: none"> Replace the fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].) High: <ul style="list-style-type: none"> Replace the fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
12	Visually inspect for fuel leakage at the fuel injector O-ring and fuel line. Is the fuel line pressure held after the ignition is off?	Yes	Go to the next step.
		No	Inspect the fuel injector. (See 01-14A-21 FUEL INJECTOR INSPECTION [LF, L5].) <ul style="list-style-type: none"> If the fuel injector has malfunction: <ul style="list-style-type: none"> Replace the fuel injector. (See 01-14A-19 FUEL INJECTOR REMOVAL/INSTALLATION [LF, L5].) If the fuel injector is normal: <ul style="list-style-type: none"> Replace the fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].)
13	Connect the M-MDS to the DLC-2. Start the engine and idle it. Access the LONGFT1 PID using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Measure the LONGFT1 PID at idle. Is the PID value between -14% and +14% ?	Yes	Go to the next step.
		No	Less than specification (too rich): <ul style="list-style-type: none"> Inspect the EVAP control system. Greater than specification (too lean): <ul style="list-style-type: none"> Inspect for air leakage at the intake air system components. Repair or replace the malfunctioning part according to the inspection result. <ul style="list-style-type: none"> If the system is normal: <ul style="list-style-type: none"> Go to the next step.
14	Disconnect the vacuum hose between the purge solenoid valve and the intake manifold from the purge solenoid valve side. Plug the open end of the vacuum hose. Switch the ignition to start. Is the engine stall now eliminated?	Yes	Inspect if the purge solenoid valve is stuck open. (See 01-16A-8 PURGE SOLENOID VALVE INSPECTION [LF, L5].) Inspect the evaporative emission control system. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
15	Visually inspect the exhaust system part. (See 01-15A-1 EXHAUST SYSTEM INSPECTION [LF, L5].) Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
16	Visually inspect the CMP sensor and teeth of the camshaft. Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [LF, L5]

STEP	INSPECTION	RESULTS	ACTION
17	Inspect the engine condition while tapping the EGR valve housing. Does the engine condition improve?	Yes	Replace the EGR valve. (See 01-16A-9 EGR VALVE REMOVAL/ INSTALLATION [LF, L5].)
		No	Go to the next step.
18	Inspect the variable valve timing control system operation. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
19	Is the engine compression correct? (See 01-10A-17 COMPRESSION INSPECTION [LF, L5].)	Yes	Go to the next step.
		No	Inspect for causes.
20	Inspect the PCV valve. (See 01-16A-10 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [LF, L5].) Is there any malfunction?	Yes	Replace the PCV valve. (See 01-16A-9 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/ INSTALLATION [LF, L5].)
		No	Inspect the valve timing. (See 01-10A-18 VARIABLE VALVE TIMING ACTUATOR INSPECTION [LF, L5].)
21	<ul style="list-style-type: none"> • Verify test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. (See 01-03A-4 SYMPTOM DIAGNOSTIC INDEX [LF, L5].) — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

01-03A

NO.9 FAST IDLE/RUNS ON [LF, L5]

id010397801500

9	FAST IDLE/RUNS ON
DESCRIPTION	<ul style="list-style-type: none"> • Engine speed continues at fast idle after warm-up. • Engine runs after the ignition is off.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • ECT sensor No.1, No.2 malfunction • A/C switch malfunction • Refrigerant pressure sensor malfunction • Evaporator temperature sensor malfunction • FAN switch malfunction • Communication between climate control unit and instrument cluster • Communication between instrument cluster and PCM • CPP switch malfunction (MTX) • Neutral switch malfunction (MTX) • TR switch malfunction (ATX) • Communication between TCM and PCM (ATX) • Improper operation of electronic throttle control system • APP sensor malfunction

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Connect the M-MDS to the DLC-2. Access ECT1 and ECT2 PIDs using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Start and warm up the engine to normal operating temperature. Are the ECT1 and ECT2 PIDs between 82—112°C {180—234°F} ?	Yes	Go to the next step.
		No	ECT1 and ECT2 PIDs are higher than 112 °C {234 °F} : <ul style="list-style-type: none"> • Go to the symptom troubleshooting "NO.17 COOLING SYSTEM CONCERNS-OVERHEATING". (See 01-03A-64 NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [LF, L5].) ECT1 and ECT2 PIDs are less than 82 °C {180 °F} : <ul style="list-style-type: none"> • Go to the symptom troubleshooting "NO.18 COOLING SYSTEM CONCERNS-RUNS COLD". (See 01-03A-67 NO.18 COOLING SYSTEM CONCERNS-RUNS COLD [LF, L5].)

SYMPTOM TROUBLESHOOTING [LF, L5]

STEP	INSPECTION	RESULTS	ACTION
2	Connect the M-MDS to the DLC-2. Switch the ignition to ON (engine off). Perform the PCM DTC inspection using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Are any DTCs present?	Yes	Go to the appropriate DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	Go to the next step.
3	Connect the M-MDS to the DLC-2 Access the AC_REQ, CPP/, CPP/PNP and TR PIDs using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Are PID values normal?	Yes	Go to the next step.
		No	<p>AC_REQ PID is not specified:</p> <ul style="list-style-type: none"> Inspect the A/C switch, refrigerant pressure sensor, evaporator temperature sensor and fan switch. (See 07-40B-15 EVAPORATOR TEMPERATURE SENSOR INSPECTION [MANUAL AIR CONDITIONER].) (See 07-40A-24 EVAPORATOR TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) Inspect communication between climate control unit and instrument cluster. Inspect communication between instrument cluster and PCM. <p>CPP PID is not specified (MTX):</p> <ul style="list-style-type: none"> Inspect the CPP switch. (See 01-40A-22 CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION [LF, L5].) <p>CPP/PNP PID is not specified (MTX):</p> <ul style="list-style-type: none"> Inspect the neutral switch. (See 01-40A-23 NEUTRAL SWITCH INSPECTION [LF, L5].) <p>TR PID is not specified (ATX):</p> <ul style="list-style-type: none"> Inspect the neutral switch. (See 01-40A-23 NEUTRAL SWITCH INSPECTION [LF, L5].) Inspect the TR switch. (See 05-17-14 TRANSAXLE RANGE (TR) SWITCH INSPECTION [FS5A-EL].) Inspect communication between TCM and PCM. <p>Repair or replace the malfunctioning part according to the inspection result.</p>
4	Is there air leakage felt or heard at the intake air system components while racing the engine to higher speed?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	<p>Inspect the following:</p> <ul style="list-style-type: none"> Electronic throttle control system operation (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) APP sensor (See 01-40A-26 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [LF, L5].) <p>Repair or replace the malfunctioning part according to the inspection result.</p>
5	<ul style="list-style-type: none"> Verify test results. <ul style="list-style-type: none"> If normal, return to the diagnostic index to service any additional symptoms. (See 01-03A-4 SYMPTOM DIAGNOSTIC INDEX [LF, L5].) If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> If the vehicle is repaired, troubleshooting is completed. If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

SYMPTOM TROUBLESHOOTING [LF, L5]

NO.10 LOW IDLE/STALLS DURING DECELERATION [LF, L5]

id010397801600

10	LOW IDLE/STALLS DURING DECELERATION
DESCRIPTION	<ul style="list-style-type: none"> • Engine stops unexpectedly at the beginning of deceleration or recovery from deceleration.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • ECT sensor No.1, No.2 malfunction • Improper operation of A/C magnetic clutch • Vacuum leakage • Air leakage from intake air system • PCM DTC is stored • Improper operation of electronic throttle control system • Improper operation of evaporative emission control system • APP sensor malfunction • TP sensor malfunction • MAF sensor malfunction • VSS malfunction • A/C switch malfunction • Refrigerant pressure sensor malfunction • Evaporator temperature sensor malfunction • FAN switch malfunction • Communication between climate control unit and instrument cluster • Communication between instrument cluster and PCM • CPP switch malfunction (MTX) • Neutral switch malfunction (MTX) • TR switch malfunction (ATX) • Communication between TCM and PCM (ATX)

01-03A

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Does the engine idle roughly?	Yes	Go to the symptom troubleshooting "NO.8 ENGINE RUNS ROUGH/ROLLING IDLE". (See 01-03A-44 NO.8 ENGINE RUNS ROUGH/ROLLING IDLE [LF, L5].)
		No	Go to the next step.
2	Turn off the A/C switch and fan switch. Does the A/C magnetic clutch engage?	Yes	Go to the symptom troubleshooting "NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY." (See 01-03A-76 NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY [LF, L5].)
		No	Go to the next step.
3	Verify the following: <ul style="list-style-type: none"> • Proper routing of and no damage to the vacuum lines • No air leakage from the intake air system Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
4	Connect the M-MDS to the DLC-2. Switch the ignition to ON (engine off). Perform the PCM DTC inspection using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Are any DTCs present?	Yes	Go to the appropriate DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	Go to the next step.
5	Perform the electronic throttle control system operation inspection. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
6	Disconnect the vacuum hose between the purge solenoid valve and the intake manifold from purge solenoid valve side. Plug the open end of the vacuum hose. Drive the vehicle. Does the engine condition improve?	Yes	Inspect the evaporative emission control system. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5]) Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [LF, L5]

STEP	INSPECTION	RESULTS	ACTION
7	Connect the M-MDS to the DLC-2 Access the APP1, APP2, TP_REL, MAF and VSS PIDs using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Are PID values normal?	Yes No	Go to the next step. APP1, APP2 PIDs are not specified: <ul style="list-style-type: none"> • Inspect the APP sensor. (See 01-40A-26 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [LF, L5].) TP_REL is not specified: <ul style="list-style-type: none"> • Inspect the TP sensor. (See 01-40A-26 THROTTLE POSITION (TP) SENSOR INSPECTION [LF, L5].) MAF PID is not specified: <ul style="list-style-type: none"> • Inspect the MAF sensor. (See 01-40A-25 MASS AIR FLOW (MAF) SENSOR INSPECTION [LF, L5].) VSS PID is not specified: <ul style="list-style-type: none"> • Inspect the VSS. (See 05-17-27 VEHICLE SPEED SENSOR (VSS) INSPECTION [FS5A-EL].) Repair or replace the malfunctioning part according to the inspection result.
8	Connect the M-MDS to the DLC-2 Access the AC_REQ, CPP/, CPP/PNP and TR PIDs using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Are PID values normal?	Yes No	Go to the next step. AC_REQ PID is not specified: <ul style="list-style-type: none"> • Inspect the A/C switch, refrigerant pressure sensor, evaporator temperature sensor and fan switch. (See 07-40B-15 EVAPORATOR TEMPERATURE SENSOR INSPECTION [MANUAL AIR CONDITIONER].) • Inspect the evaporator temperature sensor. (See 07-40A-24 EVAPORATOR TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) Inspect communication between climate control unit and instrument cluster. Inspect communication between instrument cluster and PCM. CPP PID is not specified (MTX): <ul style="list-style-type: none"> • Inspect the CPP switch. (See 01-40A-22 CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION [LF, L5].) CPP/PNP PID is not specified (MTX): <ul style="list-style-type: none"> • Inspect the neutral switch. (See 01-40A-23 NEUTRAL SWITCH INSPECTION [LF, L5].) TR PID is not specified (ATX): <ul style="list-style-type: none"> • Inspect the neutral switch. (See 01-40A-23 NEUTRAL SWITCH INSPECTION [LF, L5].) • Inspect the TR switch. (See 05-17-14 TRANSAXLE RANGE (TR) SWITCH INSPECTION [FS5A-EL].) Inspect communication between TCM and PCM. Repair or replace the malfunctioning part according to the inspection result.
9	<ul style="list-style-type: none"> • Verify test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. (See 01-03A-4 SYMPTOM DIAGNOSTIC INDEX [LF, L5].) — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

SYMPTOM TROUBLESHOOTING [LF, L5]

NO.11 ENGINE STALLS/QUITS, ENGINE RUNS ROUGH, MISSES, BUCK/JERK, HESITATION/STUMBLE, SURGES [LF, L5]

id010397801700

01-03A

11	<p>ENGINE STALLS/QUITS—ACCELERATION/CRUISE ENGINE RUNS ROUGH—ACCELERATION/CRUISE MISSES—ACCELERATION/CRUISE BUCK/JERK—ACCELERATION/CRUISE/DECELERATION HESITATION/STUMBLE—ACCELERATION SURGES—ACCELERATION/CRUISE</p>
DESCRIPTION	<ul style="list-style-type: none"> • Engine stops unexpectedly at the beginning of acceleration or during acceleration. • Engine stops unexpectedly while cruising. • Engine speed fluctuates during acceleration or cruising. • Engine misses during acceleration or cruising. • Vehicle bucks/jerks during acceleration, cruising, or deceleration. • Momentary pause at beginning of acceleration or during acceleration. • Momentary minor irregularity in engine output.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Air cleaner restriction • Electrical connector disconnection • Poor fuel quality • Ignition wiring malfunction • Air leakage from intake air system • Intake air system restriction • EGR valve malfunction • Improper operation of electronic throttle control system • Vacuum leakage • PCM DTC is stored • APP sensor malfunction • TP sensor malfunction • CKP sensor and related wiring harness malfunction • MAF sensor and related wiring harness malfunction • Battery power supply circuit malfunction • VSS and related wiring harness malfunction • CKP sensor and teeth of crankshaft pulley malfunction • Spark plug malfunction • Improper operation of electronic throttle control system • Exhaust system part malfunction • Excessive fuel pressure • Fuel leakage from fuel system • Improper operation of A/C control system • Improper operation of cruise control system • A/F sensor malfunction • Fuel shut- off valve malfunction • Purge solenoid valve malfunction • Evaporative emission control system malfunction • CMP sensor and teeth of camshaft malfunction • Improper operation of variable valve timing control system • EGR valve malfunction • Low engine compression • PCV valve malfunction <p>Warning The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before servicing the fuel system:</p> <ul style="list-style-type: none"> • Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. • Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual. (See 01-14A-4 BEFORE SERVICE PRECAUTION [LF, L5].) Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.

SYMPTOM TROUBLESHOOTING [LF, L5]

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Verify the following: <ul style="list-style-type: none"> • Air cleaner element • Electrical connections • Fuel quality (such as proper octane, contamination, winter/summer blend) • Ignition wiring • No air leakage from intake air system • No restriction of the intake air system • Proper sealing of intake manifold and components attached to intake manifold: such as EGR valve • Smooth operation of the throttle valve • Vacuum connection Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result. Repeat Step 1.
		No	Go to the next step.
2	Connect the M-MDS to the DLC-2. Switch the ignition to ON (engine off). Perform the PCM DTC inspection using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Are any DTCs present?	Yes	Go to the appropriate DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	Go to the next step.
3	Is the engine overheating?	Yes	Go to the symptom troubleshooting "NO.17 COOLING SYSTEM CONCERNS-OVERHEATING". (See 01-03A-64 NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [LF, L5].)
		No	Go to the next step.
4	Connect the M-MDS to the DLC-2 Access the APP1, APP2, TP_REL, MAF, VPWR and VSS PIDs using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Are PID values normal?	Yes	Go to the next step.
		No	APP1, APP2 PIDs are not specified: <ul style="list-style-type: none"> • Inspect if the output signal from the APP sensor changes smoothly. (See 01-40A-26 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [LF, L5].) TP_REL is not specified: <ul style="list-style-type: none"> • Inspect if the output signal from the TP sensor changes smoothly. (See 01-40A-26 THROTTLE POSITION (TP) SENSOR INSPECTION [LF, L5].) RPM_REL is not specified: <ul style="list-style-type: none"> • Inspect the CKP sensor and related wiring harness for vibration or an intermittent open/short circuit. (See 01-40A-32 CRANKSHAFT POSITION (CKP) SENSOR INSPECTION [LF, L5].) MAF PID is not specified: <ul style="list-style-type: none"> • Inspect for an intermittent open circuit of the MAF sensor and the related wiring harness. (See 01-40A-25 MASS AIR FLOW (MAF) SENSOR INSPECTION [LF, L5].) VPWR PID is not specified: <ul style="list-style-type: none"> • Inspect for an intermittent open circuit. VSS PID is not specified: <ul style="list-style-type: none"> • Inspect for an intermittent open circuit in the VSS and related wiring harness. (See 05-17-27 VEHICLE SPEED SENSOR (VSS) INSPECTION [FS5A-EL].) Repair or replace the malfunctioning part according to the inspection result.
5	Visually inspect the CKP sensor and teeth of the crankshaft pulley. Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [LF, L5]

STEP	INSPECTION	RESULTS	ACTION
6	Inspect the spark plug condition. (See 01-18A-3 SPARK PLUG INSPECTION [LF, L5].) Is the spark plug wet, covered with carbon or grayish white?	Yes	Spark plug is wet or covered with carbon: <ul style="list-style-type: none"> Inspect for fuel leakage from fuel injector. Spark plug is grayish white: <ul style="list-style-type: none"> Inspect the fuel injector for clogging. Repair or replace the malfunctioning part according to the inspection result.
		No	Install the spark plugs on original cylinders. Go to the next step.
7	Perform the electronic throttle control system operation inspection. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
8	Visually inspect the exhaust system part. (See 01-15A-1 EXHAUST SYSTEM INSPECTION [LF, L5].) Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
9	Inspect the fuel line pressure. (See 01-14A-6 FUEL LINE PRESSURE INSPECTION [LF, L5].) Is there any malfunction?	Yes	Zero or low: <ul style="list-style-type: none"> Inspect the fuel pump relay and the fuel pump circuit. Inspect the fuel line for clogging. <ul style="list-style-type: none"> If there is a malfunction: <ul style="list-style-type: none"> Repair or replace the malfunctioning part according to the inspection result. If there is no malfunction: <ul style="list-style-type: none"> Replace the fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].) High: <ul style="list-style-type: none"> Replace the fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
10	Visually inspect for fuel leakage at the fuel injector O-ring and fuel line. Is the fuel line pressure held after the ignition is off?	Yes	Go to the next step.
		No	Inspect the fuel injector. (See 01-14A-21 FUEL INJECTOR INSPECTION [LF, L5].) <ul style="list-style-type: none"> If the fuel injector has malfunction: <ul style="list-style-type: none"> Replace the fuel injector. (See 01-14A-19 FUEL INJECTOR REMOVAL/INSTALLATION [LF, L5].) If the fuel injector is normal: <ul style="list-style-type: none"> Replace the fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].)
11	<p>Note</p> <ul style="list-style-type: none"> Following test is for stall concerns with the A/C on. If other symptoms exist, go to the next step. <p>Connect pressure gauges to the A/C low side and high side pressure lines. Turn the A/C on and measure the low side and high side pressures. Are the pressures within the specifications? (See 07-10-6 REFRIGERANT PRESSURE CHECK.)</p>	Yes	Go to the next step.
		No	If the A/C is always on: <ul style="list-style-type: none"> Go to the symptom troubleshooting "NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY". (See 01-03A-76 NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY [LF, L5].) For other symptoms: <ul style="list-style-type: none"> Inspect the following: <ul style="list-style-type: none"> Refrigerant charging amount Condenser fan operation Repair or replace the malfunctioning part according to the inspection result.

01-03A

SYMPTOM TROUBLESHOOTING [LF, L5]

STEP	INSPECTION	RESULTS	ACTION
12	<p>Note</p> <ul style="list-style-type: none"> The following test should be performed for symptoms with the cruise control on. If other symptoms exist, go to the next step. <p>Inspect the cruise control system. (See 01-20A-1 CRUISE CONTROL SWITCH INSPECTION [LF, L5].) Is there any malfunction?</p>	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
13	<p>Inspect the A/F sensor. (See 01-40A-28 AIR FUEL RATIO (A/F) SENSOR INSPECTION [LF, L5].) Is there any malfunction?</p>	Yes	<p>Inspect for followings:</p> <ul style="list-style-type: none"> Exhaust gas leakage between exhaust manifold and A/F sensor Loose installation of A/F sensor <p>If there is no malfunction:</p> <ul style="list-style-type: none"> Replace the A/F sensor. (See 01-40A-27 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [LF, L5].) <p>If there is a malfunction:</p> <ul style="list-style-type: none"> Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
14	<p>Inspect the evaporative hose between the fuel tank and the purge solenoid valve. Does the fuel flow into the evaporative hose?</p>	Yes	<p>Inspect the fuel shut-off valve. (See 01-16A-11 FUEL SHUT-OFF VALVE INSPECTION [LF, L5].) Repair or replace the malfunctioning part according to the inspection result.</p>
		No	Go to the next step.
15	<p>Disconnect the vacuum hose between the purge solenoid valve and the intake manifold from the purge solenoid valve side. Plug the open end of the vacuum hose. Switch the ignition to start. Is the engine stall now eliminated?</p>	Yes	<p>Inspect if the purge solenoid valve is stuck open. (See 01-16A-8 PURGE SOLENOID VALVE INSPECTION [LF, L5].) Inspect the evaporative emission control system. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) Repair or replace the malfunctioning part according to the inspection result.</p>
		No	Go to the next step.
16	<p>Visually inspect the CMP sensor and teeth of the camshaft. Is there any malfunction?</p>	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
17	<p>Inspect the variable valve timing control system operation. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) Is there any malfunction?</p>	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
18	<p>Inspect the EGR system. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) Is there any malfunction?</p>	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
19	<p>Is the engine compression correct? (See 01-10A-17 COMPRESSION INSPECTION [LF, L5].)</p>	Yes	Go to the next step.
		No	Inspect for causes.
20	<p>Inspect the PCV valve. (See 01-16A-10 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [LF, L5].) Is there any malfunction?</p>	Yes	Replace the PCV valve and the oil separator as a single unit, then go to the next step. (See 01-16A-9 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [LF, L5].)
		No	<p>Inspect the following:</p> <ul style="list-style-type: none"> Valve timing Internal transaxle part (ATX) Clutch (MTX) EGR valve (mechanical stuck) Engine mounts Check valve (two-way) <p>Repair or replace the malfunctioning part according to the inspection result.</p>

SYMPTOM TROUBLESHOOTING [LF, L5]

STEP	INSPECTION	RESULTS	ACTION
21	<ul style="list-style-type: none"> • Verify test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. 01-03A

NO.12 LACK/LOSS OF POWER-ACCELERATION/CRUISE [LF, L5]

id010397804800

12	LACK/LOSS OF POWER—ACCELERATION/CRUISE
DESCRIPTION	<ul style="list-style-type: none"> • Performance is poor under load (such as power down when climbing hills).
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Poor fuel quality • Air leakage from intake air system • Intake air system restriction • EGR valve malfunction • Vacuum leakage • PCM DTC is stored • APP sensor malfunction • TP sensor malfunction • CKP sensor and related wiring harness malfunction • MAF sensor and related wiring harness malfunction • Battery power supply circuit malfunction • VSS and related wiring harness malfunction • CKP sensor and teeth of crankshaft pulley malfunction • Spark plug malfunction <ul style="list-style-type: none"> — Fuel leakage from fuel injector — Fuel injector is clogging • Improper operation of electronic throttle control system • Exhaust system part malfunction • Excessive fuel pressure • Improper operation of variable tumble control • Improper operation of variable intake air control • Improper operation of A/C system • Purge solenoid valve malfunction • Evaporative emission control system malfunction • CMP sensor and teeth of camshaft malfunction • EGR valve malfunction • Improper operation of variable valve timing control system • Low engine compression • PCV valve malfunction <p>Warning The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before servicing the fuel system:</p> <ul style="list-style-type: none"> • Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. • Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual. (See 01-14A-4 BEFORE SERVICE PRECAUTION [LF, L5].) (See 01-14A-5 AFTER SERVICE PRECAUTION [LF, L5].) <p>Caution</p> <ul style="list-style-type: none"> • Disconnecting/connecting the quick release connector without cleaning it may cause damage to the fuel pipe and the quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.

SYMPTOM TROUBLESHOOTING [LF, L5]

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Verify the following: <ul style="list-style-type: none"> • Fuel quality (such as proper octane, contamination, winter/summer blend) • No air leakage from the intake air system • No restriction of the intake air system • Proper sealing of the intake manifold and components attached to the intake manifold; such as the EGR valve • Restriction in the intake air system (such as the air cleaner element, fresh air duct) • Vacuum connection Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result. Repeat Step 1.
		No	Go to the next step.
2	Connect the M-MDS to the DLC-2. Switch the ignition to ON (engine off). Perform the PCM DTC inspection using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Are any DTCs present?	Yes	Go to the appropriate DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	Go to the next step.
3	Is the engine overheating?	Yes	Go to the symptom troubleshooting "NO.17 COOLING SYSTEM CONCERNS-OVERHEATING". (See 01-03A-64 NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [LF, L5].)
		No	Go to the next step.
4	Connect the M-MDS to the DLC-2 Access the APP1, APP2, TP_REL, MAF, VPWR and VSS PIDs using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Are PID values normal?	Yes	Go to the next step.
		No	APP1, APP2 PIDs are not specified: <ul style="list-style-type: none"> • Inspect if the output signal from the APP sensor changes smoothly. (See 01-40A-26 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [LF, L5].) TP_REL is not specified: <ul style="list-style-type: none"> • Inspect if the output signal from the TP sensor changes smoothly. (See 01-40A-26 THROTTLE POSITION (TP) SENSOR INSPECTION [LF, L5].) RPM_REL is not specified: <ul style="list-style-type: none"> • Inspect the CKP sensor and related wiring harness for vibration or an intermittent open/short circuit. (See 01-40A-32 CRANKSHAFT POSITION (CKP) SENSOR INSPECTION [LF, L5].) MAF PID is not specified: <ul style="list-style-type: none"> • Inspect for an intermittent open circuit of the MAF sensor and the related wiring harness. (See 01-40A-25 MASS AIR FLOW (MAF) SENSOR INSPECTION [LF, L5].) VPWR PID is not specified: <ul style="list-style-type: none"> • Inspect for an intermittent open circuit. VSS PID is not specified: <ul style="list-style-type: none"> • Inspect for an intermittent open circuit in the VSS and related wiring harness. (See 05-17-27 VEHICLE SPEED SENSOR (VSS) INSPECTION [FS5A-EL].) Repair or replace the malfunctioning part according to the inspection result.
5	Visually inspect the CKP sensor and teeth of the crankshaft pulley. Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
6	Inspect the spark plug condition. (See 01-18A-3 SPARK PLUG INSPECTION [LF, L5].) Is the spark plug wet, covered with carbon or grayish white?	Yes	Spark plug is wet or covered with carbon: <ul style="list-style-type: none"> • Inspect for fuel leakage from fuel injector. Spark plug is grayish white: <ul style="list-style-type: none"> • Inspect the fuel injector for clogging. Repair or replace the malfunctioning part according to the inspection result.
		No	Install the spark plugs on original cylinders. Go to the next step.

SYMPTOM TROUBLESHOOTING [LF, L5]

STEP	INSPECTION	RESULTS	ACTION
7	Perform the electronic throttle control system operation inspection. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
8	Visually inspect the exhaust system part. (See 01-15A-1 EXHAUST SYSTEM INSPECTION [LF, L5].) Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
9	Inspect the fuel line pressure. (See 01-14A-6 FUEL LINE PRESSURE INSPECTION [LF, L5].) Is there any malfunction?	Yes	Zero or low: <ul style="list-style-type: none"> • Inspect the fuel pump relay and the fuel pump circuit. • Inspect the fuel line for clogging. <ul style="list-style-type: none"> — If there is a malfunction: <ul style="list-style-type: none"> • Repair or replace the malfunctioning part according to the inspection result. — If there is no malfunction: <ul style="list-style-type: none"> • Replace the fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].) High: <ul style="list-style-type: none"> • Replace the fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
10	Inspect the variable tumble control operation. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
11	Inspect the variable intake air control operation. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
12	<p>Note</p> <ul style="list-style-type: none"> • Following test is for stall concerns with the A/C on. If other symptoms exist, go to the next step. <p>Connect pressure gauges to the A/C low side and high side pressure lines. Turn the A/C on and measure the low side and high side pressures. Are the pressures within the specifications? (See 07-10-6 REFRIGERANT PRESSURE CHECK.)</p>	Yes	Go to the next step.
		No	If the A/C is always on: <ul style="list-style-type: none"> • Go to the symptom troubleshooting "NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY". (See 01-03A-76 NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY [LF, L5].) For other symptoms: <ul style="list-style-type: none"> • Inspect the following: <ul style="list-style-type: none"> — Refrigerant charging amount — Condenser fan operation • Repair or replace the malfunctioning part according to the inspection result.
13	Inspect the A/C cut-off operation. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) Is there any malfunction?	Yes	Inspect the A/C cut-off system components. Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
14	Disconnect the vacuum hose between the purge solenoid valve and the intake manifold from the purge solenoid valve side. Plug the open end of the vacuum hose. Switch the ignition to start. Is the engine stall now eliminated?	Yes	Inspect if the purge solenoid valve is stuck open. (See 01-16A-8 PURGE SOLENOID VALVE INSPECTION [LF, L5].) Inspect the evaporative emission control system. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
15	Visually inspect the CMP sensor and teeth of the camshaft. Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.

01-03A

SYMPTOM TROUBLESHOOTING [LF, L5]

STEP	INSPECTION	RESULTS	ACTION
16	Inspect the EGR system. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
17	Inspect the variable valve timing control system operation. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
18	Is the engine compression correct? (See 01-10A-17 COMPRESSION INSPECTION [LF, L5].)	Yes	Go to the next step.
		No	Inspect for causes.
19	Inspect the PCV valve. (See 01-16A-10 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [LF, L5].) Is there any malfunction?	Yes	Replace the PCV valve and the oil separator as a single unit, then go to the next step. (See 01-16A-9 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/ INSTALLATION [LF, L5].)
		No	Inspect the following: <ul style="list-style-type: none"> • Valve timing • Internal transaxle part (ATX) • Clutch (MTX) • Brake system for dragging Repair or replace the malfunctioning part according to the inspection result.
20	<ul style="list-style-type: none"> • Verify test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. (See 01-03A-4 SYMPTOM DIAGNOSTIC INDEX [LF, L5].) — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

NO.13 KNOCKING/PINGING-ACCELERATION/CRUISE [LF, L5]

id010397812100

13	KNOCKING/PINGING—ACCELERATION/CRUISE
DESCRIPTION	<ul style="list-style-type: none"> • Sound is produced when air/fuel mixture is ignited by something other than spark plug (such as hot spot in combustion chamber).
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Engine overheating due to cooling system malfunction • ECT sensor No.1 malfunction • IAT sensor malfunction • MAF sensor malfunction • PCM DTC is stored • Low engine compression • Excessive fuel pressure • KS malfunction <p>Warning The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before servicing the fuel system:</p> <ul style="list-style-type: none"> • Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. • Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual. (See 01-14A-4 BEFORE SERVICE PRECAUTION [LF, L5].) (See 01-14A-5 AFTER SERVICE PRECAUTION [LF, L5].) <p>Caution</p> <ul style="list-style-type: none"> • Disconnecting/connecting the quick release connector without cleaning it may cause damage to the fuel pipe and the quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.

SYMPTOM TROUBLESHOOTING [LF, L5]

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Connect the M-MDS to the DLC-2. Access the ECT1 PID using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Verify ECT1 PID is less than 116°C {241°F} during driving. Is the ECT1 PID less than the specification?	Yes	Go to the next step.
		No	Go to the symptom troubleshooting "NO.17 COOLING SYSTEM CONCERNS-OVERHEATING". (See 01-03A-64 NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [LF, L5].)
2	Connect the M-MDS to the DLC-2. Access the IAT and MAF PIDs using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Are the PIDs normal? (See 01-40A-8 PCM INSPECTION [LF, L5].)	Yes	Go to the next step.
		No	IAT PID is not specified: <ul style="list-style-type: none"> Inspect IAT sensor. (See 01-40A-25 INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [LF, L5].) MAF PID is not specified: <ul style="list-style-type: none"> Inspect MAF sensor. (See 01-40A-25 MASS AIR FLOW (MAF) SENSOR INSPECTION [LF, L5].) Repair or replace the malfunctioning part according to the inspection result.
3	Connect the M-MDS to the DLC-2. Switch the ignition to ON (engine off). Perform the PCM DTC inspection using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Are any DTCs present?	Yes	Go to the appropriate DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	Go to the next step.
4	Is the engine compression correct? (See 01-10A-17 COMPRESSION INSPECTION [LF, L5].)	Yes	Go to the next step.
		No	Inspect for cause.
5	Inspect the fuel line pressure. (See 01-14A-6 FUEL LINE PRESSURE INSPECTION [LF, L5].) Is there any malfunction?	Yes	Zero or low: <ul style="list-style-type: none"> Inspect the fuel pump relay and the fuel pump circuit. Inspect the fuel line for clogging. <ul style="list-style-type: none"> If there is a malfunction: <ul style="list-style-type: none"> Repair or replace the malfunctioning part according to the inspection result. If there is no malfunction: <ul style="list-style-type: none"> Replace the fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].) High: <ul style="list-style-type: none"> Replace the fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
6	Inspect the KS. (See 01-40A-33 KNOCK SENSOR (KS) INSPECTION [LF, L5].) Is there any malfunction?	Yes	Replace the KS. (See 01-40A-33 KNOCK SENSOR (KS) REMOVAL/INSTALLATION [LF, L5].)
		No	Inspect ignition timing. (See 01-10A-3 ENGINE TUNE-UP [LF, L5].) Repair or replace the malfunctioning part according to the inspection result.
7	<ul style="list-style-type: none"> Verify test results. <ul style="list-style-type: none"> If normal, return to the diagnostic index to service any additional symptoms. (See 01-03A-4 SYMPTOM DIAGNOSTIC INDEX [LF, L5].) If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> If the vehicle is repaired, troubleshooting is completed. If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

01-03A

SYMPTOM TROUBLESHOOTING [LF, L5]

NO.14 POOR FUEL ECONOMY [LF, L5]

id010397802000

14	POOR FUEL ECONOMY
DESCRIPTION	<ul style="list-style-type: none"> • Fuel economy is unsatisfactory.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Contaminated air cleaner element • Improper ATF level (ATX) • Brake dragging • Clutch slippage (MTX) • Improper coolant level • Poor fuel quality • PCM DTC is stored • Engine cooling system malfunction • Spark plug malfunction • Excessive fuel pressure • Improper operation of variable tumble control • Improper operation of variable valve timing control system • Improper operation of variable valve intake air control • Exhaust system clogging • Contaminated MAF sensor • Low engine compression • PCV valve malfunction <p>Warning The following troubleshooting flow chart contains fuel system diagnosis and repair procedures. Read following warnings before servicing fuel system:</p> <ul style="list-style-type: none"> • Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. • Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual. (See 01-14A-4 BEFORE SERVICE PRECAUTION [LF, L5].) (See 01-14A-5 AFTER SERVICE PRECAUTION [LF, L5].) <p>Caution</p> <ul style="list-style-type: none"> • Disconnecting/connecting the quick release connector without cleaning it may cause damage to the fuel pipe and the quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Inspect for the following: <ul style="list-style-type: none"> • Air cleaner element for contamination • ATF level (ATX) • Brake dragging • Clutch slippage (MTX) • Coolant level • Fuel quality Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result. Repeat Step 1.
		No	Go to the next step.
2	Connect the M-MDS to the DLC-2. Switch the ignition to ON (engine off). Perform the PCM DTC inspection using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Are any DTCs present?	Yes	Go to the appropriate DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	Go to the next step.
3	Access the ECT1 and ECT2 PIDs using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Drive the vehicle while monitoring the PID. Are the PIDs within specification? (See 01-40A-8 PCM INSPECTION [LF, L5].)	Yes	Go to the next step.
		No	Inspect for coolant leakage, and inspect the cooling fan and condenser fan operations or and inspect the thermostat operation. Repair or replace the malfunctioning part according to the inspection result.
4	Perform the spark test. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection result. Repeat Step 1.

SYMPTOM TROUBLESHOOTING [LF, L5]

STEP	INSPECTION	RESULTS	ACTION
5	Inspect the fuel line pressure. (See 01-14A-6 FUEL LINE PRESSURE INSPECTION [LF, L5].) Is there any malfunction?	Yes	Zero or low: <ul style="list-style-type: none"> • Inspect the fuel pump relay and the fuel pump circuit. • Inspect the fuel line for clogging. <ul style="list-style-type: none"> — If there is a malfunction: <ul style="list-style-type: none"> • Repair or replace the malfunctioning part according to the inspection result. — If there is no malfunction: <ul style="list-style-type: none"> • Replace the fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].) High: <ul style="list-style-type: none"> • Replace the fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
6	Inspect the variable tumble control operation. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
7	Inspect the variable valve timing control system operation. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
8	Inspect the variable intake air control operation. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
9	Visually inspect the exhaust system parts. Are there any deformed exhaust system parts?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
10	Inspect the MAF sensor for contamination. Is there any contamination?	Yes	Replace the MAF/IAT sensor. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
11	Is the engine compression correct? (See 01-10A-17 COMPRESSION INSPECTION [LF, L5].)	Yes	Go to the next step.
		No	Inspect for causes.
12	Inspect the PCV valve. (See 01-16A-10 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [LF, L5].) Is there any malfunction?	Yes	Replace the PCV valve and the oil separator as a single unit, then go to the next step. (See 01-16A-9 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [LF, L5].)
		No	Inspect the valve timing. (See 01-10A-18 VARIABLE VALVE TIMING ACTUATOR INSPECTION [LF, L5].) Repair or replace the malfunctioning part according to the inspection result.
13	<ul style="list-style-type: none"> • Verify test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. (See 01-03A-4 SYMPTOM DIAGNOSTIC INDEX [LF, L5].) — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

01-03A

SYMPTOM TROUBLESHOOTING [LF, L5]

NO.15 EMISSION COMPLIANCE [LF, L5]

id010397802100

15	EMISSION COMPLIANCE
DESCRIPTION	<ul style="list-style-type: none"> • Fails emissions test.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Electrical connector disconnection • Intake air system and air cleaner element malfunction • Vacuum lines leakage or blockage • PCM DTC is stored • Cooling system malfunction • Fuel-filler cap malfunction • A/F sensor malfunction • Spark plug malfunction • Erratic or no signal from CMP sensor • Excessive fuel pressure • Charcoal canister malfunction • Exhaust system clogging • TWC malfunction • EGR system malfunction • PCV valve malfunction <p>Warning The following troubleshooting flow chart contains fuel system diagnosis and repair procedures. Read following warnings before servicing fuel system:</p> <ul style="list-style-type: none"> • Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. • Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual. (See 01-14A-4 BEFORE SERVICE PRECAUTION [LF, L5].) (See 01-14A-5 AFTER SERVICE PRECAUTION [LF, L5].) <p>Caution</p> <ul style="list-style-type: none"> • Disconnecting/connecting the quick release connector without cleaning it may cause damage to the fuel pipe and the quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Inspect the following: <ul style="list-style-type: none"> • Electrical connections • Intake air system and air cleaner element concerns: obstructions, leakage or soiling • Proper maintenance schedule followed • Vacuum lines for leakage or blockage Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result. Repeat Step 1.
		No	Go to the next step.
2	Connect the M-MDS to the DLC-2. Switch the ignition to ON (engine off). Perform the PCM DTC inspection using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Are any DTCs present?	Yes	Go to the appropriate DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	Go to the next step.
3	Is any other driveability concern present?	Yes	Go to the appropriate symptom troubleshooting. (See 01-03A-4 SYMPTOM DIAGNOSTIC INDEX [LF, L5].)
		No	Go to the next step.
4	Access the ECT1 and ECT2 PIDs using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Drive the vehicle while monitoring the PID. Are the PIDs within specification? (See 01-40A-8 PCM INSPECTION [LF, L5].)	Yes	Go to the next step.
		No	Inspect for coolant leakage, and inspect the cooling fan and condenser fan operations or and inspect the thermostat operation. Repair or replace the malfunctioning part according to the inspection result.

SYMPTOM TROUBLESHOOTING [LF, L5]

STEP	INSPECTION	RESULTS	ACTION
5	Inspect the fuel-filler cap. (See 01-16A-5 FUEL-FILLER CAP INSPECTION [LF, L5].) Is there any leakage at the fuel-filler cap?	Yes	Replace the fuel-filler cap.
		No	Go to the next step.
6	Inspect the A/F sensor. (See 01-40A-28 AIR FUEL RATIO (A/F) SENSOR INSPECTION [LF, L5].) Is there any malfunction?	Yes	Inspect for followings: <ul style="list-style-type: none"> • Exhaust gas leakage between exhaust manifold and A/F sensor • Loose installation of A/F sensor If there is no malfunction: <ul style="list-style-type: none"> • Replace the A/F sensor. (See 01-40A-27 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [LF, L5].) If there is a malfunction: <ul style="list-style-type: none"> • Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
7	Perform the spark test. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection result.
8	Inspect the fuel line pressure. (See 01-14A-6 FUEL LINE PRESSURE INSPECTION [LF, L5].) Is there any malfunction?	Yes	Zero or low: <ul style="list-style-type: none"> • Inspect the fuel pump relay and the fuel pump circuit. • Inspect the fuel line for clogging. <ul style="list-style-type: none"> — If there is a malfunction: <ul style="list-style-type: none"> • Repair or replace the malfunctioning part according to the inspection result. — If there is no malfunction: <ul style="list-style-type: none"> • Replace the fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].) High: <ul style="list-style-type: none"> • Replace the fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
9	Inspect for fuel saturation inside the charcoal canister. Is there an excess amount of liquid fuel present in canister?	Yes	Replace the charcoal canister. (See 01-16A-6 CHARCOAL CANISTER REMOVAL/INSTALLATION [LF, L5].)
		No	Inspect the fuel tank vent system, then go to the next step. (See 01-14A-12 FUEL TANK INSPECTION [LF, L5].)
10	Visually inspect the exhaust system parts. Are there any deformed exhaust system parts?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
11	Inspect the TWC. (See 01-15A-1 EXHAUST SYSTEM INSPECTION [LF, L5].) Is there any malfunction?	Yes	Replace the TWC. (See 01-15A-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
12	Inspect the EGR system. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) Is there any malfunction?	Yes	Replace the PCV valve and the oil separator as a single unit, then go to the next step. (See 01-16A-9 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [LF, L5].)
		No	Inspect the cause.
13	<ul style="list-style-type: none"> • Verify test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. (See 01-03A-4 SYMPTOM DIAGNOSTIC INDEX [LF, L5].) — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

01-03A

SYMPTOM TROUBLESHOOTING [LF, L5]

NO.16 HIGH OIL CONSUMPTION/LEAKAGE [LF, L5]

id010397802200

16	HIGH OIL CONSUMPTION/LEAKAGE
DESCRIPTION	<ul style="list-style-type: none"> • Oil consumption is excessive.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Improper dipstick • Improper engine oil viscosity • PCV valve malfunction • Engine internal parts malfunction

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Inspect for the following: <ul style="list-style-type: none"> • External leakage • Proper dipstick • Proper engine oil viscosity Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result. Repeat Step 1.
		No	Go to the next step.
2	Inspect the PCV valve. (See 01-16A-10 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [LF, L5].) Is there any malfunction?	Yes	Replace the PCV valve and the oil separator as a single unit, then go to the next step. (See 01-16A-9 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/ INSTALLATION [LF, L5].)
		No	Inspect the internal engine parts such as valves, valve guides, valve stem seals, cylinder head drain passage, and piston rings. Repair or replace the malfunctioning part according to the inspection result.
3	<ul style="list-style-type: none"> • Verify test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. (See 01-03A-4 SYMPTOM DIAGNOSTIC INDEX [LF, L5].) — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [LF, L5]

id010397802300

17	COOLING SYSTEM CONCERNS—OVERHEATING
DESCRIPTION	<ul style="list-style-type: none"> • Engine runs at higher than normal temperature/overheats.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Radiator hoses damage • Coolant leakage • Improper coolant level • Fans reverse rotation • Fuse malfunction • Coolant overflow system malfunction • Poor radiator condition • Improper or damaged radiator cap • Improper water/anti-freeze mixture • PCM, climate control unit, instrument cluster or multi information display DTC is stored • Improper operation of A/C system <ul style="list-style-type: none"> — Climate control unit malfunction (A/C switch malfunction or climate control unit does not determine A/C request or transmit the A/C request signal) — Instrument cluster malfunction (does not receive A/C request signal from climate control unit or transmit it to PCM) — Communication error between PCM and instrument cluster — Communication error between instrument cluster and climate control unit (Full-auto air conditioner) — Short to ground circuit between instrument cluster terminal 2I and climate control unit terminal 2P (Manual air conditioner) • Improper operation of cooling fan control system • Improper tension of drive belt • Leakage around heater unit • Leakage at coolant hoses and/or radiator • Thermostat malfunction

SYMPTOM TROUBLESHOOTING [LF, L5]

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Inspect the following: <ul style="list-style-type: none"> • Collapsed or restricted radiator hoses • Coolant leakage • Engine coolant level • Fan rotational direction • Fuses • Overflow system • Radiator condition • Radiator pressure cap • Water and anti-freeze mixture Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result. Repeat Step 1.
		No	Go to the next step.
2	Connect the M-MDS to the DLC-2. Switch the ignition to ON (engine off). Perform the PCM, climate control unit, instrument cluster and multi information display DTC inspection using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) (See 07-02-4 DTC DISPLAY.) (See 09-02E-4 DTC INSPECTION [INSTRUMENT CLUSTER].) (See 09-02J-3 DTC INSPECTION [MULTI INFORMATION DISPLAY].) Are any DTCs present?	Yes	Go to the appropriate DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].) (See 07-02-5 DTC TABLE.) (See 09-02E-5 DTC TABLE [INSTRUMENT CLUSTER].) (See 09-02J-4 DTC TABLE [MULTI INFORMATION DISPLAY].)
		No	Go to the next step.
3	Start the engine and idle it. Turn the A/C switch on and set the blower fan to any speed. Does the magnetic clutch engage?	Yes	Go to Step 11.
		No	Inspect the following: <ul style="list-style-type: none"> • Refrigerant charging amount • Open circuit in the wiring harness between the A/C relay and PCM terminal 1I • Seized A/C magnetic clutch • A/C magnetic clutch Repair or replace the malfunctioning part according to the inspection result. <ul style="list-style-type: none"> • If all items are normal: — Go to the next step.
4	Access the PCM PID AC_REQ using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Start the engine and idle it. Monitor the AC_REQ PID while turning on and off the air conditioner by switching the control panel. Does the PID change according to air control panel switching? (See 01-40A-8 PCM INSPECTION [LF, L5].)	Yes	Go to Step 11.
		No	Manual air conditioner: <ul style="list-style-type: none"> • Go to Step 8. Full-auto air conditioner: <ul style="list-style-type: none"> • Go to the next step.
5	Verify the multi information display indication of A/C system while turning on and off the air conditioner by switching the control panel. Does the multi information display indicate properly?	Yes	Replace the instrument cluster (instrument cluster does not receive A/C request signal from climate control unit or transmit it to PCM). (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	Inspect the multi information display. (See 09-22-19 MULTI INFORMATION DISPLAY INSPECTION.) Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
7	Access climate control unit PIDs EVAP_TEMP and AC_PRES using the M-MDS. (See 07-02-22 PID/DATA MONITOR DISPLAY.) Monitor the EVAP_TEMP and AC_PRES PIDs while turning on and off the air conditioner by switching the control panel. Is the PIDs normal? (See 07-02-22 PID/DATA MONITOR TABLE.)	Yes	Replace the climate control unit (A/C switch malfunction or climate control unit does not determine A/C request or transmit the A/C request signal). (See 07-40A-26 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
		No	Repair or replace the malfunctioning part according to the inspection result.

01-03A

SYMPTOM TROUBLESHOOTING [LF, L5]

STEP	INSPECTION	RESULTS	ACTION
8	Remove the climate control unit. (See 07-40B-17 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER].) Reconnect the climate control unit connector. Start the engine and idle it. Measure the voltage at the climate control unit terminal 2P while turning on and off the air conditioner by switching the control panel. Is the voltage change in specified according to air control panel switching? (See 01-40A-8 PCM INSPECTION [LF, L5].) • Specification — Turn on the A/C: Below 1 V — Turn off the A/C: Approx. 5 V	Yes	Replace the instrument cluster (instrument cluster does not receive A/C request signal from climate control unit or transmit it to PCM). (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to the next step.
9	Inspect for following part and related harness: • Refrigerant pressure sensor (climate control unit terminal 1H) • Evaporator temperature sensor (climate control unit terminal 1C) Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
10	Inspect for open or short circuit between climate control unit terminal 2P (wiring harness-side) and instrument cluster terminal 2I (wiring harness-side). Is there any malfunction?	Yes	Repair or replace the suspected wiring harness.
		No	Replace the climate control unit (A/C switch malfunction or climate control unit does not determine A/C request or transmit the A/C request signal.). (See 07-40B-17 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER].)
11	Inspect the cooling fan control system operation. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
12	Inspect the drive belt. (See 01-10A-5 DRIVE BELT INSPECTION [LF, L5].) Is there any malfunction?	Yes	Replace the drive belt. (See 01-10A-6 DRIVE BELT REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
13	Inspect the leakage around the heater unit in the passenger compartment. Is there any leakage?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
14	Inspect the leakage at the coolant hoses and/or radiator. Is there any leakage?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
15	Cool down the engine. Remove thermostat and inspect operation. (See 01-12A-11 THERMOSTAT REMOVAL/INSTALLATION [LF, L5].) (See 01-12A-12 THERMOSTAT INSPECTION [LF, L5].) Is there any malfunction?	Yes	Access the ECT1 and ECT2 PIDs using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Inspect both the ECT1 and ECT2 PIDs and the low engine coolant temperature indicator light condition. • If the low engine coolant temperature indicator light on the instrument cluster indicates turned off but the ECT1 and ECT2 PIDs are not the same as the low engine coolant temperature indicator light condition: — Inspect the ECT sensor No.1, No.2. (See 01-40A-24 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [LF, L5].) • If the low engine coolant temperature indicator light indication on the instrument cluster illuminates but the ECT1 and ECT2 PIDs are normal: — Inspect the instrument cluster. (See 09-22-8 INSTRUMENT CLUSTER INSPECTION.) Repair or replace the malfunctioning part according to the inspection result.
		No	The engine coolant temperature and thermostat are normal, inspect engine block for leakage or blockage.

SYMPTOM TROUBLESHOOTING [LF, L5]

STEP	INSPECTION	RESULTS	ACTION
16	<ul style="list-style-type: none"> • Verify the test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. (See 01-03A-4 SYMPTOM DIAGNOSTIC INDEX [LF, L5].) — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

01-03A

NO.18 COOLING SYSTEM CONCERNS-RUNS COLD [LF, L5]

id010397802400

18	COOLING SYSTEM CONCERNS—RUNS COLD
DESCRIPTION	<ul style="list-style-type: none"> • Engine does not reach normal operating temperature.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • A/C and heater system malfunction • Thermostat malfunction • Improper operation of cooling fan control system

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Is the customer complaint "Lack of passenger compartment heat" only?	Yes	Inspect A/C and heater system. Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
2	Does the engine speed continue at fast idle?	Yes	Go to the symptom troubleshooting "NO.9 FAST IDLE/RUNS ON". (See 01-03A-47 NO.9 FAST IDLE/RUNS ON [LF, L5].)
		No	Go to the next step.
3	Cool down the engine. Remove the thermostat and inspect operation. (See 01-12A-11 THERMOSTAT REMOVAL/ INSTALLATION [LF, L5].) (See 01-12A-12 THERMOSTAT INSPECTION [LF, L5].) Is there any malfunction?	Yes	Replace the thermostat. (See 01-12A-11 THERMOSTAT REMOVAL/ INSTALLATION [LF, L5].)
		No	Go to the next step.
4	Inspect the cooling fan control system operation. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Access the ECT1 and ECT2 PIDs using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Inspect both the ECT1 and ECT2 PIDs and the low engine coolant temperature indicator light condition. <ul style="list-style-type: none"> • If the low engine coolant temperature indicator light on the instrument cluster indicates turned off but the ECT1 and ECT2 PIDs are not the same as the low engine coolant temperature indicator light condition: <ul style="list-style-type: none"> — Inspect the ECT sensor No.1, No.2. (See 01-40A-24 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [LF, L5].) • If the low engine coolant temperature indicator light indication on the instrument cluster illuminates but the ECT1 and ECT2 PIDs are normal: <ul style="list-style-type: none"> — Inspect the instrument cluster. (See 09-22-8 INSTRUMENT CLUSTER INSPECTION.) Repair or replace the malfunctioning part according to the inspection result.
5	<ul style="list-style-type: none"> • Verify test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. (See 01-03A-4 SYMPTOM DIAGNOSTIC INDEX [LF, L5].) — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace PCM. 		

SYMPTOM TROUBLESHOOTING [LF, L5]

NO.19 EXHAUST SMOKE [LF, L5]

id010397803900

19	EXHAUST SMOKE
DESCRIPTION	<ul style="list-style-type: none"> • Blue, black, or white smoke from exhaust system.
POSSIBLE CAUSE	<p>Blue smoke (Burning oil):</p> <ul style="list-style-type: none"> • PCV valve malfunction • Engine internal oil leakage <p>White smoke (Water in combustion):</p> <ul style="list-style-type: none"> • Cooling system malfunction (coolant loss) • Engine internal coolant leakage <p>Black smoke (Rich fuel mixture):</p> <ul style="list-style-type: none"> • Air cleaner restriction • Intake air system is collapsed or restricted • Fuel return line is restricted • PCM DTC is stored • Excessive fuel pressure • CMP sensor malfunction • Ignition system malfunction <p>Warning</p> <p>The following troubleshooting flow chart contains fuel system diagnosis and repair procedures. Read following warnings before servicing fuel system:</p> <ul style="list-style-type: none"> • Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. • Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete “BEFORE SERVICE PRECAUTION” and “AFTER SERVICE PRECAUTION” described in this manual. (See 01-14A-4 BEFORE SERVICE PRECAUTION [LF, L5].) (See 01-14A-5 AFTER SERVICE PRECAUTION [LF, L5].) <p>Caution</p> <ul style="list-style-type: none"> • Disconnecting/connecting the quick release connector without cleaning it may cause damage to the fuel pipe and the quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	What color is the smoke coming from the exhaust system?	Blue	Burning oil is indicated: <ul style="list-style-type: none"> • Go to the next step.
		White	Water in the combustion is indicated: <ul style="list-style-type: none"> • Go to Step 3.
		Black	Rich fuel mixture is indicated: <ul style="list-style-type: none"> • Go to Step 4.
2	Inspect the PCV valve. (See 01-16A-10 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [LF, L5].) Is there any malfunction?	Yes	Replace the PCV valve and the oil separator as a single unit, then go to the next step. (See 01-16A-9 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/ INSTALLATION [LF, L5].)
		No	Inspect the following: <ul style="list-style-type: none"> • Blocked oil drain passage in the cylinder head • Damaged cylinder bore • Damaged valve guide, stems or valve seals • Piston ring is not seated, seized or worn. Repair or replace the malfunctioning part according to the inspection result. <ul style="list-style-type: none"> • If other drivability symptoms are present: <ul style="list-style-type: none"> — Return to the diagnostic index to service any additional symptoms.

SYMPTOM TROUBLESHOOTING [LF, L5]

STEP	INSPECTION	RESULTS	ACTION
3	Does the cooling system hold pressure?	Yes	Inspect the following: <ul style="list-style-type: none"> • Cracked or porous engine block • Cylinder head gasket leakage • Intake manifold gasket leakage If other drivability symptoms are present: <ul style="list-style-type: none"> • Return to the diagnostic index to service any additional symptoms.
		No	Inspect for cause.
4	Inspect the following: <ul style="list-style-type: none"> • Air cleaner restriction • Collapsed or restricted intake air system • Restricted fuel return line Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result. Repeat Step 4.
		No	Go to the next step.
5	Connect the M-MDS to the DLC-2. Switch the ignition to ON (engine off). Perform the PCM DTC inspection using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Are any DTCs present?	Yes	Go to the appropriate DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	Go to the next step.
6	Inspect the fuel line pressure. (See 01-14A-6 FUEL LINE PRESSURE INSPECTION [LF, L5].) Is there any malfunction?	Yes	Zero or low: <ul style="list-style-type: none"> • Inspect the fuel pump relay and the fuel pump circuit. • Inspect the fuel line for clogging. <ul style="list-style-type: none"> — If there is a malfunction: <ul style="list-style-type: none"> • Repair or replace the malfunctioning part according to the inspection result. — If there is no malfunction: <ul style="list-style-type: none"> • Replace the fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].) High: <ul style="list-style-type: none"> • Replace the fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
7	Perform the spark test. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) Is a strong blue spark visible at each cylinder?	Yes	Inspect the CMP sensor. (See 01-40A-33 CAMSHAFT POSITION (CMP) SENSOR INSPECTION [LF, L5].) Repair or replace the malfunctioning part according to the inspection result.
		No	Repair or replace the malfunctioning part according to the inspection result.
8	<ul style="list-style-type: none"> • Verify test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. (See 01-03A-4 SYMPTOM DIAGNOSTIC INDEX [LF, L5].) — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

01-03A

SYMPTOM TROUBLESHOOTING [LF, L5]

NO.20 FUEL ODOR (IN ENGINE COMPARTMENT) [LF, L5]

id010397802600

20	FUEL ODOR (IN ENGINE COMPARTMENT)
DESCRIPTION	<ul style="list-style-type: none"> • Gasoline fuel smell or visible leakage.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Excessive fuel pressure • Fuel leakage from fuel system • Fuel tank vent system blockage • Purge solenoid valve malfunction • PCM DTC is stored • Charcoal canister malfunction <p>Warning The following troubleshooting flow chart contains fuel system diagnosis and repair procedures. Read following warnings before servicing fuel system:</p> <ul style="list-style-type: none"> • Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. • Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual. (See 01-14A-4 BEFORE SERVICE PRECAUTION [LF, L5].) (See 01-14A-5 AFTER SERVICE PRECAUTION [LF, L5].) <p>Caution</p> <ul style="list-style-type: none"> • Disconnecting/connecting the quick release connector without cleaning it may cause damage to the fuel pipe and the quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Inspect the fuel line pressure. (See 01-14A-6 FUEL LINE PRESSURE INSPECTION [LF, L5].) Is there any malfunction?	Yes	Zero or low: <ul style="list-style-type: none"> • Inspect the fuel pump relay and the fuel pump circuit. • Inspect the fuel line for clogging. <ul style="list-style-type: none"> — If there is a malfunction: <ul style="list-style-type: none"> • Repair or replace the malfunctioning part according to the inspection result. — If there is no malfunction: <ul style="list-style-type: none"> • Replace the fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].) High: <ul style="list-style-type: none"> • Replace the fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
2	Visually inspect for fuel leakage at the fuel injector O-ring and fuel line. Is the fuel line pressure held after the ignition is off?	Yes	Go to the next step.
		No	Inspect the fuel injector. (See 01-14A-21 FUEL INJECTOR INSPECTION [LF, L5].) <ul style="list-style-type: none"> • If the fuel injector has malfunction: <ul style="list-style-type: none"> — Replace the fuel injector. (See 01-14A-19 FUEL INJECTOR REMOVAL/INSTALLATION [LF, L5].) • If the fuel injector is normal: <ul style="list-style-type: none"> — Replace the fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].)
3	Inspect for blockage/restriction or an open circuit in the wiring harness between the engine vacuum port and the charcoal canister. Inspect for blockage in the fuel tank vent system. Is there any malfunction?	Yes	Replace the vacuum hose.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [LF, L5]

STEP	INSPECTION	RESULTS	ACTION
4	Inspect the purge solenoid valve. (See 01-16A-8 PURGE SOLENOID VALVE INSPECTION [LF, L5].) Is there any malfunction?	Yes	Replace the purge solenoid valve. (See 01-16A-8 PURGE SOLENOID VALVE REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
5	Connect the M-MDS to the DLC-2. Switch the ignition to ON (engine off). Perform the PCM DTC inspection using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Are any DTCs present?	Yes	Go to the appropriate DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	Inspect the charcoal canister for fuel saturation. <ul style="list-style-type: none"> • If an excess amount of liquid fuel is present: <ul style="list-style-type: none"> — Replace the charcoal canister. (See 01-16A-6 CHARCOAL CANISTER REMOVAL/INSTALLATION [LF, L5].)
6	<ul style="list-style-type: none"> • Verify the test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. (See 01-03A-4 SYMPTOM DIAGNOSTIC INDEX [LF, L5].) — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

01-03A

NO.21 ENGINE NOISE [LF, L5]

id010397802700

21	ENGINE NOISE
DESCRIPTION	<ul style="list-style-type: none"> • Engine noise from under hood.
POSSIBLE CAUSE	<p>Squeal, click or chirp noise:</p> <ul style="list-style-type: none"> • Improper engine oil level • Improper drive belt tension • Generator mis-installation • Splash shield or under cover looseness (splashed water to drive belts) <p>Rumble or grind noise:</p> <ul style="list-style-type: none"> • Improper drive belt tension <p>Rattle sound noise:</p> <ul style="list-style-type: none"> • Loose parts <p>Hiss sound noise:</p> <ul style="list-style-type: none"> • Air leakage from intake air system • Loose spark plug • Vacuum leakage <p>Rap or roar noise:</p> <ul style="list-style-type: none"> • Dynamic dumper looseness • Exhaust system looseness • Intake air system looseness <p>Other noise:</p> <ul style="list-style-type: none"> • Tappet noise • Timing chain noise

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Is a squealing, click or chirping sound present?	Yes	Inspect the following: <ul style="list-style-type: none"> • Engine oil level • Drive belt tension • Generator installation • Splash shield or under cover looseness Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
2	Is a rumbling or grinding noise present?	Yes	Inspect the drive belt tension. (See 01-10A-5 DRIVE BELT INSPECTION [LF, L5].) Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [LF, L5]

STEP	INSPECTION	RESULTS	ACTION
3	Is a rattling noise present?	Yes	Inspect the rattling location for loose parts. Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
4	Is a hissing noise present?	Yes	Inspect the following: <ul style="list-style-type: none"> • Intake air system leakage • Spark plug looseness • Vacuum leakage Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
5	Is a rapping or roar noise present?	Yes	Inspect for looseness in the following: <ul style="list-style-type: none"> • Dynamic dumper • Exhaust system • Intake air system Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
6	Is a knocking noise present?	Yes	Go to the symptom troubleshooting "NO.13 KNOCKING/PINGING-ACCELERATION/CRUISE". (See 01-03A-58 NO.13 KNOCKING/PINGING-ACCELERATION/CRUISE [LF, L5].)
		No	If the noise comes from inside the engine: <ul style="list-style-type: none"> • Inspect the tappet noise. • Repair or replace the malfunctioning part according to the inspection result.
7	<ul style="list-style-type: none"> • Verify test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. (See 01-03A-4 SYMPTOM DIAGNOSTIC INDEX [LF, L5].) — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

NO.22 VIBRATION CONCERNS (ENGINE) [LF, L5]

id010397802800

22	VIBRATION CONCERNS (ENGINE)
DESCRIPTION	<ul style="list-style-type: none"> • Vibration from under hood or driveline.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Loose attaching bolts or worn parts • Components malfunction such as worn parts

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Inspect the following components for loose attaching bolts or worn parts: <ul style="list-style-type: none"> • Cooling fan • Drive belt and pulleys • Engine mounts • Exhaust system mounts • Generator Is there any malfunction?	Yes	Readjust or retighten engine mount installation position. Repair or replace the malfunctioning part if necessary for other parts.
		No	Inspect the following systems: <ul style="list-style-type: none"> • Wheels • ATX • MTX • Driveline • Suspension Repair or replace the malfunctioning part according to the inspection result.
2	<ul style="list-style-type: none"> • Verify test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. (See 01-03A-4 SYMPTOM DIAGNOSTIC INDEX [LF, L5].) — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

SYMPTOM TROUBLESHOOTING [LF, L5]

NO.23 A/C DOES NOT WORK SUFFICIENTLY [LF, L5]

id010397802900

23	A/C DOES NOT WORK SUFFICIENTLY
DESCRIPTION	<ul style="list-style-type: none"> • A/C compressor magnetic clutch does not engage when A/C is turned on.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • PCM, climate control unit, instrument cluster or multi information display DTC is stored • Refrigerant pressure sensor malfunction • Improper refrigerant charging amount • Seized A/C compressor • Evaporator temperature sensor malfunction • Open or short circuit in wiring harness between evaporator temperature sensor and climate control unit (Full-auto air conditioner) • Instrument cluster malfunction (Does not receive A/C request signal from climate control unit or transmit it to PCM) • Multi information display malfunction • Climate control unit malfunction (A/C switch malfunction or climate control unit does not determine A/C request or transmit the A/C request signal) • Open or short circuit in wiring harness between climate control unit terminal 2P and instrument cluster terminal 2I (Manual air conditioner) • A/C compressor malfunction • Open circuit in wiring harness between A/C compressor terminal A and body ground • A/C relay malfunction • Open circuit in wiring harness between A/C relay and PCM terminal 11 • Open circuit in wiring harness between ignition switch (IG2) and A/C relay (vehicles without advanced keyless entry and push button start system) • Open circuit in wiring harness between IG2 relay and A/C relay (vehicles with advanced keyless entry and push button start system) • Open circuit in wiring harness between battery positive terminal and A/C relay • Open circuit in wiring harness between A/C relay and A/C magnetic clutch

01-03A

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Connect the M-MDS to the DLC-2. Switch the ignition to ON (engine off). Perform the PCM, climate control unit, instrument cluster and multi information display DTC inspection. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) (See 07-02-4 DTC DISPLAY.) (See 09-02E-4 DTC INSPECTION [INSTRUMENT CLUSTER].) (See 09-02J-3 DTC INSPECTION [MULTI INFORMATION DISPLAY].) Are any DTCs present?	Yes	Go to the appropriate DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].) (See 07-02-5 DTC TABLE.) (See 09-02E-5 DTC TABLE [INSTRUMENT CLUSTER].) (See 09-02J-4 DTC TABLE [MULTI INFORMATION DISPLAY].)
		No	Go to the next step.
2	Access the PCM PID ACCS using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Start the engine and idle it. Turn the PCM PID ACCS to ON from OFF using the M-MDS simulation function. Is the A/C magnetic clutch engaged?	Yes	Manual air conditioner: <ul style="list-style-type: none"> • Go to Step 4. Full-auto air conditioner: <ul style="list-style-type: none"> • Go to the next step.
		No	Go to Step 13.
3	Access the climate control unit PID AC_PRES using the M-MDS. (See 07-02-22 PID/DATA MONITOR DISPLAY.) Monitor the climate control unit AC_PRES PID while turning on and off the air conditioner by switching the control panel. Is the PID normal? (See 07-02-22 PID/DATA MONITOR TABLE.)	Yes	Go to Step 6.
		No	Go to Step 5.

SYMPTOM TROUBLESHOOTING [LF, L5]

STEP	INSPECTION	RESULTS	ACTION
4	Remove the climate control unit. (See 07-40B-17 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER].) Reconnect the climate control unit connector. Measure the voltage at the climate control unit terminal 1H (wiring harness-side). Is the voltage normal? (See 07-40B-20 CLIMATE CONTROL UNIT INSPECTION [MANUAL AIR CONDITIONER].)	Yes	Go to Step 7.
		No	Go to the next step.
5	Inspect the refrigerant pressure sensor. (See 07-40B-16 REFRIGERANT PRESSURE SENSOR INSPECTION [MANUAL AIR CONDITIONER].) (See 07-40A-25 REFRIGERANT PRESSURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) Is there any malfunction?	Yes	Replace the refrigerant pressure sensor. (See 07-40B-15 REFRIGERANT PRESSURE SENSOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER].) (See 07-40A-24 REFRIGERANT PRESSURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
		No	Inspect the following: <ul style="list-style-type: none"> • Refrigerant charging amount • A/C compressor for seizure Repair or replace the malfunctioning part according to the inspection result.
6	Access the climate control unit PID EVAP_TEMP using the M-MDS. (See 07-02-22 PID/DATA MONITOR DISPLAY.) Monitor the climate control unit PID EVAP_TEMP while turning on and off the air conditioner by switching the control panel. Is the PID normal? (See 07-02-22 PID/DATA MONITOR TABLE.)	Yes	Go to Step 9.
		No	Go to Step 8.
7	Remove the climate control unit. (See 07-40B-17 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER].) Reconnect the climate control unit connector. Measure the voltage at the climate control unit terminal 1C (wiring harness-side). Is the voltage normal? (See 07-40B-20 CLIMATE CONTROL UNIT INSPECTION [MANUAL AIR CONDITIONER].)	Yes	Go to Step 11.
		No	Go to the next step.
8	Inspect the evaporator temperature sensor. (See 07-40B-15 EVAPORATOR TEMPERATURE SENSOR INSPECTION [MANUAL AIR CONDITIONER].) (See 07-40A-24 EVAPORATOR TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) Is there any malfunction?	Yes	Replace the evaporator temperature sensor. (See 07-40B-15 EVAPORATOR TEMPERATURE SENSOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER].) (See 07-40A-24 EVAPORATOR TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
		No	Inspect for open or short circuit between evaporator temperature sensor and climate control unit. Repair or replace the suspected wiring harness.
9	Verify the multi information display indication of A/C system while turning on and off the air conditioner by switching the control panel. Does the multi information display indicate properly?	Yes	Replace the instrument cluster (instrument cluster does not receive A/C request signal from climate control unit or transmit it to PCM). (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to the next step.
10	Inspect the multi information display. (See 09-22-19 MULTI INFORMATION DISPLAY INSPECTION.) Is there any malfunction?	Yes	Replace the multi information display. (See 09-22-18 MULTI INFORMATION DISPLAY REMOVAL/INSTALLATION.)
		No	Replace the climate control unit (A/C switch malfunction or climate control unit does not determine A/C request or transmit the A/C request signal). (See 07-40A-26 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)

SYMPTOM TROUBLESHOOTING [LF, L5]

STEP	INSPECTION	RESULTS	ACTION
11	Remove the climate control unit. (See 07-40B-17 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER].) Reconnect the climate control unit connector. Start the engine and idle it. Measure the voltage at the climate control unit terminal 2P (wiring harness-side) while turning on and off the air conditioner by switching the control panel. Is the voltage change in specified according to air control panel switching? (See 07-40B-20 CLIMATE CONTROL UNIT INSPECTION [MANUAL AIR CONDITIONER].) <ul style="list-style-type: none"> • Specification: <ul style="list-style-type: none"> — Turn on the A/C: Below 1.0 V — Turn off the A/C: Approx. 5 V 	Yes	Replace the instrument cluster (instrument cluster does not receive A/C request signal from climate control unit or transmit it to PCM). (See 09-22-3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to the next step.
12	Inspect for open or short circuit between climate control unit terminal 2P (wiring harness-side) and instrument cluster terminal 2I (wiring harness-side). Is there any malfunction?	Yes	Repair or replace the suspected wiring harness.
		No	Replace the climate control unit (A/C switch malfunction or climate control unit does not determine A/C request or transmit the A/C request signal). (See 07-40B-17 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER].)
13	Start the engine and idle it. Turn the PCM PID ACCS to ON from OFF using the M-MDS simulation function. Measure the voltage at the A/C compressor terminal B (wiring harness-side). Is the voltage specified? <ul style="list-style-type: none"> • Specification: <ul style="list-style-type: none"> — 10.5 V or more 	Yes	Go to the next step.
		No	Go to Step 15.
14	Inspect for continuity between A/C compressor terminal A (wiring harness-side) and body ground. Is there continuity?	Yes	Replace the A/C compressor. (See 07-11-18 A/C COMPRESSOR REMOVAL/INSTALLATION.)
		No	Repair or replace the suspected wiring harness.
15	Inspect the A/C relay. (See 09-21-17 RELAY INSPECTION.) Is there any malfunction?	Yes	Replace the A/C relay.
		No	Go to the next step.
16	Switch the ignition to off. Disconnect the A/C relay and PCM connectors. Inspect for continuity between A/C relay and PCM terminal 1I (wiring harness-side). Is there continuity?	Yes	Inspect for open circuit between the following: <ul style="list-style-type: none"> • Ignition switch (IG2) and A/C relay (vehicles without advanced keyless entry and push button start system) • IG2 relay and A/C relay (vehicles with advanced keyless entry and push button start system) • Battery positive terminal and A/C relay • A/C relay and A/C magnetic clutch
		No	Repair or replace the suspected wiring harness.
17	<ul style="list-style-type: none"> • Verify test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. (See 01-03A-4 SYMPTOM DIAGNOSTIC INDEX [LF, L5].) — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

01-03A

SYMPTOM TROUBLESHOOTING [LF, L5]

NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY [LF, L5]

id010397803000

24	A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY
DESCRIPTION	<ul style="list-style-type: none"> • A/C compressor magnetic clutch does not disengage.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • PCM, instrument cluster or climate control unit DTC is stored • Short to power supply in wiring harness between A/C relay and magnetic clutch • A/C compressor magnetic clutch engagement is stuck • A/C relay malfunction • Short to ground in wiring harness between A/C relay and PCM • Short to ground in wiring harness between climate control unit terminal 2P and instrument cluster (Manual air conditioner) • Climate control unit malfunction

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Connect the M-MDS to the DLC-2. Switch the ignition to ON (engine off). Perform the PCM, instrument cluster and climate control unit DTC inspection using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) (See 09-02E-4 DTC INSPECTION [INSTRUMENT CLUSTER].) (See 09-02J-3 DTC INSPECTION [MULTI INFORMATION DISPLAY].) Are any DTCs present?	Yes	Go to the appropriate DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].) (See 09-02E-5 DTC TABLE [INSTRUMENT CLUSTER].) (See 09-02J-4 DTC TABLE [MULTI INFORMATION DISPLAY].)
		No	Go to the next step.
2	Start the engine and idle it. Turn the A/C switch on with blower switch is on. Remove the A/C relay. Does the A/C magnetic clutch disengage?	Yes	Go to Step 4.
		No	Go to the next step.
3	Switch the ignition to off. Disconnect the A/C compressor connector. Switch the ignition to ON. Measure the voltage at A/C compressor terminal B. Is the voltage B+?	Yes	Repair or replace the suspected wiring harness.
		No	Replace the A/C compressor (A/C magnetic clutch engagement is stuck). (See 07-11-18 A/C COMPRESSOR REMOVAL/INSTALLATION.)
4	Inspect the A/C relay. (See 09-21-17 RELAY INSPECTION.) Is there any malfunction?	Yes	Replace the relay.
		No	Go to the next step.
5	Access the ACCS PID using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Start the engine and idle it. Turn the A/C switch on and off with blower switch is on. Is the PID value always ON?	Yes	Manual air conditioner: <ul style="list-style-type: none"> • Go to the next step. Full-auto air conditioner: <ul style="list-style-type: none"> • Replace the climate control unit (A/C switch signal is always on). (See 07-40A-26 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
		No	Inspect for short to ground in wiring harness between PCM terminal 11 and A/C relay. Repair or replace the malfunctioning part according to the inspection result.
6	Switch the ignition to off. Disconnect the instrument cluster and climate control unit connectors. Inspect for continuity between climate control unit terminal 2P (wiring harness-side) and body ground. Is there continuity?	Yes	Repair or replace the suspected wiring harness.
		No	Replace the climate control unit (A/C switch signal is always on). (See 07-40B-17 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER].)
7	<ul style="list-style-type: none"> • Verify test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. (See 01-03A-4 SYMPTOM DIAGNOSTIC INDEX [LF, L5].) — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

SYMPTOM TROUBLESHOOTING [LF, L5]

NO.25 A/C IS NOT CUT OFF UNDER WIDE OPEN THROTTLE CONDITIONS [LF, L5]

id010397803100

25	A/C IS NOT CUT OFF UNDER WIDE OPEN THROTTLE CONDITIONS
DESCRIPTION	<ul style="list-style-type: none"> • A/C compressor magnetic clutch does not disengage under wide open throttle.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • PCM DTC is stored • APP sensor malfunction

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Does the A/C compressor disengage when the A/C switch is turned off?	Yes	Go to the next step.
		No	Go to the symptom troubleshooting "NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY". (See 01-03A-76 NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY [LF, L5].)
2	Connect the M-MDS to the DLC-2. Switch the ignition to ON (engine off). Perform the PCM DTC inspection using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Are any DTCs present?	Yes	Go to the appropriate DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	Inspect the APP sensor. (See 01-40A-26 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [LF, L5].) Repair or replace the malfunctioning part according to the inspection result.
3	<ul style="list-style-type: none"> • Verify test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. (See 01-03A-4 SYMPTOM DIAGNOSTIC INDEX [LF, L5].) — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

01-03A

NO.26 EXHAUST SULPHUR SMELL [LF, L5]

id010397803200

26	EXHAUST SULPHUR SMELL
DESCRIPTION	<ul style="list-style-type: none"> • Rotten egg smell (sulphur) from exhaust.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • Electrical connector disconnection • Poor fuel quality • Vacuum leakage • PCM DTC is stored • Improper fuel pressure • Charcoal canister malfunction <p>Warning The following troubleshooting flow chart contains fuel system diagnosis and repair procedures. Read following warnings before servicing fuel system:</p> <ul style="list-style-type: none"> • Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. • Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual. (See 01-14A-4 BEFORE SERVICE PRECAUTION [LF, L5].) (See 01-14A-5 AFTER SERVICE PRECAUTION [LF, L5].) <p>Caution</p> <ul style="list-style-type: none"> • Disconnecting/connecting the quick release connector without cleaning it may cause damage to the fuel pipe and the quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.

SYMPTOM TROUBLESHOOTING [LF, L5]

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Are any drivability or exhaust smoke concerns present?	Yes	Go to the appropriate flow chart.
		No	Go to the next step.
2	Inspect the following: <ul style="list-style-type: none"> • Electrical connections • Fuel quality • Vacuum lines Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result. Repeat Step 2.
		No	Go to the next step.
3	Connect the M-MDS to the DLC-2. Switch the ignition to ON (engine off). Perform the PCM DTC inspection using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Are any DTCs present?	Yes	Go to the appropriate DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	Go to the next step.
4	Inspect the fuel line pressure. (See 01-14A-6 FUEL LINE PRESSURE INSPECTION [LF, L5].) Is there any malfunction?	Yes	Zero or low: <ul style="list-style-type: none"> • Inspect the fuel pump relay and the fuel pump circuit. • Inspect the fuel line for clogging. <ul style="list-style-type: none"> — If there is a malfunction: <ul style="list-style-type: none"> • Repair or replace the malfunctioning part according to the inspection result. — If there is no malfunction: <ul style="list-style-type: none"> • Replace the fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].) High: <ul style="list-style-type: none"> • Replace the fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
5	Inspect the charcoal canister for fuel saturation. Is an excess amount of liquid fuel present in the canister?	Yes	Replace the charcoal canister. (See 01-16A-6 CHARCOAL CANISTER REMOVAL/INSTALLATION [LF, L5].)
		No	Inspect the fuel tank vent system. <ul style="list-style-type: none"> • If the fuel tank vent system is normal: <ul style="list-style-type: none"> — Suggest trying a different brand since the sulfur content can vary in different fuels. • If the fuel tank vent system is not normal: <ul style="list-style-type: none"> — Repair or replace the malfunctioning part according to the inspection result.
6	<ul style="list-style-type: none"> • Verify test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. (See 01-03A-4 SYMPTOM DIAGNOSTIC INDEX [LF, L5].) — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

SYMPTOM TROUBLESHOOTING [LF, L5]

NO.27 FUEL REFILL CONCERNS [LF, L5]

id010397803300

27	FUEL REFILL CONCERNS
DESCRIPTION	<ul style="list-style-type: none"> • Fuel tank does not fill smoothly.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • PCM DTC is stored • Nonreturn valve malfunction • Improper use of fuel nozzle • Inadequate fuel filling speed <p>Warning</p> <ul style="list-style-type: none"> • The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before servicing the fuel system: <ul style="list-style-type: none"> — Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. — Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete “BEFORE REPAIR PROCEDURE” and “AFTER REPAIR PROCEDURE” described in this manual. (See 01-14A-4 BEFORE SERVICE PRECAUTION [LF, L5].) (See 01-14A-5 AFTER SERVICE PRECAUTION [LF, L5].) <p>Caution</p> <ul style="list-style-type: none"> • Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.

01-03A

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Connect the M-MDS to the DLC-2. Switch the ignition to ON (engine off). Perform the PCM DTC inspection using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Are any DTCs present?	Yes	Go to the appropriate DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	Go to the next step.
2	Remove the fuel-filler pipe. Make sure nonreturn valve is installed properly. Inspect the nonreturn valve operation. Is there any malfunction?	Yes	Nonreturn valve is installed improperly: <ul style="list-style-type: none"> • Reinstall the nonreturn valve to proper position. Nonreturn valve does not operate properly: <ul style="list-style-type: none"> • Replace the nonreturn valve.
		No	Inspect the following: <ul style="list-style-type: none"> • Improper use of fuel nozzle • Inadequate fuel filling speed Repair or replace the malfunctioning part according to the inspection result.
3	Verify test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. (See 01-03A-4 SYMPTOM DIAGNOSTIC INDEX [LF, L5].) — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

SYMPTOM TROUBLESHOOTING [LF, L5]

NO.28 FUEL FILLING SHUT OFF CONCERNS [LF, L5]

id010397912000

28	FUEL FILLING SHUT OFF CONCERNS
DESCRIPTION	<ul style="list-style-type: none"> • Fuel does not shut off properly.
POSSIBLE CAUSE	<ul style="list-style-type: none"> • PCM DTC is stored • Nonreturn valve malfunction • Fuel nozzle is not inserted correctly • Fuel nozzle malfunction • Fuel shut-off valve malfunction <p>Warning</p> <ul style="list-style-type: none"> • The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before servicing the fuel system: <ul style="list-style-type: none"> — Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. — Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete “BEFORE REPAIR PROCEDURE” and “AFTER REPAIR PROCEDURE” described in this manual. <p style="margin-left: 40px;">(See01-14A-4 BEFORE SERVICE PRECAUTION [LF, L5].) (See01-14A-5 AFTER SERVICE PRECAUTION [LF, L5].)</p> <p>Caution</p> <ul style="list-style-type: none"> • Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Connect the M-MDS to the DLC-2. Switch the ignition to ON (engine off). Perform the PCM DTC inspection using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Are any DTCs present?	Yes	Go to the appropriate DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
		No	Go to the next step.
2	Remove the fuel-filler pipe. Make sure nonreturn valve is installed properly. Inspect the nonreturn valve operation. Is there any malfunction?	Yes	Nonreturn valve is installed improperly: <ul style="list-style-type: none"> • Reinstall the nonreturn valve to proper position. Nonreturn valve does not operate properly: <ul style="list-style-type: none"> • Replace the nonreturn valve.
		No	Inspect for the following: <ul style="list-style-type: none"> • Fuel is not inserted correctly • Improper use of fuel nozzle • Inspect fuel shut-off valve. Repair or replace the malfunctioning part according to the inspection result.
3	Verify test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. Retest. 		

SYMPTOM TROUBLESHOOTING [LF, L5]

NO.29 SPARK PLUG CONDITION [LF, L5]

id010397803600

01-03A

29	SPARK PLUG CONDITION
DESCRIPTION	<ul style="list-style-type: none"> • Incorrect spark plug condition.
POSSIBLE CAUSE	<p>Note</p> <ul style="list-style-type: none"> • Inspecting the spark plug conditions can determine whether a problem is related to a specific cylinder or possibly all cylinders. <p>Wet/carbon stuck on specific plug:</p> <ul style="list-style-type: none"> • Spark—Weak, not visible • Air/fuel mixture—Excessive fuel injection volume • Compression—No compression, low compression • Malfunction spark plug <p>Grayish white with specific plug:</p> <ul style="list-style-type: none"> • Air/fuel mixture—Insufficient fuel injection volume • Malfunction spark plug <p>Wet/carbon is stuck on all plugs:</p> <ul style="list-style-type: none"> • Spark—Spark weak • Air/fuel mixture—Too rich • Compression—Low compression • Clogging in intake/exhaust system <p>Grayish white with all plugs:</p> <ul style="list-style-type: none"> • Air/fuel mixture—Too lean <p>Warning</p> <p>The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before servicing the fuel system:</p> <ul style="list-style-type: none"> • Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. • Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete “BEFORE SERVICE PRECAUTION” and “AFTER SERVICE PRECAUTION” described in this manual. (See 01-14A-4 BEFORE SERVICE PRECAUTION [LF, L5].) (See 01-14A-5 AFTER SERVICE PRECAUTION [LF, L5].) <p>Caution</p> <ul style="list-style-type: none"> • Disconnecting/connecting the quick release connector without cleaning it may cause damage to the fuel pipe and the quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.

Diagnostic procedure

STEP	INSPECTION	RESULTS	ACTION
1	Remove all spark plugs. Inspect the spark plug. (See 01-18A-3 SPARK PLUG INSPECTION [LF, L5].) Is there any malfunction?	Yes	Symptom troubleshooting completed.
		No	Specific plug is wet or covered with carbon: <ul style="list-style-type: none"> • Go to the next step. Specific plug looks grayish white: <ul style="list-style-type: none"> • Go to Step 7. All plugs are wet or covered with carbon: <ul style="list-style-type: none"> • Go to Step 9. All plugs look grayish white: <ul style="list-style-type: none"> • Go to Step 15.
2	Are the spark plugs wet/covered with carbon from the engine oil?	Yes	Inspect all areas related to oil, working up and down.
		No	Go to the next step.
3	Inspect the spark plugs for the following: <ul style="list-style-type: none"> • Air gap • Cracked insulator • Heat range • Worn electrode Is there any malfunction?	Yes	Replace the spark plug. (See 01-18A-3 SPARK PLUG REMOVAL/ INSTALLATION [LF, L5].)
		No	Go to the next step.
4	Inspect the compression pressure at the suspected malfunctioning cylinder. (See 01-10A-17 COMPRESSION INSPECTION [LF, L5].) Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [LF, L5]

STEP	INSPECTION	RESULTS	ACTION
5	Install all spark plugs. Perform the spark test at the suspected malfunctioning cylinder. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) Is a strong blue spark visible (compare with normal cylinder)?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection result.
6	Inspect the fuel line pressure. (See 01-14A-6 FUEL LINE PRESSURE INSPECTION [LF, L5].) Is there any malfunction?	Yes	Zero or low: <ul style="list-style-type: none"> • Inspect the fuel pump relay and the fuel pump circuit. • Inspect the fuel line for clogging. <ul style="list-style-type: none"> — If there is a malfunction: <ul style="list-style-type: none"> • Repair or replace the malfunctioning part according to the inspection result. — If there is no malfunction: <ul style="list-style-type: none"> • Replace the fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].) High: <ul style="list-style-type: none"> • Replace the fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].)
		No	Inspect fuel injector for the following: <ul style="list-style-type: none"> • Injection volume • Leakage • Open or short circuit in injector Repair or replace the malfunctioning part according to the inspection result.
7	Inspect the spark plug for the following: <ul style="list-style-type: none"> • Air gap • Heat range Is there any malfunction?	Yes	Replace the spark plug. (See 01-18A-3 SPARK PLUG REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
8	Perform the fuel injector operation inspection. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
9	Is the air cleaner element free of clogging?	Yes	Go to the next step.
		No	Replace the air cleaner element.
10	Perform the spark test. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection result.
11	Inspect the fuel line pressure. (See 01-14A-6 FUEL LINE PRESSURE INSPECTION [LF, L5].) Is there any malfunction?	Yes	Zero or low: <ul style="list-style-type: none"> • Inspect the fuel pump relay and the fuel pump circuit. • Inspect the fuel line for clogging. <ul style="list-style-type: none"> — If there is a malfunction: <ul style="list-style-type: none"> • Repair or replace the malfunctioning part according to the inspection result. — If there is no malfunction: <ul style="list-style-type: none"> • Replace the fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].) High: <ul style="list-style-type: none"> • Replace the fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [LF, L5]

STEP	INSPECTION	RESULTS	ACTION
12	Access the following PIDs using the M-MDS: <ul style="list-style-type: none"> • ECT1 • ECT2 • O2S11 (When engine can be started) • O2S12 (When engine can be started) • MAF (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Are the PIDs normal? (See 01-40A-8 PCM INSPECTION [LF, L5].)	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection result.
13	Perform the purge control inspection when the engine can be started. (See 01-03A-86 ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5].) Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
14	Perform the compression inspection. (See 01-10A-17 COMPRESSION INSPECTION [LF, L5].) Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Visually inspect for deformed exhaust system parts. Repair or replace the malfunctioning part according to the inspection result.
15	If the engine cannot be started: <ul style="list-style-type: none"> • Inspect the intake air system for air leakage. If the engine can be started: <ul style="list-style-type: none"> • Perform the intake manifold vacuum inspection. Is air sucked in from intake air system?	Yes	Repair or replace the malfunctioning part according to the inspection result.
		No	Go to the next step.
16	Inspect the fuel line pressure. (See 01-14A-6 FUEL LINE PRESSURE INSPECTION [LF, L5].) Is there any malfunction?	Yes	Zero or low: <ul style="list-style-type: none"> • Inspect the fuel pump relay and the fuel pump circuit. • Inspect the fuel line for clogging. <ul style="list-style-type: none"> — If there is a malfunction: <ul style="list-style-type: none"> • Repair or replace the malfunctioning part according to the inspection result. — If there is no malfunction: <ul style="list-style-type: none"> • Replace the fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].) High: <ul style="list-style-type: none"> • Replace the fuel pump unit. (See 01-14A-13 FUEL PUMP UNIT REMOVAL/INSTALLATION [LF, L5].)
		No	Go to the next step.
17	Access the following PIDs using the M-MDS: <ul style="list-style-type: none"> • ECT1 • ECT2 • O2S11 (When engine can be started) • O2S12 (When engine can be started) • MAF (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Are the PIDs normal? (See 01-40A-8 PCM INSPECTION [LF, L5].)	Yes	Inspect PCM ground condition. Repair or replace the malfunctioning part according to the inspection result.
		No	Repair or replace the malfunctioning part according to the inspection result.
18	<ul style="list-style-type: none"> • Verify test results. <ul style="list-style-type: none"> — If normal, return to the diagnostic index to service any additional symptoms. (See 01-03A-4 SYMPTOM DIAGNOSTIC INDEX [LF, L5].) — If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. <ul style="list-style-type: none"> • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest. 		

01-03A

SYMPTOM TROUBLESHOOTING [LF, L5]

INTERMITTENT CONCERN TROUBLESHOOTING [LF, L5]

id010397800400

Vibration Method

- If a malfunction occurs or becomes worse while driving on a rough road or when the engine is vibrating, perform the steps below.

Note

- There are several reasons why the vehicle or engine vibration could cause an electrical malfunction. Inspect the following:
 - Connectors not fully seated
 - Wiring harnesses not having full play
 - Wiring harnesses laying across brackets or moving parts
 - Wiring harnesses routed too close to hot parts
- An improperly routed, improperly clamped, or loose wiring harness can cause a wiring harness to become pinched between parts.
- The connector joints, points of vibration, and places where wiring harnesses pass such as through the firewall and body panels are the major areas to be checked.

Inspection Method for Switch Connectors or Wiring Harnesses

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition to ON (engine off).

Note

- If the engine starts and runs, perform the following steps during idle.

3. Access PIDs for the switch you are inspecting.
4. Turn the switch on manually.
5. Slightly shake each connector or wiring harness vertically and horizontally while monitoring the PID.
 - If PID value is unstable, inspect for poor connection.

am6zzw000010

Inspection Method for Sensor Connectors or Wiring Harnesses

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition to ON (engine off).

Note

- If the engine starts and runs, perform the following steps during idle.

3. Access PIDs for the switch you are inspecting.
4. Slightly shake each connector or wiring harness vertically and horizontally while monitoring the PID.
 - If PID value is unstable, inspect for poor connection.

am6zzw000010

SYMPTOM TROUBLESHOOTING [LF, L5]

Inspection Method for Sensors

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition to ON (engine off).

Note

- If the engine starts and runs, perform the following steps during idle.

3. Access PIDs for the switch you are inspecting.
4. Vibrate the sensor slightly with your finger.
 - If PID value is unstable or malfunction occurs, check for poor connection or poorly mounted sensor or both.

01-03A

Inspection Method for Actuators or Relays

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition to ON (engine off).

Note

- If the engine starts and runs, perform the following steps during idle.

3. Prepare the output state control function for actuators or relays that you are inspecting.
4. Vibrate the actuator or relay with your finger for 3 s after output state control function is activated.
 - If variable click sound is heard, check for poor connection or poorly mounted actuator or both, or the relay.

Note

- Vibrating relays too strongly may result in open relays.

am6zzw000010

Water Sprinkling Method

If malfunction occurs only under high humidity or rainy/snowy weather, perform the following steps:

Caution

- Indirectly change the temperature and humidity by spraying water onto the front of the radiator.
- If a vehicle is subject to water leakage, the leakage may damage the control module. When testing a vehicle with a water leakage problem, special caution must be used.

1. Connect the M-MDS to the DLC-2 if you are inspecting sensors or switches.
2. Switch the ignition to ON (engine off).

Note

- If the engine starts and runs, perform the following steps at idle.

3. Access PIDs for sensor or switch if you are inspecting sensors or switches.
4. If you are inspecting the switch, turn it on manually.
5. Spray water onto the vehicle or run it through a car wash.
 - If PID value is unstable or malfunction occurs, repair or replace part if necessary.

am3uuw000333

SYMPTOM TROUBLESHOOTING [LF, L5]

ENGINE CONTROL SYSTEM OPERATION INSPECTION [LF, L5]

id010397803700

Input Signal System Inspection Procedure

1. Find an irregular signal. (See 01-03A-86 Finding irregular signals.)
2. Locate source. (See 01-03A-86 Locating the source of unusual signals.)
3. Repair or replace the malfunctioning part.
4. Confirm that the irregular signal is no longer detected.

Finding irregular signals

While referring to 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5], use the PID/DATA monitor and record function to inspect the input signal system relating to the problem.

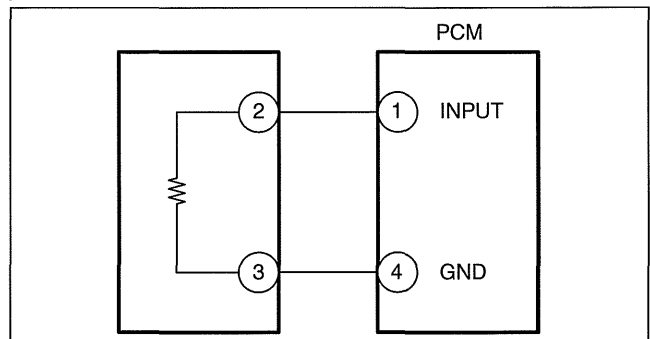

1. Start the engine and idle the vehicle. You can assume that any signals that are out of specification by a wide margin are irregular.
2. When recreating the problem, any sudden change in monitor input signals that is not intentionally created by the driver can be determined as irregular.

Locating the source of unusual signals

Caution

- Compare the M-MDS monitor voltage with the measurement voltage using the digital measurement system function. If you use another tester, misreading may occur.
- When measuring voltage, attach the tester ground to the ground of the PCM that is being tested, or to the engine itself. If this is not performed, the measured voltage and actual voltage may differ.
- After connecting the pin to a waterproof coupler, confirming continuity and measuring the voltage, inspect the waterproof connector for cracks. If there are any, use sealant to fix them. Failure to do this may result in deterioration of the wiring harness or terminal from water damage, leading to problems with the vehicle.

Thermistor type (IAT sensor and ECT sensor No.1, No.2)

am3uuw0000301

Input signal system inspection for thermistor type

1. When an irregular signal is detected, measure the #1 PCM terminal voltage.
 - If the #1 terminal voltage and the M-MDS monitor voltage are the same, proceed to the next step.
 - If there is a difference of **0.5 V or more**, inspect the following points concerning the PCM connector:
 - Female terminal opening loose
 - Coupler (pin holder) damage
 - Pin discoloration (blackness)
 - Harness/pin crimp is loose or disconnected
2. Measure the #2 sensor terminal voltage.
 - If there is a **0.5 V or more** difference between the sensor and the M-MDS voltages, inspect the wiring harness for open or short circuits.
 - If the sensor and the M-MDS voltages are the same, inspect the following points concerning the sensor connector:
 - Female terminal opening is loose
 - Coupler (pin holder) damage
 - Pin discoloration (blackness)
 - Harness/pin crimp is loose or disconnected
 - If there are no problems, proceed to next investigation below.

GND system inspection for thermistor type

- Confirm that terminal sensor #3 is at **0 V**.
 - If it is at **0 V**, inspect the sensor. If necessary, replace the sensor.
 - If not, inspect for the following:
 - Open circuit in wiring harness
 - Female terminal opening is loose
 - Coupler (pin holder) damage
 - Pin discoloration (blackness)
 - Harness/pin crimp is loose or disconnected

Main Relay Operation Inspection

1. Verify that the main relay clicks when the ignition is switched to ON and off.
 - If there is no operation sound, inspect the following:
 - Main relay (See 09-21-17 RELAY INSPECTION.)
 - Harness and connector between ignition switch^{*1}/relay block^{*2} and main relay
 - Harness and connector between PCM terminal 1Q and main relay terminal B

^{*1} : Vehicles without advanced keyless entry and push button start system

^{*2} : Vehicles with advanced keyless entry and push button start system

Intake Manifold Vacuum Inspection

1. Verify air intake hoses are installed properly.
2. Start the engine and run it at idle.
3. Disconnect the vacuum hose between the intake manifold and purge solenoid valve from the intake manifold side.
4. Connect a vacuum gauge to the intake manifold and measure the intake manifold vacuum.
 - If not as specified, inspect the following:

Specification

LF: More than 68 kPa {510 mmHg, 20 inHg}

L5: More than 70 kPa {525 mmHg, 21 inHg}

Note

- Air suction can be located by engine speed change when lubricant is sprayed on the area where suction is occurring.
 - Air suction at throttle body, intake manifold and PCV valve installation points
 - EGR valve (stuck open)
 - Fuel injector insulator
 - Engine compression (See 01-10A-17 COMPRESSION INSPECTION [LF, L5].)

Electronic Throttle Control System Inspection

Engine coolant temperature compensation inspection

1. Connect the M-MDS to the DLC-2.
2. Access the following PIDs:
 - ECT1
 - ECT2
 - IAT
 - RPM
3. Verify that the engine is cold, then start the engine.
4. Verify that the engine speed decreases as the engine warms up.
 - If the engine speed does not decrease or decreases slowly, inspect the following:
 - ECT sensor No.1, No.2 and related wiring harness (See 01-40A-24 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [LF, L5].)
 - Electronic throttle body and related wiring harness (See 01-13A-6 THROTTLE BODY INSPECTION [LF, L5].)

SYMPTOM TROUBLESHOOTING [LF, L5]

Load compensation inspection

1. Start the engine and idle it.
2. Connect the M-MDS to the DLC-2.
3. Verify that P0506:00 or P0507:00 is not displayed.
 - If P0506:00 or P0507:00 are displayed, perform DTC inspection. (See 01-02A-168 DTC P0506:00 [LF, L5].)
(See 01-02A-170 DTC P0507:00 [LF, L5].)
4. Access the RPM PID.

Note

- Excludes temporary idle speed drop just after the loads are turned on.

5. Verify that the engine speed is within the specification under each load condition.
 - If load condition is not as specified, inspect the following:
 - A/C switch and related wiring harness (See 07-40A-26 CLIMATE CONTROL UNIT INSPECTION [FULL-AUTO AIR CONDITIONER].) (See 07-40B-20 CLIMATE CONTROL UNIT INSPECTION [MANUAL AIR CONDITIONER].)
 - Fan switch and related wiring harness (See 07-40B-22 FAN SWITCH INSPECTION [MANUAL AIR CONDITIONER].)

Idle speed (ATX: P, N position, MTX: Neutral position)
600—700 rpm (MTX), 650—750 (ATX)

Idle-up speed (ATX: P, N position, MTX: Neutral position)
A/C on and refrigerant pressure sensor (middle pressure) is off: 700—800 rpm (MTX), 650—750 (ATX)
A/C on and refrigerant pressure sensor (middle pressure) is on: 700—800 rpm (MTX), 670—770 (ATX)
Electrical loads on: 650—800 rpm

Throttle position (TP) sweep inspection

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition to ON.
3. Verify that none of the following DTC are displayed:
 - P0122:00, P0123:00, P0222:00, P0223:00, P0638:00, P2100:00, P2101:00, P2107:00, P2108:00, P2119:00, P2122:00, P2123:00, P2127:00, P2128:00, P2135:00, P2138:00
 - If any one DTC is displayed, perform DTC inspection. (See 01-02A-17 DTC TABLE [LF, L5].)
4. Access TP_REL PID.
5. Verify that the PID reading is within the CTP_REL value. (See 01-40A-8 PCM INSPECTION [LF, L5].)
 - If the PID reading is out of range, perform the following:
 - Remove the air duct from the throttle body.
 - Verify that the throttle valve opens when the accelerator pedal is depressed.
 - If the throttle valve opens, inspect the TP sensor and related wiring harness.
 - If the throttle valve does not open, inspect the throttle actuator control motor and related wiring harness.
6. Gradually depress the throttle pedal and verify that the PID reading increases accordingly.
 - If the PID reading drops momentarily, inspect the following:
 - TP sensor
7. Fully depress the throttle pedal and verify that the PID reading is within WOT value. (See 01-40A-8 PCM INSPECTION [LF, L5]d.)
 - If the PID reading is out of range, perform the followings:
 - Remove the air duct from throttle body.
 - Verify that the throttle valve opens when throttle pedal is depressed.
 - If the throttle valve opens, inspect the TP sensor and related wiring harness.
 - If the throttle valve does not open, inspect the throttle actuator control motor and related wiring harness.

SYMPTOM TROUBLESHOOTING [LF, L5]

Variable Intake Air Control Operation Inspection

1. Start the engine.
2. Inspect the rod operation under the following condition:

Rod operation

Engine speed	4,400 rpm (LF)/4,600 rpm (L5)	
	Below	Above
Shutter valve actuator	Operate	Not operate

- If the rod operation is not as specified, inspect as follows:
 - (1) Stop the engine.
 - (2) Connect the M-MDS to the DLC-2.
 - (3) Verify that DTC P0661:00 or P0662:00 is not displayed.
 - If DTC P0661:00 or P0662:00 is shown, perform DTC inspection. (See 01-02A-193 DTC P0661:00 [LF, L5].) (See 01-02A-195 DTC P0662:00 [LF, L5].)
 - (4) Inspect the variable intake air solenoid valve. (See 01-13A-7 VARIABLE INTAKE AIR SOLENOID VALVE INSPECTION [LF, L5].)
 - If the variable intake air solenoid valve is not normal, replace the variable intake air solenoid valve. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
 - If the variable intake air solenoid valve is normal, inspect the following:
 - Vacuum hose and vacuum chamber for looseness or damage
 - Shutter valve actuator (See 01-13A-7 VARIABLE INTAKE AIR SHUTTER VALVE ACTUATOR INSPECTION [LF, L5].)
 - Shutter valve stuck open or closed

Variable Tumble Control Operation Inspection

1. Connect the M-MDS to the DLC-2.
2. Access ECT1 and ECT2 PIDs.
3. Verify that ECT1 and ECT2 PIDs are **less than 60 °C {140 °F} (LF)/63 °C {145 °F} (L5)**.
4. Start the engine.
5. Inspect rod operation under the following conditions:

Rod operation

Engine speed	3,750 rpm	
	Below	Above
Shutter valve actuator	Operate	Not operate

- If the rod operation is not specified, inspect as follows:
 - (1) Verify that DTC P2009:00 or P2010:00 is not displayed.
 - If DTC No. P2009:00 or P2010:00 are shown, perform DTC inspection. (See 01-02A-224 DTC P2009:00 [LF, L5].) (See 01-02A-226 DTC P2010:00 [LF, L5].)
 - (2) Inspect the variable tumble solenoid valve. (See 01-13A-7 VARIABLE TUMBLE SOLENOID VALVE INSPECTION [LF, L5].)
 - If the variable tumble solenoid valve is not normal, replace the variable tumble solenoid valve. (See 01-13A-4 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [LF, L5].)
 - If the variable tumble solenoid valve is normal, inspect the following:
 - Vacuum hose and vacuum chamber for looseness or damage
 - Shutter valve actuator (See 01-13A-7 VARIABLE INTAKE AIR SHUTTER VALVE ACTUATOR INSPECTION [LF, L5].)
 - Shutter valve stuck open or closed

01-03A

SYMPTOM TROUBLESHOOTING [LF, L5]

Fuel Injector Operation Inspection

If simulation function of M-MDS is used:

STEP	INSPECTION	RESULTS	ACTION
1	Start the engine and warm it up until normal operating temperature. Connect the M-MDS to DLC-2. Access the INJ#1, INJ#2, INJ#3 and INJ#4 PIDs using the M-MDS. (See 01-02A-7 ON-BOARD DIAGNOSTIC TEST [LF, L5].) Turn the fuel injector from on to off using the PIDs each cylinder. Does the engine speed drop?	Yes	Fuel injector work properly.
		No	Go to the next step.
2	Disconnect the fuel injector that the engine speed does not drop at Step 1. Switch the ignition to ON. Measure the voltage between suspect fuel injector terminal A (wiring harness-side) and body ground. Is the voltage B+?	Yes	Go to the next step.
		No	Repair or replace for a possible open or short circuit.
3	Inspect for open or short circuit in wiring harness between suspect fuel injector terminal B and following PCM terminals: <ul style="list-style-type: none"> • Fuel injector No.1 — PCM terminal 2BB • Fuel injector No.2 — PCM terminal 2BC • Fuel injector No.3 — PCM terminal 2BD • Fuel injector No.4 — PCM terminal 2AZ 	Yes	Repair or replace for a possible open or short circuit.
		No	Go to the next step.
4	Inspect suspect fuel injector. (See 01-14A-21 FUEL INJECTOR INSPECTION [LF, L5].) Is there any malfunction?	Yes	Replace the fuel injector. (See 01-14A-19 FUEL INJECTOR REMOVAL/ INSTALLATION [LF, L5].)
		No	Replace the PCM. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)

If simulation function of M-MDS is used:

STEP	INSPECTION	RESULTS	ACTION
1	While cranking engine, inspect for fuel injector operation sound at each cylinder using a soundscope. Is operation sound heard?	Yes	Fuel injector work properly.
		No	Go to the next step.
2	Disconnect the fuel injector that the engine speed does not drop at Step 1. Switch the ignition to ON. Measure the voltage between suspect fuel injector terminal A (wiring harness-side) and body ground. Is the voltage B+?	Yes	Go to the next step.
		No	Repair or replace for a possible open or short circuit.
3	Inspect for open or short circuit in wiring harness between suspect fuel injector terminal B and following PCM terminals: <ul style="list-style-type: none"> • Fuel injector No.1 — PCM terminal 2BB • Fuel injector No.2 — PCM terminal 2BC • Fuel injector No.3 — PCM terminal 2BD • Fuel injector No.4 — PCM terminal 2AZ 	Yes	Repair or replace for a possible open or short circuit.
		No	Go to the next step.
4	Inspect suspect fuel injector. (See 01-14A-21 FUEL INJECTOR INSPECTION [LF, L5].) Is there any malfunction?	Yes	Replace the fuel injector. (See 01-14A-19 FUEL INJECTOR REMOVAL/ INSTALLATION [LF, L5].)
		No	Replace the PCM. (See 01-40A-7 PCM REMOVAL/INSTALLATION [LF, L5].)

SYMPTOM TROUBLESHOOTING [LF, L5]

Fuel Cut Control System Inspection

1. Warm up engine and idle it.
2. Turn off the electrical loads and A/C switch.
3. Connect the M-MDS to the DLC-2.
4. Access RPM PID.
5. Listen for the fuel injector operation sound at all cylinders using the soundscope and monitor both PIDs while performing the following steps:
 - (1) Depress the accelerator pedal and increase the engine speed to **4,000 rpm**.
 - (2) Quickly release the accelerator pedal (brake pedal is not depressed) and verify that the fuel injector operation sound stops, and starts again when the engine speed drops **below 1,200 rpm**.
 - If not as specified, inspect the following:
 - ECT sensor No.1, No.2 and related wiring harness (See 01-40A-24 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [LF, L5].)
 - Neutral/ CPP switch and related wiring harness (MTX) (See 01-40A-23 NEUTRAL SWITCH INSPECTION [LF, L5].) (See 01-40A-22 CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION [LF, L5].)
 - TR switch and related wiring harness (ATX) (See 05-17-14 TRANSAXLE RANGE (TR) SWITCH INSPECTION [FS5A-EL].)

01-03A

Fuel Pump Operation Inspection

1. Remove the fuel-filler cap.
2. Switch the ignition to ON.
3. Turn the fuel pump relay from off to on using the FP PID and inspect if the operation sound is heard.
 - If no operation sounds is heard, proceed to next step.
4. Measure voltage at wiring harness side fuel pump connector terminal B

Specification

B+ (Ignition at on)

- If the voltage is as specified, inspect the following:
 - Fuel pump continuity
 - Fuel pump GND
 - Wiring harness between fuel pump relay terminal E and PCM terminal 1BG
- If not as specified, inspect the following:
 - Fuel pump relay
 - Wiring harness connector (Main relay—Fuel pump relay—Fuel pump)

Fuel Pump Control System Inspection

1. Crank the engine and verify that fuel pump relay operation sound is heard.
2. If operation sound is not heard, inspect the following:
 - Fuel pump relay (See 09-21-17 RELAY INSPECTION.)
 - Wiring harness and connectors (Main relay—Fuel pump relay terminal E—PCM terminal 1BG)

Spark Test

1. Disconnect the fuel pump relay.
2. Verify that each ignition coil and connector is connected properly.
3. Inspect the ignition system in the following procedure.

Warning

- **High voltage in the ignition system can cause strong electrical shock which can result in serious injury. Avoid direct contact to the vehicle body during the following spark test.**

STEP	INSPECTION	ACTION	
1	<ul style="list-style-type: none"> • Disconnect the ignition coil from the spark plugs. • Remove the spark plugs. (See 01-18A-3 SPARK PLUG REMOVAL/INSTALLATION [LF, L5].) • Verify that the spark plugs do not have carbon deposits. • Are the spark plugs normal? 	Yes	Go to the next step.
		No	Perform no-load racing at 4,000 rpm for 2 min, 2 times to burn off the carbon deposits. Repeat Step 1.
2	<ul style="list-style-type: none"> • Inspect the spark plugs for damage, wear, and proper plug gap. • Are the spark plugs normal? 	Yes	Go to the next step.
		No	Replace spark plugs, then go to Step 1. (See 01-18A-3 SPARK PLUG REMOVAL/INSTALLATION [LF, L5].)

SYMPTOM TROUBLESHOOTING [LF, L5]

STEP	INSPECTION	ACTION	
3	<ul style="list-style-type: none"> • Reconnect the spark plugs to the ignition coil. • Ground the spark plugs to the engine. • Is a strong blue spark visible at each cylinder while cranking the engine? 	Yes	Ignition system is normal.
		No	Some cylinders do not spark: <ul style="list-style-type: none"> • Go to the next step. All cylinders do not spark: <ul style="list-style-type: none"> • Go to Step 5.
4	<ul style="list-style-type: none"> • Inspect for open or short circuit between the following terminals: <ul style="list-style-type: none"> — Ignition coil No.1 terminal C (wiring harness-side)—PCM terminal 2G (wiring harness-side) — Ignition coil No.2 terminal C (wiring harness-side)—PCM terminal 2K (wiring harness-side) — Ignition coil No.3 terminal C (wiring harness-side)—PCM terminal 2L (wiring harness-side) — Ignition coil No.4 terminal C (wiring harness-side)—PCM terminal 2H (wiring harness-side) • Is there any malfunction? 	Yes	Repair or replace the suspected wiring harness, then go to Step 1.
		No	Inspect and replace the ignition coil. (See 01-18A-2 IGNITION COIL INSPECTION [LF, L5].) (See 01-18A-2 IGNITION COIL REMOVAL/INSTALLATION [LF, L5].)
5	<ul style="list-style-type: none"> • Measure the voltage at terminal A (wiring harness-side) in each ignition coils. • Is the voltage B+? 	Yes	Go to the next step.
		No	Inspect the power supply circuit of ignition coils.
6	<ul style="list-style-type: none"> • Inspect the PCM and ignition coil connector or terminals for poor connection. • Is there any malfunction? 	Yes	Repair or replace the malfunctioning connector or terminals, then go to Step.1.
		No	Go to the next step.
7	<ul style="list-style-type: none"> • Inspect the CKP sensor and crankshaft pulley. (See 01-40A-32 CRANKSHAFT POSITION (CKP) SENSOR INSPECTION [LF, L5].) • Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection result, then go to Step.1.
		No	Inspect for open or short circuit in wiring harness and connector of CKP sensor.

EGR Control System Inspection

1. Crank the engine and verify that EGR valve operation (initial operation) sound is heard.
 - If the operation sound is not heard, connect the M-MDS to the DLC-2 and verify that the DTC P0403:00 is shown. Perform DTC inspection. (See 01-02A-133 DTC P0403:00 [LF, L5].)
2. Start the engine and idle it.
3. Warm up the engine to normal operating temperature.
4. Access the following PIDs:
 - ECT1, ECT2, RPM, SEGRP_DSD, APP1, APP2, VSS
5. Idle the vehicle and verify that the SEGRP value is 0.
6. Put the vehicle in drive.
7. Depress the accelerator pedal and verify that the SEGRP_DSD value is increased.
 - If the EGR valve increases, inspect the following:
 - EGR valve (stuck open or close) (See 01-16A-9 EGR VALVE INSPECTION [LF, L5].)
 - Wiring harness and connectors (Main relay—EGR valve—PCM)
 - If the SEGRP_DSD value does not increase, inspect the VSS, APP1, APP2, TP_REL, ECT1 and ECT2 PIDs. (See 01-40A-8 PCM INSPECTION [LF, L5].)
8. Stop the vehicle and verify that the SEGRP value returns to 0.

Purge Control System Inspection

1. Start the engine.
2. Disconnect the vacuum hose between the purge solenoid valve and the charcoal canister.
3. Put a finger to the purge solenoid valve and verify that there is no vacuum applied when the engine is cold.
 - If there is a vacuum, inspect the following:
 - Wiring harness and connectors (Purge solenoid valve terminal A—PCM terminal 1BA)
 - Purge solenoid valve (See 01-16A-8 PURGE SOLENOID VALVE INSPECTION [LF, L5].)
4. Warm up the engine to the normal operating temperature.
5. Stop the engine.
6. Connect the M-MDS to the DLC-2 and verify that the DTC P0443:00 is shown. Perform DTC inspection. (See 01-02A-147 DTC P0443:00 [LF, L5].)
7. Switch the ignition to ON.
8. Access ECT1 and ECT2 PIDs.
9. Verify that the engine coolant temperature is **more than 60 °C {140 °F}**.
 - If the M-MDS indicates **less than 60 °C {140 °F}**, perform the ECT sensor No.1, No.2 inspection. (See 01-40A-24 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [LF, L5].)

SYMPTOM TROUBLESHOOTING [LF, L5]

10. Set the vehicle on the dynamometer or chassis roller.

Warning

- When the dynamometer or chassis roller is operating, there is a possibility that the operator may come into contact with or be caught up in the rotating parts, leading to serious injuries or death. When performing work while the dynamometer or chassis roller is operating, be careful not to come into contact with or be caught up in any of the rotating parts.

11. Drive vehicle at engine speed **approx. 2,000 rpm for 30 s or more.**

12. Put a finger to the purge solenoid valve and verify that there is no vacuum applied while step 2.

- If there is no vacuum, inspect the following:
 - Wiring harness and connector (Main relay—Purge solenoid valve—PCM terminal 1BA)
 - Purge solenoid valve (See 01-16A-8 PURGE SOLENOID VALVE INSPECTION [LF, L5].)
 - MAF, APP1, APP2, TP_REL and LOAD PIDs (See 01-40A-8 PCM INSPECTION [LF, L5].)
- If there is vacuum, inspect the following:
 - Vacuum hose (Purge solenoid valve—Charcoal canister)

A/C Cut-off Control System Inspection

1. Start the engine.
2. Turn the A/C switch and the fan switch on.
3. Verify that the A/C compressor magnetic clutch actuates.
 - If it does not actuate, go to symptom troubleshooting “NO.23 A/C DOES NOT WORK SUFFICIENTLY”. (See 01-03A-73 NO.23 A/C DOES NOT WORK SUFFICIENTLY [LF, L5].)
4. Fully open the throttle valve and verify that the A/C compressor magnetic clutch does not actuate for **2—5 s**.
 - If it actuates, inspect as follows:
 - A/C relay (See 09-21-17 RELAY INSPECTION.)
 - Open or short to ground circuit in wiring harness and connectors (Ignition switch (vehicles without advanced keyless entry and push button start system)/IG2 relay (vehicles with advance keyless entry and push button start)—A/C relay—PCM terminal 1I)
 - A/C related parts
 - APP1, APP2 PIDs (See 01-40A-8 PCM INSPECTION [LF, L5].)

Cooling Fan Control System Inspection

1. Connect the M-MDS to the DLC-2.
2. Start the engine and warm it up to normal operating temperature.
3. Perform the KOER self-test. (See 01-02A-11 KOEO/KOER SELF TEST [LF, L5].)
4. Verify that the DTC P0480:00 is not shown and the cooling fan operates during the KOER self-test.
 - If DTC P0480:00 is shown, perform the DTC troubleshooting procedure. (See 01-02A-163 DTC P0480:00 [LF, L5].)
 - If the cooling fans do not operate, indicated order in accordance with fan operation conditions.

Cooling fans do not operate

- Inspect for followings:
 - Open circuit between the fan control module and battery post
 - Open circuit between fan control module and ground
 - Poor connection of the fan control module connector
 - If there is no malfunction, replace the cooling fan component. (See 01-12A-13 COOLING FAN COMPONENT REMOVAL/INSTALLATION [LF, L5].)

Cooling fan motor does not operate

- Inspect for followings:
 - Open or short to ground circuit between the fan control module and cooling fan motor
 - Poor connection of the fan control module connector or cooling fan motor connector
 - If there is no malfunction, replace the cooling fan component. (See 01-12A-13 COOLING FAN COMPONENT REMOVAL/INSTALLATION [LF, L5].)

Variable Valve Timing Control System Operation Inspection

When idling cannot be continued

1. Remove the OCV and verify that the spool valve is at maximum retard position. (See 01-10A-20 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [LF, L5].)
2. Connect the OCV.
3. Switch the ignition to ON.
4. Verify that the spool valve is at maximum retard position.
 - If the spool valve is stuck in the advance direction, inspect for the following:
 - Short circuit in wiring harnesses or connectors between OCV and PCM
5. Inspect the variable valve timing actuator. (See 01-10A-18 VARIABLE VALVE TIMING ACTUATOR INSPECTION [LF, L5])

01-03A

SYMPTOM TROUBLESHOOTING [LF, L5]

When idling can be continued

1. Disconnect OCV connector.
2. Warm up the engine and idle it.
3. Apply battery voltage to the OCV and verify that the engine idles roughly or stalls.
 - If the engine idles roughly or stalls, inspect the timing chain component (valve timing deviation).
 - If the engine does not idle roughly or stalls, go to the next step.
4. Remove the OCV and perform spool valve operation inspection. (See 01-10A-20 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [LF, L5].)
 - If not as specified, inspect the following:
 - OCV (See 01-10A-20 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [LF, L5].)
 - Harnesses and connectors between OCV and PCM open or short
 - If as specified, inspect the following hydraulic passages for clogging or leakage or both:
 - Oil pressure switch—OCV
 - OCV—Camshaft
 - Camshaft internal passage
5. If they are normal, replace the camshaft pulley (with built-in variable valve timing actuator). (See 01-10A-18 VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [LF, L5].)

Evaporative Emission (EVAP) System Leak Inspection

- To verify that the problem has been fixed properly after repairs, the run drive cycle or EVAP system leak inspection must be performed.

EVAP system leak inspection using the M-MDS

EVAP system test out line

- The EVAP system test, which can substituted for the run drive cycle as an EVAP control system repair confirmation method, can detect the small/large leak or blockage without run-drive cycle.

Note

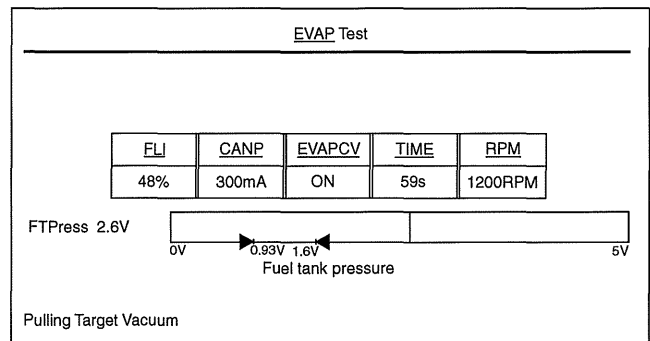

- M-MDS can not detect "VERY SMALL LEAK". To identify the leak point, please use the leak tester or ultrasonic leak detector.

EVAP system test description

- The EVAP system test finds gas leaks or blockage of EVAP system using the changes of the fuel tank pressure.
 - This test starts after sending an on-demand test signal from the M-MDS to the PCM.
 - This test consists of three stages, and each stage is performed automatically as follows:

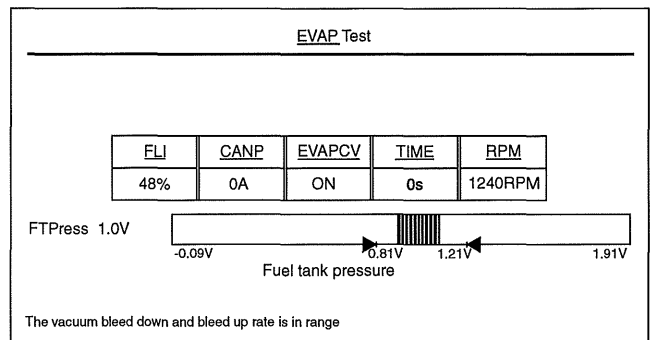

Stage 1 test. (Test for large leak or blockage)

- M-MDS send the stage 1 test start signal to the PCM.
- PCM controls the CV solenoid valve and purge solenoid valve to control the tank pressure to the targeted value.
- M-MDS detect the large leak or the purge line blockage if the tank pressure does not arrive at the target vacuum in specified period.

Stage 2 test. (Test for small leak)

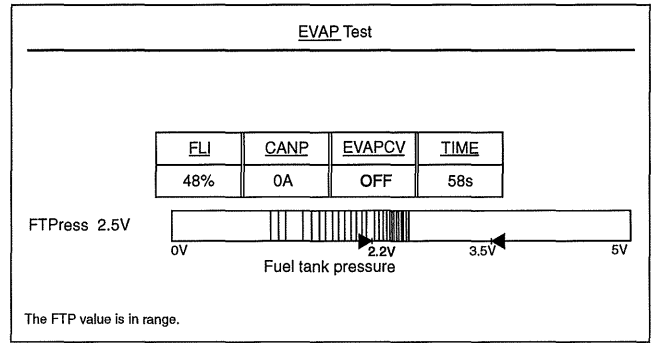

- When fuel tank pressure arrived at the targeted pressure at stage 1 test, M-MDS send the stage 2 test signal to the PCM to turn off the purge solenoid to keep the tank pressure.
- M-MDS detect the small leak if the tank pressure can not keep within the target in specified period.

SYMPTOM TROUBLESHOOTING [LF, L5]

Stage 3 test. (Test for blockage)

- M-MDS send the stage 3 test signal to the PCM to turn off the CV solenoid for check the blockage of EVAP system.
- M-MDS detect blockage of the CV solenoid valve or air filter if the tank pressure does not arrive at the target (atmosphere).

01-03A

ac9uuw00002845

EVAP system malfunction judgment

- M-MDS detect the small/large leak or blockage based on fuel tank pressure at the end of EVAP Test.

The EVAP Test could not obtain the target vacuum. A large leak or blockage is suspect.

- This judgment means tank pressure could not arrive at target pressure at stage 1 test.
 - Check for the large leakage or inspect the purge solenoid valve operation and related hoses.
 - Repair or replace any malfunctioning parts.

The EVAP Test could not maintain the target vacuum. A small leak is suspect.

- This judgment means tank pressure could not stay in target pressure at stage 2 test.
 - Run the EVAP Test again after Re-tighten the fuel filler cap.
 - If small leak is suspected again, use the leak tester or ultrasonic leak detector for identify the leak point.
 - Repair or replace any malfunctioning parts.

Blockage in EVAP system.

- This judgment means tank pressure could not return to atmosphere at stage 3 test.
 - Inspect the CV solenoid, Air filter, Charcoal canister and related hoses for blockage.

No large leaks or blockage have been detected in the EVAP system at this time.

- M-MDS can not detect "VERY SMALL LEAK".
 - To identify the leak point, please use the leak tester or ultrasonic leak detector.

A small leak in the purge solenoid valve is suspect.

- This judgment means tank pressure goes to minus side at stage 2 test.
 - Check the purge solenoid valve. Refer to the workshop manual.

am3uuw0000542

SYMPTOM TROUBLESHOOTING [LF, L5]

Evaporative system test procedure

1. Verify that all PIDs within the following specifications.

Note

- To successfully perform this procedure, all PIDs must be within the specifications before proceeding to the next step.

2. Select the following items from the initialization screen of the M-MDS.
 1. Select the "Powertrain".
 2. Select the "Fuel".
 3. Select the "EVAP Test".
 - Verify that ECT and IAT are within the specifications at the confirmation screen. To successfully perform this procedure, ECT and IAT must be within the spec before proceeding to the next step.
 - Fuel Level must be maintained within **15%—85%**. PCM will cancel the EVAP Test If the Fuel Level is **lower than 15%** or **higher than 85%**.
3. Verify the test results described on the M-MDS and follow the instructions.

Specification

PID	PID Range
BARO	74.9 kPa {562 mmHg, 22.1 inHg} or more
FLI	15—85%
ECT	ECT minus IAT -10—25 °C {-5.6—13.9 °F}
IAT	

am3uuw0000542

EVAP system leak inspection using leak tester

1. Perform the following **SST** (EVAP System Tester 134-01049A) self-test:

Note

- If the tester does not work correctly during the self-test, refer to the tester operators manual for a more detailed self-test procedure.

- (1) Verify that the control valve on the panel is in the HOLD position then open the nitrogen bottle valve.
- (2) Connect the vehicle interface hose (part of the **SST**) to the SELF-TEST port located on the control panel. Hand tighten the fitting. (Do not overtighten.)
- (3) Turn the control valve to the TEST position.
- (4) The gauge should read **331—381 mm {13—15 in}** of water.
 - If the gauge is not reading in this range, adjust the pressure by turning the black knob on the low pressure regulator at the nitrogen bottle.
- (5) Turn the control valve to the HOLD position.
- (6) Verify that the gauge holds pressure and that the flow meter reads no flow.
 - If there is no drop in pressure and no flow, the tester passes the self-test.
 - If the gauge leaks down, refer to the tester operators manual.

am3uuw0000554

SYMPTOM TROUBLESHOOTING [LF, L5]

2. Connect the **SST** to the vehicle.
 - (1) Verify that the control valve on the panel is in the HOLD position then open the nitrogen bottle valve.
 - (2) Remove the fuel-filler cap from the vehicle.
 - If the fuel-filler cap is not a MAZDA part or equivalent, replace it.

Note

- **INSPECT FUEL FILLER CAP AND FILLER NECK**
 - Visually inspect for damage, insufficient sealing, rust, cracks or warps for filler cap and filler neck.
 - Repair or replace if necessary.

- (3) Connect the receiver assembly (**SST**: 134-01059) to the vehicle cap test hose assembly (part of the **SST**) and the fuel-filler cap from the vehicle.
 - (4) Connect the cap adaptor (**SST**: 134-01058) to the vehicle cap test hose assembly (part of the **SST**) and to the fuel-filler neck.
 - (5) Connect the vehicle interface hose (part of the **SST**) to the center fitting of the vehicle cap test hose assembly (part of the **SST**).
3. Connect the M-MDS to the DLC-2.
 4. Switch the ignition to ON (engine off).
 5. Request the PCM on-board device control (Mode 08) using the M-MDS to close the canister vent value.

ac9uuw00001084

Note

- The canister vent value is closed for **10 min** unless the following any actions are done:
 - The engine is started.
 - The ignition is switched to off.

6. Make sure the control valve on the 134-01049A is in the HOLD position and that the valve on the cylinder of nitrogen gas is open.
7. Turn the control valve to the open position and let the system fill. You should note a drop in the gauge pressure along with the flow meter being pegged at maximum flow for several minutes depending on how full or empty the fuel tank is, and how long it takes to completely fill and pressurize the evaporative emissions system hoses.
8. If the gauge and the flow meter do not settle to a measurable level after **2—3 min**, then refer to the Mazda Workshop Manual to verify that the canister vent valve is properly closed. If canister vent valve is properly closed. The EVAP system has large leakage. Check for leakage and repair as necessary.
9. Verify the pressure gauge and flow meter reading to determine if there is an evaporative emissions leak:

NO EVAPORATIVE LEAK:

- The flow meter registers “zero flow” and the pressure gauge returns to the pre-set pressure of **356 mm {14 in}** of water (H₂O).

EVAPORATIVE LEAK:

- The pressure does not return to the preset level of **356 mm {14 in}** of water (H₂O) when measuring the flow. See “SETTING LEAK STANDARD FOR TESTING” (.020 to .040 inch H₂O) of the Evaporative Emissions Tester operators manual (134-01067).

Note

- Turn the control valve to the HOLD position then disconnect the **SST**.

SYMPTOM DIAGNOSTIC INDEX [L3 WITH TC]

id010339800500

- Verify malfunction symptoms using the following diagnostic index, then go to the appropriate troubleshooting chart.

Diagnostic Index

No.	TROUBLESHOOTING ITEM		DESCRIPTION
1	Melting of main or other fuses		—
2	MIL illuminates		<ul style="list-style-type: none"> • MIL is illuminated incorrectly.
3	Will not crank		<ul style="list-style-type: none"> • Starter does not work.
4	Hard to start/long crank/erratic start/erratic crank		<ul style="list-style-type: none"> • Starter cranks the engine at normal speed but the engine requires excessive cranking time before starting. • Battery is operating normally.
5	Engine stalls	After start/at idle	<ul style="list-style-type: none"> • Engine stops unexpectedly at idle or after start or both.
6	Crankes normally but will not start		<ul style="list-style-type: none"> • Starter cranks engine at normal speed but engine will not run. • Refer to symptom troubleshooting "NO.5 ENGINE STALLS" if this symptom appears after the engine stalls. • Fuel is in tank. • Battery is in normal condition.
7	Slow return to idle		<ul style="list-style-type: none"> • Engine takes more time than normal to return to idle speed. • Engine speed continues at fast idle after warm-up.
8	Engine runs rough/rolling idle		<ul style="list-style-type: none"> • Engine speed fluctuates between the specified idle speed and lower speed, and engine shakes excessively. • Idle speed is too slow and the engine shakes excessively.
9	Fast idle/runs on		<ul style="list-style-type: none"> • Engine speed continues at fast idle after warm-up. • Engine runs after the ignition is switched off.
10	Low idle/stalls during deceleration		<ul style="list-style-type: none"> • Engine stops unexpectedly at beginning of deceleration or recovery from deceleration.
11	Engine stalls/quits	Acceleration/cruise	<ul style="list-style-type: none"> • Engine stops unexpectedly at beginning of acceleration or during acceleration. • Engine stops unexpectedly while cruising.
	Engine runs rough	Acceleration/cruise	<ul style="list-style-type: none"> • Engine speed fluctuates during acceleration or cruising.
	Misses	Acceleration/cruise	<ul style="list-style-type: none"> • Engine misses during acceleration or cruising.
	Buck/jerk	Acceleration/cruise/ deceleration	<ul style="list-style-type: none"> • Vehicle bucks/jerks during acceleration, cruising, or deceleration.
	Hesitation/stumble	Acceleration	<ul style="list-style-type: none"> • Momentary pause at beginning of acceleration or during acceleration.
12	Surges	Acceleration/cruise	<ul style="list-style-type: none"> • Momentary minor irregularity in engine output.
12	Lack/loss of power	Acceleration/cruise	<ul style="list-style-type: none"> • Performance is poor under load (e.g., power down when climbing hills).
13	Knocking/pinging		<ul style="list-style-type: none"> • Sound is produced when air/fuel mixture is ignited by something other than a spark plug (e.g., hot spot in the combustion chamber).
14	Poor fuel economy		<ul style="list-style-type: none"> • Fuel economy is unsatisfactory.
15	Emission compliance		<ul style="list-style-type: none"> • Fails emissions test.
16	High oil consumption/leakage		<ul style="list-style-type: none"> • Oil consumption is excessive.
17	Cooling system concerns	Overheating	<ul style="list-style-type: none"> • Engine runs at higher than normal temperature/overheats.
18	Cooling system concerns	Runs cold	<ul style="list-style-type: none"> • Engine does not reach normal operating temperature.
19	Exhaust smoke		<ul style="list-style-type: none"> • Blue, black, or white smoke from exhaust system.
20	Fuel odor (in engine compartment)		<ul style="list-style-type: none"> • Gasoline fuel smell or visible leakage.
21	Engine noise		<ul style="list-style-type: none"> • Engine noise from under hood.
22	Vibration concerns (engine)		<ul style="list-style-type: none"> • Vibration from under the hood or driveline.
23	A/C does not work sufficiently		<ul style="list-style-type: none"> • A/C compressor magnetic clutch does not engage when A/C is turned on.
24	A/C is always on or A/C compressor runs continuously		<ul style="list-style-type: none"> • A/C compressor magnetic clutch does not disengage.
25	A/C is not cut off under wide open throttle conditions		<ul style="list-style-type: none"> • A/C compressor magnetic clutch does not disengage under WOT.
26	Exhaust sulphur smell		<ul style="list-style-type: none"> • Rotten egg smell (sulphur) from exhaust.
27	Fuel refill concerns		<ul style="list-style-type: none"> • Fuel tank does not fill smoothly.
28	Fuel filling shut off concerns		<ul style="list-style-type: none"> • Fuel does not shut off properly.
29	Spark plug condition		<ul style="list-style-type: none"> • Incorrect spark plug condition.
